
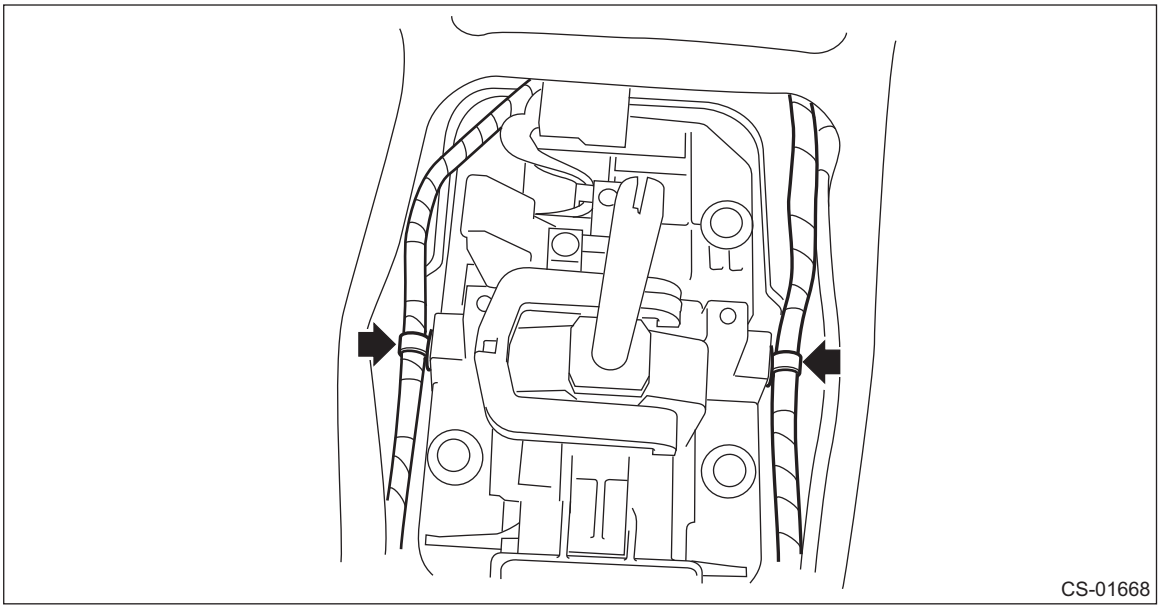
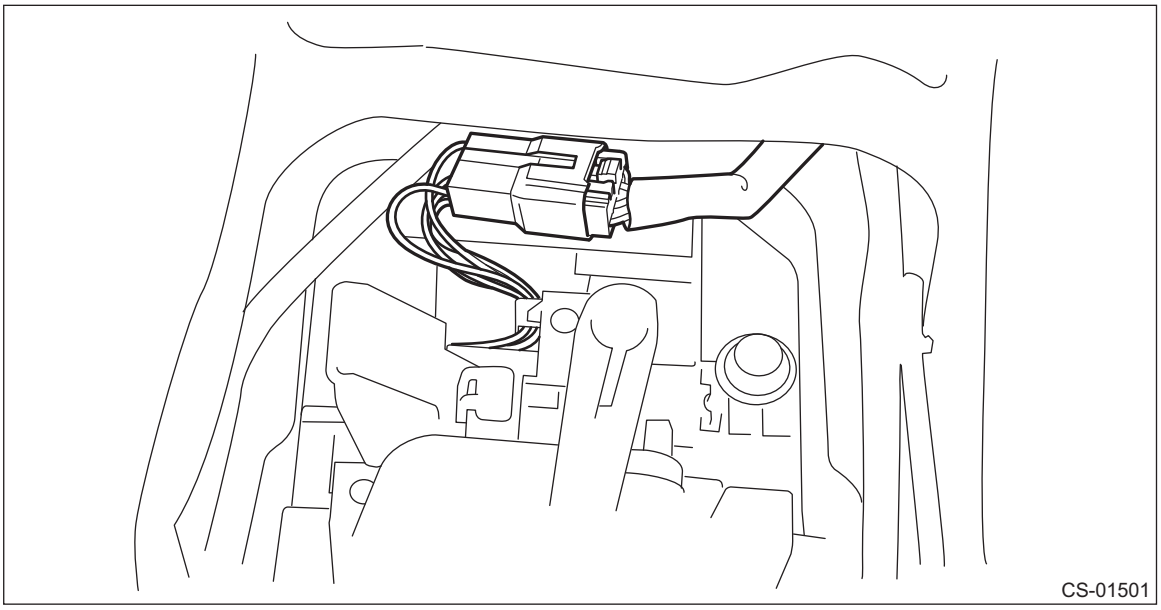
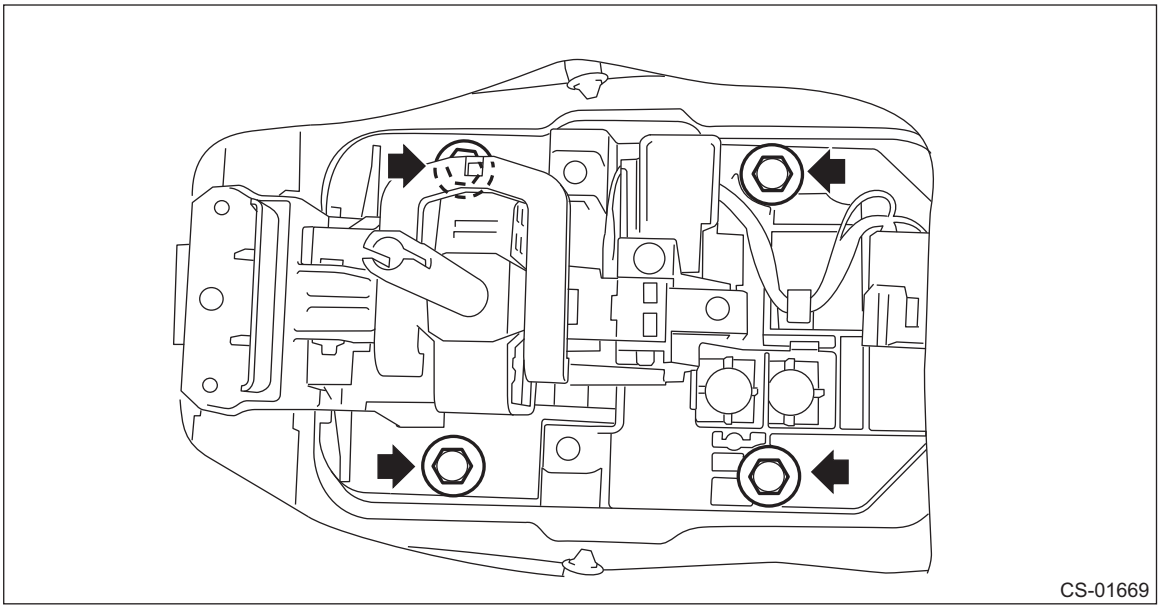
17) Remove the harness clips.



18) Disconnect the harness connector.



19) Remove the select lever assembly.



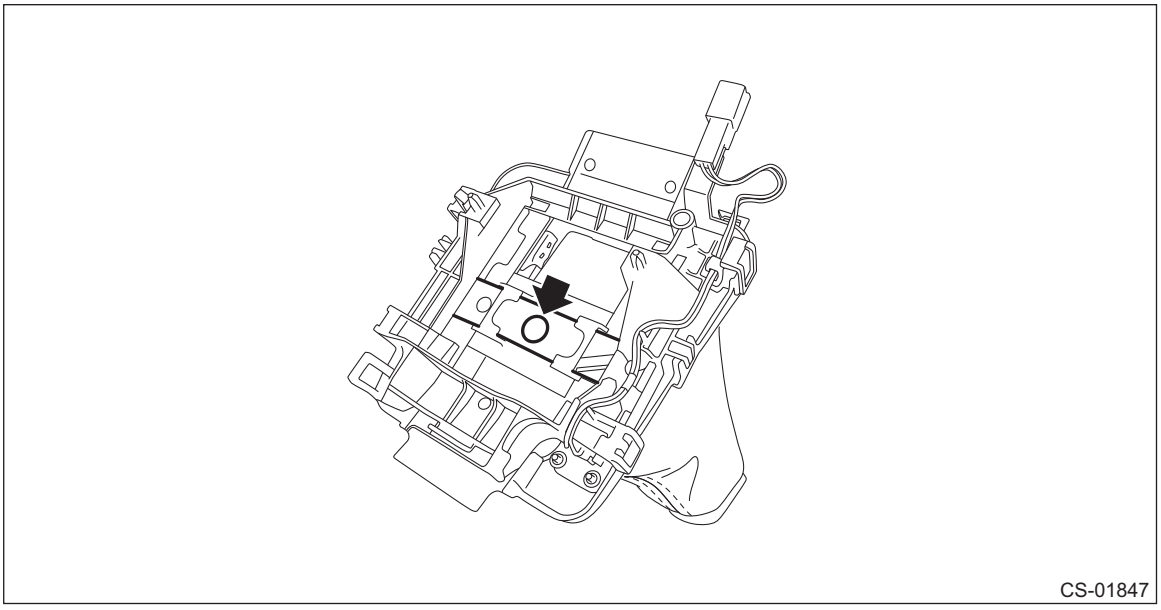
B: INSTALLATION

1) Install the select lever assembly after setting it to the vehicle body.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

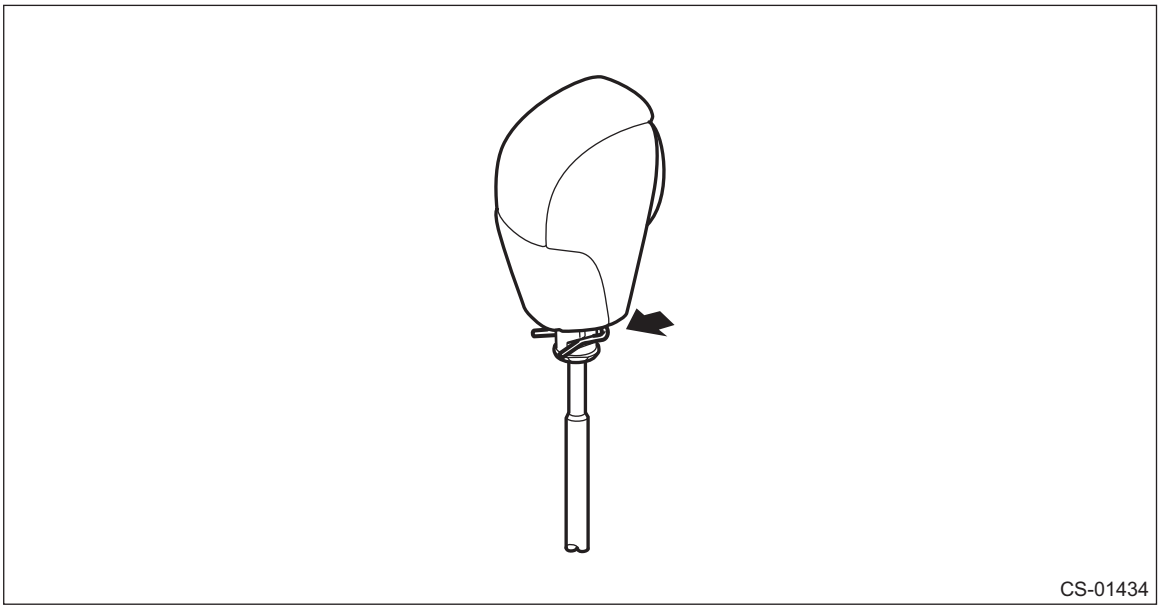
2) Connect the harness connector.
3) Install the harness clip to the select lever assembly.
4) Shift the select lever to “N” range.
5) Install the indicator assembly, then connect the connector.

NOTE:
Insert the select lever through the blind hole sufficiently.



CS-01847

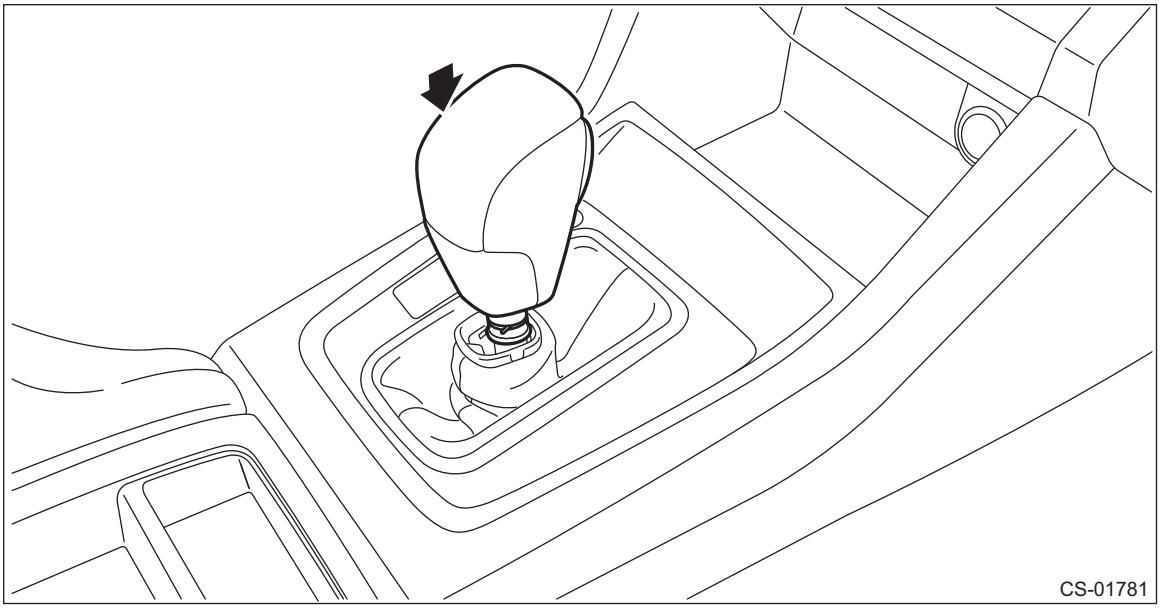
6) Install the panel center LWR LH and RH. <Ref. to EI-73, INSTALLATION, Console Box.>
7) Install the cover - shift lever. <Ref. to EI-73, INSTALLATION, Console Box.>
8) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
9) Accessing from the button side of the grip, attach the clamp grip pin.



CS-01434

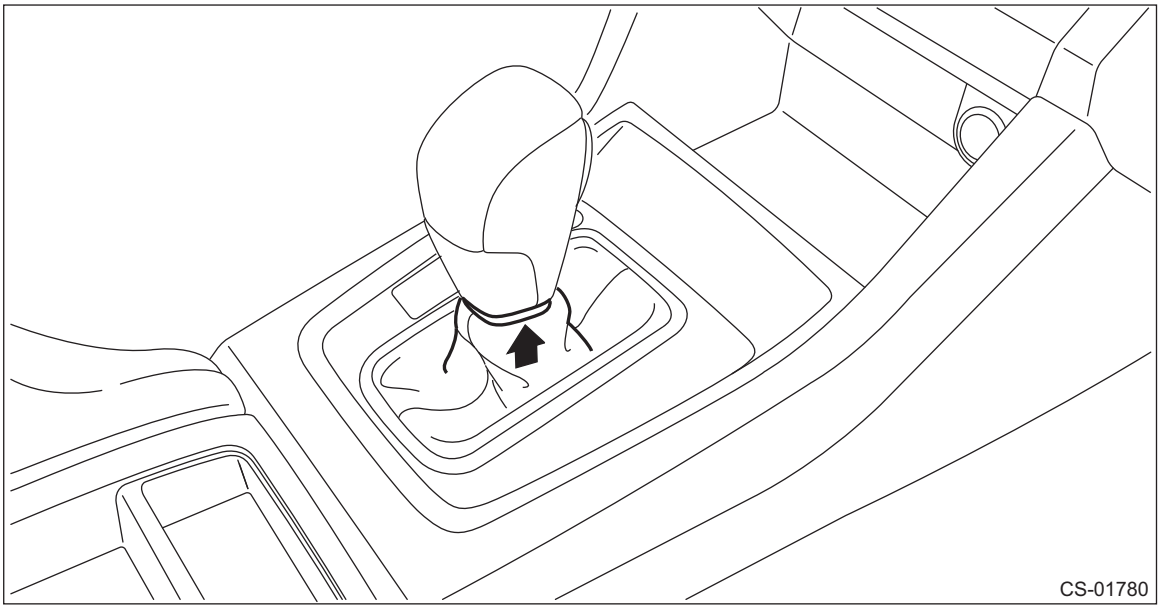
10) Insert the grip assembly to the select lever and press it down until a click is heard.

NOTE:
While pressing the clamp grip with a finger in order to prevent it from popping out, insert the grip assembly.



11) Securely install the boot assembly.

NOTE:
After installation, check that the boot assembly does not come off.



12) After installation of grip, check the following points.
- The grip will not come off.
- The button on the grip operates normally.

13) Shift the select lever to “N” range.
14) Lift up the vehicle.
15) Secure the cable to the bracket. <Ref. to CS-48, INSTALLATION, Select Cable.>
16) Adjust the select cable position. <Ref. to CS-53, ADJUSTMENT, Select Cable.>
17) After adjustment, confirm that the select lever operates properly at all range positions using the shift lock release button.

NOTE:
According to the select lever operation, confirm that the indicator positions are shown correctly.
18) Install the center exhaust cover.

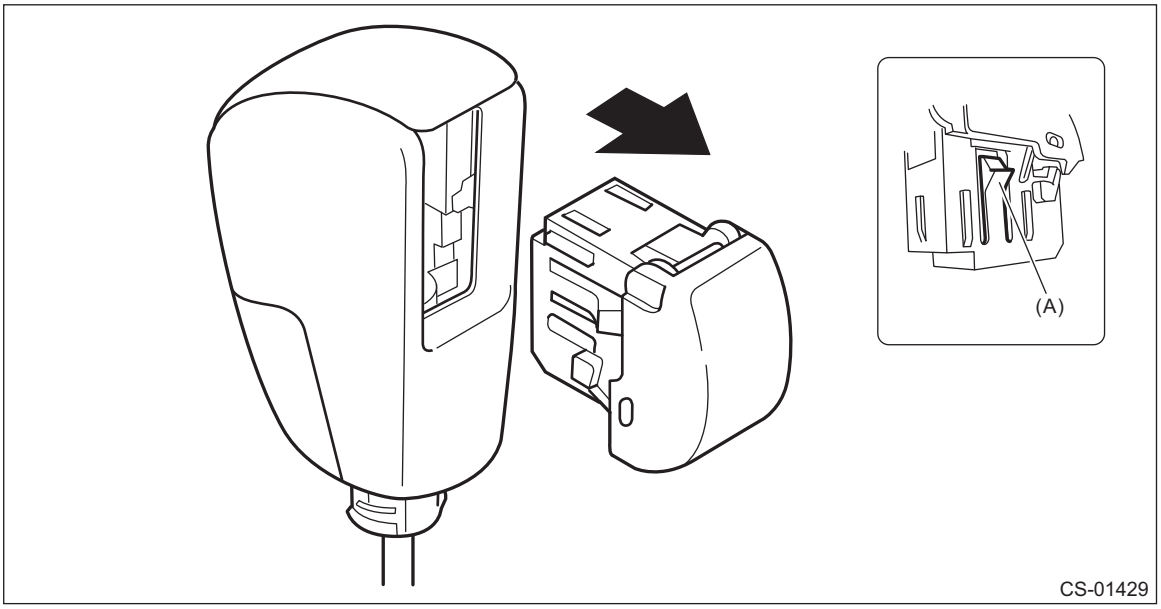
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

19) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
20) Lower the vehicle.
21) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
22) Inspect the following items. If a malfunction is found in the inspection, adjust the select cable or inhibitor switch.
(1) The shift lock operates normally. <Ref. to CS-14, SHIFT LOCK OPERATION, INSPECTION, AT Shift Lock Control System.>
(2) Engine starts when the select lever is in “P” or “N” range, but not in other ranges.
(3) Back-up light illuminates when the select lever is in the “R” range, but not in other ranges.
(4) Select lever and indicator positions are matched.

C: DISASSEMBLY

1. GRIP ASSY

1) Remove the button assembly_AT.

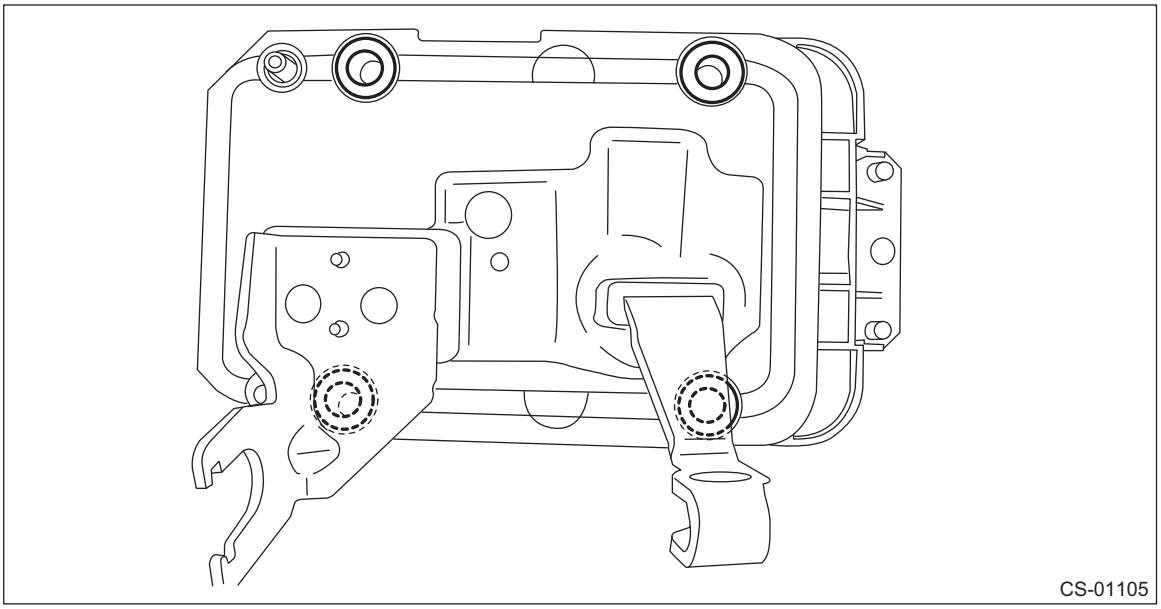


(A) Claw

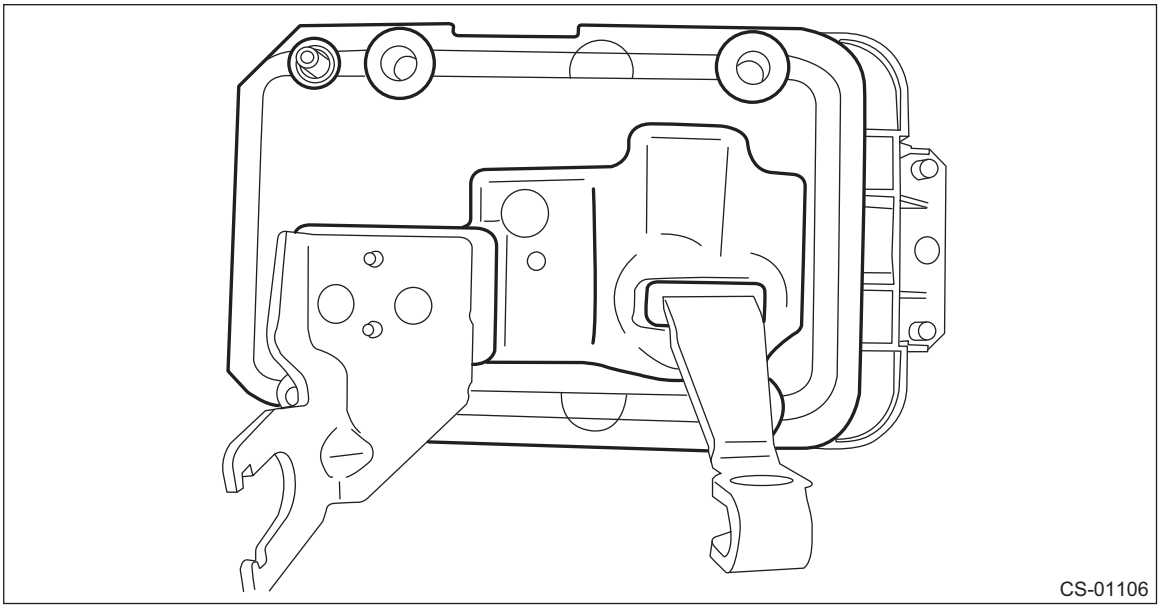
2) Remove the rod COMPL.

2. AT SELECT LEVER ASSEMBLY

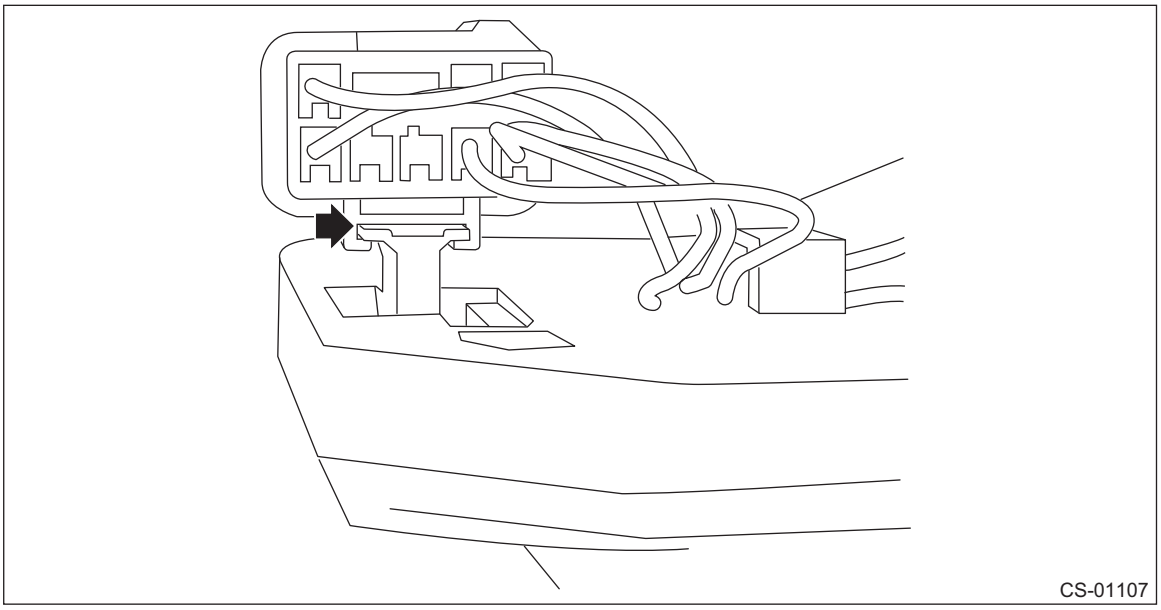
1) Remove the spacer plate.



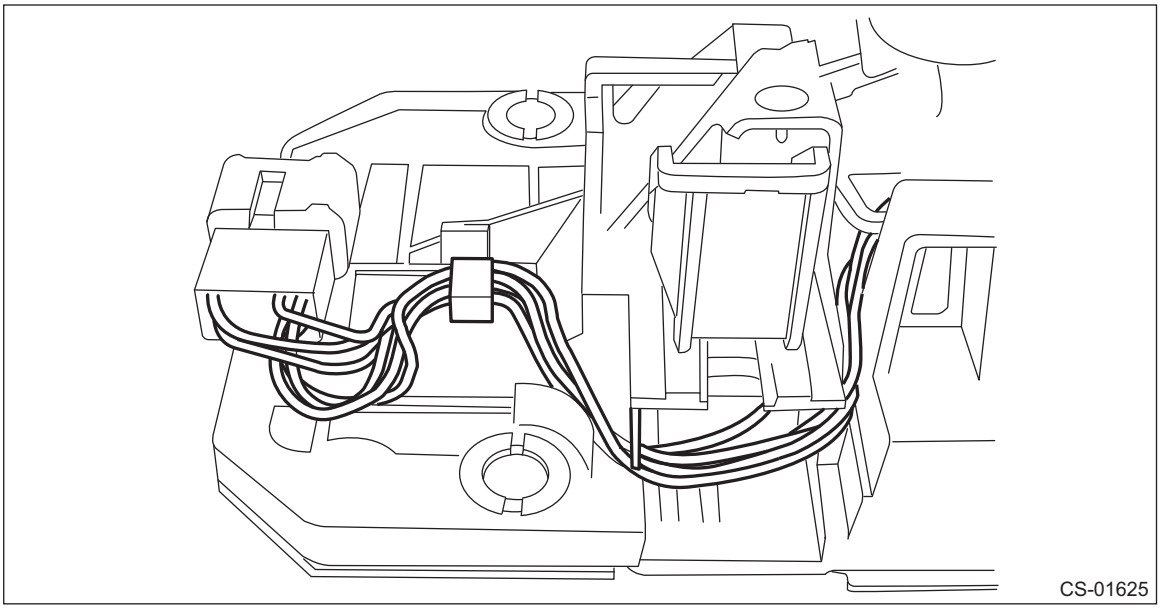
2) Remove the gasket.



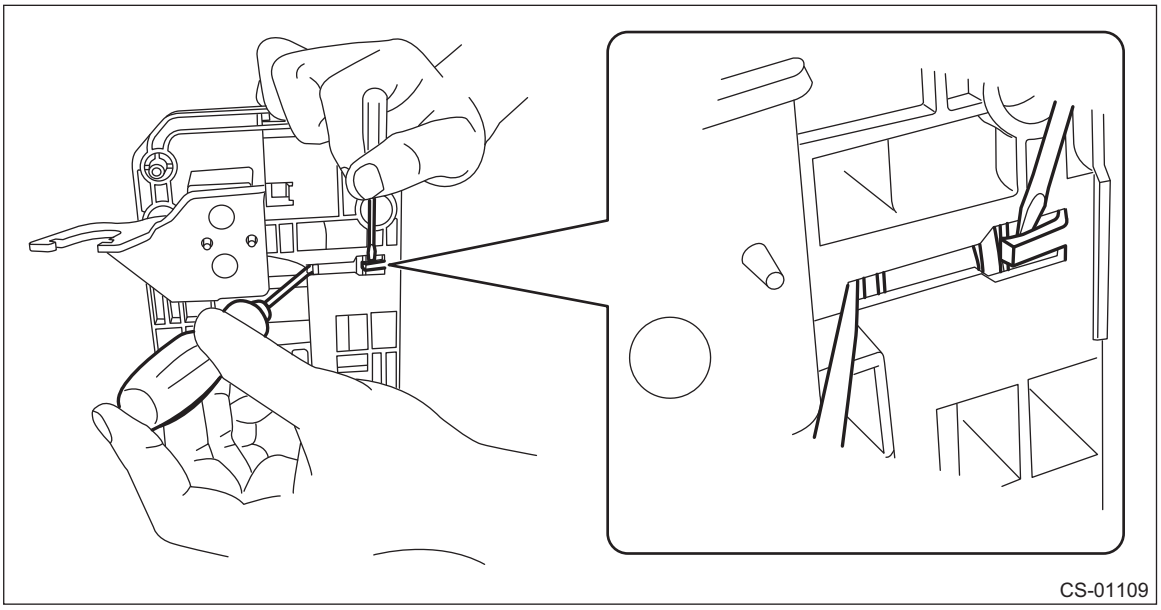
3) Insert a flat tip screwdriver with a thin tip under the connector and disconnect the harness connector.



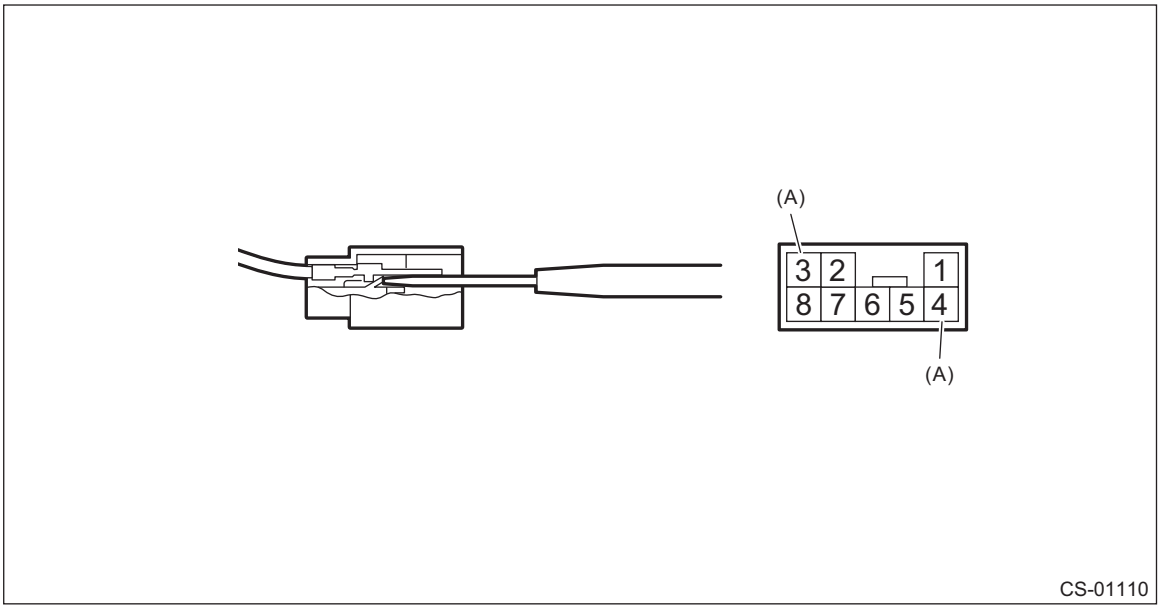
4) Remove the harness.



5) Raise the claw with a flat tip screwdriver with a thin tip and remove the solenoid unit.



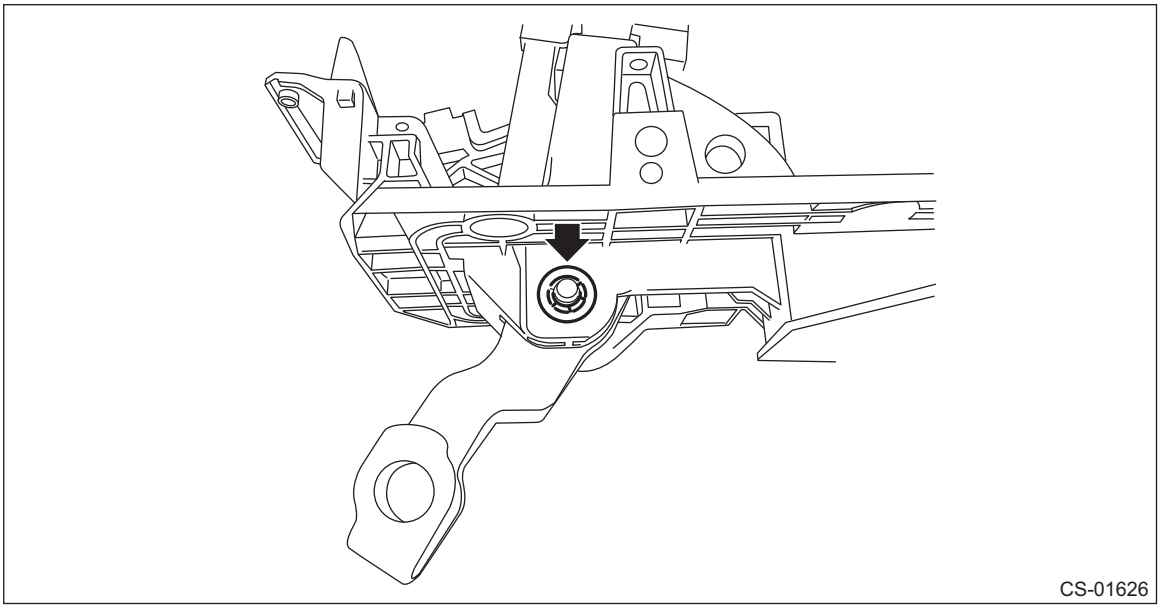
6) Remove the terminal of the solenoid unit using a flat tip precision screwdriver with a tip width of 1.3 mm (0.05 in) or less, KTC connector terminal tool ECC-1T or equivalent.



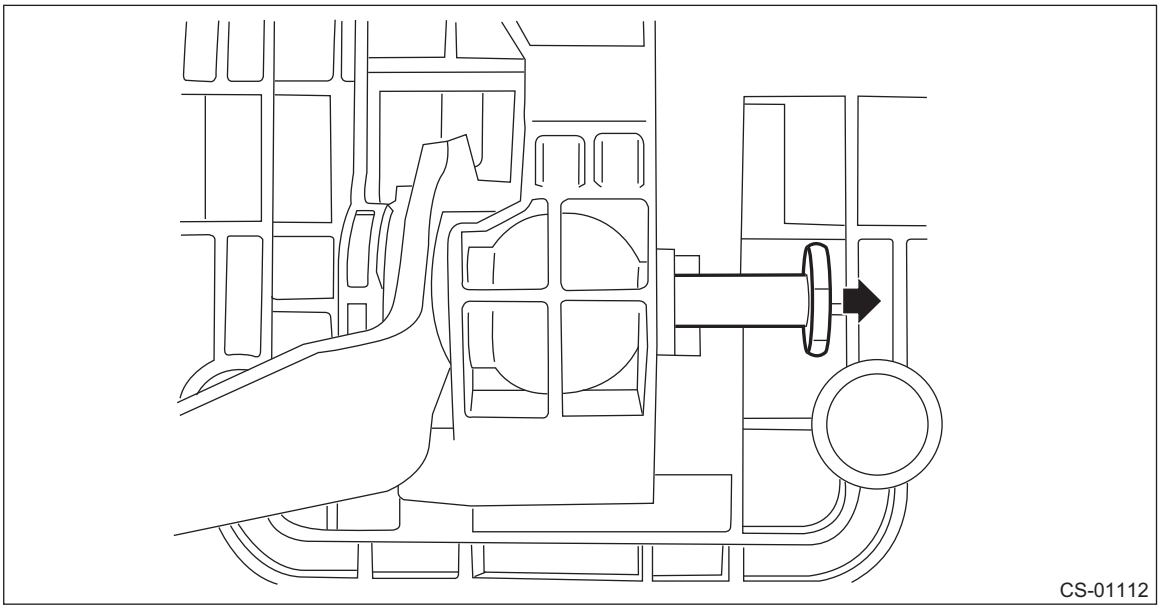
(A) Solenoid unit terminals

7) Remove the clamp push nut.

NOTE:
Replace the clamp push nut with a new part.

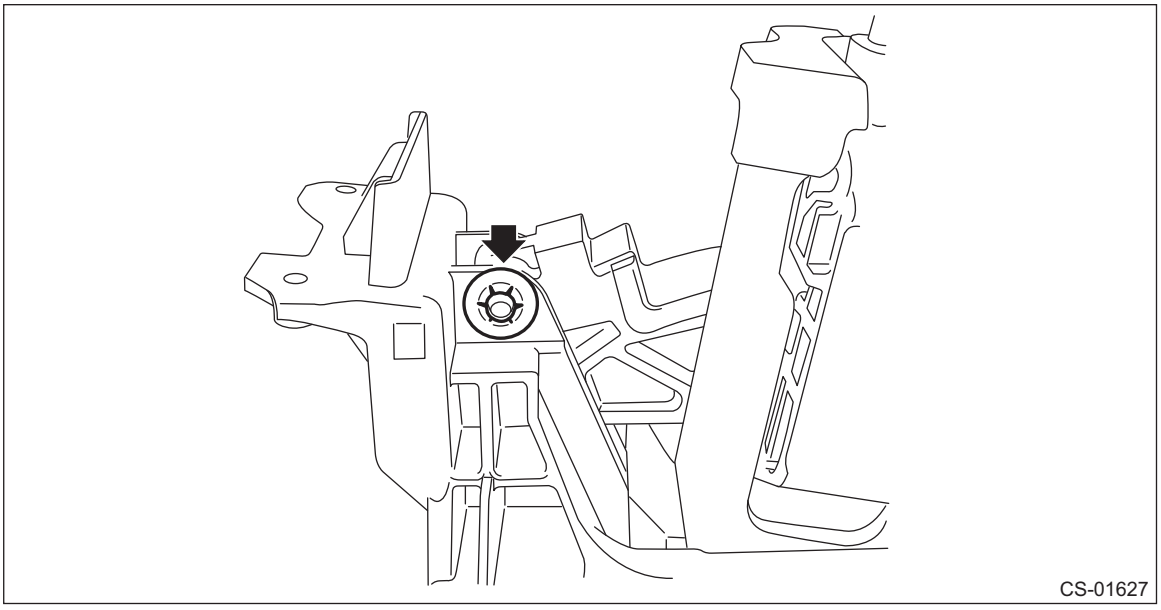


8) Pull out shaft control.

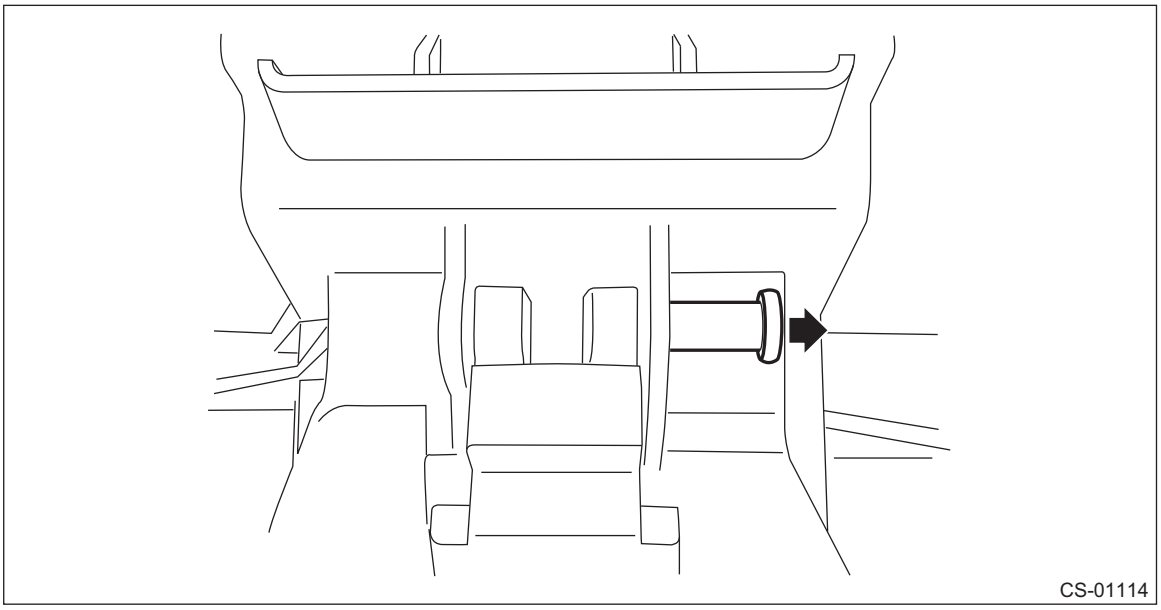


9) Remove the clamp push nut.

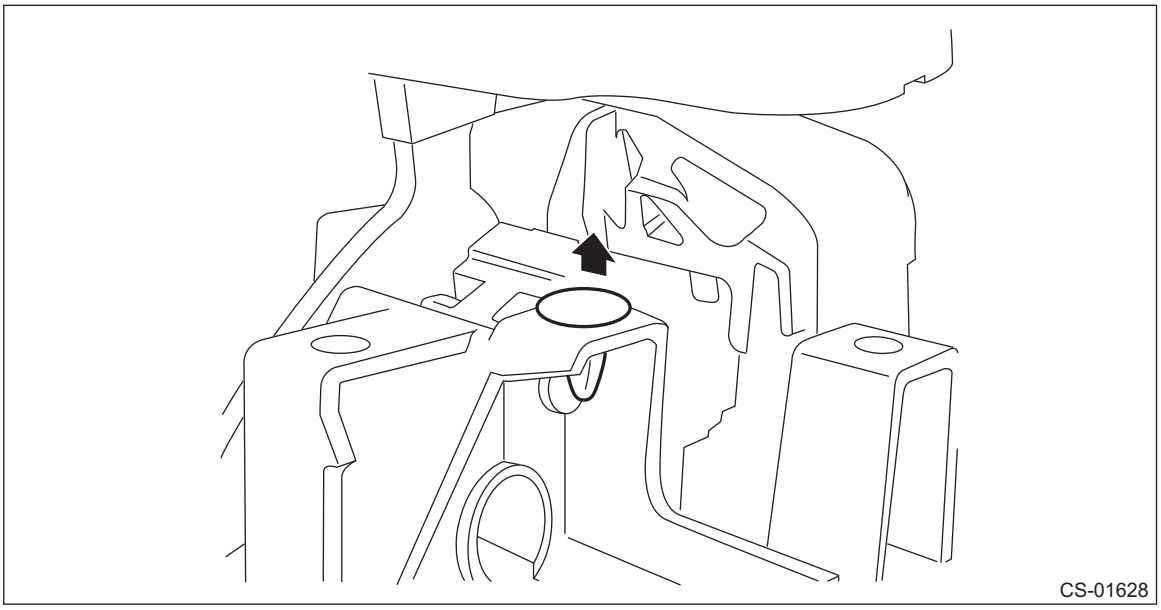
NOTE:
Replace the clamp push nut with a new part.



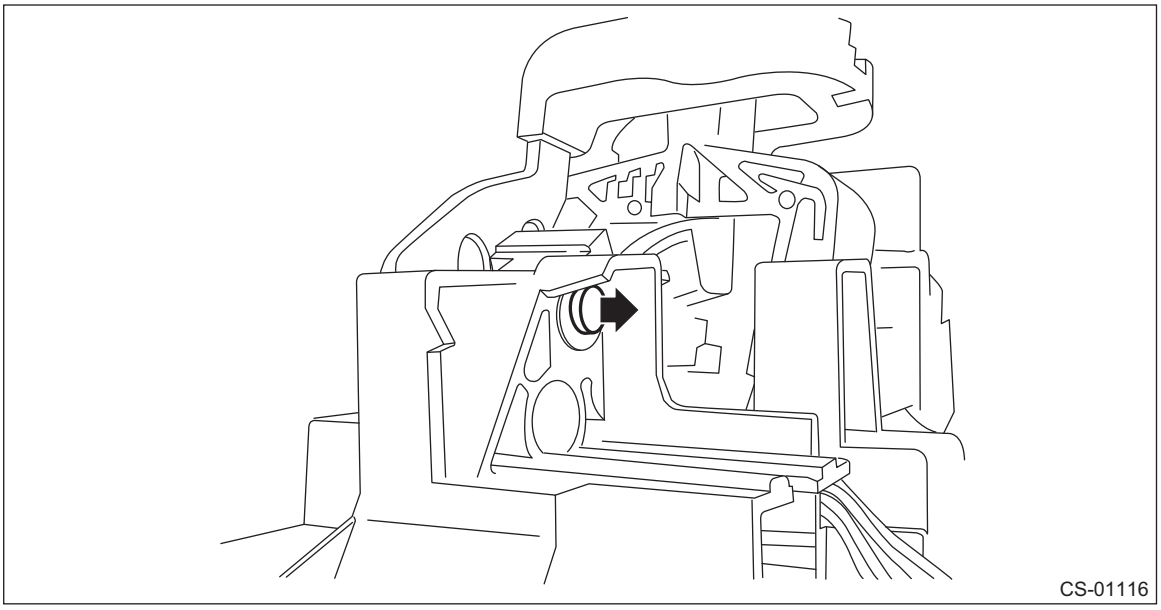
10) Pull out spacer pin guide.



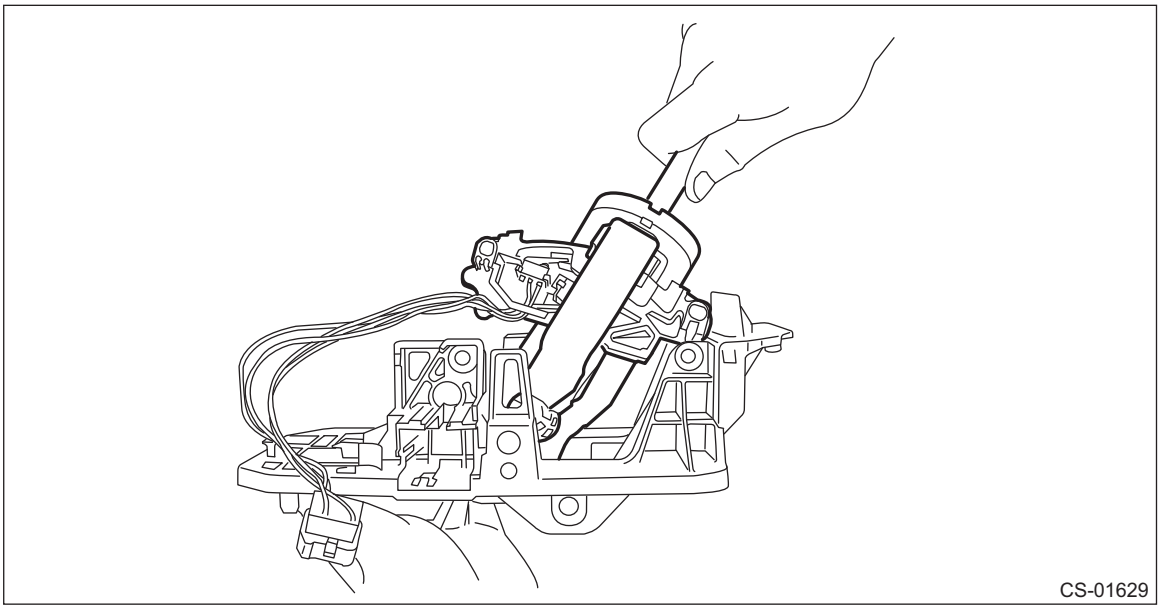
11) Remove the clamp pin.



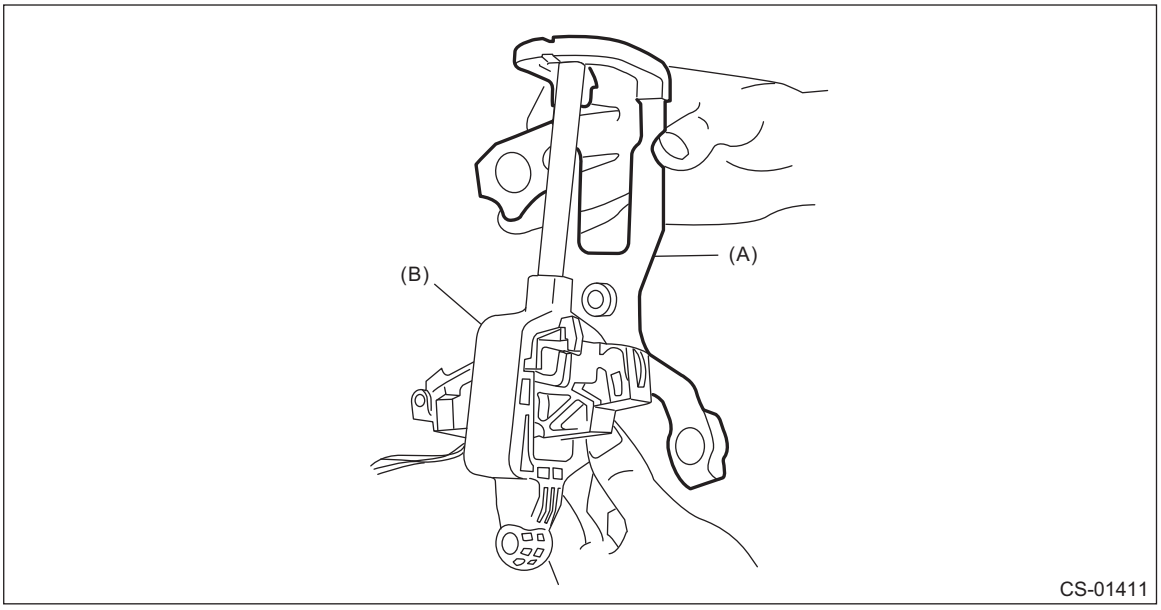
12) Remove the spacer pin guide.



13) Remove the select lever COMPL.

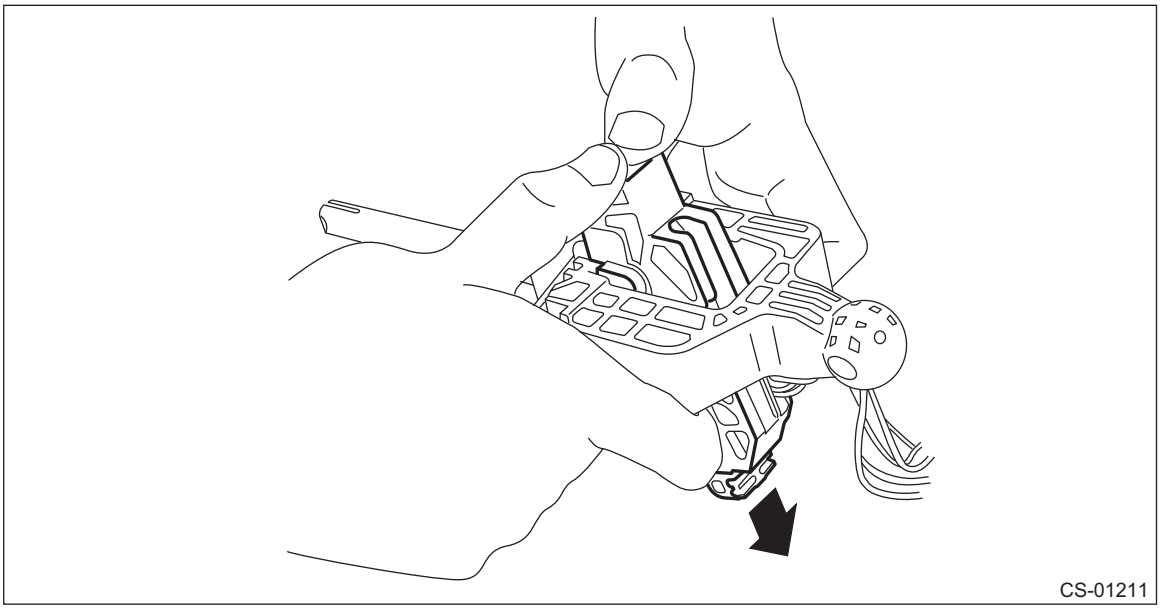


14) Remove the arm COMPL.

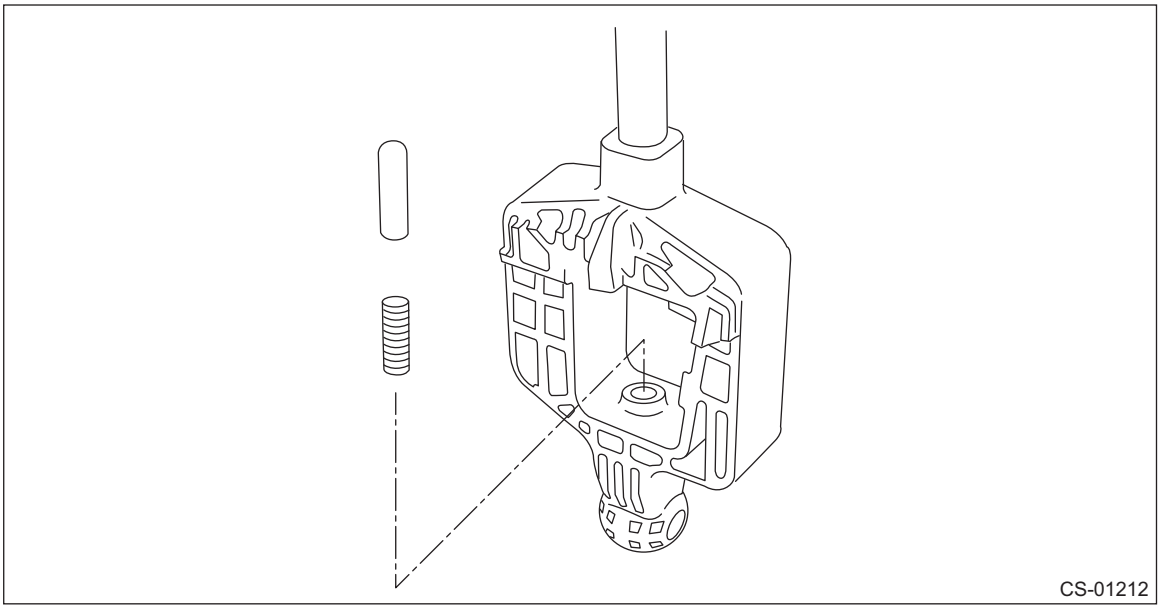


(A) Arm COMPL
(B) Selector lever COMPL

15) Remove the plate guide.



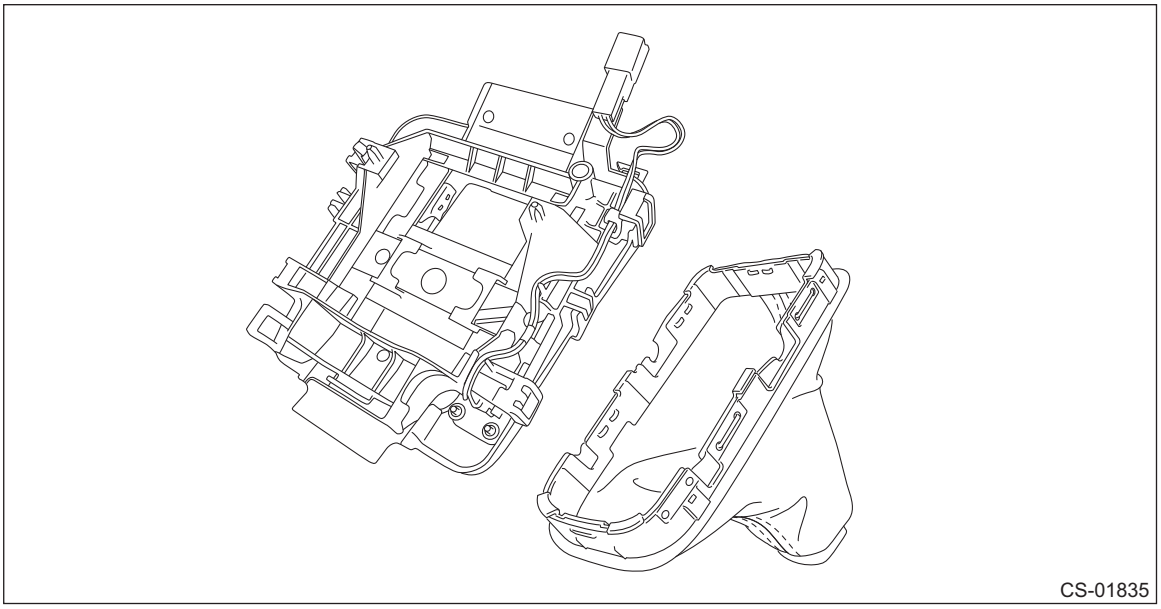
16) Remove the rod detent and the detent spring.



3. INDICATOR ASSY

1) Remove the boot assembly from the indicator assembly.

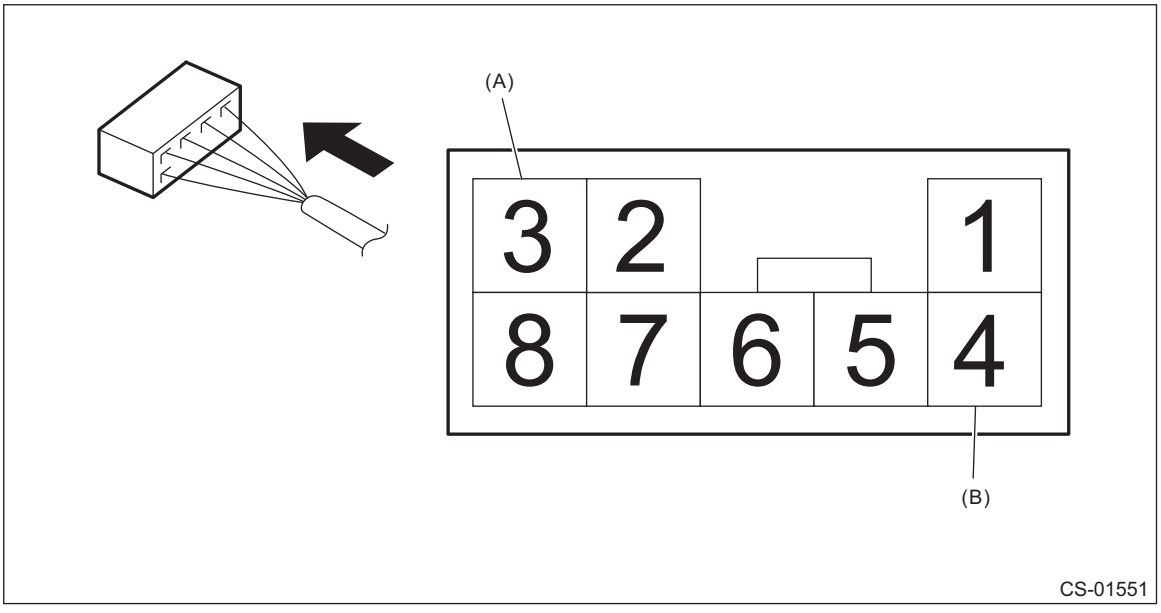
CAUTION:
When removing the boot assembly, be careful not to damage the boot assembly claws and adjacent parts.



D: ASSEMBLY

1) Clean all the parts before assembly.
2) Apply Multemp D No. 2 or equivalent to the sliding portion of each part.
3) Assemble in the reverse order of disassembly.

NOTE:
Insert the solenoid unit terminals to the harness connector.



(A) Solenoid unit (color code: blue) (B) Solenoid unit (color code: black)

4) After installation, check the following points.
- The select indicator matches the select lever position when the select lever is changed from “P” range to “D” range.
- The select lever position and the position mark match each other.
- Operating force to move the select lever from “P” to “D” range

E: INSPECTION

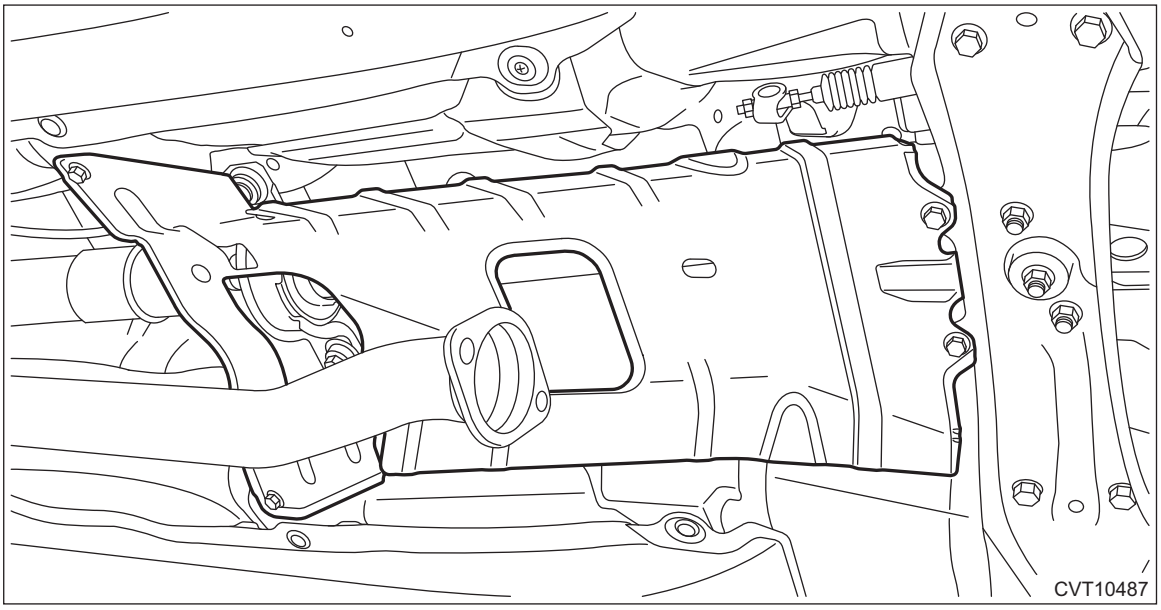
1) Inspect the removed parts by comparing with new parts for deformation, damage and wear. Repair or replace if defective.
2) Inspect the select lever assembly operating condition before assembly. Normal if it operates smoothly.

4. Select Cable

A: REMOVAL

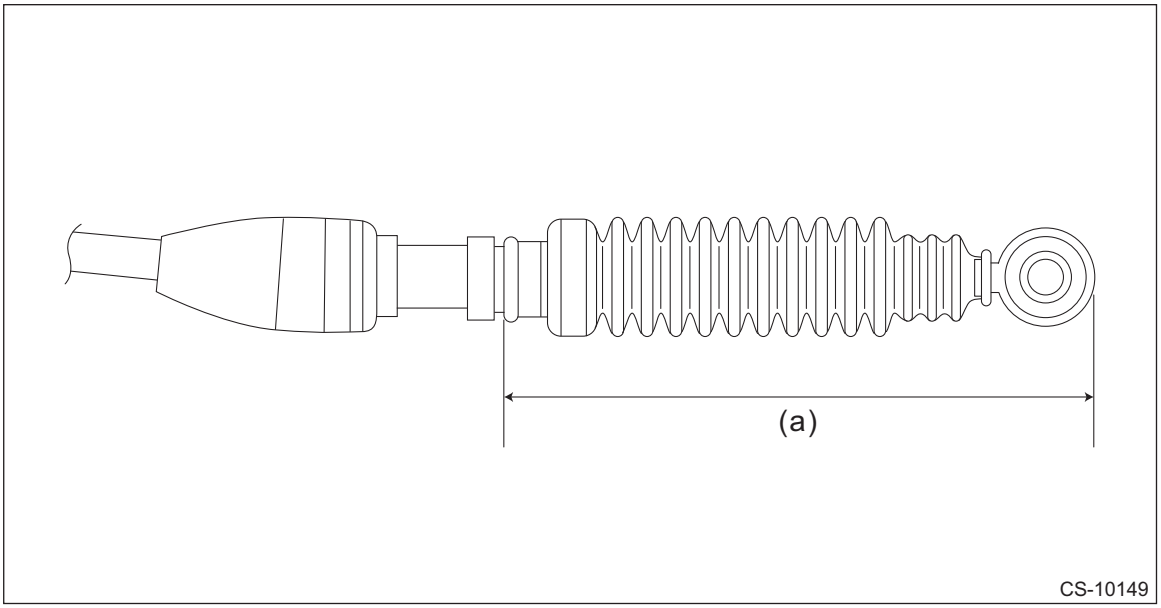
1) Shift the select lever to “N” range.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

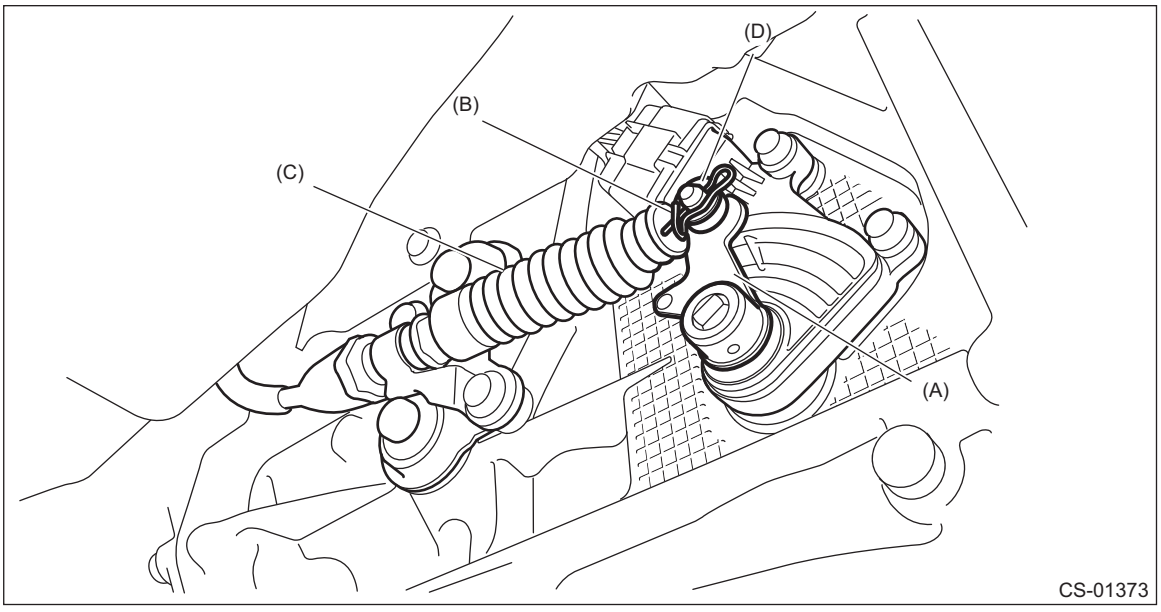
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Lift up the vehicle.
4) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
5) Remove the center exhaust cover.



6) Remove the snap pin and washer from the shifter arm.

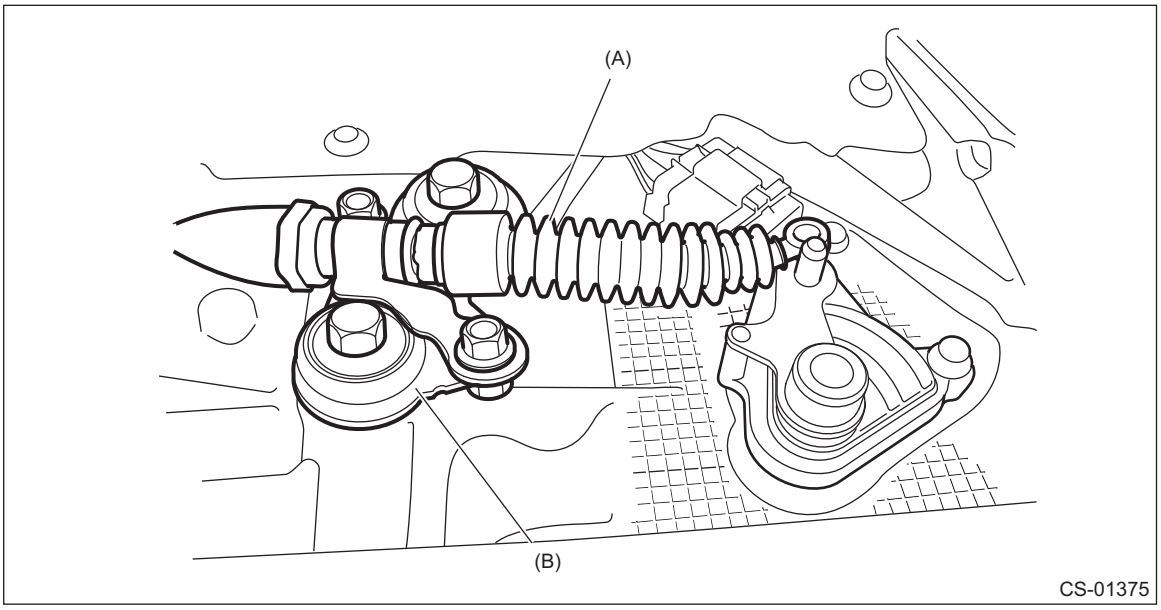
CAUTION:
Do not apply extra overload while holding the part (a).





(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

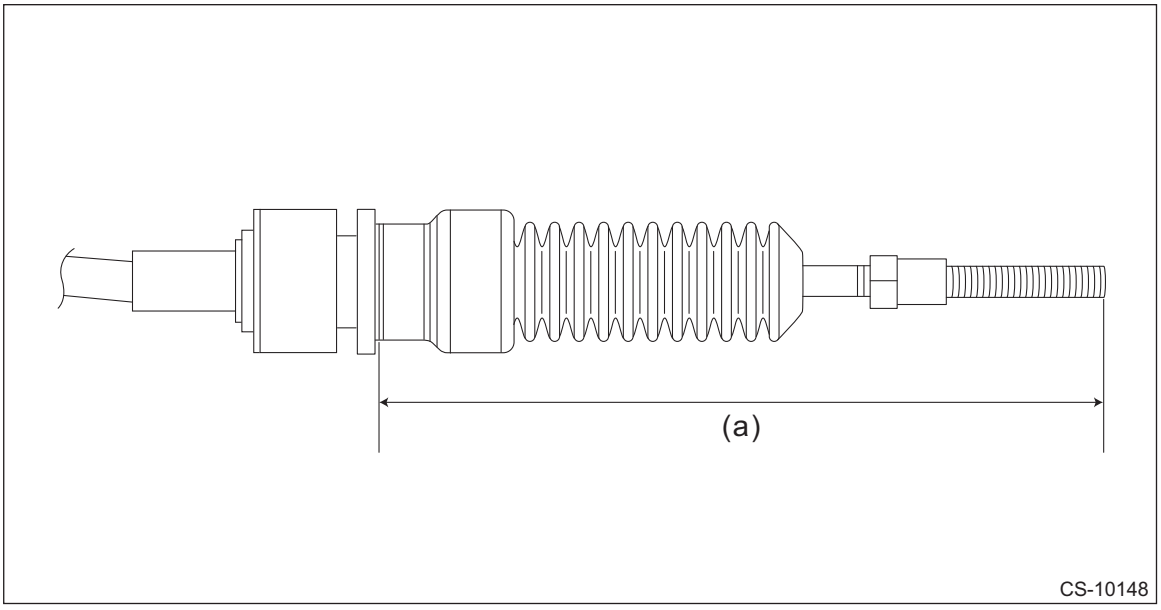
7) Remove the plate assembly.

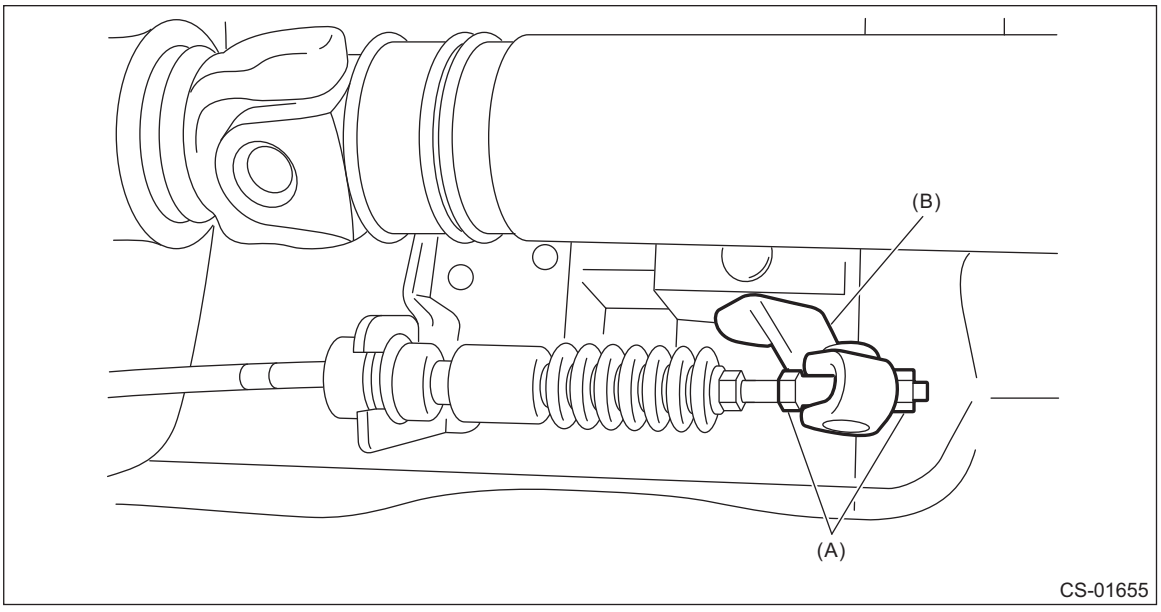


(A) Select cable (B) Plate ASSY

8) Disconnect the cable from arm COMPL.

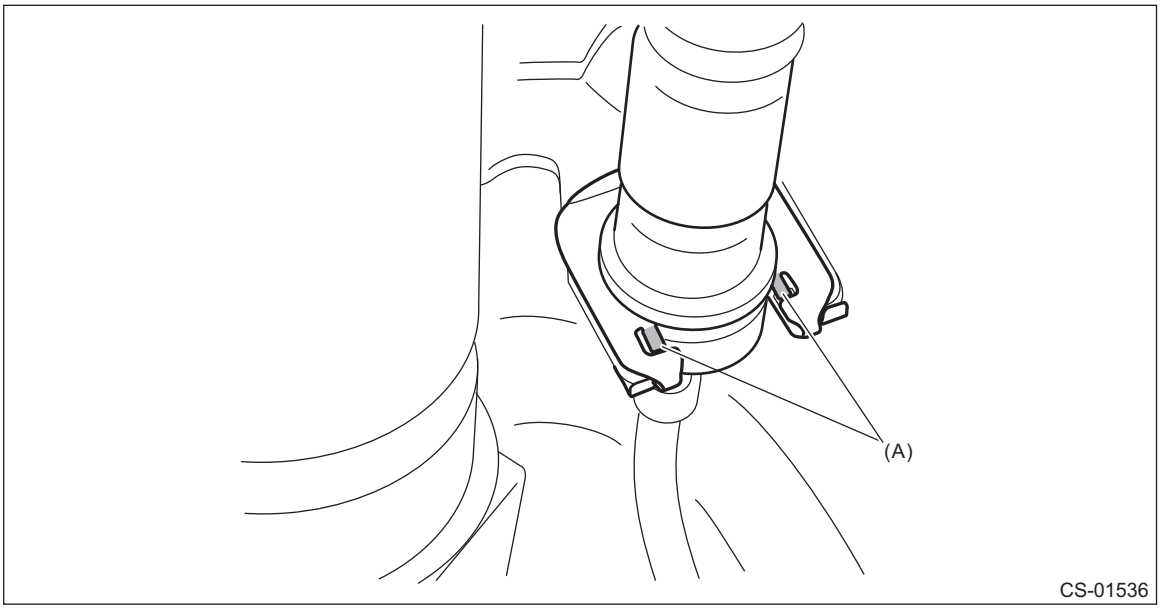
CAUTION:
Do not apply extra overload while holding the part (a).





(A) Adjusting nut (B) Arm COMPL

9) Raise the claw of clamp and remove the cable.



(A) Claw

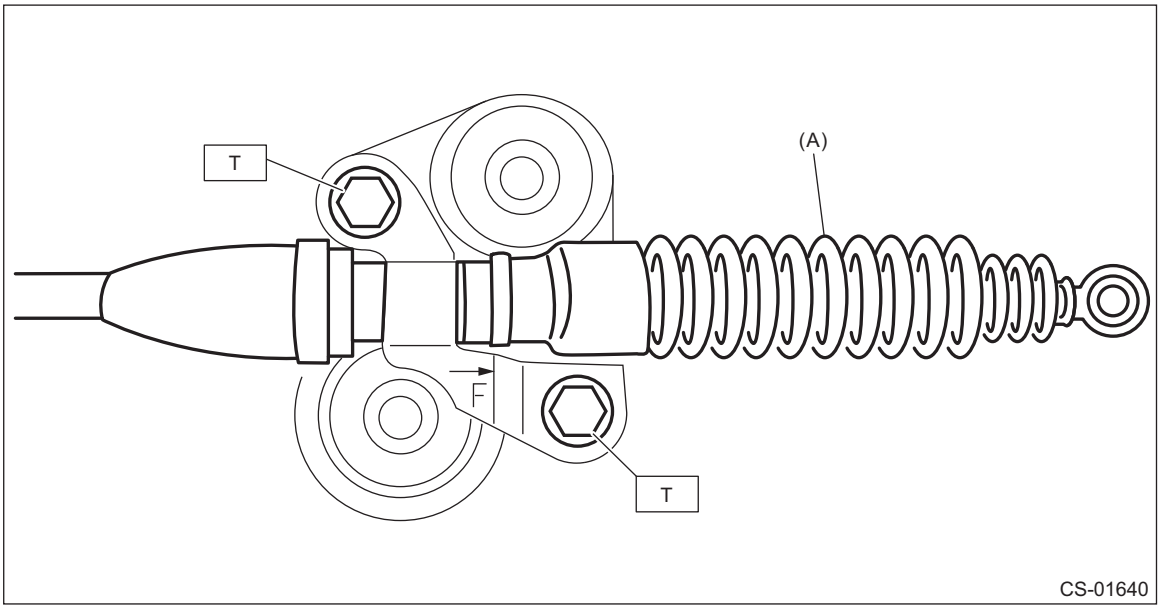
10) Remove the select cable from plate assembly.

B: INSTALLATION

1) Position the select cable as shown in the figure, and install it to the plate assembly.

CAUTION:
• If the cable is installed in the wrong direction, loosen the bracket bolts, and then reinstall the cable in the correct direction.
• Do not forcibly turn the cable (wire side) to align the direction correctly.

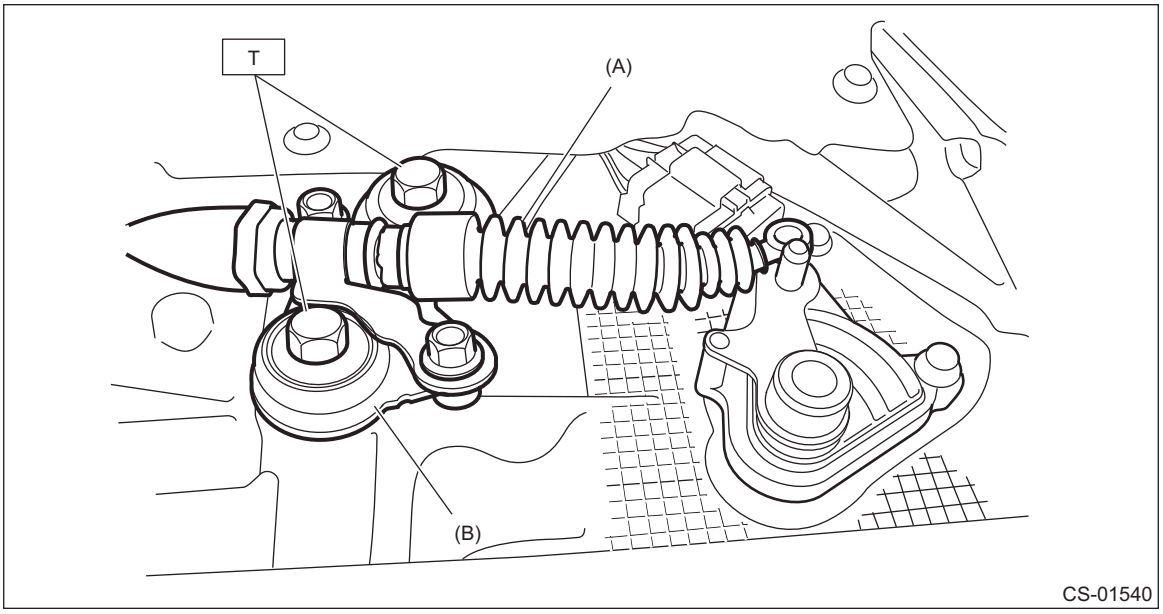
Tightening torque:
T: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Select cable

2) Install the select cable to the shifter arm.
3) Install the plate assembly.

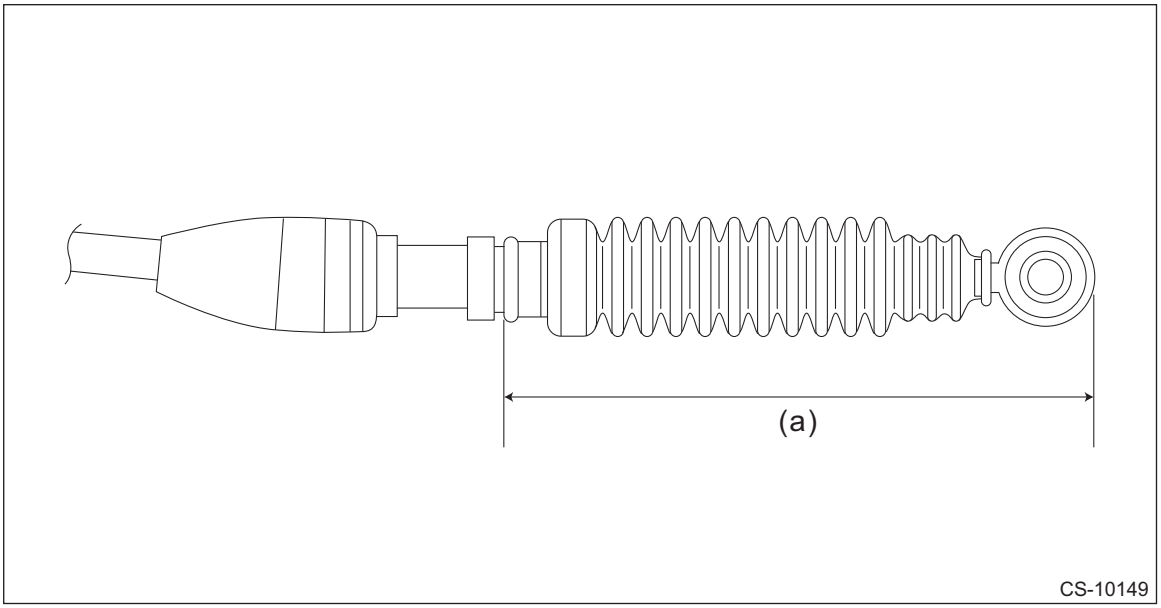
Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

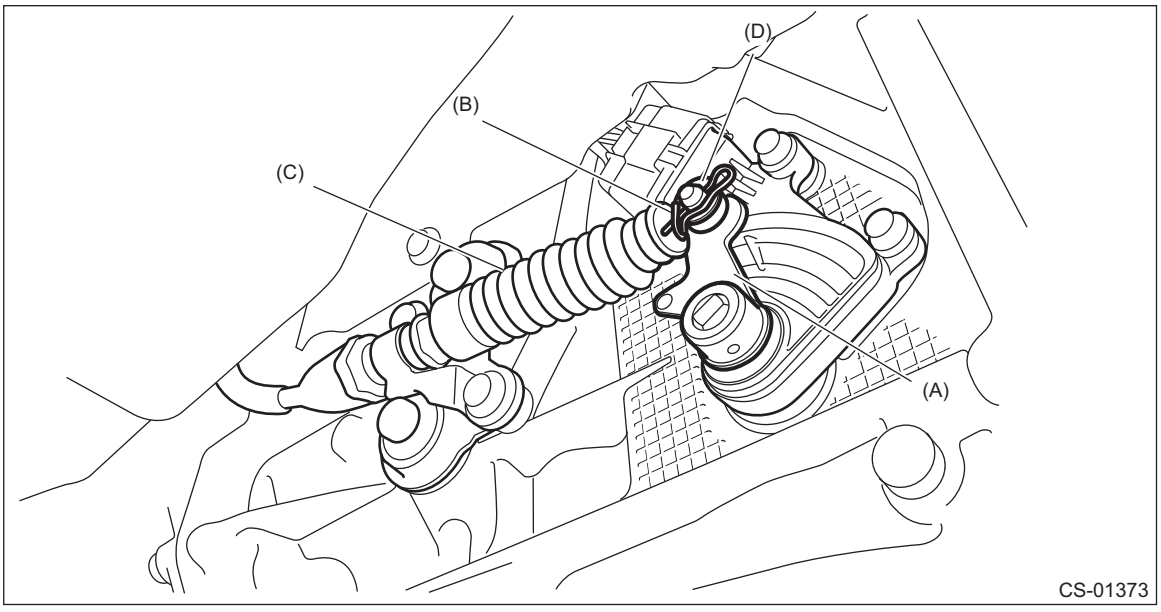


(A) Select cable (B) Plate ASSY

4) Install the washer and snap pin to the shifter arm.

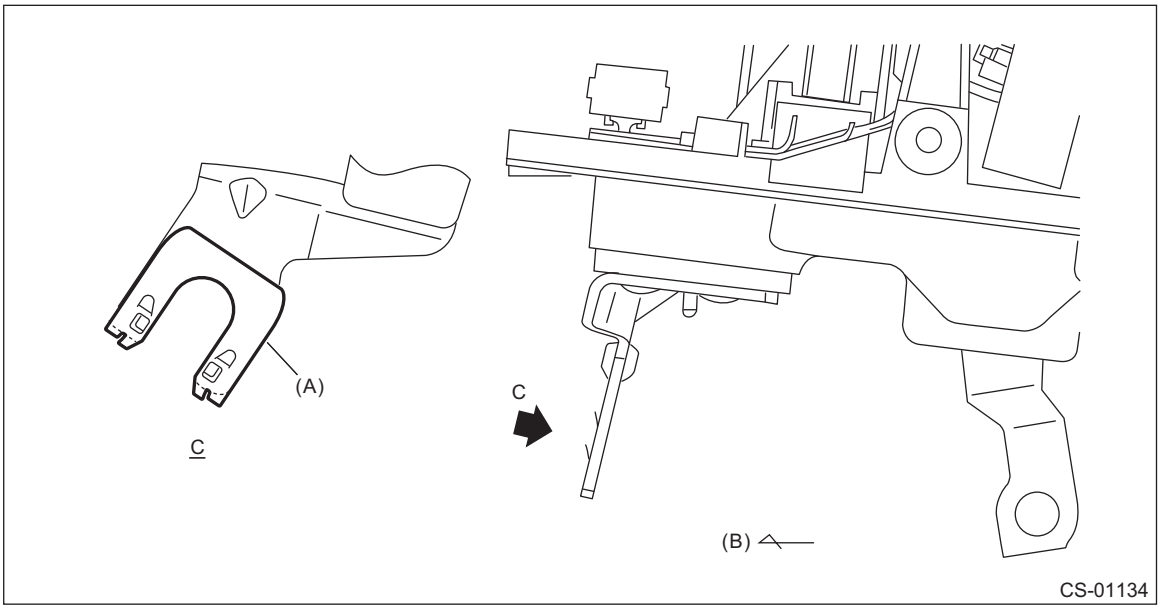
CAUTION:
Do not apply extra overload while holding the part (a).





(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

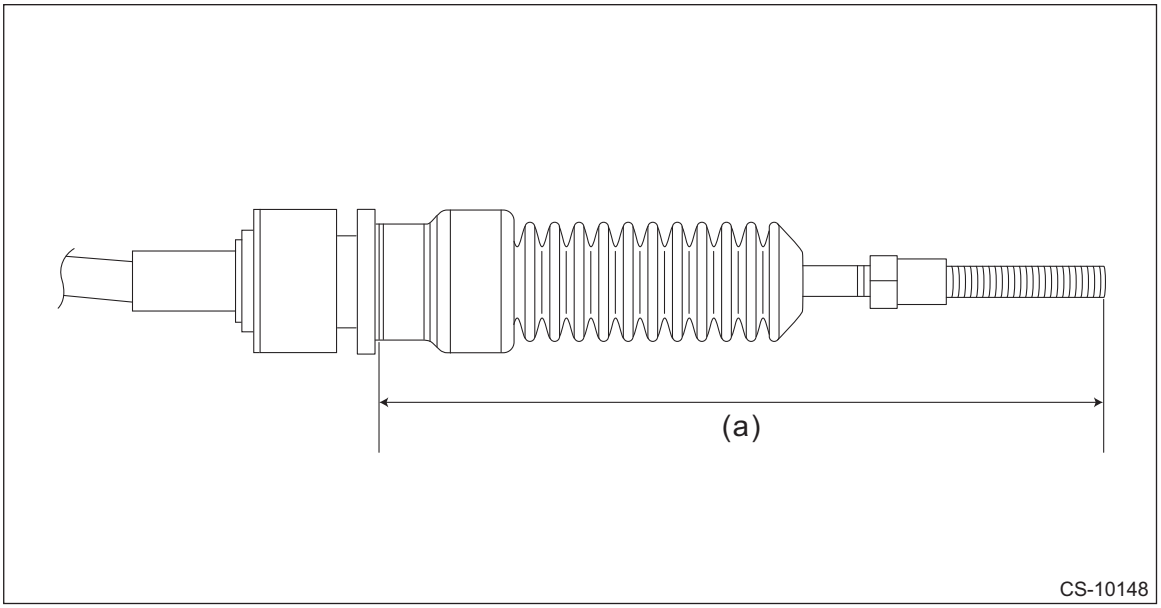
5) Install new clamp paying attention to the installing direction.

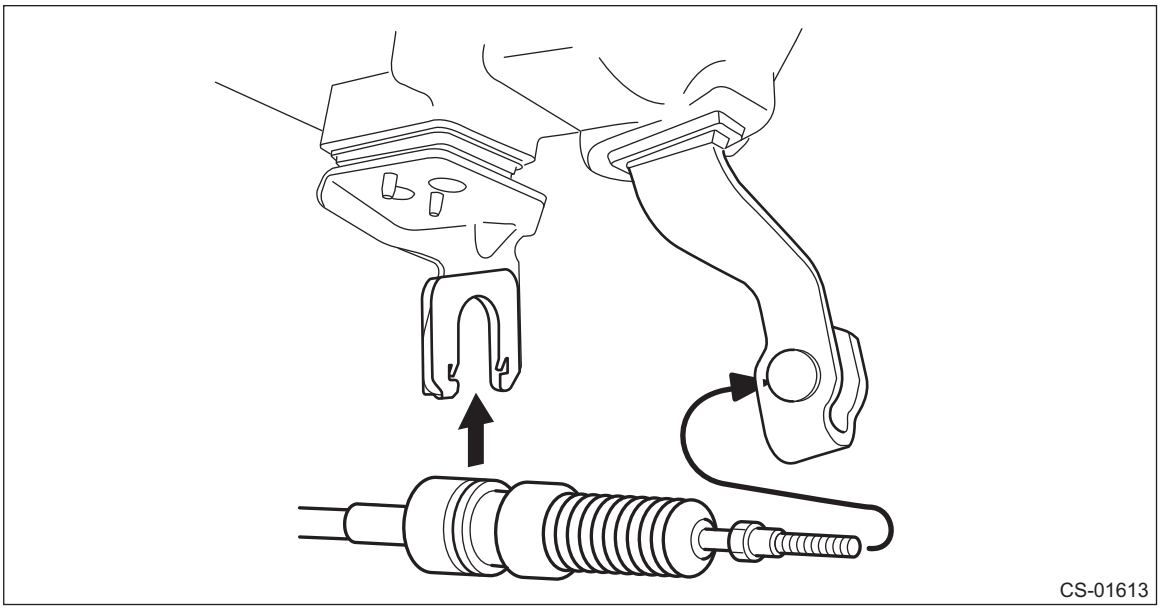


(A) Clamp (B) Forward

6) Insert the tip of inner cable into connector hole of select lever, and fix the cable to bracket.

CAUTION:
Do not apply extra overload while holding the part (a).





7) Shift the select lever to the “N” range, and then adjust the select cable position. <Ref. to CS-53, ADJUSTMENT, Select Cable.>
8) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
9) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
10) Lower the vehicle.
11) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

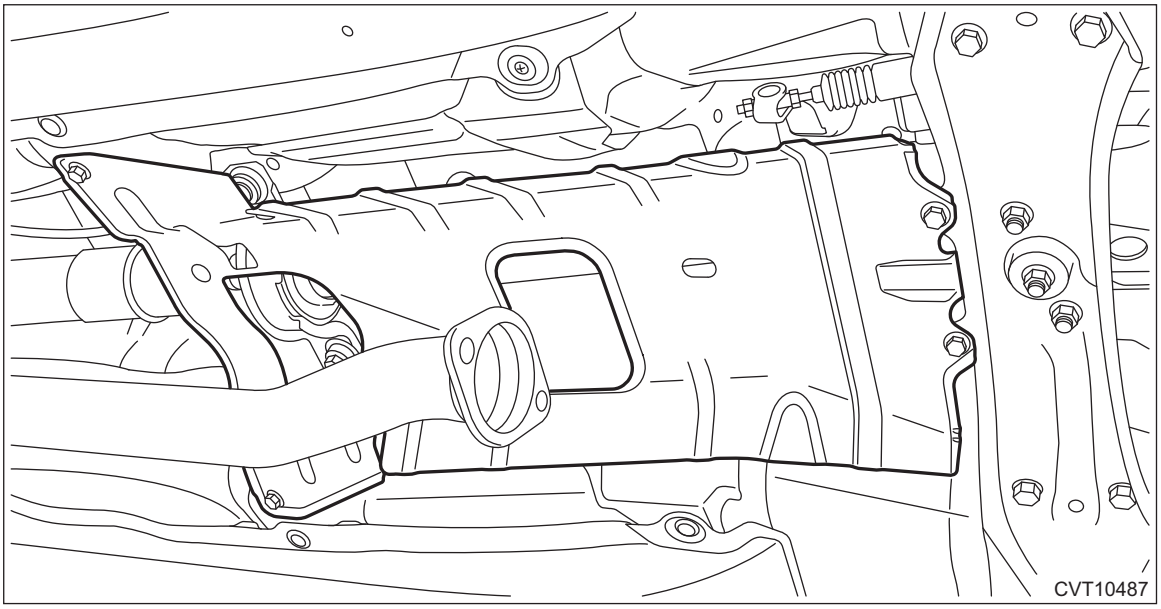
C: INSPECTION

Check the removed cable and replace or adjust if damaged, rusty or malfunctioning.
1) Check the cable for smooth operation.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.
4) Check the boot for damage, cracks and deterioration.

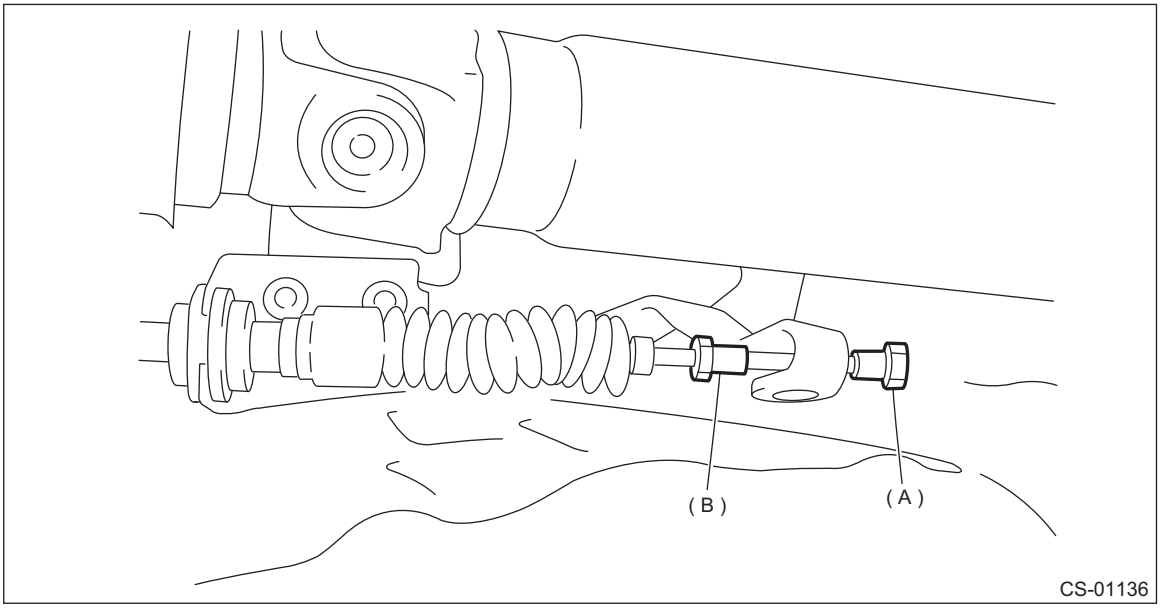
5) Move the select lever from “P” to “D” range. Check the existence of feel to contact the detents in each range. If the detents cannot be felt or the position pointer is improperly aligned, adjust the cable.
6) Check if the starter motor rotates when the select lever is set to “P” range.
7) Check the back-up light illumination when the select lever is in “R” range.
8) Check the parking lock operation when the select lever is in “P” range.

D: ADJUSTMENT

1) Shift the select lever to “N” range.
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.

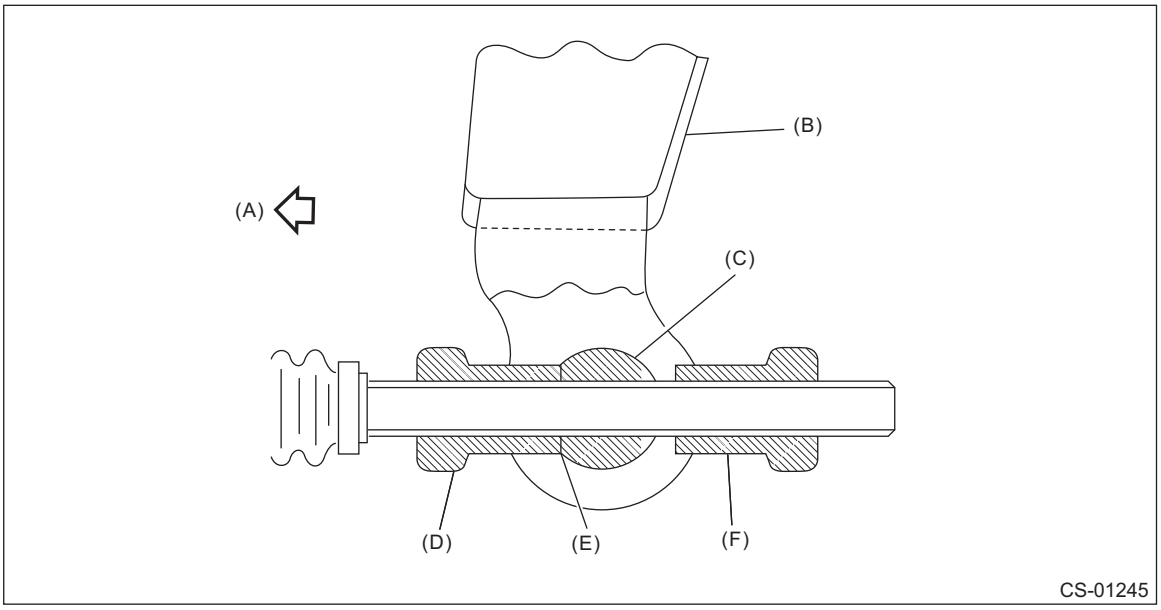


5) Loosen the adjusting nuts on both sides.



(A) Adjusting nut A
(B) Adjusting nut B

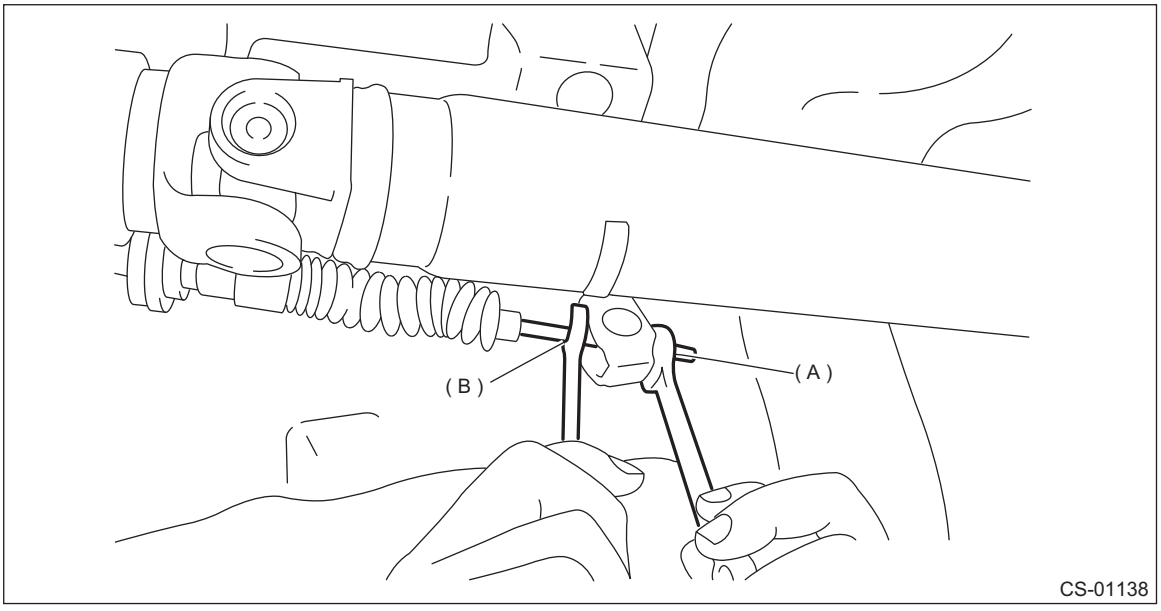
6) Turn adjusting nut B until it lightly touches the connector.



(A) Forward side
(B) Select lever
(C) Connector
(D) Adjusting nut B
(E) Contact point
(F) Adjusting nut A

7) Set a spanner wrench to adjusting nut B so that it does not rotate, and then tighten the adjusting nut A.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)



(A) Adjusting nut A
(B) Adjusting nut B

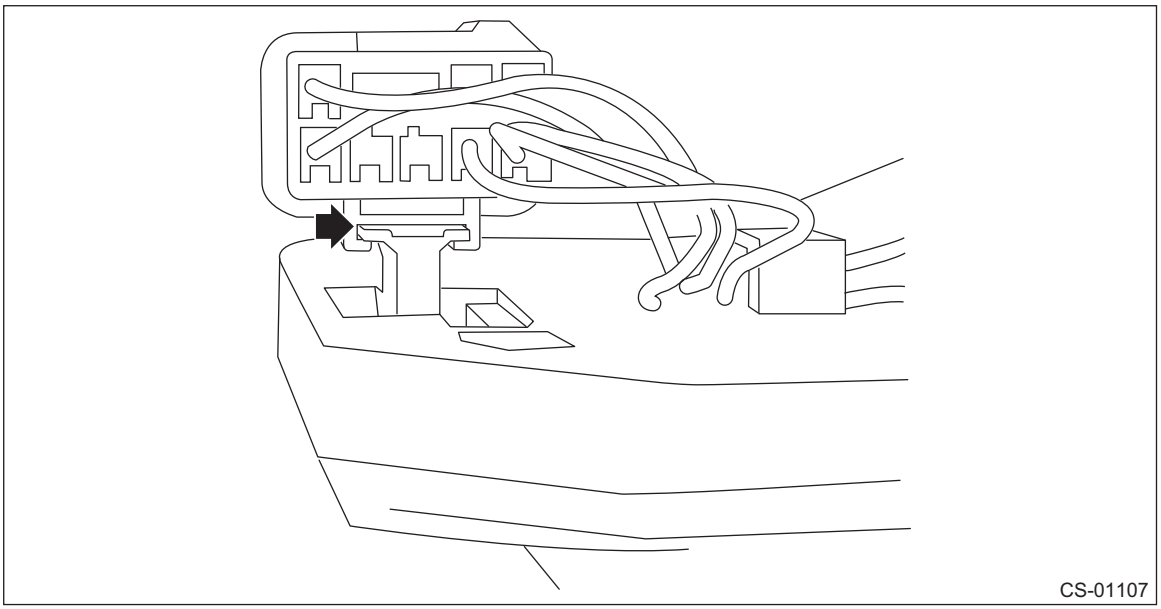
8) After the completion of adjustment, confirm that the select lever operates normally at all ranges.
9) Installing procedure hereafter is in the reverse order of removal.

5. AT Shift Lock Solenoid and “P” Range Switch

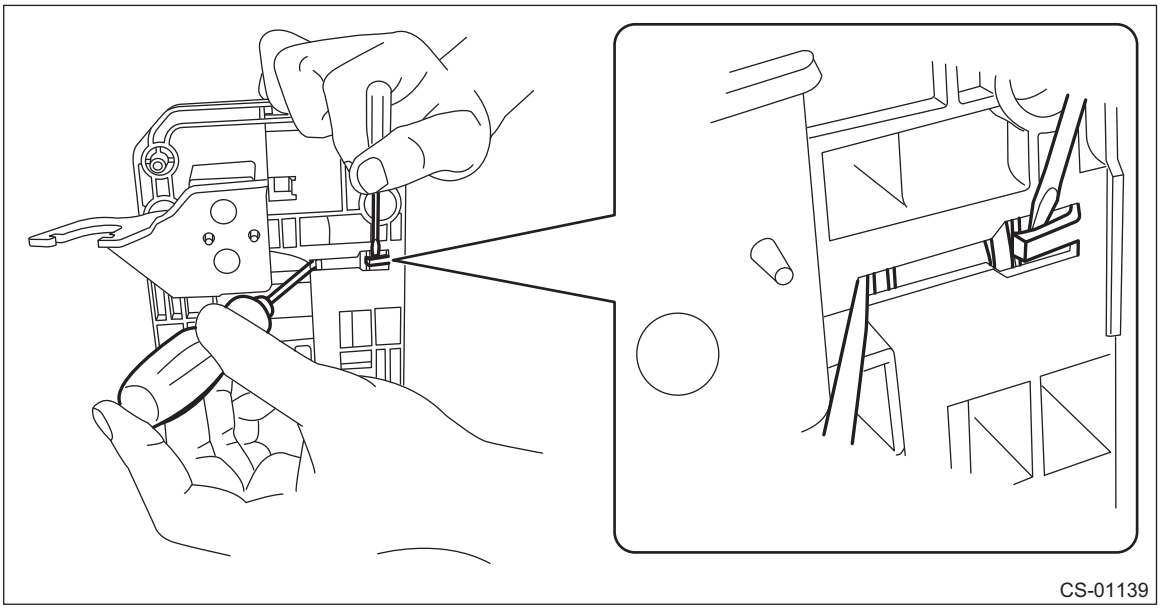
A: REMOVAL

1. SOLENOID UNIT

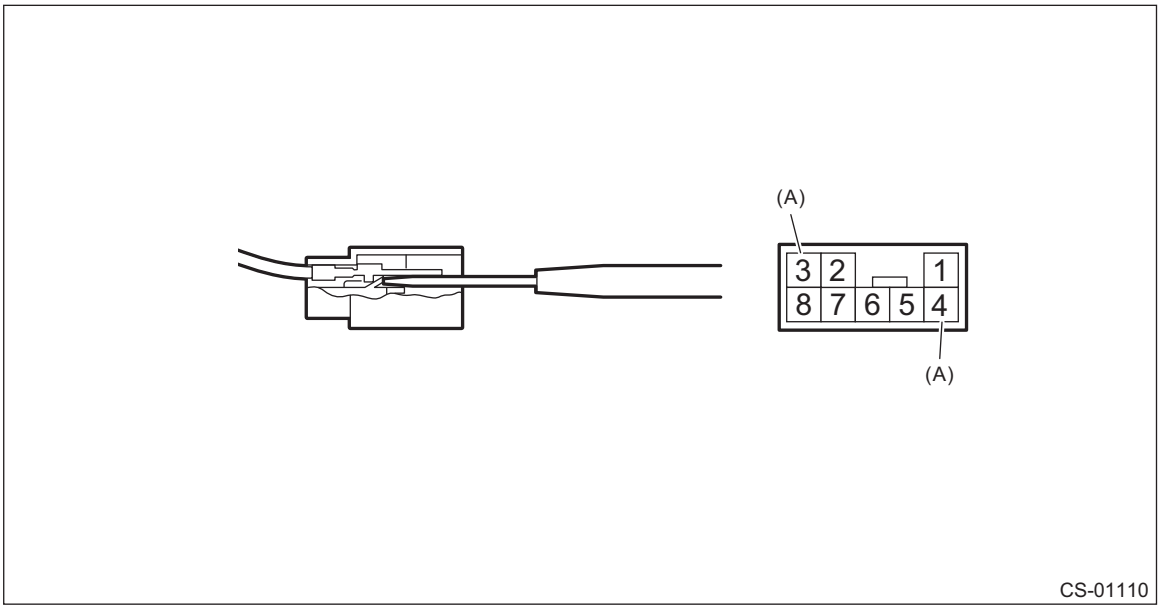
1) Remove the AT select lever. <Ref. to CS-25, REMOVAL, Select Lever.>
2) Remove the spacer and gasket. <Ref. to CS-33, DISASSEMBLY, Select Lever.>
3) Using a flat tip screwdriver with a thin tip, remove the harness connector.



4) Raise the claw with a flat tip screwdriver with a thin tip and remove the solenoid unit.



5) Remove the terminal of the solenoid unit using a flat tip precision screwdriver with a tip width of 1.3 mm (0.05 in) or less, KTC connector terminal tool ECC-1T or equivalent.



(A) Solenoid unit terminals

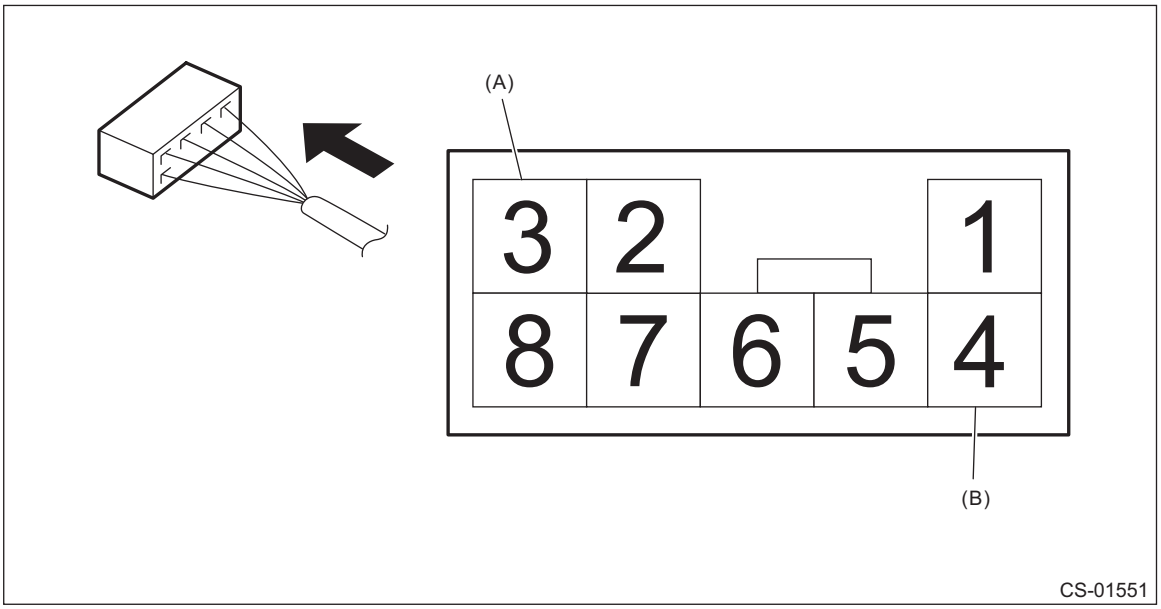
2. “P” RANGE SWITCH

For the removal of “P” range switch, refer to the procedure for AT select lever. <Ref. to CS-33, DISASSEMBLY, Select Lever.>

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Connect the solenoid unit terminals.



(A) Solenoid unit (color code: blue) (B) Solenoid unit (color code: black)

C: INSPECTION

	Step	Check	Yes	No
1	**CHECK SOLENOID UNIT.** Measure the resistance of solenoid unit connector terminals. ***Terminals*** ***No. 4 — No. 3:***	Is the resistance 27.6 — 30.5 Ω?	Go to step **2**.	Replace the solenoid unit. <Ref. to CS-55, AT Shift Lock Solenoid and “P” Range Switch.>
2	**CHECK SOLENOID UNIT.** Connect the battery to the solenoid unit connector terminals, and then operate the solenoid. ***Terminals*** ***No. 3 (+) — No. 4 (–):***	Does the solenoid unit operate normally?	Go to step **3**.	Replace the solenoid unit. <Ref. to CS-55, AT Shift Lock Solenoid and “P” Range Switch.>
3	**CHECK “P” RANGE SWITCH.** 1) Shift the select lever to “P” range. 2) Measure the resistance between “P” range switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the “P” range switch. <Ref. to CS-55, AT Shift Lock Solenoid and “P” Range Switch.>
4	**CHECK “P” RANGE SWITCH.** 1) Set the select lever to other than “P” range. 2) Measure the resistance between “P” range switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Normal.	Replace the “P” range switch. <Ref. to CS-55, AT Shift Lock Solenoid and “P” Range Switch.>

6. Body Integrated Unit

A: NOTE

Refer to “Body Integrated Unit” for removal and installation procedure. <Ref. to SL-80, Body Integrated Unit.>

7. MT Gear Shift Lever

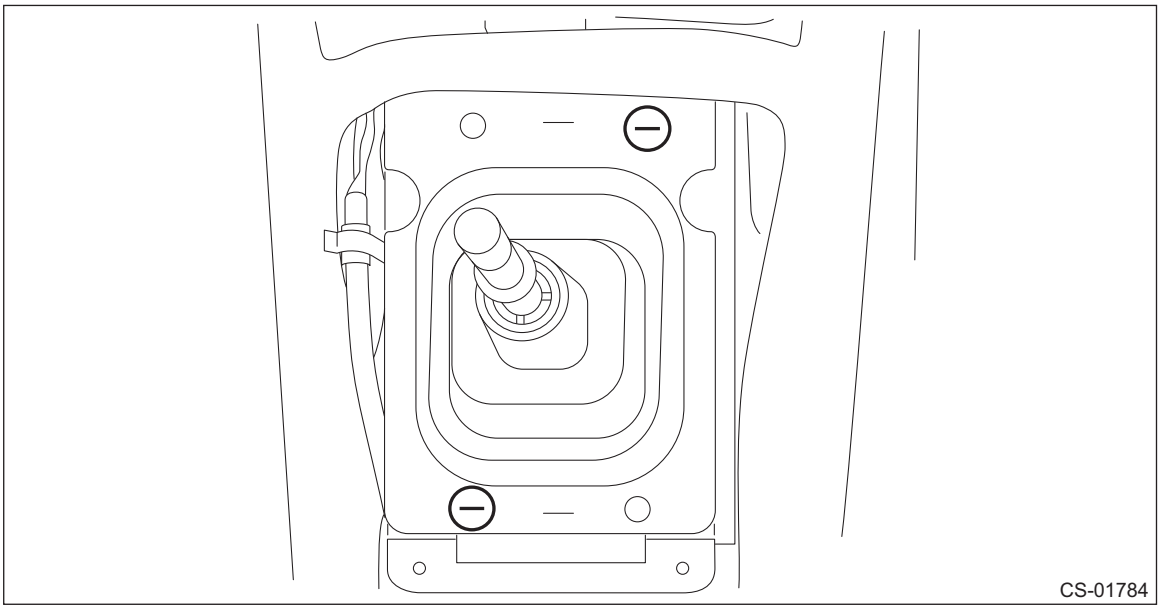
A: REMOVAL

1. STI MODEL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

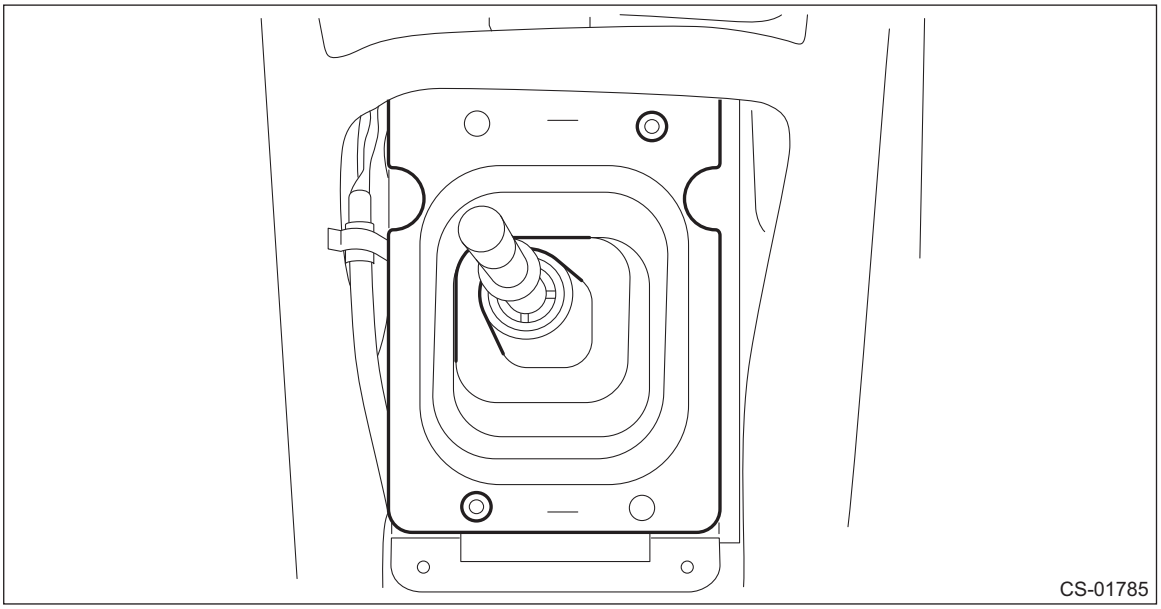
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the gear shift knob by turning it counterclockwise.
3) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
4) Remove the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
5) Remove the panel center LWR LH and RH. <Ref. to EI-70, REMOVAL, Console Box.>
6) Remove the clamp.



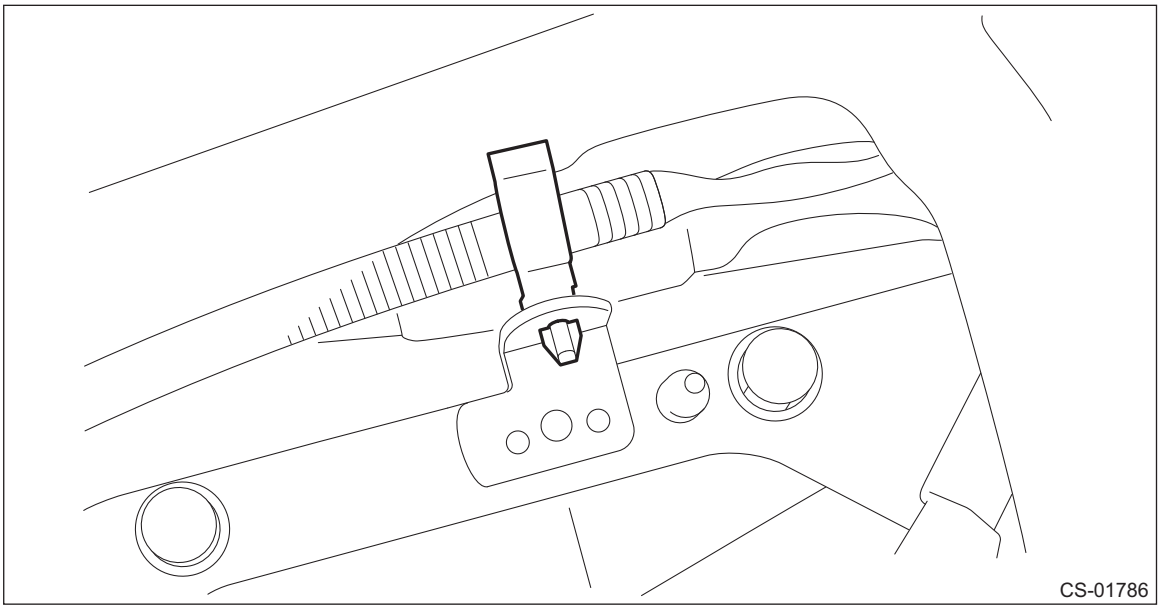
CS-01784

7) Remove the boot and insulator assembly.

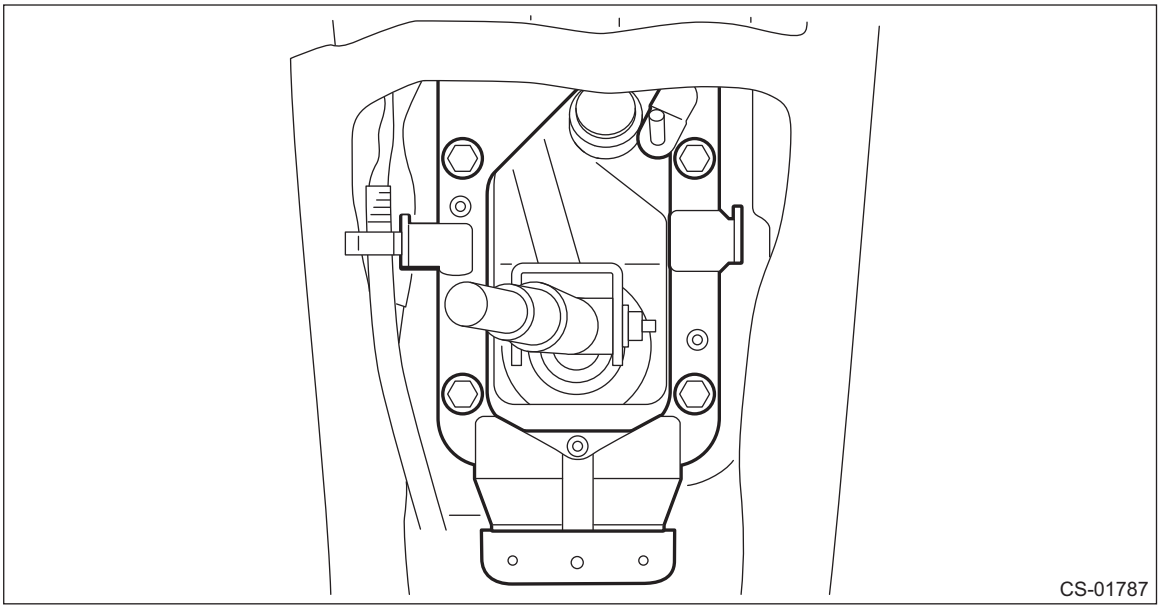


CS-01785

8) Remove the harness clamp.



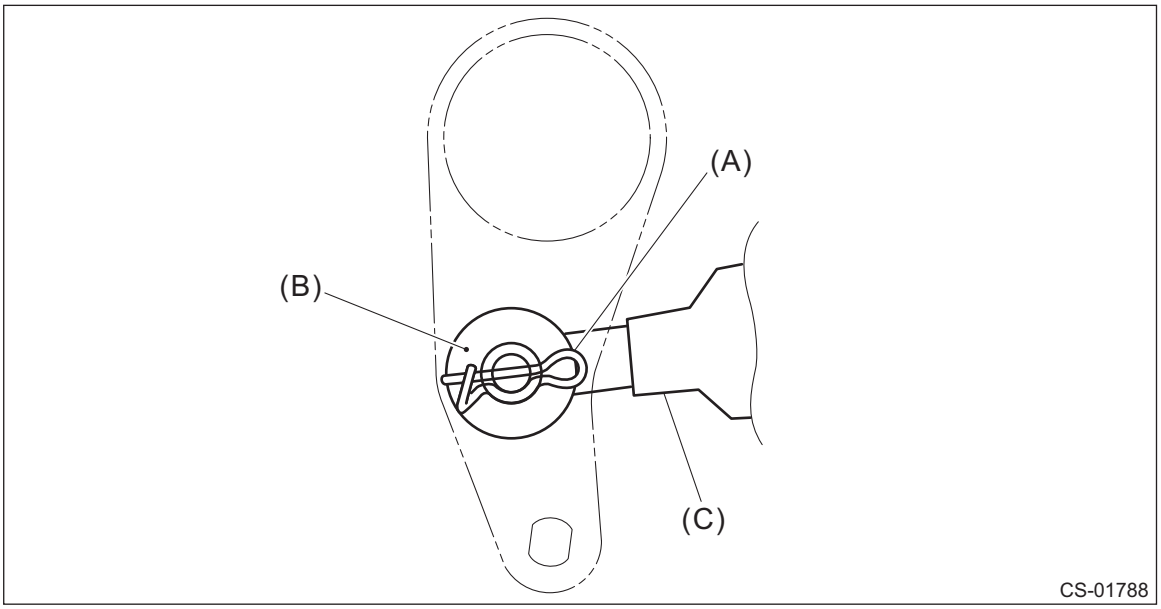
9) Remove the plate COMPL.



10) Lift up the vehicle.
11) Remove the center exhaust pipe (rear). <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>

12) Remove the center exhaust cover.

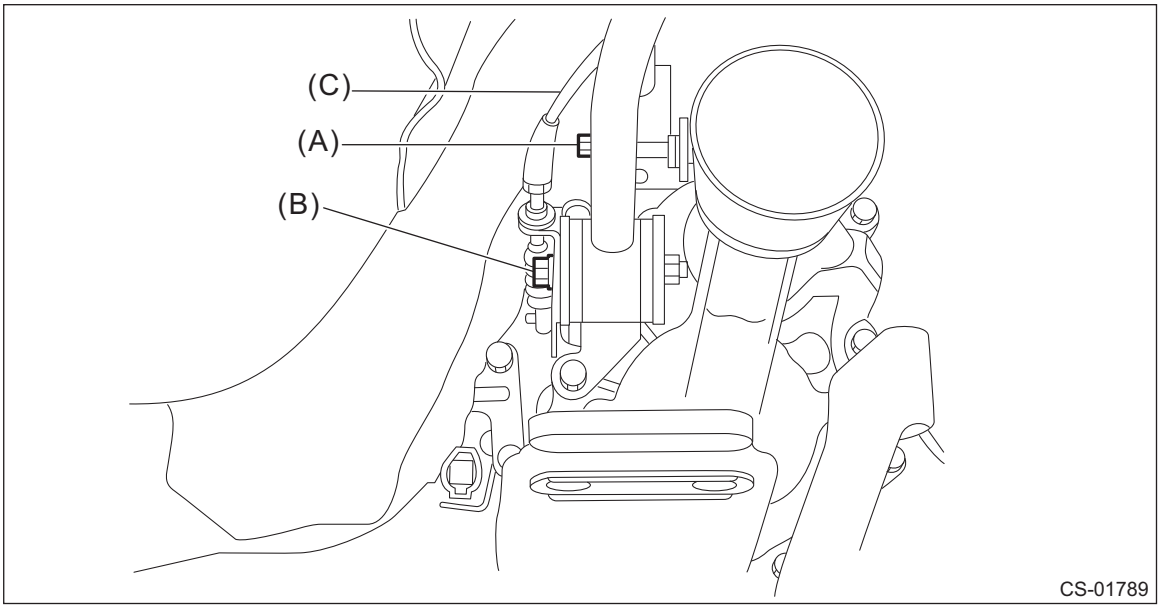
13) Remove the crossmember. <Ref. to 6MT(TY85)-30, REMOVAL, Transmission Mounting System.>
14) Remove the snap pin and washer, and remove the reverse check cable.



(A) Snap pin (B) Washer (C) Reverse check cable

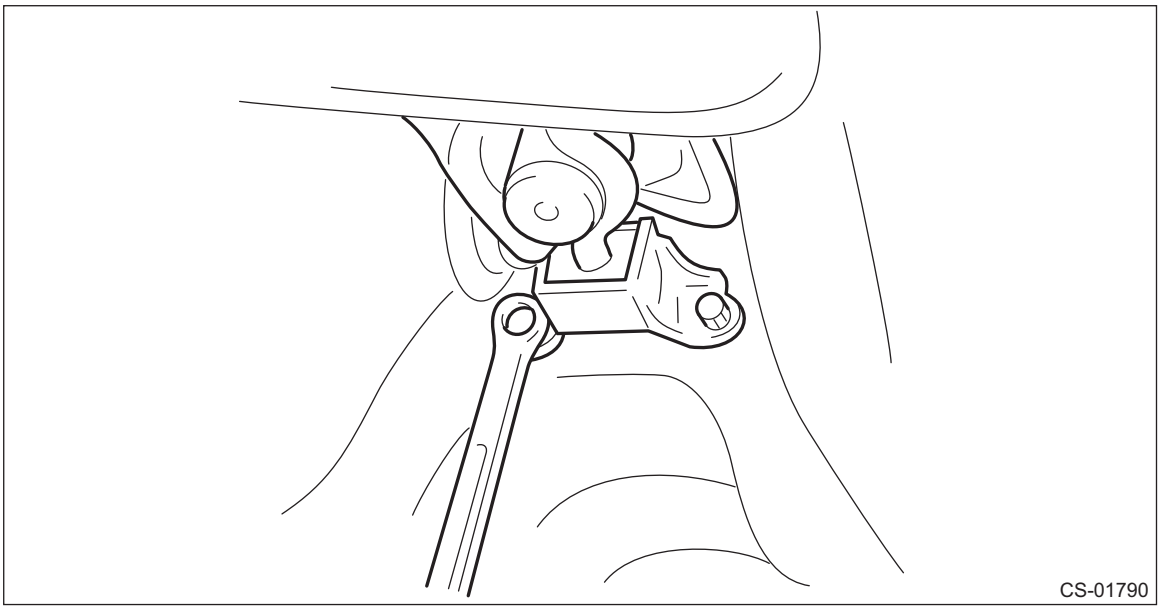
15) Move the transmission to the right side, and remove the joint COMPL, stay bolts and reverse check cable.

NOTE:
If the transmission is not moved aside, the joint COMPL and stay bolts may contact the body and cause damage.



(A) Joint COMPL bolt (B) Stay bolt (C) Reverse check cable

16) Remove the cushion rubber.



17) Remove the gear shift lever.

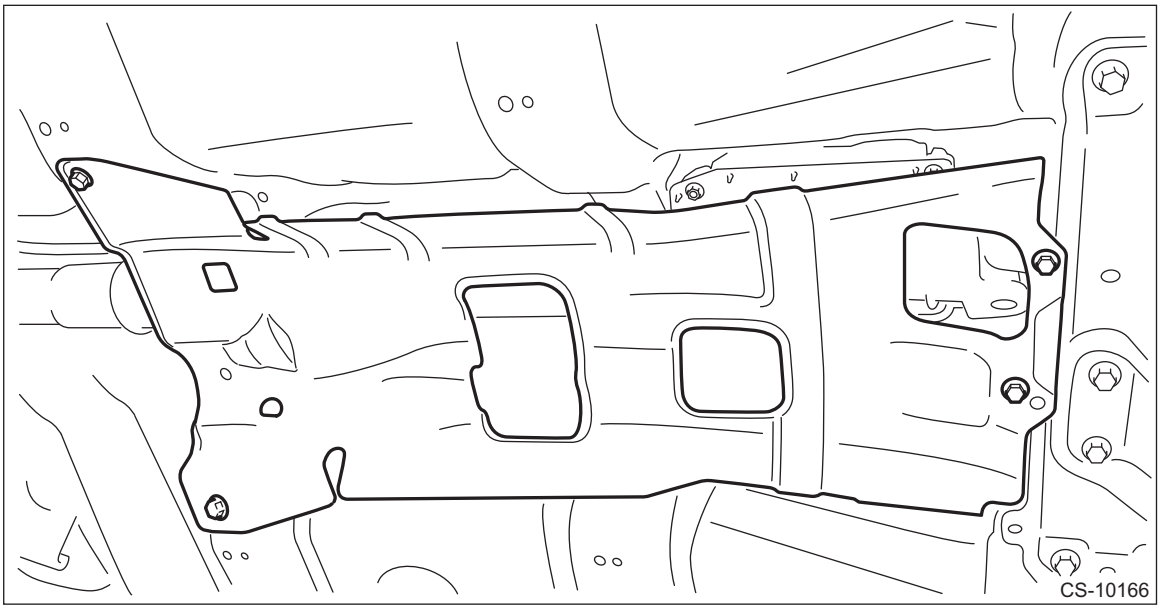
2. EXCEPT FOR STI MODEL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

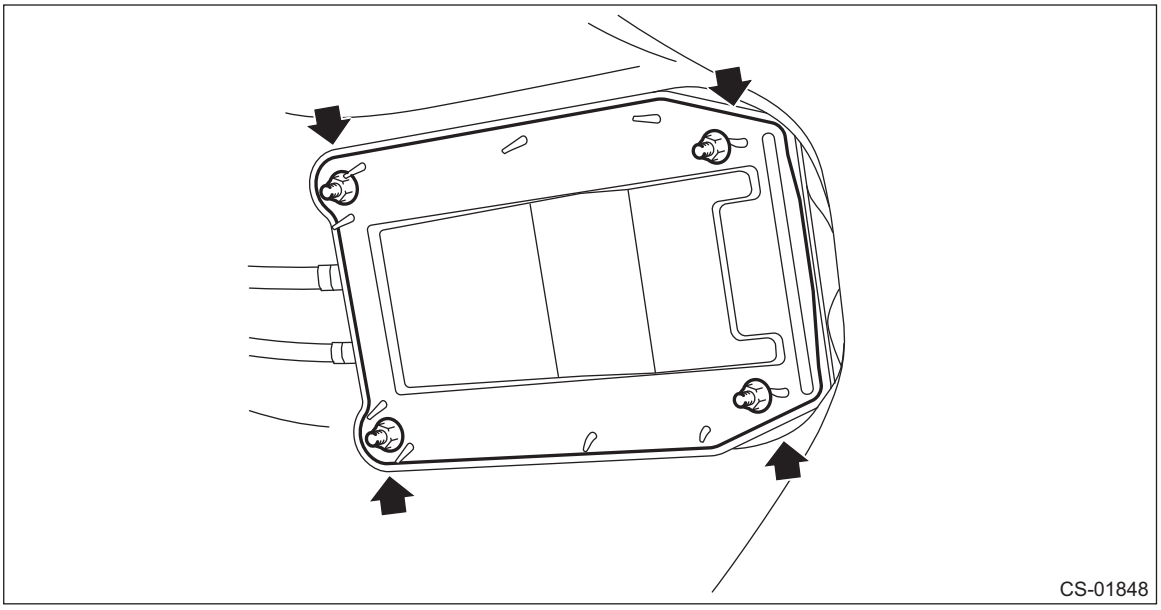
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

4) Remove the center exhaust cover.



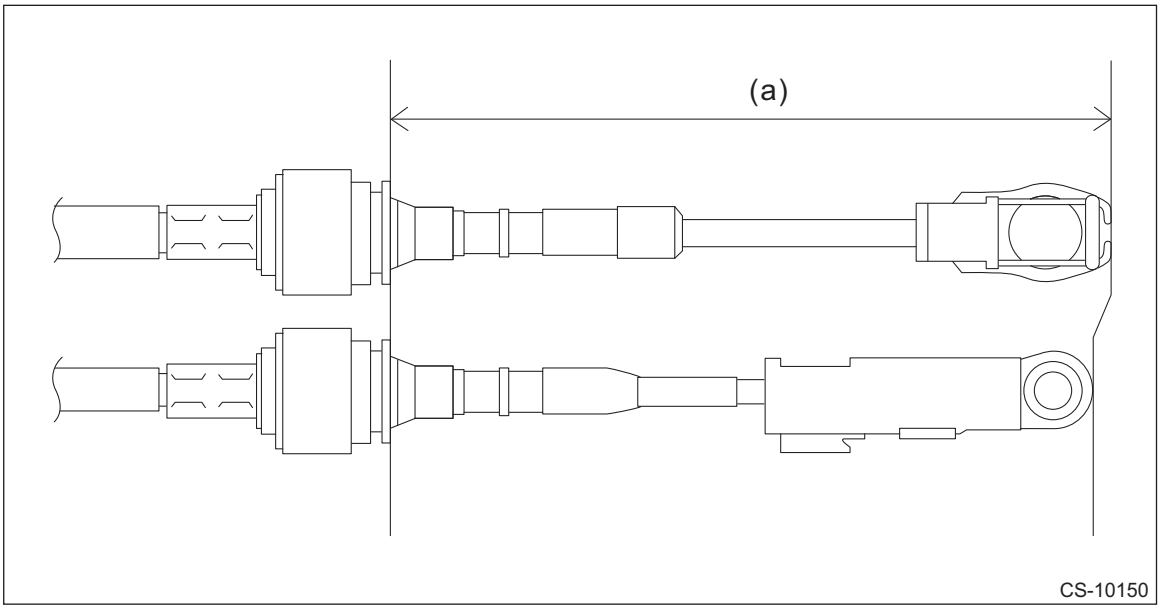
5) Remove the cable cover plate.



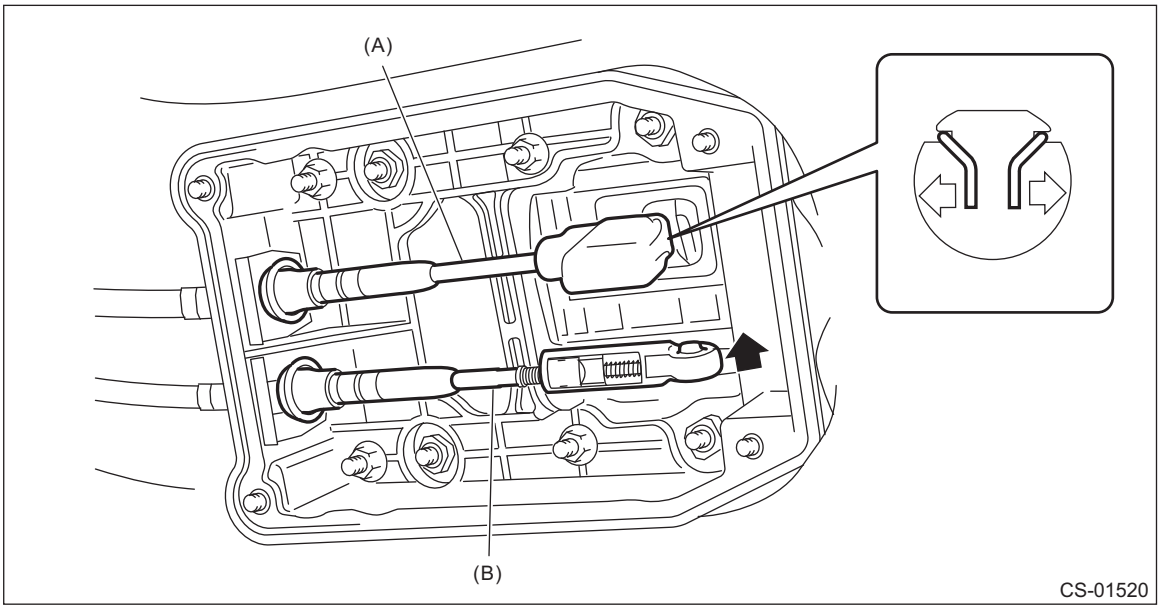
6) Disconnect the MT gear shift cable and MT gear select cable.

CAUTION:
- **Be careful not to deform the cable inner.**
- **Do not twist the cable inner excessively.**

- **Do not apply extra overload while holding the part (a).**

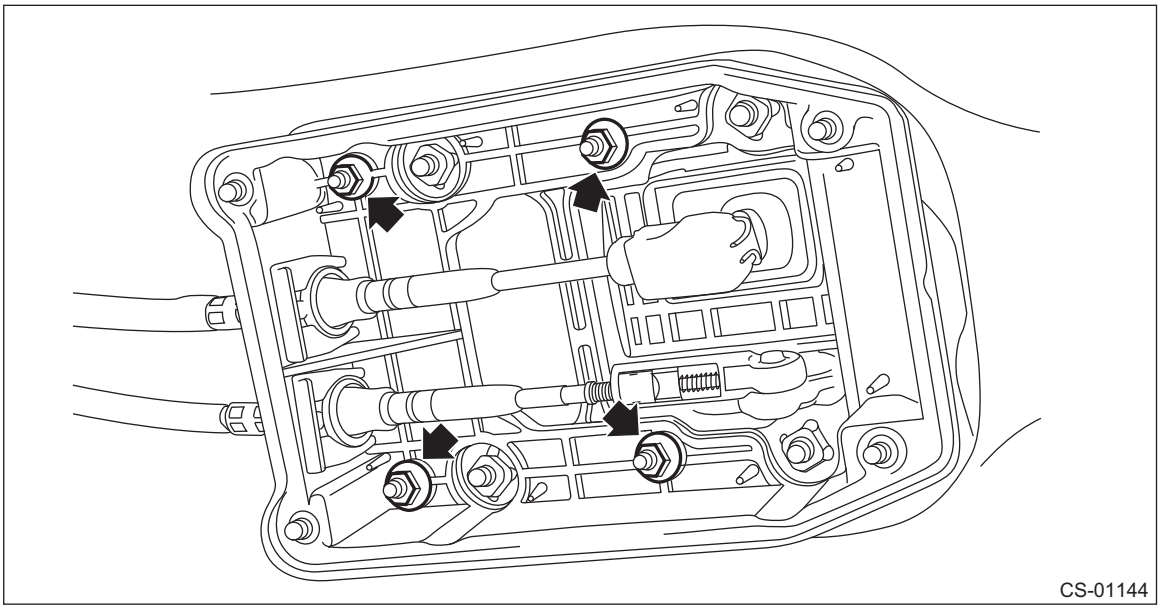


(1) Pull out down the MT gear shift cable to spread the spring.
(2) Push the MT gear select cable in the direction of arrow, and remove it.



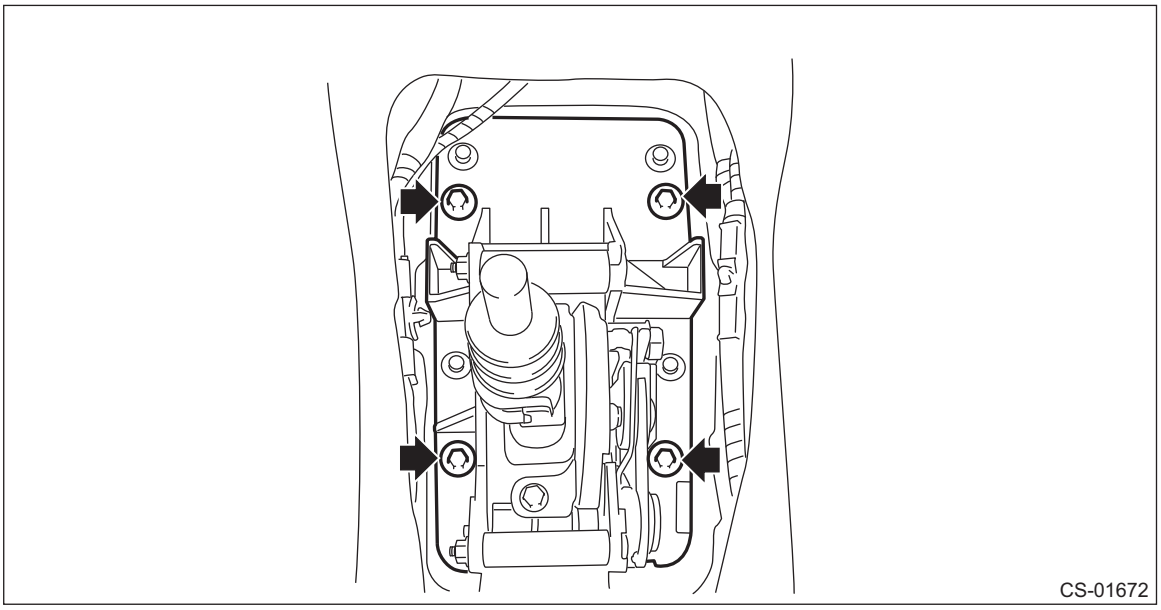
(A) MT gear shift cable (B) MT gear select cable

7) Remove the cable cover assembly.



8) Lower the vehicle.
9) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
10) Remove the gear shift knob and remove the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
11) Remove the panel center LWR LH and RH. <Ref. to EI-70, REMOVAL, Console Box.>
12) Remove the harness clamp.
13) Remove the gear shift lever assembly.

NOTE:
The MT gear shift lever cannot be disassembled.



B: INSTALLATION

1. STI MODEL

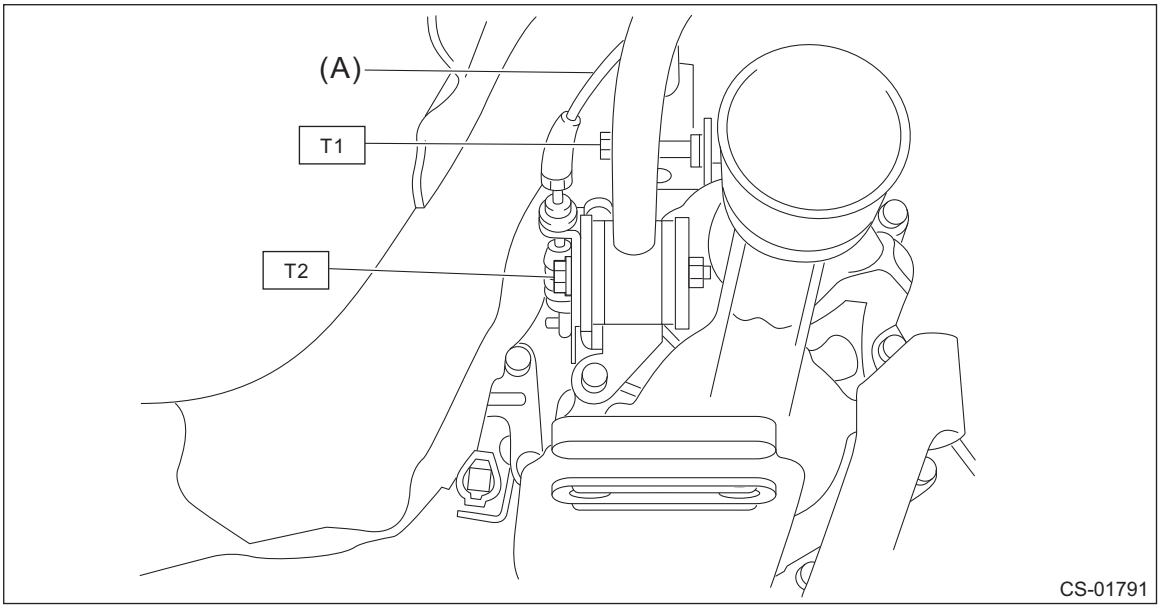
1) Insert the gear shift lever from the bottom of the vehicle.

NOTE:
After inserting the rod and stay, temporarily put them onto transmission mount.
2) Install the cushion rubber.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

3) Move the transmission to the right side of the vehicle, and install the joint COMPL and stay.

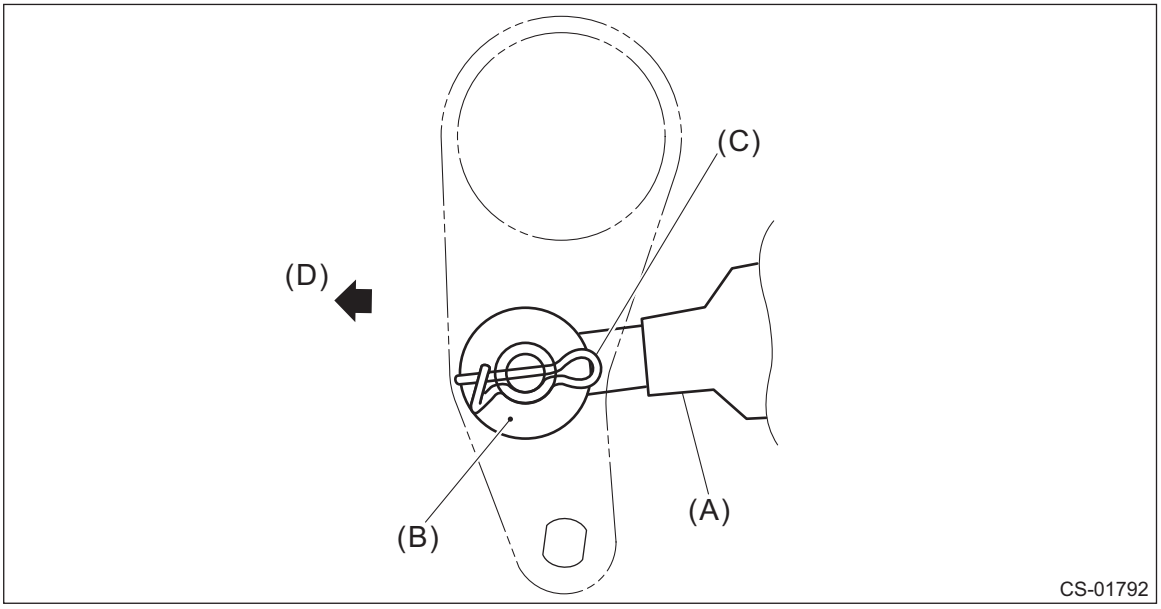
Tightening torque:
T1: 12 N·m (1.2 kgf-m, 8.9 ft-lb)
T2: 32 N·m (3.3 kgf-m, 23.6 ft-lb)



(A) Reverse check cable

4) Install the reverse check cable, washer and snap pin.

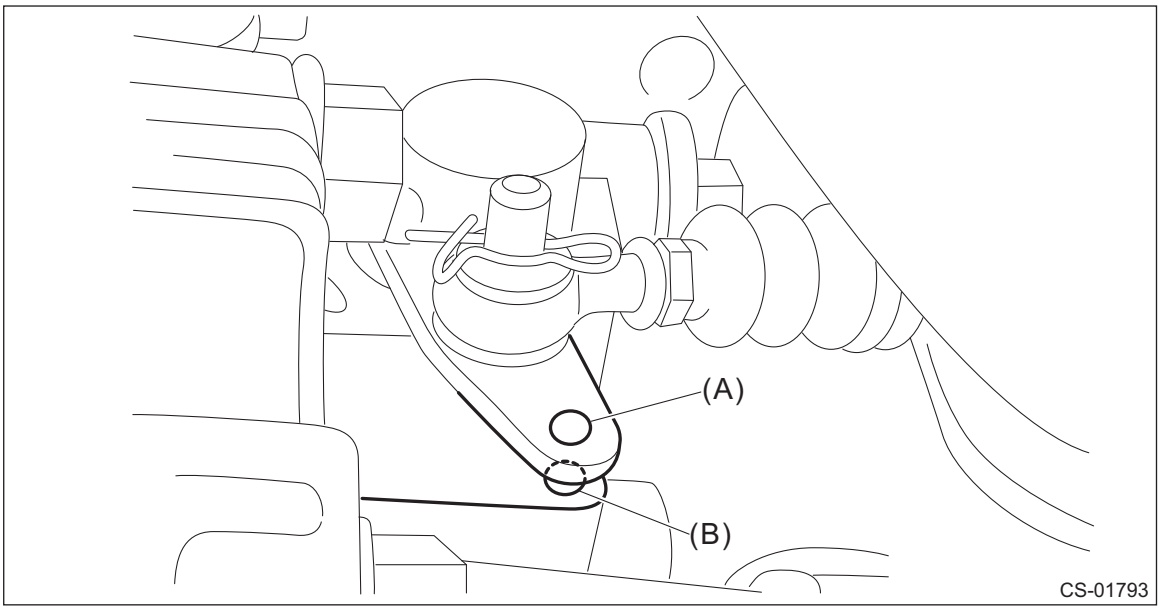
NOTE:
Pay attention to the installing direction of the snap ring.



(A) Reverse check cable
(B) Washer
(C) Snap pin
(D) Front side

5) Make sure the hole of extension case is aligned with that of reverse check lever. If the hole positions are not aligned, adjust the reverse check cable. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>

NOTE:
• Check that the M3 bolt goes through the hole of reverse check lever and can be inserted into the hole of extension case.
• When checking visually, confirm that the gap of hole positions is 0.5 mm (0.02 in) or less.



(A) Hole of reverse check lever (B) Hole of extension case

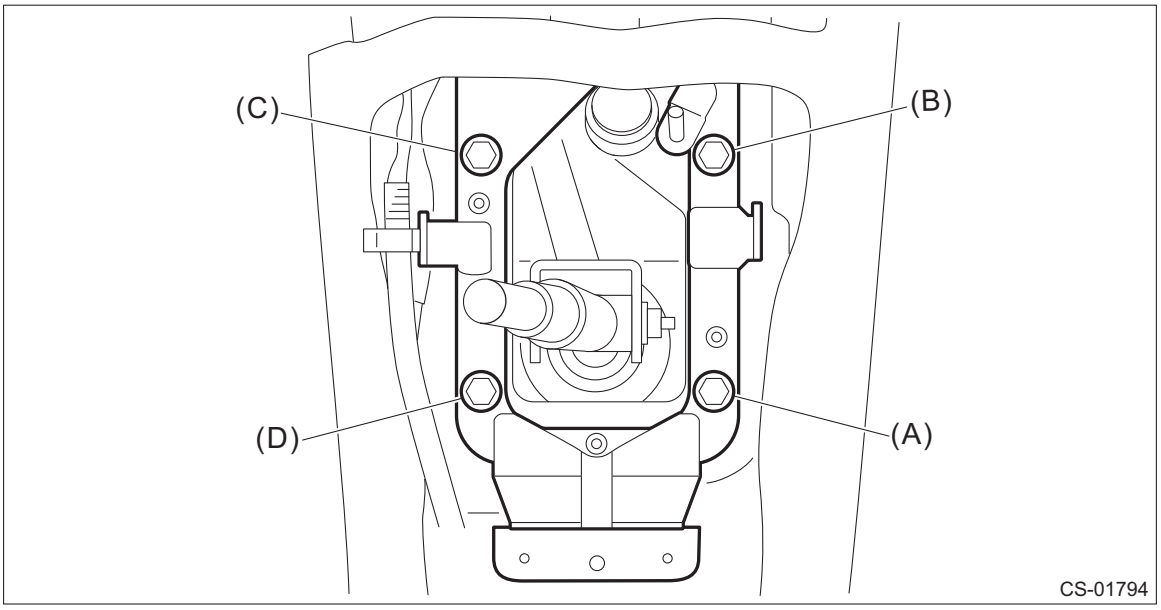
6) Install the crossmember. <Ref. to 6MT(TY85)-30, INSTALLATION, Transmission Mounting System.>
7) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
8) Install the center exhaust pipe (rear). <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
9) Install the plate COMPL.

NOTE:
Be careful not to twist the inner boot when installing.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
(1) Set the plate COMPL to the vehicle.
(2) Temporarily tighten the bolt (A).
(3) Tighten the bolt (B).
(4) Tighten the bolt (A).

(5) Tighten the bolts (C) and (D).



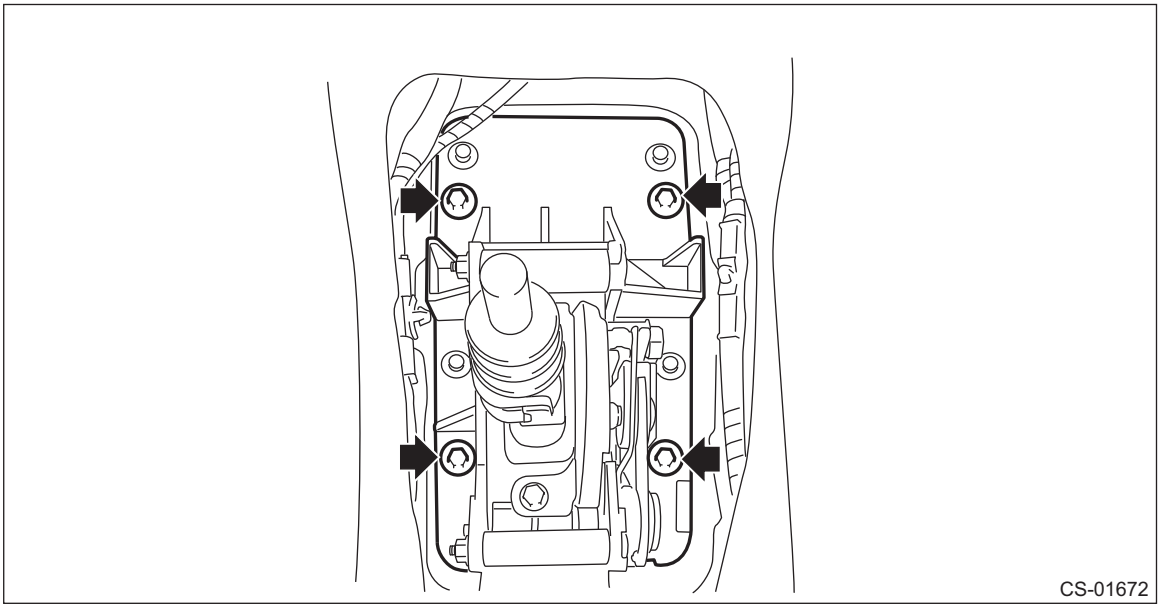
10) Install the harness clamp to the plate COMPL.
11) Install the boot and insulator assembly, and secure with a clamp.
12) Install the panel center LWR LH and RH. <Ref. to EI-73, INSTALLATION, Console Box.>
13) Install the cover - shift lever. <Ref. to EI-73, INSTALLATION, Console Box.>
14) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
15) Install the gear shift knob by turning it clockwise.

CAUTION:
Do not turn the gear shift knob excessively to prevent it from being damaged.
16) Make sure the gears can be shifted accurately into each gear.
17) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. EXCEPT FOR STI MODEL

1) Install the gear shift lever assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

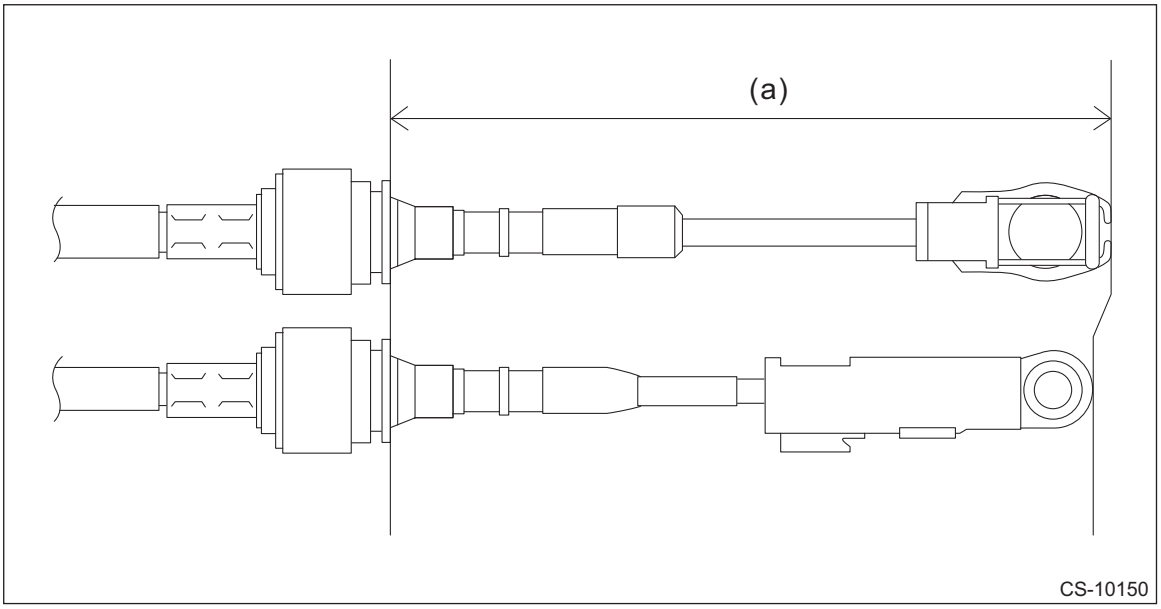


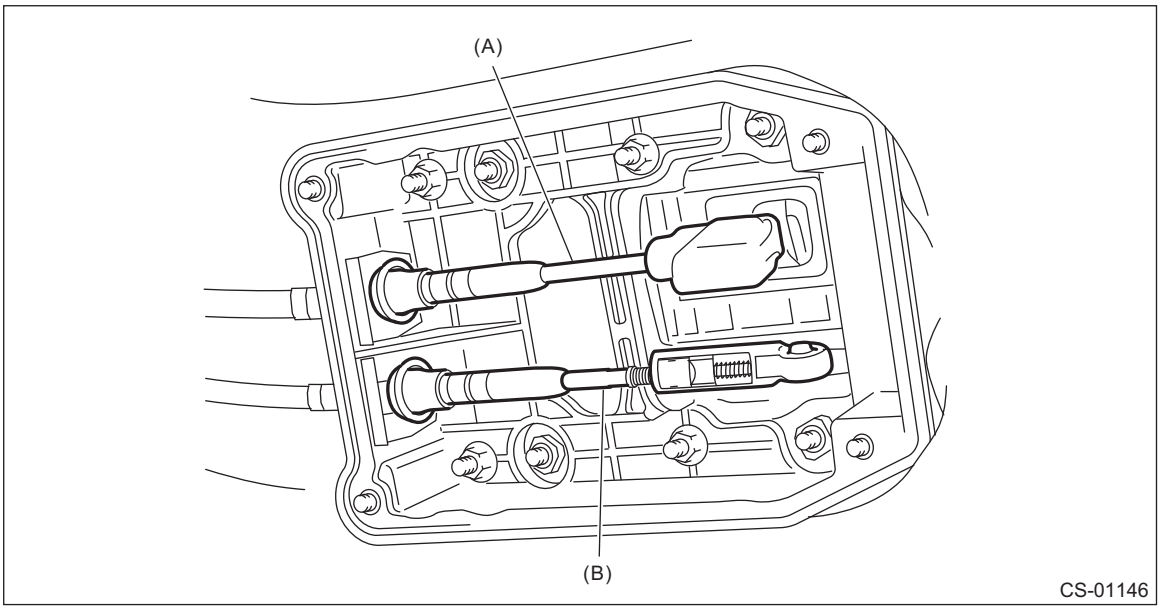
2) Install the harness clamp.

3) Lift up the vehicle.
4) Install the cable cover assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Connect the MT gear shift cable and MT gear select cable.

CAUTION:
- **Be careful not to deform the cable inner.**
- **Do not twist the cable inner excessively.**
- **Do not apply extra overload while holding the part (a).**





(A) MT gear shift cable (B) MT gear select cable

6) Attach the cable cover plate.

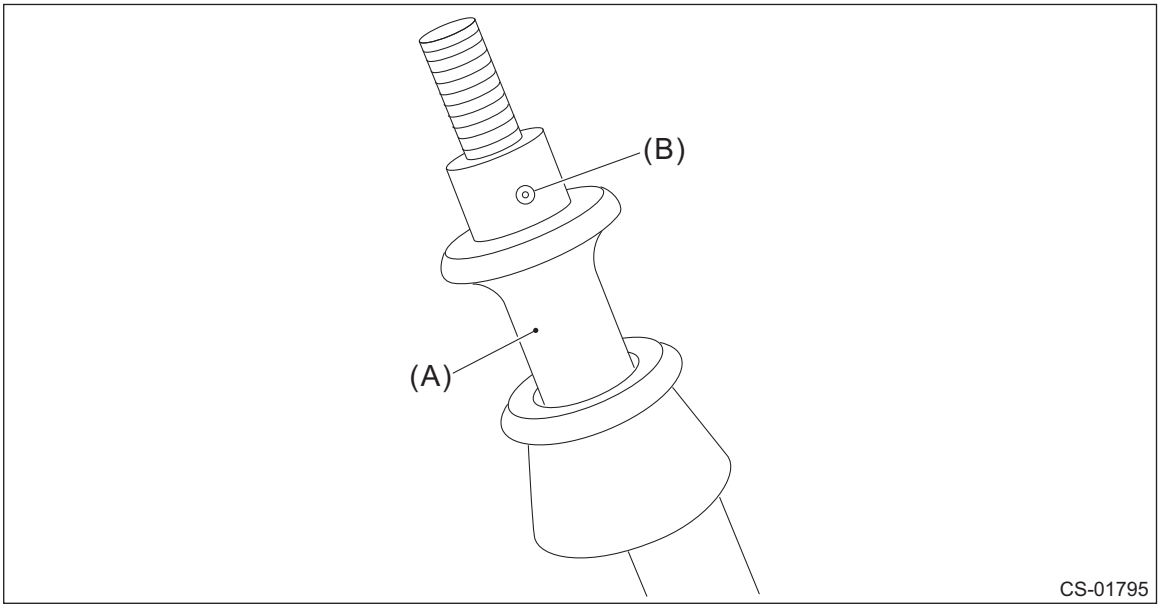
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

8) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
9) Lower the vehicle.
10) Install the panel center LWR LH and RH. <Ref. to EI-73, INSTALLATION, Console Box.>
11) Install the cover - shift lever, and install the gear shift knob. <Ref. to EI-73, INSTALLATION, Console Box.>
12) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
13) Make sure the gears can be shifted accurately into each gear. Adjust the MT gear select lever, if the gears cannot be shifted correctly. <Ref. to CS-113, ADJUSTMENT, MT Gear Select Cable.>
14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

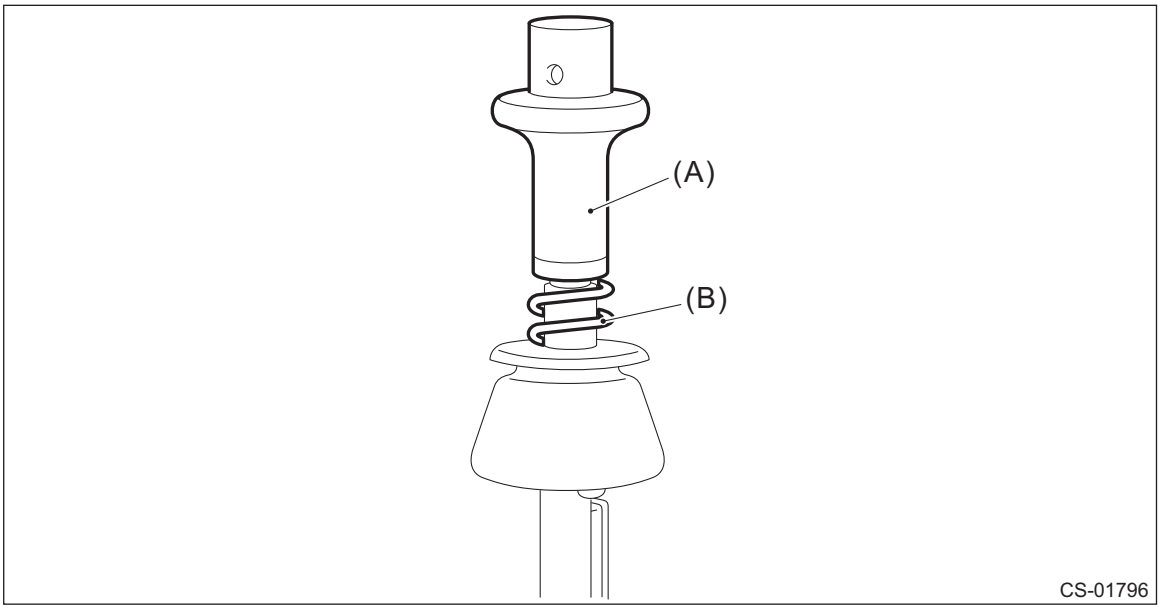
C: DISASSEMBLY

NOTE:
Disassemble procedures are only for STI model.
1) Remove the spring pin from the slider.



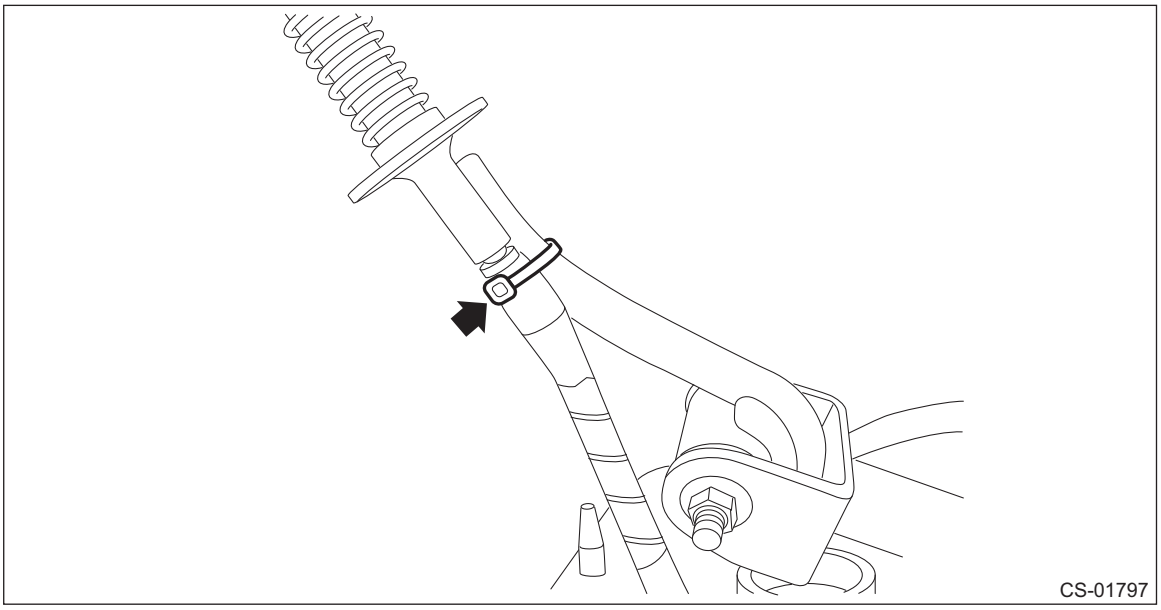
(A) Slider
(B) Spring pin

2) Remove the slider and spring.

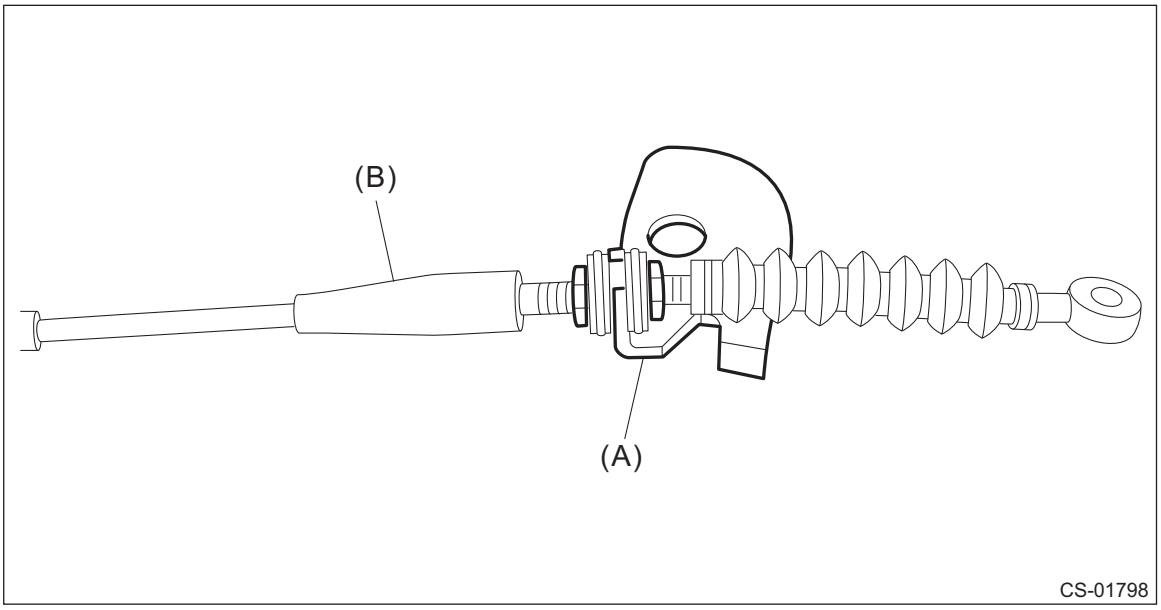


(A) Slider (B) Spring

3) Cut off the band clip.

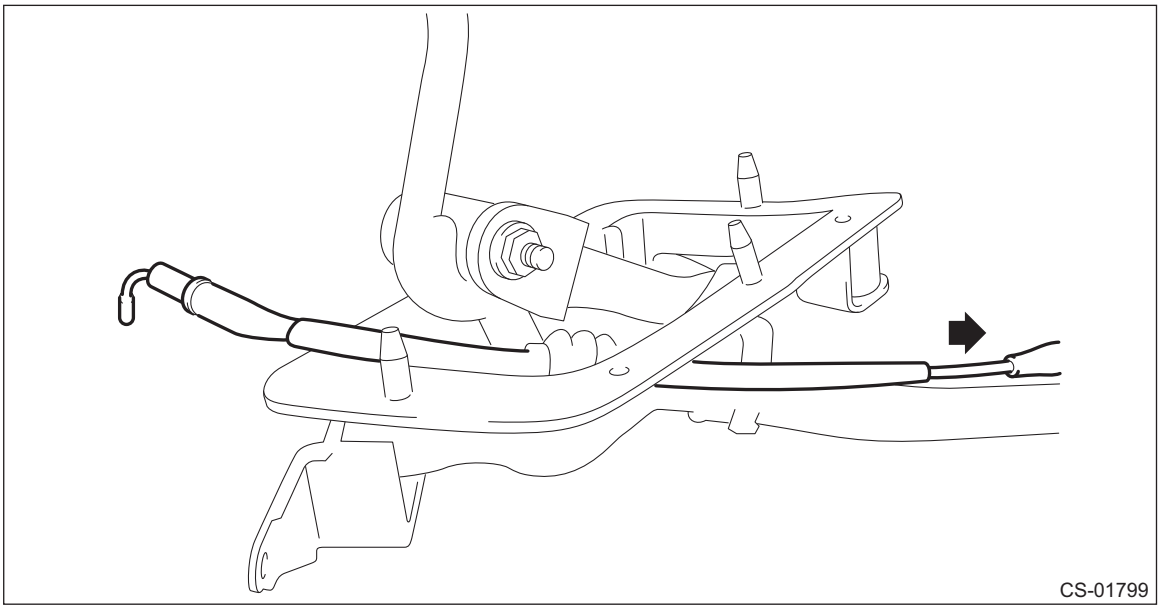


4) Remove the reverse check cable from the cable plate.

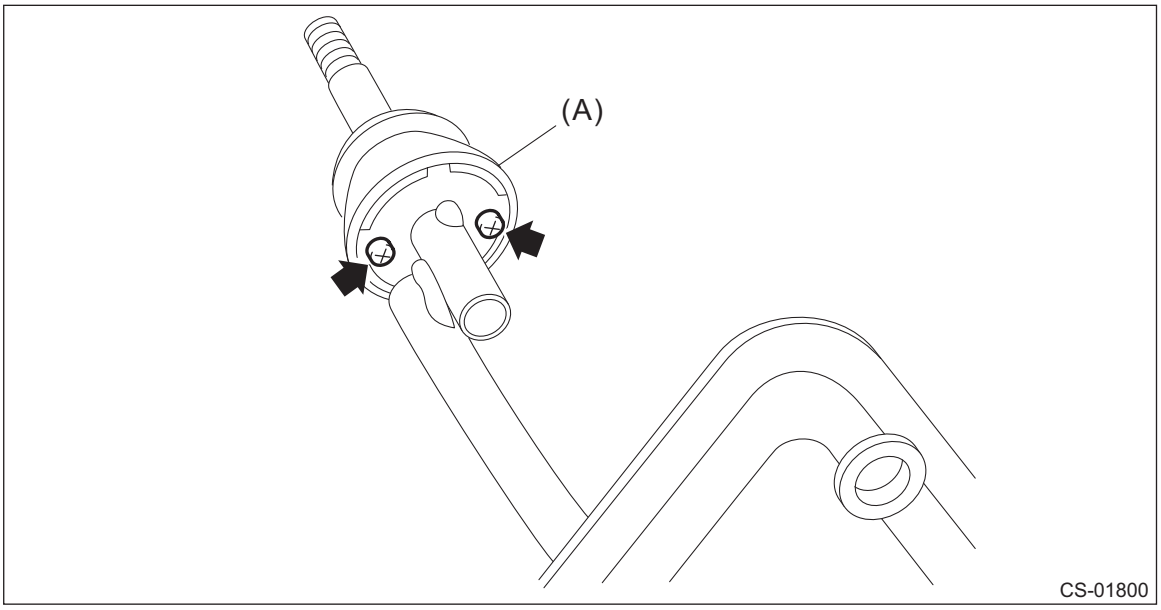


(A) Cable plate (B) Reverse check cable

5) Remove the reverse check cable.



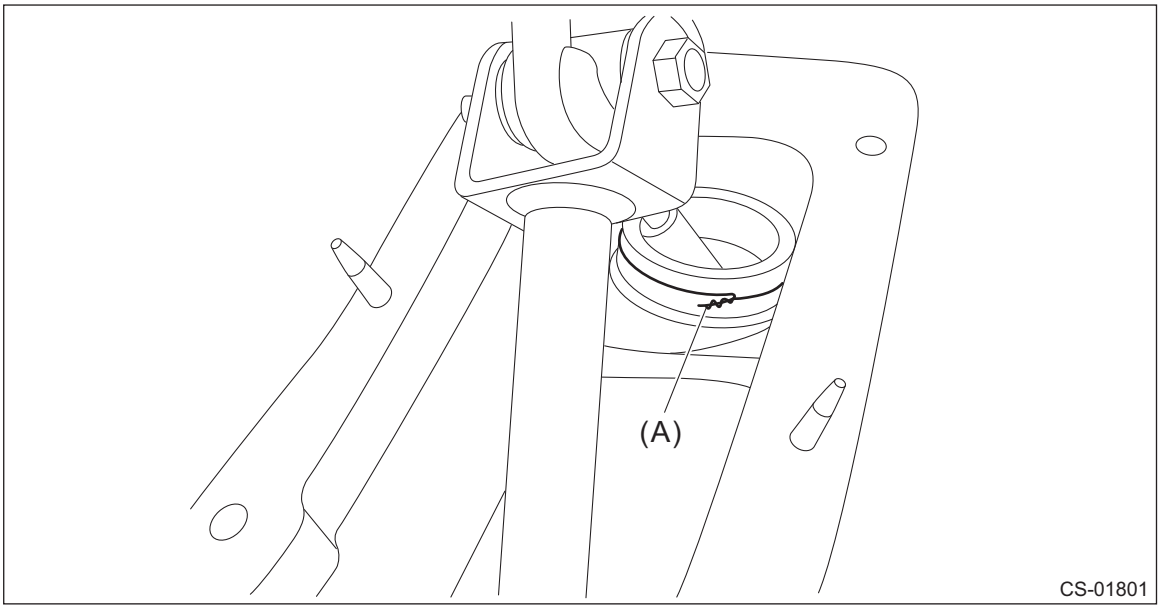
6) Remove the holder and spring.



(A) Holder

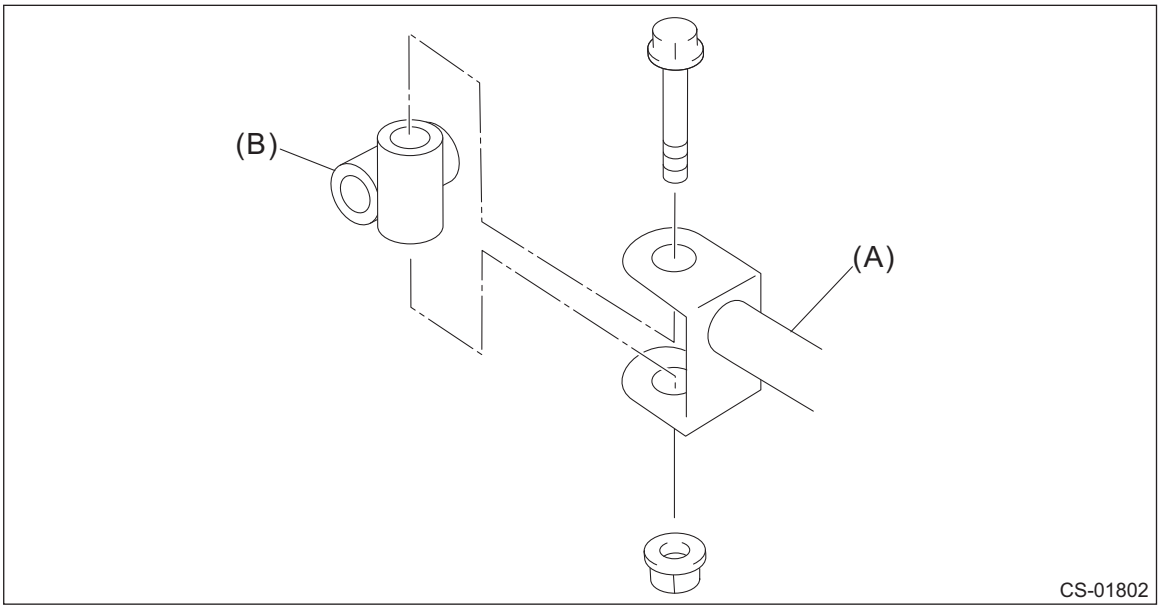
7) Disassemble the lock wire.

NOTE:
Do not reuse the lock wire.



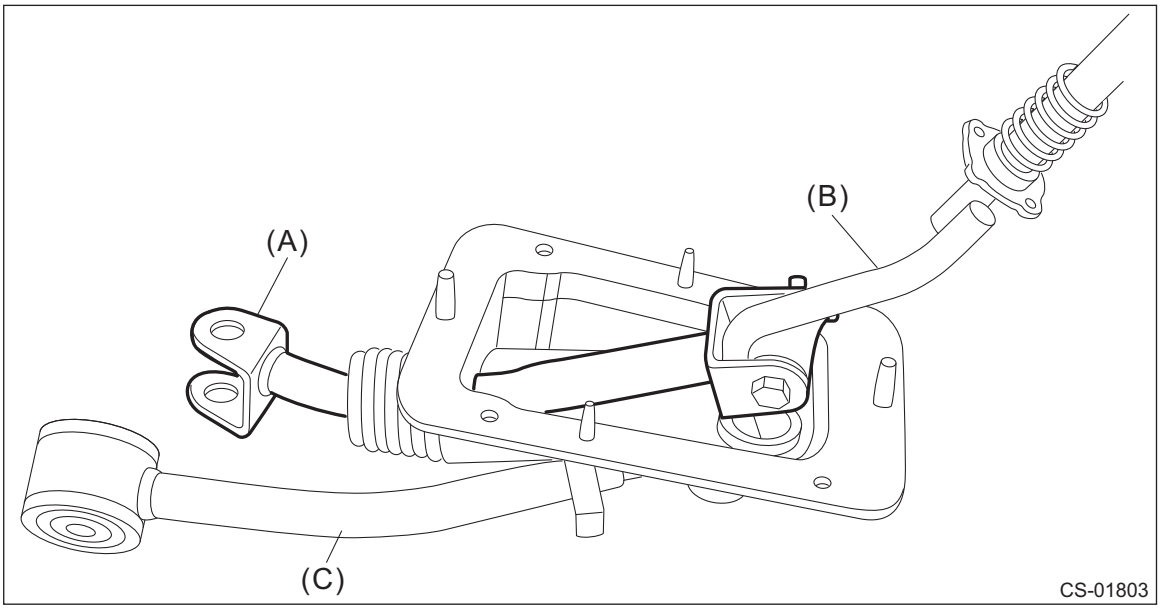
(A) Lock wire

8) Remove the boss from the rod.



(A) Rod (B) Boss

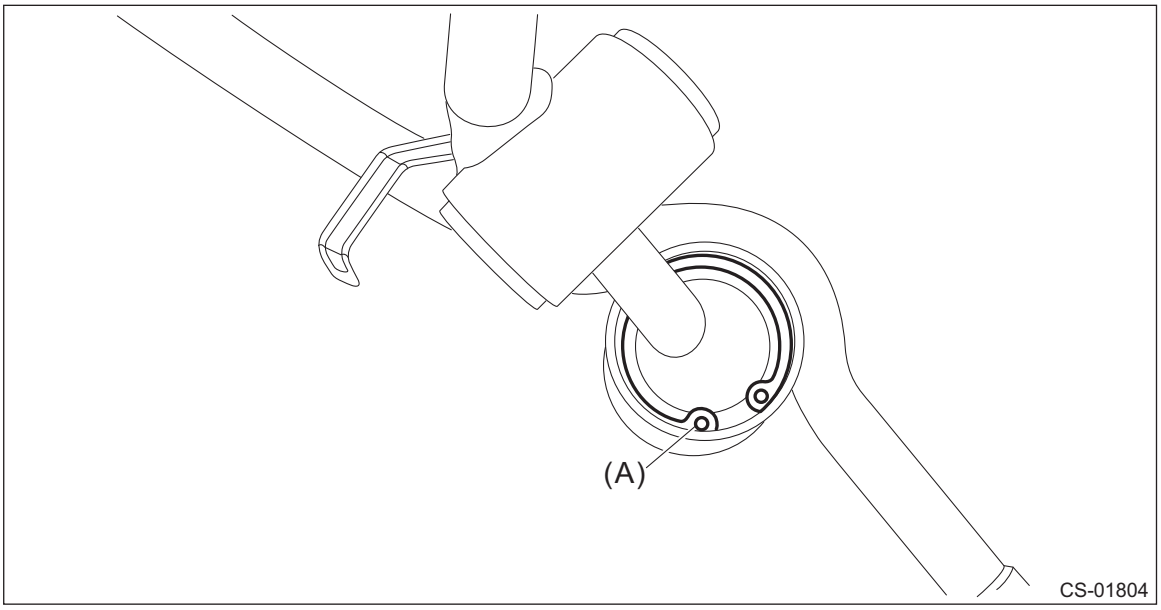
9) Remove the rod from lever.



(A) Rod (B) Lever (C) Stay

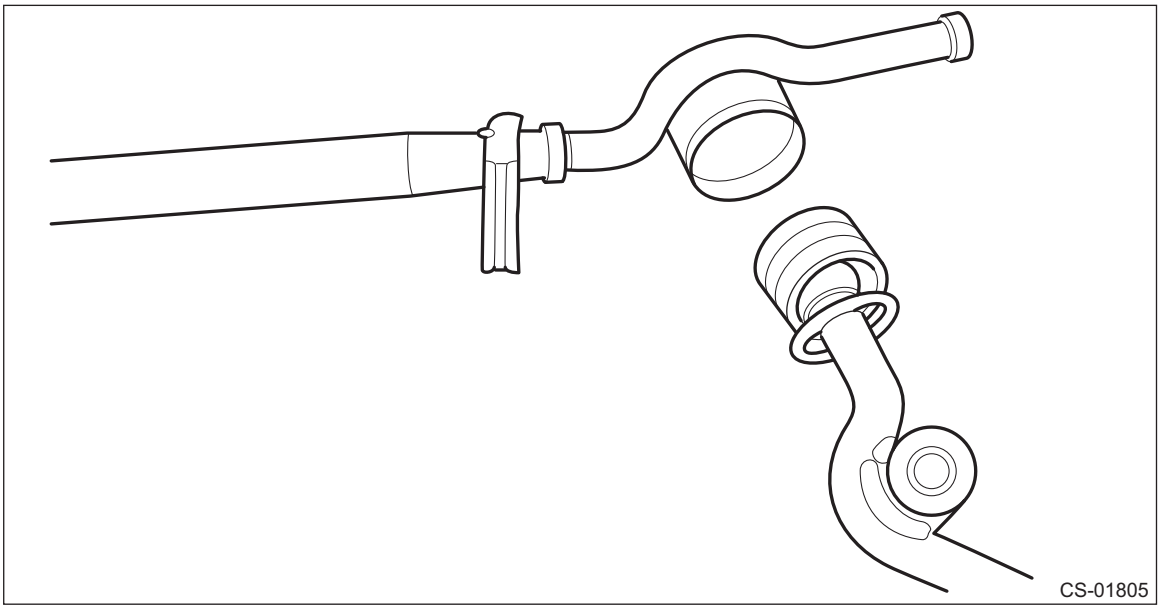
10) Separate the rod and inner boot.

11) Remove the snap ring.

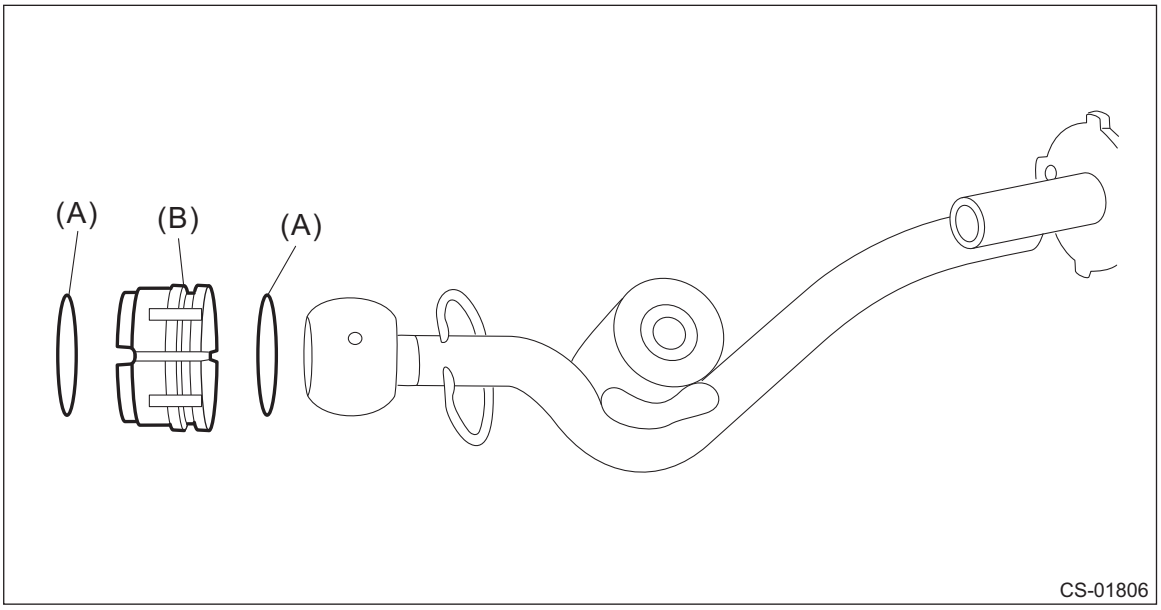


(A) Snap ring

12) Separate the gear shift lever and the stay.

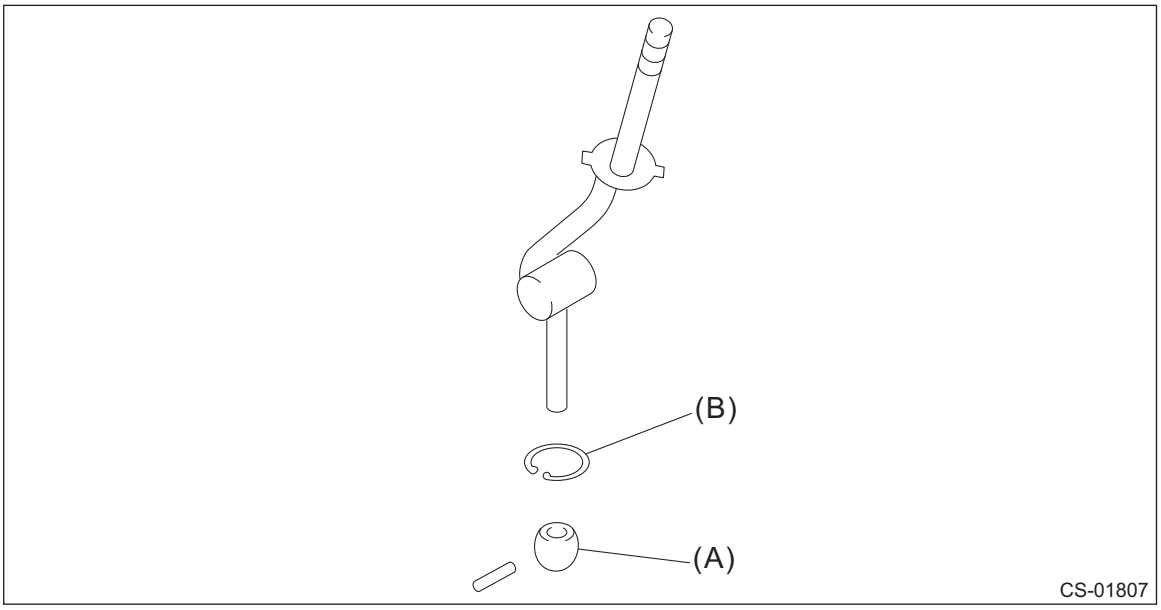


13) Remove the O-ring and bushing.



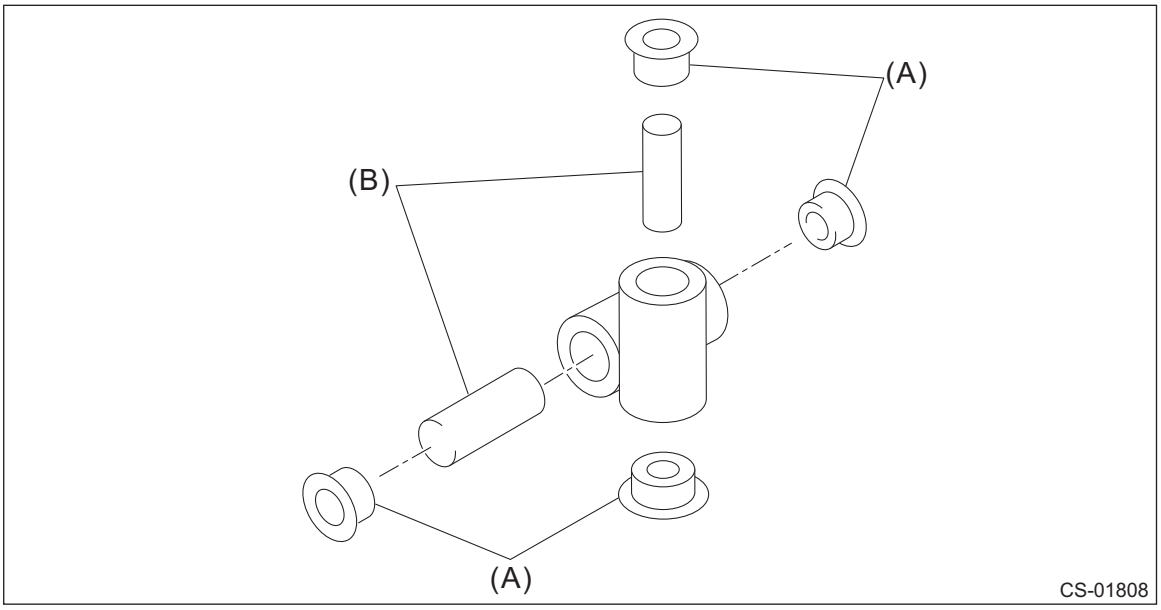
(A) O-ring (B) Bushing

14) Remove the spring pin, and then remove the bushing and snap ring.



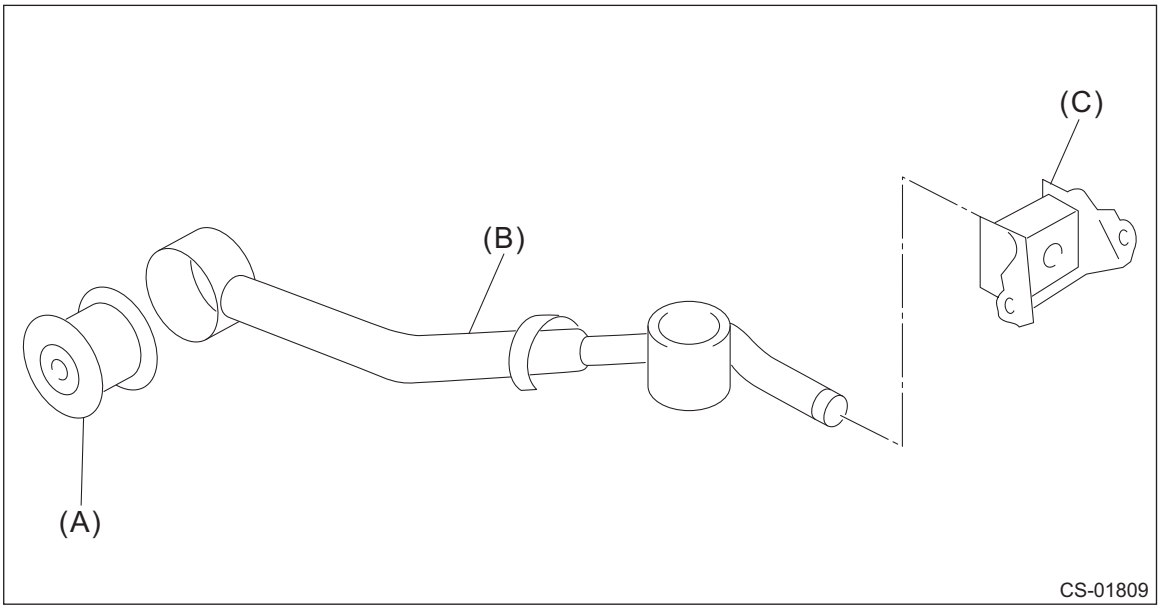
(A) Bushing (B) Snap ring

15) Remove the bushing and spacer from the boss.



(A) Bushing (B) Spacer

16) Remove the bushing and cushion rubber from the stay.

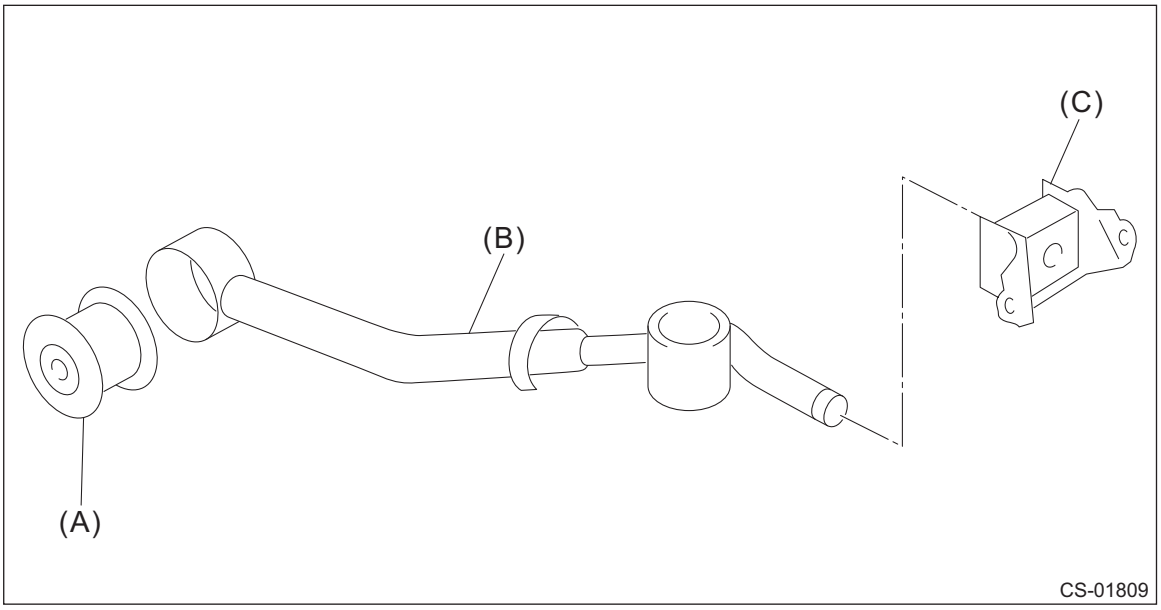


(A) Bushing (B) Stay (C) Cushion rubber

D: ASSEMBLY

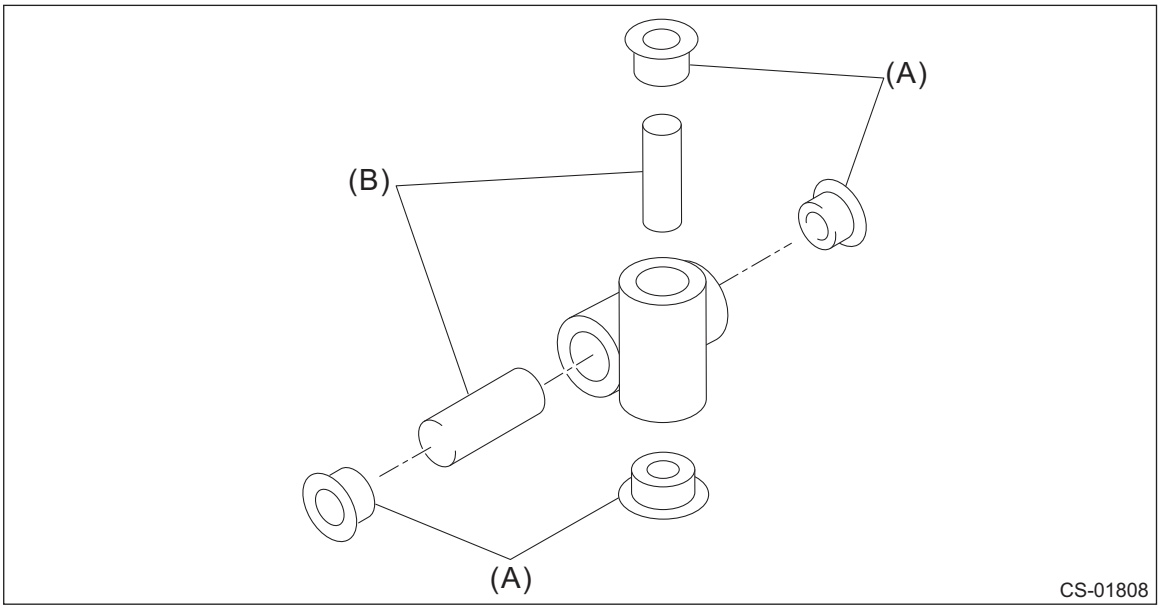
NOTE:
- Clean all the parts before assembly.
- Apply NIGTIGHT LTS No. 2 grease or equivalent to each part. <Ref. to CS-5, 6MT GEAR SHIFT LEVER (STI MODEL), COMPONENT, General Description.>

1) Mount the bushing and cushion rubber to the stay.



(A) Bushing (B) Stay (C) Cushion rubber

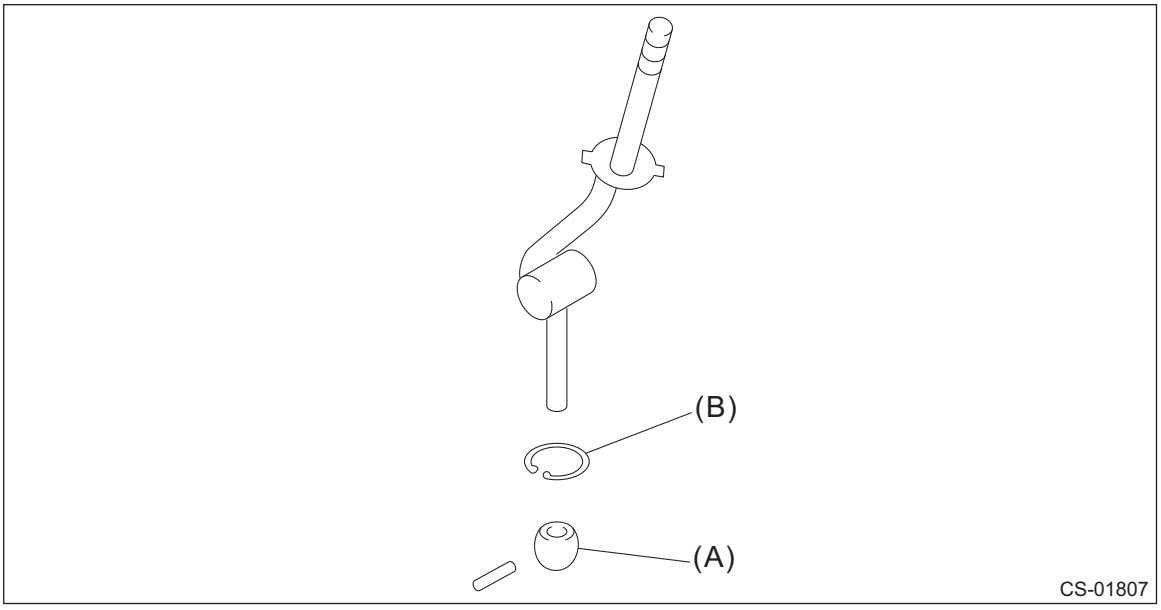
2) Install the bushing and spacer to boss.



(A) Bushing (B) Spacer

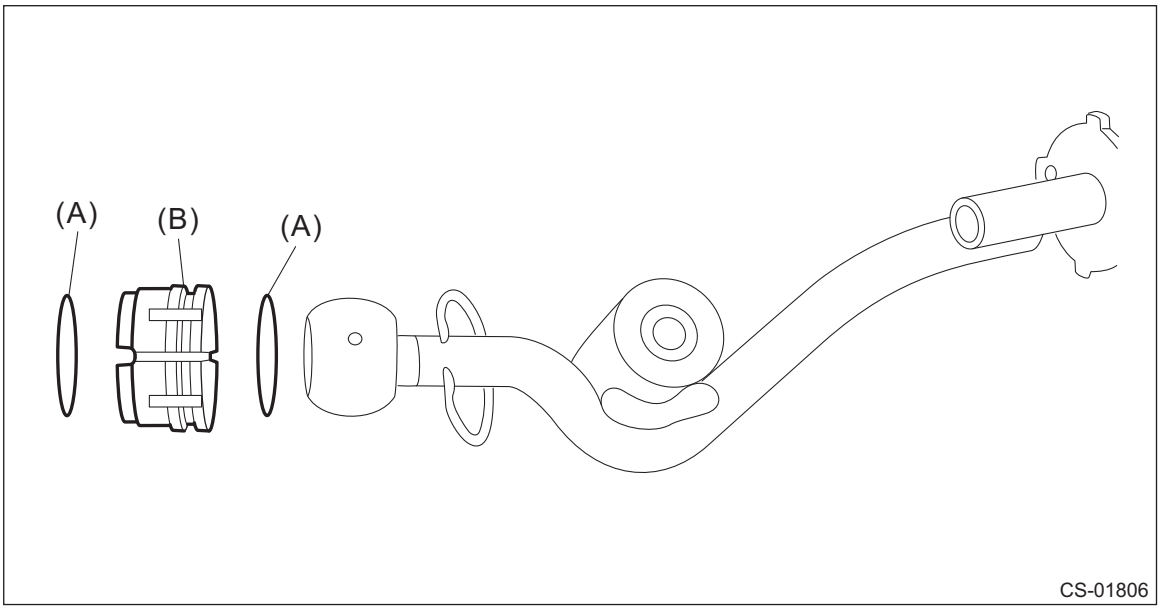
3) Install the snap ring and install the bushing.

NOTE:
Apply grease to the bushing.



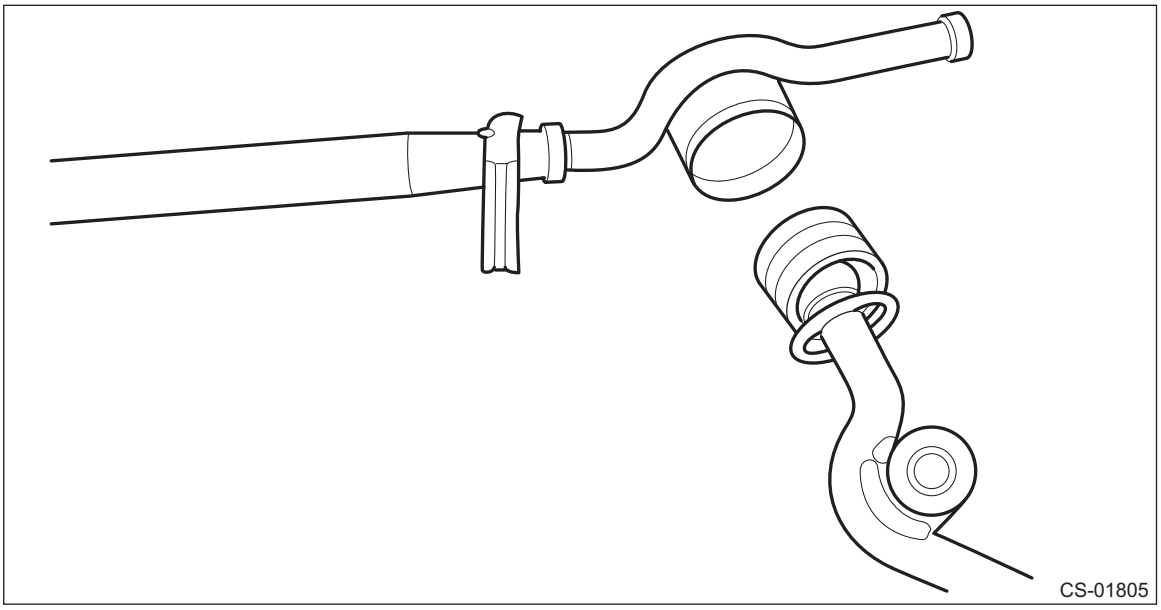
(A) Bushing (B) Snap ring

4) Apply grease to the bushing and O-ring, and then install to gear shift lever.

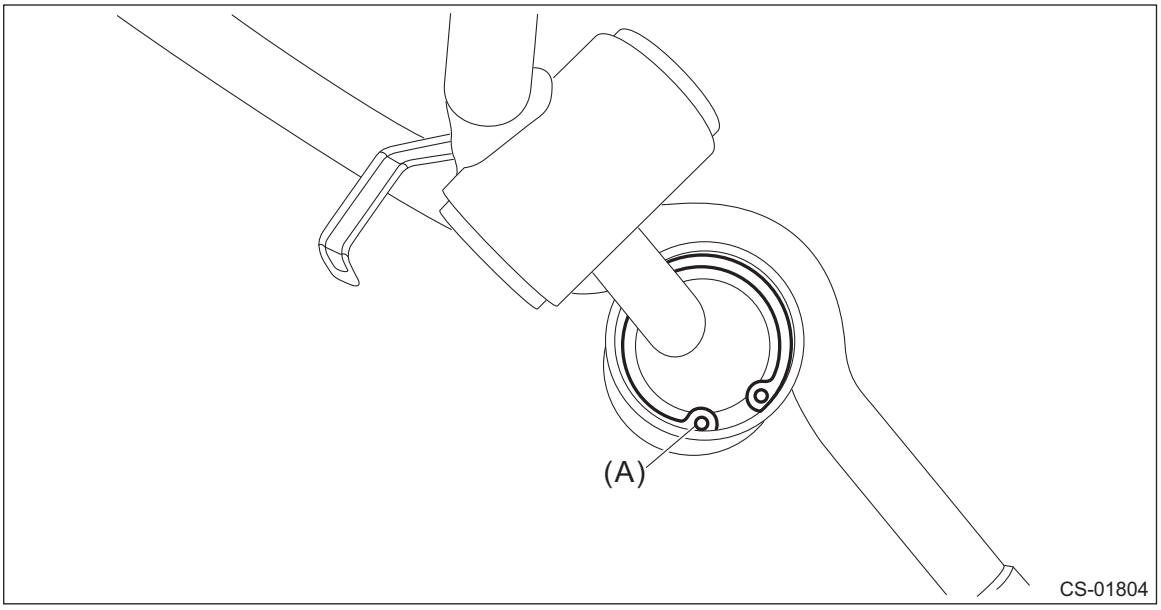


(A) O-ring (B) Bushing

5) Apply sufficient grease into boss, and then install the gear shift lever to the stay.



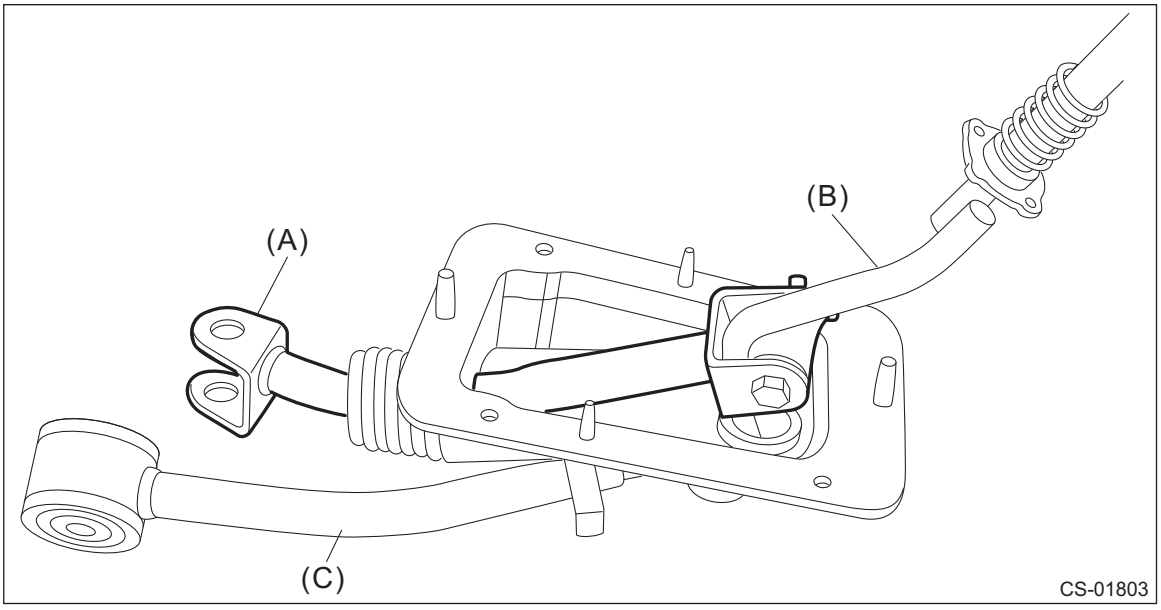
6) Install the snap ring.



(A) Snap ring

7) Insert the gear shift lever and rod into boot hole.
8) Install the rod.

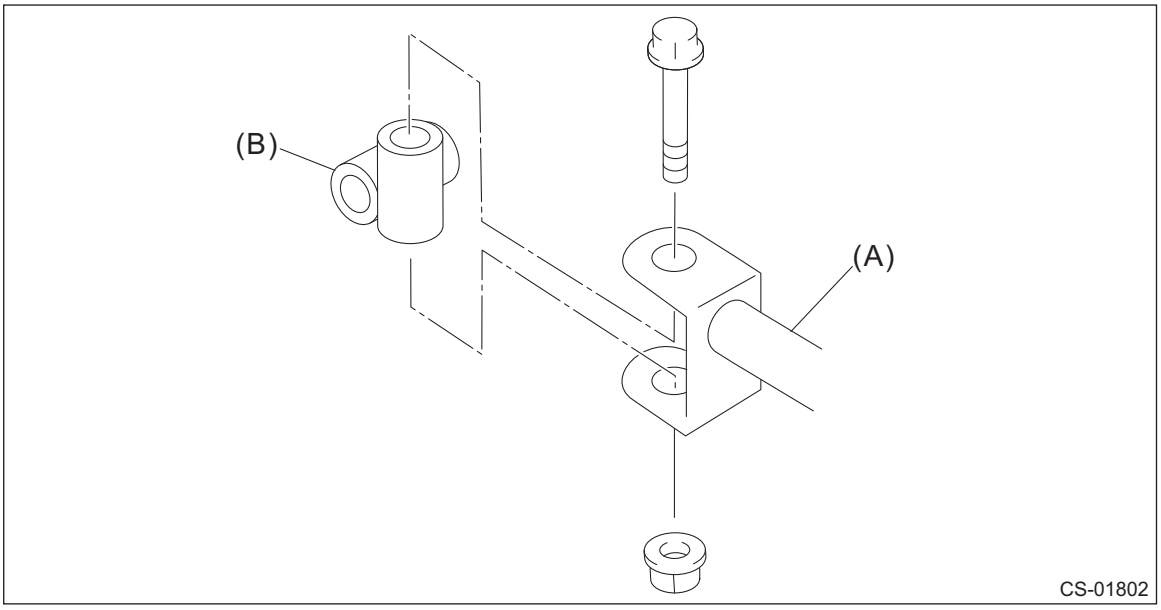
Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



(A) Rod (B) Lever (C) Stay

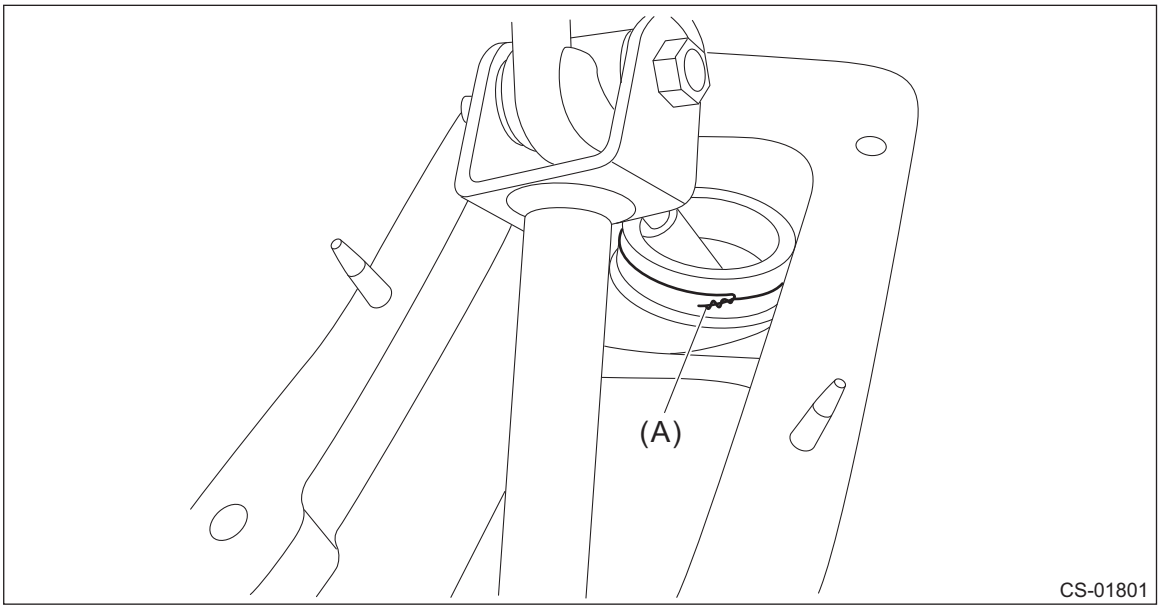
9) Install the boss to the rod.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



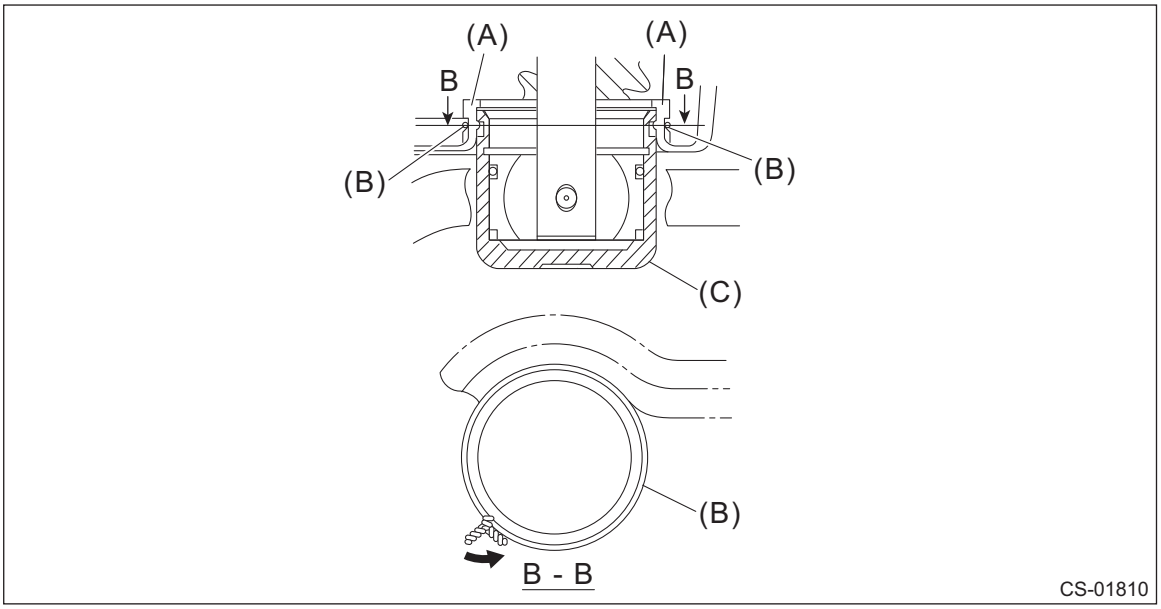
(A) Rod (B) Boss

10) Install a new lock wire.



(A) Lock wire

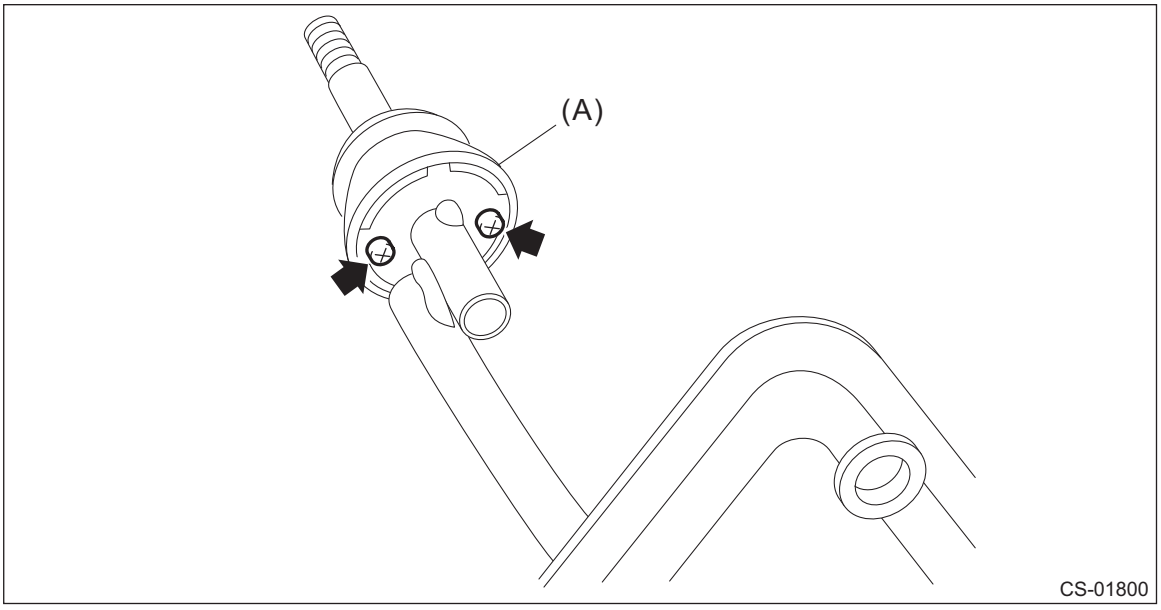
NOTE:
- Install the lock wire to the stay groove.
- Bend the extra wire to the same direction of lock wire winding.



(A) Inner boot (B) Lock wire (C) Stay

11) Install the holder.

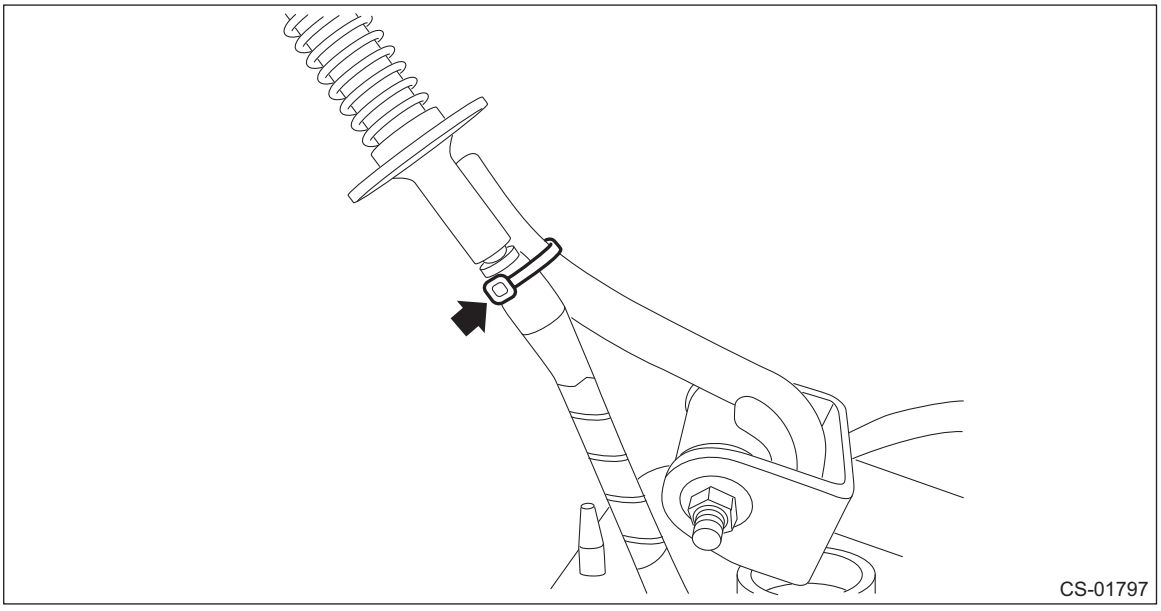
Tightening torque:
1.3 N·m (0.1 kgf-m, 1.0 ft-lb)



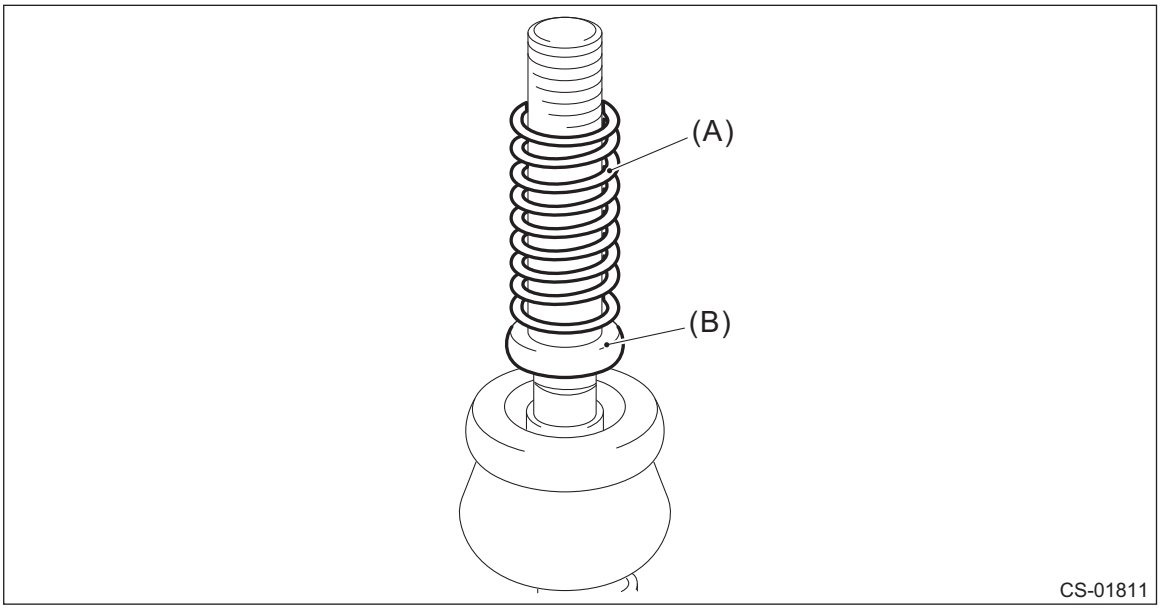
(A) Holder

12) Insert the reverse check cable into the boot hole.
13) Insert the reverse check cable into the gear shift assembly, and fix in place with a band clip.

NOTE:
- Cut the excess band clip.
- Make sure that the reverse check cable is inserted into the gearshift lever assembly with no gaps.



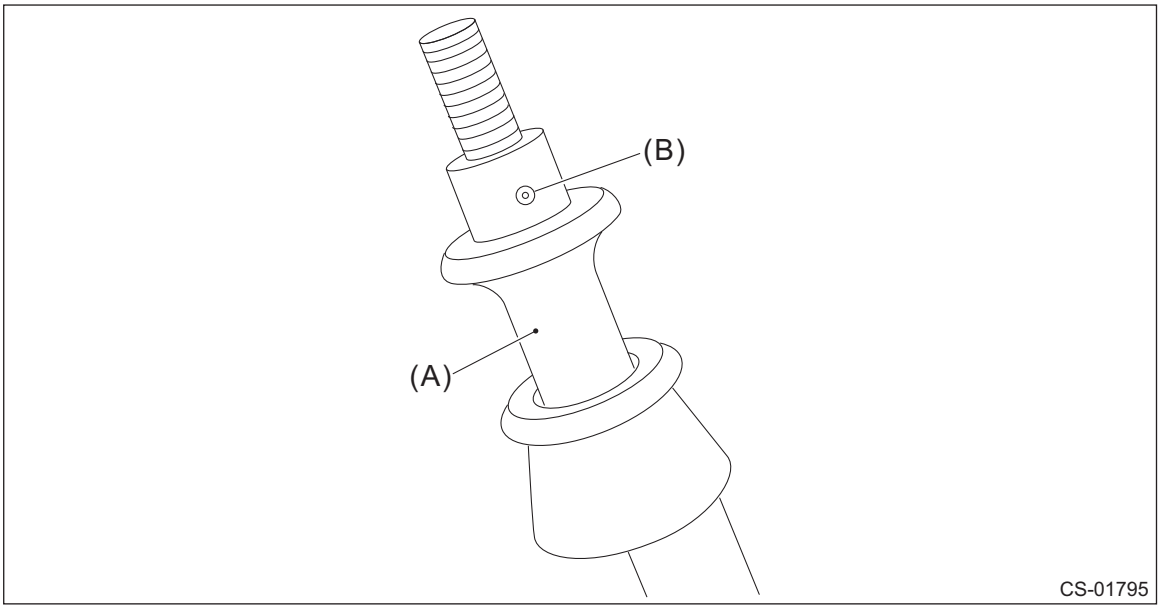
14) Install the seat cushion and spring.



(A) Spring (B) Seat cushion

15) Use the spring pin to secure the end of the slider and reverse check cable.

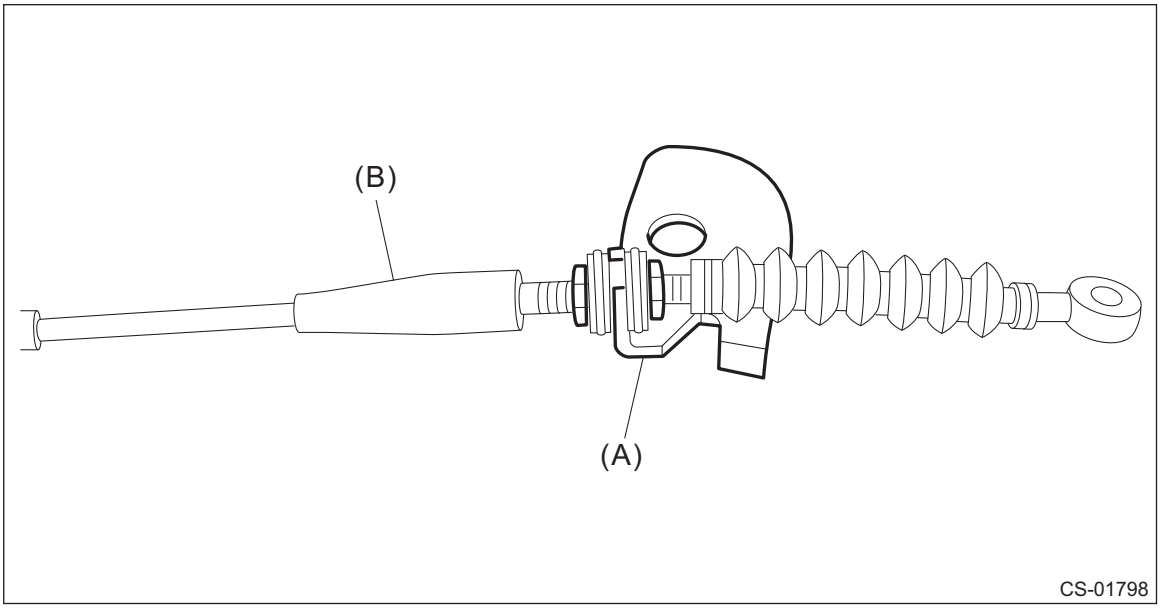
NOTE:
Apply grease to the moving part of slider.



(A) Slider (B) Spring pin

16) Install the reverse check cable to the cable plate, and tighten the lock nut.

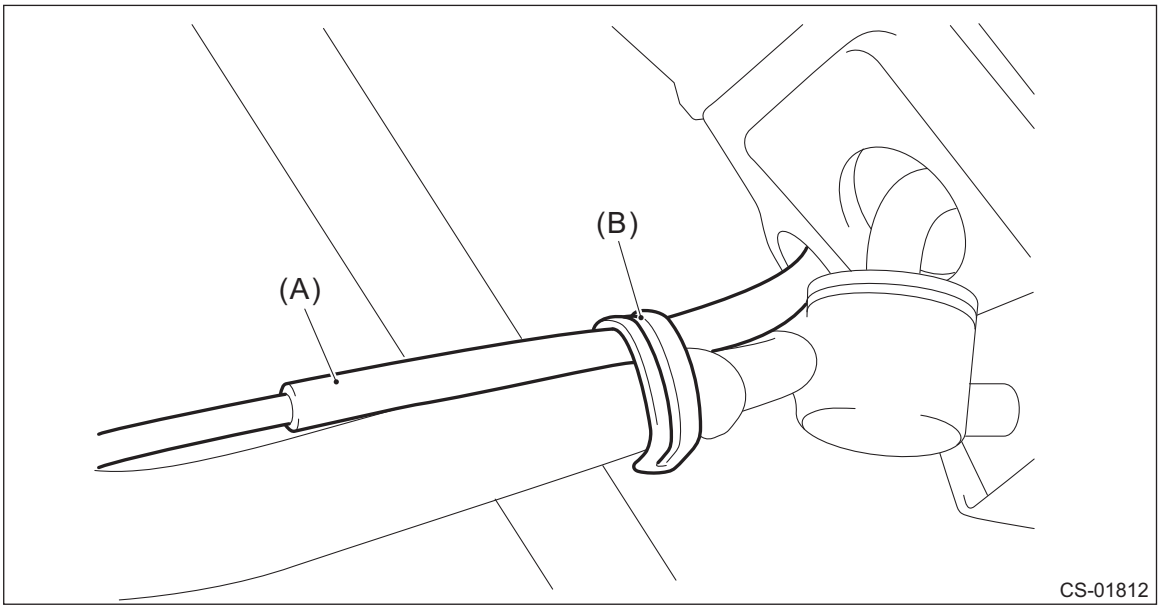
Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)



(A) Cable plate (B) Reverse check cable

17) Secure the reverse check cable to the stay clip.

NOTE:
Install the reverse check cable on top of the stay.

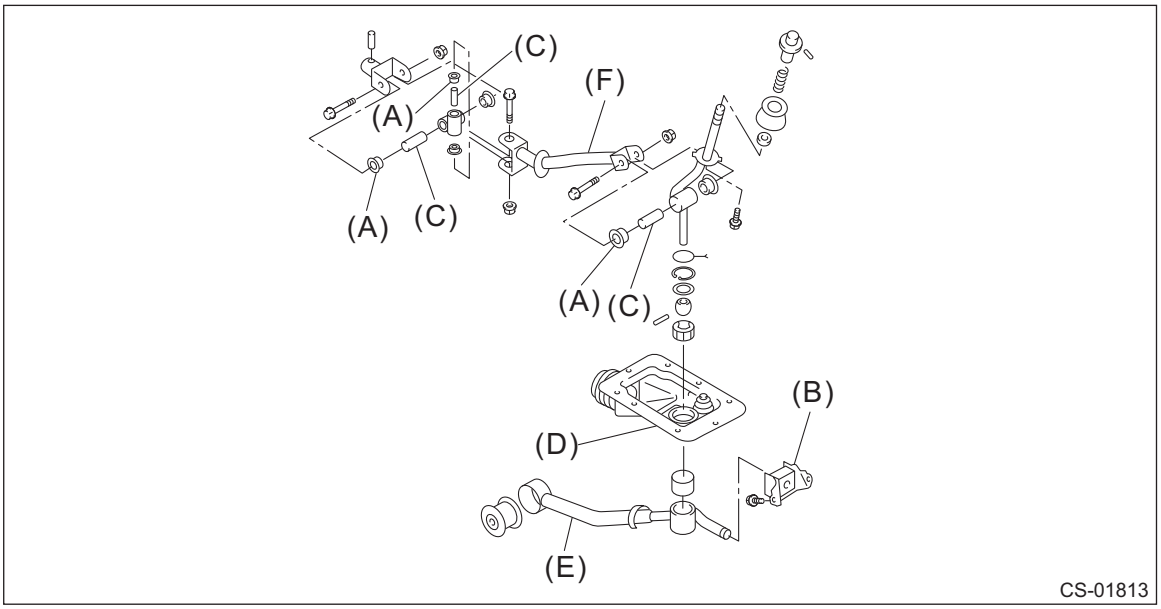


(A) Reverse check cable (B) Clip

E: INSPECTION

1. STI MODEL

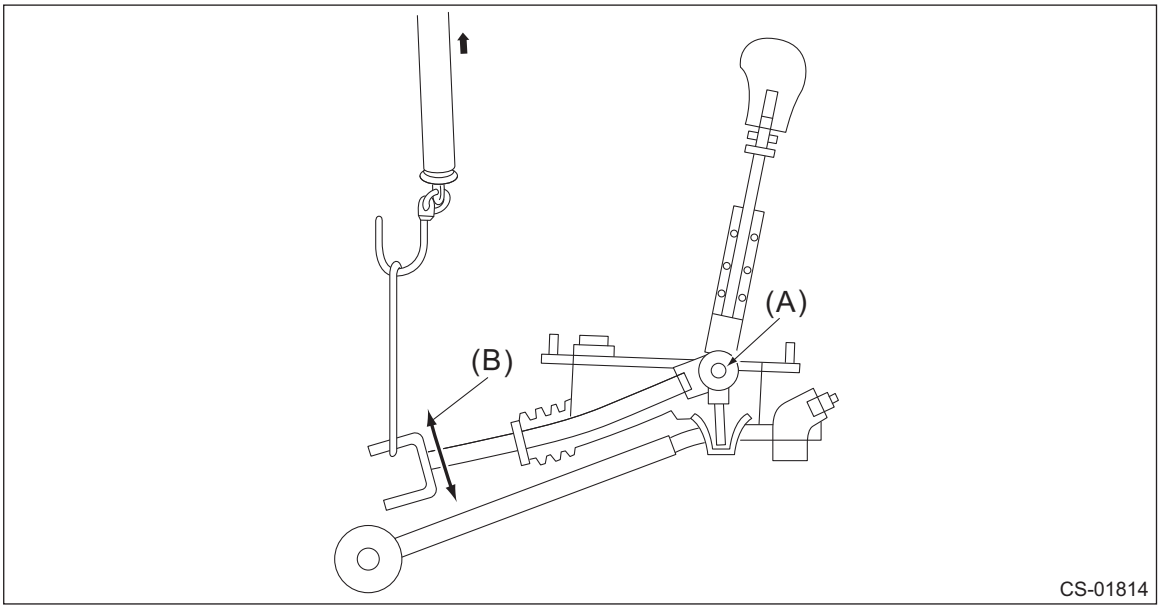
1) Check the parts (bushing, cushion rubber, spacer, boot, stay and rod, etc.) for deformation, damage and wear. If necessary, correct or replace faulty parts. Compare the removed parts with new parts to judge if there are damages or not.



(A) Bushing
(B) Cushion rubber
(C) Spacer
(D) Boot
(E) Stay
(F) Rod

2) Check the swing torque of rod linked with the gear shift lever.
If the torque exceeds the specifications, replace the bushing or retighten nuts.

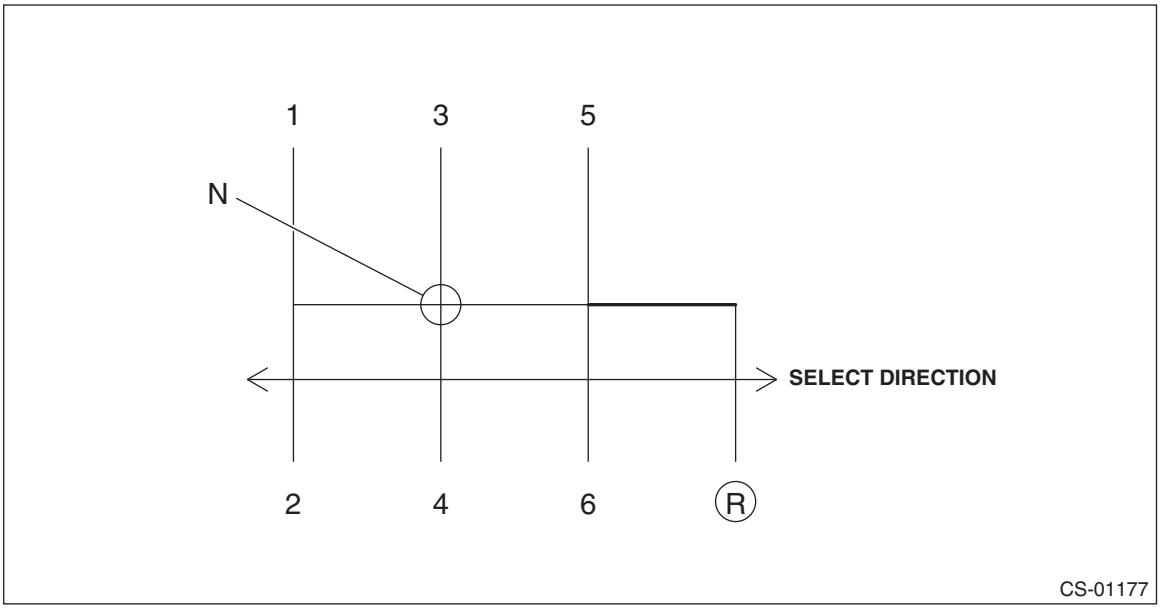
Swing torque:
3.7 N (0.38 kgf, 0.83 lbf) or less



(A) Pivot
(B) Swing torque

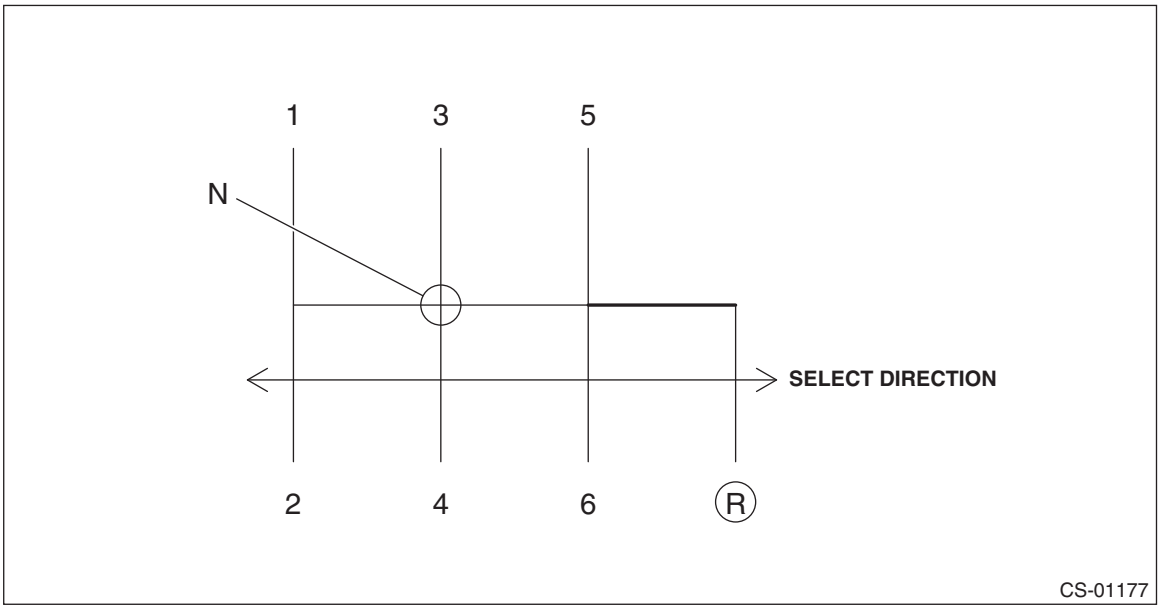
2. EXCEPT FOR STI MODEL

1) Check the parts for deformation, damage and wear. Repair or replace if necessary. Compare the removed parts with new parts to confirm if there are damages or not.
2) Check that selecting to the reverse direction is disable unless the slider is pulled up.
3) Check that selecting to the reverse direction is possible when the slider is pulled up to the full.
4) Check that the shift lever moves to initial position, when the slider backs to “N” position from step 3).



5) Move the shift lever to the neutral position, and check that the play in the select direction above the shift knob is within the reference standard. If not within the reference standard values, replace the MT gear shift lever. <Ref. to CS-62, EXCEPT FOR STI MODEL, REMOVAL, MT Gear Shift Lever.>

Play in neutral position:
Reference standard
1.5 mm (0.059 in) or less

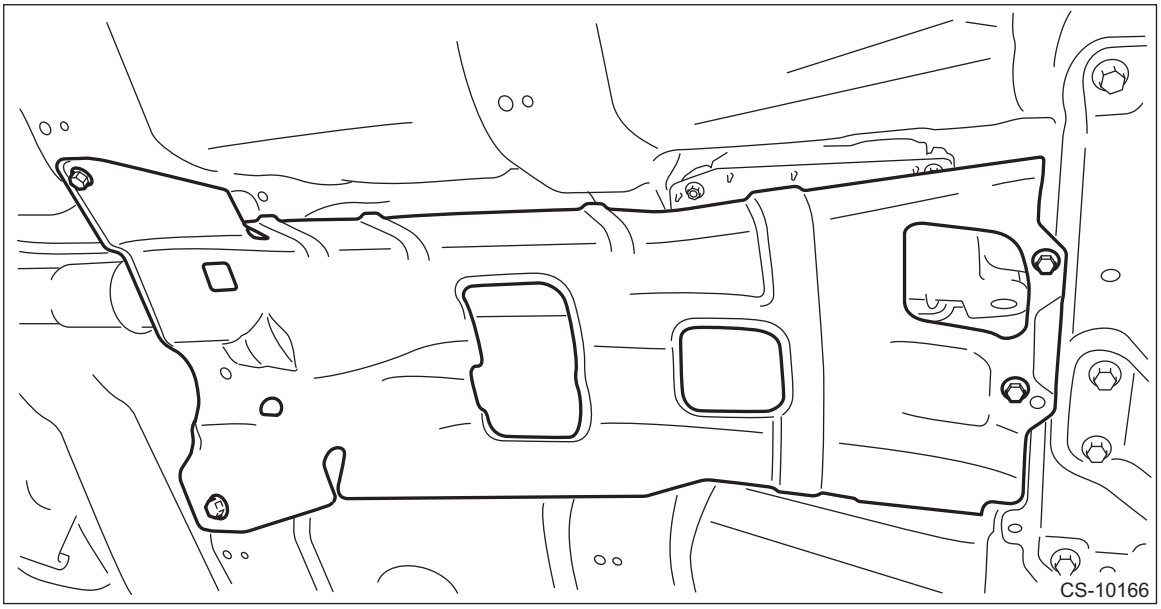


8. MT Gear Shift Cable

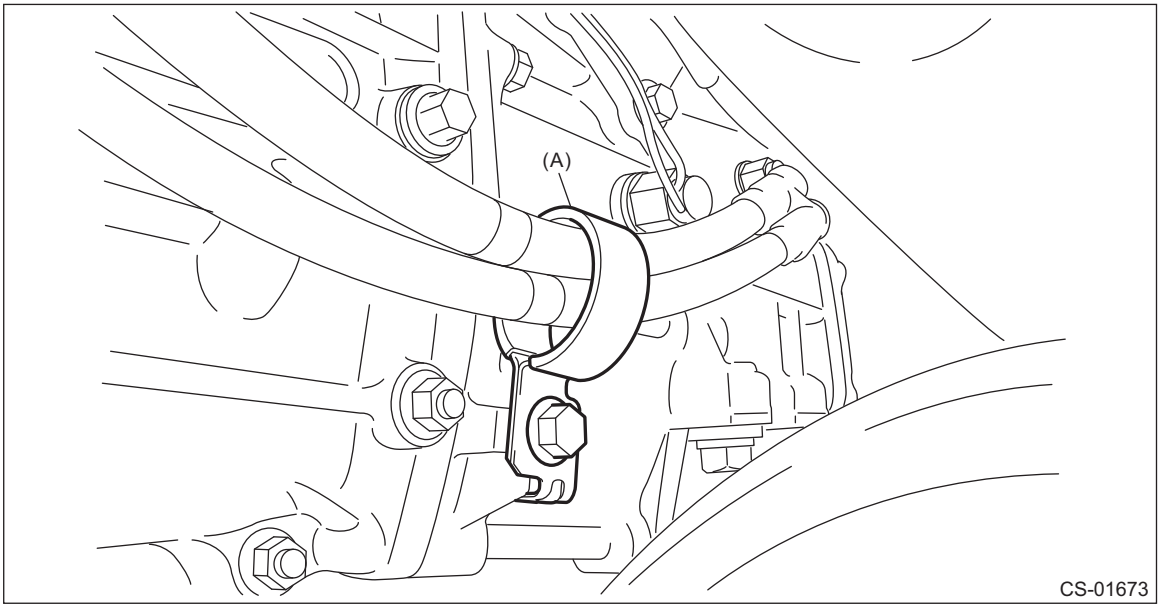
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.

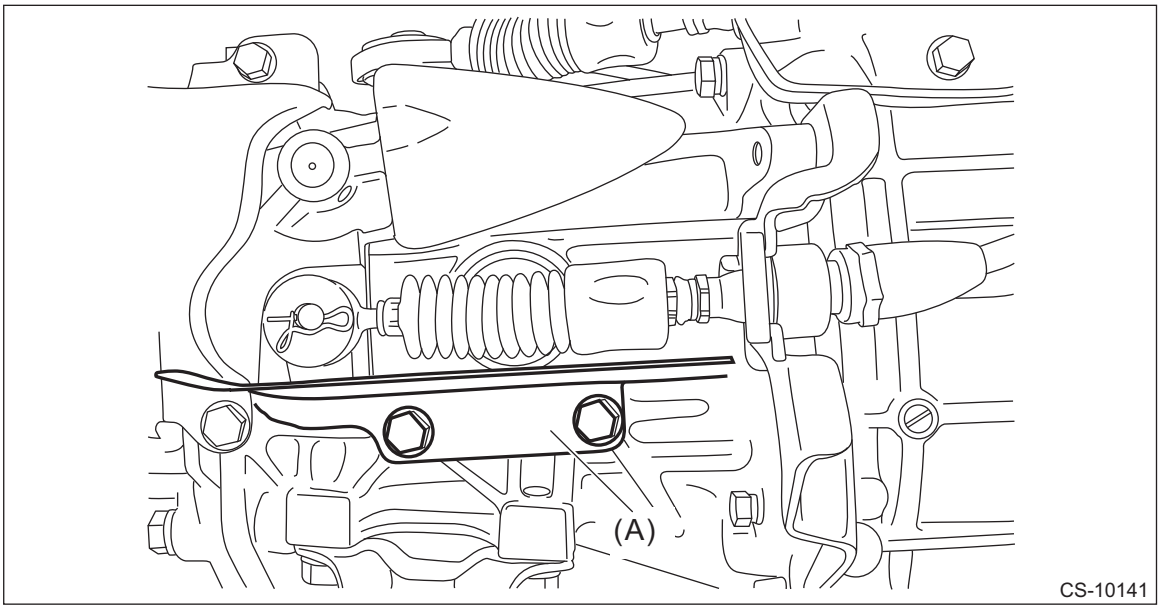


5) Remove the cable clamp.



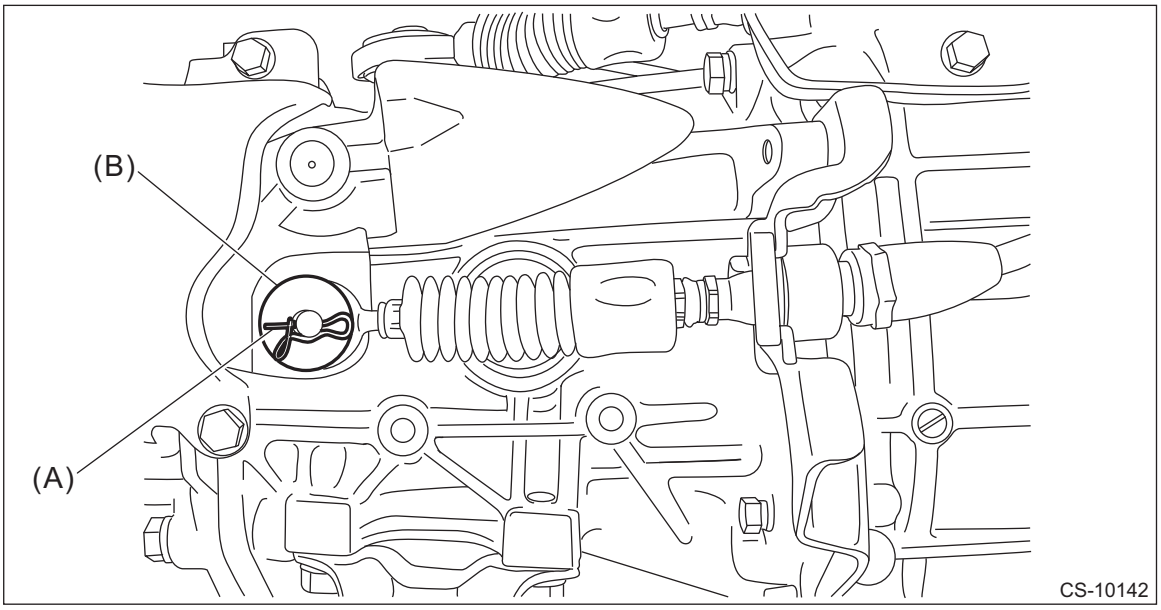
(A) Cable clamp

6) Remove the dust cover.



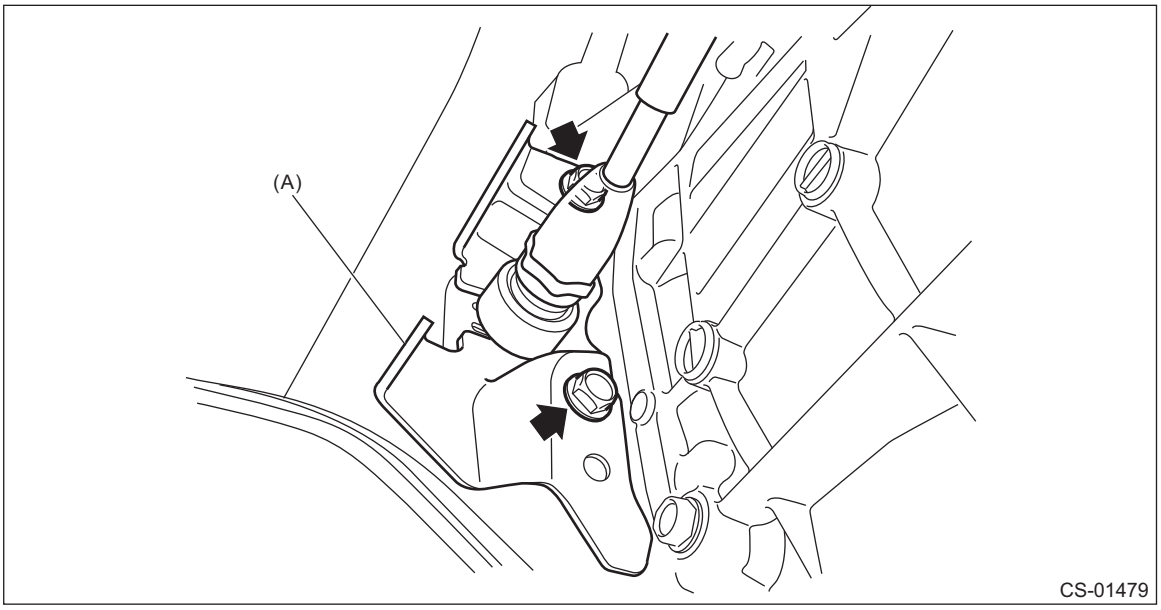
(A) Dust cover

7) Remove the snap pin and washer.



(A) Snap pin (B) Washer

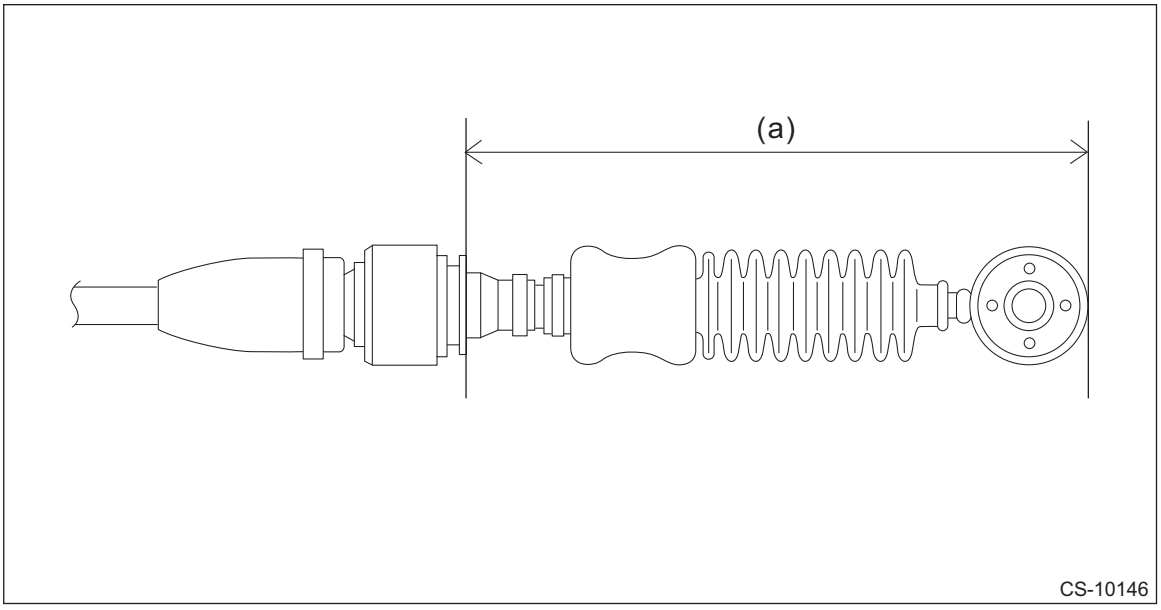
8) Remove the bolts holding the shift bracket.

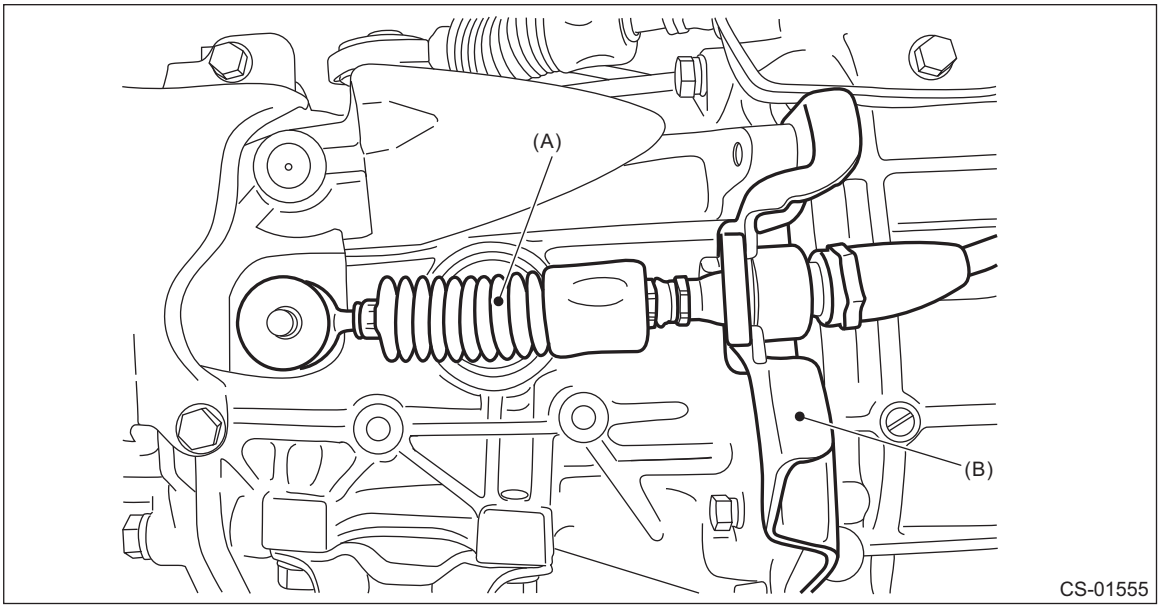


(A) Shift bracket

9) Remove the shift bracket together with the MT gear shift cable.

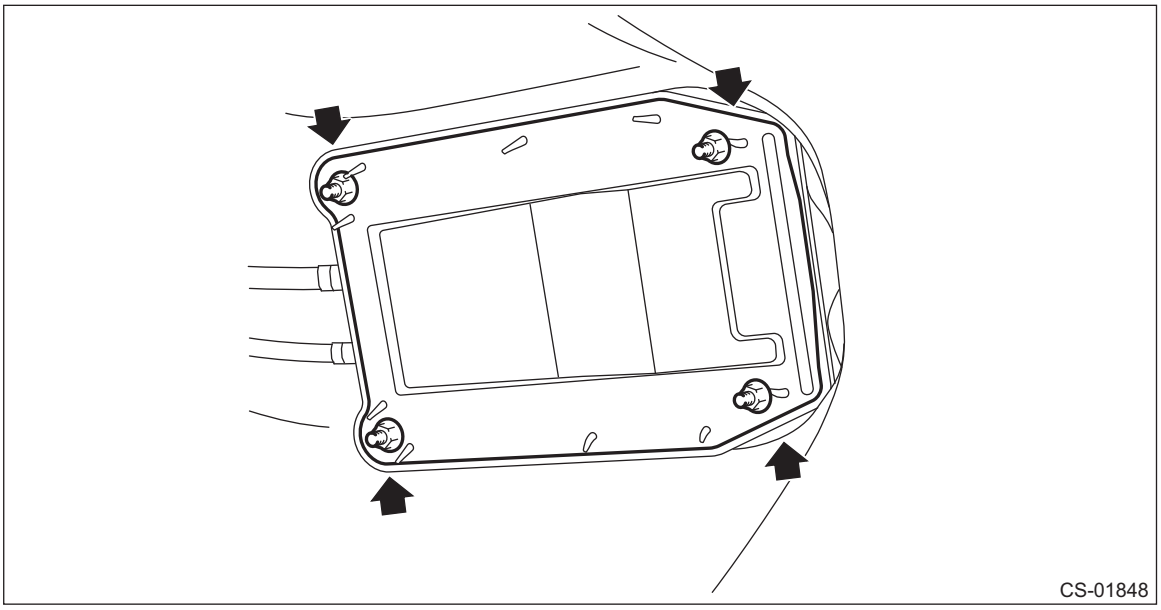
CAUTION:
Do not apply extra overload while holding the part (a).





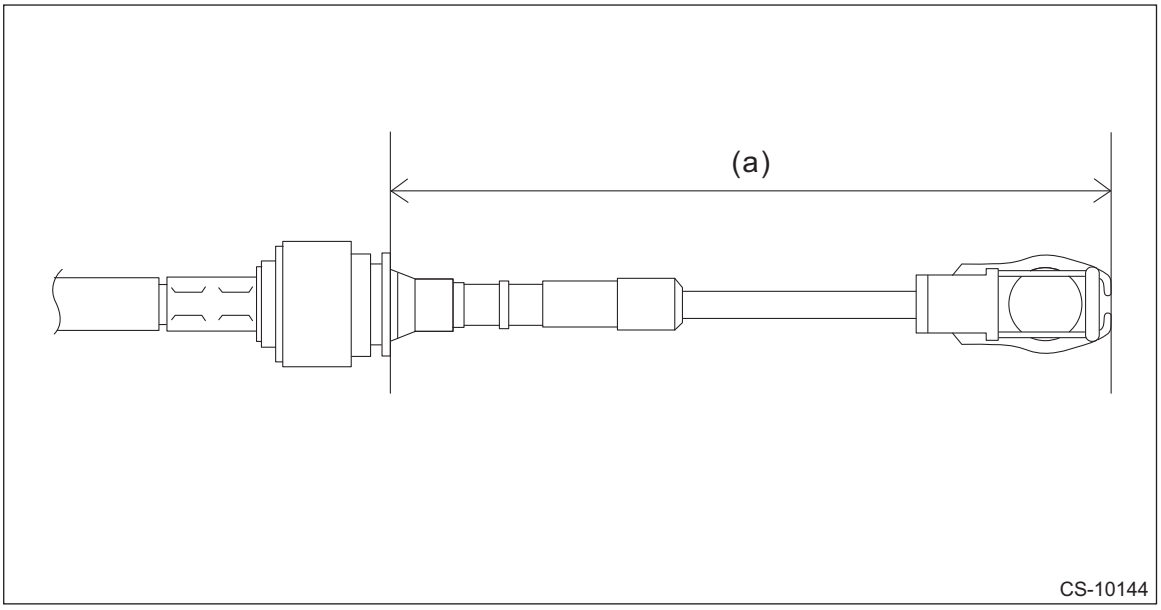
(A) MT gear shift cable (B) Shift bracket

10) Remove the cable cover plate.

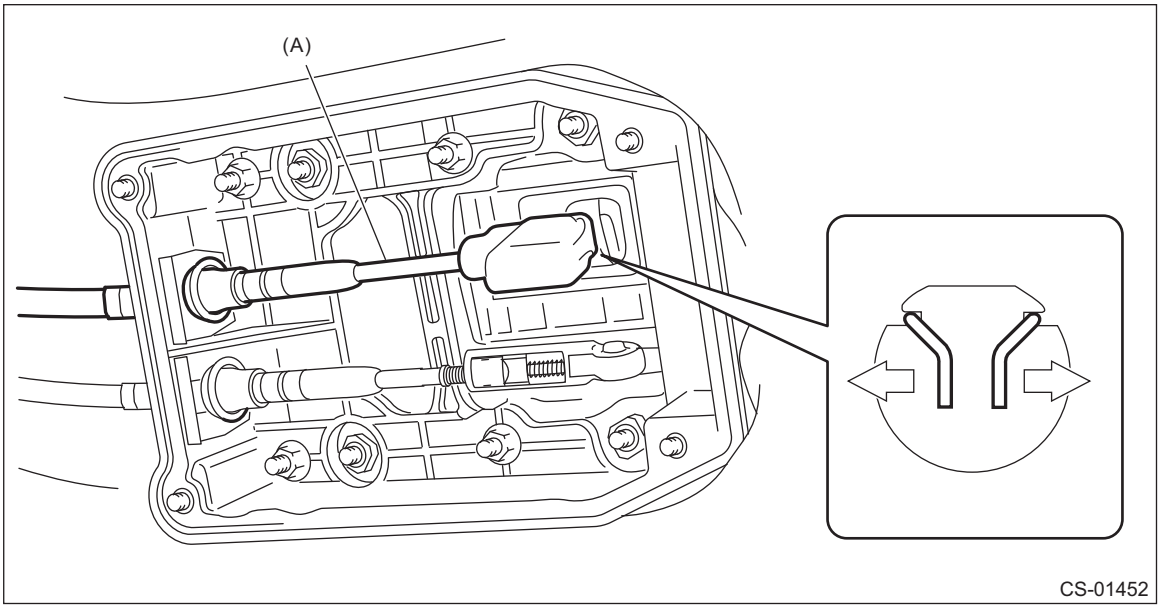


11) Disconnect the MT gear shift cable.

CAUTION:
- **Be careful not to deform the cable inner.**
- **Do not apply extra overload while holding the part (a).**

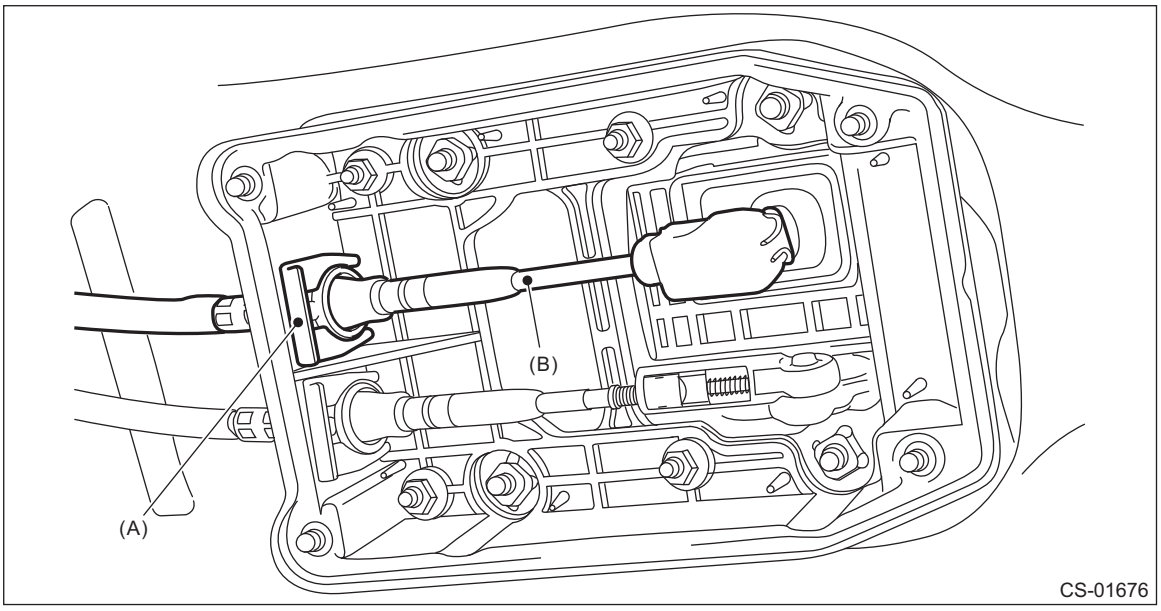


NOTE:
Pull out down the MT gear shift cable to spread the spring.



(A) MT gear shift cable

12) Remove the clamp.

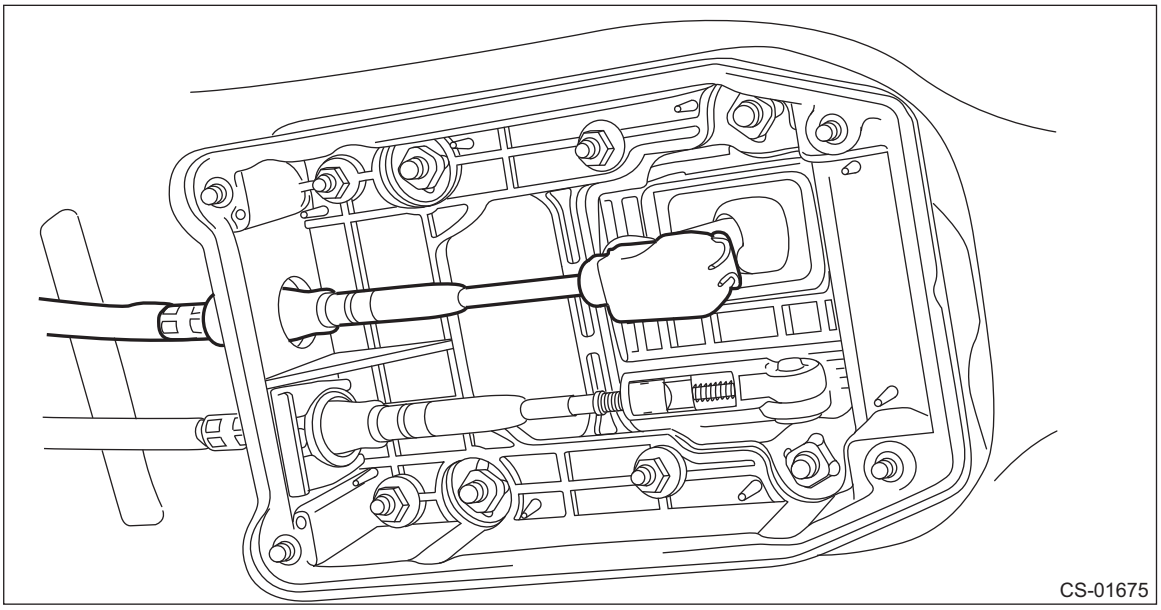


(A) Clamp (B) MT gear shift cable

13) Pull out the MT gear shift cable.

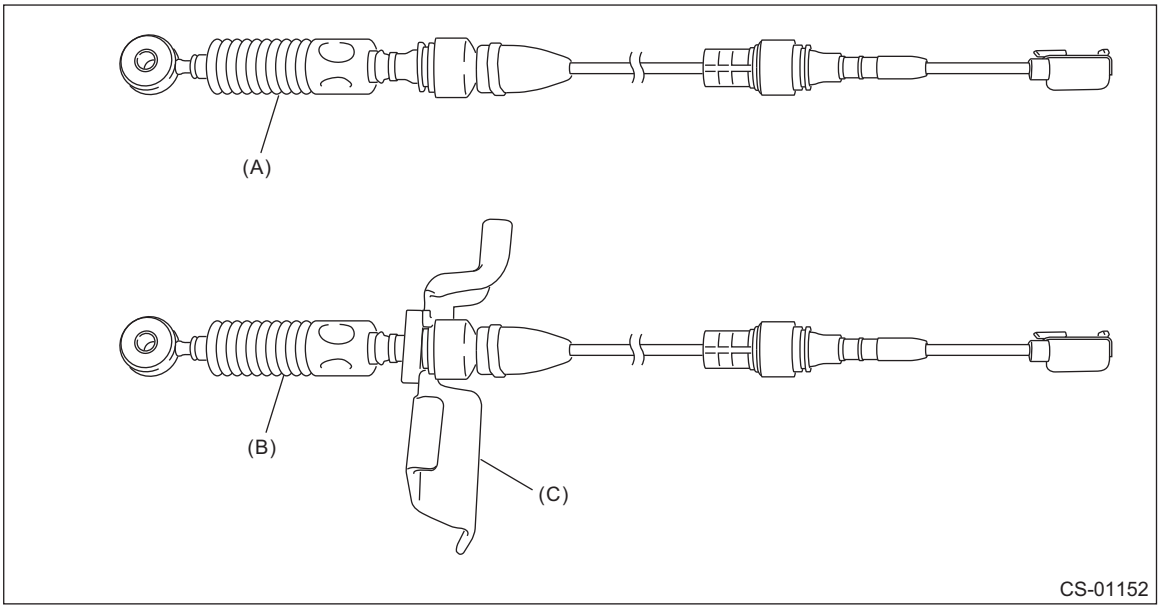
CAUTION:
- **Do not bend MT gear shift cable at a sharp angle.**

- **Do not twist the cable inner excessively.**



B: INSTALLATION

CAUTION:
- **Do not bend MT gear shift cable at a sharp angle.**
- **When replacing the new MT gear shift cable, secure it to shift bracket with the clamps, be careful not to mistake the installing direction.**

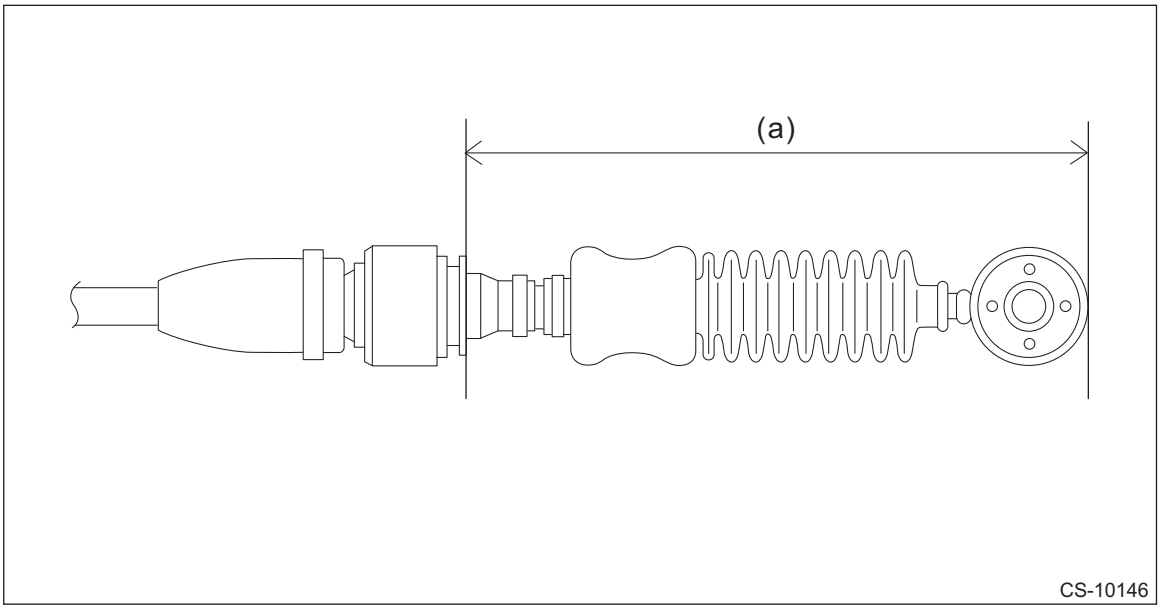


(A) Old MT gear shift cable (B) New MT gear shift cable (C) Shift bracket

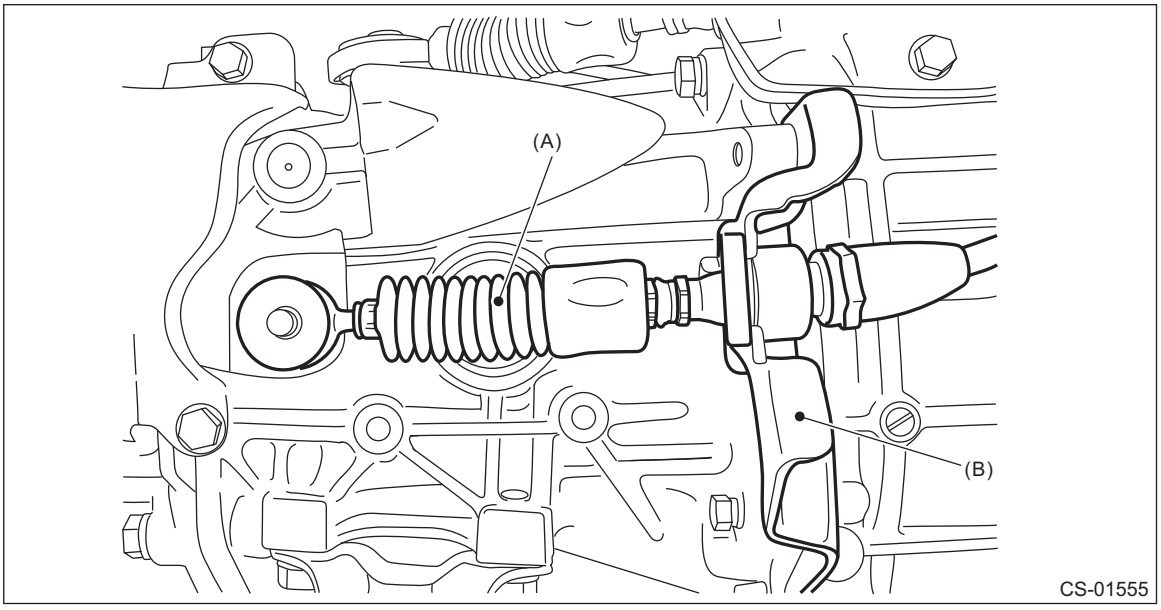
1) Install the shift bracket together with the MT gear shift cable.

CAUTION:
- **Do not twist the cable inner excessively.**

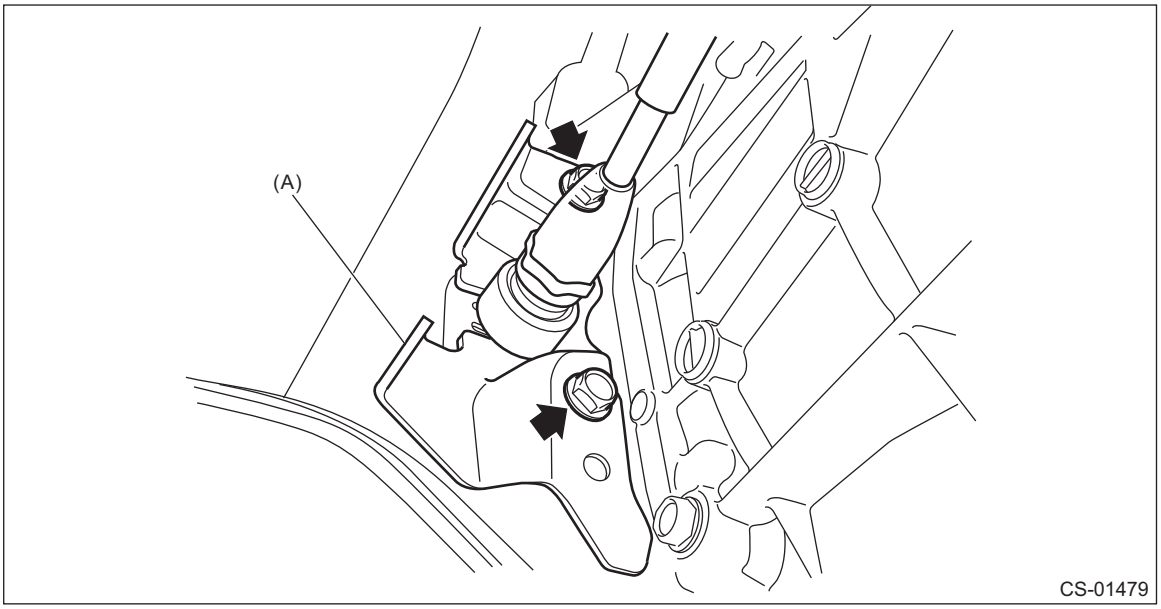
- **Do not apply extra overload while holding the part (a).**



Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

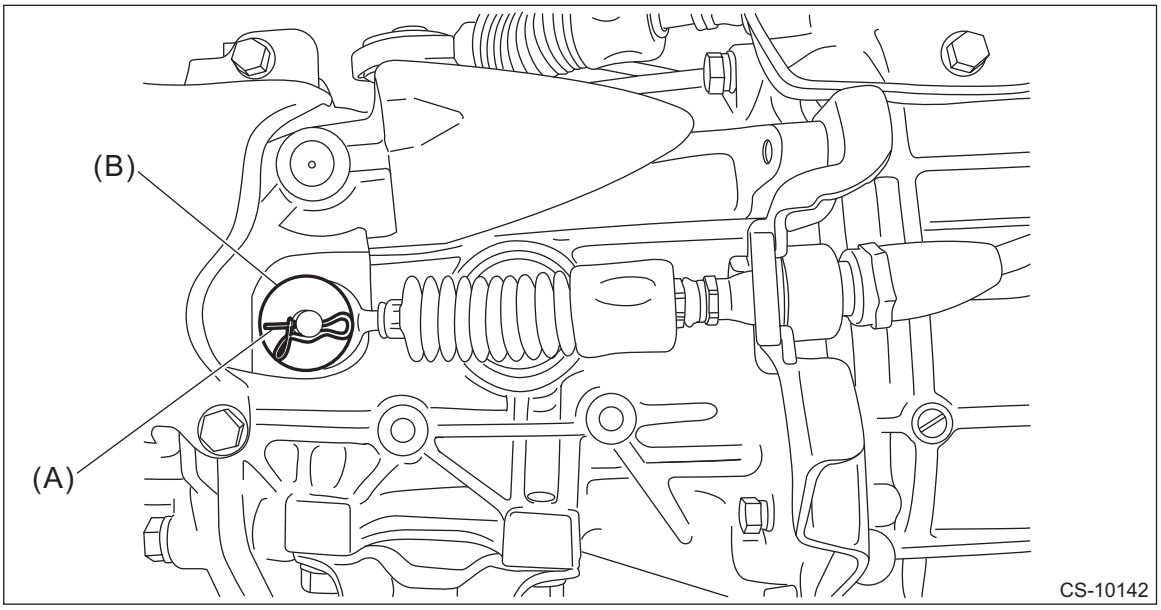


(A) MT gear shift cable (B) Shift bracket



(A) Shift bracket

2) Install the snap pin and washer.

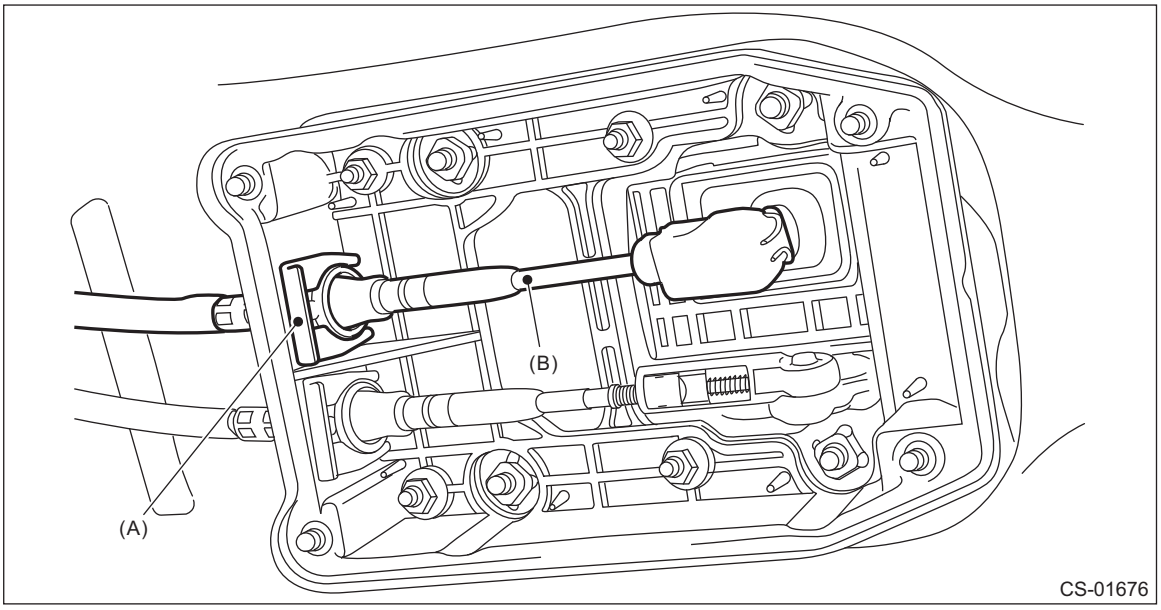


(A) Snap pin (B) Washer

3) Install the dust cover.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

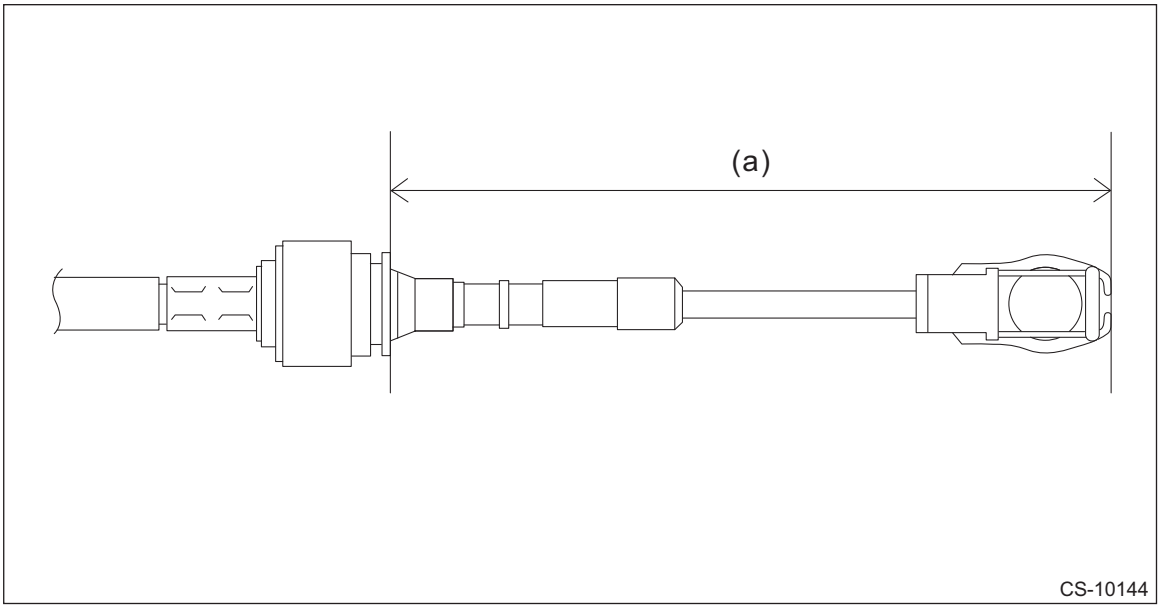
4) Insert the MT gear shift cable into cable cover assembly, and install the clamp.



(A) Clamp (B) MT gear shift cable

5) Connect the MT gear shift cable.

CAUTION:
Do not apply extra overload while holding the part (a).

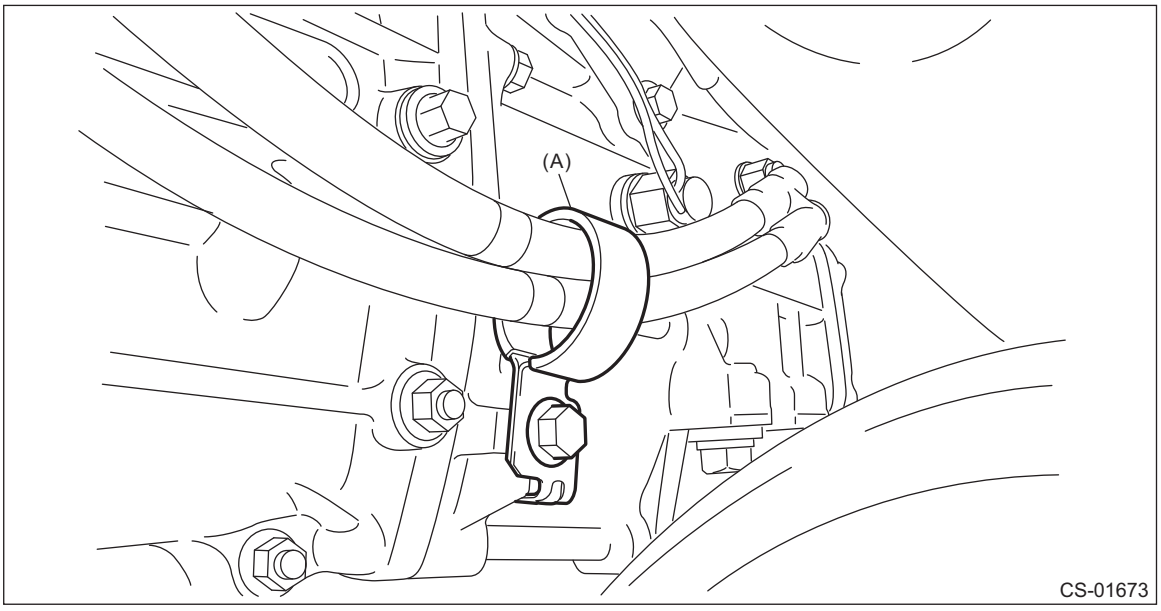


6) Attach the cable cover plate.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Insert the MT gear shift cable into cable clamp, and install to the transmission.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Cable clamp

8) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

9) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
10) Lower the vehicle.
11) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

12) Make sure the gears can be shifted accurately into each gear.

9. MT Gear Select Cable

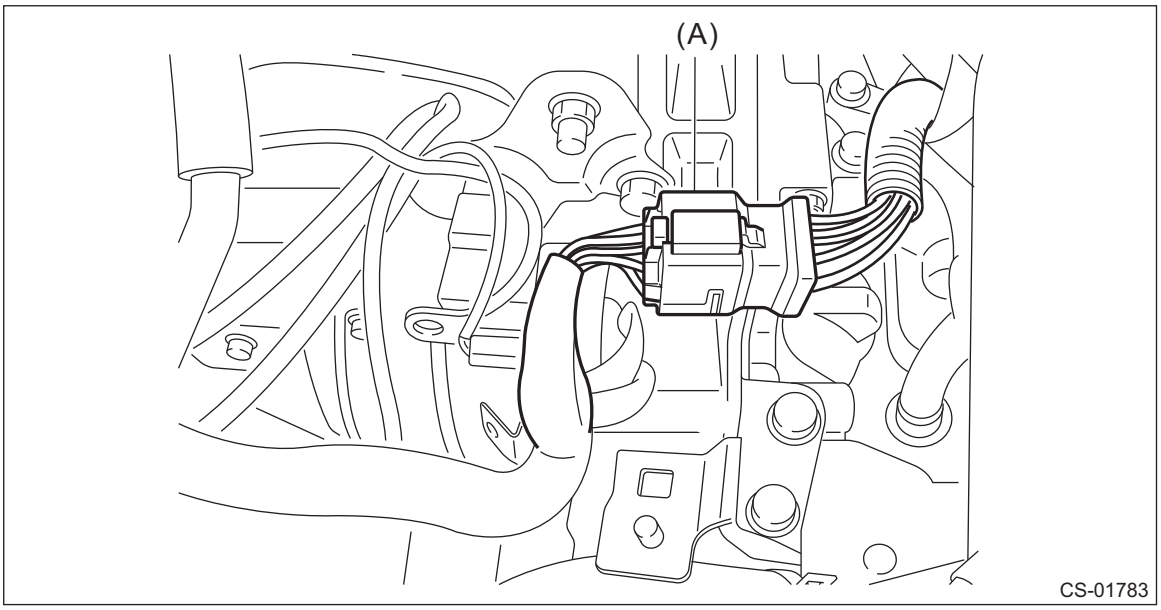
A: REMOVAL

CAUTION:
Always use new MT gear select cable if the cable is removed from selector lever COMPL of transmission side.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

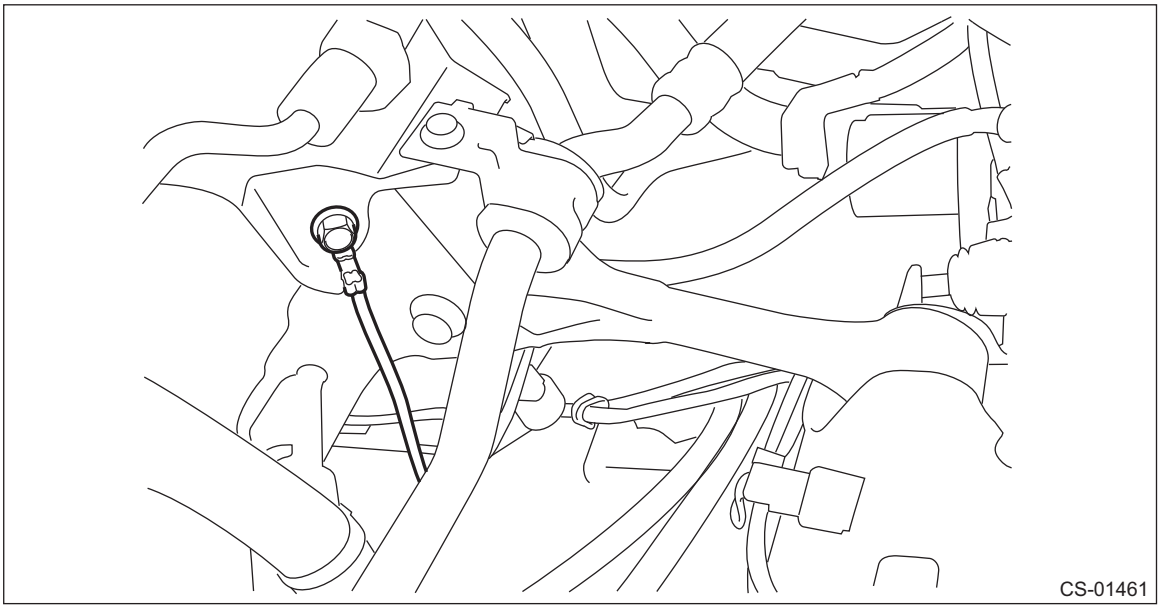
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Remove the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Disconnect the engine harness connector.



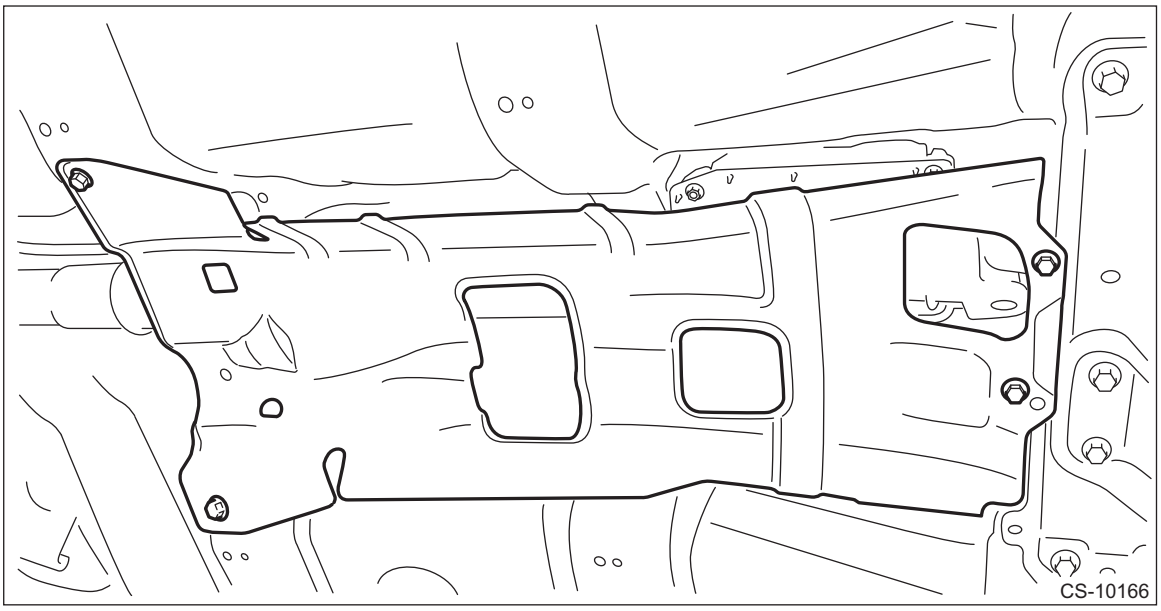
(A) Engine harness connectors

5) Disconnect the transmission radio ground cord terminal.

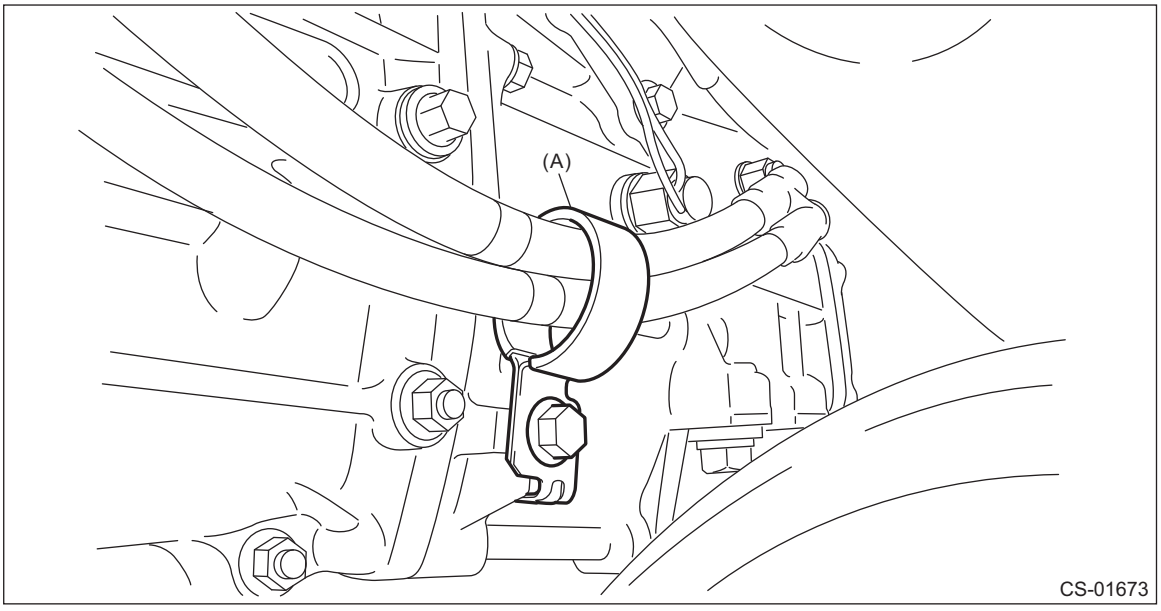


6) Remove the pitching stopper. <Ref. to 6MT(TY85)-30, PITCHING STOPPER, REMOVAL, Transmission Mounting System.>

7) Lift up the vehicle.
8) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
9) Remove the center exhaust cover.



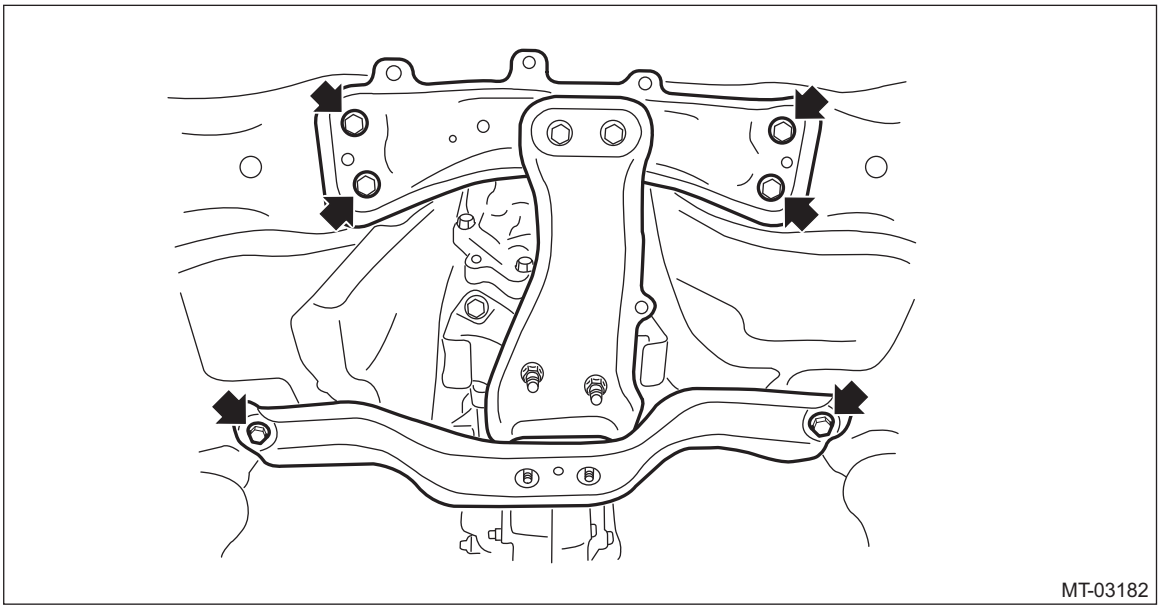
10) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
11) Remove the cable clamp.



(A) Cable clamp

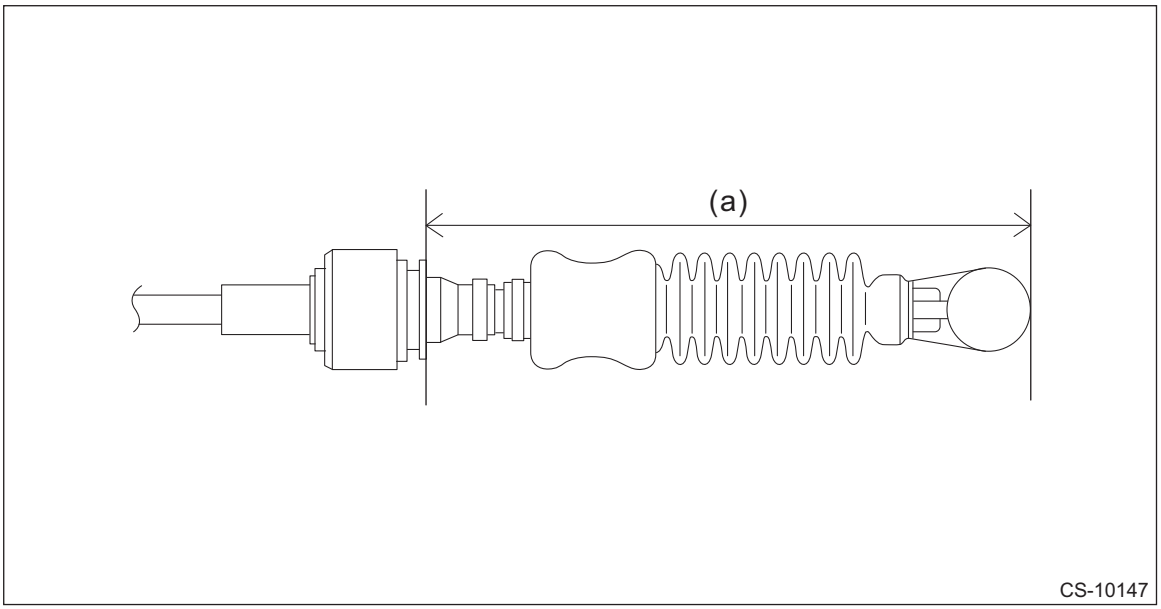
12) Place the transmission jack under the transmission.

13) Remove the mounting bolt of front crossmember and rear crossmember, and lower the transmission approx. 100 mm (4 in).



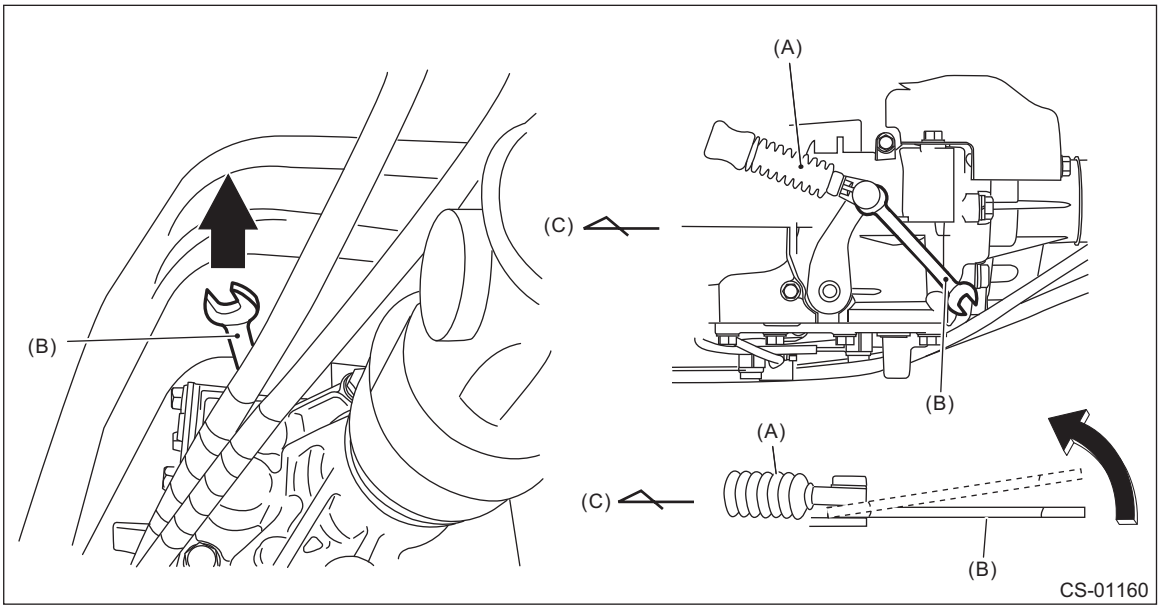
14) Insert a spanner between the selector lever COMPL and the MT gear select cable, and remove the MT gear select cable by raising the handle.

CAUTION:
Do not apply extra overload while holding the part (a).



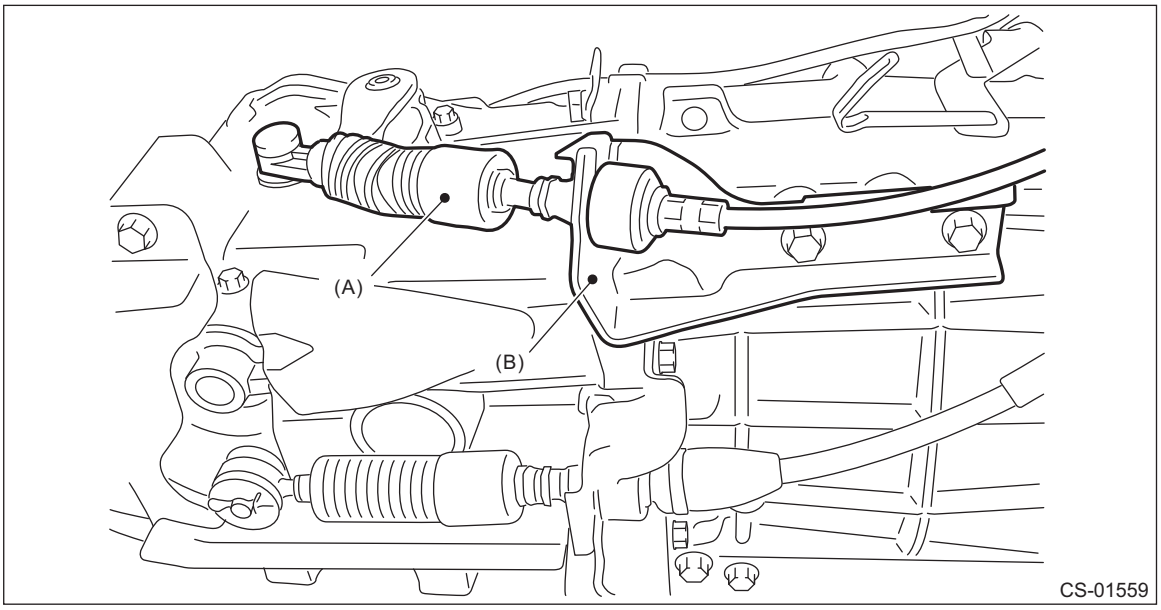
NOTE:
- Use a spanner with 11 to 13 in size.

- The thickness of the spanner must not exceed 6 mm (0.2 in).



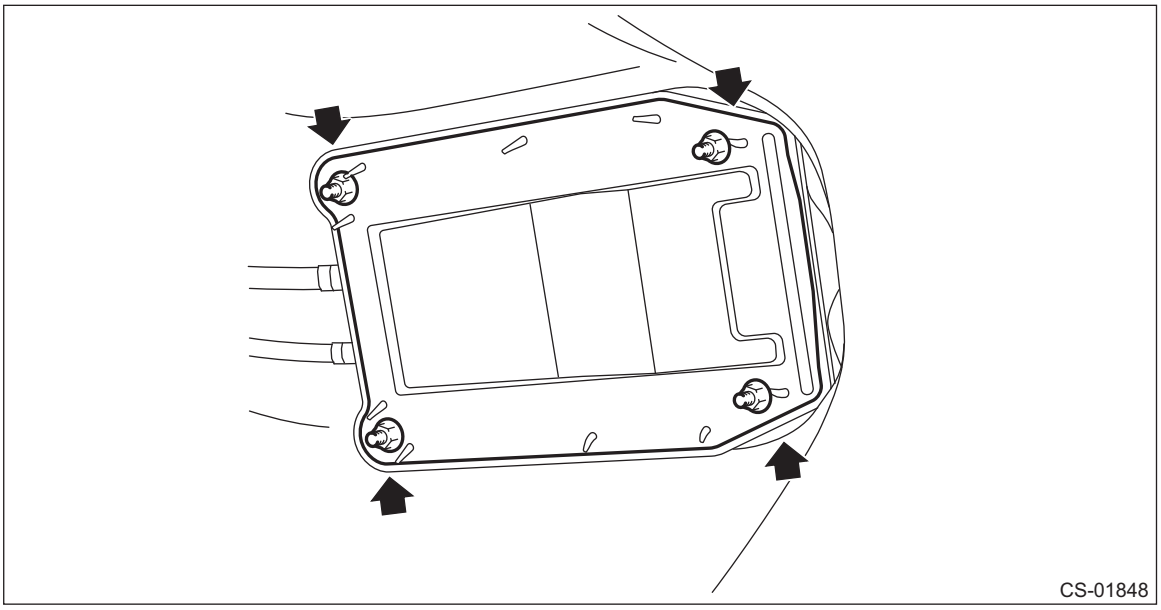
(A) MT gear select cable (B) Spanner (C) Forward

15) Remove the MT gear select cable and select bracket as a single unit.



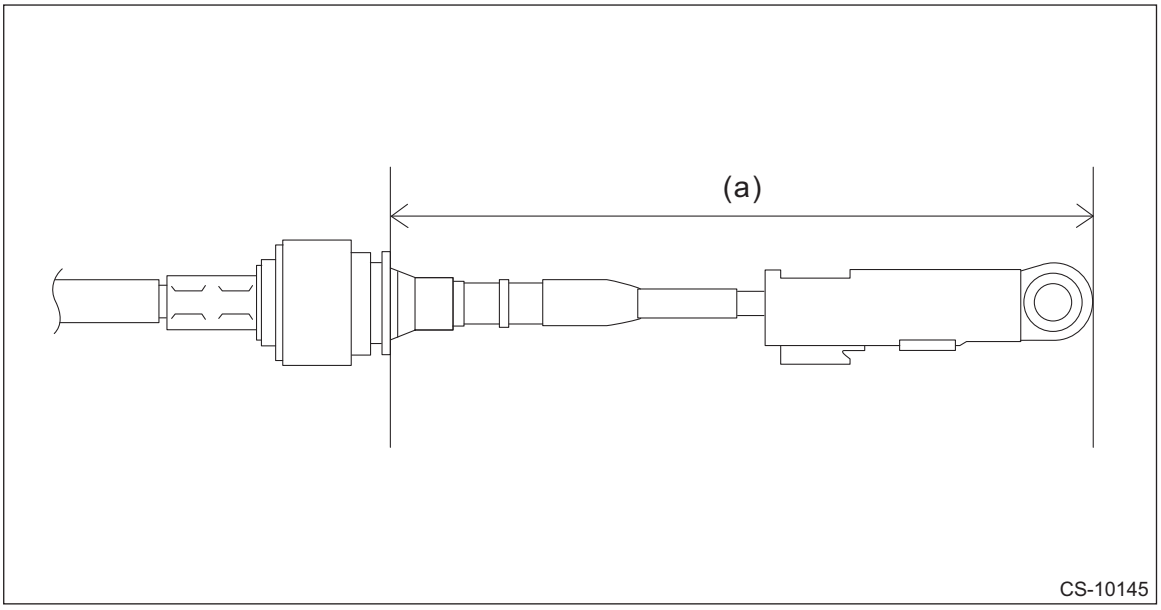
(A) MT gear select cable (B) Select bracket

16) Remove the cable cover plate.

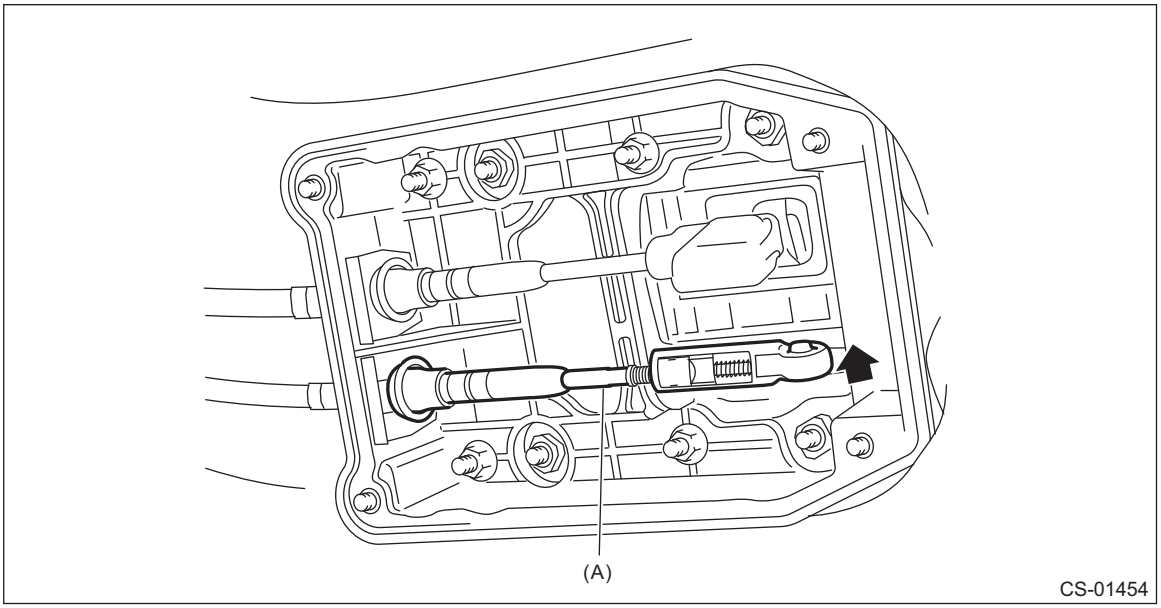


17) Disconnect the MT gear select cable.

CAUTION:
- **Be careful not to deform the cable inner.**
- **Do not apply extra overload while holding the part (a).**

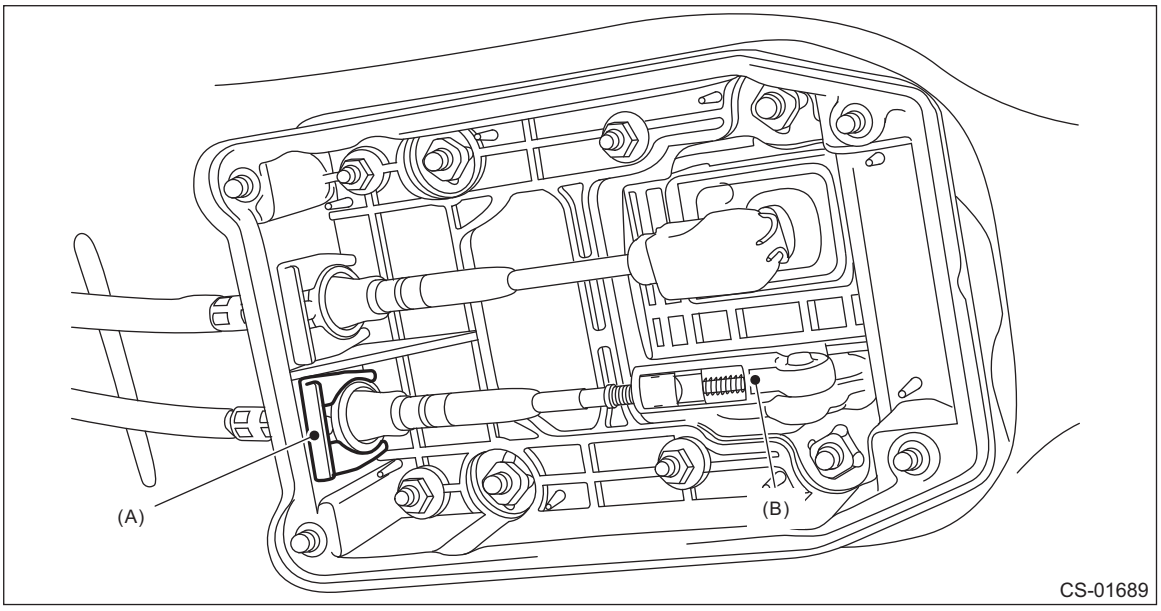


NOTE:
Push the MT gear select cable in the direction of arrow, and remove it.



(A) MT gear select cable

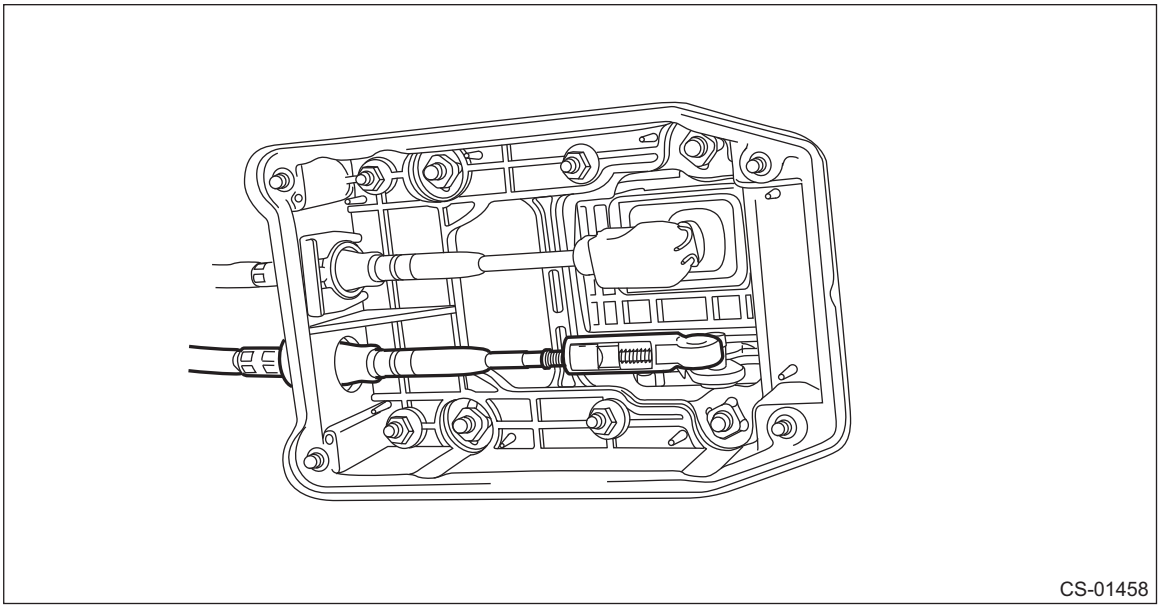
18) Remove the clamp.



(A) Clamp (B) MT gear select cable

19) Pull out the MT gear select cable.

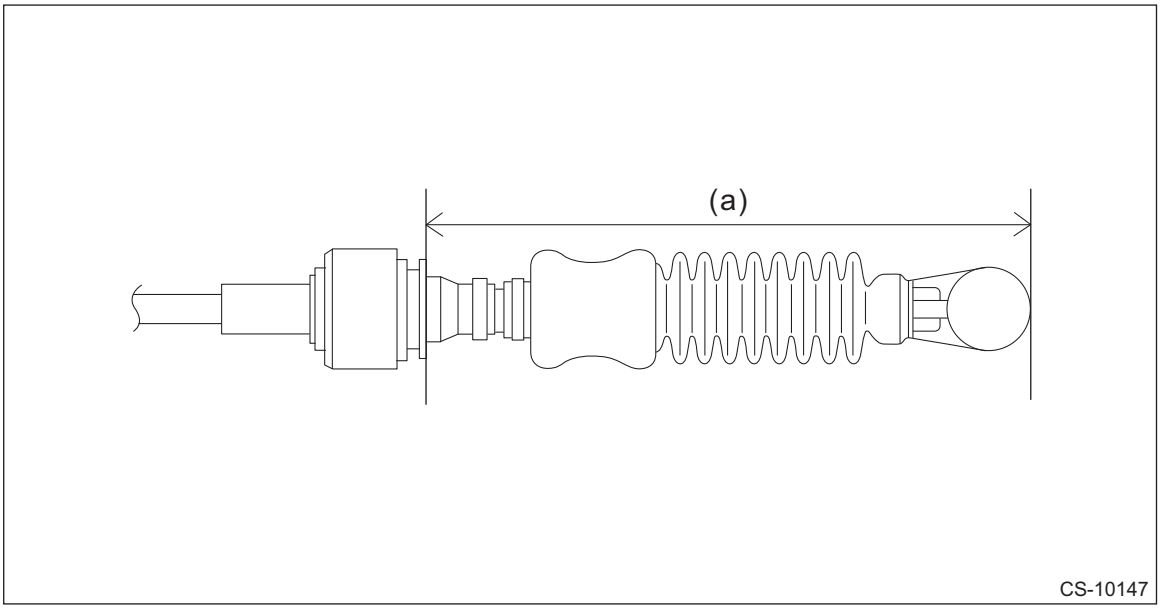
CAUTION:
Do not bend the MT gear select cable sharply.



CS-01458

B: INSTALLATION

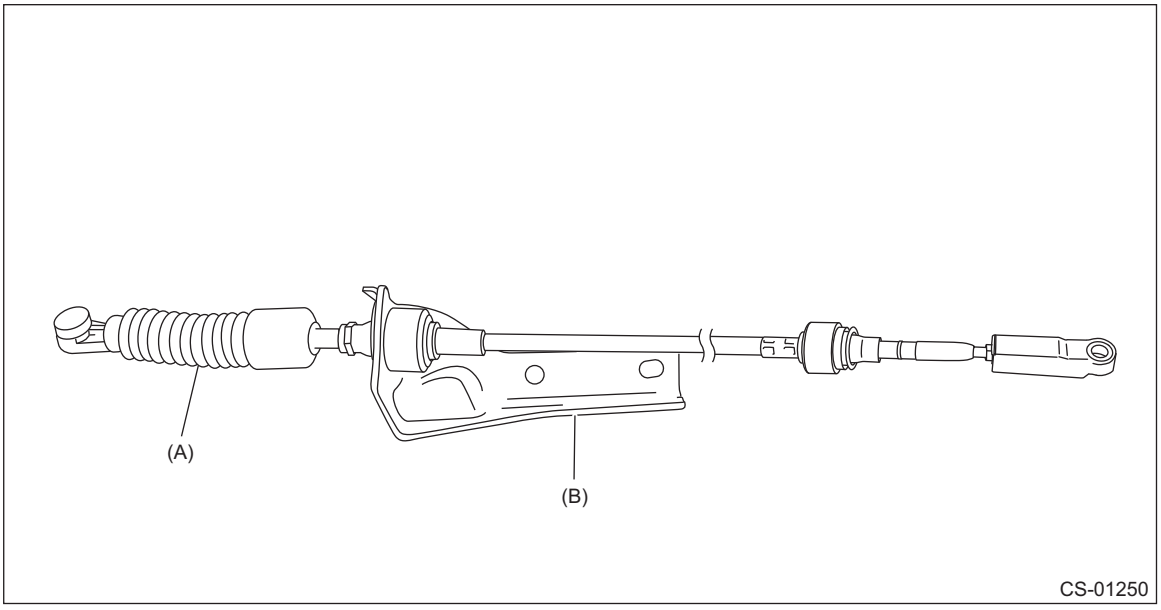
CAUTION:
• Always use new MT gear select cable if the cable is removed from selector lever COMPL of transmission side.
• Do not bend the MT gear select cable sharply.
• Do not twist the inner cable excessively.
• Do not apply extra overload while holding the part (a).



CS-10147

1) Remove the MT gear select cable from the select bracket.

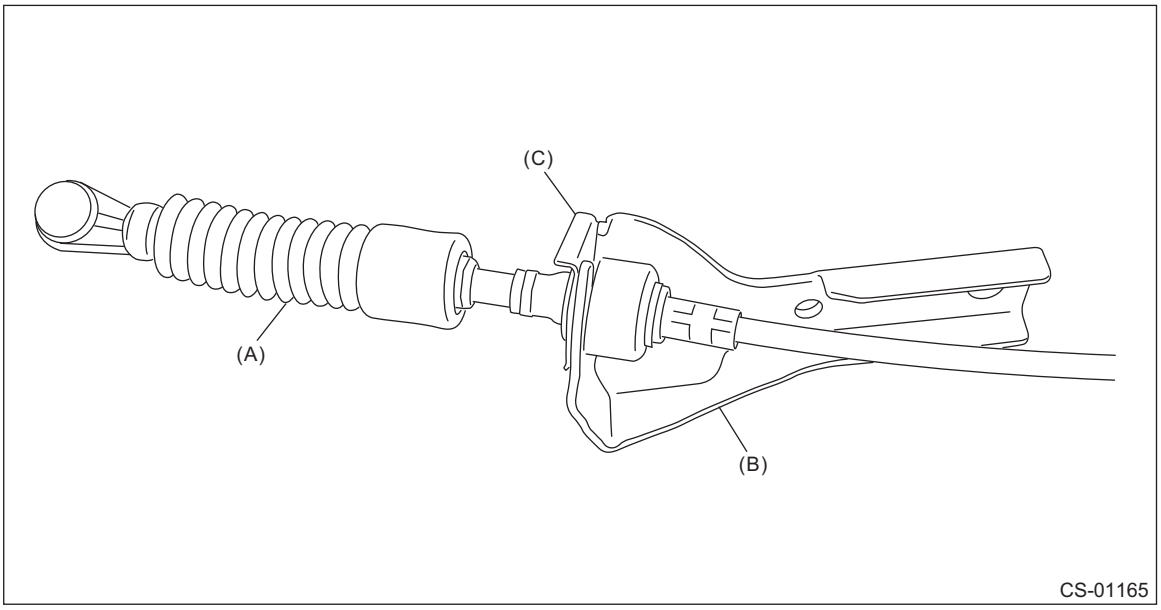
CAUTION:
Check for assembling position before removing the MT gear select cable from the select bracket.



(A) MT gear select cable (B) Select bracket

2) Set to the new MT gear select cable to the select bracket and secure it with the clamp.

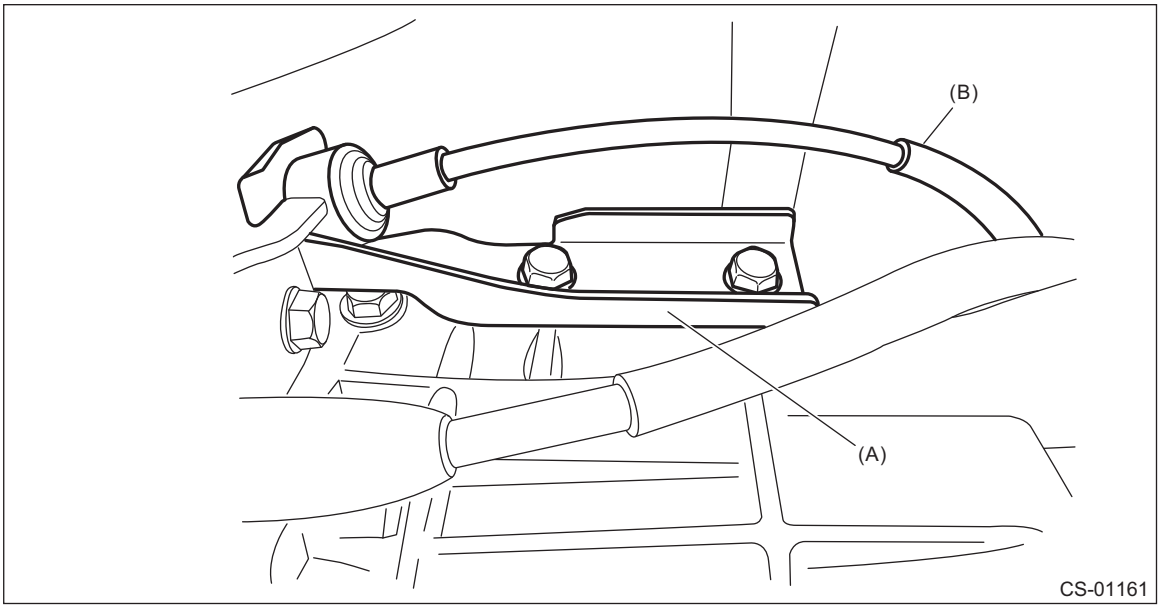
CAUTION:
Be careful not to mistake the MT gear select cable installing direction.



(A) MT gear select cable (B) Select bracket (C) Clamp

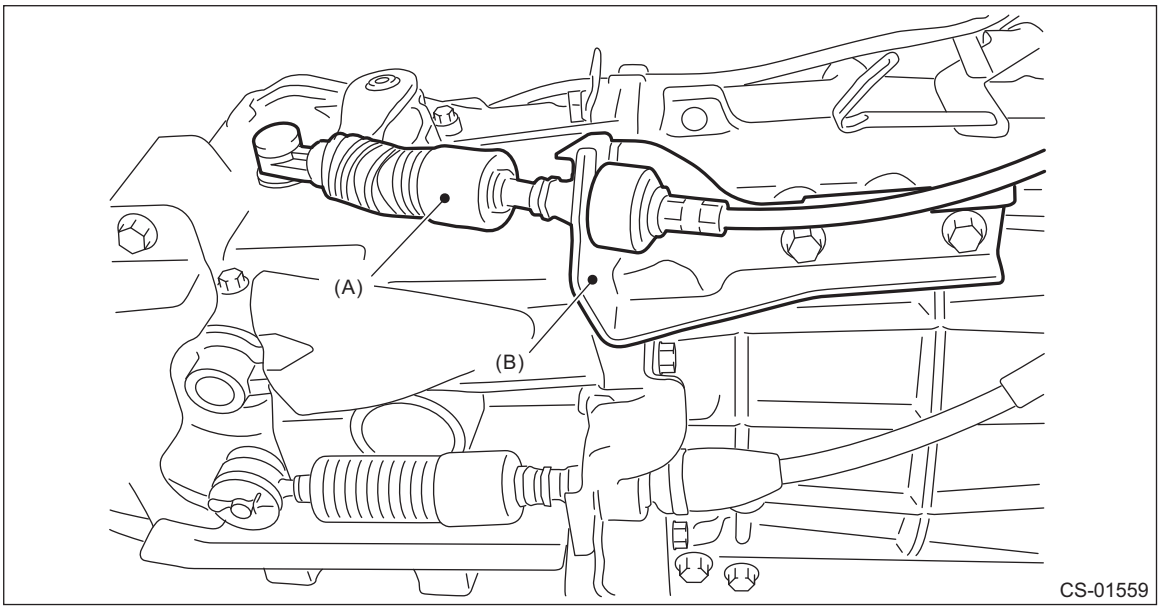
3) Install the MT gear select cable and select bracket as a single unit.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



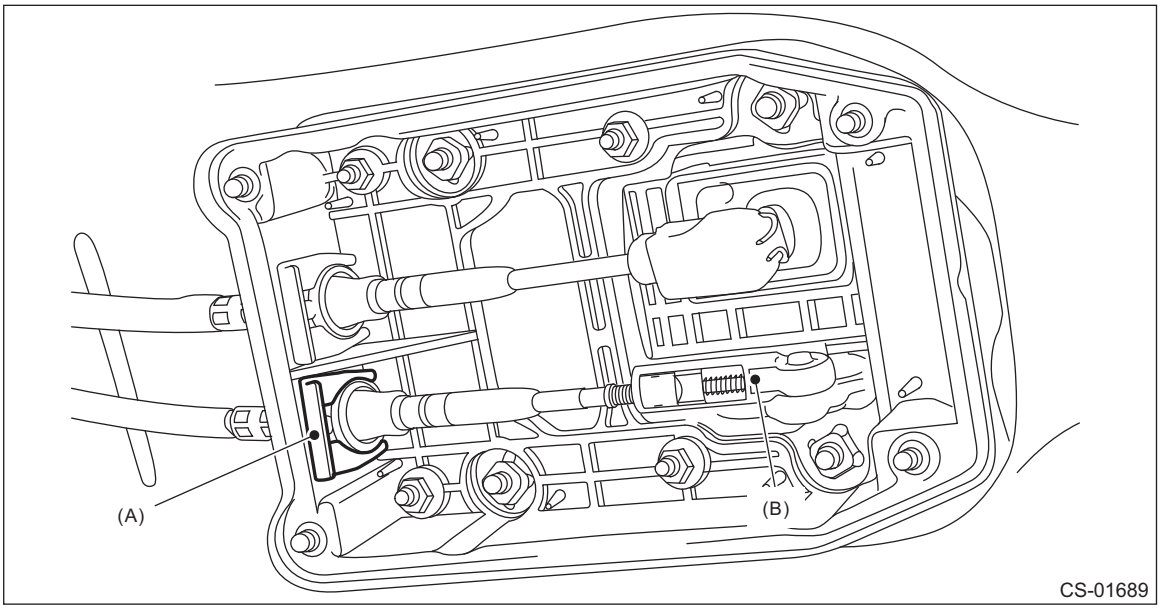
(A) Select bracket (B) MT gear select cable

4) Install the MT gear select cable to the select lever COMPL.



(A) MT gear select cable (B) Select bracket

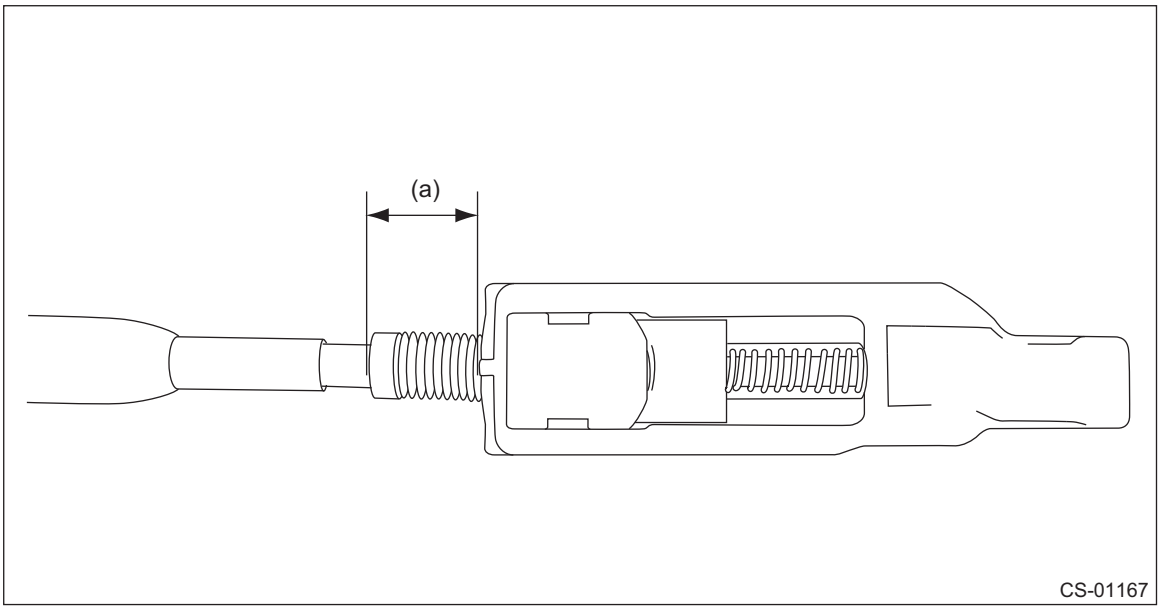
5) Insert the MT gear select cable into cable cover assembly, and install the clamp.



(A) Clamp (B) MT gear select cable

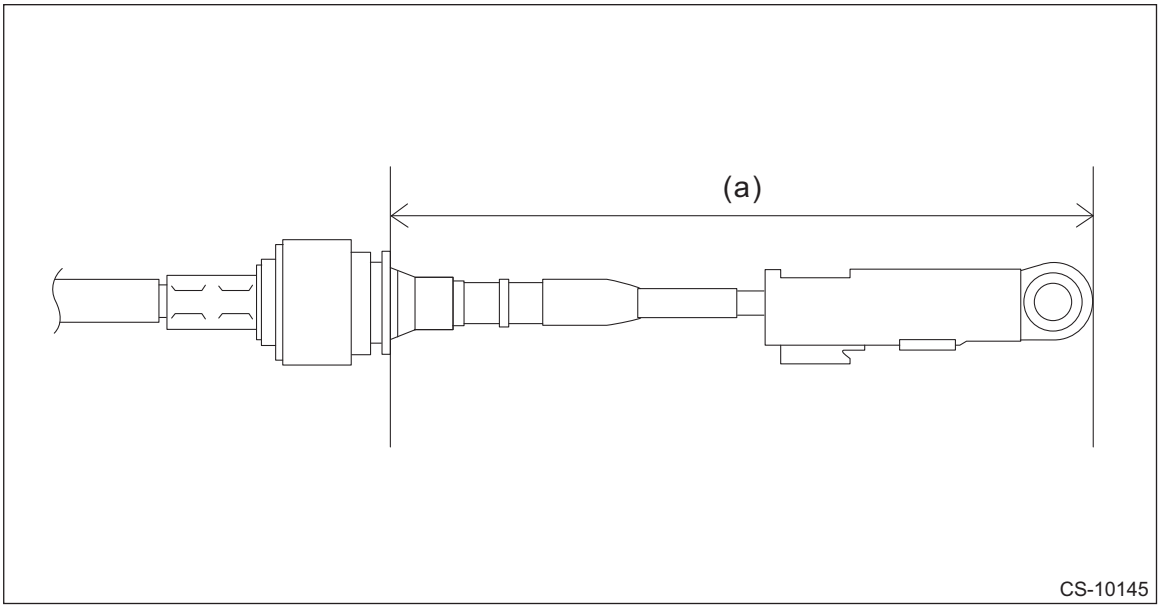
6) Measure the exposed length (a) of MT gear select cable. If the value is out of specification, adjust the MT gear select cable. <Ref. to CS-113, ADJUSTMENT, MT Gear Select Cable.>

Exposed length (a) of MT gear select cable:
Specification: 11 mm (0.4 in)



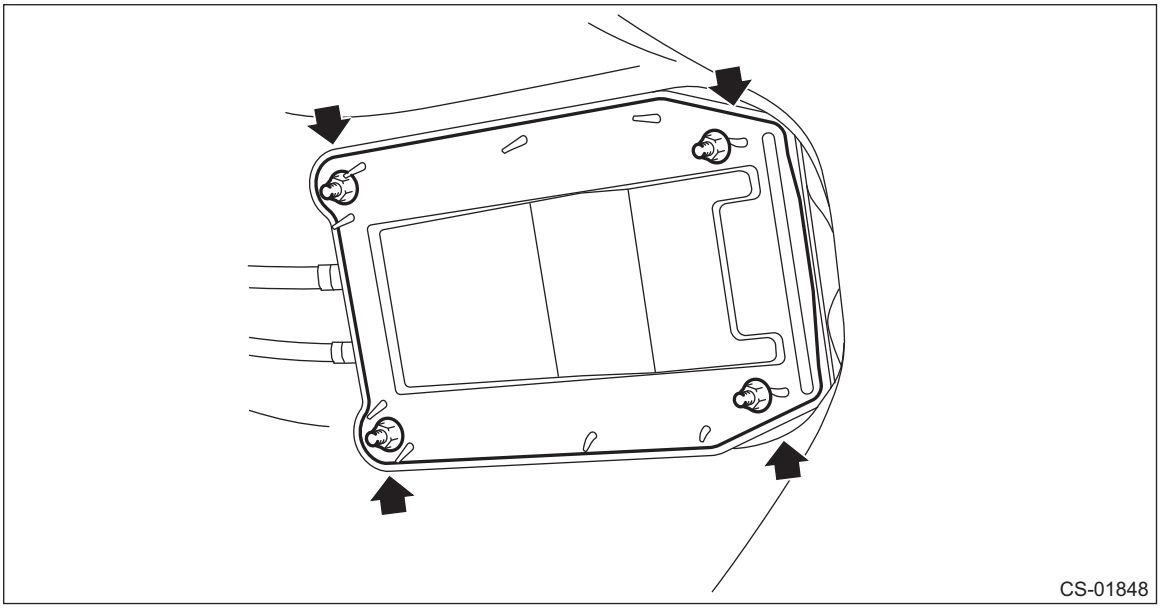
7) Connect the MT gear select cable.

CAUTION:
Do not apply extra overload while holding the part (a).



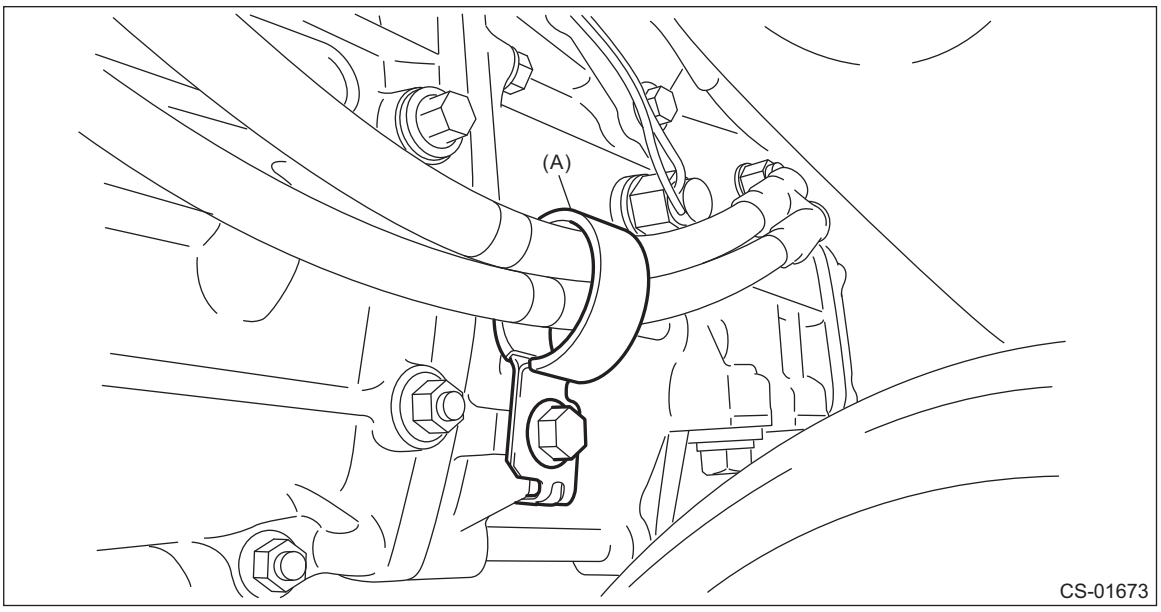
8) Attach the cable cover plate.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



9) Insert the MT gear select cable into cable clamp, and install to the transmission.

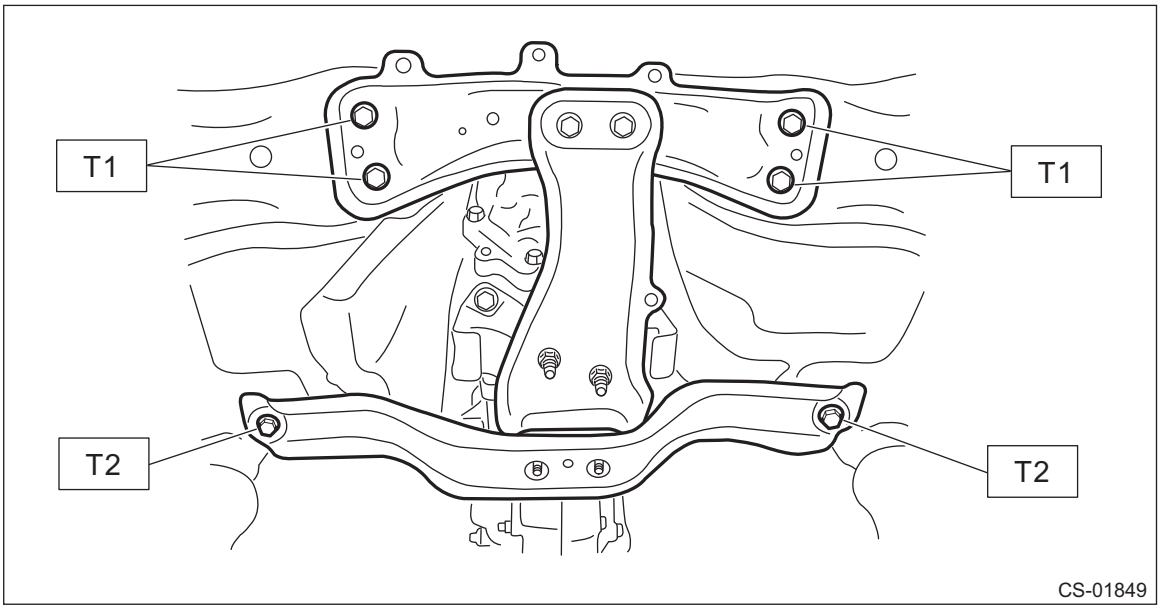
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Cable clamp

10) Raise the transmission jack, install the front crossmember and rear crossmember.

Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)

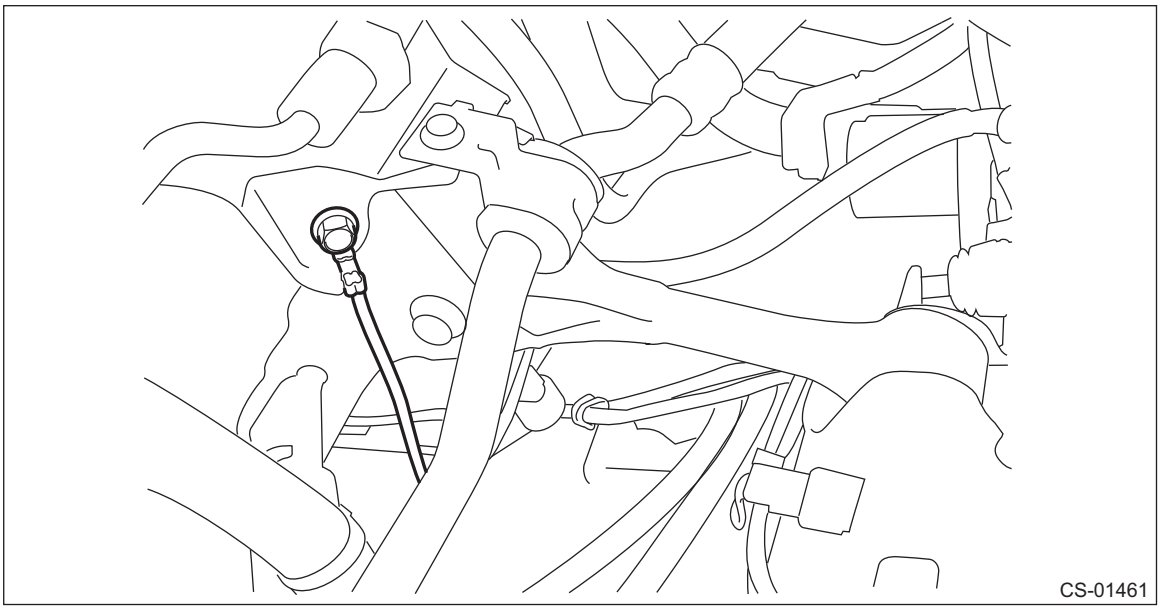


11) Take out the transmission jack.
12) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
13) Install the center exhaust cover.

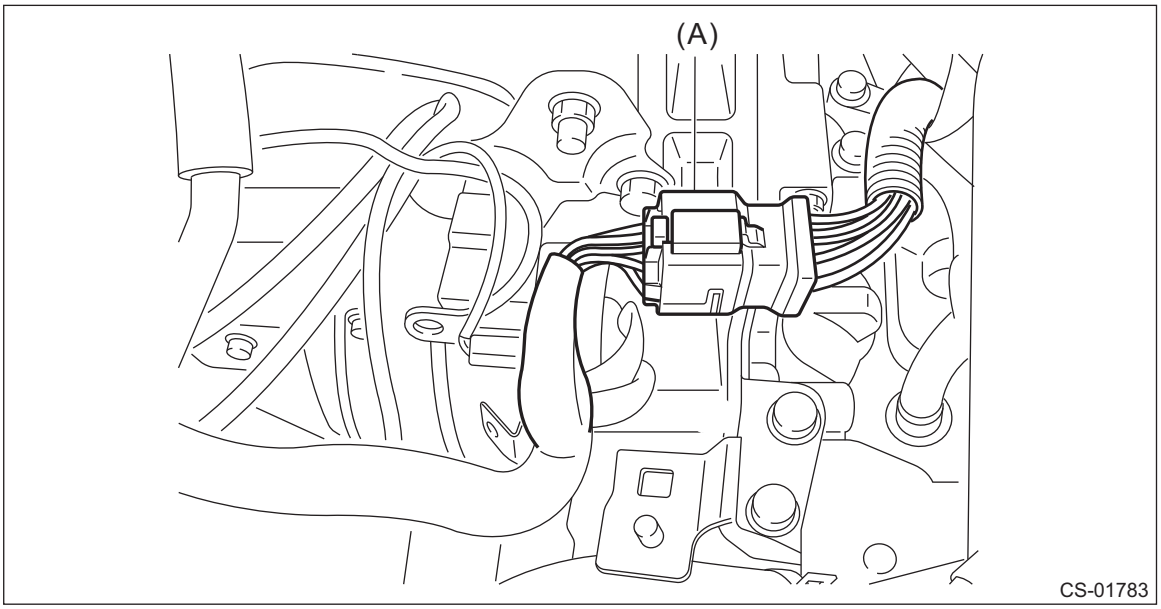
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
14) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
15) Lower the vehicle.
16) Install the pitching stopper. <Ref. to 6MT(TY85)-30, PITCHING STOPPER, INSTALLATION, Transmission Mounting System.>

17) Install the transmission radio ground cord terminal.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)



18) Connect the engine harness connector.



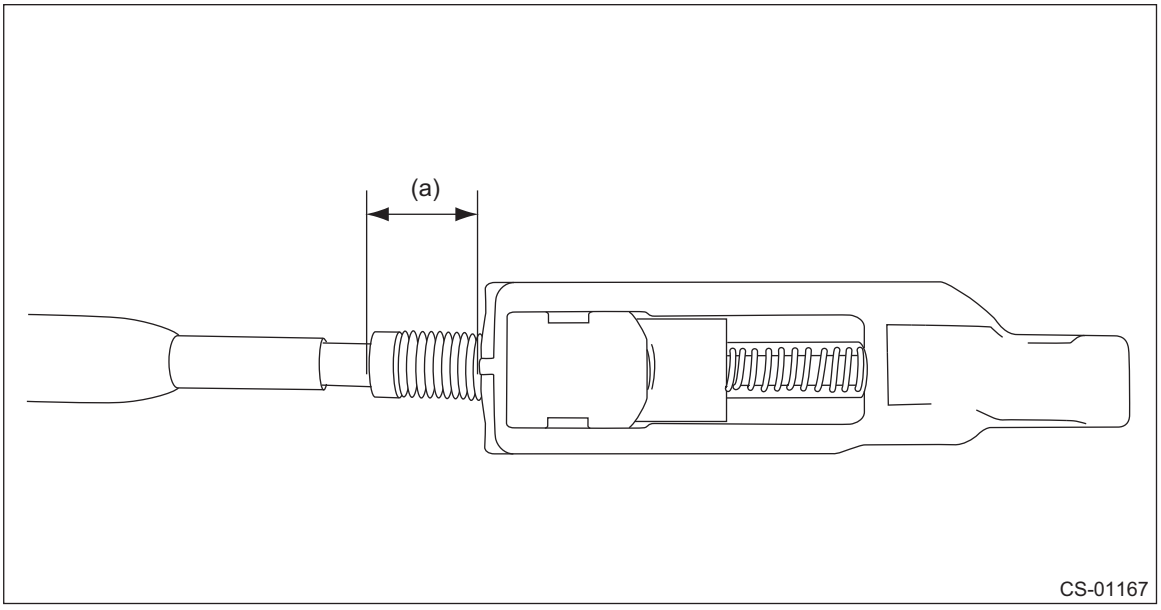
(A) Engine harness connectors

19) Install the intercooler stay and the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
20) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
21) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
22) Make sure the gears can be shifted accurately into each gear.

C: INSPECTION

1) Check that exposed length (a) of MT gear select cable is within specification.

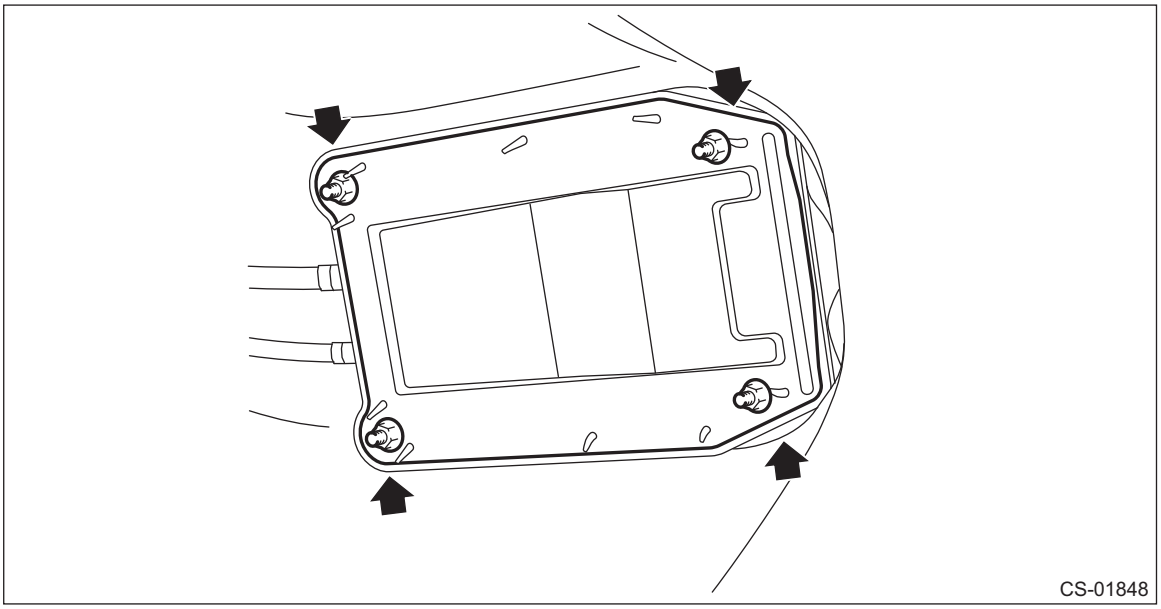
Exposed length (a) of MT gear select cable:
Specification: 11 mm (0.4 in)



2) If it is not within the specification, perform the adjustment. <Ref. to CS-113, ADJUSTMENT, MT Gear Select Cable.>

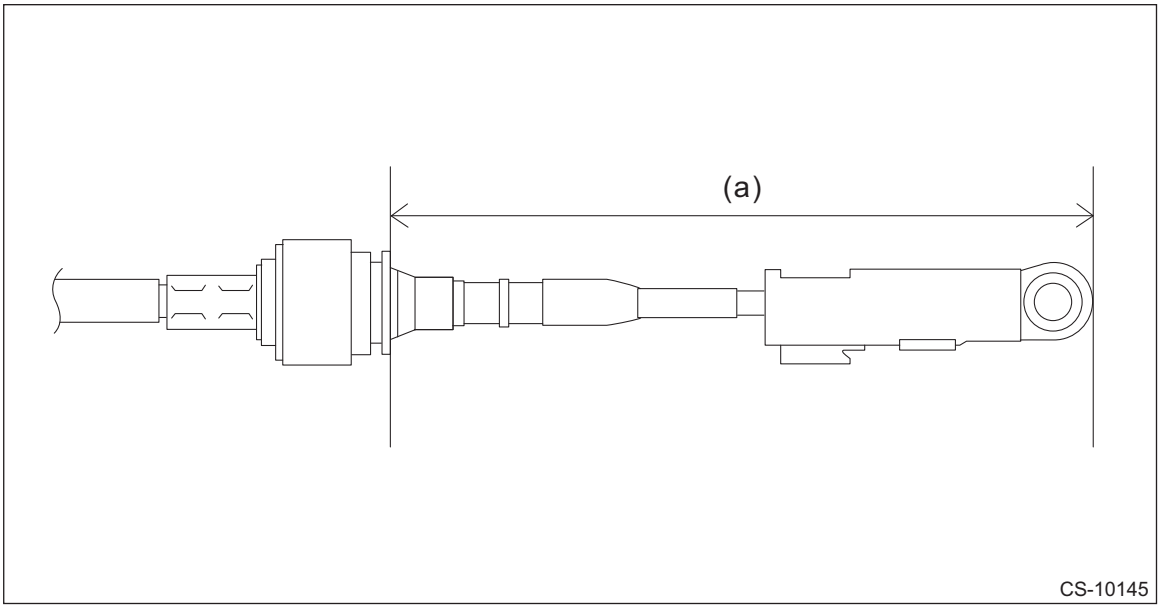
D: ADJUSTMENT

NOTE:
Two persons are required to perform the MT gear select cable adjustment. (Only the step 7) requires two workers.)
1) Move the shift lever to the 6th.
2) Remove the cable cover plate.

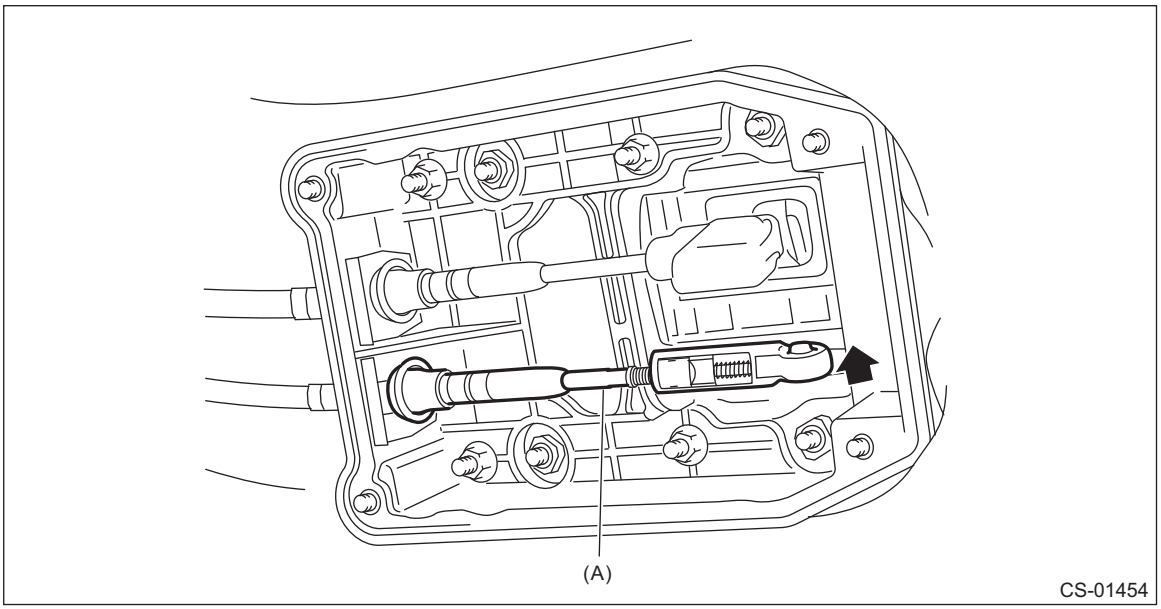


3) Disconnect the MT gear select cable.

CAUTION:
Do not apply extra overload while holding the part (a).

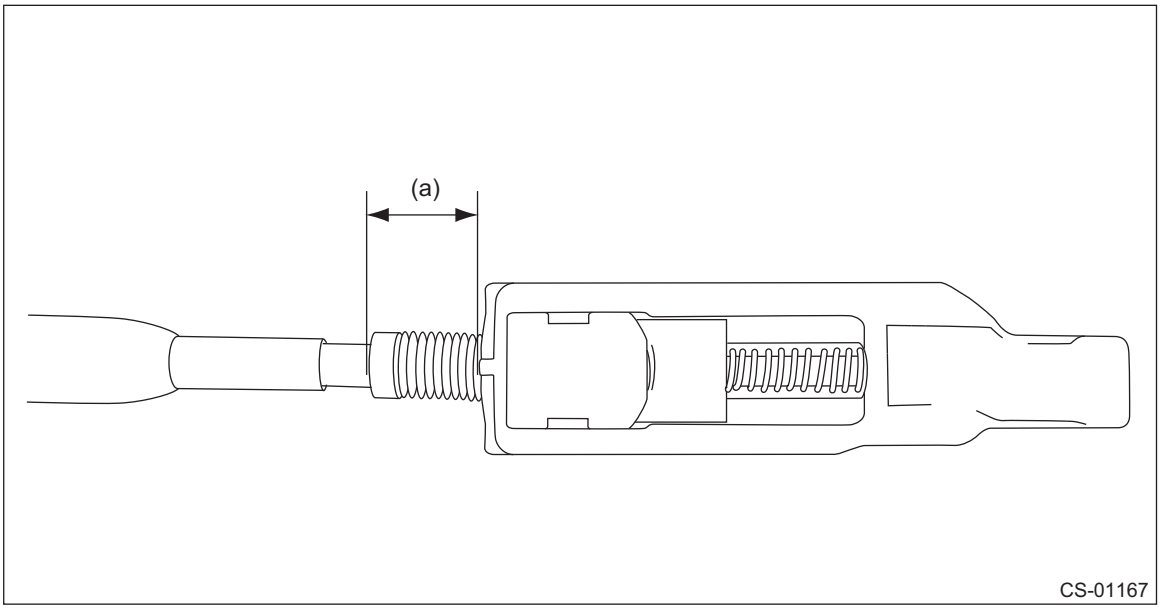


NOTE:
Push the MT gear select cable in the direction of arrow, and remove it.



(A) MT gear select cable

4) Measure the exposed length (a) of MT gear select cable.

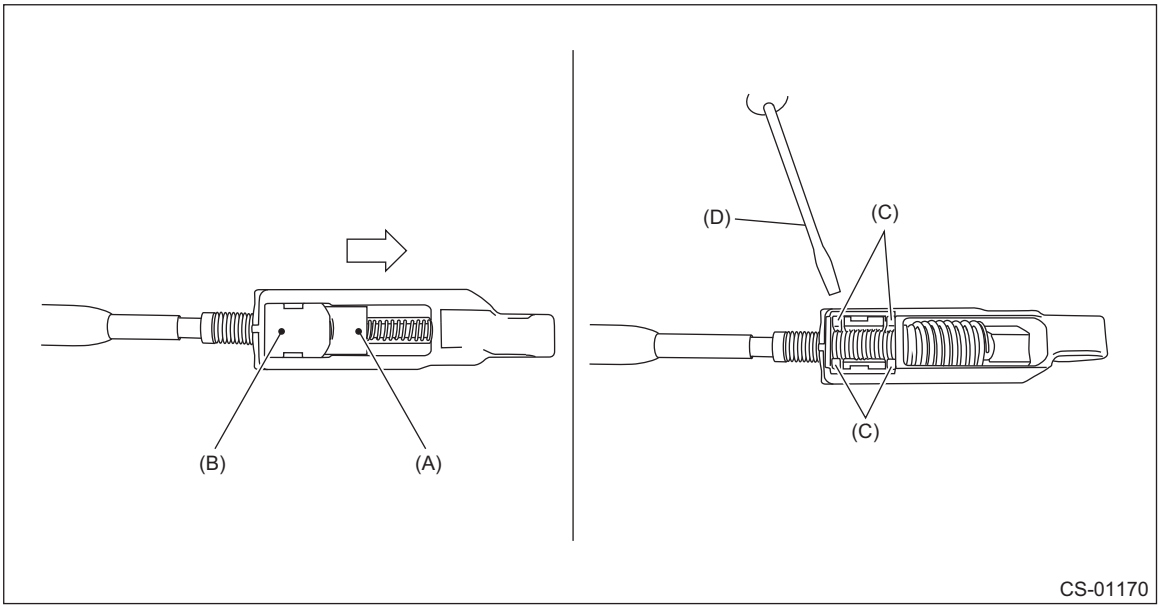


(a) Measurement value

5) Slide the slider (green) in the direction of the arrow and release the lock piece (pink) by using flat tip screwdriver etc.

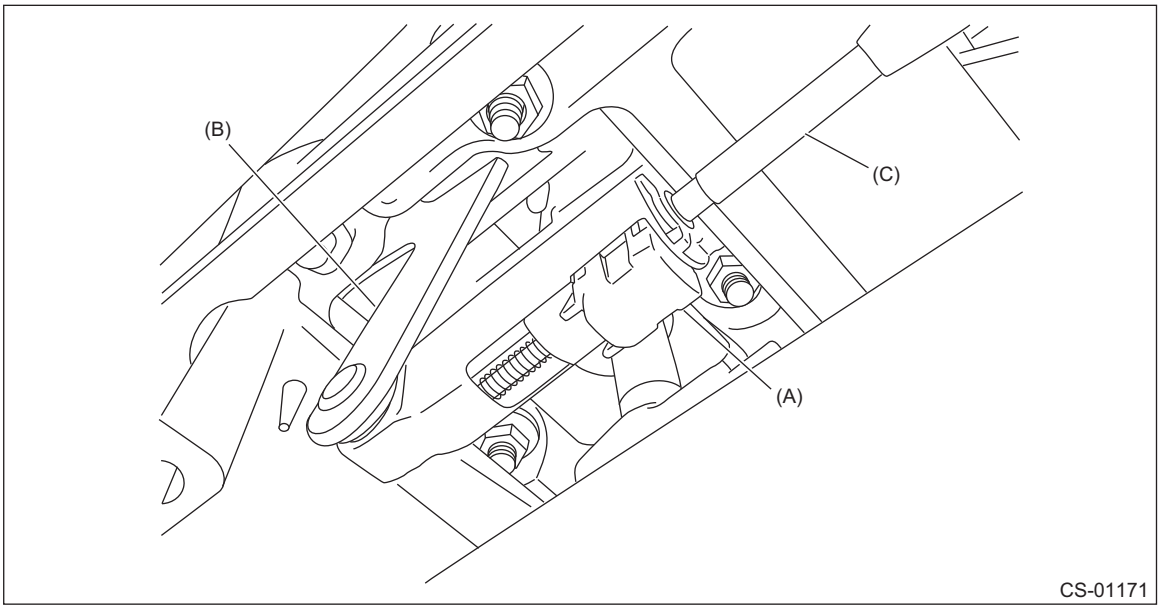
CAUTION:
Lock piece is easily damaged for the resin. When the lock piece is broken, replace the new MT gear select cable.

NOTE:
Rotate the MT gear select cable to 180 degrees, slide the slider in the direction of the arrow and push the claw of lock piece.



(A) Slider
(B) Lock piece
(C) Claw
(D) Flat tip screwdriver

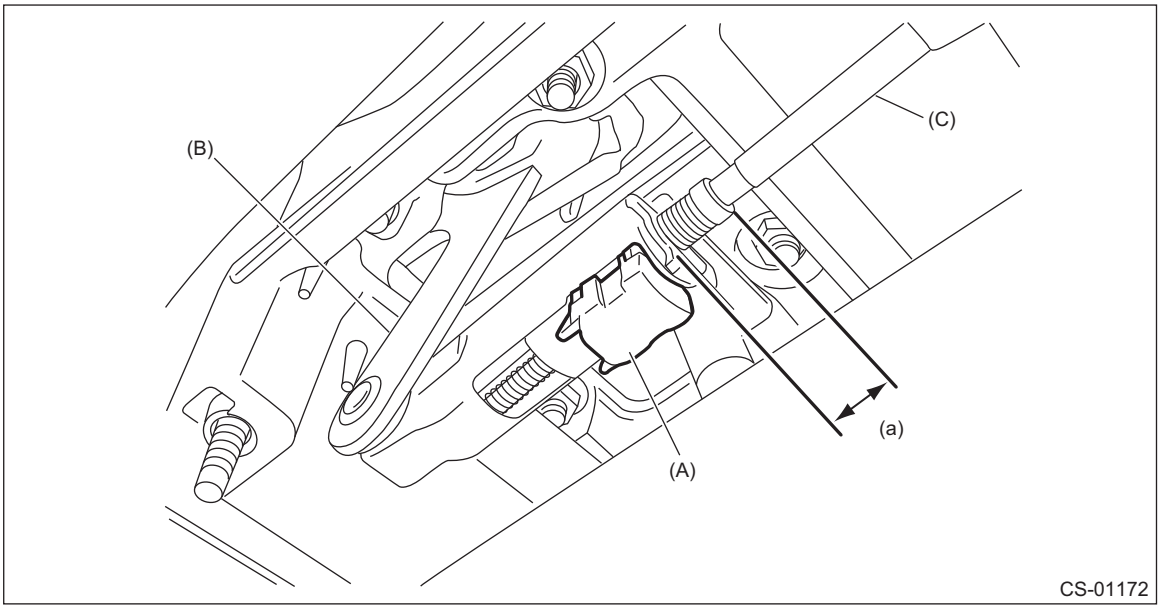
6) Connect the MT gear select cable to the select lever, with the lock piece released.



(A) Lock piece (B) Select lever (C) MT gear select cable

7) Move the shift lever to the reverse side, keep the exposed length (a) of MT gear select cable to 11 mm (0.4 in), and push the lock piece.

NOTE:
Pull up the slider of the gear shift lever assembly, move to the Rev side.

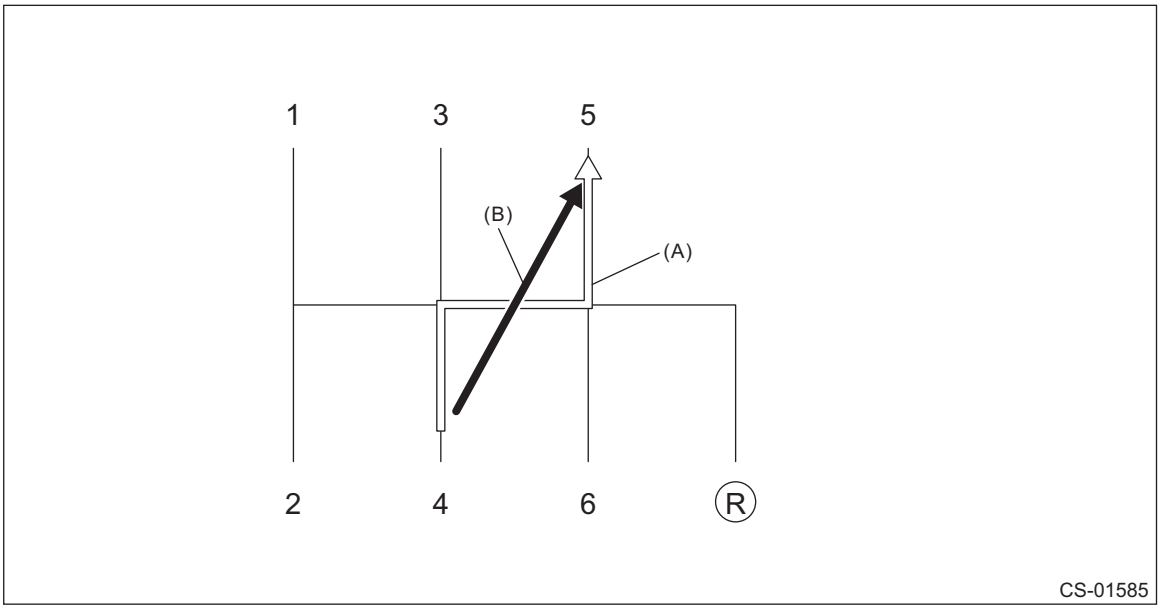


(a) Exposed length 11 mm (0.4 in)

(A) Lock piece (B) Select lever (C) MT gear select cable

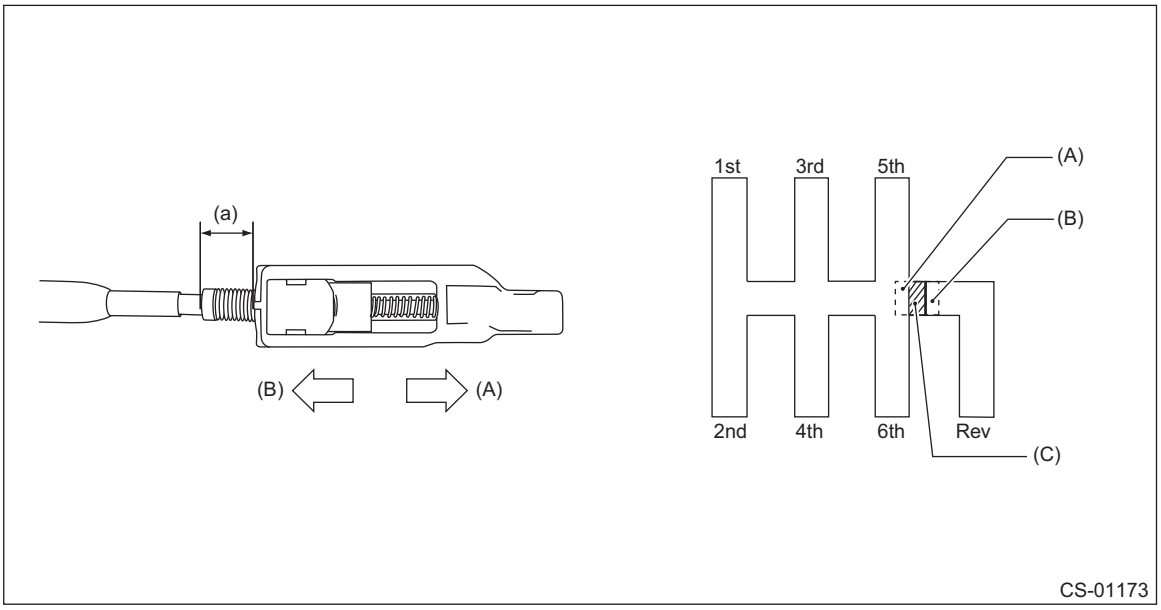
8) Shift to 5th ←→ 6th and Rev, and check for stuck.

9) Check that the shift lever can move along the cranking line when operating the lever from 4th to 5th gear with a load applied toward the 6th gear.



(A) Cranking operation (B) Load direction

10) If the shifting operation is not smooth, readjust the exposed length (a) of MT gear select cable by referring to the following figure.



(a) Exposed length of MT gear select cable

(A) Extend direction of exposed length of MT gear select cable (B) Shorten direction of exposed length of MT gear select cable (C) Specification of exposed length (a)

- If the shift cannot be inserted to push the reverse lock bracket 5th and 6th.

⇨ Extend the exposed length (a) of MT gear select cable.

- When operate the select lever to 4th → 5th, it cannot be operated at select lever crank line.

⇨ Shorten the exposed length (a) of MT gear select cable.

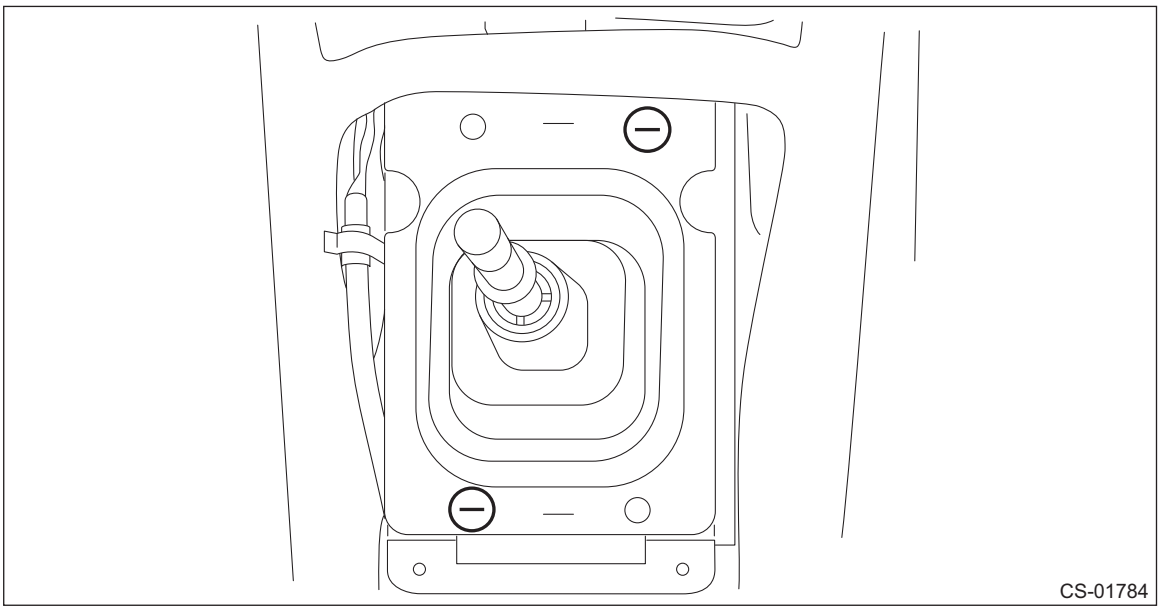
NOTE:
If it cannot adjust, replace the MT gear select cable.
11) If no fault is found in the shift and select operation, restore the vehicle.

10.Reverse Check Cable

A: REMOVAL

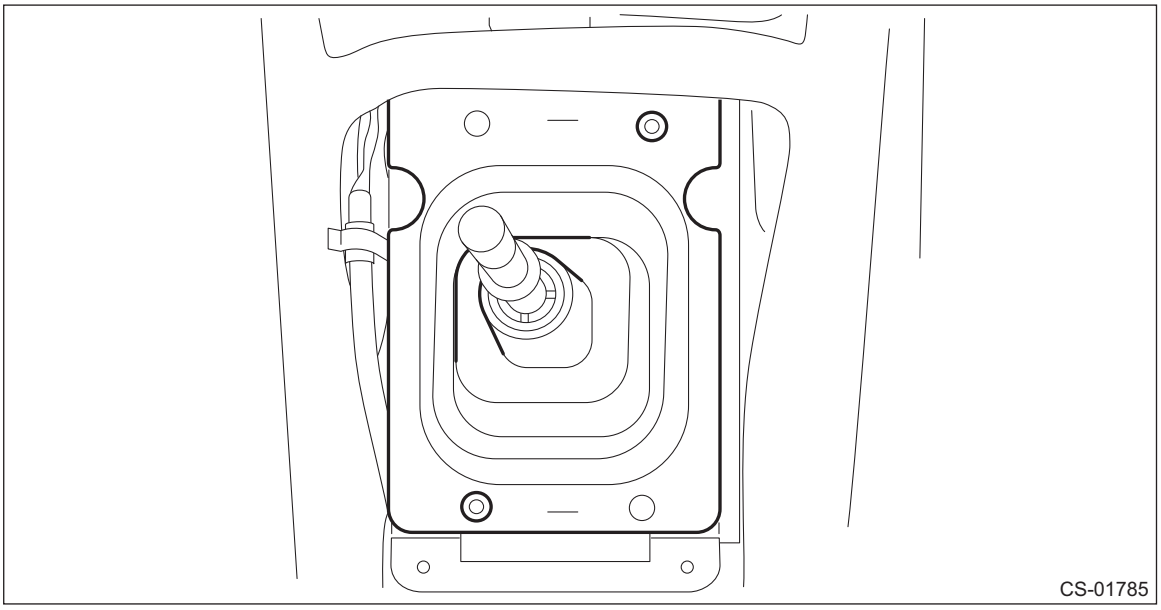
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the gear shift knob by turning it counterclockwise.
3) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
4) Remove the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
5) Remove the panel center LWR LH and RH. <Ref. to EI-70, REMOVAL, Console Box.>
6) Remove the clamp.



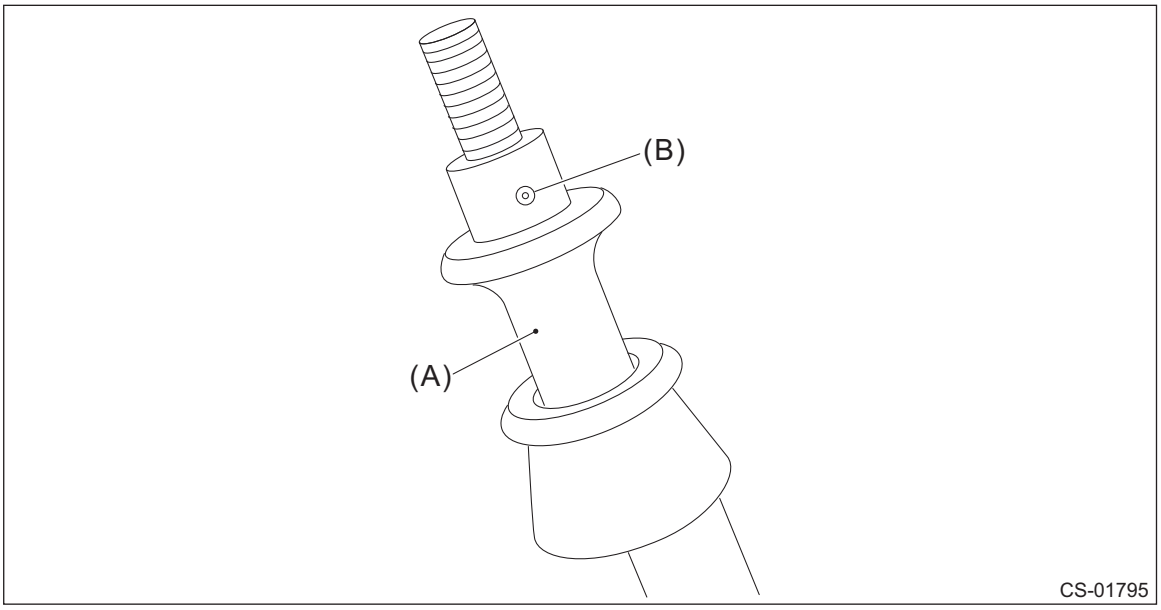
CS-01784

7) Remove the boot and insulator assembly.



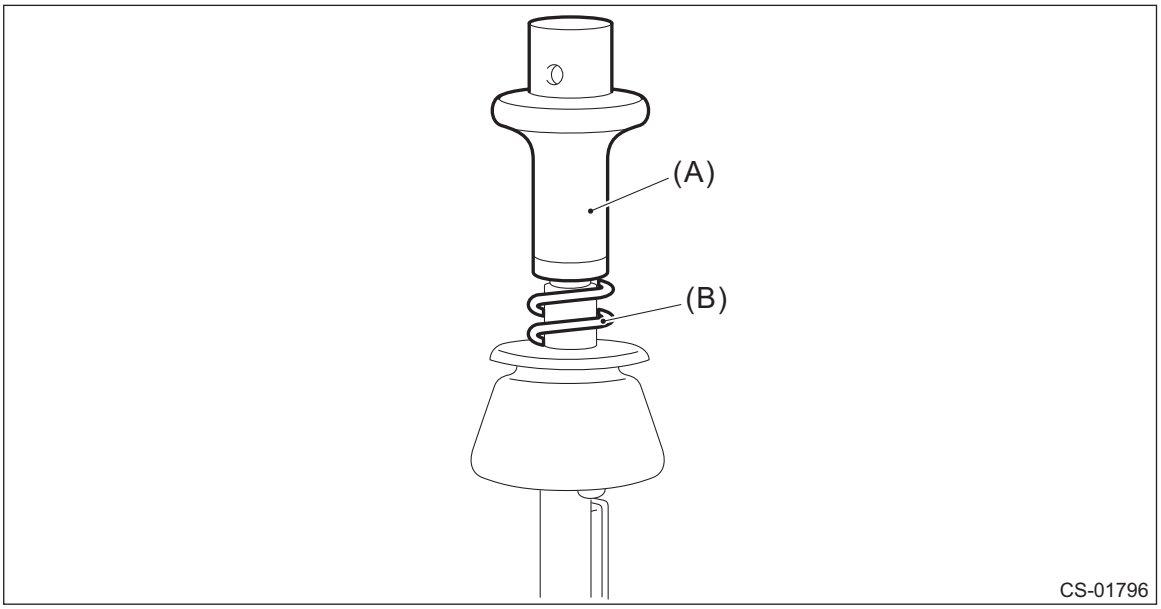
CS-01785

8) Remove the spring pin from the slider.



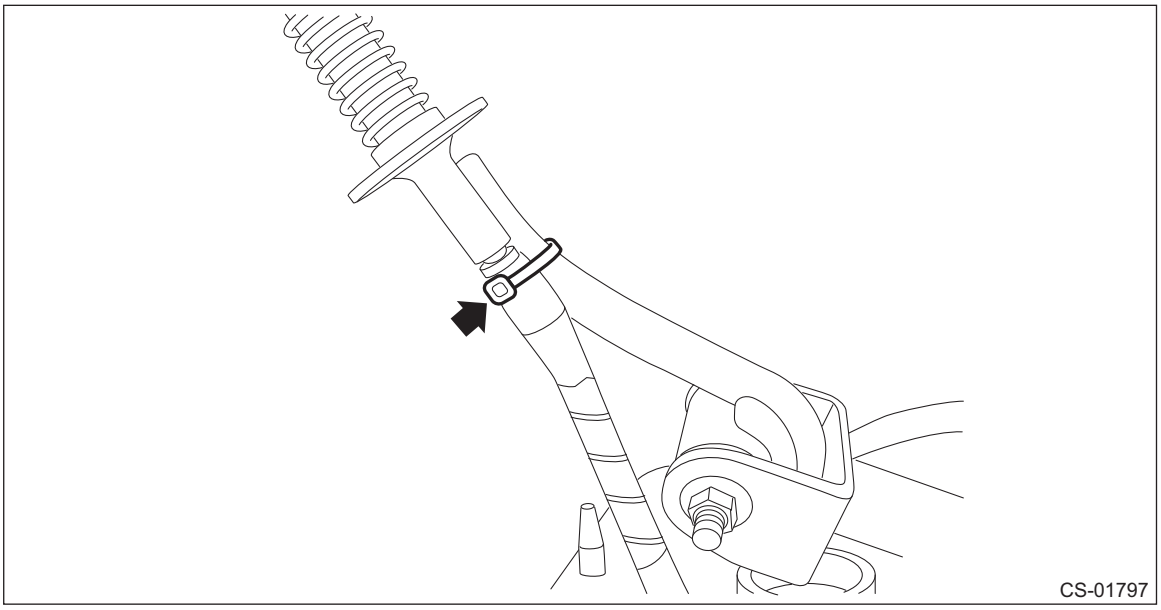
(A) Slider (B) Spring pin

9) Remove the slider and spring.



(A) Slider (B) Spring

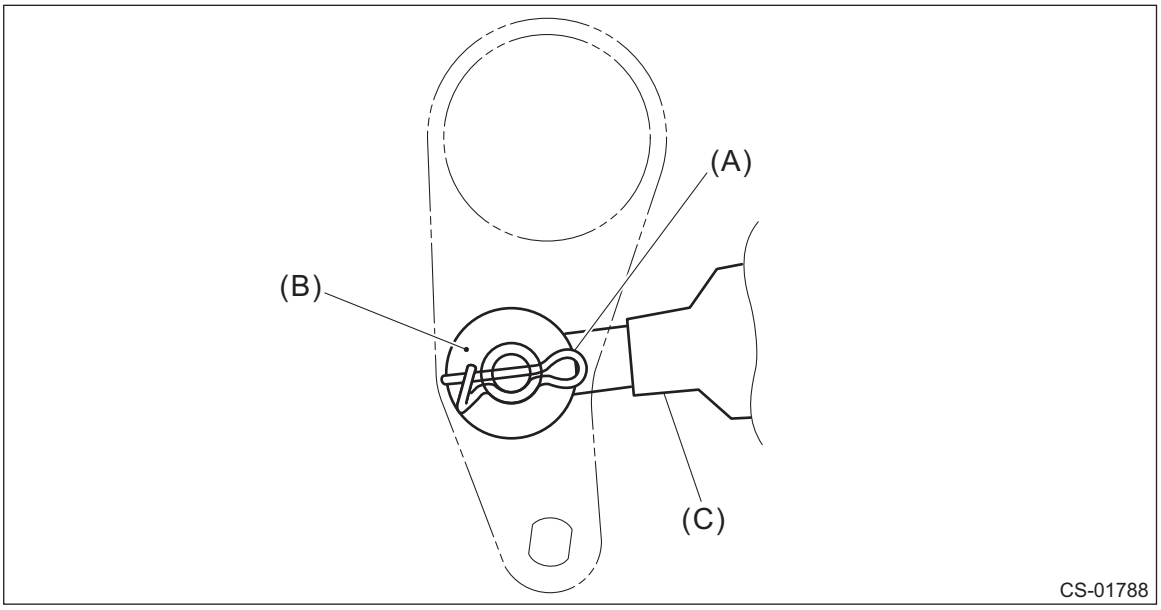
10) Cut the band clip, and separate the reverse check cable from the gear shift lever.



11) Lift up the vehicle.
12) Remove the center exhaust pipe (rear). <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
13) Remove the center exhaust cover.

14) Remove the crossmember. <Ref. to 6MT(TY85)-30, REMOVAL, Transmission Mounting System.>

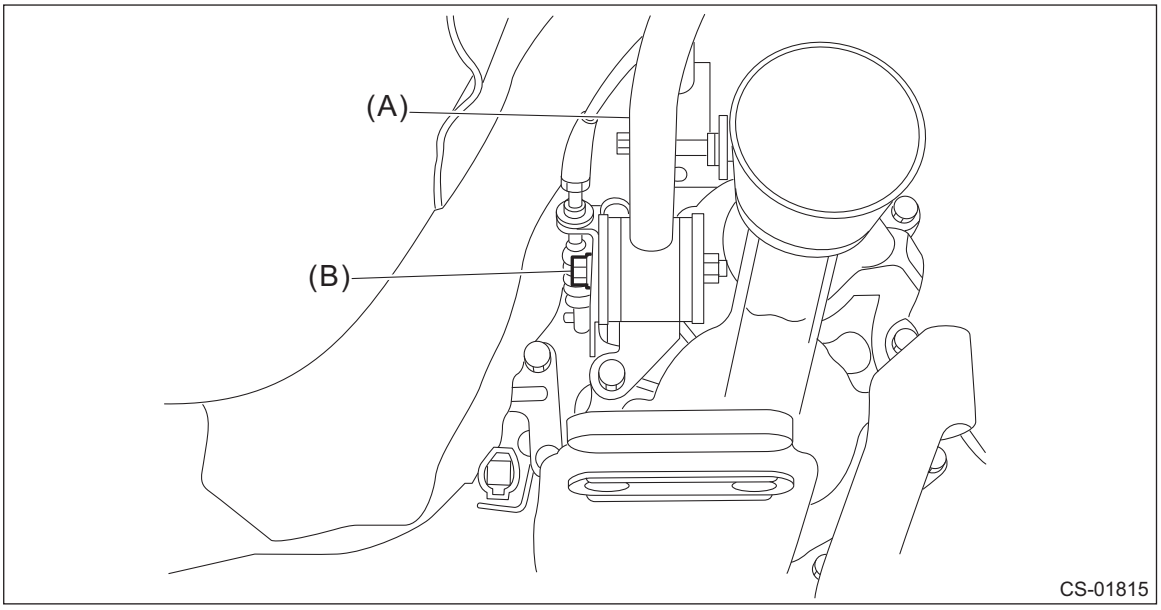
15) Remove the snap pin and washer, and separate the reverse check cable.



(A) Snap pin (B) Washer (C) Reverse check cable

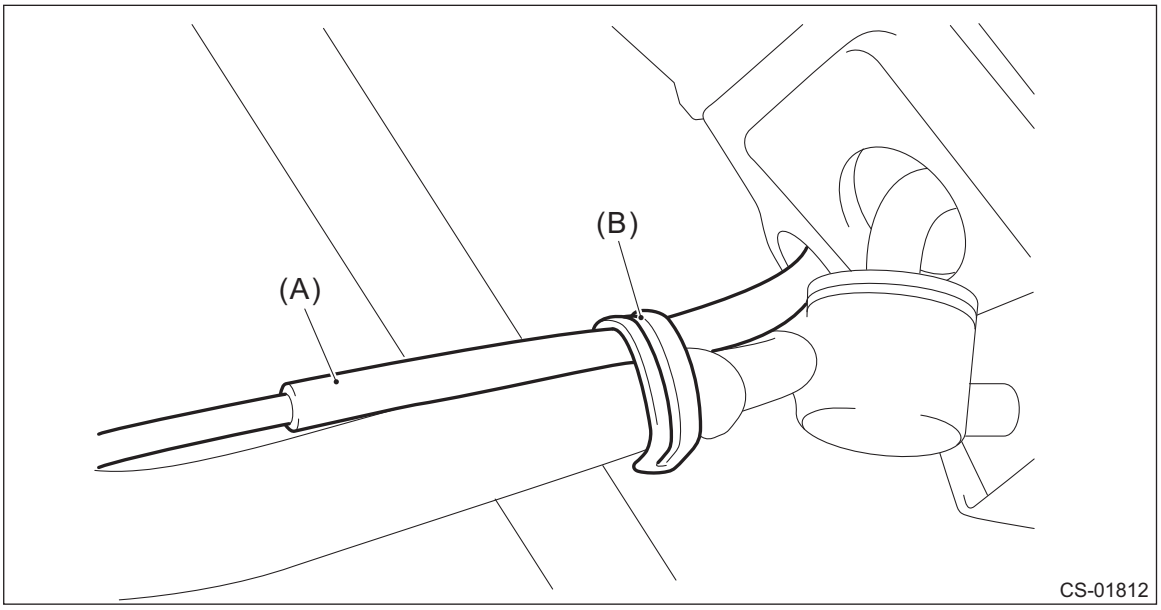
16) Move the transmission to the right side, and remove the stay bolts and the reverse check cable.

NOTE:
If the transmission is not moved aside, the stay bolts may contact the body and cause damage.



(A) Stay (B) Stay bolt

17) Lift up the stay clip, and separate the stay from the reverse check cable.

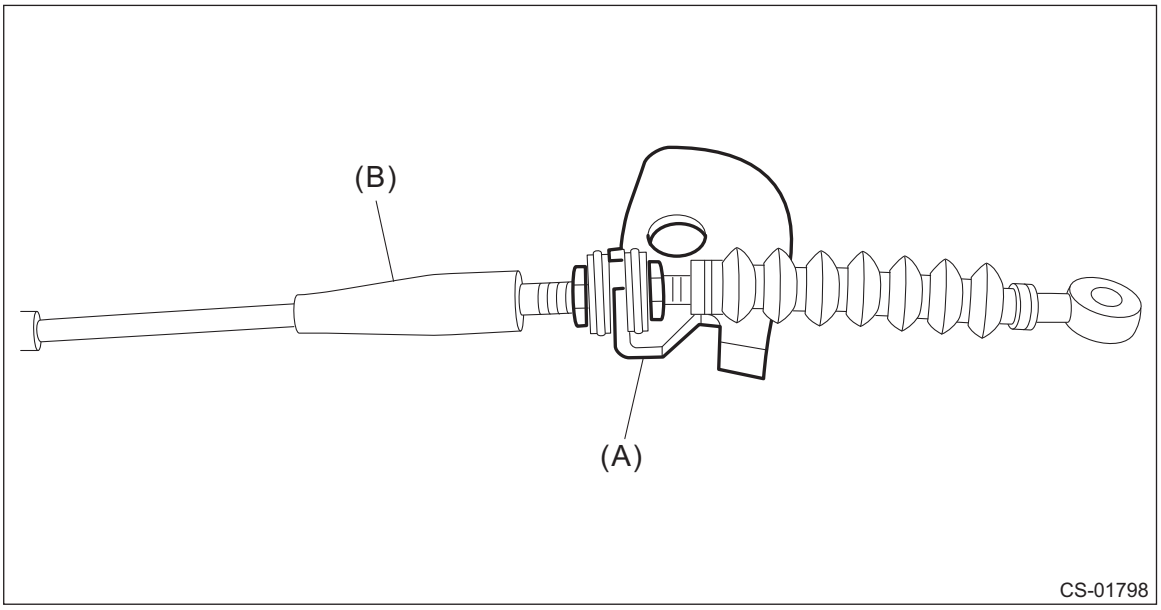


(A) Reverse check cable (B) Clip

18) Pull out the reverse check cable from underside of the vehicle to remove it.

NOTE:
Be careful not to damage the inner boot.

19) Loosen the lock nut, and remove the reverse check cable from the cable plate.



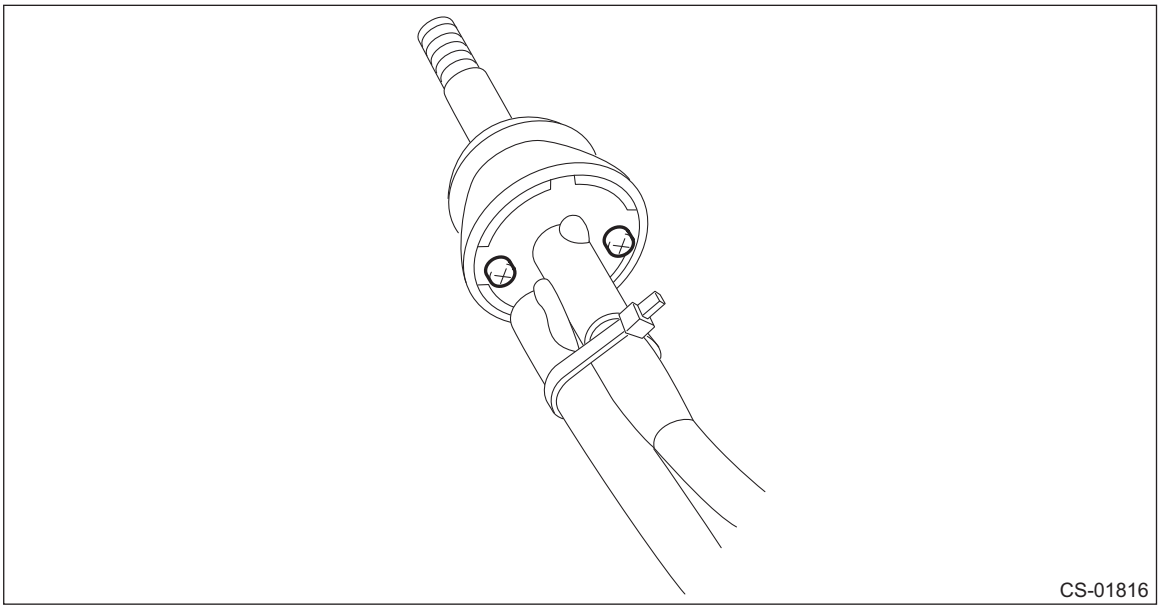
(A) Cable plate (B) Reverse check cable

B: INSTALLATION

1) Insert the reverse check cable into the inner boot hole from underside of the vehicle.
2) Insert the reverse check cable into the gear shift lever assembly, and secure it with the band clip.

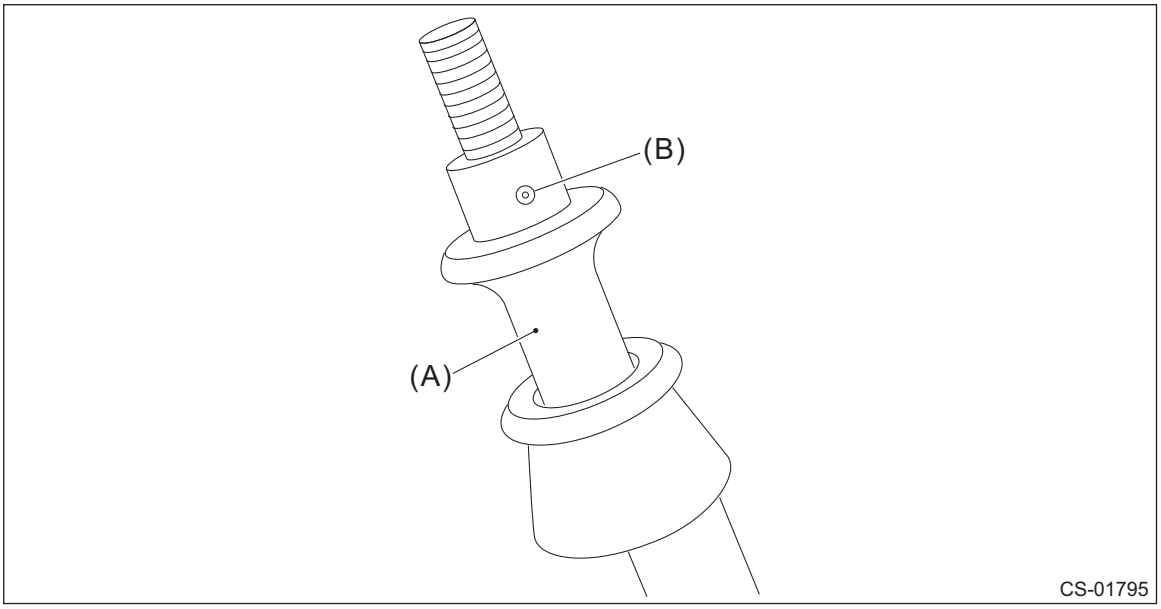
NOTE:
- Cut the excess band clip.

- Make sure that the reverse check cable is inserted into the gearshift lever assembly with no gaps.



3) Use the spring pin to secure the end of the slider and reverse check cable.

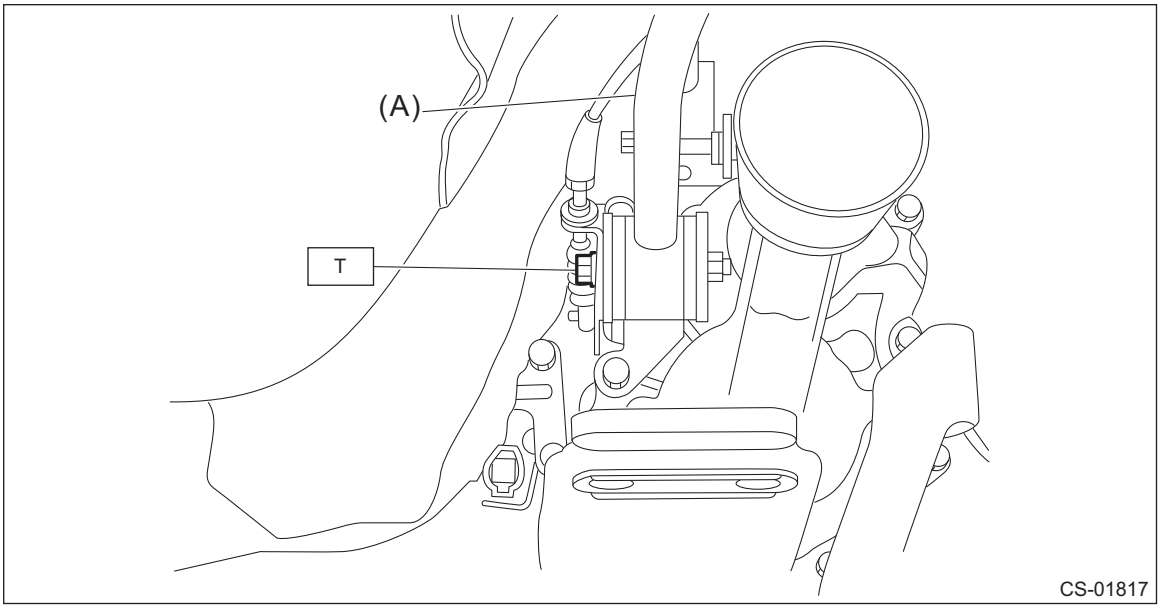
NOTE:
Apply grease to the moving part of slider.



(A) Slider (B) Spring pin

4) Move the transmission to the right side, and install the stay.

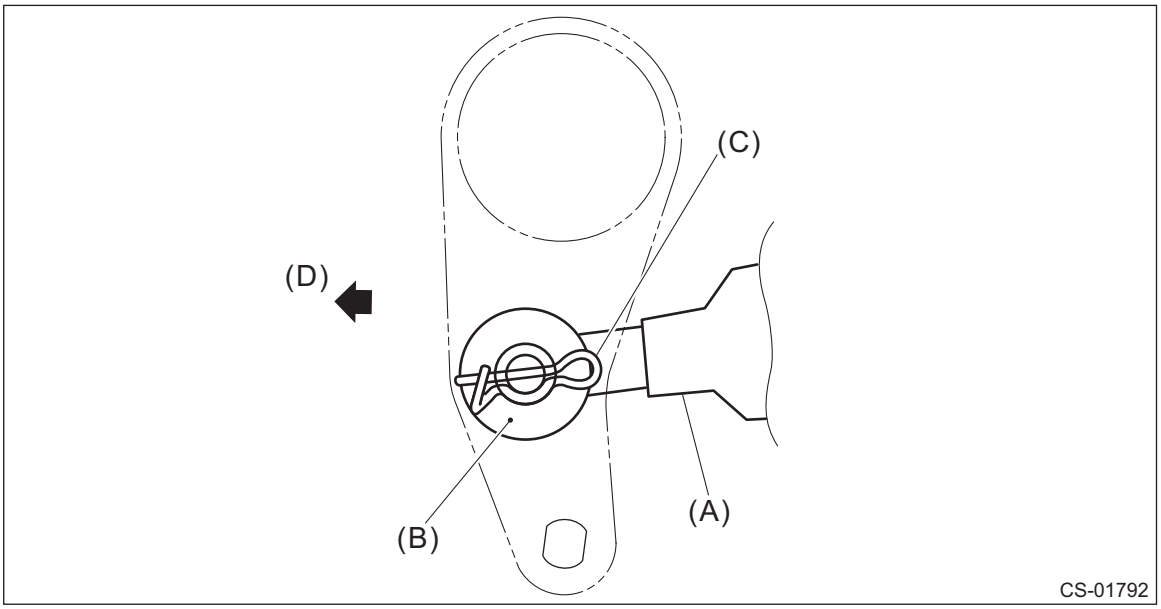
Tightening torque:
T: 32 N·m (3.3 kgf-m, 23.6 ft-lb)



(A) Stay

5) Install the reverse check cable, washer and snap pin.

NOTE:
Make sure to point the snap pin in an appropriate direction.

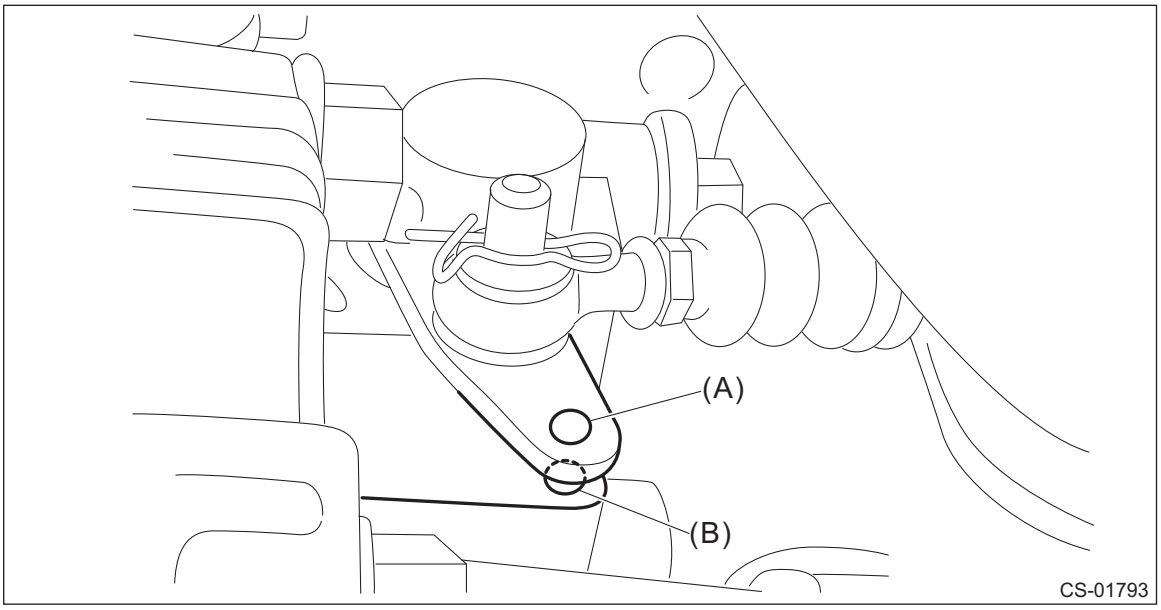


(A) Reverse check cable
(B) Washer
(C) Snap pin
(D) Front side

6) Make sure the hole of extension case is aligned with that of reverse check lever. If the hole positions are not aligned, adjust the reverse check cable. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>

NOTE:
• Check that the M3 bolt goes through the hole of reverse check lever and can be inserted into the hole of extension case.

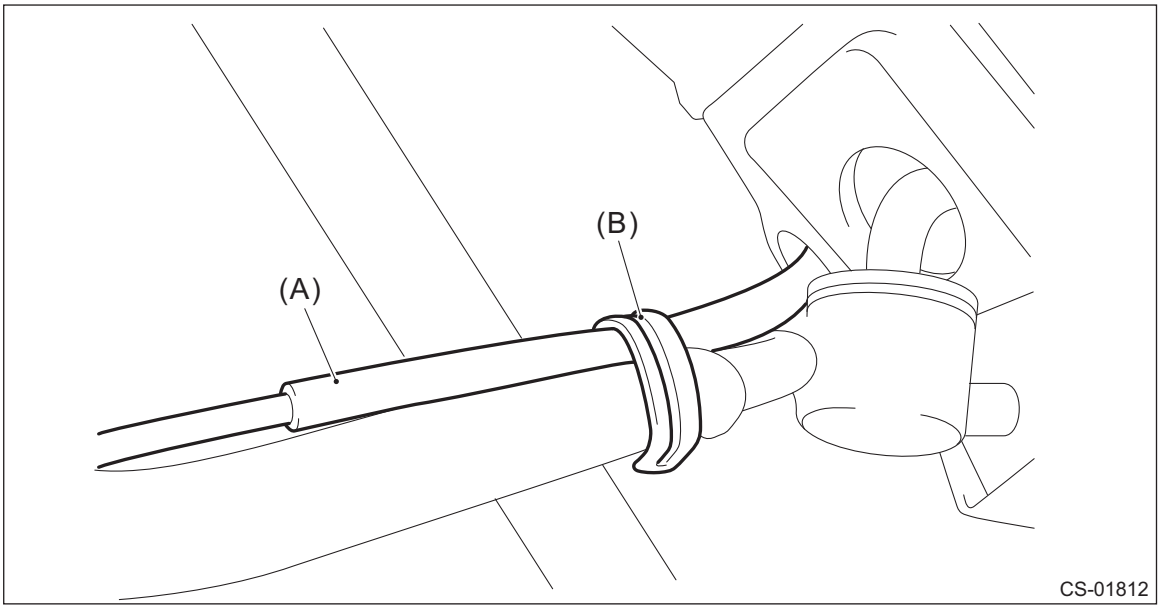
- When checking visually, confirm that the gap of hole positions is 0.5 mm (0.02 in) or less.



(A) Hole of reverse check lever (B) Hole of extension case

7) Secure the reverse check cable to the stay clip.

NOTE:
Install the reverse check cable on top of the stay.

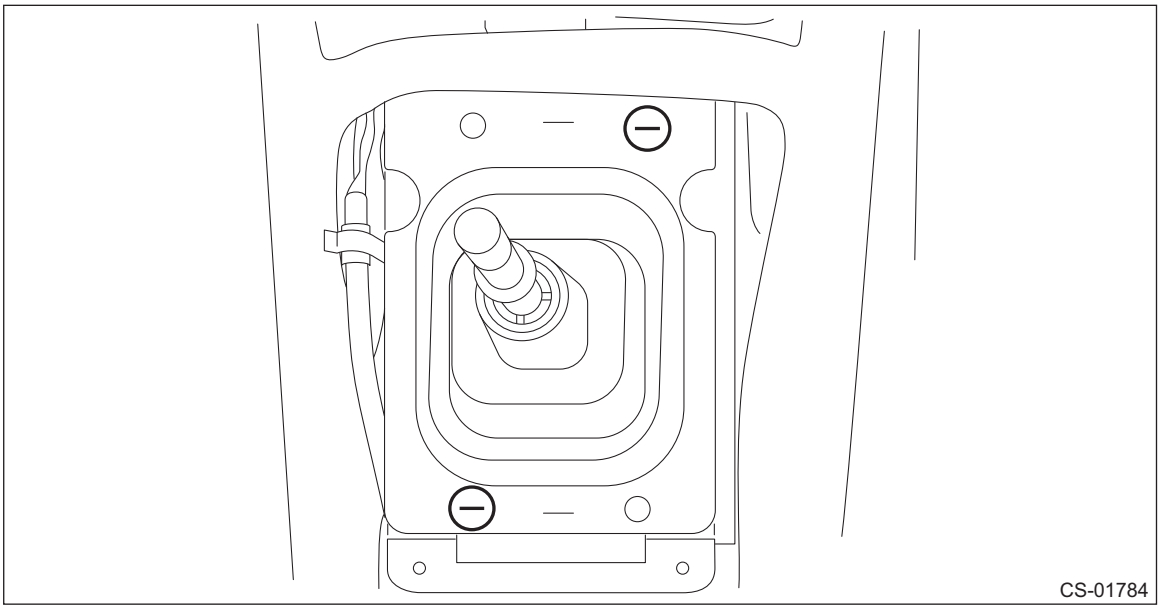


(A) Reverse check cable (B) Clip

8) Install the crossmember. <Ref. to 6MT(TY85)-30, INSTALLATION, Transmission Mounting System.>
9) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
10) Install the center exhaust pipe (rear). <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>

11) Install the boot and insulator assembly, and secure with a clamp.



12) Install the panel center LWR LH and RH. <Ref. to EI-73, INSTALLATION, Console Box.>
13) Install the cover - shift lever. <Ref. to EI-73, INSTALLATION, Console Box.>
14) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
15) Install the gear shift knob by turning it clockwise.

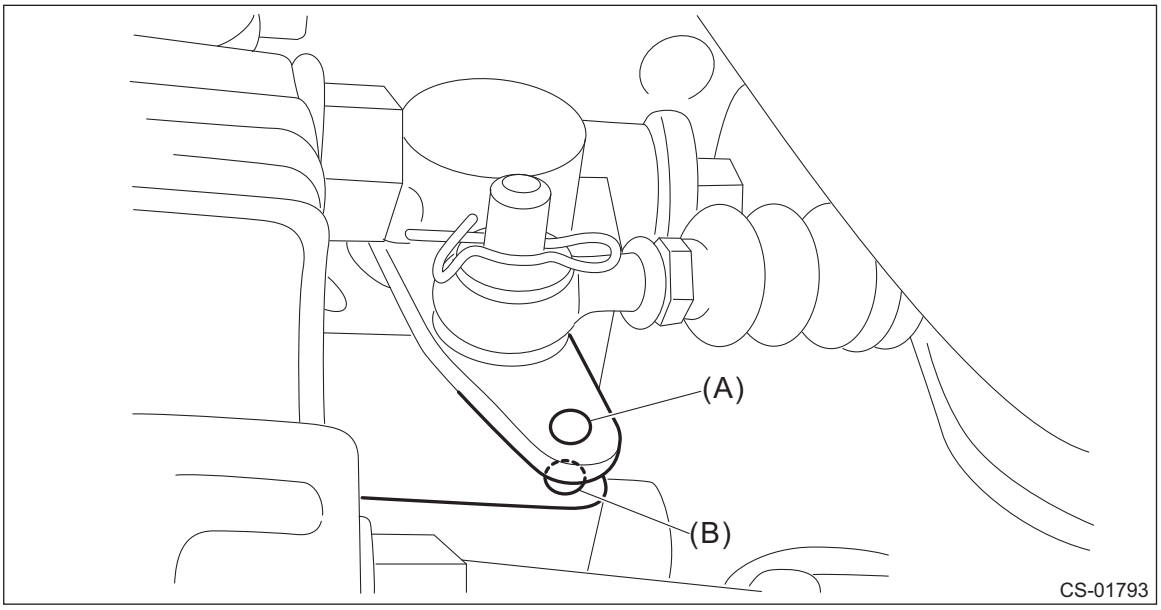
CAUTION:
Do not turn the gear shift knob excessively to prevent it from being damaged.
16) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Make sure the slider moves smoothly. If it does not move, adjust the reverse check cable, or check the slider for damage. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>
2) Check if the gear shifts into reverse when pulling up the slider. If the gear cannot shift into reverse, adjust the reverse check cable. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>
3) Check that the gear does not shift into reverse when the slider is not pulled up. If the gear shifts into reverse, adjust or replace the reverse check cable. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>
4) Make sure the hole of extension case is aligned with that of reverse check lever. If the hole positions are not aligned, adjust the reverse check cable. <Ref. to CS-128, ADJUSTMENT, Reverse Check Cable.>

NOTE:
• Check that the M3 bolt goes through the hole of reverse check lever and can be inserted into the hole of extension case.

- When checking visually, confirm that the gap of hole positions is 0.5 mm (0.02 in) or less.



(A) Hole of reverse check lever (B) Hole of extension case

D: ADJUSTMENT

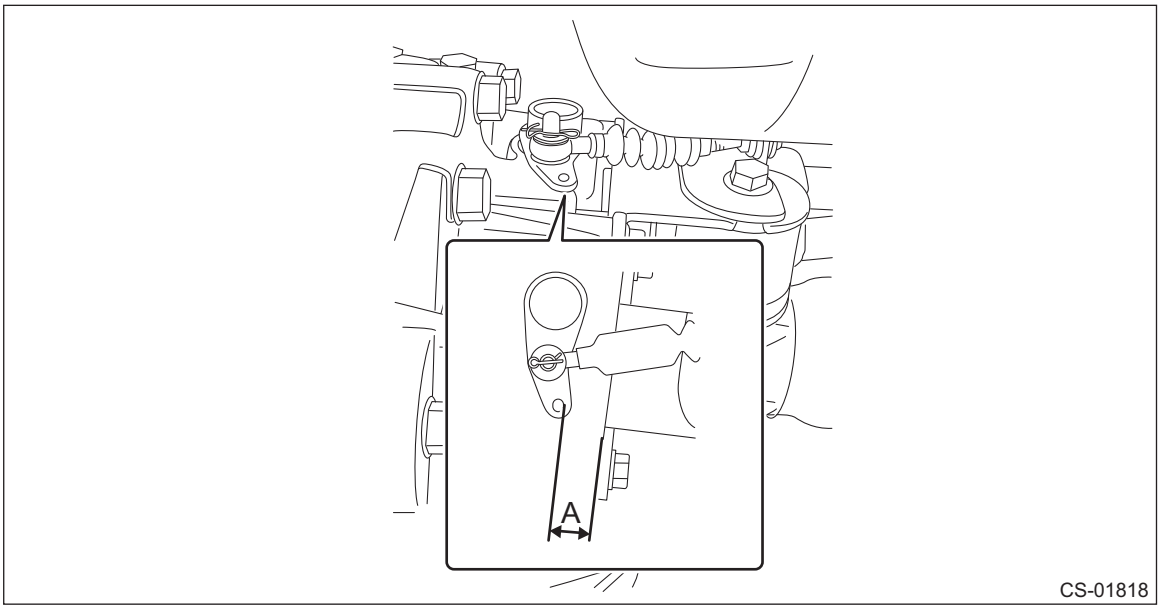
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

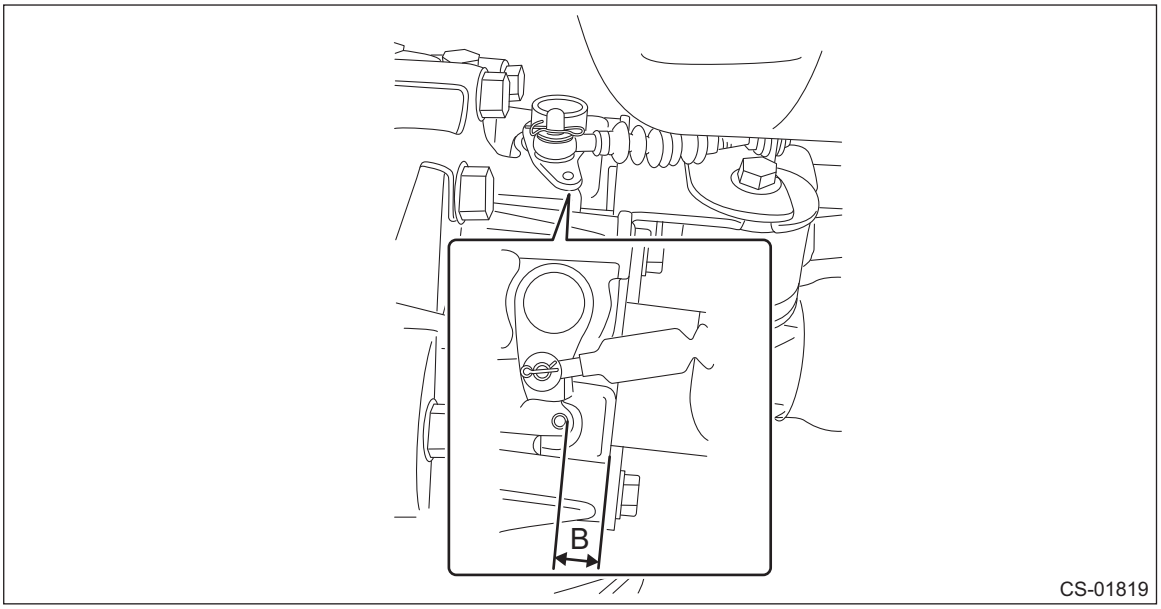
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.

5) Remove the crossmember. <Ref. to 6MT(TY85)-30, REMOVAL, Transmission Mounting System.>

6) Measure the distance “A” from the shift bracket seating face on transmission side to the hole edge of the reverse check lever.



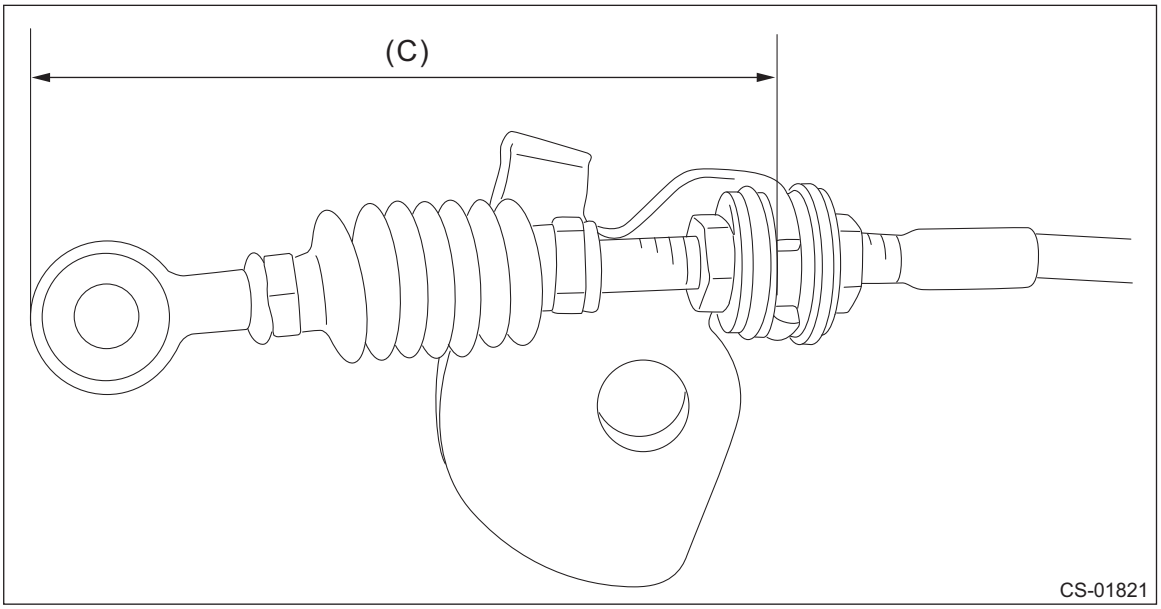
7) Measure the distance “B” from the shift bracket seating face on transmission side to the hole edge of the extension case.



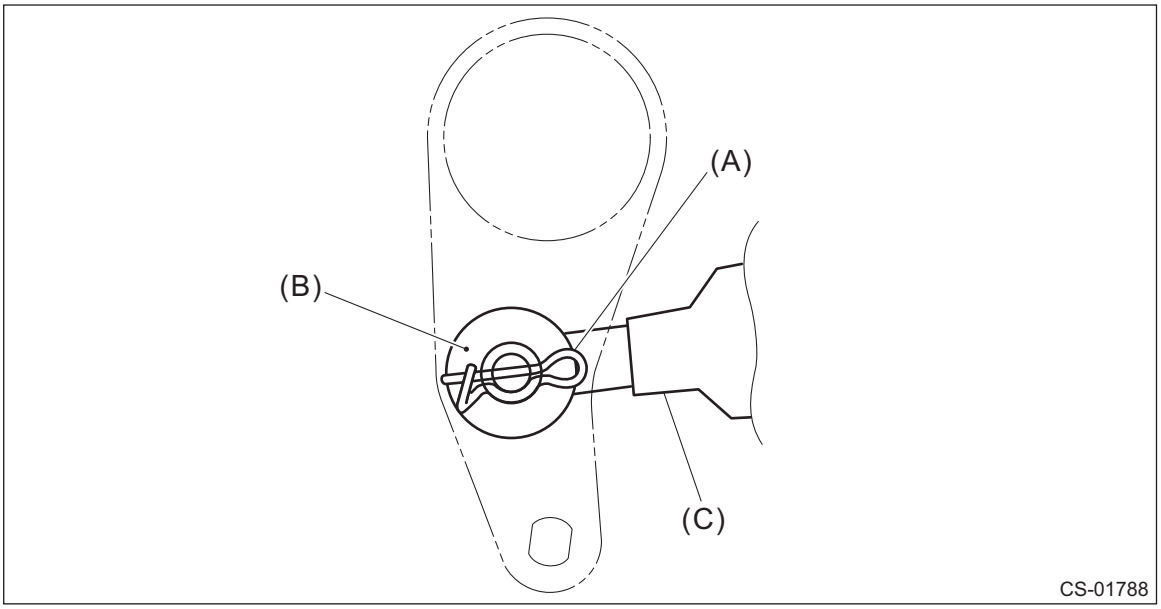
8) Calculate the following formula and determine the amount of cable adjustment.
T mm = (A – B) × 0.56
[T in = (A – B) × 0.56]
T: Amount of cable adjustment
A: Distance from the shift bracket seating face on transmission side to the hole edge of the reverse check lever
B: Distance from the shift bracket seating face on transmission side to the hole edge of the extension case

NOTE:
• If the value “T” (amount of cable adjustment) is positive (+), shorten the length “C” (from cable plate edge to reverse check cable) by using adjustment procedures.

• If the value “T” (amount of cable adjustment) is negative (–), lengthen the length “C” (from cable plate edge to reverse check cable) by using adjustment procedures.



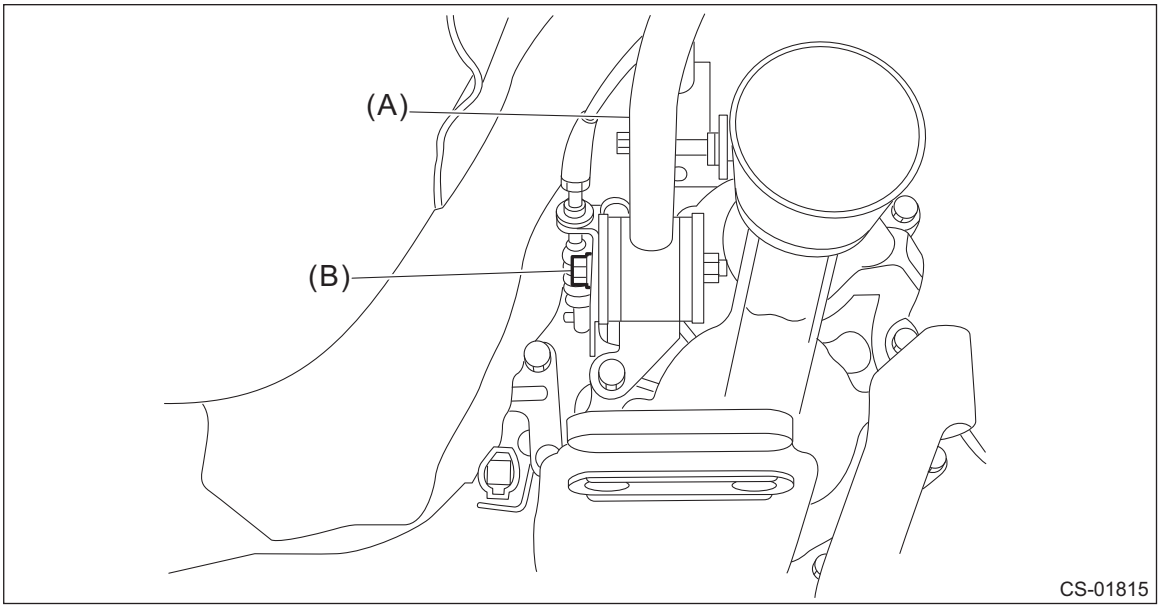
9) Remove the snap pin and washer, and separate the reverse check cable.



(A) Snap pin (B) Washer (C) Reverse check cable

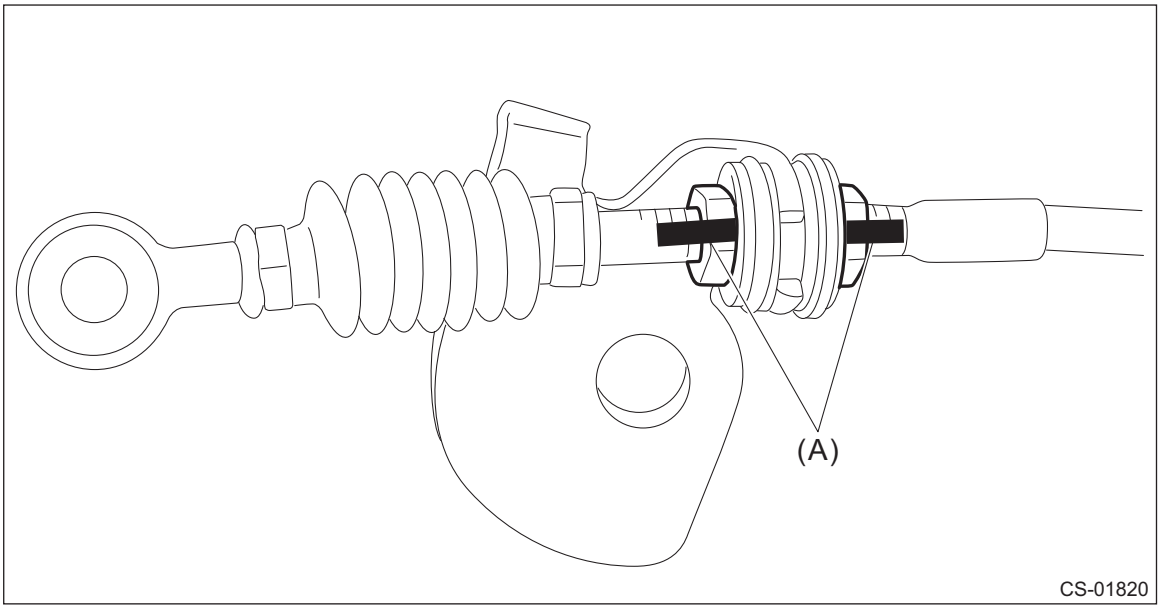
10) Move the transmission to the right side, and remove the stay bolts and the reverse check cable.

NOTE:
If the transmission is not moved aside, the stay bolts may contact the body and cause damage.



(A) Stay (B) Stay bolt

11) Check the adjustment of the reverse check cable.
(1) Add a marking on the reverse check cable.

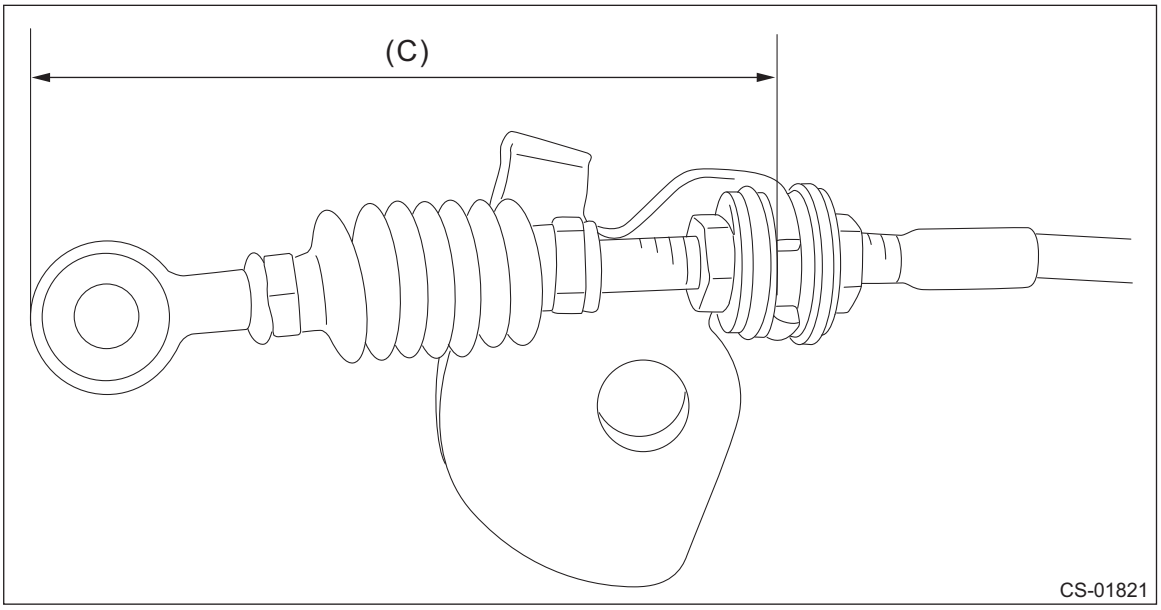


(A) Marking

(2) According to the value “T” (amount of cable adjustment) calculated in the step 8), turn the lock nut of reverse check cable back and forth, then adjust the length “C” (from cable plate edge to reverse check cable).

NOTE:
• Turning the lock nut toward front of the vehicle makes the cable length shorter and toward the rear of the vehicle the cable length longer.
• The amount of the cable adjustment by one lock nut rotation is 1 mm (0.04 in).

- Turn the lock nuts on both sides by the same adjustment amount.

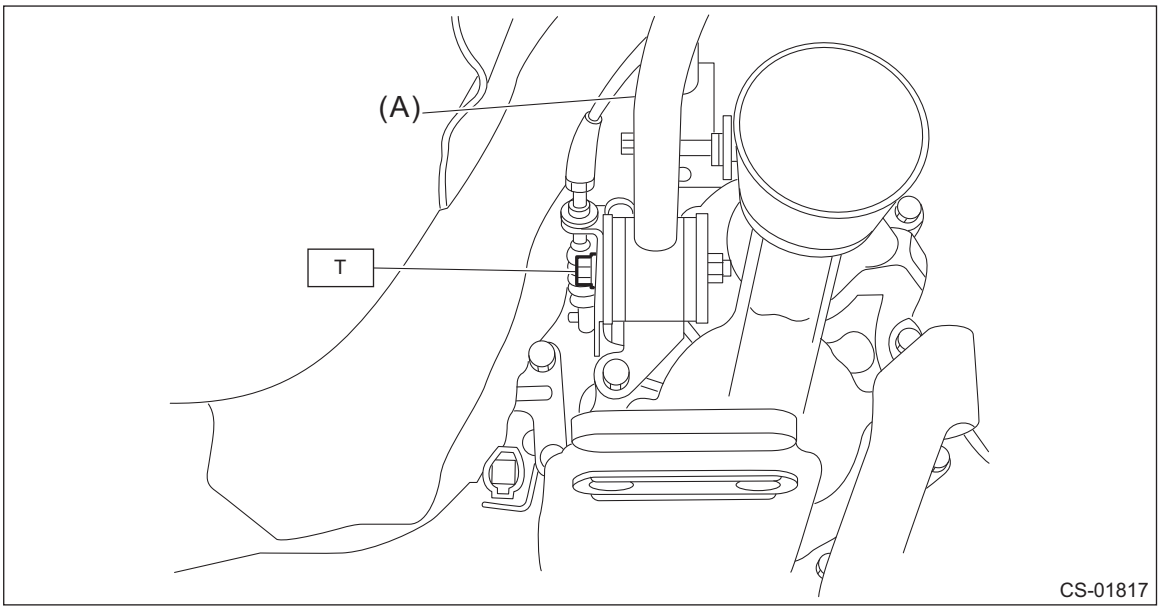


(3) Tighten the lock nut.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

12) Move the transmission to the right side, and install the stay.

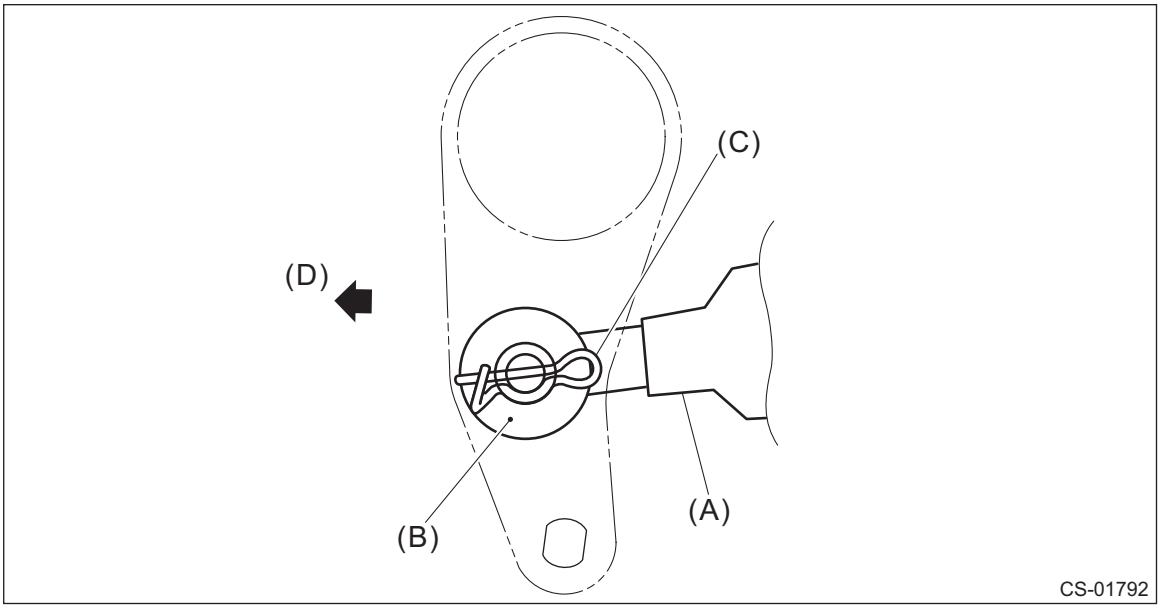
Tightening torque:
T: 32 N·m (3.3 kgf-m, 23.6 ft-lb)



(A) Stay

13) Install the reverse check cable, washer and snap pin.

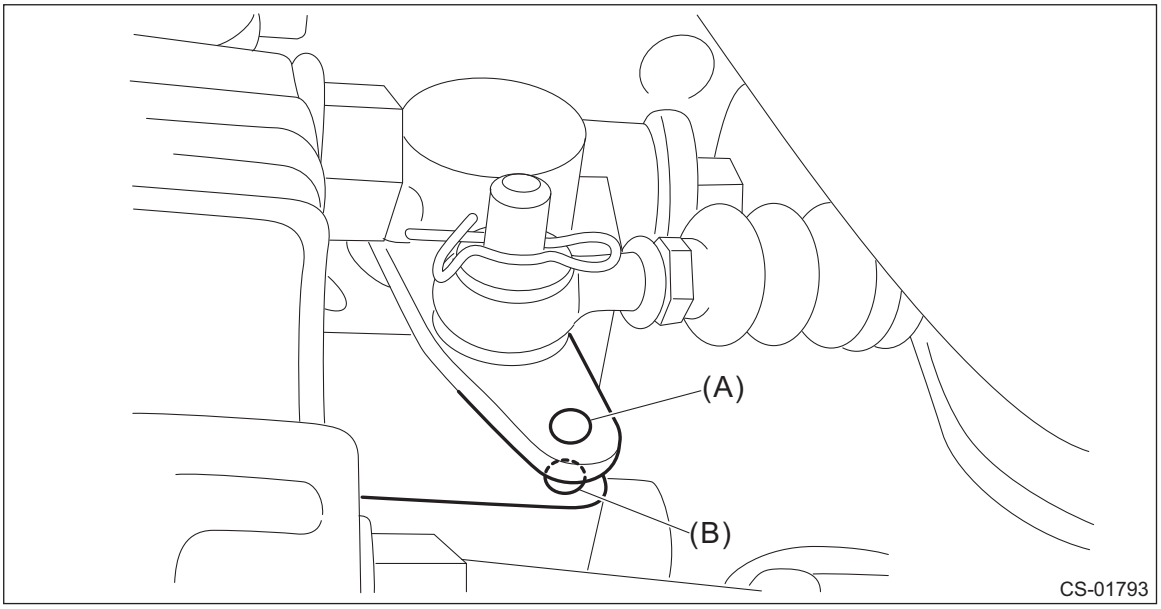
NOTE:
Make sure to point the snap pin in an appropriate direction.



(A) Reverse check cable
(B) Washer
(C) Snap pin
(D) Front side

14) Make sure the hole of extension case is aligned with that of reverse check lever. If the hole positions are not aligned, return to the step 6) and repeat the adjustment procedures of the reverse check cable.

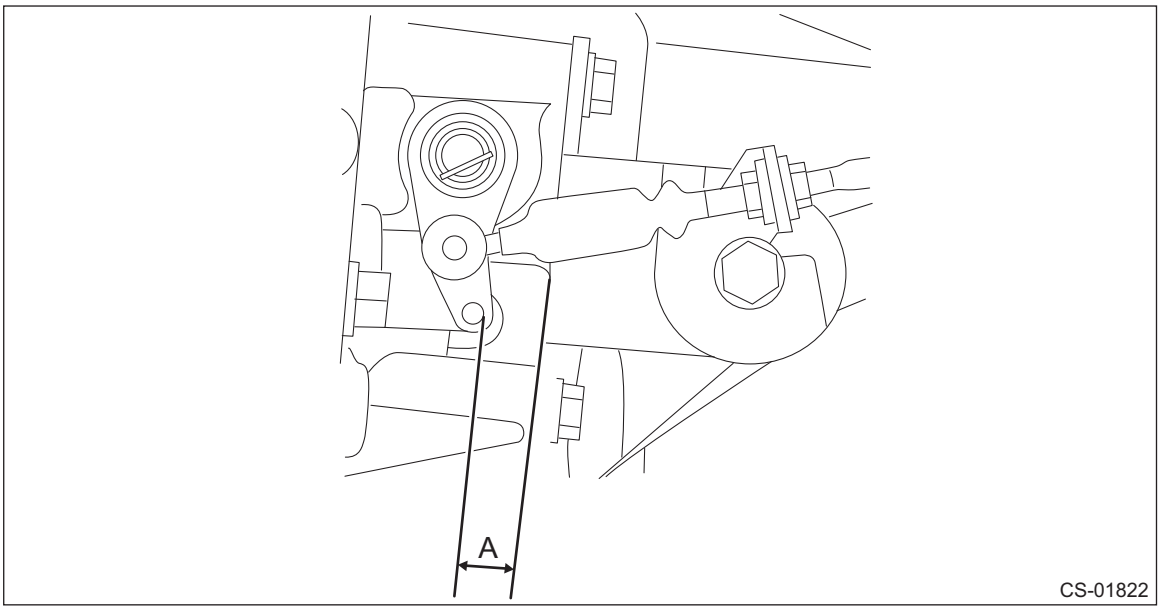
NOTE:
• Check that the M3 bolt goes through the hole of reverse check lever and can be inserted into the hole of extension case.
• When checking visually, confirm that the gap of hole positions is 0.5 mm (0.02 in) or less.



(A) Hole of reverse check lever
(B) Hole of extension case

NOTE:
If the hole positions are not aligned after repeating the reverse check cable adjustment, adjust the cable hole position to the reference standard.

Distance from the shift bracket seating face on transmission side to the hole edge of the reverse check lever "A":
Reference standard
16 mm (0.63 in)



15) Install the crossmember. <Ref. to 6MT(TY85)-30, INSTALLATION, Transmission Mounting System.>
16) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
17) Install the center exhaust pipe (rear). <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
18) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

11.General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
AT select lever	Starter does not run.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Back-up light does not illuminate.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	AT shift lock system does not operate normally.	Adjust the select cable and inhibitor switch, or inspect the circuit.
	Manual mode can not be set.	Inspect the mode switch and select lever, or inspect the circuit.
MT gear shift lever (STI model)	Cannot shift into reverse.	Adjust the reverse check cable.
	Can shift into reverse when the slider is not pulled up.	Adjust or replace the reverse check cable.
	Slider cannot be pulled up or sticks in the pulled-up position.	• Check the reverse check system of the transmission. • Adjust or replace the reverse check cable.
MT gear shift lever (Except for STI model)	Cannot shift into reverse.	Adjust the MT gear select cable.
	Shifted to 6th though it shifted to reverse.	Adjust or replace the MT gear select cable.
	Can shift into reverse when the slider is not pulled up.	Adjust or replace the MT gear select cable.
	Slider cannot be pulled up or sticks in the pulled-up position.	• Check the shift link system of the transmission. • Adjust or replace the MT gear select cable.

1. General Description

A: SPECIFICATION

1. TORQUE CONVERTER

Model		2.0 L DOHC turbo
Type		Symmetric, 3-element, single stage, 2-phase torque converter
Stall torque ratio		2.09
Nominal	mm (in)	246 (9.69)
Stall speed (at sea level)	r/min	2,050 — 2,590 (D range) 2,130 — 2,680 (R range)
One-way clutch		Sprag type one-way clutch

2. OIL PUMP

Type		Internal gear pump
Driving method		Driven by chain
Number of teeth	Inner rotor	8
	Outer rotor	9

3. TRANSMISSION CONTROL ELEMENT

Type	Forward continuously variable speed change, 1 reverse, planetary gear
Multi-plate clutch	1 set
Multi-plate brake	1 set

4. TRANSMISSION GEAR RATIO (INCLUDING TRANSFER REDUCTION RATIO)

Forward	3.508 — 0.545
Rev	2.350

5. PLATE

Number of input clutch drive plates	5
Number of forward clutch drive plates	6
Number of reverse brake drive plates	5

6. SELECTOR POSITION

P (Park)	Transmission neutral, output shaft locked, engine start enabled
R (Reverse)	Rev
N (Neutral)	Transmission neutral, engine start enabled
D (Drive)	Forward continuously variable speed change and 8 speed step change*1
M (Manual mode) (paddle shift +side)	Manual gear change 1st → 2nd → 3rd → 4th → 5th → 6th → 7th*1 → 8th*1
M (Manual mode) (paddle shift –side)	Manual gear change 1st ← 2nd ← 3rd ← 4th ← 5th ← 6th ← 7th*1 ← 8th*1

*1: Only when in S# mode

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic hydraulic control (speed changed by signals of vehicle speed and accelerator opening angle)
Fluid	Specified fluid: Subaru High Torque CVT Fluid **CAUTION:** **Always use specified CVTF. Using other fluid will cause malfunction.**
Fluid capacity L (US qt, Imp qt)	12.11 — 12.61 (12.8 — 13.3, 10.7 — 11.1)
Lubrication system	Forced feed lubrication with oil pump

8. COOLING AND HARNESS

Cooling system	CVTF cooler (with warmer feature)
Inhibitor switch harness	12 poles
Transmission harness	20 poles

9. TRANSFER

Transfer type	Variable torque distribution (VTD)
Number of transfer clutch drives & driven plates	3
Control method	Electronic hydraulic type
Reduction gear ratio	1.000 (37/37)

10.REDUCTION GEAR RATIO

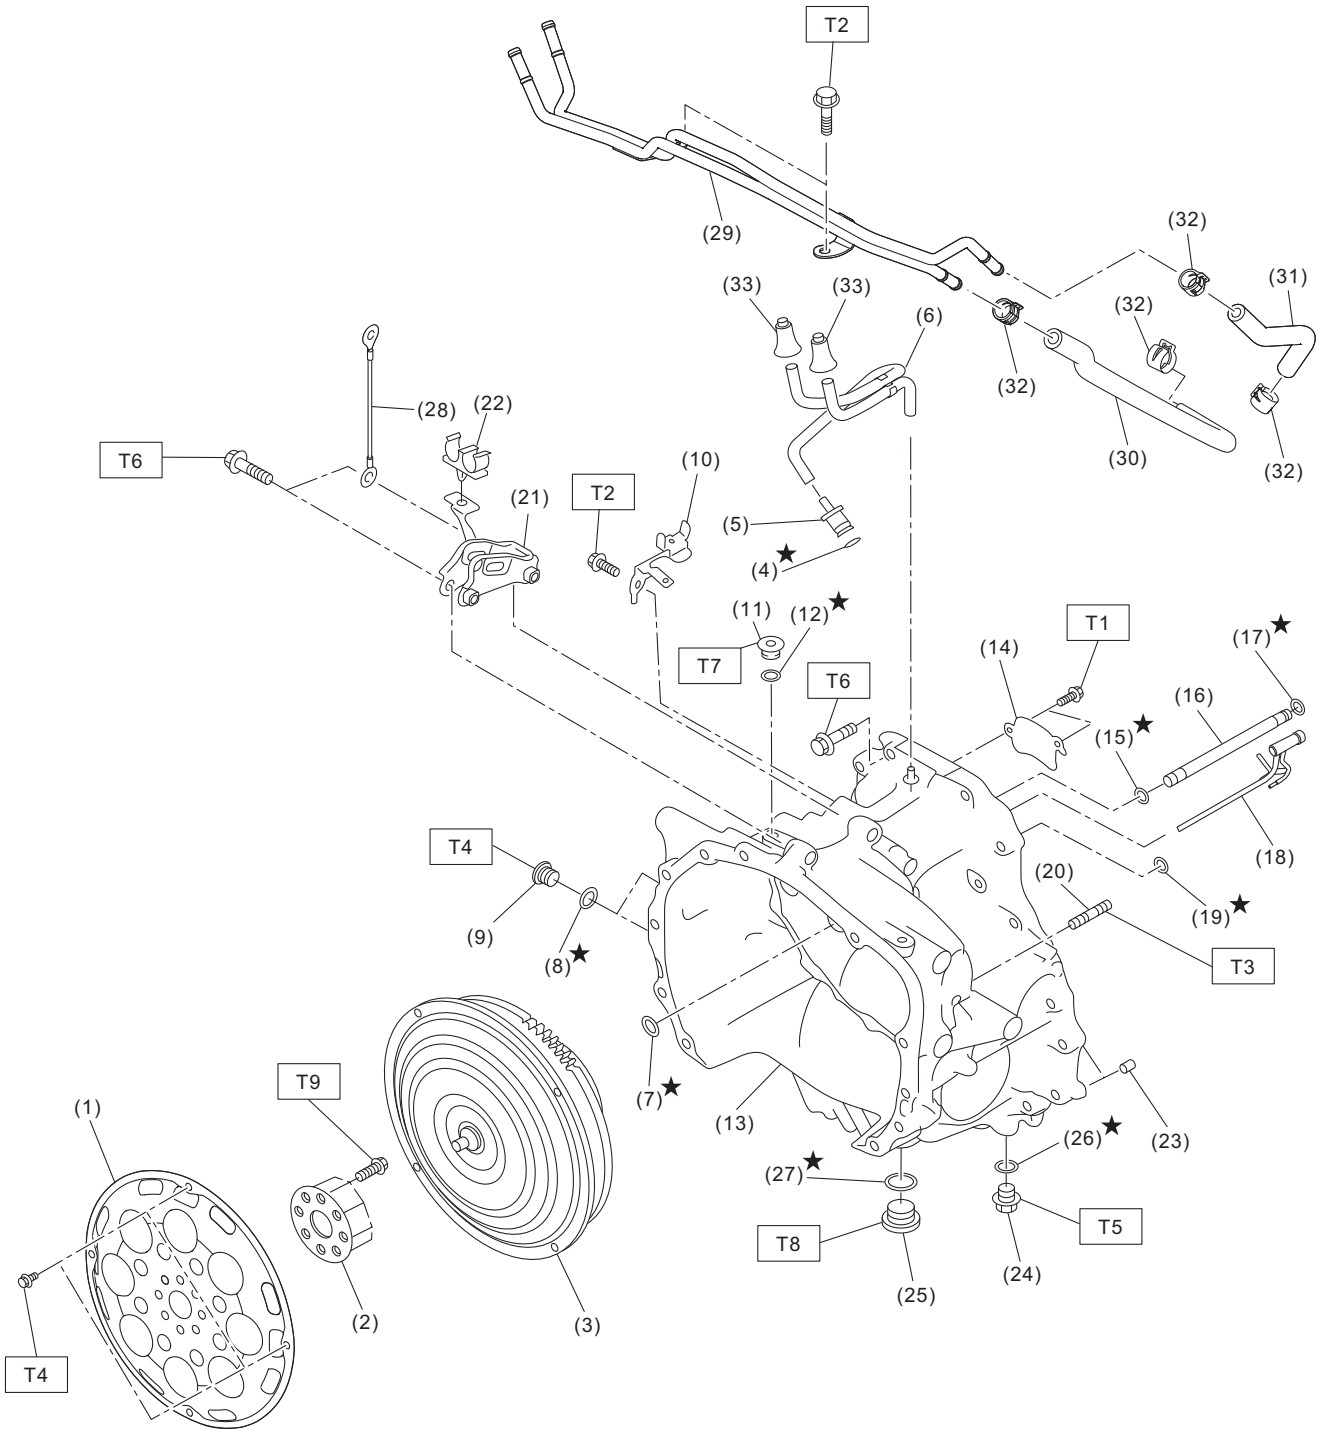
Front final reduction gear ratio	3.900

11.FRONT DIFFERENTIAL GEAR OIL

Fluid	Recommended fluid: SUBARU GEAR OIL EXTRA MT **CAUTION:** **If an alternative transmission oil is used, you may not have expected functionality and performance.** Alternative fluid: GL-5 (75W-90)
Fluid capacity L (US qt, Imp qt)	1.3 — 1.5 (1.4 — 1.6, 1.1 — 1.3)

B: COMPONENT

1. TORQUE CONVERTER ASSEMBLY AND CONVERTER CASE



(1) Drive plate
(2) Reinforcement drive plate
(3) Torque converter ASSY
(4) O-ring
(5) Oil charge pipe cap
(6) Air breather hose
(7) O-ring
(8) O-ring
(9) Plug
(10) Transmission harness stay
(11) Plug
(12) O-ring
(13) Converter case
(14) Oil stopper plate
(15) O-ring
(16) Lubrication pipe
(17) O-ring
(18) Lubrication pipe
(19) O-ring
(20) Stud bolt
(21) Pitching stopper bracket
(22) Clip
(23) Straight pin
(24) Overflow drain plug
(25) Front differential gear oil drain plug
(26) Gasket
(27) Gasket
(28) Transmission radio ground cord
(29) CVTF cooler pipe COMPL
(30) CVTF hose
(31) CVTF hose
(32) Clamp
(33) Air breather cap

Tightening torque: N·m (kgf-m, ft-lb)

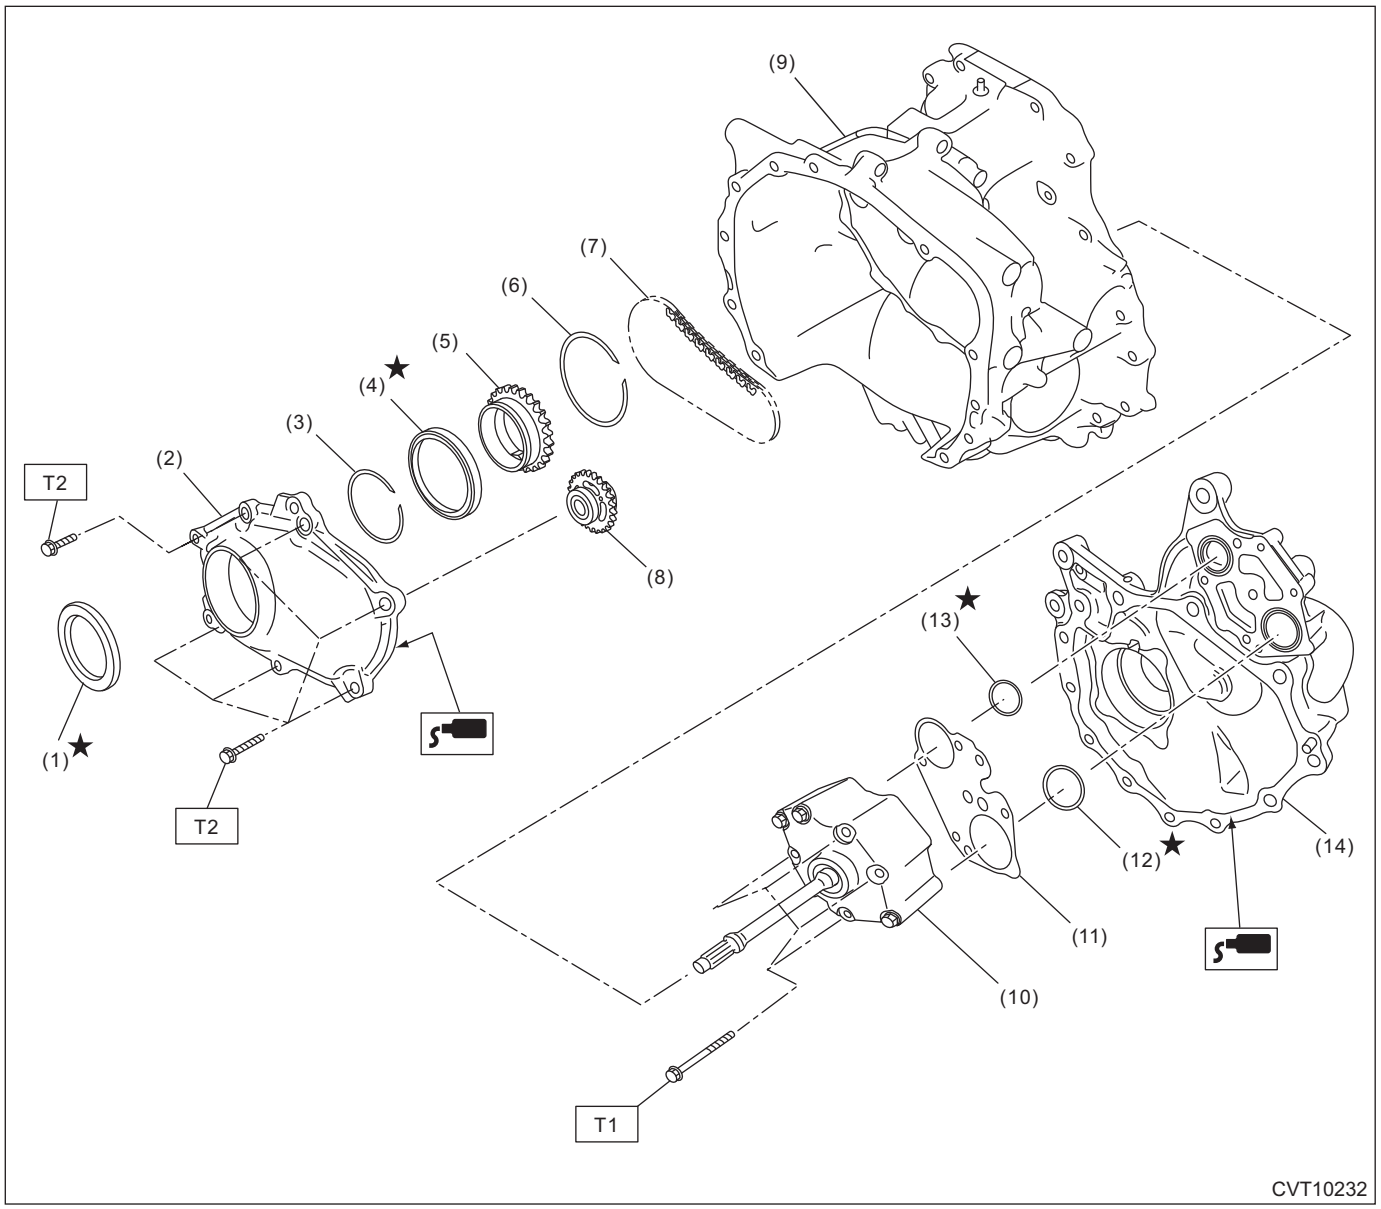
T8: 70 (7.1, 51.6)
T9: <Ref. to CVT(TR690)-140, INSTALLATION, Drive Plate.>

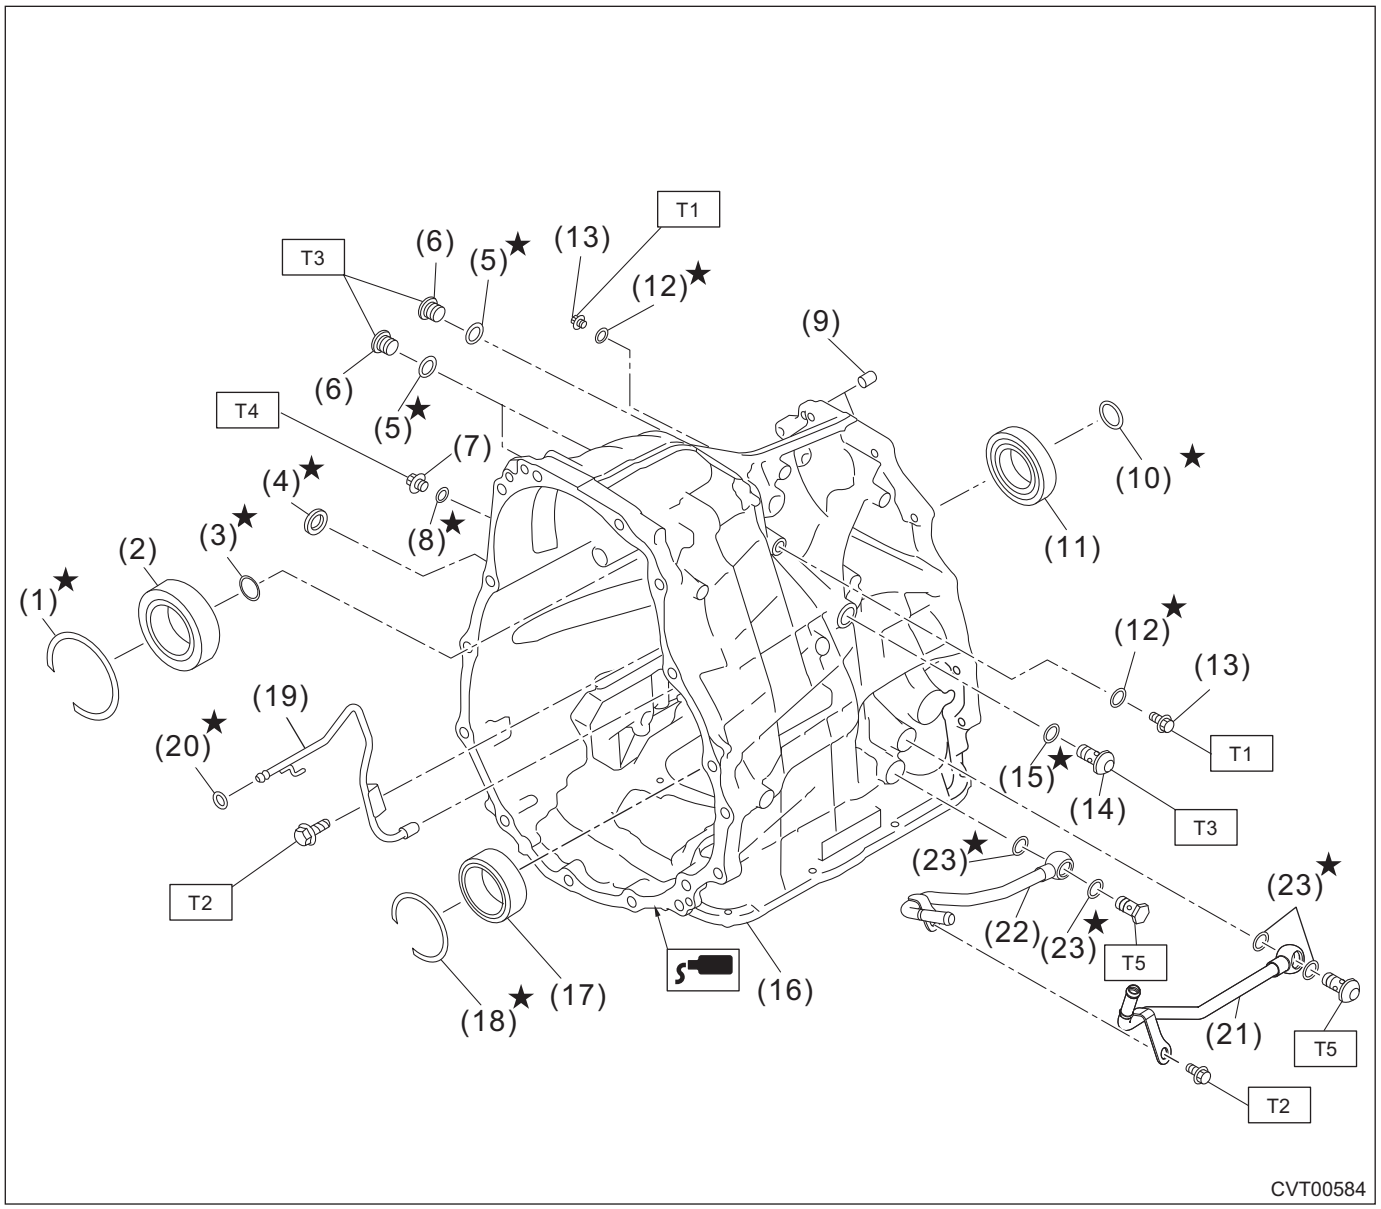
2. OIL PUMP ASSY



(1) Oil seal
(2) Oil pump chain cover
(3) Snap ring
(4) Ball bearing
(5) Drive sprocket
(6) Snap ring
(7) Oil pump chain
(8) Driven sprocket
(9) Converter case
(10) Oil pump ASSY
(11) Plate
(12) O-ring (large)
(13) O-ring (small)
(14) Drive pinion retainer

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8.5 (0.9, 6.3)
T2: 24 (2.4, 17.7)

3. TRANSMISSION CASE



(1) Snap ring
(2) Roller bearing
(3) Seal ring
(4) Oil seal
(5) O-ring
(6) Plug
(7) Plug
(8) Gasket
(9) Straight pin
(10) Seal ring
(11) Ball bearing
(12) O-ring
(13) Plug
(14) Plug
(15) O-ring
(16) Transmission case
(17) Roller bearing
(18) Snap ring
(19) Lubrication pipe
(20) O-ring
(21) CVTF outlet pipe
(22) CVTF inlet pipe
(23) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 13 (1.3, 9.6)
T2: 16 (1.6, 11.8)
T3: 25 (2.5, 18.4)

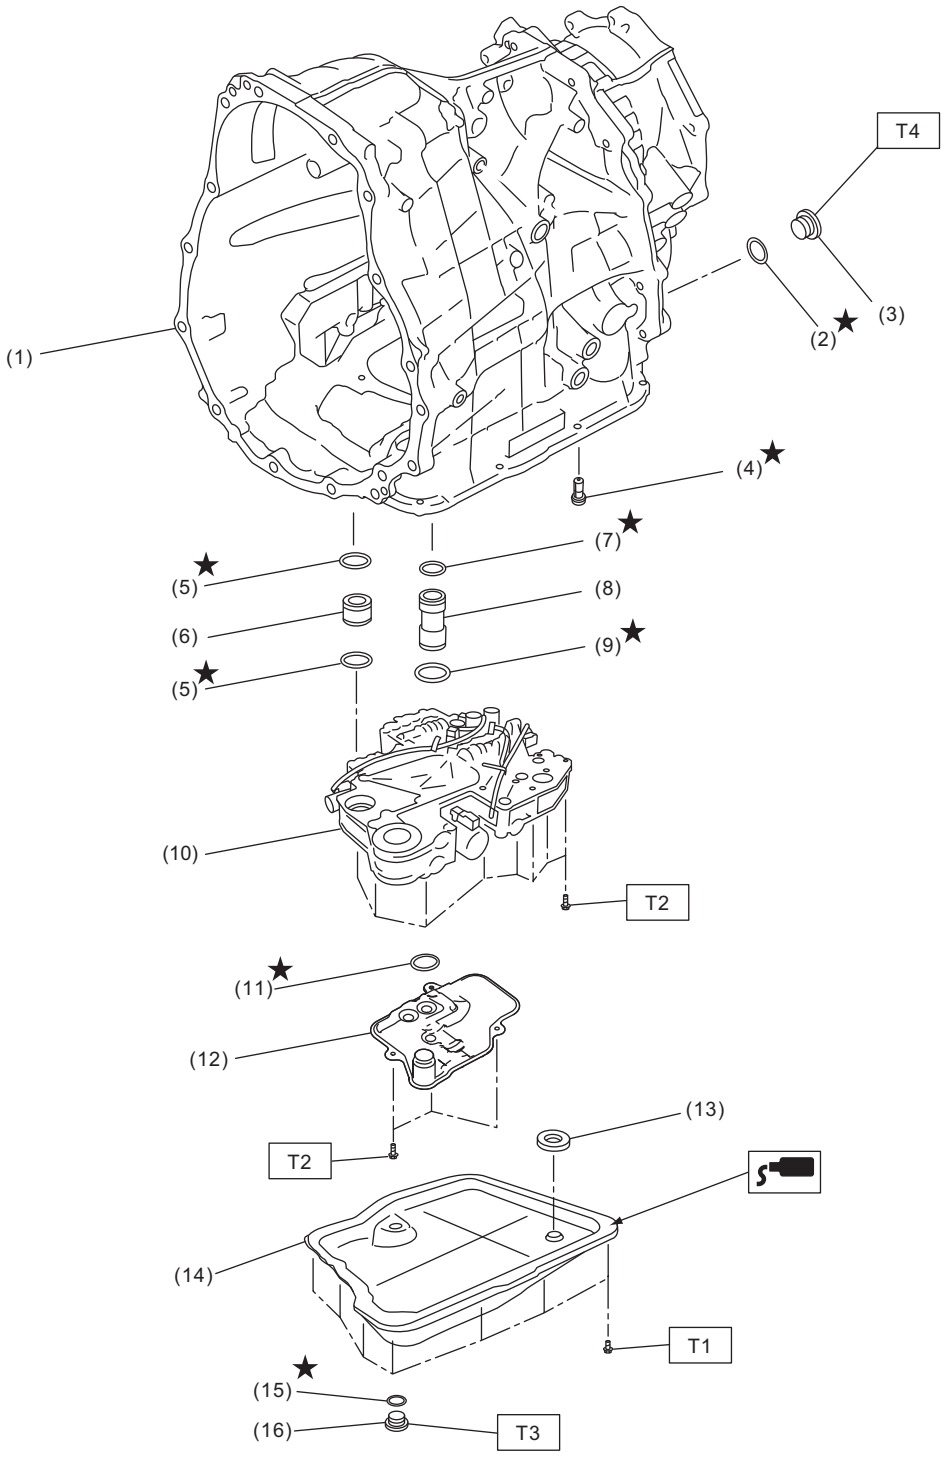
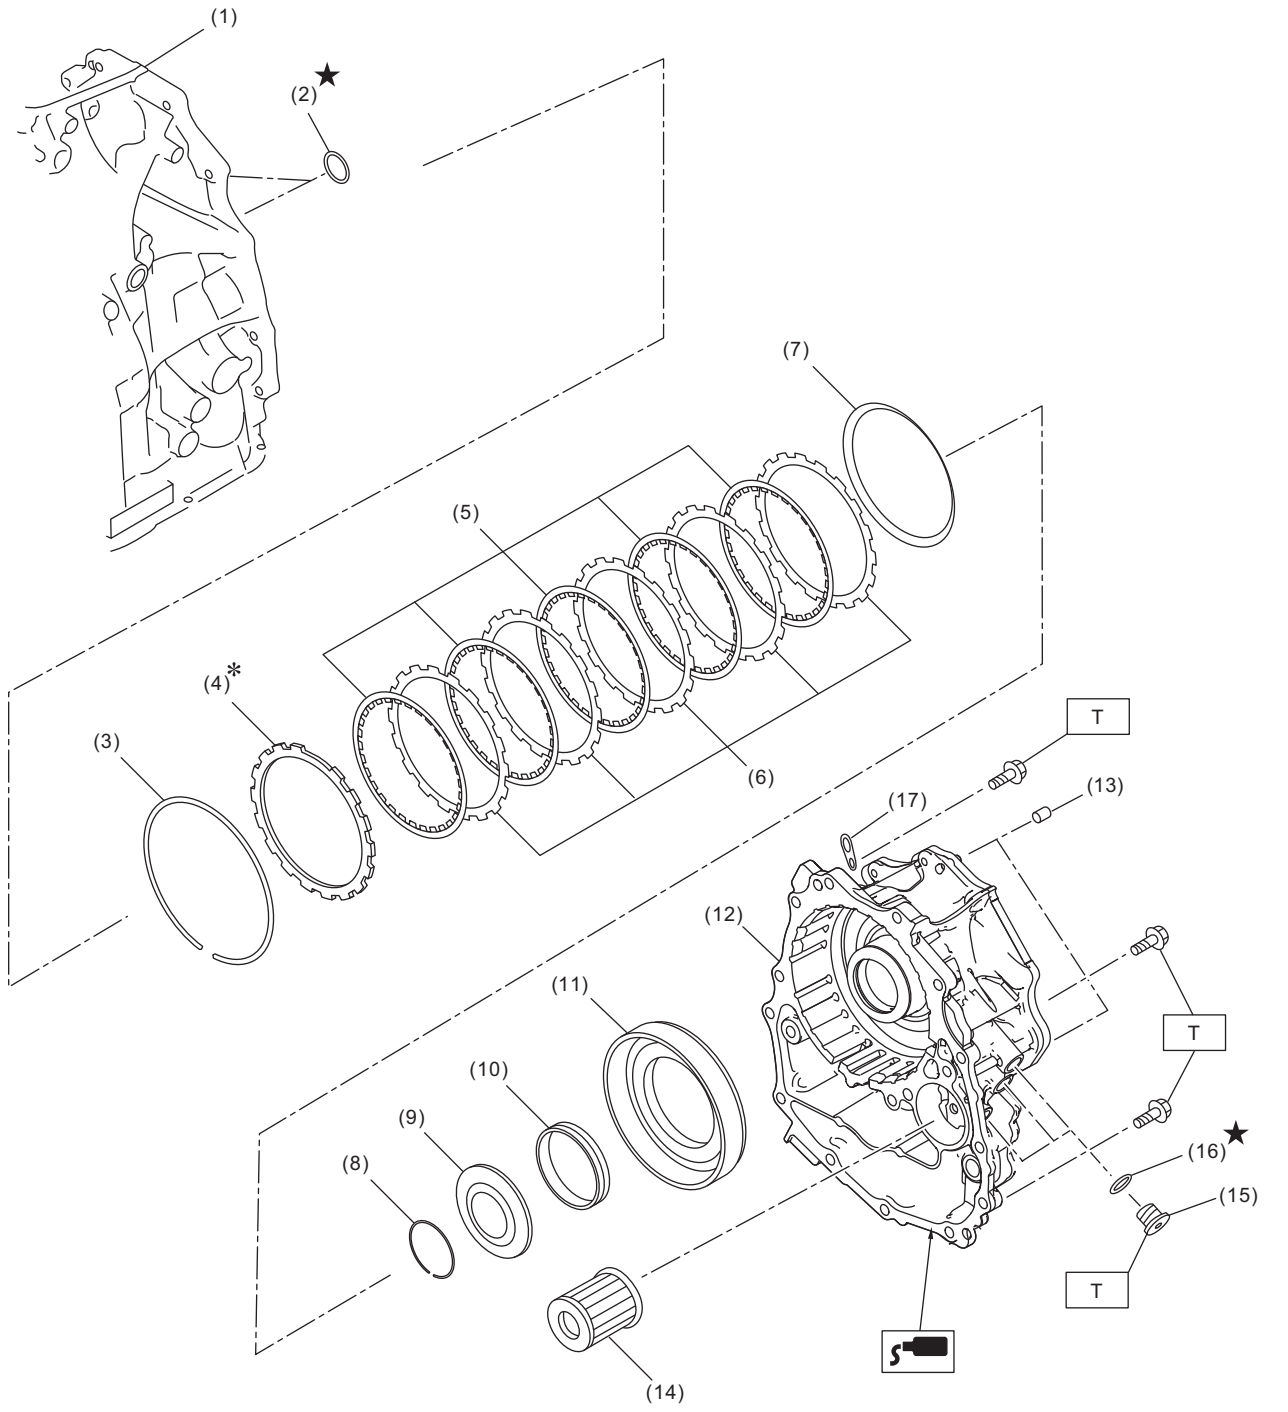
4. CONTROL VALVE BODY



(1) Transmission case
(2) Gasket
(3) Filler plug
(4) CVTF filter
(5) O-ring
(6) Pressure pipe
(7) O-ring (small)
(8) CVTF pipe
(9) O-ring (large)
(10) Control valve body
(11) O-ring
(12) Oil strainer
(13) Magnet
(14) Oil pan
(15) Gasket
(16) CVTF drain plug

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 9 (0.9, 6.6)
T3: 39.2 (4.0, 28.9)
T4: 50 (5.1, 36.9)

5. REVERSE BRAKE ASSEMBLY AND INTERMEDIATE CASE

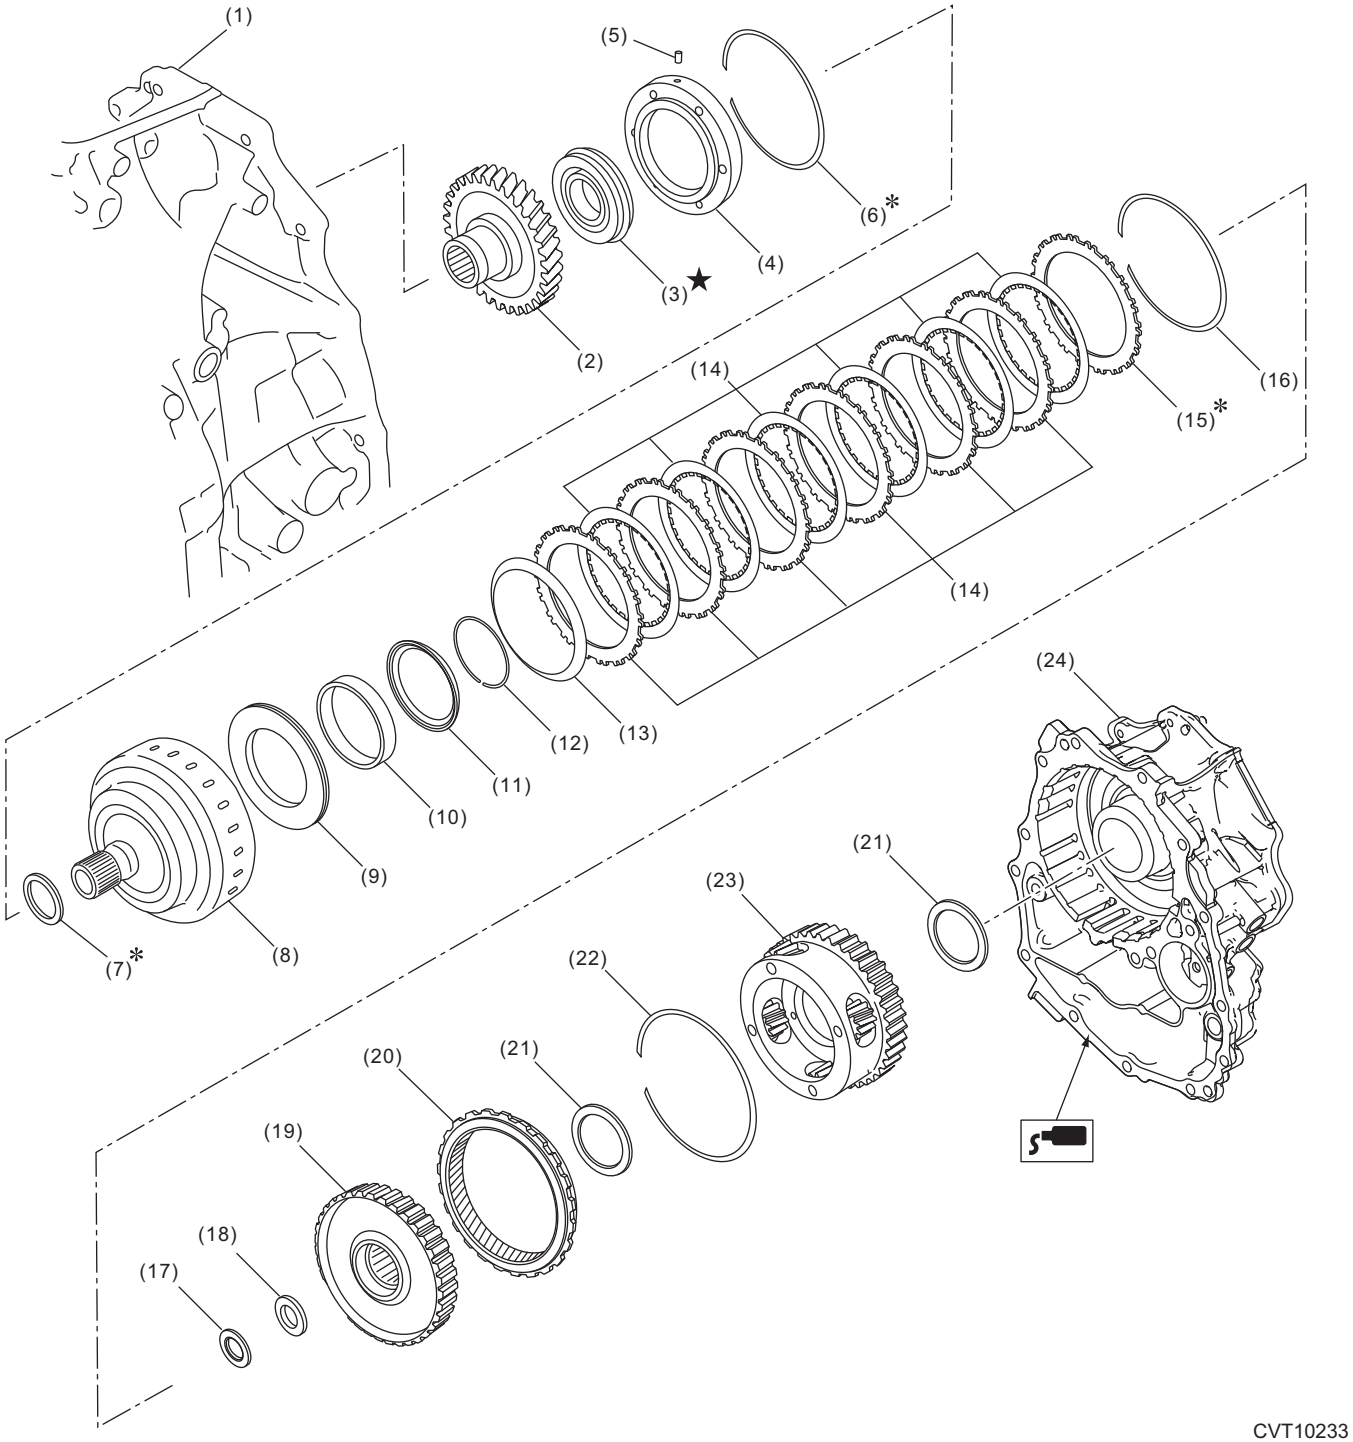


AT-07299

(1) Transmission case
(2) O-ring
(3) Snap ring
(4) Retaining plate
(5) Drive plate
(6) Driven plate
(7) Dish plate
(8) Snap ring
(9) Spring retainer
(10) Return spring
(11) Reverse brake piston
(12) Intermediate case
(13) Straight pin
(14) CVTF filter
(15) Plug
(16) O-ring
(17) Transmission hanger

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

6. FORWARD CLUTCH ASSEMBLY AND REDUCTION DRIVEN GEAR



(1) Transmission case
(2) Reduction driven gear
(3) Ball bearing
(4) Reduction driven gear retainer
(5) Straight pin
(6) Snap ring
(7) Washer
(8) Forward clutch drum
(9) Forward clutch piston
(10) Return spring
(11) Forward clutch piston retainer
(12) Snap ring
(13) Dish plate
(14) Forward clutch plate

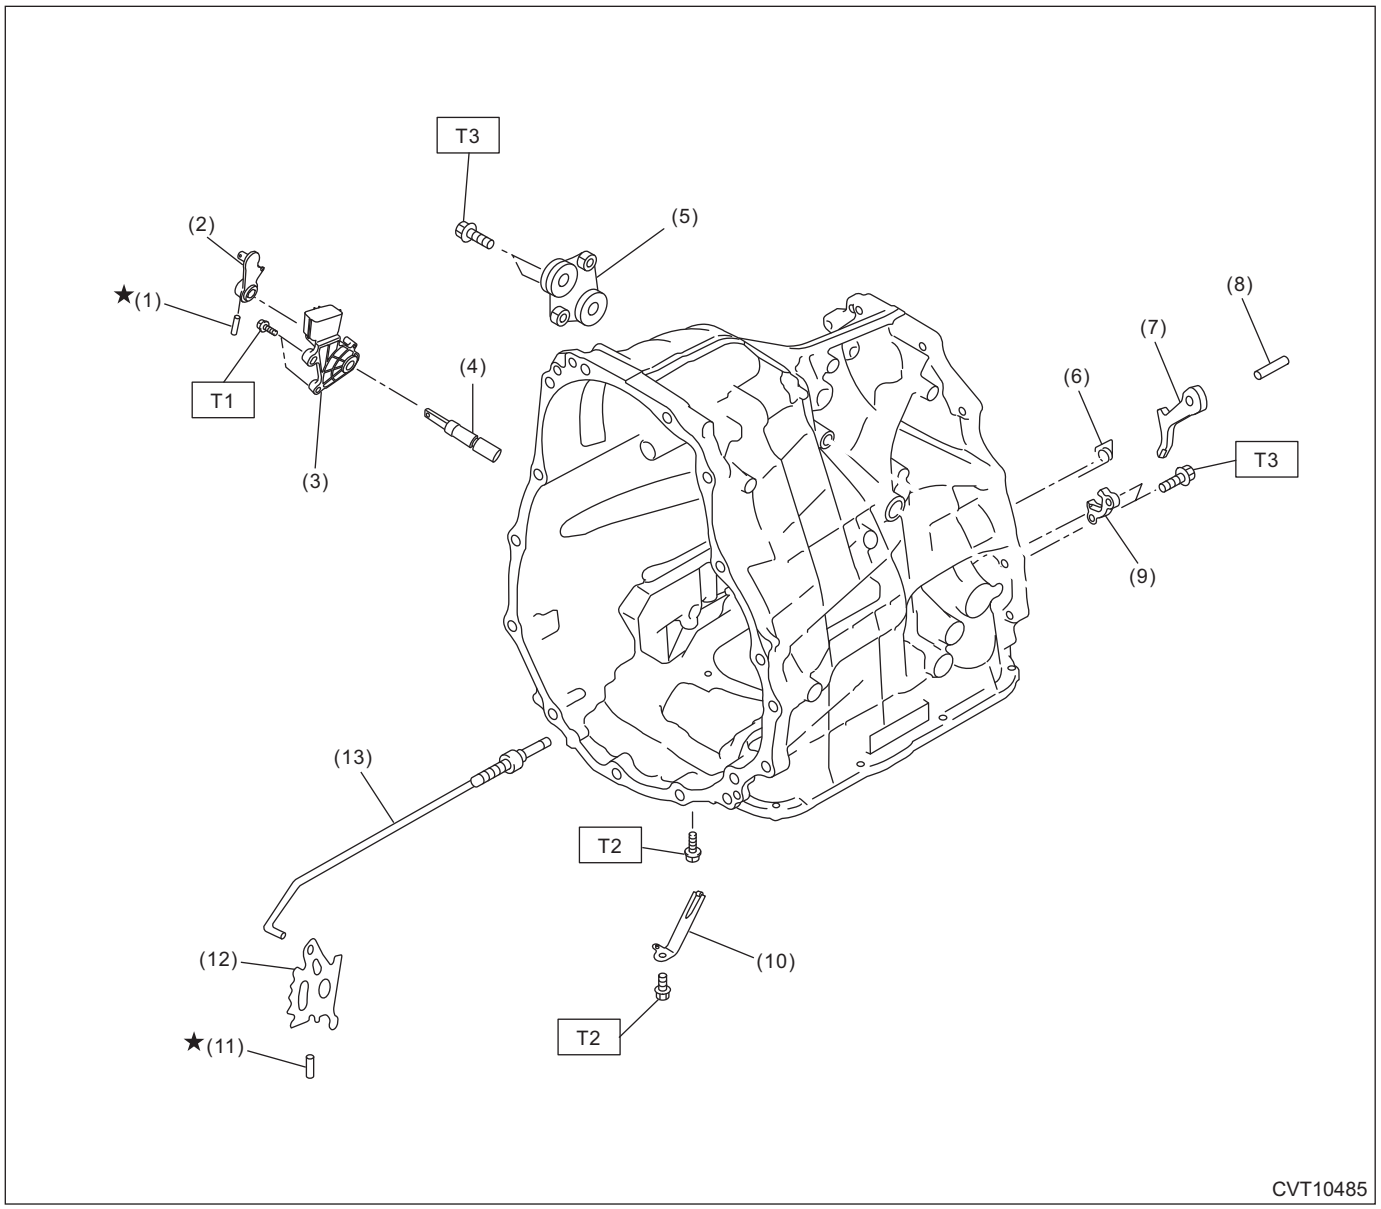
(19) O-ring
(20) Seal ring
(21) Ball bearing
(22) Front reduction drive gear
(23) Ball bearing
(24) O-ring
(25) Converter case

Tightening torque: N·m (kgf-m, ft-lb)
T1: 24 (2.4, 17.7)
T2: 25 (2.5, 18.4)

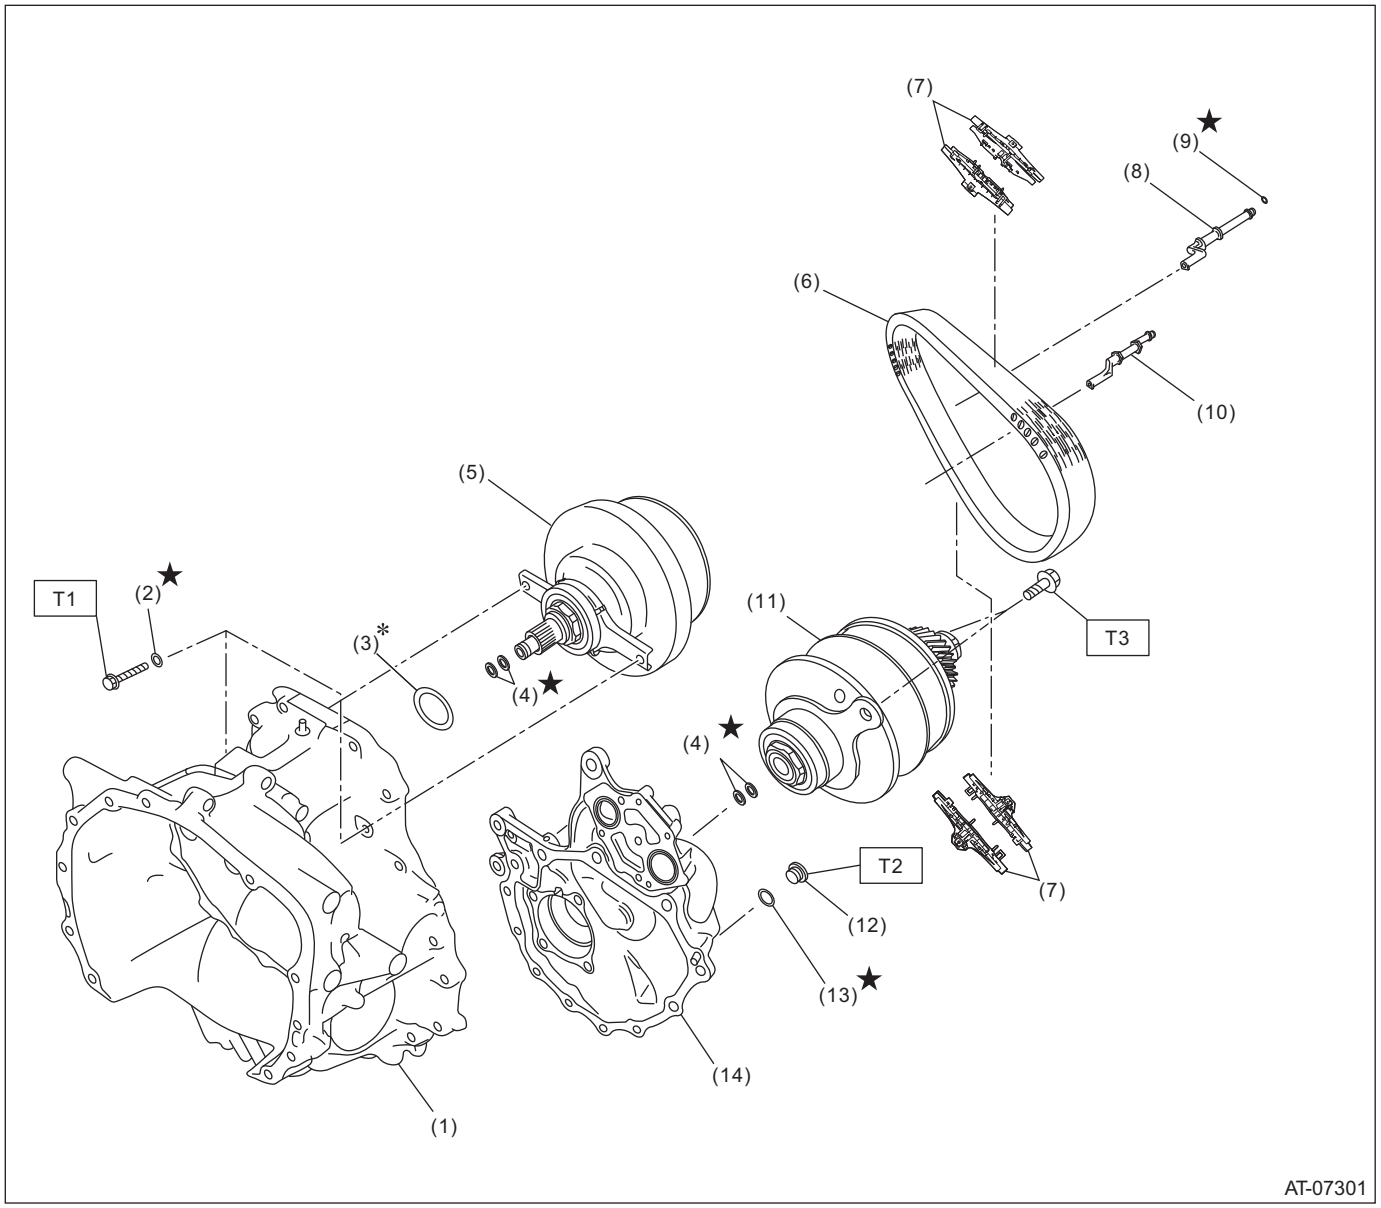
8. TRANSMISSION CONTROL DEVICE



(1) Spring pin
(2) Shifter arm
(3) Inhibitor switch
(4) Shifter arm shaft
(5) Cable plate ASSY
(6) Return spring
(7) Parking pawl
(8) Shaft
(9) Parking support
(10) Detent spring
(11) Spring pin
(12) Manual plate
(13) Parking rod

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 7 (0.7, 5.2)
T3: 25 (2.5, 18.4)

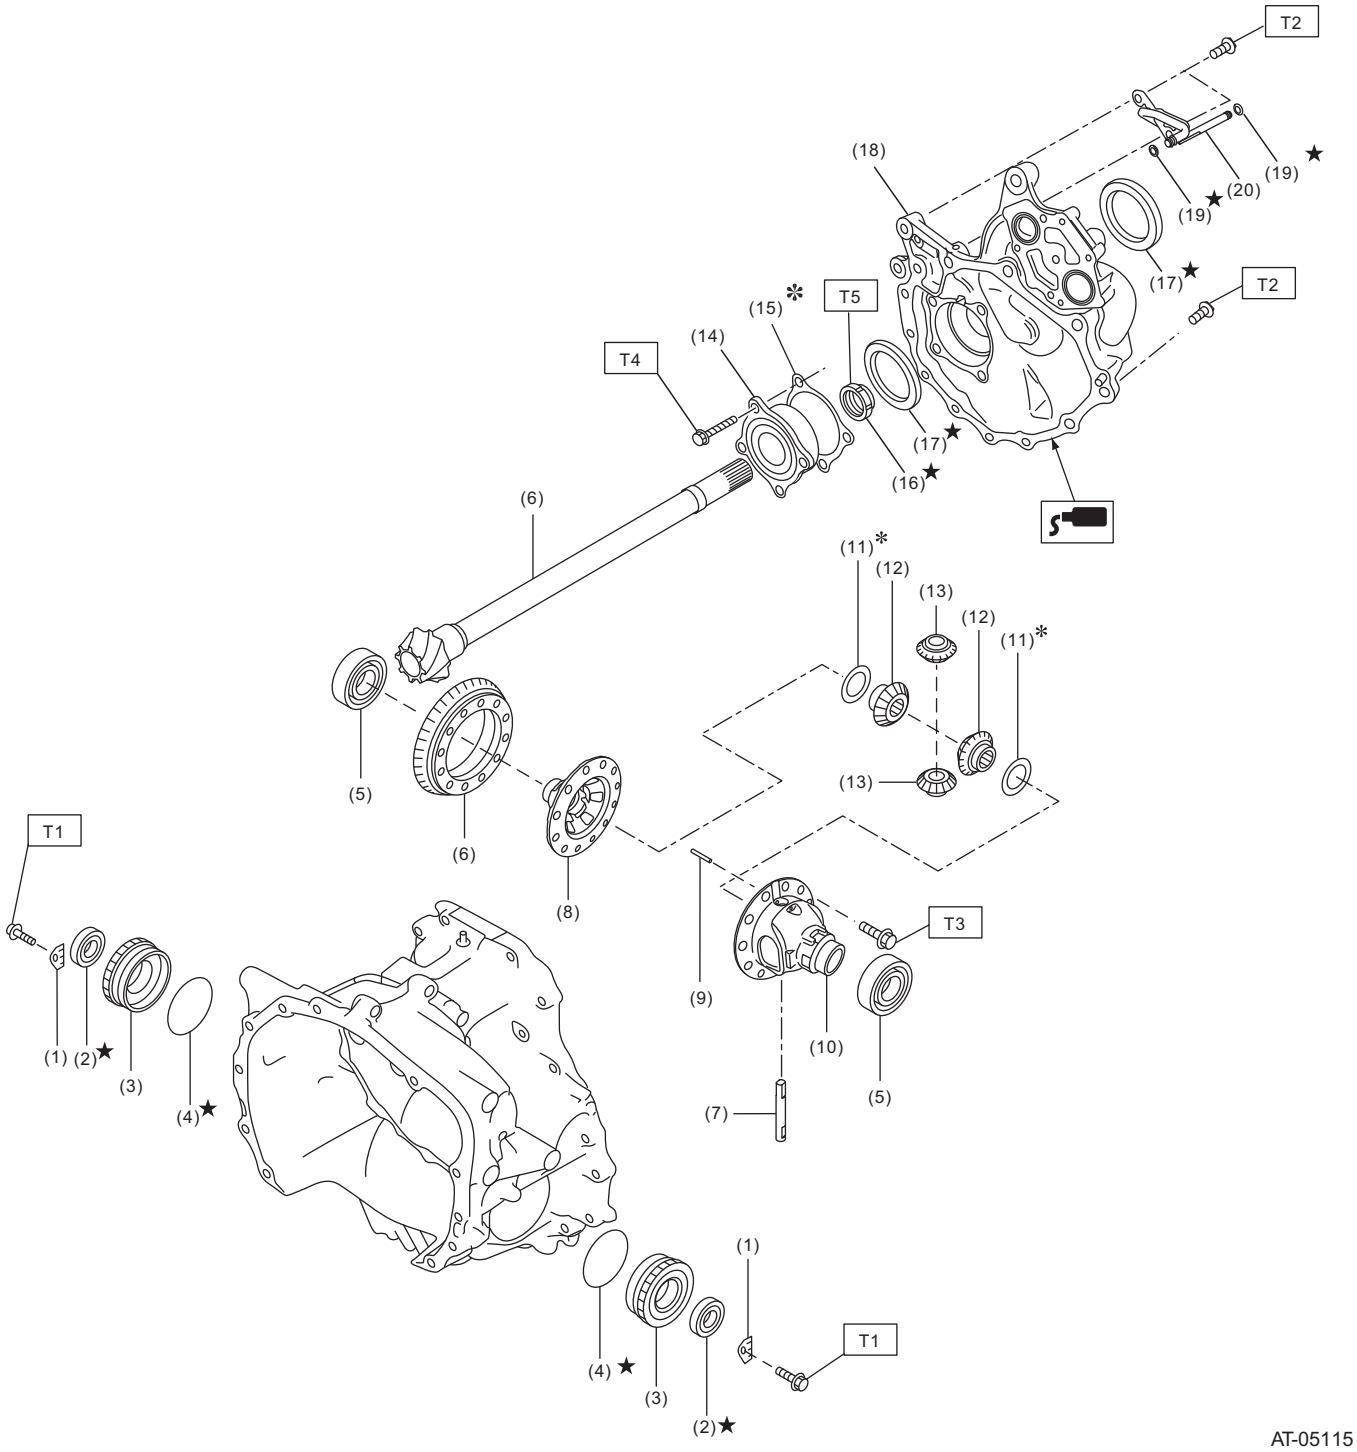
9. PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN



(1) Converter case
(2) Seal washer
(3) Shim
(4) Seal ring
(5) Primary pulley ASSY
(6) Variator chain
(7) Chain guide
(8) Lubrication pipe
(9) O-ring
(10) Support rod
(11) Secondary pulley ASSY
(12) Plug
(13) O-ring
(14) Drive pinion retainer

Tightening torque: N·m (kgf-m, ft-lb)
T1: 21 (2.1, 15.5)
T2: 25 (2.5, 18.4)
T3: 33 (3.4, 24.3)

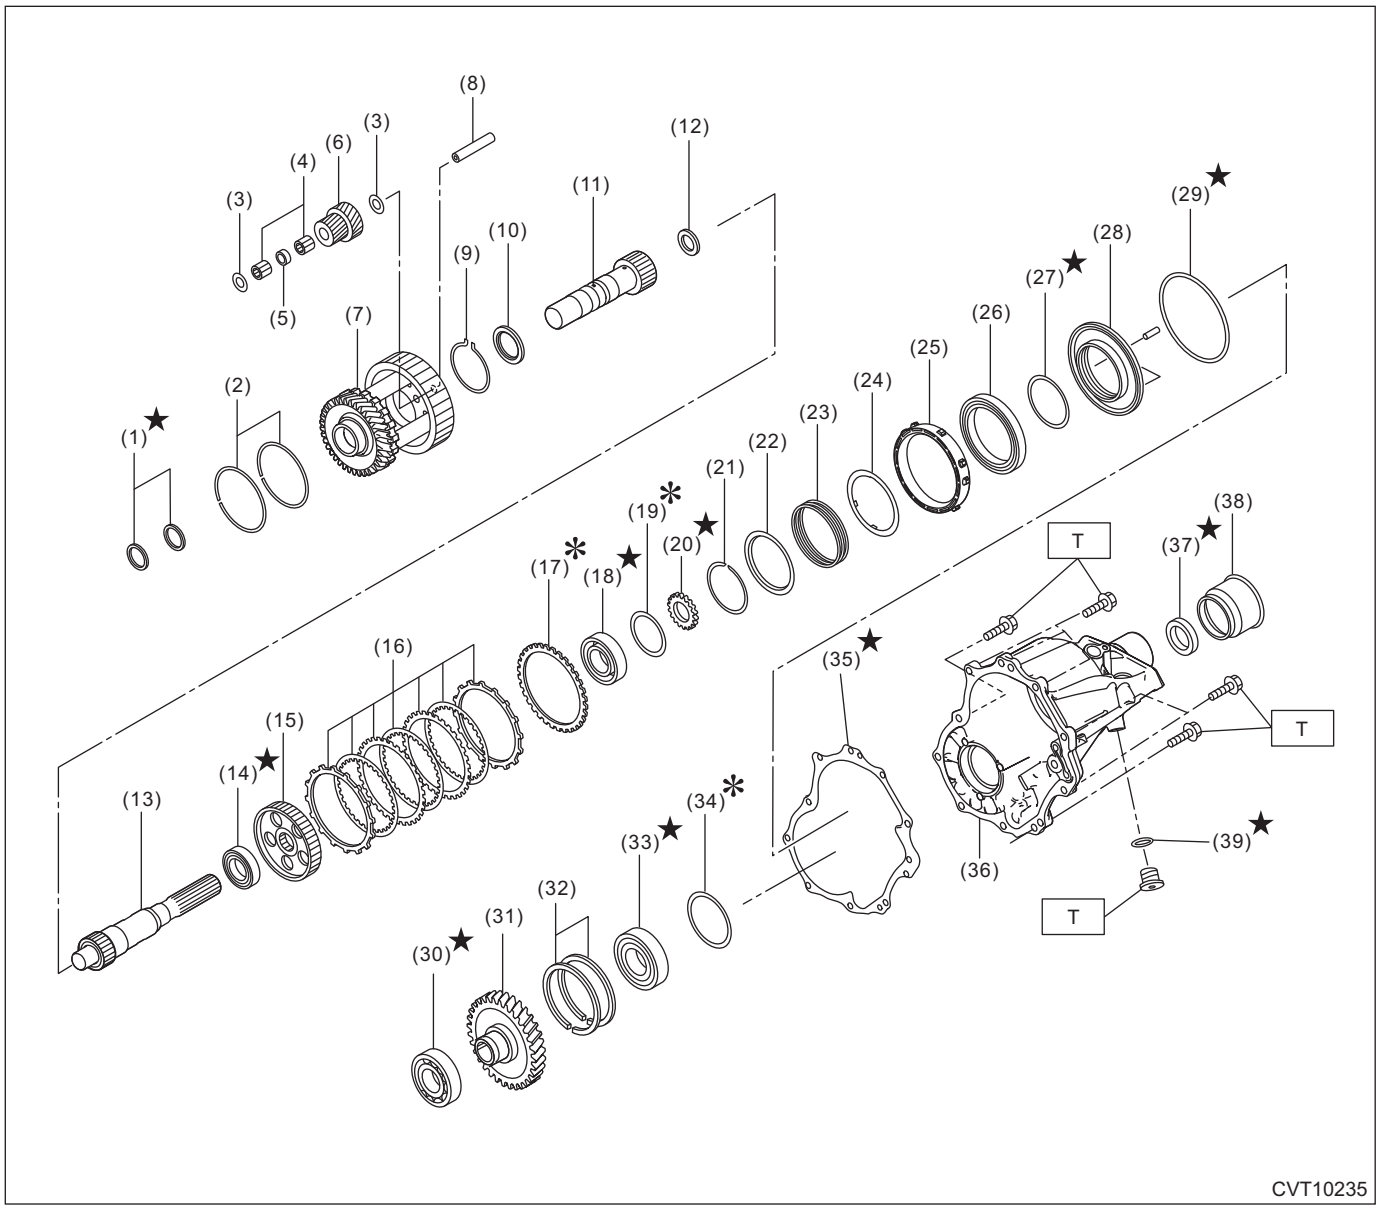
10.FRONT DIFFERENTIAL GEAR



(1) Lock plate
(2) Oil seal
(3) Differential side retainer
(4) O-ring
(5) Taper roller bearing
(6) Drive pinion gear set
(7) Pinion shaft
(8) Differential case RH
(9) Straight pin
(10) Differential case LH
(11) Washer
(12) Differential bevel gear
(13) Differential bevel pinion
(14) Taper roller bearing
(15) Shim
(16) Lock nut
(17) Oil seal
(18) Drive pinion retainer
(19) O-ring
(20) Lubrication pipe

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 43 (4.4, 31.7)
T3: <Ref. to CVT(TR690)-276, DIFFERENTIAL CASE ASSEMBLY, ASSEMBLY, Front Differential Assembly.>
T4: 70 (7.1, 51.6)
T5: 130 (13.3, 95.9)

11.TRANSFER AND EXTENSION CASE



(1) Seal ring
(2) Snap ring
(3) Planetary pinion washer
(4) Needle bearing
(5) Spacer
(6) Pinion gear
(7) Planetary carrier ASSY
(8) Planetary pinion shaft ASSY
(9) Snap ring
(10) Thrust bearing
(11) Intermediate shaft
(12) Thrust washer
(13) Rear drive shaft
(14) Ball bearing
(15) Transfer clutch hub
(16) Transfer clutch plate
(17) Driven plate No. 3
(18) Ball bearing
(19) Rear drive shaft shim
(20) Revolution gear
(21) Snap ring
(22) Clutch spring retainer
(23) Return spring
(24) Spring retainer
(25) Pressure plate
(26) Ball bearing
(27) O-ring
(28) Transfer clutch piston
(29) D-ring
(30) Ball bearing
(31) Transfer reduction driven gear
(32) Snap ring
(33) Ball bearing
(34) Shim
(35) Gasket
(36) Extension case
(37) Oil seal
(38) Dust cover

Tightening torque: N·m (kgf-m, ft-lb)
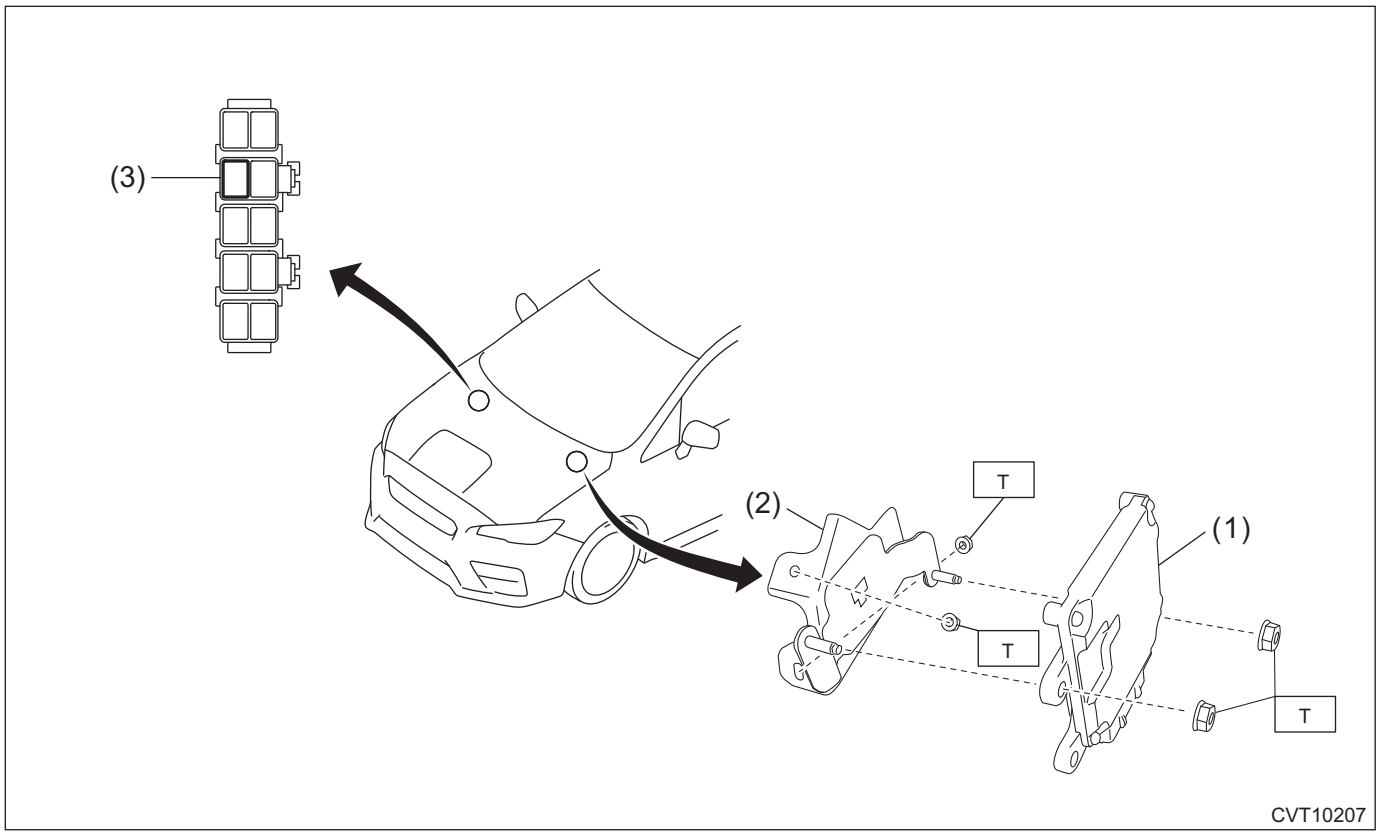
T: 23 (2.3, 17.0)

14.TRANSMISSION CONTROL MODULE

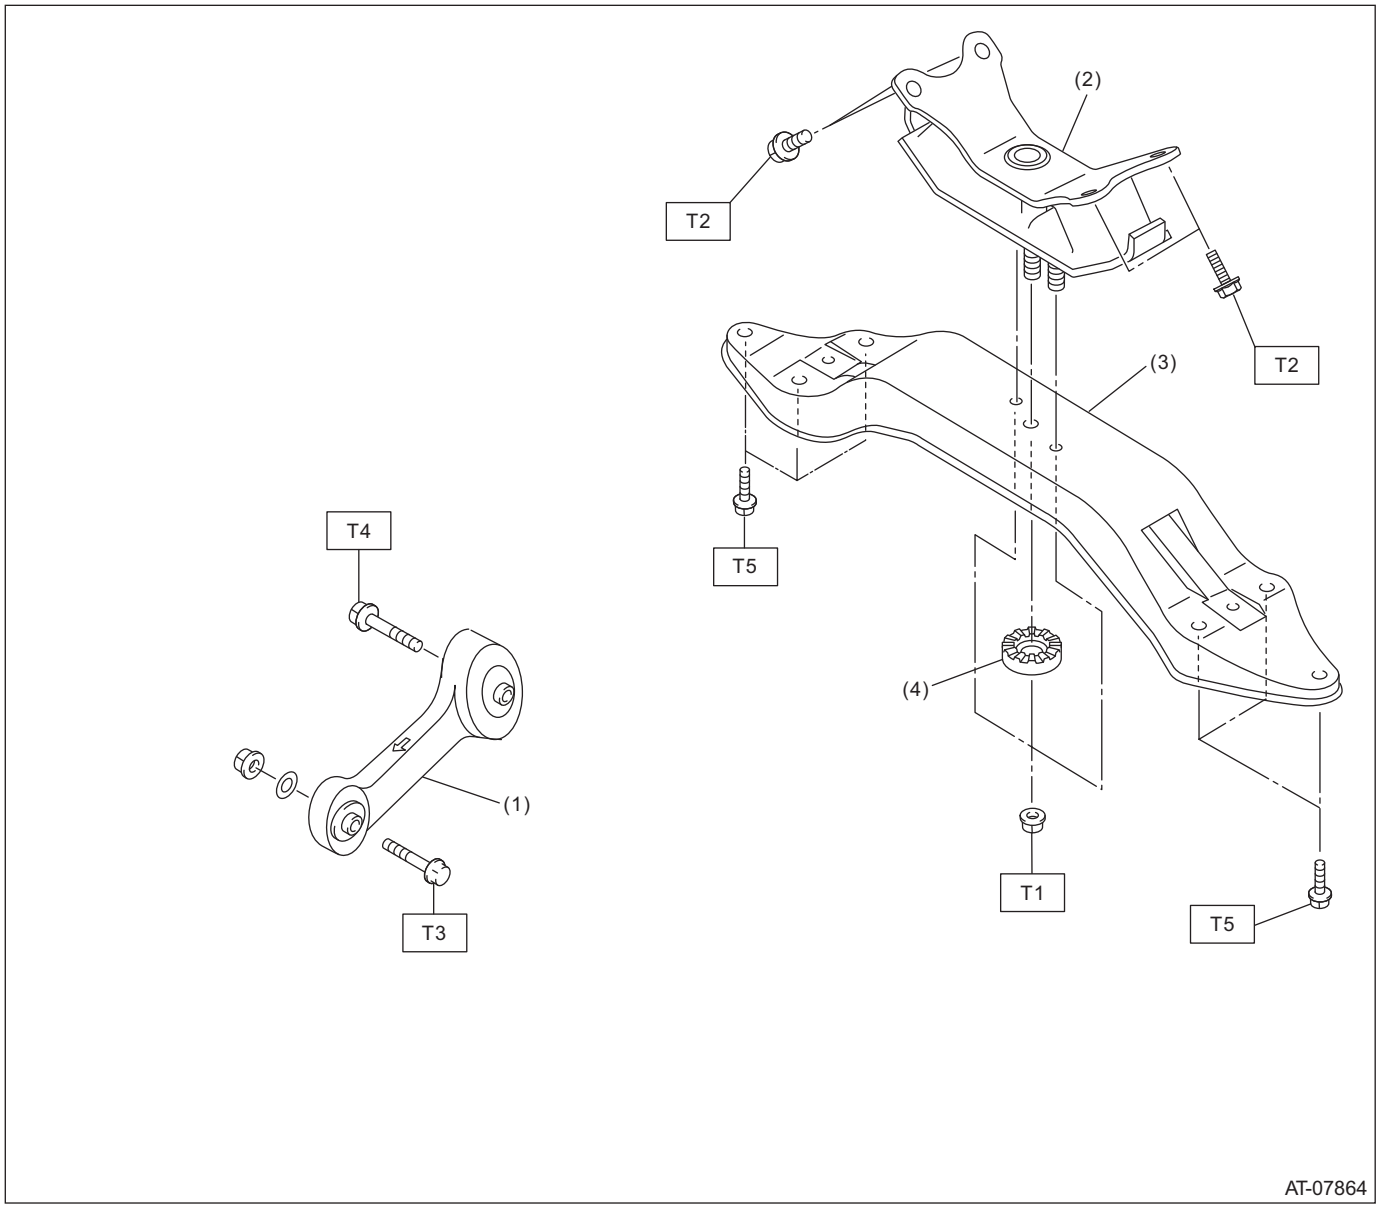


(1) Transmission control module (TCM)
(2) TCM bracket
(3) Relay

Tightening torque: N·m (kgf-m, ft-lb)

T: 7.5 (0.8, 5.5)

15.TRANSMISSION MOUNTING



(1) Pitching stopper
(2) Rear cushion rubber
(3) Transmission rear crossmember
(4) Stopper

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 40 (4.1, 29.5)
T3: 50 (5.1, 36.9)
T4: 58 (5.9, 42.8)
T5: 70 (7.1, 51.6)

C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the oil pan with its inner side facing up until it is installed, to prevent intrusion of foreign matter into the control valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

• When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry apart with screwdrivers or other tools.
• Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine CVTF and recommended grease. Do not mix CVTF, grease etc. of different grades or manufacturers.
• Be sure to tighten bolts and nuts to the specified torque.
• Place lifts, shop jacks or rigid racks at specified locations.
• Apply CVTF onto sliding or revolving surfaces before installation.
• Apply CVTF onto the press-fitting surface of the part before press-fitting the part using a press.
• Replace deformed or damaged snap rings with new parts.
• Before installing O-rings or oil seals, apply sufficient amount of CVTF to avoid damage and deformation.
• Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
• Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
• Avoid damaging the mating surface of the case.
• Before applying liquid gasket, completely remove the old liquid gasket.
• After removing the sensors, breather hose and plugs, plug the holes to avoid foreign materials intruding as necessary.
• During disassembly or assembly, be sure to use nylon gloves or paper towels. Do not use cloth gloves or waste cloth.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41099AC000	41099AC000	ENGINE SUPPORT ASSY	Used for supporting engine.
 ST18801AA000	18801AA000	OIL PRESSURE GAUGE ASSY	Used for measuring the secondary pressure (line pressure).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18658AA021	18658AA021	WRENCH COMPL RETAINER	Used for removing and installing the differential side retainer.
 ST18681AA000	18681AA000	PRESSURE GAUGE ADAPTER	Used for measuring the secondary pressure (line pressure) and transfer clutch hydraulic pressure. NOTE: Used together with the genuine O-ring (part No. 806911080).
 ST18769AA000	18769AA000	EXPANDER PULLEY	Used for removing and installing the secondary pulley assembly.
 ST-498897700	498897700	OIL PRESSURE ADAPTER SET	Used for measuring the secondary pressure (line pressure) hydraulic pressure.
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used for measuring the transfer clutch hydraulic pressure. NOTE: Used with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used for measuring the transfer clutch hydraulic pressure.
 ST73099SG000	73099SG000	SPECIAL TOOL CONDENSER	Used for installing the transfer clutch pressure test plug.
 ST18270AA040	18270AA040	SOCKET	Used for installing the transfer clutch pressure test plug.
 ST-498575400	498575400	OIL PRESSURE GAUGE ASSY	Used for measuring the transfer clutch hydraulic pressure.
 ST-498277200	498277200	STOPPER SET	• Used for removing and installing automatic transmission assembly to engine. • Used for preventing the torque converter from dropping off.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the roller bearing of the primary pulley and secondary pulley. • Used for removing the bearing of reduction driven gear. • Used for removing the differential side retainer bearing outer race.
 ST18760AA000	18760AA000	CLAW	• Used for removing ball bearing of front reduction driven gear. • Used together with PULLER ASSY (398527700).
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST18632AA000	18632AA000	TRANSMISSION STAND	Used for disassembling and assembling the transmission.
 ST-498255400	498255400	PLATE	Used for measuring the backlash of hypoid gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for disassembling and installing the multi-plate clutch piston for shifting. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used. (Except for transfer clutch piston)
 ST18765AA000	18765AA000	COMPRESSOR SUPPORT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for disassembling and installing the multi-plate clutch for shifting.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18667AA010	18667AA010	HOLDER	• Used for removing and installing the drive pinion lock nut. • Used as a holder to rotate gear when checking tooth contact.
 ST18270KA010	18270KA010	SOCKET (E16)	Used for removing and installing the center support COMPL.
 ST18270KA020	18270KA020	SOCKET (E20)	• Used for removing and installing the hypoid driven gear. • Used for removing and installing the drive pinion shaft retainer.
 ST-398497701	398497701	SEAT	Used for removing and installing the ball bearing.
 ST-398177700	398177700	INSTALLER	• Used for removing and installing the ball bearing and tapered roller bearing. • Used for installing the parking gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398643600	398643600	GAUGE	Used for measuring the total end play, extension end play and drive pinion height.
 ST-899864100	899864100	REMOVER	Used for removing and installing the ball bearing.
 ST-498077000	498077000	REMOVER	• Used for removing ball bearing of front reduction drive gear. • Used for removing the inner bearing inner race of the drive pinion shaft. • Used for removing the differential taper roller bearing.
 ST18657AA010	18657AA010	INSTALLER	Used for installing the oil seal of inhibitor switch.
 ST18657AA020	18657AA020	OIL SEAL INSTALLER	Used for installing the oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18621AA000	18621AA000	ADAPTER WRENCH	Used for removing and installing the drive pinion shaft lock nut.
 ST18651AA000	18651AA000	INSTALLER	Used for installing the bearing of front reduction drive gear.
 ST18720AA000	18720AA000	REMOVER	Used for removing ball bearing of reduction driven gear.
 ST-498497300	498497300	CRANKSHAFT STOPPER	Used for stopping the drive plate rotation when removing and installing the drive plate.
 ST20299AG010	20299AG010	BASE	Used for installing the bearing on primary pulley side.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-399513600	399513600	INSTALLER	• Used to install the rear drive shaft ball bearing. • Used for removing the bearing of the oil pump chain sprocket.
 ST-499267300	499267300	STOPPER PIN	Used for adjusting the inhibitor switch.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the front differential taper roller bearing. • Used for removing and installing the transfer reduction drive gear. • Used for installing the ball bearing of the transfer reduction drive gear. • Used for installing the oil seal. • Used for installing the ball bearing of the transfer reduction driven gear.
 ST-499277200	499277200	INSTALLER	• Used for installing the inner bearing inner race of drive pinion shaft. • Used for installing the reduction driven gear.
 ST-499575400	499575400	GAUGE	Used for measuring height of end play.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499575600	499575600	GAUGE	Used for measuring height of end play.
 ST-398744300	398744300	PISTON GUIDE	Used for measuring height of end play.
 ST-499787700	499787700	WRENCH	Used for measuring the differential pinion shaft backlash.
 ST-499757002	499757002	INSTALLER	Used for installing the bearing of front reduction driven gear.
 ST18767AA000	18767AA000	BEARING REMOVER	Used for removing the reduction driven gear bearing retainer.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499755602	499755602	PRESS SNAP RING	Used for installing the ball bearing and roller bearing.
 ST-498077600	498077600	REMOVER	• Used for removing the ball bearing of the rear drive shaft. • Used for removing the ball bearing of transfer reduction driven gear. • Used for removing ball bearing of reduction driven gear. • Used for removing the ball bearing of drive sprocket.
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring voltage and resistance of TCM terminals.
 ST-927720000	927720000	HOUSING BUSHING INSTALLER AND REMOVER	• Used for installing the oil seal of oil pump chain cover. • Use BASE TUBE LATERAL LINK (927890000) and BUSHING SHAFT (927880000).
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures, refer to “Help” for the application.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Thickness gauge	Used for the clearance in reverse brake, forward clutch, transfer clutch and input clutch.
Caliper	Used for measuring the clearance at the parts.
Spring scale	Used for measuring the starting torque of the drive pinion.
TORX® bit T70	Used for removing and installing differential gear oil drain plug.
Straight pin remover	Used for removing and installing the spring pin.
Deep socket	Used for removing and installing the secondary pressure sensor. NOTE: Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27).
Push/pull gauge	Used for measuring clutch clearance.
Angle gauge	• Used for installing the hypoid driven gear. • Used for installing the drive plate.
Dial gauge	• Used for measuring backlash. (Lever type) • Used with magnet stand.
Magnet stand	• Used for measuring backlash. • Used with dial gauge (lever type).
DST-i	Used together with Subaru Select Monitor 4.

2. CVTF

A: INSPECTION

Check for leakage of CVTF from transmission.

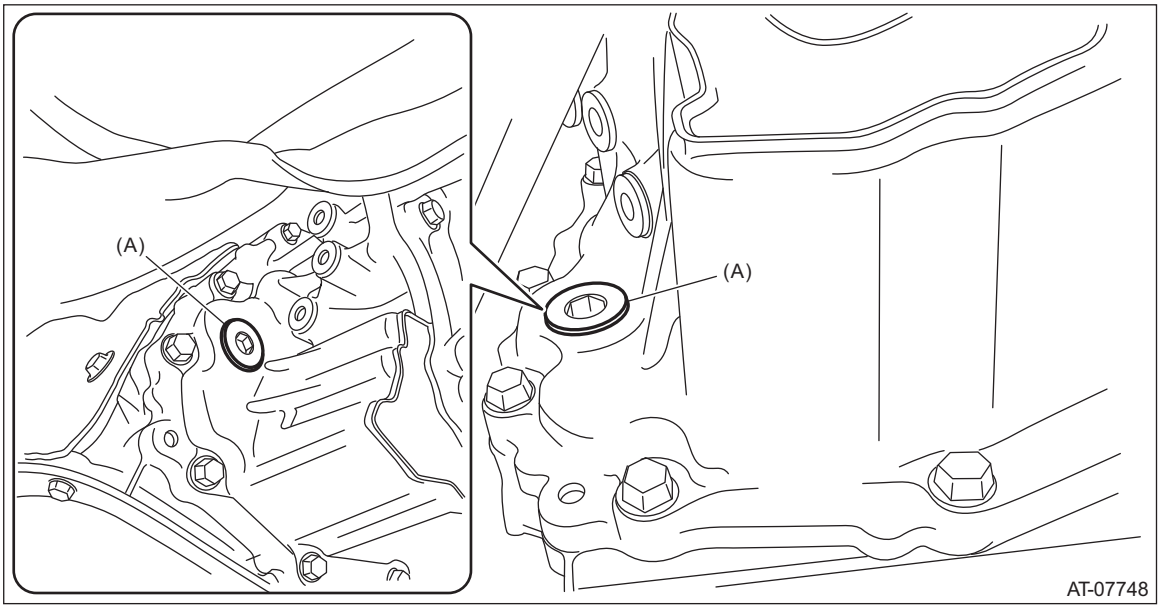
B: ADJUSTMENT

CAUTION:
• CVTF level changes along with CVTF temperature. When inspecting CVTF level, observe the specified CVTF temperature.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
2) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.
3) With the engine running, lift up the vehicle and remove the filler plug.

CAUTION:
Pay special attention to the following operations as the engine is at idle.

NOTE:
CVTF is at the specified level when it is up to the filler plug hole lower section.

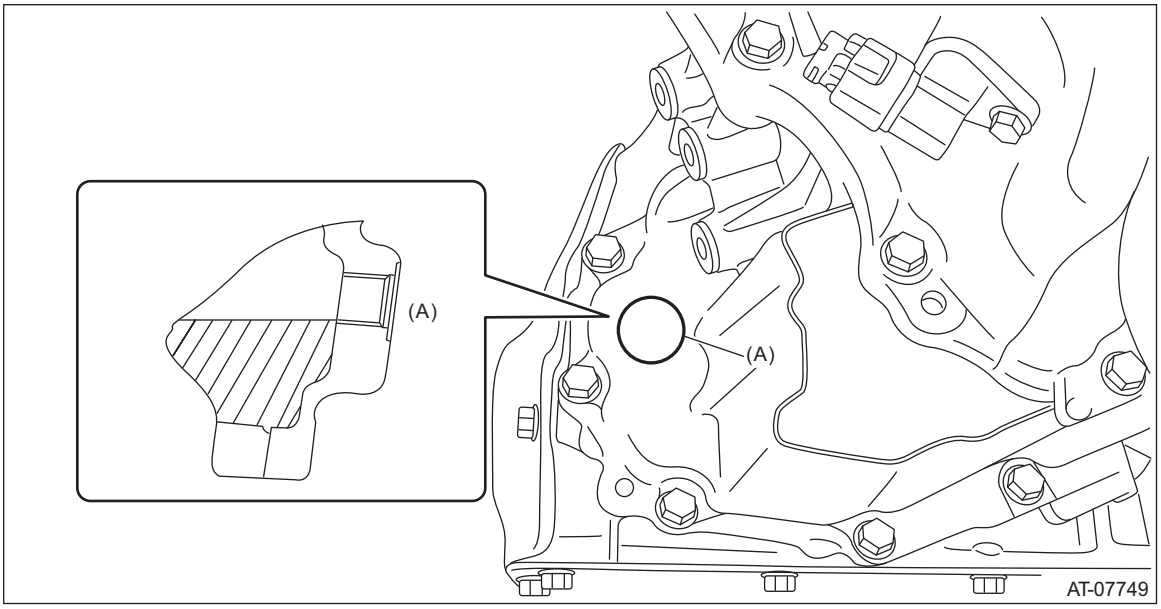


(A) Filler plug

4) When there is no CVTF leakage from the transmission, add the specified fluid up to the filler plug hole lower section.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

CAUTION:
Note that when CVTF is added up to the lower section of filler plug while the transmission is in cold condition, overfilling of CVTF occurs, causing the oil to spill out.



(A) Filler plug hole

5) Install the filler plug.

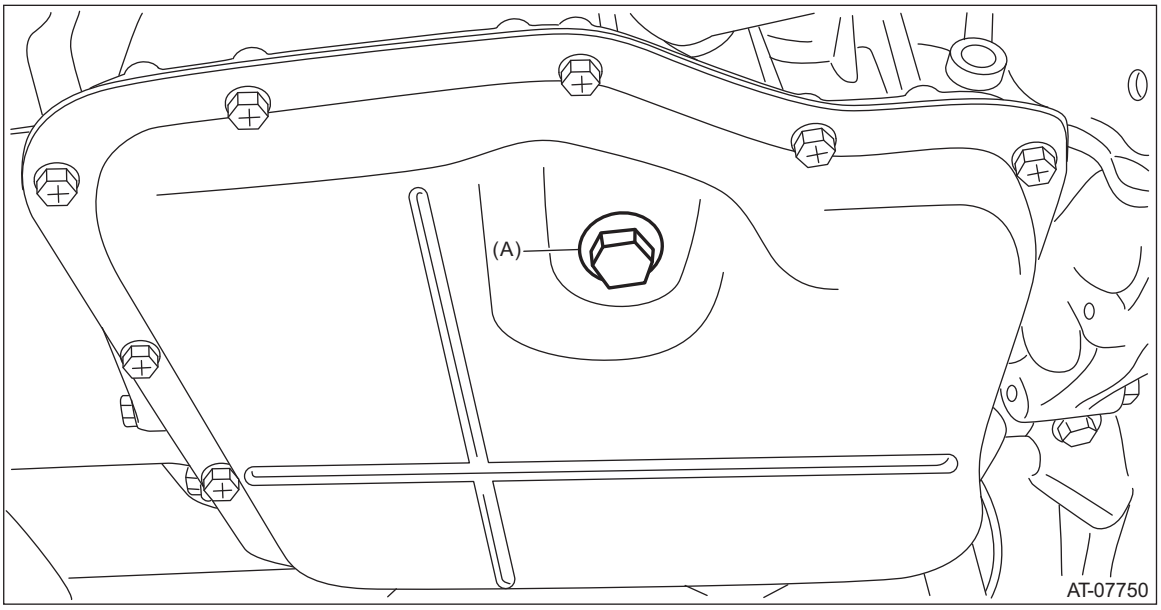
NOTE:
Use a new gasket.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

C: REPLACEMENT

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill the CVTF on exhaust pipe to prevent it from emitting smoke or causing fires. If CVTF adheres, wipe it off completely.
• Always use specified CVTF. Using other fluid will cause malfunction.

1) Lift up the vehicle, and remove the CVTF drain plug.



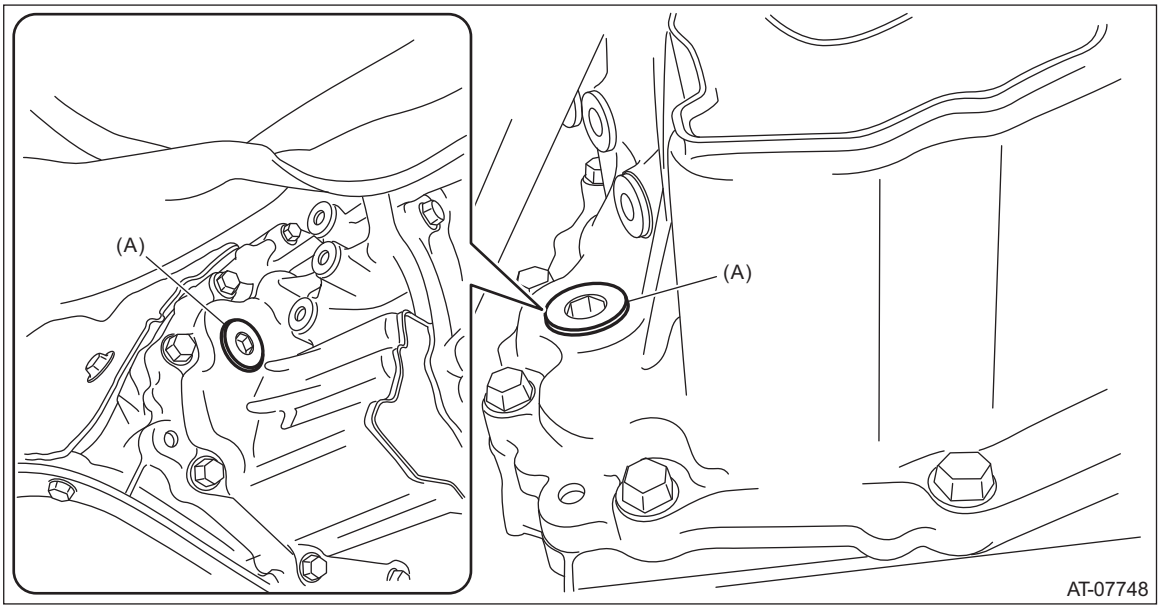
(A) CVTF drain plug

2) Check the CVTF condition. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
3) Install the CVTF drain plug and gasket.

NOTE:
Use a new gasket.

Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)

4) Remove the filler plug.



(A) Filler plug

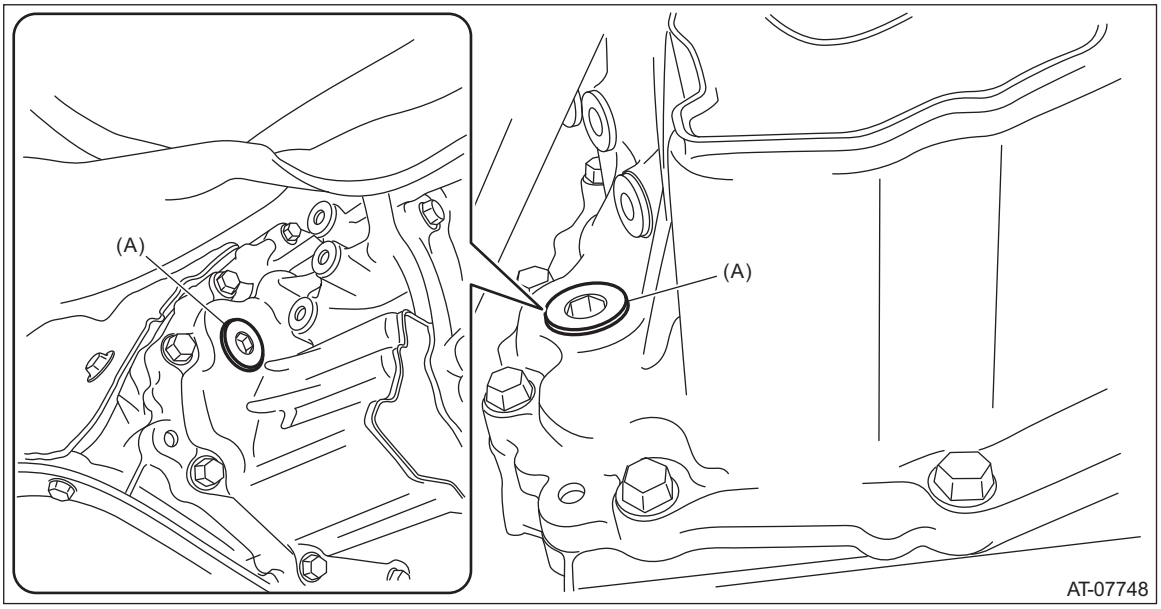
5) Add the specified fluid up to the filler plug hole lower section.

Specified fluid:
<Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

6) Temporarily tighten the filler plug.
7) Idle the engine to raise CVTF temperature to 35 — 45°C (95 — 113°F) on Subaru Select Monitor.
8) Operate the select lever in P → R → N → D and D → N → R → P to circulate CVTF with the engine idling.

CAUTION:
Pay special attention to the following operations as the engine is at idle.
9) Place the select lever in "P" range. Then lift up the vehicle with the engine at idle to adjust the CVTF level and check for leakage. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
10) Replace with a new gasket, and attach the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



(A) Filler plug

D: CONDITION CHECK

NOTE:
When replacing CVTF, determine the condition inside the transmission body by inspecting the drained CVTF.

Fluid condition	Trouble and possible cause	Corrective action
Metal particles.	Excessive wear of the internal of the transmission body.	Replace CVTF and check if CVT operates correctly.
Thick and varnish-form fluid.	Burnt clutches	Replace CVTF and check the CVT body or vehicle for faulty.
Clouded CVTF or bubbles.	Water mixed in fluid.	Replace CVTF and check the water entering point.

3. Differential Gear Oil

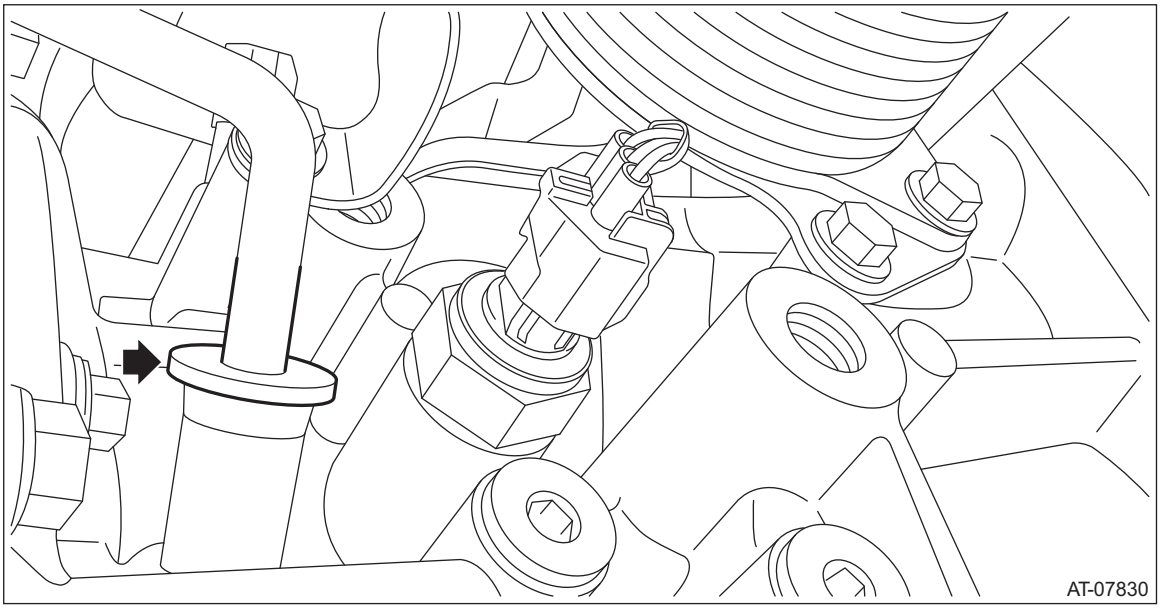
A: INSPECTION

Check that there is no leakage of differential gear oil from the converter case.

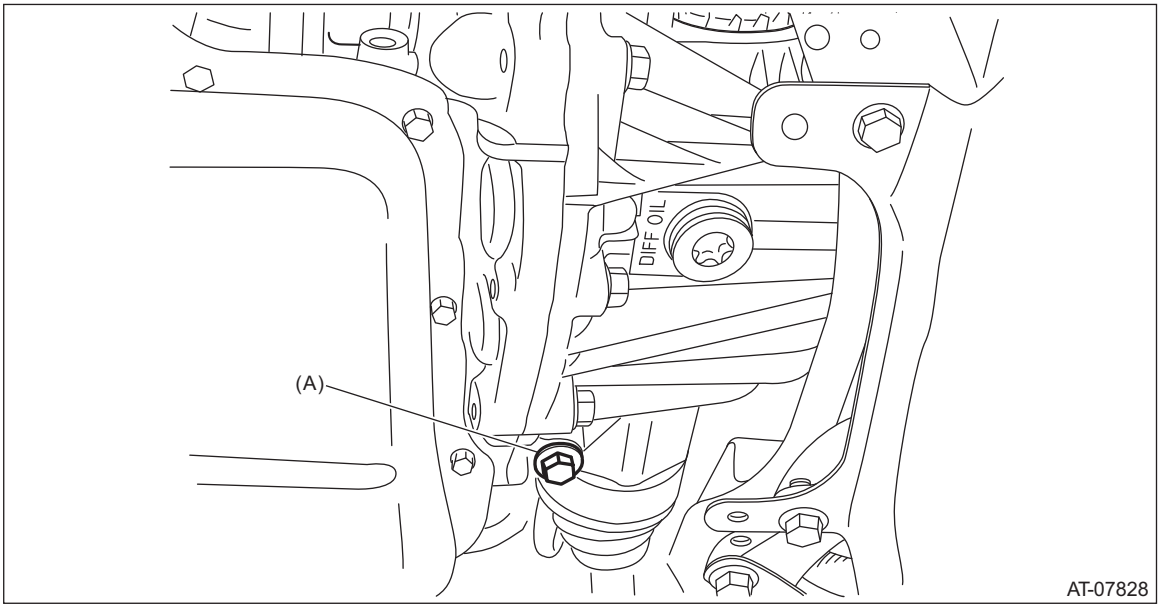
B: ADJUSTMENT

NOTE:
Immediately after removing the overflow drain plug, remaining gear oil (approx. 8 cc) may come out of the overflow pipe. This is not included in the specified amount. When removing the overflow drain plug, make sure the gear oil flows out of the overflow drain plug hole by filling with gear oil.

1) Lift up the vehicle.
2) Remove the oil charge pipe cap.



3) Remove the overflow drain plug.



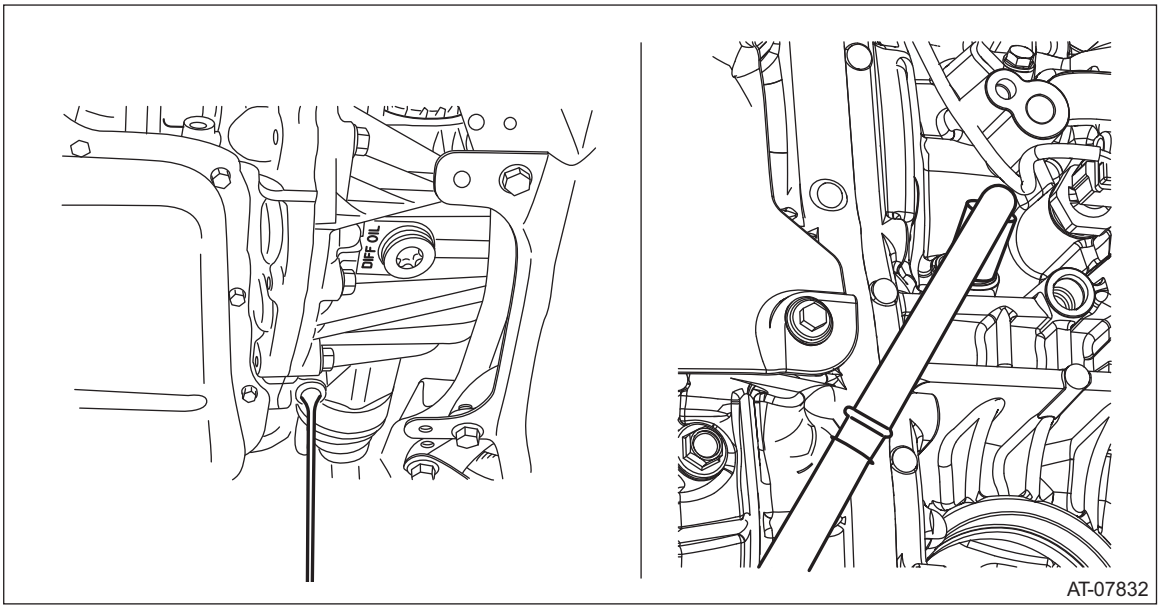
(A) Overflow drain plug

4) Fill in the differential gear oil through the charge pipe up to where the oil flows out of the overflow drain plug.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>
5) When the flow of the differential gear oil turns into a narrow stream, install the overflow drain plug.

NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)



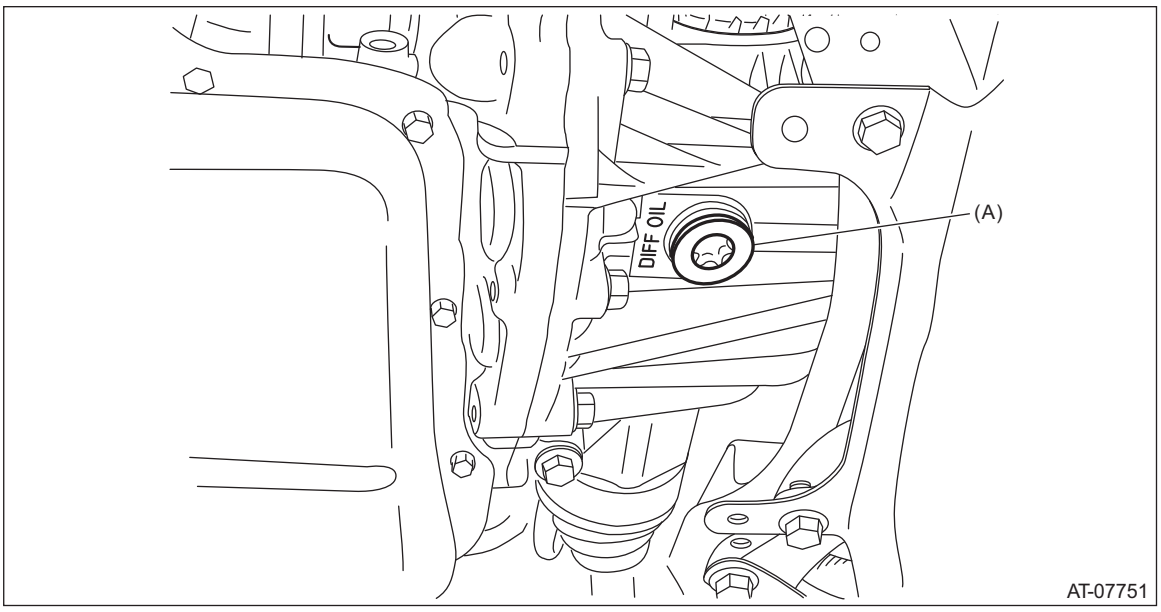
6) Install the oil charge pipe cap.

C: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill differential gear oil on the exhaust pipe to prevent it from emitting smoke or causing a fire. If gear oil adheres, wipe it off completely.
1) Lift up the vehicle.
2) Remove the differential gear oil drain plug using TORX® bit T70. Drain differential gear oil.
3) Install the differential gear oil drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

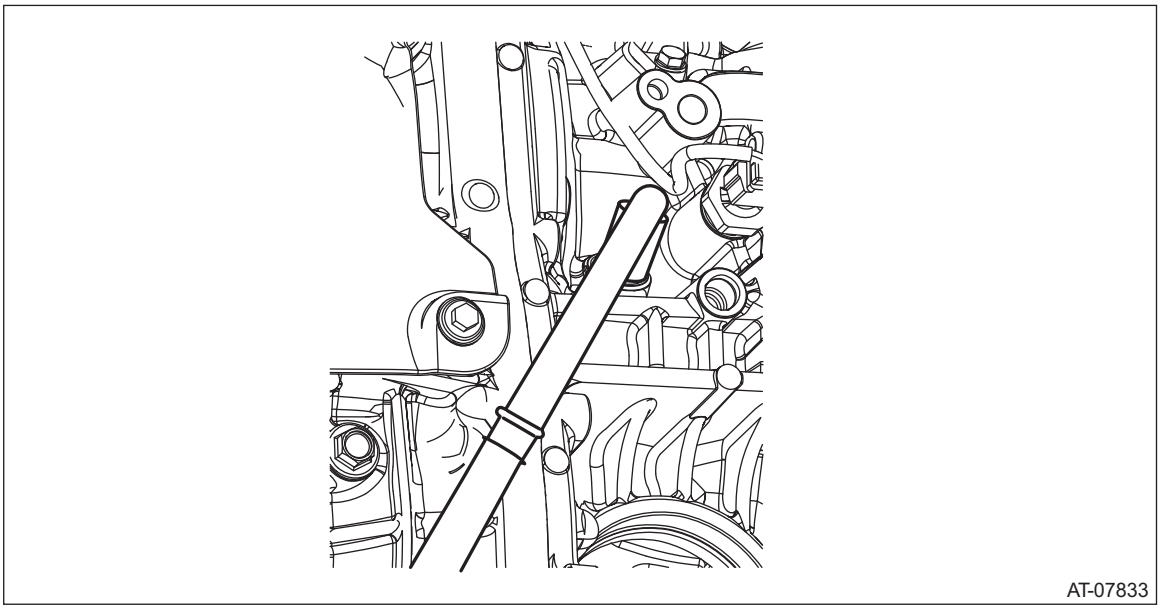


(A) Differential gear oil drain plug

4) Pour gear oil from the charge pipe.

Recommended gear oil:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>

Gear oil capacity:
<Ref. to CVT(TR690)-4, FRONT DIFFERENTIAL GEAR OIL, SPECIFICATION, General Description.>



5) Adjust the level of differential gear oil. <Ref. to CVT(TR690)-40, ADJUSTMENT, Differential Gear Oil.>

4. Variator Chain Break-in

A: GENERAL DESCRIPTION

Perform Variator Chain Break-in when the following work has been performed.
- Variator chain replacement
- Primary pulley and secondary pulley replacement

B: PROCEDURE

NOTE:
- During variator chain break-in, VDC warning light illuminate because of the difference between the vehicle speed value and G sensor value. This is not a malfunction. If the warning light illuminates, clear the VDC memory after the variator chain break-in is finished. <Ref. to VDC(diag)-30, Clear Memory Mode.>
- If the above malfunction code is detected during variator chain break-in, the system enters into fail mode, and the vehicle shows symptom such as engine speed rapid increases even if the accelerator pedal is gradually depressed.

1) Lift up the vehicle.

CAUTION:
Lift up the vehicle until the tire bottom is 0.3 m (0.98 ft) or more above the ground.

2) Shift the select lever to “P” or “N” range.
3) Apply the parking brake.
4) Connect the Subaru Select Monitor to data link connector.
5) Idle the engine to raise the CVTF temperature to 40 — 50°C (104 — 122°F) displayed on the Subaru Select Monitor.

NOTE:
When CVTF temperature does not rise easily or if you want to rise CVTF temperature faster, maintain the engine speed within 2,000 — 2,500 r/min at “P” or “N” range to raise the CVTF temperature.

6) With the select lever in “P” or “N” range, increase the engine speed to 3,000 — 3,500 r/min from the idling condition, and maintain the speed for approximately five seconds, then release the accelerator pedal.
7) Depress the accelerator pedal gradually again from idling condition to increase the engine speed to 3,000 — 3,500 r/min, maintain the speed for approximately five seconds, then release the accelerator pedal.
8) Release the parking brake.
9) Shift the select lever into manual mode and set to 1st.
10) Depress the accelerator pedal gradually, and increase the engine speed to 5,300 r/min from engine idling condition.

NOTE:
Increase the engine speed while taking care that the engine speed does not become too high.

11) Release the accelerator pedal to fully closed position to lower the engine speed to 4,000 r/min.
12) Depress the accelerator pedal gradually again, and increase the engine speed to 5,300 r/min.
13) Repeat the steps 11) and 12) for 40 times.
14) Release the accelerator pedal to return the engine speed to idling.
15) Shift the select lever to “P” range, and then turn the engine to OFF.

5. Road Test

A: INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of CVT.

CAUTION:
Always observe the local traffic laws when performing the test.

2. D RANGE SHIFT FUNCTION

In intelligent mode, make sure the engine speed is 1,100 — 1,300 r/min while driving on the level road at 50 km/h (31 MPH) after accelerating from halting to 1/4 of accelerator opening angle. Then stop the vehicle. Check normal gear change has occurred while the vehicle speed changes from a constant speed to zero.

3. KICK-DOWN FUNCTION

Check if engine speed will rise by operating the accelerator opening angle to the full from a constant speed of 50 km/h (31 MPH) or more.

4. ENGINE BRAKE OPERATION

In each mode of SI-DRIVE, check down shifting operation, engine braking, and indicators inside the meters.
When in S# mode
• Drive in “8th speed of manual mode” [90 — 100 km/h (56 — 62 MPH)], and shift down from 8th to 7th. Check if the indicator of combination meter switches “8” → “7”. At the same time, check engine braking in 7th gear.
• Drive in “7th speed of manual mode” [80 — 90 km/h (50 — 56 MPH)], and shift down from 7th to 6th. Check if the indicator of combination meter switches “7” → “6”. At the same time, check engine braking in 6th gear.
• Drive in “6th speed of manual mode” [70 — 80 km/h (43 — 50 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
• Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
• Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
• Drive in “3rd speed of manual mode” [30 — 40 km/h (19 — 25 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
• Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.
Other than in S# mode
• Drive in “6th speed of manual mode” [70 — 80 km/h (43 — 50 MPH)], and shift down from 6th to 5th. Check if the indicator of combination meter switches “6” → “5”. At the same time, check the engine brake in 5th gear.
• Drive in “5th speed of manual mode” [60 — 70 km/h (37 — 43 MPH)], and shift down from 5th to 4th. Check if the indicator of combination meter switches “5” → “4”. At the same time, check the engine brake in 4th gear.
• Drive in “4th speed of manual mode” [50 — 60 km/h (31 — 37 MPH)], and shift down from 4th to 3rd. Check if the indicator of combination meter switches “4” → “3”. At the same time, check the engine brake in 3rd gear.
• Drive in “3rd speed of manual mode” [40 — 50 km/h (25 — 31 MPH)], and shift down from 3rd to 2nd. Check if the indicator of combination meter switches “3” → “2”. At the same time, check the engine brake in 2nd gear.
• Drive in “2nd speed of manual mode” [20 — 30 km/h (12 — 19 MPH)], and shift down from 2nd to 1st. Check if the indicator of combination meter switches “2” → “1”. At the same time, check the engine brake in 1st gear.

5. LOCK-UP FUNCTION

When the accelerator is lightly depressed while driving on a flat road in “D” range, check that rpm does not change abruptly.

6. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to the “P” range and apply the parking brake. Check that the vehicle does not move when the parking brake is released.

7. NOISE AND VIBRATION

Check for noise and vibration during driving at a constant speed, accelerating, decelerating and manual shift operation.

8. OIL LEAKAGE

After the driving test, inspect for leakage of CVTF and differential gear oil from the transmission body.

6. Stall Test

A: INSPECTION

CAUTION:
Make sure no other person is around the vehicle during stall test measurement.

NOTE:
Stall test is extremely important in diagnosing the condition of CVT and engine. The test is necessary to measure the engine stall speeds in “R” and “D” range.
Purposes of the stall test:
- Operational check of forward clutch and reverse brake
- Operational check of the torque converter assembly
- Engine performance check

1) Place wheel chocks at the front and rear of all wheels and engage the parking brake.
2) Turn the A/C OFF.
3) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
4) Check the engine oil level. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
5) Check the coolant level. <Ref. to CO(w/o STI)-15, INSPECTION, Engine Coolant.>
6) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
7) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to “N” or “P” range.
8) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake. (With EyeSight)
9) Shift the select lever to “D” range.
10) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
11) When the engine speed stabilizes, quickly record the engine speed and release accelerator pedal. Shift the select lever to “N” range. Let the engine idle for one minute or more to cool it down.
12) Shift to “R” range and perform the same stall test.

NOTE:
- Do not perform a stall test for over 5 seconds at a time. (From closed throttle, fully open throttle to stall speed reading.) Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed of 1,200 r/min or less.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the CVT from sustaining damage.

Stall speed standard:
2,050 — 2,590 r/min (D range)
2,130 — 2,680 r/min (R range)

Stall test judgment

Range	Range	Probable cause
Lower than standard value	D, R	• Throttle valve is not fully open. • Insufficient engine output • Torque converter malfunction
Higher than standard value	D	• Forward clutch slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	R	• Reverse brake slippage • Secondary pressure (line pressure) is low. • Variator chain malfunction • Input clutch slippage
	D, R	• Torque converter malfunction • Control valve body malfunction • TCM malfunction • Damaged harness and harness connector

7. Time Lag Test

A: INSPECTION

NOTE:
When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before shock is felt. This symptom helps to check the condition of forward clutch and reverse brake.
- Perform the test at normal operation CVTF temperature of 60 — 80°C (140 — 176°F).
- Be sure to allow one minute or more interval between tests.
- Make three measurements and take the average value.

1) Apply the parking brake.
2) Start the engine. Check the idle speed. (A/C OFF)
3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time elapsed from shifting the lever until the shock is felt.

Time lag standard:
1.2 seconds or less

If “N” → “D” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Forward clutch worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

4) In the same manner, measure the time lag when shifting from “N” range to “R” range.

Time lag standard:
1.5 seconds or less

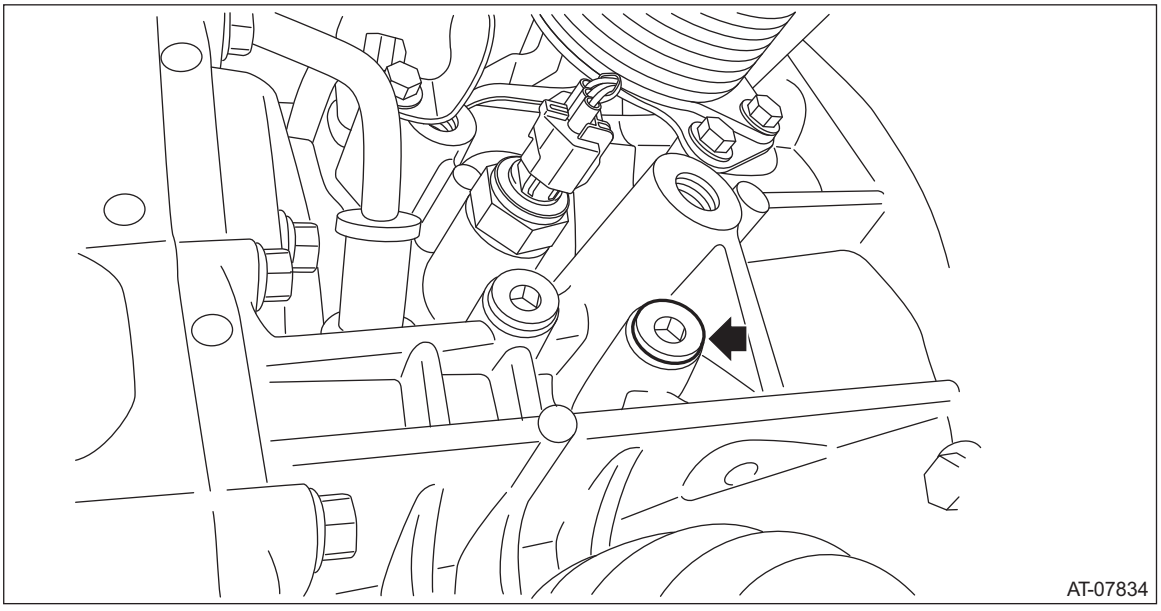
If “N” → “R” time lag is longer than specified:
- Secondary pressure (line pressure) is too low.
- Reverse brake worn
- Piston malfunction
- Control valve body malfunction
- Learning incomplete

8. Secondary Pressure (Line Pressure) Test

A: INSPECTION

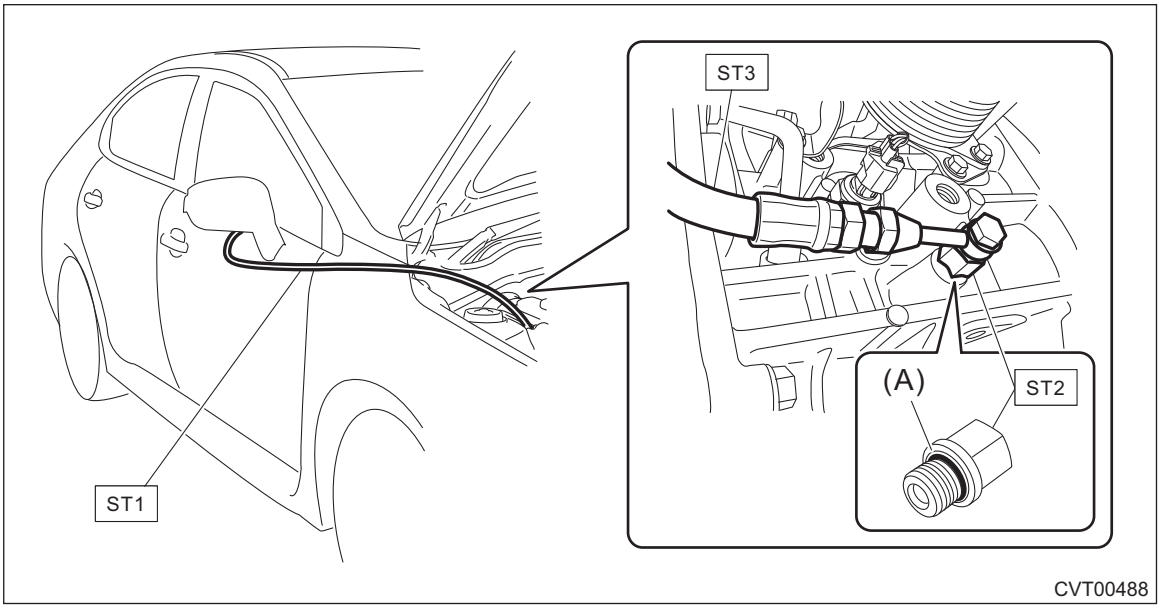
CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Make sure no other person is around the vehicle during secondary pressure (line pressure) test measurement.
• After performing the secondary pressure (line pressure) test measurement, adjust the CVTF level.

NOTE:
• If the pulley and variator chain, clutch or brake show signs of slipping or shift feel is not correct, check the secondary pressure (line pressure).
• Connect Subaru Select Monitor to vehicle so as to measure the engine speed and actual secondary pressure (secondary pressure (line pressure)).
• In many cases, slippage or inability to operate the vehicle may be due to insufficient oil pressure for the operation of clutch, brake or control valve.
1) Remove the front wheel RH. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the test plug for secondary pressure (line pressure).



4) Attach ST1, ST2 and ST3 to transmission.
ST1 18801AA000 OIL PRESSURE GAUGE ASSY
ST2 18681AA000 PRESSURE GAUGE ADAPTER
ST3 498897700 OIL PRESSURE ADAPTER SET

NOTE:
Use ST2 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806911080) attached.



(A) O-ring (genuine part)

5) Lower the vehicle.
6) Set the gauge so that it can be seen from the driver's seat.
7) Install the front wheel RH. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
8) Using the Subaru Select Monitor, check if the throttle valve operates when you depress the accelerator pedal. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
9) Check the engine oil level. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
10) Check the coolant level. <Ref. to CO(w/o STI)-15, INSPECTION, Engine Coolant.>
11) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
12) Increase the CVTF temperature to 60 — 80°C (140 — 176°F) by idling the engine with the select lever shifted to "N" or "P" range.
13) Hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake. (With EyeSight)
14) Shift the select lever to "D" range.
15) Depress the accelerator pedal to the full while fully depressing the foot brake pedal with your left foot.
16) Immediately after the engine speed becomes steady, record the reading of the secondary pressure (line pressure), engine speed and actual secondary pressure on Subaru Select Monitor. And then release the accelerator pedal. Shift the select lever to "N" range. Let the engine idle for one minute or more to cool it down.

NOTE:
• Do not continue the stall test for 5 seconds or more at a time (from fully closed throttle, fully open throttle to secondary pressure (line pressure) reading). Failure to follow this instruction will cause the engine oil and CVTF to deteriorate and the clutch and brake to be adversely affected.
• After performing the secondary pressure (line pressure) test, be sure to cool down the engine for at least one minute with the select lever set in "P" or "N" range and with the idle speed at 1,200 r/min or less.
• Under each condition, check that the measured pressure matches almost totally with actual secondary pressure.
• When both measured pressure and actual secondary pressure are out of specification, judge as control valve malfunction.
• The value at stall is for reference because the pressure changes under different conditions or circumstances.

- The value at idling is steady because it is not affected by any condition or circumstance.

Secondary pressure (line pressure) standard				
	Range	Throttle	Brake	Secondary pressure (line pressure) (MPa (kgf/cm^2, psi))
Stall	D, R	Full open	ON	4.5 — 6 (45.9 — 61.2, 652 — 870)
Idling	P, N	Full closed	OFF	0.5 — 1.5 (5.1 — 15.3, 72 — 218)

17) Remove the ST and install the plug after measurement.

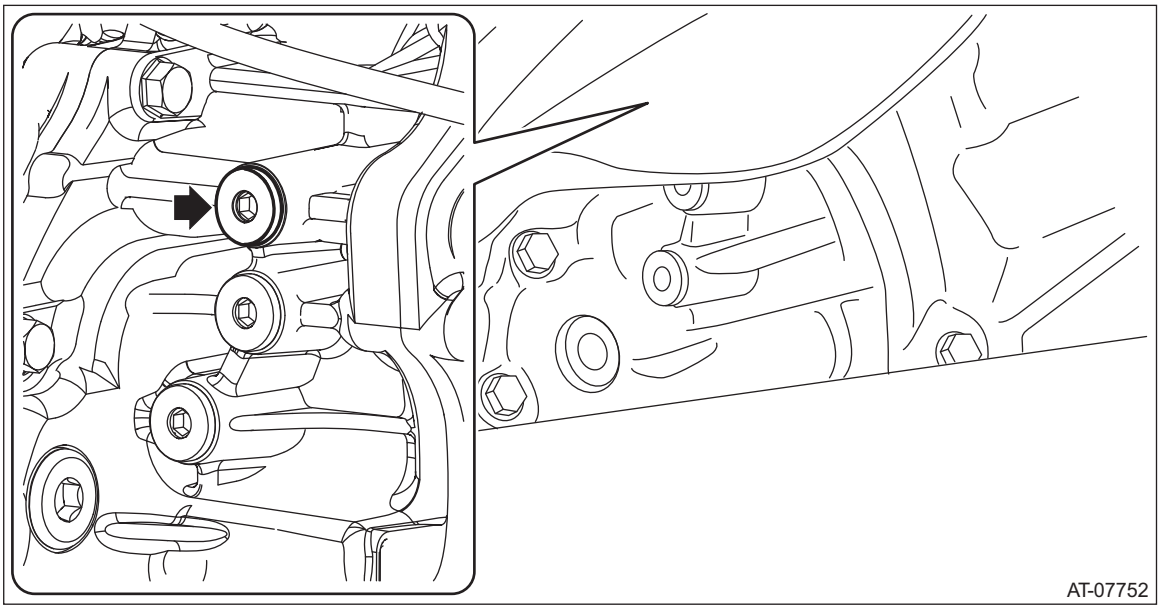
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

9. Transfer Clutch Pressure Test

A: INSPECTION

1) Lift up the vehicle.
2) Remove the test plug.



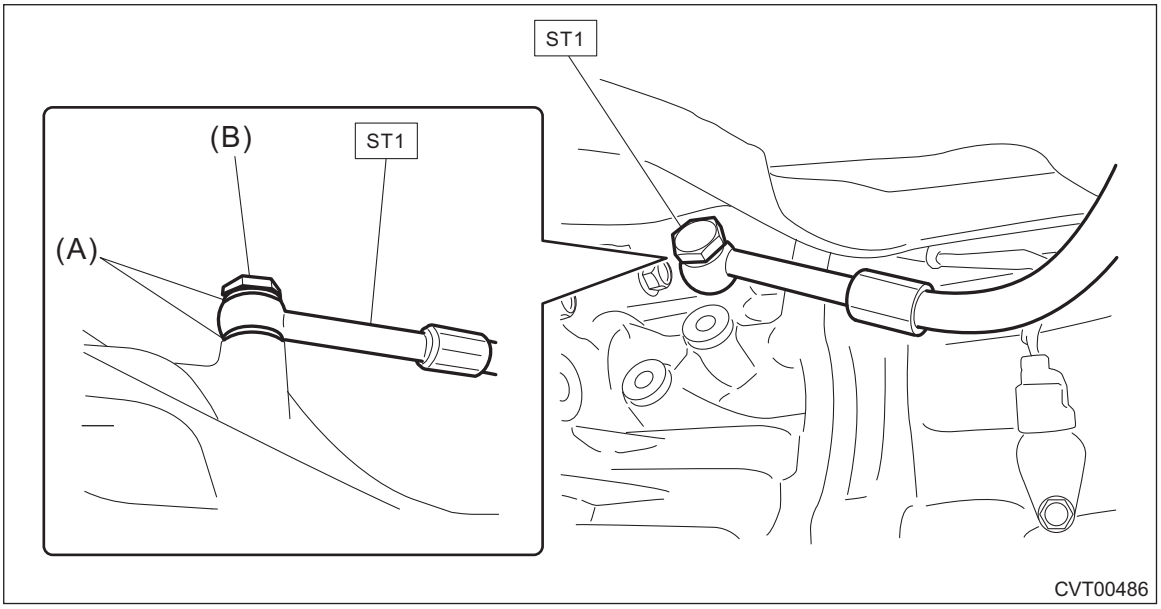
3) Set the ST1, ST2, ST3 and ST4 to the transmission.

CAUTION:
Be careful when setting tools so that the hoses do not touch the exhaust pipes.

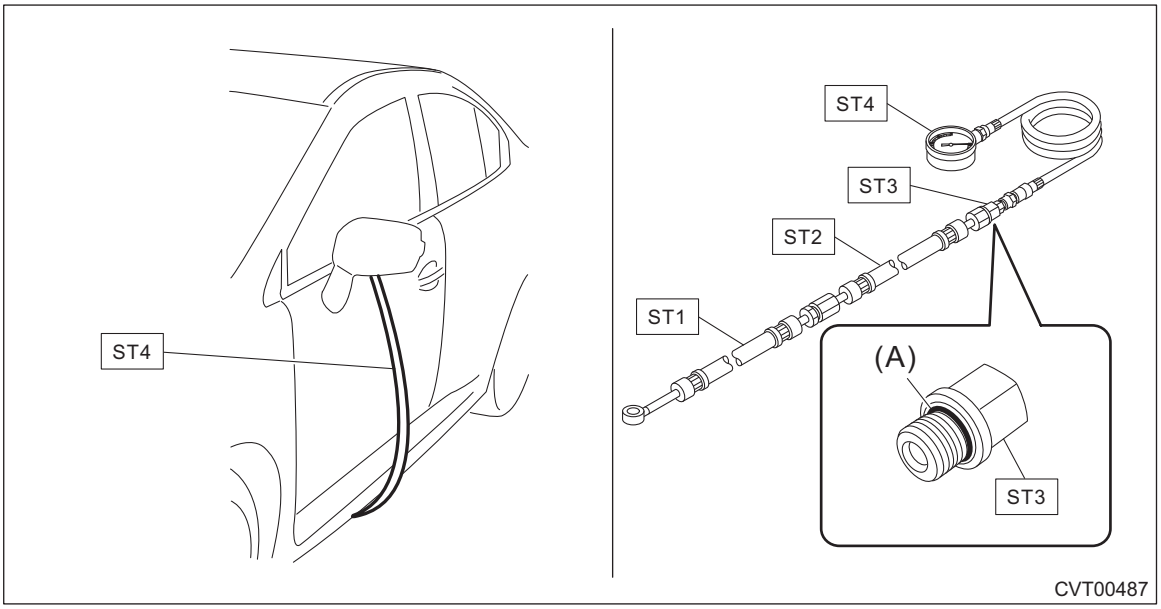
NOTE:
• Use ST1 ADAPTER HOSE B with genuine union screw (Part No. 801914010) and gasket (Part No. 803914060) attached.

- Use ST3 PRESSURE GAUGE ADAPTER with genuine O-ring (Part No. 806911080) attached.

ST1 34099AC020 ADAPTER HOSE B
ST2 34099AC010 ADAPTER HOSE A
ST3 18681AA000 PRESSURE GAUGE ADAPTER
ST4 498575400 OIL PRESSURE GAUGE ASSY



(A) Gasket (genuine part)
(B) Union screw (genuine part)



(A) O-ring (genuine part)

4) Lower the vehicle.
5) Connect the Subaru Select Monitor to the data link connector and read the current data.
6) Check the transfer clutch pressure as in secondary pressure (line pressure) test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>

NOTE:
If oil pressure is not produced or it does not change, the control valve body may be malfunctioning.

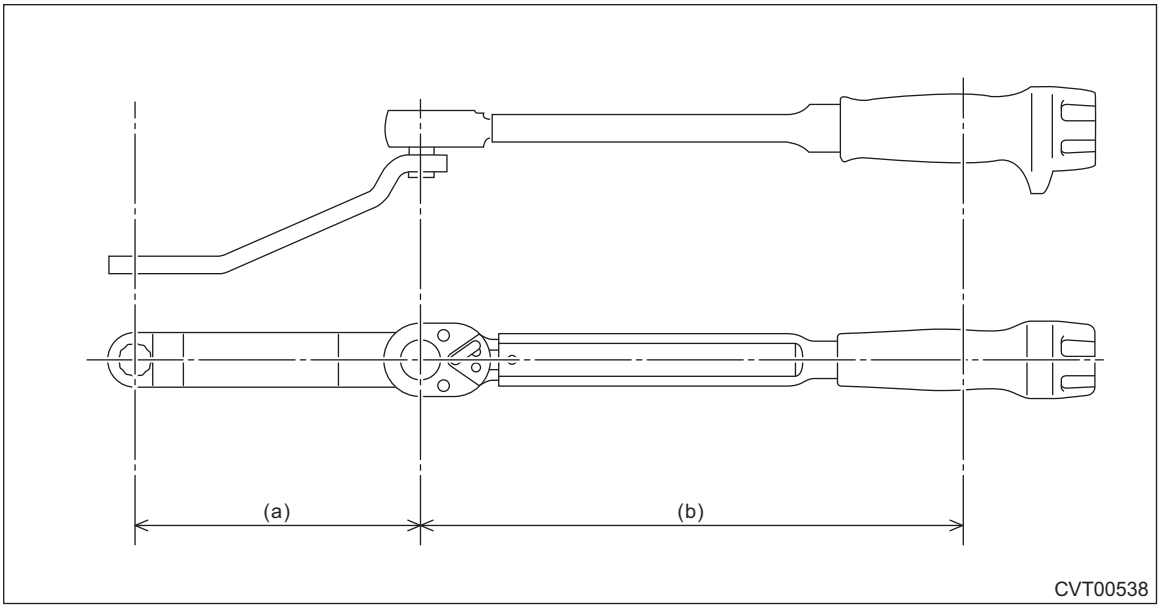
Range position	ON Duty ratio (%)	Accelerator pedal opening angle (%)	Standard transfer clutch pressure kPa (kgf/cm^2, psi)
D	95 — 100	Fully opened (100)	1,000 — 1,200 (10.2 — 12.2, 145 — 174)
	60	Adjust ON Duty ratio to 60%.	400 — 700 (4.1 — 7.1, 58 — 102)
	0	Fully closed (0)	—
N or P	0	Fully closed (0)	0

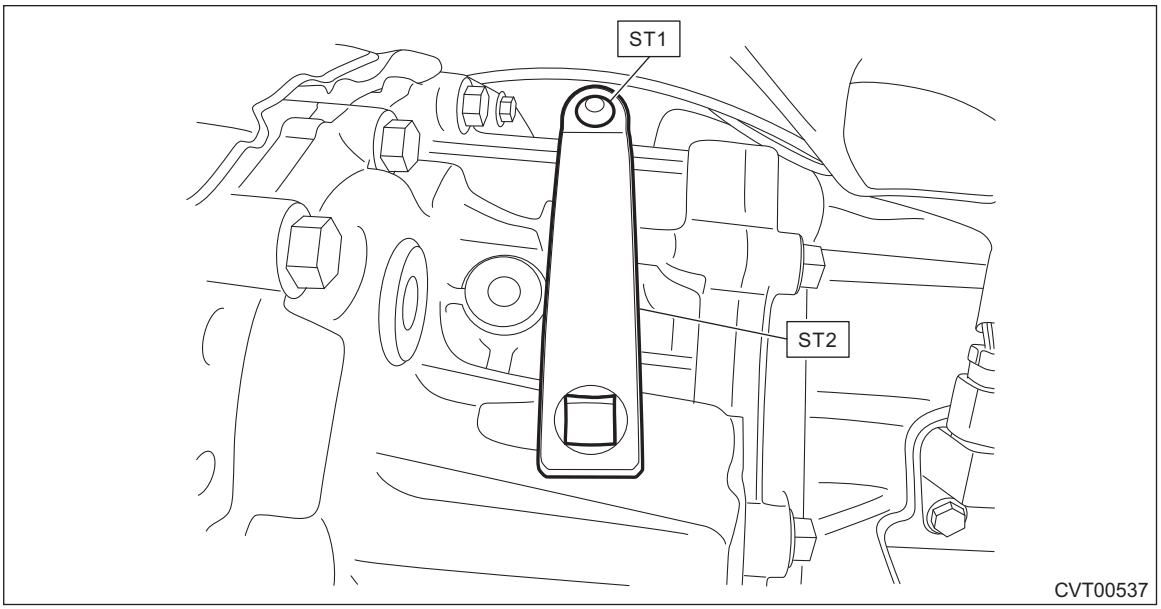
7) Lift up the vehicle.
8) Remove the ST.
9) Install the test plug using ST1 and ST2.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Tighten the test plug while directly aligning ST2 and torque wrench.

ST1 18270AA040 SOCKET
ST2 73099SG000 SPECIAL TOOL CONDENSER
Using the following formula, calculate the tightening torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
L1: ST2 length 0.1 m (3.94 in) (a)
L2: Torque wrench length (b) m (in)

[Required torque setting]
T2: Tightening torque: N·m (kgf-m, ft-lb)





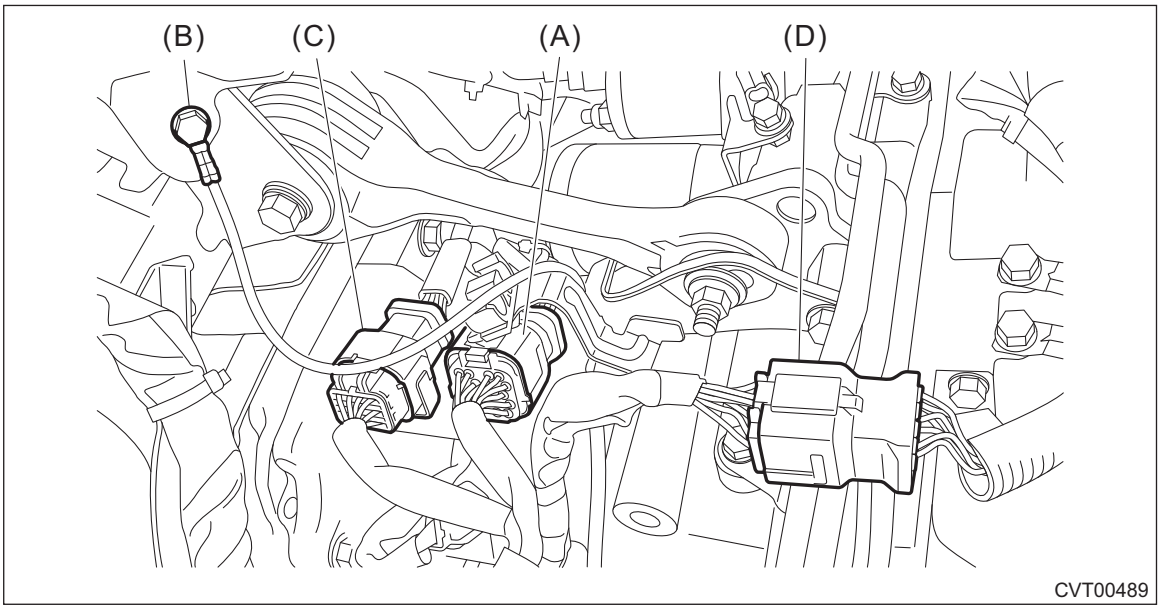
10) Lower the vehicle.

10.Automatic Transmission Assembly

A: REMOVAL

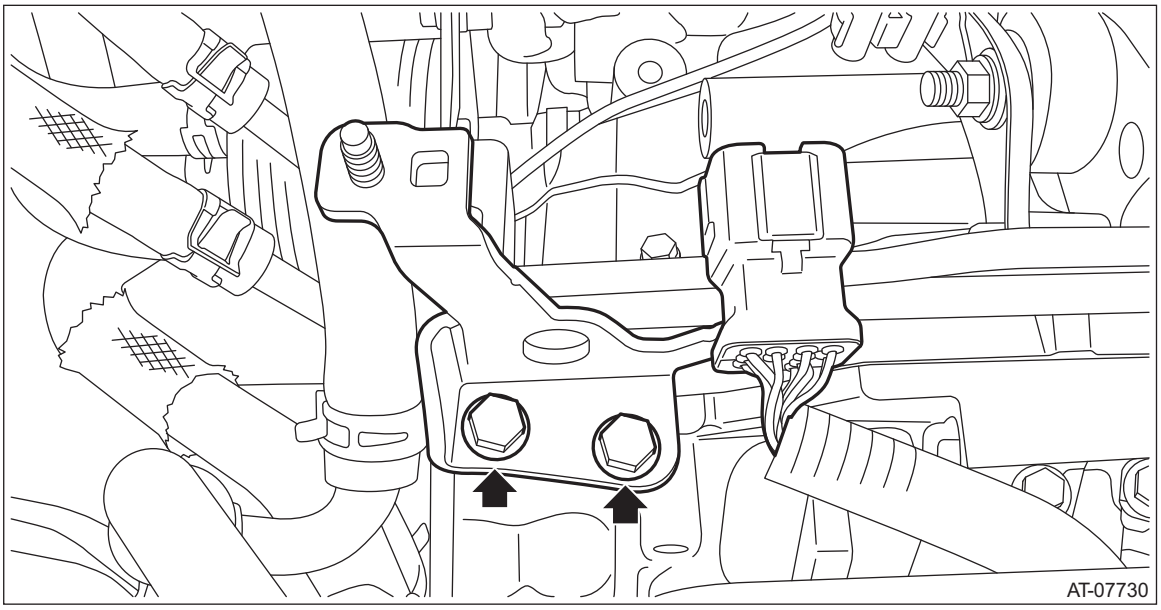
1) Remove the front tires.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
5) Remove the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
6) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
7) Disconnect the following connectors.

- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector
- Engine harness connectors

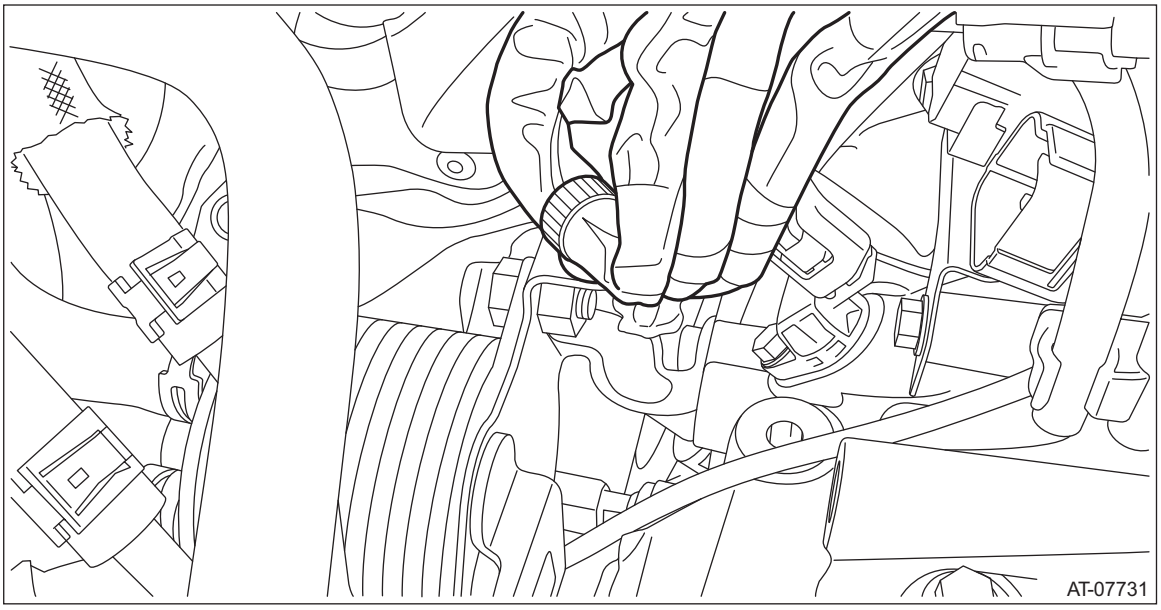


(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector
(D) Engine harness connectors

8) Remove the engine hanger rear.

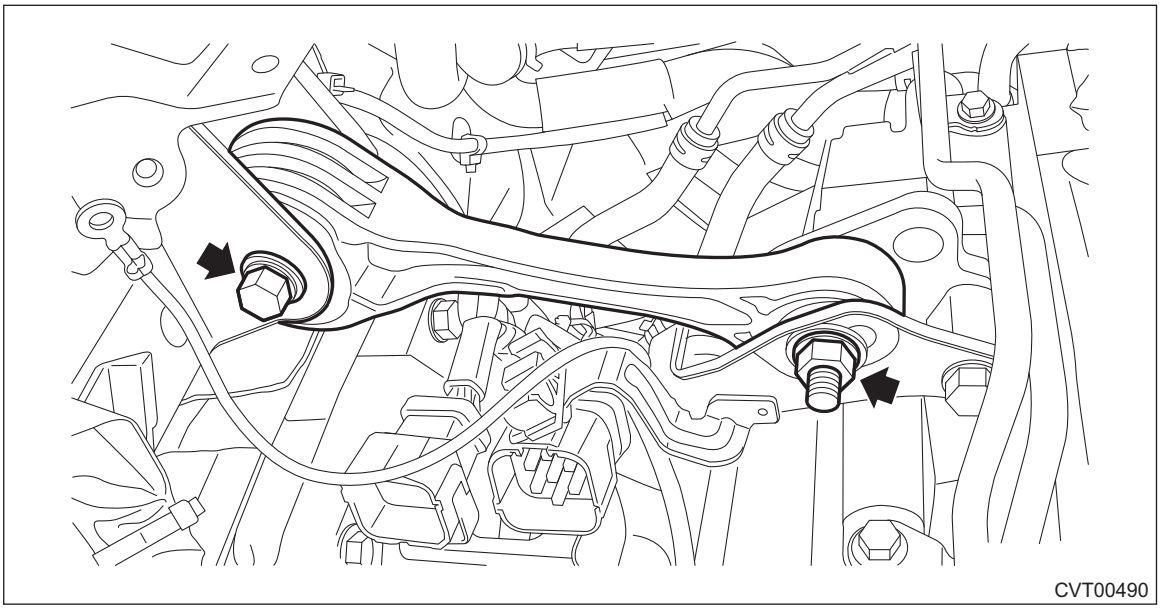


9) Remove the harness clip.

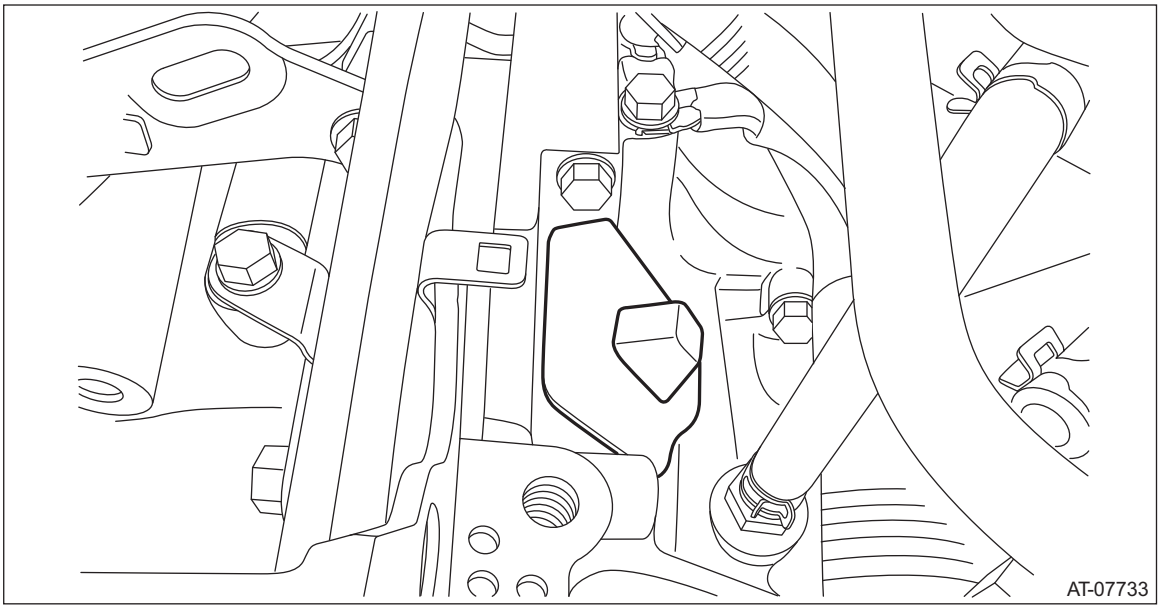


10) Remove the starter. <Ref. to SC(w/o STI)-7, REMOVAL, Starter.>

11) Remove the pitching stopper.



12) Remove the service hole plug.

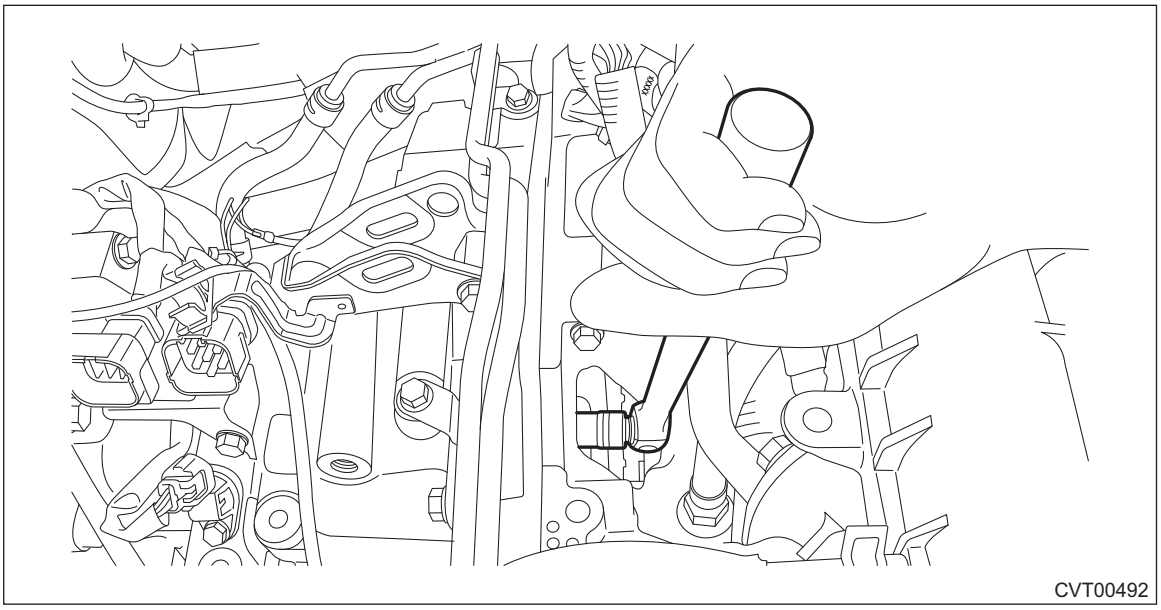


13) Remove the four bolts combining the torque converter and drive plate while rotating the crank pulley a little at a time in the same direction as engine revolution.

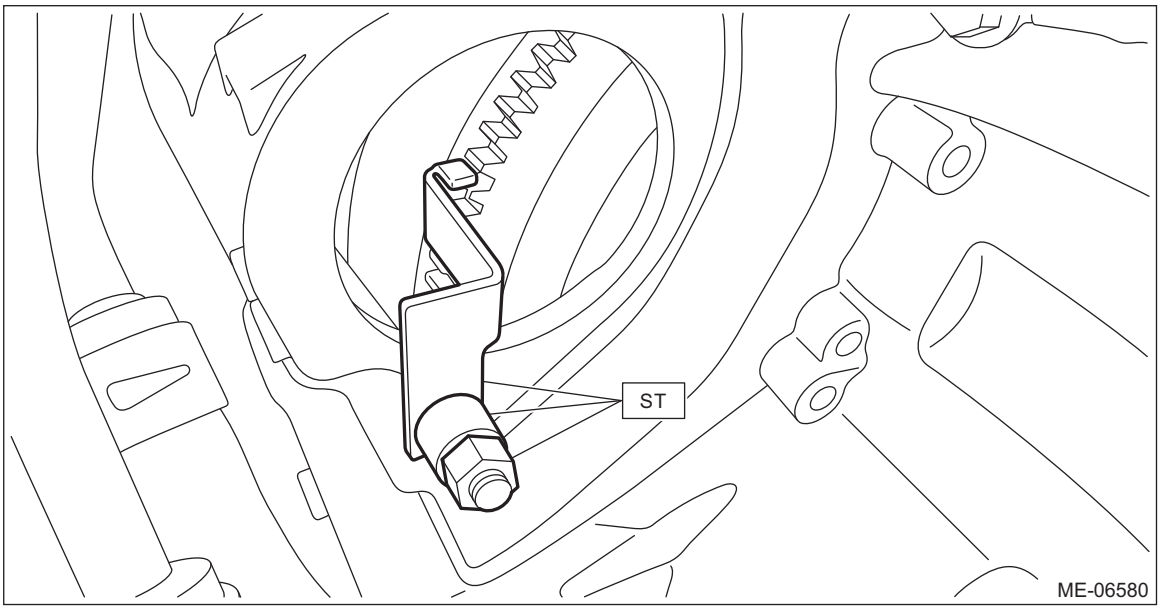
CAUTION:

- **Be careful not to drop bolts into the converter housing.**

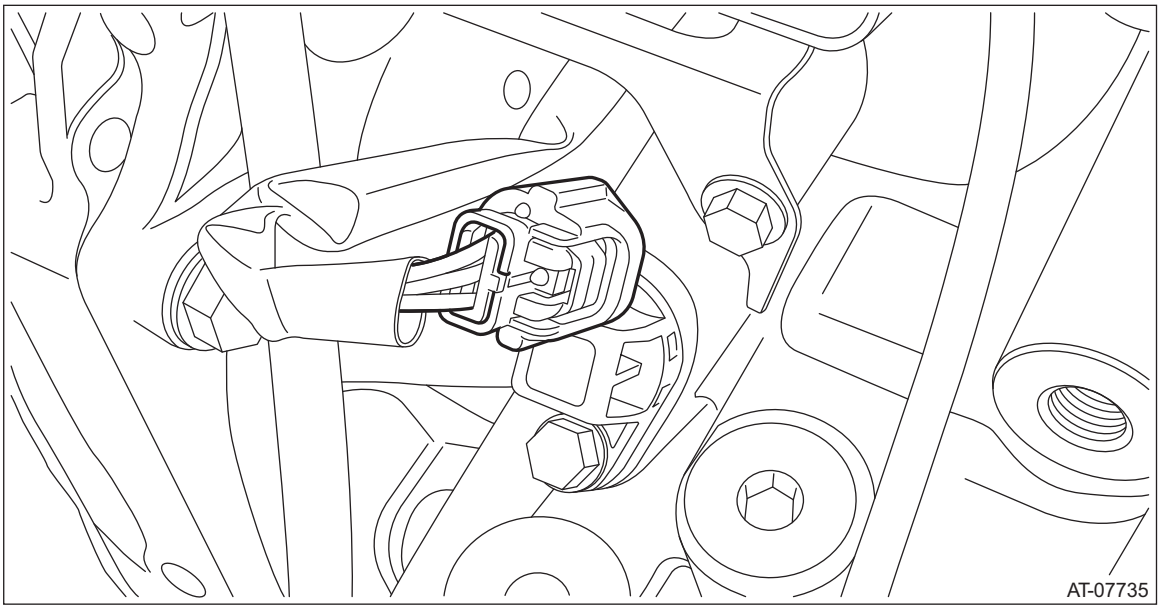
- **Be careful not to damage the mounting bolts.**



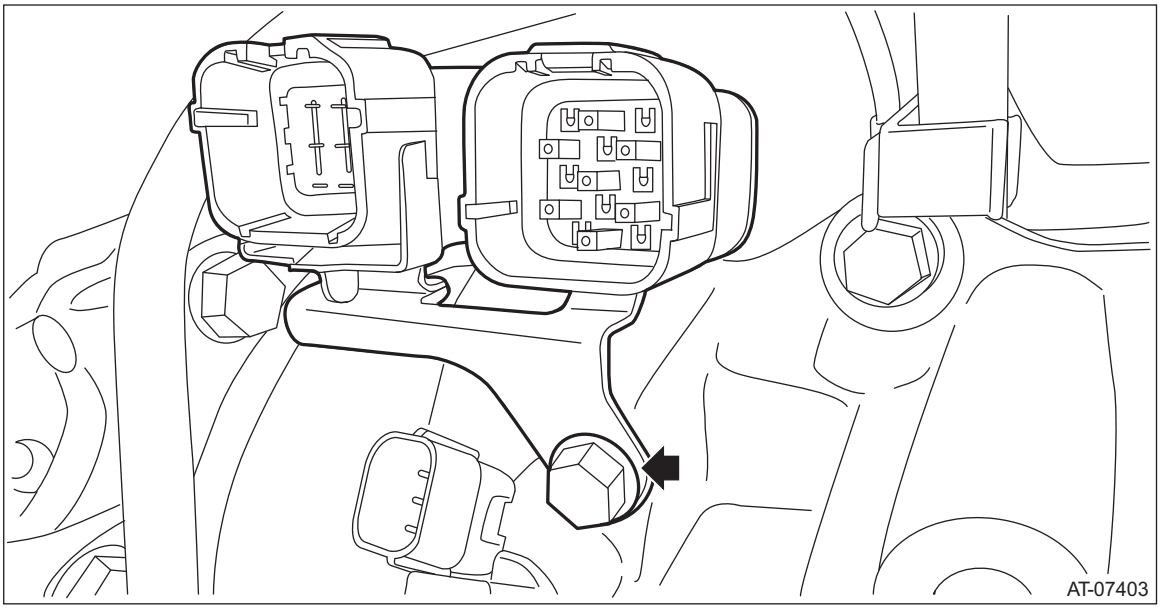
14) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.
15) Attach the ST to the converter case.
ST 498277200 STOPPER SET



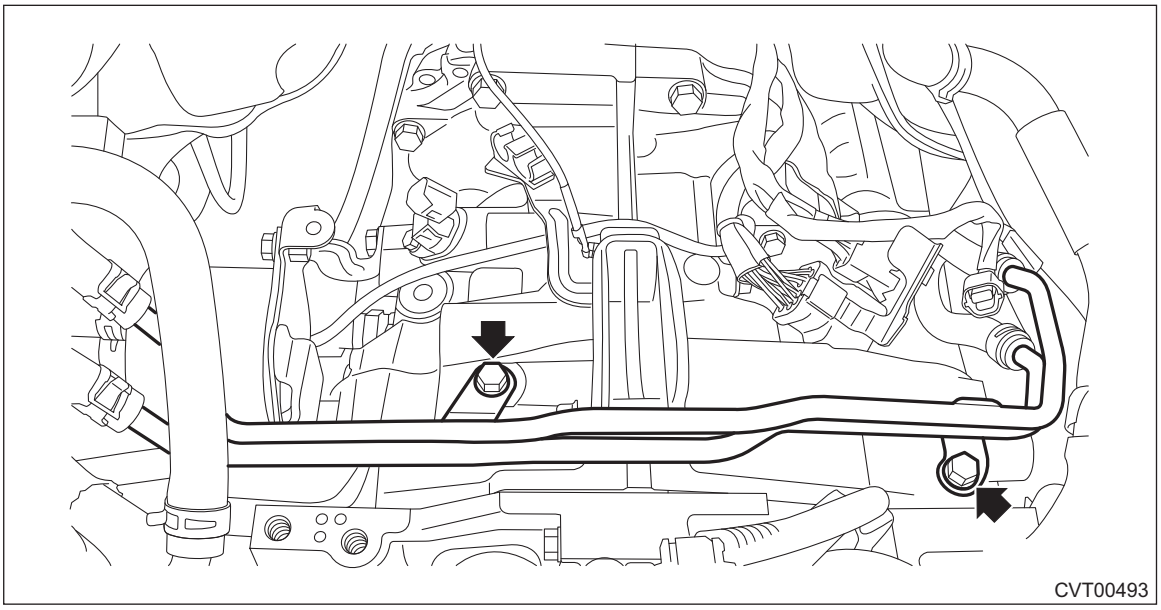
16) Remove the primary speed sensor harness connector.



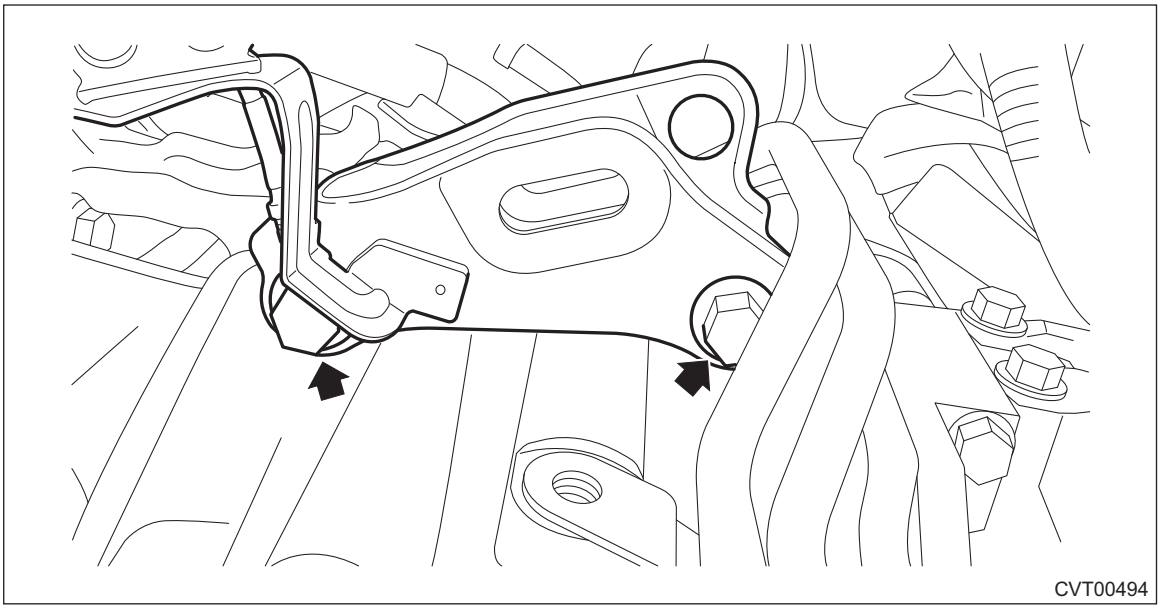
17) Remove the transmission harness stay.



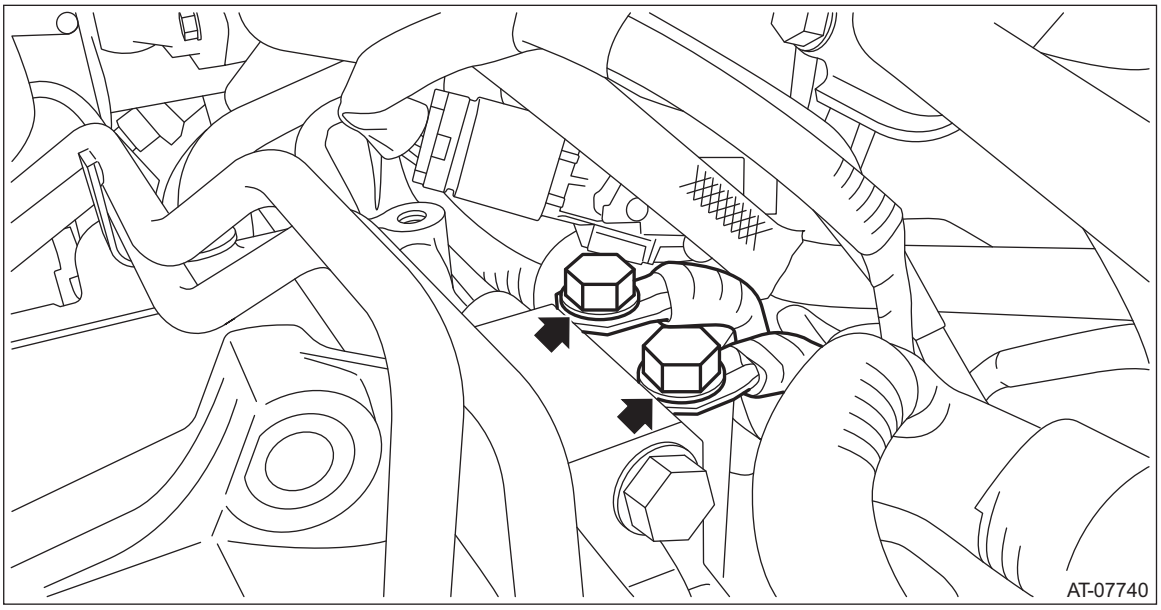
18) Remove the CVTF cooler pipe COMPL mounting bolt.



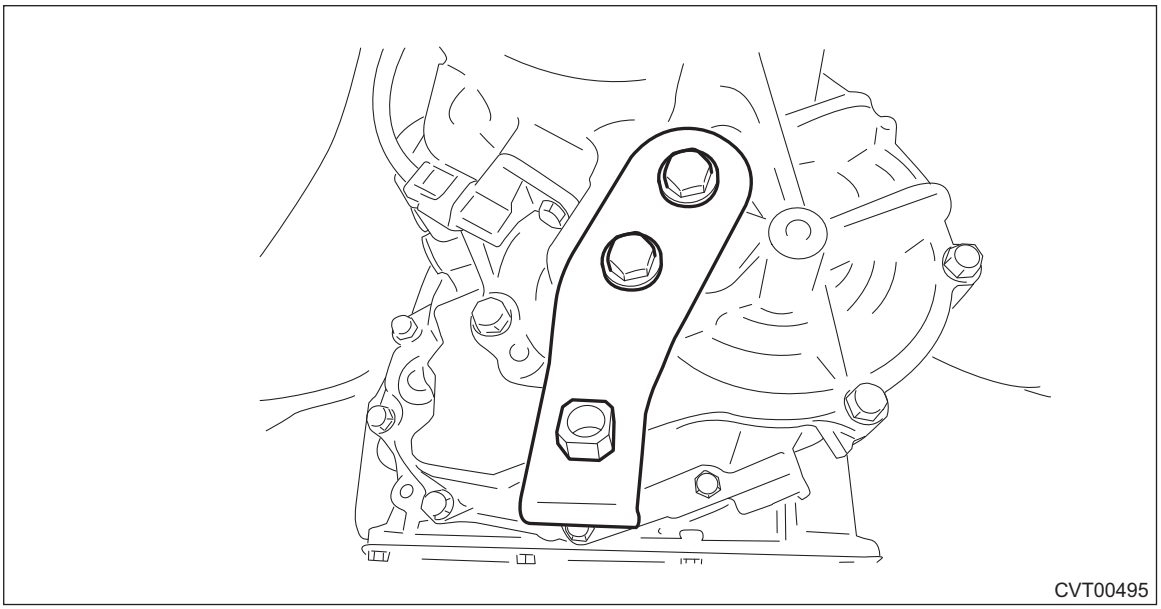
19) Remove the pitching stopper bracket and transmission radio ground cord.



20) Remove the engine ground terminal.

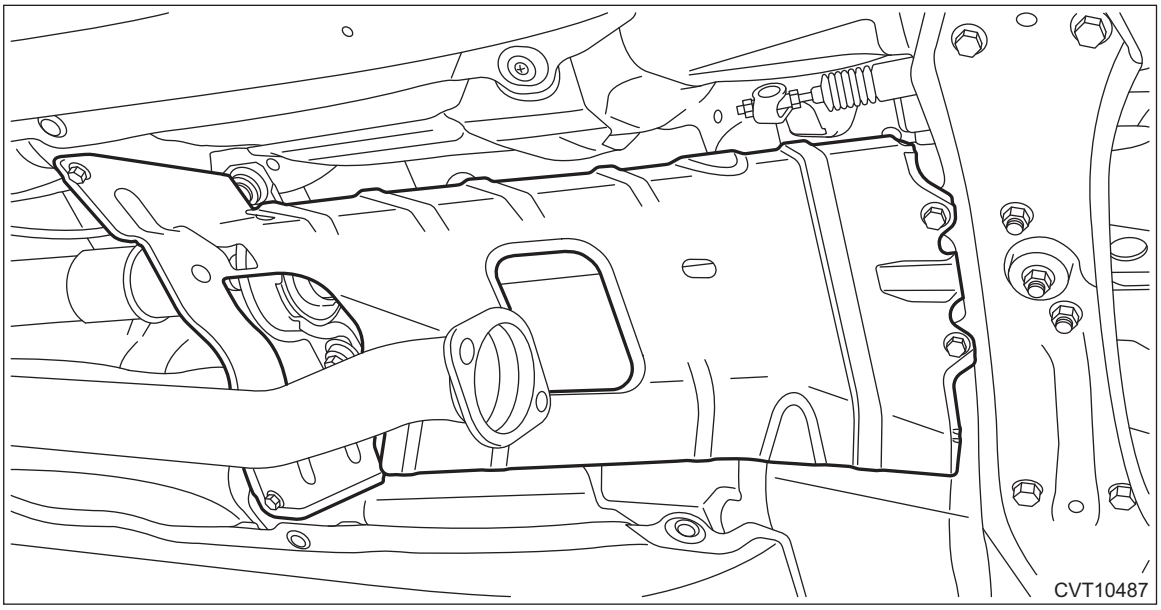


21) Lift up the vehicle.
22) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
23) Remove the exhaust hanger bracket.

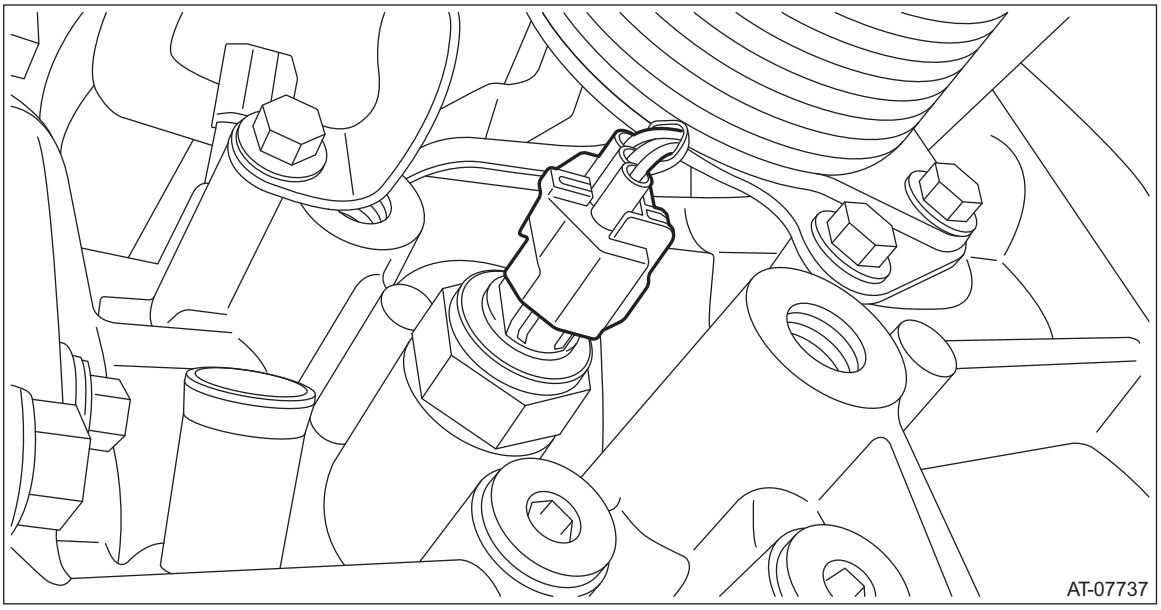


24) Remove the CVTF drain plug to drain CVTF. <Ref. to CVT(TR690)-37, REPLACEMENT, CVTF.>

25) Remove the center exhaust cover.

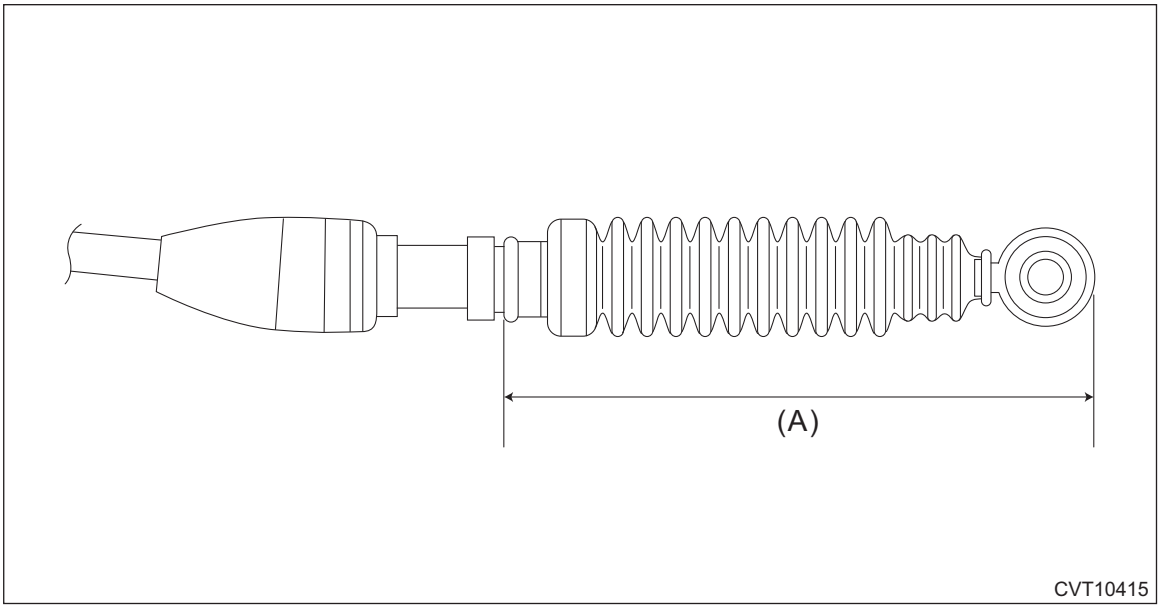


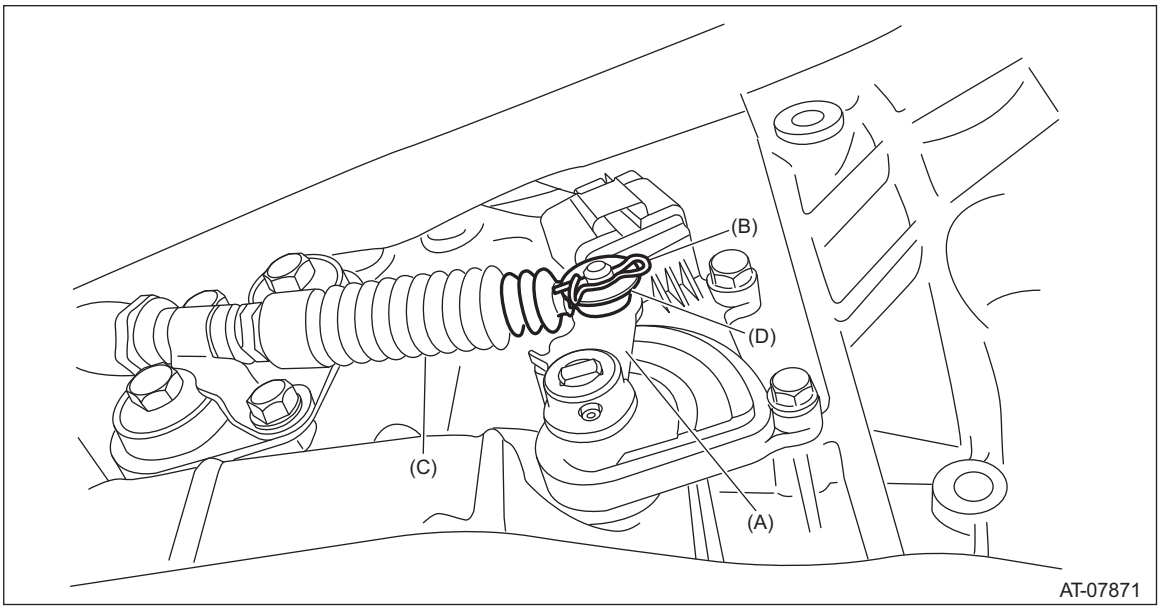
26) Remove the secondary pressure sensor harness connector.



27) Remove the snap pin and washer, and disconnect the select cable.

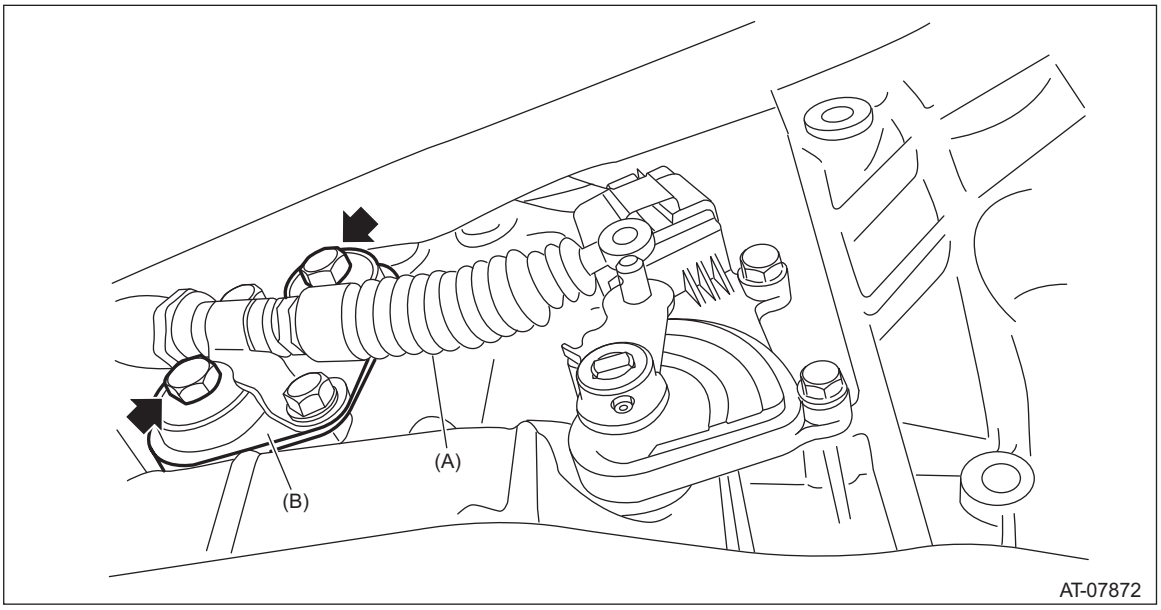
CAUTION:
Do not apply extra overload while holding the part (A).





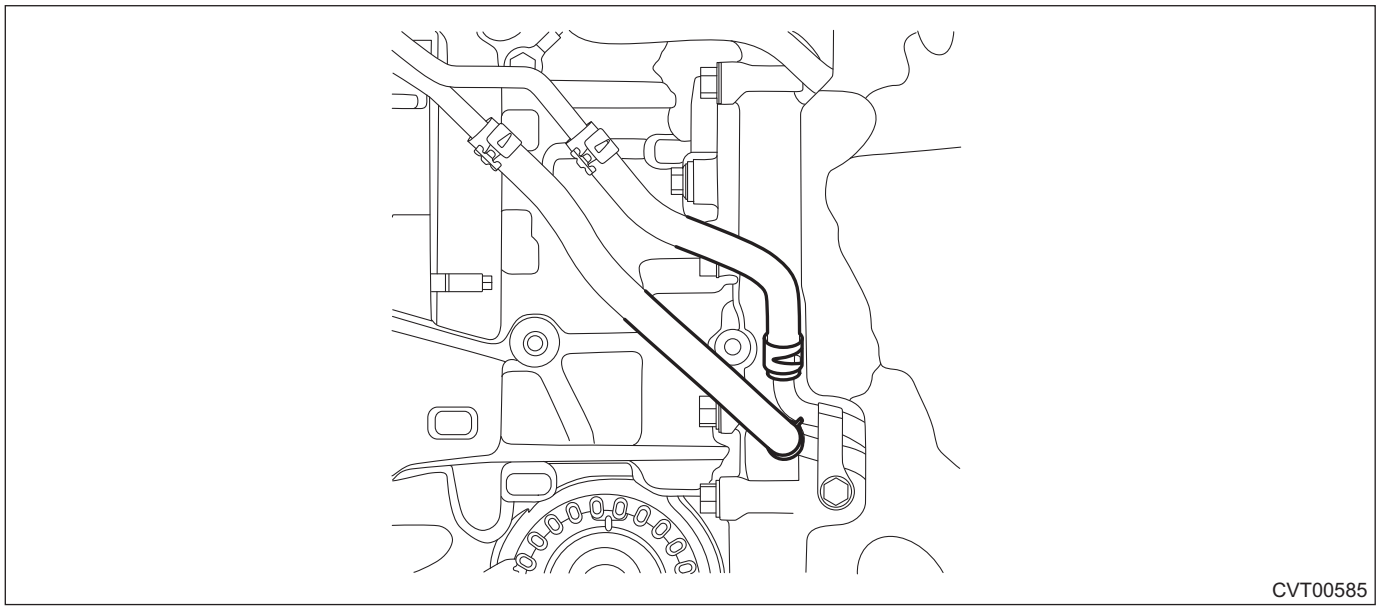
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

28) Remove the cable plate assembly.

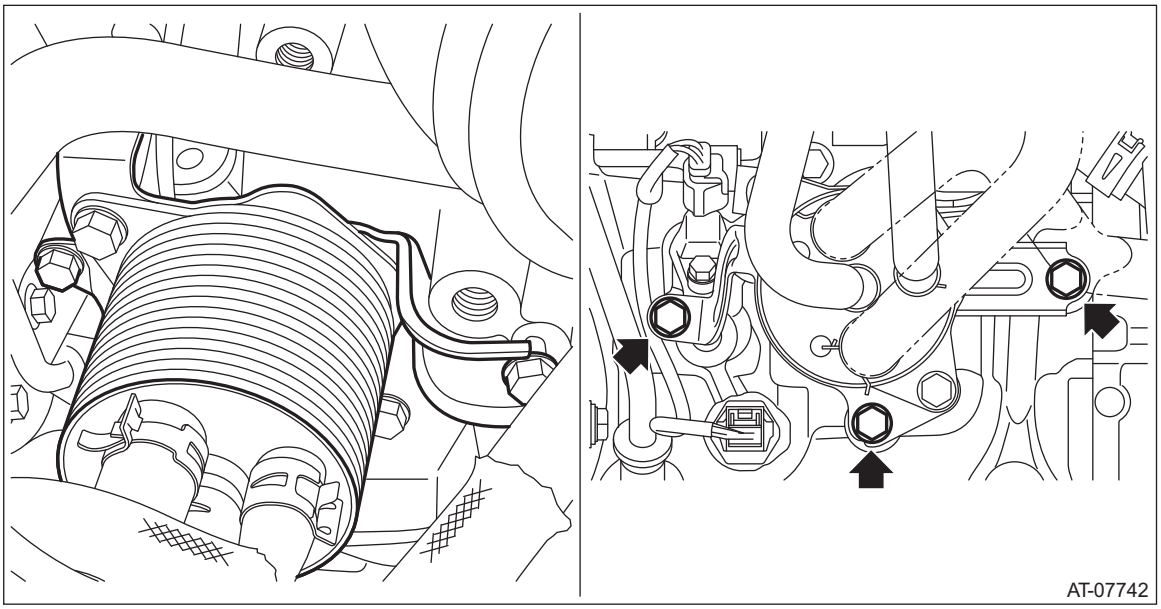


(A) Select cable
(B) Cable plate ASSY

29) Drain differential gear oil. <Ref. to CVT(TR690)-41, REPLACEMENT, Differential Gear Oil.>
30) Remove the CVTF inlet hose and outlet hose.

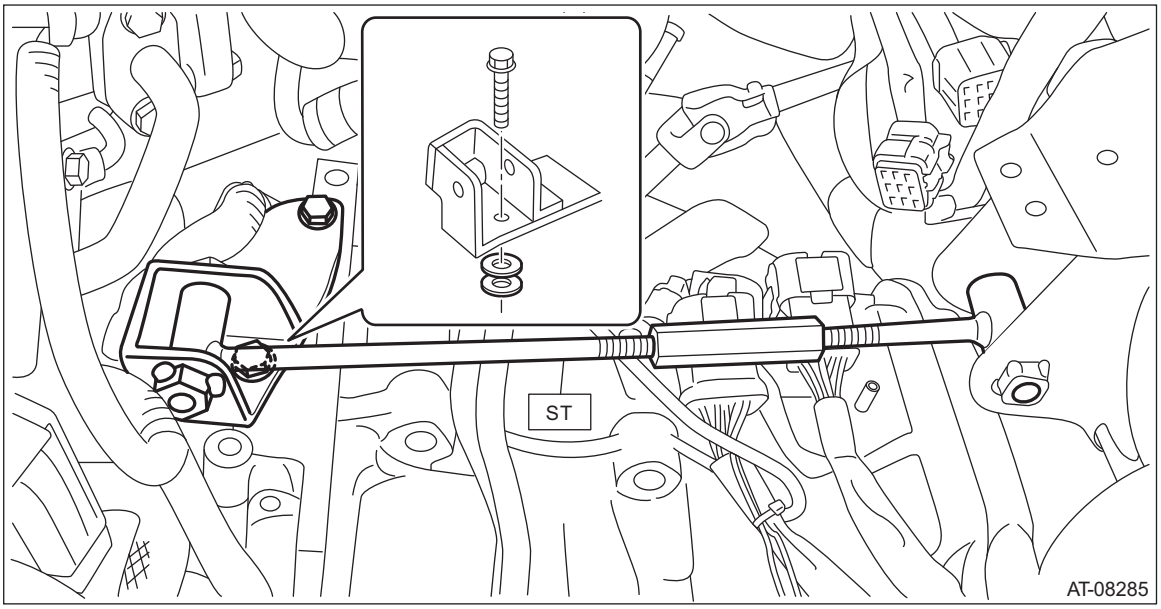


31) Remove the CVTF cooler (with warmer feature), and using a piece of wire, affix to a location where it will not interfere with the operation.

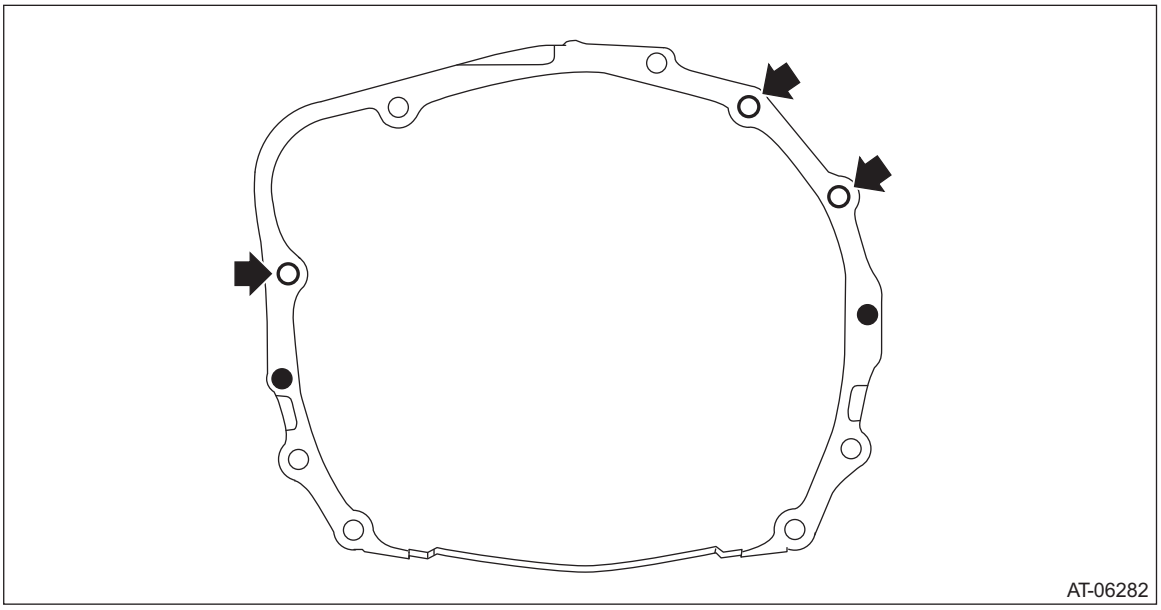


32) Set the ST.
ST 41099AC000 ENGINE SUPPORT ASSY

NOTE:
Place a washer with 4 mm (0.16 in) thickness into the gap between the engine block and ST.



33) Remove the three transmission connecting bolts.

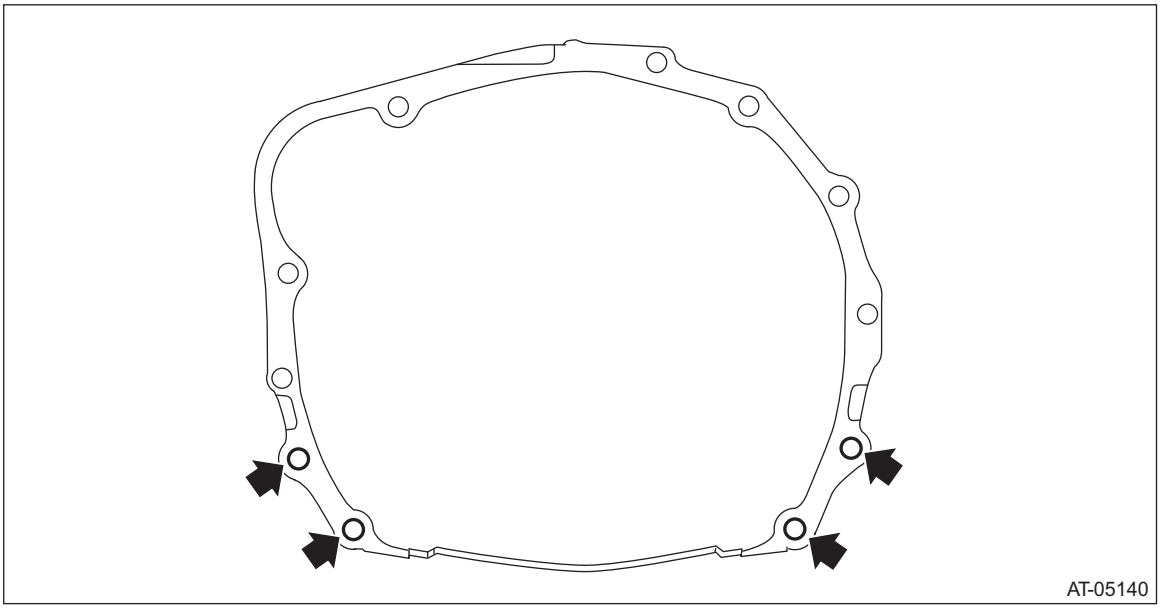


34) Lift up the vehicle.
35) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
36) Remove the stabilizer link. <Ref. to FS-29, REMOVAL, Front Stabilizer.>
37) Disconnect the lower arm ball joint and housing.
38) Pull out the front drive shaft from transmission using a crowbar.

NOTE:
Place cloth between the tire lever or bar and the transmission in order to avoid damaging the transmission side retainer.
39) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.

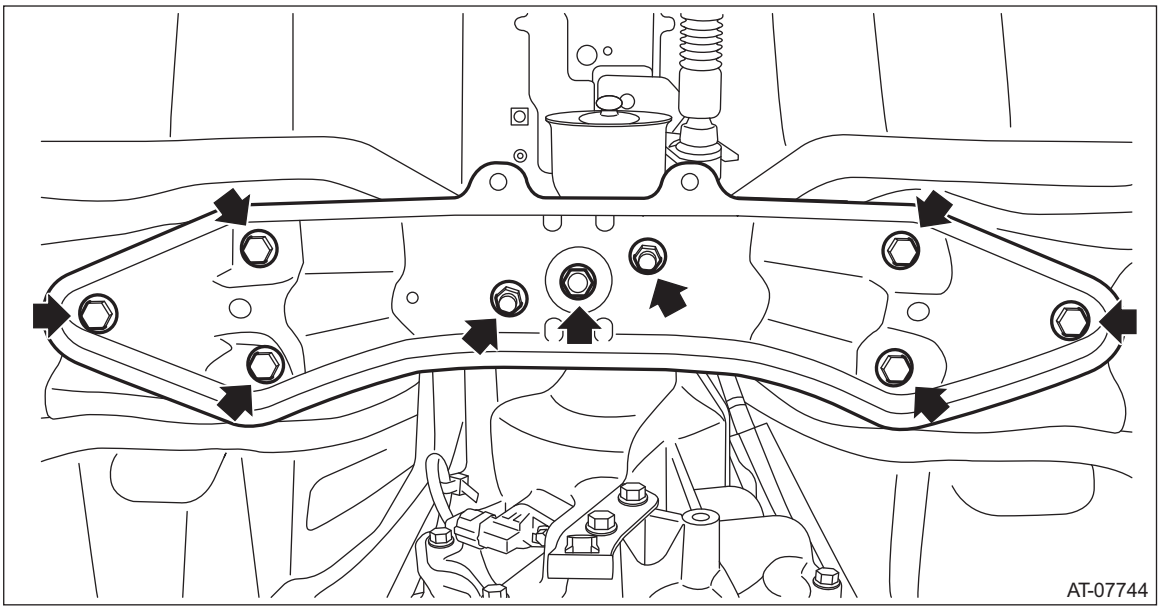
NOTE:
- Before pulling the front drive shaft RH, turn the steering wheel to the right hand at full lock.
- Before pulling the front drive shaft LH, turn the steering wheel to the left hand at full lock.

40) Remove the two transmission connecting bolts and two nuts (lower side).



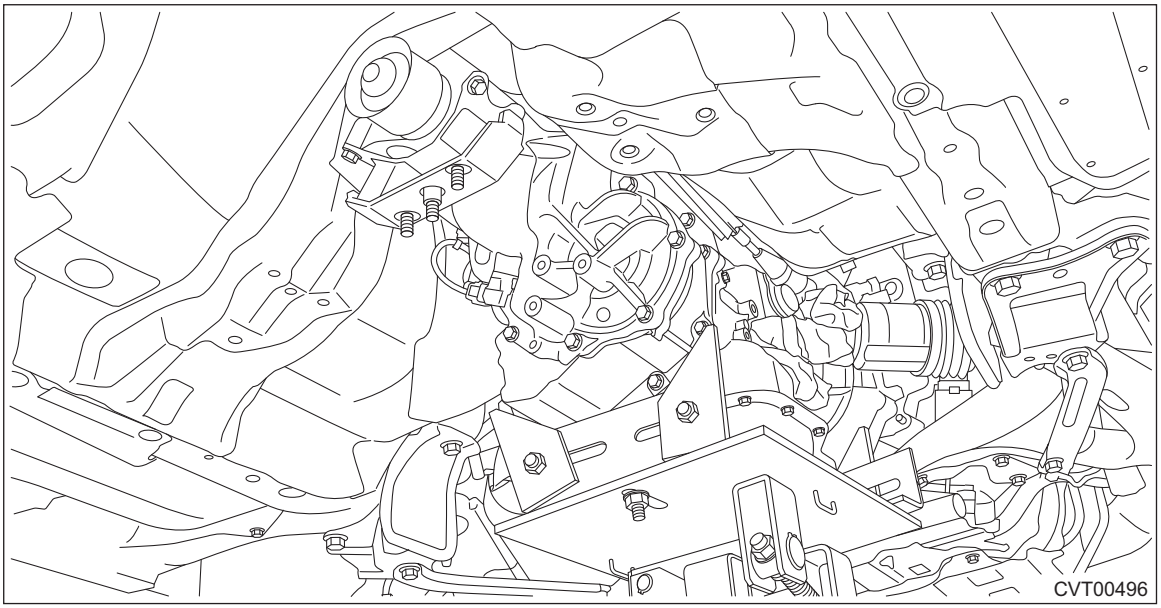
41) Set the transmission jack under the transmission.

NOTE:
Make sure that the support plates of transmission jack do not touch the oil pan.
42) Remove the transmission rear crossmember.

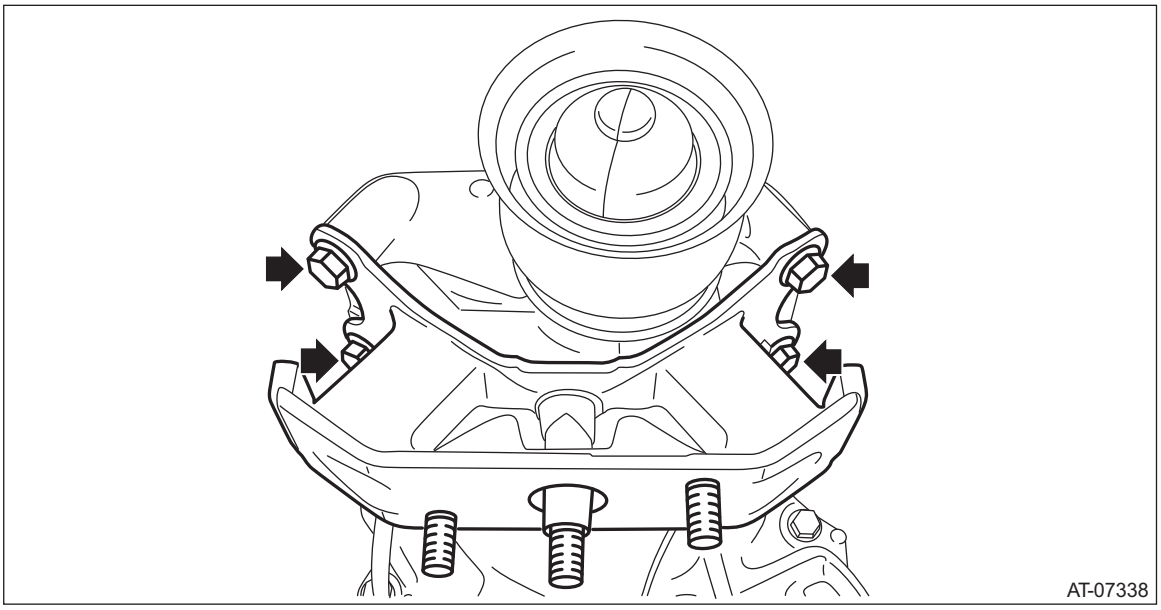


43) While lowering the transmission jack gradually, fully retract the engine support, and then tilt the engine rearward.
44) Remove the transmission assembly.

NOTE:
Remove it while moving the transmission jack up and down so that the engine and transmission remain directly aligned.

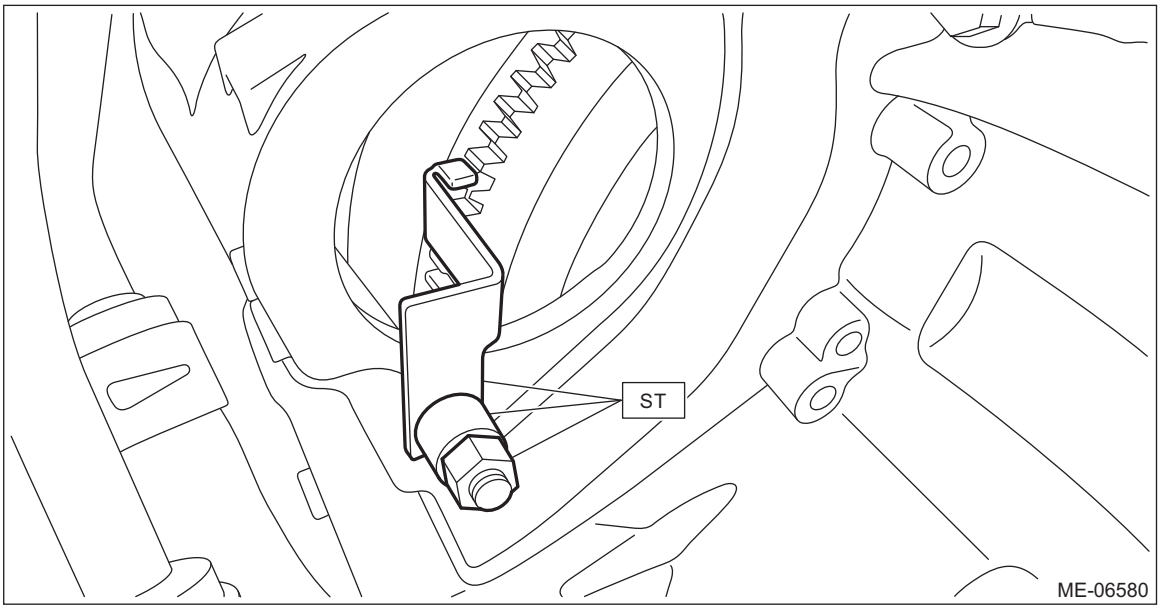


45) Remove the rear cushion rubber.



B: INSTALLATION

1) Attach the ST to converter case.
ST 498277200 STOPPER SET

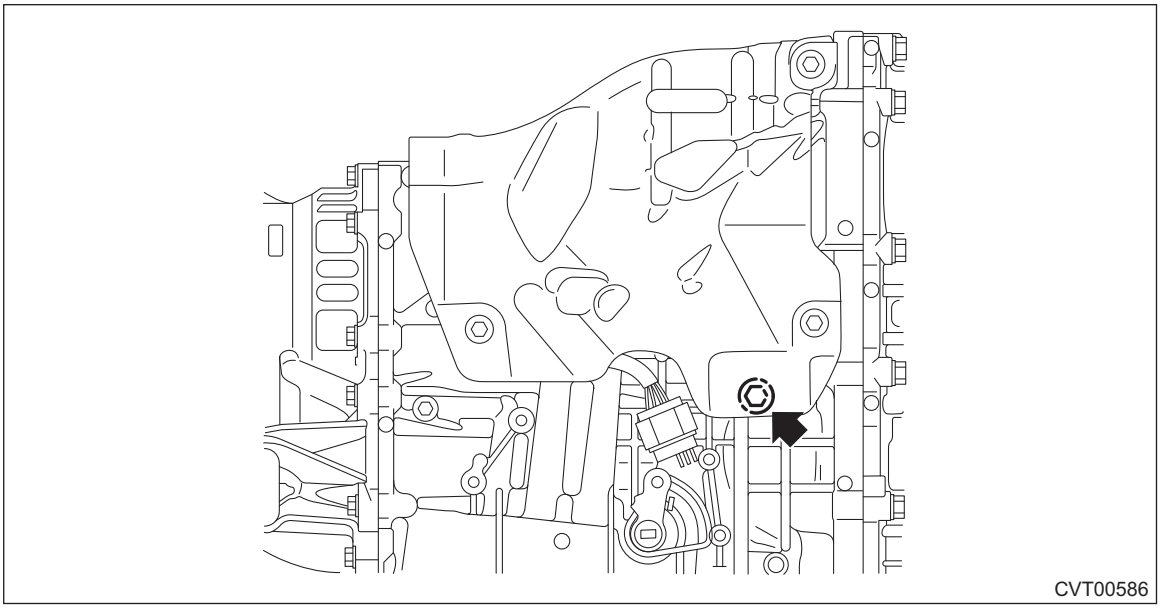


2) When completely overhauling the transmission, refill approx. 10 L (10.6 US qt, 8.8 Imp qt) of CVTF through the transmission right side plug, and install the plug.

CAUTION:
Always use specified CVTF. Using other fluid will cause malfunction. <Ref. to CVT(TR690)-4, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>

NOTE:
Use a new gasket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

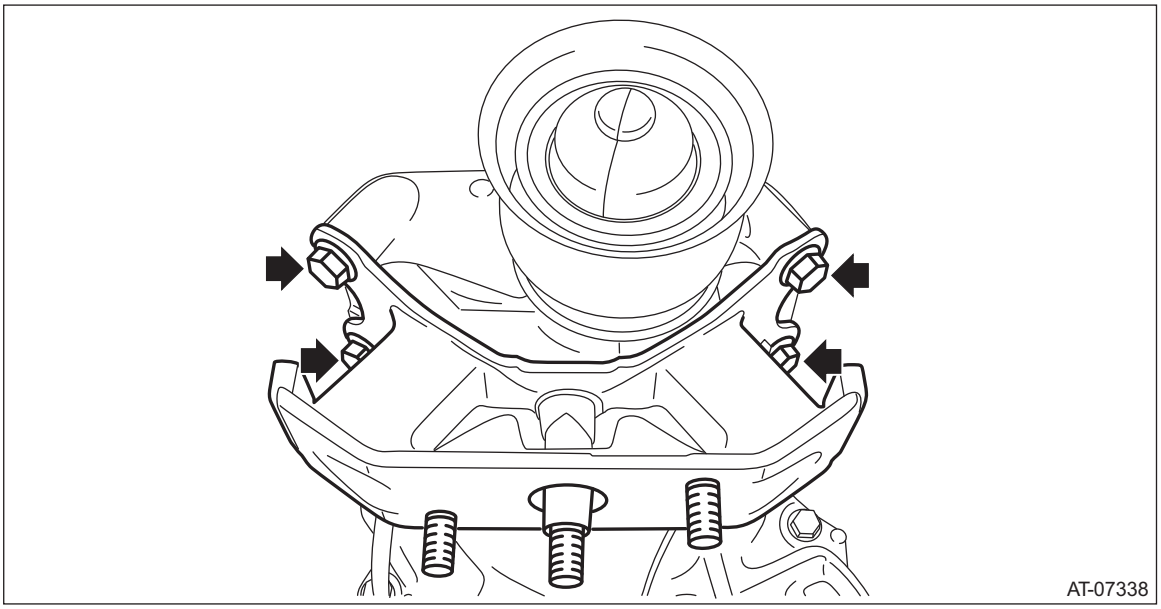


3) Replace the front differential side retainer oil seal. <Ref. to CVT(TR690)-90, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
• Be sure to replace the differential side retainer oil seal with a new part whenever the front drive shaft is removed from the transmission.
• When a new differential side retainer oil seal has been installed, replacement is not required.

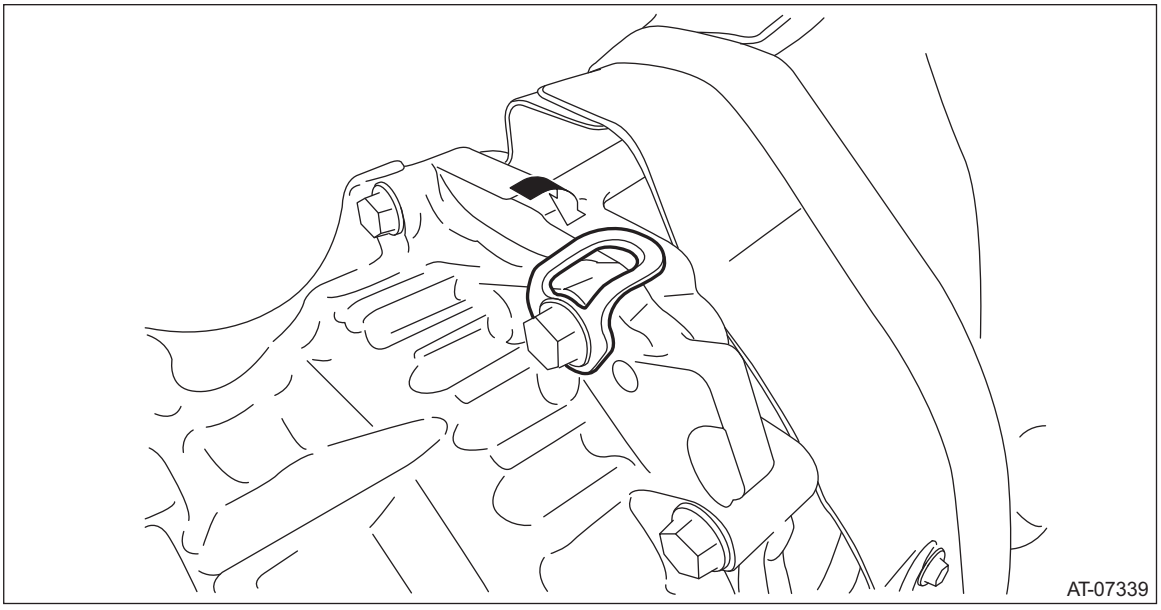
4) Install the rear cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



5) Mount the transmission onto the transmission jack.
6) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:
Do not apply excessive load or impact to the transmission case.

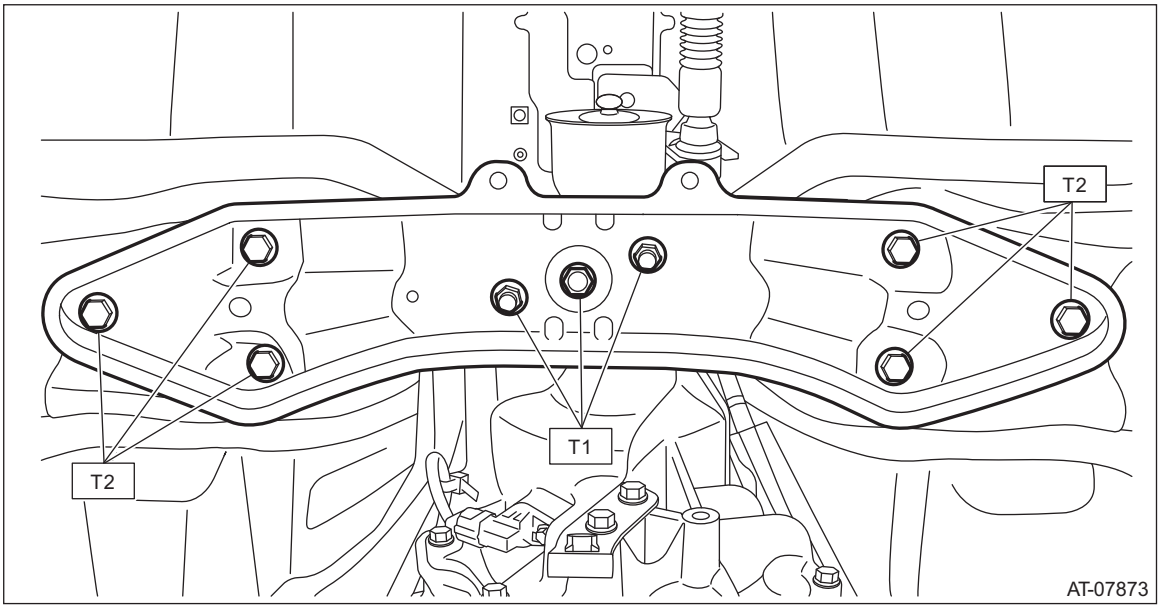


7) Remove the pitching stopper bracket, if mounted.
8) Install the transmission onto the engine.

NOTE:
- While raising the transmission jack gradually, turn the screw of engine support, then tilt the engine forward.
- Temporarily attach the two engine connecting bolts and two nuts (lower side).

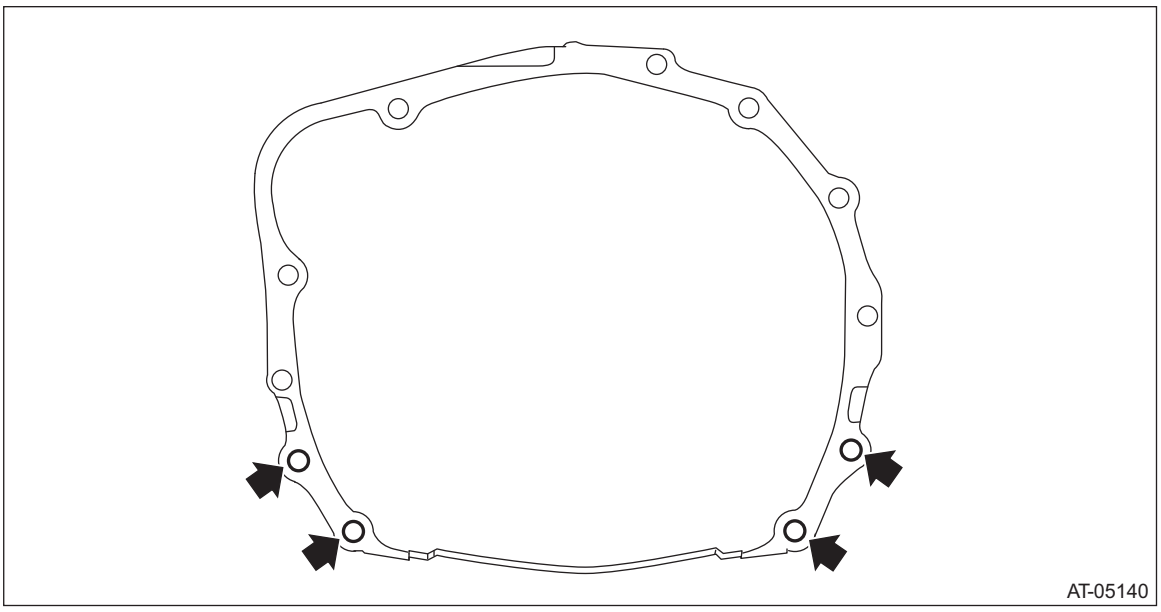
9) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



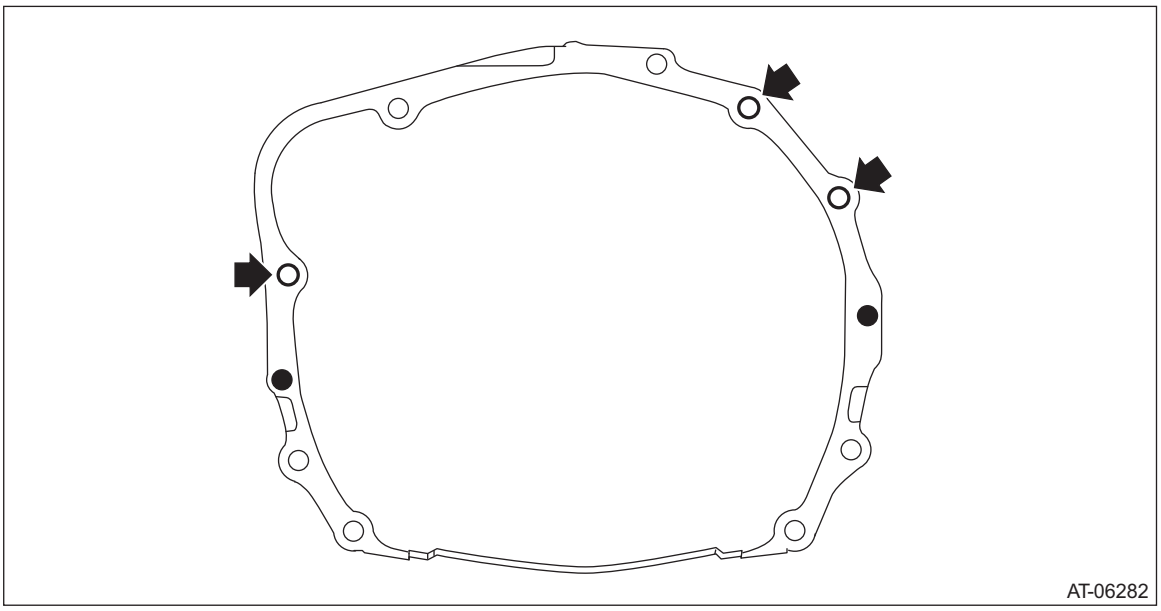
10) Tighten the two engine connecting bolts and two nuts (lower side).

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



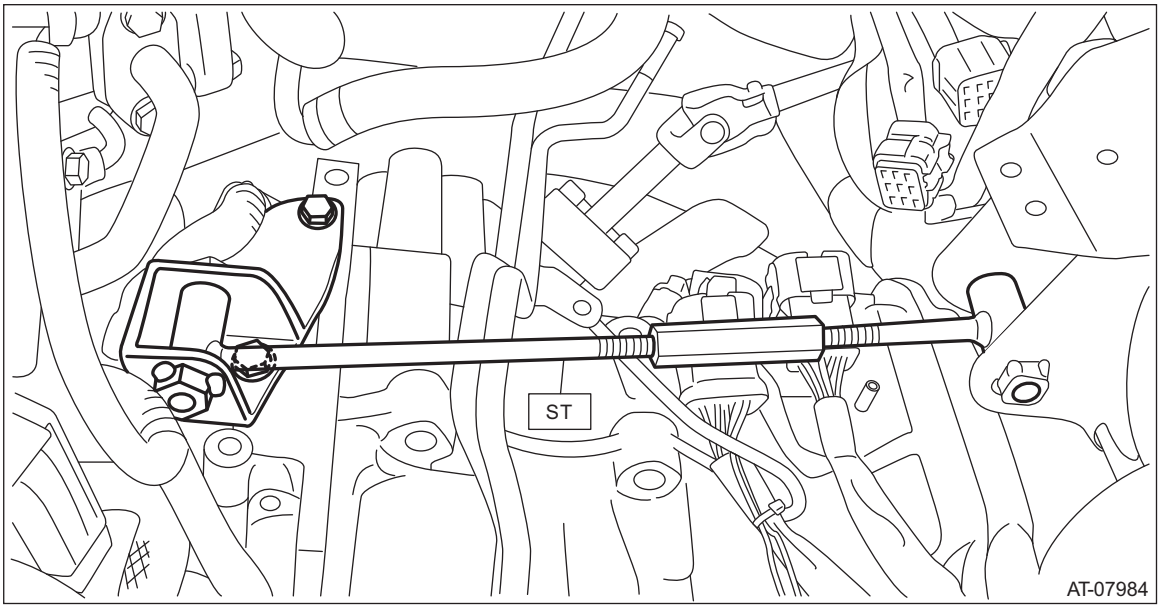
11) Remove the transmission jack.
12) Lower the vehicle.
13) Install the three engine mounting bolts (upper side).

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



14) Remove the ST (STOPPER SET) from converter case.

15) Remove the ST (ENGINE SUPPORT ASSY).
ST 41099AC000 ENGINE SUPPORT ASSY



16) Match the torque converter screw hole with drive plate hole to install the bolt.

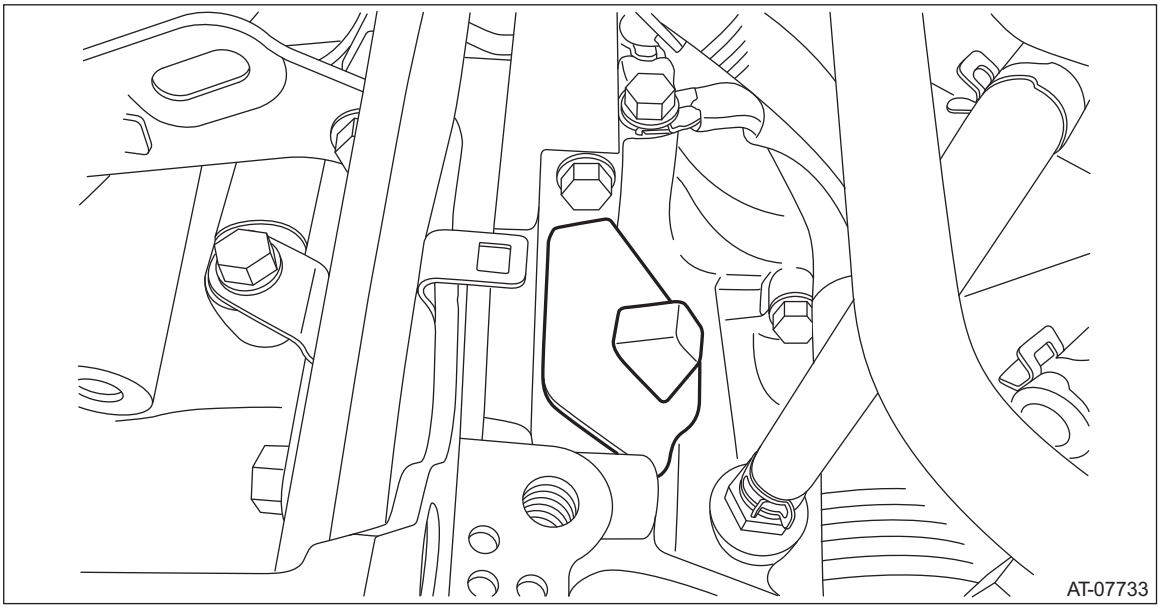
CAUTION:
- **Do not drop the mounting bolt in the converter housing.**
- **Do not damage the mounting bolt.**

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

17) Install the remaining three bolts by rotating the crank pulley a little at a time in the same direction as engine revolution.

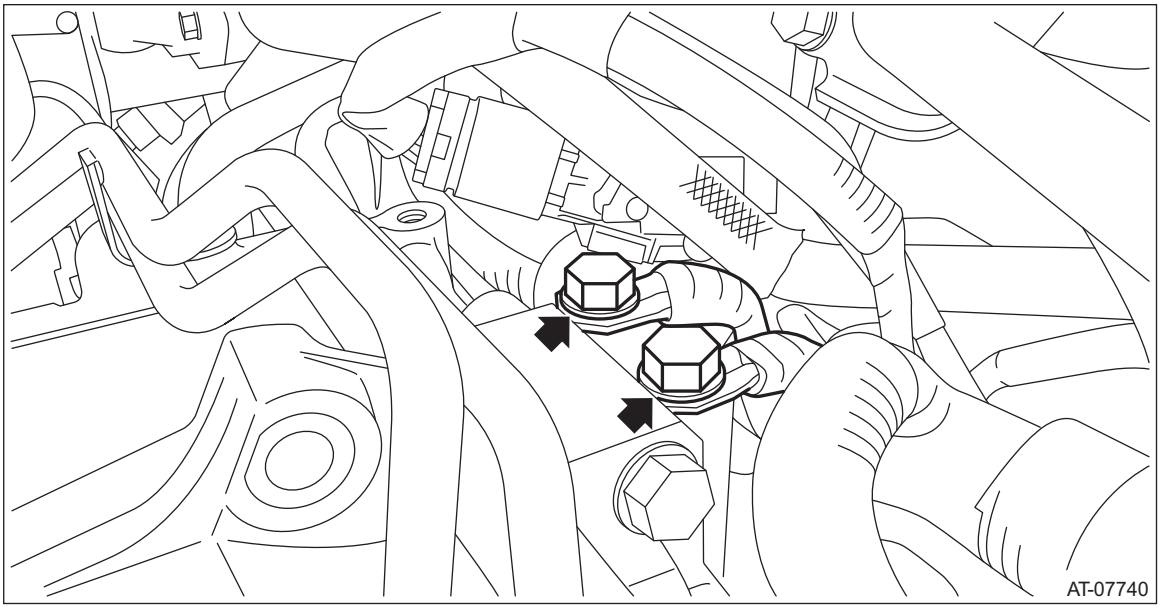
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

18) Install the service hole plug.



19) Install the engine ground terminals.

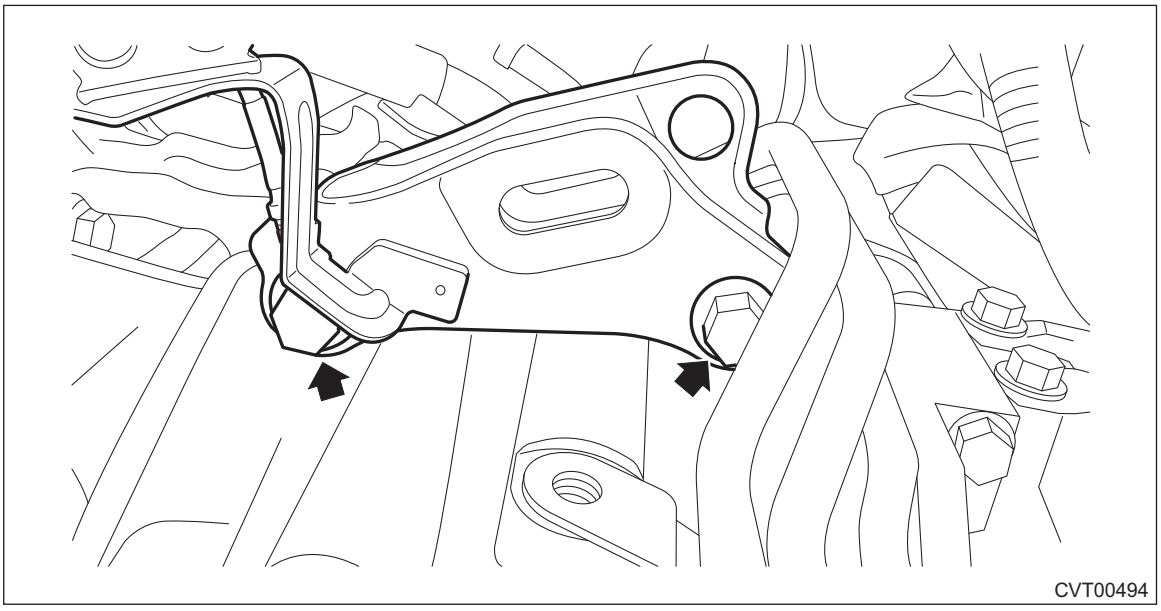
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



20) Install the pitching stopper bracket and transmission radio ground cord.

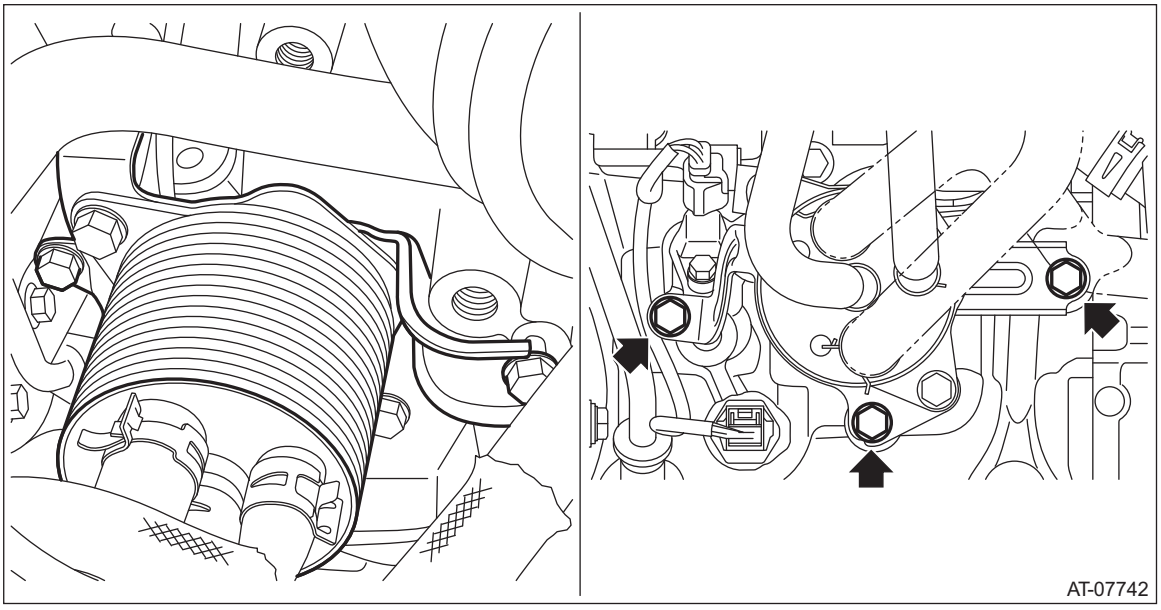
CAUTION:
Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)



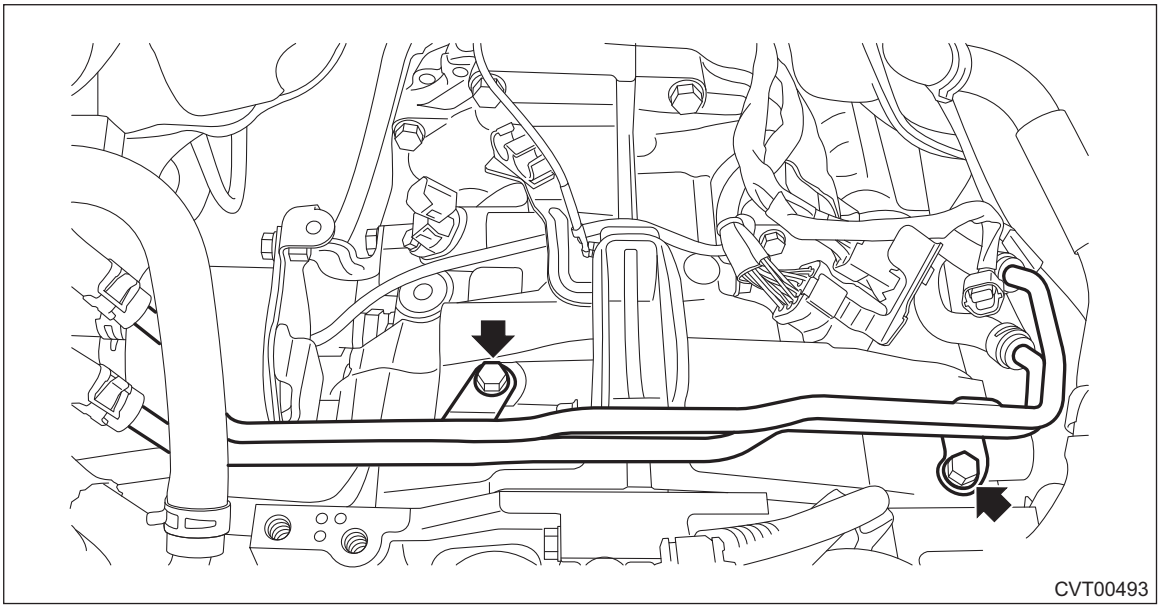
21) Install the CVTF cooler (with warmer feature).

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



22) Install the CVTF cooler pipe COMPL.

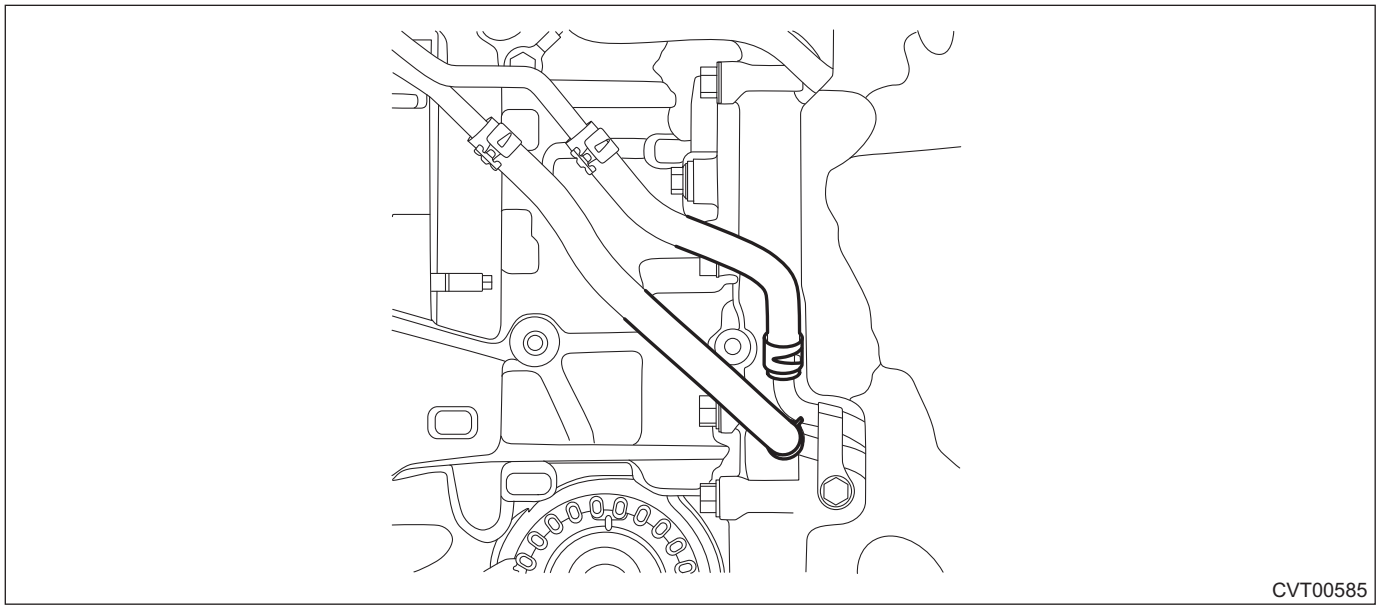
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



23) Install the CVTF inlet hose and outlet hose.

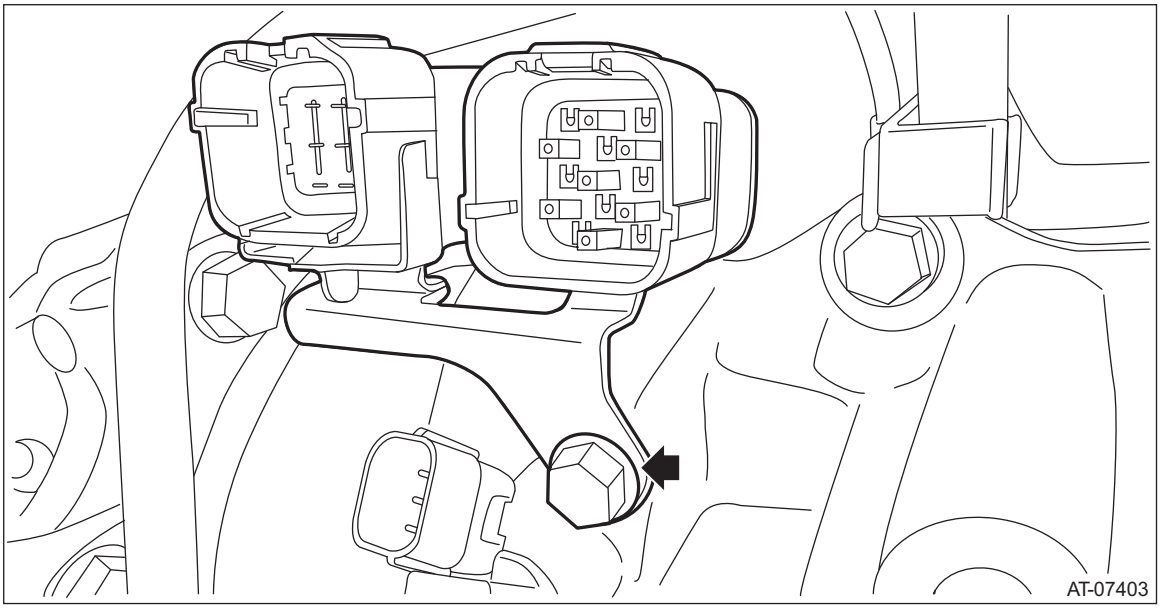
NOTE:
- Use new CVTF hoses.

- Install the CVTF hose with the painted position facing the rear side of transmission.



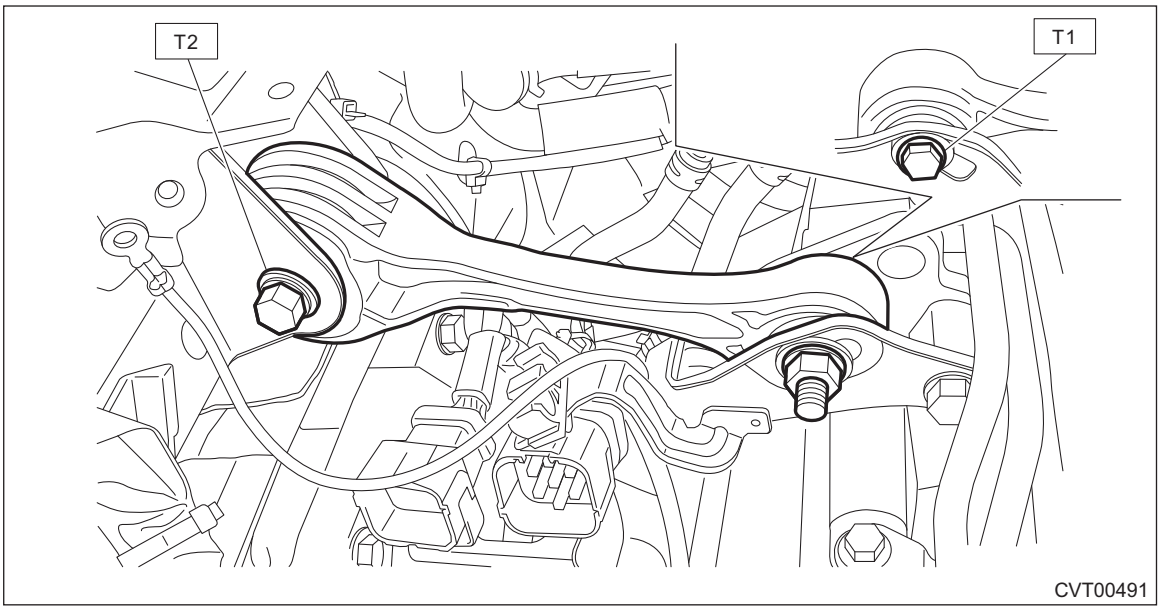
24) Install the starter. <Ref. to SC(w/o STI)-8, INSTALLATION, Starter.>
25) Install the transmission harness stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

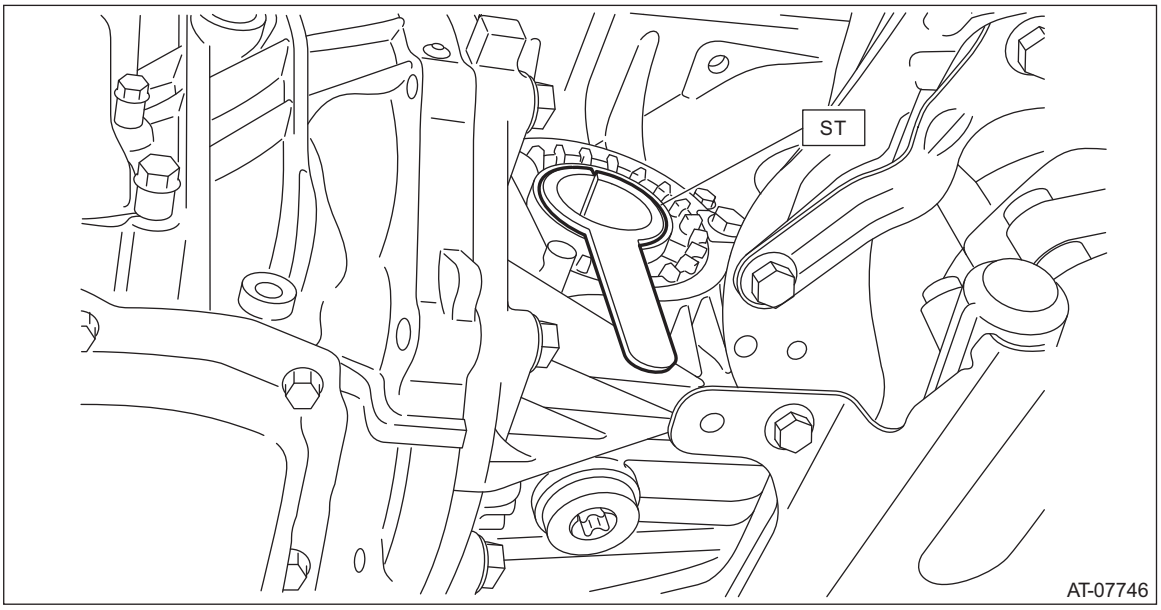


26) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



27) Lift up the vehicle.
28) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR



29) Replace the circlip of the drive shaft with a new part.
30) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).

NOTE:
- Before inserting the front drive shaft RH, turn the steering wheel to the right hand at full lock.
- Before inserting the front drive shaft LH, turn the steering wheel to the left hand at full lock.

31) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
32) Insert the ball joint into housing and secure with bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**

• **Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.**

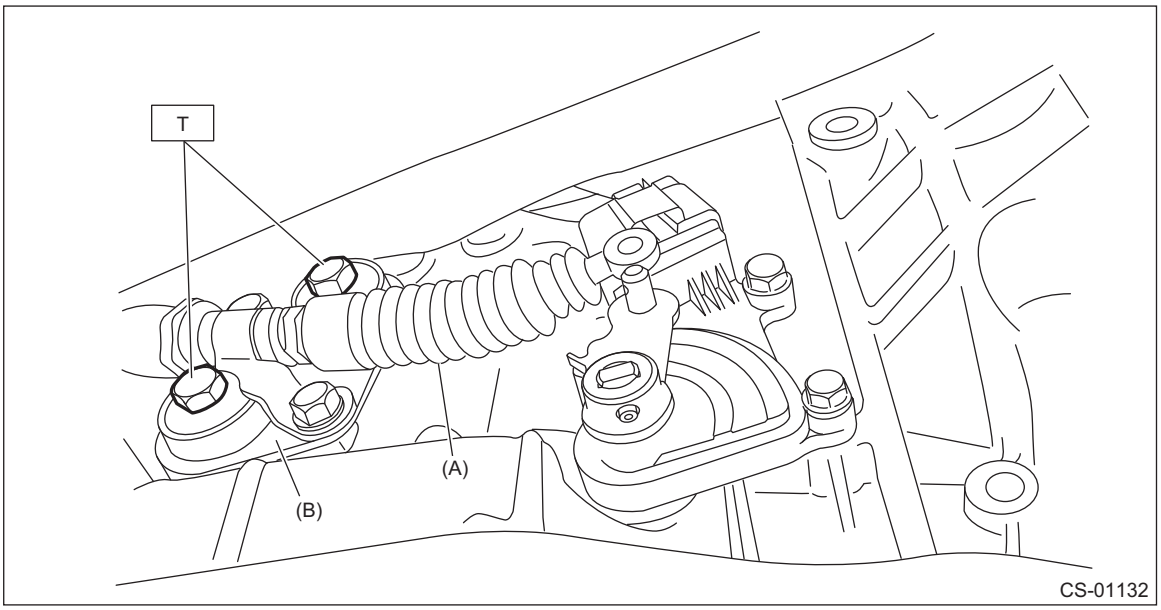
33) Replace the flange nut with a new part and install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

34) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>

35) Install the cable plate assembly.

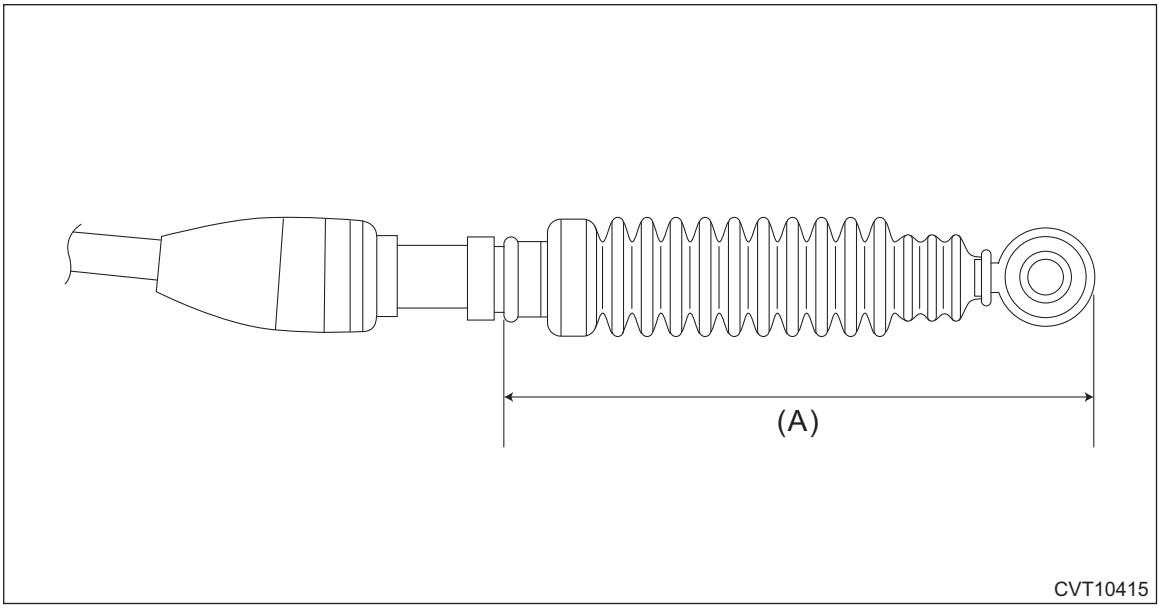
Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

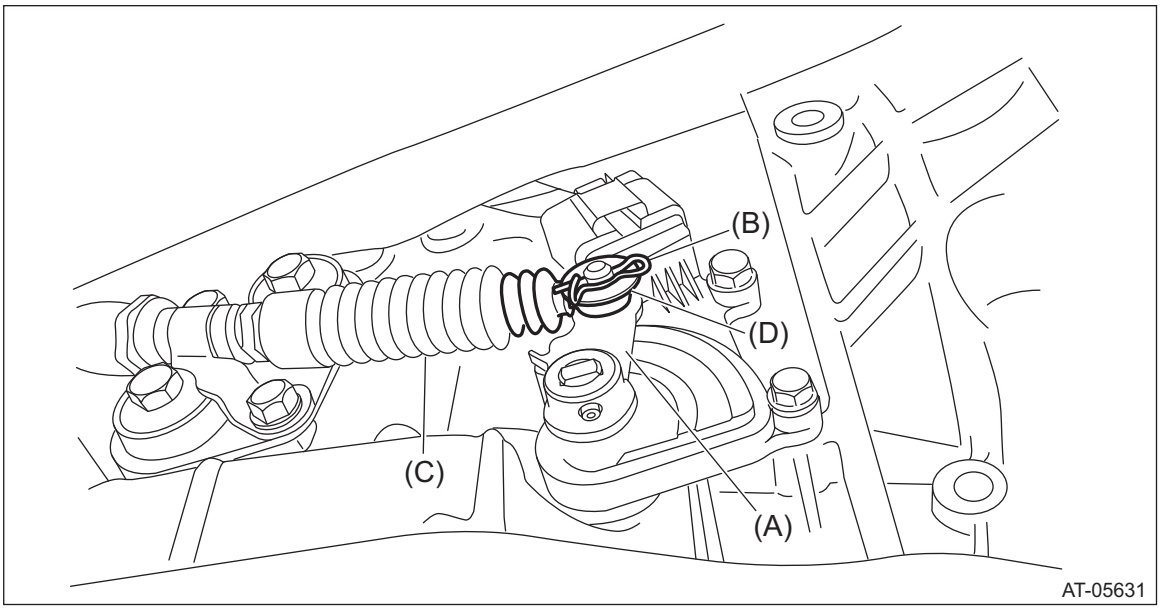


(A) Select cable
(B) Cable plate ASSY

36) Connect the select cable and install the washer and snap pin.

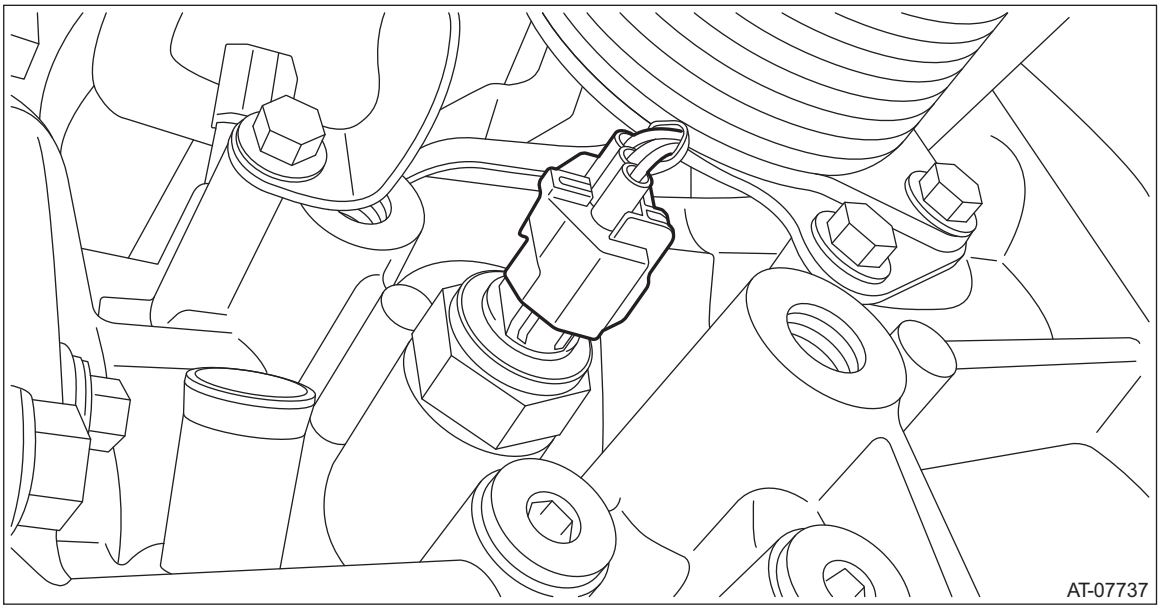
CAUTION:
Do not apply extra overload while holding the part (A).





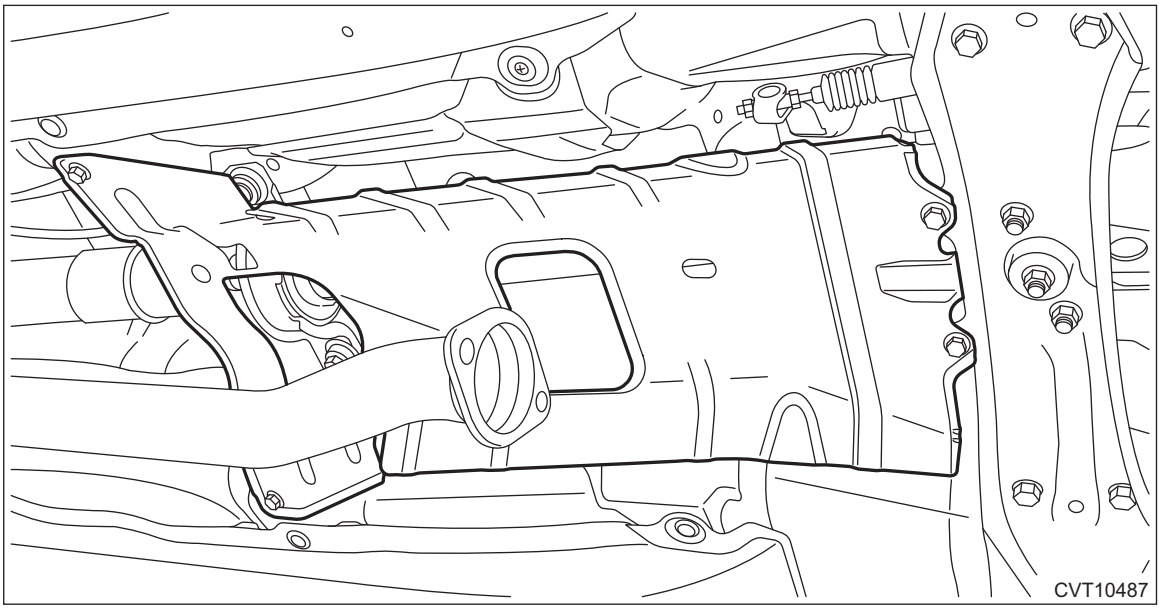
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

37) Connect the secondary pressure sensor harness connector.



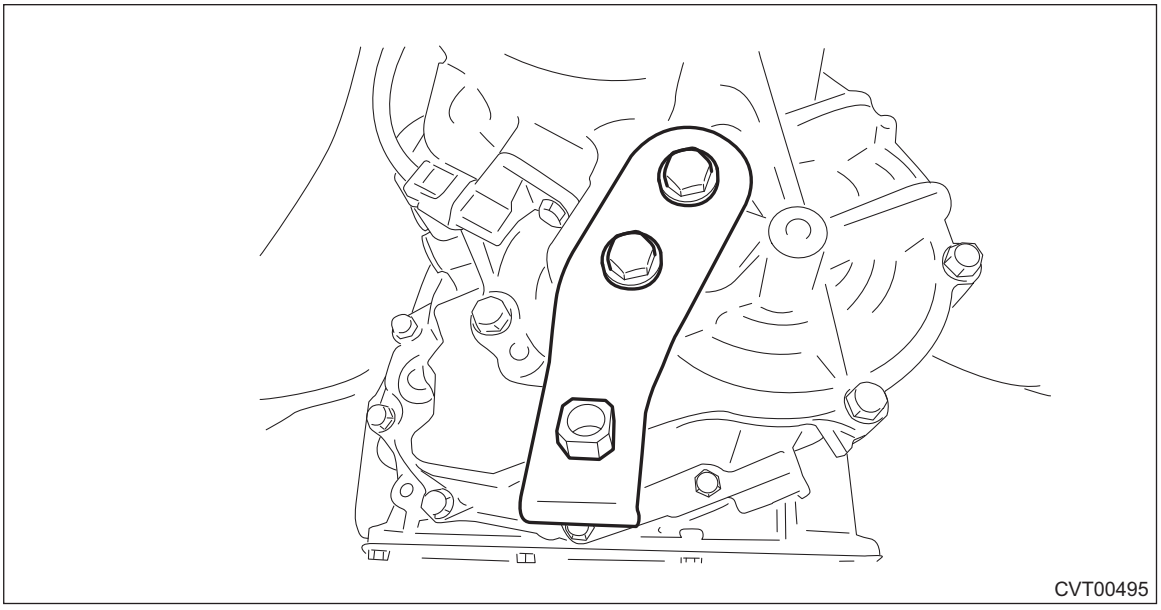
38) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

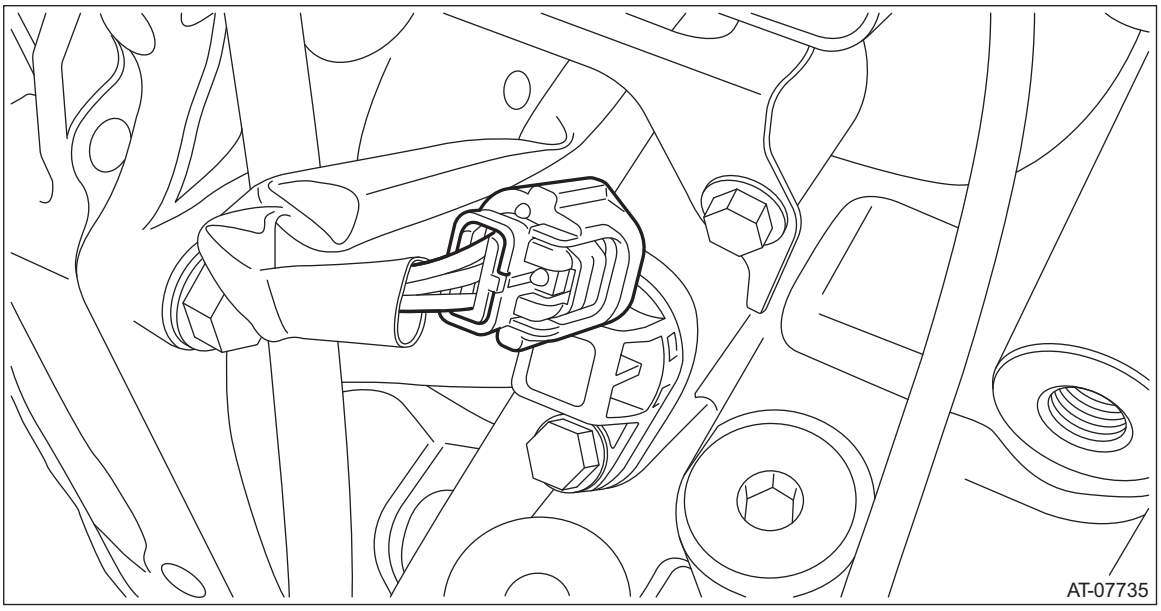


39) Install the exhaust hanger bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

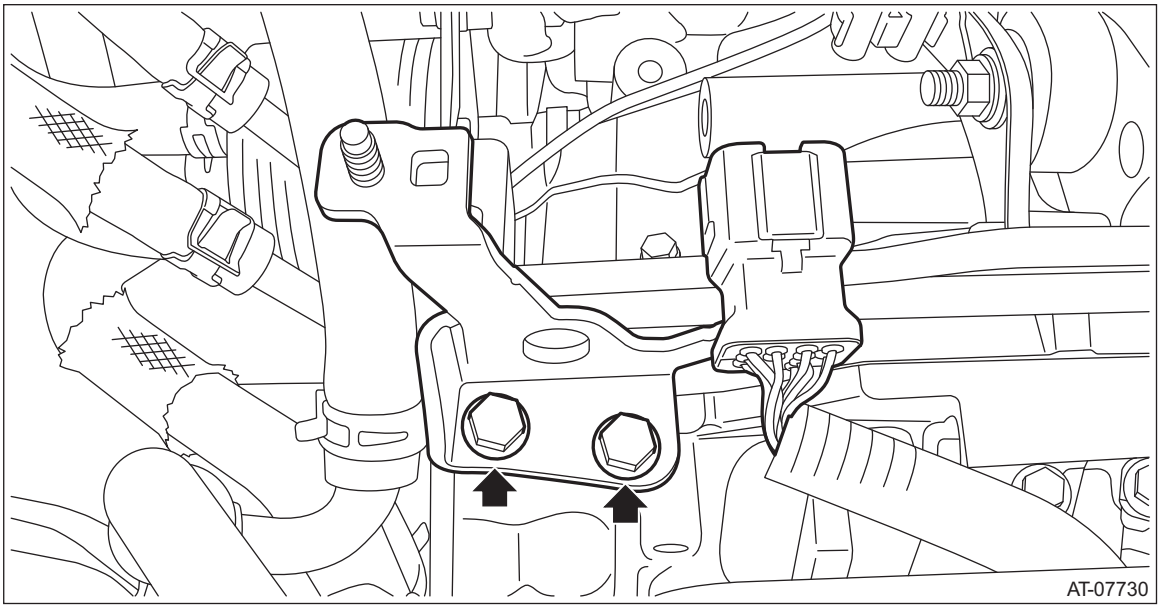


40) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
41) Connect the primary pressure sensor harness connector.

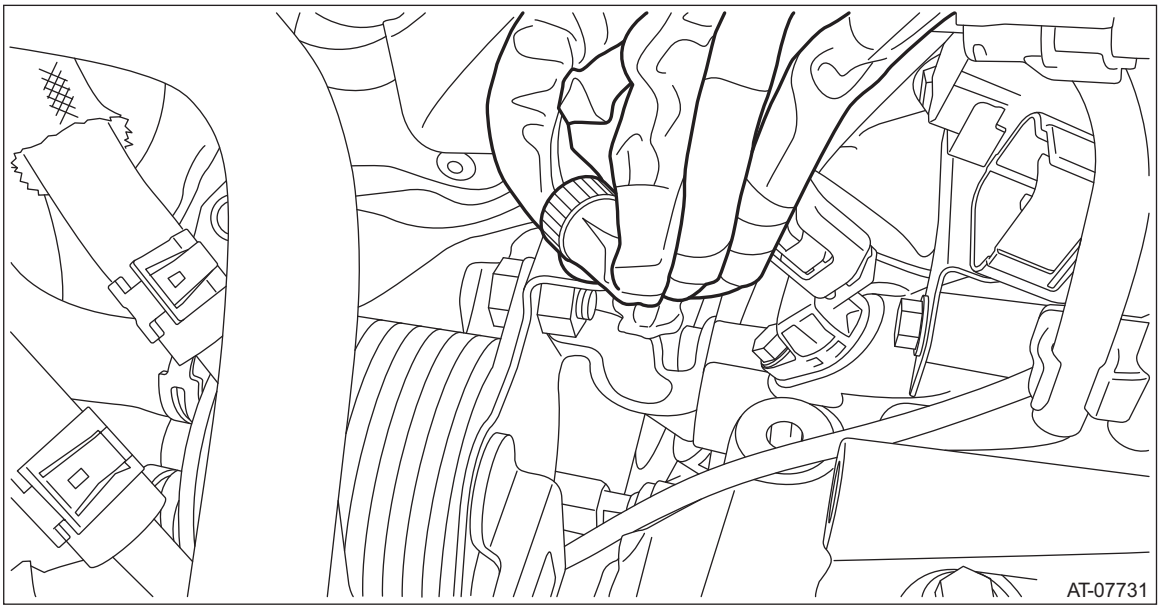


42) Install the engine hanger rear.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

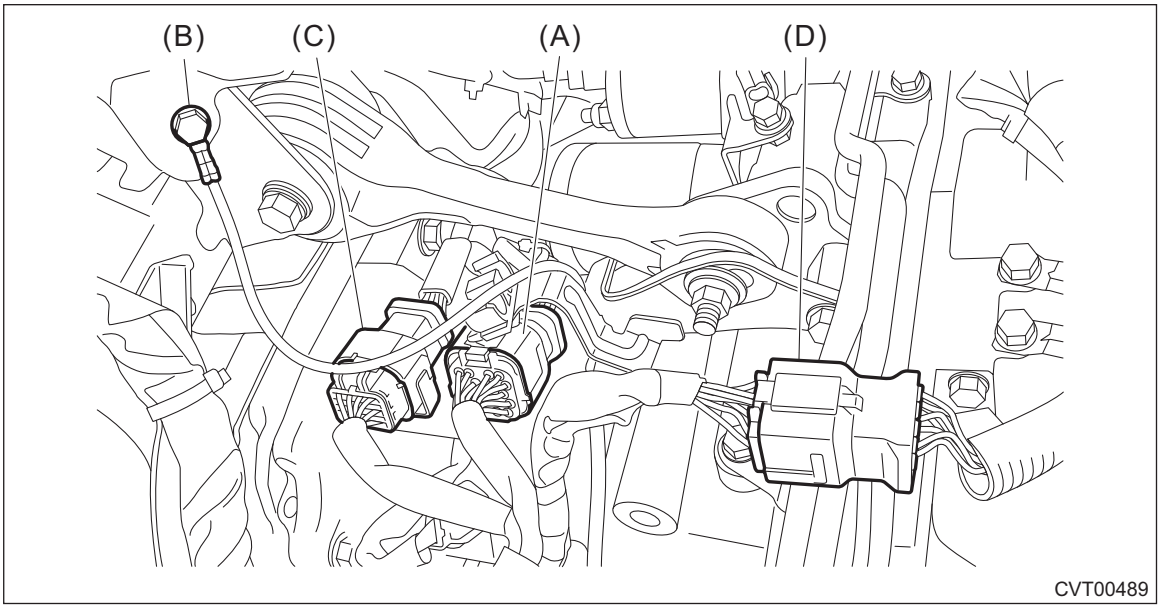


43) Install the harness clip.



44) Connect the following harness connectors.
- Transmission harness connectors
- Transmission radio ground terminal
- Inhibitor harness connector
- Engine harness connectors

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)



(A) Transmission harness connectors
(B) Transmission radio ground terminal
(C) Inhibitor harness connector
(D) Engine harness connectors

45) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
46) Install the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
47) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
48) Install the front tires.
49) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
50) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
51) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-40, ADJUSTMENT, Differential Gear Oil.>
52) Refill CVTF to adjust the CVTF amount. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
53) Perform the variator chain break-in. <Ref. to CVT(TR690)-43, Variator Chain Break-in.>

CAUTION:
Always execute the variator chain break-in after the replacement of the following.
- **Variator chain replacement**
- **Primary pulley and secondary pulley replacement**

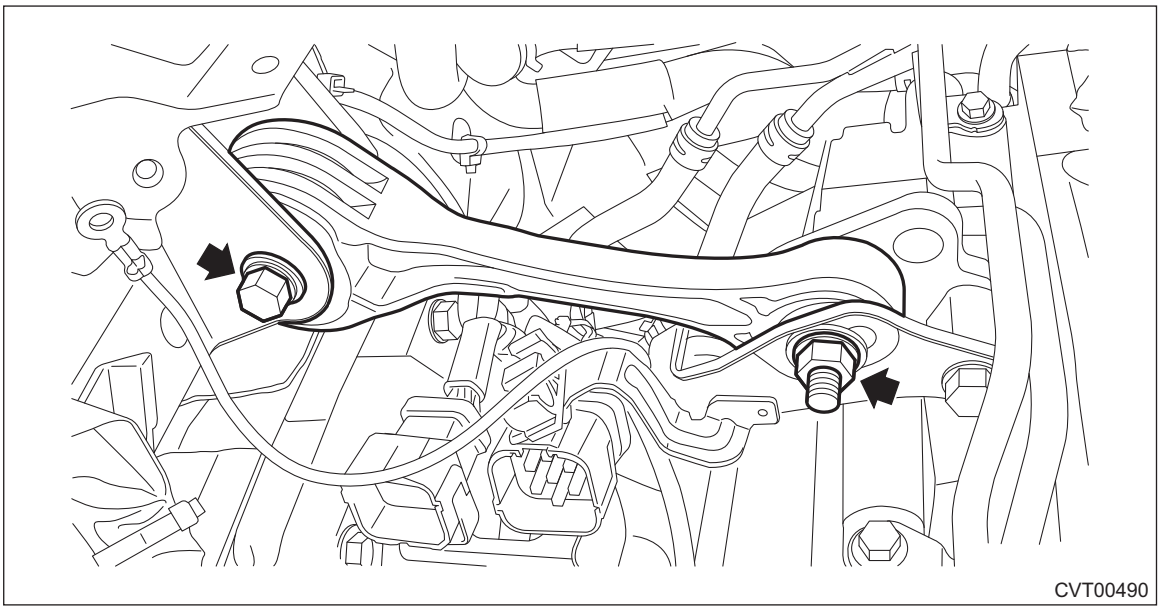
54) Perform the operation for clearing AT learning value. <Ref. to CVT(diag)-19, OPERATION, Clear Memory Mode.>
55) Perform the operation of AT learning mode. <Ref. to CVT(diag)-25, Learning Control.>
56) Perform the road test to make sure there is no fault. <Ref. to CVT(TR690)-44, INSPECTION, Road Test.>

11.Transmission Mounting System

A: REMOVAL

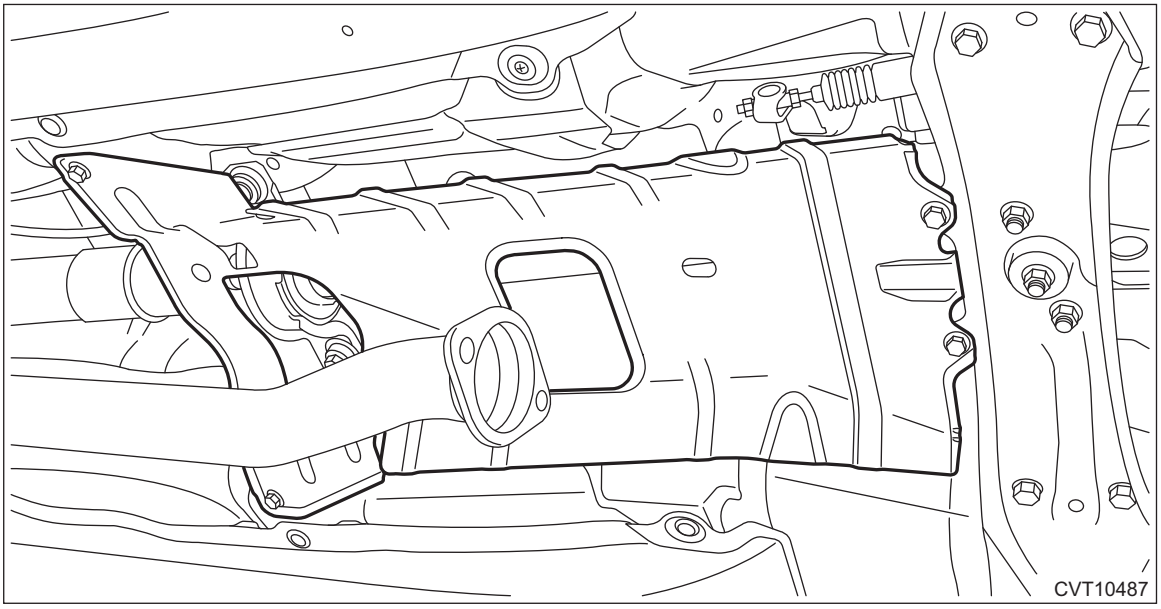
1. PITCHING STOPPER

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the pitching stopper.



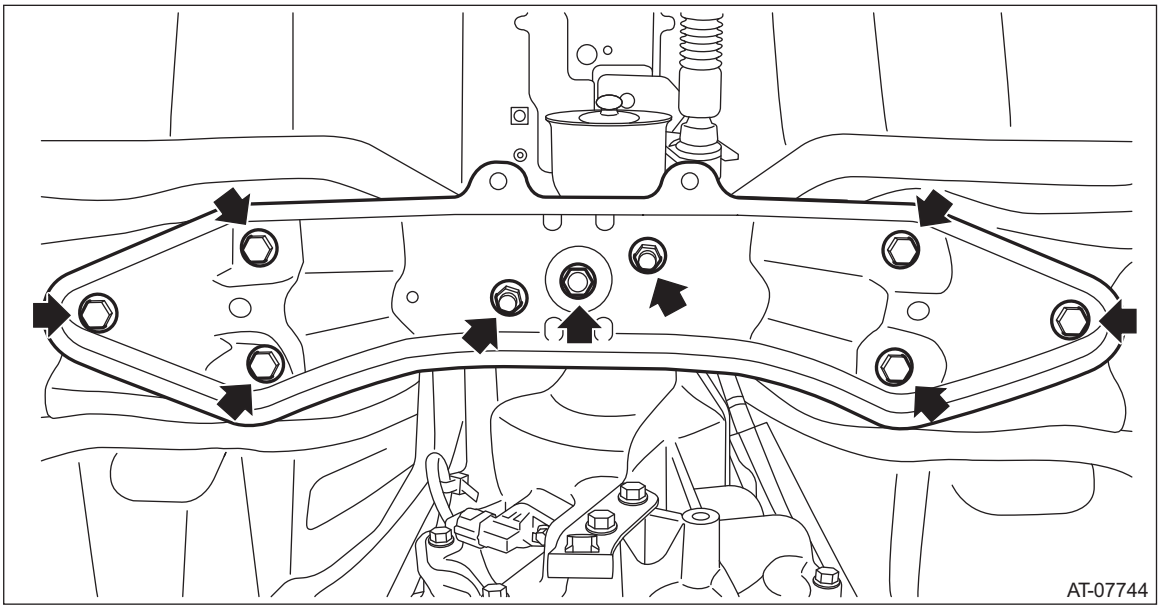
2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.

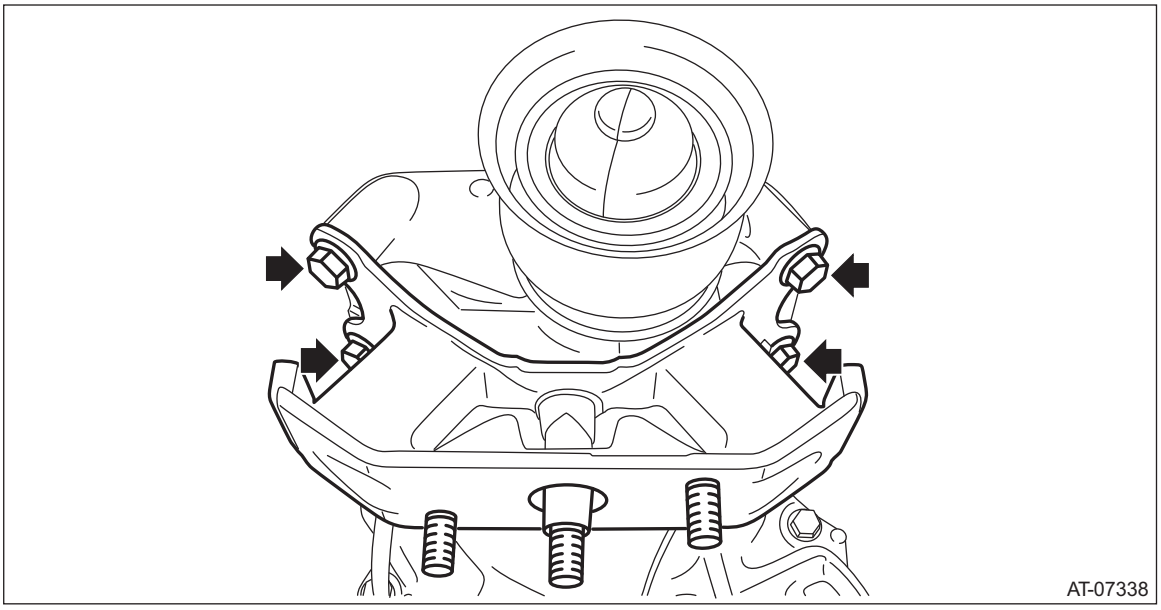


5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.

6) Remove the transmission rear crossmember.



7) Remove the rear cushion rubber.

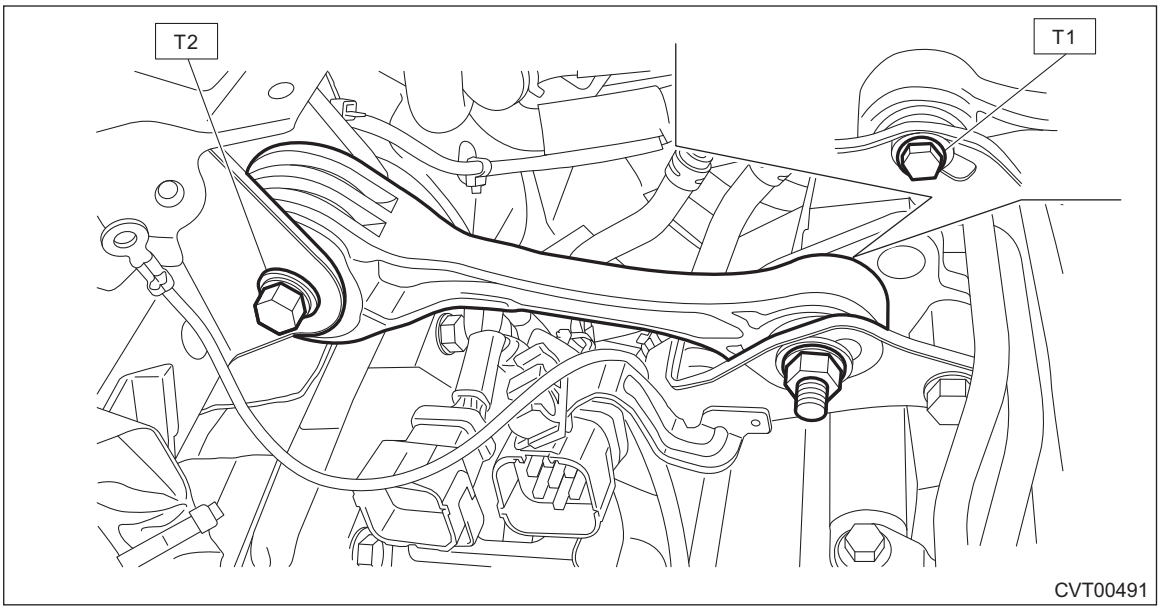


B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

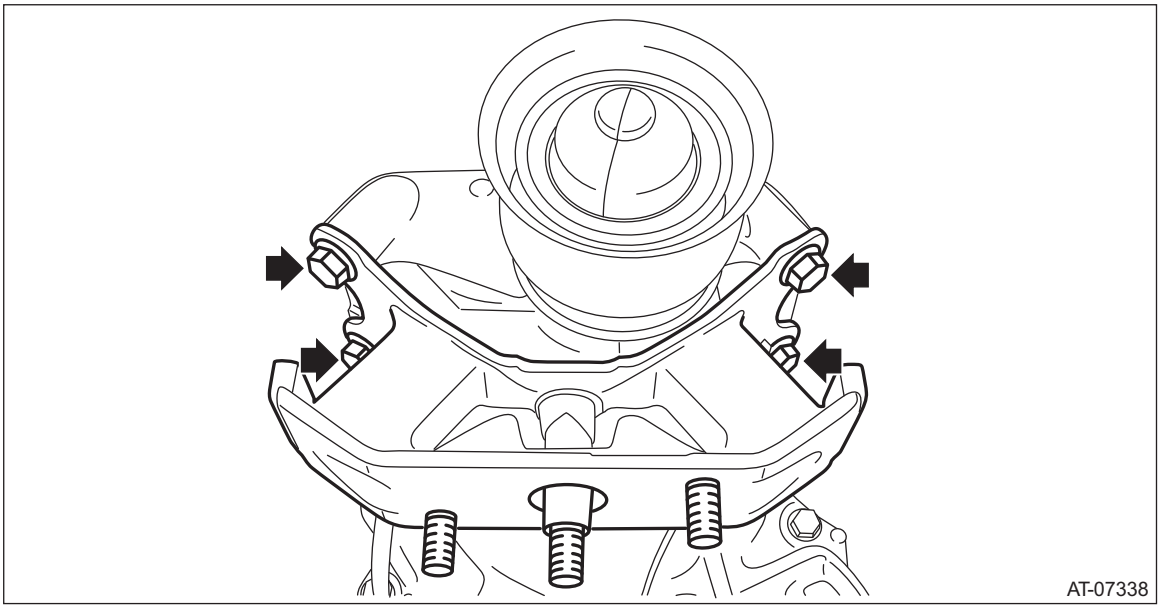


2) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
3) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

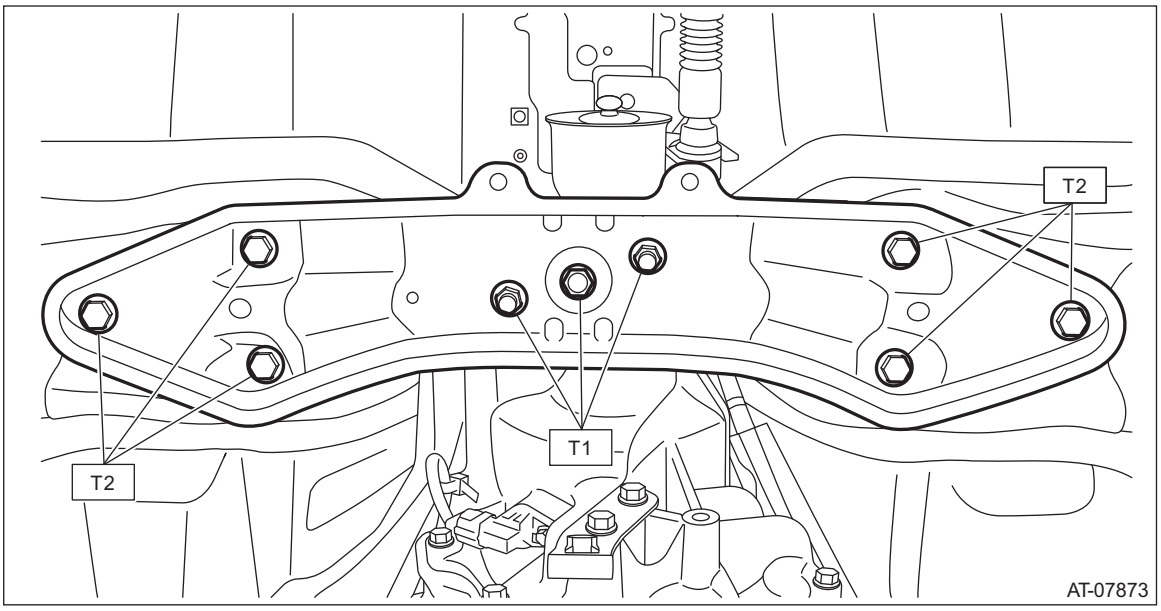
1) Install the rear cushion rubber.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



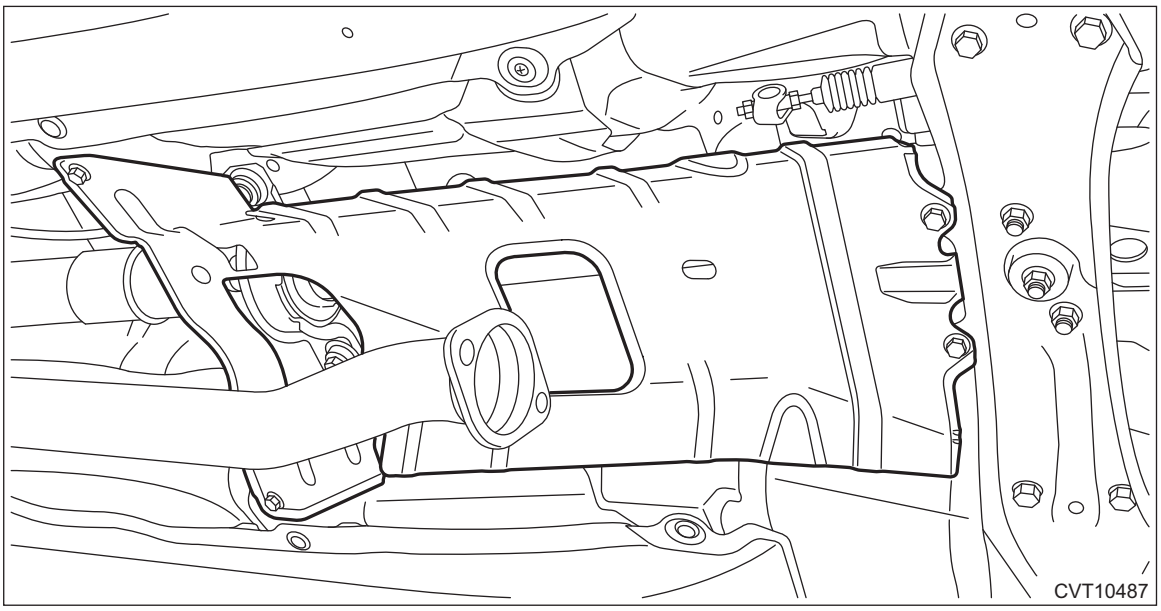
2) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



3) Remove the transmission jack.
4) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



5) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

- Check the crossmember for bends or damage.
- Check that the cushion rubber is not stiff, cracked or otherwise damaged.
- Check the pitching stopper for bends or damage.

12.Extension Case Oil Seal

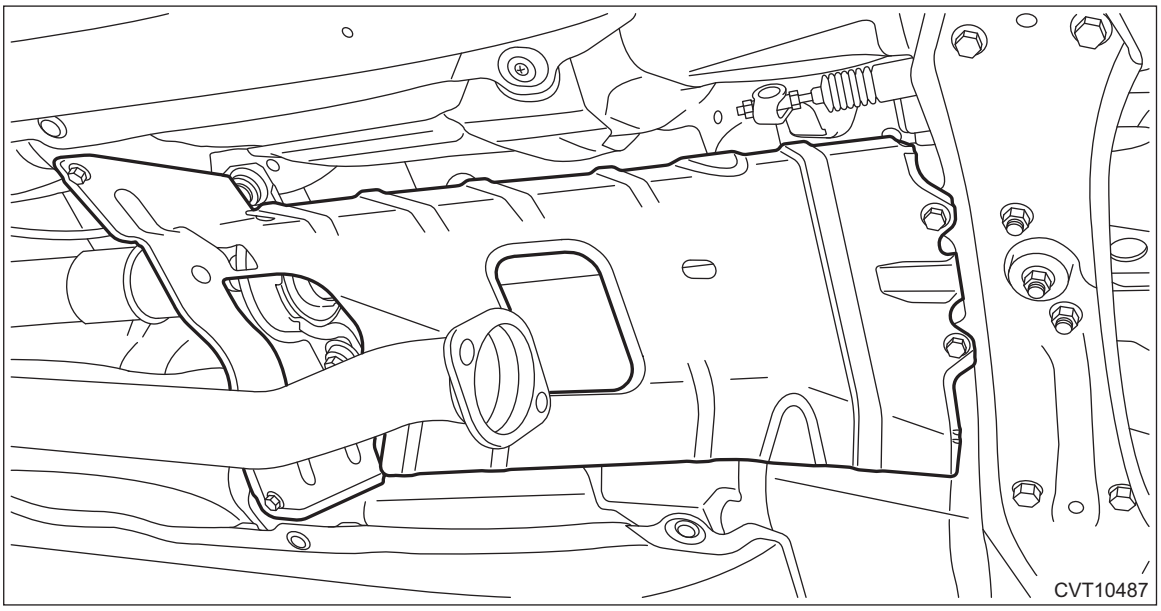
A: INSPECTION

Check for leakage of CVTF from the joint section of transmission and propeller shaft. If a leak is found, inspect the propeller shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
Immediately after the vehicle has been running or after idling for a long time, the CVTF will be hot. Be careful not to burn yourself.

1) Lift up the vehicle.
2) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
3) Remove the center exhaust cover.

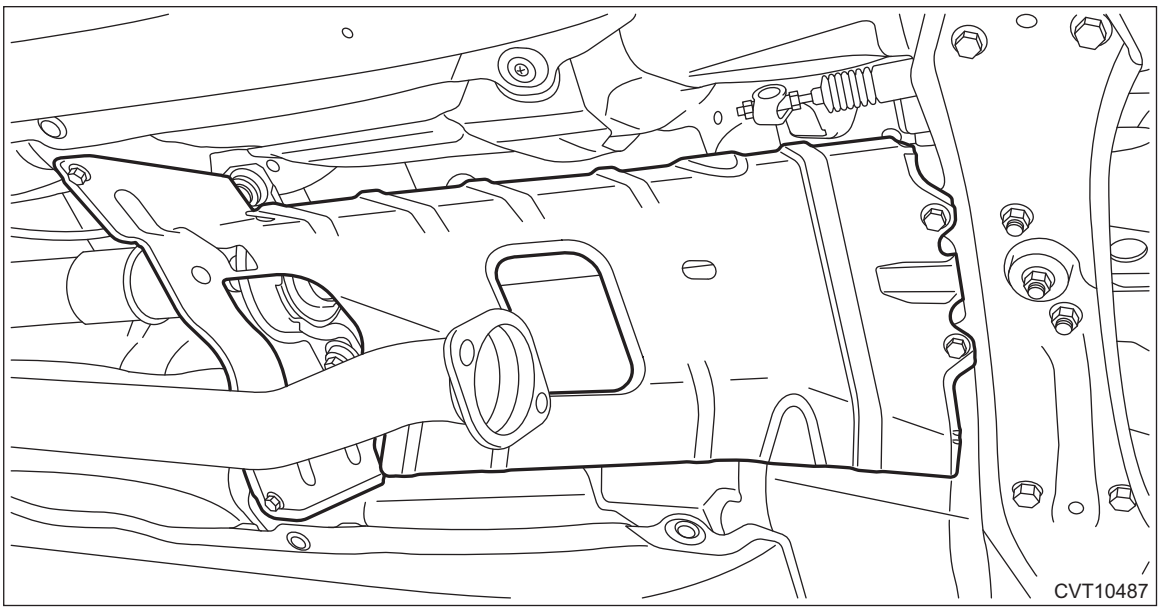


4) Clean the transmission exterior.
5) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
6) Using a screwdriver or ST, remove the oil seal trying not to damage the extension case.
ST 398527700 PULLER ASSY
7) Using the ST, install the oil seal.

NOTE:
- Use a new oil seal.
- Apply CVTF to the oil seal lip and press-fitting surface.

ST 498057300 INSTALLER
8) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
9) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



10) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
11) Adjust the CVTF level and check there is no leakage. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

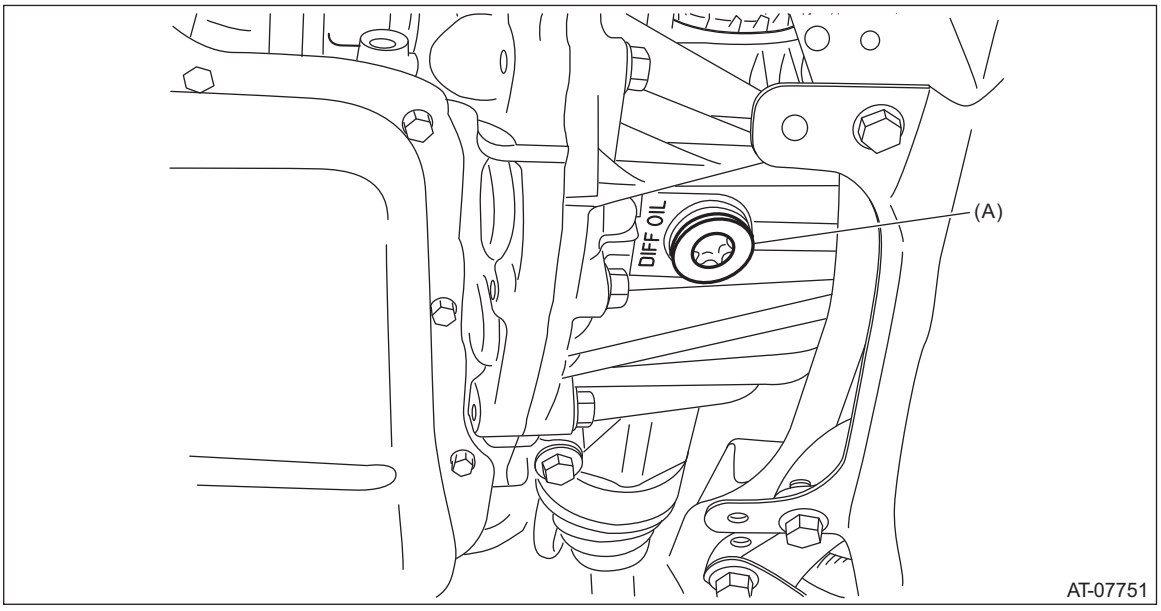
13.Differential Side Retainer Oil Seal

A: INSPECTION

Check for leakage of gear oil from the oil seal. If there is an oil leak, inspect the front drive shaft and replace the oil seal.

B: REPLACEMENT

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the differential gear oil will be hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. If differential gear oil is spilled on the exhaust pipe, wipe it off completely.
1) Remove the front tires.
2) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
3) Remove the differential gear oil drain plug using TORX® bit T70, and then drain differential gear oil.



(A) Differential gear oil drain plug

4) Tighten the differential gear oil drain plug.

NOTE:
Use a new gasket.

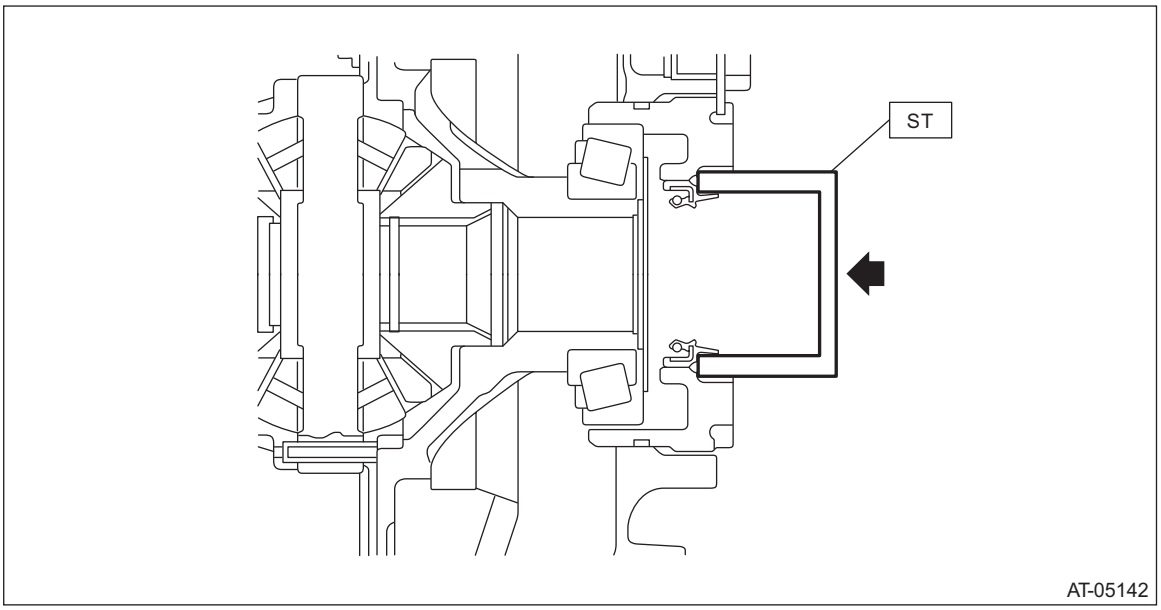
Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
5) Remove the stabilizer link. <Ref. to FS-29, REMOVAL, Front Stabilizer.>
6) Disconnect the lower arm ball joint and housing.
7) Pull out the front drive shaft from transmission using a crowbar.

NOTE:
Place a cloth between the tire lever or bar and the transmission in order to avoid damaging the differential side retainer.
8) Holding the joint of front drive shaft from transmission side, pull out the drive shaft from transmission with care not to stretch the boot.

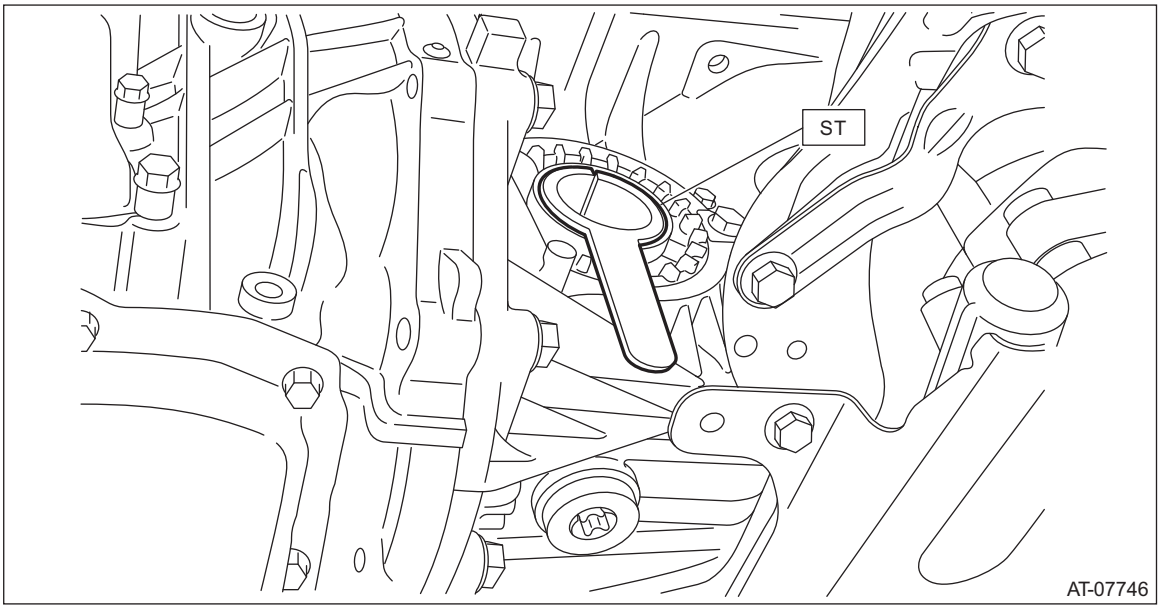
NOTE:
• Before pulling the front drive shaft RH, turn the steering wheel to the right hand at full lock.
• Before pulling the front drive shaft LH, turn the steering wheel to the left hand at full lock.
9) Remove the differential side retainer oil seal using driver wrapped with vinyl tape etc.

10) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Apply differential gear oil to the lip surface, so that the oil seal lip is not deformed.
- Apply differential gear oil to the press-fitting surface of oil seal and the differential side retainer.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.



11) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR



12) Replace the circlip of the drive shaft with a new part.
13) Insert the front drive shaft spline section into transmission and remove the ST (OIL SEAL PROTECTOR).
14) Insert the drive shaft into the transmission securely by pressing the housing from outside of the vehicle.
15) Insert the ball joint into housing and secure with bolt.

CAUTION:
- **Do not apply grease to the tapered portion of ball stud.**
- **Before tightening, make sure the lower side of housing and stepped section of ball joint are in contact.**

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
16) Replace the flange nut with a new part and install the stabilizer link.

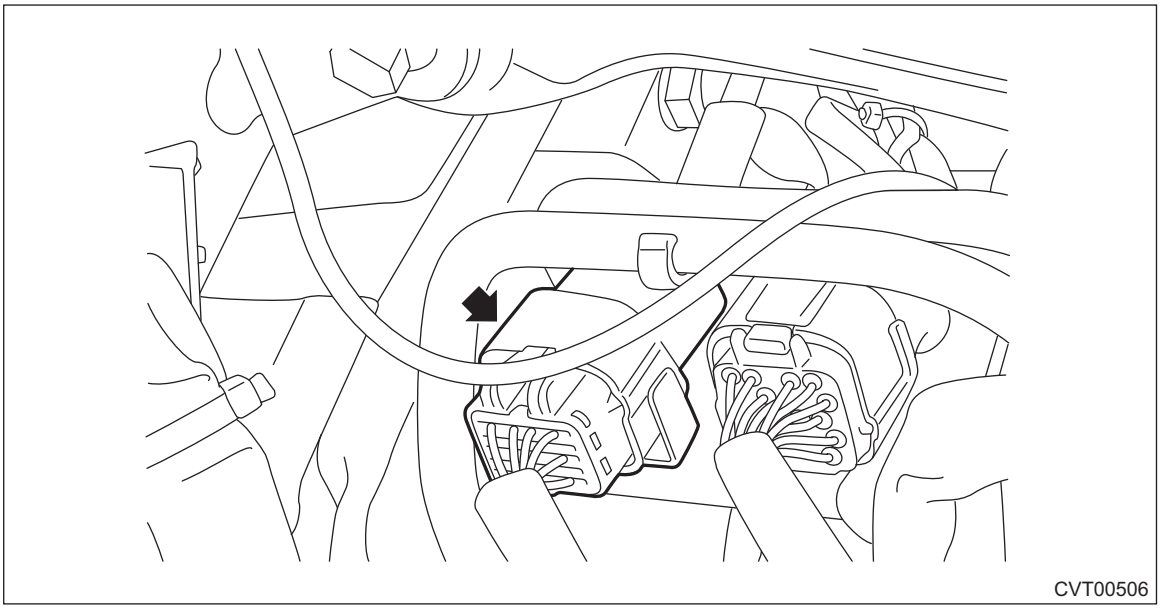
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
17) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
18) Lower the vehicle.
19) Refill differential gear oil to adjust the differential gear oil amount. <Ref. to CVT(TR690)-40, ADJUSTMENT, Differential Gear Oil.>
20) Install the front tires.

14.Inhibitor Switch

A: INSPECTION

When the driving condition or starter motor operation is improper, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
3) Disconnect the inhibitor harness connector.



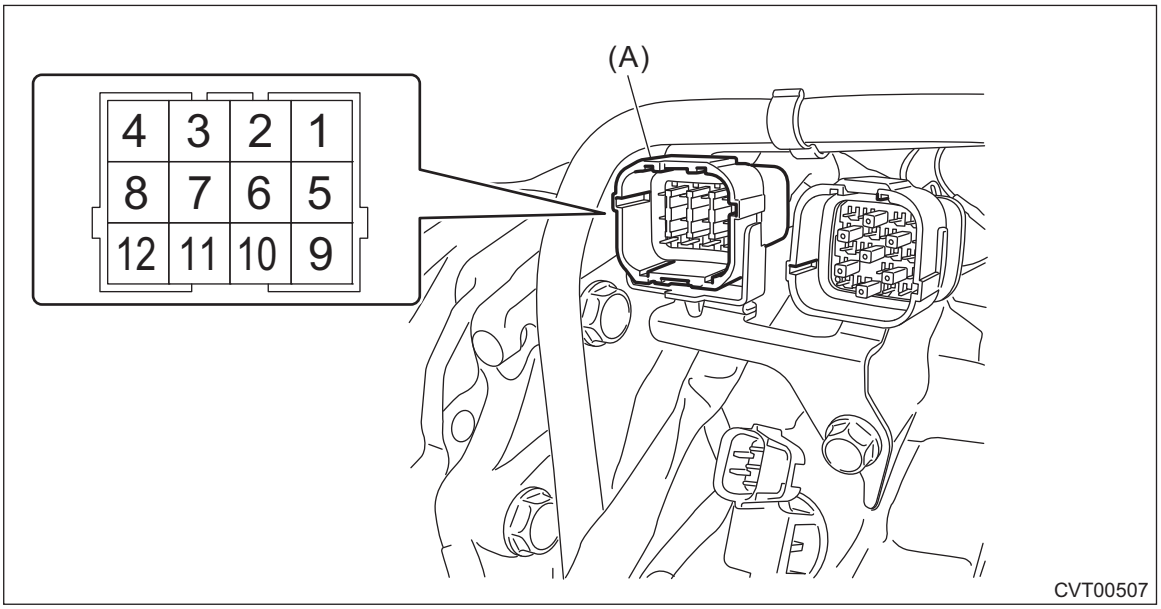
4) Check for continuity in inhibitor switch circuit by shifting the select lever in “P”, “R”, “N” and “D” respectively.

NOTE:

- Check that there is no continuity in the starter circuit when the select lever is in the “R” and “D” ranges.

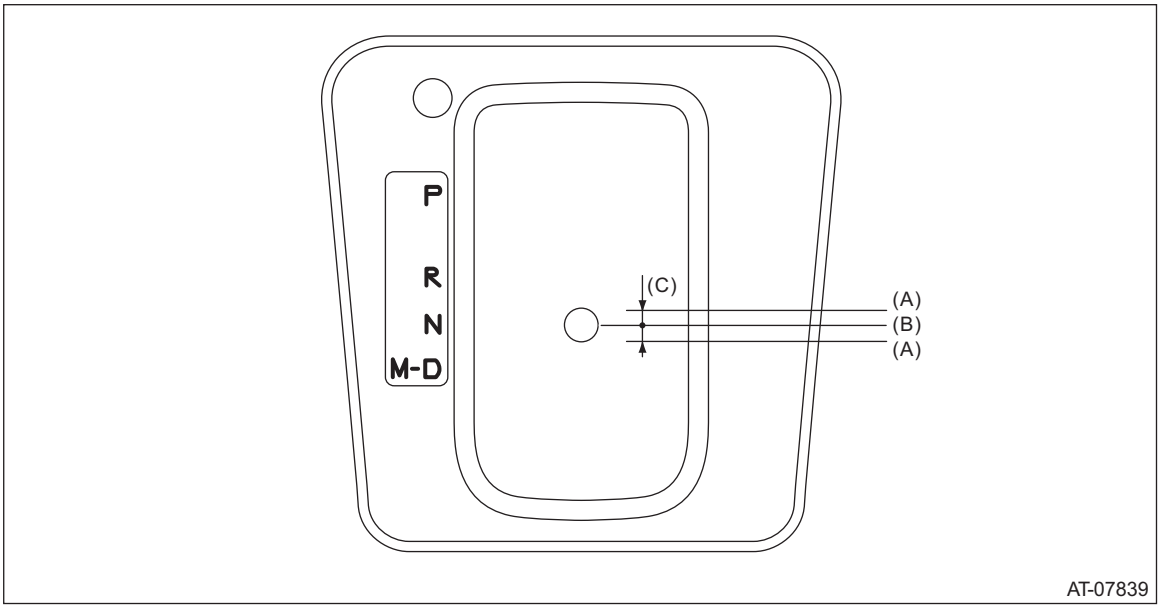
• When inhibitor switch is normal, check there is no poor contact in vehicle side connector and no open circuit in harness.

	Range	Terminal No.
Signal sent to TCM	P	4 — 3
	R	4 — 2
	N	4 — 1
	D	4 — 8
Starter circuit	P/N	12 — 11
Back-up light circuit	R	10 — 9



(A) Inhibitor harness connector

5) Check that there is continuity at equal points when the select lever is moved 1.5° in both directions from the “N” range.
If there is continuity in only one direction or in other points, adjust the inhibitor switch. <Ref. to CVT(TR690)-95, ADJUSTMENT, Inhibitor Switch.>



(A) Continuity does not exist.
(B) Continuity exists.
(C) 1.5°

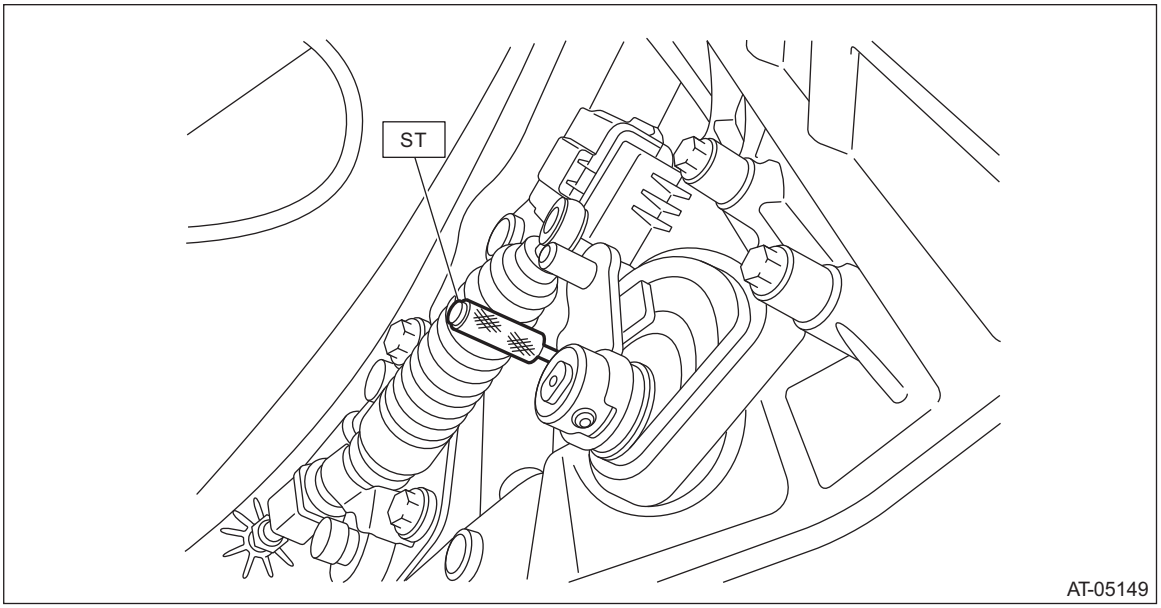
6) Repeat the above inspection in other gear ranges. If there is fault, adjust the inhibitor switch and select cable.

Inhibitor switch:
<Ref. to CVT(TR690)-95, ADJUSTMENT, Inhibitor Switch.>
Select cable:
<Ref. to CS-53, ADJUSTMENT, Select Cable.>

B: ADJUSTMENT

1) Shift the select lever to “N” range.
2) Loosen the two bolts holding the inhibitor switch.

3) Insert the ST vertically into the holes of the shifter arm and switch body.
ST 499267300 STOPPER PIN



4) Tighten the two bolts holding the inhibitor switch.

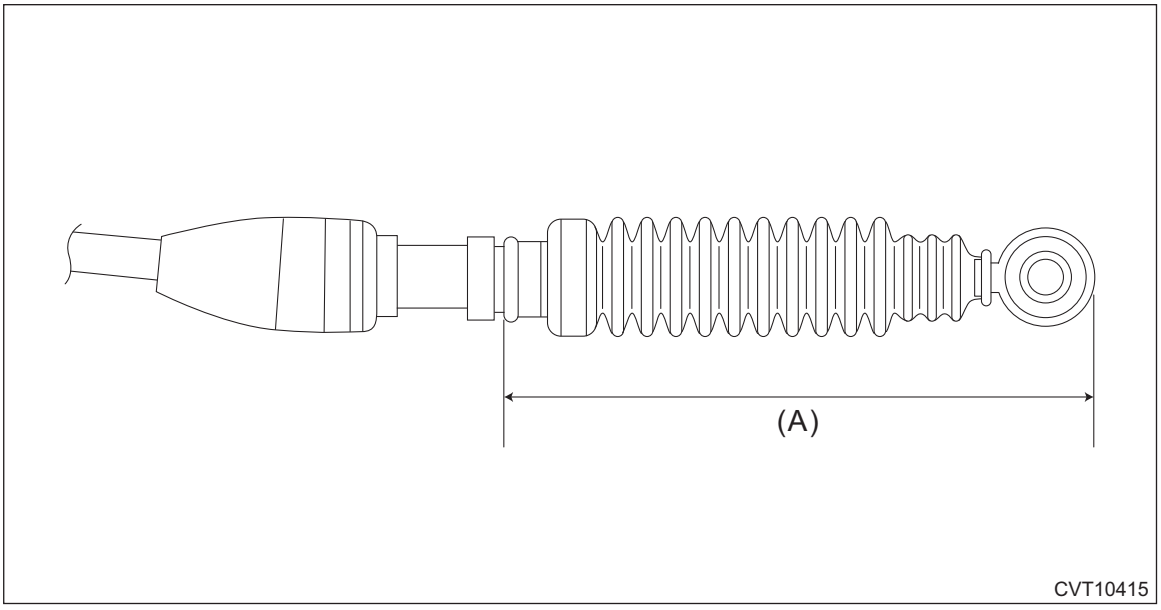
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

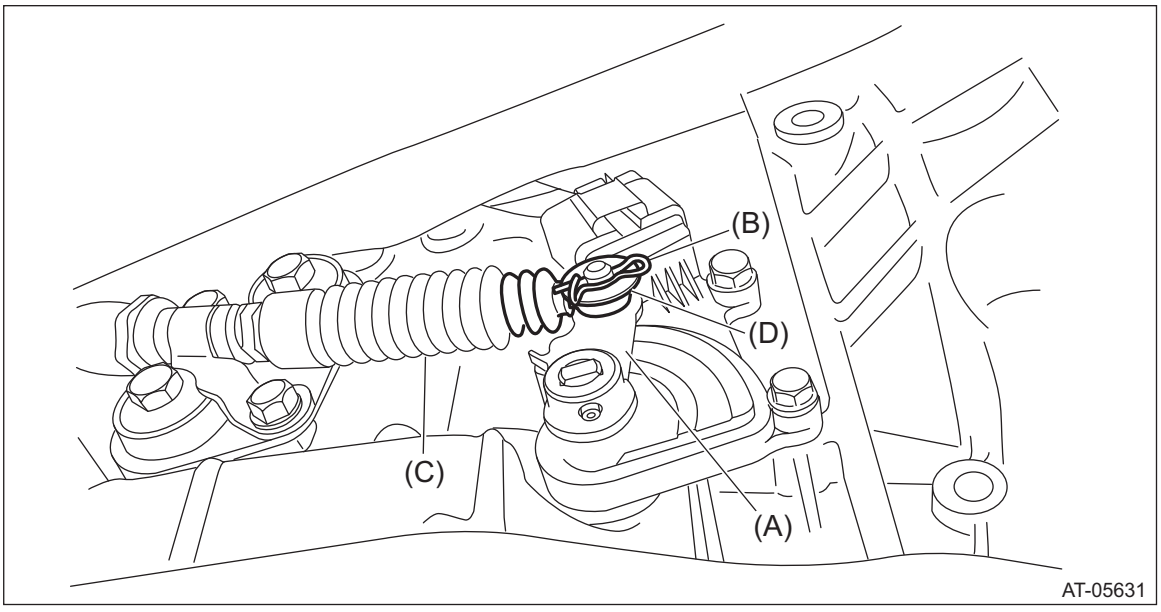
5) Repeat the inspection of the inhibitor switch. If the inhibitor switch is determined to be “faulty”, replace it.

C: REMOVAL

1) Shift the select lever to “N” range.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Lift up the vehicle.
4) Remove the snap pin and washer, and disconnect the select cable.

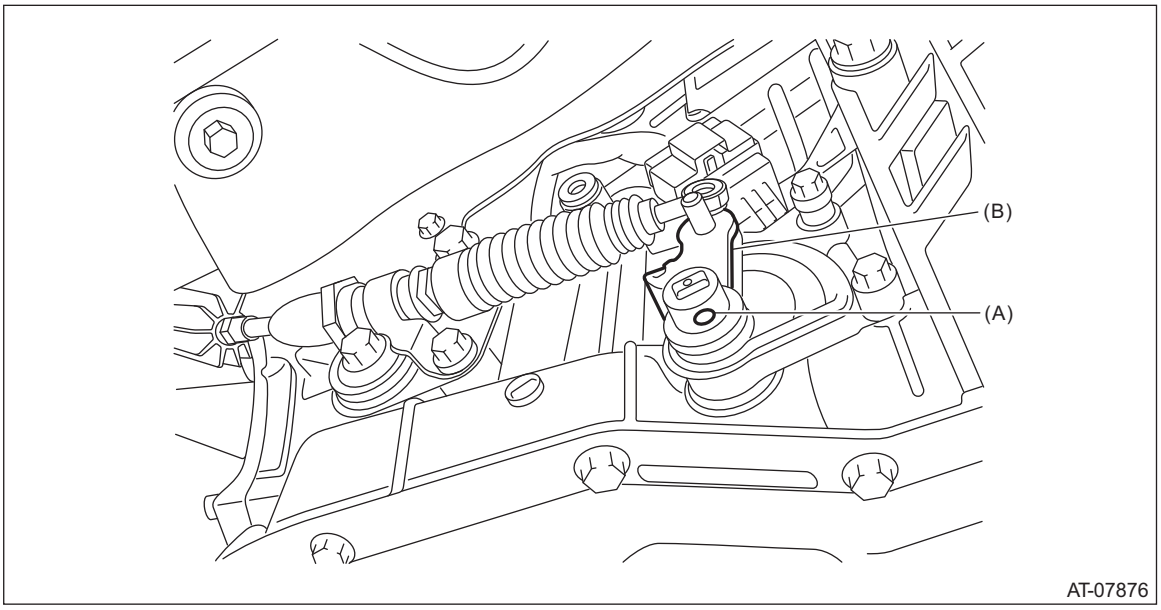
CAUTION:
Do not apply extra overload while holding the part (A).





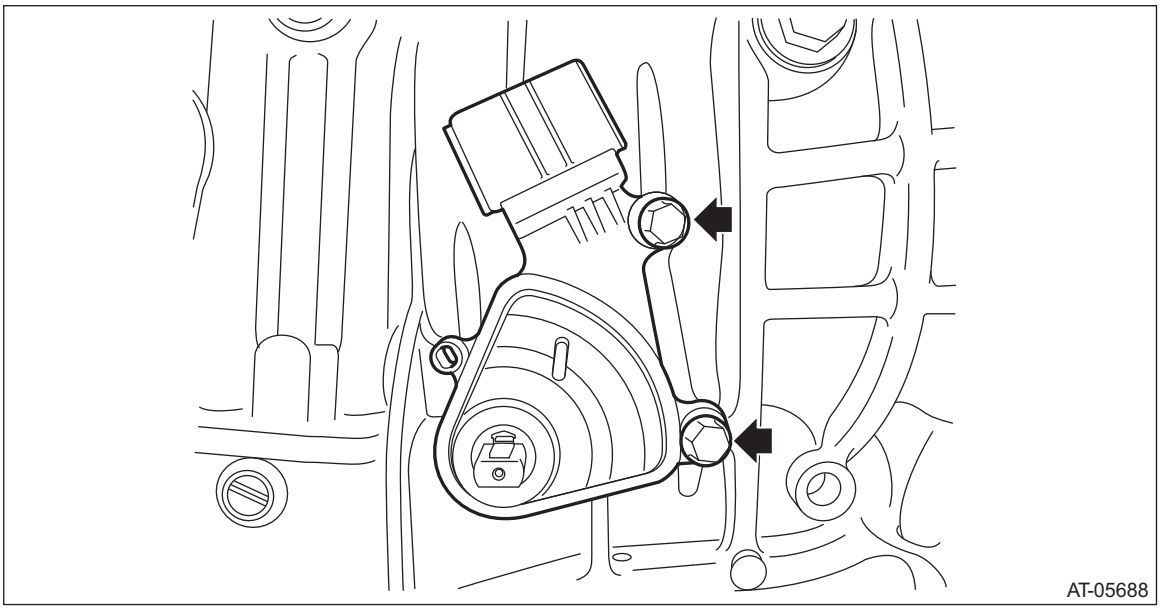
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

5) Remove the spring pin and shifter arm.



(A) Spring pin
(B) Shifter arm

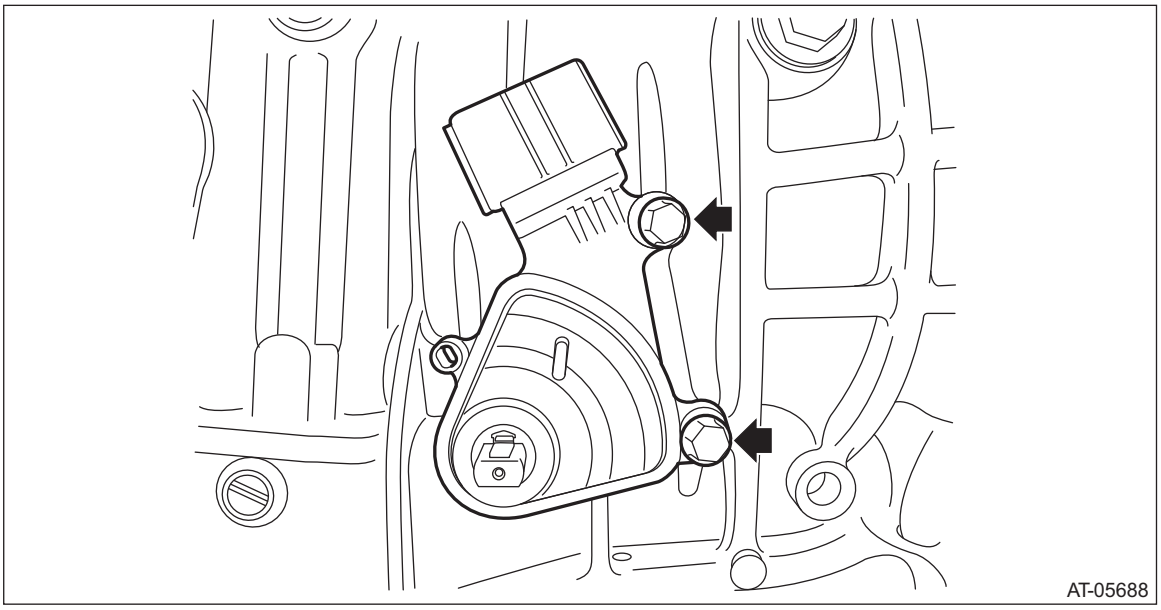
6) Remove the inhibitor harness connector from inhibitor switch.
7) Remove the two inhibitor switch securing bolts.



8) Remove the inhibitor switch.

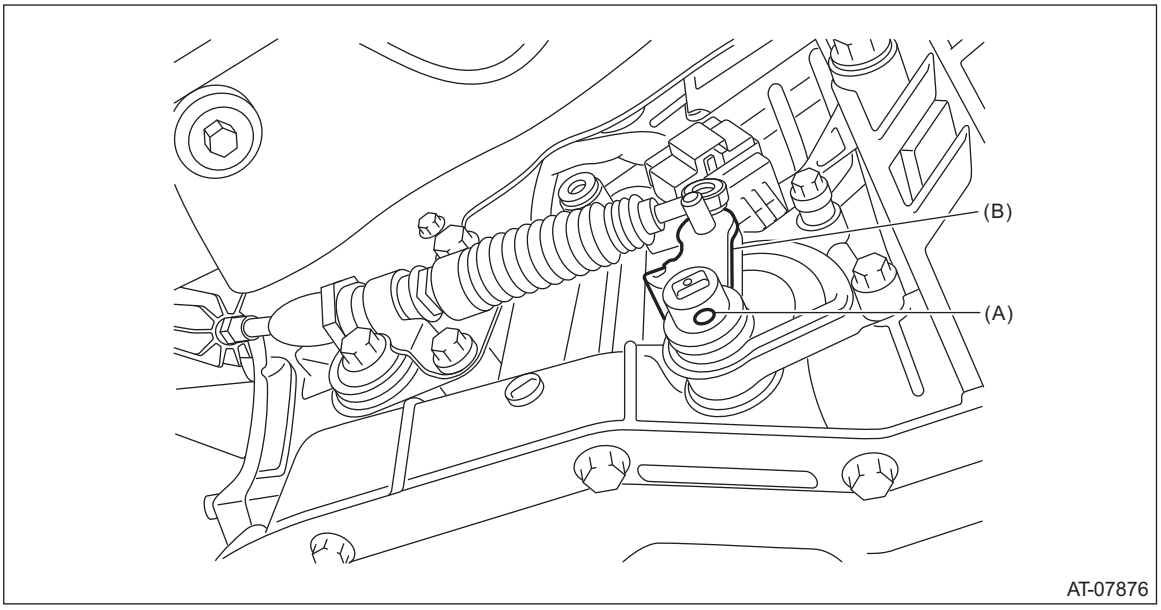
D: INSTALLATION

1) Temporarily install the inhibitor switch.



2) Connect the inhibitor harness connector to the inhibitor switch.
3) Install the shifter arm and fix with the spring pin.

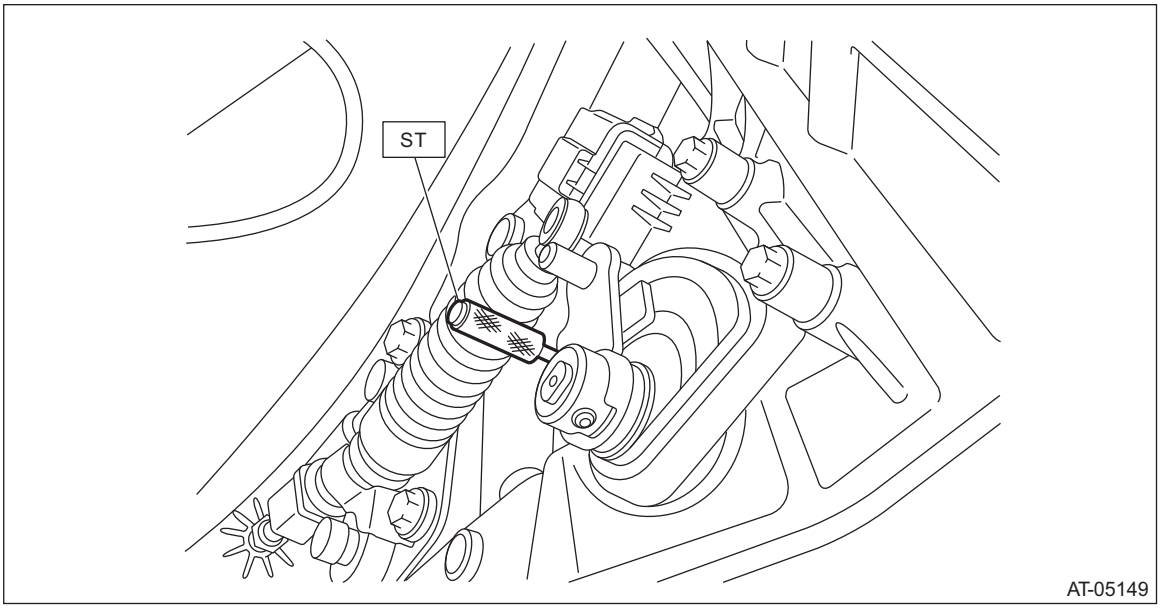
NOTE:
Use new spring pin.



(A) Spring pin
(B) Shifter arm

4) Shift the shifter arm to “N” range.

5) Install the ST vertically in the cutout of shifter arm and the hole of switch body.
ST 499267300 STOPPER PIN

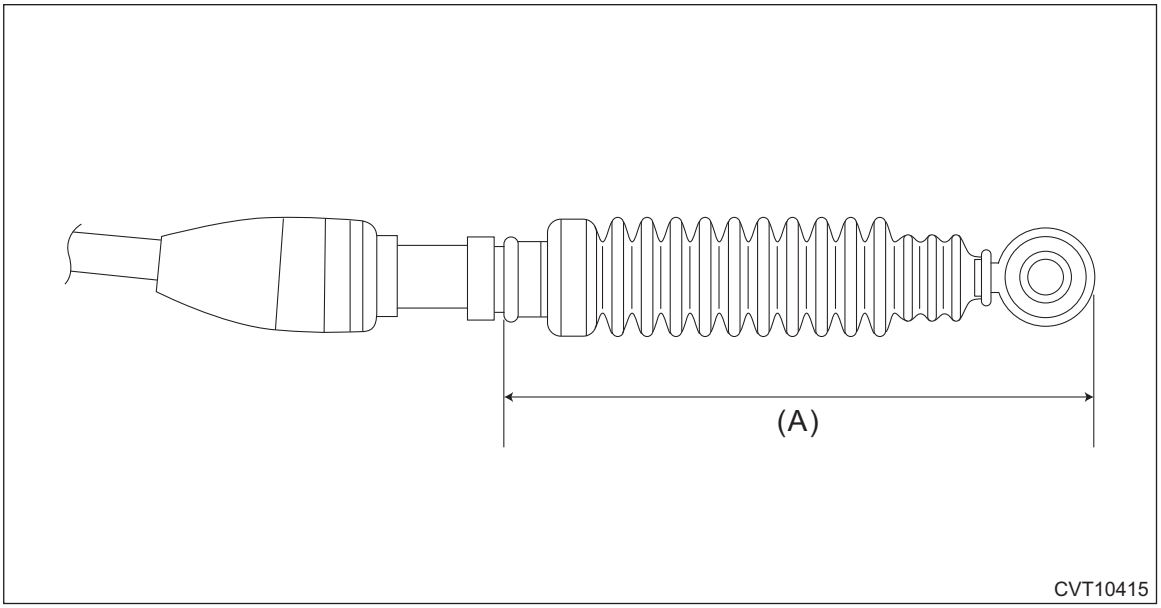


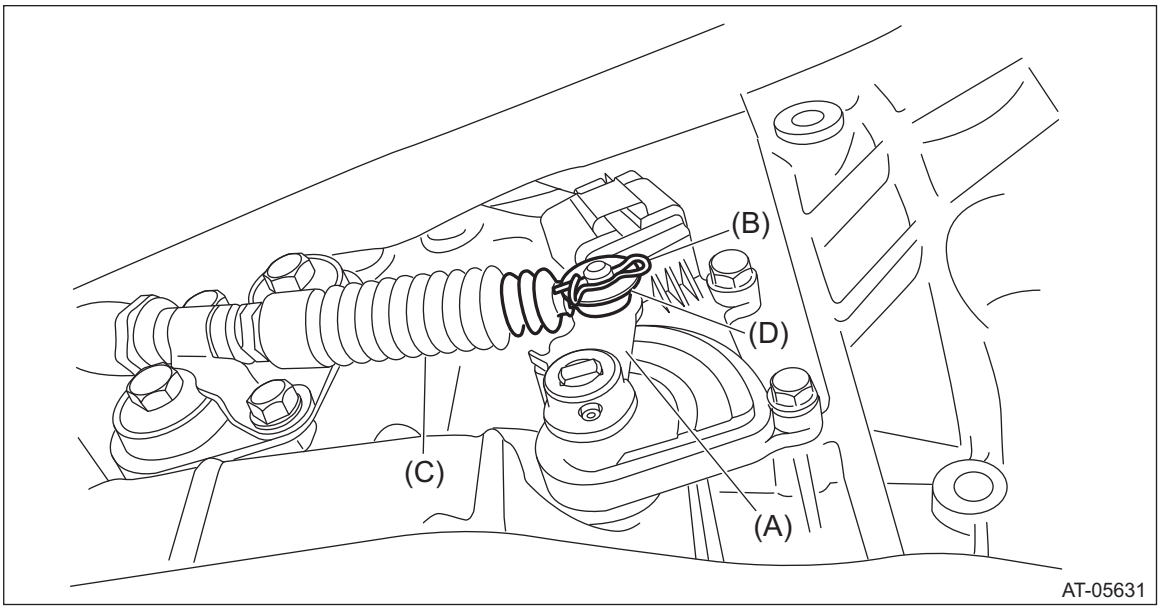
6) Tighten the two bolts holding the inhibitor switch.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

7) Connect the select cable and install the washer and snap pin.

CAUTION:
Do not apply extra overload while holding the part (A).





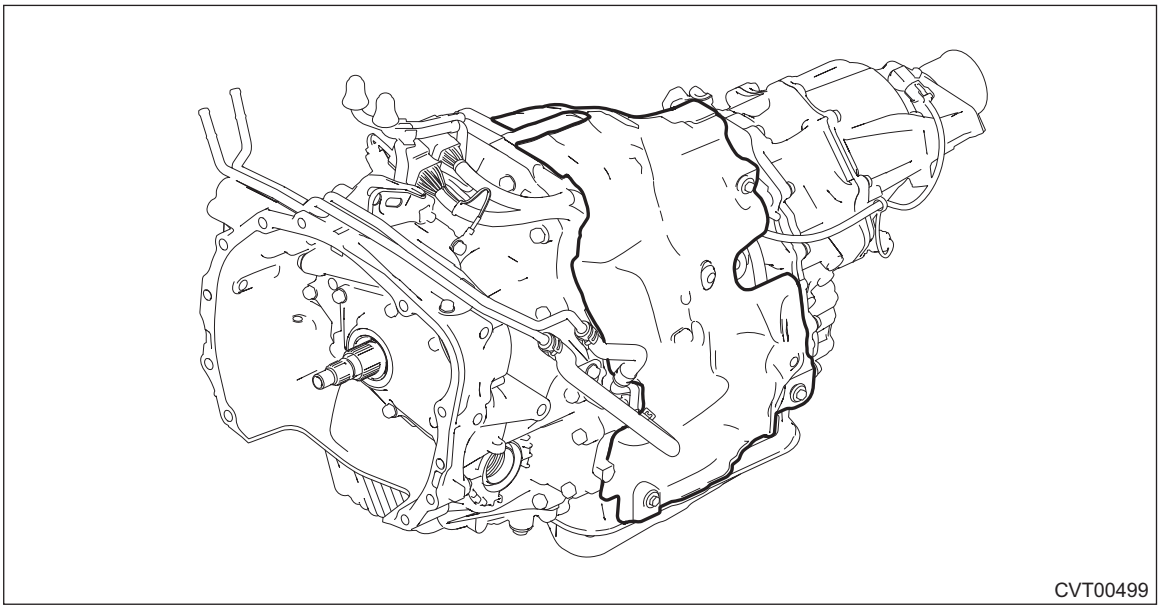
(A) Shifter arm
(B) Snap pin
(C) Select cable
(D) Washer

8) Lower the vehicle.
9) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
10) Check the inhibitor switch. <Ref. to CVT(TR690)-93, INSPECTION, Inhibitor Switch.>

15.Secondary Speed Sensor

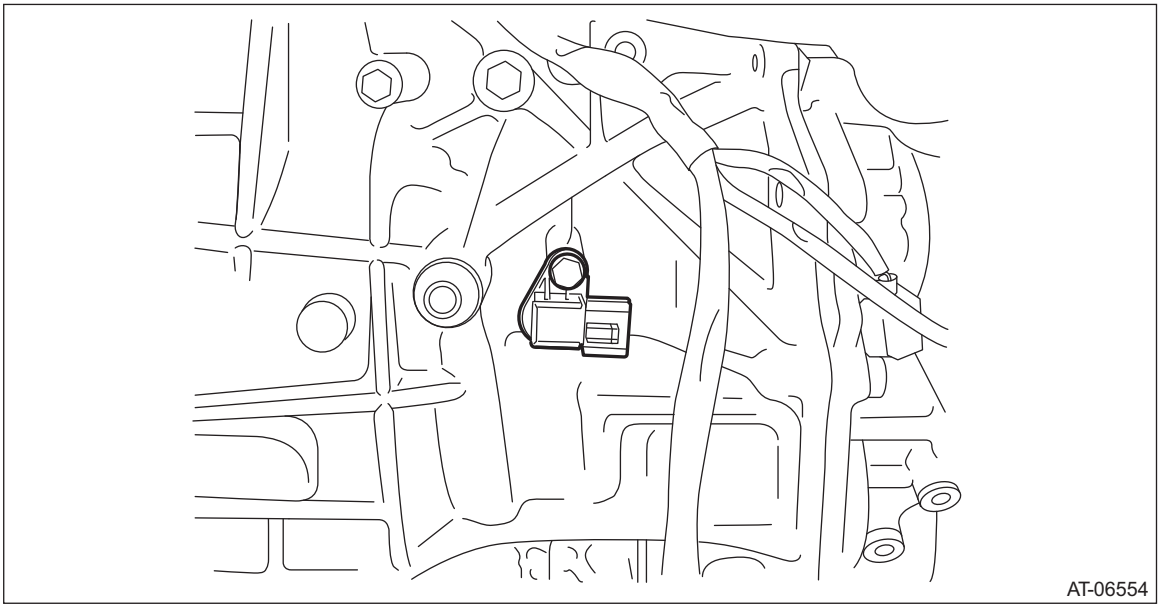
A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.
1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the transmission cover on the transmission upper side.



CVT00499

3) Remove the secondary speed sensor harness connector.
4) Remove the secondary speed sensor.



AT-06554

B: INSTALLATION

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of secondary speed sensor. If adhesion occurs, replace with a new part.
Install in the reverse order of removal.

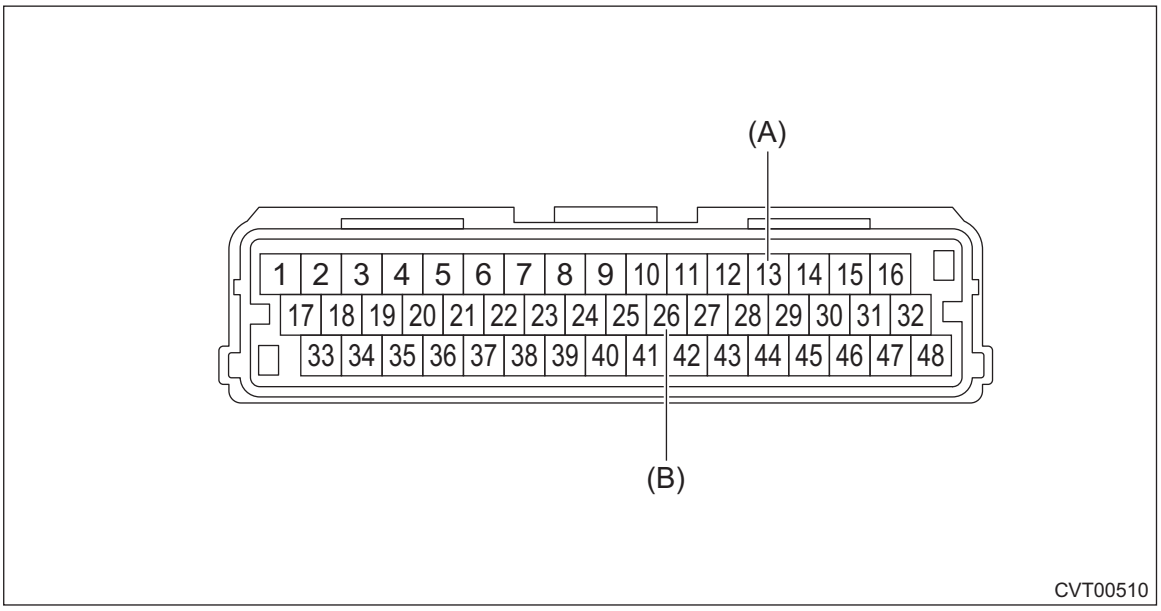
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
Secondary speed sensor
5 N·m (0.5 kgf-m, 3.7 ft-lb)
Transmission cover
8 N·m (0.8 kgf-m, 5.9 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-128, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

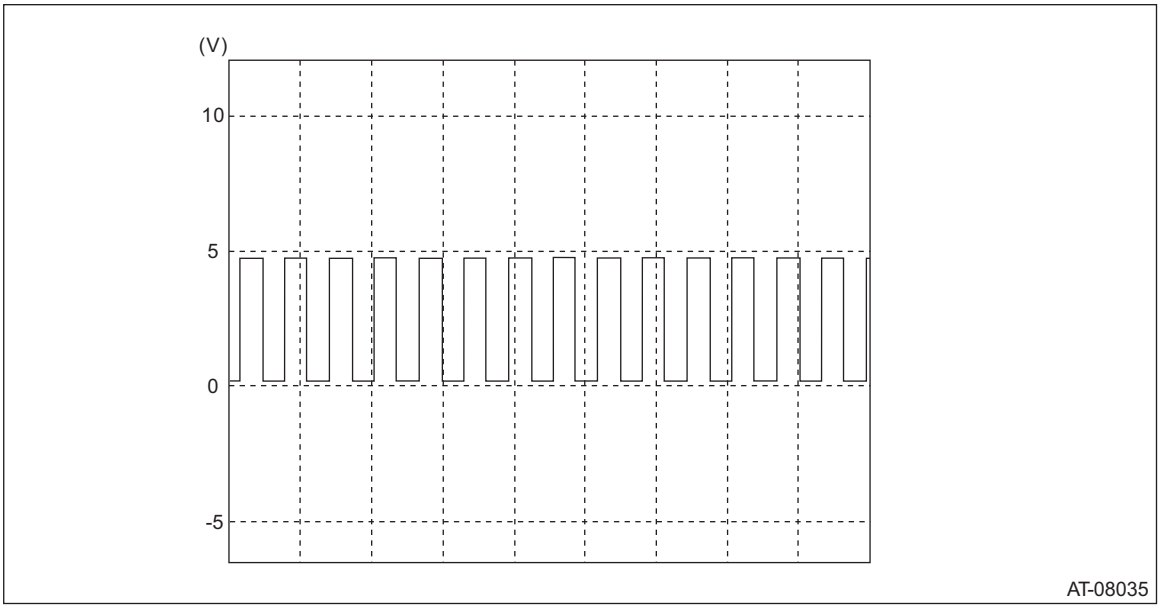
Terminals:
No. 13 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of secondary speed sensor with engine idling.

NOTE:
The waveform cycle changes as the speed changes.

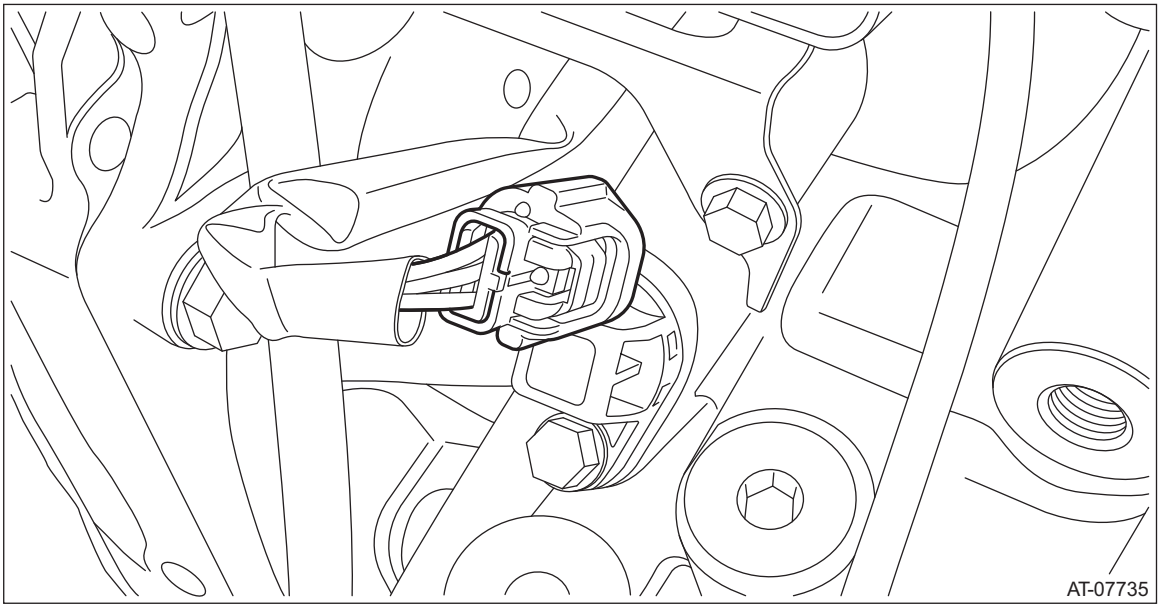


16.Primary Speed Sensor

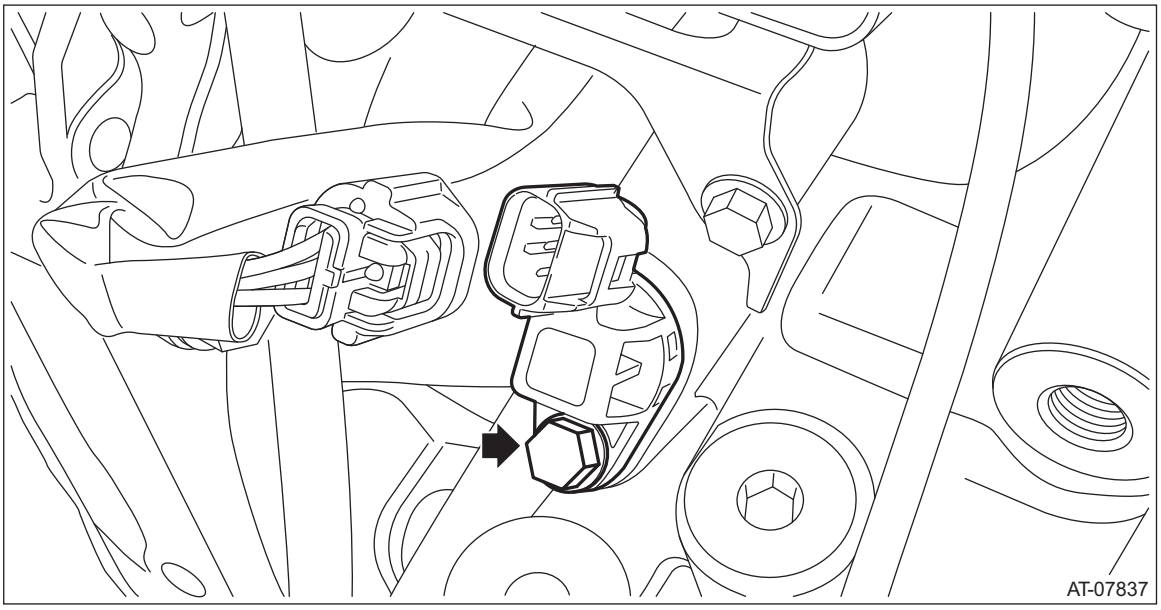
A: REMOVAL

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Clean the transmission exterior.
5) Remove the primary speed sensor harness connector.



6) Remove the primary speed sensor and the spacer.



B: INSTALLATION

CAUTION:
Be sure to prevent water or oil from contacting the connector terminal of primary speed sensor. If adhesion occurs, replace with a new part.

Install in the reverse order of removal.

CAUTION:
Do not forget to install the spacer.

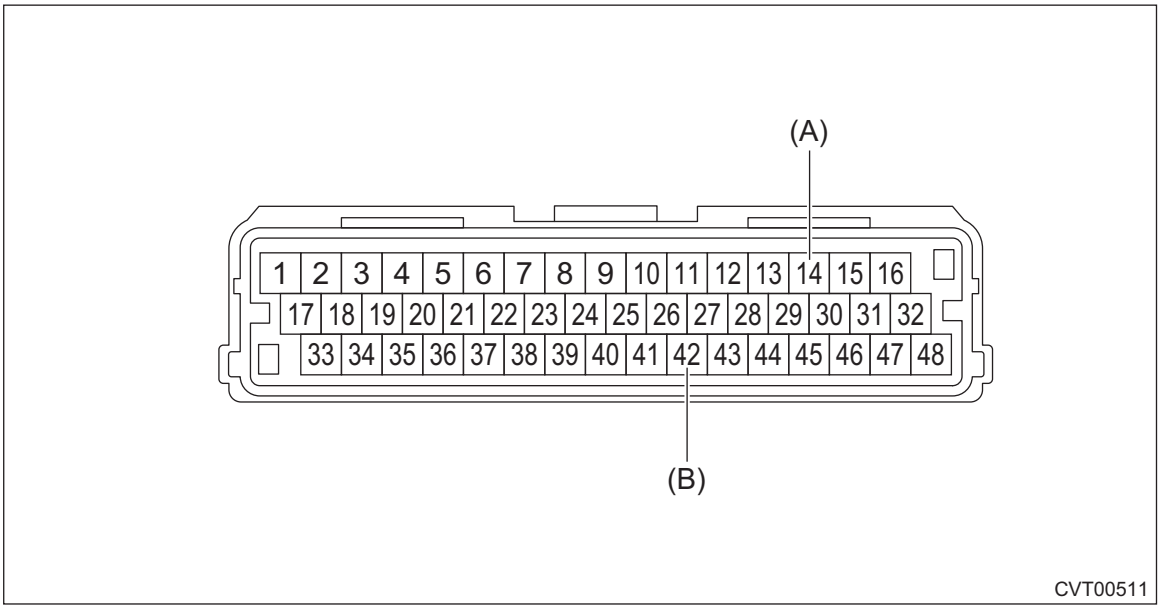
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
Primary speed sensor
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-128, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

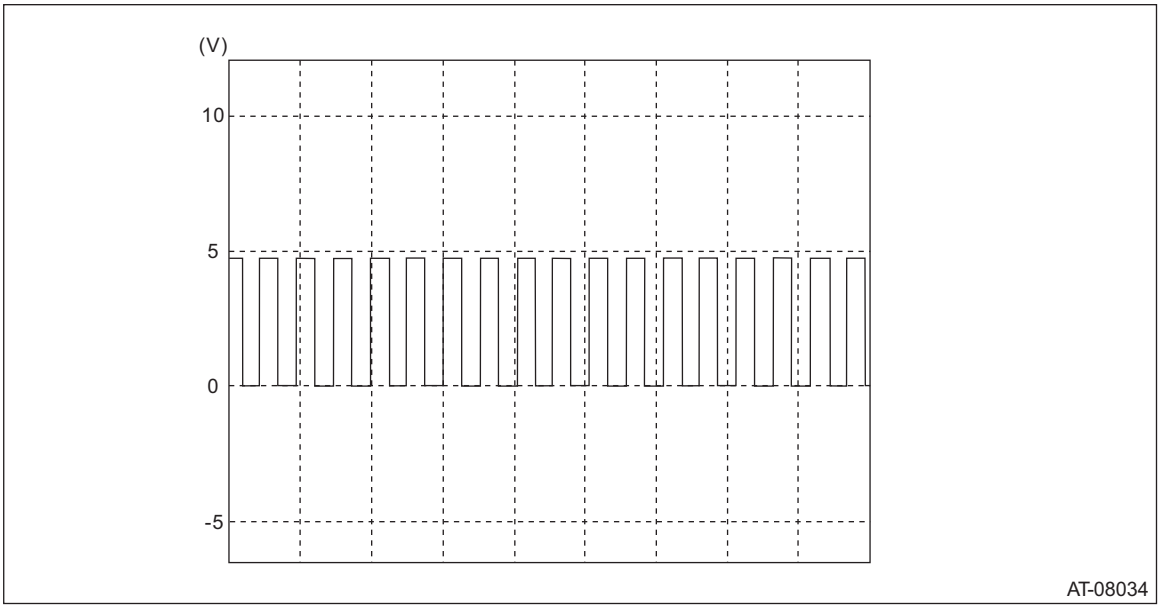
Terminals:
No. 14 (+) — No. 42 (–)



(A) + probe
(B) – probe

4) Start and warm up the engine.
5) Check the waveform of primary speed sensor with engine idling.

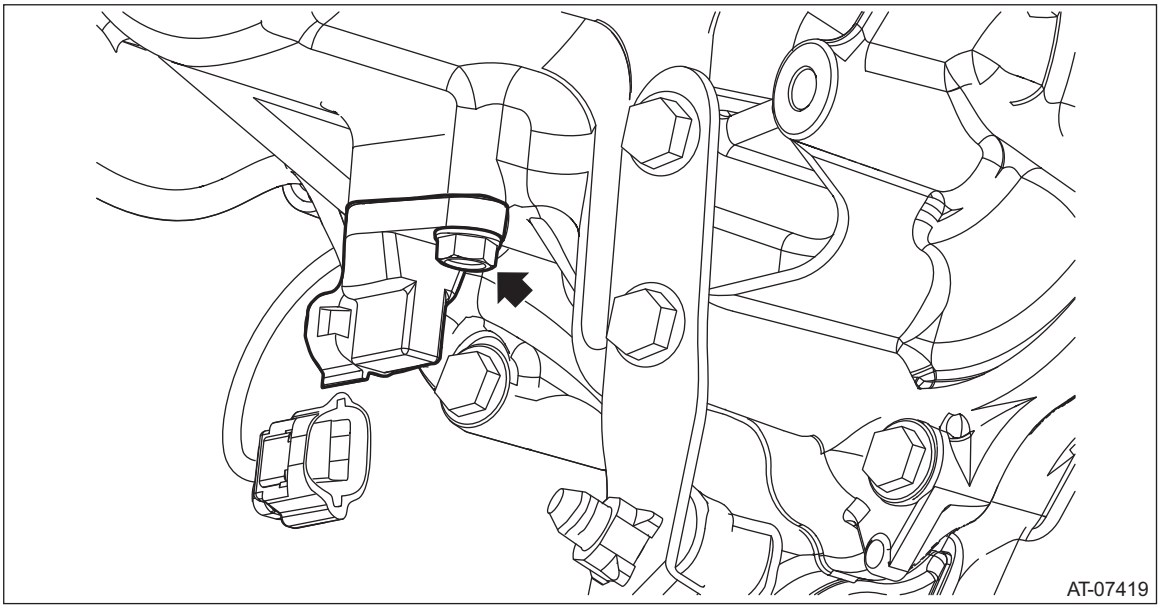
NOTE:
The waveform cycle changes as the speed changes.



17.Front Wheel Speed Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• When removing front wheel speed sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the front wheel speed sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the front wheel speed sensor harness connector.
5) Remove the front wheel speed sensor.



B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of front wheel speed sensor. If adhesion occurs, replace with a new part.
• After installing the front wheel speed sensor, adjust the CVTF level.
Install in the reverse order of removal.

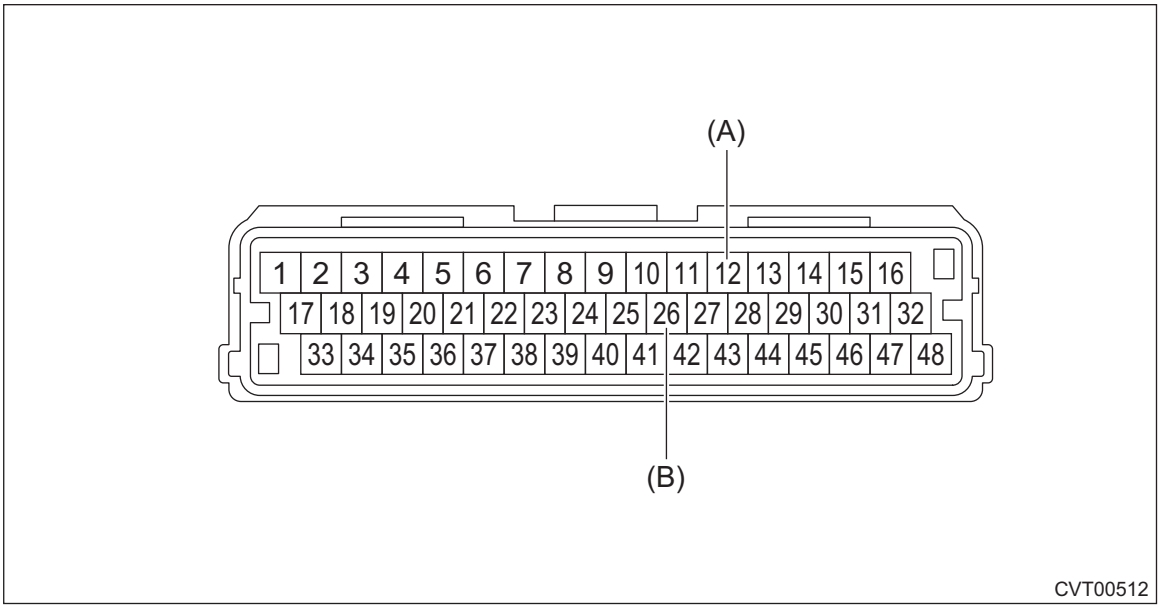
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-128, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

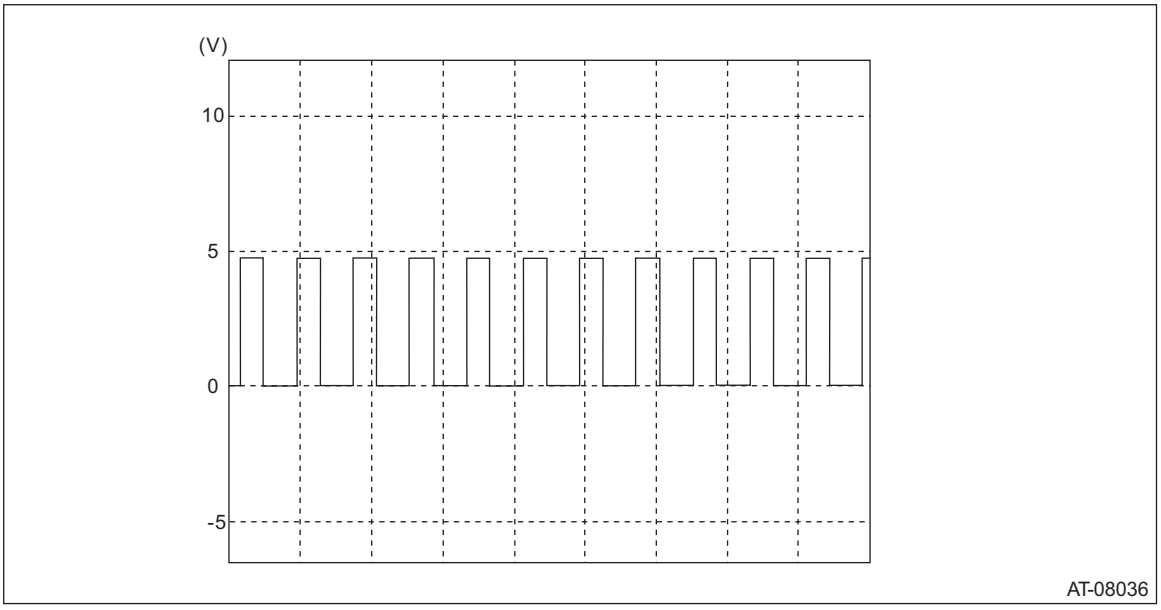
Terminals:
No. 12 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of front wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

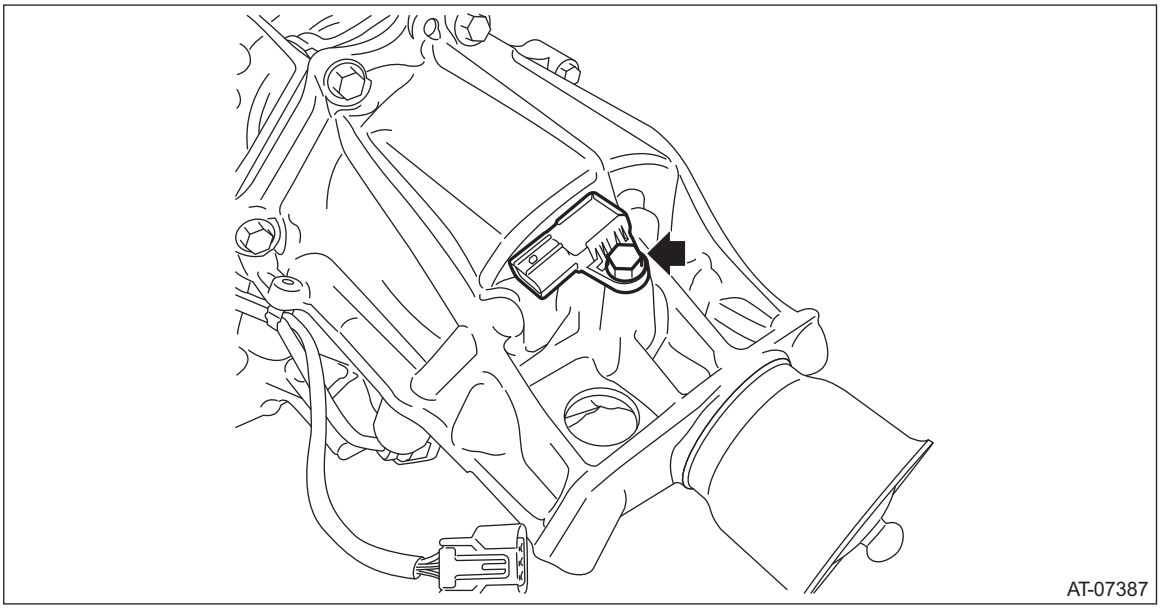
NOTE:
The waveform cycle changes as the speed changes.



18.Rear Wheel Speed Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the bolts which connect the center exhaust pipe (rear) and rear exhaust pipe.
5) Remove the bolts holding the center exhaust cover, and move the center exhaust cover to the rear.
6) Disconnect the rear wheel speed sensor connector.
7) Remove the rear wheel speed sensor.

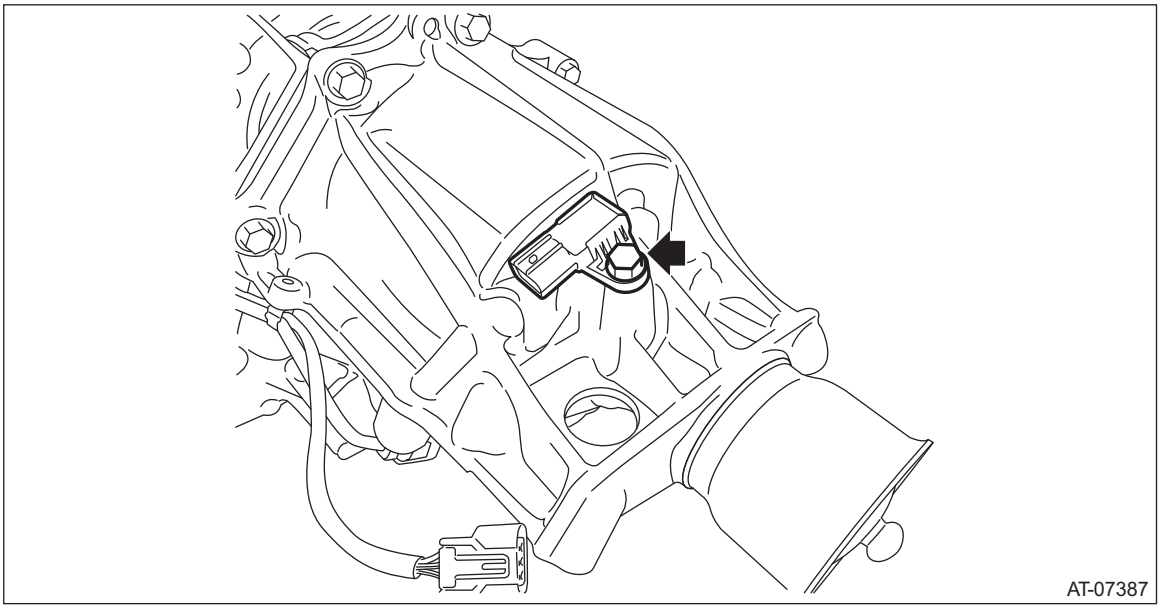


B: INSTALLATION

1) Install the rear wheel speed sensor.

NOTE:
Use new O-rings.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



2) Connect the rear wheel speed sensor connector.
3) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
4) Tighten the bolts which connect the center exhaust pipe (rear) and rear exhaust pipe.

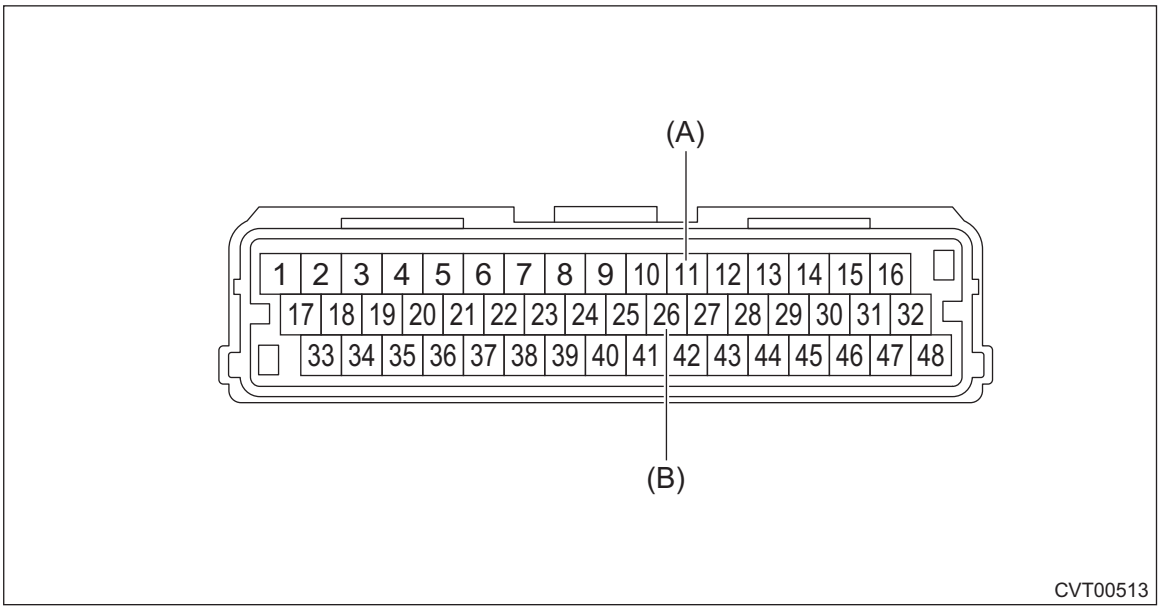
NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
5) Lower the vehicle.
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Remove the bulkhead harness connector from TCM. <Ref. to CVT(TR690)-128, REMOVAL, Transmission Control Module (TCM).>
2) Set the ST between the TCM and bulkhead harness.
ST 18460AA040 CHECK BOARD
3) Set the probe of oscilloscope to the check board connector.

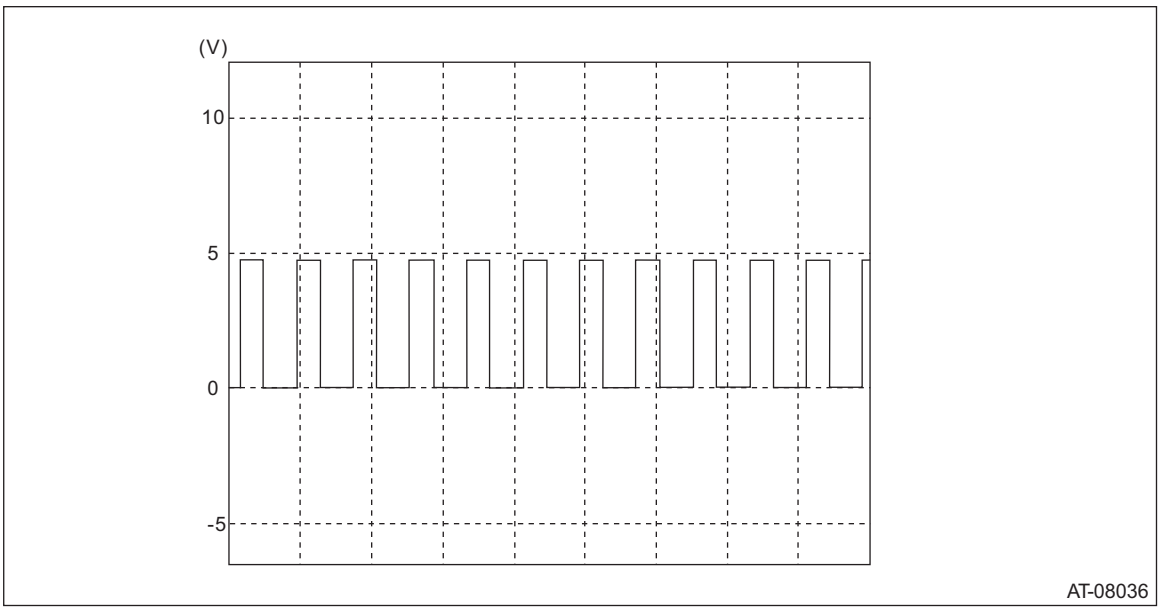
Terminals:
No. 11 (+) — No. 26 (–)



(A) + probe
(B) – probe

4) Lift up the vehicle and raise the vehicle speed up to 20 km/h (12 MPH).
5) Check the waveform of rear wheel speed sensor when vehicle speed is at 20 km/h (12 MPH).

NOTE:
The waveform cycle changes as the speed changes.

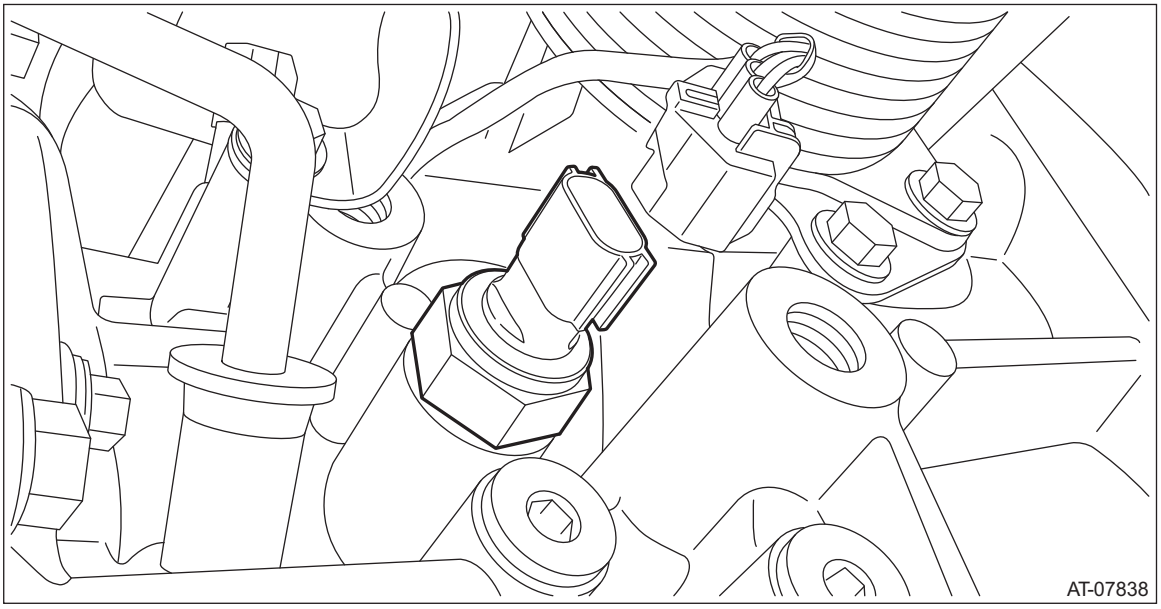


19.Secondary Pressure Sensor

A: REMOVAL

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• When removing secondary pressure sensor, CVTF may let out. If CVTF has leaked, adjust the CVTF level after installing the secondary pressure sensor.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the secondary pressure sensor harness connector.
5) Remove the secondary pressure sensor.

NOTE:
Use Ko-ken 3/8 12-point 27 mm (manufacturer product No. 3305M-27) deep socket.



B: INSTALLATION

CAUTION:
• Be sure to prevent water or oil from contacting the connector terminal of secondary pressure sensor. If adhesion occurs, replace with a new part.
• After installing the secondary pressure sensor, adjust the CVTF level.
Install in the reverse order of removal.

NOTE:
• Use new O-rings.
• Apply CVTF to the O-rings.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

C: INSPECTION

1) Start and warm up the engine.
2) Shift the select lever to “P” or “N” range.
3) Depress the brake pedal and hold it.
4) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is idling. <Ref. to CVT(diag)-14, OPERATION, Subaru Select Monitor.>

Specification:
Approx. 0.8 V

5) Check “secondary pressure sensor voltage” by using Subaru Select Monitor while the engine is stopped and the ignition switch is turned on. <Ref. to CVT(diag)-14, OPERATION, Subaru Select Monitor.>

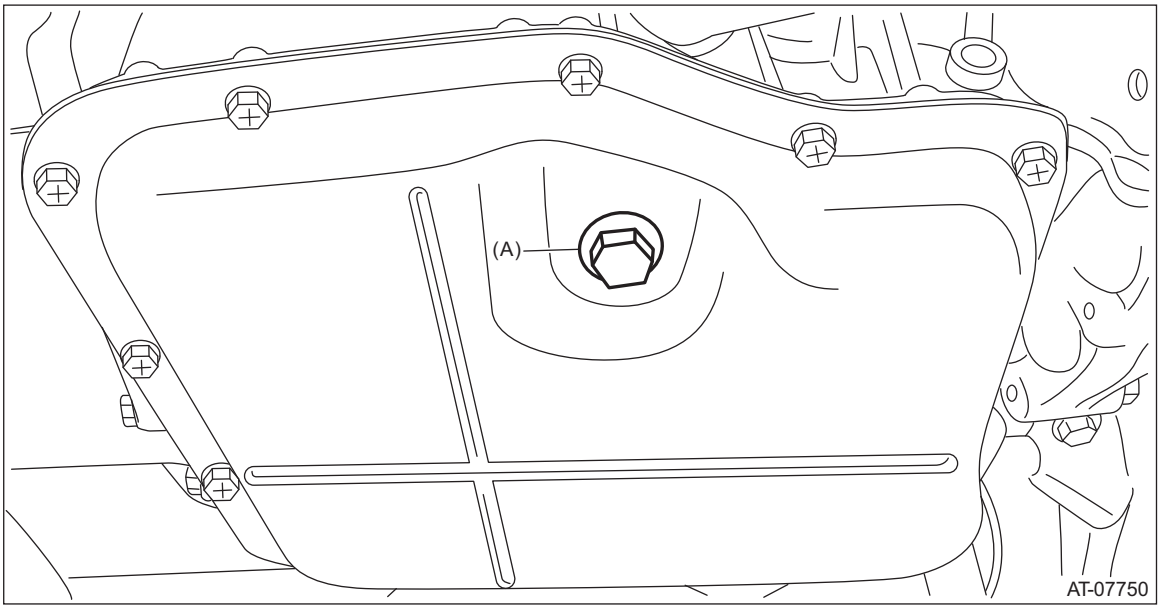
Specification:
Approx. 0.5 V

20.Control Valve Body

A: REMOVAL

CAUTION:
• Directly after the vehicle has been running or the engine has been idling for a long time, the CVTF is hot. Be careful not to burn yourself.
• Be careful not to spill CVTF on the exhaust pipe to prevent it from emitting smoke or causing a fire. If the CVTF adheres, wipe it off completely.

NOTE:
The control valve body is replaced as an assembly only, because it is a non-disassembly part.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Remove the CVTF drain plug to drain CVTF.



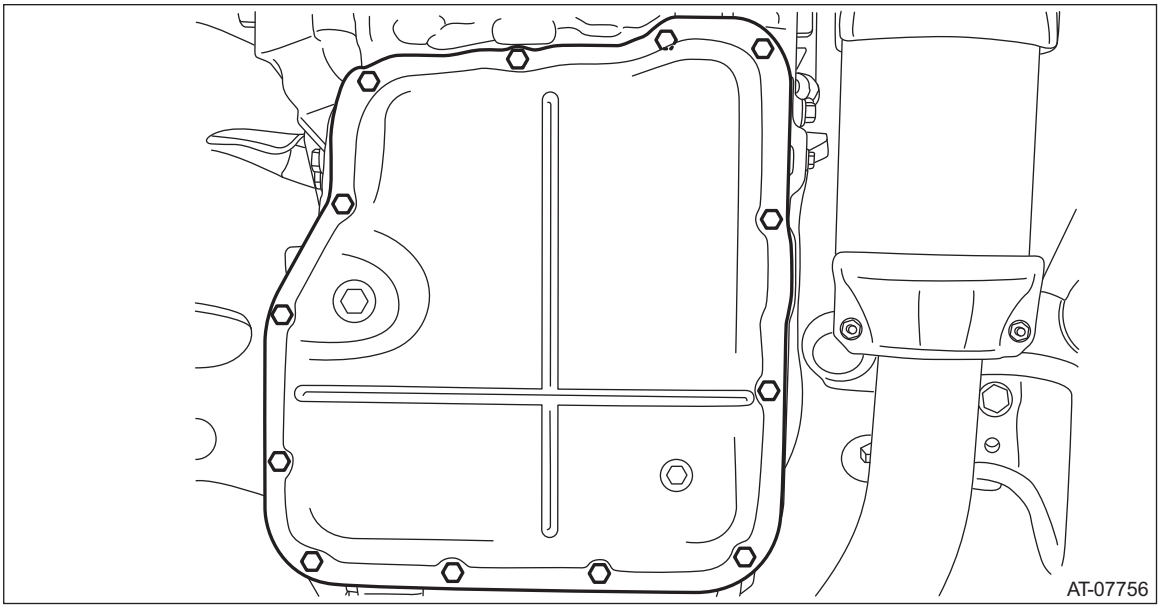
(A) CVTF drain plug

5) Install the CVTF drain plug.

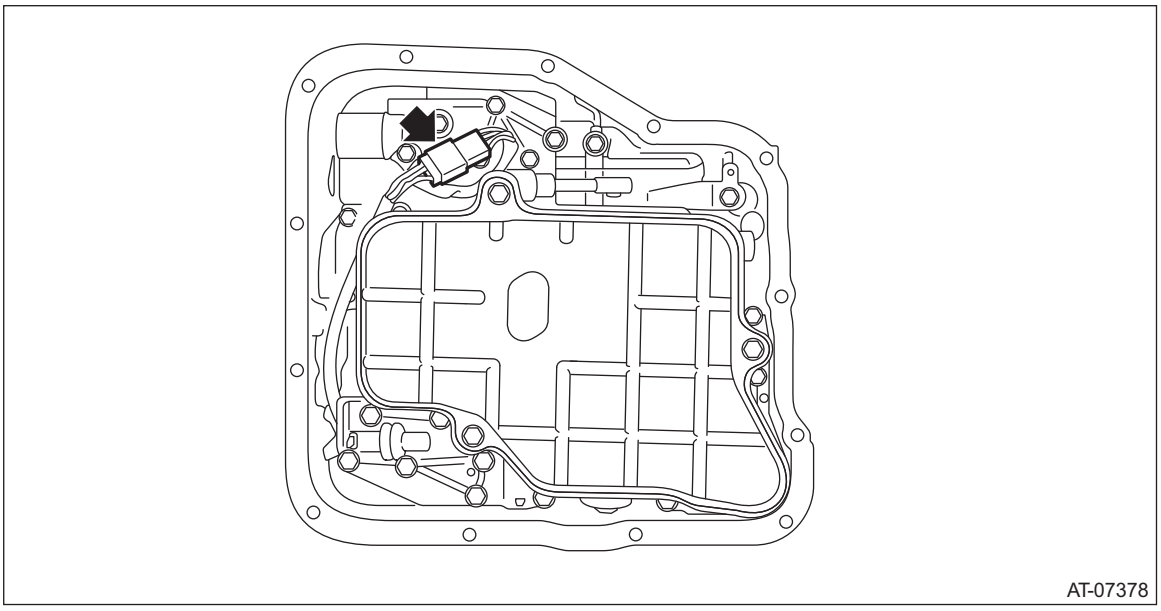
NOTE:
Use a new gasket.

Tightening torque:
39.2 N·m (4.0 kgf-m, 28.9 ft-lb)
6) Remove the oil pan.

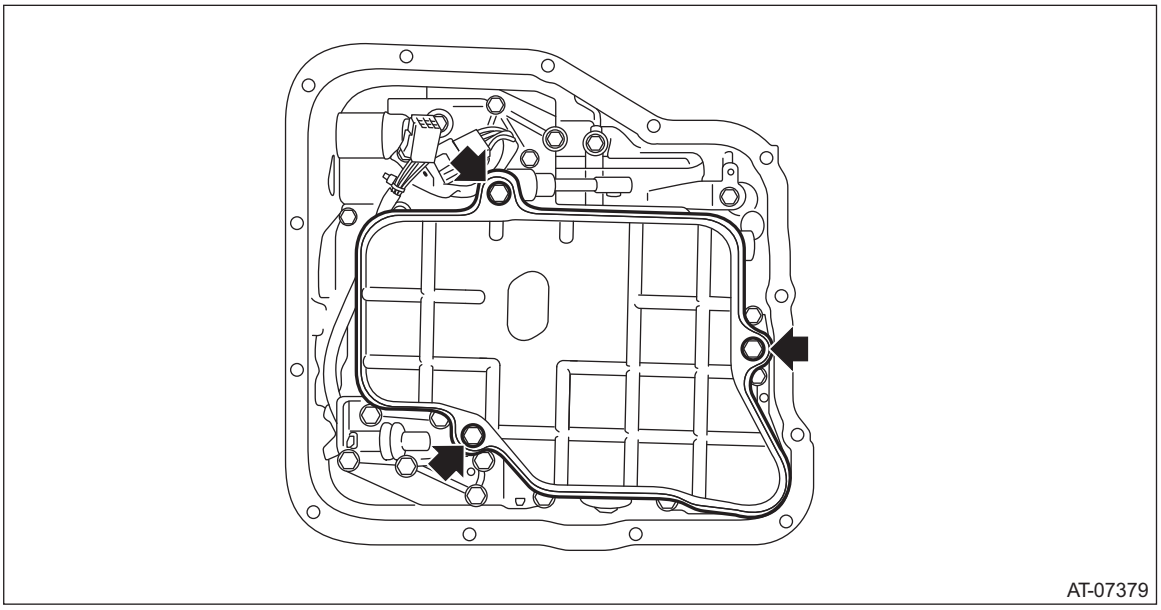
CAUTION:
Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.



7) Remove the magnet.
8) Disconnect the control valve harness connector.

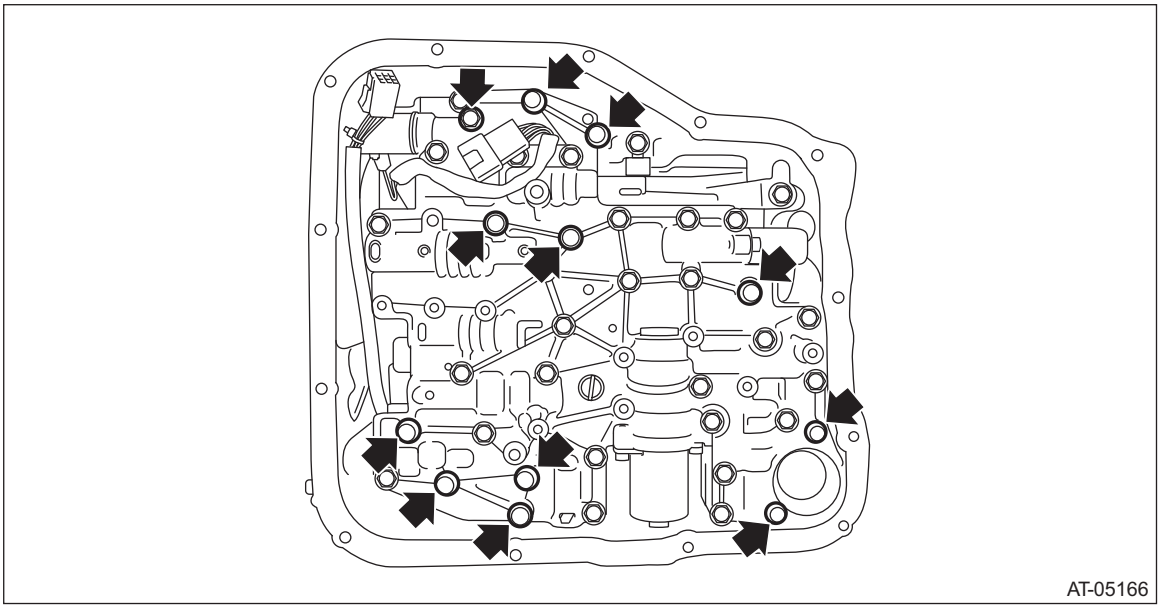


9) Remove the oil strainer.



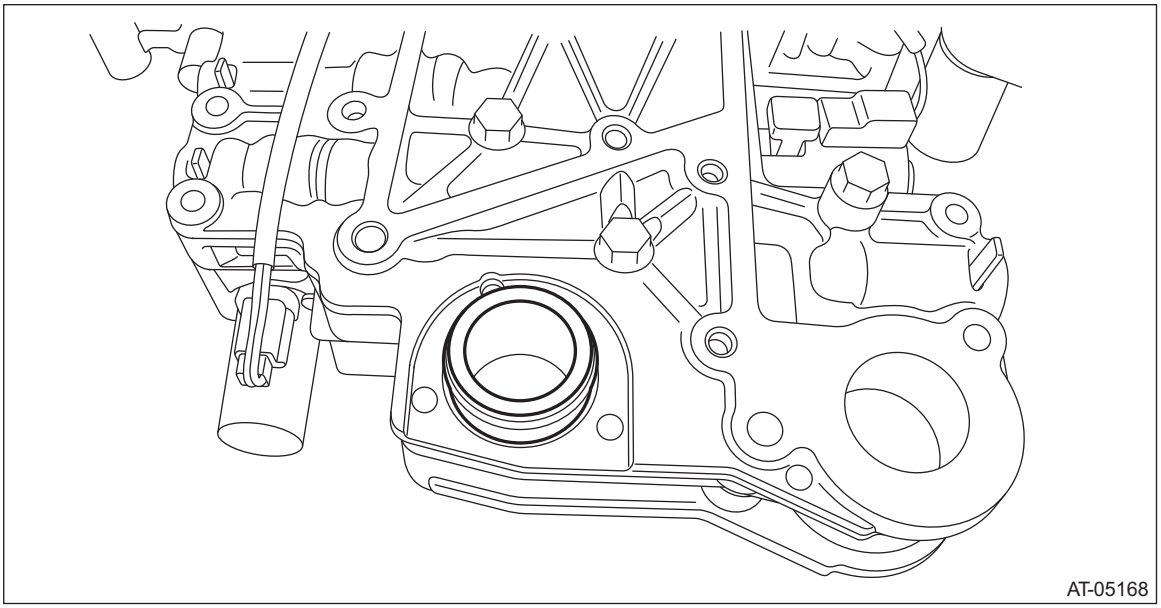
10) Remove the control valve body.

CAUTION:
Do not let the manual valve drop off.

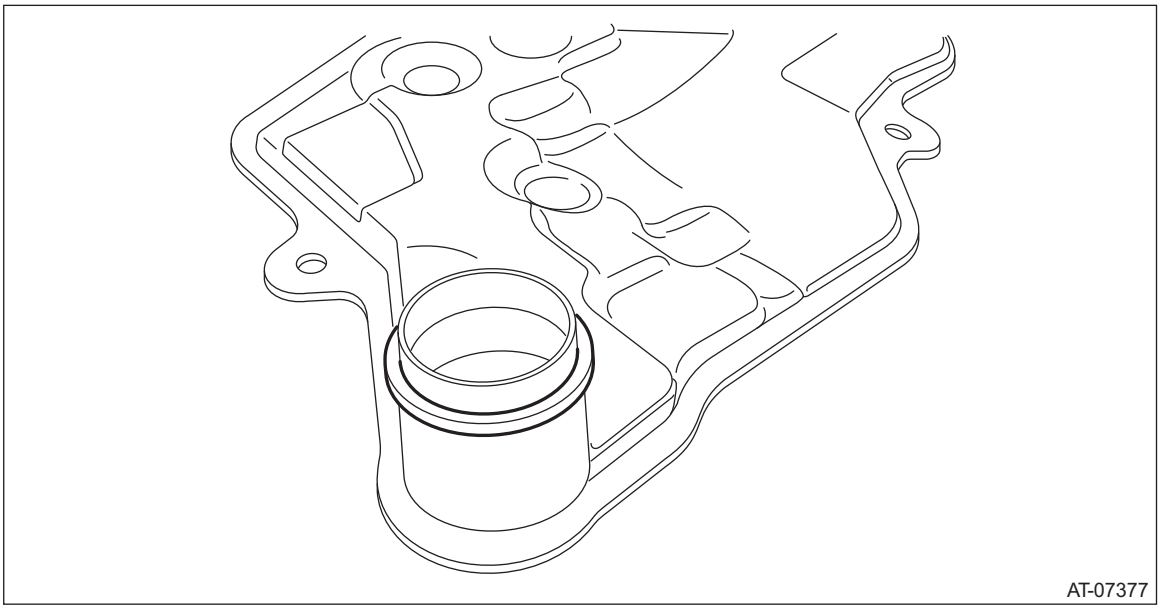


11) Remove the pressure pipe.

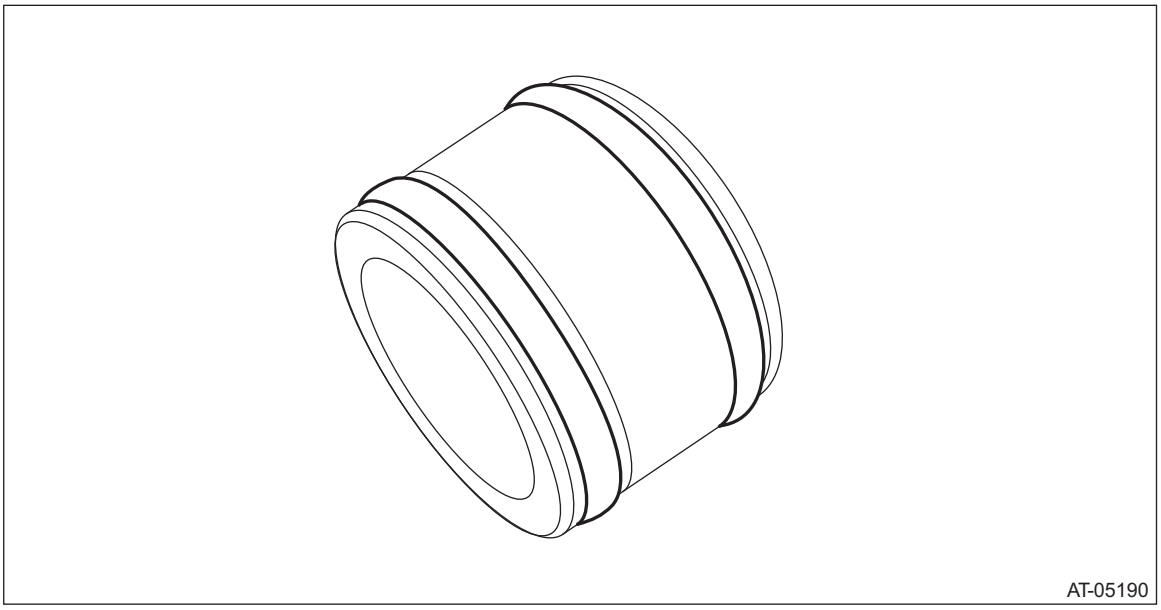
NOTE:
It may be located in transmission case side.



12) Remove the O-ring from oil strainer.



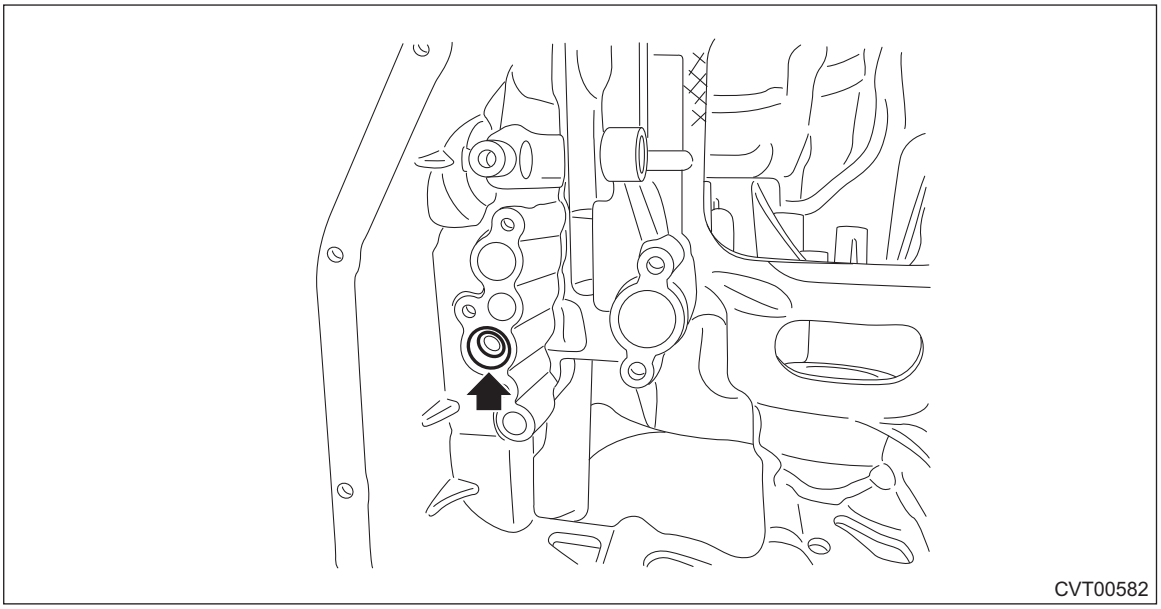
13) Remove the O-ring from pressure pipe.



B: INSTALLATION

1) Clean the mating surface of oil pan and transmission case.
2) Make sure that the CVTF filter is installed to the transmission case.

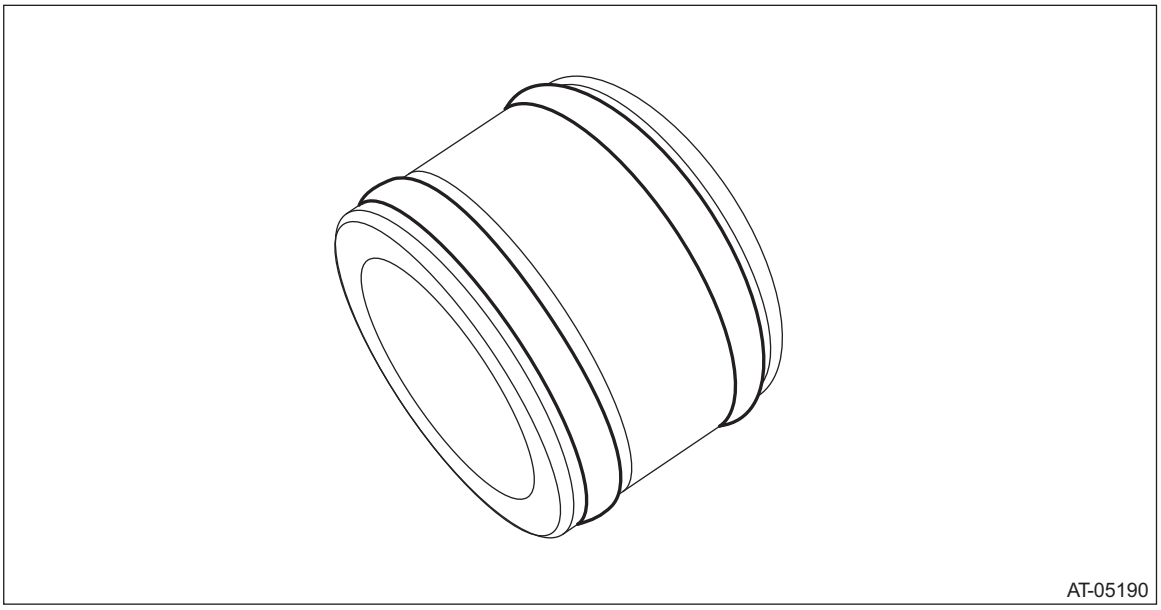
NOTE:
Make sure that the CVTF filter does not protrude from the transmission case.



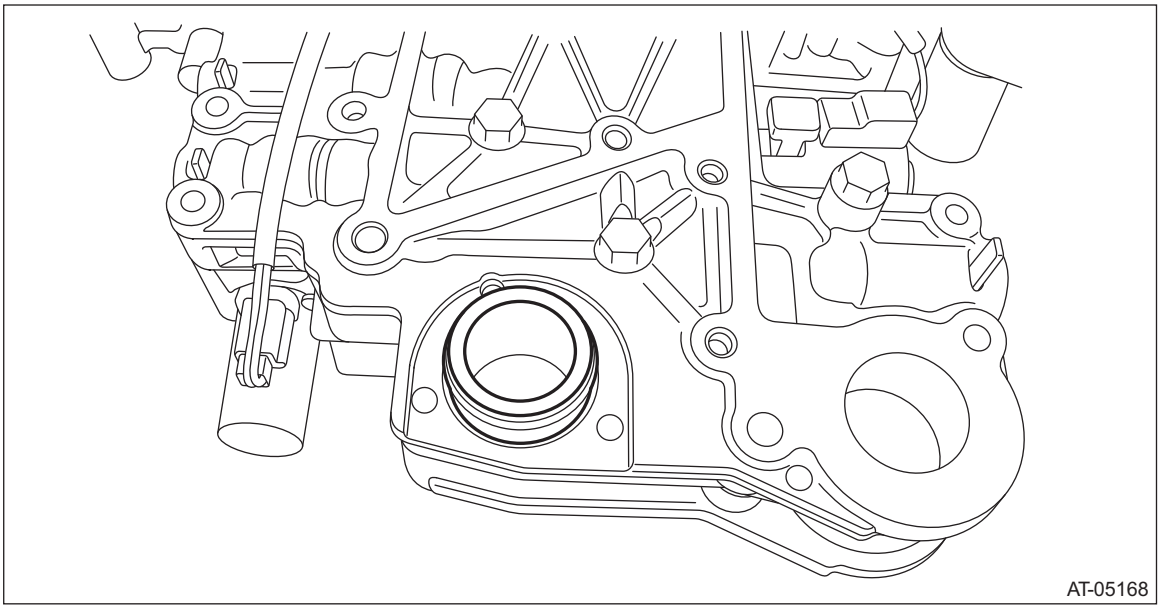
3) Check the control valve body for dust and other foreign matter.
4) Install the O-ring to the pressure pipe.

NOTE:
- Use new O-rings.

- Apply CVTF to the O-rings.



5) Install the pressure pipe.

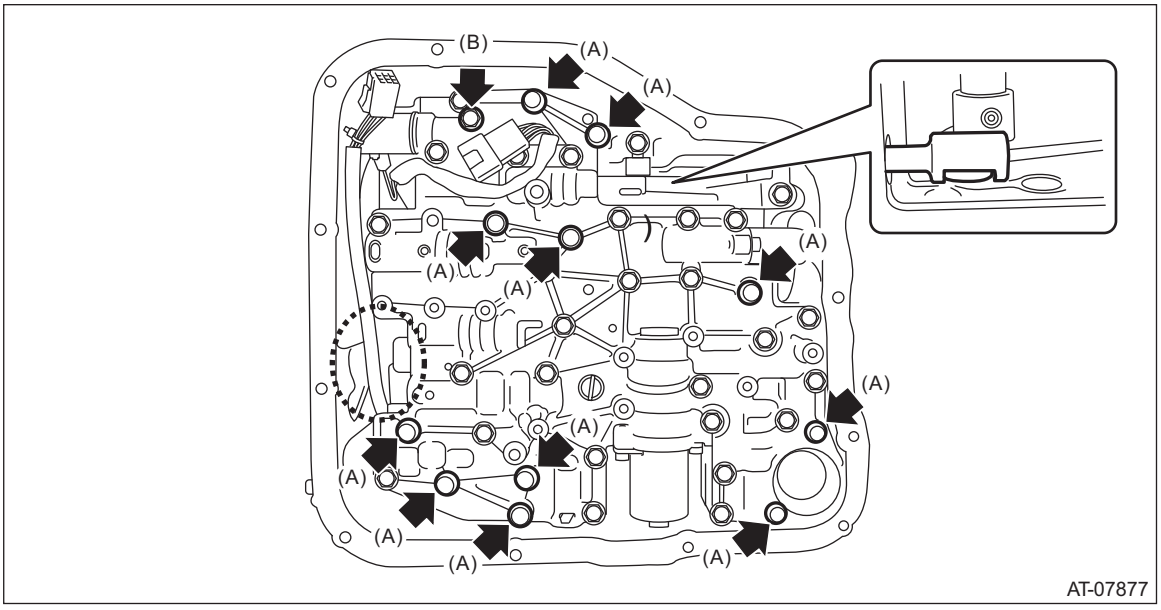


6) Install the control valve body.

CAUTION:
- **Beware of the transmission harness getting caught in between.**
- **Do not impact or bend the transmission harness because it has the oil temperature sensor inside.**

NOTE:
- Engage the manual valve to the manual plate.
- Lead the transmission harness through from the point indicated by dashed line in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

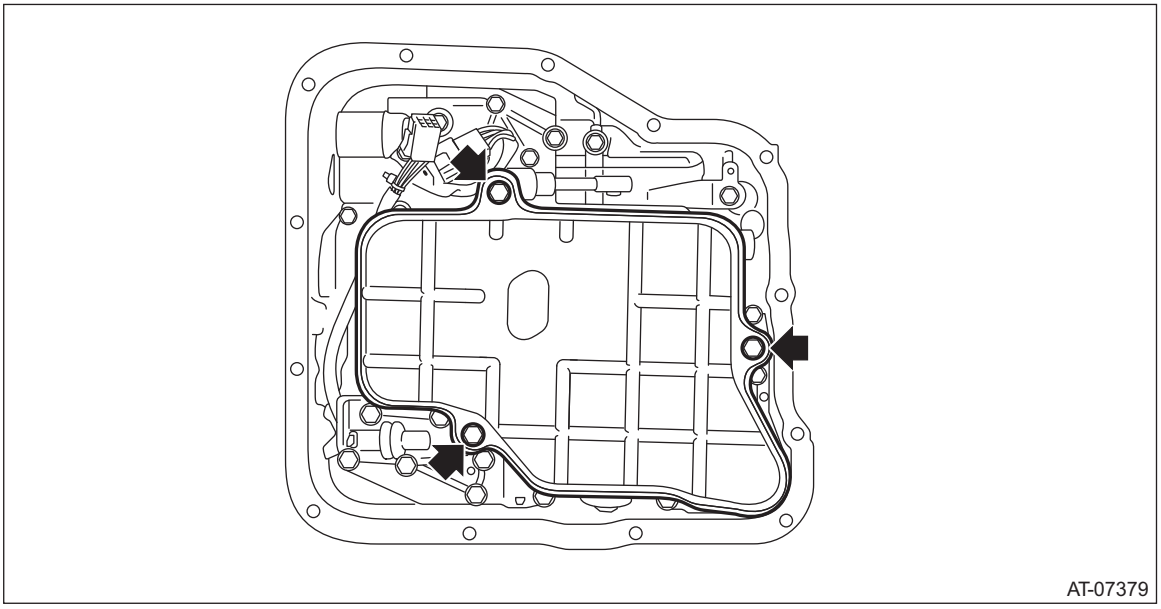


(A) Short bolt (11 pcs)
(B) Long bolt (1 pcs)

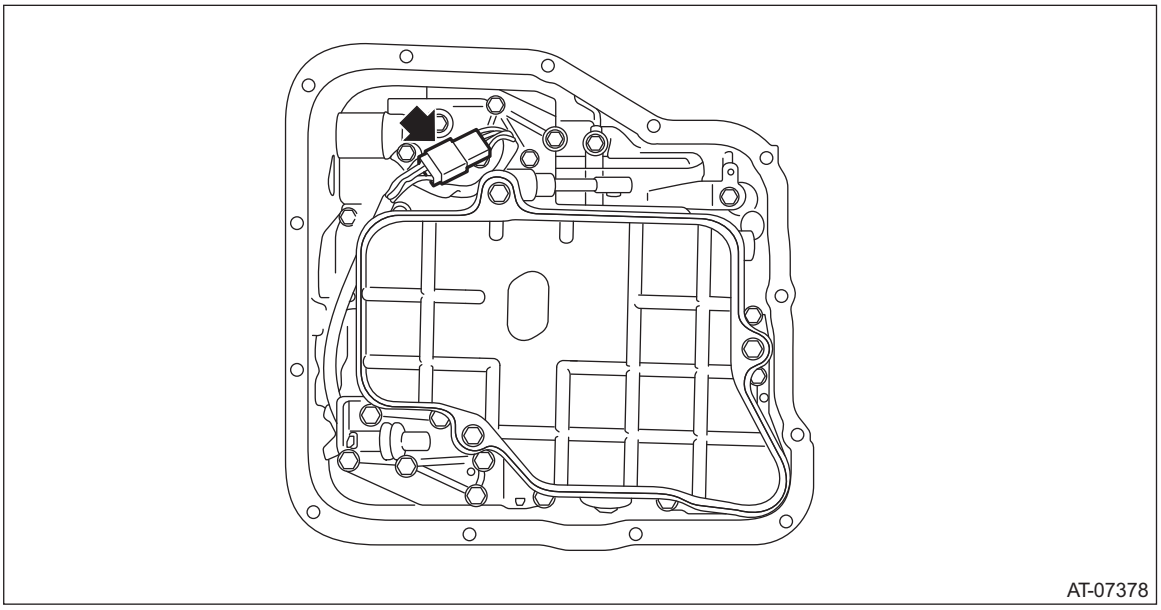
7) Install the O-ring to oil strainer and install the oil strainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.
- Let the transmission harness run between control valve body and oil strainer.

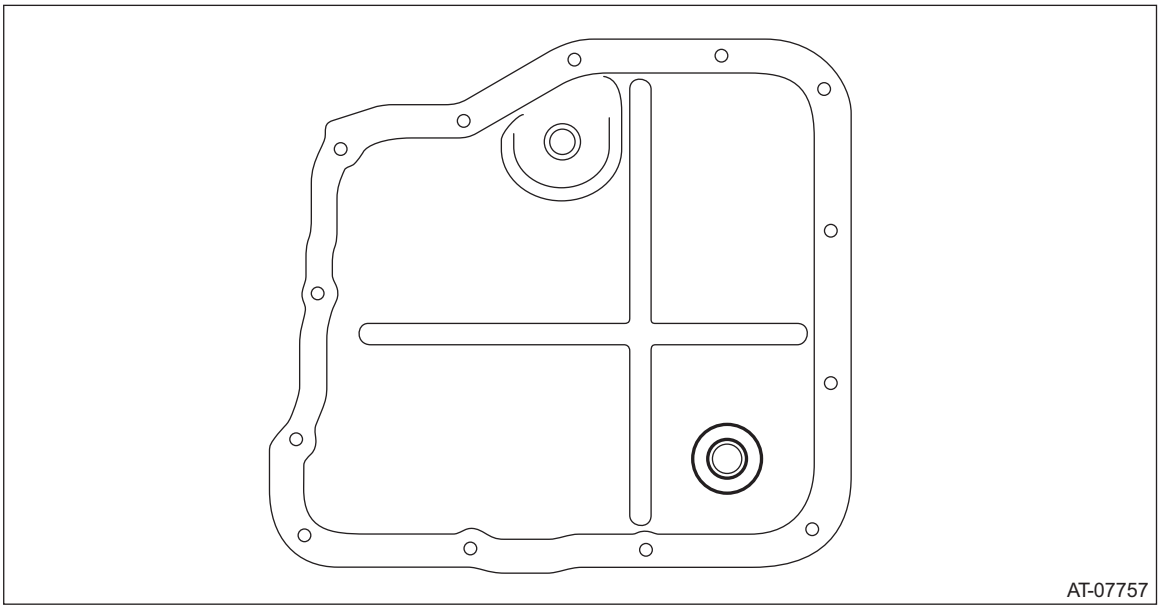
Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



8) Connect the control valve harness connector.

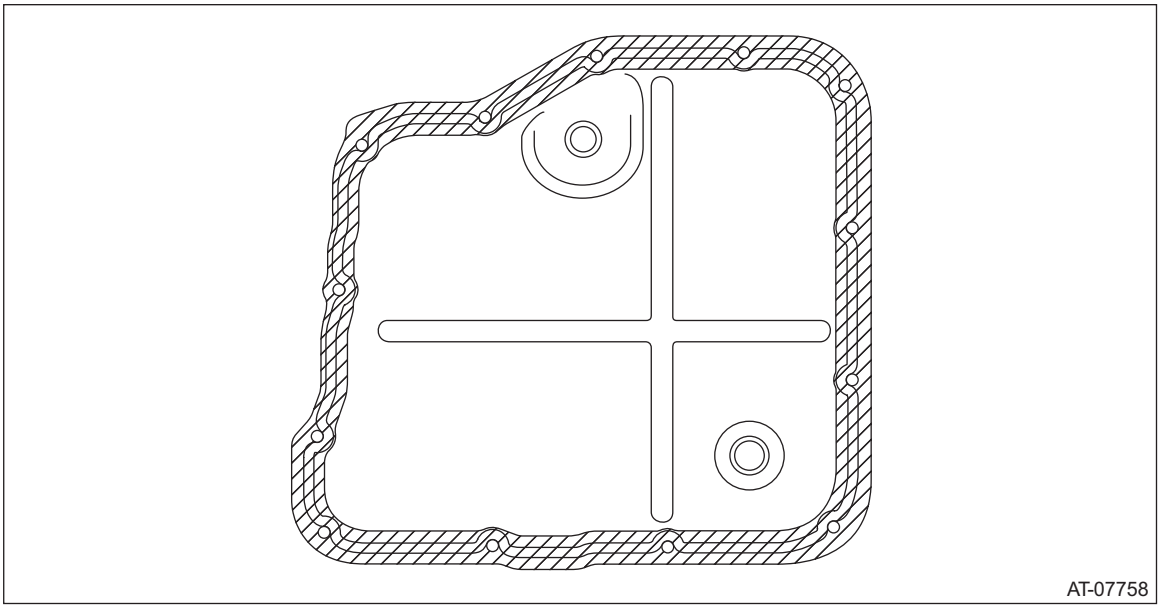


9) Clean the magnet.
10) Attach the magnet at the specified position of the oil pan.



11) Apply liquid gasket all around the oil pan mating surface seamlessly.

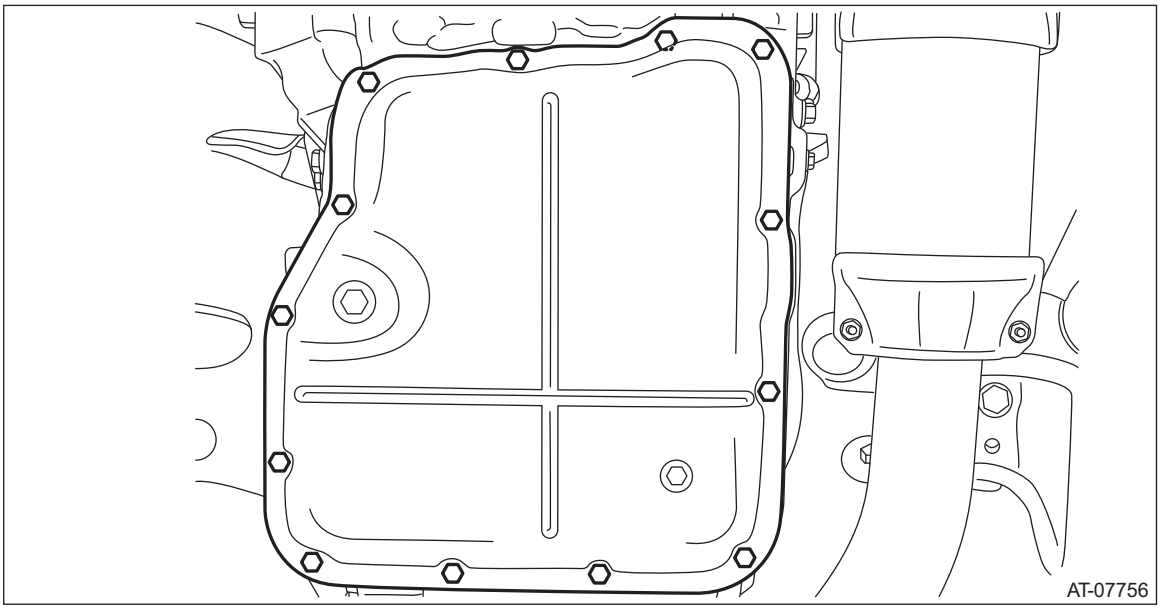
Liquid gasket:
THREE BOND 1217B (Part No. K0877YA020) or equivalent



12) Install the oil pan by equally tightening the bolts.

CAUTION:
Beware of the transmission harness getting caught in between.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

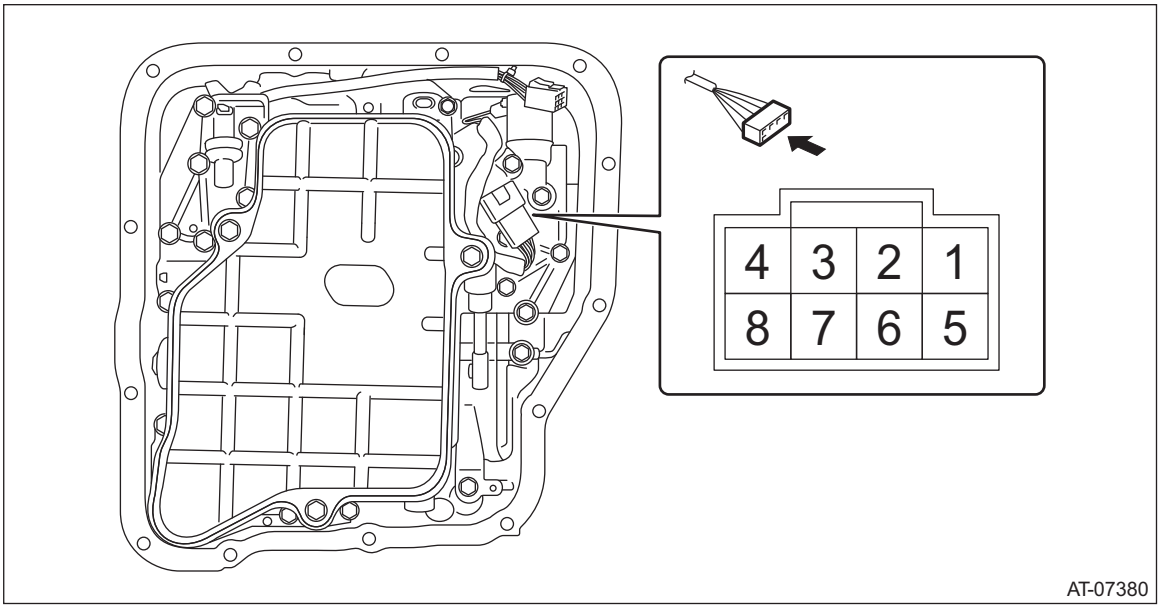


13) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
14) Fill with CVTF. <Ref. to CVT(TR690)-37, REPLACEMENT, CVTF.>
15) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
16) Perform the operation of AT learning mode. <Ref. to CVT(diag)-25, Learning Control.>

C: INSPECTION

- Check each part for damage or dust.
- Check oil strainer for clogging.
- Measure the resistance of each solenoid.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

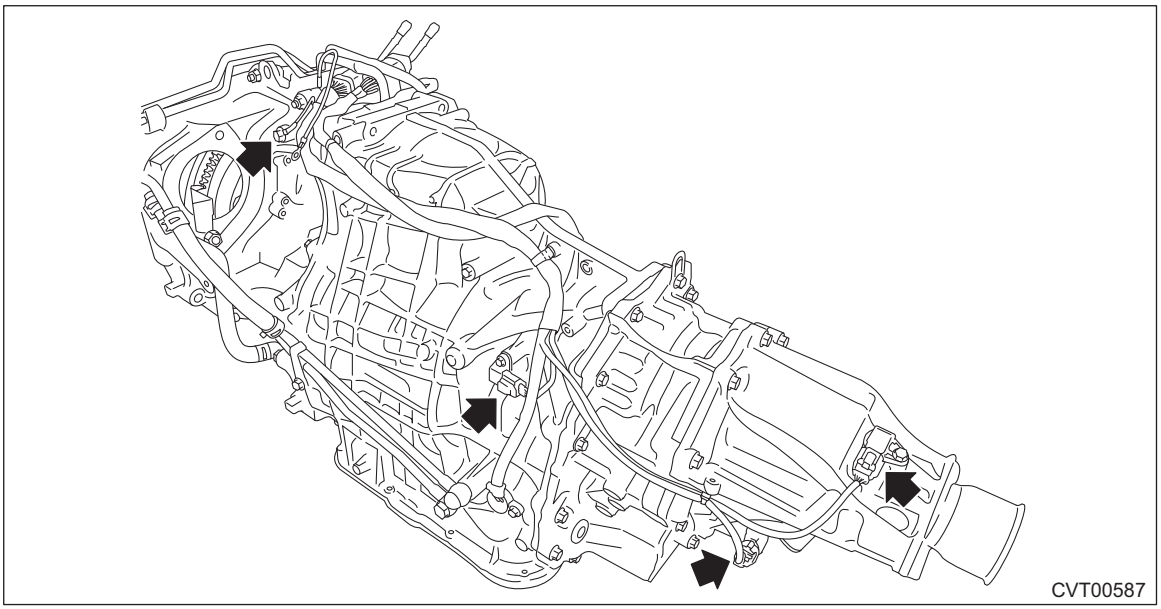


Solenoid	Terminal No.	Standard (Ω)
Secondary solenoid	No. 1 — control valve body	Approx. 6.6 Ω
Lock-up duty solenoid	No. 2 — control valve body	Approx. 12 Ω
F&R solenoid	No. 3 — control valve body	Approx. 5.3 Ω
Lock-up ON/OFF solenoid	No. 5 — control valve body	Approx. 16 Ω
Primary DOWN solenoid	No. 6 — control valve body	Approx. 12 Ω
Primary UP solenoid	No. 7 — control valve body	Approx. 12 Ω
AWD solenoid	No. 8 — control valve body	Approx. 3.2 Ω

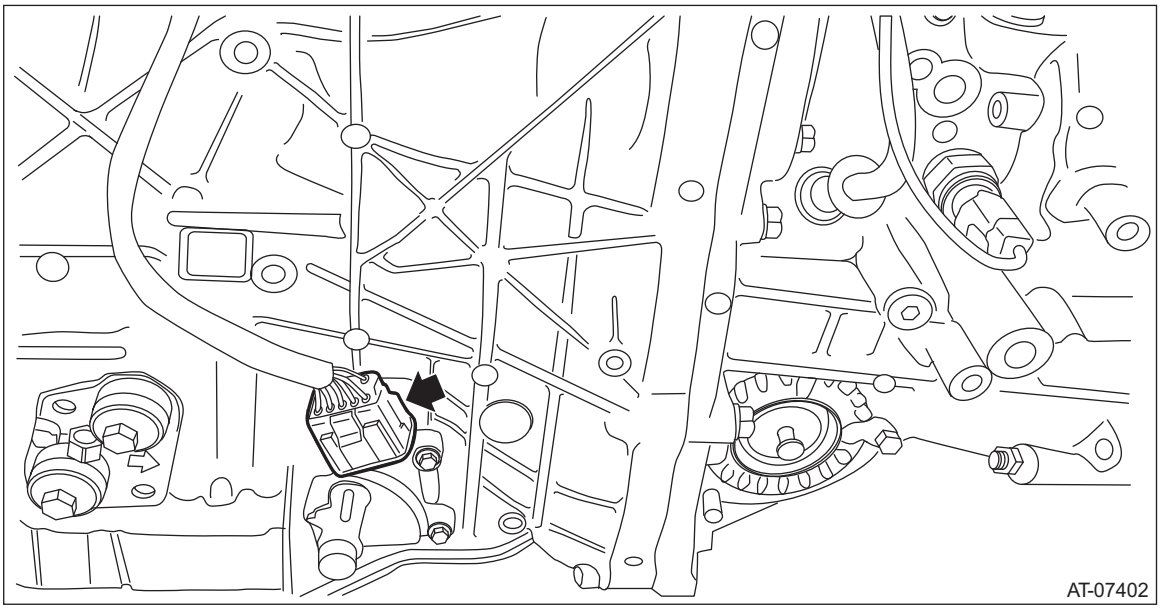
21.Transmission Harness

A: REMOVAL

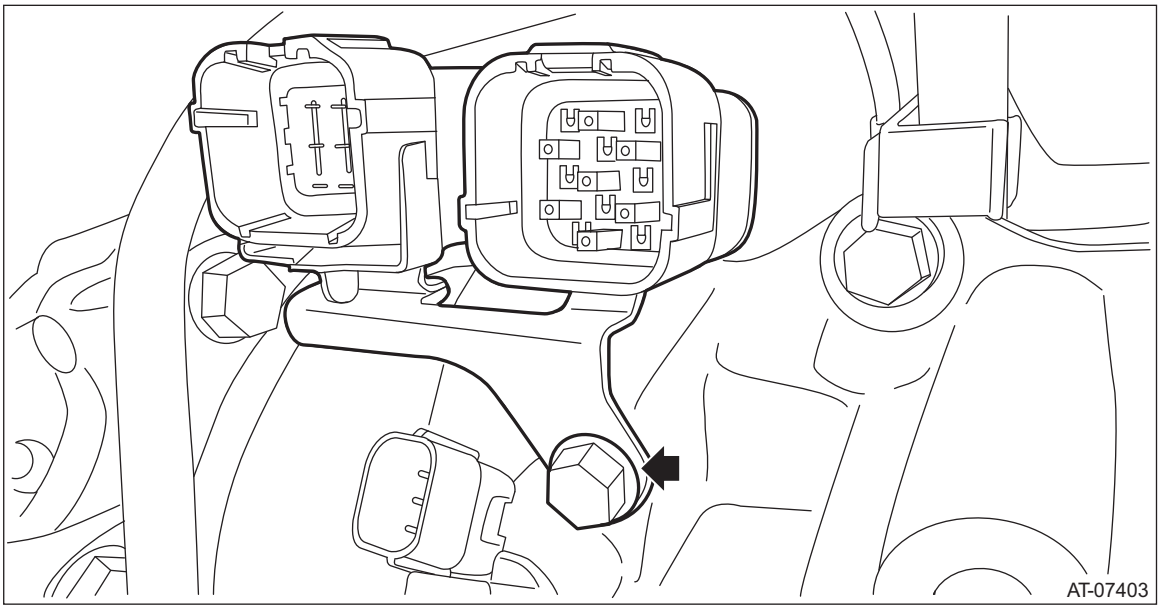
1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Prepare for overhaul. <Ref. to CVT(TR690)-142, Preparation for Overhaul.>
3) Remove the transmission harness ground terminal and remove the harness connectors from front wheel speed sensor, rear wheel speed sensor and secondary speed sensor.



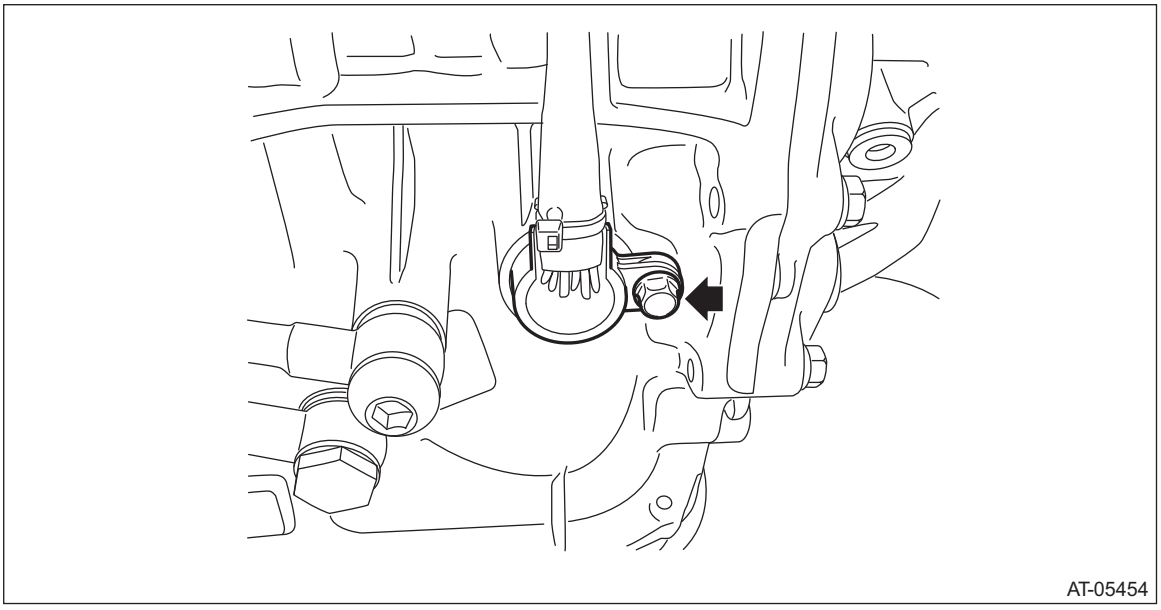
4) Remove the harness connectors from inhibitor switch, primary speed sensor and secondary pressure sensor.



5) Remove the transmission harness stay.



6) Remove transmission harness connector and inhibitor harness connector from harness stay.
7) Remove the control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
8) Remove the mounting bolt to pull out the bushing of transmission harness from transmission case round hole.



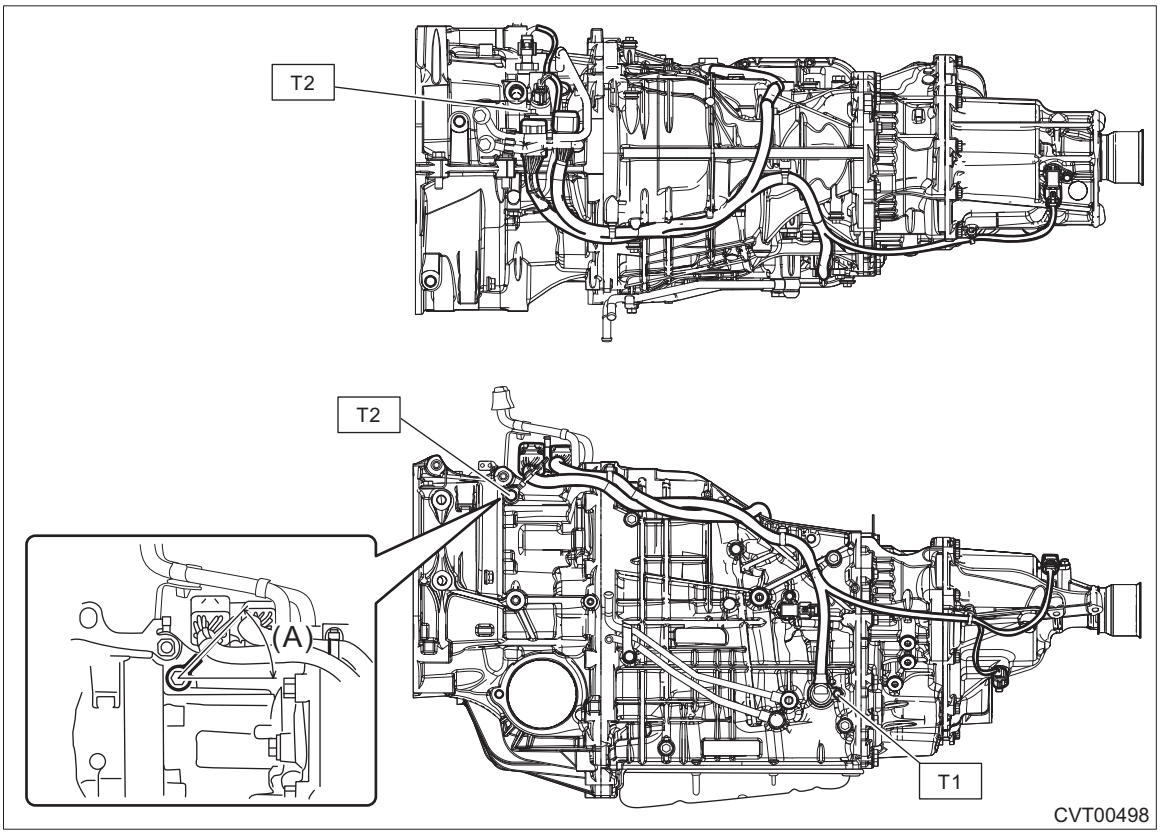
9) Remove the harness clip from transmission assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use new O-rings.
- Do not impact or bend the transmission harness because it has the oil temperature sensor inside.
- Install the transmission ground terminal at an approximately 45° angle (A).

Tightening torque:
T1: 5 N·m (0.5 kgf-m, 3.7 ft-lb)
T2: 16 N·m (1.6 kgf-m, 3.7 ft-lb)



C: INSPECTION

1) Visually check the harness and connector for damage or crack.
2) Check the harness terminal for rust, disconnection or poor contact.
3) Check the continuity between harness terminals and oil temperature sensor.

NOTE:
Refer to WIRING SECTION for transmission harness terminal and oil temperature sensor terminal. <Ref. to WI-139, WIRING DIAGRAM, CVT Control System.>

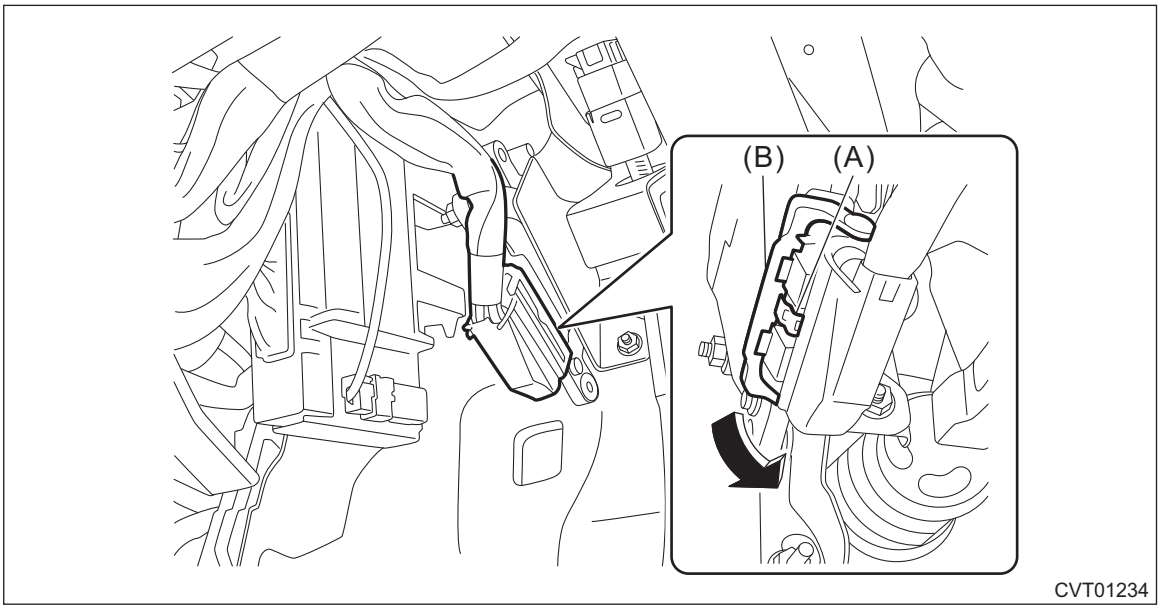
Harness continuity standard
Less than 1 Ω

Oil temperature sensor standard
Approx. 2.6 kΩ (at 20°C)

22.Transmission Control Module (TCM)

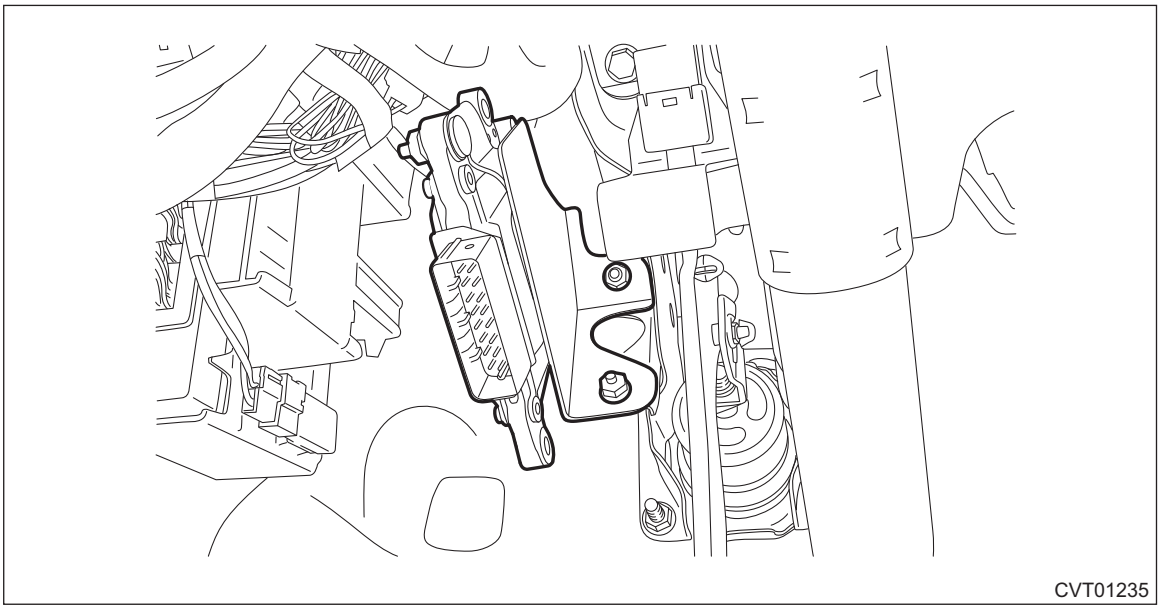
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Move the lock lever in the arrow direction while pressing the lock button, and disconnect the connector.

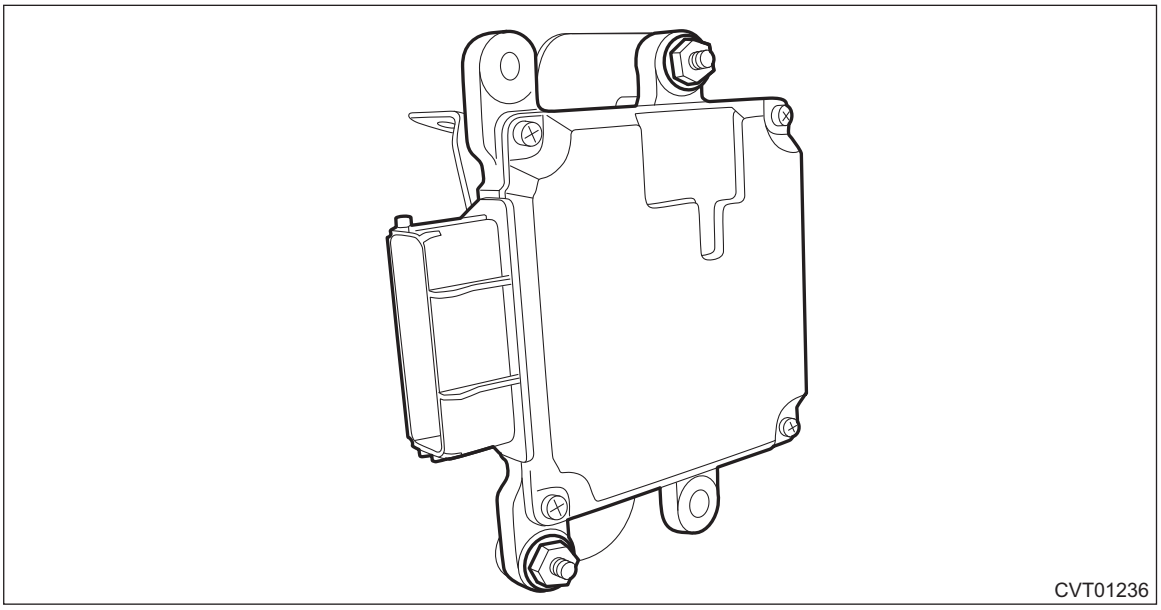


(A) Lock button
(B) Lock lever

3) Remove the TCM.



4) Remove the TCM from the bracket.



B: INSTALLATION

1) Install the TCM to the bracket.

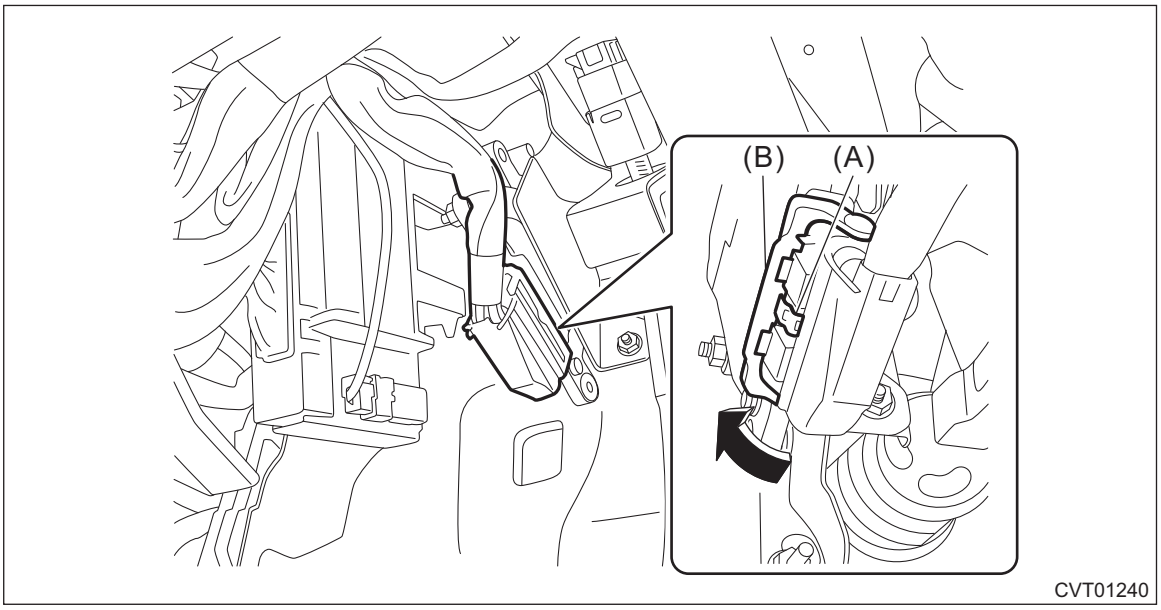
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the TCM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the harness connector to TCM.

NOTE:
- Install the connector in the reverse order of removal.
- Move the lock lever in the arrow direction, and confirm that a clicking sound is heard.



(A) Lock button
(B) Lock lever

4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

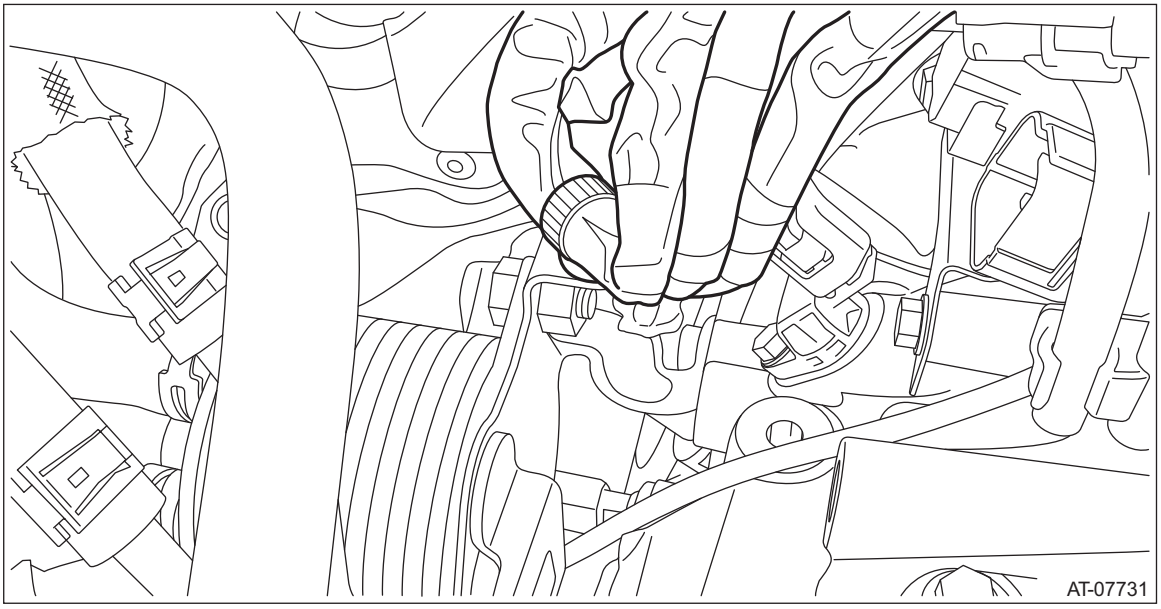
5) Perform the operation of AT learning mode. <Ref. to CVT(diag)-25, Learning Control.>

23.CVTF Cooler (With Warmer Function)

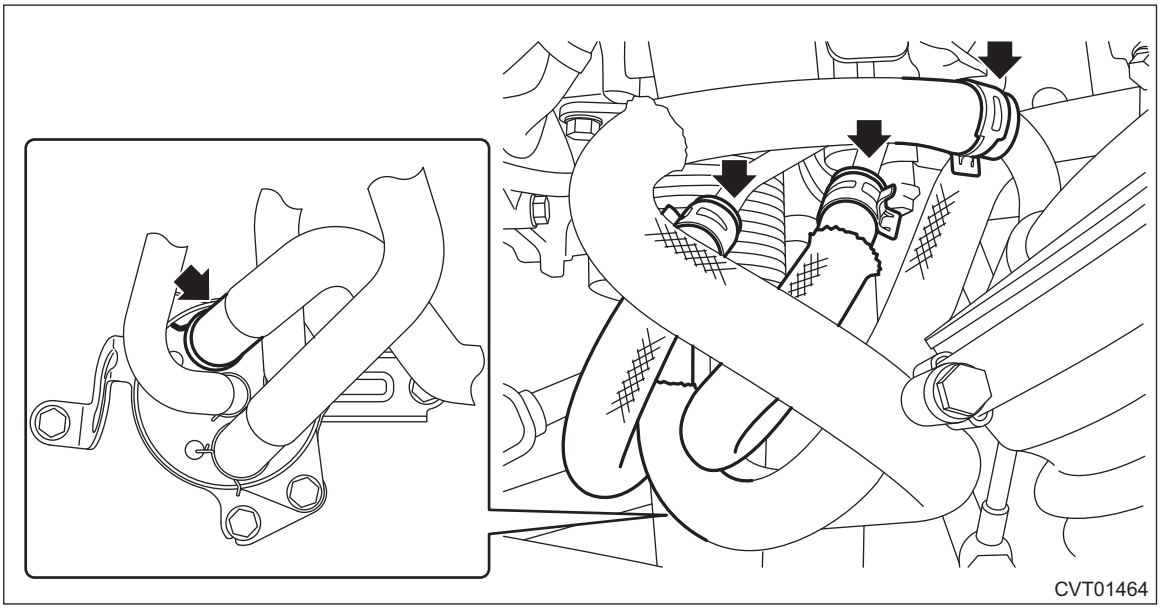
A: REMOVAL

CAUTION:
If the CVTF and engine coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.

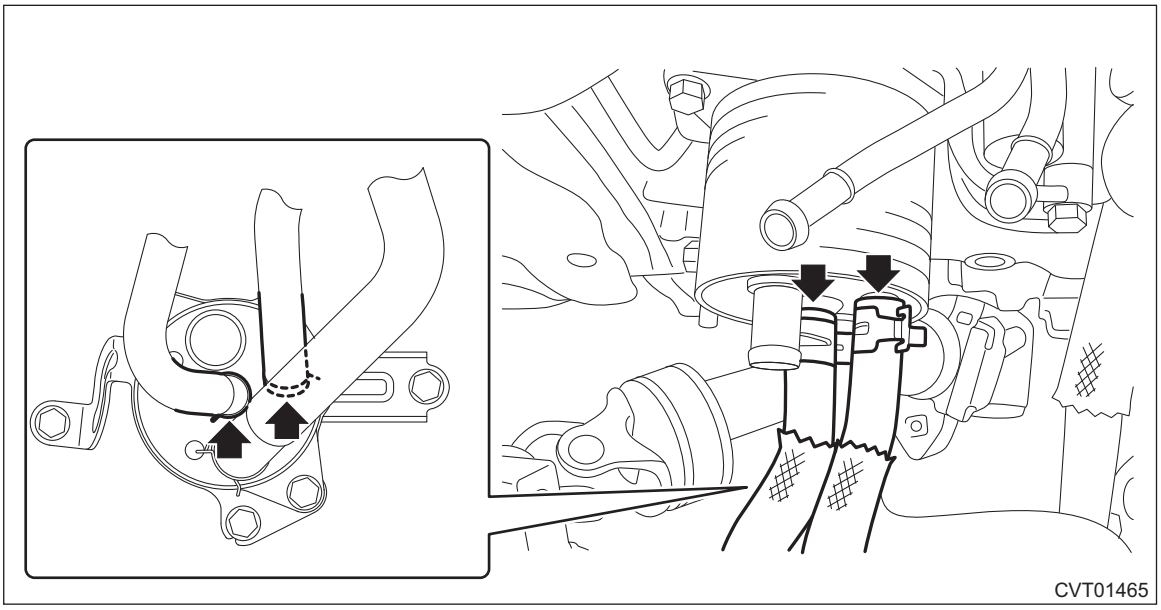
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, REPLACEMENT, Engine Coolant.>
4) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
5) Remove the harness clip.



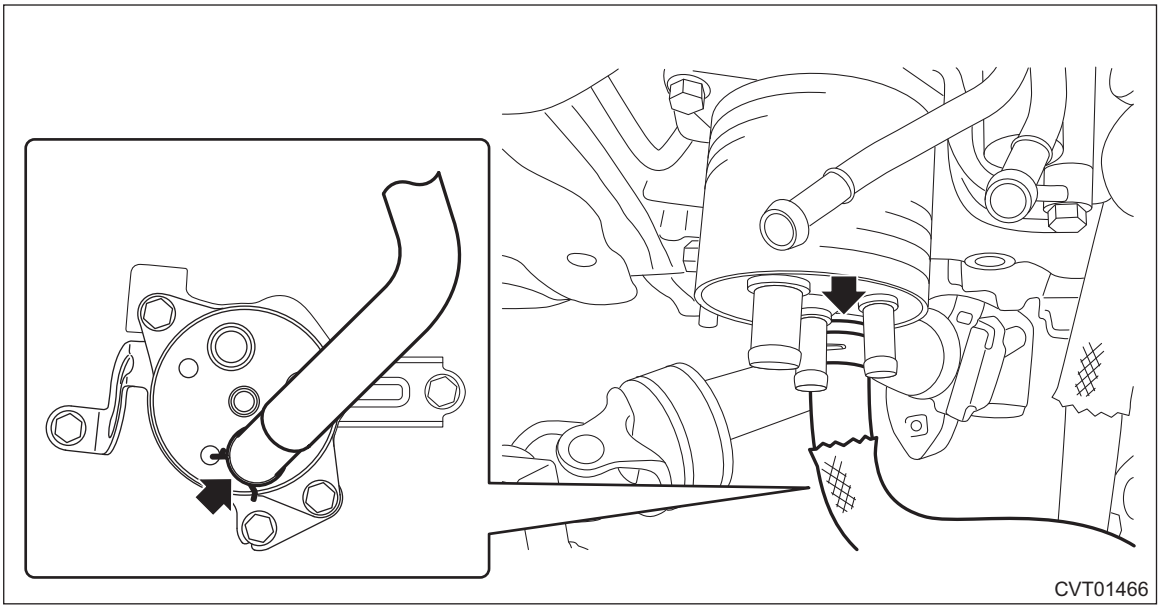
6) Disconnect the engine coolant outlet hose, engine coolant inlet hose, CVTF inlet hose and CVTF outlet hose.



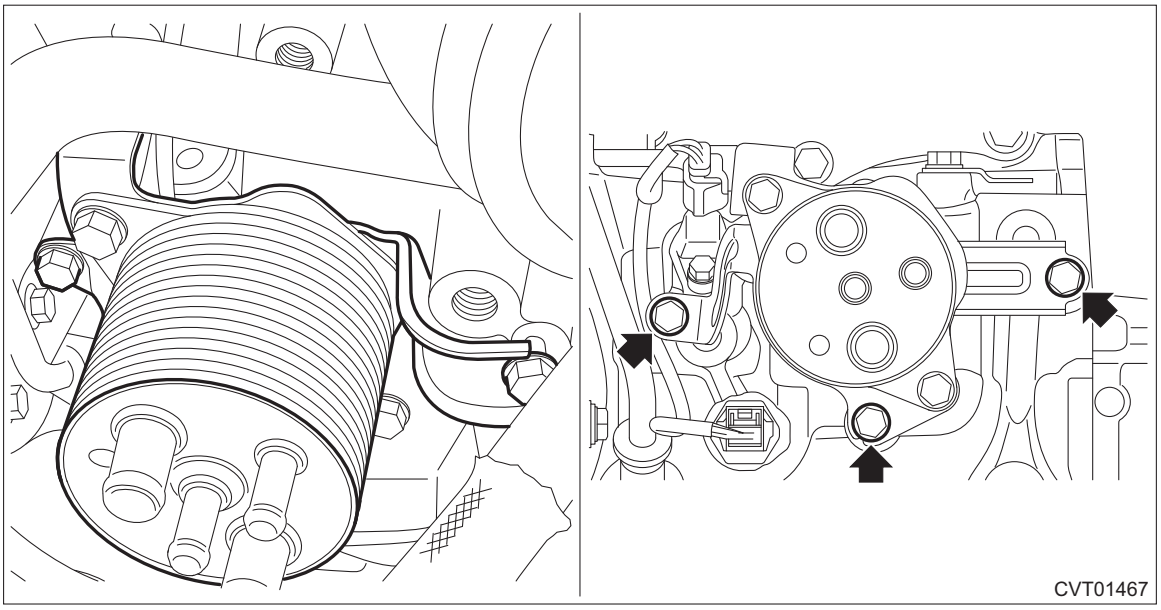
7) Remove the CVTF inlet hose and CVTF outlet hose.



8) Remove the engine coolant outlet hose.

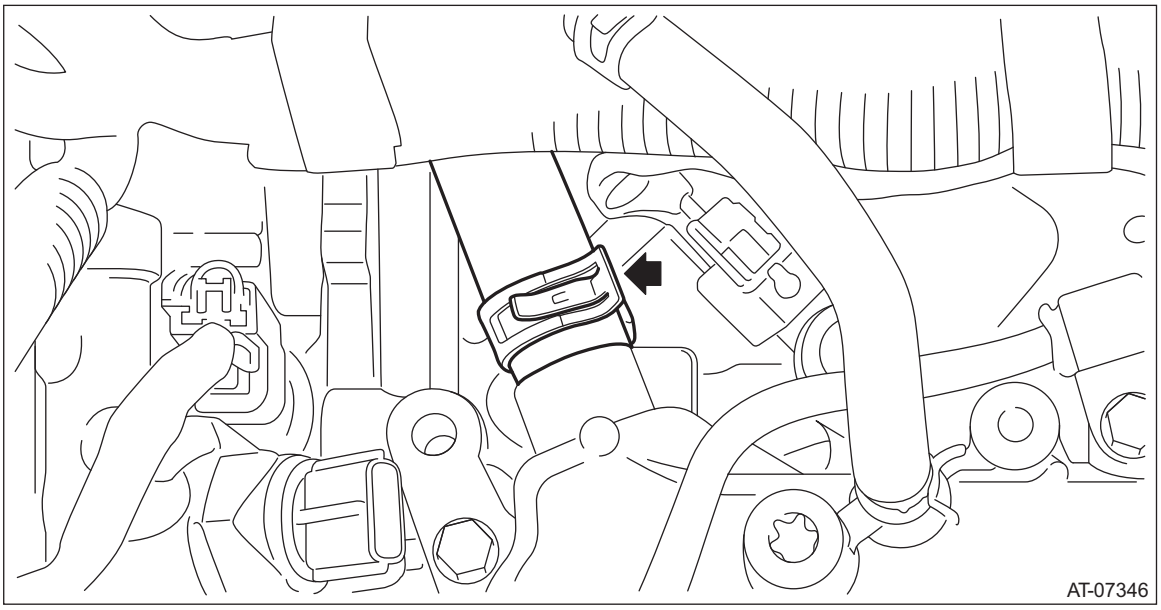


9) Remove the CVTF cooler (with warmer feature).



10) Remove the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-46, FUEL PIPE INSULATOR NO. 3, REMOVAL, Fuel Insulator.>

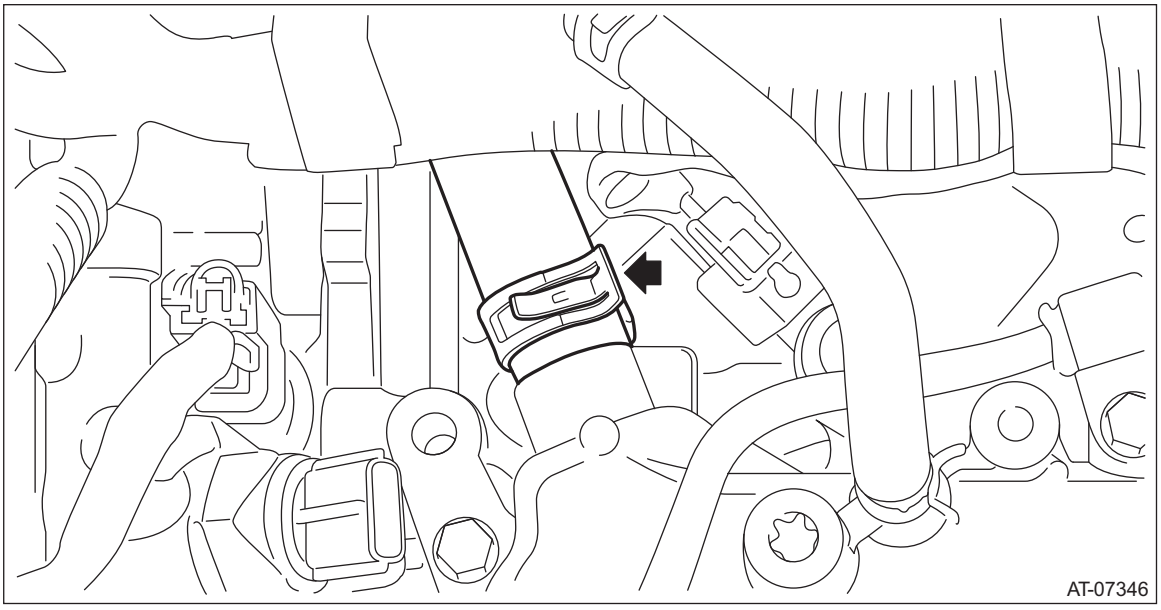
11) Remove the engine coolant inlet hose.



B: INSTALLATION

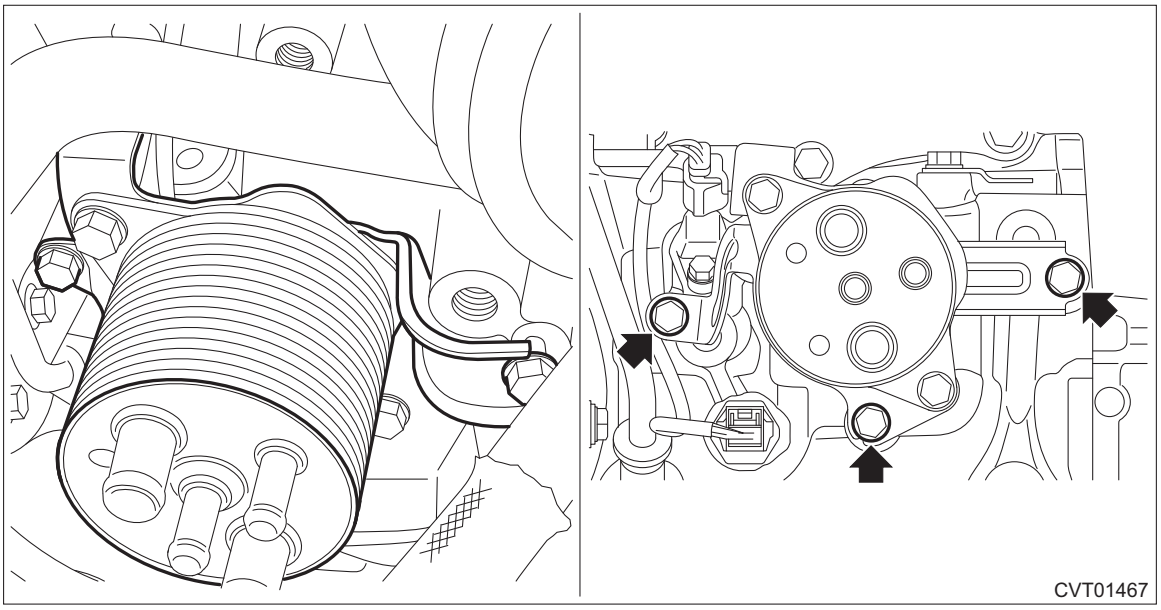
1) Connect the engine coolant inlet hose.

NOTE:
When installing the engine coolant inlet hose, the triangle marking should face upward.

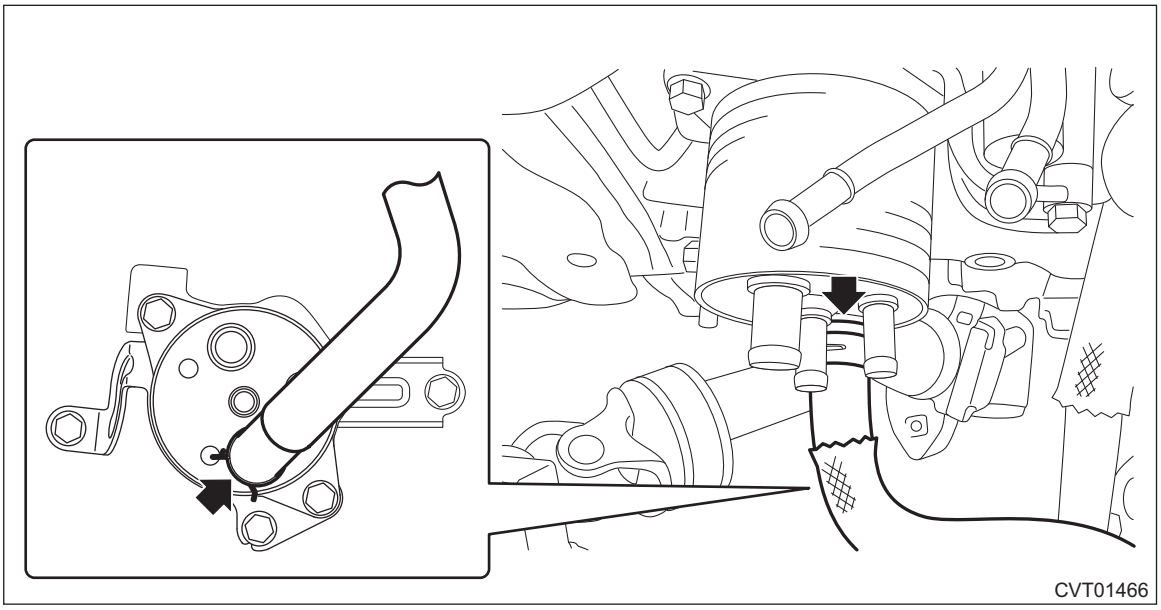


2) Install the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 3, INSTALLATION, Fuel Insulator.>
3) Replace the CVTF inlet hose and the outlet hose.
4) Install the CVTF cooler (with warmer feature).

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

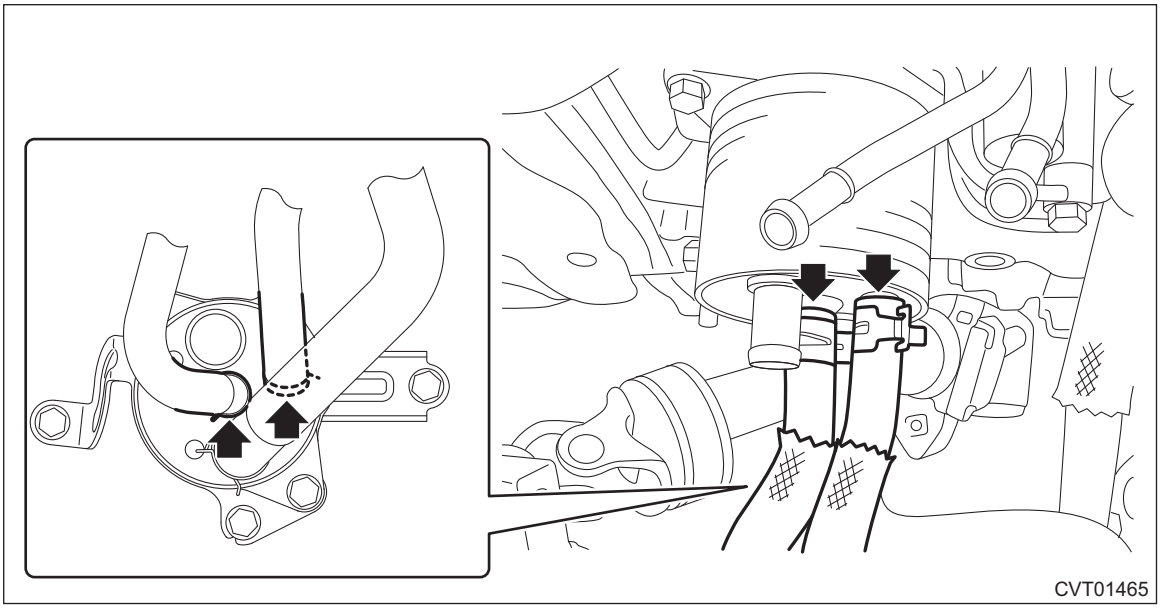


5) Connect the engine coolant outlet hose.

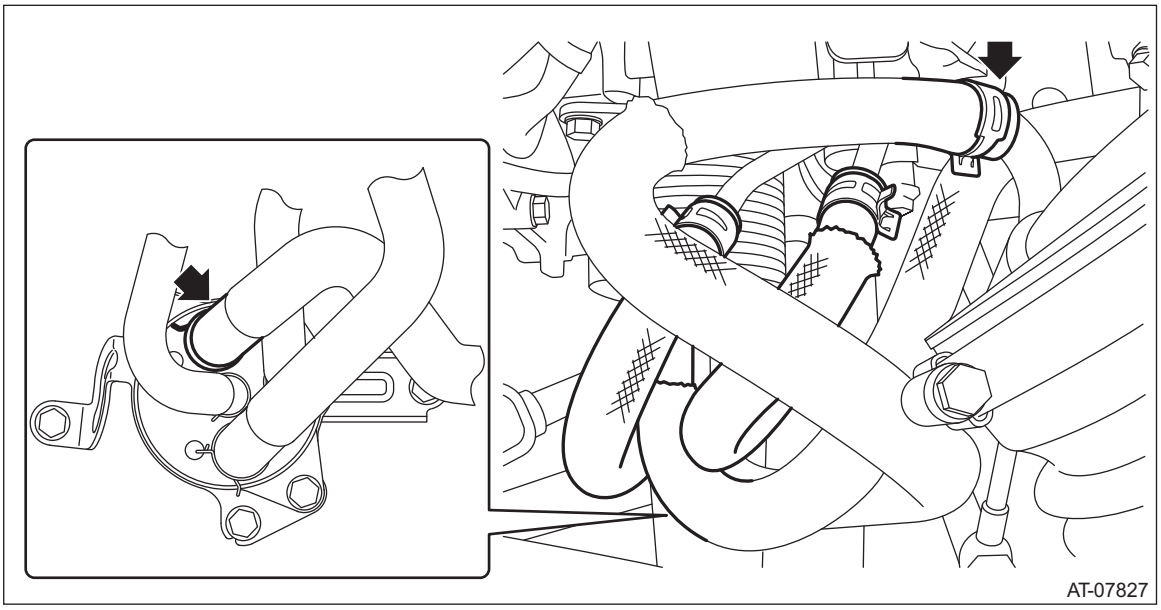


6) Connect the CVTF inlet hose and CVTF outlet hose.

NOTE:
Use new CVTF hoses.

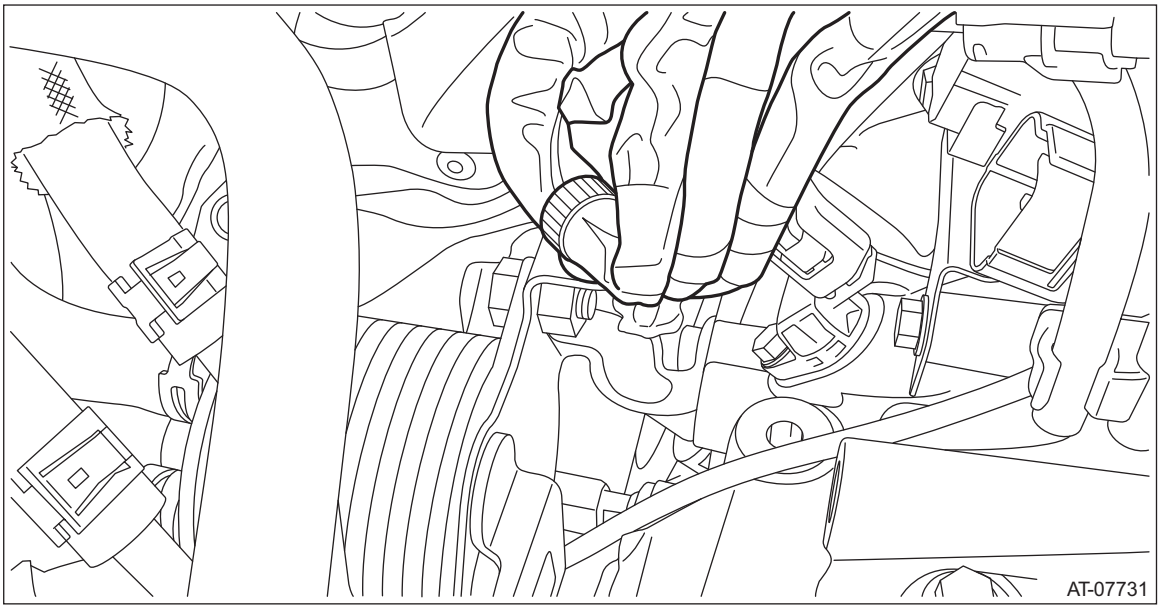


7) Install the engine coolant outlet hose, engine coolant inlet hose, CVTF inlet hose and CVTF outlet hose.



8) Check installation condition of hoses.
- Make sure the hoses do not interfere with each other or with other components.
- Check each hose for bent, excess curve, and twisting conditions.

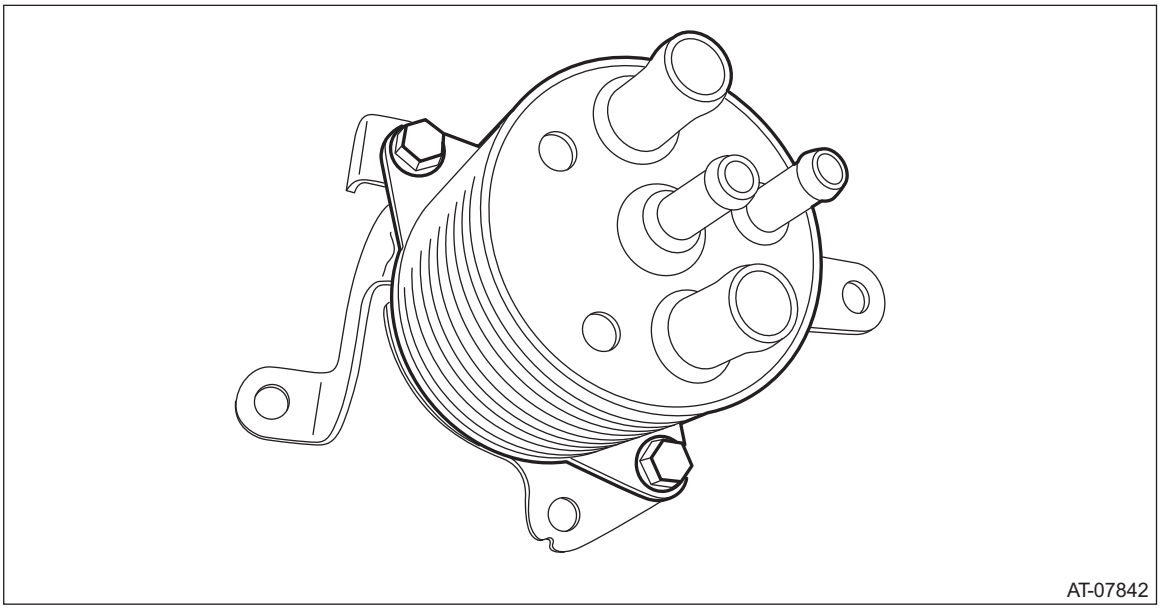
9) Install the harness clip.



10) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
11) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
12) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
13) Fill engine coolant. <Ref. to CO(w/o STI)-15, REPLACEMENT, Engine Coolant.>
14) Adjust the CVTF level. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

C: DISASSEMBLY

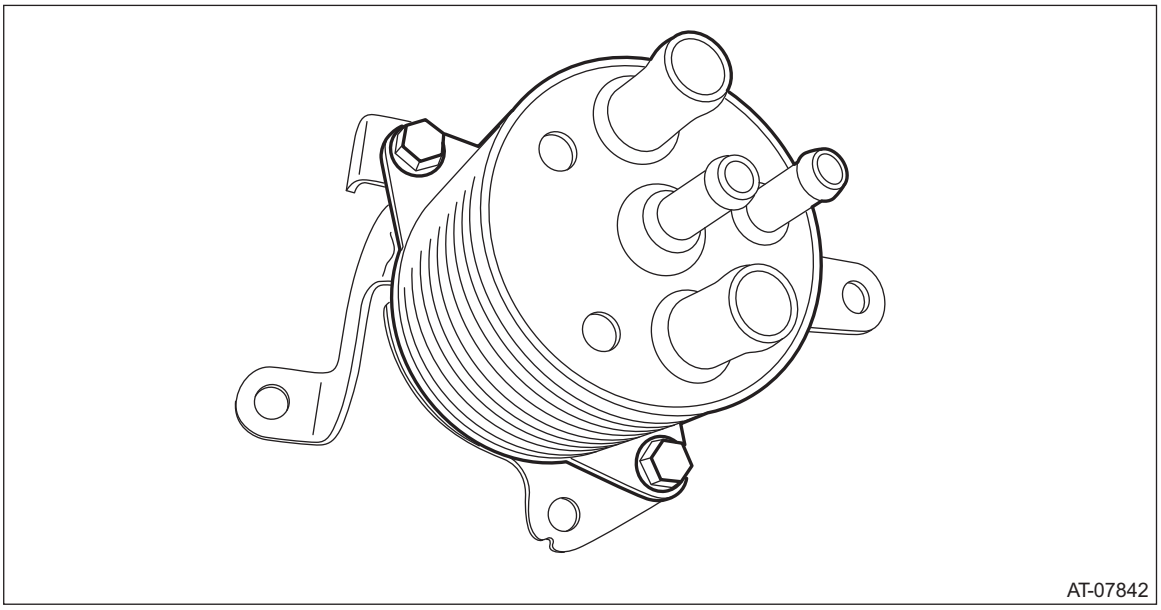
1) Remove the bracket.



D: ASSEMBLY

1) Attach the bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



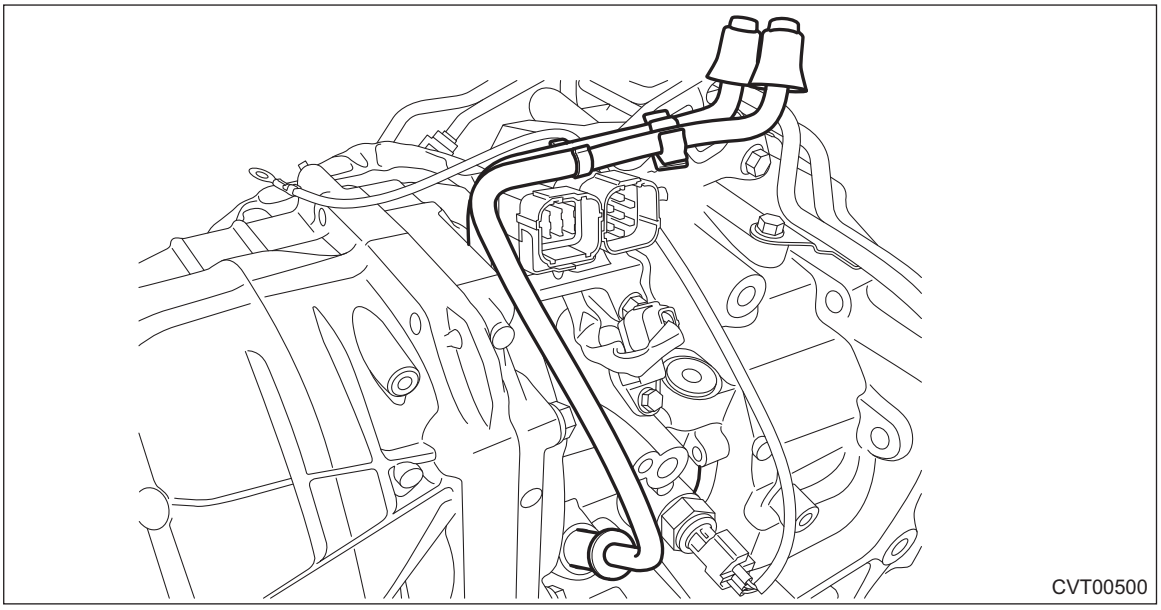
E: INSPECTION

Replace any faulty CVTF cooler hoses, CVTF cooler pipes and clamps found in the inspection below.
1) Check that there are no CVTF or engine coolant leaks from the connections.
2) Check the clamp for deformation.
3) Lightly bend the CVTF cooler hose and check for cracks in the surface or other damages.
4) Pinch the CVTF cooler hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
5) Check for peeling, cracks, and deformation at the tip of the hose.
6) Check the CVTF cooler (with warmer feature) for any damage.

24.Air Breather Hose

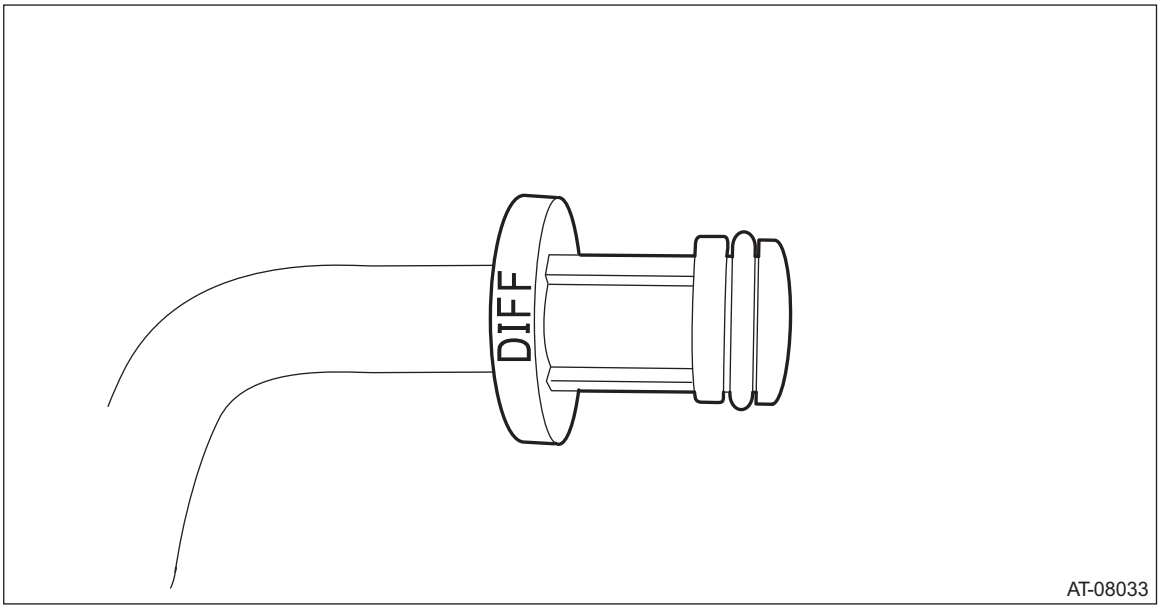
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the two air breather hoses.



CVT00500

5) Remove the air breather cap.
6) Remove the oil cap.



AT-08033

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use new O-rings.

C: INSPECTION

- Check the hose for peeling, crack or clogging.
- Check the oil cap is not cracked or clogged.

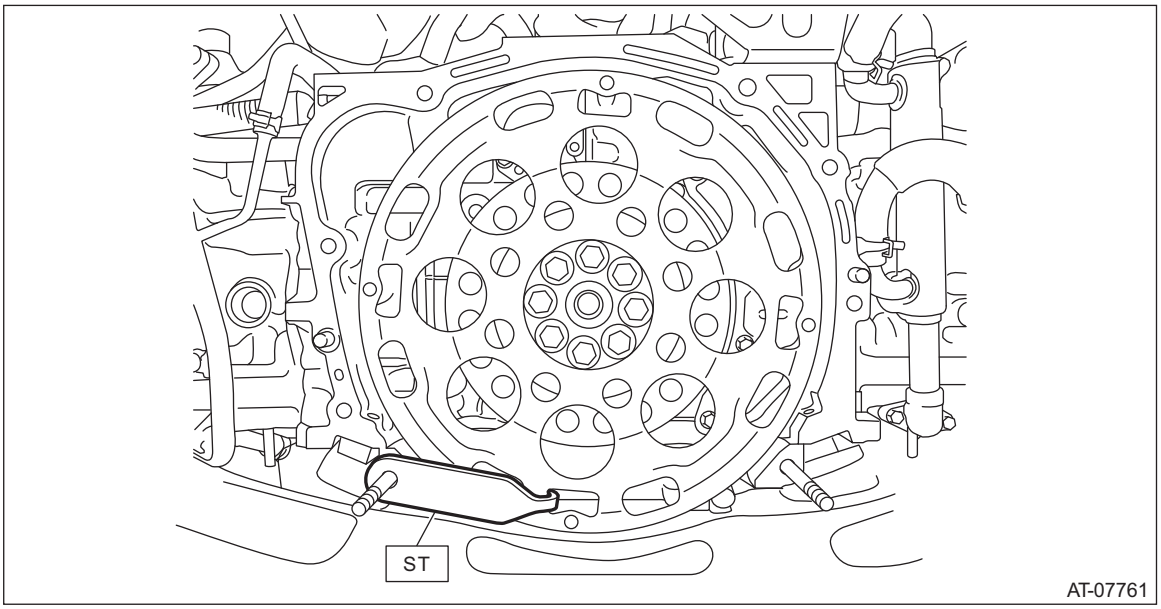
- Check O-ring of oil cap is not damaged.

25.Drive Plate

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER

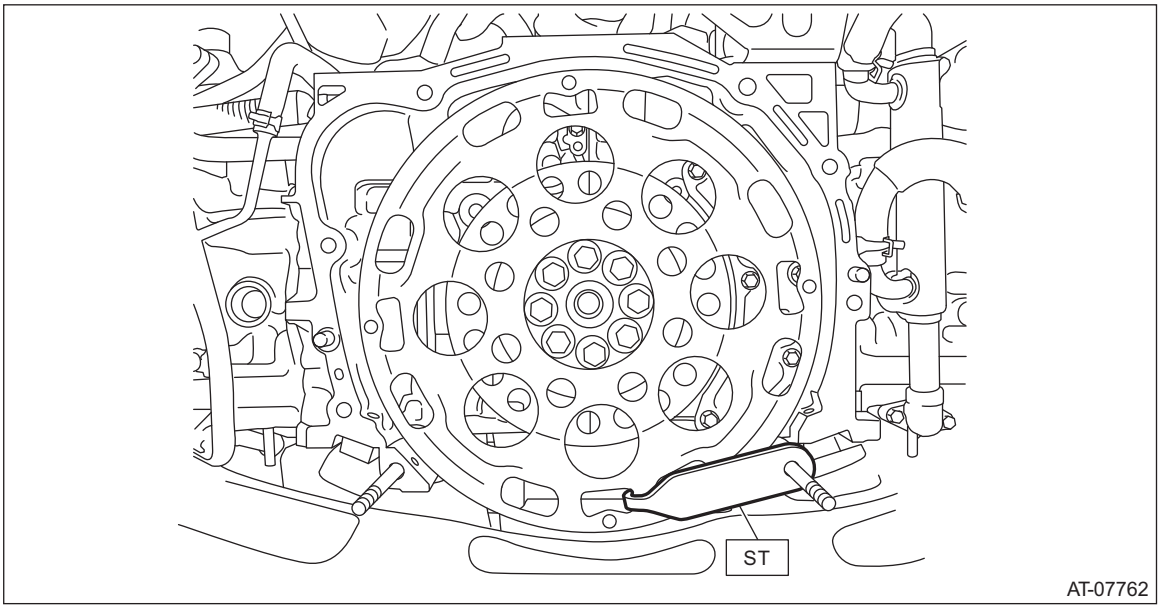


3) Remove the drive plate and reinforcement drive plate.

B: INSTALLATION

1) Temporarily install the drive plate and reinforcement drive plate.
2) Set the ST.

NOTE:
Set the ST to the drive plate referring to the illustration.
ST 498497300 CRANKSHAFT STOPPER



3) Tighten the drive plate mounting bolt in two stages.

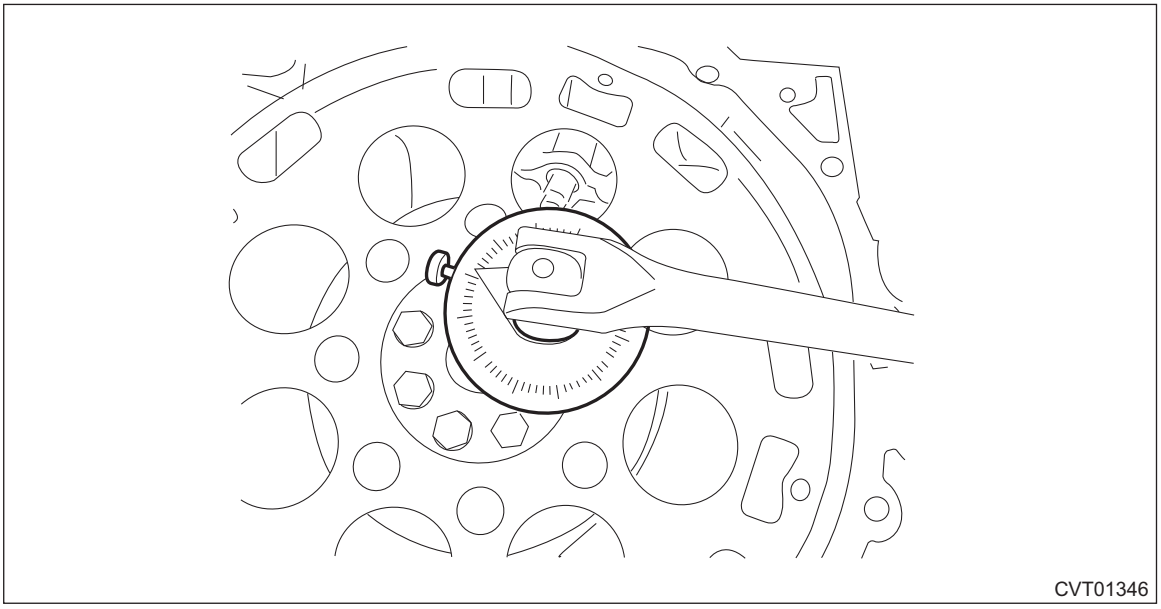
NOTE:
Fix the engine unit.

(1) Tighten the drive plate mounting bolt.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

(2) While checking the tightening angle with the angle gauge, tighten the drive plate mounting bolts to the specified angle.

Tightening angle:
30° — 35°



4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check the drive cable for damage.

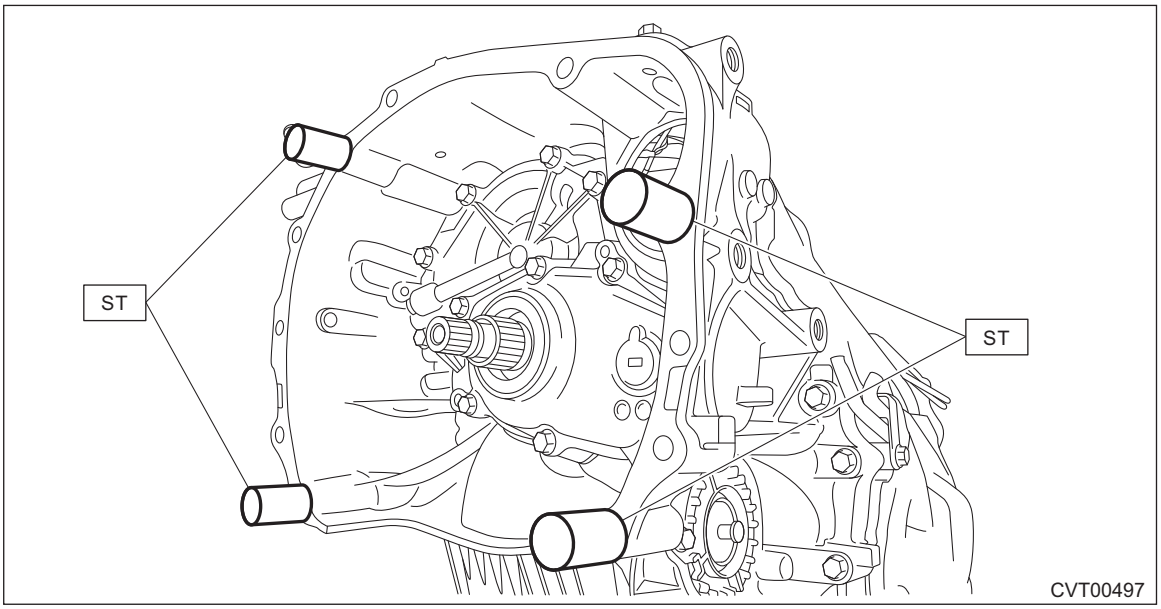
26.Preparation for Overhaul

A: GENERAL DESCRIPTION

Before disassembling and assembling the transmission, follow the following procedures to prepare.

B: PROCEDURE

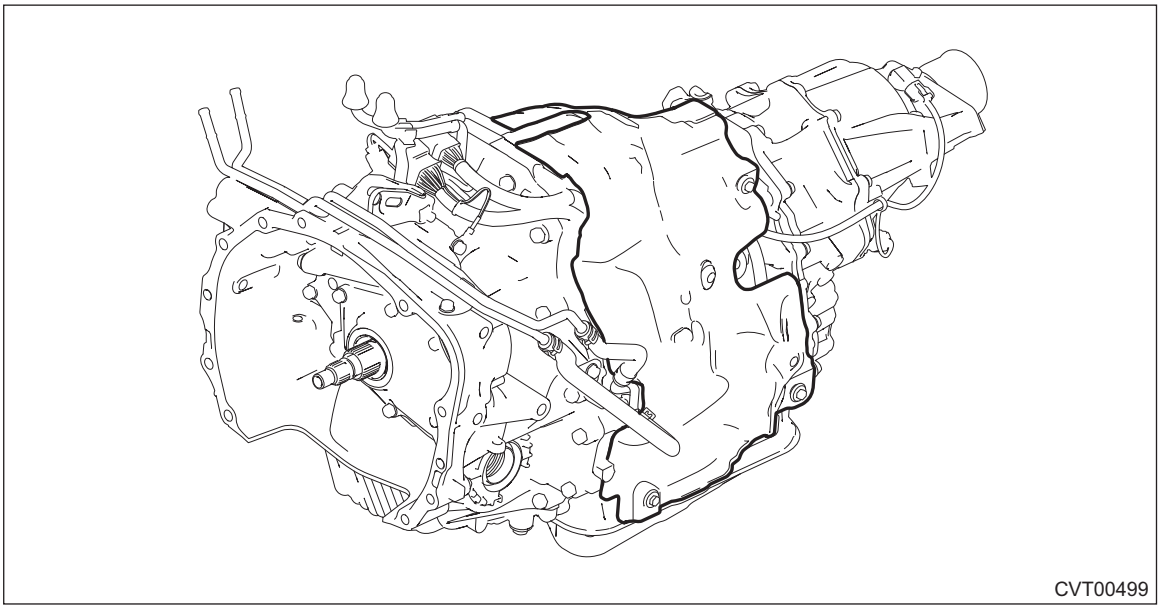
1) Clean the transmission exterior.
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-143, REMOVAL, Torque Converter Assembly.>
3) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY



4) Remove the transmission cover on the transmission upper side.

NOTE:
Install using the following tightening torque.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



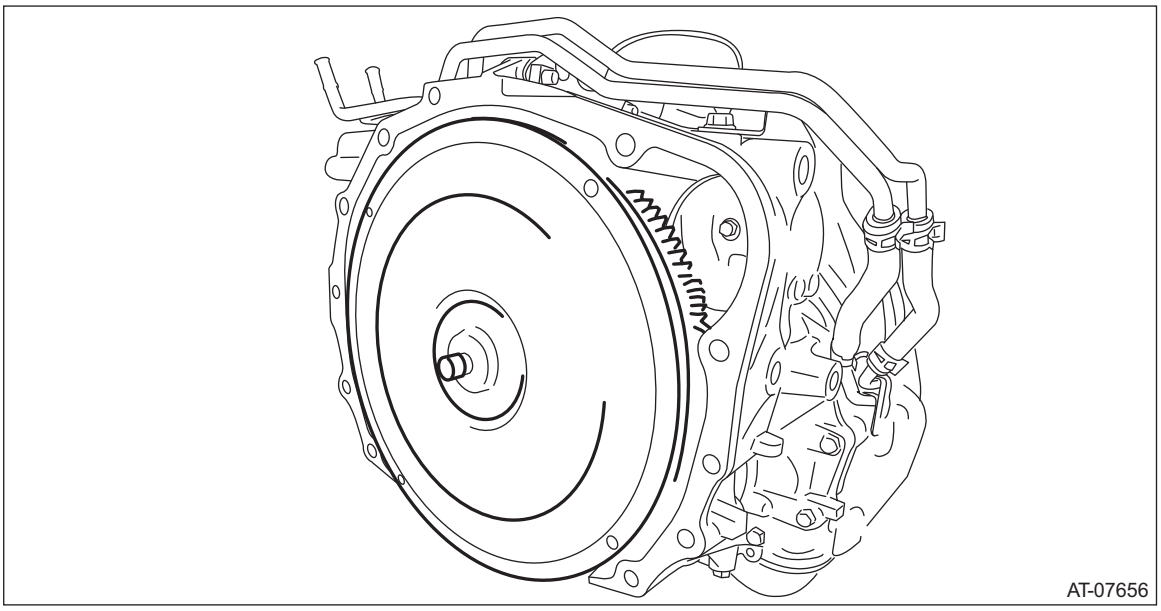
5) Place the transmission assembly on end.

27.Torque Converter Assembly

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly horizontally.

CAUTION:
Do not scratch the inside of engaging parts.



3) Remove the O-ring from the front reduction drive gear.

B: INSTALLATION

1) Install the O-ring to front reduction drive gear.

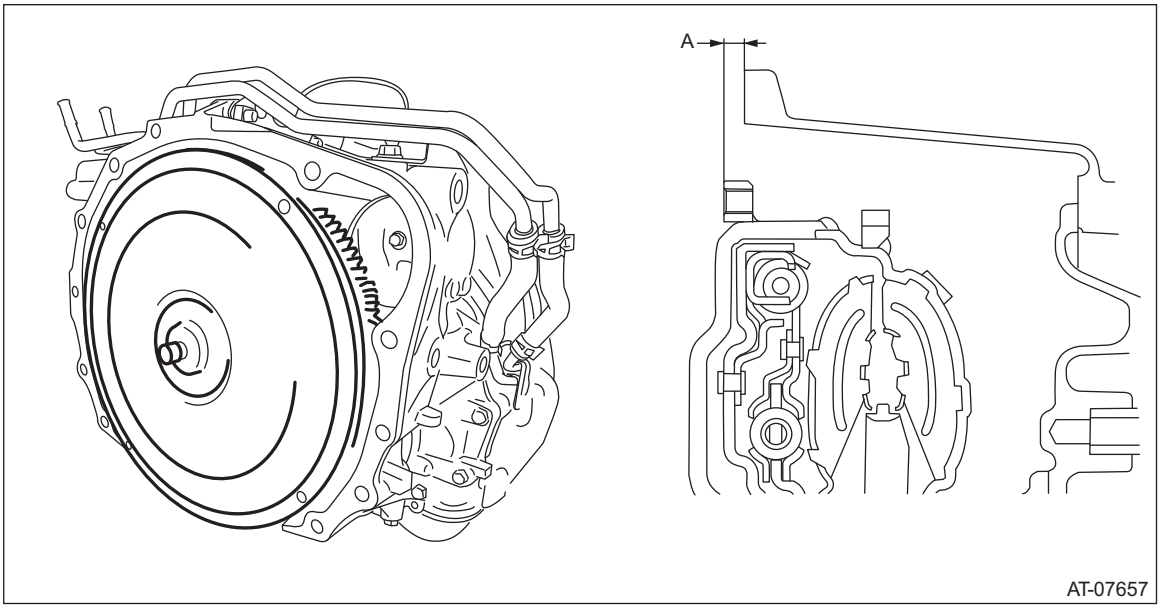
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

2) While holding the torque converter assembly by hand, carefully install it into the torque converter case.

NOTE:
- Apply CVTF to the oil seal lip.
- Do not damage the oil seal and O-ring.

3) Engage the splines while gently rotating the torque converter assembly by hand, and securely insert the assembly.
4) Measure depth “A”, from converter case end surface to drive plate contacting surface.

Standard (reference):
6.8 mm (0.268 in) or less



5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

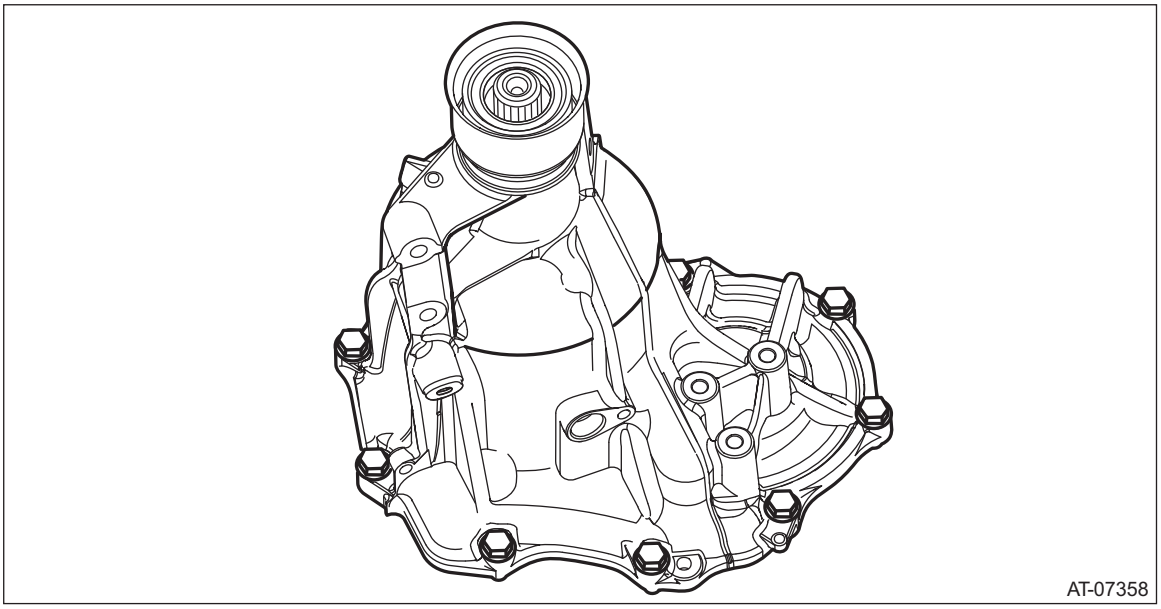
- Check the protrusion of torque converter center (front boss) is not deformed or damaged.
- Check the ring gear and exterior for break or damage.

28.Extension Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the front wheel speed sensor. <Ref. to CVT(TR690)-108, REMOVAL, Front Wheel Speed Sensor.>
3) Remove the rear wheel speed sensor. <Ref. to CVT(TR690)-110, REMOVAL, Rear Wheel Speed Sensor.>
4) Remove the harness clip, and remove the extension case.

NOTE:
The total number of extension case mounting bolts is 10.

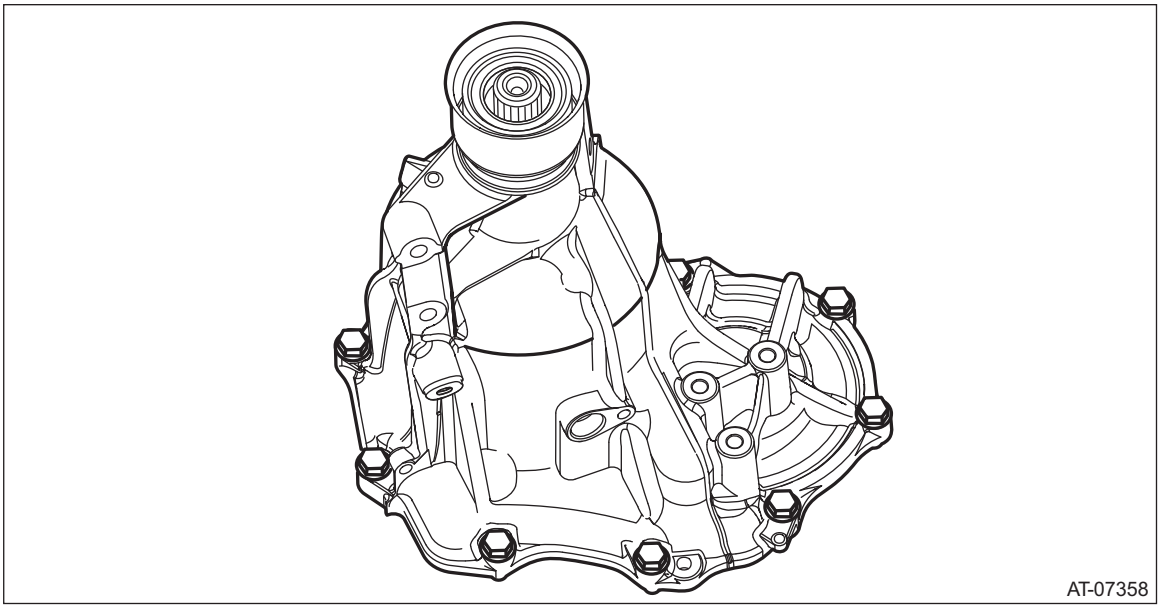


B: INSTALLATION

1) Clean the mating surface of the extension case and intermediate case.
2) Select the rear drive shaft shim. <Ref. to CVT(TR690)-151, ADJUSTMENT, Rear Drive Shaft.>
3) Select the shim for transfer reduction driven gear. <Ref. to CVT(TR690)-164, ADJUSTMENT, Transfer Reduction Driven Gear.>
4) Install the selected rear drive shaft shims to the rear drive shaft.
5) Attach the selected shim to transfer reduction driven gear assembly.
6) Install the gasket and the extension case.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

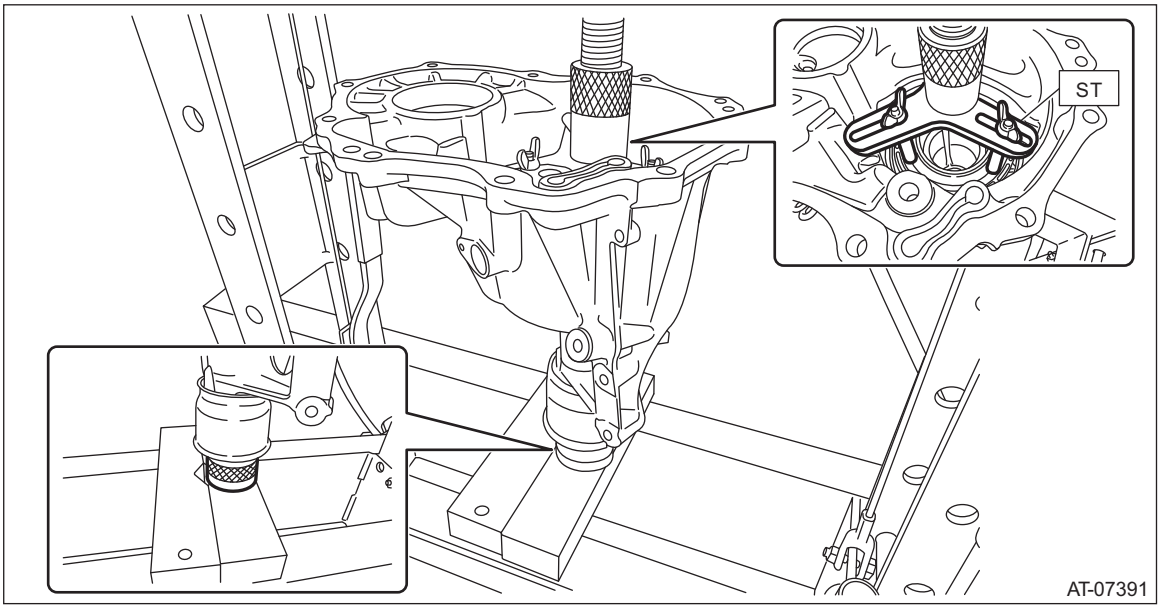


7) Install the rear wheel speed sensor. <Ref. to CVT(TR690)-110, INSTALLATION, Rear Wheel Speed Sensor.>
8) Install the front wheel speed sensor. <Ref. to CVT(TR690)-108, INSTALLATION, Front Wheel Speed Sensor.>
9) Install the transmission assembly. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

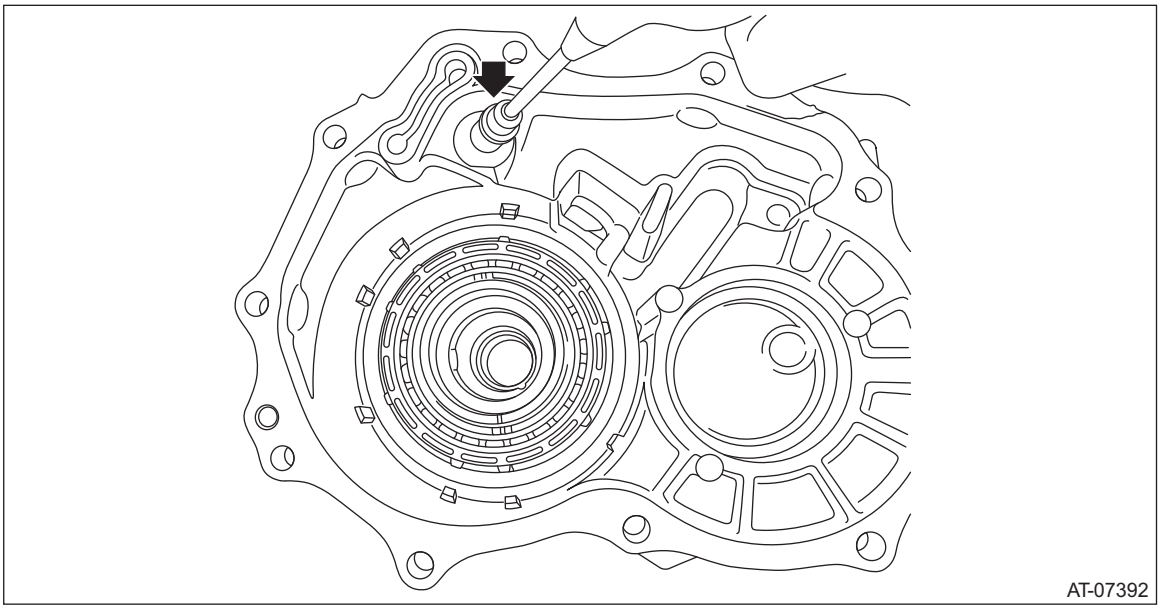
C: DISASSEMBLY

1) Remove the dust cover from extension case.
2) Remove the snap ring using the ST and press.

CAUTION:
If the operation is performed with the dust cover installed, place a table between the extension case and the press table.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



3) Supply compressed air to remove the transfer clutch piston.



4) Remove the D-ring and O-ring from the transfer clutch piston.
5) Remove the extension case oil seal from the extension case.
6) Remove the plug from the extension case.

D: ASSEMBLY

1) Install the O-ring and plug.

NOTE:
Use new O-rings.

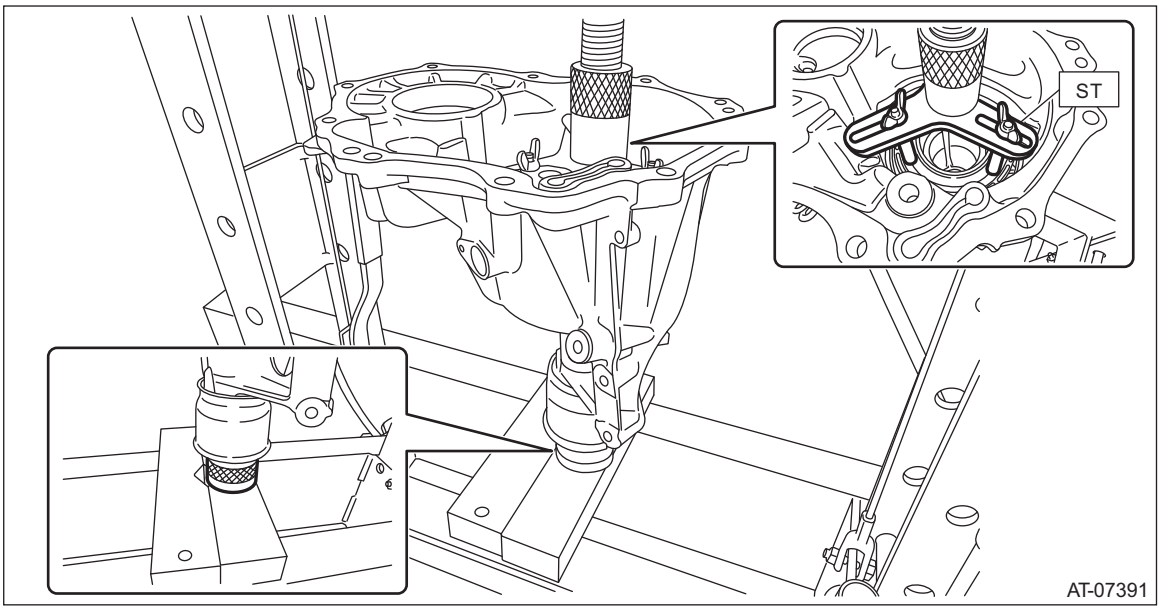
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the D-ring and O-ring to the transfer clutch piston.

NOTE:
- Use new D-rings and O-rings.
- Apply CVTF to the D-rings and O-rings of the transfer clutch piston assembly.

3) Insert the transfer clutch piston, spring retainer, return spring and clutch spring retainer.
4) Using the ST and a press, install the snap ring.

CAUTION:
If the operation is performed with the dust cover installed, place a table between the extension case and the press table.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



5) Press-fit the dust cover into extension case.
6) Install the extension case oil seal to extension case.
ST 498057300 INSTALLER

E: INSPECTION

- Use compressed air to make sure the extension case routes are not clogged or leaking.
- Check the D-rings and O-rings for damage.
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check there is no leak of CVTF from the joint between extension case and intermediate case.
- Check there is no damage or cracks on the extension case.

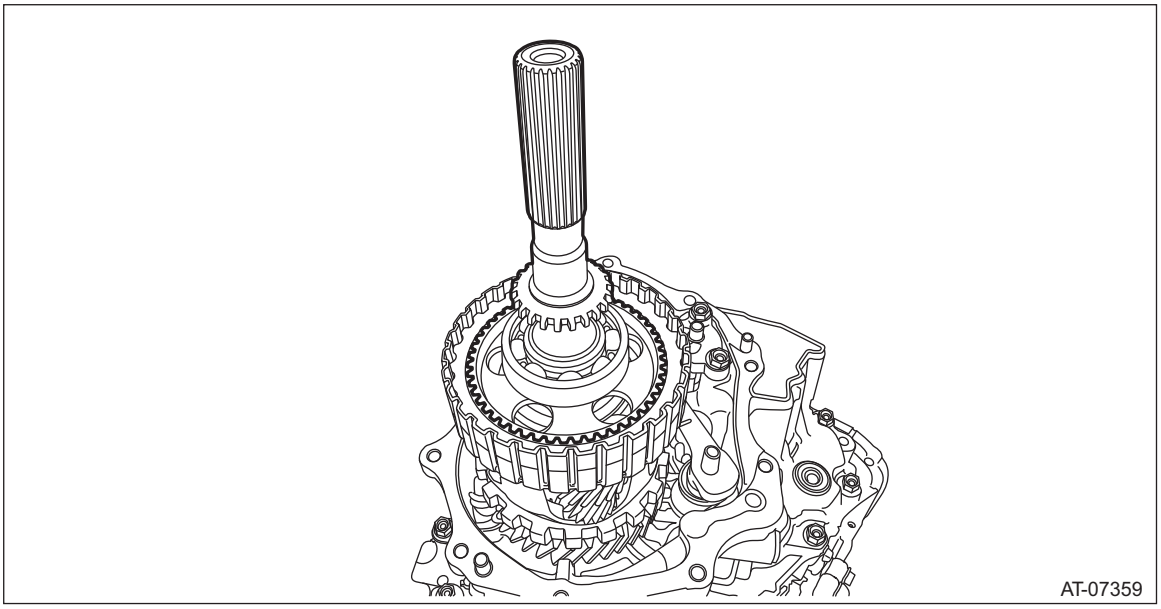
F: ADJUSTMENT

NOTE:
When replacing the extension case, select the rear drive shaft shim and transfer reduction driven gear shim. <Ref. to CVT(TR690)-151, ADJUSTMENT, Rear Drive Shaft.> <Ref. to CVT(TR690)-164, ADJUSTMENT, Transfer Reduction Driven Gear.>

29.Rear Drive Shaft

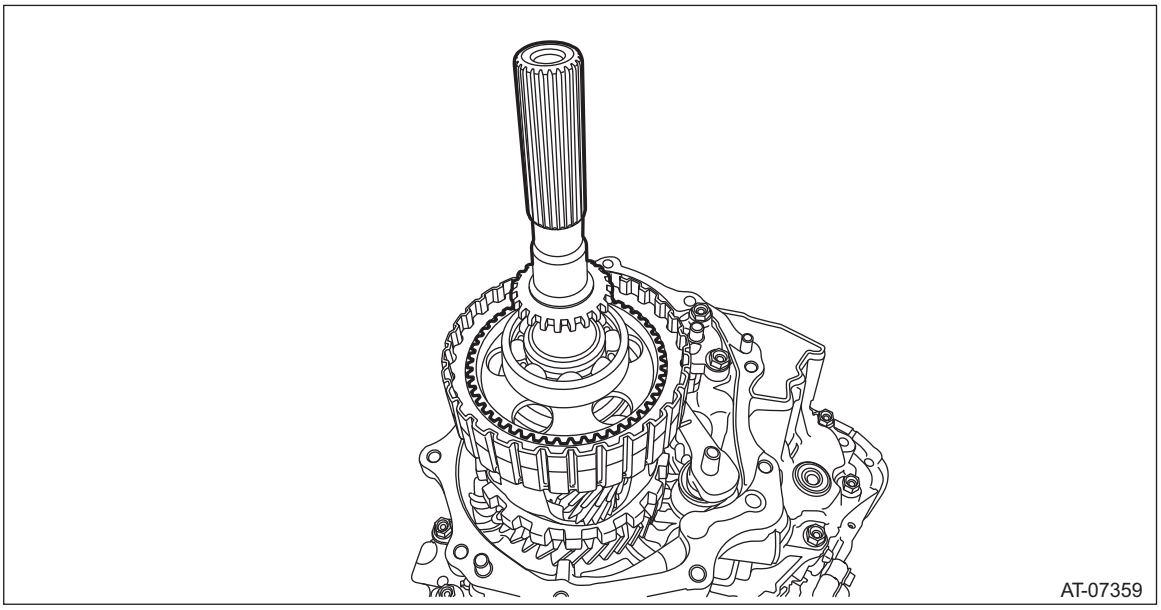
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft.



B: INSTALLATION

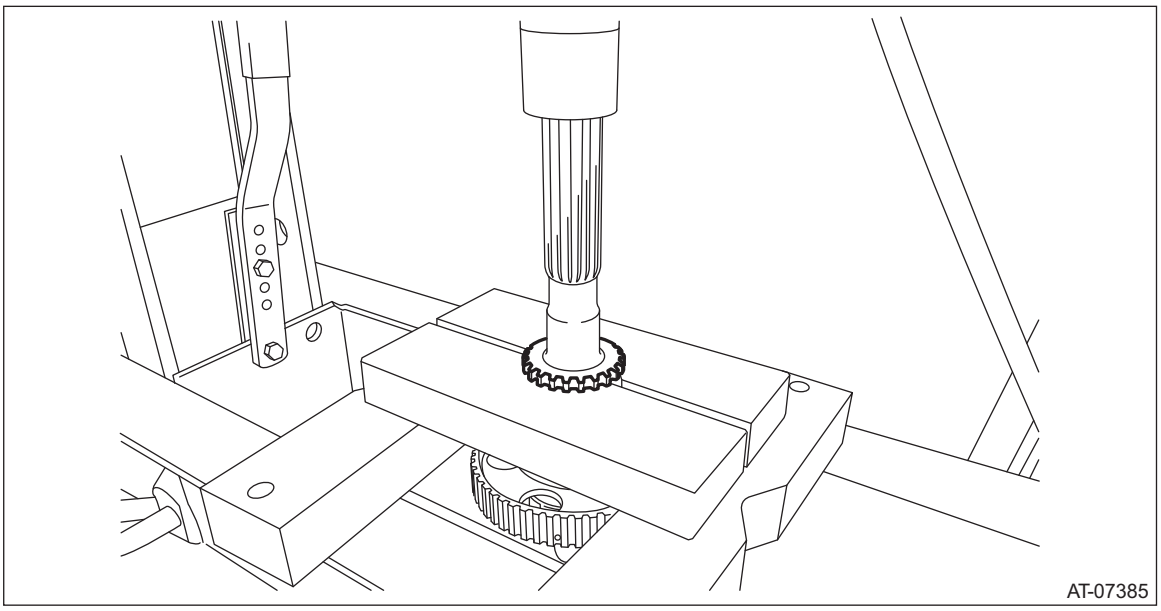
1) Install the rear drive shaft.



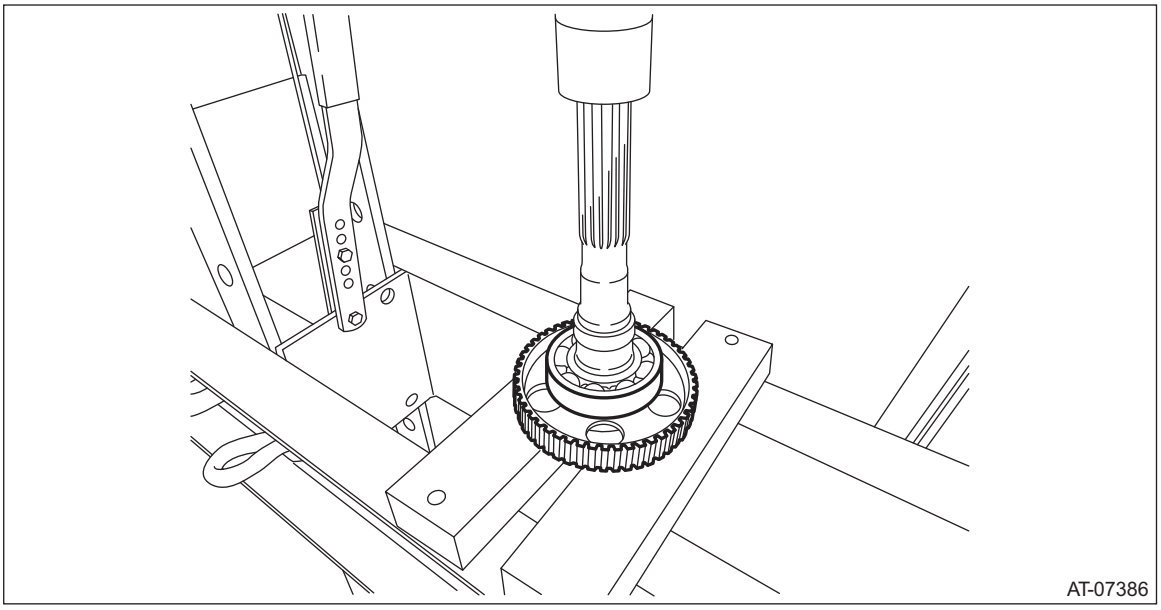
2) Select the rear drive shaft shim. <Ref. to CVT(TR690)-151, ADJUSTMENT, Rear Drive Shaft.>
3) Install the selected rear drive shaft shims to the rear drive shaft.
4) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
5) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Using a press, remove the revolution gear.



2) Using a press, remove the front and rear ball bearings and clutch hub.



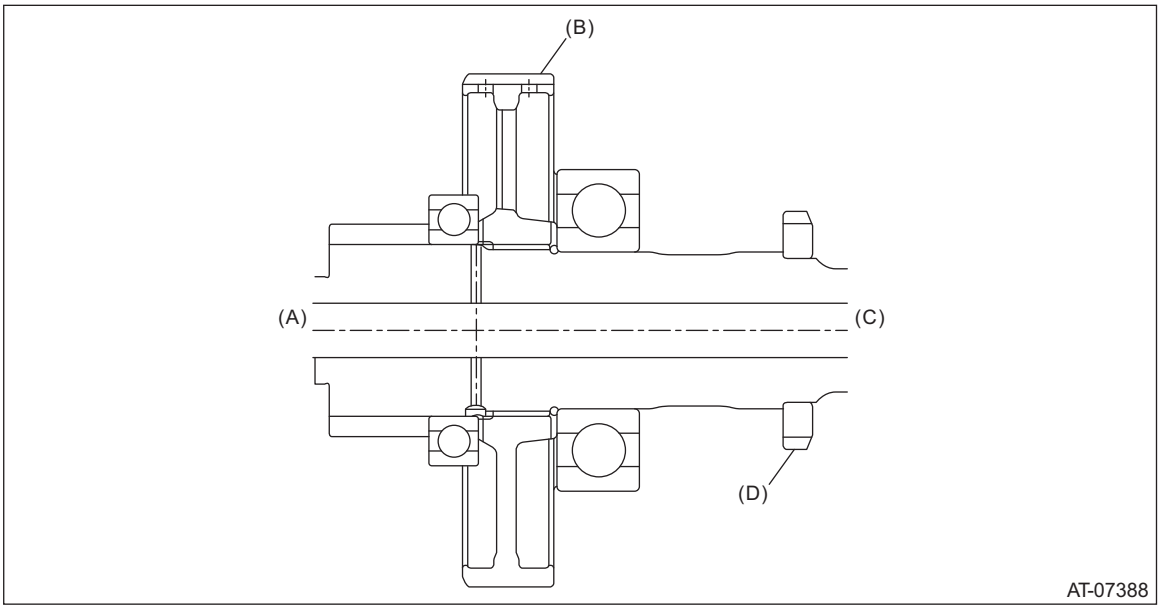
D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

- Use new ball bearings and revolution gear.
- Apply CVTF to press-fitting surface of ball bearing.

- Make sure of the direction of clutch hub.



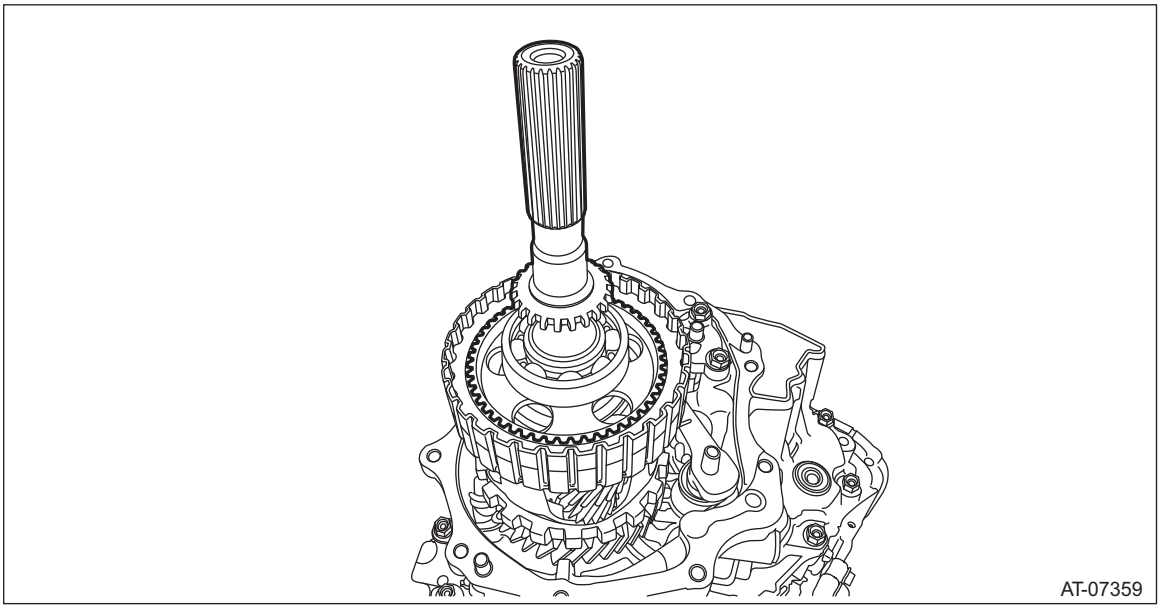
(A) Front side
(B) Clutch hub
(C) Rear side
(D) Revolution gear

E: INSPECTION

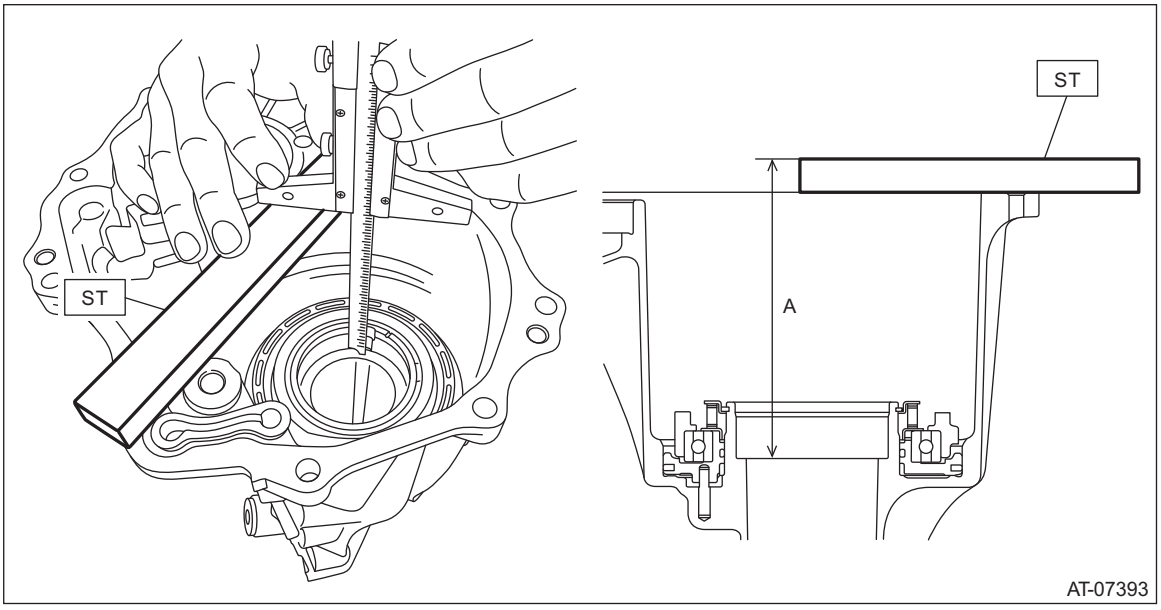
- Check each part for crack, damage or dust.
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Inspect axial play of the rear drive shaft.

F: ADJUSTMENT

NOTE:
When replacing the rear drive shaft or bearing, select the rear drive shaft shim.
1) Install the rear drive shaft.

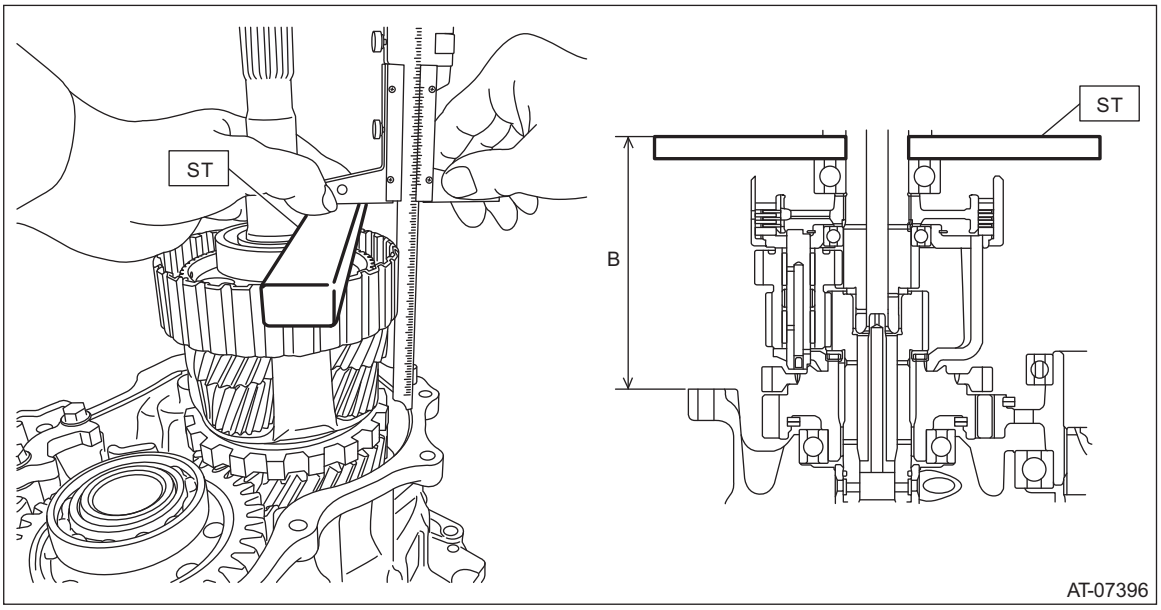


2) Using the ST, measure the depth “A” from the end surface of ST to the contact surface of ball bearing.
ST 499575400 GAUGE



3) Using the ST, measure the height “B” from the mating surface of intermediate case to the end surface of ST.

NOTE:
Set the ST so that it does not ride on the bearing inner race.
ST 499575400 GAUGE



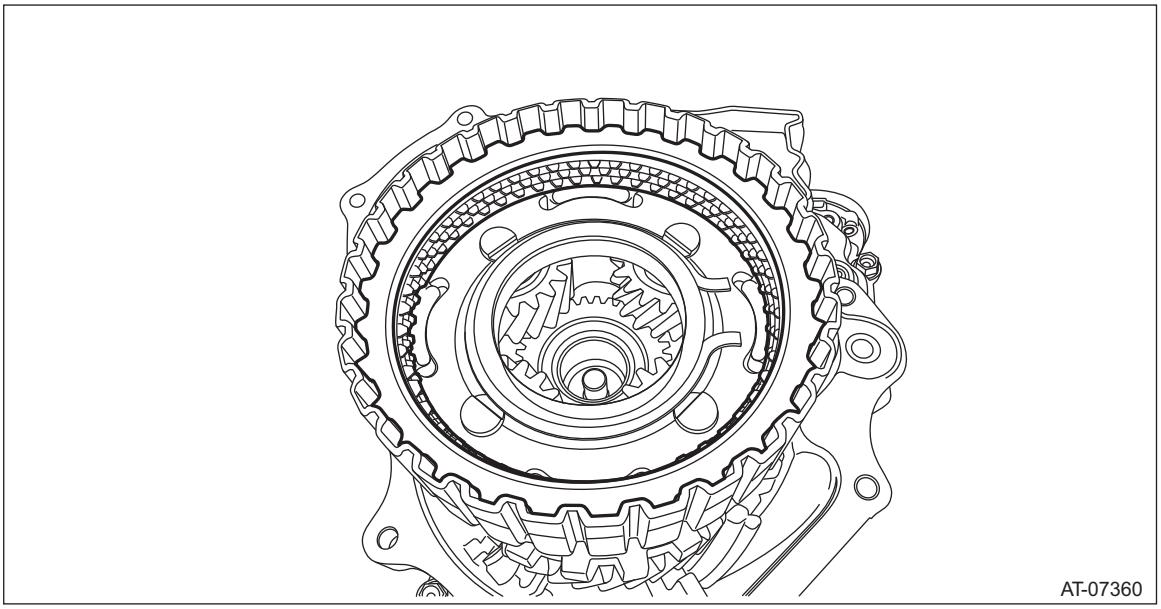
4) Obtain the thickness of rear drive shaft shim using the following formula to select none to four rear drive shaft shims.
T (mm) = A – B + 0.38 – (0.05 — 0.25)
[T (in) = A – B + 0.0149 – (0.002 — 0.01)]
T: Rear drive shaft shim thickness
A: Depth from the ST end surface to the ball bearing contact surface
B: Height from the mating surface of the intermediate case to the ST end face
0.38 mm (0.0149 in): Thickness of gasket
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

Rear drive shaft shim	
Part No.	Thickness mm (in)
33281AA040	0.2 (0.008)
33281AA050	0.5 (0.020)
33281AA060	0.3 (0.012)

30.Transfer Clutch

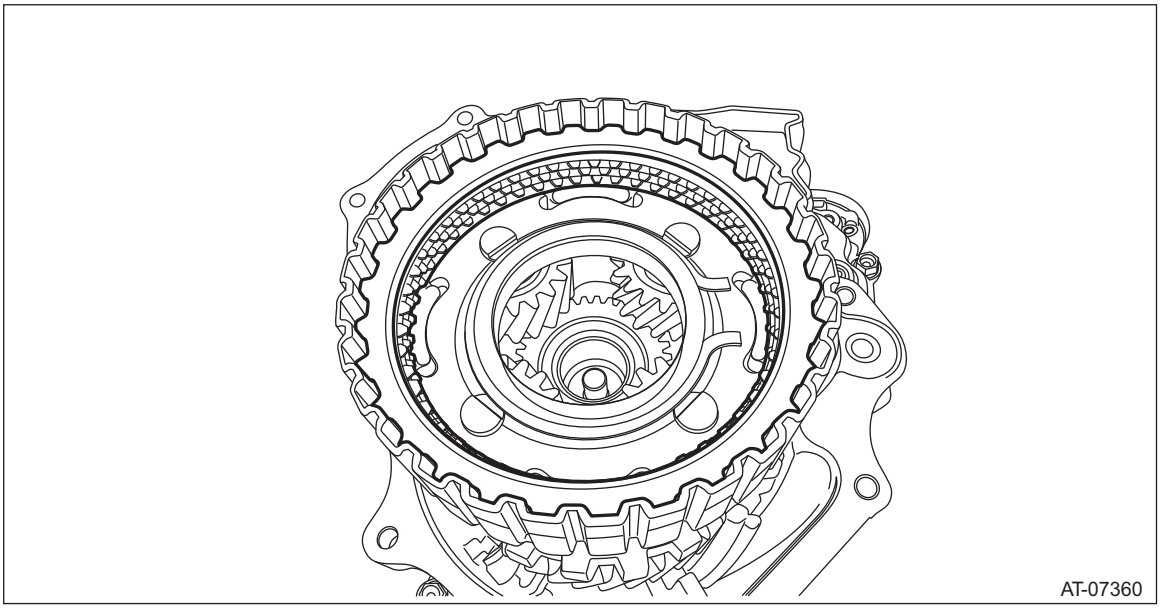
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly.



B: INSTALLATION

1) Install the transfer clutch assembly.



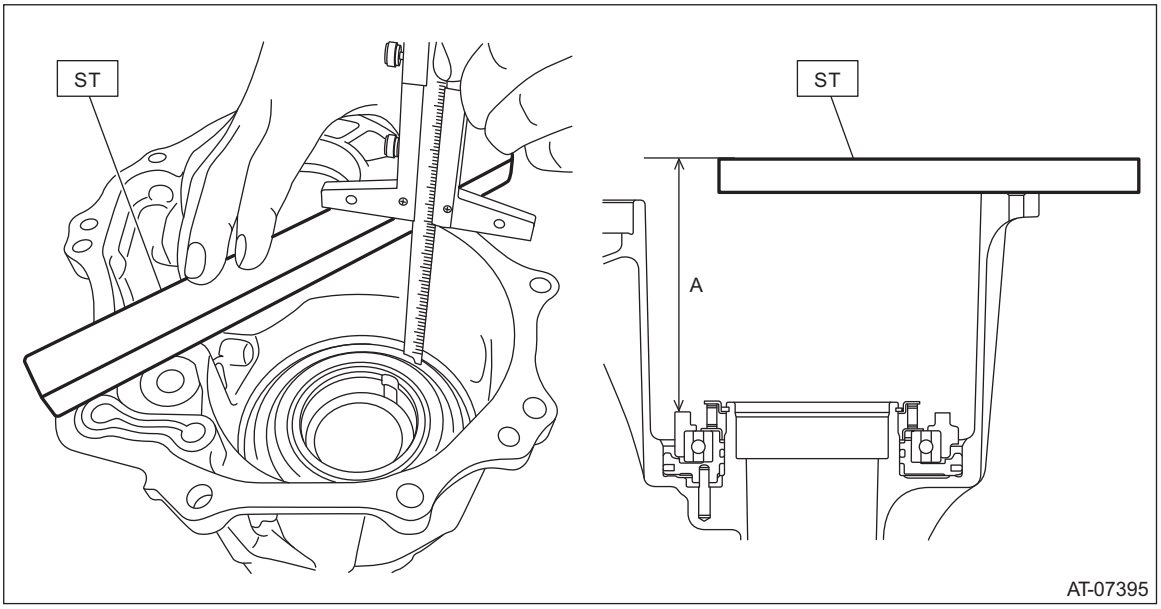
2) Select driven plate No. 3. <Ref. to CVT(TR690)-155, ADJUSTMENT, Transfer Clutch.>
3) Attach the selected driven plate No. 3 to the center differential assembly.
4) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
5) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
6) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

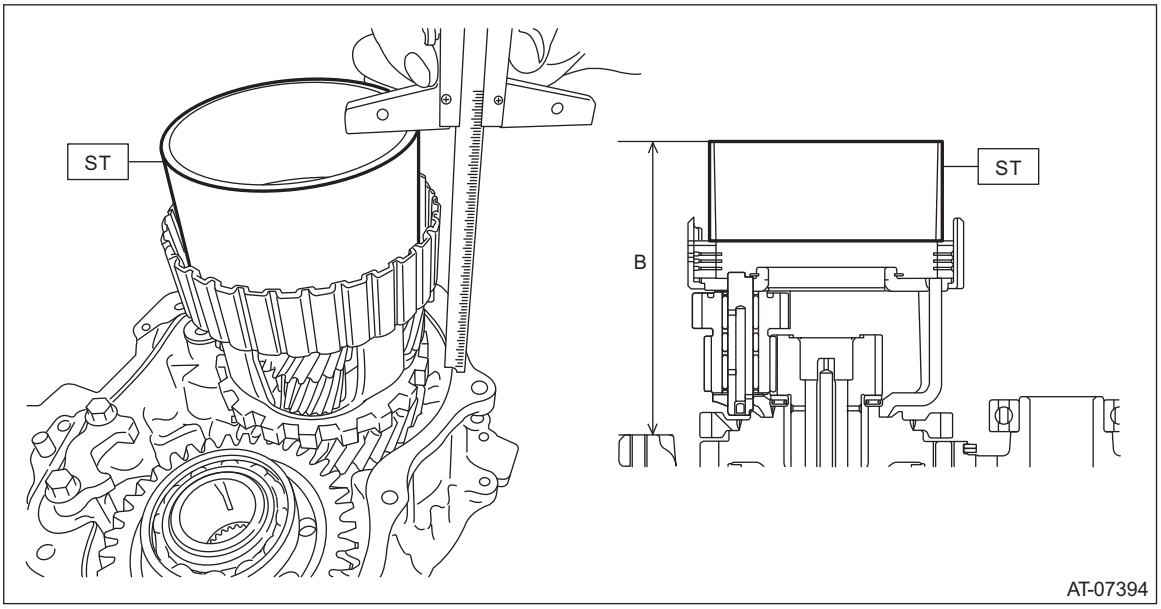
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Check the lip seal for damage.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-155, ADJUSTMENT, Transfer Clutch.>

D: ADJUSTMENT

1) Install the drive plate and driven plate to the center differential carrier.
2) Using the ST, measure depth “A” from the end surface of ST to the transfer clutch piston.
ST 499575400 GAUGE



3) Using the ST, measure the height “B” from the mating surface of intermediate case to the end surface of ST.
ST 398744300 PISTON GUIDE



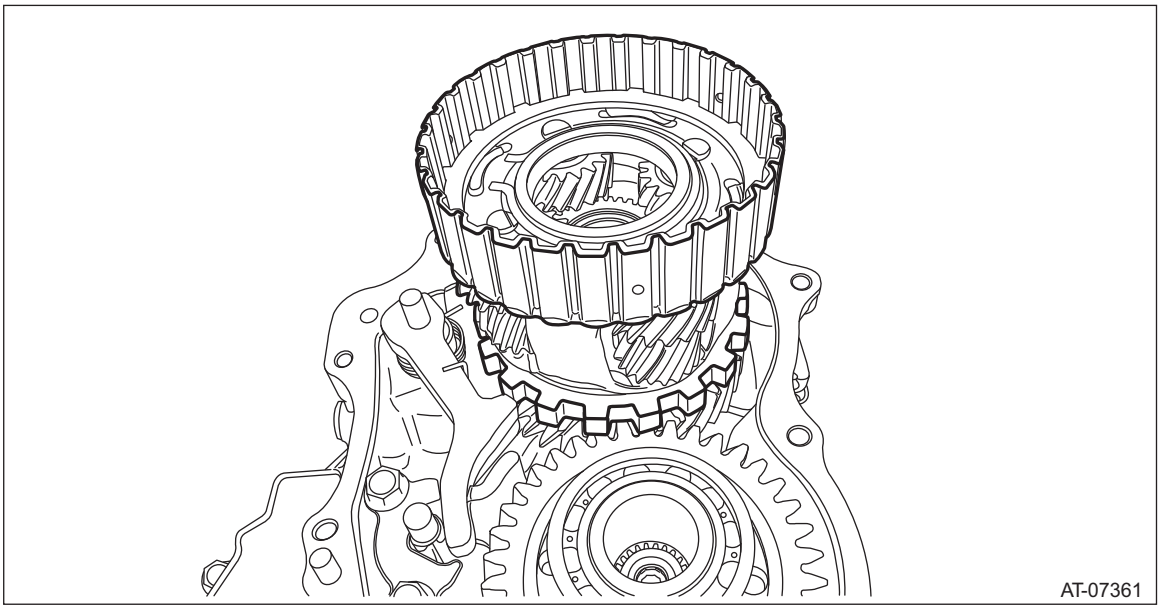
4) Obtain the thickness of driven plate No. 3 using the following formula to select one driven plate No. 3.
T mm = (A – 15) – (B – 50) + 0.38 – (0.2 — 0.6)
[T in = (A – 0.591) – (B – 1.97) + 0.0149 – (0.008 — 0.024)]
T: Rear drive shaft shim thickness
A: Depth from the ST end surface to the transfer clutch piston
B: Height from the mating surface of the intermediate case to the ST end face
0.38 mm (0.0149 in): Thickness of gasket
15 mm (0.591 in): Thickness of ST
50 mm (1.97 in): Thickness of ST
0.2 — 0.6 mm (0.008 — 0.024 in): Clearance

Driven plate No. 3	
Part No.	Thickness mm (in)
31589AA150	1.6 (0.063)
31589AA160	2.0 (0.079)
31589AA170	2.4 (0.094)
31589AA180	2.8 (0.110)

31.Center Differential Carrier

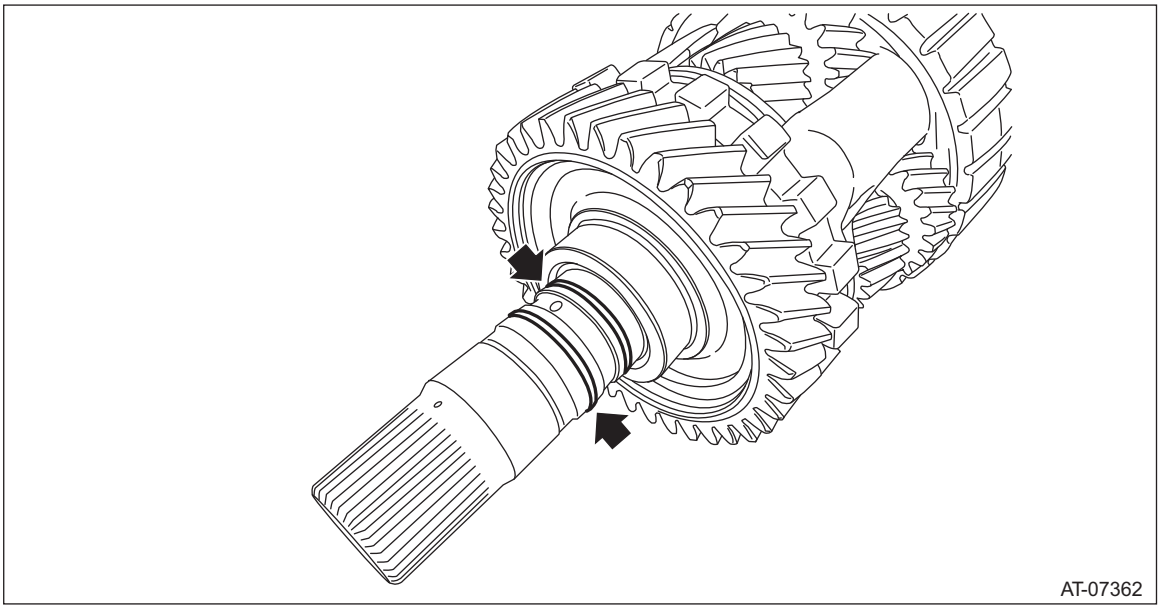
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier assembly.



AT-07361

6) Remove the seal rings.



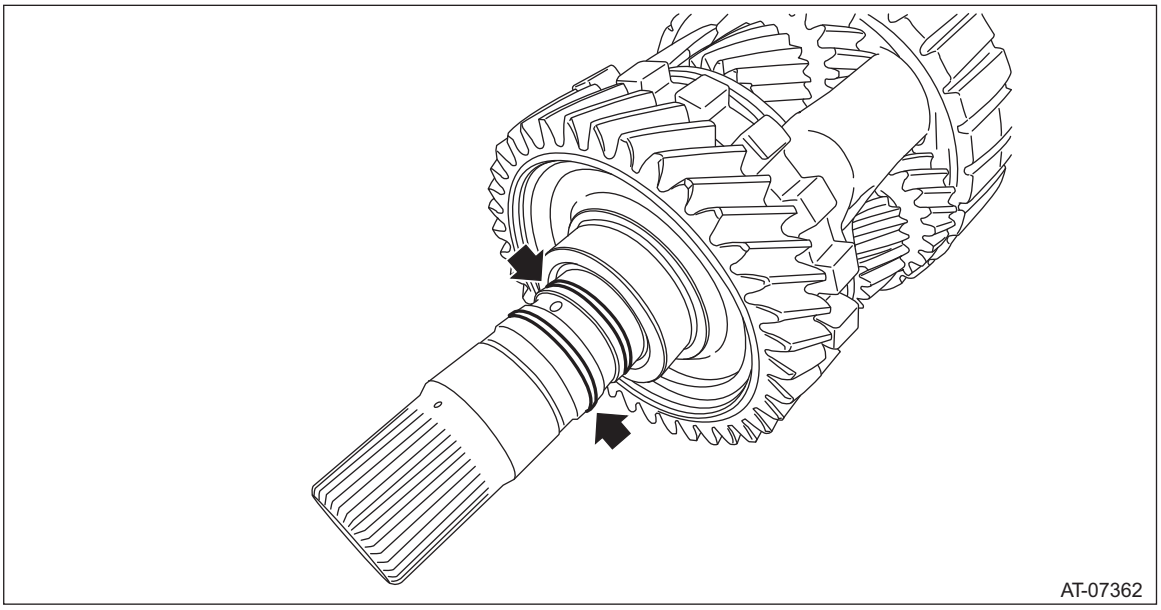
AT-07362

B: INSTALLATION

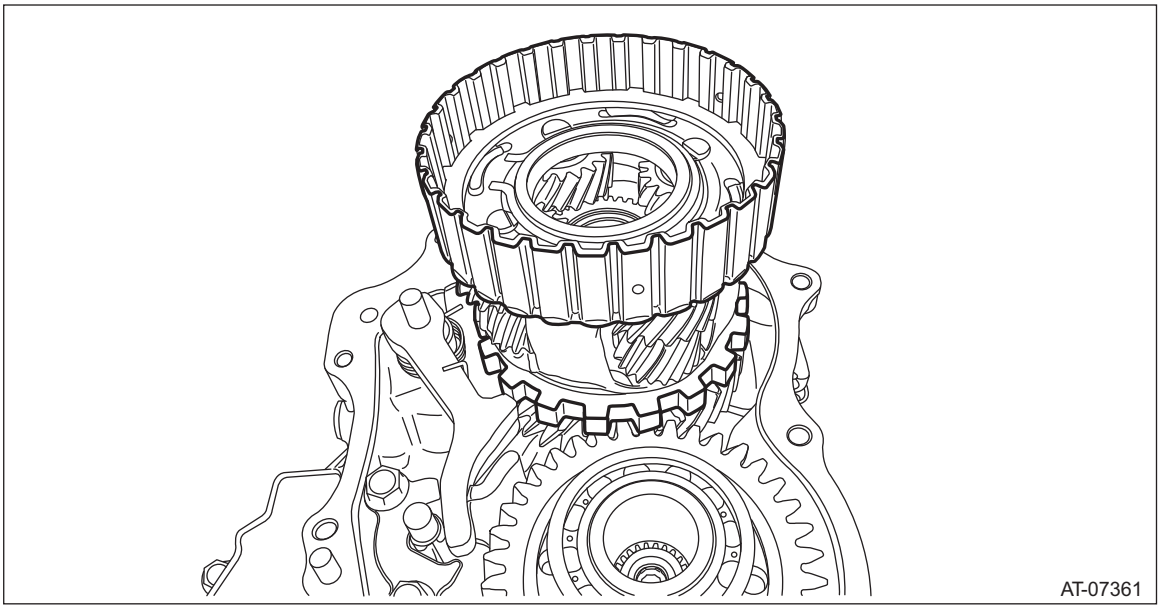
1) Install the seal rings.

NOTE:
- Use new seal rings.
- Do not stretch the seal ring excessively.

- Apply CVTF after installation.



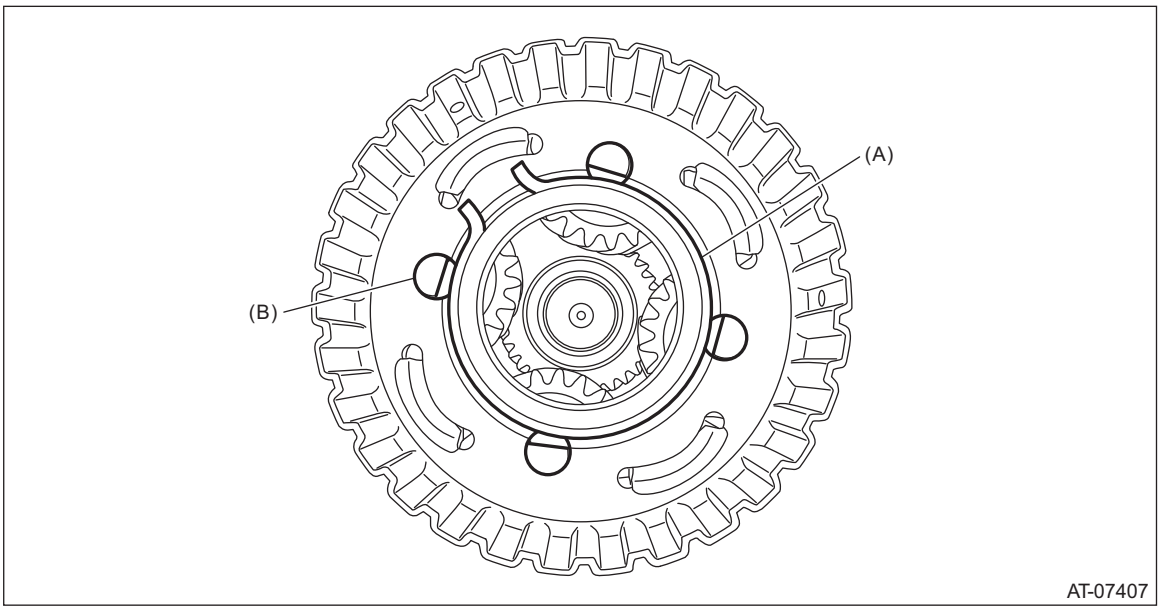
2) Install the center differential assembly.



3) Install the transfer clutch. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
4) Select driven plate No. 3 to replace. <Ref. to CVT(TR690)-155, ADJUSTMENT, Transfer Clutch.>
5) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
6) Select the rear drive shaft shim. <Ref. to CVT(TR690)-151, ADJUSTMENT, Rear Drive Shaft.>
7) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
8) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

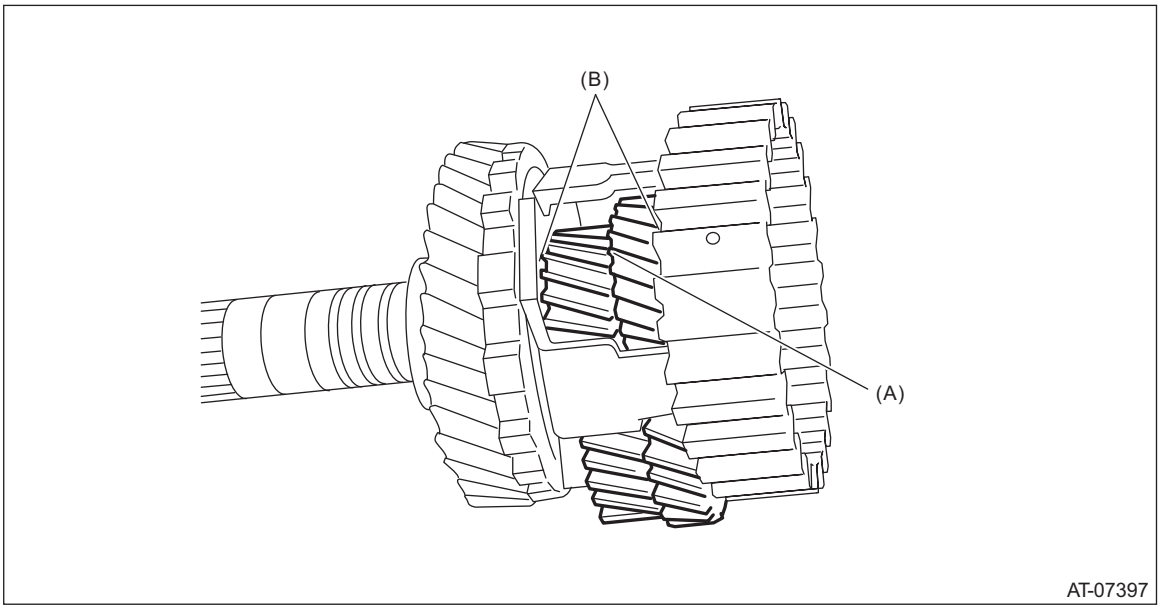
C: DISASSEMBLY

1) Remove the snap ring, and pull out the pinion shaft from center differential assembly.



(A) Snap ring
(B) Pinion shaft

2) Remove the pinion gear and washers from center differential assembly.



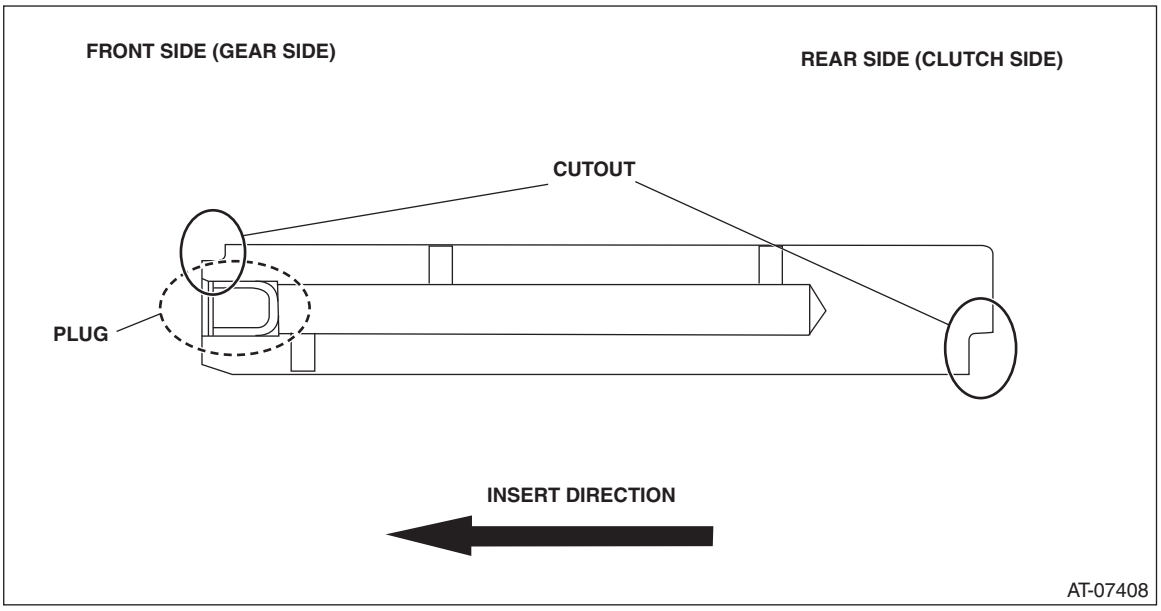
(A) Pinion gear
(B) Washer

3) Remove the intermediate shaft and thrust bearing.

D: ASSEMBLY

1) Install the thrust bearing onto intermediate shaft.
2) Insert the intermediate shaft into the center differential assembly.
3) Install the pinion gears and washers.
4) Insert the pinion shaft into the center differential assembly.

NOTE:
- Insert the pinion shaft with the side with the plug side facing the front side (gear side).
- After inserting the pinion shaft, adjust its position so that the cutout portion on the front side is on the inner side.



5) Install the snap ring.

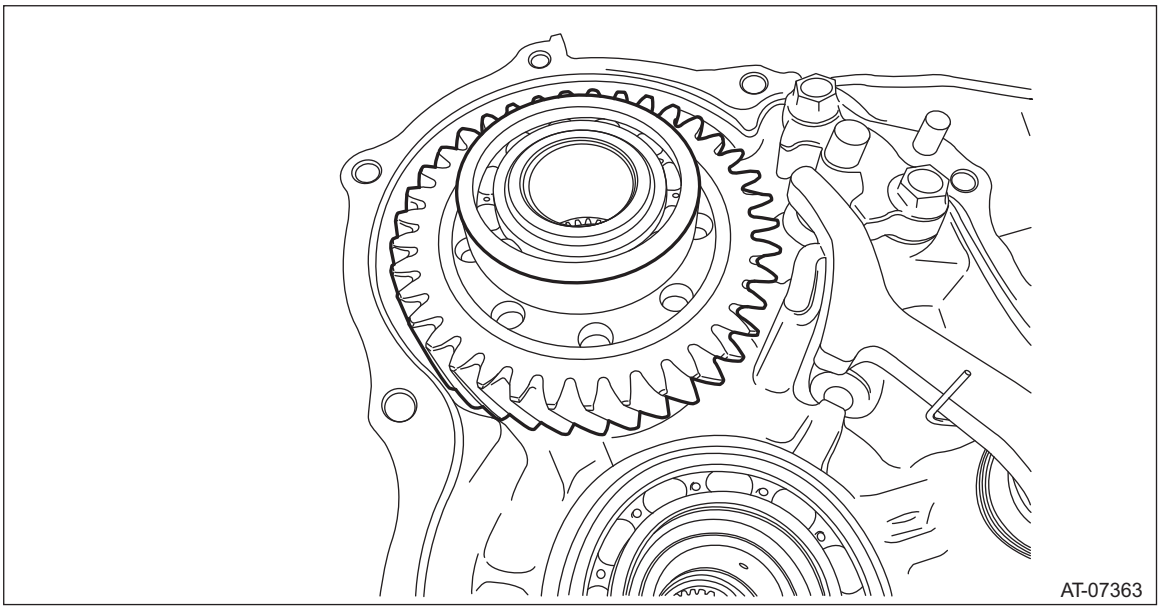
E: INSPECTION

- Check each part for crack, damage, wear or dust.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to CVT(TR690)-155, ADJUSTMENT, Transfer Clutch.>

32.Transfer Reduction Driven Gear

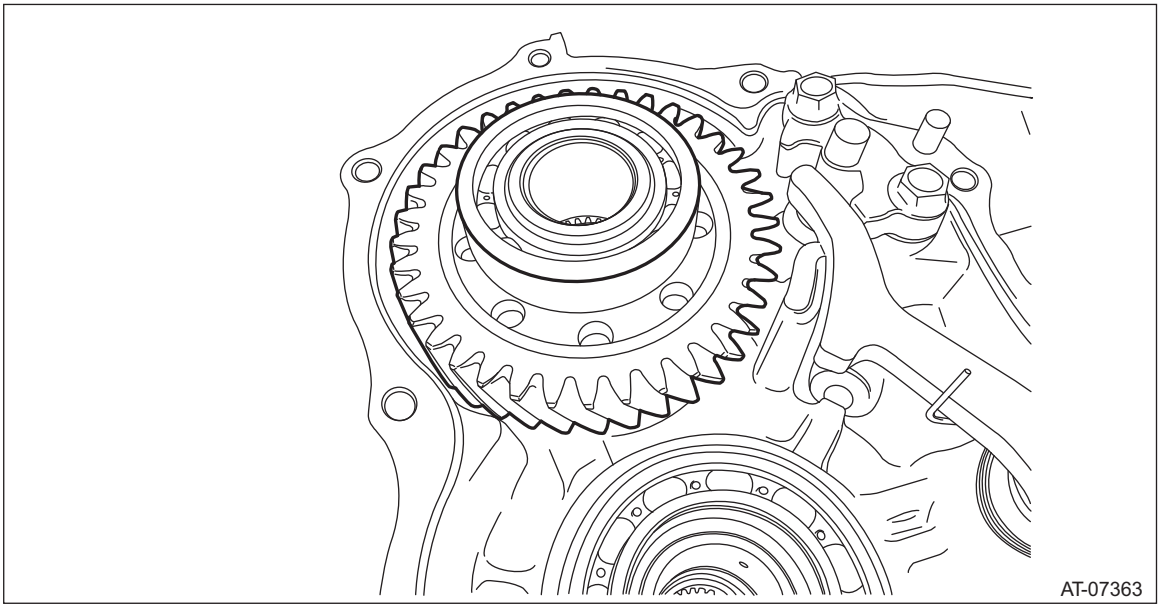
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear assembly.



B: INSTALLATION

1) Install the reduction driven gear assembly.

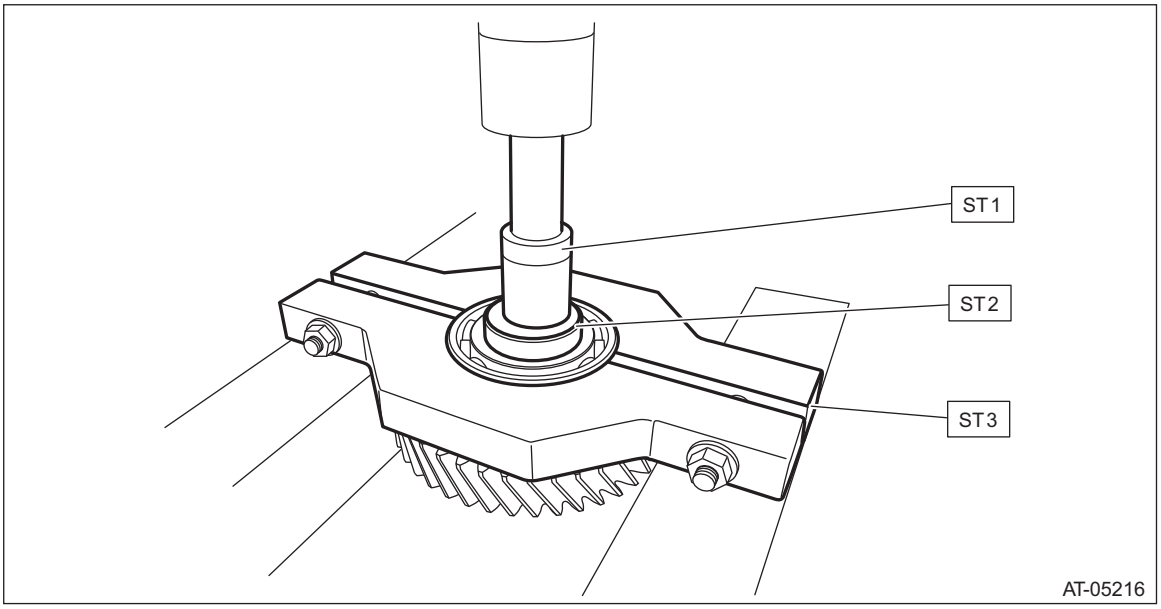


2) Select shims. <Ref. to CVT(TR690)-164, ADJUSTMENT, Transfer Reduction Driven Gear.>
3) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
4) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
5) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>

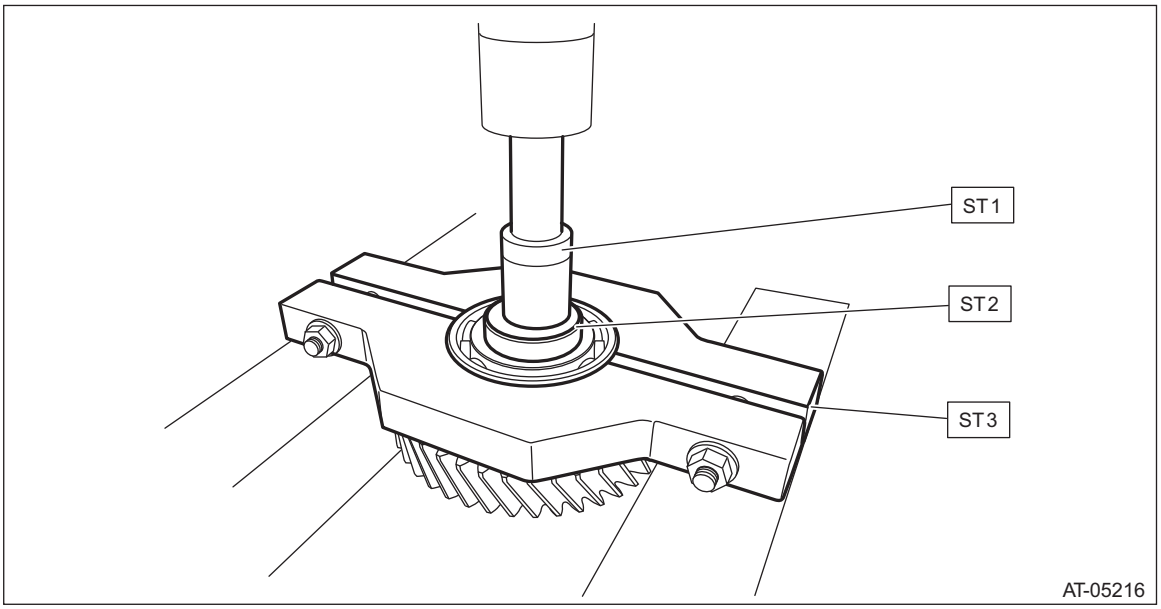
6) Mount the selected shim onto ball bearing.
7) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
8) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the snap ring from transfer reduction driven gear.
2) Using the ST, remove the ball bearing (large) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER



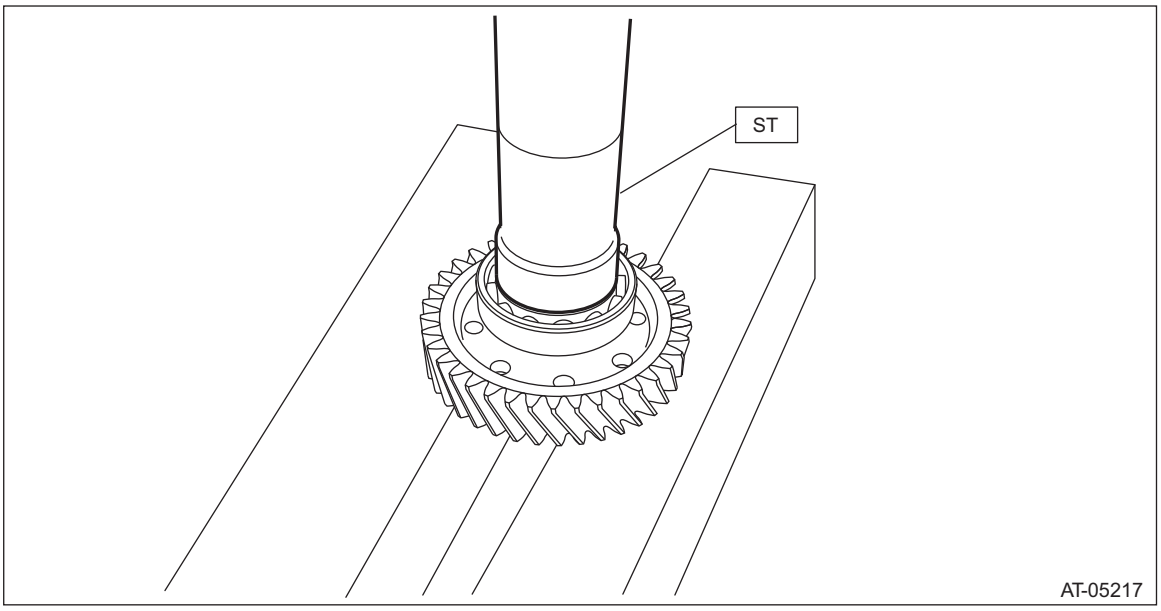
3) Using the ST, remove the ball bearing (small) from transfer reduction driven gear.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18720AA000 REMOVER



D: ASSEMBLY

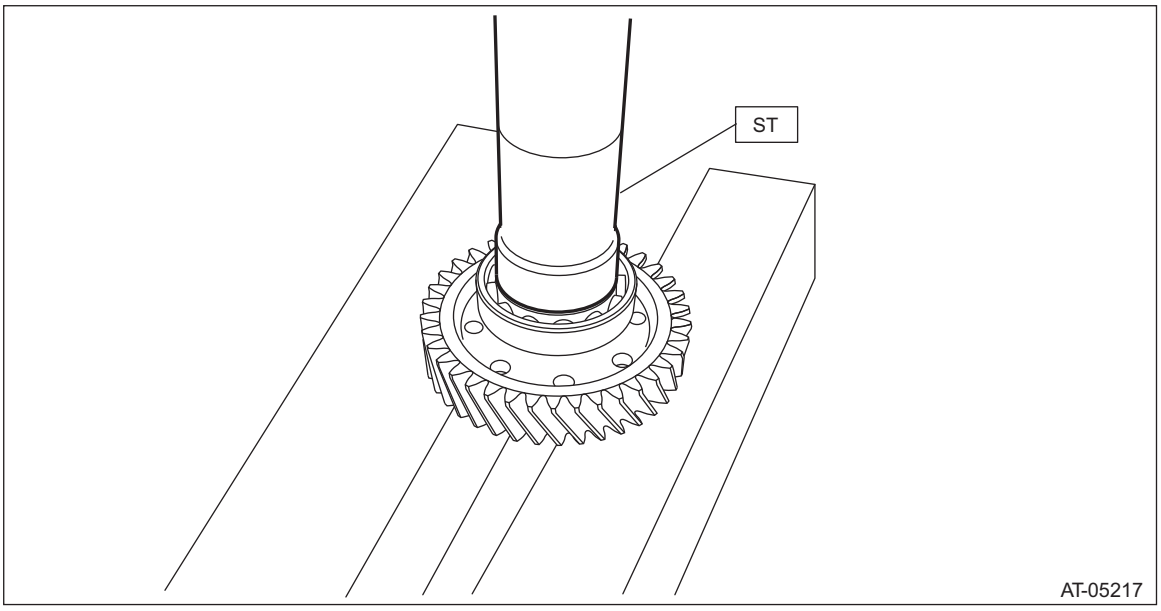
1) Install the new ball bearing (large) to reduction driven gear using the ST.
ST 499277100 BUSHING 1-2 INSTALLER

NOTE:
- Use a new ball bearing.
- Install to the splines inside transfer reduction driven gear shaft.



2) Install the new ball bearing (small) to reduction driven gear.

NOTE:
Use a new ball bearing.
ST 499277100 BUSHING 1-2 INSTALLER



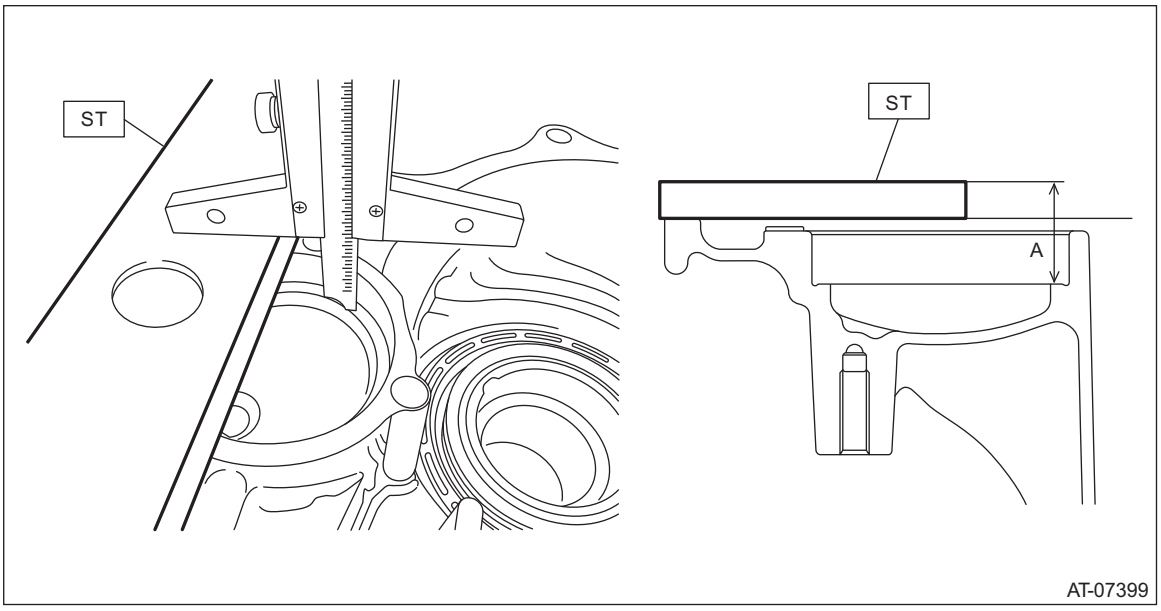
3) Install the snap ring to the transfer reduction driven gear.

E: INSPECTION

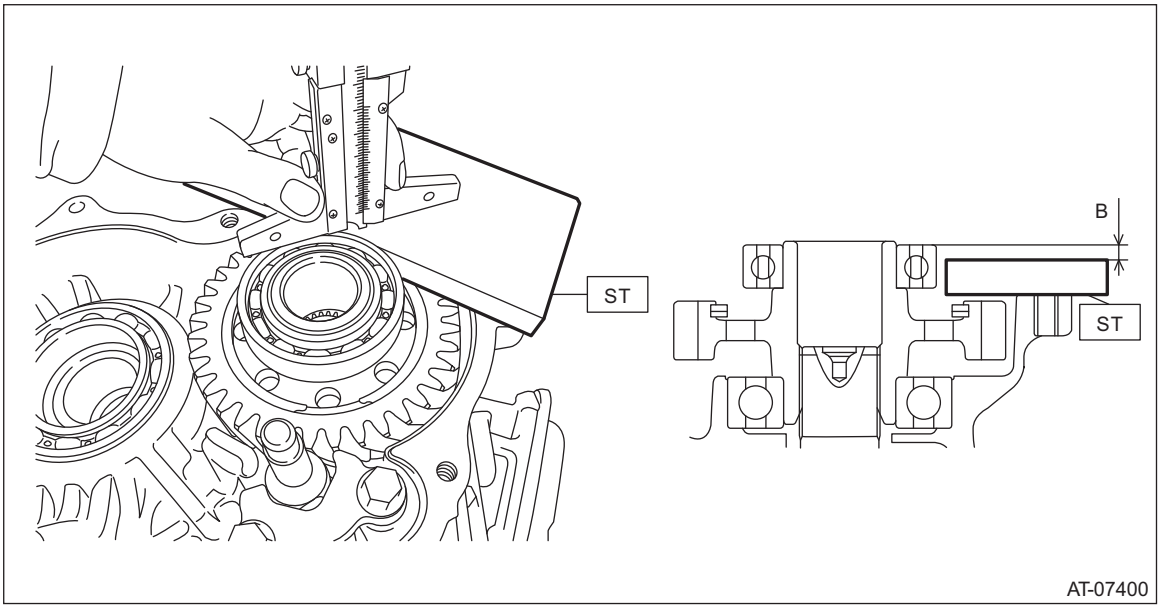
- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Make sure the gear is not broken or damaged.

F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the ball bearing catch surface.
ST 398643600 GAUGE



2) Measure height “B” from the ST to the end of the ball bearing outer ring.
ST 398643600 GAUGE



3) Obtain the thickness of shim using the following formula to select one to three shims.
T mm = (A – 15) – (B + 15) + 0.38 – (0.05 — 0.25)
[T in = (A – 0.591) – (B + 0.591) + 0.0149 – (0.002 — 0.01)]
T: Shim thickness
A: Depth from the ST upper face to the ball bearing catch surface
B: Height from the ST to the end of the ball bearing outer ring
0.38 mm (0.0149 in): Thickness of gasket
15 mm (0.591 in): Thickness of ST
0.05 — 0.25 mm (0.002 — 0.01 in): Clearance

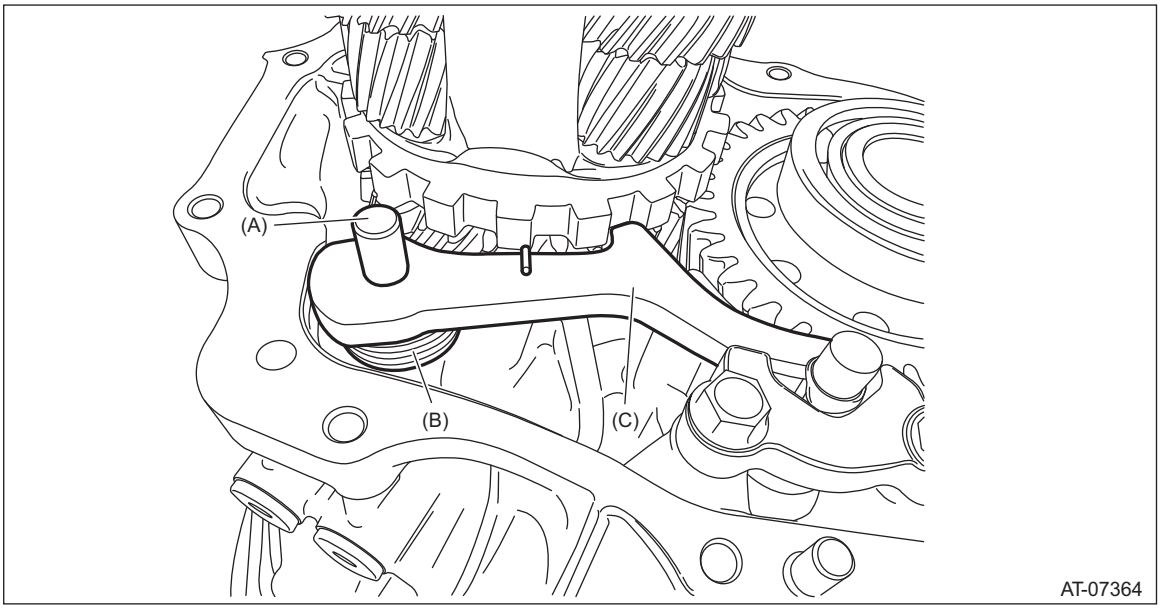
Shim	
Part No.	Thickness mm (in)
31288AA190	0.2 (0.008)

Shim	
Part No.	Thickness mm (in)
31288AA200	0.3 (0.012)
31288AA210	0.5 (0.02)

33.Parking Pawl

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Shift the range select lever to “N” range.
3) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
4) Remove the parking pawl shaft, return spring and parking pawl.

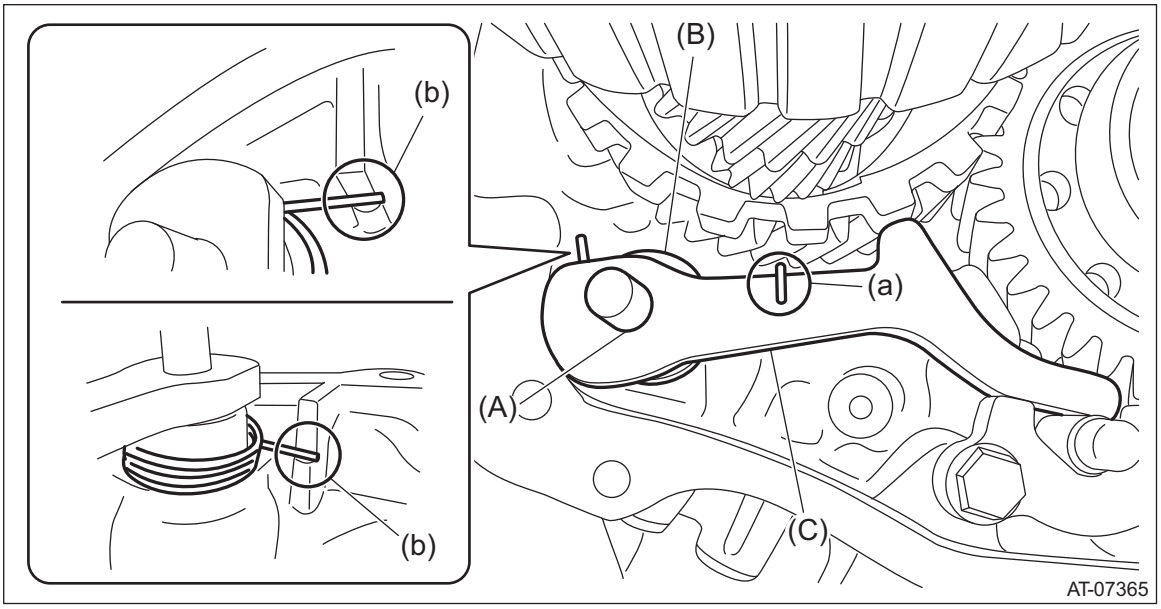


(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

B: INSTALLATION

1) Set the range select lever to the “N” range.
2) Install the parking pawl shaft, return spring and parking pawl.

NOTE:
Make sure that the end of return spring sticks out of parking pawl as shown in (a). Make sure that the other end contacts the rib of intermediate case as shown in (b).



(A) Parking pawl shaft
(B) Return spring
(C) Parking pawl

3) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
4) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

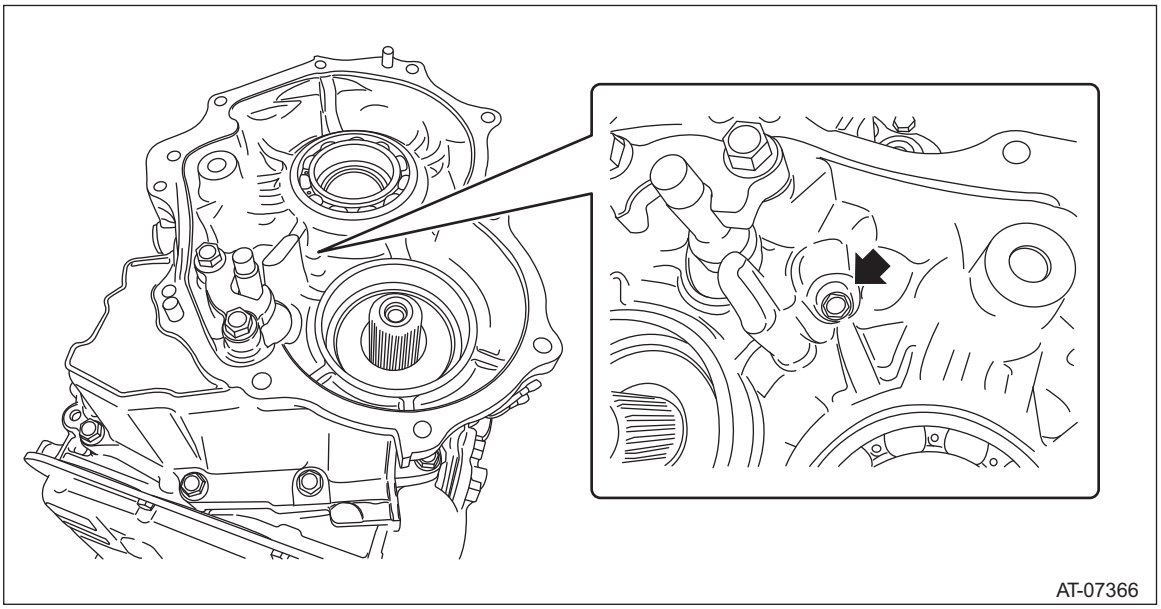
- Check the parking pawl for breakage or damage.
- Check the return spring for fatigue.

34.Intermediate Case

A: REMOVAL

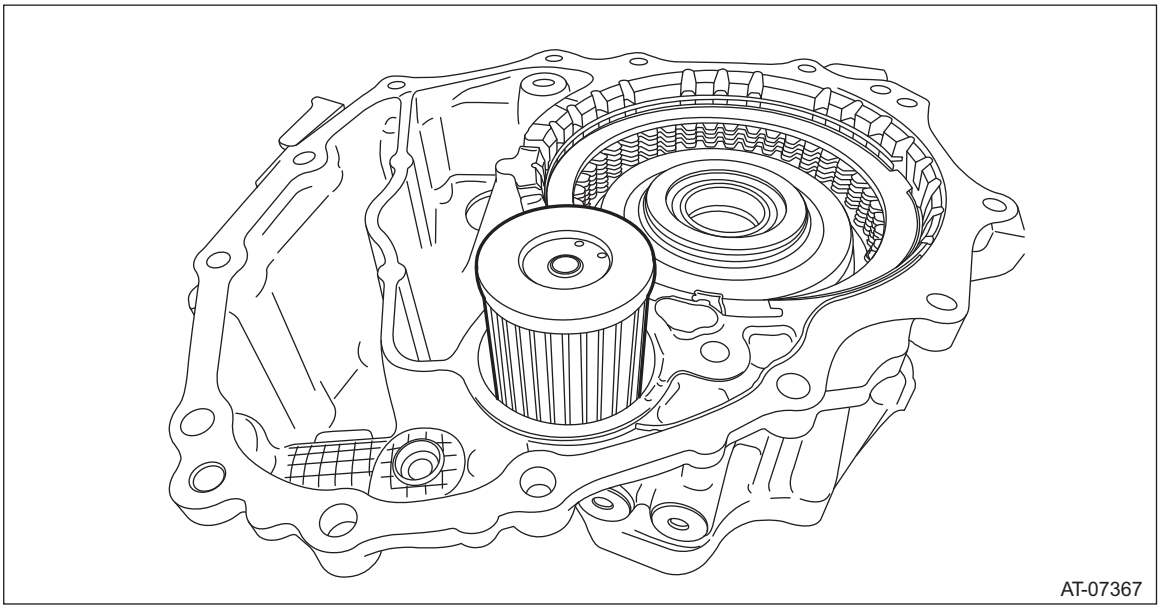
1) Remove the transmission assembly from vehicle body. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the parking pawl. <Ref. to CVT(TR690)-166, REMOVAL, Parking Pawl.>
4) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
5) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
6) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
7) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
8) Remove the intermediate case.

NOTE:
- The total number of intermediate case mounting bolts is 14.
- Inside the transmission is a single bolt (arrowed).



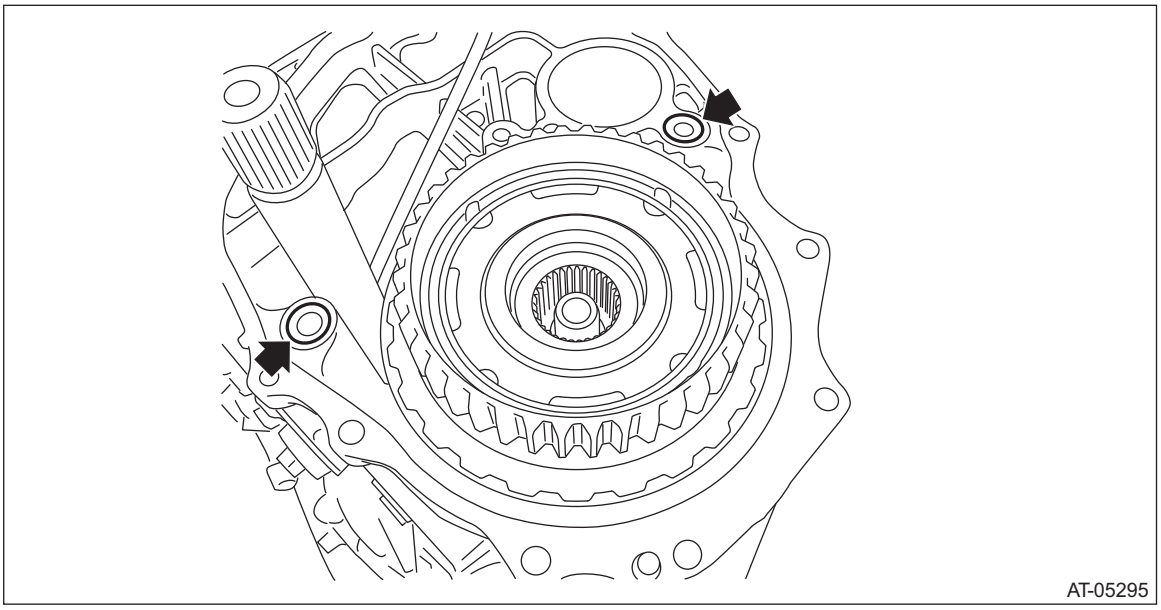
AT-07366

9) Remove the CVTF filter.



AT-07367

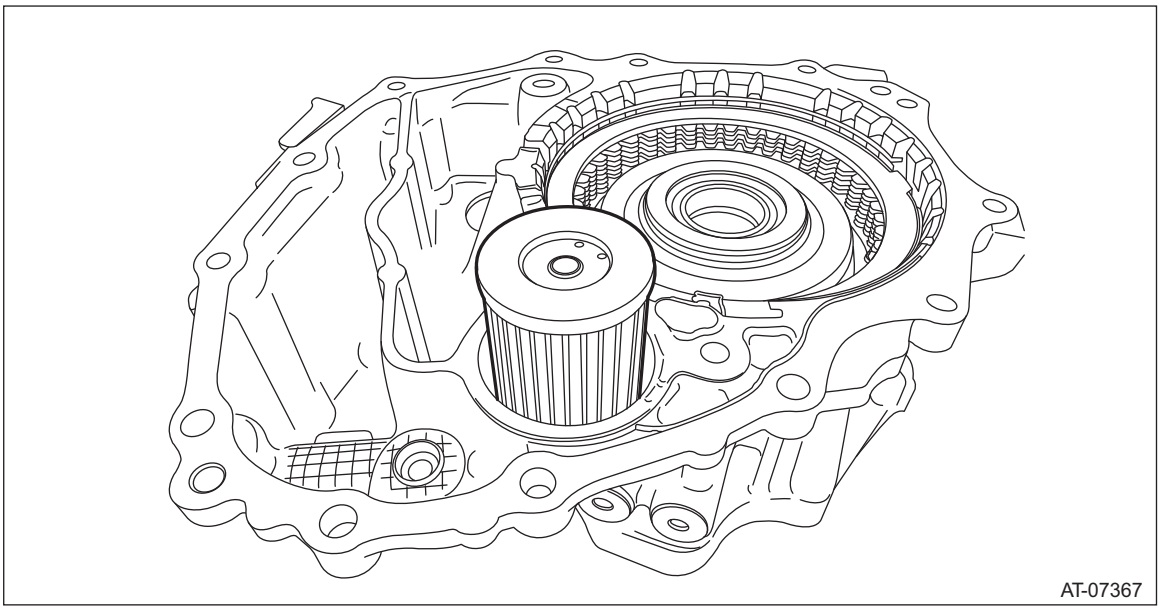
10) Remove the O-ring from the transmission case.



B: INSTALLATION

1) Clean the mating surface of intermediate case and transmission case.
2) Face the O-ring side of the CVTF filter to the intermediate case side, and install the CVTF filter.

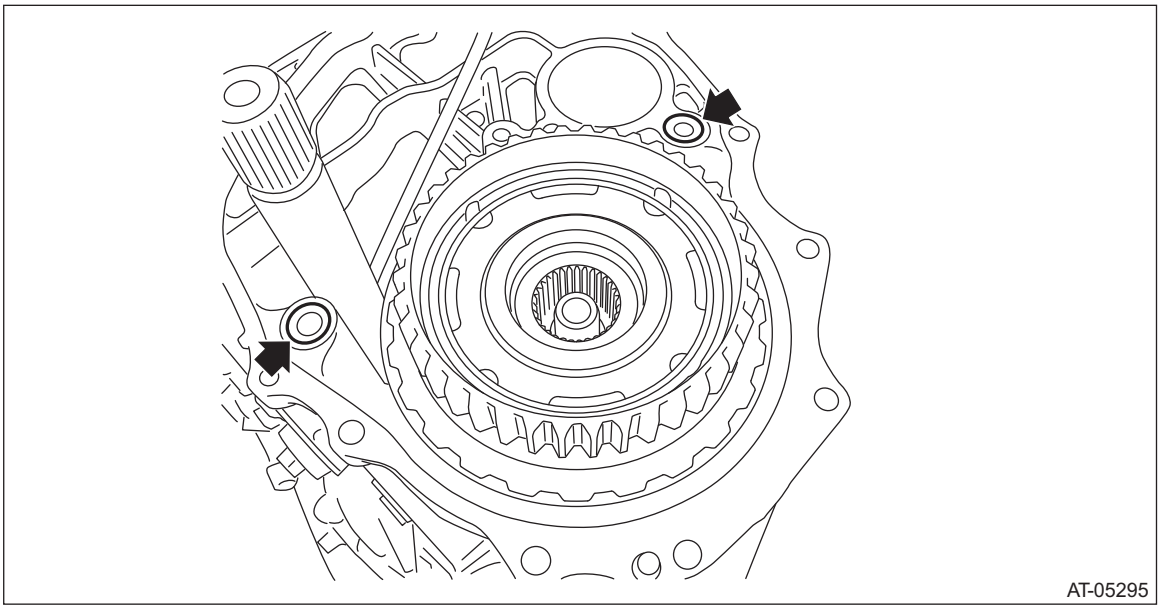
NOTE:
Apply CVTF to the O-rings.



3) Install the O-ring to the transmission case.

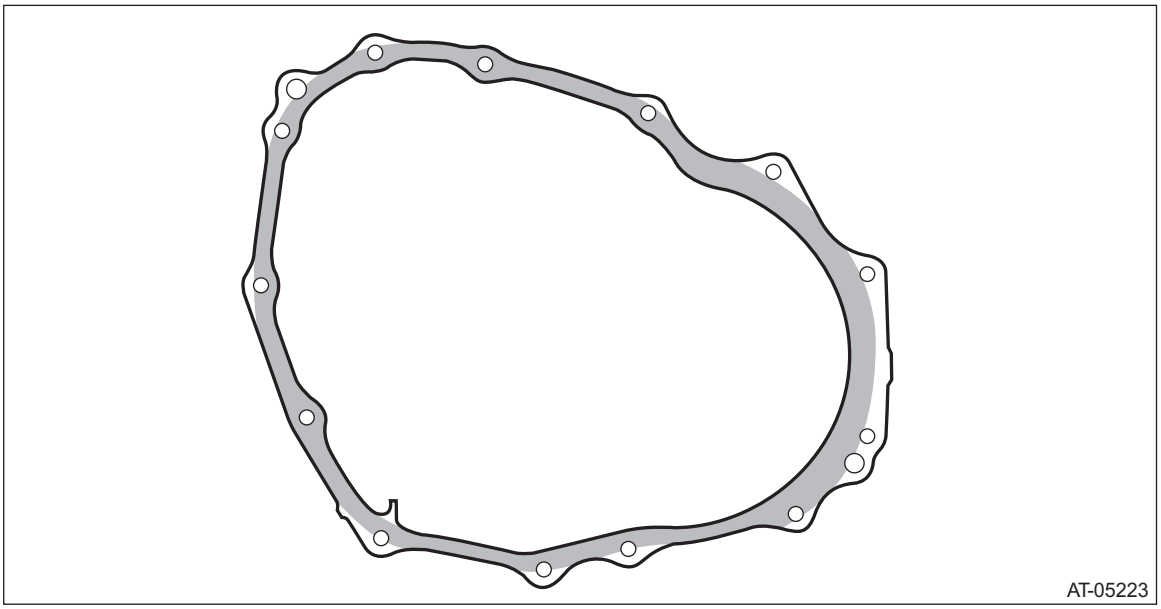
NOTE:
- Use new O-rings.

- Apply CVTF to the O-rings.



4) Apply liquid gasket to intermediate case seamlessly.

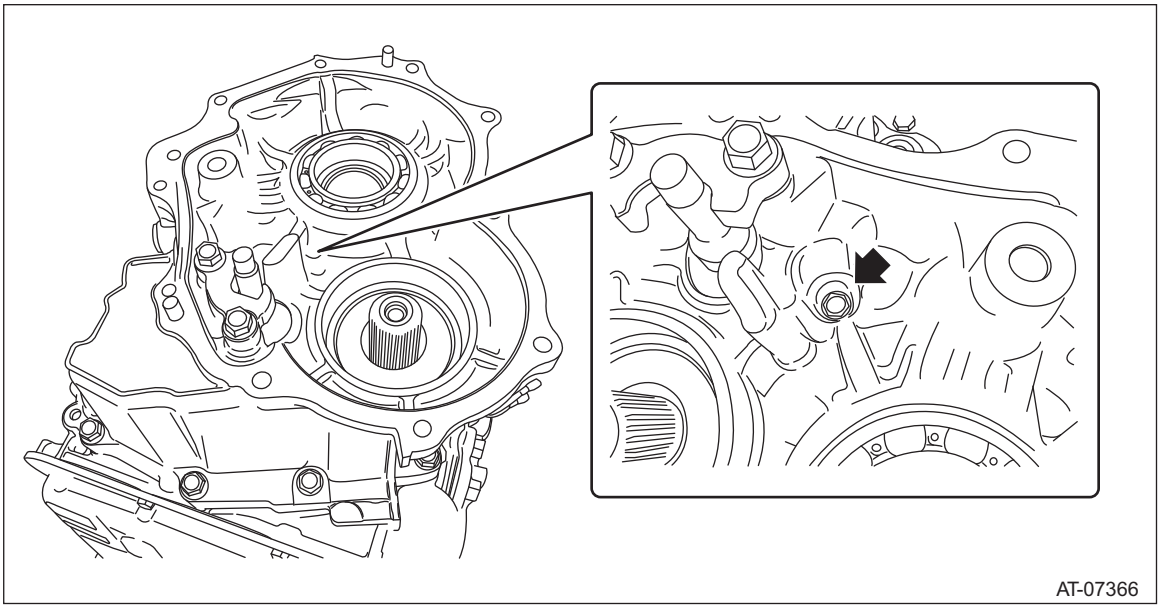
Liquid gasket:
THREE BOND 1215B or equivalent



5) Install the intermediate case and the transmission hanger to the transmission case.

NOTE:
Make sure to install the arrowed bolt.

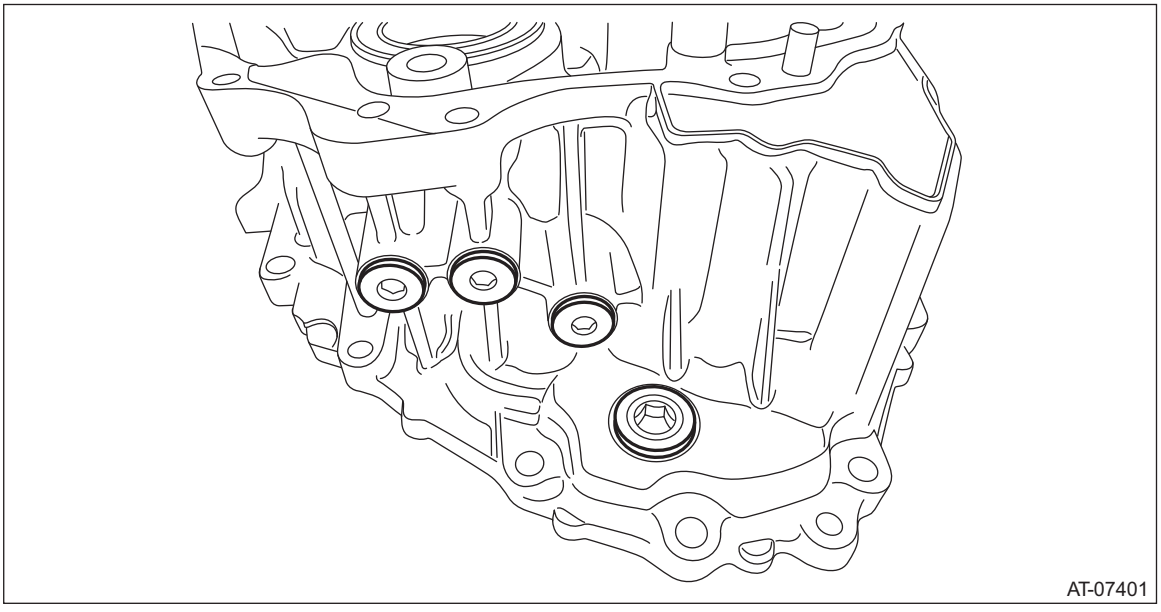
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
10) Install the parking pawl. <Ref. to CVT(TR690)-166, INSTALLATION, Parking Pawl.>
11) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
12) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the parking support.
2) Remove the CVTF filler plug.
3) Remove all plugs from intermediate case.



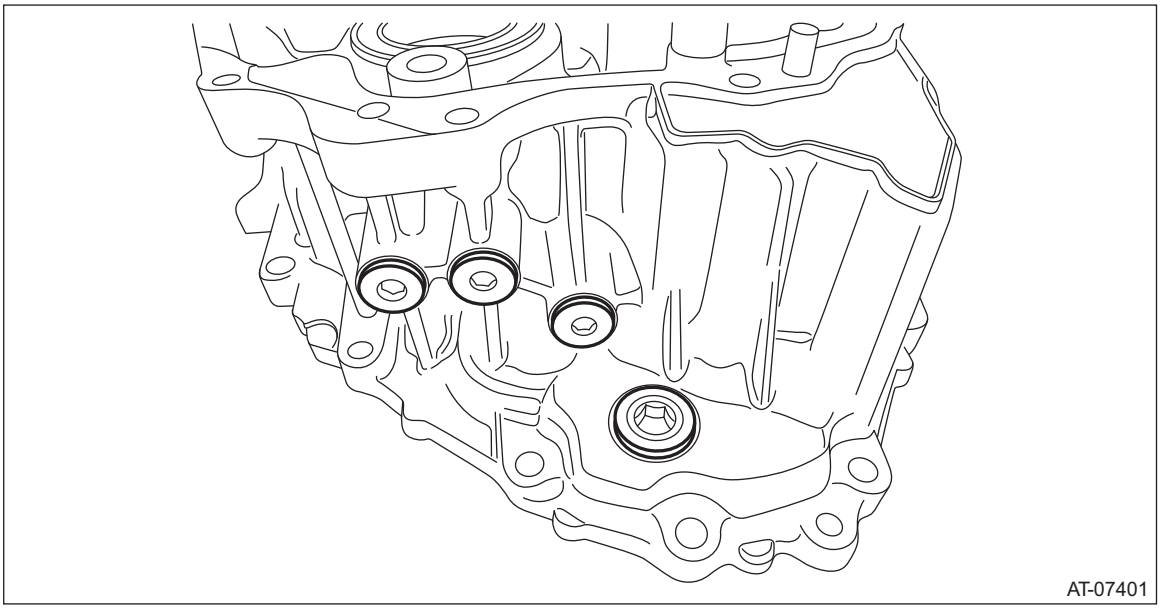
4) Remove the reverse brake assembly. <Ref. to CVT(TR690)-174, DISASSEMBLY, Reverse Brake Assembly.>

D: ASSEMBLY

1) Install the reverse brake. <Ref. to CVT(TR690)-177, ASSEMBLY, Reverse Brake Assembly.>
2) install all plugs to intermediate case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Use new O-rings.



3) Install the parking support.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Temporarily install the CVTF filler plug.

NOTE:
Replace the gasket of CVTF filler plug with a new part after installing the transmission assembly to vehicle and adjusting CVTF fluid.

E: INSPECTION

- Check the intermediate case for fissures, cracks or damage.
- Check for leakage of CVTF from the connections between intermediate case and transmission case, and between intermediate case and extension case.

35.CVTF Filter

A: REMOVAL

NOTE:
• Although CVTF filter is a maintenance-free part, replace it if a large quantity of wear debris and metal particles are found in CVTF and CVTF filter.
• For removal of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>

B: INSTALLATION

NOTE:
For installation of CVTF filter, refer to “Intermediate Case”. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>

C: INSPECTION

- Check if a large quantity of wear debris or metal particles are in CVTF and CVTF filter.
- Check for broken part or damaged O-ring.

36.Reverse Brake Assembly

A: REMOVAL

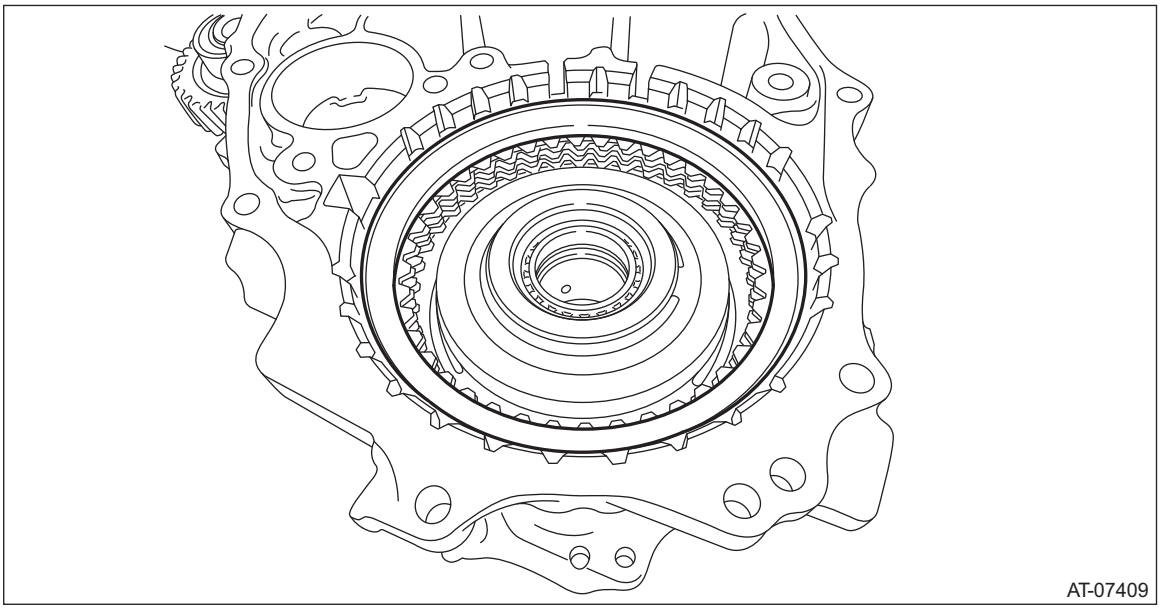
NOTE:
For removal of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>

B: INSTALLATION

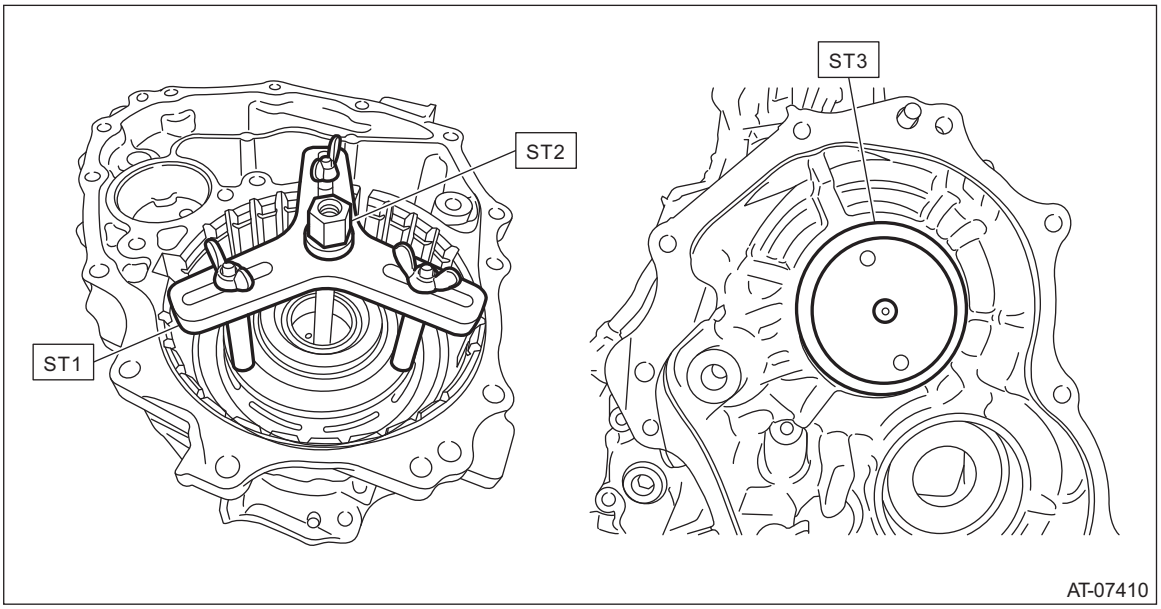
NOTE:
For installation of reverse brake assembly, refer to “Intermediate Case”. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>

C: DISASSEMBLY

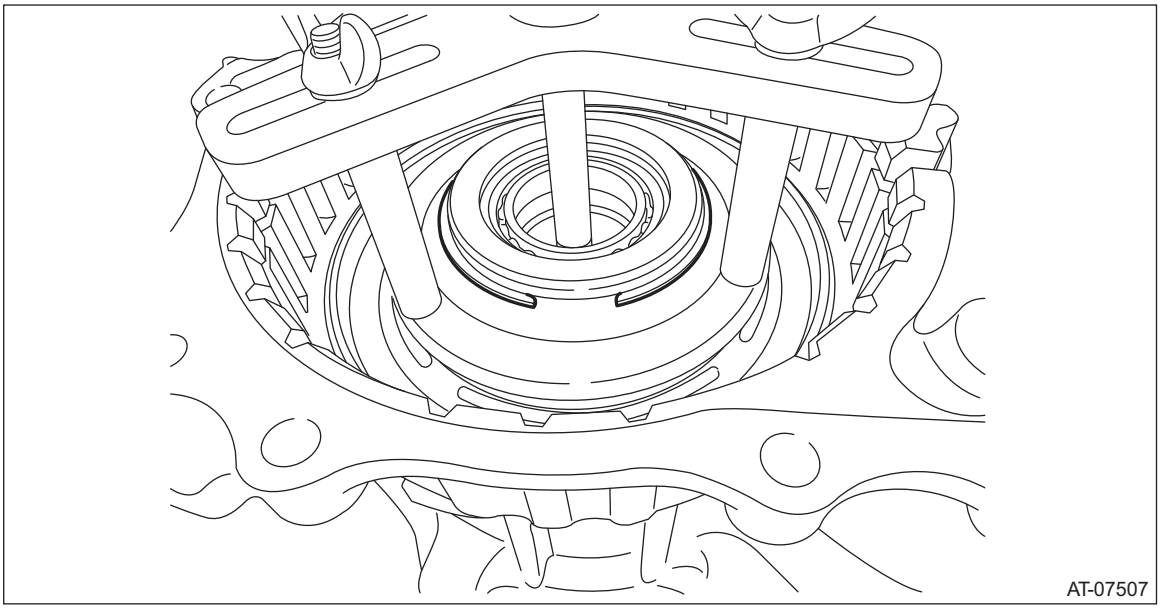
1) Remove the snap ring.
2) Remove the retaining plate, drive plate, driven plate and dish plate.



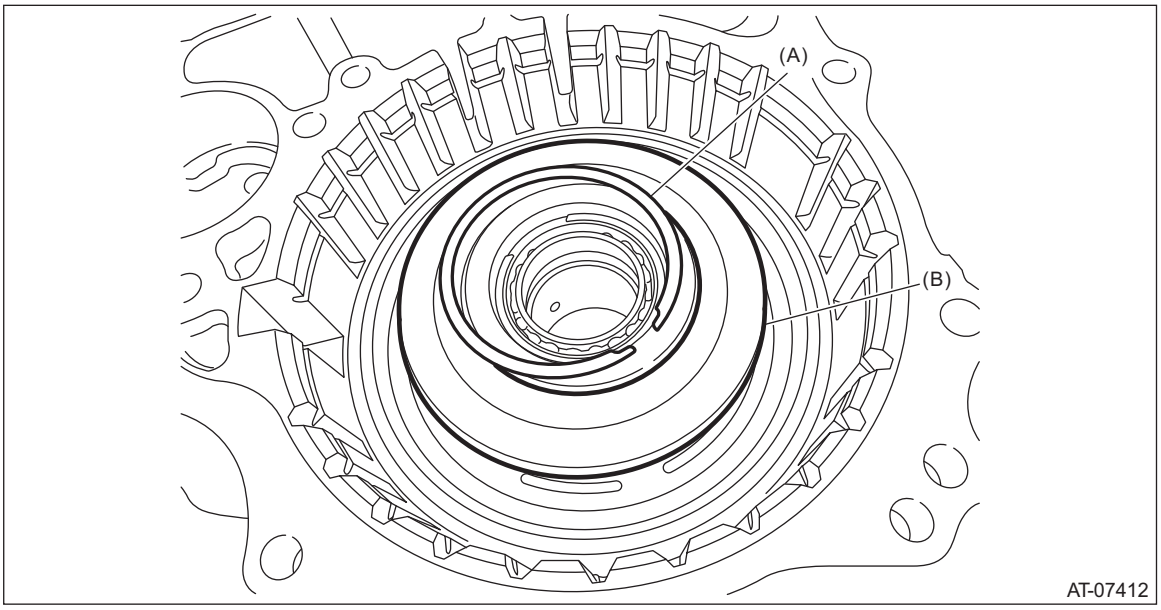
3) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT



4) Compress the return spring using the set ST to remove the snap ring.

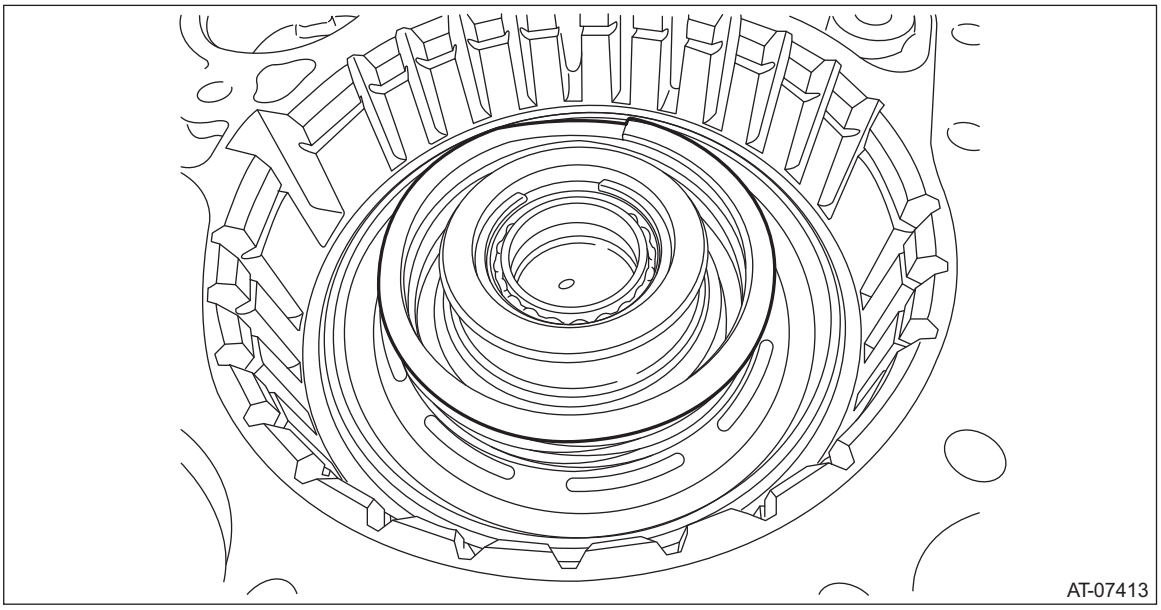


5) Using the ST, remove the snap ring and spring retainer.

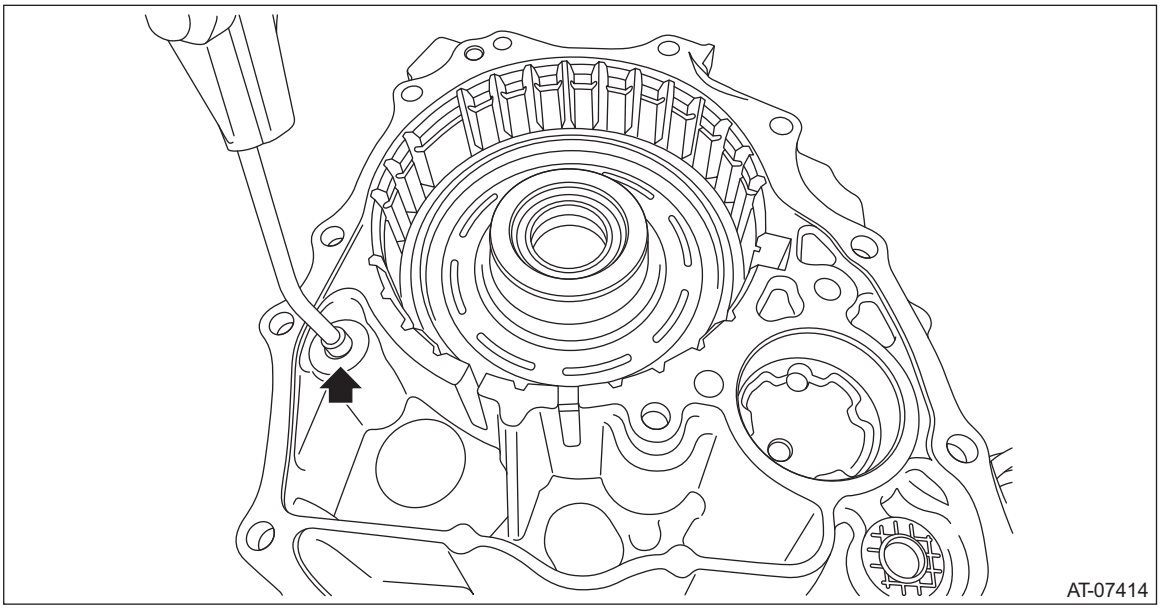


(A) Snap ring
(B) Spring retainer

6) Remove the return spring.

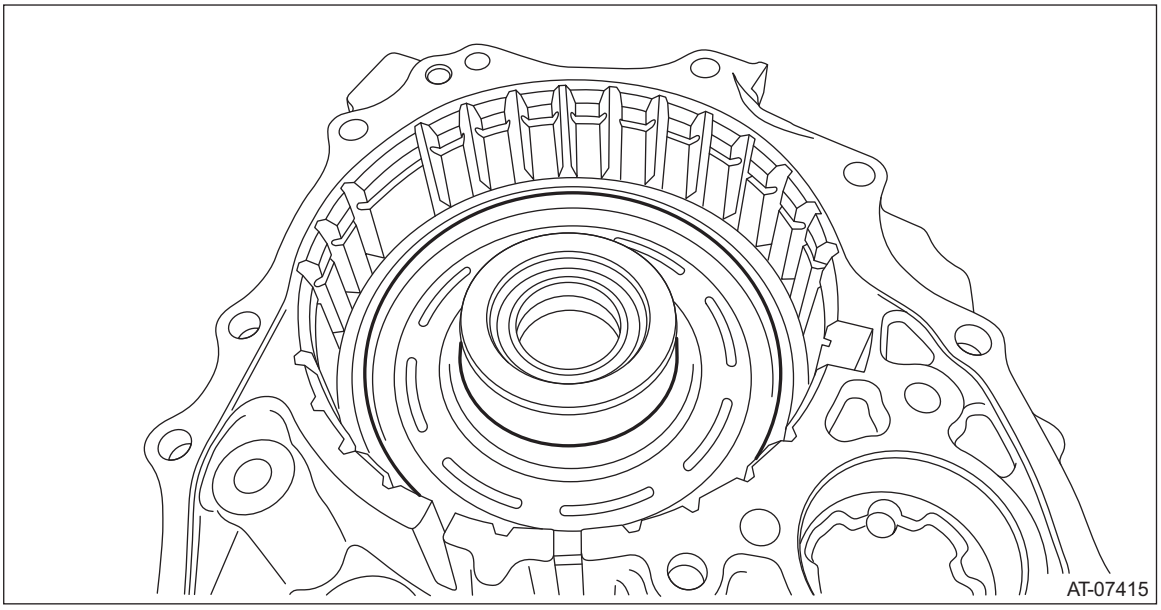


7) Remove the reverse brake piston by blowing compressed air intermittently from intermediate case hole.

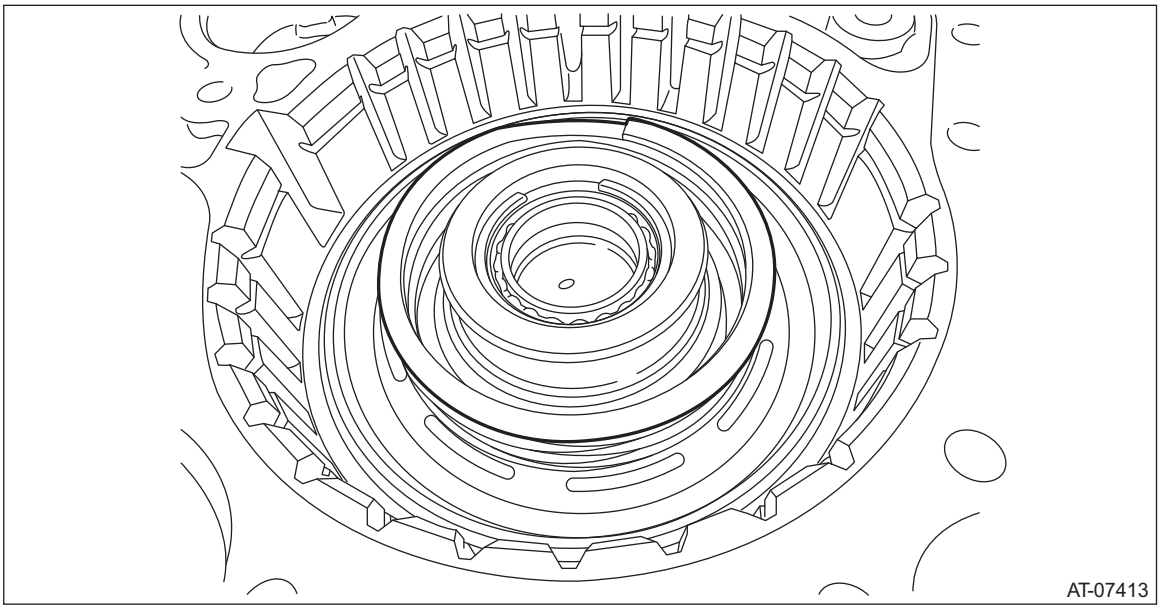


D: ASSEMBLY

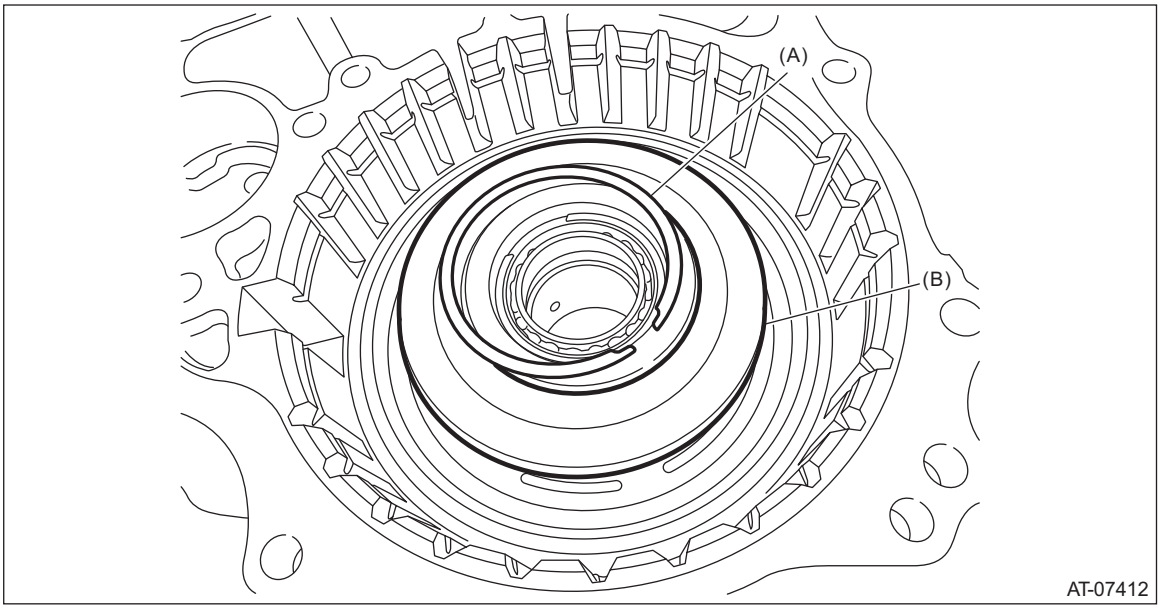
1) Apply CVTF to the seal of reverse brake piston and install it to intermediate case.



2) Install the return spring.

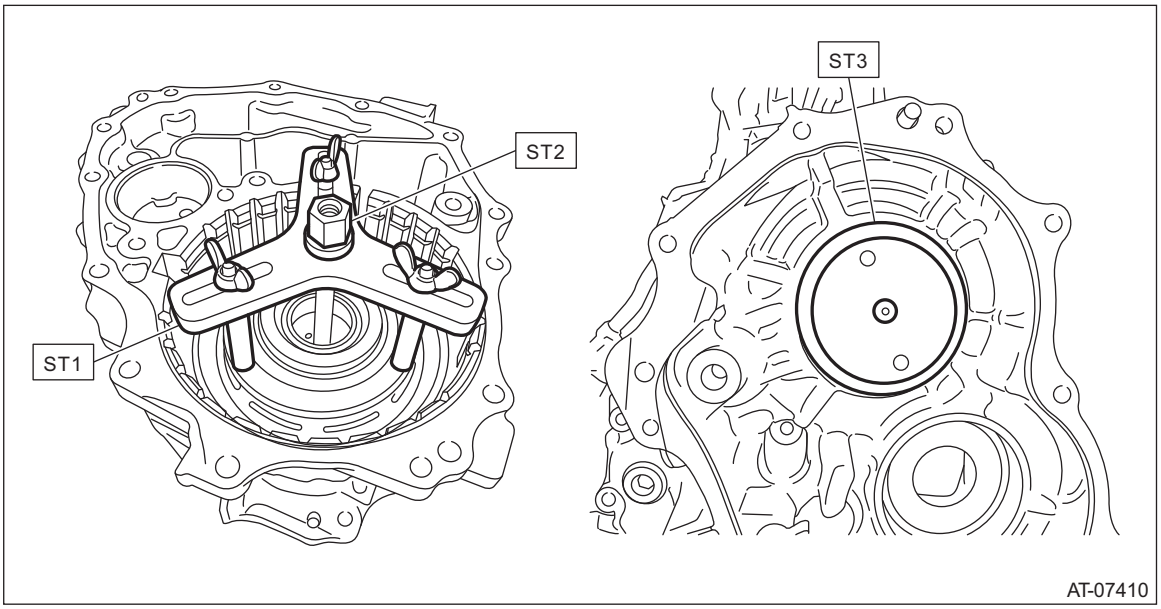


3) Set the spring retainer and snap ring.

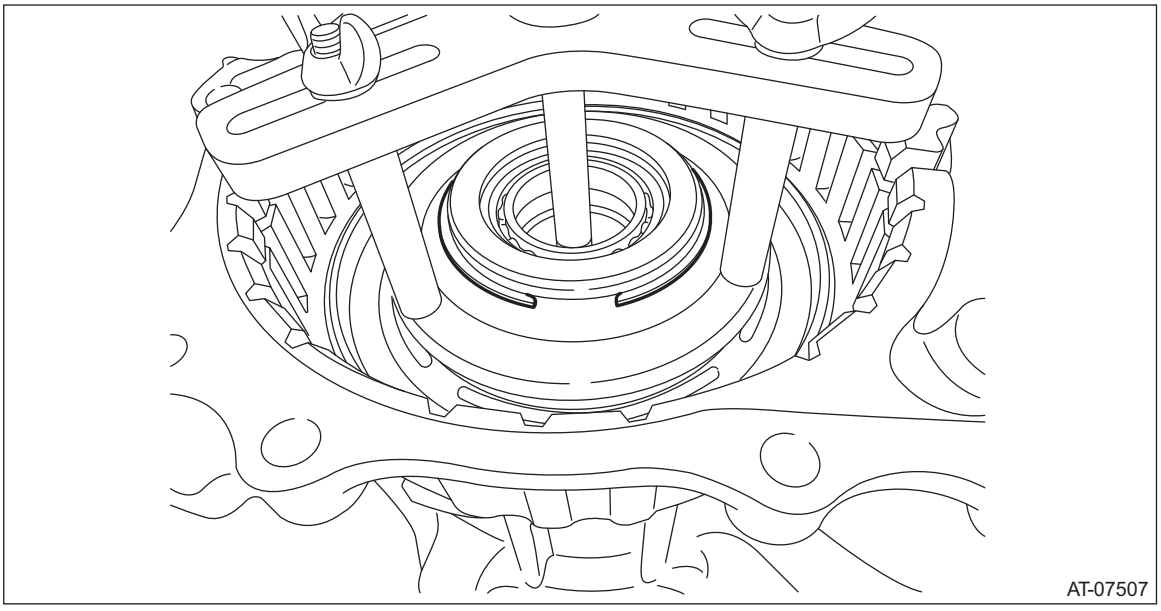


(A) Snap ring
(B) Spring retainer

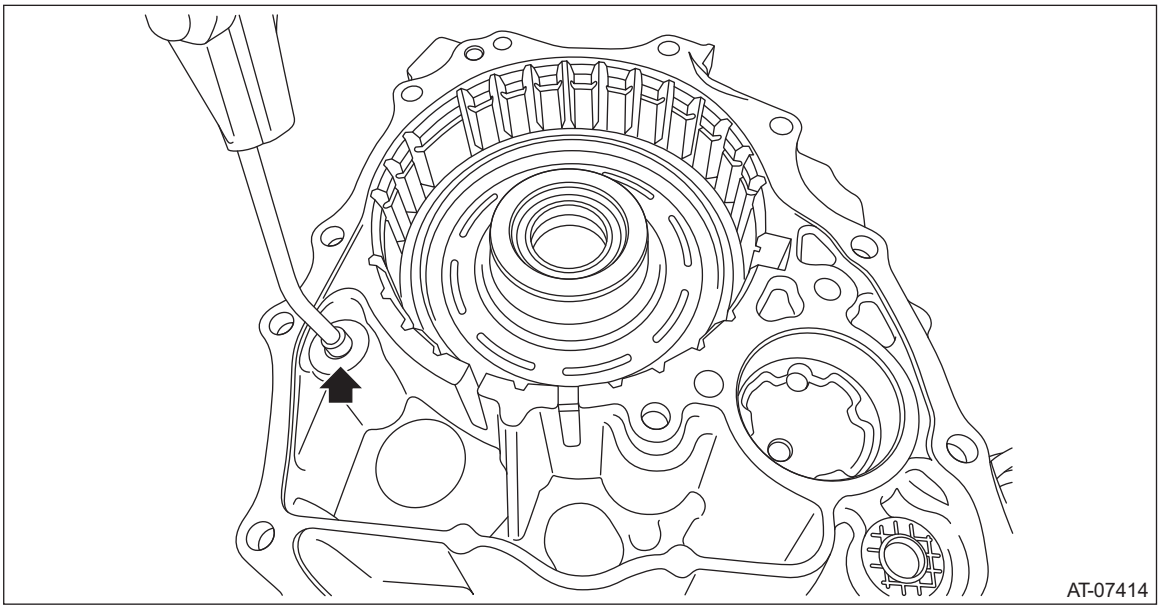
4) Set the ST1, ST2 and ST3 to intermediate case.
ST1 18762AA001 COMPRESSOR SPECIAL TOOL
ST2 18763AA000 COMPRESSOR SHAFT
ST3 18765AA000 COMPRESSOR SUPPORT



5) Compress the return spring using the ST attached, and install the snap ring.



6) Check the operation of reverse brake piston by blowing compressed air intermittently from intermediate case hole.

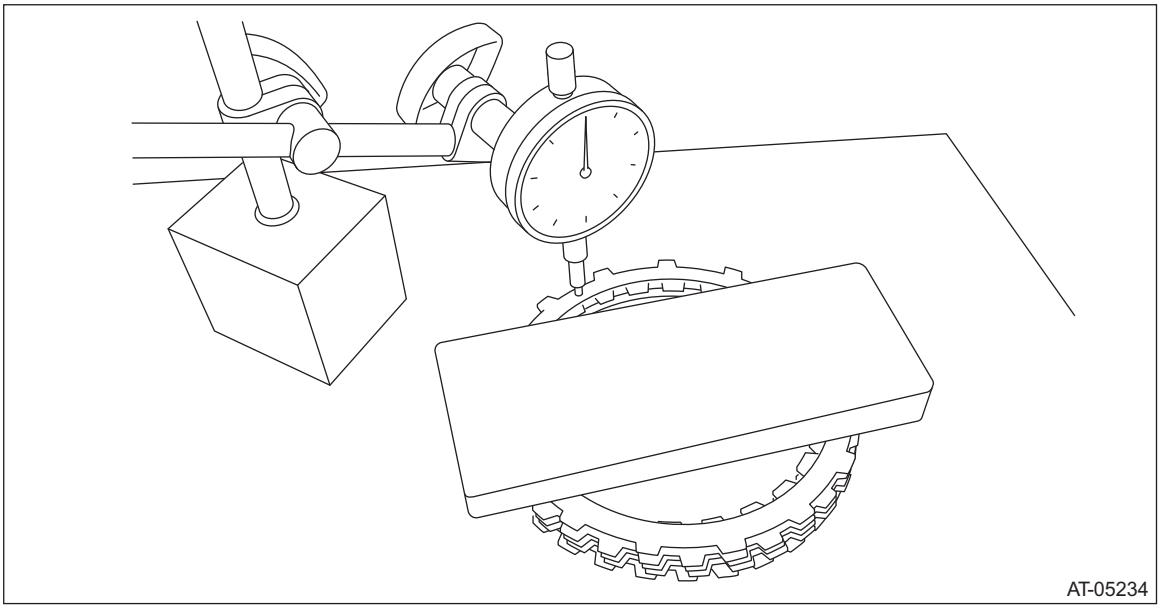


7) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
8) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.
9) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

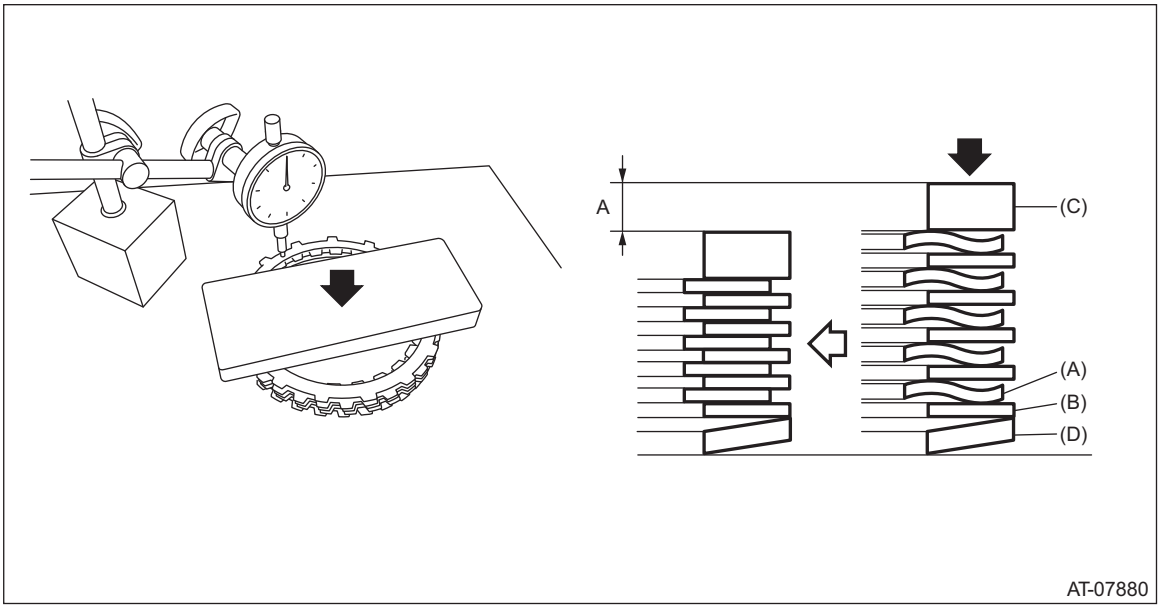
NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 84 N (8.6 kgf, 18.9 lb).

10) Put the flat board on retaining plate.



11) Using the following formula, read the push/pull gauge and calculate "N".
N = 84 N (8.6 kgf, 18.9 lb) – Z
84 N (8.6 kgf, 18.9 lb): Load applied to clutch plate
Z: Flat board weight
12) Press the center of retaining plate by applying a force of "N" or more using push/pull gauge, and then measure and record the compression amount "A".

NOTE:
Measure at four points with a 90° interval and calculate the average.

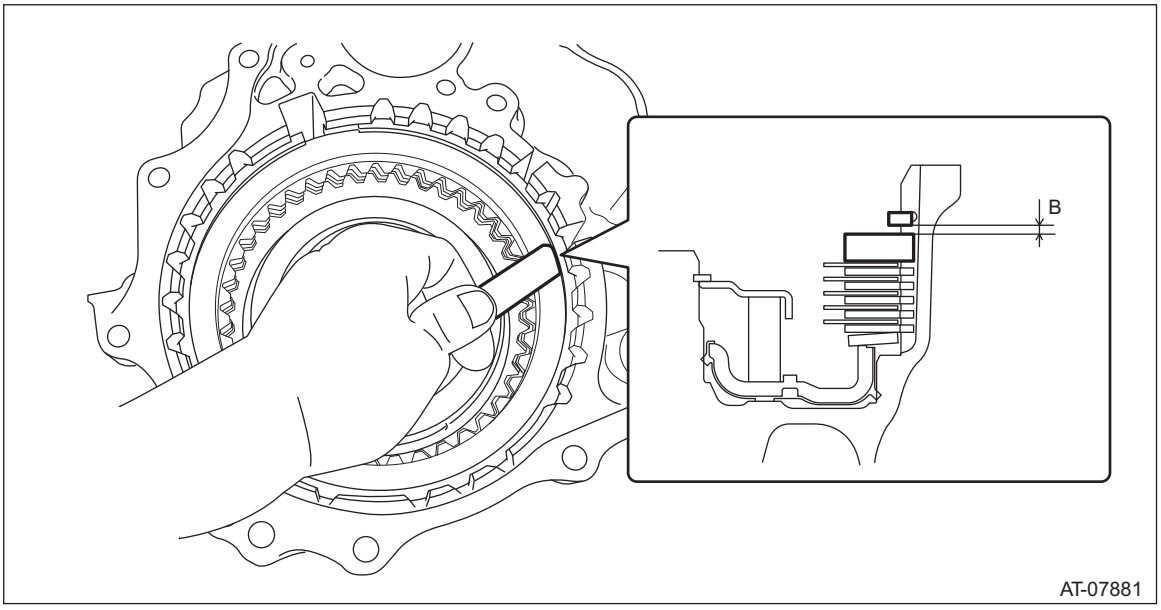


(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

13) Install the dish plate, drive plate, driven plate, retaining plate and snap ring to intermediate case.

NOTE:
Install the dish plate in the correct direction.

14) Measure and record the clearance “B” between the retaining plate and snap ring.



15) Piston stroke calculation
Calculate with A and B dimensions recorded before. If it exceeds the limit, replace with a new drive plate and adjust within the initial standard value.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Initial standard:
2.88 — 3.18 mm (0.113 — 0.125 in)

Limit thickness:
3.38 mm (0.133 in)

Retaining plate	
Part No.	Thickness mm (in)
31567AB680	5.6 (0.220)
31567AB690	5.8 (0.228)
31567AB700	6.0 (0.236)
31567AB710	6.2 (0.244)

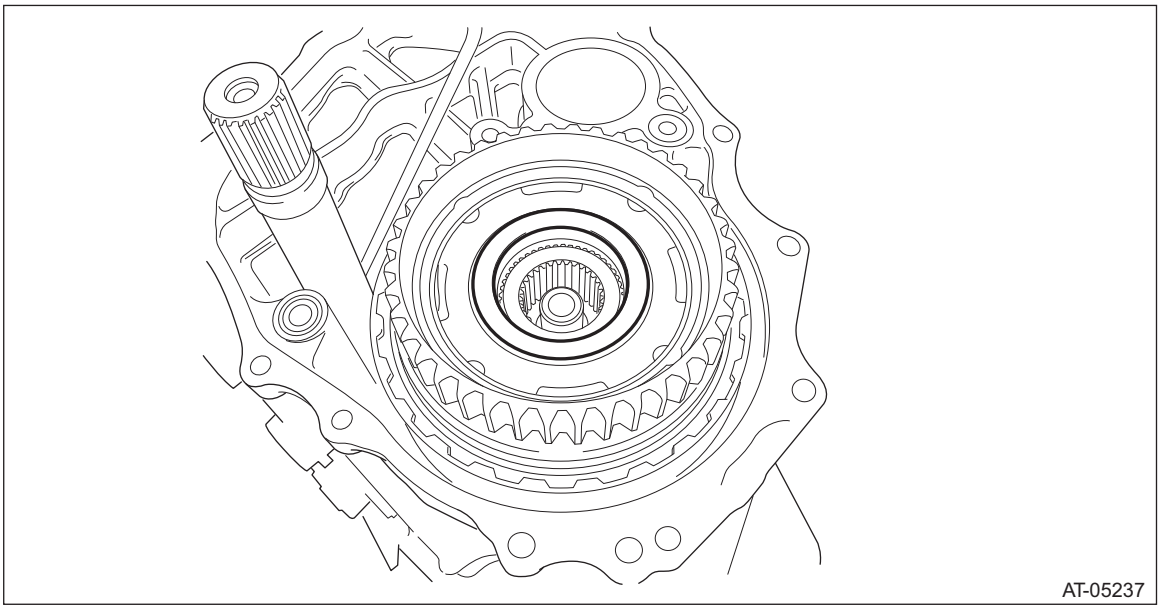
E: INSPECTION

- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and snap ring of reverse brake is within the limit. If it exceeds the limit, replace with a new drive plate and select and adjust the retaining plate within the initial standard value. <Ref. to CVT(TR690)-177, ASSEMBLY, Reverse Brake Assembly.>

37.Forward Clutch Assembly

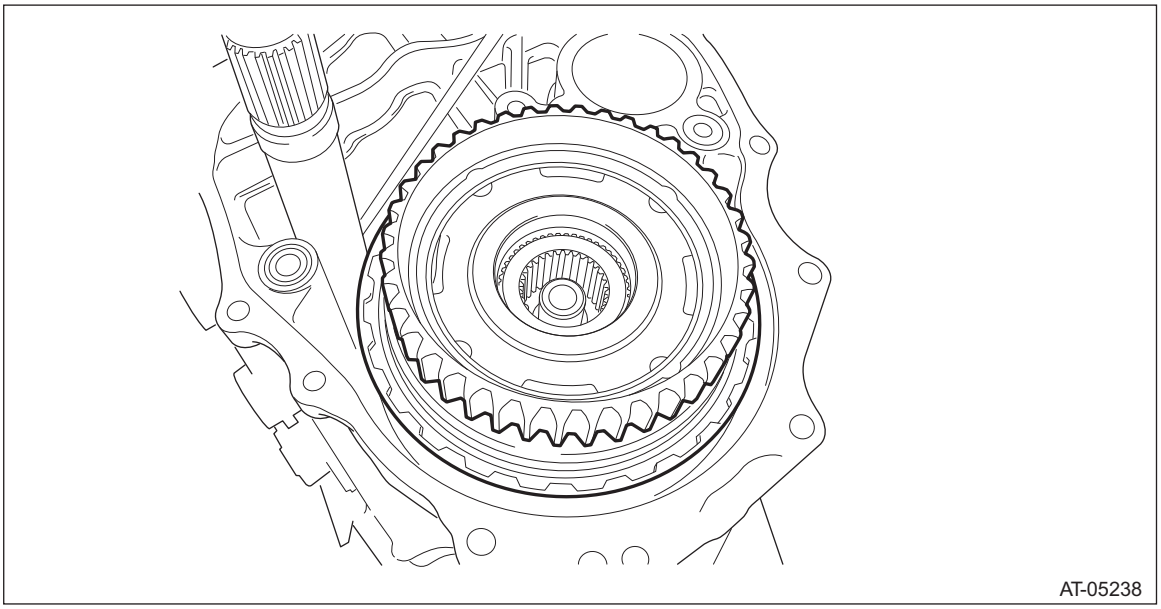
A: REMOVAL

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
8) Remove the thrust needle bearing.



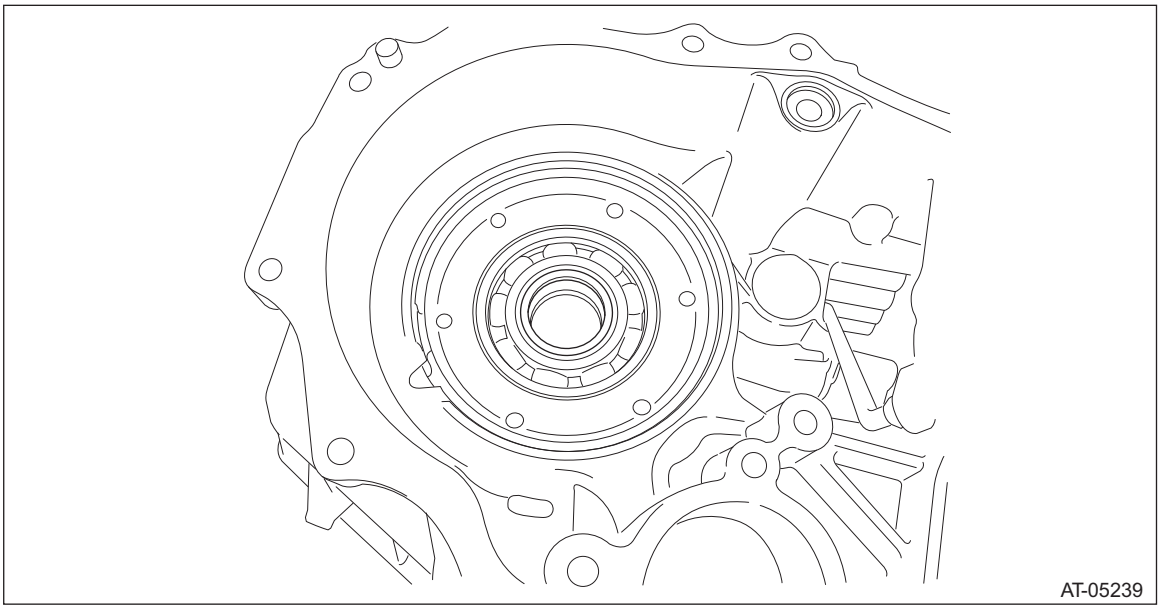
AT-05237

9) Remove the forward clutch assembly.



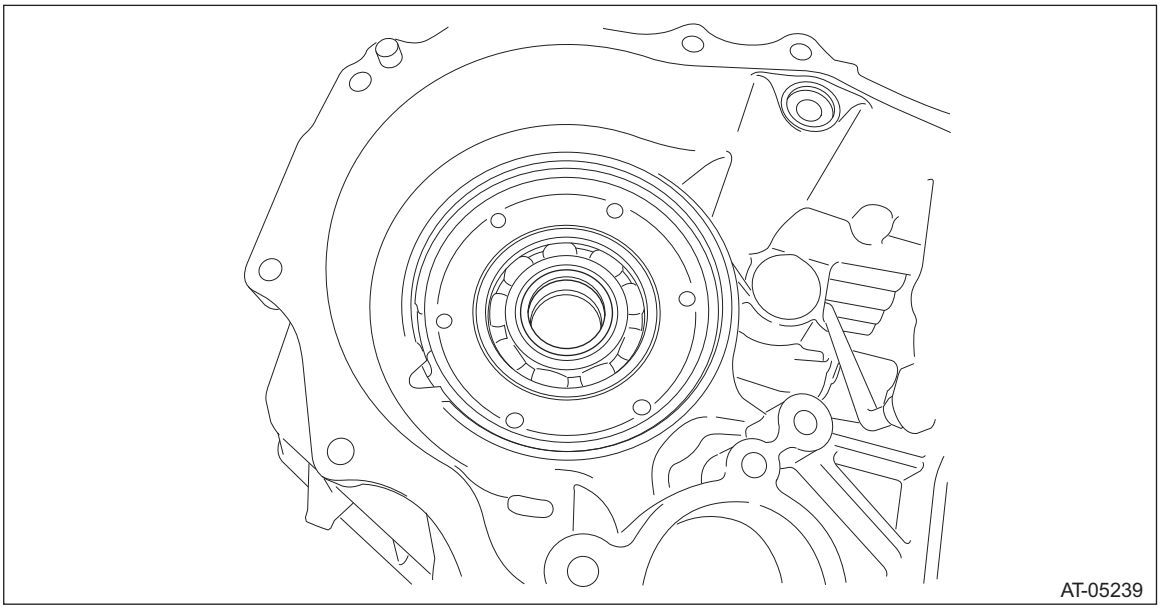
AT-05238

10) Remove the washer.

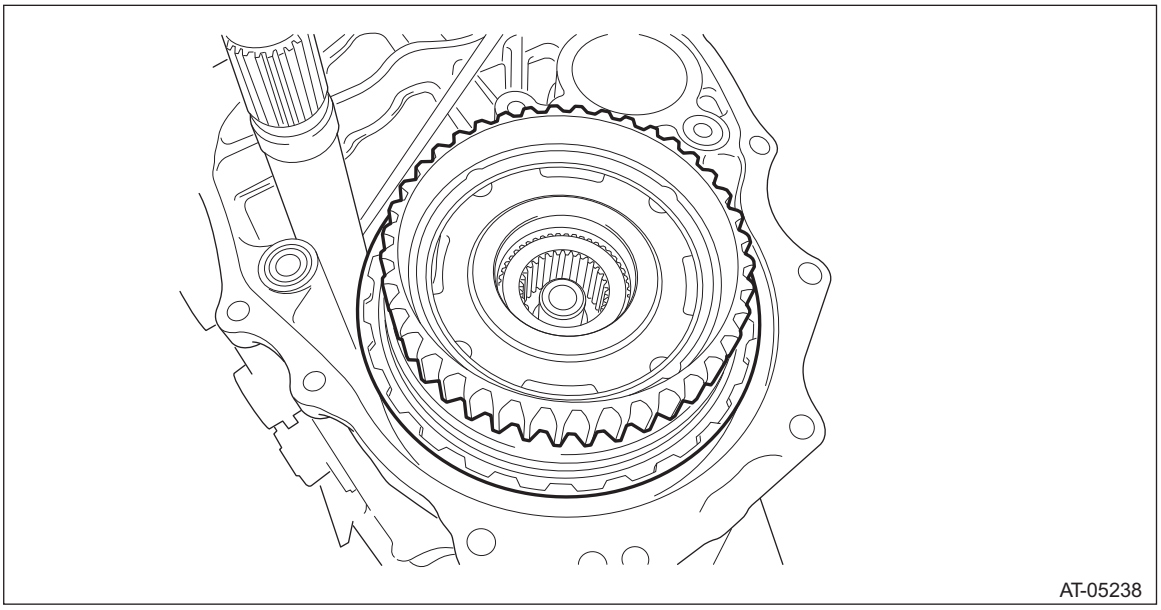


B: INSTALLATION

1) Select a washer. <Ref. to CVT(TR690)-201, ADJUSTMENT, Forward Clutch Assembly.>
2) Install the selected washer.

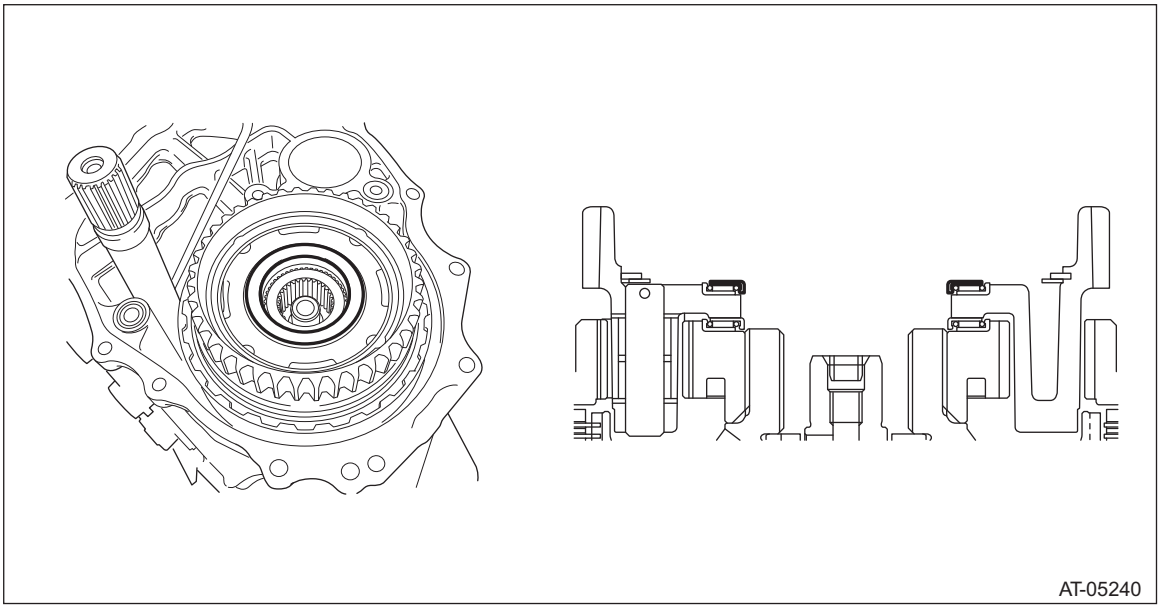


3) Install the forward clutch assembly.



4) Install the thrust needle bearing.

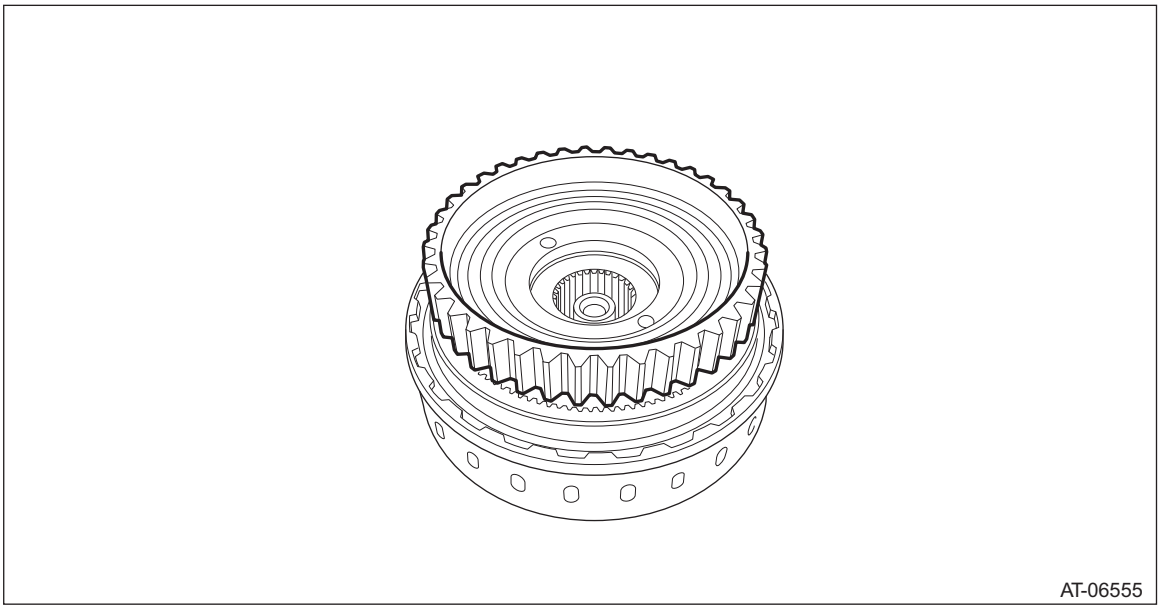
NOTE:
Install the thrust needle bearing in the correct direction.



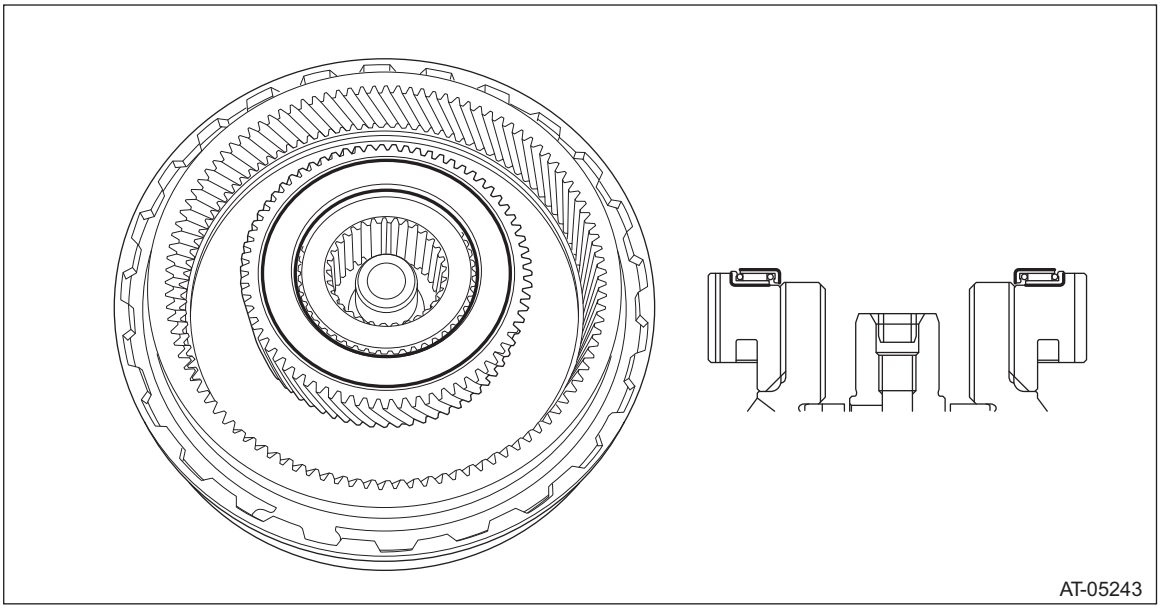
5) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
6) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
7) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
8) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
9) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
10) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
11) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the planetary carrier assembly.

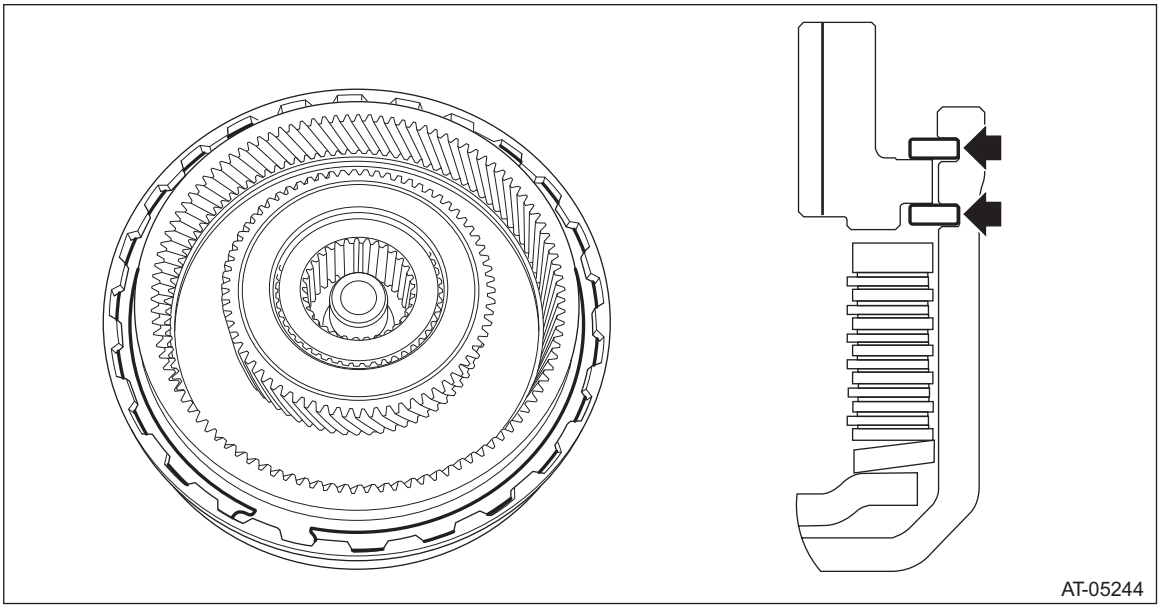


2) Remove the thrust needle bearing.

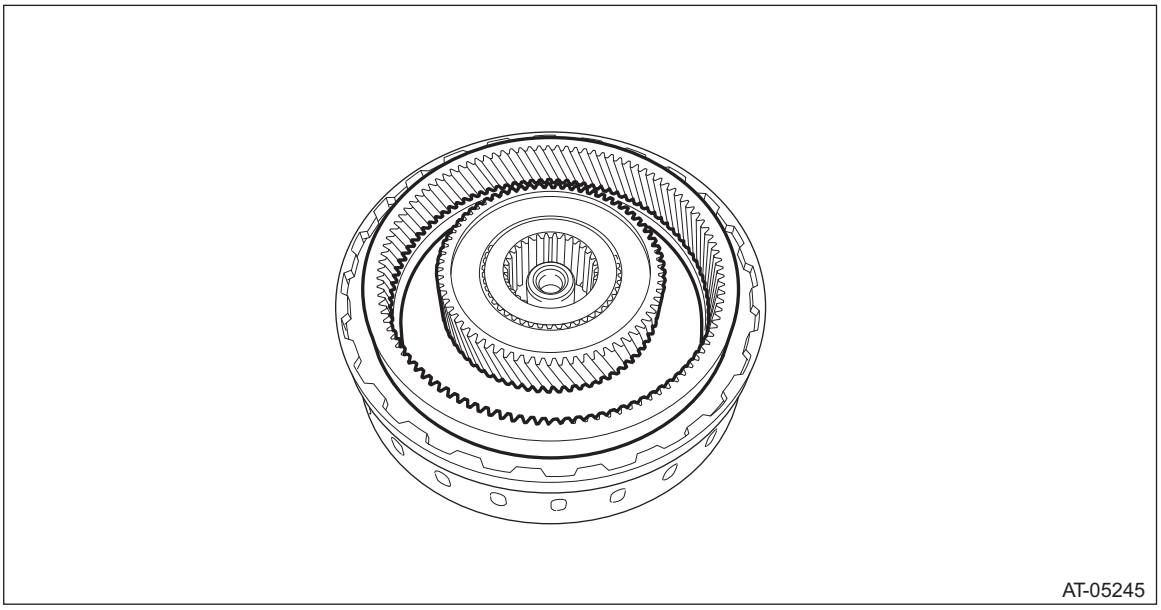


3) Remove the snap ring.

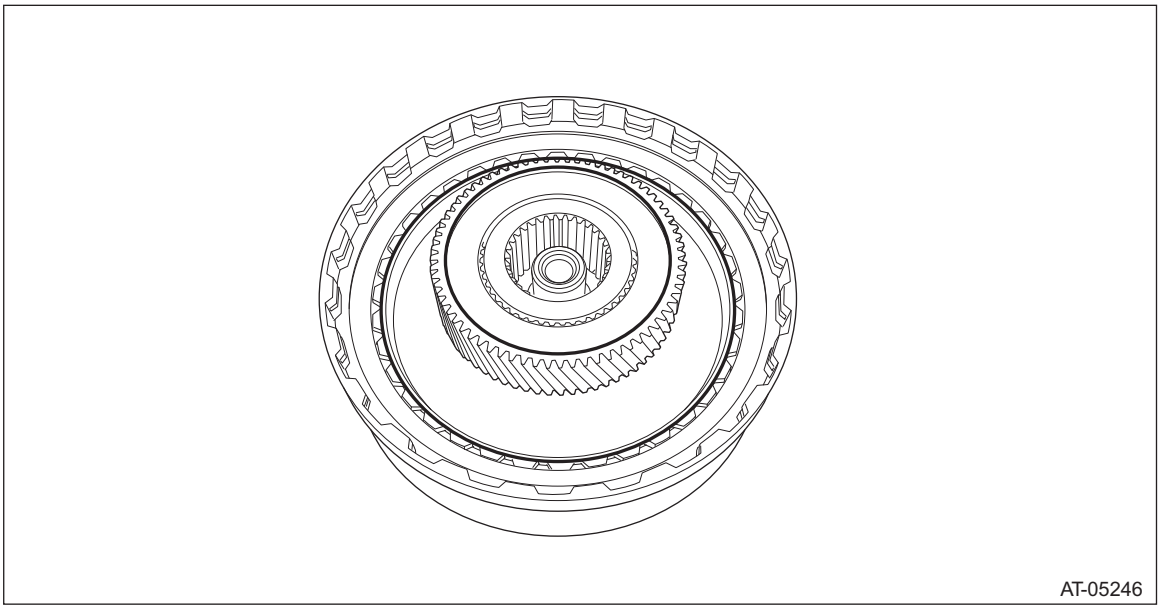
NOTE:
Use marking or labeling to the upper snap ring for measurement of the snap ring thickness when selecting the retaining plate.



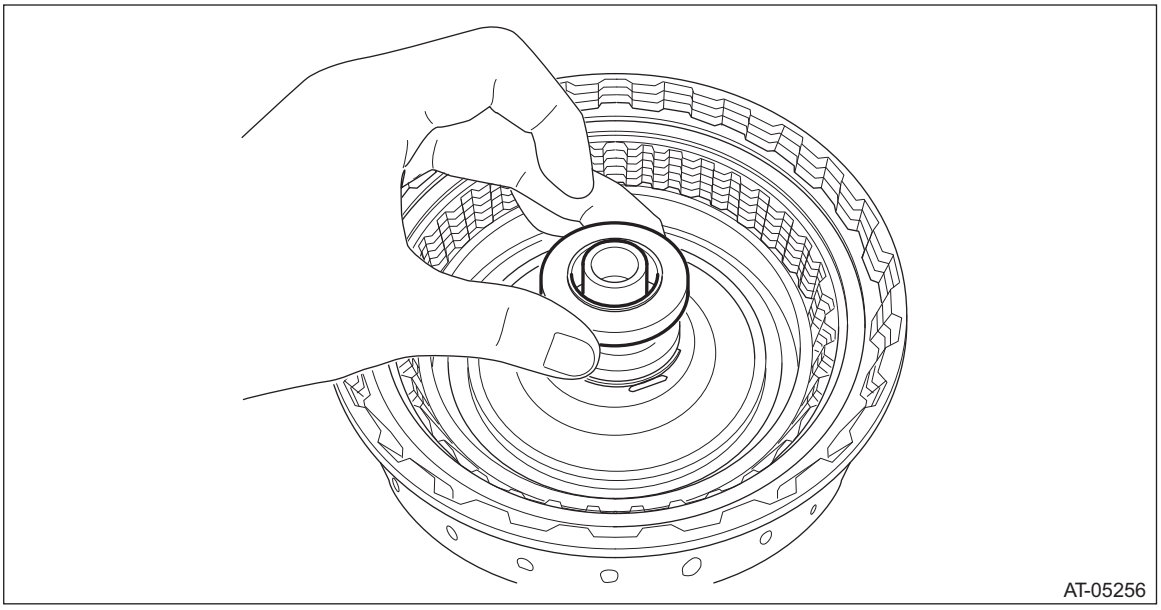
4) Remove the internal gear.



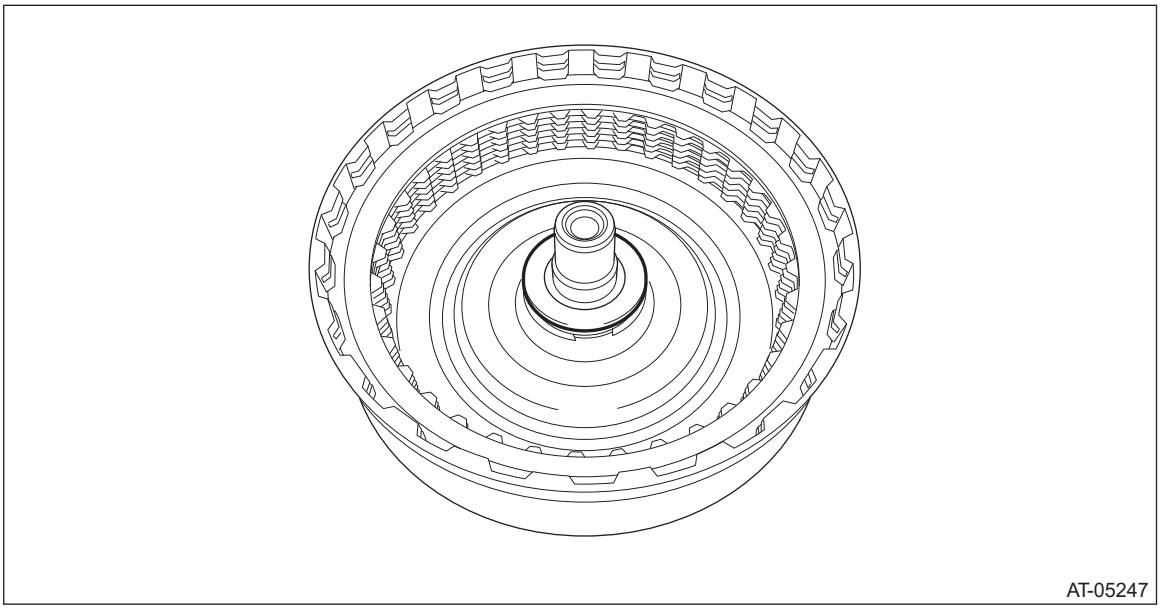
5) Remove the sun gear.



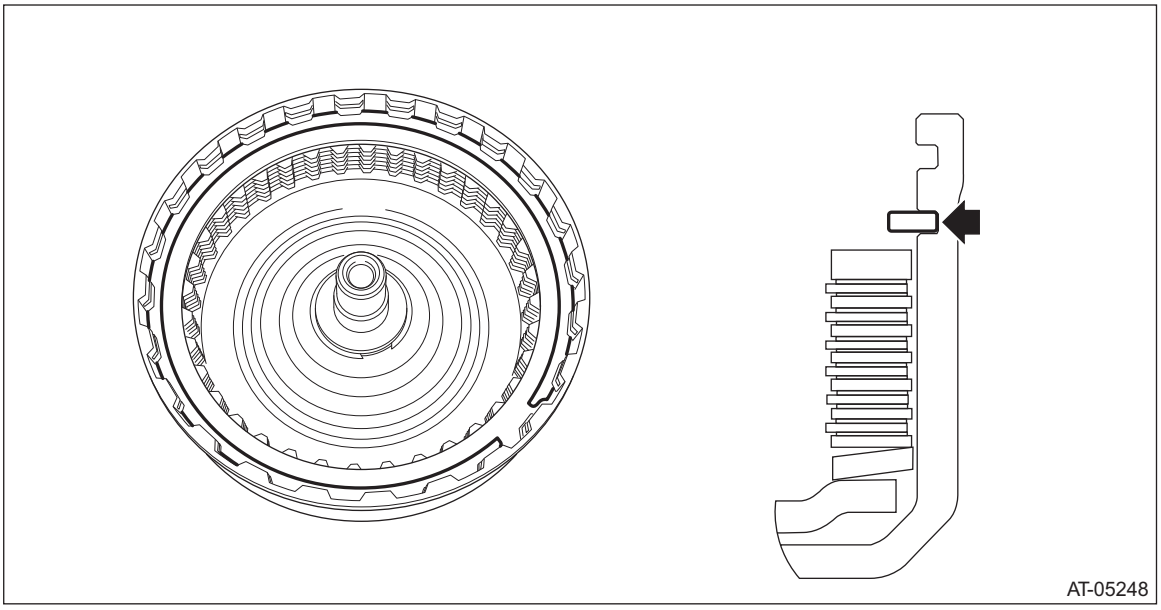
6) Remove the washer.



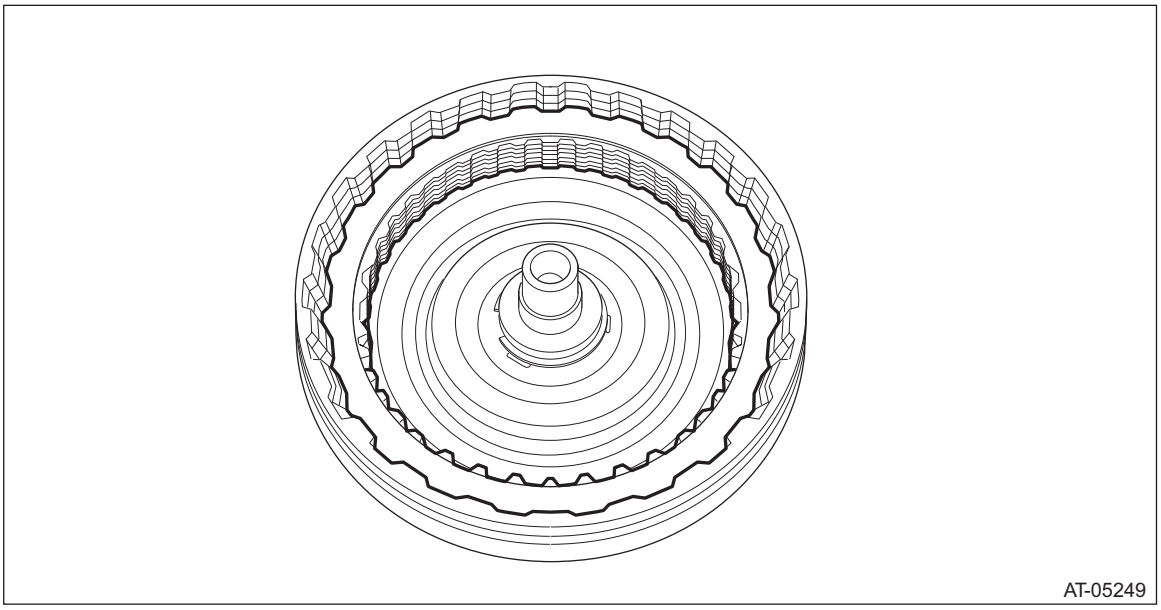
7) Remove the thrust needle bearing.



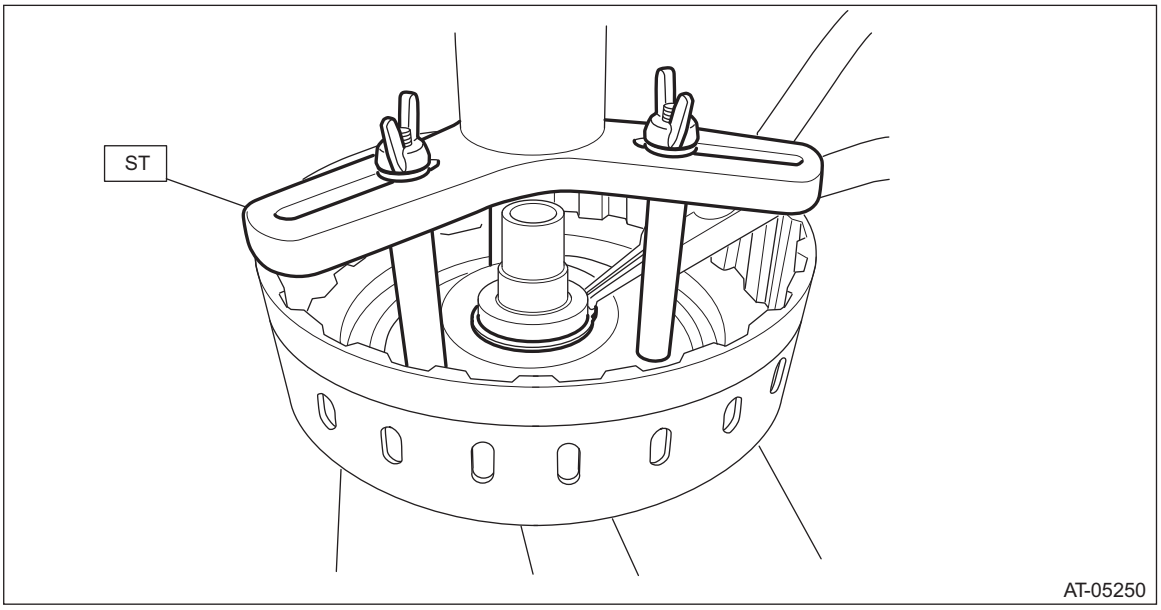
8) Remove the snap ring.



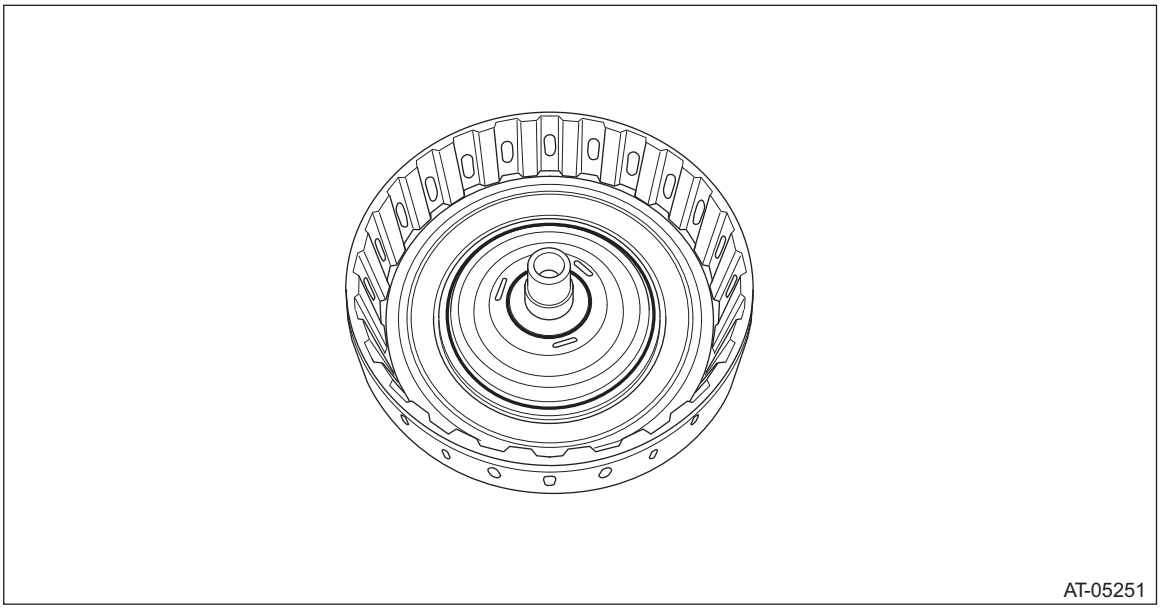
9) Remove the retaining plate, drive plate, driven plate and dish plate.



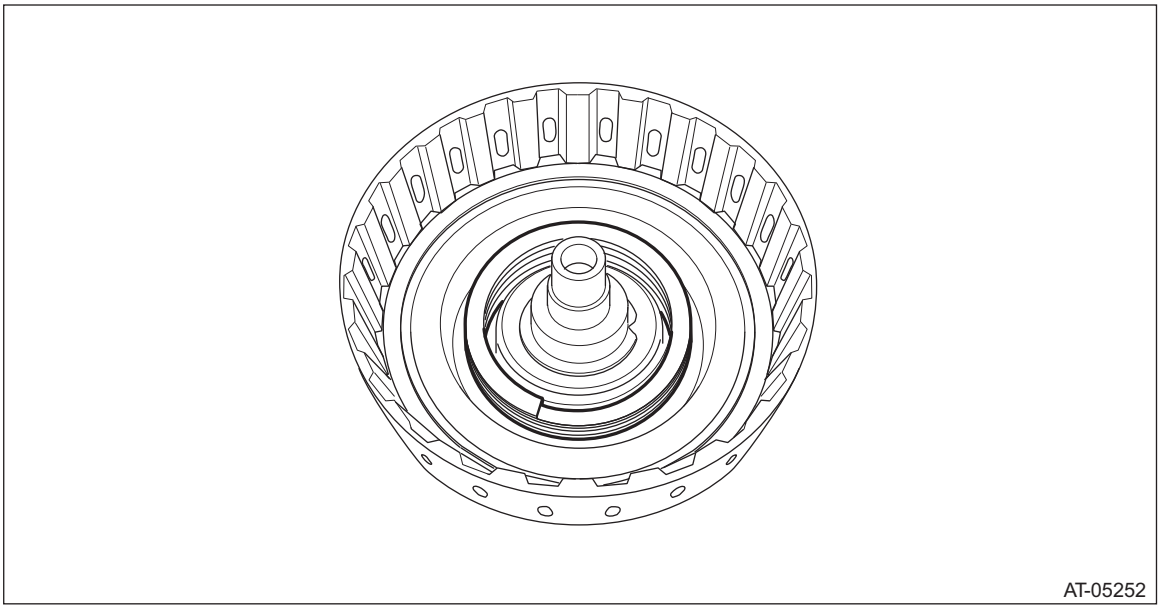
10) Using the ST, remove the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



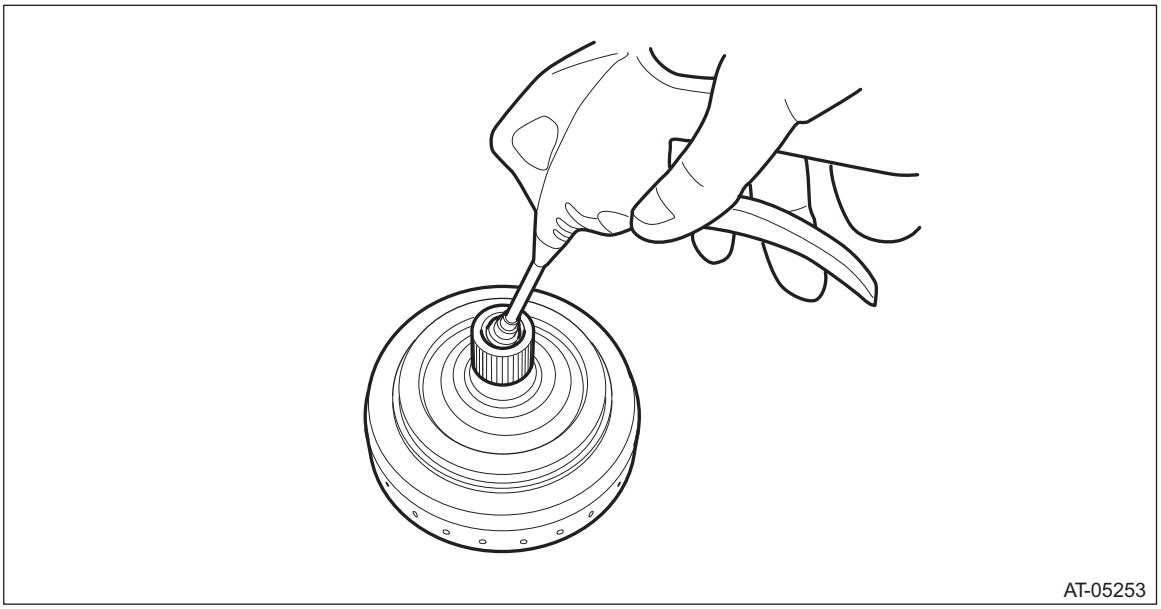
11) Remove the forward clutch piston retainer.



12) Remove the return spring.



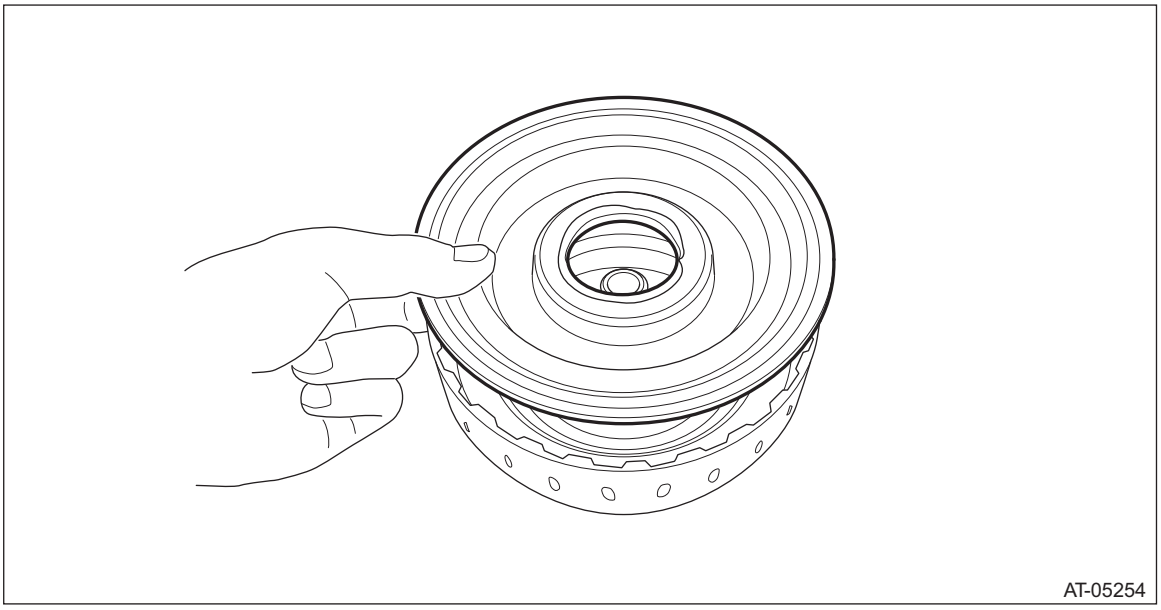
13) Remove the forward clutch piston by blowing compressed air intermittently from end of forward clutch drum.



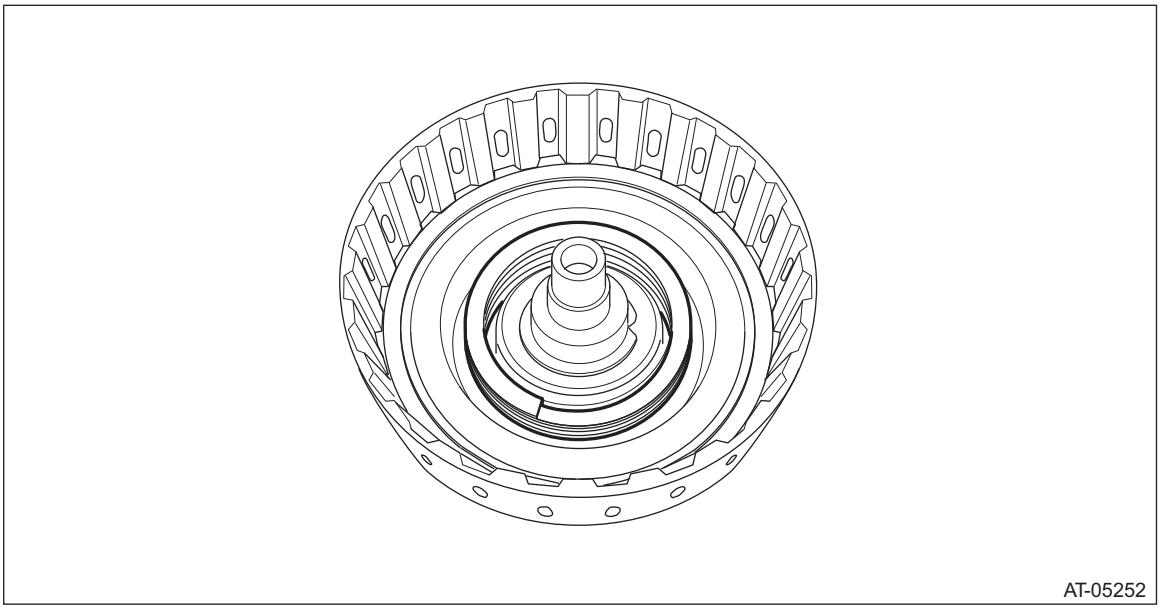
D: ASSEMBLY

1) Install the forward clutch piston to forward clutch drum.

NOTE:
- Apply CVTF to the seal of forward clutch piston.
- Insert it all the way to the end.

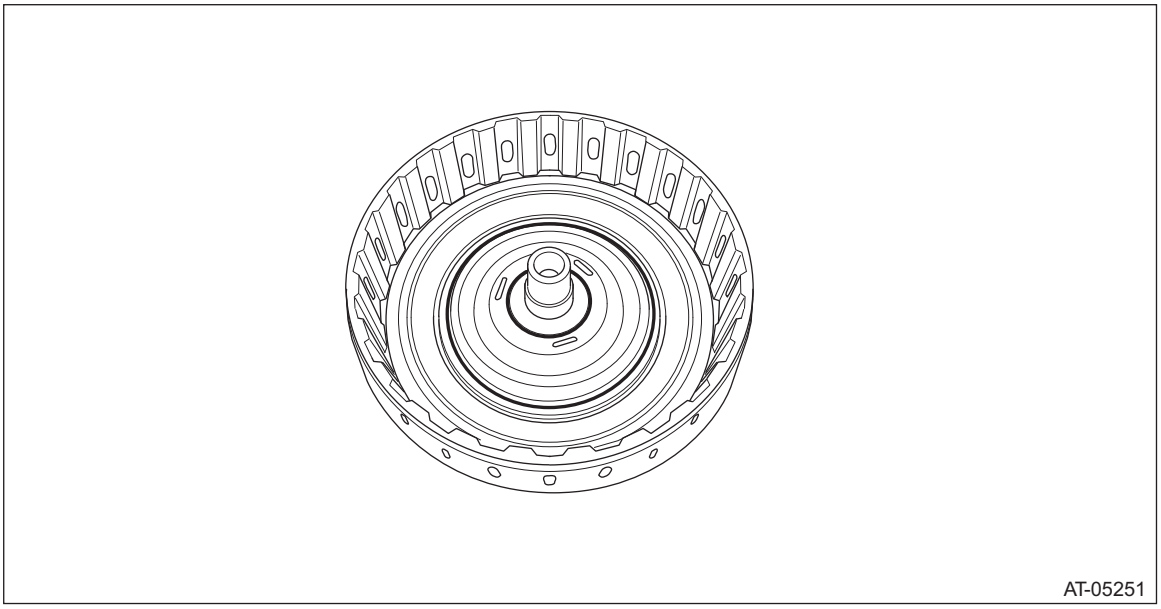


2) Install the return spring.

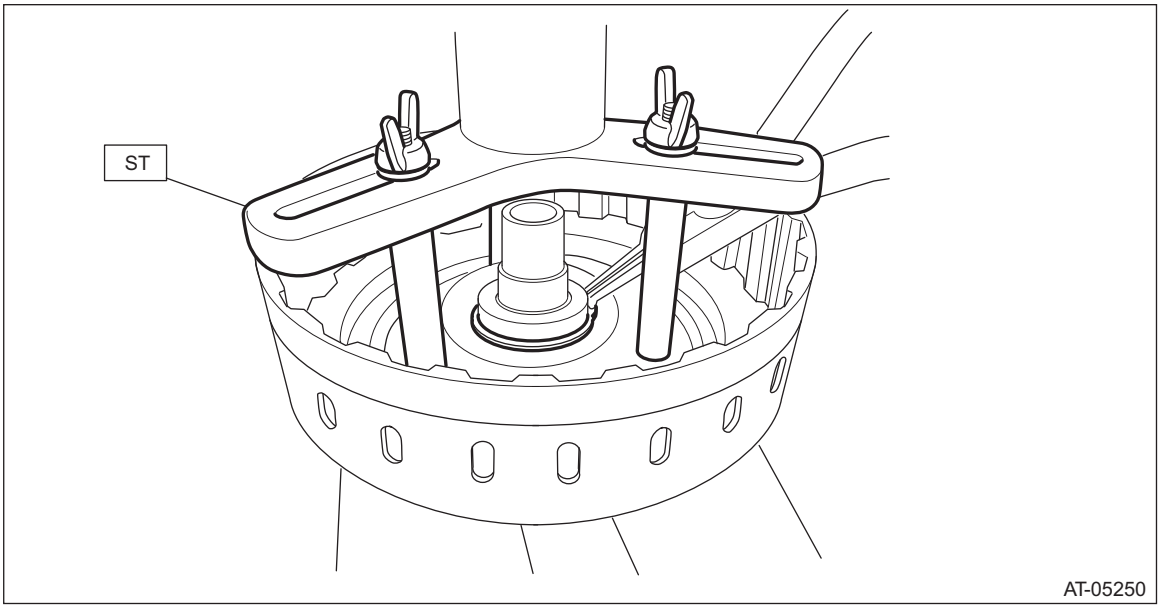


3) Install the forward clutch piston retainer.

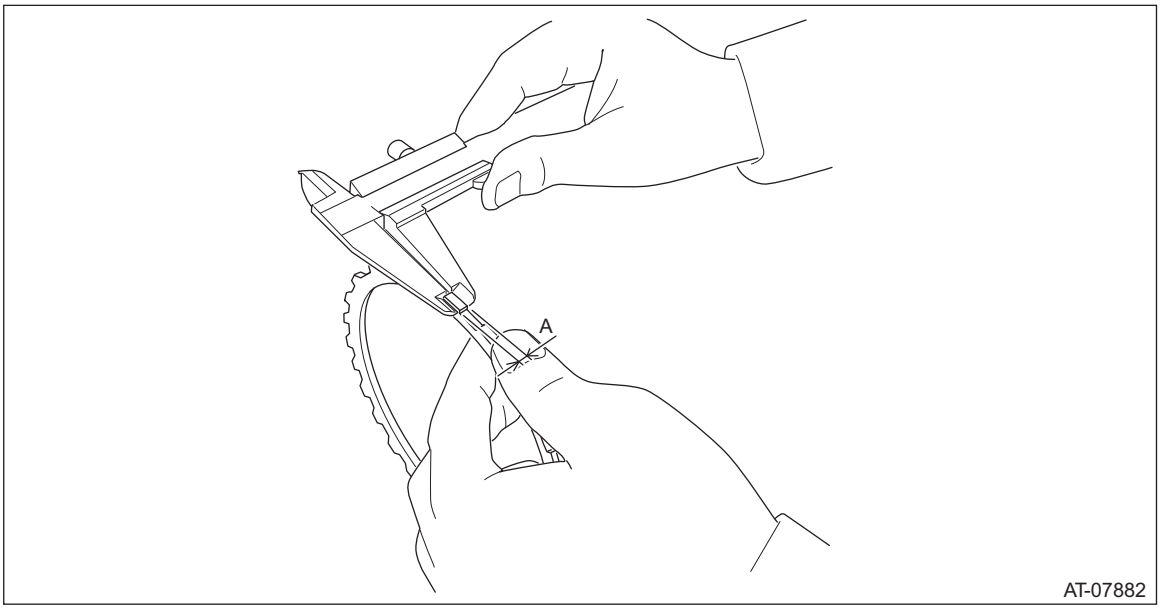
NOTE:
Apply CVTF to the sealing portion of the forward clutch piston retainer.



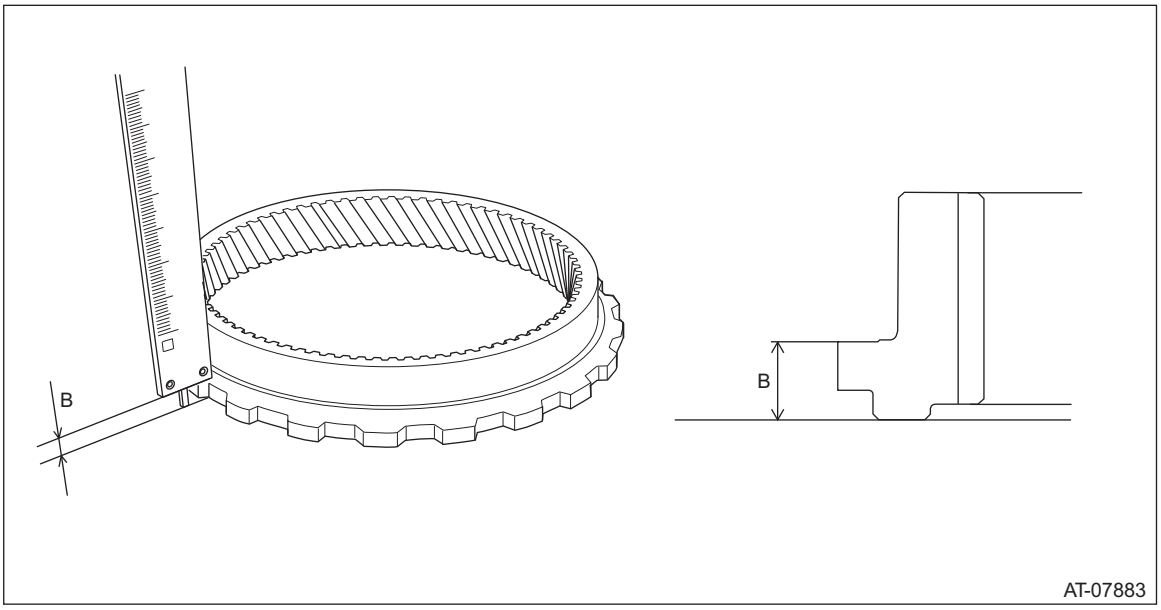
4) Compress the return spring using the ST to install the snap ring.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



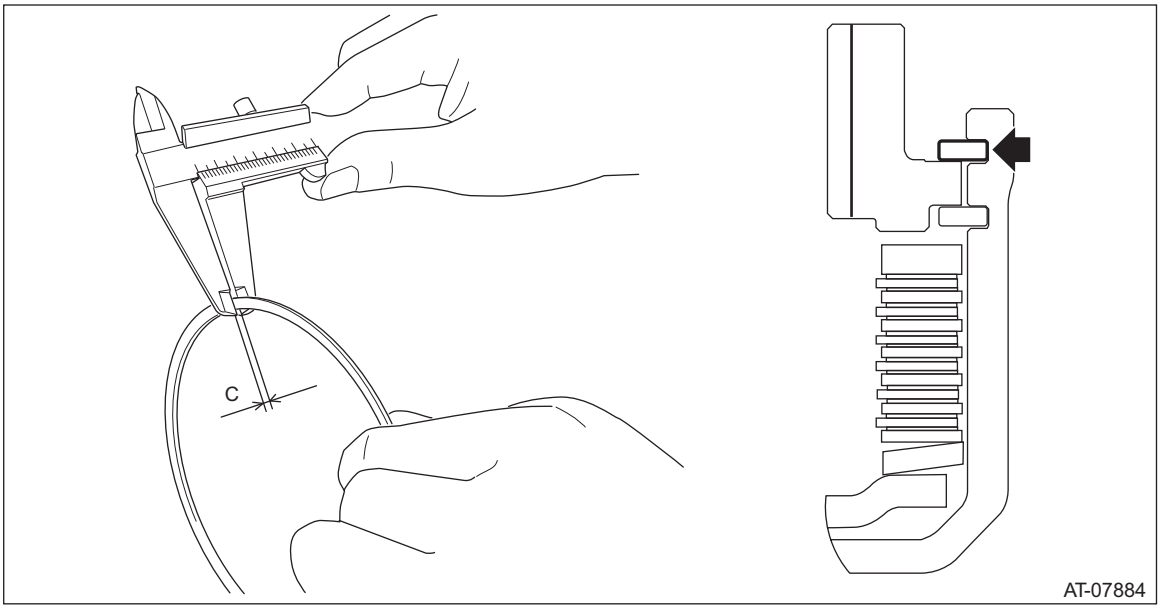
5) Measure thickness “A” of the retaining plate installed.



6) Measure thickness “B” of the internal gear on a surface plate.

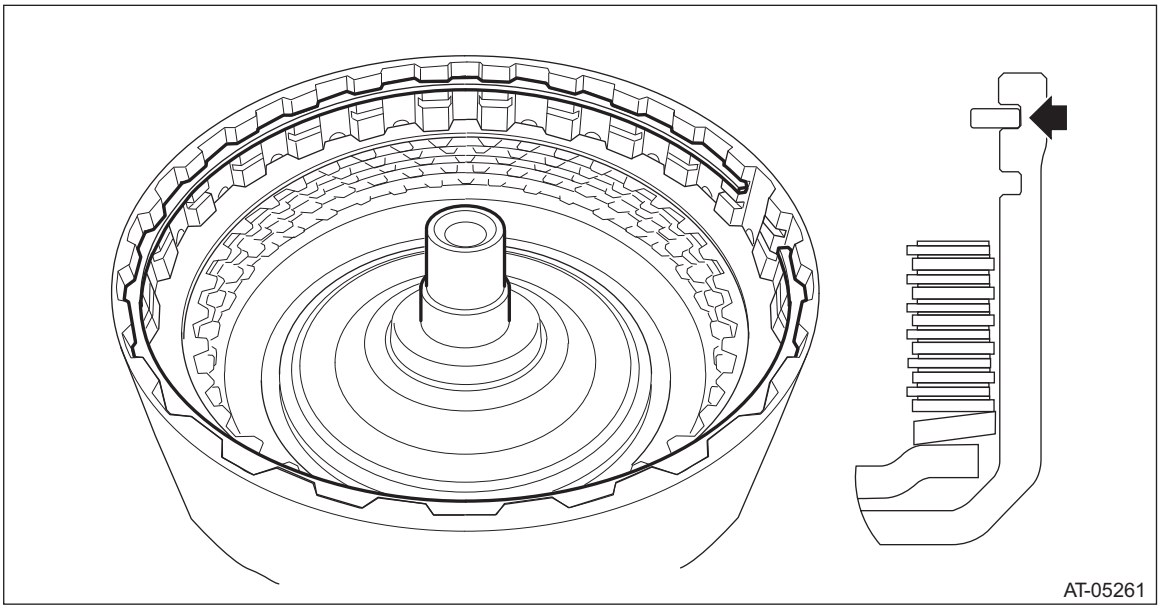


7) Measure thickness “C” of labelled or marked snap ring.

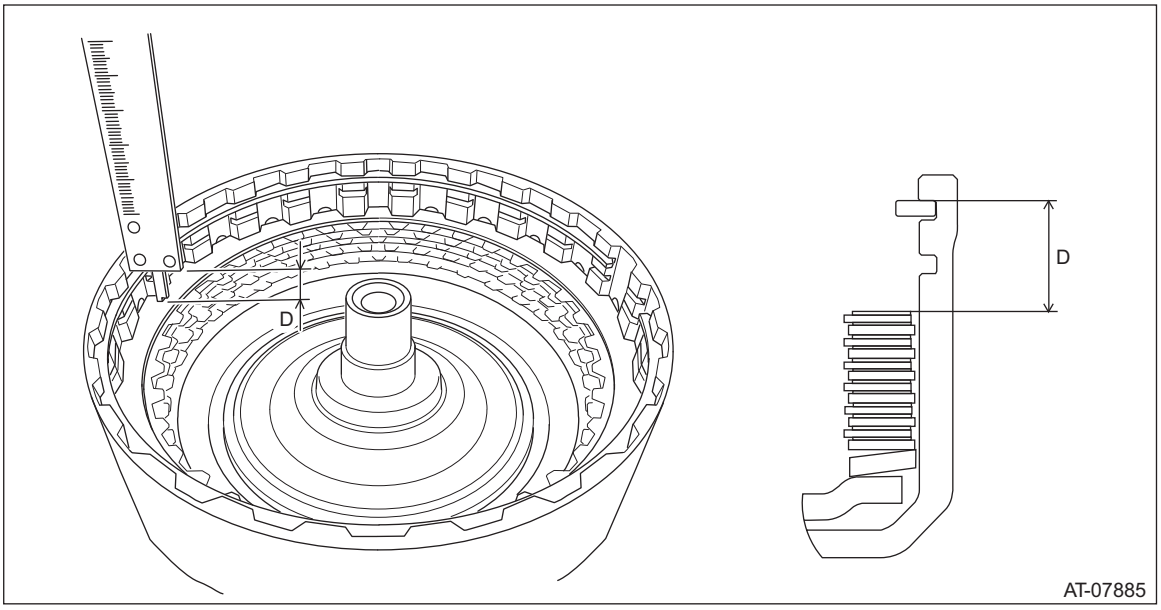


8) Install the dish plate, drive plate and driven plate.

9) Install the snap ring at the location (upper groove) indicated in the figure.

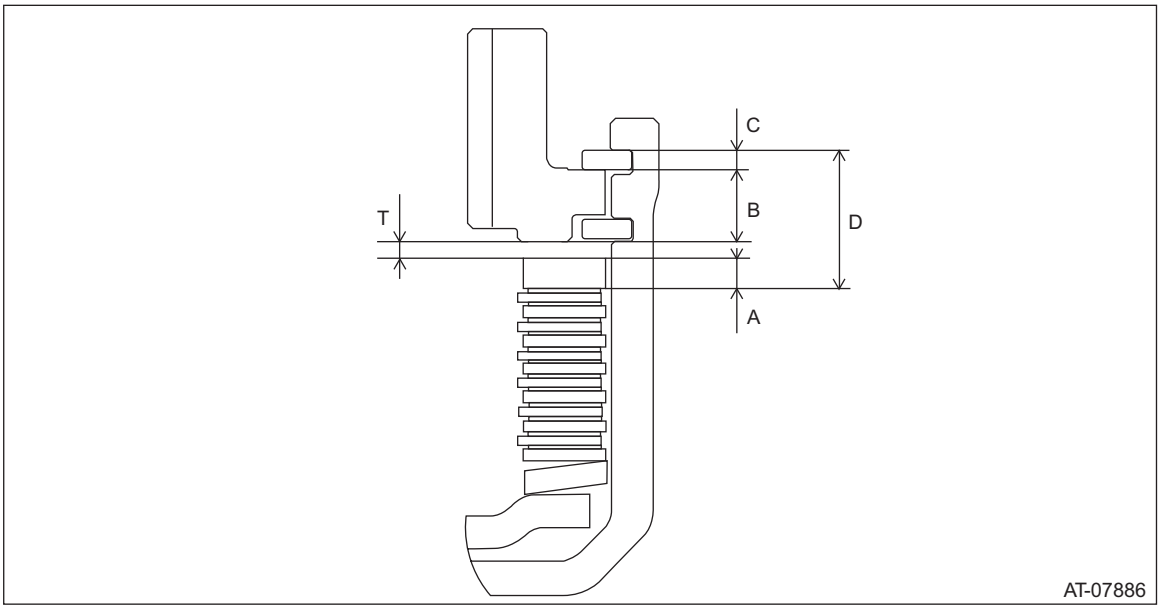


10) Measure depth “D” of snap ring and driven plate while lifting the snap ring.



11) Calculate clearance “T” from internal gear to retaining plate with the obtained value from step 5) through step 10).
Formula: T mm (in) = D – A – B – C
T: Clearance from internal gear to retaining plate
A: Thickness of retaining plate
B: Thickness of internal gear
C: Thickness of snap ring

D: Depth of snap ring and driven plate, with snap ring raised upward



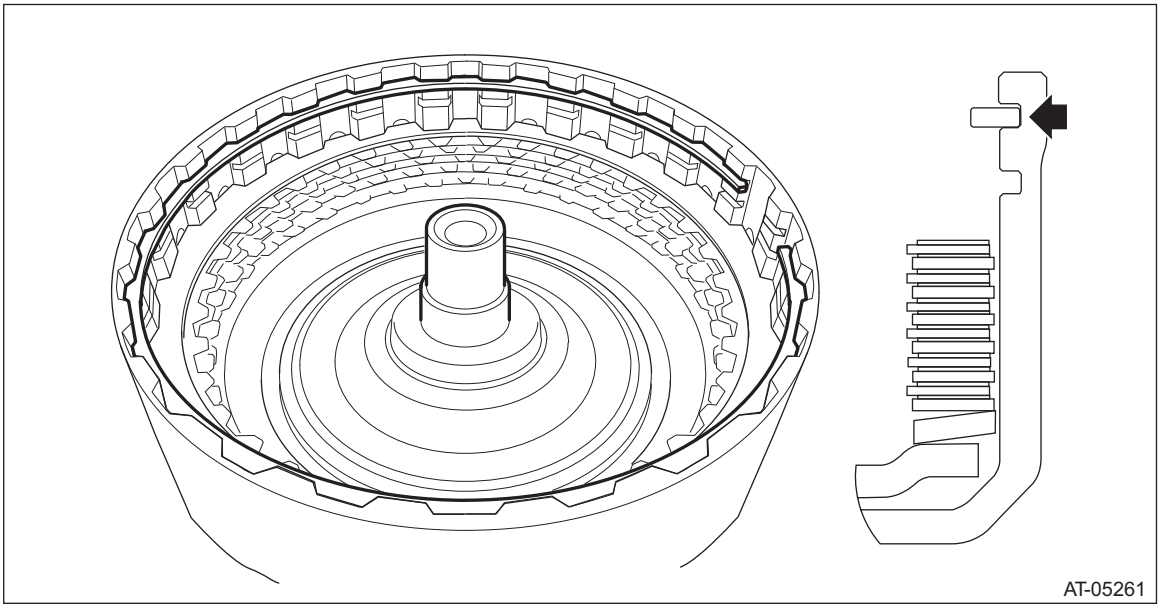
12) If the value “T” obtained from step 11) exceeds the limit for use, replace the drive plate and driven plate with new parts and select the retaining plate within the initial standard value.

Initial standard:
1.2 — 1.6 mm (0.047 — 0.063 in)

Limit thickness:
2.4 mm (0.09 in)

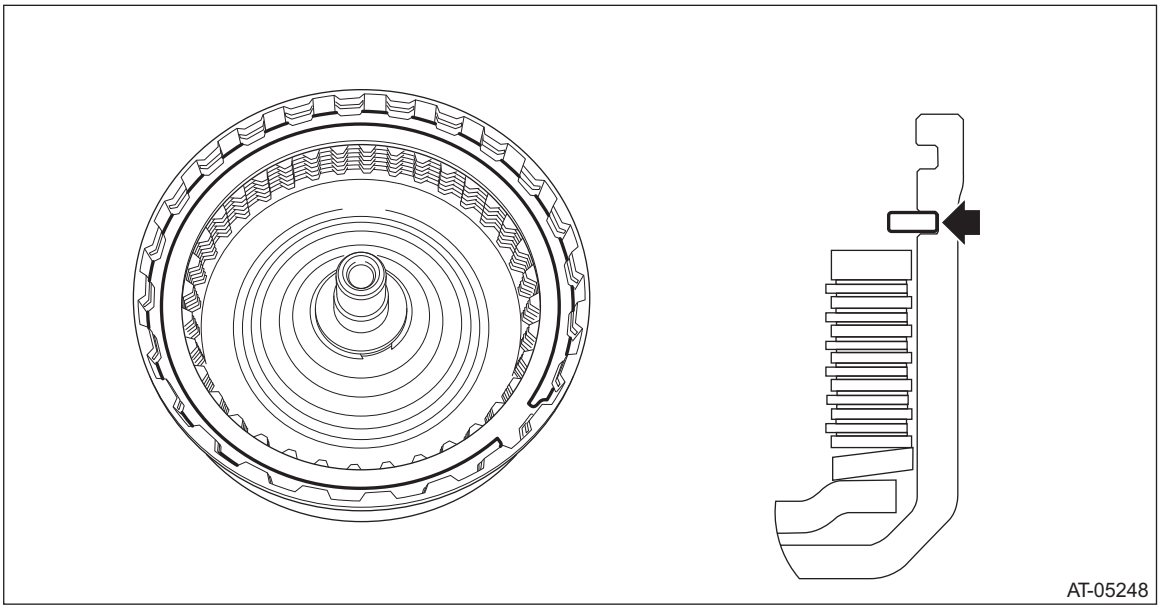
Retaining plate	
Item number	Thickness mm (in)
31567AB670	3.2 (0.126)
31567AB660	3.0 (0.118)
31567AB650	2.8 (0.110)
31567AB640	2.6 (0.102)

13) Remove the snap ring.



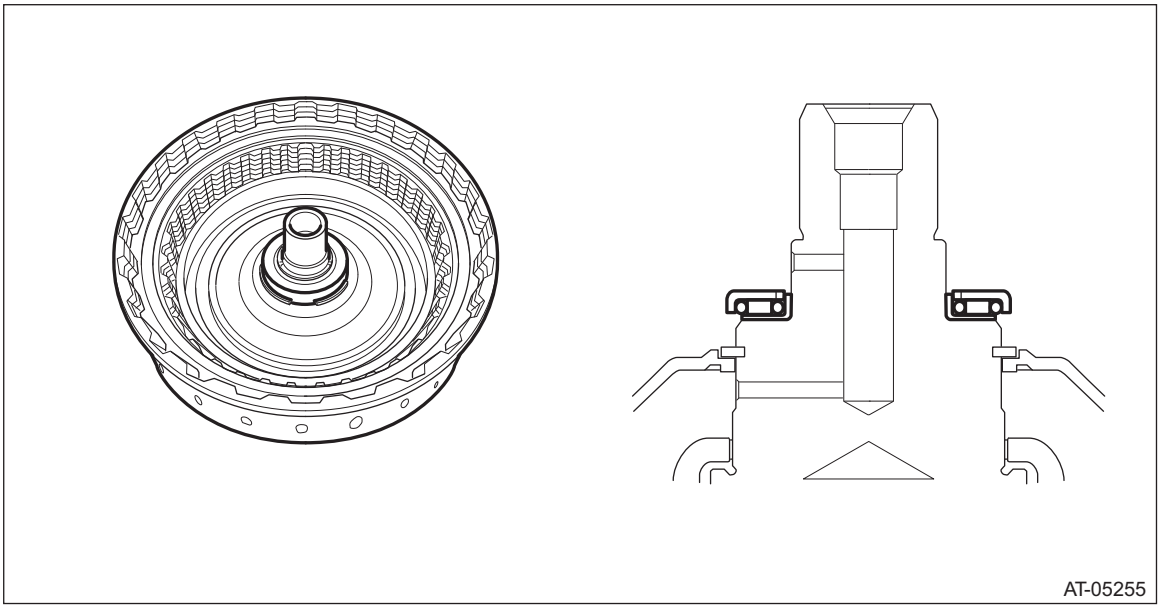
14) Replace with the selected retaining plate to install.

15) Install the snap ring to the lower groove.

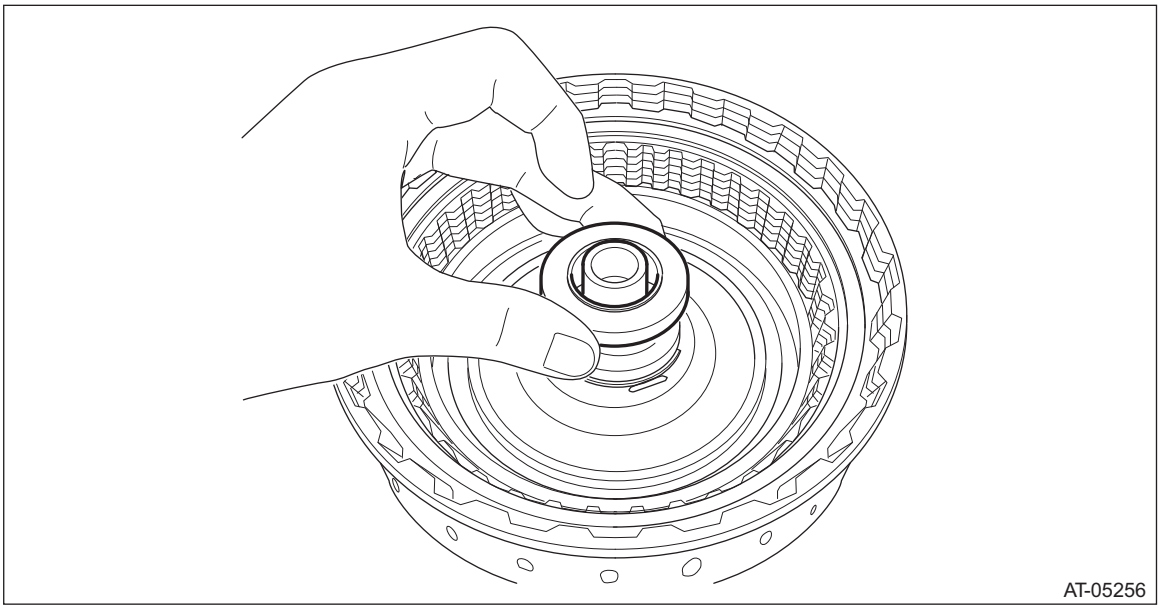


16) Install the thrust needle bearing.

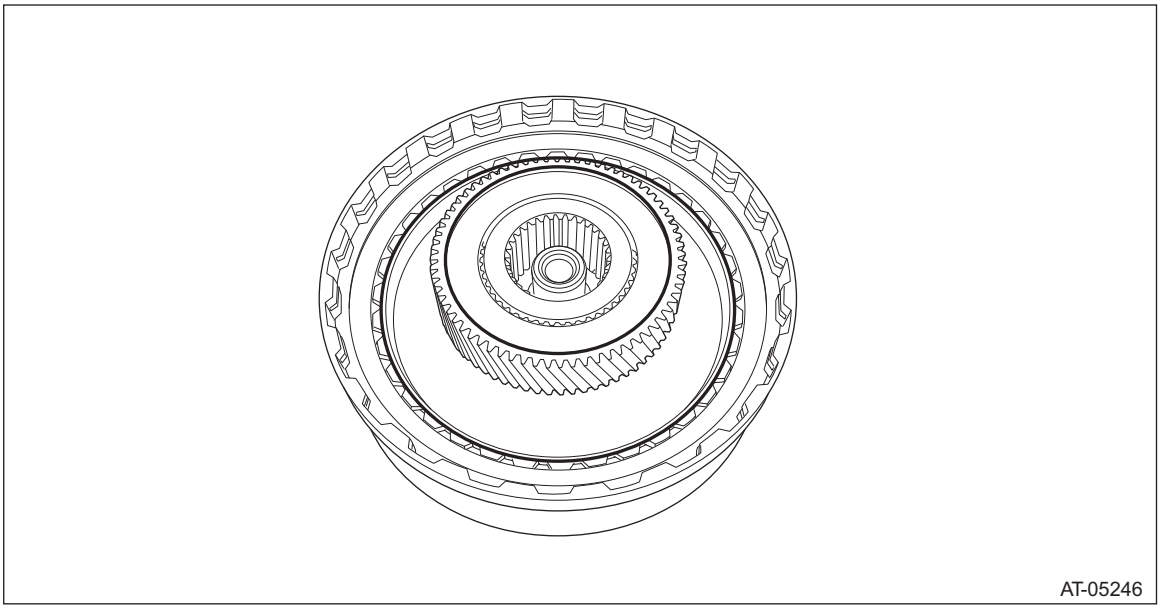
NOTE:
Install the thrust needle bearing in the correct direction.



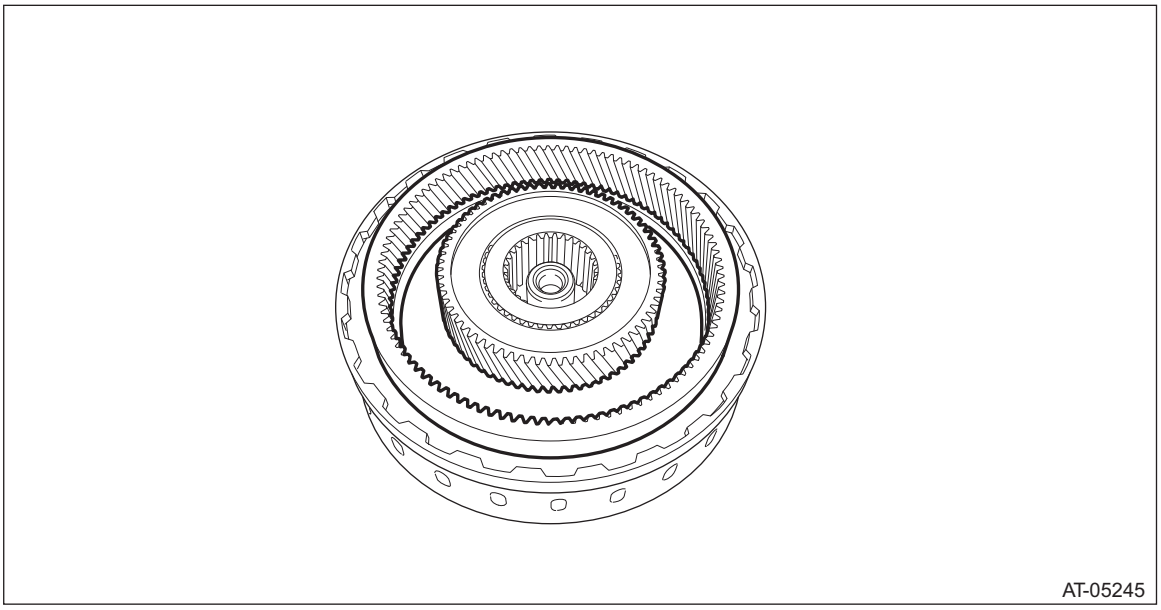
17) Install the washer.



18) Install the sun gear.

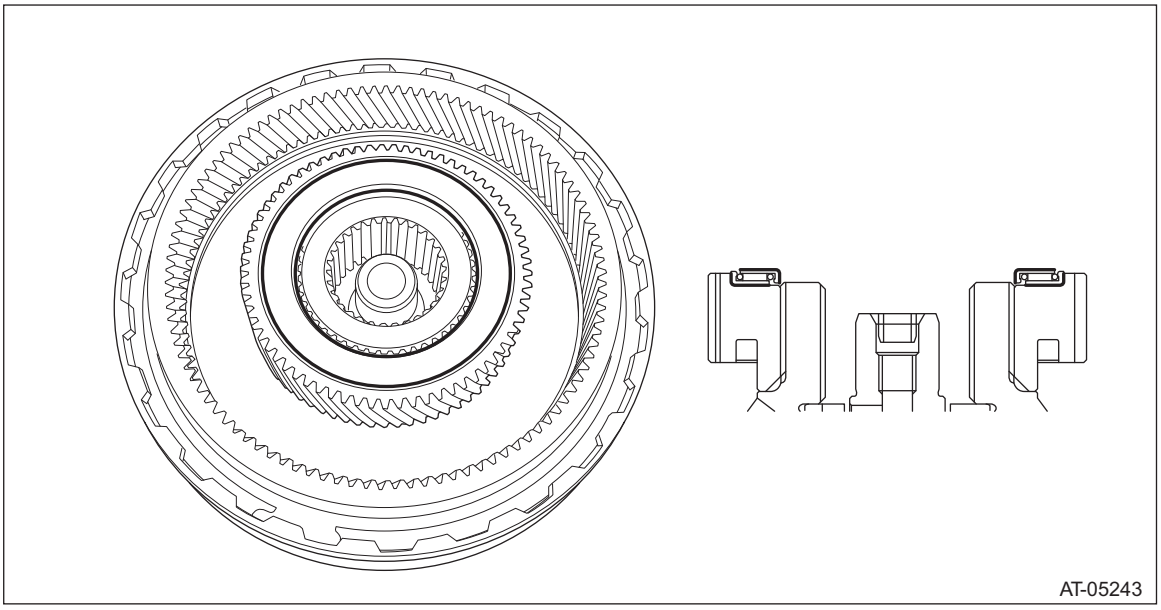


19) Install the internal gear.

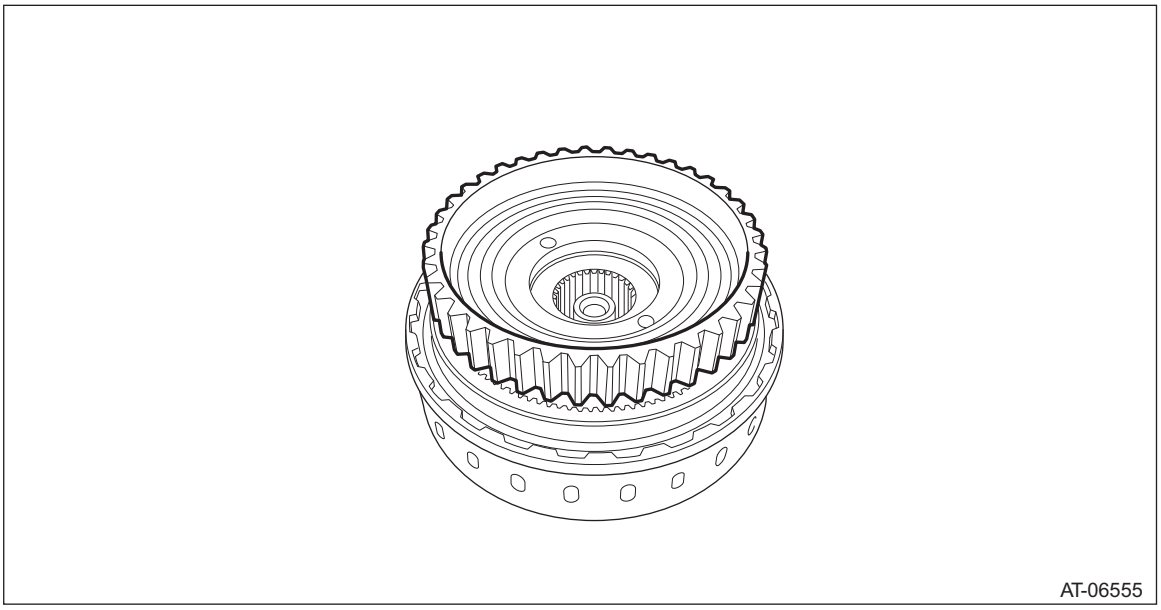


20) Install the snap ring.
21) Install the thrust needle bearing.

NOTE:
Make sure to install in the right direction.



22) Install the planetary carrier assembly.

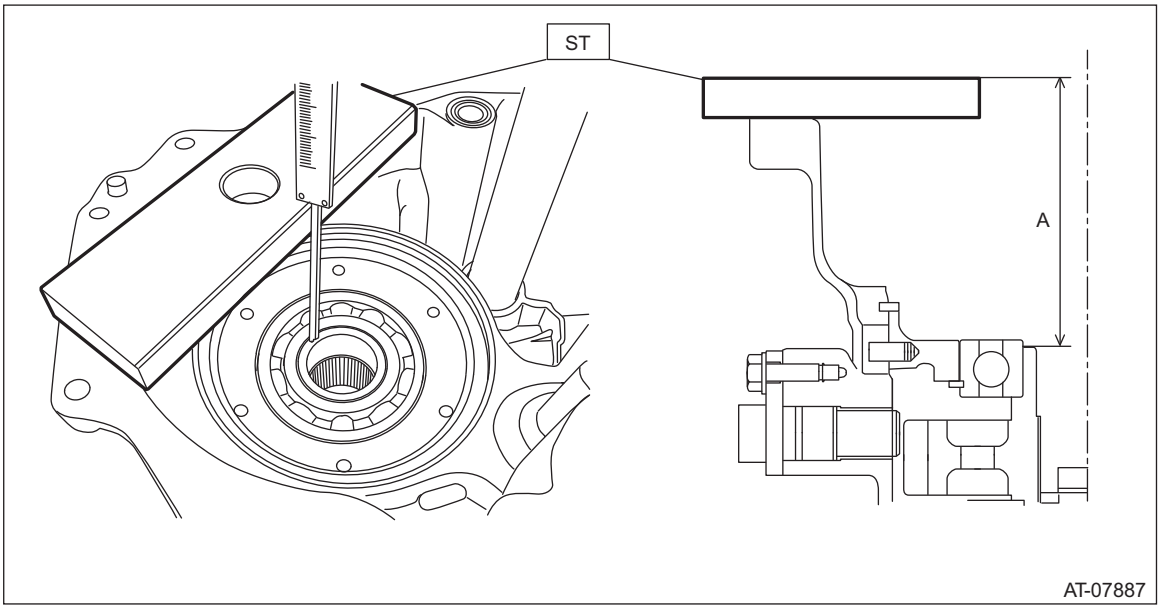


E: INSPECTION

- Check the forward clutch drum, internal gear, sun gear and forward clutch piston lip for wear or damage.
- Inspect the drive plate facing for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed spring retainer.
- Make sure the clearance between retaining plate and internal gear of forward clutch is within the limit. If it exceeds the standard, replace the forward clutch assembly. <Ref. to CVT(TR690)-192, ASSEMBLY, Forward Clutch Assembly.>

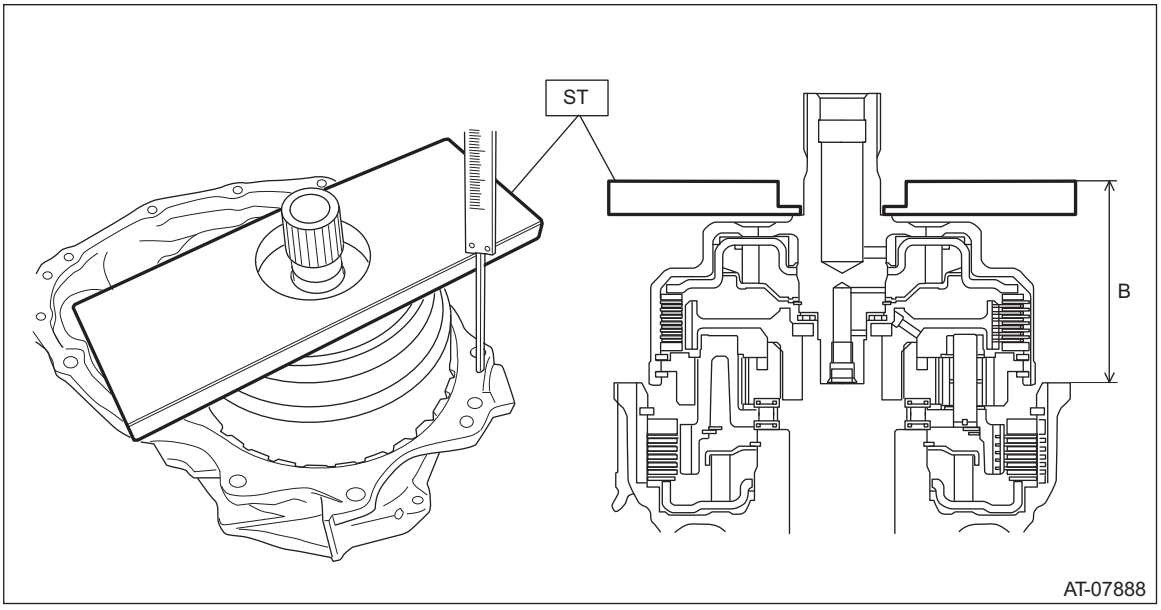
F: ADJUSTMENT

1) Measure depth “A” from the ST upper face to the washer catch surface.
ST 398643600 GAUGE



2) Install the forward clutch assembly to intermediate case.

3) Setting the ST, measure height “B” from the ST upper side to the intermediate case mating surface.
ST 499575600 GAUGE



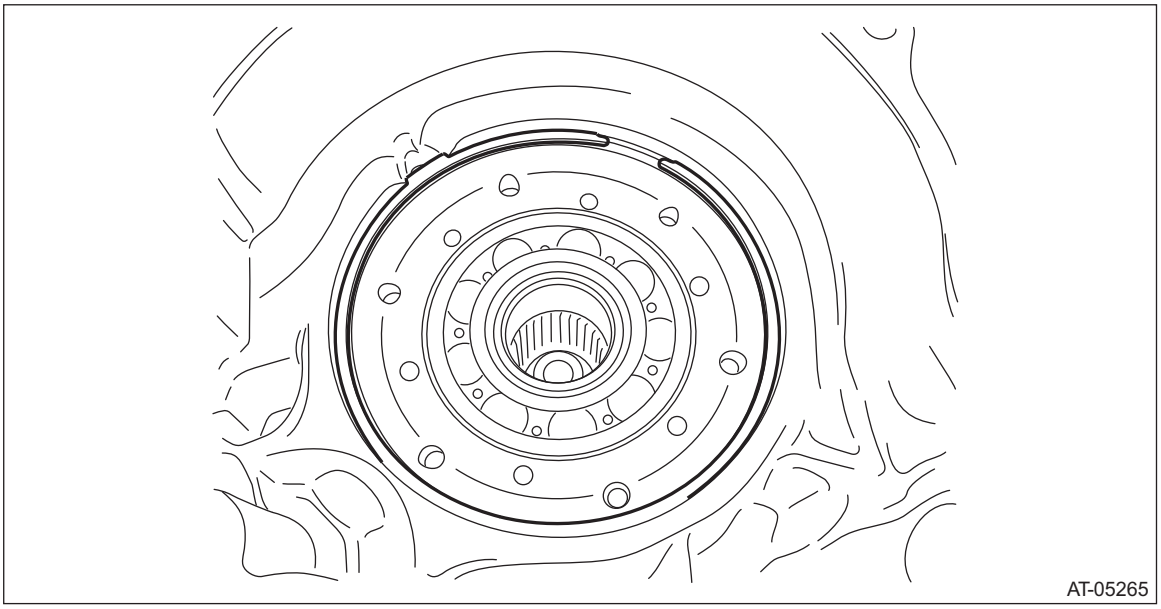
4) Obtain the thickness of washer using the following formula.
Calculation formula:
T (mm) = (A – 15) – (B – 15) – (0.35 — 0.70)
[T (in) = (A – 0.591) – (B – 0.591) – (0.014 — 0.028)]
T: Washer thickness
A: Depth from the ST upper face to the washer catch surface
B: Height from the upper surface of the ST to the mating surface of the intermediate case
15 mm (0.591 in): Thickness of ST
0.35 — 0.70 mm (0.014 — 0.028 in): Clearance
5) Select the washer to meet the value “T” obtained from step 4).

Washer	
Part No.	Washer thickness mm (in)
803034040	1.0 (0.039)
803034041	1.2 (0.047)
803034042	1.4 (0.055)
803034043	1.6 (0.063)

38.Reduction Driven Gear

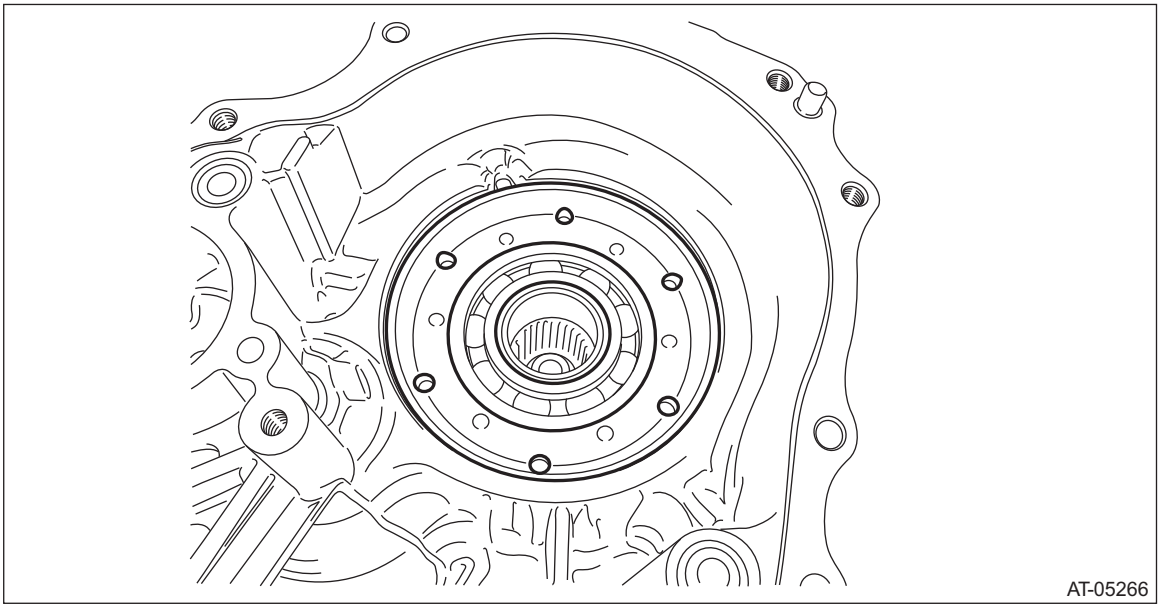
A: REMOVAL

1) Remove the transmission from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
4) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
5) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
6) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
7) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
8) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
9) Remove the snap ring.



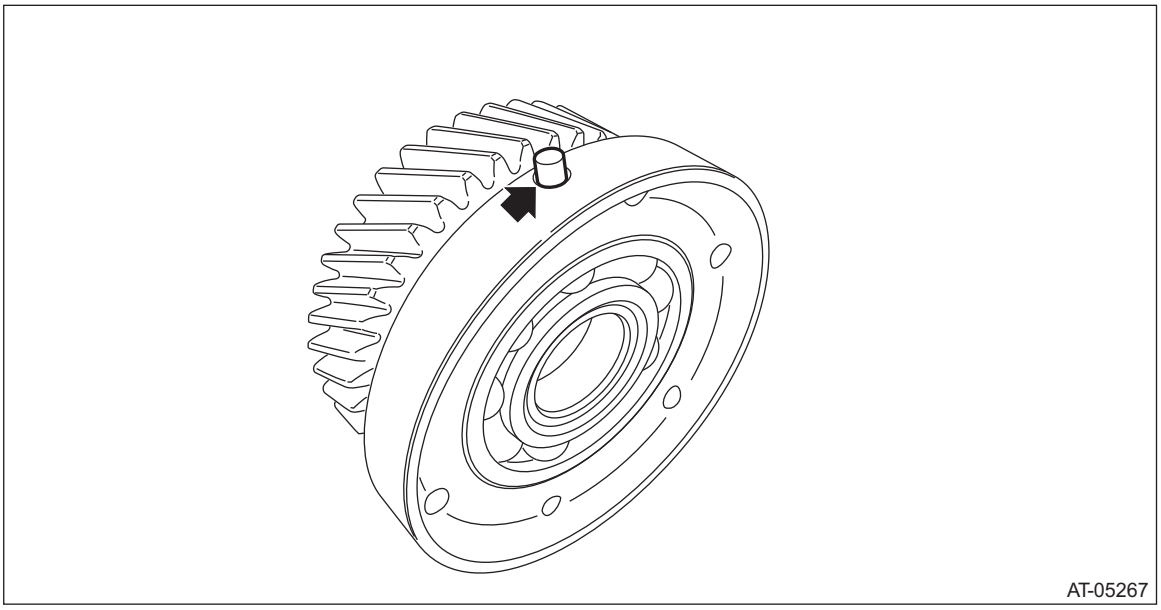
AT-05265

10) Remove the reduction driven gear assembly.



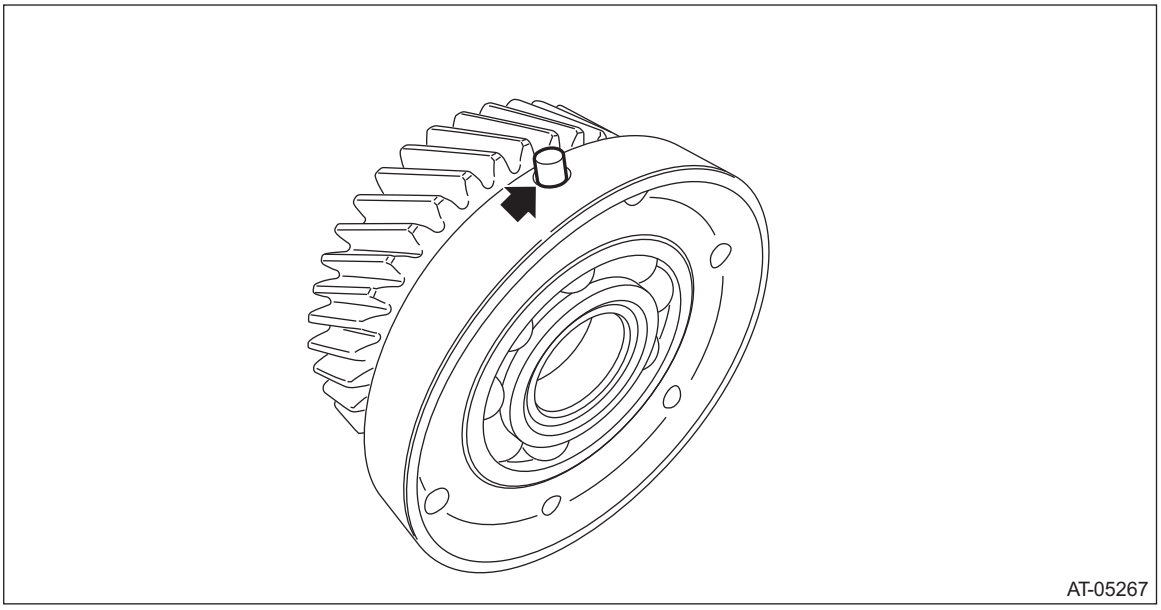
AT-05266

11) Remove the straight pin.

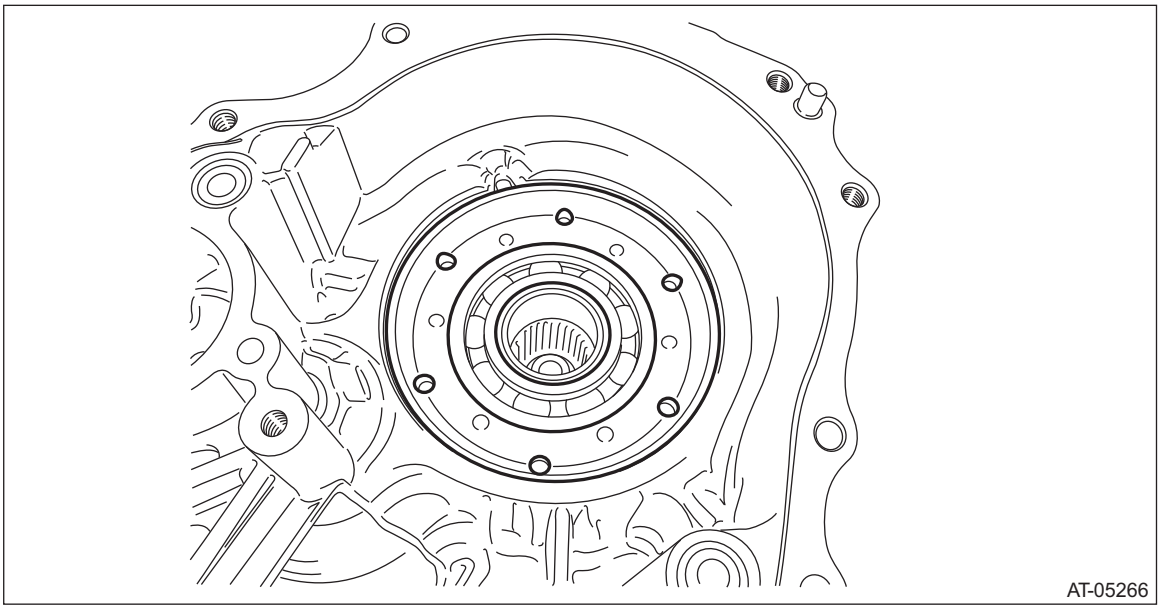


B: INSTALLATION

1) Install the straight pin to reduction driven gear assembly.



2) Fit the straight pin portion to the recess portion of transmission case and install the reduction driven gear and install the snap ring.

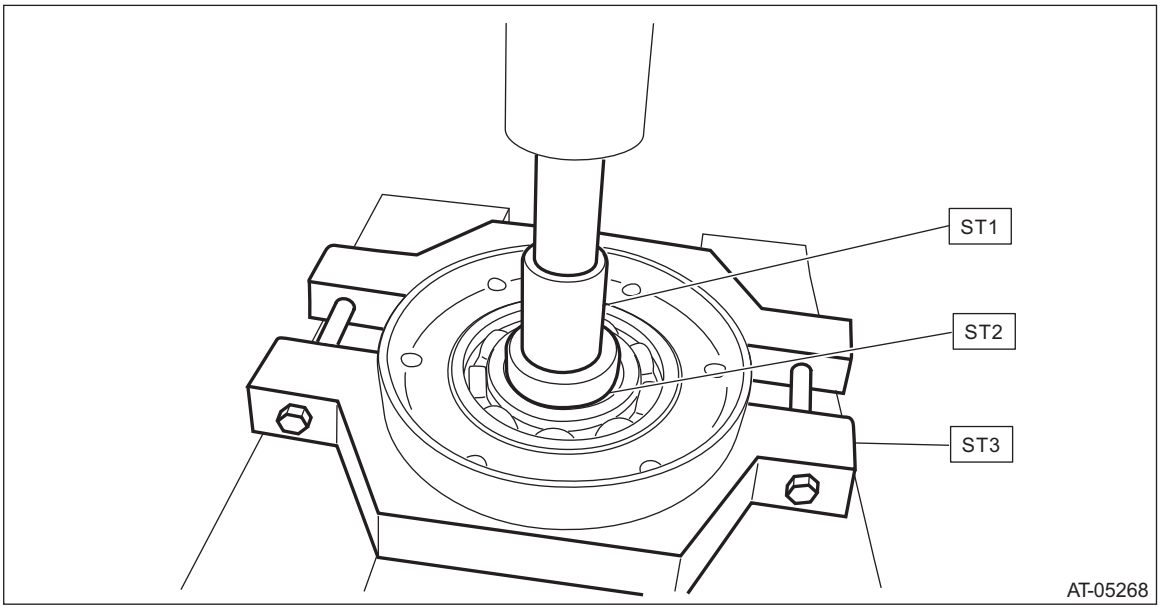


3) Select the snap ring. <Ref. to CVT(TR690)-208, ADJUSTMENT, Reduction Driven Gear.>
4) Replace with the selected snap ring.

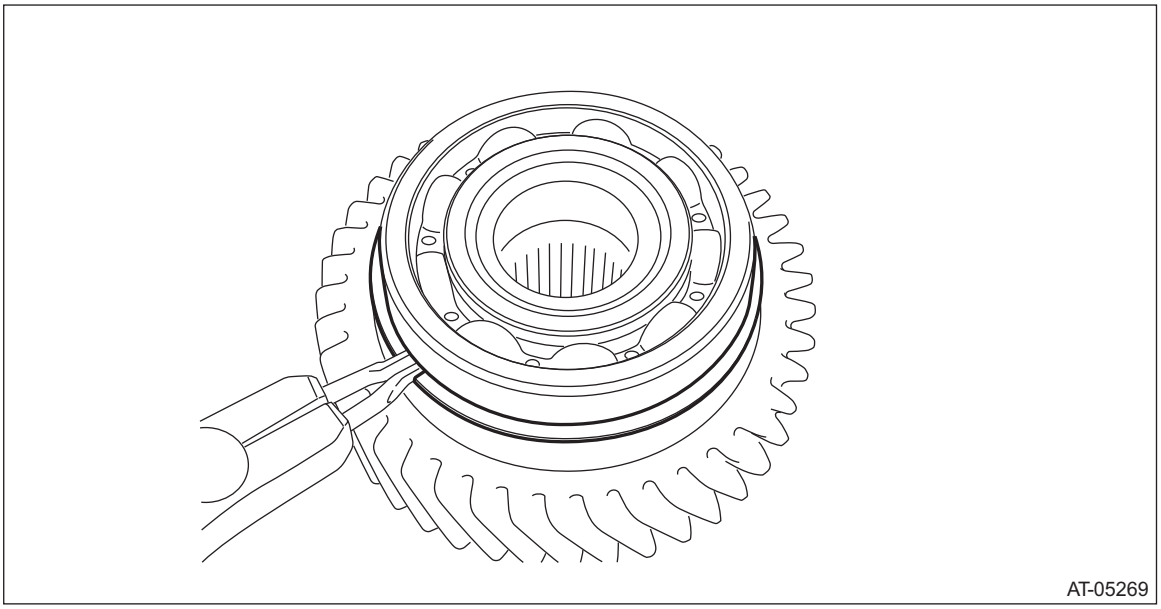
NOTE:
If the clearance measured in step 3) is within standard, the snap ring replacement is not necessary.
5) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
6) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
7) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
8) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
9) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
10) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
11) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
12) Install the transmission to vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

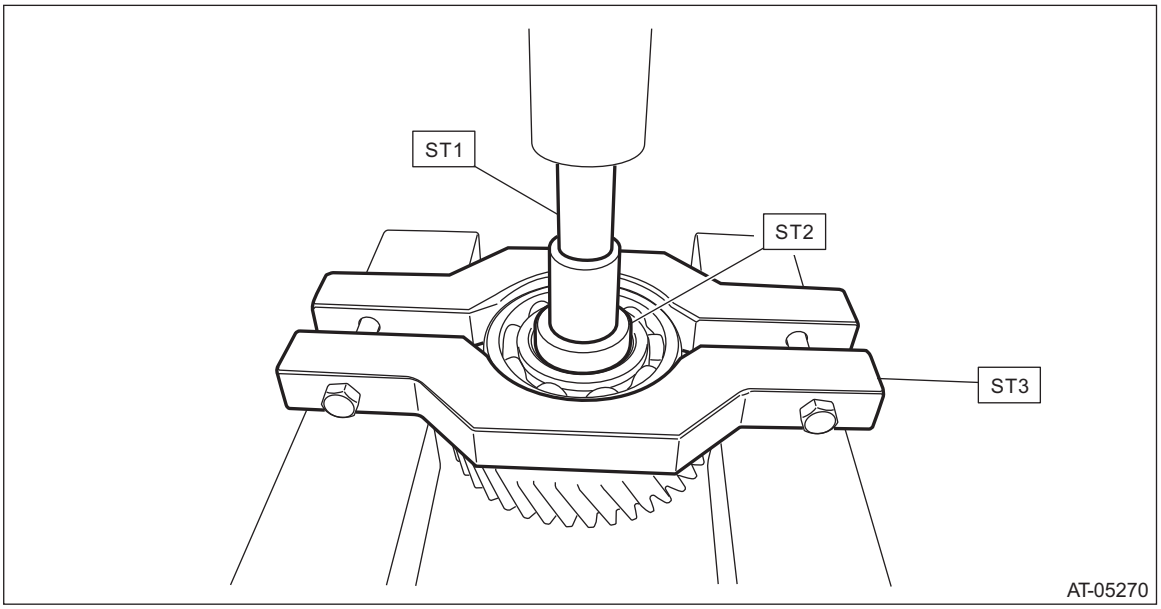
1) Remove the bearing retainer using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 18767AA000 BEARING REMOVER



2) Remove the snap ring.



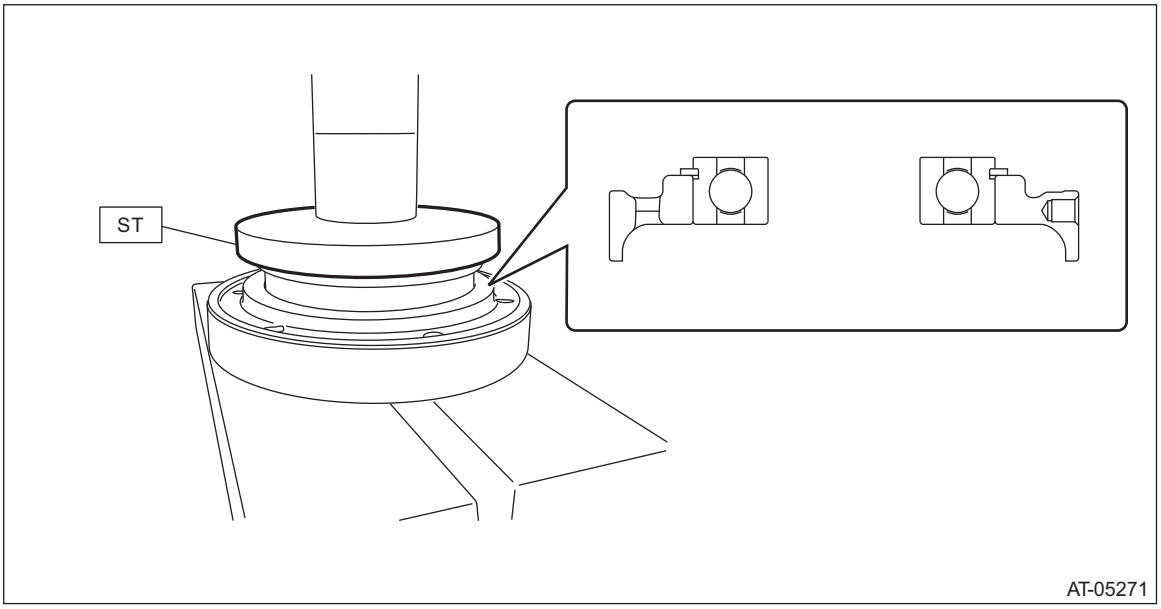
3) Remove the ball bearing using ST1, ST2 and ST3.
ST1 899864100 REMOVER
ST2 398497701 SEAT
ST3 498077600 REMOVER



D: ASSEMBLY

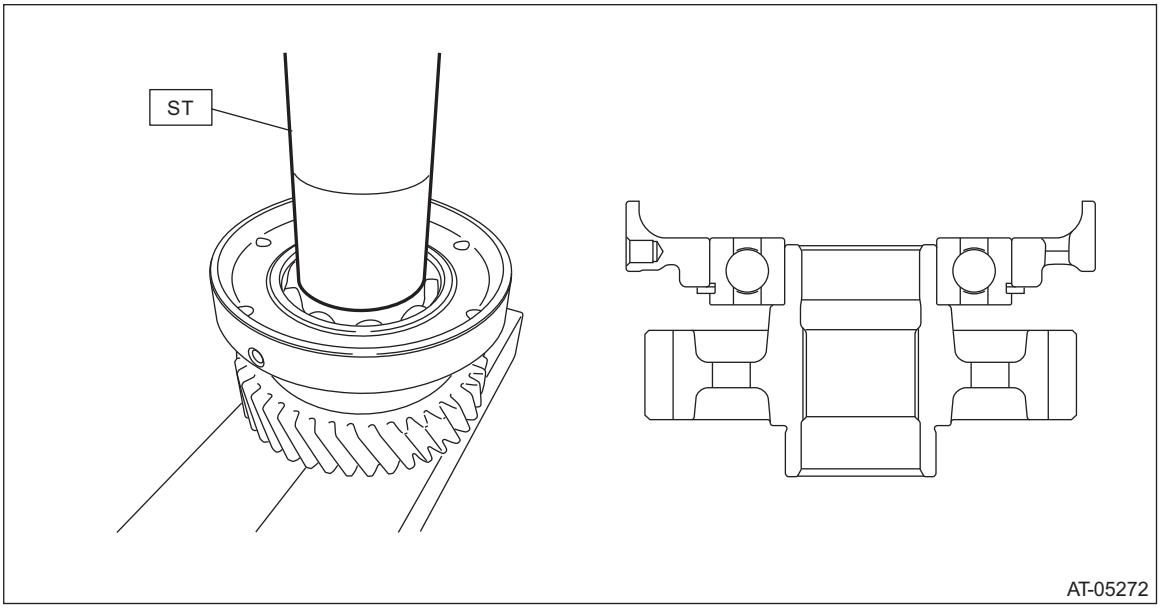
1) Using the ST, install the ball bearing to bearing retainer.
ST 398177700 INSTALLER

NOTE:
- Use a new ball bearing.
- Make sure to install the ball bearing in the right direction.
- Apply CVTF to the press-fitting area.



2) Install the snap ring.

3) Using the ST, install the reduction driven gear.
ST 499277200 INSTALLER



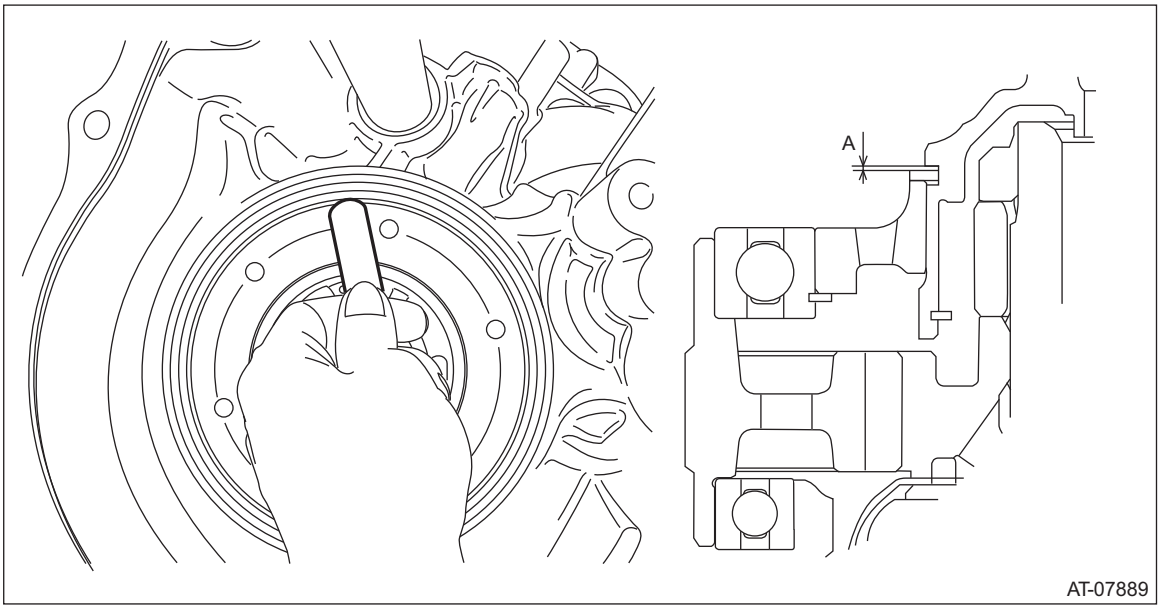
E: INSPECTION

- Check the ball bearing for smooth rotation.
- Check the ball bearing for excessive looseness.
- Check the reduction driven gear for breakage or damage.
- Check the clearance between snap ring and transmission case and replace the snap ring as necessary.

F: ADJUSTMENT

1) Measure clearance “A” between snap ring and transmission case.

Specification:
0.05 — 0.25 mm (0.002 — 0.01 in)



2) If clearance “A” is out of standard, select the snap ring within standard.

Snap ring	
Part No.	Thickness mm (in)
805100460	2.0 (0.079)
805100461	2.1 (0.083)

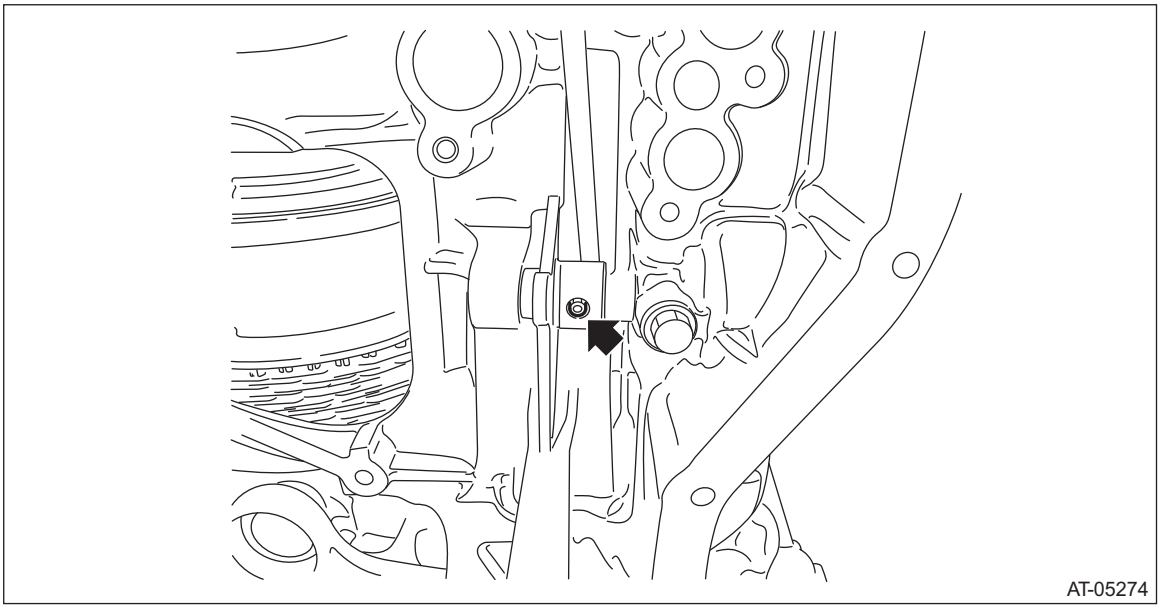
Snap ring	
Part No.	Thickness mm (in)
805100462	2.2 (0.087)
805100463	2.3 (0.091)
805100464	2.4 (0.094)

39.Transmission Control Device

A: REMOVAL

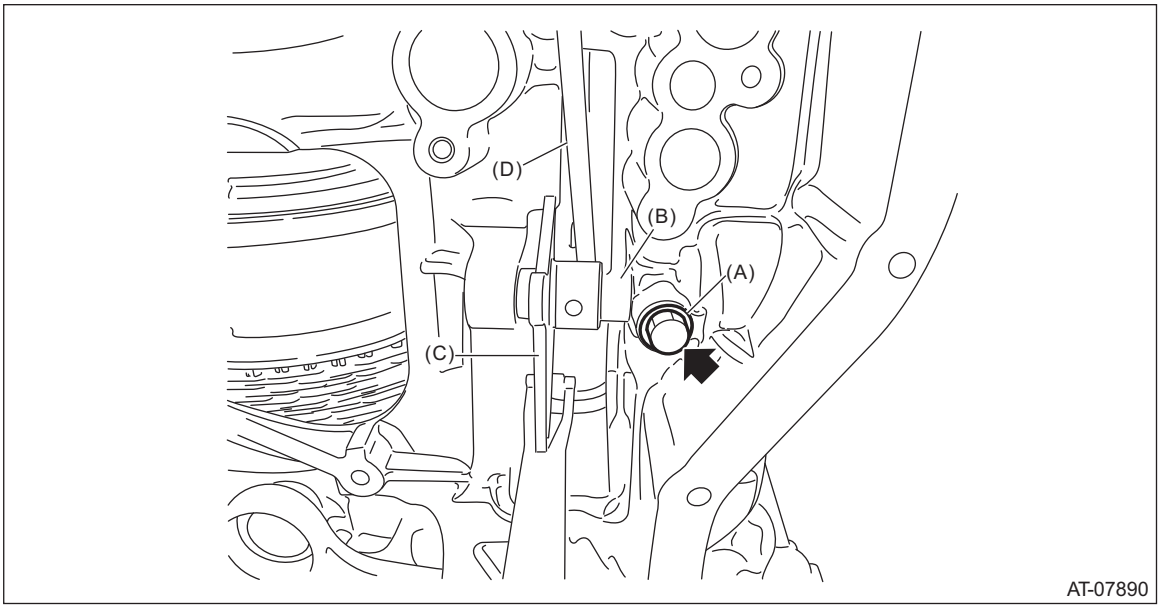
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
3) Remove the inhibitor switch. <Ref. to CVT(TR690)-96, REMOVAL, Inhibitor Switch.>
4) Remove the spring pin.

NOTE:
Prevent the spring pin from dropping in the transmission using paper towel etc.



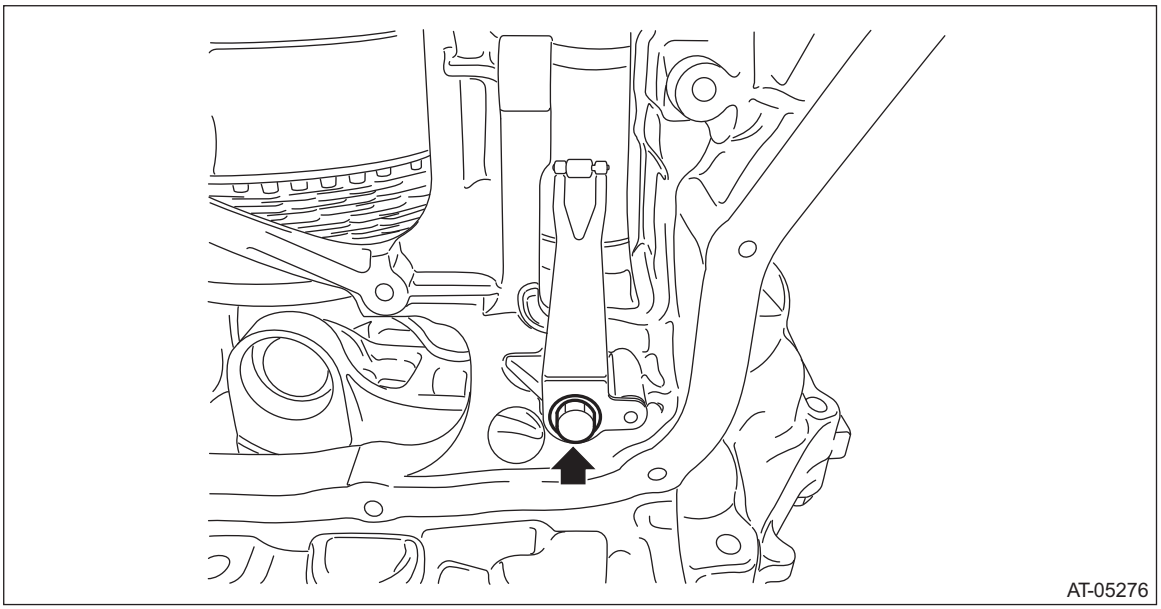
5) Remove the bolt and remove the range select lever, manual plate and parking rod.

NOTE:
Do not damage the lip of oil seal press-fitted in the case.



(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

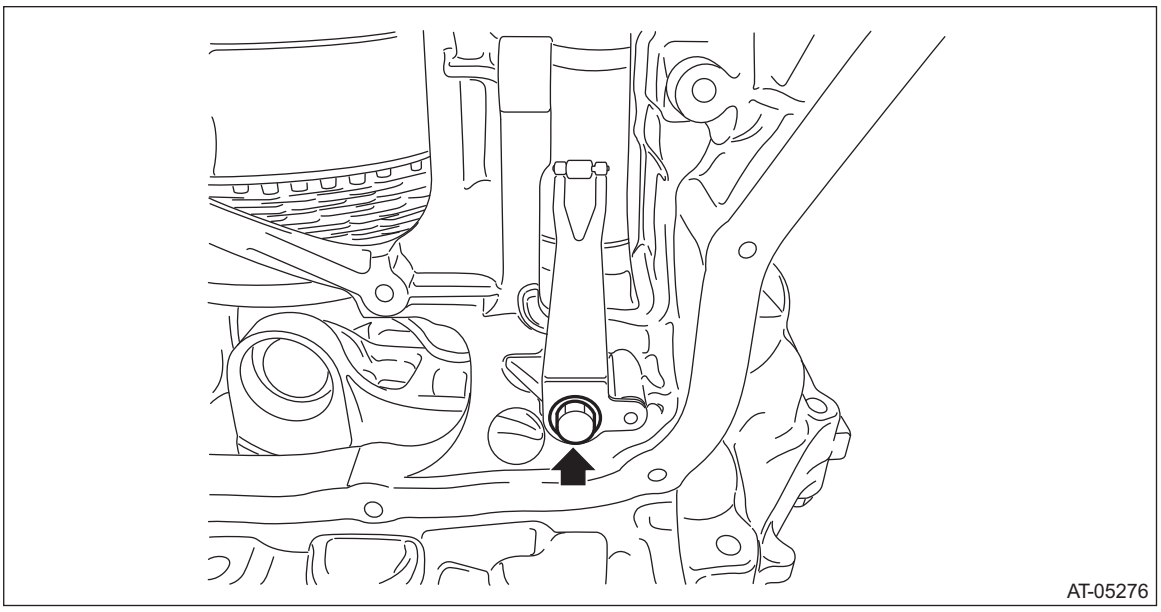
6) Remove the detent spring.



B: INSTALLATION

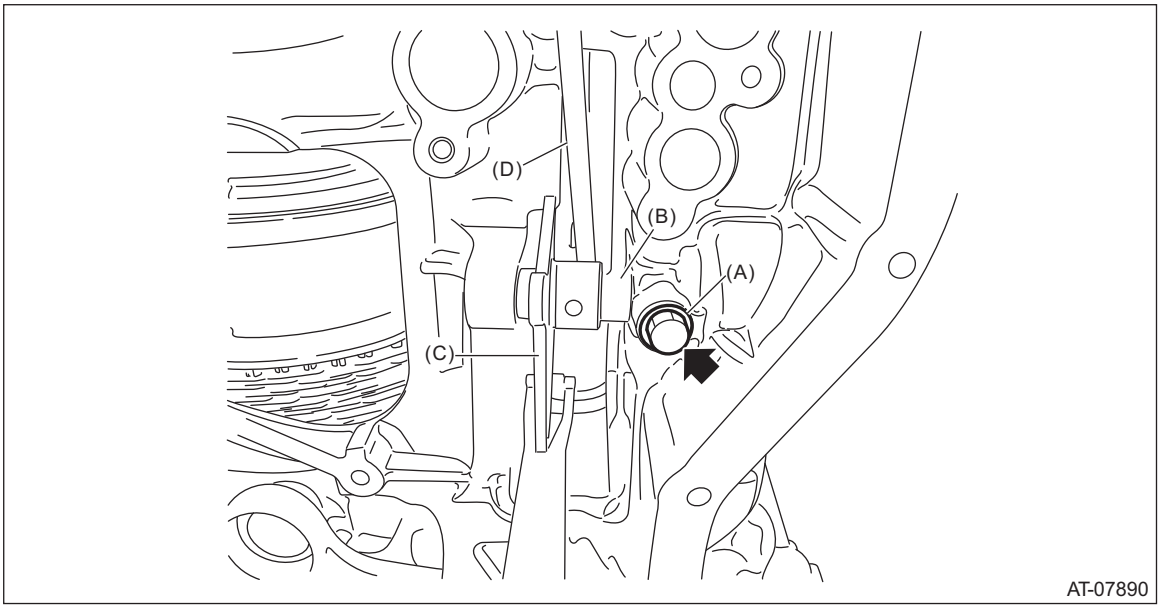
1) Install the detent spring.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



2) Install the manual plate, parking rod, range select lever and bolt.

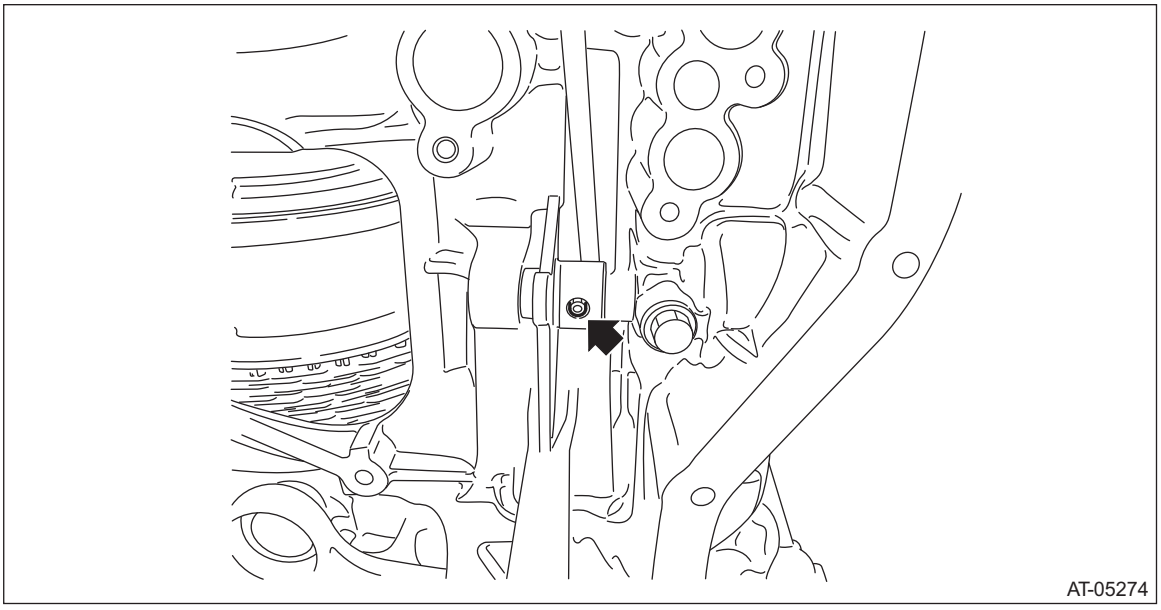
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



(A) Bolt
(B) Range select lever
(C) Manual plate
(D) Parking rod

3) Install the spring pin.

NOTE:
Use new spring pin.



4) Install the inhibitor switch. <Ref. to CVT(TR690)-99, INSTALLATION, Inhibitor Switch.>
5) Adjust the inhibitor switch. <Ref. to CVT(TR690)-95, ADJUSTMENT, Inhibitor Switch.>
6) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
7) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

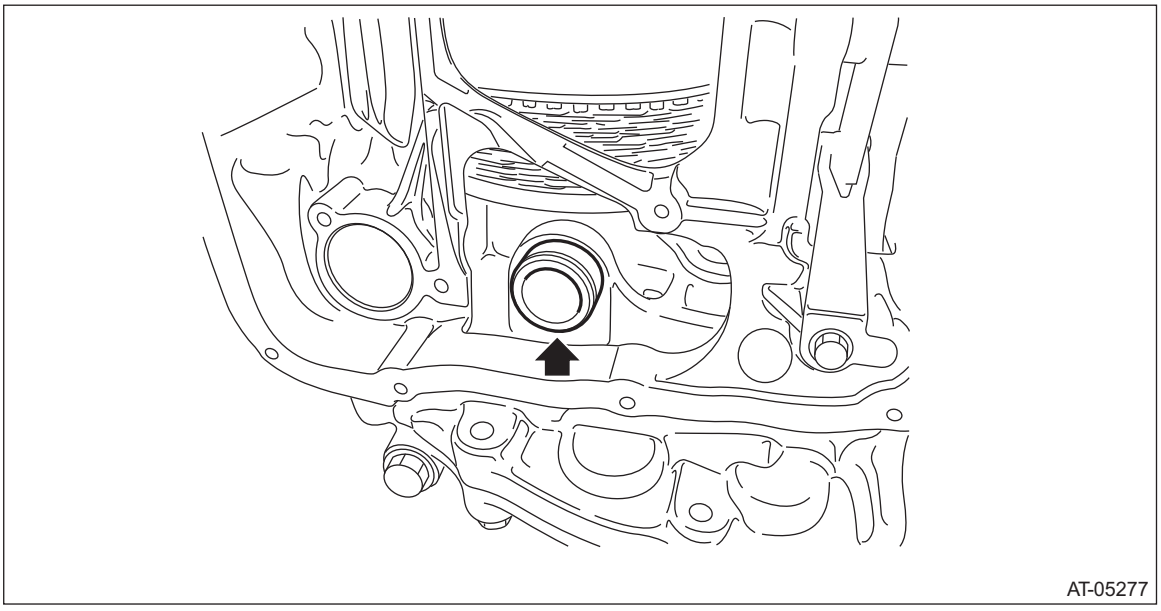
Make sure that the manual lever and detent spring are not worn or otherwise damaged.

40.Transmission Case

A: REMOVAL

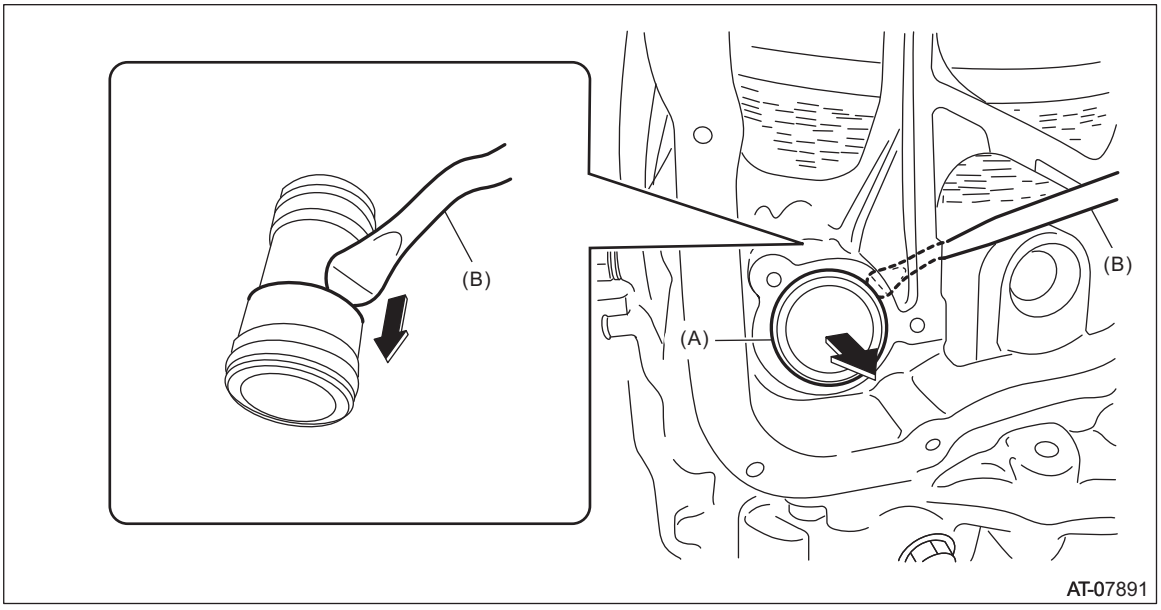
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
4) Remove the secondary speed sensor. <Ref. to CVT(TR690)-102, REMOVAL, Secondary Speed Sensor.>
5) Remove the inhibitor switch. <Ref. to CVT(TR690)-96, REMOVAL, Inhibitor Switch.>
6) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
9) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
13) Remove the reduction driven gear. <Ref. to CVT(TR690)-203, REMOVAL, Reduction Driven Gear.>
14) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>

NOTE:
When removing the control valve body, also remove the pressure pipe if it is attached on the case.



15) Remove the CVTF pipe using a tire lever etc.

NOTE:
Remove by hooking the stepped portion of CVTF pipe with a tire lever etc.

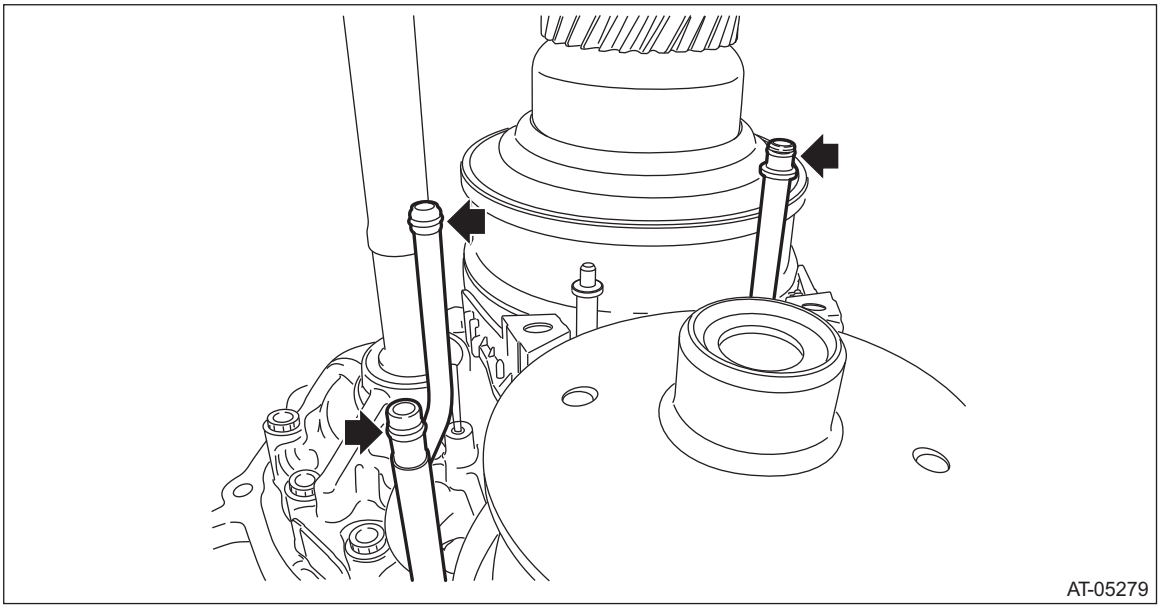


(A) CVTF pipe
(B) Tire lever

16) Remove the transmission case.

NOTE:
The total number of transmission case mounting bolts is 15.

17) Remove the O-ring of lubrication pipe.

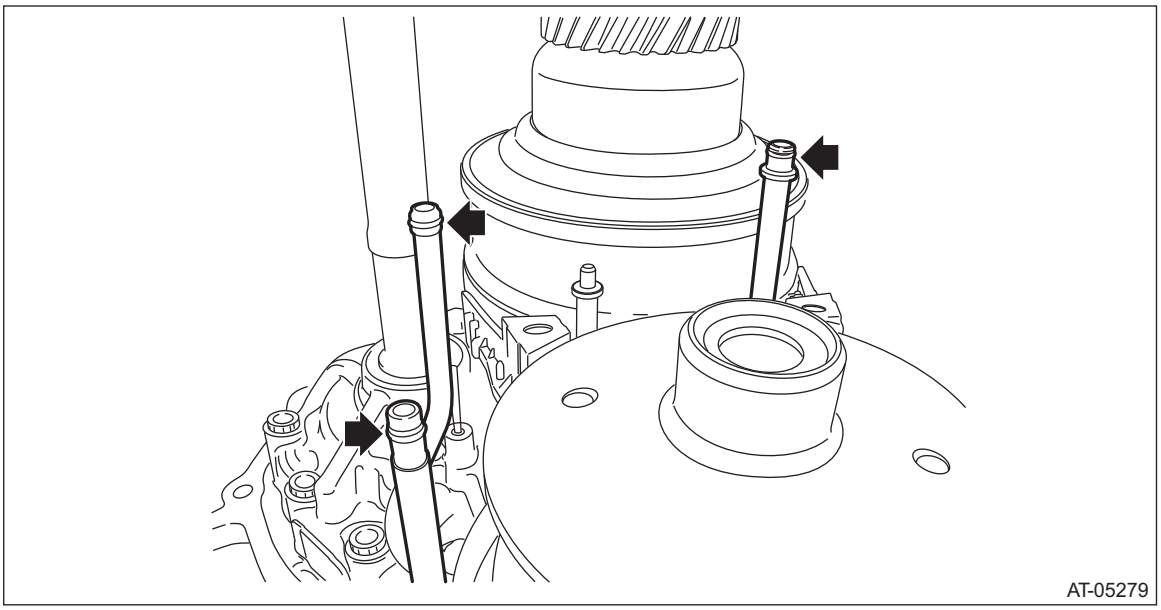


18) Remove the control device system. <Ref. to CVT(TR690)-210, REMOVAL, Transmission Control Device.>

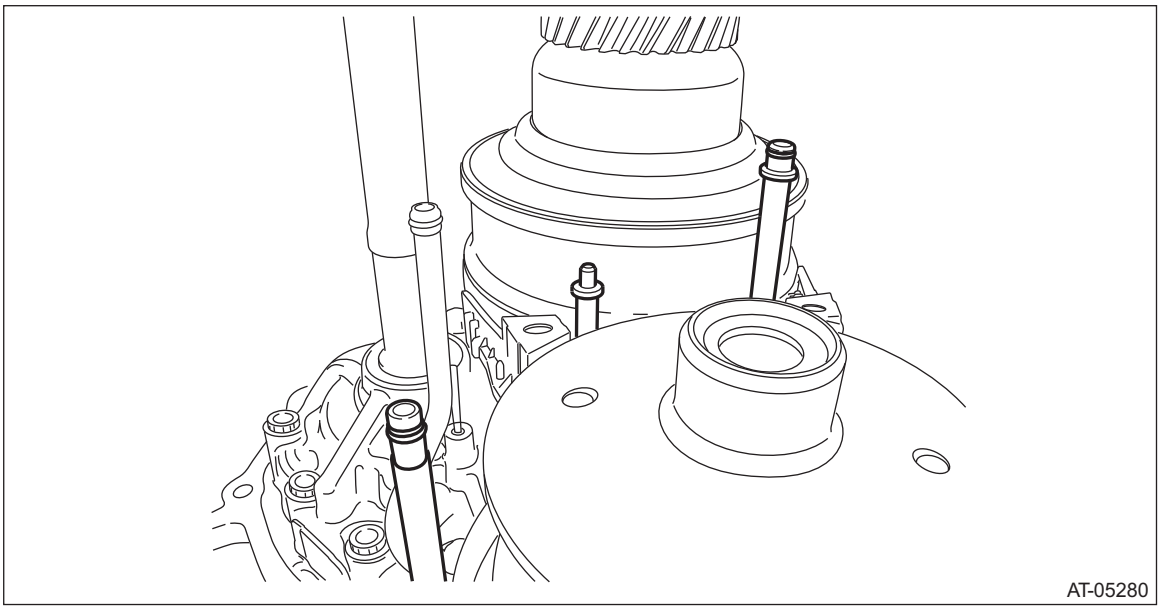
B: INSTALLATION

1) Clean the mating surface of transmission case and converter case.
2) Install the control device system. <Ref. to CVT(TR690)-211, INSTALLATION, Transmission Control Device.>
3) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

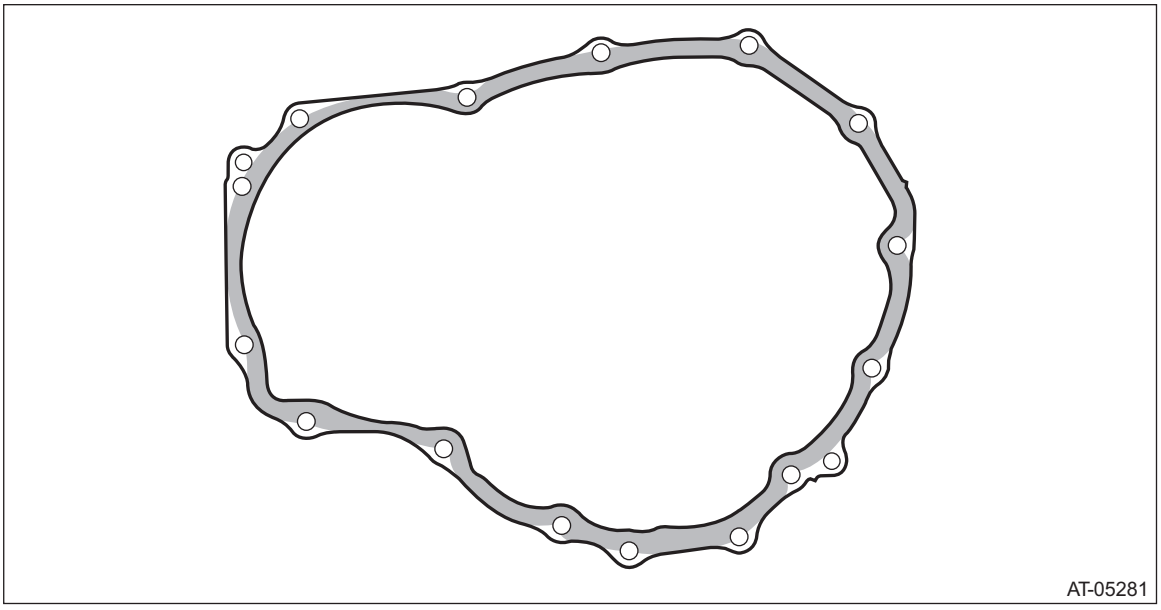


4) Make sure the lubrication pipe and support rod are in vertical position.



5) Apply liquid gasket seamlessly to the mating surface of transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent



6) Install the transmission case.

CAUTION:
If the transmission case gets in contact with the lubrication pipe and support rod, do not install the transmission case forcibly.

NOTE:
• Install while checking the lubrication pipe and support rod is being inserted properly into transmission case.
• If installing the transmission case is difficult, check if the lubrication pipe and support rod are bent.
• The total number of transmission case mounting bolts is 15.

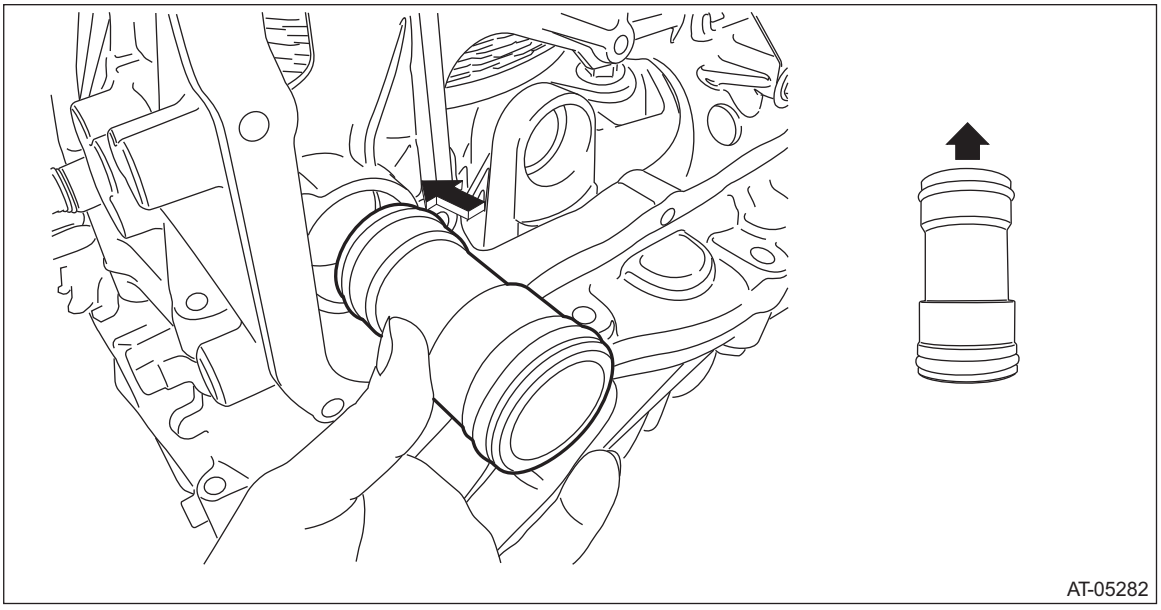
Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

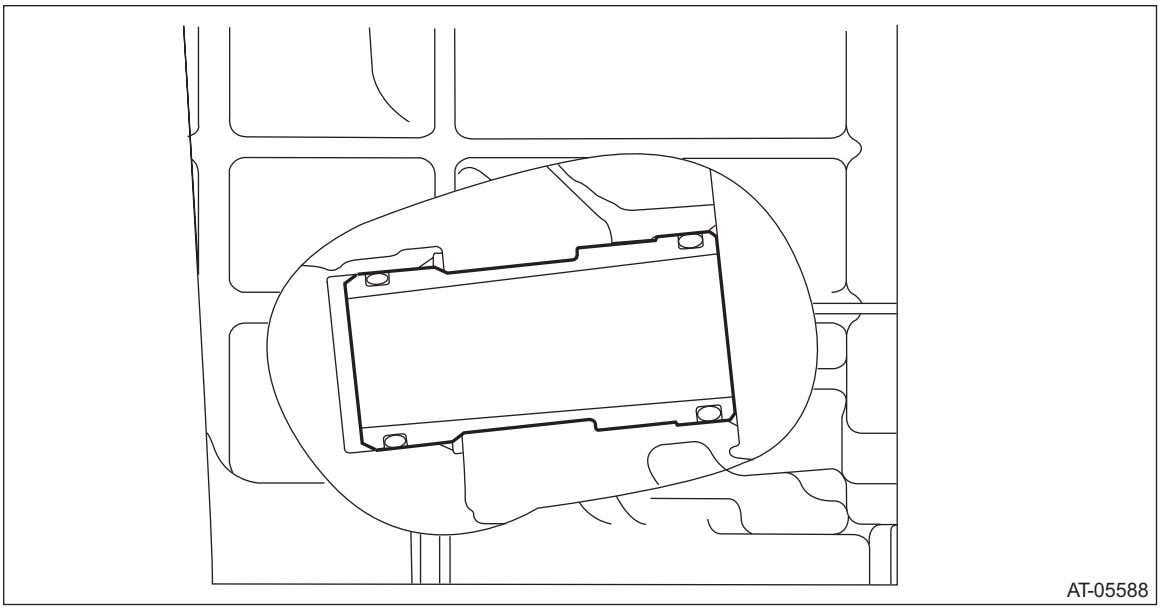
7) Install the O-ring to CVTF pipe.

NOTE:
Use new O-rings.

8) The smaller opening of CVTF pipe should be inserted to transmission.

NOTE:
After installing, make sure the CVTF pipe does not stick out of transmission case.



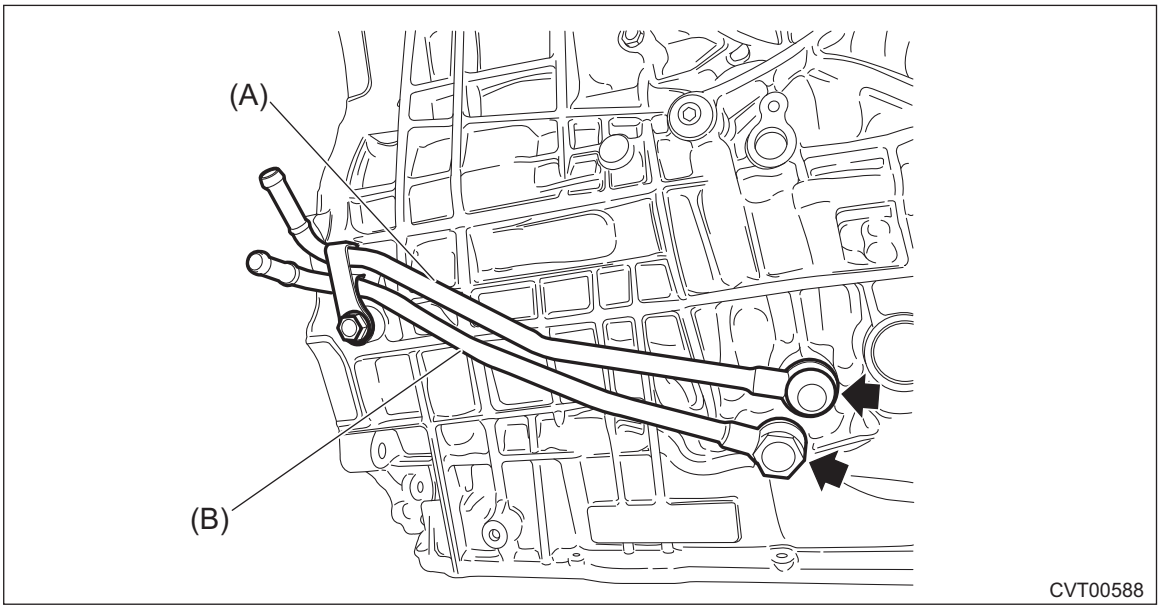


9) Install the reduction driven gear. <Ref. to CVT(TR690)-204, INSTALLATION, Reduction Driven Gear.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
17) Install the inhibitor switch. <Ref. to CVT(TR690)-99, INSTALLATION, Inhibitor Switch.>
18) Install the secondary speed sensor. <Ref. to CVT(TR690)-102, INSTALLATION, Secondary Speed Sensor.>
19) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>

20) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
21) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
22) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

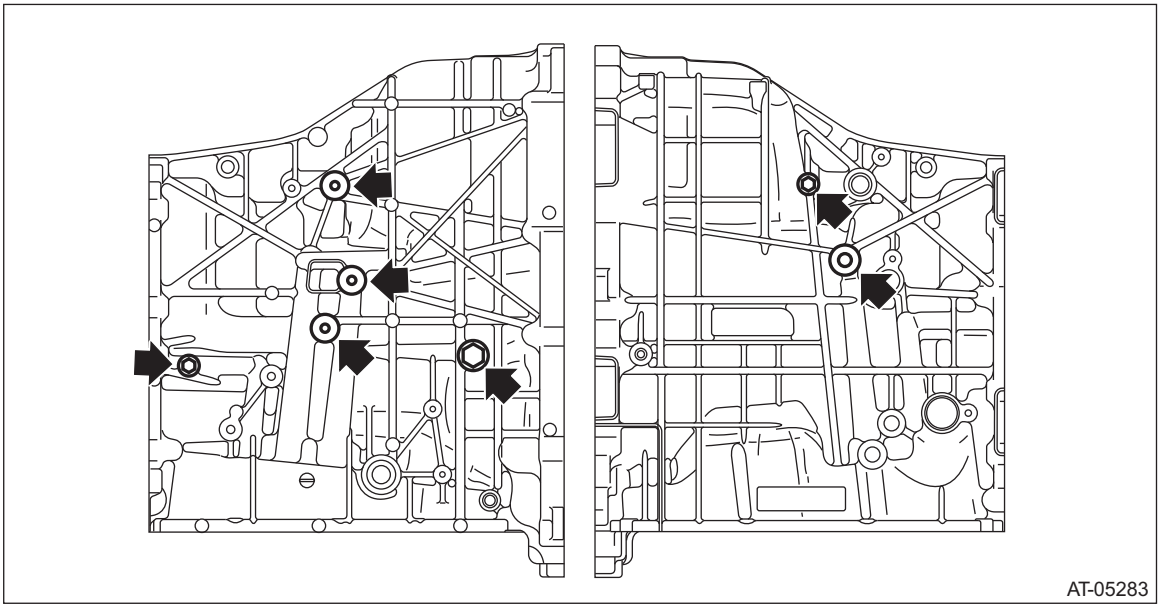
C: DISASSEMBLY

1) Remove the CVTF inlet pipe and CVTF outlet pipe.

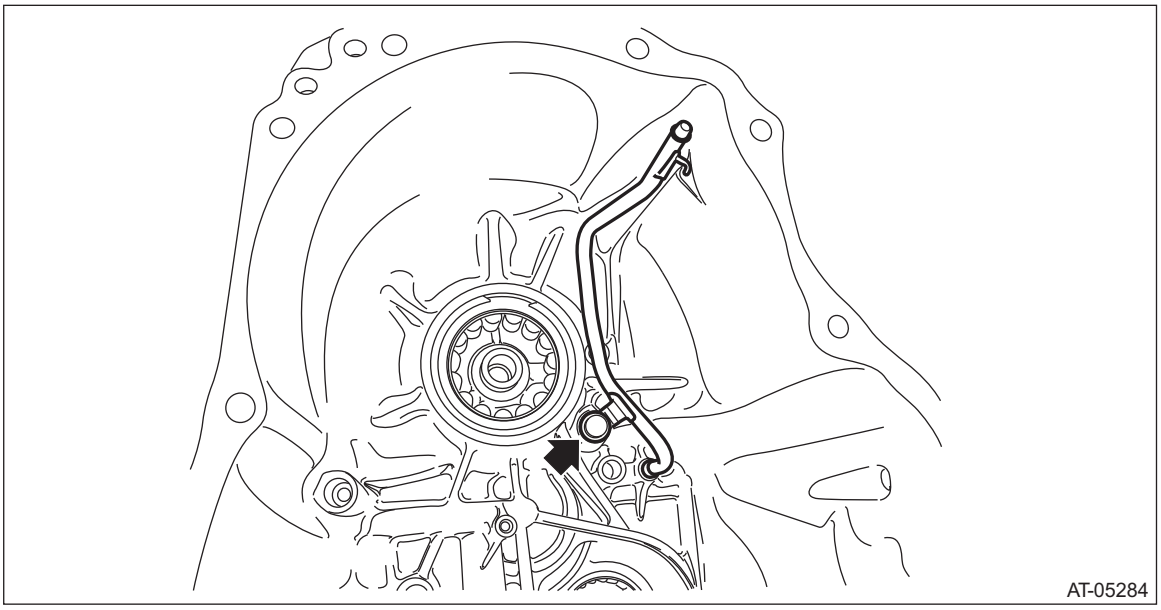


(A) CVTF outlet pipe
(B) CVTF inlet pipe

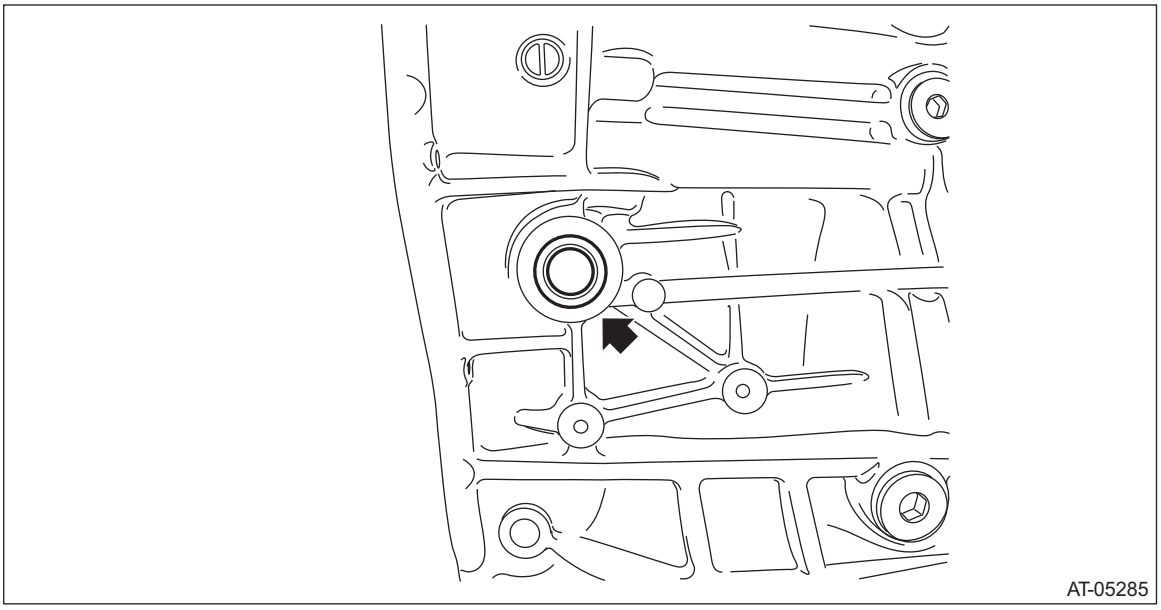
2) Remove all plugs from the transmission case.



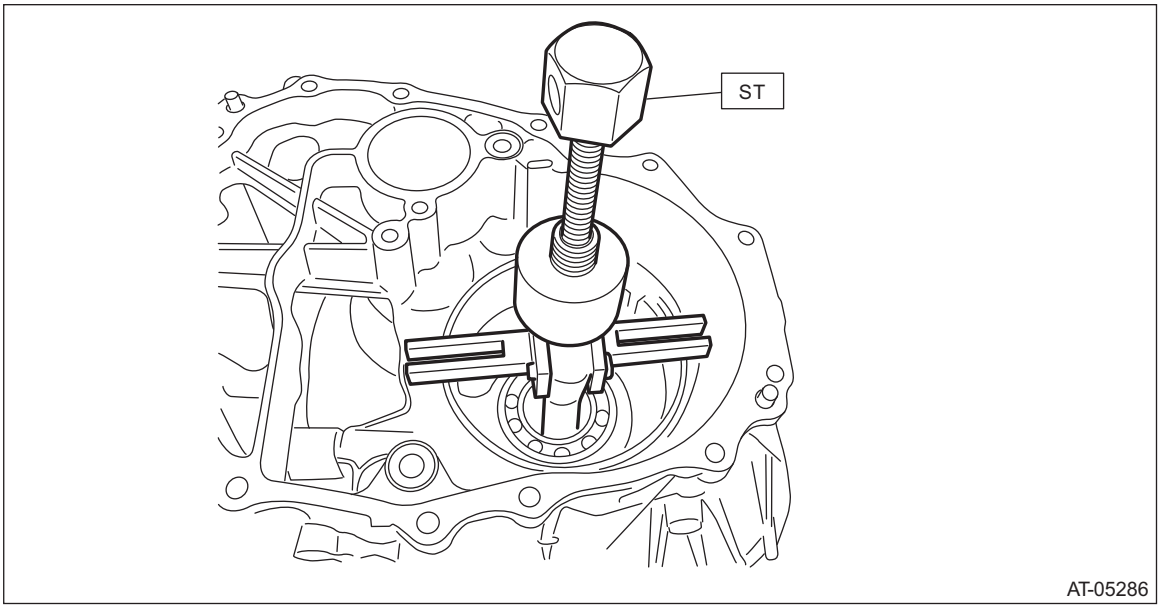
3) Remove the lubrication pipe.



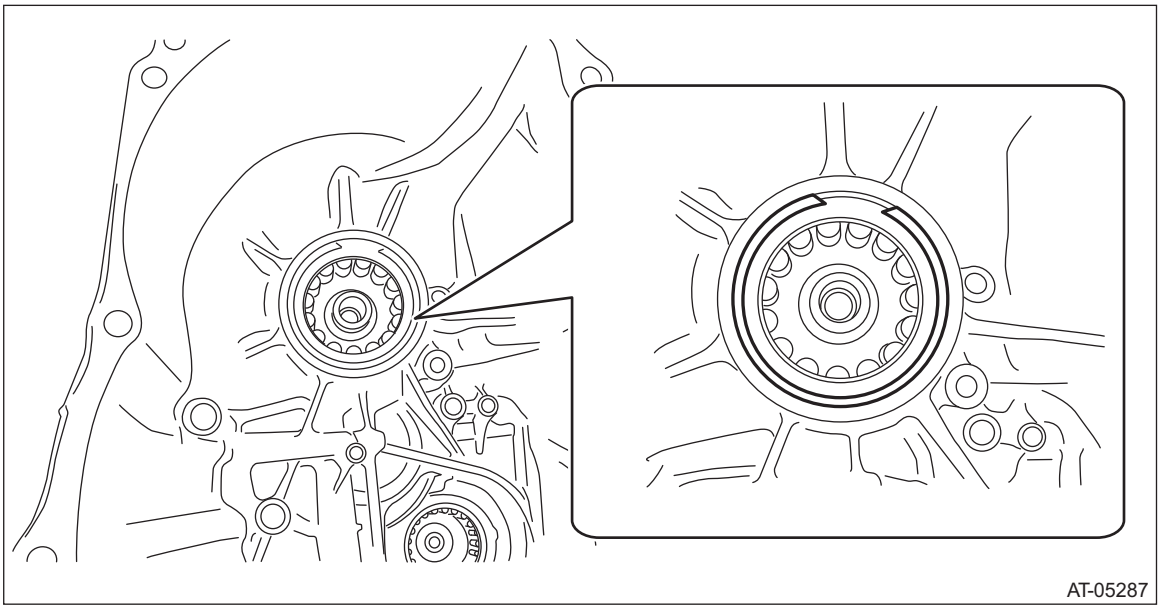
4) Remove the oil seal using a screwdriver wrapped with cloth etc.



5) Remove the ball bearing from reduction driven gear using ST.
ST 398527700 PULLER ASSY

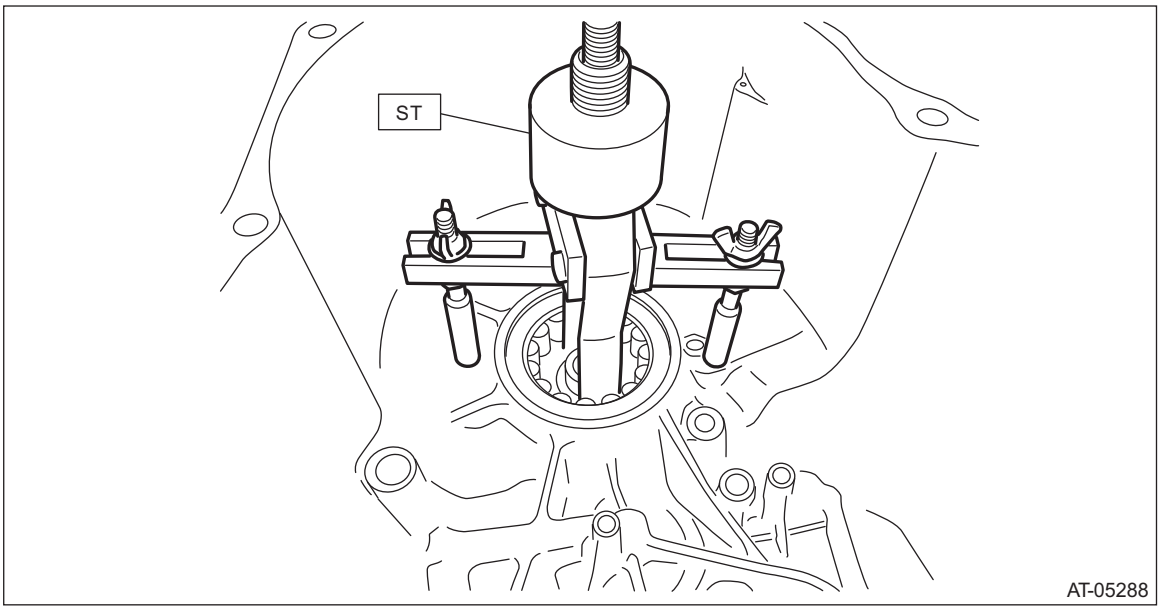


6) Remove the snap ring on primary pulley side.

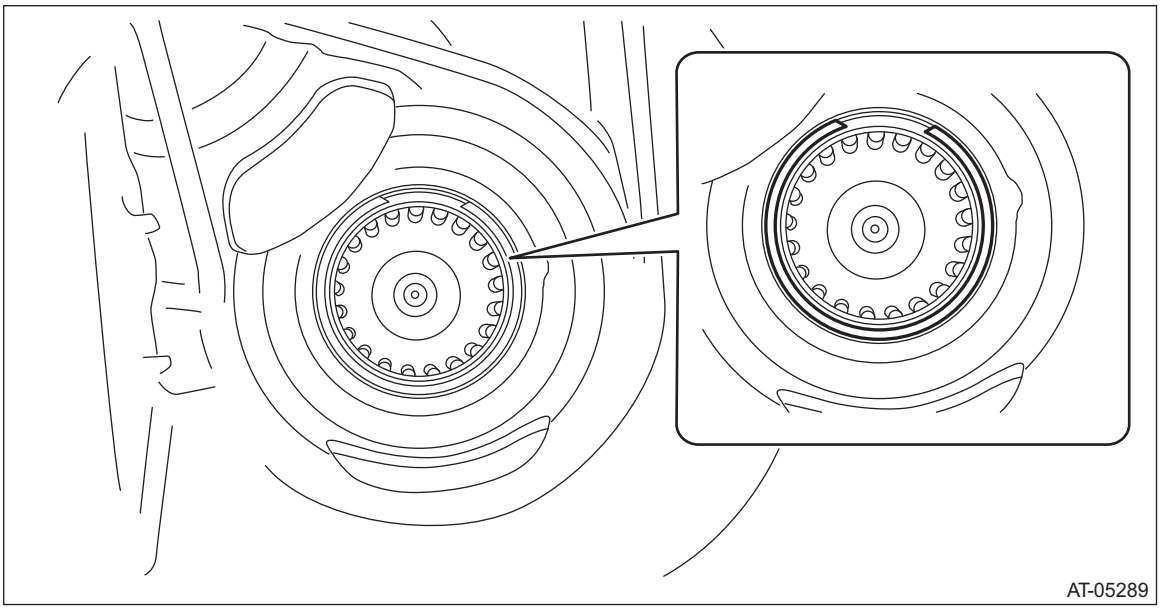


7) Using the ST, remove the roller bearing on primary pulley side.

NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY

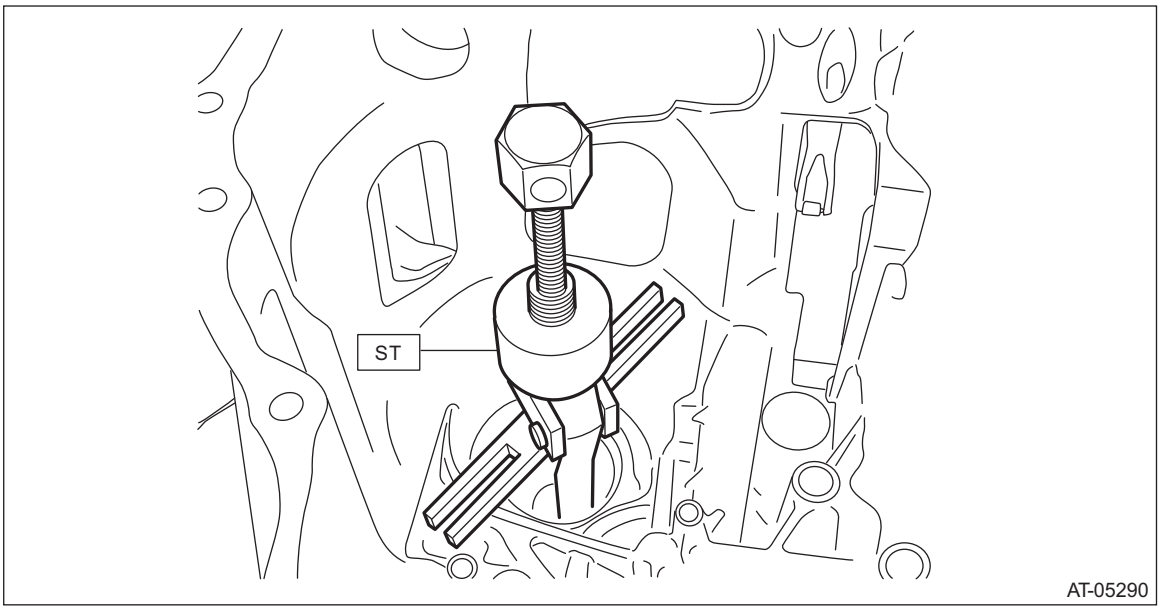


8) Remove the snap ring on secondary pulley side.



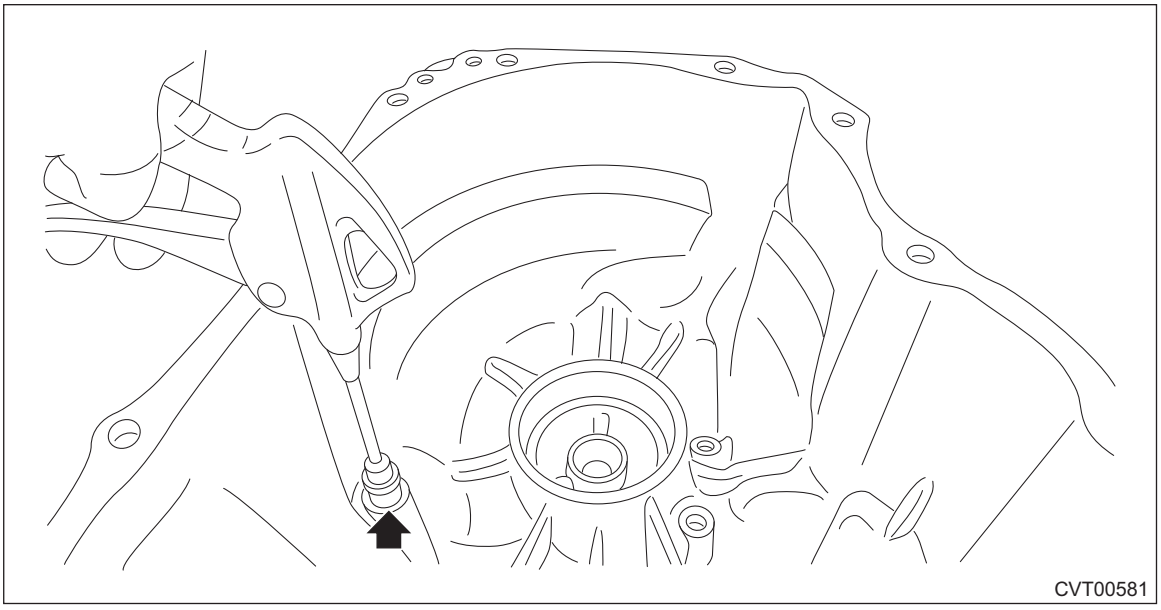
9) Using the ST, remove the roller bearing on secondary pulley side.

NOTE:
Warm up the bearing area of transmission case using a drier or heat gun.
ST 398527700 PULLER ASSY

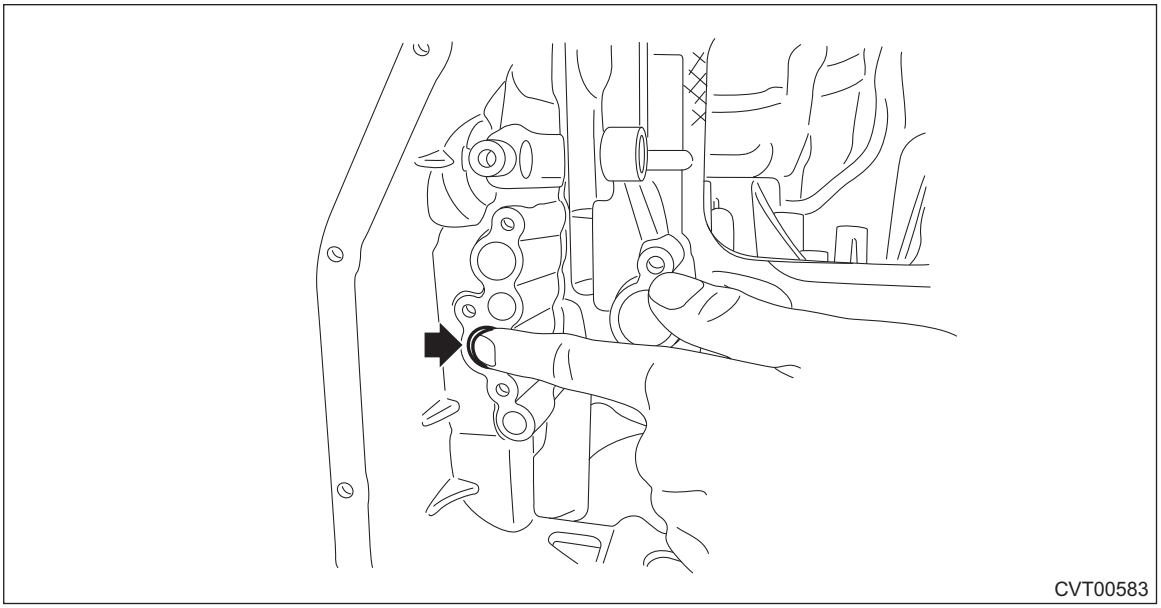


10) Remove the CVTF filter by blowing compressed air through the transmission case hole.

NOTE:
Hold the CVTF filter with a finger to prevent compressed air from leaking.



CVT00581



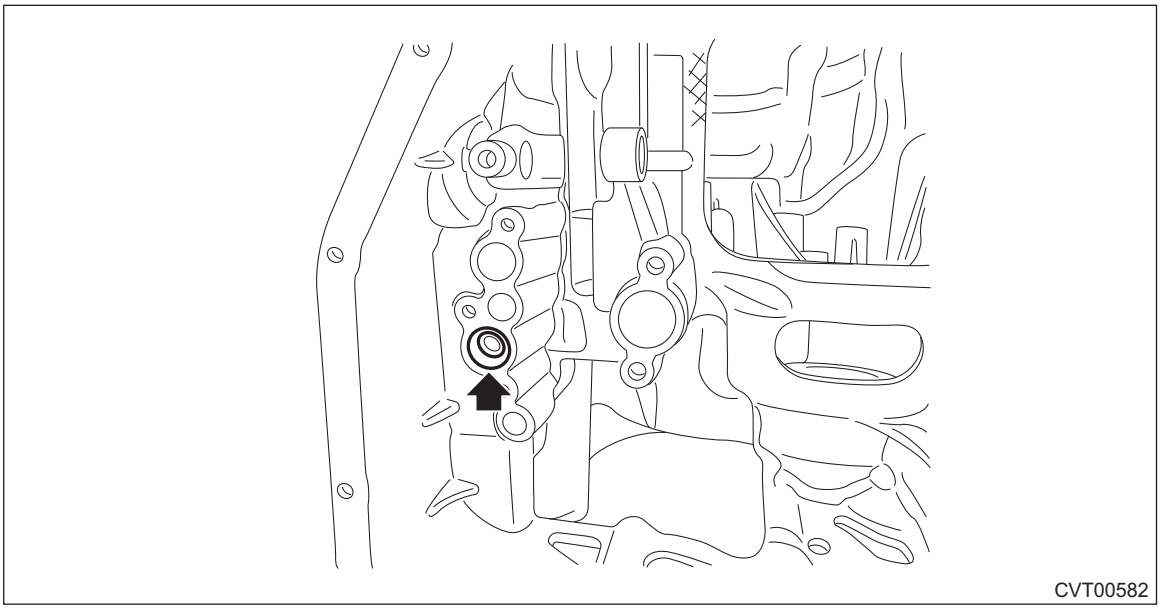
CVT00583

D: ASSEMBLY

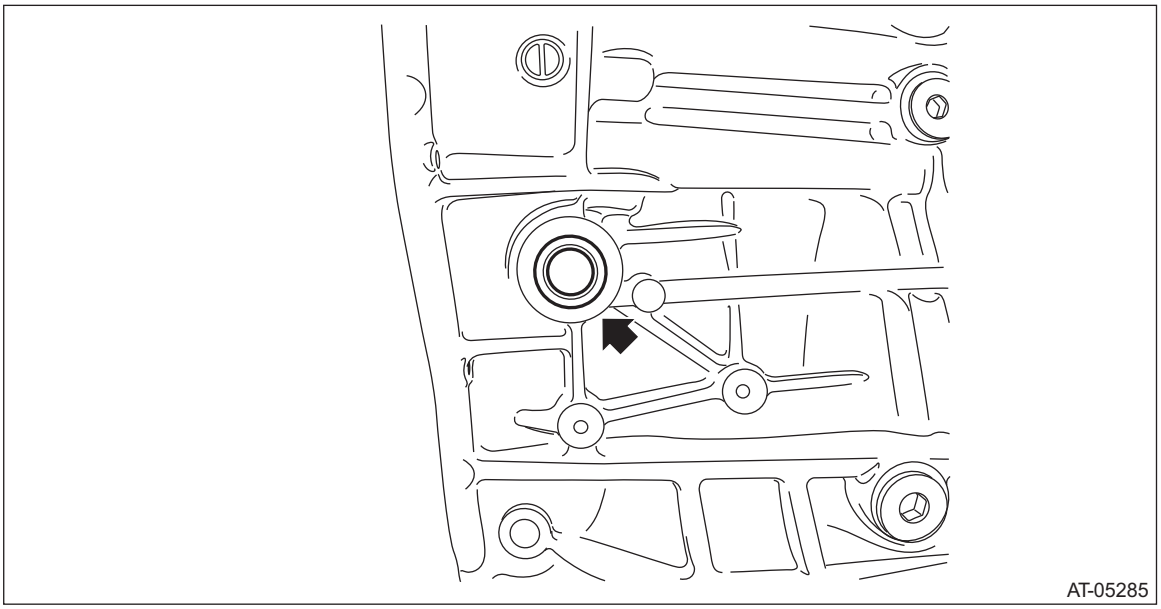
1) Install the CVTF filter.

NOTE:
- Use a new CVTF filter.
- Apply CVTF to the CVTF filter.

- Make sure that the CVTF filter does not protrude from the transmission case.

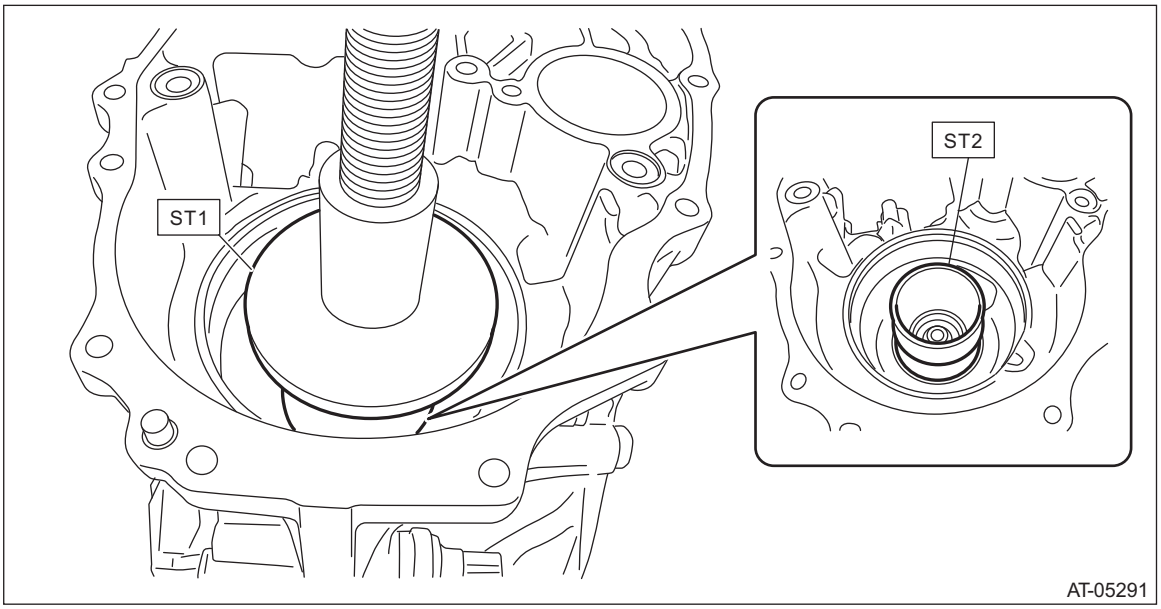


2) Using the ST, install the oil seal.
ST 18657AA000 INSTALLER



3) Using ST1 and ST2, install the ball bearing on the reduction gear side.

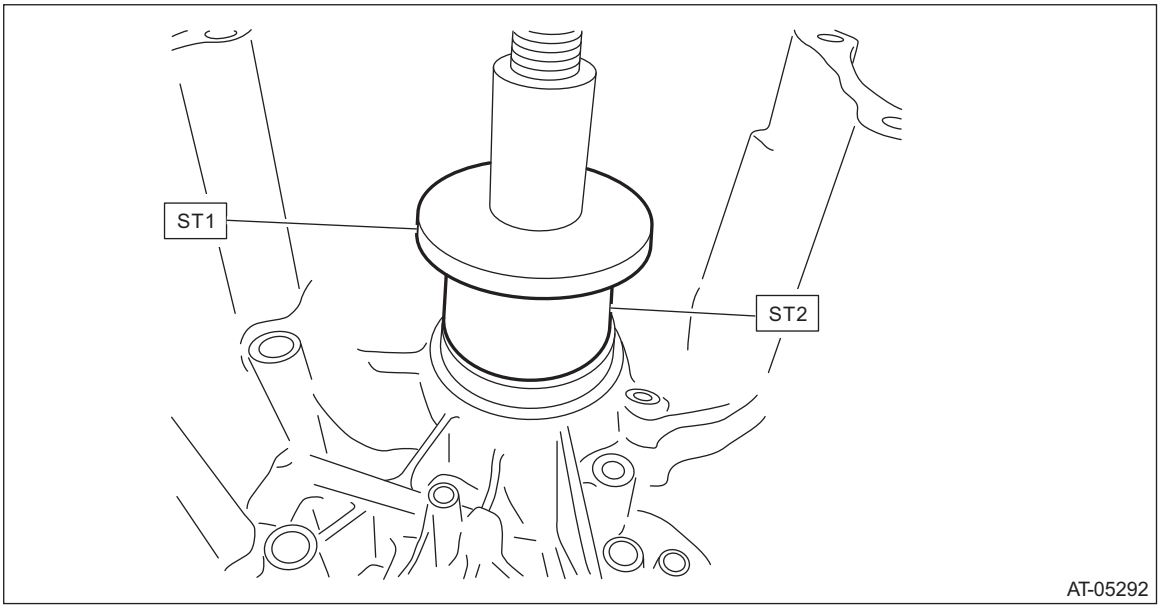
NOTE:
Use a new ball bearing.
ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING



4) Using ST1 and ST2, install the roller bearing on primary pulley side.

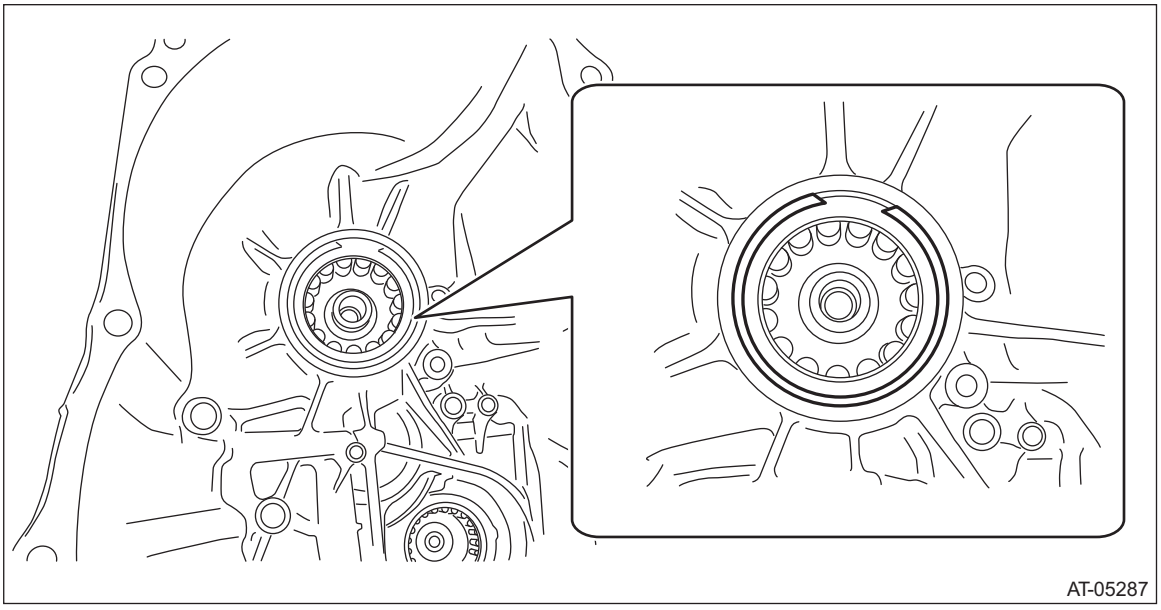
NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 20299AG010 BASE



5) Install the snap ring on primary pulley side.

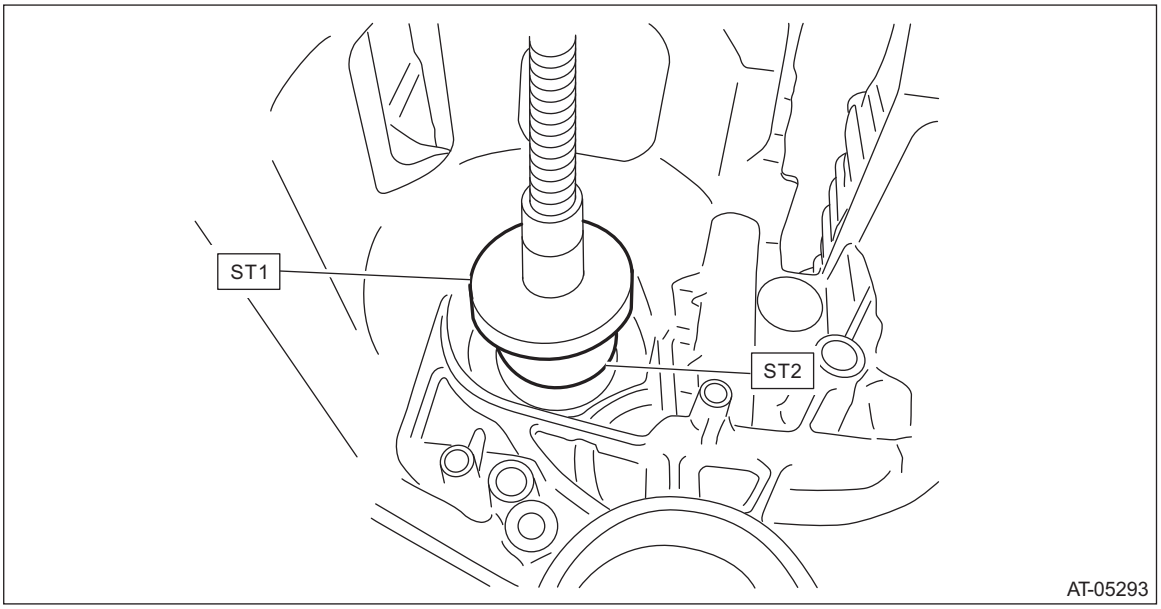
NOTE:
Use new snap rings.



6) Using ST1 and ST2, install the roller bearing on secondary pulley side.

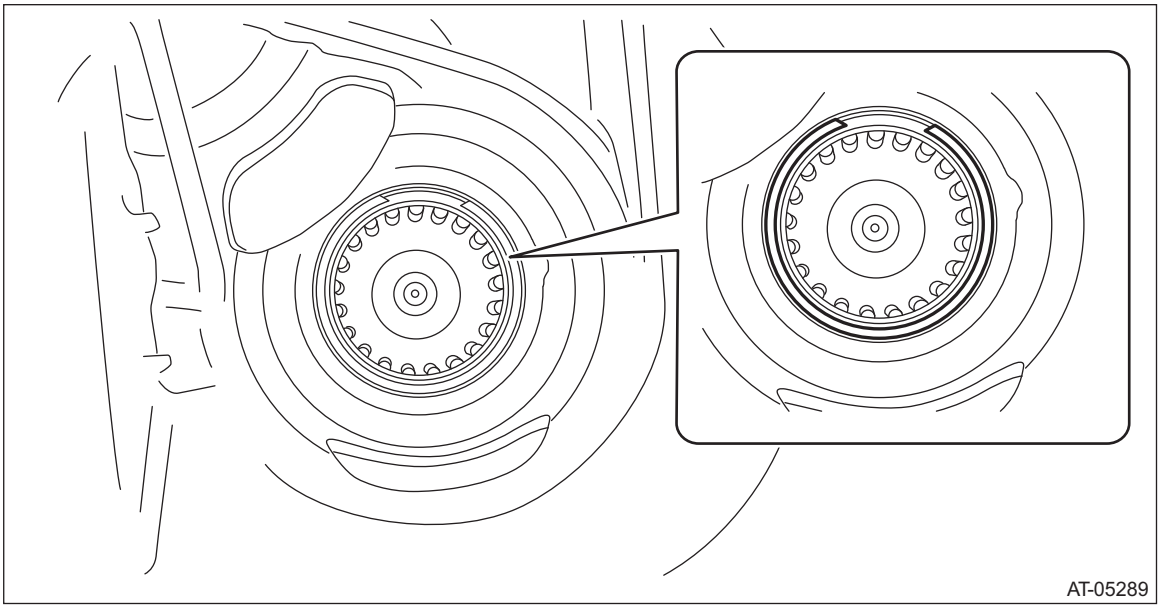
NOTE:
- Use a new roller bearing.
- Make adjustment so that the press gets in contact with the center of ST2.

ST1 398177700 INSTALLER
ST2 499755602 PRESS SNAP RING



7) Install the snap ring on secondary pulley side.

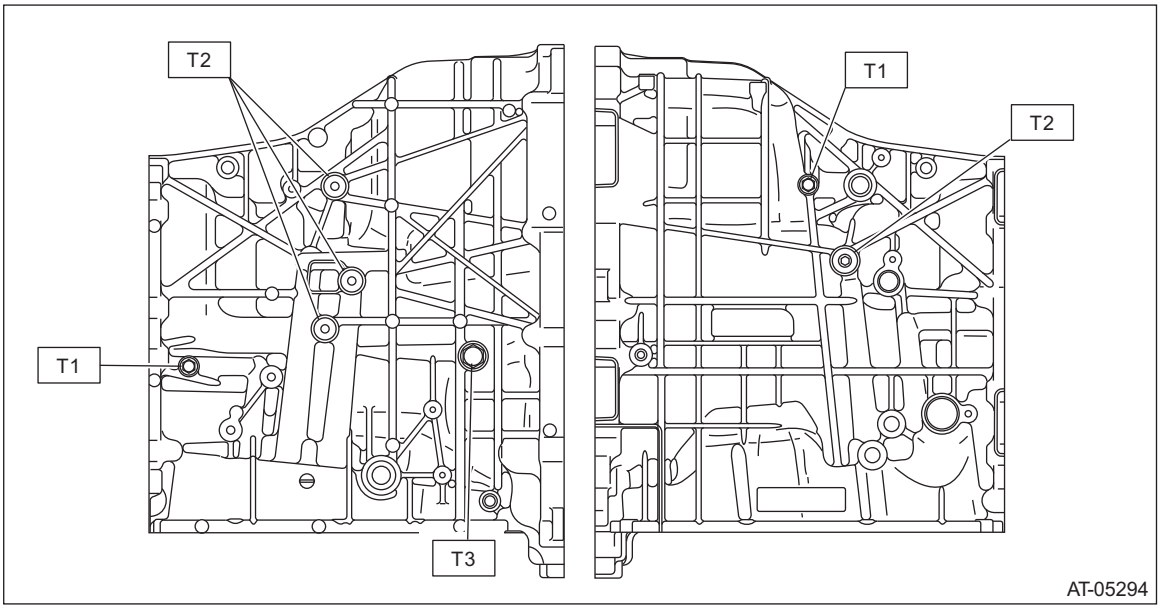
NOTE:
Use new snap rings.



8) Install all plugs.

NOTE:
Use new gaskets and O-rings.

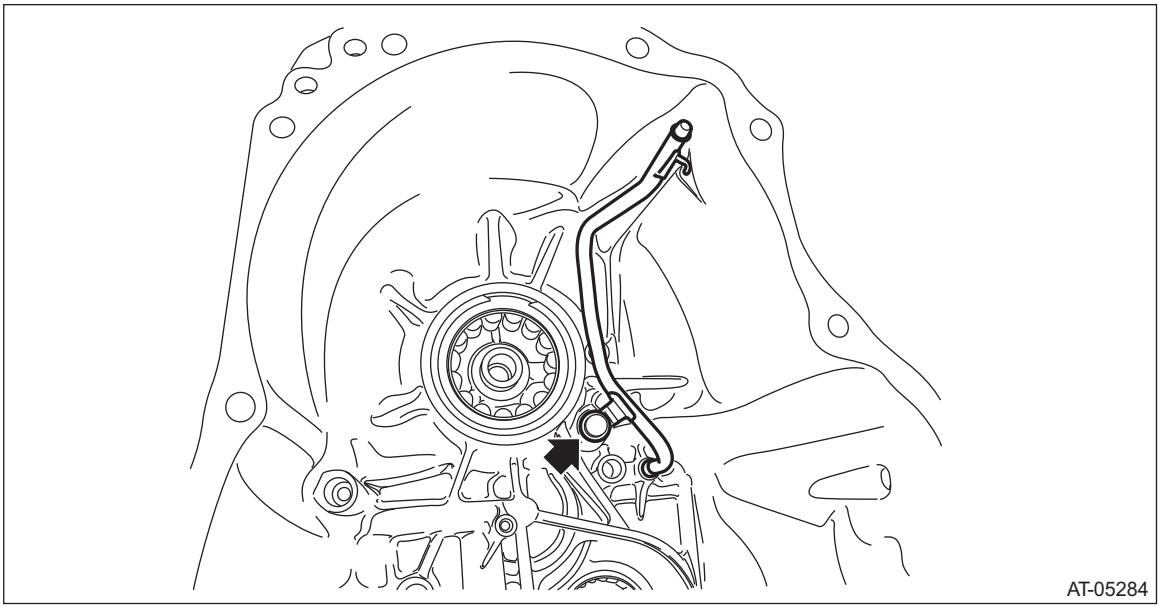
Tightening torque:
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
T3: 35 N·m (3.5 kgf-m, 25.8 ft-lb)



9) Install the lubrication pipe and O-ring.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

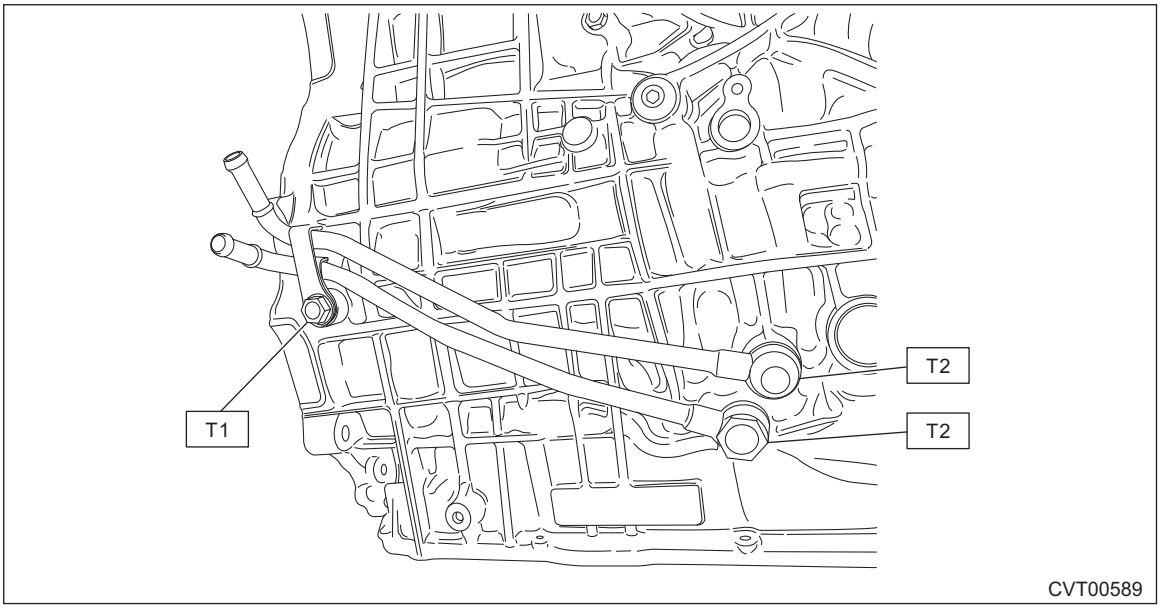
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



10) Install the CVTF inlet pipe and CVTF outlet pipe.

NOTE:
Use a new gasket.

Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 40 N·m (4.1 kgf-m, 29.5 ft-lb)



E: INSPECTION

- Check the transmission case for damage.
- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check for leakage of CVTF from the connection between intermediate case and transmission case.
- Check the lubrication pipe for bend or damage.
- Check the bearing for smooth operation.
- Check the bearing for seizure or wear.

F: ADJUSTMENT

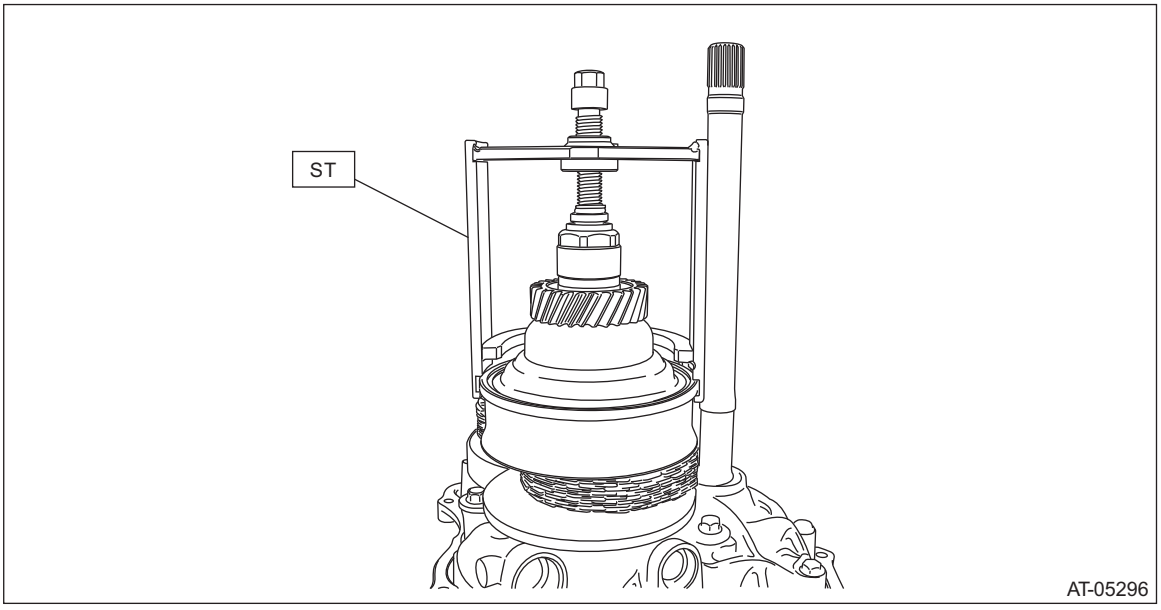
NOTE:
When replacing the transmission case with a new part, perform the following check and adjustment for the selection.

- Select the thrust bearing for the forward clutch assembly. <Ref. to CVT(TR690)-201, ADJUSTMENT, Forward Clutch Assembly.>
- Select the snap ring for the reduction gear. <Ref. to CVT(TR690)-208, ADJUSTMENT, Reduction Driven Gear.>

41.Primary Pulley and Secondary Pulley

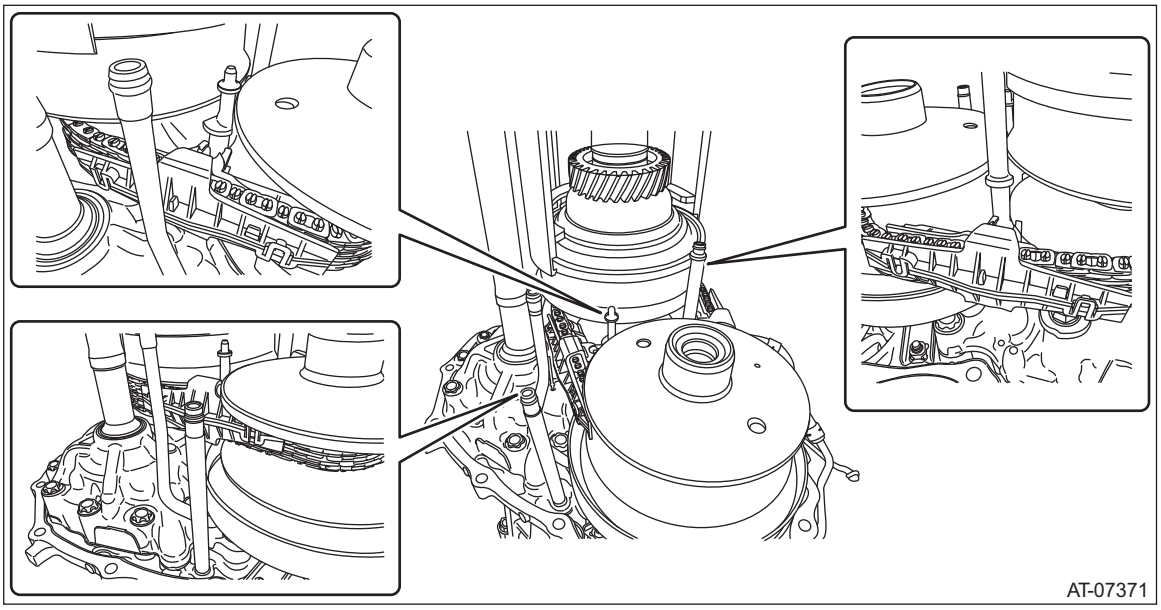
A: REMOVAL

NOTE:
Always replace primary pulley and secondary pulley as an assembly because they are non-disassembled parts.
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
13) Set the ST to the secondary pulley, and expand the V groove of pulley until the variator chain gets completely loose.
ST 18769AA000 EXPANDER PULLEY

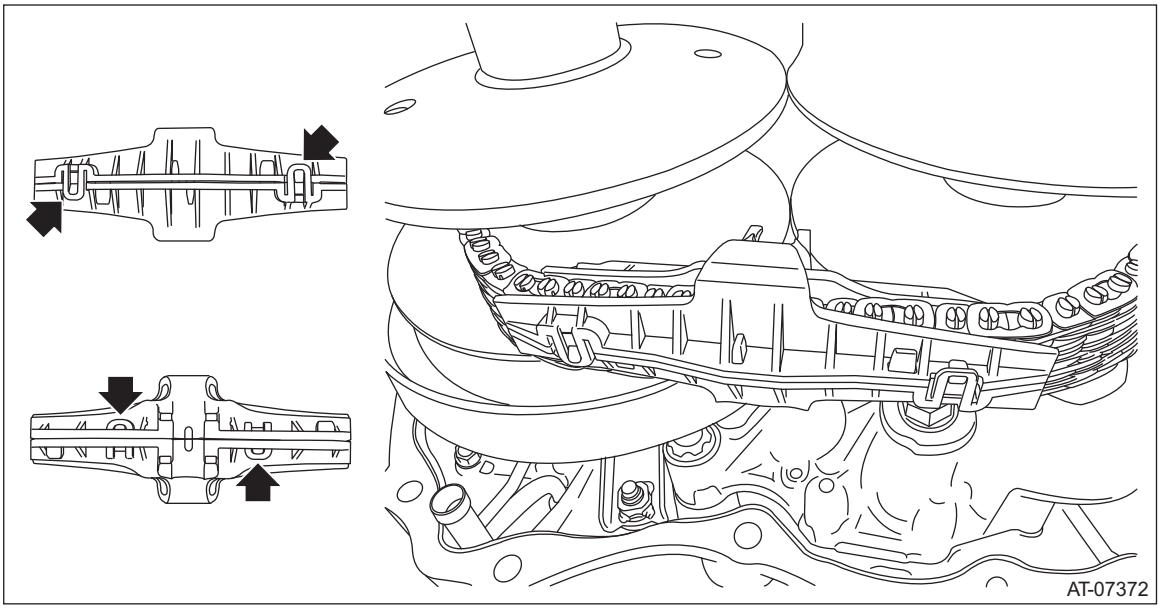


14) Remove the chain guide from lubrication pipe and support rod.

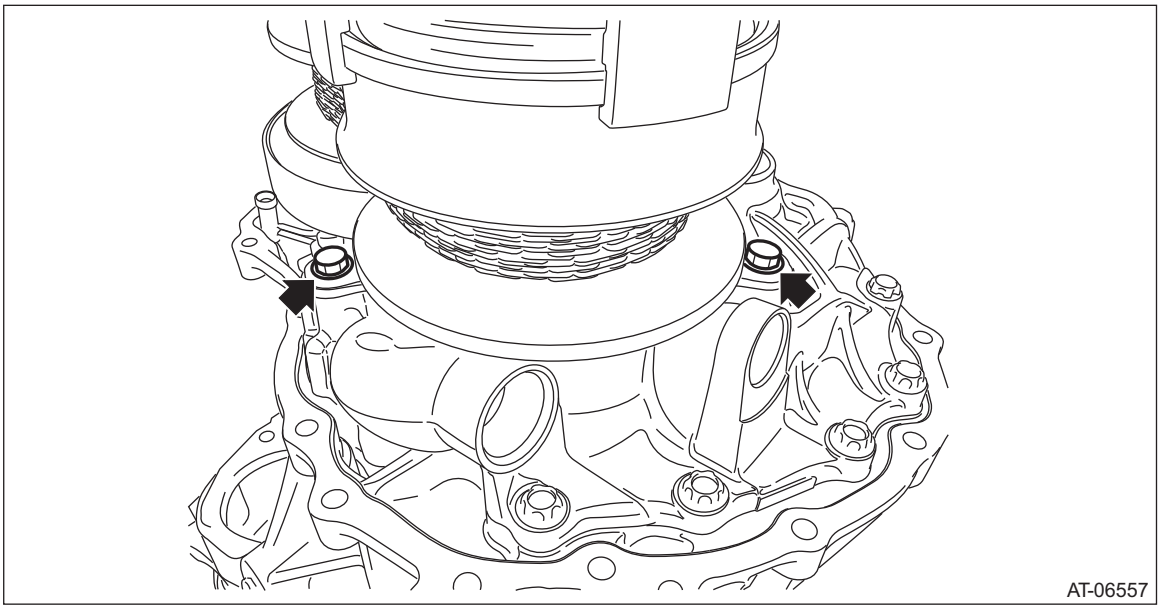
15) Remove the lubrication pipe and support rod.



16) Detach the four claws to remove the two chain guides.

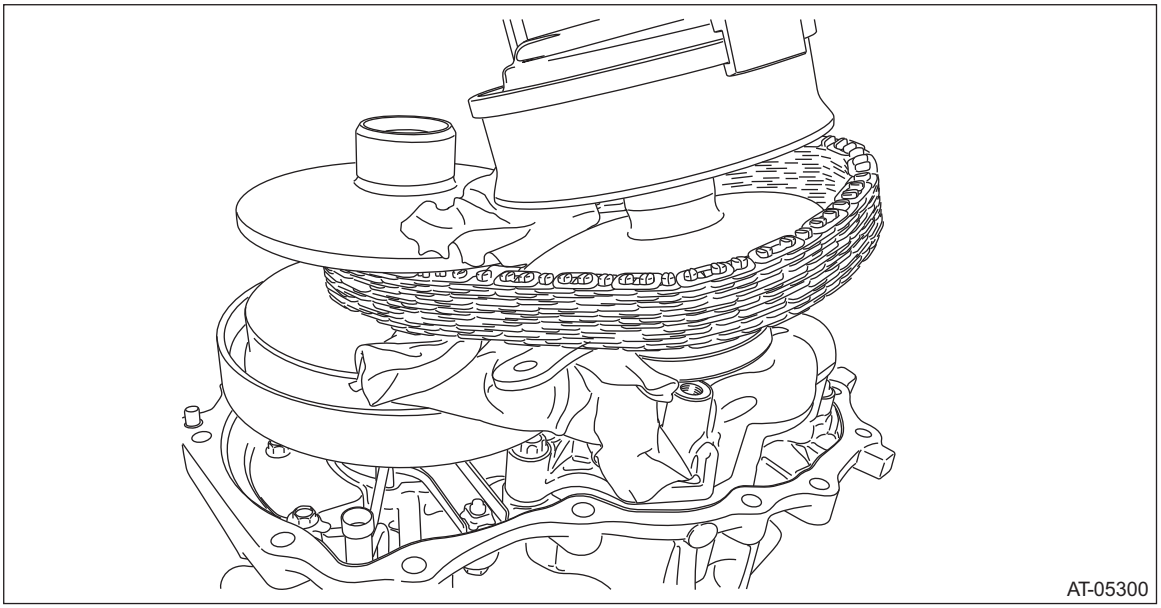


17) Remove the secondary pulley mounting bolt.



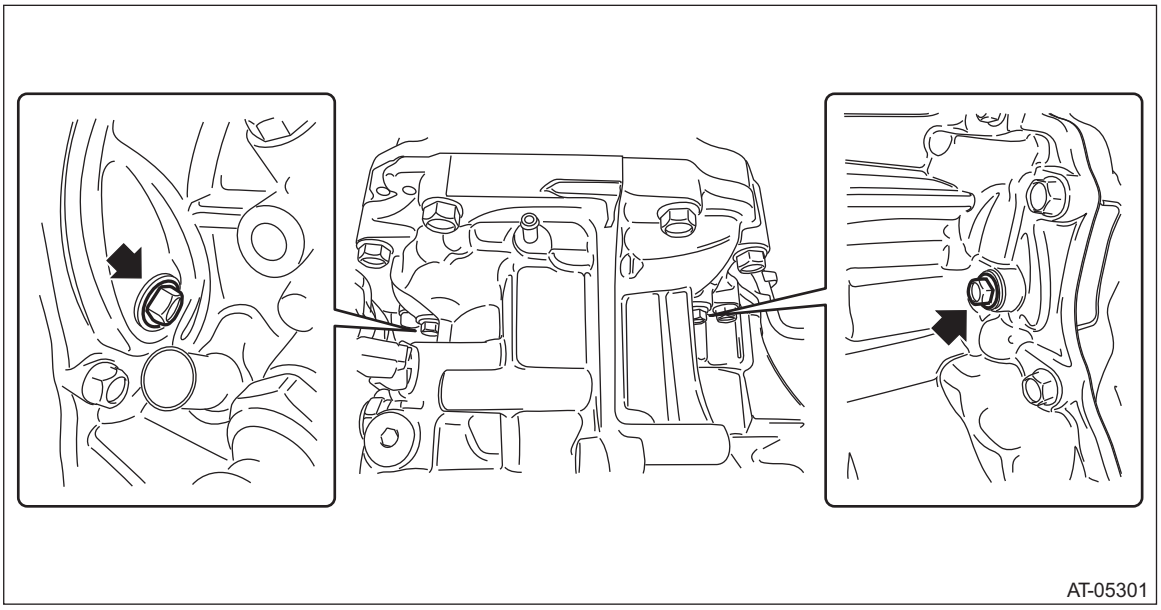
18) Remove the secondary pulley from drive pinion retainer and intersect the V groove of secondary pulley and V groove of primary pulley. Remove the variator chain from secondary pulley and remove the secondary pulley.

CAUTION:
Cover the V grooves of secondary pulley and primary pulley with cloth to protect the both pulleys and variator chain from scratching.

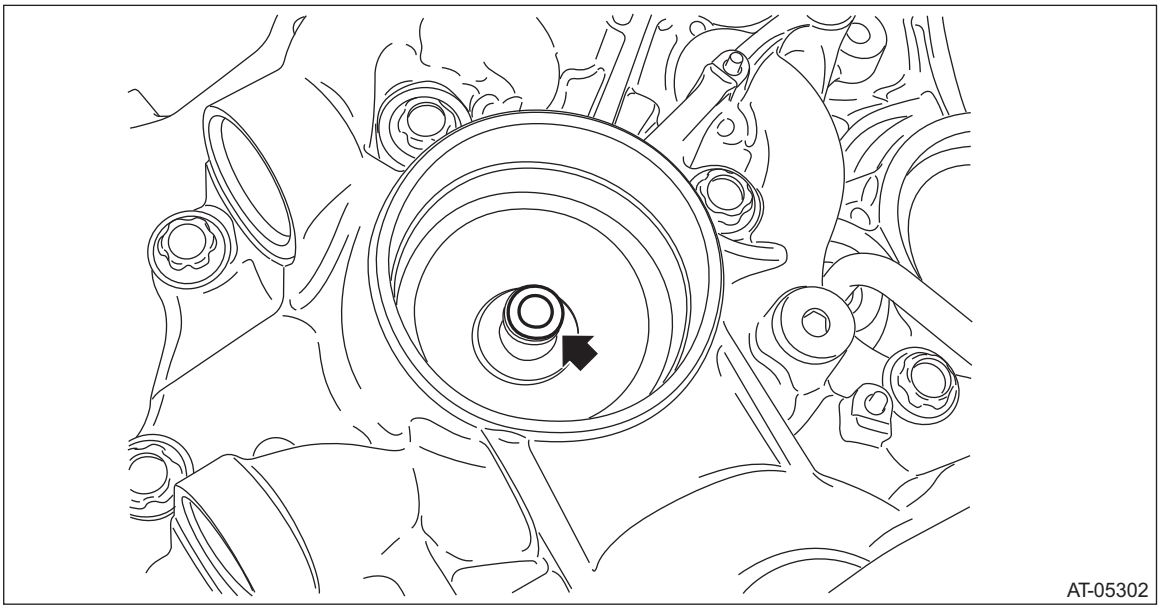


19) Remove the variator chain from primary pulley.

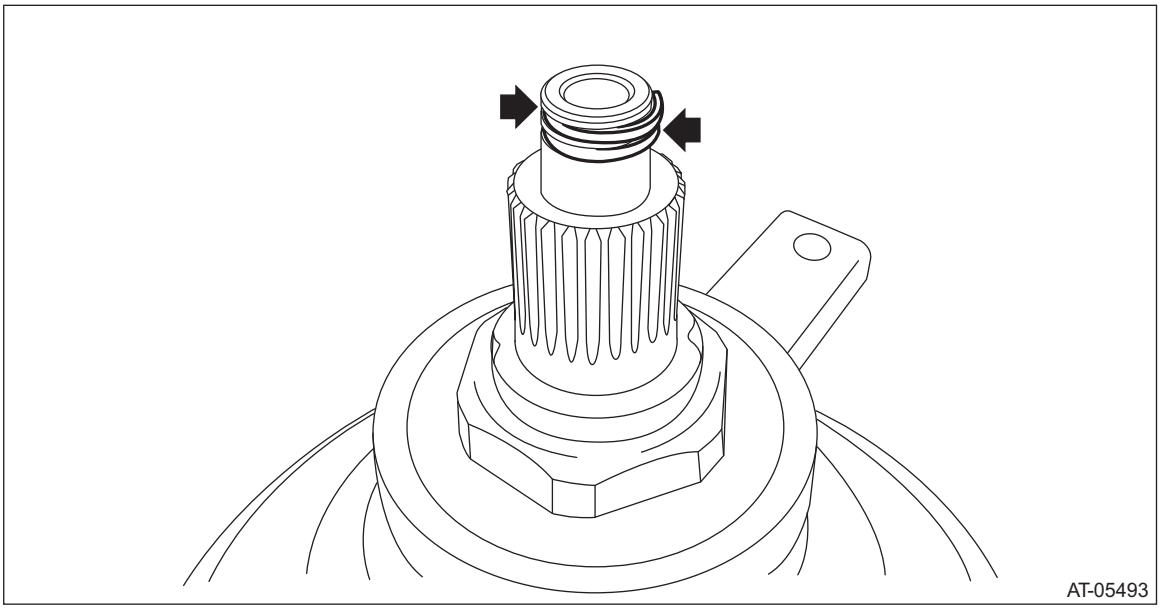
20) Remove the primary pulley mounting bolt.



21) Remove the primary pulley.
22) Remove the two seal rings from drive pinion retainer.



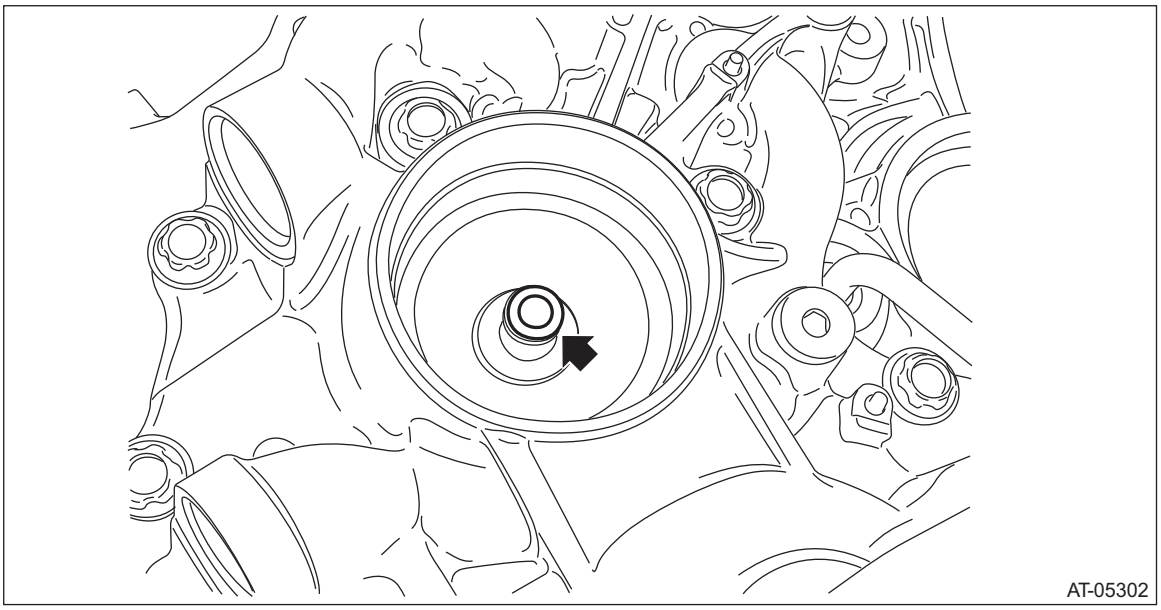
23) Remove the two seal rings from primary pulley.



B: INSTALLATION

1) Select shims for pulley alignment. <Ref. to CVT(TR690)-241, ADJUSTMENT, Primary Pulley and Secondary Pulley.>
2) Install the two seal rings to drive pinion retainer.

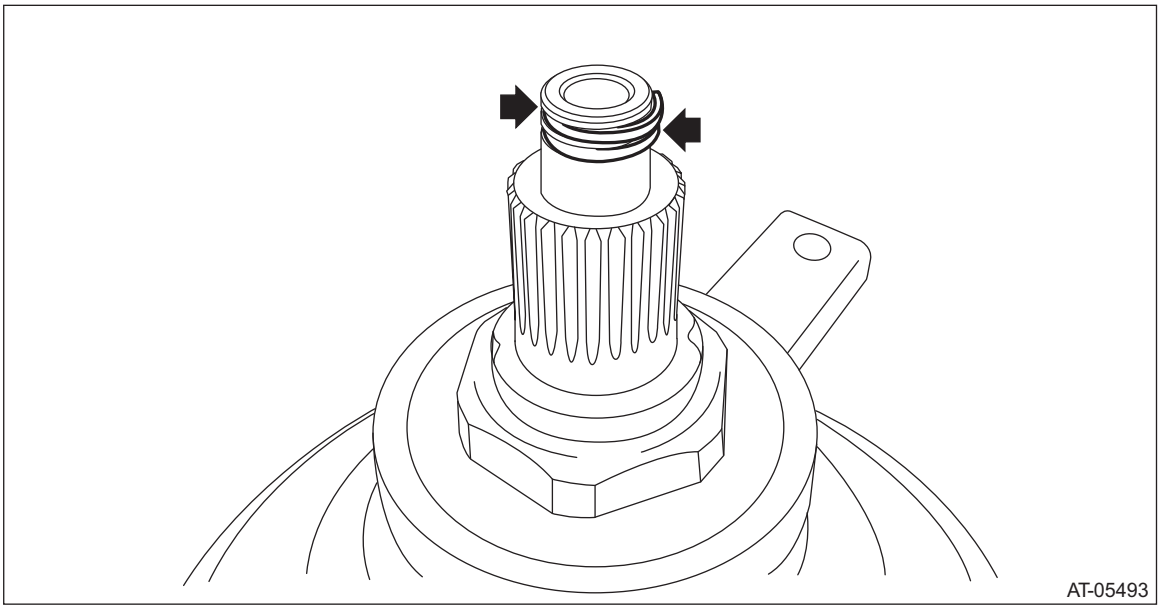
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.
- When installing the seal rings, do not expand the seal rings too much.



3) Install the selected shims to the primary pulley bearing catch surface.
4) Install the two seal rings to primary pulley.

NOTE:
- Use new seal rings.

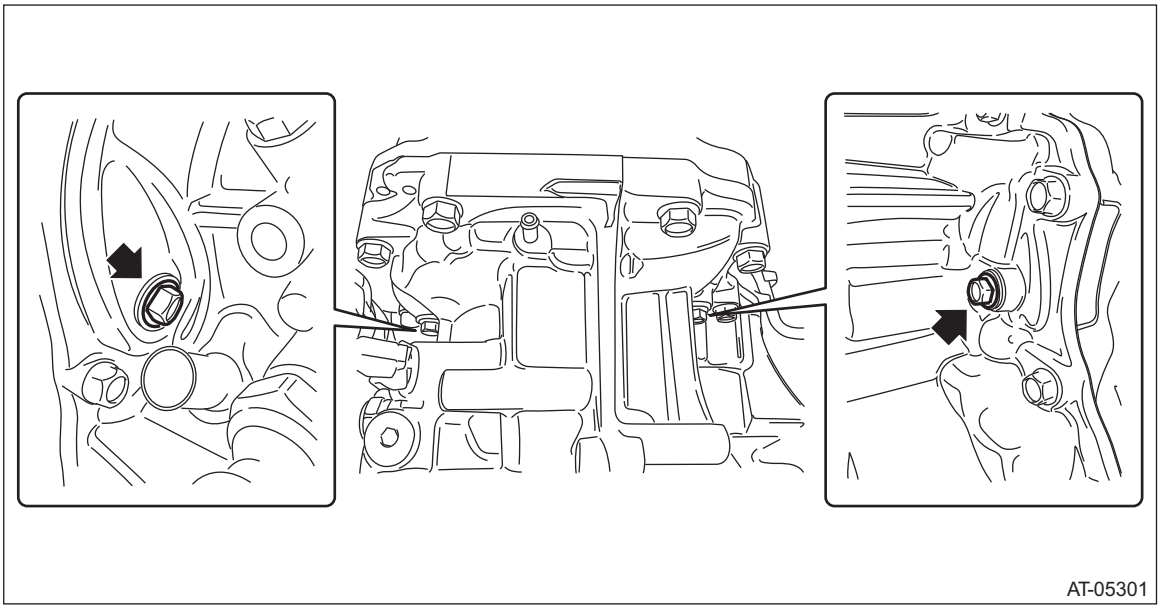
- Apply CVTF to the seal rings.



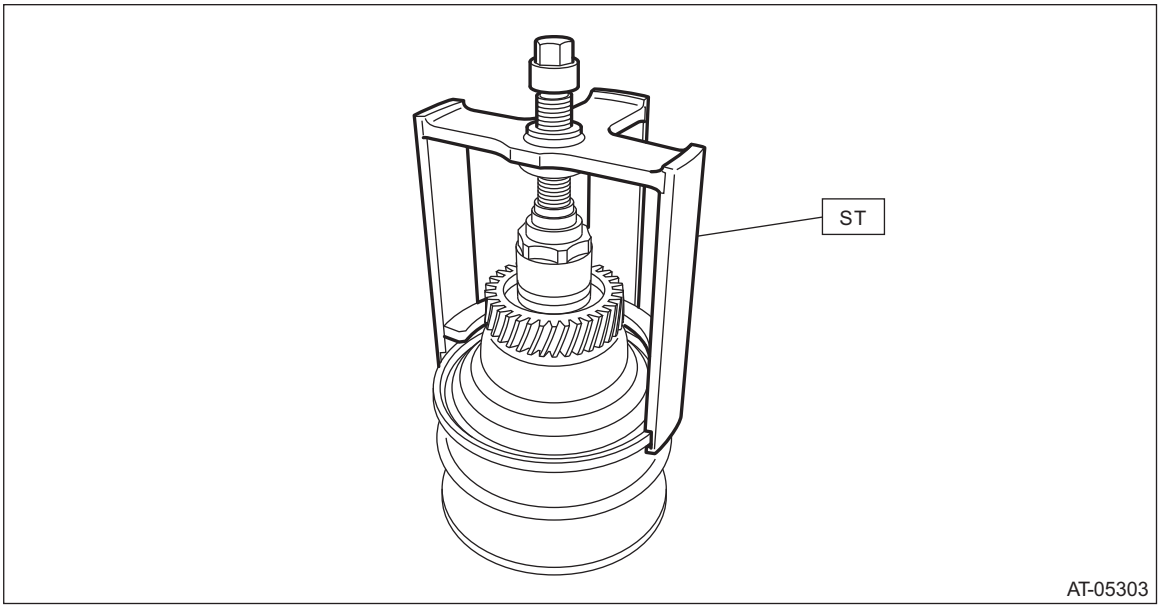
5) Install the primary pulley and adjust the position of bolt holes of primary bearing retainer and converter case to tighten the primary pulley bolt.

NOTE:
Use a new seal washer.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



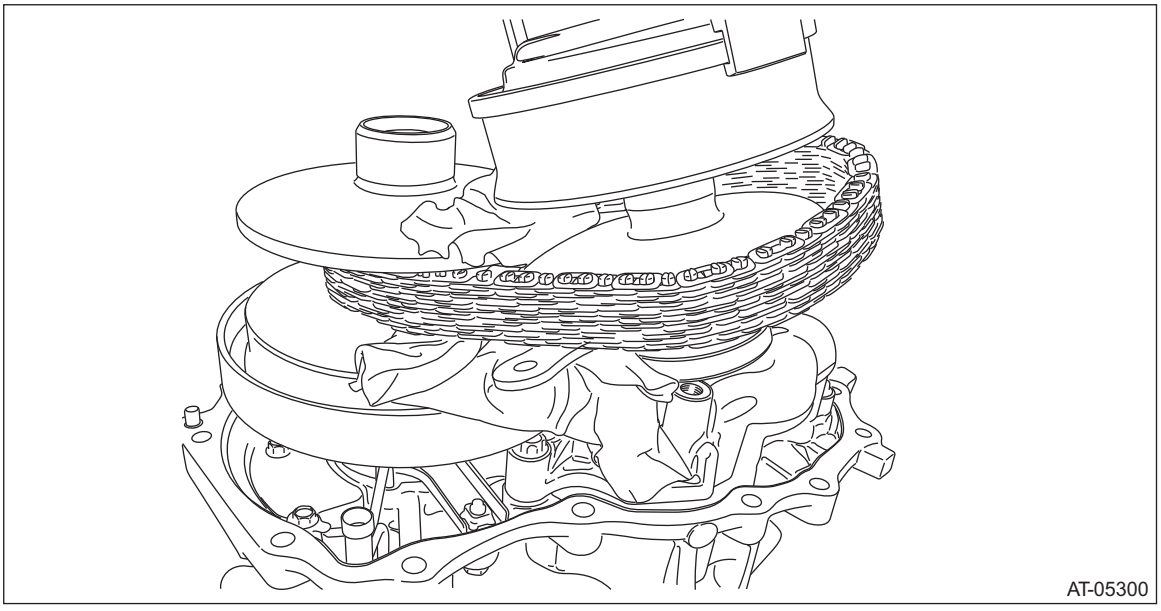
6) Set the ST to secondary pulley and expand the V groove of pulley.
ST 18769AA000 EXPANDER PULLEY



7) Place the variator chain on the primary pulley groove and attach the secondary pulley and variator chain together to the drive pinion retainer.

CAUTION:
Cover the V grooves of primary pulley and secondary pulley with cloth to protect the both pulleys and variator chain from scratching.

(1) Place the variator chain on primary pulley.
(2) Intersect the V groove of primary pulley and the V groove of secondary pulley and install the secondary pulley while placing the variator chain on secondary pulley.

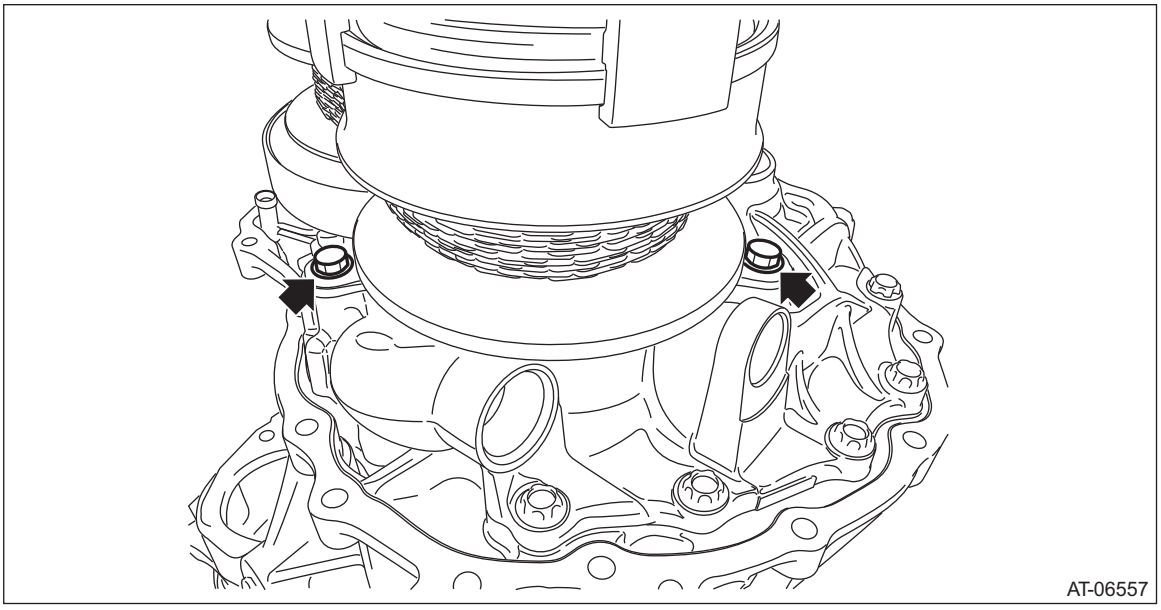


(3) While aligning the bolt hole of secondary bearing retainer and the bolt hole of driving pinion retainer, install the secondary pulley to drive pinion retainer.

8) Install the secondary pulley bolt.

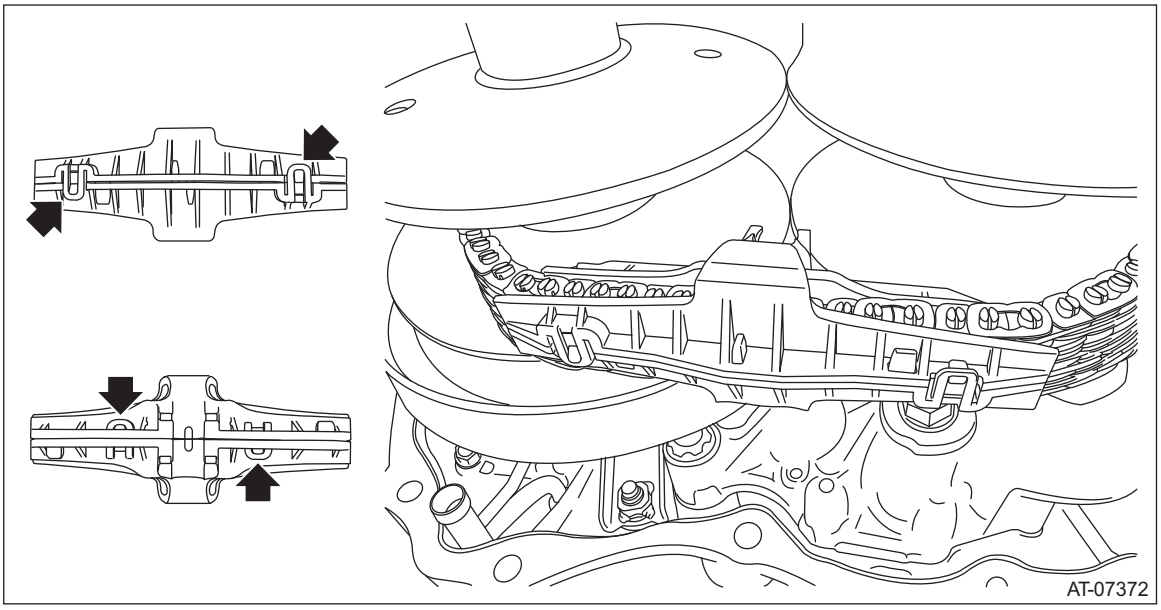
NOTE:
Apply CVTF to the bolt.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

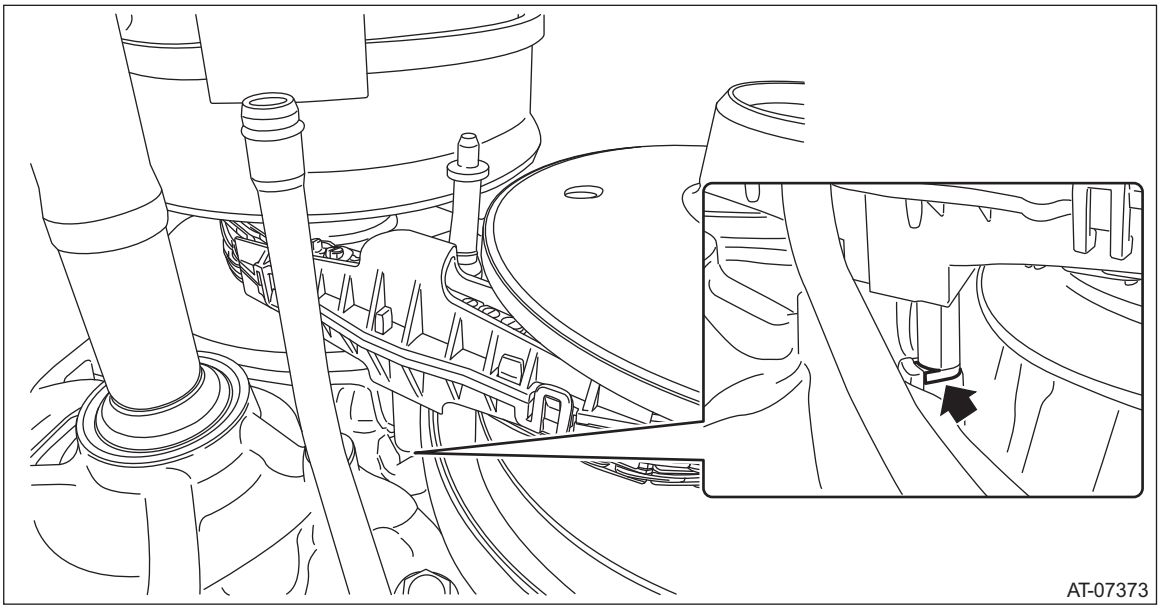


9) Install the chain guide.

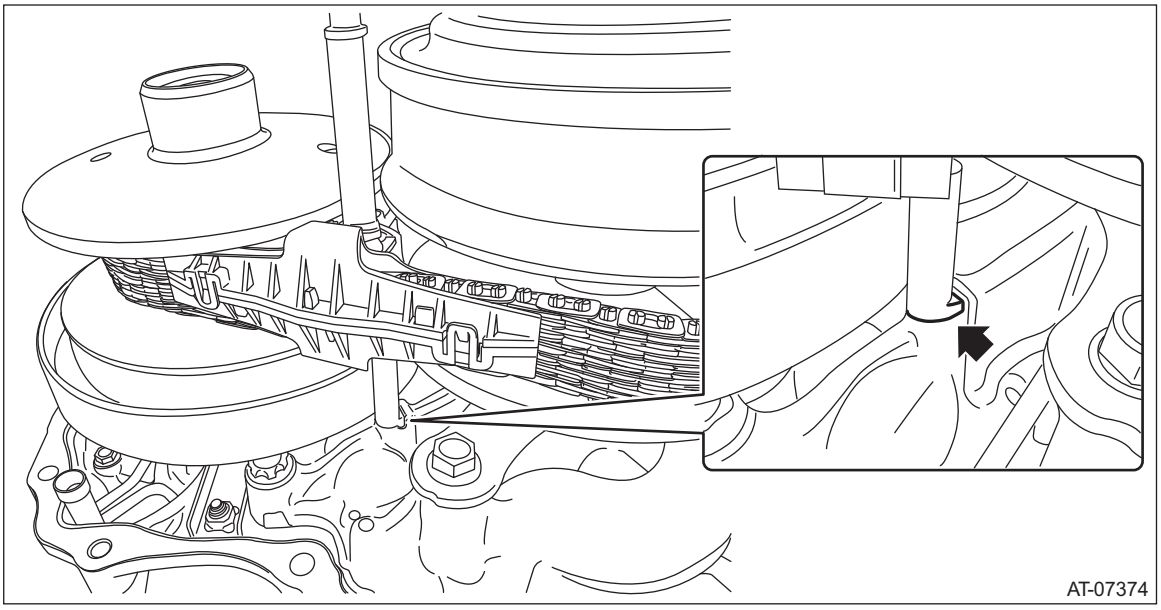
NOTE:
Install it with two claws facing outward and with two claws facing inward.



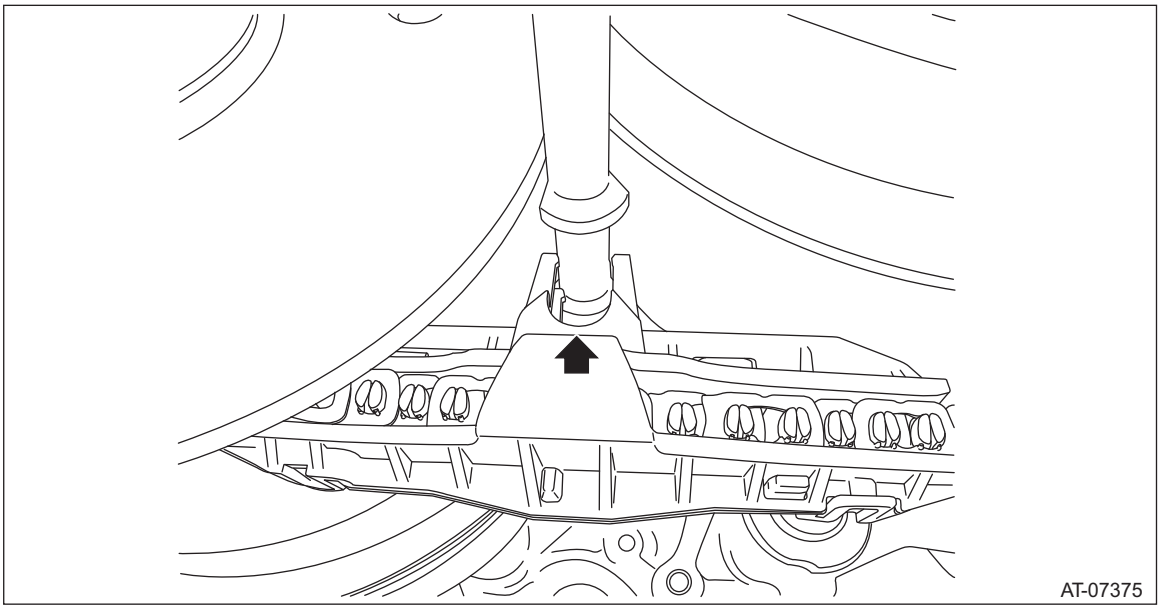
10) Engage the cutout portions of support rod and drive pinion retainer and install the support rod.



11) Engage the cutout portions of lubrication pipe and drive pinion retainer and install the lubrication pipe.



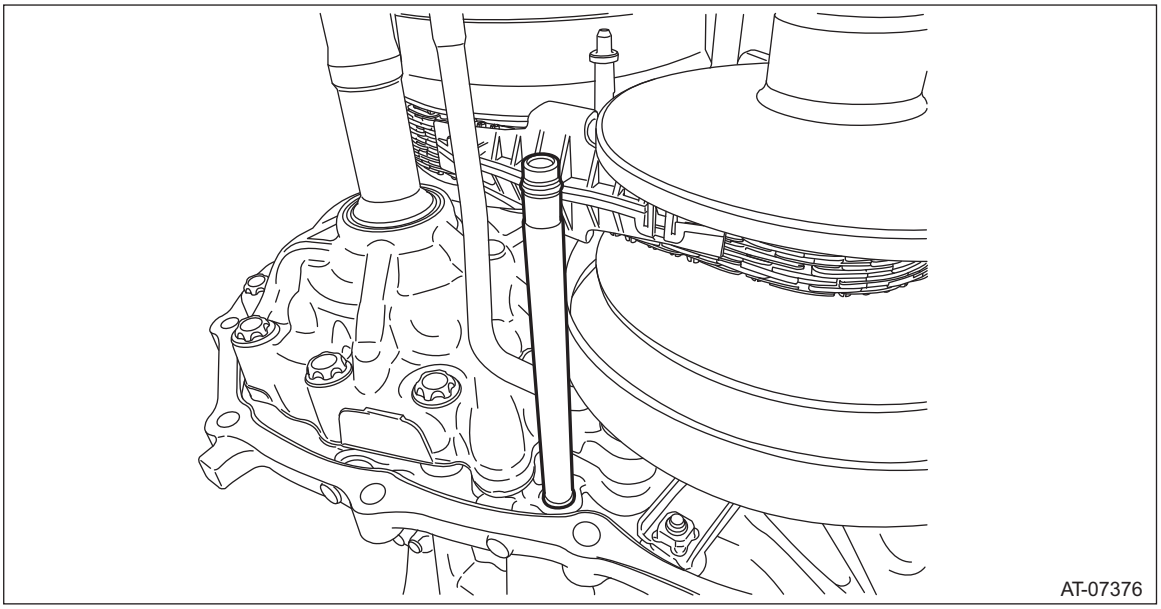
12) Install the chain guide so that the lubrication pipe and support rod run through between the protrusions of each chain guide. Then remove the ST (EXPANDER PULLEY).



13) Install the O-ring to the lubrication pipe.

NOTE:
Use new O-rings.

14) Install the lubrication pipe.



15) Install the transmission case. <Ref. to CVT(TR690)-215, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
19) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
20) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
21) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
22) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
23) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>

24) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
25) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
26) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

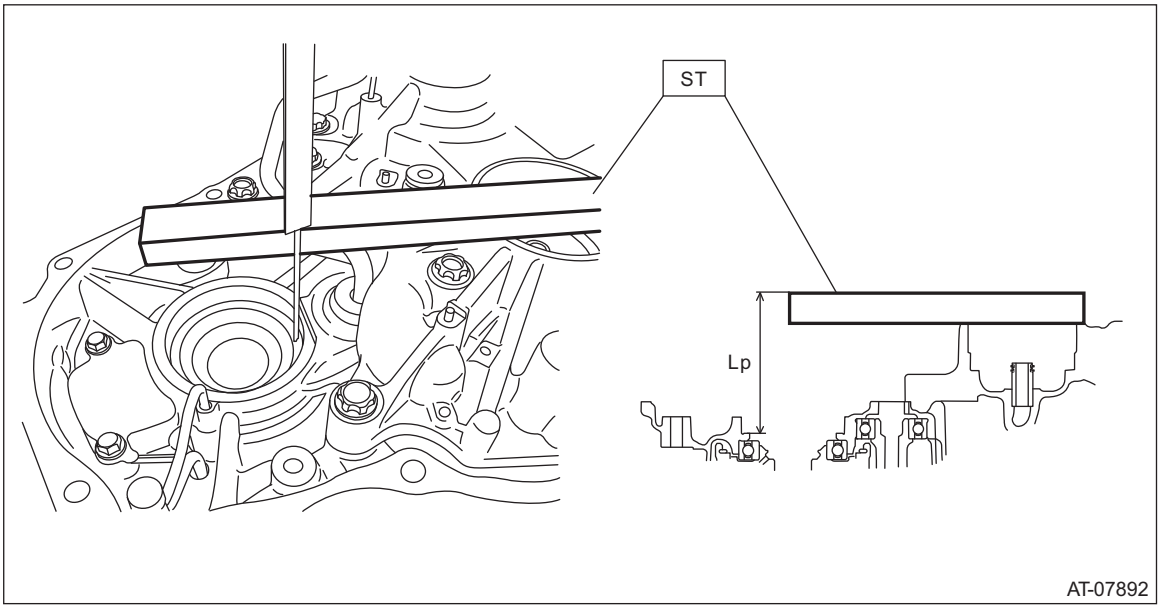
C: INSPECTION

- Check the surface of primary and secondary pulley cones for damage or wear.
- Check the primary and secondary pulley for damage.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

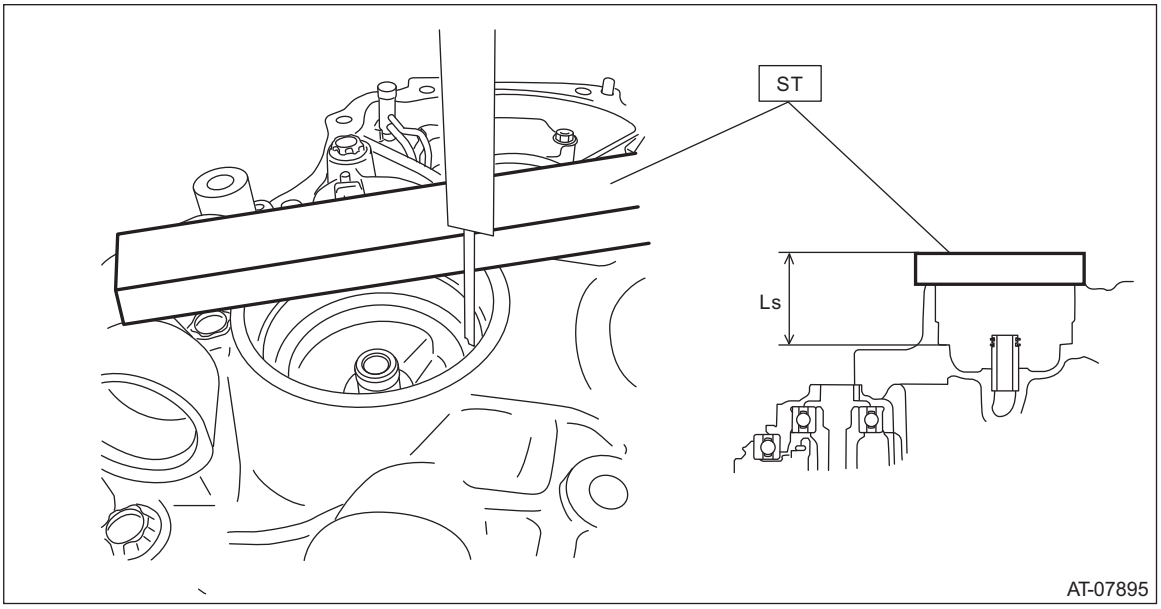
D: ADJUSTMENT

1. PROCEDURE IN REPLACEMENT OF PRIMARY AND SECONDARY PULLEY, OR IN REPLACEMENT OF PRIMARY PULLEY, SECONDARY PULLEY AND VARIATOR CHAIN

1) Measure depth “Lp” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



2) Measure height “Ls” from the drive pinion retainer upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



3) Calculate the following formula.
Calculation formula:
T (mm) = B + (Lp – Ls) + 31.601 – A
[T (in) = B + (Lp – Ls) + 1.224 – A]
T: Pulley alignment
A: Specified primary pulley dimension
B: Specified secondary pulley dimension
Lp: Depth from the ST upper face to the primary pulley bearing catch surface
Ls: Depth from the ST upper face to the secondary pulley bearing catch surface
31.601 mm (1.224 in): Constant

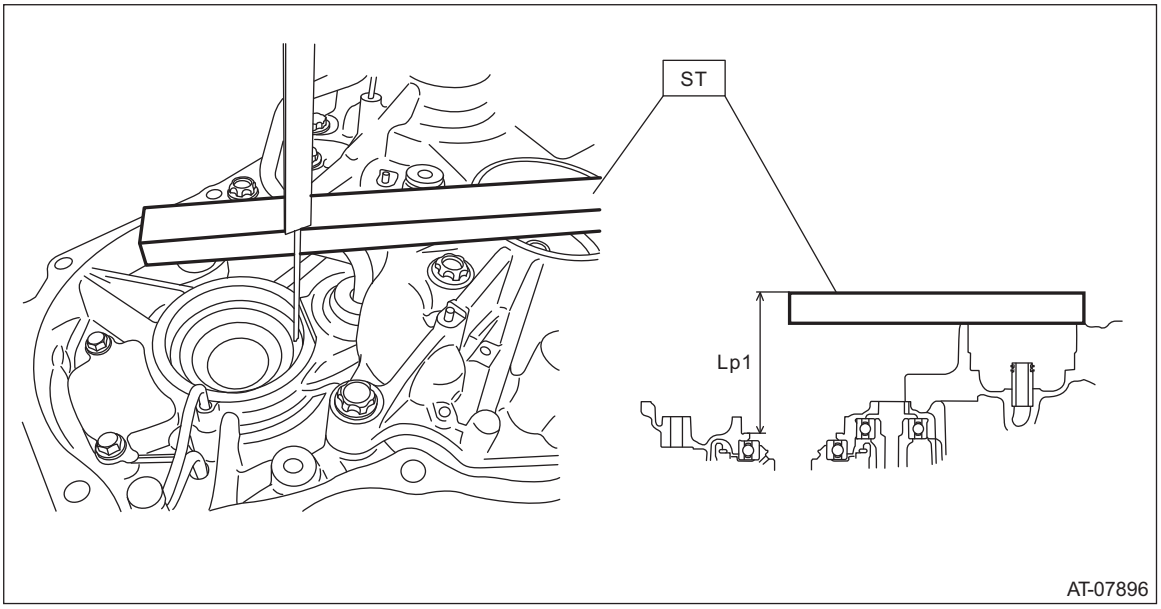
Pulley alignment T mm (in)	Shim thickness mm (in)
0.050 — 0.150 (0.002 — 0.006)	0.1 (0.004)
0.151 — 0.250 (0.006 — 0.01)	0.2 (0.008)
0.251 — 0.350 (0.01 — 0.014)	0.3 (0.012)
0.351 — 0.450 (0.014 — 0.018)	0.4 (0.016)
0.451 — 0.550 (0.018 — 0.022)	0.5 (0.020)
0.551 — 0.650 (0.022 — 0.026)	0.6 (0.024)
0.651 — 0.750 (0.026 — 0.030)	0.7 (0.028)
0.751 — 0.850 (0.030 — 0.033)	0.8 (0.031)
0.851 — 0.950 (0.033 — 0.037)	0.9 (0.035)

4) Select one to two shims so that the total thickness meets the value obtained from step 3).

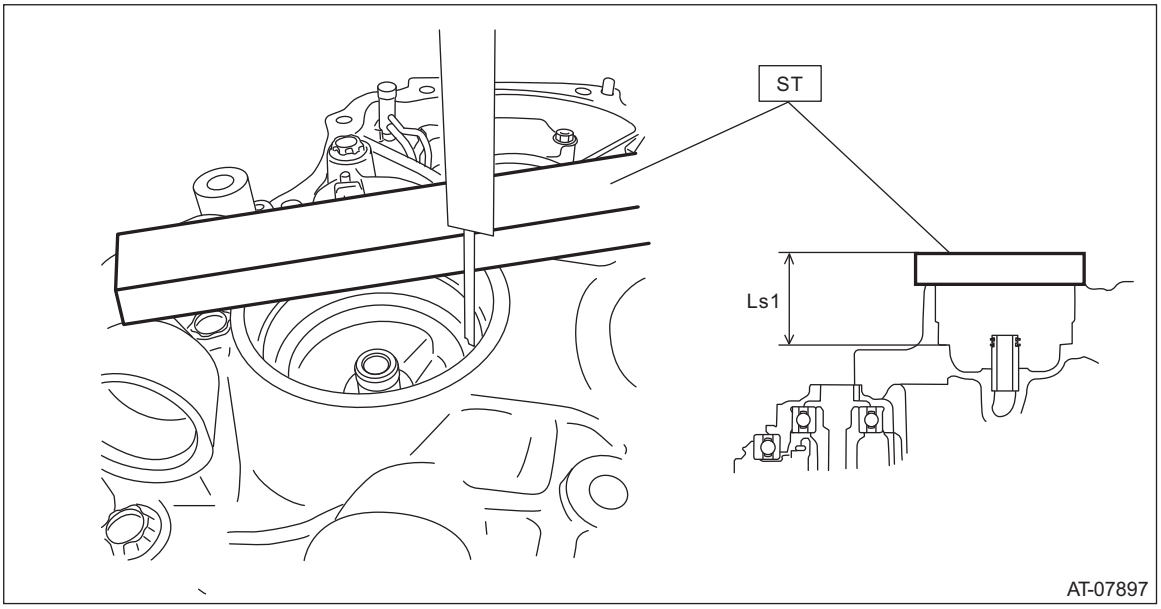
Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

2. PROCEDURE WHEN REPLACING ONLY DRIVE PINION RETAINER OR CONVERTER CASE

1) Clean the mating surface of current drive pinion retainer and converter case.
2) Measure and record the shim thickness that is attached on the current converter case.
3) Using the current drive pinion retainer, measure depth “Lp1” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

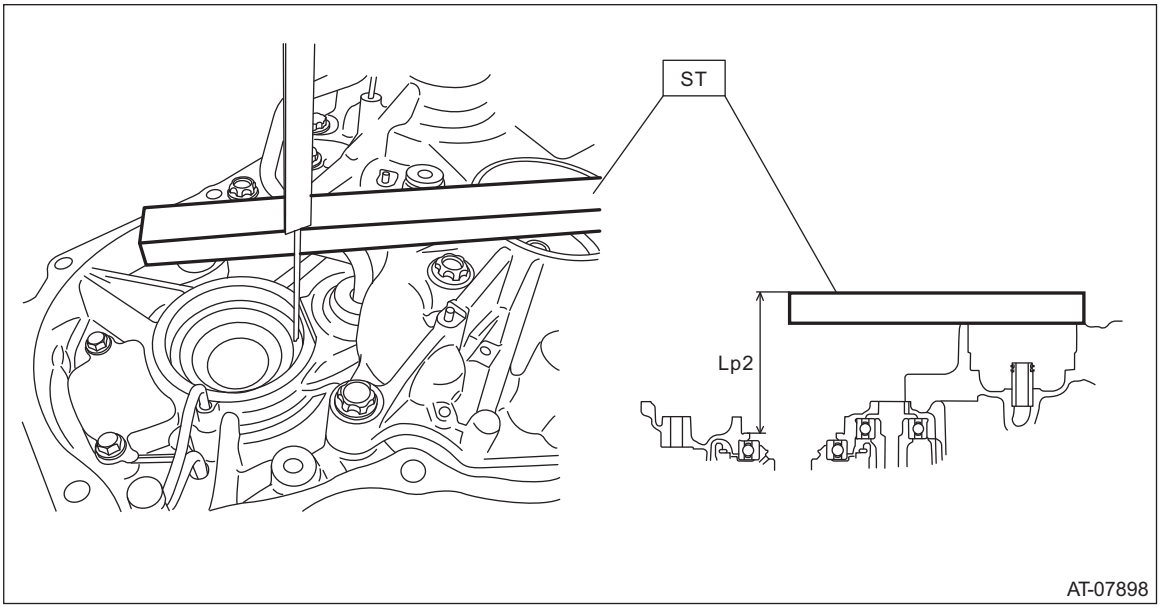


4) Using the current drive pinion retainer or current converter case, measure the depth “Ls1” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE

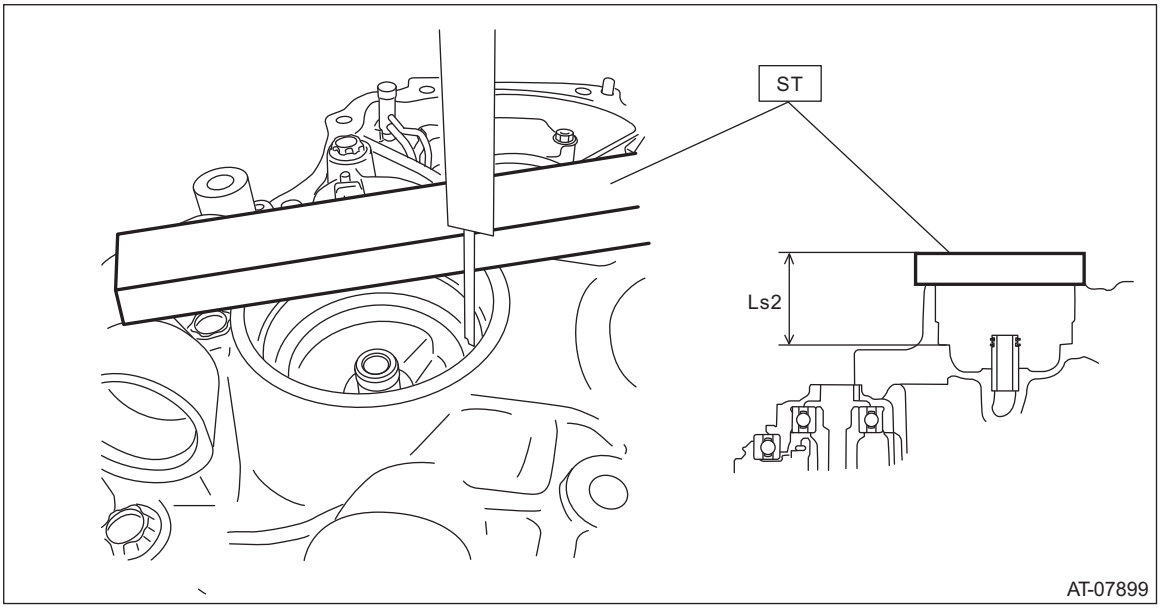


5) Calculate the “LD1” using the following formula and record it.
Calculation formula:
LD1 mm (in) = Lp1 – Ls1
LD1: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp1: Depth from the ST upper face to the primary pulley bearing catch surface
Ls1: Depth from the ST upper face to the secondary pulley bearing catch surface

6) Using the new drive pinion retainer or new converter case, measure depth “Lp2” from the ST upper face to the primary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



7) Using the new drive pinion retainer or new converter case, measure the depth “Ls2” from the ST upper face to the secondary pulley bearing catch surface at several points and calculate the average.
ST 499575400 GAUGE



8) Calculate the “LD2” using the following formula and record it.
Calculation formula:
LD2 mm (in) = Lp2 – Ls2
LD2: Height from the primary pulley bearing catch surface to the secondary pulley bearing catch surface
Lp2: Depth from the ST upper face to the primary pulley bearing catch surface
Ls2: Depth from the ST upper face to the secondary pulley bearing catch surface

9) Calculate the recorded values of “LD1” and “LD2” to obtain the positive number to select the shims.
Calculation formula: T1 mm (in) = LD1 – LD2 or T2 mm (in) = LD2 – LD1
T1, T2: Difference between new drive pinion retainer or new converter case and current drive pinion retainer or current converter case
LD1: Calculated value of current drive pinion retainer or current converter case
LD2: Calculated value of new drive pinion retainer or new converter case

Difference of the case (T1) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.070 (0.000827 — 0.00275)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.071 — 0.125 (0.00279 — 0.00492)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.126 — 0.170 (0.00496 — 0.00669)	Select the shim 0.1 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.171 — 0.230 (0.00673 — 0.00905)	Select the shim 0.2 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.231 — 0.250 (0.00909 — 0.00984)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.
0.251 — 0.300 (0.00988 — 0.01181)	Select the shim 0.3 mm thinner than the shim that is used on primary pulley side of the current converter case.

Difference of the case (T2) mm (in)	Shim selection procedure
0 — 0.020 (0 — 0.00078)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.021 — 0.080 (0.000827 — 0.00315)	Select new shim of same thickness with the shim that is used on primary pulley side of the current converter case.
0.081 — 0.100 (0.00318 — 0.00393)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.101 — 0.120 (0.00397 — 0.00472)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.121 — 0.180 (0.00476 — 0.00708)	Select the shim 0.1 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.181 — 0.220 (0.00712 — 0.00866)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.221 — 0.280 (0.00870 — 0.01102)	Select the shim 0.2 mm thicker than the shim that is used on primary pulley side of the current converter case.
0.281 — 0.300 (0.01106 — 0.01181)	Select the shim 0.3 mm thicker than the shim that is used on primary pulley side of the current converter case.

Part No.	Shim thickness mm (in)
32451AA000	0.1 (0.004)
32451AA010	0.2 (0.008)
32451AA020	0.3 (0.012)
32451AA030	0.4 (0.016)
32451AA040	0.5 (0.020)

42.Variator Chain

A: REMOVAL

For removal of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>

B: INSTALLATION

For installation of variator chain, refer to “Primary Pulley and Secondary Pulley”. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>

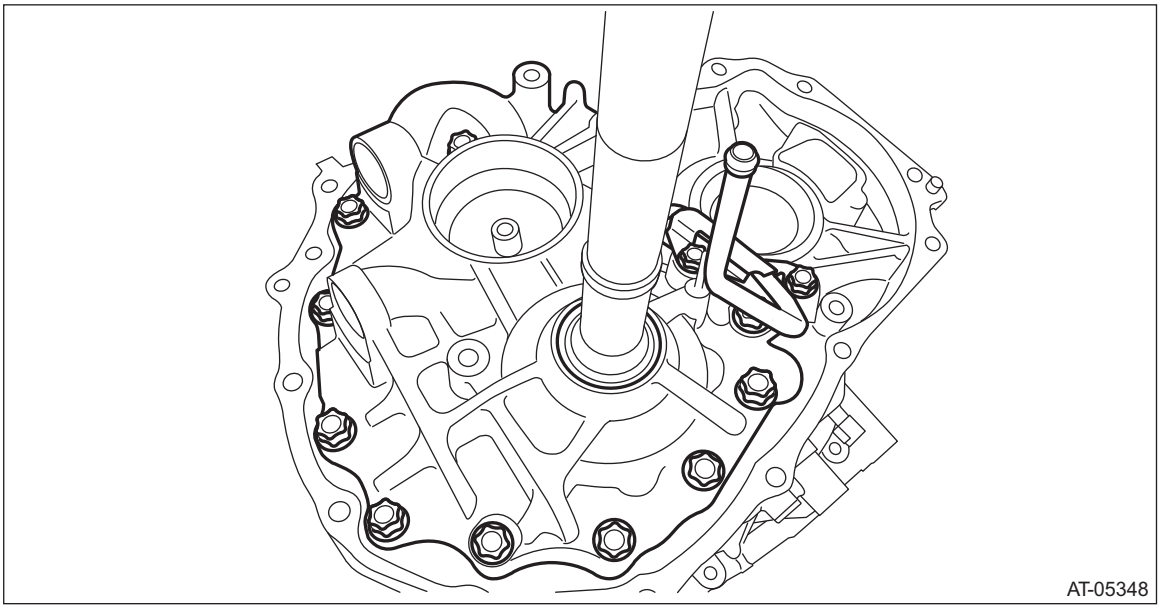
C: INSPECTION

Check the variator chain for damage and wear.

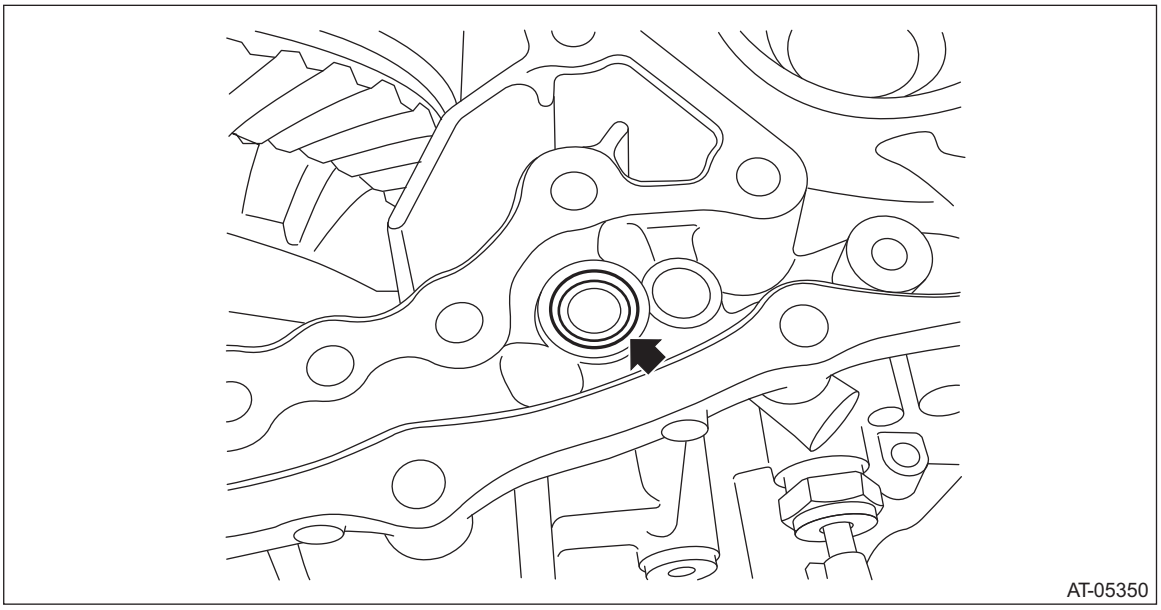
43.Drive Pinion Shaft Assembly

A: REMOVAL

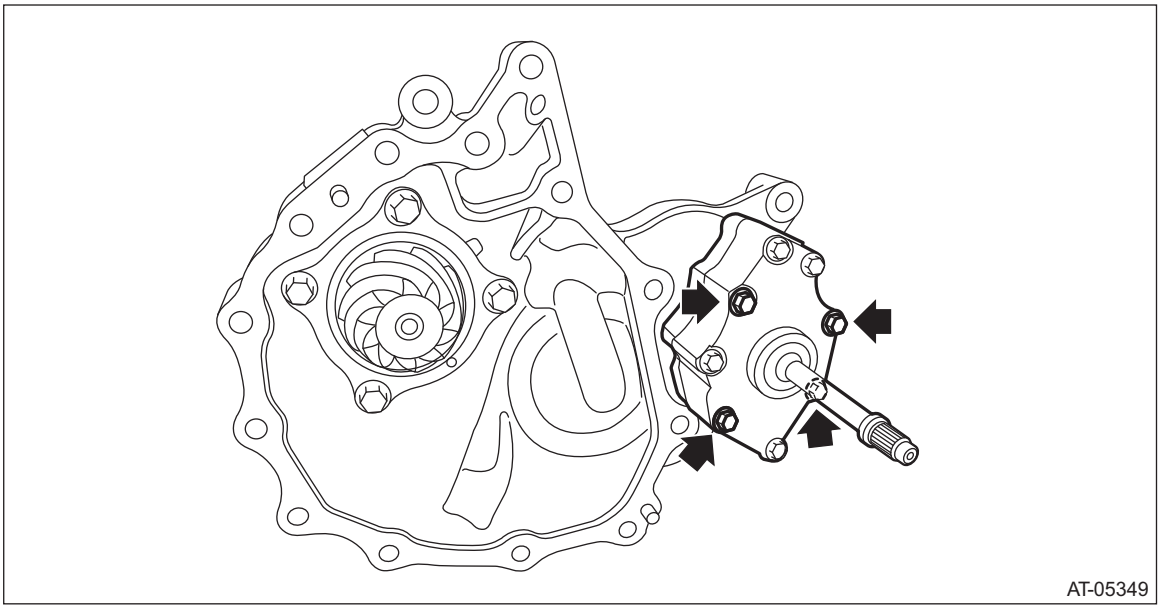
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Using the ST, remove the drive pinion retainer and lubrication pipe.
ST 18270KA020 SOCKET (E20)



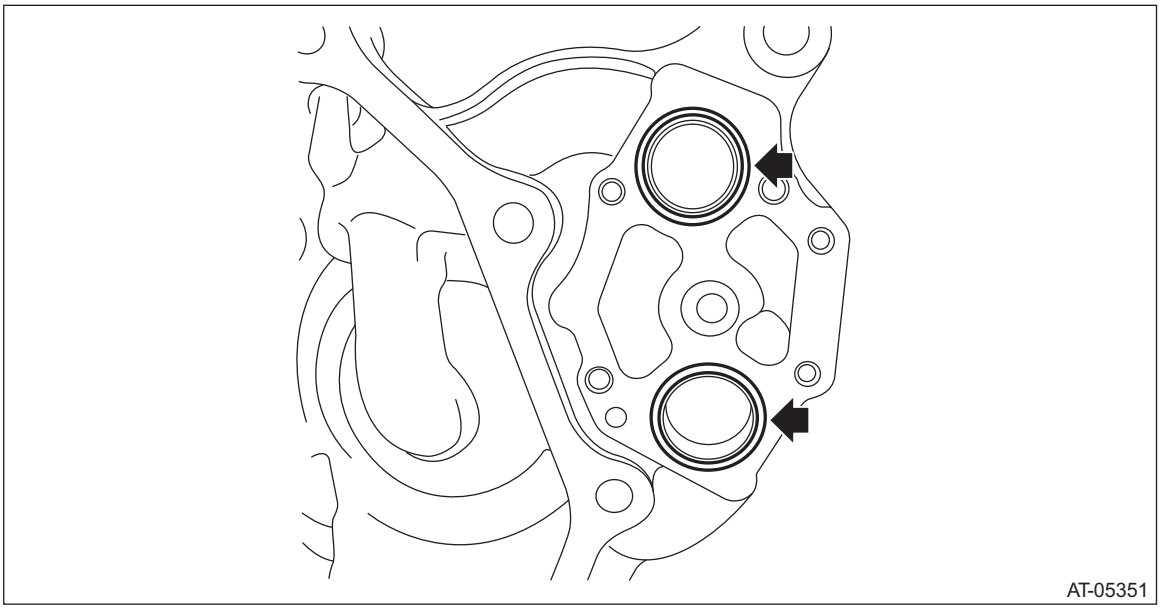
15) Remove the O-rings.



16) Remove the oil pump and the plate.



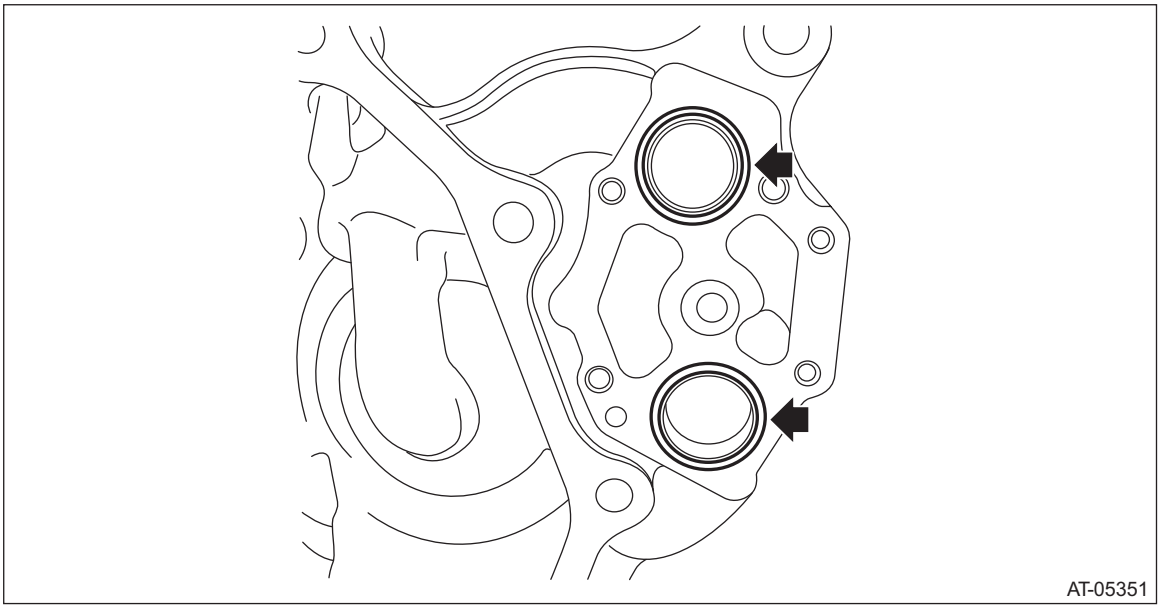
17) Remove the O-rings.



B: INSTALLATION

1) Clean the mating surface of drive pinion retainer and converter case.
2) Adjust the backlash and tooth contact between drive pinion shaft assembly and the front differential side gear. <Ref. to CVT(TR690)-260, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Install the O-ring for oil pump to drive pinion retainer.

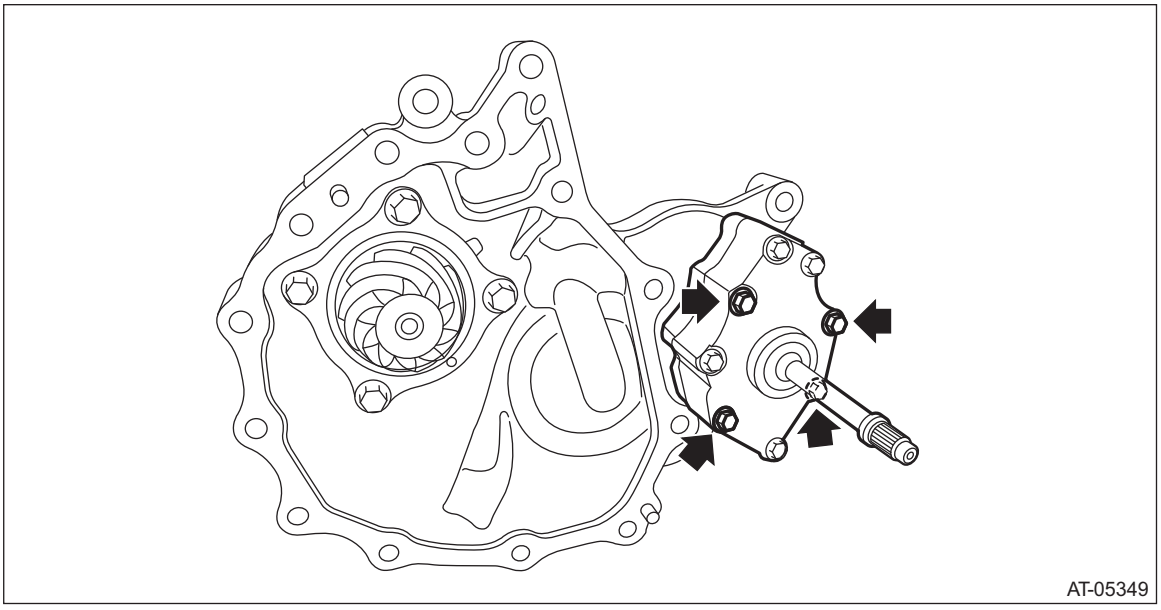
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



4) Install the plate and the oil pump.

NOTE:
Apply CVTF to the bolt.

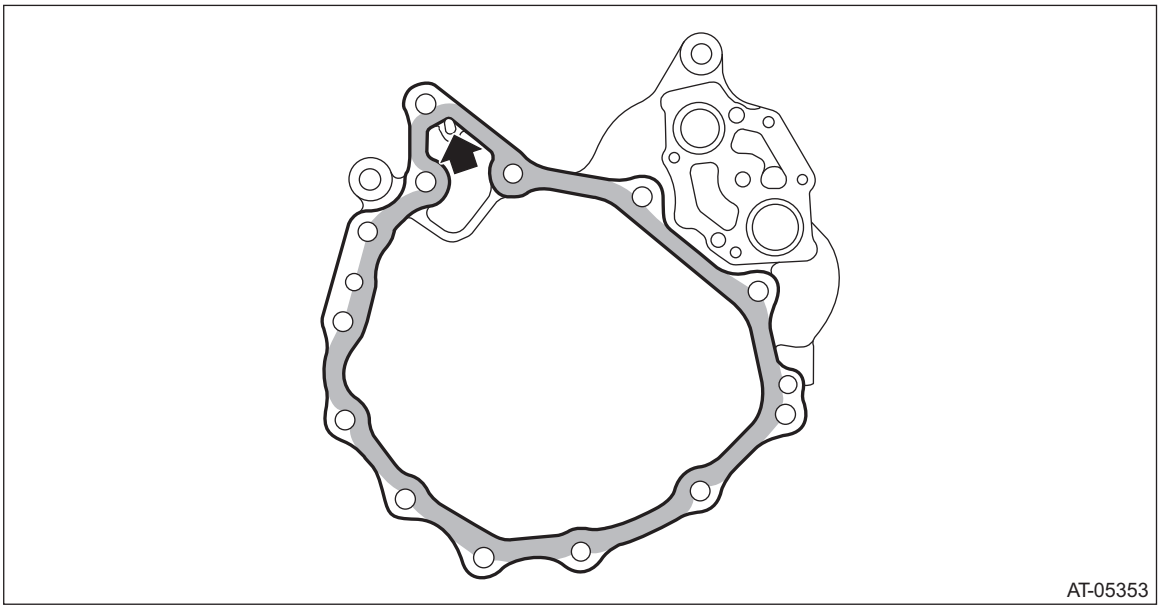
Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)



5) Apply liquid gasket seamlessly to the mating surface of drive pinion retainer.

NOTE:
Be careful not to block the arrowed hole when applying liquid gasket.

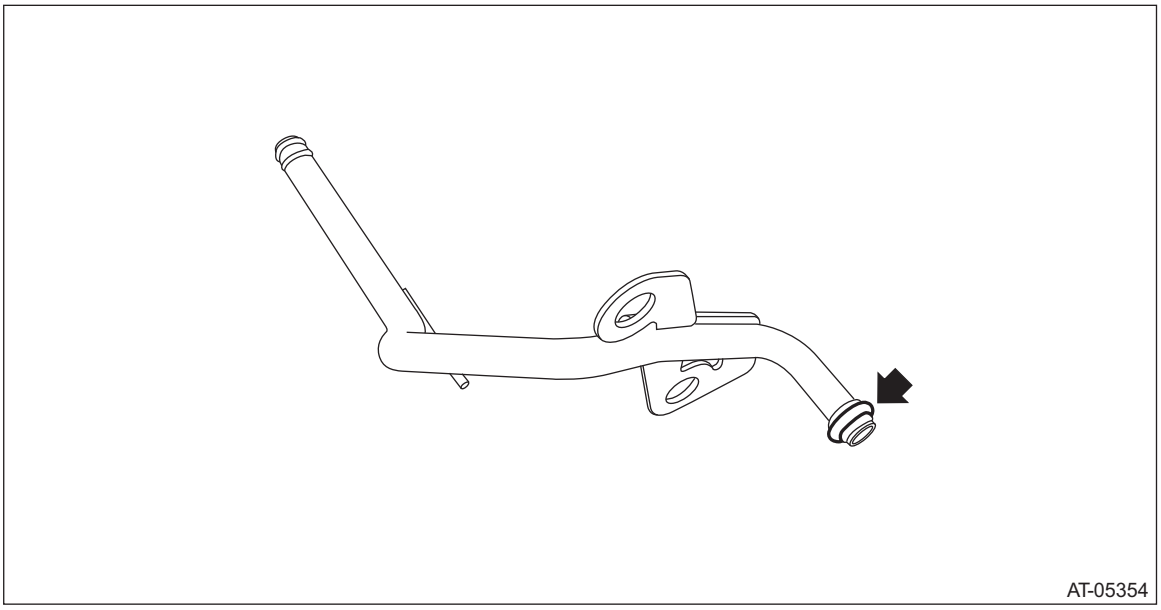
Liquid gasket:
THREE BOND 1215B or equivalent



6) Install the O-ring to the lubrication pipe.

NOTE:
- Use new O-rings.

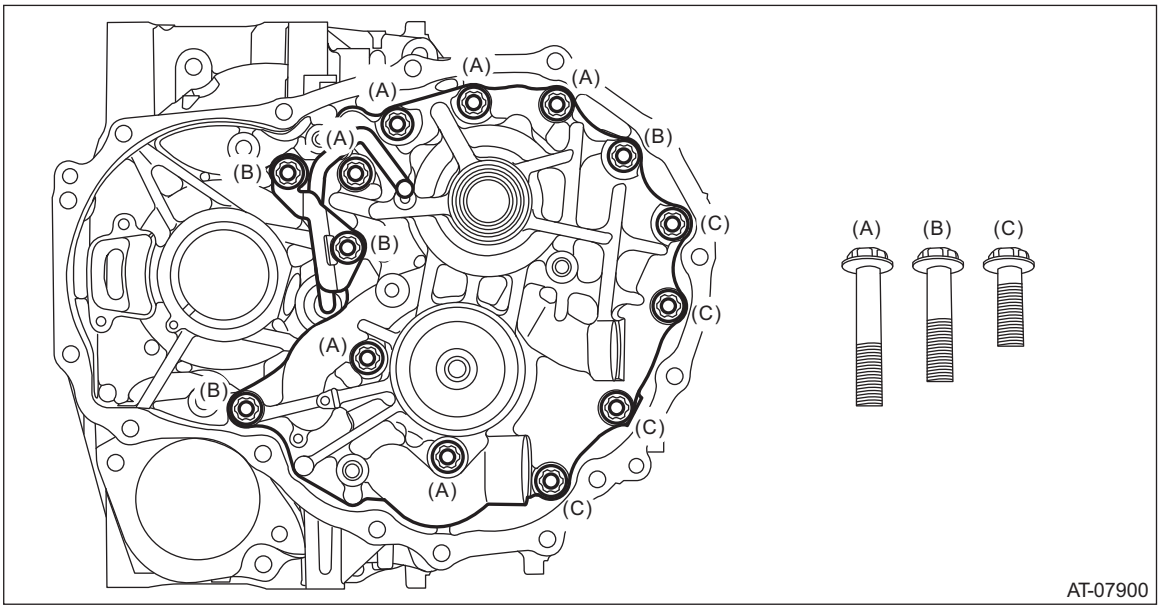
- Apply CVTF to the O-rings.



7) Install the drive pinion retainer and lubrication pipe to converter case and tighten the bolt using the ST.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

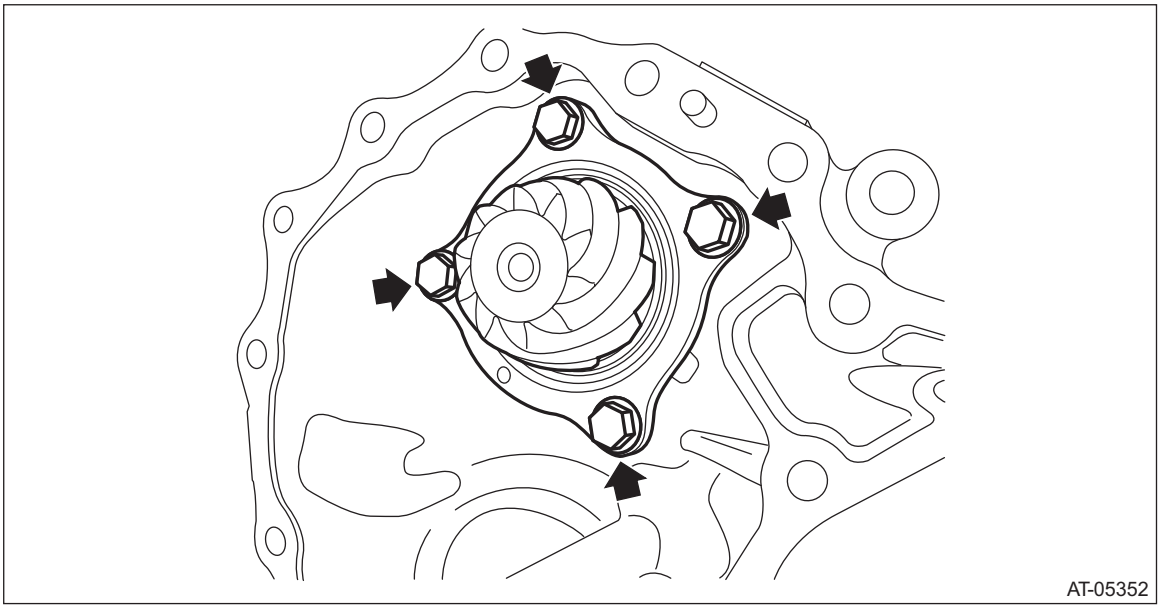


8) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>
9) Install the transmission case. <Ref. to CVT(TR690)-215, INSTALLATION, Transmission Case.>
10) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
11) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
12) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
13) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>

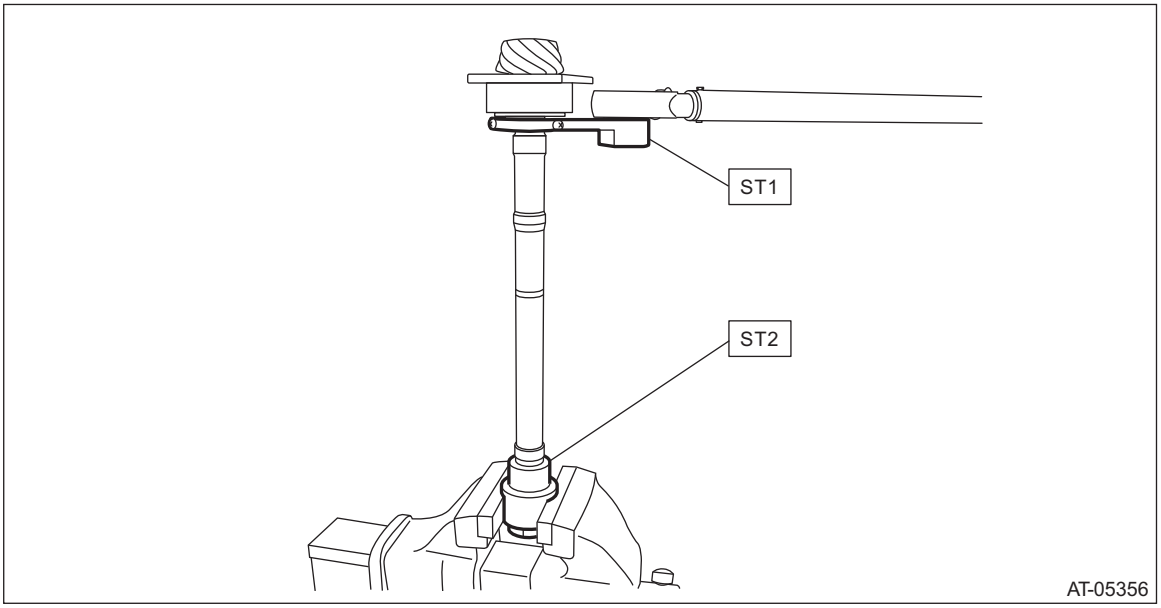
14) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
15) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
16) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
17) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>
18) Install the oil pan and control valve body. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

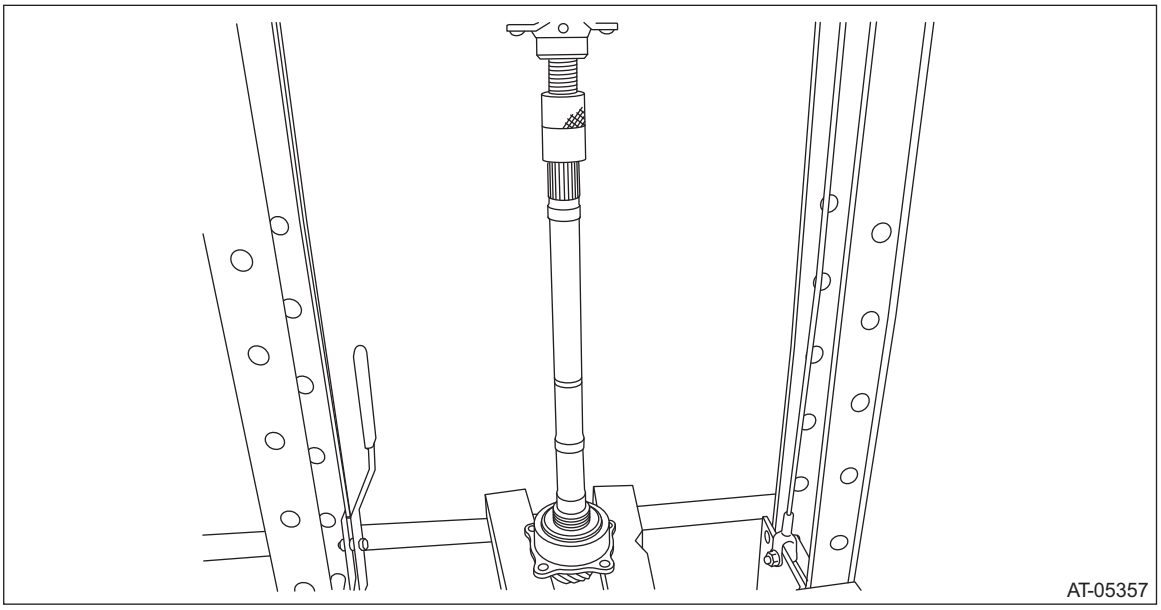
1) Remove the drive pinion assembly.



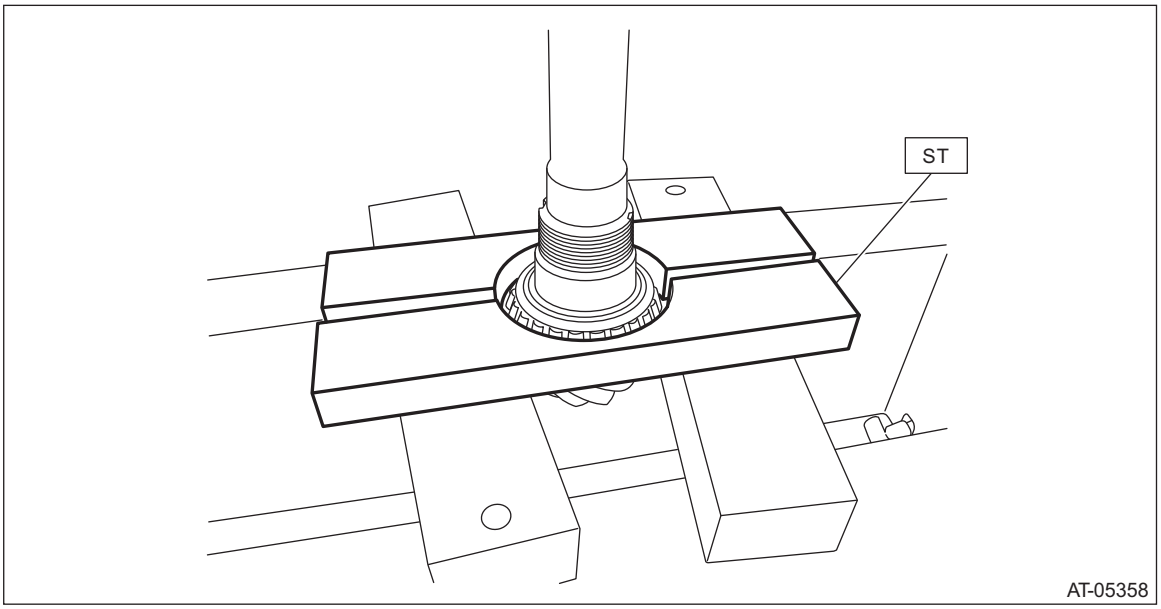
2) Flatten the tab of the lock nut.
3) Using ST1 and ST2, fix at the spline portion of drive pinion shaft to remove the lock nut.
ST1 18621AA000 ADAPTER WRENCH
ST2 18667AA010 HOLDER



4) Remove the taper roller bearing and outer race from drive pinion shaft.

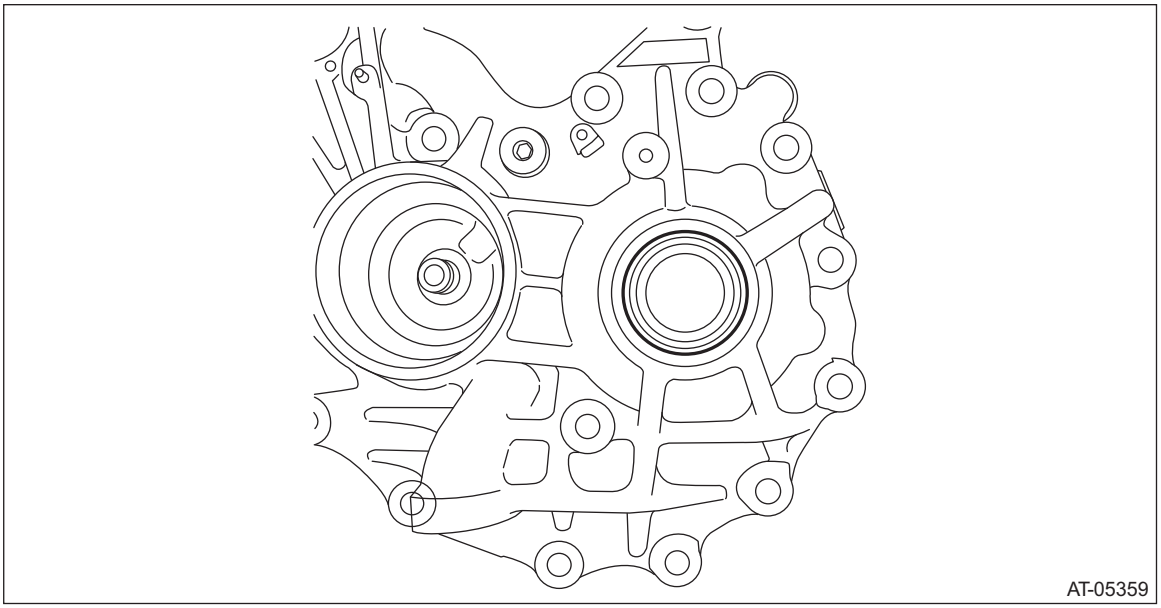


5) Remove the inner bearing inner race from the drive pinion shaft using ST.
ST 498077000 REMOVER



6) Remove the two oil seals using a screwdriver wrapped with cloth, etc.

CAUTION:
Do not damage the fitting surface of drive pinion bearing.



7) Remove the plug from drive pinion retainer.

D: ASSEMBLY

1) Install the O-ring to plug and install the plug to drive pinion retainer.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

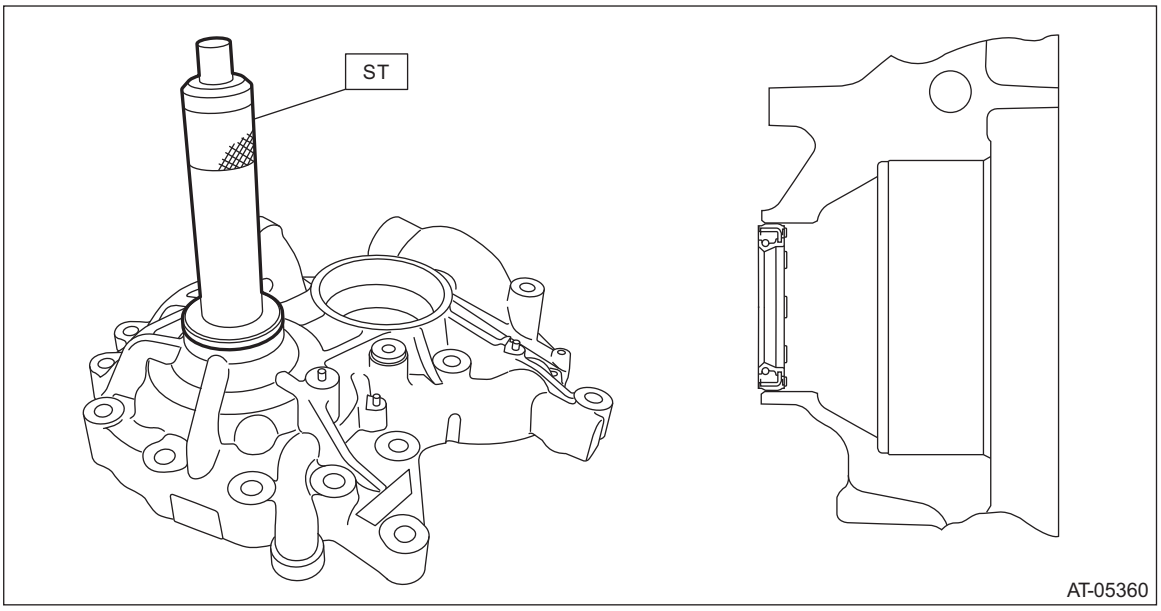
2) Using the ST, install the oil seal to drive pinion retainer.

NOTE:
- Apply CVTF to the oil seal press-fitting surface and lip.

- Install the oil seal in the correct direction.

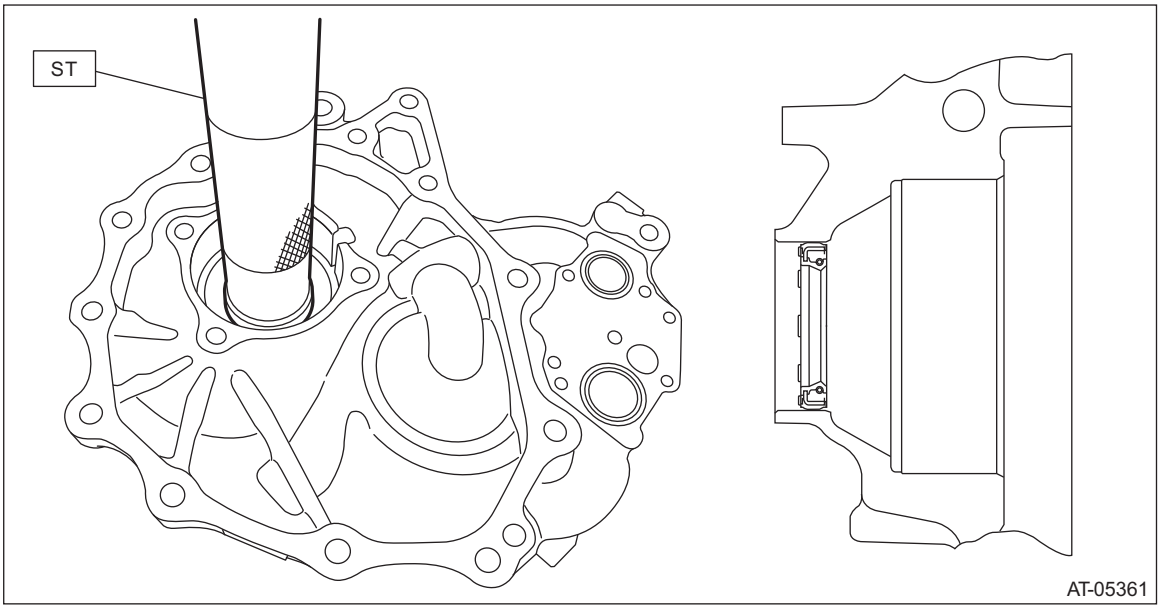
Pulley side

ST 18657AA020 OIL SEAL INSTALLER

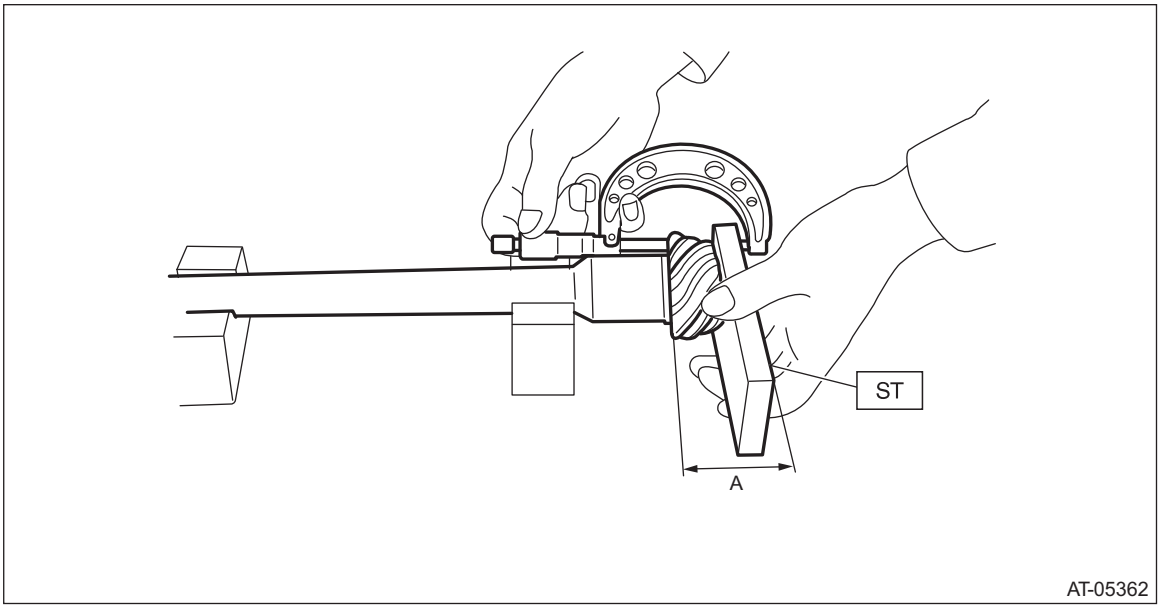


Front differential side

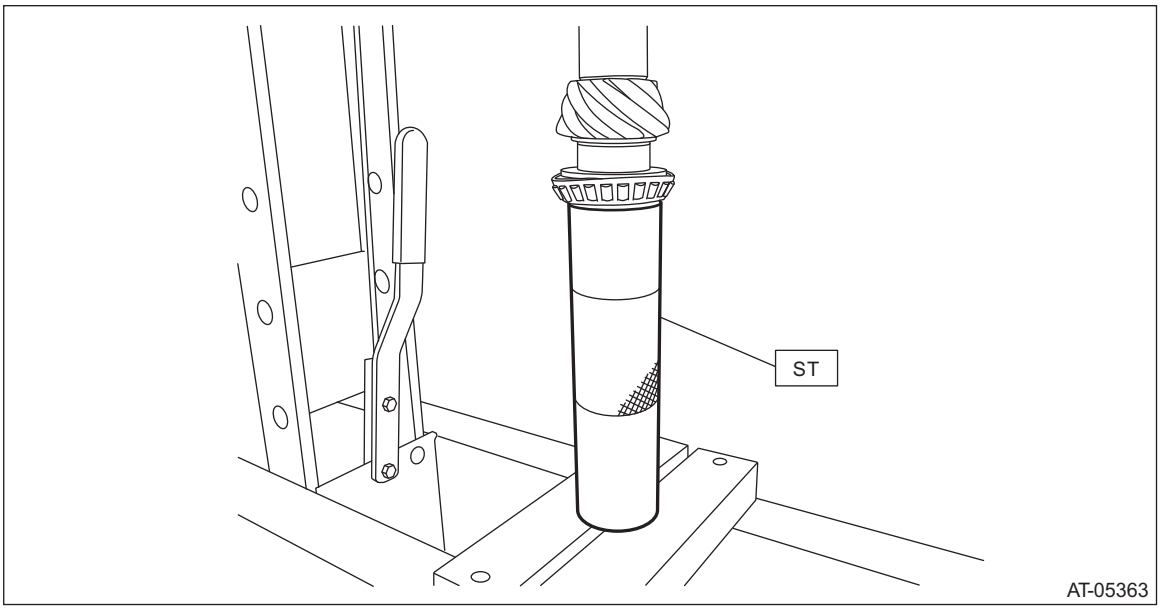
ST 499277100 BUSHING 1-2 INSTALLER



3) Measure the dimension “A” of drive pinion shaft.
ST 398643600 GAUGE



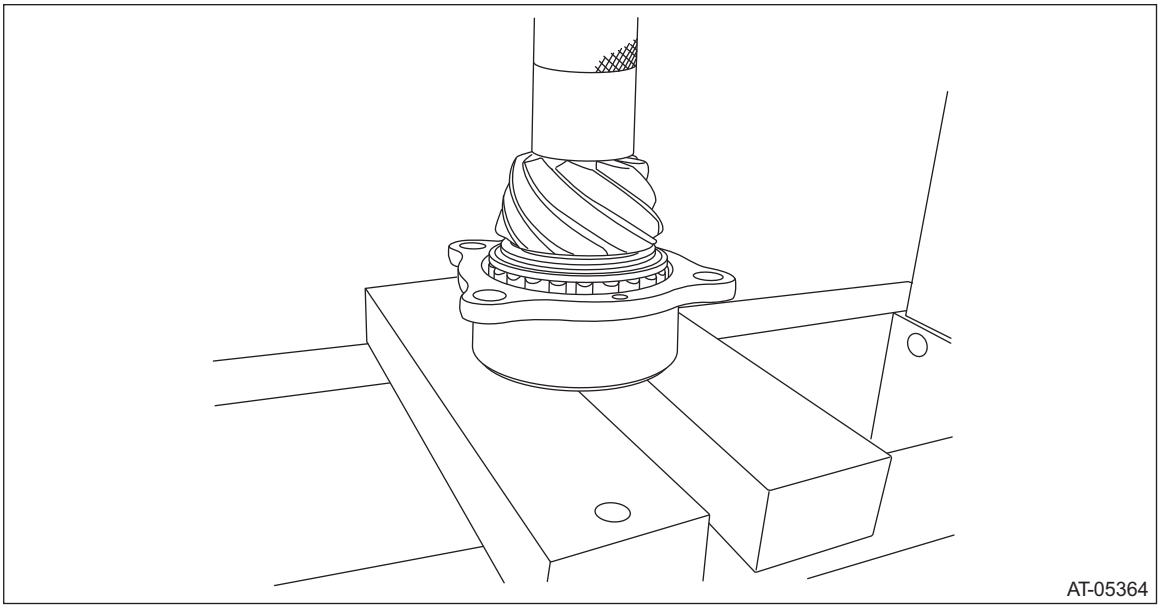
4) Press-fit the new taper roller bearing front side inner race using the ST.
ST 499277200 INSTALLER



5) Press-fit the new taper roller bearing rear side inner race and outer race together.

CAUTION:
Damage may result if too much force is applied to the roller bearing.

NOTE:
Press in to a position where the bearing rotates smoothly without play.

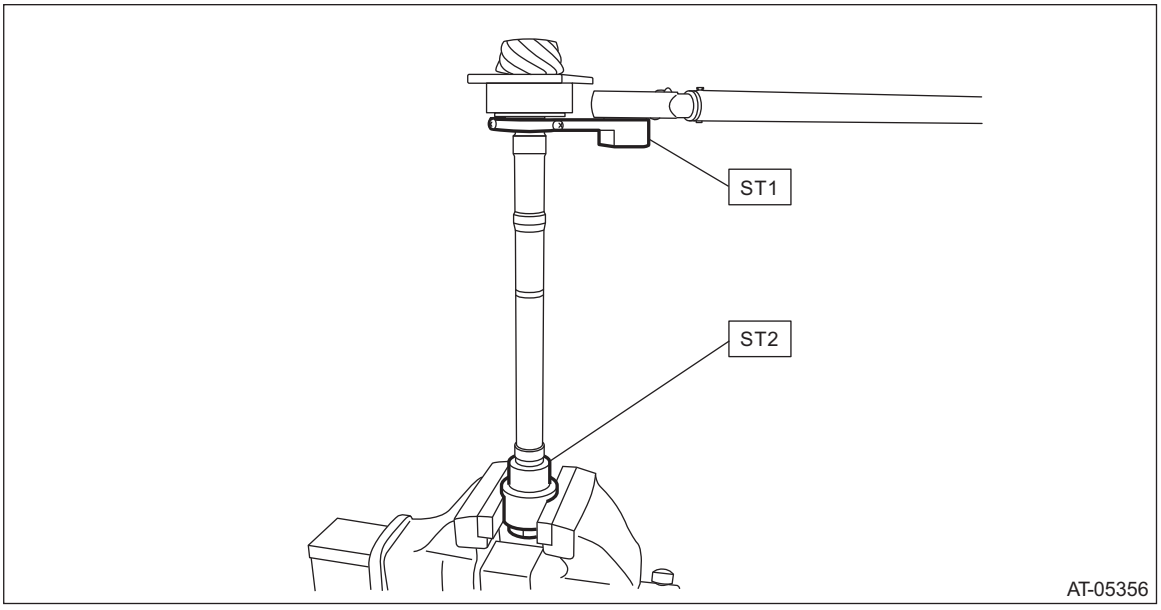


6) Tighten a new lock nut using the ST.
Using the following formula, calculate the torque for a torque wrench.
T2 = L2/(L1 + L2) × T1
T1: 130 N·m (13.3 kgf-m, 95.9 ft-lb)
[Required torque setting]
T2: Tightening torque
L1: ST1 length 0.1 m (3.94 in)
L2: Torque wrench length
Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	104 (10.6, 76.7)
0.45 (17.72)	106 (10.8, 78.2)
0.5 (19.69)	108 (11.0, 79.7)
0.55 (21.65)	110 (11.2, 81.1)

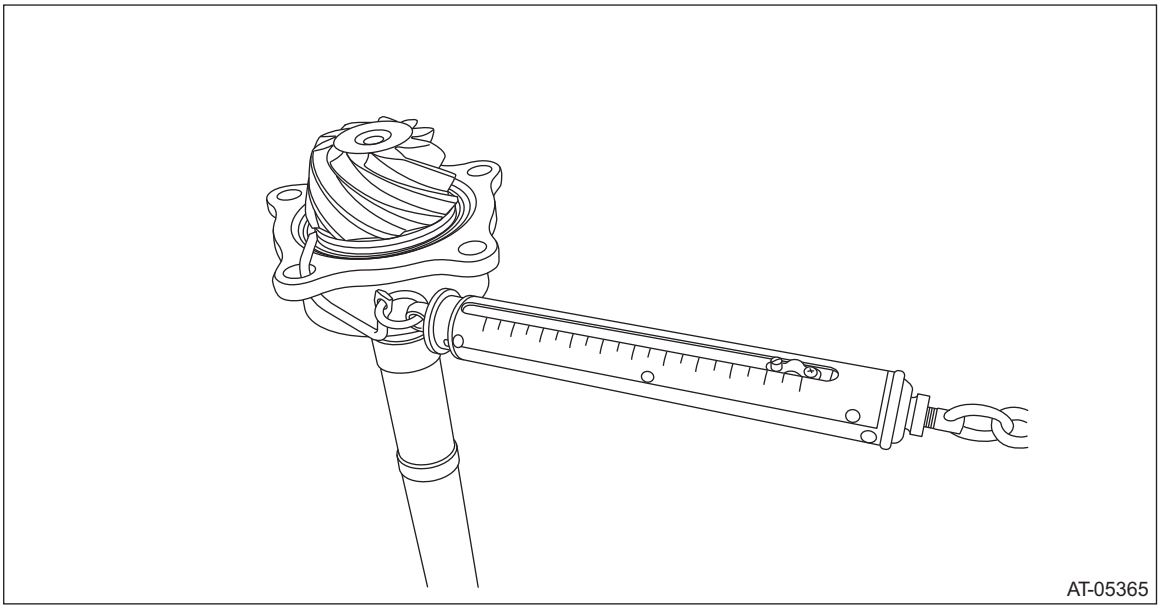
ST1 18621AA000 ADAPTER WRENCH
ST2 18667AA010 HOLDER

NOTE:
Tighten the lock nut while directly aligning ST1 and torque wrench.



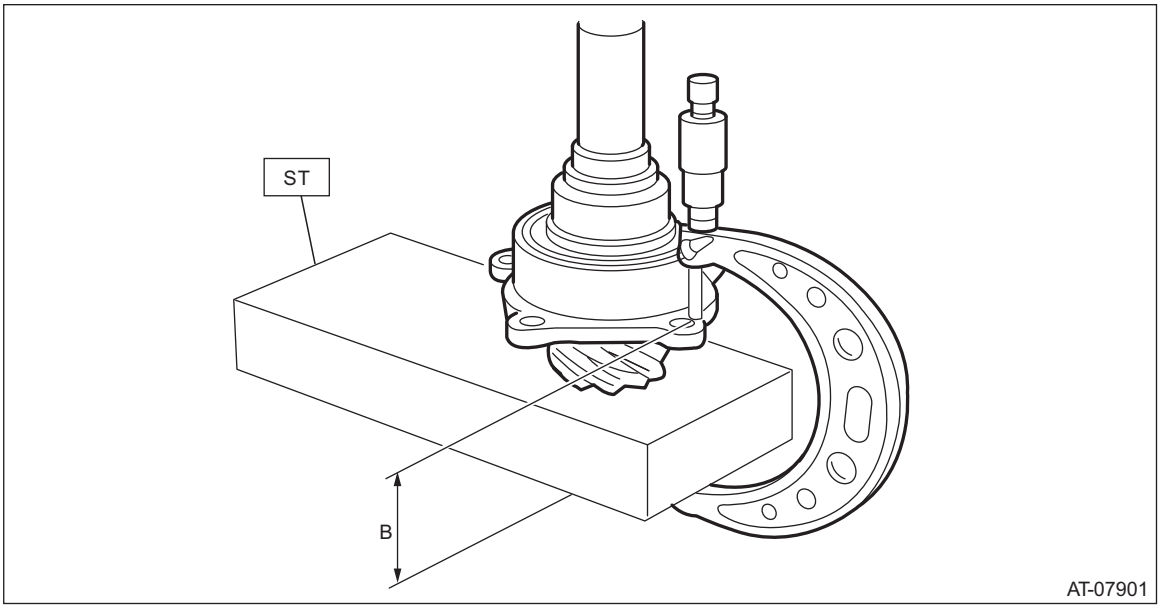
7) Apply differential gear oil to roller of bearing and rotate the bearing several times.
8) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)



9) Crimp the lock nut in 2 locations.

10) Measure the dimension “B” of the drive pinion shaft.
ST 398643600 GAUGE



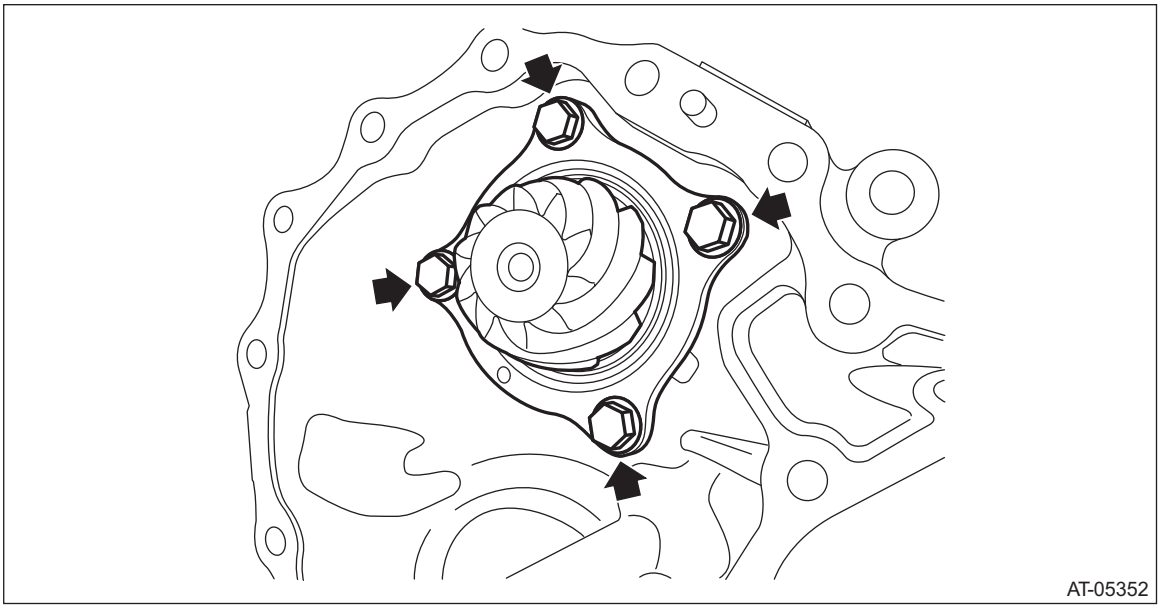
11) Obtain the thickness “T” mm (in) of the drive pinion shim using the following formula.
T = 6.55±0.1225 – (B – A)
[T in = 0.258±0.0048 – (B – A)]
T: Shim thickness
A: Height from ST to drive pinion shaft bearing catch saucer
B: Height from ST to drive pinion retainer case side end face
12) Select three or less shims from following table.

Drive pinion shim	
Part No.	Thickness mm (in)
31451AA050	0.150 (0.0059)
31451AA060	0.175 (0.0069)
31451AA070	0.200 (0.0079)
31451AA080	0.225 (0.0089)
31451AA090	0.250 (0.0098)
31451AA100	0.275 (0.0108)
31451AA240	0.300 (0.0118)

13) Install the shims selected for drive pinion retainer and drive pinion shaft assembly.

NOTE:
Be careful not to bend the shim.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

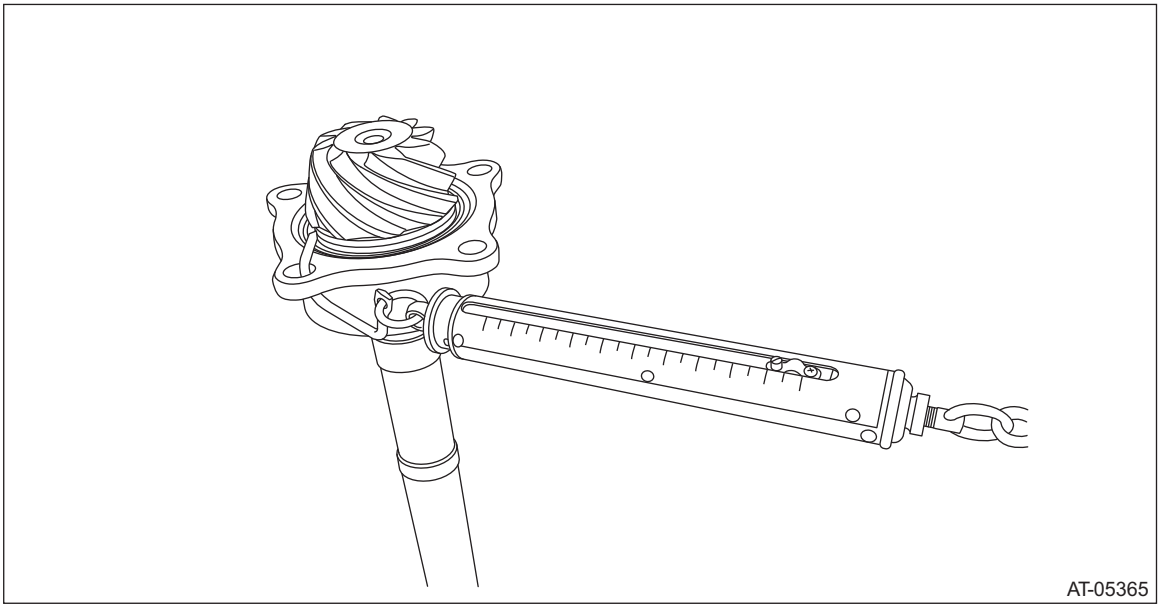


E: INSPECTION

- Make sure that all component parts are free of scratches, holes and other faults.
- Check the tooth contact. <Ref. to CVT(TR690)-260, ADJUSTMENT, Drive Pinion Shaft Assembly.>
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the bearing preload of drive pinion shaft.

CAUTION:
Before measuring, apply differential gear oil to roller of bearing and rotate the bearing several times.

Starting torque:
16.3 — 42.7 N (1.7 — 4.4 kgf, 4.4 — 9.6 lbf)

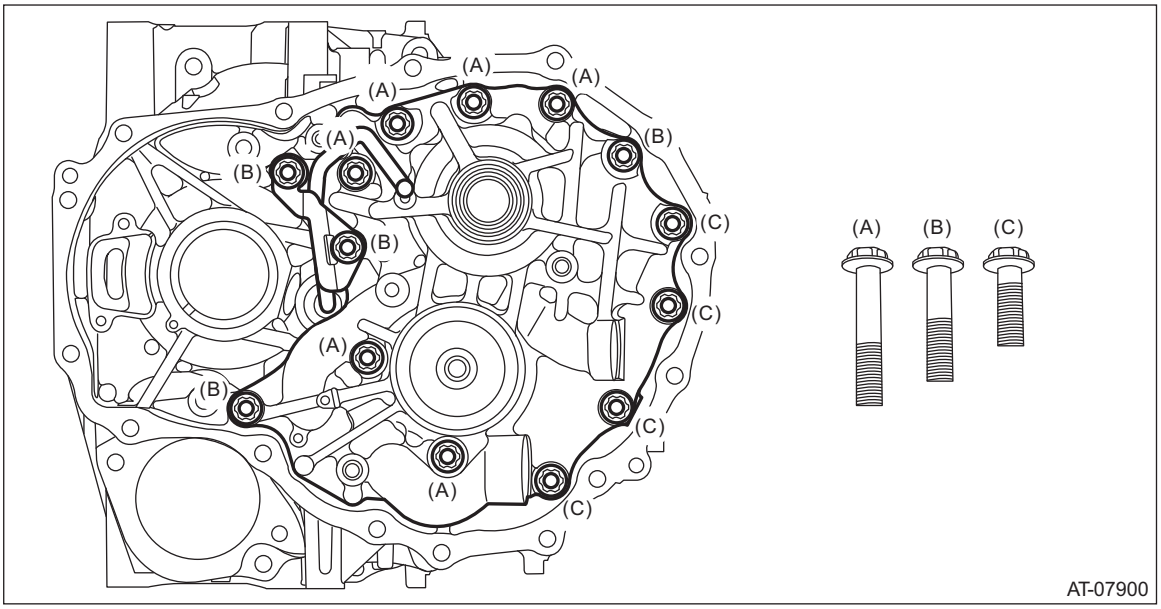


F: ADJUSTMENT

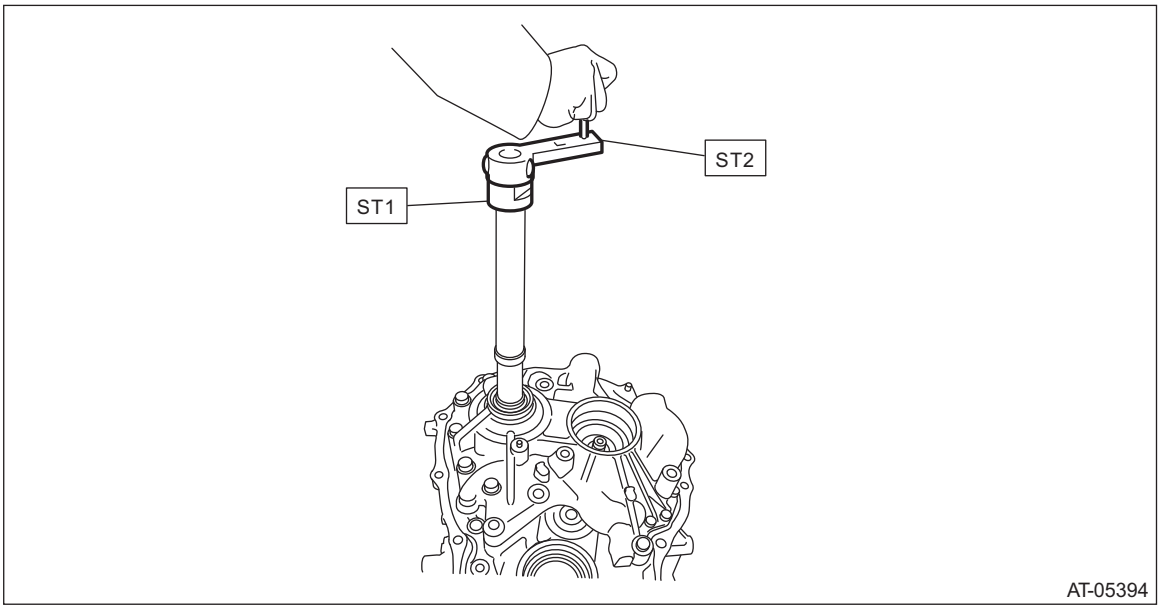
1) Remove the liquid gasket from the mating surface completely.
2) Using the ST, install the drive pinion retainer to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)



3) Rotate the drive pinion several times using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH

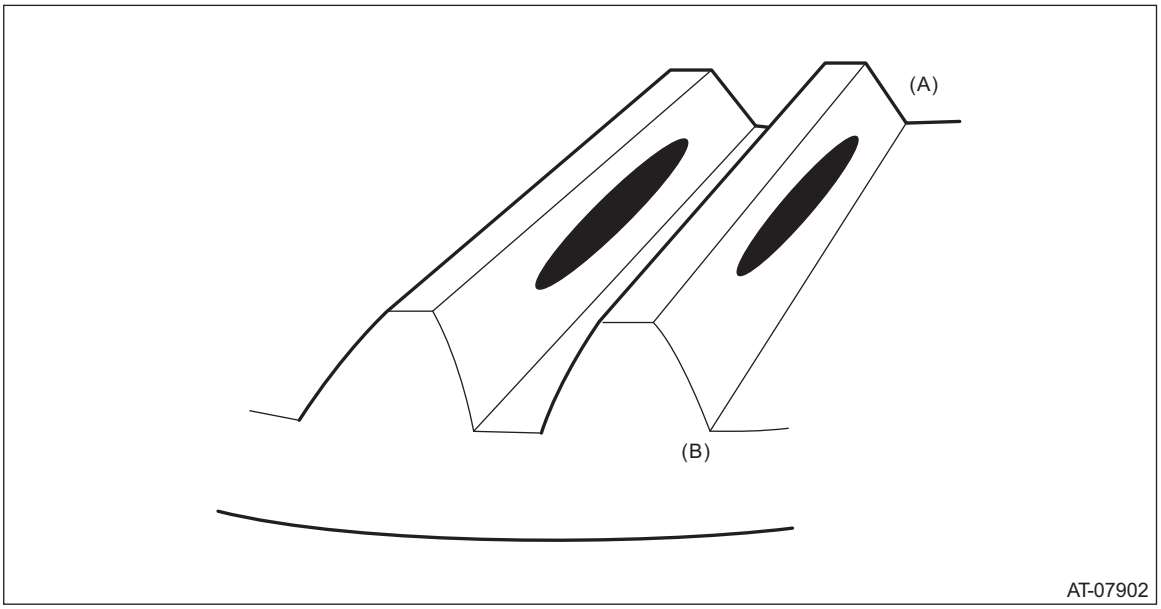


4) Adjust the drive pinion and hypoid driven gear backlash. <Ref. to CVT(TR690)-282, ADJUSTMENT, Front Differential Assembly.>
5) Using the ST, remove the drive pinion retainer from converter case.
ST 18270KA020 SOCKET (E20)
6) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Then install the drive pinion retainer and rotate the drive pinion in both directions several times. Remove the drive pinion retainer and check the tooth contact pattern.
If the teeth contact is inappropriate, adjust the backlash or thickness of the shim. <Ref. to CVT(TR690)-282, ADJUSTMENT, Front Differential Assembly.>

NOTE:
After correction, wipe off the lead-free red dye.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

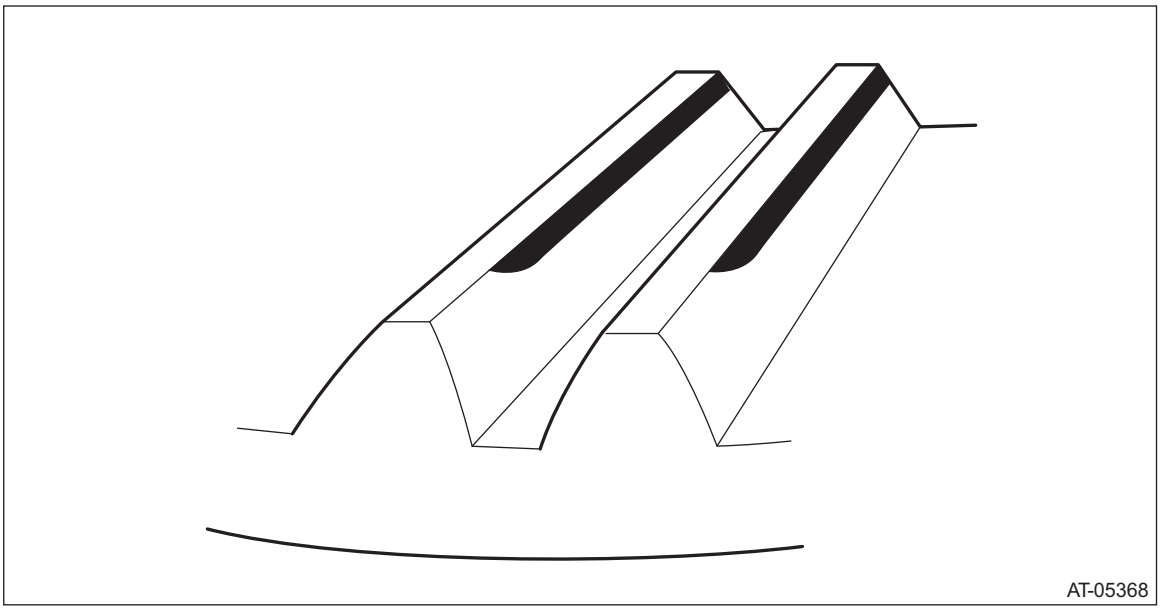


(A) Toe side
(B) Heel side

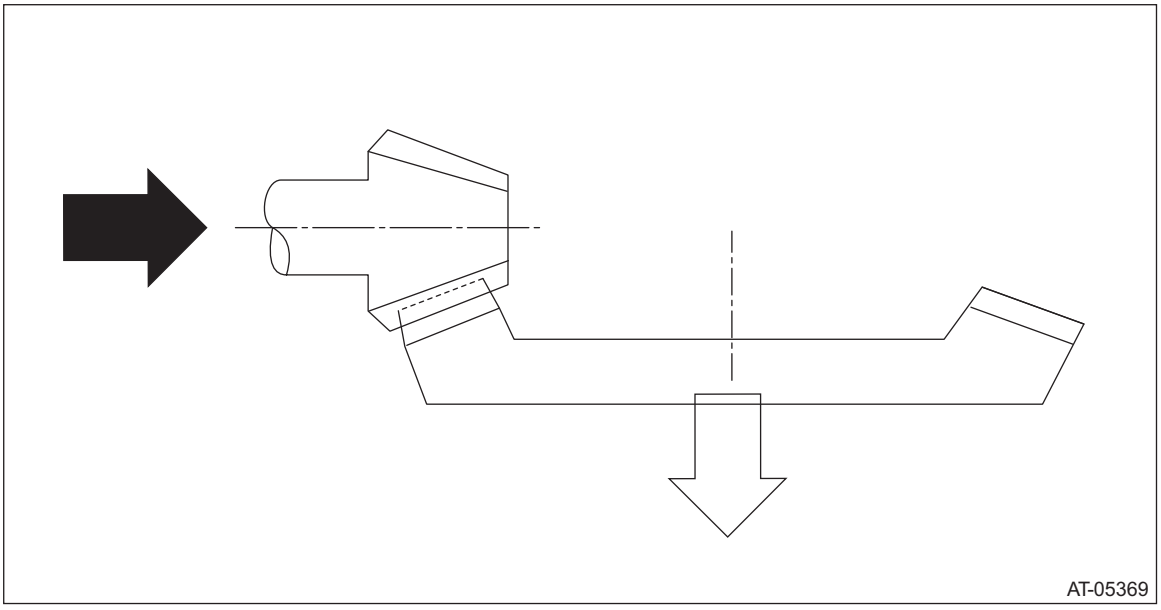
- Face contact

Check item: Backlash is too large.

Contact pattern



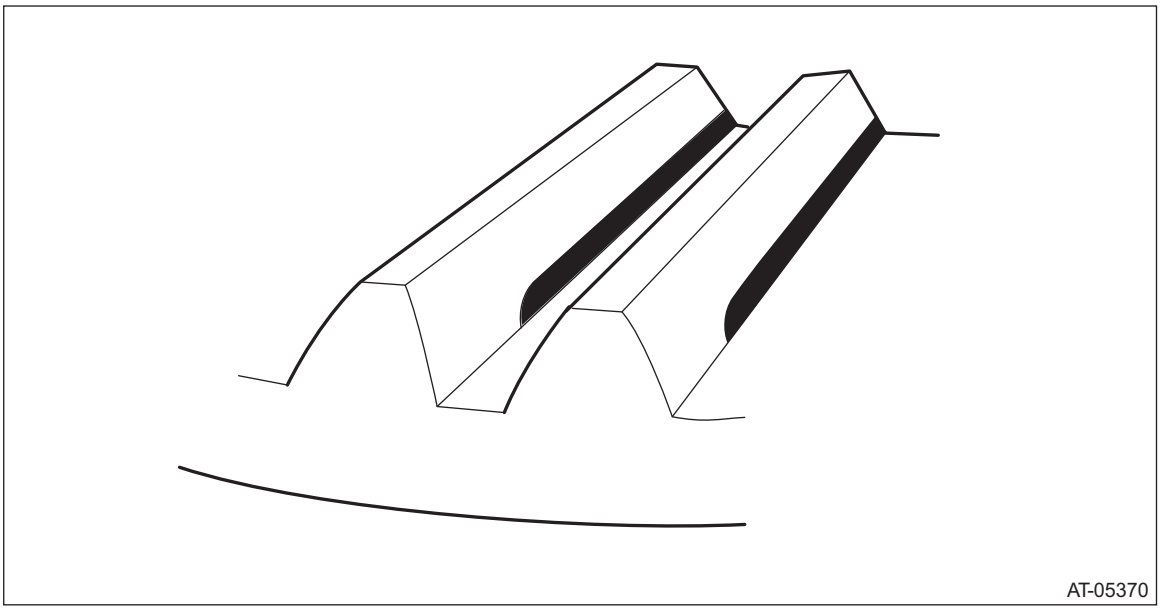
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



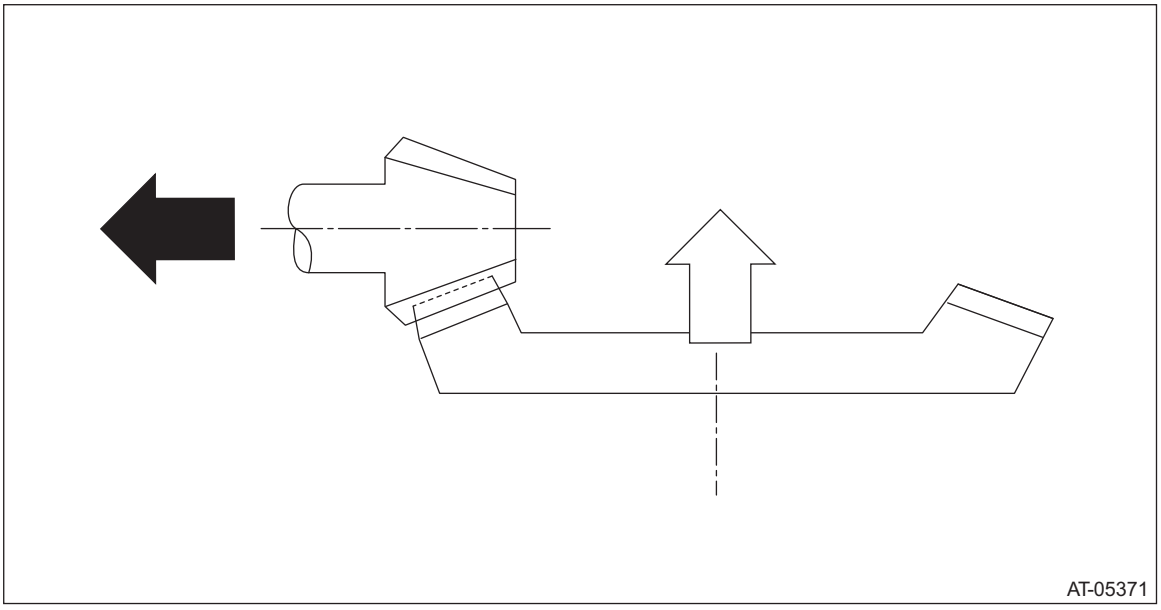
- Flank contact

Check item: Backlash is too small.

Contact pattern



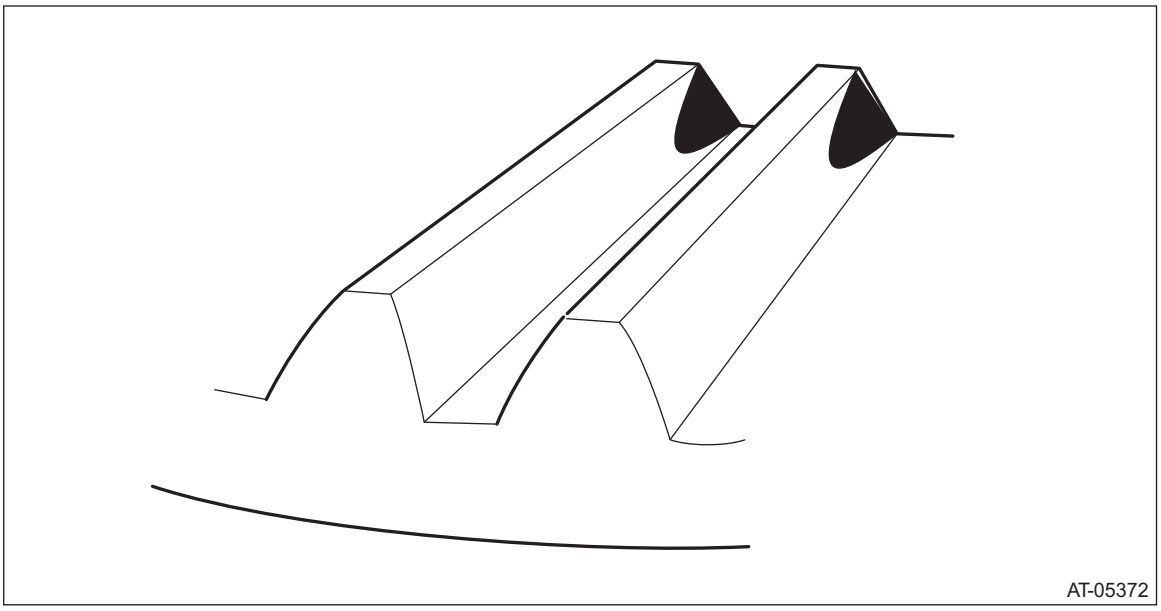
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



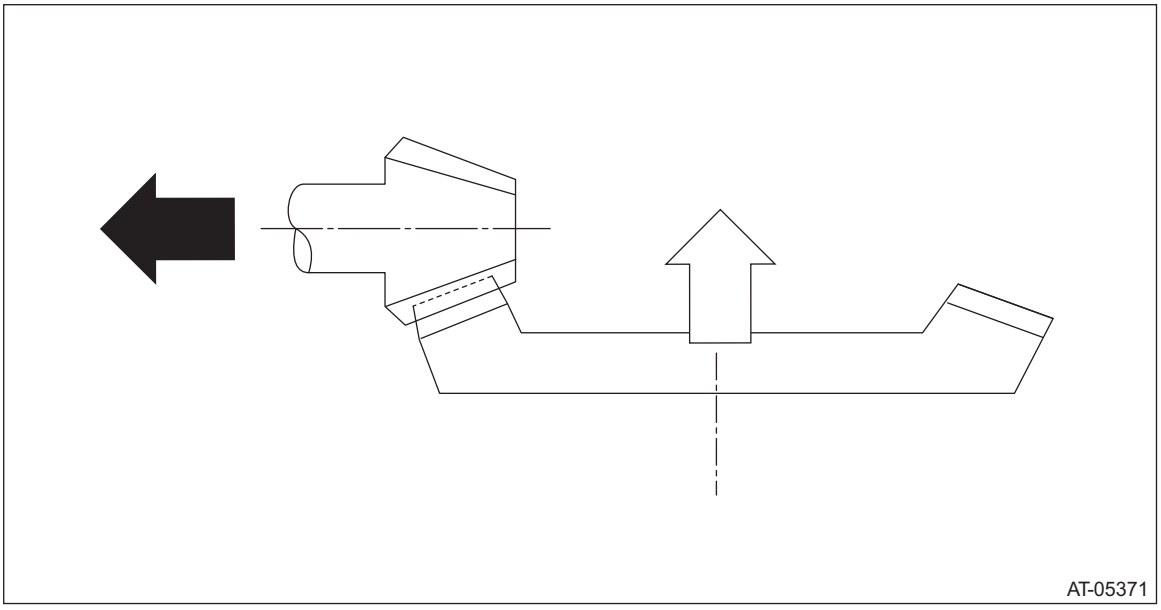
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



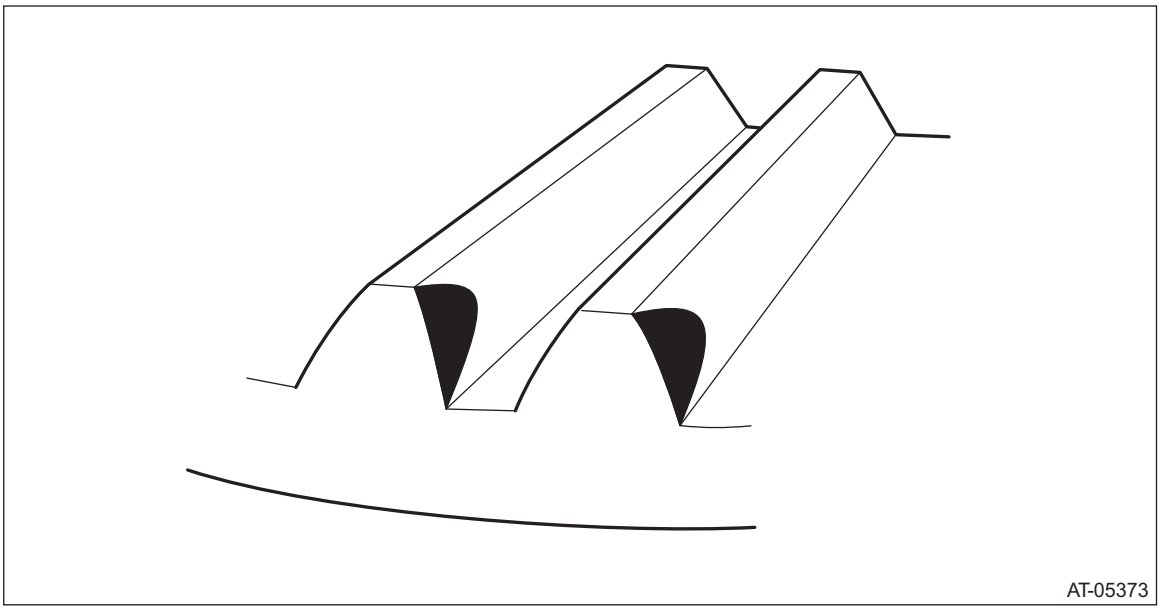
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear side.



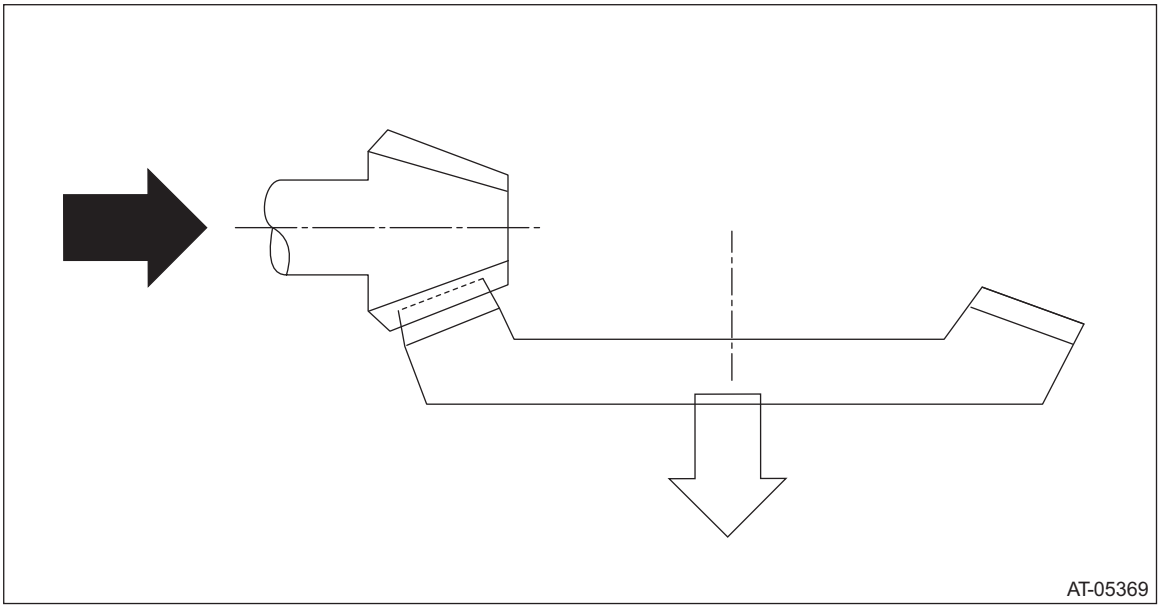
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern

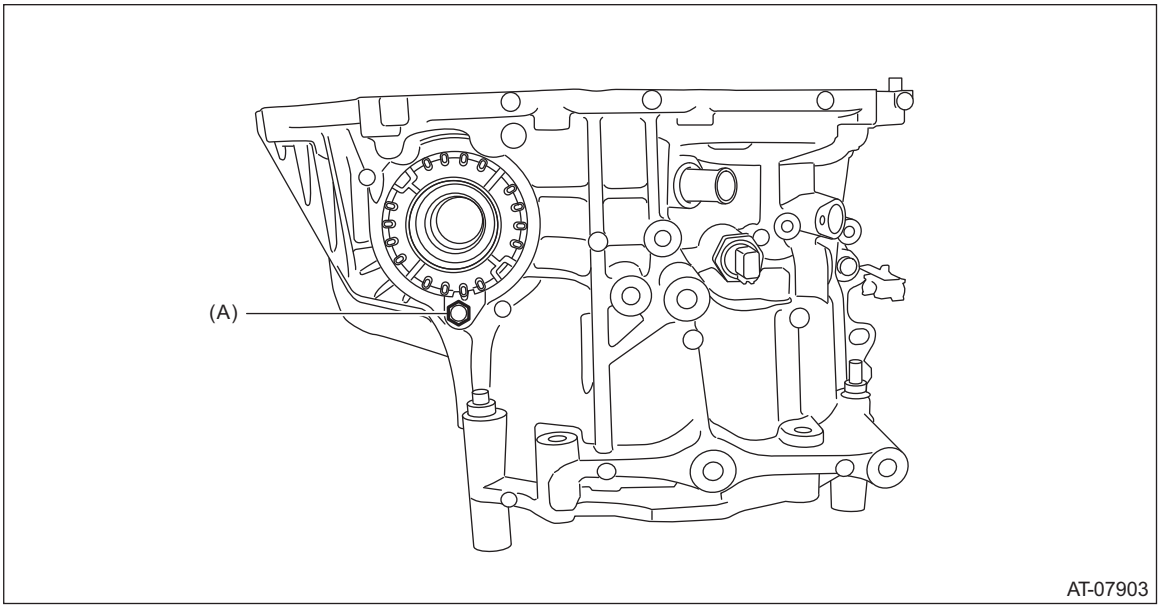


Corrective action: Increase the thickness of the pinion height adjusting washer according to the procedures for moving the drive pinion closer to the hypoid driven gear.



7) If tooth contact is correct, mark the differential side retainer position and loosen. After fitting a new O-ring and oil seal, screw in the differential side retainer to the marked position.
8) Tighten the lock plate with specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

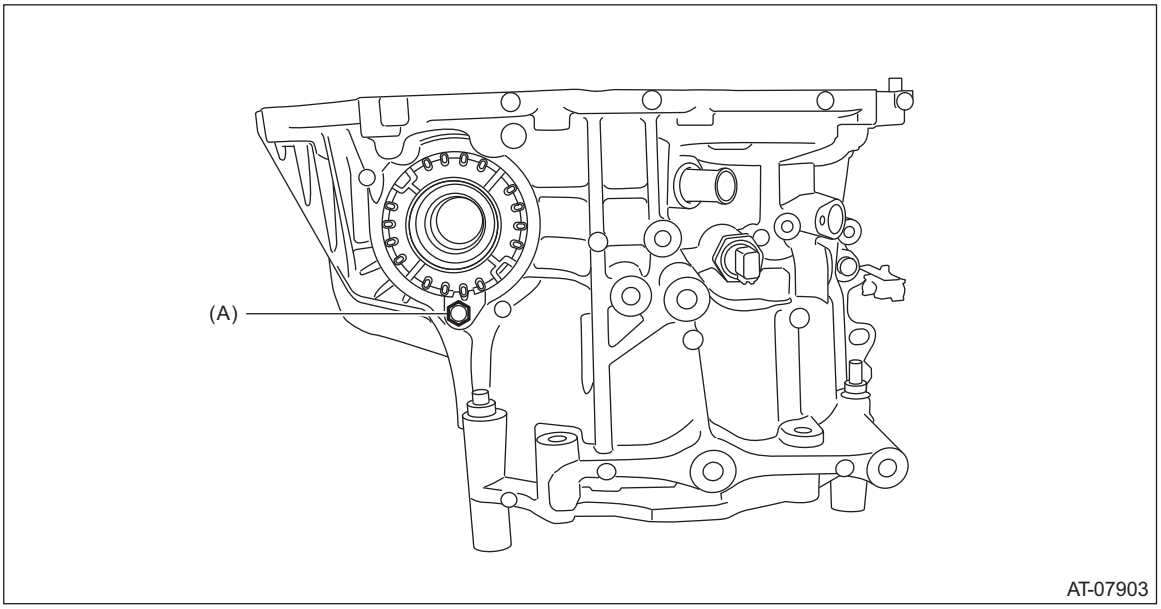


(A) Lock plate

44.Front Differential Assembly

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-247, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the lock plates on both sides.

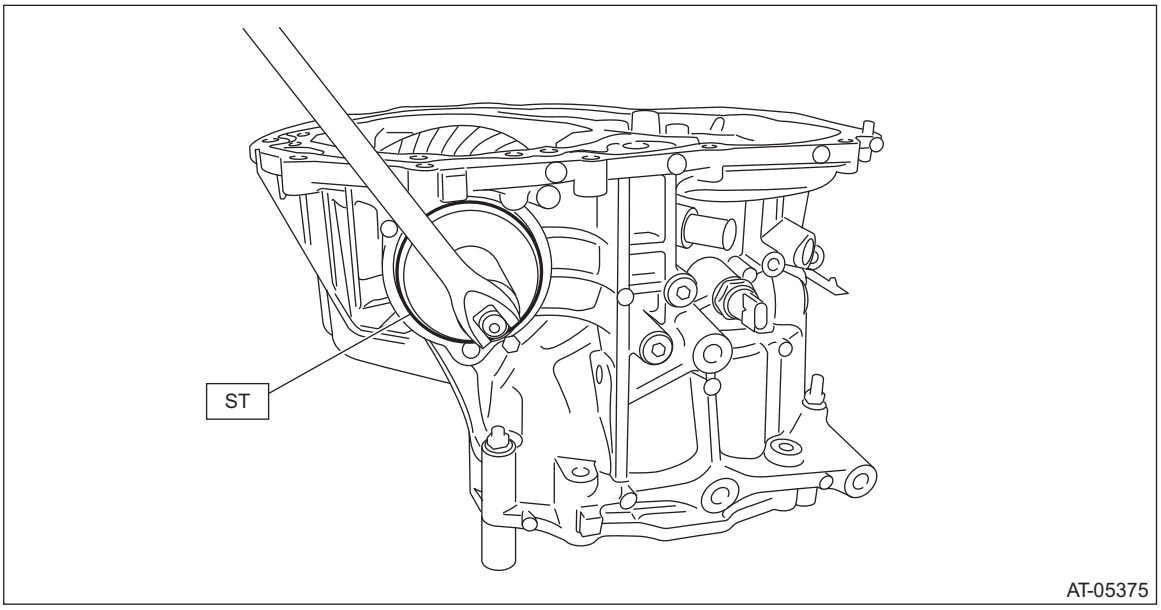


(A) Lock plate

16) Remove the differential side retainers using ST.
ST 18658AA021 WRENCH COMPL RETAINER

NOTE:
• Support the differential case assembly by hand to avoid damaging the retainer mounting hole of the converter case.

- When keeping the retainers aside, use labels etc. to avoid confusing the left and right.

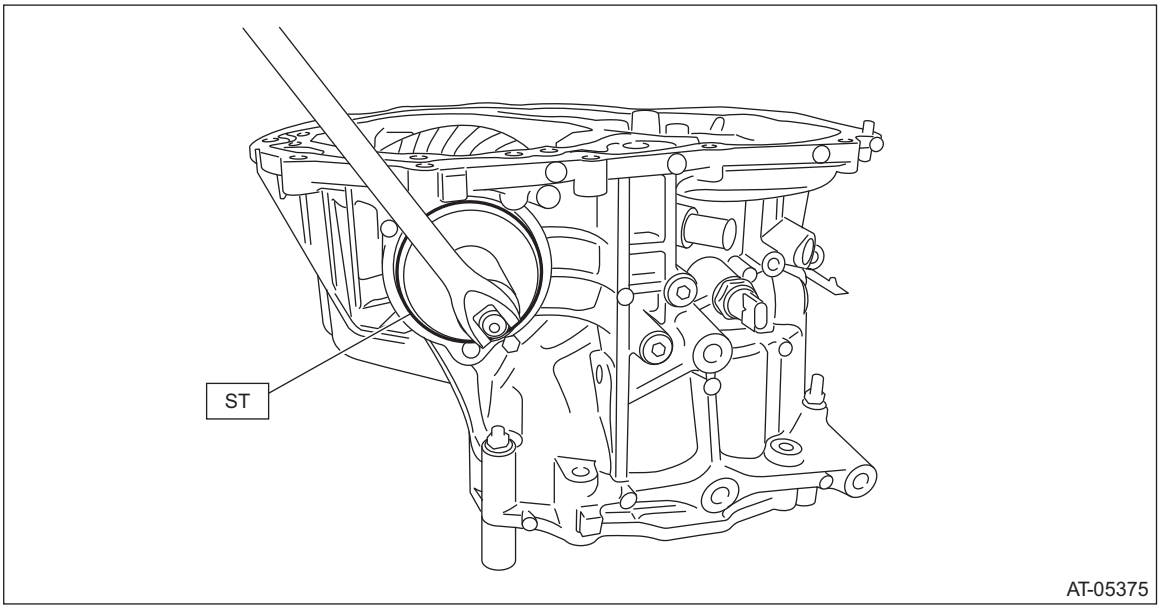


17) Remove the front differential assembly while being careful not to damage the attachment part of the retainer.
18) Remove the oil seals and O-rings from both differential side retainers. <Ref. to CVT(TR690)-273, SIDE RETAINER, DISASSEMBLY, Front Differential Assembly.>

B: INSTALLATION

1) Install the front differential assembly to the converter case.

NOTE:
Be careful not to damage the inside of the case (especially the mating surface of the differential side retainers).
2) Temporarily install the differential side retainers using ST.
ST 18658AA021 WRENCH COMPL RETAINER



3) Adjust the backlash of the front differential. <Ref. to CVT(TR690)-282, ADJUSTMENT, Front Differential Assembly.>
4) Inspect and adjust the tooth contact. <Ref. to CVT(TR690)-260, ADJUSTMENT, Drive Pinion Shaft Assembly.>

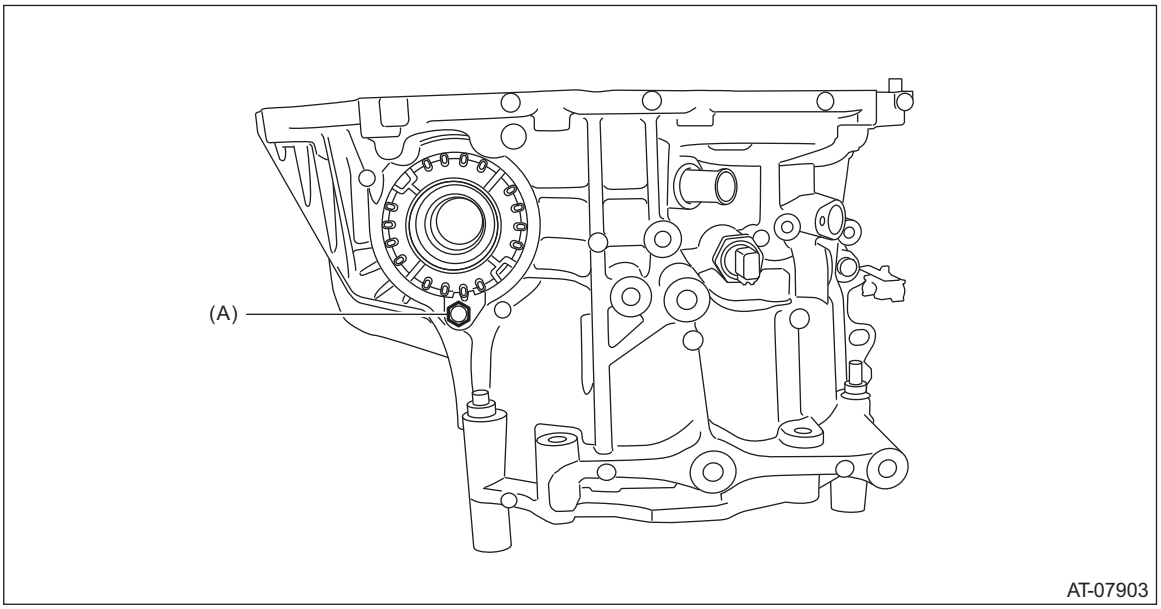
5) Remove the differential side retainers and install the O-rings and oil seals. <Ref. to CVT(TR690)-280, SIDE RETAINER, ASSEMBLY, Front Differential Assembly.>

NOTE:
- Record how many turns were needed to remove.
- Use new O-rings and oil seals.

6) Install the differential side retainers using ST.

NOTE:
When attaching, turn the differential side retainer by the same number of turns it took to remove, and align the marks.
ST 18658AA021 WRENCH COMPL RETAINER
7) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Lock plate

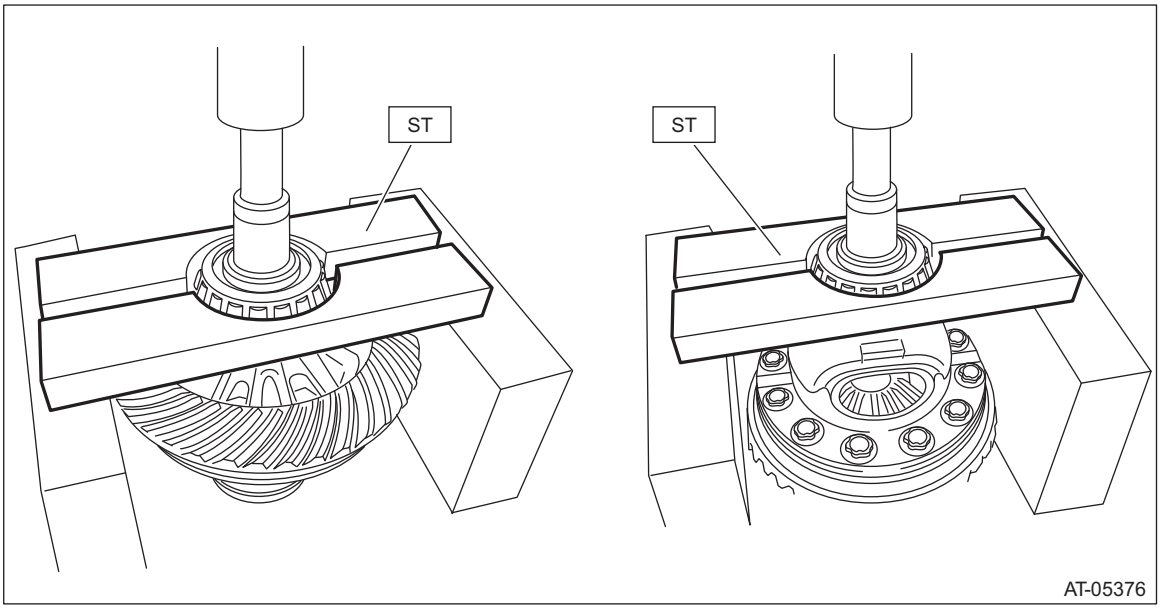
8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-249, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-215, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
15) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
16) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
17) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
18) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>
19) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
20) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>

21) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

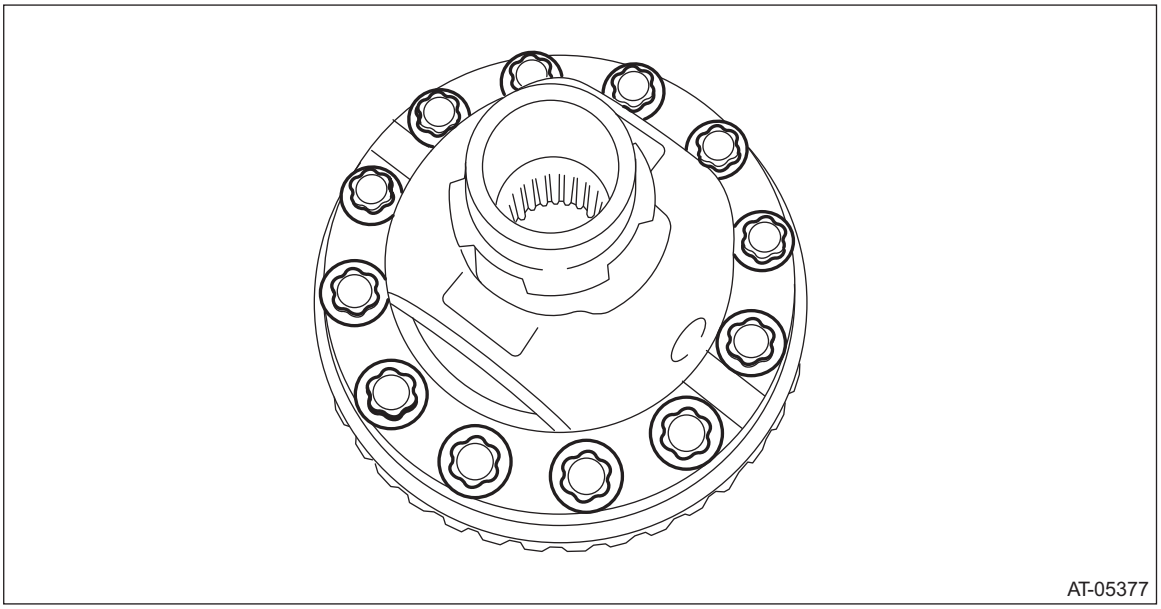
C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

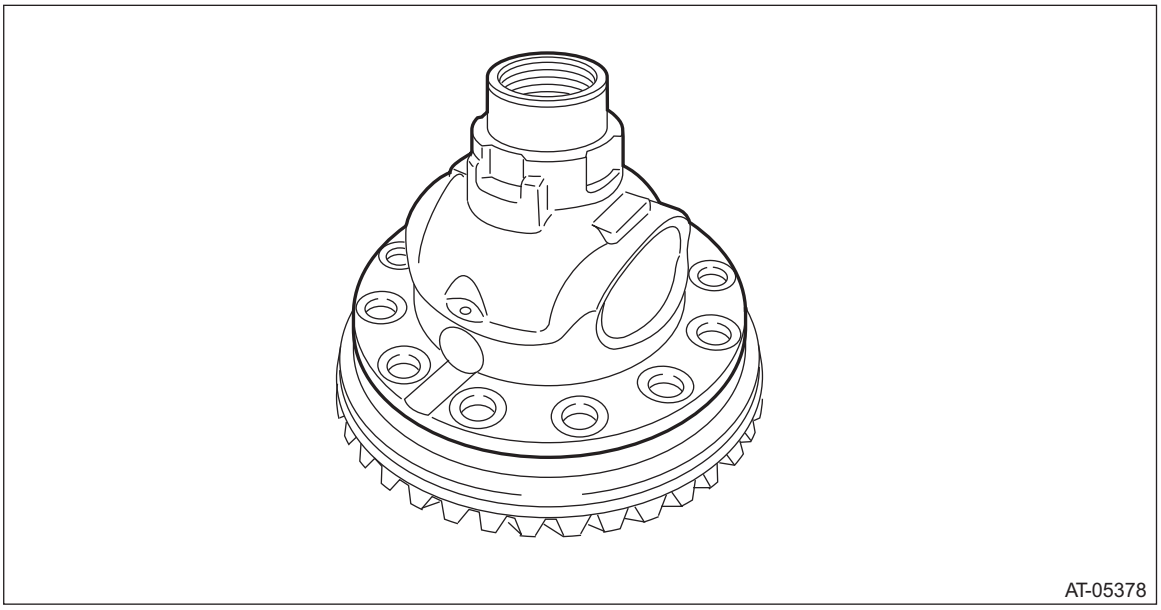
1) Remove the taper roller bearing using the ST.
ST 498077000 REMOVER



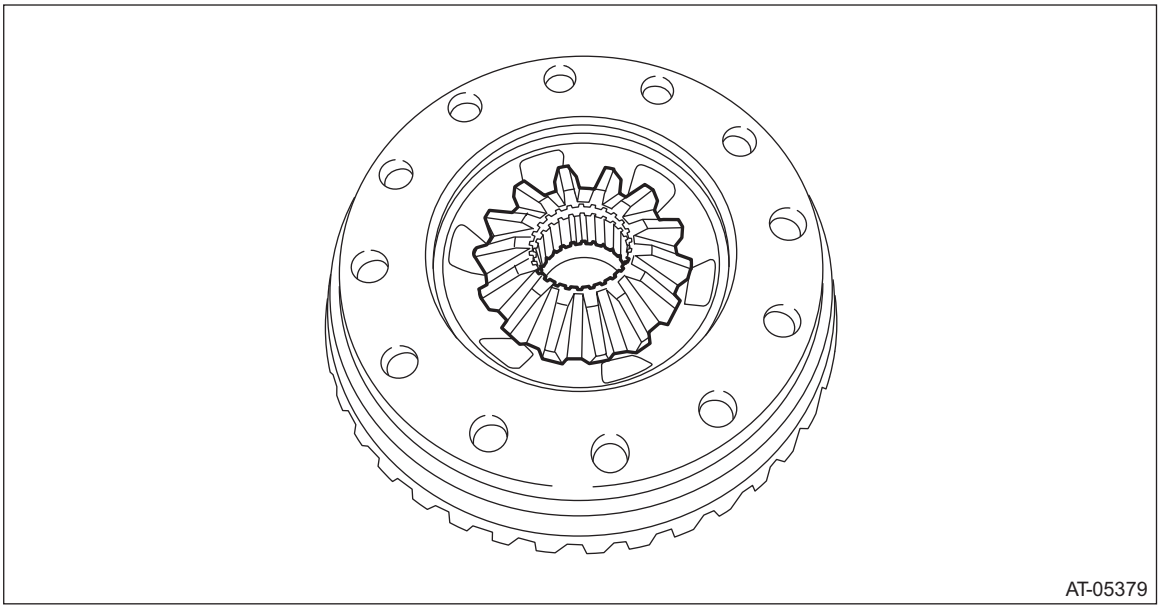
2) Remove the hypoid driven gear mounting bolt using the ST.
ST 18270KA020 SOCKET (E20)



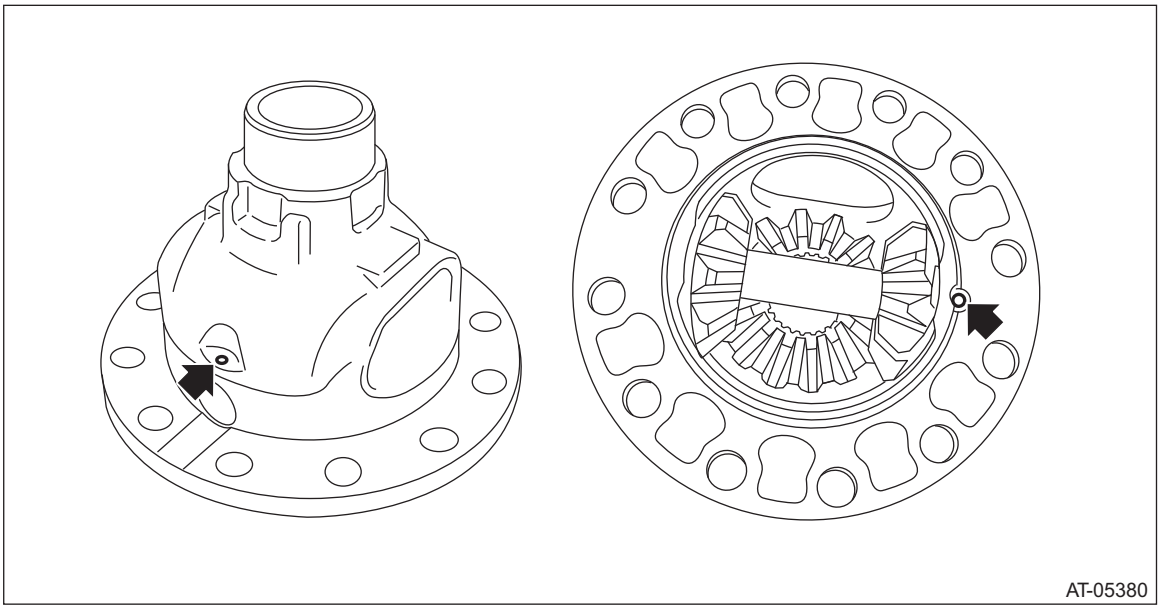
3) Remove the differential case (LH).



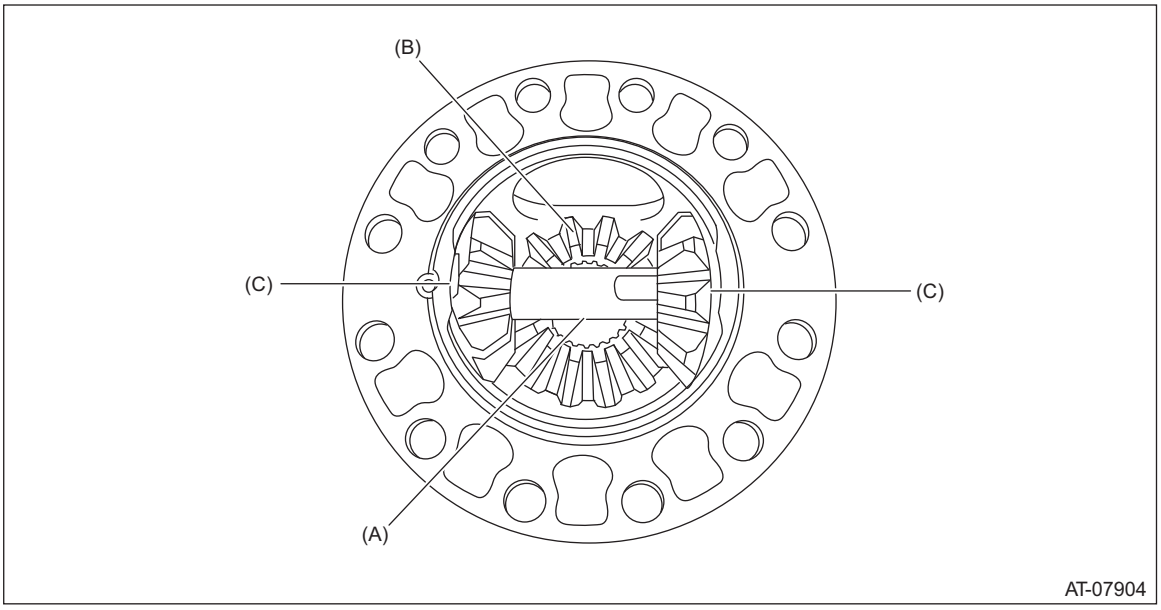
4) Remove the differential bevel gear and washer from differential case.



5) Remove the straight pin.



6) Remove the pinion shaft, then remove the differential bevel gear, washer and differential bevel pinion.

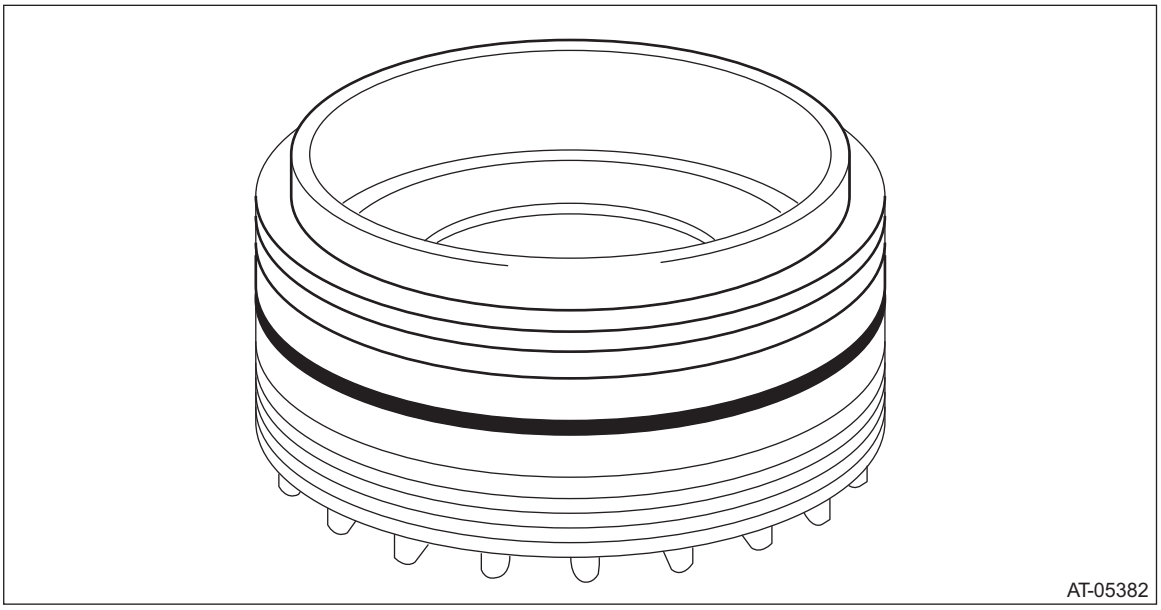


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

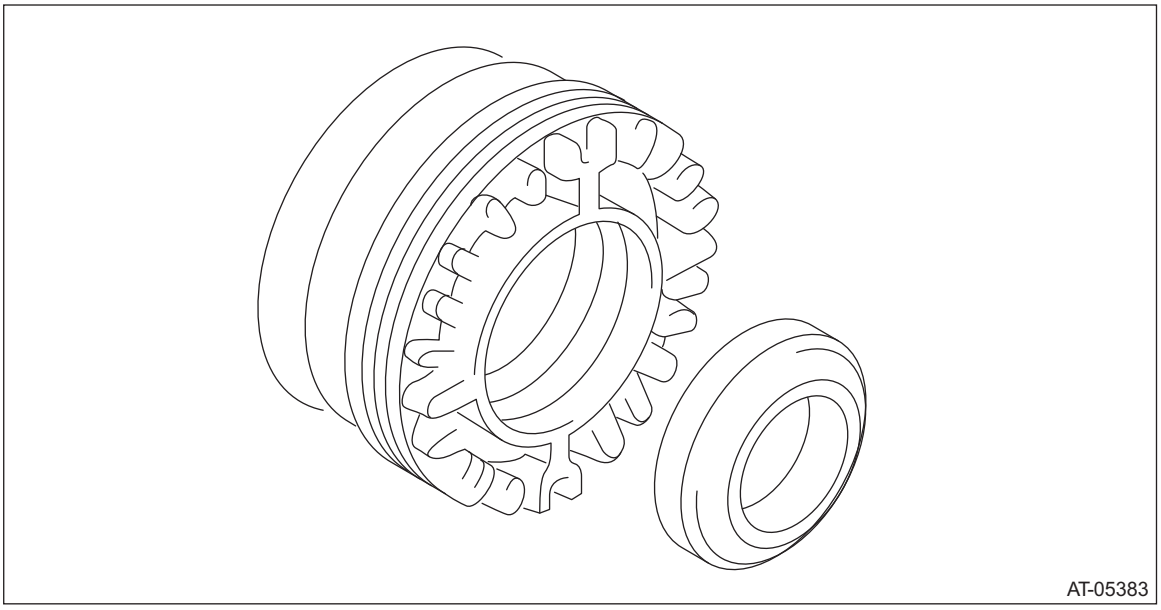
2. SIDE RETAINER

NOTE:
After adjusting the drive pinion backlash and tooth contact, replace the oil seal and O-ring with new parts.

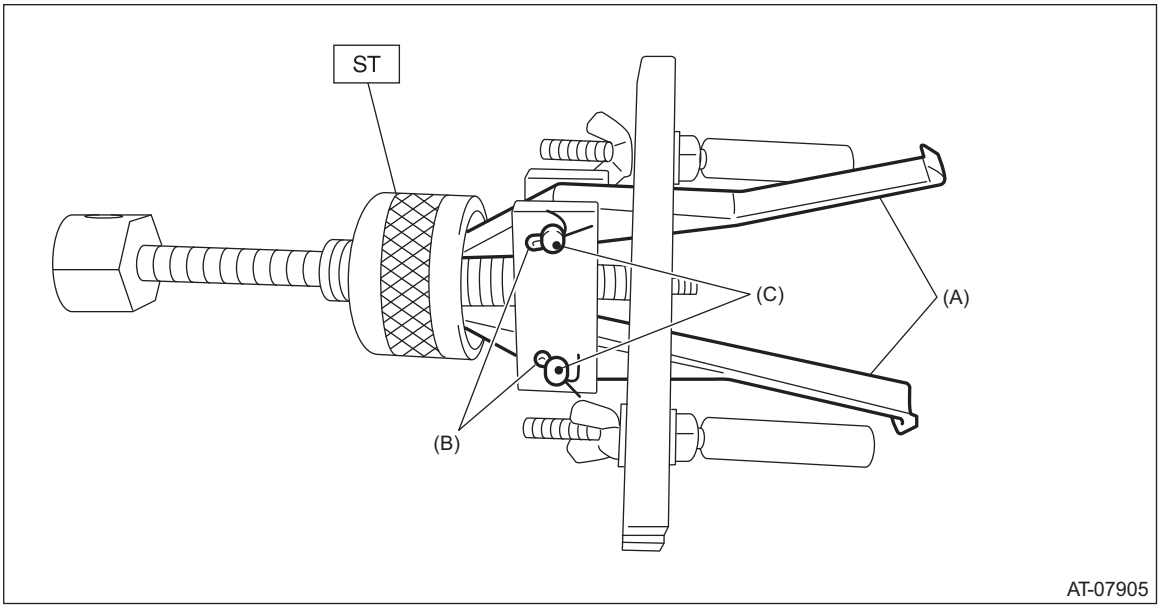
1) Remove the O-rings.



2) Remove the oil seal.

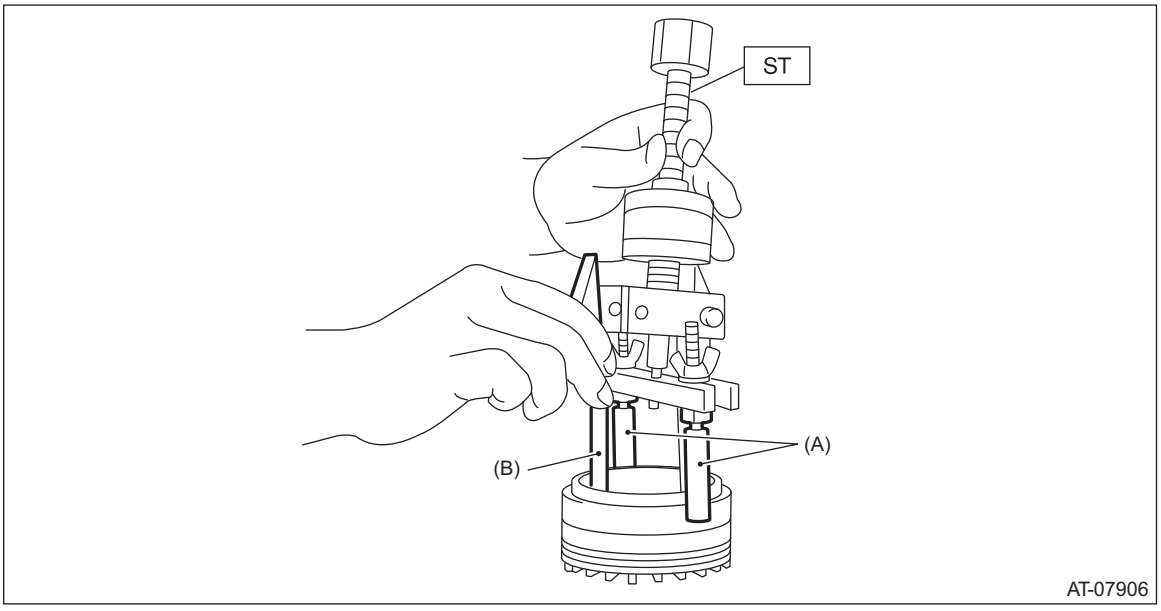


3) Remove the SPLIT PIN (ST), and then remove the claw.
ST 398527700 PULLER ASSY



(A) Claw
(B) Split pin
(C) Pin

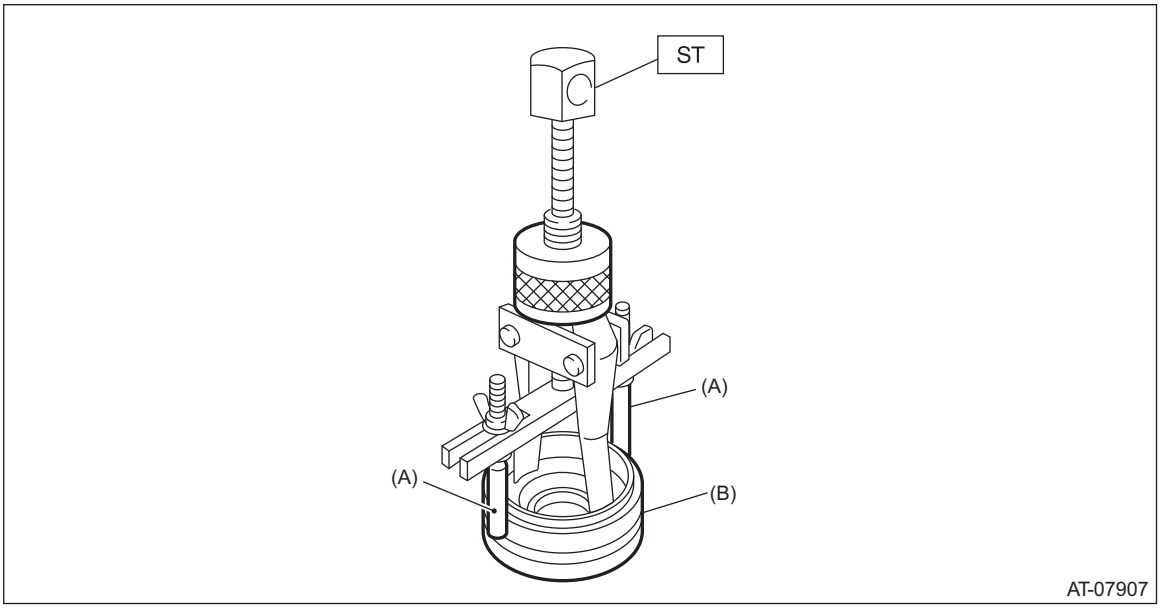
4) Attach two claws to the outer race, and set the ST to side retainer.
ST 398527700 PULLER ASSY



(A) Shaft
(B) Claw

5) Restore the removed claws to original position, and install the pin and split pin.
6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.
ST 398527700 PULLER ASSY

NOTE:
Replace the bearing inner and outer races as a single unit.

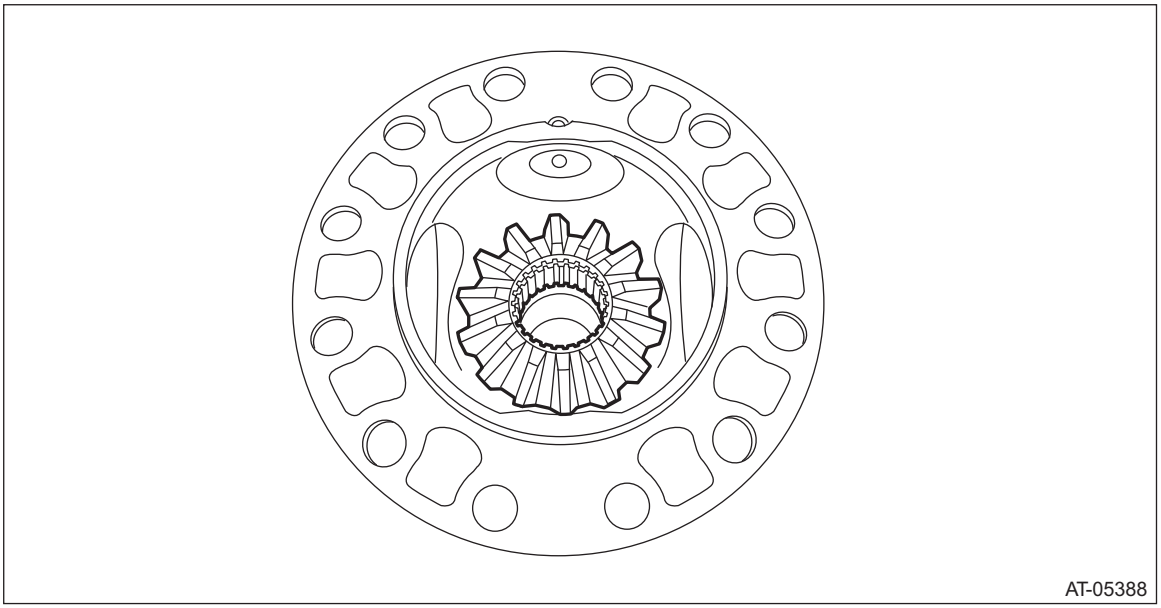


(A) Shaft
(B) Side retainer

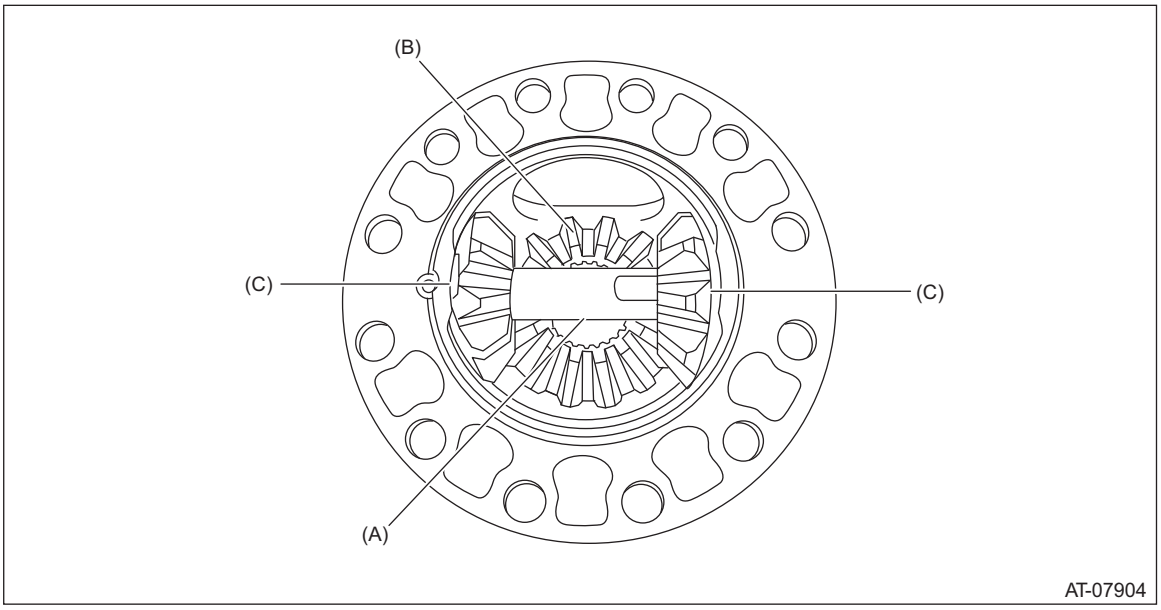
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer and differential bevel gear into differential case (LH).

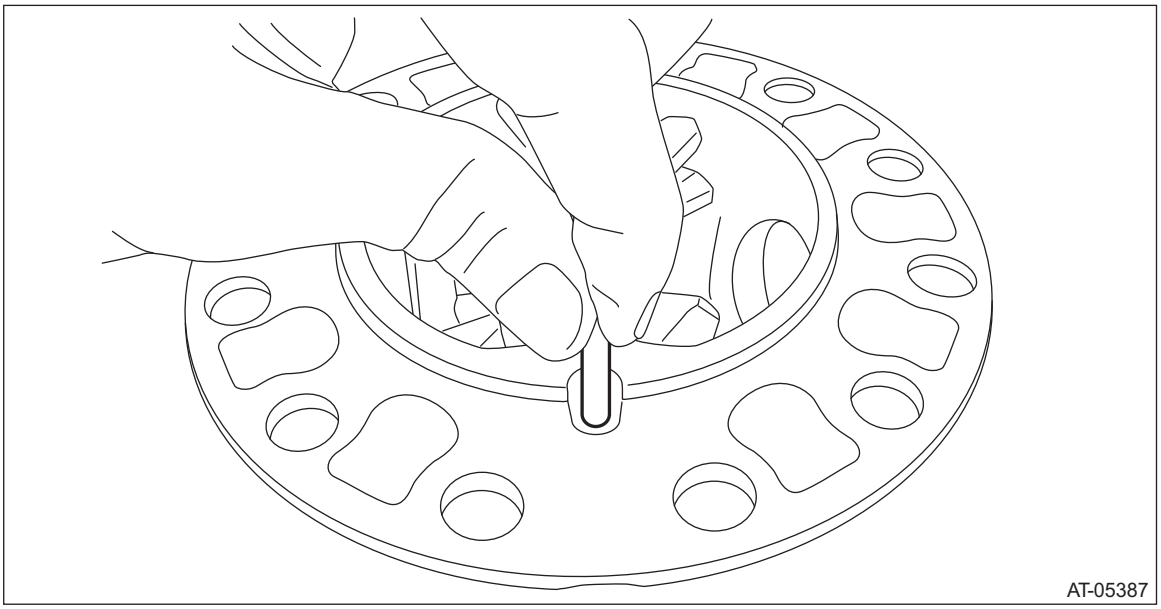


2) Install the differential bevel gear pinions into differential case (LH) and install the pinion shaft.

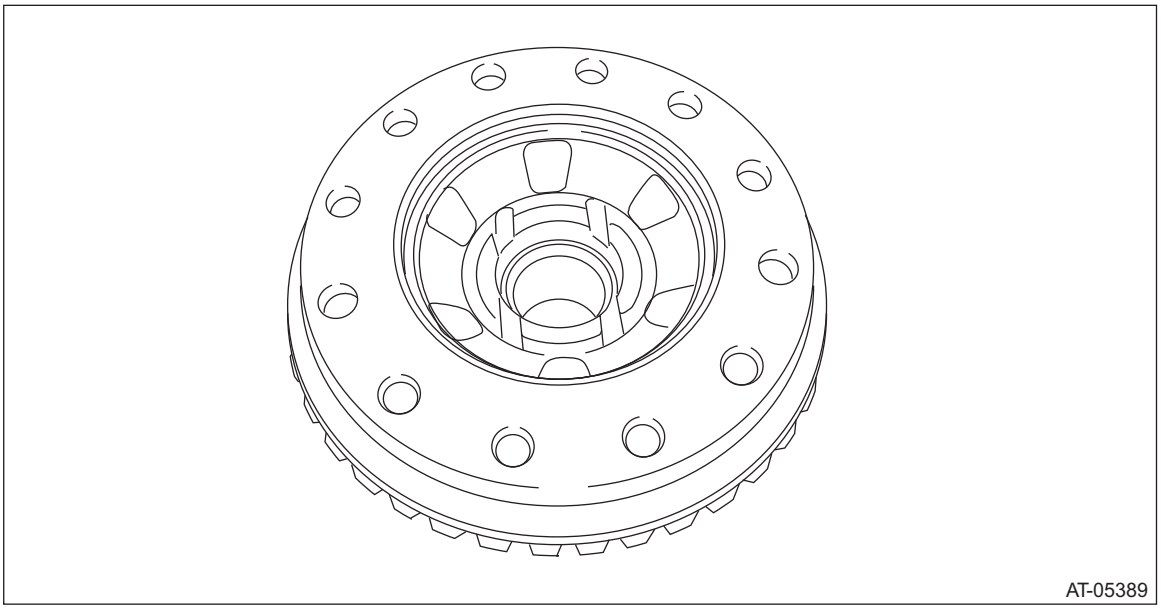


(A) Pinion shaft
(B) Differential bevel gear
(C) Differential bevel pinion

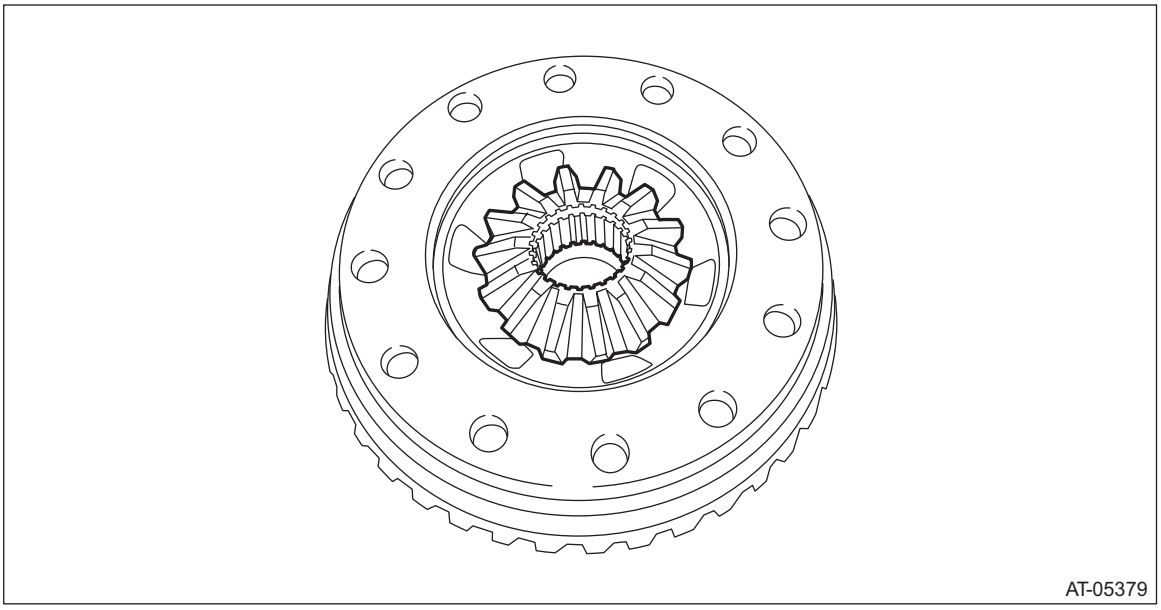
3) Install the straight pin.



4) Install the differential case (RH) to hypoid driven gear and secure with vise.

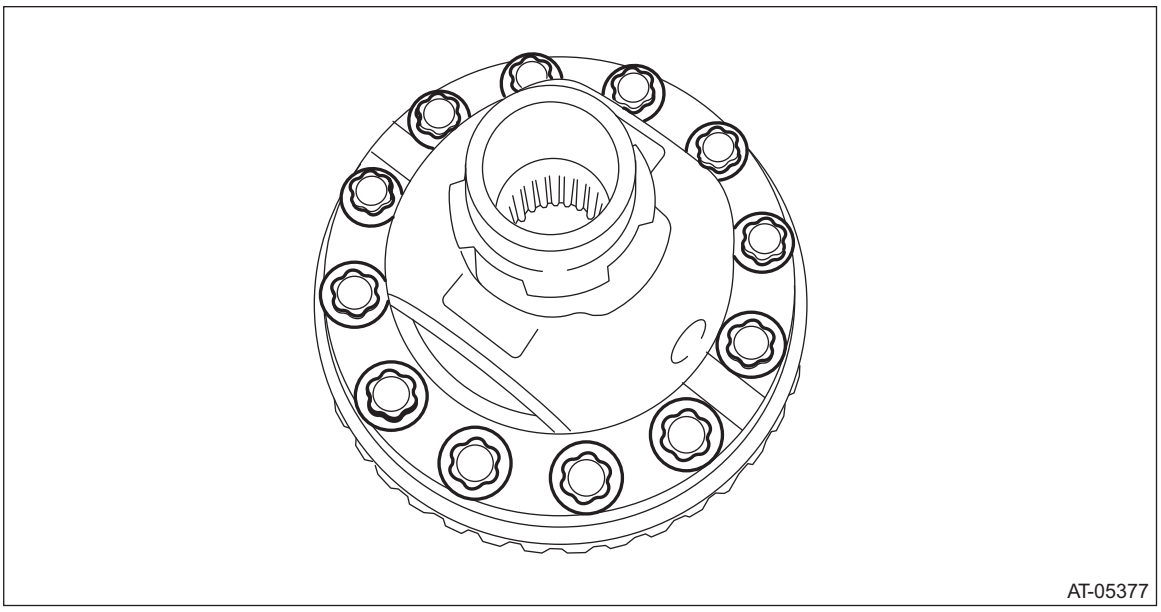


5) Install the washer and differential bevel gear to the differential case (RH).



6) Using the ST, install the hypoid driven gear by tightening the installation bolt.
ST 18270KA020 SOCKET (E20)

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



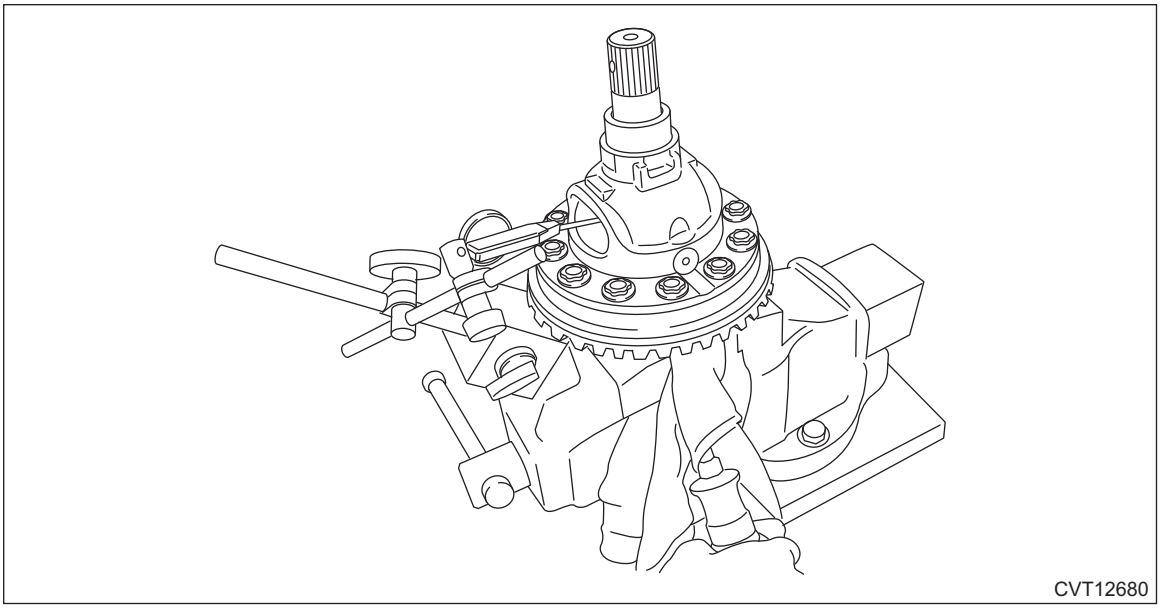
7) While checking the tightening angle with the angle gauge, further tighten the hypoid driven gear mounting bolts.

Tightening angle:
45°±2°

8) Measurement of backlash (selection of washer)
(1) Install the SUBARU genuine axle shaft to differential case.
Part No. 38415AA070 Axle shaft
(2) Measure the gear backlash using dial gauge and magnet stand, and insert the dial gauge through the window of differential case.

NOTE:
• Measure the backlash by applying a differential bevel pinion tooth between two differential bevel gear teeth.
• When measuring, fix the differential bevel pinion in place with a screwdriver covered with cloth, or a similar tool.

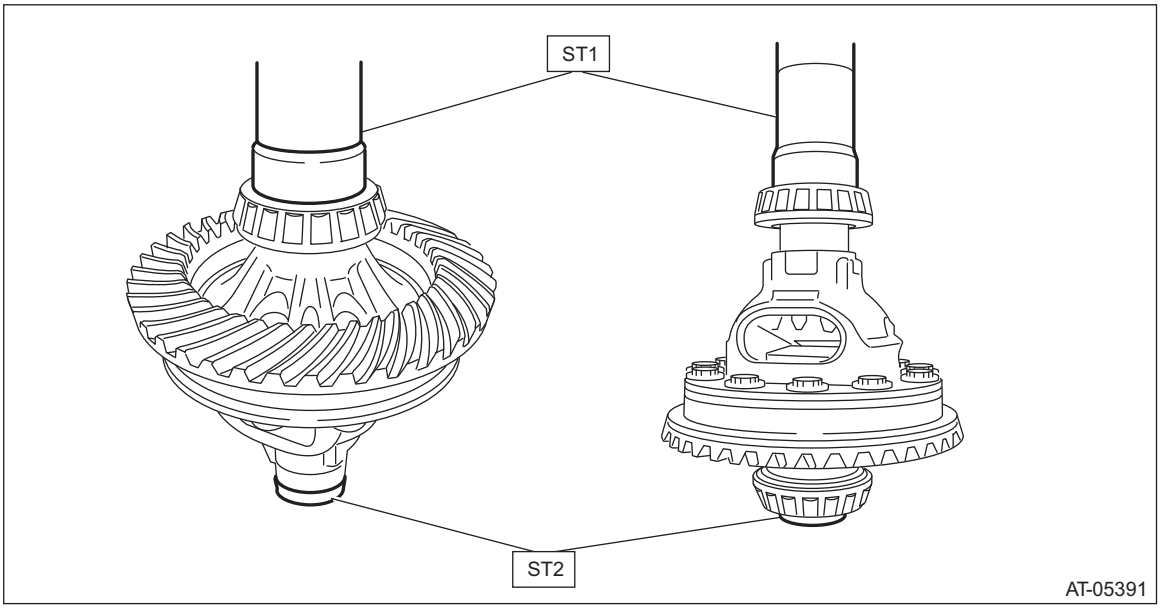
Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



(3) If the backlash is not within specification, select a washer from the table below and replace.

Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

9) Using the ST, install the left and right taper roller bearings.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT

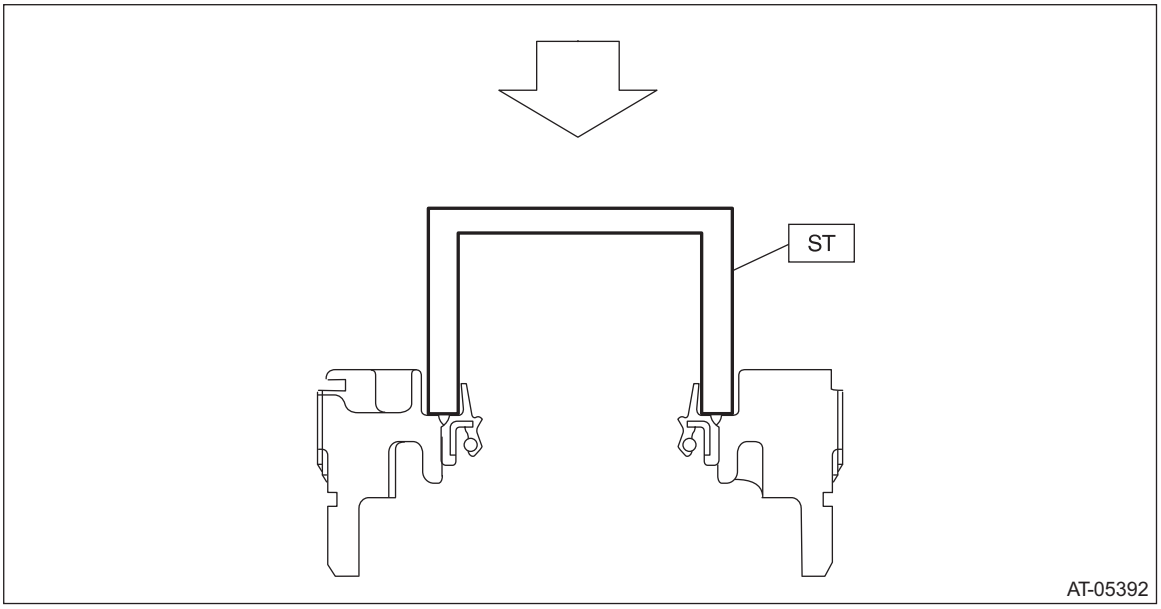


2. SIDE RETAINER

NOTE:
After adjusting the backlash and tooth contact, replace the oil seal and O-ring of side retainer with new parts.
1) Press-fit the bearing outer race to side retainer.
2) Using the ST, install the oil seal.

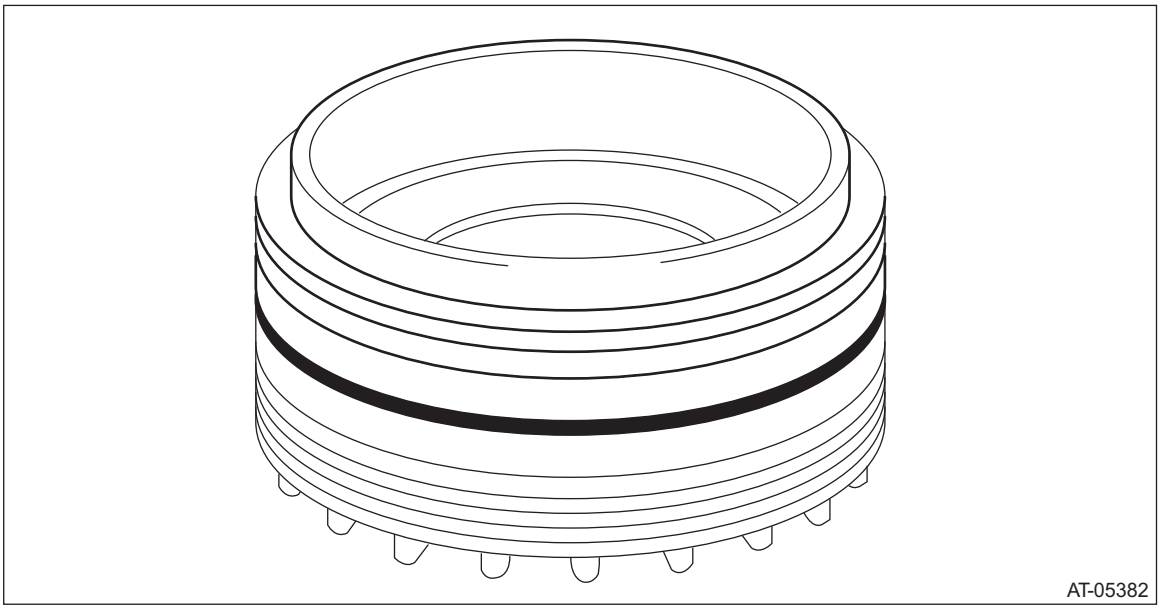
NOTE:
- Use a new oil seal.
- Apply differential oil to the oil seal lip.
- Oil seal has an identification mark (R, L). When installing oil seals, do not confuse the left and right.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



3) Install the O-rings.

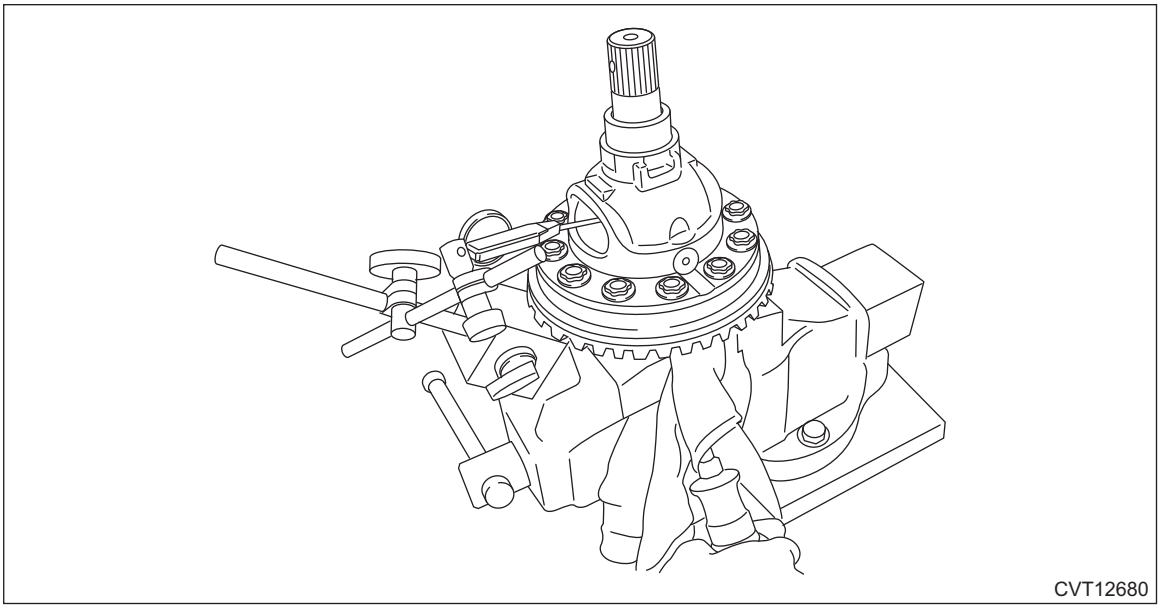
NOTE:
- Use new O-rings.
- Apply gear oil to O-ring.



E: INSPECTION

- Check each component for scratches, damage or other faults.
- Inspect the backlash of the pinion gear.

Specification:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



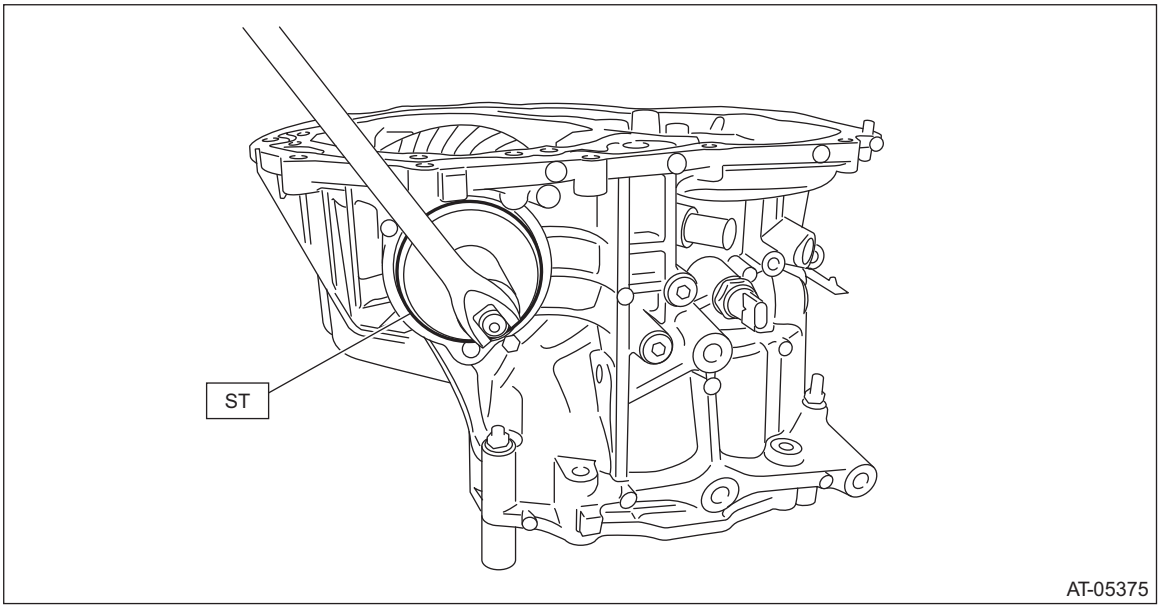
CVT12680

• Measure the hypoid gear backlash, and then adjust it to be within specification. <Ref. to CVT(TR690)-282, ADJUSTMENT, Front Differential Assembly.>

F: ADJUSTMENT

1) Using the ST, screw-in the retainer until resistance is felt.

NOTE:
RH side should be screwed-in more than LH side.
ST 18658AA021 WRENCH COMPL RETAINER

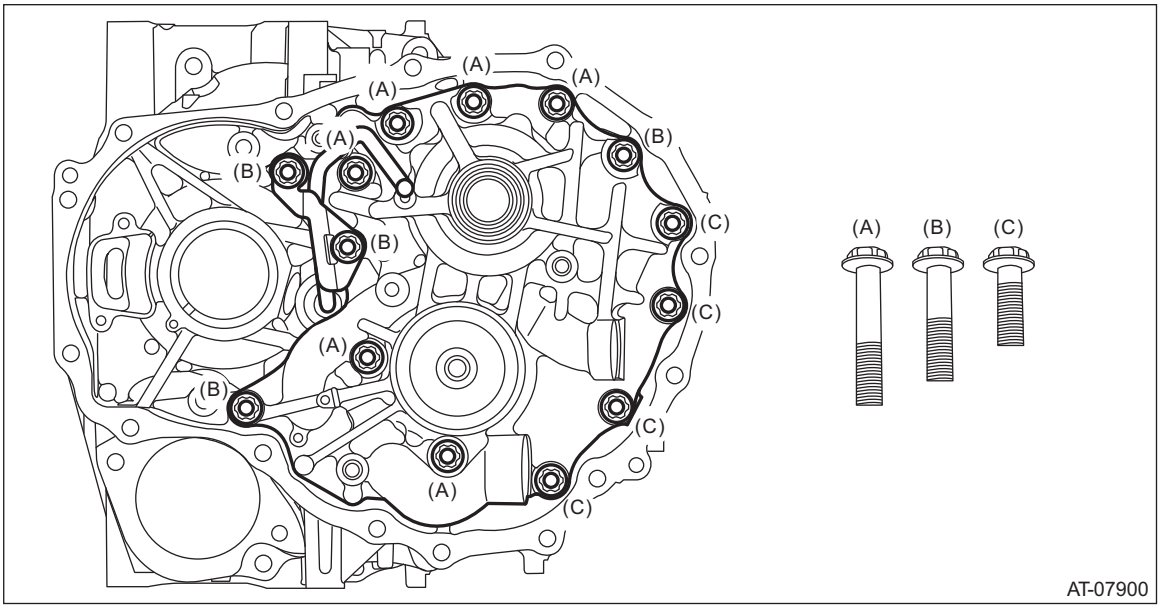


AT-05375

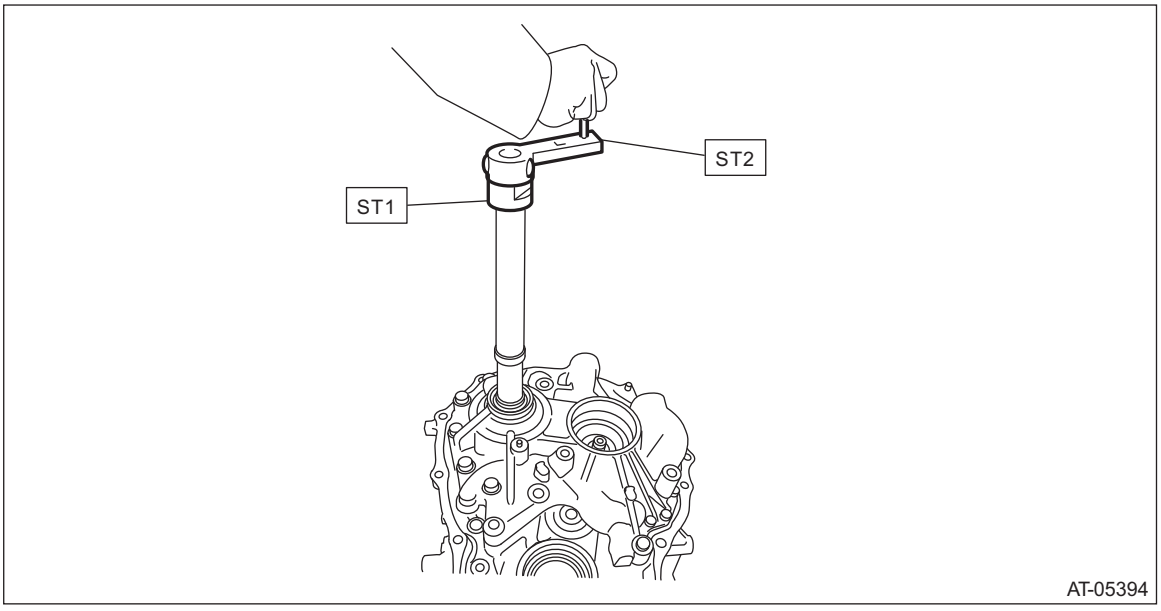
2) Remove the remaining liquid gasket from the mating surface completely.
3) Using the ST, install the drive pinion assembly to converter case.
ST 18270KA020 SOCKET (E20)

NOTE:
Do not confuse the three different-length bolts when installing.

Tightening torque:
43 N·m (4.4 kgf-m, 31.7 ft-lb)

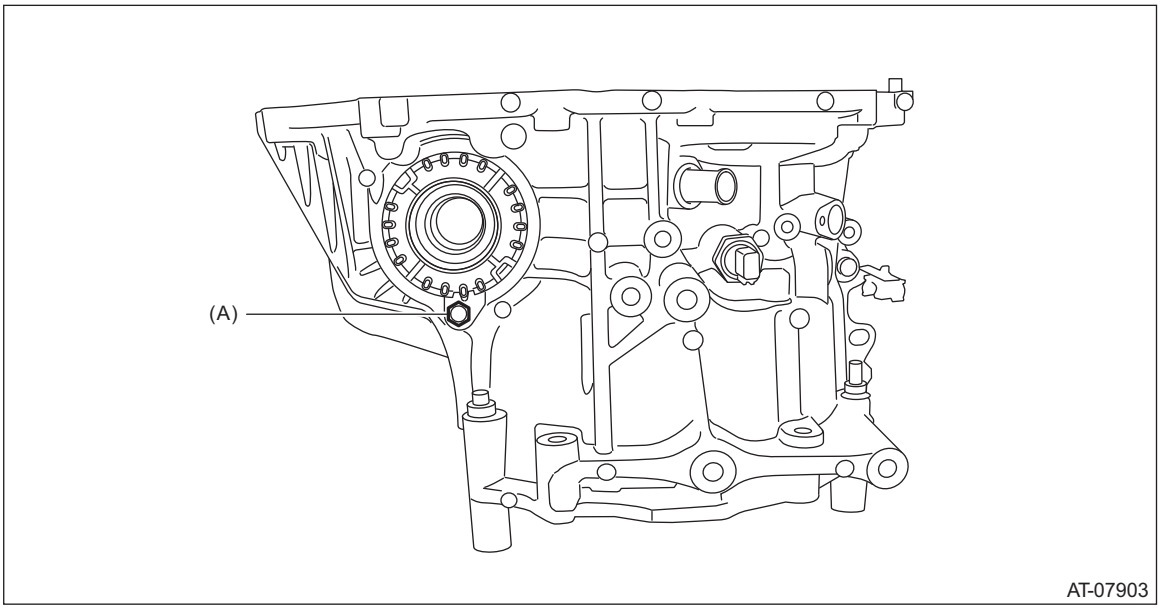


4) Rotate the drive pinion shaft ten times or more using ST1 and ST2.
ST1 18667AA010 HOLDER
ST2 499787700 WRENCH



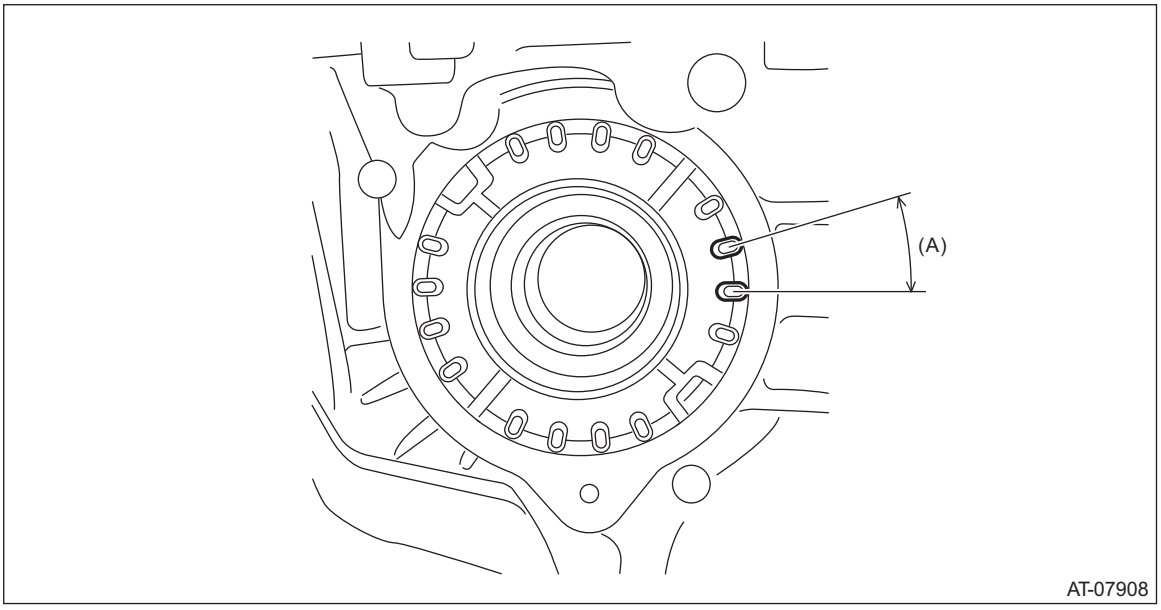
5) While rotating the pinion shaft, tighten the retainer LH and loosen the retainer RH until the shaft can't be turned anymore. The backlash is “zero” when the pinion shaft comes to the point where it doesn't rotate.

6) After the “zero” state is established, loosen the retainer LH by 3 notches and secure it with the lock plate. Loosen the retainer RH and retighten until it stops. Rotate the drive pinion 2 or 3 times. Tighten the retainer RH further 1-3/4 notches. This sets the preload. Finally, secure the retainer with its lock plate.



(A) Lock plate

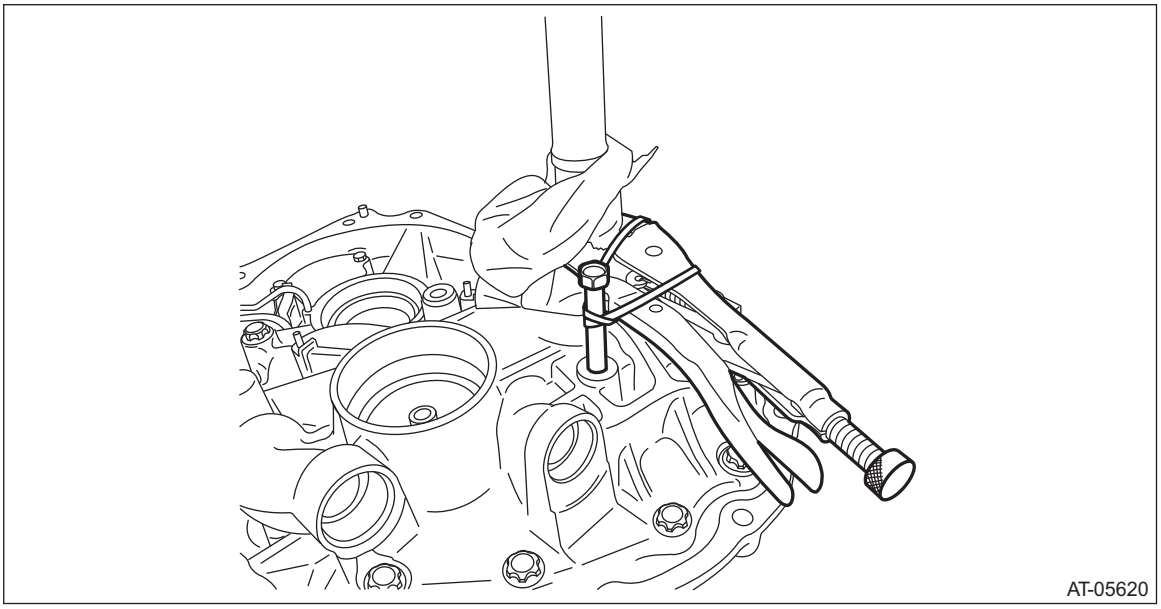
NOTE:
Turning the retainer by every one tooth changes the backlash approx. 0.05 mm (0.0020 in).



(A) 1 tooth

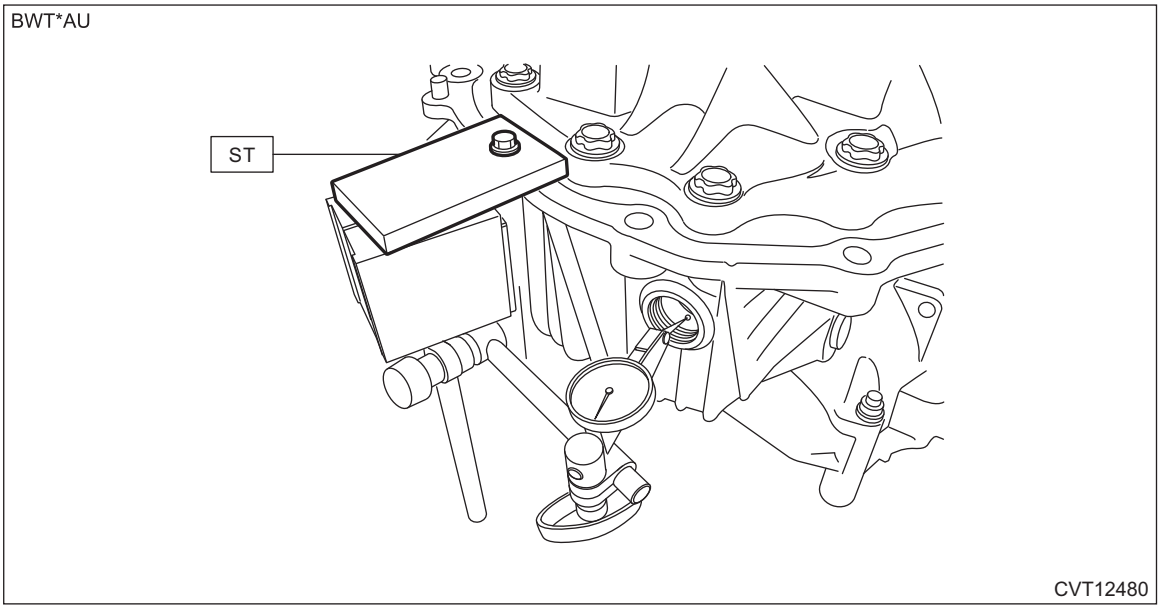
7) Insert the two SUBARU genuine axle shafts into differential case.
Part No. 38415AA070 Axle shaft

8) Wrap the drive shaft pinion shaft with cloth and pinch with vise pliers. Install the installation bolt into the bolt hole of secondary pulley and secure the bolt and vise pliers using a band or wire.
Make sure the drive pinion shaft does not move.



9) Check if the backlash is within specification, by using ST, dial gauge and magnet stand.
ST 498255400 PLATE

Backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)



10) Adjust the teeth contact of the front differential and drive shaft. <Ref. to CVT(TR690)-260, ADJUSTMENT, Drive Pinion Shaft Assembly.>

45.Oil Pump

A: REMOVAL

NOTE:
Refer to “Drive Pinion Shaft” for removal procedures. <Ref. to CVT(TR690)-247, REMOVAL, Drive Pinion Shaft Assembly.>

B: INSTALLATION

NOTE:
Refer to “Drive Pinion Shaft” for installation procedures. <Ref. to CVT(TR690)-249, INSTALLATION, Drive Pinion Shaft Assembly.>

C: INSPECTION

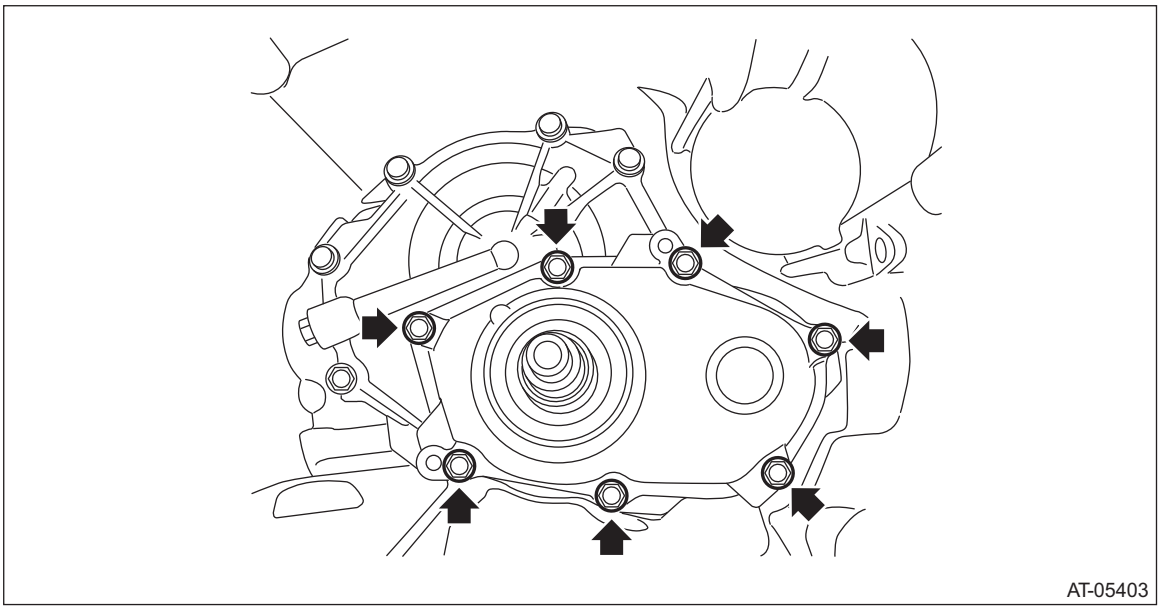
Check the following items.
- Check the oil pump for damage and wear.
- Rotate the oil pump by hand, and check that it rotates smoothly.

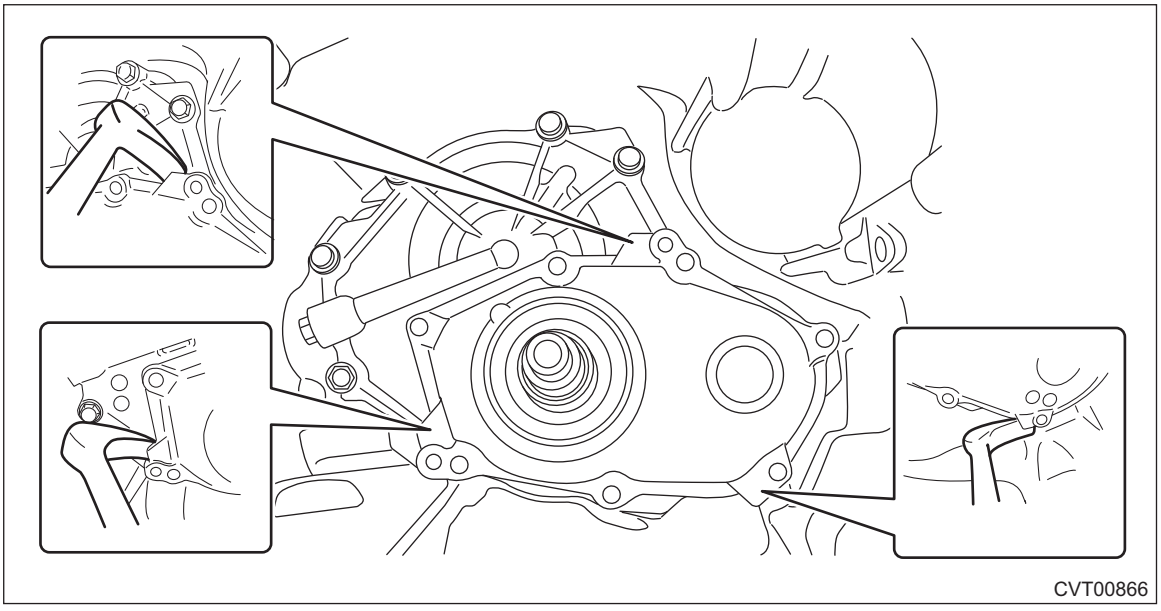
1) Measure the secondary pressure. <Ref. to CVT(TR690)-49, INSPECTION, Secondary Pressure (Line Pressure) Test.>
2) Remove the oil pan and oil strainer. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
3) Check oil strainer for clogging.
When oil strainer has no clogging, replace the oil pump.

46.Oil Pump Chain

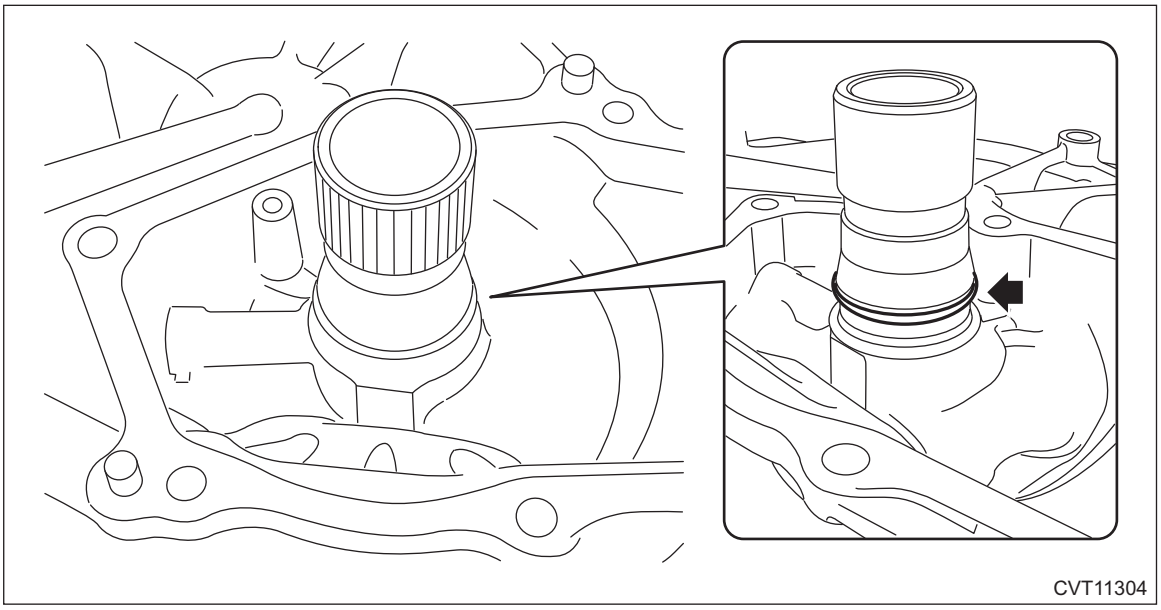
A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to CVT(TR690)-143, REMOVAL, Torque Converter Assembly.>
3) Remove the oil pump chain cover.



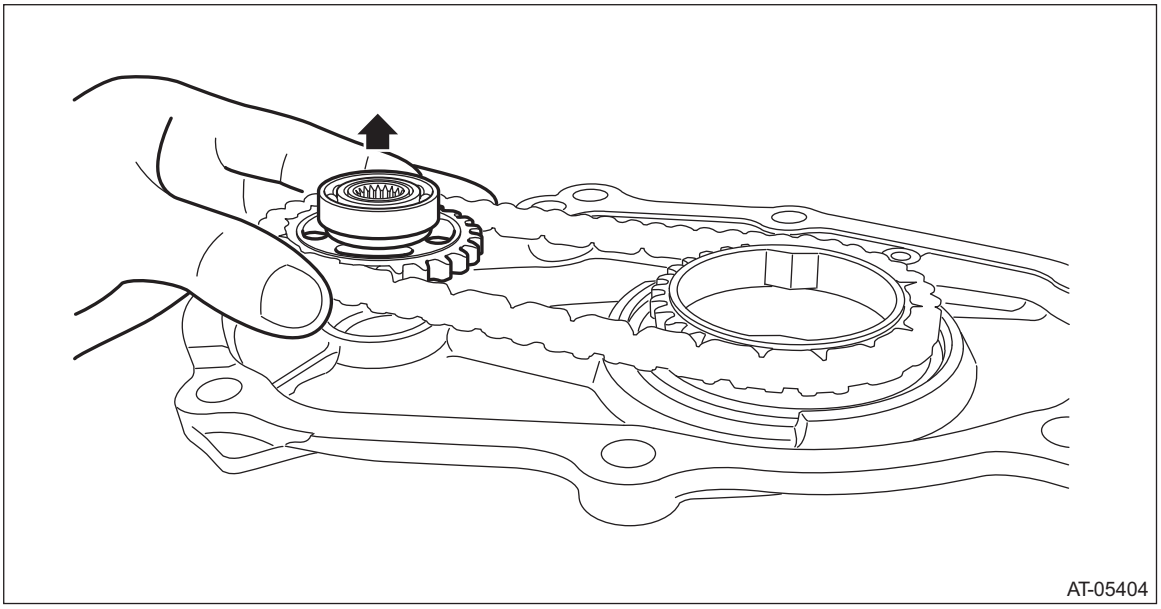


4) Remove the seal ring from center support COMPL.

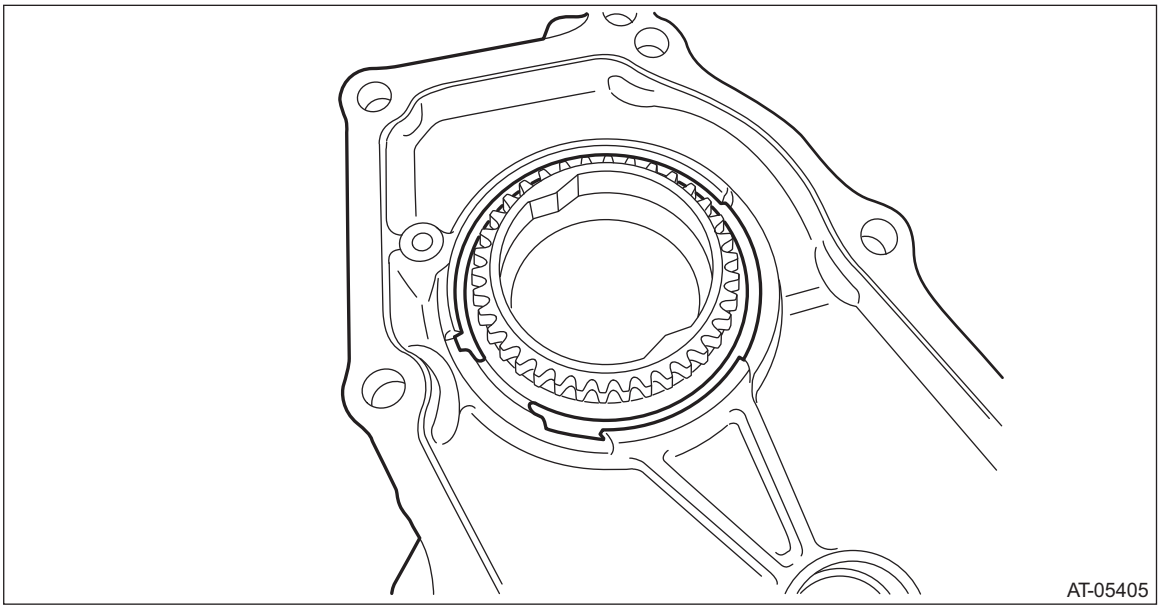


5) Remove the driven sprocket from oil pump chain cover to remove the oil pump chain.

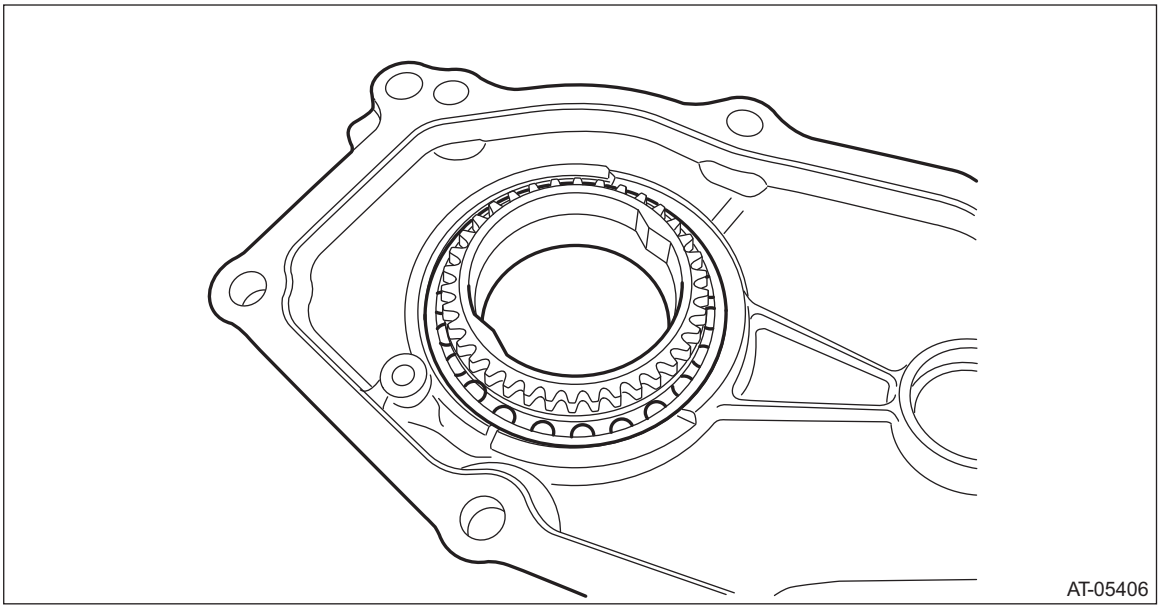
NOTE:
The driven sprocket is replaced as an assembly only, because it is a non-disassembly part.



6) Remove the snap ring.



7) Remove the drive sprocket.

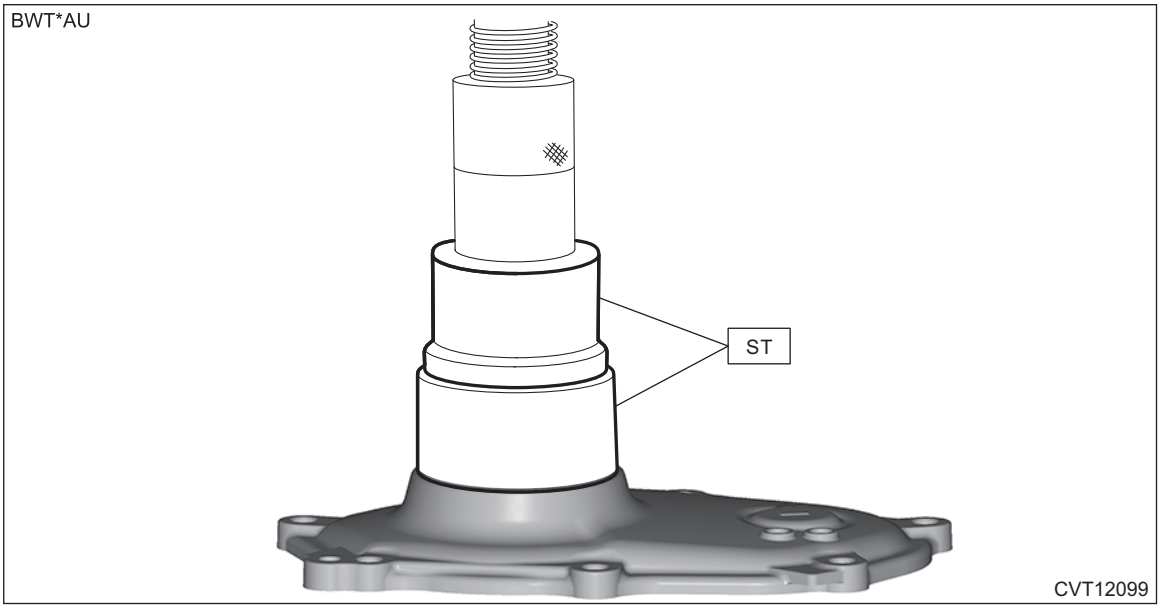


8) Remove the oil seal from the oil pump chain cover.

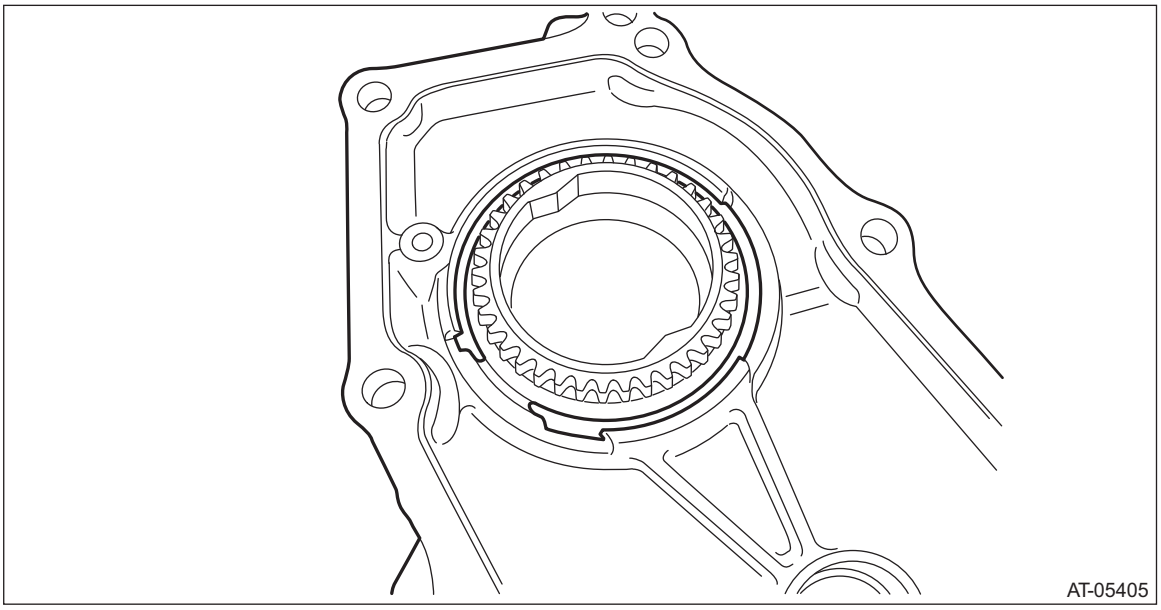
B: INSTALLATION

1) Clean the mating surface of oil pump chain cover and converter case cover.

2) Using the ST, install the oil seal.
ST 927720000 HOUSING BUSHING INSTALLER AND REMOVER

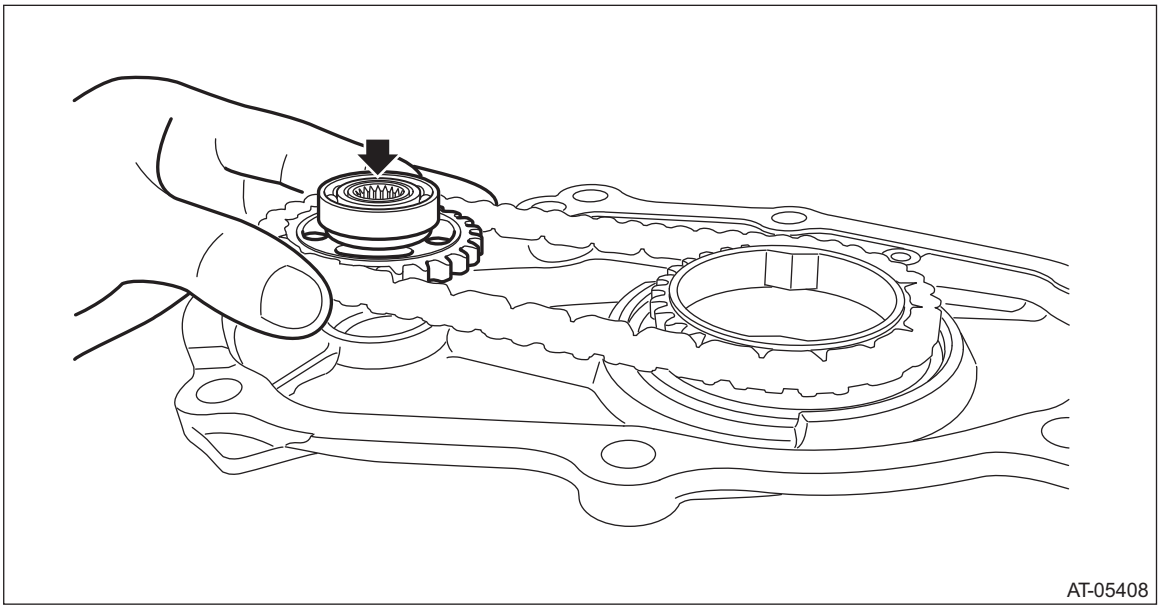


3) Install the drive sprocket and install the snap ring.



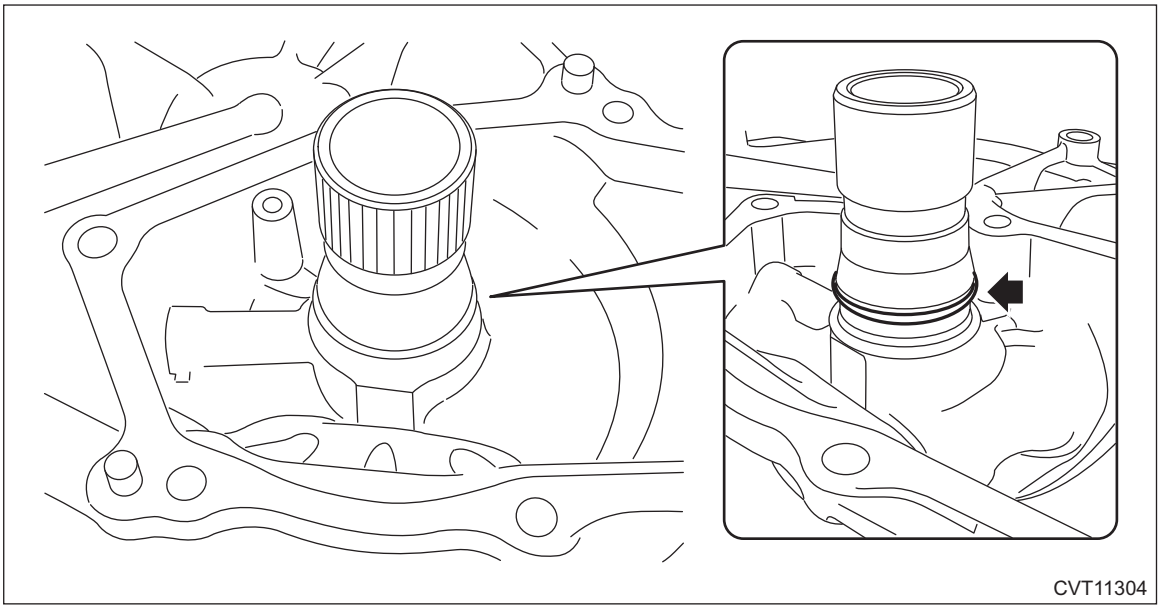
4) Place the oil pump chain on drive sprocket.

5) Place the oil pump chain on driven sprocket and install the driven sprocket to oil pump chain cover.



6) Install the seal ring to center support COMPL.

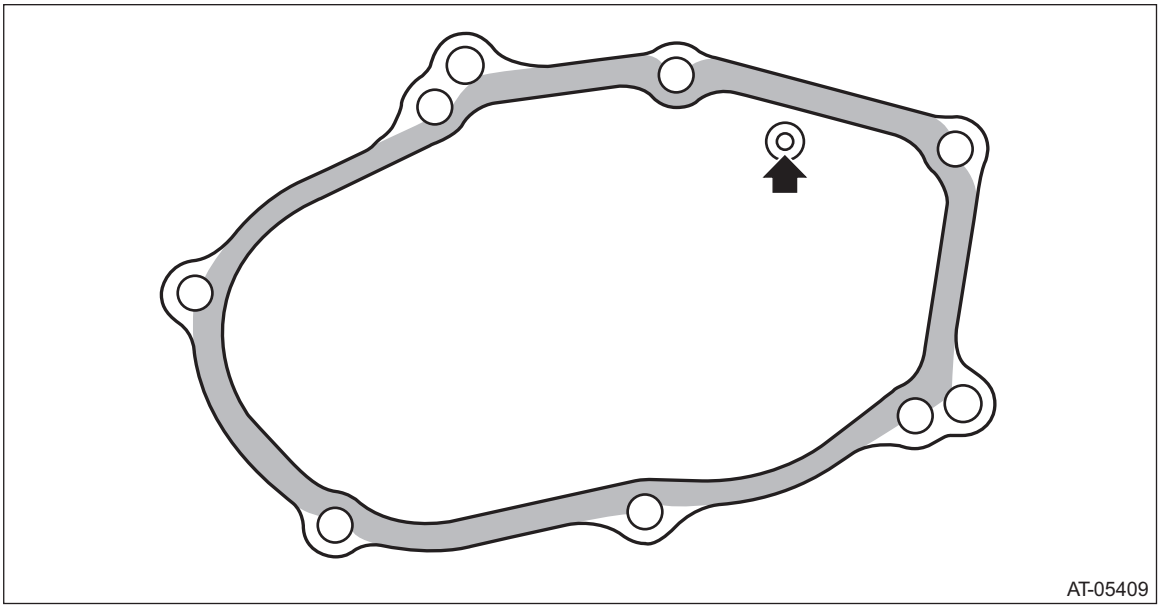
NOTE:
- Use new seal rings.
- Apply CVTF to the seal rings.



7) Apply liquid gasket seamlessly to the mating surface of oil pump chain cover.

CAUTION:
Do not apply liquid gasket at the arrowed hole.

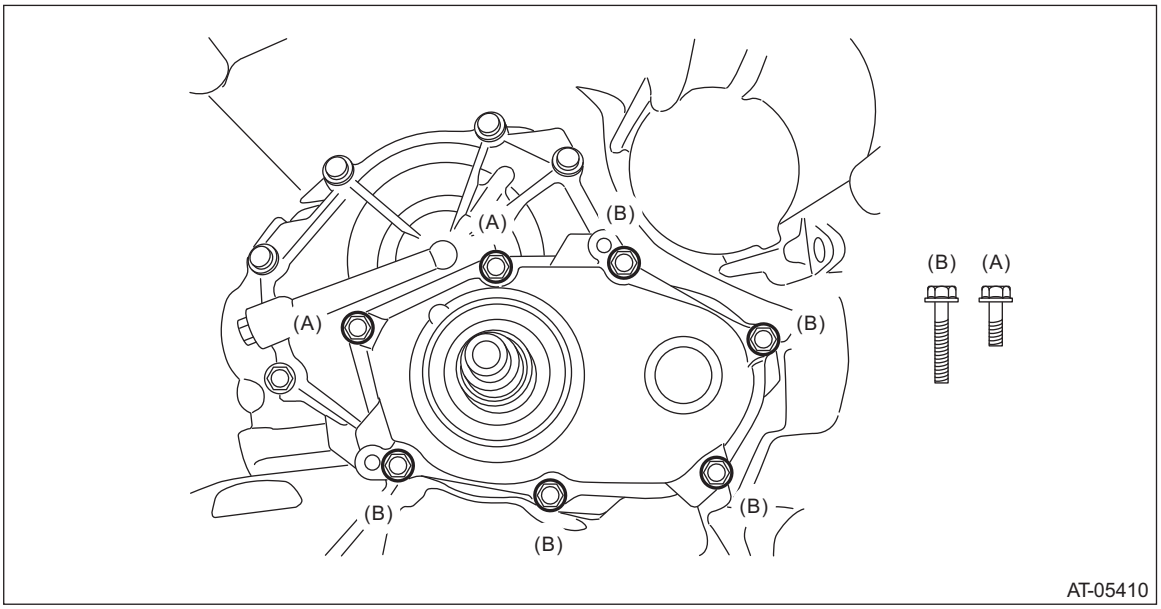
Liquid gasket:
THREE BOND 1215B or equivalent



8) Install the oil pump chain cover.

NOTE:
There are two types of bolt.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

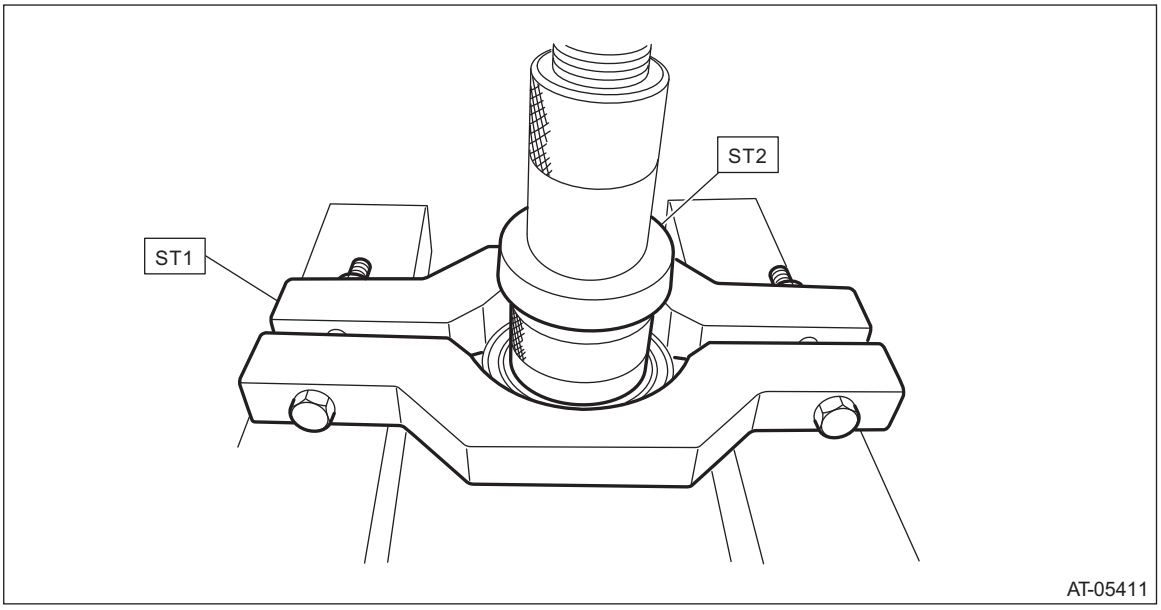


9) Install the torque converter assembly. <Ref. to CVT(TR690)-143, INSTALLATION, Torque Converter Assembly.>
10) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DRIVE SPROCKET

1) Remove the ball bearing using ST.
ST1 498077600 REMOVER
ST2 399513600 INSTALLER

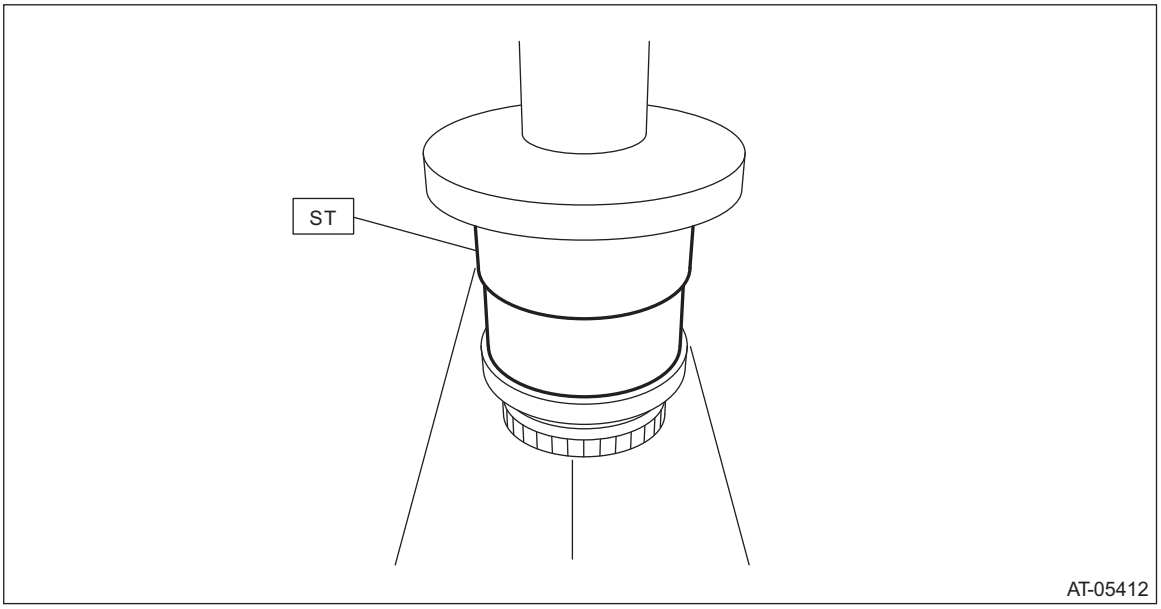


D: ASSEMBLY

1. DRIVE SPROCKET

1) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



E: INSPECTION

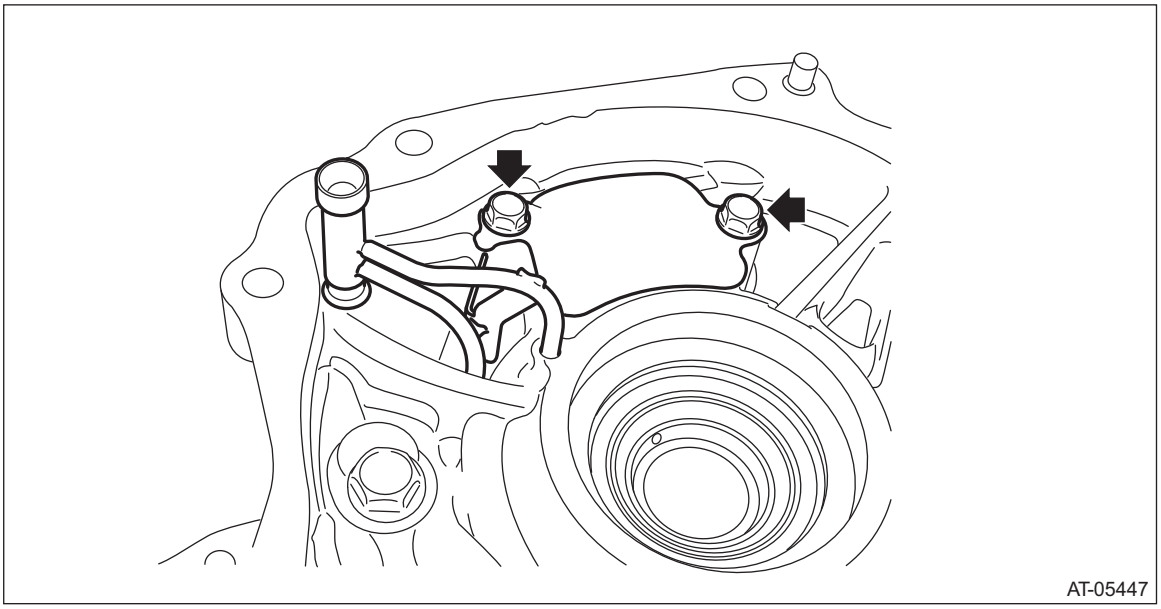
- Check the oil pump chain for damage.
- Replace if gear teeth are broken, damaged, sharpen or excessively worn.
- Check the bearing for seizure or wear.

- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.
- Check the oil pump chain cover for damage.
- Check for leakage of CVTF from the mating surface of oil pump chain cover.
- Check the oil seal for damage.

47.Converter Case Cover

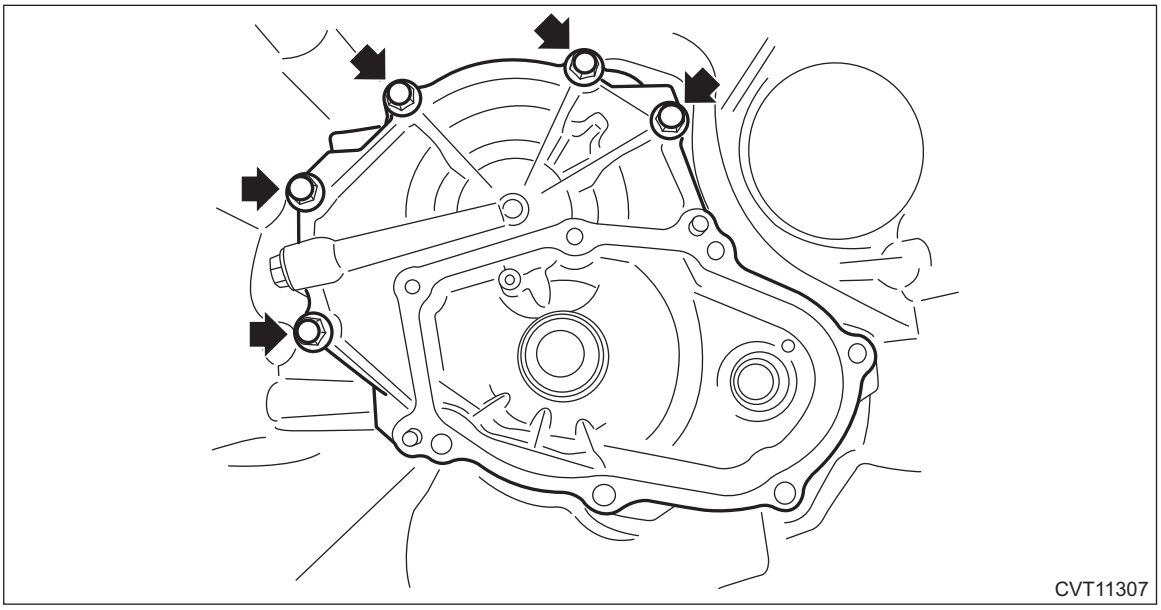
A: REMOVAL

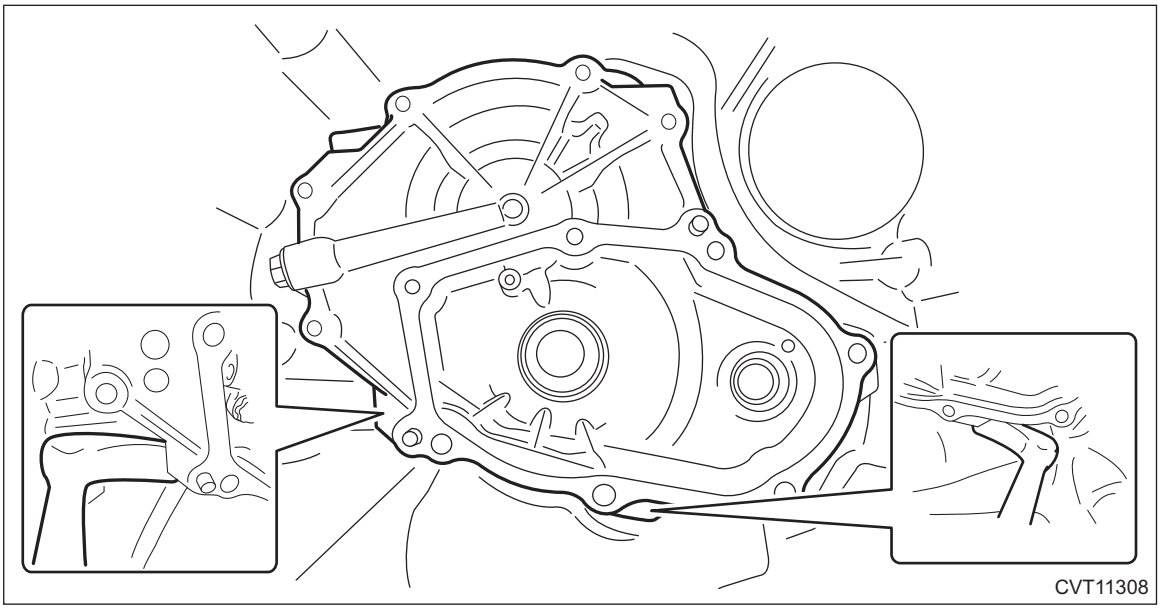
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
6) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
7) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
8) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
9) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
10) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
11) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
12) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
13) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
14) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-247, REMOVAL, Drive Pinion Shaft Assembly.>
15) Remove the oil stopper plate and lubrication pipe.



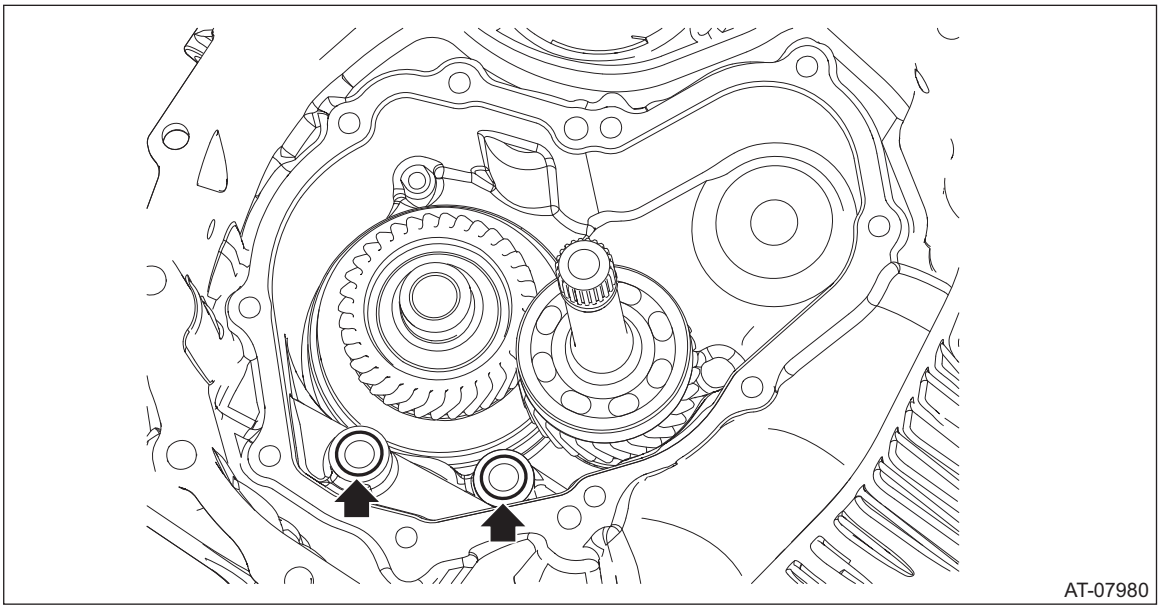
16) Flip over the converter case.
17) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-287, REMOVAL, Oil Pump Chain.>

18) Remove the converter case cover.

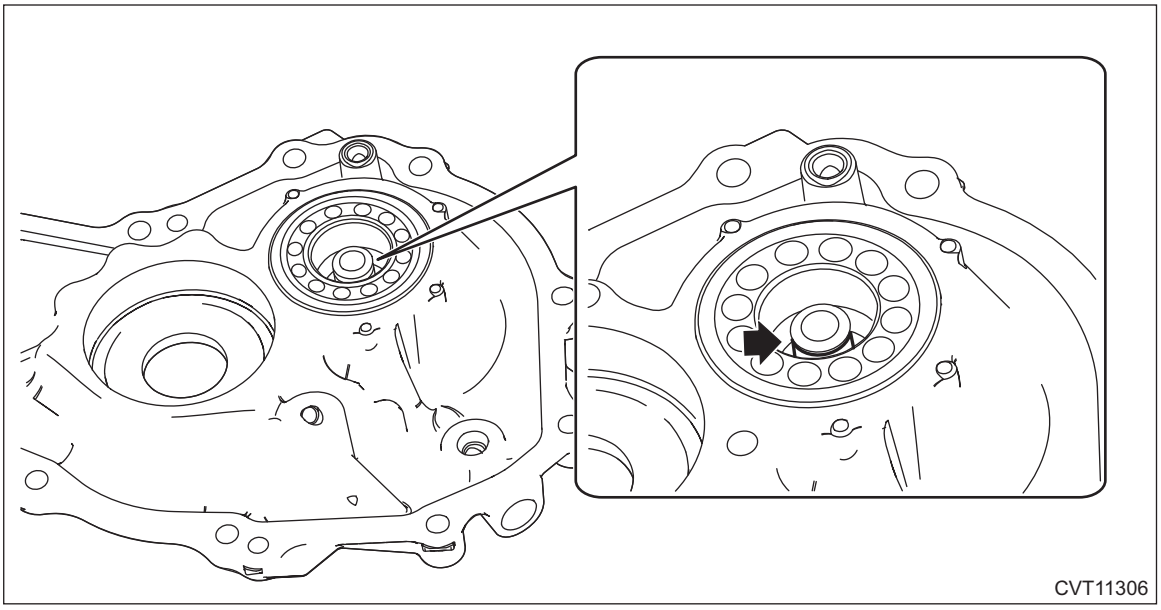




19) Remove the O-rings.

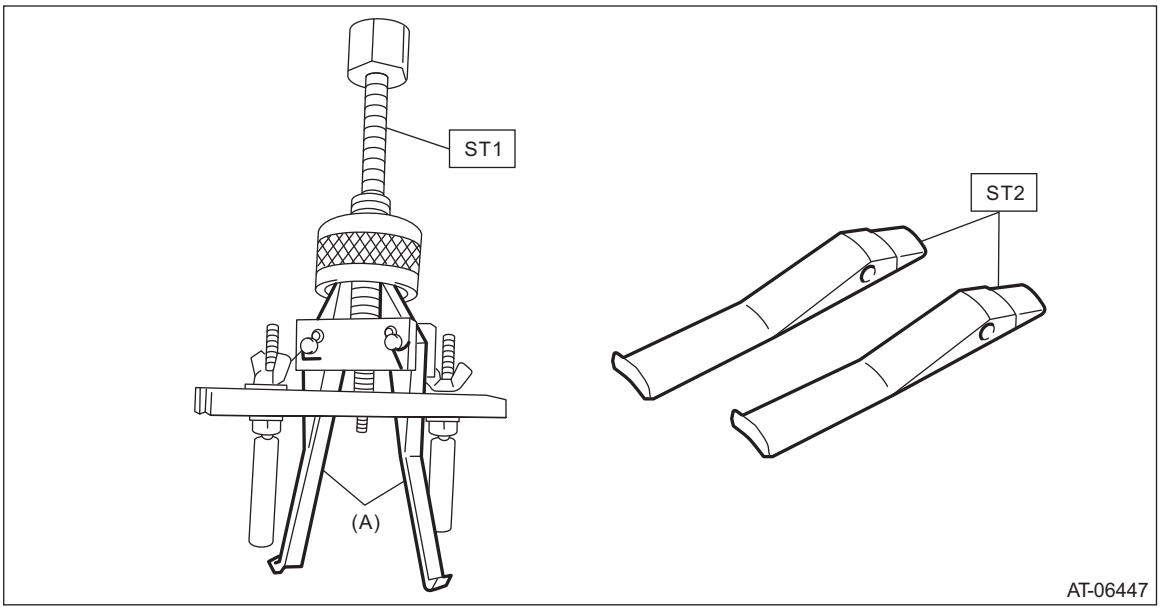


20) Remove the seal ring from converter case cover.



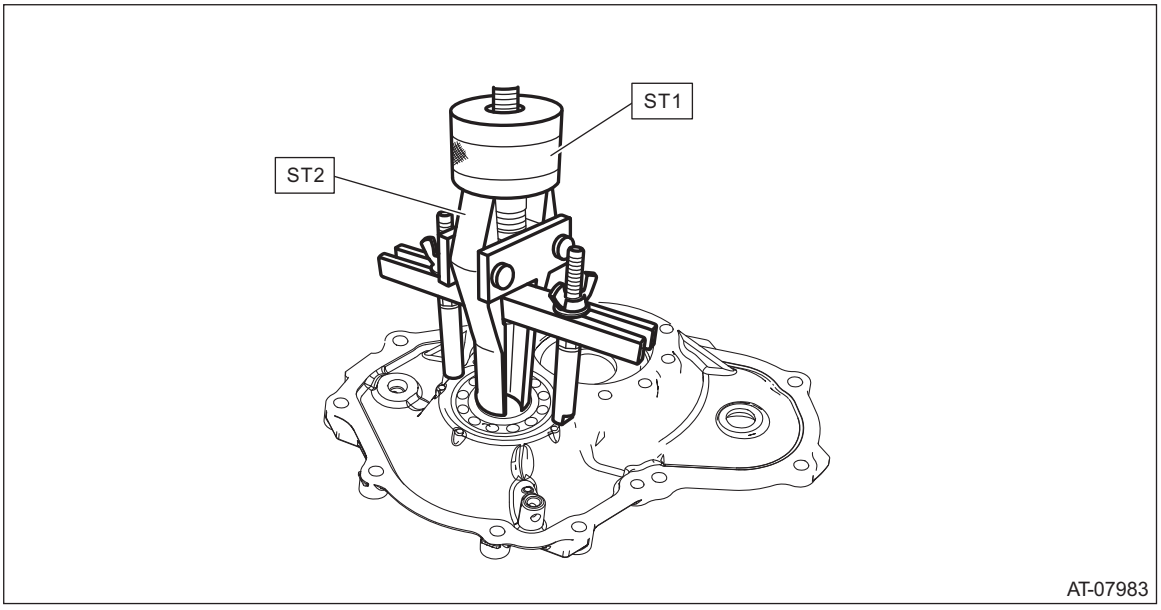
21) Using the ST, remove the ball bearing from the converter case cover.

(1) Remove the claw of ST1, and attach the claw of ST2.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Claw

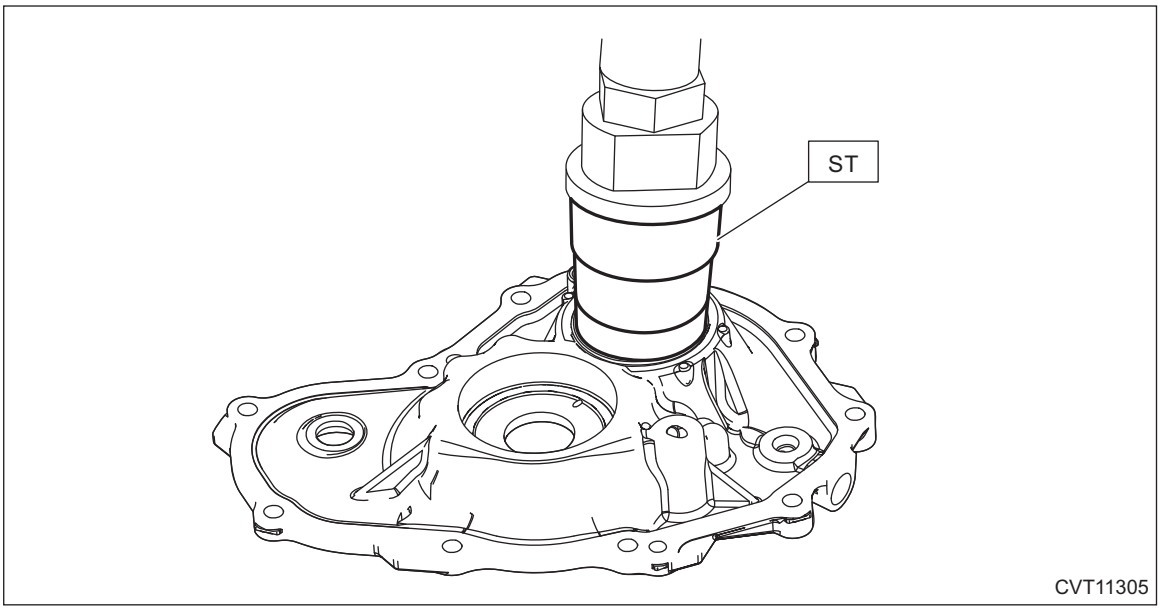
(2) Using the ST, remove the ball bearing from the converter case cover.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



B: INSTALLATION

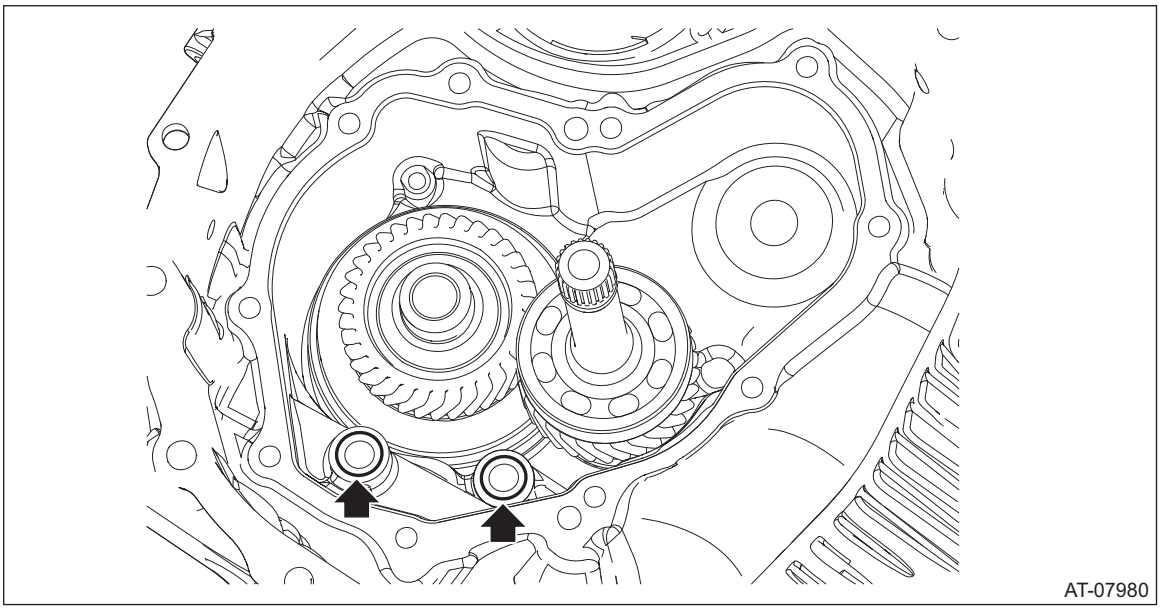
1) Clean the mating surface of converter case cover and converter case.
2) Adjust the shims of front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-310, ADJUSTMENT, Front Reduction Drive Gear.> <Ref. to CVT(TR690)-317, ADJUSTMENT, Front Reduction Driven Gear.>
3) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction driven gear.
4) Using the ST, install the ball bearing to the converter case cover.

NOTE:
Use a new ball bearing.
ST 499755602 PRESS SNAP RING



5) Install the O-rings.

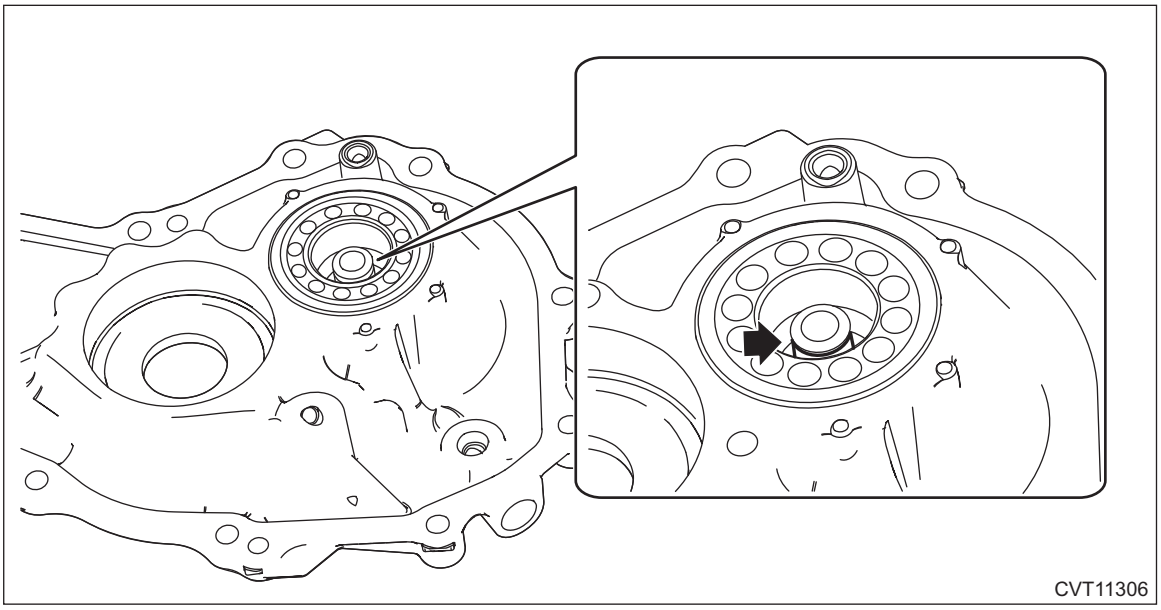
NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.



6) Apply CVTF to the selected shims and install on the bearing catch surface of the front reduction drive gear.
7) Install the seal ring to converter case cover.

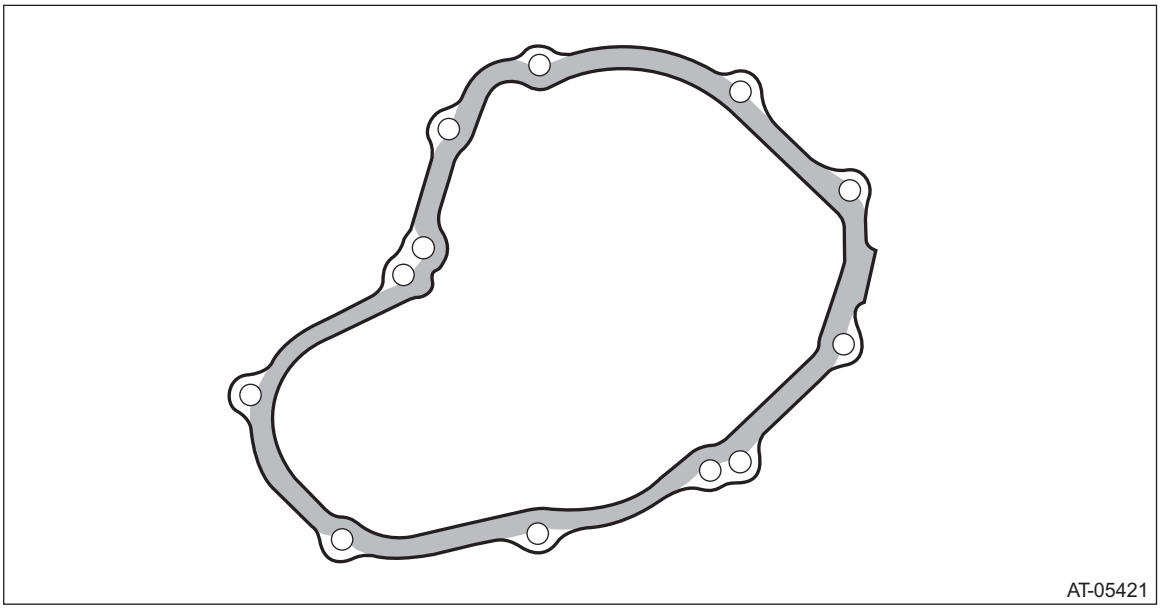
NOTE:
- Use new seal rings.

- When installing the seal rings, do not expand the seal rings too much.



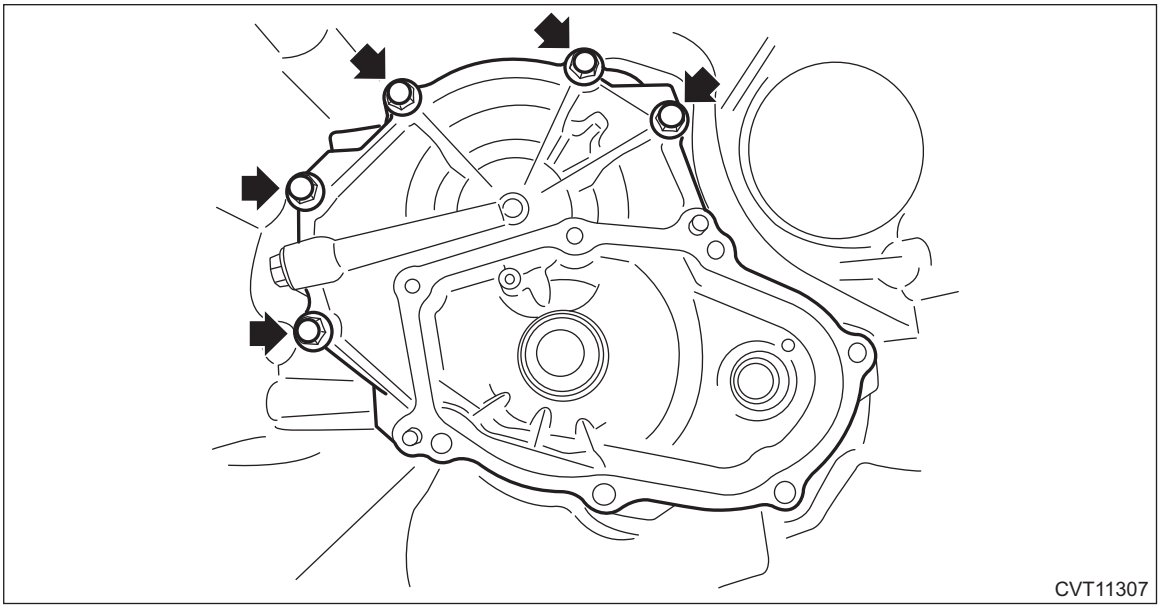
8) Apply liquid gasket seamlessly to the mating surface of converter case cover.

Liquid gasket:
THREE BOND 1215B or equivalent



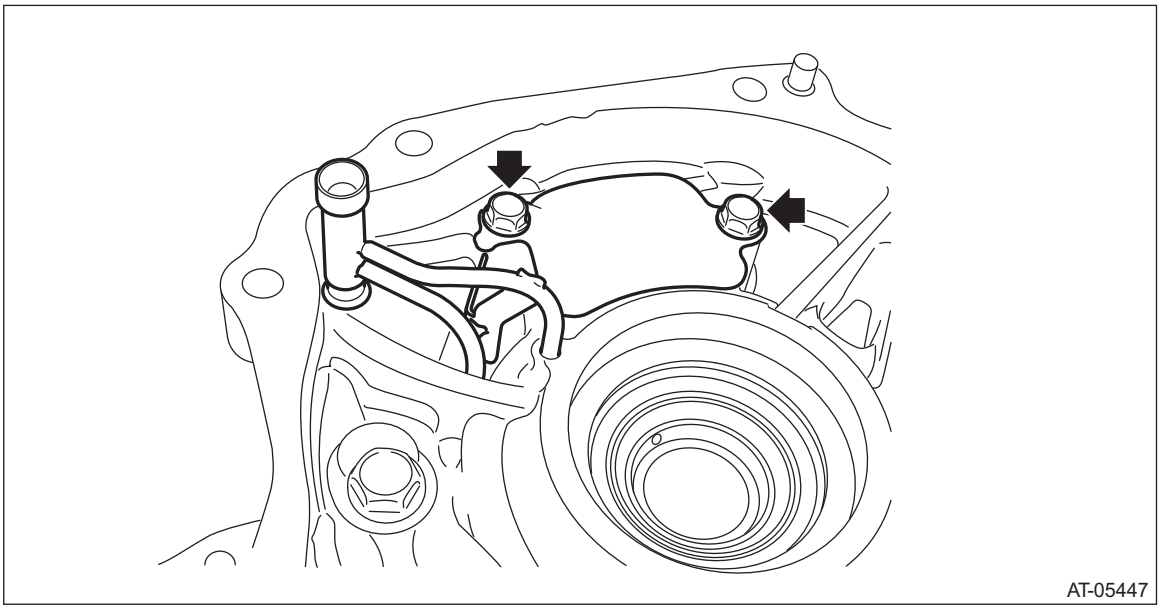
9) Install the converter case cover.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)



10) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-289, INSTALLATION, Oil Pump Chain.>
11) Flip over the converter case cover.
12) Install the oil stopper plate and lubrication pipe.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

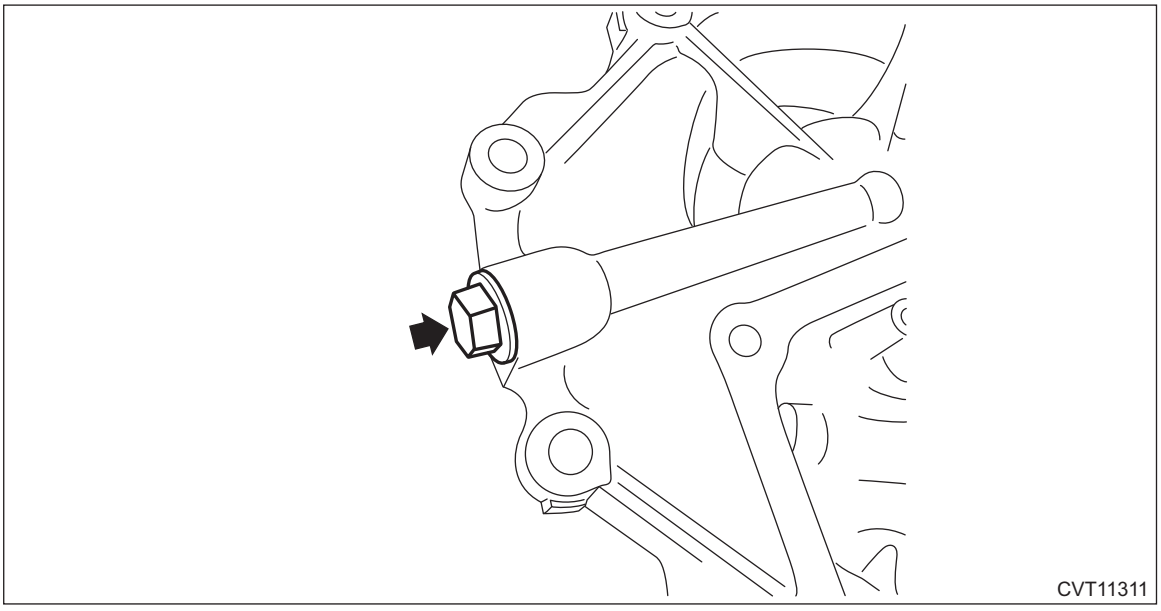


13) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-249, INSTALLATION, Drive Pinion Shaft Assembly.>
14) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>
15) Install the transmission case. <Ref. to CVT(TR690)-215, INSTALLATION, Transmission Case.>
16) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
17) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
18) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>

19) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
20) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
21) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
22) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
23) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>
24) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
25) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
26) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the plug and O-ring.

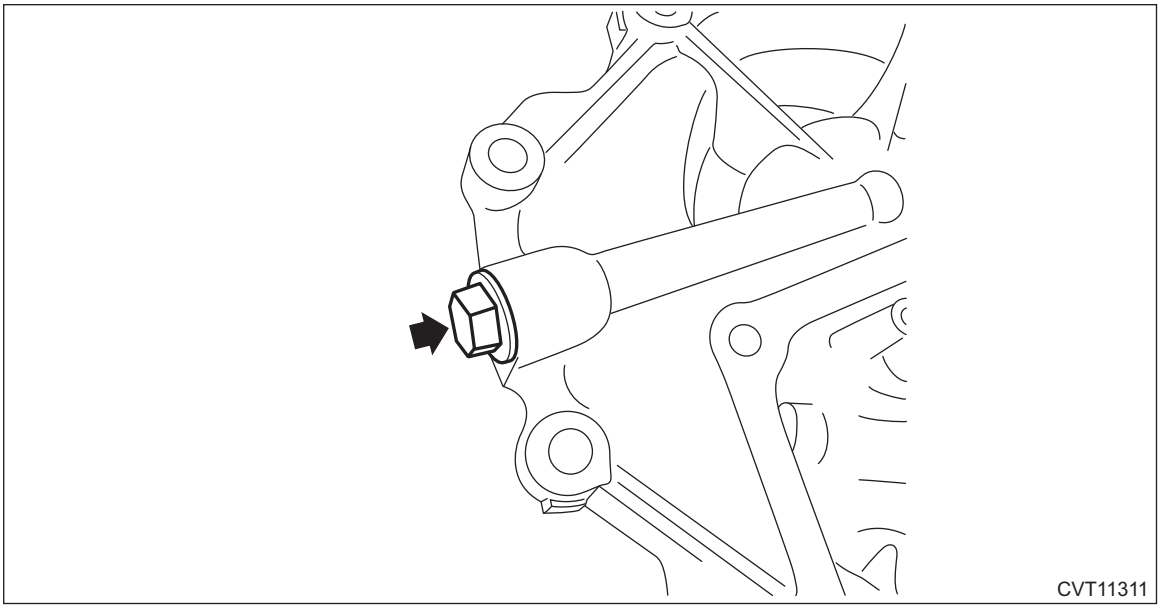


D: ASSEMBLY

1) Install the plugs.

NOTE:
- Use new O-rings.
- Apply CVTF to the O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and converter case cover.
- Check there is no damage or cracks on the converter case cover.

F: ADJUSTMENT

When replacing the converter case cover, select the following shims.

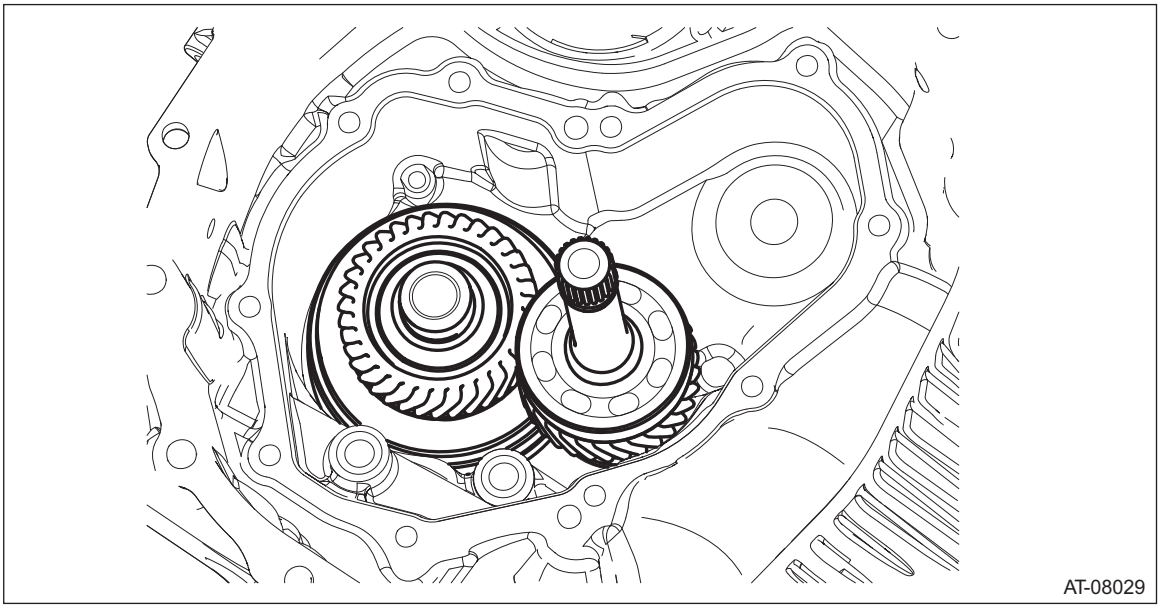
- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-310, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-317, ADJUSTMENT, Front Reduction Driven Gear.>

48.Front Reduction Drive Gear

A: REMOVAL

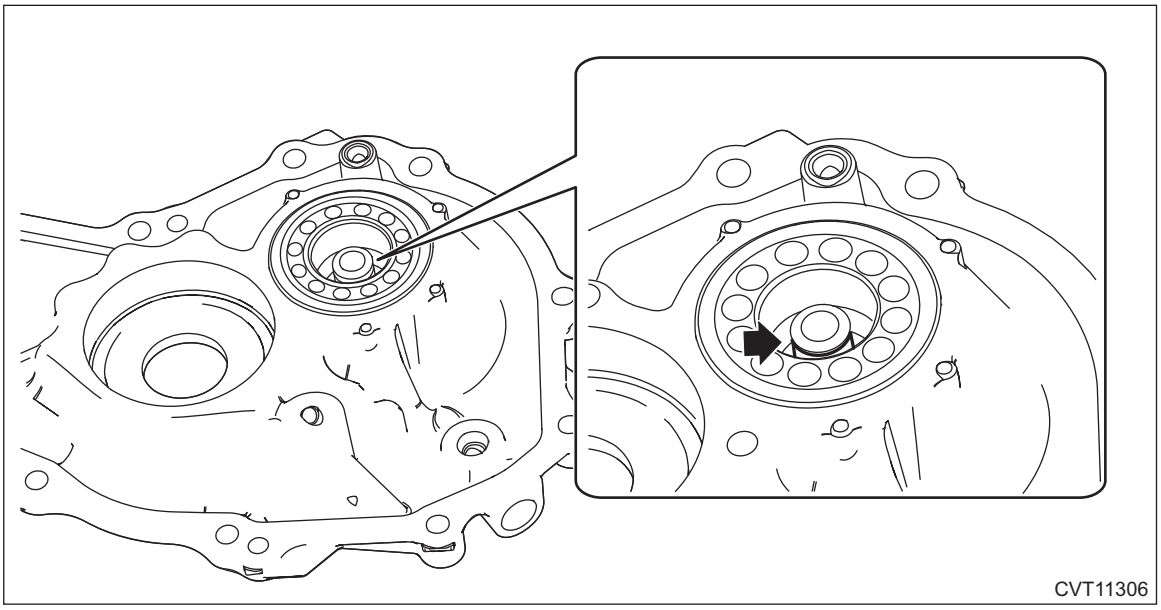
1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the primary speed sensor. <Ref. to CVT(TR690)-105, REMOVAL, Primary Speed Sensor.>
6) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
7) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
8) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
9) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
10) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
11) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
12) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
13) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
14) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
15) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-247, REMOVAL, Drive Pinion Shaft Assembly.>
16) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-287, REMOVAL, Oil Pump Chain.>
17) Remove the converter case cover. <Ref. to CVT(TR690)-295, REMOVAL, Converter Case Cover.>
18) Remove the front reduction drive gear and front reduction driven gear together.

NOTE:
Remove the front reduction driven shaft while holding it.



19) Remove the shims of the front reduction driven gear from the converter case.

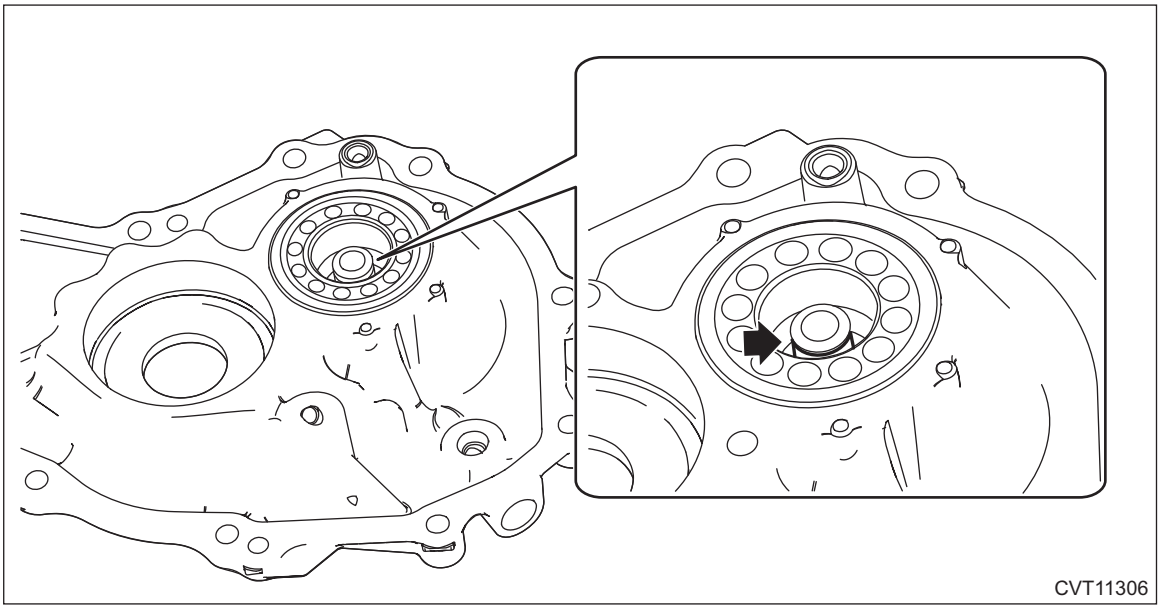
20) Remove the seal rings.



B: INSTALLATION

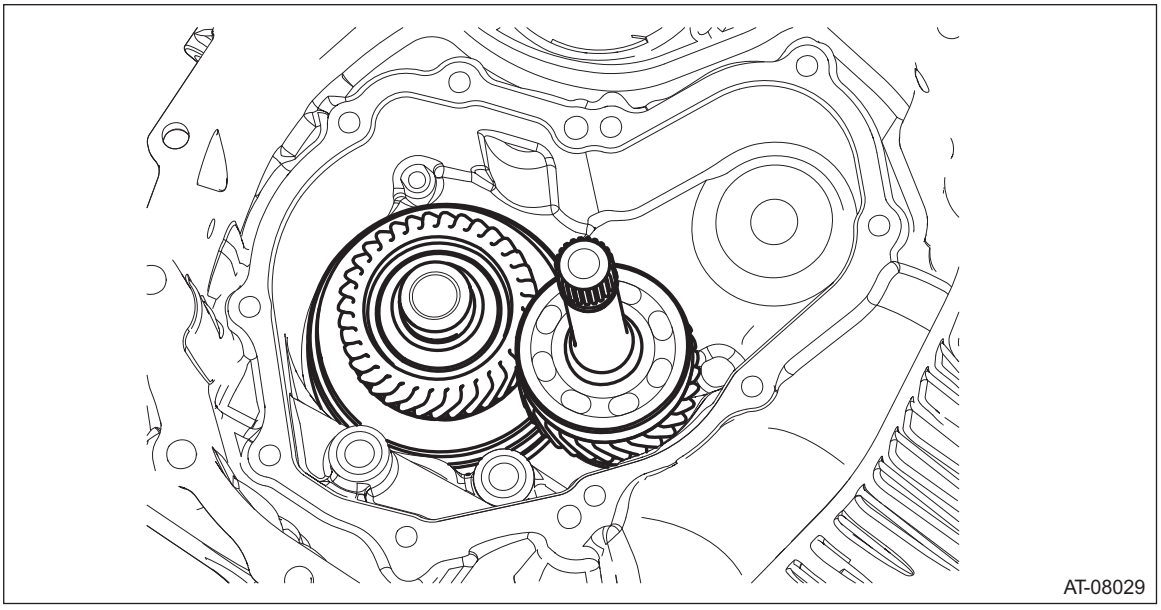
1) Clean the mating surface of converter case cover and converter case.
2) Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-310, ADJUSTMENT, Front Reduction Drive Gear.>
3) Apply CVTF to the shims and install on the bearing catch surface of the front reduction drive gear.
4) Install the seal ring to converter case cover.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.



5) Install the front reduction drive gear and front reduction driven gear together.

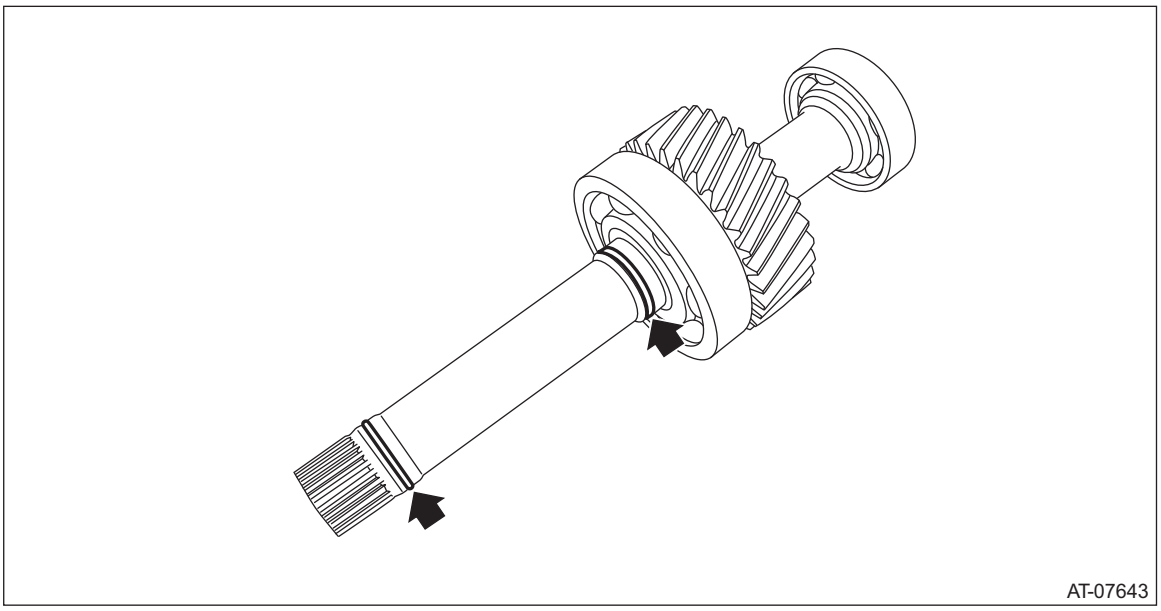
CAUTION:
Be careful not to detach the spline of input clutch and the spline of front reduction driven shaft.



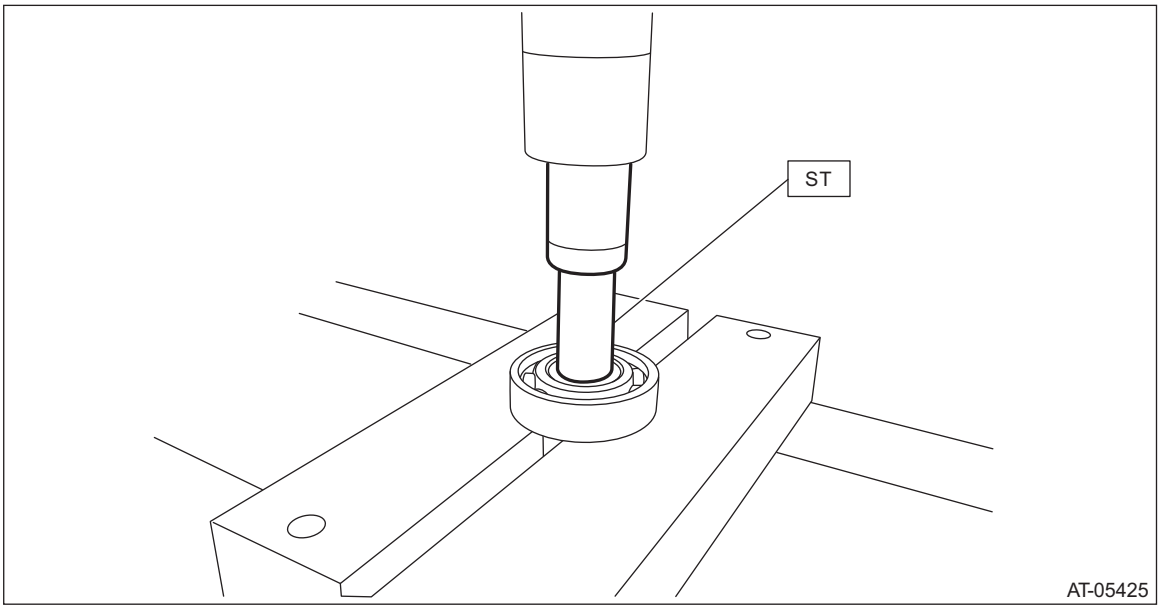
6) Install the converter case cover. <Ref. to CVT(TR690)-298, INSTALLATION, Converter Case Cover.>
7) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-289, INSTALLATION, Oil Pump Chain.>
8) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-249, INSTALLATION, Drive Pinion Shaft Assembly.>
9) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>
10) Install the transmission case. <Ref. to CVT(TR690)-215, INSTALLATION, Transmission Case.>
11) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
12) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
13) Install the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
14) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
15) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
16) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>
17) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
18) Install the primary speed sensor. <Ref. to CVT(TR690)-105, INSTALLATION, Primary Speed Sensor.>
19) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>
20) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
21) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
22) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

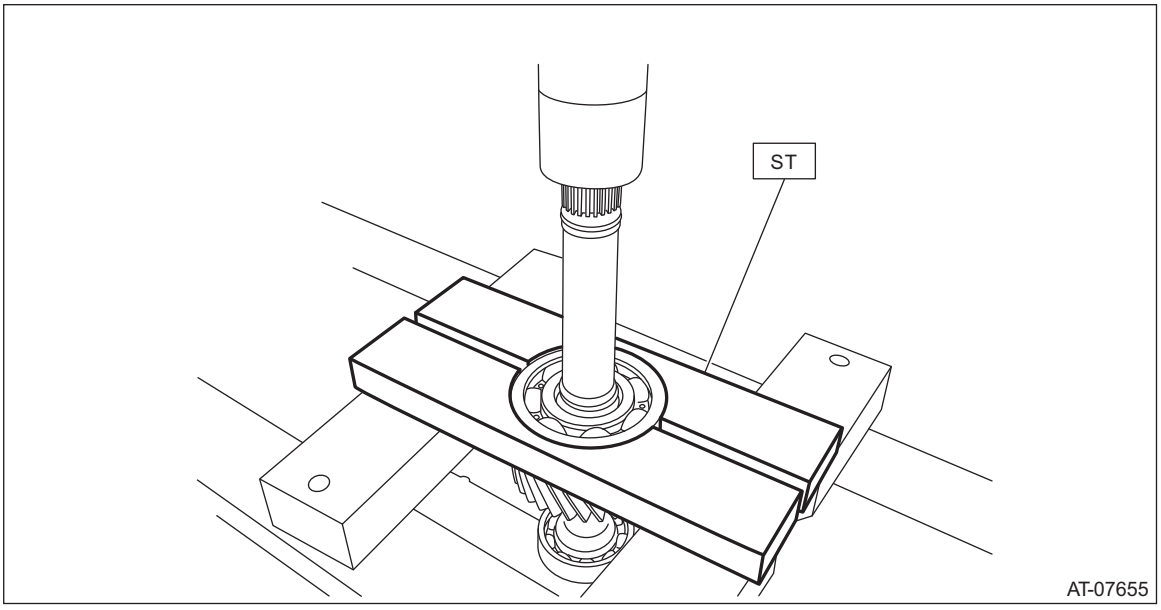
1) Remove the seal ring and O-ring.



2) Using the ST, remove the ball bearing from front reduction drive gear.
ST 899864100 REMOVER



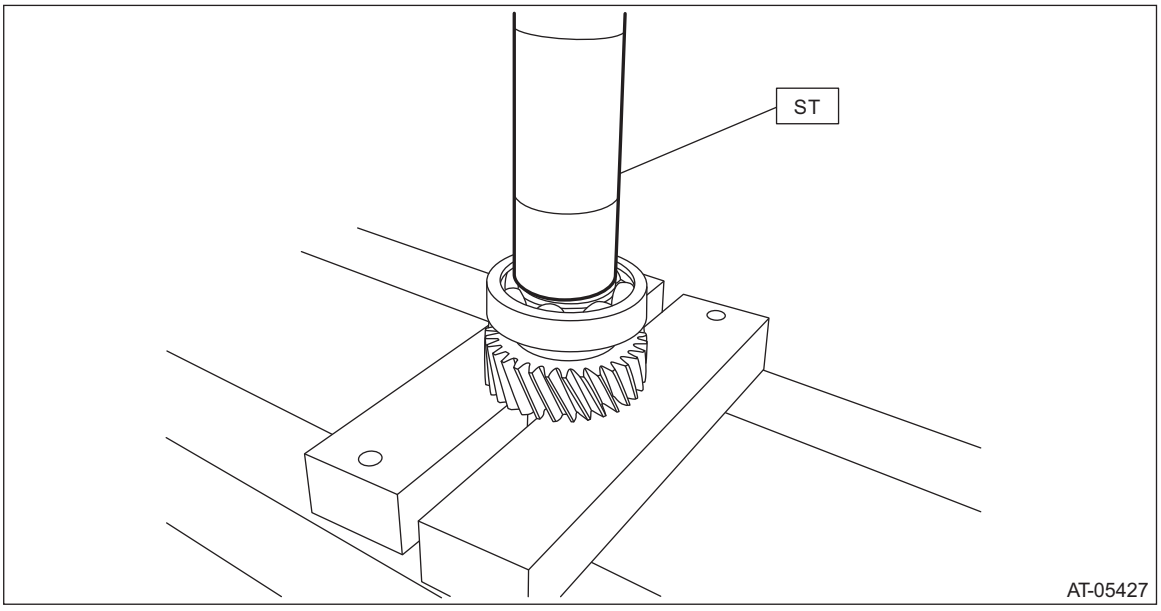
3) Using the ST, remove the ball bearing from front reduction drive gear.
ST 498077000 REMOVER



D: ASSEMBLY

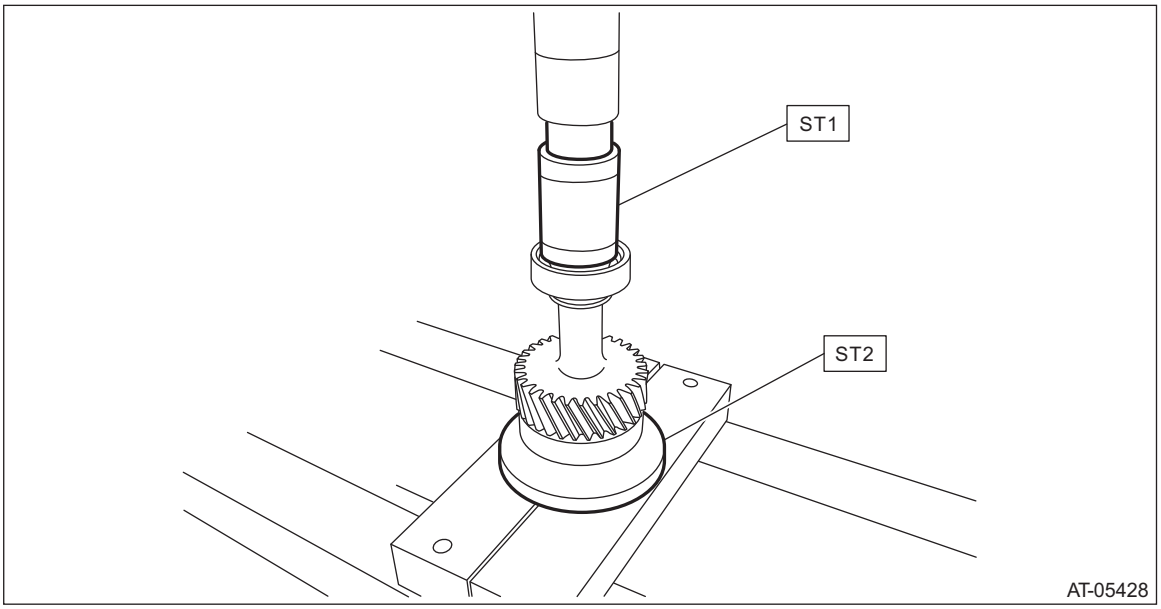
1) Using the ST, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST 18651AA000 INSTALLER



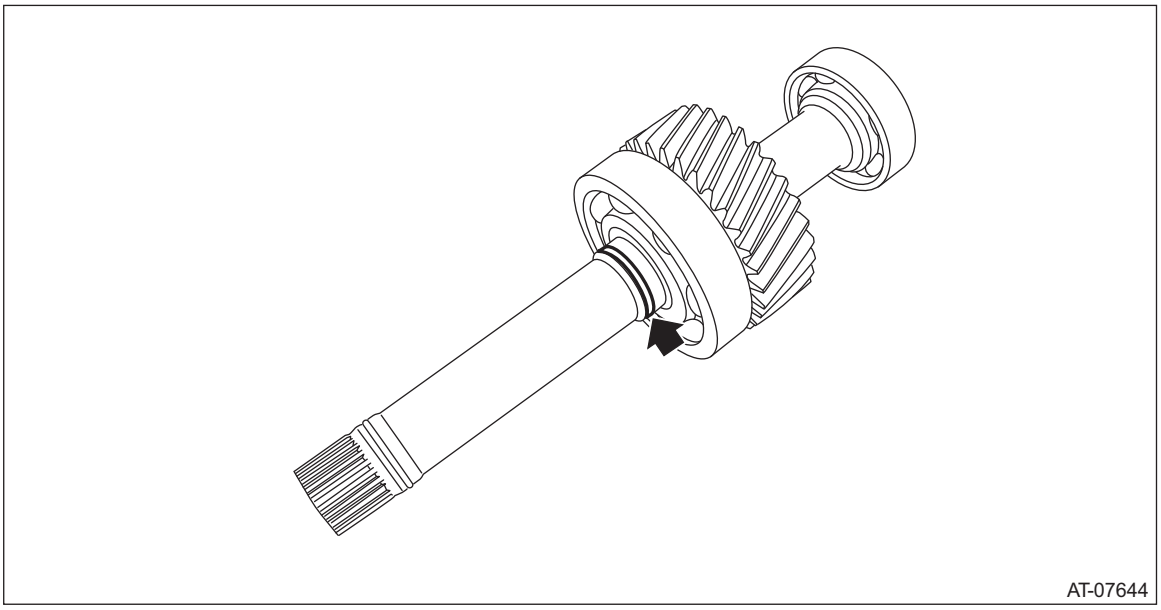
2) Using ST1 and ST2, install the ball bearing to front reduction drive gear.

NOTE:
Use a new ball bearing.
ST1 499757002 INSTALLER
ST2 398177700 INSTALLER



3) Install the seal rings.

NOTE:
- Use new seal rings.
- When installing the seal rings, do not expand the seal rings too much.
- Install the O-ring when installing the torque converter assembly.

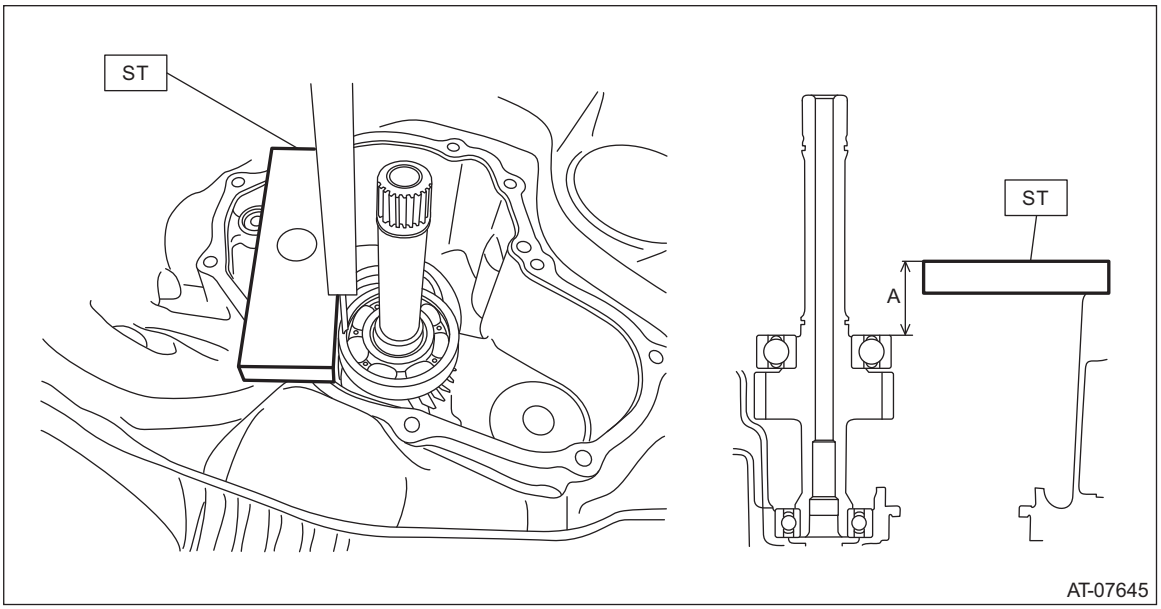


E: INSPECTION

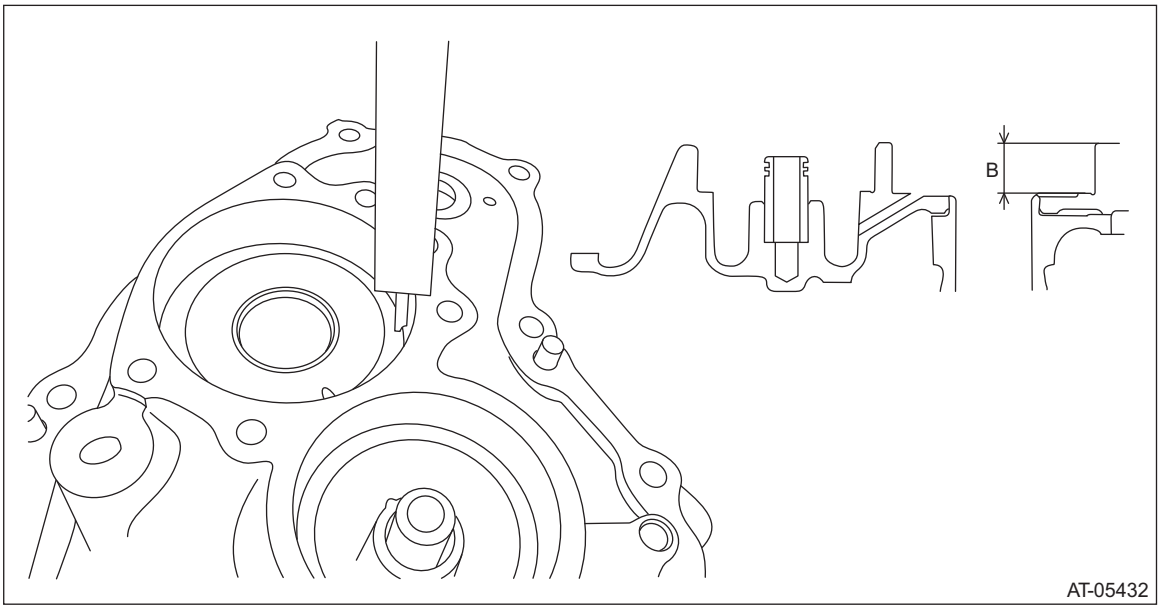
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

F: ADJUSTMENT

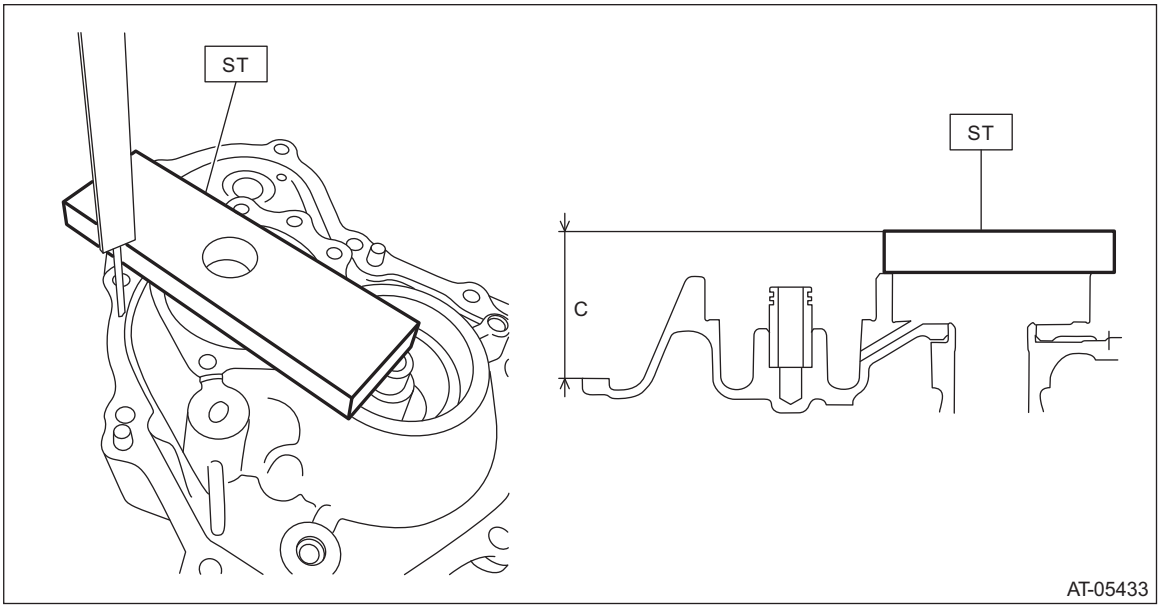
1) Measure height “A” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE



2) Measure depth “B” from the converter case cover upper face to the bearing catch surface.



3) Using the ST, measure height “C” from the ST upper face to the converter case cover mating surface.
ST 398643600 GAUGE



4) Using the following formula, calculate clearance “T” to select shims.
Calculation formula:
T mm = (A – 15) – ((C – 15) – B)
[T in = (A – 0.591) – ((C – 0.591) – B)]
T: Clearance
A: Depth from the ST upper face to the bearing end surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Height from the ST upper face to the converter case cover mating surface
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)	Part No.
1.070 — 1.174 (0.042 — 0.045)	1.0 (0.039)	31288AA160
1.175 — 1.274 (0.046 — 0.049)	1.1 (0.043)	31288AA170
1.275 — 1.374 (0.050 — 0.053)	1.2 (0.047)	31288AA180
1.375 — 1.474 (0.054 — 0.057)	1.3 (0.051)	31288AA220
1.475 — 1.580 (0.058 — 0.062)	1.4 (0.055)	31288AA230

49.Front Reduction Driven Gear

A: REMOVAL

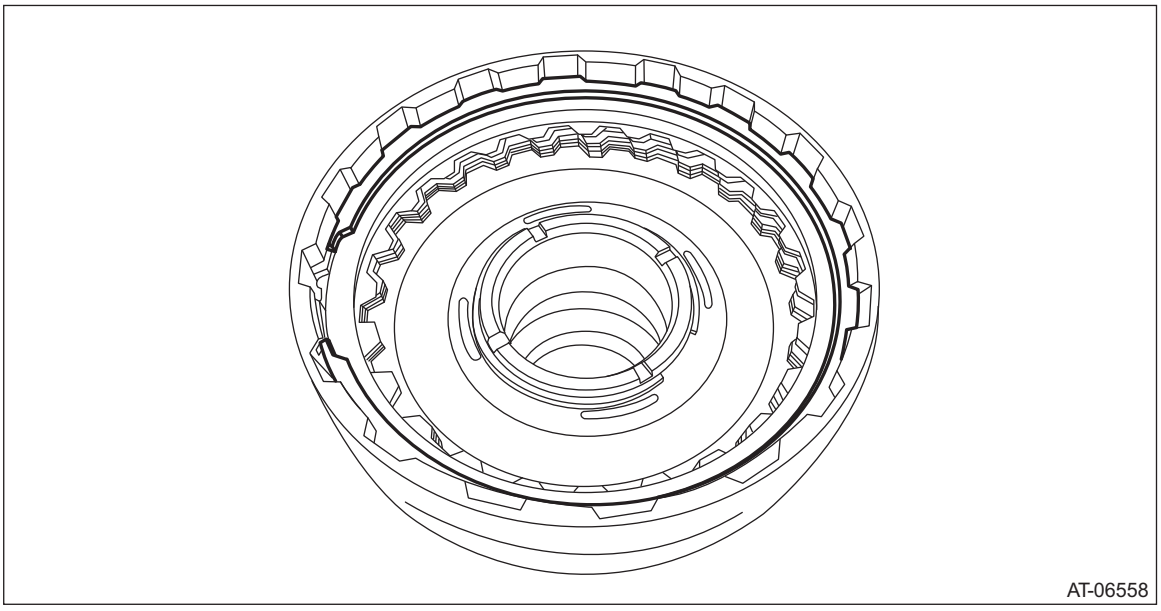
NOTE:
For removal of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-304, REMOVAL, Front Reduction Drive Gear.>

B: INSTALLATION

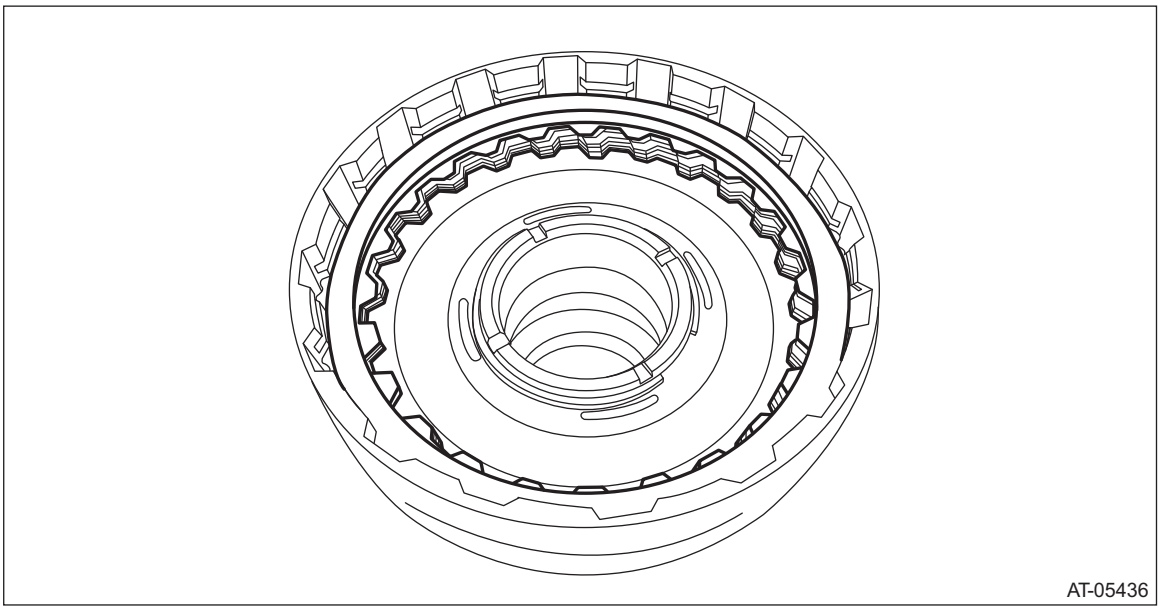
NOTE:
For installation of front reduction driven gear, refer to the “Front Reduction Drive Gear”. <Ref. to CVT(TR690)-305, INSTALLATION, Front Reduction Drive Gear.>

C: DISASSEMBLY

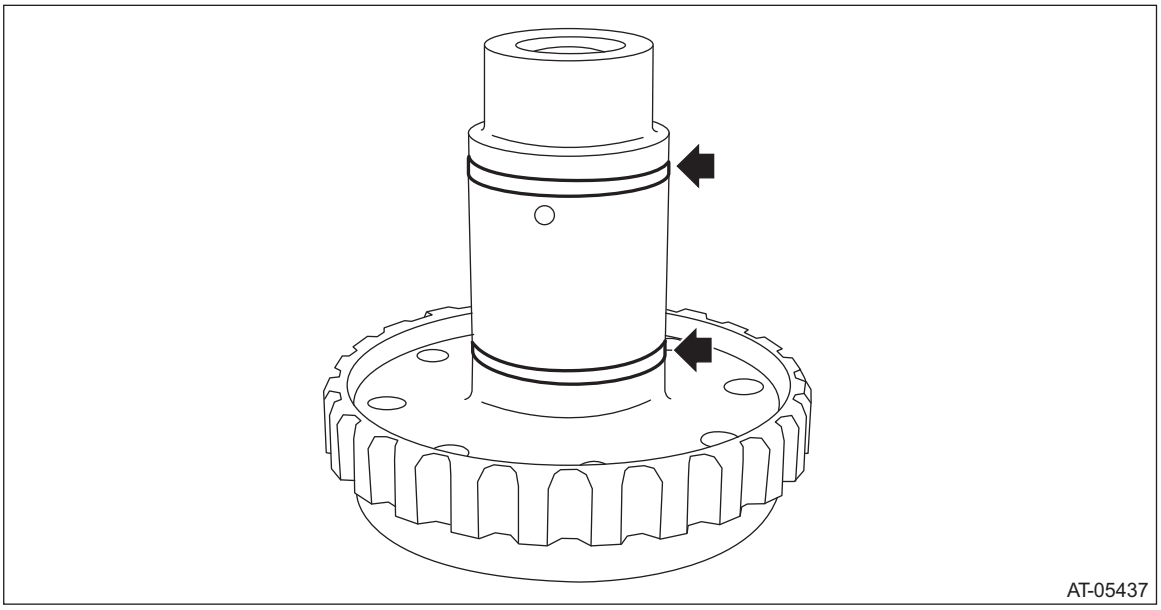
1) Remove the front reduction driven shaft from the front reduction driven gear.
2) Remove the snap ring.



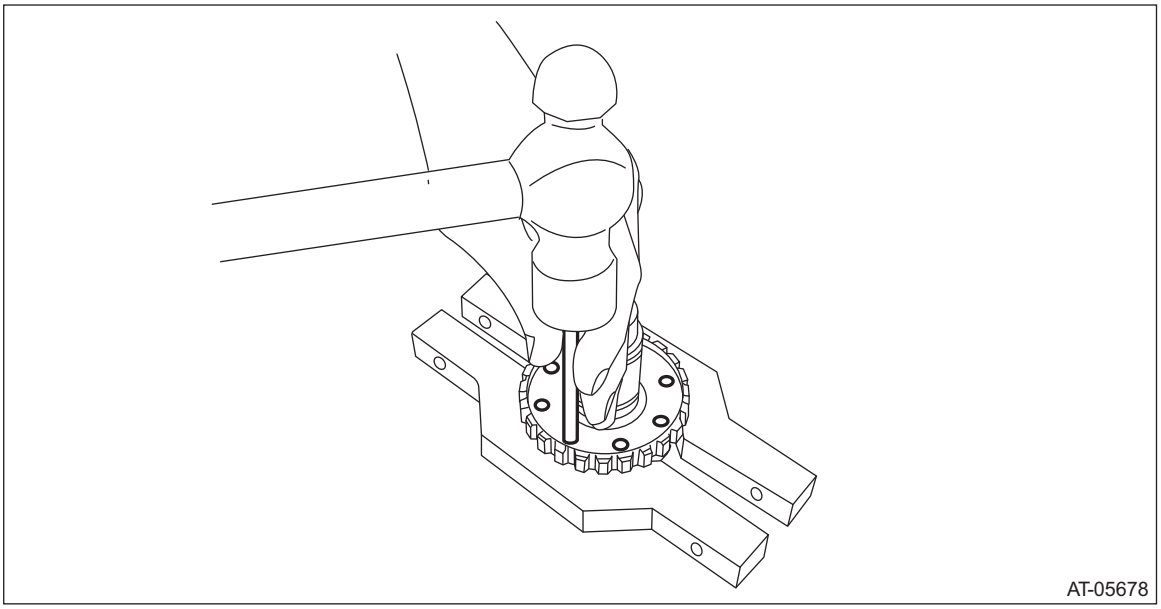
3) Remove the retaining plate, drive plate, driven plate and dish plate.



4) Remove the seal ring from front reduction driven shaft.



5) Remove the ball bearing, while tapping the entire circumference around the ball bearing outer race a little at a time through the front reduction driven shaft hole using the round bar with diameter of 7 mm (0.28 in).



D: ASSEMBLY

1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

NOTE:
Make sure of the direction of dish plate.

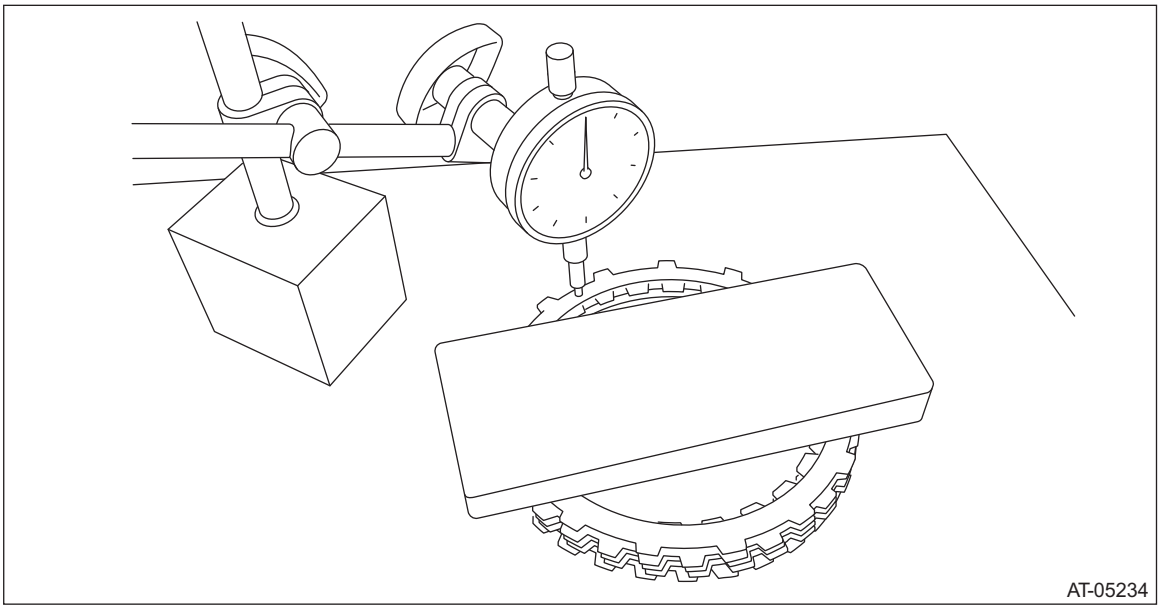
2) Set the dial gauge to retaining plate, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

3) Scale and record the weight "Z" of a flat board which will be put on retaining plate.

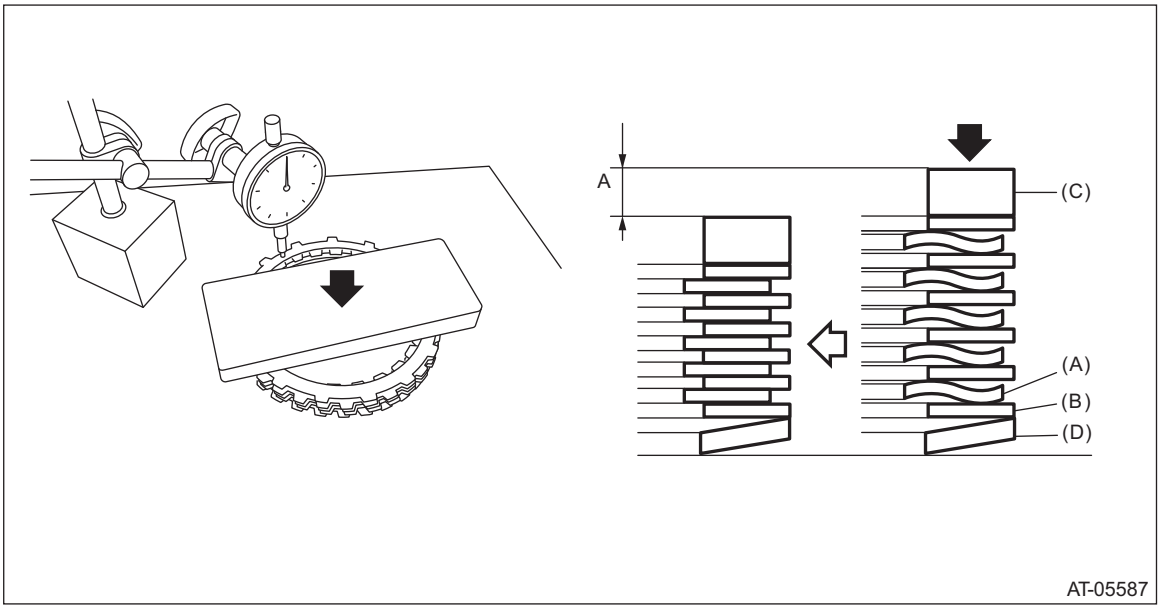
NOTE:
- Use a stiff board which does not bend against load as a flat board to be put on retaining plate.
- Use a flat board weighing less than 130 N (13.3 kgf, 29.2 lb).

4) Put the flat board on retaining plate.



5) Using the following formula, calculate load “N”, a force of pressing with push/pull gauge.
N = 130N (13.3 kgf, 29.2 lb) – Z
130 N (13.3 kgf, 29.2 lb): Load applied to clutch plate
Z: Flat board weight
6) Press the center of retaining plate by applying a force of “N” using push/pull gauge, and then measure and record the compression amount “A”.

NOTE:
Measure at four points with a 90° interval and calculate the average.



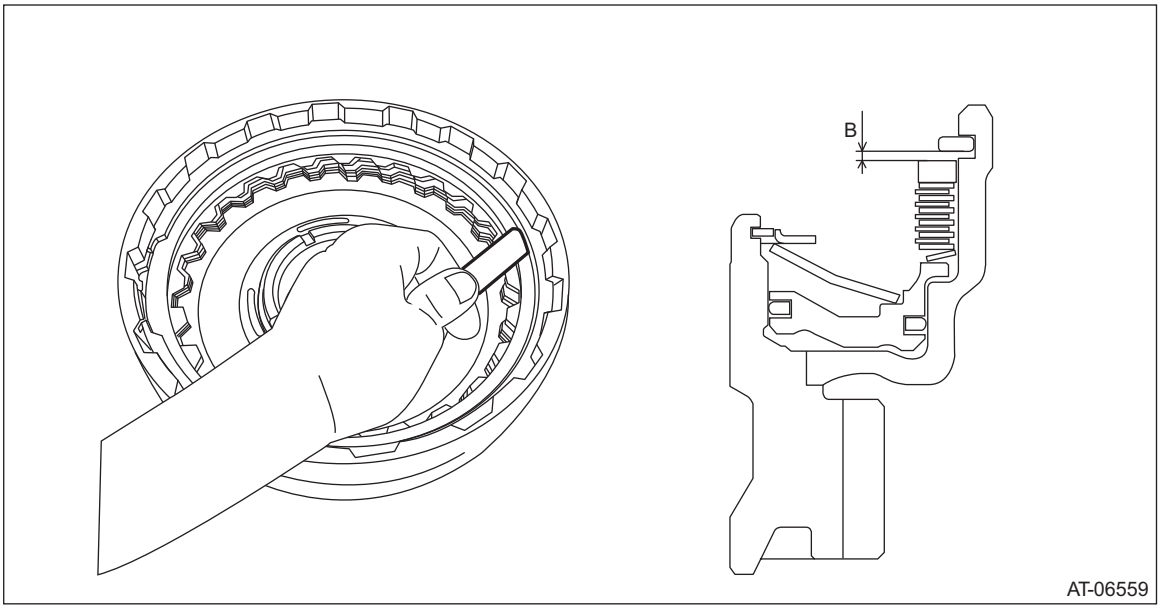
(A) Drive plate
(B) Driven plate
(C) Retaining plate
(D) Dish plate

7) Install the dish plate, driven plate, drive plate, retaining plate and snap ring.

NOTE:
Make sure of the direction of dish plate.

8) Measure and record the clearance “B” between the retaining plate and snap ring.

NOTE:
Before measuring, press down the whole circumference of retaining plate using your finger.



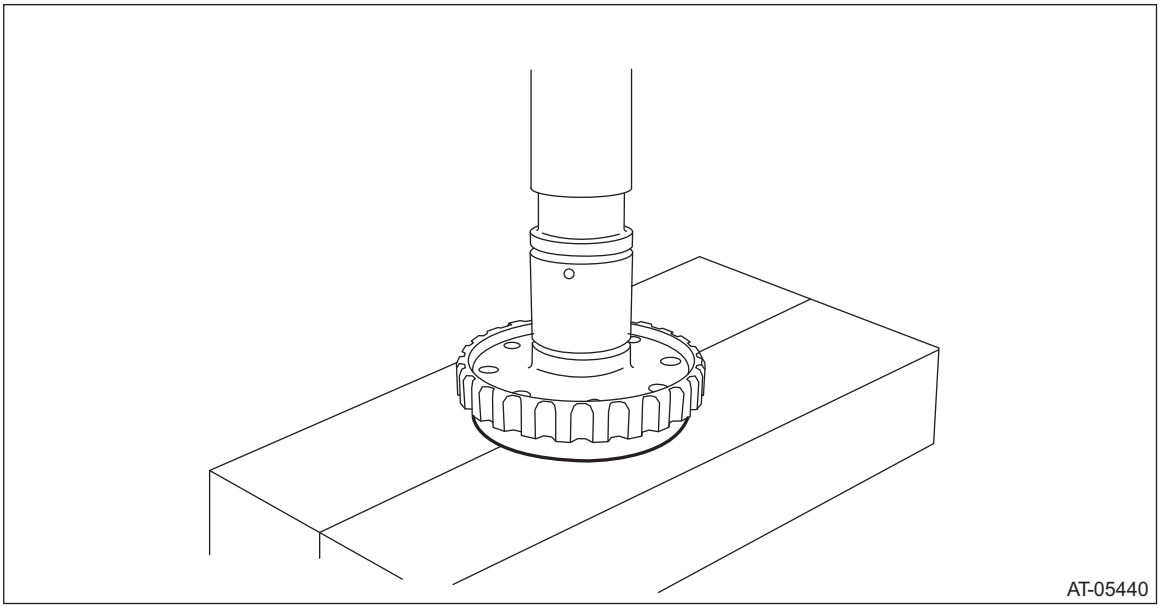
9) Piston stroke calculation
Calculate with A and B dimensions recorded before.
If out of standard, replace with a new drive plate and adjust it within standard.
S mm (in) = A + B
S: Piston stroke
A: Compression amount of drive plate and dish plate
B: Clearance between retaining plate and snap ring

Specification:
2.4 — 2.8 mm (0.094 — 0.11 in)

Retaining plate	
Part No.	Thickness mm (in)
31667AA430	3.1 (0.122)
31667AA440	3.3 (0.130)
31667AA450	3.5 (0.138)

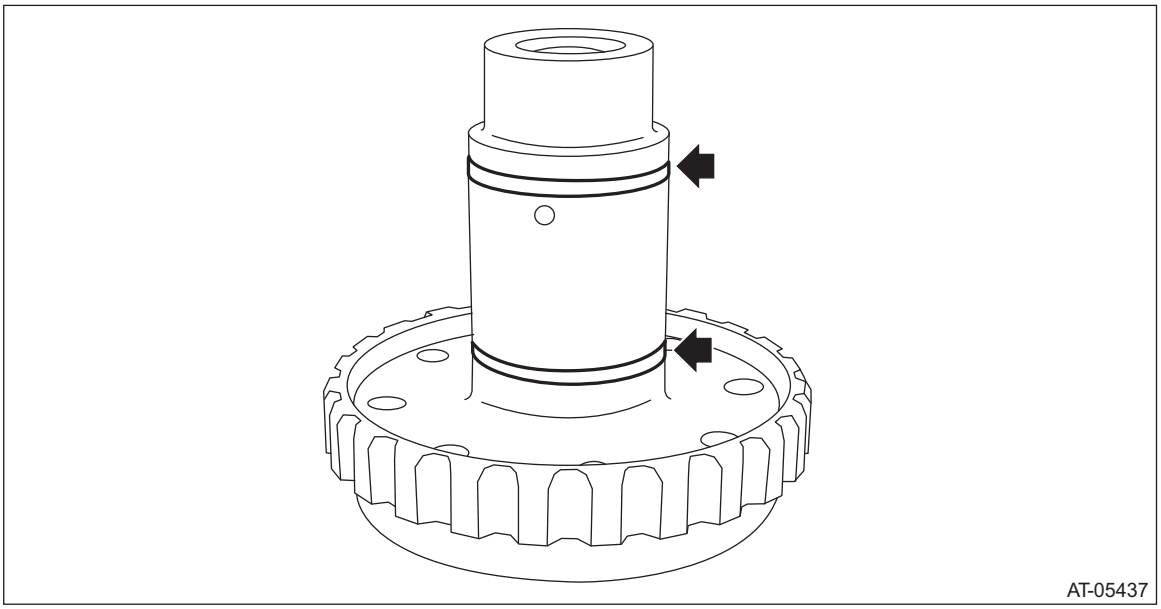
10) Press-fit the ball bearing into front driven shaft.

NOTE:
Use a new ball bearing.



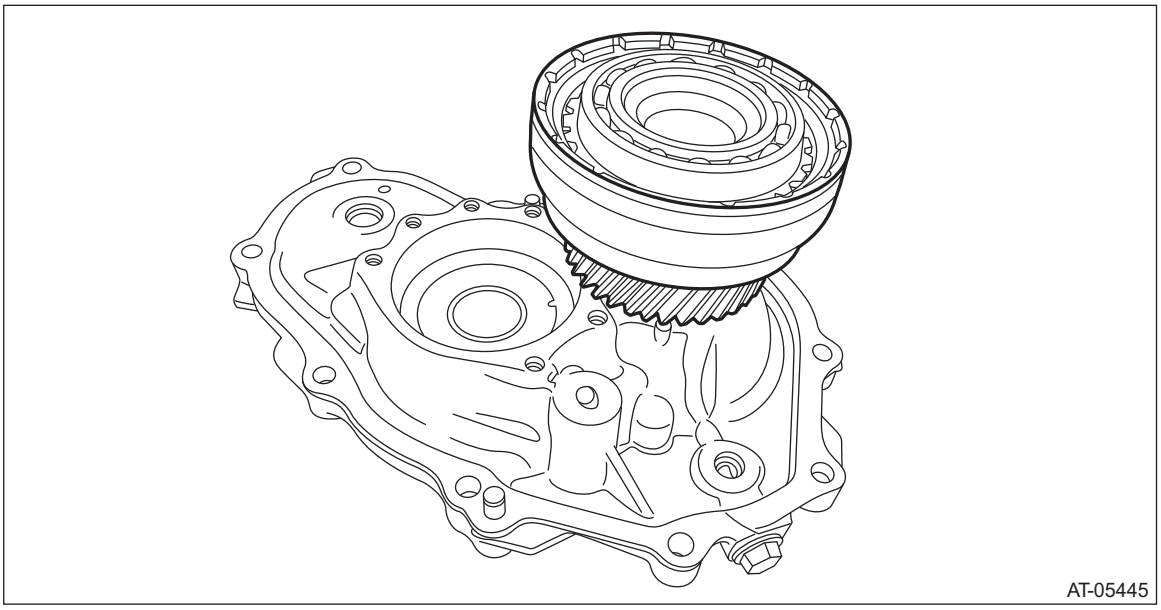
11) Install the seal ring to the front driven shaft.

NOTE:
- Install a new seal ring.
- Apply CVTF to the seal rings.



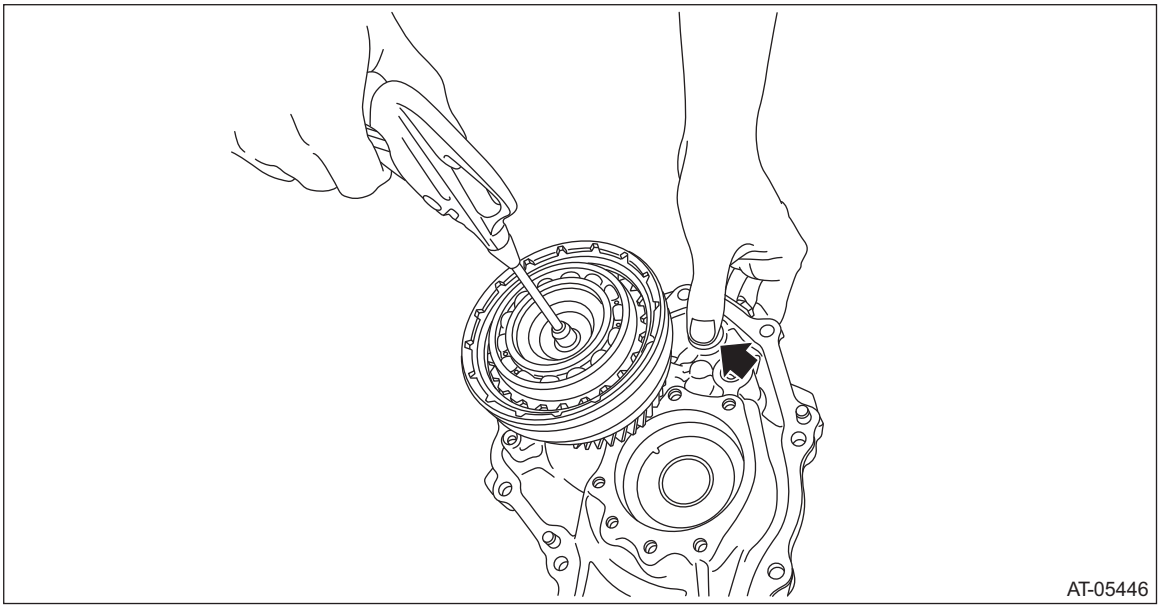
12) Install the front reduction driven shaft to the front reduction driven gear.

13) Install the front reduction driven gear assembly to converter case cover.



14) Apply compressed air intermittently to check the piston operation.

NOTE:
Hold the arrowed area with a finger.



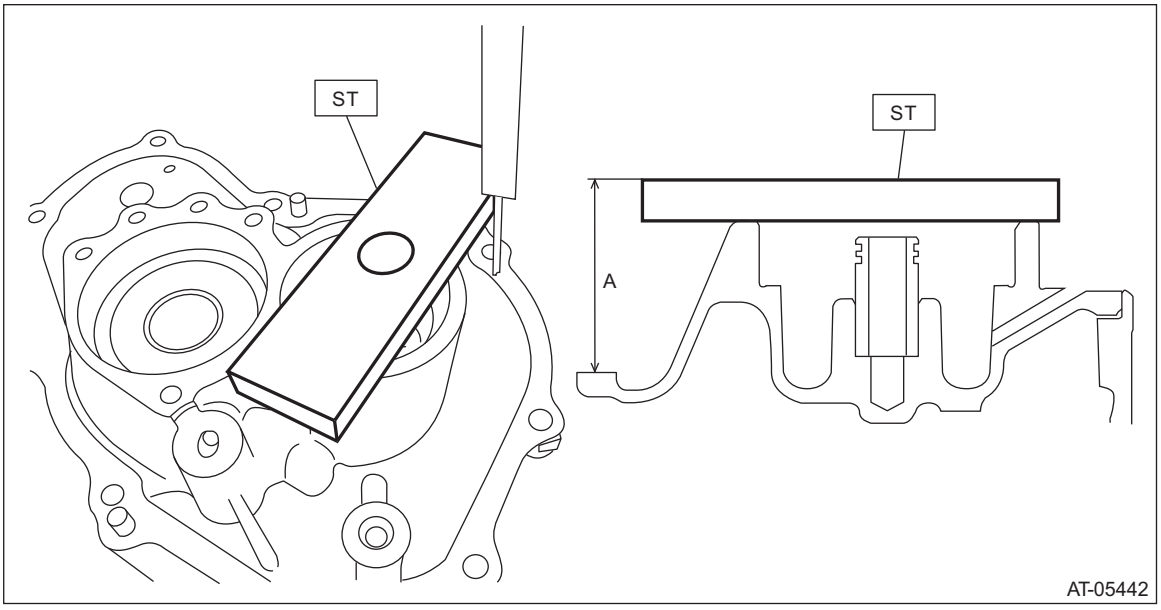
E: INSPECTION

- Check the drive plate for wear and damage.
- Check the driven plate for discoloration (burnt color).
- Check for worn snap ring, fatigue or damaged return spring or deformed piston retainer.
- Replace if its tooth surfaces are broken, damaged or excessively worn.
- Check the bearing for seizure or wear.
- Apply CVTF to bearing and rotate the bearing to check for noise or dragging etc.

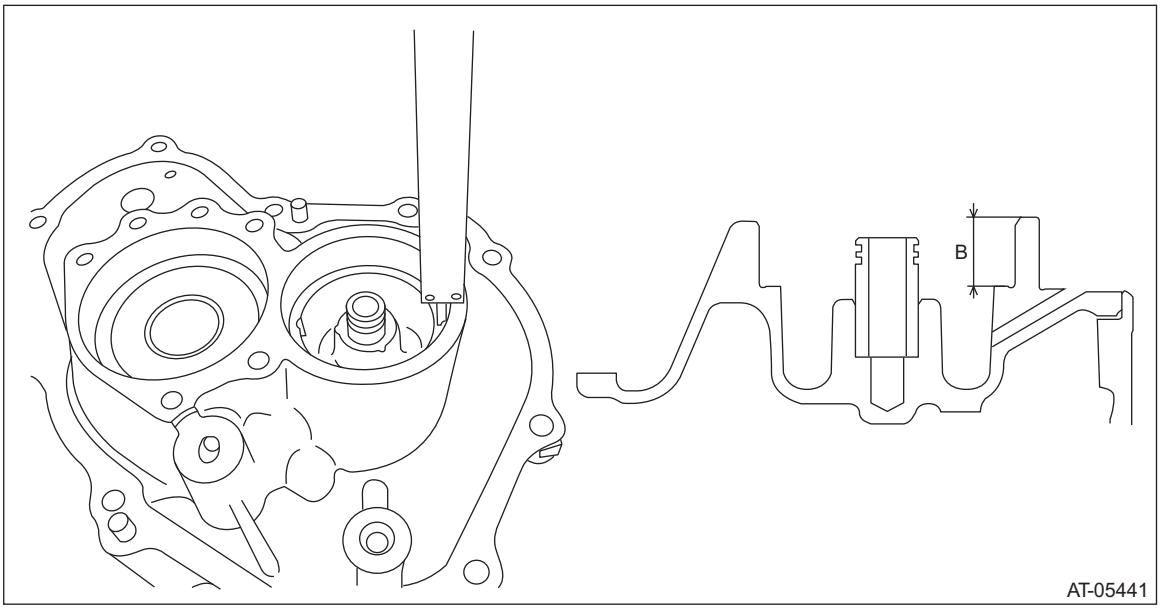
F: ADJUSTMENT

1) If the ball bearing is attached, remove the bearing and shims. <Ref. to CVT(TR690)-295, REMOVAL, Converter Case Cover.>

2) Using the ST, measure height “A” from the ST upper face to the mating surface of the case.
ST 398643600 GAUGE



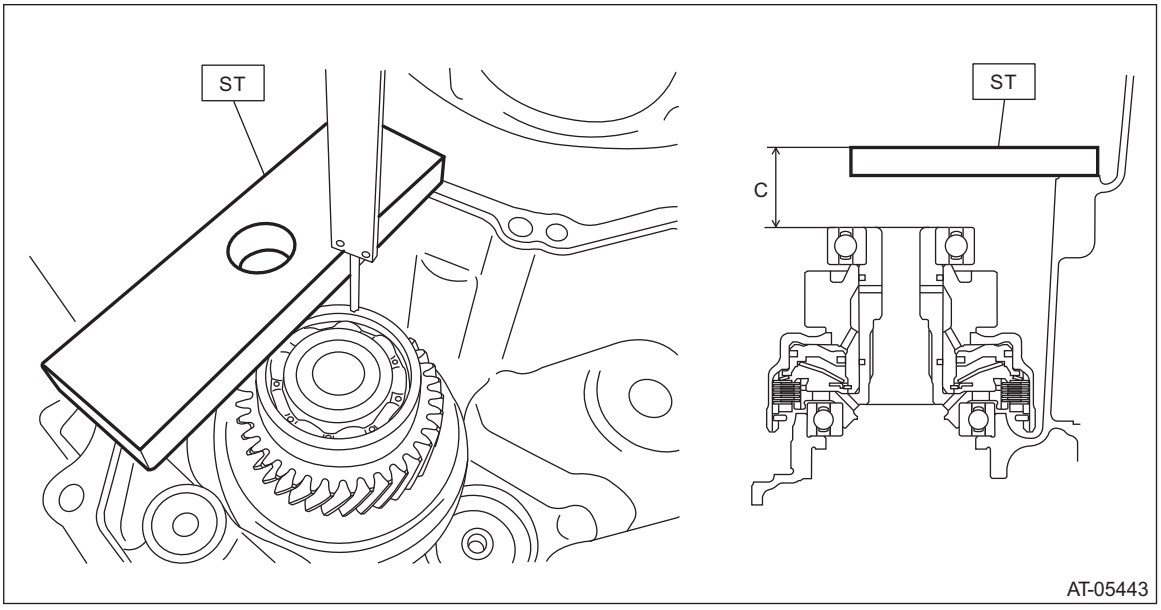
3) Measure depth “B” from the converter case cover upper face to the bearing catch surface.



4) Install the ball bearing to the reduction driven gear.

NOTE:
Use a new ball bearing.

5) Measure depth “C” from the ST upper face to the bearing end face using the ST.
ST 398643600 GAUGE



6) Calculate clearance “T” using the following formula.
Formula: T mm = (C – 15) – ((A – 15) – B)
[T in = (C – 0.591) – ((A – 0.591) – B)]
T: Clearance
A: Height from the ST upper face to the converter case mating surface
B: Depth from the converter case cover upper face to the bearing catch surface
C: Depth from the ST upper face to the bearing end face
15 mm (0.591 in): Thickness of ST

Clearance “T” mm (in)	Thickness of shim mm (in)
0.470 — 0.569 (0.019 — 0.021)	0.4 (0.016)
0.570 — 0.669 (0.022 — 0.025)	0.5 (0.020)
0.670 — 0.769 (0.026 — 0.029)	0.6 (0.024)
0.770 — 0.869 (0.030 — 0.033)	0.7 (0.028)
0.870 — 0.980 (0.034 — 0.039)	0.8 (0.031)

7) Select one to two shims so that the total thickness meets the value obtained from above.

Part No.	Thickness of shim mm (in)
31288AA130	0.2 (0.008)
31288AA140	0.3 (0.012)
31288AA150	0.5 (0.020)

50.Converter Case

A: REMOVAL

1) Remove the transmission assembly from the vehicle. <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.>
2) Remove the air breather hose. <Ref. to CVT(TR690)-138, REMOVAL, Air Breather Hose.>
3) Remove the oil pan and control valve body. <Ref. to CVT(TR690)-115, REMOVAL, Control Valve Body.>
4) Remove the transmission harness. <Ref. to CVT(TR690)-125, REMOVAL, Transmission Harness.>
5) Remove the secondary pressure sensor. <Ref. to CVT(TR690)-113, REMOVAL, Secondary Pressure Sensor.>
6) Remove the primary speed sensor. <Ref. to CVT(TR690)-105, REMOVAL, Primary Speed Sensor.>
7) Remove the extension case. <Ref. to CVT(TR690)-145, REMOVAL, Extension Case.>
8) Remove the rear drive shaft. <Ref. to CVT(TR690)-149, REMOVAL, Rear Drive Shaft.>
9) Remove the transfer clutch assembly. <Ref. to CVT(TR690)-154, REMOVAL, Transfer Clutch.>
10) Remove the center differential carrier. <Ref. to CVT(TR690)-157, REMOVAL, Center Differential Carrier.>
11) Remove the transfer reduction driven gear assembly. <Ref. to CVT(TR690)-161, REMOVAL, Transfer Reduction Driven Gear.>
12) Remove the intermediate case. <Ref. to CVT(TR690)-168, REMOVAL, Intermediate Case.>
13) Remove the forward clutch assembly. <Ref. to CVT(TR690)-183, REMOVAL, Forward Clutch Assembly.>
14) Remove the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
15) Remove the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-231, REMOVAL, Primary Pulley and Secondary Pulley.>
16) Remove the drive pinion shaft assembly. <Ref. to CVT(TR690)-247, REMOVAL, Drive Pinion Shaft Assembly.>
17) Remove the front differential assembly. <Ref. to CVT(TR690)-268, REMOVAL, Front Differential Assembly.>
18) Remove the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-287, REMOVAL, Oil Pump Chain.>
19) Remove the converter case cover. <Ref. to CVT(TR690)-295, REMOVAL, Converter Case Cover.>
20) Remove the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-304, REMOVAL, Front Reduction Drive Gear.>

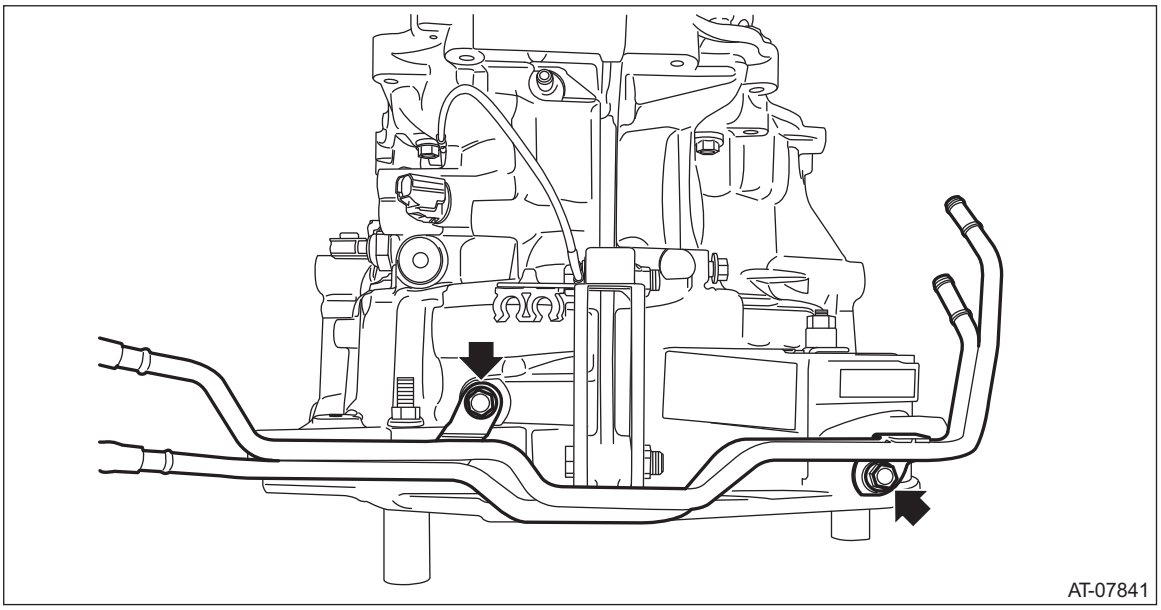
B: INSTALLATION

1) Install the front reduction drive gear and front reduction driven gear. <Ref. to CVT(TR690)-305, INSTALLATION, Front Reduction Drive Gear.>
2) Install the converter case cover. <Ref. to CVT(TR690)-298, INSTALLATION, Converter Case Cover.>
3) Install the oil pump chain cover and the oil pump chain. <Ref. to CVT(TR690)-289, INSTALLATION, Oil Pump Chain.>
4) Install the front differential assembly. <Ref. to CVT(TR690)-269, INSTALLATION, Front Differential Assembly.>
5) Install the drive pinion shaft assembly. <Ref. to CVT(TR690)-249, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the primary pulley, secondary pulley and variator chain. <Ref. to CVT(TR690)-235, INSTALLATION, Primary Pulley and Secondary Pulley.>
7) Install the transmission case. <Ref. to CVT(TR690)-214, REMOVAL, Transmission Case.>
8) Install the forward clutch assembly. <Ref. to CVT(TR690)-184, INSTALLATION, Forward Clutch Assembly.>
9) Install the intermediate case. <Ref. to CVT(TR690)-169, INSTALLATION, Intermediate Case.>
10) Install the transfer reduction driven gear. <Ref. to CVT(TR690)-161, INSTALLATION, Transfer Reduction Driven Gear.>
11) Install the center differential carrier. <Ref. to CVT(TR690)-157, INSTALLATION, Center Differential Carrier.>
12) Install the transfer clutch assembly. <Ref. to CVT(TR690)-154, INSTALLATION, Transfer Clutch.>
13) Install the rear drive shaft. <Ref. to CVT(TR690)-149, INSTALLATION, Rear Drive Shaft.>

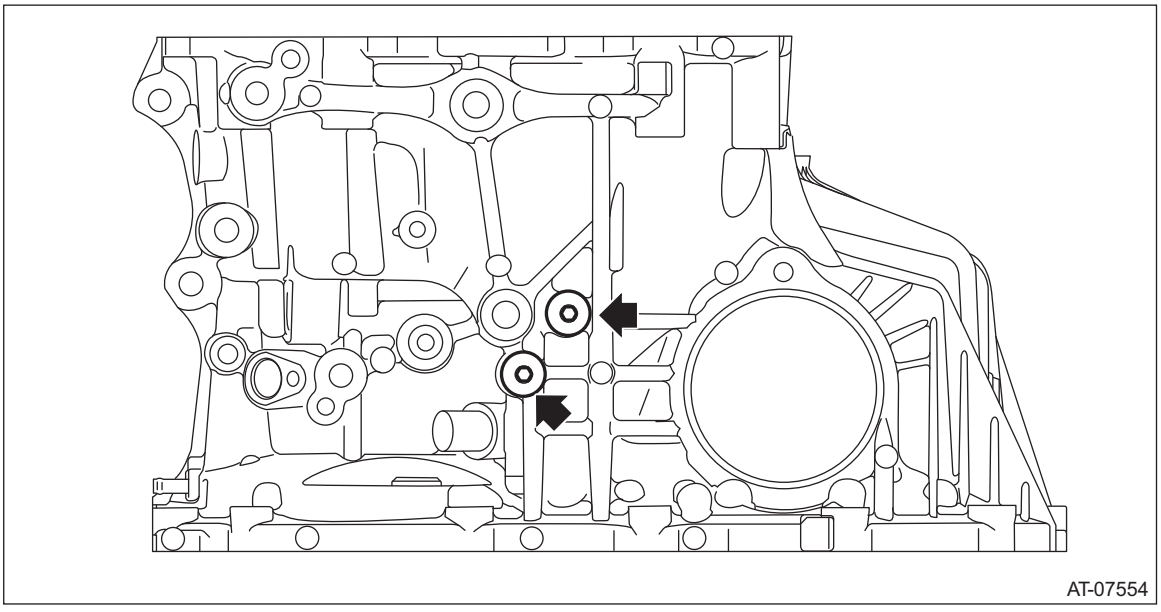
14) Install the extension case. <Ref. to CVT(TR690)-145, INSTALLATION, Extension Case.>
15) Install the primary speed sensor. <Ref. to CVT(TR690)-105, INSTALLATION, Primary Speed Sensor.>
16) Install the secondary pressure sensor. <Ref. to CVT(TR690)-113, INSTALLATION, Secondary Pressure Sensor.>
17) Install the transmission harness. <Ref. to CVT(TR690)-126, INSTALLATION, Transmission Harness.>
18) Install the control valve body and oil pan. <Ref. to CVT(TR690)-119, INSTALLATION, Control Valve Body.>
19) Install the air breather hose. <Ref. to CVT(TR690)-138, INSTALLATION, Air Breather Hose.>
20) Install the transmission assembly to the vehicle. <Ref. to CVT(TR690)-69, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the CVTF cooler pipe COMPL.



2) Remove the pitching stopper bracket and transmission radio ground cord, if mounted.
3) Remove the oil drain plug and overflow drain plug. <Ref. to CVT(TR690)-41, REPLACEMENT, Differential Gear Oil.>
4) Remove all plugs.



D: ASSEMBLY

1) Install the oil drain plug.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

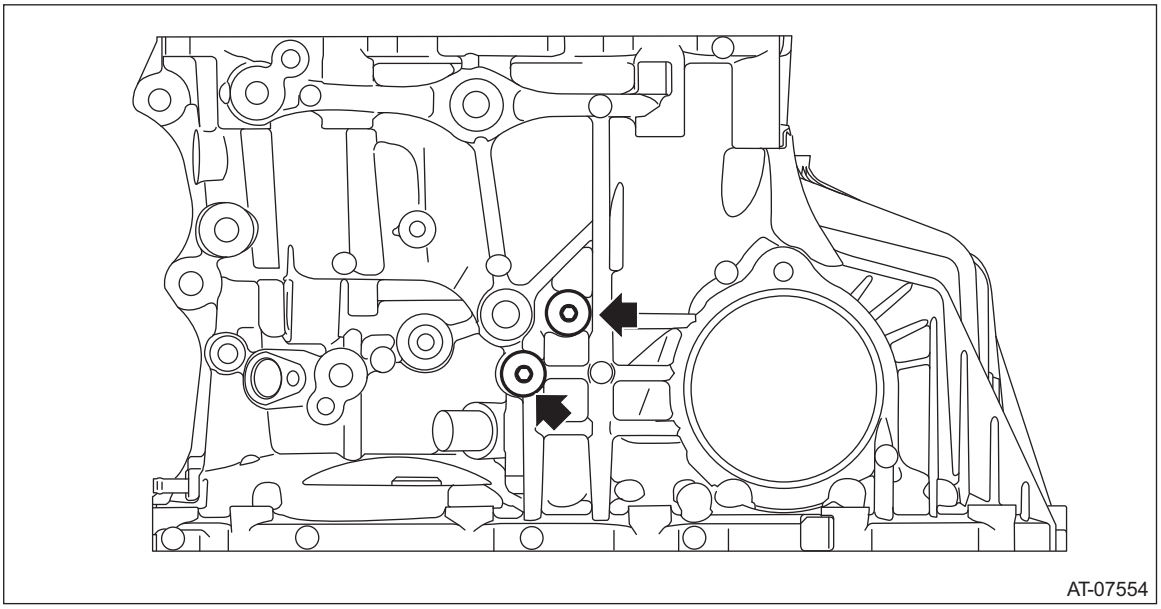
2) Temporarily install the overflow drain plug.

NOTE:
Replace the gasket of overflow drain plug with a new part after installing the transmission assembly to vehicle and adjusting differential gear oil.

3) Install all plugs.

NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



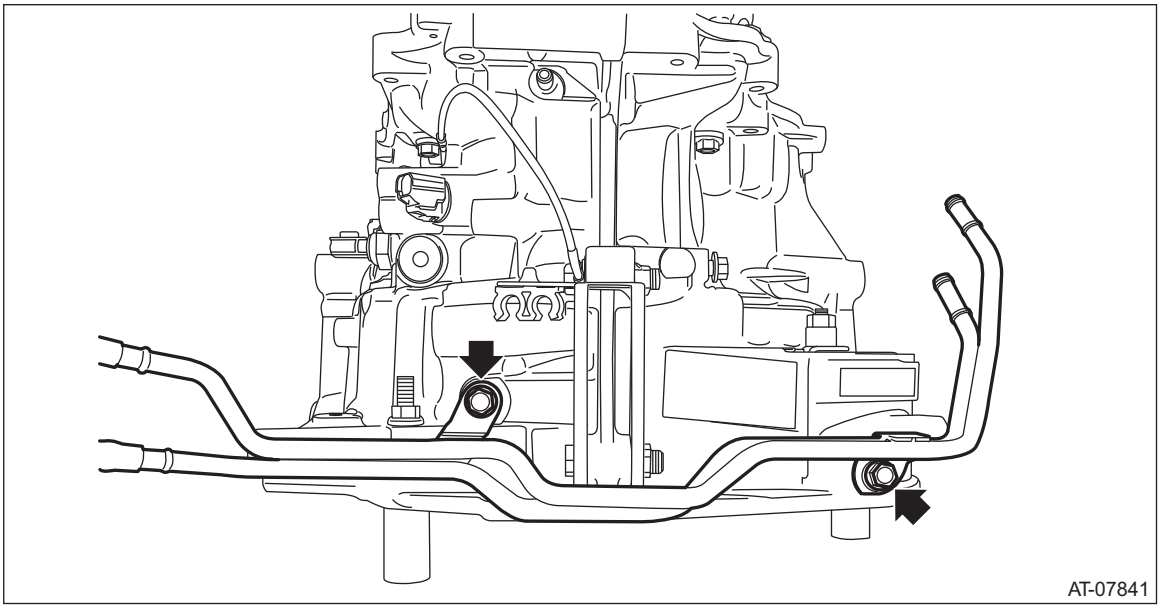
4) Install the pitching stopper bracket and transmission radio ground cord.

CAUTION:
Be careful not to deform or damage the terminal of transmission radio ground cord.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

5) Install the CVTF cooler pipe COMPL.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



E: INSPECTION

- Check for leakage of CVTF from the connection between converter case and transmission case.
- Check there is no damage or cracks on the converter case.

F: ADJUSTMENT

When replacing the converter case, select the following shims.

- Select the shim for front reduction drive gear. <Ref. to CVT(TR690)-310, ADJUSTMENT, Front Reduction Drive Gear.>
- Select the shim for front reduction driven gear. <Ref. to CVT(TR690)-317, ADJUSTMENT, Front Reduction Driven Gear.>
- Select shims for primary pulley. <Ref. to CVT(TR690)-241, ADJUSTMENT, Primary Pulley and Secondary Pulley.>

51.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Stall speed is low after warming-up, with select lever in “D” or “R” range.	Engine control system
Vehicle does not move despite engine speed rising up, with select lever in “D” or “R” range.	• Engine control system • Select cable • CVTF • Secondary pressure circuit • Pulley, gear and variator chain • Forward/reverse changeover section • TCM • Control valve body • Inhibitor switch
Vehicle does not move by engine stall, with select lever in “D” or “R” range.	• Parking mechanism • Select cable • Bearing • Forward/reverse changeover section
Excessive shock occurs at starting, with select lever in “D” or “R” range.	• Secondary pressure circuit • Pulley, gear and variator chain
Acceleration speed from standstill is insufficient, with select lever in “D” or “R” range.	• Control valve body • Forward/reverse changeover section
Engine speed suddenly rises up during driving, with select lever in “D” or “R” range.	• Control valve body • Secondary pressure circuit • Primary pressure circuit
Vibration occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Forward/reverse changeover section • Pulley and variator chain • Torque converter assembly • Hydraulic pressure circuit to torque converter • Control valve body
Sudden braking occurs during driving, with select lever in “D” or “R” range.	• Secondary pressure circuit • Primary pressure circuit • Control valve body
During deceleration, lockup clutch does not disengage until just before halting, with select lever in “D” or “R” range.	• Control valve body • Torque converter assembly
Engine stalls with vehicle at a standstill, with select lever in “D” or “R” range.	• Engine control system • Control valve body
Excessive lockup shock occurs during driving, with select lever in “D” range.	Control valve body
Slipping occurs at lockup, or lockup does not occur during driving, with select lever in “D” range.	• Control valve body • Lockup hydraulic line • Torque converter assembly
Excessive shift shock occurs when shifting the select lever from “N” range to “D” range, or from “N” range to “R” range.	• Inhibitor switch • Control valve body • Forward/reverse changeover section
Vehicle does not keep at standstill with select lever in “P” range, or parking cannot be released when shifting from “P” range to another range.	• Select cable • Parking mechanism
Select lever does not shift smoothly.	• Select cable • Inhibitor switch • Detent spring • Manual plate

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to CVT(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the following items which might affect CVT problems. • General inspection <Ref. to CVT(diag)-5, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness damage • Oil leakage • Stall speed test <Ref. to CVT(TR690)-46, Stall Test.> • Secondary pressure test <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.> • Transfer clutch pressure test <Ref. to CVT(TR690)-52, Transfer Clutch Pressure Test.> • Time lag test <Ref. to CVT(TR690)-48, Time Lag Test.> • Road test <Ref. to CVT(TR690)-44, Road Test.> • Inhibitor switch <Ref. to CVT(TR690)-93, Inhibitor Switch.>	Is the check result OK?	Go to step **2**.	Repair the items which may be affecting the CVT trouble.
2	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON and wait for at least 2 seconds.	Does the AT OIL TEMP light illuminate?	Go to step **3**.	Check the AT OIL TEMP light.
3	**CHECK AT OIL TEMP LIGHT.** Start the engine and wait for 2 seconds or more.	Does the AT OIL TEMP light blink?	Go to step **4**.	Go to step **5**.
4	**CHECK DTC DISPLAY.** Read the DTC. NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to CVT(diag)-32, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **6**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **5**.

	Step	Check	Yes	No
5	**PERFORM GENERAL DIAGNOSTICS.** 1) Inspect using “Diagnostic Procedure without Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-173, Diagnostic Procedure without Diagnostic Trouble Code (DTC).> 2) Inspect using “Diagnostics with Phenomenon”. <Ref. to CVT(diag)-174, Diagnostics with Phenomenon.> 3) Perform the Inspection Mode. <Ref. to CVT(diag)-20, Inspection Mode.> 4) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Go to step **6**.	Finish the diagnosis.
6	**PERFORM DIAGNOSIS.** 1) Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-40, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: For the DTC table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-35, List of Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Perform the Inspection Mode. <Ref. to CVT(diag)-20, Inspection Mode.> 5) Read the DTC.	Is DTC displayed on Subaru Select Monitor?	Inspect by referring to “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-40, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer reading	km (miles)		
Frequency	❑ Continuous ❑ Intermittent (times/day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
AT OIL TEMP light	❑ Blinks continuously	❑ Does not blink	
Select lever position	❑ P ❑ R ❑ N ❑ D ❑ Manual mode		
Driving condition	❑ Not affected ❑ At racing ❑ While decelerating	❑ At starting ❑ While accelerating ❑ While turning (❑ RH/❑ LH)	❑ While idling ❑ When cruising (Vehicle speed km/h) ❑ Immediately after starting the engine
Manual mode	❑ ON ❑ OFF		
Symptoms	❑ Vehicle does not move (❑ Any position ❑ Particular position)		
	❑ Vehicle does not move (no load racing condition as in N range)		
	❑ Vehicle does not move (engine speed does not increase, felt as stall condition)		
	❑ Noise or vibration (Describe concretely:)		
	❑ Shock felt at N → D selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shock felt at N → R selection (seconds after shifting, when engine cold or after warm-up)		
	❑ Shifting is wrong (Describe concretely:)		
	❑ Shock or judder during driving		
	❑ Fails to accelerate.		
	❑ Engine speed increases abruptly during driving		
	❑ Shock or judder during standing start		
	❑ Select lever does not move		
	❑ Other ( )		

3. General Description

A: CAUTION

1) The airbag system wiring harness is routed near the TCM.

CAUTION:
• All the airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

2) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal because it deforms inside which may lead to malfunction.

CAUTION:
If a taper pin or the like has been inserted into the connector terminal, replace the connector.

3) The TCM connector is waterproof. When measuring the TCM connector terminal voltage, or the resistance between the terminals, use the ST.
ST 18460AA040 CHECK BOARD

B: INSPECTION

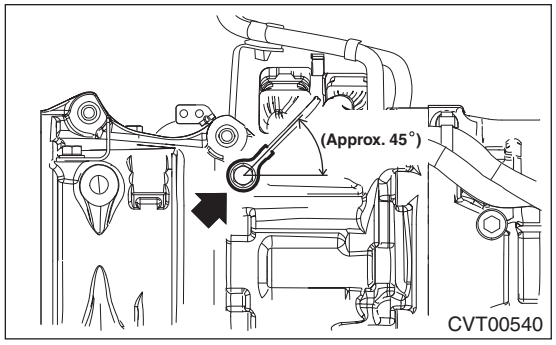
1. BATTERY

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>

2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



3. OPERATION OF SELECT LEVER

Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:
Stop the engine while checking operation of the select lever.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18460AA040	18460AA040	CHECK BOARD	Used for measuring voltage and resistance of TCM terminals.

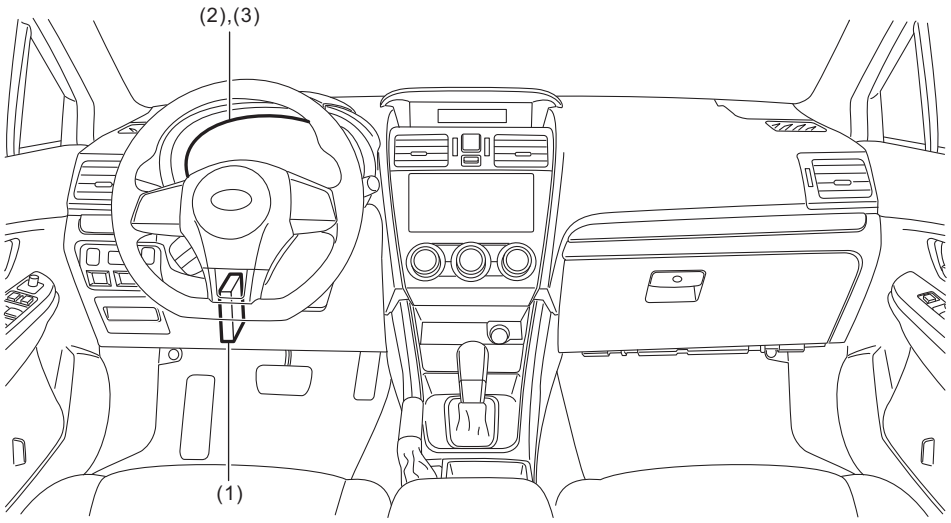
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

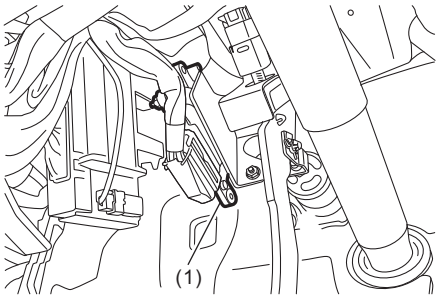
A: LOCATION

1. CONTROL MODULE

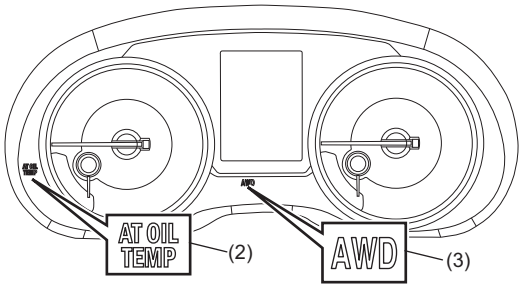


CVT00536

(1) Transmission control module (TCM)
(2) AWD light
(3) AT OIL TEMP light

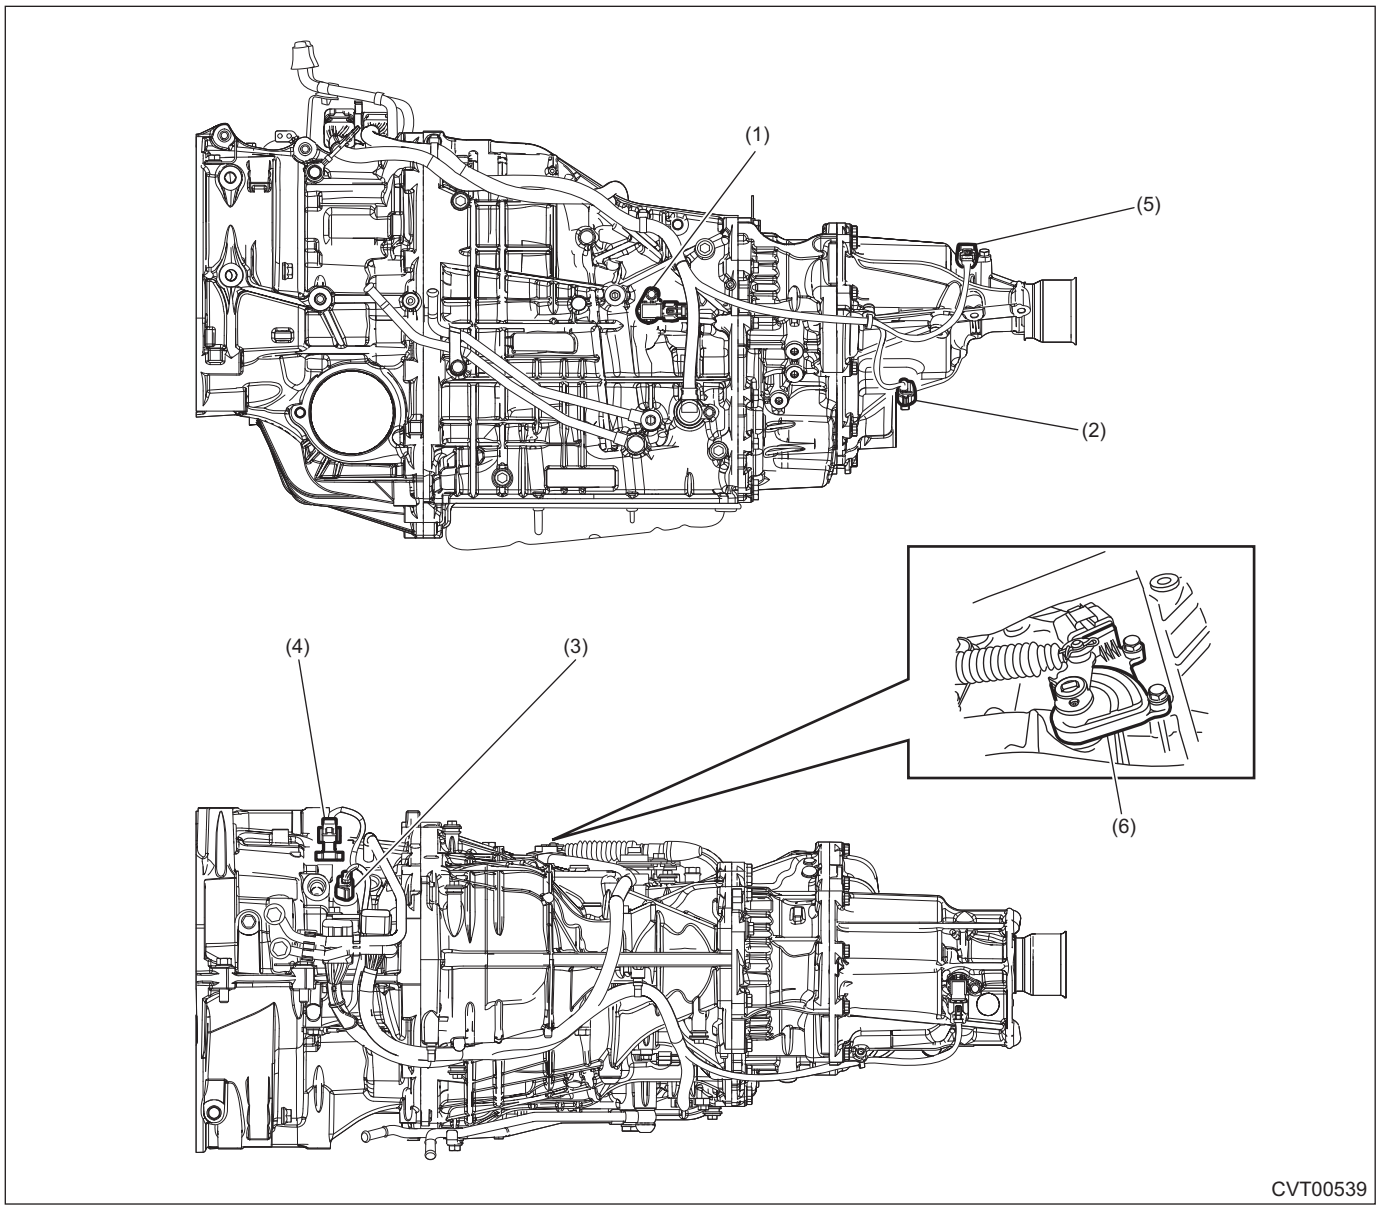


CVT01447



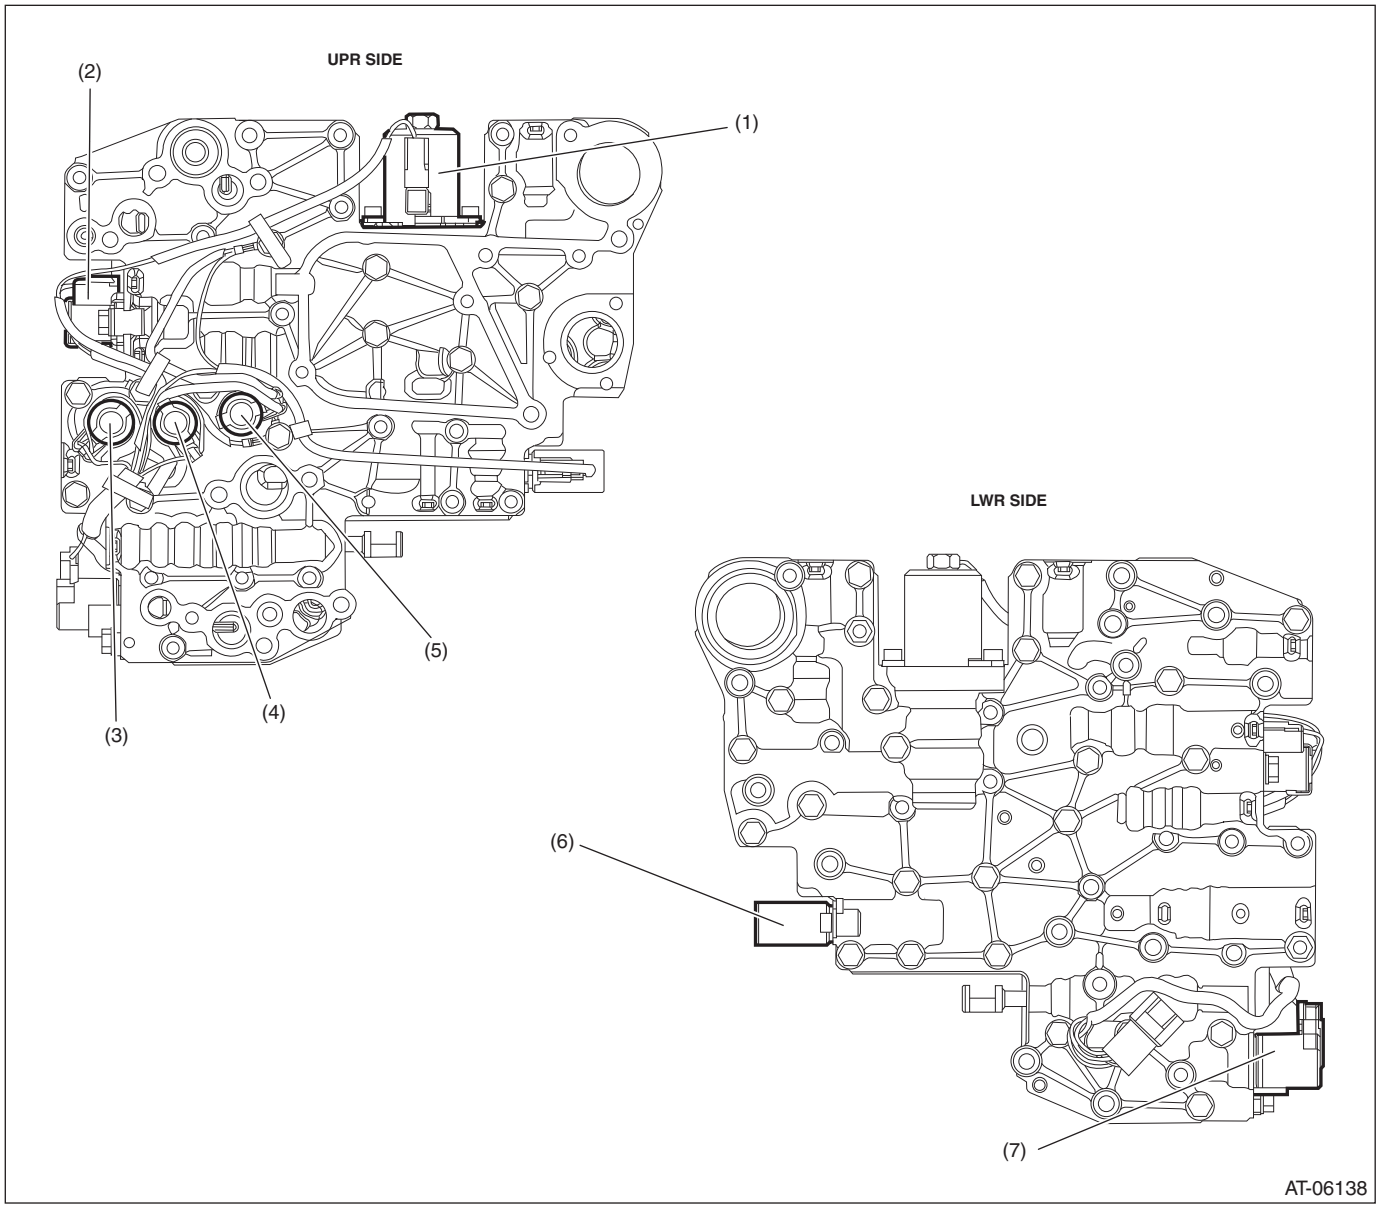
CVT00552

2. SENSOR



(1) Secondary speed sensor
(2) Front wheel speed sensor
(3) Primary speed sensor
(4) Secondary pressure sensor
(5) Rear wheel speed sensor
(6) Inhibitor switch

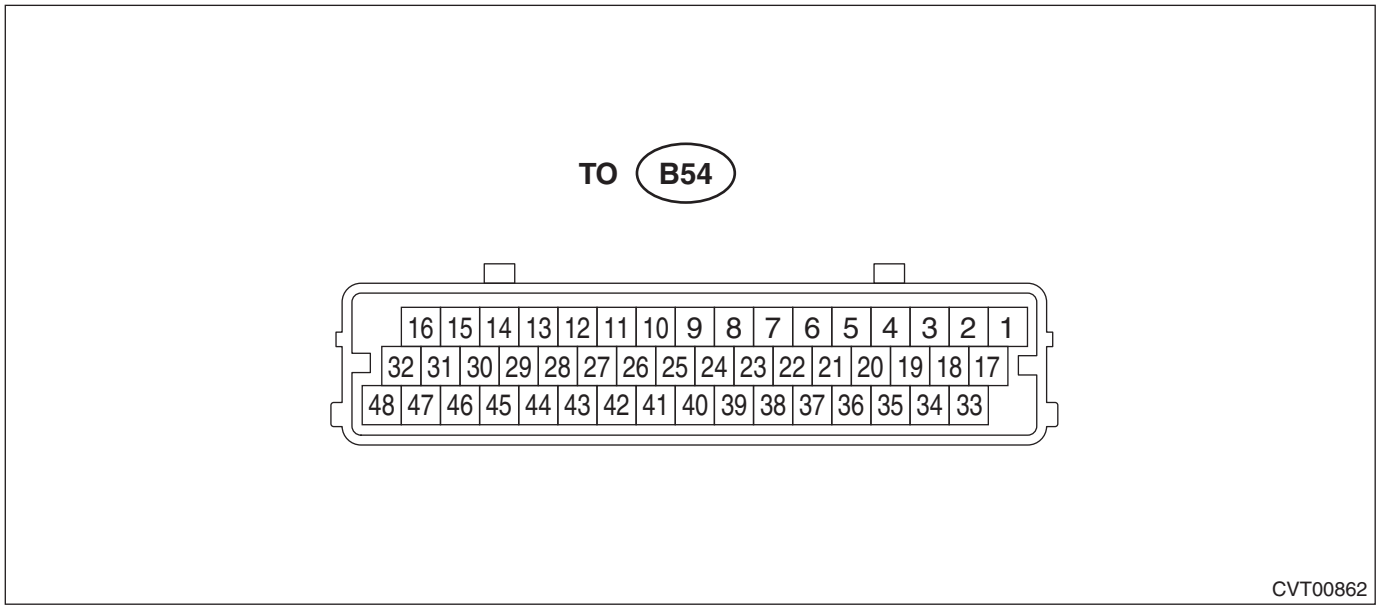
3. SOLENOID



(1) Secondary solenoid
(2) AWD solenoid
(3) Lock-up duty solenoid
(4) Primary DOWN solenoid
(5) Primary UP solenoid
(6) F&R solenoid
(7) Lock-up ON/OFF solenoid

5. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION



NOTE:
Measure after warming up.

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
Backup power supply	34	—	10 — 13 V	—	
Ignition power supply	41	—	10 — 13 V	—	
Main power supply	8	—	10 — 13 V	—	
Main power supply	24	—	10 — 13 V	—	
Main power supply	40	—	10 — 13 V	—	
Manual mode switch	20	Manual mode switch ON	Less than 1 V	—	
		Manual mode switch OFF	8 V or more	—	
Manual mode UP switch	19	Manual mode UP switch ON	Less than 1 V	—	
		Manual mode UP switch OFF	8 V or more	—	
Manual mode DOWN switch	18	Manual mode DOWN switch ON	Less than 1 V	—	
		Manual mode DOWN switch OFF	8 V or more	—	
Stop light switch	29	Stop light switch ON	8 V or more	—	
		Stop light switch OFF	Less than 1 V	—	
P range switch	38	P range	Less than 1 V	—	
		Except for P range	8 V or more	—	
R range switch	37	R range	Less than 1 V	—	
		Except for R range	8 V or more	—	
N range switch	36	N range	Less than 1 V	—	
		Except for N range	8 V or more	—	
D range switch	35	D range	Less than 1 V	—	
		Except for D range	8 V or more	—	

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
ATF temperature sensor	6	ATF temperature at 20°C (68°F)	Approx. 2.6 V	Approx. 2.6 kΩ	
		ATF temperature at 80°C (176°F)	Approx. 0.7 V	Approx. 370 Ω	
ATF temperature sensor GND	1	Always	Approx. 0 V	—	
Secondary pressure sensor power supply output	33	Ignition switch ON	5 V	—	
Secondary pressure sensor	5	Ignition switch ON, engine OFF	Approx. 0.5 V (0 MPa)	—	Value increases with increase of engine load. (0.5 — 4.5 V)
		Ignition switch ON, engine ON	Approx. 1.0 V (1.0 MPa)	—	
Secondary pressure sensor GND	2	Always	Approx. 0 V	—	
Primary speed sensor	14	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Secondary speed sensor	13	While driving	0 or 5 V	—	Refer to the waveform (sensor)
Front wheel speed sensor	12	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
Rear wheel speed sensor	11	Engine ON, “P” or “N” range	0 or 5 V	—	Refer to the waveform (sensor)
Self shut output	25	For three seconds after ignition switch ON and OFF	Less than 1 V	—	
		Ignition switch OFF	8 V or more		
F&R solenoid	16	Engine ON	Refer to the waveform (solenoid (1))	Approx. 4 — 6 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Secondary solenoid	32	Engine ON	Refer to the waveform (solenoid (2))	Approx. 5 — 7 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary UP solenoid	47	Engine ON, while UP shifting	Refer to the waveform (solenoid (3))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Primary DOWN solenoid	30	Engine ON, while DOWN shifting	Refer to the waveform (solenoid (4))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
Lock-up duty solenoid	15	Lock-up ON	Refer to the waveform (solenoid (5))	Approx. 10 — 13.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
AWD solenoid	48	Engine ON, “P” or “N” range	Refer to the waveform (solenoid (6))	Approx. 2 — 4.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		Engine ON, “D” range, brake ON	Refer to the waveform (solenoid (7))		

Item	Terminal No.	Measuring condition	Measurement value	Resistance between terminal and chassis ground	Remarks
Lock-up ON/OFF solenoid	31	With lock-up OFF	Less than 1 V	Approx. 13 — 18.5 Ω	Resistance value at 20°C (68°F). Value is higher as the temperature increase.
		With lock-up ON and in "R" range	Battery voltage or higher		
CAN communication line (+)	43	—	—	—	
CAN communication line (–)	44	—	—	—	
GND	26	Always	Approx. 0 V	—	
GND	42	Always	Approx. 0 V	—

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «Data Monitor».

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signal. TCM input value.	rpm
Turbine Revolution Speed	Turbine rotation speed which is based on the primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor, and is accelerated by the reduction gear ratio.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
Rear Wheel Speed	Rear wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
ATF Temperature	Value calculated from the ATF temperature sensor output value. ATF temperature of the oil pan section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Lock-Up ON/OFF Solenoid	Lock-up ON/OFF solenoid drive signal. Set to ON at a lockup condition. TCM output value.	ON or OFF
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Front Wheel Speed	Front wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Rear Wheel Speed	Rear wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Stop Light Switch	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%

Display	Contents	Unit of measure
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
SI Drive mode(Display)	Currently selected SI-DRIVE mode, which is transmitted from meter. Determined by the SI-DRIVE SW operation. TCM input value.	I, S or S#
SI Drive mode(Control)	Current SI-DRIVE mode in ECM control, which is transmitted from the ECM. Determined by adjusting the mode determined by the SI-DRIVE SW operation inside the ECM. TCM input value.	I, S or S#
Shift Step in Manual Mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
AT learning	AT initial learning completion status. AT oil temperature warning light blinks at 4 Hz when the learning is not completed. TCM output value.	Complete or Not Completed
Ignition SW ON Count	Number of times the ignition switch is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition switch.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

NOTE:
For detailed operation procedures, refer to “Application help”.

3. READ FREEZE FRAME DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».

5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents	Unit of measure
Engine Speed	Engine speed signal transmitted from the ECM. Calculated from crankshaft position sensor signal. TCM input value.	rpm
Turbine Revolution Speed	Turbine rotation speed which is based on the primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor, and is accelerated by the reduction gear ratio.	rpm
Accel opening angle	Accelerator pedal opening angle transmitted from the ECM. Value calculated from the accelerator pedal position sensor output. TCM input value.	%
Front Wheel Speed	Front wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
Rear Wheel Speed	Rear wheel speed calculated from the forward/reverse clutch output axis rotation speed.	km/h or MPH
ATF Temperature	Value calculated from the ATF temperature sensor output value. ATF temperature of the oil pan section.	°C or °F
Lock Up Duty Ratio	Lock-up duty solenoid control duty ratio. TCM output value.	%
Lock-Up ON/OFF Solenoid	Lock-up ON/OFF solenoid drive signal. Set to ON at a lockup condition. TCM output value.	ON or OFF
Transfer Duty Ratio	Transfer duty solenoid control duty ratio. TCM output value.	%
Actual Gear Ratio	Current gear ratio (rotation ratio of the pulley) calculated from the primary pulley axis rotation speed and the secondary pulley axis rotation speed.	—
Primary Rev Speed	Primary pulley rotation speed calculated by the TCM using signals from the primary speed sensor.	rpm
Secondary Rev Speed	Secondary pulley rotation speed calculated by the TCM using signals from the secondary speed sensor.	rpm
Front Wheel Speed	Front wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Rear Wheel Speed	Rear wheel rotation speed calculated from the forward/reverse clutch output axis rotation speed.	rpm
Stop Light Switch	Stop light SW signal. Set to ON when the brake pedal is depressed. TCM input value.	ON or OFF
Secondary Set Current	Value of the indicator current for controlling the secondary solenoid calculated by the TCM.	mA
Secondary Actual Current	Actual current value of the secondary solenoid. TCM output value.	mA
F&R Linear Solenoid Set Current	Value of the indicator current for controlling the F&R linear solenoid calculated by the TCM.	mA
F&R Linear Solenoid Actual Current	Actual current value of the F&R linear solenoid. TCM output value.	mA
ECU ACC	Battery voltage. TCM input value.	V
Primary UP Duty	Primary UP solenoid control duty ratio. TCM output value.	%
Primary DOWN Duty	Primary DOWN solenoid control duty ratio. TCM output value.	%
P Range	Inhibitor SW signal. Set to ON when the select lever is in P range. TCM input value.	ON or OFF
R Range	Inhibitor SW signal. Set to ON when the select lever is in R range. TCM input value.	ON or OFF
N Range	Inhibitor SW signal. Set to ON when the select lever is in N range. TCM input value.	ON or OFF
D Range	Inhibitor SW signal. Set to ON when the select lever is in D range. TCM input value.	ON or OFF
SI Drive mode(Display)	Currently selected SI-DRIVE mode, which is transmitted from meter. Determined by the SI-DRIVE SW operation. TCM input value.	I, S or S#

Display	Contents	Unit of measure
SI Drive mode(Control)	Current SI-DRIVE mode in ECM control, which is transmitted from the ECM. Determined by adjusting the mode determined by the SI-DRIVE SW operation inside the ECM. TCM input value.	I, S or S#
Shift Step in Manual Mode	Gear shift position in manual mode or in multi-stage shifting mode. TCM output value.	—
Tiptronic Mode Switch	Manual mode SW signal. Set to ON when the select lever is in the manual shift gate. TCM input value.	ON or OFF
Up Switch	Status of the paddle shift up SW. Set to ON when the plus (+) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
Down Switch	Status of the paddle shift down SW. Set to ON when the minus (–) side of the steering wheel paddle shift is pulled. TCM input value.	ON or OFF
secondary pressure sensor voltage.	Voltage value after an analog/digital conversion is done inside the TCM using the signal input from the secondary pressure sensor. TCM input value.	V
ATF Temp sensor voltage.	Sensor voltage value input from the ATF temperature sensor to the TCM. TCM input value.	V
Diagnosis Lamp	Transmission failure detection status. Set to ON when a failure is detected. AT oil temperature warning light blinks at 2 Hz. TCM output value.	ON or OFF
ATF Temperature Lamp	ATF high temperature detection status. Set to ON when high temperature is detected. AT oil temperature warning light illuminates. TCM output value.	ON or OFF
Ignition SW ON Count	Number of times the ignition switch is turned ON since the vehicle was manufactured.	times
Count	Shows whether the elapsed time counter after turning ON the ignition switch is synchronized with the integrated unit (master unit) or an original counter. “Common” means the integrated unit, and “Originally” means that the original counter is used.	—
Time Count	Shows the elapsed time after turning ON the ignition switch.	ms
Actual Secondary Pressure	Pressure value applied to the secondary pulley cylinder (line pressure) detected by the secondary pressure sensor.	MPa
System Voltage	Power supply voltage supplied to the backup power supply (≈ battery voltage).	V

NOTE:
For detailed operation procedures, refer to “Application help”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «DTC».

NOTE:
• For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-35, List of Diagnostic Trouble Code (DTC).>
• For detailed operation procedures, refer to “Application help”.

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

<Ref. to CVT(TR690)-44, Road Test.>

10.Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to CVT(diag)-19, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P0601	Internal Control Module Memory Checksum Error	Perform the drive cycle A twice.
P0604	Internal Control Module Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P062F	Internal Control Module EEPROM Error	Perform the drive cycle A twice.
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low	—
P0842	Transmission Fluid Pressure Sensor/Switch "A" Circuit Low	—
P0843	Transmission Fluid Pressure Sensor/Switch "A" Circuit High	—
P0890	TCM Power Relay Sense Circuit Low	—
P0962	Pressure Control Solenoid "A" Control Circuit Low	—
P0963	Pressure Control Solenoid "A" Control Circuit High	—
P0966	Pressure Control Solenoid "B" Control Circuit Low	—
P0967	Pressure Control Solenoid "B" Control Circuit High	—
P160A	Random Access Memory (RAM) Error	Perform the drive cycle A twice.
P2530	Ignition Switch Run Position Circuit	—
P2763	Torque Converter Clutch Pressure Control Solenoid Control Circuit High	Perform the drive cycle A, then perform the drive cycle C.

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”.

3. DRIVE CYCLE B

DTC	Item	Condition
P0711	Transmission Fluid Temperature Sensor "A" Circuit Range/Performance	—

Diagnostic procedure:
1) Start the engine under condition that ATF temperature is at 20°C (68°F) or below.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

NOTE:
Repeat two or more driving cycles in this driving pattern.

4. DRIVE CYCLE C

DTC	Item	Condition
P0500	Vehicle Speed Sensor "A" Circuit	—

DTC	Item	Condition
P0720	Output Shaft Speed Sensor Circuit	—
P0721	Output Shaft Speed Sensor Circuit Range/Performance	—
P0970	Pressure Control Solenoid "C" Control Circuit Low	—
P0971	Pressure Control Solenoid "C" Control Circuit High	—
P0973	Shift Solenoid "A" Control Circuit Low	—
P0974	Shift Solenoid "A" Control Circuit High	—
P0976	Shift Solenoid "B" Control Circuit Low	—
P0977	Shift Solenoid "B" Control Circuit High	—
P1706	Rear Output Shaft Speed Sensor Circuit No Signal	—
P170B	Rear Output Shaft Speed Sensor Circuit Range/Performance	—
P2158	Vehicle Speed Sensor "B" Circuit	—
P2746	Intermediate Shaft Speed Sensor "B" Circuit Range/Performance	—
P2747	Intermediate Shaft Speed Sensor "B" Circuit No Signal	—
P2750	Intermediate Shaft Speed Sensor "C" Circuit Range/Performance	—
P2751	Intermediate Shaft Speed Sensor "C" Circuit No Signal	—
P2763	Torque Converter Clutch Pressure Control Solenoid Control Circuit High	Perform the drive cycle A, then perform the drive cycle C.
P2764	Torque Converter Clutch Pressure Control Solenoid Control Circuit Low	—
P2769	Torque Converter Clutch Circuit Low	—
P2770	Torque Converter Clutch Circuit High	—

Diagnostic procedure:
1) Start the engine.
2) Accelerate slowly to a legal speed, and then decelerate slowly to a stop.

5. DRIVE CYCLE D

DTC	Item	Condition
P0713	Transmission Fluid Temperature Sensor "A" Circuit High	—
P0730	Incorrect Gear Ratio	—
P0746	Pressure Control Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0747	Pressure Control Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0751	Shift Solenoid "A" Performance/Stuck Off	Perform the drive cycle D twice.
P0752	Shift Solenoid "A" Stuck On	Perform the drive cycle D twice.
P0756	Shift Solenoid "B" Performance/Stuck Off	Perform the drive cycle D twice.
P0757	Shift Solenoid "B" Stuck On	Perform the drive cycle D twice.
P0776	Pressure Control Solenoid "B" Performance/Stuck Off	Perform the drive cycle D twice.
P0841	Transmission Fluid Pressure Sensor/Switch "A" Circuit Range/Performance	—
P0961	Pressure Control Solenoid "A" Control Circuit Range/Performance	—
P0965	Pressure Control Solenoid "B" Control Circuit Range/Performance	—
P2757	Torque Converter Clutch Pressure Control Solenoid Control Circuit Performance/Stuck Off	Perform the drive cycle D twice.
P2758	Torque Converter Clutch Pressure Control Solenoid Control Circuit Stuck On	Perform the drive cycle D twice.

Diagnostic procedure:
1) Start the engine.
2) Drive in any driving pattern for 20 minutes. (Include driving at a constant legal speed (for 20 seconds) at least once.)

6. DRIVE CYCLE E

DTC	Item	Condition
P0801	Reverse Inhibit Control Circuit/Open	—
U0073	Control Module Communication Bus Off	—

DTC	Item	Condition
U0100	Lost Communication With ECM/PCM “A”	—
U0122	Lost Communication With Vehicle Dynamics Control Module	—
U0140	Lost Communication With Body Control Module	—
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	—
U0164	Lost Communication With HVAC Control Module	—
U0401	Invalid Data Received From ECM/PCM “A”	—
U0416	Invalid Data Received From Vehicle Dynamics Control Module	—
U0422	Invalid Data Received From Body Control Module	—
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	—
U0424	Invalid Data Received From HVAC Control Module	—
U1235	Lost Communication With EyeSight	—
U1433	Invalid Data Received From EyeSight	—

Diagnostic procedure:
1) Start the engine.

7. DRIVE CYCLE F

DTC	Item	Condition
P0705	Transmission Range Sensor "A" Circuit (PRNDL Input)	—

Diagnostic procedure:
1) Start the engine.
2) Depress the brake pedal and move the select lever to each range at an interval of five seconds.

NOTE:
Move the select lever in the following order: “P” → “R” → “N” → “D”.
3) Maintain the engine speed to 2,000 rpm for five seconds or more.

8. DRIVE CYCLE G

DTC	Item	Condition
P0708	Transmission Range Sensor "A" Circuit High	—

Diagnostic procedure:
1) Start the engine.
2) Drive for three seconds at 16 km/h (10 MPH).

NOTE:
Drive in “D” range and “R” range.

9. DRIVE CYCLE H

DTC	Item	Condition
P0719	Brake Switch "B" Circuit Low	—
P0724	Brake Switch "B" Circuit High	—
P0951	Auto Shift Manual Control Circuit Range/Performance	—

Diagnostic procedure:
1) Start the engine.
2) Operate the stop light switch or the manual mode switch.

NOTE:
Drive in “D” range and “R” range.
3) Read the data of the stop light switch or the manual mode switch using the Subaru Select Monitor. Or measure the terminal voltage.

11.Active Test

A: OPERATION

CAUTION:
- **Be sure to perform the active test while the engine is not running.**
- **After executing the active test, execute the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.>**

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «Active Test».

Item	SSM display	Execution condition
Activating the actuator ON/OFF	F&R Clutch Solenoid	When all of the following conditions are met: • P range • Ignition switch is ON (engine stops) • Battery voltage is 10.9 V or more
	Secondary Solenoid	
	Primary Down Solenoid	
	Primary Up Solenoid	
	AWD Solenoid	
	Lock-Up Duty Solenoid	
	Lock-Up ON/OFF Solenoid	

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Learning Control

A: GENERAL DESCRIPTION

- Follow the messages displayed on the Subaru Select Monitor when working.
- When the following work is performed, perform learning work for the transmission.

Replacement of TCM/Replacement or disassembly of transmission assembly/Replacement of control valve body/Clearing AT leaning value is executed.

B: PROCEDURE

1. PREPARATION FOR LEARNING

1) Warm up or cool down until the ATF temperature displayed on the Subaru Select Monitor is 40 — 65°C (104 — 149°F).
2) After stopping the vehicle, shift the select lever to “P” range.
3) Apply the parking brake.
4) Lift up the vehicle.

CAUTION:
While working, be sure to keep the lower edge of the tires 30 cm or more above the ground as vehicle will vibrate.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON.
7) Turn off all switches causing an electrical load, such as headlights, A/C, seat heater and rear defogger, etc.

2. SIMPLE LEARNING

NOTE:
Simple learning is performed with the vehicle lifted, without actually running the vehicle.

CAUTION:
Do not turn the power of the Subaru Select Monitor OFF during work, and do not disconnect the data link connector.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Transmission Control System».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «AT learning mode».
7) Follow the messages displayed on the screen when working.

NOTE:
During AT learning in progress, AT OIL TEMP light in the combination meter starts flashing at 2 Hz and the learning operation starts. When the AT OIL TEMP light which was flashing at 2 Hz goes off, the following message is displayed on the screen.
8) When «AT learning normally ended.» is displayed, simple AT learning is completed.

NOTE:
- If communication error occurs during learning, retry the “AT learning mode” from the beginning.
- If the message «Execute AT learning again after fixing troubles of the vehicle» appears during learning, select [OK] and display the DTC list. After repairing the locations indicated by the DTC, start the “AT learning mode” over from the beginning.
- When communication error occurs during learning, select lever does not shift occasionally. If select lever does not shift, turn the ignition switch to OFF before operating the select lever.

• If the message «AT learning ended abnormally. Try again from the beginning.» is displayed, start the “AT learning mode” over from the beginning.

Display	Main causes for abnormal termination
AT learning ended abnormally. Try again from the beginning.	• Fault is detected during AT learning. • The accelerator pedal is depressed during AT learning. • An unspecified operation was performed during AT learning • ATF temperature becomes out of specification during AT learning. • Battery voltage is low. • Malfunction indicator light illuminates. • Parking brake is not applied hard enough. • Brake pedal is not fully depressed. • Abnormal idle speed increase, etc.

• For detailed operation procedures, refer to “PC application help for Subaru Select Monitor”.

13.AT OIL TEMP Warning Light Display

A: OPERATION

The AT OIL TEMP light illuminates or blinks, when the ATF temperature is high and malfunction occurs in CVT.

- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When ATF temperature is high

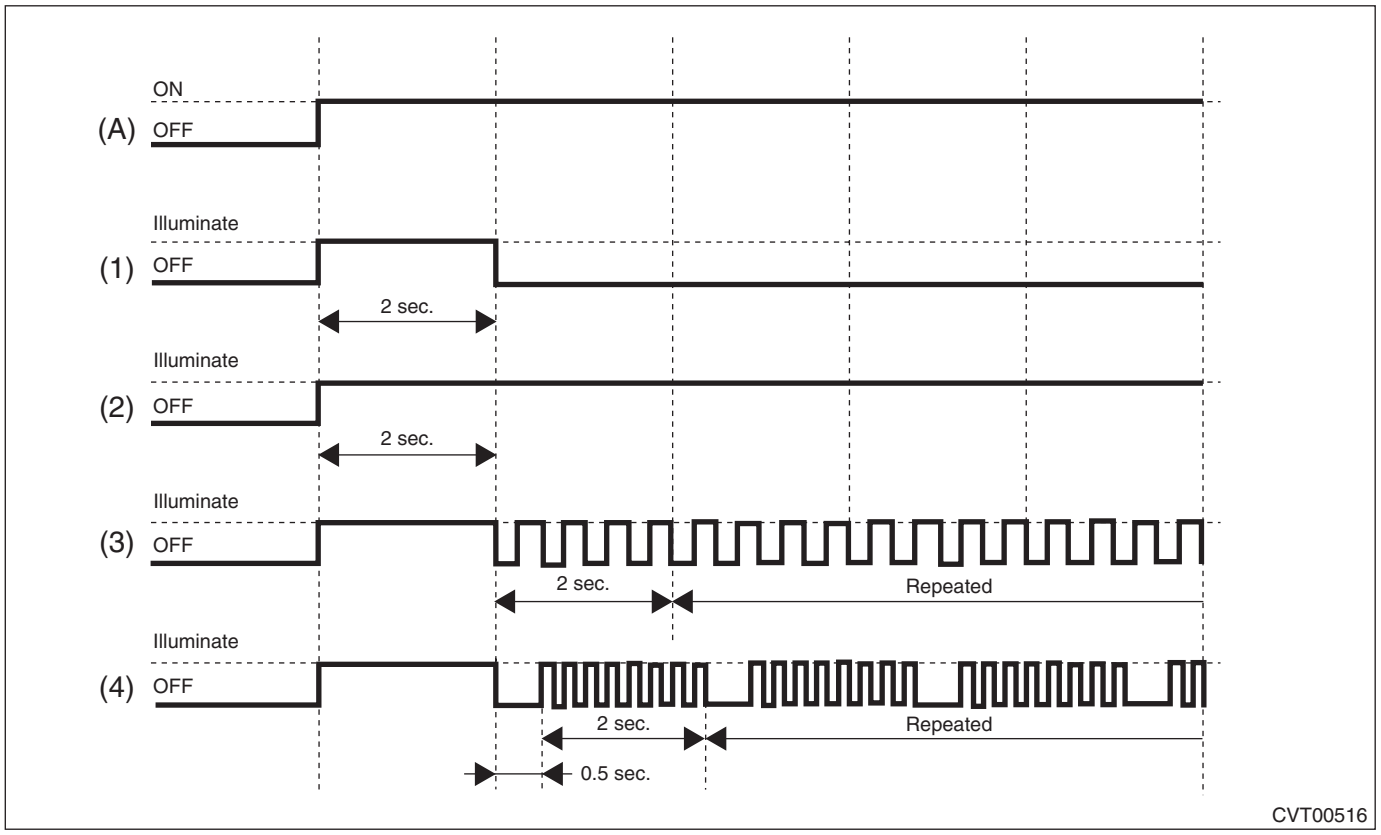
AT OIL TEMP light illuminates when the ATF temperature is abnormally high with the ignition switch ON.

- When malfunction is detected

AT OIL TEMP light blinks at 2 Hz when the TCM detects the malfunction of CVT with the ignition switch ON. In this case, inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to CVT(diag)-40, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

- When AT learning is not finished

AT OIL TEMP light repeats “Blinking at 4 Hz → Turning OFF” every two seconds, when the AT learning is not completed with the ignition switch ON. In this case, perform the “Learning”. (During AT learning, the light blinks at 2 Hz or illuminates.) <Ref. to CVT(diag)-25, Learning Control.>



(A) Ignition switch condition

(1) At normal condition
(2) When ATF temperature is high
(3) When malfunction is detected
(4) When AT learning is not finished

If the AT OIL TEMP light does not illuminate, or illumination patterns are not as above, check the AT OIL TEMP light circuit. <Ref. to CVT(diag)-28, INSPECTION, AT OIL TEMP Warning Light Display.>

B: INSPECTION

Diagnosis:
- CAN communication is lost with the combination meter.
- Combination meter malfunction
- TCM is in special control mode.
- AT learning is not finished.

Trouble symptom:
- When the ignition switch is turned to ON, the AT OIL TEMP light does not illuminate.
- AT OIL TEMP light remains lit after engine start.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK AT OIL TEMP LIGHT.** Turn the ignition switch to ON.	Does AT OIL TEMP light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AT OIL TEMP LIGHT.** Start the engine.	Does the AT OIL TEMP light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK TCM.** Read the data of «ATF Temperature Lamp» using the Subaru Select Monitor.	Is “ON” displayed?	Go to step **8**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
8	**CHECK TCM.** Read the data of «ATF Temp.» using the Subaru Select Monitor.	Is the display 125°C or more?	Go to step **9**.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

	Step	Check	Yes	No
9	**CHECK ATF TEMPERATURE.** Check the real fluid temperature from the transmission case surface temperature.	Does it clearly differ from the «ATF Temp.» displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC P0712. If there is no problem, perform the diagnosis according to DTC P0713.	When ATF temperature can be judged as actually high, perform the diagnosis again after the ATF temperature lowers.

14.AWD Warning Light Display

A: OPERATION

AWD light blinks when a fault occurs in AWD.

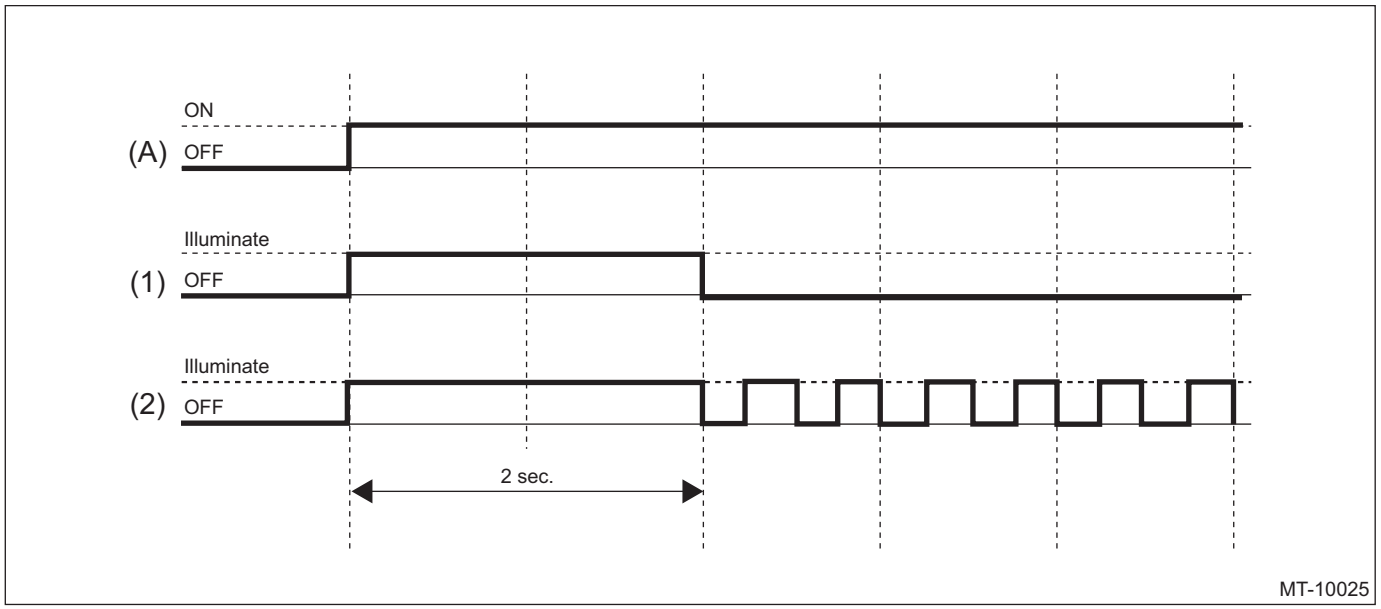
- At normal condition

After turning the ignition switch to ON, illuminates for 2 seconds then goes off.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed.
2. When air pressure of any of four tires is excessively low.



(A) Ignition switch condition

(1) At normal condition (2) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to CVT(diag)-30, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

Diagnosis:

- CAN communication is lost with the combination meter.
- Combination meter malfunction

Trouble symptom:

- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light remains lit after engine start.
- AWD light is blinking immediately after engine start.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate and then go off in 2 seconds?	Go to step **5**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
5	**CHECK AWD LIGHT.** Start the engine.	Does the AWD light go off?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Go to step **6**.
6	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **7**.
7	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

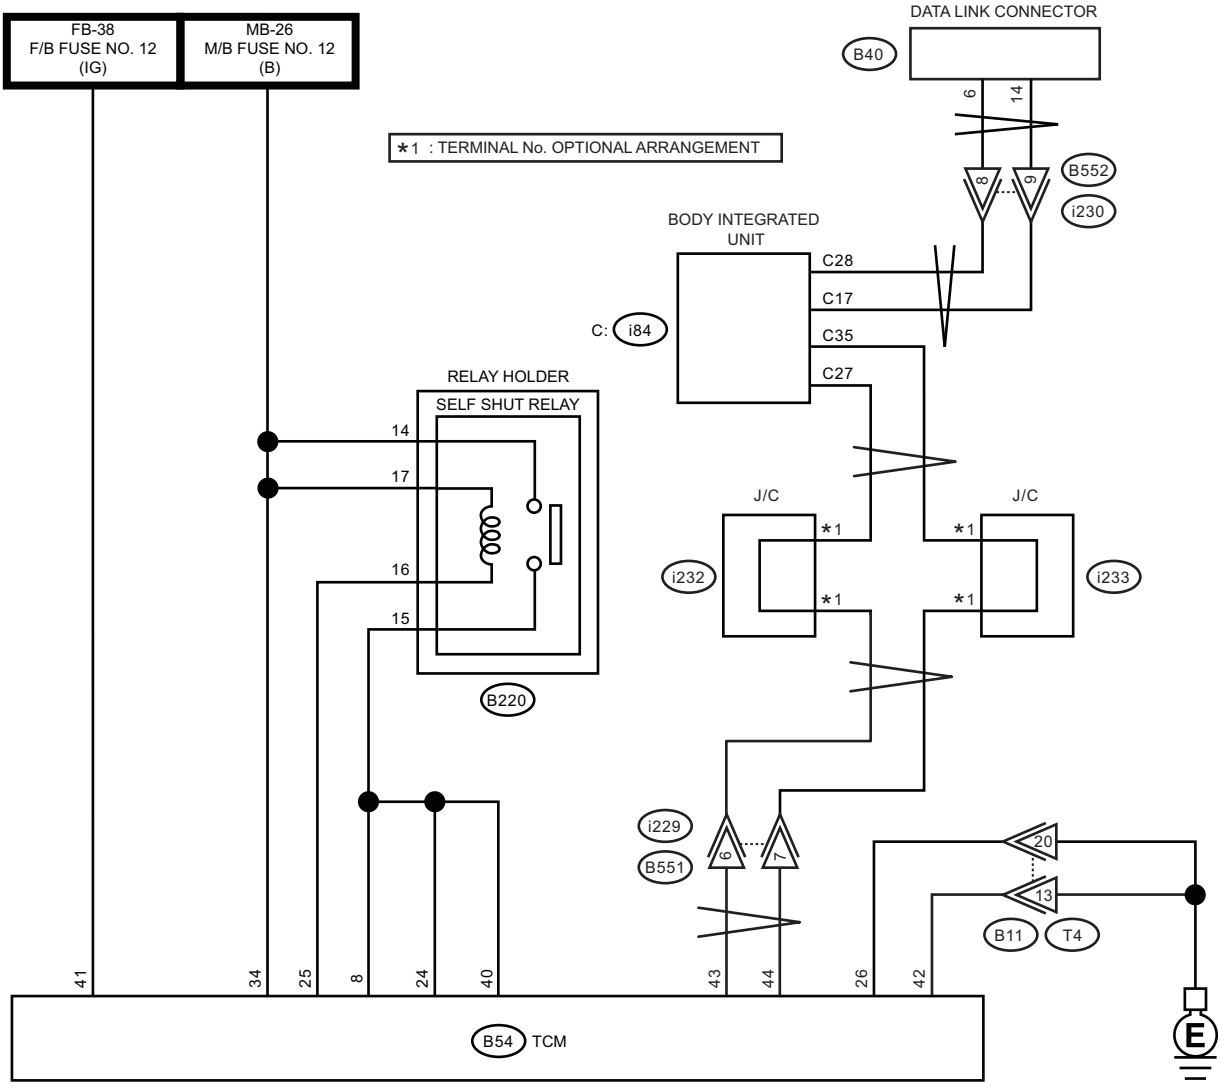
15.Diagnostic Procedure for Subaru Select Monitor Communication

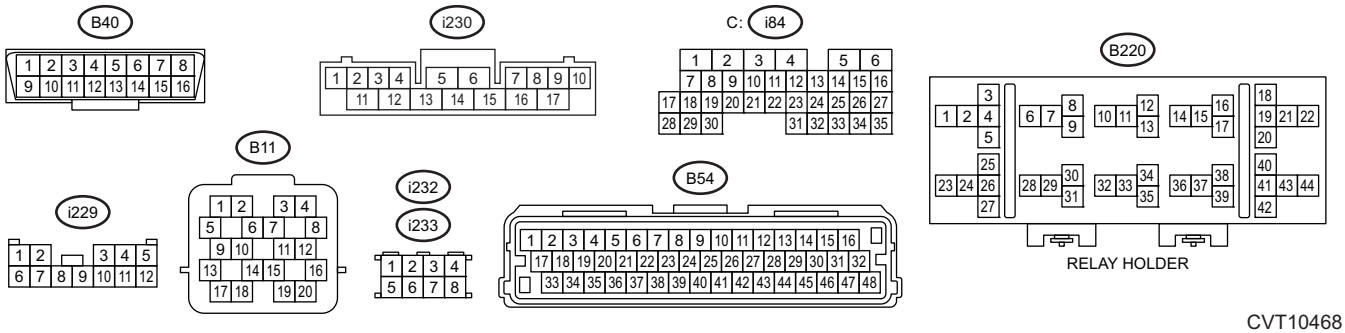
A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Defective harness connector
Trouble symptom:
Subaru Select Monitor communication failure

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:

CVT control system <Ref. to WI-139, CVT Control System.>





CVT10468

Step	Check	Yes	No
1 **CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the transmission using the Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF TCM CONNECTOR.** Turn the ignition switch to OFF.	Is the TCM connector inserted into the TCM until the clamp locks?	Go to step **5**.	Insert the TCM connector to TCM.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to transmission system can be executed normally.	Is «Select Function» displayed?	Check DTC of TCM. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. (Engine OFF) 4) Measure the ignition power supply voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 8 (+) — Chassis ground (–):*** ***(B54) No. 24 (+) — Chassis ground (–):*** ***(B54) No. 34 (+) — Chassis ground (–):*** ***(B54) No. 40 (+) — Chassis ground (–):*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit of harness between TCM and battery.
8	**CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 26 — Chassis ground:*** ***(B54) No. 42 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the TCM ground circuit and poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
P0500	Vehicle Speed Sensor "A" Circuit	Wheel speed data from VDC CM&H/U is abnormal.	<Ref. to CVT(diag)-40, DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0601	Internal Control Module Memory Checksum Error	TCM ROM is faulty.	<Ref. to CVT(diag)-41, DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal Control Module Random Access Memory (RAM) Error	TCM RAM is faulty.	<Ref. to CVT(diag)-42, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	Internal Control Module EEPROM Error	TCM EEPROM is faulty.	<Ref. to CVT(diag)-43, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	Transmission Range Sensor "A" Circuit (PRNDL Input)	Inhibitor switch malfunction or short circuit	<Ref. to CVT(diag)-44, DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0708	Transmission Range Sensor "A" Circuit High	Inhibitor switch malfunction or open circuit	<Ref. to CVT(diag)-46, DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0711	Transmission Fluid Temperature Sensor "A" Circuit Range/Performance	ATF temperature sensor is faulty or input signal circuit is faulty.	<Ref. to CVT(diag)-49, DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0712	Transmission Fluid Temperature Sensor "A" Circuit Low	ATF temperature sensor is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-51, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0713	Transmission Fluid Temperature Sensor "A" Circuit High	ATF temperature sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-53, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0719	Brake Switch "B" Circuit Low	Brake switch is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-56, DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	Output Shaft Speed Sensor Circuit	Front wheel speed sensor is faulty or input signal circuit is open or shorted.	<Ref. to CVT(diag)-58, DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0721	Output Shaft Speed Sensor Circuit Range/Performance	Front wheel speed sensor characteristics is abnormal.	<Ref. to CVT(diag)-62, DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0724	Brake Switch "B" Circuit High	Brake switch is faulty or input signal circuit is shorted.	<Ref. to CVT(diag)-63, DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0730	Incorrect Gear Ratio	Primary speed sensor, secondary speed sensor, control valve, or chain is faulty.	<Ref. to CVT(diag)-65, DTC P0730 INCORRECT GEAR RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
P0746	Pressure Control Solenoid "A" Performance/ Stuck Off	Secondary solenoid is faulty, hydraulic circuit is stuck in low pressure side.	<Ref. to CVT(diag)-67, DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
VDC does not operate.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from Vehicle dynamics control module NOTE: The Vehicle dynamics control module detects malfunction if one of the speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH	ON

Time needed for diagnosis: 2.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

B: DTC P0601 INTERNAL CONTROL MODULE MEMORY CHECKSUM ERROR

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
TCM ROM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0601 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in ROM area of the TCM.
- Judge as NG when the consistency in the ROM area is lost.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Checksum (ROM)	Error

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
TCM RAM malfunction

Step		Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Read the DTC.	Is DTC P0604 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction in RAM area of the TCM.
- Judge as NG if an attempt to write to RAM area failed.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM only used for CAN communication.	Error

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

D: DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
TCM EEPROM malfunction

Step		Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Read the DTC.	Is DTC P062F displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG if an attempt to write to EEPROM area failed.

Diagnosis 2
- Detect the malfunction in EEPROM area of the TCM.
- Judge as NG when the consistency in the EEPROM area is lost.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

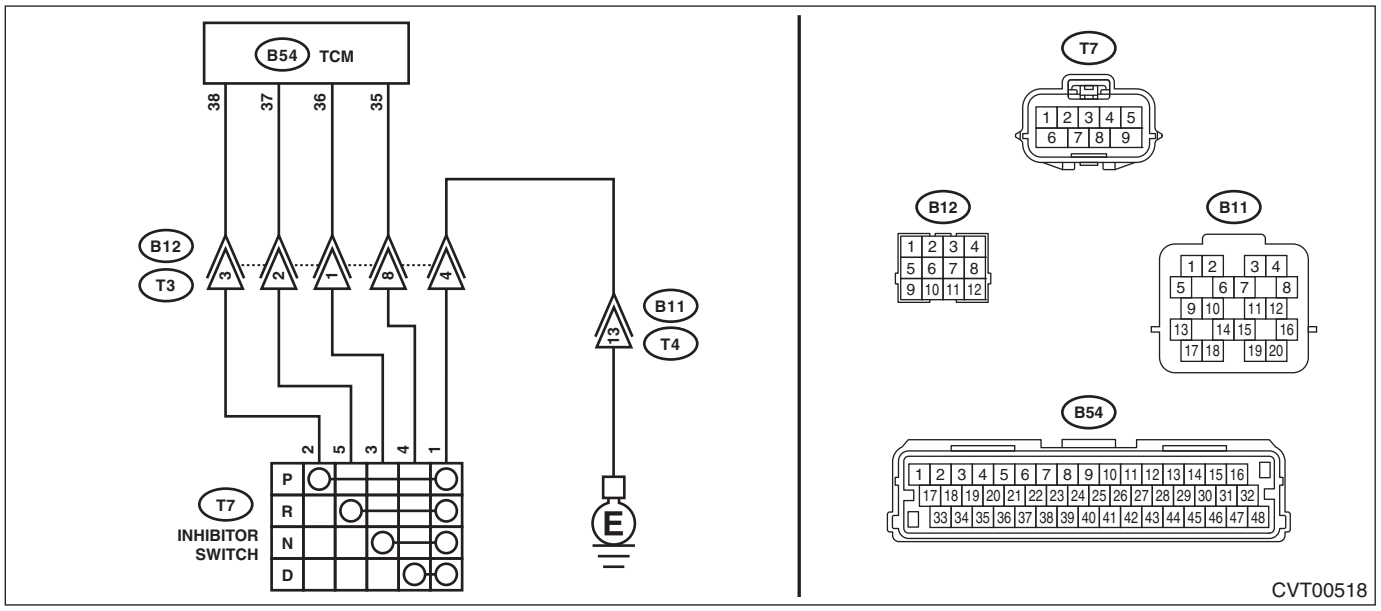
Malfunction Criteria	Threshold Value
Diagnosis 1	
Writing-check (EEPROM)	Error
Diagnosis 2	
Checksum (EEPROM)	Error

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

E: DTC P0705 TRANSMISSION RANGE SENSOR "A" CIRCUIT (PRNDL INPUT)

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is display “OFF” for the range other than corresponding range?	Go to step **5**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 38 — Chassis ground:*** ***(B54) No. 37 — Chassis ground:*** ***(B54) No. 36 — Chassis ground:*** ***(B54) No. 35 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of body harness.
3	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 3 — Chassis ground:*** ***(T3) No. 2 — Chassis ground:*** ***(T3) No. 1 — Chassis ground:*** ***(T3) No. 8 — Chassis ground:***	Is each resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of transmission harness.

	Step	Check	Yes	No
4	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Terminals*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance other than corresponding range 1 MΩ or more?	Go to step **5**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>
5	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if more than one input of Range Switch are detected.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

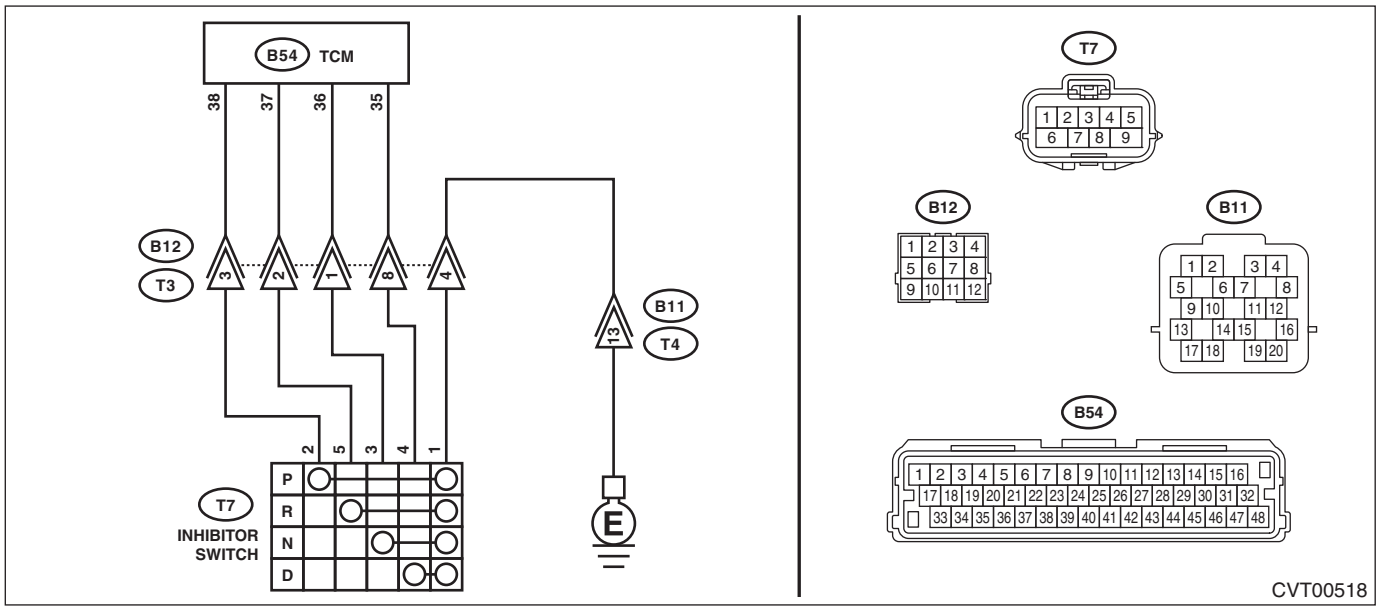
Malfunction Criteria	Threshold Value
Two or more transmission range switches ON NOTE: "Transmission range switch ON" is defined as transmission range switch input voltage < 1.7 V.	True

Time needed for diagnosis: 3 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

F: DTC P0708 TRANSMISSION RANGE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shift characteristics are erroneous.
- The range position of the select lever and the position of shift indicator display do not match.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Move the select lever to each range, and read the data of «P Range», «R Range Signal», «N Range» and «D Range Signal» using the Subaru Select Monitor.	Is the display of the corresponding range “ON”?	Go to step **7**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance of harness between TCM connector and transmission connector. ***Connector & terminal*** ***(B54) No. 38 — (B12) No. 3:*** ***(B54) No. 37 — (B12) No. 2:*** ***(B54) No. 36 — (B12) No. 1:*** ***(B54) No. 35 — (B12) No. 8:***	Is each resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK HARNESS.** Measure the resistance of harness between inhibitor switch connector and transmission ground. ***Connector & terminal*** ***(T7) No. 1 — Transmission ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the inhibitor switch connector. 2) Measure the resistance between transmission connector and inhibitor switch connector. ***Connector & terminal*** ***(T3) No. 3 — (T7) No. 2:*** ***(T3) No. 2 — (T7) No. 5:*** ***(T3) No. 1 — (T7) No. 3:*** ***(T3) No. 8 — (T7) No. 4:***	Is each resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of transmission harness.
5	**CHECK INHIBITOR SWITCH.** Move the select lever to each range, and measure the resistance between inhibitor switch terminals. ***Terminals*** ***No. 2 — No. 1:*** ***No. 5 — No. 1:*** ***No. 3 — No. 1:*** ***No. 4 — No. 1:***	Is the resistance of the corresponding range less than 1 MΩ?	Go to step **6**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>
6	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between each connector and chassis ground. ***Connector & terminal*** ***Transmission connector (B12 side)*** ***(B12) No. 3 (+) — Chassis ground (–):*** ***(B12) No. 2 (+) — Chassis ground (–):*** ***(B12) No. 1 (+) — Chassis ground (–):*** ***(B12) No. 8 (+) — Chassis ground (–):*** ***Transmission connector (T7 side)*** ***(T7) No. 2 (+) — Chassis ground (–):*** ***(T7) No. 5 (+) — Chassis ground (–):*** ***(T7) No. 3 (+) — Chassis ground (–):*** ***(T7) No. 4 (+) — Chassis ground (–):***	Is each voltage less than 1 V?	Go to step **7**.	Repair the harness which outputs 1 V or more.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact between TCM, inhibitor switch, transmission ground?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of Range Switch.
- Judge as NG if there is no input from all Range Switches.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from measured output shaft speed * sensor)	≥ 6 MPH

* Measured output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543: Center differential gear ratio

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
All transmission range switches OFF NOTE: "Transmission range switch OFF" is defined as transmission range switch input voltage ≥ 3.4 V.	True

Time needed for diagnosis: 3 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

G: DTC P0711 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

NOTE:
For the diagnostic procedure, perform the diagnosis according to DTC P0712 and P0713. <Ref. to CVT(diag)-51, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CVT(diag)-53, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Judge the malfunction of the transmission oil temperature sensor characteristics (stuck to low temperature side).
- Judge as NG if the amount of oil temperature change since ignition ON is equal to or below the predetermined value.

Diagnosis 2
- Judge the malfunction of the transmission oil temperature sensor characteristics (stuck to high temperature side).
- Judge as NG when the difference between engine coolant temperature and CVT oil temperature is equal to or more than specified value at starting.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage (The timer is held when the following conditions are not satisfied.)	≥ 10 V
Transmission range	Drive
Vehicle speed (calculated from measured output shaft speed * sensor)	≥ 21.9 MPH
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Soak time (received from ECM)	≥ 21600 s
(Engine speed	≥ 400 rpm
for time)	≥ 300 s

* Measured output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543: Center differential gear ratio

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Absolute change of measured Transmission fluid temperature sensor input voltage	< 0.049 V
Transmission fluid temperature	< 20 degC

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 2 Transmission fluid temperature – ECT at engine start	> 18 degC

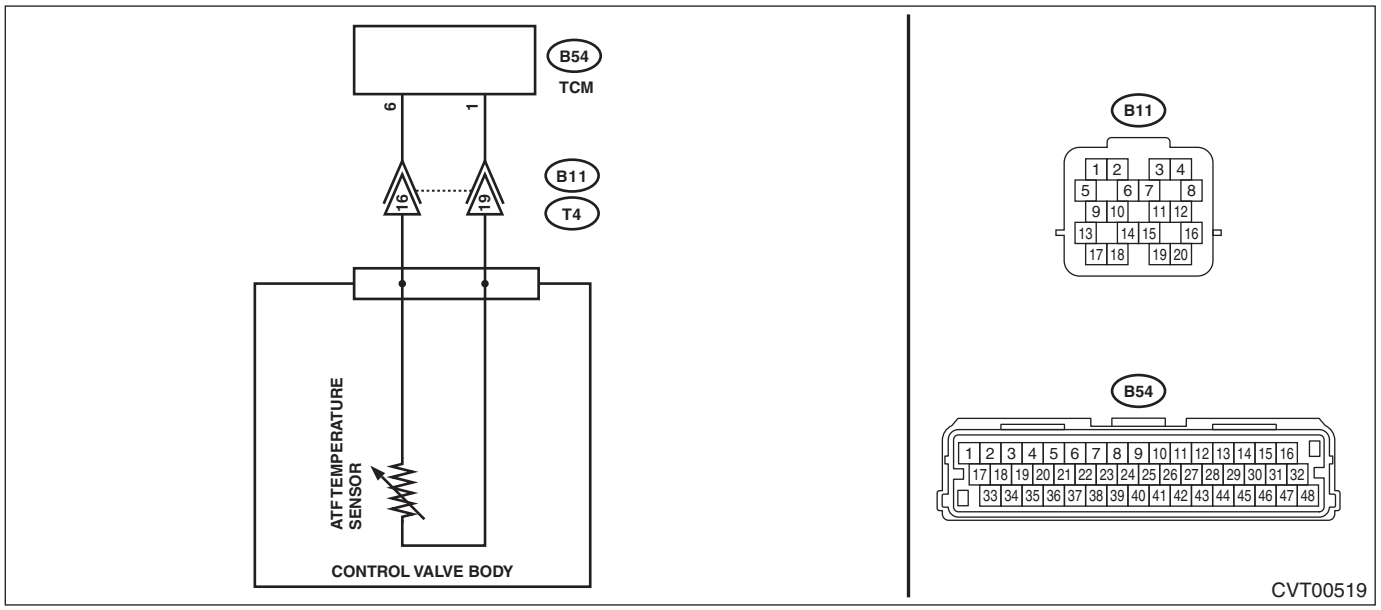
Time needed for diagnosis:
- **Diagnosis 1:** 600 s
- **Diagnosis 2:** Immediately

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

H: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Measure the resistance of harness between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 1 — Chassis ground:*** ***(B54) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the transmission connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 16 — Transmission body:*** ***(T4) No. 19 — Transmission body:***	Is the resistance 1 MΩ or more?	Repair the short circuit of body harness.	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal (T4) No. 16 — No. 19:*** NOTE: Perform the measurements using multiple oil temperatures.	Is resistance as follows? Fluid temperature 0°C → Approx. 6.2 kΩ Fluid temperature 20°C → Approx. 2.6 kΩ Fluid temperature 80°C → Approx. 370 Ω	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of transmission oil temperature sensor.
- Judge as NG if the voltage detected by the transmission oil temperature sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

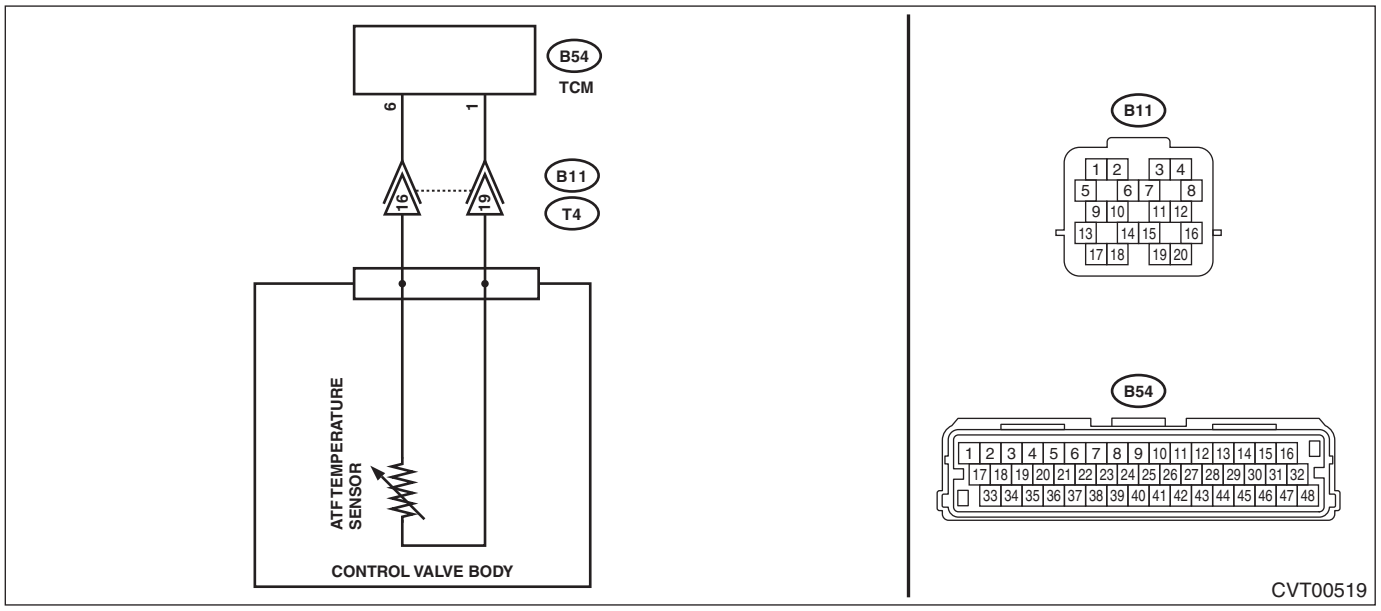
Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage	< 0.132 V
(Transmission fluid temperature)	(> 150 degC)

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

I: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Excessive shift shock
- Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 6 (+) — (B54) No. 1 (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 6 — (B11) No. 16:*** ***(B54) No. 1 — (B11) No. 19:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of body harness.
3	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 16 — No. 19:***	Is the resistance 1 MΩ or more?	Repair the open circuit of transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ATF TEMPERATURE SENSOR.** 1) Connect all connectors. 2) Start the engine. 3) Warm up until the ATF temperature exceeds 50°C (122°F). 4) Turn the ignition switch to OFF. 5) Disconnect the transmission connector. 6) Measure the resistance between transmission connector terminals. ***Connector & terminal (T4) No. 16 — No. 19:***	Is the resistance 730 — 1120 Ω?	Go to step **5**.	Go to step **7**.
5	**CHECK ATF TEMPERATURE SENSOR.** Measure the resistance between transmission connector terminals. ***Connector & terminal (T4) No. 16 — No. 19:***	Does the resistance value increase gradually while the ATF temperature decreases?	Go to step **6**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the connector to transmission. 2) Turn the ignition switch to ON. (Do not start engine.) 3) Read the data of «ATF Temp.» using the Subaru Select Monitor.	Does the ATF temperature gradually decrease?	Check for poor contact of the ATF temperature sensor and transmission connector harness, and repair the defective part.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of ATF temperature sensor circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission oil temperature sensor 5 V system.
- Judge as NG if the voltage detected by the transmission oil temperature sensor is higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Vehicle speed (calculated from measured output shaft speed * sensor)	≥ 6.3 MPH
Above condition satisfied for	≥ 50 s

* Measured output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543: Center differential gear ratio

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured Transmission fluid temperature sensor input voltage	> 4.502 V
(Transmission fluid temperature)	(< – 53 degC)

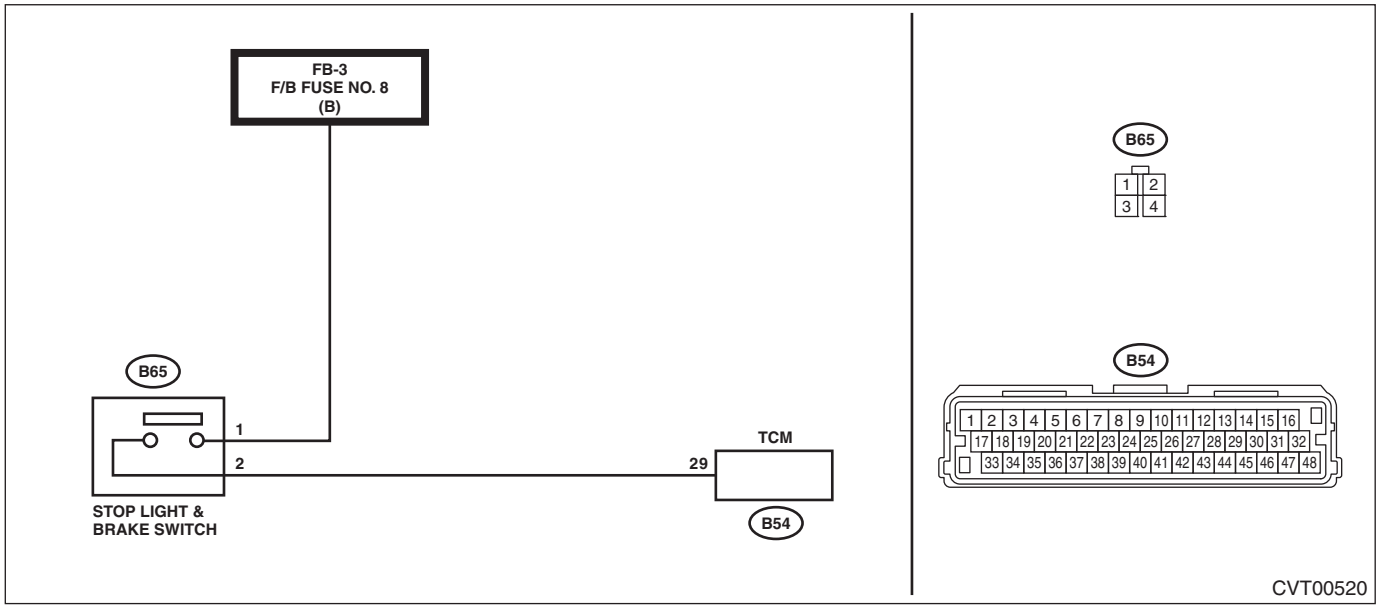
Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

J: DTC P0719 BRAKE SWITCH "B" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not shifted down when climbing a hill or driving down a hill.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
Stop light system <Ref. to WI-346, Stop Light System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 8). 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse (No. 8). If the new fuse (No. 8) has blown out easily, repair the short circuit of harness between fuse (No. 8) and stop light switch.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the stop light switch connector. 4) Measure the resistance between TCM connector and stop light switch connector. ***Connector & terminal*** ***(B54) No. 29 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between the stop light switch connector and fuse (No. 8). ***Connector & terminal*** ***(B65) No. 1 — fuse (No. 8):***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Install the fuse (No. 8). 2) Connect the stop light switch connector. 3) Depress the brake pedal. 4) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) With brake pedal depressed, read the data of «Stop Light Switch» using Subaru Select Monitor.	Is "ON" displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **6**.
6	**CHECK FOR POOR CONTACT.**	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect no input from the brake signal.
- Judge as NG if a predetermined number of deceleration occurs while the cruise control is set to OFF and the brake is OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

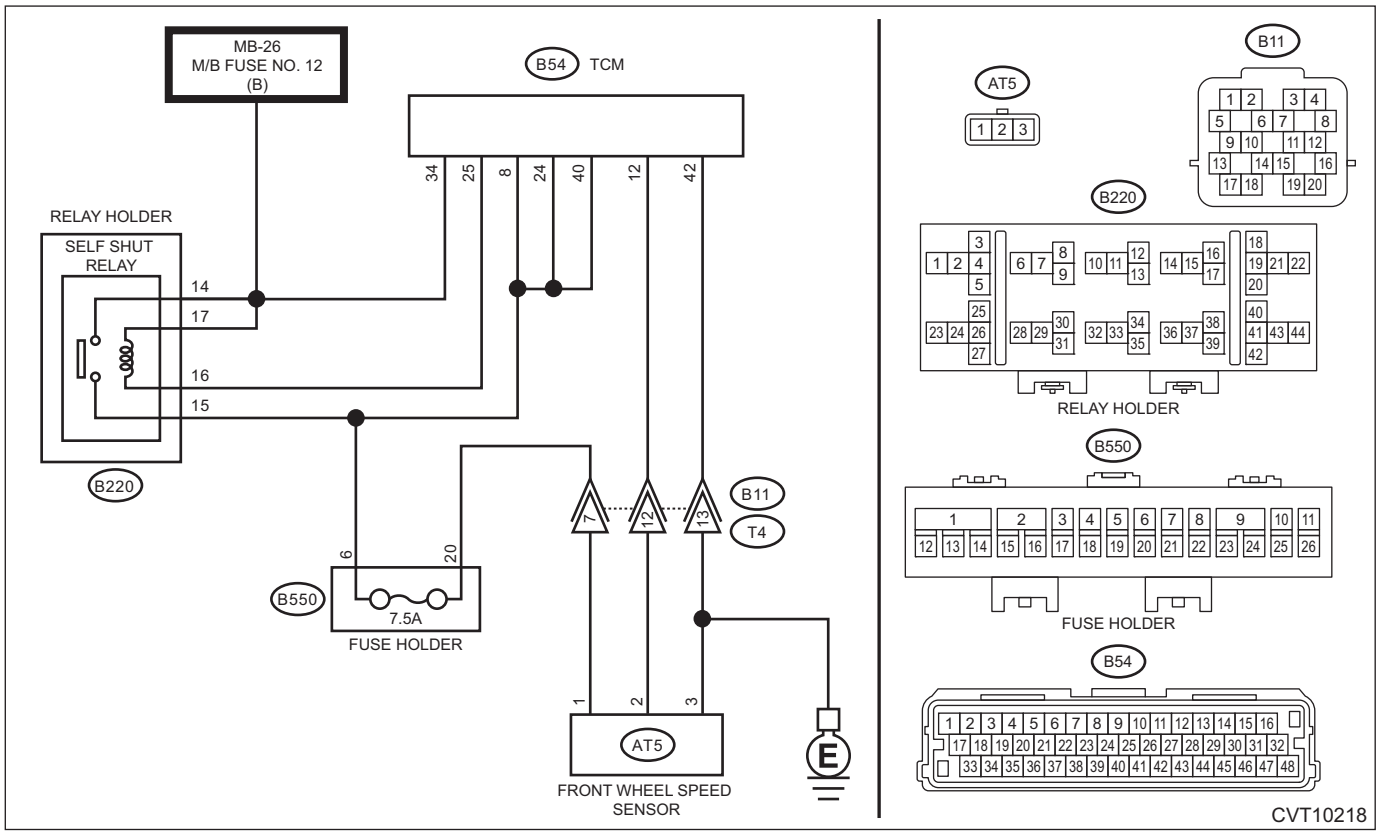
Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 30 km/h to 1 km/h while the brake SW is OFF	> 10 count

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

K: DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shock occurs when selecting shift position.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between relay holder and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 12 — (B11) No. 12:*** ***(B54) No. 42 — (B11) No. 13:*** ***(B550) No. 20 — (B11) No. 7:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between relay holder and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 7 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Front Wheel Speed» using Subaru Select Monitor.	Does the value of «Front Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of front wheel speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the front wheel speed sensor connector. 4) Measure the resistance between transmission connector and front wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 7 — (AT5) No. 1:*** ***(T4) No. 12 — (AT5) No. 2:*** ***(T4) No. 13 — (AT5) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK FRONT WHEEL SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 7 — Chassis ground:*** ***(T4) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK FRONT WHEEL SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the front wheel speed sensor. <Ref. to CVT(TR690)-108, Front Wheel Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Go to step **16**.	The original front wheel speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0720 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect no input signal from the front wheel speed sensor.
- Judge as NG if there is no output from the front wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from wheel speed sensor)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured front output shaft speed	0 rpm

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

L: DTC P0721 OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0721, is DTC P1706 or P0500 displayed?	Perform the diagnosis according to DTCs other than P0721.	Perform the diagnosis according to DTC P0720. <Ref. to CVT(diag)-58, DTC P0720 OUTPUT SHAFT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of front wheel speed sensor characteristics.
- Judge as NG when the deviation between vehicle speed from VDC and front wheel speed sensor becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from wheel speed sensor)	≥ 12 MPH

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

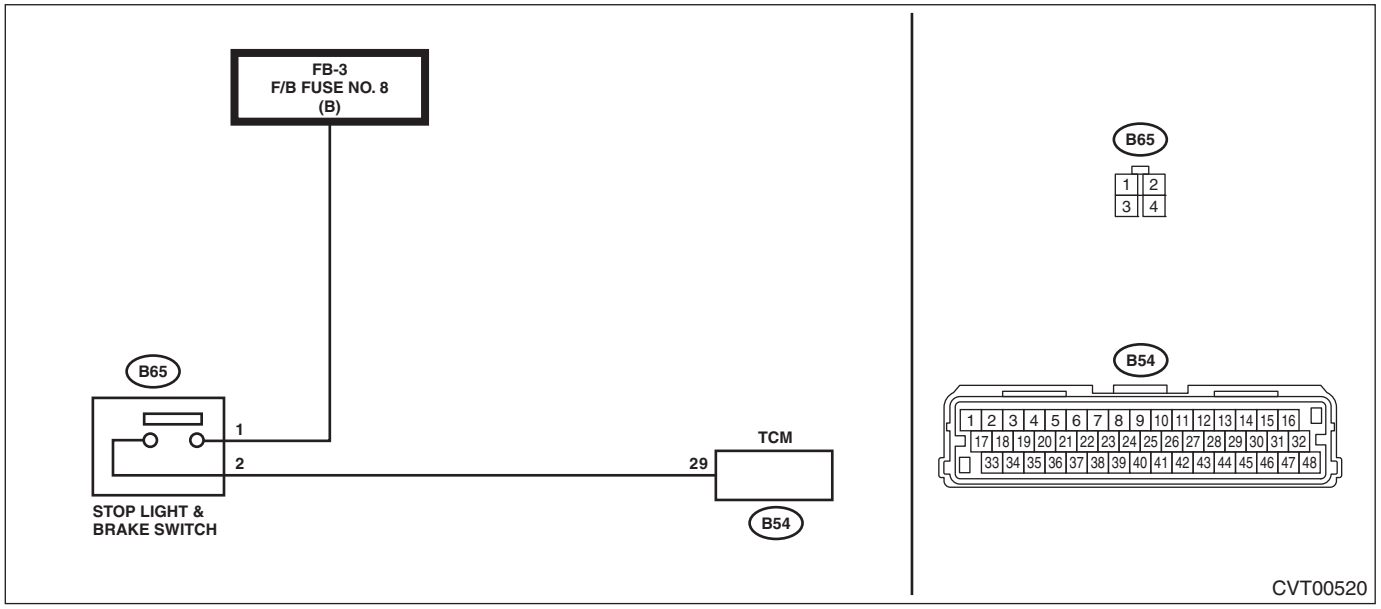
Malfunction Criteria	Threshold Value
ABS *: Vehicle speed (calculated from front output shaft speed sensor) – Vehicle speed (calculated from wheel speed sensor)	> 10 MPH

* ABS: Absolute value
Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

M: DTC P0724 BRAKE SWITCH "B" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not shifted down when climbing a hill or driving down a hill.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
Stop light system <Ref. to WI-346, Stop Light System.>



Step		Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance between stop light switch. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 29 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit of harness.	Go to step **3**.
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Is “OFF” displayed?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **4**.
4	**CHECK FOR POOR CONTACT.**	Is there poor contact in the stop light switch input signal circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the brake signal stuck to ON.
- Judge as NG if a predetermined number of acceleration occurs while the cruise control is set to OFF and the brake is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Cruise control	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of times that vehicle speed changes from 1 km/h to 30 km/h while the brake SW is ON	> 10 count

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

N: DTC P0730 INCORRECT GEAR RATIO

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

	Step	Check	Yes	No
1	**CHECK TRANSMISSION FLUID.** Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **2**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
2	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **3**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
3	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **4**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-93, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **5**.	Go to step **6**.
5	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to “D” range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep the constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **6**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
6	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the “Inspection Mode”. <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0730 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

- Detect the abnormality in transmission gear ratio control function.
- Judge as NG if the discrepancy between the transmission target gear ratio (as internal data) and the actual gear ratio becomes the specified value or more. (Compare the value of "Gear Ratio Target × Secondary pulley speed ≈ Target primary speed equivalent value" with the value of primary pulley speed sensor.)

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm
Transmission range	Drive

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Target primary pulley shaft speed – Measured primary pulley shaft speed	≥ 600 rpm
(Commanded duty of shift up pressure control solenoid	≥ 90%
or	
Commanded duty of shift down pressure control solenoid)	≥ 90%

* ABS: Absolute value

Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

O: DTC P0746 PRESSURE CONTROL SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Shift control malfunction
- CVT chain slippage

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0746, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0746.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0746 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to low pressure side).
• Judge as NG when the actual line pressure drops to or below the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.75 A

Secondary parameters	Execution condition
Torque converter clutch circuit control solenoid output command	ON
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≤ 0.75 A
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure	< Map 1 kPa
Diagnosis 2	
Measured line pressure	< Map 2 kPa

P: DTC P0747 PRESSURE CONTROL SOLENOID "A" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0747, is any of the DTCs P0842, P0843, P0962 and P0963 displayed?	Perform the diagnosis according to DTCs other than P0747.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Keep the engine speed at 3,000 rpm. 2) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» higher than step 7 value? Does the value change according to the engine speed, within the range of 1.5 — 2.5 MPa?	Go to step **9**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
9	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Apply the parking brake. 2) Set the select lever to "D" range. 3) Depress the brake pedal firmly. 4) Slowly open the accelerator fully, and stabilize the engine speed. 5) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor. **CAUTION:** **Do not perform a stall test for over 5 seconds at a time.**	Is the «Actual Secondary Pressure» higher than step 8 value? Does the value change according to the engine speed, within the range of 4.5 — 6.0 MPa?	Go to step **10**.	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0747 displayed?	Perform the secondary pressure test. <Ref. to CVT(TR690)-49, Secondary Pressure (Line Pressure) Test.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission line pressure solenoid and hydraulic circuit (stuck to high pressure side).
• Judge as NG when the actual line pressure rises to or above the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A

Secondary parameters	Execution condition
Torque converter clutch circuit control solenoid output command	OFF
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Measured line pressure control solenoid valve current	≥ 0.5 A
Torque converter clutch circuit control solenoid output command	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure	> Map 1 kPa
Diagnosis 2	
Measured line pressure	> Map 2 kPa

Map 1: Torque converter clutch circuit control solenoid output command = OFF

Q: DTC P0751 SHIFT SOLENOID "A" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Shift control malfunction
- Engine speed increases abruptly.

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0751, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0751.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0751 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Commanded duty of shift down pressure control solenoid	0%
Engine speed	≥ 1000 rpm
Actual pulley ratio*	> 1.5

Secondary parameters	Execution condition
	and < 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08
Commanded duty of shift up pressure control solenoid	≥ 90%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

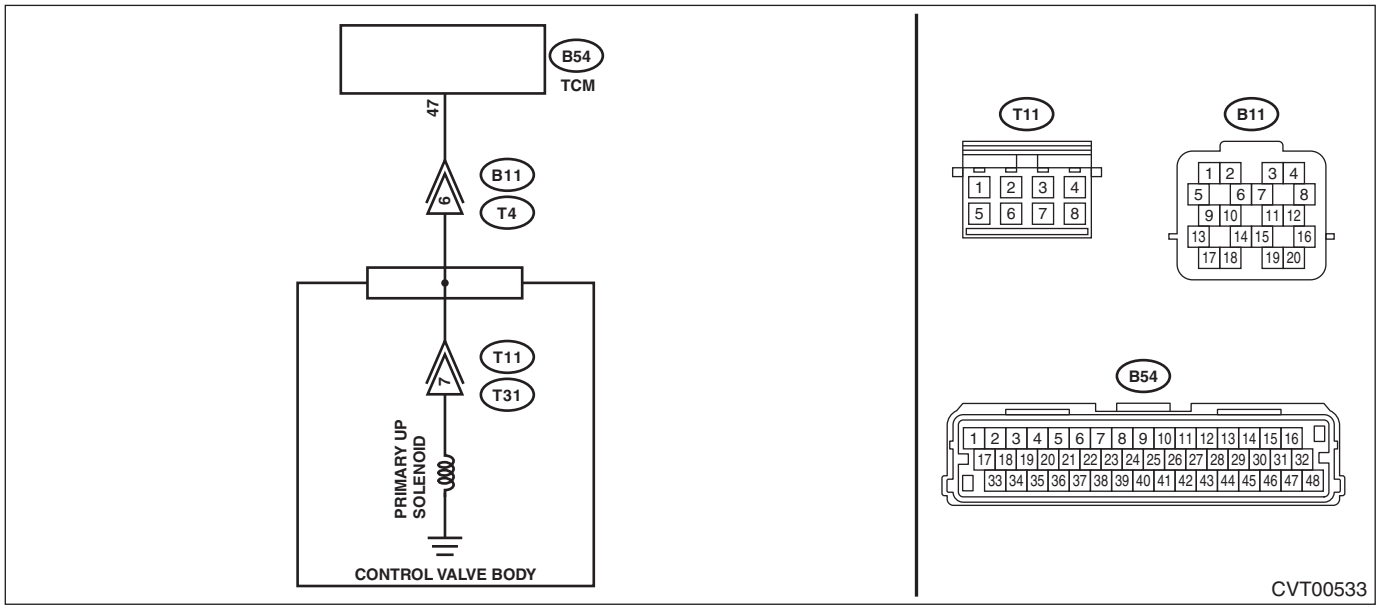
Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

R: DTC P0752 SHIFT SOLENOID "A" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0752, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0752.	Go to step **2**.
2	**CHECK PRIMARY UP SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary UP solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY UP SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0752 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-up fluid pressure control solenoid and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Commanded duty of shift up pressure control solenoid	0%
Engine speed	≥ 1000 rpm
Actual pulley ratio*	< 0.5

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

S: DTC P0756 SHIFT SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0756, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0756.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0756 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the amount of gear rate change per second is within the predetermined value, even though the down-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift up pressure control solenoid	0%
Actual pulley ratio*	≥ 0.363

Secondary parameters	Execution condition
	and ≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> – 0.08 and < 0.08
Commanded duty of shift down pressure control solenoid	> 80%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

Time needed for diagnosis: 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

T: DTC P0757 SHIFT SOLENOID "B" STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Vibration occurs at shift change.
- Shift control malfunction

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0757, is any of the DTCs P0973, P0974, P0976, P0977, P2747 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0757.	Go to step **2**.
2	**CHECK PRIMARY DOWN SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the primary DOWN solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **5**.	Go to step **3**.
3	**CHECK PRIMARY DOWN SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
8	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Release the brake pedal to stabilize the engine speed and front wheel speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 2.0 — 2.4?	Go to step **9**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**CHECK INPUT SIGNAL FOR TCM.** 1) Set the select lever to "D" range. 2) Slowly increase the speed to 40 km/h (25 MPH) and keep to a constant speed. 3) Read the data of «Actual Gear Ratio» using Subaru Select Monitor. NOTE: Before operation, set SI-DRIVE to I mode.	Is the «Actual Gear Ratio» 0.5 — 0.8?	Go to step **10**.	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
10	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0757 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of shift-down fluid pressure control solenoid characteristics and hydraulic circuit characteristics (stuck to high pressure side).
• Judge as NG if the amount of gear rate change per second is equal to or larger than the predetermined value, even though the up-shift command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Commanded duty of shift down pressure control solenoid	0%
Actual pulley ratio*	≥ 0.363

Secondary parameters	Execution condition
	and ≤ 2.348

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual pulley ratio * change for 1 second	> 0.04
Commanded duty of shift up pressure control solenoid	> 50%

* Actual pulley ratio: Measured primary pulley shaft speed / Measured secondary pulley shaft speed

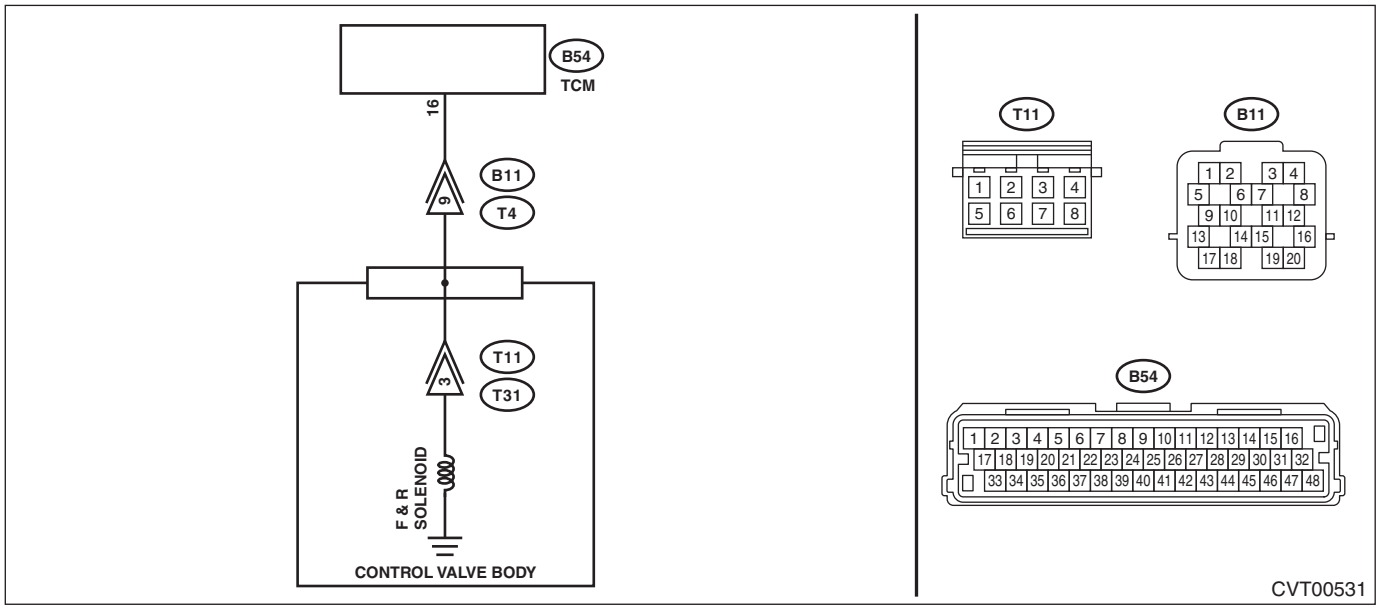
Time needed for diagnosis: 10 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

U: DTC P0776 PRESSURE CONTROL SOLENOID "B" PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0776, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0776.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 500 mA appear repeatedly during forced operation, and does operating sound emit during indicating 500 mA?	Go to step **5**.	Go to step **3**.
3	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS.** Check the transmission harness. (Open circuit, short circuit to power supply, short circuit to ground, and poor contact)	Is the check result OK?	Go to step **7**.	Repair the harness.
5	**CHECK TRANSMISSION FLUID.** 1) Connect the transmission connector. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **6**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>

	Step	Check	Yes	No
6	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **7**.	Check according to the "Corrective action" of ATF (CVTF) "CONDITION CHECK". <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to "D" range. 5) Shift the select lever to "P" range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **8**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-93, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	**STALL TEST.** Perform the stall test. <Ref. to CVT(TR690)-46, Stall Test.>	Is the result of the stall test OK?	Go to step **9**.	Replace the transmission assembly if the stall speed is higher than the standard value of the stall test. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>
9	**DRIVING CHECK BY INSPECTION MODE.** 1) Turn the ignition switch to OFF. 2) Perform a drive check based on the "Inspection Mode". <Ref. to CVT(diag)-20, Inspection Mode.>	Does the AT OIL TEMP light blink and is DTC P0776 displayed?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of transmission forward/reverse clutch pressure solenoid and hydraulic circuit characteristics (stuck to low pressure side).
• Judge as NG if the value calculated by "output speed – secondary pulley speed" becomes the predetermined value or more, even though the forward/reverse clutch is engaged.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured secondary pulley shaft speed	≥ 100 rpm
Measured output shaft speed *	≥ 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A

Secondary parameters	Execution condition
Engine speed	≥ 400 rpm
Diagnosis 2	
12 V battery system voltage	≥ 10 V
Transmission range	Drive
Measured output shaft speed *	< 100 rpm
Commanded forward & reverse clutch pressure control solenoid current	< 0.9 A
Accelerator pedal position (from ECM)	> 6%
Engine speed	≥ 400 rpm

* Measured output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543: Center differential gear ratio

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Diagnosis 1	
ABS *: Measured output shaft speed ** – Measured secondary pulley shaft speed/ 1.322	> Table 1 rpm
Diagnosis 2	
Measured secondary pulley shaft speed	> 600 rpm

* ABS: Absolute value
* Measured output shaft speed: Measured rear output shaft speed × 0.543 *** + Measured front output shaft speed × (1 – 0.543)
*** 0.543: Center differential gear ratio

Table 1

Vehicle speed (MPH)	0	13	25	38	50	63	75
ABS: Measured output shaft speed – Measured primary pulley shaft speed (rpm)	150	100	100	100	100	100	100

Vehicle speed (MPH)	88	100	113	125	138	150	159
ABS: Measured output shaft speed – Measured primary pulley shaft speed|(rpm)	100	100	100	100	100	100	100

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

V: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT/OPEN

DTC detecting condition:
Immediately at fault recognition

NOTE:
For diagnostic procedures, refer to “BODY CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to BC(diag)-47, DTC B1016 SHIFT LOCK CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of shift lock solenoid or circuit.
- Judge as NG if abnormal signal from the integrated unit is received, when bus off is not detected and there is no trouble in CAN between the integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Shift lock solenoid system circuit abnormal (received from BIU)	ON

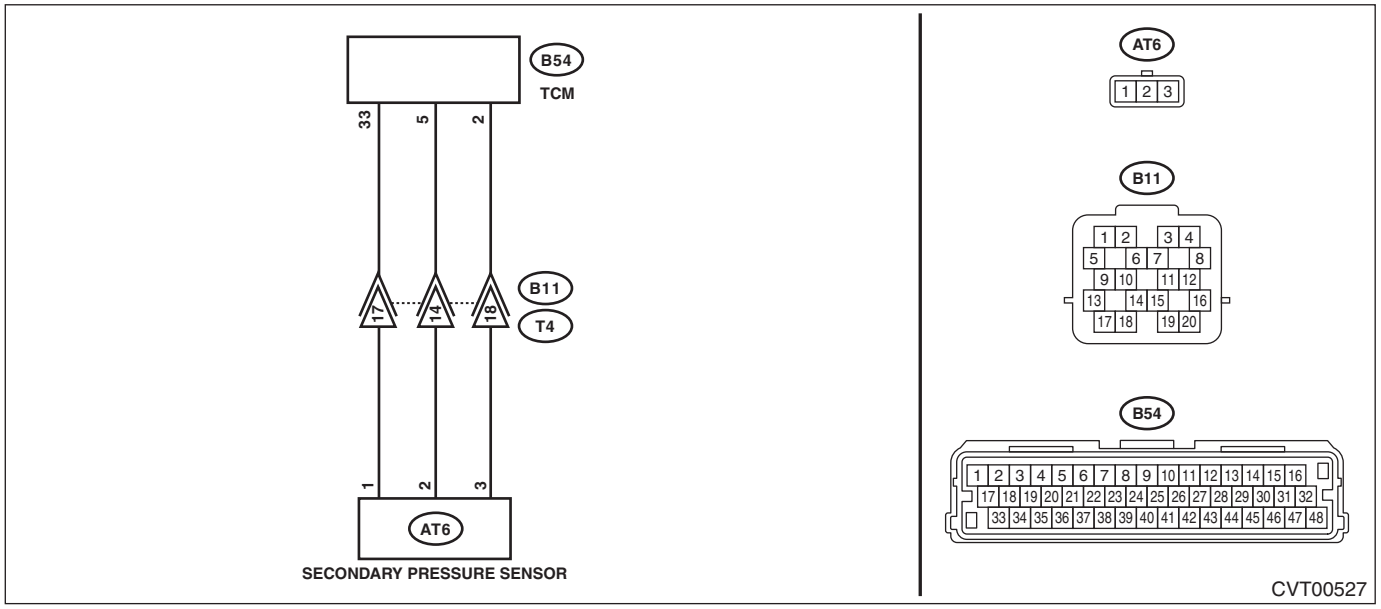
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Does not illuminate.

W: DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

CAUTION:
- **Before performing diagnosis, record the freeze frame data.**
- **Use the check board when measuring the TCM terminal voltage and resistance.**

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Are DTCs other than P0841 displayed?	Perform the diagnosis according to DTC. After the diagnosis, start the engine, and drive for 20 minutes in any driving pattern. (Include driving at a constant legal speed (for 20 seconds) at least once.) Read the DTC, and if P0841 alone is detected, Go to step **2**.	Go to step **2**.
2	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to ON. 2) Read the data of «secondary pressure sensor voltage.» using Subaru Select Monitor. (While shaking the secondary pressure sensor harness)	Is the value of «secondary pressure sensor voltage.» 0.39 — 0.61 V?	Go to step **10**.	Go to step **3**.

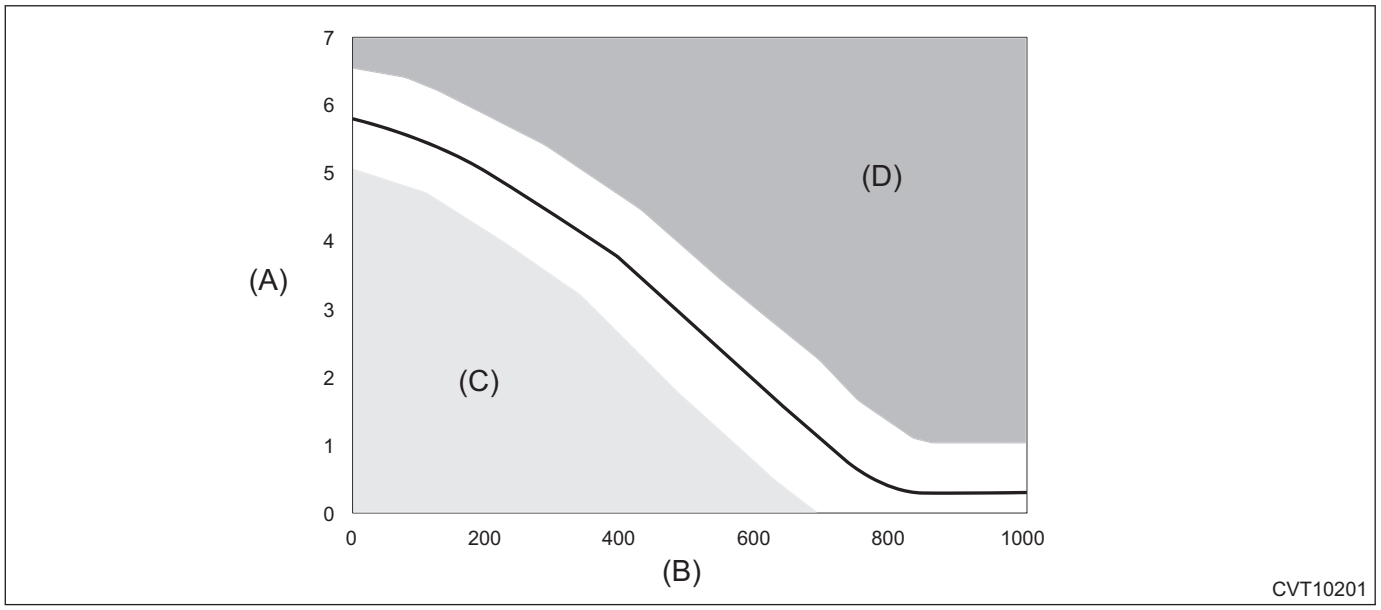
	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Measure the resistance between TCM connector and secondary pressure sensor connector. ***Connector & terminal*** ***(B54) No. 2 — (AT6) No. 3:*** ***(B54) No. 5 — (AT6) No. 2:*** ***(B54) No. 33 — (AT6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness.
4	**CHECK HARNESS.** Measure the resistance between TCM connectors. ***Connector & terminal*** ***(B54) No. 2 — (B54) No. 33:*** ***(B54) No. 5 — (B54) No. 2:*** ***(B54) No. 33 — (B54) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 2 — Transmission body:*** ***(B54) No. 5 — Transmission body:*** ***(B54) No. 33 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **7**.	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
7	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Connect the secondary pressure sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 33 (+) — (B54) No. 2 (–):***	Is the voltage 4.6 — 5.4 V?	Go to step **8**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-113, Secondary Pressure Sensor.>
8	**CHECK SECONDARY PRESSURE SENSOR OUTPUT.** Measure the voltage between TCM connectors. ***Connector & terminal*** ***(B54) No. 5 (+) — (B54) No. 2 (–):***	Is the voltage 0.39 — 0.61 V?	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the secondary pressure sensor connector. 4) Check the TCM connector (B54) and the secondary pressure sensor connector (AT6).	Is there any fault in the TCM connector or the secondary pressure sensor connector?	Repair the connector, or replace harness.	Go to step **10**.
10	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the ATF amount correct?	Go to step **11**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.> Go to step **11**.
11	**CHECK INPUT SIGNAL FOR TCM.** 1) Perform the Clear Memory Mode. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal and move the select lever to each range at an interval of five seconds. NOTE: Move the select lever in the following order: “P” → “R” → “N” → “D” → “N” → “R” → “P”. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Go to step **12**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-113, Secondary Pressure Sensor.>
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Shift the select lever to “P” range. 2) Keep the engine speed at 3,000 rpm. 3) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 1.5 — 2.5 MPa? And is the difference of the actual oil pressure 0.2 MPa or more compared with the value measured in step 11?	Go to step **13**.	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-113, Secondary Pressure Sensor.>
13	**CHECK FREEZE FRAME DATA.** 1) Turn the ignition switch to OFF. 2) Check the recorded freeze frame data.	Was the detected symptom low-voltage malfunction? <Ref. to CVT(diag)-96, CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Go to step **14**.
14	**CHECK TCM INPUT SIGNAL (STALL TEST).** 1) Lift up the vehicle. 2) Start the engine. 3) Apply the parking brake. 4) Set the select lever to “D” range. 5) Depress the brake pedal firmly. 6) Slowly open the accelerator fully, and stabilize the engine speed. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 4.5 — 6.0 MPa?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Go to step **15**.

	Step	Check	Yes	No
15	**CHECK TCM INPUT SIGNAL (STALL TEST).** Check the «Actual Secondary Pressure» in step 14.	Is the «Actual Secondary Pressure» 4.5 MPa or less?	Replace the transmission assembly. <Ref. to CVT(TR690)-56, Automatic Transmission Assembly.>	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>

1. CLASSIFICATION OF SYMPTOM USING FREEZE FRAME DATA

Apply the values of «Actual Secondary Pressure» and «Secondary Actual Current» recorded in the freeze frame data onto the graph shown in the following figure, and judge if either low-voltage malfunction or high-voltage malfunction occurs.



(A) Actual secondary pressure (MPa) (C) Low-voltage malfunction (D) High-voltage malfunction
(B) Secondary actual current (mA)

NOTE:
Symptom that the DTC P0841 illuminates can be classified into 2 patterns.
- Low-voltage malfunction: detected due to insufficient oil pressure
- High-voltage malfunction: detected due to excessive oil pressure

2. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure control function.
- Judge as NG if a discrepancy between the target secondary oil pressure (as internal data) and the detected value of the secondary oil pressure sensor becomes the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ Table 1 rpm

Table 1

Target line pressure (kPa)	0	500	1000	1500	2000	3000	4000	5000	6000
Engine speed (rpm)	400	600	965	1180	1370	1670	1930	2150	2340

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Target line pressure – Measured line pressure	≥ 500 kPa

* ABS: Absolute value

Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

X: DTC P0842 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift the select lever to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 2 — (B11) No. 18:*** ***(B54) No. 5 — (B11) No. 14:*** ***(B54) No. 33 — (B11) No. 17:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 — Chassis ground:*** ***(B54) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Measure the resistance between transmission connector and secondary pressure sensor connector. ***Connector & terminal*** ***(T4) No. 14 — (AT6) No. 2:*** ***(T4) No. 17 — (AT6) No. 1:*** ***(T4) No. 18 — (AT6) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 — Chassis ground:*** ***(T4) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-113, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the ground short circuit of the transmission line pressure sensor.
- Judge as NG if the voltage detected by the transmission line pressure sensor is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	< 0.195 V (< – 574 kPa)

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Y: DTC P0843 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Shift characteristics malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) Start the engine. 2) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 3) Depress the brake pedal, and shift to “D” range. 4) Shift the select lever to “P” range. 5) Stabilize the engine speed at idle. 6) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Turn the ignition switch to ON. 5) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 5 (+) — Chassis ground (–):*** ***(B54) No. 33 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between TCM connector terminals. ***Connector & terminal*** ***(B54) No. 5 — (B54) No. 33:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK TRANSMISSION HARNESS.** 1) Disconnect the secondary pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 14 (+) — Chassis ground (–):*** ***(T4) No. 17 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **5**.	Repair the short circuit of harness.
5	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between transmission connector terminals. ***Connector & terminal*** ***(T4) No. 14 — (T4) No. 17:***	Is the resistance less than 1 Ω?	Repair the short circuit of harness.	Go to step **6**.
6	**CHECK POWER SUPPLY FOR SECONDARY PRESSURE SENSOR.** 1) Connect the TCM connector. 2) Connect the transmission connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between secondary pressure sensor connector terminals. ***Connector & terminal*** ***(AT6) No. 1 (+) — (AT6) No. 3 (–):***	Is the voltage 4.5 V or more?	Replace the secondary pressure sensor. <Ref. to CVT(TR690)-113, Secondary Pressure Sensor.> If the replacement of the sensor do not eliminate the malfunction, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure sensor 5 V system.
- Judge as NG if the voltage detected by the transmission line pressure sensor is higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

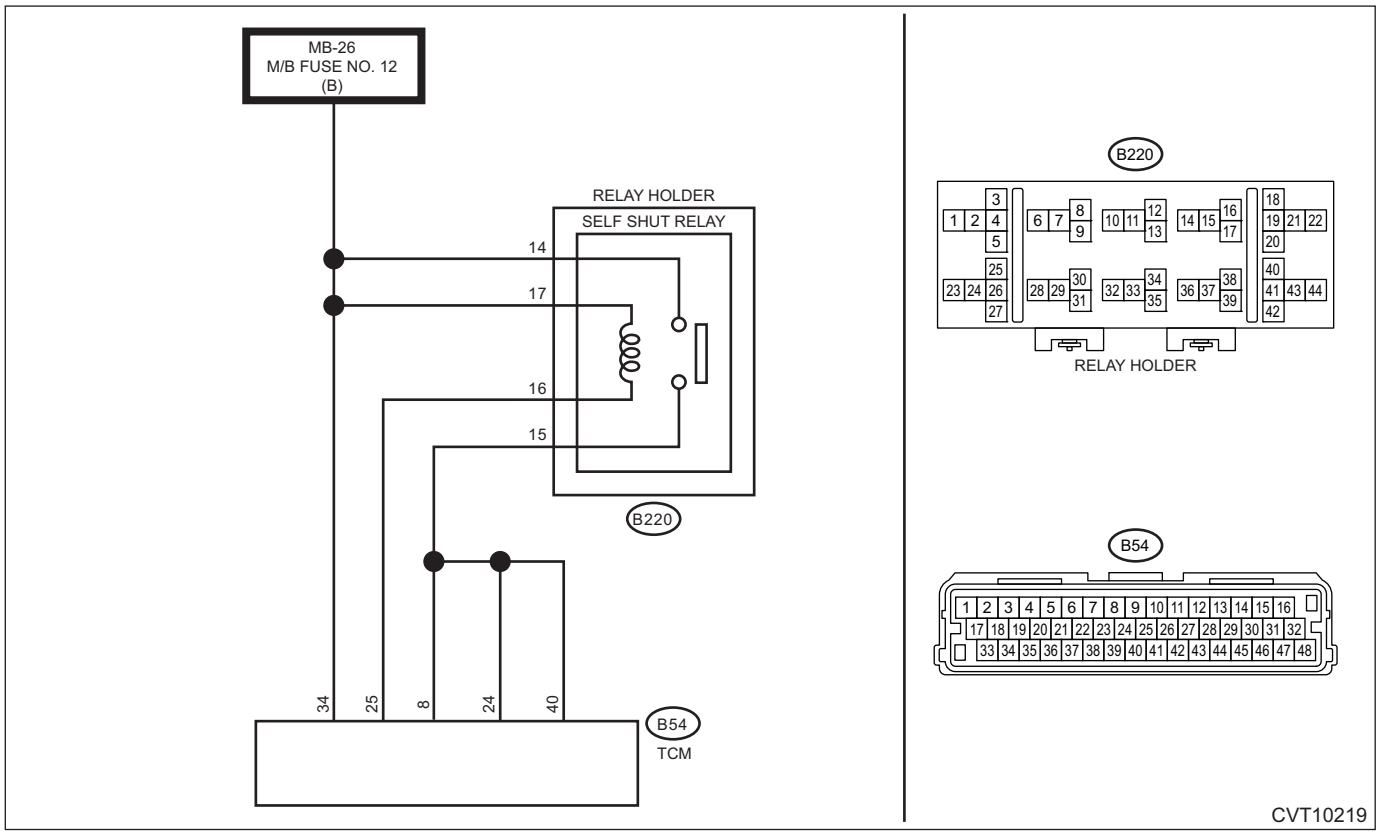
Malfunction Criteria	Threshold Value
Measured line pressure sensor input voltage (Line pressure)	> 4.883 V (> 8200 kPa)

Time needed for diagnosis: 1.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Z: DTC P0890 TCM POWER RELAY SENSE CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed.

CAUTION:
• After diagnosis, perform Clear Memory Mode for ECM. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
• Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.

	Step	Check	Yes	No
3	**CHECK RELAY POWER SUPPLY.** Measure the voltage between relay holder and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the open or short circuit of harness.
4	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **5**.	Replace the self shut relay.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the self shut relay.
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **7**.
7	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P0890 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission fluid pressure solenoid drive power supply relay circuit.
- Judge as NG if the transmission fluid pressure solenoid drive power supply voltage is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
TCM Power Relay output command	ON
Ignition state	Run or Crank

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured TCM input voltage which is supplied from 12 V battery system through the TCM Power Relay	< 2 V

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AA:DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Manual mode can not be set.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the manual mode switch connector. 3) Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(B116) No. 8 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK MANUAL MODE SWITCH.** Measure the resistance between manual mode switch terminals. ***Terminals*** ***No. 7 — No. 8:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the select lever assembly. <Ref. to CS-25, Select Lever.>
3	**CHECK MANUAL MODE SWITCH.** 1) Shift the select lever to manual mode. 2) Measure the resistance between manual mode switch terminals. ***Terminals*** ***No. 7 — No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the select lever assembly. <Ref. to CS-25, Select Lever.>
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and manual mode switch connector. ***Connector & terminal*** ***(B54) No. 20 — (B116) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Measure the resistance between manual mode switch connector and chassis ground. ***Connector & terminal*** ***(B116) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.
6	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Set the select lever to “D” range. 4) Read the data of «Tiptronic Mode Switch» using Subaru Select Monitor.	Does the value of «Tiptronic Mode Switch» change to “ON” with select lever in manual mode, and “OFF” with select lever in other than manual mode?	Current condition is normal.	Go to step **7**.
7	**CHECK FOR POOR CONTACT.**	Is there poor contact of the manual mode switch circuit?	Repair the poor contact.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

1. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground (ground-fault) in manual SW circuit.
- Judge as NG if the manual SW is ON in P, R or N range.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

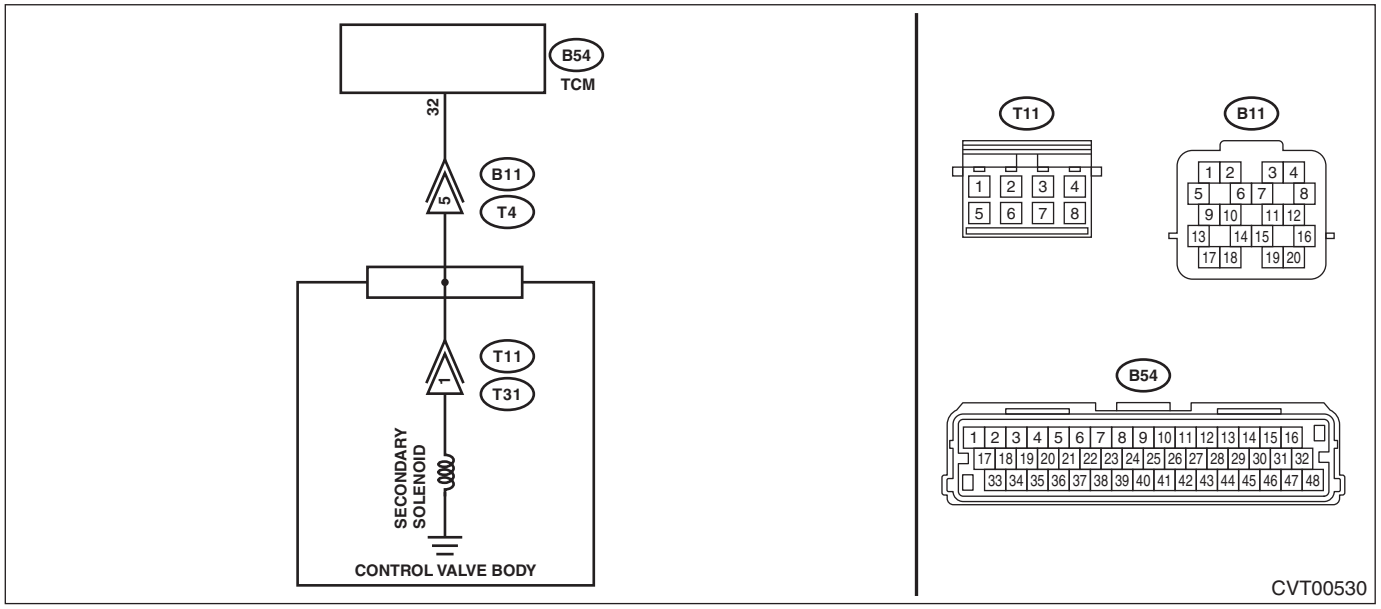
Malfunction Criteria	Threshold Value
Manual SW status in other than D range	ON

Time needed for diagnosis: 5 s
Malfunction indicator light illumination: Does not illuminate.

AB:DTC P0961 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- Shift control malfunction
- Engine speed increases abruptly.

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0961, is DTC P0962 or P0963 displayed?	Perform the diagnosis according to DTCs other than P0961.	Go to step **2**.
2	**CHECK SECONDARY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the secondary solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «Sec. Sol. Actual Current» synchronize with «Sec. Sol. Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and secondary solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
4	**CHECK SECONDARY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Repair or replace the harness.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of transmission line pressure solenoid drive circuit.
- Judge as NG when the deviation between target current and actual current of the transmission line pressure solenoid becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Target line pressure control solenoid valve current – Measured line pressure control solenoid valve current	> 0.2 A

* ABS: Absolute value

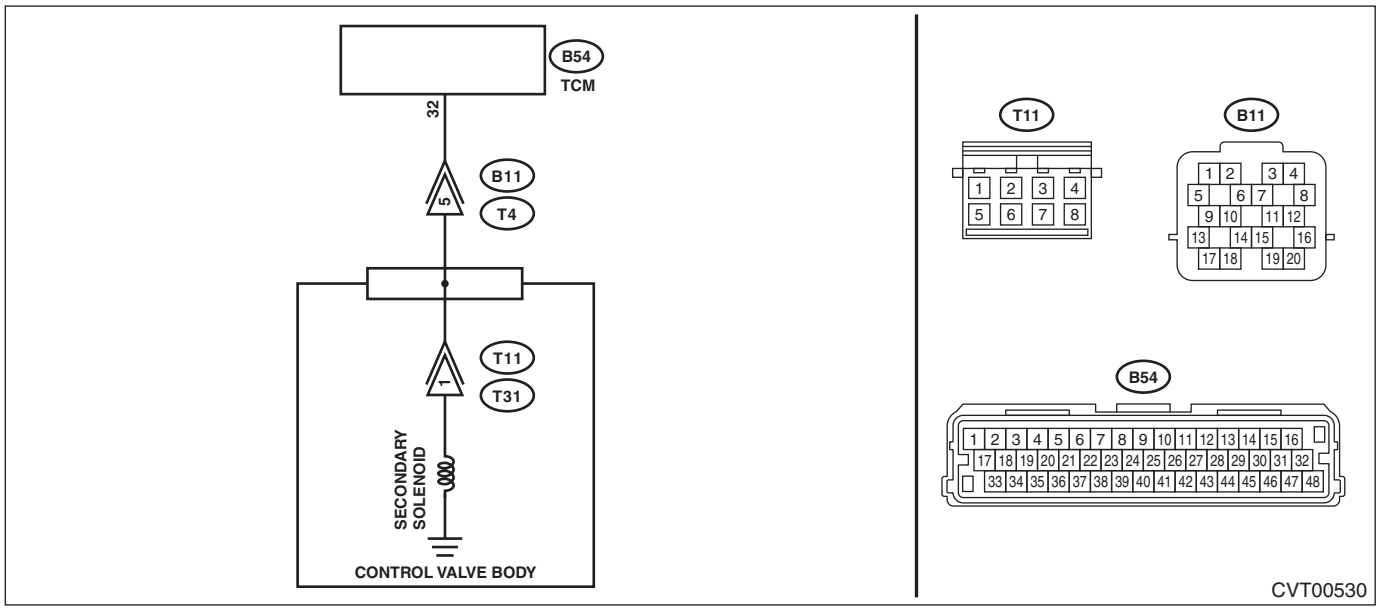
Time needed for diagnosis: 5 seconds

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AC:DTC P0962 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is higher than the predetermined value.

Diagnosis 2
- Detect the ground short of the transmission line pressure solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission line pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.1 A
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

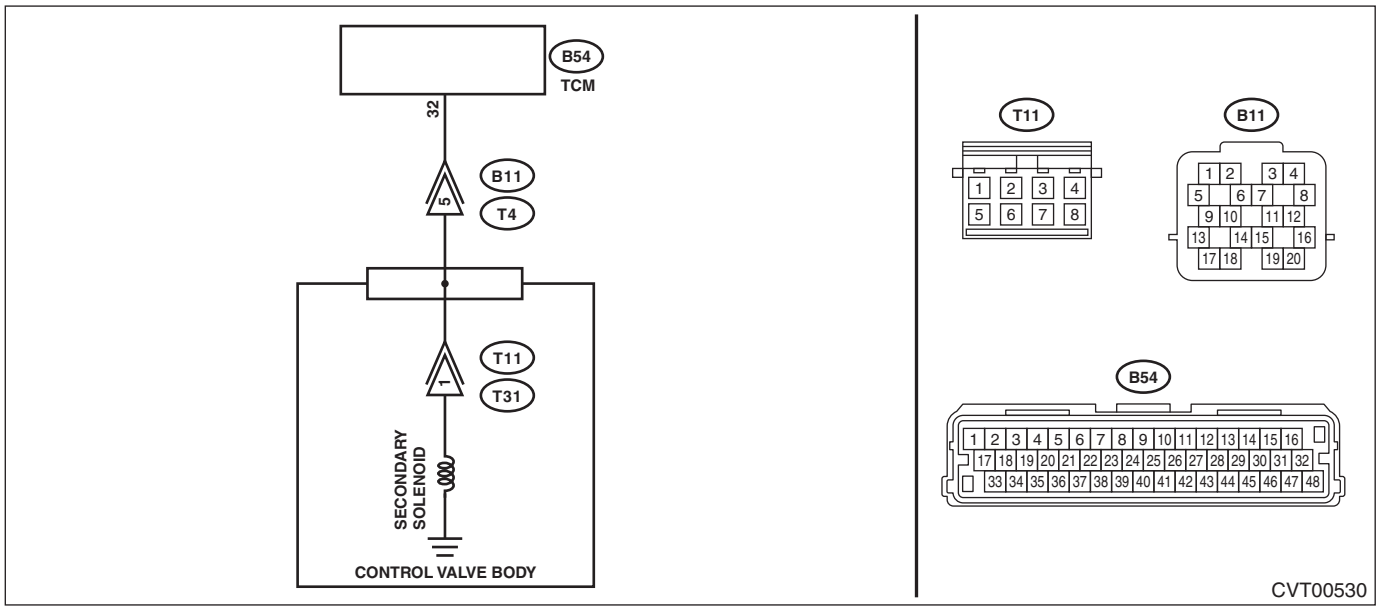
Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured line pressure control solenoid valve current	≥ 1.1 A
Diagnosis 2	
Signal of malfunction from solenoid driver IC	ON
As defined by:	
Measured line pressure control solenoid valve current ≥ 1.2 A	

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AD:DTC P0963 PRESSURE CONTROL SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not start.
- Engine speed increases abruptly during driving.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "N" range. 2) Read the data of «Secondary Set Current» and «Secondary Actual Current» using Subaru Select Monitor.	Does the value of «Secondary Set Current» and «Secondary Actual Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 32 — (B11) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 32 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK SECONDARY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 — Transmission body:***	Is the resistance approx. 5 — 7 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 5 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect short circuit to power supply or open circuit of the transmission line pressure solenoid drive circuit.
- Judge as NG if the transmission line pressure solenoid drive current is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded line pressure control solenoid valve current	≥ 0.2 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured line pressure control solenoid valve current	< 0.1 A

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AE:DTC P0965 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine speed increases abruptly, and can not accelerate.
- Excessive slippage is felt.

Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P0965, is any of the DTCs P0720, P0966, P0967, P1706 and P2751 displayed?	Perform the diagnosis according to DTCs other than P0965.	Go to step **2**.
2	**CHECK F&R SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the F&R solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication change as 300 → 500 → 700 mA during forced operation, and does «F&R Linear Solenoid Actual Current» synchronize with «F&R Linear Solenoid Set Current»?	Go to step **3**.	Go to step **4**.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of harness and connector between TCM and F&R solenoid.	Is there poor contact?	Repair the poor contact of harness and connector.	Recheck the poor contact of harness and connector. Replace the TCM if no fault is found. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
4	**CHECK F&R SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Repair or replace the harness.

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the deviation between set current and actual current of the transmission forward/reverse clutch pressure solenoid drive circuit becomes equal to or larger than the predetermined value.
Diagnosis 2
• Detect the malfunction of transmission forward/reverse clutch pressure solenoid drive circuit characteristics.
• Judge as NG when the transmission forward/reverse clutch pressure solenoid drive current is within the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Diagnosis 2	
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

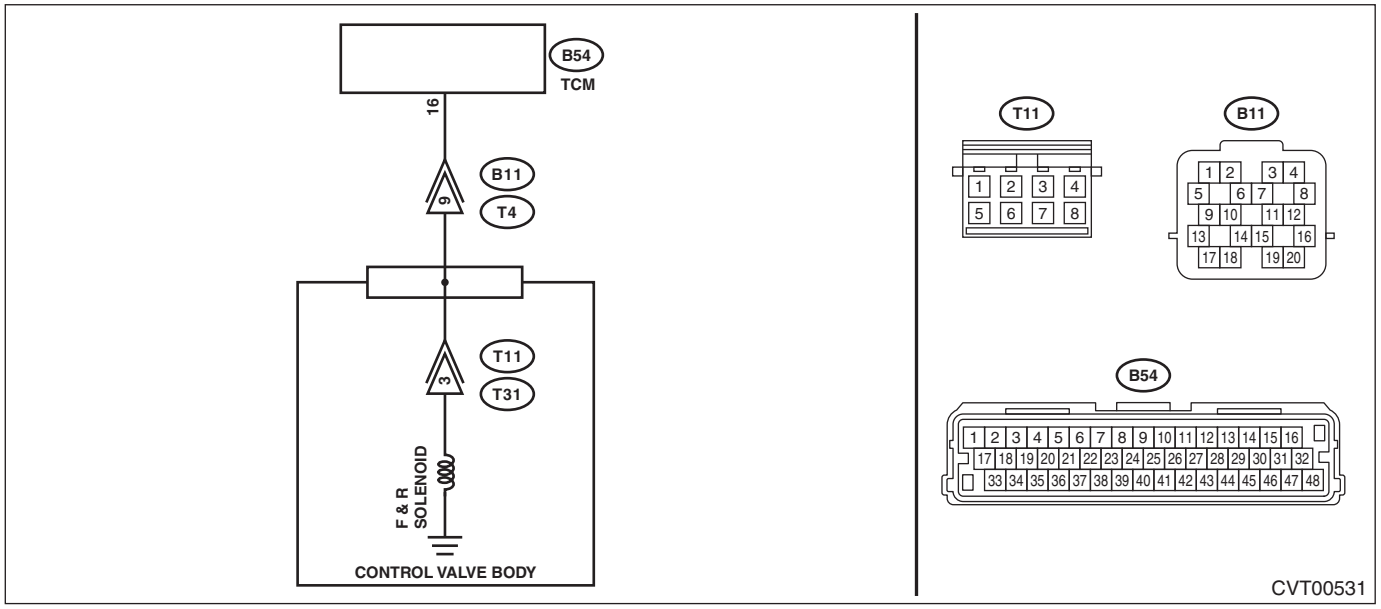
Malfunction Criteria	Threshold Value
Diagnosis 1	
ABS *: Target forward & reverse clutch pressure control solenoid current – Measured forward & reverse clutch pressure control solenoid current	> 0.2 A
Diagnosis 2	
Measured forward & reverse clutch pressure control solenoid current	> 1.08 A and ≤ 1.6 A

* ABS: Absolute value
Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AF:DTC P0966 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Excessive shift shock

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at "D" range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» using Subaru Select Monitor.	Does the value of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground in transmission forward/reverse clutch pressure solenoid circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the transmission forward/reverse clutch pressure solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current ≥ 1.6 A	ON

Time needed for diagnosis: 0.02 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AG:DTC P0967 PRESSURE CONTROL SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Engine speed increases abruptly, and can not start.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL FOR TCM.** 1) After driving with warm up condition, park the vehicle while depressing the brake pedal at “D” range. 2) Read the data of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» using Subaru Select Monitor.	Does the value of «Commanded Forward & Reverse Linear Solenoid Current» and «Actual Forward & Reverse Linear Solenoid Current» almost correspond?	Check for poor contact of connector.	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 16 — (B11) No. 9:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 16 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **4**.	Repair the short circuit of harness.

	Step	Check	Yes	No
4	**CHECK F&R SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 — Transmission body:***	Is the resistance approx. 4 — 6 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **6**.
6	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 9 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

• Detect open circuit or short circuit to power supply in the transmission forward/reverse clutch pressure solenoid circuit.
• Judge as NG if the transmission forward/reverse clutch pressure solenoid drive current is lower than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Target forward & reverse clutch pressure control solenoid current	≥ 0.1 A

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

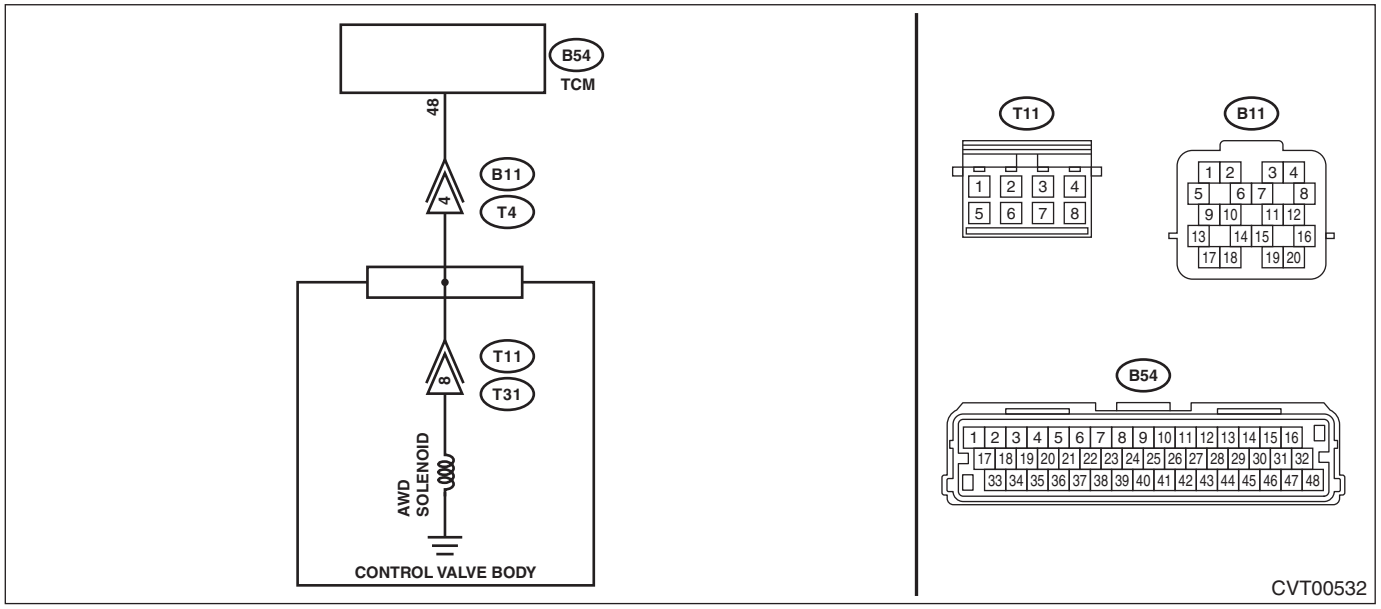
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured forward & reverse clutch pressure control solenoid current < 5.9 mA	ON

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AH:DTC P0970 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Drivability getting worse.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the short circuit to ground in transfer solenoid circuit.
- Judge as NG when the number of detection of short circuit to ground counted by a detecting circuit in the transfer solenoid drive circuit exceeds 10 times.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Target duty cycle	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

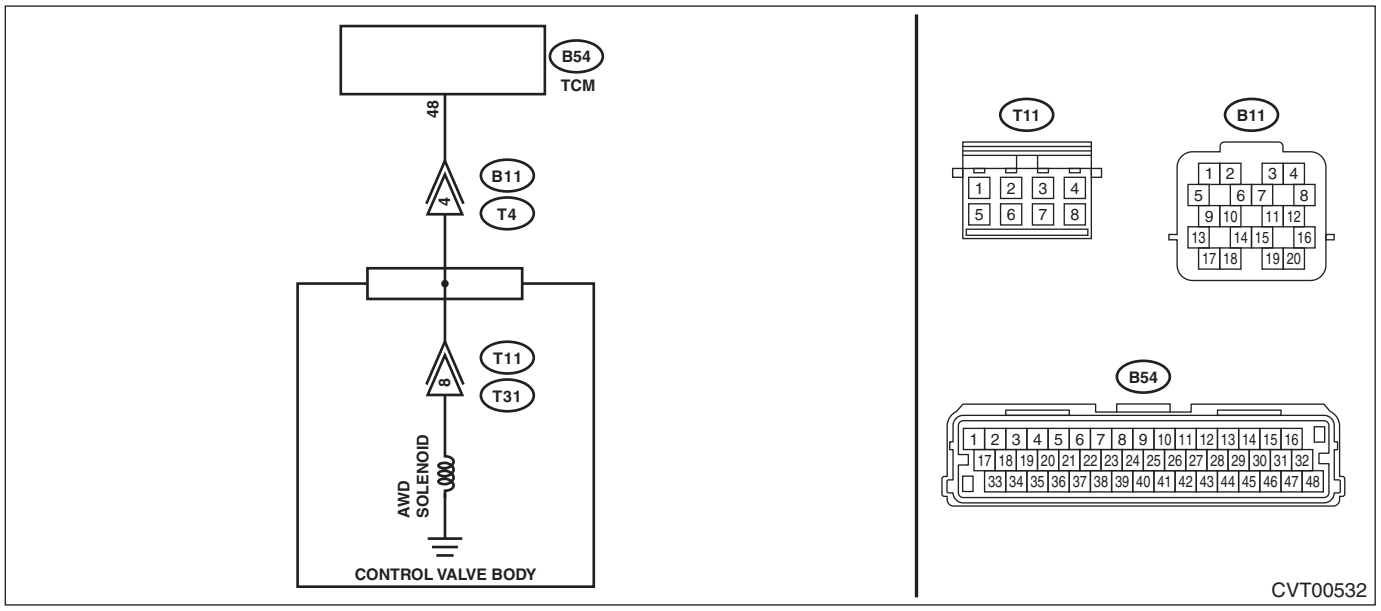
Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

AI: DTC P0971 PRESSURE CONTROL SOLENOID "C" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Tight corner braking phenomenon occurs.
- Drivability getting worse.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 48 — (B11) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 48 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK AWD SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 — Transmission body:***	Is the resistance approx. 2 — 4.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 4 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or short circuit to power supply in the transfer solenoid circuit.
- Judge as NG when the number of detection of open circuit or short circuit to power supply counted by a detecting circuit in the transfer solenoid drive circuit exceeds 10 times.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Target duty cycle	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

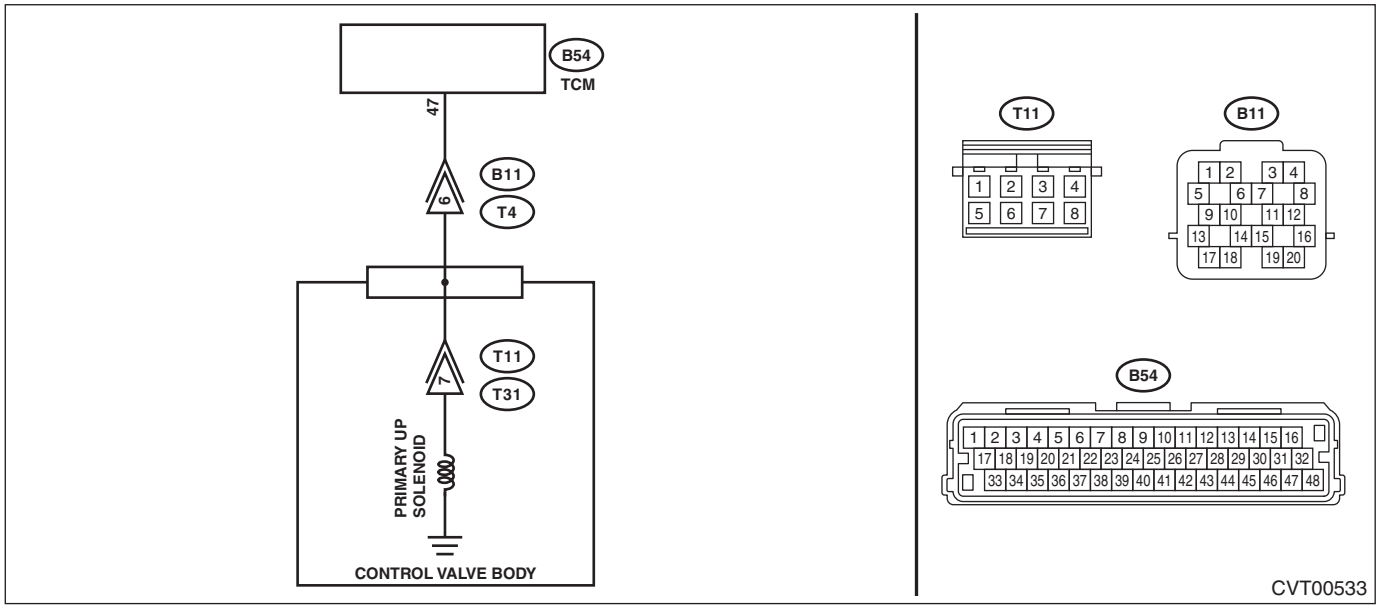
Malfunction Criteria	Threshold Value
Malfunction signal from solenoid driver IC	≥ 10 count

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Does not illuminate.

AJ:DTC P0973 SHIFT SOLENOID "A" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No up-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-up fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

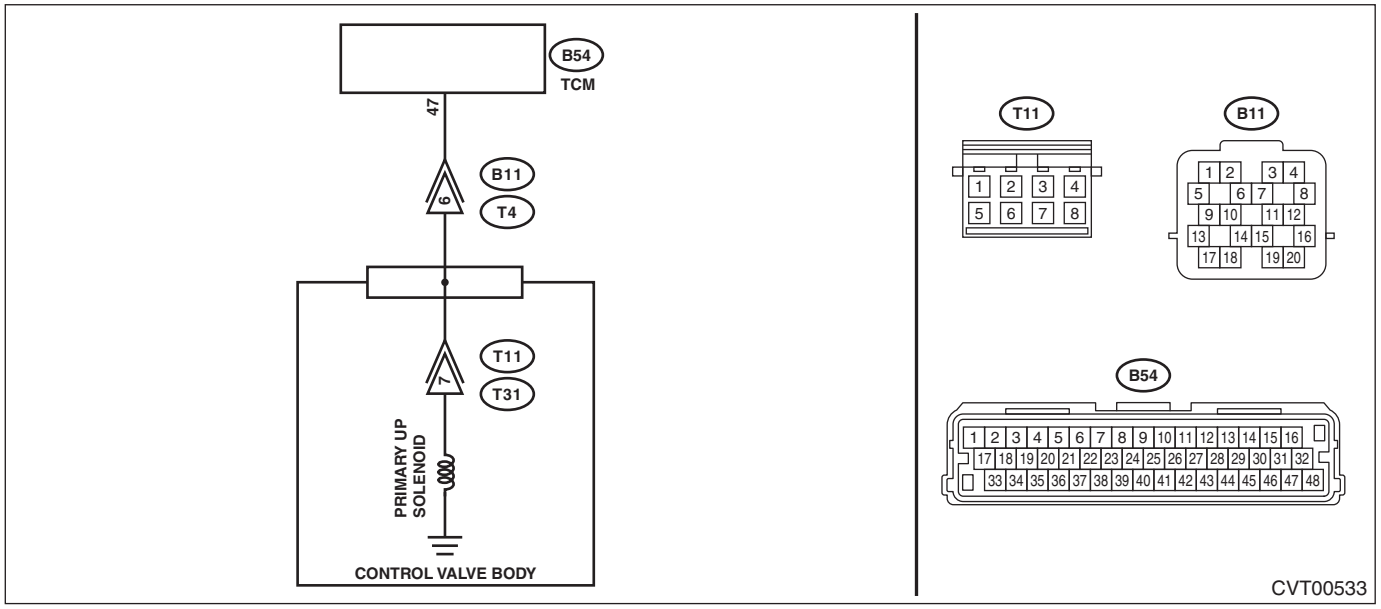
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≤ 0.8 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AK:DTC P0974 SHIFT SOLENOID "A" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No up-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 47 — (B11) No. 6:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 47 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK PRIMARY UP SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 6 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-up fluid pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-up fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift up pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

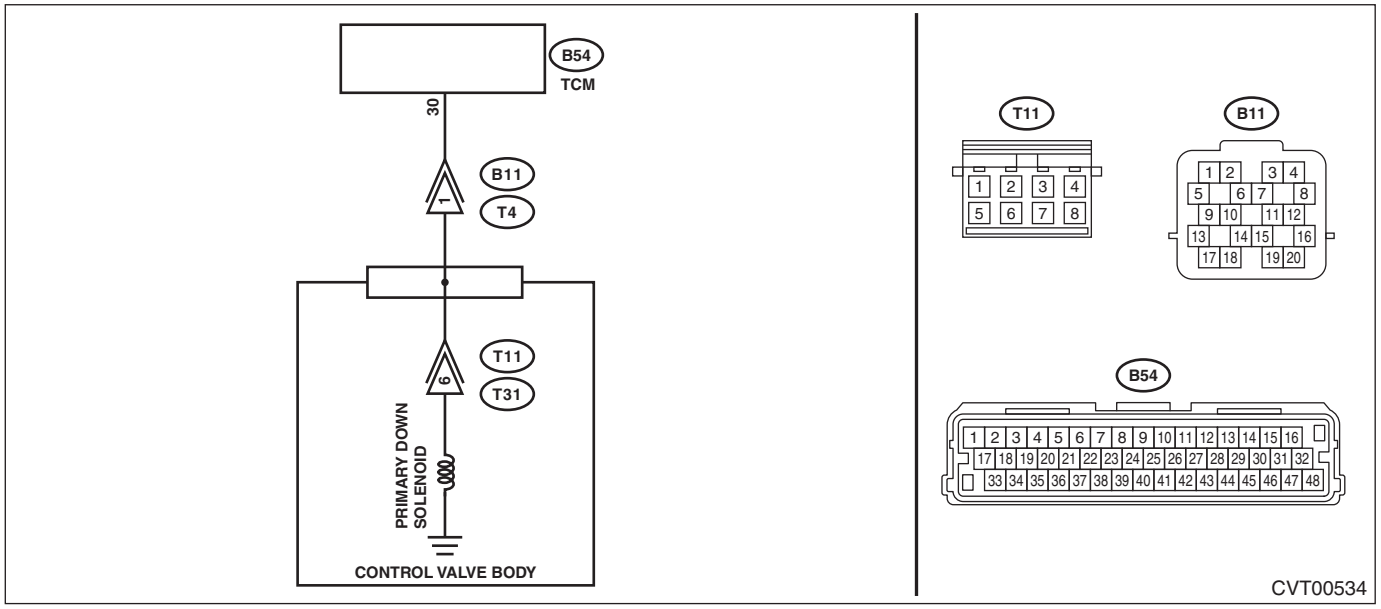
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift up pressure control solenoid voltage ≥ 2.5 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AL:DTC P0976 SHIFT SOLENOID "B" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No down-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the shift-down fluid pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

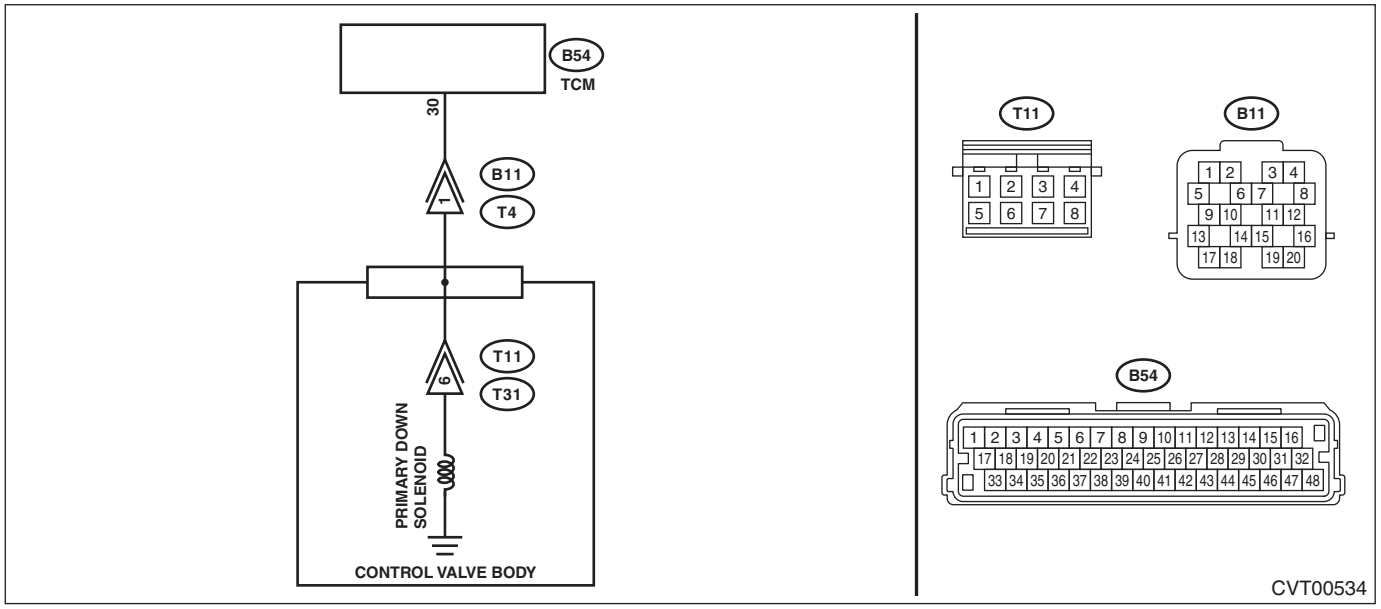
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≤ 0.8 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AM:DTC P0977 SHIFT SOLENOID "B" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Gear is not changed. (No down-shift)

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 30 — (B11) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 30 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK PRIMARY DOWN SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 1 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the shift-down fluid pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the shift-down fluid pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of shift down pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured shift down pressure control solenoid voltage ≥ 2.5 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AN:DTC P160A RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
TCM RAM malfunction

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the Clear Memory Mode using the Subaru Select Monitor. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Read the DTC.	Is DTC P160A displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Current condition is normal. Check for interference from noise, etc.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction in RAM area of the TCM.
• Judge as NG if an attempt to write to RAM area failed.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

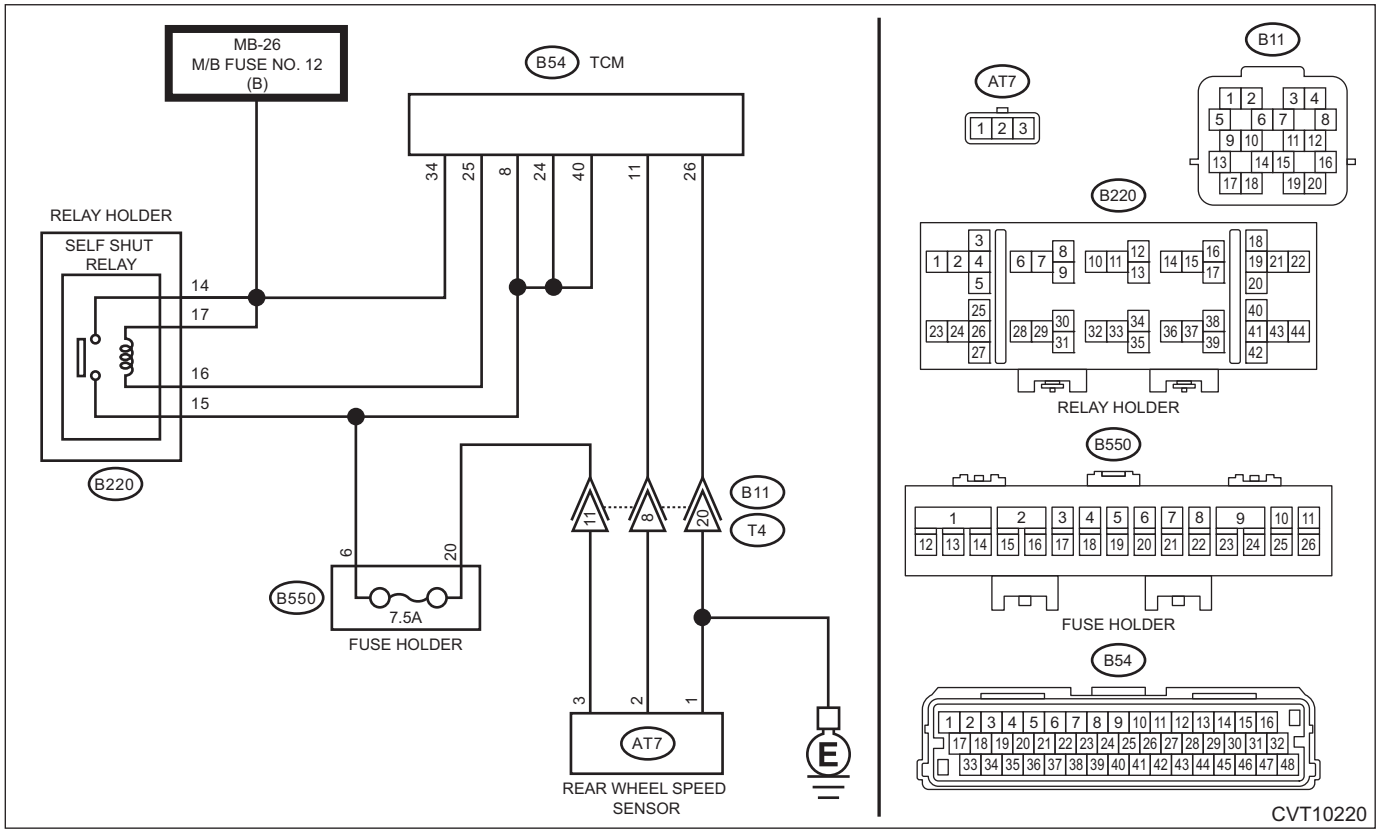
Malfunction Criteria	Threshold Value
Writing-check (RAM) NOTE: This check is carried out about the RAM used except for CAN communication.	Error

Time needed for diagnosis: Immediately
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AO:DTC P1706 REAR OUTPUT SHAFT SPEED SENSOR CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
AWD does not function.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between relay holder and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 11 — (B11) No. 8:*** ***(B54) No. 26 — (B11) No. 20:*** ***(B550) No. 20 — (B11) No. 11:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between relay holder and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 11 (+) — Chassis ground (–):***	Is the voltage approx. 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Slowly increase the speed to 30 km/h (19 MPH). 6) Read the data of «Rear Wheel Speed» using Subaru Select Monitor.	Does the value of «Rear Wheel Speed» change according to the engine speed?	Current condition is normal. Repair the poor contacts of harnesses of rear wheel speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the rear wheel speed sensor connector. 4) Measure the resistance between transmission connector and rear wheel speed sensor connector. ***Connector & terminal*** ***(T4) No. 20 — (AT7) No. 1:*** ***(T4) No. 8 — (AT7) No. 2:*** ***(T4) No. 11 — (AT7) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK REAR WHEEL SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 8 — Chassis ground:*** ***(T4) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK REAR WHEEL SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the rear wheel speed sensor. <Ref. to CVT(TR690)-110, Rear Wheel Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P1706 displayed?	Go to step **16**.	The original rear wheel speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P1706 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the rear wheel speed sensor.
- Judge as NG if there is no output from the rear wheel speed sensor while the forward/reverse clutch is engaged and the wheel speed from VDC is equal to or higher than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from wheel speed sensor)	≥ 3 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured rear front output shaft speed	0 rpm

Time needed for diagnosis: 3 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AP:DTC P170B REAR OUTPUT SHAFT SPEED SENSOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Acceleration is poor during standing start.
- No lock-up occurs.
- The engine stalls when the vehicle is stopped.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P170B, is any of the DTCs P0720, P1706 and P0500 displayed?	Perform the diagnosis according to DTCs other than P170B.	Perform the diagnosis according to DTC P1706. <Ref. to CVT(diag)-131, DTC P1706 REAR OUTPUT SHAFT SPEED SENSOR CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of rear wheel speed sensor characteristics.
- Judge as NG when the deviation between vehicle speed from VDC and rear wheel speed sensor becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Vehicle speed (calculated from wheel speed sensor)	≥ 12 MPH
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Vehicle speed (calculated from rear output shaft speed) – Vehicle speed (calculated from wheel speed sensor)	> 10 MPH

* ABS: Absolute value
Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AQ:DTC P2158 VEHICLE SPEED SENSOR "B" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
VDC does not operate.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of connector and harness between VDCCM&H/U and wheel speed sensor.

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of VDC wheel speed sensor.
- Judge as NG when the wheel speed sensor normal status signal from VDC is cleared.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

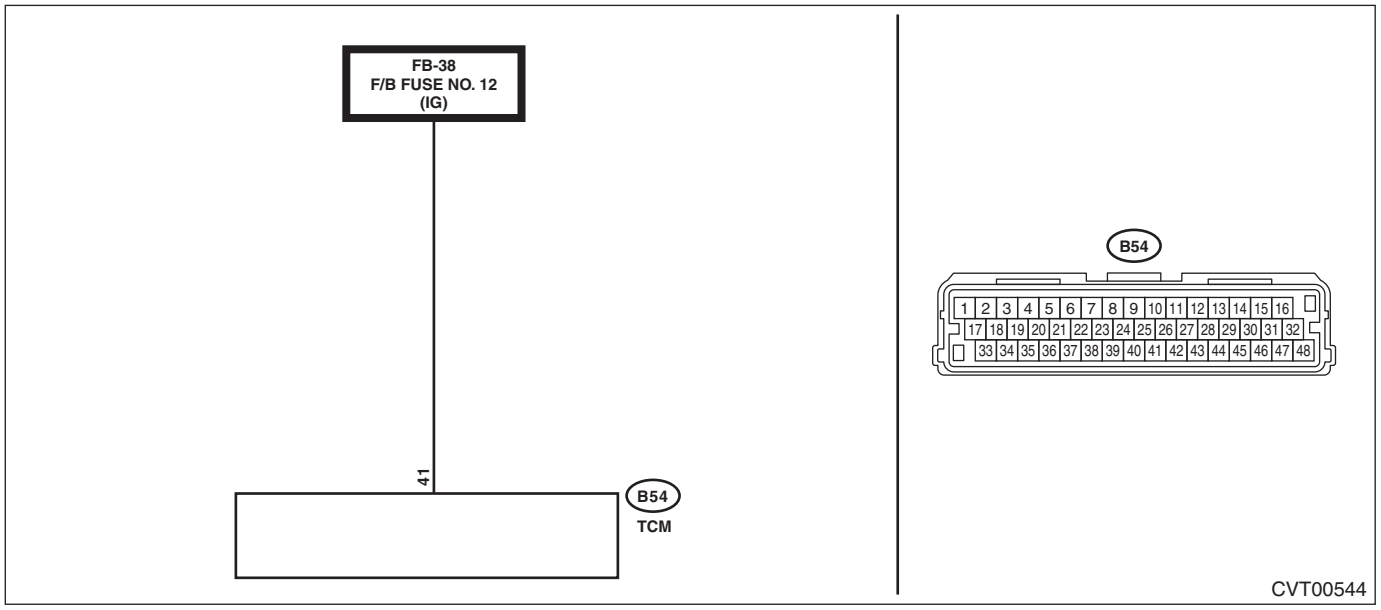
Malfunction Criteria	Threshold Value
Vehicle speed (rear wheel) from vehicle dynamics control module NOTE: The Vehicle dynamics control module detects malfunction if either of rear wheel speed sensors does not output a signal and the other vehicle speed sensor output signal is above 7.46 MPH	≥ 186.4 MPH

Time needed for diagnosis: 2.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AR:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

Immediately at fault recognition
Trouble symptom:
Faulty TCM operation

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** Check the installing condition of TCM connector.	Is the TCM connector installed properly?	Go to step **2**.	Install the TCM connector.

	Step	Check	Yes	No
2	**CHECK INPUT VOLTAGE OF TCM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. (While wiggling the harness) ***Connector & terminal*** ***(B54) No. 41 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground of harness between TCM connector and ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch connector (IG relay 1 connector for model with push button start) • Poor contact of ignition switch (IG relay 1 for model with push button start)

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of ignition SW circuit.
- Judge as NG if the ignition SW signals are lost 5 times or more even though the engine is ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Count of temporarily discontinuous input of ignition switch	≥ 5 count

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AS:DTC P2746 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2746, is any of the DTCs P2747, U0100 and U0401 displayed?	Perform the diagnosis according to DTCs other than P2746.	Perform the diagnosis according to DTC P2747. <Ref. to CVT(diag)-140, DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

- Detect the malfunction of primary speed sensor signal characteristics.
- Judge as NG if the value calculated by “engine speed – primary pulley speed” becomes equal to or larger than the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 400 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.
Judgment value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed × 1.129 *	< Table 1 rpm

* 1.129: Primary reduction gear ratio

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured primary pulley shaft speed × 1.129 (rpm)	0	500	1000	1500	2000	2500	3000	3500

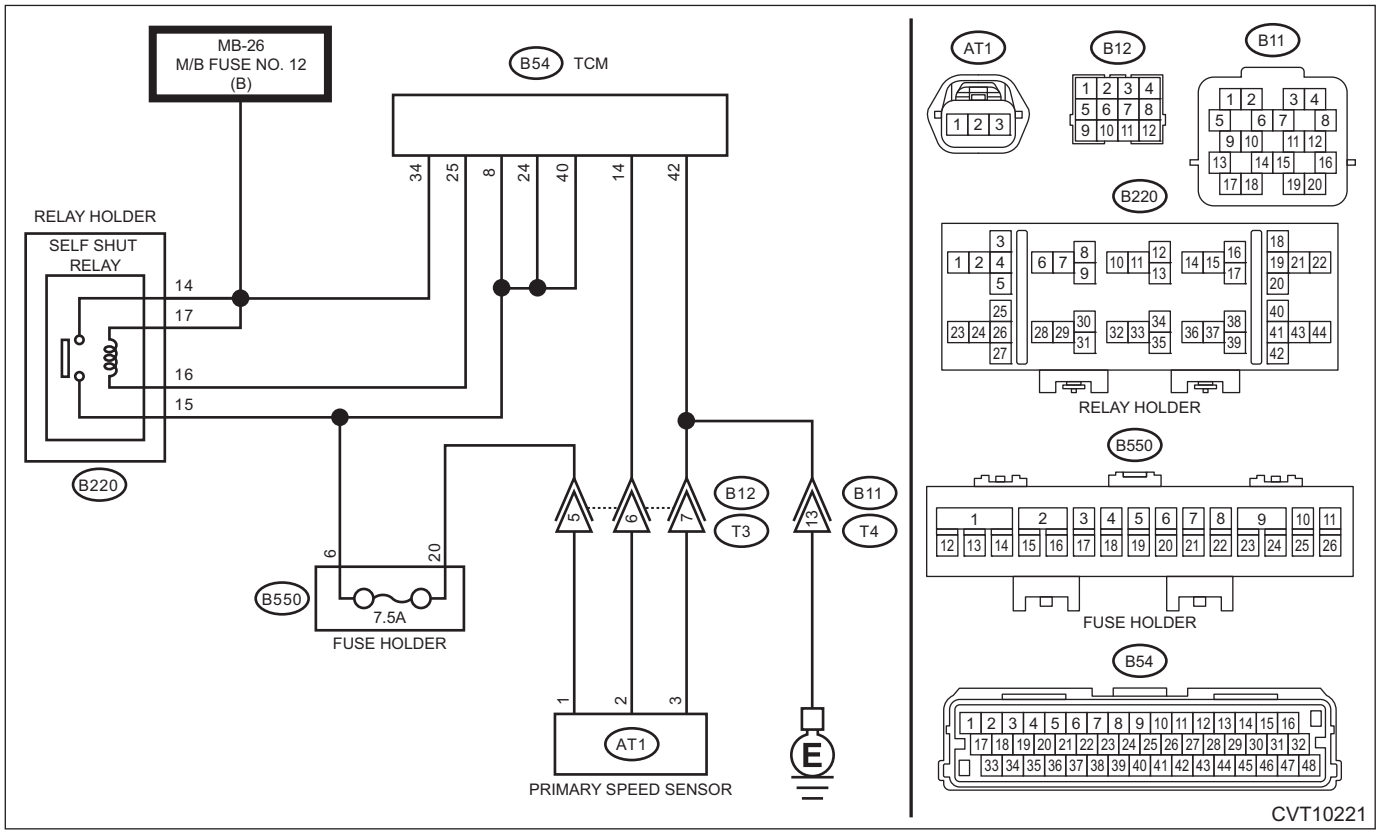
Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured primary pulley shaft speed × 1.129 (rpm)	4000	4500	5000	5500	6000	6500	7000

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AT:DTC P2747 INTERMEDIATE SHAFT SPEED SENSOR "B" CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Standing start problems
- Shock occurs when engaging the lockup clutch.
- Shock occurs when selecting shift position.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between relay holder and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 42 — (B11) No. 13:*** ***(B54) No. 14 — (B12) No. 6:*** ***(B54) No. 42 — (B12) No. 7:*** ***(B550) No. 20 — (B12) No. 5:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between relay holder and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B12) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Primary Rev Speed» using Subaru Select Monitor.	Does the value of «Primary Rev Speed» change according to those of «Turbine Revolution Speed»?	Current condition is normal. Repair the poor contacts of harnesses of primary speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the primary speed sensor connector. 4) Measure the resistance between transmission connector and primary speed sensor connector. ***Connector & terminal*** ***(T3) No. 5 — (AT1) No. 1:*** ***(T3) No. 6 — (AT1) No. 2:*** ***(T3) No. 7 — (AT1) No. 3:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK PRIMARY SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T3) No. 5 — Chassis ground:*** ***(T3) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK PRIMARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the primary speed sensor. <Ref. to CVT(TR690)-105, Primary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Go to step **16**.	The original primary speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2747 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect no input signal from the primary speed sensor.
- Judge as NG if there is no input signal from the primary pulley speed sensor, while the secondary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured secondary pulley shaft speed	≥ 500 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured primary pulley shaft speed	0 rpm

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AU:DTC P2750 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Besides DTC P2750, is DTC P2747 or P2751 displayed?	Perform the diagnosis according to DTCs other than P2750.	Perform the diagnosis according to DTC P2751. <Ref. to CVT(diag)-146, DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Diagnosis 1
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG when the secondary pulley speed against the primary pulley speed goes outside the possible range considering the hardware capabilities.

Diagnosis 2
- Detect the malfunction of secondary speed sensor signal characteristics.
- Judge as NG if the secondary speed exceeds the predetermined value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Diagnosis 1	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed / Measured front output shaft speed	≥ 0.36 and ≤ 2.34
Diagnosis 2	
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed / Measured output shaft speed *	≥ 0.36 and ≤ 2.34

* Measured output shaft speed: Measured rear output shaft speed × 0.543 ** + Measured front output shaft speed × (1 – 0.543)
** 0.543: Center differential gear ratio

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

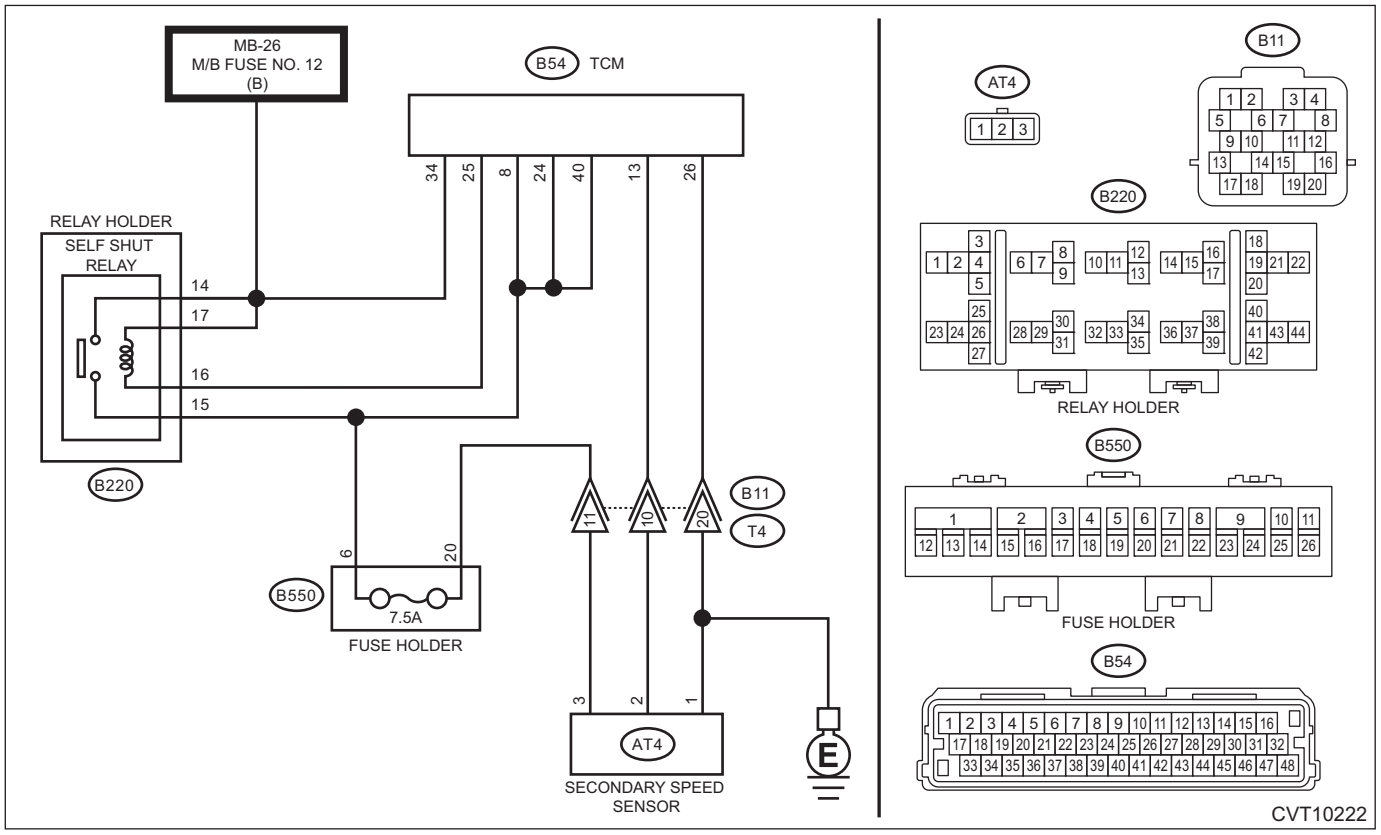
Malfunction Criteria	Threshold Value
Diagnosis 1	
Measured primary pulley shaft speed / Measured secondary pulley shaft speed	< 0.33 or > 2.58
Diagnosis 2	
Measured secondary pulley shaft speed	> 12250 rpm

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AV:DTC P2751 INTERMEDIATE SHAFT SPEED SENSOR "C" CIRCUIT NO SIGNAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Shifting shock is felt.
- Acceleration is poor during standing start.
- Shift control malfunction

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse (7.5 A) from the fuse holder. 3) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the fuse blows out easily, repair the short circuit of harness.
2	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Remove the self shut relay. 3) Measure the resistance between TCM connector and relay holder. ***Connector & terminal*** ***(B54) No. 25 — (B220) No. 16:*** ***(B54) No. 8 — (B220) No. 15:*** ***(B54) No. 24 — (B220) No. 15:*** ***(B54) No. 40 — (B220) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 25 — Chassis ground:*** ***(B54) No. 8 — Chassis ground:*** ***(B54) No. 24 — Chassis ground:*** ***(B54) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness.
4	**CHECK RELAY POWER SUPPLY.** Measure the voltage between relay holder and chassis ground. ***Connector & terminal*** ***(B220) No. 14 (+) — Chassis ground (–):*** ***(B220) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short circuit of harness.
5	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 16 — No. 17:***	Is the resistance 110 — 140 Ω?	Go to step **6**.	Replace the self shut relay.
6	**CHECK SELF SHUT RELAY.** Measure the resistance between self shut relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the self shut relay.
7	**CHECK INPUT SIGNAL FOR TCM.** 1) Connect the TCM connector. 2) Install the self shut relay. 3) Read the data of «Control module voltage» using Subaru Select Monitor.	Is the «Control module voltage» 10 V or more?	Current condition is normal. Check for poor contact in connectors or harnesses, and repair the defective part.	Go to step **8**.
8	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 13 — (B11) No. 10:*** ***(B54) No. 26 — (B11) No. 20:*** ***(B550) No. 20 — (B11) No. 11:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness.
9	**CHECK HARNESS.** Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit of harness.
10	**CHECK HARNESS.** Measure the resistance between relay holder and fuse holder. ***Connector & terminal*** ***(B220) No. 15 — (B550) No. 6:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of harness.
11	**CHECK TRANSMISSION HARNESS.** 1) Install the fuse. 2) Connect the TCM connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between transmission connector terminals. ***Connector & terminal*** ***(B11) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **12**.	Repair the open circuit of harness or poor contact of connector.

	Step	Check	Yes	No
12	**CHECK INPUT SIGNAL FOR TCM.** 1) Turn the ignition switch to OFF. 2) Connect the transmission connector. 3) Lift up the vehicle. 4) Start the engine. 5) Set the select lever to “D” range. 6) Read the data of «Secondary Rev Speed» using Subaru Select Monitor.	Does the value of «Secondary Rev Speed» change according to those of «Front Wheel Speed»?	Current condition is normal. Repair the poor contacts of harnesses of secondary speed sensor and transmission connector.	Go to step **13**.
13	**CHECK TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Disconnect the secondary speed sensor connector. 4) Measure the resistance between transmission connector and secondary speed sensor connector. ***Connector & terminal*** ***(T4) No. 10 — (AT4) No. 2:*** ***(T4) No. 11 — (AT4) No. 3:*** ***(T4) No. 20 — (AT4) No. 1:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the transmission harness.
14	**CHECK SECONDARY SPEED SENSOR HARNESS.** Measure the resistance between transmission connector and chassis ground. ***Connector & terminal*** ***(T4) No. 10 — Chassis ground:*** ***(T4) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **15**.	Repair the short circuit of harness.
15	**CHECK SECONDARY SPEED SENSOR.** 1) Turn the ignition switch to OFF. 2) Replace the secondary speed sensor. <Ref. to CVT(TR690)-102, Secondary Speed Sensor.> 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Go to step **16**.	The original secondary speed sensor is defective.
16	**CHECK SELF SHUT RELAY.** 1) Turn the ignition switch to OFF. 2) Replace the self shut relay. 3) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 4) Read the DTC.	Is DTC P2751 displayed?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	The original self shut relay is defective.

1. OUTLINE OF DIAGNOSIS

- Detect the no input signal from the secondary speed sensor.
- Judge as NG if there is no input signal from the secondary pulley speed sensor, while the primary pulley speed sensor has the input signal although the primary and secondary pulleys are interlocked via the chain.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Transmission range	Drive or Reverse
Measured primary pulley shaft speed	≥ 1000 rpm

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Measured secondary pulley shaft speed	0 rpm

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AW:DTC P2757 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT PERFORMANCE/STUCK OFF

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
No lock-up occurs.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2757 displayed?	Perform the diagnosis according to DTCs other than P2757.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **8**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.

	Step	Check	Yes	No
6	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. ***Connector & terminal*** ***(T4) No. 2 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness.
7	**CHECK HARNESS.** Measure the resistance between transmission connector and control valve body. ***Connector & terminal*** ***(T11) No. 2 — Control valve body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Repair the short circuit of harness.
8	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **9**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
9	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **10**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
10	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.> Go to step **11**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-93, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
11	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 70% or more, and «Front Wheel Speed» is 40 km/h (25 MPH) or more, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2757 displayed?	Replace the torque converter assembly. <Ref. to CVT(TR690)-143, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to low pressure side).
• Judge as NG if the deviation between engine speed and primary pulley speed becomes equal to or larger than the predetermined value, even though the lock-up command is issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Commanded duty of torque converter clutch pressure control solenoid	≥ 95%
Measured primary pulley shaft speed × 1.129 * (rpm)	> Table 1 rpm

* 1.129: Primary reduction gear ratio

Table 1

Engine speed (rpm)	3700	3727	3755	3782	3856	4019	4213	4456
Measured primary pulley shaft speed × 1.129 (rpm)	0	500	1000	1500	2000	2500	3000	3500

Engine speed (rpm)	4786	5213	5651	6101	6569	7044	7520
Measured primary pulley shaft speed × 1.129 (rpm)	4000	4500	5000	5500	6000	6500	7000

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 **	> Table 2 rpm

* ABS: Absolute value

** 1.129: Primary reduction gear ratio

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	200	200	200	200	200	200	200	200

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	200	200	200	200	200	200	200

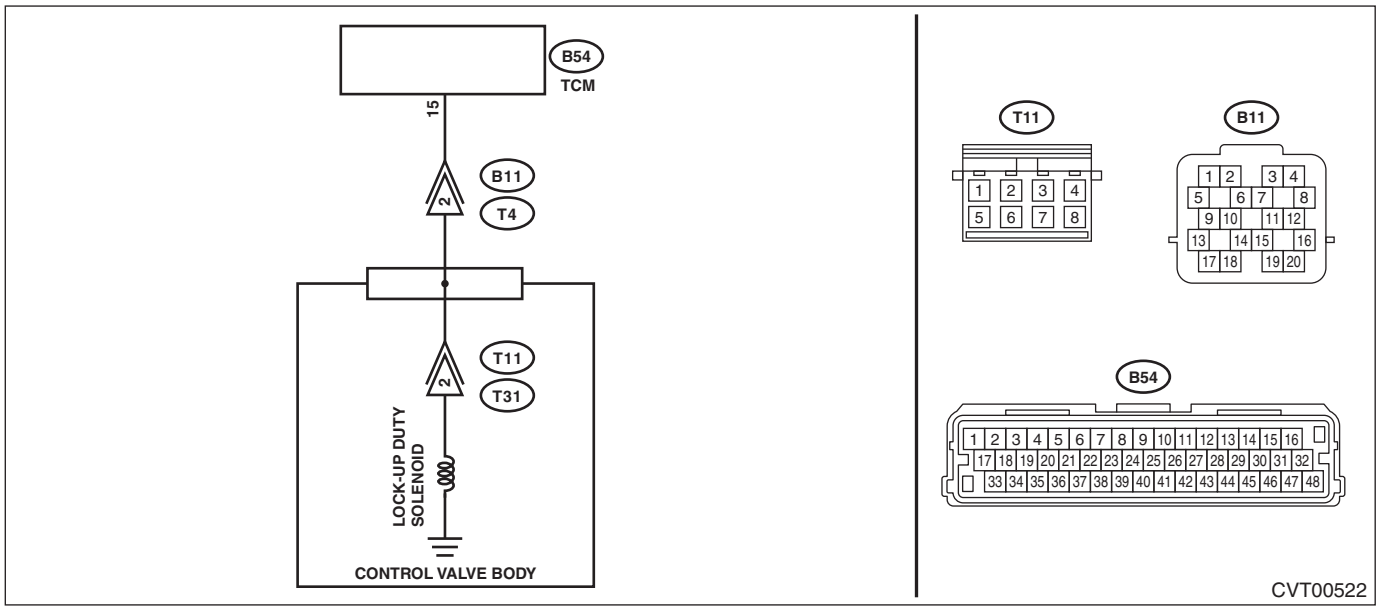
* ABS: Absolute value

Time needed for diagnosis: 10 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AX:DTC P2758 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT STUCK ON

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
The engine stalls when the vehicle is stopped.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC using Subaru Select Monitor.	Is a DTC other than DTC P2758 displayed?	Perform the diagnosis according to DTCs other than P2758.	Go to step **2**.
2	**CHECK LOCK-UP DUTY SOLENOID (ACTIVE TEST).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform forced operation of the lock-up duty solenoid. <Ref. to CVT(diag)-24, Active Test.>	Does the indication of 0 → 50% appear repeatedly during forced operation, and does operating sound emit during indicating 50%?	Go to step **8**.	Go to step **3**.
3	**CHECK LOCK-UP DUTY SOLENOID.** 1) Turn the ignition switch to OFF. 2) Disconnect the transmission connector. 3) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the TCM connector. 2) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness.
5	**CHECK HARNESS.** Measure the resistance between TCM connector and transmission body. ***Connector & terminal*** ***(B54) No. 15 — Transmission body:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit of harness.

	Step	Check	Yes	No
6	**CHECK HARNESS.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Disconnect the control valve body connector. 3) Measure the resistance between transmission connector and control valve body connector. ***Connector & terminal*** ***(T4) No. 2 — (T11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness.
7	**CHECK HARNESS.** Measure the resistance between transmission connector and control valve body. ***Connector & terminal*** ***(T11) No. 2 — Control valve body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Repair the short circuit of harness.
8	**CHECK TRANSMISSION FLUID.** 1) Connect all connectors. 2) Check the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>	Is the check result OK?	Go to step **9**.	Adjust the amount of ATF. <Ref. to CVT(TR690)-36, ADJUSTMENT, CVTF.>
9	**CHECK TRANSMISSION FLUID.** Check the condition of ATF. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>	Is the check result OK?	Go to step **10**.	Check according to the “Corrective action” of ATF (CVTF) “CONDITION CHECK”. <Ref. to CVT(TR690)-39, CONDITION CHECK, CVTF.>
10	**CHECK INPUT SIGNAL FOR TCM.** 1) Lift up the vehicle. 2) Start the engine. 3) Warm up until the ATF temperature reaches to 40 — 70°C (104 — 158°F). 4) Depress the brake pedal, and shift the select lever to “D” range. 5) Shift the select lever to “P” range. 6) Stabilize the engine speed at idle. 7) Read the data of «Actual Secondary Pressure» using Subaru Select Monitor.	Is the «Actual Secondary Pressure» 0.5 — 1.5 MPa?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.> Go to step **11**.	Perform the diagnosis according to DTC P0841. <Ref. to CVT(diag)-93, DTC P0841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Step		Check	Yes	No
11	**DRIVING CHECK FOR LOCK-UP CONDITION.** 1) Perform the Clear Memory Mode. <Ref. to CVT(diag)-19, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Start the engine. 4) Warm up until the ATF temperature exceeds 50°C. 5) Drive the vehicle for one minute or more while keeping such constant speed that «Lock Up Duty Ratio» is 0%, and «Front Wheel Speed» is 5 km/h (3 MPH) or less, which are displayed on the Subaru Select Monitor. 6) Turn the ignition switch to OFF. 7) Start the engine. 8) Perform the procedure in step 5) again. 9) Read the DTC using Subaru Select Monitor.	Does the AT OIL TEMP light blink and is DTC P2758 displayed? Or does the engine stall?	Replace the torque converter assembly. <Ref. to CVT(TR690)-143, Torque Converter Assembly.>	Current condition is normal. It is possible that temporary poor contact occurs.

1. OUTLINE OF DIAGNOSIS

• Detect the malfunction of lock-up fluid pressure control solenoid, and hydraulic circuit, or drive circuit characteristics (stuck to high pressure side).
• Judge as NG if the deviation between engine speed and primary pulley speed becomes less than the predetermined value, even though the lock-up command is not issued.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Engine speed	≥ 1000 rpm
Transmission range	Drive
Engine torque	> Table 1 N·m
Commanded duty of torque converter clutch pressure control solenoid	≤ 0%

Table 1

		Engine coolant temperature (degC)							
		– 40	– 20	0	20	40	60	80	100
Vehicle speed (calculated from measured front output shaft speed sensor) (MPH)	0	145	130	116	102	88	74	74	74
	13	170	156	142	128	114	100	100	100
	25	192	178	164	150	136	121	121	121
	38	223	209	195	181	167	153	153	153
	50	240	240	228	214	200	186	186	186
	63	240	240	240	240	234	220	220	220
	75	240	240	240	240	240	240	240	240

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 **	< Table 2 rpm

* ABS: Absolute value

** 1.129: Primary reduction gear ratio

Table 2

Engine speed (rpm)	0	500	1000	1500	2000	2500	3000	3500
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	0	0	50	50	50	50	50	50

Engine speed (rpm)	4000	4500	5000	5500	6000	6500	7000
ABS *: Engine speed – Measured primary pulley shaft speed × 1.129 (rpm)	50	50	50	50	50	50	50

* ABS: Absolute value

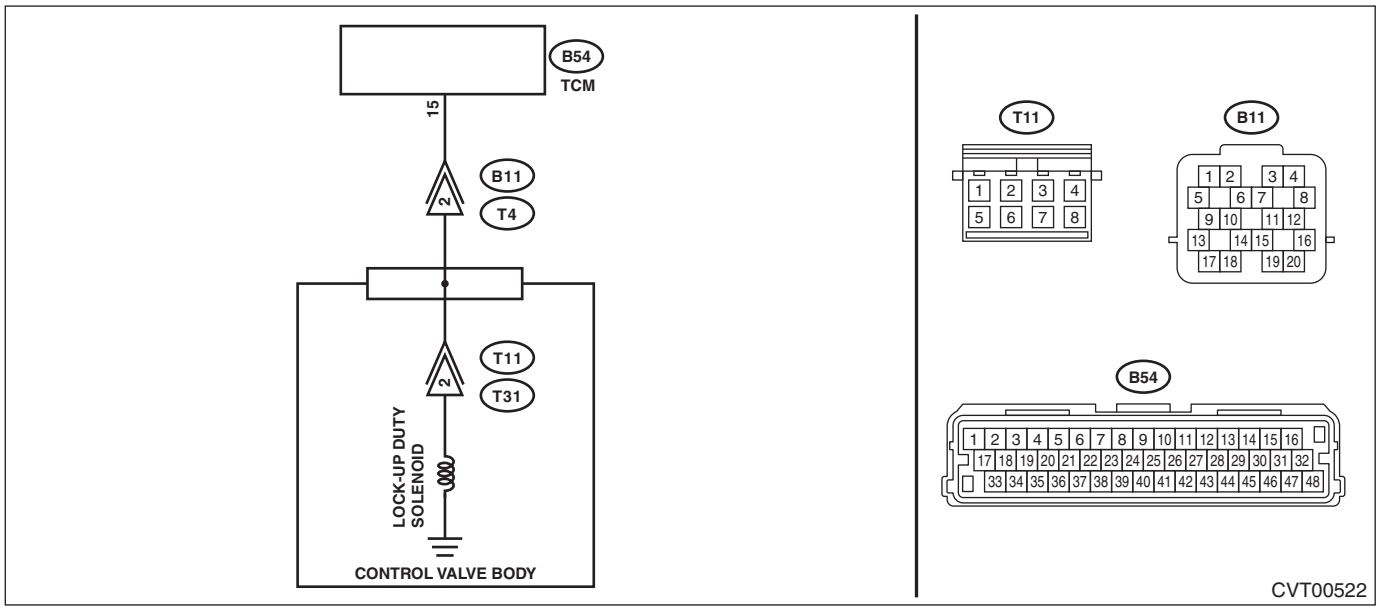
Time needed for diagnosis: 10 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AY:DTC P2763 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- No lock-up occurs.
- Engine stalls.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 15 — (B11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.
5	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 (+) — Transmission body (–):***	Is the voltage approx. 0 V?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

• Detect short circuit to power supply or open circuit of the lock-up clutch pressure control solenoid drive circuit.
• Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	0%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≥ 2.5 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AZ:DTC P2764 TORQUE CONVERTER CLUTCH PRESSURE CONTROL SOLENOID CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>

	Step	Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK-UP DUTY SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance approx. 10 — 13.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 2 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch pressure control solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch pressure control solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Commanded duty of torque converter clutch pressure control solenoid	100%

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

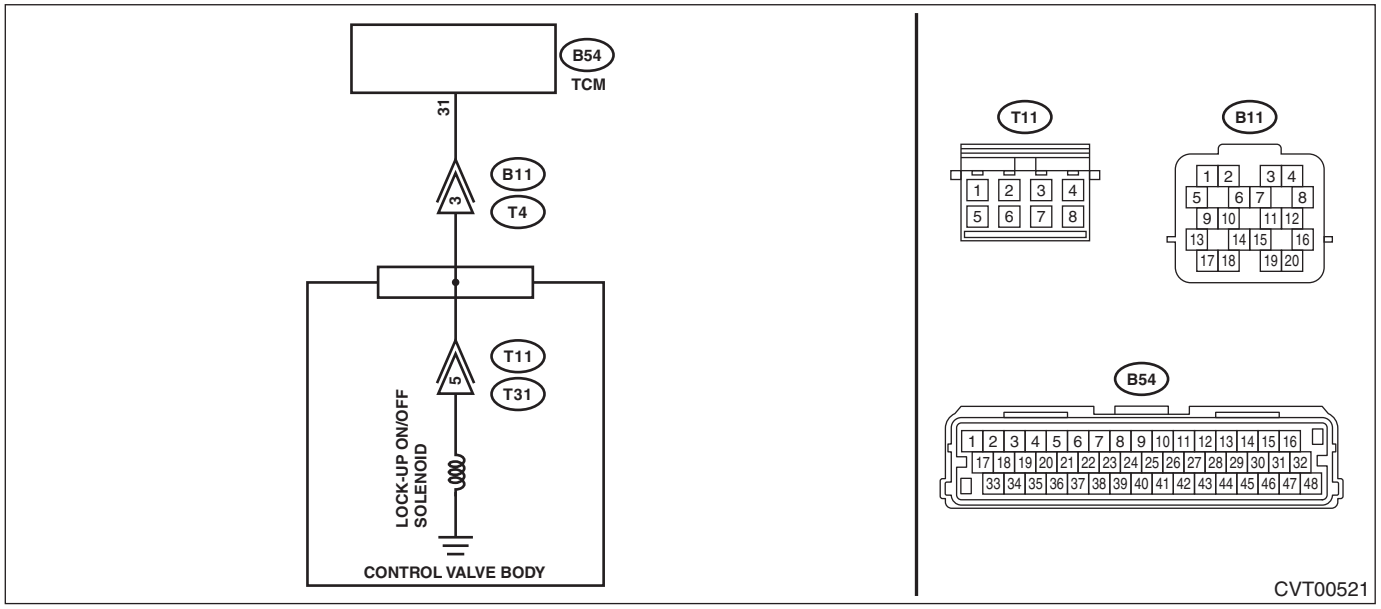
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch pressure control solenoid voltage ≤ 0.8 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BA:DTC P2769 TORQUE CONVERTER CLUTCH CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit of harness.
2	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **3**.
3	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS INSIDE TRANSMISSION.** 1) Disconnect the control valve body connector. 2) Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance 1 MΩ or more?	Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect the ground short of the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch ON/OFF solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

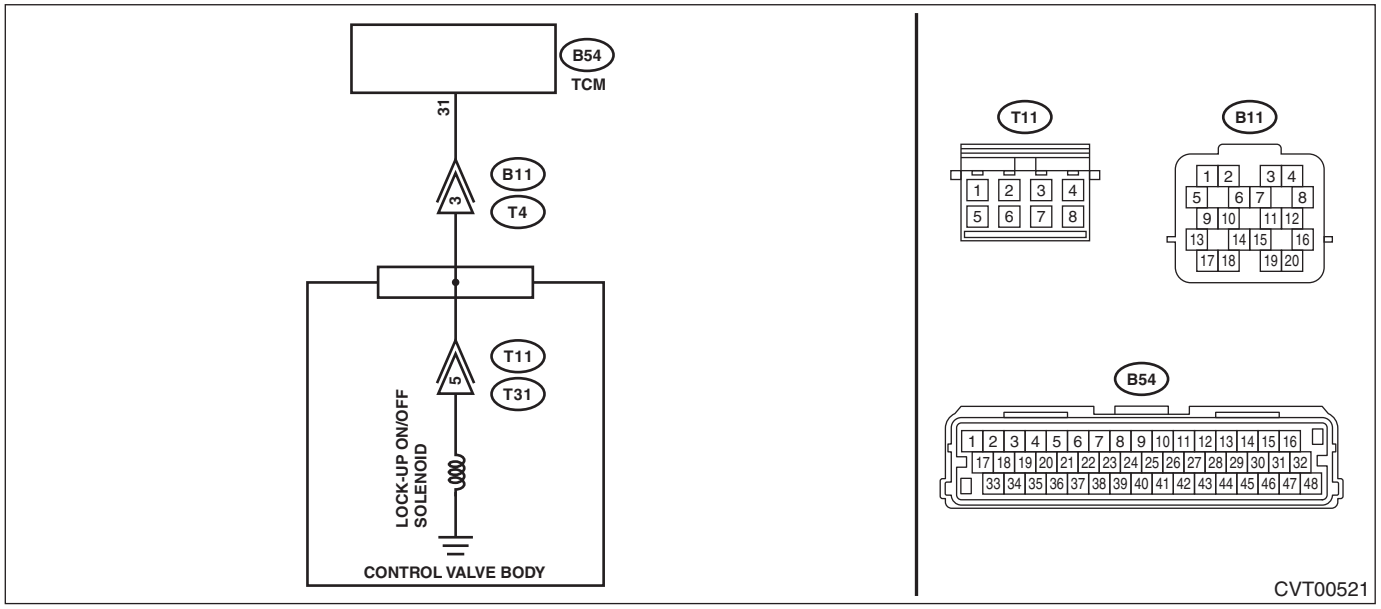
Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch circuit control solenoid voltage ≤ 0.8 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BB:DTC P2770 TORQUE CONVERTER CLUTCH CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
No lock-up occurs.

CAUTION:
Use the check board when measuring the TCM terminal voltage and resistance.
Wiring diagram:
CVT control system <Ref. to WI-139, CVT Control System.>



Step		Check	Yes	No
1	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Disconnect the transmission connector. 4) Measure the resistance between TCM connector and transmission connectors. ***Connector & terminal*** ***(B54) No. 31 — (B11) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness.
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM connector and chassis ground. ***Connector & terminal*** ***(B54) No. 31 (+) — Chassis ground (–):***	Is the voltage approx. 0 V?	Go to step **3**.	Repair the short circuit of harness.
3	**CHECK LOCK UP ON/OFF SOLENOID.** Measure the resistance between transmission connector and transmission body. ***Connector & terminal*** ***(T4) No. 3 — Transmission body:***	Is the resistance approx. 13 — 18.5 Ω? (when cold)	Check for poor contact of connector, and if no fault is found, replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Go to step **4**.
4	**CHECK HARNESS INSIDE TRANSMISSION.** **CAUTION:** **Start work after ATF cools down.** 1) Remove the transmission oil pan. 2) Check for the harness pinch, damage.	Is there any fault in the harness?	Replace the transmission harness.	Go to step **5**.

Step		Check	Yes	No

Replace the control valve body. <Ref. to CVT(TR690)-115, Control Valve Body.>	Replace the transmission harness.

1. OUTLINE OF DIAGNOSIS

- Detect open circuit or short circuit to ground in the lock-up clutch ON/OFF solenoid drive circuit.
- Judge as NG when an abnormal signal is received from the solenoid driver IC of the lock-up clutch ON/OFF solenoid drive circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 9 V
Torque converter clutch circuit control solenoid output command	OFF

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Signal of malfunction from solenoid driver IC As defined by: Measured torque converter clutch circuit control solenoid voltage ≥ 2.5 V	ON

Time needed for diagnosis: 0.2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BC:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure has occurred.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BD:DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the ECM.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from ECM	Lost

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BE:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the VDC CM.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Lost

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BF:DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the body integrated unit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Lost

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BG:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the combination meter.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Lost

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BH:DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the A/C control panel.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Lost

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BI: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from ECM is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from ECM	Did not change

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BJ:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from VDC CM is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10 V
Measured primary pulley shaft speed	> 0 rpm
or	
Transmission range	Drive or Reverse

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from Vehicle Dynamics Control Module	Did not change

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BK:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.

- Judge as NG when data received from the body integrated unit is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from BIU	Freeze

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BL:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the combination meter is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed or D range switch	> 0 rpm ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from combination meter	Freeze

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm

Secondary parameters	Execution condition
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from A/C control panel	Freeze

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BN:DTC U1235 LOST COMMUNICATION WITH EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when CAN communication failure occurs with the stereo camera.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Lost

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

BO:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

- Detect malfunction of CAN communication.
- Judge as NG when data received from the stereo camera is not normal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Turbine shaft speed	> 0 rpm
or	
D range switch	ON

3. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
CAN data from stereo camera	Freeze

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

18.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SHIFT INDICATOR

Diagnosis:
- CAN communication is abnormal with the combination meter.
- Combination meter malfunction

Trouble symptom:
- Shift indicator does not display or remains displayed.
- Shift indicator display does not change.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Is DTC U0155 or U0423 displayed?	Perform the self-diagnosis of combination meter.	Go to step **2**.
2	**CHECK DTC.** Read the DTC relating the TCM using the Subaru Select Monitor.	Are DTCs other than U0155 and U0423 displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK COMBINATION METER.** Read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK TCM.** 1) Operate the + side of the paddle shift switch. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **5**.	Check for poor contact between TCM and paddle shift UP switch, and repair the defective part.
5	**CHECK TCM.** 1) Operate the – side of the paddle shift switch. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does it change between ON and OFF according to the operation?	Go to step **6**.	Check for poor contact between TCM and paddle shift down switch, and repair the defective part.
6	**CHECK TCM.** 1) Turn the ignition switch OFF, then turn it ON again. 2) Shift the select lever to manual mode. 3) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “1” displayed?	Go to step **7**.	Perform the diagnosis according to DTC P0951. <Ref. to CVT(diag)-104, DTC P0951 AUTO SHIFT MANUAL CONTROL CIRCUIT RANGE/ PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	**CHECK TCM.** 1) Shift up the select lever. 2) Read the data of «Shift step in Manu. mode» using the Subaru Select Monitor.	Is “2” displayed?	Current condition is normal.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

19.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
Engine stalls when driving in “D” or “R” range, or selecting “N” → “D”, “N” → “R”.	• Control valve • Engine control system
While driving in “D” range, vibration occurs immediately before the stop or engine stalls.	• Control valve • Torque converter
Vehicle cannot shift while driving in “D” range.	• Control valve • TCM • Shift mechanism • Power supply system
Excessive shock when selecting “N” → “D”, and “N” → “R”.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Excessive shock at standing start in “D” range.	• Control valve • TCM • F&R clutch pack • ATF deterioration or lack
Engine speed increases abruptly during driving in “D” or “R” range.	• Control valve • Secondary pressure sensor • F&R clutch pack • ATF deterioration or lack
Vehicle can not start when depressing the accelerator pedal in “D” or “R” range, or acceleration is very poor. (without abrupt engine increase)	• Control valve • F&R clutch pack • Shift mechanism • Parking mechanism • Engine control system • Power supply system
Shift indicator in combination meter displays the position which differs from select lever position.	• Inhibitor switch • Select cable related • Combination meter
Manual mode enters even though the select lever and paddle shift switch is not operated.	• Manual mode switch • Paddle shift switch • Select lever • TCM
Engine speed increases abruptly in “D” or “R” range, vehicle can not start.	• F&R clutch pack • Select cable related
Manual mode can not be set	• Select lever • TCM

1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

Type			6-forward speeds and 1-reverse (all stage with synchromesh)
Transmission gear ratio		1st	3.455
		2nd	1.947
		3rd	1.296
		4th	0.972
		5th	0.780
		6th	0.667
		Rev.	3.636
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	4.111
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.000
Front differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2)
Center differential	Type and number of gear		Straight bevel gear (bevel pinion: 2, bevel gear: 2, viscous coupling)
Transmission gear oil capacity			3.3 L (3.5 US qt, 2.9 Imp qt)

2. TRANSMISSION GEAR OIL

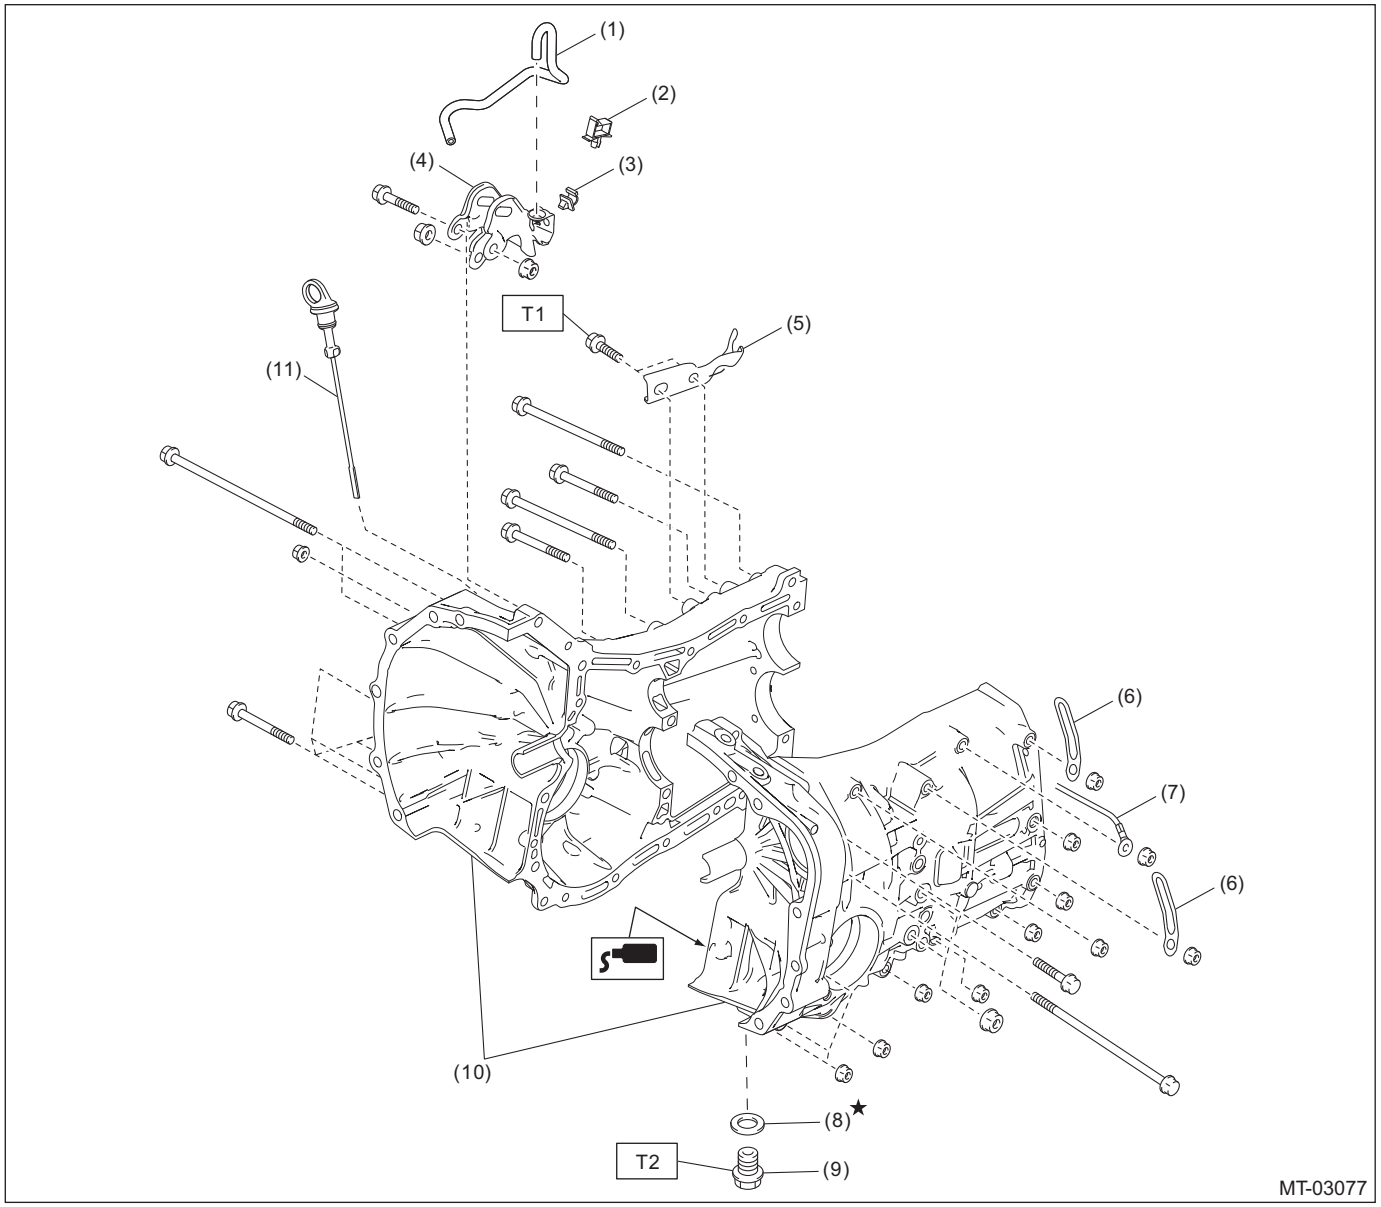
CAUTION:
If an alternative transmission gear oil is used, you may not have expected functionality and performance.

Recommended oil:
SUBARU GEAR OIL EXTRA MT

Alternative:
GL-5 (75W-90)

B: COMPONENT

1. TRANSMISSION CASE



(1)	Air breather hose	(7)	Transmission radio ground cord
(2)	Clamp	(8)	Gasket
(3)	Hose clamp	(9)	Drain plug
(4)	Pitching stopper bracket	(10)	Transmission case ASSY
(5)	Select bracket	(11)	Oil level gauge
(6)	Harness clip		

Tightening torque: N·m (kgf-m, ft-lb)

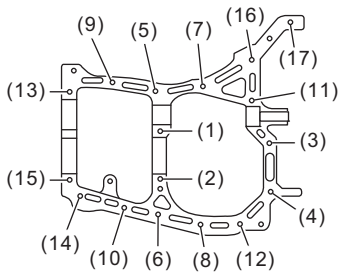
T1: 18 (1.8, 13.3)

T2: 44 (4.5, 32.5) (aluminum gasket, silver)

70 (7.1, 51.6) (copper gasket, brown)

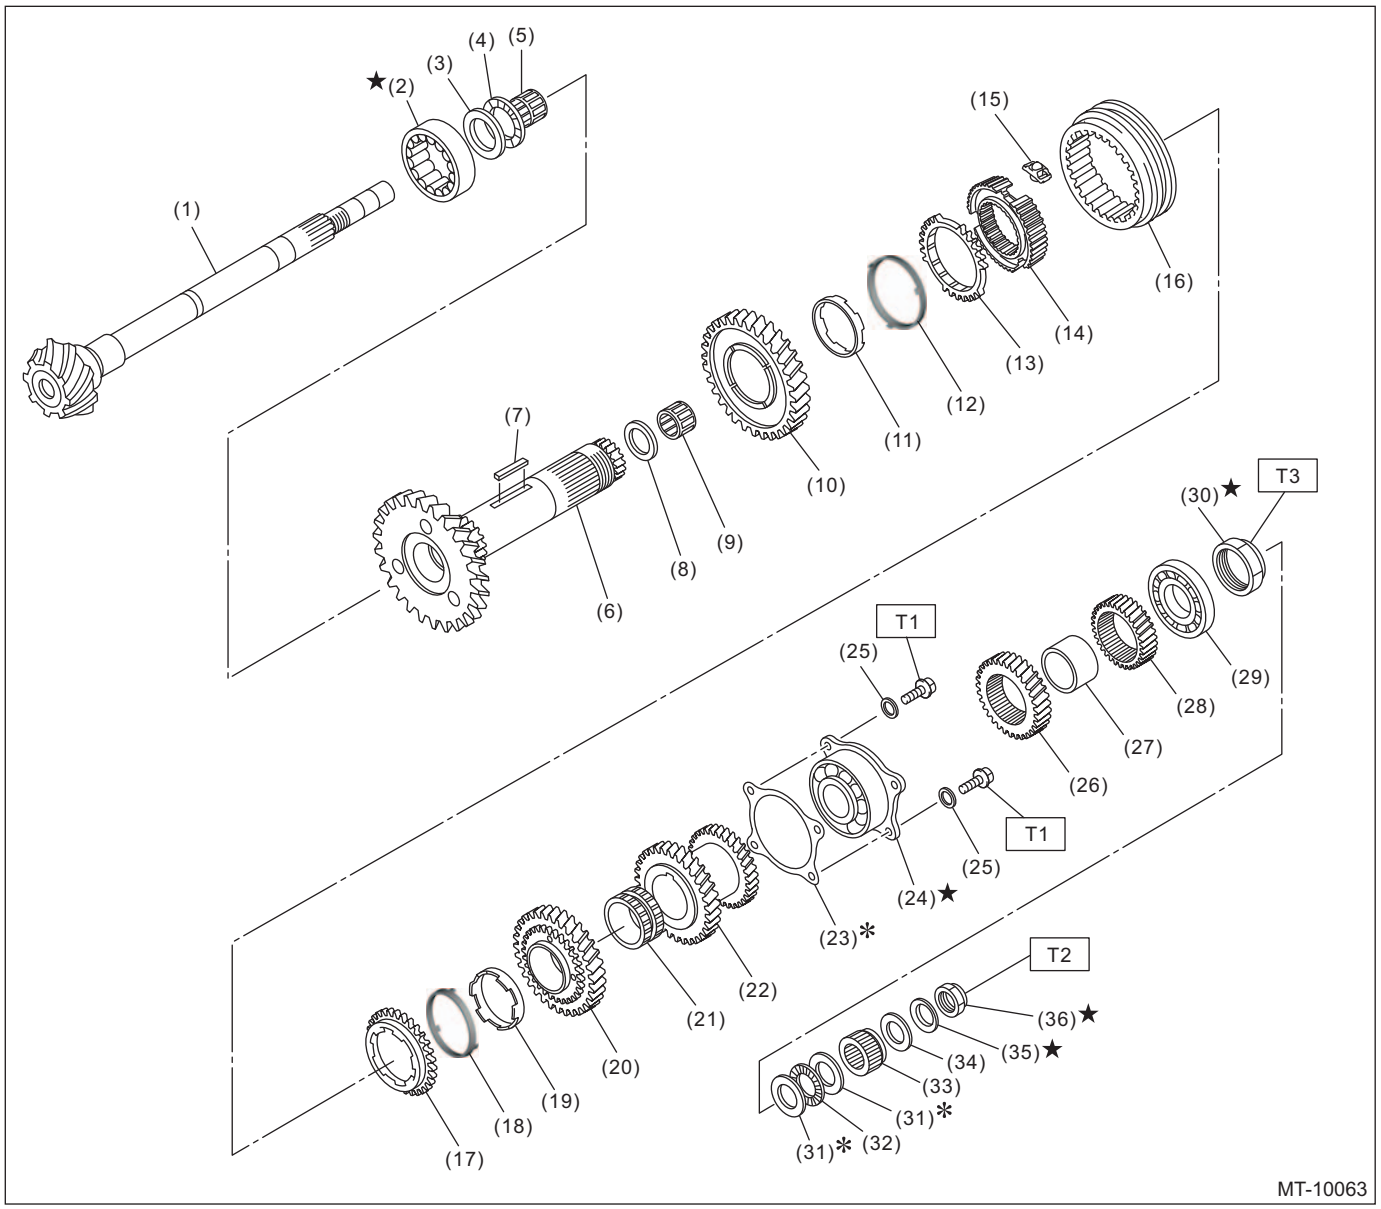
70 (7.1, 51.6) (metal gasket, black)

Transmission case tightening torque



Bolt No.	Bolt size mm	Tightening torque: N·m (kgf-m, ft-lb)
(5) — (15)	8	25 (2.5, 18.4)
(1) — (4) (16), (17)	10	40 (4.1, 29.5)

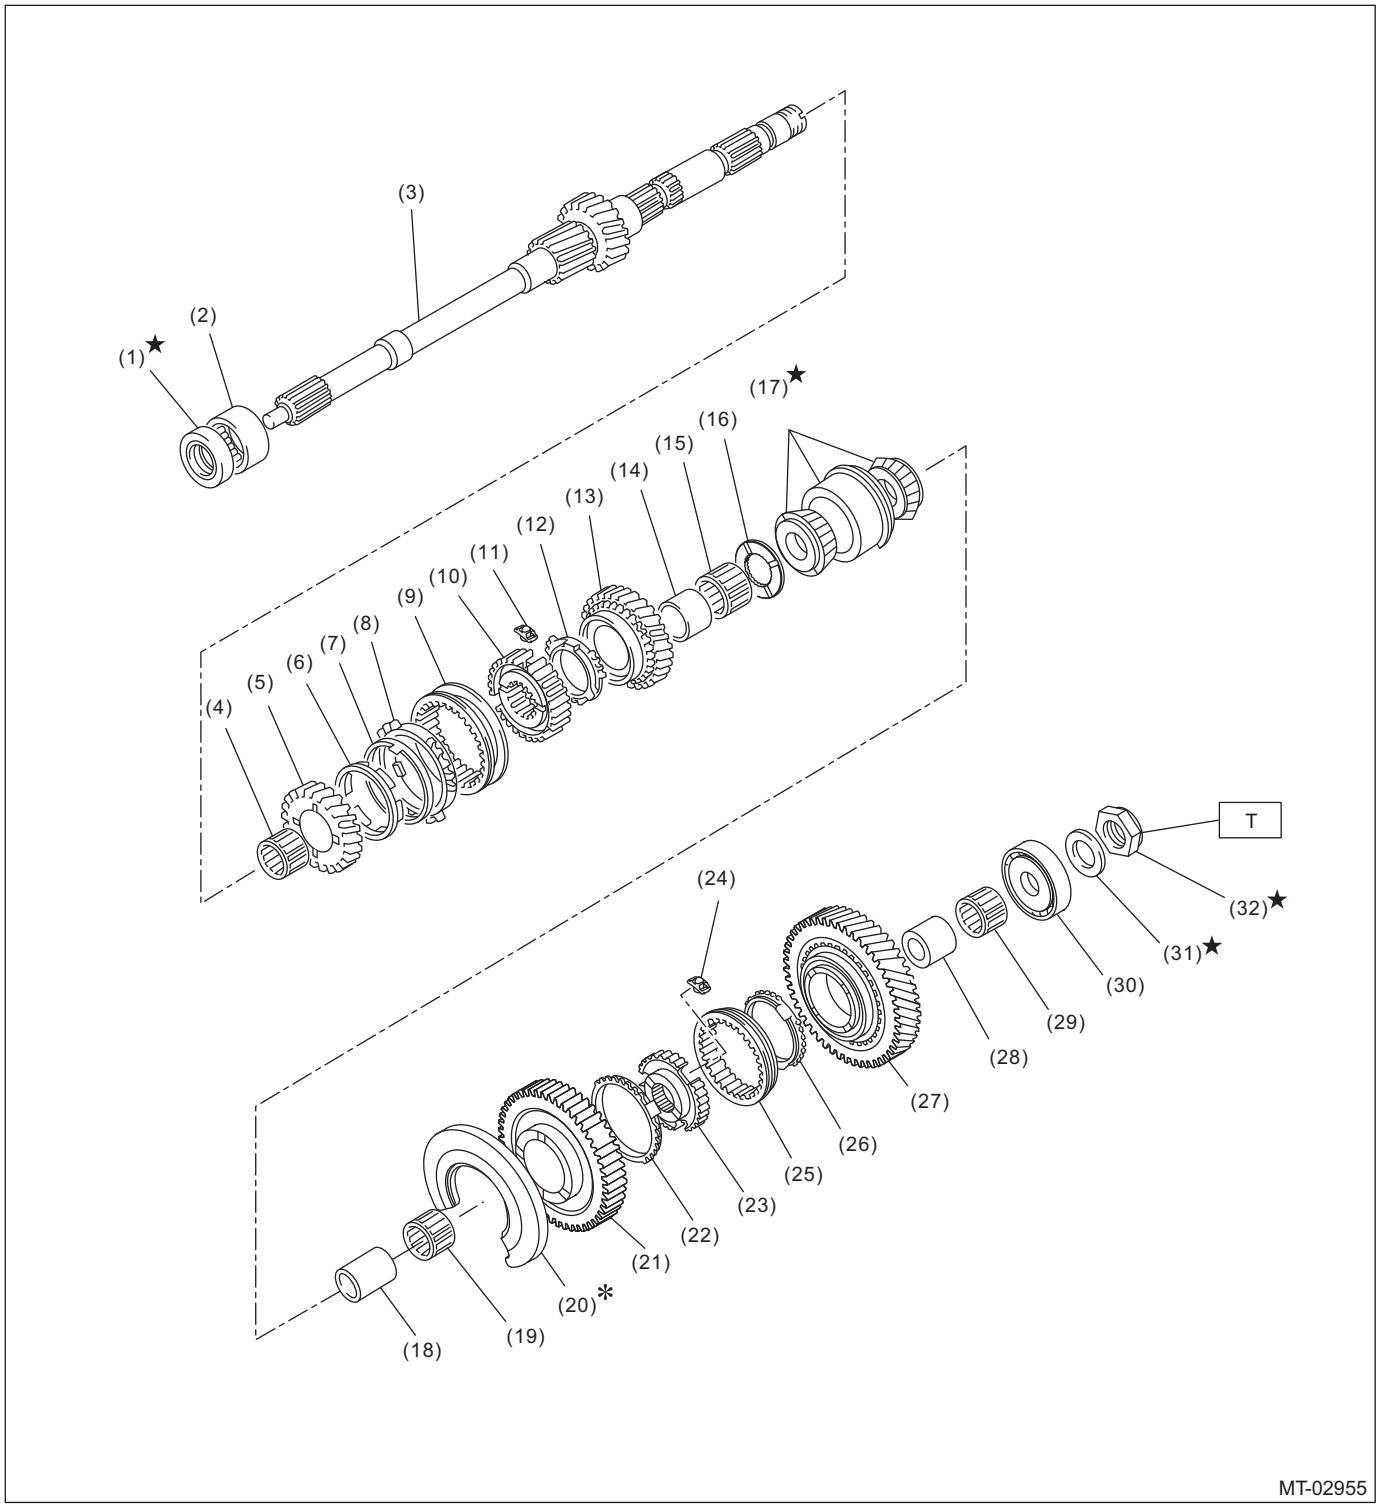
2. DRIVE PINION SHAFT ASSEMBLY



(1) Drive pinion shaft
(2) Roller bearing
(3) Washer
(4) Thrust bearing
(5) Needle bearing
(6) Driven shaft
(7) Key
(8) Drive pinion collar
(9) Needle bearing
(10) 1st driven gear
(11) 1st inner baulk ring
(12) 1st synchro cone
(13) 1st outer baulk ring
(14) 1st-2nd synchronizer hub
(15) 1st-2nd shifting insert
(16) 1st-2nd coupling sleeve
(17) 2nd outer baulk ring
(18) 2nd synchro cone
(19) 2nd inner baulk ring
(20) 2nd driven gear
(21) 2nd driven gear bushing
(22) 3rd-4th driven gear
(23) Drive pinion shim
(24) Double ball bearing
(25) Spring washer
(26) 5th driven gear
(27) Drive pinion spacer
(28) 6th driven gear
(29) Ball bearing
(30) Lock nut
(31) Adjusting washer
(32) Thrust bearing
(33) Differential bevel gear sleeve
(34) Washer
(35) Lock washer
(36) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 30 (3.1, 22.1)
T2: 126 (12.8, 92.9)
T3: 440 (44.9, 324.5)

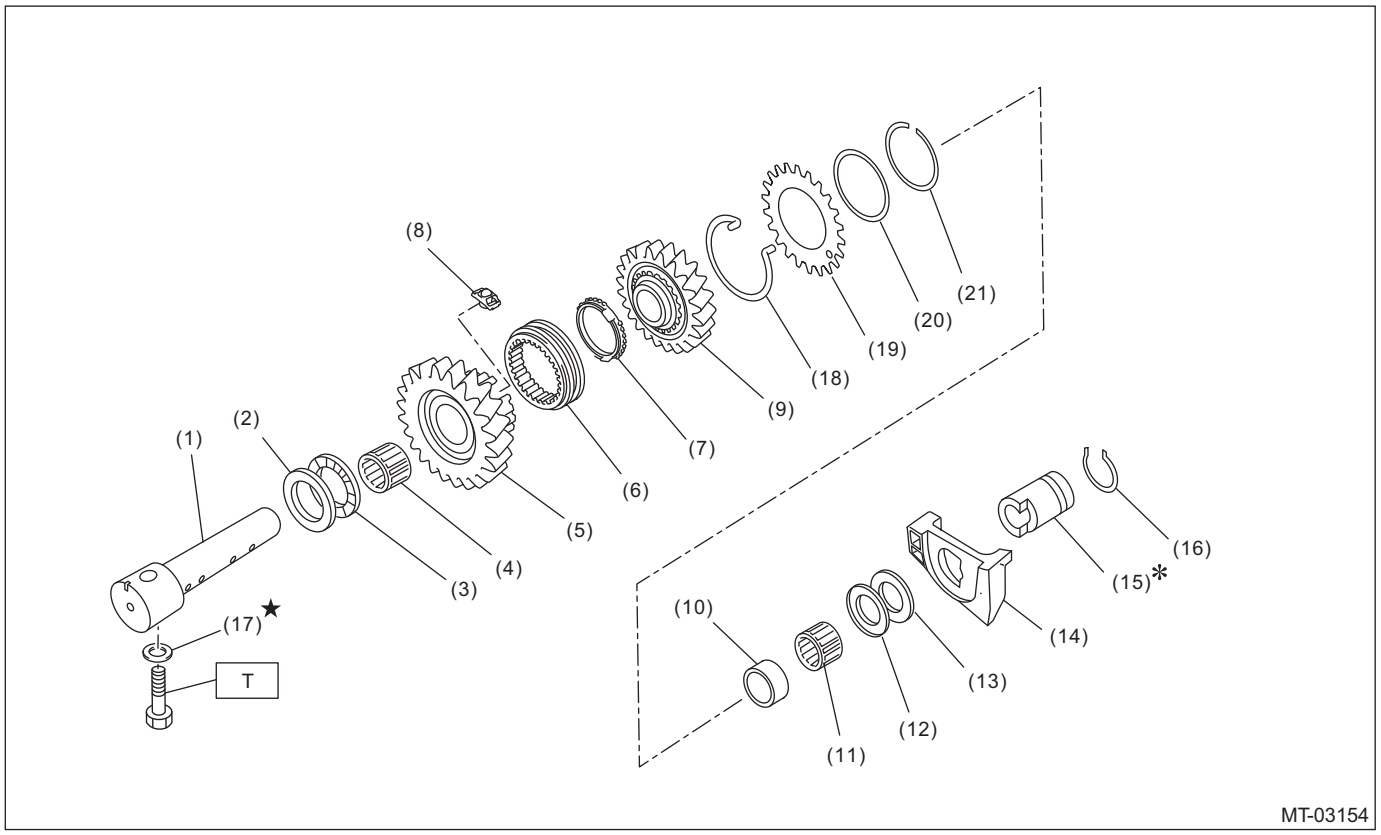
3. MAIN SHAFT ASSEMBLY



(1) Oil seal
(2) Needle bearing
(3) Main shaft
(4) 3rd needle bearing
(5) 3rd drive gear
(6) 3rd inner baulk ring
(7) 3rd synchro cone
(8) 3rd outer baulk ring
(9) 3rd-4th coupling sleeve
(10) 3rd-4th synchronizer hub
(11) 3rd-4th shifting insert
(12) 4th baulk ring
(13) 4th drive gear
(14) 4th needle bearing race
(15) 4th needle bearing
(16) 4th gear thrust washer
(17) Double taper roller bearing
(18) 5th needle bearing race
(19) 5th needle bearing
(20) Main shaft rear plate
(21) 5th drive gear
(22) 5th baulk ring
(23) 5th-6th synchronizer hub
(24) 5th-6th shifting insert
(25) 5th-6th coupling sleeve
(26) 6th baulk ring
(27) 6th drive gear
(28) 6th needle bearing race
(29) 6th needle bearing
(30) Ball bearing
(31) Lock washer
(32) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T: 160 (16.3, 118.0)

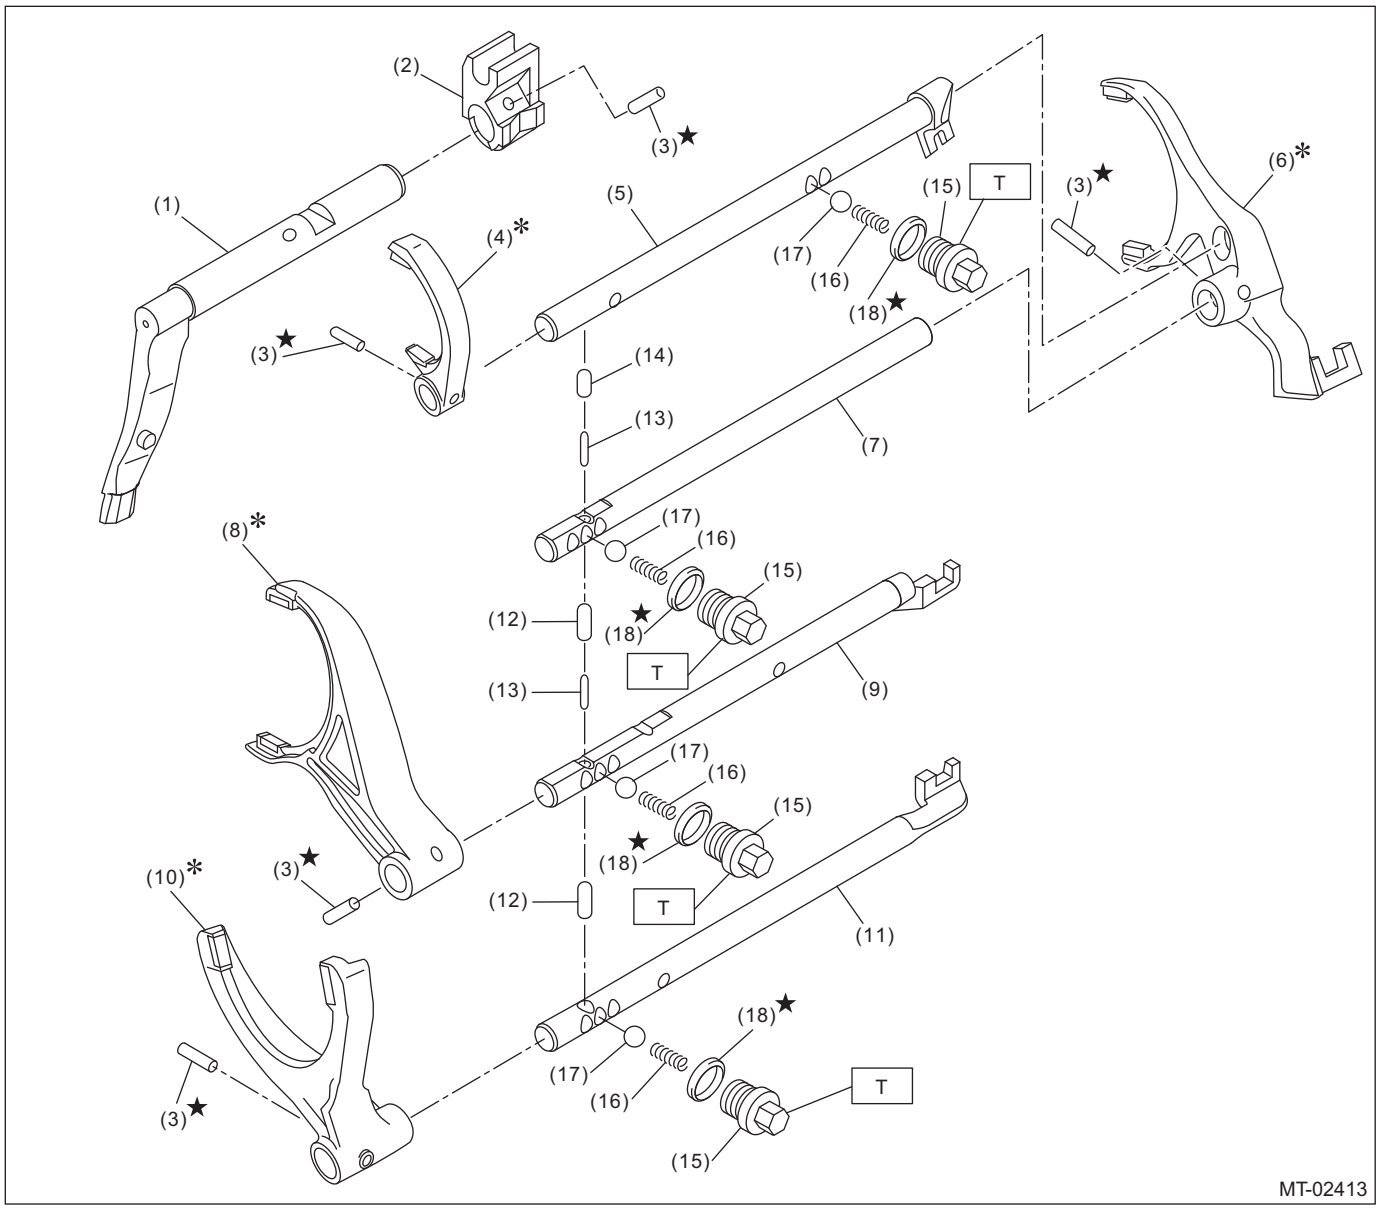
4. REVERSE IDLER GEAR ASSEMBLY



(1) Reverse idler gear shaft
(2) Reverse idler gear washer
(3) Thrust bearing
(4) Needle bearing
(5) Reverse idler gear No. 2
(6) Reverse coupling sleeve
(7) Reverse baulk ring
(8) Reverse shifting insert
(9) Reverse idler gear
(10) Reverse idler gear collar
(11) Needle bearing
(12) Thrust bearing
(13) Reverse idler gear washer
(14) Oil case guide
(15) Reverse idler gear bushing
(16) Snap ring
(17) Gasket
(18) Reverse idler spring
(19) Reverse idler sub gear
(20) Friction plate
(21) Snap ring

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

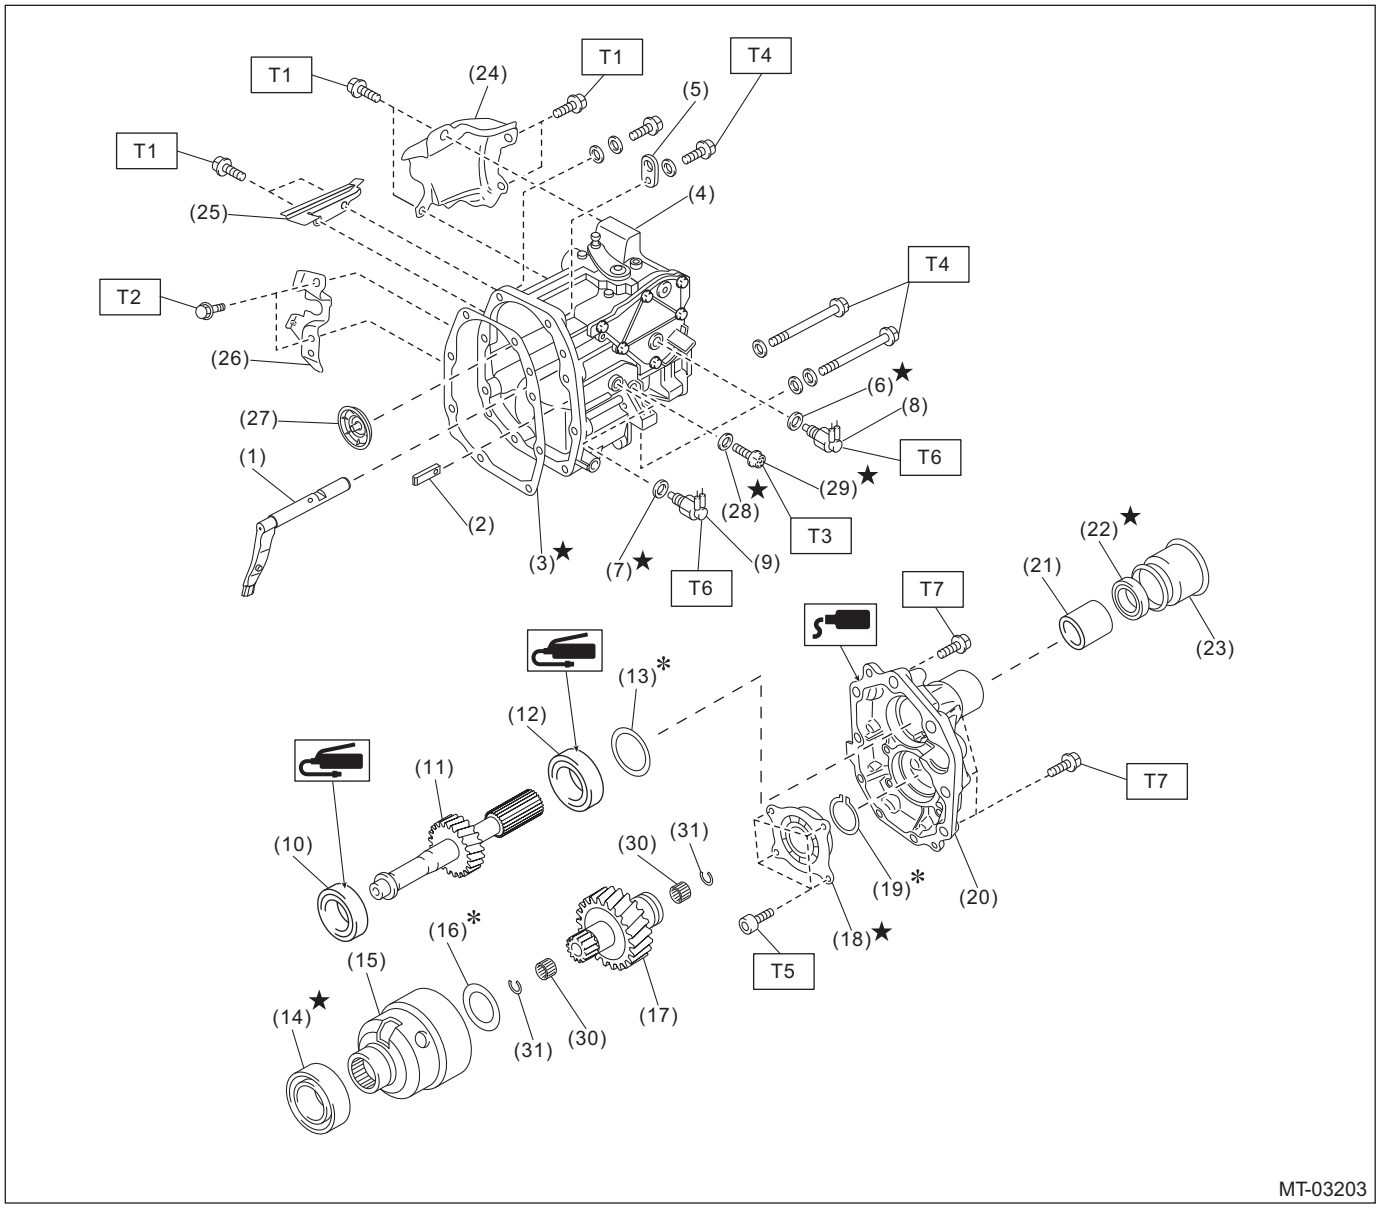
5. SHIFTER FORK AND SHIFTER ROD



(1) Shifter arm
(2) Selector arm
(3) Straight pin
(4) Reverse shifter fork
(5) Reverse fork rod
(6) 5th-6th shifter fork
(7) 5th-6th fork rod
(8) 3rd-4th shifter fork
(9) 3rd-4th fork rod
(10) 1st-2nd shifter fork
(11) 1st-2nd fork rod
(12) Interlock plunger
(13) Interlock plunger
(14) Interlock plunger
(15) Checking ball plug
(16) Checking ball spring
(17) Check ball
(18) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T: 20 (2.0, 14.8)

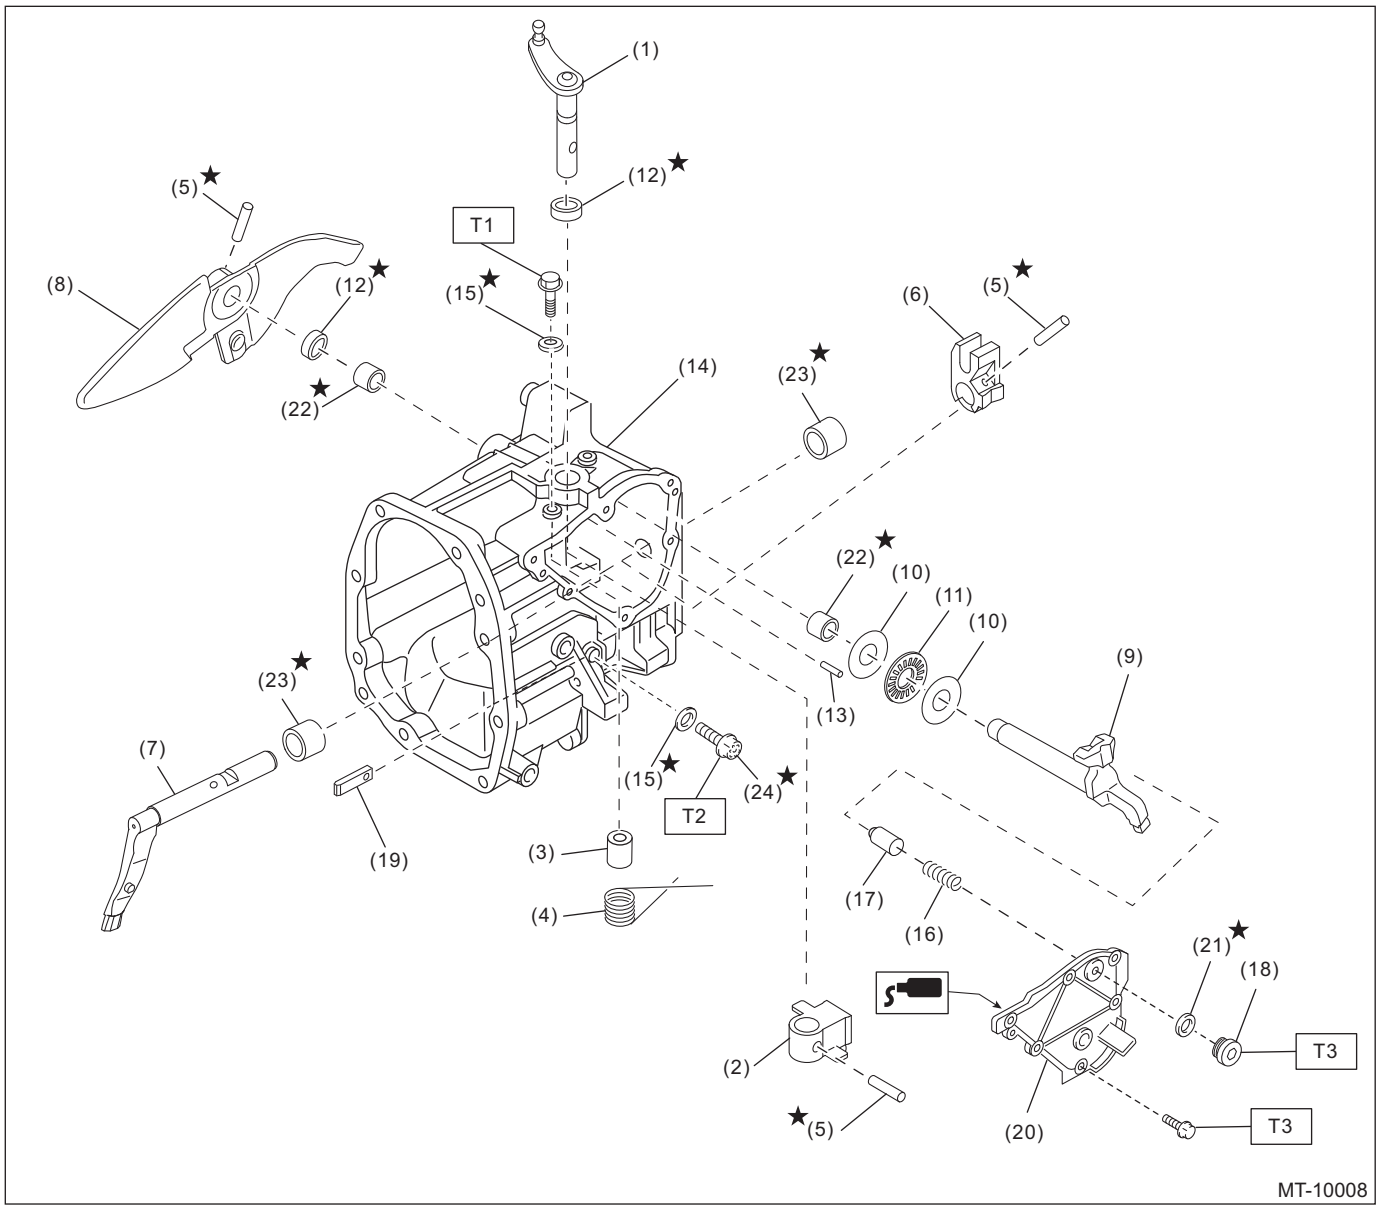
6. TRANSFER CASE AND EXTENSION



(1) Shifter arm
(2) Interlock plate
(3) Gasket
(4) Transfer case
(5) Transmission hanger
(6) Gasket
(7) Gasket
(8) Neutral position switch
(9) Back-up light switch
(10) Taper roller bearing (transfer case side)
(11) Transfer driven gear
(12) Taper roller bearing (extension case side)
(13) Adjusting washer
(14) Ball bearing
(15) Center differential
(16) Adjusting washer
(17) Transfer drive gear
(18) Ball bearing
(19) Snap ring
(20) Extension case
(21) Bushing
(22) Oil seal
(23) Dust cover
(24) Transfer cover
(25) Dust cover
(26) Shift bracket
(27) Oil guide
(28) Gasket
(29) Precoat bolt
(30) Needle bearing
(31) Snap ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 20 (2.0, 14.8)
T4: 24.5 (2.5, 18.1)
T5: 26 (2.7, 19.2)
T6: 32.3 (3.3, 23.8)
T7: 40 (4.1, 29.5)

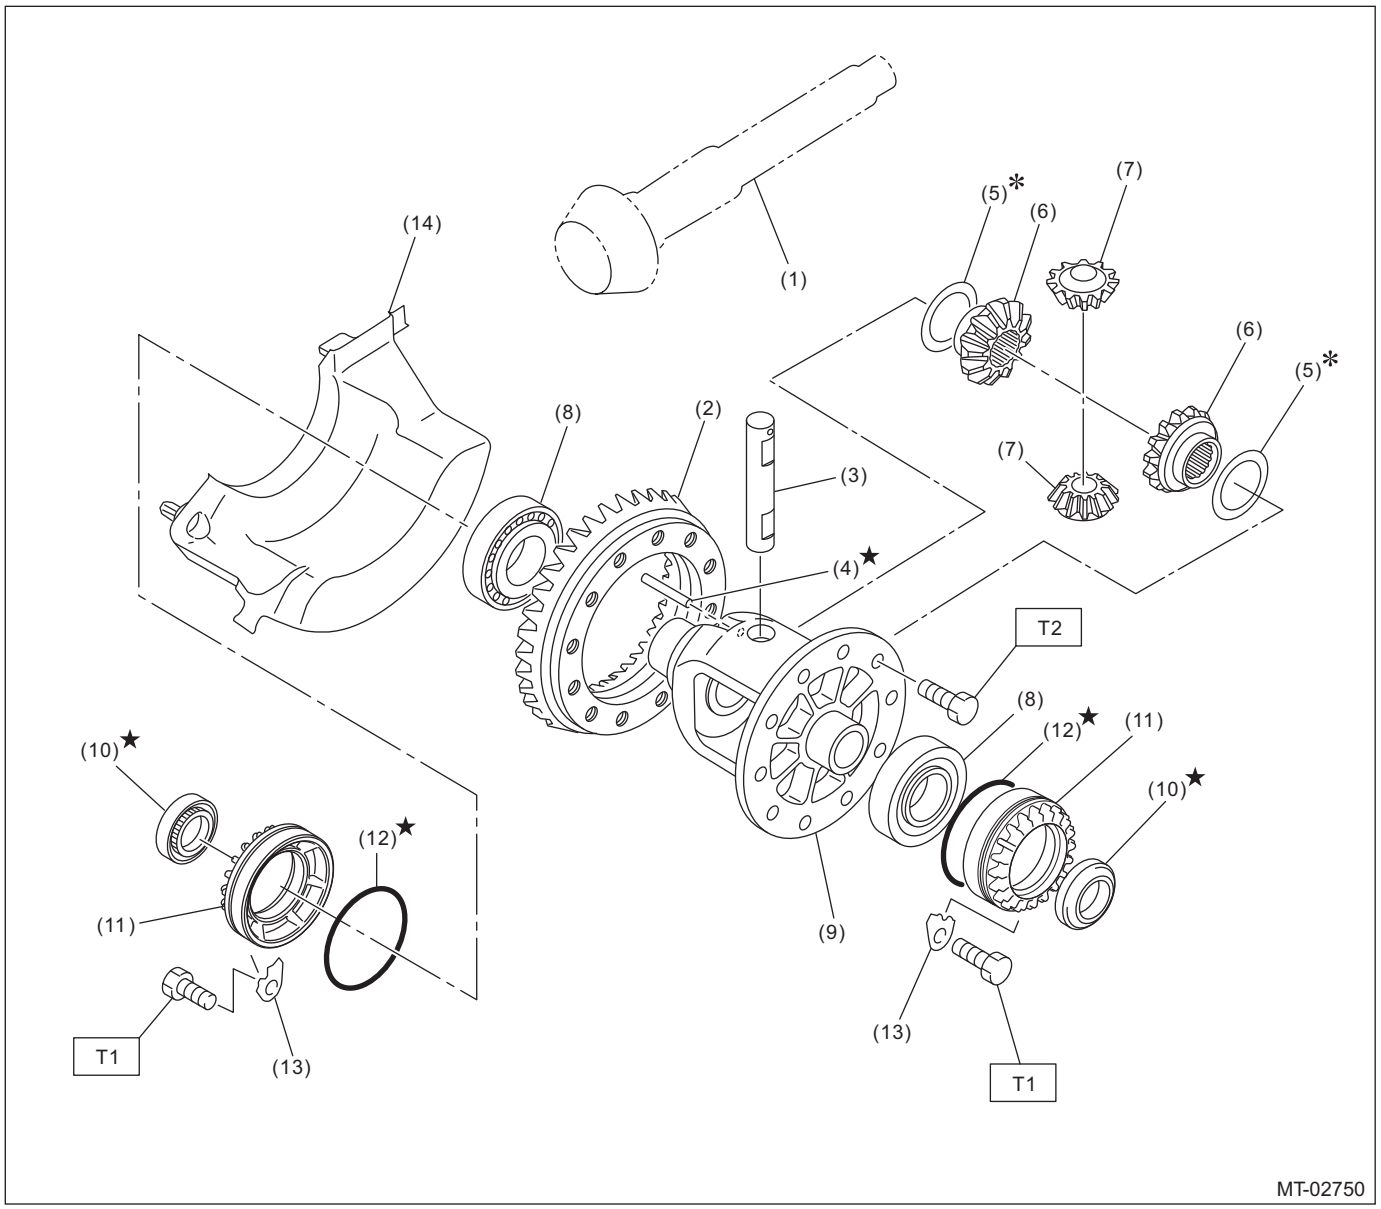
7. SHIFT LINK ASSEMBLY



(1) Selector lever COMPL
(2) Selector arm No. 2
(3) Shifter arm collar
(4) Neutral set spring
(5) Straight pin
(6) Selector arm
(7) Shifter arm
(8) Shift lever COMPL
(9) Shifter arm No. 2
(10) Adjusting washer
(11) Thrust bearing
(12) Oil seal
(13) Straight pin
(14) Transfer case
(15) Gasket
(16) Checking ball spring
(17) Shift accent plunger
(18) Seal bolt
(19) Interlock plate
(20) Transmission cover
(21) Seal ring
(22) Needle bearing
(23) Roller bearing
(24) Precoat bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 20 (2.0, 14.8)
T3: 25 (2.5, 18.4)

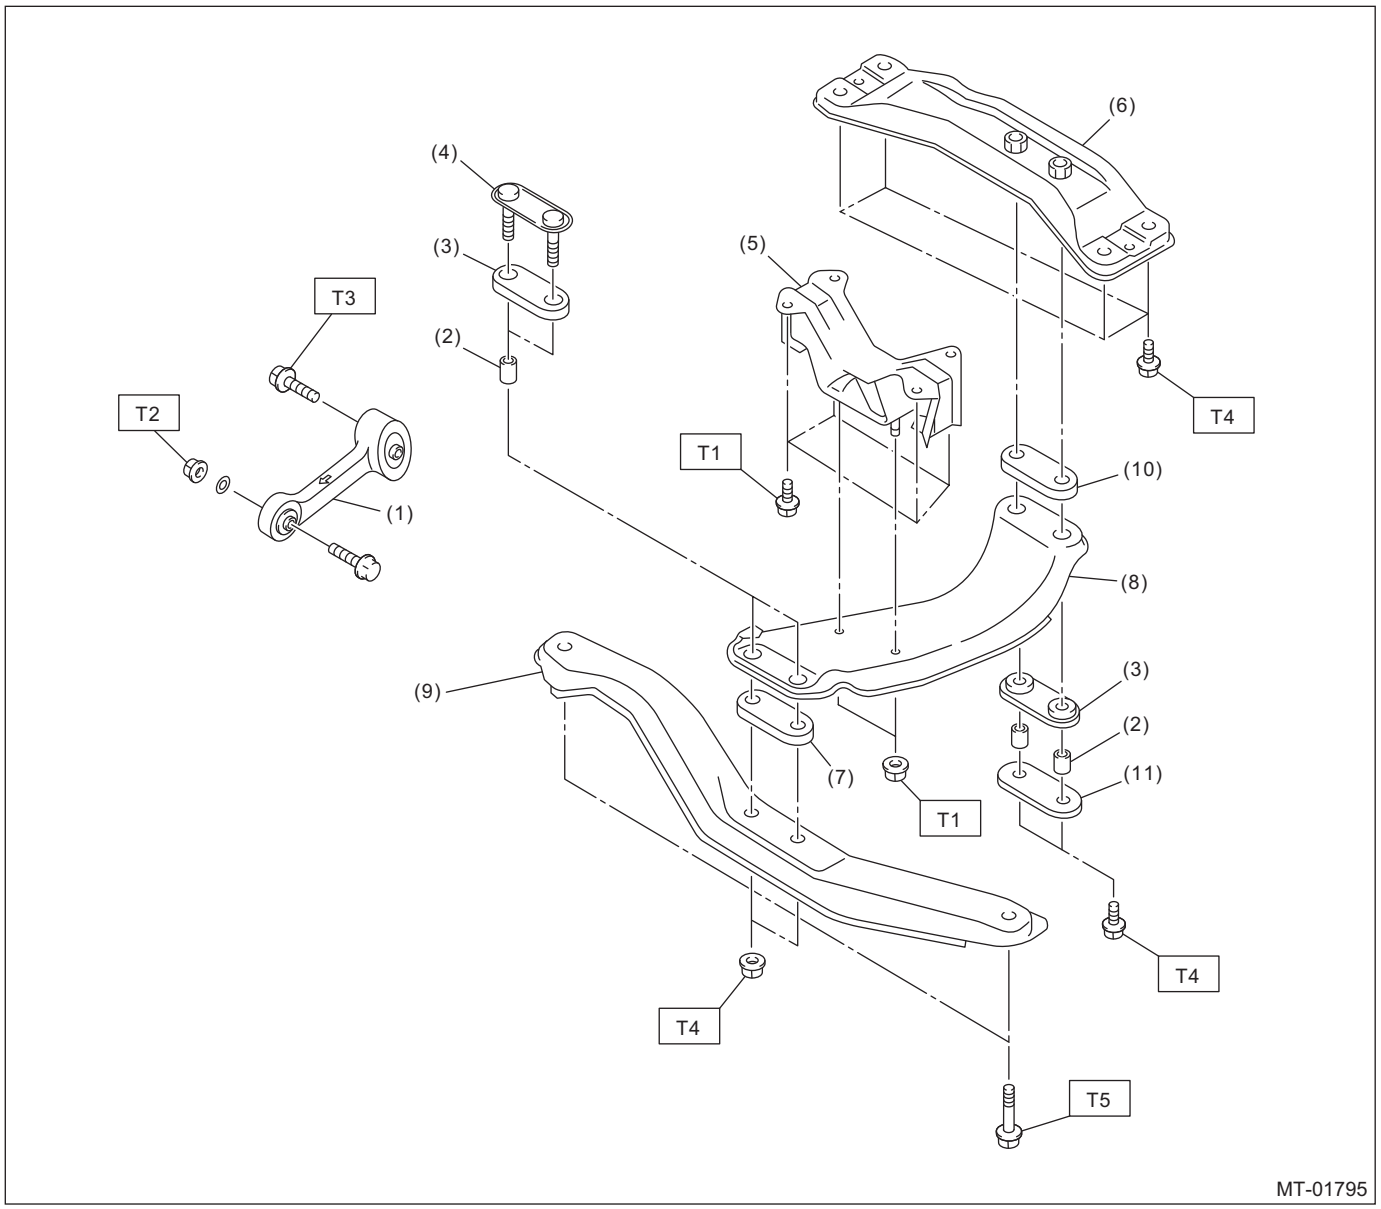
8. FRONT DIFFERENTIAL



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Adjusting washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Taper roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate
(14) Front oil guide

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 62 (6.3, 45.7)

9. TRANSMISSION MOUNTING



(1)	Pitching stopper	(7)	Upper cushion rubber	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Spacer	(8)	Center crossmember	***T1: 35 (3.6, 25.8)***
(3)	Lower cushion rubber	(9)	Front crossmember	***T2: 50 (5.1, 36.9)***
(4)	Front plate	(10)	Rear cushion rubber	***T3: 58 (5.9, 42.8)***
(5)	Transmission cushion rubber	(11)	Rear plate	***T4: 70 (7.1, 51.6)***
(6)	Rear crossmember			***T5: 140 (14.3, 103.3)***

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine gear oil, grease or equivalent. Do not mix gear oil, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolving surfaces before installation.
- Replace deformed or damaged snap rings with new parts.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove and clean the old liquid gasket.
- Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
- When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
- When replacing the taper roller bearing, replace the outer race and inner race as a set.
- When replacing the hypoid gear, replace the hypoid driven gear and drive pinion shaft as a set.
- Replace the bolts if the seating surface or the thread surface is excessively rusted.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899524100	899524100	PULLER SET	Used for removing the front differential taper roller bearing. (1) Puller (2) Cap
 ST-399780104	399780104	WEIGHT	Used for adjusting preload on the front differential taper roller bearing.
 ST-498077000	498077000	REMOVER	• Used for removing the roller bearing and washer of the drive pinion shaft assembly. • Used for removing the transfer driven gear taper roller bearing.
 ST-498077600	498077600	REMOVER	Used for removing the center differential ball bearing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with DIAL GAUGE (498247100).
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash of differential bevel pinion gear and hypoid driven gear. • Used together with MAGNET BASE (498247001).
 ST18667AA020	18667AA020	HOLDER	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for measuring the backlash of hypoid driven gear. • Used for adjusting preload on the front differential taper roller bearing.
 ST-498937000	498937000	TRANSMISSION HOLDER	Used for removing and installing the main shaft assembly lock nut.
 ST-499277100	499277100	BUSHING 1-2 INSTALLER	• Used for installing the drive pinion shaft assembly washer. • Used for installing the front differential taper roller bearing inner race.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499277200	499277200	INSTALLER	• Used for installing the 3rd-4th driven gear, 5th driven gear, ball bearing and 6th driven gear. • Used for installing the drive pinion shaft assembly washer.
 ST-927640000	927640000	INSTALLER	Used for installing the taper roller bearing (transfer case side) of transfer driven gear.
 ST18658AA021	18658AA021	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer. • Used for adjusting preload on the front differential taper roller bearing. • Used for adjusting the backlash of hypoid driven gear.
ST18722AA010	18722AA010	REMOVER	Used for removing the 5th drive gear and 6th drive gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	• Used for installing the 4th, 5th and 6th drive gear needle bearing races and the main shaft assembly double taper roller bearings. • Used together with REMOVER (899714110).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499917500	499917500	DRIVE PINION GAUGE ASSY	Used for adjusting the drive pinion shaft assembly shim.
 ST-499927100	499927100	HANDLE	Used for backlash measurement of the hypoid driven gear and preload adjustment of the front differential taper roller bearing.
 ST-499937100	499937100	TRANSMISSION STAND	Used for disassembling and assembling the transmission.
 ST-499987003	499987003	SOCKET WRENCH (35)	Used for removing and installing the main shaft assembly lock nut.
 ST-499987300	499987300	SOCKET WRENCH (50)	Used for removing and installing the driven shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899714110	899714110	REMOVER	Used for removing and installing the parts of main shaft assembly and driven shaft.
 ST-899864100	899864100	REMOVER	• Used for removing the parts of the main shaft assembly. • Used for removing the transfer driven gear taper roller bearing (transfer case side) and for installing it (extension case side). • Used for removing the transfer drive gear ball bearing. • Used for installing the transfer case taper roller bearing.
 ST18680AA020	18680AA020	HOLDER	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for removing and installing the driven shaft lock nut.
 ST-899904100	899904100	STRAIGHT PIN REMOVER	Used for removing and installing the straight pin.
 ST-398497701	398497701	SEAT	• Used for installing the front differential taper roller bearing. • Used together with BUSHING 1-2 INSTALLER (499277100).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST-498255400	498255400	PLATE	Used for measuring the hypoid driven gear backlash.
 ST41099AC000	41099AC000	ENGINE SUPPORT ASSY	Used for supporting engine.
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the front differential taper roller bearing outer race. • Used for removing the differential side retainer oil seal.
 ST-398643600	398643600	GAUGE	Used for adjusting the extension end play.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398177700	398177700	INSTALLER	• Used for installing the transfer drive gear ball bearing. • Used for installing the 4th drive gear needle bearing race.
 ST-498175500	498175500	INSTALLER	Used for installing the taper roller bearing of transfer driven gear (extension case side).
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting the oil seal from damage when inserting the front drive shaft.
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-398791700	398791700	REMOVER	Used for removing and installing the straight pin.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18662AA010	18662AA010	SOCKET (27)	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used for measuring the starting torque of the drive pinion shaft assembly.
 ST-899754112	899754112	PRESS	• Used for removing driven shaft parts. • Used to install the main shaft assembly ball bearing.
 ST18631AA000	18631AA000	HANDLE	Used for installing transfer case assembly and extension case assembly.
 ST18762AA001	18762AA001	COMPRESSOR SPECIAL TOOL	• Used for removing the 1st driven gear. • COMPRESSOR SPECIAL TOOL (18762AA000) can also be used.
 ST18654AA000	18654AA000	INSTALLER	Used for installing the 2nd driven gear bushing.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18657AA000	18657AA000	INSTALLER	Used for installing the transfer case oil seal.
 ST-498267200	498267200	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST-498267300	498267300	CYLINDER HEAD TABLE	Used for removing and installing the roller bearing of the transfer case.
 ST18763AA000	18763AA000	COMPRESSOR SHAFT	Used for removing and installing the needle bearing of the transfer case.
 ST-498277200	498277200	STOPPER SET	• Used for installing the needle bearing of the transfer case. • Use only the spacer.

2. GENERAL TOOL

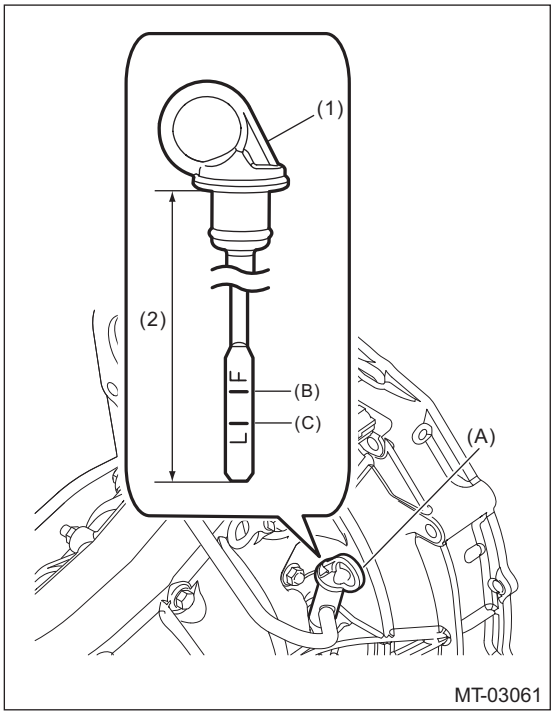
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® bit T70	Used for removing and installing the drain plug.
Spring pin remover	Used for removing and installing the straight pin. (3 — 3.3 mm)
Socket driver (TORX® 45 size, tamper resistant type)	Used for removing and installing interlock plate.

2. Transmission Gear Oil

A: INSPECTION

1) Park the vehicle on a level surface.
2) Turn the ignition switch to OFF, and wait until the engine cools.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted in the proper direction.
5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, check for oil leakage and add oil through the oil level gauge hole to bring the level up to the upper level.

CAUTION:
The length of the oil level gauge varies depending on models and destinations. Make sure to use the appropriate oil level gauge.



(A) Oil level gauge
(B) Upper level
(C) Lower level

(1) Gray
(2) 195.9 mm (7.71 in)

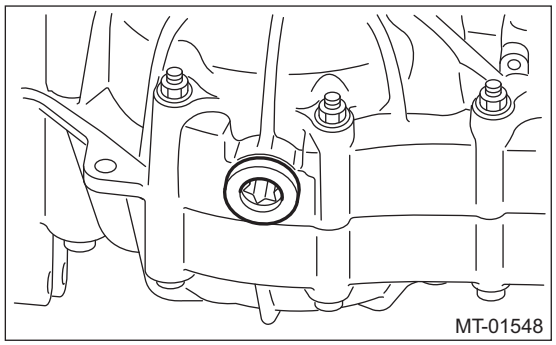
B: REPLACEMENT

1) Pull out the oil level gauge.
2) Lift up the vehicle.
3) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilt, wipe it off completely.
4) Attach the drain plug using TORX® bit T70.

NOTE:
- Install the drain plug after draining transmission gear oil.
- Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



5) Lower the vehicle.
6) Fill with transmission gear oil through the oil level gauge hole.

CAUTION:
If an alternative gear oil is used, you may not have expected functionality and performance.

Recommended gear oil:
SUBARU GEAR OIL EXTRA MT

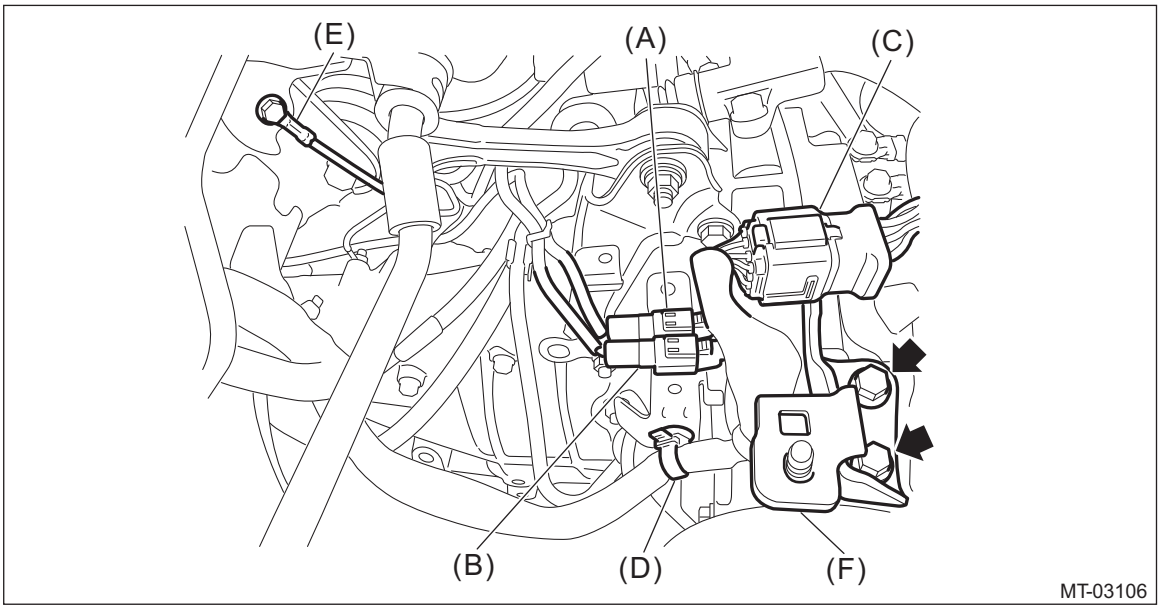
Alternative:
GL-5 (75W-90)

Gear oil capacity:
3.3 L (3.5 US qt, 2.9 Imp qt)
7) Check the transmission gear oil amount, and confirm that it is within the specification.

3. Manual Transmission Assembly

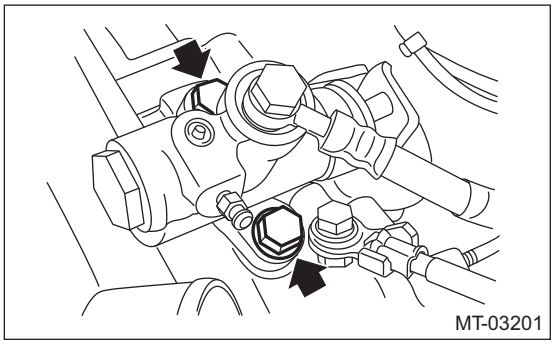
A: REMOVAL

1) Open the front hood completely.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Remove the intercooler and the intercooler stay. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
5) Disconnect the clips and the following connectors, then remove the transmission radio ground cord terminal and the engine rear hanger.



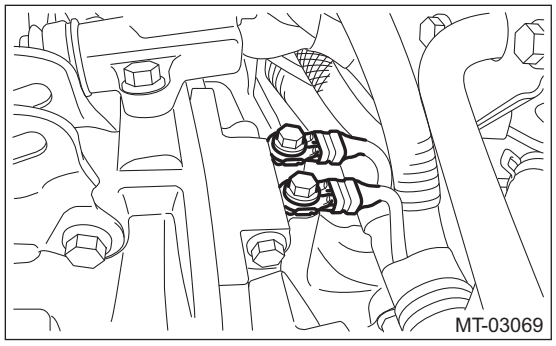
(A)	Neutral position switch connector (2P, brown)	(B)	Back-up light switch connector (2P, gray)	(C)	Engine harness connector (16P, brown)
(D)	Clip	(E)	Transmission radio ground cord terminal	(F)	Engine rear hanger

6) Remove the operating cylinder and suspend on a wire.



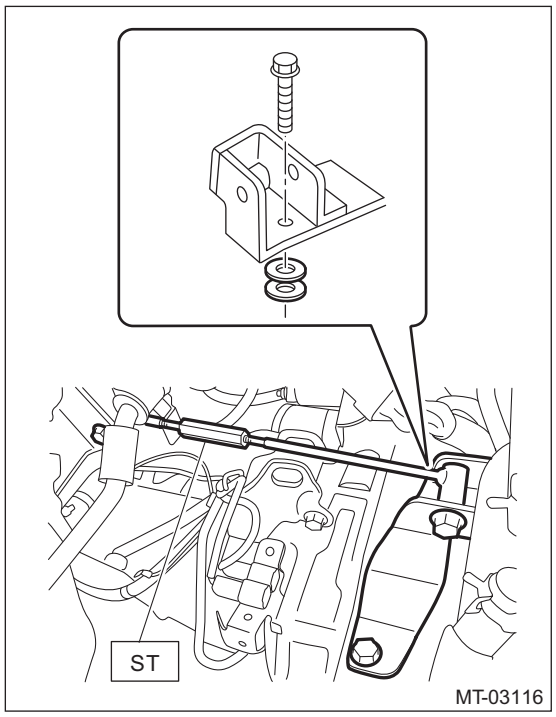
7) Remove the pitching stopper. <Ref. to 6MT(TY75)-38, PITCHING STOPPER, REMOVAL, Transmission Mounting System.>

8) Disconnect the engine ground terminal.

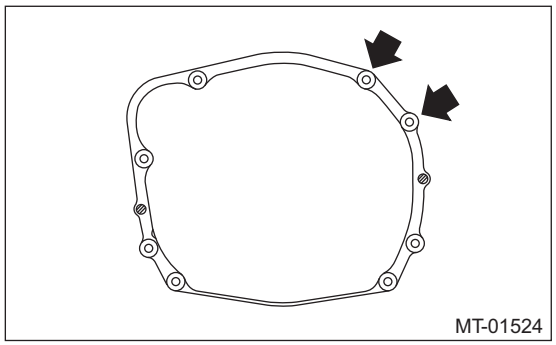


9) Set the ST.
ST 41099AC000 ENGINE SUPPORT ASSY

NOTE:
Place a washer with 4 mm (0.16 in) thickness into the gap between the engine block and ST.

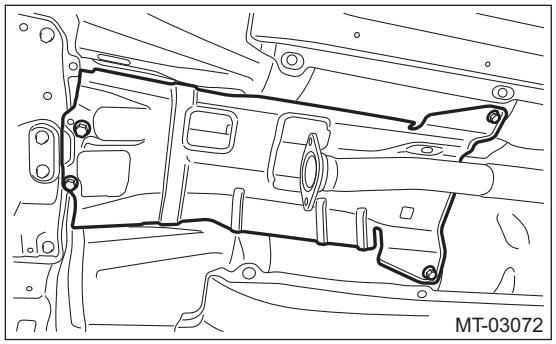


10) Remove the starter. <Ref. to SC(w/o STI)-7, REMOVAL, Starter.>
11) Remove the bolts which hold upper side of transmission to engine.

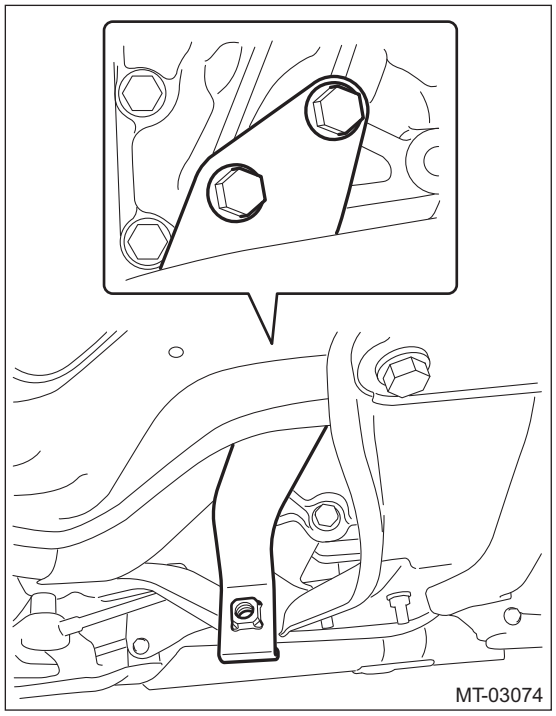


12) Remove the front tires.
13) Lift up the vehicle.
14) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
15) Drain transmission gear oil completely. <Ref. to 6MT(TY75)-24, REPLACEMENT, Transmission Gear Oil.>

16) Remove the center exhaust cover.



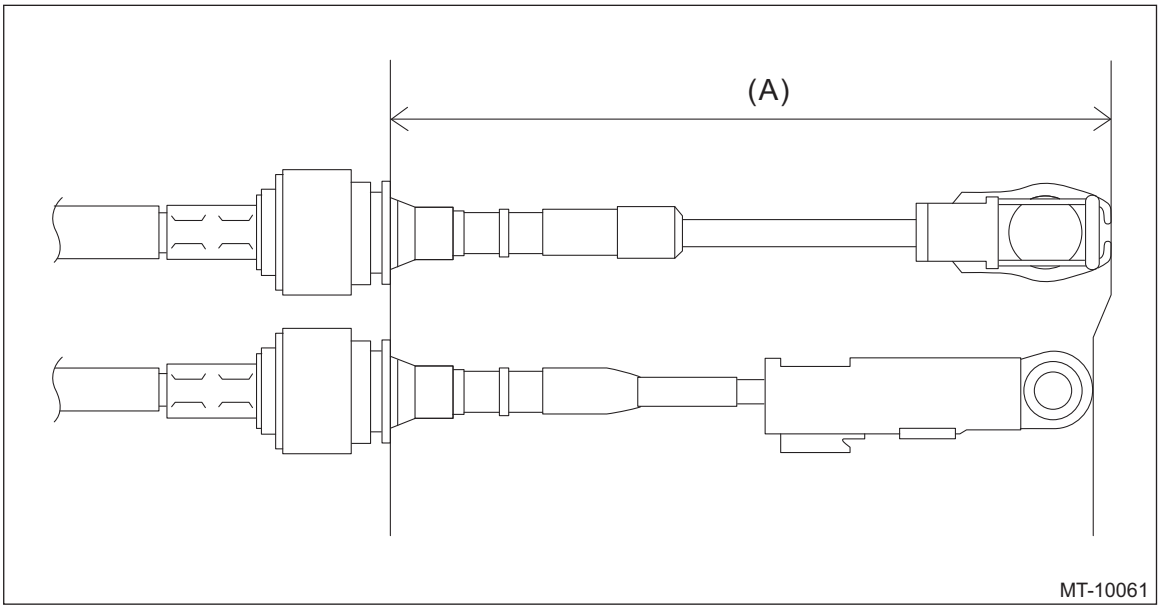
17) Remove the hanger bracket.



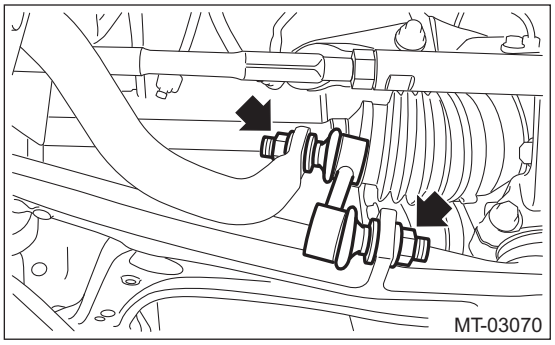
18) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
19) Remove the MT gear shift cable and MT gear select cable from MT gear shift lever. <Ref. to CS-62, EXCEPT FOR STI MODEL, REMOVAL, MT Gear Shift Lever.>

CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **If the MT gear select cable is removed from the selector lever COMPL on the transmission side, replace with new MT gear select cable.**

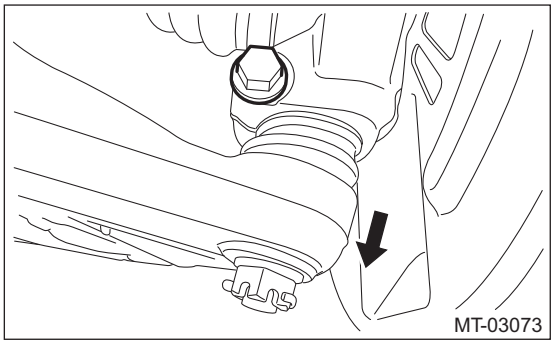
- **Do not apply extra overload while holding the part (A).**



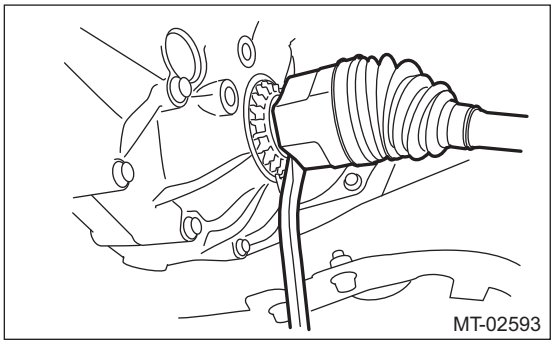
20) Remove the stabilizer link.



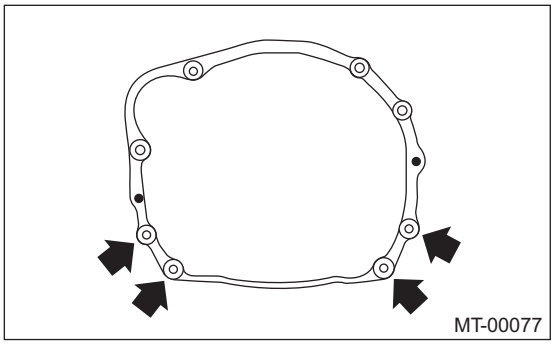
21) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.



22) Using a crowbar, separate the left and right front drive shafts.

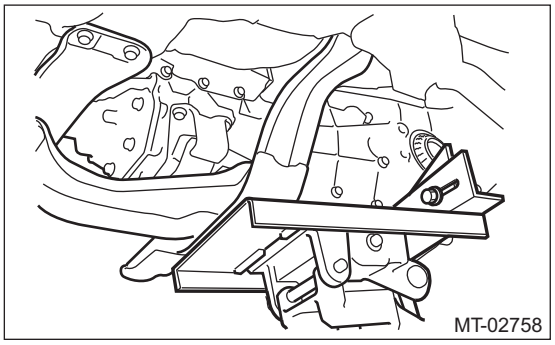


23) Remove the bolts and nuts which hold lower side of transmission to engine.

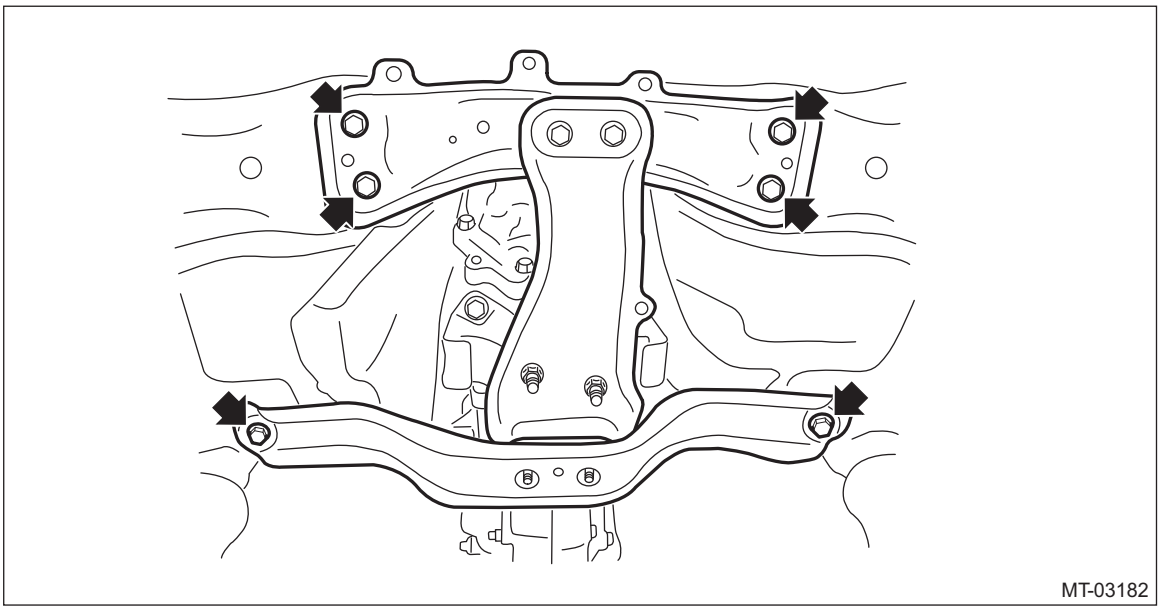


24) Place the transmission jack under the transmission.

CAUTION:
Always support the transmission case with a transmission jack.



25) Remove the front crossmember and the rear crossmember.



26) While lowering the transmission jack, tighten the turnbuckle of the ST, and incline the engine unit rearward.
27) Remove the transmission assembly.

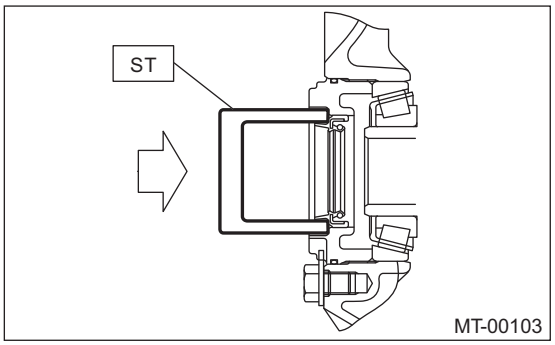
NOTE:
Move the transmission jack towards the rear until the main shaft is withdrawn from the clutch cover.
28) Remove the transmission cushion rubber.
29) Remove the release bearing & lever. <Ref. to CL-17, EXCEPT FOR STI MODEL, REMOVAL, Release Bearing and Lever.>

B: INSTALLATION

1) Install the release bearing & lever. <Ref. to CL-18, EXCEPT FOR STI MODEL, INSTALLATION, Release Bearing and Lever.>
2) Replace the differential side retainer oil seal. <Ref. to 6MT(TY75)-44, REPLACEMENT, Differential Side Retainer Oil Seal.>

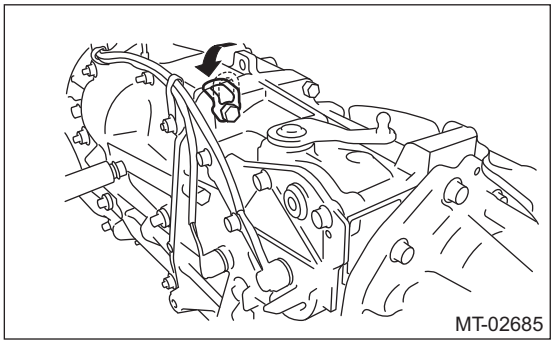
NOTE:
- Be sure to replace the oil seal after removing the front drive shaft.
- When a new oil seal has been installed, replacement is not required.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



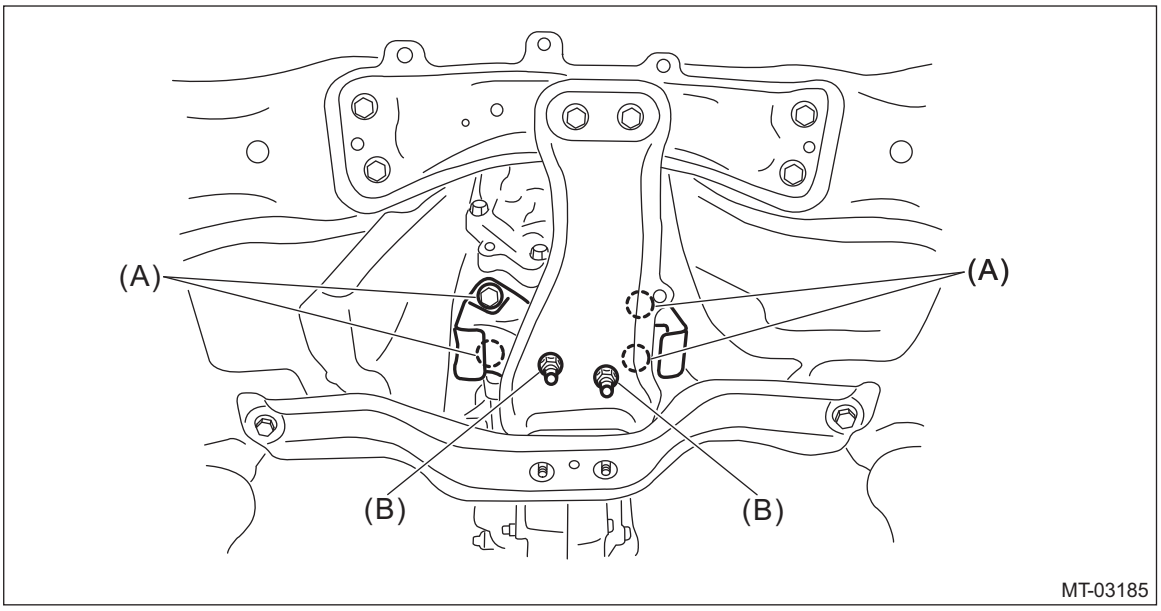
3) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

CAUTION:
Do not apply excessive load or impact to the transmission case.



4) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
5) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)

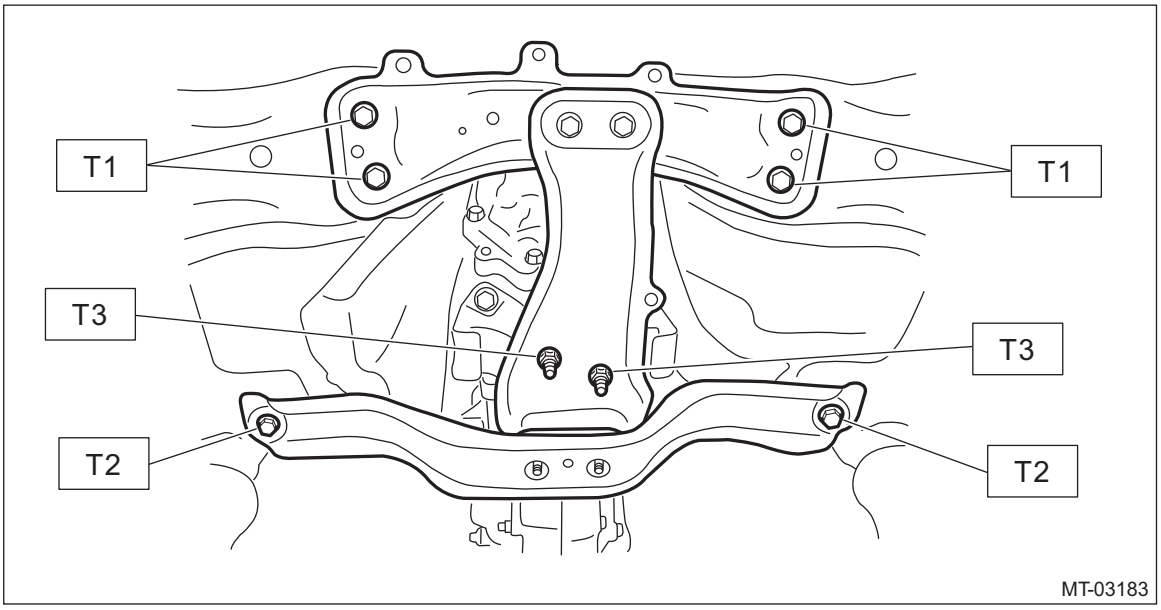


6) Install the transmission assembly onto the engine.
(1) Lift up the transmission gradually using a transmission jack.
(2) Engage at the spline section.

NOTE:
Be careful not to hit the main shaft against the clutch cover.

7) While raising the transmission jack, loosen the turnbuckle of the ST, and set the engine unit to the original position.
8) Install the front crossmember and rear crossmember.
9) Tighten the transmission cushion rubber mounting nut.

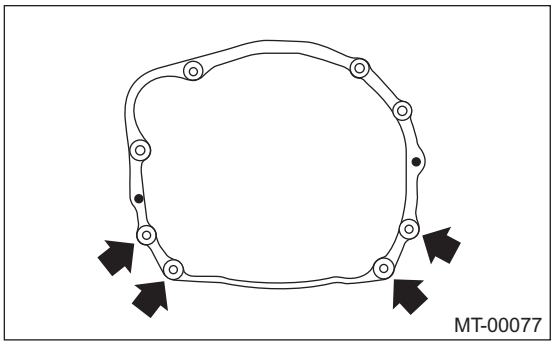
Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)



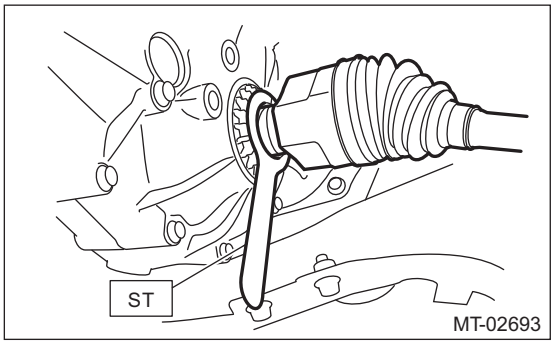
10) Take out the transmission jack.

11) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

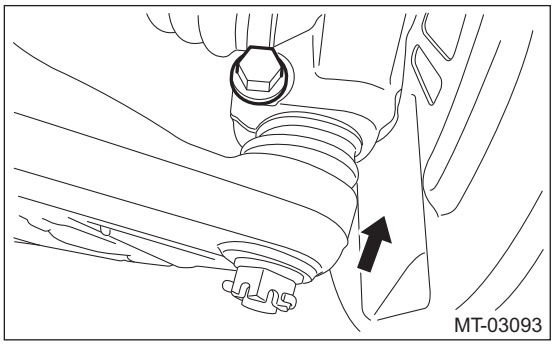


12) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR
13) Replace the circlip of the front drive shaft with a new part.
14) Install the front drive shaft and remove ST.
ST 28399SA010 OIL SEAL PROTECTOR



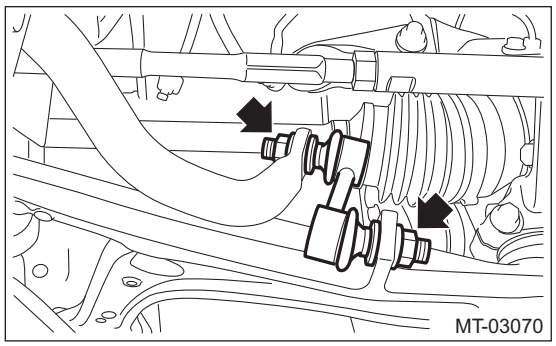
15) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



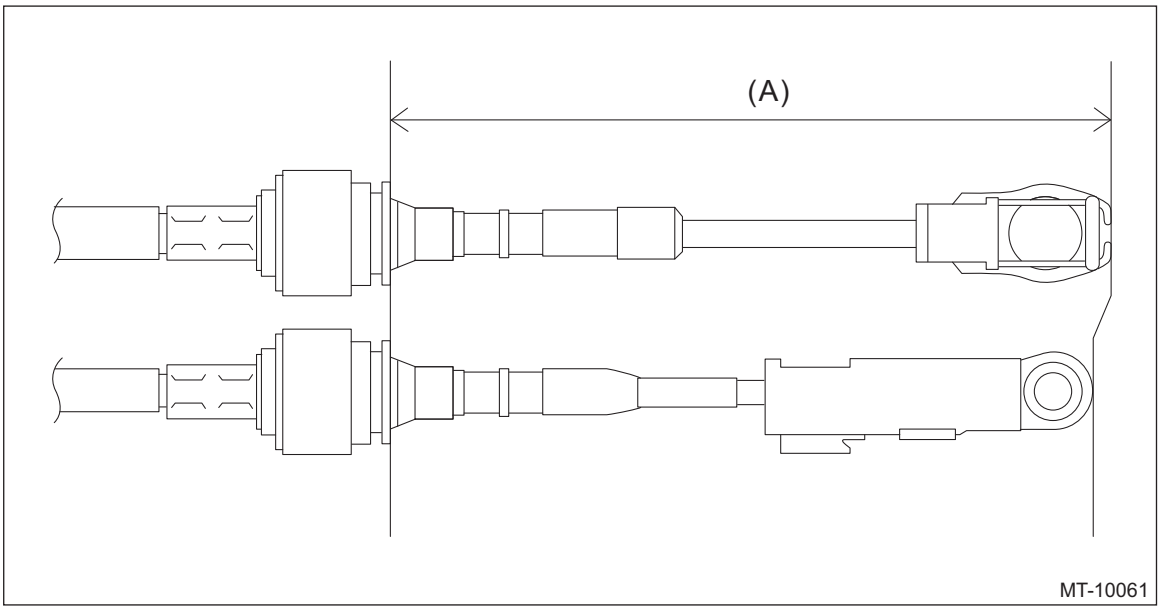
16) Replace the flange nut with a new part and install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



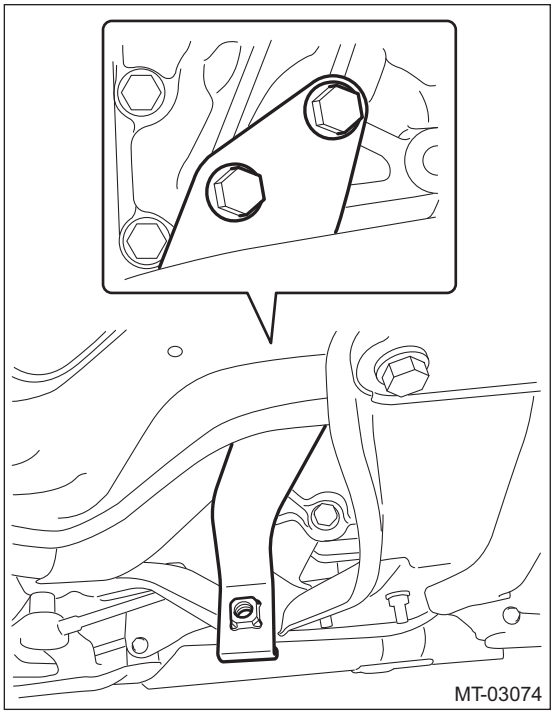
17) Install the MT gear shift cable and MT gear select cable to MT gear shift lever. <Ref. to CS-68, EXCEPT FOR STI MODEL, INSTALLATION, MT Gear Shift Lever.>

CAUTION:
- **Do not bend MT gear shift cable and MT gear select cable at a sharp angle.**
- **If the MT gear select cable is removed from the selector lever COMPL on the transmission side, replace with new MT gear select cable.**
- **Do not apply extra overload while holding the part (A).**



18) Install the hanger bracket.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

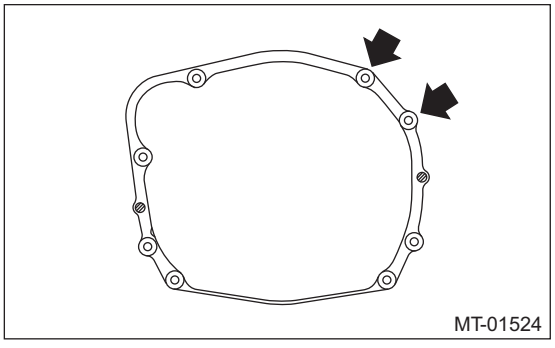


19) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
20) Install the center exhaust cover.

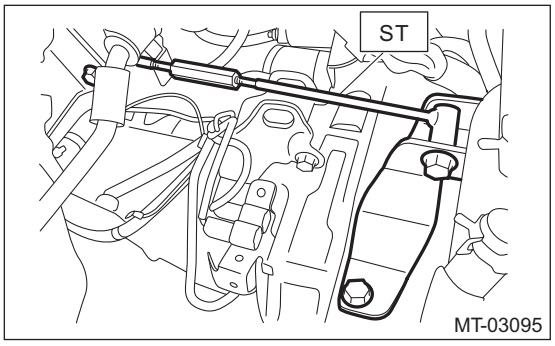
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

21) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
22) Lower the vehicle.
23) Install the starter. <Ref. to SC(w/o STI)-8, INSTALLATION, Starter.>
24) Tighten the bolts which hold the upper side of the transmission to the engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

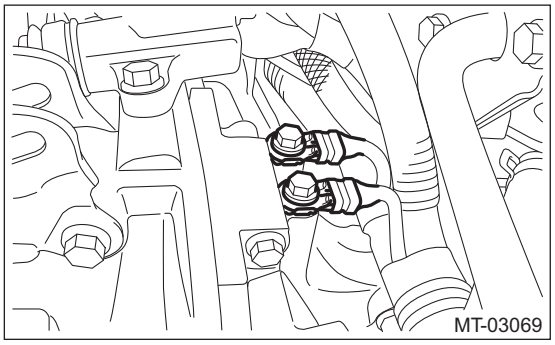


25) Remove the ST.



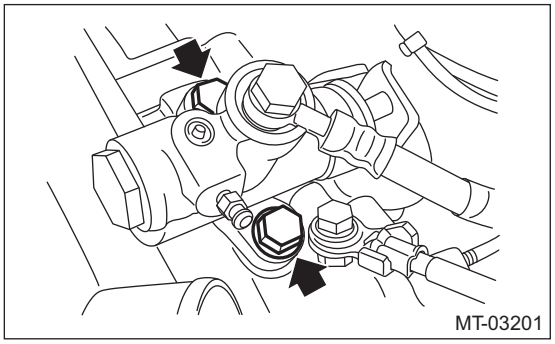
26) Install the pitching stopper. <Ref. to 6MT(TY75)-39, PITCHING STOPPER, INSTALLATION, Transmission Mounting System.>
27) Install the engine ground terminals.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



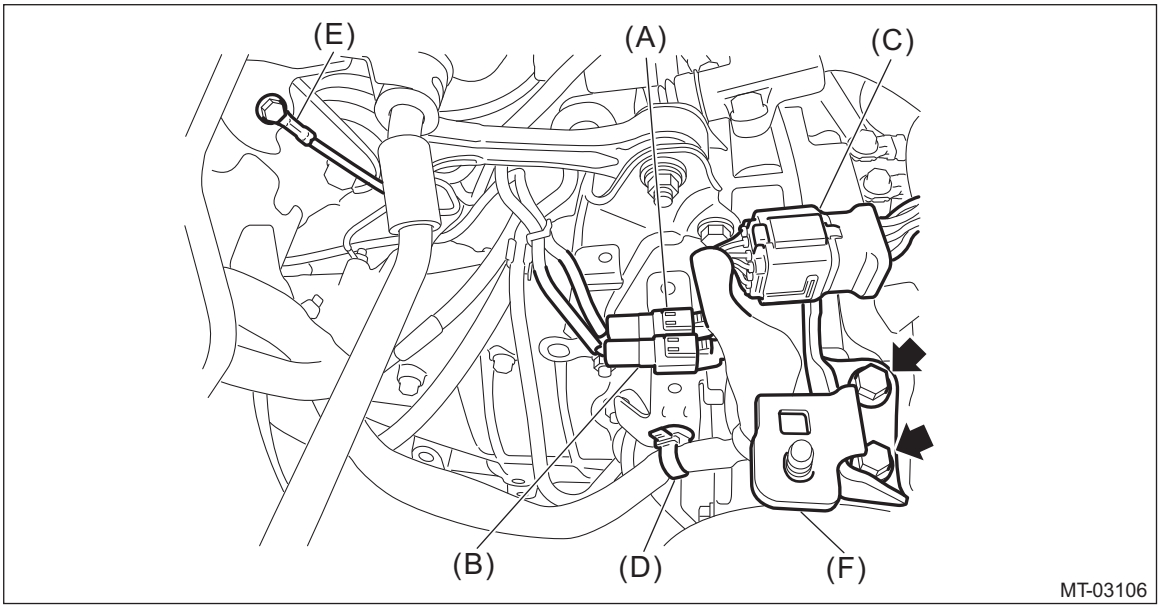
28) Install the operating cylinder.

Tightening torque:
37 N·m (3.8 kgf-m, 27.3 ft-lb)



29) Install the transmission radio ground cord terminal and the engine rear hanger, connect the following connectors, and then secure the clip on the bracket.

Tightening torque:
Transmission radio ground cord terminal
13 N·m (1.3 kgf-m, 9.6 ft-lb)
Engine rear hanger
21 N·m (2.1 kgf-m, 15.5 ft-lb)



(A)	Neutral position switch connector (2P, brown)	(B)	Back-up light switch connector (2P, gray)	(C)	Engine harness connector (16P, brown)
(D)	Clip	(E)	Transmission radio ground cord terminal	(F)	Engine rear hanger

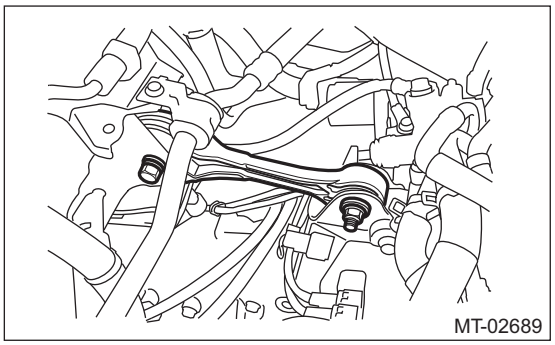
30) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-24, Transmission Gear Oil.>
31) Install the intercooler stay and the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
32) Install the front tires.
33) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
34) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

4. Transmission Mounting System

A: REMOVAL

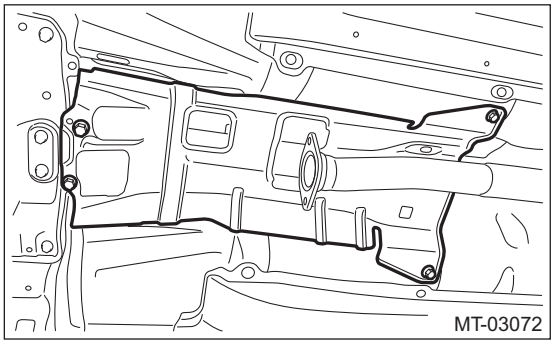
1. PITCHING STOPPER

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the pitching stopper.



2. CROSSMEMBER AND CUSHION RUBBER

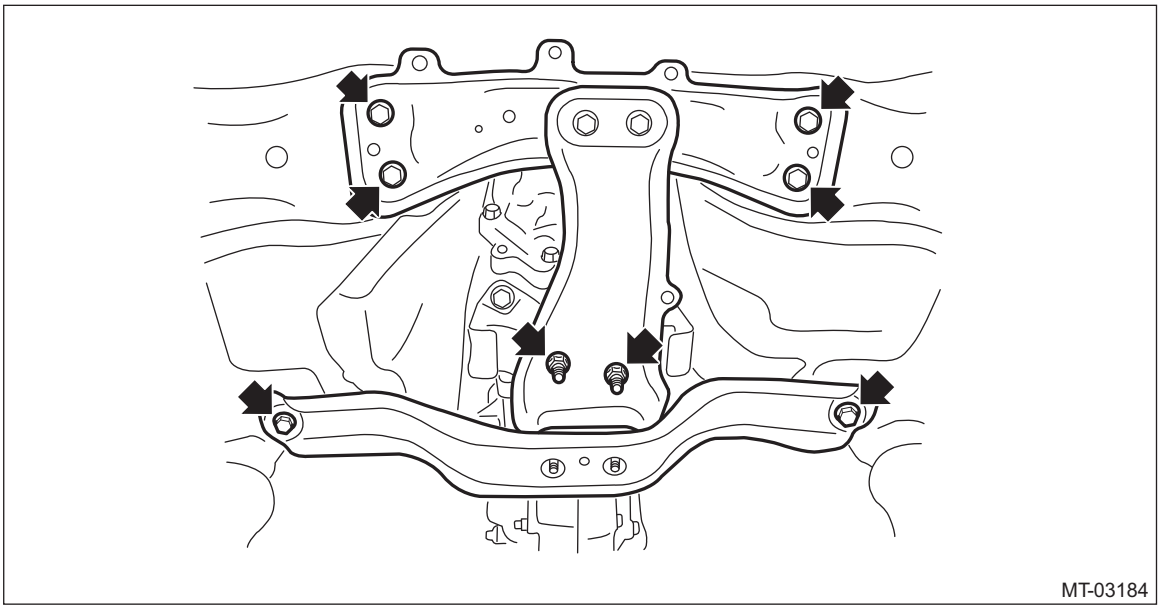
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Remove the center exhaust cover.



5) Set the transmission jack.

CAUTION:
Always support the transmission case with a transmission jack.

6) Remove the front crossmember and the rear crossmember.



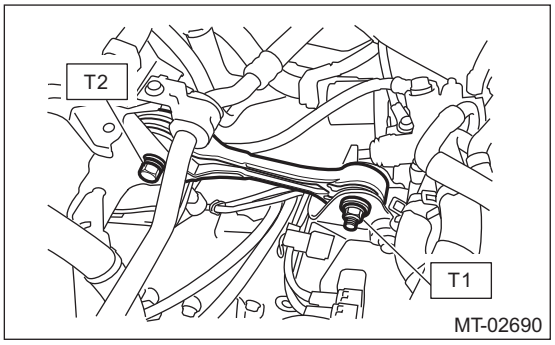
7) Remove the transmission cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

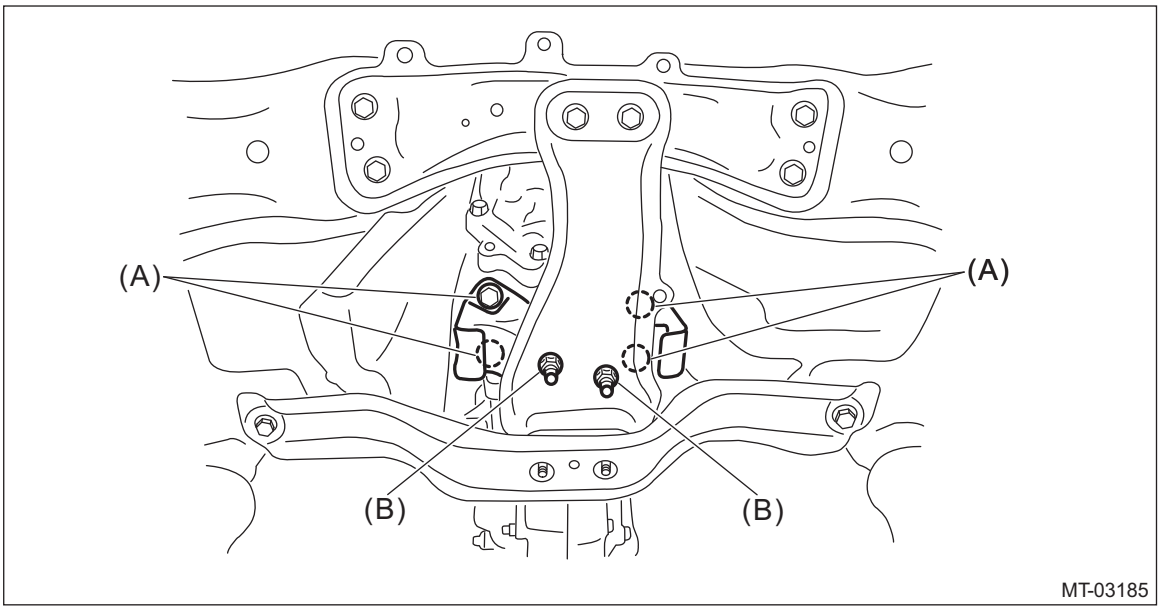


2) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
3) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. CROSSMEMBER AND CUSHION RUBBER

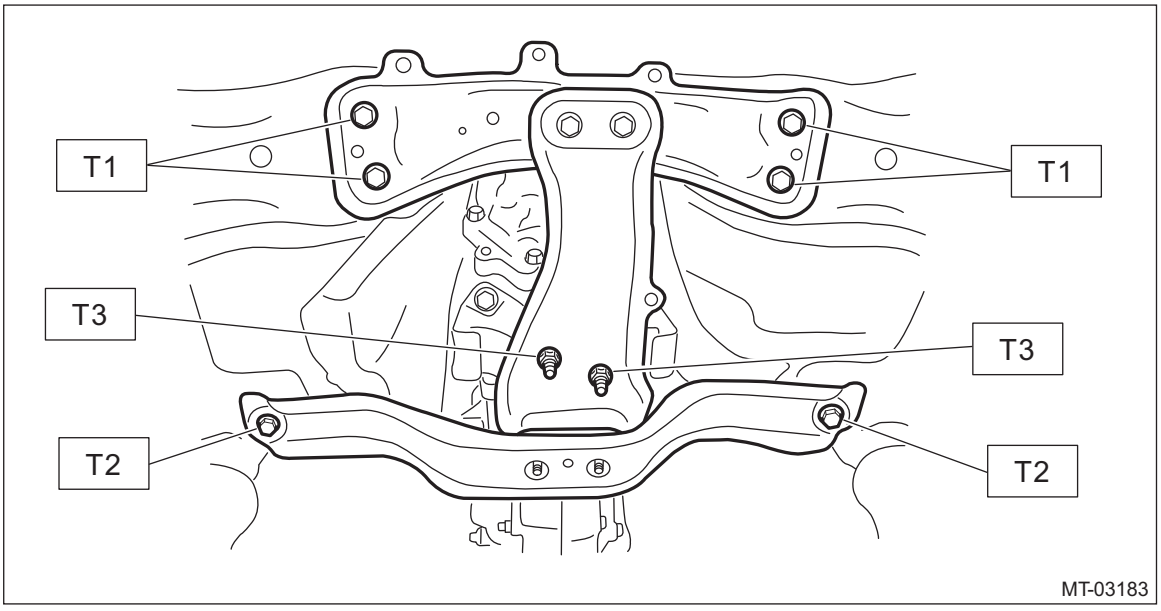
1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Install the front crossmember and rear crossmember.
4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T2: 140 N·m (14.3 kgf-m, 103.3 ft-lb)
T3: 35 N·m (3.6 kgf-m, 25.8 ft-lb)



5) Remove the transmission jack.
6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
7) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
8) Lower the vehicle.
9) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Check the following; repair or replace the faulty parts.

1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bends or damage. Check that the cushion rubber is not stiff, cracked or otherwise damaged.

5. Oil Seal

A: INSPECTION

Check for leakage of transmission gear oil from the oil seal. If there is oil leakage, replace the oil seal with the new part and check the propeller shaft.

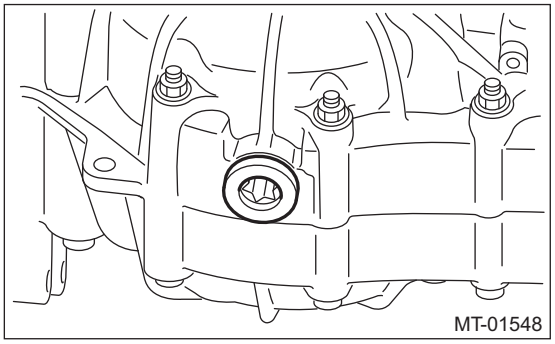
B: REPLACEMENT

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

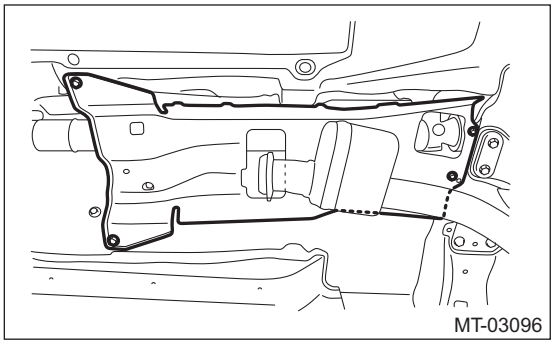
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
5) Attach the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)

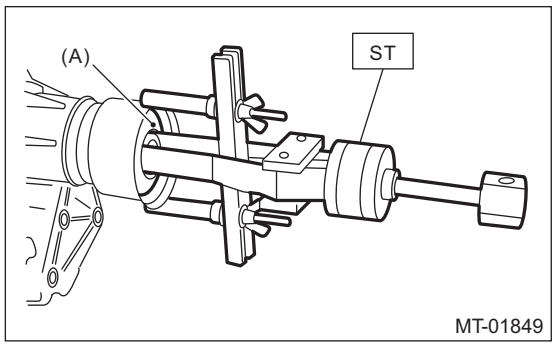


6) Remove the rear exhaust pipe. <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
7) Remove the center exhaust cover.



8) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>

9) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY

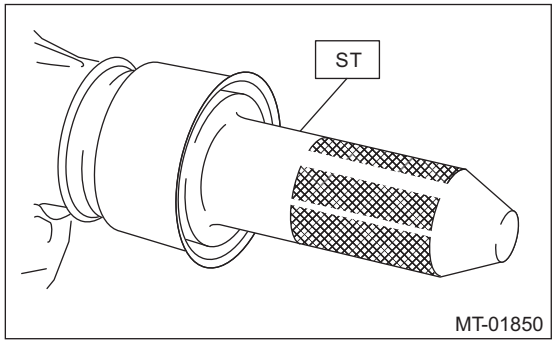


(A) Oil seal

10) Using the ST, install the oil seal.

NOTE:
- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

ST 498057300 INSTALLER



11) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
12) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

13) Install the rear exhaust pipe. <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
14) Lower the vehicle.
15) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-24, Transmission Gear Oil.>
16) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

6. Differential Side Retainer Oil Seal

A: INSPECTION

Check for transmission gear oil leaks at differential side retainer oil seal. If there is oil leakage, replace the oil seal with the new part and check the drive shaft.

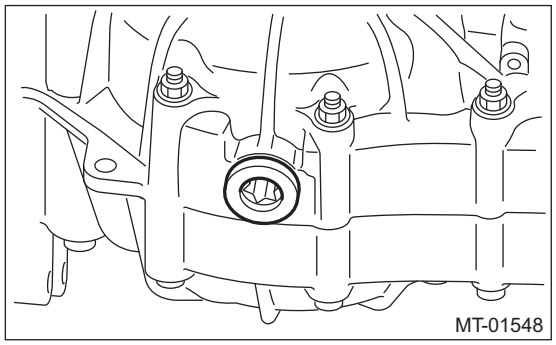
B: REPLACEMENT

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the front tires.
3) Lift up the vehicle.
4) Using the TORX® bit T70, remove the drain plug, and drain the transmission gear oil completely.

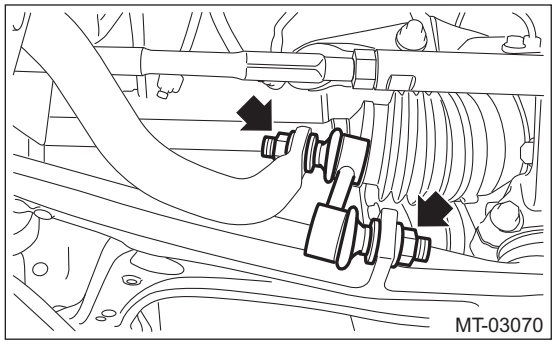
CAUTION:
• Immediately after the vehicle has been running or after idling for a long time, the gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the gear oil on the exhaust pipe, to prevent emission of smoke or causing a fire. If gear oil is spilled, wipe it off completely.
5) Attach the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

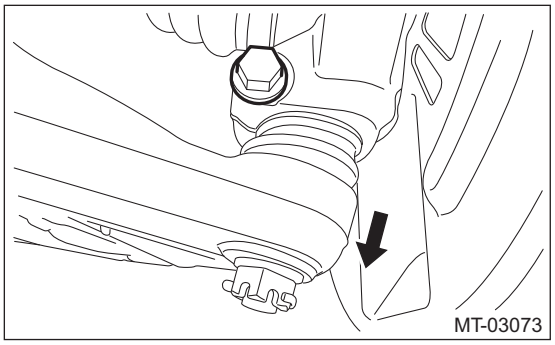
Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



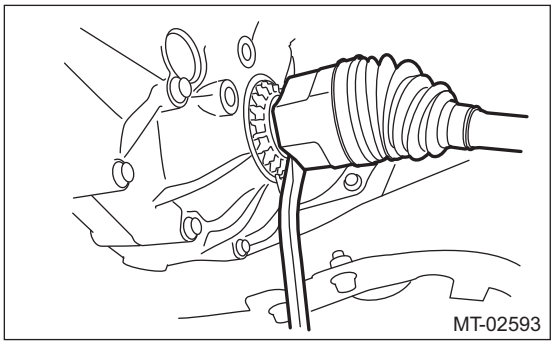
6) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
7) Remove the stabilizer link.



8) Remove the bolt securing the ball joint of the front arm to the housing, then separate the front arms and the housing.



9) Using a crowbar, separate the left and right front drive shafts.



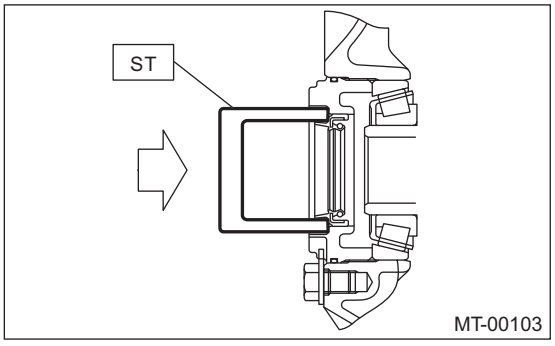
10) Remove the differential side retainer oil seal.

NOTE:
- Be sure to replace the oil seal after removing the front drive shaft from the transmission.
- Use the ST 398527700 PULLER ASSY to remove the oil seal. If removing the oil seal with a flat tip screwdriver, be careful not to scratch the differential side retainer.

11) Using the ST, install the differential side retainer oil seal by lightly tapping with a plastic hammer.

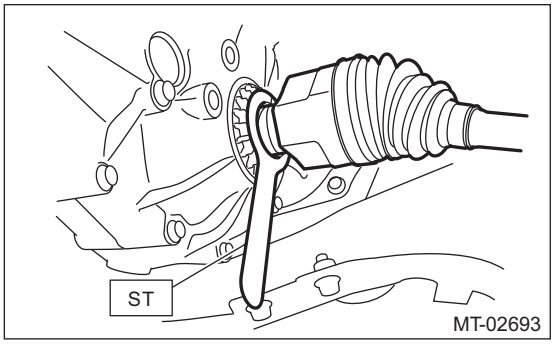
CAUTION:
- **Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.**
- **Check the identification marks (L, R) during installation not to mix up the oil seals RH and LH.**

NOTE:
Use a new oil seal.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



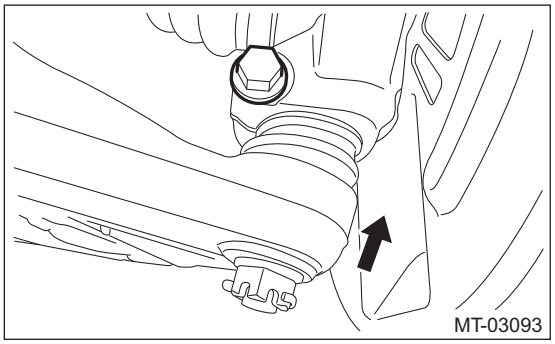
12) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR
13) Replace the circlip of the front drive shaft with a new part.

14) Install the front drive shaft and remove ST.
ST 28399SA010 OIL SEAL PROTECTOR



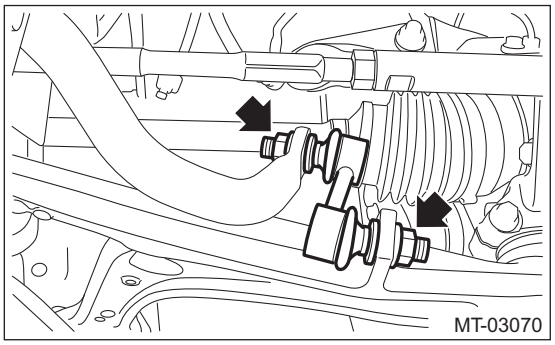
15) Insert the front arm ball joint and tighten the mounting bolt.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



16) Replace the flange nut with a new part and install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



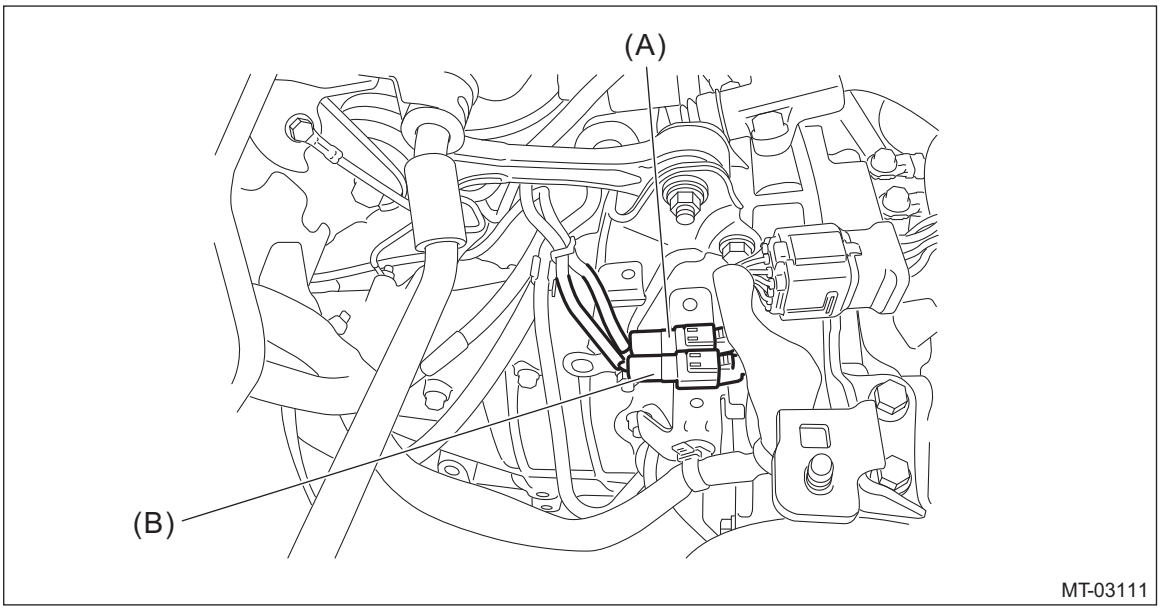
17) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
18) Lower the vehicle.
19) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY75)-24, Transmission Gear Oil.>
20) Install the front tires.
21) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

7. Switches and Harness

A: REMOVAL

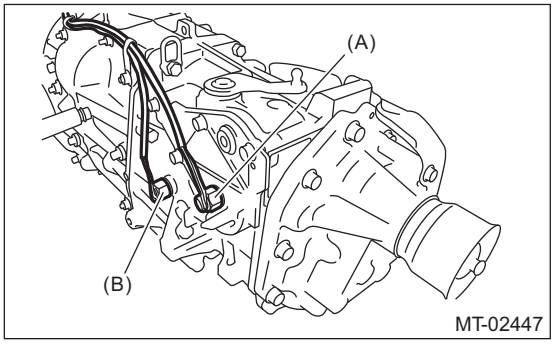
1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Disconnect the connector back-up light switch & neutral position switch.



(A) Neutral position switch connector (2P, brown)
(B) Back-up light switch connector (2P, gray)

5) Remove the harness connector from bracket.
6) Lift up the vehicle.
7) Remove the harness from each clip.
8) Remove the back-up light switch & neutral position switch with the harness.



(A) Neutral position switch
(B) Back-up light switch

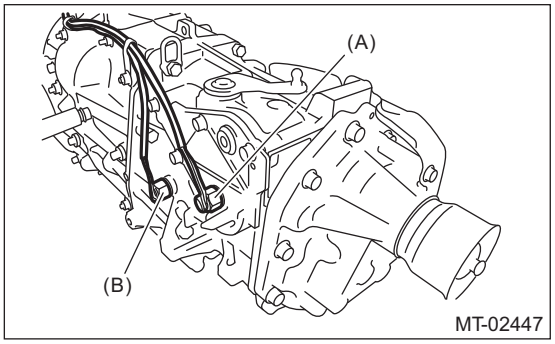
B: INSTALLATION

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

1) Install the back-up light switch & neutral position switch with the harness.

NOTE:
Use a new gasket.

Tightening torque:
32.3 N·m (3.3 kgf-m, 23.8 ft-lb)



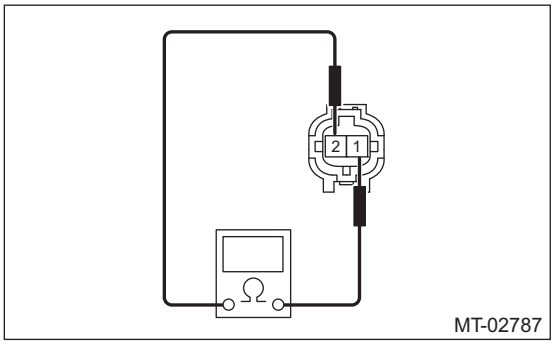
(A) Neutral position switch
(B) Back-up light switch

2) Secure the harness on each clip.
3) Lower the vehicle.
4) Install the harness connector to the bracket.
5) Connect the connectors of back-up light switch & neutral position switch.
6) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
7) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
8) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. BACK-UP LIGHT SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the back light switch connector.
3) Measure the resistance between the back-up light switch terminals.



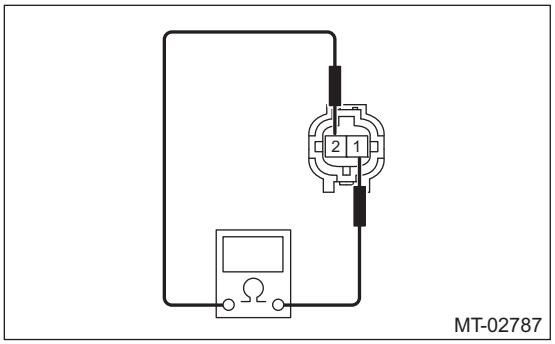
Gear shift position	Terminal No.	Specified resistance
Reverse position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.

2. NEUTRAL POSITION SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the connector of neutral position switch.

3) Measure the resistance between neutral position switch terminals.



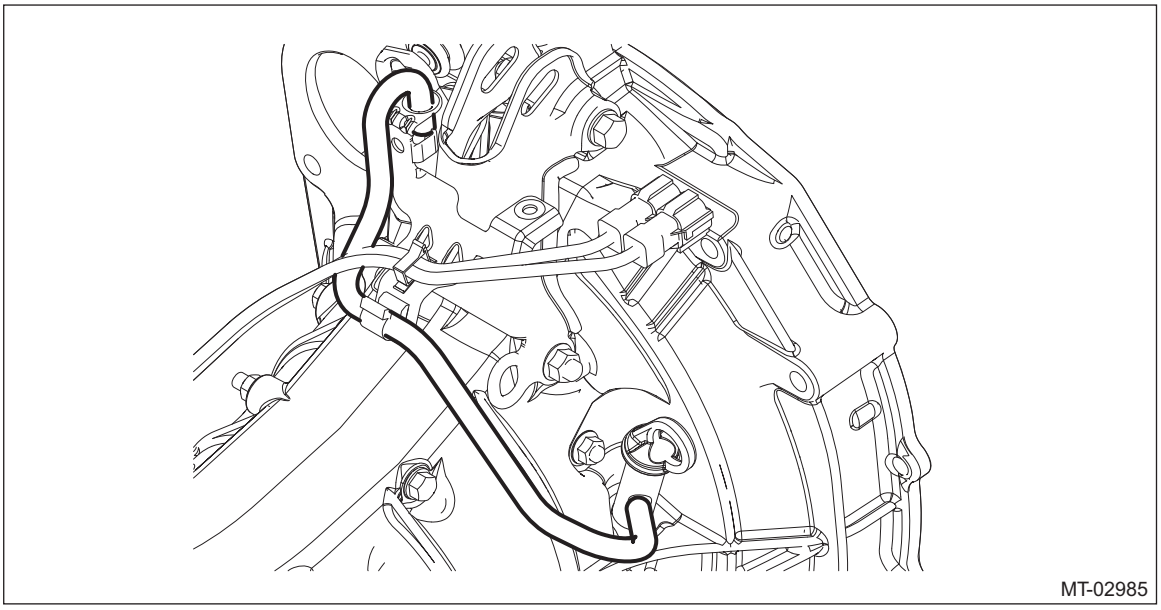
Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	Less than 1 Ω
Other positions		1 MΩ or more

4) Replace faulty parts.

8. Air Breather Hose

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the air breather hose.

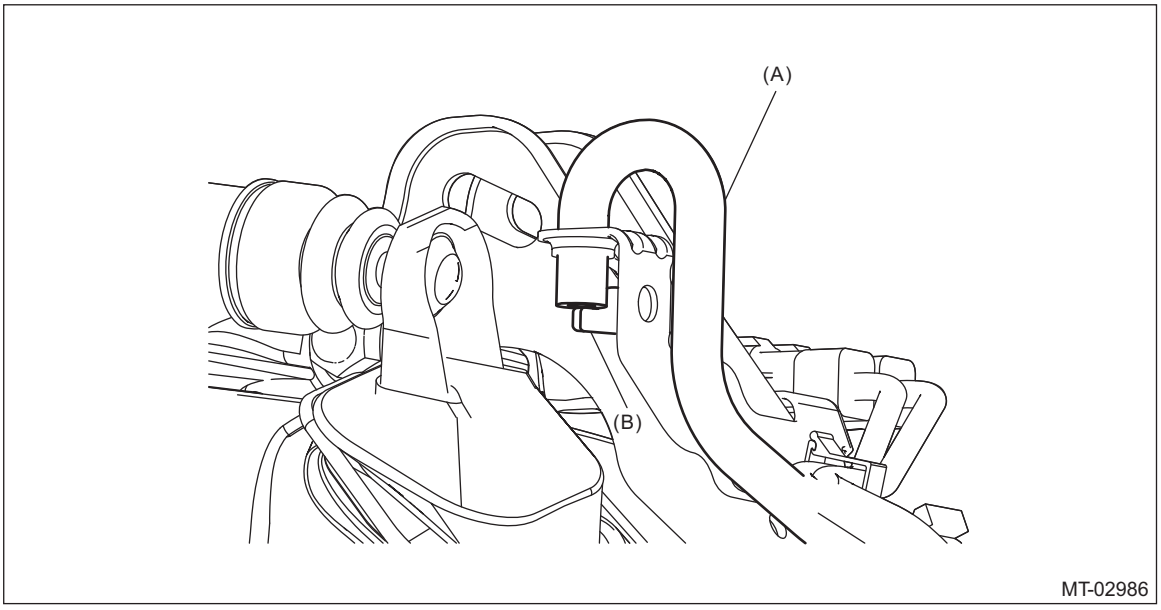


MT-02985

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• When installing the air breather hose, pay attention to the positions of the two markings on the hose and make sure the markings come to the same position as when removed.
• Securely insert the air breather hose until the hose end contacts the catch of the pitching stopper bracket.



MT-02986

(A) Air breather hose (B) Catch

C: INSPECTION

Check the hose for peeling, crack or clogging.

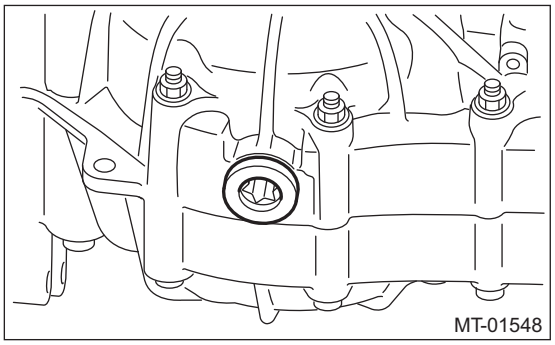
9. Preparation for Overhaul

A: PROCEDURE

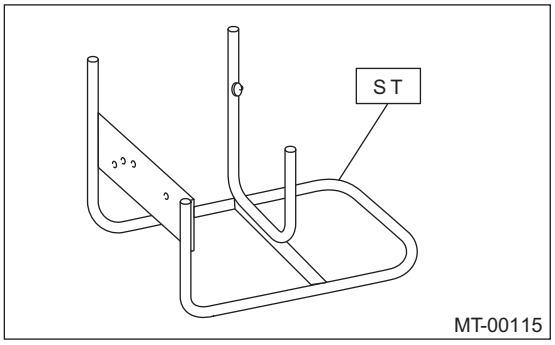
1) Clean oil, grease, dirt and dust from the transmission.
2) When transmission gear oil remains in the transmission, using the TORX® bit T70, remove the drain plug, and drain the gear oil completely.
3) Attach the drain plug using TORX® bit T70.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb) (aluminum gasket, silver)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (copper gasket, brown)
70 N·m (7.1 kgf-m, 51.6 ft-lb) (metal gasket, black)



4) Attach the transmission to the ST.
ST 499937100 TRANSMISSION STAND

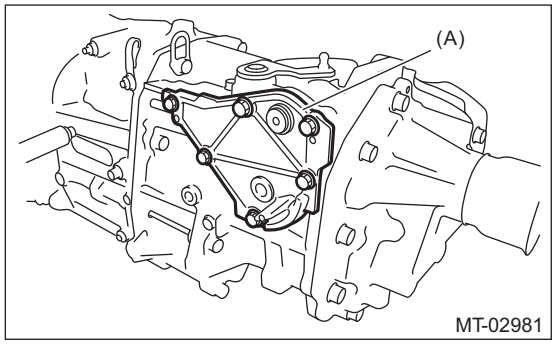


5) Apply transmission gear oil to rotating parts before assembly.
6) All disassembled parts, if to be reused, should be reinstalled in the original positions.
7) Gaskets, lock washers and lock nuts must be replaced with new ones.
8) Apply liquid gasket to the specified areas to prevent leakage.

10.Transfer Case and Extension Case Assembly

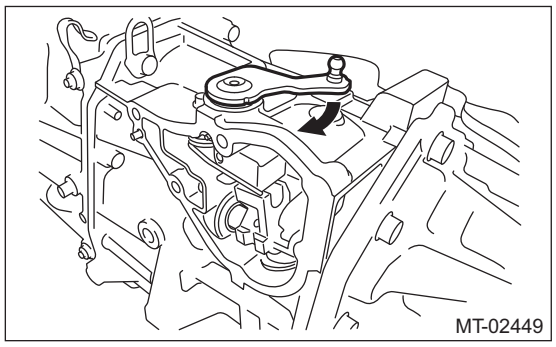
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly.
(1) Remove the transmission cover.

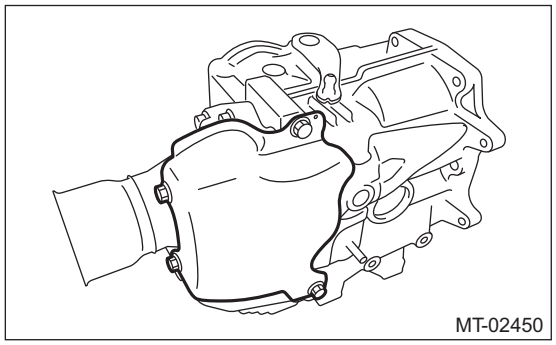


(A) Transmission cover

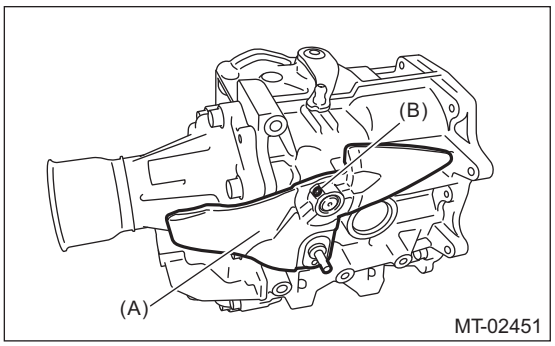
(2) Set and hold the selector lever COMPL to the 1st-2nd side, and remove the transfer case and extension case assembly as a unit.



4) Remove the transfer cover.

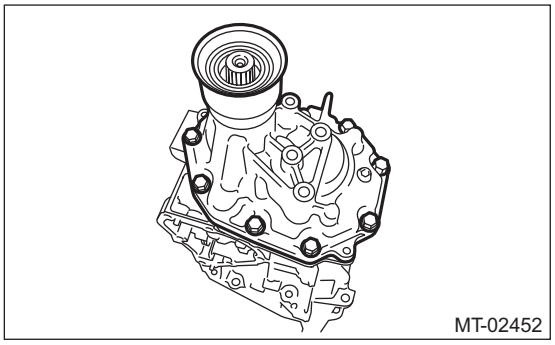


5) Use the ST to push out the spring pin, and remove the shift lever COMPL.
ST 398791700 REMOVER

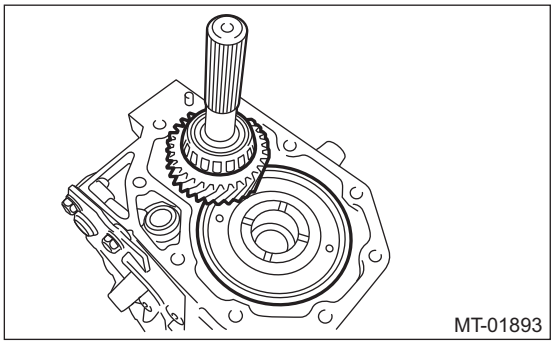


(A) Shift lever COMPL
(B) Straight pin

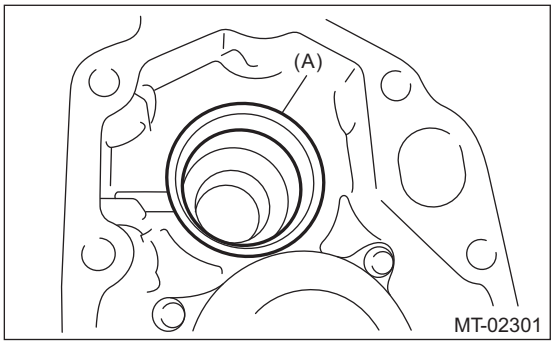
6) Remove the extension case assembly.



7) Remove the transfer driven gear and center differential as a unit.



8) Remove the taper roller bearing (extension case side) outer race and the adjusting washer.



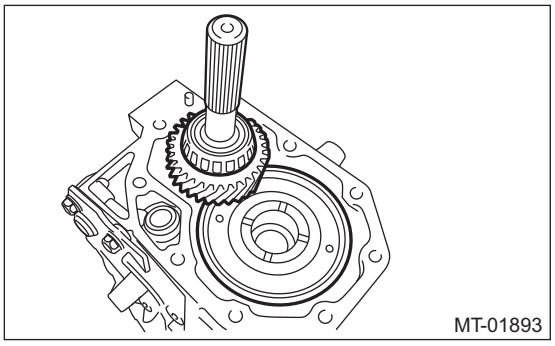
(A) Taper roller bearing (extension case side) outer race

B: INSTALLATION

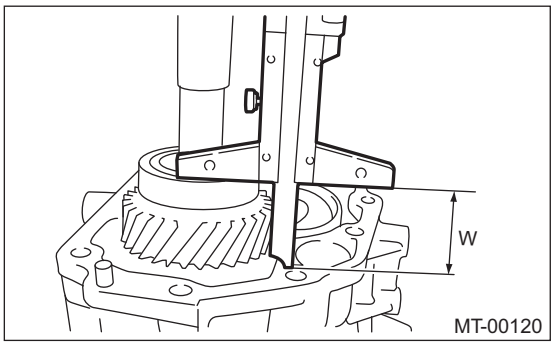
1) Clean the mating surfaces of the transmission case, transfer case and extension case.
2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent

3) Install the center differential and the transfer driven gear.

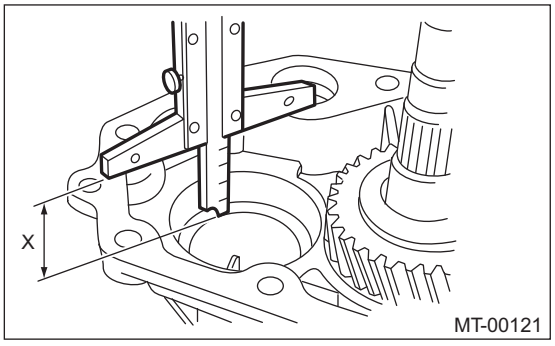


4) Install the taper roller bearing (extension case side) outer race to the transfer driven gear.
5) While pressing the taper roller bearing (extension case side) outer race horizontally, rotate the transfer driven gear for ten turns.
6) Measure the height “W” between transfer case and taper roller bearing (transfer case side) on the transfer driven gear.



7) Measure the depth “X” of taper roller bearing insertion part of the extension case.

NOTE:
Measure while the taper roller bearing (extension case side) outer race and the adjusting washer are removed.



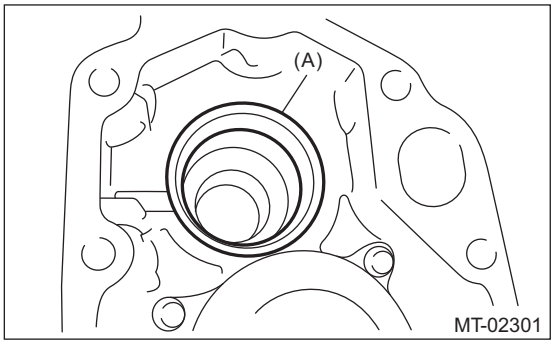
8) Calculate the adjusting washer thickness “t” using the following calculation.
t = X – W + (0.15 — 0.2 mm (0.006 — 0.008 in))
X: Depth of taper roller bearing insertion part of extension case
W: Height between transfer case and taper roller bearing (transfer case side) on transfer driven gear
0.15 — 0.20 mm (0.006 — 0.008 in): Amount of standard protrusion
9) Select the adjusting washer with the nearest value in the following table.

NOTE:
Be sure that it is always within the preload.

Preload of taper roller bearing (extension case side) (amount of standard protrusion): 0.15 — 0.20 mm (0.006 — 0.008 in)

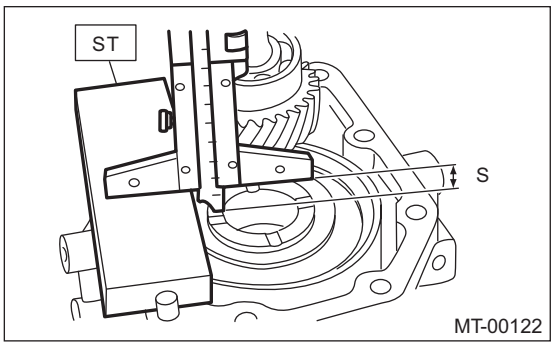
Adjusting washer (50 × 61 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

10) Install the selected adjusting washer and taper roller bearing (extension case side) outer race.

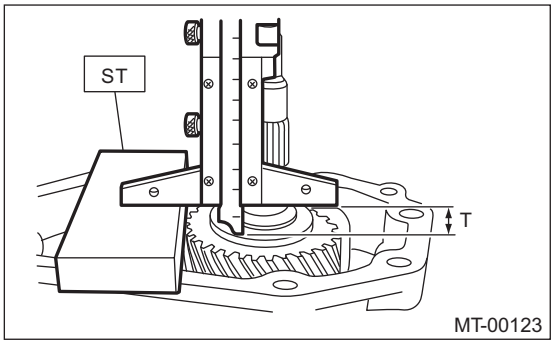


(A) Taper roller bearing (extension case side) outer race

11) Measure the depth “S” between the transfer case + ST and the center differential.
ST 398643600 GAUGE



12) Measure the height “T” between the extension case + ST and the transfer drive gear.
ST 398643600 GAUGE



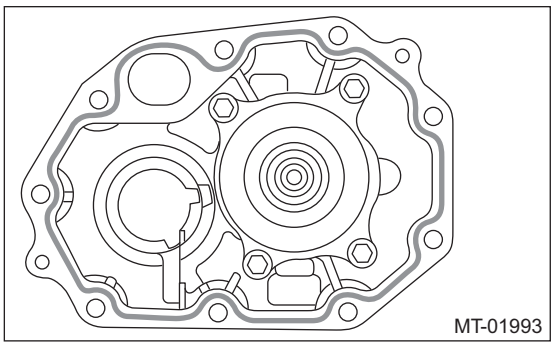
13) Calculate the adjusting washer thickness “U” using the following calculation.
U = S + T – 30 mm (1.18 in) – (0.15 — 0.35 mm (0.0059 — 0.0138 in))
S: Depth between the transfer case + ST and the center differential
T: Height between the extension case + ST and the transfer drive gear
30 mm (1.18 in): Thickness of ST 15 mm (0.59 in) × 2
0.15 — 0.35 mm (0.0059 — 0.0138 in): Clearance
14) Select a suitable adjusting washer in the following table.

Clearance:
0.15 — 0.35 mm (0.0059 — 0.0138 in)

Adjusting washer	
Part No.	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)
803036080	1.8 (0.071)
803036081	1.9 (0.075)

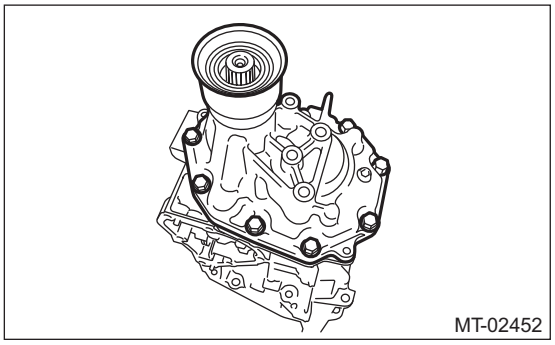
15) Install the adjusting washer to center differential.
16) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



17) Install the extension case assembly.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



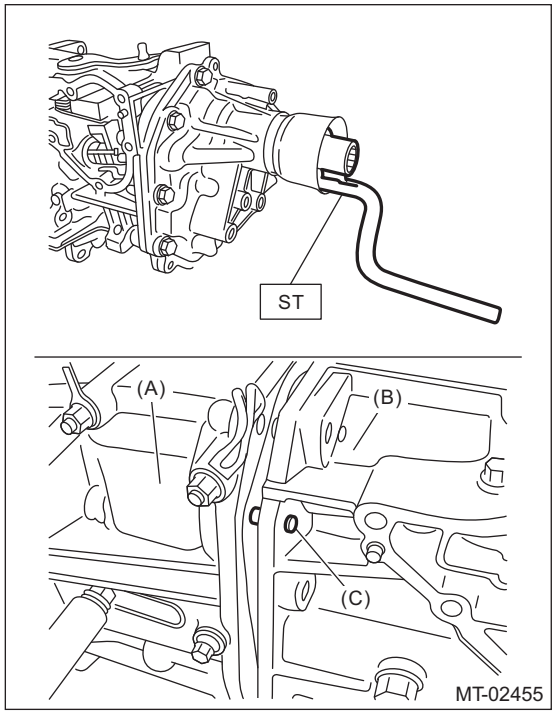
18) Temporarily install the gasket to the transmission case side.

NOTE:
Use a new gasket.

19) Install the transfer case together with the extension case assembly.

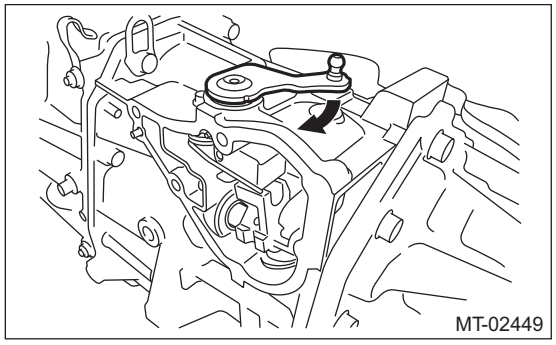
(1) While moving the HANDLE to align the spline position, press in the transfer case assembly until the knock pin comes slightly out of transfer case.

ST 18631AA000 HANDLE



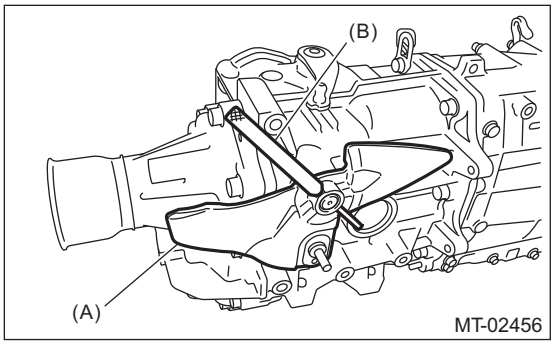
(A) Transmission case
(B) Transfer case
(C) Knock pin

(2) Set and hold the selector lever COMPL to the 1st-2nd side, and install the transfer case assembly so that the shifter arm edge and fork rod does not contact.



20) Temporarily install the transfer case assembly.

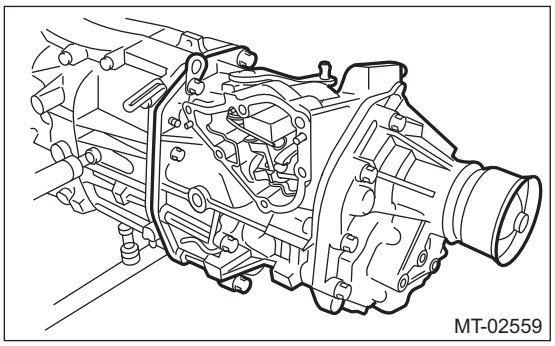
21) Install the shift lever COMPL, then insert the remover or similar tool instead of straight pin.



(A) Shift lever COMPL
(B) Remover

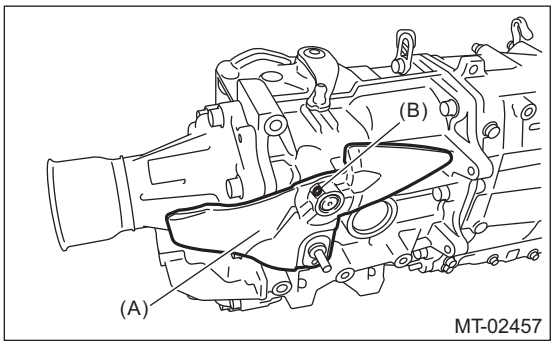
22) Operate the selector arm and remover to confirm the correct shifting into each gear is possible.
23) Install the transfer case assembly.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)



24) Install the shift lever COMPL and secure it with the straight pin.

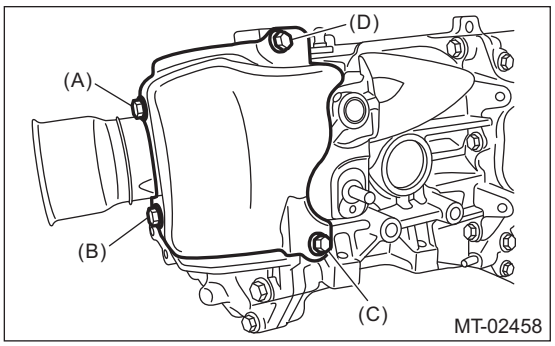
NOTE:
Use a new straight pin.



(A) Shift lever COMPL
(B) Straight pin

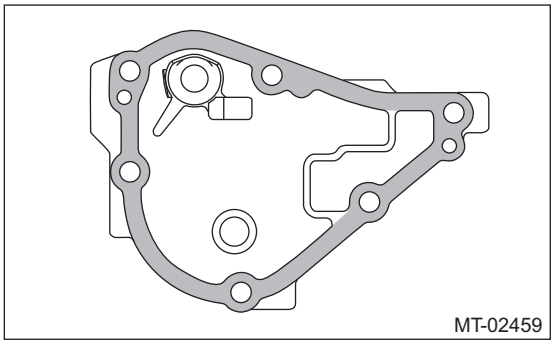
25) Install the transfer cover.
(1) Temporarily install the transfer cover mounting bolts.
(2) Tighten bolts in order of (B), (A), (C), (D).

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)



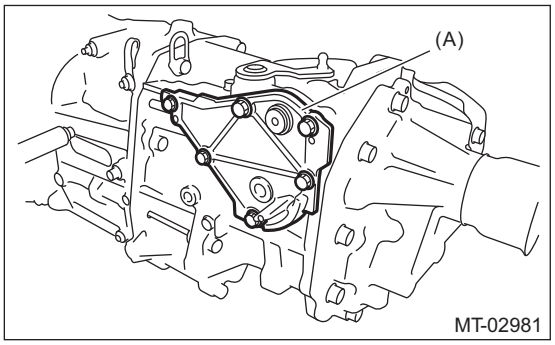
26) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



27) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Transmission cover

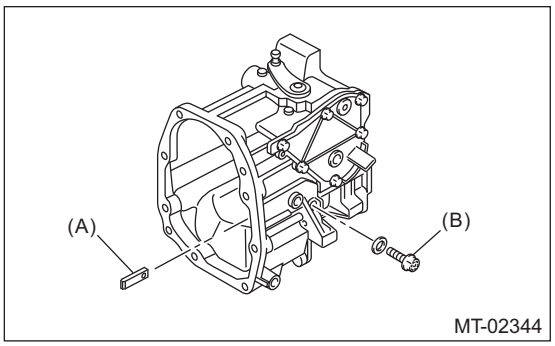
28) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
29) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1. TRANSFER CASE

1) Remove the interlock plate.

NOTE:
Do not remove the precoat bolt (B) if the parts are assembled as a transmission assembly.



(A) Interlock plate
(B) Precoat bolt

2) Remove the shift link assembly. <Ref. to 6MT(TY75)-73, REMOVAL, Shift Link Assembly.>

2. EXTENSION CASE

1) Remove the transfer drive gear assembly. <Ref. to 6MT(TY75)-64, REMOVAL, Transfer Drive Gear.>
2) Remove the oil seal from the extension case. <Ref. to 6MT(TY75)-42, REPLACEMENT, Oil Seal.>
3) Remove the dust cover.

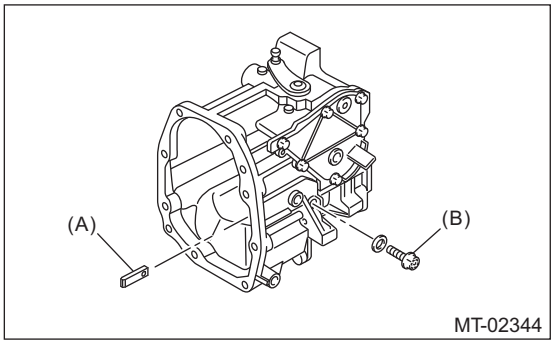
D: ASSEMBLY

1. TRANSFER CASE

1) Install the shift link assembly to the transfer case. <Ref. to 6MT(TY75)-78, INSTALLATION, Shift Link Assembly.>
2) Install the interlock plate.

NOTE:
- Use a new bolt and gasket.
- Clean the bolt threads before installing the interlock plate.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



(A) Interlock plate
(B) Precoat bolt

2. EXTENSION CASE

1) Using the ST, install the oil seal to the extension case. <Ref. to 6MT(TY75)-42, REPLACEMENT, Oil Seal.>

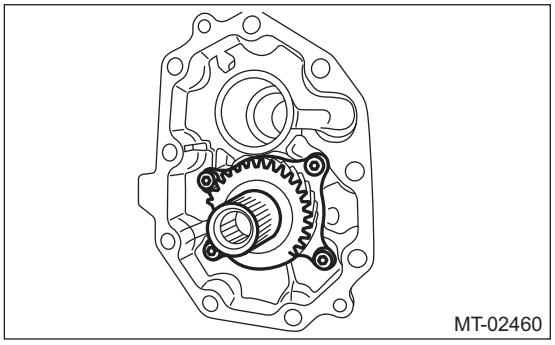
NOTE:
Use a new oil seal.
2) Install the dust cover.

3) Install the transfer drive gear to the extension case. <Ref. to 6MT(TY75)-64, INSTALLATION, Transfer Drive Gear.>

11.Transfer Drive Gear

A: REMOVAL

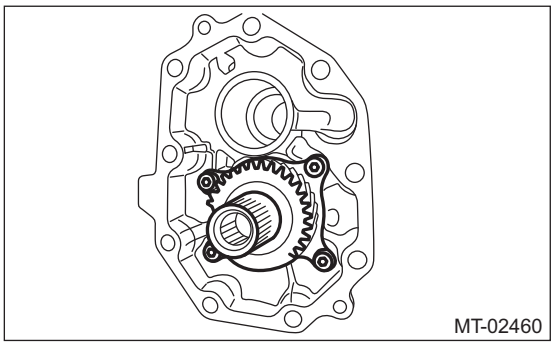
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear. <Ref. to 6MT(TY75)-67, REMOVAL, Transfer Driven Gear.>
6) Remove the transfer drive gear.



B: INSTALLATION

1) Install the transfer drive gear.

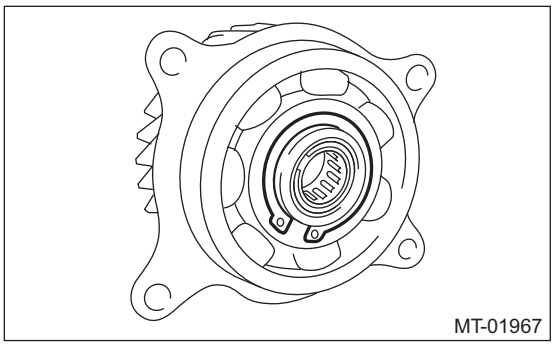
Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)



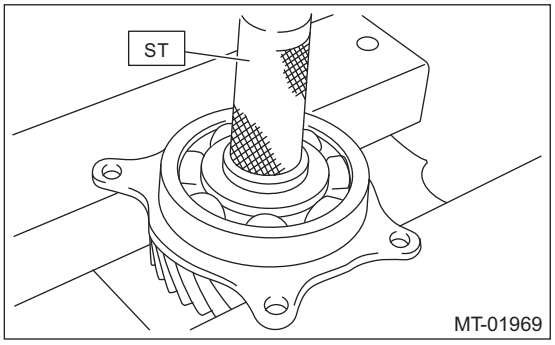
2) Install the transfer driven gear. <Ref. to 6MT(TY75)-68, INSTALLATION, Transfer Driven Gear.>
3) Select the adjusting washer. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Remove the snap ring.



2) Remove the ball bearing.
ST 899864110 REMOVER



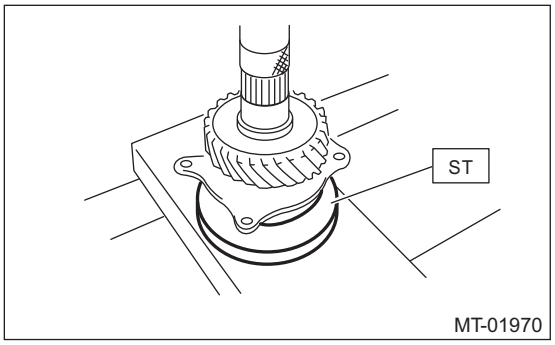
3) Remove the snap ring from transfer drive gear, and remove the needle bearing.

D: ASSEMBLY

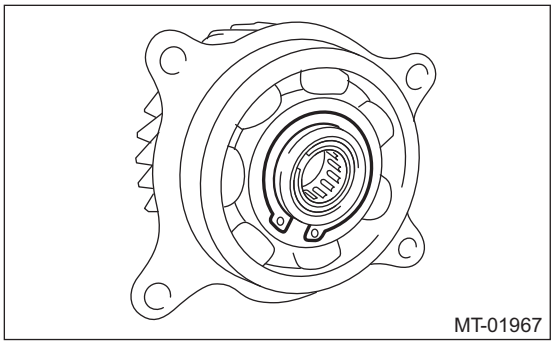
1) Install the needle bearing and snap ring to the transfer drive gear.
2) Set the ST to the ball bearing inner race, then install the transfer drive gear.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.
ST 398177700 INSTALLER



3) Install the snap ring.



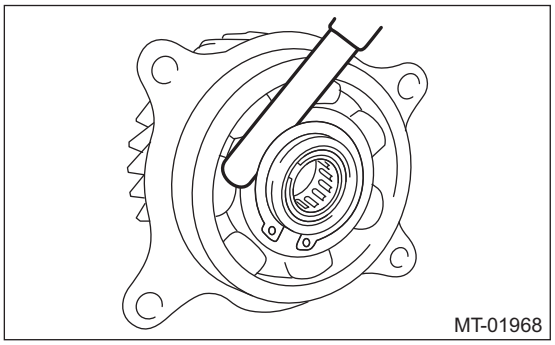
4) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 6MT(TY75)-66, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.

2) Transfer drive gear
If the tooth face of transfer drive gear and the shaft are excessively broken or damaged, replace the transfer drive gear.
3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:
0.01 — 0.15 mm (0.0004 — 0.0059 in)



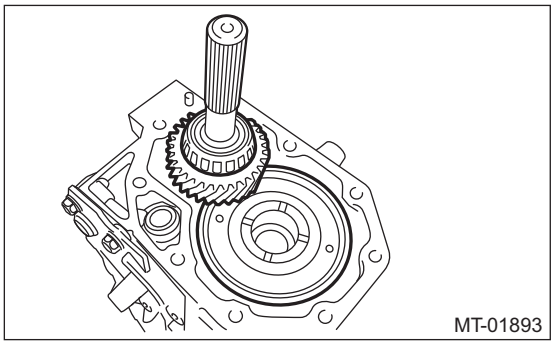
If the measurement is not within specification, select a suitable snap ring and replace it.

Snap ring (outer-30)	
Part No.	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.0697)

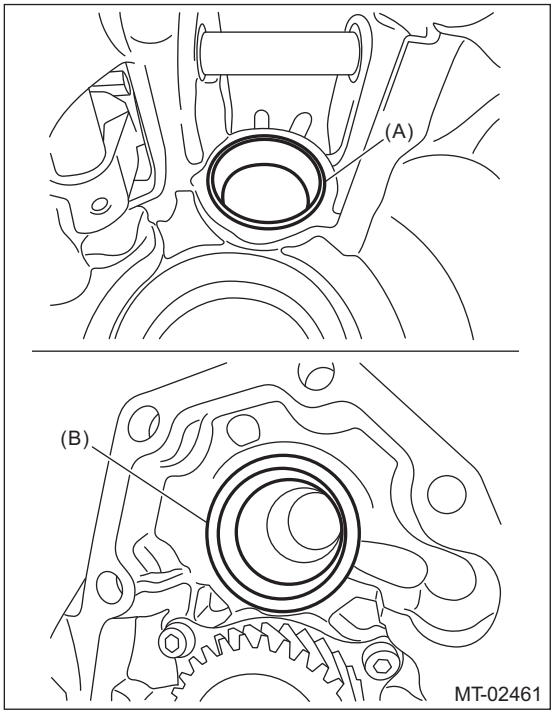
12.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear and center differential as a unit.



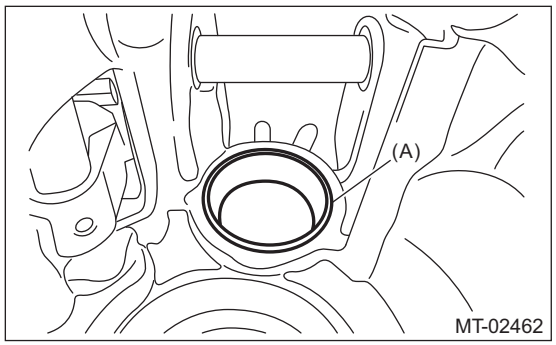
6) Remove the taper roller bearing outer race.



(A) Taper roller bearing (transfer case side) outer race
(B) Taper roller bearing (extension case side) outer race

B: INSTALLATION

1) Install the taper roller bearing (transfer case side) outer race.

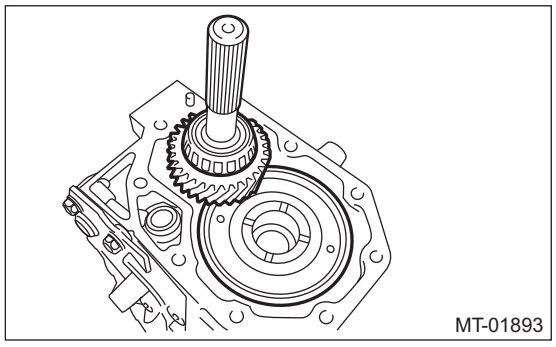


(A) Taper roller bearing (transfer case side) outer race

2) Apply a coat of grease to the taper roller bearing (transfer case side) of transfer driven gear and the roller rolling surface of the taper roller bearing (extension case side).

Grease:
NICHIMOLY N-130 or equivalent

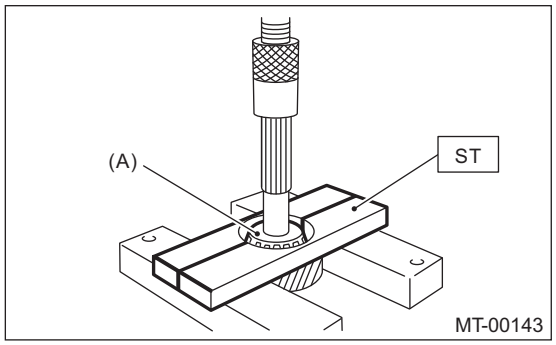
3) Install the transfer driven gear and center differential as a unit.



4) Select the adjusting washer. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the selected adjusting washer and taper roller bearing (extension case side) outer race to the extension case.
6) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
7) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

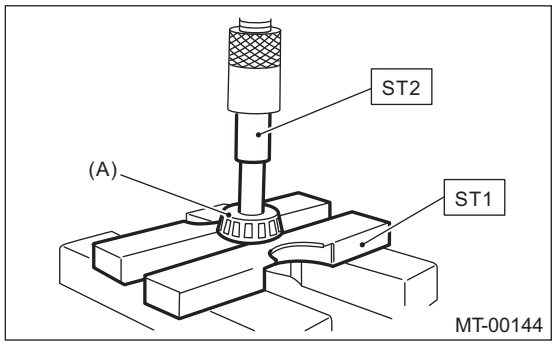
C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).
ST 498077000 REMOVER



(A) Taper roller bearing (extension case side)

2) Using ST1 and ST2, remove the taper roller bearing (transfer case side).
ST1 498077000 REMOVER
ST2 899864100 REMOVER



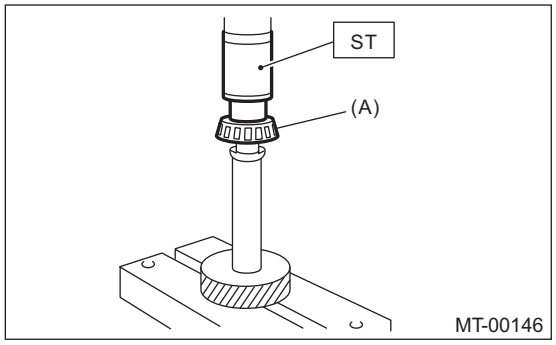
(A) Taper roller bearing (transfer case side)

D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transfer case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST 927640000 INSTALLER

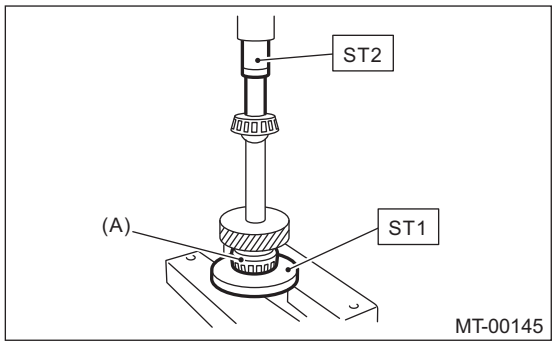


(A) Taper roller bearing (transfer case side)

2) Using the ST, install the taper roller bearing (extension case side).

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 498175500 INSTALLER
ST2 899864100 REMOVER



(A) Taper roller bearing (extension case side)

E: INSPECTION

1) Taper roller bearing
Replace the taper roller bearing in the following cases.
- In case of broken or rusty taper roller bearings
- In case of worn or damaged taper roller bearings
- When the taper roller bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.

2) Transfer driven gear
If the tooth face of transfer driven gear and the shaft are excessively broken or damaged, replace the transfer driven gear.

13.Center Differential

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT(TY75)-67, REMOVAL, Transfer Driven Gear.>

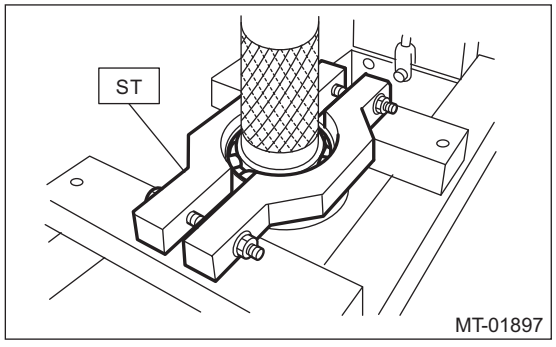
B: INSTALLATION

1) Install the center differential and transfer driven gear into the transfer case as a unit. <Ref. to 6MT(TY75)-68, INSTALLATION, Transfer Driven Gear.>
2) Select the adjusting washer. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
3) Install the transfer driven gear. <Ref. to 6MT(TY75)-68, INSTALLATION, Transfer Driven Gear.>
4) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

Remove the ball bearing using ST.

NOTE:
Center differential is a non-disassembled part which should not be disassembled.
ST 498077600 REMOVER

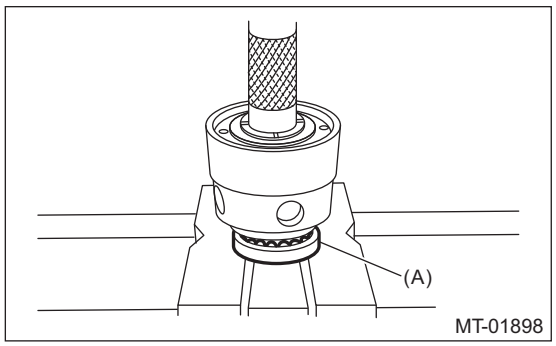


D: ASSEMBLY

Install the ball bearings.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Use a new ball bearing.



(A) Ball bearing

E: INSPECTION

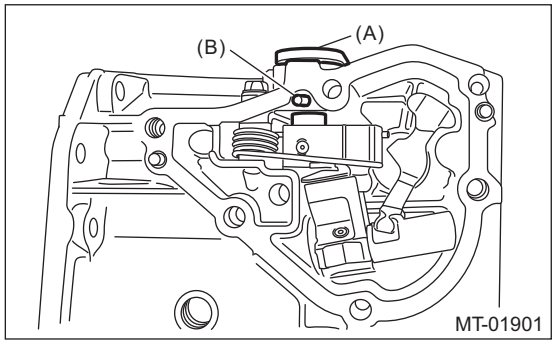
1) Ball bearing
Replace the ball bearing in following cases.
- In case of broken or rusty ball bearings
- In case of worn or damaged ball bearings
- When the ball bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- When the ball bearing has other defects.

2) Center differential
If there is wear or damage, replace the center differential assembly.

14.Shift Link Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the center differential and transfer driven gear as a unit. <Ref. to 6MT(TY75)-67, REMOVAL, Transfer Driven Gear.>
6) Pull out the straight pin.



(A) Selector lever COMPL
(B) Straight pin

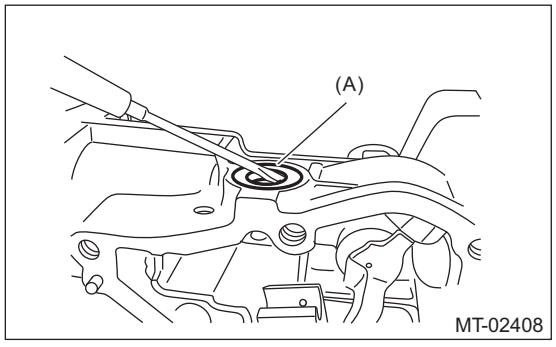
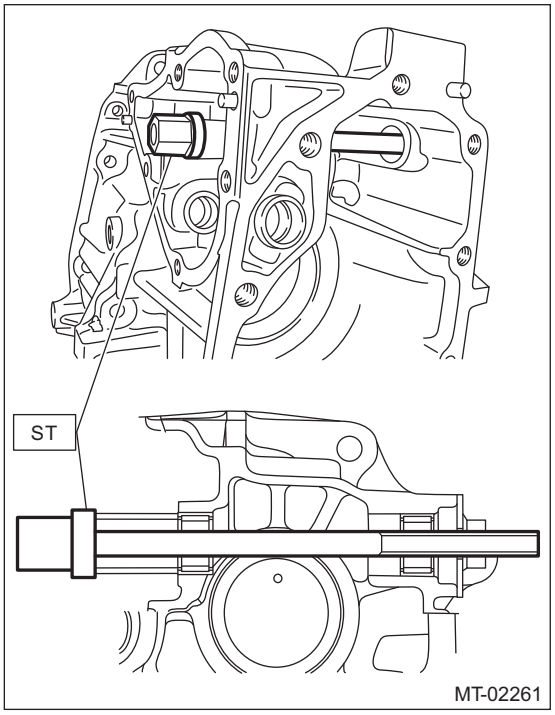
12) Remove the oil seal using a screwdriver wrapped with tape, etc.

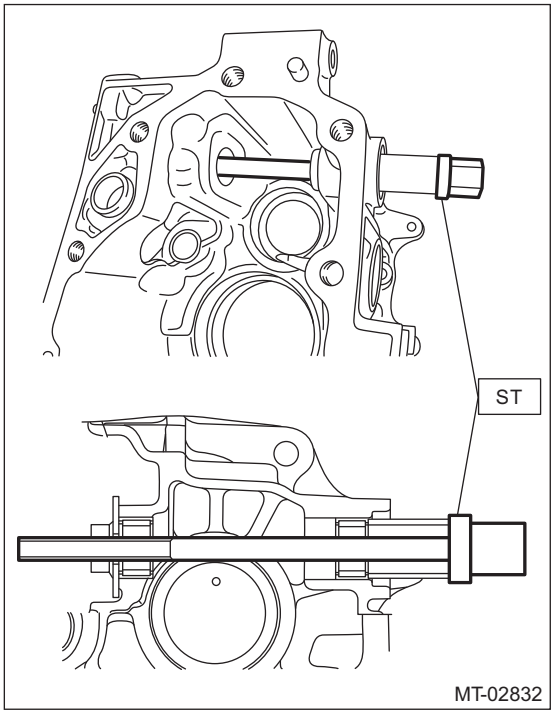
NOTE:
The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for removing the shifter arm No. 2.



(A) Oil seal

13) Remove the needle bearing by using a tube with the diameter of 20 mm (0.79 in) or 21 mm (0.83 in) and the ST.
ST 18763AA000 COMPRESSOR SHAFT



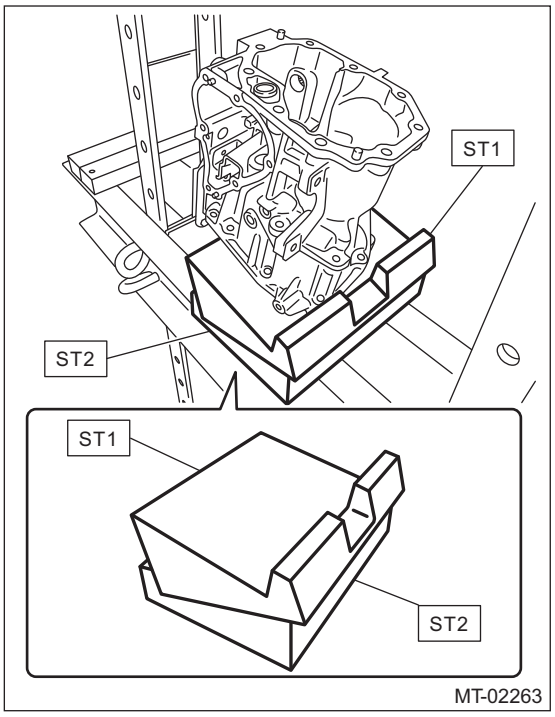


14) Set ST1, ST2 and transfer case to a press.

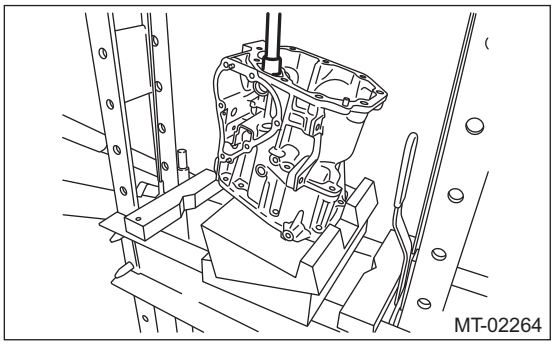
NOTE:
- Set the ST2 under ST1.

• Set the transfer case so that the hole for shifter arm is positioned vertically.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE



15) Remove the roller bearing by using a round bar with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).

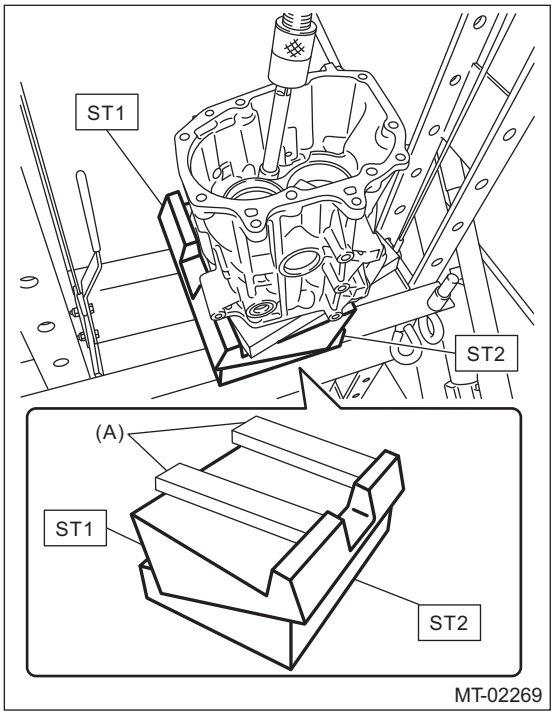


16) Flip over the transfer case, and set an iron plate between transfer case and ST.

NOTE:

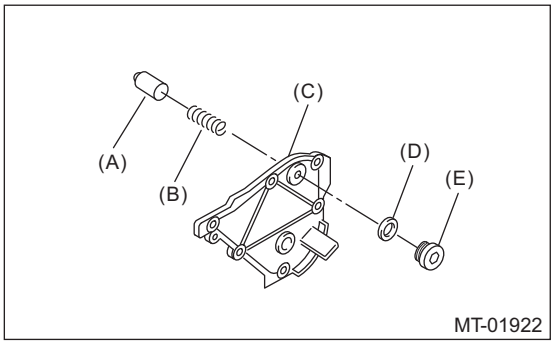
• Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
• Set the iron plate so that the transfer case knock pin does not ride on the iron plate.

17) Remove the roller bearing by using a tube with the diameter of 22 mm (0.87 in) or 23 mm (0.91 in).



(A) Iron plate

18) Remove the shift accent plunger and the check ball spring.



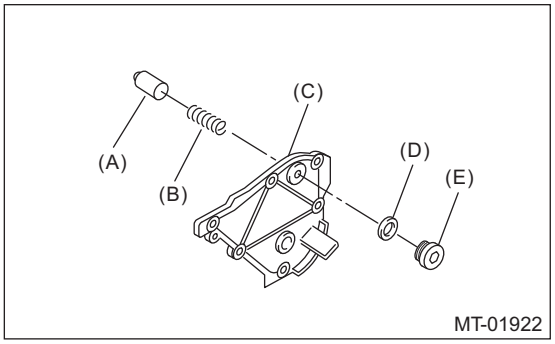
(A) Shift accent plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt

B: INSTALLATION

1) Clean the mating surface of the transmission cover and transfer case.
2) Install the shift accent plunger and the check ball spring.

NOTE:
Use new seal rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



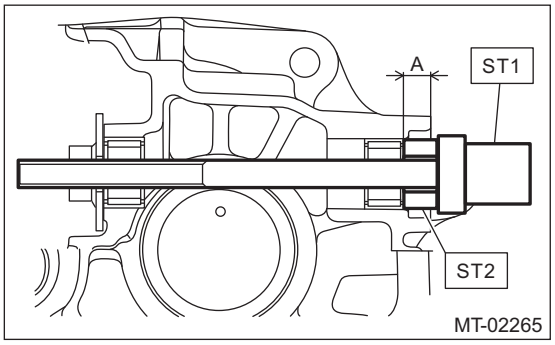
(A) Shift accent plunger
(B) Checking ball spring
(C) Transmission cover
(D) Seal ring
(E) Seal bolt

3) Using the ST, install the needle bearing.

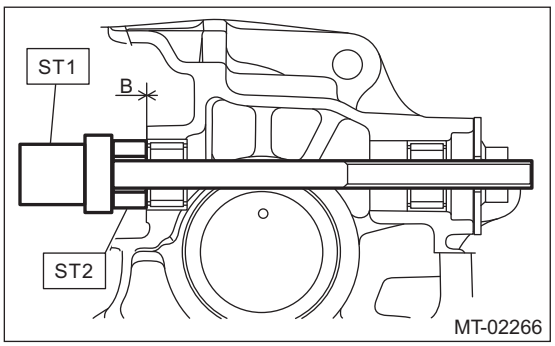
NOTE:
- Use a new needle bearing.
- If the press-fit depth exceeds the service limit, replace with a new needle bearing.

ST1 18763AA000 COMPRESSOR SHAFT
ST2 498277200 STOPPER SET

Press-fit depth of needle bearing:
A: 8.5±0.2 mm (0.33±0.01 in) from the end of transfer case



B: 0.2±0.2 mm (0.01±0.01 in) from the end of transfer case

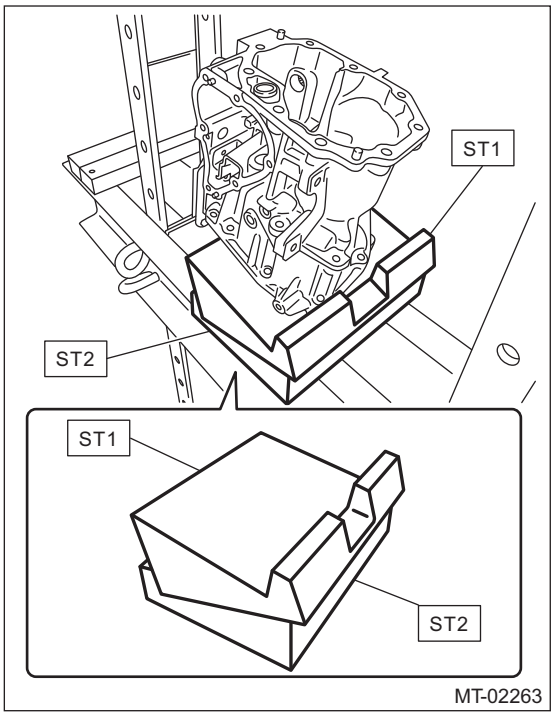


4) Set ST1, ST2 and transfer case to a press.

NOTE:
- Set the ST2 under ST1.

- Set the transfer case so that the hole for shifter arm is positioned vertically.

ST1 498267300 CYLINDER HEAD TABLE
ST2 498267200 CYLINDER HEAD TABLE

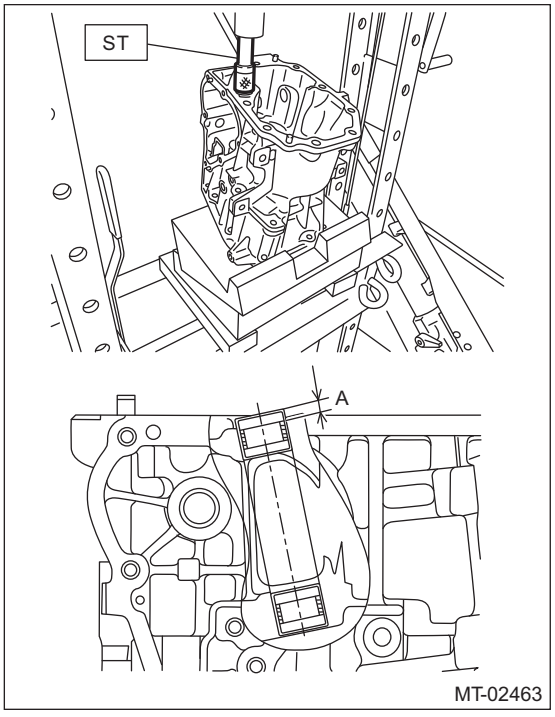


5) Using the ST, install the roller bearing.

NOTE:
- Use a new roller bearing.
- Gradually perform the press-fit operation while measuring the press-fit depth.
- If the press-fit depth exceeds the service limit, replace with a new bearing.

ST 899864100 REMOVER

Press-fit depth of roller bearing:
A: 5.1±0.2 mm (0.20±0.01 in) from the finished surface of transfer case



6) Flip over the transfer case, and set an iron plate between transfer case and ST.

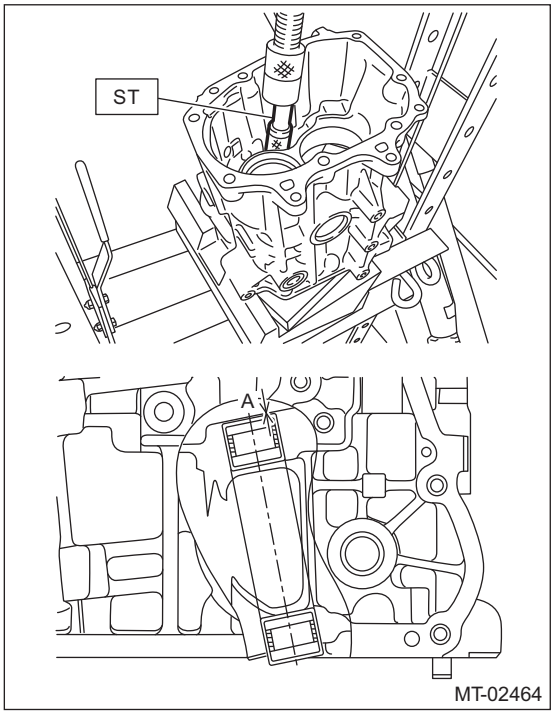
NOTE:
• Insert the iron plate which is thicker than the exposed length of the transfer case knock pin between the ST and transfer case.
• Set the parts while taking care that the transfer case knock pin and the roller bearing do not ride over the iron plate.

7) Using the ST, install the roller bearing.

NOTE:
• Use a new roller bearing.
• Gradually perform the press-fit operation while measuring the press-fit depth.
• If the press-fit depth exceeds the service limit, replace with a new bearing.

ST 899864100 REMOVER

Press-fit depth of roller bearing:
A: 0±0.2 mm (0±0.01 in) from the end of transfer case

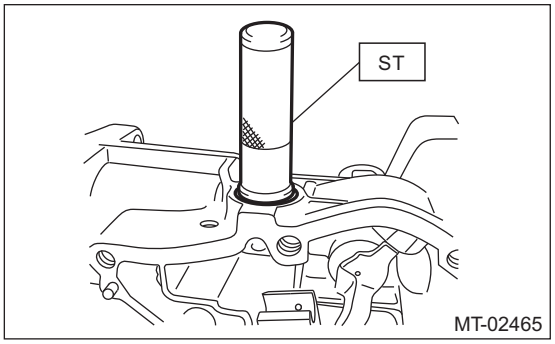


8) Using the ST, install the oil seal.

NOTE:
• Use a new oil seal.
• The illustration shows the oil seal of selector lever COMPL. Perform the same procedures for installing the oil seal of shifter arm No. 2.
• Apply transmission gear oil to the oil seal lips.

ST 18657AA000 INSTALLER

Press-fit depth of oil seal:
1±0.2 mm (0.04±0.01 in) from the end of transfer case



9) Insert the shifter arm and fix with a straight pin.

NOTE:
Use a new straight pin.

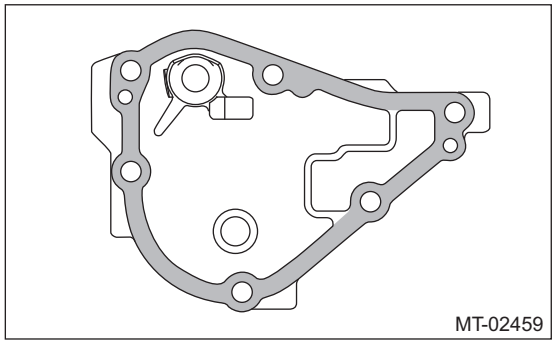
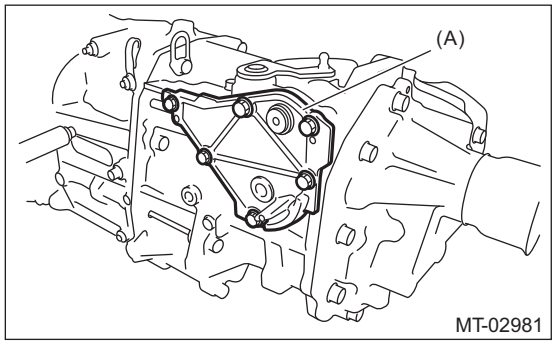
15) Install the center differential and transfer driven gear as a unit.
16) Install the transfer case and the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
17) Apply liquid gasket seamlessly.

Liquid gasket:
THREE BOND 1215B or equivalent



18) Install the transmission cover.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



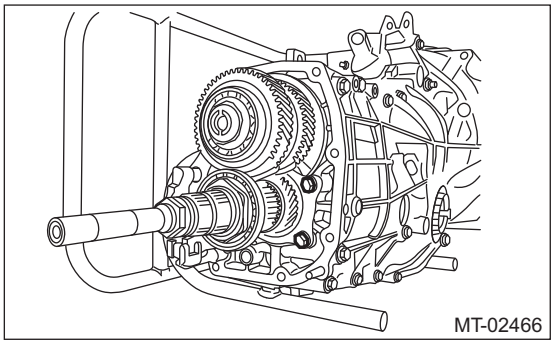
(A) Transmission cover

19) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
20) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

15.Transmission Case

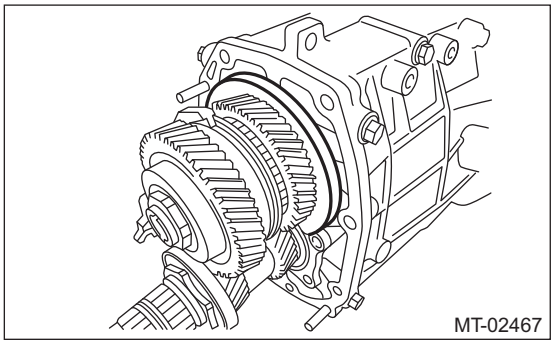
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever and the release bearing. <Ref. to CL-17, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the bearing mounting bolt.



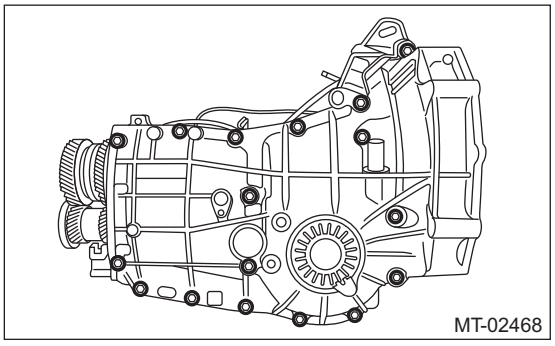
MT-02466

5) Remove the main shaft rear plate.



MT-02467

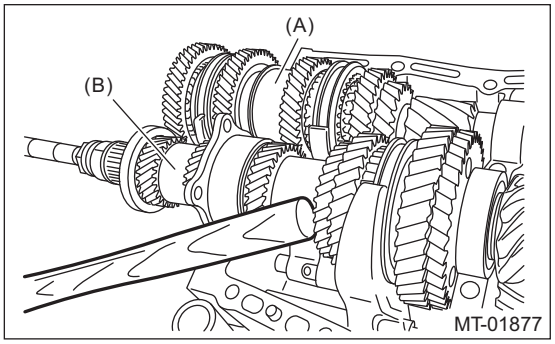
6) Remove the bolts and nuts, and separate the transmission case into the right and left cases.



MT-02468

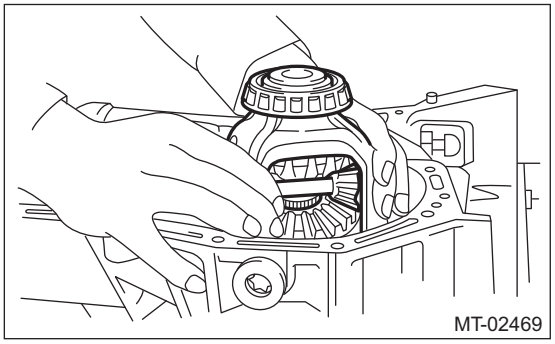
7) Remove the drive pinion shaft assembly.

NOTE:
Use a hammer handle, etc. to remove if too tight.



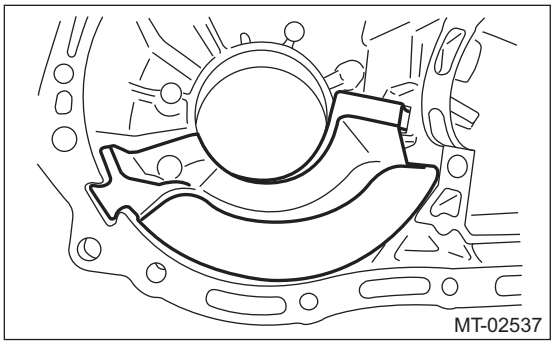
(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

8) Remove the main shaft assembly.
9) Remove the front differential assembly.



10) Remove the differential side retainers and taper roller bearing outer races on the left and right sides. <Ref. to 6MT(TY75)-126, REMOVAL, Front Differential Assembly.>

NOTE:
Do not confuse the right and left taper roller bearing outer races.
11) Remove the reverse idler gear. <Ref. to 6MT(TY75)-138, REMOVAL, Reverse Idler Gear.>
12) Remove the shifter fork and rod. <Ref. to 6MT(TY75)-150, REMOVAL, Shifter Fork and Rod.>
13) Remove the front oil guide.



B: INSTALLATION

1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with cleaning solvent.
2) Install the shifter fork and rod. <Ref. to 6MT(TY75)-152, INSTALLATION, Shifter Fork and Rod.>
3) Install the reverse idler gear. <Ref. to 6MT(TY75)-140, INSTALLATION, Reverse Idler Gear.>
4) Select the drive pinion shim. <Ref. to 6MT(TY75)-107, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the taper roller bearing outer race to the transmission case LH side, and install the differential side retainer with the O-ring removed.
6) Install the front differential assembly.

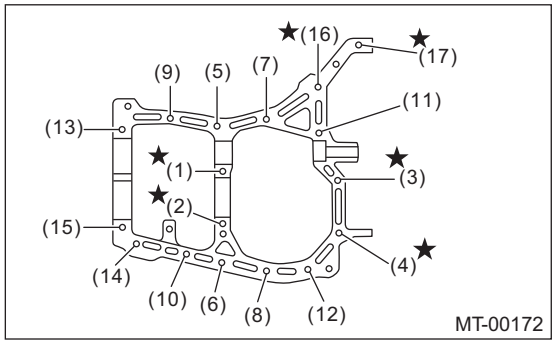
7) Install the main shaft assembly.

NOTE:
Align to install the needle bearing knock pin hole to the transmission case knock pin.
8) Install the selected drive pinion shims and drive pinion shaft assembly.

NOTE:
Align the roller bearing knock pin hole to the transmission case knock pin.
9) Align the left and right side of the transmission case, and tighten it with 17 mounting bolts.

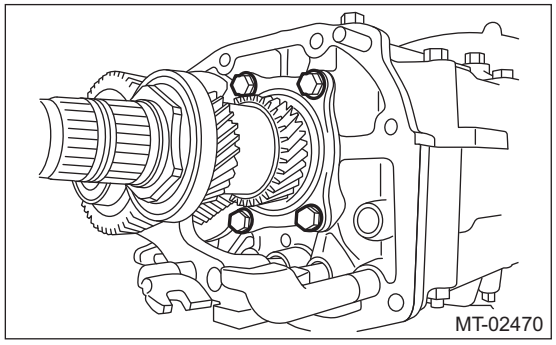
NOTE:
- Insert bolts (11) and (16) from the LH side of the transmission case.
- Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ ***10 mm bolt***
40 N·m (4.1 kgf-m, 29.5 ft-lb)



10) Install the taper roller bearing outer race to the RH side of the transmission case.
11) Tighten the bearing mounting bolts.

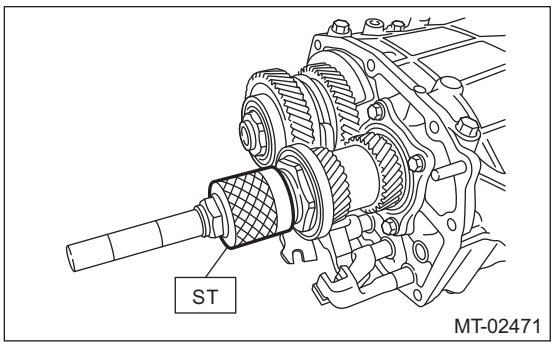
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



12) Perform backlash adjustment of the hypoid driven gear and preload adjustment of the taper roller bearing.

(1) Attach the ST on drive pinion shaft assembly.

ST 18667AA020 HOLDER

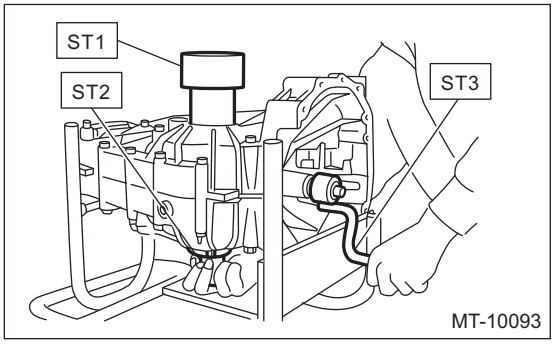


(2) Place the transmission case with the LH side facing downward, and put ST1 on the taper roller bearing outer race.

(3) Screw in the differential side retainer from the bottom into LH side case using ST2. Fit the ST3 on the main shaft. Shift the gear into 4th or 5th, and turn the shaft several times. Screw in the differential side retainer while rotating the ST3 until a slight resistance is felt on ST2.

This is the contact point of the hypoid driven gear and the drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

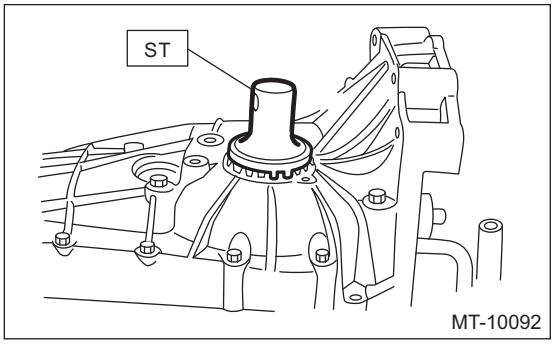
ST1 399780104 WEIGHT
ST2 18658AA021 WRENCH COMPL RETAINER
ST3 499927100 HANDLE



(4) Remove the WEIGHT, and screw in the differential side retainer without the O-ring into the RH side of the transmission case, and stop at the point where a slight resistance is felt.

NOTE:
In this condition, the backlash between hypoid driven gear and drive pinion shaft is zero.

ST 18658AA021 WRENCH COMPL RETAINER



(5) Loosen the differential side retainer on the LH side of the transmission case by 3 notches, and turn the differential side retainer on the RH side of the transmission case by 3 notches in order to apply backlash.

(6) Screw in the differential side retainer of the RH side of the transmission case additionally by 1 notch in order to apply preload on taper roller bearing.

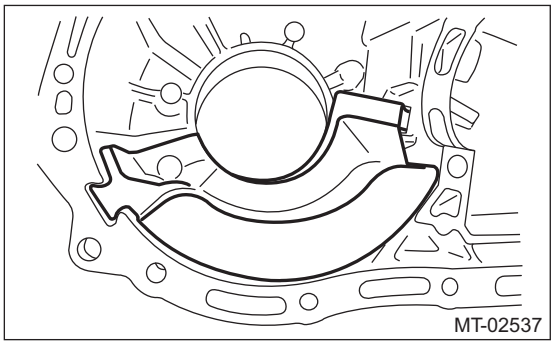
(7) Tighten temporarily both the retainer lock plates LH and RH, and put marks on both the differential side retainer and retainer lock plate for later readjustment.

NOTE:
When it is difficult to attach the retainer lock plate, turn over the retainer lock plate and attach.

(8) Turn the transmission main shaft several times while tapping around the differential side retainer lightly with plastic hammer.

13) Inspect and adjust backlash and tooth contact of the hypoid driven gear. <Ref. to 6MT(TY75)-131, INSPECTION, Front Differential Assembly.>
14) Separate the transmission case into left and right parts. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
15) Check each shifter fork. <Ref. to 6MT(TY75)-154, INSPECTION, Shifter Fork and Rod.>
16) Select a main shaft rear plate. <Ref. to 6MT(TY75)-105, ADJUSTMENT, Main Shaft Assembly.>
17) Install the front oil guide.

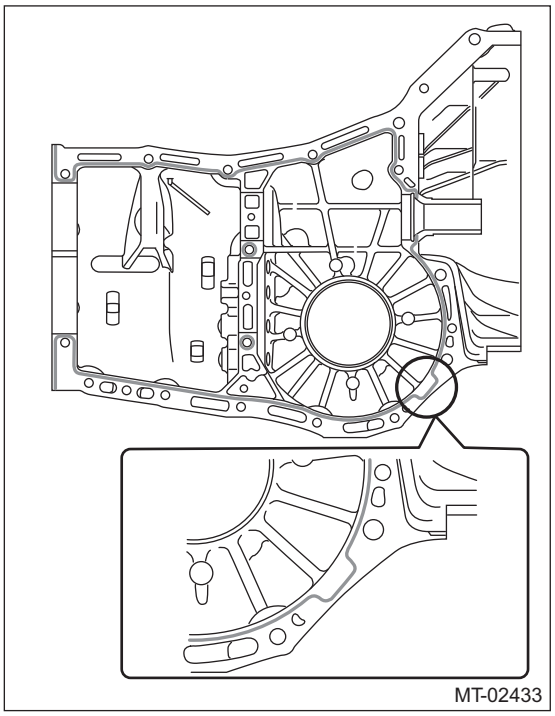
NOTE:
Fit in all the way.



MT-02537

18) Apply liquid gasket, then join the right side and left side of the case together.

Liquid gasket:
THREE BOND 1215B or equivalent

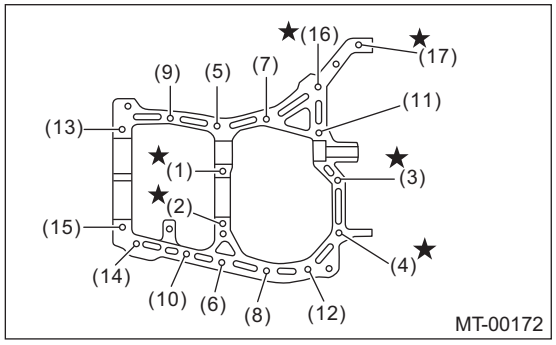


MT-02433

19) Tighten 17 bolts with brackets and clips as shown in the figure.

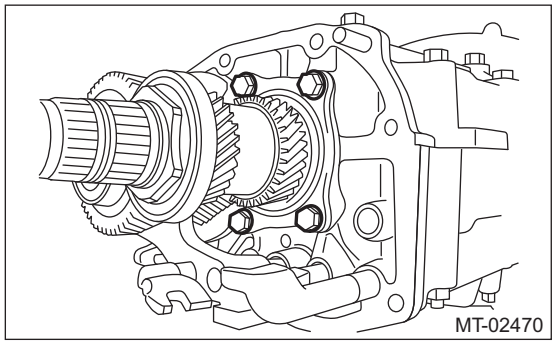
NOTE:
- Insert bolts (11) and (16) from the LH side of the transmission case.
- Match the cases together so that the drive pinion shims are not caught between the cases.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.4 ft-lb)
★ 10 mm bolt
40 N·m (4.1 kgf-m, 29.5 ft-lb)



20) Tighten the bearing mounting bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

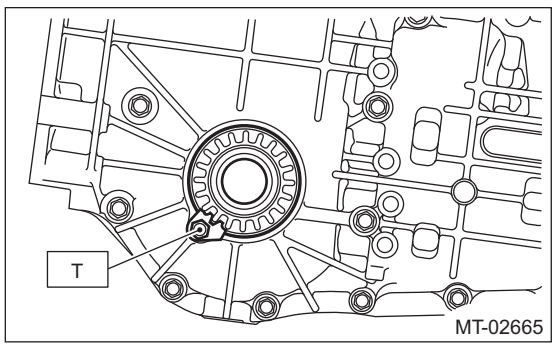


21) Remove the retainer lock plate, and loosen the differential side retainer until the groove of the O-ring appears. Fit the O-ring into the groove and tighten the differential side retainer into the position where it was not loosened.

NOTE:
- When loosening the differential side retainer, record the number of the turns made.
- Perform this for both left and right differential side retainers.
- Use new O-rings.
- Apply transmission gear oil to O-ring.

22) Install the retainer lock plate.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



23) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>

24) Install the clutch release lever and release bearing. <Ref. to CL-17, INSTALLATION, Release Bearing and Lever.>
25) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, or oil leaks.

16.Main Shaft Assembly

A: REMOVAL

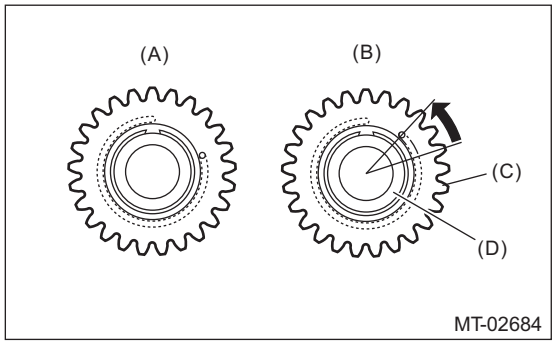
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly.

B: INSTALLATION

1) Attach the needle bearing and oil seal to the front of the main shaft assembly.

NOTE:
- Wrap the clutch splined section with vinyl tape to prevent damage to the oil seal.
- Apply NICHIMOLY N-130 or the equivalent to the sealing lip of the oil seal.
- Use a new oil seal.

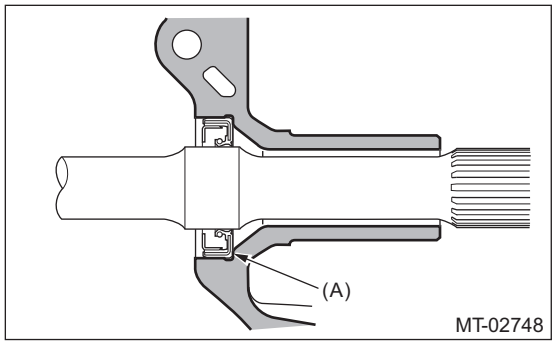
2) Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.
   (1) When the reverse idler sub gear is at free status, put alignment marks on reverse idler sub gear and reverse idler gear.
   (2) Rotate the alignment mark on the reverse idler sub gear side in the arrow direction by two teeth, and secure it with a wire.



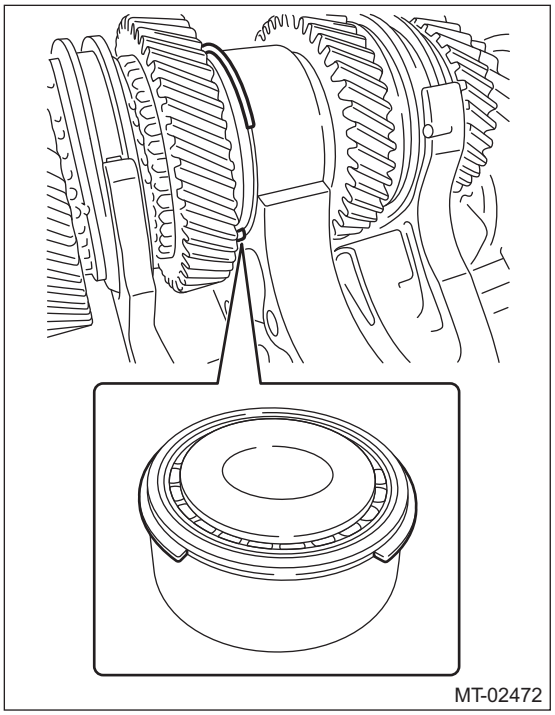
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

3) Fit the transmission case knock pin to the knock pin hole of the needle bearing outer race and install the main shaft assembly.

NOTE:
- Align the end face of the seal with surface (A) when installing the oil seal.



• Face the cutout portion of the snap ring for the double taper roller bearing to the drive pinion shaft assembly.



4) After installing the main shaft, check that the reverse idler gear and reverse idler sub gear are misaligned by two teeth and remove the wire.
5) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Check each shifter fork. <Ref. to 6MT(TY75)-154, INSPECTION, Shifter Fork and Rod.>
7) Select a main shaft rear plate. <Ref. to 6MT(TY75)-105, ADJUSTMENT, Main Shaft Assembly.>
8) Install the transmission case. <Ref. to 6MT(TY75)-86, INSTALLATION, Transmission Case.>
9) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Put vinyl tape around the main shaft spline and pull out the oil seal and needle bearing by hand to prevent the oil seal from being damaged.
2) Flatten the tab of the lock nut.

3) Remove the lock nut and lock washer using ST1 and ST2.
ST1 498937000 TRANSMISSION HOLDER

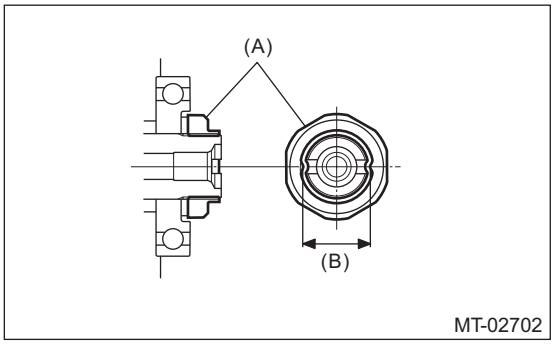
17) Crimp the lock nut at two locations so that the dimension (B) becomes 23.3 mm (0.92 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



(A) Lock nut
(B) Outer dimension after crimping

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected.
1) Bearing
Replace the bearings in the following cases.
- When the bearing balls, outer races and inner races are broken or rusty.

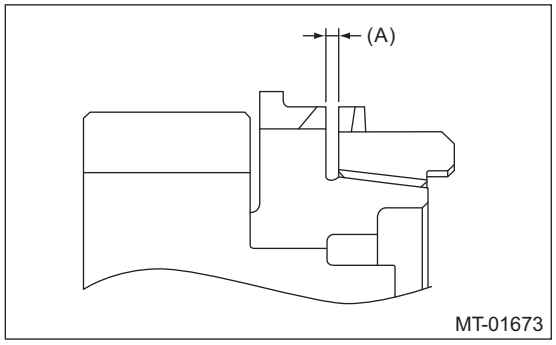
• When the bearing is worn.
• When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
• When bearing has other defects.

2) Bushing (each gear)
Replace the bushing in following cases.
• When the sliding surface is damaged or abnormally worn.
• When the inner wall is abnormally worn.

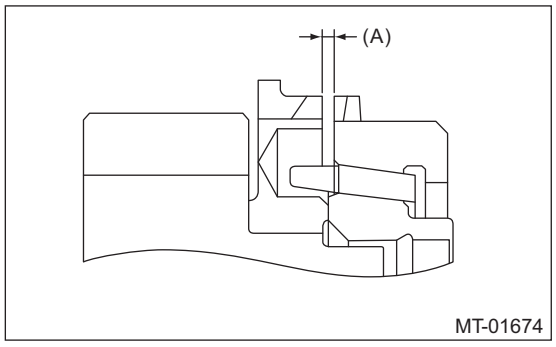
3) Gear
Replace gears in the following cases.
• Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
• Correct or replace if the cone that contacts the baulk ring is rough or damaged.
• Repair or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• When the inner surface or end face is damaged.
• When the baulk ring inner surface is abnormally or partially worn down.
• When the contact surface of the baulk ring insert section is cracked or abnormally worn.
• If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

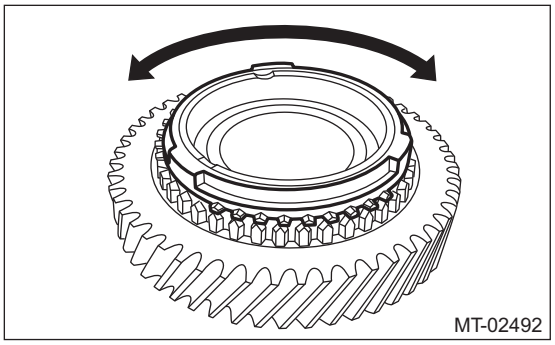
Clearance (A):
0.5 mm (0.020 in) or more
• Single cone



• Double cone

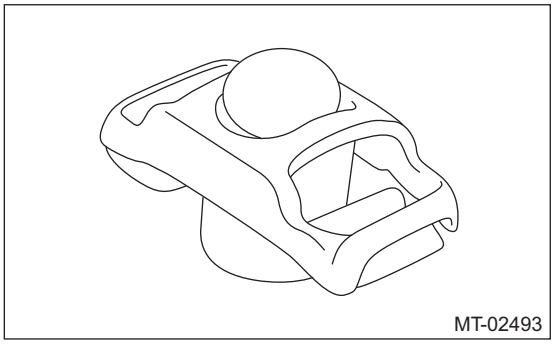


• Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.



5) Coupling sleeve and synchronizer hub
• Check the slipping condition of the coupling sleeve.
• Check the splines on the coupling sleeve and synchronizer hub for wear.

6) Shifting insert
Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.



7) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

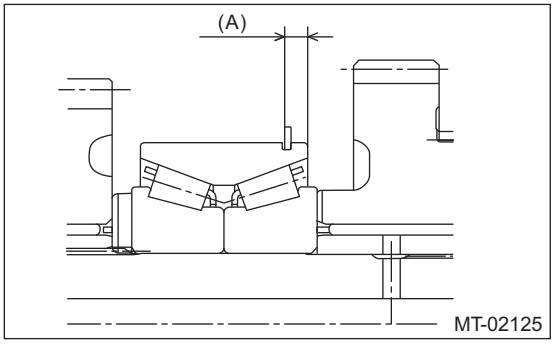
8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

Selection of main shaft rear plate:
Measure the protrusion amount (A) of bearing from transmission main case surface, and select a suitable plate in the following table.

NOTE:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 4.00 (0.1524 — 0.1575)	32294AA051	2

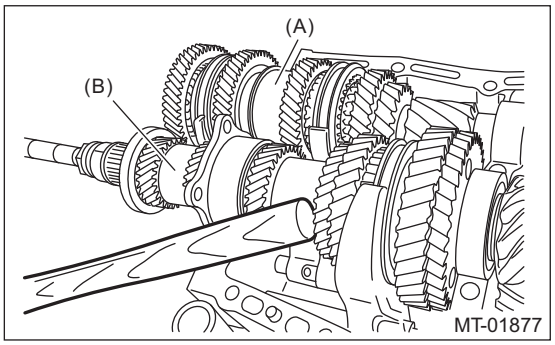


17.Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly.

NOTE:
Use a hammer handle, etc. to remove if too tight.

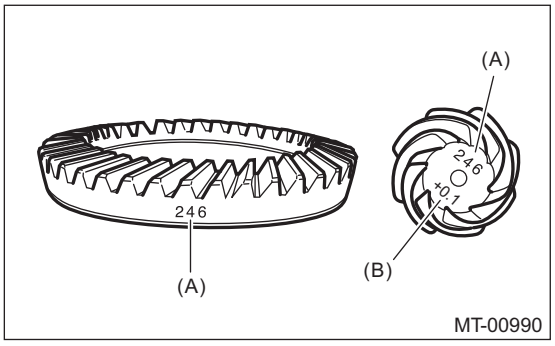


(A) Main shaft ASSY
(B) Drive pinion shaft ASSY

5) Remove the main shaft assembly.

B: INSTALLATION

1) Remove the front differential assembly.
2) Hypoid gear set match mark/No.: The number (A) on top of the drive pinion, and the number on the hypoid driven gear are set numbers for the two gears. Use a pair having the same numbers.
The figure (B) below shows a number for shim adjustment. If no number is shown, the value is zero.

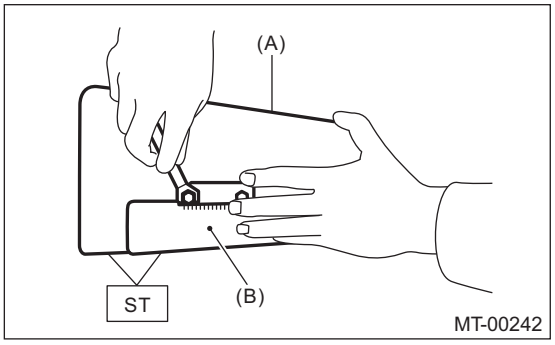


(A) Set number
(B) Number for shim adjustment

3) Place the drive pinion shaft assembly on transmission main case RH without shim and tighten the bearing mounting bolts.
4) Perform the adjustment of ST.

(1) Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Plate
(B) Scale

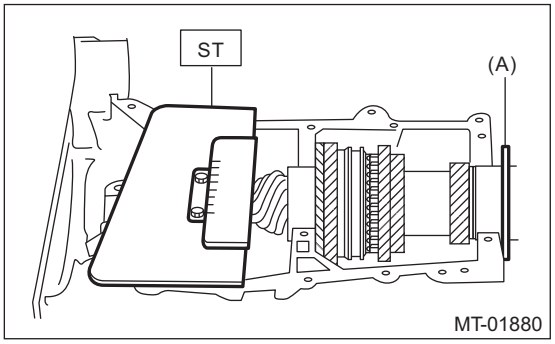
(2) Tighten the two bolts.

5) Position the ST by inserting the knock pin of ST into the knock hole of transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY



(A) Adjust the clearance to zero without drive pinion shims.

7) The thickness of drive pinion shims shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by –.)

8) Select one to three drive pinion shim(s) from the following table for the value determined as described above, and take the shim(s) whose thickness is closest to the said value.

NOTE:
Install the shim with it's cut in facing the shifter fork & rod side.

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)

9) Install the front differential assembly. <Ref. to 6MT(TY75)-126, INSTALLATION, Front Differential Assembly.>
10) Fit the transmission case knock pin to the knock pin hole of the roller bearing and install the drive pinion shaft assembly.
11) Install the main shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Main Shaft Assembly.>
12) Check each shifter fork. <Ref. to 6MT(TY75)-154, INSPECTION, Shifter Fork and Rod.>
13) Install the transmission case. <Ref. to 6MT(TY75)-86, INSTALLATION, Transmission Case.>
14) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
• Attach a cloth to the end of driven shaft (on the frictional side of the thrust needle bearing) to prevent damage during disassembly or reassembly.
• When replacing the coupling sleeve and synchronizer hub, replace them as a set. Because these must engage at the specified point, avoid disassembly as much as possible. If it is necessary to disassemble, mark the engaging points on the splines beforehand.
1) Flatten the tab of the lock nut.
2) Remove the lock nut using ST1, ST2 and ST3.

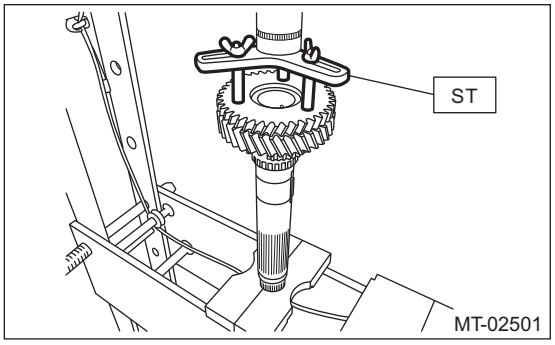
12) Remove the key.
13) Remove the 2nd driven gear, 2nd inner baulk ring, 2nd synchro cone, 2nd outer baulk ring, 1st-2nd shifting insert and 1st-2nd coupling sleeve.

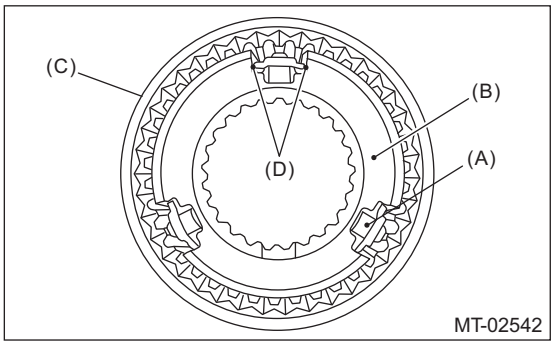
CAUTION:
When removing 1st-2nd coupling sleeve, be careful not to lose the 1st-2nd shifting insert.

14) Remove the 1st driven gear, 1st inner baulk ring, 1st synchro cone, 1st outer baulk ring, 2nd driven gear bushing and 1st-2nd synchronizer hub using ST and a press.
ST 18762AA001 COMPRESSOR SPECIAL TOOL



D: ASSEMBLY

NOTE:
- Match the alignment marks, and install the coupling sleeve and then install the shifting insert.
- Make sure that there is no large clearance at both sides of the shifting insert after assembly.

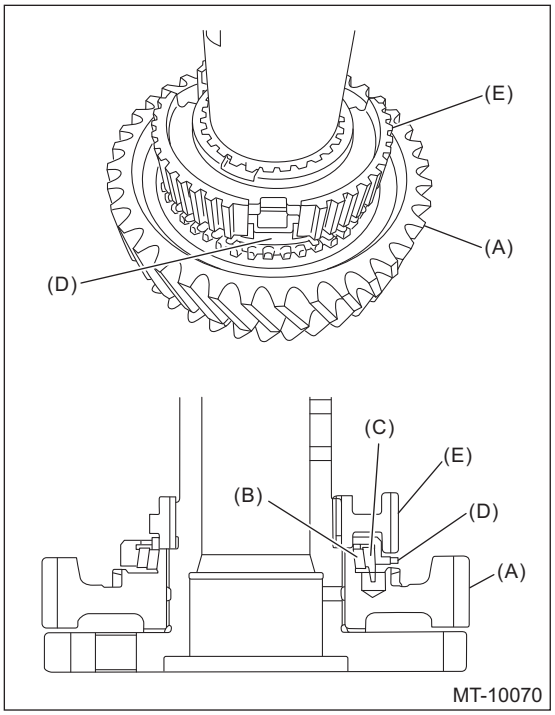


(A) Shifting insert
(B) Synchronizer hub
(C) Coupling sleeve
(D) There is no large clearance at this part.

1) Install the 1st driven gear, 1st inner baulk ring, 1st synchro cone, 1st outer baulk ring and 1st-2nd synchronizer hub.

NOTE:
- Install the 1st-2nd synchronizer hub in proper direction.

- Align the protrusion of the 1st outer baulk ring into the groove of the 1st-2nd synchronizer hub.



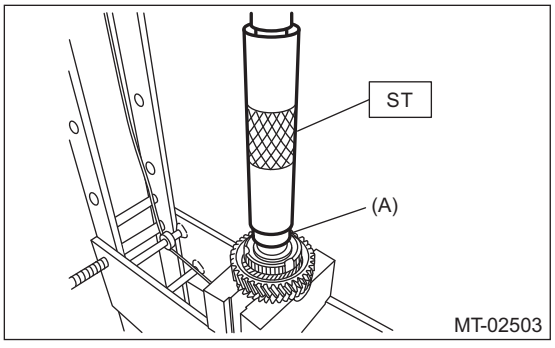
(A) 1st driven gear
(B) 1st inner baulk ring
(C) 1st synchro cone
(D) 1st outer baulk ring
(E) 1st-2nd synchronizer hub

2) Install the 2nd driven gear bushing using ST and a press.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
- Attach a cloth to the end of the driven shaft to prevent damage.
- When press fitting, align the oil holes of the driven shaft and 2nd driven gear bushing.

ST 18654AA000 INSTALLER

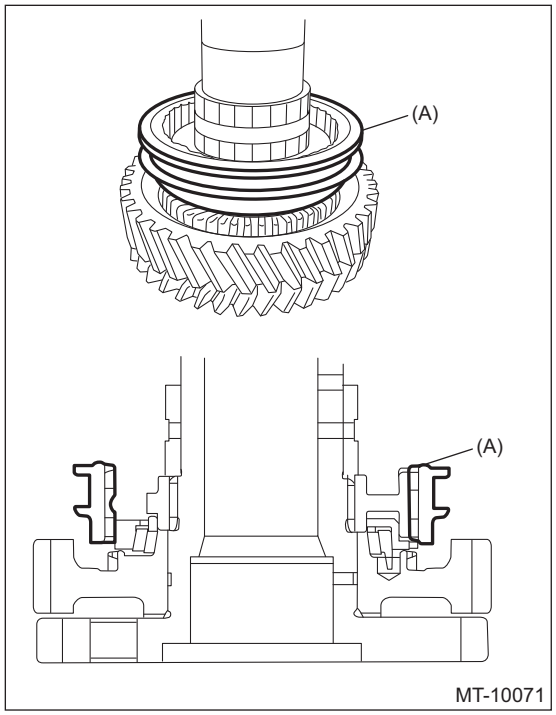


(A) 2nd driven gear bushing

3) Install the 1st-2nd coupling sleeve.

NOTE:
- Install the 1st-2nd coupling sleeve in proper direction.

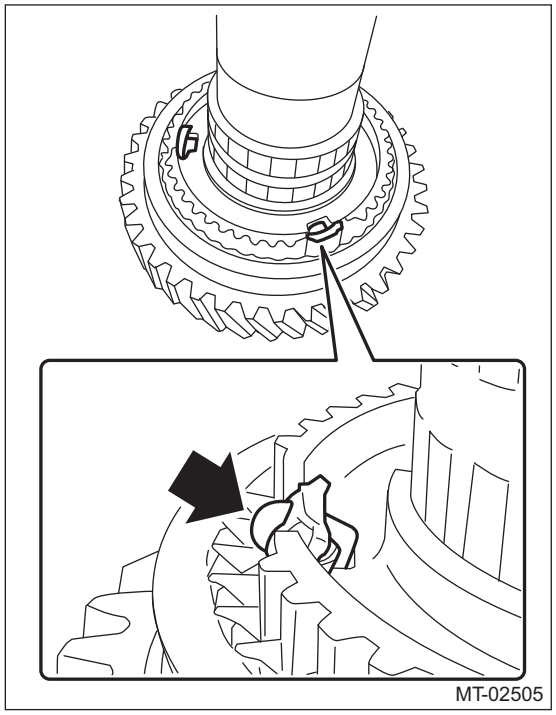
- Align the alignment marks of 1st-2nd coupling sleeve and the 1st-2nd synchronizer hub.



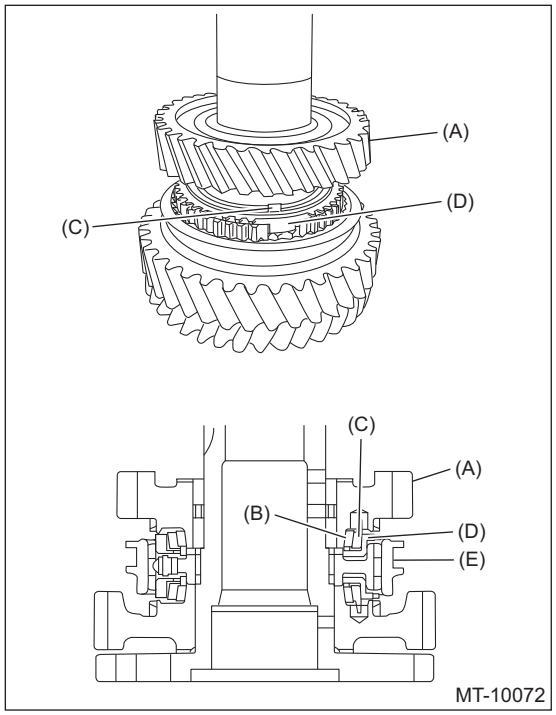
(A) 1st-2nd coupling sleeve

4) Install the 1st-2nd shifting insert.

NOTE:
Press in the ball part to install.



5) Install the 2nd outer baulk ring, 2nd synchro cone, 2nd inner baulk ring and 2nd driven gear.



(A) 2nd driven gear
(B) 2nd inner baulk ring
(C) 2nd synchro cone
(D) 2nd outer baulk ring
(E) 1st-2nd coupling sleeve

6) Install the key to the driven shaft.
7) Using the ST and a press, install the 3rd-4th driven gear.

CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
- Match the groove on the 3rd-4th driven gear to the key.
- Install the 3rd-4th driven gear in the proper direction.

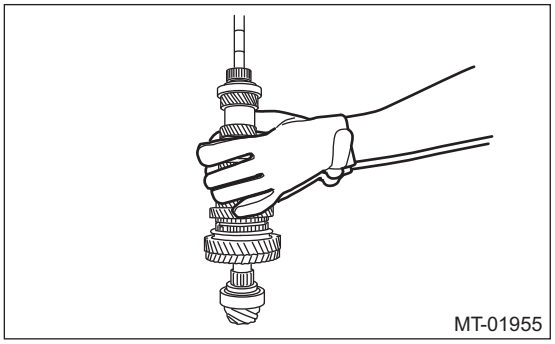
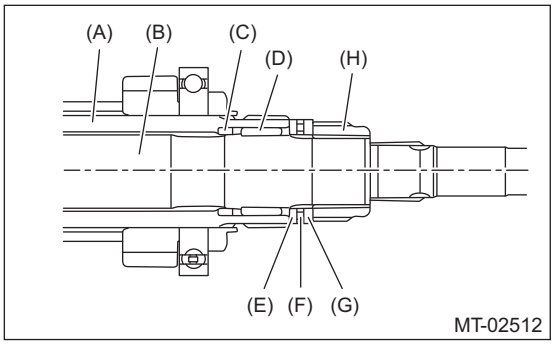
(A) Washer

18) Install the thrust bearing and needle bearing and install the driven shaft assembly.



19) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

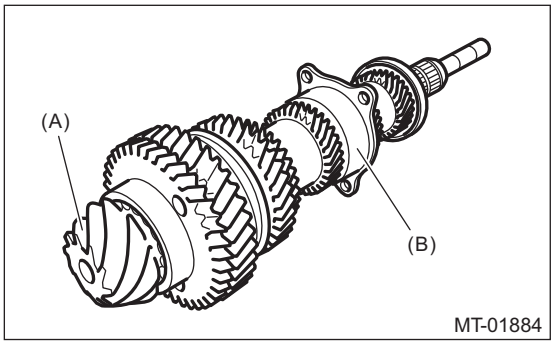


(A) Driven shaft
(B) Drive pinion shaft
(C) Drive pinion collar
(D) Needle bearing (25 × 30 × 20)
(E) Adjusting washer No. 2 (25 × 36 × t)
(F) Thrust bearing (25 × 36 × 2)
(G) Adjusting washer No. 1 (25 × 36 × t)
(H) Differential bevel gear sleeve

20) Adjust the thrust bearing preload. <Ref. to 6MT(TY75)-122, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected.
1) Bearing
Replace the bearings in the following cases.
- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after transmission gear oil has been applied.
- The double ball bearing of the drive pinion shaft should be checked for smooth rotation before the drive pinion shaft assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.



(A) Drive pinion shaft
(B) Double ball bearing

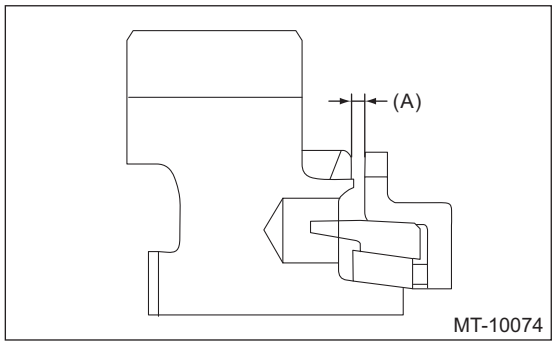
- When bearing has other defects.

2) Bushing (each gear)
Replace the bushing in following cases.
- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gear
Replace gears in the following cases.
- Replace the gear with new part if its tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
- When the inner surface and end face are damaged.
- When the baulk ring inner surface is abnormally or partially worn down.
- If the gap between the end faces of the baulk ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.

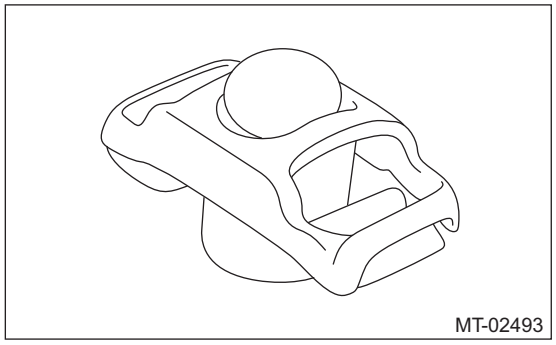
Clearance (A):
0.5 mm (0.020 in) or more



- When the contact surface of the baulk ring insert section is damaged or abnormally worn.
- Apply transmission gear oil to the cone of the gear and while press-fitting the baulk ring, check there is no rotation in the circumferential direction.

5) Coupling sleeve and synchronizer hub
- Check the slipping condition of the coupling sleeve.
- Check the splines on the coupling sleeve and synchronizer hub for wear.

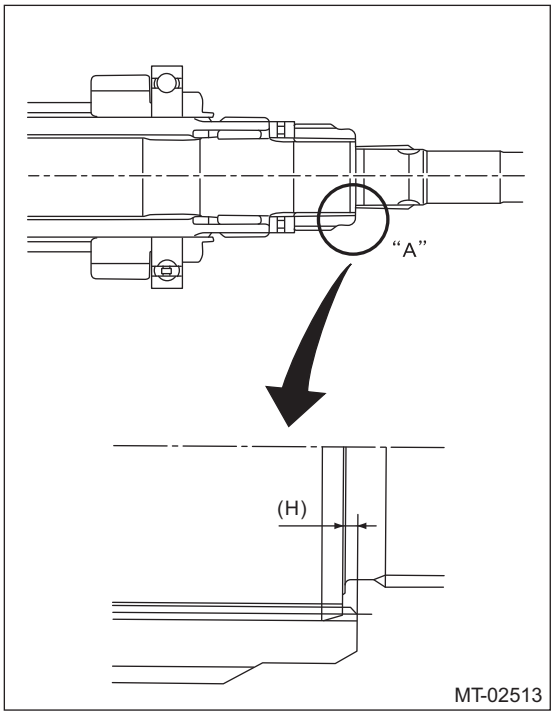
6) Shifting insert
Replace the shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.



F: ADJUSTMENT

1. THRUST BEARING PRELOAD

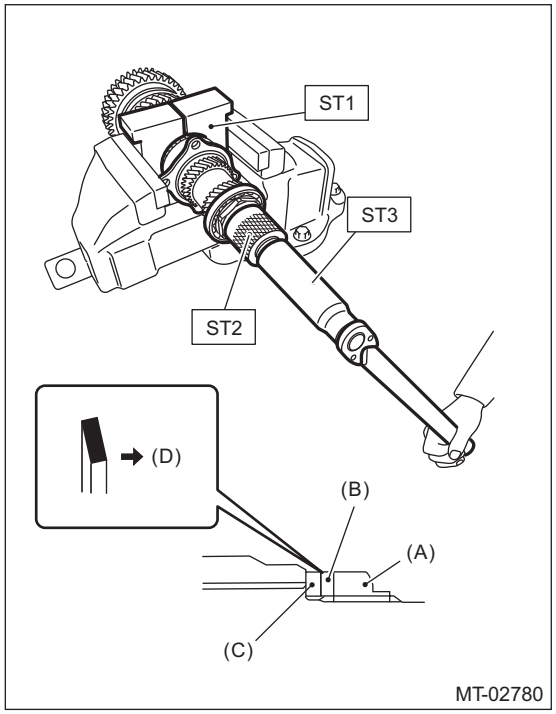
1) Select a suitable adjusting washer No. 1 so that dimension (H) will be zero in a visual check. Position the washer (20 × 31 × 4) and lock washer (20 × 31 × 2.3) and attach the lock nut (20 × 11).



2) Install the lock nut with ST1, ST2 and ST3.

NOTE:
- Use new lock nuts and lock washers.
- Install the lock washer in the correct direction.

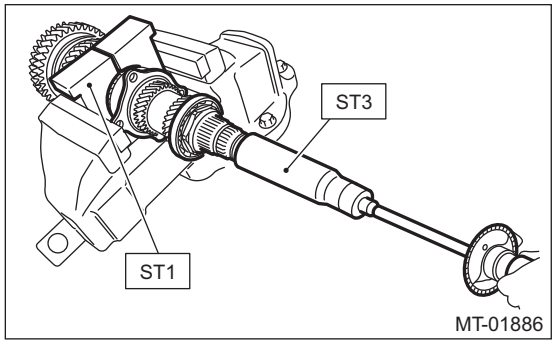
Tightening torque:
126 N·m (12.8 kgf-m, 92.9 ft-lb)
ST1 18680AA020 HOLDER
ST2 18667AA020 HOLDER
ST3 18662AA010 SOCKET (27)



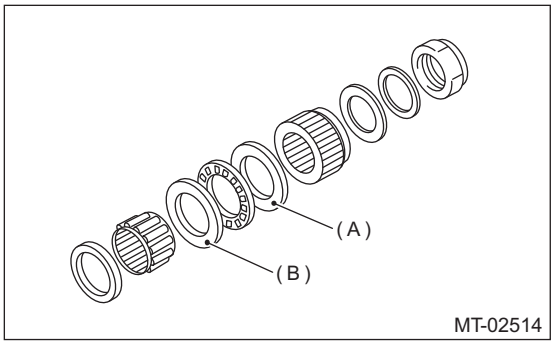
(A) Lock nut
(B) Lock washer
(C) Washer
(D) Lock nut side

3) After removing the ST2 used in step 2), measure the starting torque using torque driver.

Starting torque:
0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)
ST1 18680AA020 HOLDER
ST3 18662AA010 SOCKET (27)



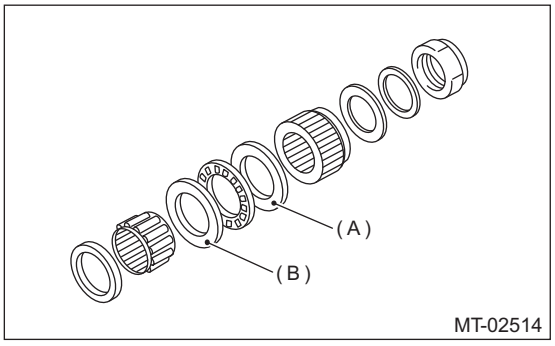
4) If the starting torque is not within the specified limit, select new adjusting washer No. 1 and recheck starting torque.



(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part No.	Thickness mm (in)
803025071	2.925 (0.1152)
803025072	2.950 (0.1161)
803025073	2.975 (0.1171)
803025074	3.000 (0.1181)
803025075	3.025 (0.1191)
803025076	3.050 (0.1201)
803025077	3.075 (0.1211)

5) If the specified starting torque cannot be obtained by the selection of adjusting washer No. 1, select adjusting washer No. 2 from the list below. Repeat steps 1) through 4) to adjust starting torque.



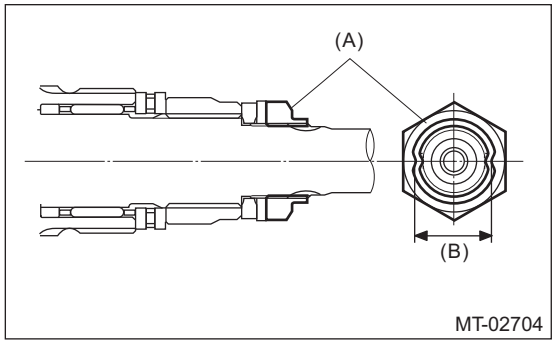
(A) Adjusting washer No. 1
(B) Adjusting washer No. 2

Starting torque	Dimension H	Adjusting washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025070	2.850 (0.1122)
803025074	3.000 (0.1181)
803025078	3.150 (0.1240)

6) Recheck that the starting torque is within the specified range, and crimp the lock nut at two locations so that the dimension (B) becomes 20.1 mm (0.79 in) or less.

CAUTION:
When crimping the lock nut, be careful not to crack it.



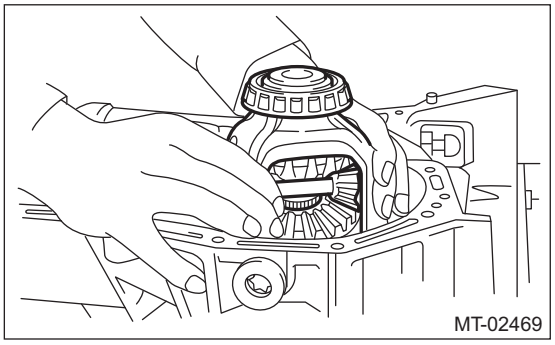
(A) Lock nut
(B) Outer dimension after crimping

18.Front Differential Assembly

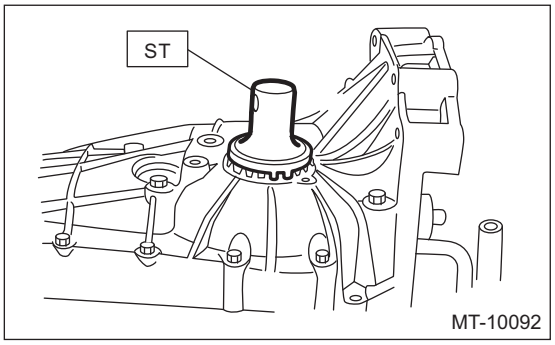
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Main Shaft Assembly.>
6) Remove the front differential assembly.

NOTE:
- Do not confuse the right and left taper roller bearing outer races.
- Be careful not to damage the oil seal of differential side retainer.



7) Remove the differential side retainers using ST.
ST 18658AA021 WRENCH COMPL RETAINER

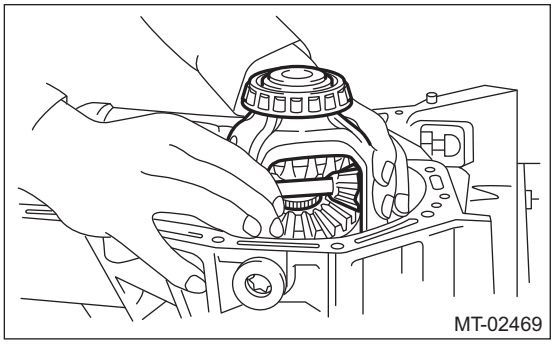


8) Remove the taper roller bearing outer race from the transmission case.
ST 398527700 PULLER ASSY

B: INSTALLATION

1) Install the differential side retainers using ST.
ST 18658AA021 WRENCH COMPL RETAINER
2) Install the taper roller bearing outer race to the transmission case.
3) Install the front differential assembly.

CAUTION:
Make sure the oil seal lip is not folded.

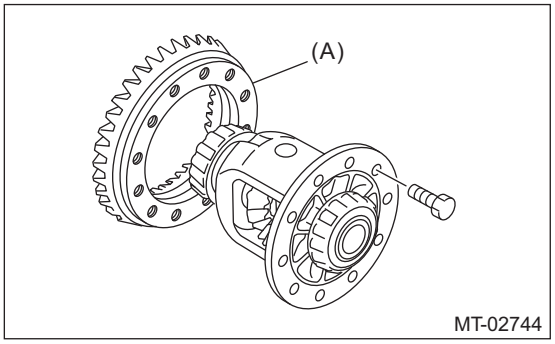


4) Install the main shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Main Shaft Assembly.>
5) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the transmission case. <Ref. to 6MT(TY75)-86, INSTALLATION, Transmission Case.>
7) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

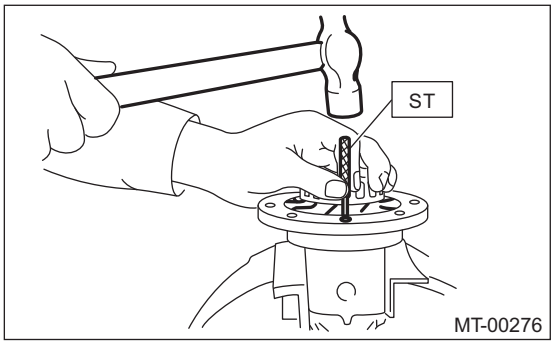
1. DIFFERENTIAL CASE ASSEMBLY

1) Loosen the twelve bolts and remove hypoid driven gear.

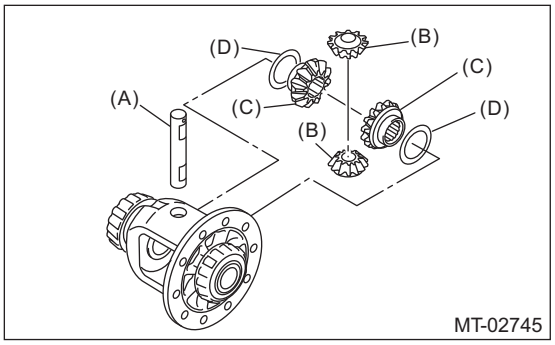


(A) Hypoid driven gear

2) Drive out the straight pin from differential assembly toward hypoid driven gear side.
ST 899904100 STRAIGHT PIN REMOVER

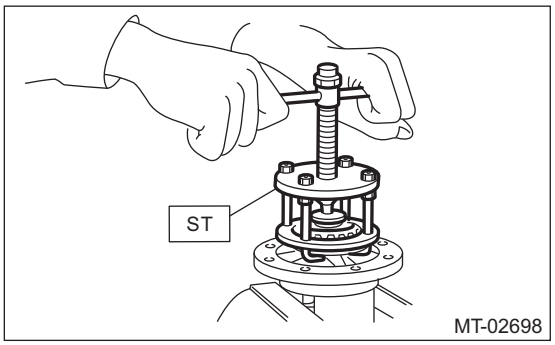


3) Pull out the pinion shaft, and remove the differential bevel pinion, differential bevel gear and adjusting washer.



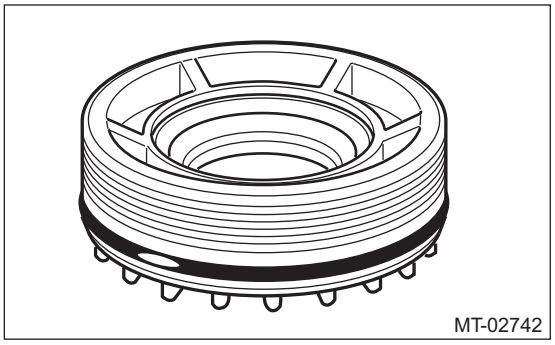
(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

4) Using the ST, remove the taper roller bearing.
ST 899524100 PULLER SET



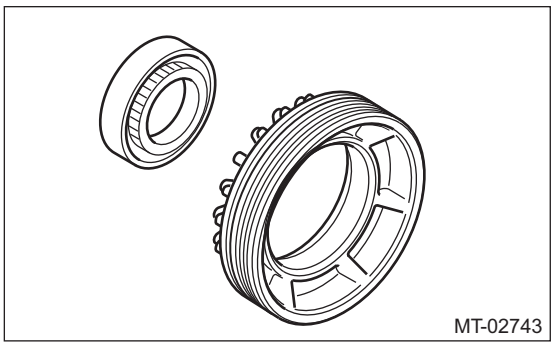
2. DIFFERENTIAL SIDE RETAINER

1) Remove the O-rings.



2) Remove the oil seal.

NOTE:
Remove using the flat tip screwdriver.

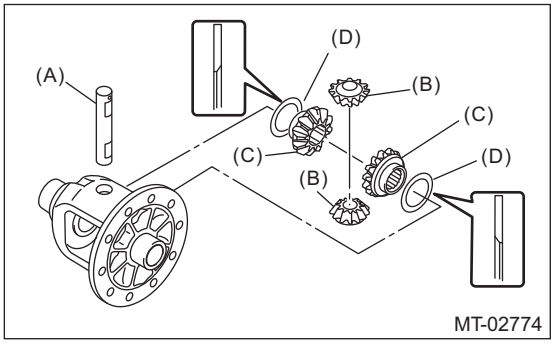


D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the differential bevel gear and differential bevel pinion together with adjusting washer, and insert the pinion shaft.

NOTE:
Face the chamfered side of adjusting washer toward differential bevel gear.

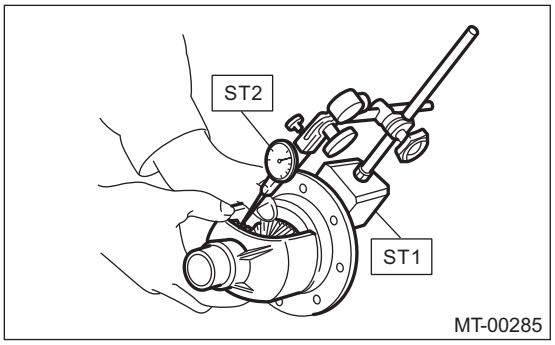


(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Adjusting washer

2) Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT(TY75)-132, DIFFERENTIAL BEVEL PINION GEAR BACKLASH, INSPECTION, Front Differential Assembly.>

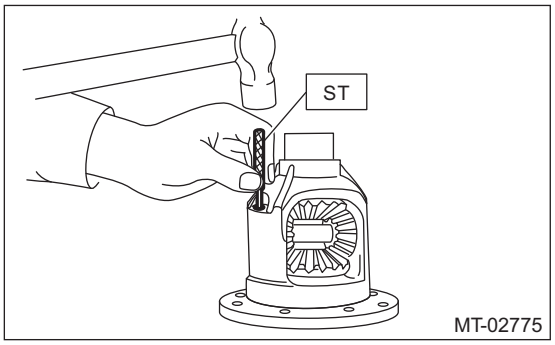
NOTE:
Be sure the differential bevel pinion gear teeth contact adjacent gear teeth during measurement.

Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE



3) Align the pinion shaft pin hole with the differential case pin hole, and drive the straight pin into the holes from the hypoid driven gear side using the ST.

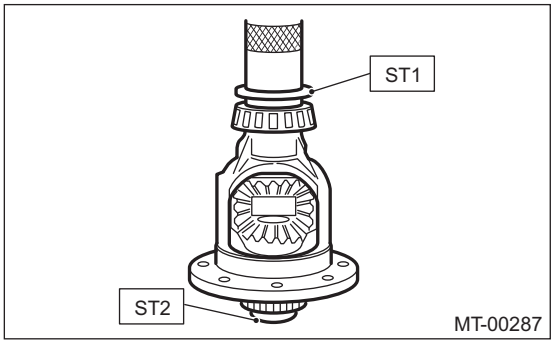
NOTE:
Use a new straight pin. After driving, crimp the area around the hole, and make sure that the straight pin will not come out.
ST 899904100 STRAIGHT PIN REMOVER



4) Install the taper roller bearing.

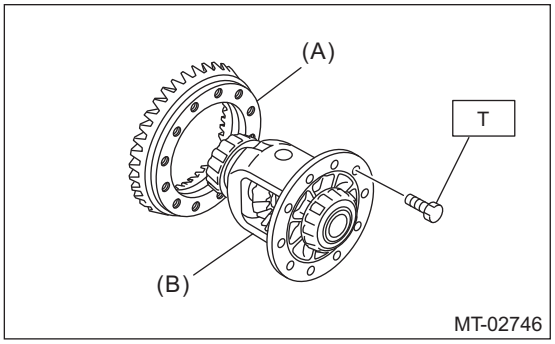
CAUTION:
Do not apply a load in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.
ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 SEAT



5) Install the hypoid driven gear using twelve bolts.

Tightening torque:
T: 62 N·m (6.3 kgf-m, 45.7 ft-lb)



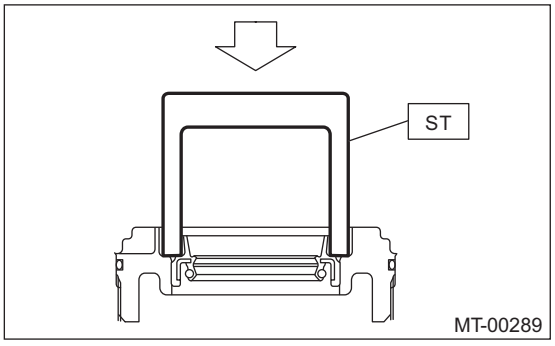
(A) Hypoid driven gear
(B) Differential case

2. DIFFERENTIAL SIDE RETAINER

1) Using the ST, install the oil seal by lightly tapping with a plastic hammer.

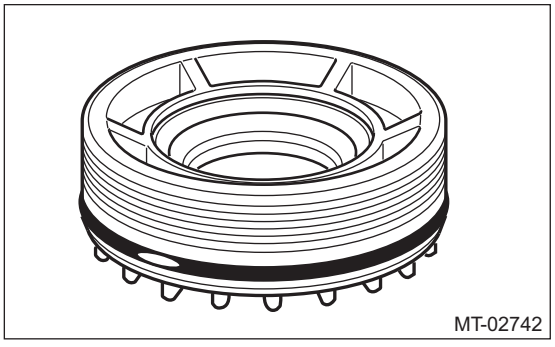
NOTE:
- Use a new oil seal.
- Apply transmission gear oil to the oil seal lips, and install the oil seal while being careful not to deform the lip.
- Check the identification marks (L, R), and attach the oil seals RH and LH.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER



2) Install the O-rings.

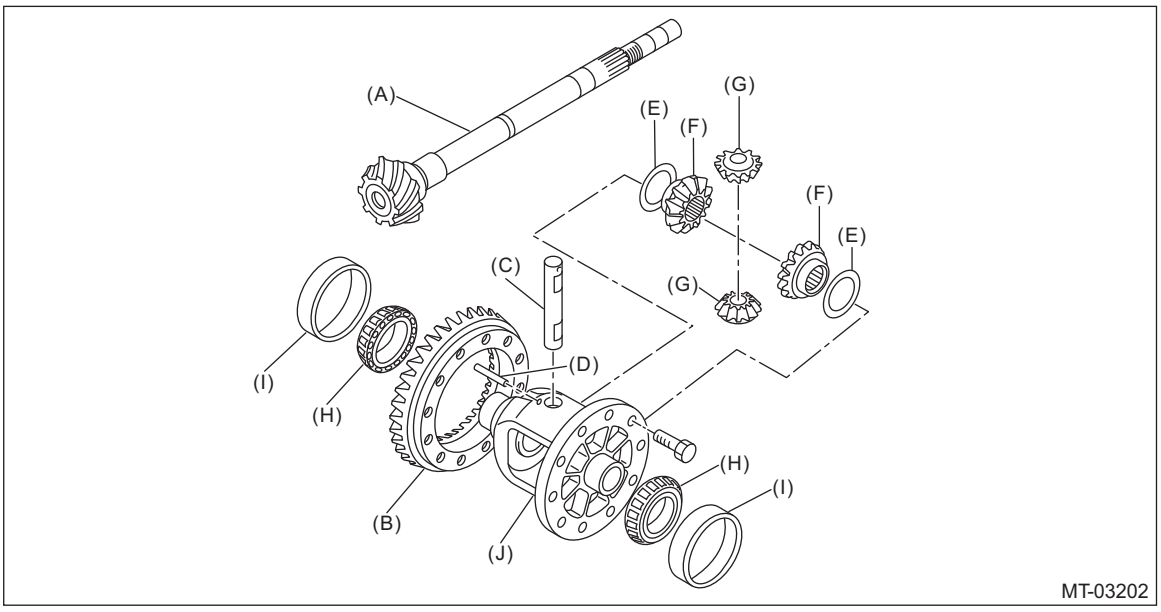
NOTE:
- Use new O-rings.
- Apply transmission gear oil to O-ring.
- Do not stretch or damage the O-ring.
- Install the O-ring after hypoid driven gear backlash adjustment and completion of tooth contact inspection.



E: INSPECTION

Repair or replace the differential gear in the following cases:

• When the hypoid driven gear and drive pinion shaft tooth surfaces are damaged, excessively worn, or seized.
• When the roller bearing on the drive pinion shaft has a worn or damaged roller path.
• When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, adjusting washer, pinion shaft or straight pin.
• When the differential case sliding surfaces are worn or damaged.



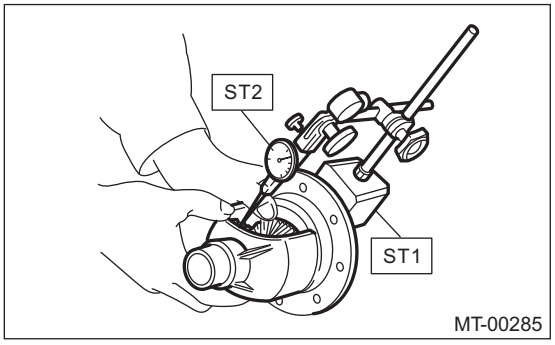
(A) Drive pinion shaft
(B) Hypoid driven gear
(C) Pinion shaft
(D) Straight pin
(E) Adjusting washer
(F) Differential bevel gear
(G) Differential bevel pinion
(H) Taper roller bearing inner race
(I) Taper roller bearing outer race
(J) Differential case

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

Measure the backlash between the differential bevel gear and differential bevel pinion. Adjust the backlash if not within specified limit. <Ref. to 6MT(TY75)-133, ADJUSTMENT, Front Differential Assembly.>

Standard backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

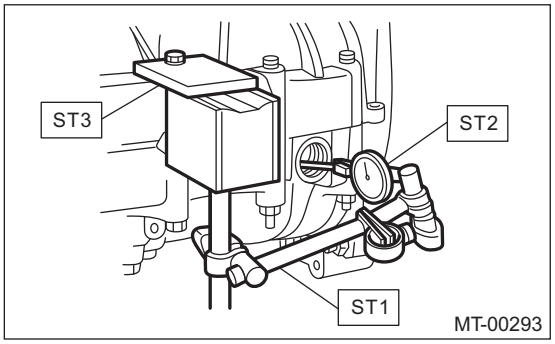


2. HYPOID DRIVEN GEAR BACKLASH

1) Set the ST1, ST2 and ST3. Insert the dial gauge probe through drain plug hole so that the probe comes in contact with the tooth surface on the right corner, and check the backlash.
ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
ST3 498255400 PLATE
2) Install SUBARU genuine axle shafts to both sides, rotate in the inversion direction so that the gauge contacts the tooth surface, and read the dial gauge.

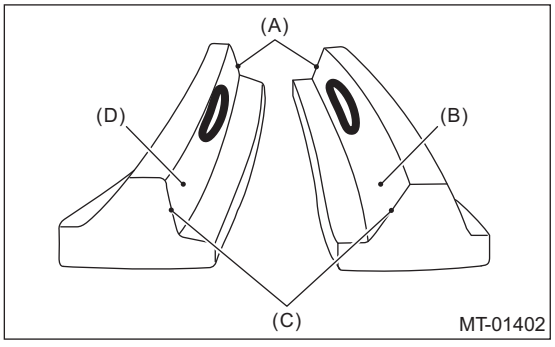
NOTE:
If the backlash is outside the specified range, adjust it by turning the differential side retainers on the left and right side.

Backlash
0.13 — 0.18 mm (0.0051 — 0.0071 in)
Part No. 38415AA100 Axle shaft



3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Check tooth contact of hypoid driven gear as follows: Apply a thin uniform coat of red lead on both teeth surfaces on 3 or 4 teeth of the hypoid driven gear. Move the hypoid driven gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on the hypoid driven gear, and judge whether face contact is correct. When the contact pattern is not correct, adjust. <Ref. to 6MT(TY75)-133, ADJUSTMENT, Front Differential Assembly.>
- Tooth contact is correct.



(A) Toe
(B) Coast side
(C) Heel
(D) Drive side

F: ADJUSTMENT

1. DIFFERENTIAL BEVEL PINION GEAR BACKLASH

1) Disassemble the front differential assembly. <Ref. to 6MT(TY75)-127, DISASSEMBLY, Front Differential Assembly.>

2) Select the adjusting washer from the table and install.

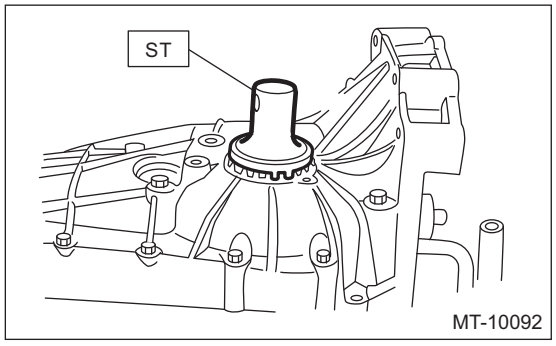
Adjusting washer	
Part No.	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

3) Adjust until the standard value is obtained.

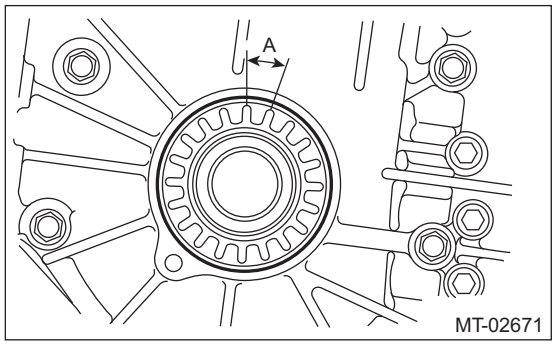
Backlash:
Standard
0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID DRIVEN GEAR BACKLASH

Adjust the backlash by turning the differential side retainers on the left and right side.
ST 18658AA021 WRENCH COMPL RETAINER



NOTE:
Each time the differential side retainer rotates by one notch (A), the backlash changes by 0.05 mm (0.0020 in).

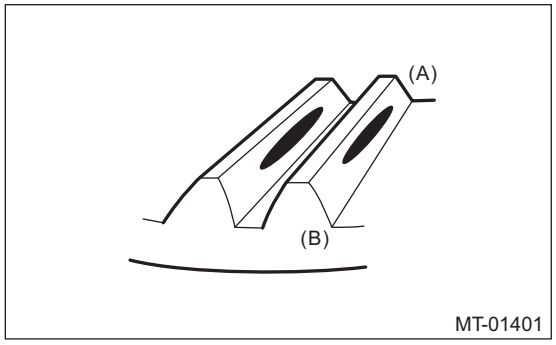


3. TOOTH CONTACT OF HYPOID DRIVEN GEAR

1) Adjust until correct teeth contact is obtained.
2) Check tooth contact, and perform the adjustment as follows.

- Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

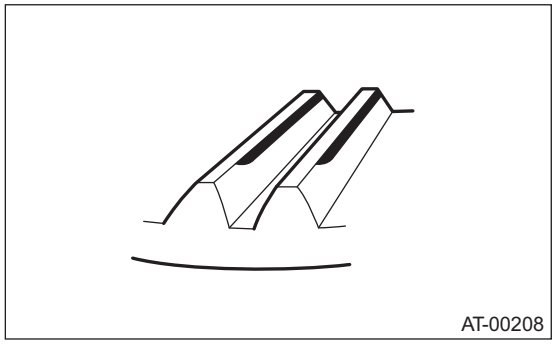


(A) Toe side
(B) Heel side

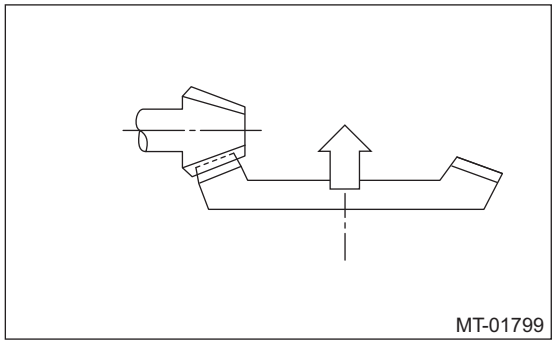
- Face contact

Check item: Backlash is too large.

Contact pattern



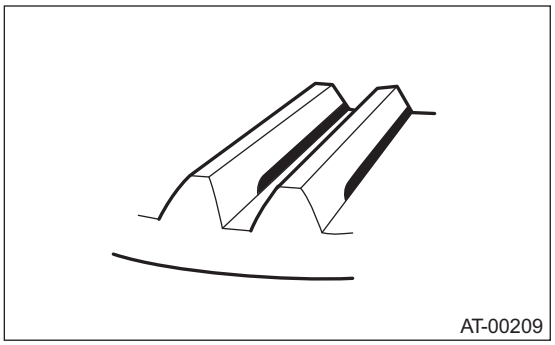
Corrective action: Tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft.



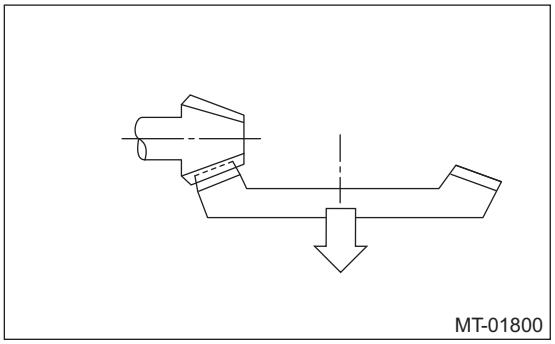
- Flank contact

Check item: Backlash is too small.

Contact pattern



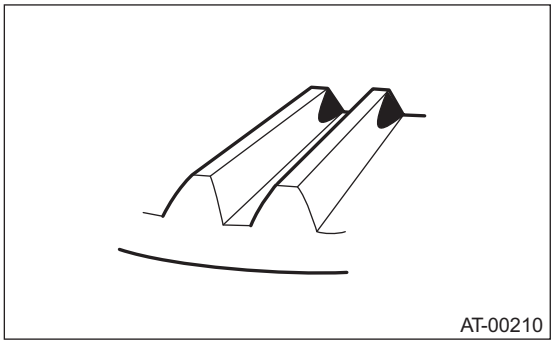
Corrective action: Loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



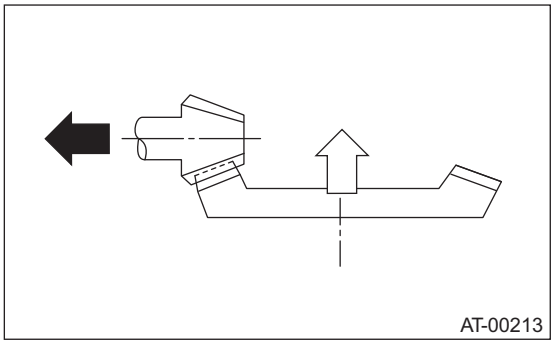
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



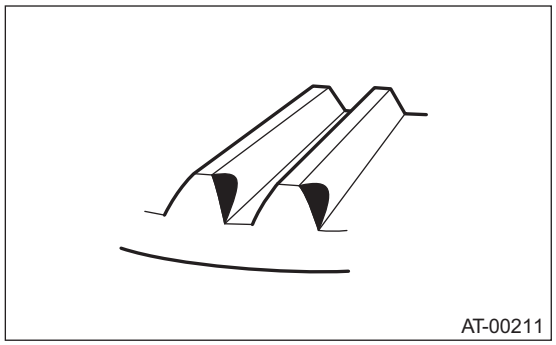
Corrective action: Increase the thickness of drive pinion shim and tighten the differential side retainer to move the hypoid driven gear closer to the drive pinion shaft according to the procedure for bringing drive pinion shaft away from hypoid driven gear.



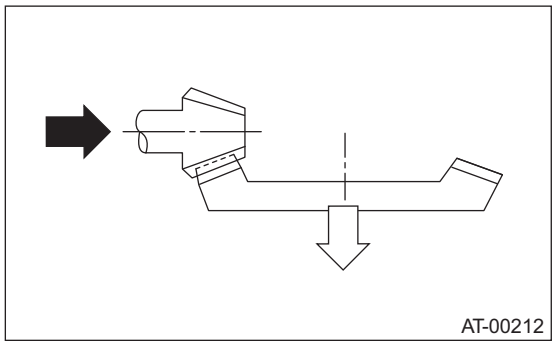
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern



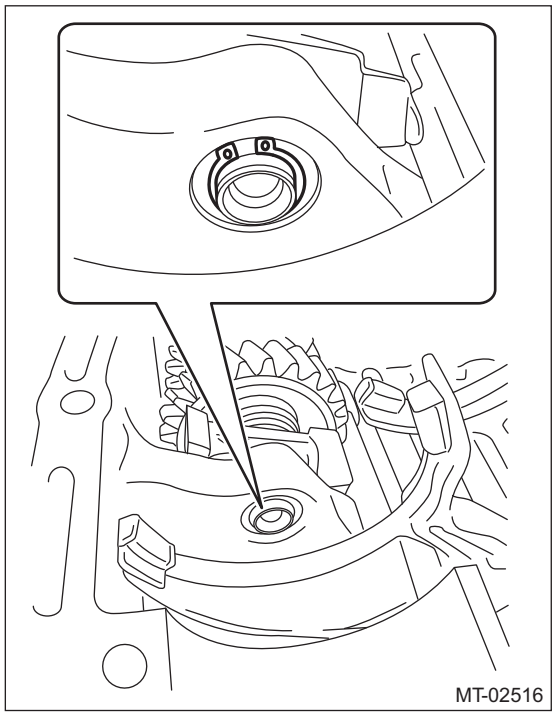
Corrective action: Reduce thickness of the drive pinion shim according to the procedures for moving the drive pinion shaft closer to hypoid driven gear. Also loosen the differential side retainer to move the hypoid driven gear away from the drive pinion shaft.



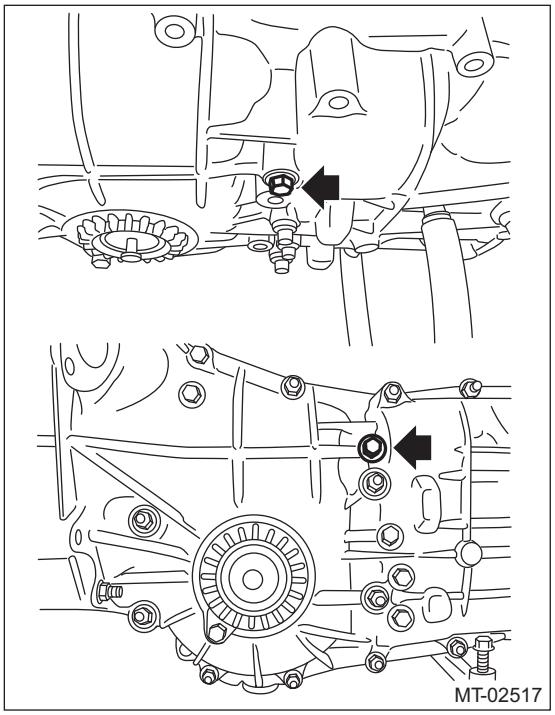
19.Reverse Idler Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Main Shaft Assembly.>
7) Remove the front differential assembly. <Ref. to 6MT(TY75)-126, REMOVAL, Front Differential Assembly.>
8) Shift into 4th.
9) Remove the snap ring.

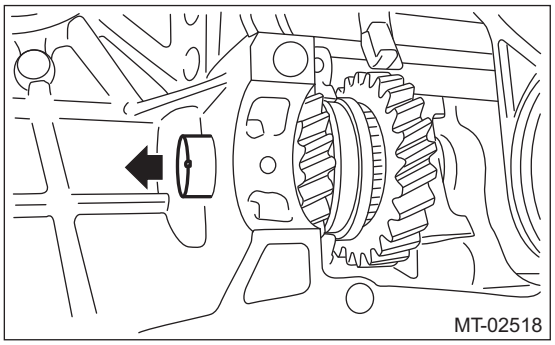


10) Remove the reverse idler gear shaft securing bolt.

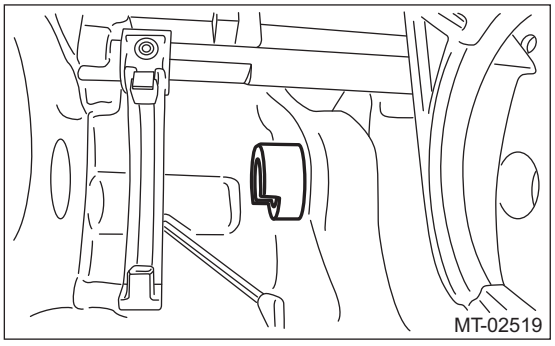


11) Remove the reverse idler gear shaft by pushing it out.

NOTE:
Support the reverse idler gear assembly with hands to avoid collapsing.

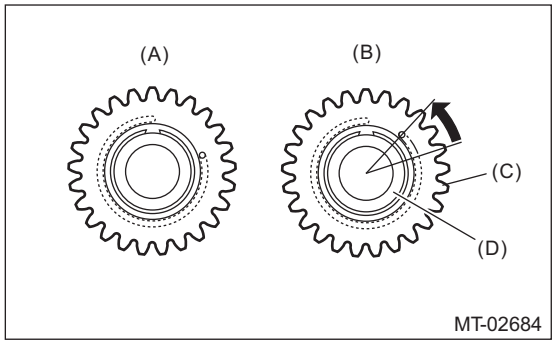


12) Remove the reverse idler gear.
13) Remove the reverse idler gear bushing.



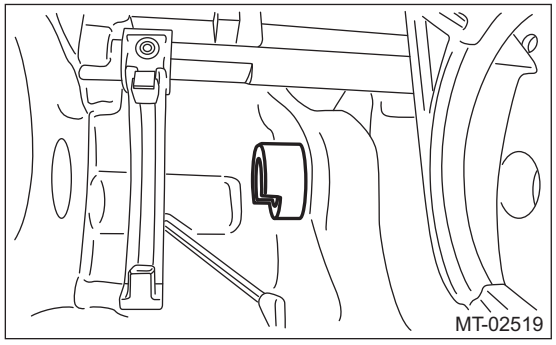
B: INSTALLATION

NOTE:
Rotate the reverse idler sub gear by two teeth from free status in the direction of the arrow to make it engage with the reverse gear of the main shaft and install the main shaft assembly.



(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

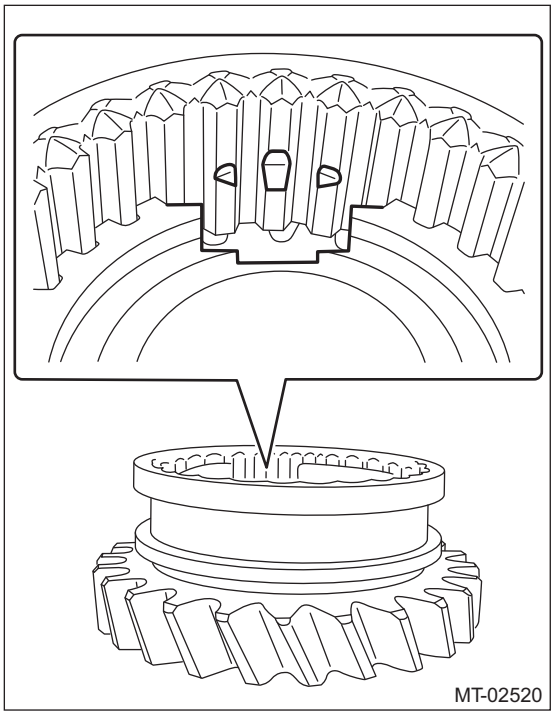
1) Install the reverse idler gear bushing with the cutout portion of the reverse idler gear bushing facing the front of the transmission.



2) Assembling reverse idler gear assembly
(1) Install the reverse coupling sleeve to the reverse idler gear No. 2.

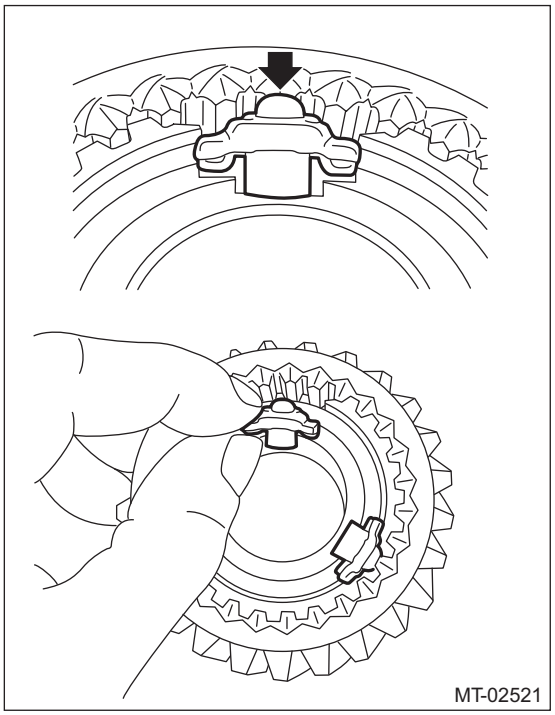
NOTE:
• Install the reverse coupling sleeve in the correct direction.

• Make sure that the oval-shaped cutout portion inside the reverse coupling sleeve matches the center of the reverse idler gear No. 2 groove.

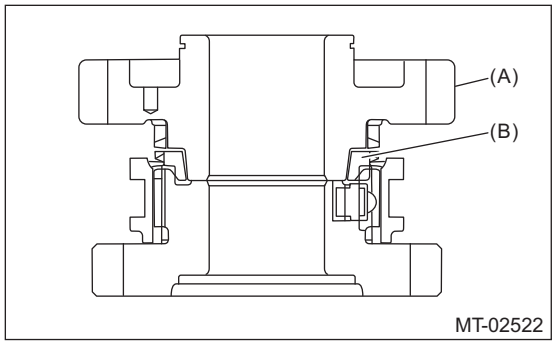


(2) Install the reverse shifting insert.

NOTE:
Press in the ball part to install.

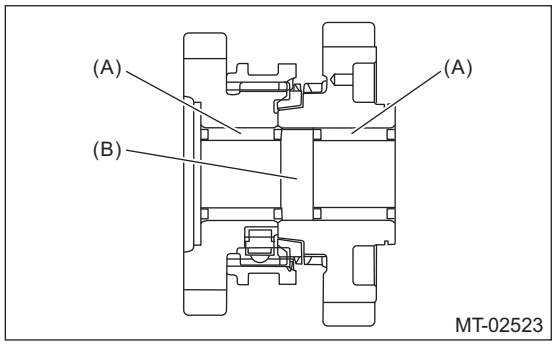


(3) Install the reverse baulk ring and reverse idler gear.



(A) Reverse idler gear
(B) Reverse baulk ring

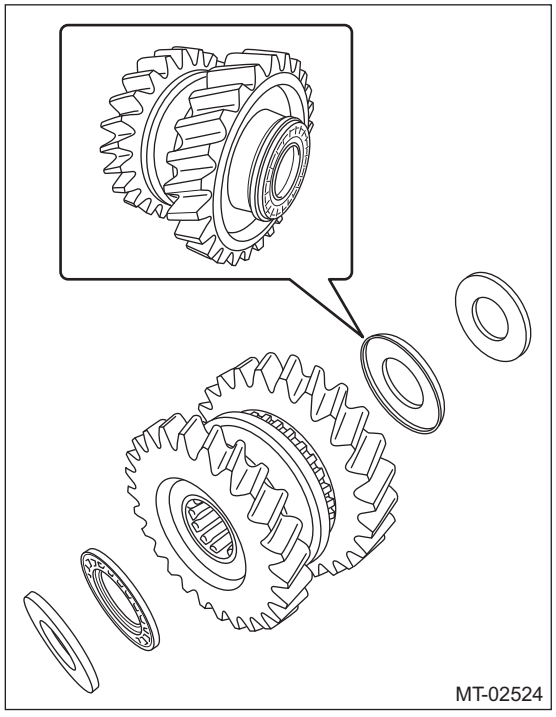
(4) Install the needle bearing and reverse idler gear collar.



(A) Needle bearing
(B) Reverse idler gear collar

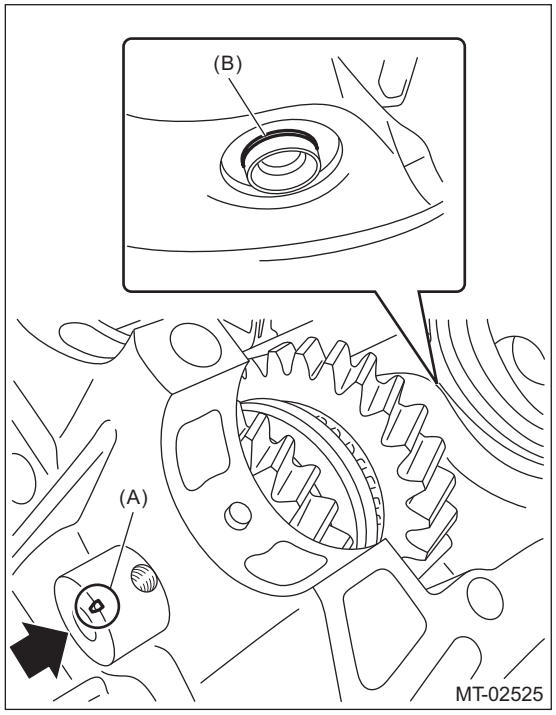
(5) Install the thrust bearing and reverse idler gear washer.

NOTE:
Install the thrust bearing in the correct direction.



3) Install the assembled reverse idler gear assembly to the transmission case and hold it with hands.
4) Install the reverse idler gear shaft.

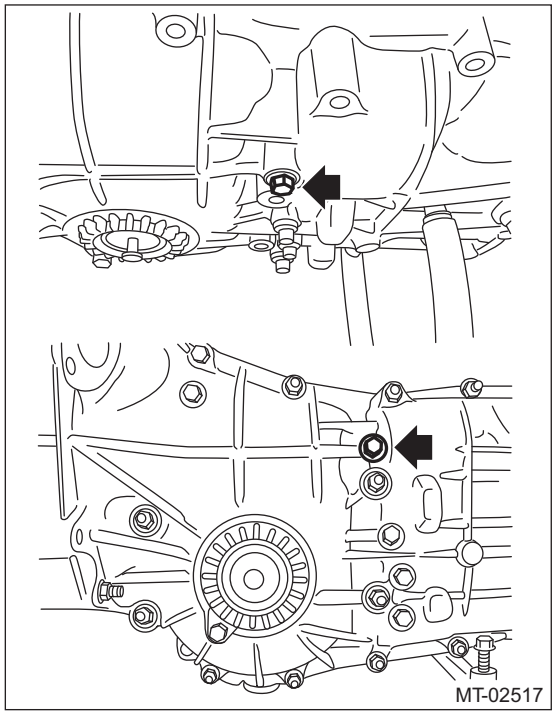
NOTE:
- Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
- Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.



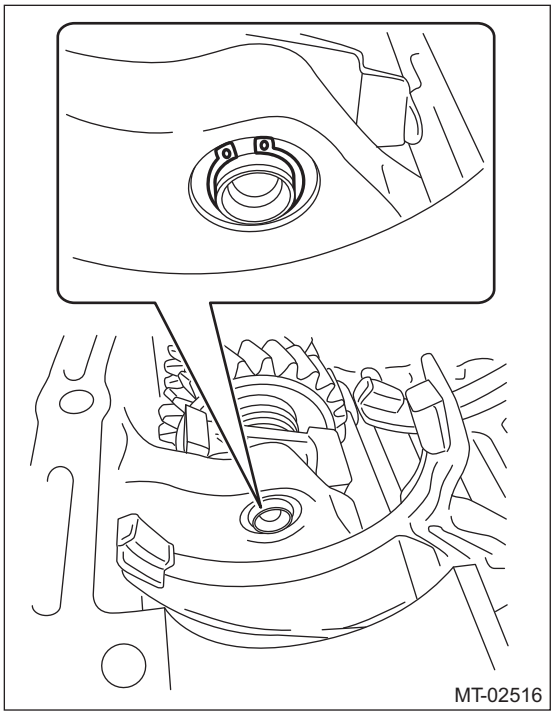
(A) Cutout portion of the reverse idler gear shaft
(B) Snap ring installation groove

5) Install the reverse idler gear shaft securing bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

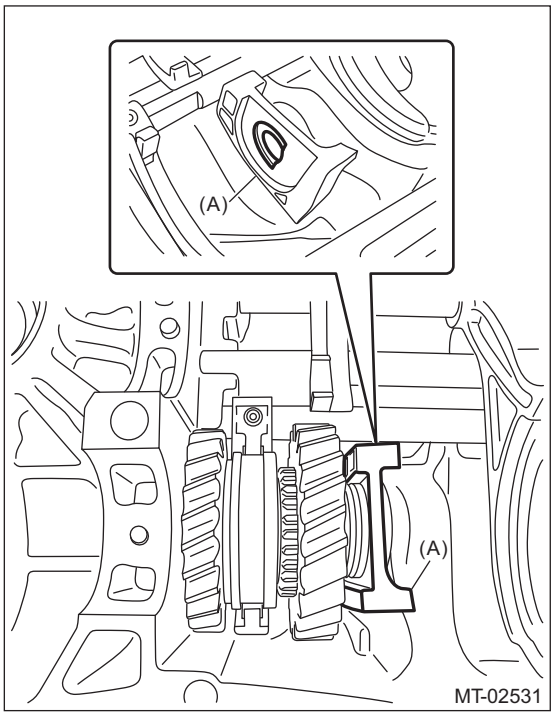


6) Install the snap ring.



7) Select the reverse idler gear bushing. <Ref. to 6MT(TY75)-149, ADJUSTMENT, Reverse Idler Gear.>
8) Remove the reverse idler gear assembly and replace with the selected bushing. <Ref. to 6MT(TY75)-138, REMOVAL, Reverse Idler Gear.>
9) Install the reverse idler gear assembly, oil case guide and reverse idler gear shaft.

NOTE:
- Install with the cutout portion of the reverse idler gear shaft facing the RH side of the transmission case.
- Make sure that the groove of the reverse idler gear shaft comes out of the reverse idler gear bushing.
- Insert the cutout portion of the reverse idler gear bushing into the oil case guide.

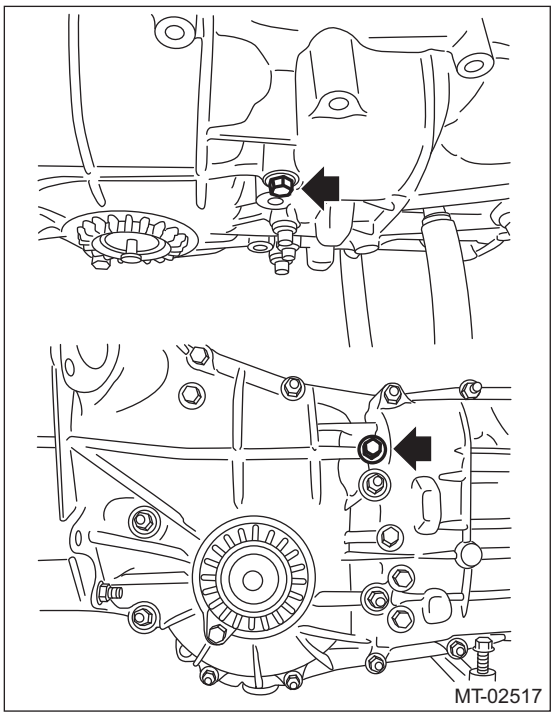


(A) Oil case guide

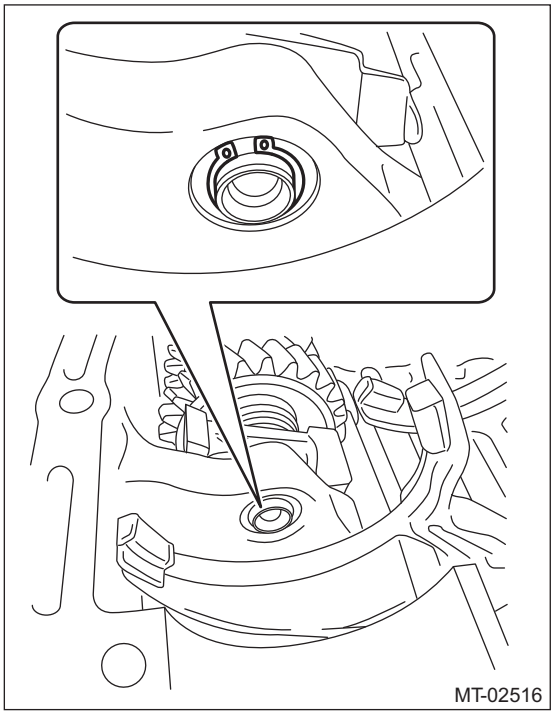
10) Install the reverse idler gear shaft securing bolt.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



11) Install the snap ring.



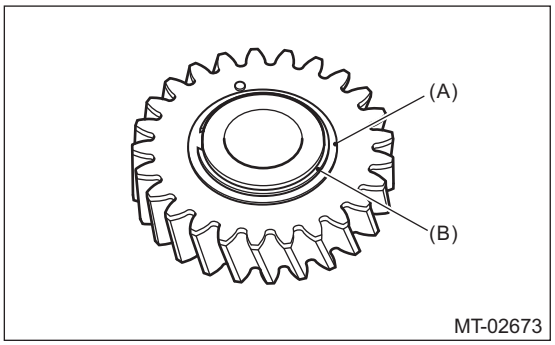
12) Check the reverse shifter fork. <Ref. to 6MT(TY75)-154, INSPECTION, Shifter Fork and Rod.>
13) Install the front differential assembly. <Ref. to 6MT(TY75)-126, INSTALLATION, Front Differential Assembly.>
14) Install the main shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Main Shaft Assembly.>

15) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, INSTALLATION, Drive Pinion Shaft Assembly.>
16) Install the transmission case. <Ref. to 6MT(TY75)-86, INSTALLATION, Transmission Case.>
17) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
18) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
19) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

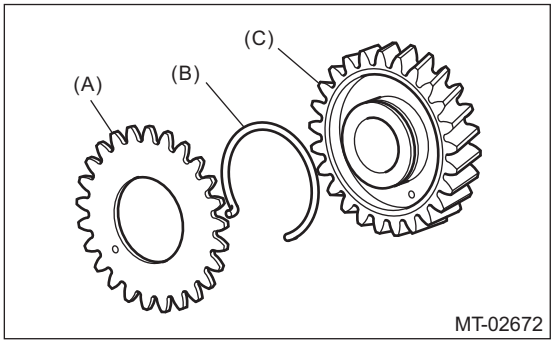
1. REVERSE IDLER GEAR ASSEMBLY

1) Remove the snap ring and friction plate.



(A) Friction plate
(B) Snap ring

2) Remove the reverse idler sub gear and reverse idler spring.



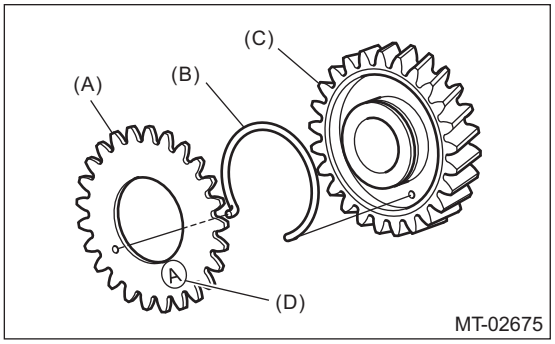
(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear

D: ASSEMBLY

1. REVERSE IDLER GEAR ASSEMBLY

1) Attach the reverse idler sub gear and reverse idler spring.

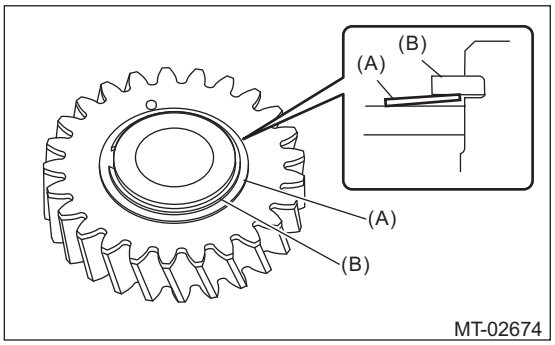
NOTE:
Point the stamp (marking A) towards the outside, and install the reverse idler sub gear.



(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Reverse idler gear
(D) Stamp (marking A)

2) Install the friction plate and snap ring.

NOTE:
Make sure the friction plate is installed in the proper direction.

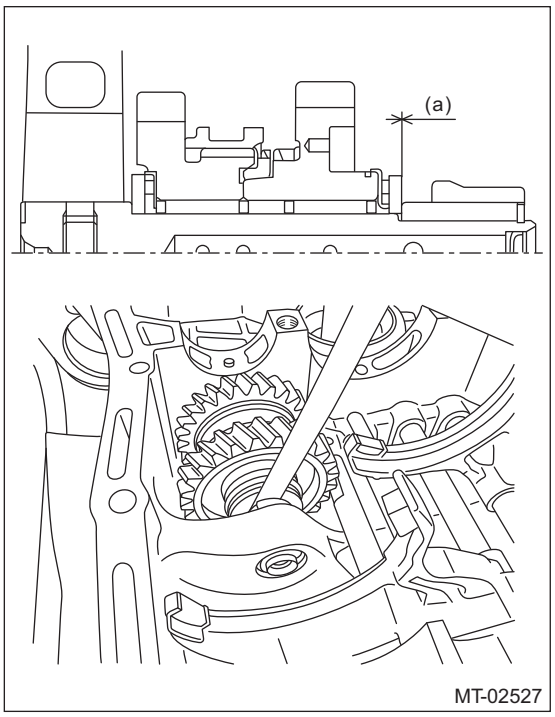


(A) Friction plate
(B) Snap ring

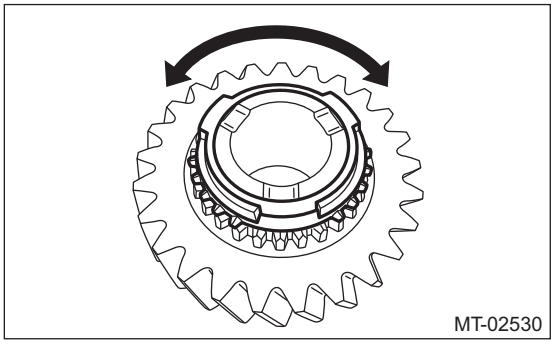
E: INSPECTION

1) Check the clearance between the reverse idler gear bushing and reverse idler gear washer. If the value is out of specification, select the appropriate reverse idler gear bushing and adjust.

Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)

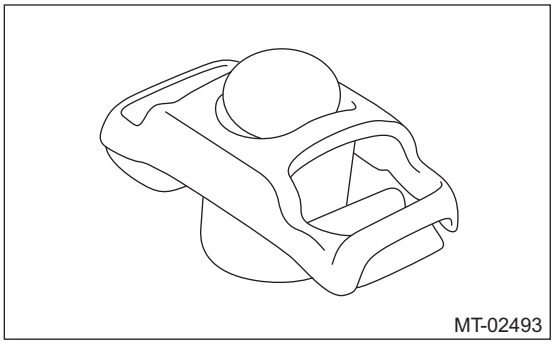


2) Check the reverse idler gear and reverse idler gear shaft for damage. Replace if it is damaged.
3) Apply transmission gear oil to the cone of the reverse idler gear and while press-fitting the reverse baulk ring, check there is no rotation in the circumferential direction.



4) Reverse coupling sleeve
- Check the sliding condition of the reverse coupling sleeve.
- Check the splines on the reverse coupling sleeve and reverse idler gear for wear.

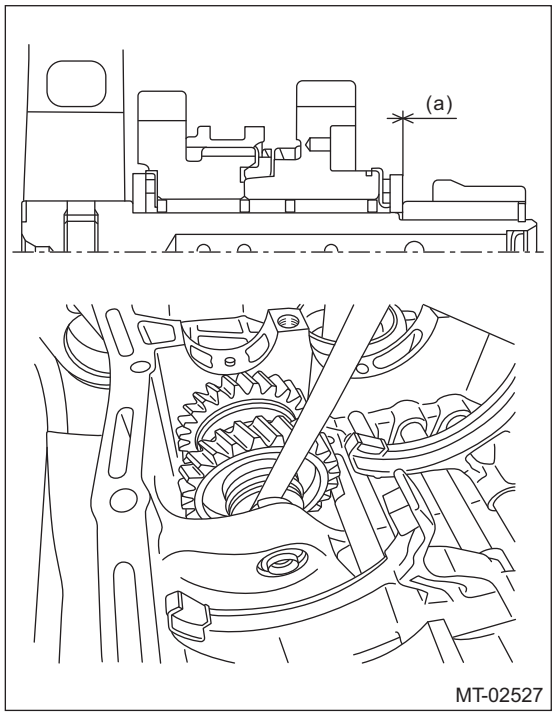
5) Reverse shifting insert
Replace the reverse shifting insert if there is deformation, excessive wear on the ball section or any defectiveness.



F: ADJUSTMENT

1) Select the appropriate reverse idler gear bushing from the table below, and adjust until the clearance between the reverse idler gear and reverse idler gear washer is within specification.

Clearance (a):
0.1 — 0.3 mm (0.004 — 0.012 in)

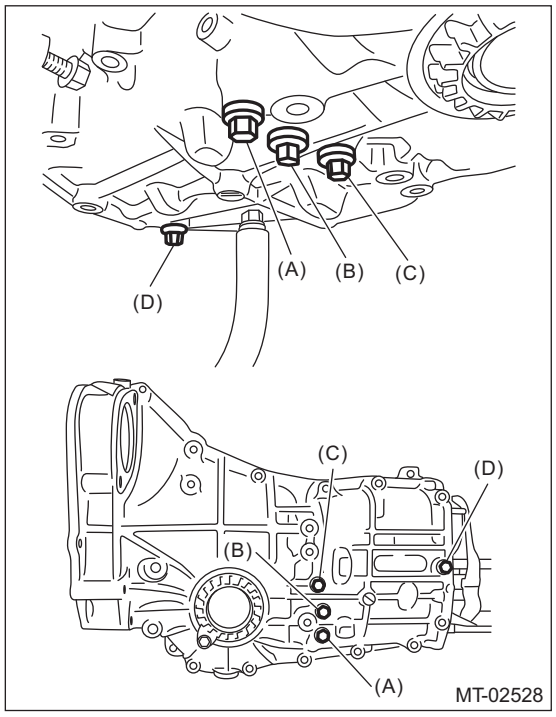


Reverse idler gear bushing		
Part No.	Length mm (in)	Groove for identification
32289AA080	27.75 (1.093)	None
32289AA090	27.90 (1.098)	1
32289AA100	28.05 (1.104)	2
32289AA110	28.20 (1.110)	3
32289AA120	28.35 (1.116)	4

20.Shifter Fork and Rod

A: REMOVAL

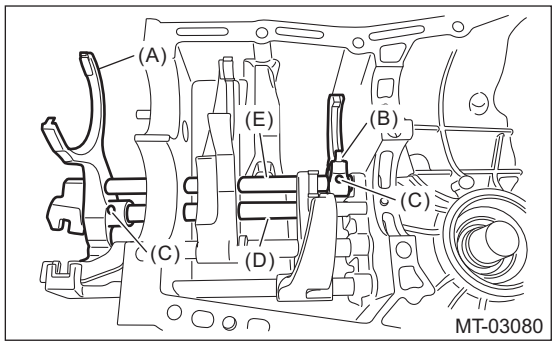
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, REMOVAL, Switches and Harness.>
3) Remove the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-53, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 6MT(TY75)-85, REMOVAL, Transmission Case.>
5) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly. <Ref. to 6MT(TY75)-92, REMOVAL, Main Shaft Assembly.>
7) Remove the front differential assembly. <Ref. to 6MT(TY75)-126, REMOVAL, Front Differential Assembly.>
8) Remove the reverse idler gear assembly. <Ref. to 6MT(TY75)-138, REMOVAL, Reverse Idler Gear.>
9) Remove the check ball plugs, check ball springs and check balls.



(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

10) Use the ST to push out the straight pin of 5th-6th shifter fork and reverse shifter fork, and remove the 5th-6th shifter fork, reverse shifter fork, 5th-6th fork rod and reverse fork rod.

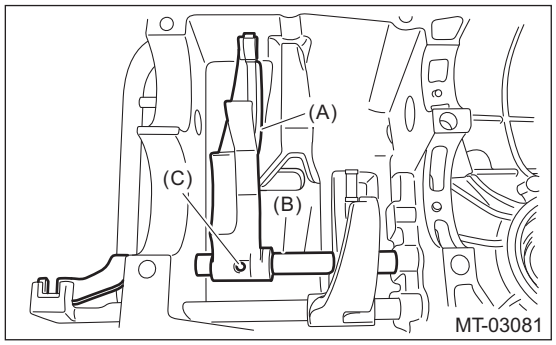
NOTE:
Tap out the reverse shifter fork straight pin, after setting the gear into reverse position. In the neutral position, removing is impossible because the clearance between transmission case is narrow.
ST 398791700 REMOVER



(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

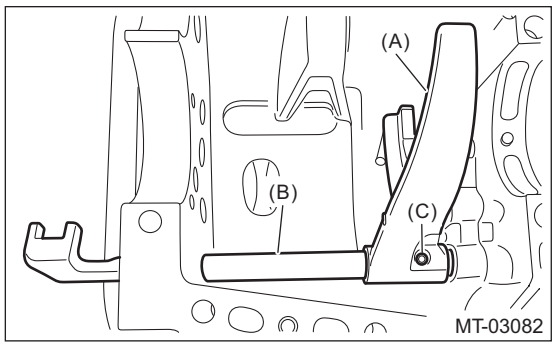
11) Drive out the straight pin by tapping with the ST, and remove the 3rd-4th shifter fork and 3rd-4th fork rod.

NOTE:
When removing the 3rd-4th fork rod, keep other fork rods in neutral.
ST 398791700 REMOVER



(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

12) Drive out the straight pin by tapping with the ST, and remove the 1st-2nd shifter fork and 1st-2nd fork rod.
ST 398791700 REMOVER

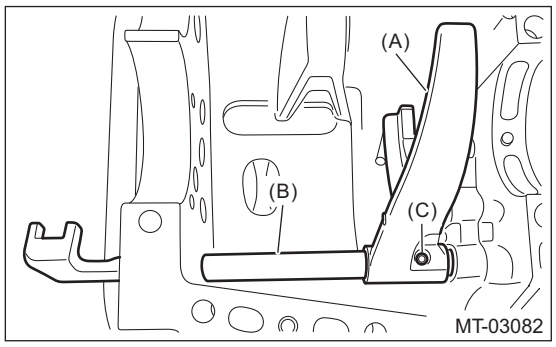


(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

B: INSTALLATION

1) Install the 1st-2nd fork rod to the 1st-2nd shifter fork through the hole on the rear of the transmission case.
2) Align the holes on the 1st-2nd fork rod and 1st-2nd shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
Use a new straight pin.
ST 398791700 REMOVER



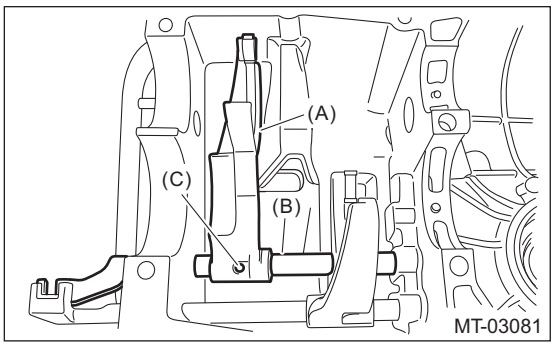
(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

3) Install the 3rd-4th fork rod to the 3rd-4th shifter fork through the hole on the rear of the transmission case.
4) Align the holes on the 3rd-4th fork rod and 3rd-4th shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
- Use a new straight pin.
- Set other fork rods to neutral.

• Check that the positions of interlock plunger is correct.

ST 398791700 REMOVER

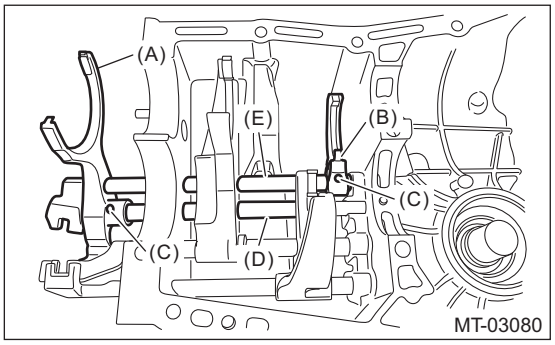


(A) 3rd-4th shifter fork
(B) 3rd-4th fork rod
(C) Straight pin

5) Install the 5th-6th fork rod into 5th-6th shifter fork, then insert through the hole on the rear of transmission case. Align the hole of the 5th-6th shifter fork with the hole on the transmission case, then insert the reverse fork rod to install the reverse shifter fork.
6) Align the holes on the 5th-6th fork rod and 5th-6th shifter fork and the holes on the reverse fork rod and reverse shifter fork, and drive the straight pin into these holes using the ST to fix.

NOTE:
• Use a new straight pin.
• Set other fork rods to neutral.
• Check that the positions of interlock plunger is correct.

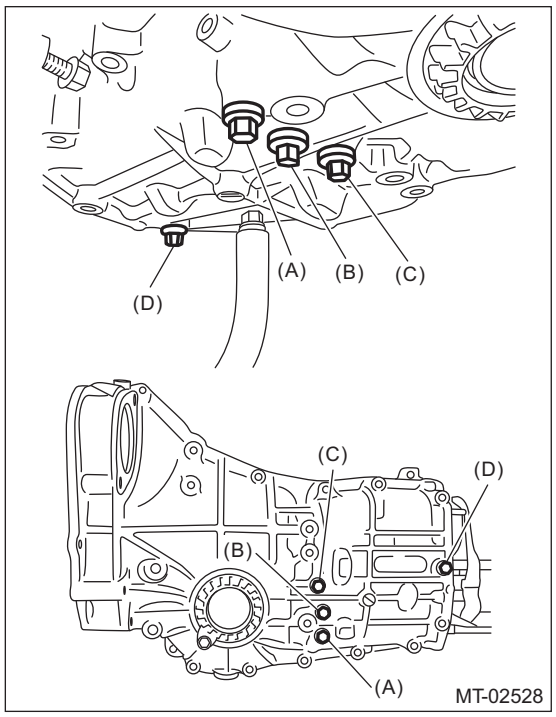
ST 398791700 REMOVER



(A) 5th-6th shifter fork
(B) Reverse shifter fork
(C) Straight pin
(D) 5th-6th fork rod
(E) Reverse fork rod

7) Install the check ball plugs, check ball springs and check balls.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



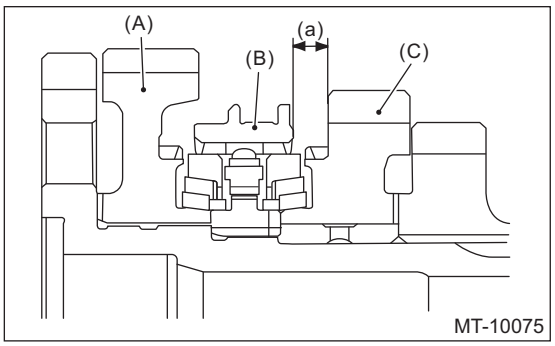
(A) 1st-2nd
(B) 3rd-4th
(C) 5th-6th
(D) Rev.

8) Install the reverse idler gear assembly. <Ref. to 6MT(TY75)-140, INSTALLATION, Reverse Idler Gear.>
9) Install the front differential assembly. <Ref. to 6MT(TY75)-126, INSTALLATION, Front Differential Assembly.>
10) Install the main shaft assembly. <Ref. to 6MT(TY75)-92, INSTALLATION, Main Shaft Assembly.>
11) Install the drive pinion shaft assembly. <Ref. to 6MT(TY75)-107, INSTALLATION, Drive Pinion Shaft Assembly.>
12) Install the transmission case. <Ref. to 6MT(TY75)-86, INSTALLATION, Transmission Case.>
13) Install the transfer case together with the extension case assembly. <Ref. to 6MT(TY75)-55, INSTALLATION, Transfer Case and Extension Case Assembly.>
14) Install the back-up light switch and the neutral position switch. <Ref. to 6MT(TY75)-47, INSTALLATION, Switches and Harness.>
15) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check the shifter fork and fork rod for damage. Replace if it is damaged.
2) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.
3) Inspect the clearance between 2nd driven gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
7.4 — 7.8 mm (0.291 — 0.307 in)

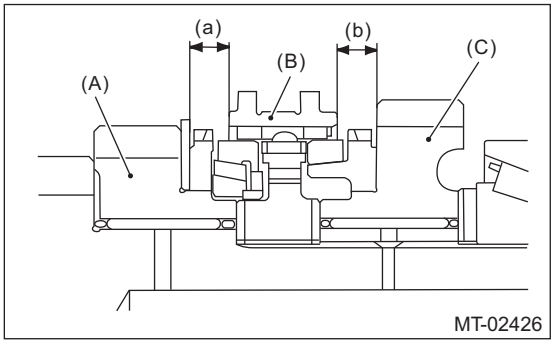


(A) 1st driven gear
(B) Coupling sleeve
(C) 2nd driven gear

1st-2nd shifter fork		
Part No.	Mark	Contents
32804AA120	1	Approaches 2nd gear by 0.2 mm (0.008 in).
32804AA130	No mark	Standard
32804AA140	2	Approaches 1st gear by 0.2 mm (0.008 in).

4) Inspect the clearance between the 3rd, 4th drive gear and the coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 — 7.8 mm (0.295 — 0.307 in)

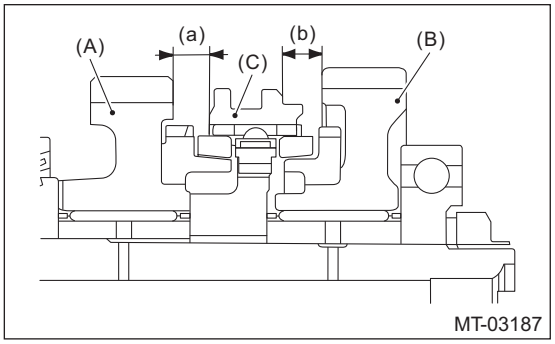


(A) 3rd drive gear
(B) Coupling sleeve
(C) 4th drive gear

3rd-4th shifter fork		
Part No.	Mark	Contents
32810AA061	1	Approaches 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Standard
32810AA101	3	Approaches 3rd gear by 0.2 mm (0.008 in).

5) Inspect the clearance between 5th, 6th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a), (b):
7.5 — 7.8 mm (0.295 — 0.307 in)

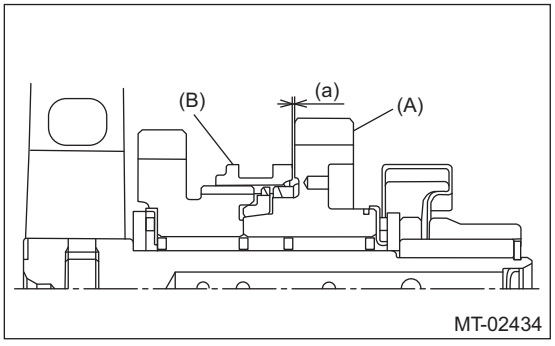


(A) 5th drive gear
(B) 6th drive gear
(C) Coupling sleeve

5th-6th shifter fork		
Part No.	Mark	Contents
32940AA050	1	Approaches 5th gear by 0.2 mm (0.008 in).
32940AA060	No mark	Standard
32940AA070	2	Approaches 6th gear by 0.2 mm (0.008 in).

6) Check the clearance between the reverse idler gear and reverse coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

Clearance (a):
0.50 mm (0.020 in) or less



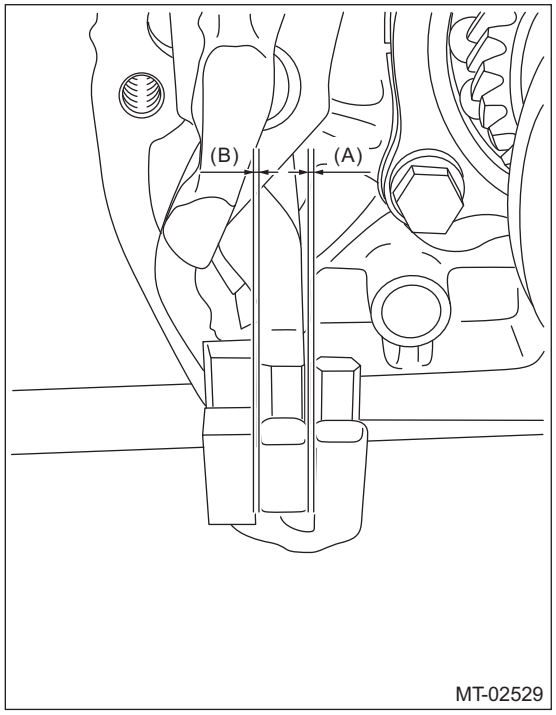
(A) Reverse idler gear
(B) Reverse coupling sleeve

Reverse shifter fork		
Part No.	Mark	Contents
32941AA070	2	Approaches reverse idler gear by 0.3 mm (0.012 in).
32941AA060	No mark	Standard
32941AA050	1	Approaches reverse idler gear No. 2 by 0.3 mm (0.012 in).

7) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the rod or fork as required.

Clearance (A):
1st-2nd — 3rd-4th
0.1 — 0.9 mm (0.004 — 0.035 in)

Clearance (B):
3rd-4th — 5th-6th
0.2 — 1.0 mm (0.008 — 0.039 in)



21.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two types: One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the sleeve	Replace.
	(b) Worn, damaged or burred chamfer of gear spline	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between baulk ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Replace.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn shifter fork or broken check ball spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Synchronizer hub tooth step wear	Replace.
	(g) Worn 1st driven gear and driven shaft	Replace.
	(h) Worn 2nd driven gear and bushing	Replace.
	(i) Worn 3rd drive gear and needle bearing	Replace.
	(j) Worn 4th drive gear and needle bearing	Replace.
	(k) Worn 5th drive gear and needle bearing	Replace.
	(l) Worn 6th drive gear and needle bearing	Replace.
	(m) Worn reverse idler gear and needle bearing	Replace.
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Lubricate with specified oil or replace.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble the differential and replace the broken component parts. At the same time, check other component parts for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load or improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Excessive backlash of a vehicle under severe operating conditions due to worn differential side gear, adjusting washer or differential pinion	Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noises Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment • Bearing noise when driving or coasting: Cracked, broken or damaged bearings • Noise mainly when turning: Noise from differential side gear, differential pinion or differential pinion shaft, etc.	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn adjusting washer and differential pinion shaft	Replace.

1. General Description

A: SPECIFICATION

1. MANUAL TRANSMISSION AND DIFFERENTIAL

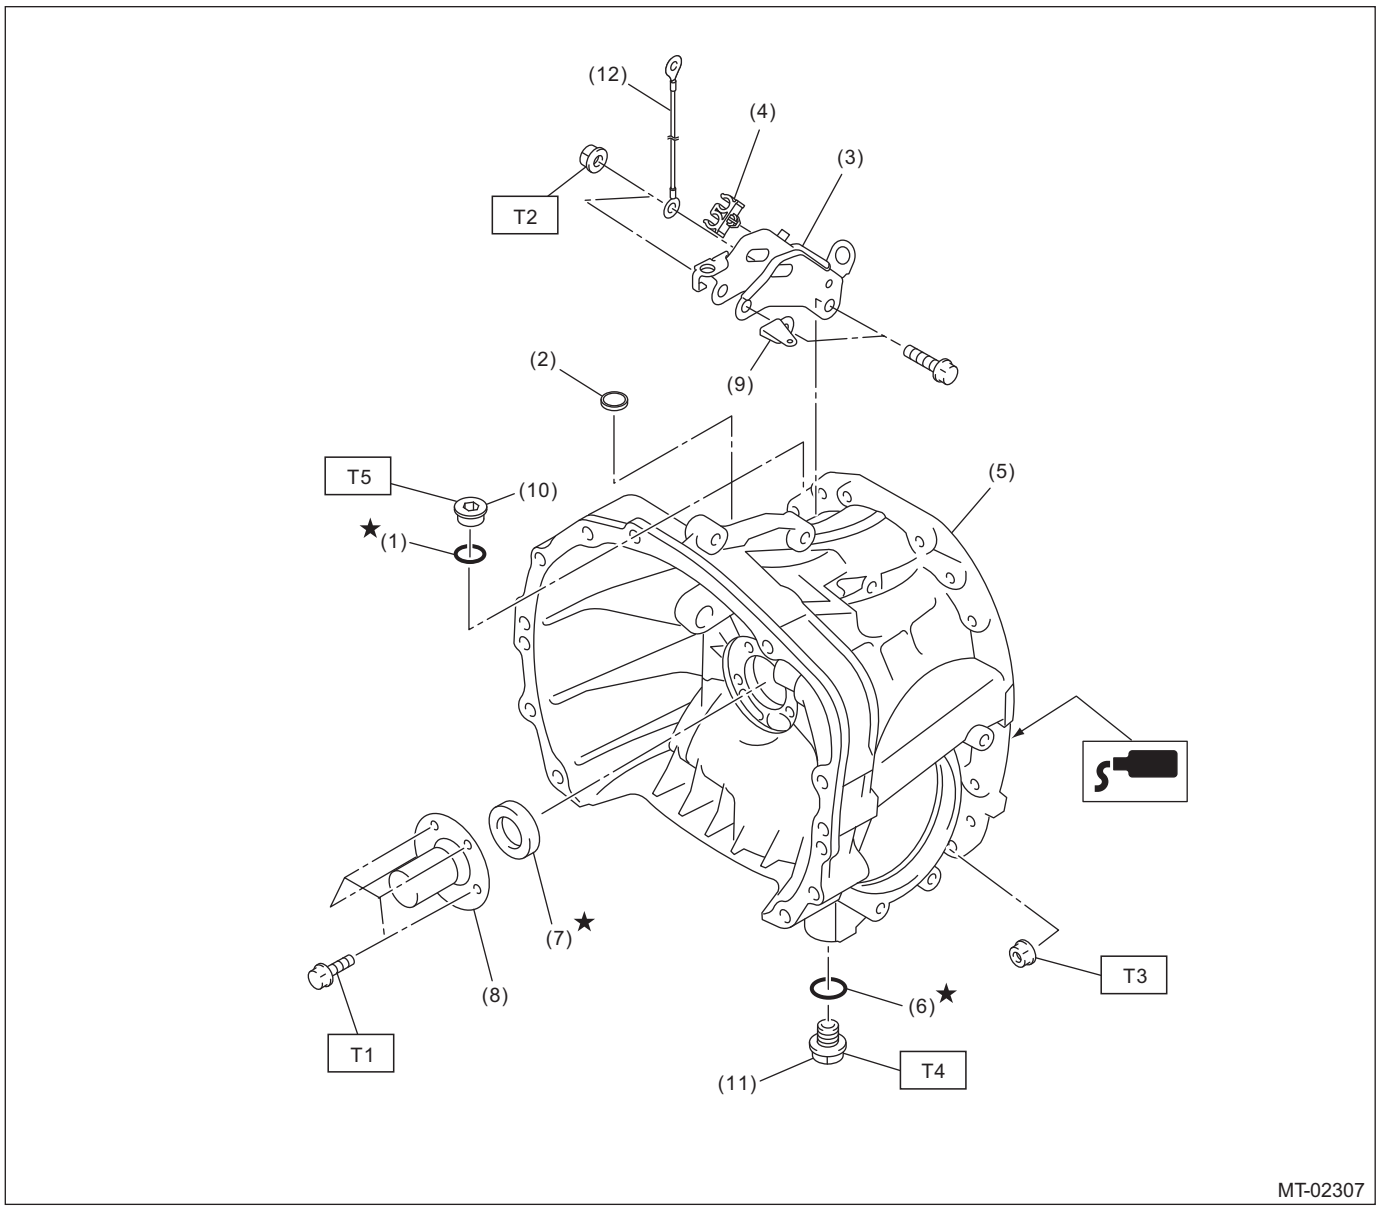
Type			6-forward speeds and 1-reverse (all stage with synchromesh)
Transmission gear ratio		1st	3.636
		2nd	2.235
		3rd	1.590
		4th	1.137
		5th	0.971
		6th	0.756
		Rev.	3.545
Front reduction gear	Final	Type of gear	Hypoid
		Gear ratio	3.900
Rear reduction gear	Transfer	Type of gear	Helical
		Gear ratio	1.103
Front differential	Type and number of gear		Planetary gear (pinion gear: 8, gear: 2)
	LSD type		Helical
Center differential	Type and number of gear		Planetary gear (Internal gear: 1, pinion gear: 6, sun gear: 1, and solenoid compression variable control multiplate clutch)
Transmission gear oil capacity			4.1 L (4.3 US qt, 3.6 Imp qt)

2. TRANSMISSION GEAR OIL

Recommended oil:
GL-5 (75W-90) or equivalent

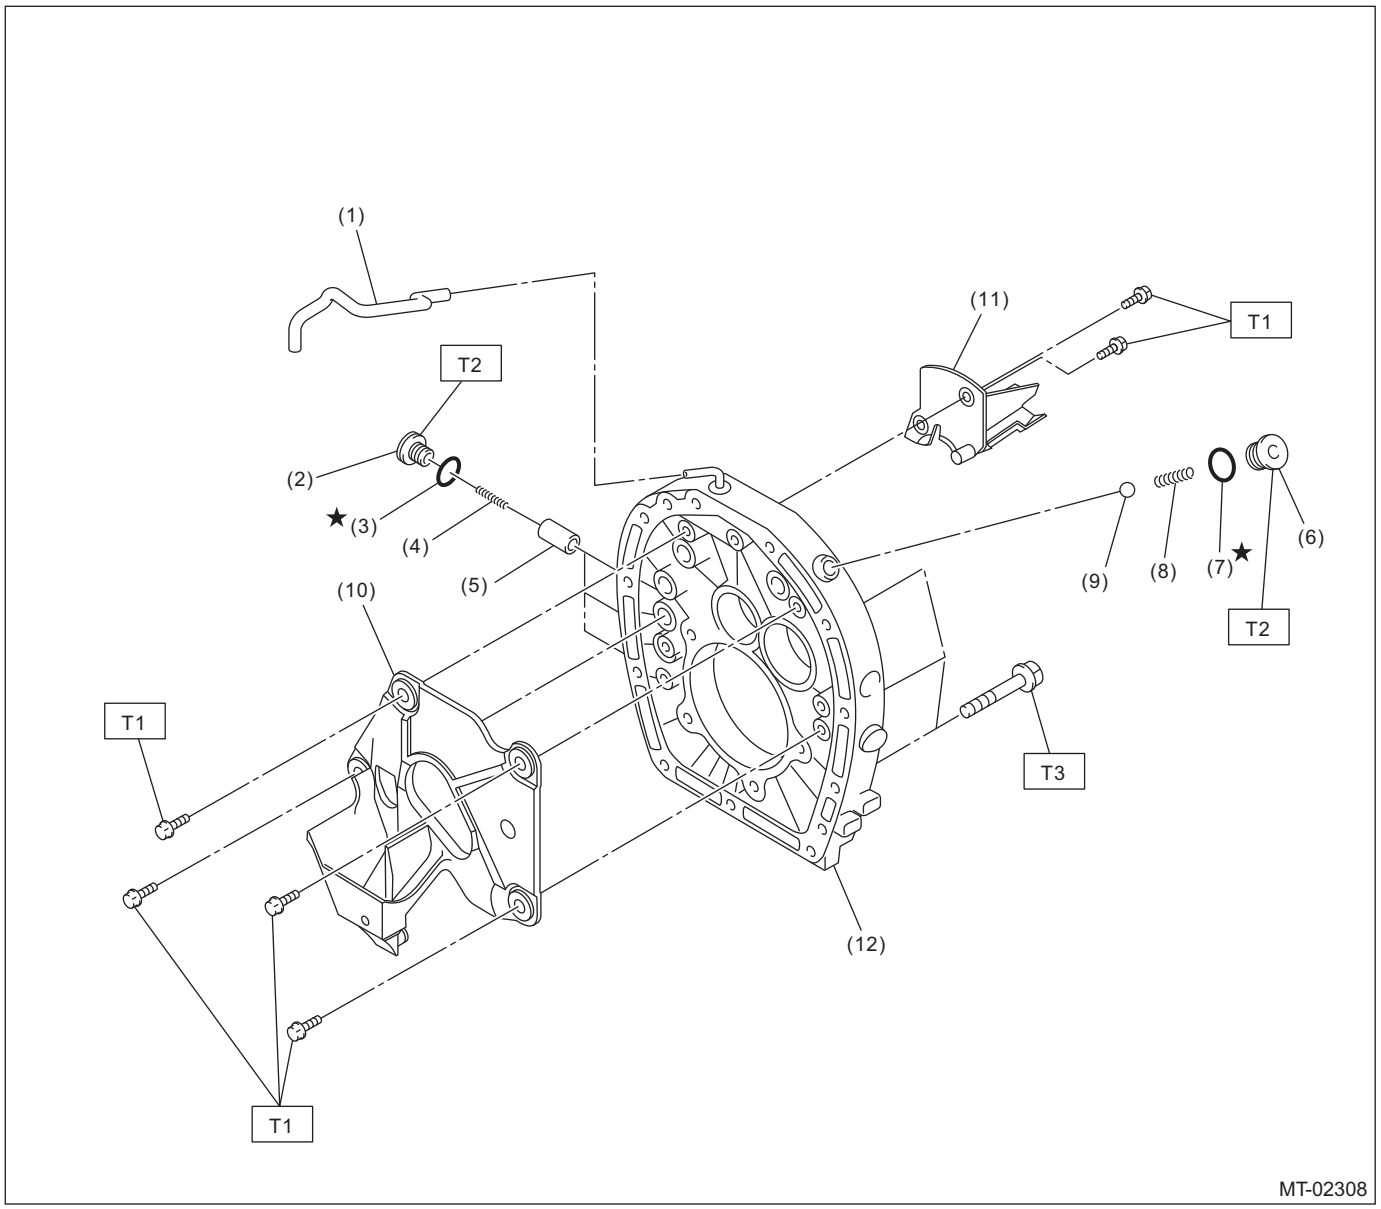
B: COMPONENT

1. CLUTCH HOUSING



(1)	Gasket	(7)	Oil seal	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Plug	(8)	Clutch release bearing guide	***T1: 6.4 (0.7, 4.7)***
(3)	Pitching stopper bracket	(9)	Clutch return spring bracket	***T2: 41 (4.2, 30.2)***
(4)	Clip	(10)	Plug	***T3: 50 (5.1, 36.9)***
(5)	Clutch housing	(11)	Drain plug	***T4: 70 (7.1, 51.6)***
(6)	Gasket	(12)	Transmission radio ground cord	***T5: 46 (4.7, 33.9)***

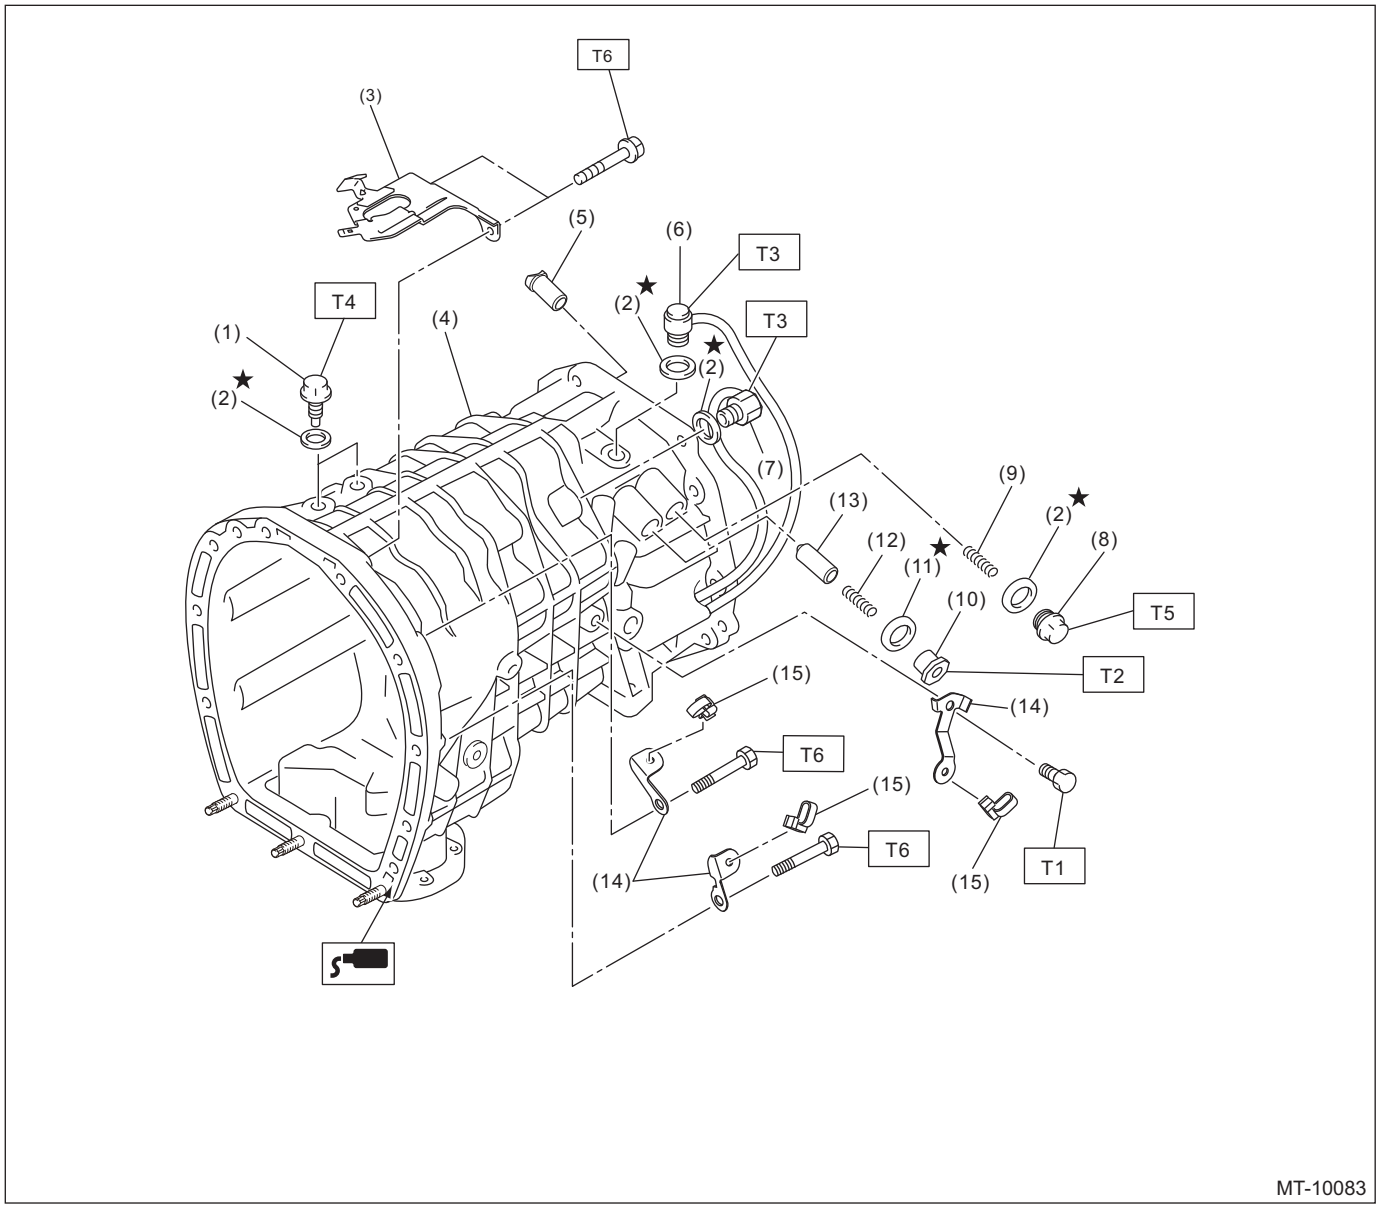
2. ADAPTER PLATE



(1)	Air breather hose	(7)	O-ring
(2)	Check plug	(8)	Checking ball spring
(3)	O-ring	(9)	Check ball
(4)	Checking ball spring	(10)	Oil guide A
(5)	Shift accent plunger	(11)	Oil guide B
(6)	Check plug	(12)	Adapter plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 25 (2.5, 18.4)
T3: 50 (5.1, 36.9)

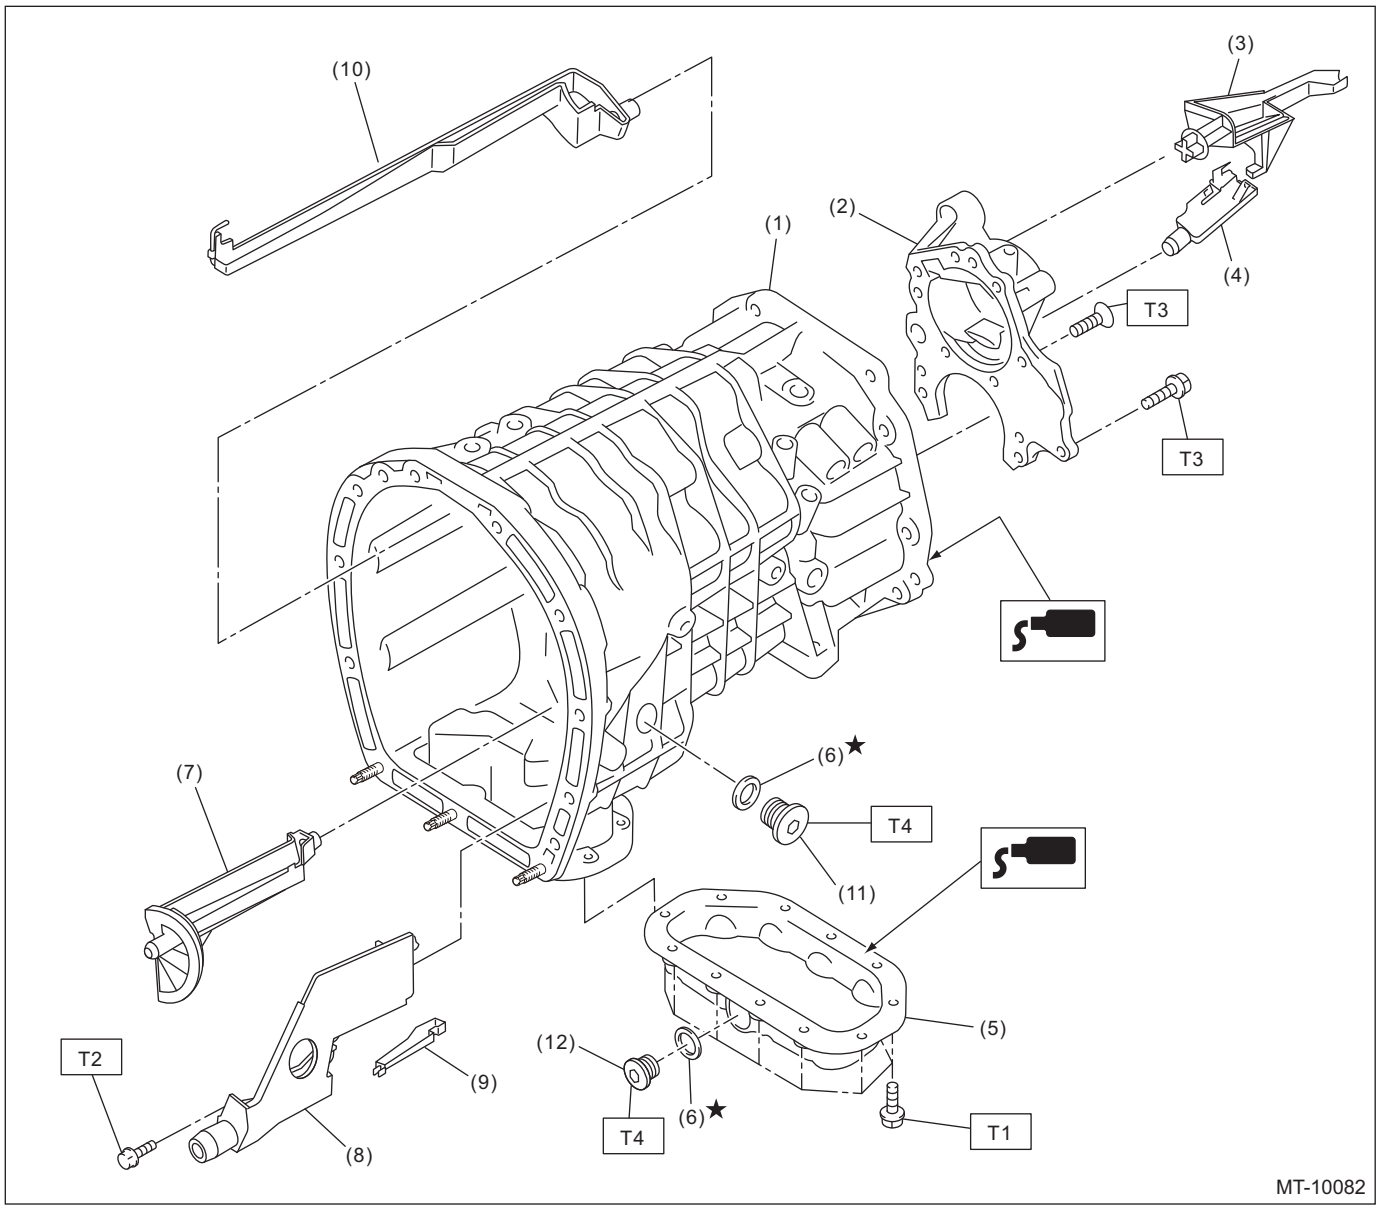
3. TRANSMISSION CASE



(1)	Pilot bolt	(9)	Return spring
(2)	Gasket	(10)	Plug
(3)	Transmission harness stay	(11)	O-ring
(4)	Transmission case	(12)	Checking ball spring
(5)	Selector plunger	(13)	Shift accent plunger
(6)	Neutral position switch	(14)	Harness bracket
(7)	Back-up light switch	(15)	Band clip
(8)	Plug		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: 25 (2.5, 18.4)
T3: 32 (3.3, 23.6)
T4: 34 (3.5, 25.1)
T5: 41 (4.2, 30.2)
T6: 50 (5.1, 36.9)

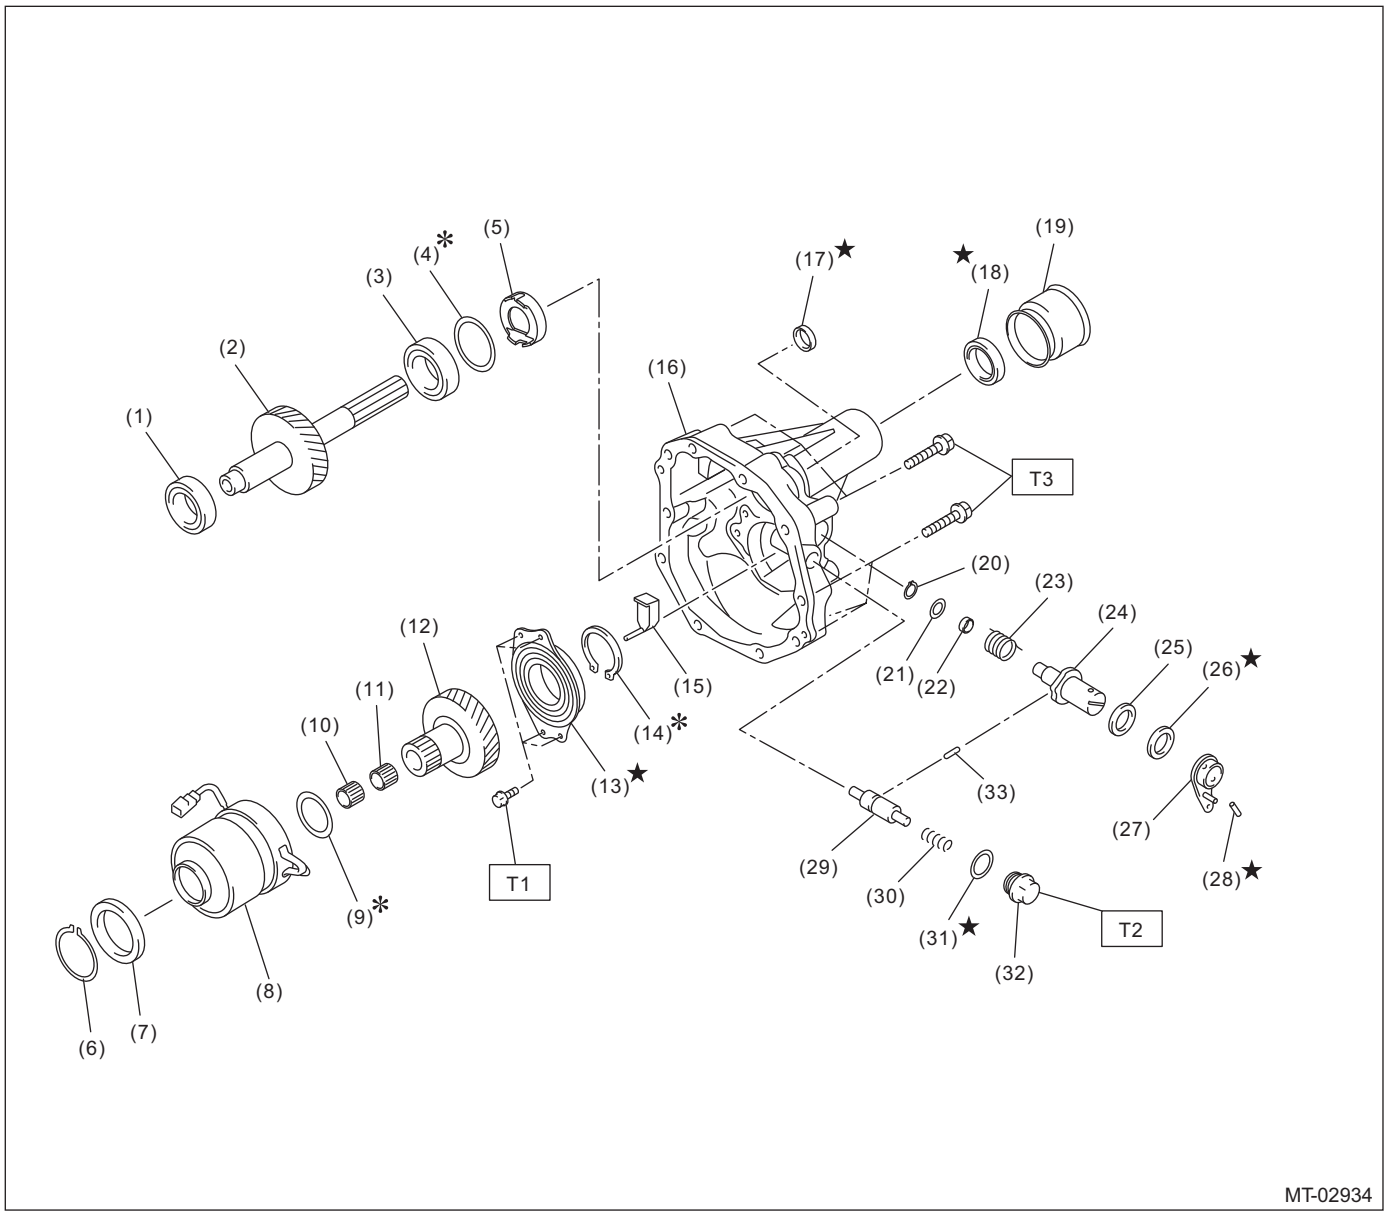
4. OIL PAN & OIL GUIDE



(1)	Transmission case	(7)	Oil guide F
(2)	Transfer bearing holder	(8)	Oil guide D
(3)	Oil guide G	(9)	Oil guide E
(4)	Oil guide H	(10)	Oil guide C
(5)	Oil pan	(11)	Filler plug
(6)	Gasket	(12)	Drain plug

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 18 (1.8, 13.3)
T3: 25 (2.5, 18.4)
T4: 50 (5.1, 36.9)

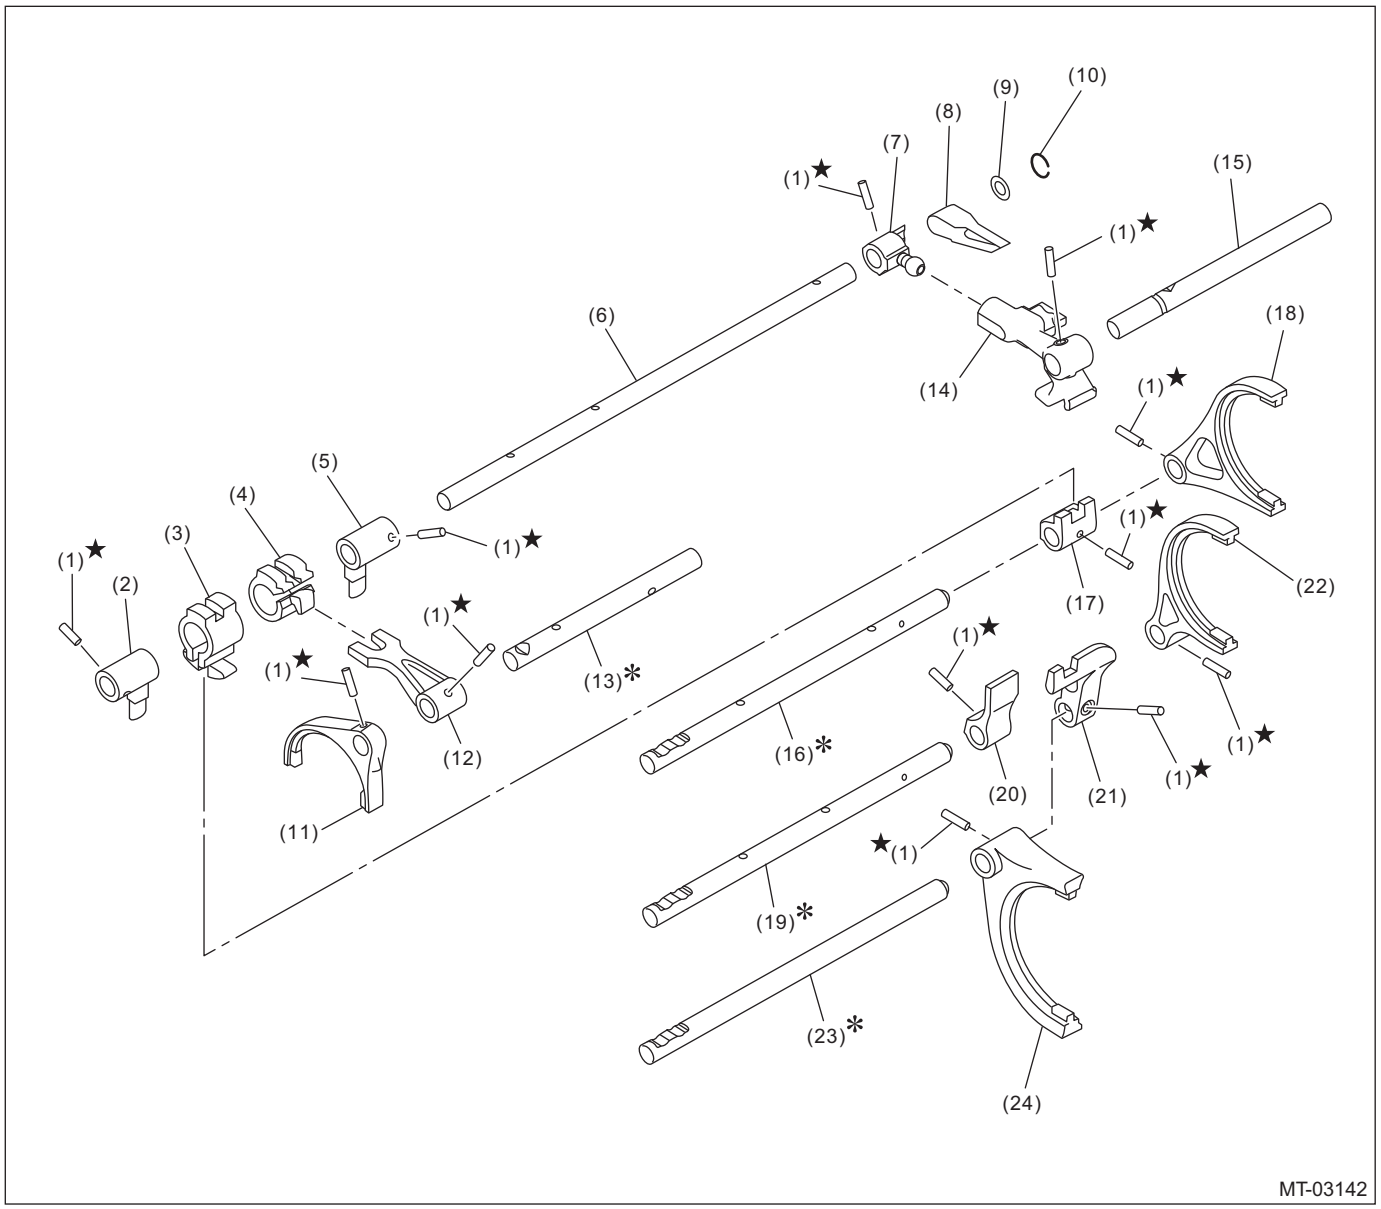
5. EXTENSION CASE AND CENTER DIFFERENTIAL



(1) Taper roller bearing (transmission case side)
(2) Transfer driven gear
(3) Taper roller bearing (extension case side)
(4) Adjusting washer
(5) Oil plate
(6) Snap ring
(7) Collar
(8) Center differential
(9) Adjusting washer
(10) Needle bearing
(11) Needle bearing
(12) Transfer drive gear
(13) Ball bearing (with flange)
(14) Snap ring
(15) Oil guide
(16) Extension case
(17) Oil seal
(18) Oil seal
(19) Dust cover
(20) Snap ring
(21) Washer
(22) Bushing
(23) Return spring
(24) Reverse check shaft
(25) Ball bearing
(26) Oil seal
(27) Reverse check lever
(28) Straight pin
(29) Reverse check plunger
(30) Reverse check spring
(31) Gasket
(32) Plug
(33) Reverse lock plunger

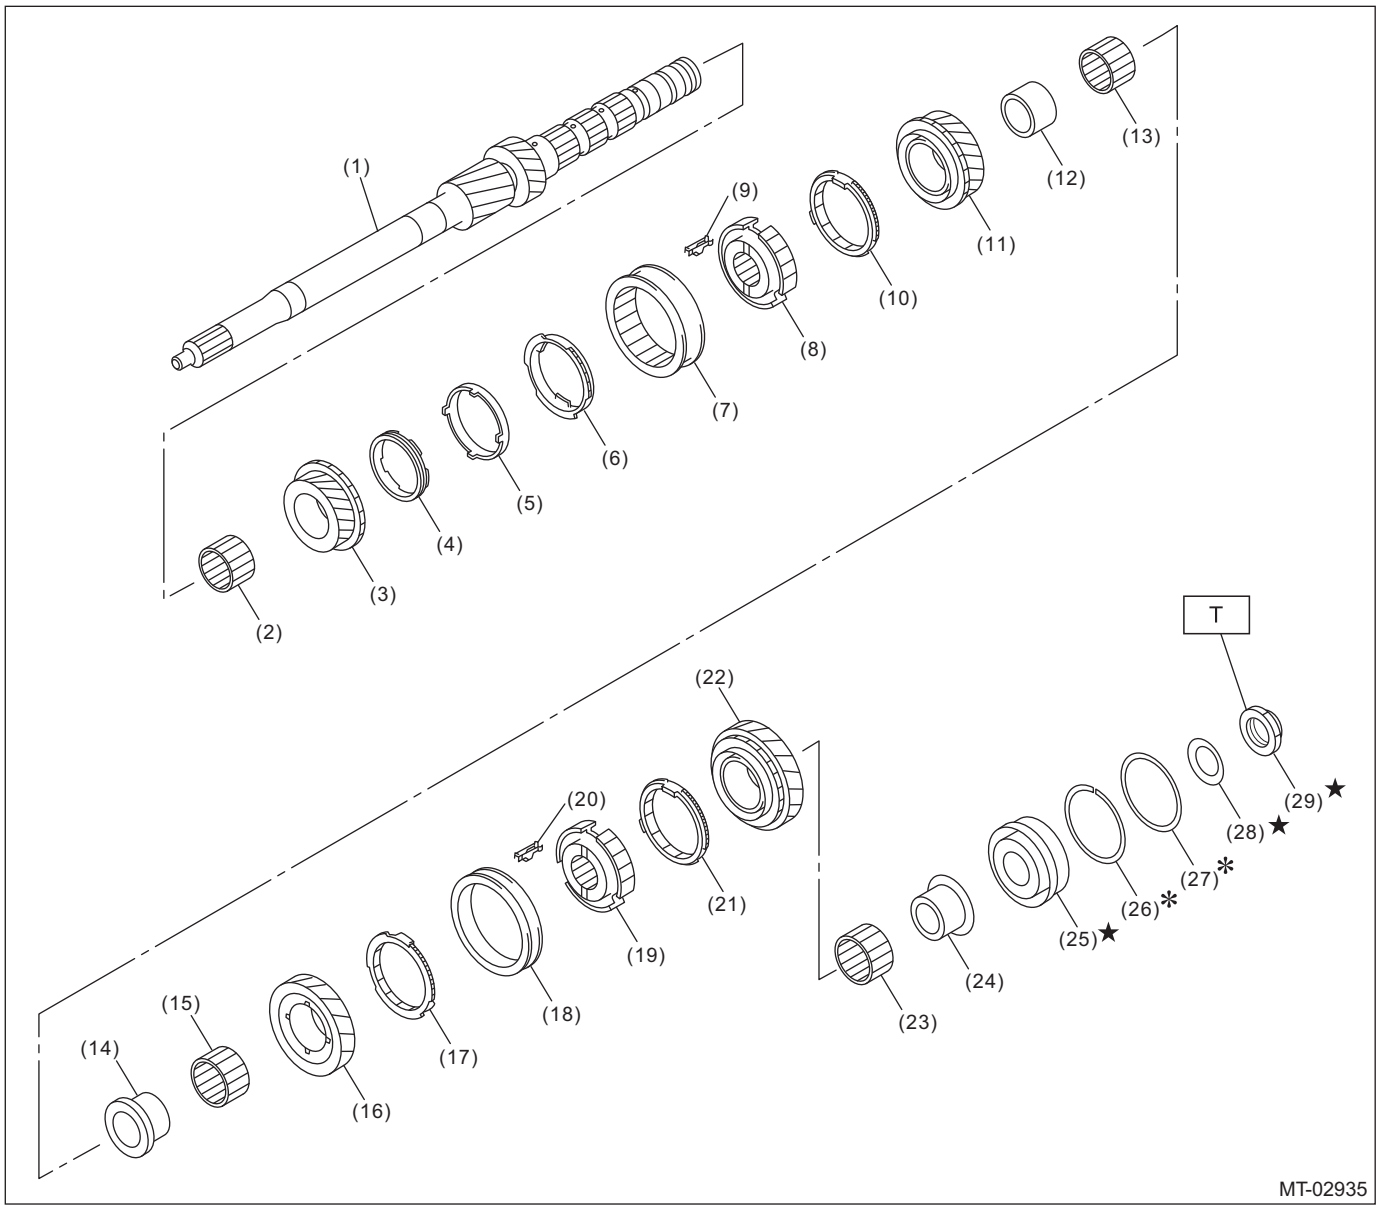
Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 41 (4.2, 30.2)
T3: 48 (4.9, 35.4)

6. SHIFTER FORK AND FORK ROD



(1)	Straight pin	(9)	Washer	(17)	5th-6th shifter arm
(2)	Interlock arm	(10)	Snap ring	(18)	5th-6th shifter fork
(3)	Interlock block	(11)	Reverse shifter fork	(19)	3rd-4th fork rod
(4)	Reverse interlock block	(12)	Reverse shifter arm	(20)	3rd-4th shifter arm
(5)	Interlock arm	(13)	Reverse fork rod	(21)	1st-2nd shifter arm
(6)	Striking rod	(14)	Selector arm	(22)	3rd-4th shifter fork
(7)	Selector arm No. 2	(15)	Shifter arm shaft	(23)	1st-2nd fork rod
(8)	Neutral set spring	(16)	5th-6th fork rod	(24)	1st-2nd shifter fork

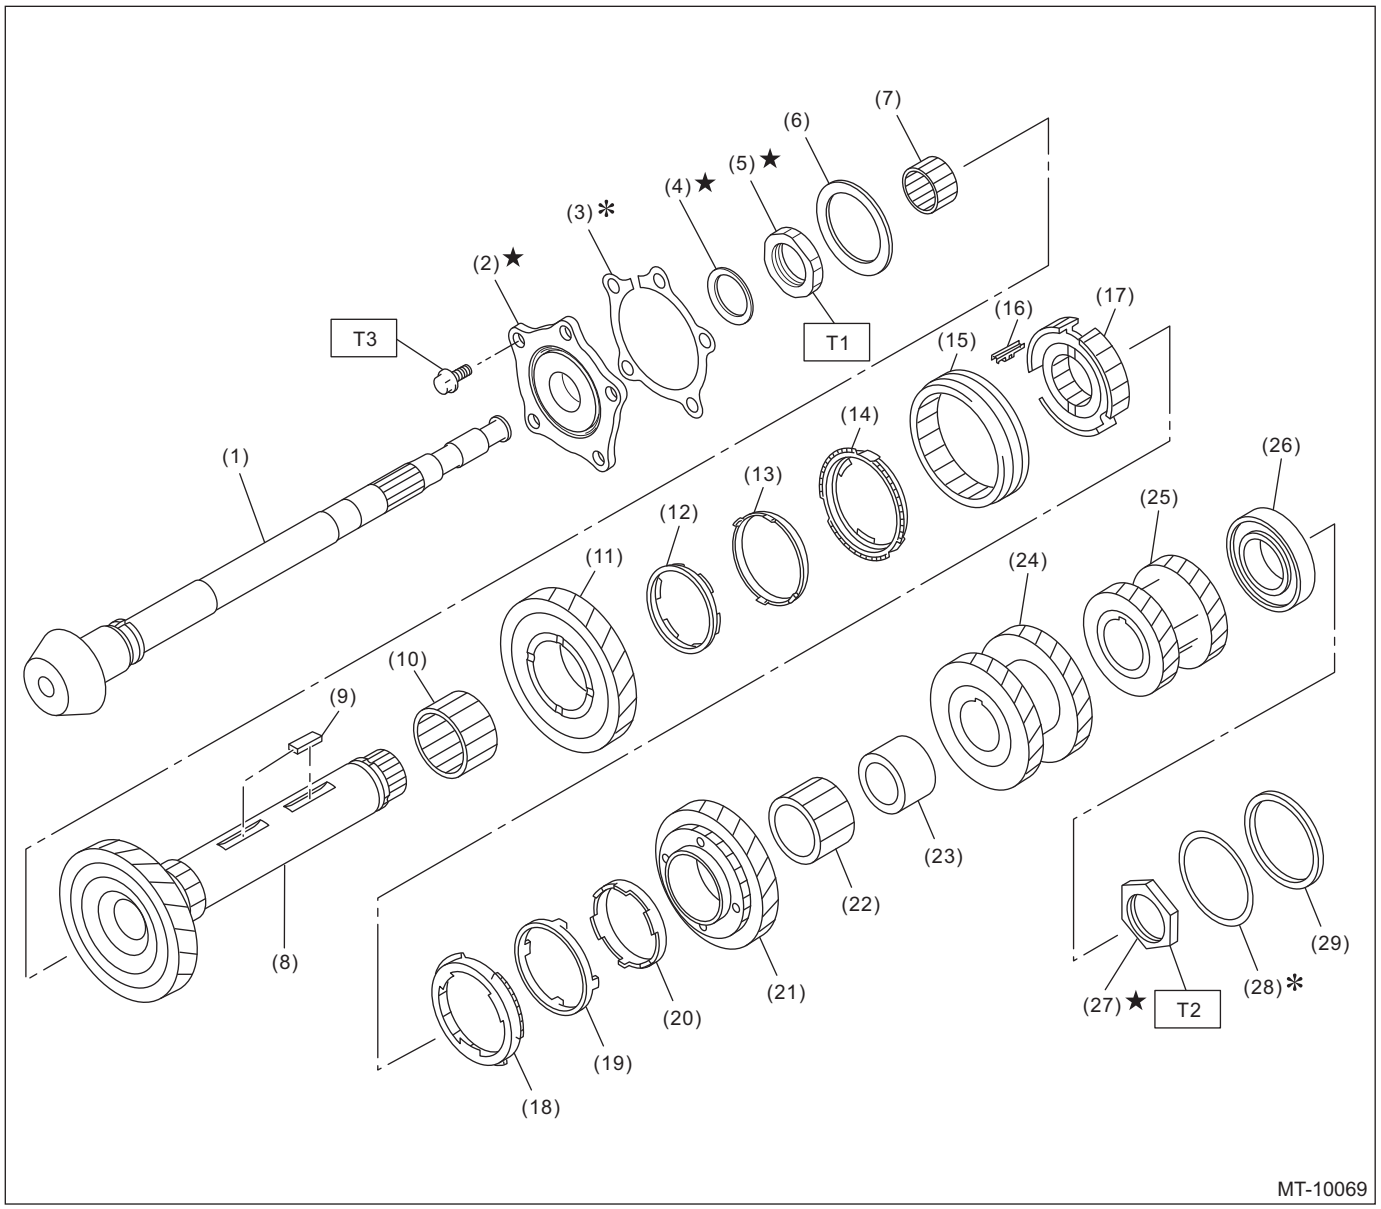
7. MAIN SHAFT ASSEMBLY



(1) Main shaft
(2) 3rd needle bearing
(3) 3rd drive gear
(4) 3rd inner baulk ring
(5) 3rd synchro cone
(6) 3rd outer baulk ring
(7) 3rd-4th coupling sleeve
(8) 3rd-4th synchronizer hub
(9) 3rd-4th shifting insert
(10) 4th baulk ring
(11) 4th drive gear
(12) 4th needle bearing race
(13) 4th needle bearing
(14) 5th drive gear bushing
(15) 5th needle bearing
(16) 5th drive gear
(17) 5th baulk ring
(18) 5th-6th coupling sleeve
(19) 5th-6th synchronizer hub
(20) 5th-6th shifting insert
(21) 6th baulk ring
(22) 6th drive gear
(23) 6th needle bearing
(24) 6th drive gear bushing
(25) Double taper roller bearing
(26) Snap ring
(27) Adjusting washer
(28) Lock washer
(29) Lock nut

Tightening torque: N·m (kgf-m, ft-lb)
T: 392 (40.0, 289.1)

8. DRIVE PINION SHAFT ASSY & DRIVEN GEAR ASSY



(1) Drive pinion shaft
(2) Double taper roller bearing
(3) Drive pinion shim
(4) Lock washer
(5) Lock nut
(6) Thrust bearing
(7) Needle bearing
(8) Driven shaft
(9) Key
(10) 1st needle bearing
(11) 1st driven gear
(12) 1st inner baulk ring
(13) 1st synchro cone
(14) 1st outer baulk ring
(15) 1st-2nd coupling sleeve
(16) 1st-2nd shifting insert
(17) 1st-2nd synchronizer hub
(18) 2nd outer baulk ring
(19) 2nd synchro cone
(20) 2nd inner baulk ring
(21) 2nd driven gear
(22) 2nd needle bearing
(23) 2nd driven gear bushing
(24) 3rd-4th driven gear
(25) 5th-6th driven gear
(26) Ball bearing
(27) Lock nut
(28) Adjusting washer
(29) Collar

Tightening torque: N·m (kgf-m, ft-lb)

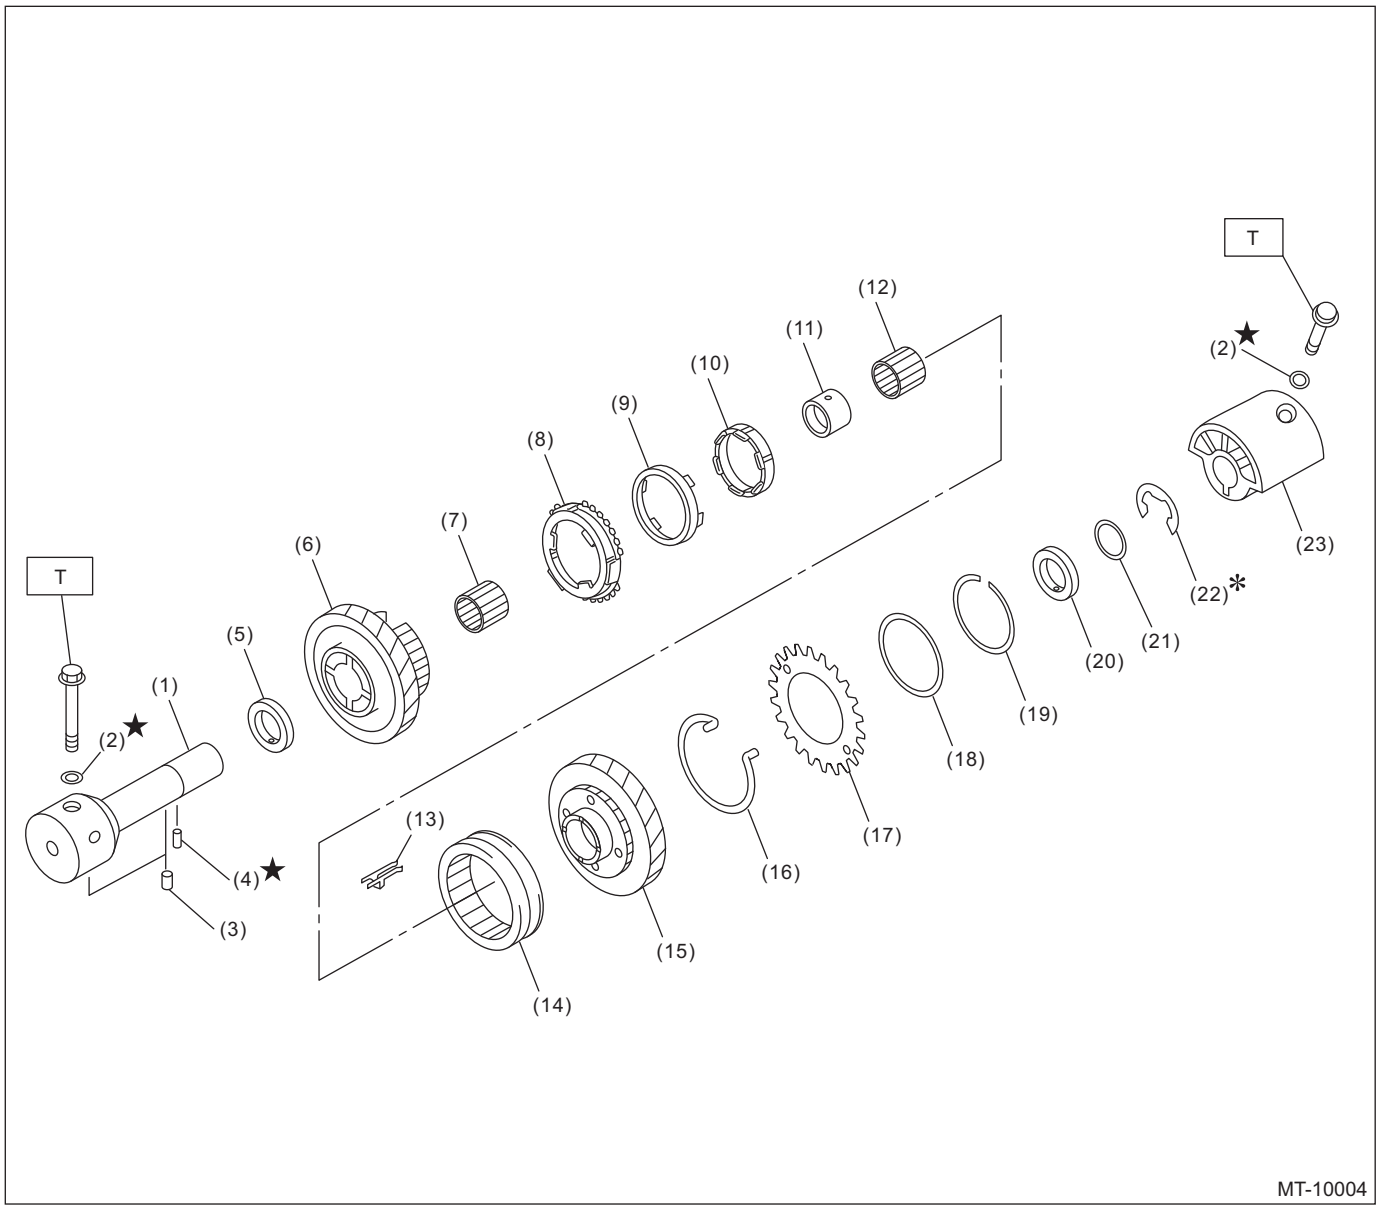
* Tightening torque when using the ST

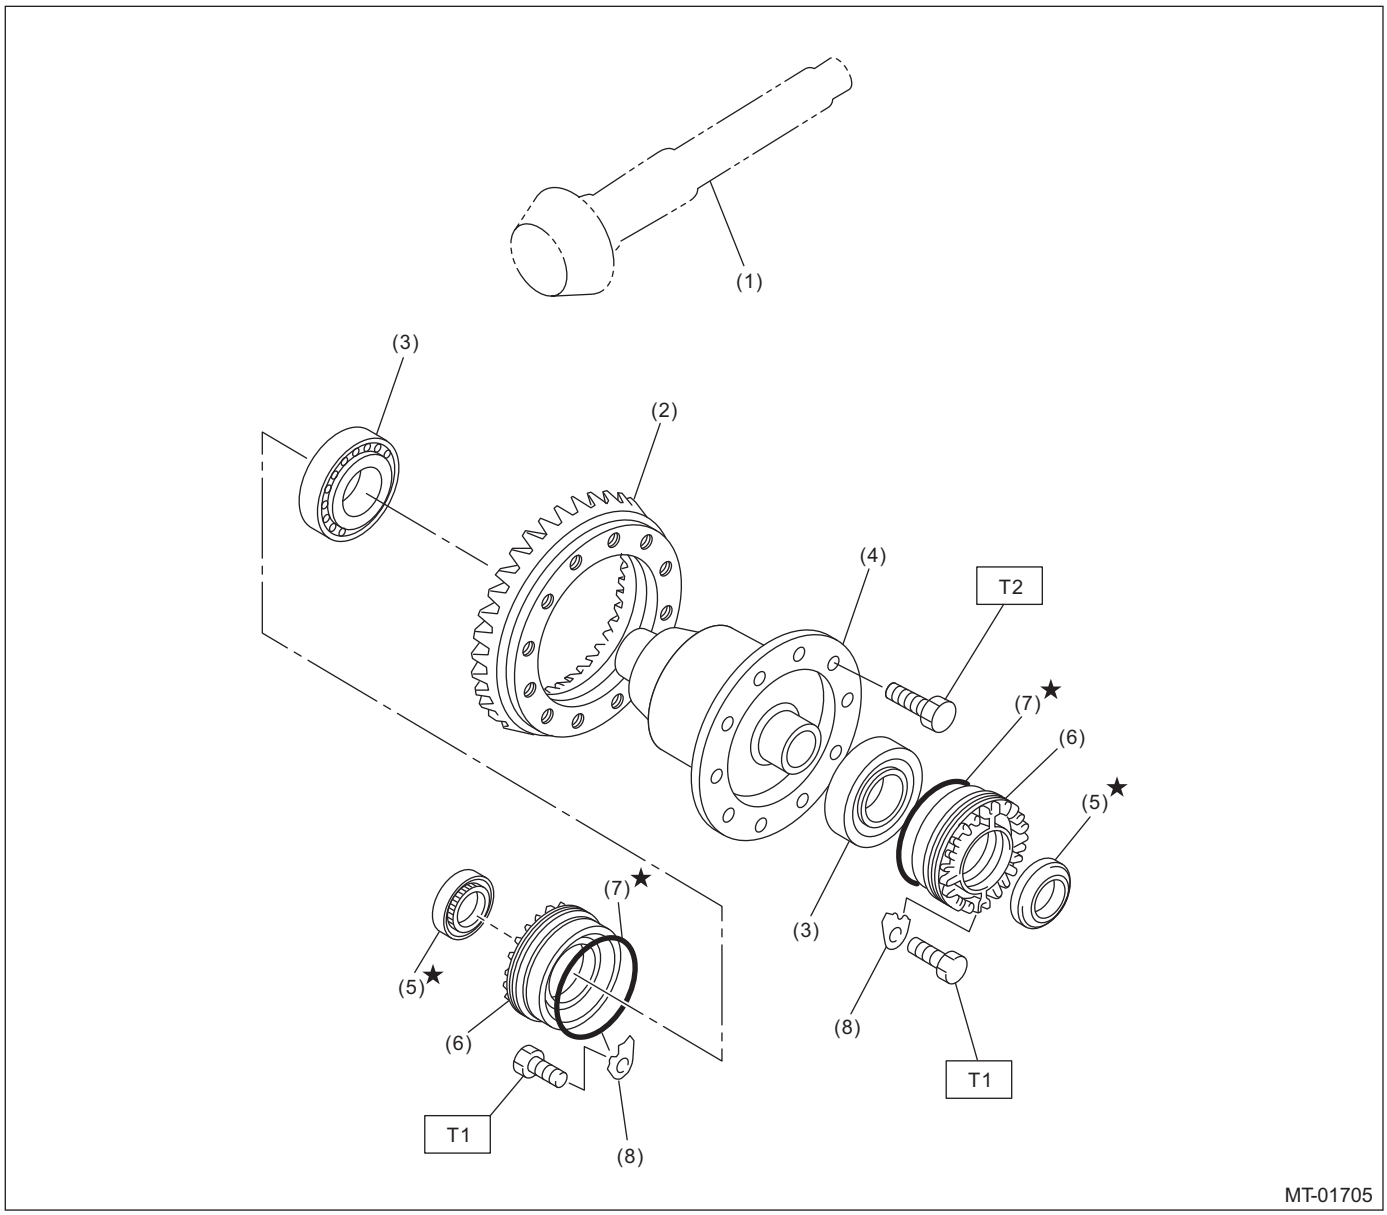
9. REVERSE IDLER GEAR ASSEMBLY



(1) Reverse idler gear shaft
(2) Gasket
(3) Knock pin
(4) Straight pin
(5) Counter high and low washer
(6) Reverse idler gear No. 2
(7) Needle bearing
(8) Reverse outer baulk ring
(9) Reverse synchro cone
(10) Reverse inner baulk ring
(11) Reverse idler gear bushing
(12) Needle bearing
(13) Shifting insert
(14) Reverse coupling sleeve
(15) Reverse idler gear
(16) Reverse idler spring
(17) Reverse idler sub gear
(18) Friction plate
(19) Snap ring
(20) Counter high and low washer
(21) Washer
(22) Snap ring
(23) Reverse idler holder

Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

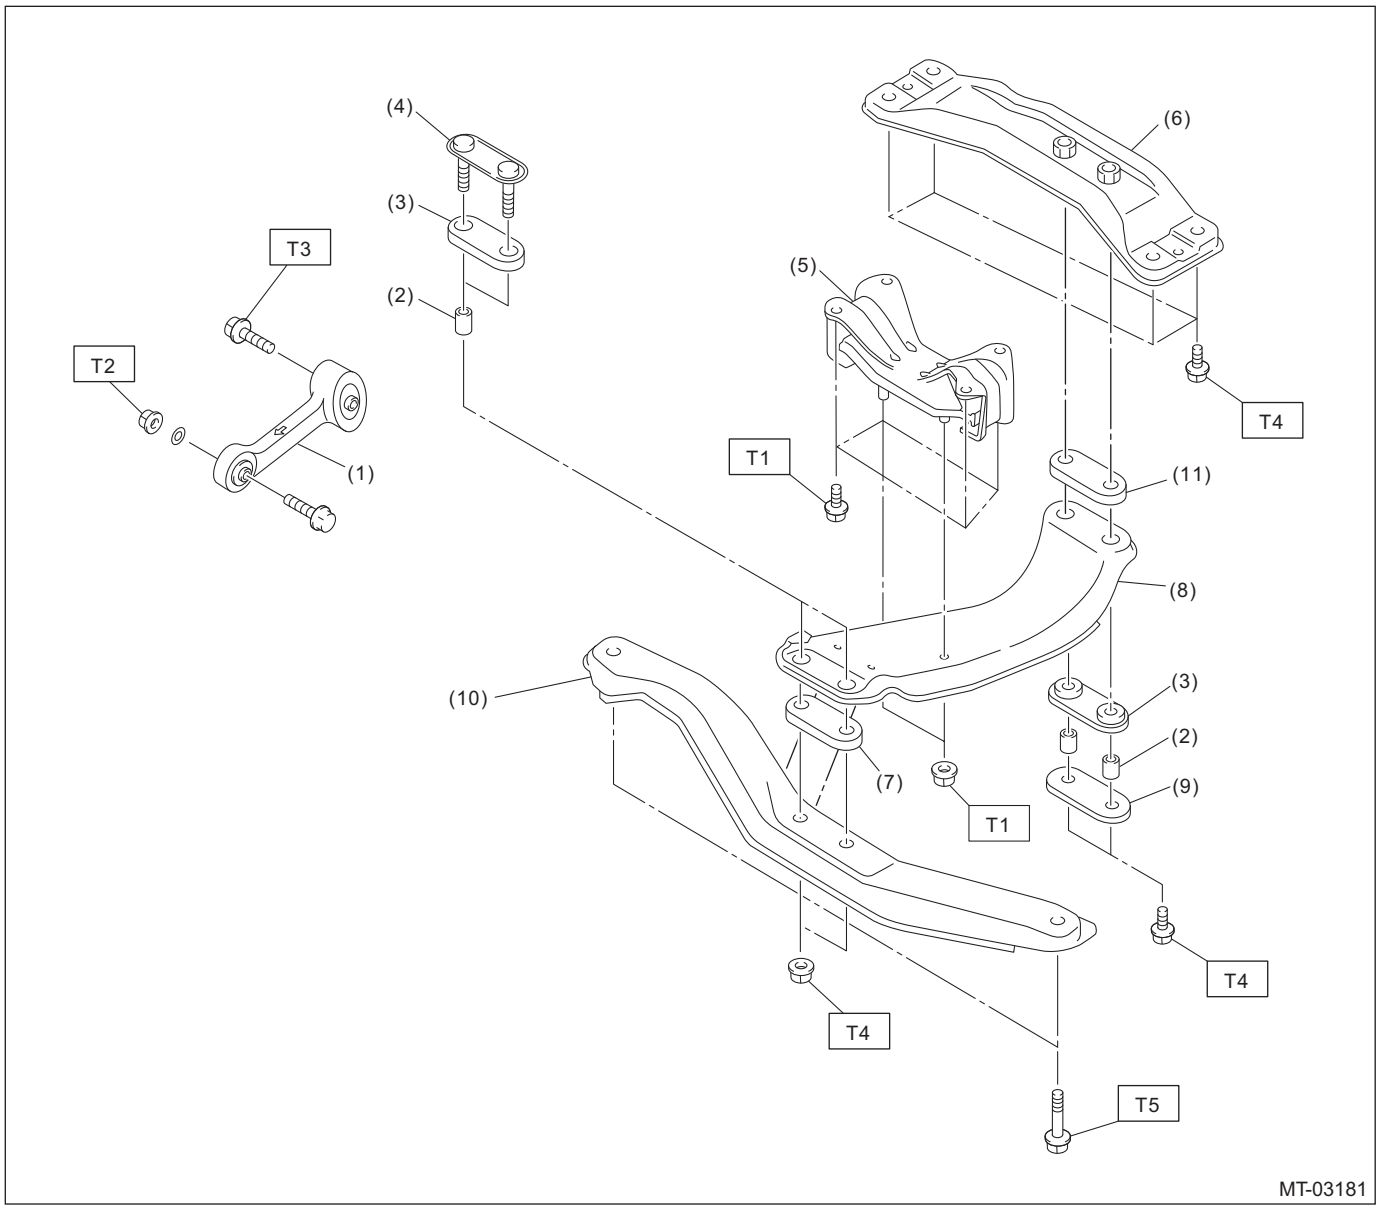
10.FRONT DIFFERENTIAL ASSEMBLY



(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Taper roller bearing
(4) Differential ASSY
(5) Oil seal
(6) Differential side retainer
(7) O-ring
(8) Retainer lock plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 69 (7.0, 50.9)

11.TRANSMISSION MOUNTING



(1) Pitching stopper
(2) Spacer
(3) Lower cushion rubber
(4) Front plate
(5) Transmission cushion rubber
(6) Rear crossmember
(7) Upper cushion rubber
(8) Center crossmember
(9) Rear plate
(10) Front crossmember
(11) Rear cushion rubber

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 50 (5.1, 36.9)
T3: 58 (5.9, 42.8)
T4: 70 (7.1, 51.6)
T5: 140 (14.3, 103.3)

C: CAUTION

• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• When disassembling the case and other light alloy parts, disassemble by using a plastic hammer. Do not pry apart with screwdrivers or other tools.
• Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine transmission gear oil, grease or equivalent. Do not mix transmission gear oil, grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply transmission gear oil onto sliding or revolving surfaces before installation.
• Always replace deformed or damaged snap rings.
• Before installing O-rings or oil seals, apply sufficient amount of transmission gear oil to avoid damage and deformation.
• Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
• Before securing a part on a vise, place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• Avoid damaging the mating surface of the case.
• Before applying liquid gasket, completely remove and clean the old liquid gasket.
• Be careful of handling the oil seal, O-ring and gasket. If the contact surface of them is damaged, oil leakage may occur.
• When pressing-in the oil seal, make sure that the oil seal lip portion and outer surface are not damaged or tilted.
• When replacing the taper roller bearing, replace the outer race and inner race as a set.
• When replacing the hypoid gear, replace the ring gear and pinion gear as a set.
• Replace the bolts if the seating surface or the thread surface is excessively rusted.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398791700	398791700	REMOVER	Used for removing and installing the straight pin.
 ST-399527700	399527700	PULLER SET	Used for removing the taper roller bearing (differential). (1) BOLT (899521412) (2) PULLER (399527702) (3) HOLDER (399527703) (4) SEAT (398497701) (5) BOLT (899520107) (6) NUT (021008000)
 ST-498515700	498515700	REMOVER	Used for removing the taper roller bearing of transfer driven gear.
 ST-498247001	498247001	MAGNET BASE	• Used for measuring the backlash between hypoid driven gears. • Used with DIAL GAUGE (498247100).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498247100	498247100	DIAL GAUGE	• Used for measuring the backlash between hypoid driven gears. • Used with MAGNET BASE (498247001).
 ST-899858600	899858600	REMOVER	Used for removing the taper roller bearing.
 ST-499757002	499757002	INSTALLER	Used for installing the taper roller bearing of transfer driven gear (transmission case side).
 ST18658AA021	18658AA021	WRENCH COMPL RETAINER	• Used for removing and installing the differential side retainer RH. • Used for adjusting the backlash of hypoid driven gear.
 ST-499877000	499877000	RACE 4-5 INSTALLER	Used for disassembling the driven shaft and transfer driven gear.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-899864100	899864100	REMOVER	• Used for removing the parts of the main shaft assembly and drive pinion shaft assembly. • Used for removing and installing the transfer driven gear taper roller bearing.
 ST-498057300	498057300	INSTALLER	Used for installing the extension case oil seal.
 ST-498255400	498255400	PLATE	Used for measuring the hypoid driven gear backlash.
 ST41099AA012	41099AA012	ENGINE SUPPORT BRACKET	• Used for supporting engine. • ENGINE SUPPORT BRACKET (41099AA010 or 41099AA011) can also be used.
 ST41099AA020	41099AA020	ENGINE SUPPORT	• Used for supporting engine. • Used together with ENGINE SUPPORT BRACKET (41099AA012).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398527700	398527700	PULLER ASSY	• Used for removing the extension case oil seal. • Used for removing the front differential taper roller bearing outer race. (Used together with 18760AA000 (CLAW).)
 ST-398643600	398643600	GAUGE	Used for adjusting total end play, extension end play and drive pinion shim.
 ST-398177700	398177700	INSTALLER	• Used for assembling the main shaft assembly. • Used for installing the transfer driven gear taper roller bearing (extension case side).
 ST-399893600	399893600	PLIER	• Used for removing and installing the neutral set spring. • Used together with CLAW (18756AA000).
 ST18756AA000	18756AA000	CLAW	• Used for removing and installing the neutral set spring. • Used together with PLIER (399893600).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499247400	499247400	INSTALLER	Used for installing the ball bearing of the transfer drive gear.
 ST-398497701	398497701	SEAT	• Used for installing the ball bearing of the transfer drive gear. • Used for installing the front differential taper roller bearing.
 ST-398437700	398437700	INSTALLER	Used for installing the front differential taper roller bearing.
 ST18632AA000	18632AA000	STAND ASSY	Used for disassembling and assembling the transmission.
ST18671AA000	18671AA000	OIL SEAL GUIDE	• Used for installing the reverse check shaft oil seal. • Used for installing the shifter arm shaft oil seal. • Used together with INSTALLER (18657AA010).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18657AA010	18657AA010	INSTALLER	• Used for installing the reverse check shaft oil seal. • Used together with OIL SEAL GUIDE (18671AA000).
 ST18657AA000	18657AA000	INSTALLER	• Used for installing the shifter arm shaft oil seal. • Used together with OIL SEAL GUIDE (18671AA000).
 ST18758AA000	18758AA000	PULLER	Used for removing the transfer driven gear taper roller bearing outer race.
 ST18831AA000	18831AA000	GAUGE	Used for selecting the transfer driven gear adjusting washer.
 ST18631AA000	18631AA000	HANDLE	Used for measuring the front differential back-lash.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST18754AA000	18754AA000	REMOVER	Used to remove parts of the driven gear.
 ST18665AA000	18665AA000	HOLDER	• Used for removing and installing the main shaft assembly lock nut. • Used together with BASE (18664AA000).
 ST18666AA000	18666AA000	HOLDER	• Used for removing and installing the driven shaft lock nut. • Used together with BASE (18664AA000).
 ST18667AA000	18667AA000	HOLDER	• Used for removing and installing the drive pinion shaft assembly lock nut. • Used together with BASE (18664AA000).
 ST18664AA000	18664AA000	BASE	• Used for removing and installing the main shaft assembly lock nut. • Used for removing and installing the drive pinion shaft assembly lock nut. • Used for removing and installing the driven shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST18722AA010	18722AA010	REMOVER	Used for disassembling the main shaft assembly.
 ST18651AA000	18651AA000	INSTALLER	Used for assembling the main shaft assembly.
 ST18852AA000	18852AA000	TORQUE WRENCH	• Used to tighten the main shaft assembly lock nut. • Used to tighten the drive pinion shaft assembly lock nut. • Used to tighten the driven shaft lock nut.
ST18668AA000	18668AA000	PUNCH	Used to crimp the main shaft assembly lock nut.
ST18669AA000	18669AA000	PUNCH	Used to crimp the driven shaft lock nut.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST18670AA000	18670AA000	PUNCH	Used to crimp the drive pinion shaft assembly lock nut.
 ST18620AA000	18620AA000	ADAPTER WRENCH	Used for removing and installing the driven shaft lock nut.
 ST18621AA000	18621AA000	ADAPTER WRENCH	Used for removing and installing the drive pinion shaft assembly lock nut.
 ST18723AA000	18723AA000	REMOVER	Used for disassembling the driven shaft.
 ST18630AA000	18630AA000	WRENCH ASSY	Used for removing and installing the differential side retainer LH.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18672AA000	18672AA000	GUIDE CLIP	Used for installing the reverse idler gear snap ring.
 ST18720AA000	18720AA000	REMOVER	Used for disassembling the main shaft assembly.
 ST18654AA000	18654AA000	INSTALLER	Used for assembling the driven shaft.
 ST18663AA000	18663AA000	SOCKET	Used for removing and installing the transfer bearing holder.
 ST18853AA000	18853AA000	HEIGHT GAUGE	• Used for selecting the fork rod. • Used for selecting the snap ring and washer of the main shaft assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18760AA000	18760AA000	CLAW	• Used for removing the front differential taper roller bearing outer race. • Used together with PULLER ASSY (398527700).
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	Used for protecting oil seal when installing front drive shaft.
 ST18657AA020	18657AA020	OIL SEAL INSTALLER	Used for installing the oil seal.
 ST18270KA020	18270KA020	SOCKET (E20)	Used for removing and installing the hypoid driven gear.

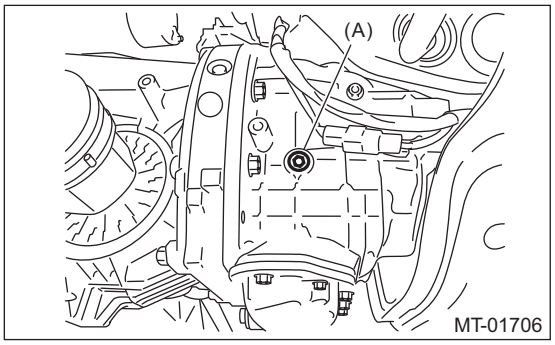
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
TORX® bit T70	Used for removing and installing the drain plug.
Depth gauge	Used for measuring the transmission end play.

2. Transmission Gear Oil

A: INSPECTION

1) Lift up the vehicle.
2) Remove the filler plug.



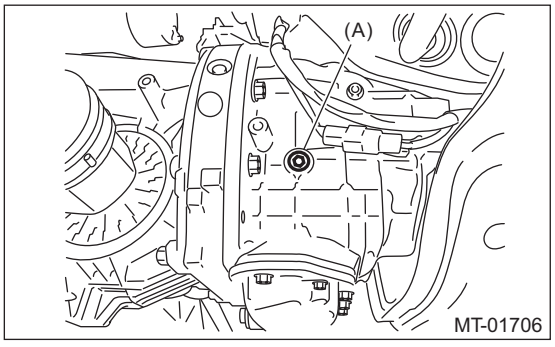
(A) Filler plug

3) Check that the transmission gear oil level is up to the bottom of the filler plug. If the transmission gear oil level is low, confirm that there is no oil leakage and refill up to the bottom of filler plug.
4) Using a new gasket, and tighten the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

B: REPLACEMENT

1) Lift up the vehicle.
2) Remove the filler plug.



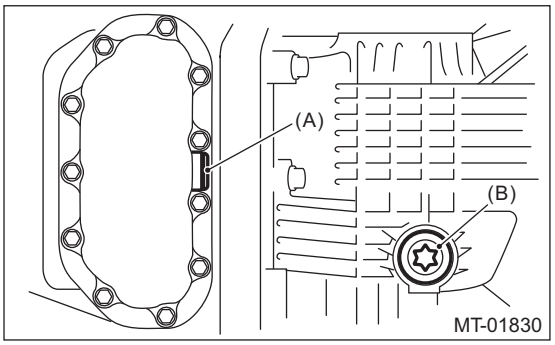
(A) Filler plug

3) Remove the two drain plugs (oil pan side, clutch housing side), and then drain the transmission gear oil completely.

CAUTION:
• Immediately after running the vehicle or after idling for a long time, the transmission gear oil will be hot. Be careful not to receive burns.
• Be careful not to spill the transmission gear oil on exhaust pipe to prevent it from emitting smoke or causing fires. If transmission gear oil is spilled on the exhaust pipe, wipe it off completely.

NOTE:
• Tighten the drain plug of the transmission gear oil after draining the transmission gear oil.
• Always use a new gasket.
• Use TORX® bit T70 to remove and install the drain plug on clutch housing side.

Tightening torque:
Oil pan side
50 N·m (5.1 kgf-m, 36.9 ft-lb)
Clutch housing side
70 N·m (7.1 kgf-m, 51.6 ft-lb)



(A) Drain plug (oil pan side)
(B) Drain plug (clutch housing side)

4) Pour transmission gear oil to the bottom end of filler plug.

NOTE:
Carefully refill transmission gear oil while checking the level. Excessive or insufficient oil must be avoided.

Recommended gear oil:
GL-5 (75W-90) or equivalent

Transmission gear oil capacity
4.1 L (4.3 US qt, 3.6 Imp qt)
5) Check the level of the transmission gear oil.
6) Using a new gasket, and tighten the filler plug.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Oil Seal

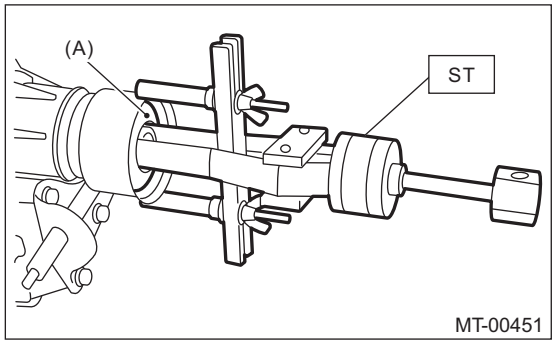
A: INSPECTION

Check that there is no oil leaking from the oil seal. If there is any deformation, hardening, wear or other malfunctions of the oil seal, perform the following:

- Replace the oil seal.
- Inspect the propeller shaft.

B: REPLACEMENT

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Clean the transmission exterior.
4) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
5) Remove the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(STI)-14, REMOVAL, Muffler.>
6) Remove the center exhaust cover.
7) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
8) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY

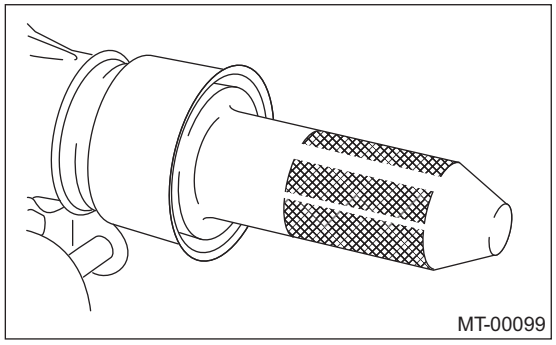


(A) Oil seal

9) Using the ST, install the oil seal.

NOTE:
- When grease is not applied to the oil seal lips, apply the transmission gear oil to the oil seal lips.
- Use a new oil seal.

ST 498057300 INSTALLER



10) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
11) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

12) Install the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(STI)-15, INSTALLATION, Muffler.>
13) Pour in transmission gear oil and check the oil level. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
14) Lower the vehicle.
15) Connect the battery ground terminal.

4. Differential Side Retainer Oil Seal

A: INSPECTION

Check that there is no oil leaking from the differential side retainer oil seal. If there is oil leakage, perform the following procedures.

- Replace the oil seal.
- Check the front drive shaft.

B: REPLACEMENT

1) Disconnect the ground cable from battery.
2) Remove the front tires.
3) Lift up the vehicle.
4) Remove the front exhaust pipe and center exhaust pipe. <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
5) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
6) Separate the front drive shaft from the transmission. <Ref. to DS-43, REMOVAL, Front Drive Shaft.>
7) Remove the differential side retainer oil seal by using a flat tip screwdriver or similar tools.
8) Using the ST, install the differential side retainer oil seal by lightly tapping with a hammer.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

9) Apply transmission gear oil to the oil seal lips.
10) Set the ST to the differential side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

11) Install the front drive shaft into the transmission.

NOTE:
Replace the circlip of drive shaft with a new part.

12) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.

ST 28399SA010 OIL SEAL PROTECTOR

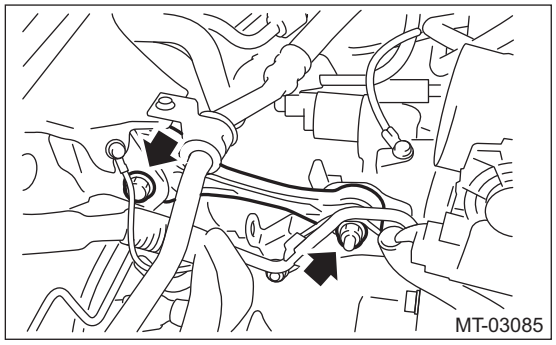
13) Install the front exhaust pipe and the center exhaust pipe. <Ref. to EX(STI)-5, INSTALLATION, Front Exhaust Pipe.>
14) Pour transmission gear oil to the bottom end of filler plug. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
15) Lower the vehicle.
16) Install the front tires.
17) Connect the battery ground terminal.

5. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the pitching stopper.

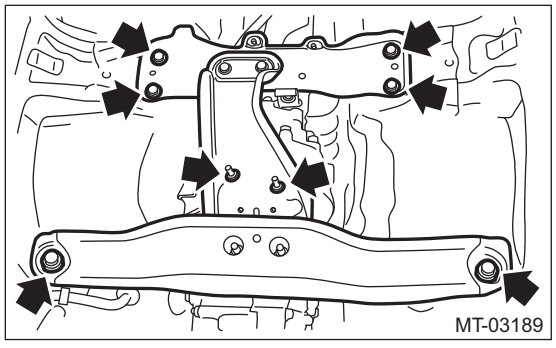


2. CROSSMEMBER AND CUSHION RUBBER

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
4) Remove the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(STI)-14, REMOVAL, Muffler.>
5) Remove the center exhaust cover.
6) Set the transmission jack.

CAUTION:
Always support the transmission case with a transmission jack.

7) Remove the front crossmember and the rear crossmember.



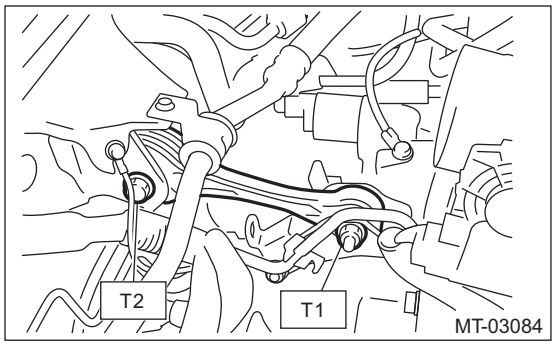
8) Remove the transmission cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

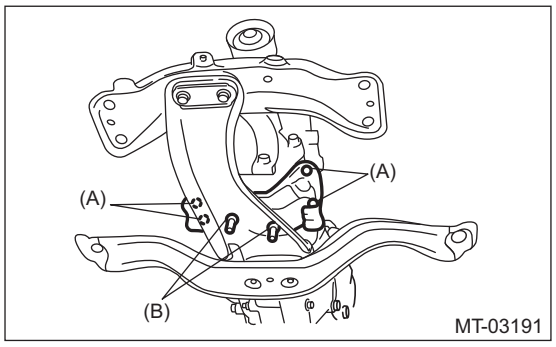


2) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
3) Connect the battery ground terminal.

2. CROSSMEMBER AND CUSHION RUBBER

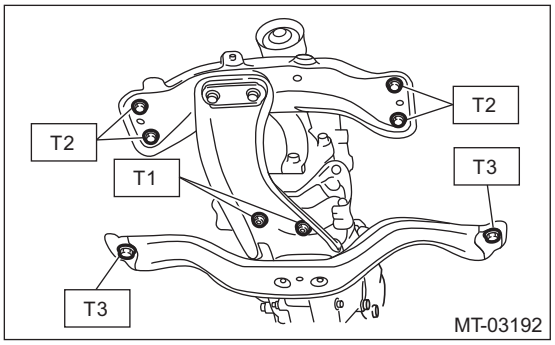
1) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
2) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)



3) Install the front crossmember and rear crossmember.
4) Tighten the transmission cushion rubber mounting nut.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T3: 140 N·m (14.3 kgf-m, 103 ft-lb)



5) Remove the transmission jack.
6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the rear exhaust pipe and muffler. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(STI)-15, INSTALLATION, Muffler.>
8) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
9) Lower the vehicle.
10) Connect the battery ground terminal.

C: INSPECTION

Perform the following inspection procedures and repair or replace faulty parts.

1. PITCHING STOPPER

Check the pitching stopper for bends or damage. Check that the rubber is not stiff, cracked or otherwise damaged.

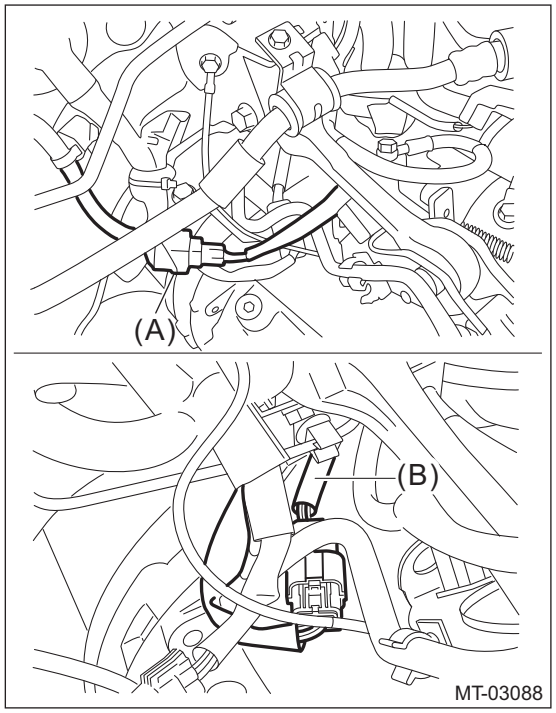
2. CROSSMEMBER AND CUSHION RUBBER

Check the crossmember for bending or damage. Check that the cushion rubber is not stiff, cracked, or otherwise damaged.

6. Manual Transmission Assembly

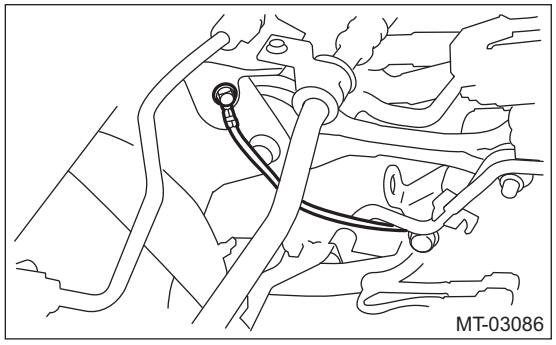
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Disconnect the following harness connectors, and then remove the intercooler stay RH No. 2.



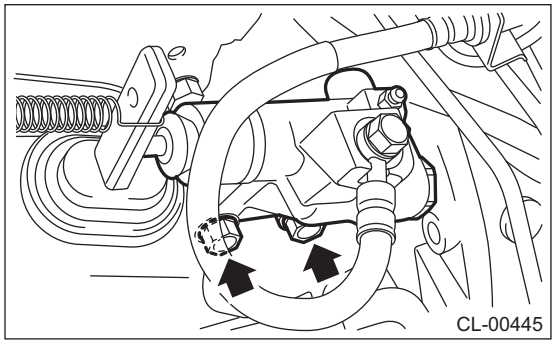
(A) Rear oxygen sensor connector
(B) Neutral position switch backup light switch connector

4) Remove the secondary air combination valve. <Ref. to EC(STI)-57, SECONDARY AIR COMBINATION VALVE LH, REMOVAL, Secondary Air Combination Valve.>
5) Disconnect the transmission radio ground cord terminal.

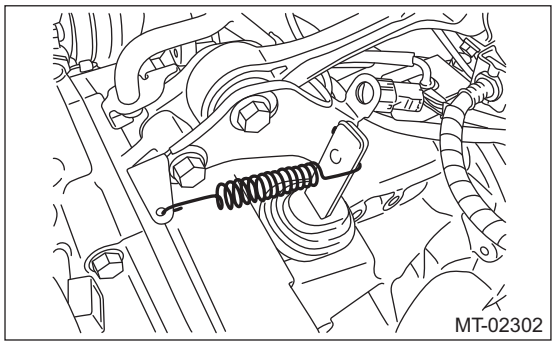


6) Remove the starter assembly. <Ref. to SC(STI)-7, REMOVAL, Starter.>
7) Remove the operating cylinder.

NOTE:
Hang the removed operating cylinder with a piece of wire.

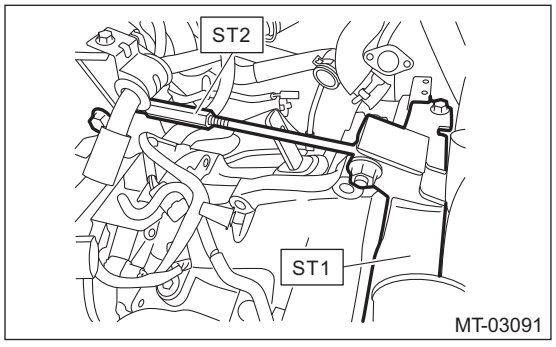


8) Remove the return spring.



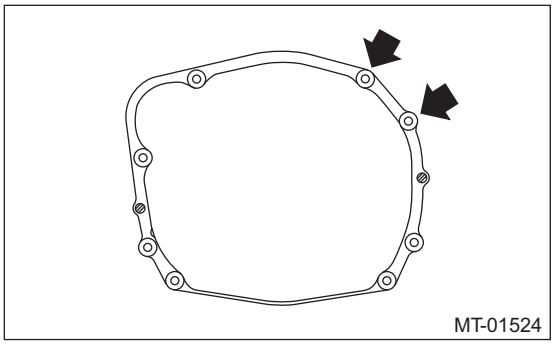
9) Remove the pitching stopper. <Ref. to 6MT(TY85)-30, PITCHING STOPPER, REMOVAL, Transmission Mounting System.>
10) Remove the pitching stopper bracket, clutch return spring bracket, and transmission radio ground cable.
11) Set the ST.

ST1	41099AA012	ENGINE SUPPORT BRACKET
ST2	41099AA020	ENGINE SUPPORT

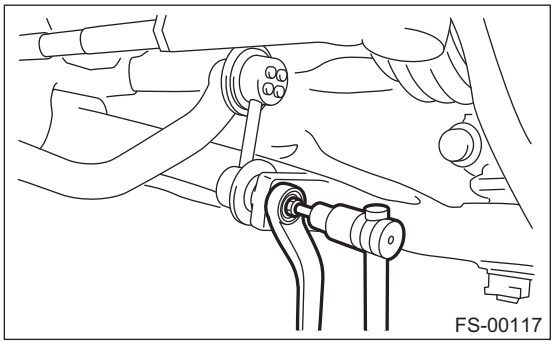


12) Remove the clutch release lever shaft.
(1) Remove the plug using a hexagon wrench.
(2) Attach a 6 mm (0.24 in) bolt to the release lever shaft, and pull out the release lever shaft.
(3) Lift the release fork, and remove from the claw of the release bearing. Pull the release fork to the engine side, and make it so that it moves freely.
13) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>

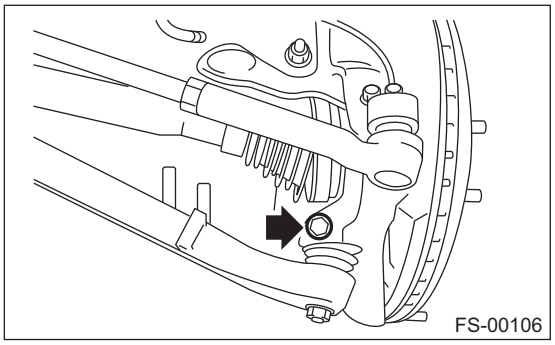
14) Remove the bolts which hold upper side of transmission to engine.



15) Remove the front wheels.
16) Lift up the vehicle.
17) Drain transmission gear oil completely. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
18) Remove the center exhaust cover.
19) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
20) Remove the stabilizer link.

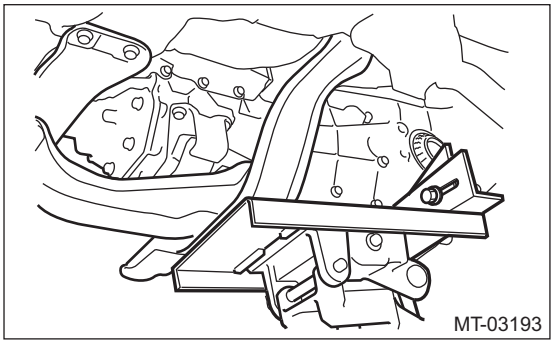


21) Remove the ball joint of front arm from the housing.

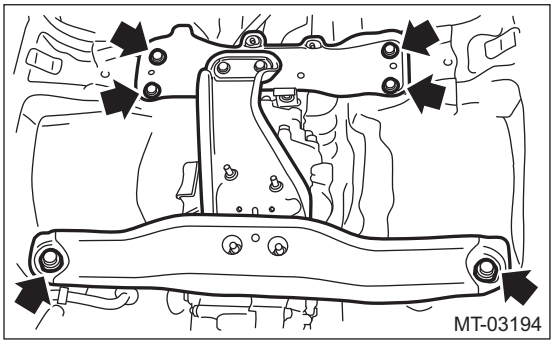


22) Remove the front drive shaft. <Ref. to DS-43, REMOVAL, Front Drive Shaft.>
23) Place the transmission jack under the transmission.

CAUTION:
Always support the transmission case with a transmission jack.

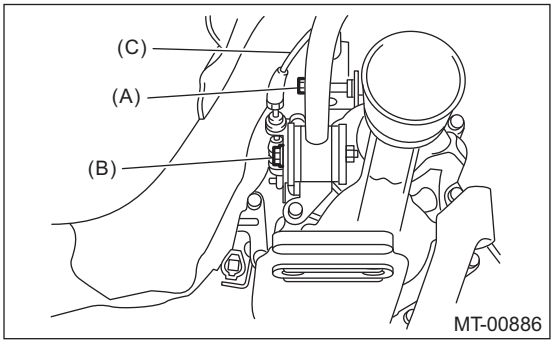


24) Remove the front crossmember and the rear crossmember.



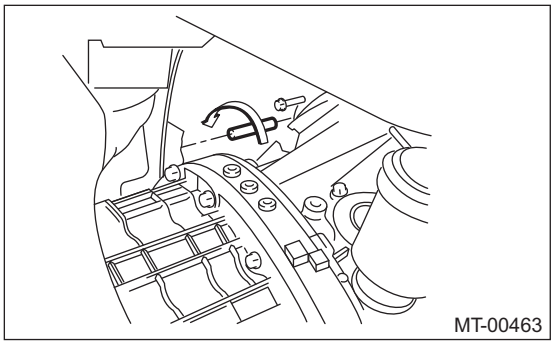
25) Move the transmission to the right side of the vehicle, and remove the joint COMPL, stay bolts and reverse check cable.

NOTE:
If the transmission is not moved aside, the joint COMPL and stay bolts may contact the body and cause damage.



(A) Joint COMPL bolt
(B) Stay bolt
(C) Reverse check cable

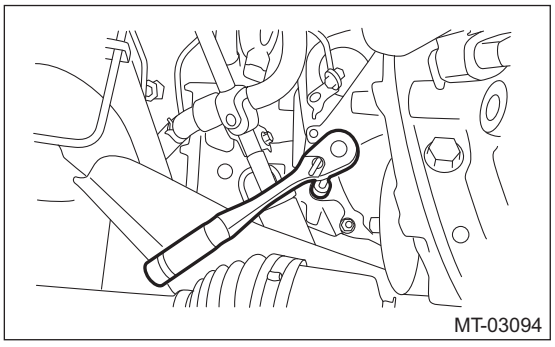
26) Tighten the turnbuckle of the ST to tilt the engine assembly towards the back.



MT-00463

27) Remove the bolts and nuts holding the bottom of transmission to the engine, and remove the transmission assembly.

NOTE:
• During removal, be careful not to hit the transmission against the body when pulling towards the rear.
• The clutch pipe and breather pipe may interfere with each other. Remove carefully.



MT-03094

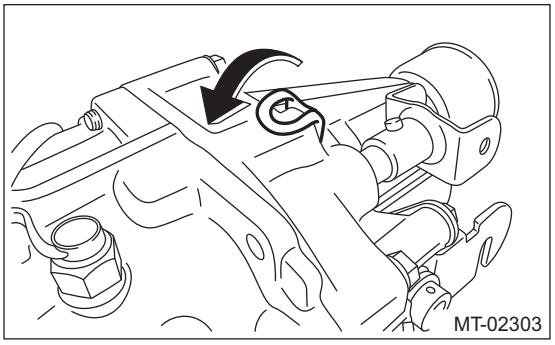
28) Remove the transmission cushion rubber.

B: INSTALLATION

1) Set the release fork, release bearing and release lever shaft to the transmission. <Ref. to CL-17, STI MODEL, INSTALLATION, Release Bearing and Lever.>
2) Replace the differential side retainer oil seal. <Ref. to 6MT(TY85)-29, REPLACEMENT, Differential Side Retainer Oil Seal.>

NOTE:
Be sure to replace the oil seal after removing the front drive shaft.
3) Strike and bend the transmission hanger of transmission rear with a rubber hammer etc. so that it gets in contact with the transmission case.

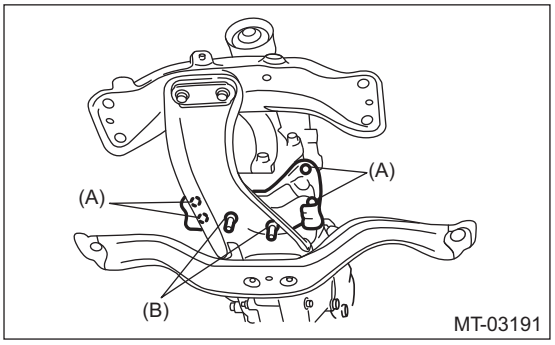
CAUTION:
Do not apply excessive load or impact to the transmission case.



MT-02303

4) Install the transmission cushion rubber to the transmission, and tighten the bolt (A).
5) Install the transmission cushion rubber to the center crossmember, and temporarily tighten the nut (B).

Tightening torque:
Bolt (A)
35 N·m (3.6 kgf-m, 25.8 ft-lb)

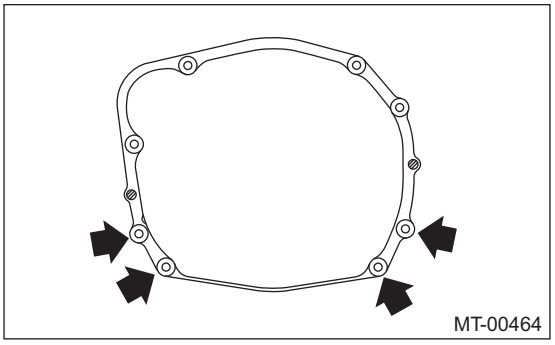


MT-03191

6) Install the transmission assembly onto the engine.
7) Tighten the bolts and nuts which hold the lower side of transmission to the engine.

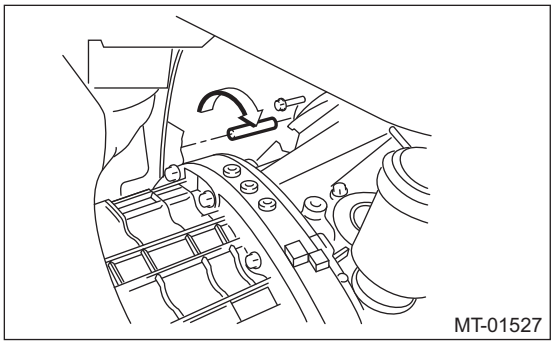
NOTE:
• Make sure that the main shaft spline is completely inserted.
• Make sure that the rear end of the engine is set low.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



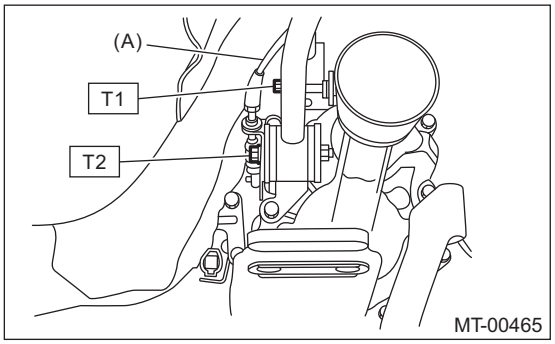
MT-00464

8) Loosen the turnbuckle of ST to return the engine to its original position.



9) Move the transmission to the right side of the vehicle, and attach the joint COMPL, stay bolts and reverse check cable.

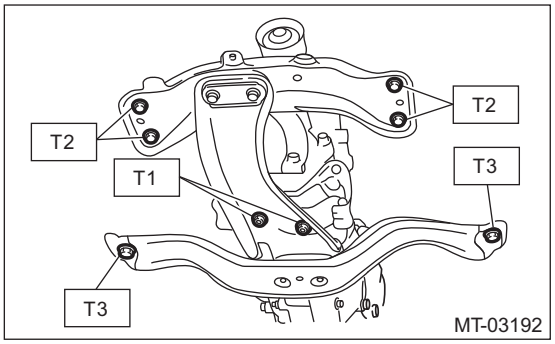
Tightening torque:
T1: 12 N·m (1.2 kgf-m, 8.9 ft-lb)
T2: 32 N·m (3.3 kgf-m, 23.6 ft-lb)



(A) Reverse check cable

10) Install the front crossmember and rear crossmember.
11) Tighten the transmission cushion rubber mounting nut.

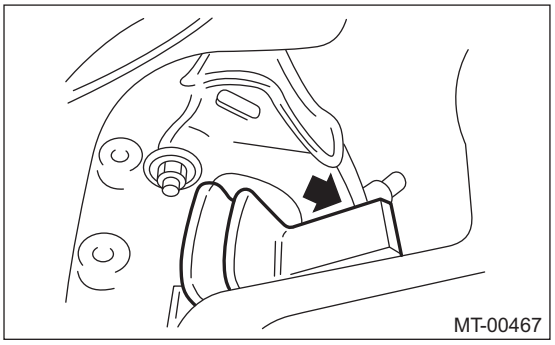
Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
T3: 140 N·m (14.3 kgf-m, 103 ft-lb)



12) Lower the vehicle.
13) Install the starter. <Ref. to SC(STI)-7, INSTALLATION, Starter.>
14) Tighten the bolts which hold the upper side of the transmission to the engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
15) Make sure that the release bearing is completely inserted.

NOTE:
• Push the release fork towards the operating cylinder side until a clicking sound is heard. Pull the release fork towards the engine side. If the release fork is not in contact with the case, the setting is complete.
• Confirm that the boot cover is set securely.



16) Install the pitching stopper bracket, clutch return spring bracket, and transmission radio ground cable.

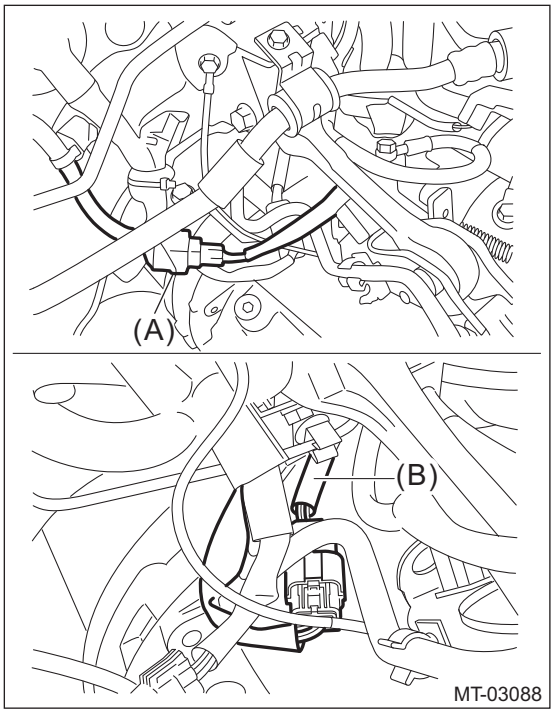
Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)
17) Install the pitching stopper. <Ref. to 6MT(TY85)-30, PITCHING STOPPER, INSTALLATION, Transmission Mounting System.>
18) Install the return spring.
19) Install the operating cylinder.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

NOTE:
Check that the clutch hose is routed properly.
20) Install the starter assembly. <Ref. to SC(STI)-7, INSTALLATION, Starter.>
21) Install the transmission radio ground terminal.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)
22) Install the secondary air combination valve. <Ref. to EC(STI)-57, SECONDARY AIR COMBINATION VALVE LH, INSTALLATION, Secondary Air Combination Valve.>

23) Connect the following harness connectors, and then install the intercooler stay RH No. 2.



(A) Rear oxygen sensor connector
(B) Neutral position switch backup light switch connector

24) Lift up the vehicle.
25) Set the ST to differential side retainer.
ST 28399SA010 OIL SEAL PROTECTOR
26) Install the front drive shaft into the transmission.

NOTE:
Replace the circlip of drive shaft with a new part.
27) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.
ST 28399SA010 OIL SEAL PROTECTOR
28) Install the ball joint of the front arm.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
29) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

NOTE:
Use a new self-locking nut.
30) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
31) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

32) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
33) Fill the transmission gear oil. <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>
34) Lower the vehicle.
35) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
36) Connect the battery ground terminal.

7. Driver's Control Center Differential Control Module

A: REMOVAL

For removal of driver's control center differential control module, refer to the "FU(STI)" section. <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>

B: INSTALLATION

For installation of driver's control center differential control module, refer to the "FU(STI)" section. <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>

8. DCCD Multi Select Switch

A: REMOVAL

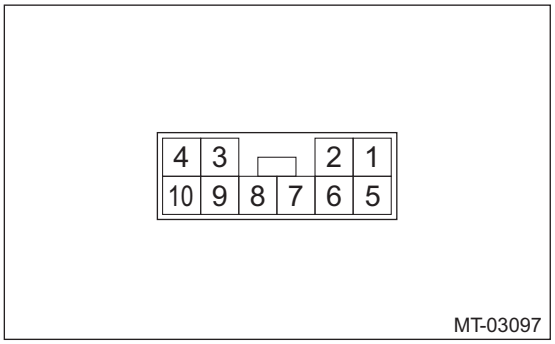
For removal of DCCD multi select switch, refer to the “FU(STI)” section. <Ref. to FU(STI)-55, REMOVAL, SI-DRIVE (SUBARU Intelligent Drive) Selector.>

B: INSTALLATION

For installation of DCCD multi select switch, refer to the “FU(STI)” section. <Ref. to FU(STI)-55, INSTALLATION, SI-DRIVE (SUBARU Intelligent Drive) Selector.>

C: INSPECTION

1) Check that the DCCD multi select switch does not have deformation, cracks, or other damages.
2) Measure the resistance between DCCD multi select switch selector terminals.

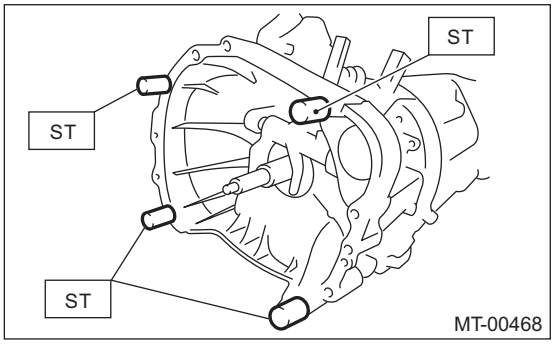


Switch position	Terminal No.	Standard
AUTO / MANU (when the AUTO / MANU switch is pushed in)	1 and 9	Less than 1 Ω
C.DIFF + (when the C.DIFF switch knob is pressed in the C.DIFF + direction)	2 and 9	Less than 1 Ω
C.DIFF – (when the C.DIFF switch knob is pressed in the C.DIFF – direction)	3 and 9	Less than 1 Ω

9. Preparation for Overhaul

A: PROCEDURE

1) Clean oil, grease, dirt and dust from the transmission.
2) Attach the ST on the transmission.
ST 18632AA000 STAND ASSY

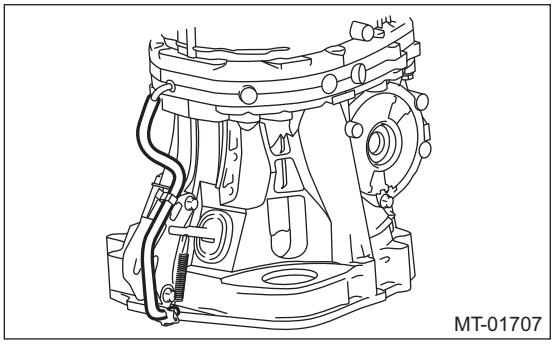


3) Apply transmission gear oil to rotating parts before assembly.
4) When reusing disassembled parts, reinstall in the original positions.
5) Gaskets, lock washers and lock nuts must be replaced with new parts.
6) Apply liquid gasket to the specified areas to prevent leakage.

10.Air Breather Hose

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the air breather hose.



B: INSTALLATION

1) Install the air breather hose.
2) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
3) Connect the battery ground terminal.

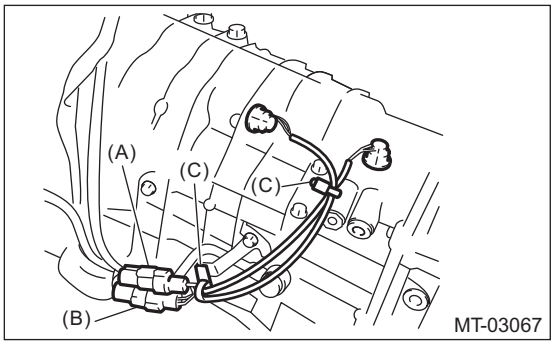
C: INSPECTION

Make sure the hose is not cracked or clogged.

11.Back-up Light Switch

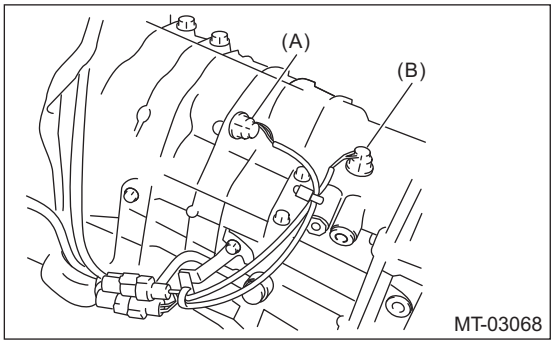
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Disconnect the back-up light switch connector.



(A) Back-up light switch connector (2P, gray)
(B) Neutral position switch connector (2P, brown)
(C) Clip

3) Disconnect the back-up light switch.



(A) Back-up light switch
(B) Neutral position switch

B: INSTALLATION

1) Install the back-up light switch.

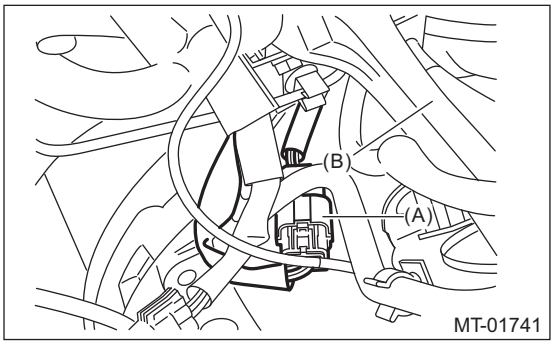
NOTE:
Use a new gasket.

Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)

2) Connect the back-up light switch connector.
3) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

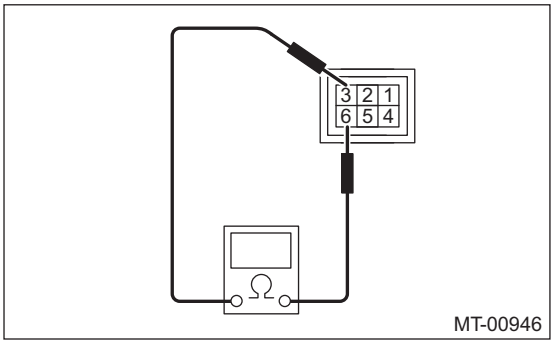
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Disconnect the transmission harness and chassis harness.



(A) Transmission harness connectors
(B) Pitching stopper

4) Measure the resistance between the back-up light switch terminals. If it is not within the specification, replace the back-up light switch.

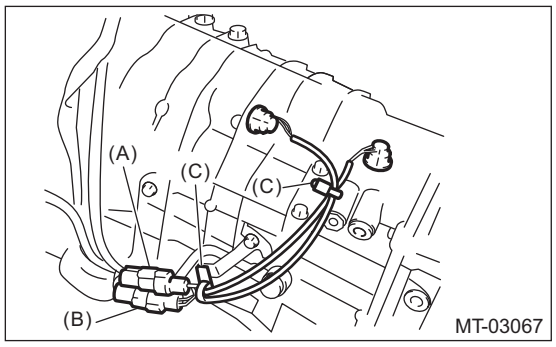
Gear shift position	Terminal No.	Standard
Back position	3 and 6	Less than 1 Ω
Other positions		1 MΩ or more



12.Neutral Position Switch

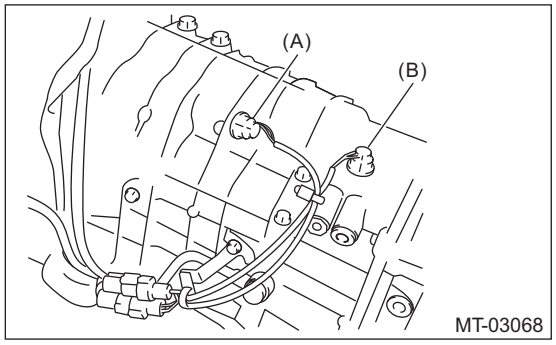
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Disconnect the connector and clip of the neutral position switch.



(A) Back-up light switch connector (2P, gray)
(B) Neutral position switch connector (2P, brown)
(C) Clip

3) Remove the neutral position switch.



(A) Back-up light switch
(B) Neutral position switch

B: INSTALLATION

1) Install the neutral position switch.

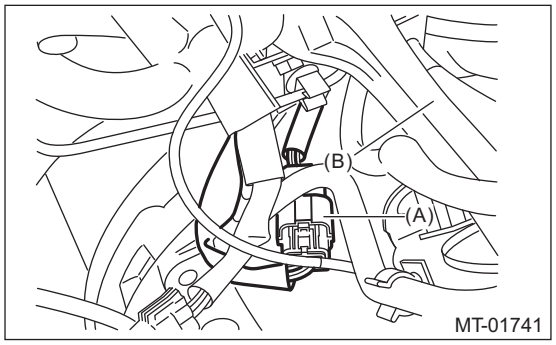
NOTE:
Use a new gasket.

Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)

2) Connect the connector and clip of the neutral position switch.
3) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

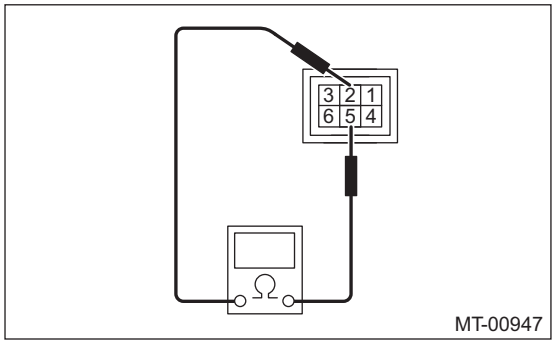
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Disconnect the transmission harness and chassis harness.



(A) Transmission harness connectors
(B) Pitching stopper

4) Measure the resistance between neutral position switch terminals. If not within the standard values, replace the neutral position switch.

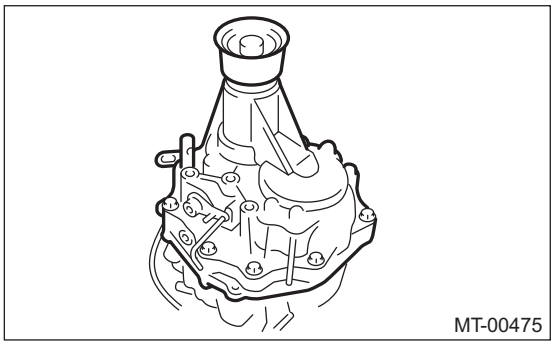
Gear shift position	Terminal No.	Standard
Neutral position	2 and 5	Less than 1 Ω
Other positions		1 MΩ or more



13.Extension Case

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the extension case.



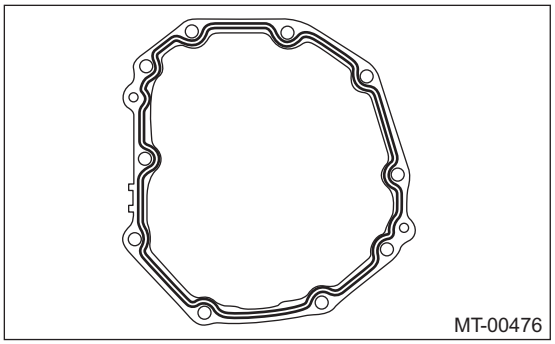
4) Remove any remaining liquid gasket from the extension case and transmission case.

B: INSTALLATION

1) Select the adjusting washer of the transfer driven gear, and attach it to the extension case. <Ref. to 6MT(TY85)-45, ADJUSTMENT, Extension Case.>
2) Install the taper roller bearing (extension case side) outer race to the extension case.

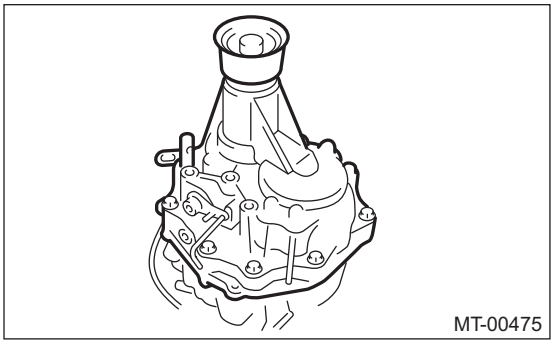
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
3) Select the adjusting washer of the transfer drive gear, and attach it to the center differential.
4) Apply liquid gasket to the transmission case.

Liquid gasket:
THREE BOND 1215B or equivalent

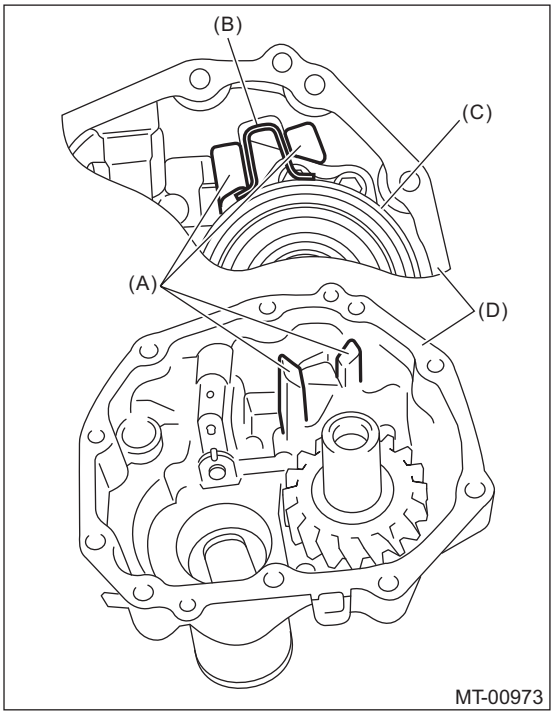


5) Install the extension case.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



NOTE:
Insert the stopper section of the center differential between the oil guide.



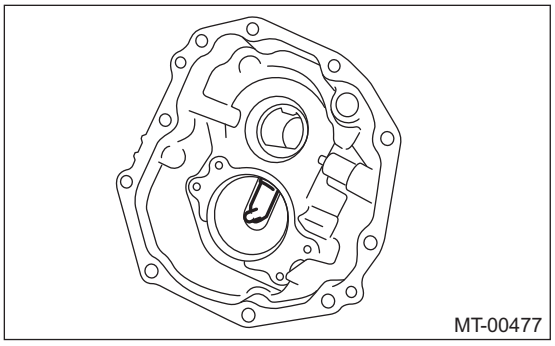
(A) Oil guide
(B) Stopper
(C) Center differential
(D) Extension case

6) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

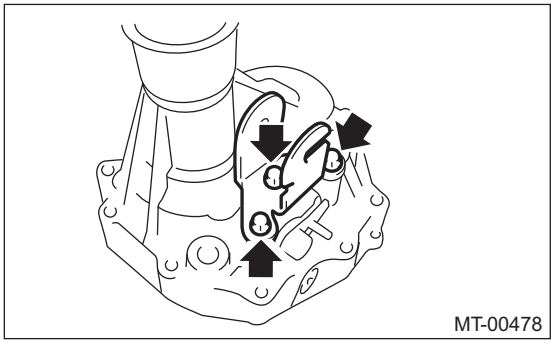
C: DISASSEMBLY

1) Remove the transfer drive gear. <Ref. to 6MT(TY85)-53, REMOVAL, Transfer Drive Gear.>

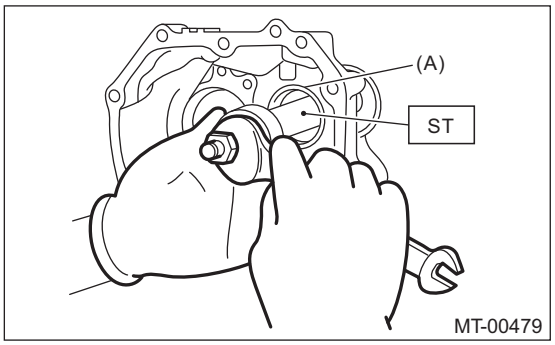
2) Remove the oil guide.



3) Remove the shift bracket.

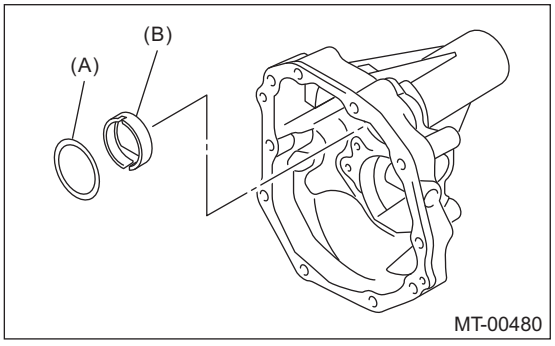


4) Using the ST, remove the taper roller bearing (extension case side) outer race.
ST 18758AA000 PULLER



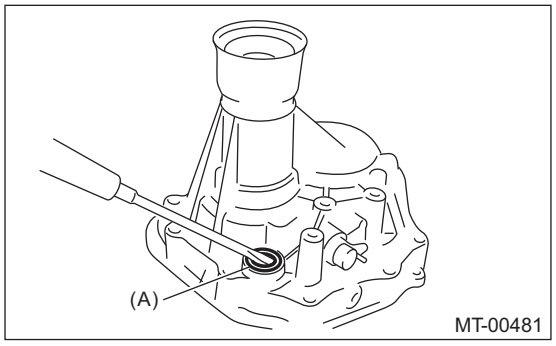
(A) Taper roller bearing (extension case side) outer race

5) Remove the adjusting washer and oil plate.



(A) Adjusting washer
(B) Oil plate

6) Remove the shifter arm oil seal.

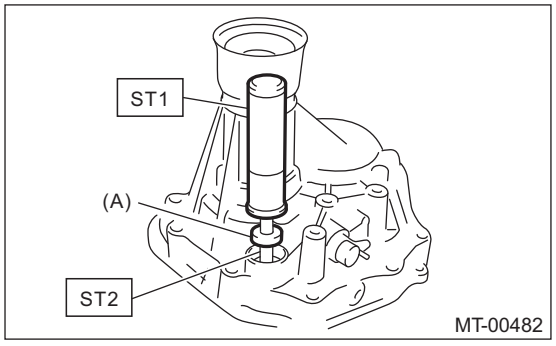


(A) Oil seal

7) Remove the reverse check system. <Ref. to 6MT(TY85)-50, REMOVAL, Reverse Check System.>
8) Remove the extension case oil seal. <Ref. to 6MT(TY85)-28, REPLACEMENT, Oil Seal.>

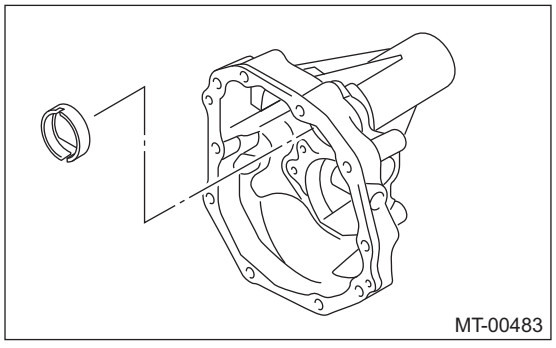
D: ASSEMBLY

1) Install the reverse check system. <Ref. to 6MT(TY85)-50, INSTALLATION, Reverse Check System.>
2) Install the extension case oil seal. <Ref. to 6MT(TY85)-28, REPLACEMENT, Oil Seal.>
3) Using the ST, install the shifter arm shaft oil seal.
ST1 18657AA000 INSTALLER
ST2 18671AA000 OIL SEAL GUIDE



(A) Oil seal

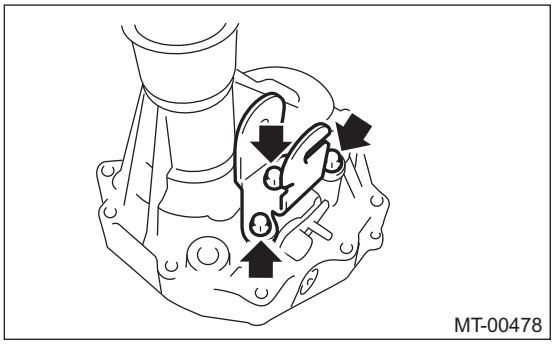
4) Install the oil plate.



5) Select the adjusting washer, and attach to the extension case. <Ref. to 6MT(TY85)-45, ADJUSTMENT, Extension Case.>
6) Install the taper roller bearing (extension case side) outer race to the extension case.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
7) Install the shift bracket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



8) Attach the oil guide and the transfer drive gear. <Ref. to 6MT(TY85)-53, INSTALLATION, Transfer Drive Gear.>

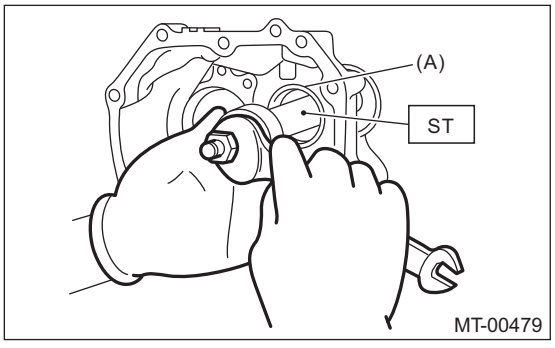
E: INSPECTION

1) Check to make sure there is no damage or cracks on the extension case. If damage or cracking is found, replace the extension case.
2) Inspect for oil leaks at the extension case and transmission case oil seals and mating surfaces. If there are oil leaks, replace the oil seal and liquid gasket.

F: ADJUSTMENT

1. TRANSFER DRIVEN GEAR ADJUSTING WASHER ADJUSTMENT

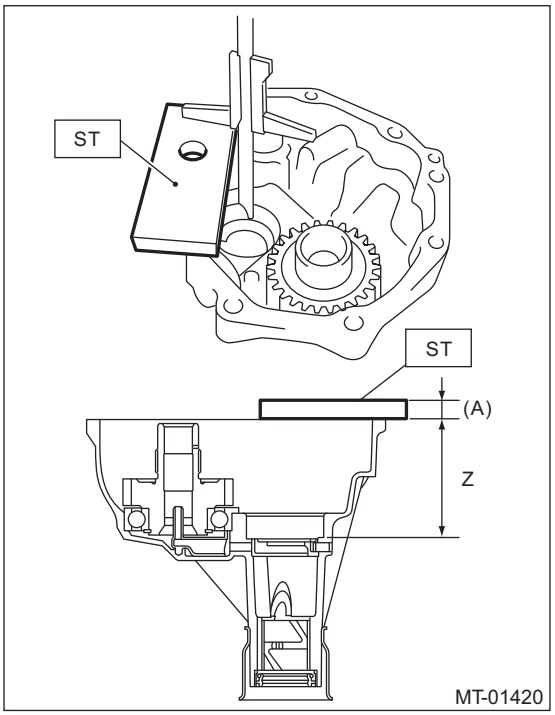
1) Using the ST, remove the taper roller bearing (extension case side) outer race.
ST 18758AA000 PULLER



(A) Taper roller bearing (extension case side) outer race

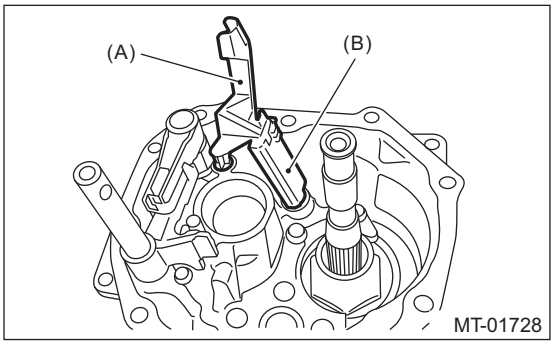
2) Remove the adjusting washer.
3) Measure depth “Z” between the extension case end area and the taper roller bearing (extension case side) contact area.
ST 398643600 GAUGE

NOTE:
When measuring depth “Z”, subtract the thickness of the ST [15 mm (0.59 in)] from the measured value.



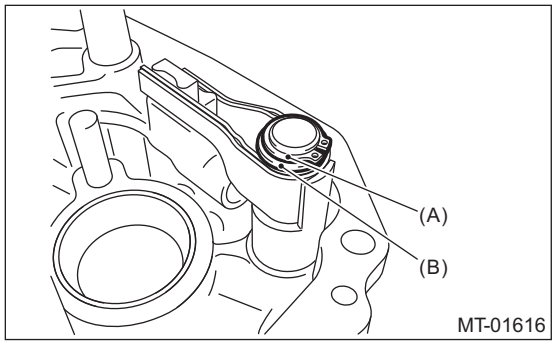
(A) 15 mm (0.59 in)

4) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
5) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
6) Remove the oil guides G and H.



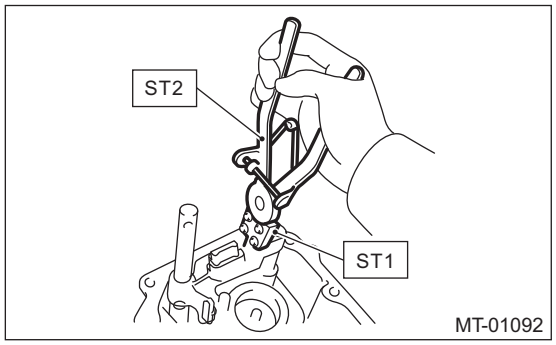
(A) Oil guide G
(B) Oil guide H

7) Remove the snap ring and washer from the selector arm area.

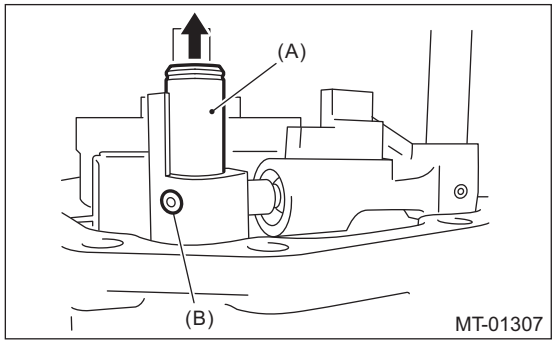


(A) Snap ring
(B) Washer

8) Using an ST, remove the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER

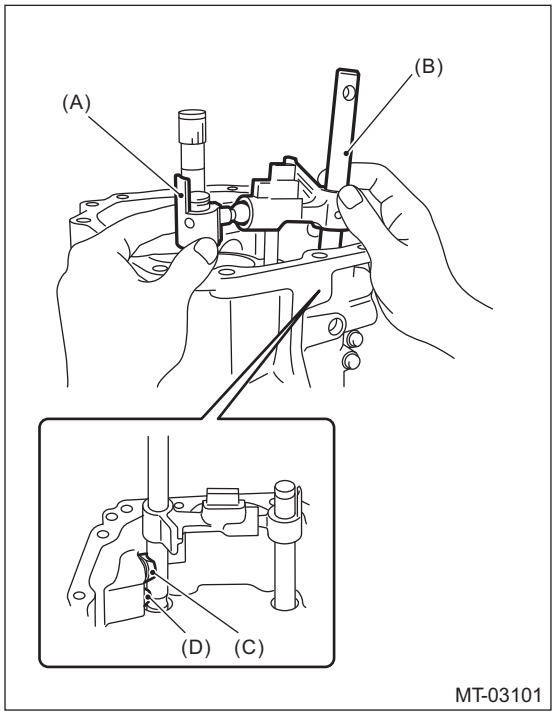


9) Lift the striking rod, and remove the straight pin.



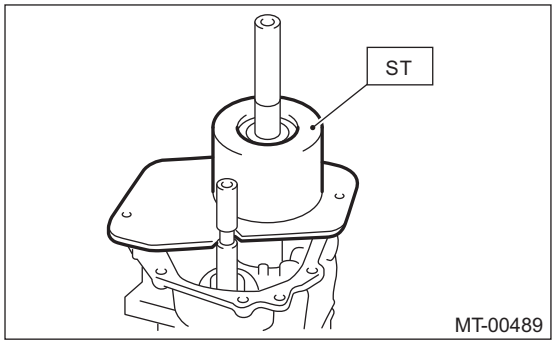
(A) Striking rod
(B) Straight pin

10) Remove the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.



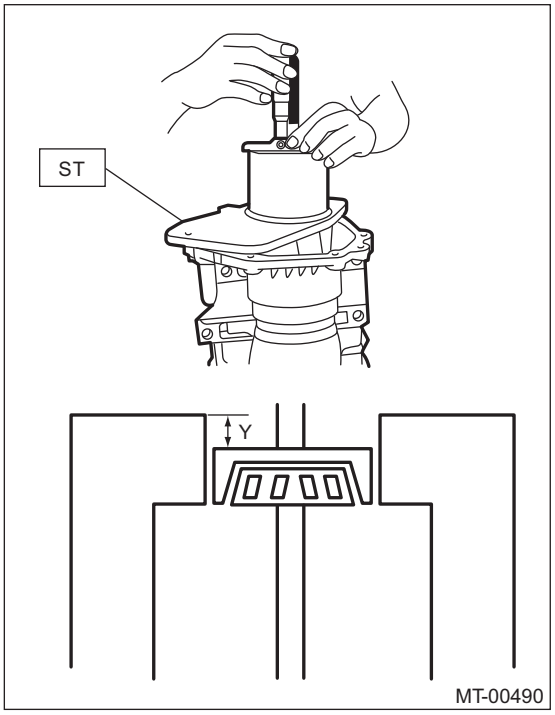
(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

11) Attach the taper roller bearing (extension case side) to the transfer driven gear.
12) Set the ST.
ST 18831AA000 GAUGE



13) Turn the transfer driven gear 10 or more times to seat the taper roller bearing properly.

14) Measure depth “Y” between the end of the ST and the taper roller bearing (extension case side).
ST 18831AA000 GAUGE



15) Using the following calculation, calculate the transfer driven gear adjusting washer value “t”.
t = Z – (100 – Y) – {0.02 — 0.11 mm (0.0008 — 0.0043 in)}

t mm (in)	Transfer driven gear adjusting washer thickness
Y mm (in)	Depth between the end of the ST and the taper roller bearing (extension case side)
Z mm (in)	Depth between the end of the extension case and the taper roller bearing (extension case side) contact area
0.02 — 0.11 mm (0.0008 — 0.0043 in)	Standard clearance between the adjusting washer and the taper roller bearing (extension case side)
100 mm (3.94 in)	Height of ST

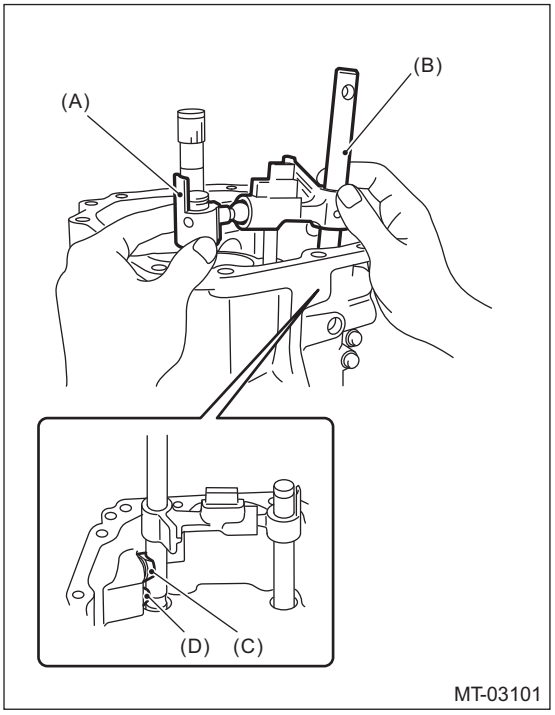
16) Refer to the calculated value “t” to select the closest adjusting washer from the following table.

Standard clearance between the adjusting washer and the taper roller bearing (extension case side)
0.02 — 0.11 mm (0.0008 — 0.0043 in)

NOTE:
Match to be within the standard clearance range.

Adjusting washer (50 × 61 × t)	
Part No.	Thickness t mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0570)

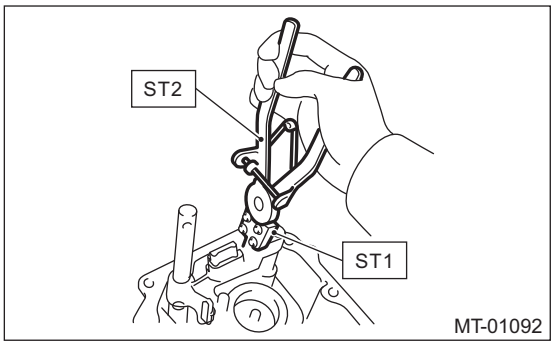
17) Install the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.



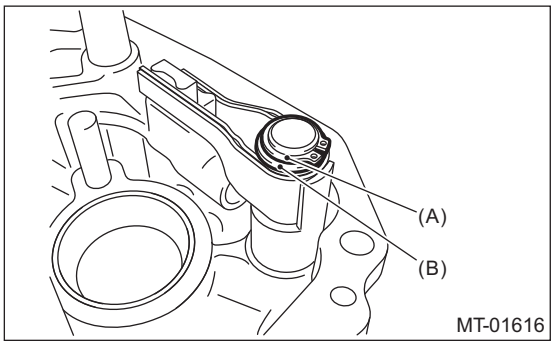
(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

18) Install a new straight pin.

19) Using the ST, install the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER



20) Install the washer and snap ring to the selector arm area.

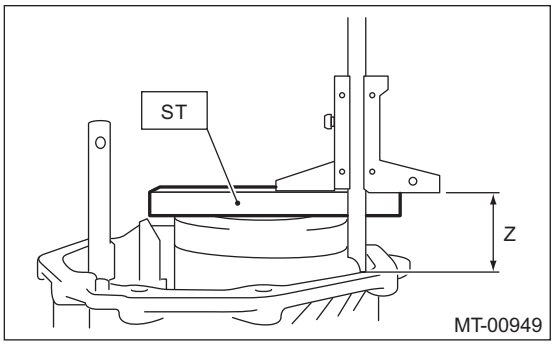


(A) Snap ring
(B) Washer

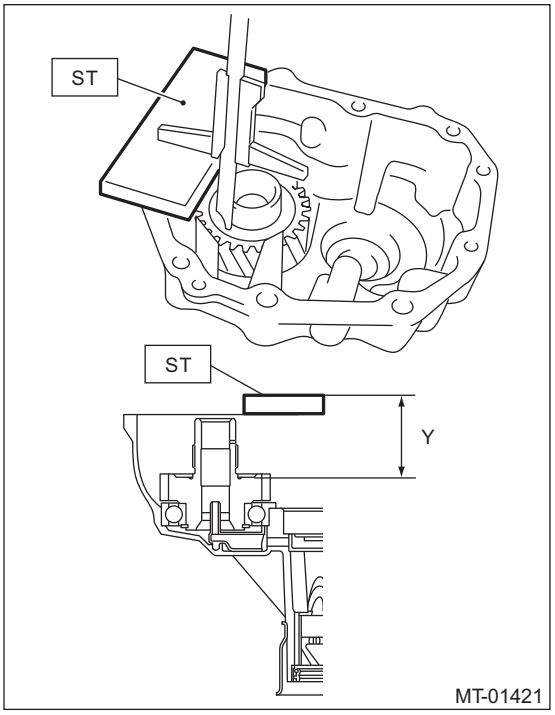
21) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>

2. TRANSFER DRIVE GEAR ADJUSTING WASHER SELECTION

1) Measure height "Z" between the transmission case end area and ST.
ST 398643600 GAUGE



2) Measure depth "Y" between the end of the ST and the transfer drive gear.
ST 398643600 GAUGE



3) Using the following calculation, calculate the transfer drive gear adjusting washer value "t".
t = {Y – 15 mm (0.59 in)} – {Z – 15 mm (0.59 in)} – 0.75 — 0.95 mm (0.030 — 0.037 in)

t mm (in)	Transfer drive gear adjusting washer thickness
Y mm (in)	Depth between the end of the ST and the transfer drive gear
Z mm (in)	Height from the end of the transmission case to the end of the ST
0.75 — 0.95 mm (0.030 — 0.037 in)	Standard clearance between the adjusting washer and transfer drive gear
15 mm (0.591 in)	Thickness of ST

4) Refer to the calculated value "t" to select the closest adjusting washer from the following table.

Standard clearance between the adjusting washer and transfer drive gear
0.75 — 0.95 mm (0.030 — 0.037 in)

NOTE:
Match to be within the standard clearance range.

Adjusting washer (36.3 × 52 × t)	
Part No.	Thickness mm (in)
803036070	0.80 (0.0315)
803036071	0.95 (0.0374)
803036072	1.10 (0.0433)
803036073	1.25 (0.0492)
803036074	1.40 (0.0551)

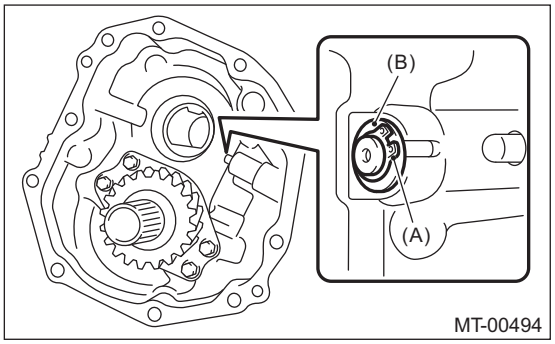
Adjusting washer (36.3 × 52 × t)	
Part No.	Thickness mm (in)
803036075	0.65 (0.0256)

5) Install the selected adjusting washer.

14.Reverse Check System

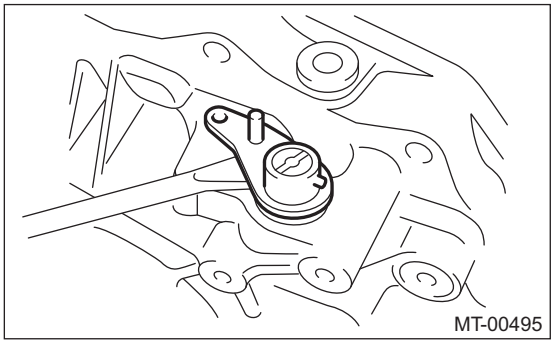
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
4) Remove the snap ring and washer.

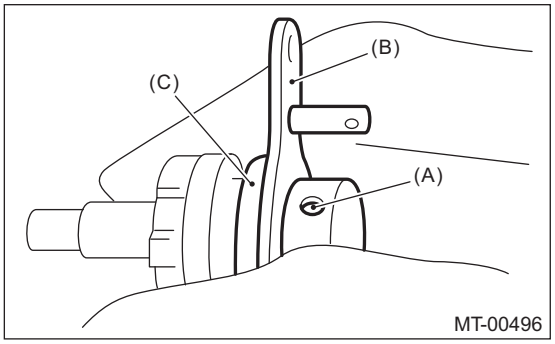


(A) Snap ring
(B) Washer

5) Remove the reverse check shaft and return spring.

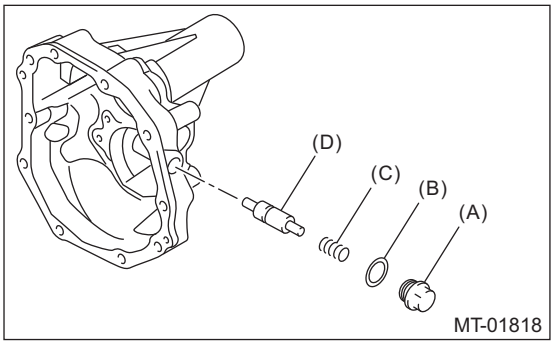


6) Remove the straight pin, and remove the reverse check lever and oil seal.



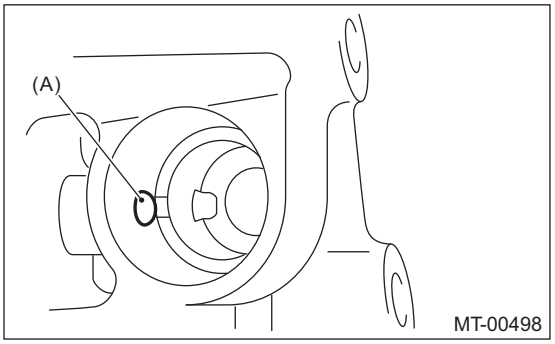
(A) Straight pin
(B) Reverse check lever
(C) Oil seal

7) Remove the plug, then remove the gasket, reverse check spring and reverse check plunger.



(A) Plug
(B) Gasket
(C) Reverse check spring
(D) Reverse check plunger

8) Remove the reverse lock plunger.



(A) Reverse lock plunger

B: INSTALLATION

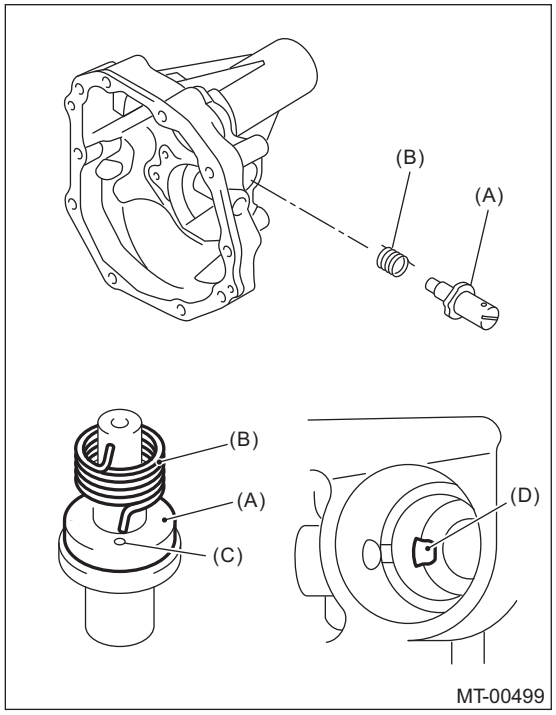
1) Insert the reverse lock plunger.
2) Install the reverse check plunger, reverse check spring, gasket and plug in order.

NOTE:
Use a new gasket.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

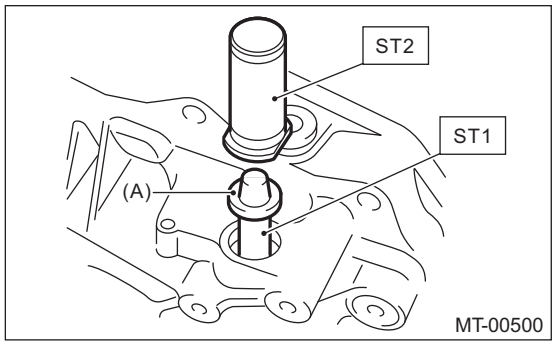
3) Install the return spring and reverse check shaft.

NOTE:
Confirm that the end of the spring matches the hole of the reverse check shaft and the cut out of the extension case.



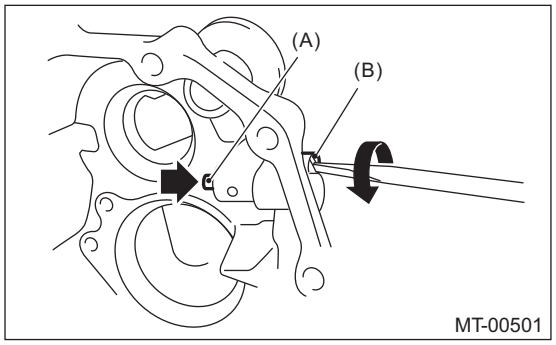
(A) Reverse check shaft
(B) Return spring
(C) Hole
(D) Cut out

4) Install the washer and snap ring.
5) Attach ST1 to the reverse check shaft. Install the new oil seal, and push it in using ST2.
ST1 18671AA000 OIL SEAL GUIDE
ST2 18657AA010 INSTALLER



(A) Oil seal

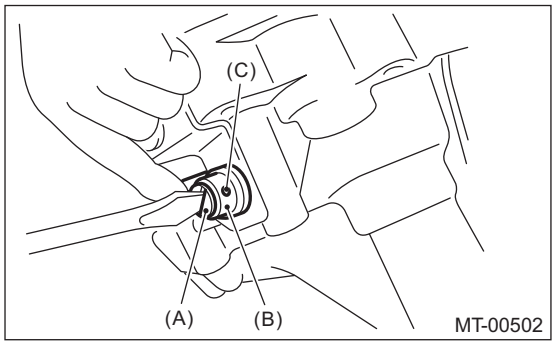
6) Insert the reverse check lever, and turn the reverse check shaft until the reverse check plunger is first pushed in.



(A) Reverse check plunger
(B) Reverse check shaft

7) Match the hole of the reverse check lever and the reverse check shaft, and attach the straight pin.

NOTE:
Use a new straight pin.



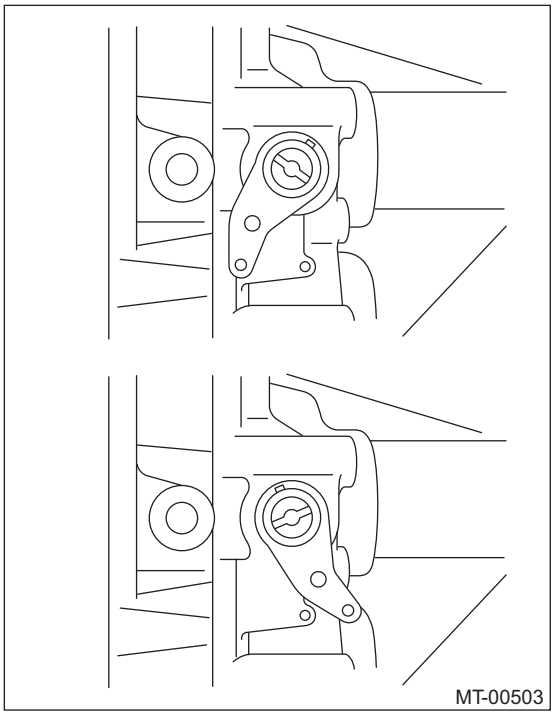
(A) Reverse check shaft
(B) Reverse check lever
(C) Hole

8) Check that the reverse check is operating correctly. <Ref. to 6MT(TY85)-51, INSPECTION, Reverse Check System.>
9) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

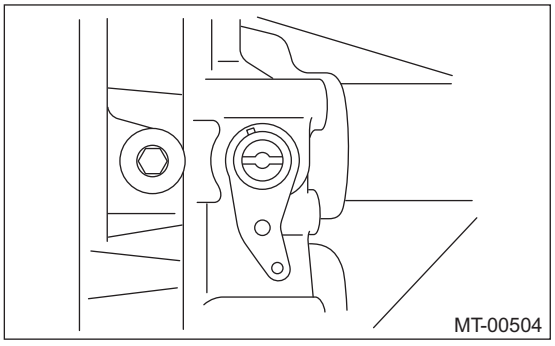
C: INSPECTION

1) Check that there is no damage on any parts.
2) Check that the reverse check lever is operating smoothly.
3) Inspect that there is no oil leak at the oil seal section of the reverse check shaft. If there is oil leakage, replace the oil seal.
4) Check the operation of the reverse check.

(1) When the reverse check lever is in the following position, the reverse check plunger is pressed, or the gear can shift into reverse.



(2) When the reverse check lever is in the following position, the reverse check plunger is not pressed, or the gear cannot shift into reverse.

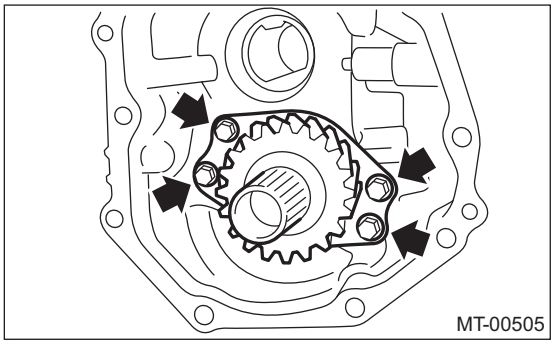


5) If it is not as specified, reassemble the reverse check system.

15.Transfer Drive Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
4) Remove the transfer drive gear.



MT-00505

B: INSTALLATION

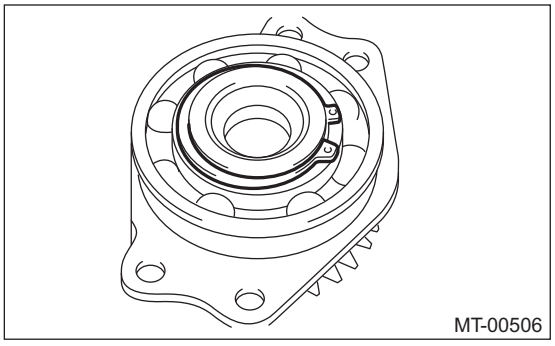
1) Install the transfer drive gear.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) When the ball bearing, transfer drive gear or snap ring are replaced, select an appropriate adjusting washer for the transfer drive gear. <Ref. to 6MT(TY85)-44, ASSEMBLY, Extension Case.>
3) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
4) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

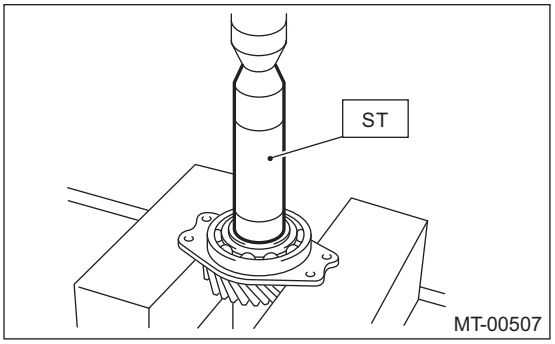
C: DISASSEMBLY

1) Remove the snap ring.



MT-00506

2) Remove the ball bearing using ST.
ST 499877000 RACE 4-5 INSTALLER

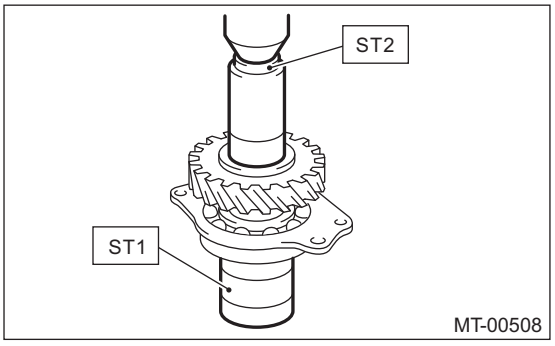


MT-00507

D: ASSEMBLY

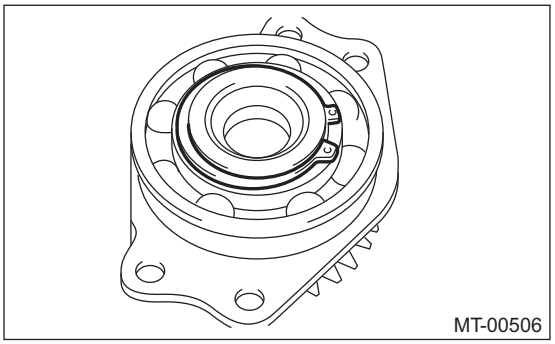
1) Using the ST, install the ball bearing.

NOTE:
Use a new ball bearing.
ST1 499247400 INSTALLER
ST2 398497701 SEAT



MT-00508

2) Install the snap ring.



MT-00506

3) Inspect the clearance between the snap ring and the ball bearing. <Ref. to 6MT(TY85)-53, INSPECTION, Transfer Drive Gear.>

E: INSPECTION

1) Ball bearing
Replace the bearings in the following cases.
- Damage or rust on the bearings
- Wear, or damage
- The bearing does not rotate smoothly or an abnormal noise is emitted.

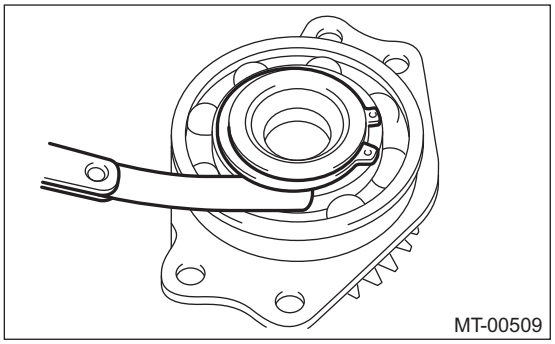
2) Transfer drive gear
Replace the drive gear in following case:

• If the drive gear tooth surface and shaft are excessively damaged or broken.

3) Measure the clearance between the snap ring and ball bearing inner race with a thickness gauge.

Standard clearance between the snap ring and inner race:

0 — 0.15 mm (0 — 0.0059 in)



4) If the measurement is out of specifications, reselect an appropriate snap ring.

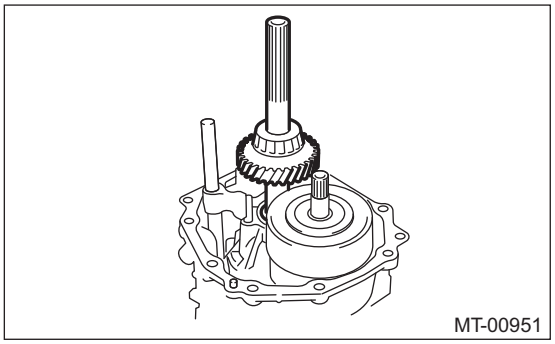
Snap ring	
Part No.	Thickness mm (in)
805045050	1.76 (0.069)
805045060	1.88 (0.074)
805045070	2.00 (0.079)

After replacing the snap ring, reinspect the clearance.

16.Transfer Driven Gear

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
4) Remove the transfer driven gear.



MT-00951

B: INSTALLATION

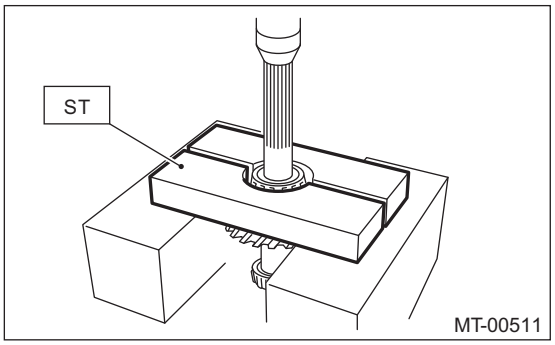
1) Install the transfer driven gear.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

2) When the taper roller bearing or the transfer driven gear is replaced, select an appropriate adjusting washer for the transfer driven gear. <Ref. to 6MT(TY85)-45, ADJUSTMENT, Extension Case.>
3) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
4) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

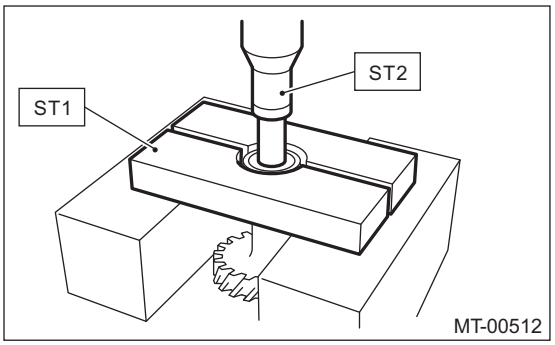
C: DISASSEMBLY

1) Using the ST, remove the taper roller bearing (extension case side).
ST 498515700 REMOVER



MT-00511

2) Using the ST, remove the taper roller bearing (transmission case side).
ST1 899858600 REMOVER
ST2 899864100 REMOVER



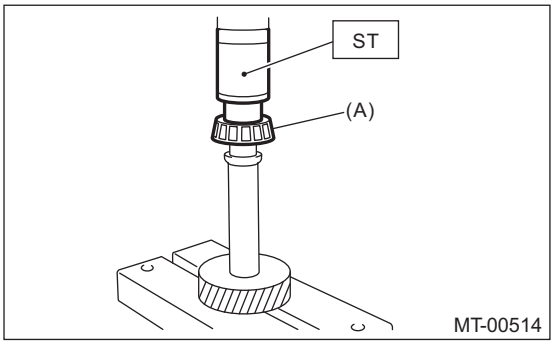
MT-00512

D: ASSEMBLY

1) Using the ST, install the taper roller bearing (transmission case side).
ST 499757002 INSTALLER

CAUTION:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.



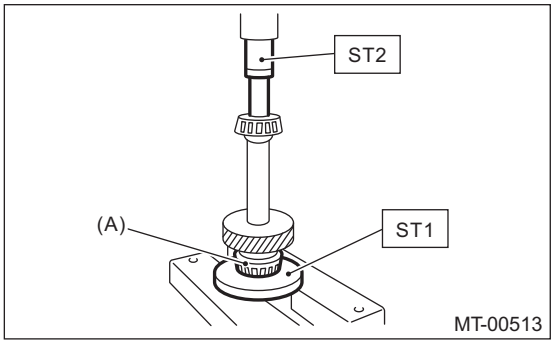
MT-00514

(A) Taper roller bearing (transmission case side)

2) Using the ST, install the taper roller bearing (extension case side).
ST1 398177700 INSTALLER
ST2 899864100 REMOVER

CAUTION:
• Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
Be careful when handling because the taper roller bearing and the outer race are used as a set.



(A) Taper roller bearing (extension case side)

E: INSPECTION

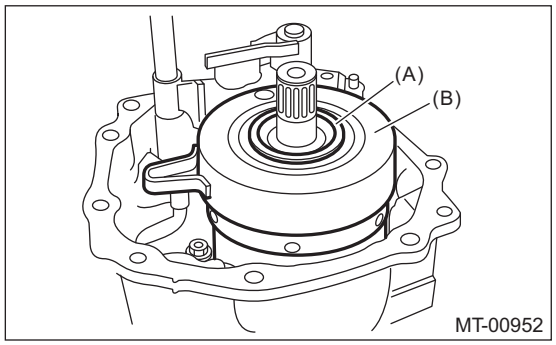
1) Taper roller bearing
Replace the bearings in the following cases.
- Damage or rust on the bearings
- Wear, or damage
- After applying transmission gear oil, bearing does not rotate smoothly or an abnormal noise is emitted.

2) Transfer driven gear
Replace the driven gear in the following cases.
- If the driven gear tooth surface and shaft are excessively damaged or broken.

17.Center Differential

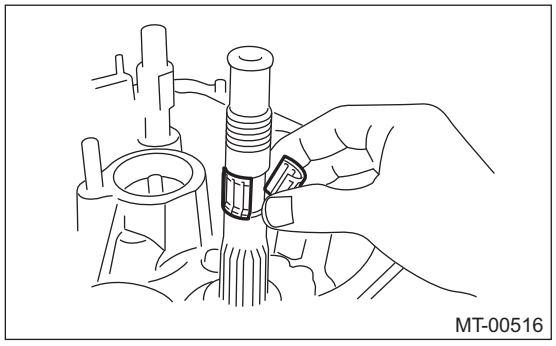
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
4) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
5) Disconnect the center differential connector.
6) Remove the adjusting washer and center differential.



(A) Adjusting washer
(B) Center differential

7) Remove the needle bearing.



B: INSTALLATION

1) Install the needle bearing.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.
2) Install the adjusting washer and center differential.
3) When replacing the center differential, select and install the appropriate transfer drive gear and adjusting washer. <Ref. to 6MT(TY85)-45, ADJUSTMENT, Extension Case.>
4) Connect the center differential connector, and affix to the oil guide.
5) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
6) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

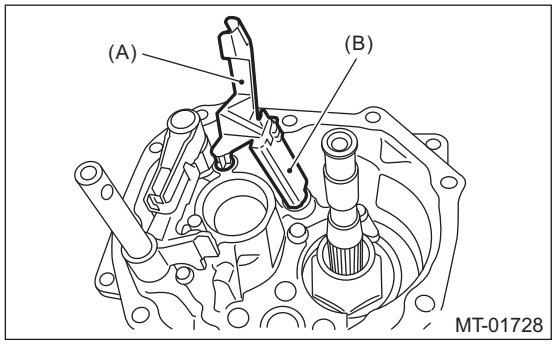
C: INSPECTION

Check that there is no damage on the center differential. Replace if damaged.

18.Transmission Case

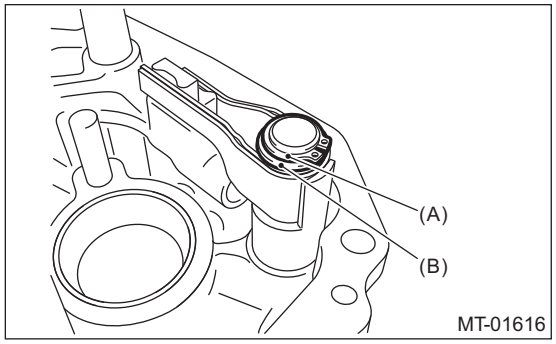
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the oil guides G and H.



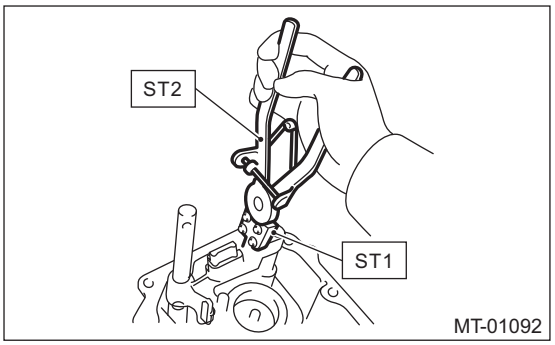
(A) Oil guide G
(B) Oil guide H

8) Remove the snap ring and washer from the selector arm area.

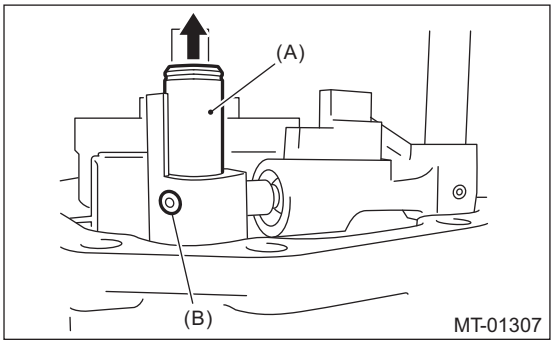


(A) Snap ring
(B) Washer

9) Using an ST, remove the neutral set spring and support.
ST1 18756AA000 CLAW
ST2 399893600 PLIER

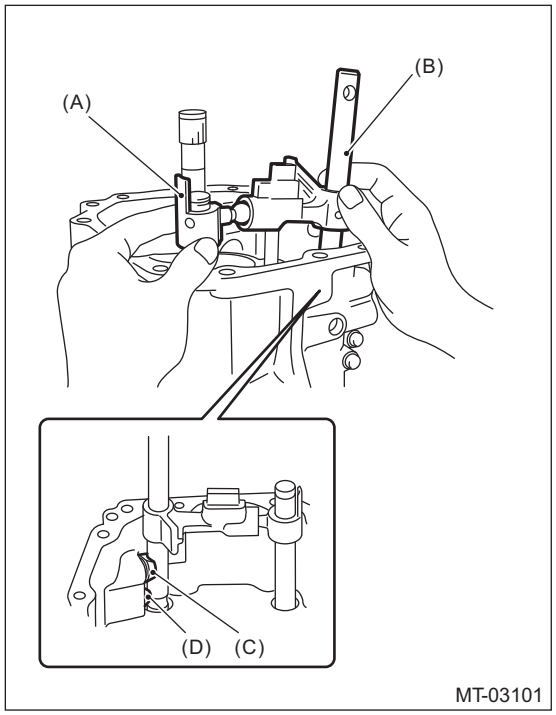


10) Lift the striking rod, and remove the straight pin.



(A) Striking rod
(B) Straight pin

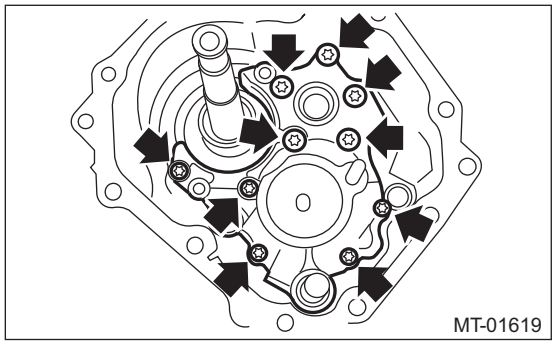
11) Remove the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.



(A) Selector arm No. 2
(B) Shifter arm shaft
(C) Selector plunger
(D) Shift accent plunger

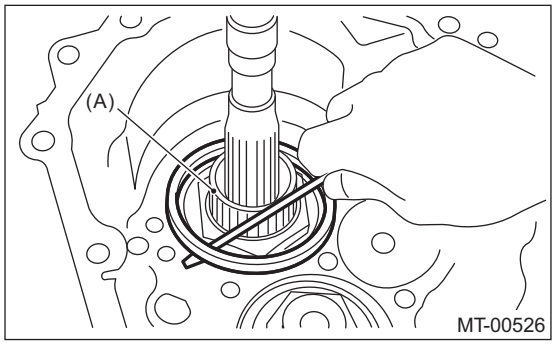
12) Remove the transfer bearing holder.

NOTE:
Using a general tool may cause damage. Remove the bolt using the ST.
ST 18663AA000 SOCKET



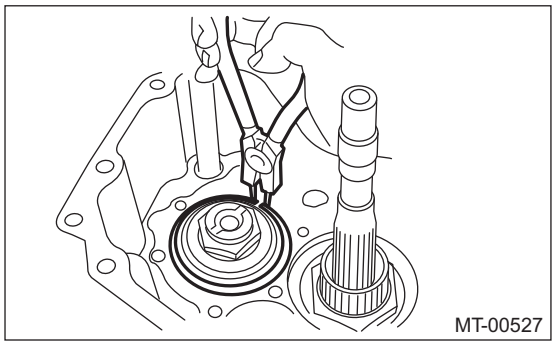
13) Remove the washer on the main shaft section.

14) Remove the driven gear assembly shim and spacer.

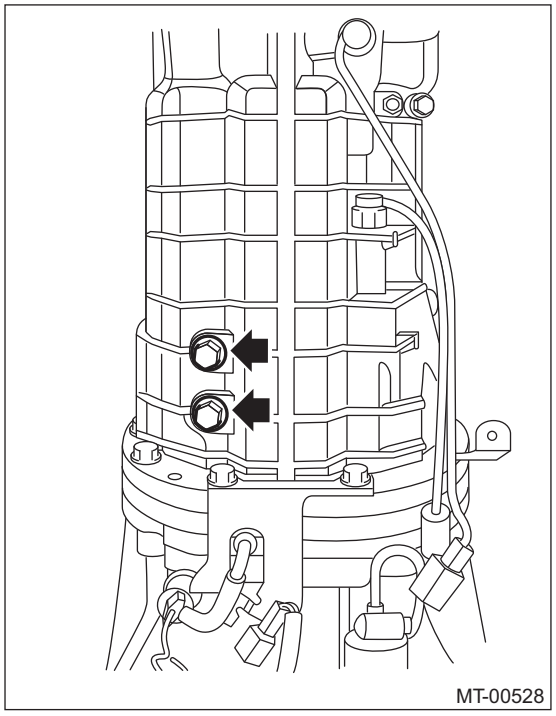


(A) Driven gear ASSY

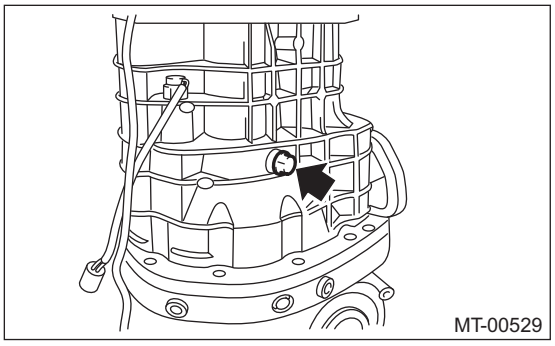
15) Remove the snap ring.



16) Remove the pilot bolt.

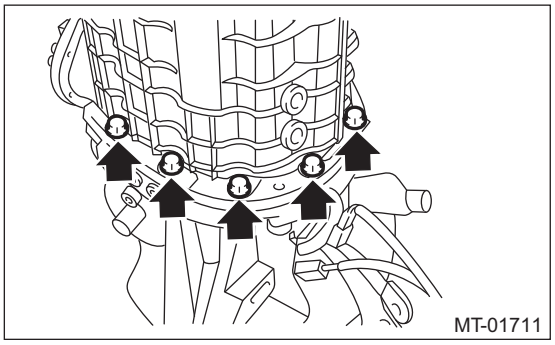


17) Remove the holder reverse bolt.



18) Remove the transmission case.

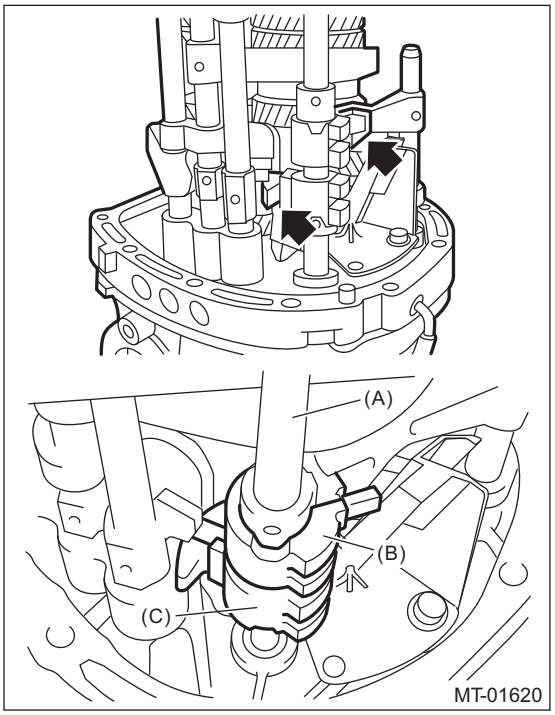
NOTE:
If the oil guide is caught between the shift fork, it may be difficult to remove the transmission case. Move the oil guide, then remove. Do not pull on the transmission case with excessive force.



19) Remove any remaining liquid gasket from the transmission case and adapter plate.

B: INSTALLATION

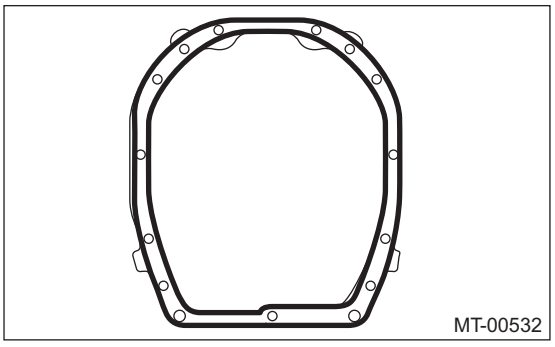
1) Check that the shifter fork and the interlock block are both shifted into the neutral position. If they are not, shift into the neutral position.



(A) Striking rod
(B) Reverse interlock block
(C) Interlock block

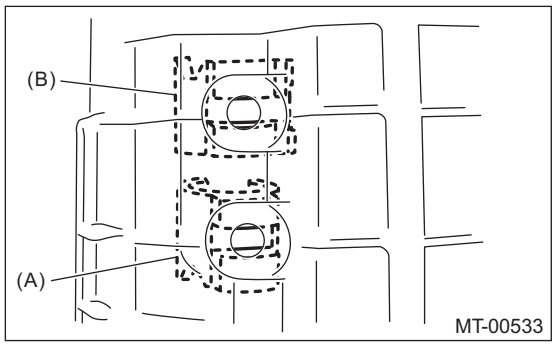
2) Apply liquid gasket to the adapter plate.

Liquid gasket:
THREE BOND 1215B or equivalent



3) Install the transmission case.

4) By inspecting from the pilot bolt attachment hole, check that the interlock block and the reverse interlock block are aligned to the neutral position. If not aligned, remove the transmission case, and shift the shifter fork and interlock block to the neutral position.



(A) Interlock block
(B) Reverse interlock block

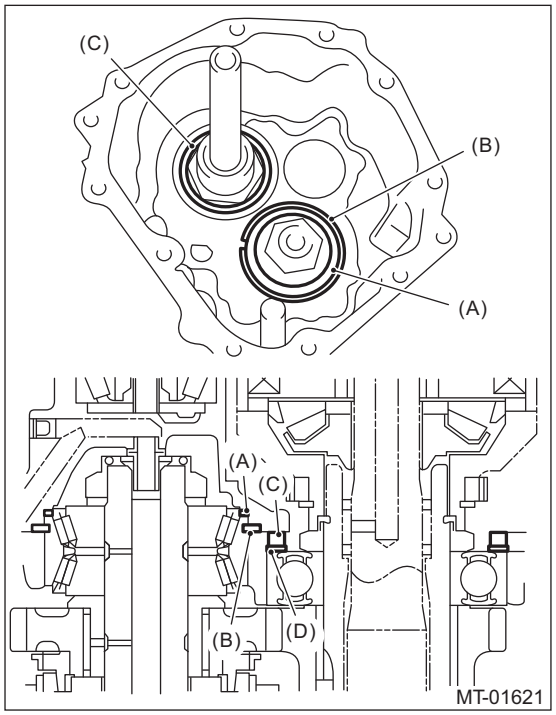
5) Use a new gasket to temporarily attach the pilot bolt.
6) Install the transmission case with the bolts and nuts.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
7) Tighten the pilot bolt.

Tightening torque:
34 N·m (3.5 kgf-m, 25.1 ft-lb)
8) Tighten the holder reverse bolt.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

9) Install the snap ring and washer for the main shaft assembly, and washer and collar for the driven gear assembly.



(A) Washer
(B) Snap ring
(C) Collar
(D) Washer

10) Install the transfer bearing holder.

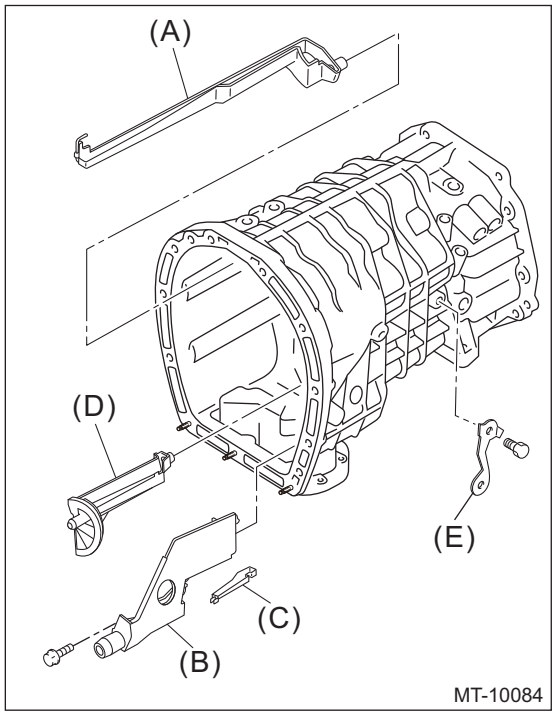
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
ST 18663AA000 SOCKET
11) When replacing the transfer bearing holder, select the appropriate transfer driven gear and adjusting washer, and install to the extension case. <Ref. to 6MT(TY85)-45, ADJUSTMENT, Extension Case.>
12) Install the selector arm No. 2, shifter arm shaft, selector plunger, shift accent plunger and spring.
13) Install a new straight pin.
14) Using the ST, install the neutral set spring.
ST1 18756AA000 CLAW
ST2 399893600 PLIER
15) Install the snap ring and washer to the selector arm area.
16) Install the oil guides G and H.
17) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
18) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>

19) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
20) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

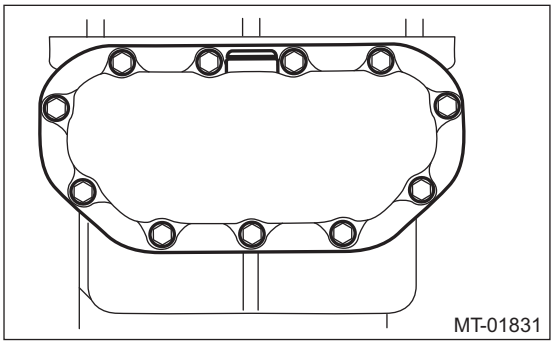
1) Remove the transmission harness from the transmission case.

NOTE:
Remove the connector by disengaging the connector claw from the inside of the transmission case.
2) Remove the oil guides C, D, E, F and harness bracket.



(A) Oil guide C
(B) Oil guide D
(C) Oil guide E
(D) Oil guide F
(E) Harness bracket

3) Remove the oil pan.

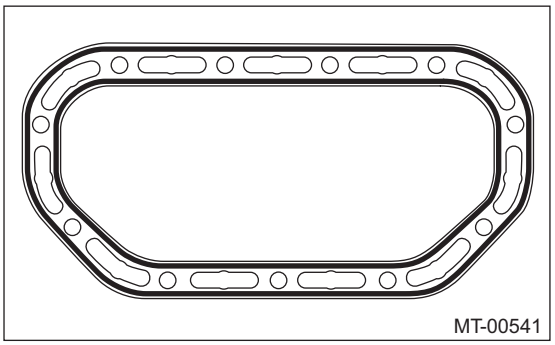


4) Remove any remaining liquid gasket from the transmission case and oil pan.

D: ASSEMBLY

1) Apply liquid gasket to the oil pan.

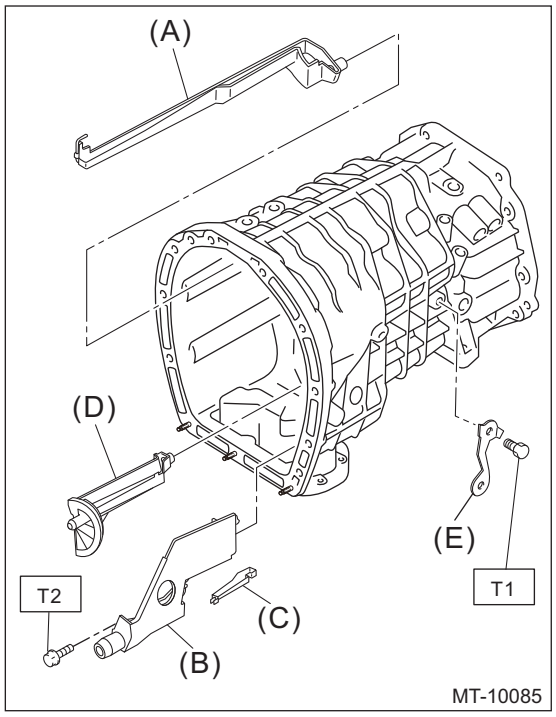
Liquid gasket:
THREE BOND 1215B or equivalent



2) Install the oil pan.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
3) Install the oil guides C, D, E, F and harness bracket.

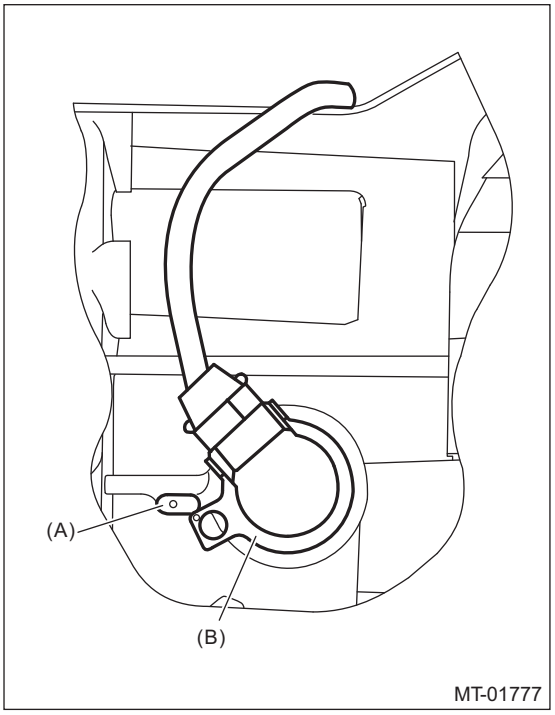
Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Oil guide C
(B) Oil guide D
(C) Oil guide E
(D) Oil guide F
(E) Harness bracket

4) Install the transmission harness to the transmission.

NOTE:
Install the transmission harness connector by aligning the protrusions of the transmission and transmission harness connector.



(A) Protrusion
(B) Transmission harness connectors

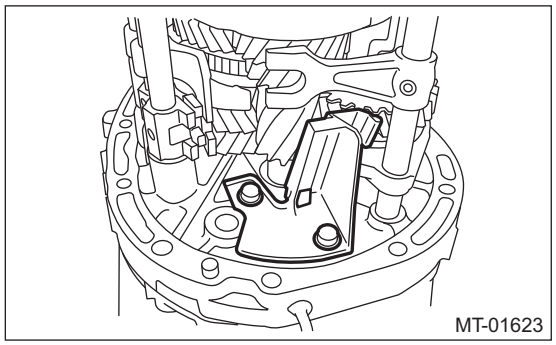
E: INSPECTION

1) If the sludge is accumulated in the oil pan, use a waste cloth to wipe it off completely.
2) Check that there is no damage on any parts. Replace damaged parts with new parts.

19.Main Shaft Assembly

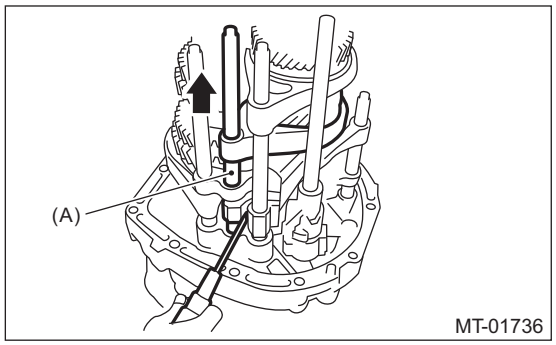
A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the striking rod.
9) Remove the oil guide B.



MT-01623

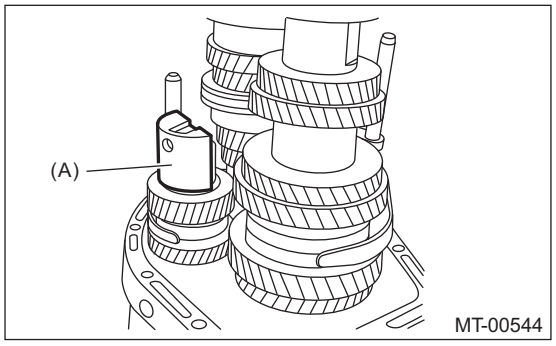
10) Use a screwdriver to shift to the 4th gear position.



MT-01736

(A) 3rd-4th fork rod

11) Remove the reverse idler holder.

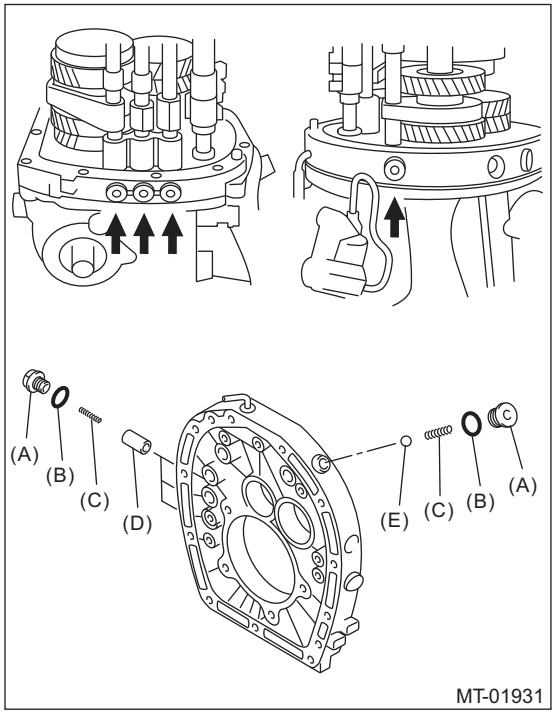


MT-00544

(A) Reverse idler holder

12) Remove the check plug, O-ring, check ball spring, shift accent plunger and check ball from the adapter plate.

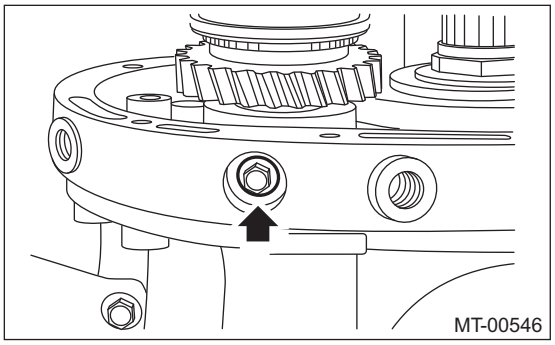
NOTE:
Do not reuse the O-ring.



MT-01931

(A) Check plug
(B) O-ring
(C) Checking ball spring
(D) Shift accent plunger
(E) Check ball

13) Remove the bolt and gasket holding the reverse idler gear shaft.

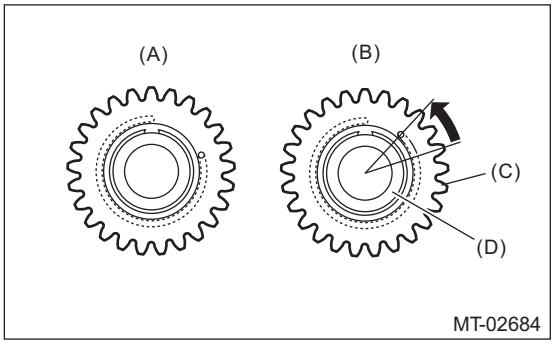


14) Push the main shaft assembly, driven gear assembly, reverse idler gear and shifter forks to remove from the adapter plate all at once.

NOTE:
A helper is required to perform this work.

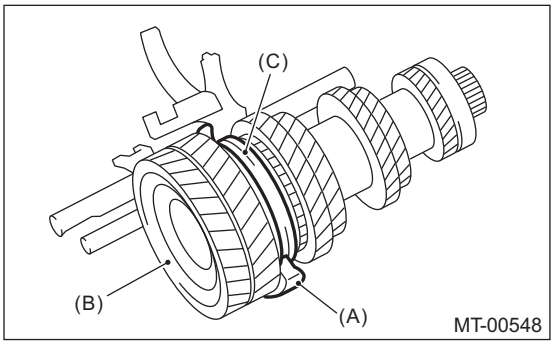
B: INSTALLATION

1) Adjust the 3rd-4th and 5th-6th fork rods. <Ref. to 6MT(TY85)-108, ADJUSTMENT, Shifter Fork and Rod.>
2) Rotate the reverse idler sub gear in the arrow direction by two teeth, and secure it with a wire.



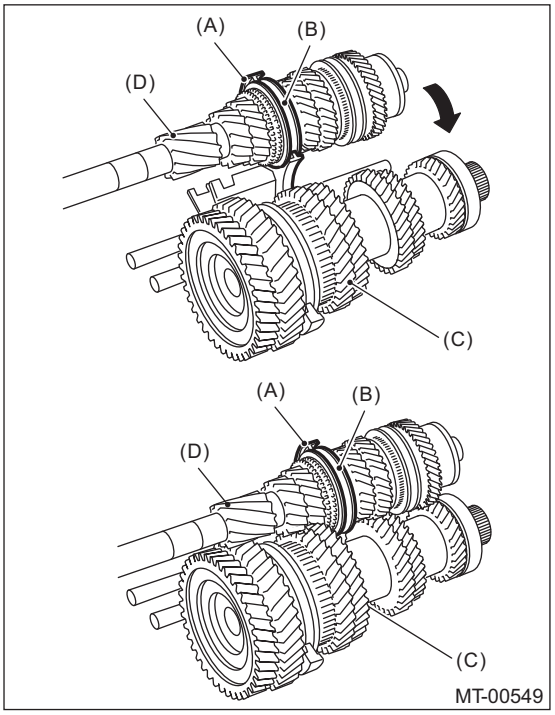
(A) Free status
(B) Set status
(C) Reverse idler sub gear
(D) Reverse idler gear

3) Attach the driven gear assembly to the 1st-2nd shifter fork assembly.



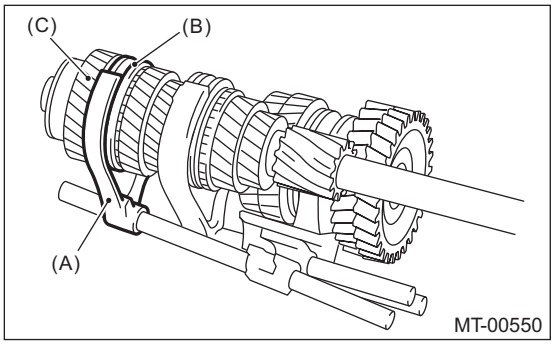
(A) 1st-2nd shifter fork
(B) Driven gear ASSY
(C) 1st-2nd coupling sleeve

4) Attach the main shaft assembly to the 3rd-4th shifter fork, and assemble to the driven gear assembly.



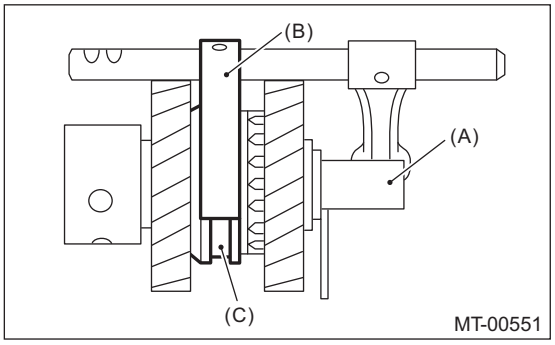
(A) 3rd-4th shifter fork
(B) 3rd-4th coupling sleeve
(C) Driven gear ASSY
(D) Main shaft ASSY

5) Attach the 5th-6th shifter fork assembly to the main shaft assembly.



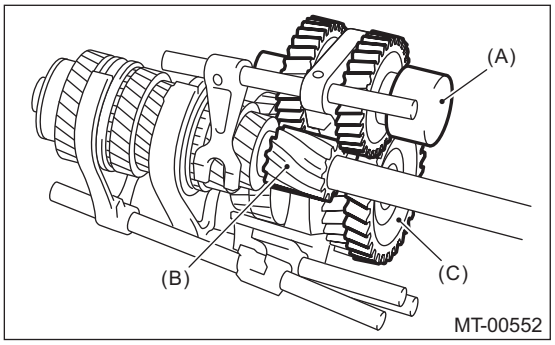
(A) 5th-6th shifter fork
(B) 5th-6th coupling sleeve
(C) Main shaft ASSY

6) Attach the reverse shifter fork assembly to the reverse idler gear assembly.



(A) Reverse idler gear ASSY
(B) Reverse shifter fork
(C) Reverse coupling sleeve

7) Install the reverse idler gear assembly.

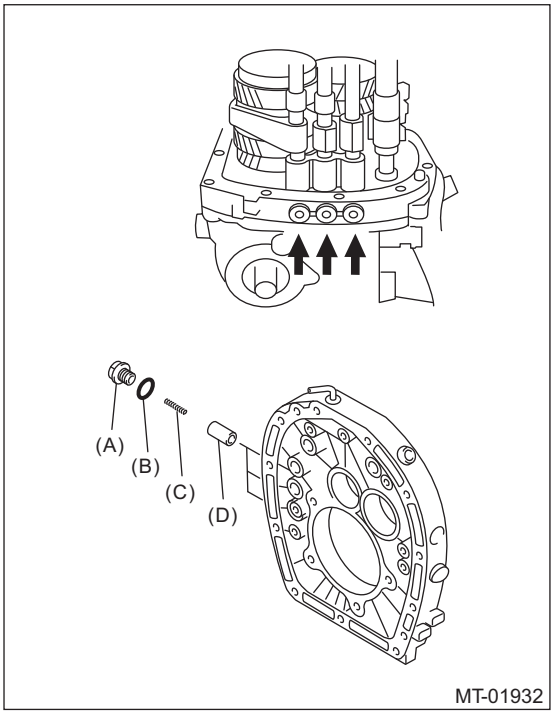


(A) Reverse idler gear ASSY
(B) 1st drive gear
(C) Reverse gear (driven shaft)

8) Install the thrust bearing of the driven gear assembly.
9) Push on the shifter forks, main shaft assembly, driven gear assembly and reverse idler gear assemblies, to attach to the adapter plate all at once.

NOTE:
A helper is required to perform this work.
10) As necessary, remove the wire used to secure from the reverse idler gear.
11) Install the shift accent plunger, check ball spring, new O-ring and check plugs.

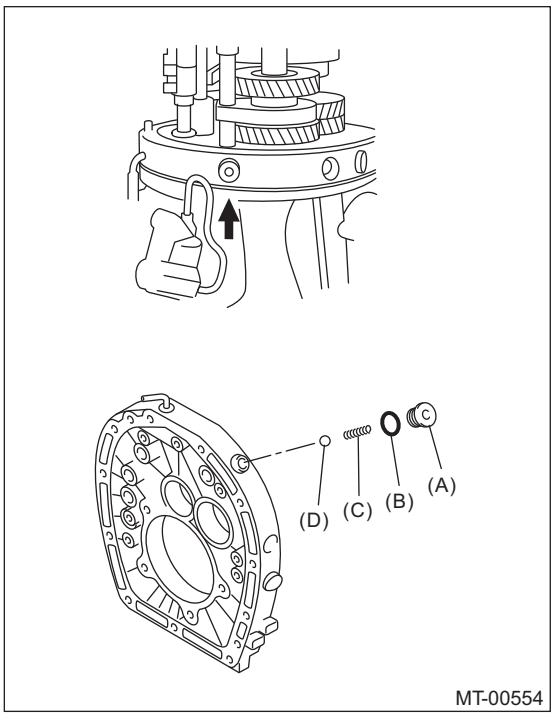
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Check plug
(B) O-ring
(C) Checking ball spring
(D) Shift accent plunger

12) Install the check ball, check ball spring, new O-ring and check plugs.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Check plug
(B) O-ring
(C) Checking ball spring
(D) Check ball

13) Install the bolt and a new gasket holding the reverse idler shaft.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

14) Use a screwdriver to shift to the 4th gear position.
15) Install the reverse idler holder.
16) Install the oil guide B.

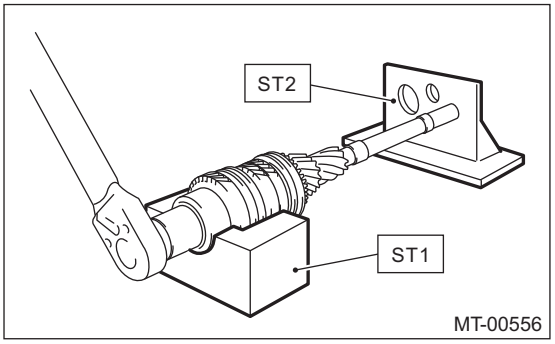
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

17) Install the striking rod.
18) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
19) Install the selected main shaft snap ring and washers.
20) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
21) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
22) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
23) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
24) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

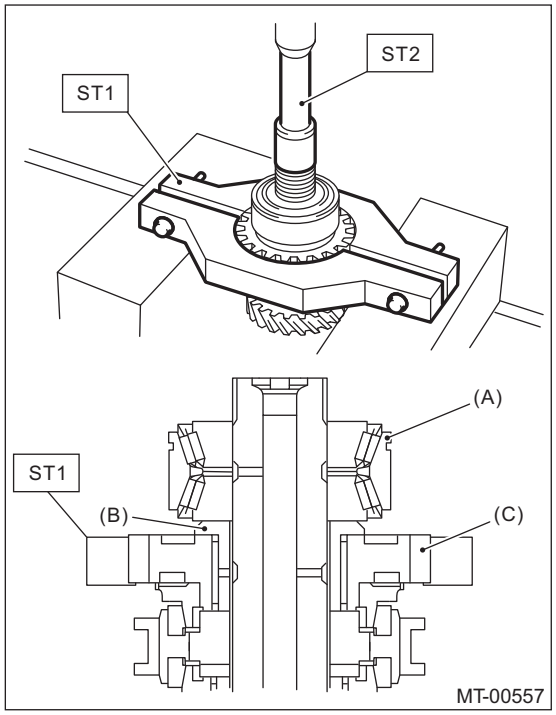
NOTE:
Individual coupling sleeves and synchronizer hubs meet at a specified position. Before disassembly, mark the meeting position of the coupling sleeve and synchronizer hub.
1) Affix the ST to the work table.
ST 18664AA000 BASE
2) Flatten the tab of the lock nut.
3) Set the main shaft assembly to the ST, and remove the lock nut and lock washer.
ST1 18665AA000 HOLDER
ST2 18664AA000 BASE

NOTE:
Use a 38 mm socket wrench.



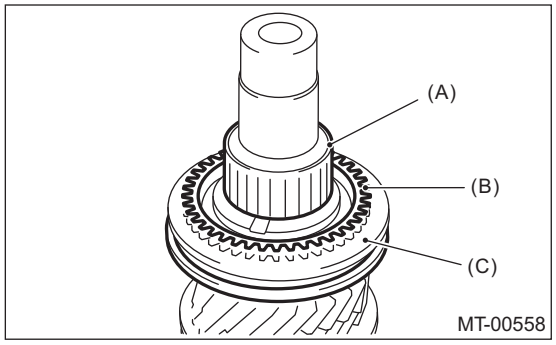
4) Remove the main shaft assembly from the ST.

5) Set the ST1 to the 6th drive gear, and use a press to remove the double taper roller bearing and outer race, 6th drive gear bushing and 6th drive gear.
ST1 18722AA010 REMOVER
ST2 899864100 REMOVER



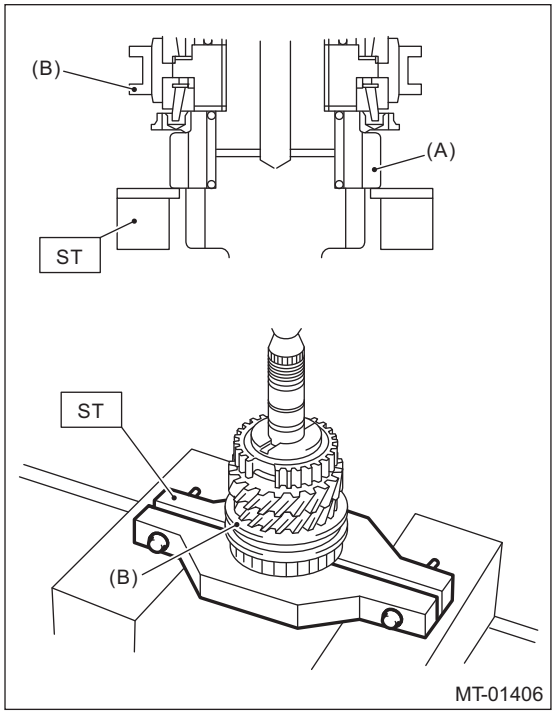
(A) Double taper roller bearing
(B) 6th drive gear bushing
(C) 6th drive gear

6) Remove the 5th-6th coupling sleeve, 6th needle bearing and 6th baulk ring.



(A) 6th needle bearing
(B) 6th baulk ring
(C) 5th-6th coupling sleeve

7) Set the ST to the 3rd drive gear, and use a press to remove individual parts.
ST 18720AA000 REMOVER

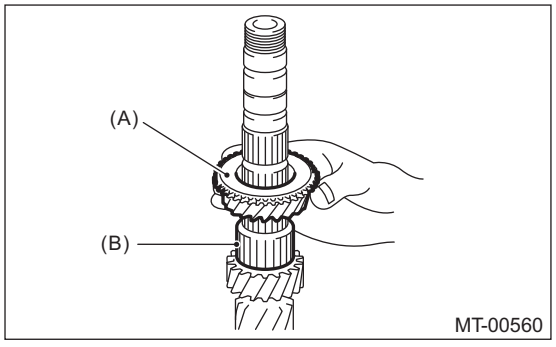


(A) 3rd drive gear
(B) 3rd-4th coupling sleeve

D: ASSEMBLY

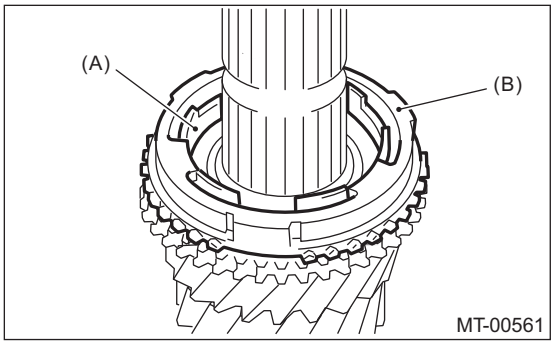
NOTE:
When replacing the following parts, replace as a set.
- Coupling sleeve and synchronizer hub
- 3rd outer baulk ring, 3rd synchro cone and 3rd inner baulk ring
- Double taper roller bearing

1) Apply adequate transmission gear oil to the main shaft, 3rd needle bearing and 3rd drive gear inner surface.
2) Install the 3rd needle bearing and 3rd drive gear to the main shaft.



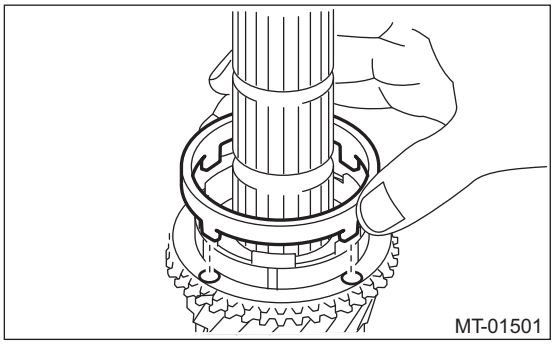
(A) 3rd drive gear
(B) 3rd needle bearing

3) Install the 3rd inner baulk ring, 3rd synchro cone and 3rd outer baulk ring.



(A) 3rd inner baulk ring
(B) 3rd outer baulk ring

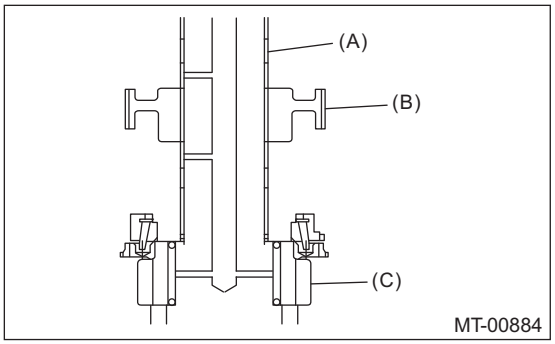
NOTE:
Install the 3rd synchro cone by aligning the protrusion of the 3rd synchro cone with the hole on the 3rd drive gear.



4) Install the 3rd-4th synchronizer hub and 4th needle bearing race.

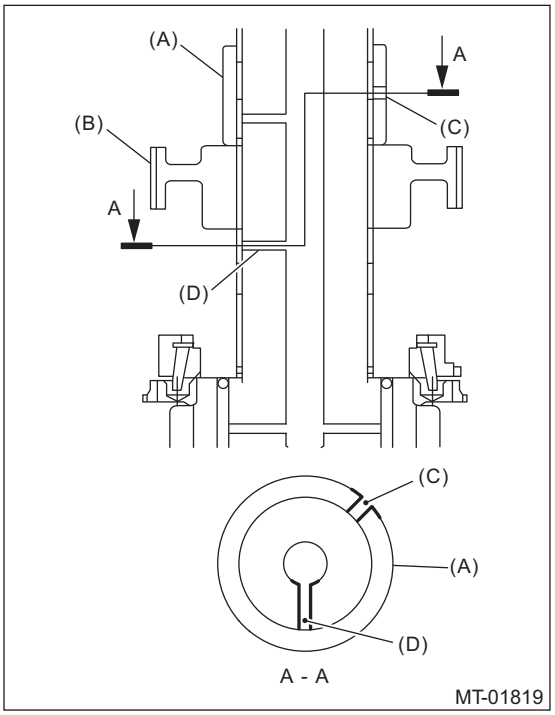
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

(1) Being careful of the install direction of the 3rd-4th synchronizer hub, set to the main shaft.



(A) Main shaft
(B) 3rd-4th synchronizer hub
(C) 3rd drive gear

(2) With the main shaft oil hole and 4th needle bearing race oil hole out of alignment, attach to the main shaft.



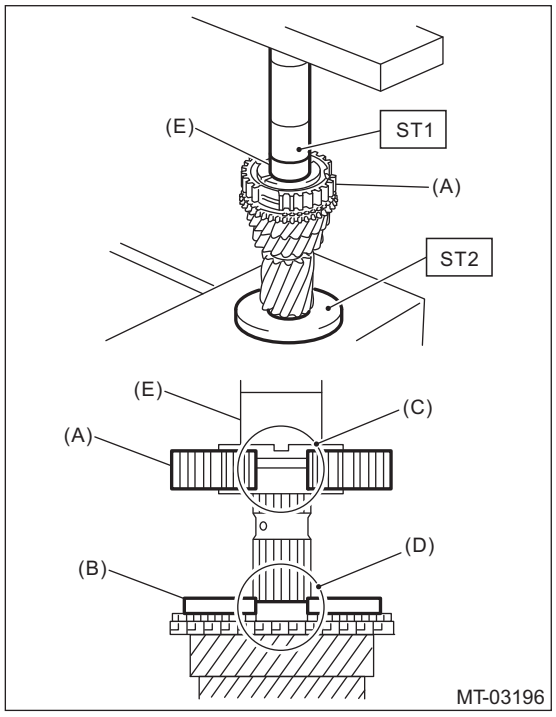
(A) 4th needle bearing race
(B) 3rd-4th synchronizer hub
(C) 4th needle bearing race oil hole
(D) Main shaft oil hole

(3) Using the ST, push in to the 3rd-4th synchronizer hub and 4th needle bearing race all at once.

ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
When pushing into the 3rd-4th synchronizer hub and 4th needle bearing race, move the 3rd outer baulk ring to match the protrusion of the 3rd outer baulk ring and the cut out of the 3rd-4th synchronizer hub.

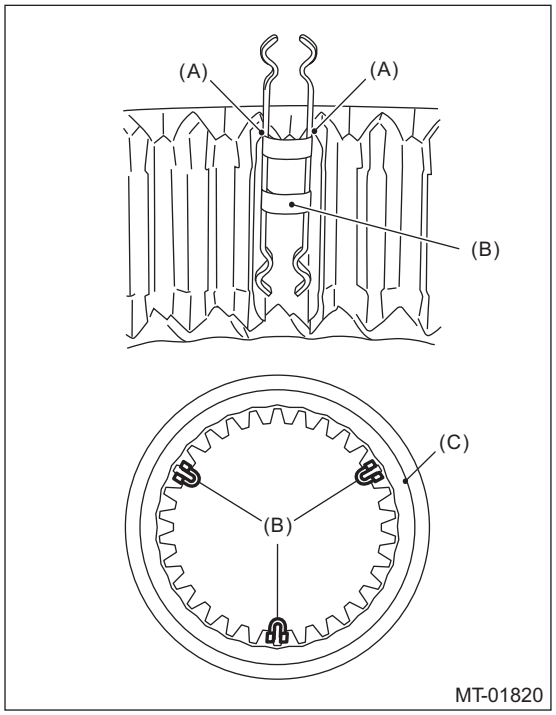


(A) 3rd-4th synchronizer hub
(B) 3rd outer baulk ring
(C) Cut out of the 3rd-4th synchronizer hub
(D) Protrusion of the 3rd outer baulk ring
(E) 4th needle bearing race

5) Make sure that the 3rd drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
6) Attach the 3rd-4th shifting insert at the appropriate position of the 3rd-4th coupling sleeve.

NOTE:
• The location angle of each shifting insert is 120°.

• Refer to the following figure to install the shifting insert.

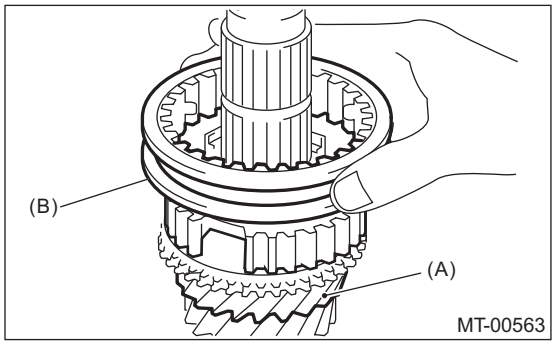


(A) Attach the straight part of the shifting insert to the sleeve convex portion.
(B) 3rd-4th shifting insert
(C) 3rd-4th coupling sleeve

7) Attach the 3rd-4th coupling sleeve to the 3rd-4th synchronizer hub.

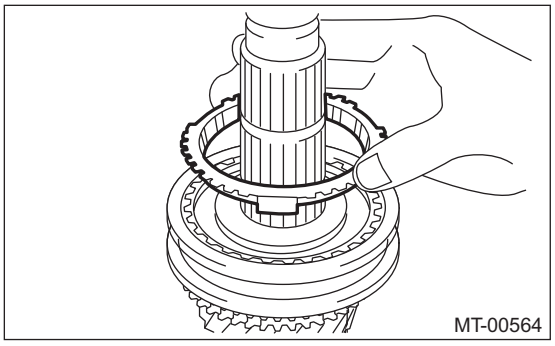
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
• There is an identification groove on the 3rd-4th coupling sleeve.
• Place the groove towards the 3rd drive gear, and attach the 3rd-4th coupling sleeve.



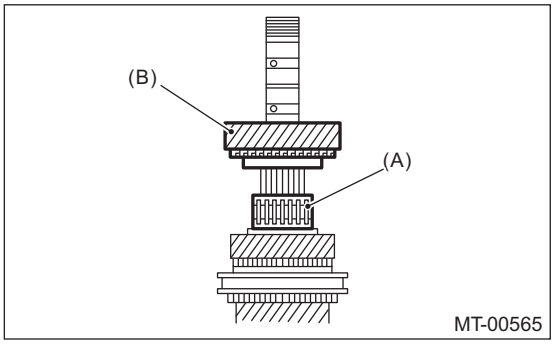
(A) 3rd drive gear
(B) 3rd-4th sleeve identification groove (1)

8) Install the 4th baulk ring.



9) Apply adequate transmission gear oil to the main shaft, 4th needle bearing and 4th drive gear inner surface.

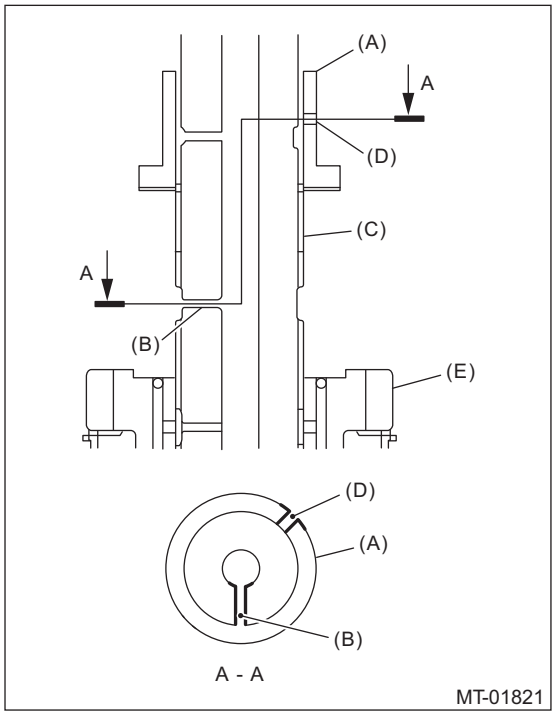
10) Install the 4th needle bearing and 4th drive gear.



(A) 4th needle bearing
(B) 4th drive gear

11) Install the 5th drive gear bushing.

(1) With the main shaft oil hole and 5th drive gear bushing oil hole out of alignment, attach to the main shaft.

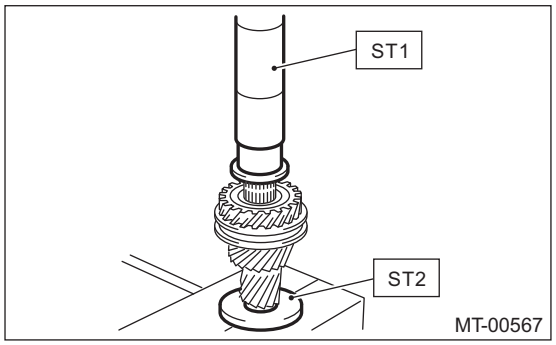


(A) 5th drive gear bushing
(B) Main shaft oil hole
(C) Main shaft
(D) 5th drive gear bushing oil hole
(E) 4th drive gear

(2) Using the ST, push into the 5th drive gear bushing.

ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

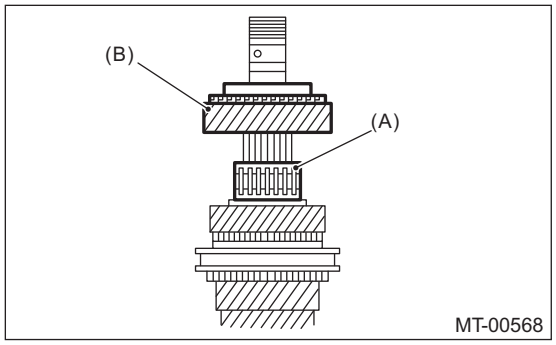
CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).



12) Make sure that the 4th drive gear can be turned smoothly by hand. If it does not turn smoothly, re-assemble.

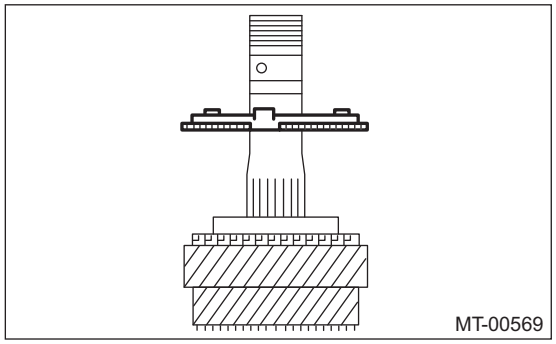
13) Apply adequate transmission gear oil to the main shaft, 5th needle bearing and 5th drive gear inner surface.

14) Install the 5th needle bearing and 5th drive gear.



(A) 5th needle bearing
(B) 5th drive gear

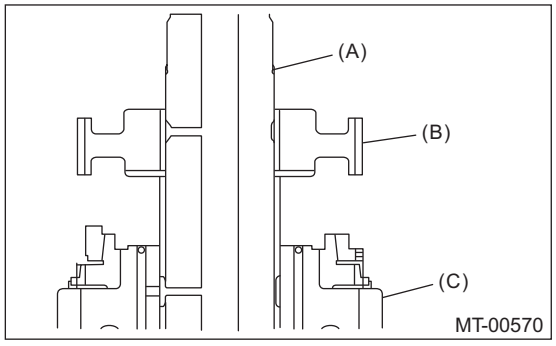
15) Install the 5th baulk ring.



16) Install the 5th-6th synchronizer hub.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

(1) Being careful of the install direction of the 5th-6th synchronizer hub, set to the main shaft.



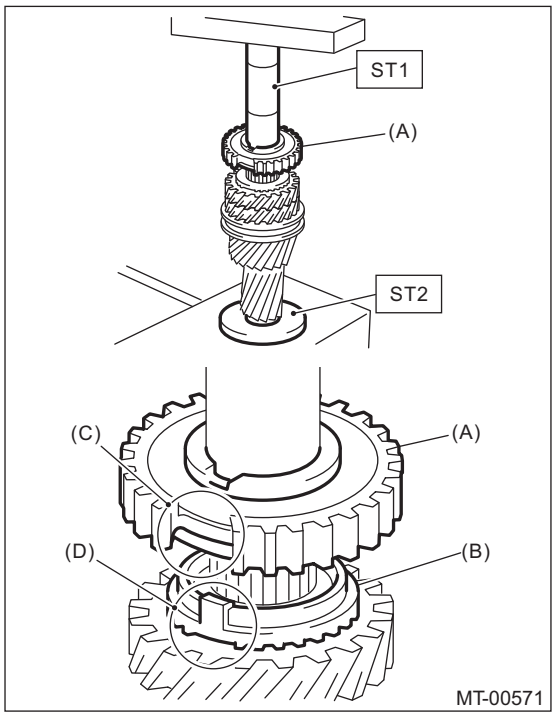
(A) Main shaft
(B) 5th-6th synchronizer hub
(C) 5th drive gear

(2) Using the ST, push into the 5th-6th synchronizer hub.

ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
When pushing into the 5th-6th synchronizer hub, move the 5th outer baulk ring to match the protrusion of the 5th outer baulk ring and the cut out of the 5th-6th drive gear bushing.

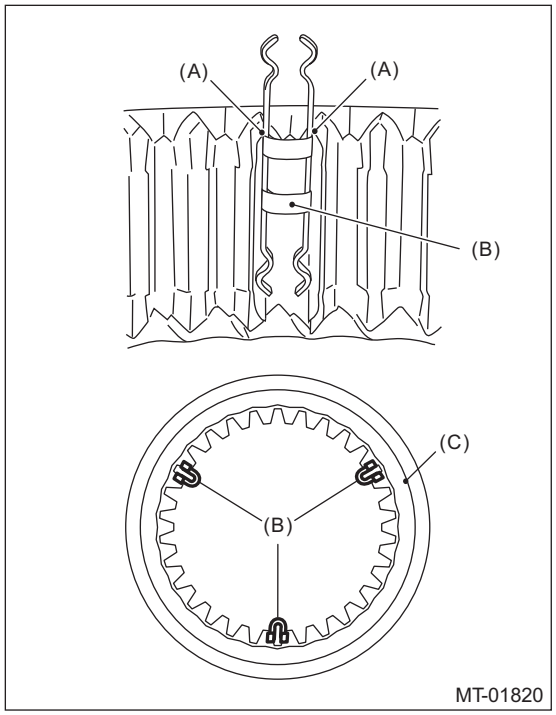


(A) 5th-6th synchronizer hub
(B) 5th outer baulk ring
(C) Cut out of the 5th-6th synchronizer hub
(D) Protrusion of the 5th outer baulk ring

17) Make sure that the 5th drive gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
18) Attach the 5th-6th shifting insert at the appropriate position of the 5th-6th coupling sleeve.

NOTE:
- The location angle of each shifting insert is 120°.

• Refer to the following figure to install the shifting insert key.

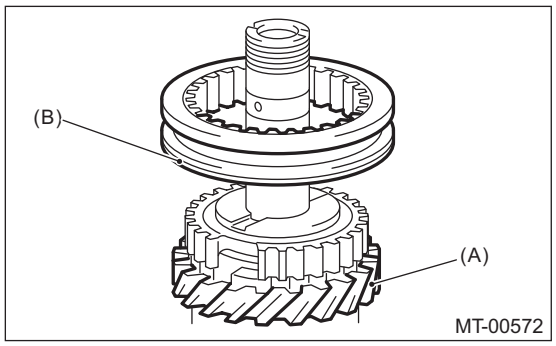


(A) Attach the straight part of the shifting insert to the sleeve convex portion.
(B) 5th-6th shifting insert
(C) 5th-6th coupling sleeve

19) Attach the 5th-6th coupling sleeve to the 5th-6th synchronizer hub.

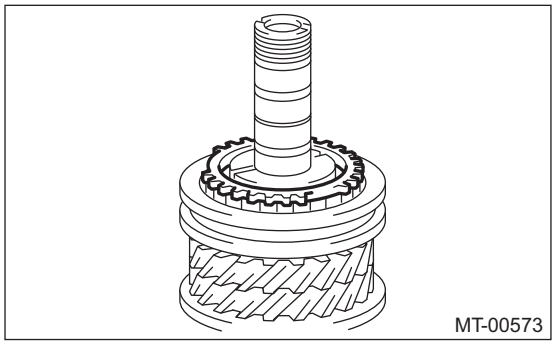
CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
• There are two identification grooves on the 5th-6th coupling sleeve.
• Place the grooves towards the 5th drive gear, and attach the 5th-6th coupling sleeve.

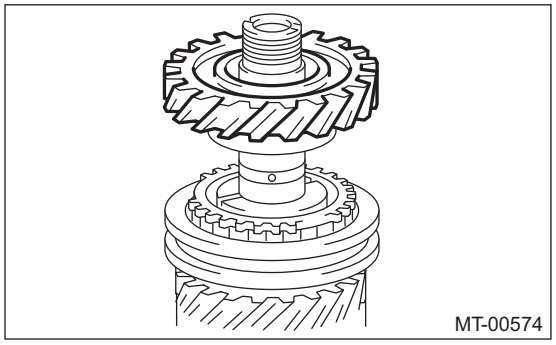


(A) 5th drive gear
(B) 5th-6th coupling sleeve identification groove (2)

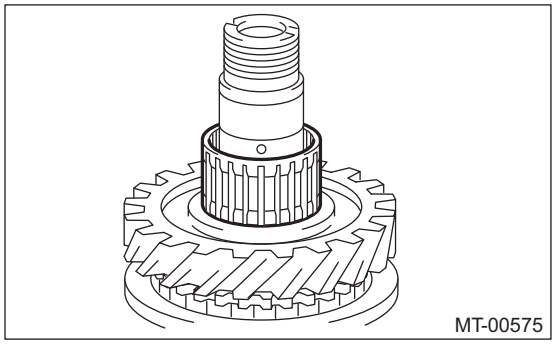
20) Install the 6th baulk ring.



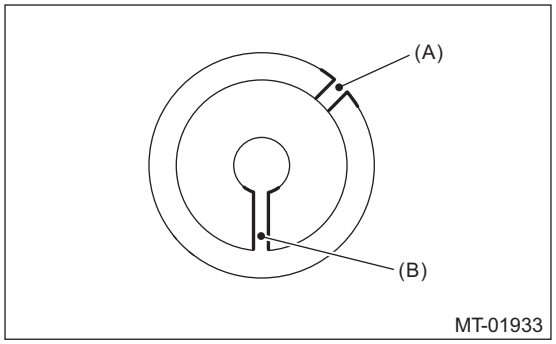
21) Apply adequate transmission gear oil to the main shaft, 6th needle bearing and 6th drive gear inner surface.
22) Install the 6th drive gear.



23) Install the 6th needle bearing.



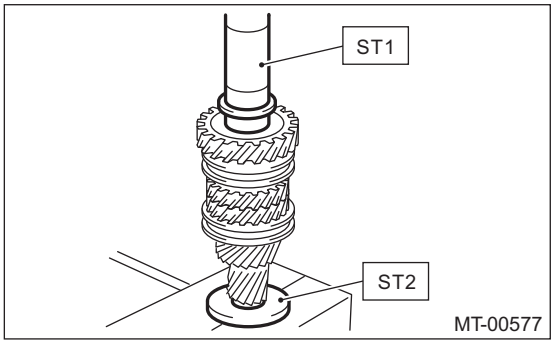
24) With 6th drive gear bushing oil hole and the main shaft oil hole out of alignment, attach to the main shaft.



(A) 6th drive gear bushing oil hole
(B) Main shaft oil hole

25) Using the ST, install the 6th drive gear bushing.
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

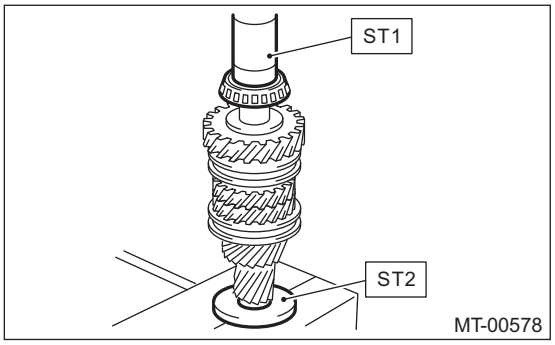
CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).



26) Make sure that the 6th drive gear can be turned smoothly by hand. If it does not turn smoothly, re-assemble.
27) Using the ST, install the double taper roller bearing inner race (front side).
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

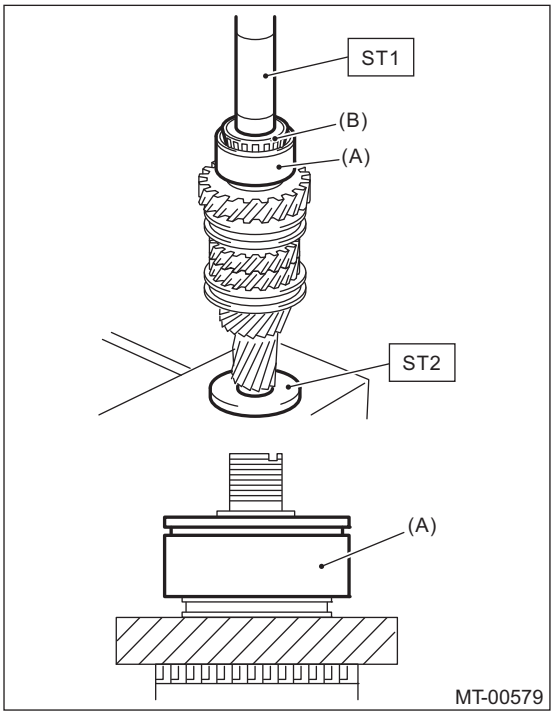
NOTE:
Use a new double taper roller bearing.



28) Using the ST, install the outer race and inner race (rear side) of the double taper roller bearing.
ST1 18651AA000 INSTALLER
ST2 398177700 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
• Confirm that the outer race and inner race are installed in the proper direction.
• Push in until there is no backlash on the double taper roller bearing outer race and the bearing turns smoothly by hand.



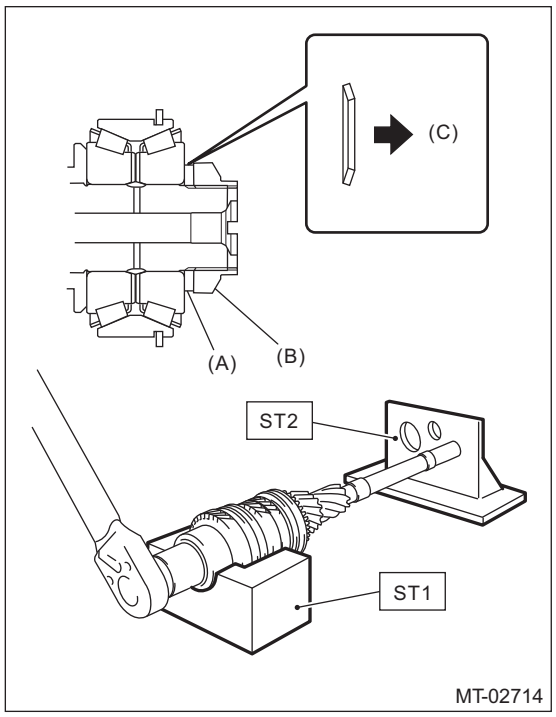
(A) Double taper roller bearing outer race
(B) Double taper roller bearing inner race (rear side)

29) Make sure that the double taper roller bearing turns smoothly by hand. If it does not turn smoothly, replace the double taper roller bearing as a set, and reassemble.
30) Attach a new lock washer and a new lock nut.

CAUTION:
Apply transmission gear oil to the lock washer and lock nut before installation.
31) Set the main shaft assembly to the ST, and tighten the lock nut.
ST1 18665AA000 HOLDER
ST2 18664AA000 BASE

NOTE:
Make sure the lock washer is installed in the proper direction.

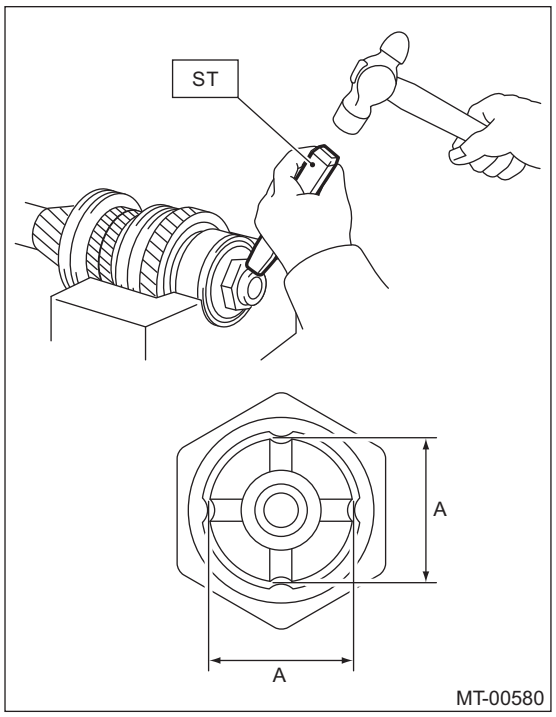
Tightening torque:
392 N·m (40.0 kgf-m, 289.1 ft-lb)



(A) Lock washer
(B) Lock nut
(C) Nut side

32) Using the ST, crimp the lock nut in 4 locations, with dimensions within A 27±0.3 mm (1.06±0.01 in).
ST 18668AA000 PUNCH

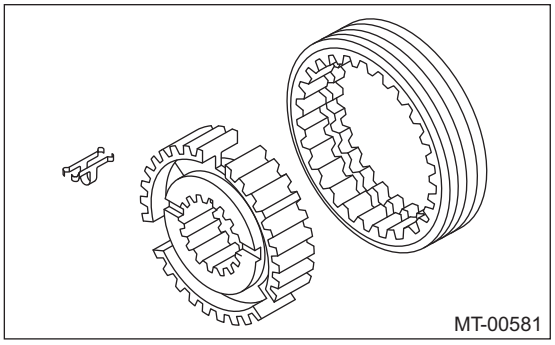
NOTE:
Do not damage the crimp area of the lock nut.



E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring

5) Shifting insert
Replace the shifting insert if deformed, excessively worn or defective in any way.



F: ADJUSTMENT

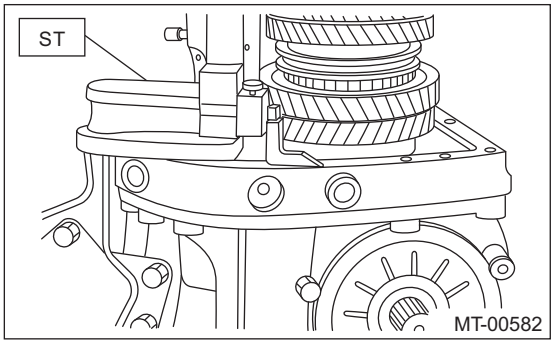
1. MAIN SHAFT SNAP RING & ADJUSTING WASHER SELECTION

NOTE:
In the following conditions, perform the procedures below.
- 1st to 6th driven gear replacement
- 1st and 2nd synchro ring assembly replacement
- Ball bearing replacement
- Adapter plate replacement
- Driven shaft replacement

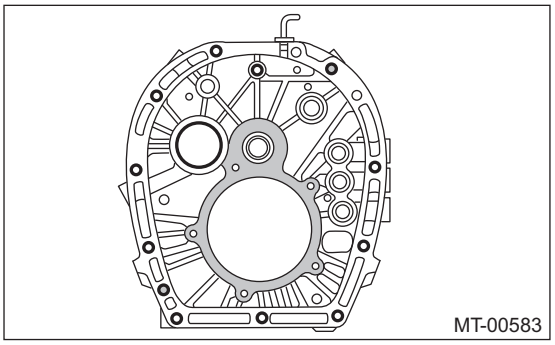
1) Insert the drive pinion shaft assembly into the adapter plate.

NOTE:
Confirm that the thrust bearing outer race has not been removed and the drive pinion is not lifted.

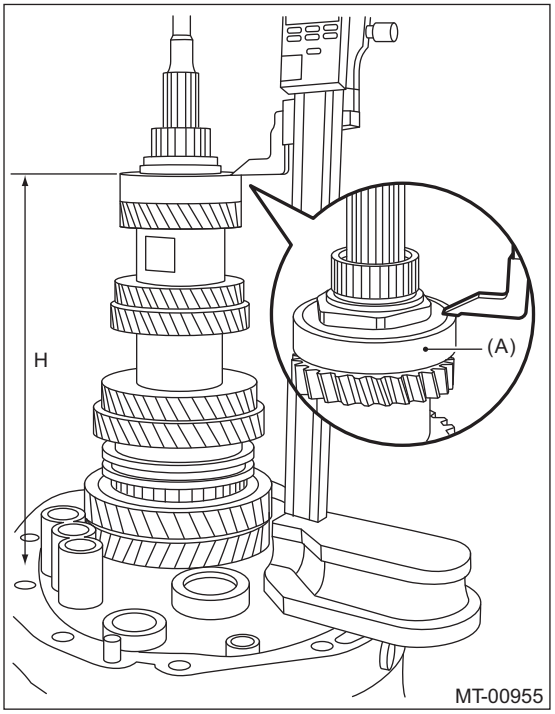
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



NOTE:
- The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
- During measurement, do not place the height gauge in the shaded area shown in the figure.

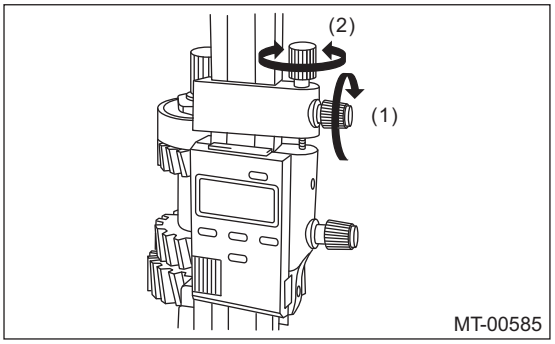


3) Measure the height to the ball bearing end face. (Height H)



(A) Ball bearing

NOTE:
Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the end face of the bearing.



Turn approximately 120° at a time, and measure the ball bearing in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

4) According to the measurement value, select the snap ring and adjusting washer from the following table.

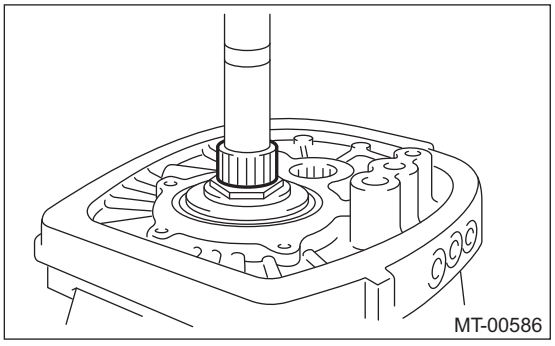
Snap ring		
H: mm (in)	Part No.	Thickness: mm (in)
270.83 — 271.40 (10.66 — 10.69)	805072010	1.65 (0.065)
271.41 — 271.98 (10.69 — 10.71)	805072011	1.95 (0.077)
271.99 — 272.56 (10.71 — 10.73)	805072012	2.25 (0.089)

Adjusting washer		
H: mm (in)	Part No.	Thickness: mm (in)
270.83 — 271.40 (10.66 — 10.69)	803067012	1.6 (0.063)
271.41 — 271.98 (10.69 — 10.71)	803067011	1.3 (0.051)
271.99 — 272.56 (10.71 — 10.73)	803067010	1.0 (0.039)

20.Driven Gear Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the driven gear assembly. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>
9) Remove the 1st needle bearing.



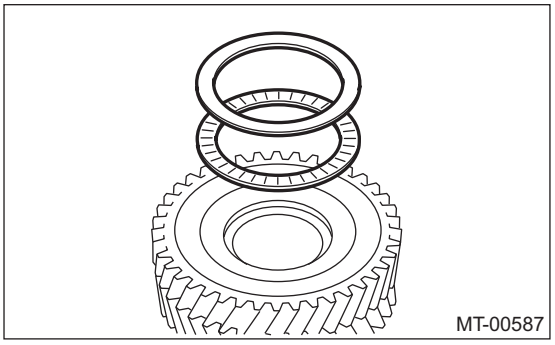
MT-00586

10) Remove the thrust needle bearing.

B: INSTALLATION

1) Adjust the main shaft snap ring. <Ref. to 6MT(TY85)-76, ADJUSTMENT, Main Shaft Assembly.>
2) Adjust the 1st-2nd fork rod. <Ref. to 6MT(TY85)-108, ADJUSTMENT, Shifter Fork and Rod.>
3) Install the thrust needle bearing.

NOTE:
Confirm that the thrust needle bearing is installed in the proper direction.



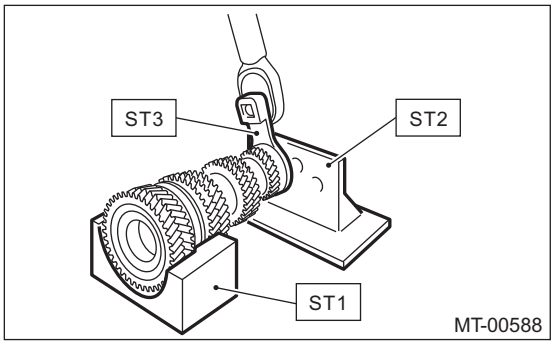
MT-00587

4) Install the 1st needle bearing.
5) Install the driven gear assembly. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>
6) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
7) Adjust the backlash of the driven gear assembly in the axial direction. <Ref. to 6MT(TY85)-85, ADJUSTMENT, Driven Gear Assembly.>
8) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
9) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
10) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
11) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
12) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

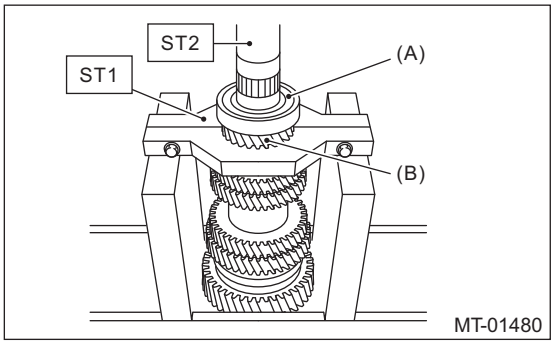
C: DISASSEMBLY

NOTE:
Individual coupling sleeves and synchronizer hubs meet at a specified position. Before disassembly, mark the meeting position of the coupling sleeve and synchronizer hub.
1) Affix the ST to the work table.
ST 18664AA000 BASE
2) Flatten the tab of the lock nut.

3) Attach ST3 to the lock nut, set the driven gear assembly to the ST, and remove the lock nut.
ST1 18666AA000 HOLDER
ST2 18664AA000 BASE
ST3 18620AA000 ADAPTER WRENCH

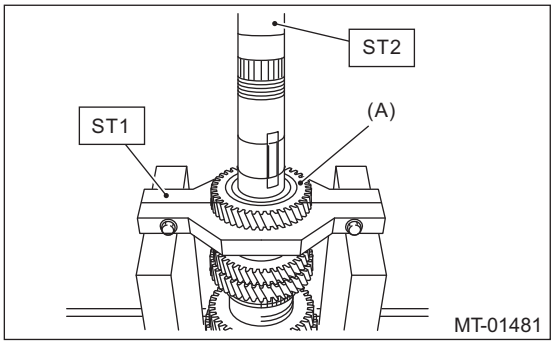


4) Attach ST1 to the 6th driven gear, then remove the ball bearing and 5th-6th driven gear.
ST1 18723AA000 REMOVER
ST2 499877000 RACE 4-5 INSTALLER



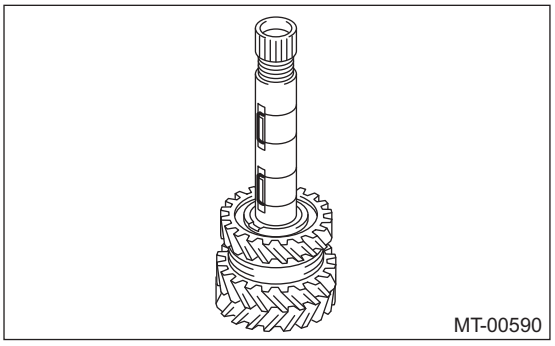
(A) Ball bearing
(B) 5th-6th driven gear

5) Attach ST1 to the 4th driven gear, then remove the 3rd-4th driven gear.
ST1 18723AA000 REMOVER
ST2 499877000 RACE 4-5 INSTALLER

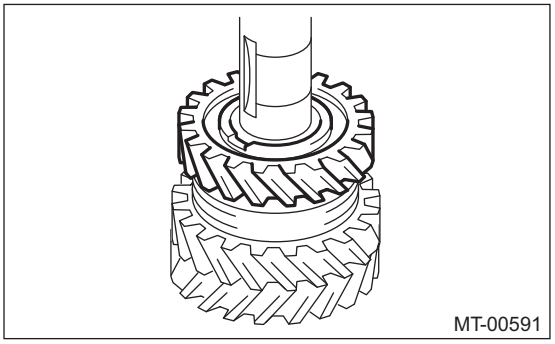


(A) 3rd-4th driven gear

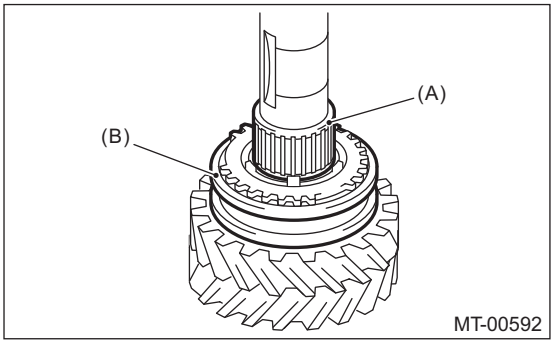
6) Remove the key.



7) Remove the 2nd driven gear.

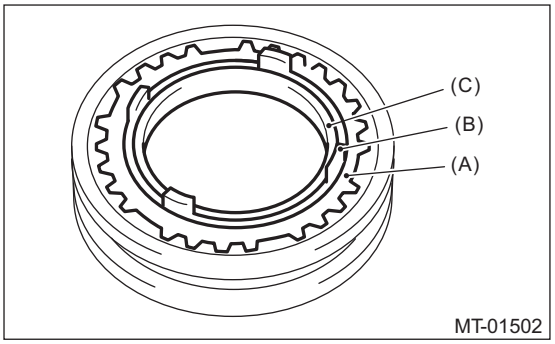


8) Remove the 2nd needle bearing and 1st-2nd coupling sleeve.



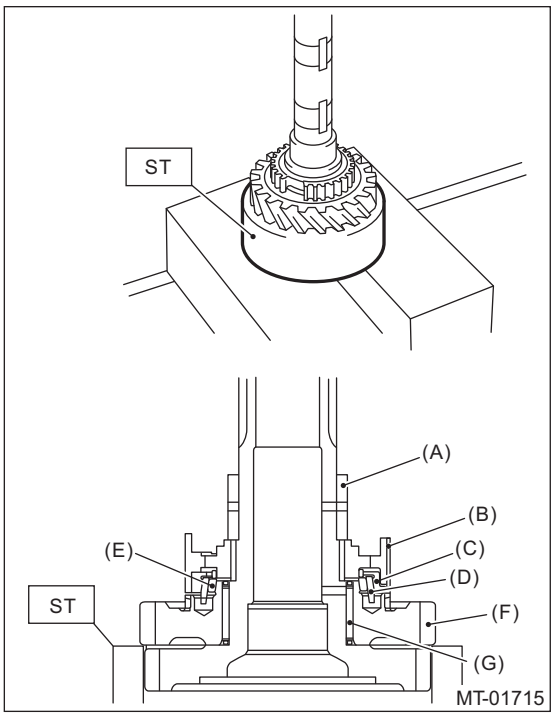
(A) 2nd needle bearing
(B) 1st-2nd coupling sleeve

9) Remove the 2nd outer baulk ring, 2nd synchro cone and 2nd inner baulk ring.



(A) 2nd outer baulk ring
(B) 2nd synchro cone
(C) 2nd inner baulk ring

10) Using the ST, remove individual parts.
ST 18754AA000 REMOVER



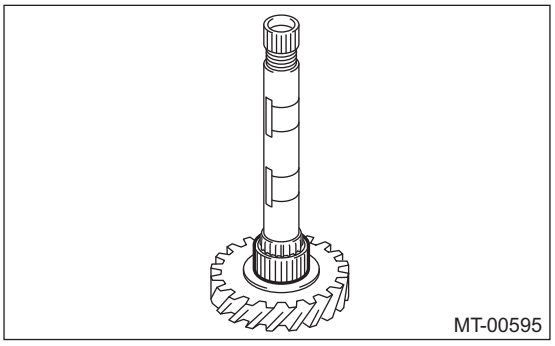
(A) 2nd drive gear bushing
(B) 1st-2nd synchronizer hub
(C) 1st outer baulk ring
(D) 1st synchro cone
(E) 1st inner baulk ring
(F) 1st driven gear
(G) 1st needle bearing

D: ASSEMBLY

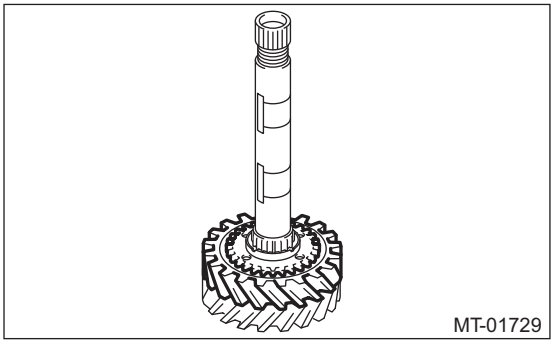
NOTE:
When replacing the following parts, replace as a set.
- Coupling sleeve and synchronizer hub
- 1st outer baulk ring, 1st synchro cone and 1st inner baulk ring
- 2nd outer baulk ring, 2nd synchro cone and 2nd inner baulk ring

1) Apply adequate transmission gear oil to the main shaft, 1st needle bearing and 1st driven gear inner surface.

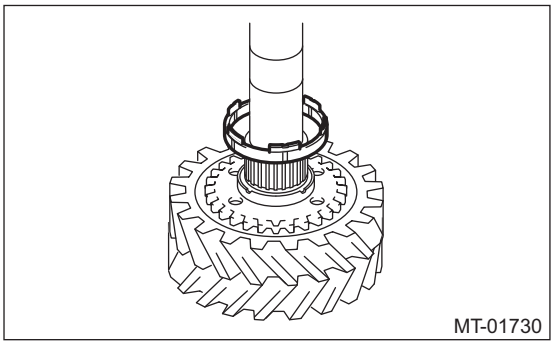
2) Install the 1st needle bearing.



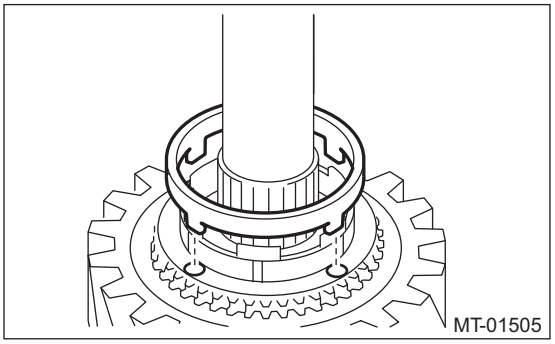
3) Attach the 1st driven gear to the driven shaft.



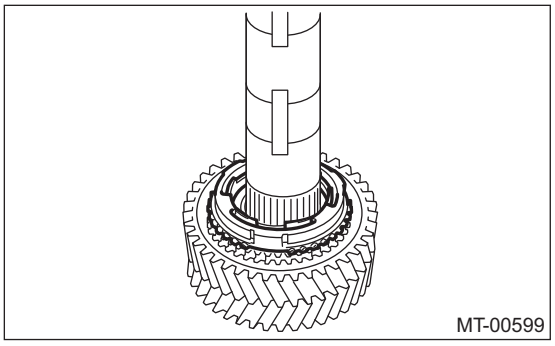
4) Install the 1st inner baulk ring.



5) Match the protrusion of the 1st synchro cone to the hole of the 1st driven gear, then install.



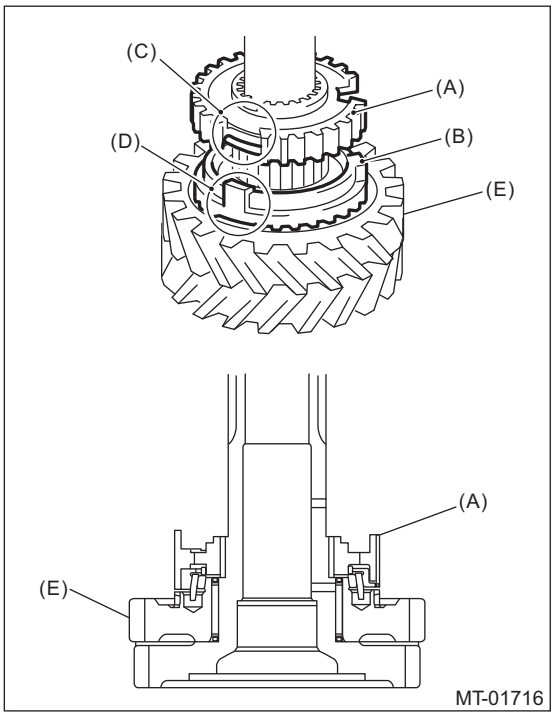
6) Install the 1st outer baulk ring.



7) Install the 1st-2nd synchronizer hub.

CAUTION:
Apply transmission gear oil onto sliding or revolving surfaces before installation.

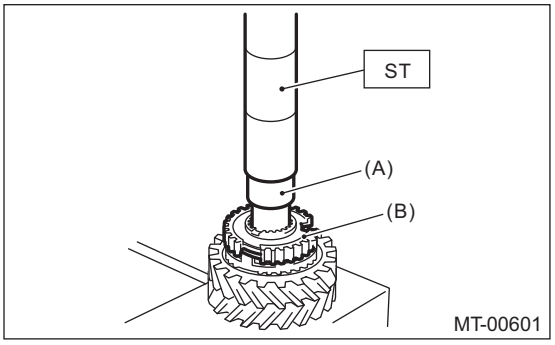
NOTE:
• Match the cut out of the 1st-2nd synchronizer hub with the protrusion on the outer baulk ring, then install.
• Make sure that the 1st-2nd synchronizer hub is installed in the correct direction.



(A) 1st-2nd synchronizer hub
(B) 1st outer baulk ring
(C) Cut out of the 1st-2nd synchronizer hub
(D) Protrusion of the 1st outer baulk ring
(E) 1st driven gear

8) Using the ST, install the 1st-2nd synchronizer hub and 2nd driven gear bushing.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

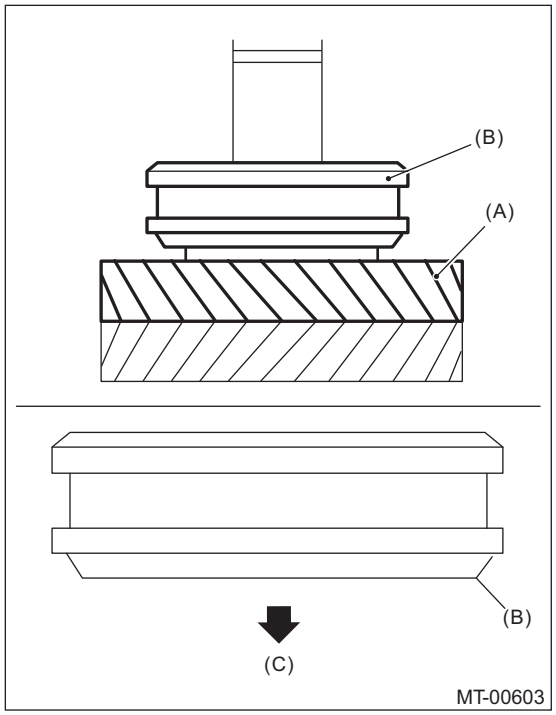


(A) 2nd driven gear bushing
(B) 1st-2nd synchronizer hub

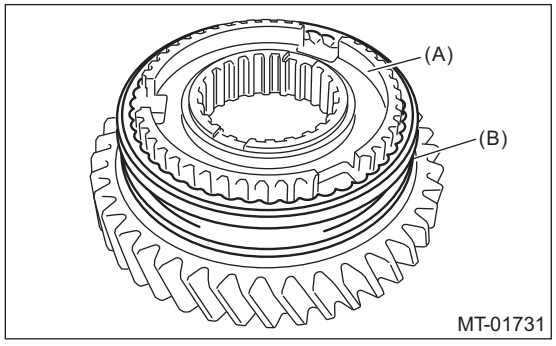
9) Make sure that the 1st driven gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
10) Attach the 1st-2nd coupling sleeve to the 1st-2nd synchronizer hub.

NOTE:
• Make sure that the 1st-2nd coupling sleeve is installed in the correct direction.
• Align the 1st-2nd synchronizer hub cut out section (three places) and the key grooves (three places) of shifting insert that are located inside the 1st-2nd coupling sleeve.

• Set the 1st-2nd coupling sleeve and 1st driven gear so that they contact each other.



(A) 1st driven gear
(B) 1st-2nd coupling sleeve
(C) 1st driven gear side

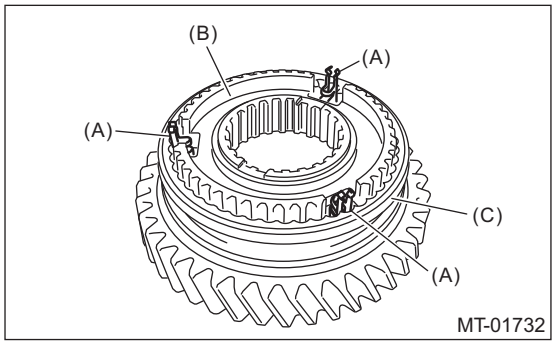


(A) 1st-2nd synchronizer hub
(B) 1st-2nd coupling sleeve

11) Attach the 1st-2nd shifting insert to the appropriate position of the 1st-2nd coupling sleeve.

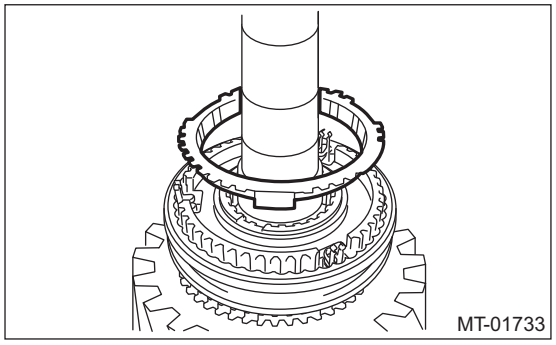
NOTE:
• The location angle of each shifting insert is 120°.

• Install the 1st-2nd shifting insert to the key grooves (three places) of shifting insert that are located inside the 1st-2nd coupling sleeve.

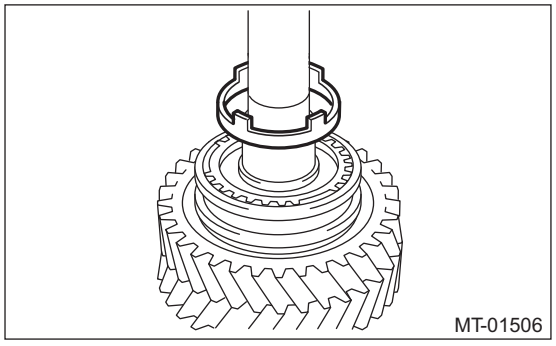


(A) 1st-2nd shifting insert
(B) 1st-2nd synchronizer hub
(C) 1st-2nd coupling sleeve

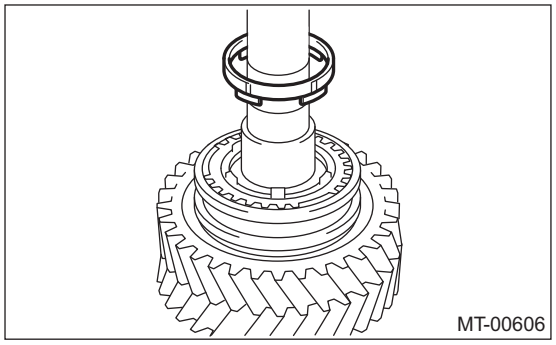
12) Install the 2nd outer baulk ring.



13) Install the 2nd synchro cone.

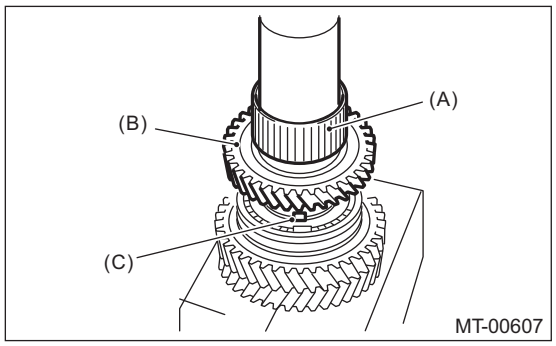


14) Install the 2nd inner baulk ring.



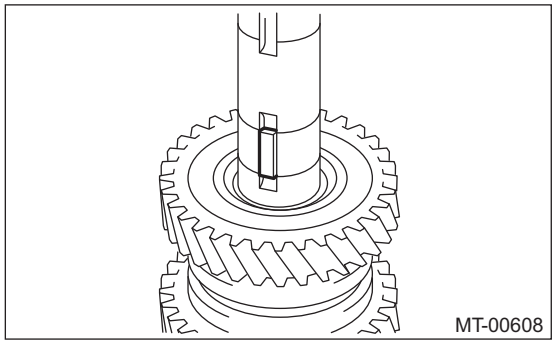
15) Apply adequate transmission gear oil to the 2nd driven gear bushing, 2nd needle bearing and 2nd driven gear inner surface.
16) Install the 2nd needle bearing and 2nd driven gear.

NOTE:
Match the protrusion of the 2nd synchro cone to the hole of the 2nd driven gear, then install.



(A) 2nd needle bearing
(B) 2nd driven gear
(C) Protrusion of the 2nd synchro cone

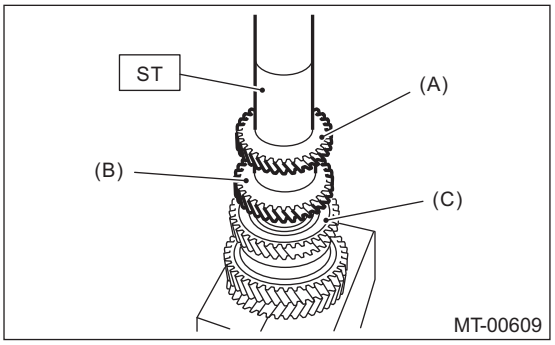
17) Attach the key.



18) Using the ST, install the 3rd-4th driven gear.
ST 18654AA000 INSTALLER

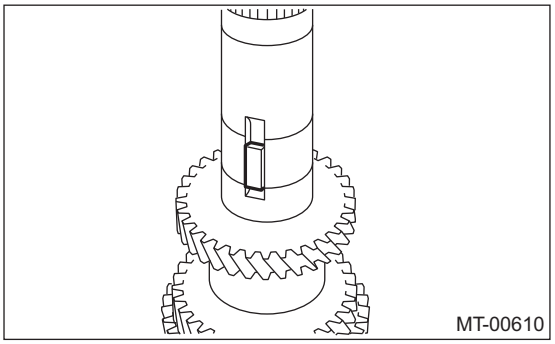
CAUTION:
• Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).
• Apply transmission gear oil onto sliding or revolving surfaces before installation.

NOTE:
• Make sure that the 3rd-4th driven gear is installed in the correct direction.
• Match the groove on the 3rd-4th driven gear to the key.



(A) 4th gear
(B) 3rd gear
(C) 2nd gear

19) Make sure that the 2nd driven gear can be turned smoothly by hand. If it does not turn smoothly, reassemble.
20) Attach the key.

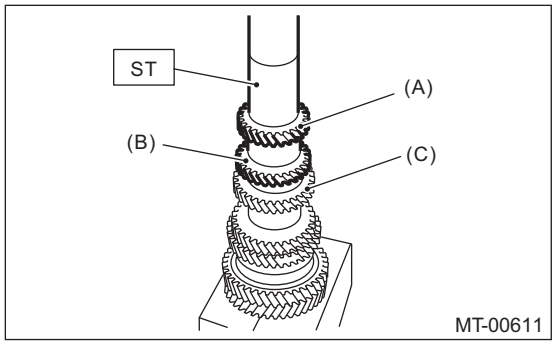


21) Using the ST, install the 5th-6th driven gear.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
• Make sure that the 5th-6th driven gear is installed in the correct direction.

• Match the groove on the 5th-6th driven gear to the key.

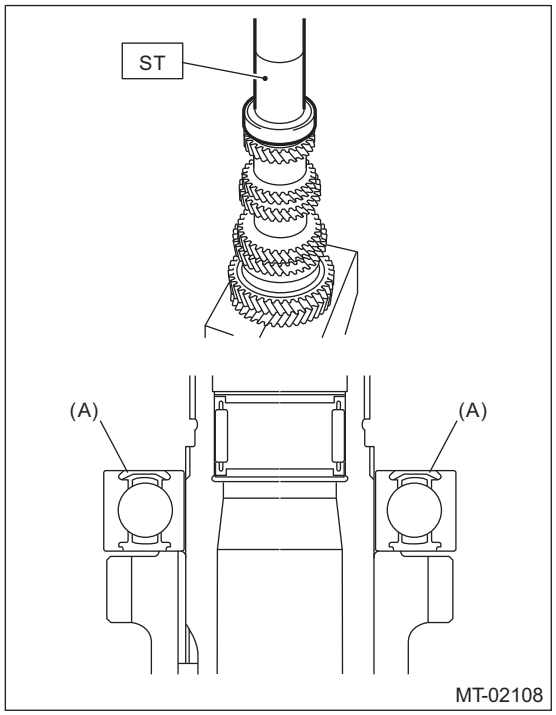


(A) 6th gear
(B) 5th gear
(C) 4th gear

22) Using the ST, install the ball bearing.
ST 18654AA000 INSTALLER

CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
Face the sealing section of the ball bearing to the lock nut side, and install the ball bearing.

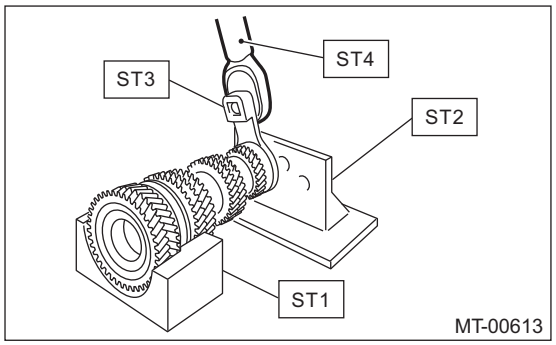


(A) Sealing

23) Make sure that the ball bearing turns smoothly by hand. If it does not turn smoothly, reassemble.
24) Install a new lock nut.

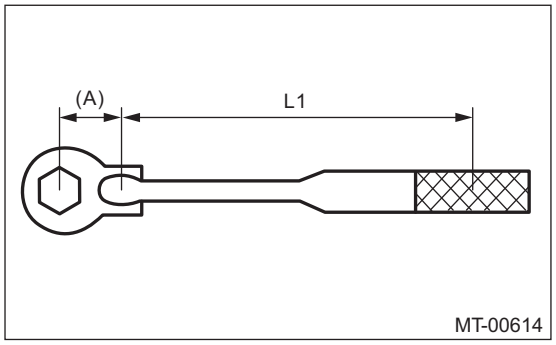
25) Attach ST3 to the lock nut, attach ST to the driven gear assembly, and tighten the lock nut.
ST1 18666AA000 HOLDER
ST2 18664AA000 BASE
ST3 18620AA000 ADAPTER WRENCH
ST4 18852AA000 TORQUE WRENCH

Tightening torque:
530 N·m (54.0 kgf-m, 390.9 ft-lb)



NOTE:
When using a torque wrench other than ST4, use the calculation below to calculate and tighten the lock nut.
T = L1/(0.1 + L1) × 570

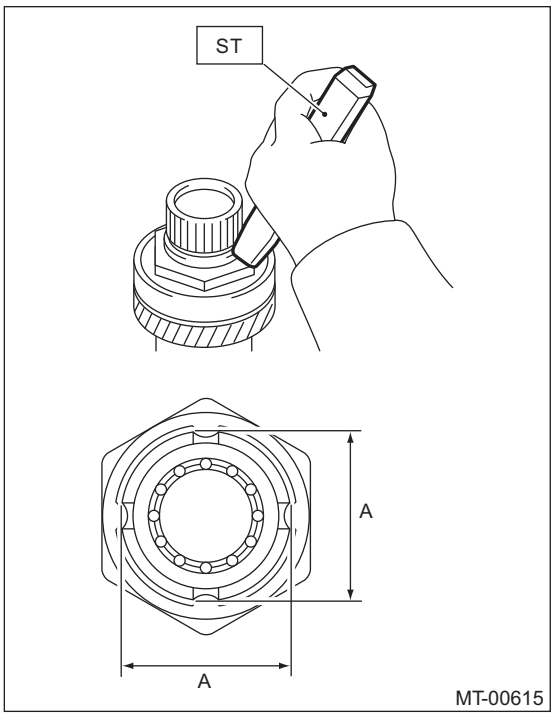
T N·m (kgf-m, ft-lb)	Torque wrench setting
L1 m (in)	Torque wrench length
0.1 m (3.94 in)	Length of ST
570 N·m (58.1 kgf-m, 420 ft-lb)	Tightening torque (lock nut)



(A) 0.1 m (3.94 in)

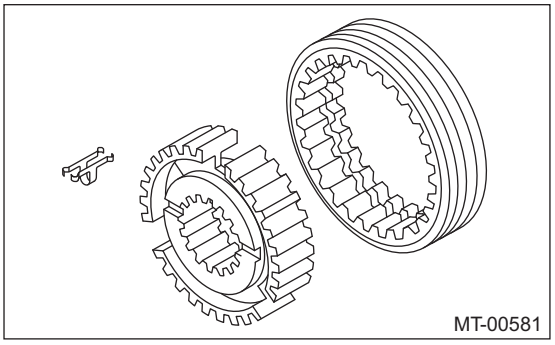
26) Using the ST, crimp the lock nut in 4 locations, with dimensions within A 44±0.5 mm (1.73±0.02 in).
ST 18669AA000 PUNCH DRIVEN SHAFT

NOTE:
Do not damage the crimp area of the lock nut.



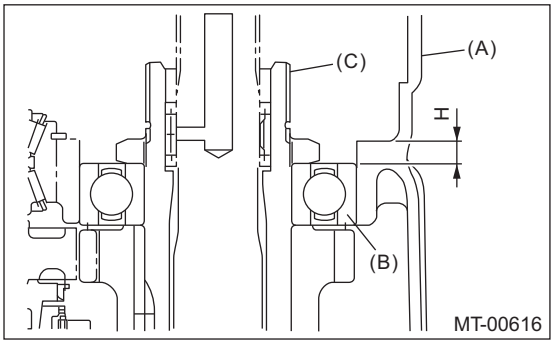
E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring
5) Shifting insert
Replace the shifting insert key if deformed, excessively worn or defective in any way.



F: ADJUSTMENT

1) Measure the length “H” from the transmission case and transfer bearing holder mating surface, to the end face of the ball bearing.



(A) Transmission case
(B) Ball bearing
(C) Driven gear ASSY

2) Using the following calculation, calculate the thickness of the driven gear assembly adjusting washer.
T = H – {5.8±0.05 mm (0.23±0.002 in)} – {0.1 — 0.3 mm (0.0039 — 0.0118 in)}

T	Adjusting washer thickness
H	Length from the transmission case and transfer bearing holder mating surface to the end face of the ball bearing
5.8±0.05 mm (0.23±0.002 in)	Collar thickness
0.1 — 0.3 mm (0.0039 — 0.0118 in)	Driven gear assembly axial direction backlash standard

3) Select 0 to 3 adjusting washers from the following table, and adjust to the backlash that is closest to the standard value.

Driven gear assembly axial direction backlash standard:
0.1 — 0.3 mm (0.0039 — 0.0118 in)

Adjusting washer	
Part No.	Thickness T mm (in)
803072030	0.15 (0.0059)
803072031	0.30 (0.0118)
803072032	0.45 (0.0177)
803072033	0.60 (0.0236)

21.Reverse Idler Gear Assembly

A: REMOVAL

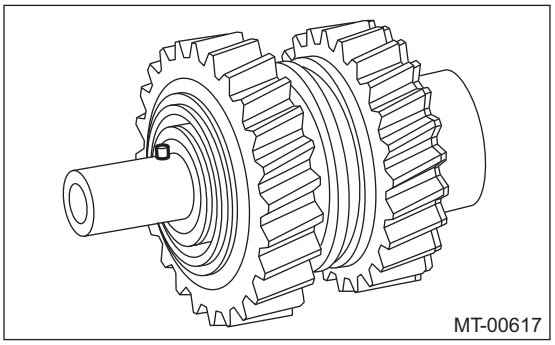
1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the reverse idler gear assembly. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>

B: INSTALLATION

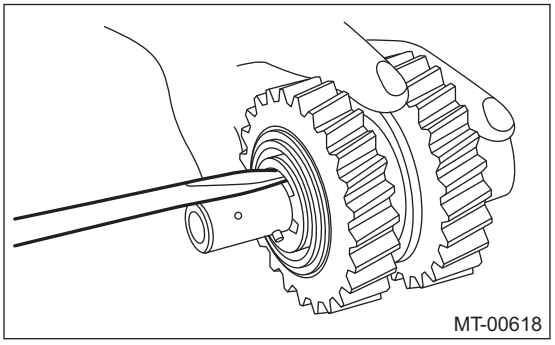
1) Select the reverse fork rod. <Ref. to 6MT(TY85)-108, ADJUSTMENT, Shifter Fork and Rod.>
2) Install the reverse idler gear assembly. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>
3) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
4) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
5) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
6) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
7) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
8) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

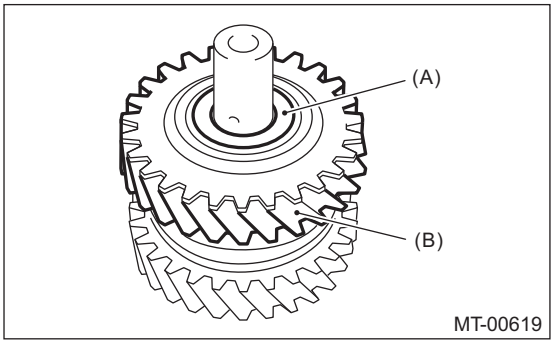
NOTE:
Reverse coupling sleeves and reverse gears meet at a specified position. Before disassembly, mark the meeting position of the reverse coupling sleeve and synchronizer hub.
1) Remove the straight pin.



2) Remove the snap ring and washer.

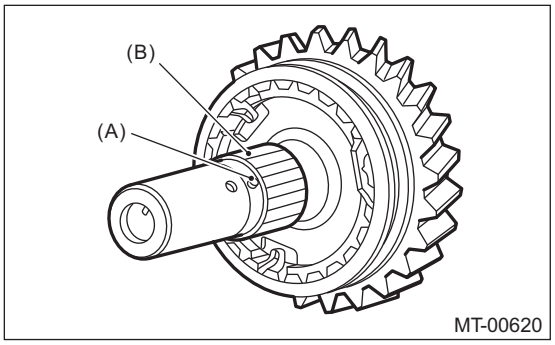


3) Remove the counter high & low washer and reverse idler gear.



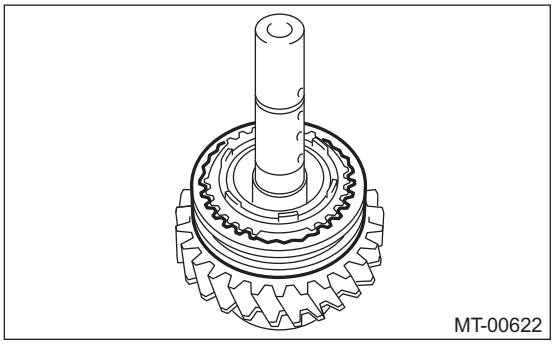
(A) Counter high and low washer
(B) Reverse idler gear

4) Remove the knock pin and reverse idler gear needle bearing.

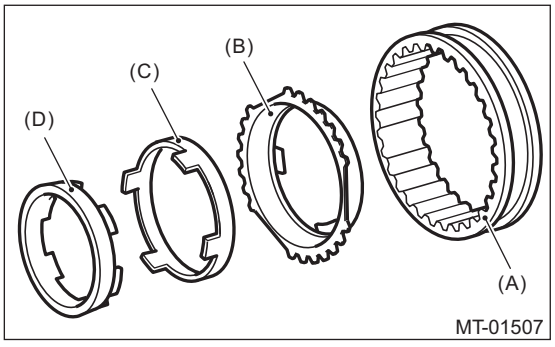


(A) Knock pin
(B) Reverse idler gear needle bearing

5) Remove the collar.
6) Remove the reverse coupling sleeve.

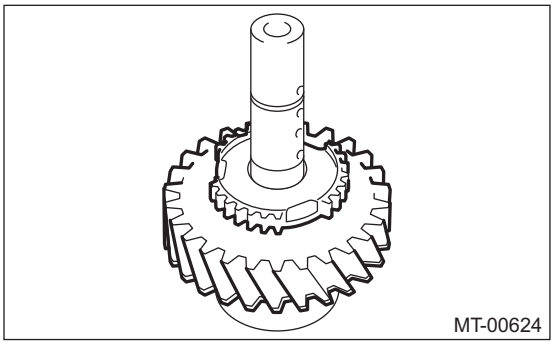


7) Remove the reverse outer baulk ring, reverse synchro cone and reverse inner baulk ring from the reverse coupling sleeve.

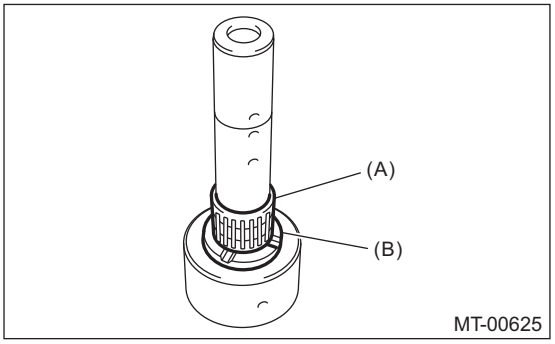


(A) Reverse coupling sleeve
(B) Reverse outer baulk ring
(C) Reverse synchro cone
(D) Reverse inner baulk ring

8) Remove reverse idler gear No. 2.

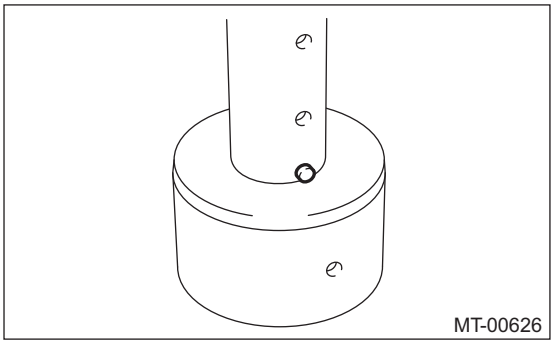


9) Remove the counter high & low washer and needle bearing.

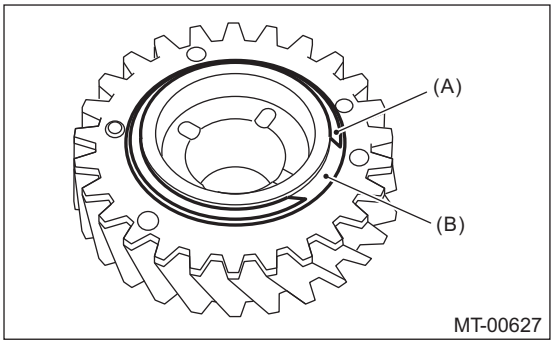


(A) Needle bearing
(B) Counter high and low washer

10) Remove the knock pin.

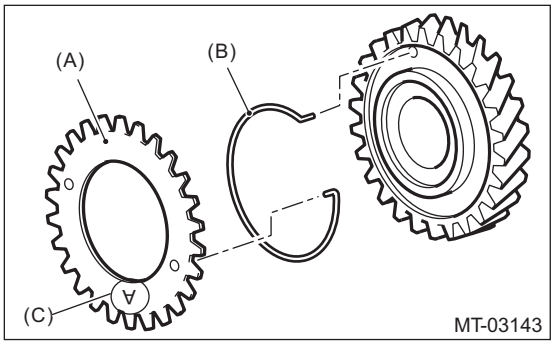


11) Remove the snap ring and friction plate.



(A) Snap ring
(B) Friction plate

12) Remove the reverse idler sub gear and reverse idler spring.

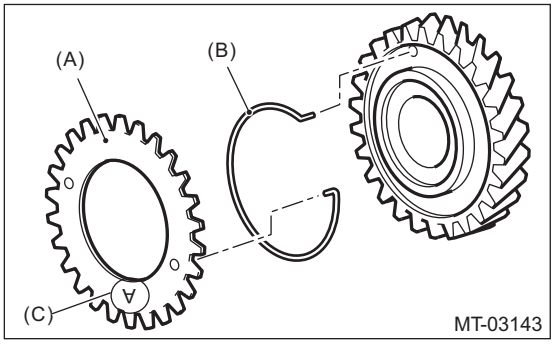


(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Stamp (marking A)

D: ASSEMBLY

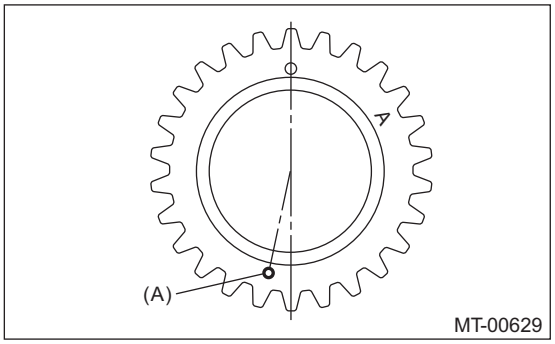
1) Attach the reverse idler sub gear and reverse idler spring.

NOTE:
• Point the stamp (marking A) towards the outside, and install the reverse idler sub gear.



(A) Reverse idler sub gear
(B) Reverse idler spring
(C) Stamp (marking A)

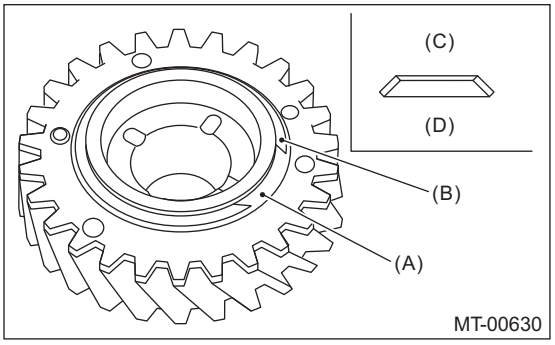
• While paying attention to the direction of the reverse idler sub gear attachment hole, attach the reverse idler spring and reverse idler sub gear.



(A) Attachment hole

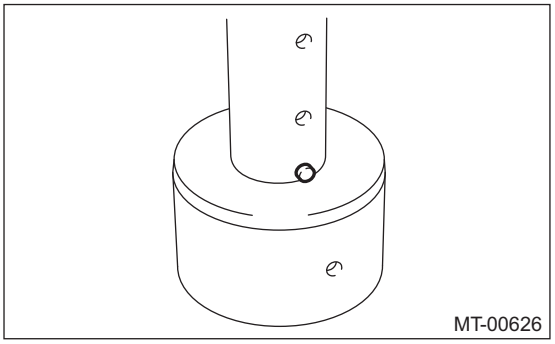
2) Install the friction plate and snap ring.

NOTE:
Confirm that the friction plate is installed in the proper direction.



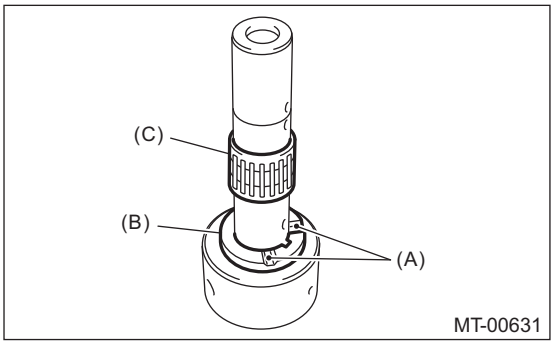
(A) Friction plate
(B) Snap ring
(C) Snap ring side
(D) Reverse idler sub gear side

3) Apply adequate transmission gear oil to the reverse idler gear shaft, needle bearing and reverse drive gear inner surface.
4) Install the knock pin.



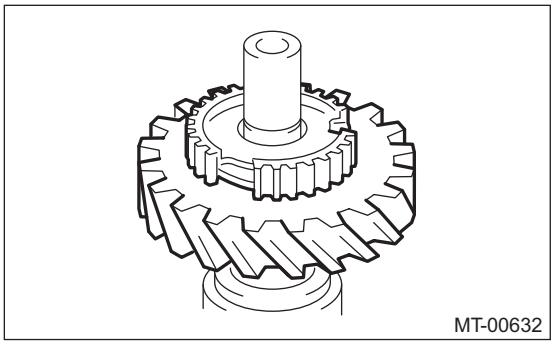
5) Install the counter high & low washer and needle bearing.

NOTE:
Point the groove towards the reverse idler gear, and attach the washer.



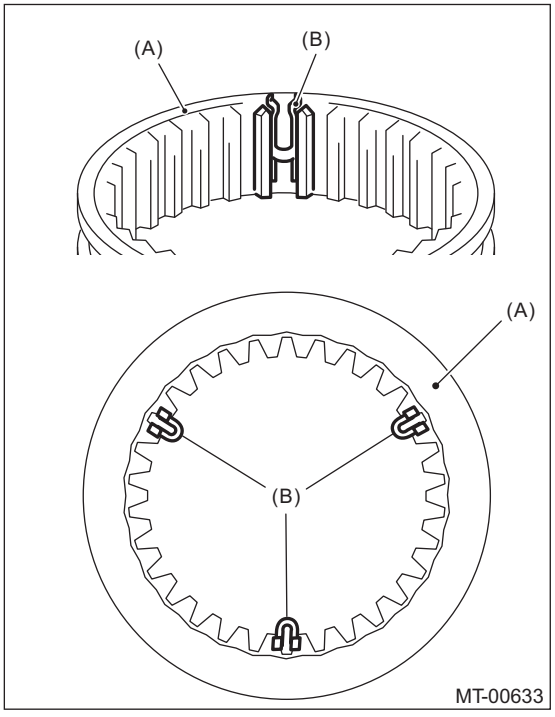
(A) Groove
(B) Counter high and low washer
(C) Needle bearing

6) Install the reverse idler gear No. 2.



7) Attach the shifting insert to the appropriate location of the reverse coupling sleeve.

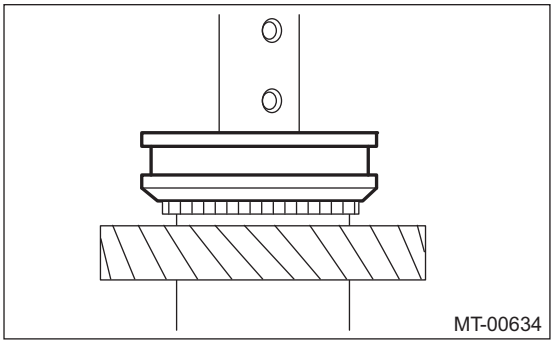
NOTE:
- The location angle of each shifting insert is 120°.
- Refer to the following figure to install the shifting insert.



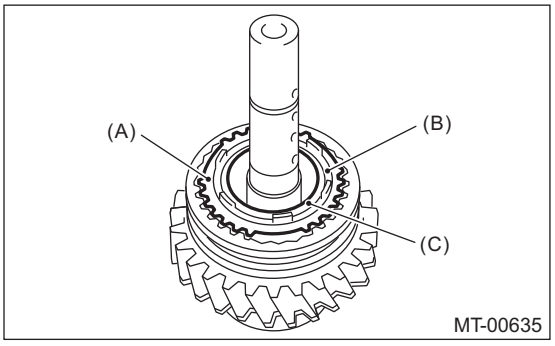
(A) Reverse sleeve
(B) Shifting insert

8) Install the reverse coupling sleeve to the reverse idler gear No. 2.

NOTE:
Confirm that the reverse coupling sleeve is installed in the proper direction.

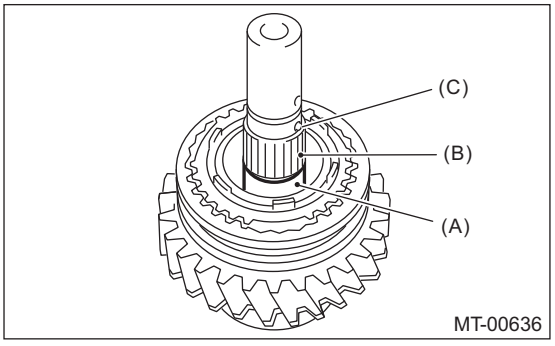


9) Apply adequate transmission gear oil to the collar, needle bearing and reverse drive gear inner surface.
10) Install the reverse outer baulk ring, reverse synchro cone and reverse inner baulk ring.



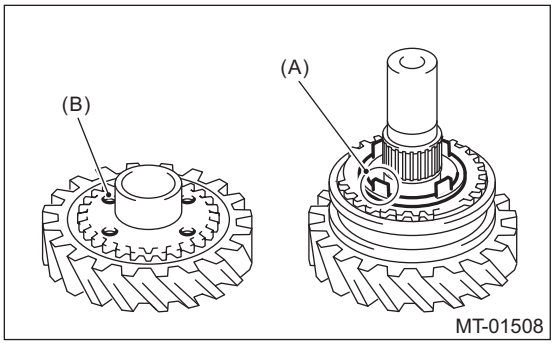
(A) Reverse outer baulk ring
(B) Reverse synchro cone
(C) Reverse inner baulk ring

11) Install the collar and needle bearing, then the knock pin.



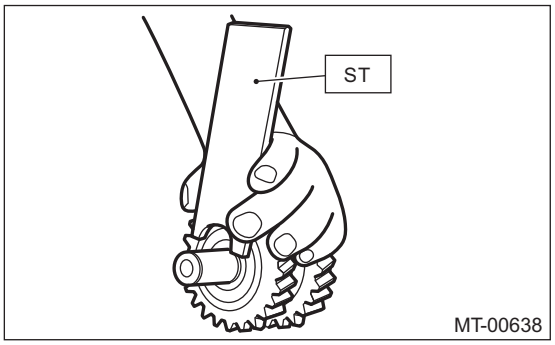
(A) Collar
(B) Needle bearing
(C) Knock pin

12) Match the protrusion of the reverse synchro cone to the hole on the reverse idler gear, and install the reverse idler gear.



(A) Protrusion on the reverse synchro cone
(B) Hole of the reverse idler gear

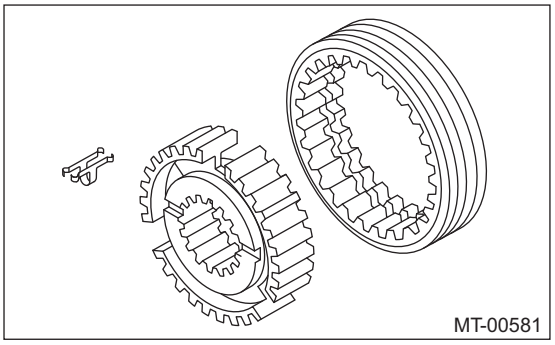
13) Point the groove towards the reverse idler gear, and attach the counter high & low washer and the washer.
14) Using the ST, install the snap ring.
ST 18672AA000 GUIDE CLIP



15) Inspect and adjust the clearance between the snap ring and the washer. <Ref. to 6MT(TY85)-91, INSPECTION, Reverse Idler Gear Assembly.>
16) Install a new straight pin.

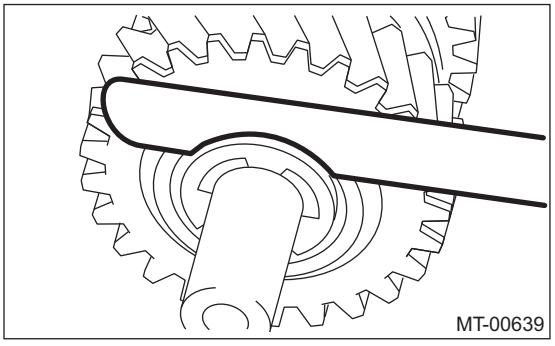
E: INSPECTION

Disassembled parts should be washed with cleaning solvent first, then inspected carefully.
1) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
• The bearing has other defects.
2) Bushing (each gear)
Replace the bushing in following cases.
• The sliding surface is damaged or abnormally worn.
3) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
• The contact area of the baulk ring is damaged.
• The inner face of the gear is worn.
4) Baulk ring, synchro cone
Replace the baulk ring and synchro cone in the following cases.
• Wear, rusting or damage of the baulk ring
5) Shifting insert
Replace the shifting insert if deformed, excessively worn or defective in any way.



6) Check clearance between the snap ring and washer.

Clearance specification:
0.1 — 0.3 mm (0.0039 — 0.0118 in)



If the clearance is out of the specification, select a snap ring from the following table and replace it.

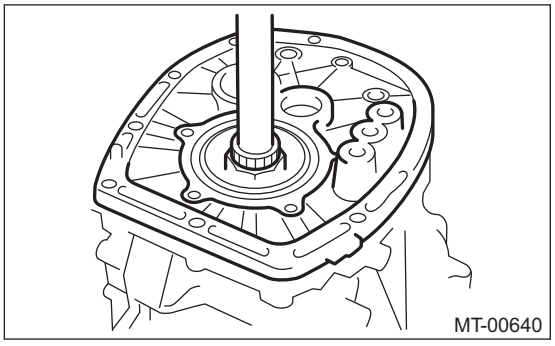
Snap ring	
Part No.	Thickness mm (in)
031319000	1.50 (0.059)
805019030	1.60 (0.062)
805019010	1.72 (0.068)

After replacing the snap ring, inspect the clearance.

22.Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly.

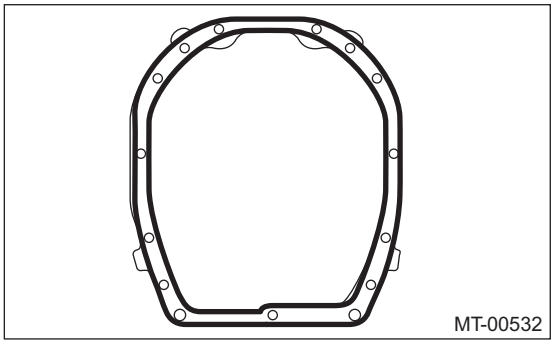


MT-00640

B: INSTALLATION

1) Remove any remaining gasket material from the drive plate and clutch housing.
2) Apply liquid gasket to the clutch housing.

Liquid gasket:
THREE BOND 1215B or equivalent

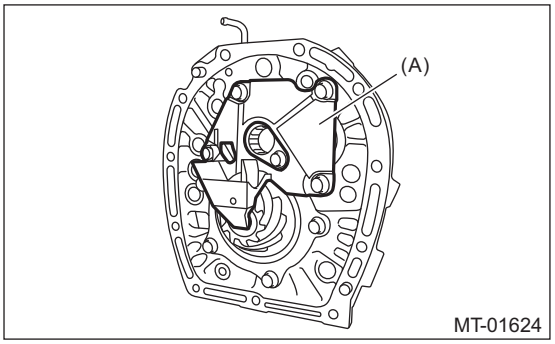


MT-00532

3) Install the individual gear assemblies. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>
4) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
5) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
6) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
7) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
8) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
9) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

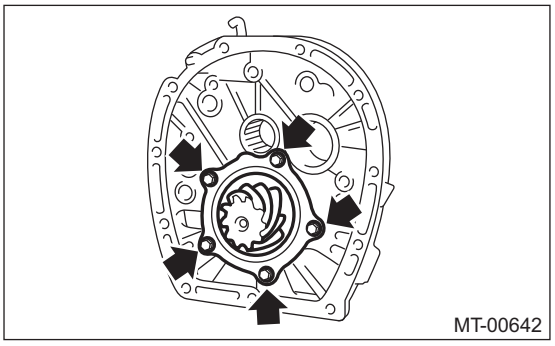
NOTE:
Replace the drive pinion shaft and hypoid driven gear as a set.
1) Remove the oil guide A.



MT-01624

(A) Oil guide A

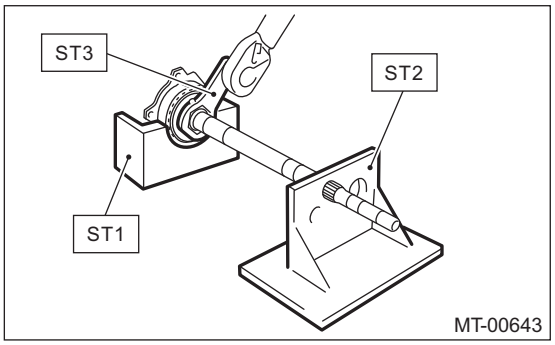
2) Remove the drive pinion shaft and shim from the adapter plate.



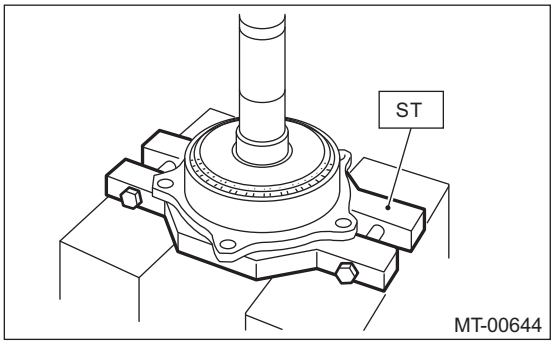
MT-00642

3) Affix the ST to the work table.
ST 18664AA000 BASE

4) Flatten the tab of the lock nut.
5) Attach ST3 to the lock nut, and set the drive pinion shaft to ST. Remove the lock nut and lock washer.
ST1 18667AA000 HOLDER
ST2 18664AA000 BASE
ST3 18621AA000 ADAPTER WRENCH



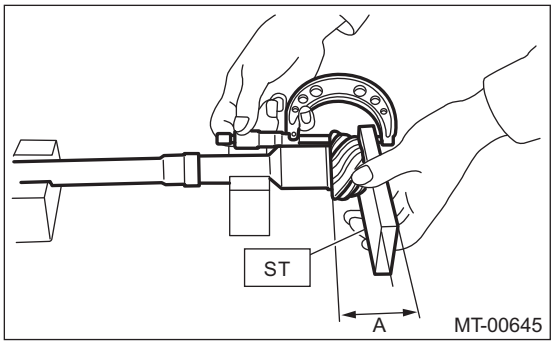
6) Using the ST, remove the double taper roller bearing assembly.
ST 18723AA000 REMOVER



D: ASSEMBLY

1) Using the ST, measure drive pinion measurement A.

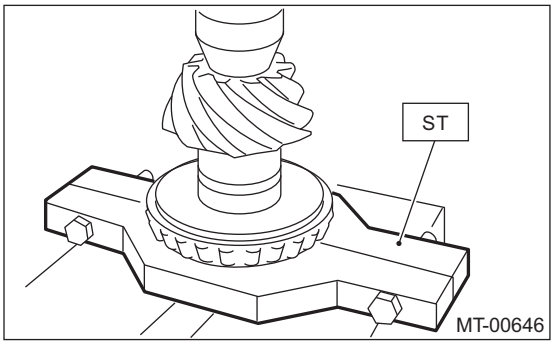
NOTE:
When selecting the drive pinion shim, refer to measurement A.
ST 398643600 GAUGE



2) Using the ST and a press, attach the double taper roller bearing inner race (front side) to the drive pinion shaft.
ST 18723AA000 REMOVER

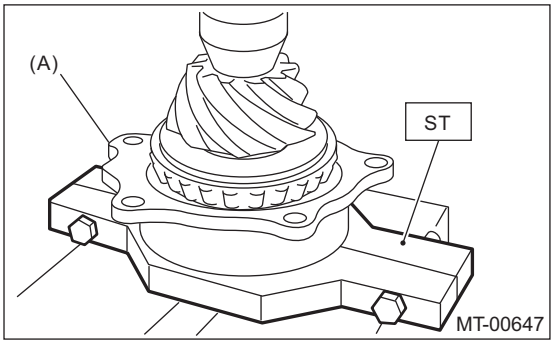
CAUTION:
Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).

NOTE:
Use a new double taper roller bearing.



3) Using the ST and a press, attach the double taper roller bearing outer race and the double taper roller bearing to the drive pinion shaft.
ST 18723AA000 REMOVER

NOTE:
- Use a new double taper roller bearing.
- Push in to a position where the bearing rotates smoothly.

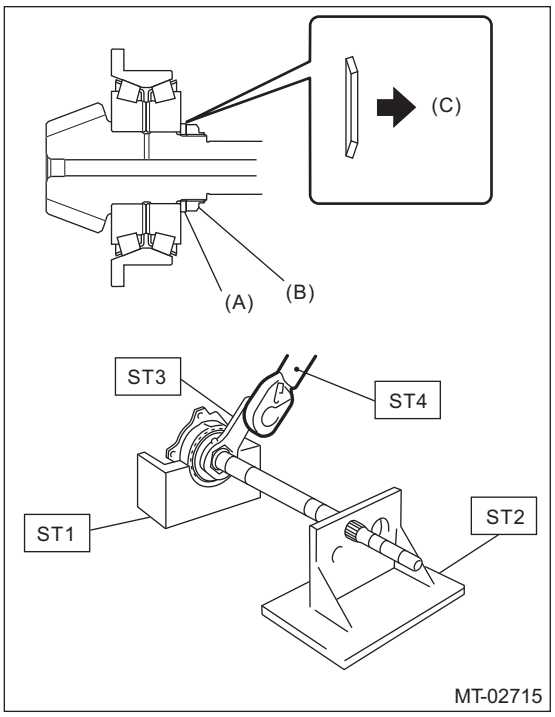


(A) Double taper roller bearing outer race

4) Attach a new lock washer and a new lock nut.
5) Set the ST to the drive pinion, and tighten the lock nut.
ST1 18667AA000 HOLDER
ST2 18664AA000 BASE
ST3 18621AA000 ADAPTER WRENCH
ST4 18852AA000 TORQUE WRENCH

NOTE:
- Tighten using the ST and the straight line torque wrench.
- Make sure the lock washer is installed in the proper direction.

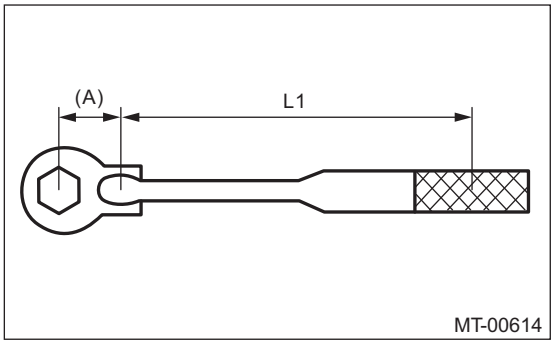
Tightening torque:
265 N·m (27.0 kgf-m, 195.4 ft-lb)



(A) Lock washer
(B) Lock nut
(C) Nut side

NOTE:
When using a torque wrench other than ST4, use the calculation below to calculate and tighten the lock nut.
Tighten using the ST and the straight line torque wrench.
T = L1/(0.1 + L1) × 285

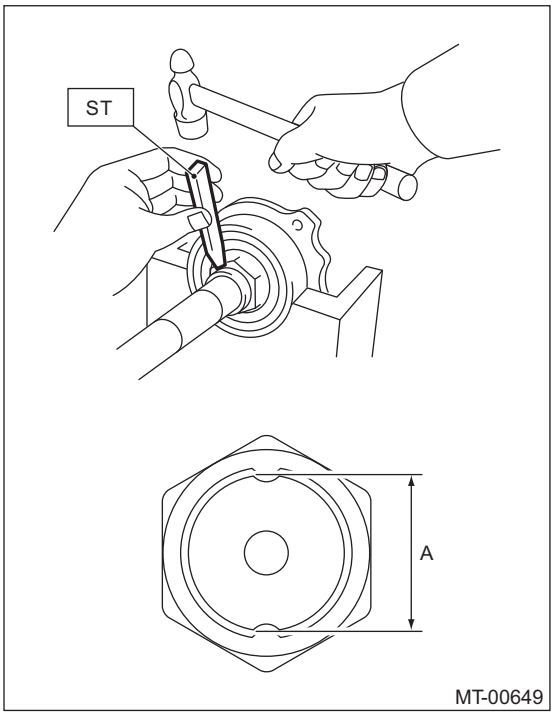
T N·m (kgf-m, ft-lb)	Torque wrench setting
L1 m (in)	Torque wrench length
0.1 m (3.94 in)	Length of ST
285 N·m (29.0 kgf-m, 210 ft-lb)	Tightening torque (lock nut)



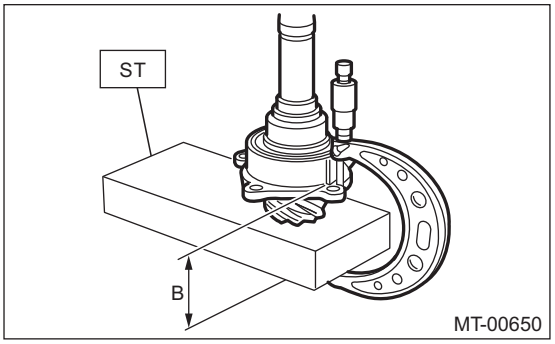
(A) 0.1 m (3.94 in)

6) Measure the starting torque. <Ref. to 6MT(TY85)-95, INSPECTION, Drive Pinion Shaft Assembly.>
7) Using the ST, crimp the lock nut in 2 locations, with dimensions within A 37±0.5 mm (1.46±0.02 in).
ST 18670AA000 PUNCH

NOTE:
Do not damage the crimp area of the lock nut.



8) Using the ST, measure drive pinion measurement B.
ST 398643600 GAUGE



9) Calculate from the calculation below to select 1 or 2 drive pinion shims from the following table.
6.5±0.0625 mm – (B – A) [0.26±0.0025 in – (B – A)]

NOTE:
A: Measurement value in step 1)
B: Measurement value in step 8)

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA270	0.15 (0.0059)
32295AA280	0.175 (0.0069)

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA290	0.20 (0.0079)
32295AA300	0.225 (0.0089)
32295AA310	0.25 (0.0098)
32295AA320	0.275 (0.0108)

10) Apply transmission gear oil to the side face of the double taper roller bearing, and attach the drive pinion shaft and the selected shims to the adapter plate.

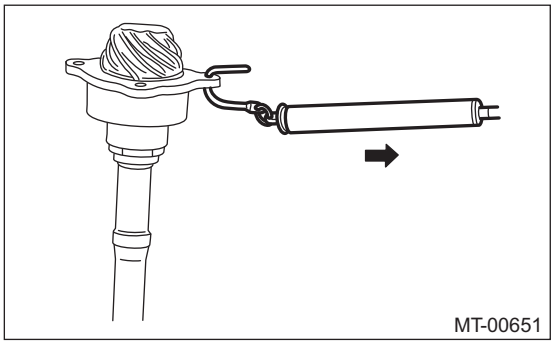
Tightening torque:
54 N·m (5.5 kgf-m, 39.8 ft-lb)
11) Install the oil guide A.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

E: INSPECTION

1) Using a spring scale, measure the starting torque. If the starting torque is outside the specification range, replace the double taper roller bearing.

Starting torque:
0 — 0.95 N (0 — 0.097 kgf, 0 — 0.21 lbf)

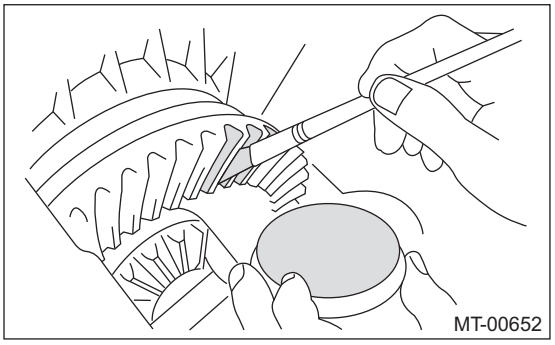


MT-00651

2) Gear
Replace gears in the following cases.
• The gear teeth surface is damaged or excessively worn.
3) Bearing
Replace the bearings in the following cases.
• Wear, rusting or damage of the bearings
• The bearing does not rotate smoothly or an abnormal noise is emitted when turning.
4) Adapter plate
Replace the adapter plate in the following cases:
• Wear, rusting or damage of the bearings
• Damage of the adapter plate
5) Check that the pipes and pipe chambers are not damaged or clogged. Repair or replace if damaged or clogged.

F: ADJUSTMENT

1) Inspect and adjust the hypoid driven gear-to-drive pinion backlash. <Ref. to 6MT(TY85)-102, HYPOID DRIVEN GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>
2) Apply a thin uniform coat of lead-free red dye on the surfaces of 3 or 4 hypoid driven gear teeth.

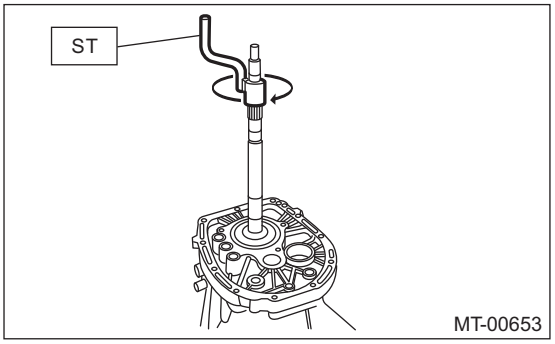


MT-00652

3) Install the drive pinion shaft assembly to the clutch housing, and tighten at least 4 bolts.

NOTE:
Install with the remaining liquid gasket, so that the clutch housing and the adapter plate will not be damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
4) Turn a few times using the ST.
ST 18631AA000 HANDLE

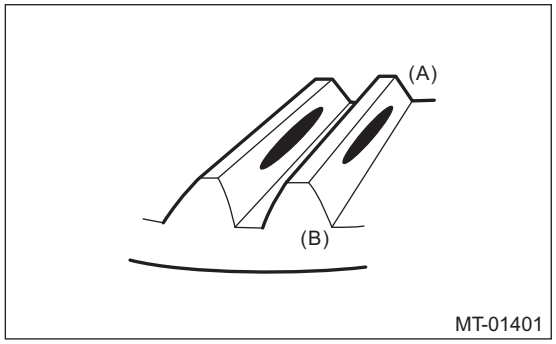


MT-00653

5) Remove the drive pinion shaft assembly, and inspect the mating condition of the teeth. If the tooth contact is not correct, adjust the backlash or shim thickness.

• Correct tooth contact

Check item: Tooth contact surface is slightly shifted toward the toe side under a no-load condition. (When driving, it moves towards the heel side.)

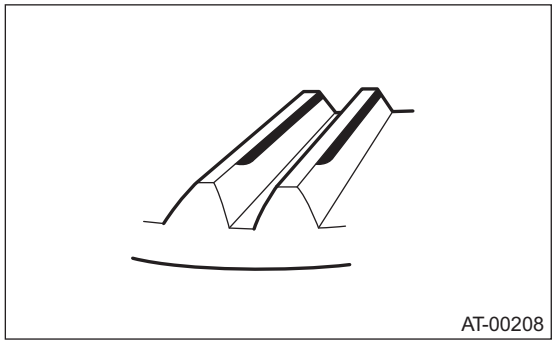


(A) Toe side
(B) Heel side

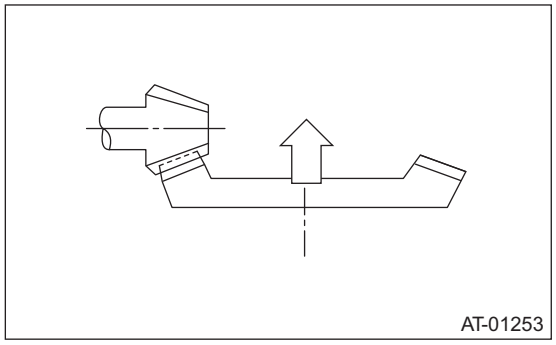
• Face contact

Check item: Backlash is too large.

Contact pattern



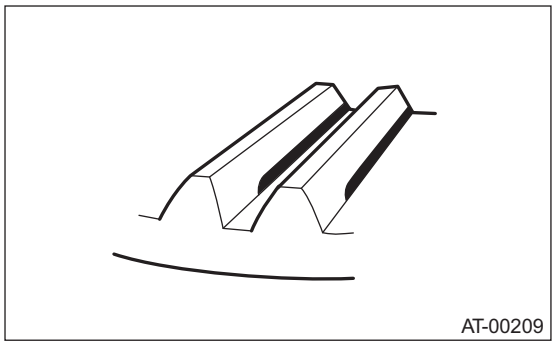
Corrective action: Tighten the side retainer to move the driven gear closer to the drive pinion shaft.



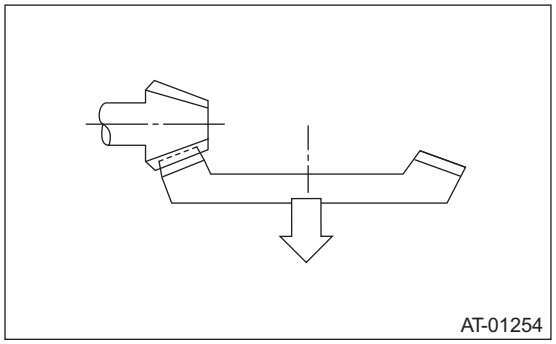
• Flank contact

Check item: Backlash is too small.

Contact pattern



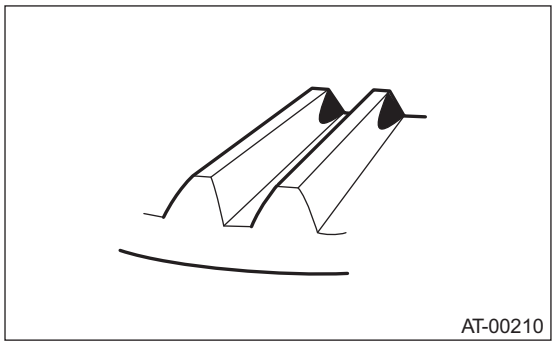
Corrective action: Loosen the side retainer to move the driven gear away from the drive pinion shaft.



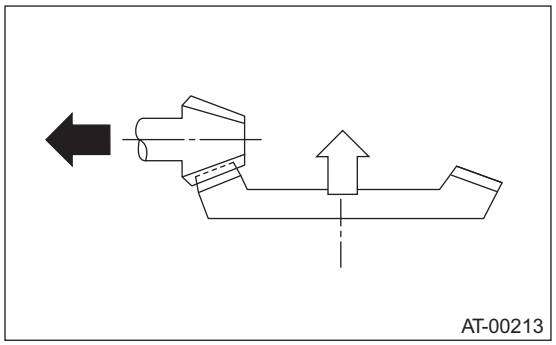
• Toe contact (inside contact)

Check item: Teeth contact area is too small.

Contact pattern



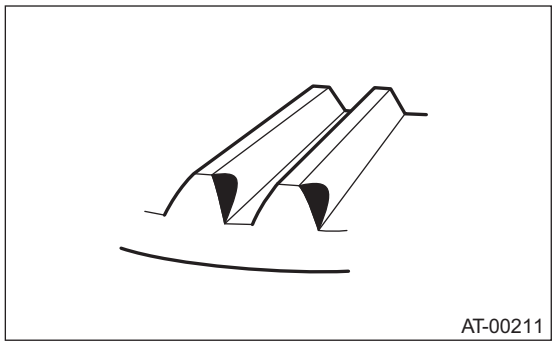
Adjustment: Reduce the thickness of the drive pinion shim according to the procedure for moving the drive pinion away from the driven gear.



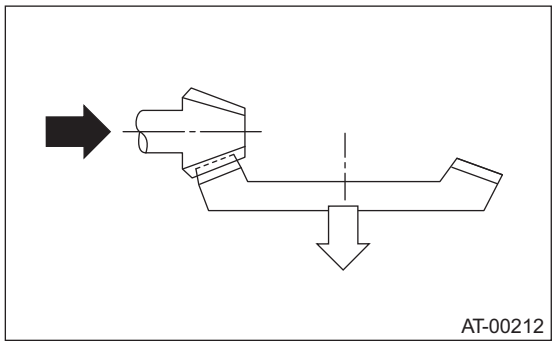
- Heel contact (outside end contact)

Check item: Teeth contact area is too small.

Contact pattern



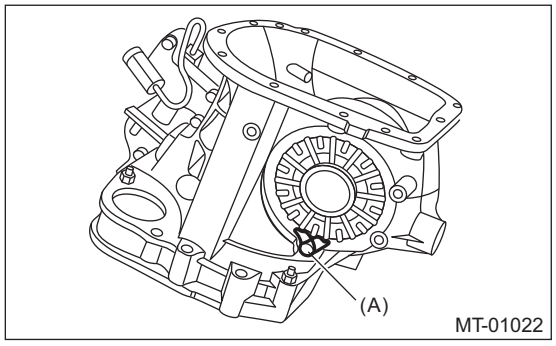
Adjustment: Increase thickness of the drive pinion shim according to the procedures for moving the drive pinion closer to the driven gear.



23.Front Differential Assembly

A: REMOVAL

1) Remove the manual transmission assembly. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, REMOVAL, Drive Pinion Shaft Assembly.>
10) Remove the retainer lock plates on both sides.

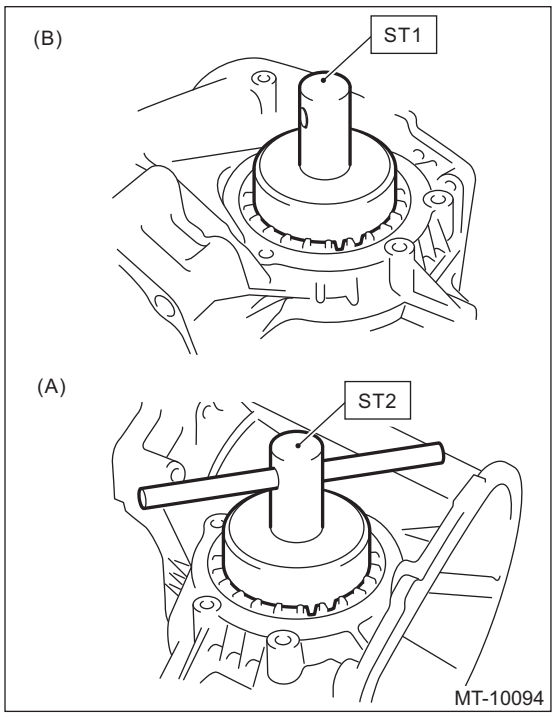


(A) Retainer lock plate

11) Remove the differential side retainers on both sides using the ST.

ST1	18658AA021	WRENCH COMPL RETAINER (RH SIDE)
ST2	18630AA000	WRENCH ASSY (LH SIDE)

NOTE:
Be careful not to damage the section where the clutch case retainer will be attached.



(A) LH side
(B) RH side

12) Remove the front differential.

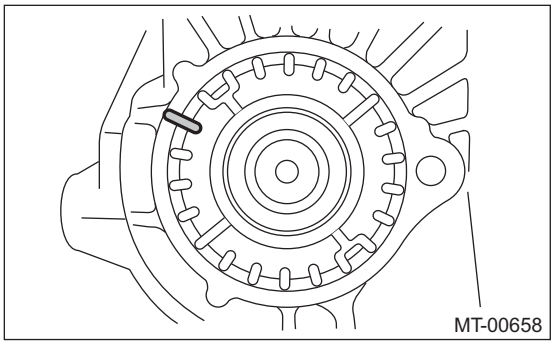
B: INSTALLATION

1) Install the differential assembly to the clutch housing.
2) Apply oil to the screw threads of the differential side retainer.
3) Remove the O-rings on both sides of the differential side retainer.
4) Install the differential side retainers to both sides, using the ST.

ST1	18658AA021	WRENCH COMPL RETAINER (RH SIDE)
ST2	18630AA000	WRENCH ASSY (LH SIDE)

NOTE:
Be careful not to damage the oil seal.
5) Inspect and adjust the hypoid driven gear backlash. <Ref. to 6MT(TY85)-101, HYPOID DRIVEN GEAR BACKLASH, INSPECTION, Front Differential Assembly.>
6) Inspect and adjust the tooth contact. <Ref. to 6MT(TY85)-95, ADJUSTMENT, Drive Pinion Shaft Assembly.>

7) Mark the mating positions of the left and right differential side retainers and the clutch housing.



MT-00658

8) Remove the differential side retainers from both sides.

NOTE:
When removing the side retainer, record how many times it was turned to remove.

9) Install new O-rings to the differential side retainers on both sides.

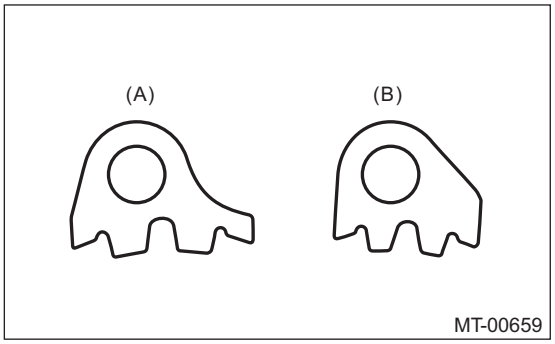
10) Attach the differential side retainers to both sides.

NOTE:
When attaching, turn the side retainer the same number of turns it took to remove, and align the marks.

11) Install the retainer lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Be careful not to confuse the left and right side retainer lock plates.



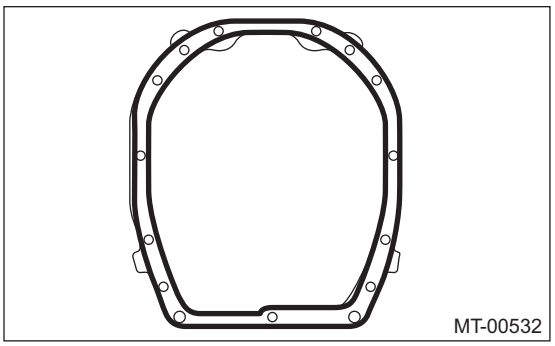
MT-00659

(A) LH
(B) RH

12) Remove any remaining liquid gasket from the clutch housing and adapter plate.

13) Apply liquid gasket to the clutch housing.

Liquid gasket:
THREE BOND 1215B or equivalent



MT-00532

14) Install the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, INSTALLATION, Drive Pinion Shaft Assembly.>

15) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>

16) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>

17) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>

18) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>

19) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>

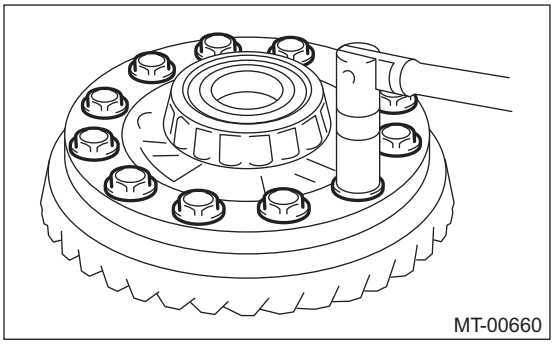
20) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>

21) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

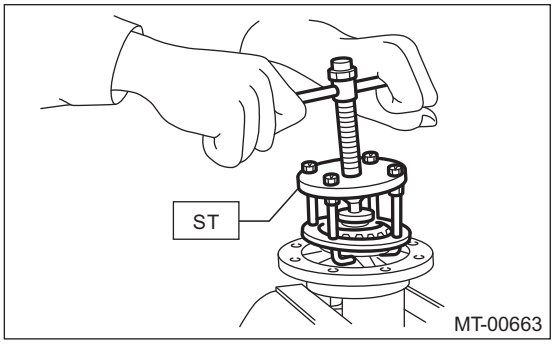
1. DIFFERENTIAL CASE

1) Fix the differential assembly on a vice, and remove the hypoid driven gear.
ST 18270KA020 SOCKET (E20)



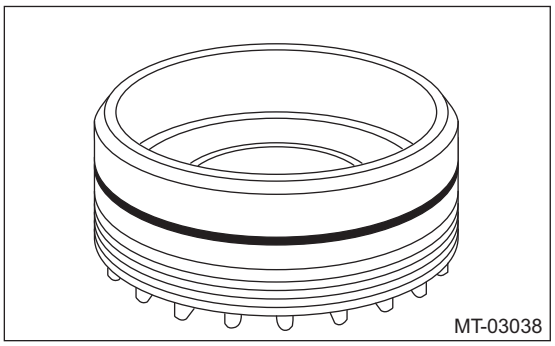
MT-00660

2) Remove the taper roller bearing of the hypoid driven gear using the ST.
ST 399527700 PULLER SET

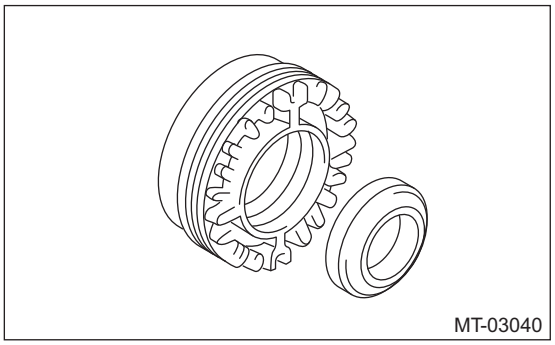


2. DIFFERENTIAL SIDE RETAINER

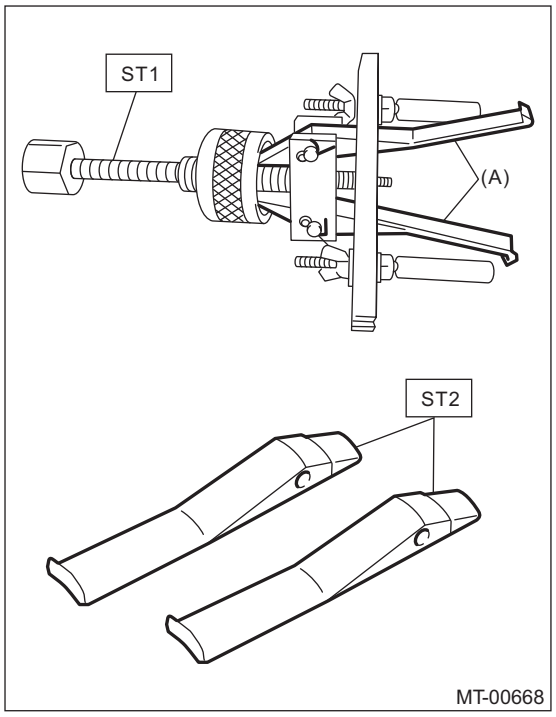
1) Remove the O-rings.



2) Remove the oil seal.

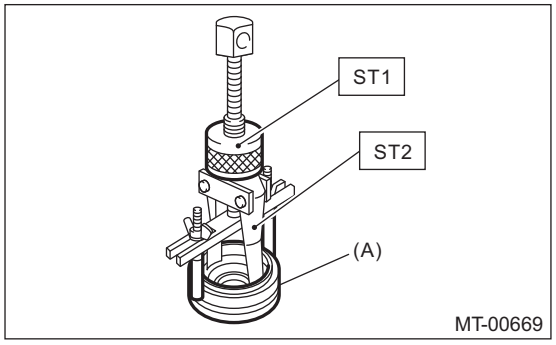


3) Remove the claw of ST1, and attach the claw of ST2.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Claw

4) Using the ST, remove the taper roller bearing outer race.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW



(A) Differential side retainer

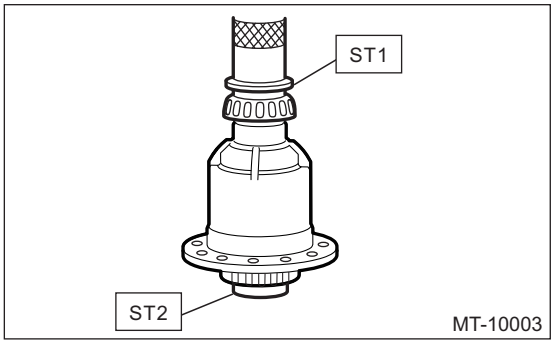
D: ASSEMBLY

1. DIFFERENTIAL CASE

1) Using the ST, attach the RH and LH taper roller bearing inner races to the differential case.
ST1 398437700 INSTALLER
ST2 398497701 SEAT

CAUTION:
Do not apply pressure in excess of 20 kN (2.0 ton, 2.2 US ton, 2.0 Imp ton).

NOTE:
Always replace the taper roller bearing inner race and outer race as a set.



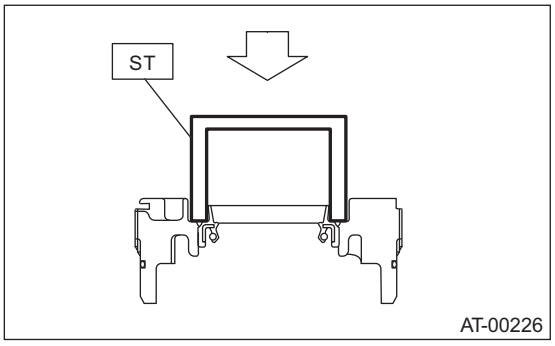
2) Install the hypoid driven gear to differential case.
ST 18270KA020 SOCKET (E20)

Tightening torque:
69 N·m (7.0 kgf-m, 50.9 ft-lb)

2. DIFFERENTIAL SIDE RETAINER

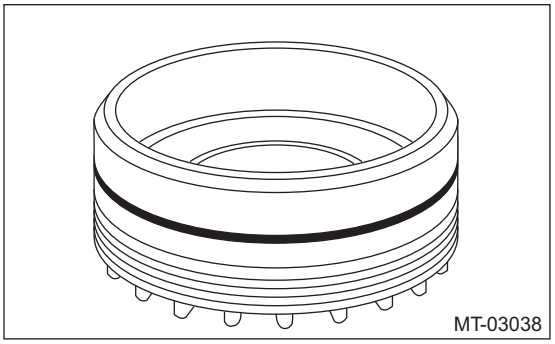
NOTE:
Install the oil seal and O-ring of side retainer after the adjustment of backlash and tooth contact.
1) Attach the taper roller bearing outer race to the differential side retainer.
2) Using the ST, install the oil seal.
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
- Use a new oil seal.
- Apply oil to the oil seal lips.



3) Install the O-rings.

NOTE:
Use new O-rings.



E: INSPECTION

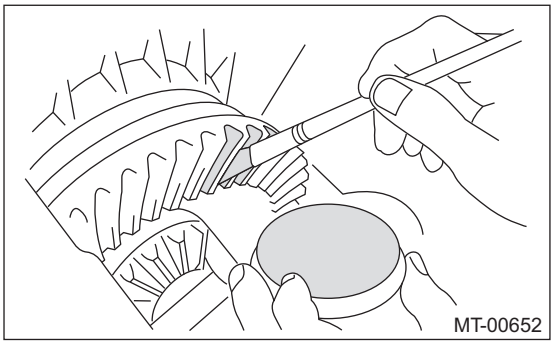
Repair or replace the front differential in the following cases:
- If gears are damaged, seized, or are excessively worn.
- If differential case sliding surfaces are damaged, seized, or are excessively worn.
- If there is damage, rust or wear in the bearings or bearing locations.
- If the bearing does not rotate smoothly or an abnormal noise is emitted when turning.

1. HYPOID DRIVEN GEAR BACKLASH

Inspect the hypoid driven gear backlash. Adjust if out of standard. <Ref. to 6MT(TY85)-102, HYPOID DRIVEN GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

2. TOOTH CONTACT OF HYPOID DRIVEN GEAR

1) Check that the hypoid driven gear backlash is within the standard value. Adjust if out of standard. <Ref. to 6MT(TY85)-102, HYPOID DRIVEN GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>
2) Apply a thin uniform coat of lead-free red dye on the surfaces of 3 or 4 hypoid driven gear teeth.



3) Attach the drive pinion shaft assembly, and affix with at least 4 bolts.

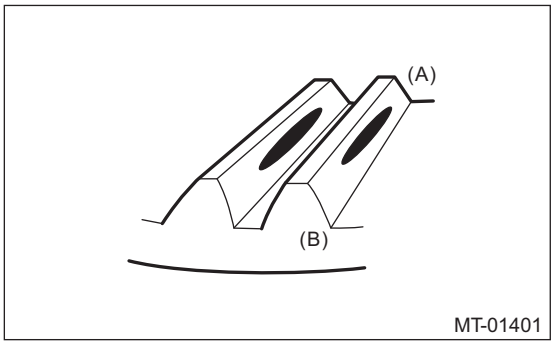
NOTE:
Use old gaskets and washers to prevent the mating surfaces of the housing from becoming damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Turn the drive pinion shaft to the left and right for several turns.
5) Remove the drive pinion shaft assembly, and inspect the mating condition of the teeth. If tooth contact is not correct, perform adjustment. <Ref. to 6MT(TY85)-95, ADJUSTMENT, Drive Pinion Shaft Assembly.>

- Correct tooth contact

NOTE:
In a no load condition, the tooth contact from the center to the toe side is 50-60%. (While driving, the tooth contact will shift towards the heel side.)



(A) Toe side
(B) Heel side

F: ADJUSTMENT

1. HYPOID DRIVEN GEAR BACKLASH

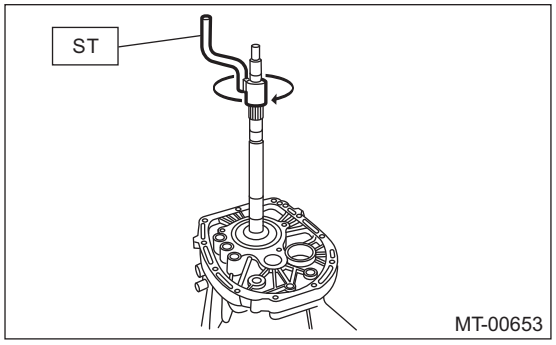
1) Attach the RH and LH differential side retainers.
ST1 18658AA021 WRENCH COMPL RETAINER (RH SIDE)
ST2 18630AA000 WRENCH ASSY (LH SIDE)

NOTE:
Tighten the side retainer on the RH side a little further than that of the LH side.
2) Attach the drive pinion shaft assembly, and affix with 5 bolts.

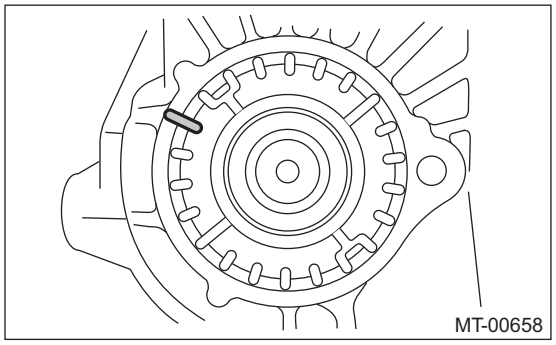
NOTE:
Use old gaskets and washers to prevent the mating surfaces of the housing from becoming damaged.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3) Using the ST, loosen the differential side retainer RH, and tighten the differential side retainer LH until the hypoid driven gear just contacts the drive pinion.
ST1 18658AA021 WRENCH COMPL RETAINER (RH SIDE)
ST2 18630AA000 WRENCH ASSY (LH SIDE)
4) Use the ST to turn the drive pinion shaft a few times.
ST 18631AA000 HANDLE



5) Repeat steps 3) and 4) until differential side retainer LH does not turn anymore. For differential side retainer RH, tighten until the inner race and outer race just comes into contact. This is the “zero” backlash state.
6) Mark the mating positions of the left and right differential side retainers and the clutch housing.

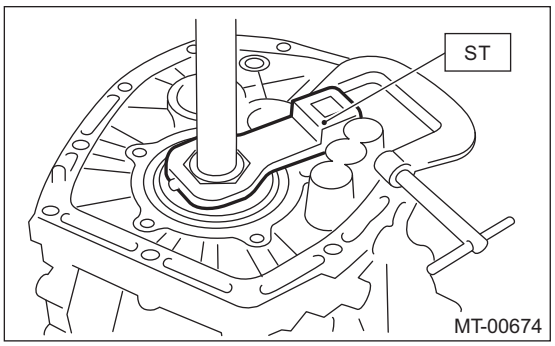


7) Return the differential side retainer LH by 3 notches, and tighten the differential side retainer RH by 3 notches.
8) Temporarily attach the LH side retainer lock plate.
9) Tighten the differential side retainer RH by 1.25 notches.
10) Temporarily attach the RH side retainer lock plate.

NOTE:

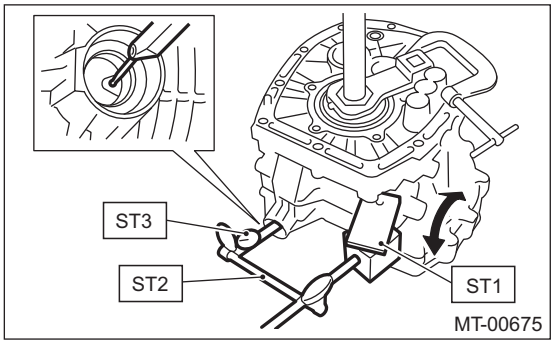
- If the lock plate cannot be aligned, adjust the position toward the tightened side.
- The notch on the lock plate moves by 0.5 notch if the lock plate is turned upside down when installed.

11) Use the ST to fix the drive pinion shaft in place.
ST 18621AA000 ADAPTER WRENCH



12) Install the SUBARU genuine axle shaft to the front differential left and right sides.
Part No. 38415AA000 Axle shaft
13) Move the axle shaft, and measure the hypoid driven gear backlash.
ST1 498255400 PLATE
ST2 498247001 MAGNET BASE
ST3 498247100 DIAL GAUGE

Hypoid driven gear backlash:
0.13 — 0.18 mm (0.0051 — 0.0071 in)



14) If the backlash is out of specified range, remove the left and right retainer lock plates and loosen RH side differential side retainer. Then, adjust the LH side differential side retainer by turning it, and attach the LH side retainer lock plate.
15) Tighten the RH side differential side retainer until the inner race and outer race just come into contact.

2. TOOTH CONTACT OF HYPOID DRIVEN GEAR

Regarding teeth contact conditions, refer to the drive pinion section. <Ref. to 6MT(TY85)-101, TOOTH CONTACT OF HYPOID DRIVEN GEAR, INSPECTION, Front Differential Assembly.>

24.Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>

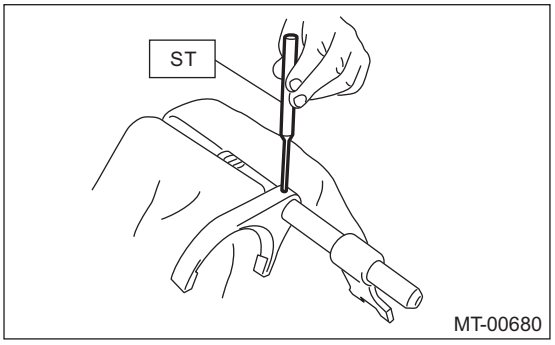
B: INSTALLATION

1) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>
2) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
3) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
4) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
5) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
6) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
7) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

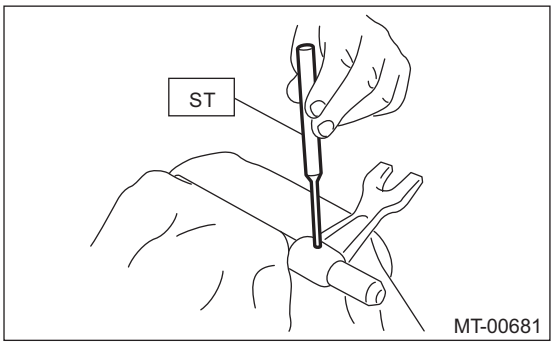
C: DISASSEMBLY

1. REVERSE SHIFTER FORK

1) Remove the reverse shifter fork using the ST.
ST 398791700 REMOVER

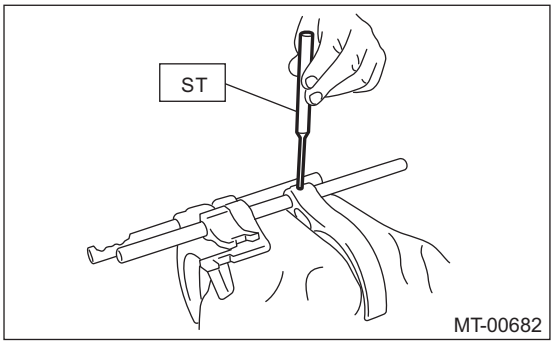


2) Remove the reverse shifter arm using the ST.
ST 398791700 REMOVER

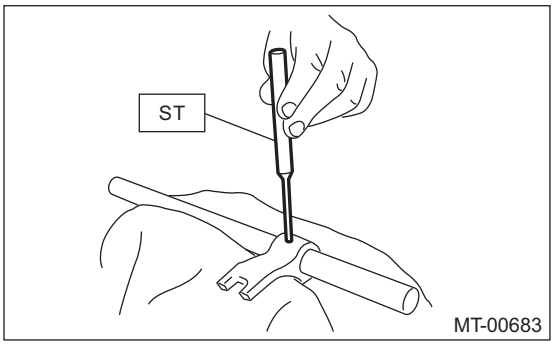


2. 1ST-2ND, 3RD-4TH SHIFTER FORK

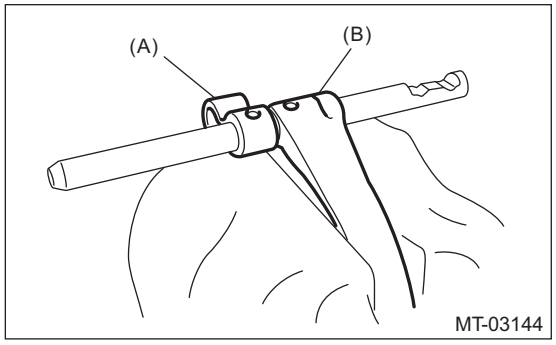
1) Using the ST, remove the 3rd-4th shifter fork.
ST 398791700 REMOVER



2) Using the ST, remove the 3rd-4th shifter arm.
ST 398791700 REMOVER



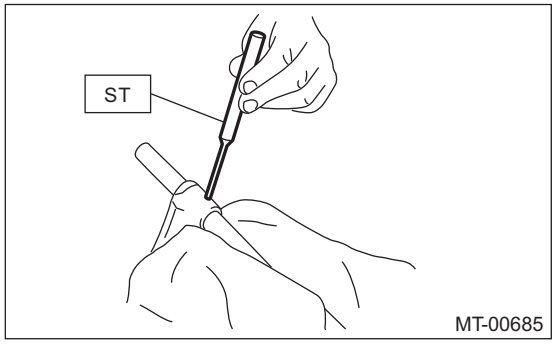
3) Using the ST, remove the 1st-2nd shifter arm and 1st-2nd shifter fork.
ST 398791700 REMOVER



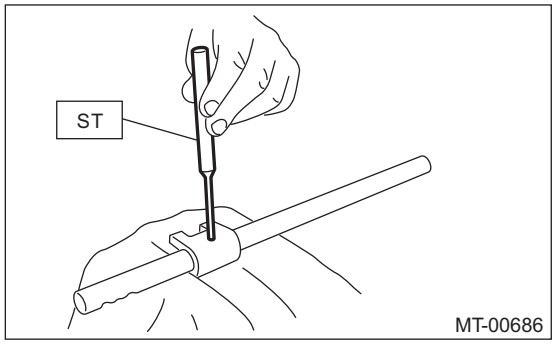
(A) 1st-2nd shifter arm
(B) 1st-2nd shifter fork

3. 5TH-6TH SHIFTER FORK

1) Using the ST, remove the 5th-6th shifter fork.
ST 398791700 REMOVER

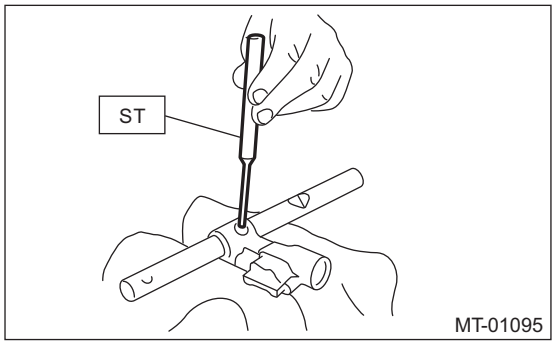


2) Using the ST, remove the 5th-6th shifter arm.
ST 398791700 REMOVER



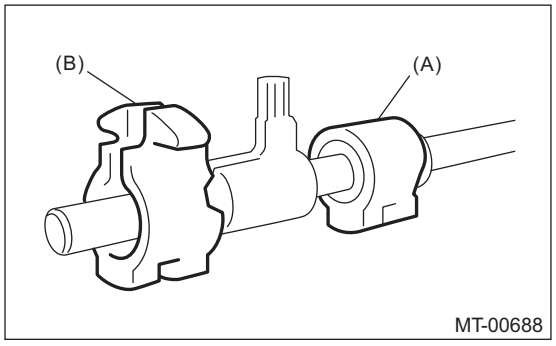
4. SHIFTER ARM SHAFT

Remove the selector arm using the ST.
ST 398791700 REMOVER



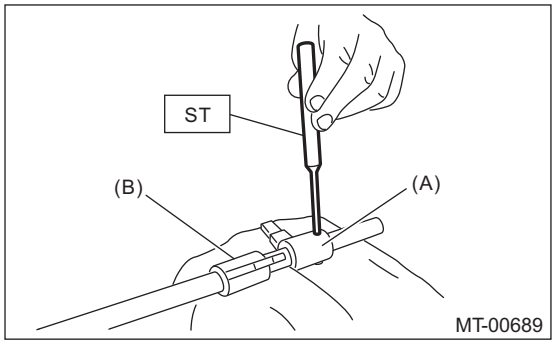
5. STRIKING ROD

1) Remove the reverse interlock block and the interlock block from the striking rod.



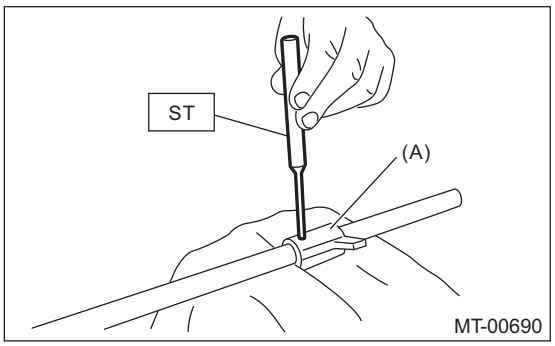
(A) Reverse interlock block
(B) Interlock block

2) Remove the reverse interlock arm using the ST.
ST 398791700 REMOVER



(A) Reverse interlock arm
(B) Interlock arm

3) Remove the interlock arm using the ST.
ST 398791700 REMOVER



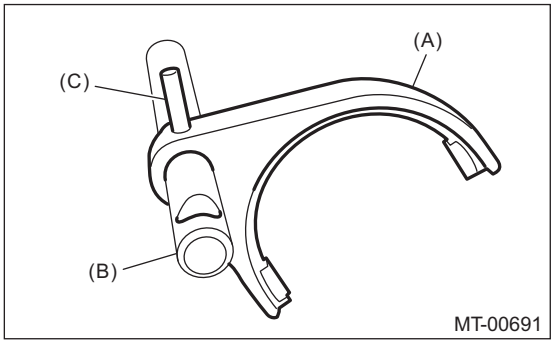
(A) Interlock arm

D: ASSEMBLY

1. REVERSE SHIFTER FORK

1) Using the ST, install the reverse shifter fork.
ST 398791700 REMOVER

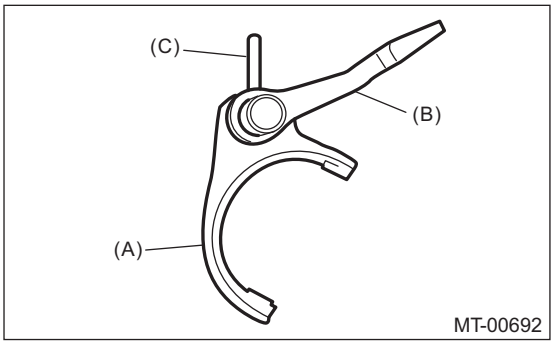
NOTE:
• Confirm that the reverse shifter fork and rod are installed in the proper direction.
• Use a new straight pin.



(A) Reverse shifter fork
(B) Reverse fork rod
(C) Straight pin

2) Using the ST, install the reverse shifter arm.
ST 398791700 REMOVER

NOTE:
• Confirm that the reverse shifter arm and rod are installed in the proper direction.
• Use a new straight pin.

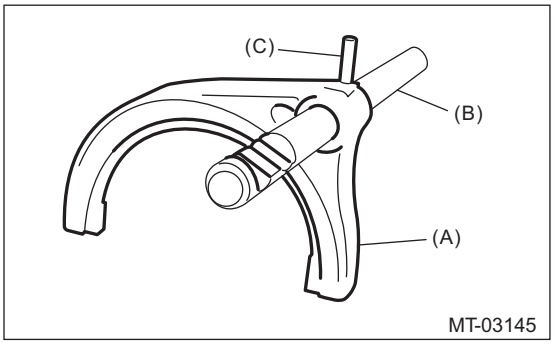


(A) Reverse shifter fork
(B) Reverse shifter arm
(C) Straight pin

2. 1ST-2ND, 3RD-4TH SHIFTER FORK

1) Using the ST, install the 1st-2nd shifter fork.
ST 398791700 REMOVER

NOTE:
• Make sure that the 1st-2nd shifter fork and rod are installed in the correct direction.
• Use a new straight pin.

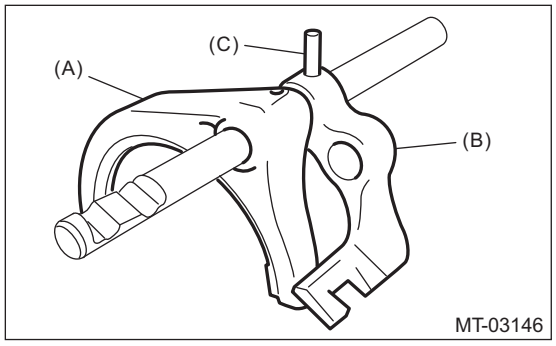


(A) 1st-2nd shifter fork
(B) 1st-2nd fork rod
(C) Straight pin

2) Using the ST, install the 1st-2nd shifter arm.
ST 398791700 REMOVER

NOTE:
• Make sure that the 1st-2nd shifter arm and fork are installed in the correct direction.

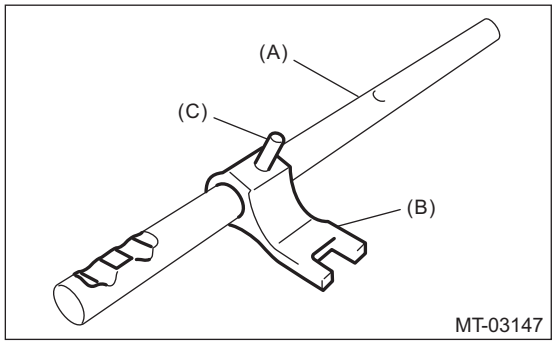
• Use a new straight pin.



(A) 1st-2nd shifter fork
(B) 1st-2nd shifter arm
(C) Straight pin

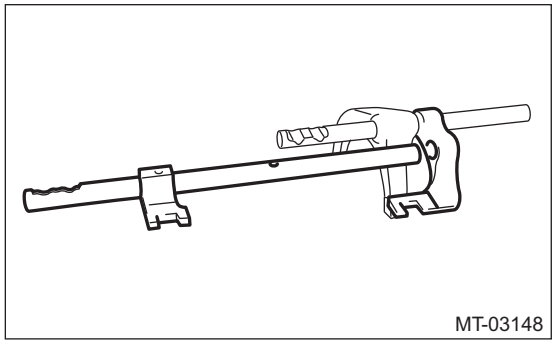
3) Using the ST, install the 3rd-4th shifter arm.
ST 398791700 REMOVER

NOTE:
• Make sure that the 3rd-4th shifter arm and rod are installed in the correct direction.
• Use a new straight pin.



(A) 3rd-4th shifter rod
(B) 3rd-4th shifter arm
(C) Straight pin

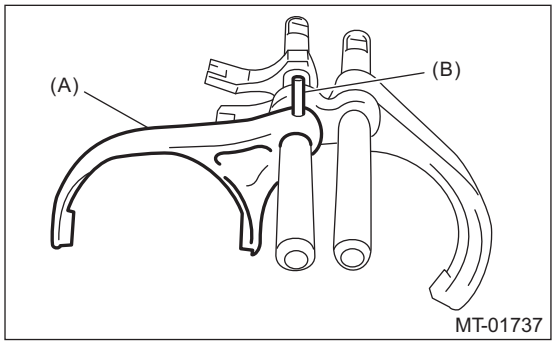
4) Attach the 3rd-4th fork rod to the 1st-2nd shifter arm.



5) Using the ST, install the 3rd-4th shifter fork.
ST 398791700 REMOVER

NOTE:
• Make sure that the 3rd-4th shifter fork is installed in the correct direction.

• Use a new straight pin.

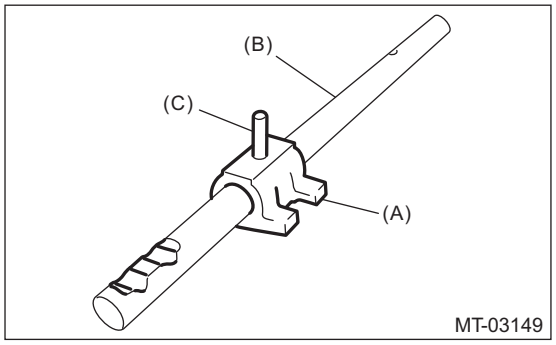


(A) 3rd-4th shifter fork
(B) Straight pin

3. 5TH-6TH SHIFTER FORK

1) Using the ST, install the 5th-6th shifter arm.
ST 398791700 REMOVER

NOTE:
• Make sure that the 5th-6th shifter arm and rod are installed in the correct direction.
• Use a new straight pin.

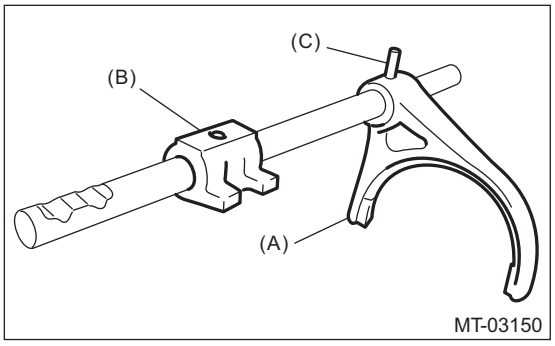


(A) 5th-6th shifter arm
(B) 5th-6th fork rod
(C) Straight pin

2) Using the ST, install the 5th-6th shifter fork.
ST 398791700 REMOVER

NOTE:
• Make sure that the 5th-6th shifter fork and arm are installed in the correct direction.

• Use a new straight pin.

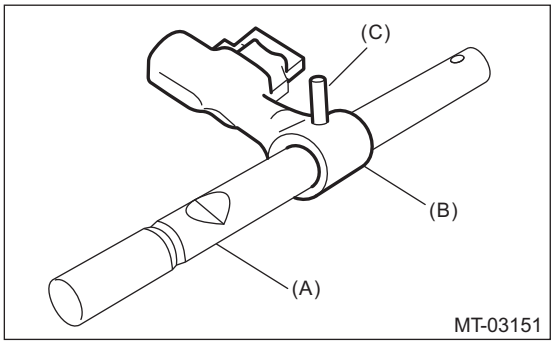


(A) 5th-6th shifter fork
(B) 5th-6th shifter arm
(C) Straight pin

4. SHIFTER ARM SHAFT

Using the ST, install the selector arm.
ST 398791700 REMOVER

NOTE:
• Confirm that the selector arm and shaft are installed in the proper direction.
• Use a new straight pin.



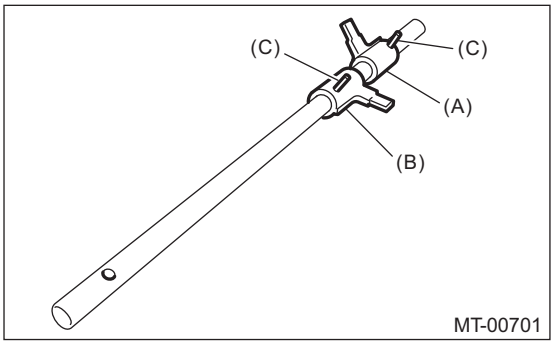
(A) Shifter arm shaft
(B) Selector arm
(C) Straight pin

5. STRIKING ROD

1) Using the ST, install the reverse interlock arm and interlock arm.
ST 398791700 REMOVER

NOTE:
• Confirm that the reverse interlock arm and rod are installed in the proper direction.
• Confirm that the interlock arm and rod are installed in the proper direction.

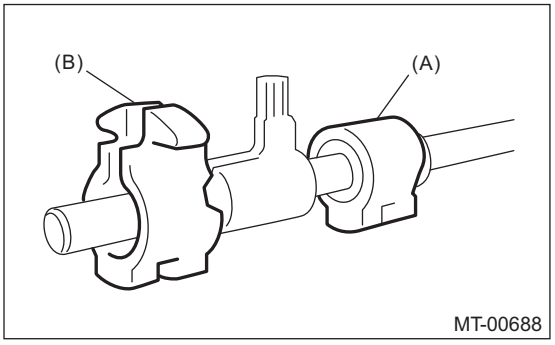
• Use a new straight pin.



(A) Reverse interlock arm
(B) Interlock arm
(C) Straight pin

2) Attach the reverse interlock block and interlock block to the striking rod.

NOTE:
Confirm that the reverse interlock block and interlock block are installed in the proper direction.



(A) Reverse interlock block
(B) Interlock block

E: INSPECTION

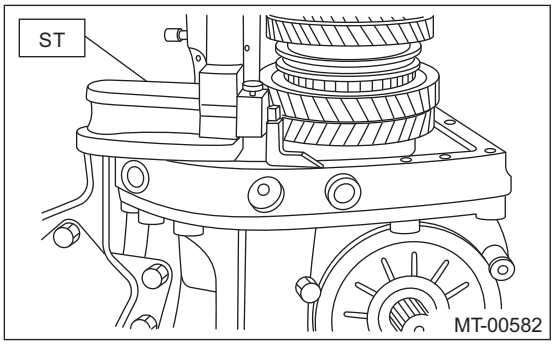
1) Check the shift shaft and shift rod for damage. Replace if damaged.
2) Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

F: ADJUSTMENT

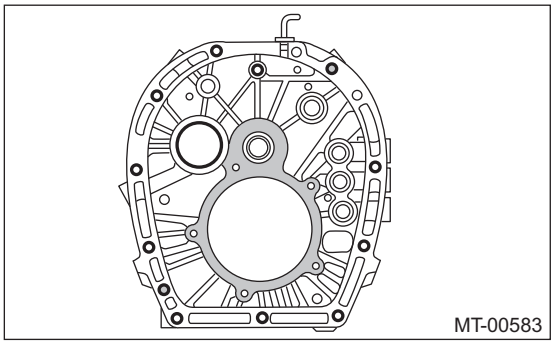
1. 1ST-2ND FORK ROD SELECTION

NOTE:
In the following conditions, perform the procedures below.
• Replacement of the 1st and 2nd driven gear
• 1st and 2nd synchro ring assembly replacement
• Adapter plate replacement
• Driven shaft replacement
• 1st-2nd synchronizer hub and coupling sleeve assembly replacement
1) Insert the drive pinion shaft assembly into the adapter plate.

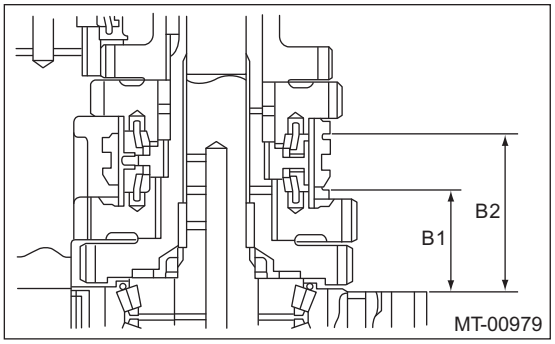
NOTE:
Confirm that the thrust bearing outer race has not been removed and the drive pinion is not lifted.
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



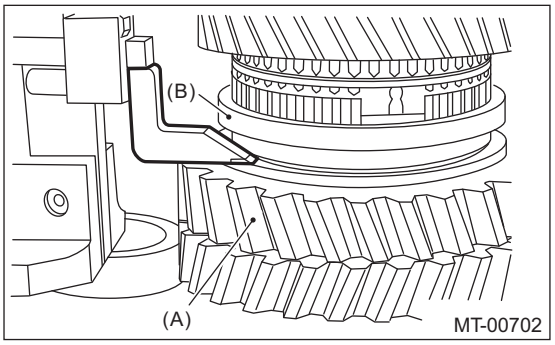
NOTE:
• The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
• During measurement, do not place the height gauge in the shaded area shown in the figure.



3) Select the main shaft snap ring. <Ref. to 6MT(TY85)-76, ADJUSTMENT, Main Shaft Assembly.>
4) Measure “B1” and “B2” as shown in the figure.

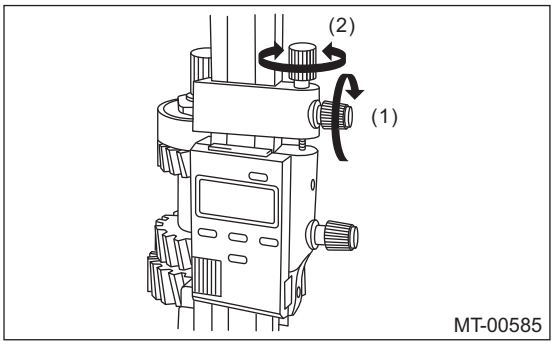


5) Shift down the 1st-2nd coupling sleeve all the way to the 1st driven gear side, and measure “B1”.

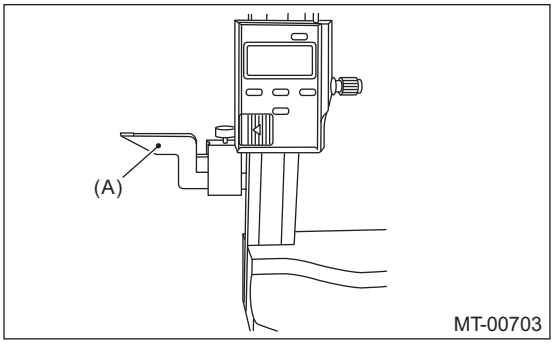


(A) 1st driven gear
(B) 1st-2nd coupling sleeve

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 1st side end surface of the coupling sleeve.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

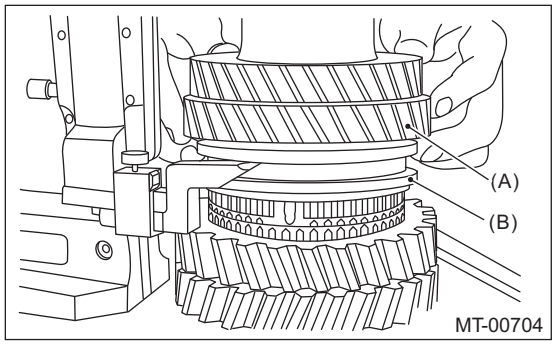


6) Set the height gauge indicator upside down.



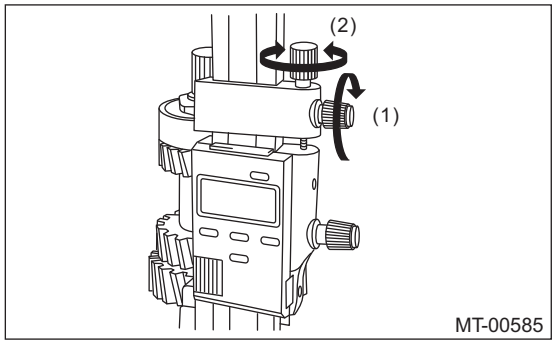
(A) Indicator

7) Shift up the 1st-2nd coupling sleeve all the way to the 2nd driven gear side, and measure “B2”.



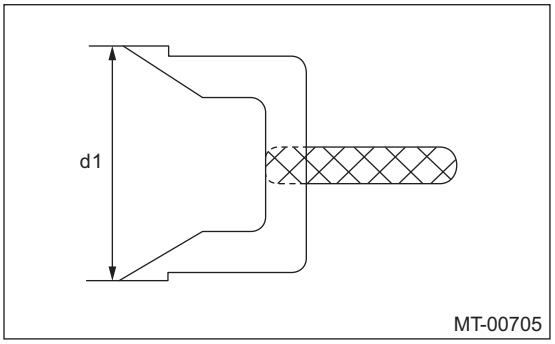
(A) 2nd driven gear
(B) 1st-2nd coupling sleeve

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 2nd side end surface of the coupling sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



8) According to both of the measurements, calculate the neutral position of the 1st-2nd coupling sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (B1 + B2) / 2
T: 1st-2nd coupling sleeve center position
B1: Height from the adapter plate end to the coupling sleeve end, when shifted to 1st gear
B2: Measured height from the adapter plate end to the coupling sleeve end, when shifted to 2nd gear: +55 mm (2.17 in)

NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “B2”, and measure “B2”.



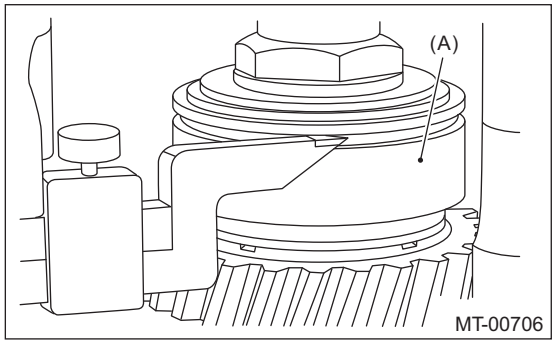
T mm (in)	Lot No. (marking)
62.58 — 62.78 (2.4638 — 2.4717)	32801AA370 (5)
62.78 — 62.98 (2.4717 — 2.4795)	32801AA380 (4)
62.98 — 63.18 (2.4795 — 2.4874)	32801AA390 (2)
63.18 — 63.38 (2.4874 — 2.4953)	32801AA400 (1)
63.38 — 63.58 (2.4953 — 2.5031)	32801AA410 (3)

2. 3RD-4TH FORK ROD SELECTION

NOTE:
In the following conditions, perform the procedures below.
• Main shaft replacement
• 3rd, and 3rd to 6th drive gear and bushing replacement
• 3rd, and 3rd to 6th synchro assembly replacement
• 3rd-4th synchronizer hub and coupling sleeve assembly replacement

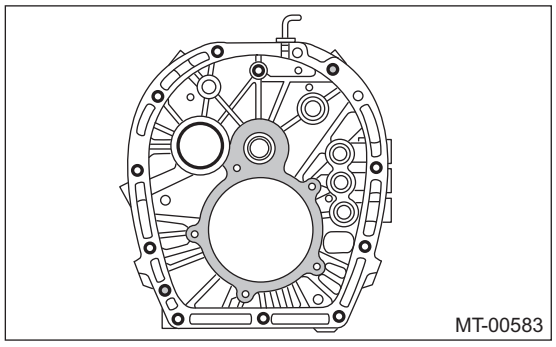
1) Insert the main shaft assembly into the adapter plate.

2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the top surface of the snap ring groove, and set to the zero point on the upper side of the double taper roller bearing.
ST 18853AA000 HEIGHT GAUGE

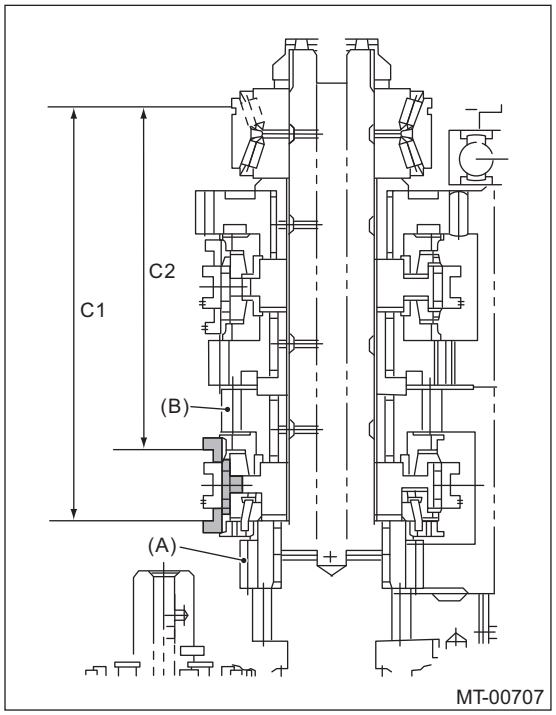


(A) Double taper roller bearing

NOTE:
• The height gauge will be set on the adapter plate during the measurement. Use a scraper to remove any gasket material remaining on the end face.
• During measurement, do not place the height gauge in the shaded area shown in the figure.

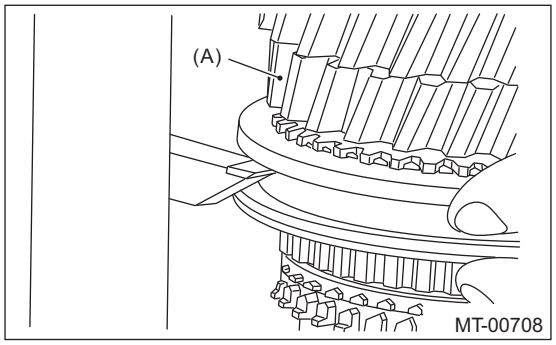


3) Use a height gauge to measure “C1” and “C2” as shown in the figure.



(A) 3rd drive gear
(B) 4th drive gear

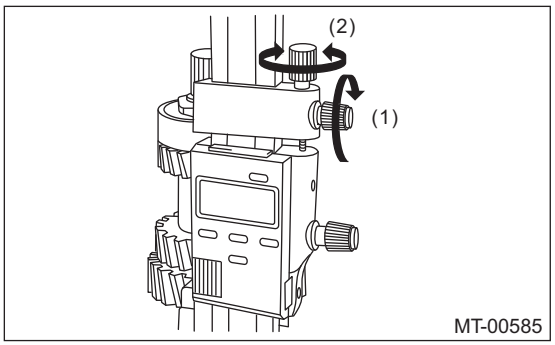
(1) Shift up the 3rd-4th coupling sleeve all the way to the 4th drive gear side, and measure “C2”.



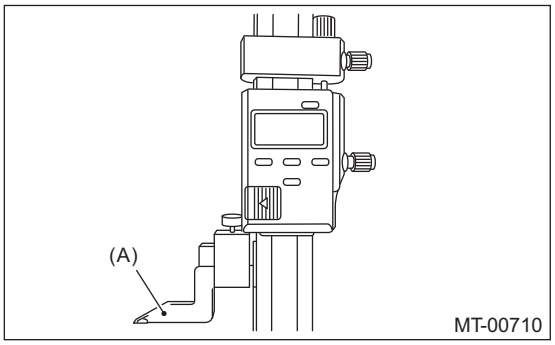
(A) 4th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure.
• Turn dial (2), and set the indicator to the 4th side end surface of the coupling sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.

• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

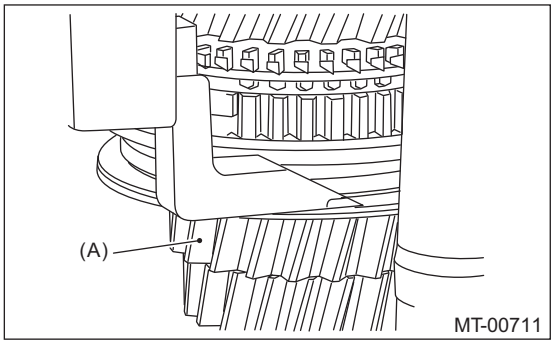


(2) Set the height gauge indicator upside down.



(A) Indicator

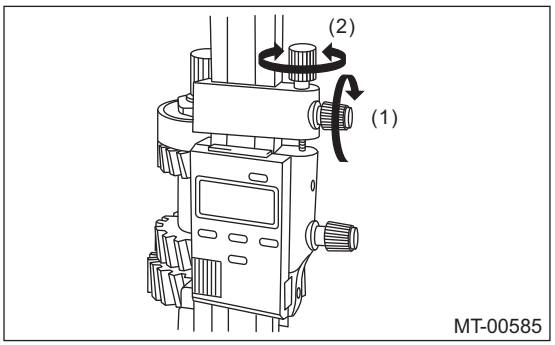
(3) Shift down the 3rd-4th coupling sleeve all the way to the 3rd drive gear side, and measure “C1”.



(A) 3rd drive gear

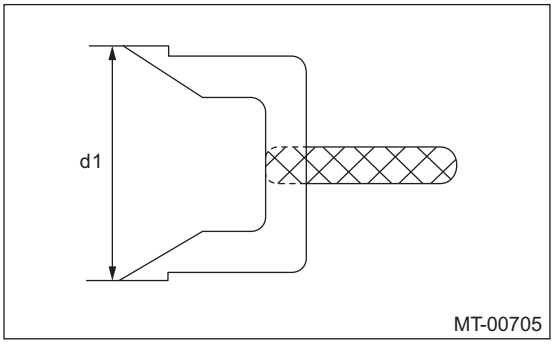
NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 3rd side end surface of the coupling sleeve.

• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



4) According to both of the measurements, calculate the neutral position of the 3rd-4th coupling sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (C1 + C2) / 2
T: 3rd-4th coupling sleeve center position
C1: Measured depth from the double taper roller bearing snap ring groove to the coupling sleeve end, when shifted to 3rd gear: +55 mm (2.17 in)
C2: Measured depth from the double taper roller bearing snap ring groove to the coupling sleeve end, when shifted to 4th gear

NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “C1”, and measure “C1”.



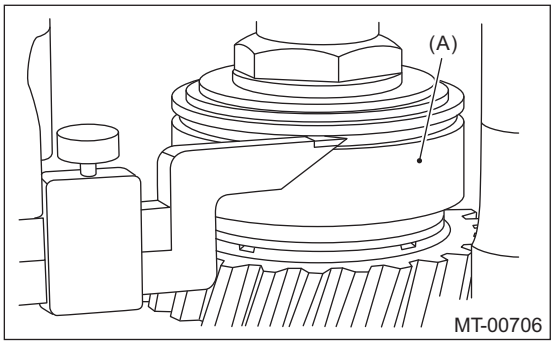
T mm (in)	Lot No. (marking)		
	M.SFT Snap ring 805072010 [t = 1.65 mm (0.065 in)]	M.SFT Snap ring 805072011 [t = 1.95 mm (0.077 in)]	M.SFT Snap ring 805072012 [t = 2.25 mm (0.089 in)]
137.22 — 137.52 (5.4024 — 5.4142)	32809AA240 (none)	32809AA250 (2)	32809AA260 (4)

T mm (in)	Lot No. (marking)		
	M.SFT Snap ring 805072010 [t = 1.65 mm (0.065 in)]	M.SFT Snap ring 805072011 [t = 1.95 mm (0.077 in)]	M.SFT Snap ring 805072012 [t = 2.25 mm (0.089 in)]
137.52 — 137.82 (5.4142 — 5.4260)	32809AA230 (1)	32809AA240 (none)	32809AA250 (2)
137.82 — 138.12 (5.4260 — 5.4379)	32809AA220 (3)	32809AA230 (1)	32809AA240 (none)
T = Thickness			

3. 5TH-6TH FORK ROD SELECTION

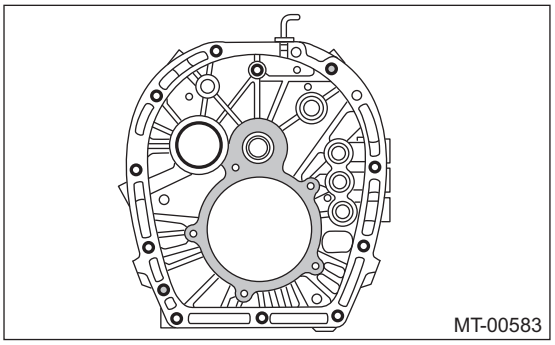
NOTE:
In the following conditions, perform the procedures below.
- Main shaft replacement
- 3rd to 6th drive gear and bushing replacement
- 3rd to 6th synchro ring assembly replacement
- 3rd-4th synchronizer hub and coupling sleeve assembly replacement
- 5th-6th synchronizer hub and coupling sleeve assembly replacement

1) Insert the main shaft assembly into the adapter plate.
2) Set the height gauge to the adapter plate. Lower the height gauge indicator to the upper face of the snap ring groove or the upper side of the double taper roller bearing. Set to zero point.
ST 18853AA000 HEIGHT GAUGE

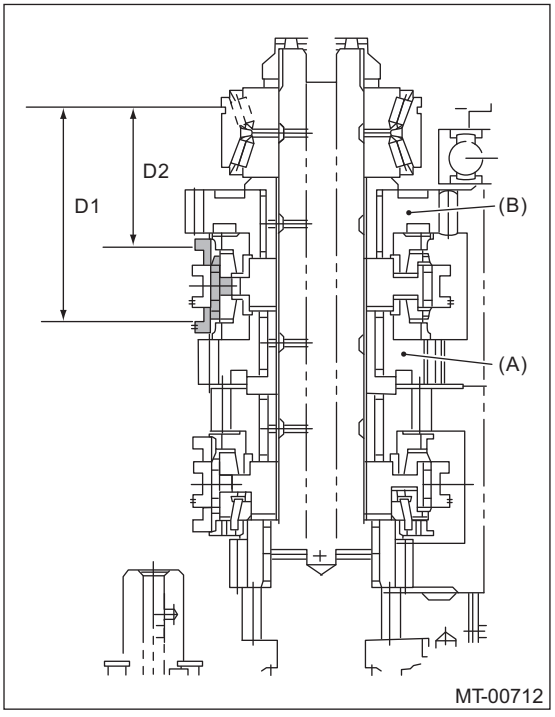


(A) Double taper roller bearing

NOTE:
- The height gauge will be set on the adapter plate during the measurement. Use a scraper to remove any gasket material remaining on the end face.
- During measurement, do not place the height gauge in the shaded area shown in the figure.

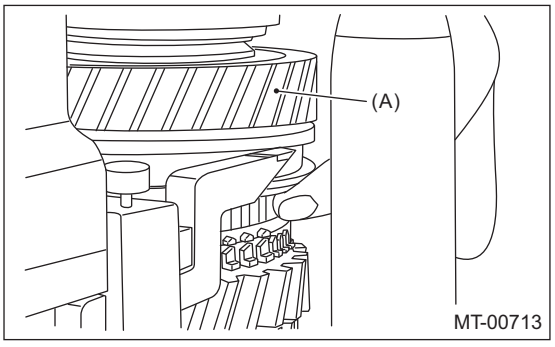


3) Use a height gauge to measure “D1” and “D2” as shown in the figure.



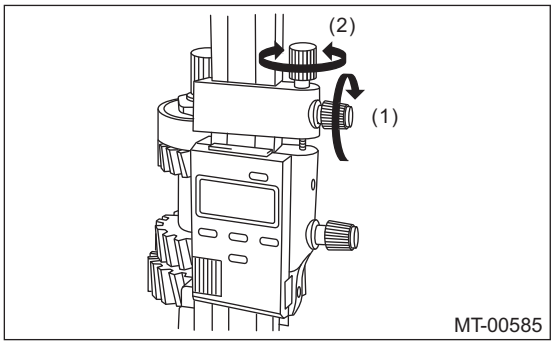
(A) 5th drive gear
(B) 6th drive gear

(1) Shift up the 5th-6th coupling sleeve all the way to the 6th drive gear side, and measure “D2”.

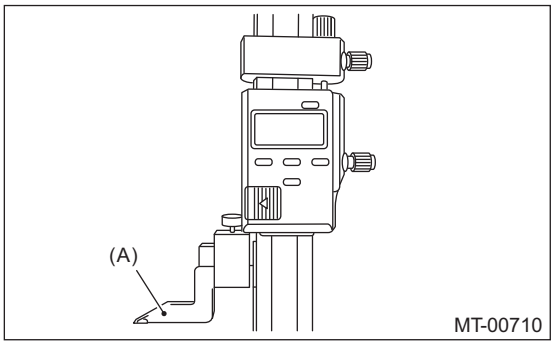


(A) 6th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 6th side end surface of the coupling sleeve.
• The measurement is to be performed with two persons, while holding the coupling sleeve straight.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.

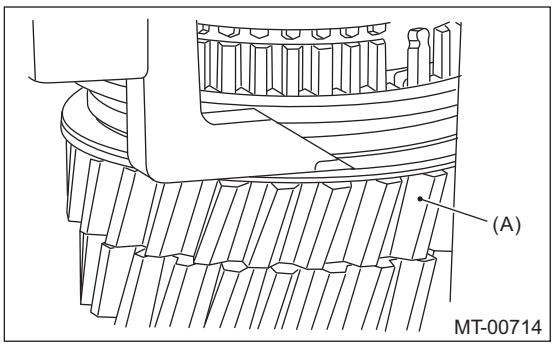


(2) Set the height gauge indicator upside down.



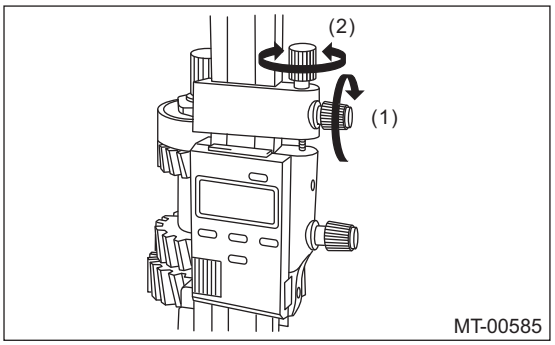
(A) Indicator

(3) Shift down the 5th-6th coupling sleeve all the way to the 5th drive gear side, and measure "D1".



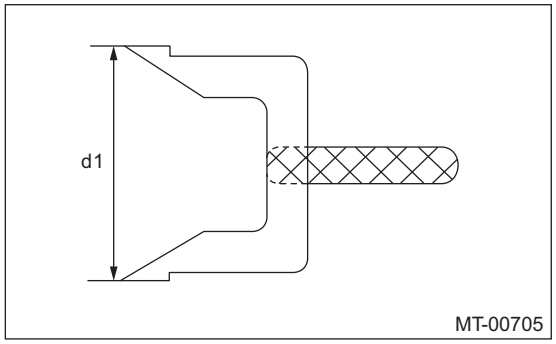
(A) 5th drive gear

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the 5th side end surface of the coupling sleeve.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



4) According to both of the measurements, calculate the neutral position of the 5th-6th coupling sleeve. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T = (D1 + D2) / 2
T: 5th-6th coupling sleeve center position
D1: Measured length from the double taper roller bearing snap ring groove to the coupling sleeve groove end, when shifted to 5th gear [Value: +55 mm (2.17 in)]
D2: Measured length from the double taper roller bearing snap ring groove to the coupling sleeve groove end, when shifted to 6th gear

NOTE:
Attach the indicator upside down in comparison to the setting procedures for the zero point. Add “d1” [Value: 55 mm (2.17 in)] from the figure below to “D1”, and measure “D1”.



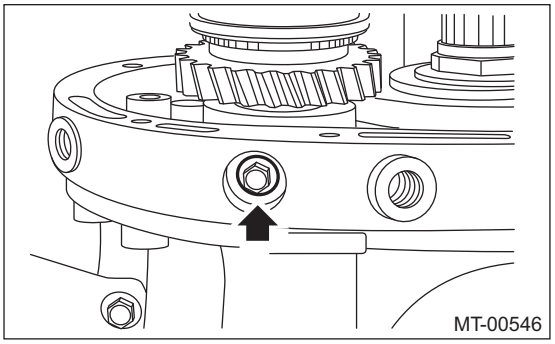
T mm (in)	Lot No. (marking)		
	M.SFT Snap ring 805072010 [t = 1.65 mm (0.065 in)]	M.SFT Snap ring 805072011 [t = 1.95 mm (0.077 in)]	M.SFT Snap ring 805072012 [t = 2.25 mm (0.089 in)]
64.12 — 64.42 (2.5244 — 2.5362)	32945AA110 (none)	32945AA120 (2)	32945AA130 (4)
64.42 — 64.72 (2.5362 — 2.5480)	32945AA100 (1)	32945AA110 (none)	32945AA120 (2)
64.72 — 65.02 (2.5480 — 2.5598)	32945AA090 (3)	32945AA100 (1)	32945AA110 (none)
T = Thickness			

4. REVERSE FORK ROD SELECTION

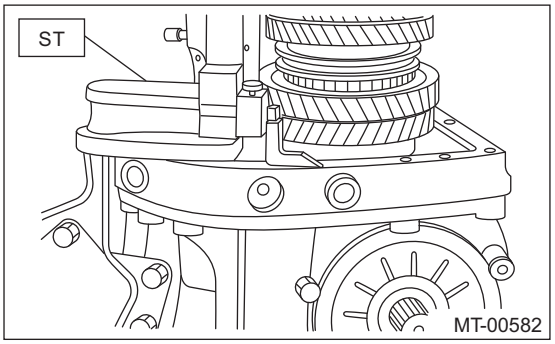
NOTE:
In the following conditions, perform the procedures below.
- Reverse idler gear replacement.
- Reverse idler gear No. 2 replacement.
- Adapter plate replacement.
- Base replacement.

1) Insert the reverse idler gear assembly into the adapter plate.
2) Tighten the reverse idler gear shaft attachment bolts.

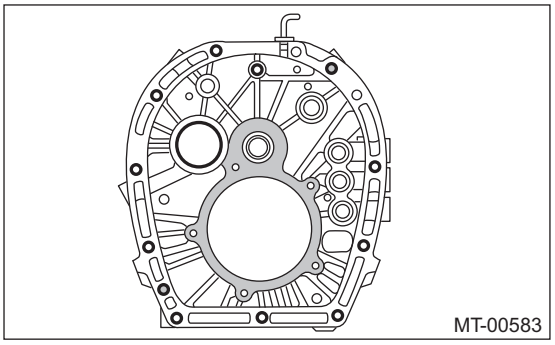
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



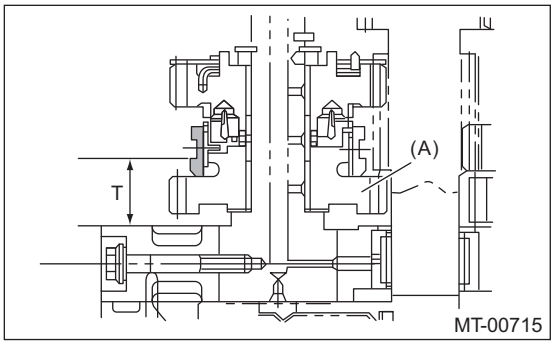
3) Set the height gauge to the adapter plate. Lower the height gauge indicator to the mating surface of the adapter plate and case, and set to zero points.
ST 18853AA000 HEIGHT GAUGE



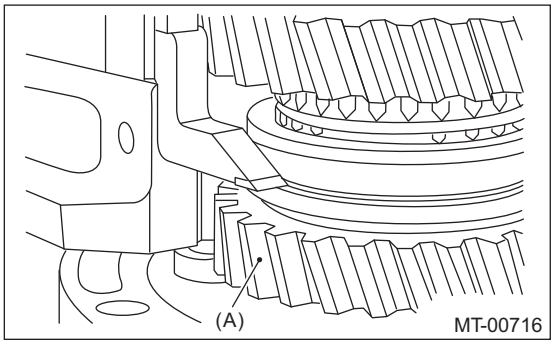
NOTE:
- The adapter plate will be the base point for the measurement. Use a scraper to remove any gasket material remaining on the end face.
- During measurement, do not place the height gauge in the shaded area shown in the figure.



4) Shift the reverse coupling sleeve to the reverse idler gear No. 2, and measure “T”.

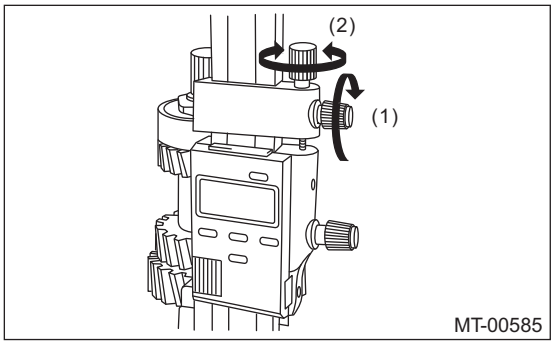


(A) Reverse idler gear No. 2



(A) Reverse idler gear No. 2

NOTE:
• Set the height gauge indicator near the measurement target, and lock dial (1) as shown in the figure. Turn dial (2), and set the indicator to the end face of the reverse coupling sleeve side.
• Turn approximately 72° at a time, and measure the coupling sleeve in 5 locations. Round down the 2 highest and 2 lowest measurement values. The remaining center value is used as the measurement value.



5) Calculate the neutral position of the reverse coupling sleeve according to the measurement. From the following calculation, select a fork rod which matches the calculated value.
Calculation: T + 4.8 mm (0.189 in)

T + 4.8 mm (0.189 in) mm (in)	Lot No. (marking)
33.50 — 33.80 (1.3189 — 1.3307)	32816AA190 (1)
33.80 — 34.10 (1.3307 — 1.3425)	32816AA200 (none)
34.10 — 34.40 (1.3425 — 1.3543)	32816AA210 (2)
T = Thickness	

25.Clutch Housing

A: REMOVAL

1) Remove the manual transmission assembly from the vehicle. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Prepare the transmission for overhaul. <Ref. to 6MT(TY85)-39, Preparation for Overhaul.>
3) Remove the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, REMOVAL, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, REMOVAL, Back-up Light Switch.>
4) Remove the extension case. <Ref. to 6MT(TY85)-43, REMOVAL, Extension Case.>
5) Remove the transfer driven gear. <Ref. to 6MT(TY85)-55, REMOVAL, Transfer Driven Gear.>
6) Remove the center differential. <Ref. to 6MT(TY85)-57, REMOVAL, Center Differential.>
7) Remove the transmission case. <Ref. to 6MT(TY85)-58, REMOVAL, Transmission Case.>
8) Remove the individual gear assemblies. <Ref. to 6MT(TY85)-64, REMOVAL, Main Shaft Assembly.>
9) Remove the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, REMOVAL, Drive Pinion Shaft Assembly.>
10) Remove the front differential assembly. <Ref. to 6MT(TY85)-98, REMOVAL, Front Differential Assembly.>

B: INSTALLATION

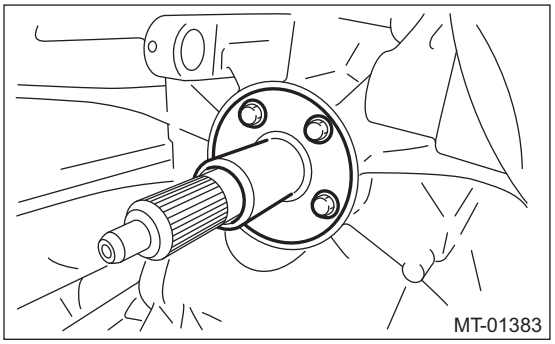
1) Install the pitching stopper bracket.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

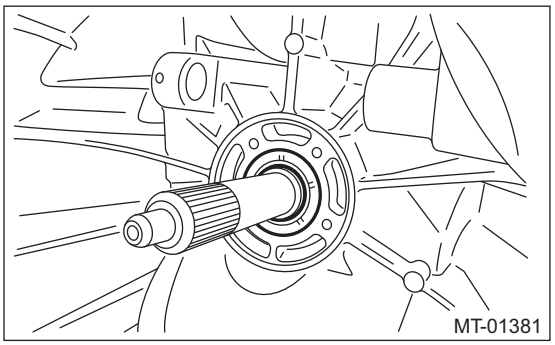
2) Install the front differential assembly. <Ref. to 6MT(TY85)-98, INSTALLATION, Front Differential Assembly.>
3) Install the drive pinion shaft assembly. <Ref. to 6MT(TY85)-92, INSTALLATION, Drive Pinion Shaft Assembly.>
4) Install the individual gear assemblies all at once. <Ref. to 6MT(TY85)-65, INSTALLATION, Main Shaft Assembly.>
5) Install the transmission case. <Ref. to 6MT(TY85)-60, INSTALLATION, Transmission Case.>
6) Install the center differential. <Ref. to 6MT(TY85)-57, INSTALLATION, Center Differential.>
7) Install the transfer driven gear. <Ref. to 6MT(TY85)-55, INSTALLATION, Transfer Driven Gear.>
8) Install the extension case. <Ref. to 6MT(TY85)-43, INSTALLATION, Extension Case.>
9) Install the neutral position switch, back-up light switch and harness. <Ref. to 6MT(TY85)-42, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT(TY85)-41, INSTALLATION, Back-up Light Switch.>
10) Install the manual transmission assembly to the vehicle. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Remove the clutch release bearing guide.



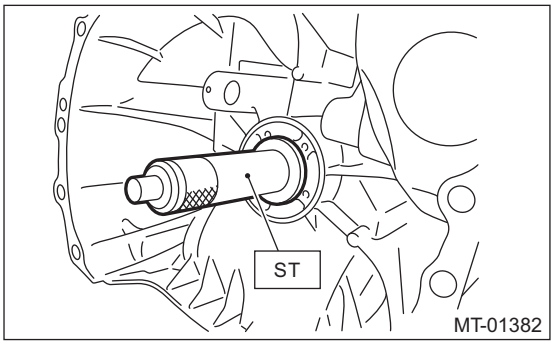
2) Remove the oil seal.



D: ASSEMBLY

1) Attach the oil seal to the clutch housing, being careful not to damage the seal.

NOTE:
Use a new oil seal.
ST 18657AA020 OIL SEAL INSTALLER



2) Install the clutch release bearing guide.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

E: INSPECTION

1) Check to make sure there is no damage or cracks on the clutch housing. If there is excessive damage, replace the clutch housing.
2) Inspect the clutch housing for transmission gear oil leakage. If any oil leaks are found, repair or replace the applicable part.

26.General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

Symptoms	Possible cause	Corrective action
1. Gears are difficult to engage. NOTE: If it is difficult to shift, there are two possible causes. One is a defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, a defective clutch function may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer at internal spline of the coupling sleeve	Replace.
	(b) Gear spline wear, damage, dents	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact or wear between synchronizer ring and gear cone	Repair or replace.
2. Gear slip-out • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper adjustment	Replace.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn shifter fork, broken shifter fork rail spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Worn in the synchronizer hub chamfer angle	Replace.
	(g) Worn 1st driven gear, needle bearing and race	Replace.
	(h) Worn 2nd driven gear, needle bearing and race	Replace.
	(i) Worn 3rd drive gear and bushing	Replace.
	(j) Worn 4th drive gear and bushing	Replace.
	(k) Worn 5th drive gear and bushing	Replace.
	(l) Worn 6th drive gear and bushing	Replace.
	(m) Worn reverse idler gear and bushing	Replace.
3. Noise emitted from transmission NOTE: If a noise is heard when the vehicle is parked with its engine idling and ceases when the clutch is disengaged, it may be considered that the noise is coming from the transmission.	(a) Insufficient or improper lubrication	Replenish or replace with the specified amount of recommended oil.
	(b) Worn or damaged gears and bearings NOTE: If the trouble is only wear of the gear teeth surfaces, only a high whirring noise will occur at high speeds, but if any part is broken, rhythmical clicking sounds will be heard even at low speeds.	Replace.

2. DIFFERENTIAL

Symptoms	Possible cause	Corrective action
1. Broken differential (case, gear, bearing, etc.) NOTE: Noise will occur, and eventually the differential will not be able to operate due to broken pieces obstructing the gear revolution.	(a) Insufficient or improper oil	Disassemble the differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of the clutch	Readjust the preload and backlash of the bearing, and the contact surface of gear.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of the drive pinion and the hypoid driven gear	Adjust.
	(e) Loose hypoid driven gear clamping bolts	Tighten.
2. Differential and hypoid gear noise Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However, noise from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for noise from the differential. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following three kinds of noises. • Gear noise when driving: If noise increases as the vehicle speed increases, it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise during coasting: Damaged gears due to misadjusted bearings and incorrect shim adjustment. • Bearing noise when driving or coasting: Cracked, broken or damaged bearings.	(a) Insufficient oil	Replenish or replace with the specified amount of recommended oil.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check the tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust the bearing preload.
	(d) Loose roller bearing	Readjust the backlash of the hypoid driven gear to drive pinion, and check the tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**START INSPECTIONS.** 1) Use the Check List for Interview to confirm the condition of the problem from the user. <Ref. to 6MT(diag)-3, Check List for Interview.> 2) Check the items related to DCCD. • General inspection <Ref. to 6MT(diag)-4, INSPECTION, General Description.> • Disconnection of harness connector • Visual check for harness connector damage • Oil leakage	Is the check result OK?	Go to step **2**.	Repair the defective items.
2	**CHECK DTC.** Read the DTC. <Ref. to 6MT(diag)-8, Subaru Select Monitor.> NOTE: • Refer to "List of Diagnostic Trouble Code (DTC)" for DTC. <Ref. to 6MT(diag)-19, List of Diagnostic Trouble Code (DTC).> • If the communication function of Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to 6MT(diag)-8, Subaru Select Monitor.>	Are DTC, time stamp and freeze frame data displayed?	Record the DTC, time stamp and freeze frame data. Go to step **3**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Inspect based on the general diagnosis table. <Ref. to 6MT(diag)-35, Diagnostics with Phenomenon.>
3	**PERFORM DIAGNOSIS.** 1) Inspect and repair all DTC using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to 6MT(diag)-21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: Refer to "List of Diagnostic Trouble Code (DTC)" for DTC. <Ref. to 6MT(diag)-19, List of Diagnostic Trouble Code (DTC).> 2) Start the engine. 3) Read the DTC using Subaru Select Monitor. <Ref. to 6MT(diag)-8, Subaru Select Monitor.>	Are any DTCs displayed?	Record all DTC using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)" for the inspection. <Ref. to 6MT(diag)-21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Repeat execute diagnosis until DTC no longer appears.	Inspect based on the general diagnosis table. <Ref. to 6MT(diag)-35, Diagnostics with Phenomenon.>

2. Check List for Interview

A: CHECK

Check the following items when a problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name			
Date of purchase			
Date of repair			
Transmission model	Transmission	V.I.N.	
Odometer distance	km or miles		
Frequency	❑ Continuous ❑ Intermittent (times a day)		
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Other ( )		
Place	❑ Highland ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Rough road ❑ Other ( )		
Ambient air temperature	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Vehicle speed	km/h (MPH)		
DCCD mode indicator	❑ Flashing	❑ Light OFF	❑ Blinking, other than light off
Driving condition	❑ Not affected ❑ While decelerating	❑ At starting ❑ While accelerating	❑ While turning (❑ RH/❑ LH) ❑ When cruising
Symptoms	❑ Will not change to AUTO or MANUAL		
	❑ The forward/rear torque distribution does not change		
	❑ Will not become differential free		
	❑ Will not become differential lock		
	❑ A tight corner braking symptom occurs in AUTO mode or in MANUAL mode with differential free		
	❑ Noise or vibration		
	❑ Other ( )		

3. General Description

A: CAUTION

The airbag system wiring harness is routed near the DCCD control module.

CAUTION:
• Airbag system wiring harnesses and connectors are yellow. Do not use an electric test equipment to check these circuits.
• Be careful not to damage the airbag system wiring harness when performing diagnostics or repair of the DCCD control module.
• When measuring the voltage and resistance of each control module or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Also, do not insert the pin more than 5 mm (0.2 in) into the part.

B: INSPECTION

1. POWER SUPPLY

1) Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the fuse condition.
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

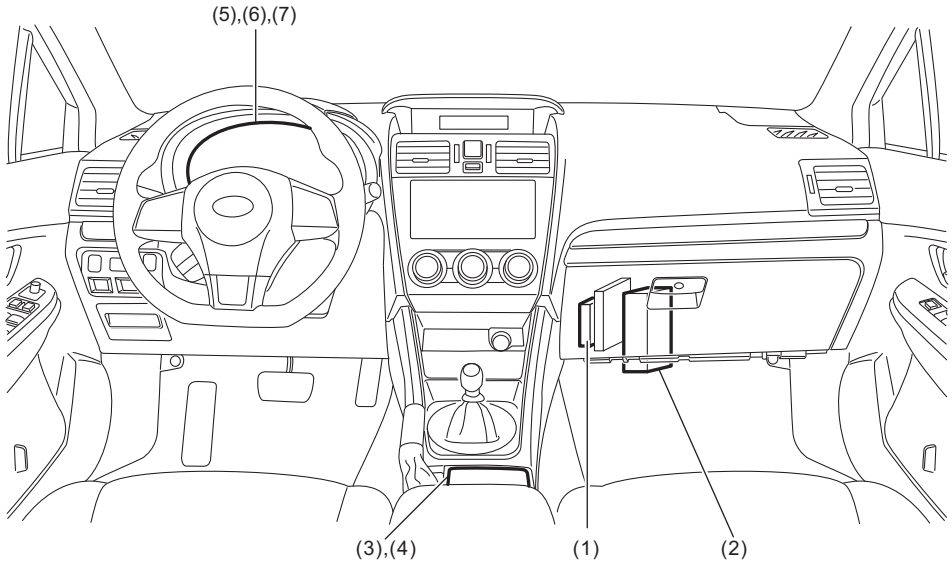
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION



MT-03100

(1) DCCD control module
(2) DCCD relay

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «DCCD».
5) On «Select Function» display, select «Data Monitor».

Display	Item	Unit of measure
Ignition SW ON Count	Total number of ignition switch ON	times
Count	Counter	—
Time Count	Elapsed time after ignition switch ON	ms
Battery Voltage	Battery voltage	V
DCCD Mode	AUTO selection mode	*1
DCCD Torque Allocation	Manual mode torque distribution	*2
C-Diff. Real Current	Center differential actual current	A
C-Diff. Indicate Current	Center differential indicator current	A
Center Diff. Relay	Center differential relay ON instruction	ON or OFF
AUTO/MANUAL Mode Switch	Mode change switch	ON or OFF
Up Switch	C.DIFF + switch	ON or OFF
Down Switch	C.DIFF – switch	ON or OFF
FR Wheel Speed	Front vehicle speed sensor (RH)	km/h or MPH
FL Wheel Speed	Front vehicle speed sensor (LH)	km/h or MPH
RR Wheel Speed	Rear vehicle speed sensor (RH)	km/h or MPH
RL Wheel Speed	Rear vehicle speed sensor (LH)	km/h or MPH
Steering Angle Sensor	Steering angle	deg
Yaw Rate	Yaw rate	deg/s
Lateral G	Lateral acceleration	m/s ¯2
Stop Light Switch	Stop light switch signal	ON or OFF
Parking Position Switch	Parking switch	ON or OFF
Accel opening angle	Accelerator position	%
Engine Speed	Engine speed signal	rpm
Neutral switch	Neutral signal	Neutral or Other than Neutral
Rear Diff. Oil Temp Lamp	Rear differential oil temperature warning light	OFF or Other than Turn Off

*1: Displayed by the number
0 in the manual mode
1 in AUTO[–] / 2 in AUTO / 3 in AUTO[+]
*2: Displayed by the number
0 in AUTO mode
1, 2, 3, 4, 5, 6 in manual mode

NOTE:
For detailed operation procedures, refer to “Application help”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «DCCD».
5) On «Select Function» display, select «DTC».

NOTE:
• For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to 6MT(diag)-19, List of Diagnostic Trouble Code (DTC).>
• For detailed operation procedures, refer to “Application help”.

8. Drive Cycle

A: PROCEDURE

It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to 6MT(diag)-11, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the ATF temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition
P1875	Center Differential Solenoid Circuit	—

Diagnostic procedure:
1) Turn the ignition switch to OFF.
2) Apply the parking brake.
3) Start the engine.
4) Make sure that the rear differential oil temperature warning light is off.
5) Set DCCD to manual mode.
6) Set torque level of DCCD to “LOCK”.
7) Stop the vehicle and idle for 10 seconds or more.
8) Read the current malfunction code using Subaru Select Monitor.

NOTE:
In step 7), do not depress the brake pedal.

3. DRIVE CYCLE B

DTC	Item	Condition
P1521	Brake Switch Signal	—

Diagnostic procedure:
1) Repeat acceleration/deceleration between 0 km/h (0 MPH) and 40 km/h (25 MPH) 10 times or more.
2) Read the current malfunction code using Subaru Select Monitor.

NOTE:
Always use the brake pedal during deceleration.

9. Clear Memory Mode

A: OPERATION

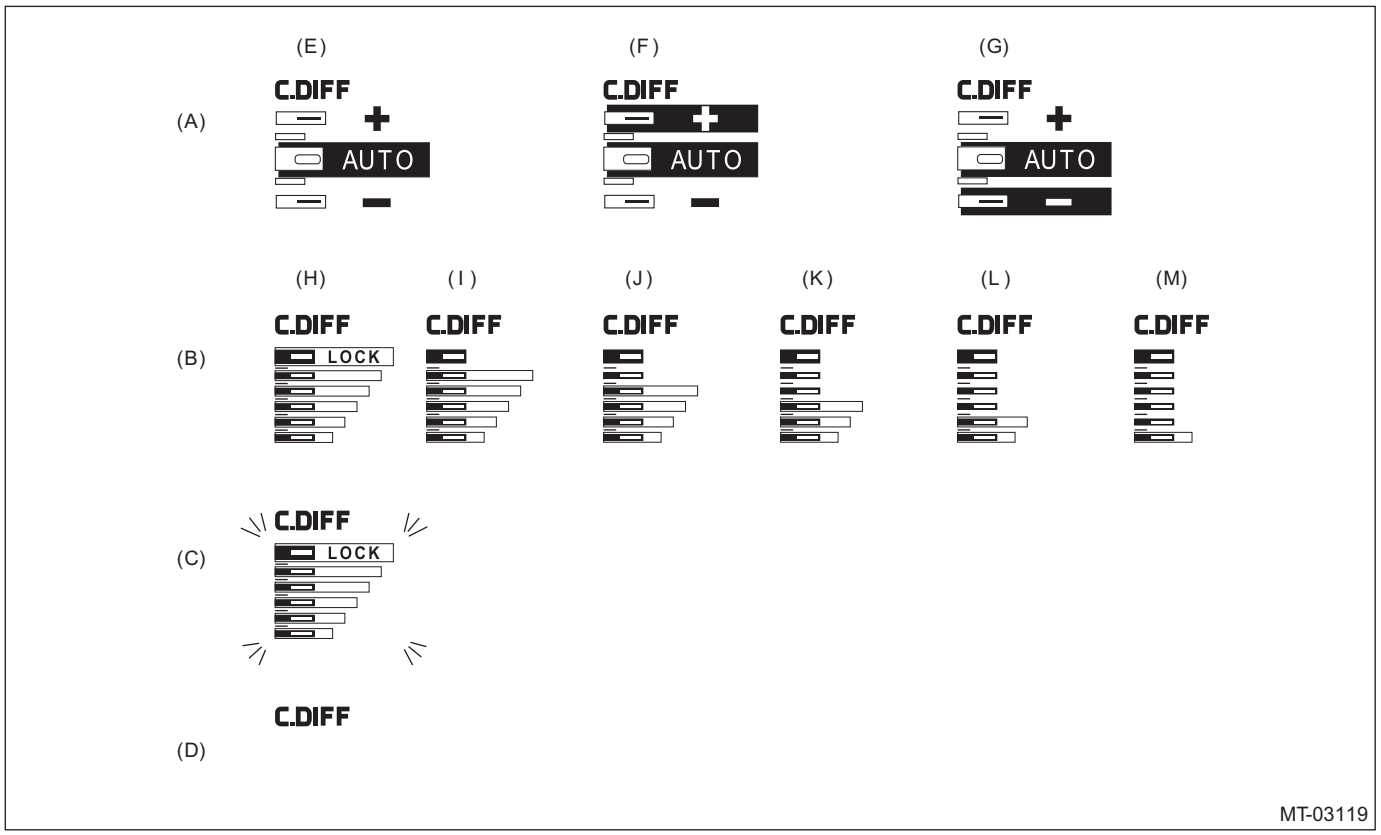
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «DCCD».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Drivers Control Center Differential (DCCD) Mode Display

A: OPERATION

When there is a problem with a part or module, DCCD manual mode display blinks. (DCCD manual mode display blinks even in AUTO mode condition.) Until the problem is detected and the ignition switch is turned OFF, the blinking continues. The faulty parts can be recognized by reading DTC with the Subaru Select Monitor.
DCCD mode display is as shown in the figure.



(A) AUTO mode display
(B) Manual mode display
(C) If faulty (blinks at 1 Hz cycle)
(D) At protection control (light off)
(E) AUTO
(F) AUTO +
(G) AUTO –
(H) 6 (LOCK)
(I) 5
(J) 4
(K) 3
(L) 2
(M) 1 (FREE)

B: INSPECTION

Diagnosis:
- Defective CAN communication
- DCCD control module malfunction
- Combination meter malfunction

Trouble symptom:
DCCD mode display does not change even when the C.DIFF +/– switch is operated.

Step		Check	Yes	No
1	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Go to step **2**.	Repair it according to combination meter diagnostics.

	Step	Check	Yes	No
2	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the display 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
3	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK MODE CHANGE SWITCH.** Read the data of «AUTO/MANUAL Mode Switch» using the Subaru Select Monitor.	Does the display change to ON/OFF according to the mode change switch operation?	Go to step **5**.	Check the mode change switch.
5	**CHECK C.DIFF +/– SWITCH (UP/DOWN).** Read the data of «Up Switch» and «Down Switch» using the Subaru Select Monitor.	Does the display change to ON/OFF according to the C.DIFF +/– switch operation?	Go to step **6**.	Check the C.DIFF +/– switch.
6	**CHECK REAR DIFFERENTIAL OIL TEMPERATURE WARNING LIGHT.**	Is the rear differential oil temperature warning light blinking?	Check the rear differential oil temperature sensor.	Go to step **7**.
7	**CHECK REAR DIFFERENTIAL OIL TEMPERATURE WARNING LIGHT.**	Does the rear differential oil temperature warning light illuminate?	Protection control is ON due to high rear differential oil temperature. Perform the inspection again after rear differential oil temperature lowers.	Go to step **8**.
8	**CHECK AWD LIGHT.**	Is the AWD light off?	Go to step **9**.	Perform the diagnosis according to AWD light display.
9	**CHECK DCCD AUTO MODE DISPLAY.** Set to AUTO mode by pressing the mode change switch.	Does the DCCD AUTO mode display illuminate?	Go to step **10**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>
10	**CHECK DCCD AUTO MODE DISPLAY.** Read the data of «DCCD Mode» using Subaru Select Monitor.	Does the DCCD AUTO mode display change according to the C.DIFF +/– switch operation?	Go to step **11**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>
11	**CHECK INDICATION OF DCCD MANUAL MODE DISPLAY.** Press the mode change switch to enter the manual mode.	Does the DCCD manual mode display illuminate?	Go to step **12**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>
12	**CHECK INDICATION OF DCCD MANUAL MODE DISPLAY.** Read the data of «DCCD Torque Allocation» using the Subaru Select Monitor.	Does the DCCD manual mode display change according to the C.DIFF +/– switch operation?	Go to step **13**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>

Step		Check	Yes	No
13	CHECK OTHER DTC.	Is any other DTC displayed?	Perform the diagnosis according to DTC.	DCCD mode display is normal.

11.AWD Warning Light Display

A: OPERATION

AWD light blinks when a fault occurs in AWD.

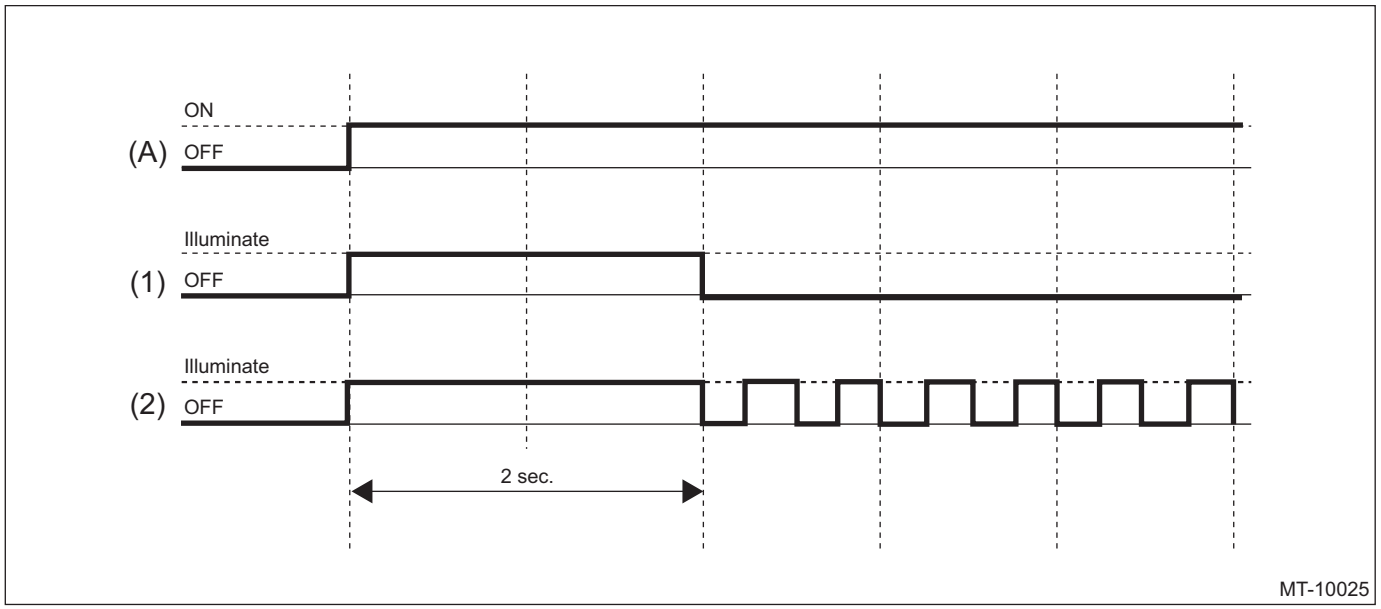
- At normal condition

After the ignition switch is turned to ON, AWD light illuminates for 2 seconds.

- When malfunction is detected

AWD light blinks at 2 Hz when any of the following malfunctions are detected with the ignition switch ON.

1. When tire with different diameter is installed.
2. When air pressure of any of four tires is excessively low.



(A) Ignition switch condition

(1) At normal condition (2) When malfunction is detected

If the AWD light does not illuminate, or illumination patterns are not as above, check the AWD light circuit. <Ref. to 6MT(diag)-15, INSPECTION, AWD Warning Light Display.>

B: INSPECTION

Diagnosis:

- Defective CAN communication
- DCCD control module malfunction
- Combination meter malfunction

Trouble symptom:

- When the ignition switch is turned to ON, the AWD light does not illuminate.
- AWD light illuminates after 2 seconds have elapsed after turning the ignition switch to ON.
- AWD light starts blinking right after 2 seconds have elapsed after turning the ignition switch to ON.

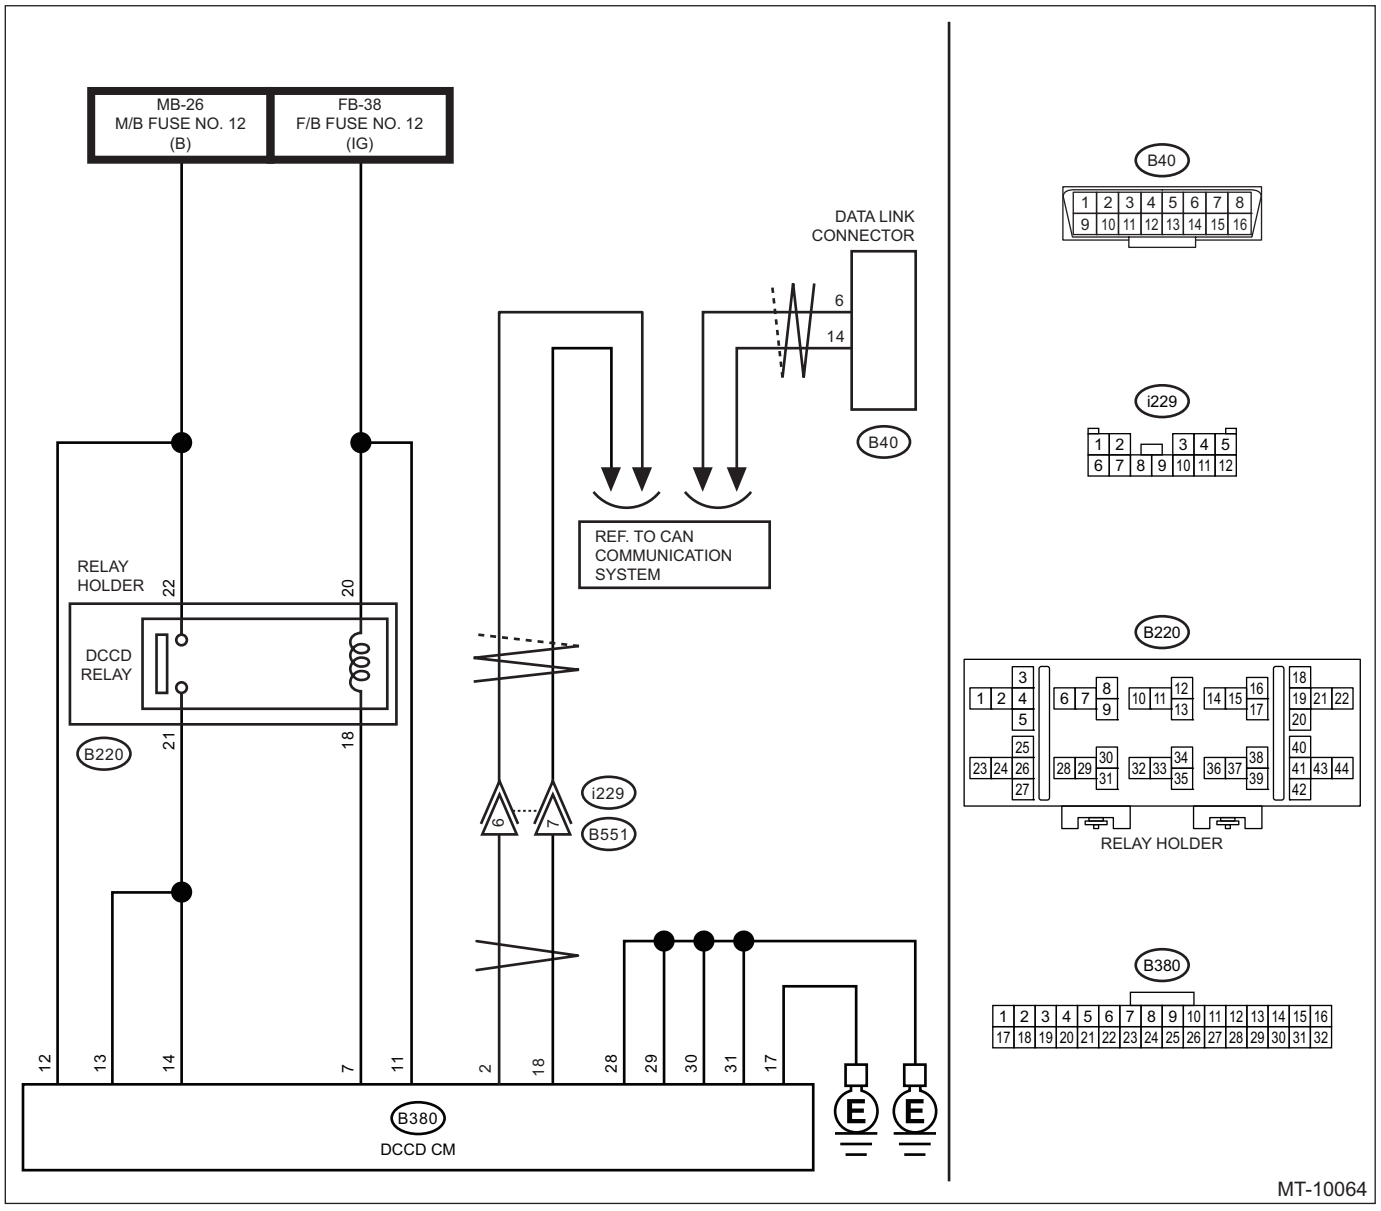
Step		Check	Yes	No
1	**CHECK AWD LIGHT.** Turn the ignition switch to ON.	Does AWD light illuminate for 2 seconds after turning the ignition switch to ON?	Go to step **2**.	Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>

	Step	Check	Yes	No
2	**CHECK AWD LIGHT.** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON.	Does AWD light go off after two seconds have elapsed after turning the ignition switch to ON?	Current condition is normal. Go back to Basic Diagnostic Procedure. <Ref. to 6MT(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Read the DTC of DCCD using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is there any trouble with the combination meter?	Repair the combination meter.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>

12.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Defective harness connector
Trouble symptom:
Subaru Select Monitor communication failure
Wiring diagram:
Drivers control center differential control system <Ref. to WI-146, Driver's Control Center Differential Control System.>



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the DCCD using the Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF DCCD CONTROL MODULE CONNECTOR.** Turn the ignition switch to OFF.	Is the DCCD control module connector inserted into the DCCD control module until locked by the clamp?	Go to step **5**.	Insert the DCCD control module connector into DCCD control module.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to DCCD system can be executed normally.	Is «Select Function» displayed?	Check DTC of the DCCD control module. <Ref. to 6MT(diag)-9, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between the DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):*** ***(B380) No. 12 (+) — Chassis ground (–):*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **8**.	Repair the open circuit in the harness between the DCCD control module and the battery.
8	**CHECK HARNESS CONNECTOR BETWEEN DCCD CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from DCCD control module. 3) Measure the resistance of harness between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 17 — Chassis ground:*** ***(B380) No. 28 — Chassis ground:*** ***(B380) No. 29 — Chassis ground:*** ***(B380) No. 30 — Chassis ground:*** ***(B380) No. 31 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the DCCD control module ground circuit and the poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of DCCD control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>

13.List of Diagnostic Trouble Code (DTC)

A: LIST

1. SUBARU SELECT MONITOR DISPLAY

DTC	Item	Content of diagnosis	Reference
P0606	Control Module Processor	Driver's control center differential control module is faulty.	<Ref. to 6MT(diag)-21, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1521	Brake Switch Signal	Stop light switch circuit is open or shorted.	<Ref. to 6MT(diag)-23, DTC P1521 BRAKE SWITCH SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P176A	Vehicle Dynamics Control Module System	VDC system failure	<Ref. to 6MT(diag)-24, DTC P176A VEHICLE DYNAMICS CONTROL SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1875	Center Differential Solenoid Circuit	Open or short in the driver's control center differential circuit	<Ref. to 6MT(diag)-25, DTC P1875 CENTER DIFFERENTIAL SOLENOID CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	Control Module Communication Bus Off	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM "A"	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM "A"	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	Defective CAN communication	<Ref. to 6MT(diag)-29, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	Defective CAN communication	<Ref. to 6MT(diag)-30, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
U1201	CAN-HS Counter Abnormal	Defective CAN communication	<Ref. to 6MT(diag)-30, DTC U1201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0606 CONTROL MODULE PROCESSOR

Diagnosis start condition:
At DCCD control module initialization (when power is turned to ON)
Malfunction judgment criteria:
When CAN function of microcomputer is abnormal (when CAN register read/write is abnormal)
Trouble symptom:
- Center differential does not operate.
- An oversteer tendency will become apparent.

Wiring diagram:
Drivers control center differential control system <Ref. to WI-146, Driver's Control Center Differential Control System.>

	Step	Check	Yes	No
1	**CHECK INPUT VOLTAGE OF DCCD CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **2**.	Repair the open or short to ground in the power supply circuit.
2	**CHECK INPUT VOLTAGE OF DCCD CONTROL MODULE.** 1) Start the engine. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 11 (+) — Chassis ground (–):***	Is the voltage 13 — 15 V?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK DCCD CONTROL MODULE GROUND HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 28 (+) — Chassis ground (–):*** ***(B380) No. 29 (+) — Chassis ground (–):*** ***(B380) No. 30 (+) — Chassis ground (–):*** ***(B380) No. 31 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Check for poor contact of connector, if a fault is not found, replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>	Repair the harness and connector.

B: DTC P1521 BRAKE SWITCH SIGNAL

Diagnosis start condition:
DTC P0606 and U code are not recorded.
Malfunction judgment criteria:
When any of the following conditions is established
- Detect deceleration of 30 km/h (19 MPH) → 0 km/h (0 MPH) 10 consecutive times with stop light SW OFF
- Detect acceleration of 0 km/h (0 MPH) → 30 km/h (19 MPH) 10 consecutive times with stop light SW ON

Diagnosis:
Stop light switch circuit is open or shorted.
Trouble symptom:
- Center differential does not operate.
- An oversteer tendency will become apparent.

	Step	Check	Yes	No
1	**CHECK DTC.**	Does the DTC related to stop light SW appear in the VDC diagnostics test mode?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the display 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
3	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **4**.
4	**CHECK DCCD CONTROL MODULE.** 1) Turn the ignition switch to ON. 2) Read the data of «Stop Light Switch» using Subaru Select Monitor.	Does the «Stop Light Switch» change to ON/OFF according to the depressing/releasing operation of the brake?	Go to step **5**.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>
5	**CHECK OTHER DTC.**	Is a DTC other than DTC P1521 displayed?	Perform the diagnosis according to DTC.	Current condition is normal.

C: DTC P176A VEHICLE DYNAMICS CONTROL SYSTEM

Diagnosis start condition:
When all the following conditions are established
- DTC P0606 and U code are not recorded.
- Engine speed is 400 rpm or more

Malfunction judgment criteria:
When any of the following conditions is established
- Continuous time of VDC sensor failure status is 0.1 seconds or more
- Continuous time of VDC wheel speed sensor failure status is 0.1 seconds or more

Trouble symptom:
- Center differential does not operate.
- An oversteer tendency will become apparent.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is DTC of VDC system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Current condition is normal.

D: DTC P1875 CENTER DIFFERENTIAL SOLENOID CIRCUIT

Diagnosis start condition:

- Overcurrent detection (short circuit, etc.)
  Always
- Zero current stuck detection (open circuit, defective power supply, etc.)
  Center differential indicator current ≥ 0.48 A

Diagnosis:

Center differential output signal circuit is open or shorted.

Trouble symptom:

- Center differential does not operate.
- The lock ratio of the center differential does not change, or malfunction occurs.
- A tight corner braking symptom occurs.
- An oversteer tendency will become apparent.
- A tendency to understeer occurs during high speed cornering.

Wiring diagram:

Drivers control center differential control system <Ref. to WI-146, Driver's Control Center Differential Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.**	Is a DTC other than DTC P1875 displayed?	Perform the diagnosis according to DTC.	Go to step **2**.
2	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND TRANSMISSION HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the DCCD control module connector. 3) Disconnect the transmission harness connector and the bulk harness connector. 4) Measure the resistance of harness between DCCD control module connector and transmission harness connector. ***Connector & terminal*** ***(B380) No. 15 — (B128) No. 1:*** ***(B380) No. 32 — (B128) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the bulk harness open circuit between DCCD control module and transmission harness.
3	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND TRANSMISSION HARNESS.** Measure the resistance between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 15 — Chassis ground:*** ***(B380) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the bulk harness short circuit between DCCD control module and transmission harness.
4	**CHECK CENTER DIFFERENTIAL.** Measure the resistance between transmission harness connector terminals. ***Connector & terminal*** ***(T9) No. 1 — No. 4:***	Is the resistance 1.2 — 2.5 Ω?	Go to step **5**.	Replace the center differential. <Ref. to 6MT(TY85)-57, Center Differential.>
5	**CHECK OUTPUT SIGNAL OF DCCD CONTROL MODULE.** 1) Connect all harness connectors. 2) Turn the ignition switch to ON. 3) Release the parking brake. 4) Press the mode change switch to enter the manual mode. 5) Press the C.DIFF +/– switch to enter the lock position. 6) Measure the voltage between DCCD control module connectors. ***Connector & terminal*** ***(B380) No. 15 (+) — No. 32 (–):***	Is the voltage 5.5 — 8.0 V?	Go to step **6**.	Go to step **7**.
6	**CHECK OUTPUT SIGNAL OF DCCD CONTROL MODULE.** 1) Move the C.DIFF +/– switch from the differential lock position to the differential free position. 2) Read the voltage between DCCD control module connectors. ***Connector & terminal*** ***(B380) No. 15 (+) — No. 32 (–):***	Does the voltage drop in stages according to the DCCD manual mode display?	Current condition is normal.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK FUSE (M/B NO. 12).** 1) Turn the ignition switch to OFF. 2) Remove the fuse (M/B No. 12).	Is the fuse (M/B No. 12) blown out?	Replace the fuse (M/B No. 12). If the new fuse (M/B No. 12) has blown out easily, check for the short circuit to chassis ground of harness between fuse (M/B No. 12) and DCCD control module, or between fuse (M/B No. 12) and relay.	Go to step **8**.
8	**CHECK POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Install the fuse. 2) Turn the ignition switch to ON. 3) Measure the voltage between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Go to step **17**.	Go to step **9**.
9	**CHECK POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the DCCD relay harness connector. 3) Measure the voltage between DCCD relay harness connector and chassis ground. ***Connector & terminal*** ***(B220) No. 22 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	Repair the open or short circuit between fuse (M/B No. 12), DCCD relay, and battery.
10	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD RELAY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCCD relay and chassis ground. ***Connector & terminal*** ***(B220) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Repair the open circuit between fuse (F/B No. 12), DCCD relay, and battery.
11	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND DCCD RELAY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from DCCD control module. 3) Measure resistance of the harness between DCCD control module connector and DCCD relay connector. ***Connector & terminal*** ***(B380) No. 7 — (B220) No. 18:*** ***(B380) No. 13 — (B220) No. 21:*** ***(B380) No. 14 — (B220) No. 21:***	Is the resistance less than 1 Ω?	Go to step **12**.	Repair the open circuit of harness between DCCD control module connector and DCCD relay connector.
12	**CHECK HARNESS BETWEEN DCCD CONTROL MODULE AND DCCD RELAY.** Measure the resistance of harness between DCCD control module connector and chassis ground. ***Connector & terminal*** ***(B380) No. 7 — Chassis ground:*** ***(B380) No. 13 — Chassis ground:*** ***(B380) No. 14 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **13**.	Repair the short circuit of harness between DCCD control module connector and DCCD relay connector.

	Step	Check	Yes	No
13	**CHECK DCCD RELAY.** Measure the resistance between DCCD relay terminals. ***Terminals*** ***No. 21 — No. 22:***	Is the resistance 1 MΩ or more?	Go to step **14**.	Replace the DCCD relay.
14	**CHECK DCCD RELAY.** 1) Connect the battery positive lead to terminal No. 20. 2) Connect the battery negative lead to terminal No. 18. 3) Measure the resistance between DCCD relay terminals. ***Terminals*** ***No. 21 — No. 22:***	Is the resistance less than 1 Ω?	Go to step **15**.	Replace the DCCD relay.
15	**CHECK DCCD CONTROL MODULE RELAY DRIVE CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **16**.	Go to step **19**.
16	**CHECK IGNITION POWER SUPPLY CIRCUIT OF DCCD CONTROL MODULE.** Measure the voltage between DCCD control module and chassis ground. ***Connector & terminal*** ***(B380) No. 13 (+) — Chassis ground (–):*** ***(B380) No. 14 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Go to step **17**.	Go to step **19**.
17	**CHECK CENTER DIFFERENTIAL.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON. 4) Run the Subaru Select Monitor. 5) Press the mode change switch to enter the manual mode. 6) Release the parking brake. 7) Press the C.DIFF +/– switch to enter the lock position. 8) Read the data of «C-Diff. Indicate Current» and «C-Diff. Real Current» using Subaru Select Monitor.	Are «C-Diff. Indicate Current» and «C-Diff. Real Current» both approximately 3.6 — 4.0 A?	Go to step **18**.	Go to step **19**.
18	**CHECK CENTER DIFFERENTIAL.** 1) Operate the C.DIFF +/– switch so that the reading of «C-Diff. Indicate Current» becomes 1.6 A using the Subaru Select Monitor. 2) Read the data of «C-Diff. Real Current» using Subaru Select Monitor.	Is «C-Diff. Real Current» about the same as «C-Diff. Indicate Current»?	Go to step **20**.	Go to step **19**.
19	**CHECK POOR CONTACT OF HARNESS CONNECTORS.**	Is there poor contact of the harness connector?	Repair the poor contact.	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>

	Step	Check	Yes	No
20	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to 6MT(diag)-11, Clear Memory Mode.> 2) Read the DTC using the Select Monitor. <Ref. to 6MT(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC P1875 displayed?	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>	Go to step **21**.
21	**CHECK DTC.**	Is a DTC other than DTC P1875 displayed?	Perform the diagnosis according to DTC.	Current condition is normal.

L: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

NOTE:
Refer to "LAN SYSTEM (DIAGNOSTICS)" for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

M: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

N: DTC U1201 CAN-HS COUNTER ABNORMAL

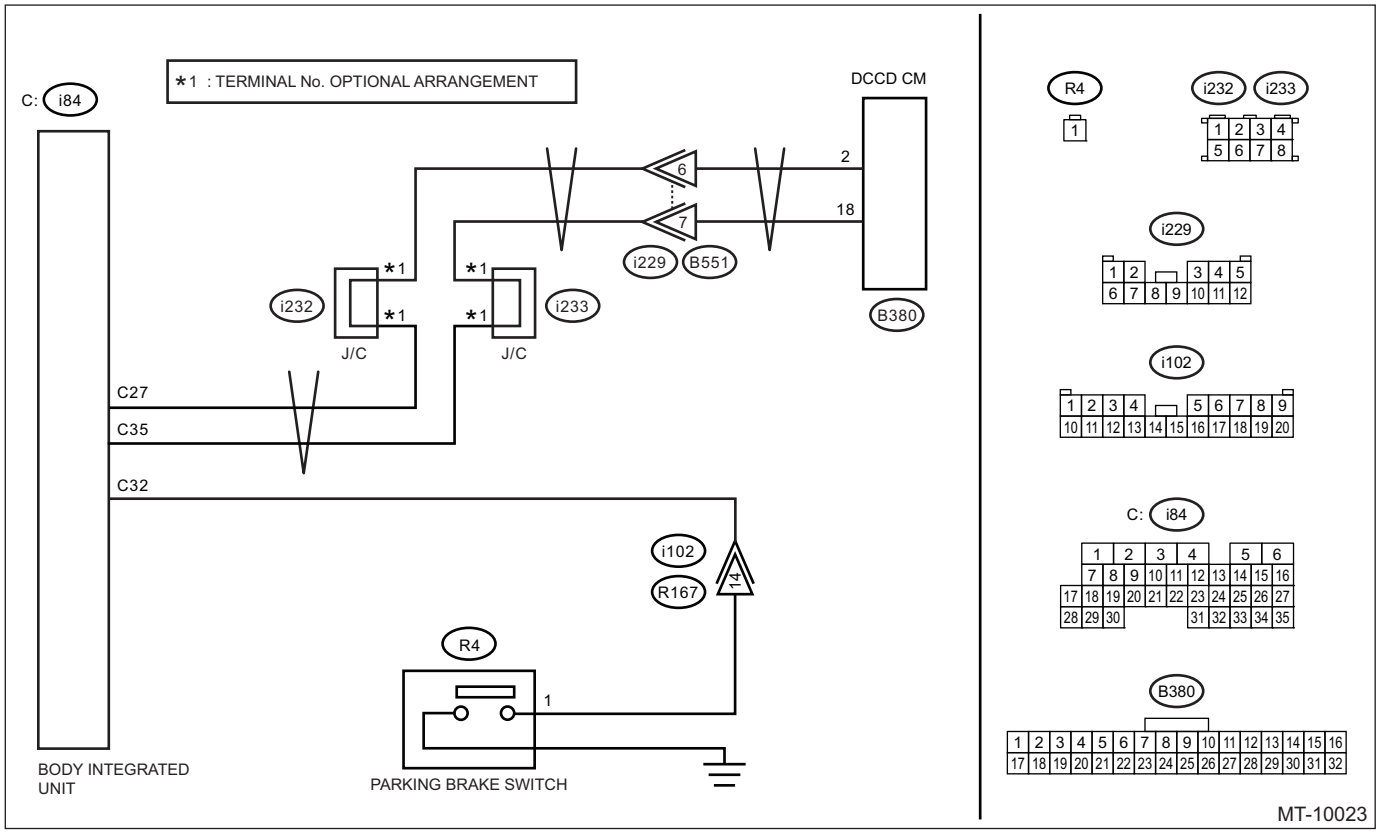
NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

15.Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK PARKING BRAKE SWITCH

Diagnosis:
Input signal circuit of parking brake switch is open or shorted.
Trouble symptom:
- It does not show a differential free tendency even when the parking brake switch is applied.
- Remains differential free even when the parking brake switch is released.

Wiring diagram:
Drivers control center differential control system <Ref. to WI-146, Driver's Control Center Differential Control System.>



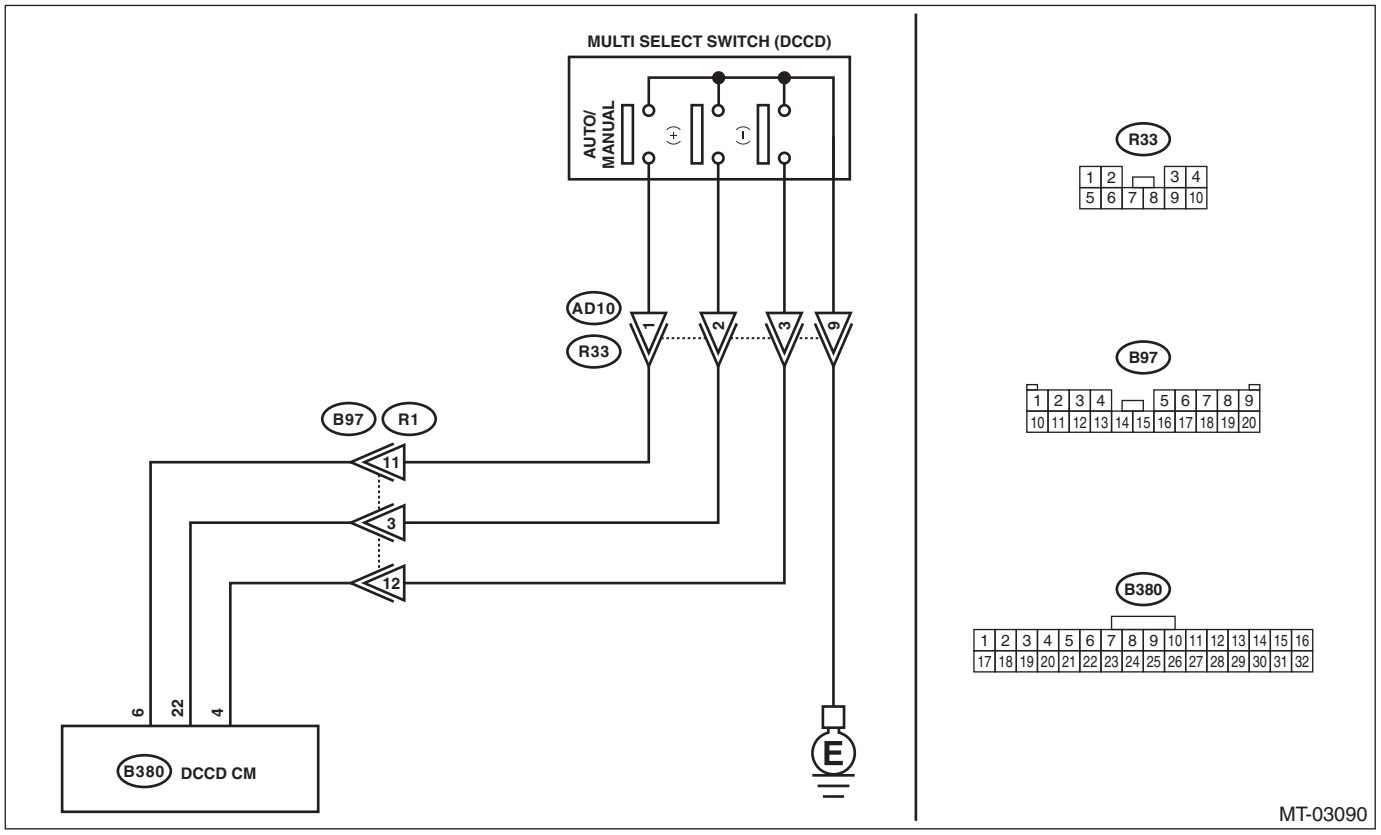
Step		Check	Yes	No
1	**CHECK IGNITION CIRCUIT OF DCCD CONTROL MODULE.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Turn the ignition switch to ON. 3) Read the data of «Battery voltage» using Subaru Select Monitor.	Is the display 10 V or more?	Go to step **2**.	Repair the open circuit of harness between fuse (F/B No. 12) and DCCD control module, or between fuse (F/B No. 12) and battery.
2	**CHECK DTC.**	Is DTC P0606 or U code displayed?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK DCCD CONTROL MODULE.** 1) Operate the parking brake lever. 2) Read the data of «Parking Position Switch» using Subaru Select Monitor.	Is the ON/OFF normally detected?	Current condition is normal.	Go to step **4**.
4	**CHECK BODY INTEGRATED UNIT.** 1) Operate the parking brake lever. 2) Read the data of «Parking Position Switch» using Subaru Select Monitor.	Is the ON/OFF normally detected?	Go to step **7**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND PARKING BRAKE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Check for open circuit, short circuit to battery and short circuit to ground between the body integrated unit connector and parking brake switch connector. ***Connector & terminal*** ***(i84) No. 32 — (R4) No. 1:***	Is there any fault in the harness?	Repair or replace the harness.	Go to step **6**.
6	**CHECK PARKING BRAKE SWITCH.** Measure the resistance between parking brake switch terminals.	Is the resistance less than 10 Ω when the parking brake lever is pulled? Is the resistance 1 MΩ or more when the parking brake lever is lowered?	Replace the body integrated unit.	Replace the parking brake switch.
7	**CHECK DTC.** Read the DTC of the LAN system using the Subaru Select Monitor.	Is DTC of CAN communication displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>

B: CHECK DCCD MULTI SELECT SWITCH

Diagnosis:
Input signal of DCCD multi select switch is open or shorted.
Trouble symptom:
- Does not enter the manual mode or auto mode when the mode change switch is pressed.
- Mode does not change in AUTO mode.
- Initial torque can not be changed in manual mode.

NOTE:
Other switch input can not be received if either mode change switch or C.DIFF +/– switch is stuck ON.
Wiring diagram:
Drivers control center differential control system <Ref. to WI-146, Driver's Control Center Differential Control System.>



Step		Check	Yes	No
1	**CHECK DCCD CONTROL MODULE.** 1) Press the manual mode change switch. 2) Read the data of «AUTO/MANUAL Mode Switch» using the Subaru Select Monitor.	Does the data change from OFF/ON?	Go to step **2**.	Go to step **4**.
2	**CHECK DCCD CONTROL MODULE.** 1) Push the multi select switch toward plus. 2) Read the data of «Up Switch» using the Subaru Select Monitor.	Does the data change from OFF/ON?	Go to step **3**.	Go to step **5**.
3	**CHECK DCCD CONTROL MODULE.** 1) Push the multi select switch toward minus. 2) Read the data of «Down Switch» using the Subaru Select Monitor.	Does the data change from OFF/ON?	Current condition is normal.	Go to step **6**.

	Step	Check	Yes	No
4	**CHECK MODE CHANGE SWITCH.** 1) Disconnect the multi select switch connector. 2) Press the mode change switch. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 1 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
5	**CHECK MULTI SELECT SWITCH.** 1) Push the multi select switch toward plus. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 2 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
6	**CHECK MULTI SELECT SWITCH.** 1) Push the multi select switch toward minus. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AD10) No. 3 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the multi select switch. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>
7	**CHECK HARNESS.** Use a tester to measure the resistance between the multi select switch harness connector and chassis ground. ***Connector & terminal*** ***(R33) No. 9 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the ground circuit.
8	**CHECK HARNESS.** 1) Disconnect the connector from DCCD control module. 2) Use a tester to measure the resistance between the DCCD control module and the multi select switch. ***Connector & terminal*** ***(R33) No. 1 — (B380) No. 6:*** ***(R33) No. 2 — (B380) No. 22:*** ***(R33) No. 3 — (B380) No. 4:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair or replace the open circuit of the harness.
9	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R33) No. 1 — (R33) No. 2:*** ***(R33) No. 1 — (R33) No. 3:*** ***(R33) No. 2 — (R33) No. 3:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair or replace the short of harness.
10	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R33) No. 1 — Chassis ground:*** ***(R33) No. 2 — Chassis ground:*** ***(R33) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the DCCD control module. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>	Repair or replace the short of harness.

16.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Faulty parts
A tight corner braking symptom occurs.	• VDCCM&H/U • ABS wheel speed sensor • Yaw rate & G sensor • Steering angle sensor • CAN communication signal • Center differential • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • ECM • Body integrated unit
An oversteer tendency will become apparent.	• Throttle position sensor • ECM • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • Center differential • DCCD relay • Rear differential oil temperature sensor • Neutral position switch • Steering angle sensor • VDCCM&H/U • CAN communication signal • Body integrated unit • Yaw rate & G sensor
A tendency to understeer occurs during high speed cornering.	• VDCCM&H/U • ABS wheel speed sensor • CAN communication signal • Throttle position sensor • Yaw rate & G sensor • Center differential • ECM • Engine speed signal • Neutral position switch • Steering angle sensor • Body integrated unit
Torque characteristics of the center differential do not change.	• C.DIFF +/– switch • DCCD relay • Center differential • DCCD control module
DCCD indicator does not operate. (is not displayed)	• Combination meter • DCCD control module
DCCD indicator does not operate even when the C.DIFF +/– switch is operated. (Displayed but does not change. or, the display blinks.)	• C.DIFF +/– switch • Combination meter • DCCD control module
DCCD AUTO mode does not operate even when the C.DIFF +/– switch is operated. (Displayed but does not change.)	• Mode change switch • Combination meter • DCCD control module • Body integrated unit • CAN communication signal

Symptoms	Faulty parts
DCCD AUTO mode display does not illuminate.	• Mode change switch • Combination meter • DCCD control module • Body integrated unit • CAN communication signal
Will not become differential free or remains differential free.	• Parking brake switch • Center differential • Mode change switch • C.DIFF +/– switch • Rear differential • Tire/Wheel • DCCD relay • Rear differential oil temperature sensor • DCCD control module • ECM • Body integrated unit • VDCCM&H/U • Yaw rate & G sensor • CAN communication signal
ABS does not operate.	• VDCCM&H/U • CAN communication signal • Stop light switch • DCCD control module • ECM • Body integrated unit • Yaw rate & G sensor
Will not lock the differential or the differential is continually locked.	• VDCCM&H/U • ABS wheel speed sensor • CAN communication signal • Center differential • C.DIFF +/– switch • Mode change switch • Tire/Wheel • DCCD control module • DCCD relay • ECM • Body integrated unit • Yaw rate & G sensor

1. General Description

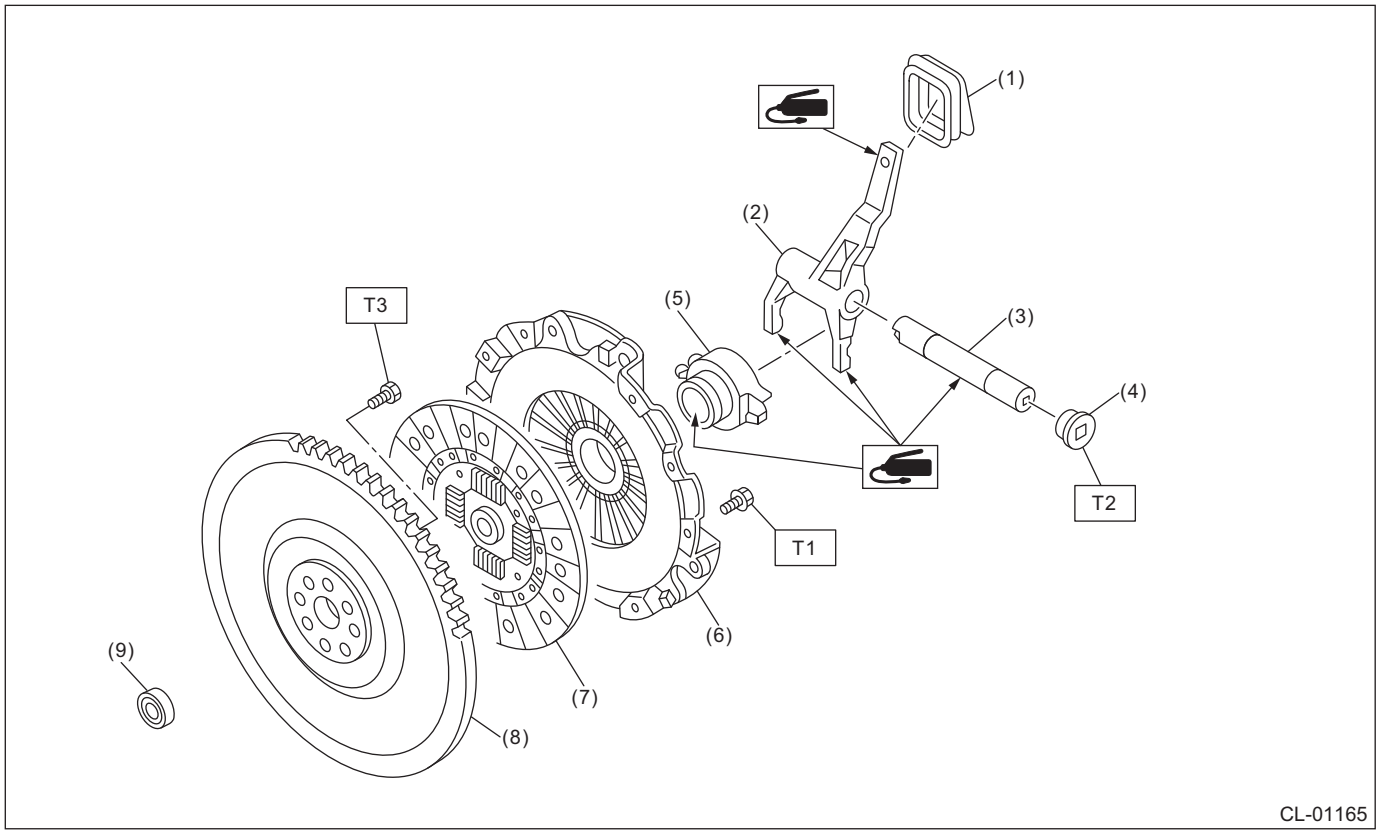
A: SPECIFICATION

Model			STI	Except for STI
Transmission type			6MT	
Clutch cover	Type		Pull type	Push type
	Diaphragm set load N (kgf, lbf)		9,120 (930, 2051)	8,400 (857, 1889)
Clutch disc	Facing material		Woven (non-asbestos)	
	O.D. × I.D. × Thickness mm (in)	Clutch cover side	240 × 160 × 3.5 (9.45 × 6.30 × 0.138)	
		Flywheel side	240 × 160 × 3.2 (9.45 × 6.30 × 0.126)	
	Spline outer diameter mm (in)		25.2 (0.992), (number of teeth: 24)	
	Depth of rivet head mm (in)	Clutch cover side	1.65 — 2.25 (0.065 — 0.089)	
		Flywheel side	1.35 — 1.95 (0.053 — 0.077)	
		Limit of sinking	0.8 (0.031)	
	Deflection limit mm (in)		0.7 (0.028) at R = 115 (4.53)	
Clutch release lever ratio			1.7	1.6
Release bearing			Grease-packed self-aligning	
Clutch pedal	Full stroke mm (in)		130 — 135 (5.12 — 5.31)	135 — 140 (5.31 — 5.51)
	Free play mm (in)		4 — 11 (0.16 — 0.43)	
Flywheel	Type		Conventional	Flexible

B: COMPONENT

1. CLUTCH ASSEMBLY

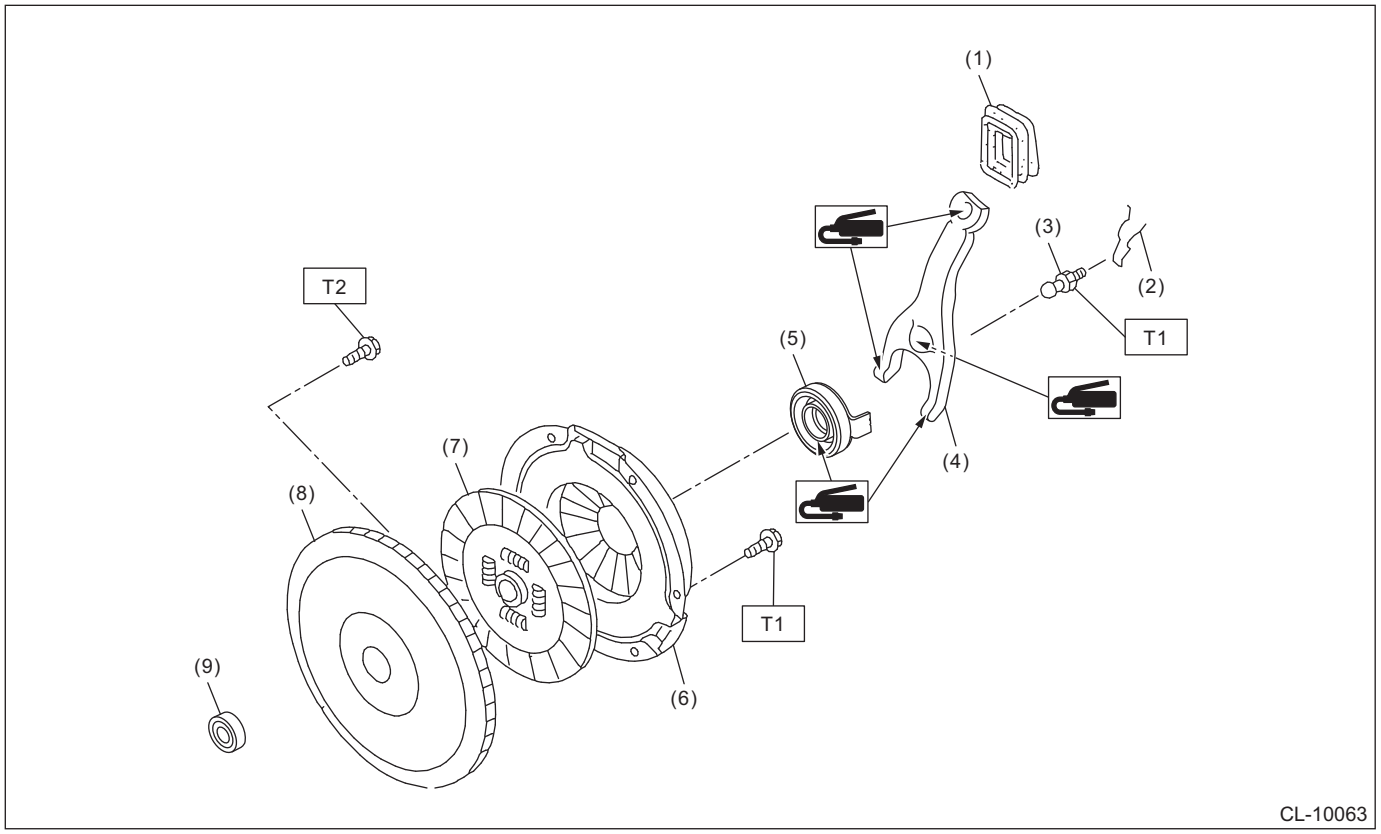
- STI model



(1)	Dust cover	(6)	Clutch cover	
(2)	Release lever	(7)	Clutch disc	
(3)	Clutch release lever shaft	(8)	Conventional flywheel	
(4)	Plug	(9)	Pilot bearing	
(5)	Release bearing			

Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: 48 (4.9, 35.4)
T3: 75 (7.6, 55.3)

- Except for STI model

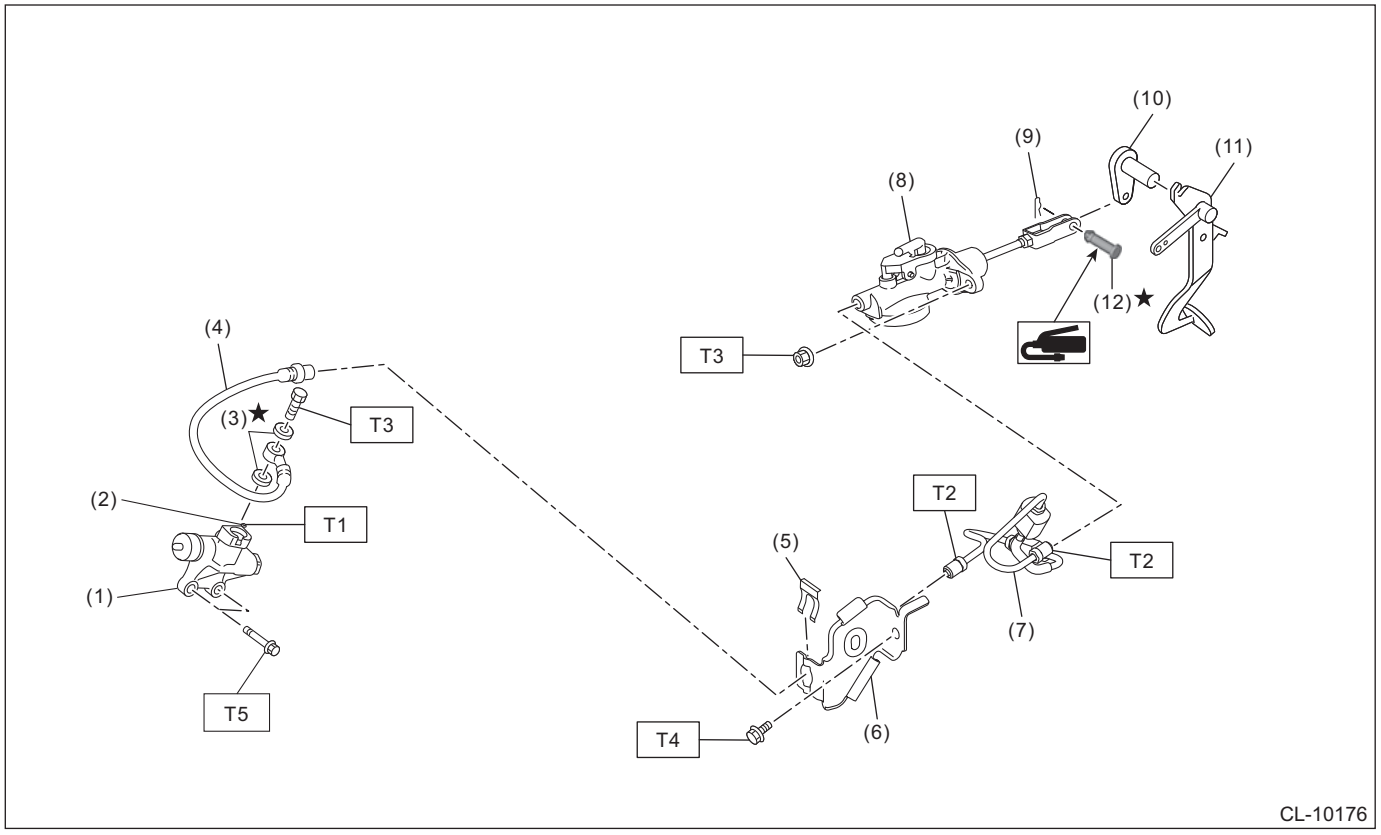


(1) Dust cover
(2) Lever spring
(3) Pivot
(4) Release lever
(5) Release bearing
(6) Clutch cover
(7) Clutch disc
(8) Flexible flywheel
(9) Pilot bearing

Tightening torque: N·m (kgf-m, ft-lb)
T1: 16 (1.6, 11.8)
T2: <Ref. to CL-15, EXCEPT FOR STI MODEL, INSTALLATION, Flywheel.>

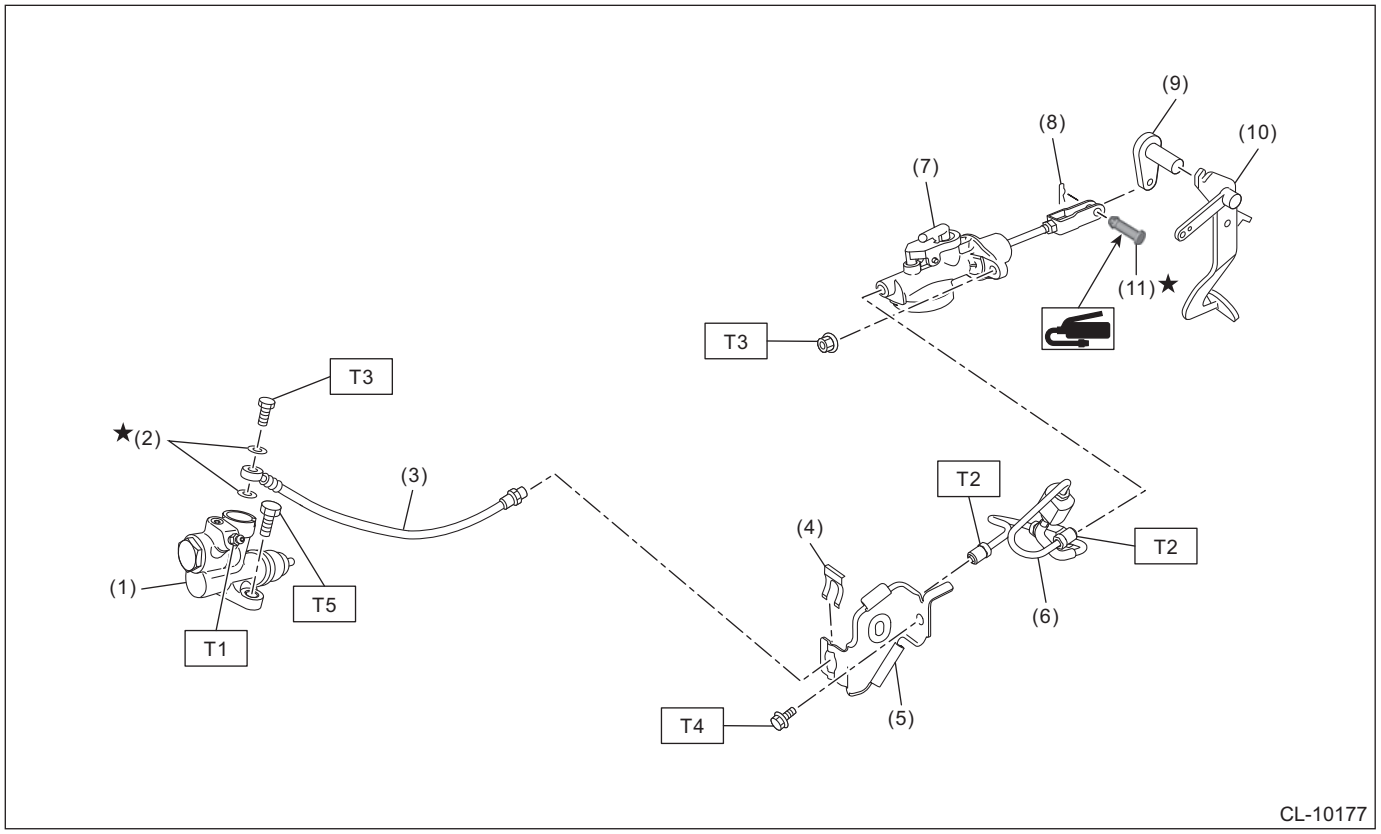
2. CLUTCH PIPE AND HOSE

- STI model



(1)	Operating cylinder	(7)	Clutch pipe	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Bleeder screw	(8)	Master cylinder ASSY	***T1: 7.8 (0.8, 5.8)***
(3)	Gasket	(9)	Snap pin	***T2: 15 (1.5, 11.1)***
(4)	Clutch hose	(10)	Lever	***T3: 18 (1.8, 13.3)***
(5)	Clamp	(11)	Pedal	***T4: 25 (2.5, 18.4)***
(6)	Clutch hose bracket	(12)	Clevis pin	***T5: 41 (4.2, 30.2)***

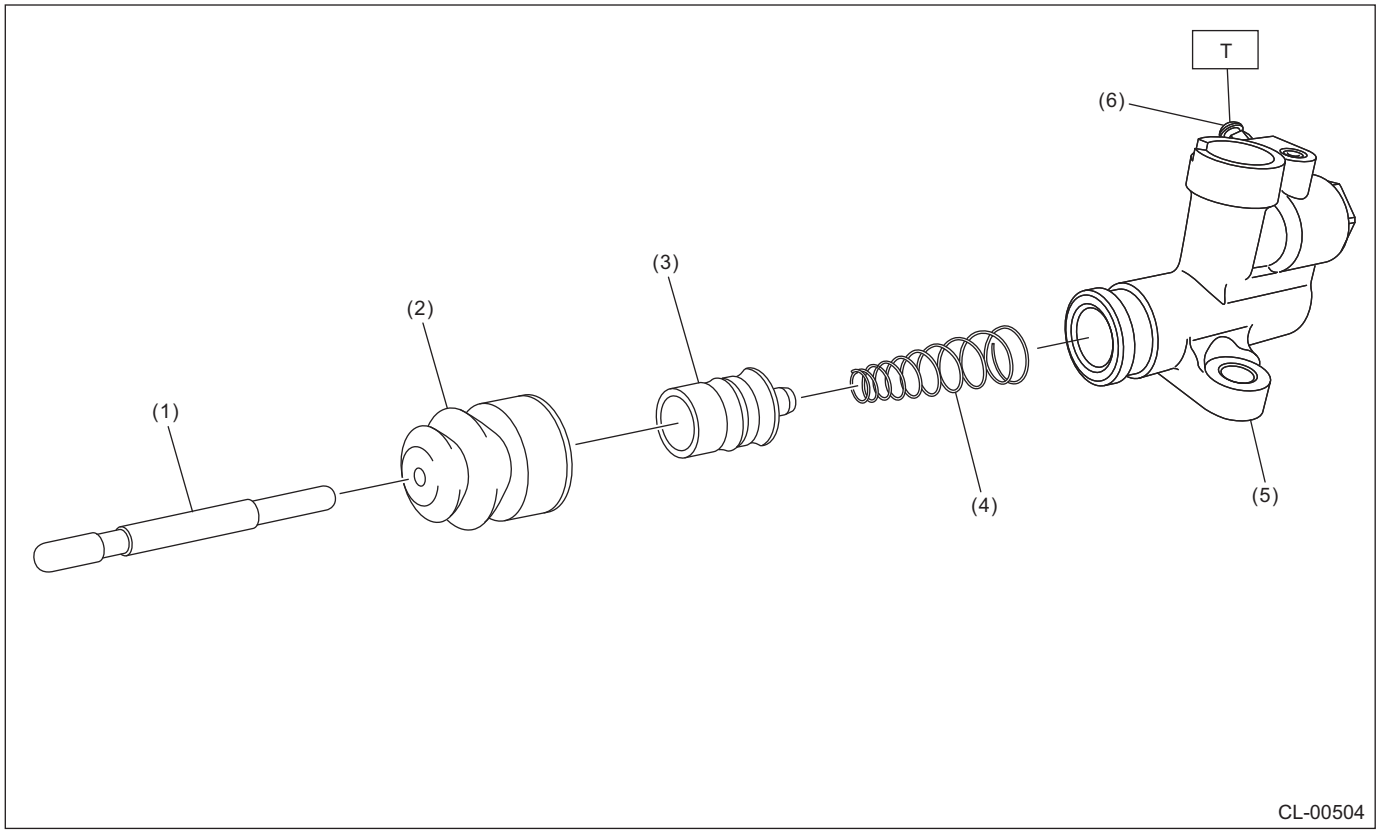
- Except for STI model



(1)	Operating cylinder	(7)	Master cylinder ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Gasket	(8)	Snap pin	***T1: 7.8 (0.8, 5.8)***
(3)	Clutch hose	(9)	Lever	***T2: 15 (1.5, 11.1)***
(4)	Clamp	(10)	Pedal	***T3: 18 (1.8, 13.3)***
(5)	Clutch hose bracket	(11)	Clevis pin	***T4: 25 (2.5, 18.4)***
(6)	Clutch pipe			***T5: 37 (3.8, 27.3)***

3. OPERATING CYLINDER

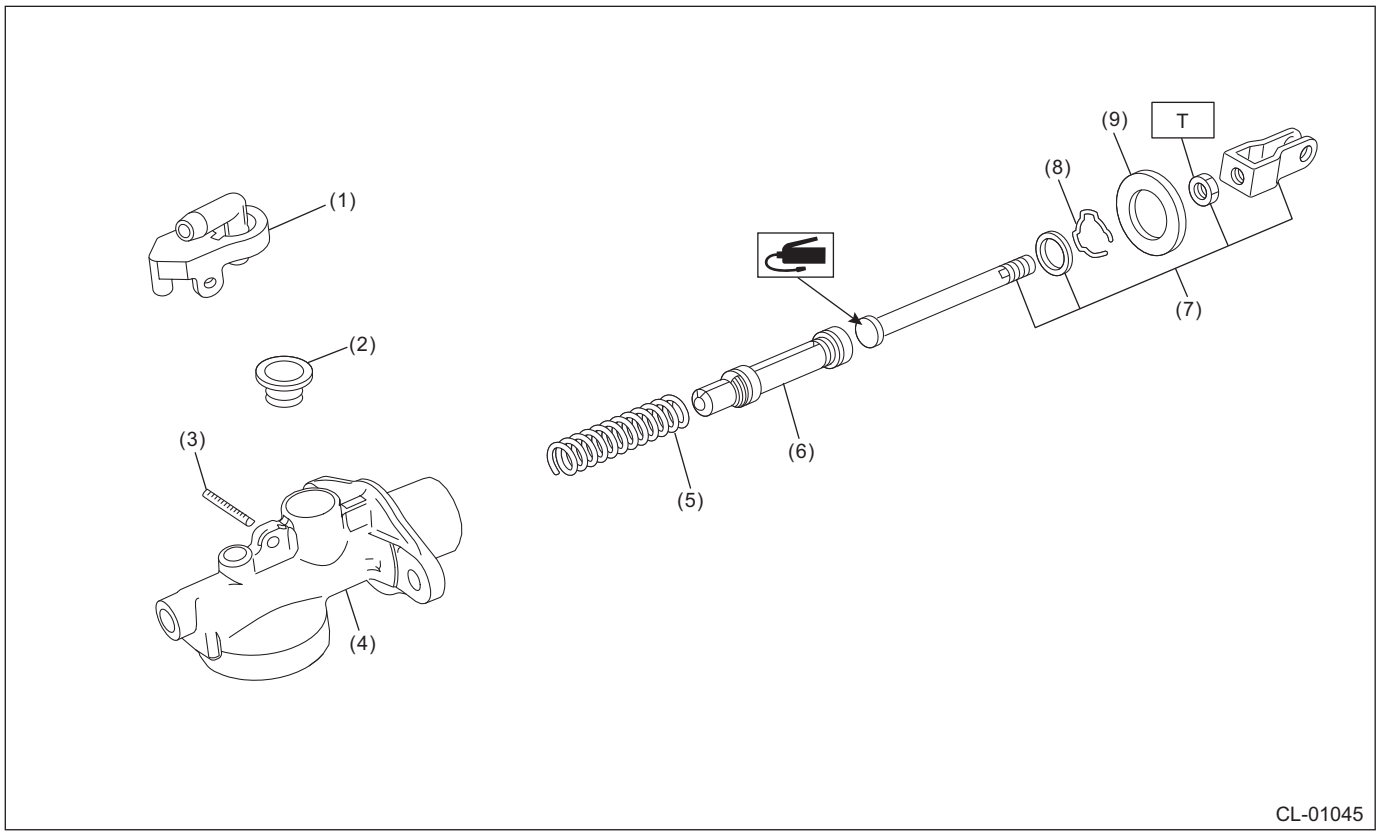
- Except for STI model



(1) Push rod
(2) Boot
(3) Piston
(4) Piston spring
(5) Operating cylinder
(6) Bleeder screw

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.8 (0.8, 5.8)

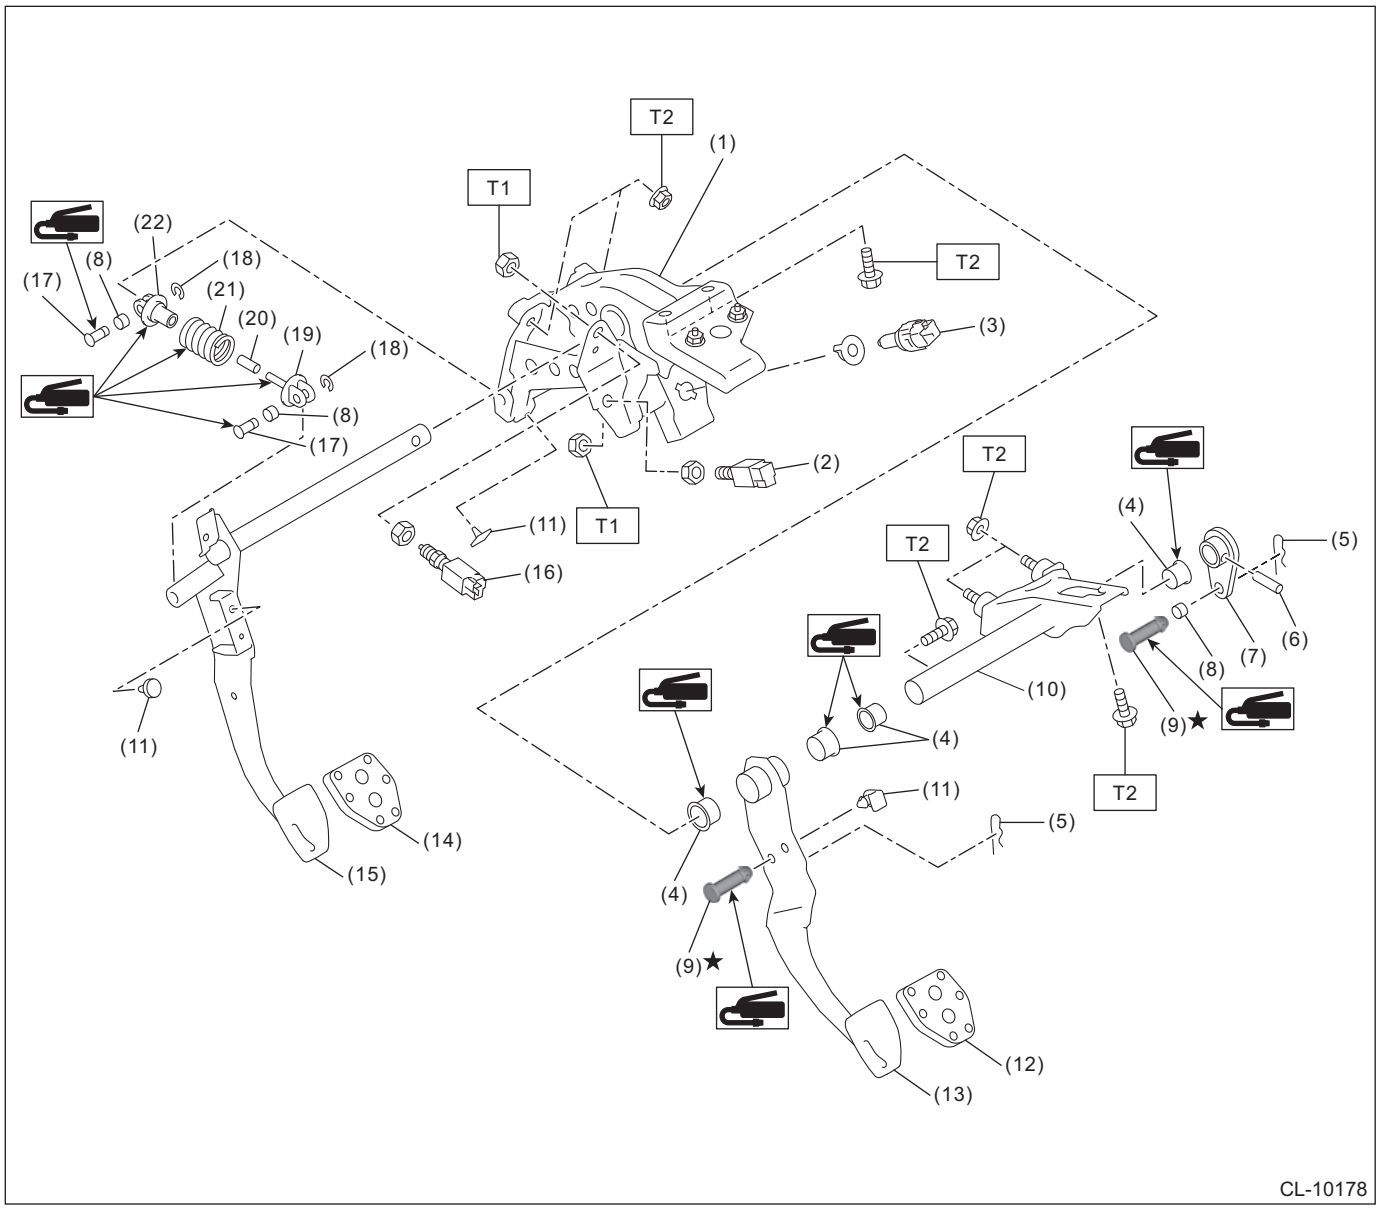
4. MASTER CYLINDER



(1) Nipple
(2) Oil seal
(3) Straight pin
(4) Master cylinder
(5) Return spring
(6) Piston
(7) Push rod ASSY
(8) Piston stop ring
(9) Seat

Tightening torque: N·m (kgf-m, ft-lb)
T: 10 (1.0, 7.4)

5. CLUTCH PEDAL



CL-10178

(1) Pedal bracket
(2) Clutch switch
(3) Stop light switch
(4) Pedal bushing
(5) Snap pin
(6) Spring pin
(7) Lever
(8) Bushing C
(9) Clevis pin
(10) Clutch master cylinder bracket
(11) Stopper
(12) Brake pedal pad (sport type)
(13) Brake pedal
(14) Clutch pedal pad (sport type)
(15) Clutch pedal
(16) Clutch start switch
(17) Assist pin
(18) Clip
(19) Assist rod A
(20) Assist bushing
(21) Assist spring
(22) Assist rod B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

C: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498497100	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of the flywheel.
 ST-499747100	499747100	CLUTCH DISC GUIDE	Used for installing the clutch disc to the flywheel.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures, refer to “Help” for the application.

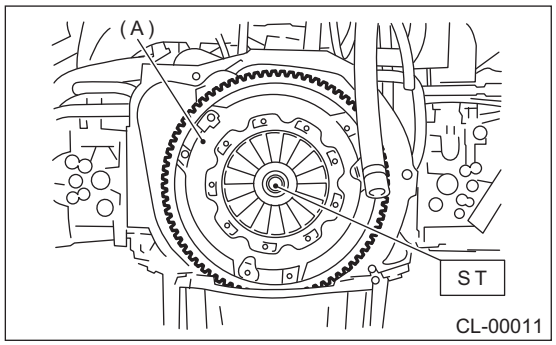
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Dial gauge	Used for measuring clutch disc run-out.
Depth gauge	Used for measuring clutch disc wear.
Angle gauge	Used for installing the flywheel.
DST-i	Used together with Subaru Select Monitor 4.

2. Clutch Disc and Cover

A: REMOVAL

1) Remove the transmission assembly.
6MT (TY75) model:
<Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
6MT (TY85) model:
<Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Attach the ST on the flywheel.
ST 499747100 CLUTCH DISC GUIDE



(A) Clutch cover

3) Remove the clutch cover and clutch disc.

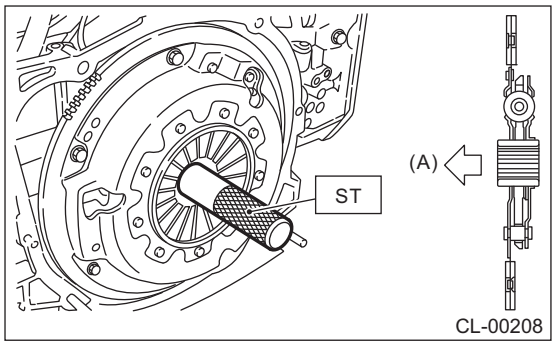
NOTE:
• Take care not to allow oil to touch the clutch disc face.
• Do not disassemble the clutch cover or clutch disc.

4) Remove the release bearing & lever. (Except for STI model) <Ref. to CL-17, EXCEPT FOR STI MODEL, REMOVAL, Release Bearing and Lever.>

B: INSTALLATION

1) Install the release bearing & lever. (Except for STI model) <Ref. to CL-18, EXCEPT FOR STI MODEL, INSTALLATION, Release Bearing and Lever.>
2) Insert the ST into the clutch disc and attach to the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful to attach in the correct direction.
ST 499747100 CLUTCH DISC GUIDE

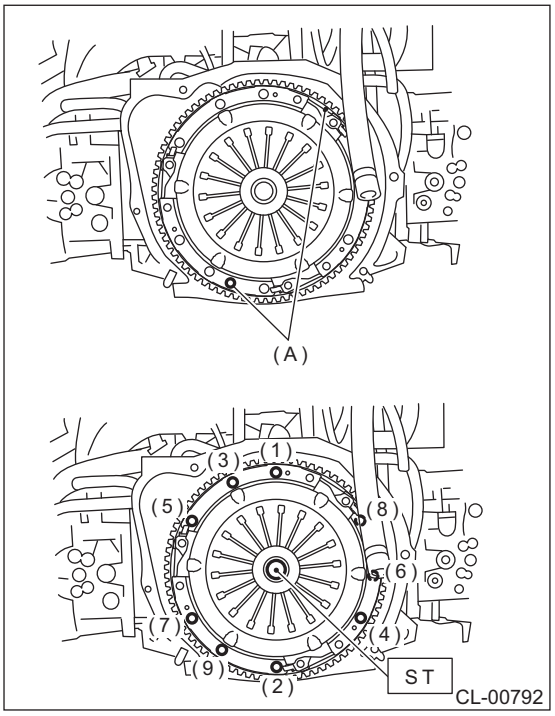


(A) Flywheel side

3) Install the clutch cover and tighten the bolts to specified torque.

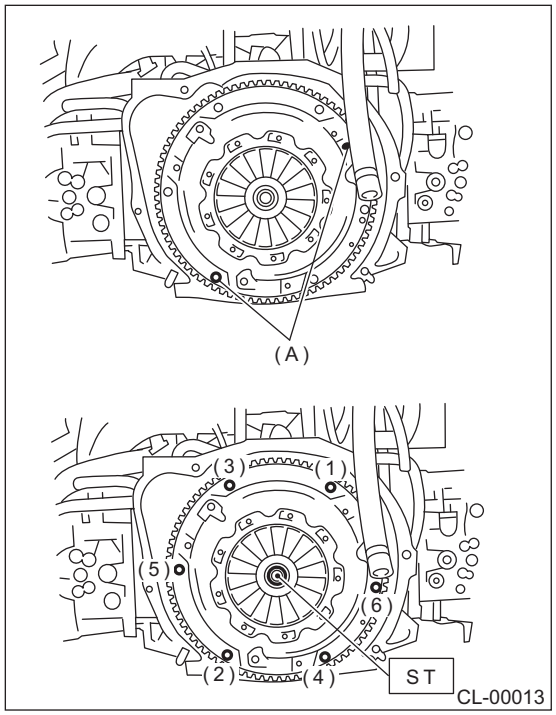
NOTE:
• When installing a clutch cover, position the clutch cover so that the spacing between the unbalance marks (paint mark) on the flywheel and clutch cover is 120° or more apart. (The unbalance mark indicates the direction of residual unbalance.)
• Temporarily tighten the bolts by hand. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)
• STI model



(A) Unbalance mark (paint)

- Except for STI model



(A) Unbalance mark (paint)

4) Remove the ST.
ST 499747100 CLUTCH DISC GUIDE
5) Install the transmission assembly.
6MT (TY75) model:
<Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>
6MT (TY85) model:
<Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

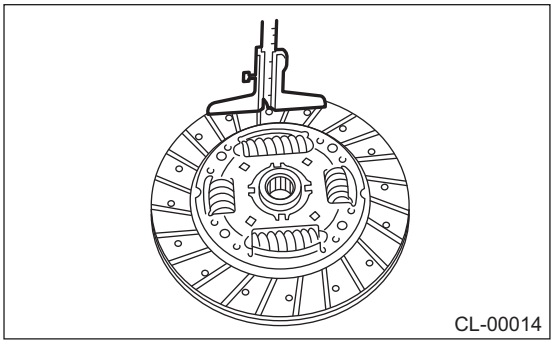
C: INSPECTION

1. CLUTCH DISC

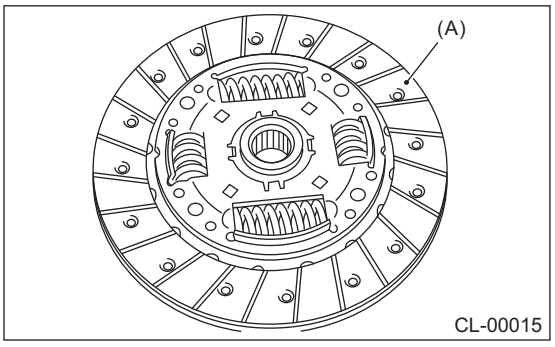
1) Facing wear
Measure the depth from the facing surface to the rivet head. Replace if the face is worn locally or worn down to less than the specified value.

Depth to rivet head:
Limit of sinking
0.8 mm (0.031 in)

NOTE:
Do not wash the clutch disc with any type of cleaning fluid.



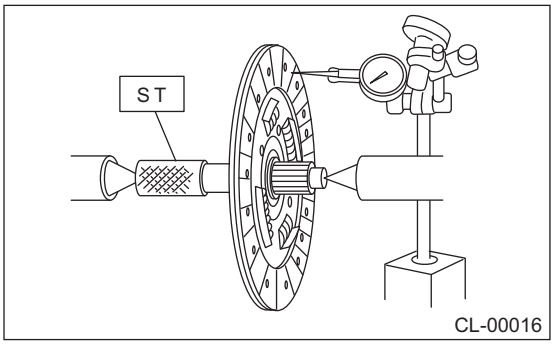
2) Hardened facing
Replace the clutch disc.
3) Oil soakage on facing
Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other locations for oil leakage.



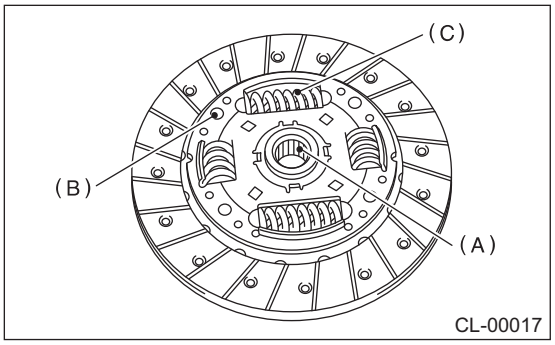
(A) Clutch facing

4) Deflection on facing
If deflection exceeds the specified value at the outer circumference of the facing, replace the clutch disc.
ST 499747100 CLUTCH DISC GUIDE

Limit for deflection:
0.7 mm (0.028 in) at R = 115 mm (4.53 in)



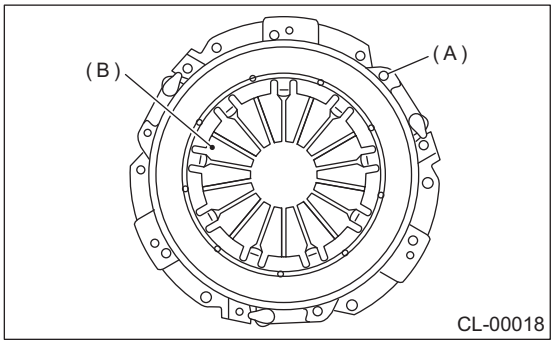
5) If there is spline wear, loose rivets, failed damper springs, etc., replace the clutch disc.



(A) Spline
(B) Rivet
(C) Damper spring

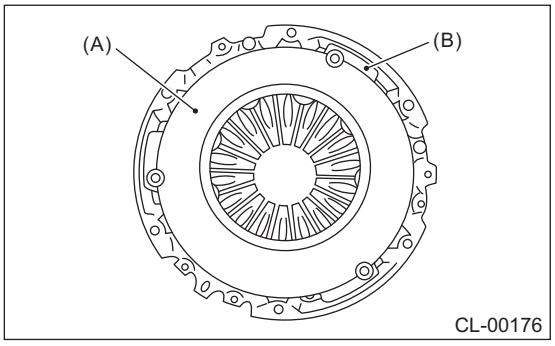
2. CLUTCH COVER

NOTE:
Visually check the following items without disassembling, and replace or repair if defective.
1) Loose thrust rivet
2) Damaged or worn bearing contact area at the center of diaphragm spring



(A) Thrust rivet
(B) Diaphragm spring

3) Damaged or worn disc contact surface of the pressure plate
4) Loose strap plate installation area
5) Worn diaphragm sliding area

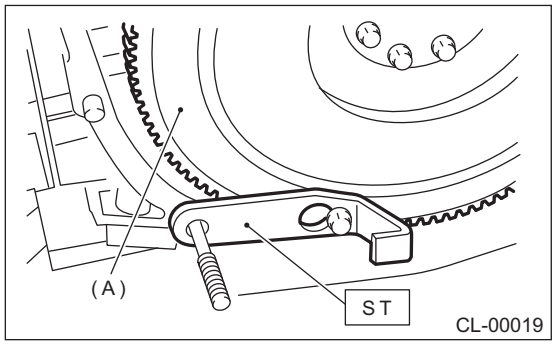


(A) Pressure plate
(B) Strap plate

3. Flywheel

A: REMOVAL

1) Remove the transmission assembly.
6MT (TY75) model:
<Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
6MT (TY85) model:
<Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch cover and clutch disc. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
3) Using the ST, remove the flywheel.
ST 498497100 CRANKSHAFT STOPPER



(A) Flywheel

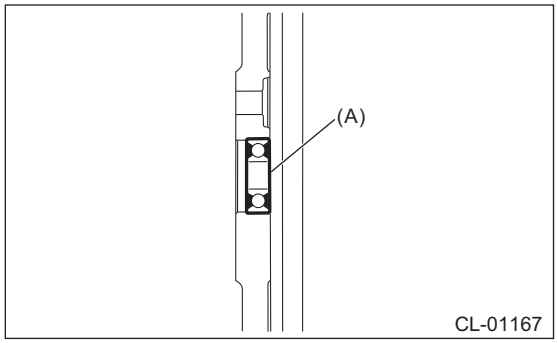
4) Drive out the pilot bearing from the flywheel.

B: INSTALLATION

1. STI MODEL

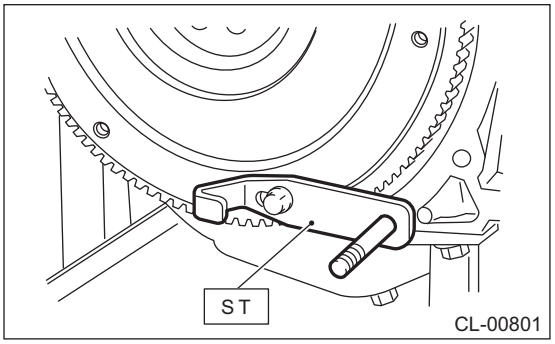
1) Press in a new pilot bearing to the position where it is flush with the flywheel surface or up to 0.4 mm (0.016 in) deeper than that.

CAUTION:
Do not press the bearing inner ring.



(A) Pilot bearing

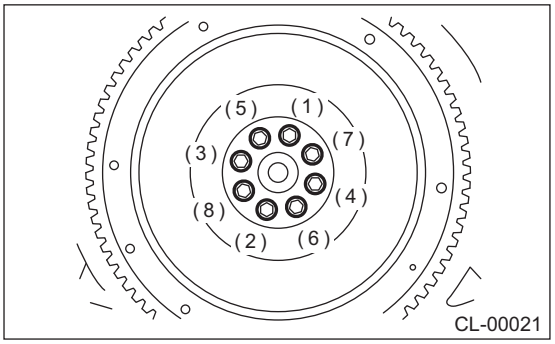
2) Install the flywheel and ST.
ST 498497100 CRANKSHAFT STOPPER



3) Tighten the flywheel mounting bolts to the specified torque.

NOTE:
Tighten the flywheel attachment bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
75 N·m (7.6 kgf-m, 55.3 ft-lb)

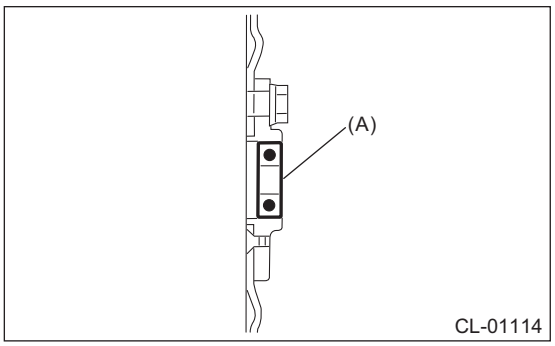


4) Install the clutch disc and clutch cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
5) Install the transmission assembly. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

2. EXCEPT FOR STI MODEL

1) Press in a new pilot bearing to the position where it is flush with the flywheel surface or up to 0.4 mm (0.016 in) deeper than that.

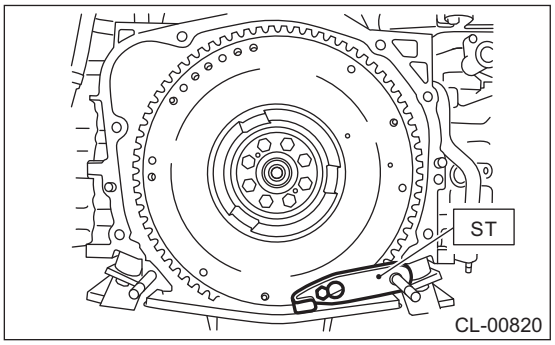
CAUTION:
Do not press the bearing inner ring.



(A) Pilot bearing

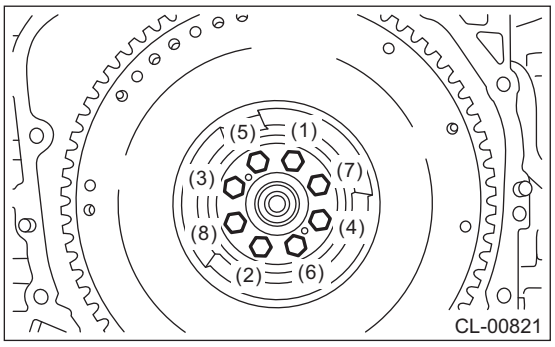
2) Temporarily install the crankshaft position sensor plate and flywheel.

NOTE:
Align the knock pin hole of the crankshaft position sensor plate to the knock pin of the crankshaft to secure the knock pin.
3) Attach the ST.
ST 498497100 CRANKSHAFT STOPPER



4) Tighten the flywheel mounting bolts in two stages.
(1) Tighten the flywheel attachment bolts.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



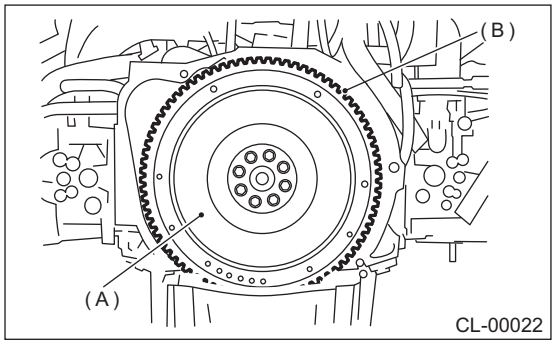
(2) While checking the tightening angle with the angle gauge, further tighten the flywheel mounting bolts.

Tightening angle:
30° — 35°

5) Install the clutch disc and clutch cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
6) Install the transmission assembly. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:
Because the center pilot bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or solvents.
1) If there is damage or defectiveness in the facing sliding surface or ring gear, replace the flywheel.



(A) Flywheel
(B) Ring gear

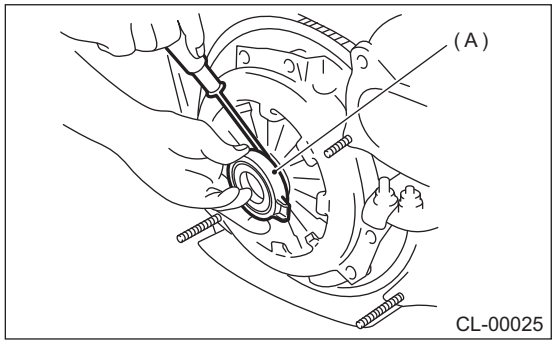
2) Smoothness of rotation
Rotate the ball bearing while applying pressure in the thrust direction.
3) If any noise or excessive play is noted, replace the pilot bearing.

4. Release Bearing and Lever

A: REMOVAL

1. STI MODEL

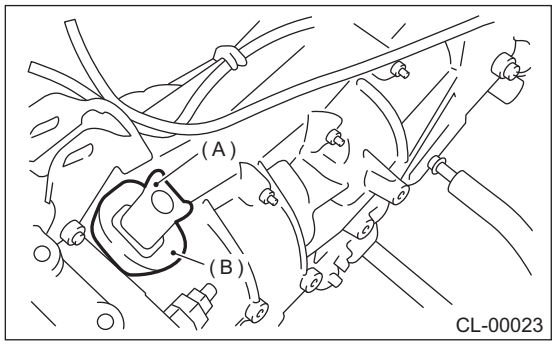
1) Remove the transmission assembly. <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
2) Remove the release lever from the transmission.
3) Using a flat tip screwdriver, remove the release bearing from the clutch cover.



(A) Release bearing

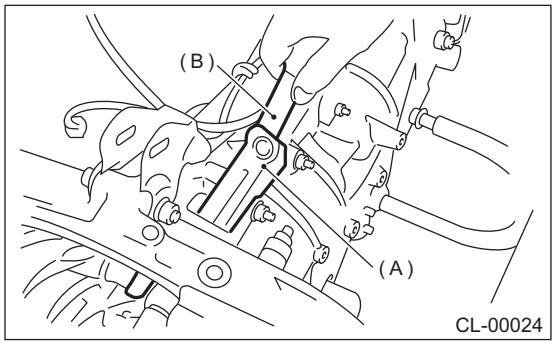
2. EXCEPT FOR STI MODEL

1) Remove the transmission assembly. <Ref. to 6MT(TY75)-26, REMOVAL, Manual Transmission Assembly.>
2) Remove the dust cover.



(A) Release lever
(B) Dust cover

3) Remove the attachment point of lever spring by inserting a screwdriver through the clutch housing release lever hole. Then remove the release lever together with the release bearing.



(A) Release lever
(B) Screwdriver

4) Separate the release lever and the release bearing.

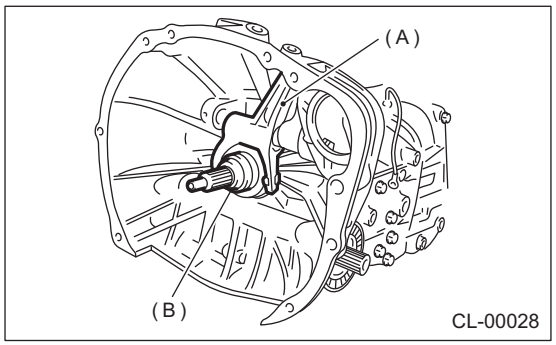
B: INSTALLATION

1. STI MODEL

1) Apply grease to the release lever shaft, the contact surface of the release lever and release bearing, and the contact surface of the release bearing and release bearing guide.

Grease:
NICHIMOLY N-130 or equivalent

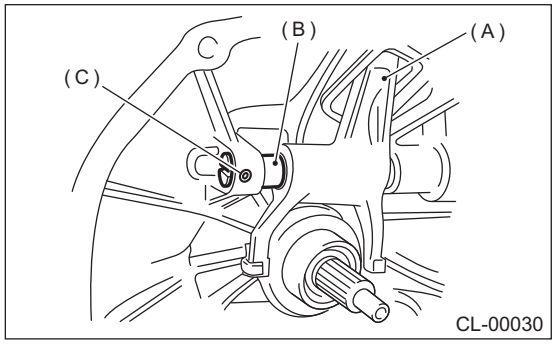
2) Attach the release bearing to the transmission.
3) Insert the release lever into the release bearing tab.



(A) Release lever
(B) Release bearing

4) Insert the release lever shaft into the release lever.

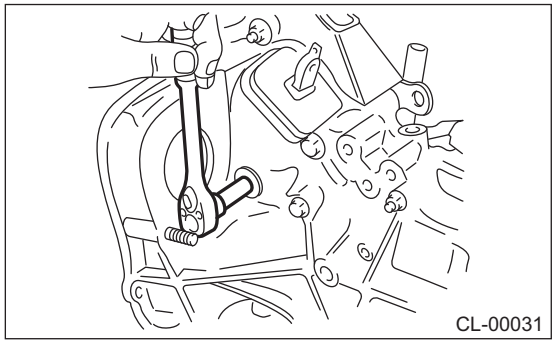
NOTE:
Make sure the cut portion of the release lever shaft comes into contact with the spring pin.



(A) Release lever
(B) Release lever shaft
(C) Spring pin

5) Tighten the plugs.

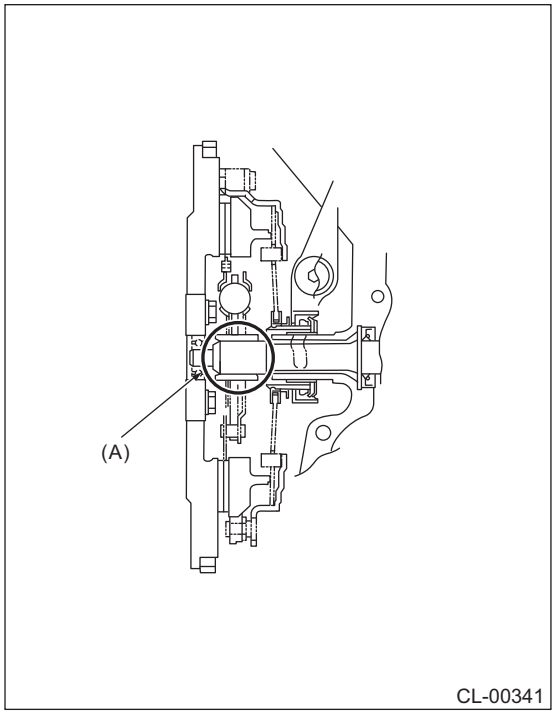
Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



6) Operate the release lever and check if the release bearing moves smoothly.
7) Apply grease to the contact surface of the release lever and operating cylinder.

Grease:
NICHIMOLY N-130 or equivalent
8) Apply grease to the transmission main shaft spline.

Grease:
NICHIMOLY N-130 or equivalent



(A) Transmission main shaft spline

9) Install the transmission assembly. <Ref. to 6MT(TY85)-34, INSTALLATION, Manual Transmission Assembly.>

2. EXCEPT FOR STI MODEL

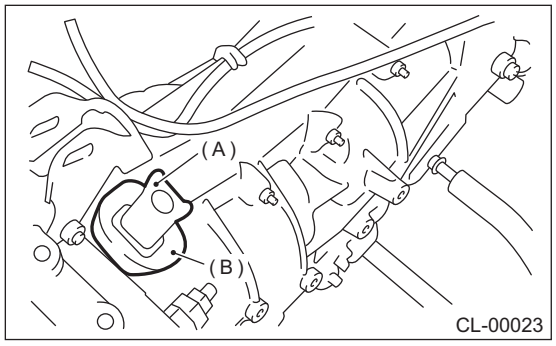
1) Apply grease of 0.5 to 0.8 g (0.02 to 0.03 oz) to the contact surface (dented portion) of the release lever and pivot.

Grease:
NICHIMOLY N-130 or equivalent
2) Apply 0.2 g (0.01 oz) of grease to the contact surface (dented portion) of the release lever and operating cylinder.

Grease:
NICHIMOLY N-130 or equivalent
3) Apply grease to the transmission main shaft spline, the contact surface of the release lever and release bearing, and the contact surface of the release bearing and transmission case.

Grease:
NICHIMOLY N-130 or equivalent
4) Install the release bearing by inserting the release lever into the clutch housing release lever hole. Then, fit the lever spring onto the raised portion of the pivot by pushing the release lever to the pivot and twisting it to both sides.

5) Install the dust cover.



(A) Release lever
(B) Dust cover

6) Operate the release lever and check if the release bearing moves smoothly.
7) Install the transmission assembly. <Ref. to 6MT(TY75)-31, INSTALLATION, Manual Transmission Assembly.>

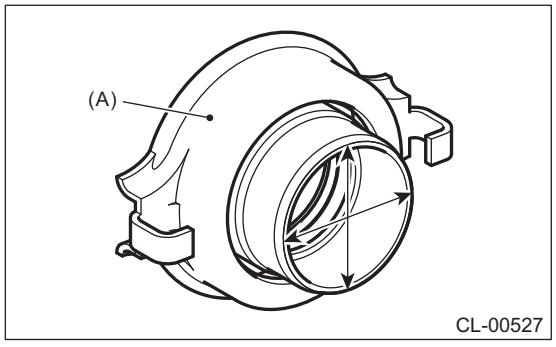
C: INSPECTION

1. RELEASE BEARING

CAUTION:
Since this bearing is grease-sealed and is a non-lubrication type, do not wash with gasoline or any other solvent when servicing the clutch.
1) Check the bearing for smooth movement by applying force to the bearing in the radial direction.

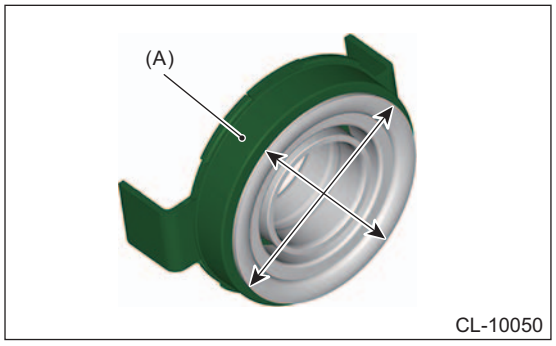
Radial direction stroke:
1.6 mm (0.063 in) or more

- **STI model**



(A) Bearing case

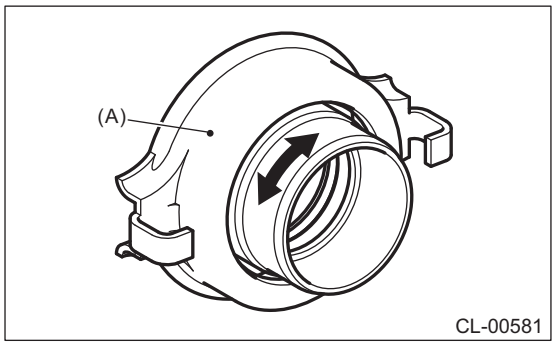
- **Except for STI model**



(A) Bearing case

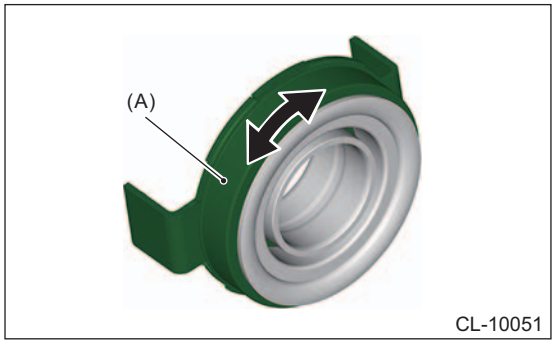
2) While applying force to the bearing in the rotational direction, check the bearing for smooth rotation.

- **STI model**



(A) Bearing case

- **Except for STI model**



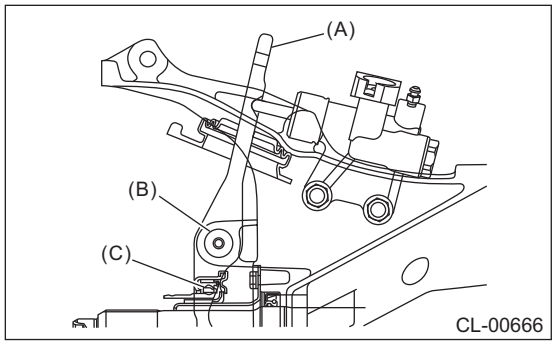
(A) Bearing case

3) Check for wear and damage at the bearing case surface in contact with the lever.

2. RELEASE LEVER

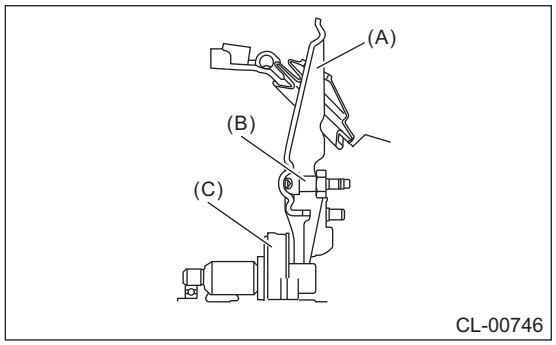
Check for wear in release shaft contact area and release bearing case contact area of the lever.

- **STI model**



(A) Release lever
(B) Release shaft
(C) Release bearing

- **Except for STI model**



(A) Release lever
(B) Pivot
(C) Release bearing

5. Operating Cylinder

A: REMOVAL

CAUTION:
Brake fluid spilled on the vehicle body will harm the paint surface; therefore, wash it off with water and wipe clean quickly if spilled.

1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

2) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>

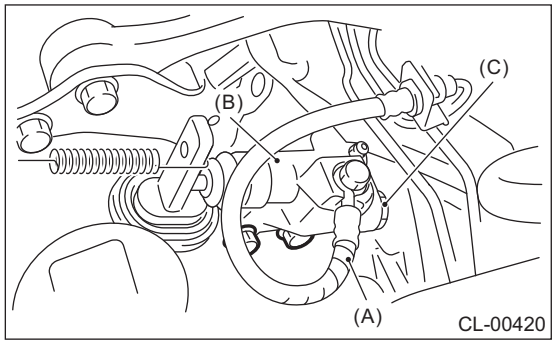
3) Remove the intercooler.
STI model:
<Ref. to IN(STI)-11, REMOVAL, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>

4) Remove the starter. (STI model) <Ref. to SC(STI)-7, REMOVAL, Starter.>

5) Disconnect the clutch hose.

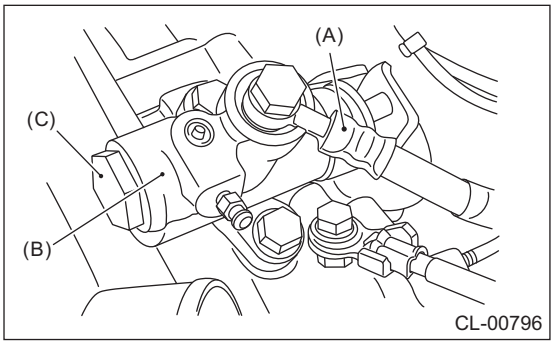
CAUTION:
• Cover the hose joint to prevent the brake fluid from flowing out.
• Do not loosen or remove the cap bolts.

• STI model



(A) Clutch hose
(B) Operating cylinder
(C) Cap bolt

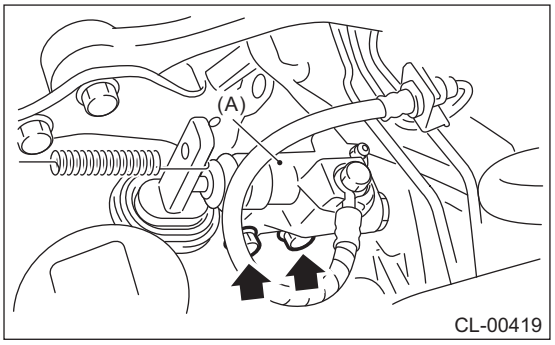
• Except for STI model



(A) Clutch hose
(B) Operating cylinder
(C) Cap bolt

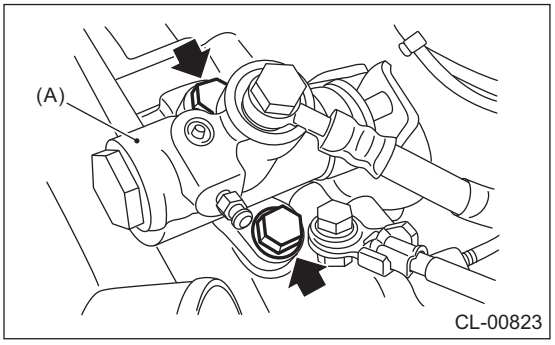
6) Remove the operating cylinder.

• STI model



(A) Operating cylinder

• Except for STI model



(A) Operating cylinder

B: INSTALLATION

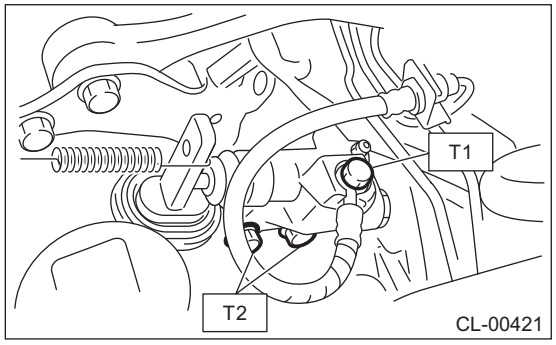
1) Install in the reverse order of removal.

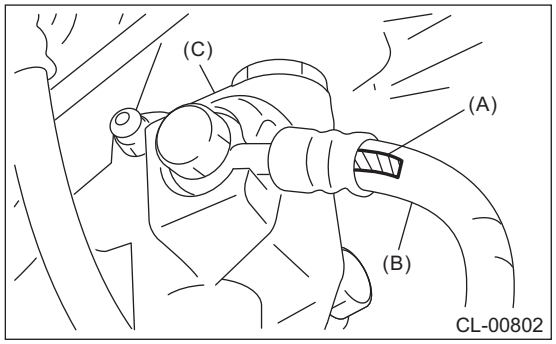
NOTE:
• Use a new gasket.
• Before installing the operating cylinder, apply grease to the contact point of the release lever and operating cylinder.

Grease:
NICHIMOLY N-130 or equivalent

• Be sure to install the clutch hose with the mark side facing upward.
• Be careful not to twist the clutch hose during installation.
• STI model

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 41 N·m (4.2 kgf-m, 30.2 ft-lb)

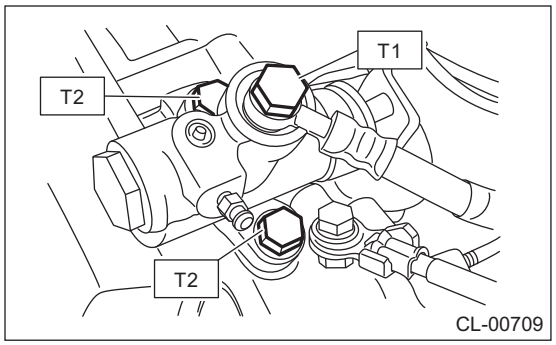


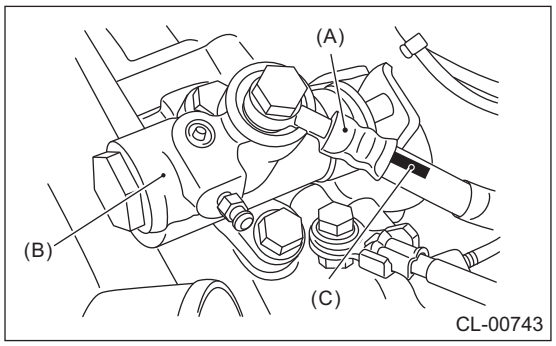


(A) Mark
(B) Clutch hose
(C) Operating cylinder

• Except for STI model

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)



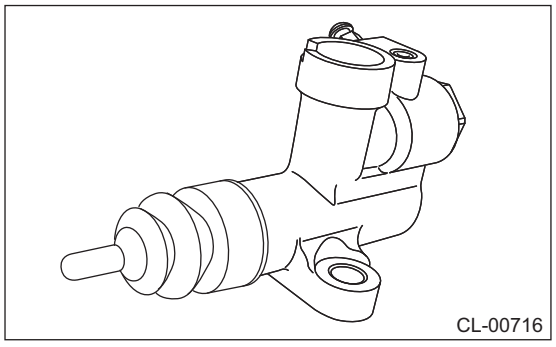


(A) Clutch hose
(B) Operating cylinder
(C) Mark

2) After bleeding air from the operating cylinder, ensure that the clutch operates properly.
<Ref. to CL-30, Clutch Fluid Air Bleeding.>

C: DISASSEMBLY

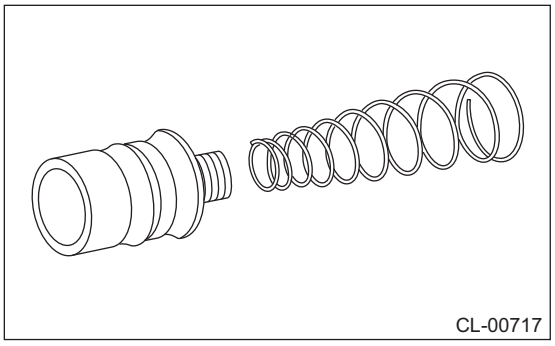
CAUTION:
Do not disassemble the STI model.
1) Remove the boot and push rod.



2) Apply compressed air through clutch hose attachment hole.

NOTE:
Face the piston hole down and place a piece of wood underneath to prevent the piston from popping out.

3) Separate the piston and piston spring.



D: ASSEMBLY

NOTE:
During assembly, apply hydraulic oil to all parts.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4

1) Install the piston spring onto the piston.
2) Insert piston into the operating cylinder.
3) Install push rod to the boot.
4) Install boot and push rod to the operating cylinder.

E: INSPECTION

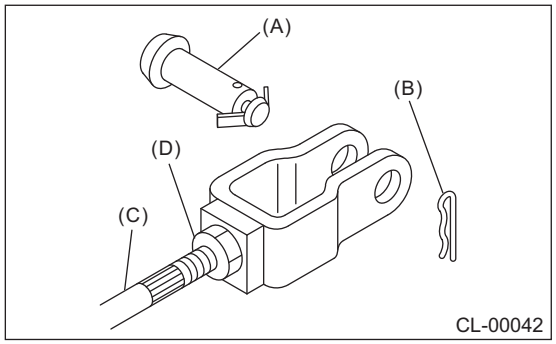
1) Check that the operating cylinder is not damaged. If operating cylinder is damaged, replace it.
2) Check the brake fluid leakage on the operating cylinder or the boot for damage. Replace the operating cylinder if brake fluid leaks or damages are noted.

6. Master Cylinder

A: REMOVAL

CAUTION:
• Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

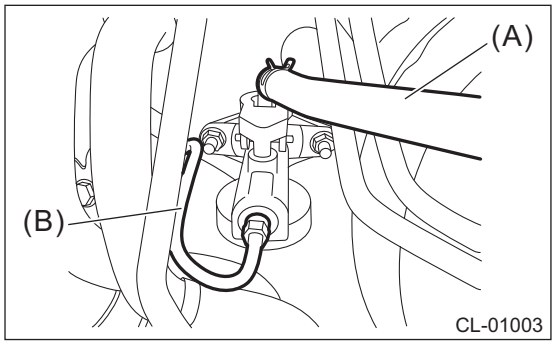
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
3) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Drain the brake fluid. <Ref. to CL-29, Clutch Fluid.>
5) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
6) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
7) Remove the snap pin and clevis pin, and then separate the push rod of the master cylinder.



(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

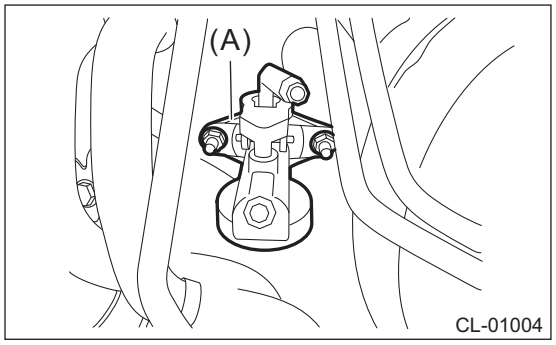
8) Remove the intercooler.
STI model:
<Ref. to IN(STI)-11, REMOVAL, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>

9) Disconnect the clutch pipe and reservoir hose.



(A) Reservoir hose
(B) Clutch pipe

10) Remove the clutch hose bracket from the bulkhead.
11) Remove the master cylinder.



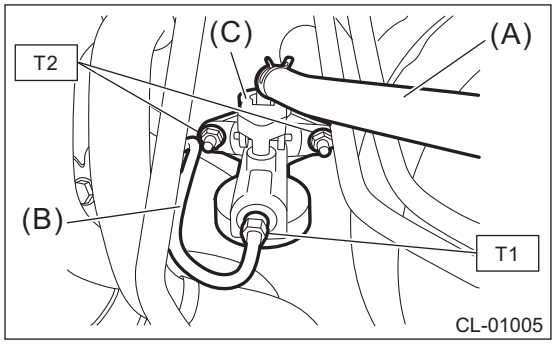
(A) Master cylinder

B: INSTALLATION

1) Attach the clutch hose bracket to the bulkhead.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
2) Install the master cylinder to the body, and connect the clutch pipe and the reservoir hose.

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 11.1 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

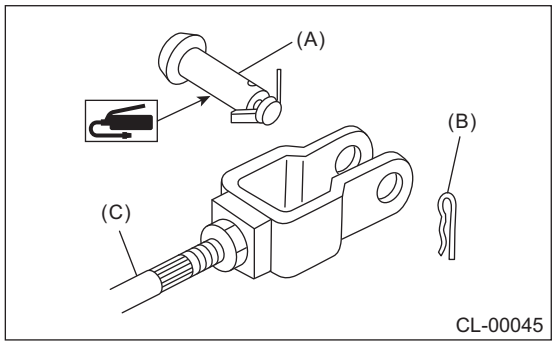


(A) Reservoir hose
(B) Clutch pipe
(C) Master cylinder

3) Connect the push rod of the master cylinder, and install the clevis pin and snap pin.

CAUTION:
Always use a new clevis pin.

NOTE:
Apply grease to the clevis pin.



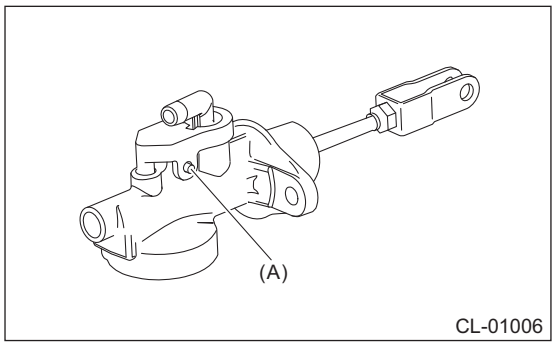
(A) Clevis pin
(B) Snap pin
(C) Push rod

4) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
5) Add recommended brake fluid. <Ref. to CL-29, Clutch Fluid.>
6) After bleeding air from the clutch system, ensure that the clutch operates properly. <Ref. to CL-30, Clutch Fluid Air Bleeding.>
7) Install the instrument panel lower cover. <Ref. to EI-66, INSTALLATION, Instrument Panel Lower Cover.>
8) Install the intercooler.
STI model:
<Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
9) Install the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
10) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

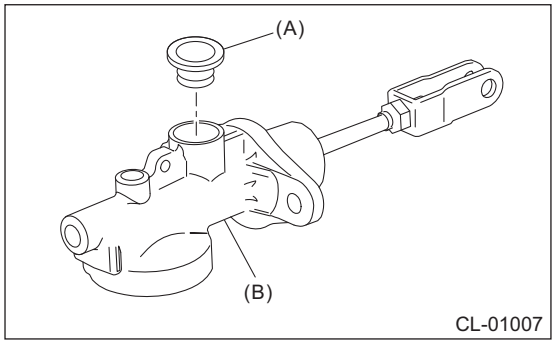
C: DISASSEMBLY

1) Remove the straight pin and nipple.



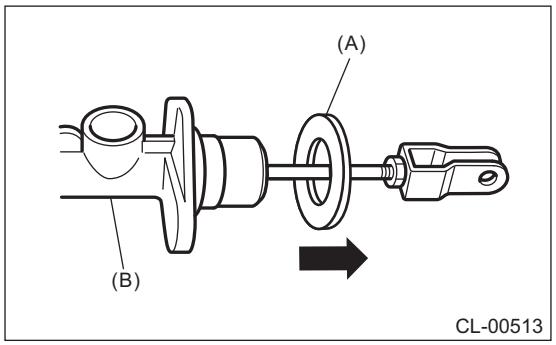
(A) Straight pin

2) Remove the oil seal.



(A) Oil seal
(B) Master cylinder

3) Move the seat towards the rear.



(A) Seat
(B) Master cylinder

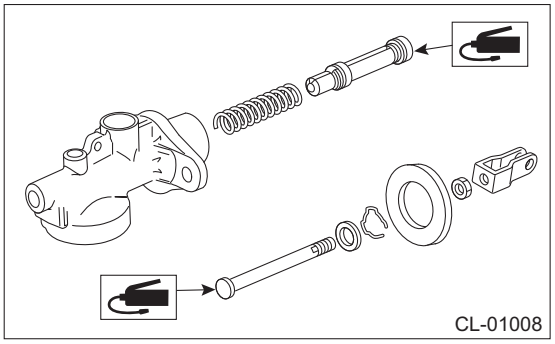
4) Remove the piston stop ring.

CAUTION:
When removing the piston stop ring, be careful to prevent the rod, washer, piston and return spring from popping out.

D: ASSEMBLY

1) Apply a coat of grease to the contact surfaces of the push rod and piston before installation.

Grease:
SILICONE GREASE G-40M or equivalent

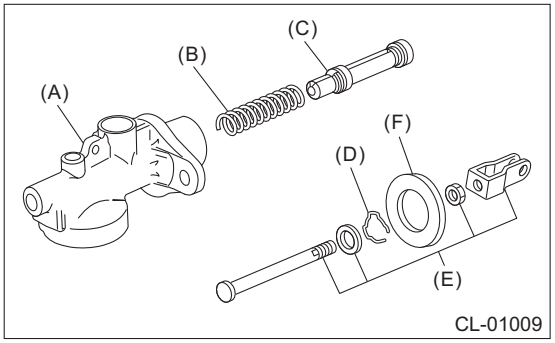


2) Assemble in the reverse order of disassembly.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, reservoir tank, return spring, seat or hose, replace the faulty part.



(A) Master cylinder body
(B) Return spring
(C) Piston
(D) Piston stop ring
(E) Push rod ASSY
(F) Seat

7. Clutch Pipe and Hose

A: REMOVAL

1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

2) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>

3) Remove the intercooler.

STI model:

<Ref. to IN(STI)-11, REMOVAL, Intercooler.>

Except for STI model:

<Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>

4) Drain the brake fluid. <Ref. to CL-29, Clutch Fluid.>

5) Remove the clutch pipe from the master cylinder.

6) Disconnect the hose from operating cylinder.

7) Remove the clutch hose bracket from the bulkhead.

8) Remove the clutch pipe from the clutch hose.

9) Remove the clutch pipe and clamp from the clutch hose bracket.

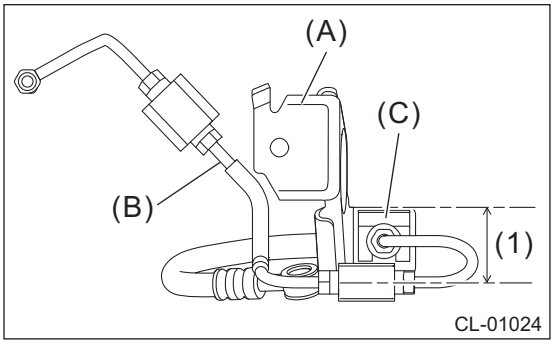
B: INSTALLATION

1) Install the clutch hose and clamp to the clutch hose bracket.

NOTE:
Be sure to install the clutch hose with the mark side facing towards vehicle top.

2) Connect the clutch pipe to the clutch hose.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

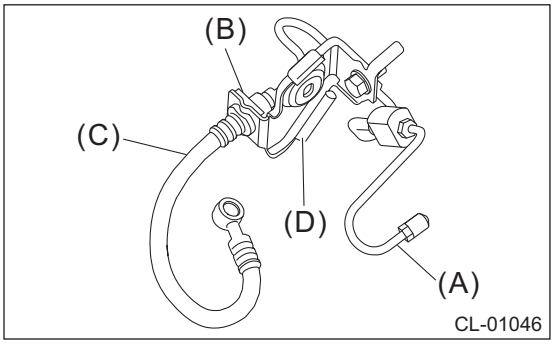


(A) Clutch hose bracket
(B) Clutch pipe
(C) Clamp

(1) Attach the clutch pipe in parallel to the clutch hose bracket as shown in the figure.

3) Attach the clutch hose bracket to the bulkhead.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) Clutch pipe
(B) Clamp
(C) Clutch hose
(D) Clutch hose bracket

4) Connect the clutch hose to the operating cylinder.

NOTE:
- Use a new gasket.
- Be sure to install the clutch hose with the mark side facing upward.
- Be careful not to twist the clutch hose during installation.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Connect the clutch pipes to the master cylinder.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

6) Bleed air from brake fluid. <Ref. to CL-30, Clutch Fluid Air Bleeding.>
7) Install the intercooler.
STI model:
<Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
8) Install the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
9) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

Check the pipes and hoses for breaks and damage. Check the joint for brake fluid leakage. If crack, breakage or damage is found, repair or replace the faulty pipe or hose.

8. Clutch Fluid

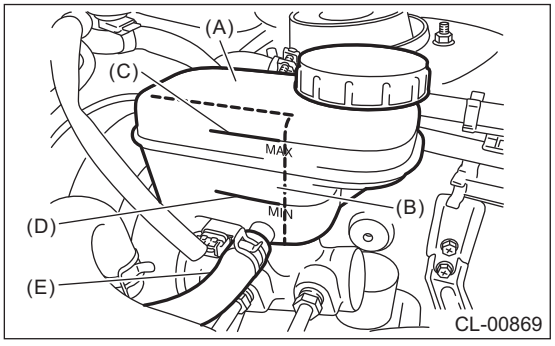
A: INSPECTION

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

1) Park the vehicle on a level surface.
2) Check the brake fluid level using the scale on the outside of the reservoir tank. If the level is below "MIN", add fluid to bring it up to "MAX", and also inspect for leakage.

CAUTION:
This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4



(A) Reservoir tank
(B) Clutch fluid chamber
(C) MAX. level
(D) MIN. level
(E) Tank hose

B: REPLACEMENT

CAUTION:
• Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.
• Use new FMVSS No. 116 DOT3 or DOT4.
• Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.
• Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
• Be careful not to allow dirt or dust to enter the reservoir tank.

NOTE:
• During the bleeding operation, keep the reservoir tank filled with brake fluid to prevent entry of air.
• Clutch pedal must be operated very slowly.
• Bleed air from the oil line with help of a co-worker.
• The required amount of brake fluid is approximately 150 mL (5.1 US fl oz, 5.3 Imp fl oz) for total clutch system.

1) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Remove the intercooler.
STI model:
<Ref. to IN(STI)-11, REMOVAL, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
3) Drain the brake fluid from the air bleeder of the operating cylinder.
4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
New FMVSS No. 116 DOT3 or DOT4
5) Bleed air from brake fluid. <Ref. to CL-30, Clutch Fluid Air Bleeding.>
6) Install the intercooler.
STI model:
<Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
7) Install the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

9. Clutch Fluid Air Bleeding

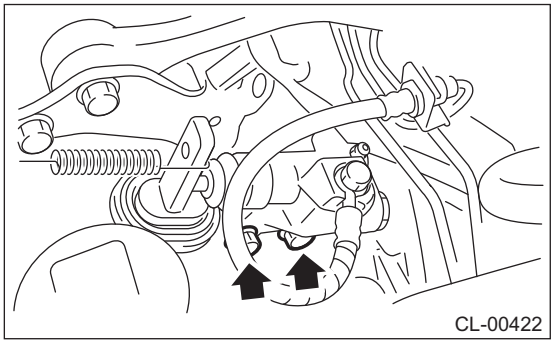
A: PROCEDURE

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilled on the vehicle body will harm the paint surface; wash it off with water and wipe clean quickly if spilled.

1. STI MODEL

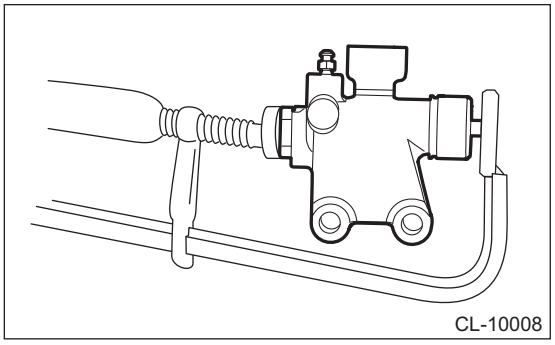
NOTE:
Bleed air from the oil line with help of a co-worker.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the starter. <Ref. to SC(STI)-7, REMOVAL, Starter.>
4) Remove the operating cylinder.

NOTE:
Do not remove the clutch hose.



CL-00422

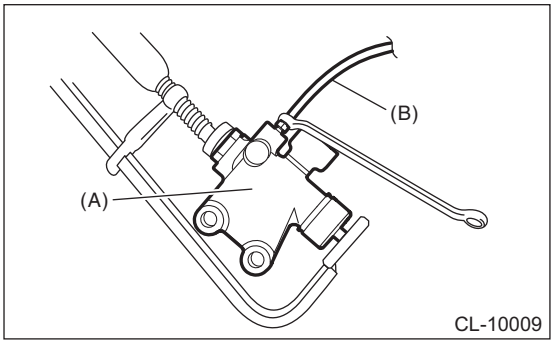
5) Hold the piston with a clamp to prevent piston from popping out.



CL-10008

6) Fit one end of a vinyl tube into the air bleeder of the operating cylinder, and put the other end into a container.
7) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the brake fluid. Release the air bleeder for 1 or 2 seconds. Next, close the air bleeder, and slowly release the clutch pedal.

NOTE:
When performing this procedure, place the screw portion of the air bleeder higher than the end of operating cylinder.



CL-10009

(A) Operating cylinder
(B) Vinyl tube

8) Repeat procedure 7), until there are no more air bubbles appearing from the air bleeder.

CAUTION:
Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.
9) Tighten the air bleeder.

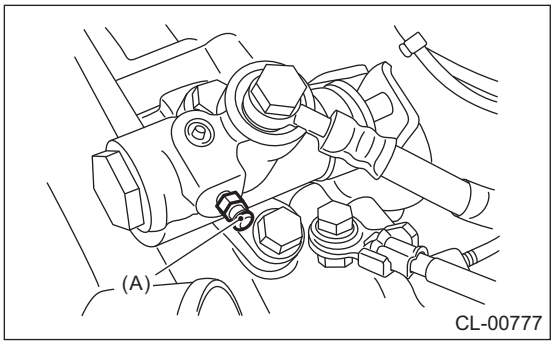
Tightening torque:
7.8 N·m (0.8 kgf-m, 5.8 ft-lb)
10) Install the operating cylinder.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)
11) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
12) After bleeding the air from clutch system, ensure that the clutch operates properly.
13) Install the starter. <Ref. to SC(STI)-7, INSTALLATION, Starter.>
14) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
15) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. EXCEPT FOR STI MODEL

NOTE:
Bleed air from the oil line with help of a co-worker.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>

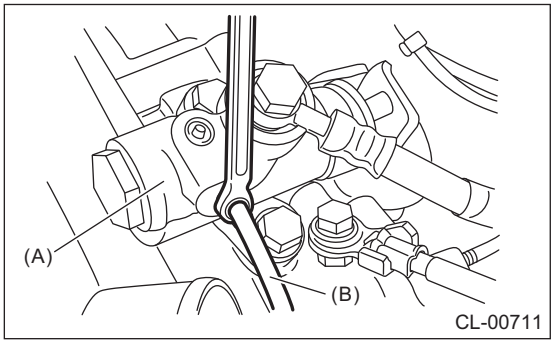
4) Fit one end of a vinyl tube into the air bleeder of the operating cylinder, and put the other end into a container.



(A) Air bleeder

5) Slowly depress the clutch pedal several times and keep it depressed. Then open the air bleeder to discharge air together with the brake fluid. Release the air bleeder for 1 or 2 seconds. Next, close the air bleeder, and slowly release the clutch pedal.

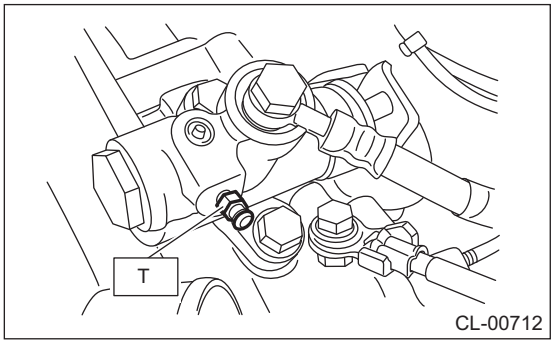
CAUTION:
Cover the air bleeder with cloth to prevent brake fluid from being splashed on surrounding parts when loosening the bleeder.



(A) Operating cylinder
(B) Vinyl tube

6) Repeat procedure 5), until there are no more air bubbles appearing from the air bleeder.
7) Tighten the air bleeder.

Tightening torque:
T: 7.8 N·m (0.8 kgf-m, 5.8 ft-lb)



8) After stepping on the clutch pedal, make sure that there are no leaks evident in the entire clutch system.
9) After bleeding the air from clutch system, ensure that the clutch operates properly.
10) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
11) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
12) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

10.Clutch Pedal

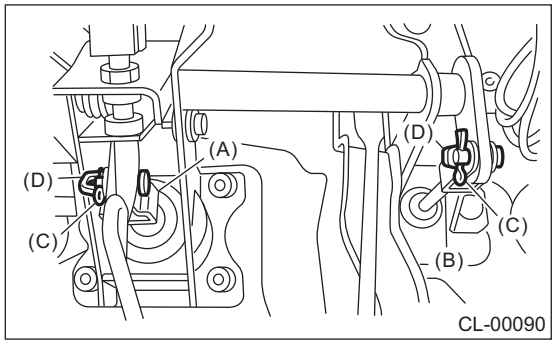
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

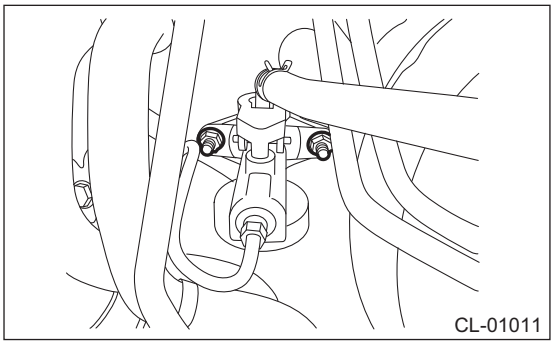
3) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Remove the steering column. <Ref. to PS-24, REMOVAL, Steering Column.>
5) Disconnect the connector from the stop light switch and clutch switch.
6) Remove the snap pins from clevis pins which secure the lever to the push rod and operating rod.
7) Pull out the clevis pins which secures the lever to the push rod and operating rod.



(A) Operating rod
(B) Push rod
(C) Snap pin
(D) Clevis pin

8) Remove the intercooler.
STI model:
<Ref. to IN(STI)-11, REMOVAL, Intercooler.>
Except for STI model:
<Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
9) Remove the clutch hose bracket mounting bolt.
10) Remove the nut which secures the clutch master cylinder.

NOTE:
• Remove the master cylinder from the stud bolt.
• Hold the clutch pipe with a wire or a string to avoid the pipe from bending.



11) Remove the bolts and nuts which secure the brake pedal and clutch pedal, and remove the pedal assembly.

B: INSTALLATION

1) Install in the reverse order of removal.

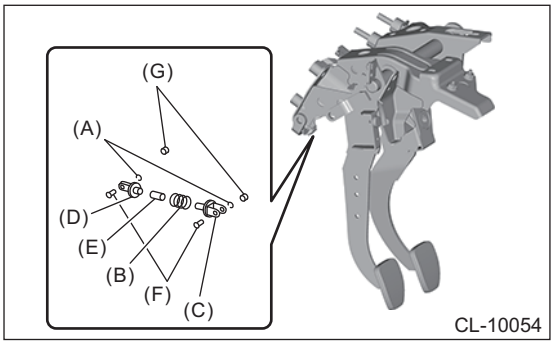
CAUTION:
Always use a new clevis pin.

Tightening torque:
Except for knee airbag module
18 N.m (1.8 kgf-m, 13.3 ft-lb)
Knee airbag module
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

2) Adjust the clutch pedal after installation. <Ref. to CL-34, ADJUSTMENT, Clutch Pedal.>
3) Check the clutch start system.

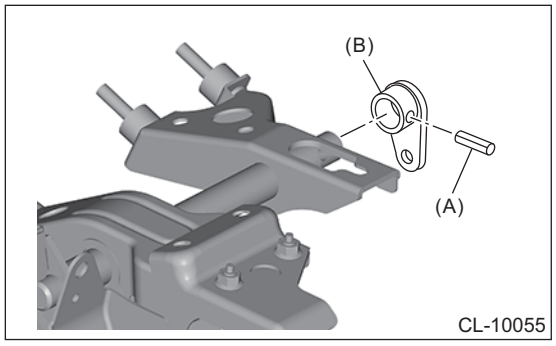
C: DISASSEMBLY

1) Remove the clutch switches.
2) Remove the clip, assist spring, assist rod A, assist rod B, assist bushing, assist pin and bushing.



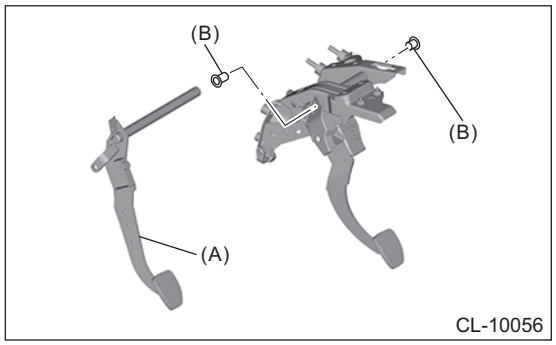
(A) Clip
(B) Assist spring
(C) Assist rod A
(D) Assist rod B
(E) Assist bushing
(F) Assist pin
(G) Bushing

3) Remove the spring pin and lever.



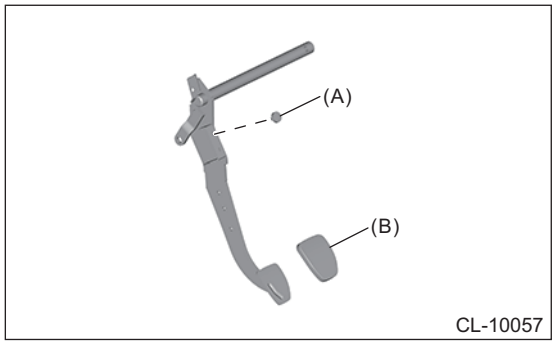
(A) Spring pin
(B) Lever

4) Remove the clutch pedal and pedal bushings.



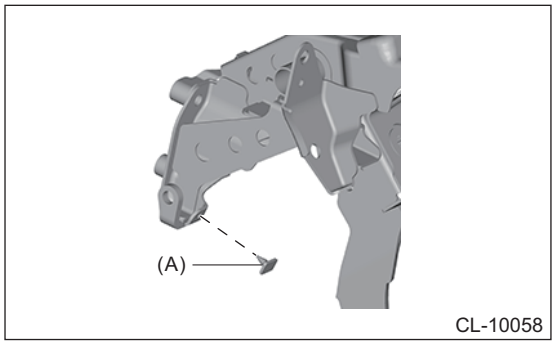
(A) Clutch pedal
(B) Pedal bushing

5) Remove the stopper and clutch pedal pad.



(A) Stopper
(B) Clutch pedal pad

6) Remove the stopper.



(A) Stopper

D: ASSEMBLY

1) Attach the stopper and clutch pedal pad to the clutch pedal.
2) Install the clutch switch to the pedal bracket.
3) Clean the pedal bushing holes of the clutch pedal and the brake pedal, apply grease, and install the pedal bushings.
4) Install the clutch pedal, brake pedal and lever to the pedal bracket, and fix with a spring pin.
5) Install the assist rod A, assist rod B, assist bushing and assist spring to the clutch pedal and pedal bracket.
6) Insert the assist pin and install the clip.

E: INSPECTION

1) Check the free play of the clutch pedal.

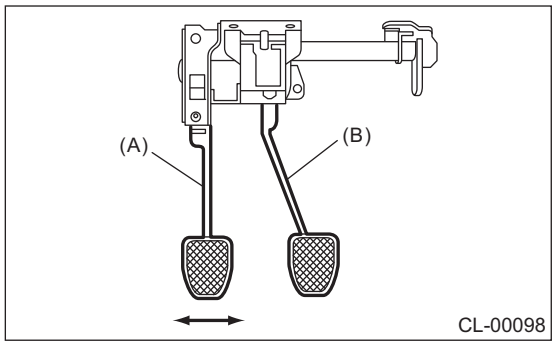
NOTE:
Check by pressing the pedal.

Clutch pedal free play:
4 — 11 mm (0.16 — 0.43 in)

2) Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to check that the clutch pedal deflection is within the service limit.

CAUTION:
If the deflection exceeds the service limit, replace the clutch pedal assembly with a new part.

Deflection of the clutch pedal:
Service limit
4.0 mm (0.157 in) or less



(A) Clutch pedal
(B) Brake pedal

F: ADJUSTMENT

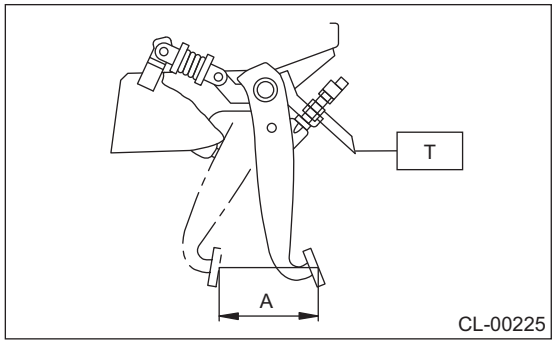
1) Turn the lock nut until the full stroke of clutch pedal becomes within the specification.

CAUTION:
When adjusting the full stroke of clutch pedal, do not turn the clutch switch.

NOTE:
If the lock nut cannot adjust the full stroke of clutch pedal to the specified value, adjust it by turning the master cylinder push rod.

Clutch pedal full stroke A:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

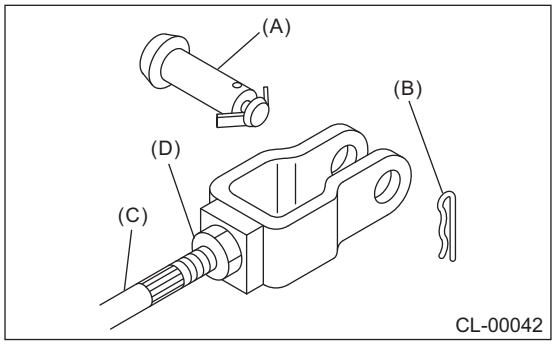
Tightening torque (clutch switch lock nut):
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)



2) If the full stroke is not within the specified value, loosen the clutch switch lock nut to adjust.

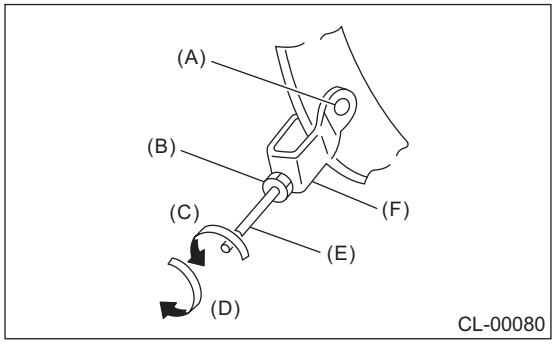
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

3) Loosen the push rod lock nuts.



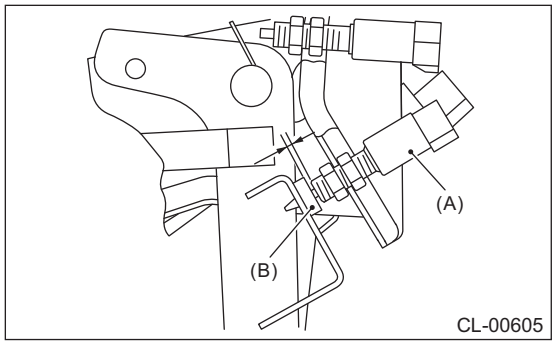
(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Push rod lock nut

4) Rotate the push rod to adjust.
(1) Make sure that the clutch pedal contacts the clutch switch side when the pedal is released.
(2) Make sure that the clutch pedal contacts the clutch pedal bracket stopper when the clutch pedal is at the maximum stroke position.



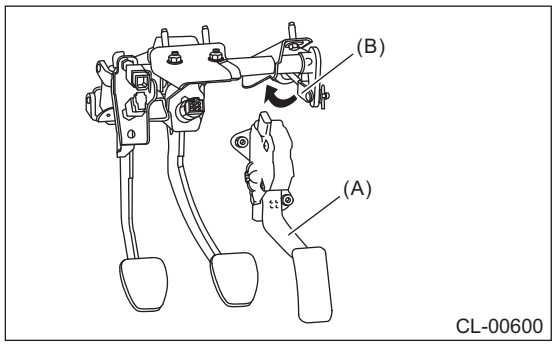
(A) Clevis hole
(B) Push rod lock nut
(C) In the shorter direction
(D) In the longer direction
(E) Push rod
(F) Clevis

5) Turn the push rod to shorten until a clearance is gained on the clutch switch side.



(A) Clutch switch
(B) Stopper

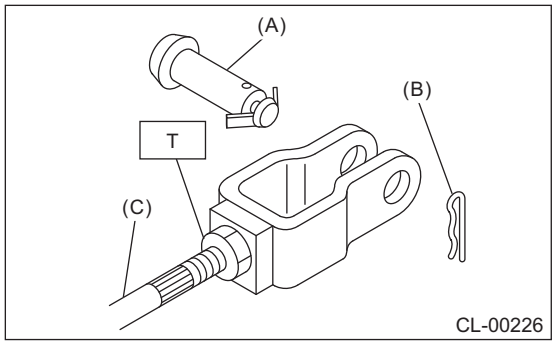
6) Turn the push rod to lengthen until clutch pedal contacts the clutch switch.
7) Turn further in the direction that will shorten the push rod (arrow direction shown in figure) by 270°.



(A) Accelerator pedal
(B) Clevis

8) Check that the clevis pin moves smoothly by moving it in the left and right directions.
9) Tighten the push rod lock nut.

Tightening torque (push rod lock nut):
T: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

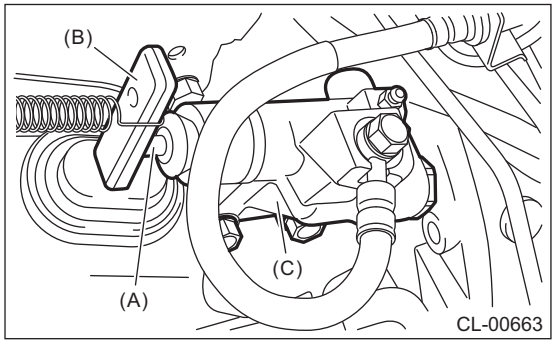


(A) Clevis pin
(B) Snap pin
(C) Push rod

10) Depress and release the clutch pedal two or three times to ensure that the clutch pedal and release lever operate smoothly. If the clutch pedal and release lever do not operate smoothly, bleed air from the clutch hydraulic system. <Ref. to CL-30, Clutch Fluid Air Bleeding.>
11) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not within specifications, repeat adjustment procedures again from the beginning.

Clutch pedal full stroke:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

12) Push the release lever until the operating cylinder push rod retracts. Check that the brake fluid level in the reservoir tank increases.



(A) Push rod
(B) Release lever
(C) Operating cylinder

13) If the brake fluid level increases, hydraulic clutch play is correct.
14) If the brake fluid level does not increase or push rod does not retract, readjust the clutch pedal.
15) Check the brake fluid level using the scale on the outside of reservoir tank. <Ref. to CL-29, INSPECTION, Clutch Fluid.>

11.Clutch Switch

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

3) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
5) Disconnect the connector from the clutch switch and clutch start switch.
6) Remove the clutch switch and clutch start switch.

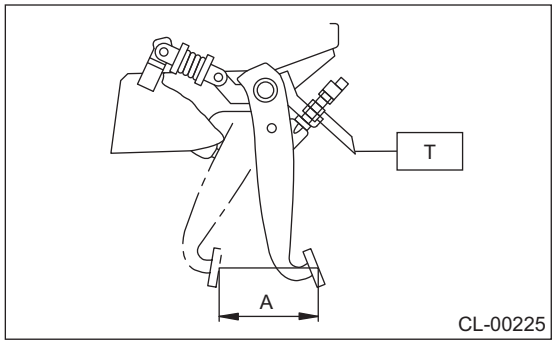
B: INSTALLATION

1. CLUTCH SWITCH

1) Install the clutch switch.
2) Move the clevis pin of push rod to left and right, retain it at the position where it moves smoothly, and measure the clutch pedal stroke.

Clutch pedal full stroke A:
STI model
130 — 135 mm (5.12 — 5.31 in)
Except for STI model
135 — 140 mm (5.31 — 5.51 in)

Tightening torque:
T: 8 N·m (0.8 kgf-m, 5.9 ft-lb)

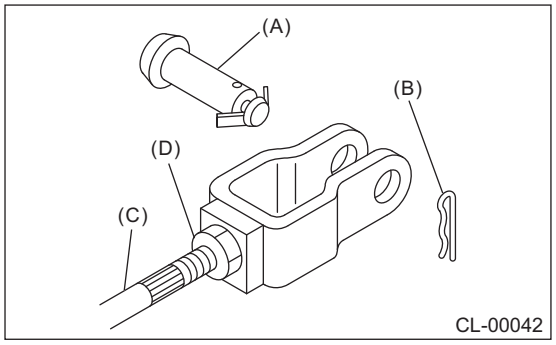


3) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-34, ADJUSTMENT, Clutch Pedal.>
4) Connect the clutch switch connector.
5) Thereafter, install in the reverse order of removal.

Tightening torque:
Knee airbag module
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

2. CLUTCH START SWITCH

1) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

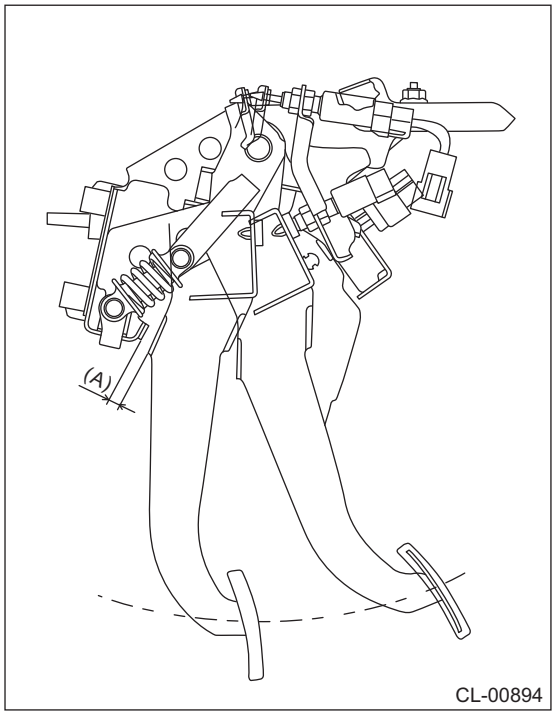


(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

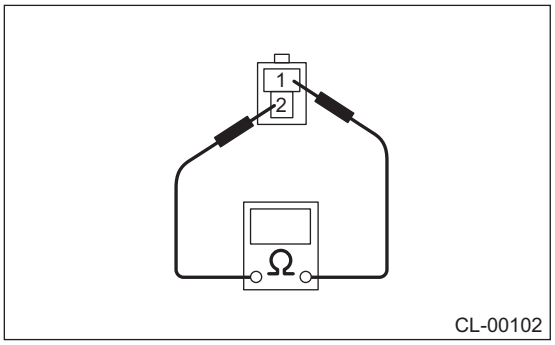
2) Install the clutch start switch so that the clutch switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below.

Clearance A:
6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

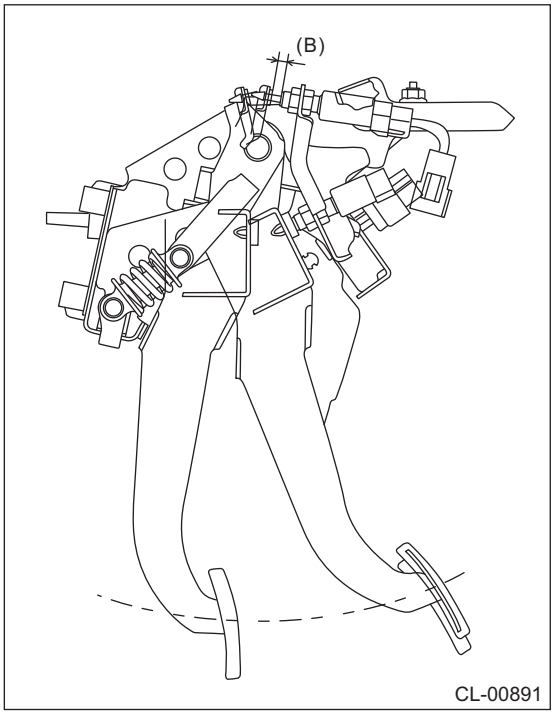


NOTE:
• Using a plate of the same thickness for the clearance facilitates the adjustment operation.
• Using the Subaru Select Monitor or a tester, check the position where the switch turns on.
Check the following figure for the terminal layout of the harness connector.



• When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:
8.6 — 9.0 mm (0.34 — 0.35 in)



3) Connect the clutch start switch connector.
4) Make sure that engine does not start with clutch pedal not depressed.
5) Make sure that engine starts with clutch pedal depressed.
6) Thereafter, install in the reverse order of removal.

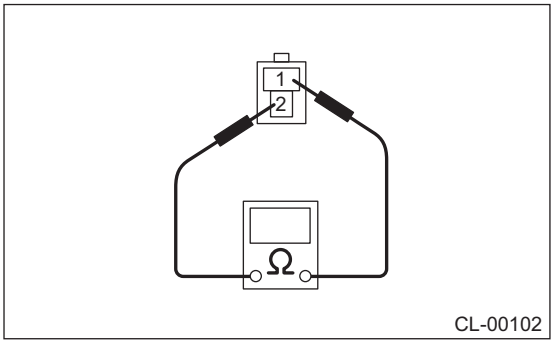
Tightening torque:
Knee airbag module
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: INSPECTION

1. CLUTCH START SWITCH

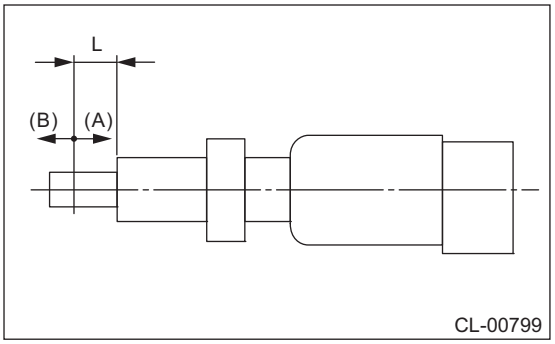
1) Perform the following inspections. If the clutch start switch does not operate normally, adjust the switch, and check it again. <Ref. to CL-38, ADJUSTMENT, Clutch Switch.>
• Make sure that engine does not start with clutch pedal not depressed.
• Make sure that engine starts with clutch pedal fully depressed.
2) When the clutch start switch does not operate normally even if it is adjusted, check the clutch start switch for continuity.
(1) Remove the clutch start switch. <Ref. to CL-36, REMOVAL, Clutch Switch.>
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more



(3) Check that the switch is turned on and off in dimension L.

Dimension L:
9 — 10 mm (0.35 — 0.39 in)



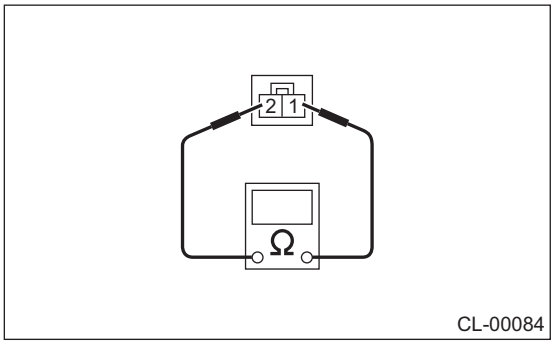
(A) ON
(B) OFF

(4) Install the clutch start switch. <Ref. to CL-36, CLUTCH START SWITCH, INSTALLATION, Clutch Switch.>

2. CLUTCH SWITCH

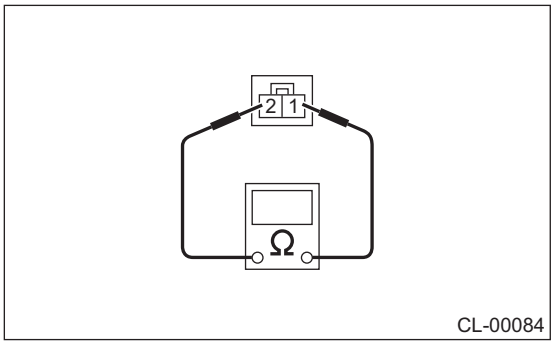
1) Check the clutch switch for continuity.
(1) Disconnect the connector of clutch switch.
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not within the specification, check the clutch stroke and installation condition, and check the clutch switch again.

Condition	Terminal No.	Specified resistance
When clutch pedal is depressed	No. 1 — No. 2	1 MΩ or more
When the clutch pedal is not depressed	No. 1 — No. 2	Less than 1 Ω



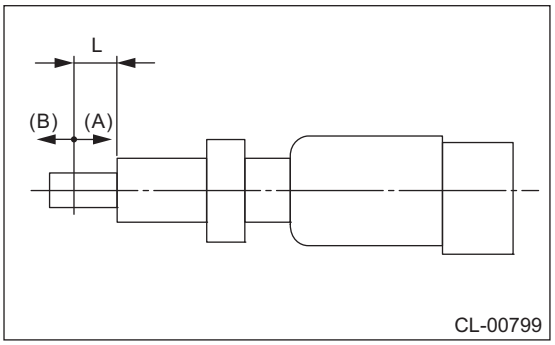
2) When the clutch switch does not operate normally even if the clutch stroke and installation condition are normal, check the clutch switch for continuity.
(1) Remove the clutch switches. <Ref. to CL-36, REMOVAL, Clutch Switch.>
(2) Measure the resistance between terminal 1 and 2 of the switch. If the resistance is not at the standard value, replace the switch.

Condition	Terminal No.	Specified resistance
ON	No. 1 — No. 2	Less than 1 Ω
OFF	No. 1 — No. 2	1 MΩ or more



(3) Check that the switch is turned on and off in dimension L.

Dimension L:
5 — 6.5 mm (0.2 — 0.26 in)

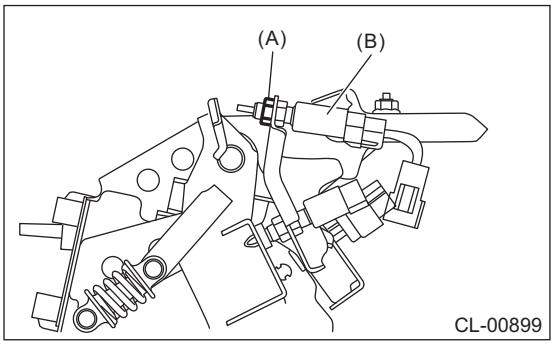


(A) ON
(B) OFF

(4) Install the clutch switch. <Ref. to CL-36, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

D: ADJUSTMENT

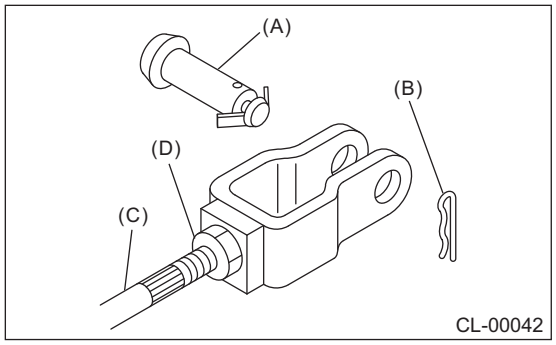
1) Loosen the lock nut of the clutch start switch.



(A) Lock nut
(B) Clutch start switch

2) Disconnect the harness connector of the clutch start switch.

3) Remove the snap pin and clevis pin connecting the clutch pedal and operating rod.

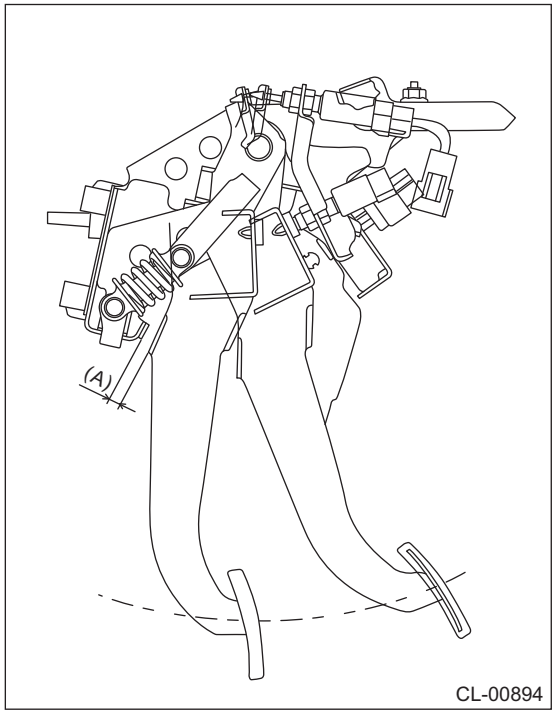


(A) Clevis pin
(B) Snap pin
(C) Push rod
(D) Lock nut

4) Adjust the clutch start switch so that the switch turns on when the clearance between clutch pedal stopper and clutch pedal is within the specification described below, and then tighten the lock nut.

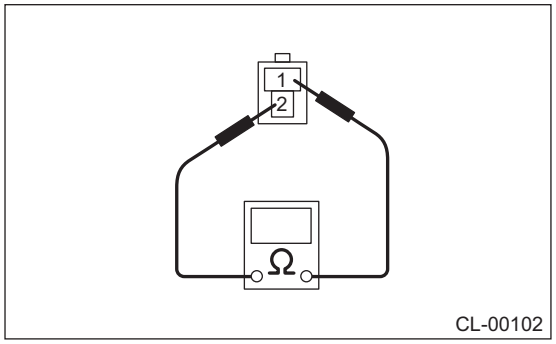
Clearance A:
6.3 — 8.6 mm (0.25 — 0.34 in)

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



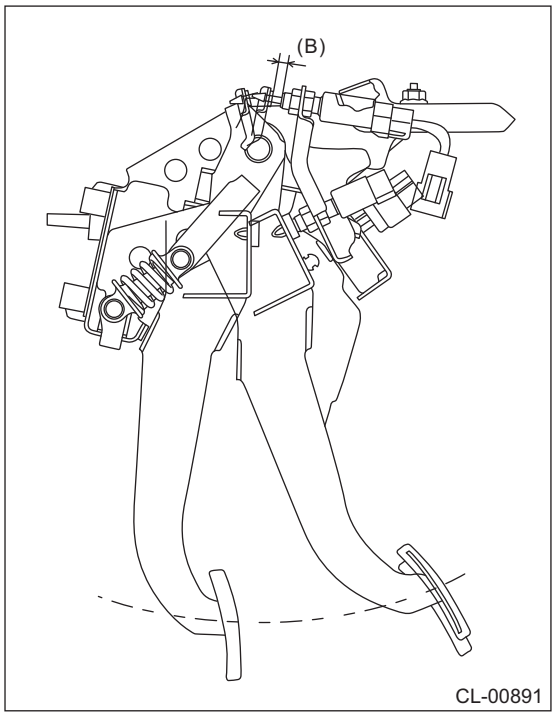
NOTE:
• Using a plate of the same thickness for the clearance facilitates the adjustment operation.

• Using the Subaru Select Monitor or a tester, check the position where the switch turns on.
Check the following figure for the terminal layout of the harness connector.



• When performing adjustment by the clearance between clutch start switch and clutch pedal plate, perform installation according to the following gap.

Clearance B:
8.6 — 9.0 mm (0.34 — 0.35 in)



5) Connect the clutch start switch connector.

12.General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptoms	Possible cause	Corrective action
1. Clutch slippage It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms. • Engine temporarily speeds up when the accelerator ON immediately after shifting. • High-speed driving is not possible; especially rapid acceleration is not possible and vehicle speed does not increase in proportion to the increase in engine speed. • Power drops particularly when ascending a slope, and there is a burning smell of the clutch plate. • Method of testing: Park the vehicle and fully apply the parking brake. Disengage the clutch and shift the transmission gear into the 1st. Gradually increase the engine speed while gradually allowing the clutch to engage. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not move forward and the engine does not stall.	(a) Oil on the clutch face	Replace.
	(b) Worn clutch face	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Defective release bearing holder	Repair or replace.
2. Clutch drags. As a symptom of this trouble, a harsh scratching noise occurs and control becomes difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because most trouble of this sort is due to a defective synchronization mechanism, perform the following tests. • Method of testing: <Ref. to CL-41, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> The problem is caused by insufficient disengagement of the clutch if an abnormal noise occurs during this test.	(a) Worn or rusty clutch disc hub spline	Replace the clutch disc.
	(b) Excessive deflection of clutch disc face	Repair or replace.
	(c) Crankshaft pilot needle bearing sticking	Replace.
	(d) Cracked clutch disc face	Replace.
	(e) Stuck clutch disc (smeared by oil or water)	Replace.
3. Clutch chatters. Clutch chattering is an unpleasant vibration to the whole vehicle when the vehicle is just started with clutch partially engaged.	(a) Adhesion of oil on the clutch face	Replace the clutch disc.
	(b) Weak or broken damper spring	Replace the clutch disc.
	(c) Poor contact of the disc surface or excessively worn disc	Replace the faulty clutch disc.
	(d) Warped pressure plate or flywheel	Repair or replace.
	(e) Loose disc rivets	Replace the clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Loose pitching stopper	Retighten or replace the pitching stopper.

Symptoms	Possible cause	Corrective action
4. Noisy clutch Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.	(a) Broken, worn or insufficiently lubricated release bearing	Replace the release bearing.
	(b) Insufficient lubrication of the pilot bearing	Replace the pilot bearing.
	(c) Loose clutch disc hub	Replace the clutch disc.
	(d) Loose damper spring retainer	Replace the clutch disc.
	(e) Deteriorated or broken damper spring	Replace the clutch disc.
	(f) Insufficient lubrication at section of pivot and release lever	Apply grease.
5. Clutch grabs suddenly. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace the clutch disc.
	(b) Deteriorated cushioning spring	Replace the clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken damper spring	Replace the clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Symptoms	Corrective action
Insufficient clutch pedal free play	Adjust the free play of the pedal.
Excessively worn and damaged pedal shaft and/or bushing	Replace the bushing or shaft with a new part.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

	Step	Check	Yes	No
1	**CHECK GEAR NOISE.** 1) Start the engine. 2) While idling the engine, step on the clutch pedal and quickly shift from neutral to reverse.	Is there any abnormal noise from the transmission gear?	Go to step **2**.	Clutch is normal.
2	**CHECK GEAR NOISE.** Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second.	Is there any abnormal noise from the transmission gear?	Go to step **3**.	Defective transmission or excessive clutch drag torque. Inspect pilot bearing, clutch disc, transmission and clutch disc hub spline.
3	**CHECK GEAR NOISE.** 1) Depress the clutch pedal at idle and shift from neutral to reverse within 0.5 — 1.0 second. 2) While stepping on the clutch pedal, shift from neutral to reverse, reverse to neutral several times.	Is there any abnormal noise from the transmission gear?	Inadequate clutch disengage. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play.	Clutch and flywheel seizure. Inspect the clutch disc and the spline of the clutch disc hub.

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. FRONT ALIGNMENT (INSPECTION VALUE)

• WRX model

Tire size		235/45R17	245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	375 (14.76)	370 (14.57)
Camber (tolerance: ±0°30′ Differences between RH and LH: 35′ or less)		–0°45′	
Caster (referential value)		6°30′	6°33′
Steering angle (tolerance: ±1.5°)	Inner wheel	37.5°	36.4°
	Outer wheel	32.9°	32.0°
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°16′	
Kingpin angle (referential value)		15°14′	15°22′

• STI model

Tire size		245/40R18	245/35R19
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	370 (14.57)	
Camber (tolerance: ±0°30′ Differences between RH and LH: 35′ or less)		–0°45′	
Caster (referential value)		6°33′	
Steering angle (tolerance: ±1.5°)	Inner wheel	36.3°	
	Outer wheel	32.0°	
Toe-in	mm (in)	0±3 (0±0.12) Toe angle (sum of both wheels): 0°±0°16′	
Kingpin angle (referential value)		15°22′	

2. REAR ALIGNMENT (INSPECTION VALUE)

• WRX model

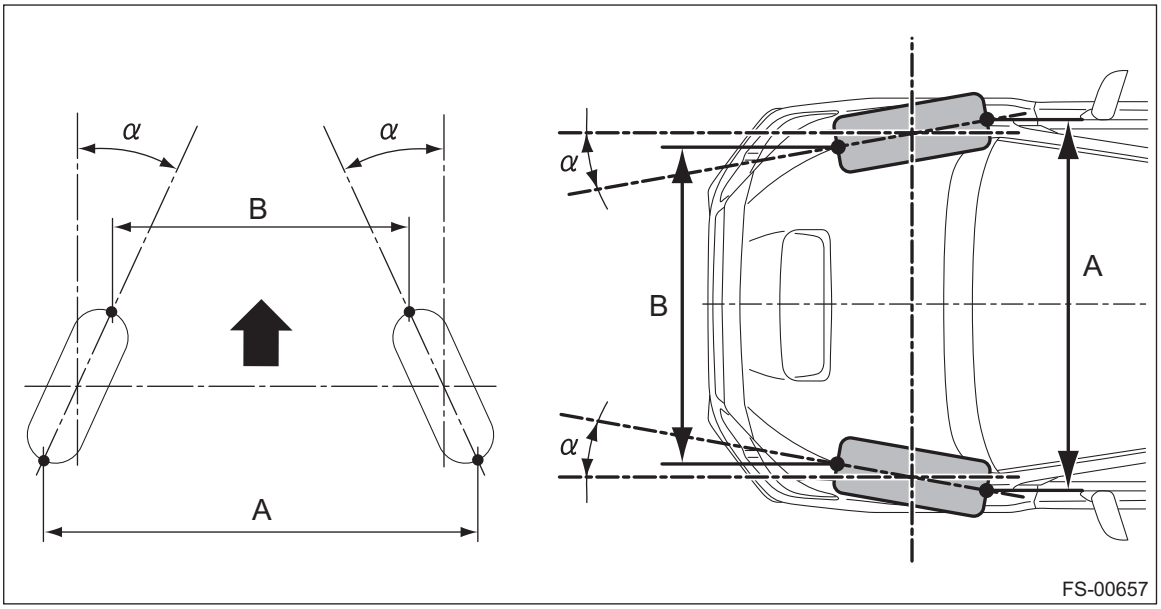
Tire size		235/45R17	245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	367 (14.45)	361 (14.21)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′	–1°40′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)	
		Toe angle (sum of both wheels): IN0°16′±16′	
Thrust angle (tolerance: 0°00′±30′)		0°00′	

• STI model

Tire size		245/40R18	245/35R19
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	362 (14.25)	
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°40′	
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)	
		Toe angle (sum of both wheels): IN0°16′±16′	
Thrust angle (tolerance: 0°00′±30′)		0°00′	

NOTE:
• Adjust with the value less than the inspection value, taking aging variation into consideration.

• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.



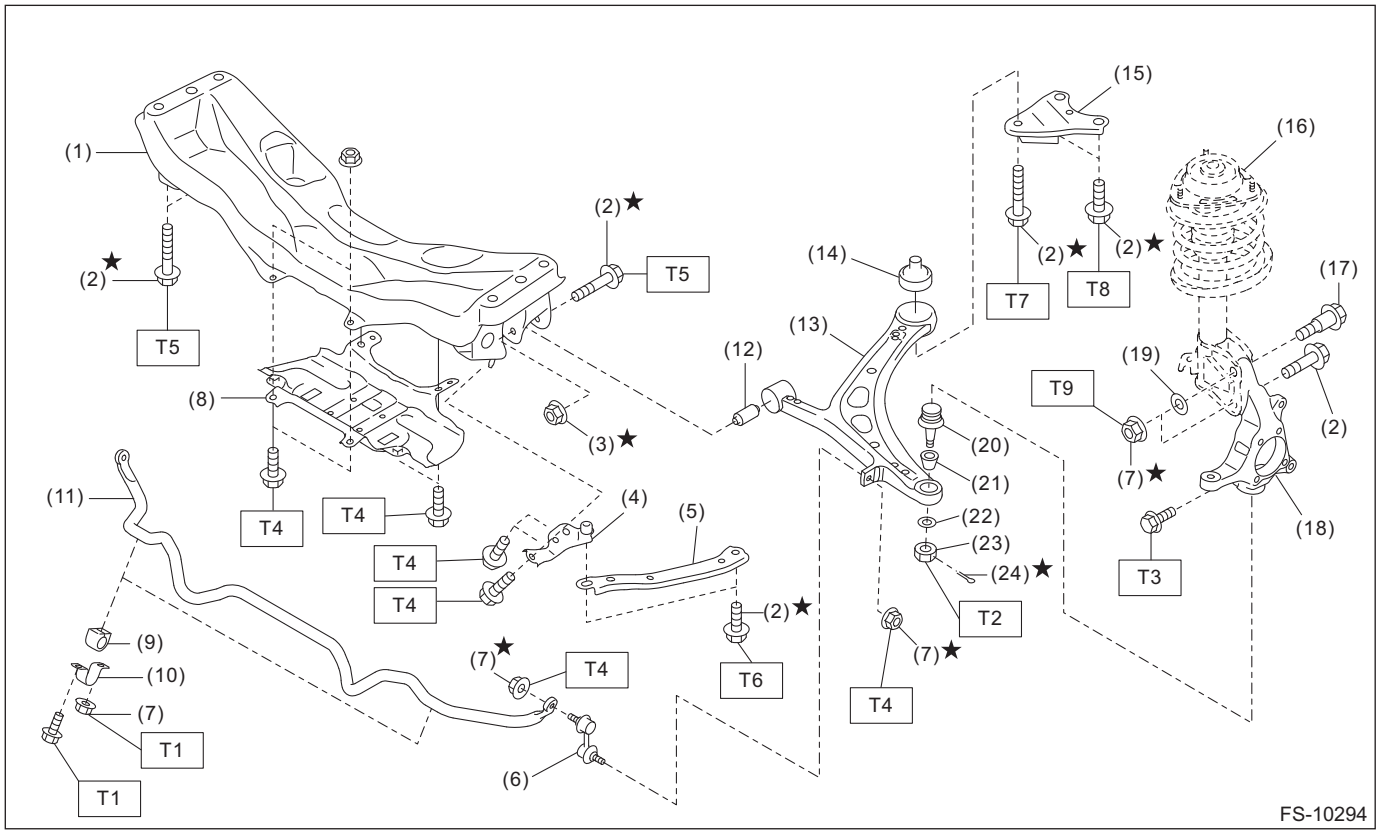
A – B = Positive: Toe-in, Negative: Toe-out

α = Individual toe angles

B: COMPONENT

1. FRONT SUSPENSION

- Electric power steering model

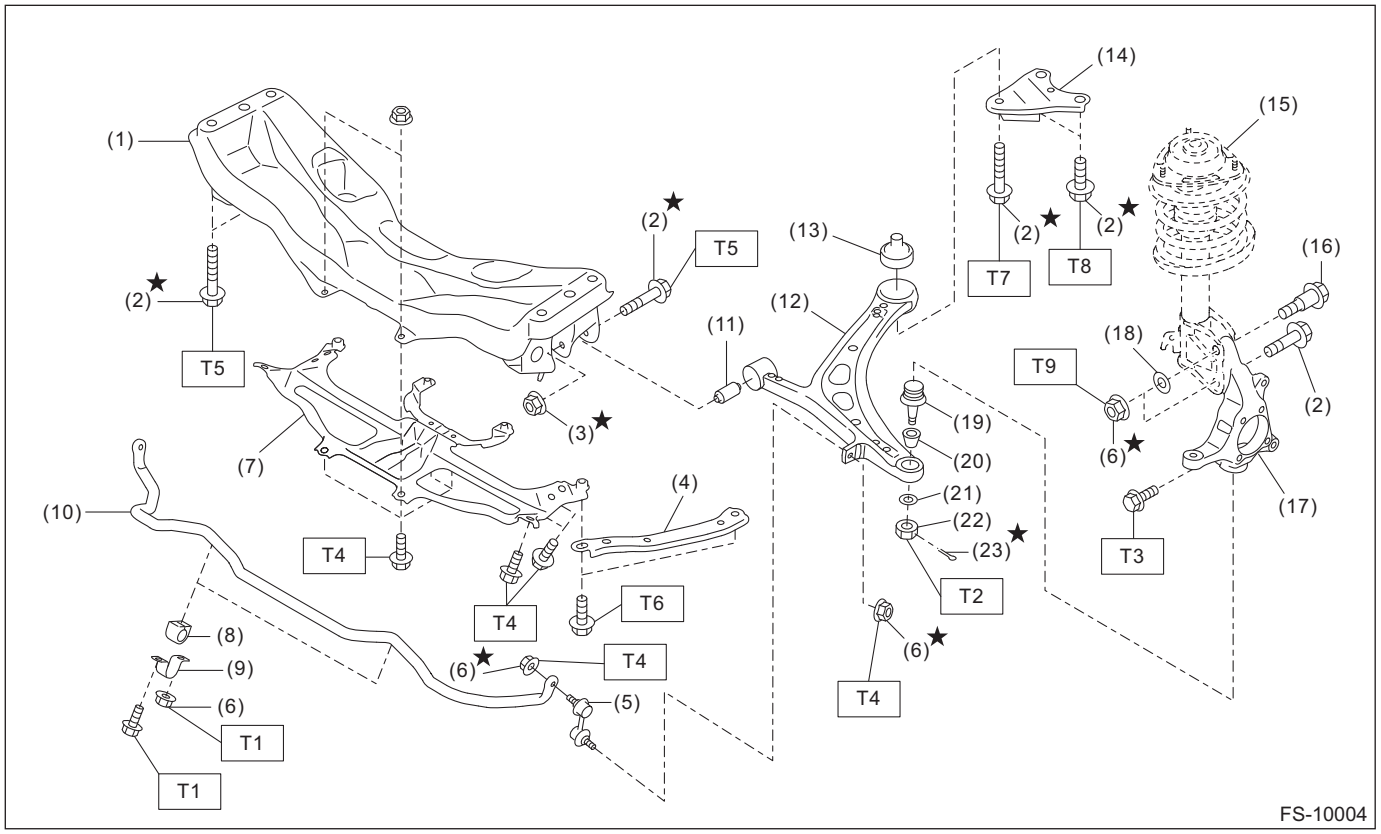


(1)	Front crossmember COMPL	(13)	Front arm ASSY
(2)	Flange bolt	(14)	Pillow ball bushing
(3)	Self-locking nut	(15)	Front arm rear plate
(4)	Support plate - front crossmember	(16)	Front strut ASSY
(5)	Front support	(17)	Adjusting bolt
(6)	Stabilizer link	(18)	Front axle housing
(7)	Flange nut	(19)	Adjusting washer
(8)	Front crossmember support	(20)	Ball joint
(9)	Bushing - stabilizer	(21)	Boss - transverse link
(10)	Clamp - stabilizer bushing	(22)	Washer
(11)	Front stabilizer	(23)	Castle nut
(12)	Bushing front - front arm	(24)	Cotter pin

Tightening torque: N·m (kgf-m, ft-lb)

T1: 25 (2.5, 18.4)
T2: 39 (4, 28.8)
T3: 50 (5.1, 36.9)
T4: 60 (6.1, 44.3)
T5: 95 (9.7, 70.1)
T6: 100 (10.2, 73.8)
T7: 140 (14.3, 103.3)
T8: 150 (15.3, 110.6)
T9: 155 (15.8, 114.3)

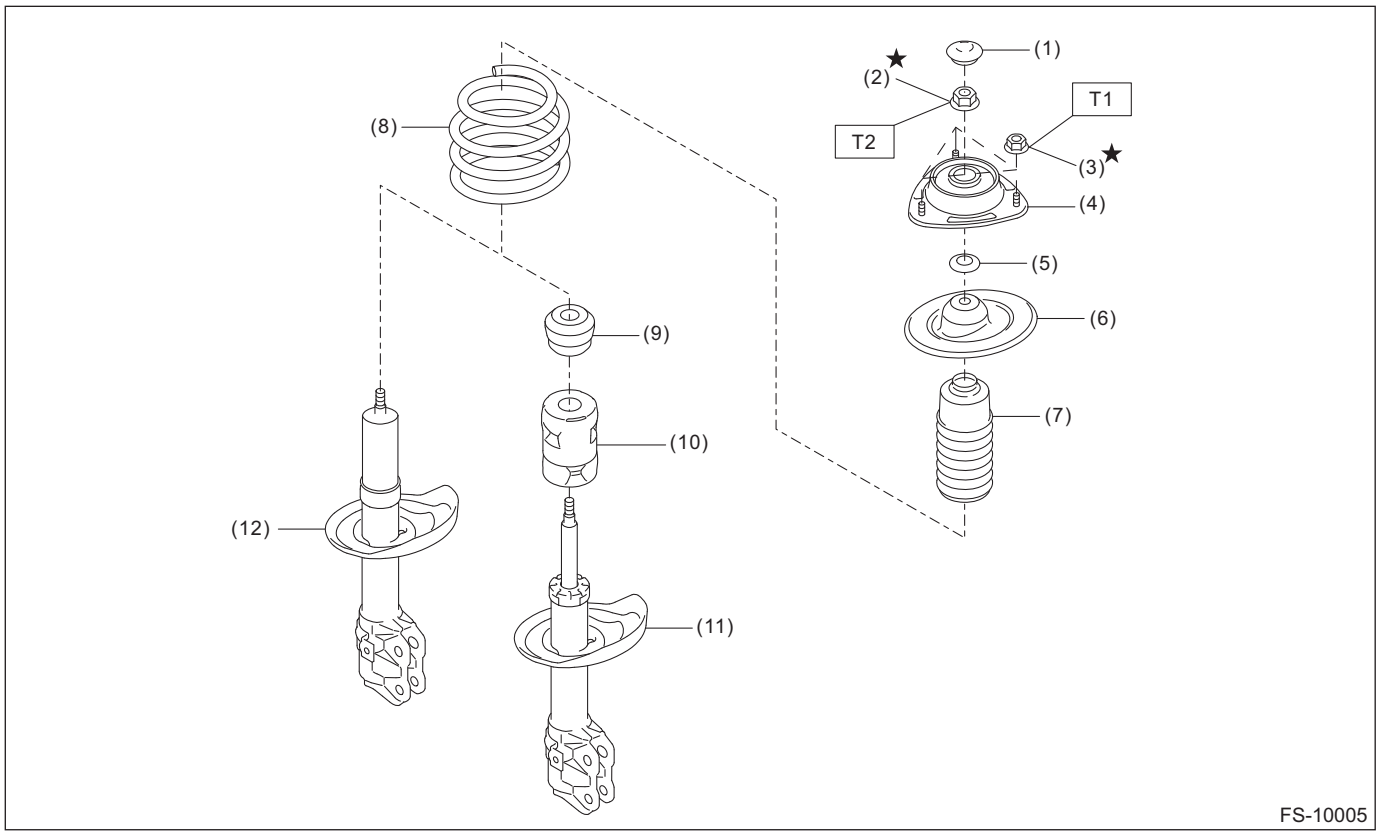
- Hydraulic power steering model



(1)	Front crossmember COMPL	(13)	Pillow ball bushing
(2)	Flange bolt	(14)	Front arm rear plate
(3)	Self-locking nut	(15)	Front strut ASSY
(4)	Front support	(16)	Adjusting bolt
(5)	Stabilizer link	(17)	Front axle housing
(6)	Flange nut	(18)	Adjusting washer
(7)	Front crossmember support	(19)	Ball joint
(8)	Bushing - stabilizer	(20)	Boss - transverse link
(9)	Clamp - stabilizer bushing	(21)	Washer
(10)	Front stabilizer	(22)	Castle nut
(11)	Bushing front - front arm	(23)	Cotter pin
(12)	Front arm ASSY		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 39 (4, 28.8)
T3: 50 (5.1, 36.9)
T4: 60 (6.1, 44.3)
T5: 95 (9.7, 70.1)
T6: 100 (10.2, 73.8)
T7: 140 (14.3, 103.3)
T8: 150 (15.3, 110.6)
T9: 155 (15.8, 114.3)

2. FRONT STRUT



(1)	Dust seal - front strut	(7)	Dust cover - front strut
(2)	Self-locking nut	(8)	Coil spring - front
(3)	Flange nut	(9)	Helper - front strut (standard damper)
(4)	Strut mount - front	(10)	Dust cover inner (standard damper)
(5)	Spacer - front strut	(11)	Strut COMPL - front (standard damper)
(6)	Spring seat UPR - front strut	(12)	Strut COMPL - front (inverted damper)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2, 14.8)
T2: 55 (5.6, 40.6)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of strut COMPL - front, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed, installed or replaced, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>

– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927680000	927680000	INSTALLER & REMOVER SET	Used for replacing the bushing front - front arm of front arm assembly.
 ST20099AE020	20099AE020	INSTALLER & REMOVER	Used for replacing pillow ball bushing of aluminum front arm.
 ST28099PA010	28099PA010	HOUSING STAND	• Used for removing pillow ball bushing of aluminum front arm. • Used together with INSTALLER & REMOVER (20099AE020).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18723AA000	18723AA000	REMOVER	• Used for assembling pillow ball bushing of aluminum front arm. • Used together with INSTALLER & REMOVER (20099AE020).
 ST20299AG020	20299AG020	STUD BOLT SOCKET	Used for removing and installing the stud bolt for front arm assembly installing portion.
 ST20399AG000	20399AG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
DST-i	Used together with Subaru Select Monitor 4.
Alignment gauge	Used for measuring wheel alignment.
Alignment gauge adapter	Used for measuring wheel alignment.
Turning radius gauge	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Tie-rod ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used for damper strut measurement.

TOOL NAME	REMARKS
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.
Shackle	• Two units used for hanging power unit. • Attached to both end of chain sling and connected to engine hook. • Load capacity: 250 kg (551 lb) or more
Sling belt	• Used for removing and installing crossmembers. • Width: 35 — 40 mm (1.38 — 1.57 in) • Length: 2 m (6.6 ft) • Load capacity: 1 t (2205 lb) or more

2. Wheel Alignment

A: INSPECTION

Check the following items before performing the wheel alignment measurement.
- Tire inflation pressure
- Uneven wear of RH and LH tires, or difference of sizes
- Tire runout
- Excessive play and wear of ball joint
- Excessive play and wear of tie-rod end
- Excessive play of wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play of steering link
- Deformation and excessive play of suspension parts

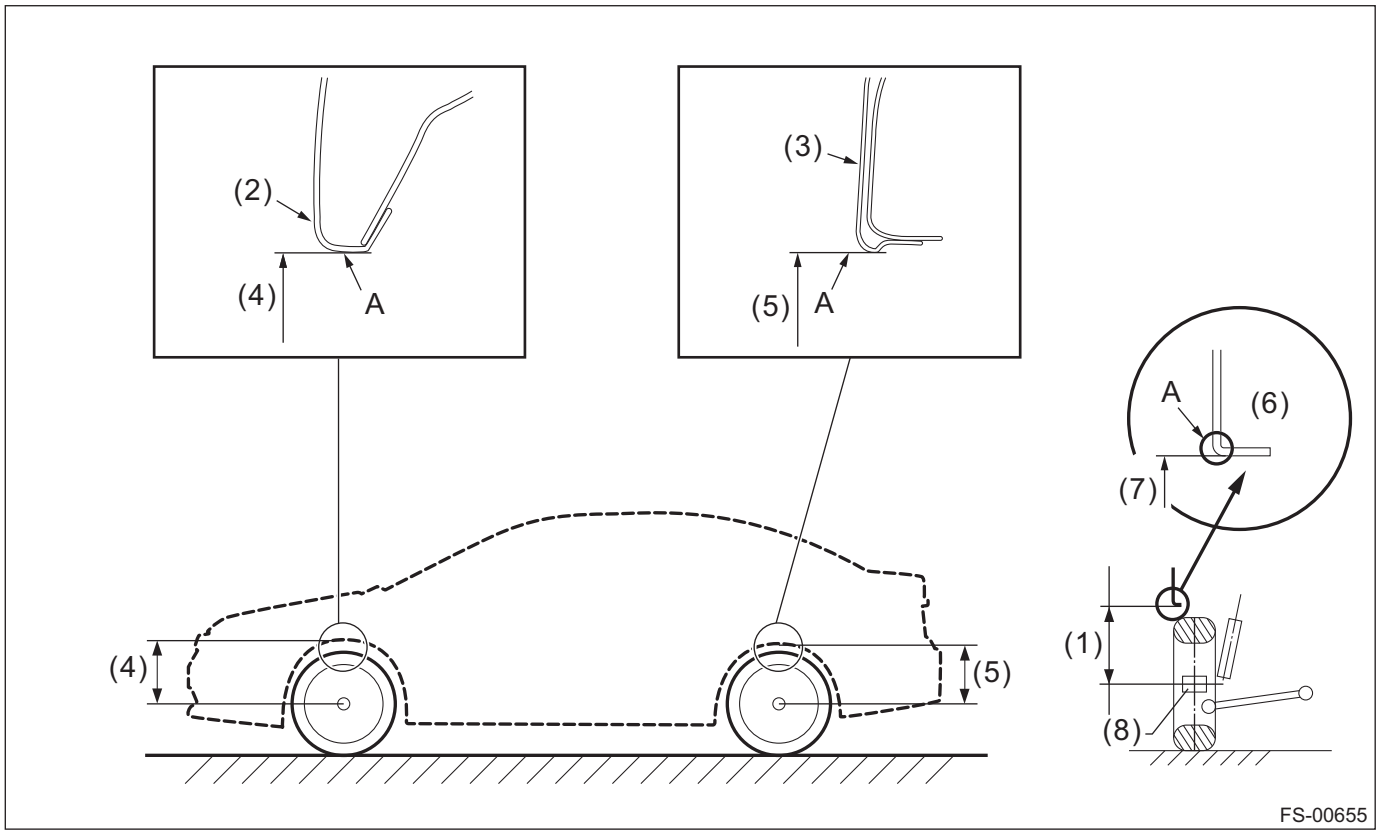
Check, adjust and measure the wheel alignment in accordance with the following procedures.

1	Wheel arch height (front and rear wheels)	Inspection: <Ref. to FS-10, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>
↓		
2	Camber (front wheel)	Inspection: <Ref. to FS-11, CAMBER, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-14, FRONT CAMBER, ADJUSTMENT, Wheel Alignment.>
	Camber (rear wheel)	Inspection: <Ref. to FS-11, CAMBER, INSPECTION, Wheel Alignment.> NOTE: Rear camber cannot be adjusted. If the value exceeds the lateral tolerance range, check the suspension parts and connections for deformation. If defective, replace with new parts.
↓		
3	Caster (front wheel)	Inspection: <Ref. to FS-12, CASTER, INSPECTION, Wheel Alignment.>
↓		
4	Adjustment of difference between right and left steering angles	Inspection: <Ref. to FS-12, STEERING ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES, ADJUSTMENT, Wheel Alignment.>
↓		
5	Front wheel toe-in	Inspection: <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
6	Rear wheel toe-in	Inspection: <Ref. to FS-13, REAR WHEEL TOE-IN, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-16, REAR WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
↓		
7	Thrust angle	Inspection: <Ref. to FS-13, THRUST ANGLE, INSPECTION, Wheel Alignment.> Adjustment: <Ref. to FS-18, THRUST ANGLE, ADJUSTMENT, Wheel Alignment.>

1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Empty the vehicle so that it is at “curb weight”.

NOTE:
Empty the trunk or luggage room, load the spare tire, jack and service tools, and fill up the fuel tank.
3) Set the steering wheel in a straight-ahead position, and stabilize the suspension by moving the vehicle in a straight line for 5 m (16 ft) or more.
4) Suspend a thread from the wheel arch (point “A” in the figure below) and affix at a position directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.



(1) Wheel arch height
(2) Front fender
(3) Rear quarter
(4) Front wheel arch height
(5) Rear wheel arch height
(6) Flange bend line
(7) Point of measurement
(8) End of spindle

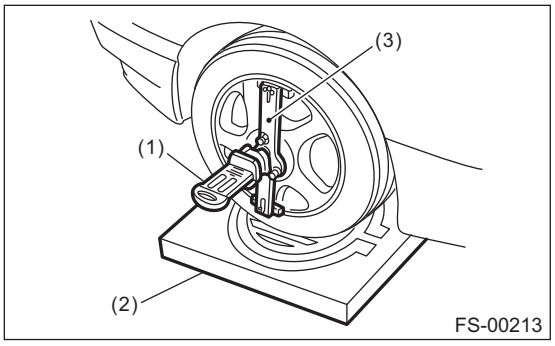
Model	Tire size	Wheel arch height specification mm (in) (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	
		Front	Rear
WRX model	235/45R17	375 (14.76)	367 (14.45)
	245/40R18	370 (14.57)	361 (14.21)
STI model	245/40R18 245/35R19	370 (14.57)	362 (14.25)

2. CAMBER

1) Place the front tire on the turning radius gauge.

NOTE:
Make sure the ground contact surfaces of the front and rear tires are at the same height.

2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.



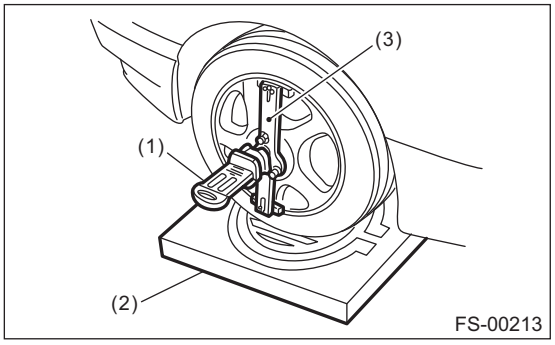
(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

Model/tire size		Front camber (difference between RH and LH 45′ or less)	Rear camber (difference between RH and LH 45′ or less)
WRX model	235/45R17	–0°45′±0°45′	–1°30′±0°45′
	245/40R18		–1°40′±0°45′
STI model	245/40R18		
	245/35R19		

3. CASTER

1) Place the front tire on the turning radius gauge. Make sure the ground contact surfaces of the front and rear tires are at the same height.
2) Set the adapter into the center of wheel, and then set the wheel alignment gauge.



(1) Alignment gauge
(2) Turning radius gauge
(3) Adapter

3) Measure the caster angle in accordance with the operation manual for wheel alignment gauge.

Model	Tire size	Caster
WRX model	235/45R17	6°30′
	245/40R18	6°33′
STI model	245/40R18 245/35R19	6°33′

4. STEERING ANGLE

1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right.

3) With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angles.

Model	Tire size	Inner wheel	Outer wheel
WRX model	235/45R17	37.5°±1.5°	32.9°±1.5°
	245/40R18	36.4°±1.5°	32.0°±1.5°
STI model	245/40R18 245/35R19	36.3°±1.5°	32.0°±1.5°

5. FRONT WHEEL TOE-IN

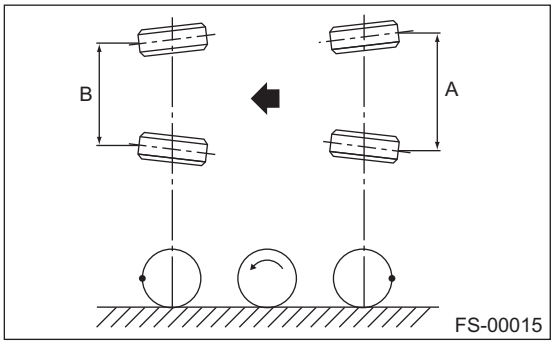
Toe-in: Inspection value
0±3 mm (0±0.12 in)

1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Place a mark at the center of both left and right tires, and measure distance “A” between the marks.
3) Move the vehicle forward to rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.

4) Measure the distance “B” between the left and right marks.
Find toe-in using the following calculation:

A – B = Toe-in



6. REAR WHEEL TOE-IN

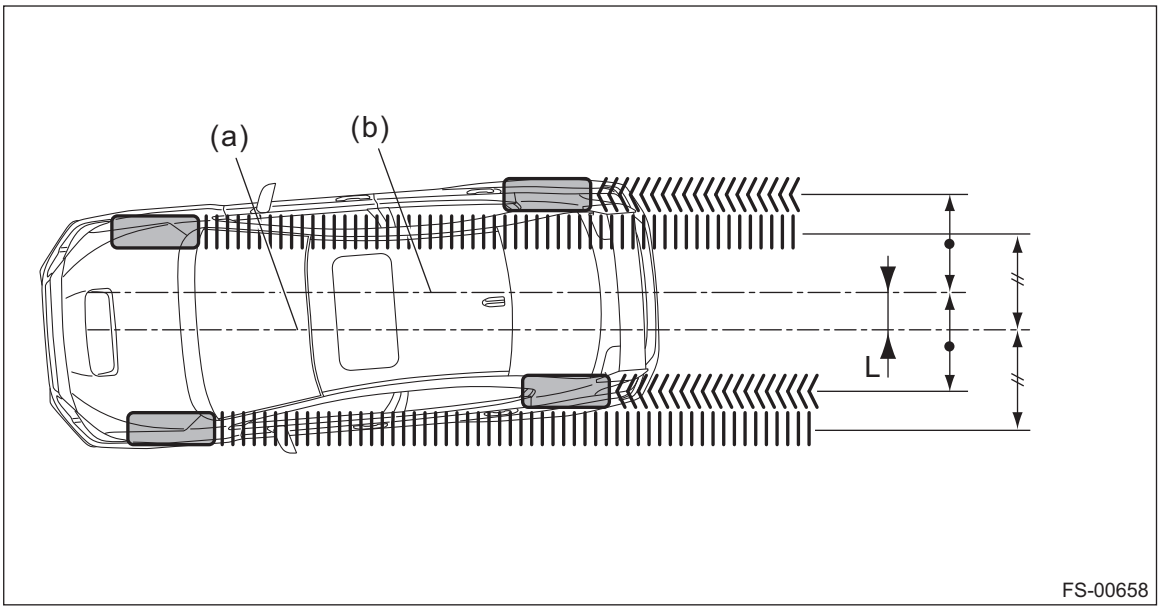
Refer to the FRONT WHEEL TOE-IN for rear toe-in inspection procedures. <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Toe-in: Inspection value
3±3 mm (0.12±0.12 in)

7. THRUST ANGLE

1) Park the vehicle on a level surface.
2) Move the vehicle 3 — 4 meters (10 — 13 feet) straight forward.
3) Draw the center of loci for both the front and rear axles.
4) Measure distance “L” between the center lines of the axle loci.

Thrust angle: Inspection value
0°±30′
Less than 30′ when "L" is 23 mm (0.9 in) or less



(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

B: ADJUSTMENT

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

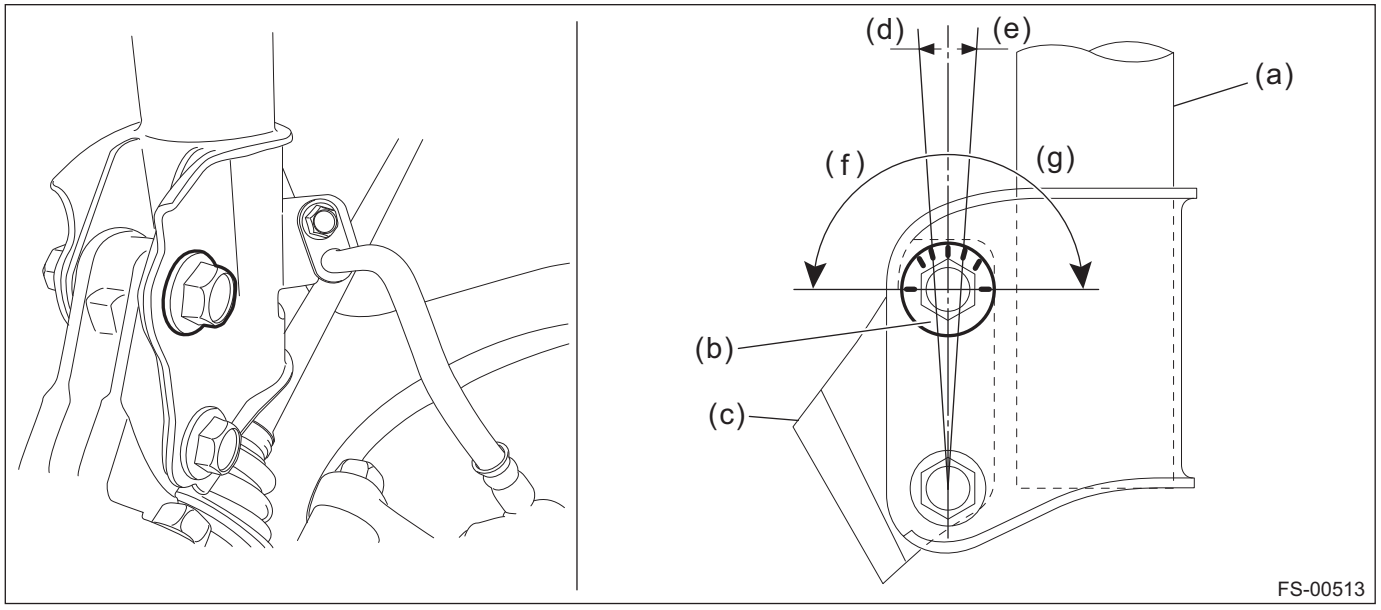
1. FRONT CAMBER

1) Adjust the camber angle to the following value.

Model	Tire size	Camber (difference between RH and LH 35′ or less)
WRX model	235/45R17	–0°45′±0°30′
	245/40R18	
STI model	245/40R18 245/35R19	

2) Loosen the two flange nuts while holding the strut bolts.
3) Turn the camber adjusting bolt so that the camber is set at specification.

NOTE:
Moving the adjusting bolt by one scale changes the camber by approximately 0°15′.



(a) Strut ASSY
(b) Adjusting bolt
(c) Front axle housing
(d) Outer direction
(e) Inner direction
(f) Camber is increased.
(g) Camber is decreased.

To increase camber.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00352	 FS-00353

To decrease camber.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00353	 FS-00352

4) Tighten two new flange nuts.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

2. ADJUSTMENT OF DIFFERENCE BETWEEN RIGHT AND LEFT STEERING ANGLES

1) Operate the steering system from lock to lock and stop operating it at the center position from lock to lock, and then install the steering wheel in the straight-ahead position.

NOTE:
Using of the steering wheel angle sensor output values shown on Subaru Select Monitor will facilitate your work.

2) Before adjusting toe-in, be sure to adjust the steering wheel in the straight-ahead position (steering angle sensor output: 0 deg).

3. FRONT WHEEL TOE-IN

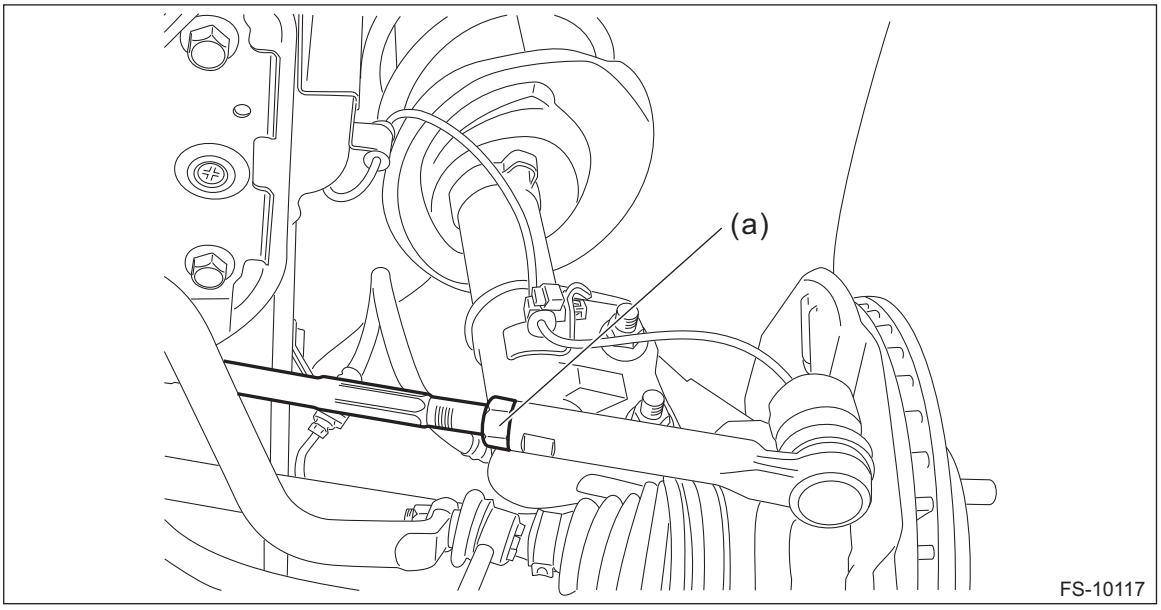
When adjusting the toe-in, adjust it to the following value.

Toe-in: Adjustment value
0±2 mm (0±0.08 in)

1) Check that the left and right wheel steering angles are within specification.
2) Loosen the left and right side steering tie-rod lock nuts (a).
3) Turn the left and right tie-rods by equal amounts until the toe-in is at the specification.

NOTE:
Both the left and right tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

4) Tighten the tie-rod lock nut (a).



Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

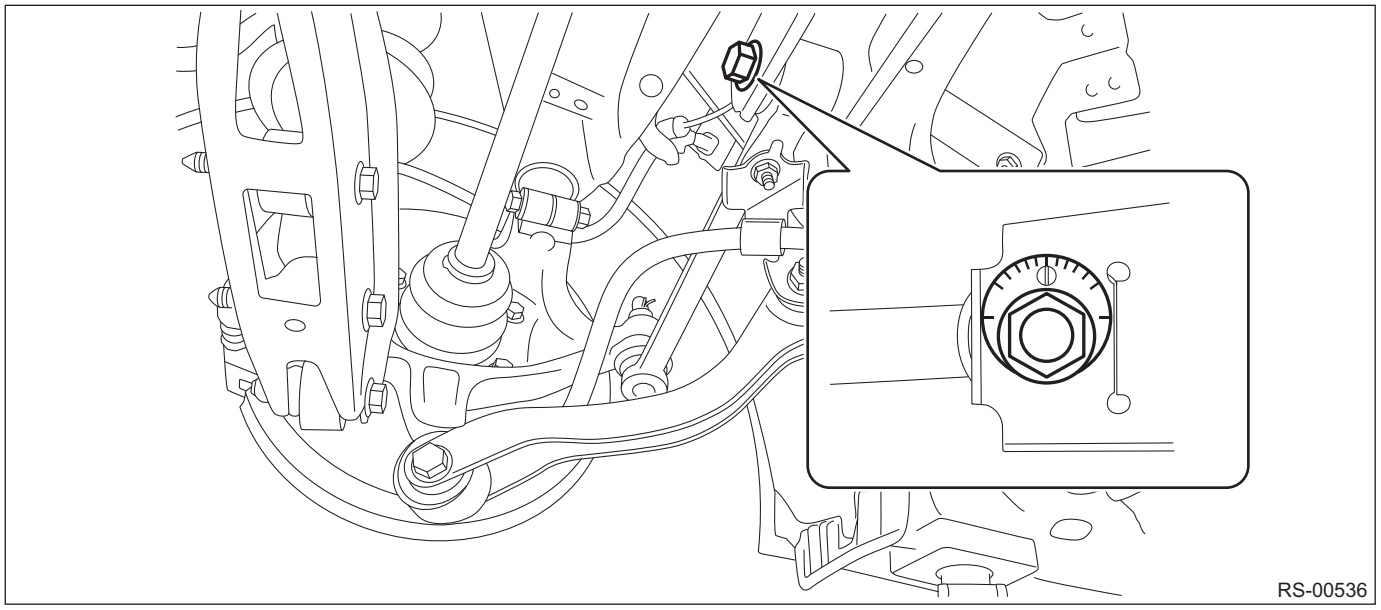
5) Check and correct the tie-rod boot if twisted.

4. REAR WHEEL TOE-IN

When adjusting, adjust it to the following value.

Toe-in: Adjustment value
3±2 mm (0.12±0.08 in)

1) Loosen the self-locking nut after holding the bolt head section of lateral link assembly - front.



2) Turn the adjusting bolt until toe-in is within the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 6.0 mm (0.24 in).

To increase toe-in.	
Rotate the left side clockwise.	Rotate the right side counterclockwise.
 FS-00018	 FS-00019

To decrease toe-in.	
Rotate the left side counterclockwise.	Rotate the right side clockwise.
 FS-00019	 FS-00018

3) Attach and tighten a new self-locking nut.

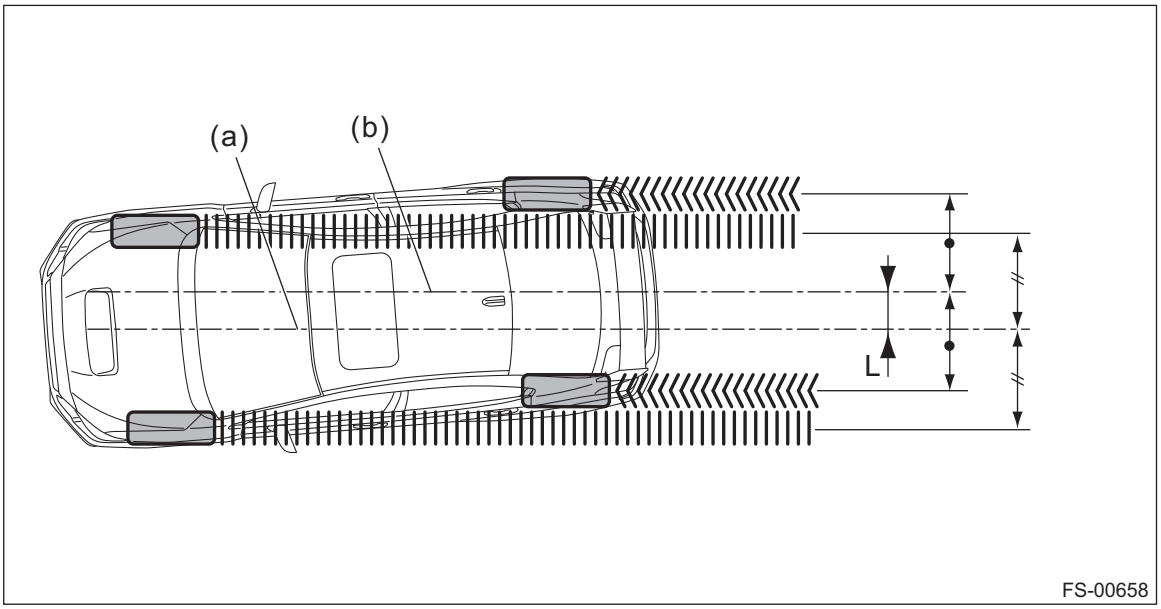
Tightening torque:
100 N·m (10.2 kgf-m, 73.8 ft-lb)

NOTE:
While holding the adjusting bolt side, tighten the nut side.

5. THRUST ANGLE

When adjusting, adjust it to the following value.

Thrust angle: Adjustment value
0°±20′
Less than 20′ when "L" is 15 mm (0.6 in) or less

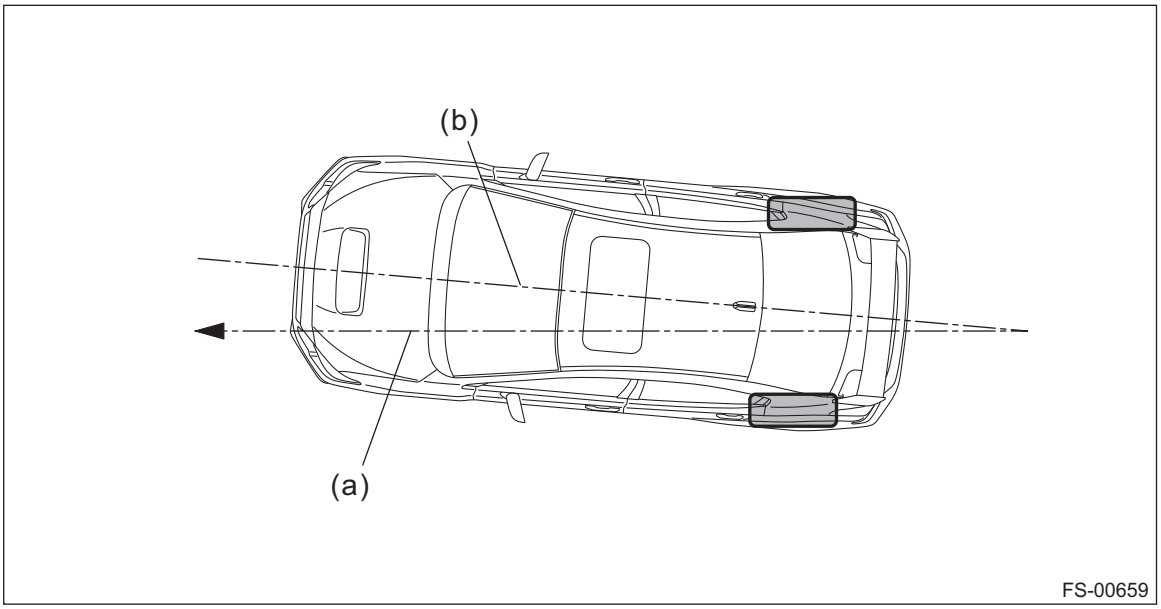


(a) Center line of loci (front axle) (b) Center line of loci (rear axle)

1) Make thrust angle adjustments by turning the toe-in adjusting bolts of the rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.
3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 15′. ("L" is approx. 11 mm (0.43 in).)

NOTE:
Thrust angle is a mean value of left and right wheel toe angles in relation to the vehicle body center line.

Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.



(a) Thrust angle (b) Body center line

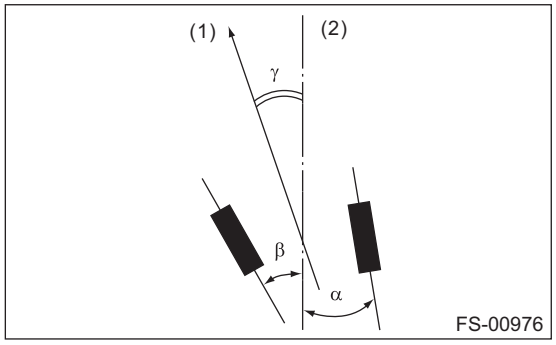
Thrust angle:

$\gamma = (\alpha - \beta)/2$

α: Rear RH wheel toe-in angle

β: Rear LH wheel toe-in angle

Substitute only the positive toe-in values from each wheel into α and β in the calculation.



(1) Front

(2) Body center line

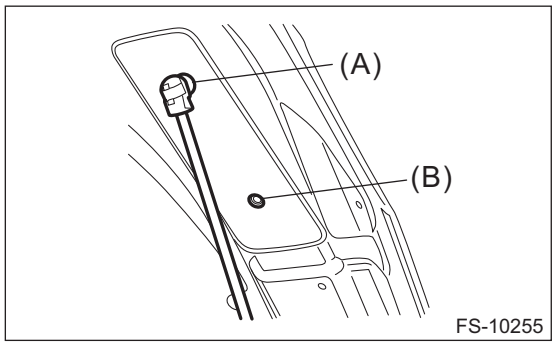
3. Front Crossmember

A: REMOVAL

CAUTION:
For electric power steering model, be careful of the following items.
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the power steering control module connector when removing or installing. If a foreign matter enters, completely remove it.
1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

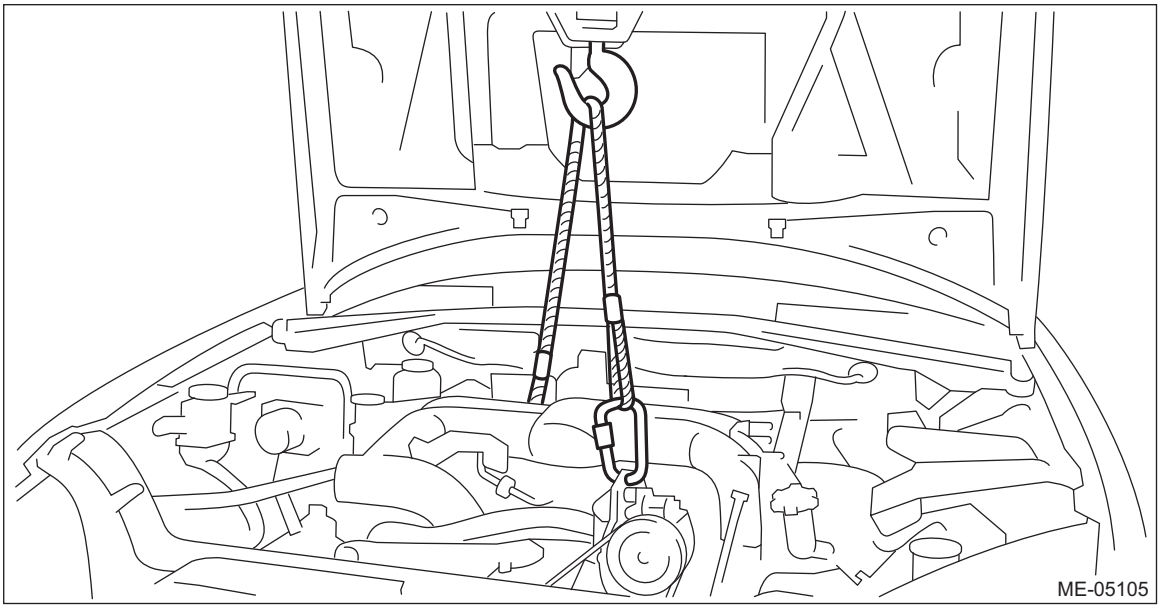
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the front wheels.
3) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>
5) Change the hood stay location from (A) to (B) to open the front hood completely.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)



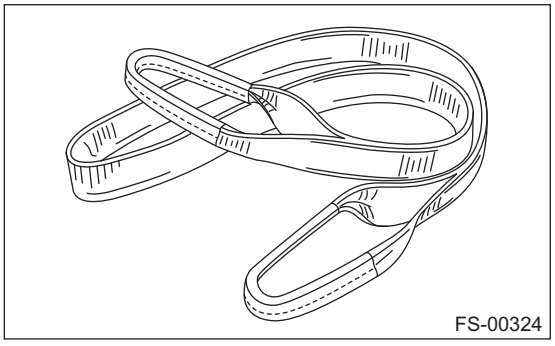
6) Remove the V-belt covers. (STI model)
7) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
8) Disconnect the connector and harness clamp from the steering gearbox. (Electric power steering model)
9) Disconnect the power steering hose from the steering gearbox. (Hydraulic power steering model)
10) Remove the engine mounting and the crossmember assembly.
    (1) Support the engine with a lifting device and wire ropes.
    (2) While lifting up the vehicle, also raise up the lifting device simultaneously.

CAUTION:
Be careful not to damage the vehicle with a lifting device or wire ropes.

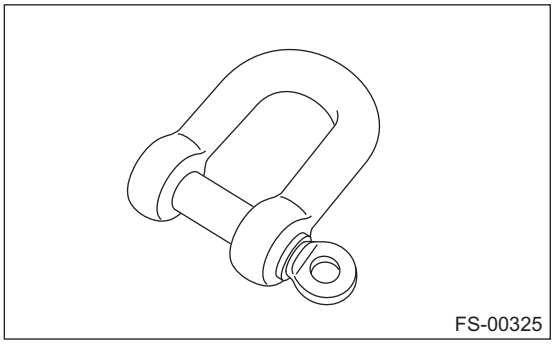


(3) Raise up the lifting device, and lift the engine body by approx. 10 mm (0.39 in).
(4) Attach the sling belt so that it wraps around the both frames using the shackle.

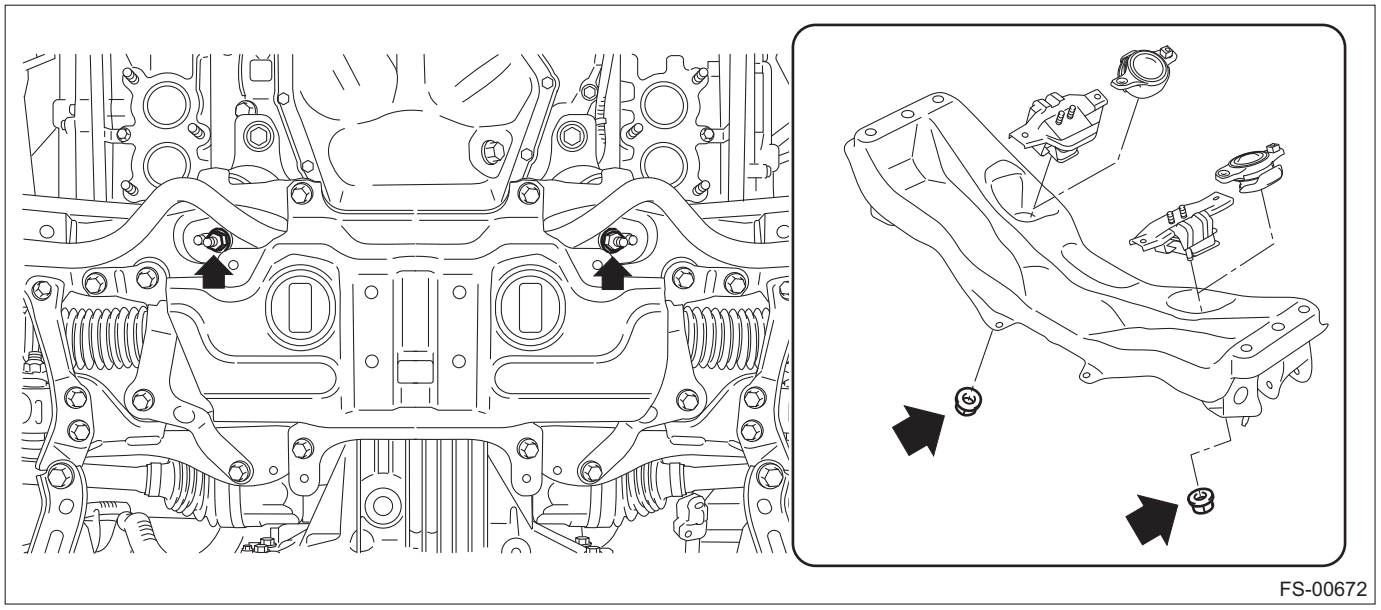
CAUTION:
- **Be sure to attach the sling belt to ensure safety in operation.**
- **Use a sling belt with the length of 2 m (6.6 ft), the width of 35 — 40 mm (1.38 — 1.57 in) and the load capacity of 1 t (2205 lb) or more.**



- **Use a shackle with the load capacity of 0.5 t (1103 lb) or more.**

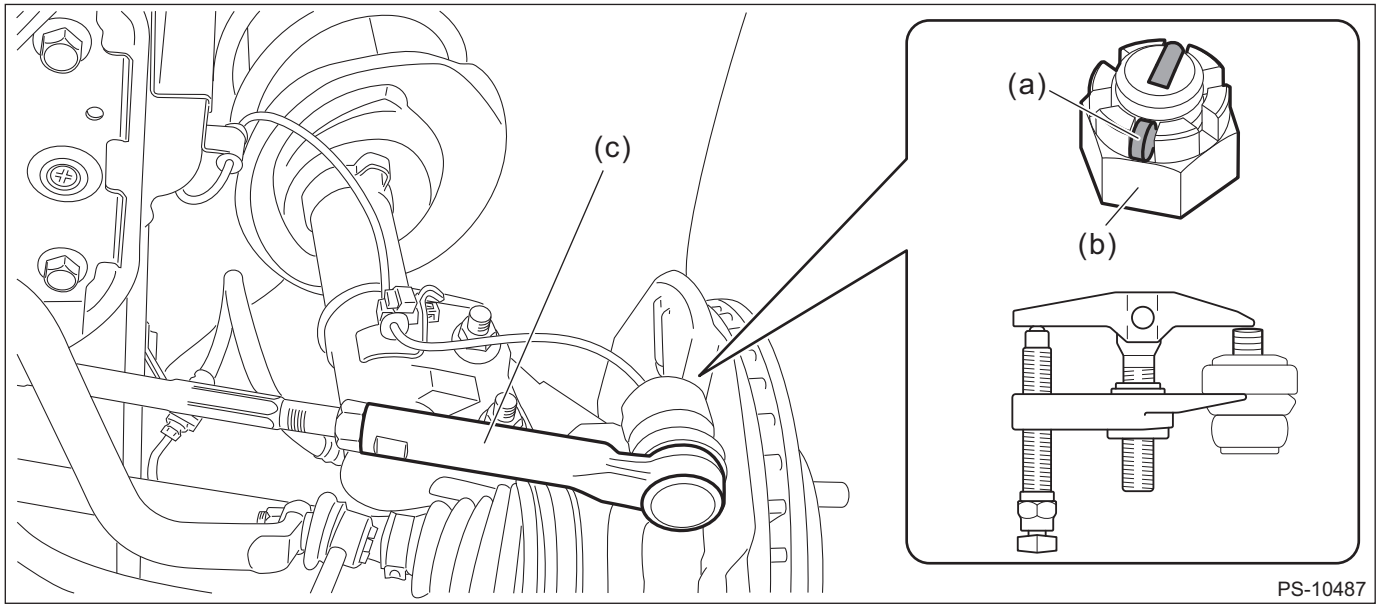


(5) Remove the nuts which secure the engine mounting to the front crossmember assembly.



11) Remove the front crossmember support and the support plate - front crossmember. <Ref. to FS-27, REMOVAL, Front Crossmember Support Plate.>
12) Remove the center exhaust pipe. (Except for STI model) <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
13) Remove the front stabilizer. <Ref. to FS-29, REMOVAL, Front Stabilizer.>
14) Disconnect the tie-rod end.
(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b).
(3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

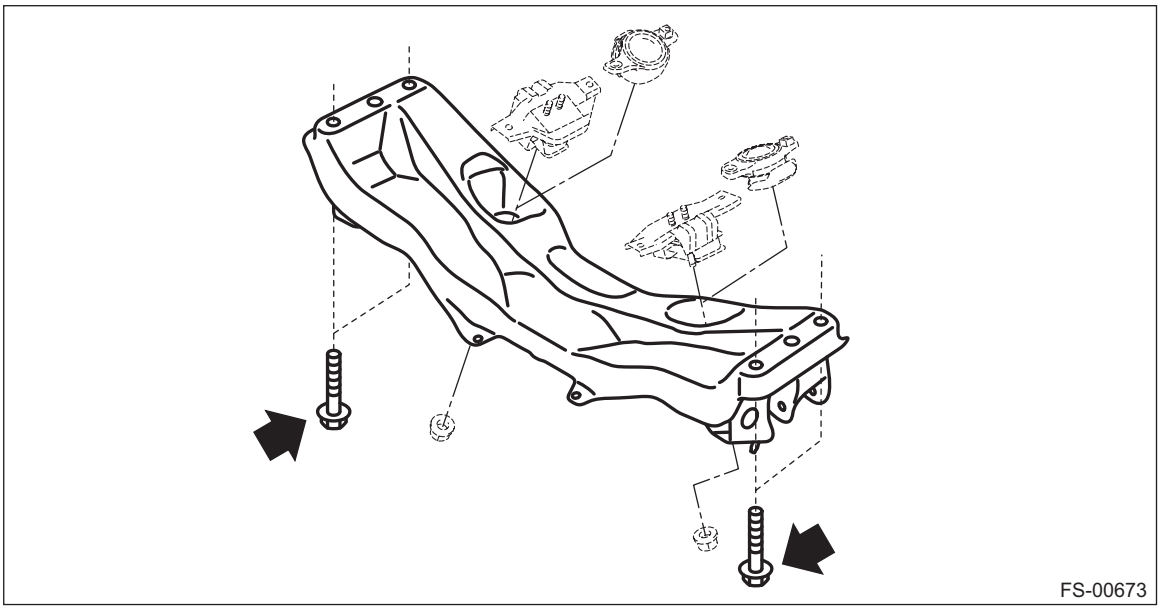
Preparation tool:
Tie-rod ball joint puller



15) Remove the front arm assembly. <Ref. to FS-35, REMOVAL, Front Arm.>
16) Remove the front crossmember assembly.

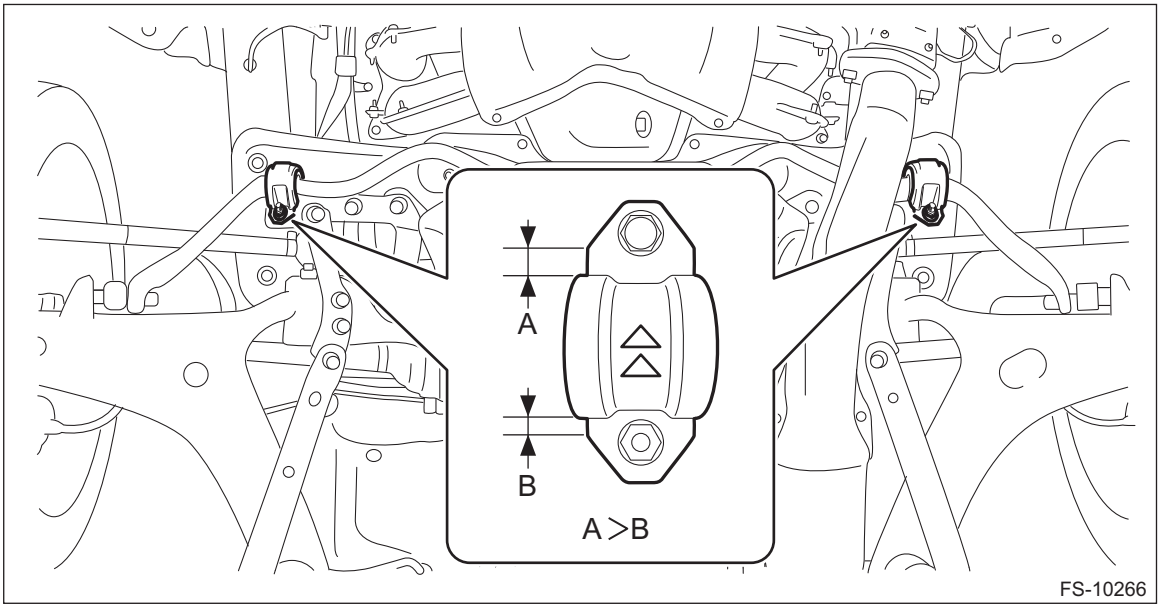
CAUTION:
• When lowering the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.

- **The front crossmember assembly is heavy. Make sure that it is firmly supported so that it is level.**
  (1) Support the front crossmember assembly from the bottom side using a transmission jack.
  (2) Remove the bolts which secure the front crossmember assembly to the body.
  (3) Lower the transmission jack slowly, and then lower the front crossmember assembly together with the steering gearbox assembly.
  (4) Remove the steering gearbox assembly from the front crossmember assembly.

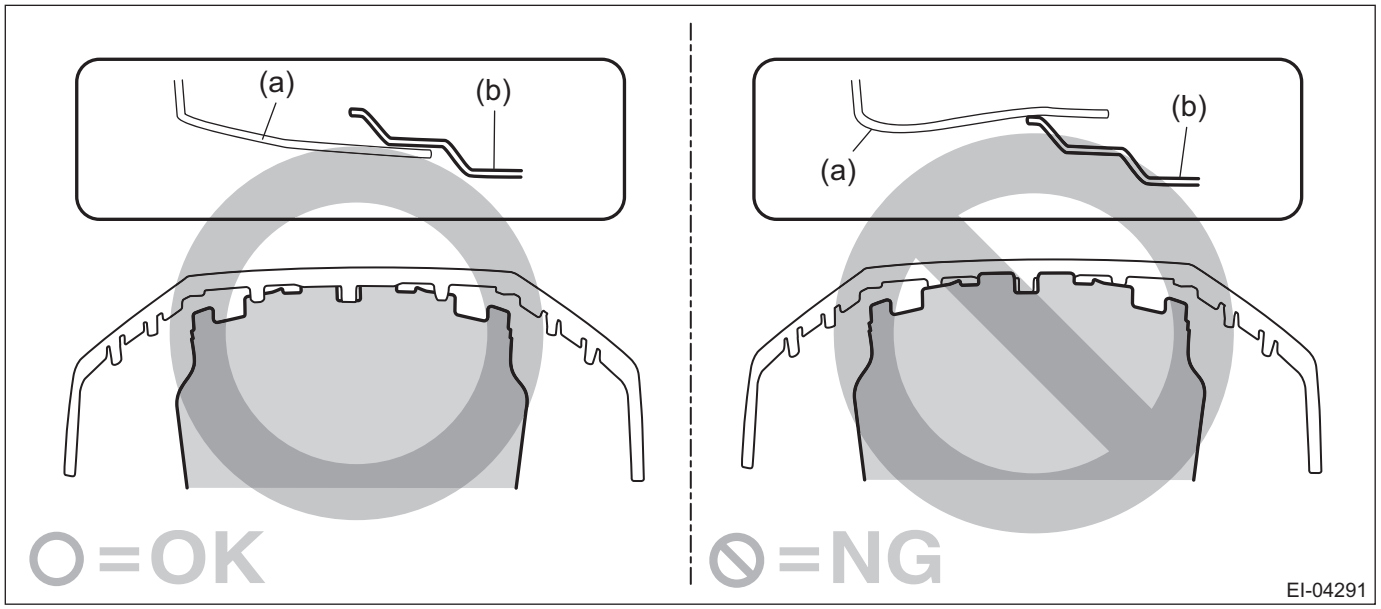


B: INSTALLATION

CAUTION:
- **When raising the transmission jack, make sure that the tie-rod end and the drive shaft boot do not interfere. The drive shaft boot may be damaged.**
- **The front crossmember assembly is heavy. Make sure that it is firmly supported so that it is level.**
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.**



• Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Install the front crossmember assembly.

NOTE:
Check the crossmember for damage or cracks, and correct or replace if defective.
(1) Install the steering gearbox assembly to the front crossmember assembly.
(2) Install the bolts which secure the front crossmember assembly to the body.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

2) Install the front arm assembly.

Tightening torque:
Front suspension parts: <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

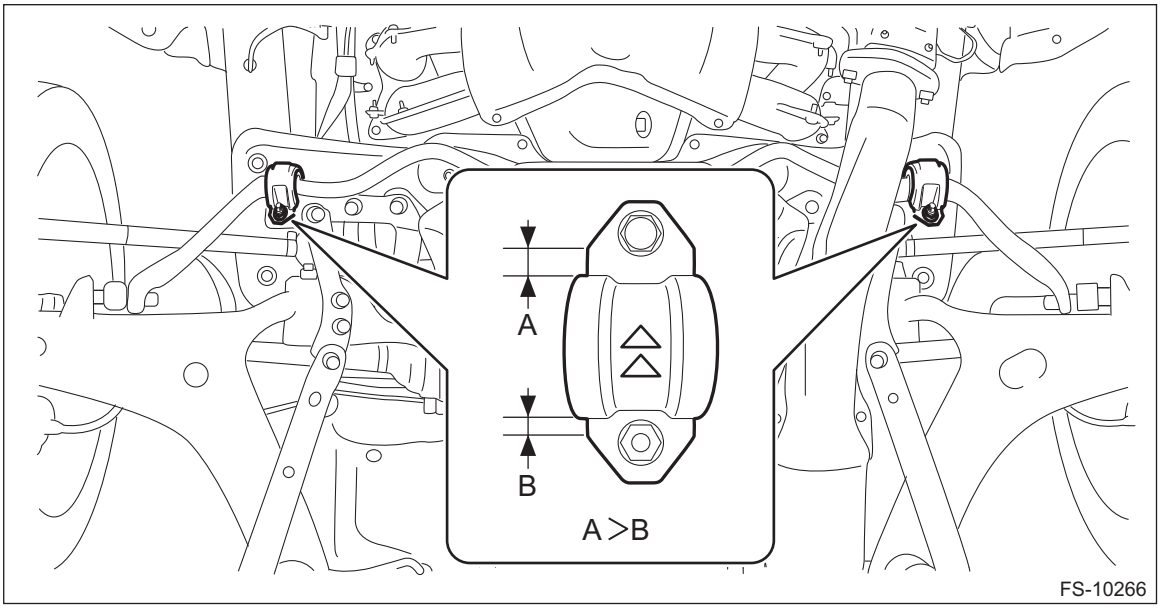
3) Install the tie-rod end.

NOTE:
When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

Tightening torque:
27 N·m (2.7 kgf-m, 19.9 ft-lb)

4) Insert a new cotter pin and secure the castle nut.
5) Install the front stabilizer.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

6) Install the center exhaust pipe. (Except for STI model) <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
7) Install the front crossmember support and the support plate - front crossmember.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

8) Install the engine mounting and the crossmember assembly with new nuts.

CAUTION:
Be careful not to damage the vehicle with a lifting device or wire ropes.

Tightening torque:
Engine mount — front crossmember assembly: 60 N·m (6.1 kgf-m, 44.3 ft-lb)

9) Install the power steering hose to the steering gearbox. (Hydraulic power steering model) <Ref. to PS-81, INSTALLATION, Pipe Assembly.>
10) Connect the steering gearbox connector and the harness clamp. (Electric power steering model)
11) Install the V-belt cover. (STI model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

12) Install the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
13) Change the hood stay location to support the front hood at ordinary position.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

14) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>
15) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
16) Install the front wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

17) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
18) Inspect the wheel alignment and adjust if necessary.

- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

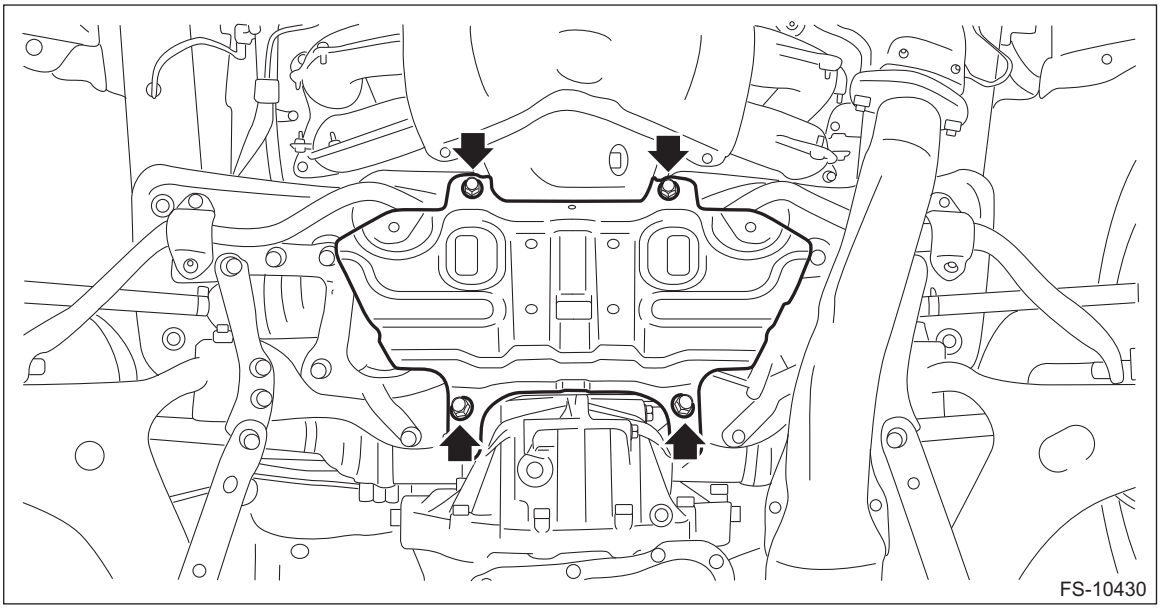
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
19) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

4. Front Crossmember Support Plate

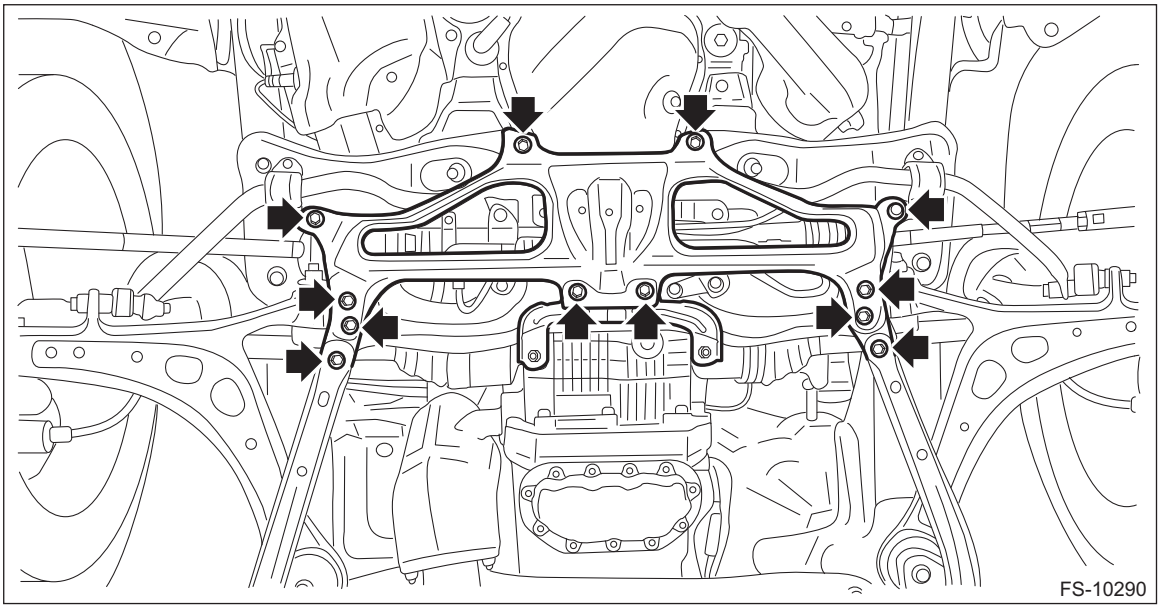
A: REMOVAL

1) Lift up the vehicle.
2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the bolt, and remove the front crossmember support.

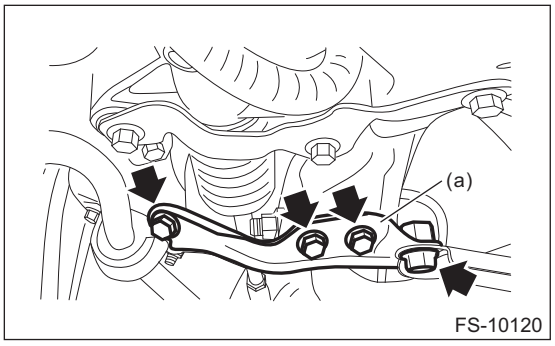
- Electric power steering model



- Hydraulic power steering model

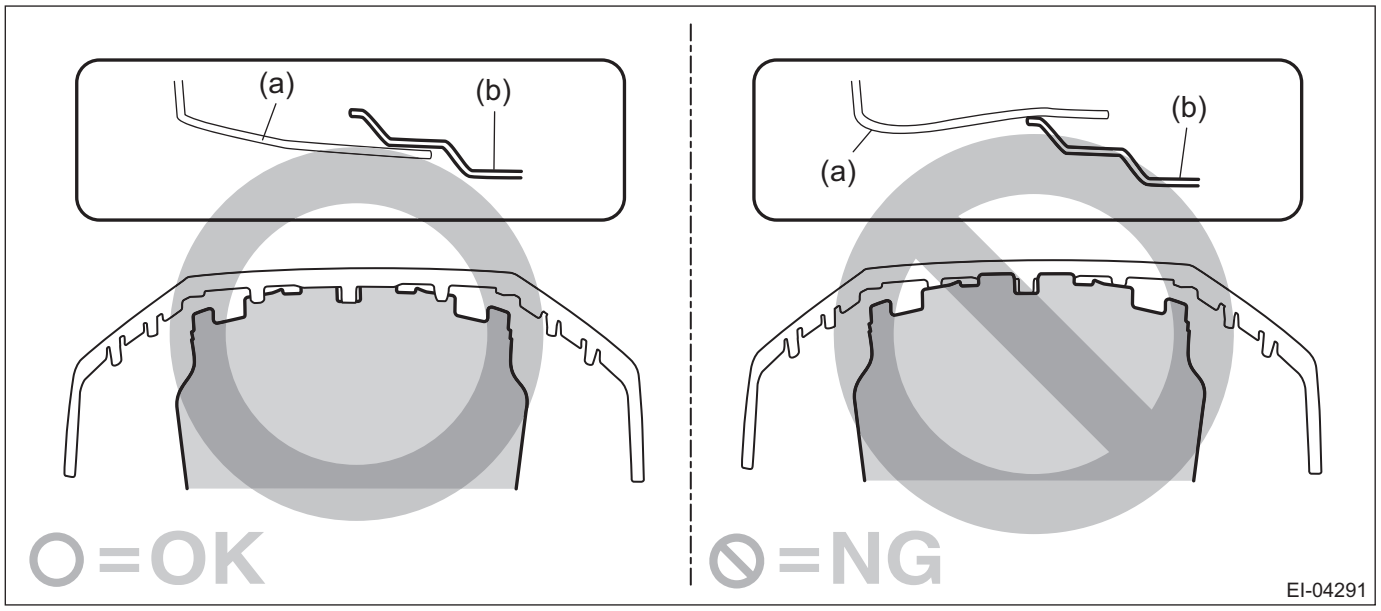


4) Remove the bolt, and remove the support plate - front crossmember (a). (Electric power steering model)



B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Install the front crossmember support and the support plate - front crossmember.

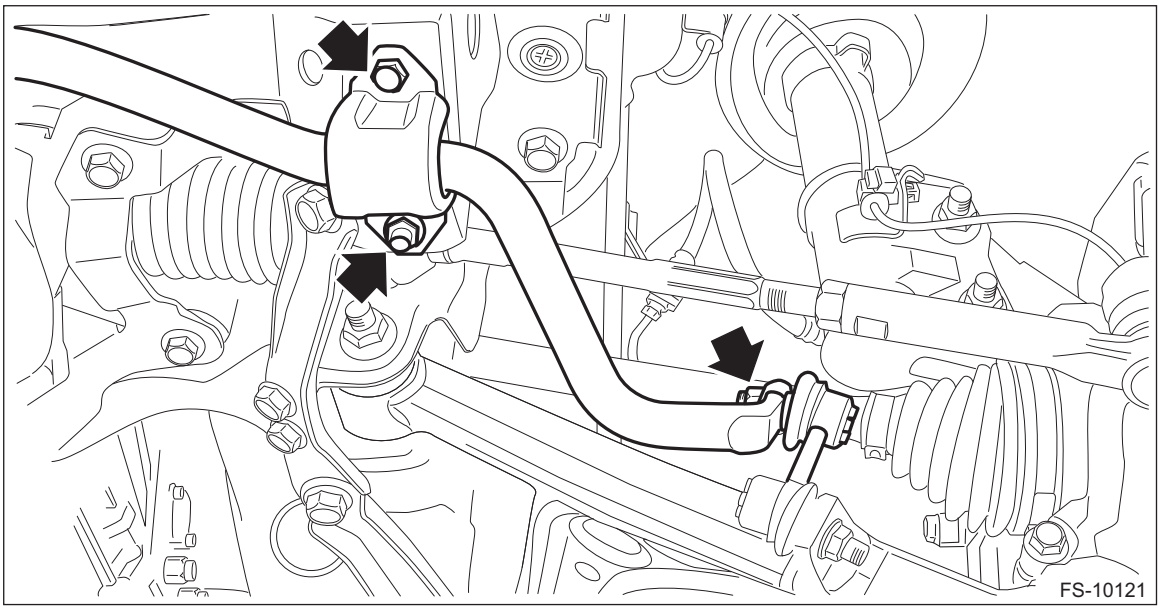
Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, COMPONENT, General Description.>

2) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
3) Lower the vehicle.

5. Front Stabilizer

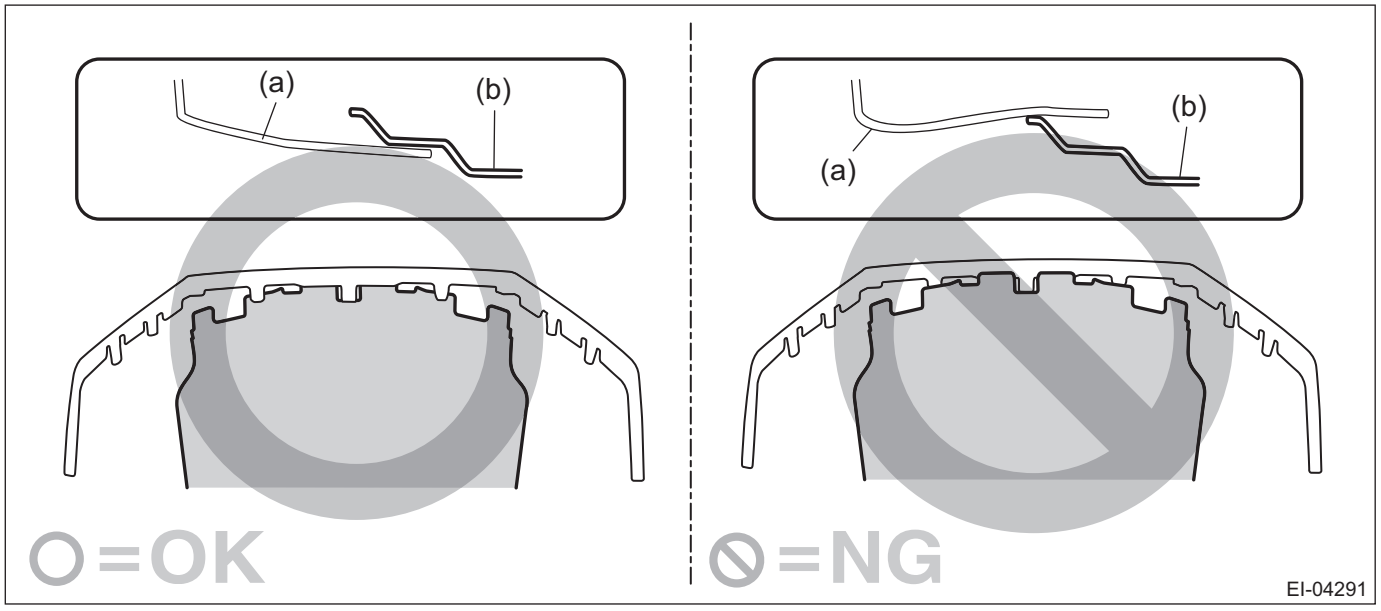
A: REMOVAL

1) Lift up the vehicle, and then remove the left and right front wheels.
2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the front crossmember support. <Ref. to FS-27, REMOVAL, Front Crossmember Support Plate.>
4) Remove the front stabilizer.
   (1) Remove the left and right stabilizer links.
   (2) Remove the clamp - stabilizer bushing on the left and right sides.



B: INSTALLATION

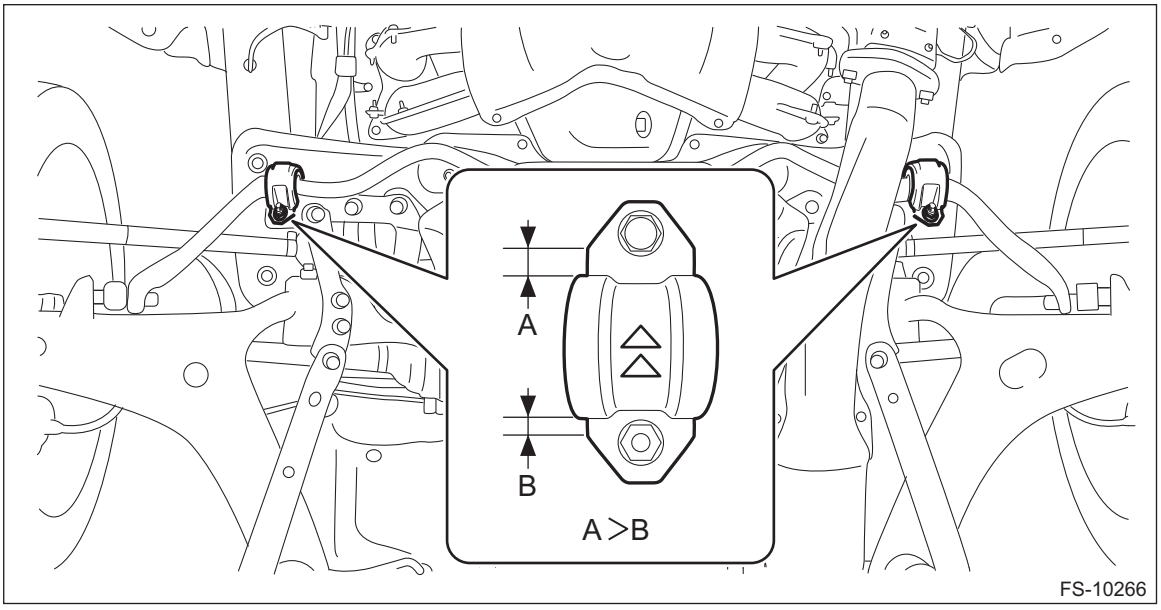
CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

2) Install the front stabilizer.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
Stabilizer link: 60 N·m (6.1 kgf-m, 44.3 ft-lb)
Clamp - stabilizer: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the front crossmember support.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

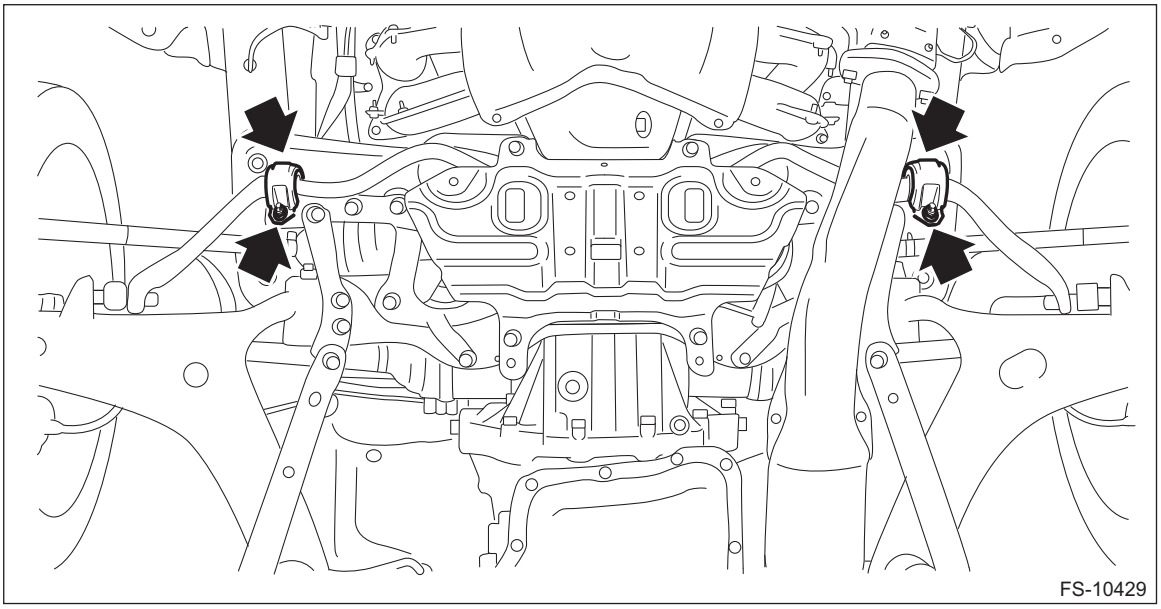
4) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle, and install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6. Front Ball Joint

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the clamp - stabilizer bushing on the left and right sides.



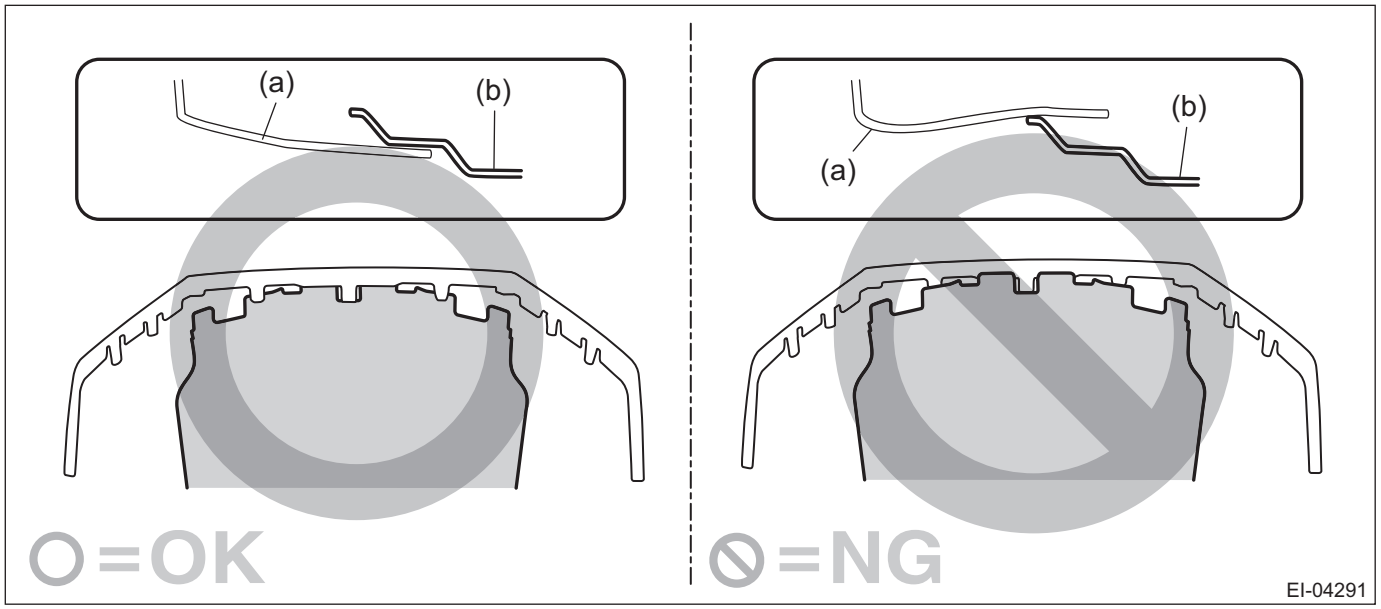
4) Remove the ball joint.
   (1) Pull out the cotter pin (a), and remove the castle nut (b).
   (2) Pull down the front arm assembly, and remove the ball stud.
   (3) Remove the bolt of the front axle housing.

   (4) Pull out the ball joint.

B: INSTALLATION

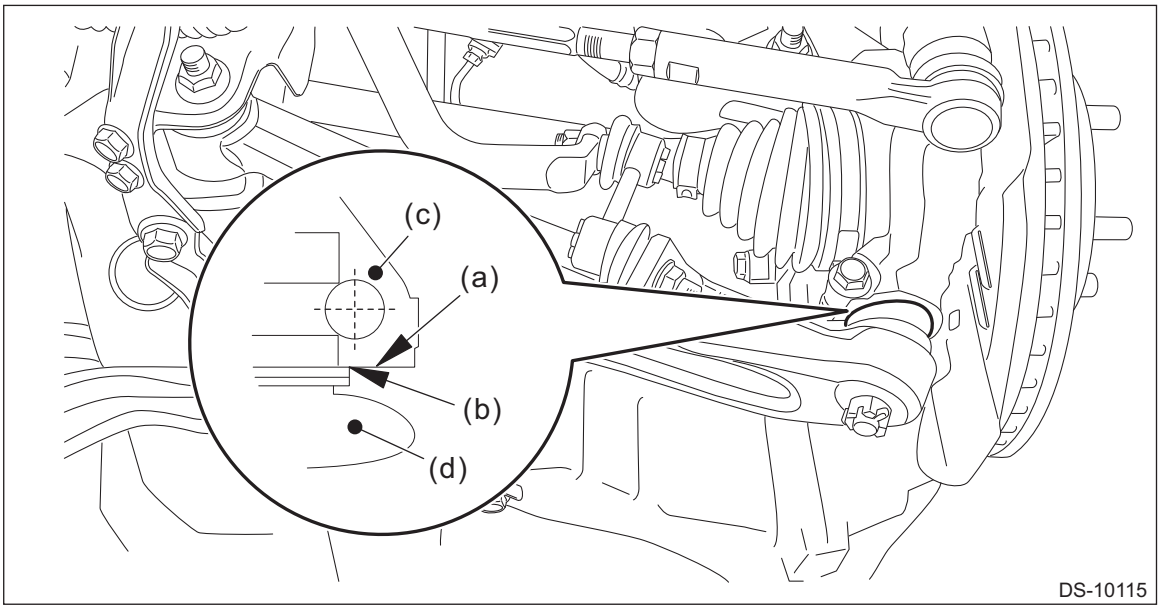
CAUTION:
- **For parts which are not reusable, always use new parts.**

• Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Install the ball joint.

CAUTION:
• Do not apply grease to the tapered portion of ball stud.
• Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.
• Be careful not to damage the boot of the joint.



(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

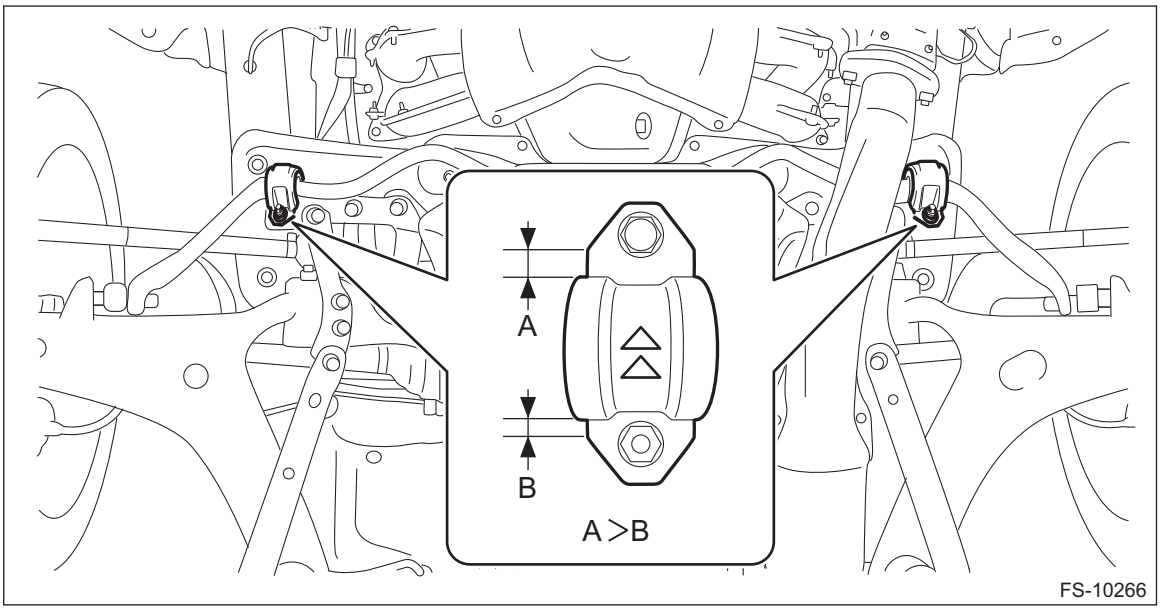
2) Connect the ball joint and front arm assembly.

NOTE:
When tightening the castle nut, tighten the castle nut to the specified torque first, then tighten it further but within 60° until the hole in the ball stud is aligned with a slot in castle nut.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

3) Insert a new cotter pin and bend it around the castle nut.
4) Install the clamp - stabilizer bushing.

CAUTION:
Install the clamp - stabilizer bushing with the arrow mark facing the front of the vehicle.



Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

5) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
6) Install the front wheels.

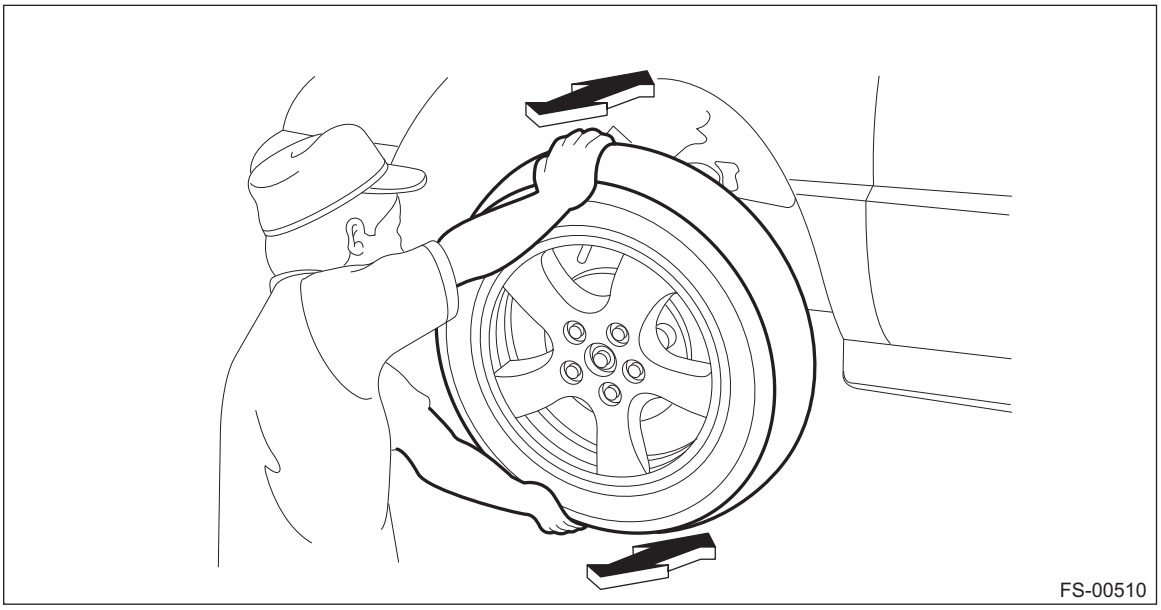
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

7) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight lane keep assist function): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.



- **Looseness exists** → Replace the ball joint. <Ref. to FS-31, REMOVAL, Front Ball Joint.>

2) Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

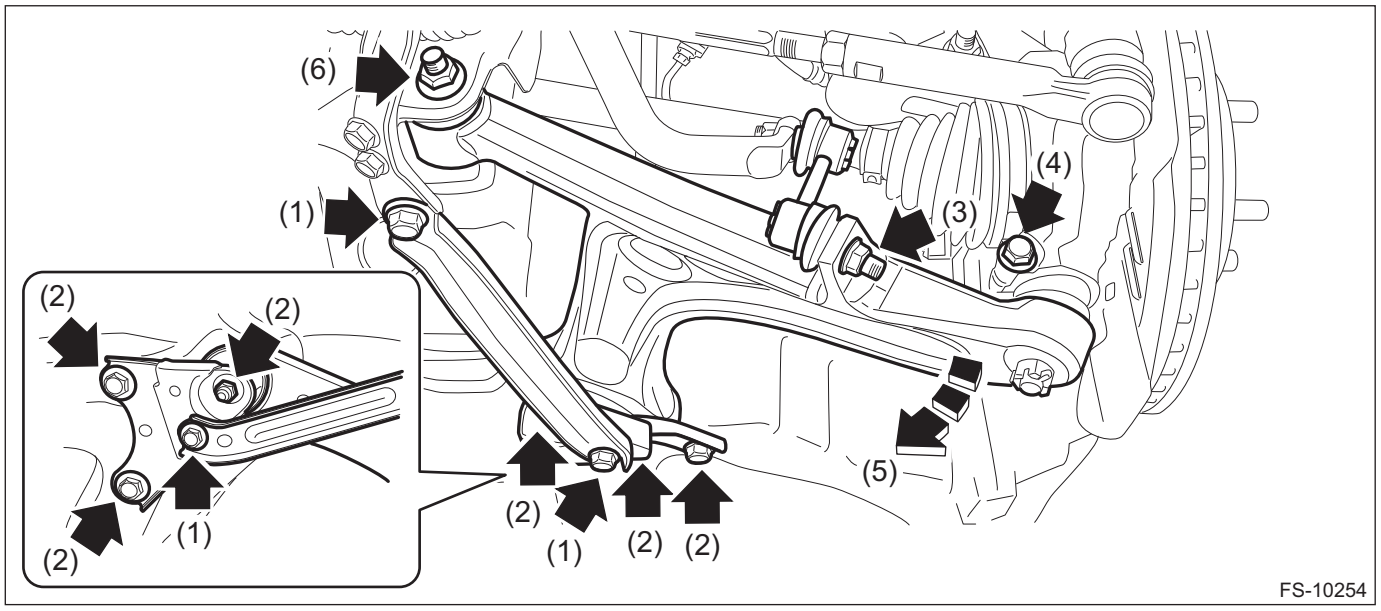
- **Looseness exists** → Check the hub unit COMPL - front axle. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>

3) Replace the ball joint if the boot is damaged when visually inspecting the ball joint.

7. Front Arm

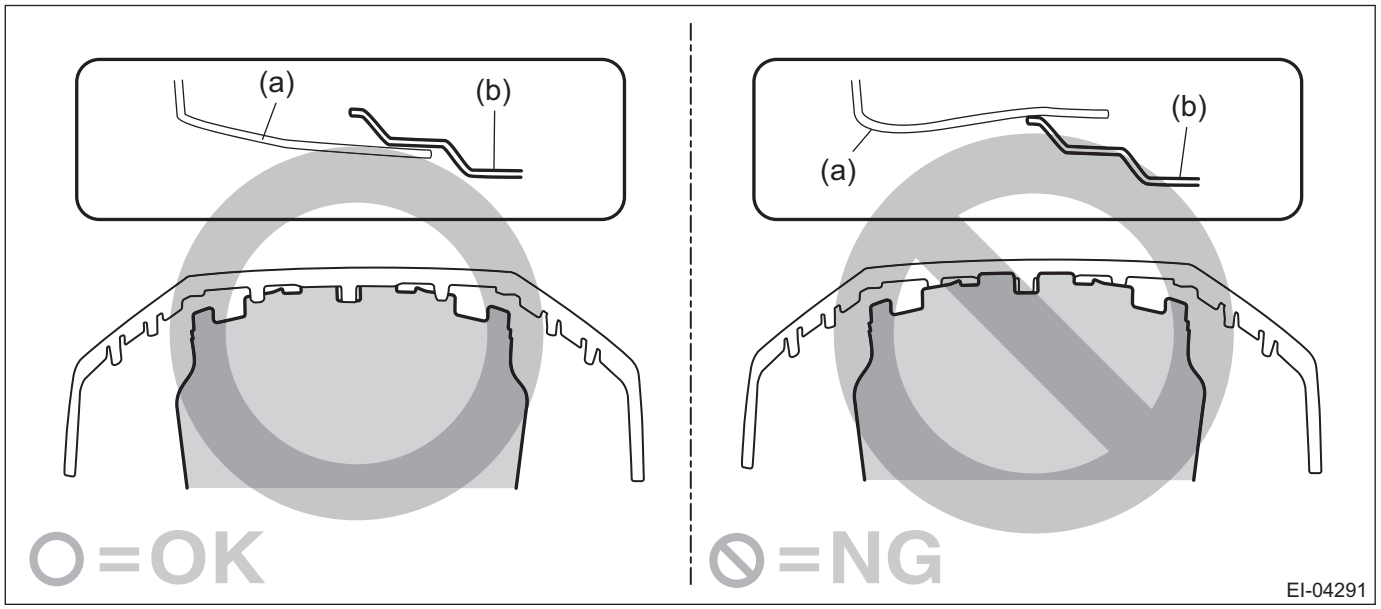
A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the front arm assembly.
   (1) Remove the bolt, and then detach the front support.
   (2) Remove the bolts and nuts, and then remove the front arm rear plate.
   (3) Remove the nut and disconnect the stabilizer link.
   (4) Remove the bolt from the front axle housing.
   (5) Lower the arm assembly front, and remove the ball stud from the front axle housing.
   (6) Remove the nuts, pull out the flange bolt, and remove the front arm assembly.



B: INSTALLATION

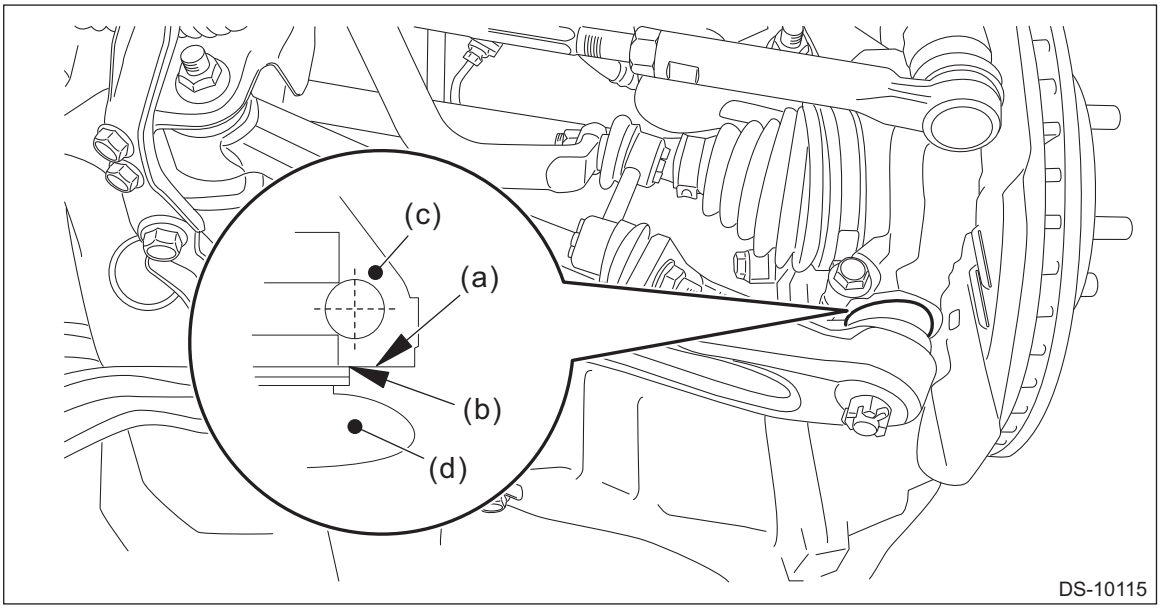
CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).**



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

2) Using new self-locking nuts and flange bolts, temporarily tighten the front arm assembly to the front crossmember assembly.
3) Connect the ball joint and the front axle housing.

CAUTION:
- **Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.**
- **Be careful not to damage the boot of the joint.**



(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

5) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

7) Unload the vehicle from the lift, and tighten the bolt which secures the front arm assembly to the front crossmember assembly while the wheels are in full contact with the ground and the vehicle is at curb weight.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>

8) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.

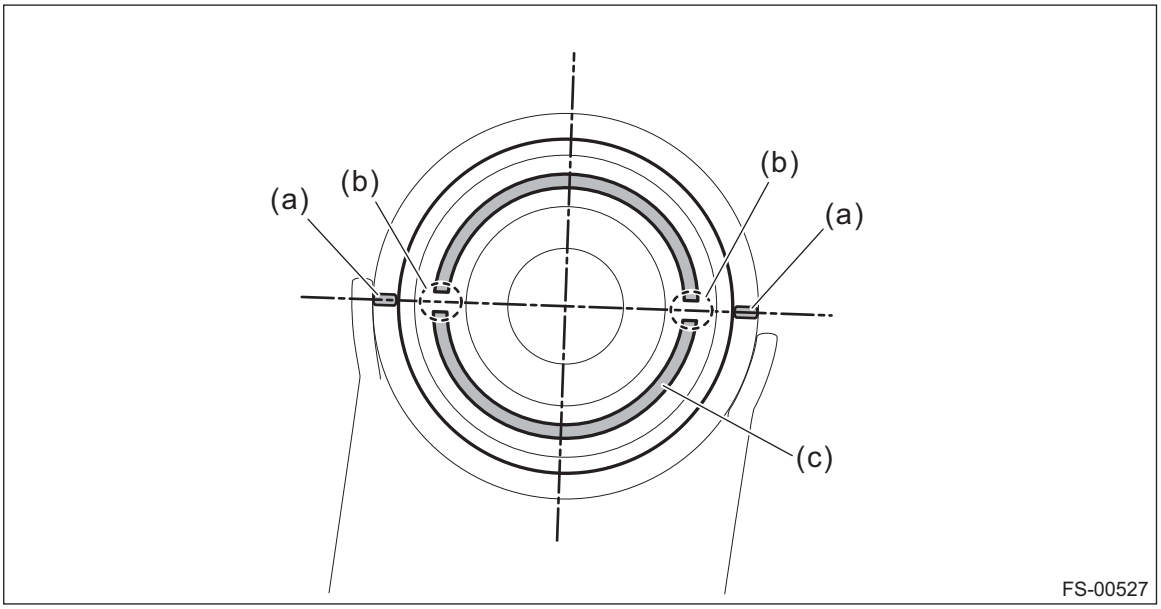
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
9) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Put an alignment mark on the front arm assembly based on the split portion of the bushing intermediate plate of the busing front - front arm.

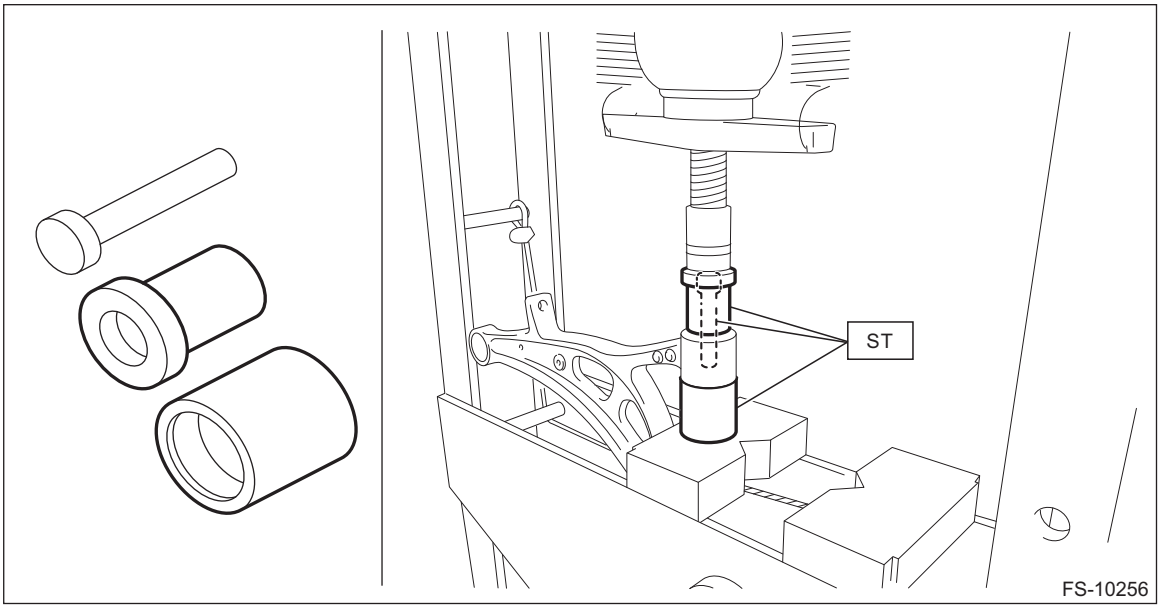
CAUTION:
Always put an alignment mark for aligning the position on bushing installation.



(a) Put an alignment mark. (b) Gap of bushing intermediate plate (c) Bushing intermediate plate

2) Using the ST and a press, remove the busing front - front arm.

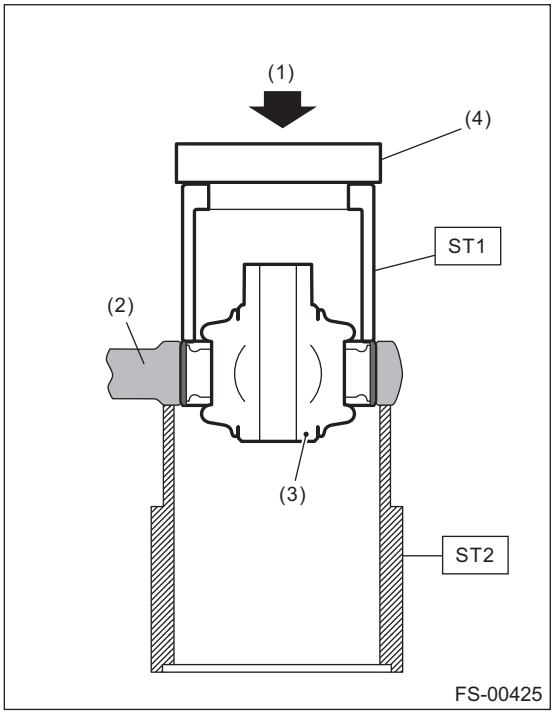
Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)



2. REAR BUSHING

1) Using the ST and a press, remove the pillow ball bushing.

Preparation tool:
ST1: INSTALLER & REMOVER (20099AE020)
ST2: HOUSING STAND (28099PA010)



(1) Press
(2) Front arm ASSY
(3) Pillow ball bushing
(4) Plate

NOTE:
Place a metal plate on the ST1 to use the press.

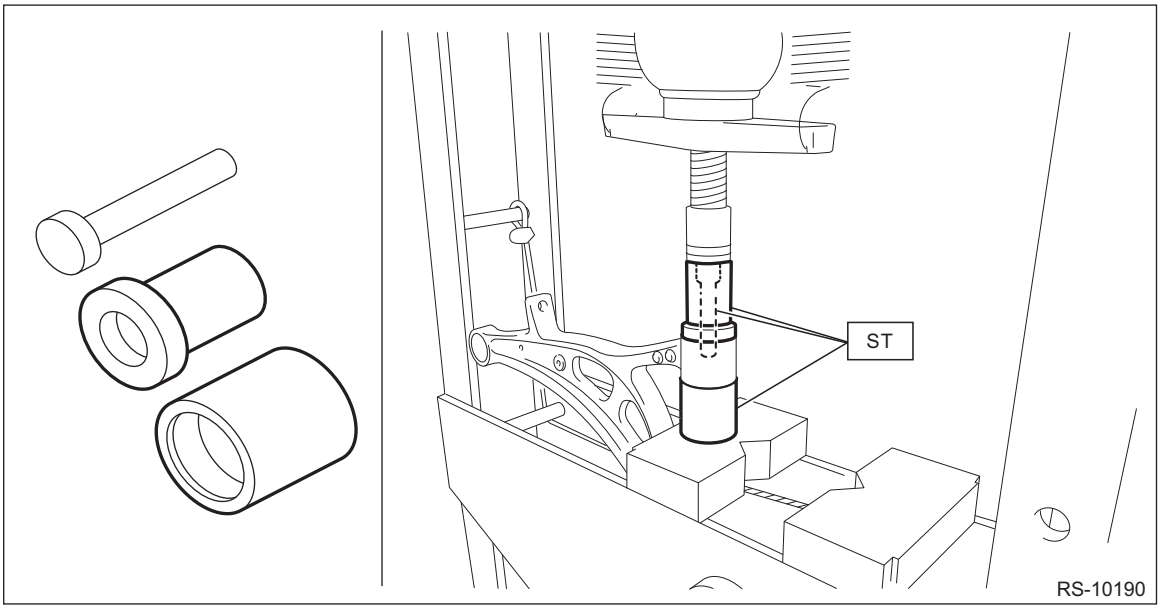
D: ASSEMBLY

1. BUSHING FRONT - FRONT ARM

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

2) Align the alignment mark on the front arm assembly to the split portion of the bushing intermediate plate of the busing front - front arm.
3) Using the ST and a press, assemble the busing front - front arm.

Preparation tool:
ST: INSTALLER & REMOVER SET (927680000)

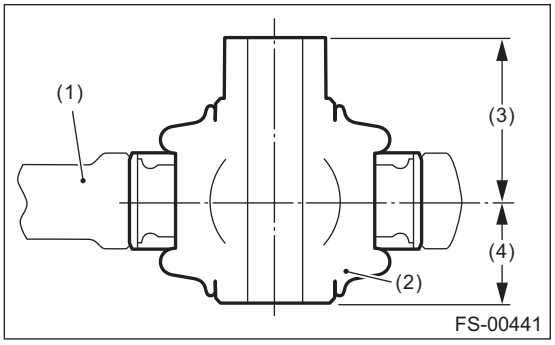


2. REAR BUSHING

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the front arm assembly for damage or cracks, and replace if defective.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

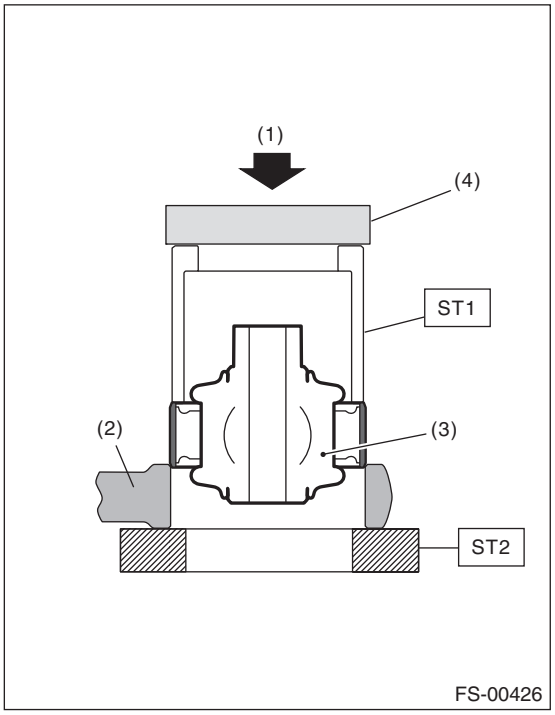
2) Using the ST and a press, install the pillow ball bushing.

CAUTION:
Install with the longer inner cylinder of the pillow ball bushing facing upward and the shorter facing downward.



(1) Front arm
(2) Bushing inner cylinder
(3) Longer
(4) Shorter

Preparation tool:
ST1: INSTALLER & REMOVER (20099AE020)
ST2: REMOVER (18723AA000)



(1) Press
(2) Front arm ASSY
(3) Pillow ball bushing
(4) Plate

NOTE:
Place a metal plate on the ST1 to use the press.

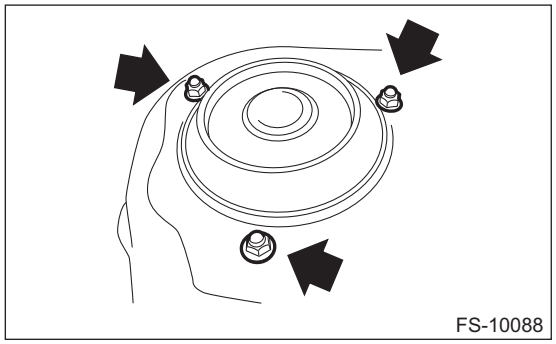
8. Front Strut

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the strut assembly.
   (1) Place an alignment mark (a) on the adjusting bolt and the strut.
   (2) Remove the brake hose bracket.
   (3) Remove the clamp of ABS wheel speed sensor harness.
   (4) Remove the adjusting bolts and flange bolts for the strut assembly.

CAUTION:
While holding the adjusting bolt side, tighten the nut side.

   (5) Remove the three nuts securing strut mount to body.



B: INSTALLATION

CAUTION:
For parts which are not reusable, always use new parts.
1) Install the strut mount - front at the upper side of the strut to the vehicle body.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)
2) Align alignment marks on the camber adjusting bolt and the strut, and install the strut to the front axle housing.

NOTE:
While holding the bolt head of adjusting bolt, tighten the nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)
3) Secure the ABS wheel speed sensor harness bracket to the strut.

CAUTION:
During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.
4) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

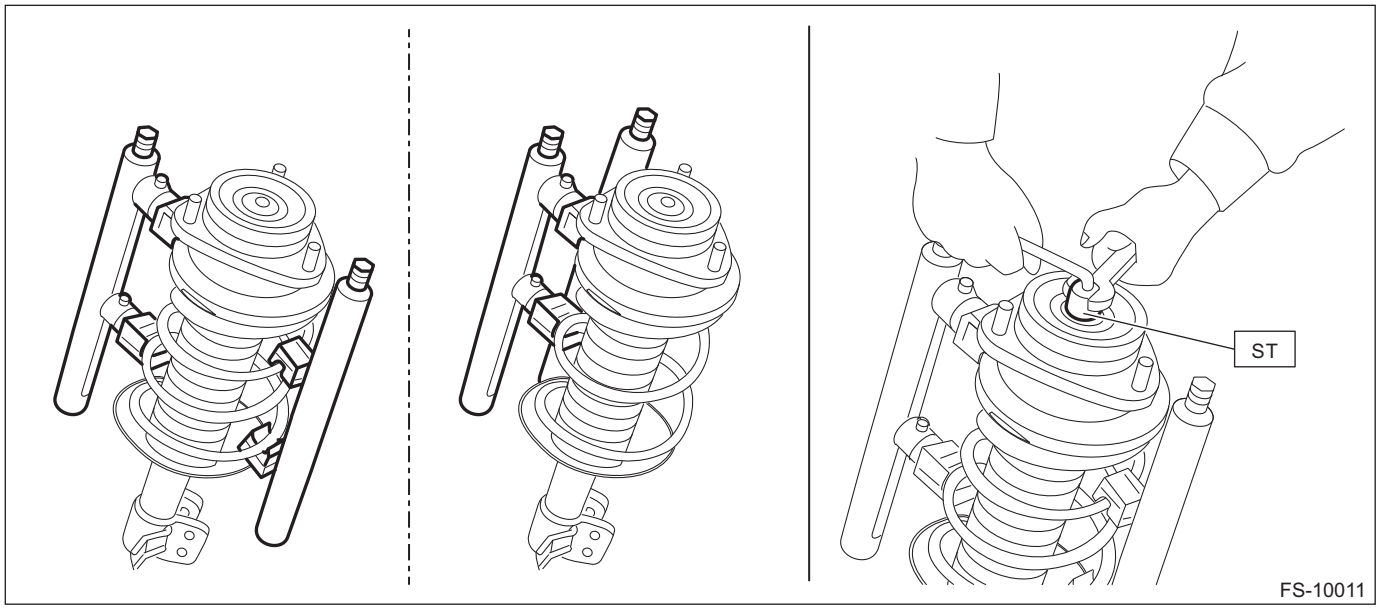
1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent strut rod from turning, remove the self-locking nut with ST.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)

NOTE:
<Example of coil spring compressor installation>

The installing position of coil spring compressor varies depending on the coil spring shape and winding number.



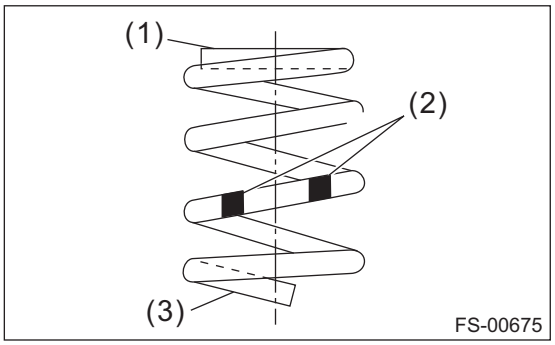
3) Remove the strut mount - front, spacer - front strut, dust cover - front strut and the spring seat UPR - front strut from the strut COMPL.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover - inner and the helper - front strut.

D: ASSEMBLY

1) Before assembly, check each part. <Ref. to FS-45, INSPECTION, Front Strut.>
2) Using a coil spring compressor, compress the coil spring.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

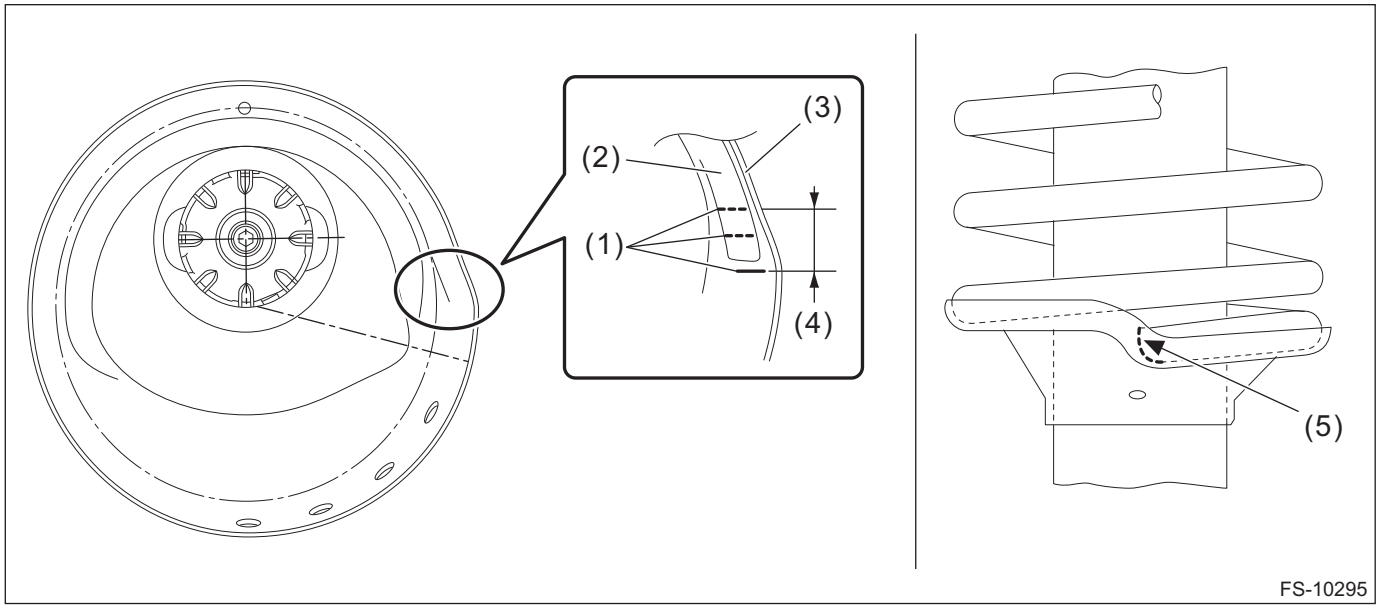
NOTE:
Make sure that the vertical install direction of the coil spring is as shown in the figure.



(1) Diameter is small (upper part)
(2) Identification paint
(3) Diameter is large (bottom part)

3) Set the coil spring correctly so that its end face seats well in the spring seat as shown in the figure.

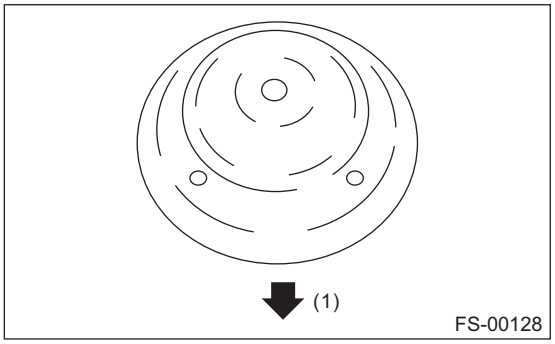
CAUTION:
Install the coil spring so that the end of spring is between the marks on the spring seat.



(1) Mark
(2) Spring
(3) Spring seat
(4) Install the spring within this area
(5) Coil spring end face

4) Install the dust cover - inner and the helper - front strut to the piston rod.
5) Pull the piston rod fully upward, and install the spring seat and the dust cover - front strut.

NOTE:
Position the spring seat UPR - front strut as shown in the figure.

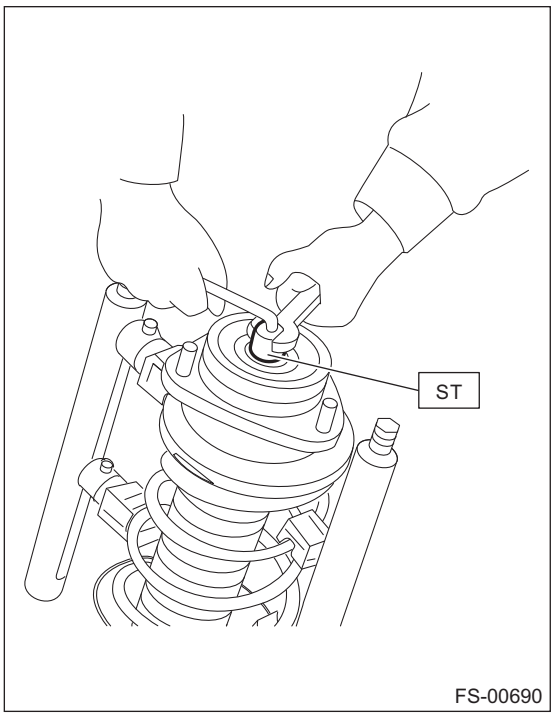


(1) Outside of body

6) Install the spacer - front strut and the strut mount - front to the piston rod, and temporarily tighten a new self-locking nut.
7) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

CAUTION:
Make sure that the strut mount - front turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399AG000)



Tightening torque:
55 N·m (5.6 kgf-m, 40.6 ft-lb)

8) Loosen the coil spring compressor carefully.

E: INSPECTION

Check the removed part for wear, damage and cracks, and then repair or replace it if defective.

1. STRUT

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Check the piston rod runout.

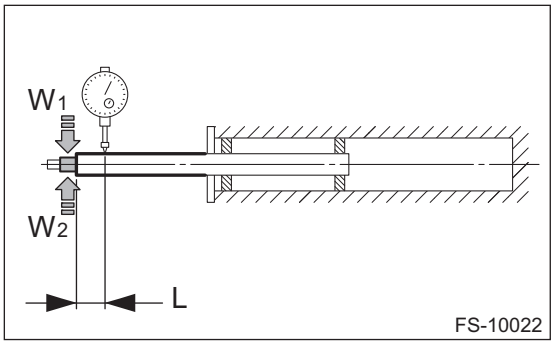
Preparation tool:
Dial gauge

(1) Fix the outer shell.
(2) Extend the piston rod until it stops retracting, and set the dial gauge at the L position from the end of the piston rod.

Measuring point:
L = 10 mm (0.39 in)

(3) While applying a force of W [20 N (2 kgf, 4 lbf)] to the arrowed section, read the dial gauge indication P_1.

(4) While applying a force of W_2 20 N (2 kgf, 4 lbf) from the opposite side of W_1, read the dial gauge indication P_2.



Play limit (P_1 + P_2): 0.8 mm (0.031 in)

4) Replace the strut if faulty is found in the inspection or limit value is exceeded.

2. STRUT MOUNT - FRONT

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new part if defective.

3. DUST COVER - INNER

If cracks or damage are found, replace it with a new part.

4. COIL SPRING - FRONT

If cracks, damage or deformation are found, replace it with a new part.

5. HELPER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.

6. DUST COVER - FRONT STRUT

If major cracks or damage are found, replace it with a new part.

F: DISPOSAL

CAUTION:

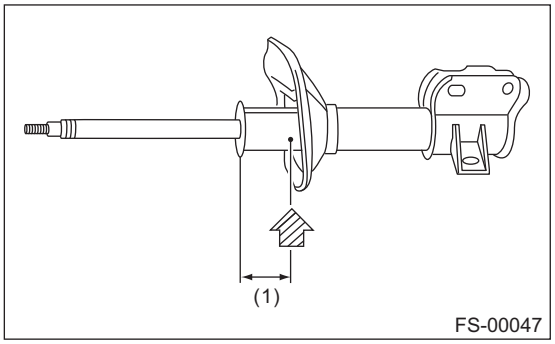
• Before handling the strut damper and shock absorber, be sure to wear goggles to protect eyes from gas, oil and cutting powder.

• Do not disassemble the strut damper and shock absorber or place them into a fire.

• When discarding gas filled strut dampers and shock absorbers, drill holes in them to purge the gas.

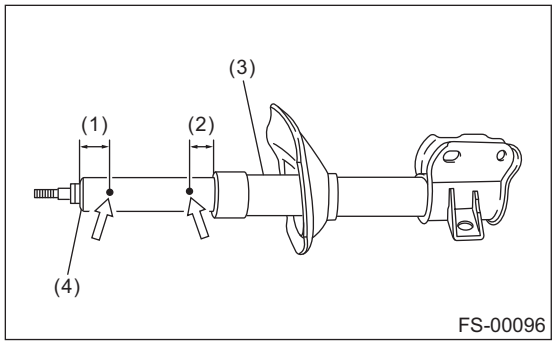
1) Place the strut damper and shock absorber on a level surface with the piston rod fully expanded.

2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter. (standard damper model)



(1) 40 mm (1.57 in)

3) Using a 2 — 3 mm (0.08 — 0.12 in) dia. drill, make a hole into the position (1) first, and then (2). (inverted damper model)



(1) 20 mm (0.78 in)
(2) 10 mm (0.39 in)
(3) Strut
(4) Damping tube

9. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Deformation or damage of suspension parts	Replace.
(2) Defective strut	Replace.
(3) Installation of the wrong strut assembly	Replace with appropriate parts.
(4) Installation of the wrong coil spring	Replace with appropriate parts.

2. POOR RIDE COMFORT

1) Large rebound shock.
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping.

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Fault in operation of strut	Replace.
(5) Damage or deformation of strut mount	Replace.
(6) Unsuitable length (maximum or minimum) of strut	Replace with appropriate parts.
(7) Abnormal deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut	Replace.
(9) Oil leakage from strut	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of strut component parts	Replace.
(2) Loosening of the suspension link installing bolt	Tighten to the specified torque.
(3) Abnormal deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of strut	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

8. Rear Lateral Link 24
9. Rear Shock Absorber 27
10. General Diagnostic Table 33

1. General Description

A: SPECIFICATION

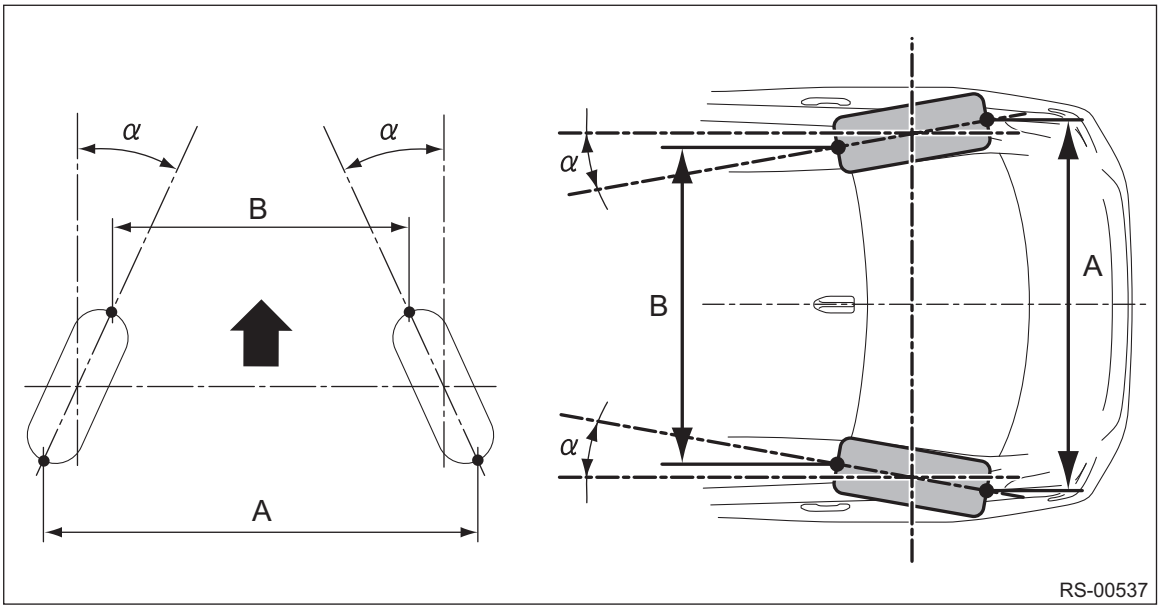
1. WRX MODEL

Tire size		235/45R17	245/40R18
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	367 (14.45)	361 (14.21)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°30′	–1°40′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)	
		Toe angle (sum of both wheels): IN0°16′±16′	
Thrust angle (tolerance: 0°00′±30′)		0°00′	

2. STI MODEL

Tire size		245/40R18 245/35R19
Wheel arch height (Tolerance: $^{+12\ mm}_{-24\ mm}$ ($^{+0.47\ in}_{-0.94\ in}$))	mm (in)	362 (14.25)
Camber (tolerance: ±0°45′ Differences between RH and LH: 45′ or less)		–1°40′
Toe-in	mm (in)	IN3±3 (IN0.12±0.12)
		Toe angle (sum of both wheels): IN0°16′±16′
Thrust angle (tolerance: 0°00′±30′)		0°00′

NOTE:
• Adjust with the value less than the inspection value, taking aging variation into consideration.
• Front toe-in, rear toe-in and front camber can be adjusted. Adjust if the value of toe-in or camber exceeds the tolerance range of the specification chart.
• Other items except for front toe-in, rear toe-in and front camber that are described in the specification chart cannot be adjusted.
• If other items exceed the tolerance range of the specification chart, check the suspension parts and connections for deformation. If defective, replace with new parts.

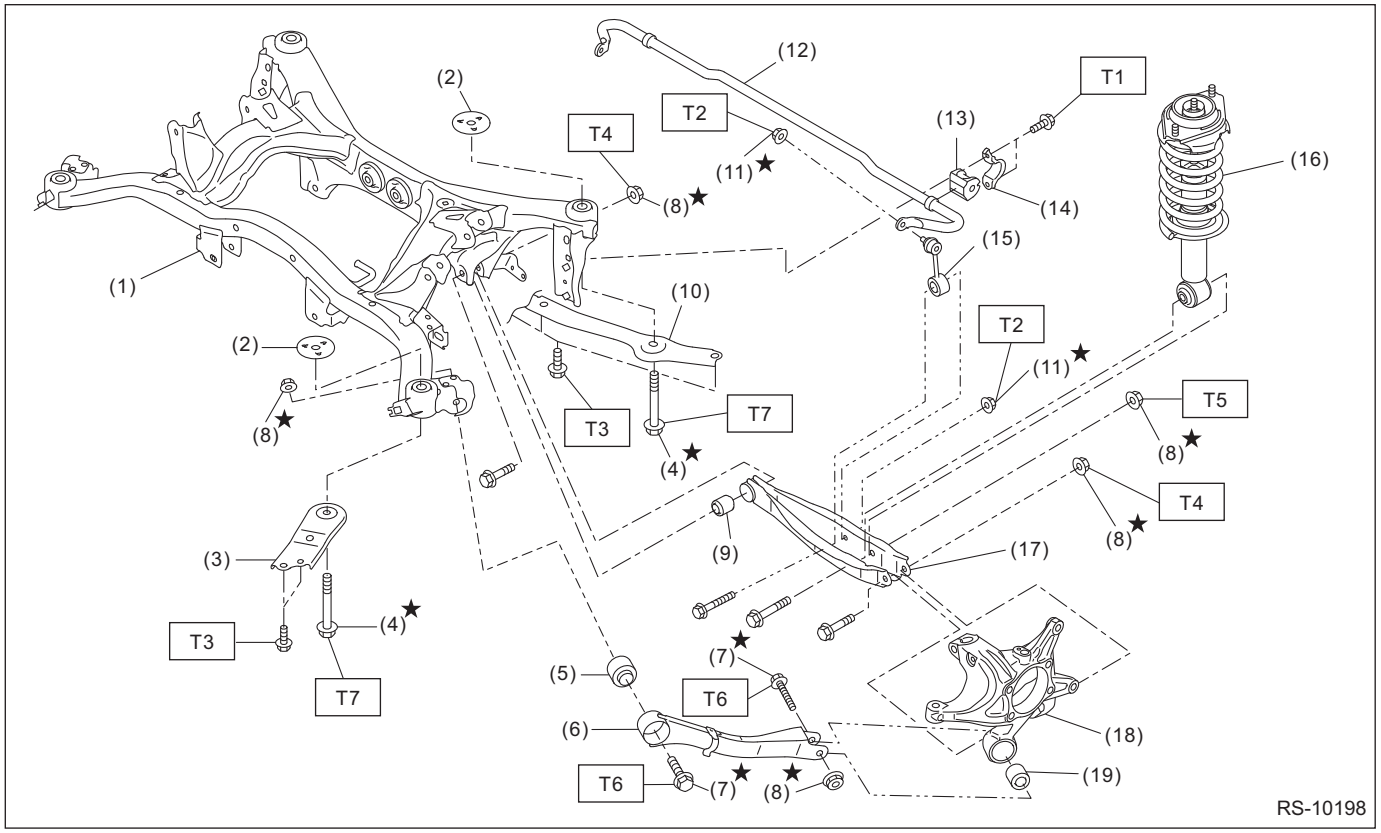


A – B = Positive: Toe-in, Negative: Toe-out

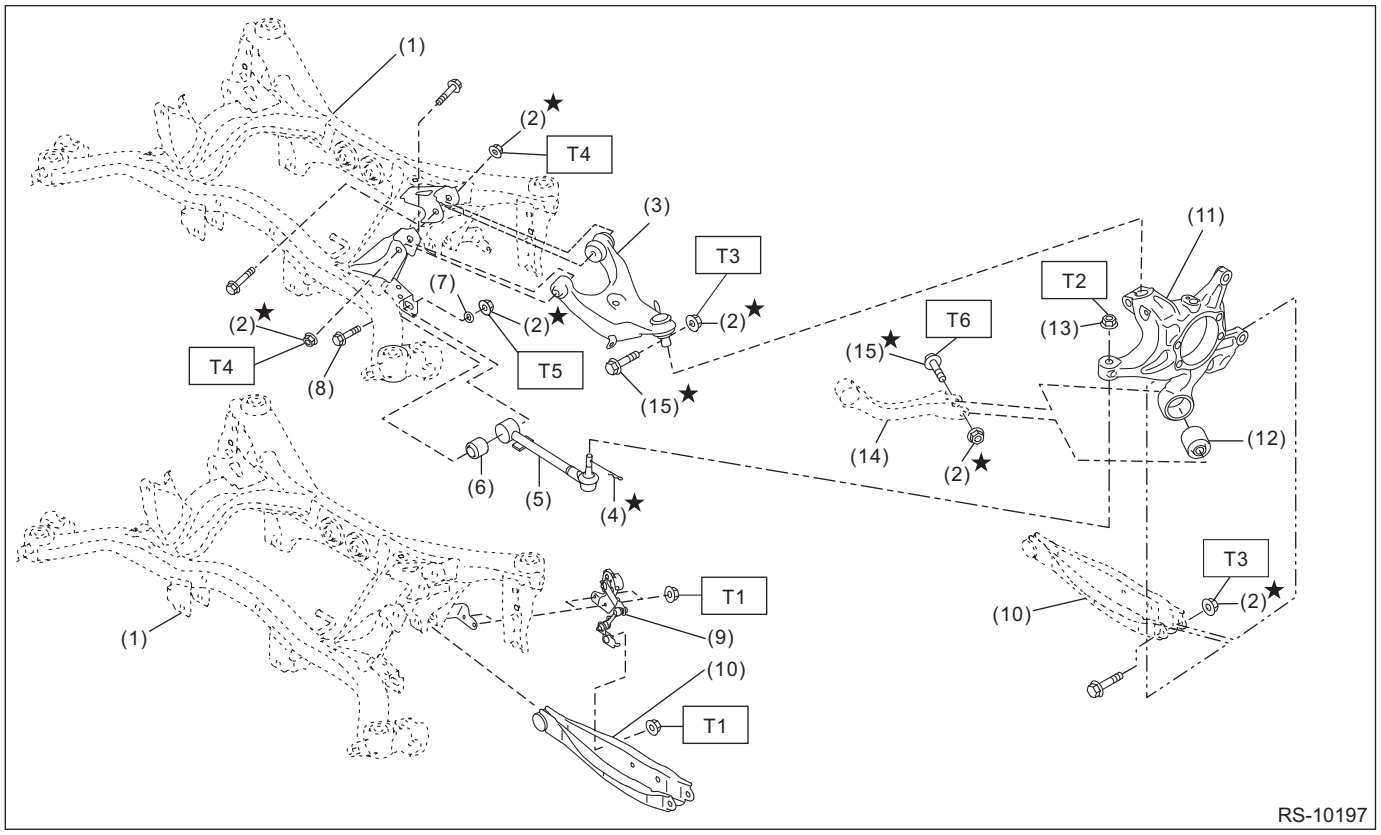
α = Individual toe angles

B: COMPONENT

1. REAR SUSPENSION

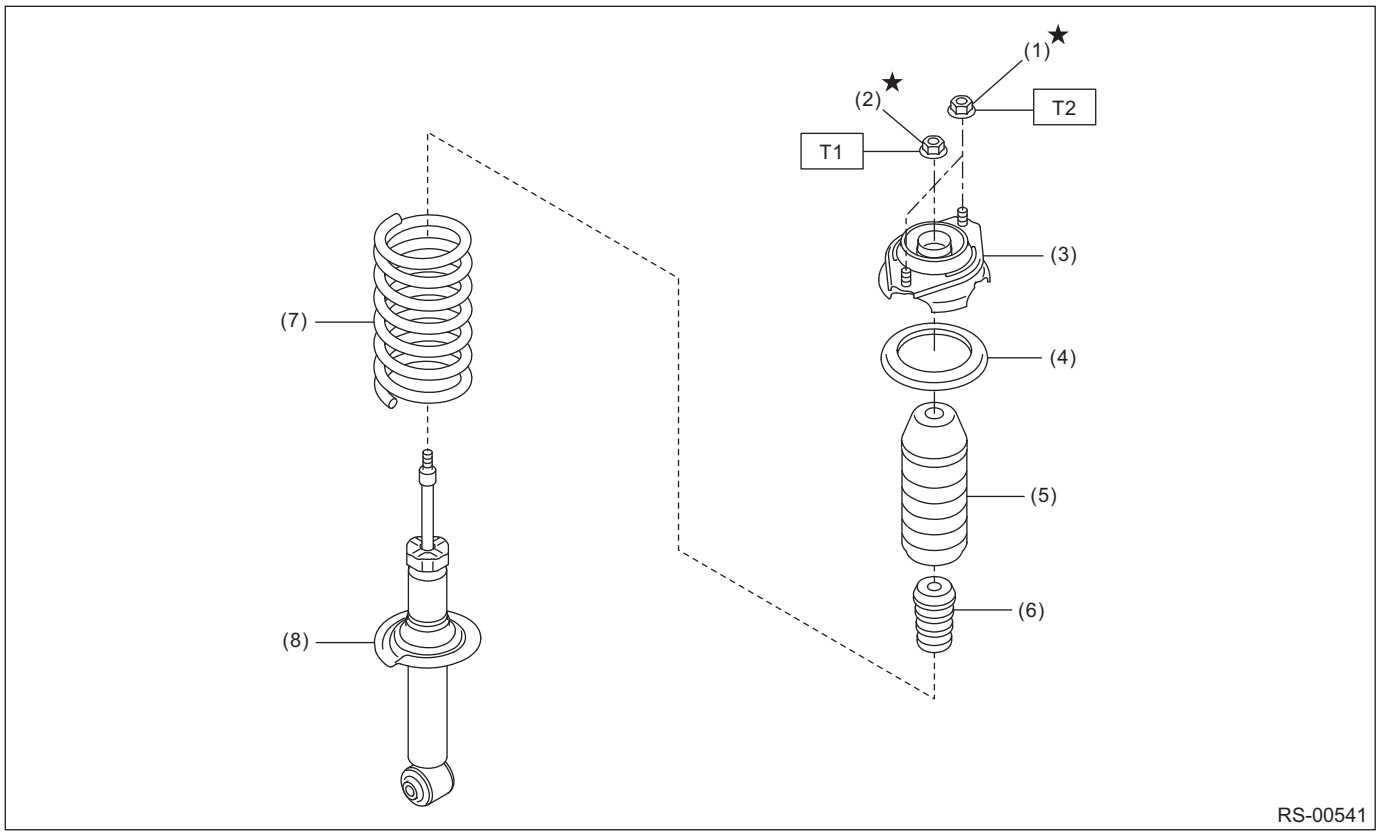


(1)	Rear sub frame ASSY	(11)	Flange nut	***Tightening torque: N·m (kgf-m, ft-lb)***	
(2)	Stopper UPR	(12)	Rear stabilizer	***T1:***	***30 (3.1, 22.1)***
(3)	Support - sub frame	(13)	Bushing - stabilizer	***T2:***	***38 (3.9, 28)***
(4)	Flange bolt A	(14)	Clamp - stabilizer bushing	***T3:***	***70 (7.1, 51.6)***
(5)	Bushing A - trailing link	(15)	Stabilizer link	***T4:***	***80 (8.2, 59)***
(6)	Trailing link	(16)	Rear shock absorber ASSY	***T5:***	***85 (8.7, 62.7)***
(7)	Flange bolt B	(17)	Rear lateral link ASSY	***T6:***	***110 (11.2, 81.1)***
(8)	Self-locking nut	(18)	Rear axle housing	***T7:***	***145 (14.8, 106.9)***
(9)	Bushing C - lateral link rear	(19)	Bushing D - rear axle housing		
(10)	Rear support sub frame				



(1)	Rear sub frame ASSY	(9)	Sensor ASSY - headlight beam leveler (models with auto headlight beam leveler only)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Self-locking nut	(10)	Lateral link ASSY - rear	***T1: 7.5 (0.8, 5.5)***
(3)	Rear upper arm ASSY	(11)	Rear axle housing	***T2: 60 (6.1, 44.3)***
(4)	Snap pin	(12)	Bushing D - rear axle housing	***T3: 80 (8.2, 59)***
(5)	Lateral link ASSY - front	(13)	Flange nut	***T4: 90 (9.2, 66.4)***
(6)	Bushing B - lateral link	(14)	Trailing link	***T5: 100 (10.2, 73.8)***
(7)	Adjusting washer	(15)	Flange bolt	***T6: 110 (11.2, 81.1)***
(8)	Adjusting bolt			

2. REAR SHOCK ABSORBER



(1)	Flange nut	(5)	Dust cover - rear shock
(2)	Self-locking nut	(6)	Helper - rear
(3)	Shock mount - rear	(7)	Coil spring - rear
(4)	Rubber seat - shock UPR	(8)	Shock absorber COMPL - rear

Tightening torque: N·m (kgf-m, ft-lb)
T1: 25 (2.5, 18.4)
T2: 30 (3.1, 22.1)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When disposing of shock absorbers, be sure to bleed the oil or gas out completely. Also, do not expose to flames or fire.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- When the suspension-related components have been removed or replaced, perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
- When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.

- Be sure that the surface of brake disc or brake pad is free from grease or oil.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing A - trailing link of the rear axle housing. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing A - trailing link of the rear axle housing. • Used together with base part of INSTALLER & REMOVER (20099PA010).
 ST20099AE000	20099AE000	INSTALLER & REMOVER	Used for replacing the bushing B - lateral link.
 ST20099AE010	20099AE010	INSTALLER & REMOVER	Used for replacing the bushing C - lateral link.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST20399FG000	20399FG000	STRUT MOUNT SOCKET	• Used for disassembling and assembling strut assembly and shock absorber assembly. • Used for checking center nut torque of strut assembly and shock absorber assembly.

2. GENERAL TOOL

TOOL NAME	REMARKS
Alignment tester	Used for measuring wheel alignment.
Toe-in gauge	Used for toe-in measurement.
Jack	Used for removing and installing suspension.
Bearing puller	Used for removing bushings.
Tie-rod ball joint puller	Used for disconnecting the lateral link assembly - front.
Coil spring compressor	Used for disassembling and assembling strut assembly and shock absorber assembly.

2. Wheel Alignment

A: INSPECTION

NOTE:
For wheel alignment, measure or adjust the front and rear wheels at a time. Refer to “Wheel Alignment” in “FRONT SUSPENSION” section for measurement and adjustment procedures of wheel alignment.

- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

3. Rear Sub Frame

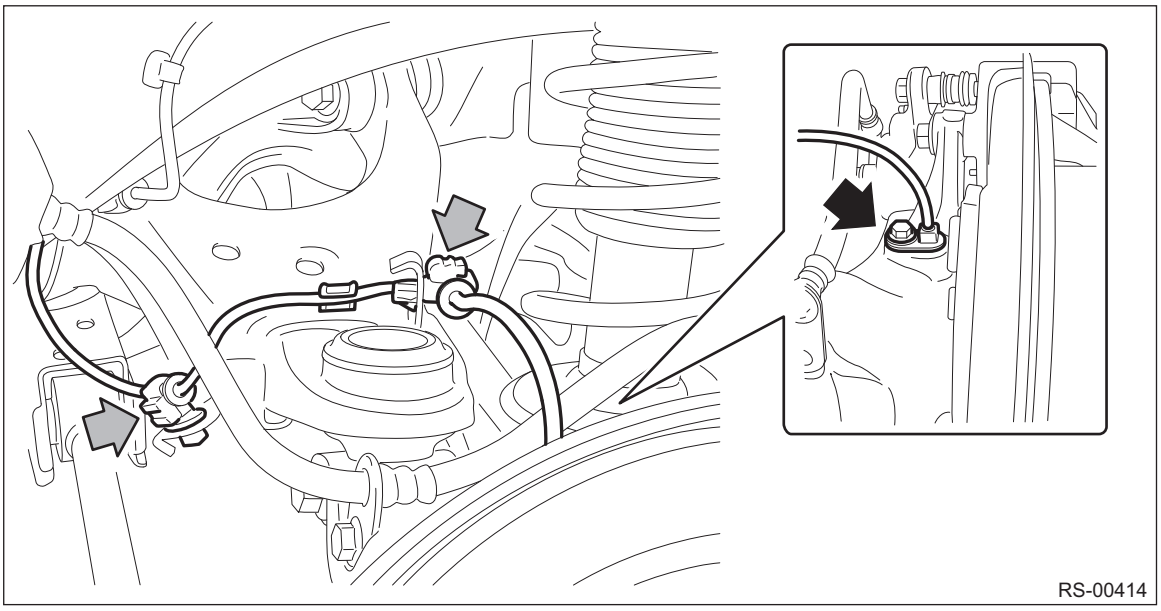
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

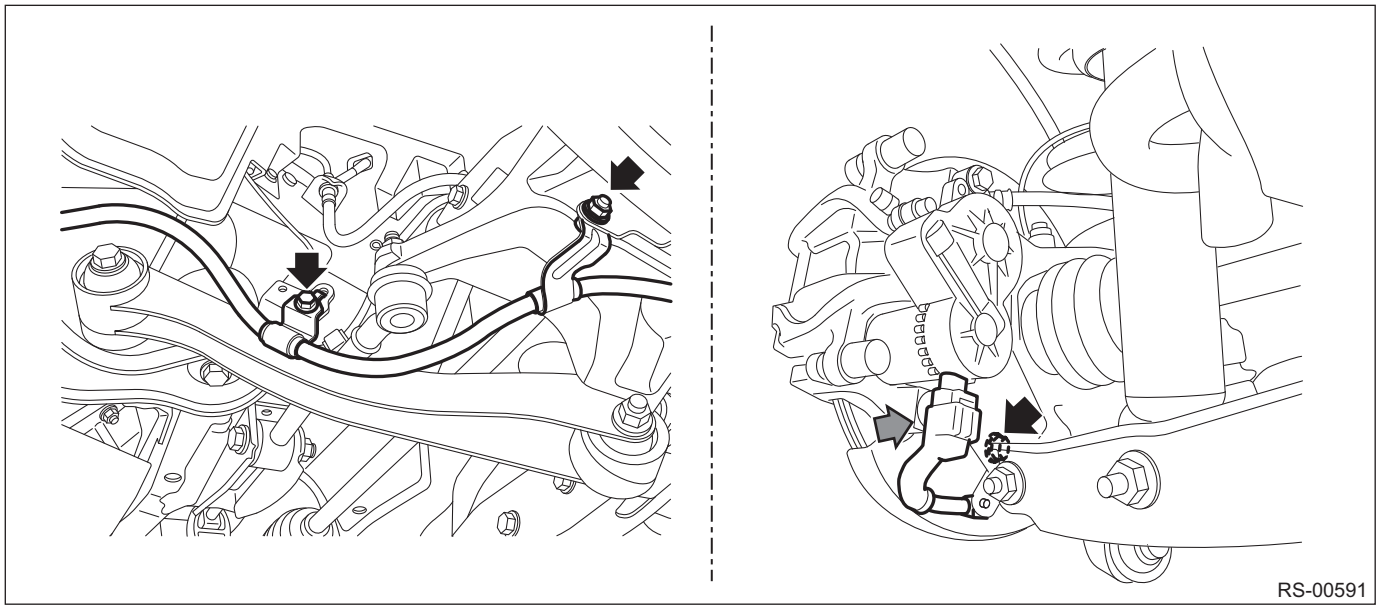
4) Remove the propeller shaft assembly. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
5) Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

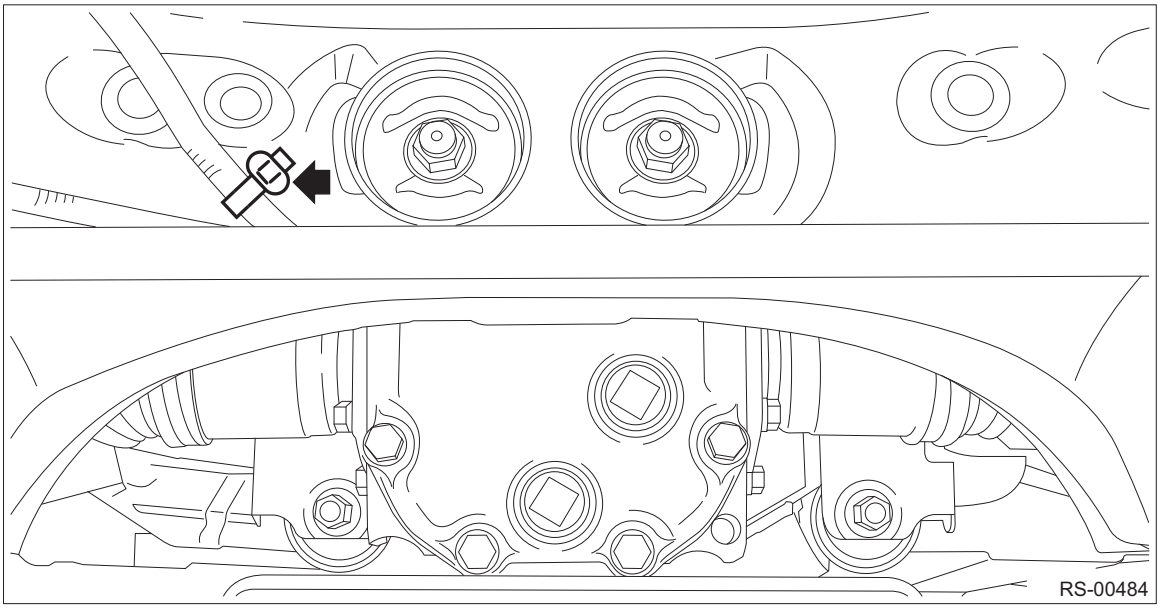


6) Remove the disc brake assembly - rear. <Ref. to BR-68, REMOVAL, Rear Disc Brake Assembly.>
7) Remove the cable assembly - parking brake and the parking brake shoe. (Models without EyeSight) <Ref. to PB-15, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

8) Disconnect the electronic parking brake harness. (Models with EyeSight) <Ref. to PB-11, REMOVAL, Parking Brake Cable.>



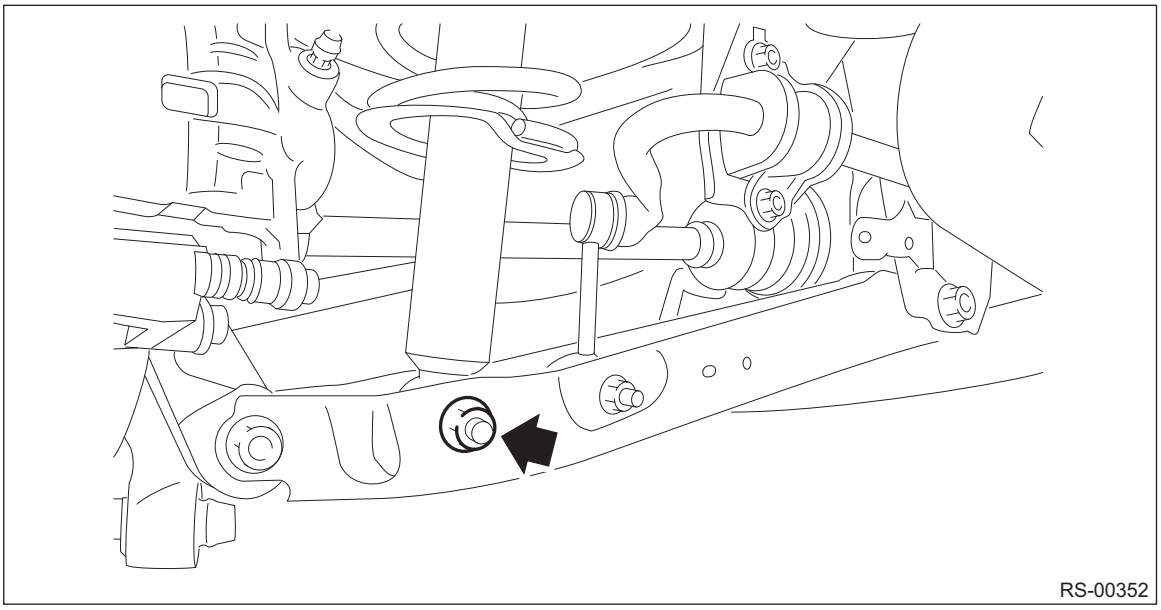
9) Remove the clamp of the sub rear harness.



10) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-88, REMOVAL, Rear Height Sensor.>
11) Remove the fuel tank protector.
- STI model: <Ref. to FU(STI)-66, REMOVAL, Fuel Tank Protector.>
- Except for STI model: <Ref. to FU(w/o STI)-144, REMOVAL, Fuel Tank Protector.>

12) Remove the rear sub frame assembly.

(1) Remove the bolts and nuts from the lower side of rear shock absorber assembly.

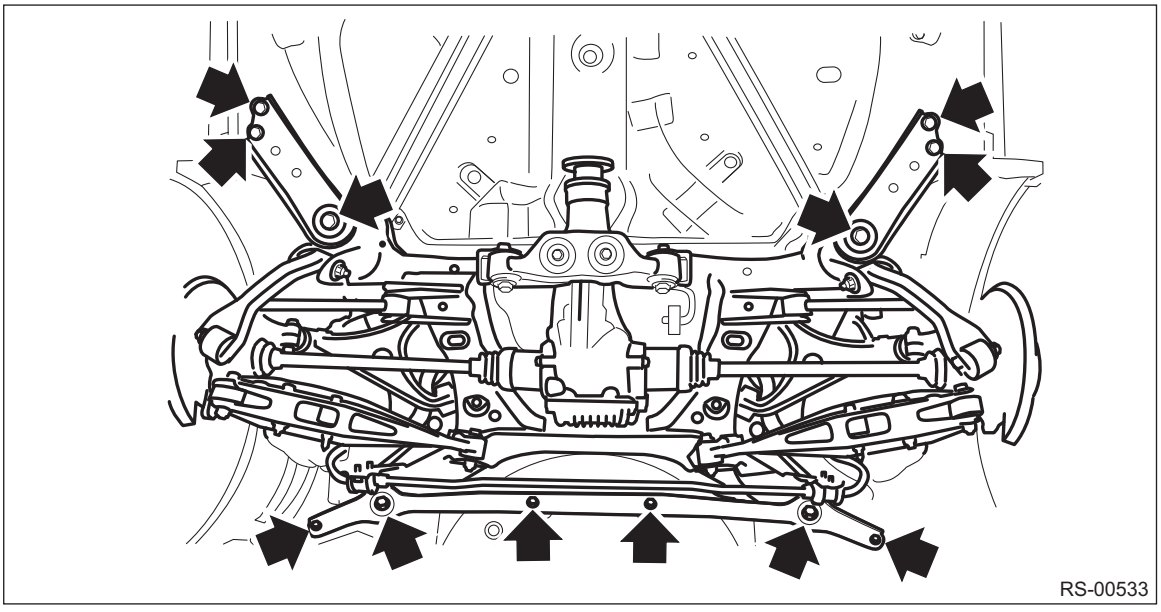


(2) Support the rear sub frame assembly using a transmission jack.

CAUTION:
The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.

(3) Remove the bolt, and remove the left and right sub frame supports and the rear sub frame support.
(4) Remove the rear sub frame assembly.

CAUTION:
While checking there is no dragging of harness and wire, lower it slowly with a transmission jack.



13) As necessary, remove each part from the rear sub frame assembly.

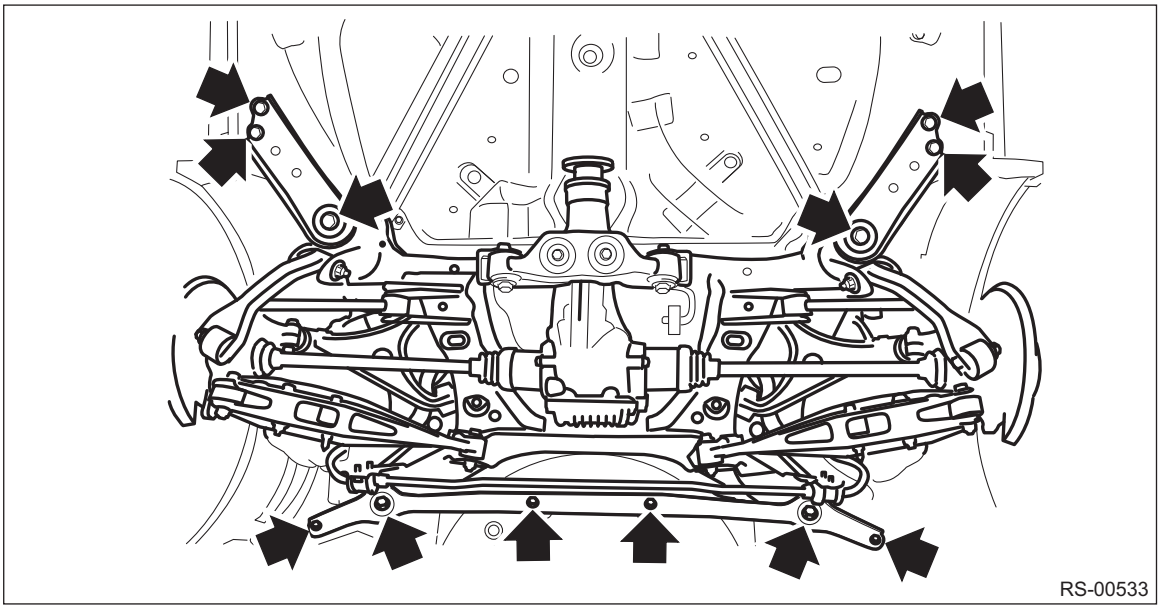
B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **During the installation, make sure that the marking of ABS wheel speed sensor harness does not twist.**

1) Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
2) Install each part to the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>
3) Install the rear sub frame assembly.
(1) Lift the rear sub frame assembly using a transmission jack.
(2) Install the right and left sub frame supports and the rear support sub frame, and install the rear sub frame assembly.

CAUTION:
- **The rear sub frame assembly is heavy. Make sure that it is horizontally-supported.**
- **While checking there is no dragging of harness and wire, raise it slowly with a transmission jack.**



Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>
4) Install the bolts and nuts on the lower side of rear shock absorber assembly.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)
5) Install the fuel tank protector.
- STI model: <Ref. to FU(STI)-66, INSTALLATION, Fuel Tank Protector.>
- Except for STI model: <Ref. to FU(w/o STI)-144, INSTALLATION, Fuel Tank Protector.>

6) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) Install the clamp of the sub rear harness.
8) Install the cable assembly - parking brake. (Models without EyeSight) <Ref. to PB-17, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
9) Install the electronic parking brake harness. (Models with EyeSight)

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
10) Install the brake hose bracket and the disc brake assembly - rear.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Disc brake assembly - rear: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>

11) Install the rear ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

12) Install the propeller shaft assembly. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
13) Install the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>

14) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

15) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

16) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
17) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

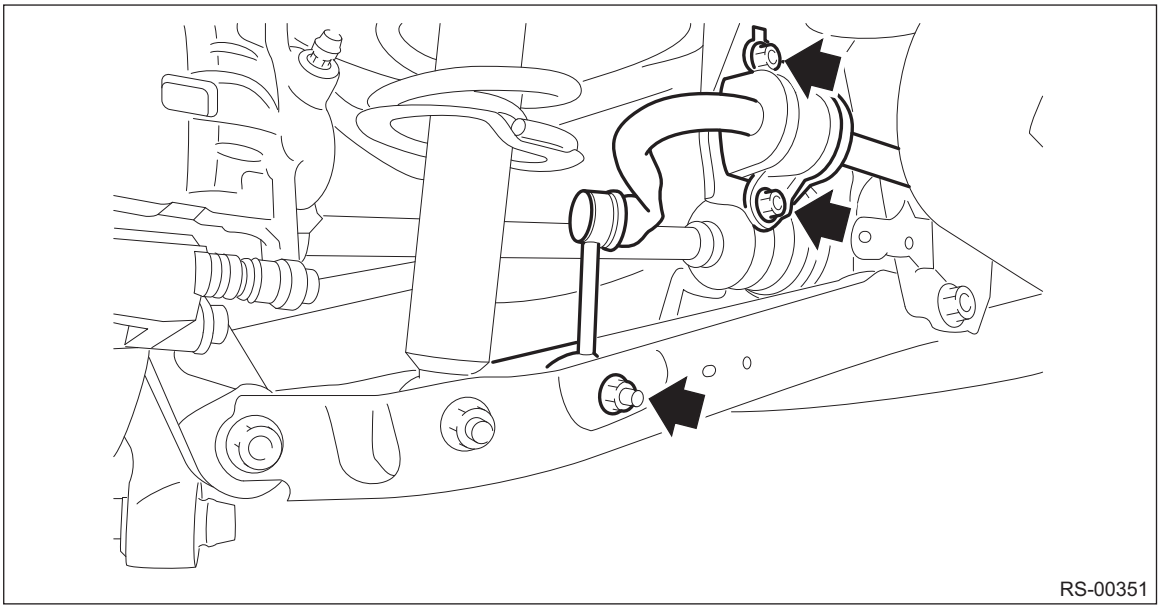
C: INSPECTION

Check the removed parts for wear, damage and crack, and repair or replace them if faulty.

4. Rear Stabilizer

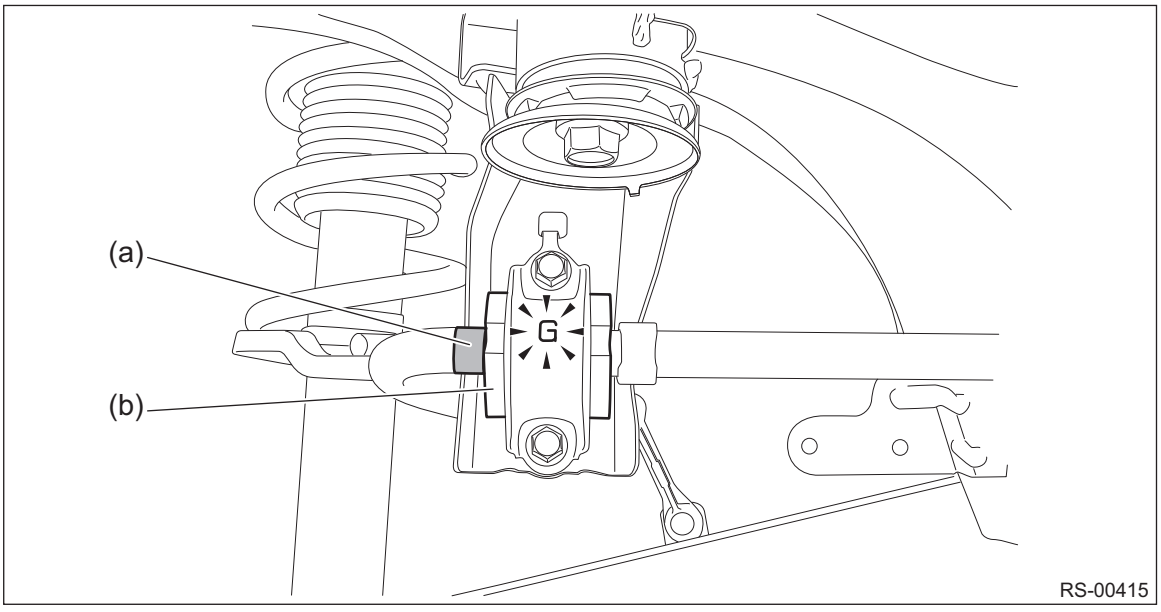
A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer.
   (1) Remove the nut and disconnect the right and left stabilizer links.
   (2) Detach the right and left clamps - stabilizer bushing and remove the rear stabilizer.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**
- **Install the clamp - stabilizer bushing with the "G" character facing upward.**
- **When installing, align the edge of identification paint (a) to the end face of the bushing (b).**



1) Before installation, inspect the following items and replace any faulty part with a new one.
- Check the bushing - stabilizer for abnormal cracks, fatigue or damage.
- Check the stabilizer link for damage.

2) Install the rear stabilizer.

Tightening torque:
Clamp - stabilizer bushing: 30 N·m (3.1 kgf-m, 22.1 ft-lb)
Stabilizer link: 38 N·m (3.9 kgf-m, 28 ft-lb)

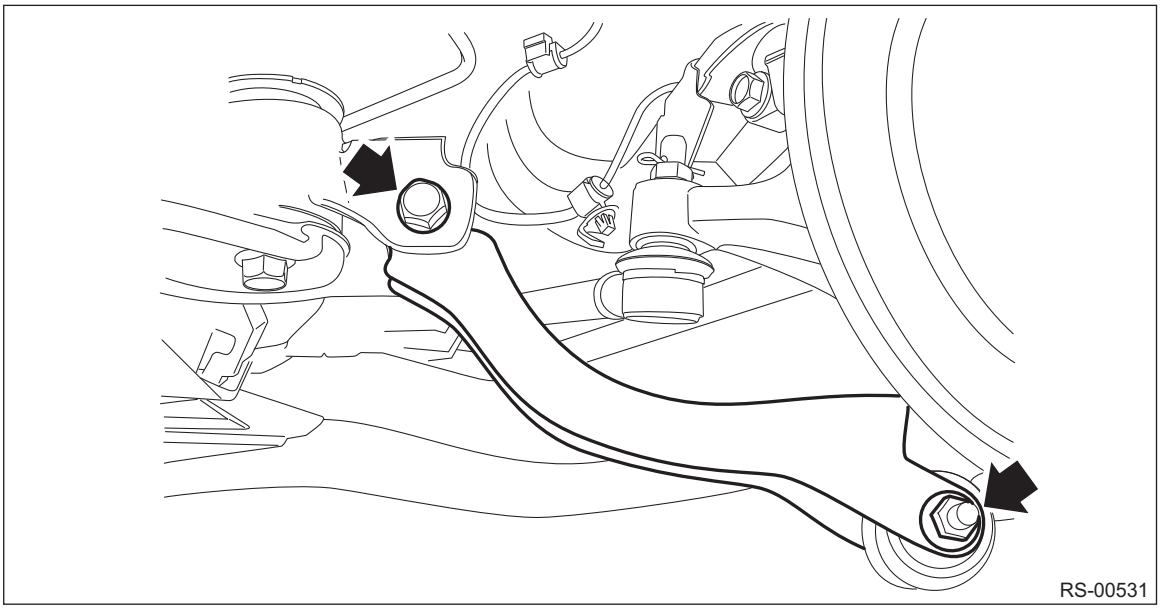
3) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5. Rear Trailing Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the bolts and nuts, and then remove the trailing link.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install the trailing link.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

2) Install the rear wheels and lower the vehicle.

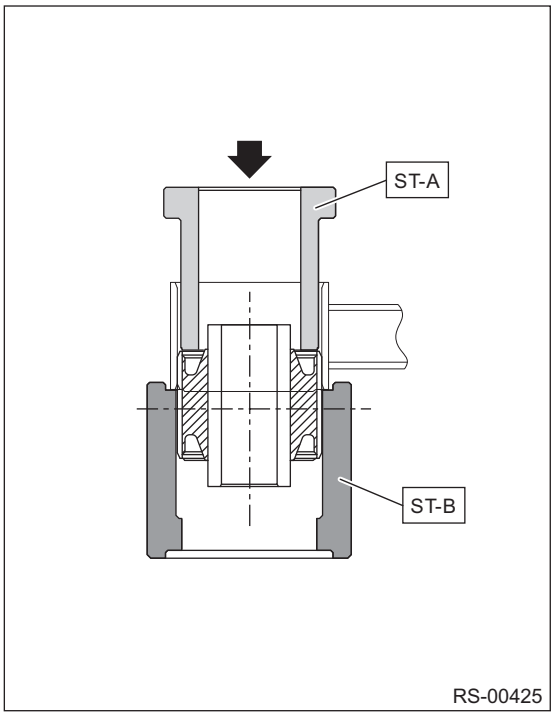
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

1. BUSHING A - TRAILING LINK

Using the ST, push out the bushing A - trailing link.

Preparation tool:
ST-A: INSTALLER (20099FG000)
ST-B: INSTALLER & REMOVER (BASE) (20099PA010)



2. BUSHING D - REAR AXLE HOUSING

For the removal procedure of bushing D - rear axle housing, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-33, BUSHING D - REAR AXLE HOUSING, DISASSEMBLY, Rear Axle.>

D: ASSEMBLY

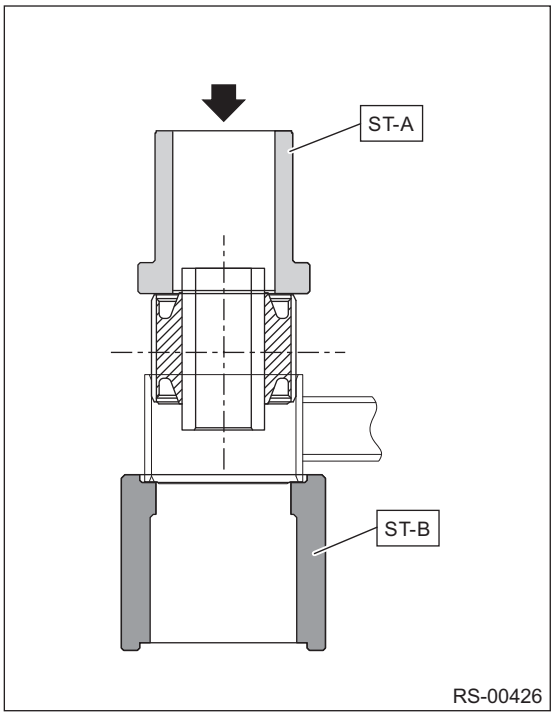
1. BUSHING A - TRAILING LINK

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST-A and ST-B, press-fit the bushing.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A: INSTALLER (20099FG000)
ST-B: INSTALLER & REMOVER (BASE) (20099PA010)



2. BUSHING D - REAR AXLE HOUSING

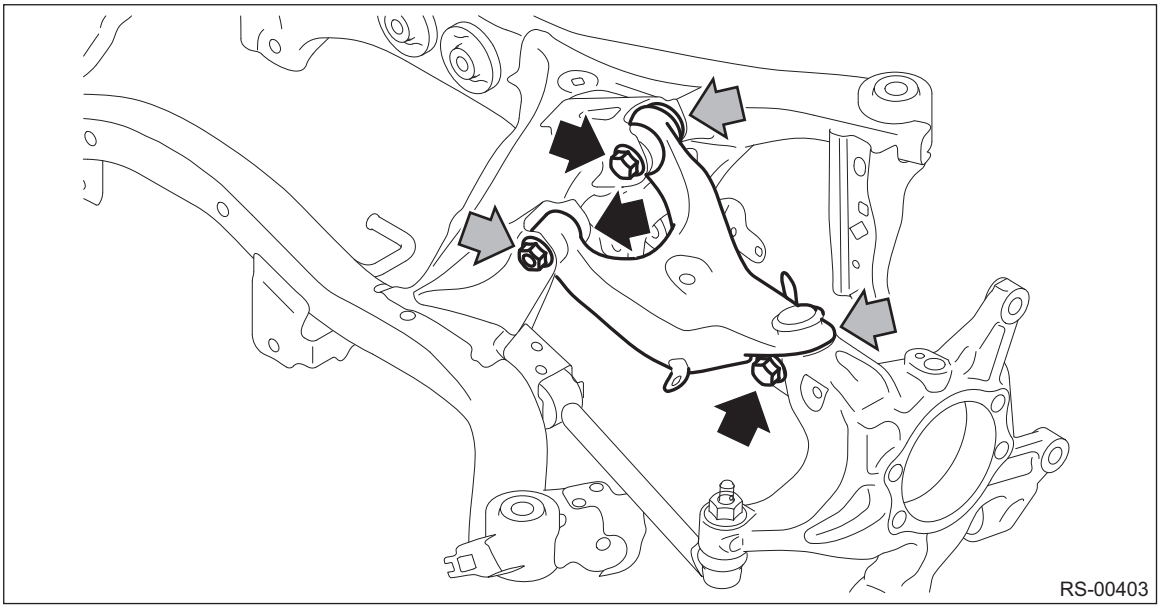
For the installation procedure of bushing D - rear axle housing, refer to “Rear Axle” in the “DRIVE SHAFT SYSTEM” section. <Ref. to DS-34, BUSHING D - REAR AXLE HOUSING, ASSEMBLY, Rear Axle.>

6. Upper Arm

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear sub frame assembly. <Ref. to RS-9, REMOVAL, Rear Sub Frame.>
4) Remove the bolts and nuts to remove the upper arm assembly.



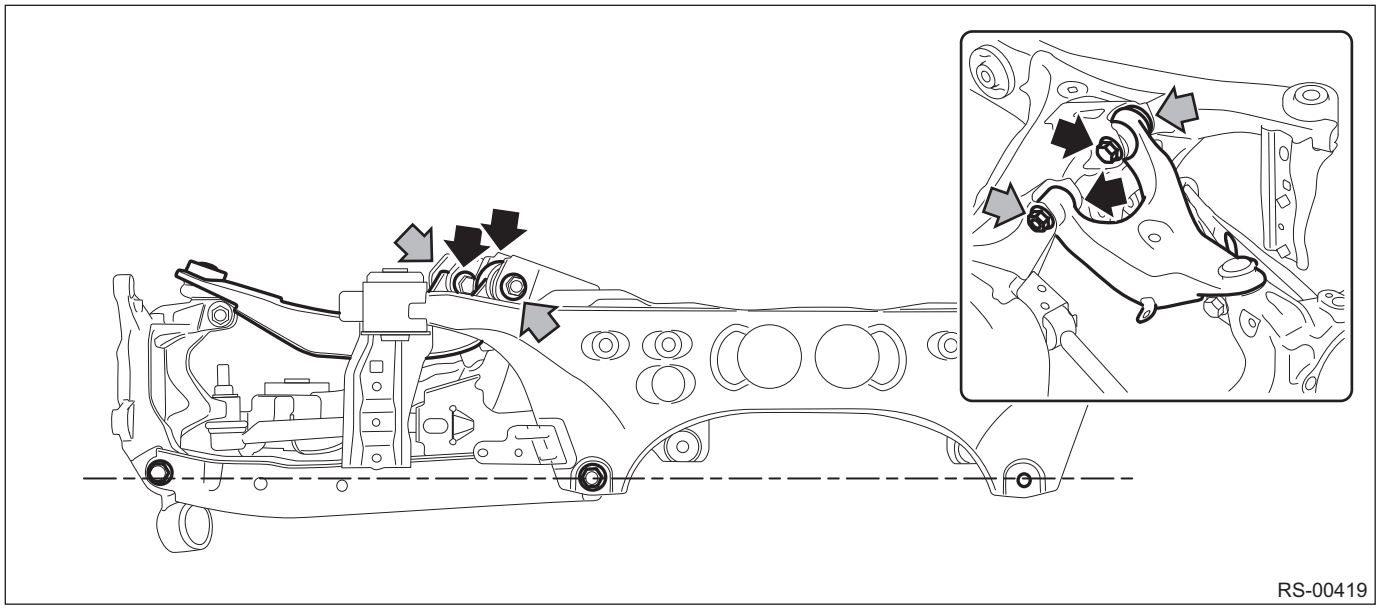
B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing when the arm is positioned in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the upper arm assembly for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for abnormal cracks, fatigue or damage.

2) Install the upper arm assembly.
   (1) Make the installation sections of the rear lateral link assembly (the bolt on the rear axle housing side and the bolt on the rear sub frame assembly side) horizontal.

(2) Install the upper arm assembly to the rear sub frame assembly.



Tightening torque:
Upper arm assembly — rear sub frame assembly: 90 N·m (9.2 kgf-m, 66.4 ft-lb)

3) Connect the upper arm assembly and the rear axle housing.

Tightening torque:
Upper arm assembly — rear axle housing: 80 N·m (8.2 kgf-m, 59 ft-lb)

4) Install the rear sub frame assembly. <Ref. to RS-11, INSTALLATION, Rear Sub Frame.>
5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

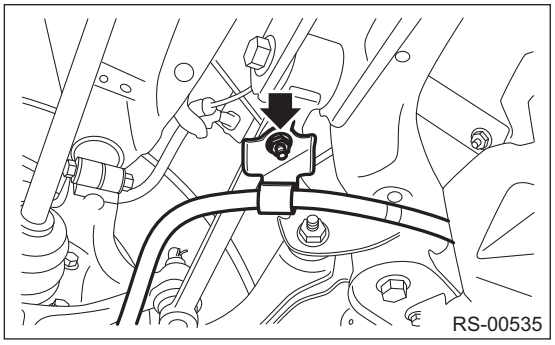
CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

7. Front Lateral Link

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the trailing link. <Ref. to RS-16, REMOVAL, Rear Trailing Link.>
3) Remove the nuts, and remove the cable assembly - parking brake or the electronic parking brake harness.

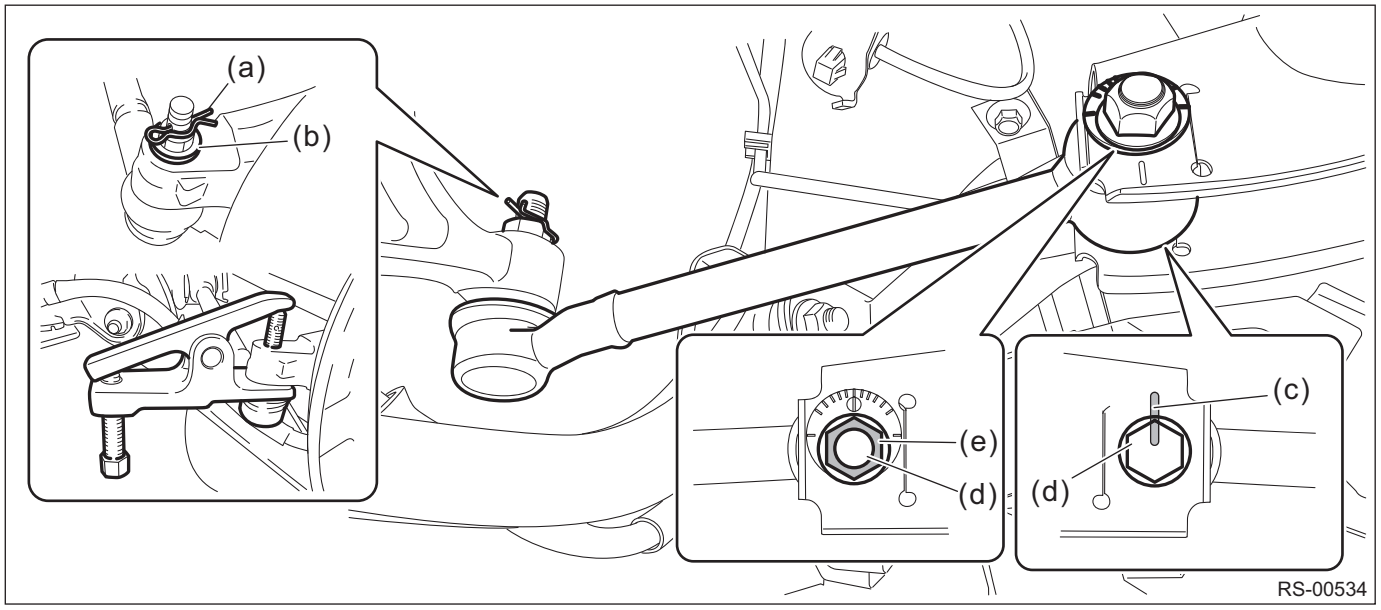


4) Remove the lateral link assembly - front.
   (1) Remove the snap pin (a) and nut (b).
   (2) Disconnect the rear axle housing and the ball joint.

Preparation tool:
Tie-rod ball joint puller

   (3) Scribe alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.
   (4) Remove the adjusting bolt (d), and remove the lateral link assembly - front.

CAUTION:
When removing the adjusting bolt (d), make sure to fix the bolt head in place when loosening the nut (e).



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.

- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - front.

CAUTION:
• When installing the adjusting bolt (d), make sure to fix the bolt head in place and tighten the nut side (e).
• Align alignment marks (c) on the adjusting bolt for lateral link assembly - front and on the rear sub frame assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the nuts, and install the cable assembly - parking brake or the electronic parking brake harness.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

4) Install the trailing link.

Tightening torque:
110 N·m (11.2 kgf-m, 81.1 ft-lb)

5) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

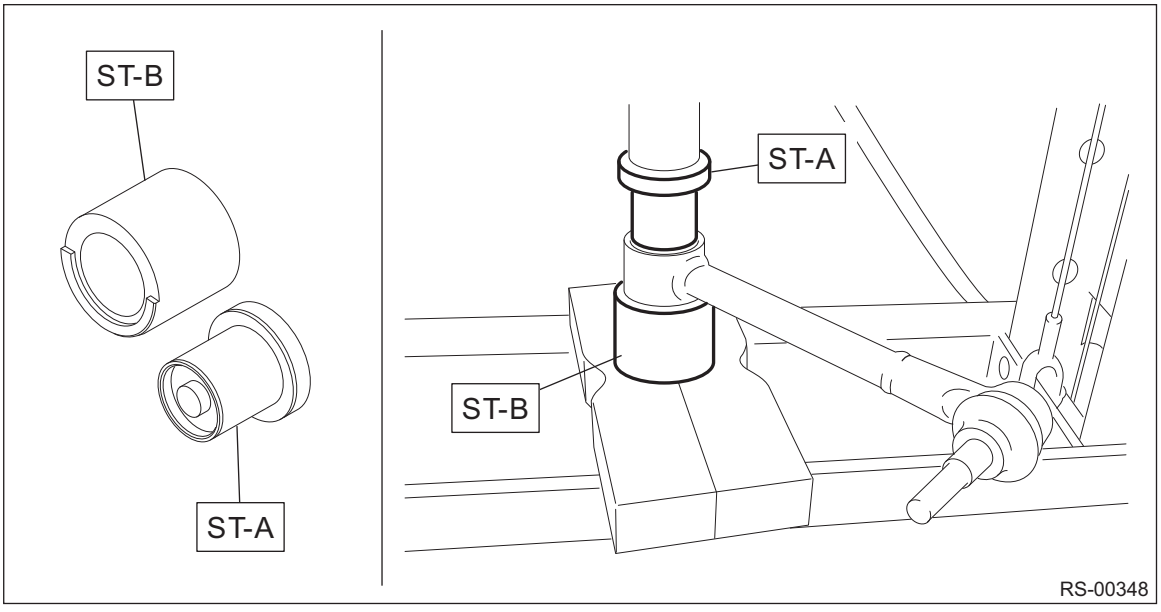
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: DISASSEMBLY

Using the ST, push out the bushing B - lateral link.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE000)



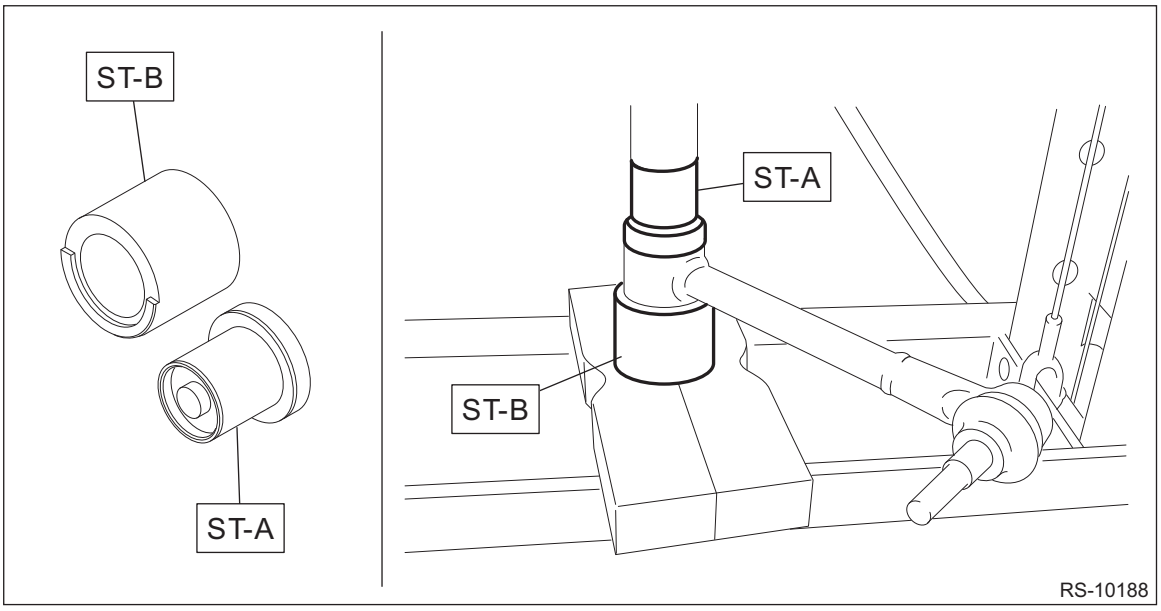
D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - front for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.
- Visually check the boot on the ball joint for damage.

2) Using the ST, press-fit the bushing B - lateral link.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE000)

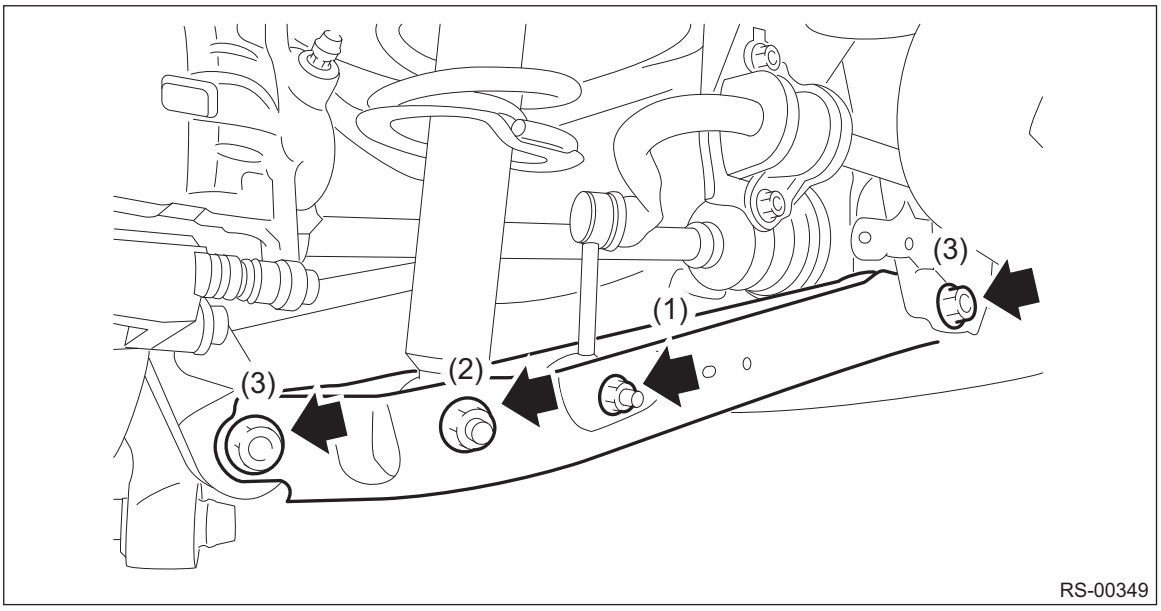


8. Rear Lateral Link

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-88, REMOVAL, Rear Height Sensor.>
4) Remove the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link.
   (2) Remove the bolts and nuts, and remove the lower side of rear shock absorber assembly.
   (3) Remove the bolts and nuts, and remove the lateral link assembly - rear.



B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Install the lateral link assembly - rear.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>

3) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

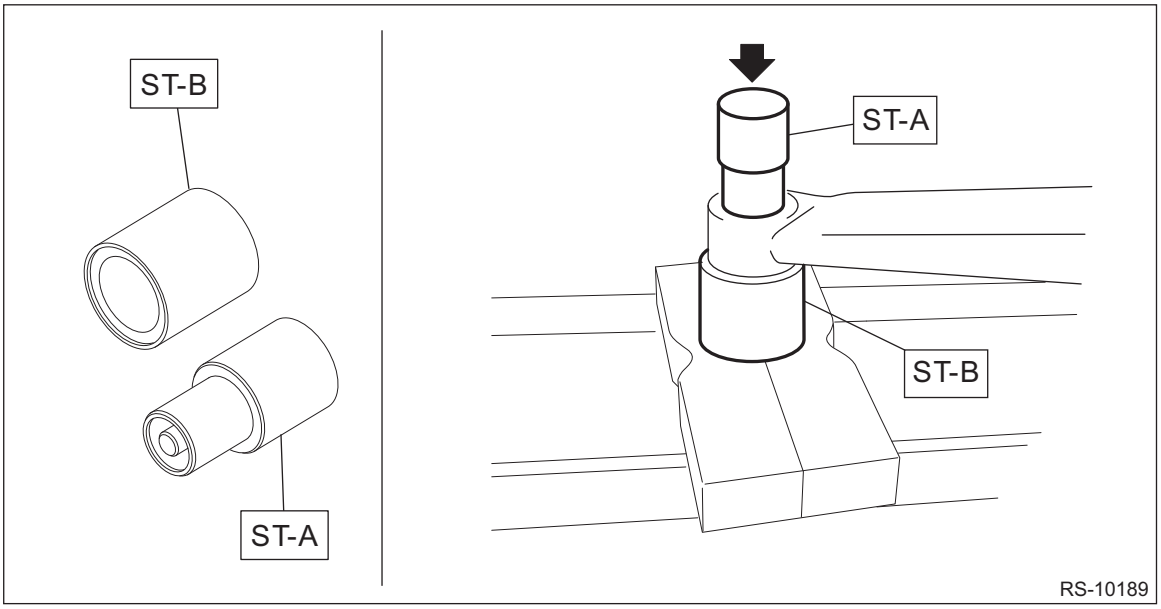
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

Using the ST, push out the bushing.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)

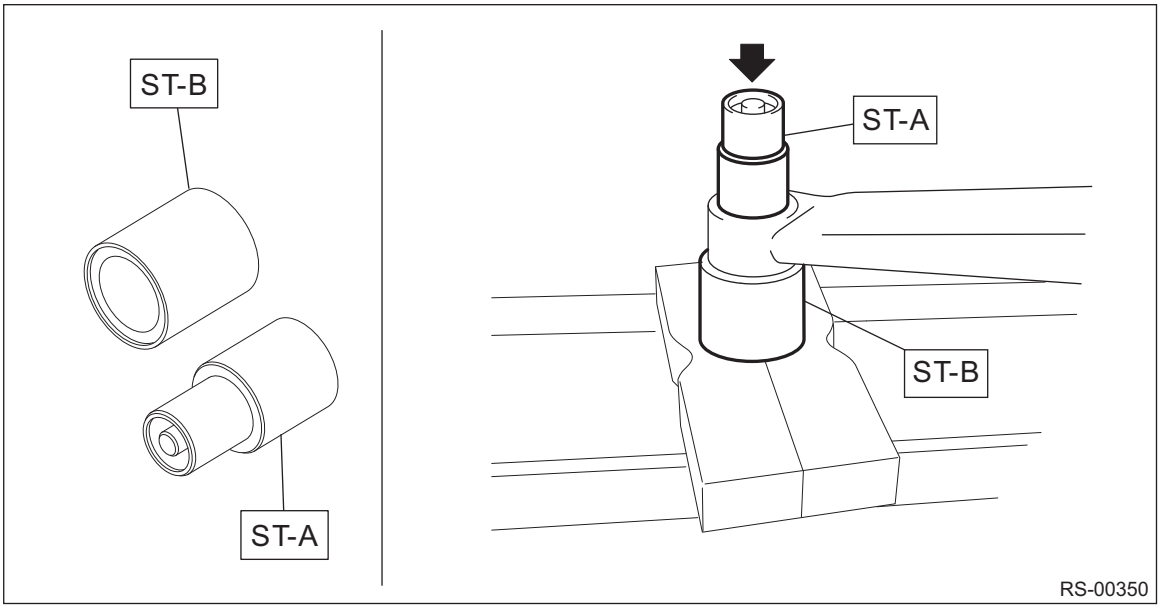


D: ASSEMBLY

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Visually check the lateral link assembly - rear for damage and deformation.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Using the ST, press the bushing into place.

Preparation tool:
ST-A & ST-B: INSTALLER & REMOVER (20099AE010)



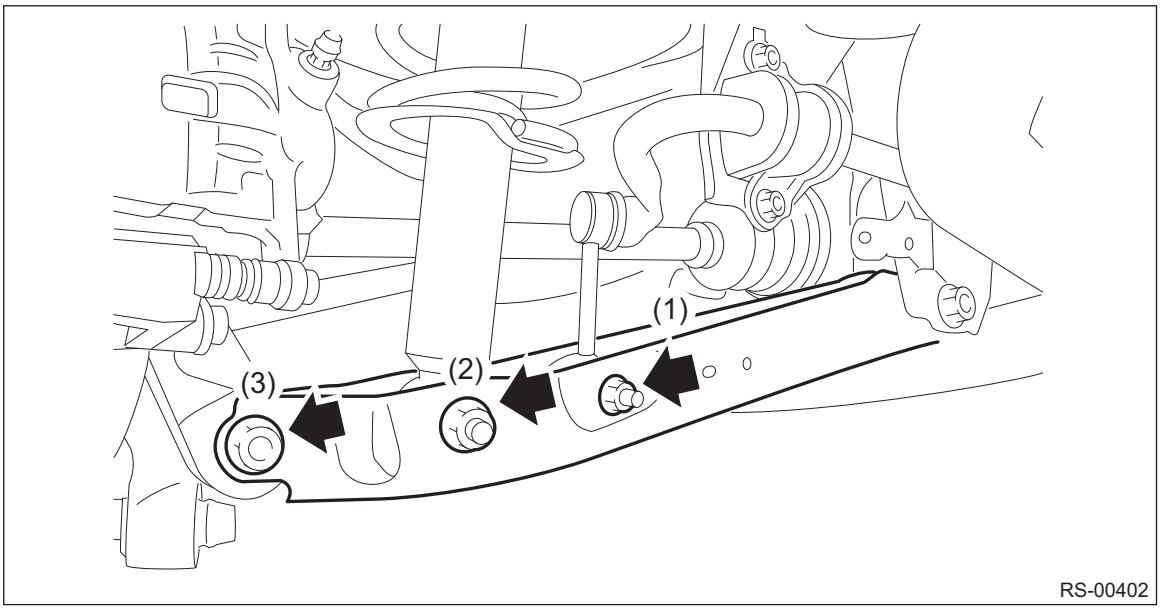
9. Rear Shock Absorber

A: REMOVAL

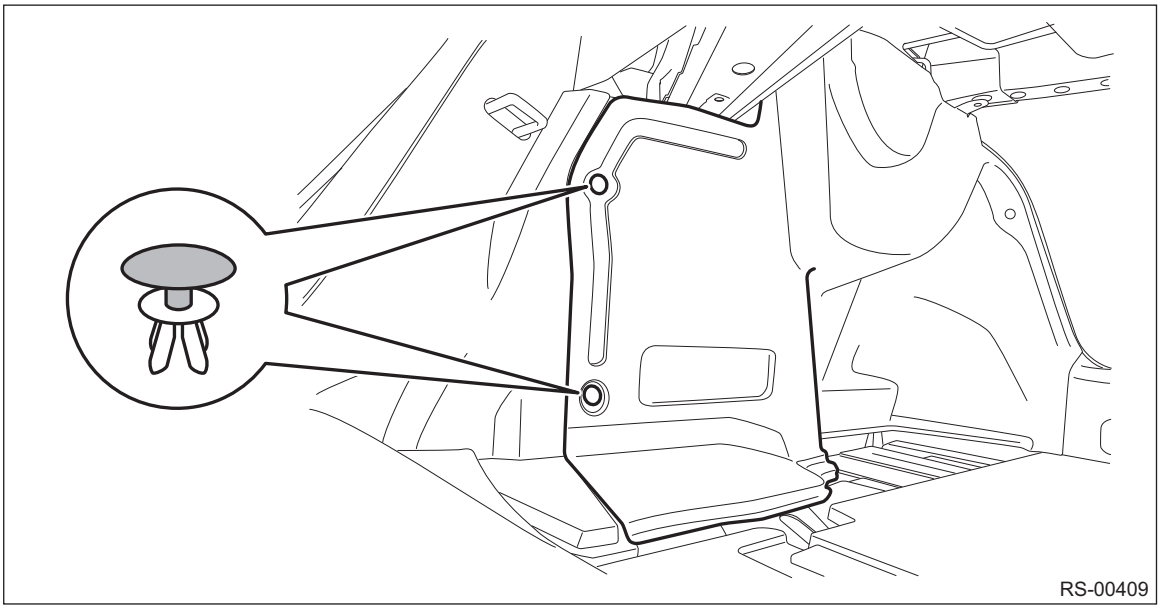
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

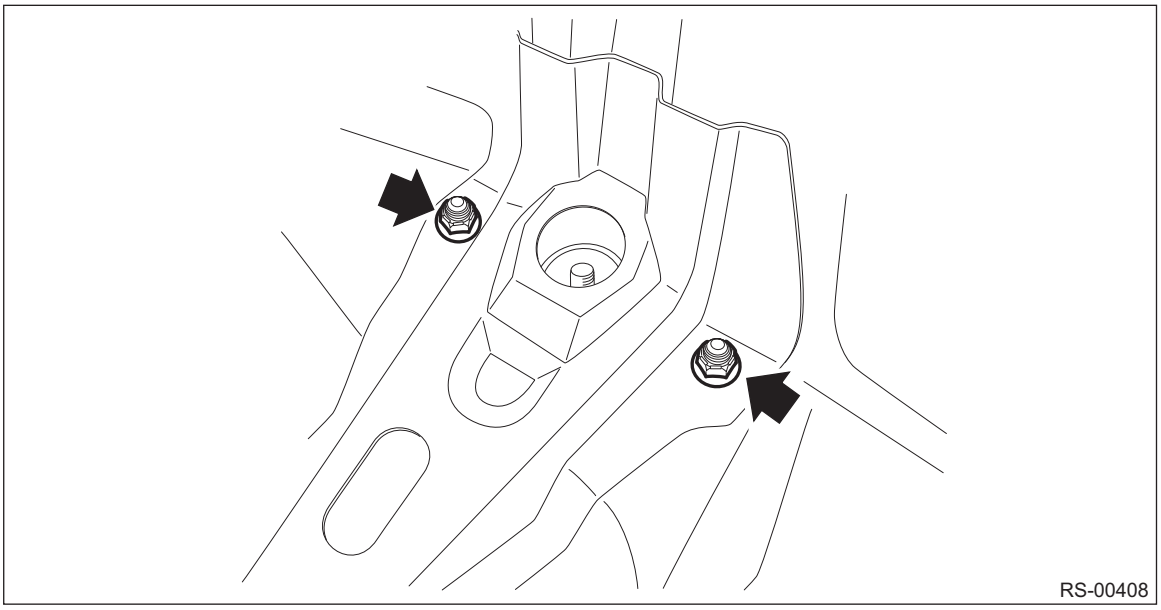
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-88, REMOVAL, Rear Height Sensor.>
4) Remove the bolts and nuts, and lower the lateral link assembly - rear.
   (1) Remove the nut and disconnect the rear stabilizer link.
   (2) Remove the bolts from the lower side of rear shock absorber assembly.
   (3) Disconnect the rear axle housing from the lateral link assembly - rear.



5) Take out the trunk mat.
6) Tilt the rear seat backrest forward.
7) Remove the clips, and turn over the trim panel - trunk side.



8) Remove the nuts on the upper side of rear shock absorber assembly.



9) Lower the lateral link assembly - rear, and remove the rear shock absorber assembly.

B: INSTALLATION

CAUTION:
- **For parts which are not reusable, always use new parts.**
- **Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.**

1) Install the rear shock absorber assembly.
   (1) Lower the lateral link assembly - rear, and place the rear shock absorber assembly inside.
   (2) Install the upper side of the rear shock absorber assembly.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
   (3) Install the bolts on the lower side of rear shock absorber assembly.

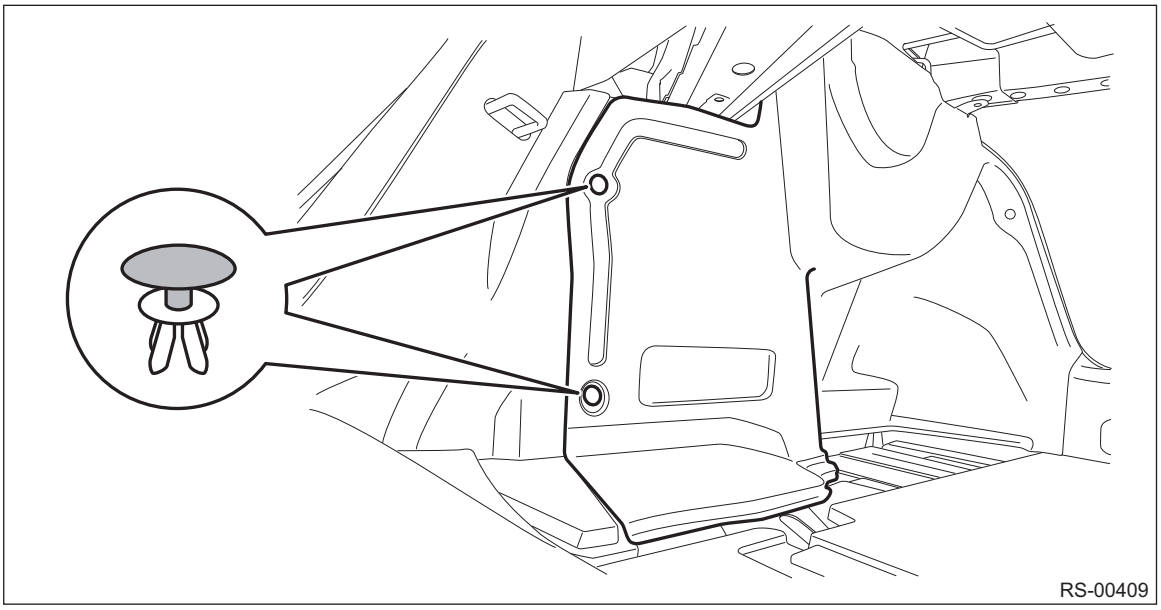
Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)
   (4) Install the lateral link assembly - rear and the stabilizer link.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to RS-3, COMPONENT, General Description.>
   (5) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the clips, and install the trim panel - trunk side.



3) Install the trunk mat, and return the rear seat backrest to the lock position.
4) Install the rear wheels and lower the vehicle.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

5) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

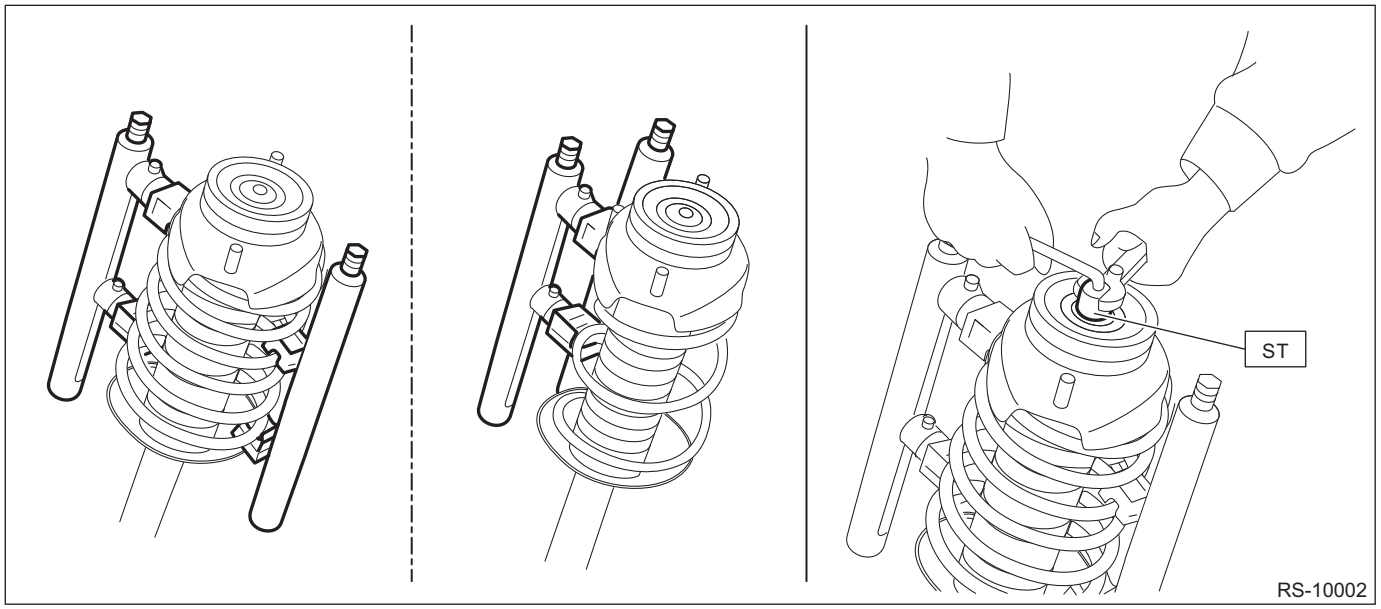
1) Using a coil spring compressor, compress the coil spring.
2) Using a hexagon wrench to prevent the shock absorber piston rod from turning, remove the self-locking nut with ST.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399FG000)

NOTE:
<Example of coil spring compressor installation>

The installing position of coil spring compressor varies depending on the coil spring shape and winding number.



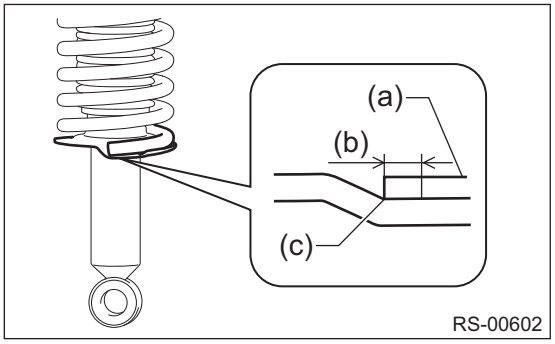
3) Remove the rubber seat - shock UPR and shock mount - rear from the shock absorber COMPL - rear.
4) Gradually decrease the compression pressure of compressor, and remove the coil spring - rear.
5) Remove the helper - rear and the dust cover - rear shock.

D: ASSEMBLY

1) Before assembly, check each part. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>
2) Using a coil spring compressor, compress the coil spring - rear.

CAUTION:
When installing the coil spring compressor to the coil spring, follow the operation manual accompanied with the coil spring compressor during operation.

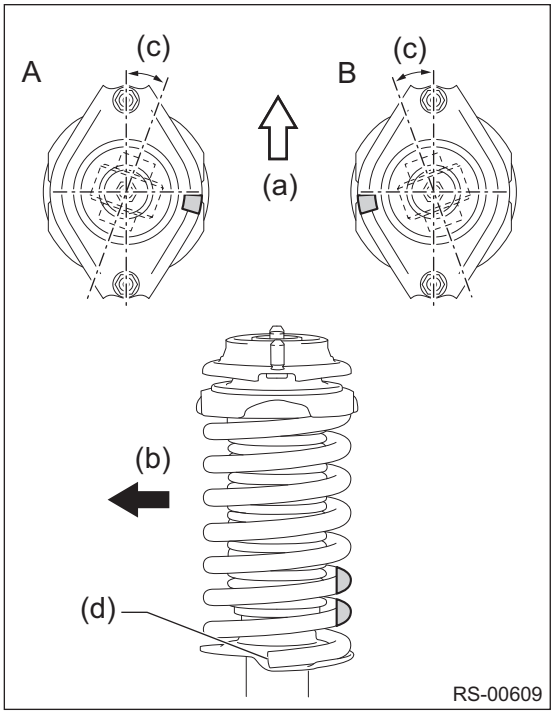
3) Install by aligning with the edge surface of the coil spring - rear and the stopper portion of the lower side spring seat.



(a) Coil spring - rear
(b) 0+10 mm (0+0.4 in)
(c) Spring seat stopper portion

4) Install the helper - rear and the dust cover - rear shock to the piston rod.
5) Fully pull up the piston rod in the upward direction.
6) Temporarily tighten the rubber seat - shock UPR and the shock mount - rear with new self-locking nuts.

NOTE:
Position the shock mount - rear as shown in the figure.



A LH side
B RH side

(a) Front side of vehicle
(b) Vehicle outside
(c) 0°±10°
(d) End portion of coil spring - rear

7) Using a hexagon wrench to prevent the shock absorber piston rod from turning, tighten the new self-locking nut with ST.

CAUTION:
Make sure that the shock mount - rear turns smoothly after tightening.

Preparation tool:
ST: STRUT MOUNT SOCKET (20399FG000)

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

8) Loosen the coil spring compressor carefully.

E: INSPECTION

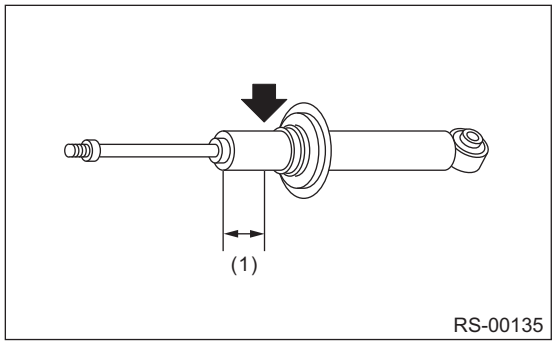
Refer to “Front Strut” in “FRONT SUSPENSION” section for inspection procedures. <Ref. to FS-45, INSPECTION, Front Strut.>

F: DISPOSAL

CAUTION:
• Before discarding the strut COMPL and the shock absorber COMPL, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
• Do not disassemble the strut COMPL and the shock absorber COMPL or throw them into flames.
• When discarding the strut COMPL and the shock absorber COMPL filled with gas, drill a hole on them to purge the gas.

1) Place the shock absorber on a level surface with the piston rod fully expanded.

2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 — 3 mm (0.08 — 0.12 in) diameter.



(1) 40 mm (1.57 in)

10.General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible cause	Corrective action
(1) Permanent distortion or damaged coil spring	Replace.
(2) Rough operation of shock absorber	Replace.
(3) Installation of the wrong shock absorber	Replace with proper parts.
(4) Installation of the wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Excessive shock in bumping

Possible cause	Corrective action
(1) Damaged coil spring	Replace.
(2) Overinflation of tires	Adjust.
(3) Improper wheel arch height	Replace the coil springs with new parts.
(4) Defective operation of shock absorber	Replace.
(5) Damage or deformation of shock absorber mount	Replace.
(6) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in shock absorber	Replace.
(9) Oil leakage from the shock absorber	Replace.

3. NOISE

Possible cause	Corrective action
(1) Wear or damage of shock absorber component parts	Replace.
(2) Loosening of the suspension link or arm installing bolt	Tighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitable length (maximum or minimum) of shock absorber	Replace with appropriate parts.
(5) Damaged coil spring	Replace.
(6) Wear or damage of the ball joint	Replace.
(7) Deformation of the clamp - stabilizer bushing	Replace.

WHEEL AND TIRE SYSTEM

WT

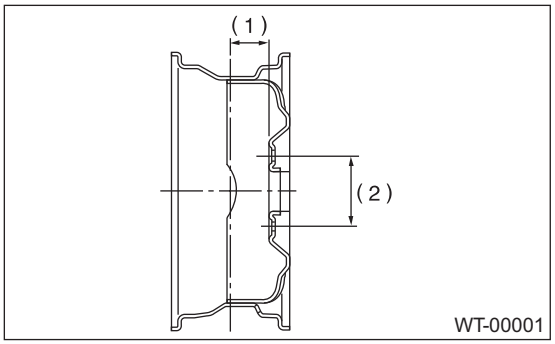
Page

1. General Description 2
2. Tire and Wheel 5
3. Temporary Tire 7
4. Tire Pressure Monitoring System 8
5. General Diagnostic Table 12

1. General Description

A: SPECIFICATION

1. NOTE



(1) Inset
(2) P.C.D.

NOTE:
Size and inflation pressure of the standard equipment tire, temporary tire and appropriate tire for equipment are described on the “Tire inflation pressure” label attached to the body side of the driver’s door.

2. STANDARD EQUIPMENT TIRE & WHEEL

• STI model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
245/40R18 97W	18 × 8$^1/_2$J	55 (2.17)	114.3 (4.5)	230 (2.3, 33)	220 (2.2, 32)
245/35R19 89W	19 × 8$^1/_2$J				

• Except for STI model

Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
245/40R18 97W	18 × 8$^1/_2$J	55 (2.17)	114.3 (4.5)	230 (2.3, 33)	220 (2.2, 32)
235/45R17 94W	17 × 8J				

3. TEMPORARY TIRE & WHEEL

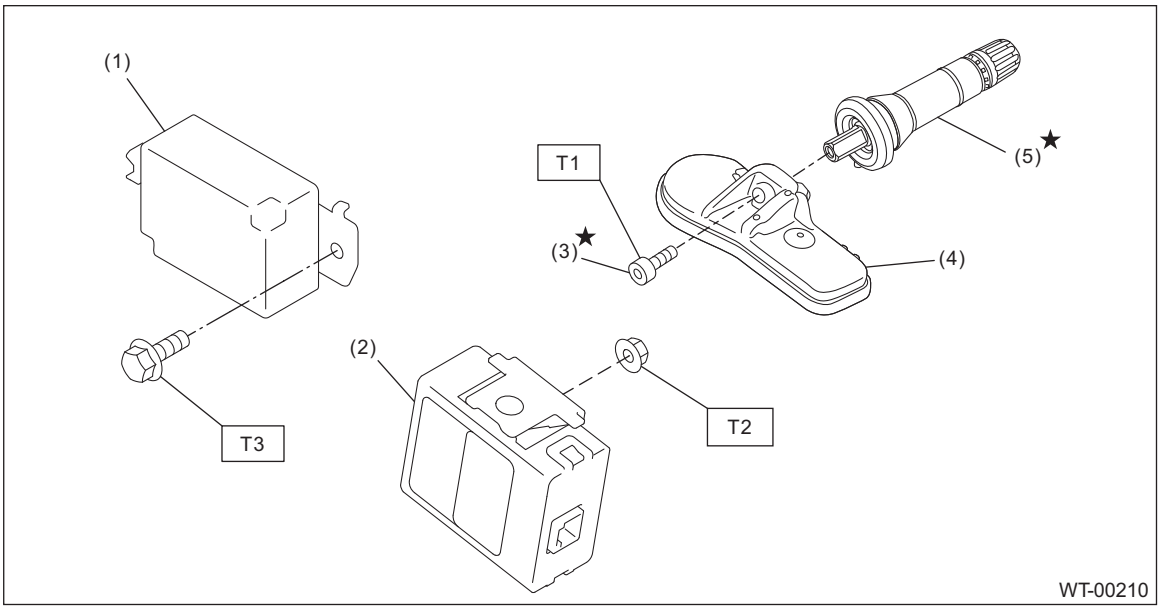
Tire size	Wheel size	Inset mm (in)	P.C.D. mm (in)	Tire inflation pressure kPa (kgf/cm^2, psi)	
				Front wheel	Rear wheel
T145/70D17 106M	17 × 4T	30 (1.18)	114.3 (4.5)	Not used	420 (4.2, 60)
T135/70D18 103M	18 × 4T	25 (0.98)			
205/50R17 89V	17 × 7J	55 (2.17)			230 (2.3, 33)
205/45R18 86S	18 × 7J				260 (2.6, 38)

4. SERVICE DATA

Part	Axial runout	Radial runout
Alloy wheel	1 mm (0.039 in)	

Wheel balancing	Standard	Service limit
Dynamic unbalance	5 g (0.18 oz) or less	

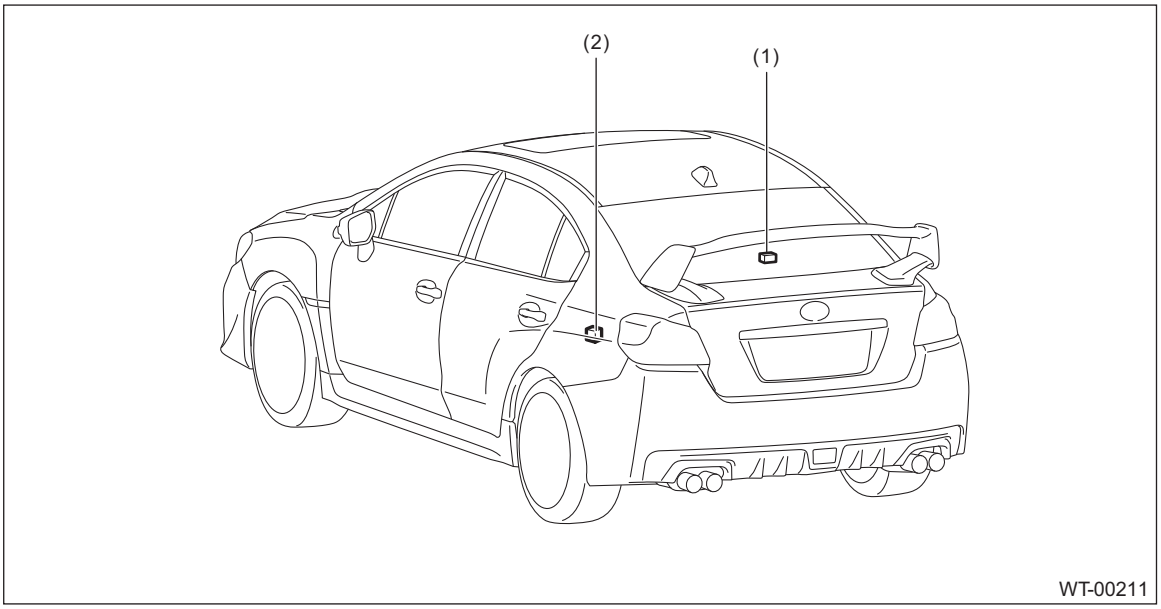
B: COMPONENT



(1) TPMS & keyless entry control module (model without keyless access with push button start)
(2) TPMS CM (model with keyless access with push button start)
(3) Screw
(4) Transmitter (snap in type)
(5) Valve

Tightening torque: N·m (kgf-m, ft-lb)

T1: 1.4 (0.1, 1)
T2: 7.5 (0.8, 5.5)
T3: 13 (1.3, 9.6)



(1) TPMS & keyless entry control module (model without keyless access with push button start)
(2) TPMS CM ASSY (model with keyless access with push button start)

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Air pressure gauge	Used for measuring tire air pressure.
Dial gauge	Used for measuring wheel runout.
Wheel balancer	Used for adjusting wheel balance.

2. Tire and Wheel

A: REMOVAL

1) Lift up the vehicle.
2) Remove the wheel nut.
3) Remove the wheels.

CAUTION:
When removing the wheels, be careful not to damage the bolt - hub.

B: INSTALLATION

1) Install the wheels to vehicle.
2) Tighten the wheel nuts to the specified torque.

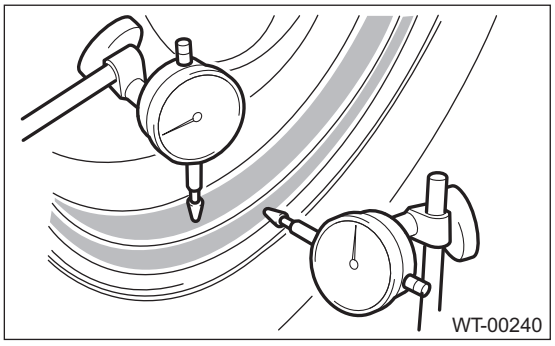
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1. TIRE

CAUTION:
When replacing a tire, make sure to use tires of the same size, construction and load range as originally installed.

1) Tire size and tire inflation pressure check <Ref. to WT-2, SPECIFICATION, General Description.>
2) Cracks, damage and wear check
3) Tire runout check
   (1) Lift up the vehicle.
   (2) Slowly rotate the wheel to check rim “runout” using a dial gauge.



- Alloy wheel

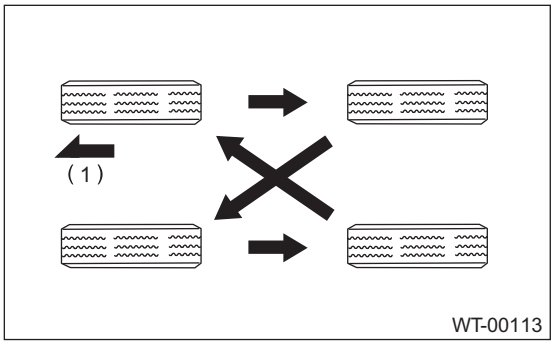
Service limit:
Axial and longitudinal runout: 1 mm (0.04 in)

   (3) If the rim runout exceeds service limit, replace the wheel.

2. TIRE ROTATION

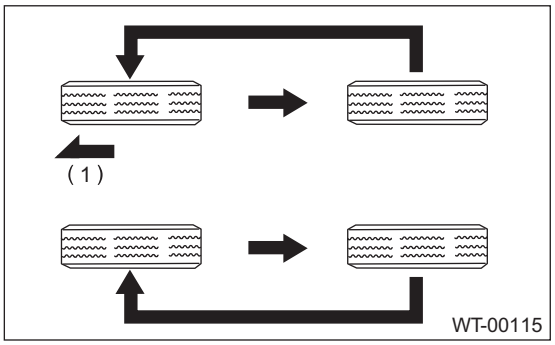
NOTE:
Rotate tires periodically (10,000 km/6,000 miles) in order to prolong life and to prevent uneven wear.
Rotate tires as shown in the figure depending on whether or not the direction of the tire rotation is specified.

- When the direction of tire rotation is not specified



(1) Front side of vehicle

- When the direction of tire rotation is specified

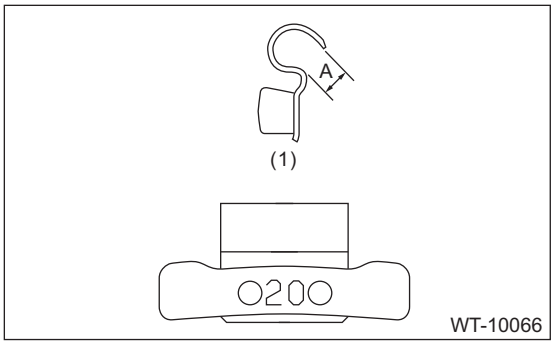


(1) Front side of vehicle

3. WHEEL BALANCING

1) Using the wheel balancer, measure wheel balance.
2) Adjust the wheel balancing.

NOTE:
- Unbalance after adjusting the wheel balancing should be 5 g (0.18 oz) or less.
- When using the adhesive type weight, degrease the surface where the adhesive type weight will be applied securely.
- After applying the adhesive type weight, apply a force to the weight and attain full adhesion.
- Using the knock-on type weight, check the size of the knock-on part.



(1) Knock-on type weight for alloy wheel

Service limit A:
Knock-on type weight for alloy wheel: 5 mm (0.2 in)

3. Temporary Tire

A: NOTE

"T-type" or "Temporary" tire for temporary use is equipped as a temporary tire.

CAUTION:
• The "T-type" or "Temporary" tire is only for temporary use. Replace with a standard equipment sized tire as soon as possible.
• Do not use standard sized tire chains for "T-type" or "Temporary" tires. Because tire size is small, tire chains can not be installed properly and will damage the vehicle and tires if they are detached while driving.
• Do not drive at a speed greater than 80 km/h (50 MPH).
• Drive the vehicle as slowly as possible and avoid bumps on the road.

B: REPLACEMENT

Refer to "Tire and Wheel" for removal and installation of the "T-type" or "Temporary" tire. <Ref. to WT-5, Tire and Wheel.>

C: INSPECTION

For inspection of the "T-type" or "Temporary" tire, refer to "Inspection" for standard equipment tire. <Ref. to WT-5, TIRE, INSPECTION, Tire and Wheel.>

4. Tire Pressure Monitoring System

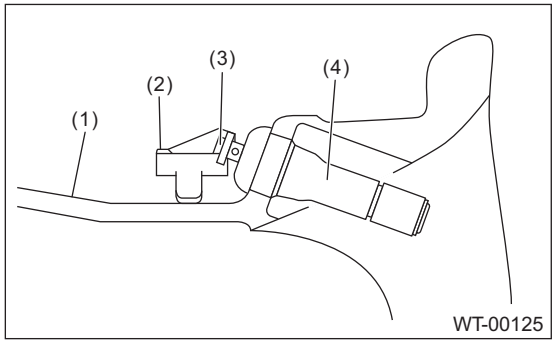
A: REMOVAL

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

1) Remove the wheels from the vehicle. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Remove the tires from wheels.

CAUTION:
Use a tire changer when removing the tire from the wheel.
3) Loosen the screw to remove the transmitter from the valve stem.

CAUTION:
Do not reuse the valve and screw.
Replace the valve and screw with a new part even when reusing transmitter.



(1) Wheel
(2) Transmitter
(3) Screw
(4) Valve

4) Remove the valve from the wheel.

2. TPMS & KEYLESS CONTROL MODULE

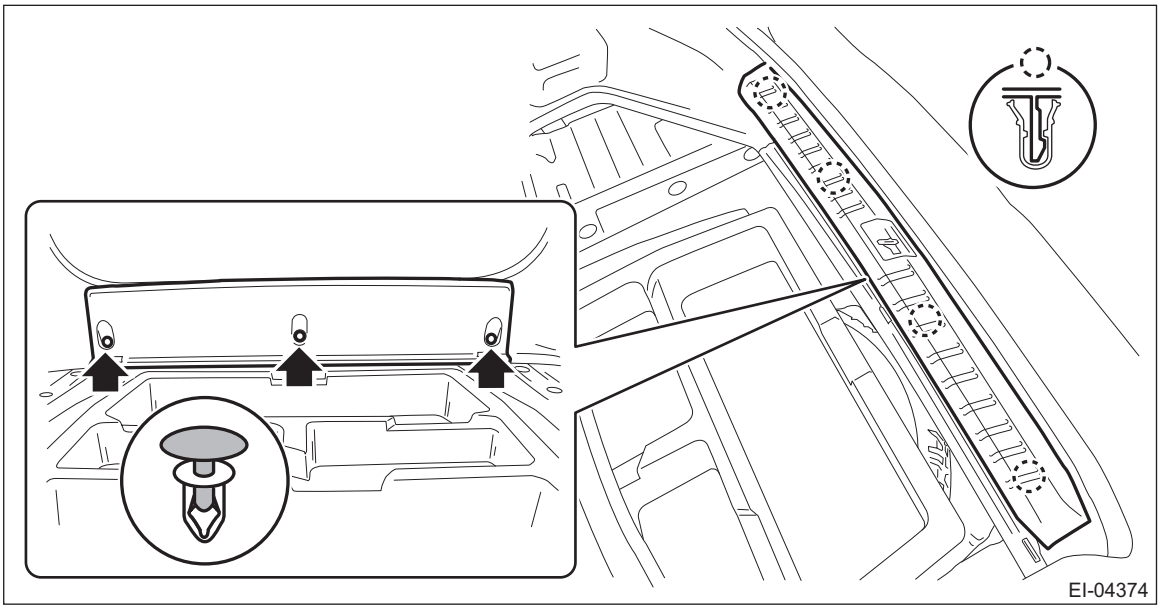
NOTE:
- TPMS CM for keyless entry model is integrated with the keyless entry control module.
- For removal procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-77, REMOVAL, Keyless Entry Control Module.>

3. TPMS CM

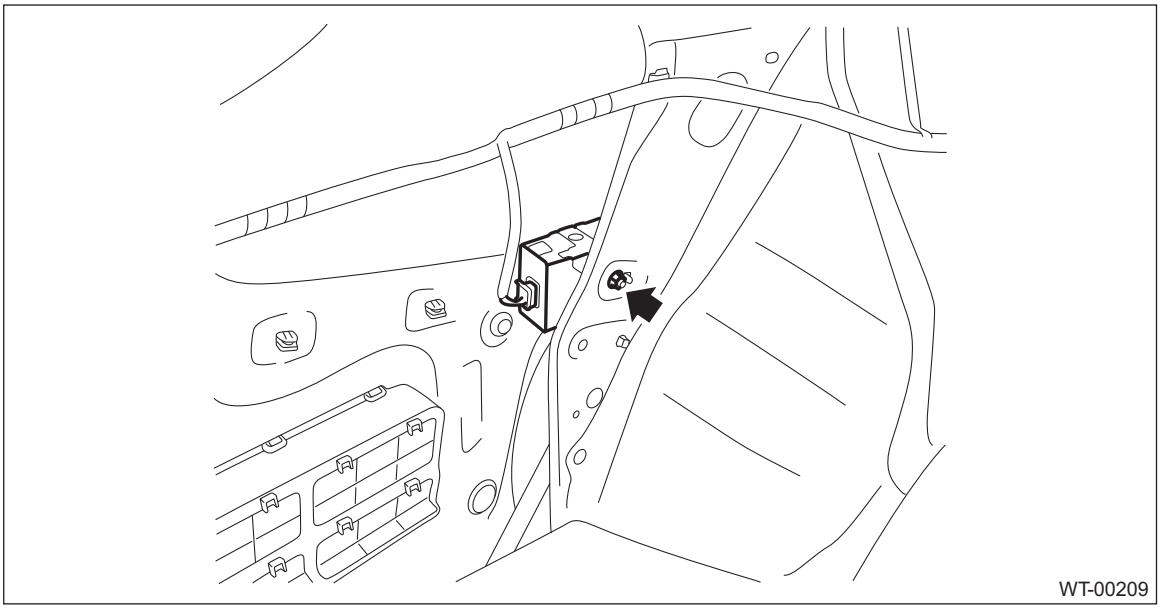
NOTE:
TPMS CM for model with keyless access with push button start is separated from the keyless access control module.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, remove the ground terminal from battery sensor.
2) Remove the trunk room mat.
3) Remove the trim panel - trunk rear.
   (1) Remove the clip.

(2) Release the claws, and remove the trim panel - trunk rear.



4) Remove the trim panel - trunk side LH. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
5) Remove the TPMS CM.
(1) Disconnect the connector.
(2) Remove the nuts to remove the TPMS CM.

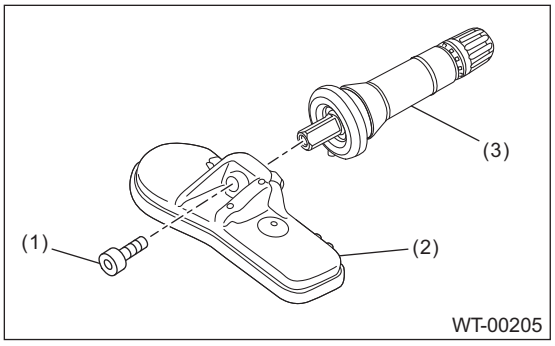


B: INSTALLATION

1. TRANSMITTER (TIRE INFLATION PRESSURE SENSOR)

CAUTION:
Use the new transmitter assembly or replace the new valve and screw, when installing.

1) Replace the valve and screw with a new part when reusing transmitter.



(1) Screw
(2) Transmitter
(3) Valve

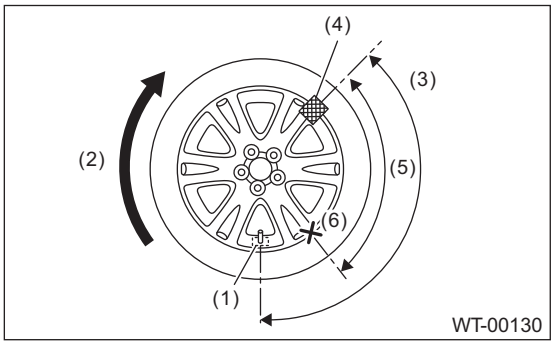
Tightening torque:
1.4 N·m (0.1 kgf-m, 1 ft-lb)

2) Install the transmitter to the wheel by aligning it with valve hole.

NOTE:
When using the jig that pulls the valve cap by hooking its neck part, use another short-type cap.

3) Install the tires to wheels.

CAUTION:
• Use a tire changer when installing tire to wheel.
• To prevent damaging the transmitter, set the tire changer boom in the position as shown in the figure.



(1) Transmitter
(2) Direction of turn table rotation
(3) 135°
(4) Tire changer boom
(5) 90°
(6) Starting point for fitting the bead to the rim

4) Install the wheels to vehicle. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>

5) Register the transmitter ID when the transmitter has been replaced. <Ref. to TPM(diag)-12, Register Transmitter (ID).>

2. TPMS & KEYLESS CONTROL MODULE

NOTE:
• TPMS CM for keyless entry model is integrated with the keyless entry control module.
• For installation procedures, refer to “SECURITY AND LOCKS” section. <Ref. to SL-77, INSTALLATION, Keyless Entry Control Module.>

3. TPMS CM

NOTE:
TPMS CM for model with keyless access with push button start is separated from the keyless access control module.
1) Install the TPMS CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel - trunk side LH.
3) Install the trim panel - trunk rear.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5. General Diagnostic Table

A: INSPECTION

Symptoms	Possible cause	Corrective action
Wheel is out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-45, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
Vehicle is abnormally out of balance.	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Front stabilizer	Inspect the front stabilizer.
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
Abnormal wheel vibration	Improperly inflated tire	Adjust the tire pressure.
	Uneven wear	Check the tire referring to “Abnormal tire wear” in this table, carry out the procedure and replace the tire.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Housing ASSY - front axle	Check the housing assembly - front axle. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - front axle	Check the hub unit COMPL - front axle. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
	Hub unit COMPL - rear axle	Check the hub unit COMPL - rear axle. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>

Symptoms	Possible cause	Corrective action
Abnormal tire wear	Improperly inflated tire	Adjust the tire pressure.
	Improper wheel balancing	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check or adjust the front wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
	Rear wheel alignment	Check or adjust the rear wheel alignment. • Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.> • Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

TIRE PRESSURE MONITORING SYSTEM (DIAGNOSTICS)

TPM(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	4
3.	Electrical Component Location	6
4.	Control Module I/O Signal	7
5.	Subaru Select Monitor	8
6.	Read Diagnostic Trouble Code (DTC)	9
7.	Clear Memory Mode	10
8.	Read Current Data	11
9.	Register Transmitter (ID)	12
10.	Display Transmitter (ID)	13
11.	Inspection Mode	14
12.	Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern	15
13.	List of Diagnostic Trouble Code (DTC)	19
14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	21
15.	General Diagnostic Table	30

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil, etc.) from the TPMS & keyless entry CM connector or TPMS CM connector during removal and installation.

NOTE:
To check harness for open or short circuits, shake the suspected trouble spot or connector.

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Check with the user regarding when the warning light lit or started blinking. 2) Before performing diagnostics, check all components which may adversely affect the tire pressure monitor system. <Ref. to TPM(diag)-4, INSPECTION, General Description.>	Is the check result of the component that might affect the tire pressure monitor system OK?	Go to step **2**.	Repair or replace each component.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to TPM(diag)-8, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 4) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Go to step **4**.	Go to step **3**.
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to TPM(diag)-30, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to TPM(diag)-10, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to TPM(diag)-14, Inspection Mode.> 4) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).> Check that the DTC is not displayed.	Does the tire pressure warning light illuminates for about 2 seconds and then foes off after turning on the ignition switch, and then go out?	Finish the diagnosis.	Check the tire inflation pressure warning light. <Ref. to TPM(diag)-15, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

	Step	Check	Yes	No
4	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **5**.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
5	**PERFORM DIAGNOSIS.** 1) Refer to "List of Diagnostic Trouble Code (DTC)". 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to TPM(diag)-10, OPERATION, Clear Memory Mode.> 4) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 5) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Repeat steps 1 to 4 until DTC is not shown.	Finish the diagnosis.

2. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the TPM control module.

CAUTION:
- **Do not use electrical test equipment on any of the airbag system wiring harness circuits.**
- **Be careful not to damage the wiring harness of the airbag system, when servicing the TPMS & keyless entry CM or TPMS CM.**

2. TPMS & KEYLESS ENTRY CM OR TPMS CM

- If the transmitter is replaced, ID registration for the transmitter is required. <Ref. to TPM(diag)-12, OPERATION, Register Transmitter (ID).>
- When adjusting tire pressure indoors in winter, there is a big temperature difference between the indoor facilities and outside. Once the car is outside where the temperature is lower, the air pressure in the tires will drop, causing the tire pressure warning light to illuminate, even if the pressure in the tires was adjusted to standard values indoors. To avoid this, it is necessary to adjust the tire pressure to the high side in consideration of the difference in temperature between inside and outside according to the following table.
- 235/45R17, 245/40R18, 245/35R19

Temperature °C (°F)	Indoor temperature	15.5 (60)		
	Ambient temperature	–1 (30)	–12 (10)	–23 (–10)
Air pressure kPa (psi)	Front	250 (36)	265 (38)	280 (41)
	Rear	240 (35)	255 (37)	270 (39)

B: INSPECTION

Before performing diagnosis, check the following item which might affect the quality of the tire pressure monitoring system.

1. TIRE

- Inspect that the tire pressure is within the specification while the tire is cool. (Refer to Tire Caution Label.)
- Check the tires for damage or the insertion of foreign matters.

2. BATTERY

Check the battery. <Ref. to SC(STI)-24, Battery.> <Ref. to SC(w/o STI)-50, Battery.>

C: PREPARATION TOOL

1. SPECIAL TOOL

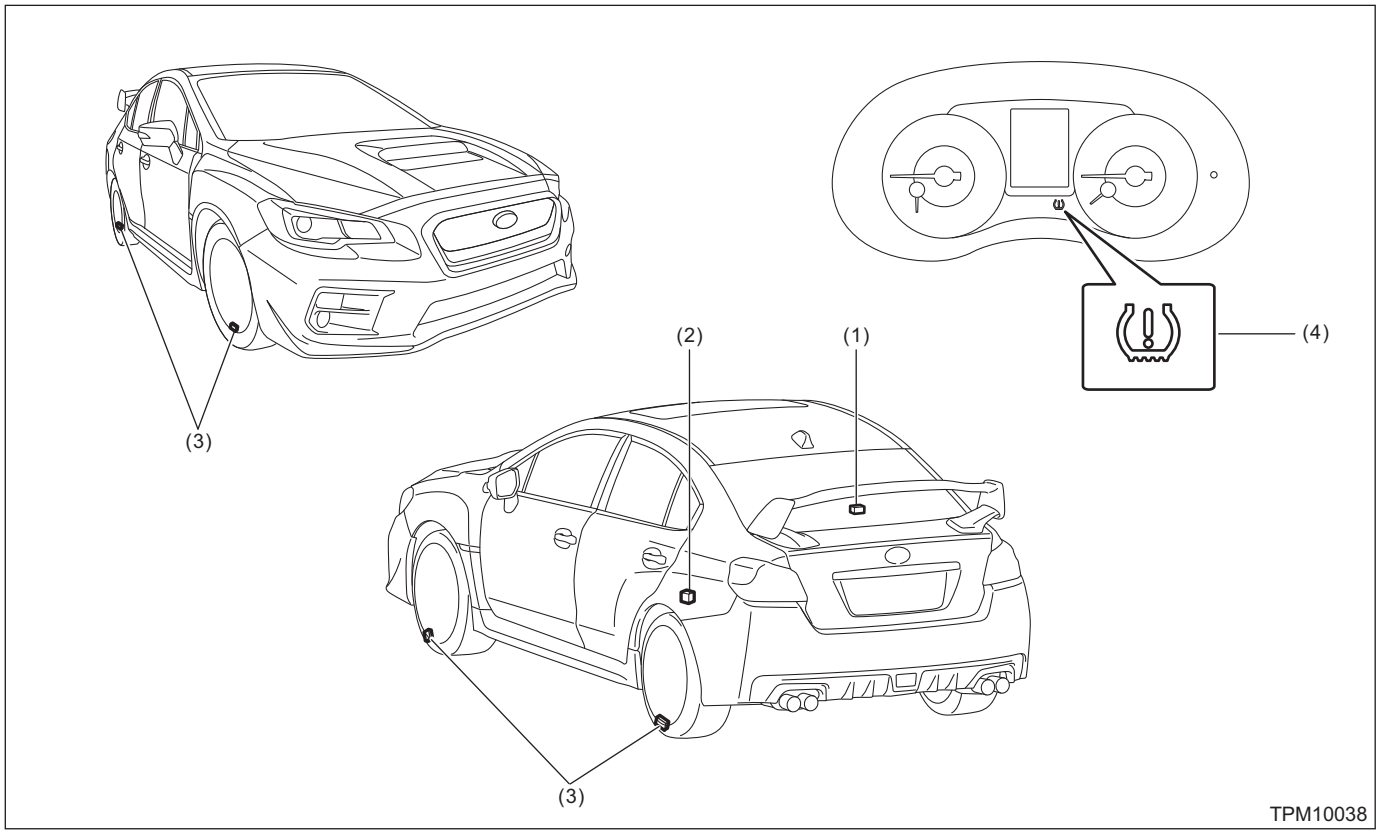
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Transmitter registration tool	Used to register the transmitter ID. Manufacturer: Kent-Moore Item number: J45295
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

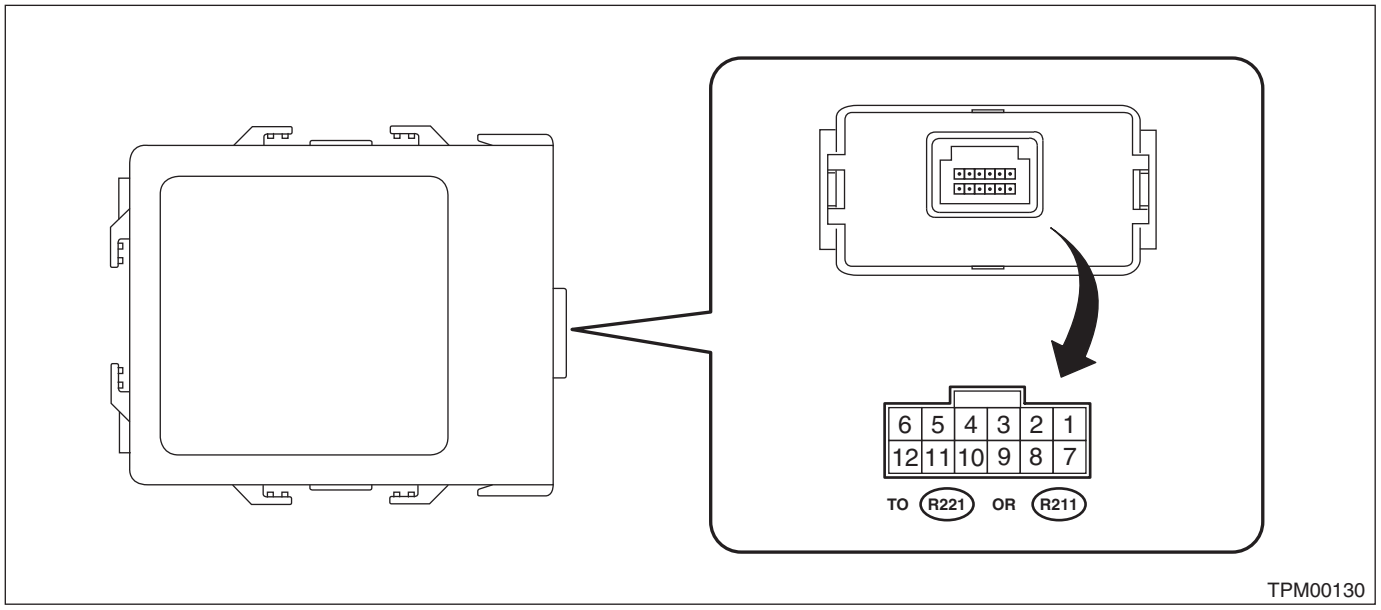
A: LOCATION



(1) TPMS & keyless entry CM (without keyless access with push button start)
(2) TPMS CM (with keyless access with push button start)
(3) Snap-in type transmitter
(4) Tire pressure warning light

4. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measured value and measuring conditions	Remarks
1	—	—	—
2	—	—	—
3	—	—	—
4	Ignition power supply	10 — 13 V (when the ignition switch is ON)	—
5	GND	0 V (always)	—
6	Battery power supply	10 — 13 V (always)	Model without push button start
7	—	—	—
8	—	—	—
9	—	—	—
10	—	—	—
11	Body integrated unit	—	—
12	—	—	—

B: WIRING DIAGRAM

Refer to “Tire Pressure Monitoring System” in the wiring diagram. <Ref. to WI-359, WIRING DIAGRAM, Tire Pressure Monitoring System.>

5. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

NOTE:
If TPMS & keyless entry CM or TPMS CM and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to TPM(diag)-8, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between the TPMS & keyless entry CM or TPMS CM and the Subaru Select Monitor.

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select TPM mode using Subaru Select Monitor.
2	**CHECK BATTERY.** Check the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.** Check the battery terminal.	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step **6**.	Go to step **5**.
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Connect the Subaru Select Monitor to another vehicle.	Is the communication for initializing with the connected vehicle possible?	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace or repair the Subaru Select Monitor.
6	**CHECK BODY INTEGRATED UNIT COMMUNICATION.** 1) Connect the Subaru Select Monitor to the target vehicle. 2) On «Each System» display, select «Body Control».	Is communication for initializing possible?	Perform the diagnosis for DTC U1500. <Ref. to BC(diag)-52, DTC U1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to TPM(diag)-19, List of Diagnostic Trouble Code (DTC).>
- All DTCs detected will be displayed.
- If a particular DTC is not properly stored in memory (due to a voltage drop of the TPMS & keyless entry CM or TPMS CM power supply, etc.) when a problem occurs, a DTC suffixed with a question mark appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
- When DTC is not displayed, check the indicator circuit and communication circuit. <Ref. to TPM(diag)-15, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

7. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Display	Contents to be displayed	Unit of measure
Tire 1 FN code	LEARN, LOW BAT, OFF, WAKE, RE ME, NORMAL	LEARN: Transmitter ID was sent by the transmitter registration tool. LOW BAT: Battery voltage of the transmitter has been lowered. OFF: Transmitter is not functioning. (No data transmission) RE ME: When the tire pressure changed within the range of ±8.4 kPa. WAKE: When data transmission started from the stop status. NORMAL: Conditions other than the above.
Tire 2 FN code		
Tire 3 FN code		
Tire 4 FN code		
Tire 1 air pressure	Value converted to tire pressure from data delivered from transmitter is displayed. (The figure may differ from the actual measured values.)	kPa
Tire 2 air pressure		kPa
Tire 3 air pressure		kPa
Tire 4 air pressure		kPa
Vehicle Speed	Vehicle speed signal which is input in control module	km/h
Pressure warning	Threshold where tire pressure warning light illuminates	kPa
Return pressure	Threshold where tire pressure warning light goes out	kPa
Transmitter power supply	Status of transmitter power supply	ON MODE/OFF
INDICATOR LAMP	Status of tire pressure warning light	ON/OFF
Registered ID 1	Transmitter ID	0 — 16777215
Registered ID 2	Transmitter ID	0 — 16777215
Registered ID 3	Transmitter ID	0 — 16777215
Registered ID 4	Transmitter ID	0 — 16777215
Latest reception ID	The former reception ID	0 — 16777215
Reception ID one ahead	The second former reception ID	0 — 16777215
Before reception ID2	The third former reception ID	0 — 16777215
Before reception ID3	The fourth former reception ID	0 — 16777215

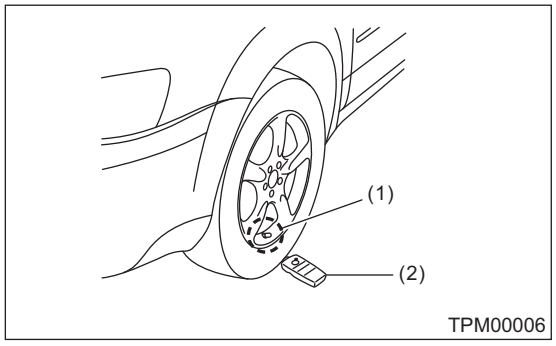
9. Register Transmitter (ID)

A: OPERATION

Perform the registration procedure of the transmitter in the following cases:
- Transmitter is replaced.
- TPMS & keyless entry CM or TPMS CM is replaced.

NOTE:
- If registration of the transmitter ID is not possible after two attempts, replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>
- During the registration, turn the ignition switch to OFF and end the Subaru Select Monitor. Or if the registration is not performed for 5 minutes or more, the registration mode is cancelled.
- When rotating tires, there is no affect on the performance or functions of the tire pressure monitoring control module even if the transmitter (ID) is not registered, however, the tire position displayed on the Subaru Select Monitor will be incorrect.

1) Adjust all tire pressures to the specifications.
2) Connect the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «Tire Pressure Monitor» and then select «Enter».
6) On «Select Function» display, select «Work Support».
7) On «Work Support» display, select «Transmitter ID regist».
8) «ID registration mode When execute Registered ID is deleted Continue?» is displayed, select [OK].
9) Contact the transmitter registration tool to the side wall area near the air valve on the front left tire, and press the switch. The transmitter ID is sent to the TPMS & keyless entry CM or TPMS CM. (At this time, the tire pressure warning light blinks to confirm that the registration has started.)



(1) Air valve (transmitter)
(2) Transmitter registration tool

NOTE:
- The registration order of transmitter ID is not specified.
- The transmitter registration tool is used by touching the side wall area near the transmitter.
- When registration of each tire is completed, «ID registration completed» is displayed on the Select Monitor screen.
- If registration procedure stop in the halfway (turning ignition switch to OFF, wrong registration order, etc), proceed from step 5).

10) When ID registration is completed, the tire pressure warning light remains lit for approximately 2 seconds, to end the registration. Switch to the screen displaying the transmitter ID on the Subaru Select Monitor display. <Ref. to TPM(diag)-13, Display Transmitter (ID).>
11) Check the transmitter ID that was registered, then perform a driving test. <Ref. to TPM(diag)-14, Inspection Mode.>

10.Display Transmitter (ID)

A: OPERATION

For detailed operation procedures, refer to Read Current Data. <Ref. to TPM(diag)-11, Read Current Data.>

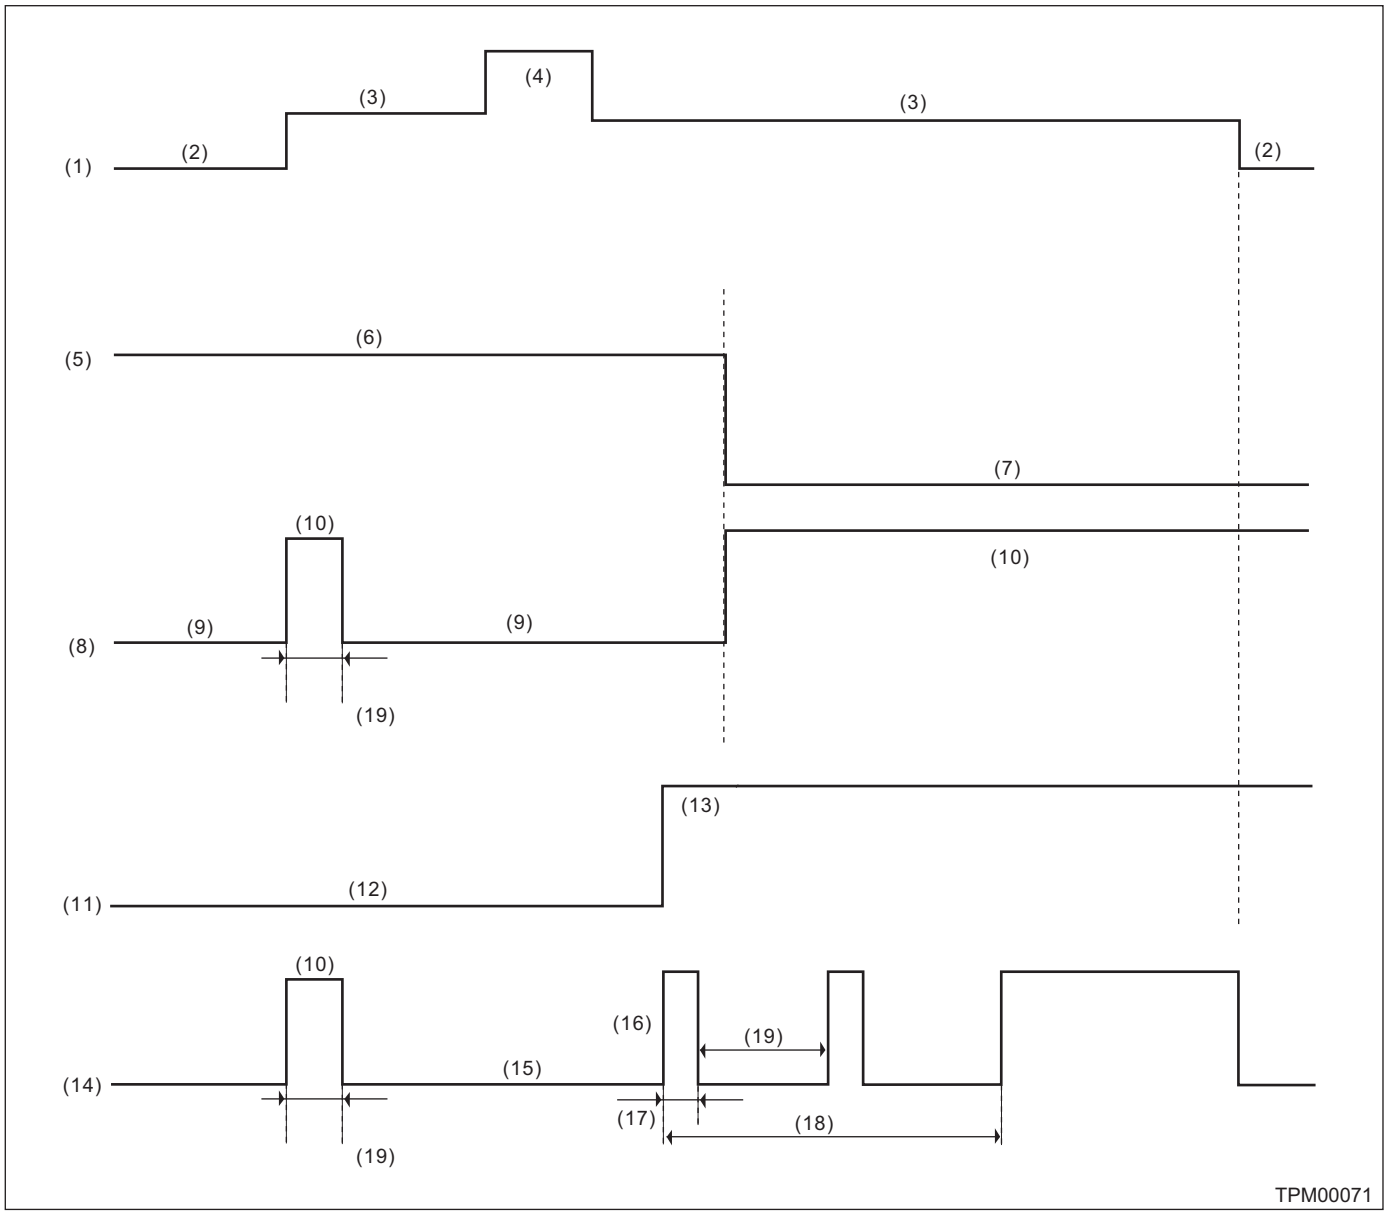
11.Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible. Drive the vehicle at 40 km/h (25 MPH) or faster for at least ten minutes.

12. Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern

A: INSPECTION



(1) Ignition switch
(2) OFF
(3) ON
(4) Start
(5) Tire inflation pressure condition
(6) Meet the specification
(7) Less than standard value (For the pressure warning level, refer to “CURRENT DATA”.) <Ref. to TPM(diag)-11, LIST, Read Current Data.>
(8) Tire inflation pressure warning light (pressure condition)
(9) Light OFF
(10) Light ON
(11) System status
(12) Normal
(13) Malfunction
(14) Tire inflation pressure warning light (system condition)
(15) Light OFF
(16) Blink
(17) 1 second
(18) Blinks 25 times
(19) 2 seconds

1) When the tire pressure warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) If the tire pressure warning light does not go off, check the TPMS & keyless entry CM or TPMS CM/warning light circuit and the combination meter circuit. <Ref. to TPM(diag)-17, TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF, Tire Pressure Warning Light / Trouble Indicator Light Illumination Pattern.>

NOTE:
If the problem is fixed while driving at approximately 40 km/h (25 MPH) after the tire pressure warning light blinks/lights, the warning light goes out and the tire pressure monitor system operates normally. (If there is a decrease in tire pressure, or a malfunction of the system, the malfunction history is displayed.)

B: TIRE PRESSURE WARNING LIGHT DOES NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON, the tire pressure warning light does not turn on (for approx. 2 seconds).

	Step	Check	Yes	No
1	**CHECK DTC.** Connect the Subaru Select Monitor, and read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-19, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK COMBINATION METER.** From «Active Test» for the combination meter, perform «TPMS warning». <Ref. to MET(diag)-16, System Operation Check Mode.>	Does the tire pressure warning light illuminate?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

C: TIRE PRESSURE WARNING LIGHT DOES NOT COME OFF

Detecting condition:
- Defective combination meter
- Tires pressure drop
- Transmitter ID not registered

Trouble symptom:
Tire pressure warning light remains illuminating after engine starts.

	Step	Check	Yes	No
1	**CHECK DTC.** Connect the Subaru Select Monitor, and read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-19, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TRANSMITTER (ID).** Display the transmitter ID of the tire pressure monitor system.	Is the transmitter ID registered?	Go to step **3**.	Register the transmitter ID. <Ref. to TPM(diag)-12, OPERATION, Register Transmitter (ID).>
3	**CHECK TRANSMITTER DATA OUTPUT.** 1) Select data display of the tire pressure monitoring. 2) Start the engine and check the tire pressure warning light output.	Is the warning light output ON?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

D: TIRE PRESSURE WARNING LIGHT IS 25 TIMES BLINKING AND TURN ON

Detecting condition:

- Defective TPMS & keyless entry CM or TPMS CM
- Defective harness
- Transmitter is faulty.

Trouble symptom:

Every time the engine starts, tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**CHECK DTC.** Connect the Subaru Select Monitor, and read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to the DTC. <Ref. to TPM(diag)-19, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Perform the diagnosis for DTC U1500. <Ref. to BC(diag)-52, DTC U1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Repair it according to the diagnosis for LAN system.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Contents of diagnosis	Remarks
C2021	TIRE 1 AIR PRESSURE LOW (NORMAL MODE)	Tire pressure of tire 1 is reduced.	<Ref. to TPM(diag)-21, DTC C2021 TIRE 1 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2022	TIRE 2 AIR PRESSURE LOW (NORMAL MODE)	Tire pressure of tire 2 is reduced.	<Ref. to TPM(diag)-21, DTC C2022 TIRE 2 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2023	TIRE 3 AIR PRESSURE LOW (NORMAL MODE)	Tire pressure of tire 3 is reduced.	<Ref. to TPM(diag)-21, DTC C2023 TIRE 3 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2024	TIRE 4 AIR PRESSURE LOW (NORMAL MODE)	Tire pressure of tire 4 is reduced.	<Ref. to TPM(diag)-21, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2121	TRANSMITTER 1 NO DATA	Data cannot be received from transmitter 1.	<Ref. to TPM(diag)-21, DTC C2121 TRANSMITTER 1 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2122	TRANSMITTER 2 NO DATA	Data cannot be received from transmitter 2.	<Ref. to TPM(diag)-22, DTC C2122 TRANSMITTER 2 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2123	TRANSMITTER 3 NO DATA	Data cannot be received from transmitter 3.	<Ref. to TPM(diag)-22, DTC C2123 TRANSMITTER 3 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2124	TRANSMITTER 4 NO DATA	Data cannot be received from transmitter 4.	<Ref. to TPM(diag)-22, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2221	TRANSMITTER 1 PRESSURE DATA ABNORMAL	Transmitter 1 data contents are abnormal.	<Ref. to TPM(diag)-23, DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2222	TRANSMITTER 2 PRESSURE DATA ABNORMAL	Transmitter 2 data contents are abnormal.	<Ref. to TPM(diag)-23, DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2223	TRANSMITTER 3 PRESSURE DATA ABNORMAL	Transmitter 3 data contents are abnormal.	<Ref. to TPM(diag)-23, DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2224	TRANSMITTER 4 PRESSURE DATA ABNORMAL	Transmitter 4 data contents are abnormal.	<Ref. to TPM(diag)-23, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2321	TRANSMITTER 1 FUNCTION CODE ABNORMAL	Function code has error.	<Ref. to TPM(diag)-25, DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Remarks
C2322	TRANSMITTER 2 FUNCTION CODE ABNORMAL	Function code has error.	<Ref. to TPM(diag)-25, DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2323	TRANSMITTER 3 FUNCTION CODE ABNORMAL	Function code has error.	<Ref. to TPM(diag)-25, DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2324	TRANSMITTER 4 FUNCTION CODE ABNORMAL	Function code has error.	<Ref. to TPM(diag)-25, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2421	TRANSMITTER 1 BATTERY VOLTAGE LOW	Transmitter battery voltage is low.	<Ref. to TPM(diag)-27, DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2422	TRANSMITTER 2 BATTERY VOLTAGE LOW	Transmitter battery voltage is low.	<Ref. to TPM(diag)-27, DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2423	TRANSMITTER 3 BATTERY VOLTAGE DECREASE	Transmitter battery voltage is low.	<Ref. to TPM(diag)-27, DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2424	TRANSMITTER 4 BATTERY VOLTAGE LOW	Transmitter battery voltage is low.	<Ref. to TPM(diag)-27, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2521	SPEED ABNORMAL	Vehicle speed signal is not input to the control module when the vehicle speed is 6 km/h (3.7 MPH) or more.	<Ref. to TPM(diag)-28, DTC C2521 SPEED ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2021 TIRE 1 AIR PRESSURE LOW (NORMAL MODE)

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-21, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C2022 TIRE 2 AIR PRESSURE LOW (NORMAL MODE)

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-21, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C2023 TIRE 3 AIR PRESSURE LOW (NORMAL MODE)

NOTE:
Refer to DTC C2024 for diagnostic procedure. <Ref. to TPM(diag)-21, DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC C2024 TIRE 4 AIR PRESSURE LOW (NORMAL MODE)

DTC DETECTING CONDITION:
Inflation pressure of tires dropped below the specified value.

NOTE:
For the specifications, refer to “CURRENT DATA”. <Ref. to TPM(diag)-11, LIST, Read Current Data.>
Trouble symptom:
Tire pressure warning light illuminates.

	Step	Check	Yes	No
1	**CHECK TIRES.** Lift up the vehicle and check for damage in the tires.	Are there cracks or damage?	Replace the tire.	Go to step **2**.
2	**CHECK TIRES.** Check the tire air pressure.	Is the tire pressure in the specifications?	Go to step **3**.	Adjust the air pressure.
3	**CHECK TRANSMITTER.** 1) Drive at 40 km/h (25 MPH) or more. 2) Confirm the current data «Tire 1 air pressure»«Tire 2 air pressure»«Tire 3 air pressure»«Tire 4 air pressure» of the tire pressure monitor. <Ref. to TPM(diag)-11, Read Current Data.>	Is there a transmitter with different data?	Replace the transmitter (tire pressure sensor) with different display. <Ref. to WT-8, Tire Pressure Monitoring System.>	Go to step **4**.
4	**PERFORM DRIVING TEST.** 1) Perform the Clear Memory Mode. <Ref. to TPM(diag)-10, OPERATION, Clear Memory Mode.> 2) Perform a driving test. <Ref. to TPM(diag)-14, PROCEDURE, Inspection Mode.> 3) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>	Even if the DTC is displayed, the system has returned to a normal condition at this time. While the malfunction is present, perform the diagnosis again.

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

E: DTC C2121 TRANSMITTER 1 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-22, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C2122 TRANSMITTER 2 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-22, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C2123 TRANSMITTER 3 NO DATA

NOTE:
Refer to DTC C2124 for diagnostic procedure. <Ref. to TPM(diag)-22, DTC C2124 TRANSMITTER 4 NO DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C2124 TRANSMITTER 4 NO DATA

DTC DETECTING CONDITION:
Data from each transmitter is not received for 8 minutes.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select “Transmit ID data monitor”. <Ref. to TPM(diag)-13, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.

	Step	Check	Yes	No
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 4».	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-8, Tire Pressure Monitoring System.>

CAUTION:
When driving vehicle to perform driving test, there should be always 2 persons (driver and checker) to check.

I: DTC C2221 TRANSMITTER 1 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C2222 TRANSMITTER 2 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C2223 TRANSMITTER 3 PRESSURE DATA ABNORMAL

NOTE:
Refer to DTC C2224 for diagnostic procedure. <Ref. to TPM(diag)-23, DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C2224 TRANSMITTER 4 PRESSURE DATA ABNORMAL

DTC DETECTING CONDITION:
- When comparing the data from each transmitter to the previous data, the change is large.
- The pressure exceeds what the transmitter can measure. (Excessive pressure)

Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as "Past faults", the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select "Transmit ID data monitor". <Ref. to TPM(diag)-13, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check "Latest reception ID".	Is "Latest reception ID" updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 4».	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.

	Step	Check	Yes	No
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Go to step **2**.
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter showing the latest ID that is not included in the registered IDs. <Ref. to WT-8, Tire Pressure Monitoring System.>

M: DTC C2321 TRANSMITTER 1 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C2322 TRANSMITTER 2 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C2323 TRANSMITTER 3 FUNCTION CODE ABNORMAL

NOTE:
Refer to DTC C2324 for diagnostic procedure. <Ref. to TPM(diag)-25, DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C2324 TRANSMITTER 4 FUNCTION CODE ABNORMAL

DTC DETECTING CONDITION:
Unexpected function codes received from each transmitter.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.

	Step	Check	Yes	No
2	**START FRONT LEFT TRANSMITTER.** 1) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 2) Select “Transmit ID data monitor”. <Ref. to TPM(diag)-13, OPERATION, Display Transmitter (ID).> 3) Use the transmitter registration tool and transmit the ID from the FL transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **3**.	Replace the front left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
3	**CHECK FRONT LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 1».	Are the two IDs same?	Go to step **4**.	Record the received ID update as the FL transmitter. Go to step **4**.
4	**START FRONT RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the FR transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **5**.	Replace the front right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
5	**CHECK FRONT RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 2».	Are the two IDs same?	Go to step **6**.	Record the received ID update as the FR transmitter. Go to step **6**.
6	**START REAR RIGHT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RR transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **7**.	Replace the rear right transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
7	**CHECK REAR RIGHT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 3».	Are the two IDs same?	Go to step **8**.	Record the received ID update as the RR transmitter. Go to step **8**.
8	**START REAR LEFT TRANSMITTER.** Use the transmitter registration tool and transmit the ID from the RL transmitter to check “Latest reception ID”.	Is “Latest reception ID” updated?	Go to step **9**.	Replace the rear left transmitter. <Ref. to WT-8, Tire Pressure Monitoring System.>
9	**CHECK REAR LEFT TRANSMITTER ID.** Compare the ID on the latest ID display with «Registered ID 4».	Are the two IDs same?	Go to step **10**.	Record the received ID update as the RL transmitter. Go to step **10**.
10	**CHECK MALFUNCTION TRANSMITTER.**	Is ID recorded by this procedure?	Go to step **11**.	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>
11	**CHECK MALFUNCTION TRANSMITTER.** Check the registered ID of the transmitter indicated by DTC.	Is there checked ID in the record?	Replace the transmitter of the recorded position. <Ref. to WT-8, Tire Pressure Monitoring System.>	Replace the transmitter indicated by diagnostics trouble code (DTC). <Ref. to WT-8, Tire Pressure Monitoring System.>

Q: DTC C2421 TRANSMITTER 1 BATTERY VOLTAGE LOW

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C2422 TRANSMITTER 2 BATTERY VOLTAGE LOW

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C2423 TRANSMITTER 3 BATTERY VOLTAGE DECREASE

NOTE:
Refer to DTC C2424 for diagnostic procedure. <Ref. to TPM(diag)-27, DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C2424 TRANSMITTER 4 BATTERY VOLTAGE LOW

DTC DETECTING CONDITION:
Low battery signals received 20 times from each transmitter.
Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

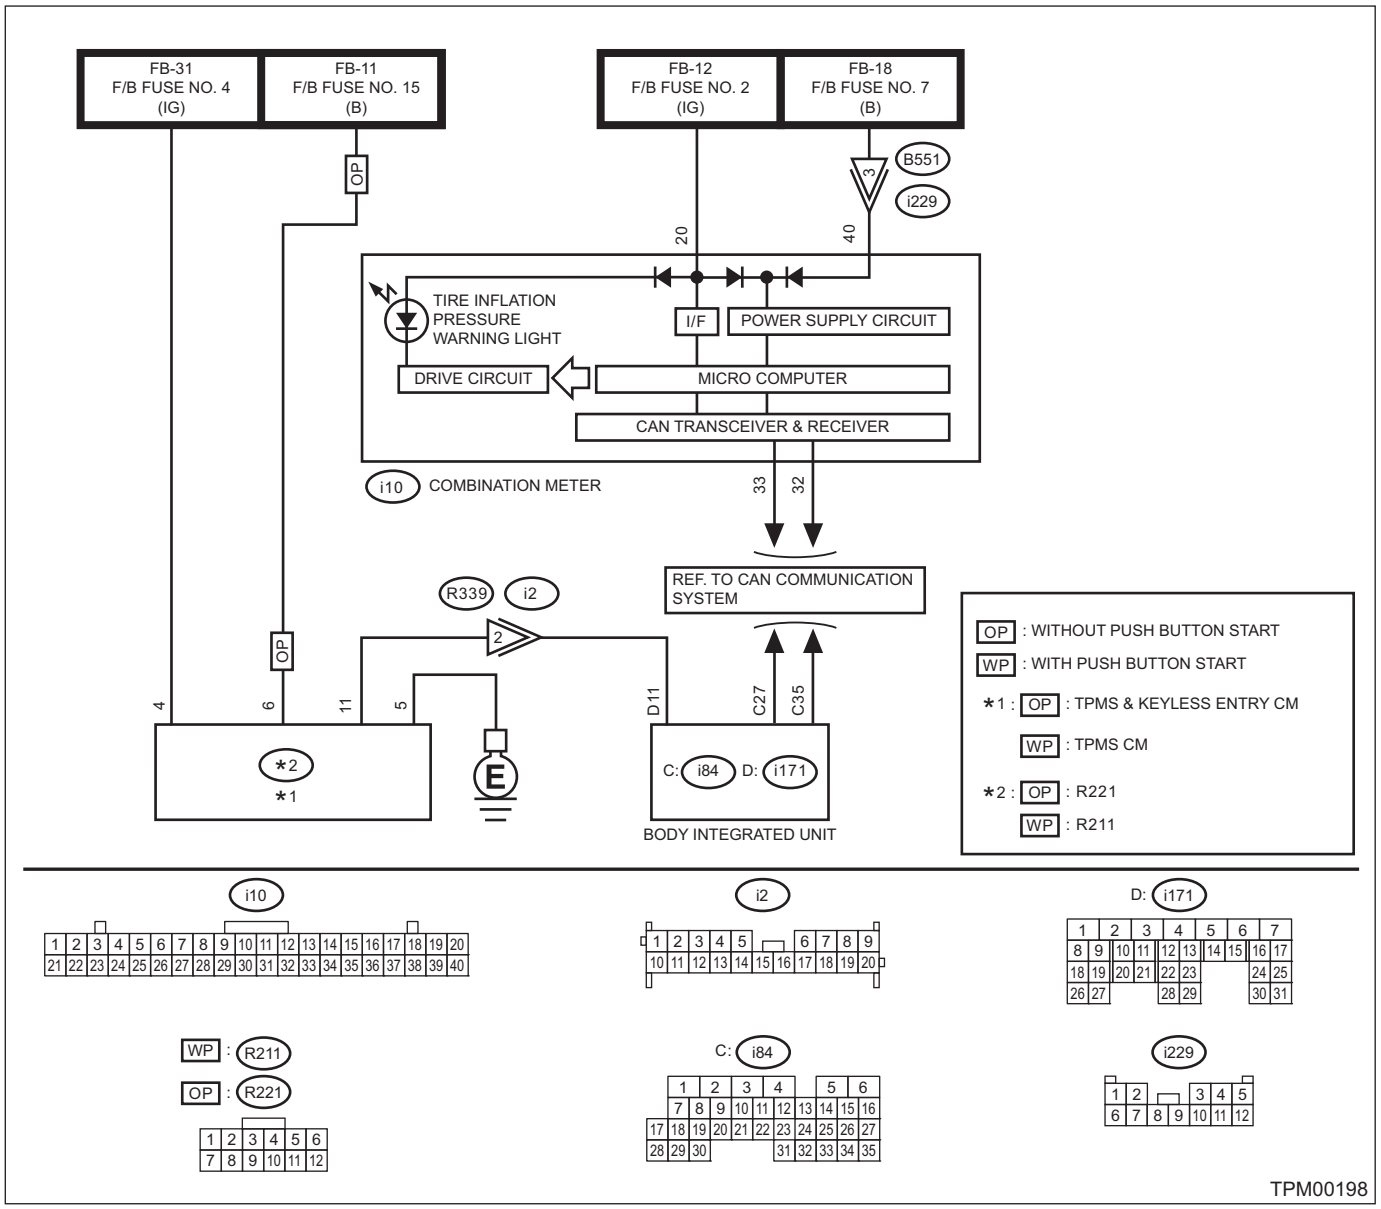
	Step	Check	Yes	No
1	**REPRODUCTION OF FAILURE.** 1) Perform the drive test. Drive the vehicle at 40 km/h (25 MPH) or faster for at least 10 minutes. 2) Read the DTC. <Ref. to TPM(diag)-9, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed as current malfunction?	Go to step **2**.	When DTC is displayed as “Past faults”, the system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, there may be temporary poor communication due to radio wave environment inside/outside the vehicle.
2	**CHECK TRANSMITTER.** 1) Replace all transmitters and register their IDs. <Ref. to TPM(diag)-12, OPERATION, Register Transmitter (ID).> 2) Perform the Clear Memory Mode, and perform driving test.	Is the fault eliminated?	Internal battery of the transmitter had worn out.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

U: DTC C2521 SPEED ABNORMAL

DTC DETECTING CONDITION:
Vehicle speed function codes were received from the transmitter, but the vehicle speed signal was not input to the module.

Trouble symptom:
Tire pressure warning light blinks 25 times and then illuminates.

Wiring diagram:
Tire Pressure Monitoring System <Ref. to WI-359, WIRING DIAGRAM, Tire Pressure Monitoring System.>



Step		Check	Yes	No
1	**CHECK LAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Repair it according to the diagnosis for LAN system.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between TPMS & keyless entry CM or TPMS CM and body integrated unit. ***Connector & terminal*** ***Without keyless access with push button start*** ***(R221) No. 11 — (i171) No. 11:*** ***(R221) No. 5 — Chassis ground:*** ***With keyless access with push button start*** ***(R211) No. 11 — (i171) No. 11:*** ***(R211) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the harness.
3	**CHECK CONNECTOR.** Check each connector.	Is there poor contact or any other faults?	Repair the connector.	Replace the TPMS & keyless entry CM or TPMS CM. <Ref. to WT-8, Tire Pressure Monitoring System.>

15.General Diagnostic Table

A: INSPECTION

Symptoms		Faulty parts
Tire pressure warning light illuminates.	Tire pressure is reduced.	• Improper tire pressure adjustment • Punctured tire
Tire pressure warning light blinks 25 times and then illuminates.	Tire pressure monitoring system has malfunction.	• Air pressure sensor malfunction • Air pressure sensor is out of battery. • Defective TPMS & keyless entry CM or TPMS CM • Defective vehicle harness • Defective combination meter
Tire pressure is dropping but the warning light does not illuminate.	Tire pressure warning light does not illuminate.	• Air pressure sensor is faulty. • Defective TPMS & keyless entry CM or TPMS CM • Defective combination meter

1. General Description

A: SPECIFICATION

1. REAR DIFFERENTIAL

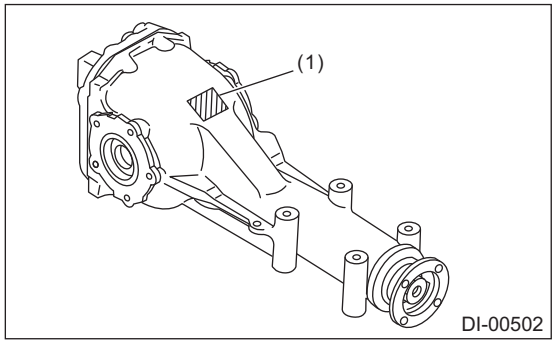
When replacing a rear differential, select the correct one according to the following table.

NOTE:
- Using a different rear differential will cause the drive train and tires to drag or emit abnormal noise.
- For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

Model	2.5 L high power turbo	2.0 L turbo	
	6MT	6MT	CVT
Rear differential type	T-type	VB3-type	
Identification	H5	E2	E3
LSD type	Torsen	—	
Type of gear	Hypoid gear		
Gear ratio (number of gear teeth)	3.545 (39/11)	4.111 (37/9)	3.900 (39/10)
Oil capacity	1.0 L (1.1 US qt, 0.9 Imp qt)	0.8 L (0.8 US qt, 0.7 Imp qt)	
Rear differential gear oil	GL-5		

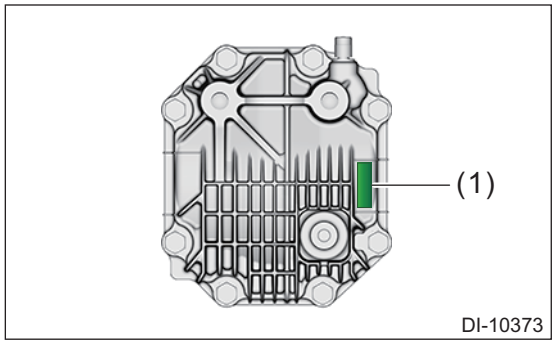
2. IDENTIFICATION

Identification positions are shown in the following figures.
- T-type



(1) Identification

- VB3-type

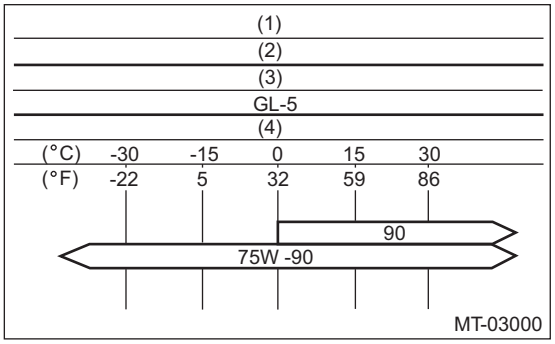


(1) Identification

3. REAR DIFFERENTIAL GEAR OIL

Recommended gear oil:
GL–5 (75W-90) or equivalent

CAUTION:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.



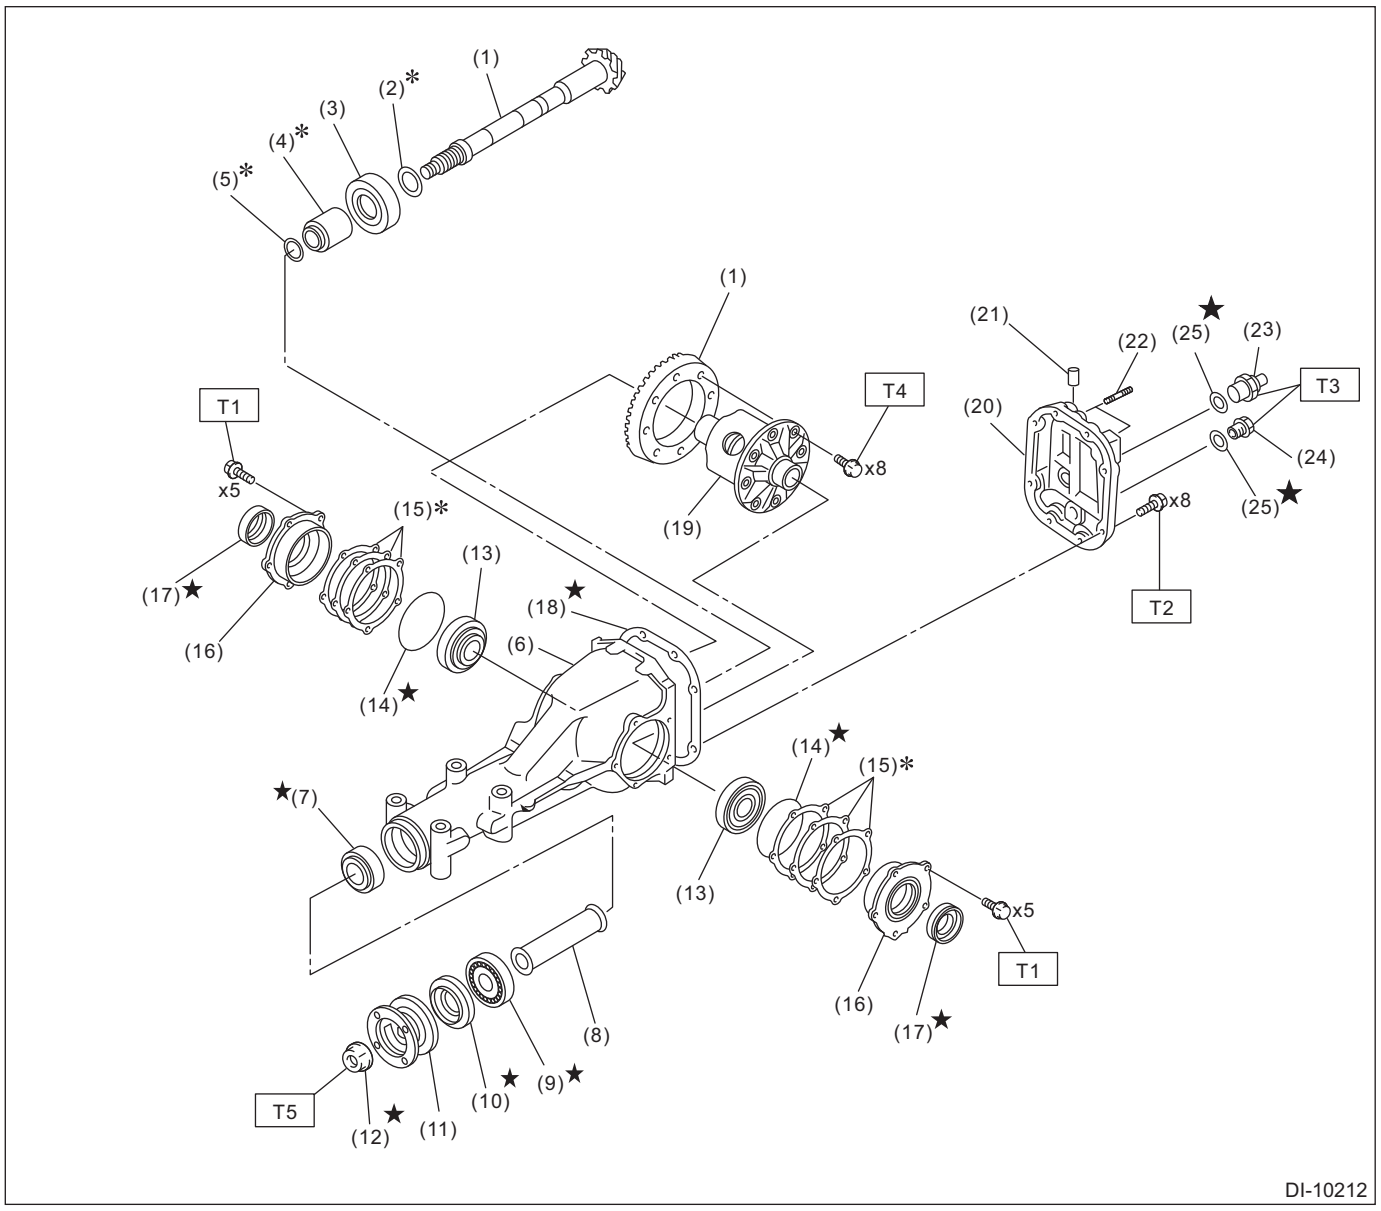
(1) Item
(2) Rear differential gear oil
(3) API classification
(4) SAE viscosity No. and applicable temperature

4. SERVICE DATA

Drive pinion bearing preload (for new bearing)	Measured with spring measurement (measured from the companion flange bolt)	N (kgf, lbf)	T-type	24.1 — 38.6 (2.5 — 3.9, 5.4 — 8.7)
			VB3-type	12.7 — 32.2 (1.3 — 3.3, 2.9 — 7.2)
	Measured with torque wrench	N·m (kgf-m, ft-lb)	T-type	0.98 — 1.57 (0.10 — 0.16, 0.72 — 1.16)
			VB3-type	0.48 — 1.22 (0.05 — 0.12, 0.35 — 0.90)
Differential bevel gear and differential bevel pinion backlash		mm (in)	VB3-type	0.13 — 0.18 (0.005 — 0.007)
Hypoid driven gear to drive pinion backlash		mm (in)	T-type	0.10 — 0.20 (0.004 — 0.008)
			VB3-type	0.10 — 0.15 (0.004 — 0.006)
Hypoid driven gear runout on its back surface		mm (in)	T-type	0.05 (0.002)
Companion flange mating surface runout			mm (in)	0.08 (0.003)
Companion flange runout on its inner surface			mm (in)	0.08 (0.003)
Total preload (measured from the companion flange bolt hole)		N (kgf, lbf)	T-type	26.5 — 53 (2.7 — 5.4, 6.0 — 11.9)

B: COMPONENT

1. REAR DIFFERENTIAL (T-TYPE)



(1)	Hypoid driven gear and drive pinion set	(12)	Self-locking nut	(23)	Oil temperature sensor
(2)	Pinion height adjusting washer	(13)	Side bearing	(24)	Drain plug
(3)	Rear bearing	(14)	O-ring	(25)	Gasket
(4)	Preload adjusting spacer	(15)	Side retainer shim

(1)	Rear differential front member (6MT model)	(5)	Rear sub frame ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Rear differential front member (CVT model)	(6)	Rear differential mount bushing	***T: <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>***
(3)	Self-locking nut	(7)	Mass damper	
(4)	Rear differential member plate			

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.

• Do not secure a part in a vise directly. Place cushioning materials such as wood pieces, blocks, aluminum plates, or waste cloth between the part and the vise.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Before installing the O-ring or snap ring, apply a sufficient amount of gear oil to avoid damage and deformation.
• Avoid damaging the mating surface of the case.
• For parts which are not reusable, always use new parts. Other parts should be replaced with new parts as required.
• When handling oil or fuel, adhere to the following to prevent unexpected accident.
  – Be careful with fire.
  – Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
  – Follow all government and local regulations concerning disposal of refuse when disposing.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-398477701	398477701	HANDLE	Used for installing the rear bearing race. (VB3-type)
 ST-398477702	398477702	DRIFT	Used for installing the front bearing race. (T-type)
 ST-398217700	398217700	ATTACHMENT SET	Stand for differential carrier disassembly and assembly.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498447120	498447120	INSTALLER	Used for installing the front oil seal.
 ST-498427200	498427200	FLANGE WRENCH	Used for stopping rotation of companion flange when removing and tightening self-lock nut. (VB3-type)
 ST-398467700	398467700	DRIFT	Used for removing drive pinion shaft, pilot bearing and front bearing cone. (T-type)
 ST-399780104	399780104	WEIGHT	• Used for installing the pilot bearing and the companion flange. (T-type) • Used for installing the front bearing cone, the front oil seal and the companion flange. (VB3-type)

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41399FG091	41399FG091	SPECIAL TOOL SHAFT	• Used for removing and installing the rear differential mount bushing. • For combination of tools for removal and installation, refer to “SPECIAL TOOL ASSY (41399FG001)”.

2. GENERAL TOOL

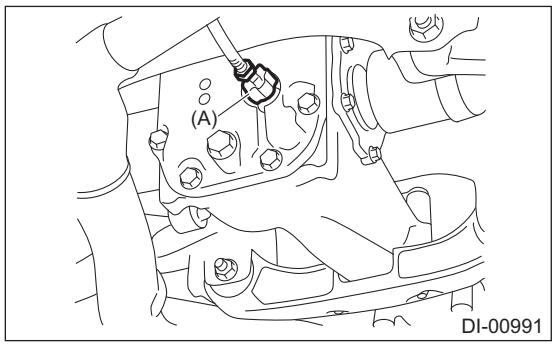
TOOL NAME	REMARKS
Transmission jack	Used for removing and installing the rear differential.
Puller	• Used for removing the side retainer. (T-type) • Used for removing companion flange. (T-type)
Thickness gauge	Used for measuring clearance.
Hexagon wrench	Used for installing and removing the oil filler plug and oil drain plug.
Angle gauge	Used for installing the hypoid driven gear. (VB3-type)
Dial gauge	Used for measuring backlash.
Magnet stand	Used for measuring backlash.

2. Differential Gear Oil

A: INSPECTION

1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

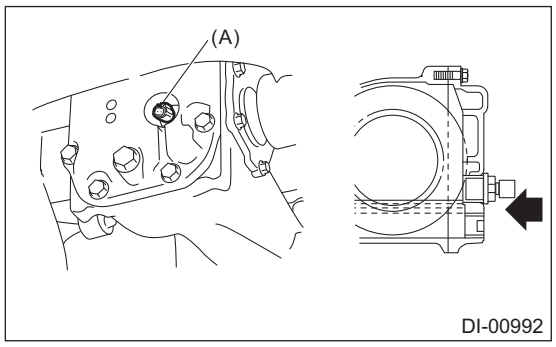
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Disconnect the oil temperature sensor connector. (T-type)



(A) Oil temperature sensor connector

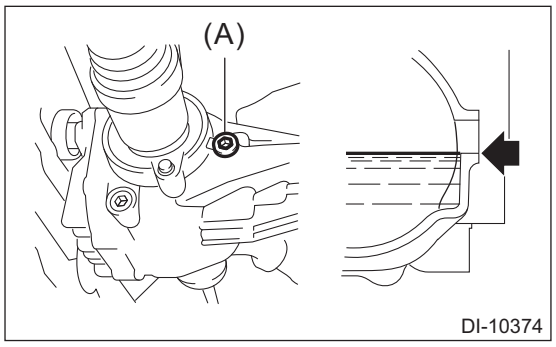
4) Remove the filler plug or the oil temperature sensor, and then check the differential gear oil. Replace the differential gear oil if it is contaminated, deteriorated or cloudy. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
5) Check that the gear oil level is within –5 mm (–0.2 in) from the bottom of the filler plug hole. If the level is low, make sure that there is no oil leakage and add oil up to the bottom of filler plug hole.

- T-type



(A) Oil temperature sensor

- VB3-type



(A) Filler plug

6) Install the filler plug or the oil temperature sensor.

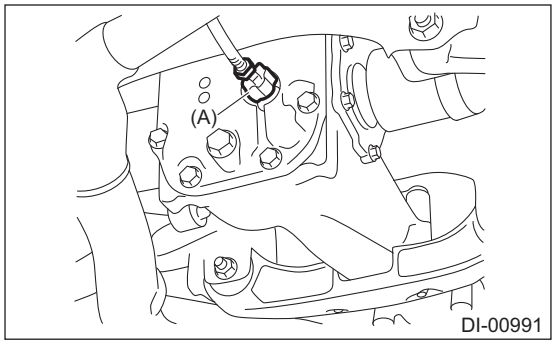
NOTE:
Use a new gasket.

Tightening torque:
T-type
60 N·m (6.1 kgf-m, 44.3 ft-lb)
VB3-type
50 N·m (5.1 kgf-m, 36.9 ft-lb)

B: REPLACEMENT

CAUTION:
• Gear oil is extremely hot just after driving. Be wary of receiving burns.
• Be careful not to spill the gear oil on exhaust pipe. If gear oil is spilled, wipe it off completely.
1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

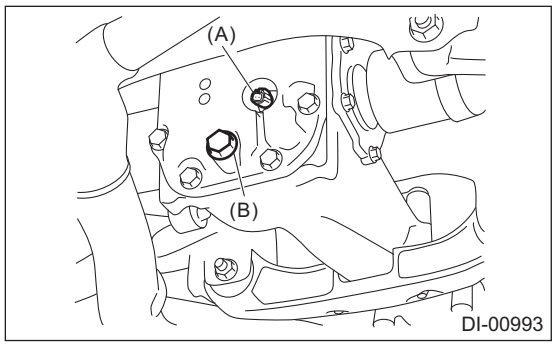
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Disconnect the oil temperature sensor connector. (T-type)



(A) Oil temperature sensor connector

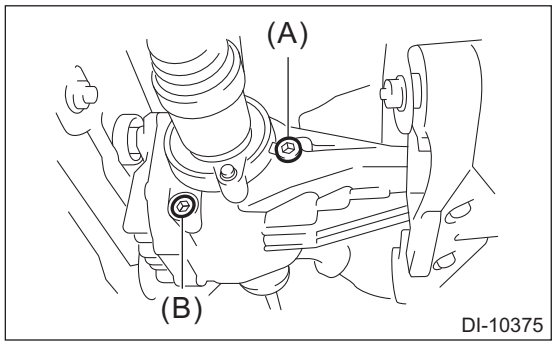
4) Remove the drain plug and filler plug or the oil temperature sensor, and drain the gear oil.

- T-type



(A) Oil temperature sensor
(B) Drain plug

- VB3-type



(A) Filler plug
(B) Drain plug

5) Install the drain plug.

NOTE:
Use a new gasket.

Tightening torque:
T-type
60 N·m (6.1 kgf-m, 44.3 ft-lb)
VB3-type
50 N·m (5.1 kgf-m, 36.9 ft-lb)

6) Fill the differential carrier with gear oil to the bottom of filler plug hole or the oil temperature sensor hole.

NOTE:
In order to prevent insufficiency of oil, supply gear oil until it flows out of the plug hole.

Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>

Oil capacity:
<Ref. to DI-2, SPECIFICATION, General Description.>

7) Install the filler plug or the oil temperature sensor.

NOTE:
Use a new gasket.

Tightening torque:
T-type
60 N·m (6.1 kgf-m, 44.3 ft-lb)
VB3-type
50 N·m (5.1 kgf-m, 36.9 ft-lb)

3. Front Differential Assembly

A: NOTE

1. CVT MODEL

Regarding the front differential, refer to the “CVT (TR690)” section. <Ref. to CVT(TR690)-268, Front Differential Assembly.>

2. 6MT (TY75) MODEL

Regarding the front differential, refer to the “6MT (TY75)” section. <Ref. to 6MT(TY75)-126, REMOVAL, Front Differential Assembly.>

3. 6MT (TY85) MODEL

Regarding the front differential, refer to the “6MT (TY85)” section. <Ref. to 6MT(TY85)-98, REMOVAL, Front Differential Assembly.>

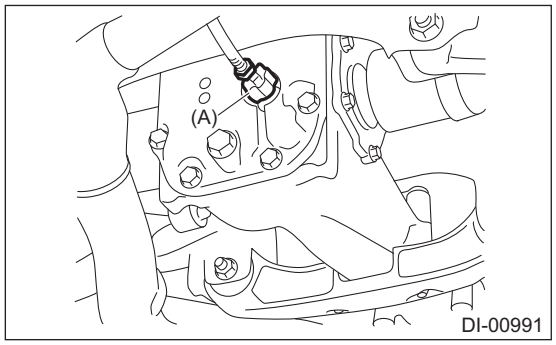
4. Rear Differential (T-type)

A: REMOVAL

1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

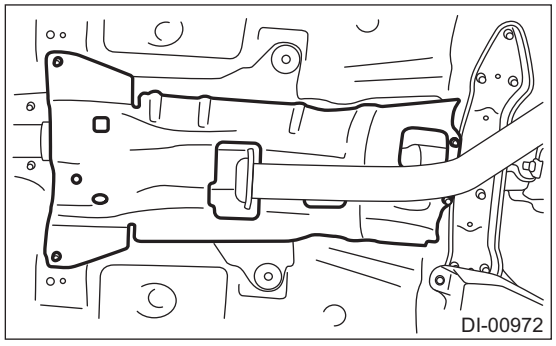
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.

4) Lift up the vehicle.
5) Remove the rear tires. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
6) Disconnect the oil temperature sensor connector. (T-type)



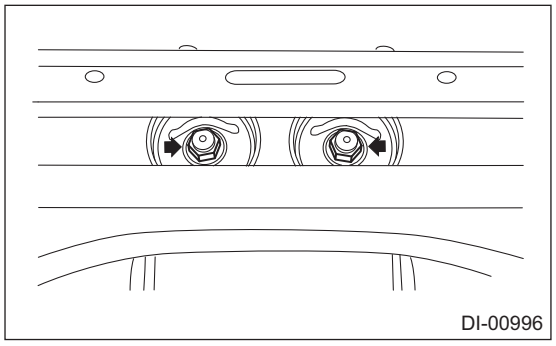
(A) Oil temperature sensor connector

7) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
8) Remove the rear exhaust pipe.
Except for STI model:
<Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
STI model:
<Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
9) Remove the center exhaust cover.

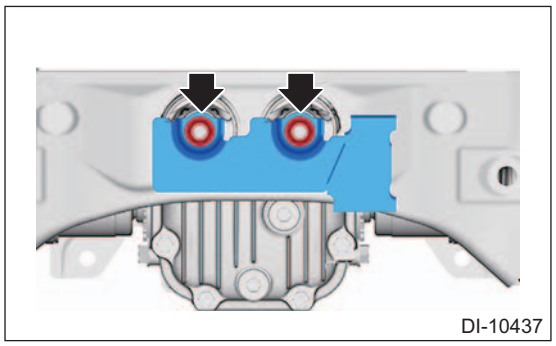


10) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
11) Loosen the self-lock nuts which hold the rear differential to the rear sub frame assembly.

- T-type



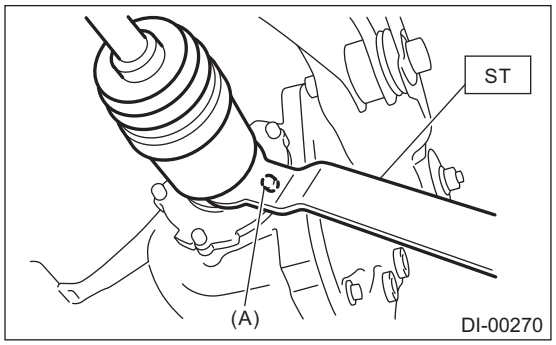
- VB3-type



12) Remove the DOJ of the rear drive shaft using the ST.

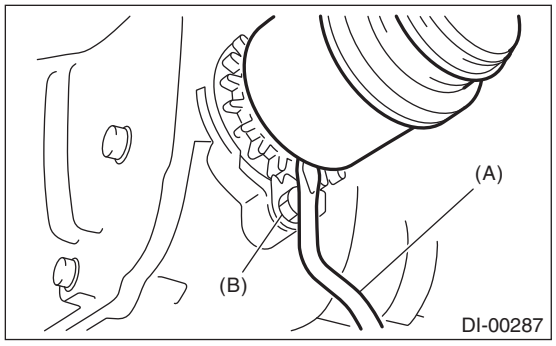
NOTE:
- For the T-type, use the ST.
- For the VB3-type, use the tire lever.
- When removing the DOJ, fit the ST or tire lever to the bolts as shown in the figure so as not to damage the side retainer.

T-type
ST 28099PA100 DRIVE SHAFT REMOVER



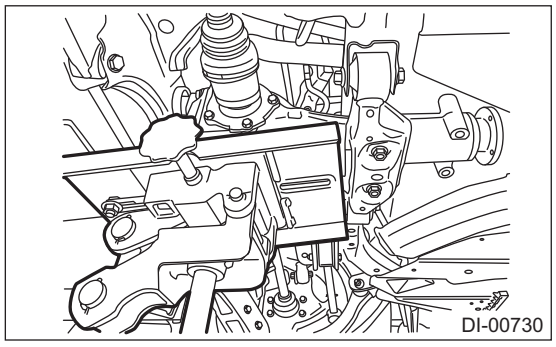
(A) Bolt

VB3-type

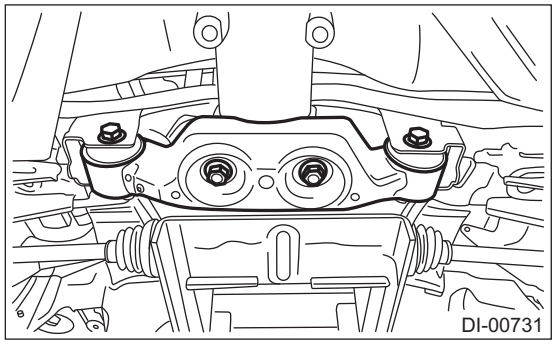


(A) Tire lever
(B) Bolt

13) Set the transmission jack.

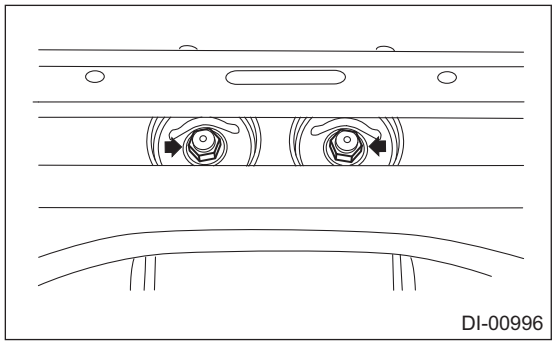


14) Remove the rear differential front member.

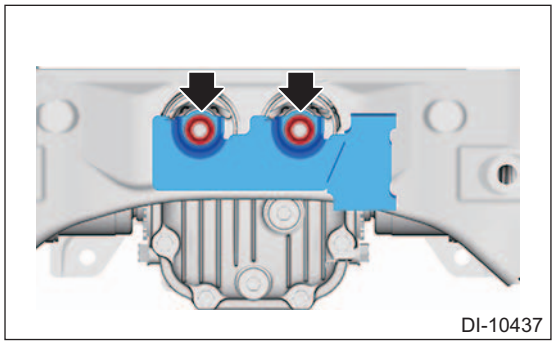


15) Remove the self-lock nuts which hold the rear differential to the rear sub frame assembly.

- T-type

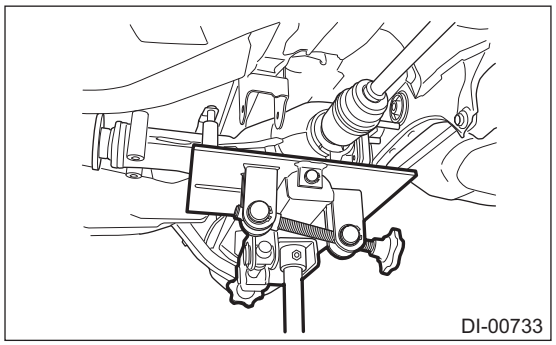


- VB3-type



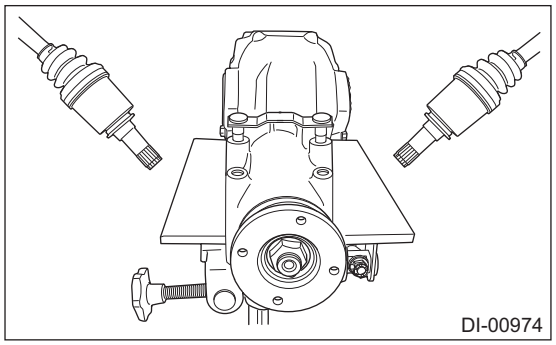
16) Pull out the rear differential stud bolt from rear differential mount bushing.

NOTE:
When pulling out the stud bolt from the rear differential mount bushing, carefully adjust the angle and location of transmission jack and jack stand, if necessary.



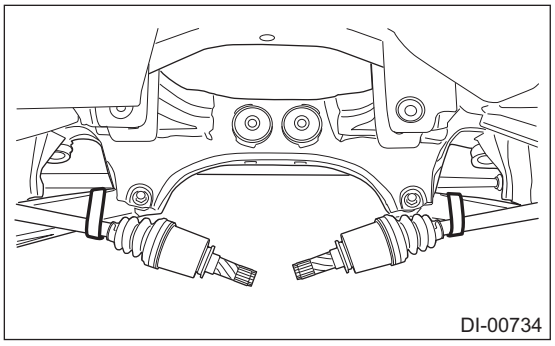
17) Lower the transmission jack.
18) Pull out the rear drive shaft.

NOTE:
If it is difficult to pull out the rear drive shaft, use the ST for T-type and the tire lever for VB3-type.
ST 28099PA100 DRIVE SHAFT REMOVER



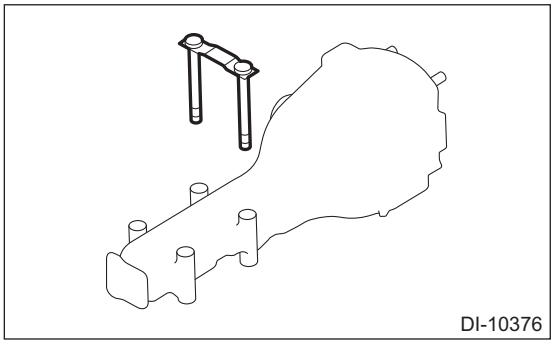
19) Lower the transmission jack.

20) Secure the rear drive shaft using a wire.

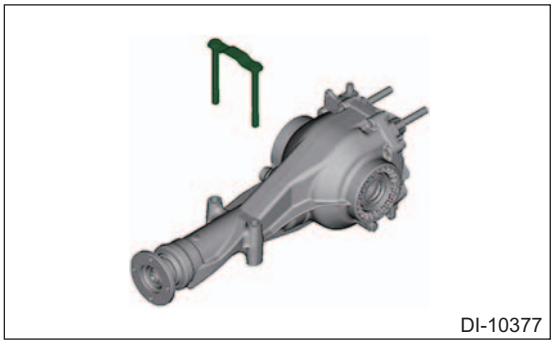


21) Remove the rear differential member plate.

- T-type



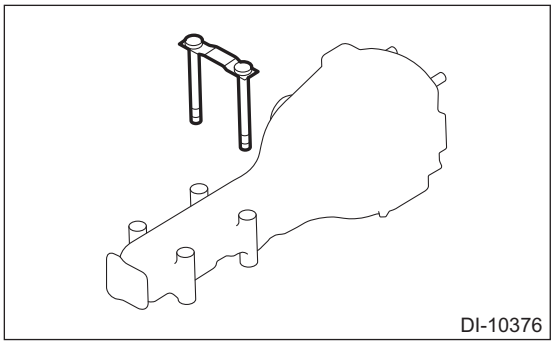
- VB3-type



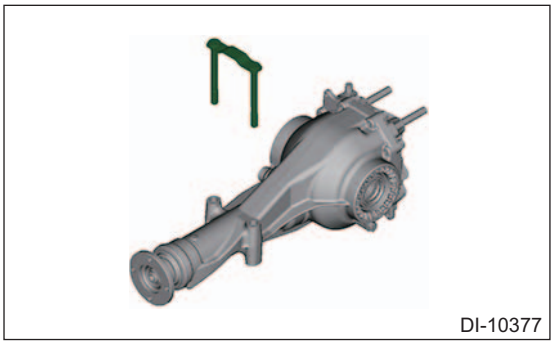
B: INSTALLATION

1) Install the rear differential member plate.

- T-type

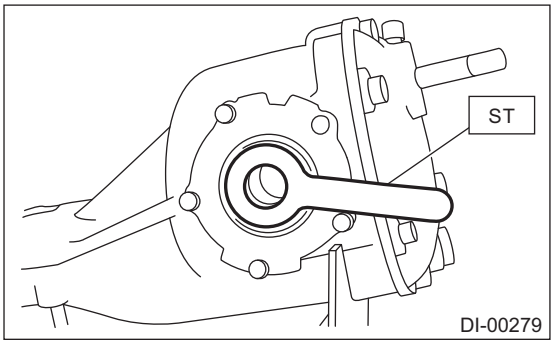


- VB3-type

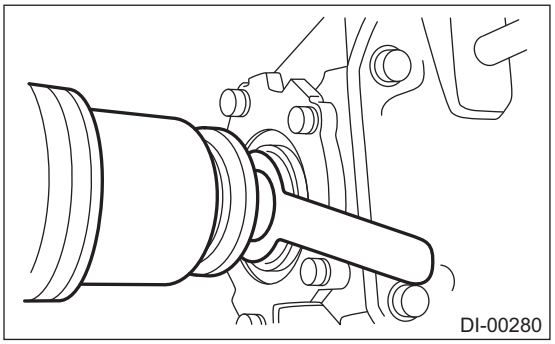


2) Set the rear differential to transmission jack.
3) Set the ST to the rear differential.

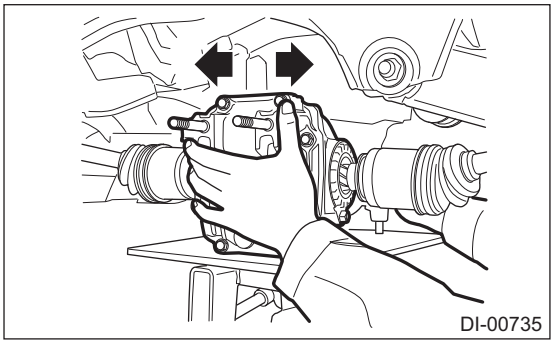
ST 28099PA090 OIL SEAL PROTECTOR



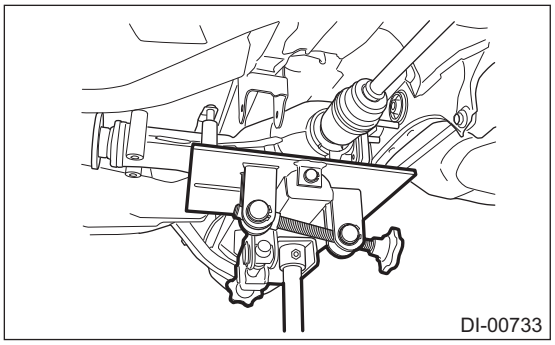
4) Insert the rear drive shaft until the spline portion of the rear drive shaft exceeds the side oil seal.



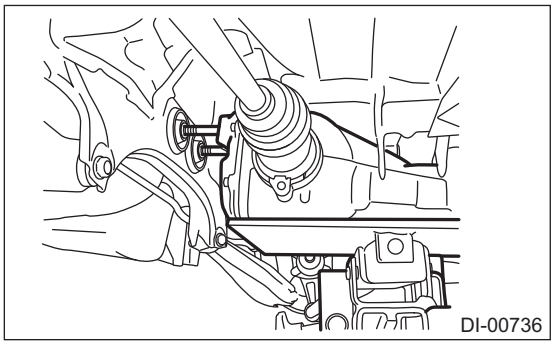
5) Remove ST from rear differential.
6) Push the rear differential from side to side to insert the DOJ completely.



7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into the rear differential mount bushing.

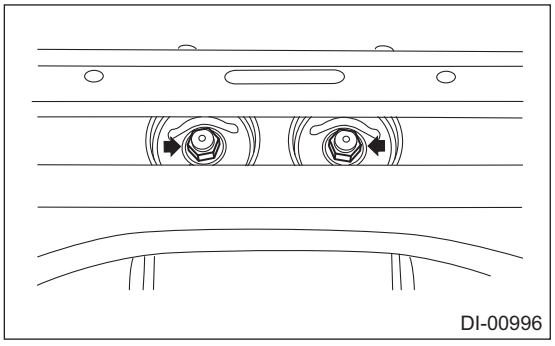


8) Raise the transmission jack to align the rear differential to its attachment position.

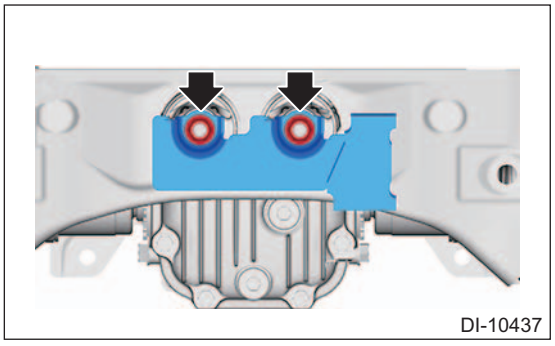


9) Temporarily install a new self-locking nut to the rear differential stud bolt.

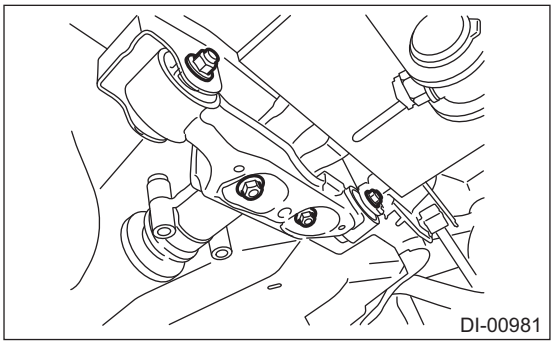
- T-type



- VB3-type

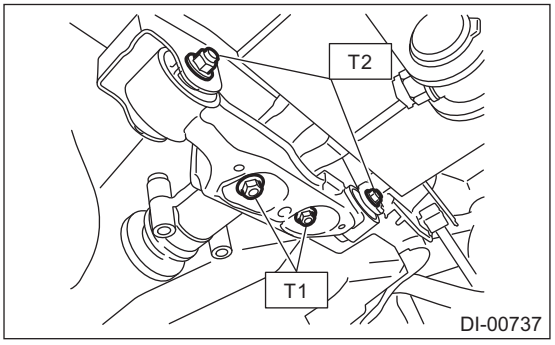


10) Install the rear differential front member, and temporarily attach a new self-locking nut.



11) Remove the transmission jack.
12) Tighten the self-locking nut.

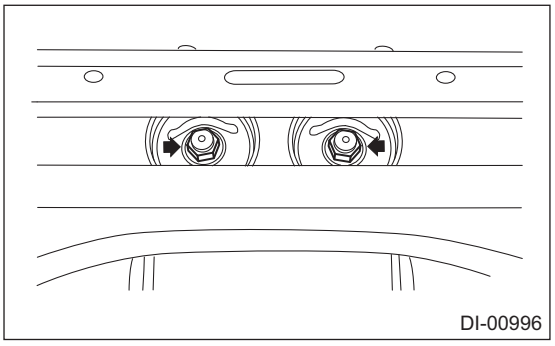
Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



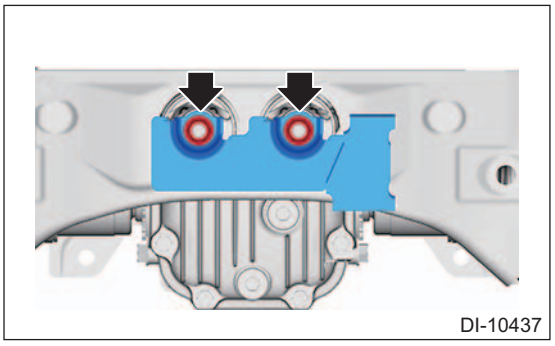
13) Tighten the self-locking nut.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

- T-type

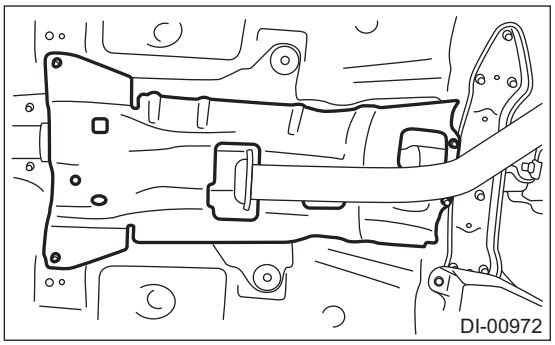


- VB3-type

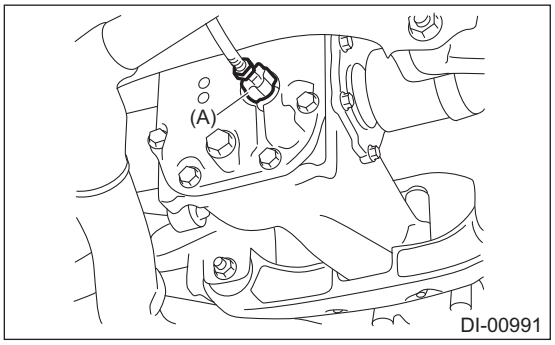


14) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
15) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



16) Install the rear exhaust pipe.
Except for STI model:
<Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
STI model:
<Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
17) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
18) Connect the oil temperature sensor connector. (T-type)



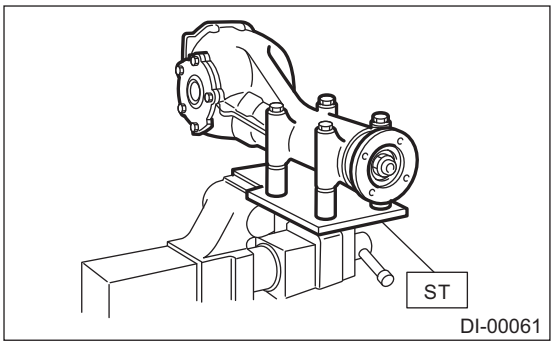
(A) Oil temperature sensor connector

19) Lower the vehicle.
20) Install the rear tires. <Ref. to WT-5, INSTALLATION, Tire and Wheel.>
21) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: DISASSEMBLY

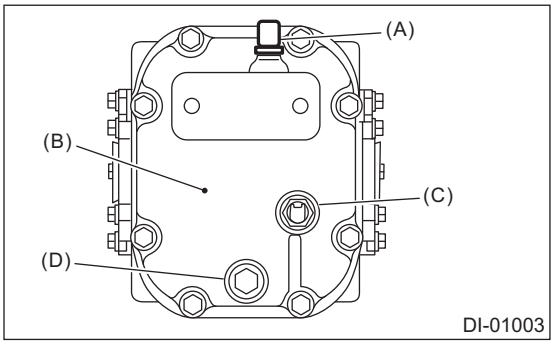
To detect the real cause of trouble, inspect the following items before disassembling.
• Tooth contact and backlash between hypoid driven gear and drive pinion
• Hypoid driven gear runout on its back surface
• Total preload of drive pinion
1) Set the ST on vise and install the rear differential to ST.
ST 398217700 ATTACHMENT SET



2) Remove the drain plug and the oil temperature sensor, and drain the gear oil.

NOTE:
Remove the oil temperature sensor and the adapter as a unit.
3) Remove the air breather cap.

NOTE:
• Do not attempt to remove the air breather cap unless necessary.
• Whenever the air breather cap is removed, replace it with a new part.

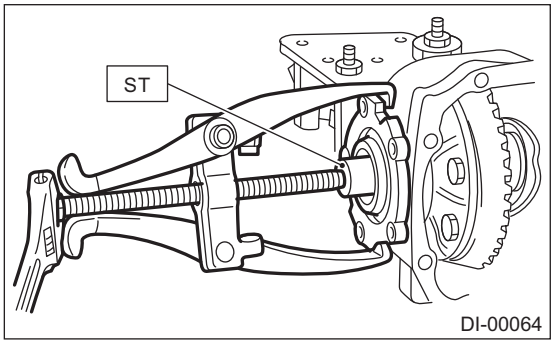


(A) Air breather cap
(B) Rear cover
(C) Oil temperature sensor
(D) Drain plug

4) Remove the bolts, and then remove the rear cover.
5) Remove the stud bolts from rear cover if necessary.
6) Remove the side retainer attachment bolts, set the ST to differential case, and extract the side retainer with a puller.

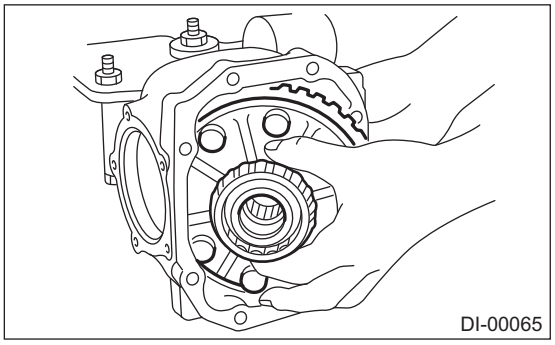
NOTE:
• Side retainer shim of each side should be kept together with its mating retainer.

• Keep the side retainers separate by attaching tags or in similar ways to make it possible to identify RH and LH sides during reassembly.
ST 398457700 ATTACHMENT

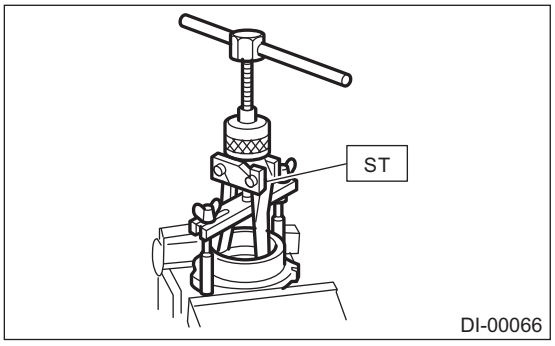


7) Remove the side oil seal and O-ring from the side retainer.
8) Remove the differential case.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



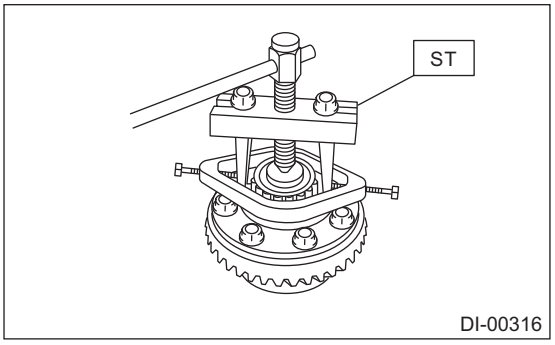
9) When replacing the side bearing, remove the side bearing race from the side retainer using ST.
ST 398527700 PULLER ASSY



10) Remove the side bearing cone using the ST.

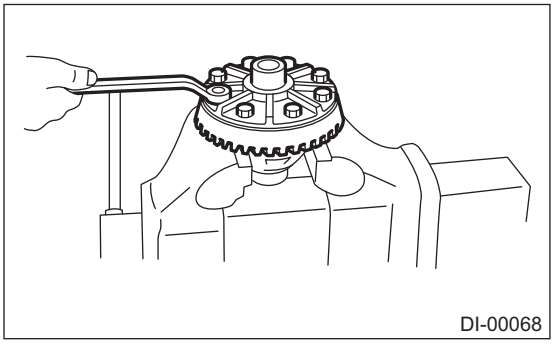
NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the side bearing cone.

• Never mix up the RH and LH side bearing races and side bearing cones.
ST 18759AA000 PULLER ASSY

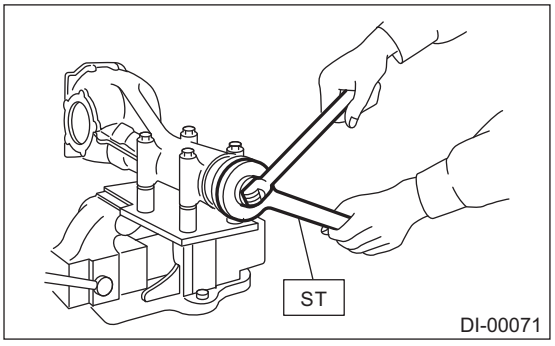


11) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

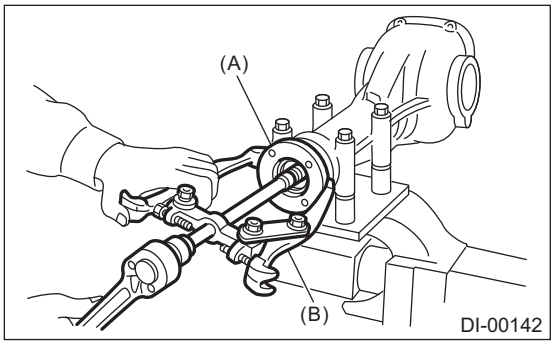
NOTE:
Do not disassemble the differential case.



12) Remove the self-locking nut while securing the companion flange with ST.
ST 18633AA000 WRENCH COMPL



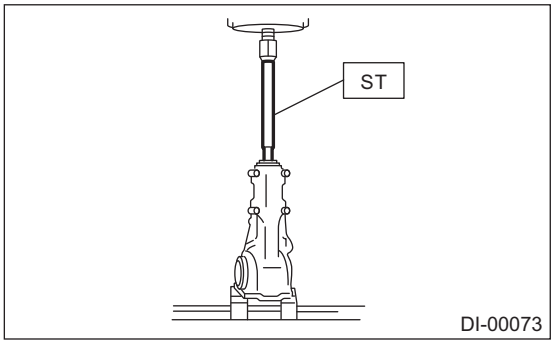
13) Extract the companion flange with a puller.



(A) Companion flange
(B) Puller

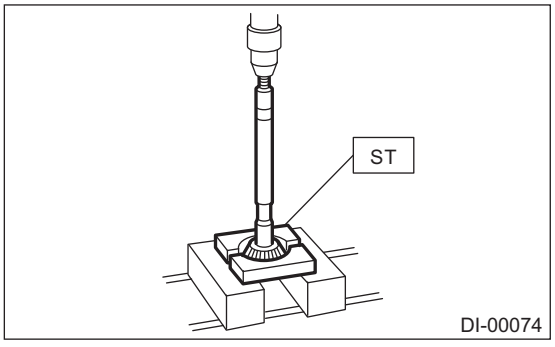
14) Press the end of drive pinion shaft using ST and remove the rear bearing cone, pinion height adjusting washer, preload adjusting spacer and washer.

NOTE:
Hold the drive pinion so as not to drop it.
ST 398467700 DRIFT

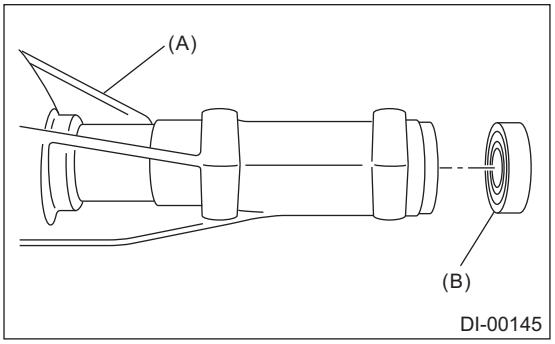


15) Support the rear bearing cone with ST, and remove it from the drive pinion.

NOTE:
Place the replacer so that its center-recessed side faces the bearing cone.
ST 398517700 REPLACER

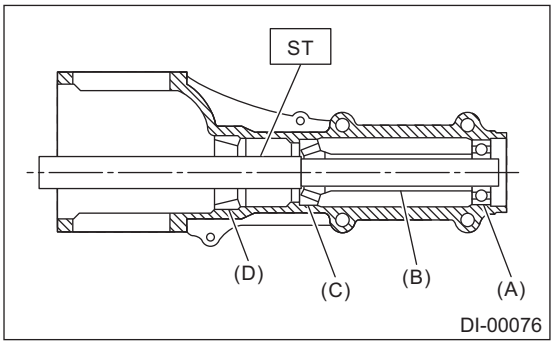


16) Remove the front oil seal using ST.
ST 398527700 PULLER ASSY



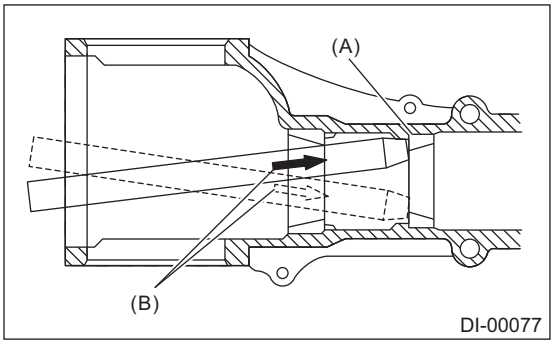
(A) Differential carrier
(B) Front oil seal

17) Remove the pilot bearing together with the front bearing cone and spacer using the ST.
ST 398467700 DRIFT



(A) Pilot bearing
(B) Spacer
(C) Front bearing
(D) Rear bearing race

18) When replacing the bearings, use a brass bar to tap out the front bearing race and rear bearing race in this order to remove them.

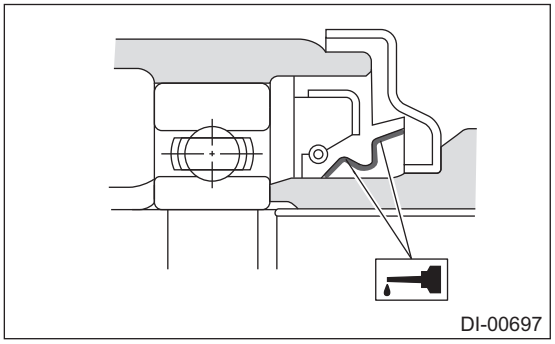


(A) 2 cutout portions along diagonal lines
(B) Tap alternately with brass bar.

D: ASSEMBLY

1. T-TYPE (H5)

NOTE:
• Check and adjust each part during assembly.
• Keep the shims and washers in order, so that they are not improperly installed.
• Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
• Apply gear oil when installing the bearings and thrust washers.
• Be careful not to mix up the side bearing races RH and LH.
• Replace the gasket, oil seal and O-ring with a new part.
• Be careful not to mix up the side oil seals RH and LH.
• Apply gear oil to the lips when installing the oil seal.

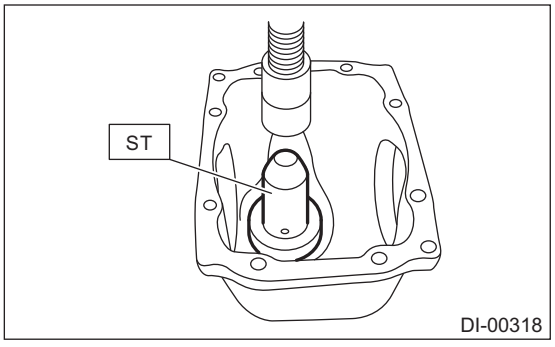


DI-00697

1) Adjusting preload for front and rear bearings

NOTE:
Adjust the bearing preload between front and rear bearings with preload adjusting spacer and washer. Pinion height adjusting washer is not affected by this adjustment. The adjustment must not be carried out with oil seal inserted.

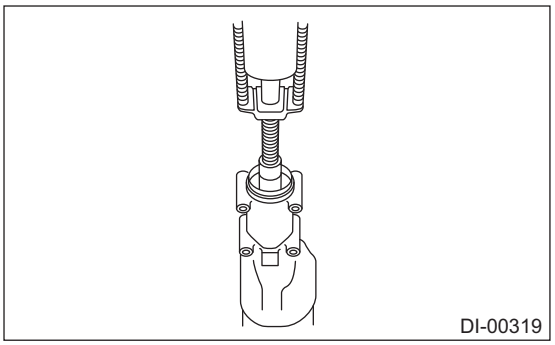
2) Press-fit the rear bearing race using the ST.
ST 398417700 DRIFT



DI-00318

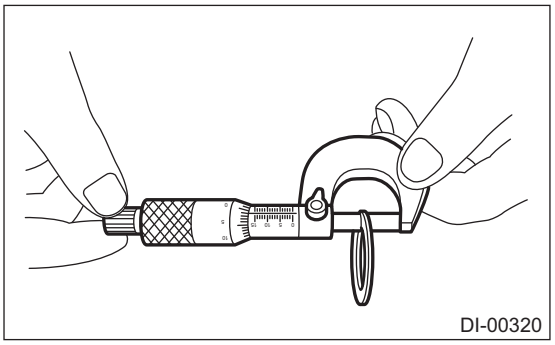
3) Press-fit the front bearing race using the ST.

NOTE:
Use a new front bearing race.
ST 398477702 DRIFT



DI-00319

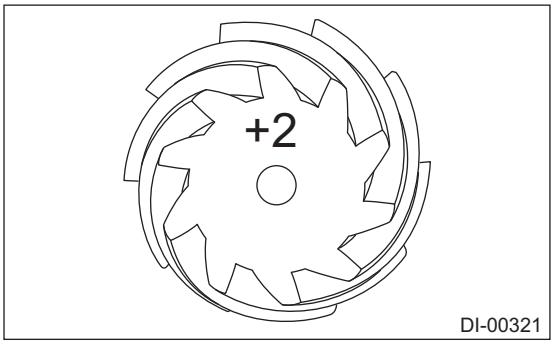
4) Selecting the pinion height adjusting washer
(1) Measure the thickness of the inserted pinion height adjusting washer.



DI-00320

(2) Read the markings on both the current drive pinion gear and the new pinion gear.

NOTE:
No marking means 0 (zero).



DI-00321

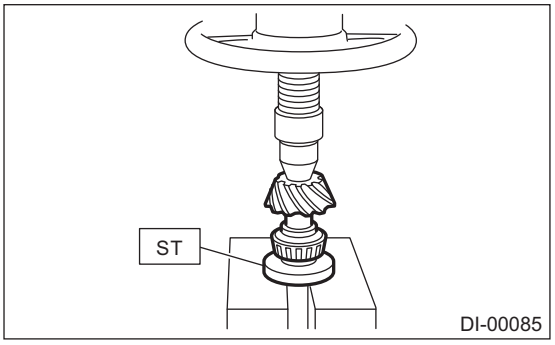
(3) Calculate the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the installed washer with a new washer of the calculated thickness.
T = T1 + (T2 × 0.01 – T3 × 0.01)

T	Thickness of selected pinion height adjusting washer mm (in)	
T1	Thickness of inserted pinion height adjusting washer mm (in)	
T2	Number of the installed drive pinion gear marking mm (in)	
T3	Number of new drive pinion gear marking mm (in)	
Memo:		

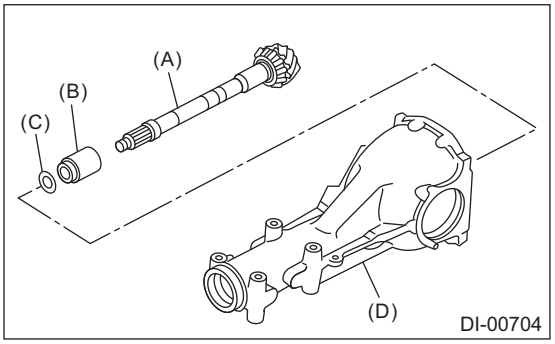
(Example of calculation)
T1 = 3.30 mm (0.1299 in), T2 = +2, T3 = –1
T = 3.30 mm (0.1299 in) + {(2 × 0.01) – (–1 × 0.01)} = 3.33 mm (0.1311 in)
Result: Thickness = 3.33 mm (0.1311 in)
The washer with part number 38336AA310 is used.

Pinion height adjusting washer	
Part No.	Thickness mm (in)
38336AA230	3.09 (0.1217)
38336AA240	3.12 (0.1228)
38336AA250	3.15 (0.1240)
38336AA260	3.18 (0.1252)
38336AA270	3.21 (0.1264)
38336AA280	3.24 (0.1276)
38336AA290	3.27 (0.1287)
38336AA300	3.30 (0.1299)
38336AA310	3.33 (0.1311)
38336AA320	3.36 (0.1323)
38336AA330	3.39 (0.1335)
38336AA340	3.42 (0.1346)
38336AA350	3.45 (0.1358)
38336AA360	3.48 (0.1370)
38336AA370	3.51 (0.1382)
38336AA380	3.54 (0.1394)
38336AA390	3.57 (0.1406)
38336AA400	3.60 (0.1417)
38336AA410	3.63 (0.1429)
38336AA420	3.66 (0.1441)

5) Install the selected pinion height adjusting washer on drive pinion, and press in the rear bearing cone with ST.
ST 18674AA000 INSTALLER



6) Insert the drive pinion, and install the originally attached preload adjusting spacer and washer.

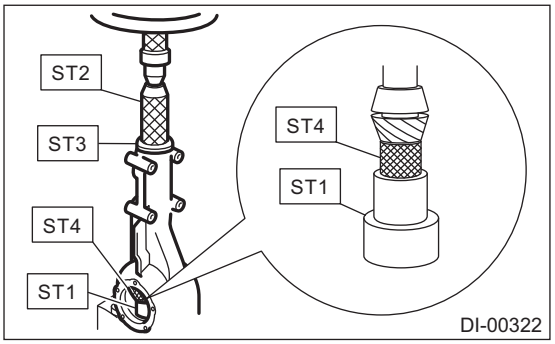


(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

7) Install the front bearing cone.

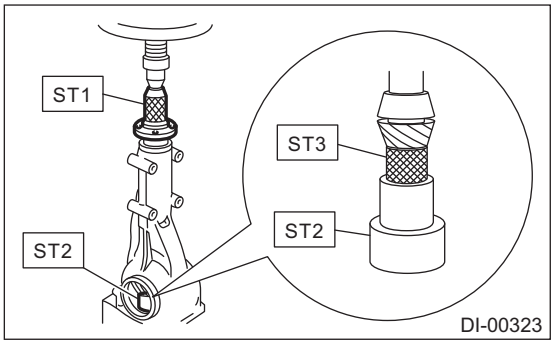
NOTE:
Use new front bearing cone.
8) Insert the spacer and press-fit the pilot bearing using ST.

NOTE:
Use a new pilot bearing.
ST1 399780104 WEIGHT
ST2 899580100 INSTALLER
ST3 398507703 DUMMY COLLAR
ST4 498937110 HOLDER DRIVE PINION



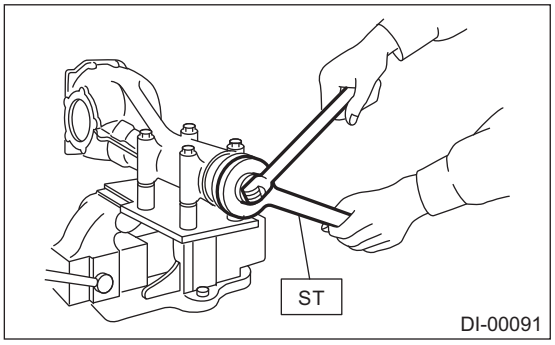
9) Press-fit the companion flange with ST1, ST2, and ST3.

NOTE:
Be careful not to damage the pilot bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT
ST3 498937110 HOLDER DRIVE PINION



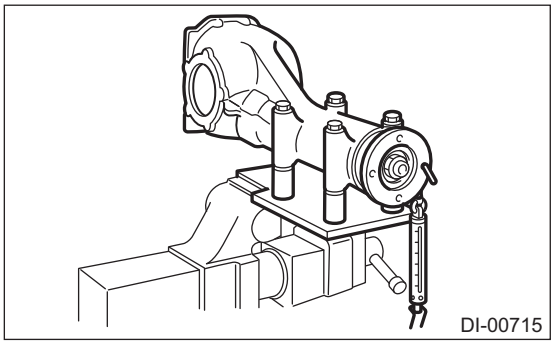
10) Tighten the self-locking nut while securing the companion flange with ST.

Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)
ST 18633AA000 WRENCH COMPL

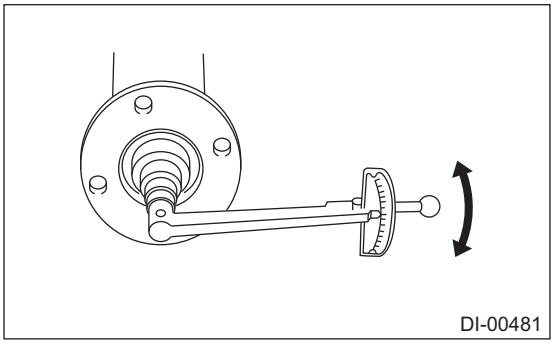


11) Rotate the drive pinion shaft 10 times or more to fit it in the respective taper roller bearing, and then measure the initial load or initial torque.

Initial load:
24.1 — 38.6 N (2.5 — 3.9 kgf, 5.4 — 8.7 lbf)



Initial torque:
0.98 — 1.57 N·m (0.10 — 0.16 kgf-m, 0.72 — 1.16 ft-lb)

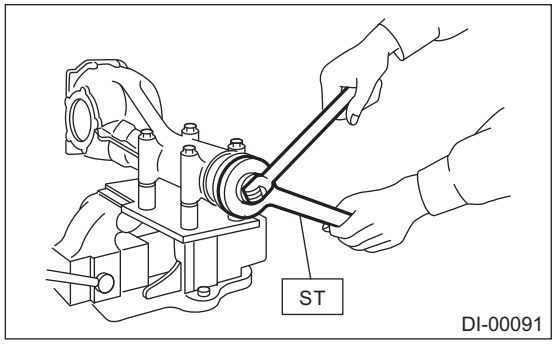


12) When the bearing preload is out of the specified range, select the preload adjusting washer and spacer from the following table in order to make it within the specified range.

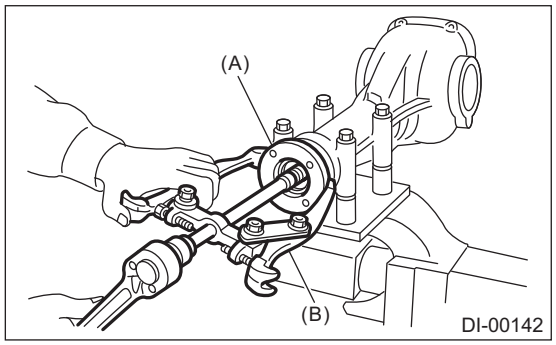
Preload adjusting washer	
Part No.	Thickness mm (in)
383705200	2.59 (0.1020)
383715200	2.57 (0.1012)
383725200	2.55 (0.1004)
383735200	2.53 (0.0996)
383745200	2.51 (0.0988)
383755200	2.49 (0.0980)
383765200	2.47 (0.0972)
383775200	2.45 (0.0965)
383785200	2.43 (0.0957)
383795200	2.41 (0.0949)
383805200	2.39 (0.0941)
383815200	2.37 (0.0933)
383825200	2.35 (0.0925)
383835200	2.33 (0.0917)
383845200	2.31 (0.0909)

Preload adjusting spacer	
Part No.	Length mm (in)
31454AA130	52.2 (2.055)
31454AA140	52.4 (2.063)
31454AA150	52.6 (2.071)
31454AA160	52.8 (2.079)
31454AA170	53.0 (2.087)
31454AA180	53.2 (2.094)

13) Remove the self-locking nut while securing the companion flange with ST.
ST 18633AA000 WRENCH COMPL



14) Extract the companion flange with a puller.

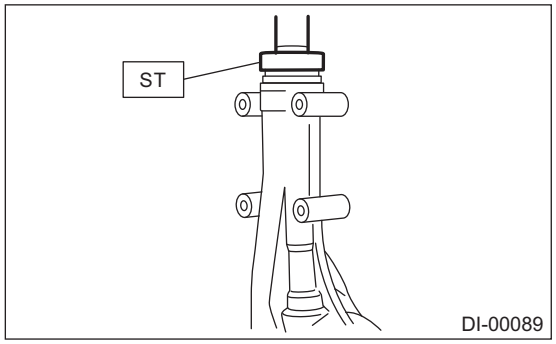


(A) Companion flange
(B) Puller

15) Using the ST, install the front oil seal.

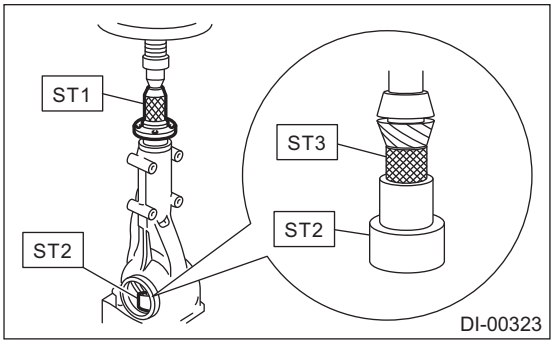
NOTE:
- Use a new oil seal.
- Press-fit until the oil seal end comes 1 mm (0.04 in) inward from end of carrier.
- Apply gear oil to the oil seal lips.

ST 498447120 INSTALLER



16) Press-fit the companion flange with ST1, ST2, and ST3.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT
ST3 498937110 HOLDER DRIVE PINION

NOTE:
Be careful not to damage the pilot bearing.

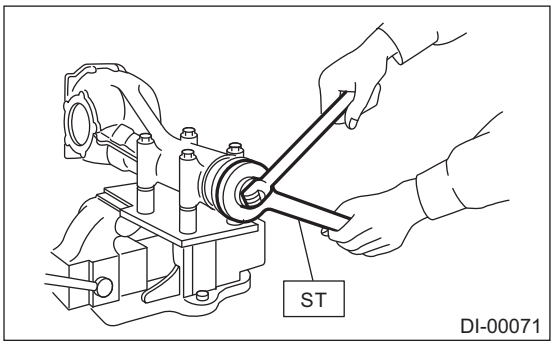


17) Apply seal material on the drive pinion shaft thread and new self-locking nut seat.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

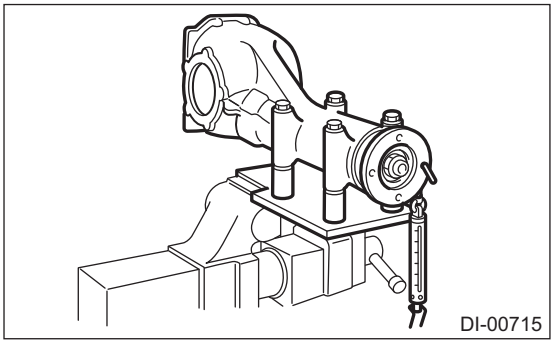
18) Tighten the new self-locking nut while securing the companion flange with ST.

Tightening torque:
181.5 N·m (18.5 kgf-m, 133.9 ft-lb)
ST 18633AA000 WRENCH COMPL

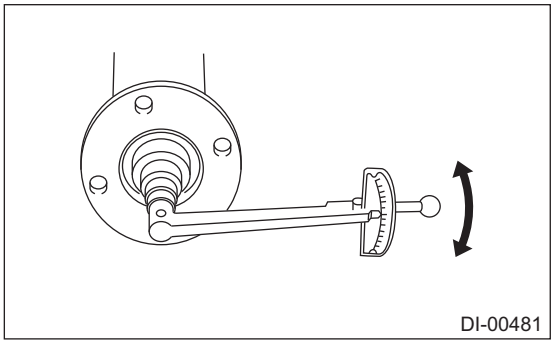


19) Check the initial torque or initial load.

Initial load:
24.1 — 38.6 N (2.5 — 3.9 kgf, 5.4 — 8.7 lbf)



Initial torque:
0.98 — 1.57 N·m (0.10 — 0.16 kgf-m, 0.72 — 1.16 ft-lb)

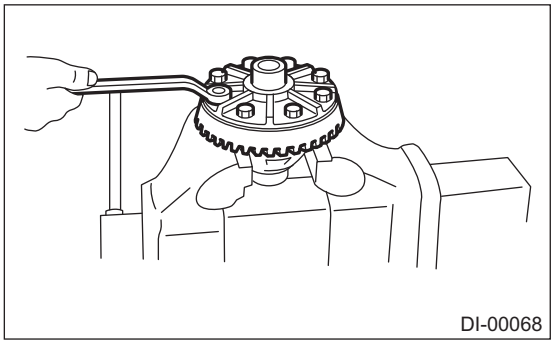


20) Install the hypoid driven gear to differential case.

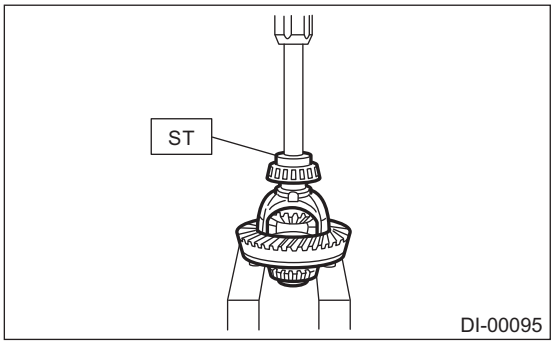
NOTE:
• Before installing bolts, apply seal material to bolt threads.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent
• Make sure there is no clearance between the differential case and driven gear.
• Tighten opposing bolts in order.

Tightening torque:
103 N·m (10.5 kgf-m, 76.0 ft-lb)

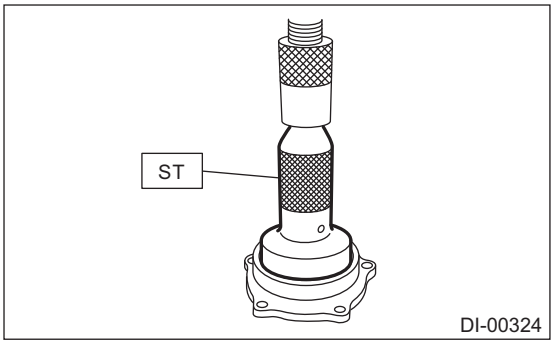


21) Press-fit the side bearing cone using the ST.
ST 398487700 DRIFT



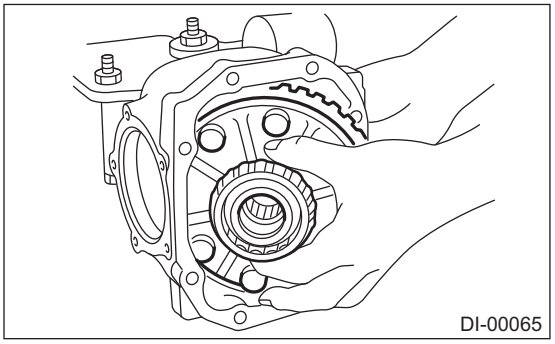
22) Using the ST, press-fit the side bearing race to the side retainer.

CAUTION:
Make sure that the side bearing races and cones are properly assembled.
ST 398417700 DRIFT



23) Side retainer shim adjustment
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side retainer shim thickness.
(2) Install the differential case.

NOTE:
Be careful not to hit the teeth of hypoid driven gear against the differential carrier.



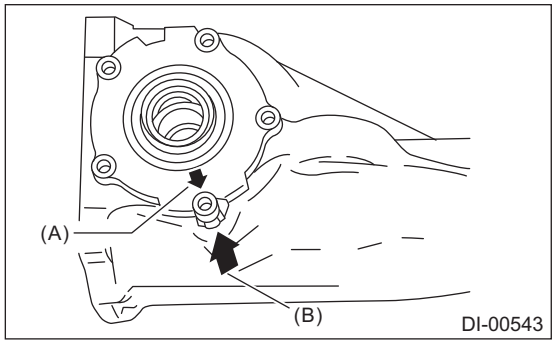
(3) Install the side retainer shim.

NOTE:
• Be careful not to mix up the side retainer shim RH and LH.
• If the side retainer shim has been broken or corroded, replace it with a new part.

Side retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) Align the arrow mark on the differential carrier with the arrow mark on the side retainer when installing the side retainer.

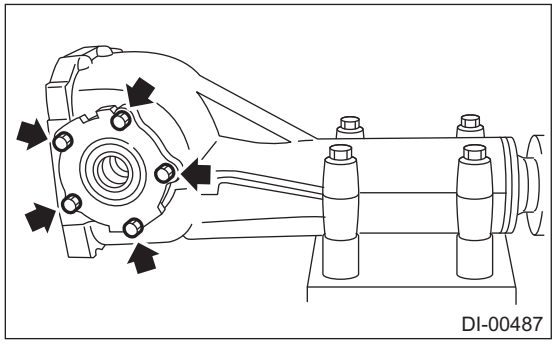
NOTE:
Be careful that side bearing race does not damage the bearing roller.



(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

(5) Tighten the side retainer bolts.

Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)

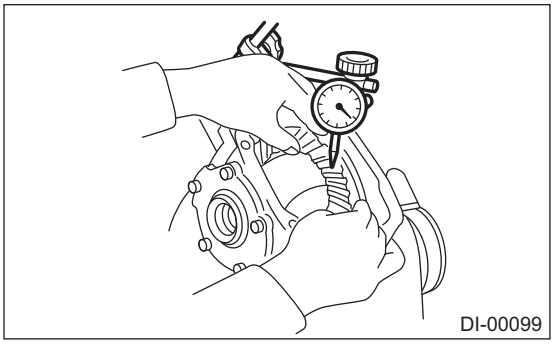


(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet stand on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge. If the backlash is outside the standard range, adjust the side retainer shim by the following method.

• When backlash is less than 0.1 mm (0.004 in):
Reduce the thickness of shim on the back side of the hypoid driven gear and increase the thickness of shims on the teeth side of the hypoid driven gear.

• When backlash exceeds 0.2 mm (0.008 in):
Increase the thickness of shim on the back side of the hypoid driven gear and reduce the thickness of shims on the teeth side of the hypoid driven gear.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

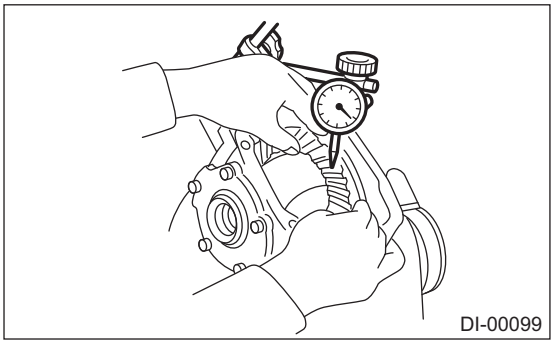


(7) Measure the total preload of the drive pinion. If the total preload is not within specification, adjust it by increasing/reducing the thickness of side retainer shims on both sides by the same amount.

Total preload:
26.5 — 53 N (2.7 — 5.4 kgf, 6.0 — 11.9 lbf)

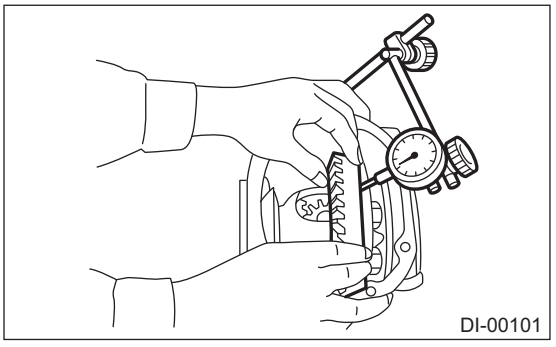
24) Recheck the hypoid driven gear to drive pinion backlash.

Backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)



25) Check drive pinion and hypoid driven gears rotate smoothly and make sure of the hypoid driven gear runout on its back surface. If the runout on the back side of the hypoid driven gear exceeds the specification, check for any foreign material between the hypoid driven gear and differential case, and for any deformation of the case or gear.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)



26) Checking and adjusting the tooth contact of hypoid driven gear

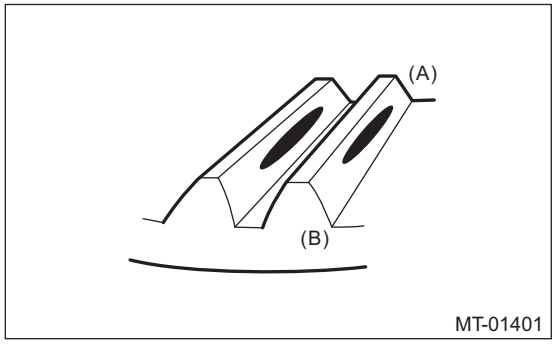
(1) Apply lead-free red dye evenly on the both sides of three to four teeth of the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is not correct, readjust.

NOTE:
Be sure to wipe off the lead-free red dye completely after the adjustment is completed.

- Correct tooth contact

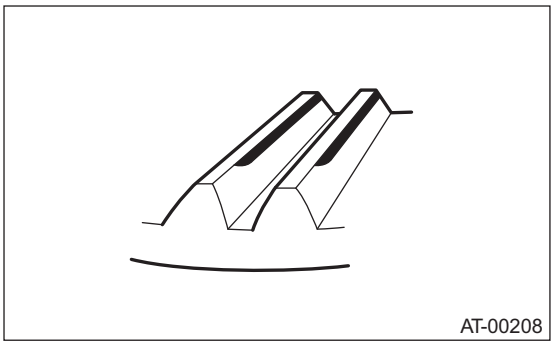
Check item: Tooth contact pattern is slightly shifted toward toe side under no-load rotation. (When driving, it moves towards the heel side.)



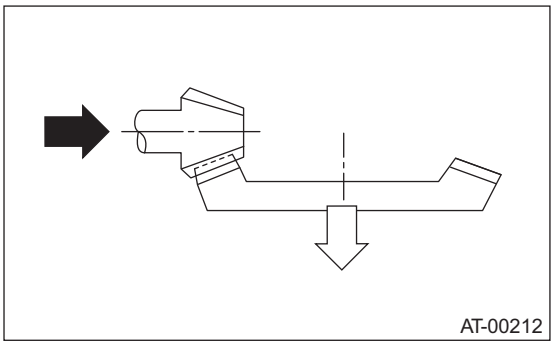
(A) Toe side
(B) Heel side

- Face contact

Check item: Backlash is too large.
Contact pattern



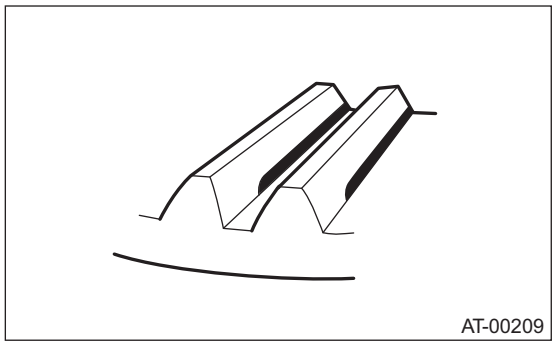
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



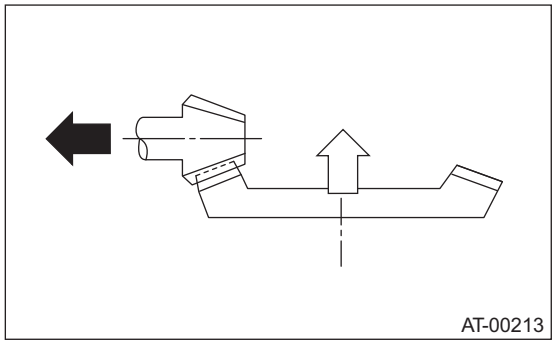
- Flank contact

Check item: Backlash is too small.

Contact pattern



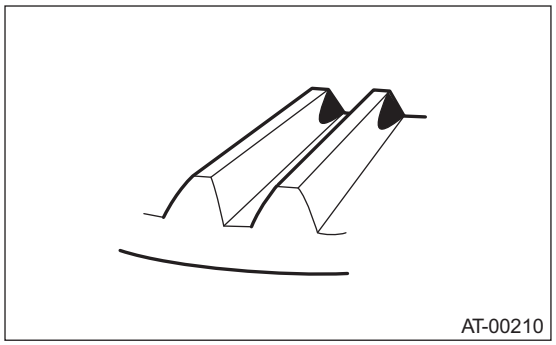
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



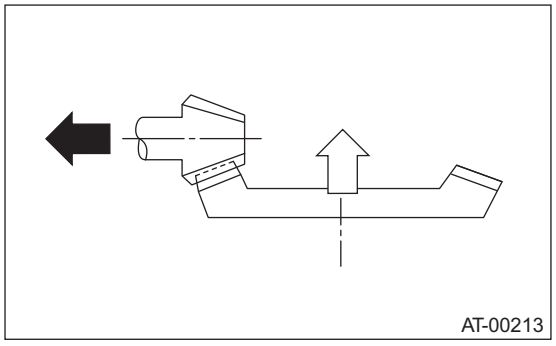
- Toe contact (inside contact)

Check item: Teeth contact area is too small.

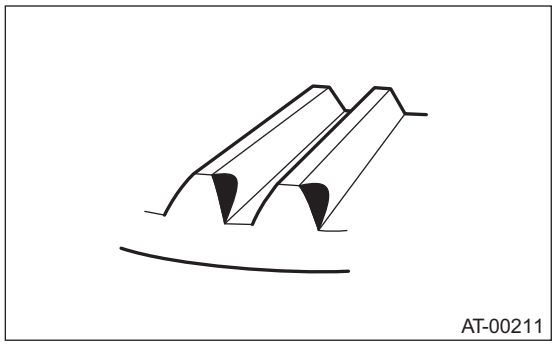
Contact pattern



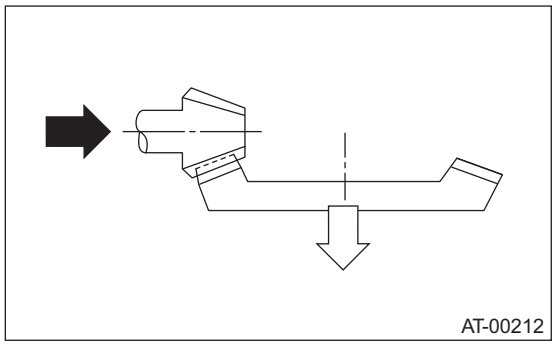
Corrective action: Reduce the thickness of pinion height adjusting washer according to the procedure for bringing drive pinion away from hypoid driven gear.



• Heel contact (outside end contact)
Check item: Teeth contact area is too small.
Contact pattern



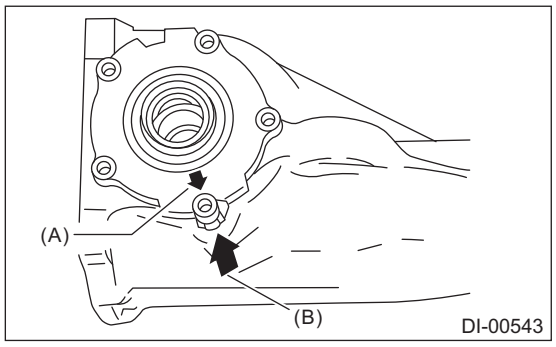
Corrective action: Increase thickness of pinion height adjusting washer according to the procedure for bringing drive pinion close to hypoid driven gear side.



27) If proper tooth contact is not obtained, readjust the drive pinion height by changing the RH and LH side retainer shims and the hypoid driven gear backlash.
28) Remove the side retainer.
29) Install the O-ring to the side retainer.

NOTE:
Use new O-rings.

30) Install the side oil seal to the side retainer. <Ref. to DI-60, REPLACEMENT, Rear Differential Side Oil Seal.>
31) Align the arrow mark on the differential carrier with the arrow mark on the side retainer.

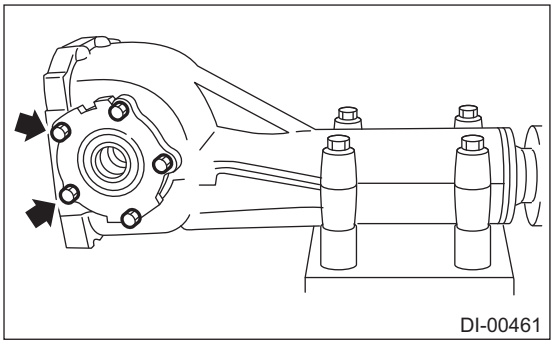


(A) Arrow mark (on the side retainer)
(B) Arrow mark (on the differential carrier)

32) Apply liquid gasket to the bolts indicated by arrows, and tighten the bolt.

Liquid gasket:
THREE BOND 1110F (Part No. K0879Y0021), THREE BOND 1110B or equivalent

Tightening torque:
10.5 N·m (1.1 kgf-m, 7.7 ft-lb)



33) Install the gasket and rear cover, and tighten the bolts to specified torque.

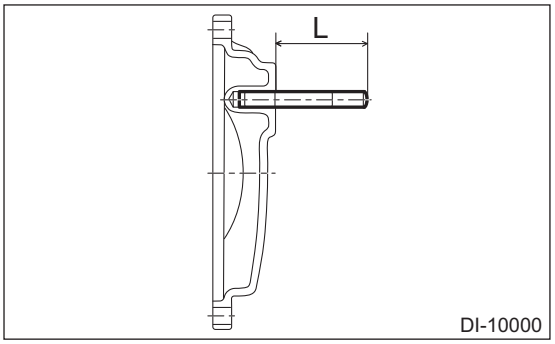
NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)

34) When the stud bolts are removed from the rear cover, install the stud bolts so that the exposed length of stud bolt is within the range of “L”.

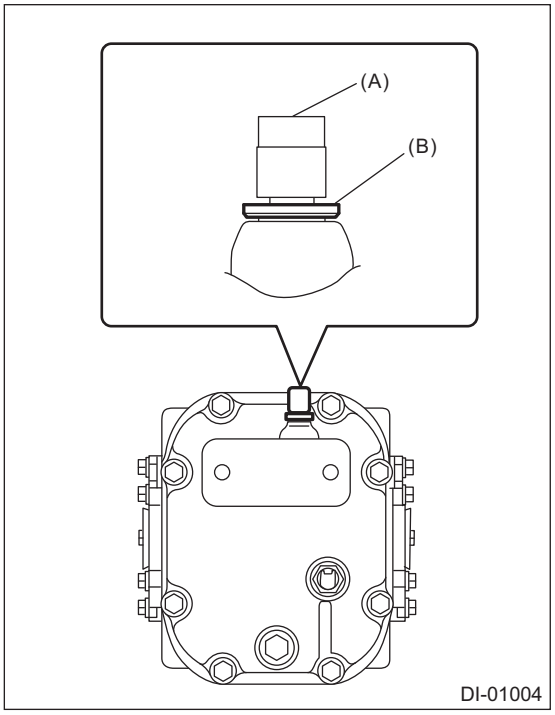
CAUTION:
• Do not tighten forcibly if the exposed length of stud bolt does not fall within the specified range. Remove the stud bolt, and check for contamination of foreign matter and any defects in the screw hole.
• Do not tighten with a tightening torque of 55 N·m (5.6 kgf-m, 40.6 ft-lb) (reference value) or more.

Exposed length L of stud bolt:
59.0 — 61.0 mm (2.32 — 2.40 in)



35) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap section (A). Be sure to tap section (B) to install.



36) Install the drain plug.

NOTE:
Use a new gasket.

Tightening torque:
60 N·m (6.1 kg-m, 44.3 ft-lb)

37) Install the oil temperature sensor.

NOTE:
• Install the oil temperature sensor and the adapter as a unit.
• After installing the rear differential to the vehicle, fill the differential gear oil, then set a new gasket and tighten to the specified torque. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.

1) Hypoid driven gear and drive pinion
• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.

2) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.

3) Oil seal
Replace if deformed or damaged, and at every disassembling.

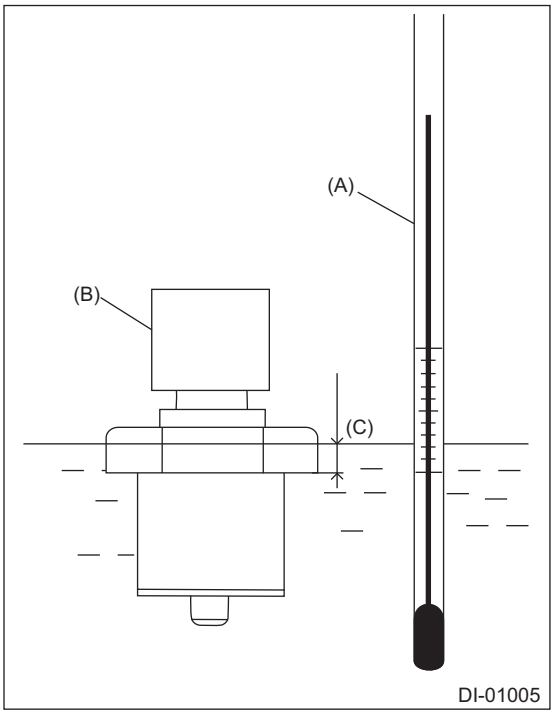
4) Differential carrier
Replace if the bearing bores are worn or damaged.

5) Differential case
Replace if sliding surfaces are abnormally worn, burned, or cracked.

6) Companion flange
Replace if the oil seal lip contact surface shows cracking.

7) Rear differential oil temperature sensor
(1) Check that the rear differential oil temperature sensor has no deformation, cracks or other damages.
(2) Immerse the rear differential oil temperature sensor and a thermometer in water.

CAUTION:
Take care not to allow water to get into the rear differential oil temperature sensor connector. If water gets into the connector, completely remove any water inside.

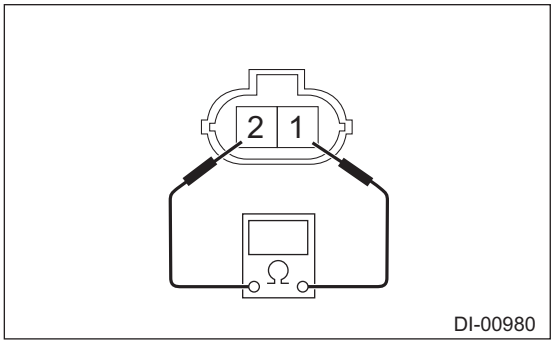


(A) Thermometer
(B) Rear differential oil temperature sensor
(C) Hexagonal part height: To approx. $^2/_3$

(3) Raise water temperature gradually, measure the resistance between the rear differential oil temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:
• Stir the water to make the temperature of the water as uniform as possible.

• Take the resistance value only after it becomes steady.
• After inspection, wipe off the water completely.



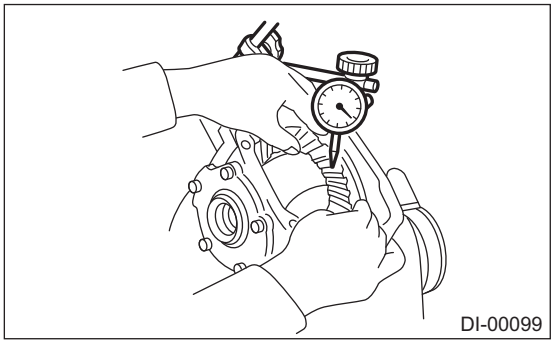
Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	2.233 — 2.701 [kΩ]
80°C (176°F)		0.313 — 0.338 [kΩ]

1. HYPOID DRIVEN GEAR TO DRIVE PINION BACKLASH

Using a dial gauge, check the backlash between hypoid driven gear and drive pinion.

Hypoid driven gear to drive pinion backlash:
0.10 — 0.20 mm (0.004 — 0.008 in)

If the backlash between hypoid driven gear and drive pinion is not within the specified range, adjust the side bearing preload and repair if necessary.

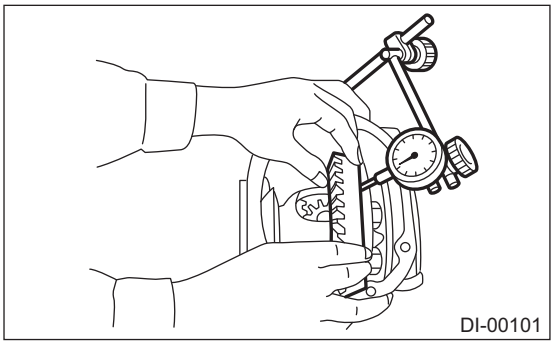


2. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE

Using a dial gauge, check the hypoid driven gear back surface runout.

Hypoid driven gear back surface runout:
0.05 mm (0.002 in)

If the hypoid driven gear runout on its back surface exceeds the limit, replace the hypoid driven gear.



3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

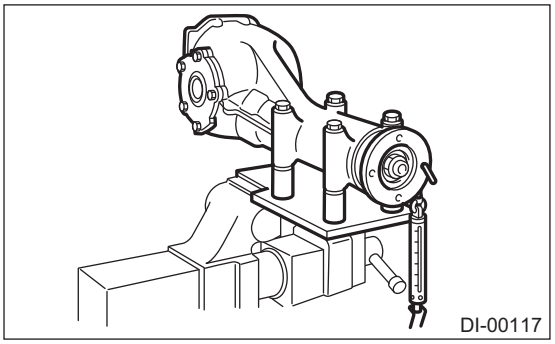
Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

4. TOTAL PRELOAD

Using a spring scale, check the total preload.

Total preload:
26.5 — 53 N (2.7 — 5.4 kgf, 6.0 — 11.9 lbf)

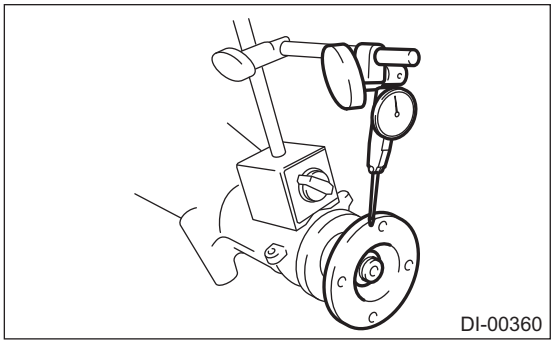
If the total preload is not within the specification, adjust the side retainer shim.



5. COMPANION FLANGE

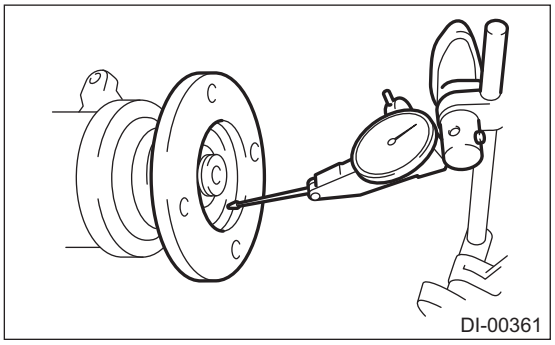
1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

Limit of runout:
0.08 mm (0.003 in)



3) Set the dial gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)



4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

F: ADJUSTMENT

1. HYPOID DRIVEN GEAR TO DRIVE PINION BACKLASH

Adjust the backlash between hypoid driven gear and drive pinion. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

2. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

3. TOTAL PRELOAD

Adjust the side retainer shim. <Ref. to DI-29, ASSEMBLY, Rear Differential (T-type).>

5. Rear Differential (VB-type)

A: REMOVAL

The removal procedure for VB3-type is included in “REMOVAL” for T-type. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).>

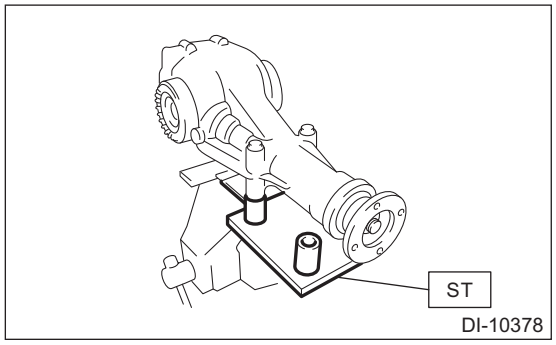
B: INSTALLATION

The installation procedure for VB3-type is included in “INSTALLATION” for T-type. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>

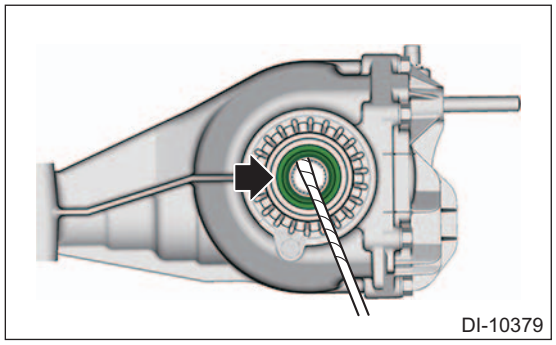
C: DISASSEMBLY

1) Set the ST on a vise and install the rear differential.

ST 398217700 ATTACHMENT SET

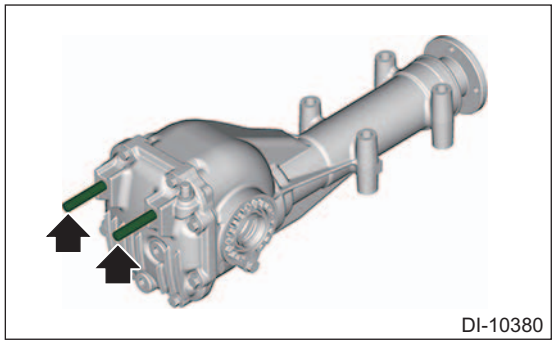


2) Remove the side oil seal using a flat tip screwdriver wrapped with vinyl tape, etc.



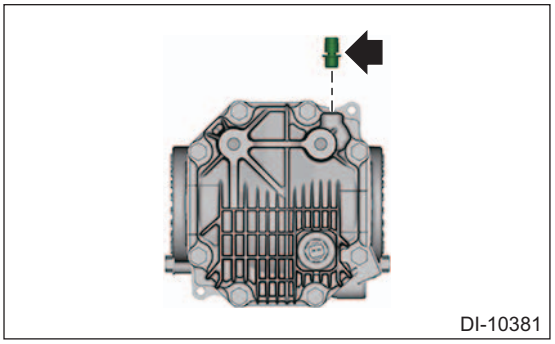
3) Remove the stud bolt from the rear cover.

NOTE:
Perform this procedure only when it is necessary.

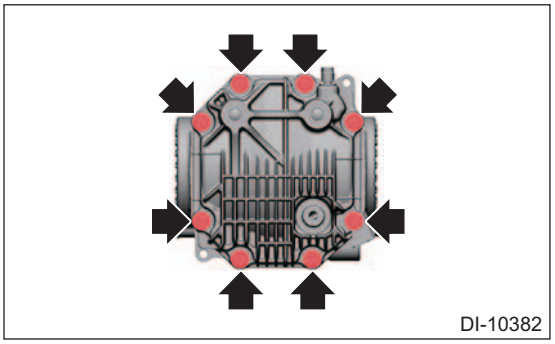


4) Remove the air breather cap.

NOTE:
Perform this procedure only when it is necessary.

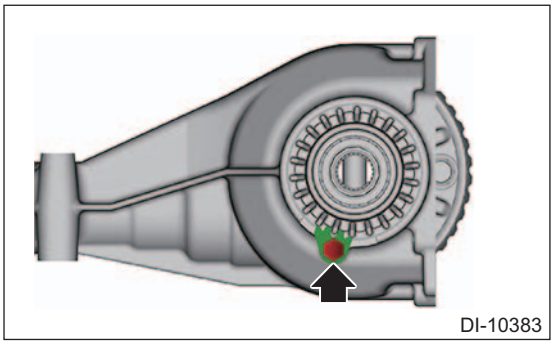


5) Remove the bolt, and remove the rear cover by lightly tapping with a plastic hammer.



6) Measure and record the tooth contact and the backlash between hypoid driven gear and drive pinion set. <Ref. to DI-44, ASSEMBLY, Rear Differential (VB-type).>

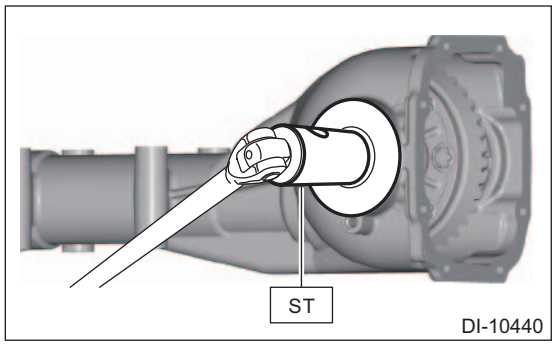
7) Remove the lock plate.



8) Remove the side retainer using the ST.

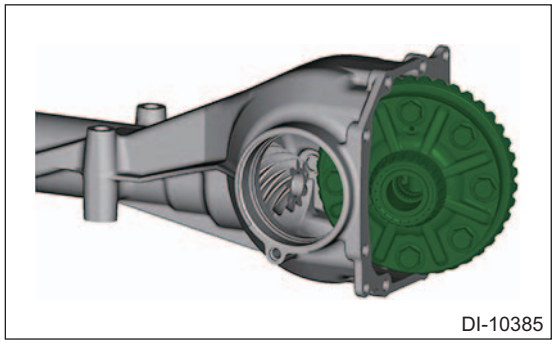
CAUTION:
- **Be careful not to drop the differential case.**
- **Be careful not to allow the hypoid driven gear teeth to contact the differential carrier.**

NOTE:
Do not mix up the side bearings RH and LH when they are not replaced with new parts.
ST 18658AA021 WRENCH COMPL RETAINER



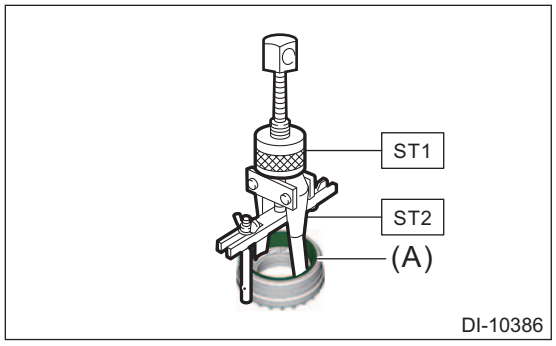
9) Remove the differential case.

NOTE:
Be careful not to allow the hypoid driven gear teeth to contact the differential carrier.

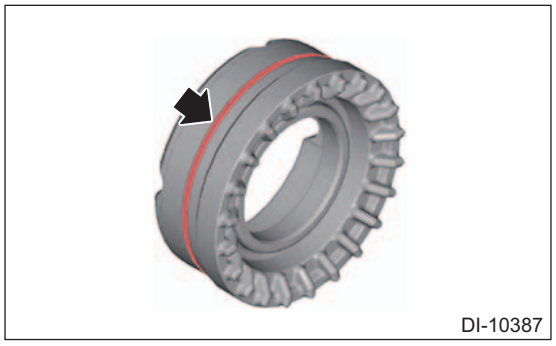


10) Remove the side bearing race (A) with ST1 and ST2.

NOTE:
Perform this procedure only when it is necessary.
ST1 398527700 PULLER ASSY
ST2 18760AA000 CLAW

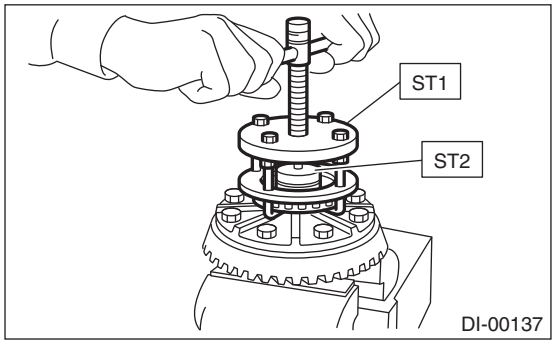


11) Remove the O-ring from the side retainer.

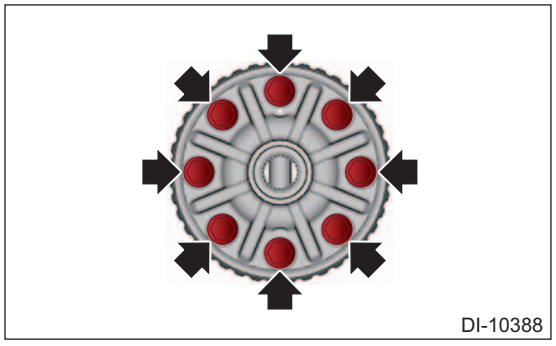


12) Remove the side bearing cone with ST1 and ST2.

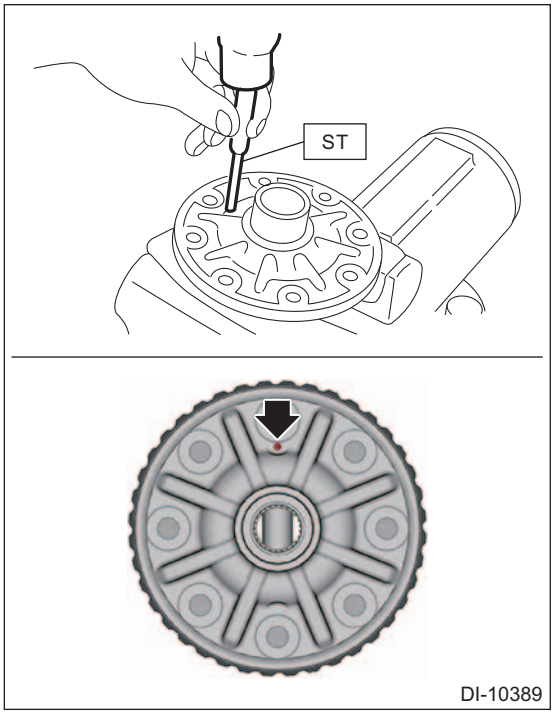
NOTE:
Perform this procedure only when it is necessary.
ST1 899524100 PULLER SET
ST2 398497701 SEAT



13) Remove the hypoid driven gear from the differential case.

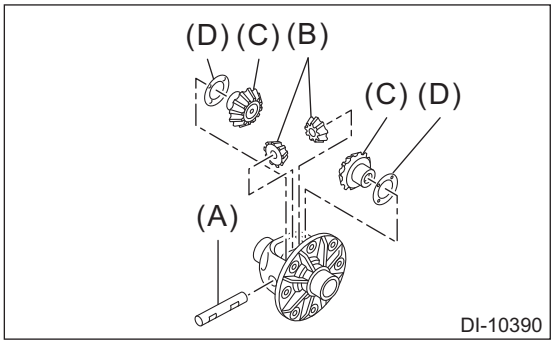


14) Using the ST, remove the spring pin.
ST 899904100 STRAIGHT PIN REMOVER



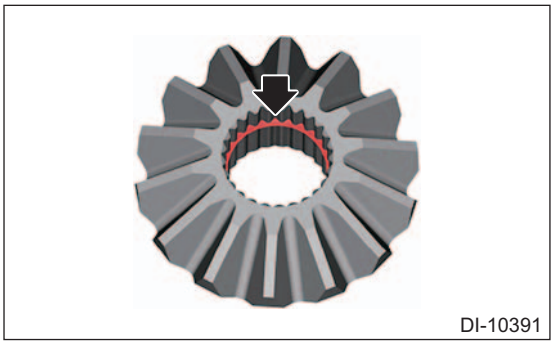
15) Pull out the pinion shaft to remove the differential bevel pinion, the differential bevel gear and the thrust washer.

NOTE:
Do not mix up the installation position of each part when reusing it.

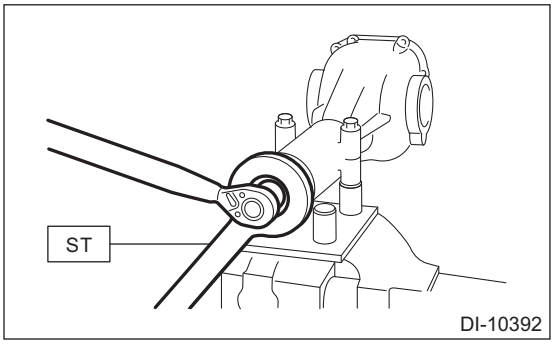


(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Thrust washer

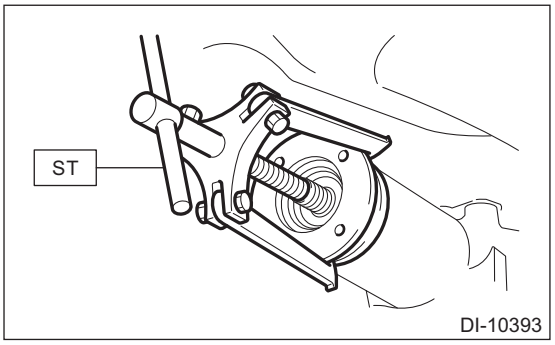
16) Remove the circlip from the differential bevel gear.



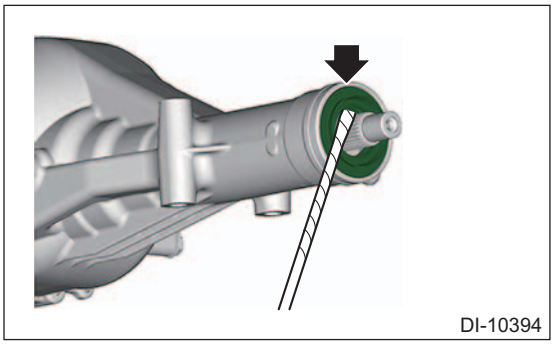
17) Remove the self-locking nut while securing the companion flange with ST.
ST 498427200 FLANGE WRENCH



18) Remove the companion flange using ST.
ST 399703600 PULLER ASSY

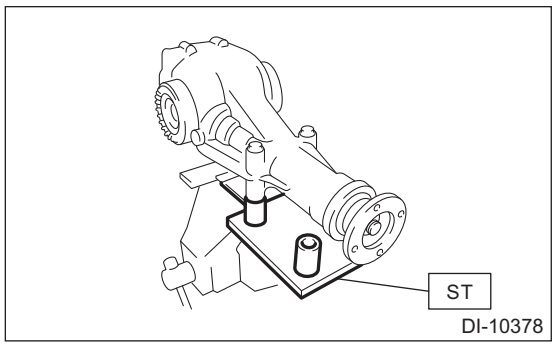


19) Remove the front oil seal using a flat tip screwdriver wrapped with vinyl tape, etc.



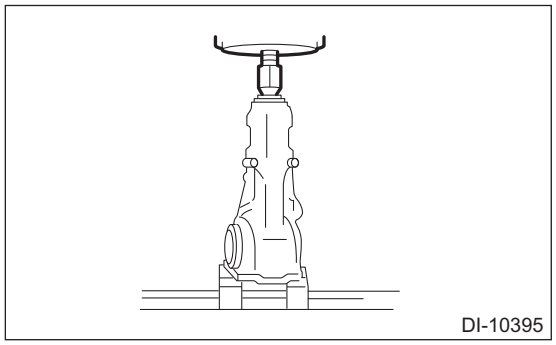
20) Remove sealant from the threaded portions of the companion flange and the drive pinion.

21) Remove the rear differential from ST.
ST 398217700 ATTACHMENT SET

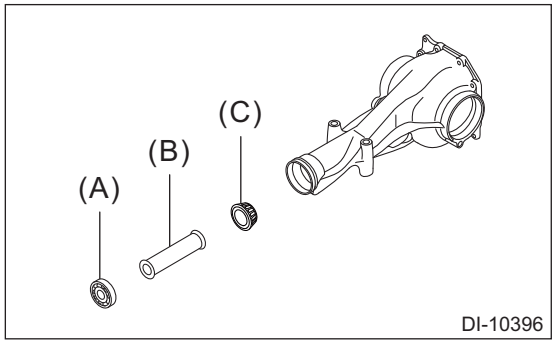


22) Press the end of drive pinion using a press, and remove the drive pinion, pinion height adjusting washer, rear bearing cone, preload adjusting spacer and preload adjusting washer as a single unit.

CAUTION:
Be careful not to drop the drive pinion.



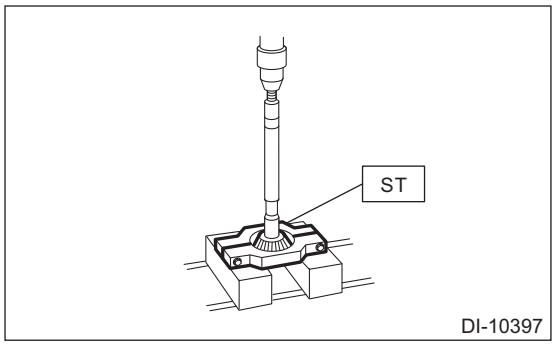
23) Remove the pilot bearing, the spacer and the front bearing cone from the differential carrier.



(A) Pilot bearing
(B) Spacer
(C) Front bearing cone

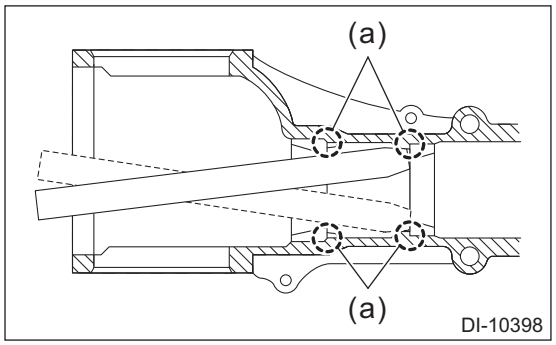
24) Using ST and a press, remove the rear bearing cone and the pinion height adjusting washer from drive pinion.

CAUTION:
Be careful not to drop the drive pinion.
ST 18720AA000 REMOVER



25) Measure and record the thickness of the pinion height adjusting washer.
26) Using a brass bar, tap out the front bearing race and the rear bearing race to remove.

NOTE:
- Remove the front bearing race first.
- Remove the rear bearing race by tapping it from the front side.
- Using the recess (a) on the differential carrier, tap the 2 points alternately to remove.



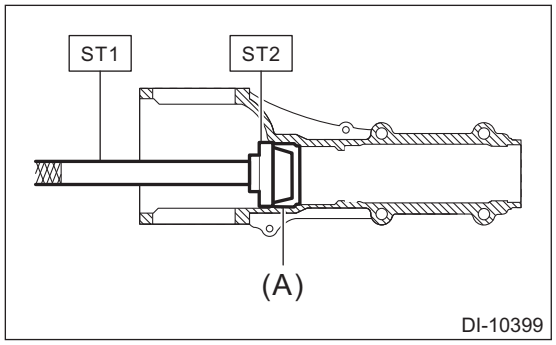
D: ASSEMBLY

1) Adjusting preload for front bearing and rear bearing

NOTE:
The adjustment must be carried out with front oil seal removed.

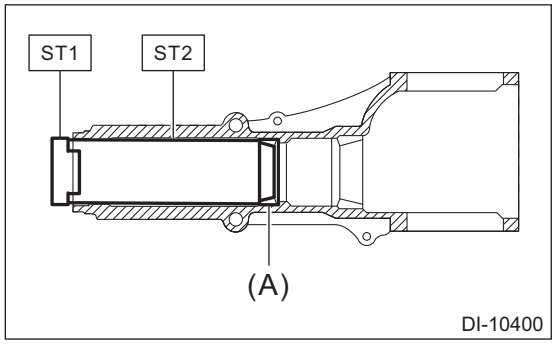
(1) Press-fit a new rear bearing race (A) with ST1, ST2 and a press.

NOTE:
Apply gear oil to the rear bearing race.
ST1 398477701 HANDLE
ST2 398477703 DRIFT 2



(2) Press-fit a new front bearing race (A) with ST1, ST2 and a press.

NOTE:
Apply gear oil to the front bearing race.
ST1 398477703 DRIFT 2
ST2 18654AA000 INSTALLER

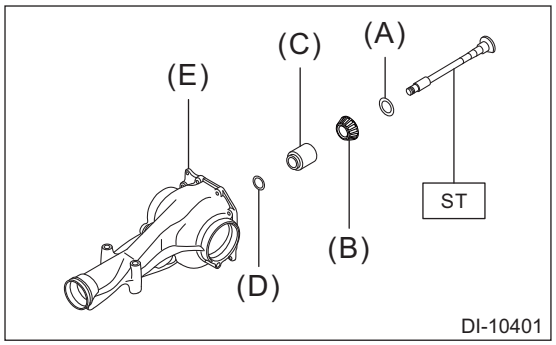


(3) Based on values of the backlash and tooth contact between hypoid driven gear and drive pinion and the thickness of the pinion height adjusting washer, which are measured during disassembly, select the pinion height adjusting washer to replace.

NOTE:
If the backlash and tooth contact between hypoid driven gear and drive pinion are normal in the inspection before disassembly, verify that the pinion height adjusting washer is not deformed or damaged, and reuse it.

(4) Set the selected pinion height adjusting washer, new rear bearing cone, preload adjusting spacer and preload adjusting washer to the ST, and insert them into the differential carrier.

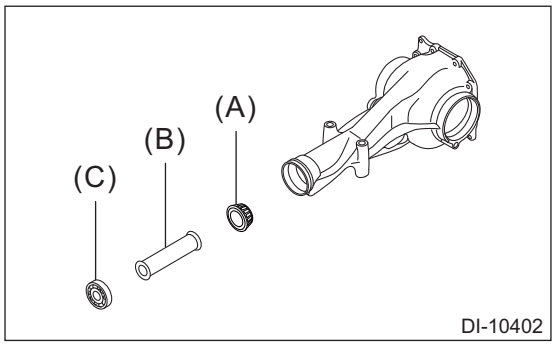
NOTE:
Apply gear oil to the rear bearing cone.
ST 18678AA000 DUMMY SHAFT



(A) Pinion height adjusting washer
(B) Rear bearing cone
(C) Preload adjusting spacer
(D) Preload adjusting washer
(E) Differential carrier

(5) Set new front bearing cone, spacer and new pilot bearing.

NOTE:
Apply gear oil to the front bearing cone and the pilot bearing.

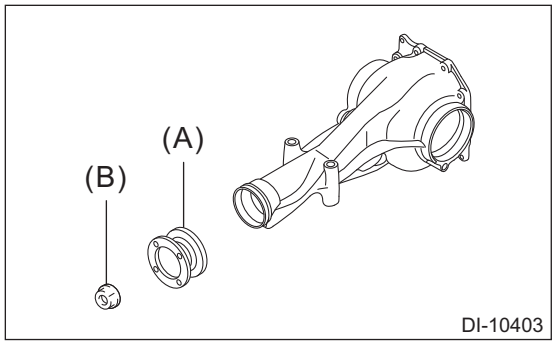


(A) Front bearing cone
(B) Spacer
(C) Pilot bearing

(6) Set the companion flange, and temporarily attach the self-locking nut.

NOTE:
• Use the self-locking nut that has been removed during disassembly.

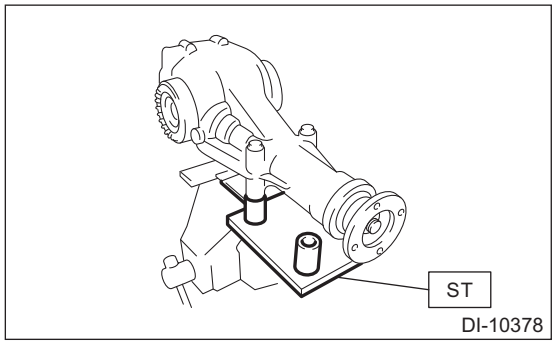
• Do not install the front oil seal.



(A) Companion flange
(B) Self-locking nut

(7) Set the ST on a vise and install the rear differential.

ST 398217700 ATTACHMENT SET



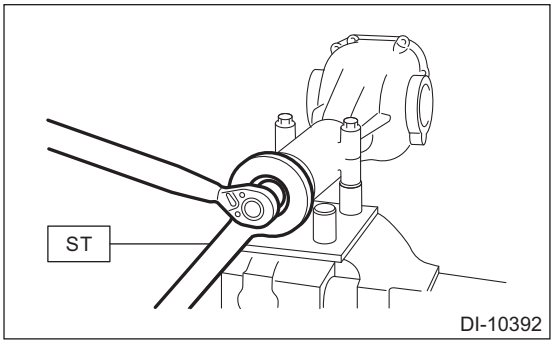
(8) Rotate the companion flange by hand to make the bearings fit in.
(9) Tighten the self-lock nut while measuring the initial torque or initial load using a torque wrench or a spring scale.

CAUTION:
Immediately stop tightening if the initial torque or initial load exceeds the standard value before the tightening torque reaches the specified value.

NOTE:
• When tightening the self-locking nut, use the ST to fix the companion flange in place.
• Select the preload adjusting washer and the preload adjusting spacer so that the initial torque or the initial load is within the standard value when tightening to the specified torque.

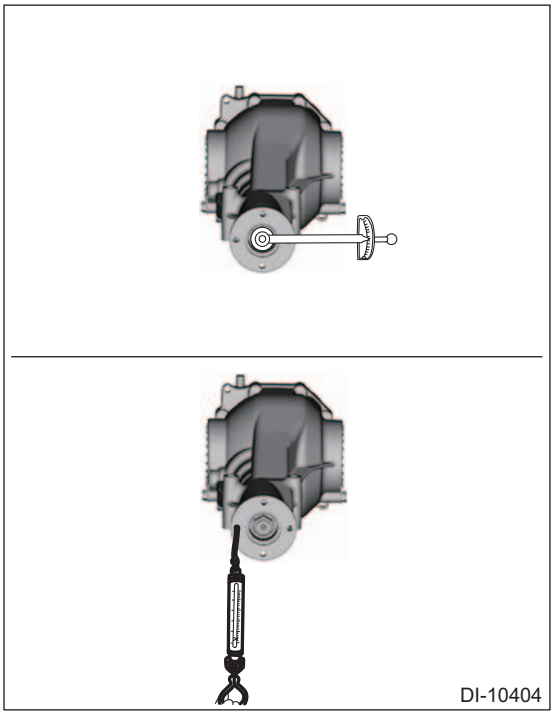
ST 498427200 FLANGE WRENCH

Tightening torque:
191 N·m (19.5 kgf-m, 140.9 ft-lb)



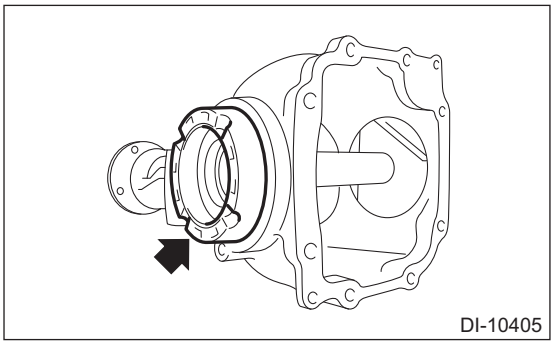
Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)



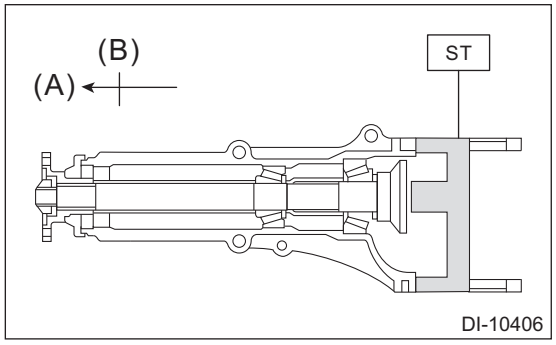
(10) Record the initial torque or the initial load after adjusting the preload.

2) Adjusting drive pinion height:
(1) Install the side retainer in the reverse direction to the left side of the differential carrier.



(2) Set the ST.

ST 18831AA010 DIFFERENTIAL CARRIER GAUGE

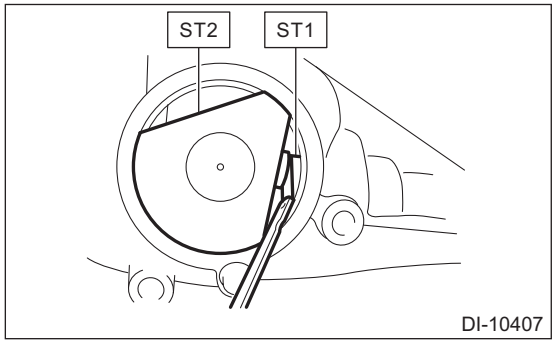


(A) Front side
(B) RH side

(3) Measure the gap between ST1 and ST2 using a thickness gauge.

NOTE:
Make sure there is no clearance between the differential carrier and ST2.

ST1 18678AA000 DUMMY SHAFT
ST2 18831AA010 DIFFERENTIAL CARRIER GAUGE



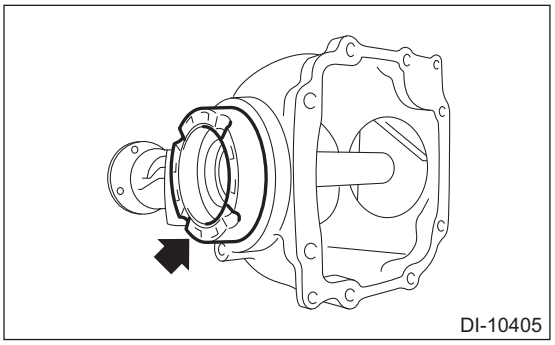
(4) Select the correct pinion height adjusting washer using the following calculation.

NOTE:
Use one to three pinion height adjusting washer(s).

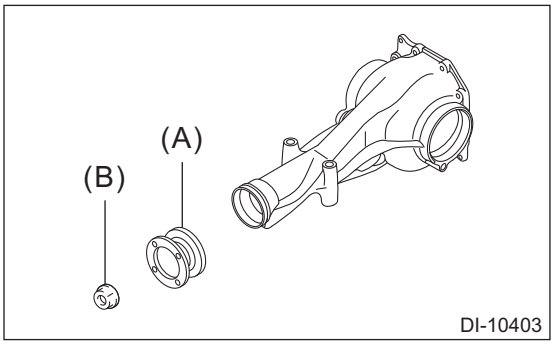
T = To + C – 0.05 mm (0.0020 in)

T	Thickness of pinion height adjusting washer mm (in)
To	Thickness of washer temporarily inserted mm (in)
C	Clearance of thickness gauge mm (in)

3) Remove the side retainer from the differential carrier.



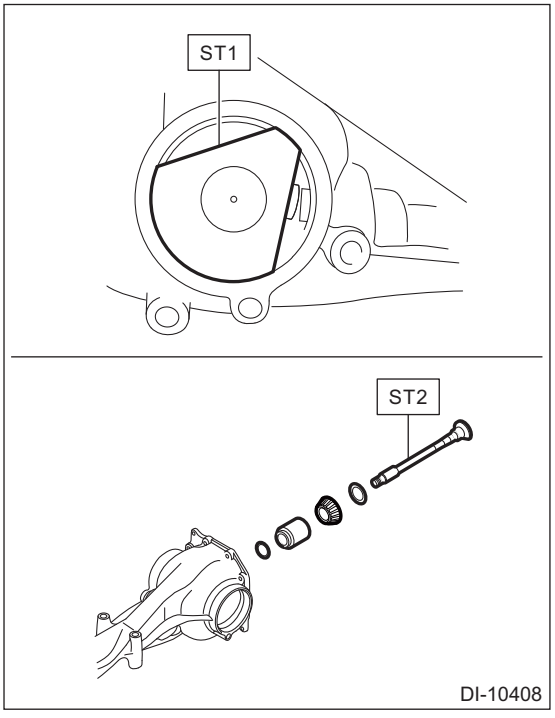
4) Remove the self-locking nut and the companion flange.



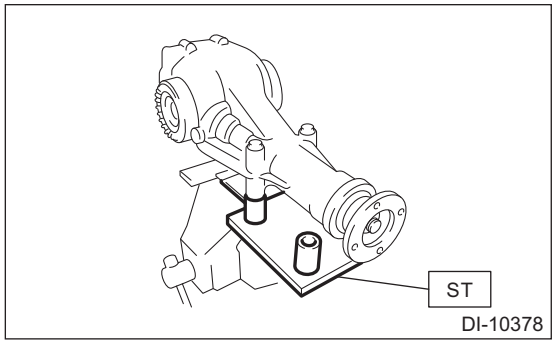
(A) Companion flange
(B) Self-locking nut

5) Remove the ST1, ST2 and each component from the differential carrier.

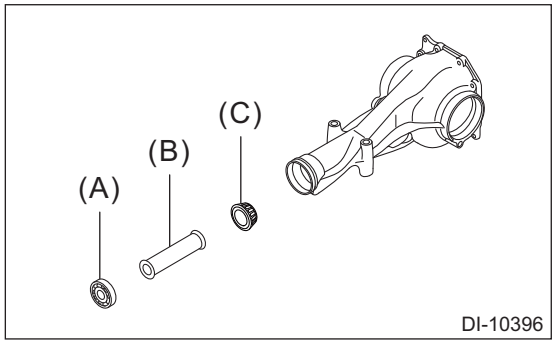
ST1 18831AA010 DIFFERENTIAL CARRIER GAUGE
ST2 18678AA000 DUMMY SHAFT



6) Remove the rear differential from ST.
ST 398217700 ATTACHMENT SET



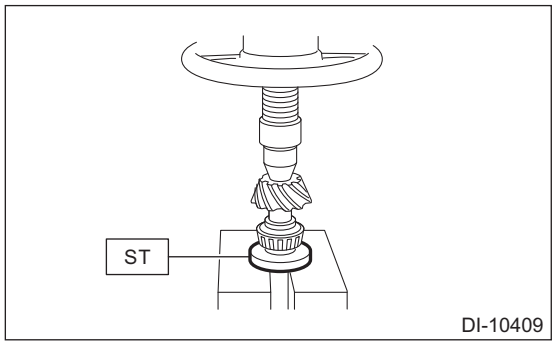
7) Remove the pilot bearing, spacer and front bearing cone.



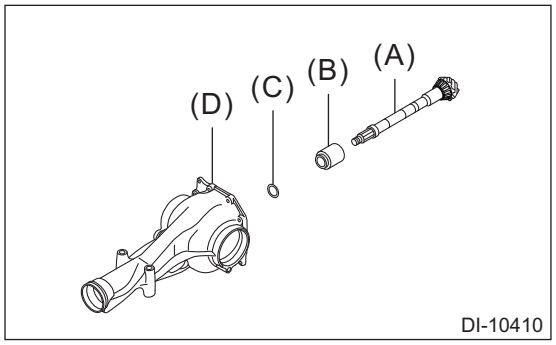
(A) Pilot bearing
(B) Spacer
(C) Front bearing cone

8) Set the selected pinion height adjusting washer to the drive pinion.
9) Press-fit the rear bearing cone to the drive pinion using the ST and a press.

NOTE:
Apply gear oil to the rear bearing cone.
ST 398177700 INSTALLER



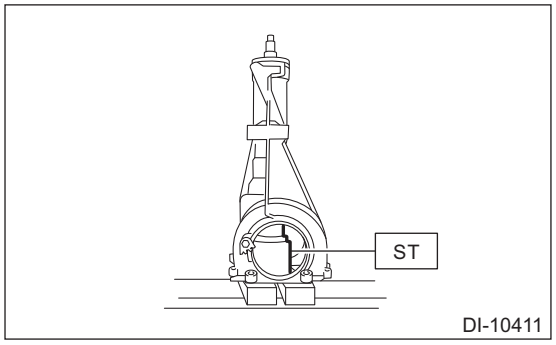
10) Set the preload adjusting spacer and preload adjusting washer to the drive pinion, and insert them into the differential carrier.



(A) Drive pinion
(B) Preload adjusting spacer
(C) Preload adjusting washer
(D) Differential carrier

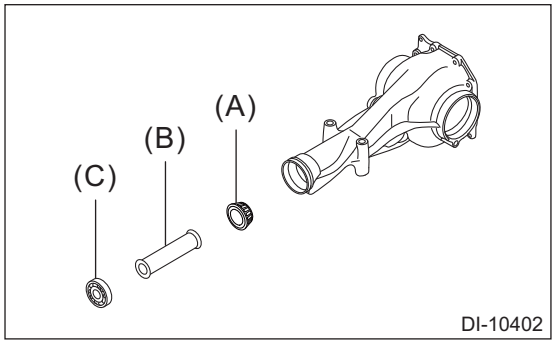
11) Set the ST and differential carrier to the press.

NOTE:
Leave the ST and the differential carrier set to the press, until the companion flange is pressed in.
ST 399780104 WEIGHT



12) Set the front bearing cone, the spacer and the pilot bearing.

NOTE:
Apply gear oil to the front bearing cone and the pilot bearing.

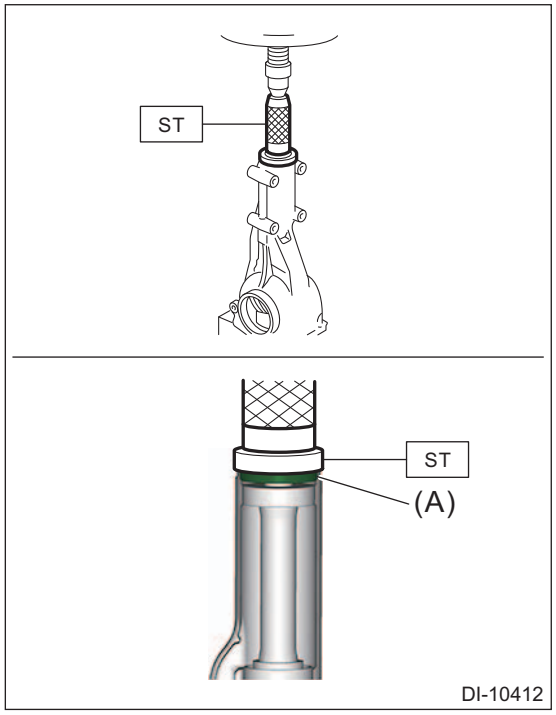


(A) Front bearing cone
(B) Spacer
(C) Pilot bearing

13) Install a new front oil seal (A) using ST and a press.

NOTE:
- Press-fit until the front oil seal comes 1 mm (0.04 in) inward from the end of the carrier.
- Apply gear oil to the front oil seal lips.

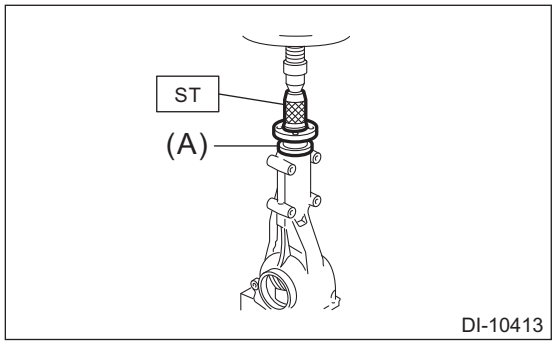
ST 498447120 INSTALLER



14) Press-fit the companion flange (A) using the ST and a press.

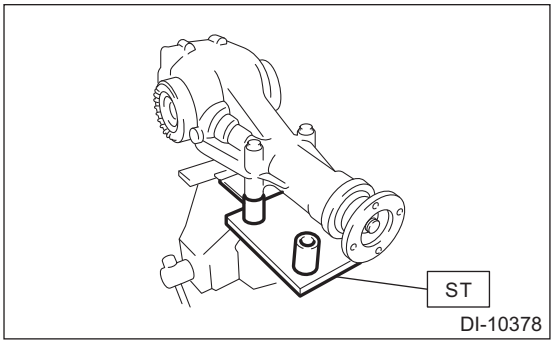
CAUTION:
Be careful not to damage the pilot bearing.

ST 899874100 INSTALLER



15) Install the rear differential from ST.

ST 398217700 ATTACHMENT SET



16) Apply seal material to the drive pinion thread portion and the self-locking nut seating surface.

CAUTION:
Always use a new self-locking nut.

NOTE:
Before applying seal material, degrease the contact surface between the self-locking nut and the companion flange and the drive pinion threads.

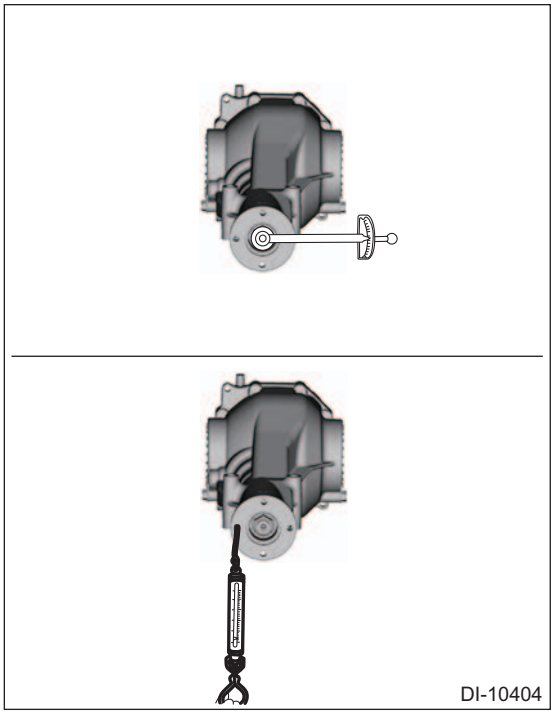
Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

17) Install the self-locking nut while securing the companion flange with ST.

CAUTION:
Tighten while adjusting the tightening torque within the range so that the initial torque or the initial load of the companion flange is within the standard value.

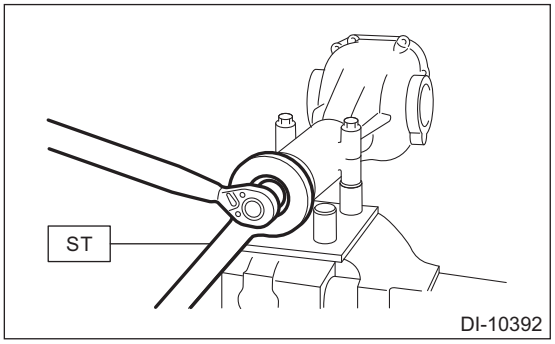
Initial torque:
0.48 — 1.22 N·m (0.05 — 0.12 kgf-m, 0.35 — 0.90 ft-lb)

Initial load:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.2 lbf)



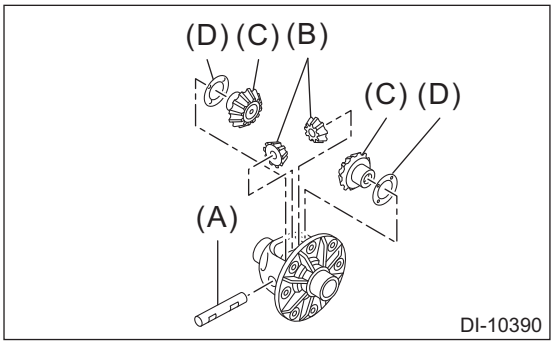
ST 498427200 FLANGE WRENCH

Tightening torque:
162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)



18) Assembling differential case
(1) Set the differential bevel pinion, the differential bevel gear and the thrust washer, and install the pinion shaft.

NOTE:
• Apply gear oil to the sliding portions of the differential bevel gear, thrust washer and pinion shaft.
• Install the thrust washer so that the chamfered side faces toward the differential bevel gear.

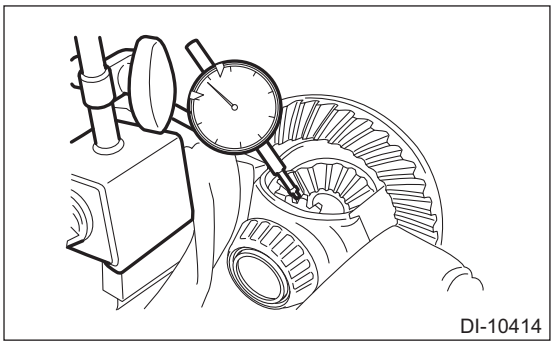


(A) Pinion shaft
(B) Differential bevel pinion
(C) Differential bevel gear
(D) Thrust washer

(2) Using a magnet stand or a dial gauge, measure the backlash between differential bevel gear and differential bevel pinion.

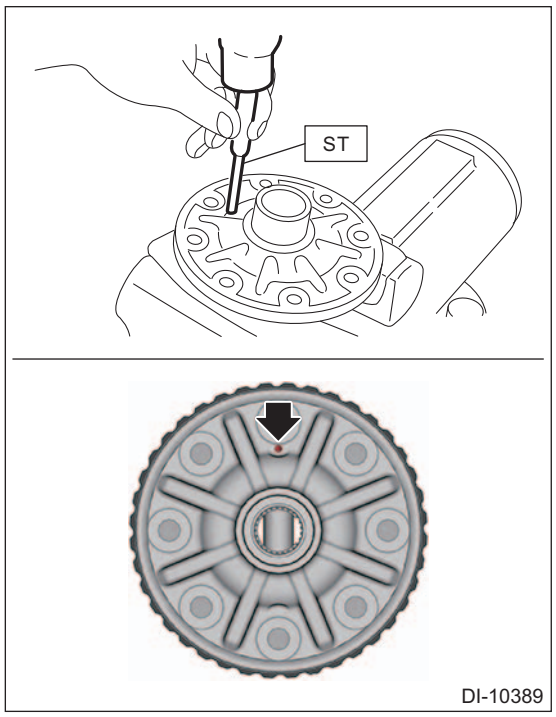
NOTE:
If the measured value of the backlash between differential bevel gear and differential bevel pinion is not within the specified range, select and replace the thrust washer so that the value falls within a specified range.

Differential bevel gear and differential bevel pinion backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)



(3) Rotate each gear by hand for smooth movement.

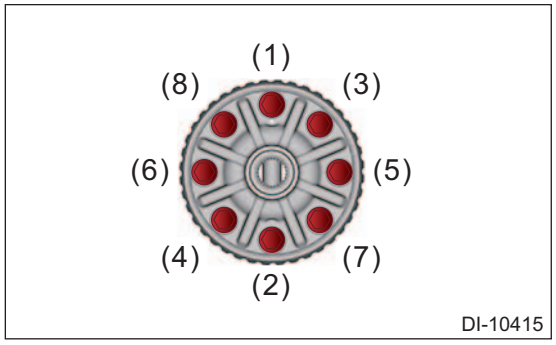
(4) Using the ST, drive in a new spring pin.
ST 899904100 STRAIGHT PIN REMOVER



19) Install the hypoid driven gear to differential case.
(1) Tighten the bolts in the numerical order as shown in the figure.

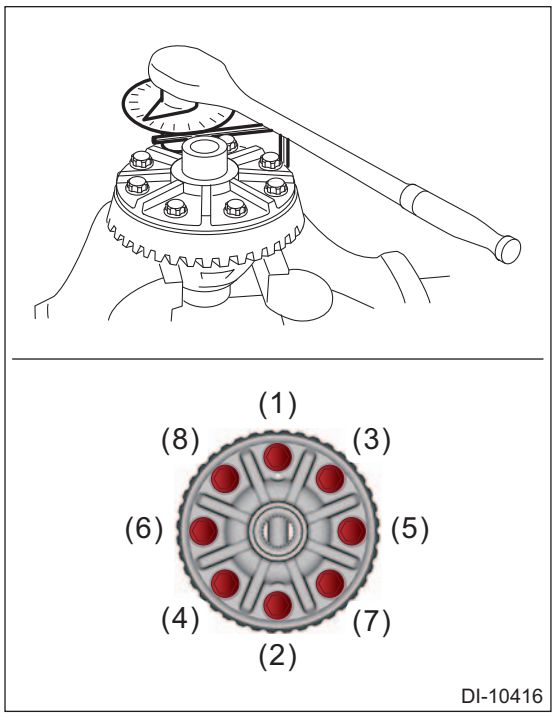
NOTE:
Make sure there is no clearance between the differential case and hypoid driven gear.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



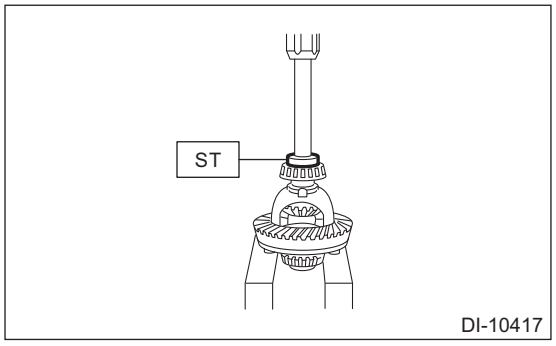
(2) Using an angle gauge, further tighten the bolts in numerical order as shown in the figure.

Tightening angle:
46°



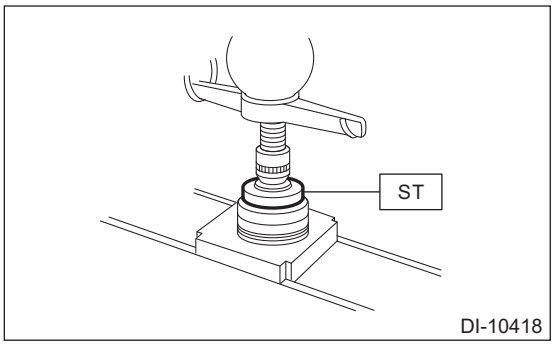
20) Press-fit a new side bearing cone using the ST and a press.

NOTE:
Apply gear oil to the side bearing cone.
ST 398487700 DRIFT

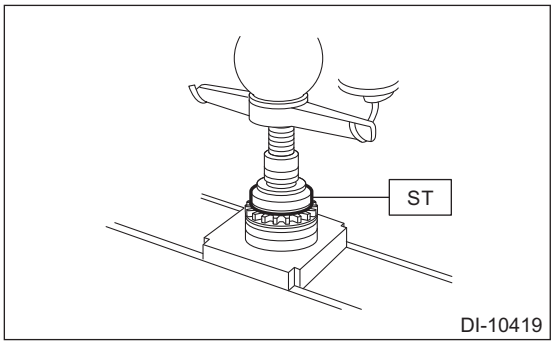


21) Assemble the side retainer.
(1) Install a new side bearing race using ST and a press.

NOTE:
Apply gear oil to the side bearing race.
ST 398417700 DRIFT

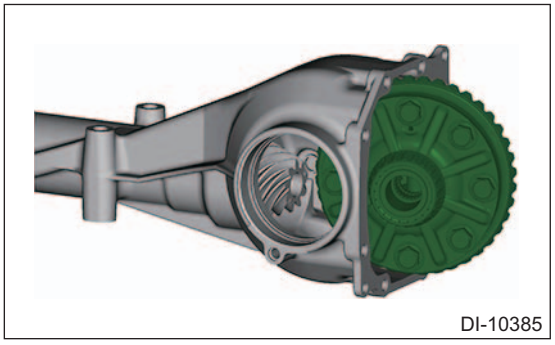


(2) Install a new side oil seal.
ST 398437700 OIL SEAL INSTALLER



22) Set the differential case.

CAUTION:
- **Be careful not to drop the differential carrier.**
- **Be careful not to allow the hypoid driven gear teeth to contact the differential carrier.**



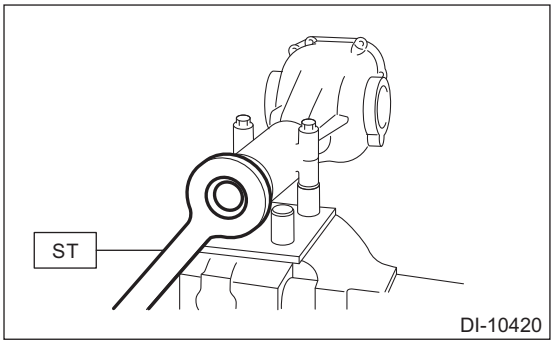
23) Temporarily install the side retainer.

CAUTION:
- **Be careful not to drop the differential carrier.**
- **Be careful not to allow the hypoid driven gear teeth to contact the differential carrier.**

NOTE:
- Do not mix up the side bearings RH and LH when reusing them.
- Apply gear oil to the threads of the side bearing and the side retainer.
- Do not install the O-ring.

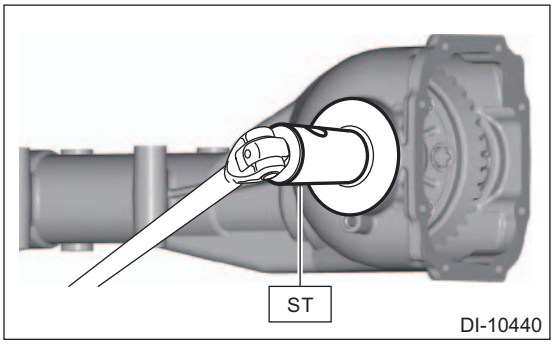
24) Backlash adjustment between hypoid driven gear and drive pinion and preload adjustment of side bearing

(1) Using the ST, turn the drive pinion for better fitting of side bearing.
ST 498427200 FLANGE WRENCH



(2) Using the ST, tighten the side retainer (RH side), and then tighten the side retainer (LH side) until there is no backlash.

CAUTION:
Be careful not to overtighten.
ST 18658AA021 WRENCH COMPL RETAINER

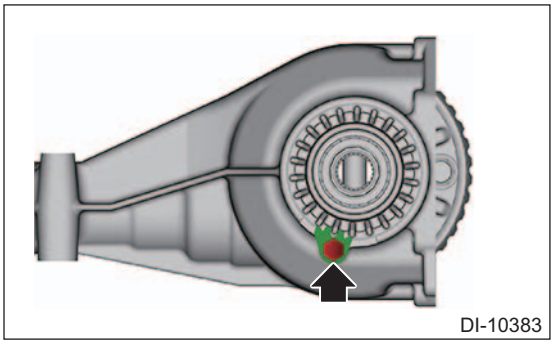


(3) Turn back the side retainer (LH side) by approx. 1.5 notches, and tighten the side retainer (RH side) by 2 notches.

NOTE:
This sets the preload.

(4) Temporarily attach the lock plate.

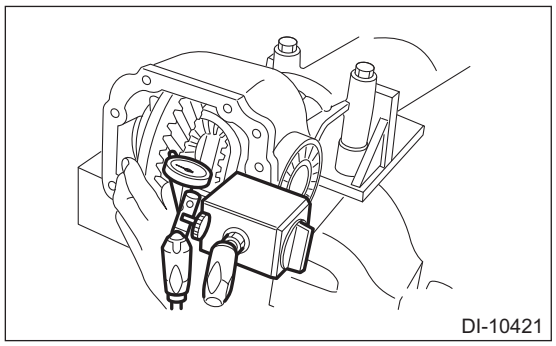
NOTE:
Turn over the lock plate to shift the holder by 1/2 teeth.



(5) Using a magnet stand or a dial gauge, measure the backlash between hypoid driven gear and drive pinion.

NOTE:
If the measured value of backlash between hypoid driven gear and drive pinion is not within the specified range, repeat the procedures for backlash adjustment between hypoid driven gear and drive pinion and for preload adjustment of the side bearing.

Hypoid driven gear to drive pinion backlash: 0.10 — 0.15 mm (0.004 — 0.006 in)



DI-10421

25) Check and adjustment of the tooth contact of hypoid driven gear and drive pinion

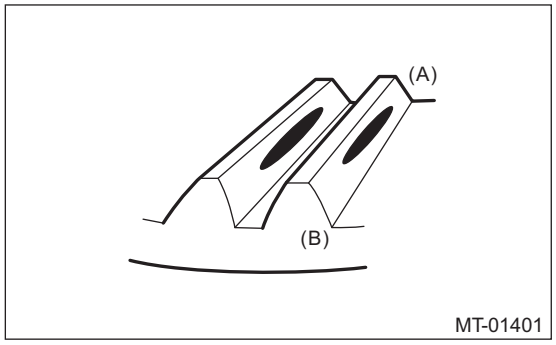
(1) Apply lead-free red dye evenly on three to four teeth of the hypoid driven gear.

(2) Check the contact pattern after rotating the hypoid driven gear back and forth until a definite contact pattern appears on the hypoid driven gear.

NOTE:
• If proper tooth contact is not obtained, readjust the backlash between hypoid driven gear and drive pinion and the drive pinion height.
• Wipe off the lead-free red dye after the check and adjustment are completed.

a. Correct tooth contact

Tooth contact pattern is slightly shifted toward the toe side under no-load rotation. (When driving, it moves towards the heel side.)

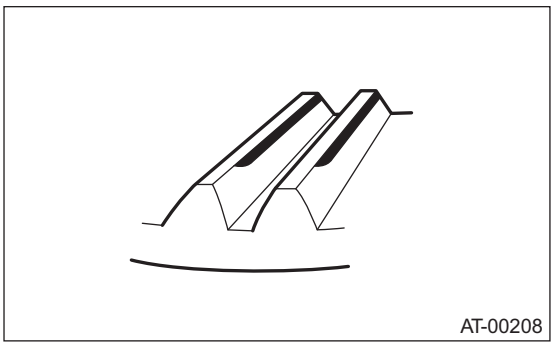


MT-01401

(A) Toe side (inside)
(B) Heel side (outside)

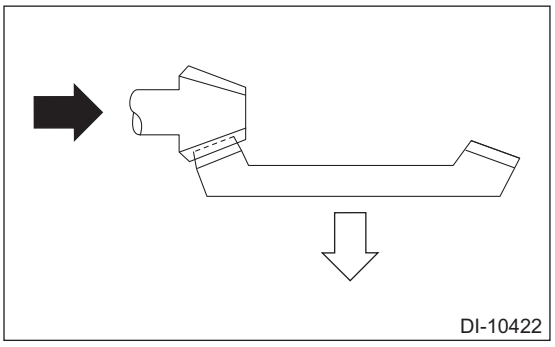
b. Face contact

Cause: Backlash is too large.



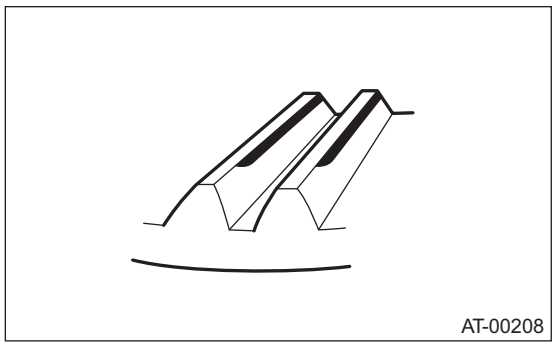
AT-00208

Corrective action: Loosen the side retainer RH, and tighten the side retainer LH by the same amount. Otherwise, adjust the thickness of the pinion height adjusting washer to move the drive pinion to the hypoid driven gear side.

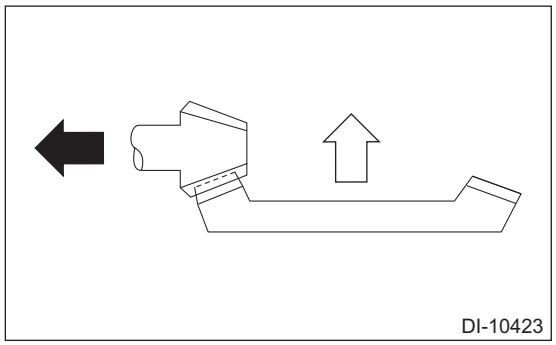


DI-10422

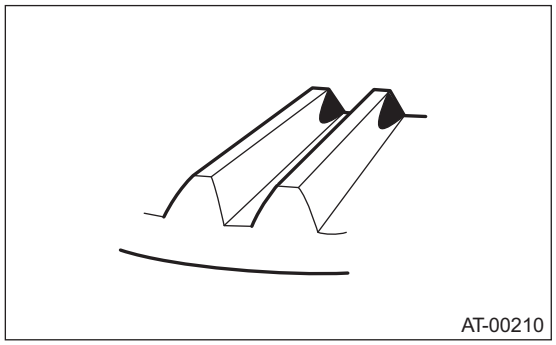
c. Flank contact
Cause: Backlash is too small.



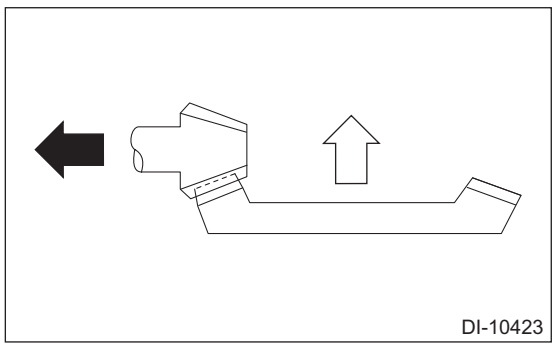
Corrective action: Loosen the side retainer LH, and tighten the side retainer RH by the same amount. Otherwise, adjust the thickness of the pinion height adjusting washer to move the drive pinion away from the hypoid driven gear side.



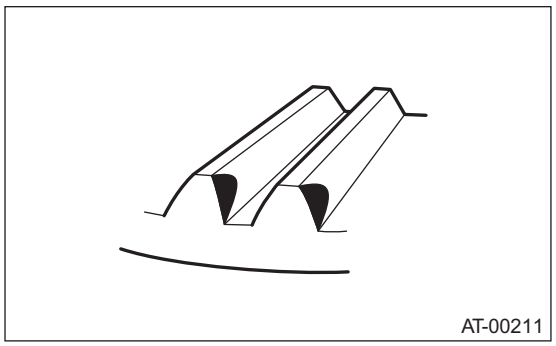
d. Toe contact (inside contact)
Cause: Teeth contact area is too small.



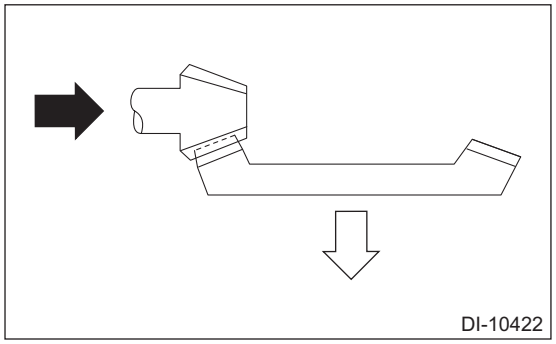
Corrective action: Adjust the thickness of the pinion height adjusting washer to move the drive pinion away from the hypoid driven gear.



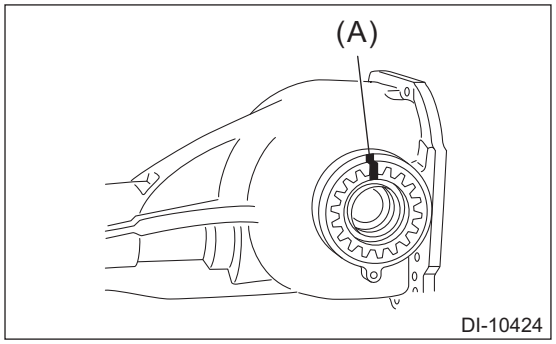
e. Heel contact (outside end contact)
Cause: Teeth contact area is too small.



Corrective action: Adjust the thickness of the pinion height adjusting washer to move the drive pinion from the hypoid driven gear.

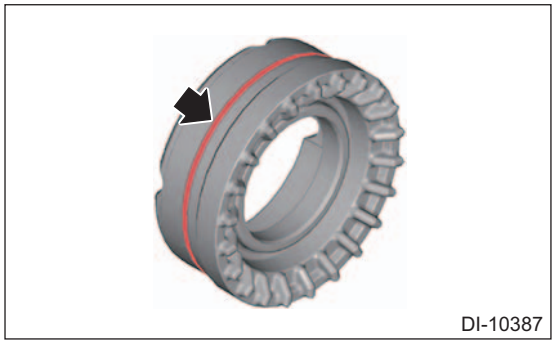


26) Place alignment marks (A) on the differential carrier and the side retainers.



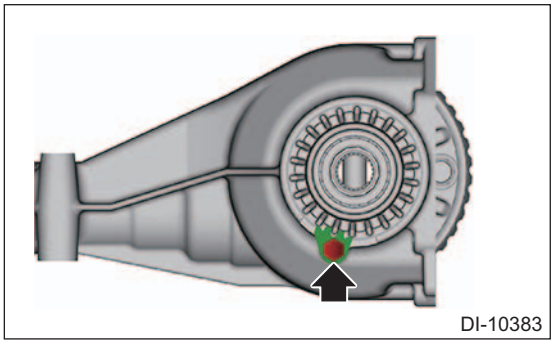
27) Remove the side retainers one side at a time, and install new O-rings.

NOTE:
Apply gear oil to the threads of the side bearing, the side retainers and the O-rings.



28) Restore the side retainers to the original positions and install the lock plate.

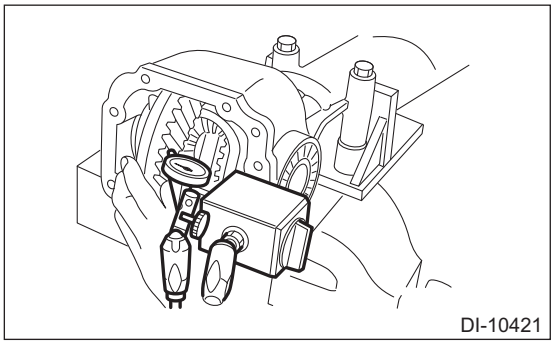
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



DI-10383

29) Using a magnet stand or a dial gauge, recheck the backlash between hypoid driven gear and drive pinion.

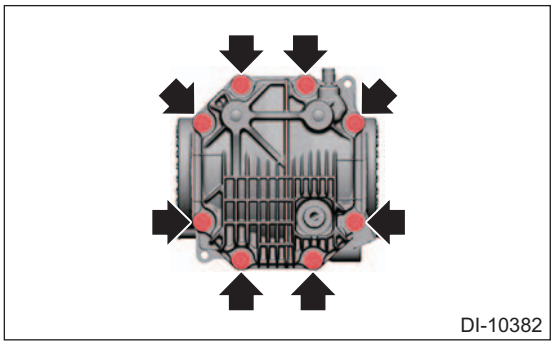
Hypoid driven gear to drive pinion backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)



DI-10421

30) Using a new gasket, install the rear cover.

Tightening torque:
34 N·m (3.5 kgf-m, 25.1 ft-lb)

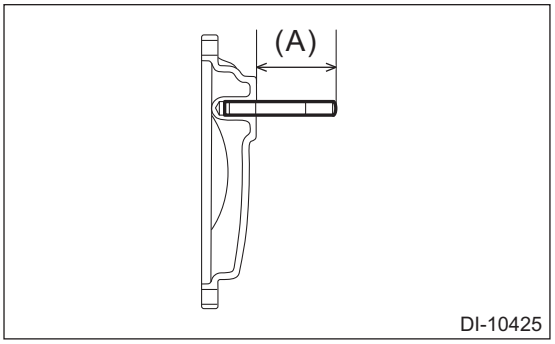


DI-10382

31) Install the stud bolt so that the exposed length of the stud bolt is within the range (A).

CAUTION:
Do not tighten with a tightening torque of 55 N·m (5.6 kgf-m, 40.6 ft-lb) (reference value) or more.

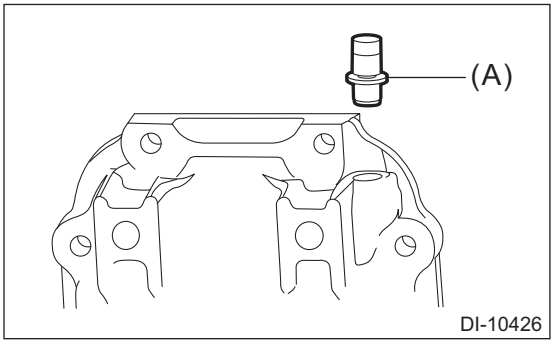
Exposed length (A) of stud bolt:
59.0 — 61.0 mm (2.32 — 2.40 in)



DI-10425

32) Install the air breather cap.

NOTE:
When installing the air breather cap, do not tap any section other than (A).



DI-10426

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage or other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
• If there is evidently an abnormal tooth contact, find out the cause and adjust until the teeth contact correctly. Replace the gear if there is an excessive worn or an incapable adjustment.
• If crack, cutout or seizure is found, replace the parts as a set. Slight damage of some teeth can be corrected by oil stone or the like.
2) Differential bevel gear and differential bevel pinion
• Replace if cracks, scoring or other defects are evident on the tooth surface.
• Replace if thrust washer contact surface is worn or seized. Slight damages of the surface can be corrected by oil stones or equivalent.
3) Bearing
Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washer
Replace if seized, flawed, abnormally worn or having other defects.

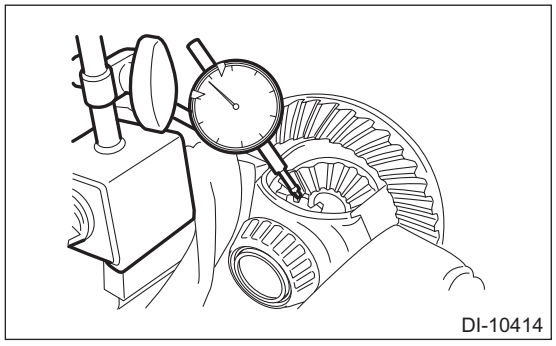
5) Oil seal
Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
Replace if the bearing bores are worn or damaged.
7) Differential case
Replace if its sliding surfaces are abnormally worn, burned, or cracked.
8) Companion flange
Replace if the oil seal lip contact surface shows cracking.

1. DIFFERENTIAL BEVEL GEAR AND DIFFERENTIAL BEVEL PINION BACKLASH

Using a dial gauge, check the backlash between differential bevel gear and differential bevel pinion.

Differential bevel gear and differential bevel pinion backlash:
0.13 — 0.18 mm (0.005 — 0.007 in)

If the backlash between differential bevel gear and differential bevel pinion is not within the specified range, select the thrust washer and readjust.



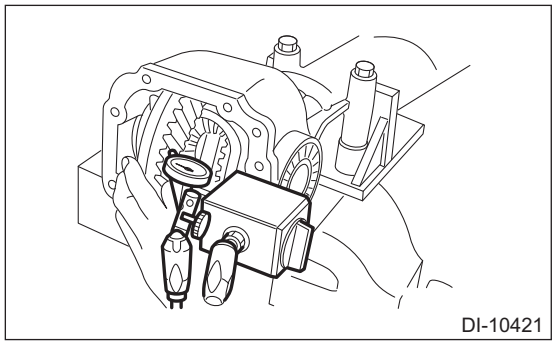
DI-10414

2. HYPOID DRIVEN GEAR TO DRIVE PINION BACKLASH

Using a dial gauge, check the backlash between hypoid driven gear and drive pinion.

Hypoid driven gear to drive pinion backlash:
0.10 — 0.15 mm (0.004 — 0.006 in)

If the backlash between hypoid driven gear and drive pinion is not within the specified range, adjust the side bearing preload and repair if necessary.

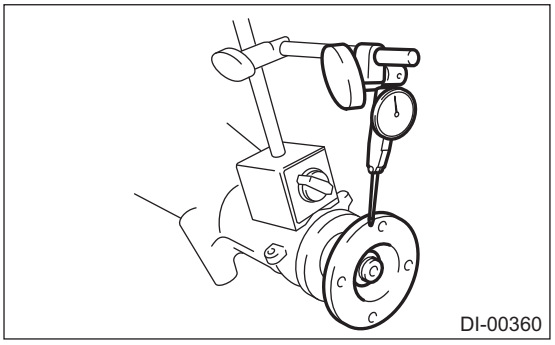


DI-10421

3. COMPANION FLANGE

1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

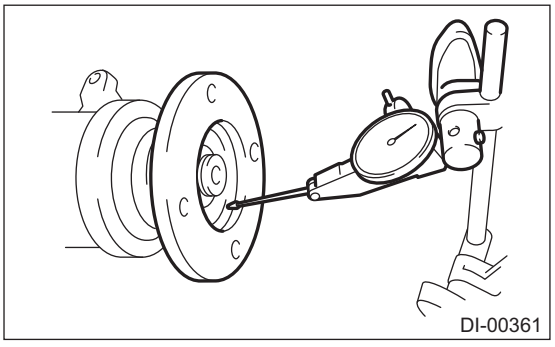
Limit of runout:
0.08 mm (0.003 in)



DI-00360

3) Set the dial gauge inside of the companion flange, and measure the runout.

Limit of runout:
0.08 mm (0.003 in)



DI-00361

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between the hypoid driven gear and drive pinion. <Ref. to DI-44, ASSEMBLY, Rear Differential (VB-type).>

F: ADJUSTMENT

1. DIFFERENTIAL BEVEL GEAR AND DIFFERENTIAL BEVEL PINION BACKLASH

Adjust the backlash between differential bevel gear and differential bevel pinion. <Ref. to DI-44, ASSEMBLY, Rear Differential (VB-type).>

2. HYPOID DRIVEN GEAR TO DRIVE PINION BACKLASH

Adjust the backlash between hypoid driven gear and drive pinion. <Ref. to DI-44, ASSEMBLY, Rear Differential (VB-type).>

3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-44, ASSEMBLY, Rear Differential (VB-type).>

6. Rear Differential Front Oil Seal

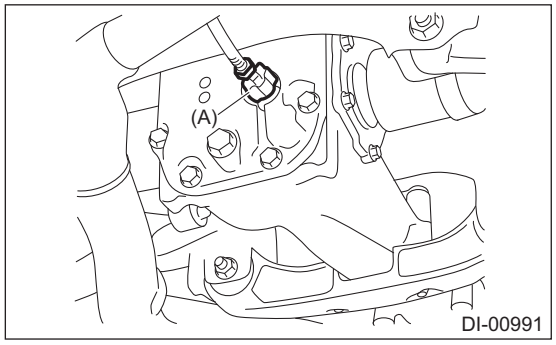
A: INSPECTION

Check that there is no leakage from the oil seal. If there is any leakage, replace the oil seal and inspect the propeller shaft.

B: REPLACEMENT

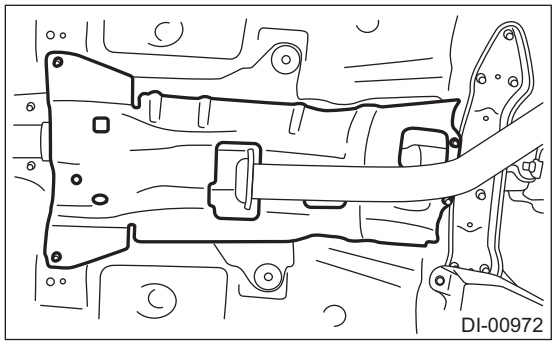
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
4) Lift up the vehicle.
5) Disconnect the oil temperature sensor connector. (T-type)



(A) Oil temperature sensor connector

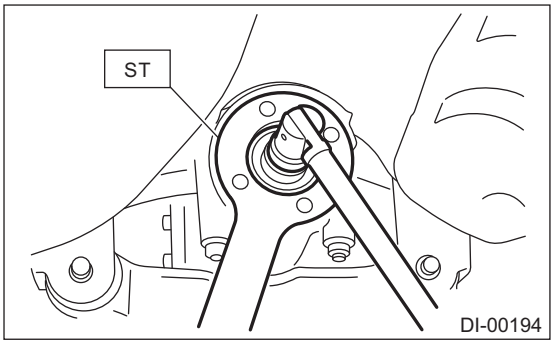
6) Drain differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
7) Remove the rear exhaust pipe.
Except for STI model:
<Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
STI model:
<Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
8) Remove the center exhaust cover.



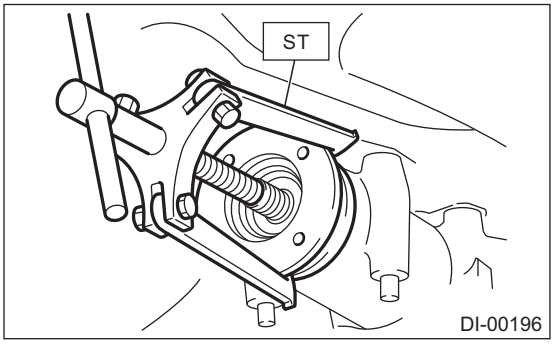
9) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
10) Check the initial torque and write it down.
11) Remove the self-locking nut while holding the companion flange with ST.
- T-type

ST 18633AA000 WRENCH COMPL
- VB3-type

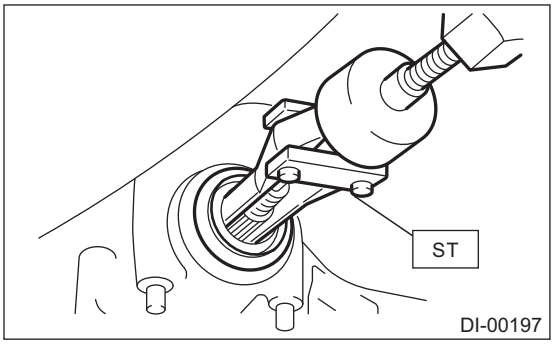
ST 498427200 FLANGE WRENCH



12) Remove the companion flange using ST.
ST 399703600 PULLER ASSY



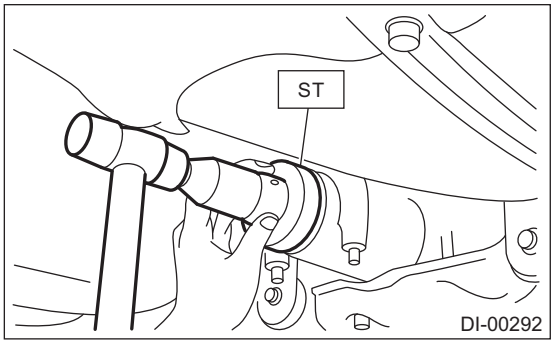
13) Remove the front oil seal using ST or screwdriver.
ST 398527700 PULLER ASSY



14) Using the ST, install the front oil seal.

NOTE:
- Use a new front oil seal.

• Apply gear oil to the front oil seal lips.
ST 498447120 INSTALLER



15) Install the companion flange.

NOTE:
Use a plastic hammer to install companion flange.
16) Tighten the self-locking nut to the specified torque so that the initial torque of companion flange becomes the same as that of before oil seal replacement.

NOTE:
• Use a new self-locking nut.
• Before installing the self-locking nut, apply the seal material to the threads of the drive pinion shaft and to the seating surface of the self-locking nut.

Seal material:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
T-type
167 — 196 N·m (17.0 — 20.0 kgf-m, 123.2 — 144.6 ft-lb)
VB3-type
162 — 220 N·m (16.5 — 22.5 kgf-m, 119.5 — 162.3 ft-lb)

• T-type

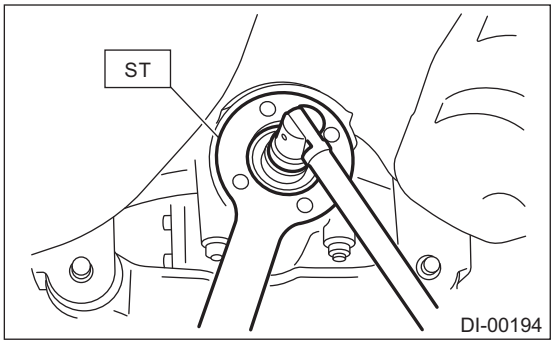
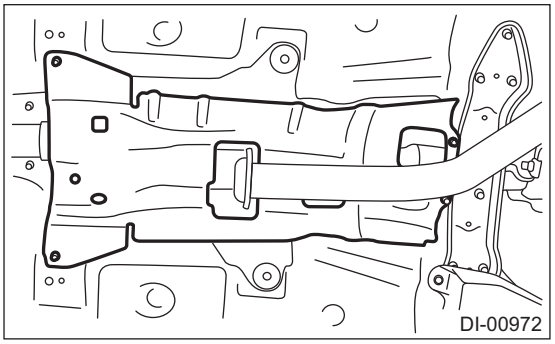
ST 498427200 FLANGE WRENCH

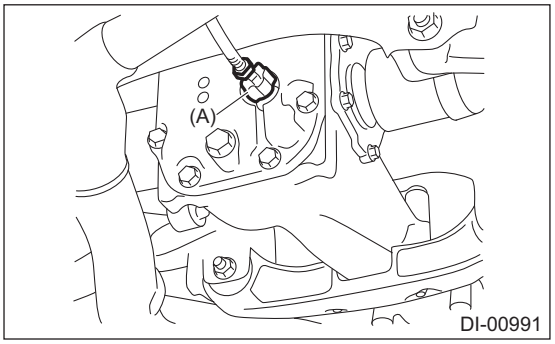


17) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
18) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



19) Install the rear exhaust pipe.
Except for STI model:
<Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
STI model:
<Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
20) Fill differential gear oil. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>
21) Connect the oil temperature sensor connector. (T-type)



(A) Oil temperature sensor connector

22) Lower the vehicle.
23) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

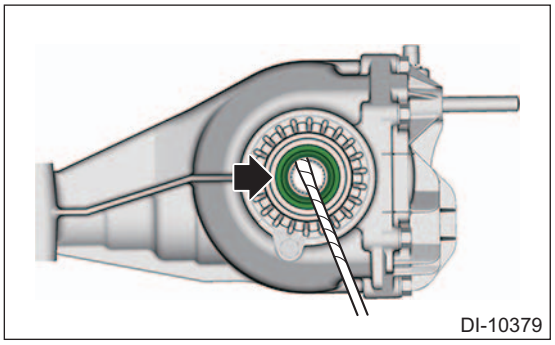
7. Rear Differential Side Oil Seal

A: INSPECTION

Check that there is no oil leakage from the oil seal.
If there is any leakage, replace the oil seal.

B: REPLACEMENT

1) Remove the rear differential.
T-type:
<Ref. to DI-22, REMOVAL, Rear Differential (T-type).>
VB3-type:
<Ref. to DI-41, REMOVAL, Rear Differential (VB-type).>
2) Wrap vinyl tape around the screwdriver, and remove the side oil seal while taking care not to damage the side retainer.

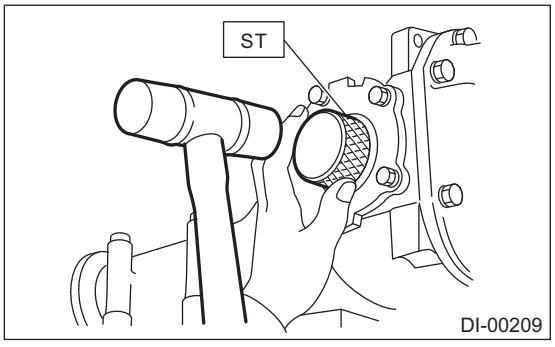


3) Using the ST, install the side oil seal.

CAUTION:
Pay attention to the left and right of the side oil seal.

NOTE:
- Use a new side oil seal.
- Apply gear oil to the side oil seal lips.

ST 398437700 OIL SEAL INSTALLER



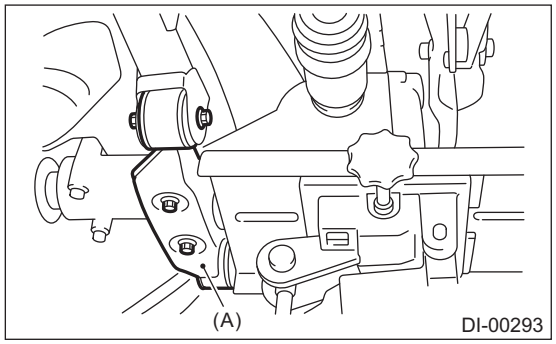
4) Install the rear differential.
T-type:
<Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>
VB3-type:
<Ref. to DI-41, INSTALLATION, Rear Differential (VB-type).>

8. Rear Differential Front Member

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

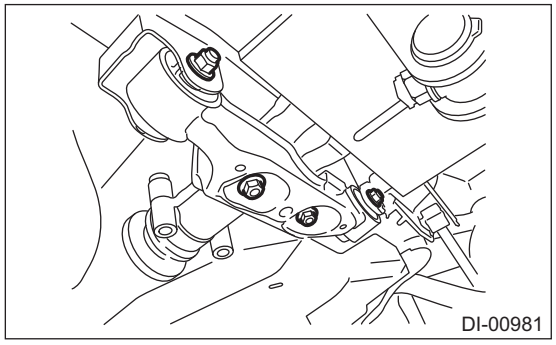
NOTE:
For models other than STI model, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Set the transmission jack.
4) Remove the rear differential front member.



(A) Rear differential front member

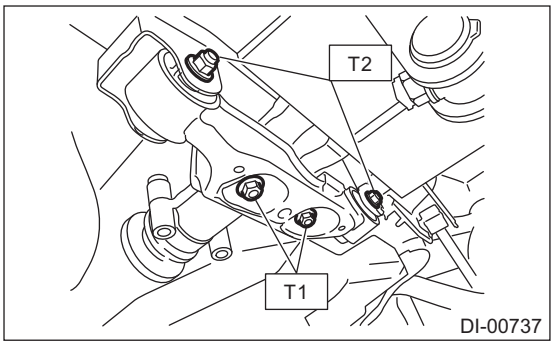
B: INSTALLATION

1) Install the rear differential front member, and temporarily attach a new self-locking nut.



2) Remove the transmission jack.
3) Tighten the self-locking nut.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



4) Lower the vehicle.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For models other than STI model, connect the ground terminal to battery sensor.

C: INSPECTION

1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential front member for cracking, hardening and damage. If cracking, hardening or damage is excessive, replace rear differential front member.

9. Rear Differential Mount Bushing

A: INSPECTION

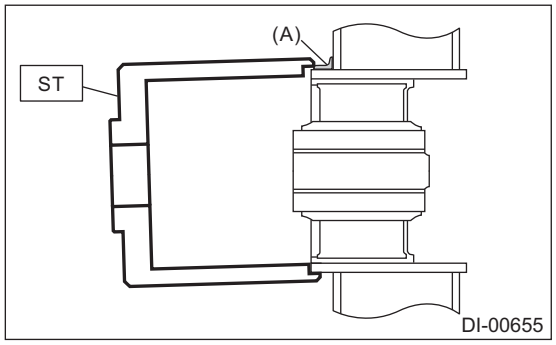
Check the rear differential mount bushing for cracks, hardening or damage. If cracking, hardening or damage is excessive, replace it.

B: REPLACEMENT

CAUTION:
• Apply the molybdenum grease on the square thread of the ST (shaft and nut) before use.
• If there was so much rust in the rear differential mount bushing, remove the rust before starting work.

1) Remove the rear differential.
T-type:
<Ref. to DI-22, REMOVAL, Rear Differential (T-type).>
VB3-type:
<Ref. to DI-41, REMOVAL, Rear Differential (VB-type).>

2) Fit the ST to the periphery of the sub frame cylinder, and make sure that the ST does not contact with welded spots or spatters.
ST 41399FG010 SPECIAL TOOL A



(A) Welded spot

3) If the ST contacts with welded spots or spatters, remove the excessive welds or spatters with sander or the equivalent so that the ST contacts the cylinder peripheral part.

CAUTION:
Performing the operation with the ST contacting with welded spots or spatters may break the ST. Be sure to remove excessive welds or spatters before the operation.

4) Set ST1, ST2, ST3, ST4 and ST5 as shown in the figure.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT
ST3 41399FG050 SPECIAL TOOL SLEEVE

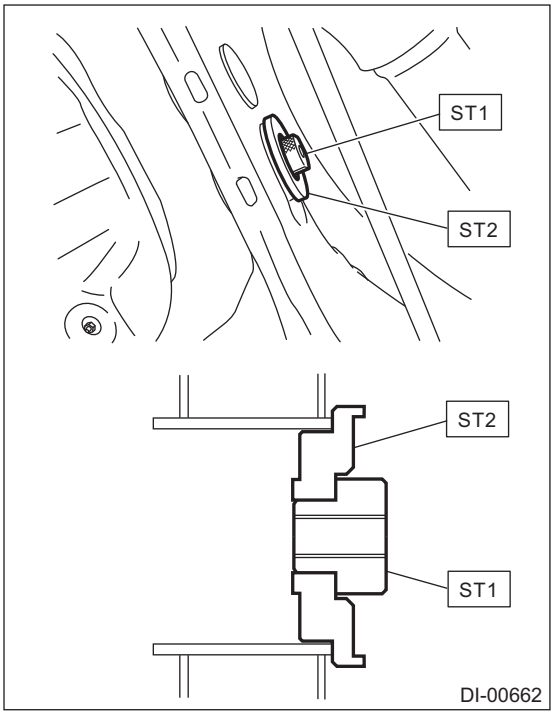
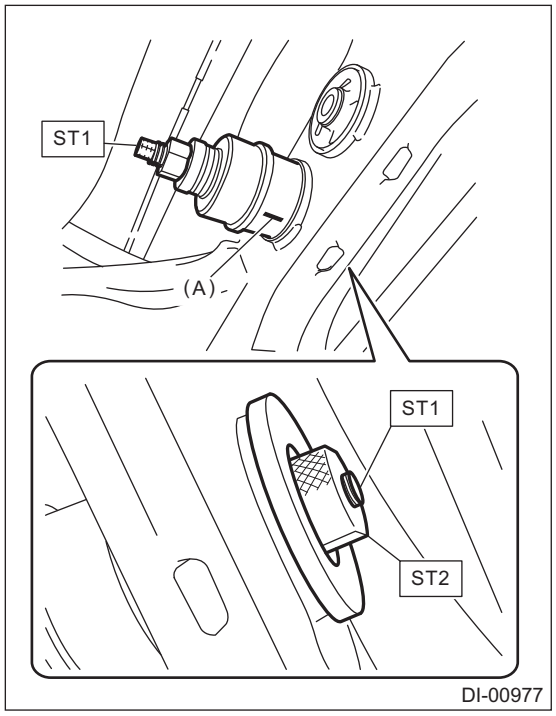
ST1 41399FG061 SPECIAL TOOL RING
ST2 41399FG041 SPECIAL TOOL D



11) Insert the ST and rear differential mount bushing set in the step 9) through the sub frame from the front side of vehicle, and screw in the ST1 by hand till the front end of ST1 comes out slightly from the rear end of ST2.

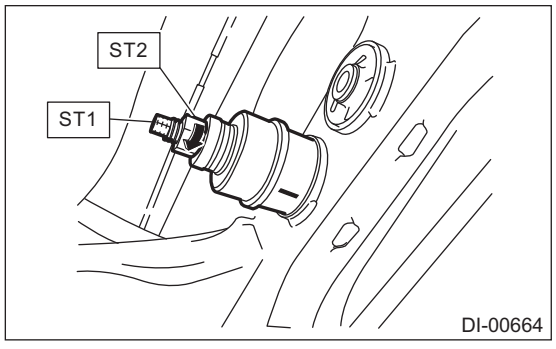
CAUTION:
Set the rear differential mount bushing with its mark facing the bottom end direction.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG061 SPECIAL TOOL RING



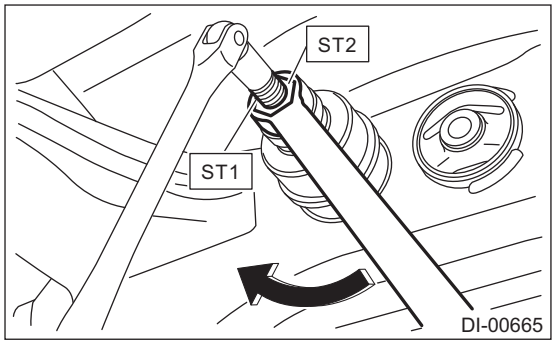
(A) Mark

12) Hold the ST1 to prevent it from rotating, and screw in the ST2 by hand till there is no loose fit on the ST and the rear differential mount bushing.

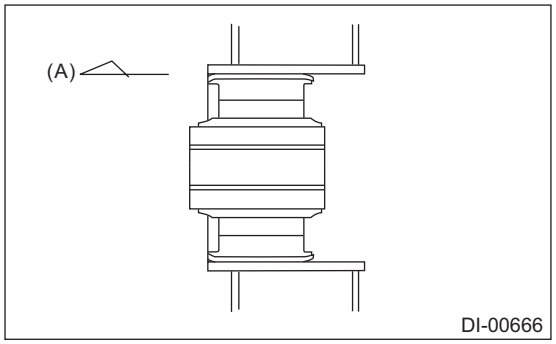
CAUTION:
Make sure that the ST and rear differential mount bushing are not tilted.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT



13) Screw in the ST2 while holding the ST1 with a tool to prevent it from rotating, and press-fit the rear differential mount bushing to the front end of sub frame cylinder.
ST1 41399FG091 SPECIAL TOOL SHAFT
ST2 41399FG070 SPECIAL TOOL NUT



14) Make sure that the rear differential mount bushing is inserted to the front end of sub frame cylinder.



(A) Front side of vehicle

15) Install the rear differential.
T-type:
<Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>
VB3-type:
<Ref. to DI-41, INSTALLATION, Rear Differential (VB-type).>

10.General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	(1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.	Repair or replace.
	(2) Clogged or damaged air breather cap.	Clean, repair or replace.
	(3) Loose bolts on the side retainer, or incorrectly fitted O-ring.	Tighten the bolts to specified torque. Replace the O-ring.
	(4) Loose rear cover attachment bolts or damaged gasket.	Replace the gasket, and tighten the bolts to specified torque.
	(5) Loose filler plug (oil temperature sensor) or drain plug.	Replace the gasket, and tighten to the specified torque.
	(6) Wear, damage or incorrect fitting of drive shaft, side retainer or oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Insufficient backlash between hypoid driven gear and drive pinion.	Readjust or replace.
	(2) Excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Insufficient or improper oil used.	Add recommended oil to the specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	(1) Incorrect backlash between hypoid driven gear and drive pinion.	Readjust or replace.
	(2) Insufficient or excessive preload for side, rear or front bearing.	Readjust or replace.
	(3) Excessive backlash between differential bevel gear and differential bevel pinion.	• Replace gear or thrust washer. (VB3-type) • Replace the differential case. (T-type)
	(4) Loose bolts and nuts such as hypoid driven gear bolt.	Retighten.
	(5) Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by rear differential, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembling.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust. (Drive pinion adjustment and backlash adjustment)
	(2) Excessive backlash between hypoid driven gear and drive pinion.	Replace the gear or the pinion height adjusting washer.
	(3) Excessive backlash between differential bevel gear and differential bevel pinion.	• Replace gear or thrust washer. (VB3-type) • Replace the differential case. (T-type)
	(4) Insufficient preload for front or rear bearing.	Readjust.
	(5) Loose drive pinion nut.	Tighten to the specified torque.
	(6) Loose bolts and nuts such as side retainer attachment bolt.	Tighten to the specified torque.
5. Noises when cornering	(1) Damaged differential gear.	• Replace. (VB3-type) • Replace the differential case. (T-type)
	(2) Excessive wear or damage of thrust washer.	Replace. (VB3-type)
	(3) Broken pinion shaft.	Replace. (VB3-type)
	(4) Stuck or damaged side bearing.	Replace.

Symptom or trouble	Possible cause	Remedy
6. Gear noise NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from rear differential, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to the condition of trouble. When listening to noises, shift the gear into four-wheel drive and fourth speed position, trying to pick up only differential noise.	(1) Improper tooth contact of hypoid driven gear and drive pinion.	Readjust or replace the hypoid driven gear & drive pinion set.
	(2) Improper backlash between hypoid driven gear and drive pinion.	Readjust.
	(3) Scored or chipped teeth of hypoid driven gear.	Replace the hypoid driven gear & drive pinion set.
	(4) Scuffed hypoid driven gear.	Replace the hypoid driven gear & drive pinion set.
	(5) Improper preload for front or rear bearings.	Readjust.
	(6) Stuck, scored or chipped teeth of front or rear bearing.	Replace.
	(7) Stuck, scored or chipped teeth of side bearing.	Replace.
	(8) Vibrating differential gear.	Replace the differential gear.

1. General Description

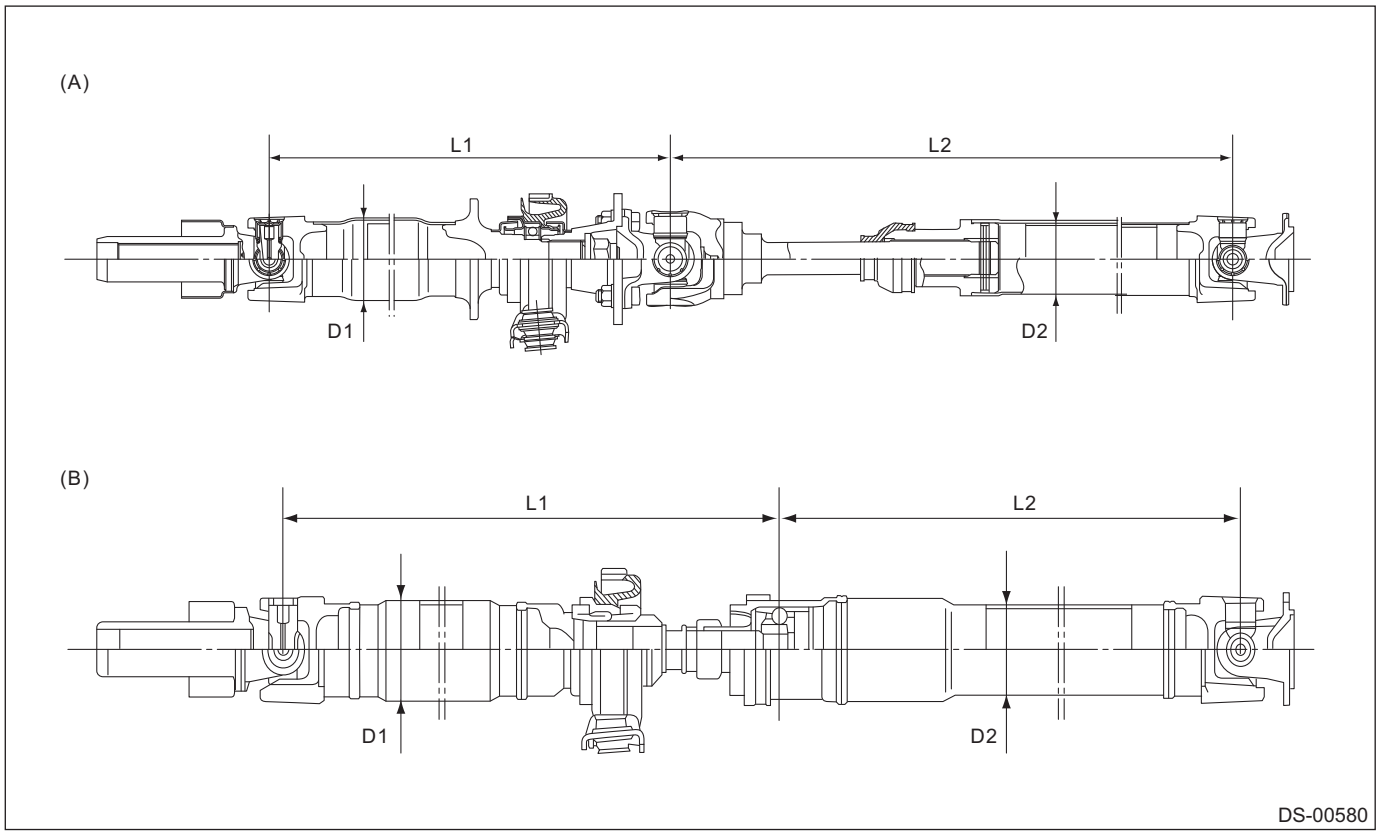
A: SPECIFICATION

1. PROPELLER SHAFT

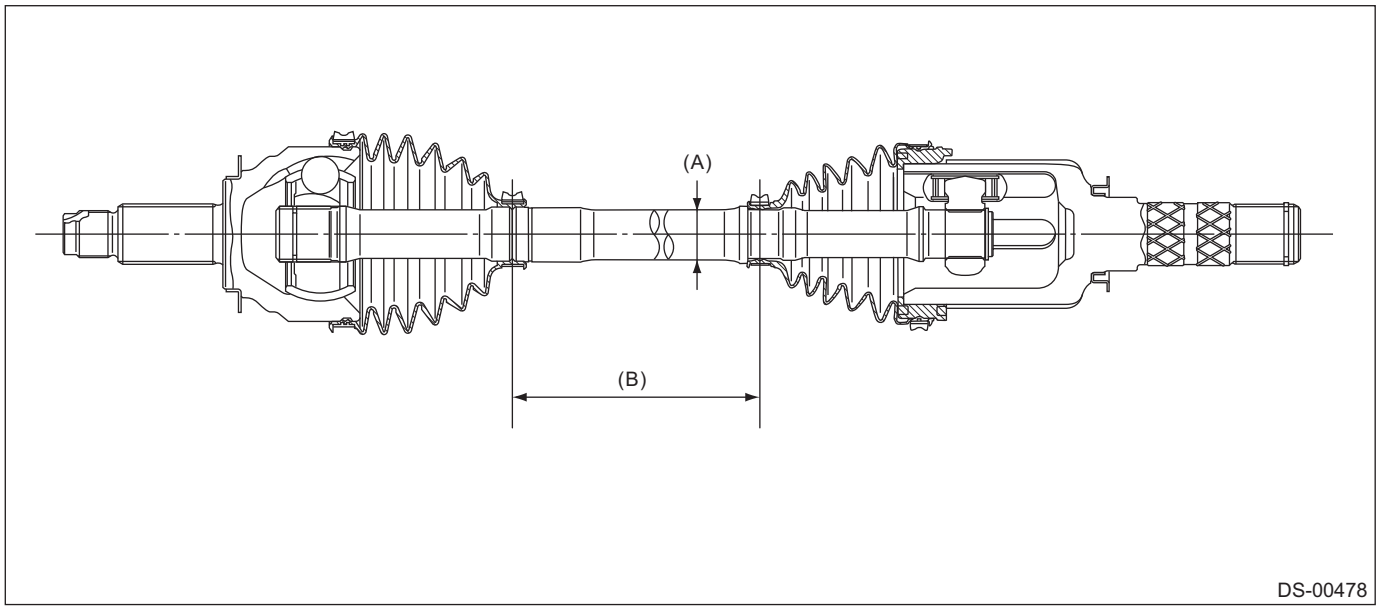
Model			Except for STI model	STI model
Propeller shaft type			EDJ	3UJ+CPS
Front propeller shaft joint-to-joint length: L_1	mm (in)	CVT	578.0 (22.76)	633.0 (24.92)
		MT	735.5 (28.96)	
Rear propeller shaft joint-to-joint length: L_2		mm (in)	723.0 (28.46)	753.5 (29.67)
Outer diameter of tube:	mm (in)	D_1	63.5 (2.50)	70.0 (2.76)
		D_2	57.5 (2.26)	57.0 (2.24)



(A) 3UJ + CPS type (B) EDJ type

2. FRONT DRIVE SHAFT ASSEMBLY

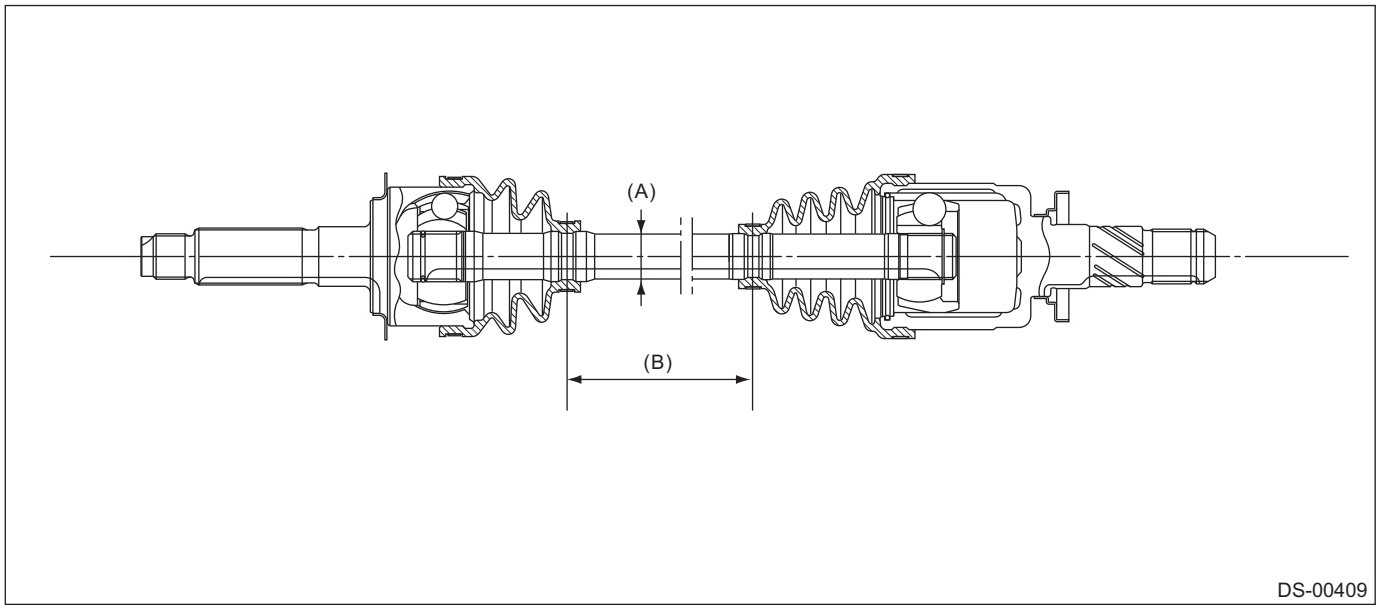
Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
Except for STI model	EBJ + PTJ	22 (0.87)	338.4 (13.32)
STI model	AC + AAR	28 (1.10)	343.1 (13.51)



(A) Axle diameter (B) Axle length

3. REAR DRIVE SHAFT ASSEMBLY

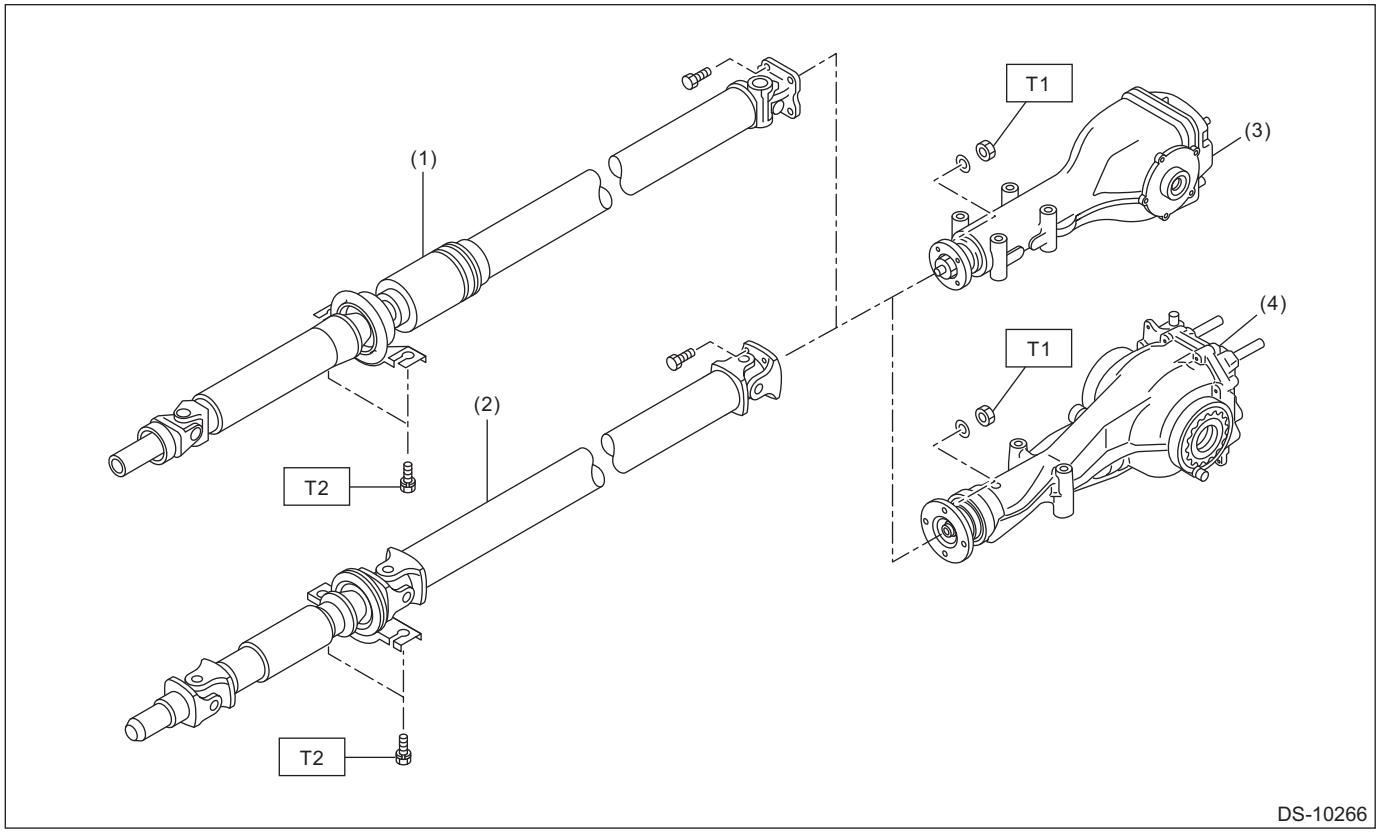
Model	Type of drive shaft	Axle diameter ϕ mm (in)	Axle length mm (in)
Except for STI model	EBJ + DOJ	22 (0.87)	388.5 (15.3)
STI model	EBJ + EDJ	25 (0.98)	339.5 (13.37)



(A) Axle diameter (B) Axle length

B: COMPONENT

1. PROPELLER SHAFT

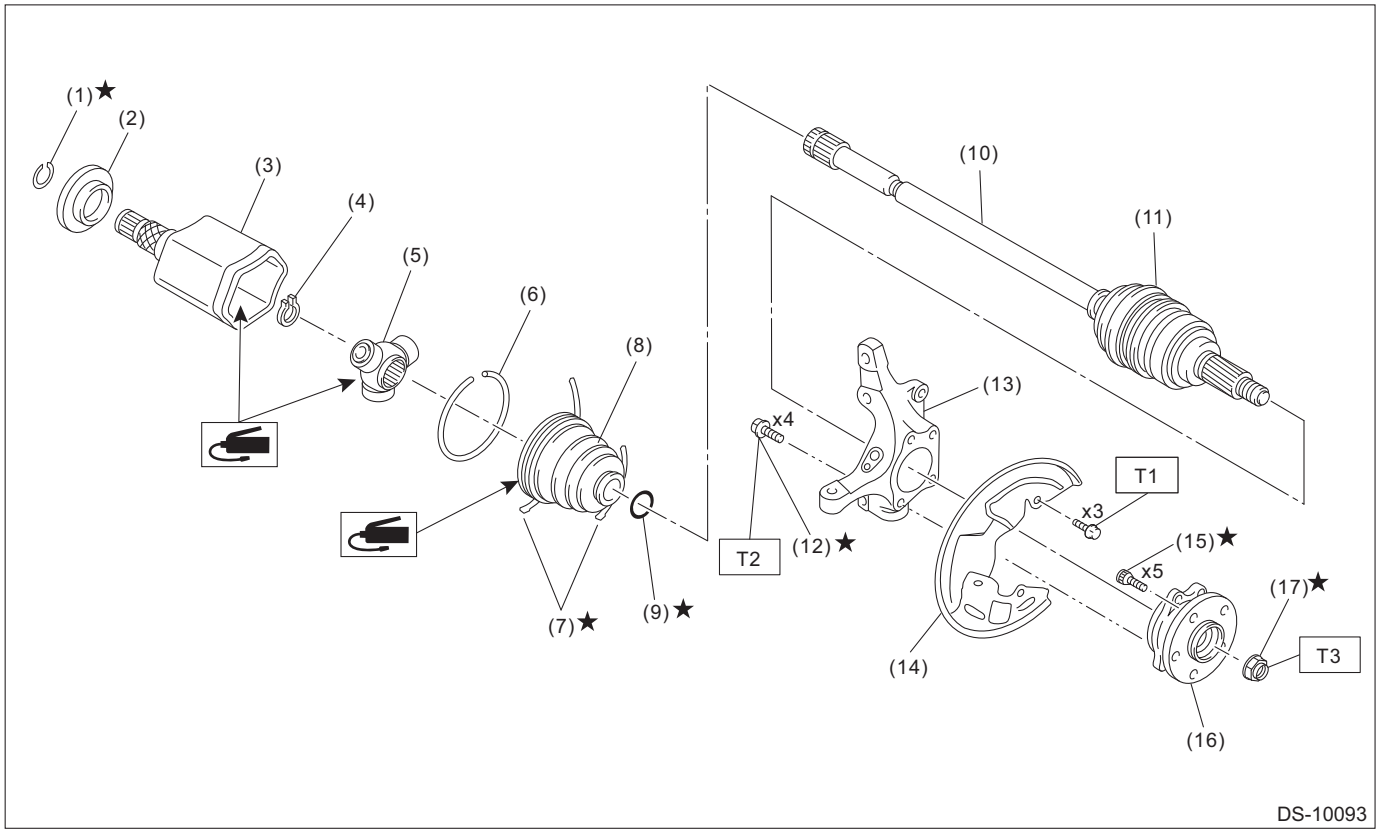


(1) Propeller shaft (3UJ+CPS type)
(2) Propeller shaft (EDJ-type)
(3) Rear differential (T-type)
(4) Rear differential (VB-type)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 31 (3.2, 22.9)
T2: 52 (5.3, 38.4)

2. FRONT AXLE

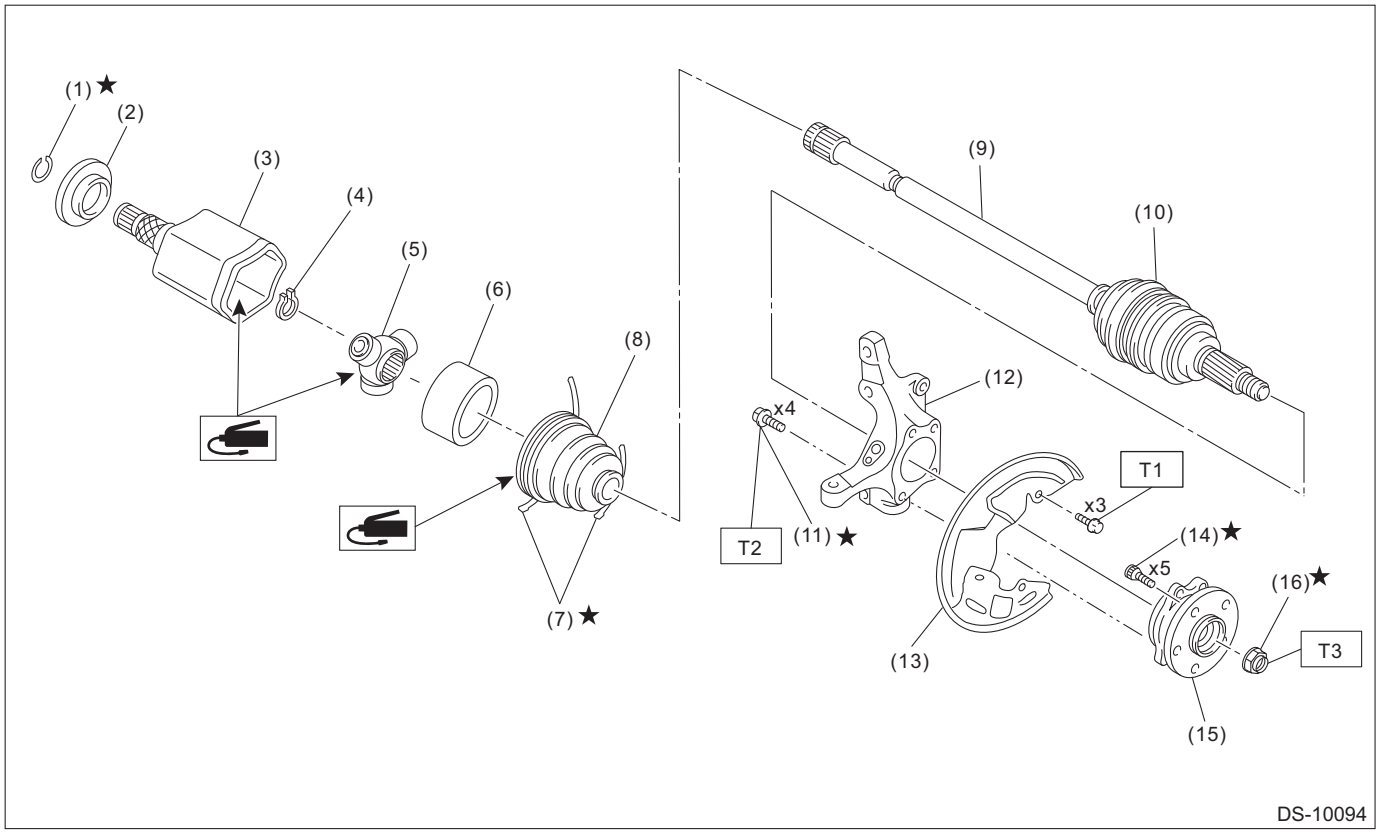
- Except for STI model



(1) Circlip
(2) Baffle plate
(3) Outer race (PTJ)
(4) Snap ring
(5) Trunnion
(6) Snap ring
(7) Boot band
(8) Boot (PTJ)
(9) O-ring
(10) Shaft ASSY (EBJ)
(11) Boot (EBJ)
(12) Bolt
(13) Front axle housing
(14) Front brake back plate
(15) Hub bolt
(16) Front hub unit bearing
(17) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 95 (9.7, 70.1)
T3: 220 (22.4, 162.3)

- STI model

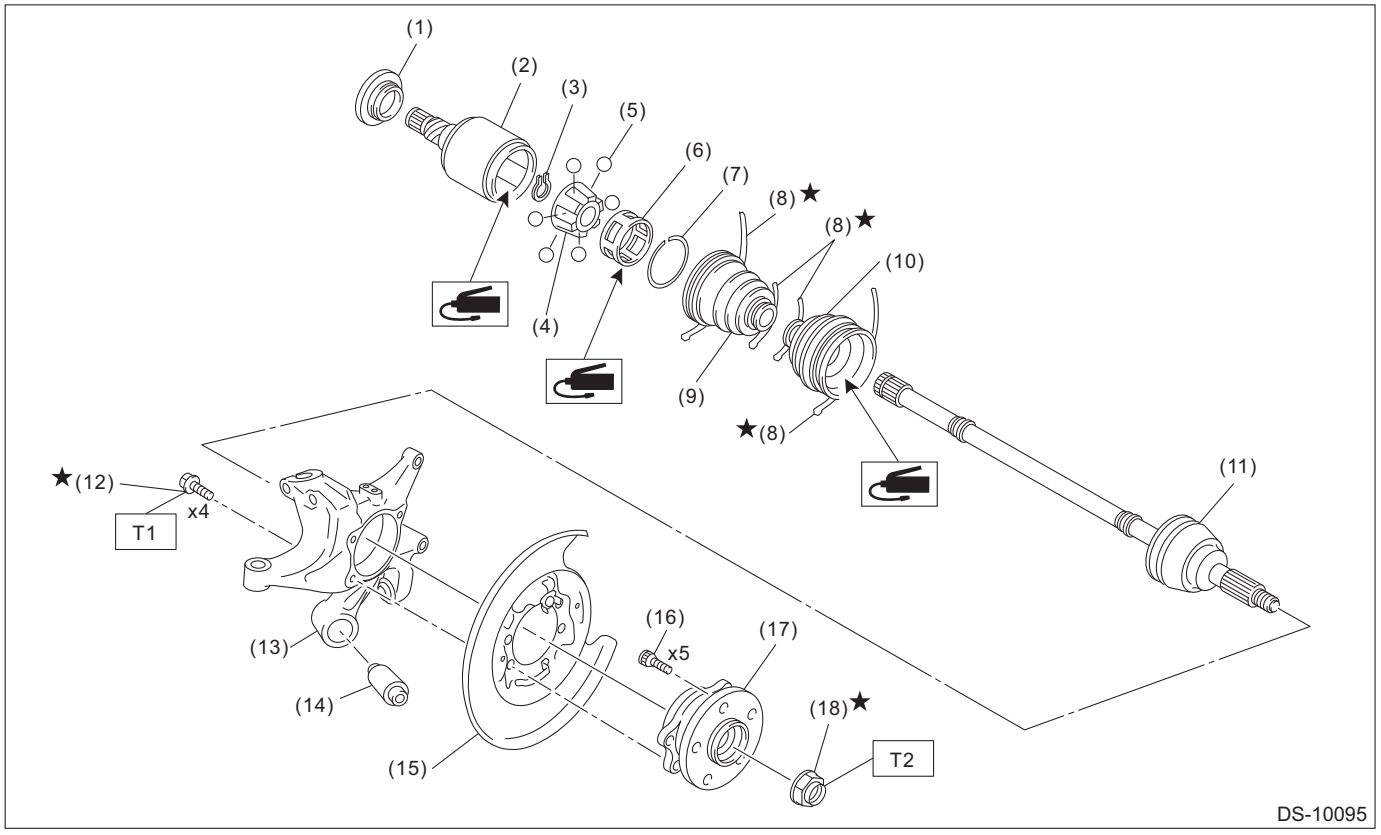


(1)	Circlip	(9)	Shaft ASSY (AC)
(2)	Baffle plate	(10)	Boot (AC)
(3)	Outer race (AAR)	(11)	Bolt
(4)	Snap ring	(12)	Front axle housing
(5)	Trunnion	(13)	Front brake back plate
(6)	Grommet	(14)	Hub bolt
(7)	Boot band	(15)	Front hub unit bearing
(8)	Boot (AAR)	(16)	Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 18 (1.8, 13.3)
T2: 95 (9.7, 70.1)
T3: 220 (22.4, 162.3)

3. REAR AXLE

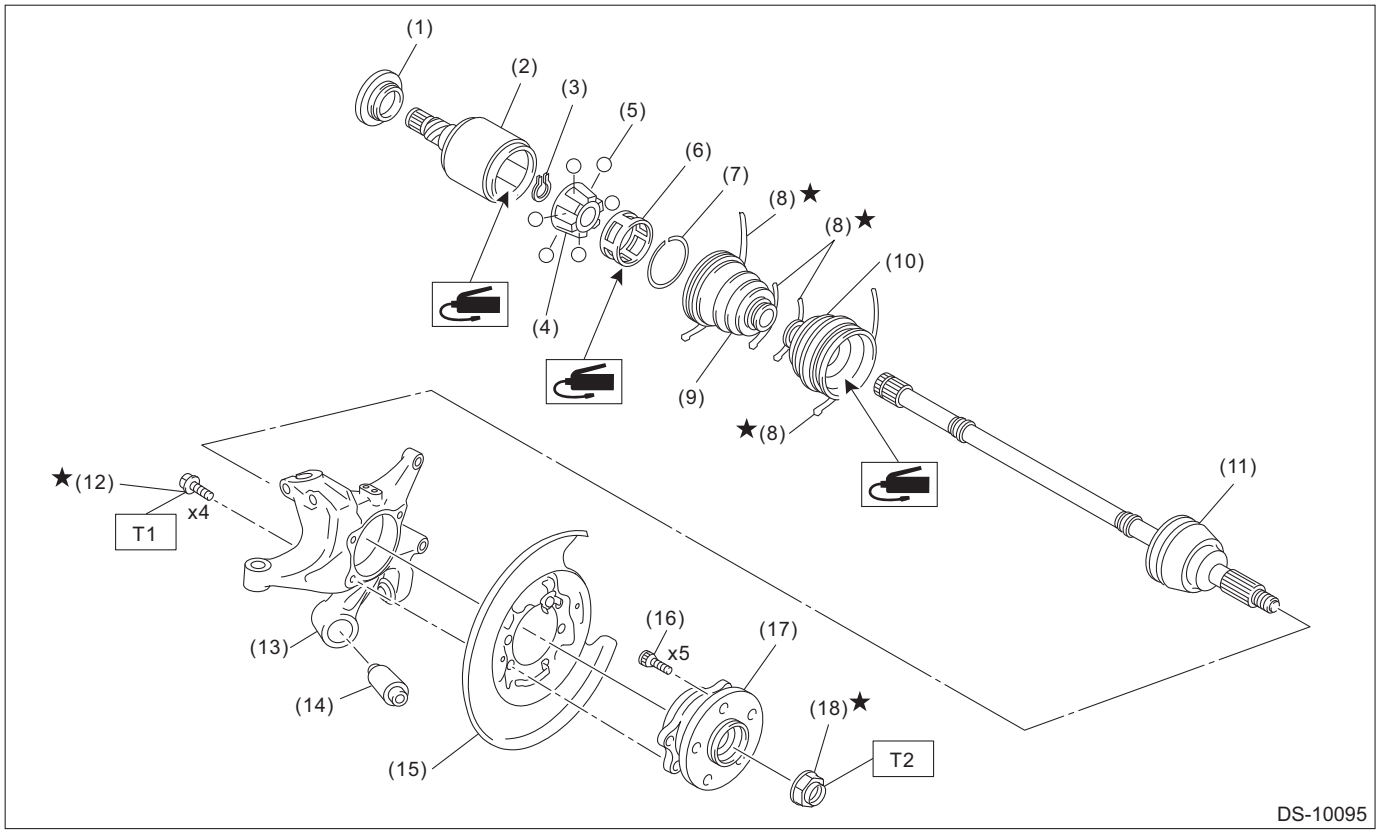
- Except for STI model



(1) Baffle plate
(2) Outer race (DOJ)
(3) Snap ring
(4) Inner race
(5) Ball
(6) Cage
(7) Snap ring
(8) Boot band
(9) Boot (DOJ)
(10) Boot (EBJ)
(11) Shaft ASSY (EBJ)
(12) Bolt
(13) Rear axle housing
(14) Bushing D - rear axle housing
(15) Rear brake back plate
(16) Hub bolt
(17) Rear hub unit bearing
(18) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 85 (8.7, 62.7)
T2: 190 (19.4, 140.1)

• STI model



(1) Baffle plate
(2) Outer race (EDJ)
(3) Snap ring
(4) Inner race
(5) Ball
(6) Cage
(7) Snap ring
(8) Boot band
(9) Boot (EDJ)
(10) Boot (EBJ)
(11) Shaft ASSY (EBJ)
(12) Bolt
(13) Rear axle housing
(14) Bushing D - rear axle housing
(15) Rear brake back plate
(16) Hub bolt
(17) Rear hub unit bearing
(18) Axle nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 85 (8.7, 62.7)
T2: 190 (19.4, 140.1)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When the suspension-related components have been removed, installed or replaced, perform the following adjustment.

– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST20099PA010	20099PA010	INSTALLER & REMOVER	• Used for replacing the bushing D - rear axle housing of the rear axle housing. • Used together with BUSHING REMOVER (20099FG000).
 ST20099FG000	20099FG000	BUSHING REMOVER	• Used for replacing the bushing D - rear axle housing of the rear axle housing. • Used together with base part of INSTALLER & REMOVER (20099PA010).
 ST28099AC000	28099AC000	BOOT BAND PLIERS	Used for tightening the boot band. (For front drive shaft)
 ST-925091000	925091000	BAND TIGHTENING TOOL	Used for tightening the boot band. (A) Jig for the band (B) Ratchet wrench

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST18675AA000	18675AA000	DIFFERENTIAL SIDE OIL SEAL INSTALLER	Used for installing the differential side retainer oil seal.
 ST-926470000	926470000	AXLE SHAFT PULLER	• Used for removing the drive shaft. • Used together with AXLE SHAFT PULLER PLATE (28099PA110).
 ST28099PA110	28099PA110	AXLE SHAFT PULLER PLATE	• Used for removing the drive shaft. • Exchange with the plate of the AXLE SHAFT PULLER (926470000) to use.
 ST28099PA080	28099PA080	HUB STAND	Used for assembling the hub bolt.
 ST28399AG000	28399AG000	HUB STAND	Used for extracting hub bolt.

ILLUSTRATION	Part No.	DESCRIPTION	REMARKS
 ST28399SA010	28399SA010	OIL SEAL PROTECTOR	• Used for installing front drive shaft into front differential. • For protecting the oil seal.
 ST28099PA090	28099PA090	OIL SEAL PROTECTOR	• Used for installing the rear drive shaft to the rear differential. • For protecting the oil seal.
 ST28099PA100	28099PA100	DRIVE SHAFT REMOVER	Used for removing the rear drive shaft from rear differential. (T-type)

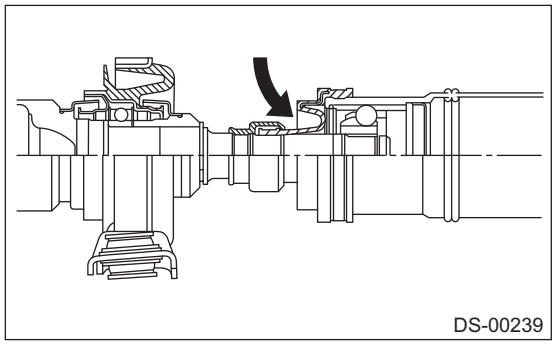
2. GENERAL TOOL

TOOL NAME	REMARKS
Tie-rod ball joint puller	Used for disconnecting joints.
Dial gauge	Used for inspecting the propeller shaft run-out.
Extension cap	Used for preventing leakage of gear oil or CVTF.
Crowbar	Used for extracting drive shaft.
Needle nose pliers	Used for tightening the boot band of the rear drive shaft. • Snap-on 96BCP Or equivalent.

2. Propeller Shaft

A: REMOVAL

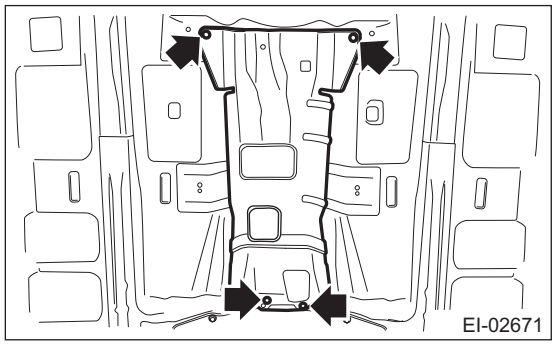
CAUTION:
- **Before removing propeller shaft, wrap metal parts with a cloth or rubber material.**
- **Do not disassemble the center EDJ of the propeller shaft.**
- **Before removing the propeller shaft, wrap the center joint part with a cloth, etc. If the joint is bent during removal, the rubber boot may be damaged due to interference with metal parts.**



1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the center exhaust pipe.
- STI model: <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

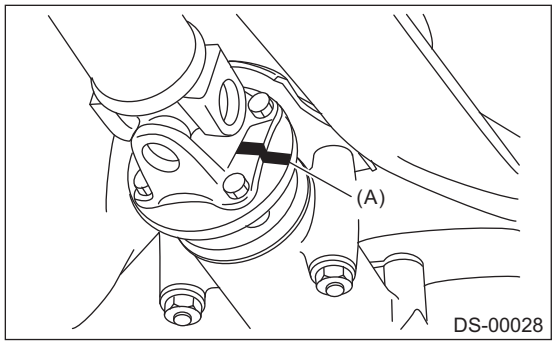
6) Remove the bolts, and then remove the center exhaust cover.



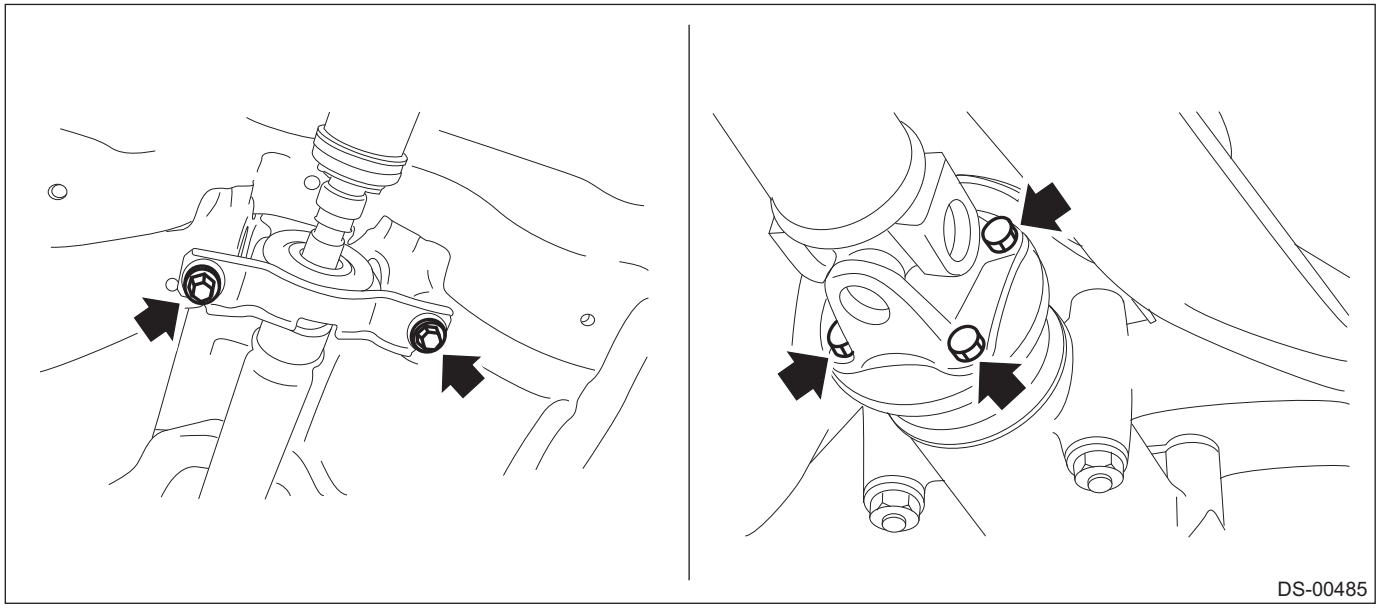
7) Remove the propeller shaft assembly.

CAUTION:
- **Do not disassemble the propeller shaft.**
- **Use a container to catch CVTF or oil flowing from propeller shaft.**
- **To prevent CVTF from leaking, install extension cap etc. to the transmission.**
- **Be careful not to damage oil seals and contact surface of the sleeve yoke.**

(1) Place alignment marks (A) on the flange yoke and rear differential.

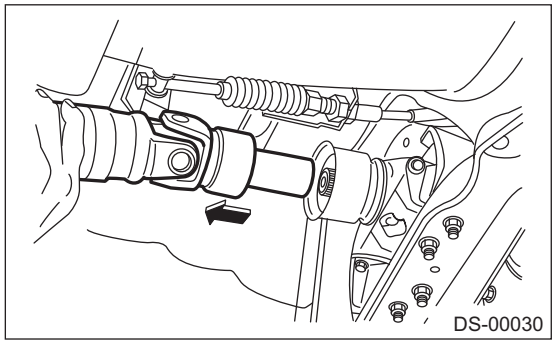


(2) Remove the bolts and remove the propeller shaft from the rear differential.



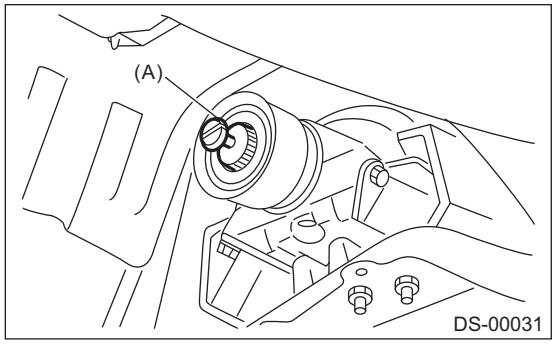
(3) Remove the end of propeller shaft from the transmission.

NOTE:
Use a container to catch oil flowing from propeller shaft.



(4) Install extension cap (A) to the transmission.

NOTE:
If extension cap (A) is not available, place vinyl bag over opening and fasten with string to prevent gear oil from leaking.

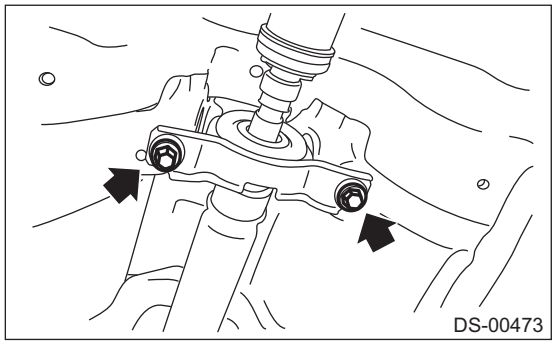


B: INSTALLATION

1) Before installation, check the following items, and replace the propeller shaft assembly as necessary.
- Dents or cracks on the tube surface
- Splines for deformation or abnormal wear
- Unsmooth joint operation or abnormal noise
- Center bearing for free play, noise or non-smooth operation.
- Oil seals for abnormal wear or damage
- Damaged center bearing

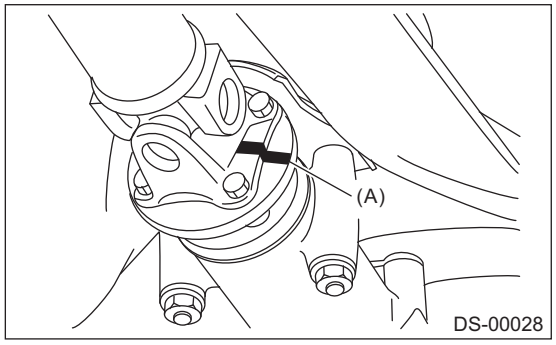
2) Apply fluid or gear oil to the oil seal lip and the propeller shaft.
Recommended fluid/oil: <Ref. to RM-3, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>
3) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:
52 N·m (5.3 kgf-m, 38.4 ft-lb)



4) Align the alignment marks (A), and connect the yoke flange and rear differential.

Tightening torque:
31 N·m (3.2 kgf-m, 22.9 ft-lb)



5) Check the propeller shaft with the propeller shaft installed to the vehicle. <Ref. to DS-15, INSPECTION, Propeller Shaft.>
6) Install the center exhaust cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>

8) Install the center exhaust pipe.
- STI model: <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>

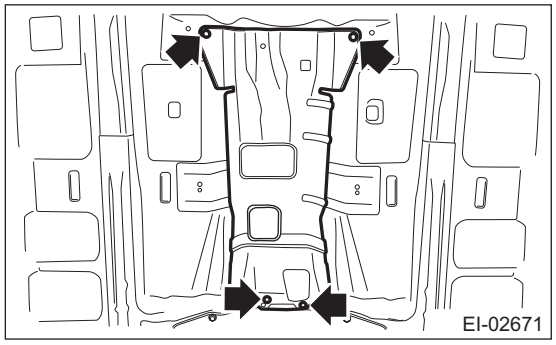
9) Lower the vehicle.

C: INSPECTION

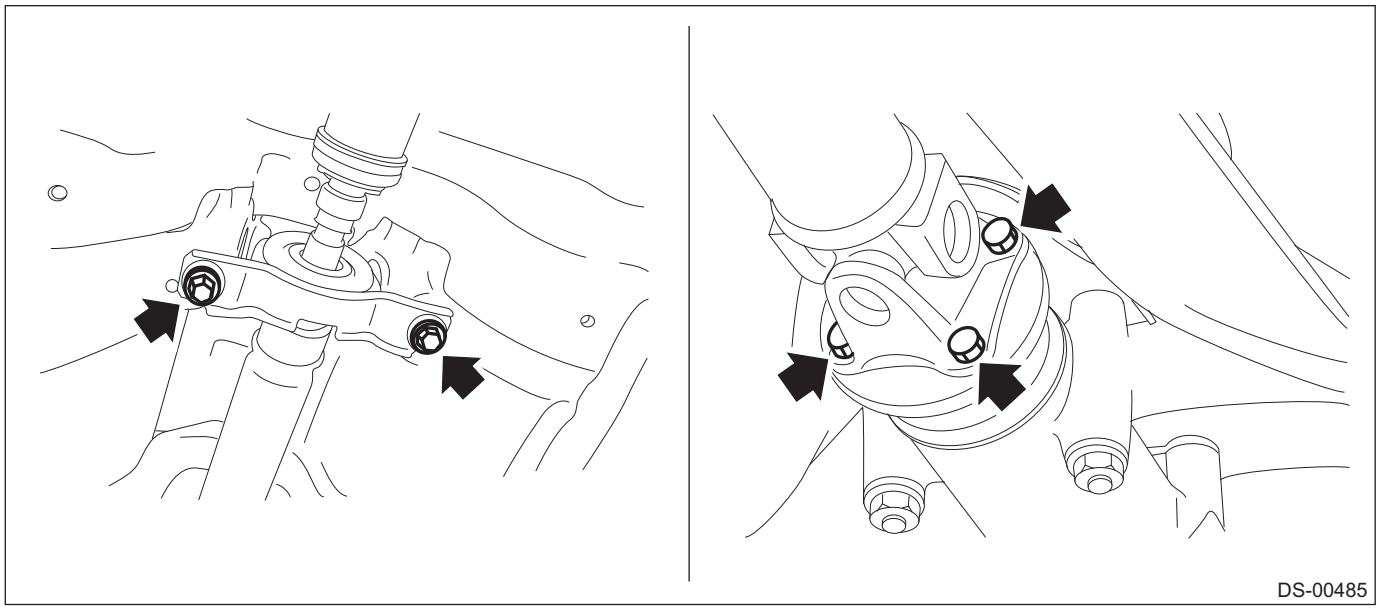
Check the propeller shaft with the propeller shaft installed to the vehicle.
1) Shift the select lever or gear shift lever to neutral.
2) Release the parking brake.
3) Lift up the vehicle.
4) Remove the center exhaust pipe.
- STI model: <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

5) Remove the rear exhaust pipe.
- STI model: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Except for STI model: <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>

6) Remove the bolts, and then remove the center exhaust cover.

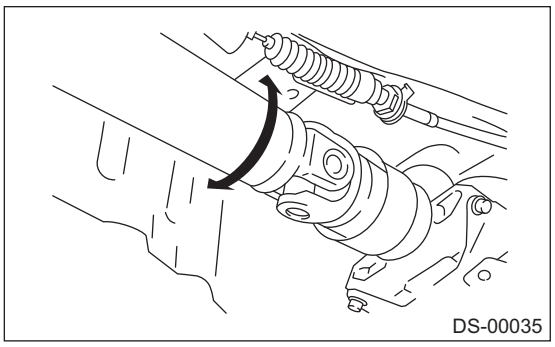


7) Check the propeller shaft mounting bolt for looseness.
(1) Yoke flange mounting bolts which connect to the rear differential
(2) Center bearing bracket mounting bolts



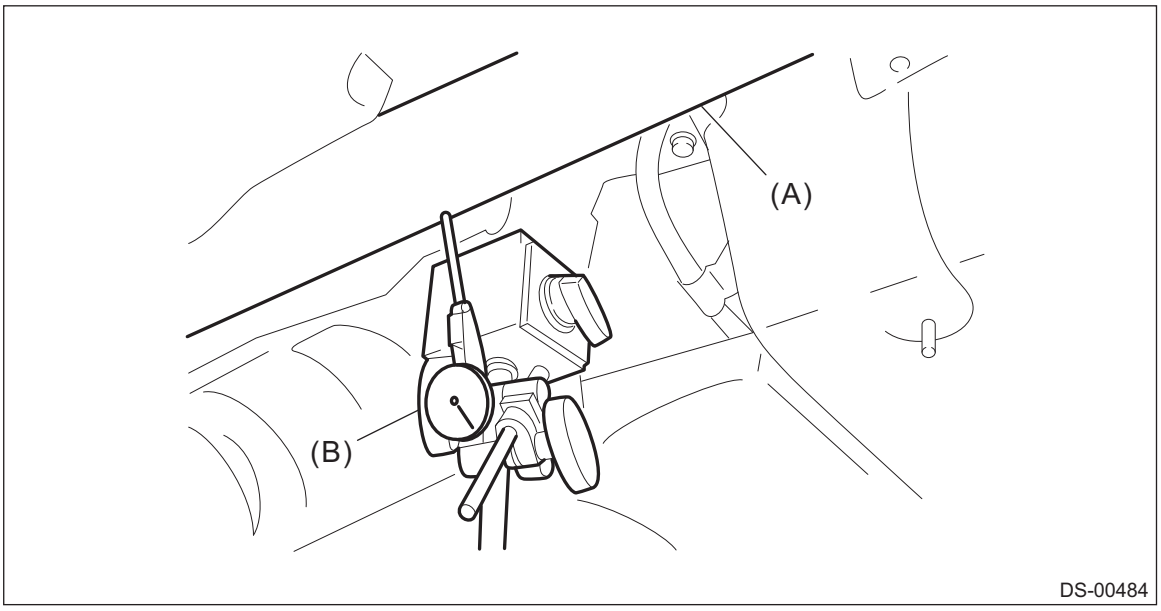
8) Check the spline and bearing for the propeller shaft.

(1) Turn the propeller shaft by hand to check if abnormal looseness exists at splines.
(2) Also move yokes to check if abnormal looseness exists at spiders and bearings.

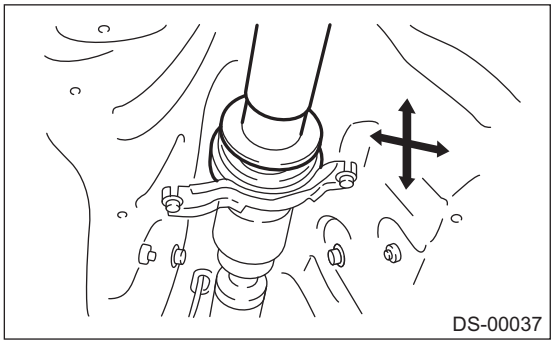


9) Measure the deflection of the propeller shaft.
(1) Set the dial gauge (B) with its indicator stem at the center of the propeller shaft (A).
(2) Turn the propeller shaft (A) slowly by hands to check for runout of the propeller shaft.

Runout:
Limit: 0.6 mm (0.024 in)



10) Check the center bearing for play.
Hold the propeller shaft near the center bearing section and move it by hand to upward, downward and sideways, in order to check for any abnormal free play of the bearings.



11) Replace the propeller shaft assembly if faulty is found in the inspection.

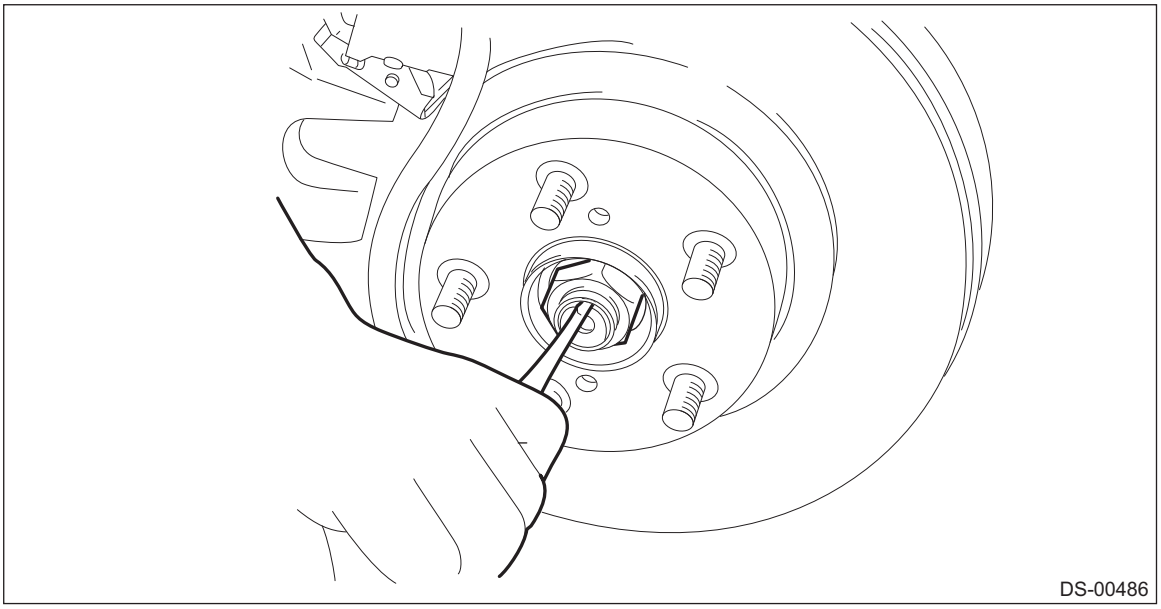
3. Front Axle

A: REMOVAL

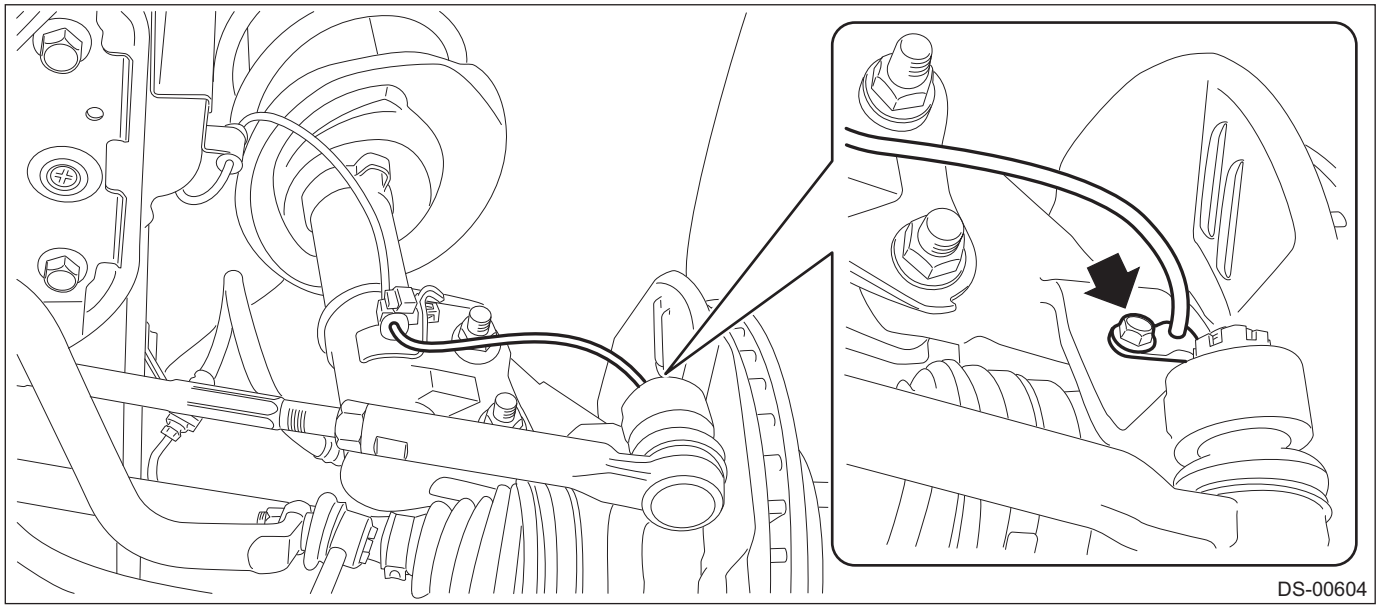
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



3) Remove the disc brake assembly and disc rotor. <Ref. to BR-29, REMOVAL, Front Disc Rotor.>
4) Remove the bolts, and remove the front ABS wheel speed sensor.

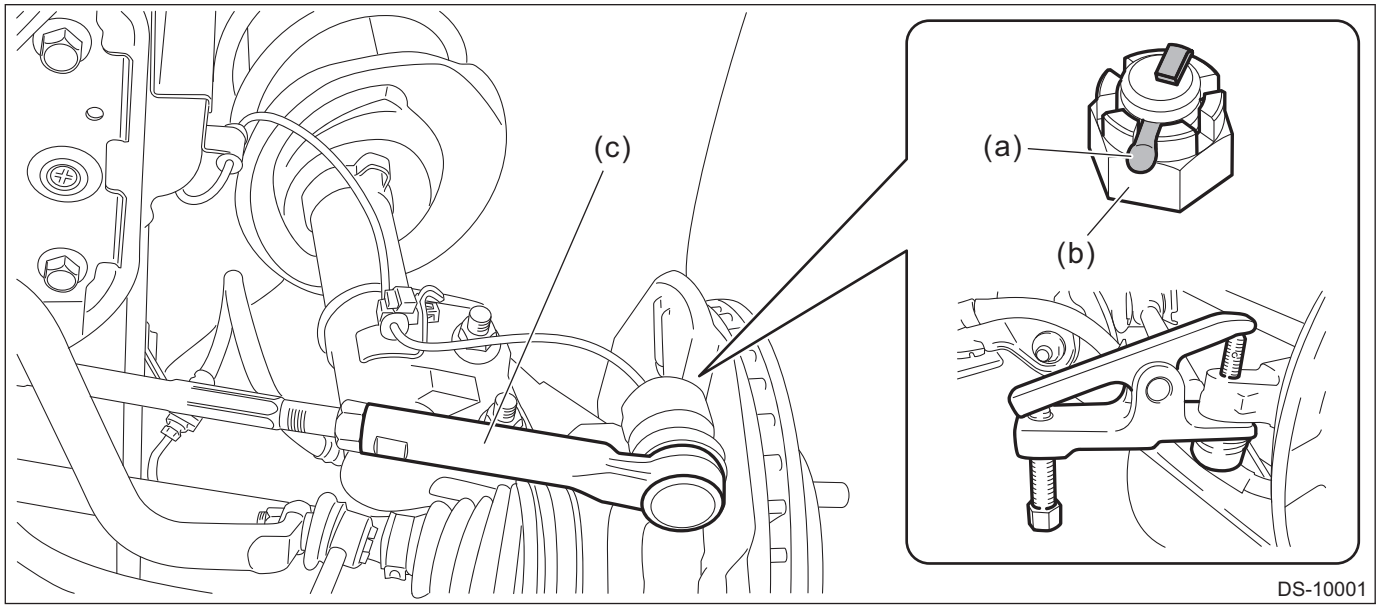


5) Disconnect the tie-rod end.

(1) Pull out the cotter pin (a).
(2) Remove the castle nut (b).
(3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

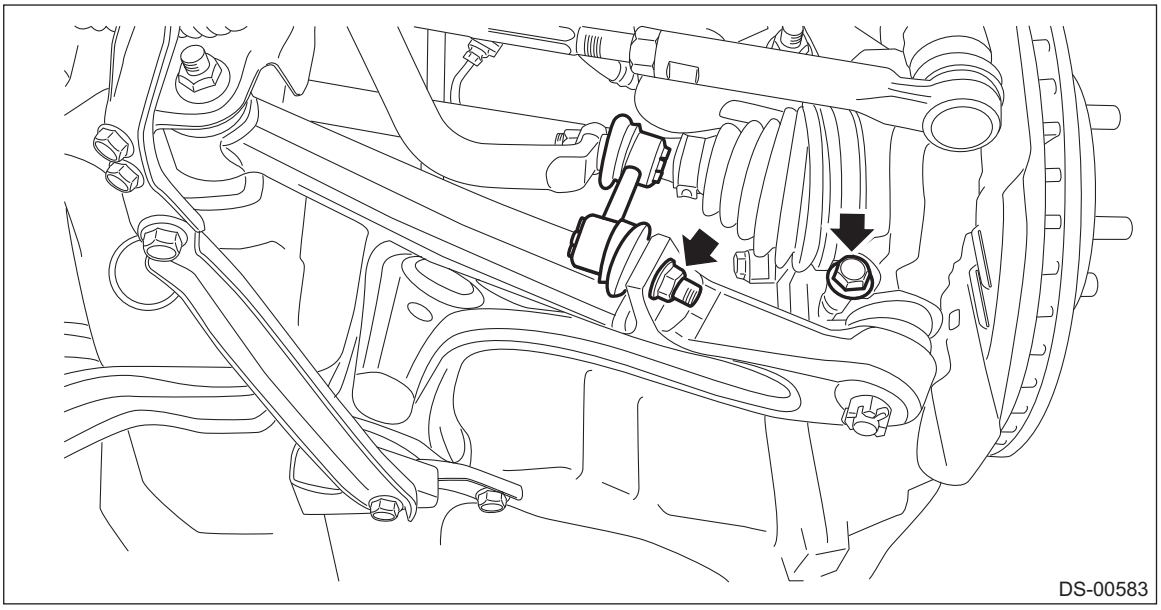
CAUTION:
Be careful not to damage the boot of the joint.

Preparation tool:
Tie-rod ball joint puller



6) Remove the stabilizer link and ball joint.

CAUTION:
Be careful not to damage the boot of the joint.

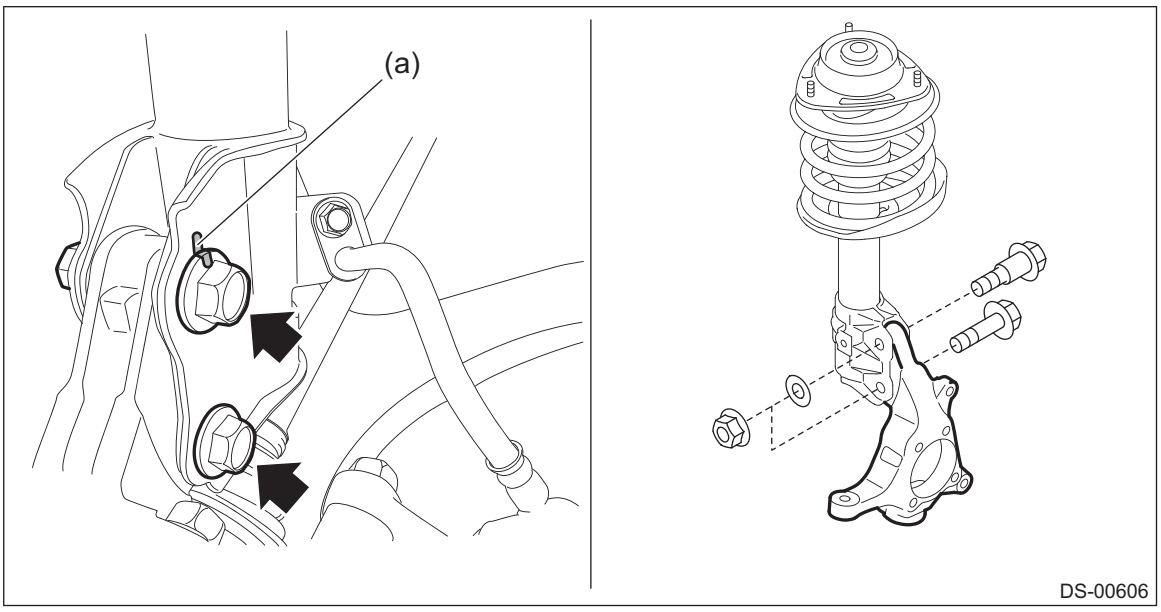


7) Remove the front drive shaft. <Ref. to DS-43, REMOVAL, Front Drive Shaft.>
8) Remove the front axle housing.

CAUTION:
- **Be careful of the weight of front axle housing.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Place an alignment mark (a) on the adjusting bolt and the strut assembly.
(2) Remove the adjusting bolts and flange bolts for the strut assembly, and then remove the front axle housing.

NOTE:
While holding the adjusting bolt side, tighten the nut side.



9) Refer to “Front Hub Unit Bearing” for removal of the front hub unit bearing. <Ref. to DS-23, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

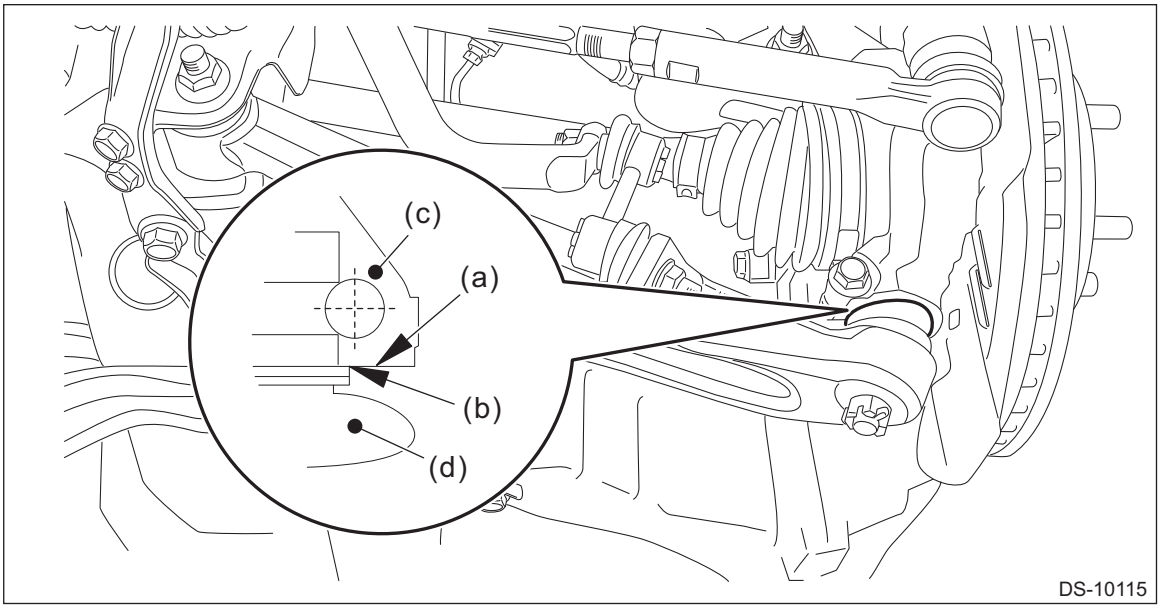
1) Install the front axle housing to the strut assembly.
   (1) Align alignment marks on the camber adjusting bolt and strut.
   (2) While holding the bolt head of adjusting bolt, tighten the nut.

Tightening torque:
155 N·m (15.8 kgf-m, 114.3 ft-lb)

2) Install the front drive shaft assembly. <Ref. to DS-44, INSTALLATION, Front Drive Shaft.>
3) Install the ball joint.

CAUTION:
• Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.
• Be careful not to damage the boot of the joint.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

4) Install the front ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the disc rotor.
6) Install the disc brake assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, FRONT DISC BRAKE, COMPONENT, General Description.>
7) Install the brake hose bracket.

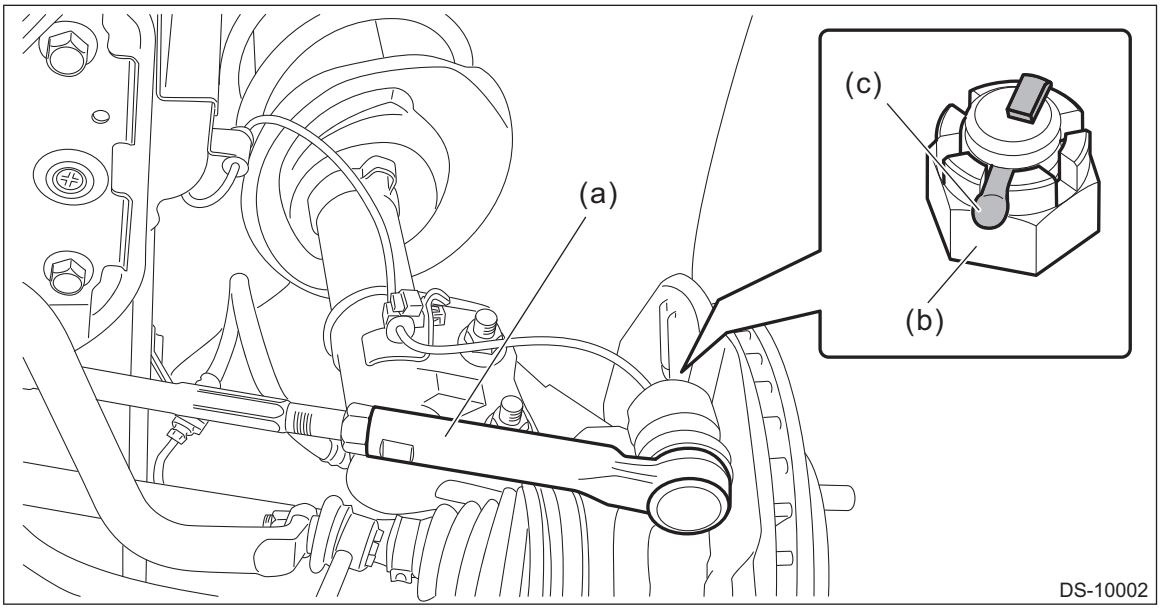
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
8) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
9) Connect the tie-rod ends.
(1) Connect the tie-rod ends to the front axle housing.
(2) Tighten the castle nuts to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
(3) Tighten the castle nut within the range of 60° so that the cotter pin hole and cutout portion of the castle nut are aligned.

(4) Insert a new cotter pin (c), and bend the tip of the pin to fix it.



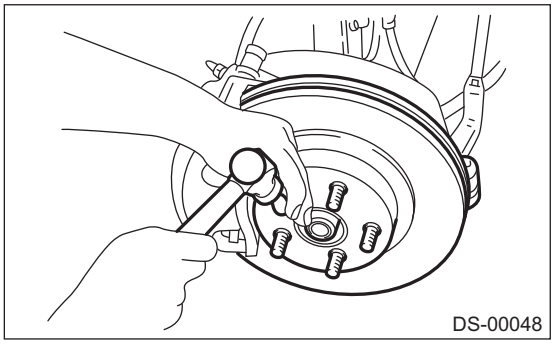
(a) Tie-rod end (b) Castle nut (c) Cotter pin

10) While depressing the brake pedal, tighten the axle nut to the specified torque.

CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

11) After tightening the axle nut, lock it securely.

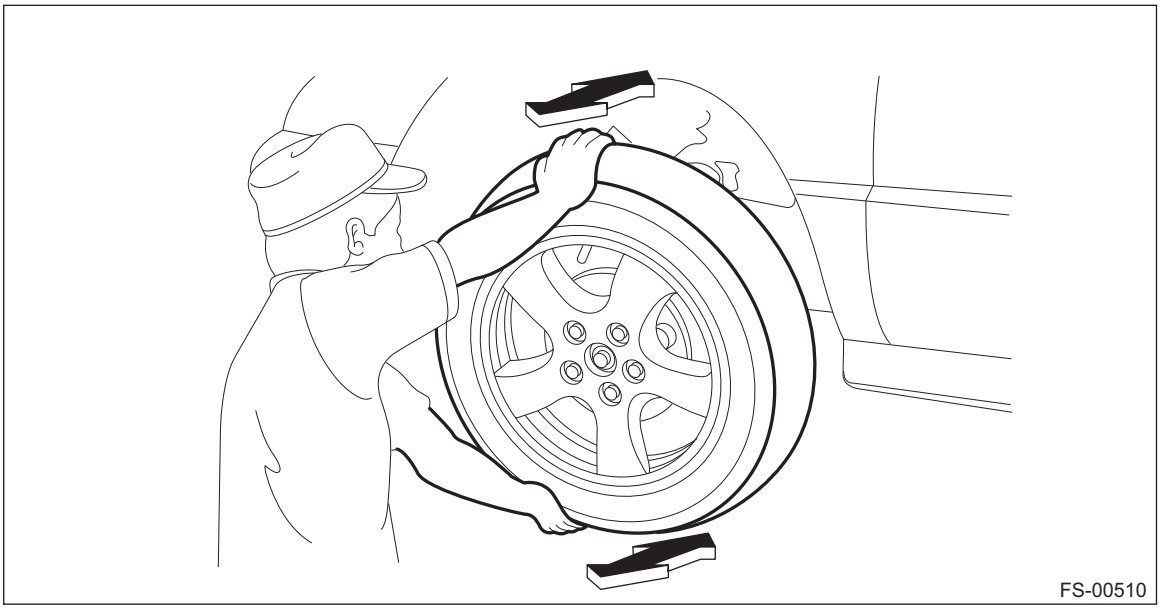


12) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.

• **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>



3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   • **Looseness exists** → Replace the ball joint. <Ref. to FS-31, REMOVAL, Front Ball Joint.>

13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

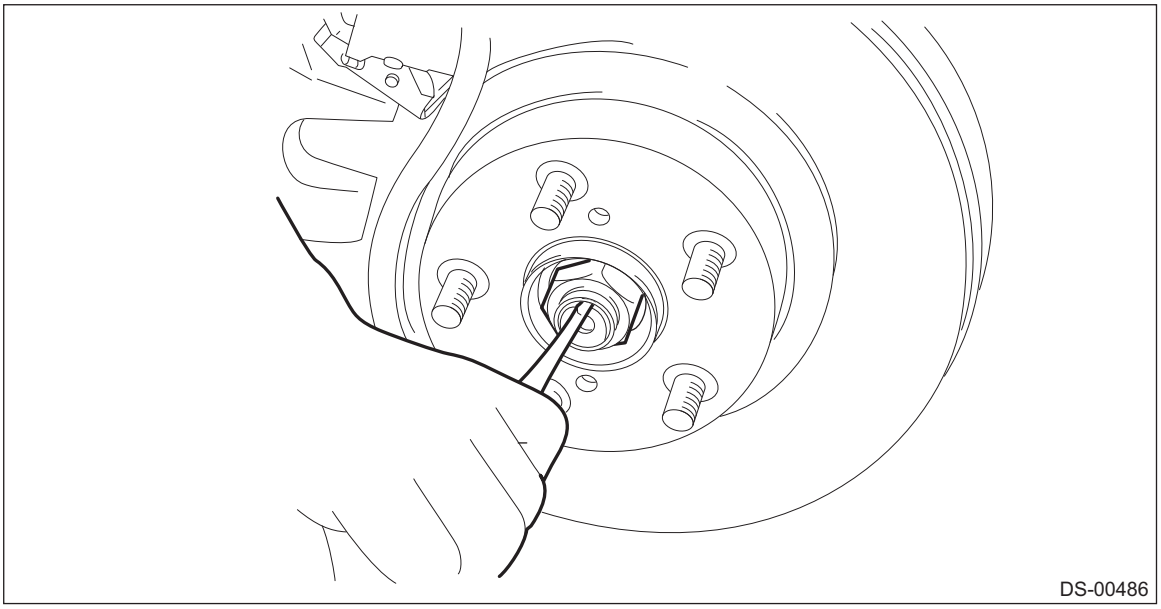
4. Front Hub Unit Bearing

A: REMOVAL

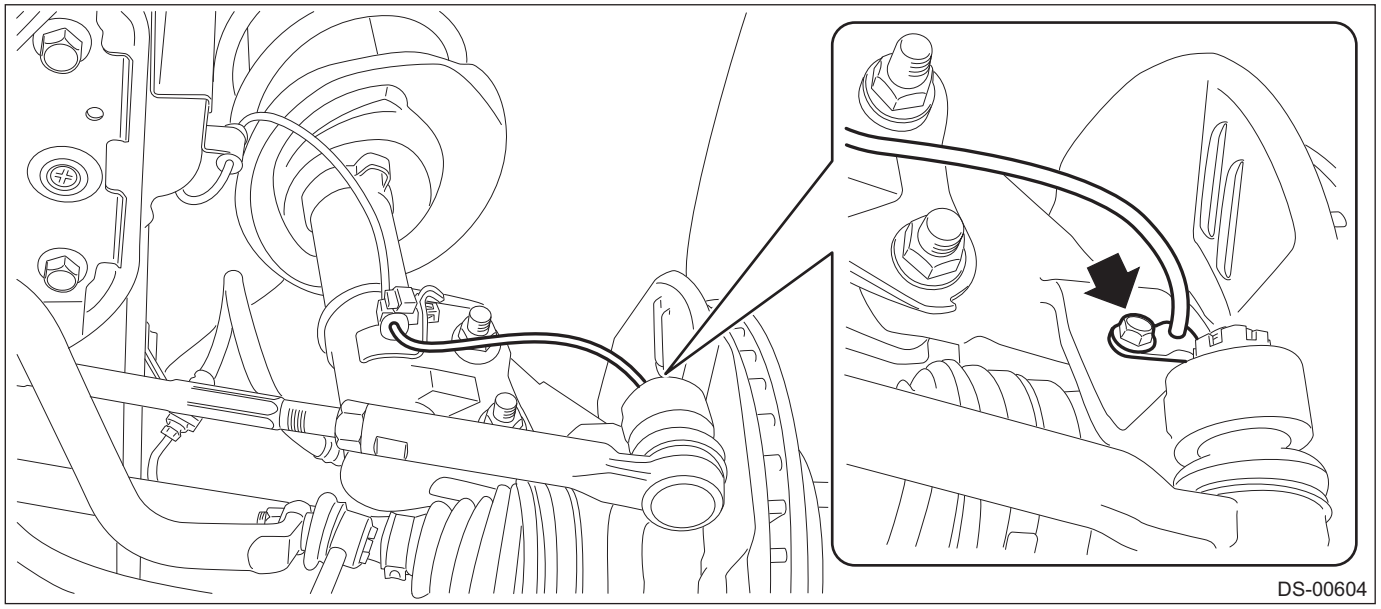
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



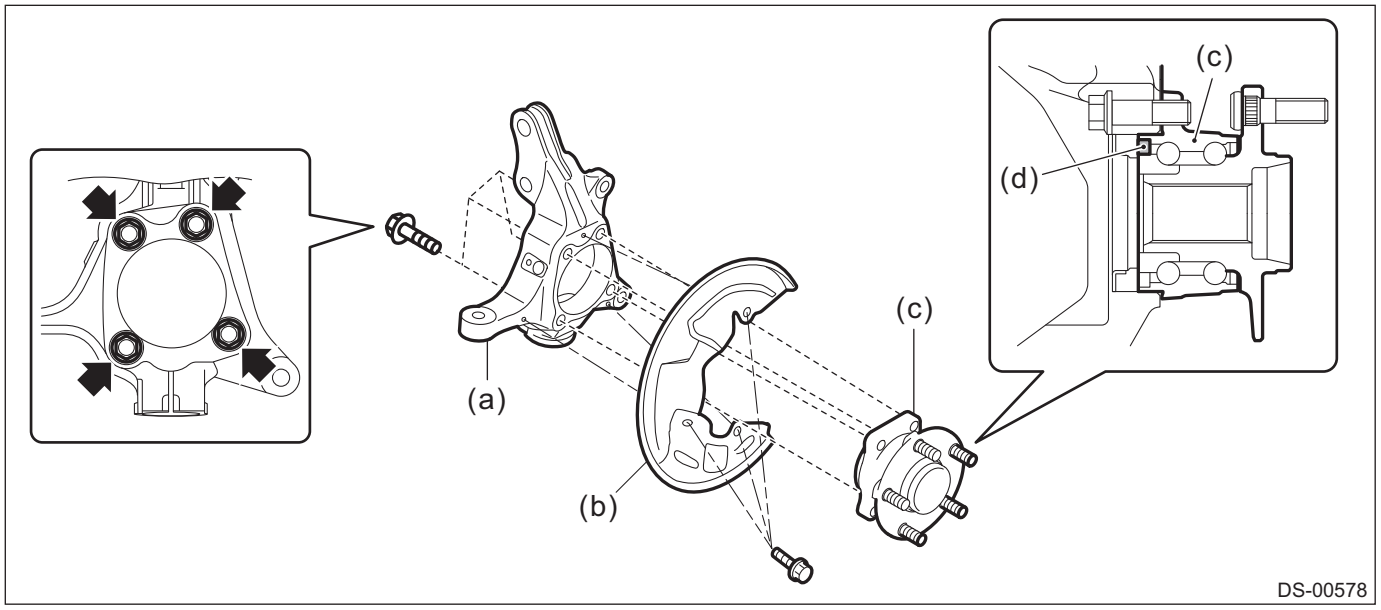
3) Remove the disc brake assembly and disc rotor. <Ref. to BR-29, REMOVAL, Front Disc Rotor.>
4) Remove the bolts, and remove the front ABS wheel speed sensor.



5) Remove the front hub unit bearing.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**

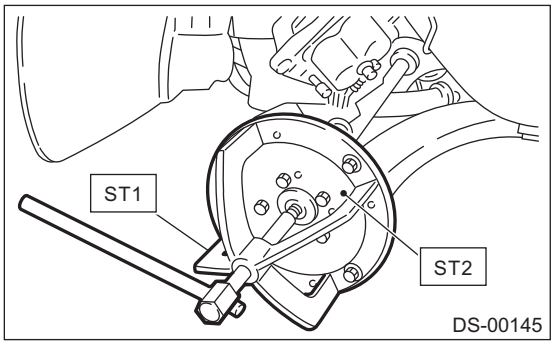
- **Be careful not to damage the magnetic encoder.**



(a) Front axle housing
(b) Front brake back plate
(c) Front hub unit bearing
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

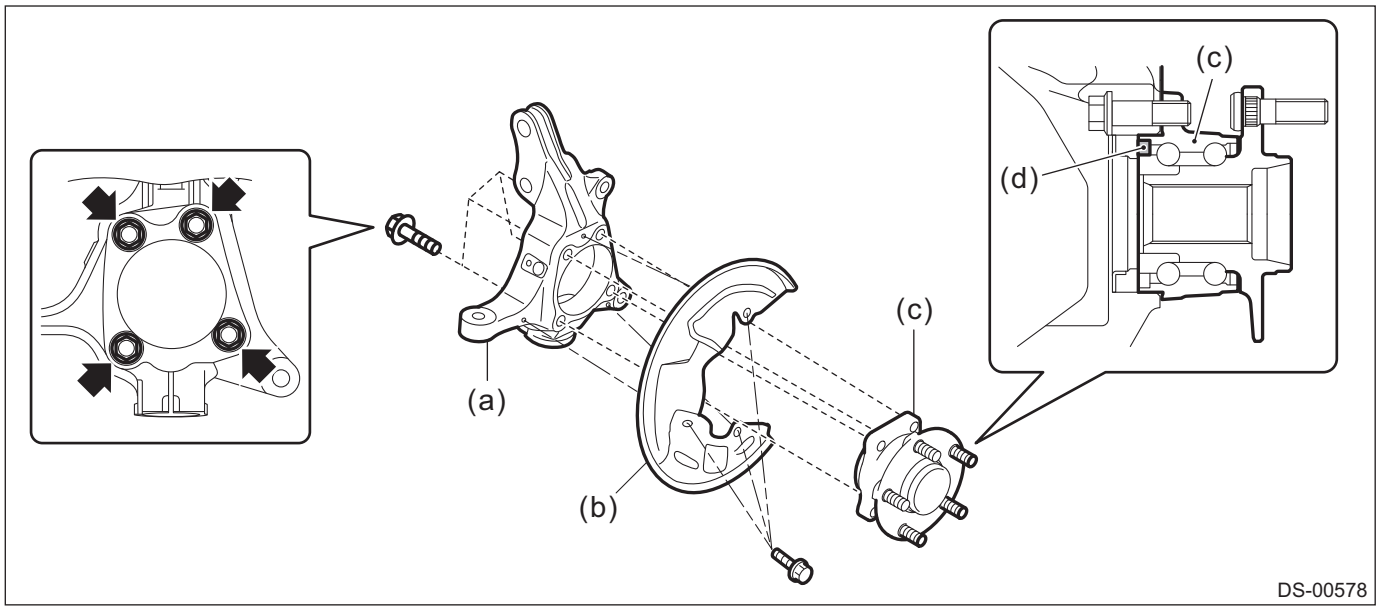


B: INSTALLATION

1) Tighten the front hub unit bearing to the front axle housing with the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**
- **Use a new mounting bolt for the front hub unit bearing.**

Tightening torque:
Front brake back plate: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
Front hub unit bearing: 95 N·m (9.7 kgf-m, 70.1 ft-lb)



(a) Front axle housing
(b) Front brake back plate
(c) Front hub unit bearing
(d) Magnetic encoder

2) Install the front drive shaft assembly.

CAUTION:
- **Do not hammer the drive shaft assembly when installing.**
- **Use new axle nuts.**

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new axle nut temporarily.

3) Install the disc rotor to the front hub unit bearing.
4) Install the disc brake assembly to the front axle housing.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, FRONT DISC BRAKE, COMPONENT, General Description.>

5) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the front ABS wheel speed sensor.

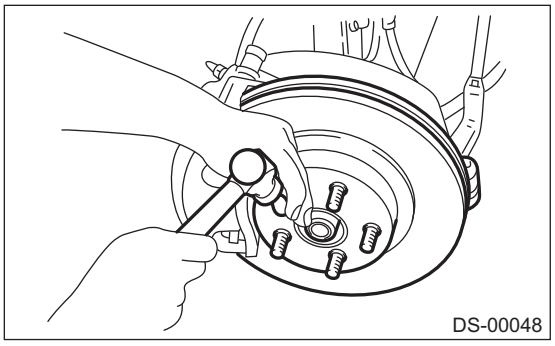
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

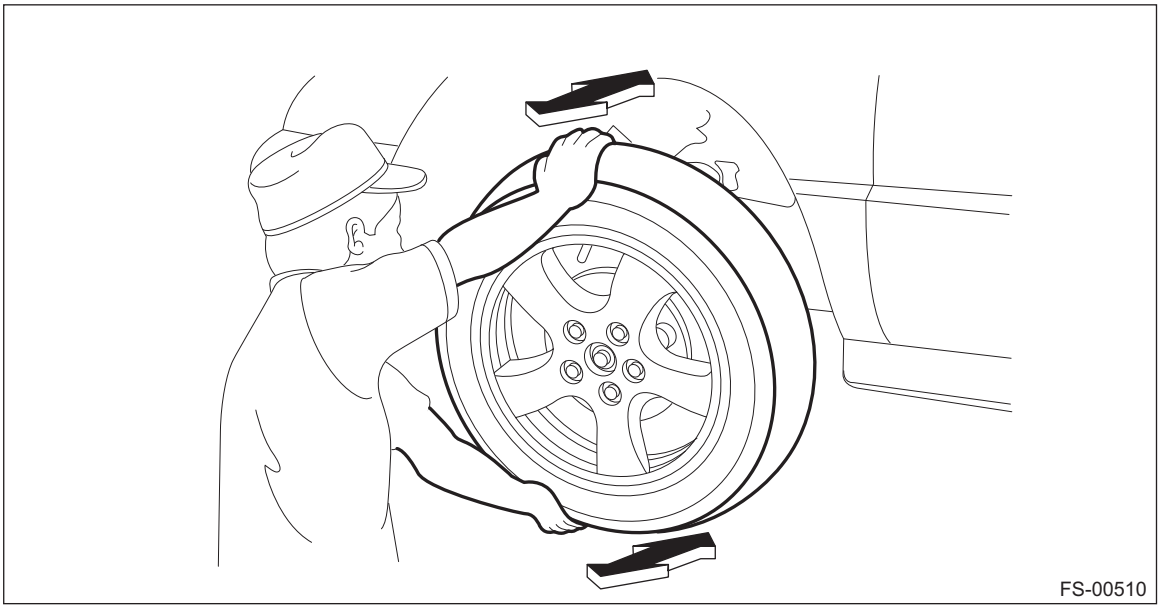
8) After tightening the axle nut, lock it securely.



9) Install the front wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the front hub unit bearing. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>



3. Check that there is no looseness by moving the upper and lower portions of front tire in an axial direction with the brake pedal depressed.
   - **Looseness exists** → Replace the ball joint. <Ref. to FS-31, REMOVAL, Front Ball Joint.>

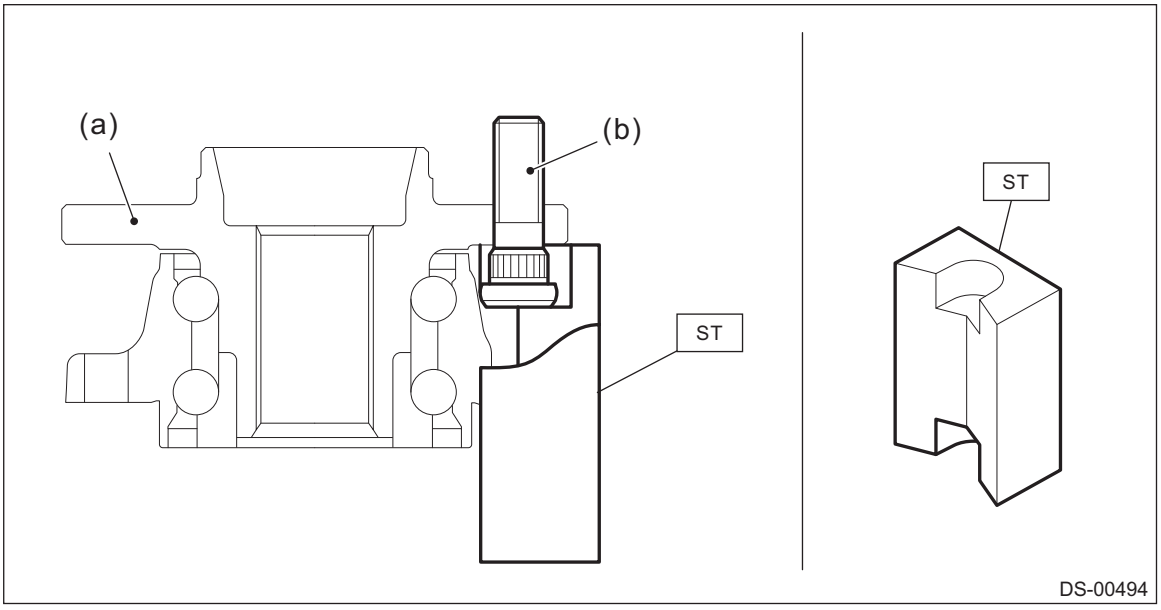
C: DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the front hub unit bearing (a).

CAUTION:
- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

NOTE:
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

Preparation tool:
ST: HUB STAND (28399AG000)



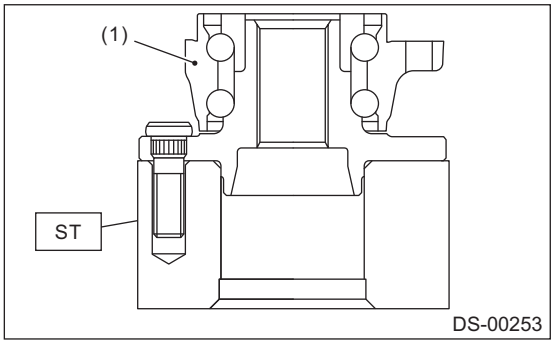
D: ASSEMBLY

1) Install the hub unit bearing to the ST securely.

Preparation tool:
ST: HUB STAND (28099PA080)

2) Using a press, press the new hub bolts until their seating surfaces contact the hub unit bearing.

NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.

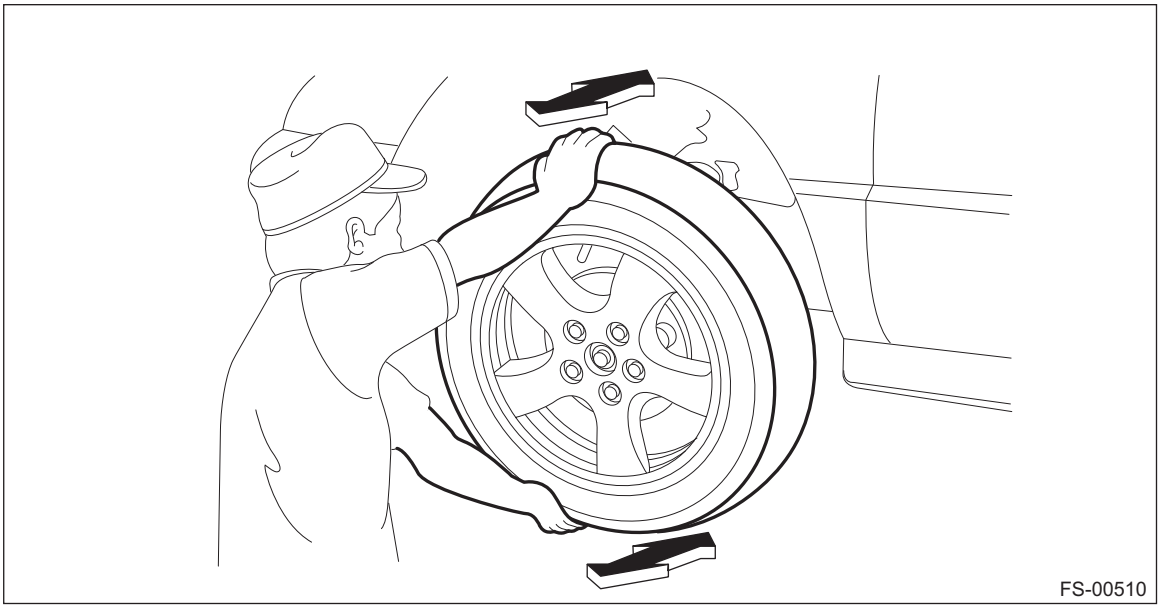


(1) Front hub unit bearing

E: INSPECTION

1) Moving the front tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

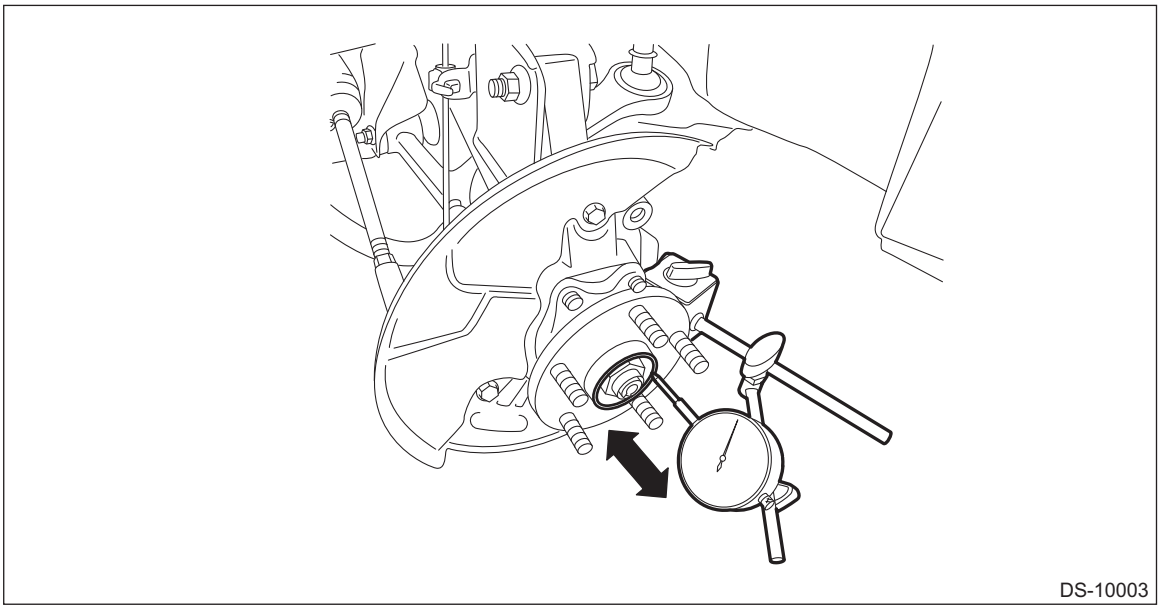
CAUTION:
If there is unsmooth sliding operation or abnormal noise in the bearing, replace the hub unit bearing.



FS-00510

2) Inspect the hub unit bearing for axial looseness.
1. Remove the tire, disc brake assembly and disc rotor.
2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



DS-10003

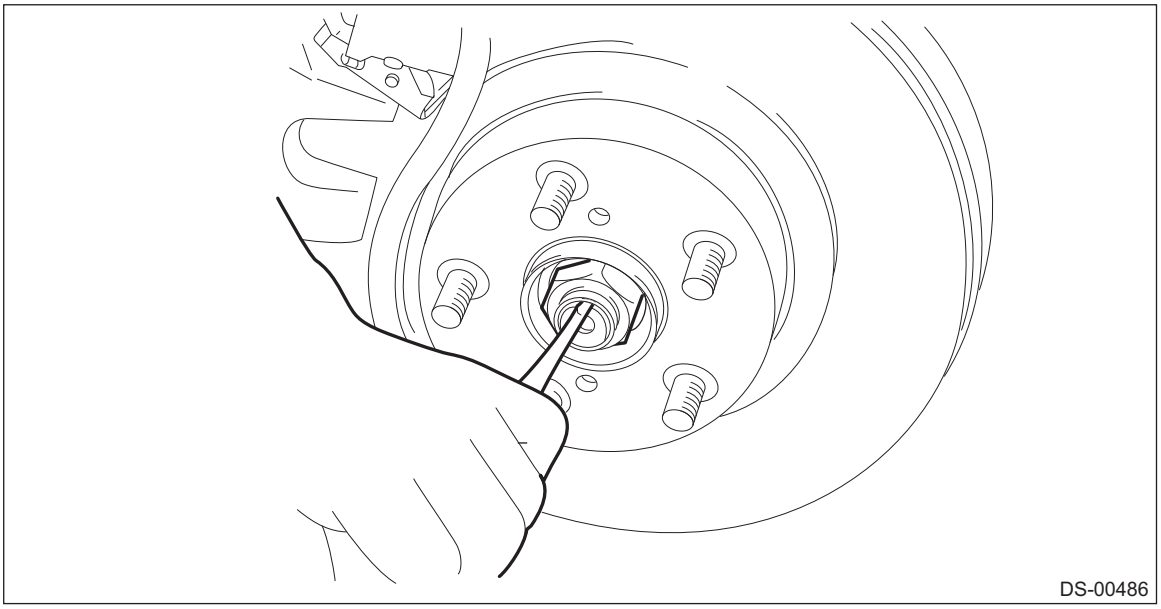
5. Rear Axle

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

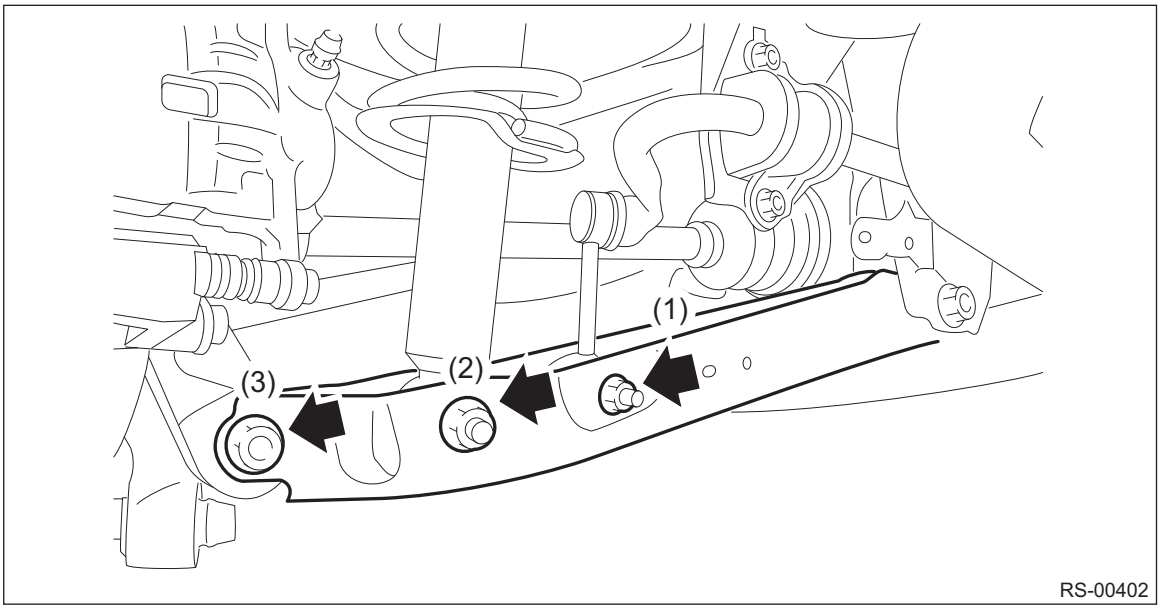
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.
(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



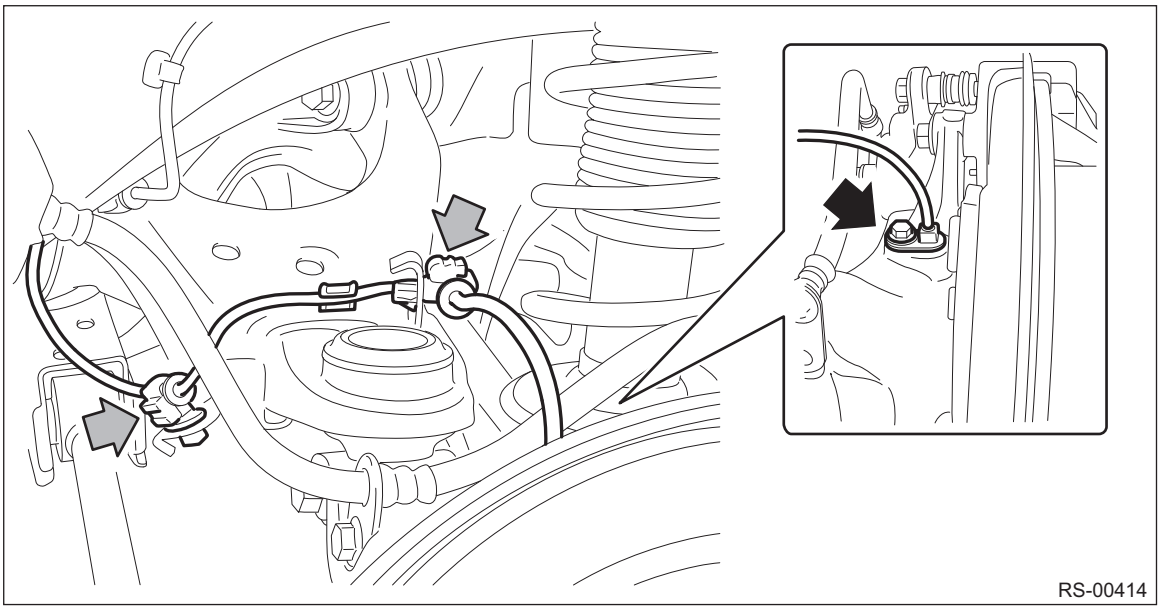
4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-88, REMOVAL, Rear Height Sensor.>
5) Remove the bolts and nuts, and lower the lateral link assembly - rear.
(1) Remove the nut and disconnect the rear stabilizer link.
(2) Remove the bolts from the lower side of rear shock absorber assembly.

(3) Disconnect the rear axle housing from the lateral link assembly - rear.



6) Remove the rear ABS wheel speed sensor from the rear axle housing.
(1) Remove the bolts, and remove the ABS wheel speed sensor.
(2) Remove the rear ABS wheel speed sensor harness from the upper arm.

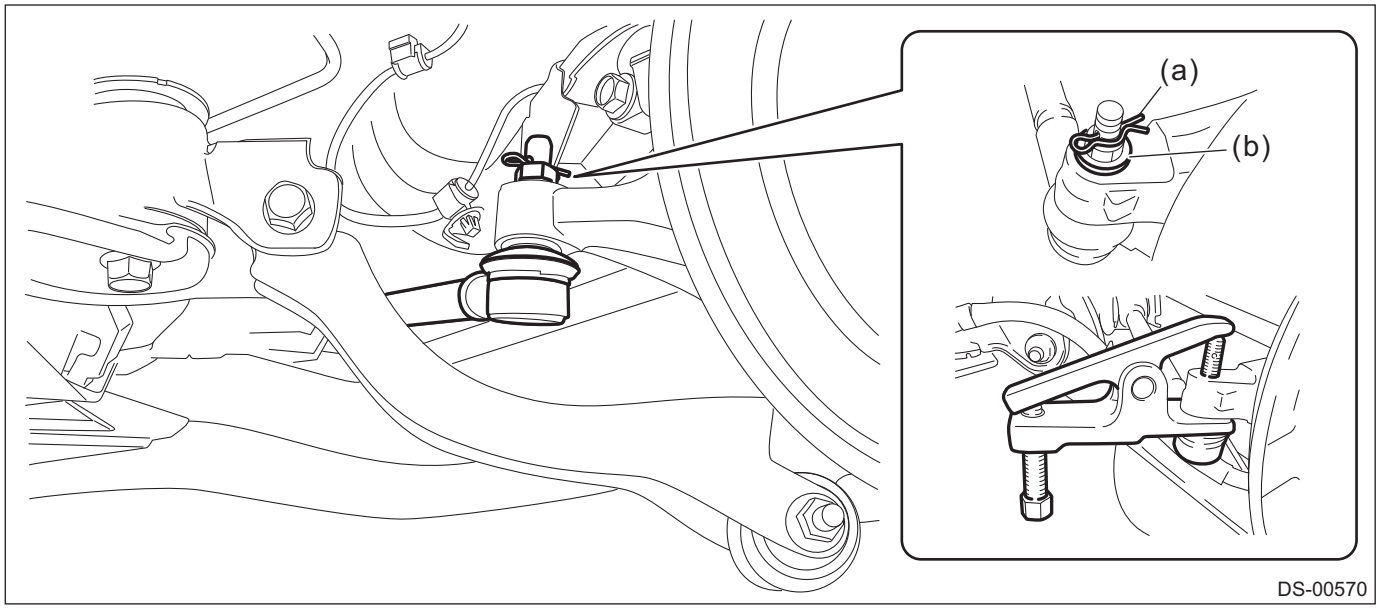
CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**



7) Remove the disc brake assembly and disc rotor. <Ref. to BR-56, REMOVAL, Rear Disc Rotor.>
8) Remove the cable assembly - hand brake cable from the parking lever - rear. (Drum-in-disc type model) <Ref. to PB-15, DRUM IN DISC TYPE MODEL, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
9) Remove the clamp B - hand brake cable from the rear brake back plate, and pull out the cable assembly - parking brake. (Drum-in-disc type model)
10) Remove the electronic parking brake harness clamp from the rear brake back plate. (Electronic parking brake model)
11) Remove the rear drive shaft assembly. <Ref. to DS-59, REMOVAL, Rear Drive Shaft.>
12) Remove the lateral link assembly - front.
(1) Remove the snap pin (a) and nut (b).
(2) Disconnect the ball joint from the rear axle housing.

CAUTION:
Be careful not to damage the boot of the joint.

Preparation tool:
Tie-rod ball joint puller

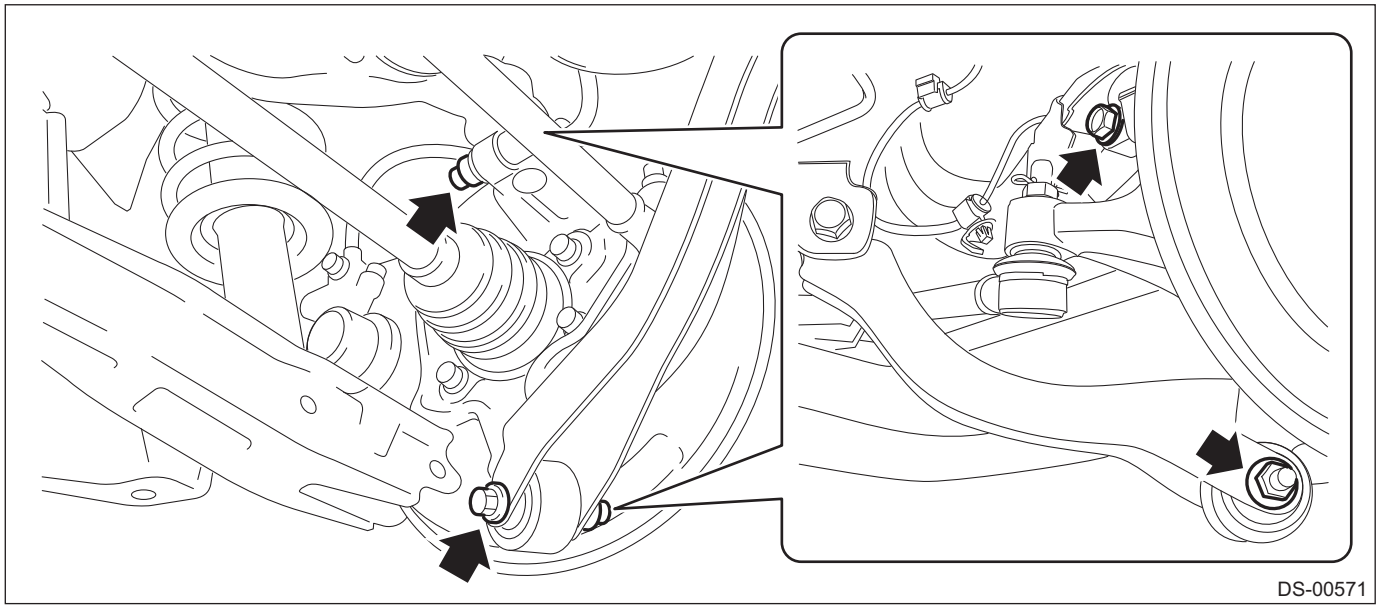


13) Remove the rear axle housing.

CAUTION:
- **Be careful of the weight of rear axle housing.**
- **Be careful not to damage the spline portion of the drive shaft.**

(1) Remove the bolts, and disconnect the upper arm and trailing link.

CAUTION:
Be careful not to damage the boot of the joint.



(2) Remove the rear axle housing.

14) Refer to “Rear Hub Unit Bearing” for removal of the rear hub unit bearing. <Ref. to DS-36, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

1) Temporarily tighten the rear axle housing to the upper arm assembly.

2) Install the rear drive shaft assembly. <Ref. to DS-63, INSTALLATION, Rear Drive Shaft.>

CAUTION:
Do not hammer the drive shaft assembly when installing.

(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new axle nut temporarily.

3) Tighten the rear shock absorber assembly, rear stabilizer link and other links to the specified torque.

Tightening torque:
Rear suspension: <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

4) Install the electronic parking brake harness clamp to the rear brake back plate. (Electronic parking brake model)

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Insert the cable assembly - parking brake into the rear back plate, and install the clamp B - hand brake cable. (Drum-in-disc type model)
6) Install the cable assembly - hand brake cable to the parking lever - rear. (Drum-in-disc type model) <Ref. to PB-17, DRUM IN DISC TYPE MODEL, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
7) Install the rear disc rotor.
8) Install the disc brake assembly.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>

9) Install the brake hose bracket and rear ABS wheel speed sensor.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

10) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

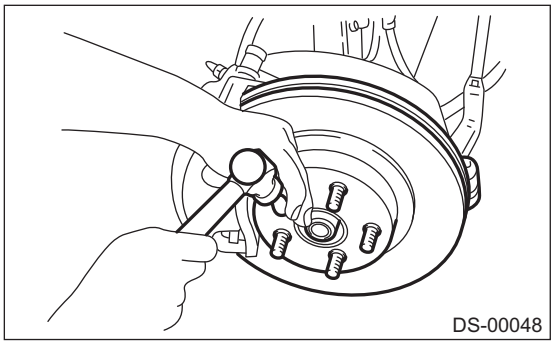
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

11) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)

12) After tightening the axle nut, lock it securely.

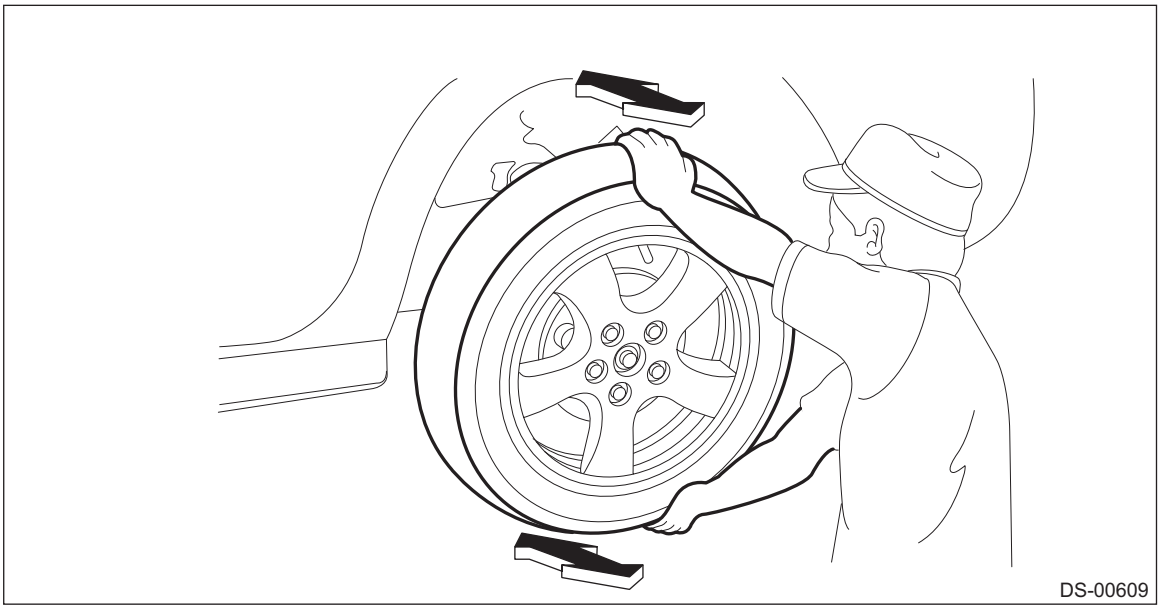


13) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.

• **Looseness exists** → Check the rear hub unit bearing. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>



14) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
15) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

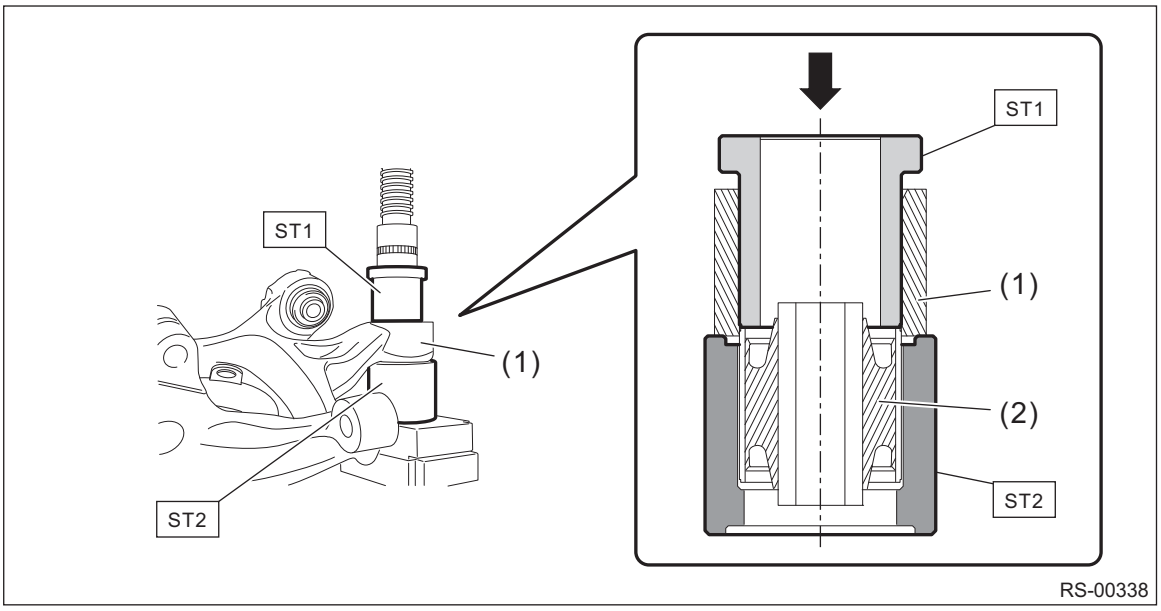
1. PILLOW BALL BUSHING

Do not remove the pillow ball bushing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.

2. BUSHING D - REAR AXLE HOUSING

1) Remove the rear axle housing. <Ref. to DS-29, REMOVAL, Rear Axle.>
2) Using the ST and a hydraulic press, push out the bushing.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)



(1) Rear axle housing (2) Bushing D - rear axle housing

D: ASSEMBLY

1. PILLOW BALL BUSHING

Do not remove the pillow ball bushing from the rear axle housing, because it cannot be replaced. If removed, replace the rear axle housing.

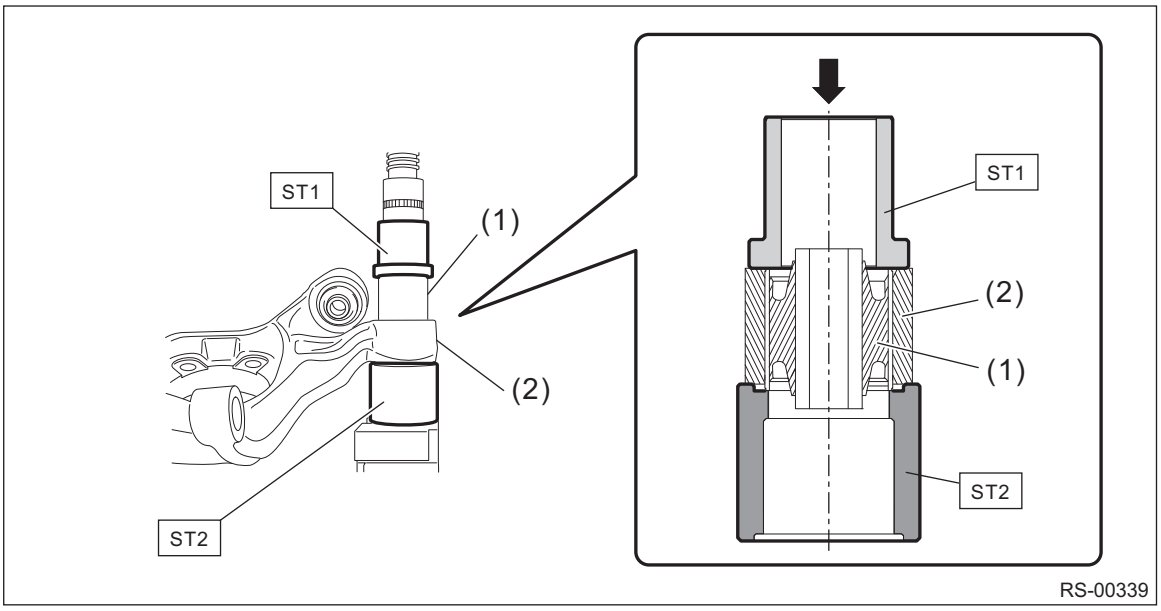
2. BUSHING D - REAR AXLE HOUSING

1) Before assembly, inspect the following items and replace any faulty part with a new one.
- Perform visual check for damage or bend on the trailing link.
- Visually check the bushing for abnormal cracks, fatigue or damage.

2) Press-fit the bushing using ST and the hydraulic press.

CAUTION:
Make sure to press the bushing straight in.

Preparation tool:
ST1: BUSHING REMOVER (20099FG000)
ST2: INSTALLER & REMOVER (BASE) (20099PA010)



(1) Bushing D - rear axle housing (2) Rear axle housing

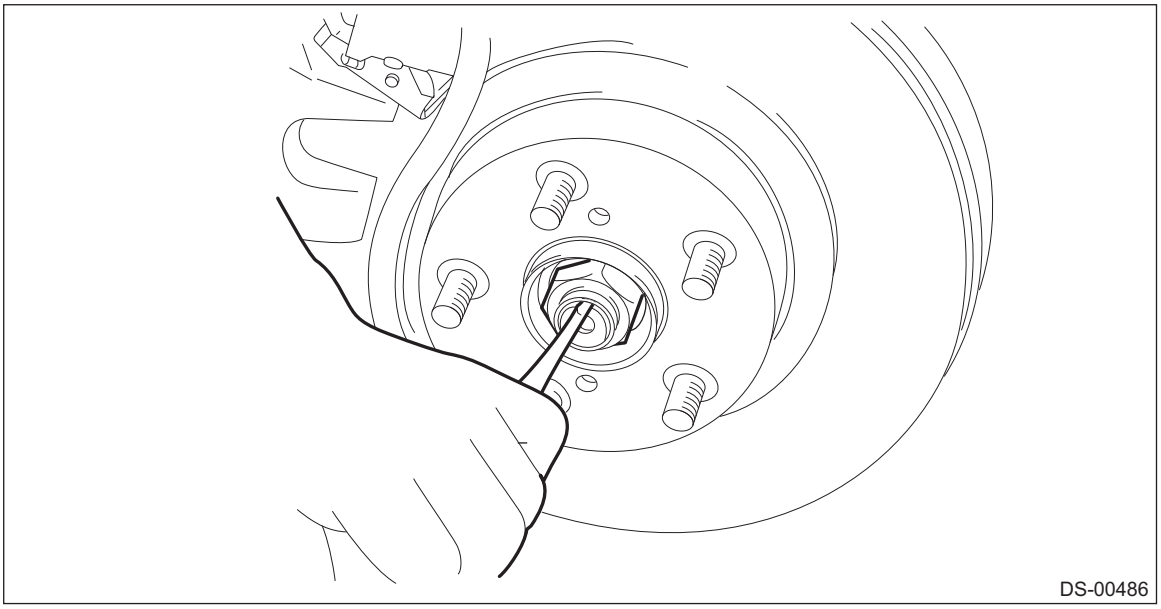
6. Rear Hub Unit Bearing

A: REMOVAL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the axle nut.

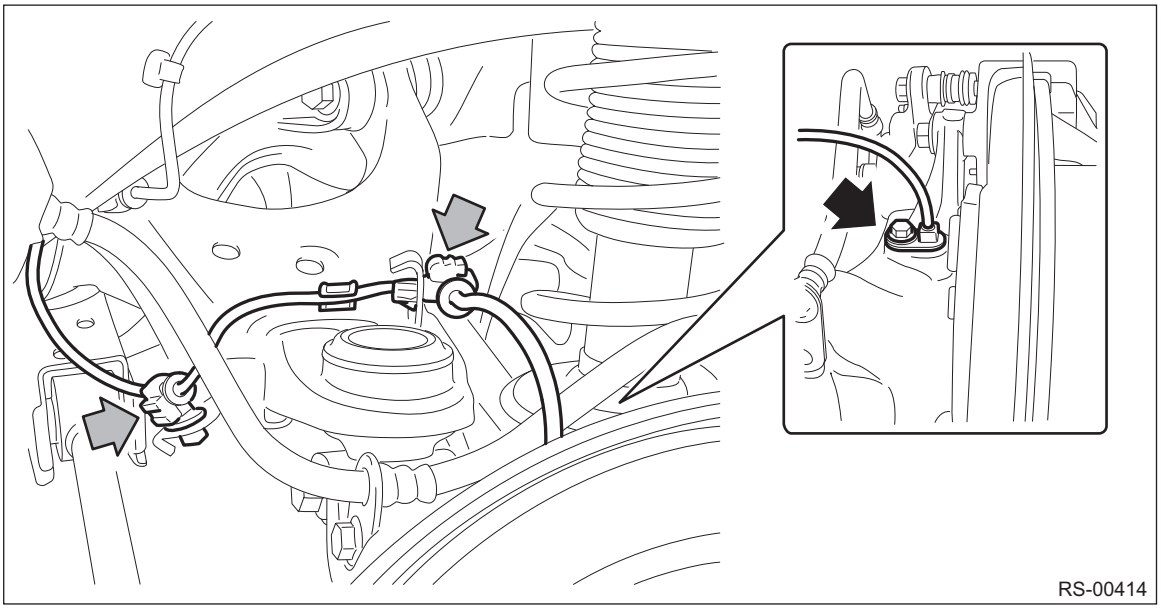
CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



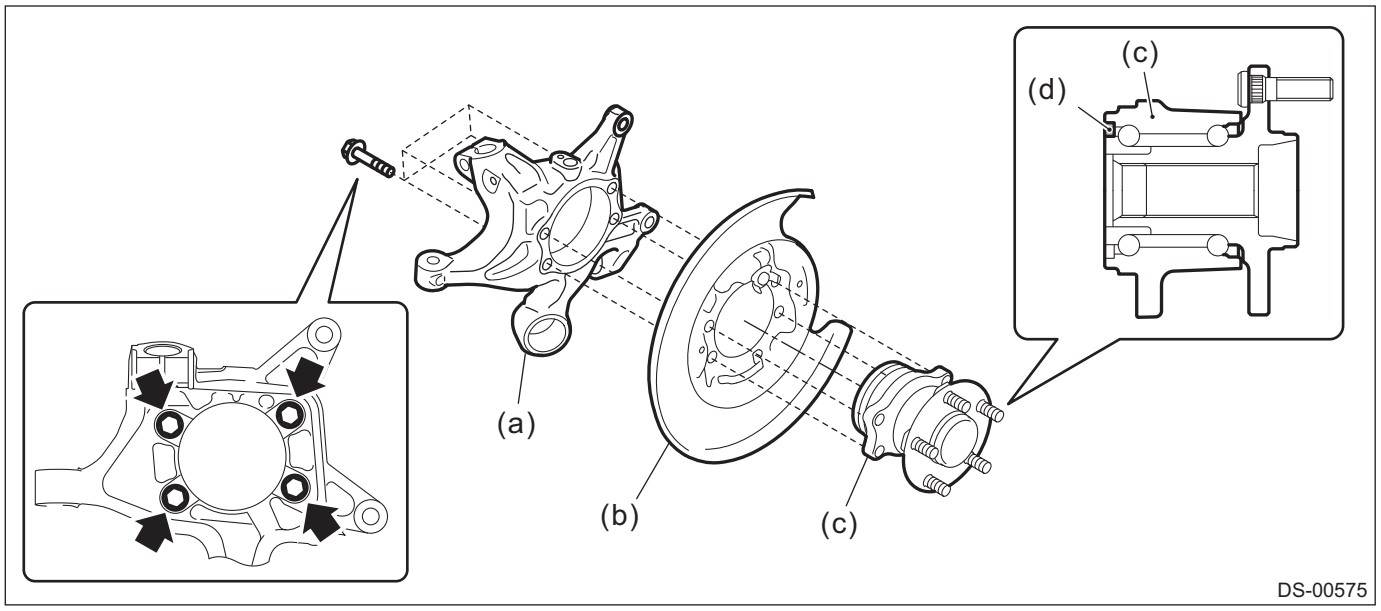
3) Remove the rear ABS wheel speed sensor.
(1) Remove the bolts, and remove the rear ABS wheel speed sensor.
(2) Remove the rear ABS wheel speed sensor harness from the upper arm.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**



4) Remove the rear disc brake assembly and rear disc rotor. <Ref. to BR-56, REMOVAL, Rear Disc Rotor.>
5) Remove the rear hub unit bearing.

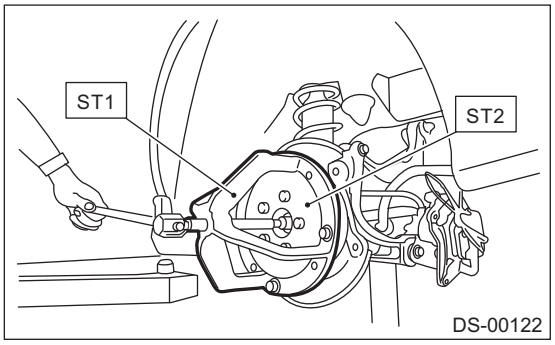
CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**



(a) Rear axle housing
(b) Rear brake back plate
(c) Rear hub unit bearing
(d) Magnetic encoder

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

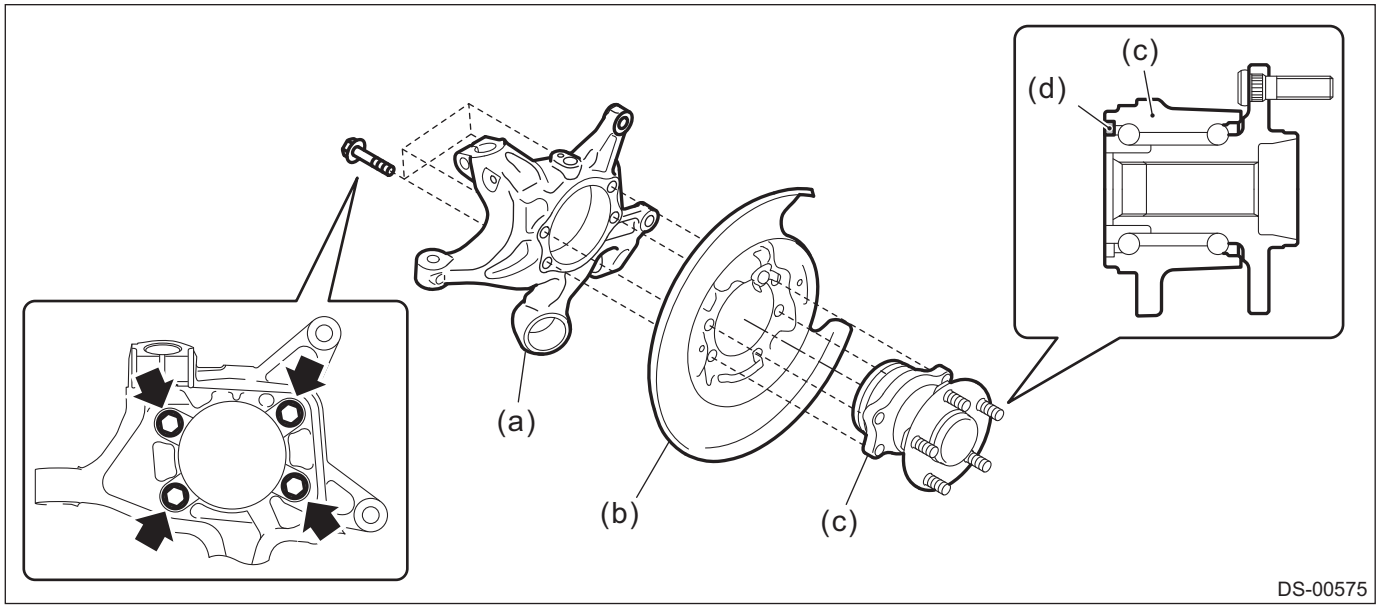


B: INSTALLATION

1) Place the rear brake back plate between the rear axle housing and the rear hub unit bearing, and tighten the bolt.

CAUTION:
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Be careful not to damage the magnetic encoder.**
- **Use a new bolt.**

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)



(a) Rear axle housing
(b) Rear brake back plate
(c) Rear hub unit bearing
(d) Magnetic encoder

2) Install the rear drive shaft assembly.

CAUTION:
Do not hammer the drive shaft assembly when installing.
(1) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.
(2) Tighten the new axle nut temporarily.
3) Install the disc rotor to the rear hub unit bearing.
4) Install the disc brake assembly to the rear axle housing.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>
5) Install the brake hose bracket.

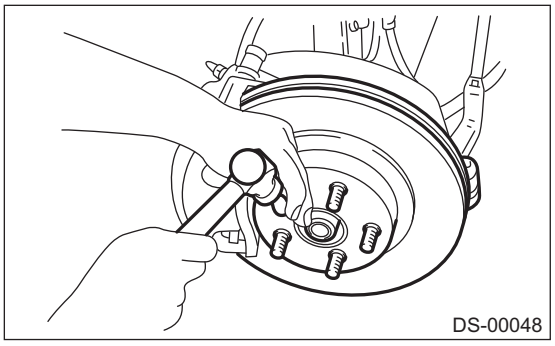
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
6) Install the rear ABS wheel speed sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
7) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)

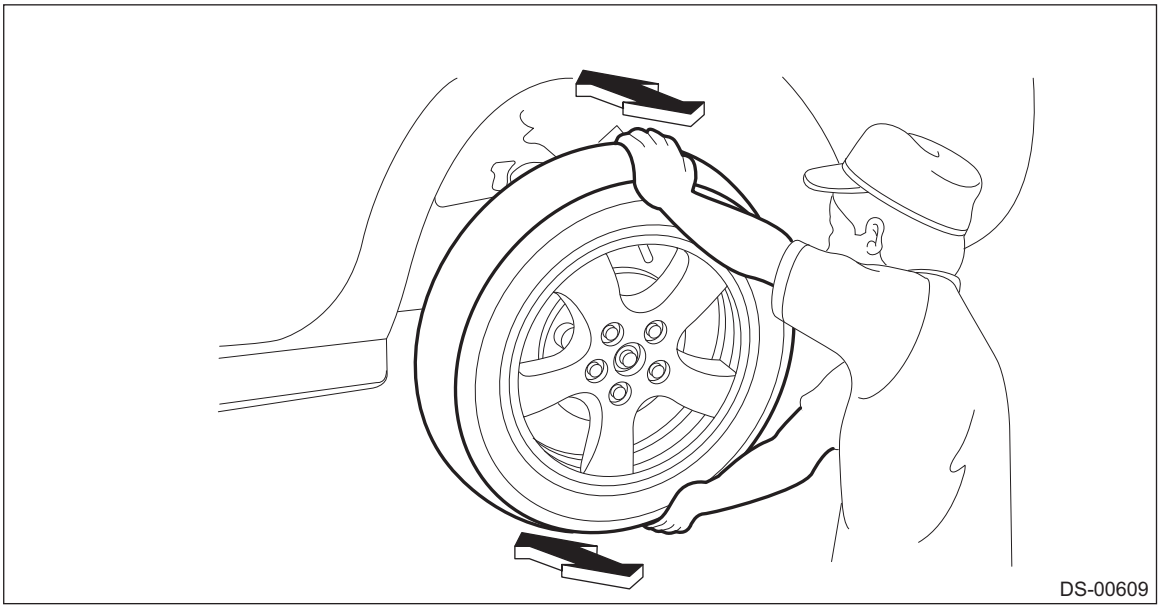
8) After tightening the axle nut, lock it securely.



9) Install the rear wheels, and perform the following inspections.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

1. Check the wheels for smooth rotation.
2. Check that there is no looseness by moving the upper and lower portions of rear tire in an axial direction with the brake pedal released.
   - **Looseness exists** → Check the rear hub unit bearing. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>



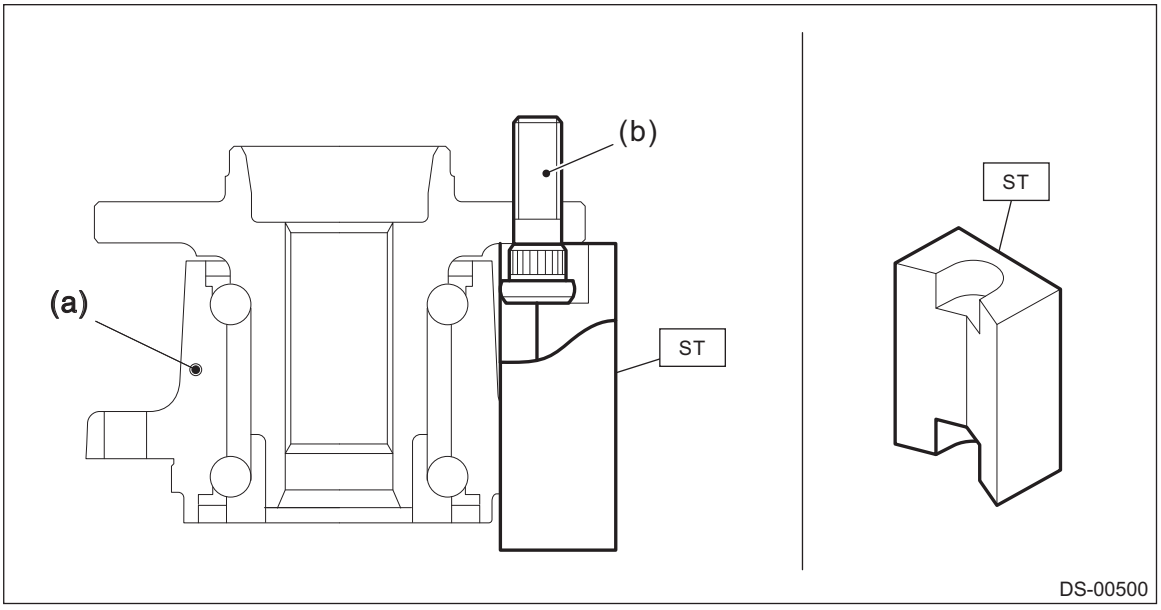
C: DISASSEMBLY

Using the ST or a hydraulic press, push out the hub bolt (b) from the rear hub unit bearing (a).

CAUTION:
- **Be careful not to hammer the hub bolts. This may deform the hub unit bearing.**
- **Do not reuse the hub bolt.**

NOTE:
Since the rear hub unit bearing can not be disassembled, only hub bolts can be removed.

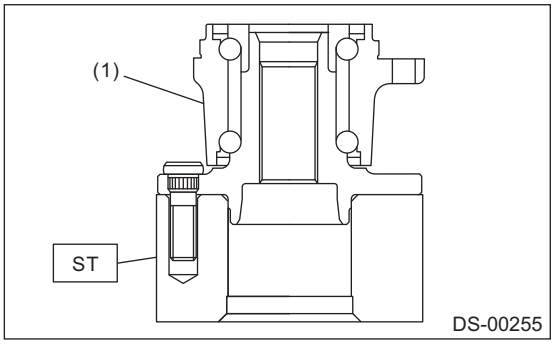
Preparation tool:
ST: HUB STAND (28399AG000)



D: ASSEMBLY

1) Install the rear hub unit bearing to the ST securely.

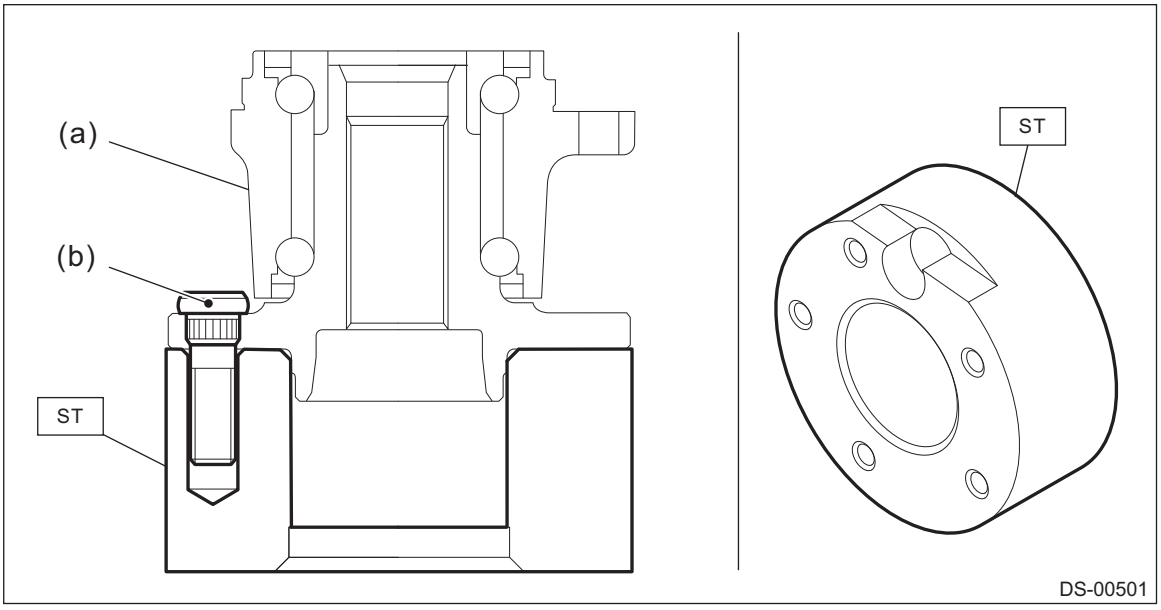
Preparation tool:
ST: HUB STAND (28099PA080)



(1) Rear hub unit bearing

2) Using a press, press new hub bolts (b) until their seating surfaces contact the rear hub unit bearing (a).

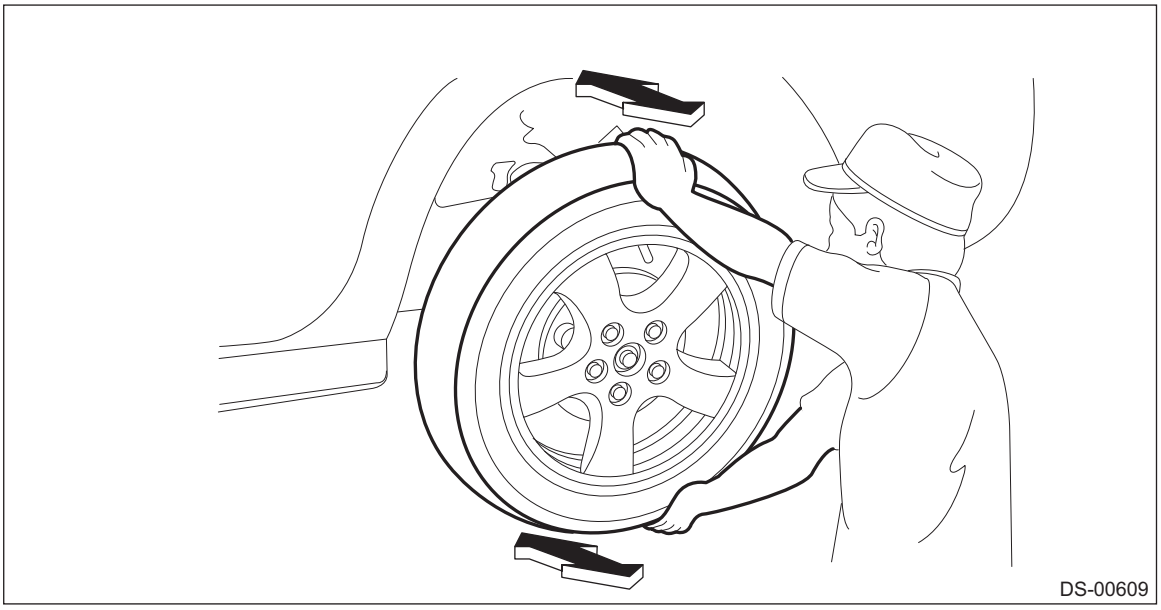
NOTE:
Use the 12 mm (0.47 in) dia. holes in the HUB STAND to prevent bolts from tilting.



E: INSPECTION

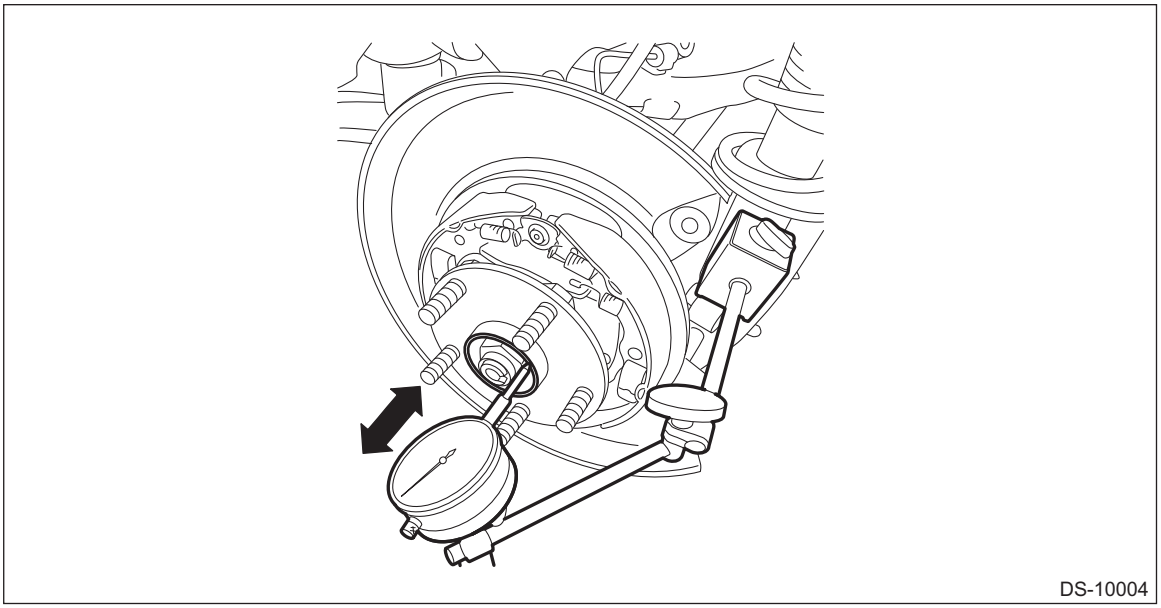
1) Moving the rear tire up and down by hand, check there is no looseness in bearing, and check the wheel rotates smoothly.

CAUTION:
If there is unsmooth sliding operation or abnormal noise in the bearing, replace the rear hub unit bearing.



2) Inspect the hub unit bearing for axial looseness.
1. Remove the tire, disc brake assembly and disc rotor.
2. Using a dial gauge, check the axial looseness. Replace the hub unit bearing if looseness exceeds the limit.

Service limit:
Maximum: 0.05 mm (0.0020 in)



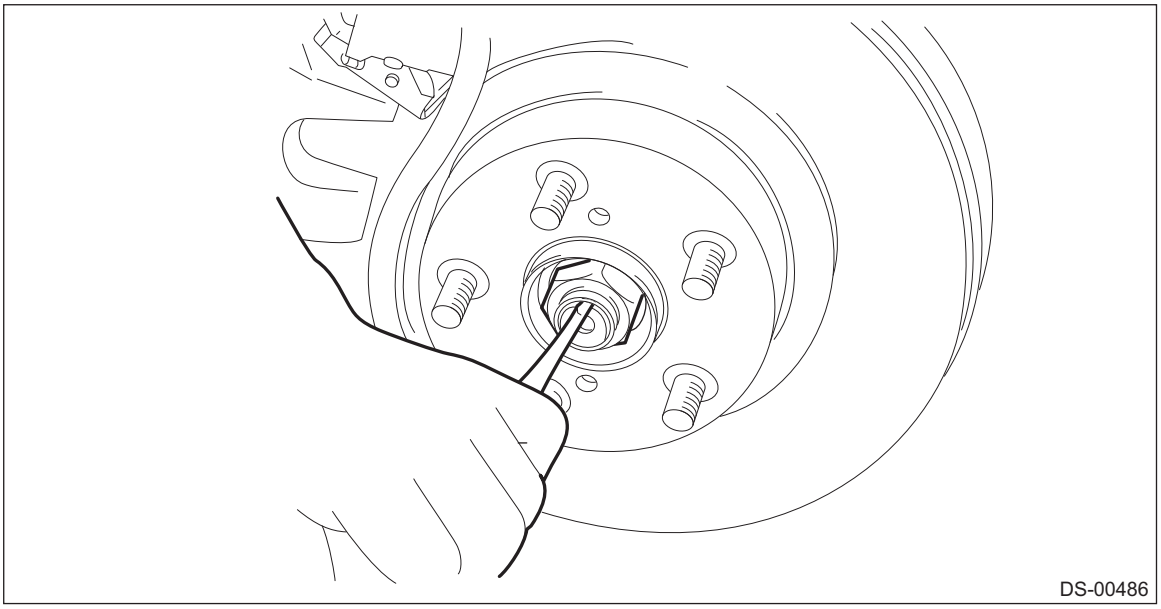
7. Front Drive Shaft

A: REMOVAL

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the axle nut.

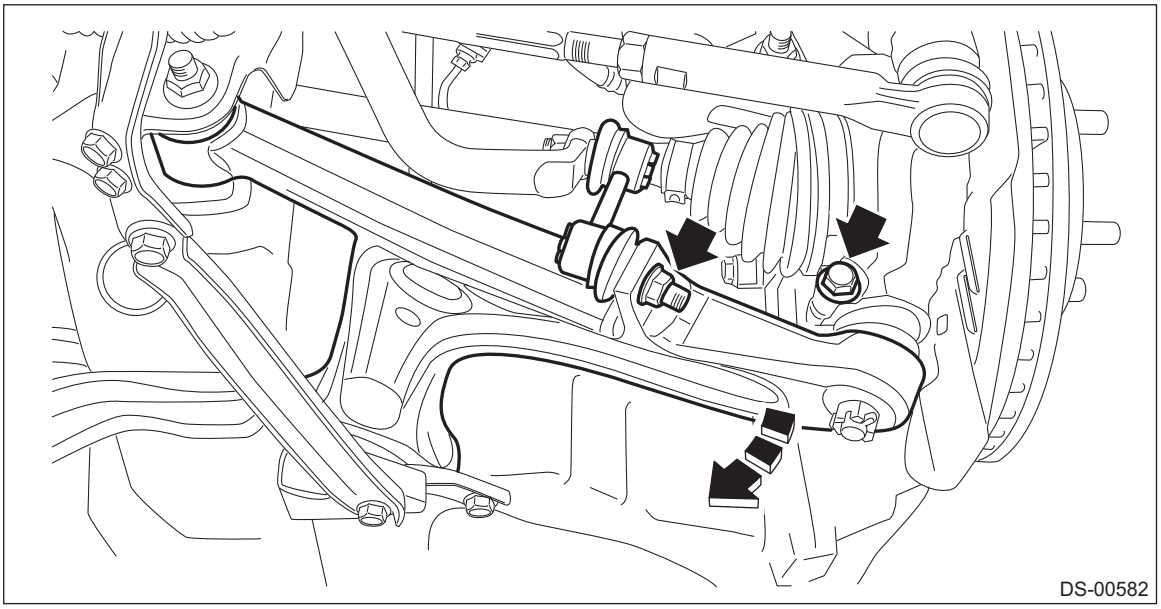
CAUTION:
Do not loosen the axle nut while the front axle is loaded. Doing so may damage the hub unit bearing.

(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



3) Drain the transmission gear oil. (MT model)
4) Drain differential gear oil. (CVT model)
5) Disconnect the ball joint.

(1) Remove the nut and disconnect the front stabilizer link.
(2) Remove the bolts, disconnect the front arm ball joint, and lower the front arm assembly.

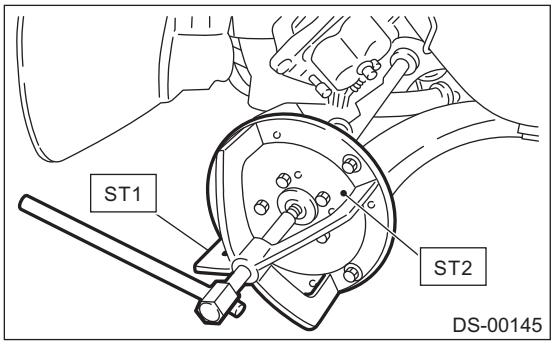


6) Remove the front drive shaft.

(1) Disconnect the front axle housing from the front drive shaft.

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)



(2) Using a tire lever, remove the front drive shaft from transmission.

CAUTION:
Be careful not to allow the tire lever to damage holder area.

Preparation tool:
Tire lever

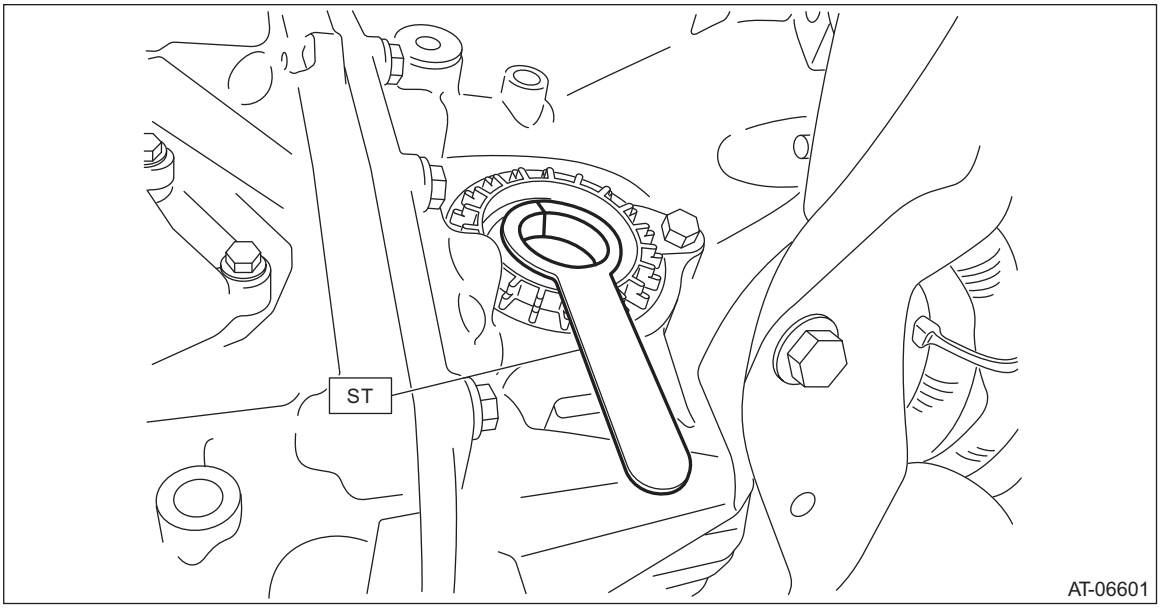
B: INSTALLATION

1) Before installation, check the drive shaft assembly. <Ref. to DS-57, INSPECTION, Front Drive Shaft.>
2) Replace the differential side retainer oil seal with a new part.
- MT model: <Ref. to 6MT(TY85)-29, REPLACEMENT, Differential Side Retainer Oil Seal.>
- CVT model: <Ref. to CVT(TR690)-90, REPLACEMENT, Differential Side Retainer Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
3) Insert the drive shaft assembly into the hub spline, and pull it into the specified position.

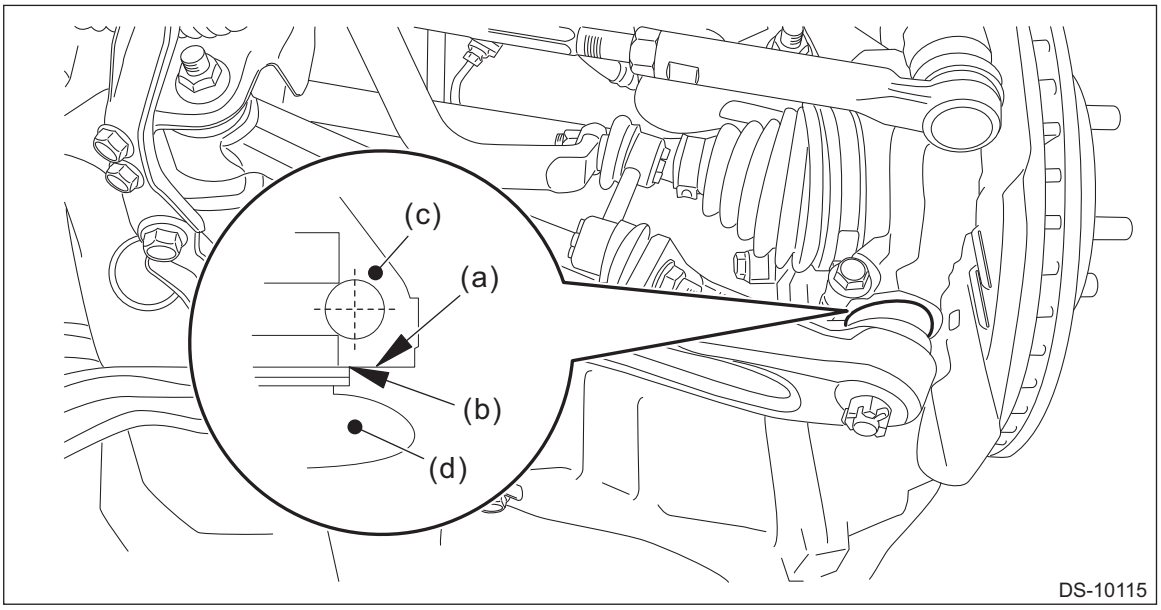
CAUTION:
Do not hammer the drive shaft assembly when installing.
4) Tighten the new axle nut temporarily.
5) Using the ST, install the front drive shaft assembly to the transmission.

Preparation tool:
ST: OIL SEAL PROTECTOR (28399SA010)



6) Install the ball joint to the front axle housing.

CAUTION:
• Before tightening, make sure the lower side of front axle housing and stepped section of ball joint are in contact.
• Be careful not to damage the boot of the joint.



(a) Lower side of front axle housing
(b) Raised section of ball joint
(c) Front axle housing
(d) Ball joint

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)
7) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)
8) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the front axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
220 N·m (22.4 kgf-m, 162.3 ft-lb)

9) After tightening axle nut, lock it securely.
10) Fill transmission gear oil. (MT model)
11) Fill differential gear oil. (CVT model)
12) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

13) Inspect the wheel alignment and adjust if necessary.
- Inspection: <Ref. to FS-10, INSPECTION, Wheel Alignment.>
- Adjustment: <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

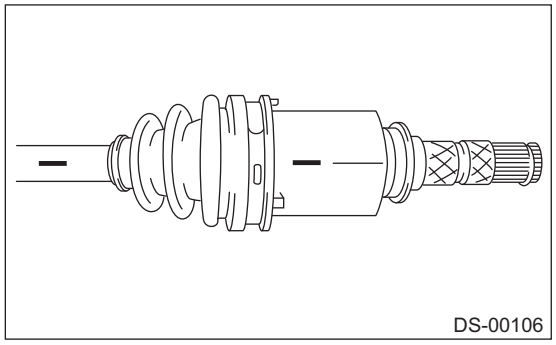
C: DISASSEMBLY

1. AC + AAR TYPE

1) Remove the outer race (AAR) from the shaft assembly.

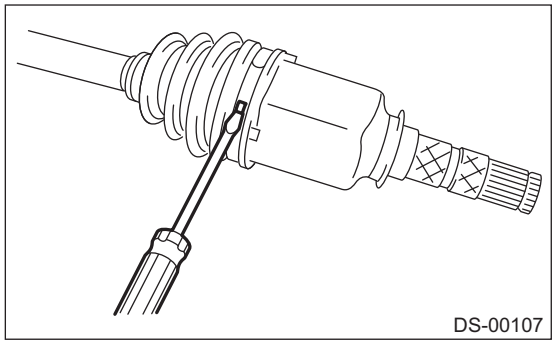
CAUTION:
Be careful not to damage the boot.

(1) Place alignment marks on the shaft and outer race.



DS-00106

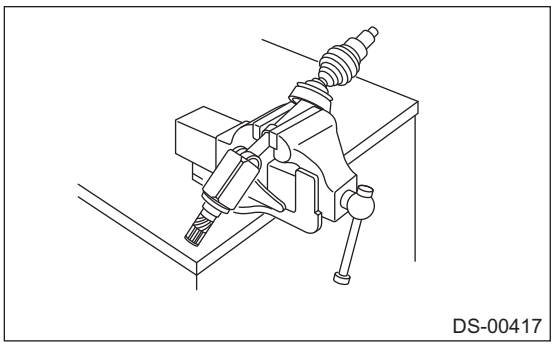
(2) Remove the boot band and boot (AAR).



DS-00107

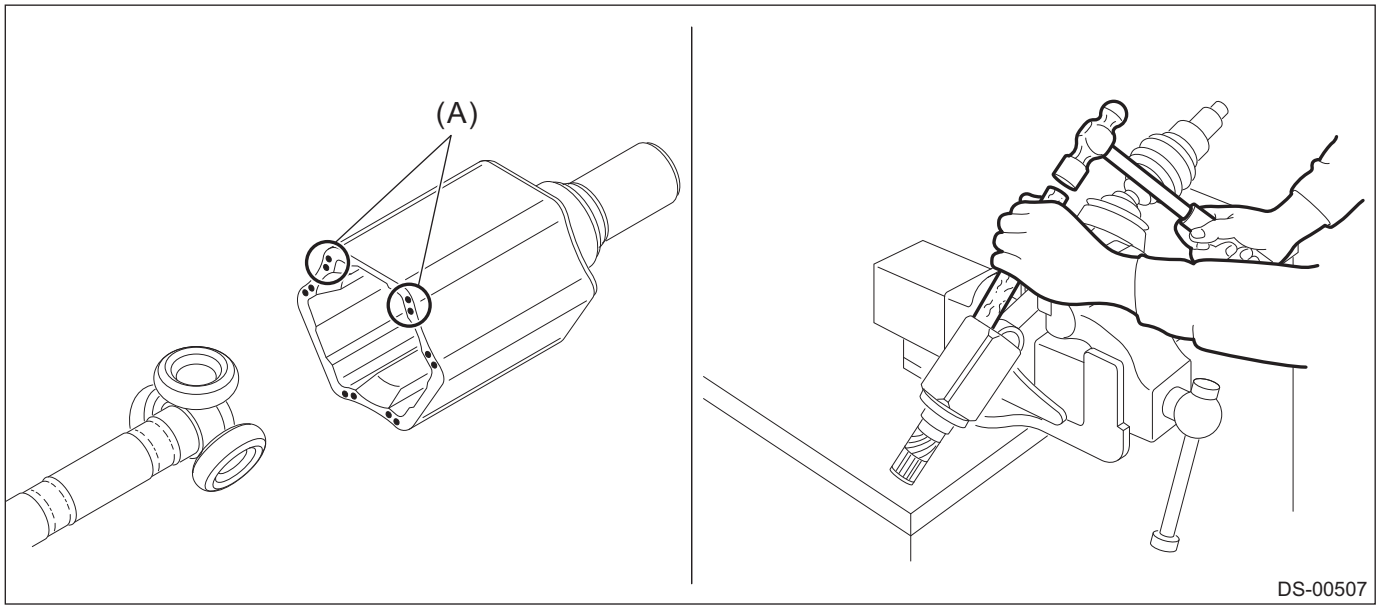
(3) Place the drive shaft between wooden blocks and fix it on a vise.

CAUTION:
Do not set the drive shaft directly on a vise.



(4) Tap the staking are of the outer race alternately with a plastic or wooden bar, and remove one roller at a time.

CAUTION:
- **Tap the staking area (A) of the outer race.**
- **Do not use a metal bar as the outer race may deform.**
- **Be careful not to damage the roller parts.**



(5) Remove the outer race from shaft assembly.

CAUTION:
Make sure to have your associate hold the outer race when removing the third roller to prevent the outer race from falling.

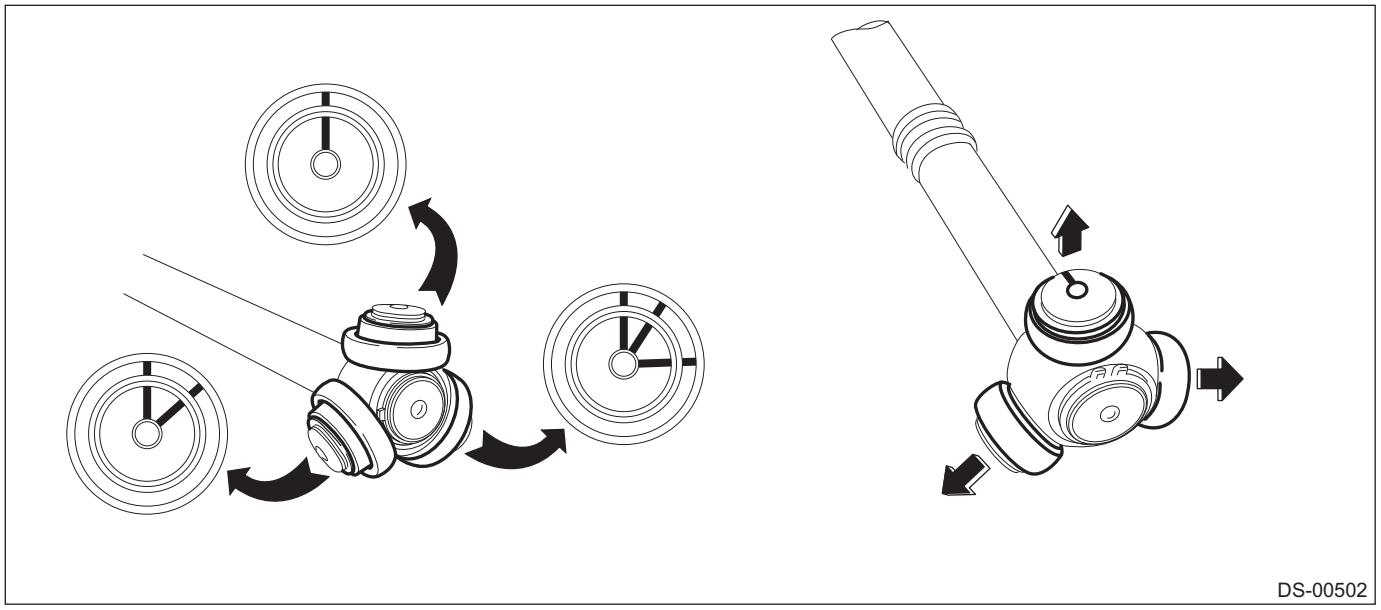
(6) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.

2) Remove the roller kit from trunnion.

CAUTION:
Be careful with the roller kit position.

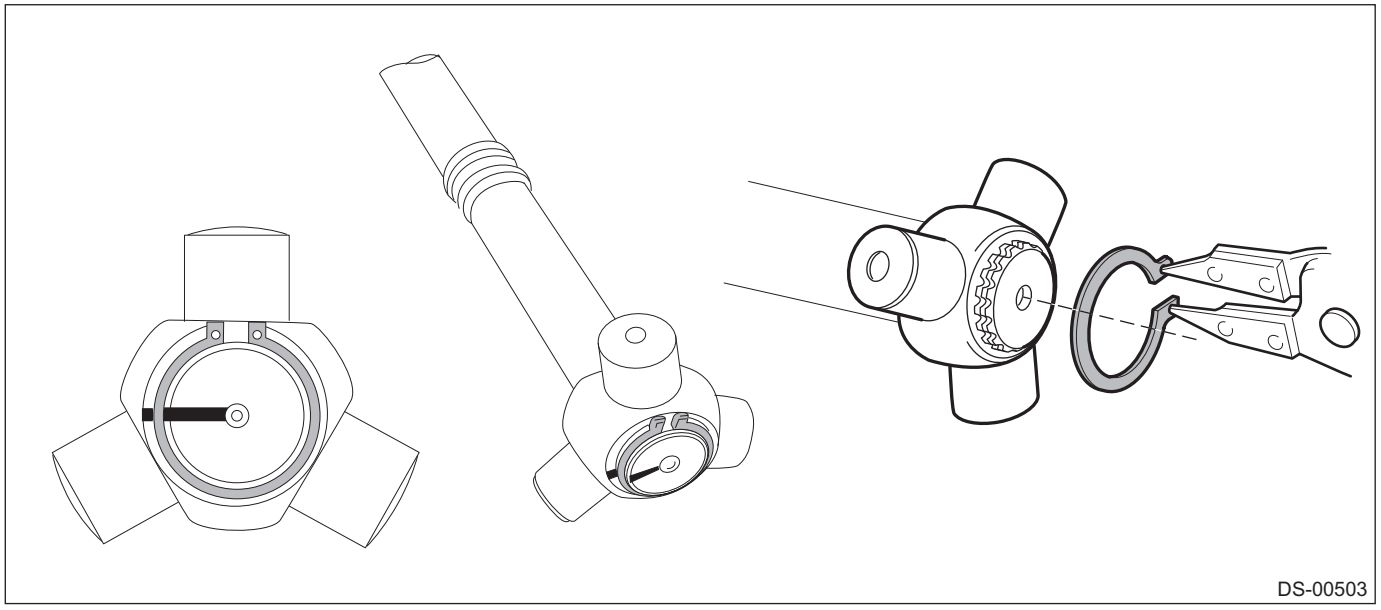
(1) Place alignment marks on the roller kit and trunnion.



(2) Remove the roller kit from trunnion.

3) Remove the trunnion from the shaft.
(1) Place alignment marks on the trunnion and shaft.
(2) Remove the snap ring and trunnion.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.

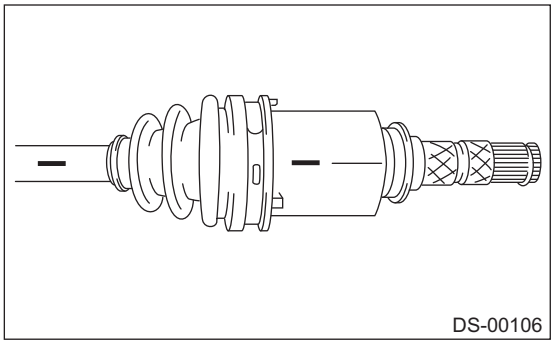


4) Remove the boot (AAR).

NOTE:
The AC is a non-disassembly part, so the drive shaft disassembly stops here.

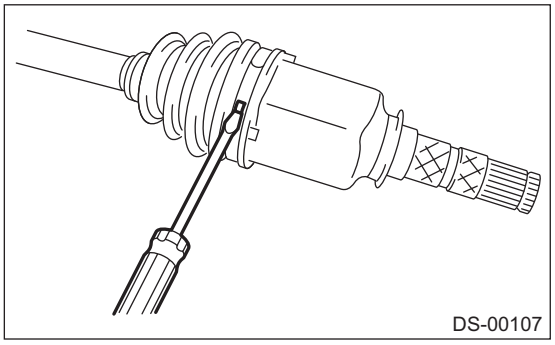
2. EBJ + PTJ TYPE

1) Place alignment marks on the shaft and outer race.

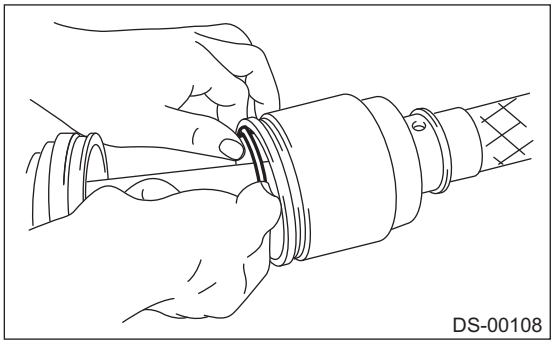


2) Remove the boot band and boot (PTJ).

CAUTION:
Be careful not to damage the boot.



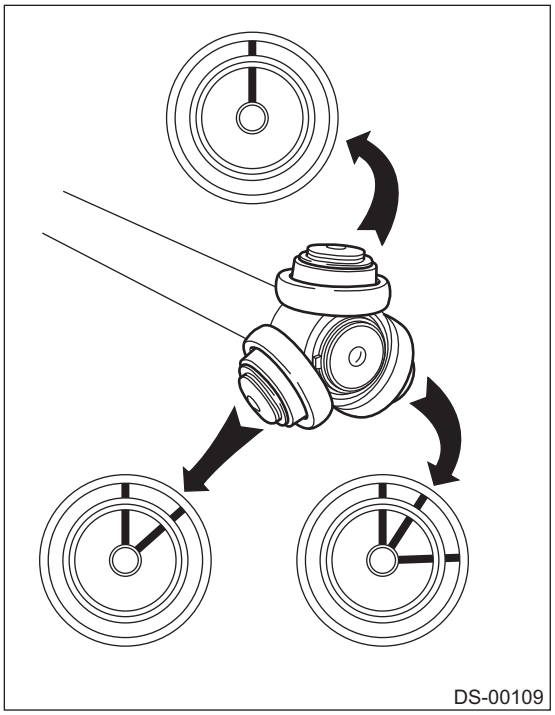
3) Remove the snap ring from the outer race (PTJ).



4) Remove the outer race (PTJ) from the shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special type of grease. Do not mix with other grease.

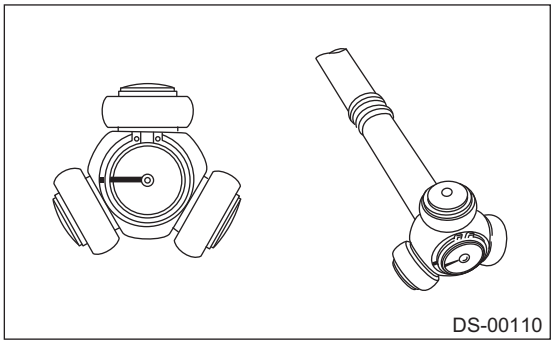
6) Place alignment marks on the roller kit and trunnion.



7) Remove the roller kit from trunnion.

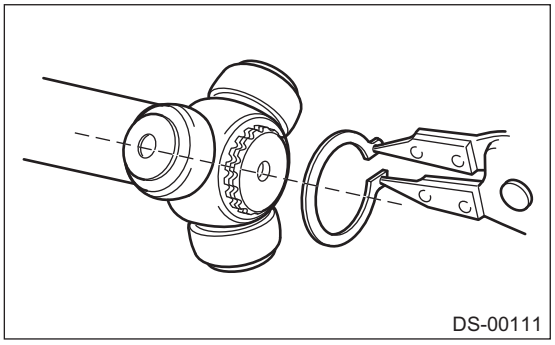
CAUTION:
Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.



9) Remove the snap ring and trunnion.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.



10) Remove the boot (PTJ).
11) Remove the O-ring from the groove of the shaft.

NOTE:
The EBJ is a non-disassembly part, so the axle disassembly stops here.

D: ASSEMBLY

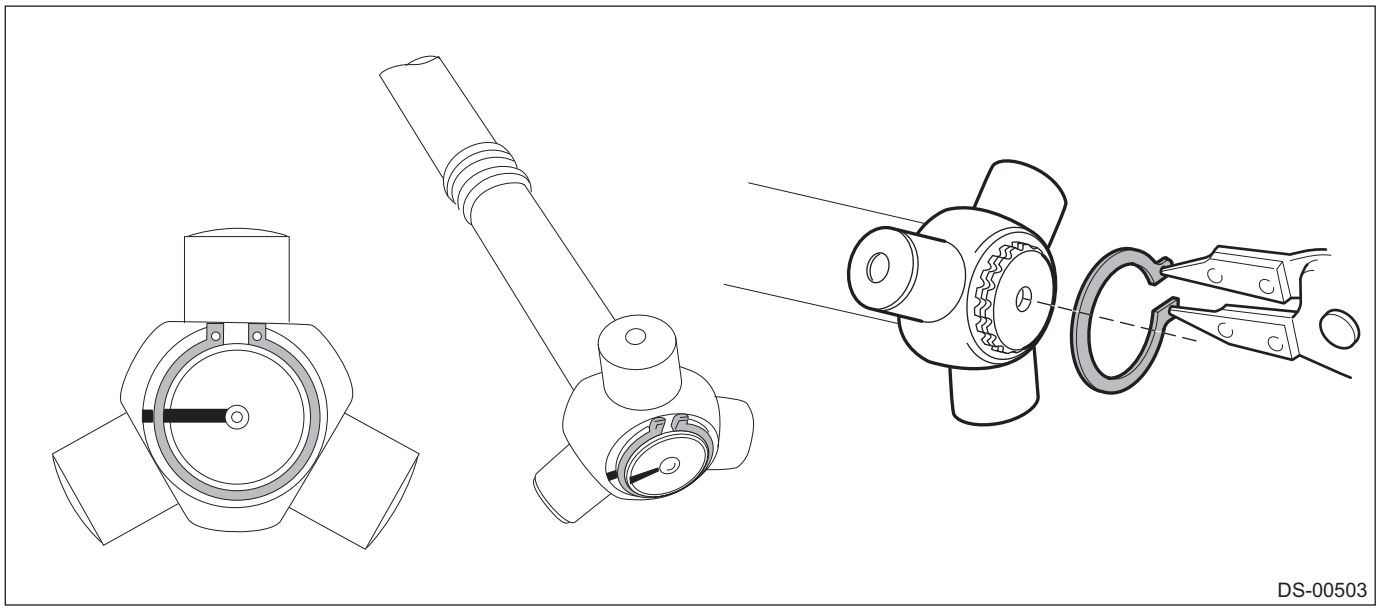
1. AC + AAR TYPE

NOTE:
Use specified grease.

AAR side:
One-Luber C

1) Pass the boot (AAR) through the shaft.
2) Install the trunnion to the shaft.
   (1) Match the alignment marks, and attach the trunnion onto the shaft.
   (2) Attach the snap ring to the shaft.

CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.



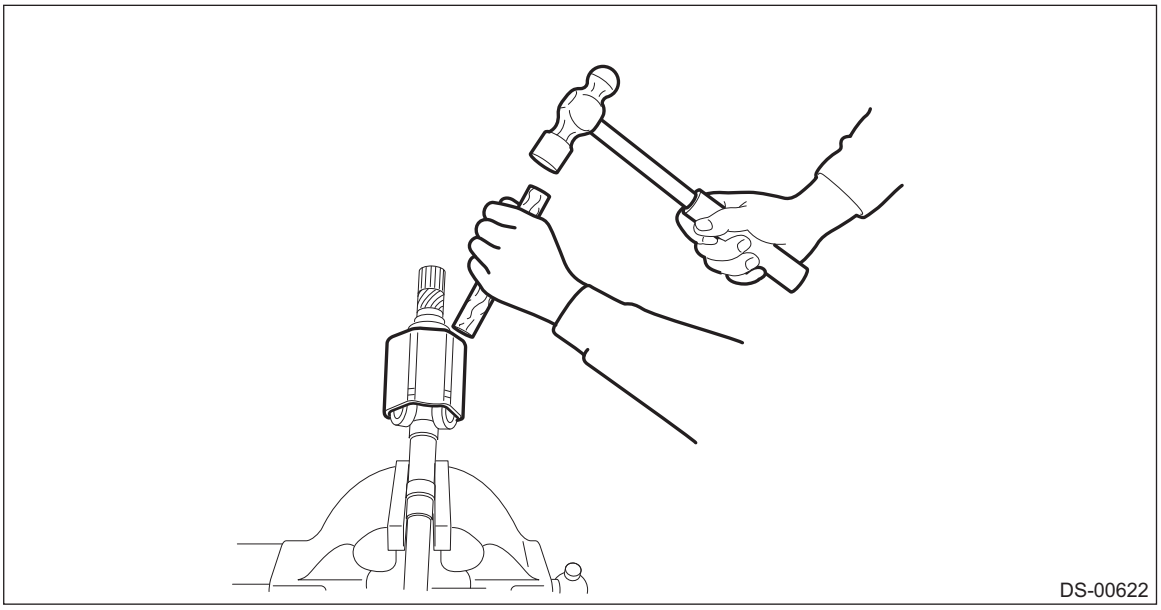
3) Fill 50 to 60 g (1.76 to 2.12 oz) of specified grease into the interior of outer race (AAR).
4) Install the roller kit to the trunnion.
   (1) Apply a thin coat of specified grease to the roller kit and trunnion.
   (2) Place the drive shaft between wooden blocks and fix it on a vise.

CAUTION:
Do not set the drive shaft directly on a vise.

5) Align the alignment marks on the shaft and outer race.
6) Tap the insertion upper part of the outer race alternately using a plastic or wood bar shown in the figure, and then insert the roller one by one.

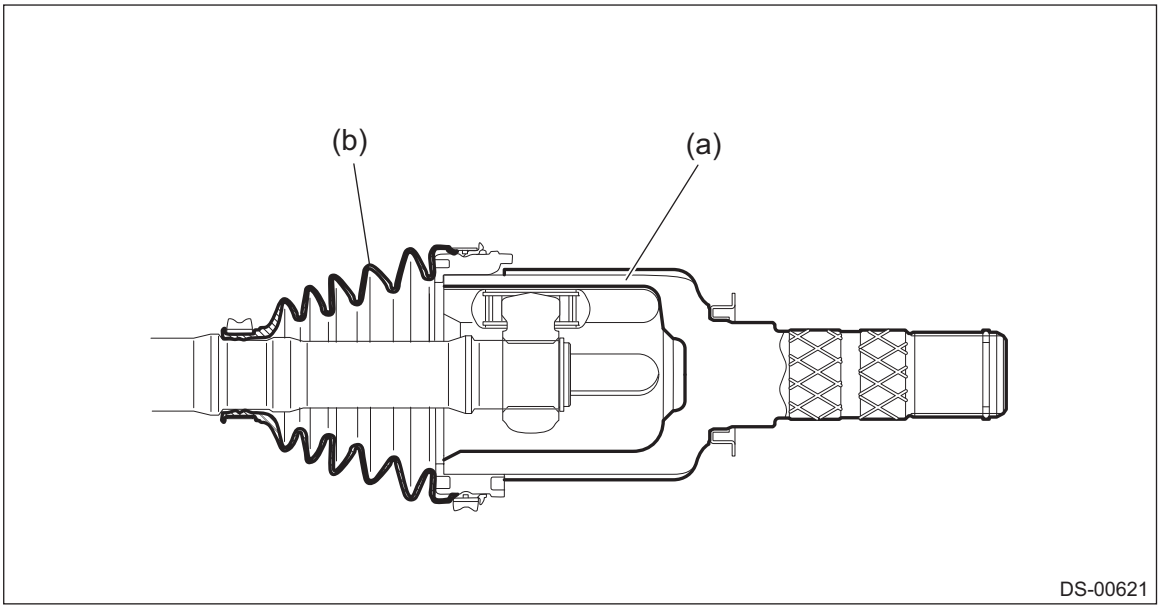
CAUTION:
- **Do not use a metal bar as the outer race may deform.**
- **Do not tap on the end of outer race (shaft part).**

- **Be careful not to deform the baffle plate.**



7) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
8) Attach the boot (AAR) taking care not to twist it.

CAUTION:
Do not let grease get on groove of the outer race side.



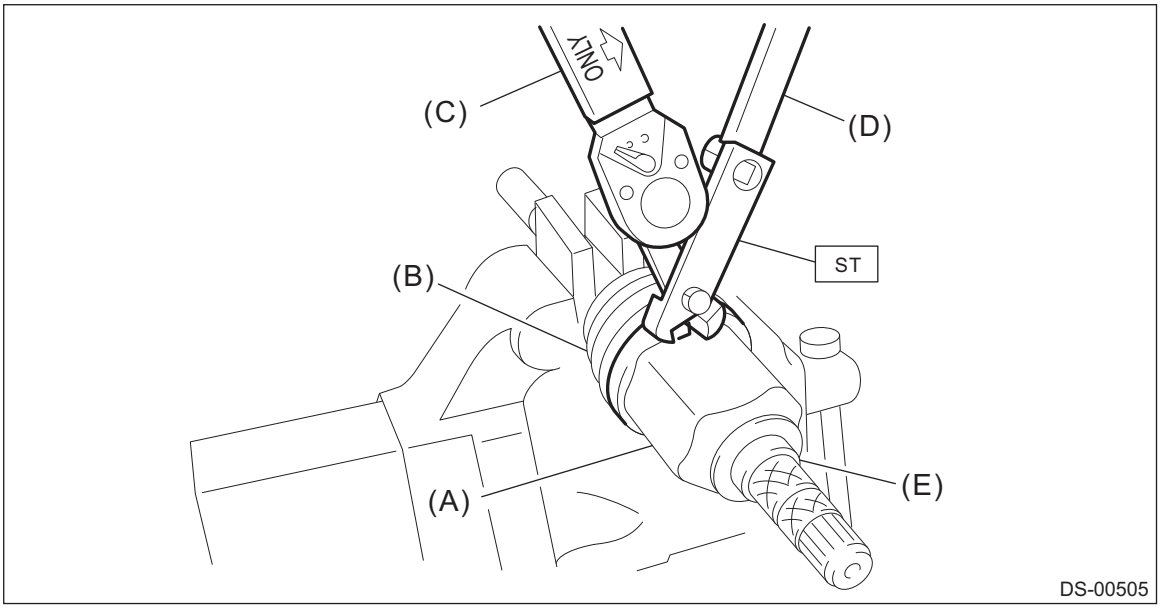
(a) Outer race (b) Boot

9) Insert a flat tip screwdriver, etc. between outer race and boot to make pressure inside of boot as high as barometric pressure.
10) Tighten the boot band.
(1) Install the new large boot band and small boot band at the required positions.
(2) Connect the torque wrench and socket flex handle to the ST.

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)
Torque wrench
Socket flex handle
(3) Use a prepared tool, tighten the boot band.

Clearance at the crimped section of the boot band:
Large boot band: 1 mm (0.04 in) or less
Small boot band: 1 mm (0.04 in) or less

Tightening torque:
Large boot band: 178 N·m (18.2 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)



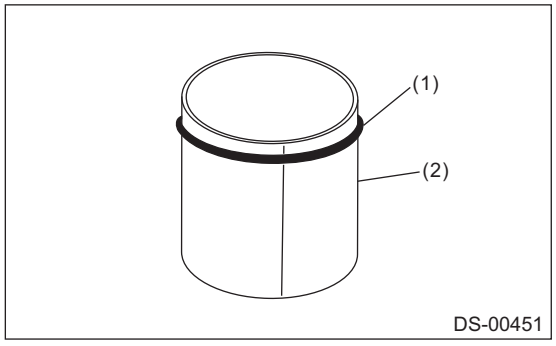
(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

11) Extend and retract the AAR repeatedly to provide an equal coating of grease.

2. EBJ + PTJ TYPE

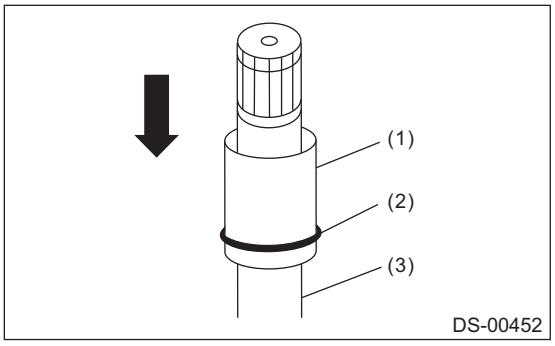
1) Roll up a thick piece of paper to a size where the shaft can pass through, and affix with tape to form a cylinder.
2) Attach a new O-ring on this cylinder.

CAUTION:
- **Always use a new O-ring.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **Do not stretch the O-ring to 30 mm (1.18 in) inner diameter or more.**



(1) O-ring
(2) Cylinder made with thick paper, etc.

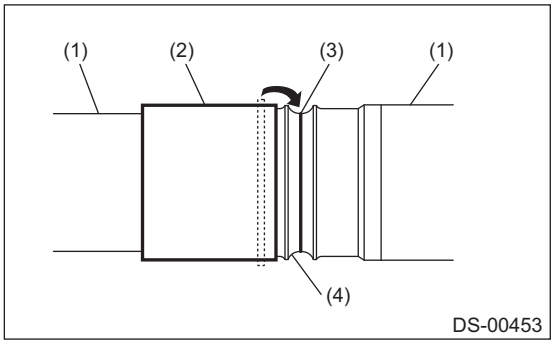
3) Pass the cylinder material onto the shaft, and slide in the direction of the shaft axis.



(1) Cylinder material
(2) O-ring
(3) Shaft

4) Clean the shaft boot groove, and wipe off the grease.
5) Slide the cylinder material near the shaft boot groove, and move the O-ring from the cylinder material onto the shaft boot groove.

CAUTION:
- **Attach the O-ring to the shaft boot groove center.**
- **Be careful that the O-ring does not become scratched and that there are no foreign objects attached to it.**
- **Make sure to install the O-ring so that it does not twist as much as possible.**
- **With the O-ring attached, do not wash with kerosene, gasoline, etc.**

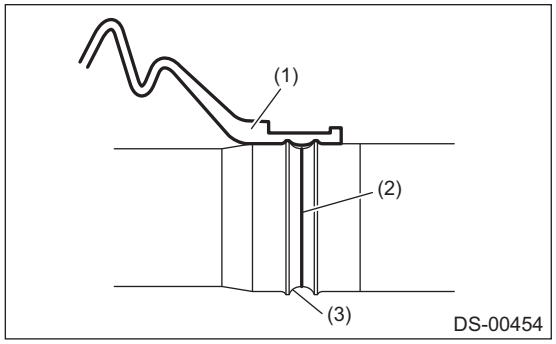


(1) Shaft
(2) Cylinder material
(3) O-ring
(4) Boot groove

6) Pass the small diameter boot band through the shaft.
7) Wrap vinyl tape around the splines of the shaft.

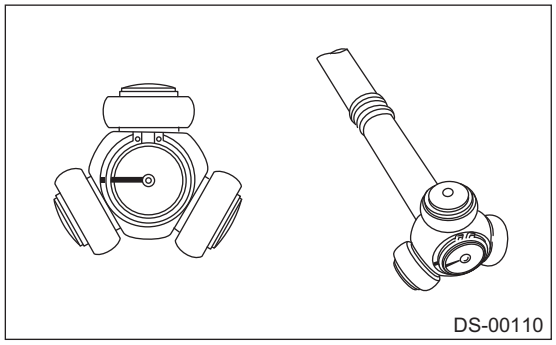
CAUTION:
To prevent damage to the boots, make sure to always wrap with vinyl tape for protection.
8) Install a new boot (PTJ).

CAUTION:
Make sure to fit securely on the boot groove of the shaft.



(1) Boot (PTJ)
(2) O-ring
(3) Boot groove

9) Match the alignment marks, and attach the trunnion onto the shaft.

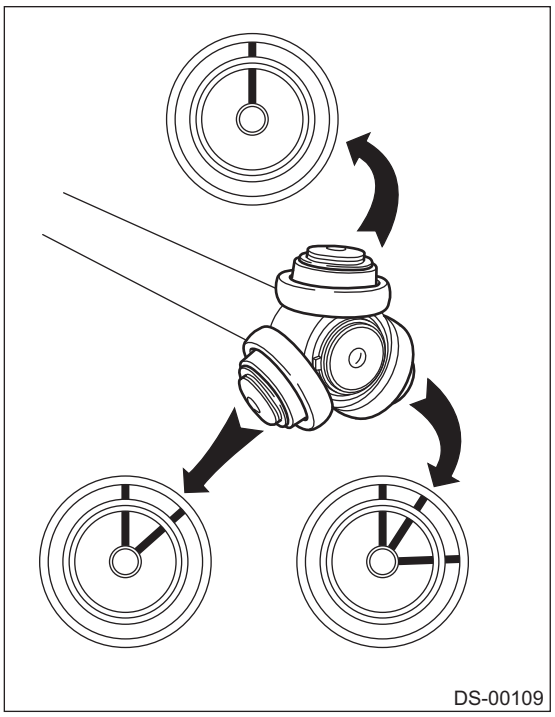


10) Attach the snap ring to the shaft.

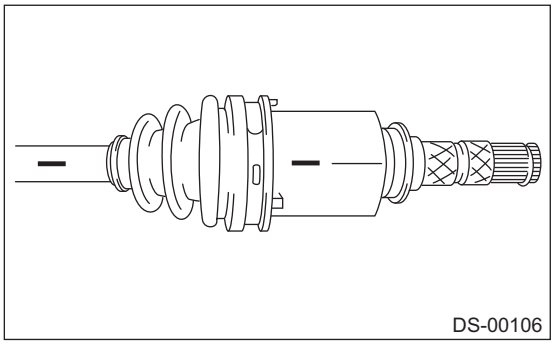
CAUTION:
Confirm that the snap ring is completely fitted in the shaft groove.
11) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of the outer race (PTJ).

Grease:
NKG302
12) Apply a thin coat of specified grease to the roller kit and trunnion.
13) Match the alignment marks of the roller kit and trunnion, and attach the roller kit.

CAUTION:
Be careful with the roller kit position.



14) Match the alignment marks of the shaft and outer race, and attach the outer race.

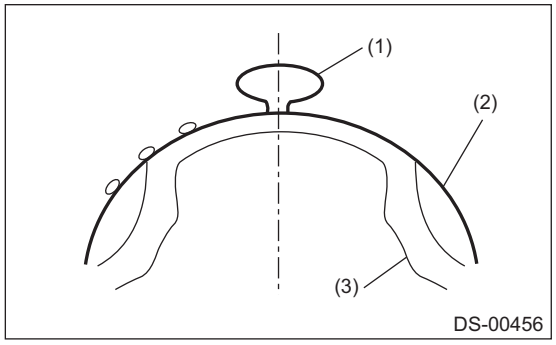


15) Install the snap ring in the groove of the outer race (PTJ).

CAUTION:
Pull the shaft lightly and make sure that the snap ring is completely fitted in the groove.
16) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.
17) Attach the boot (PTJ) taking care not to twist it.

CAUTION:
• Clean the large end of boot (PTJ) and the boot groove well, and remove the grease and other substances.
• When installing the boot (PTJ), position the outer race (PTJ) at center of the stroke.
18) Set the new boot band at the specified position.
19) Tighten the boot bands using ST, torque wrench and socket flex handle.

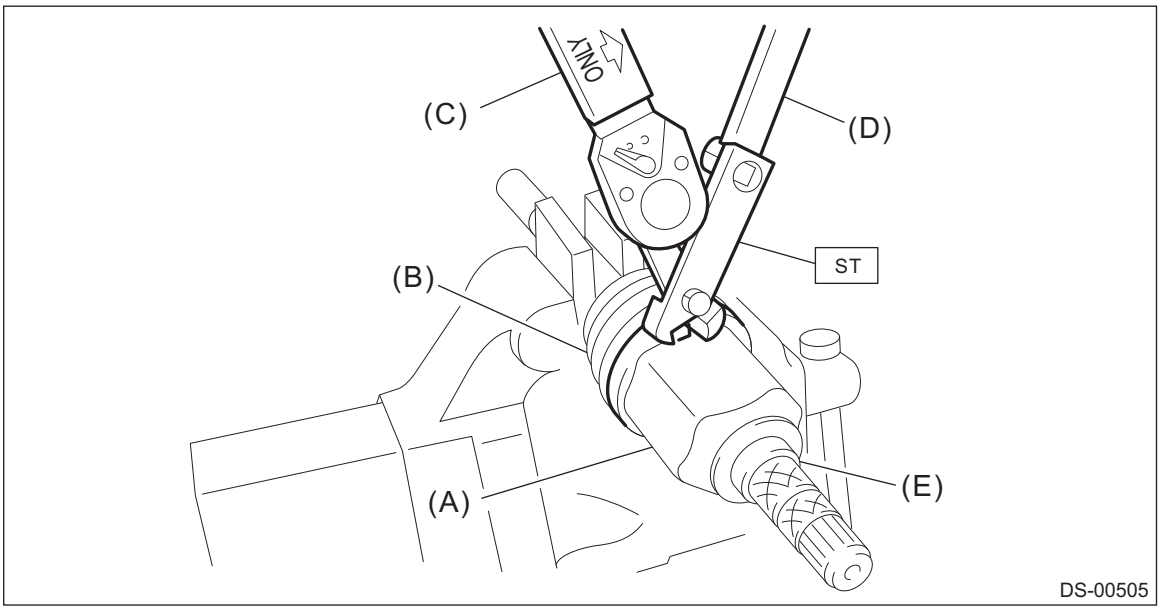
CAUTION:
The large boot band is to be tightened so that the omega shaped part is at the position indicated in the figure below.



(1) Omega shaped part
(2) Boot band
(3) Outer race

Tightening torque:
Large boot band: 178 N·m (18.2 kgf-m, 131.3 ft-lb)
Small boot band: 145 N·m (14.8 kgf-m, 106.9 ft-lb)

Preparation tool:
ST: BOOT BAND PLIERS (28099AC000)



(A) Large boot band
(B) Boot
(C) Torque wrench
(D) Socket flex handle
(E) Outer race

20) Extend and retract the boot (PTJ) repeatedly so that grease is spread evenly.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.
- **AAR and AC:**

Check for seizure, corrosion, damage, wear and excessive play.
- **PTJ (pillow tripod joint):**

Check for seizure, corrosion, damage, wear and excessive play.
- **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive play.

- **Shaft:**

Check for excessive bending, twisting, damage and wear.

- **Boot:**

Check for wear, warping, breakage and scratches.

- **Grease:**

Check for discoloration and fluidity.

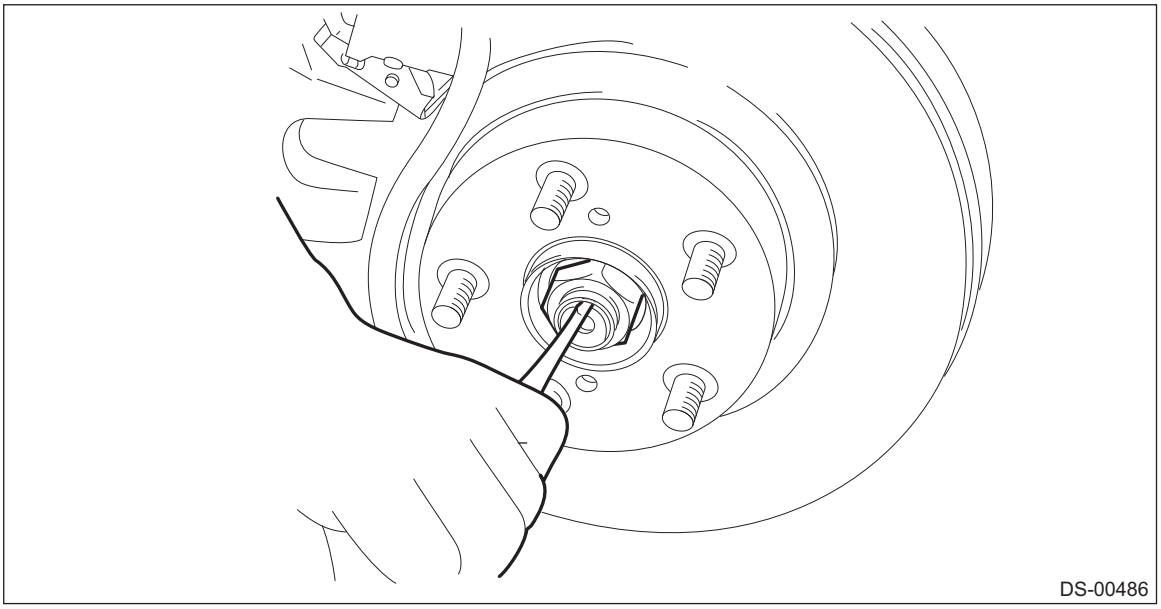
8. Rear Drive Shaft

A: REMOVAL

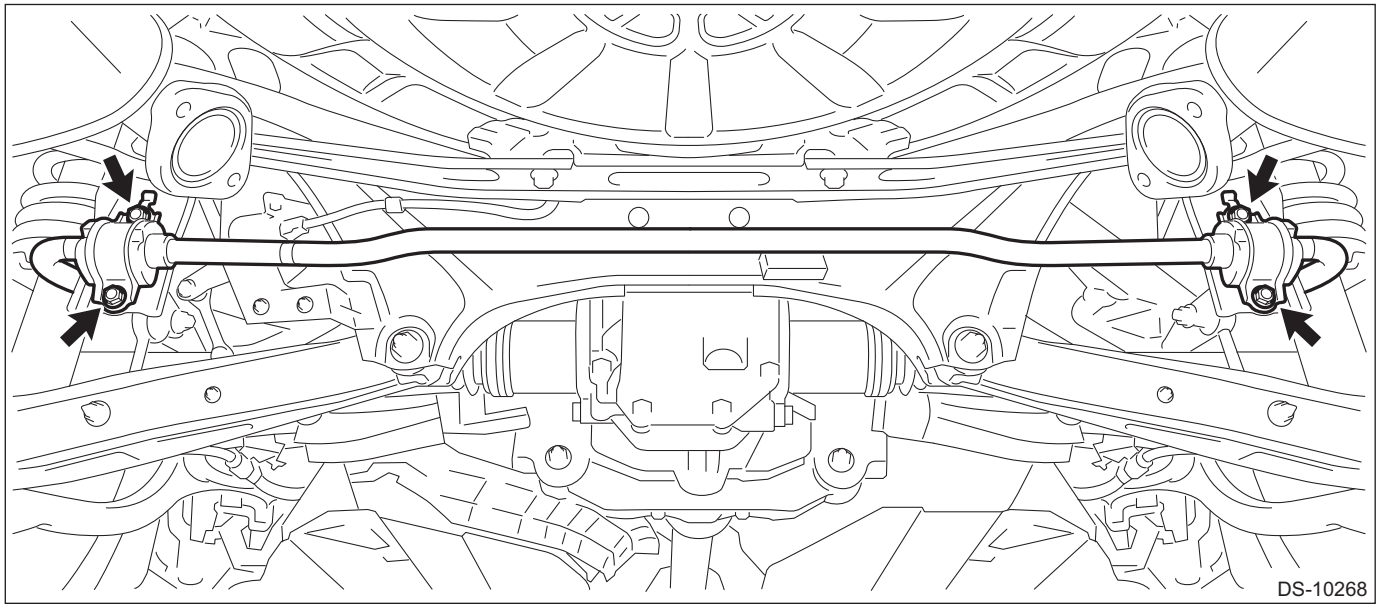
1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the axle nut.

CAUTION:
Do not loosen the axle nut while the rear axle is loaded. Doing so may damage the hub unit bearing.
(1) Lift the crimped section of axle nut.
(2) Remove the axle nut using a socket wrench while depressing the brake pedal.



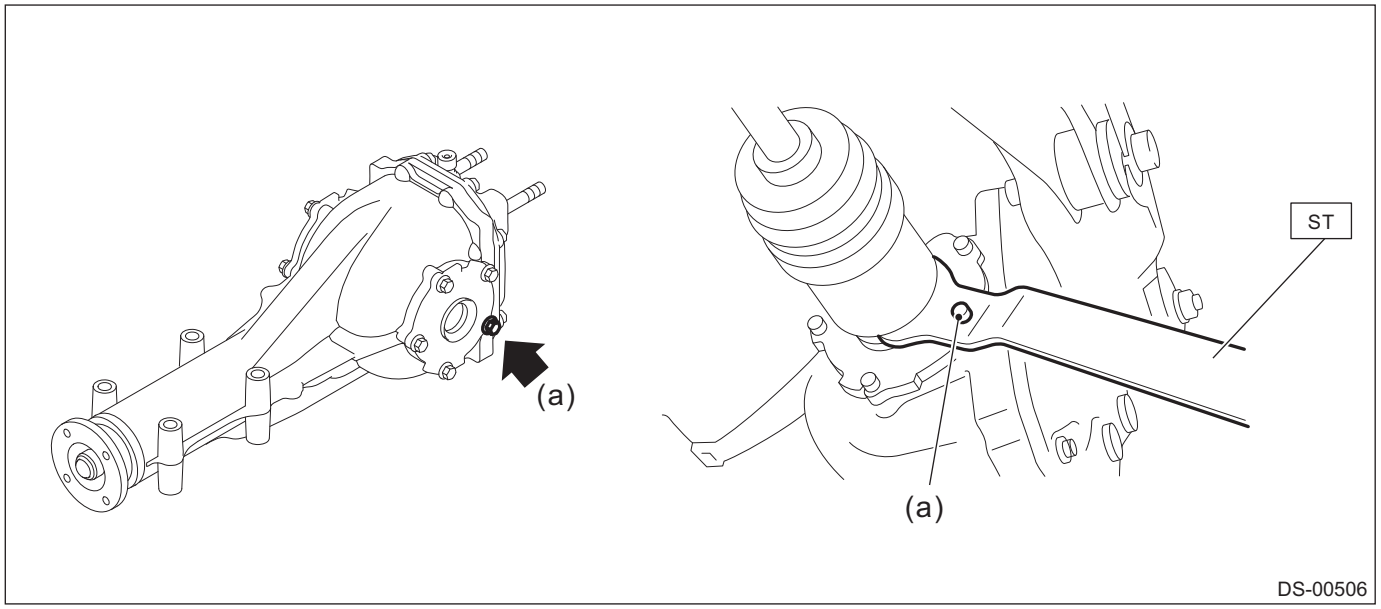
4) Remove the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler) <Ref. to LI-88, REMOVAL, Rear Height Sensor.>
5) Disconnect the oil temperature sensor connector. (Model with oil temperature sensor)
6) Drain differential gear oil.
7) Remove the bolts, then disconnect the rear stabilizer. (VB-type)



8) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
9) Loosen the joint of rear differential assembly and rear drive shaft assembly.
• T type: Pull out the rear drive shaft assembly by fitting the ST to the bolt (a) as shown in the figure.

CAUTION:
Fit the ST to the bolts as shown in the figure to prevent damage of the side bearing retainer.

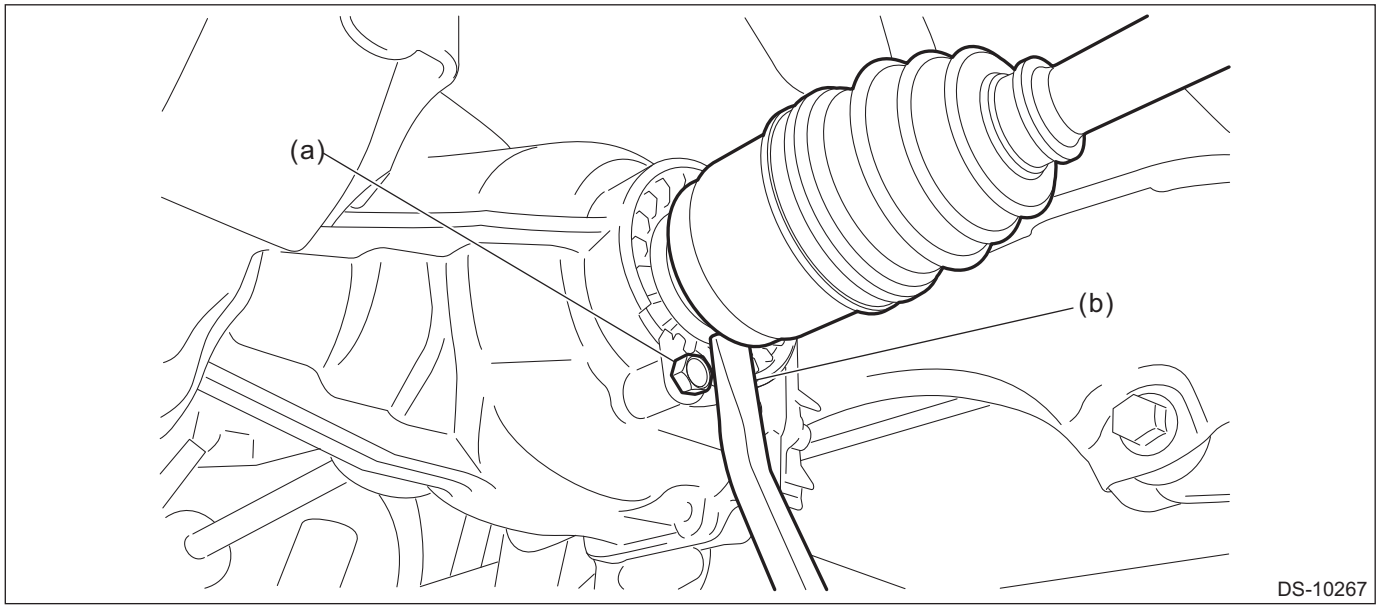
Preparation tool:
ST: DRIVE SHAFT REMOVER (28099PA100)



• VB type: Pull out the rear drive shaft assembly by fitting the tire lever (b) to the bolt (a) as shown in the figure.

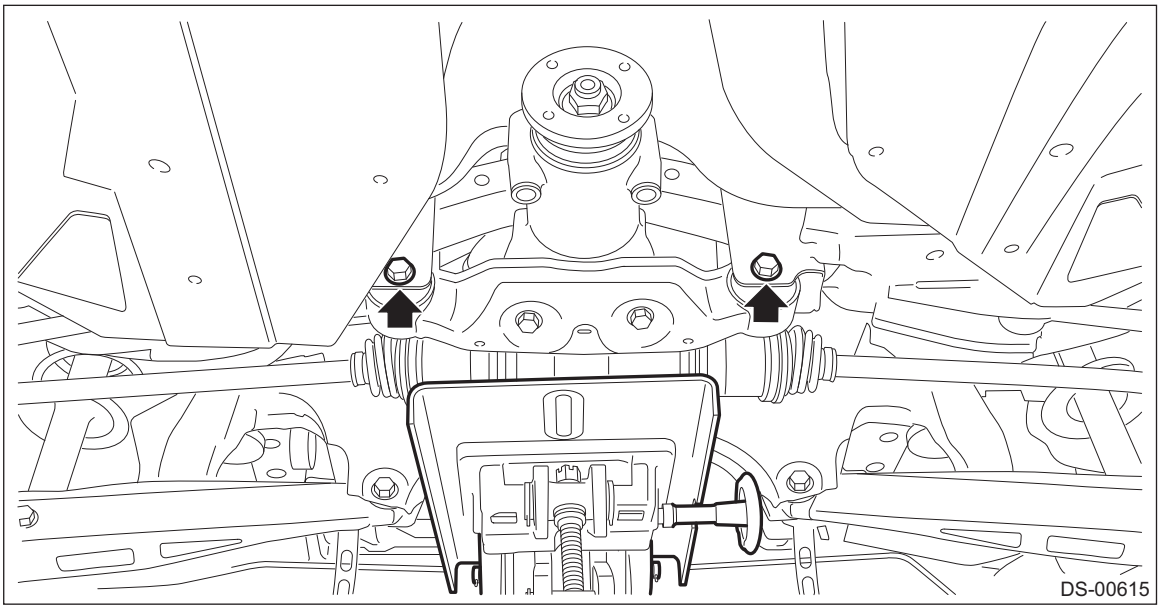
CAUTION:
To prevent damage to the side bearing retainer, use by placing the tire lever against the bolt as shown in the figure.

Preparation tool:
Tire lever

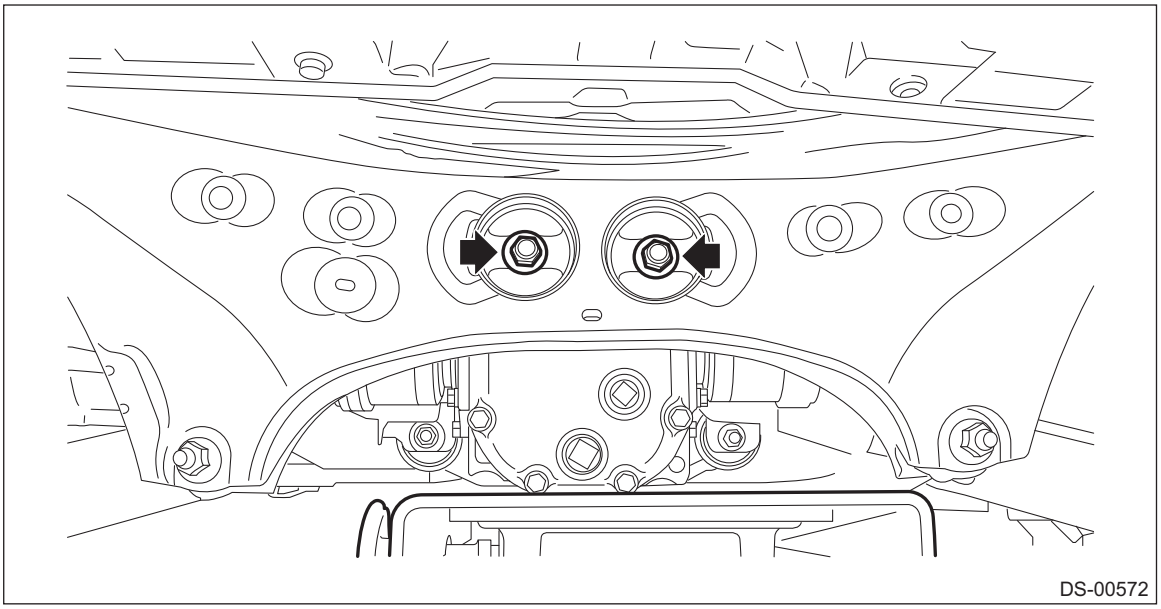


10) Remove the installation section of rear differential assembly.
(1) Support the rear differential assembly with a transmission jack.

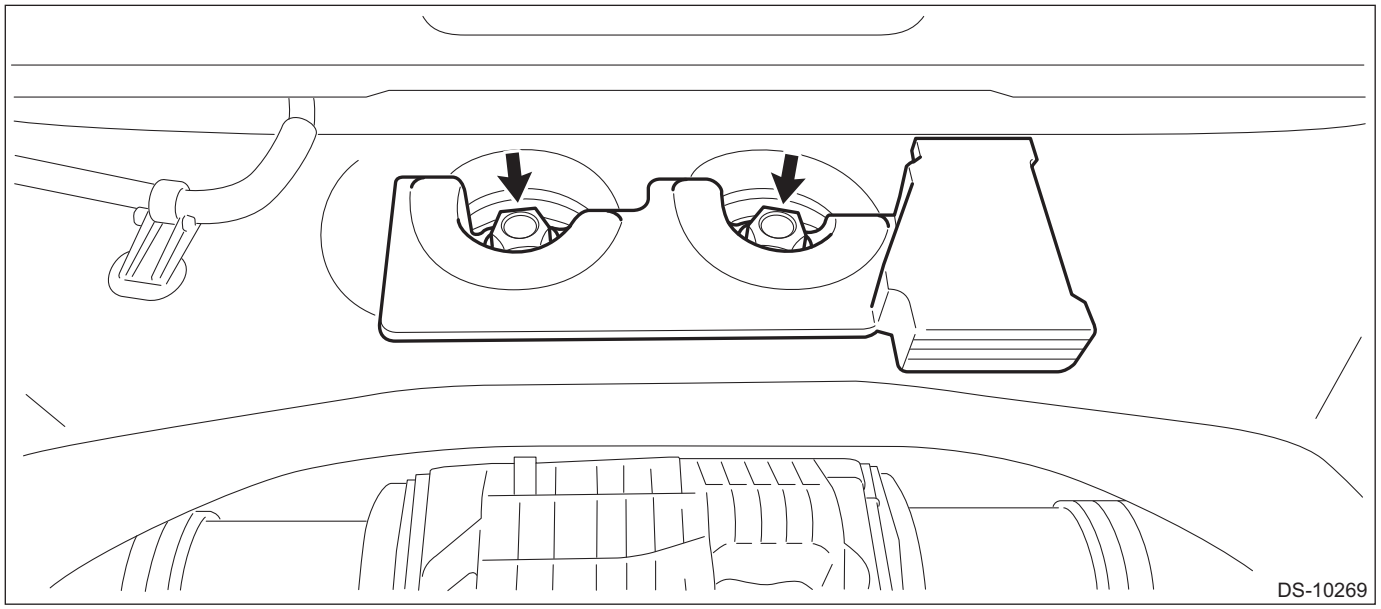
(2) Remove the bolts which hold the rear differential front crossmember from the rear sub frame assembly.



(3) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly. (T-type)

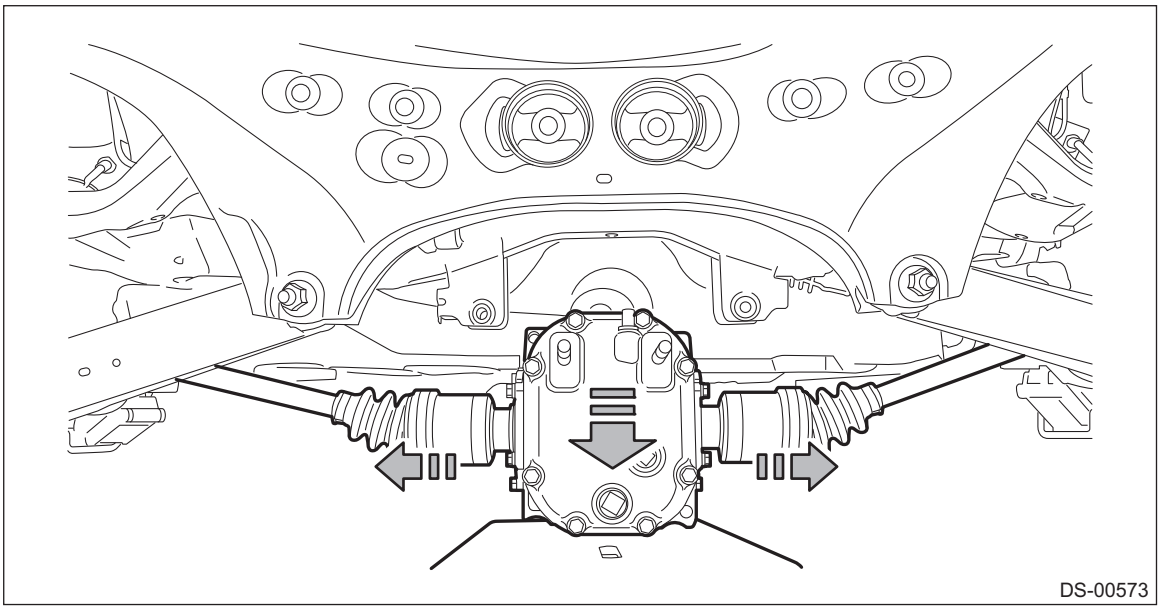


(4) Remove the mass damper and the self-locking nuts which hold the rear differential to the rear sub frame assembly. (VB-type)



11) Completely pull out the rear drive shaft assembly while lowering the rear differential.

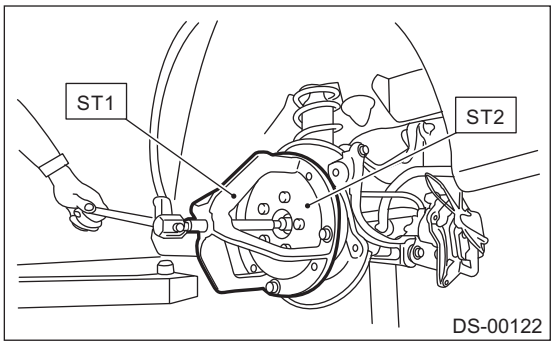
CAUTION:
Be careful not to damage the drive shaft boot.



12) Remove the rear drive shaft assembly from the rear axle housing.

NOTE:
If it is hard to remove, use the ST.

Preparation tool:
ST1: AXLE SHAFT PULLER (926470000)
ST2: AXLE SHAFT PULLER PLATE (28099PA110)

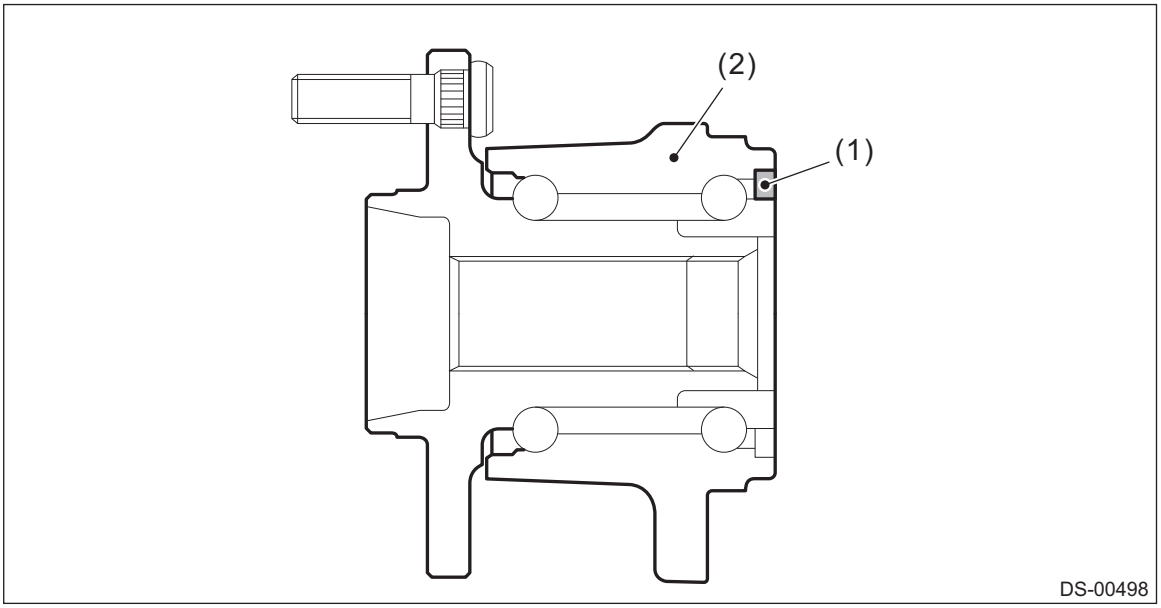


B: INSTALLATION

1) Replace the rear differential side oil seal. <Ref. to DI-60, REPLACEMENT, Rear Differential Side Oil Seal.>

CAUTION:
After pulling out the drive shaft assembly, be sure to replace with a new oil seal.
2) Insert the drive shaft assembly into the rear hub spline, and pull it into the specified position.

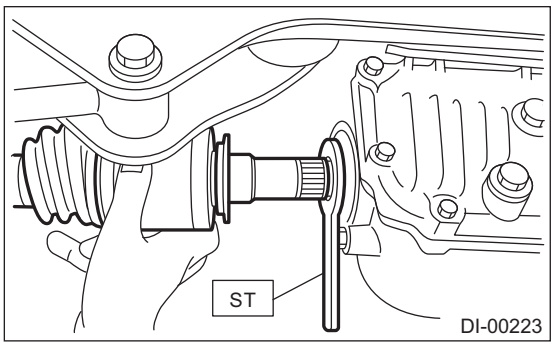
CAUTION:
- **Be careful not to damage the magnetic encoder.**
- **Do not get closer the tool which charged magnetism to magnetic encoder.**
- **Do not hammer the drive shaft assembly when installing.**



(1) Magnetic encoder (2) Rear hub unit bearing

3) Tighten the axle nut temporarily.
4) Using the ST, install the rear drive shaft assembly to the rear differential.

Preparation tool:
ST: OIL SEAL PROTECTOR (28099PA090)



5) Install the rear differential assembly to the rear sub frame assembly. (T-type)

CAUTION:
Be sure to use a new self-locking nut.

Tightening torque:
Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

6) Install the rear differential assembly and the mass damper to the rear sub frame assembly. (VB-type)

CAUTION:
Be sure to use a new self-locking nut.

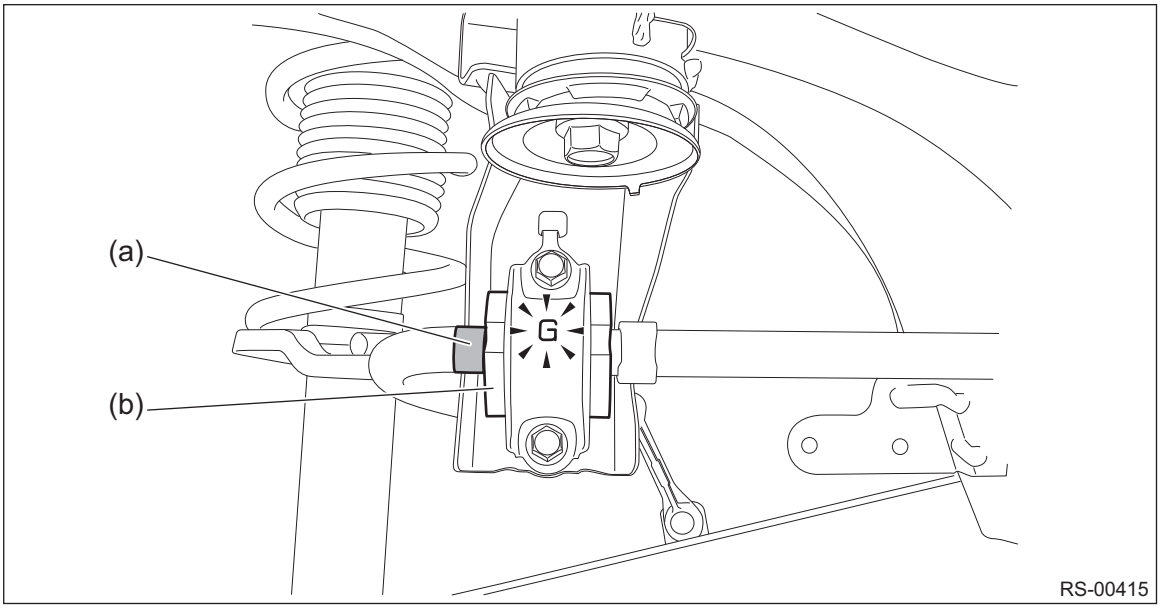
Tightening torque:
Differential assembly — bushing - differential: 70 N·m (7.1 kgf-m, 51.6 ft-lb)
Differential assembly — rear sub frame assembly: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

7) Install the sensor assembly - headlight beam leveler. (Model with auto headlight beam leveler)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

8) Install the oil temperature sensor connector. (Model with oil temperature sensor)
9) Install the rear stabilizer. (VB-type)

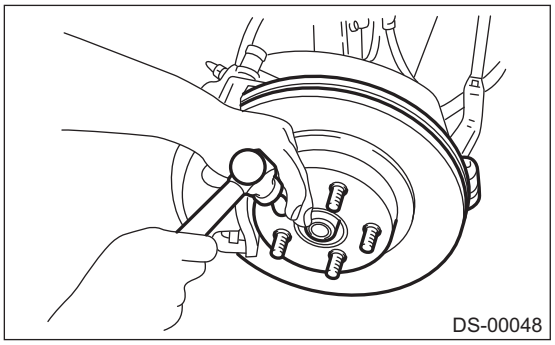
CAUTION:
• Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
• Install the clamp - stabilizer bushing with the "G" character facing upward.
• When installing, align the edge of identification paint (a) to the end face of the bushing (b).



Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
10) While pressing the brake pedal, tighten the new axle nuts to the specified torque.

CAUTION:
Do not load the rear axle before tightening the axle nut. Doing so may damage the hub unit bearing.

Tightening torque:
190 N·m (19.4 kgf-m, 140.1 ft-lb)
11) Lock the axle nut securely.



DS-00048

12) Fill differential gear oil.
13) Install the rear wheels.

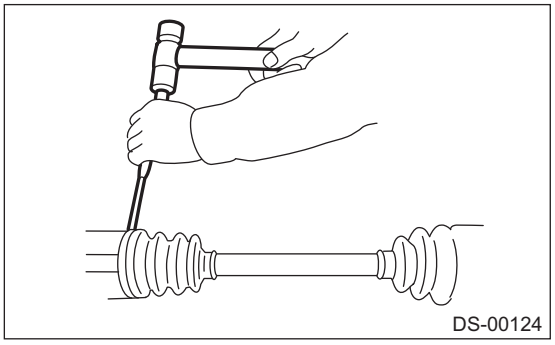
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
14) Perform reinitialization of the auto headlight beam leveler system. (Model with auto headlight beam leveler) <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

C: DISASSEMBLY

1. EBJ + EDJ TYPE

1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of boot (EDJ).

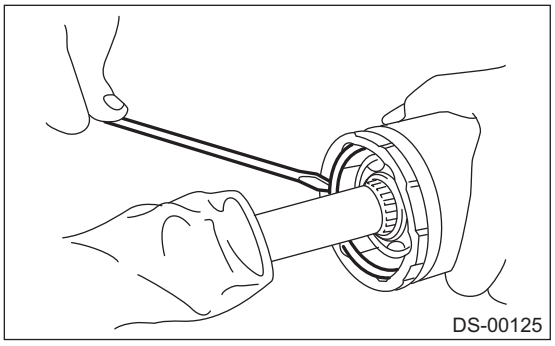
CAUTION:
Be careful not to damage the boot.



DS-00124

2) Remove the boot band on the small end of boot (EDJ) in the same manner.
3) Remove the large end of boot (EDJ) from outer race (EDJ).

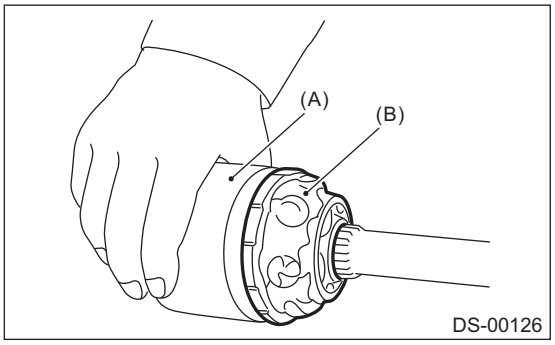
4) Remove the round snap ring at the neck of outer race (EDJ) with a flat tip screwdriver.



5) Remove the outer race (EDJ) from the shaft assembly.
6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.



(A) Outer race
(B) Grease

7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the inner race.
10) Remove the cage from the shaft and remove the boot (EDJ).

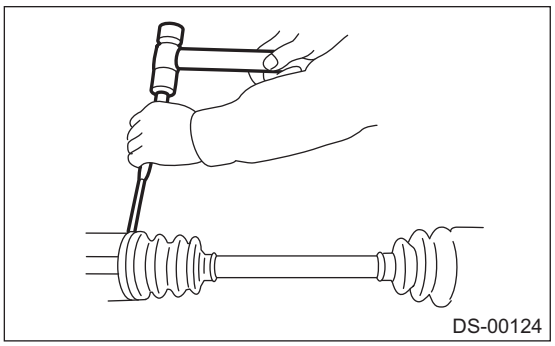
CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the boot (EBJ) using the same procedures as for the boot (EDJ).

NOTE:
The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

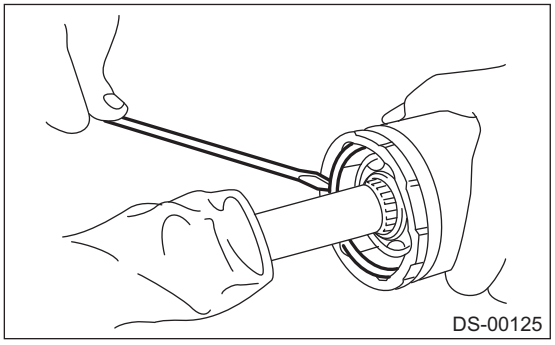
2. EBJ + DOJ TYPE

1) Using a flat tip screwdriver or pliers, loosen the boot band on the large end of boot (DOJ).

CAUTION:
Be careful not to damage the boot.



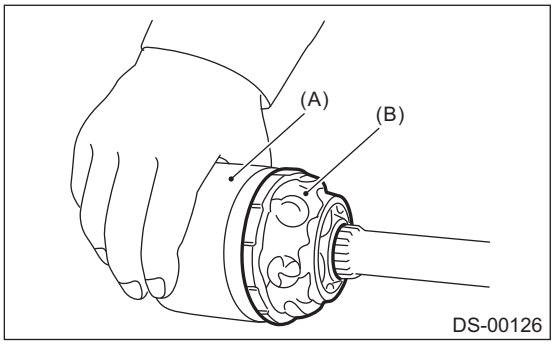
2) Remove the boot band on the small end of boot (DOJ) in the same manner.
3) Remove the large end of boot (DOJ) from outer race (DOJ).
4) Remove the round snap ring at the neck of outer race (DOJ) with a flat tip screwdriver.



5) Remove the outer race (DOJ) from the shaft assembly.
6) Wipe off the grease and take out the ball bearings.

CAUTION:
The grease is a special grease (grease for constant velocity joints). Do not mix with other greases.

NOTE:
Disassemble the parts taking care not to lose balls.



(A) Outer race
(B) Grease

7) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
8) Using pliers, remove the snap ring fixing the inner race to the shaft.
9) Take out the inner race.
10) Remove the cage from the shaft and remove the boot (DOJ).

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.
11) Remove the boot (EBJ) using the same procedures as for the boot (DOJ).

NOTE:
The EBJ is a non-disassembly part, so the drive shaft disassembly stops here.

D: ASSEMBLY

1. EBJ + EDJ TYPE

CAUTION:
Be sure to wrap shaft splines with vinyl tape to protect the boot from scratches.

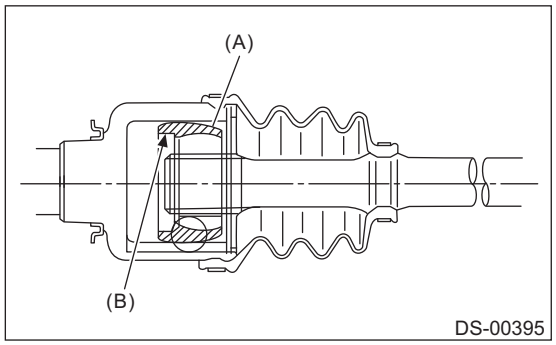
NOTE:
Use specified grease.

EBJ side:
NKG814

EDJ side:
NKG814

1) Install the boot (EBJ) to the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the boot (EDJ) at the center of shaft.
3) Insert the cage onto shaft.

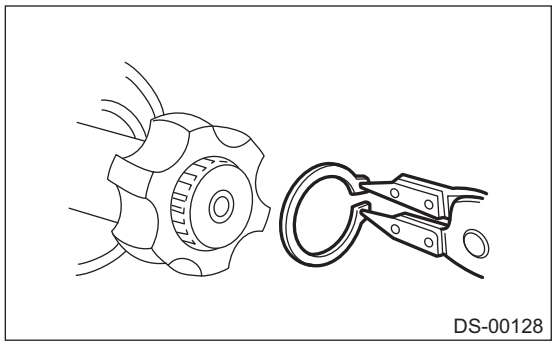
NOTE:
Insert the cage with the cutout portion facing the outer race (EDJ), since the cage has an orientation.



(A) Cage
(B) Cutout portion

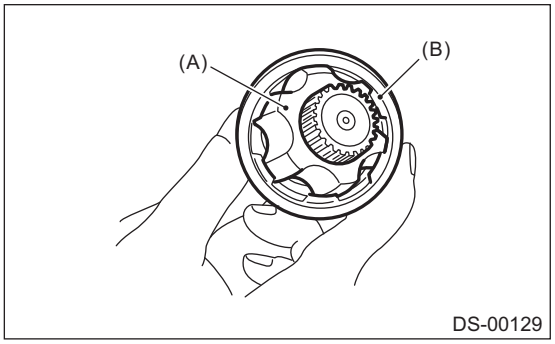
4) Install the inner race on shaft and fix the snap ring in place with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



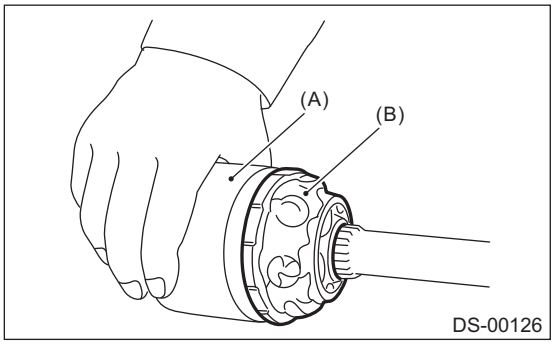
5) Install the cage to inner race fixed upon shaft.

NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.



(A) Inner race
(B) Cage

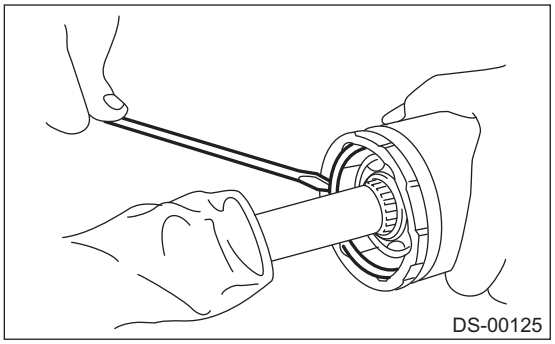
6) Fill 80 to 90 g (2.82 to 3.17 oz) of the specified grease into the inner side of the outer race (EDJ).
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race (EDJ) in place.



(A) Outer race
(B) Grease

10) Install the snap ring in the groove of the outer race (EDJ).

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race (EDJ).
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

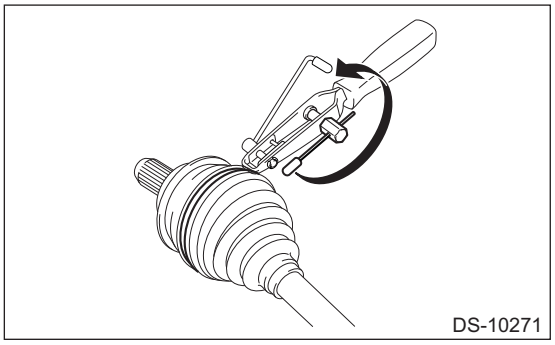


11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.
12) Attach the boot (EDJ) taking care not to twist it.

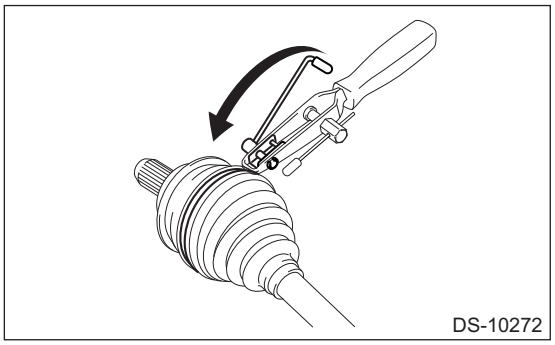
NOTE:
• The inside of the large end of boot (EDJ) and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing the boot (EDJ), position the outer race at center of the stroke.
13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the band tightening tool.

NOTE:
• For the band tightening tool, OTC CV joint banding tool and cutter (Part No. 4623) is recommended.
• Wind the band until it cannot be moved by hand.
• Bend the band using the tool while keeping the band wound tight.



DS-10271



DS-10272

16) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
17) Install the boot band using the same procedures as for the boot (EDJ).
18) Extend and retract the boot (EDJ) repeatedly to provide an equal coating of grease.

2. EBJ + DOJ TYPE

CAUTION:
Wrap shaft splines with vinyl tape to protect the boot from scratches.

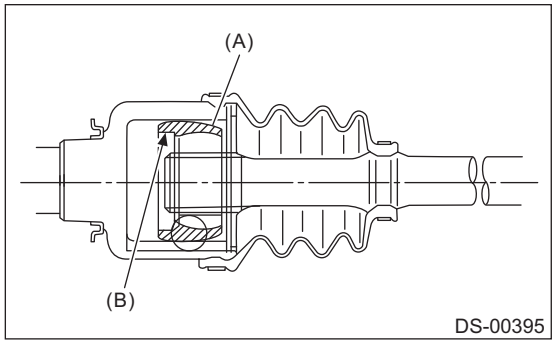
NOTE:
Use specified grease.

EBJ side:
NKG814

DOJ side:
NKG814

1) Install the boot (EBJ) to the specified position, and fill it with 50 to 60 g (1.76 to 2.12 oz) of specified grease.
2) Place the boot (DOJ) at the center of shaft.
3) Insert the cage onto shaft.

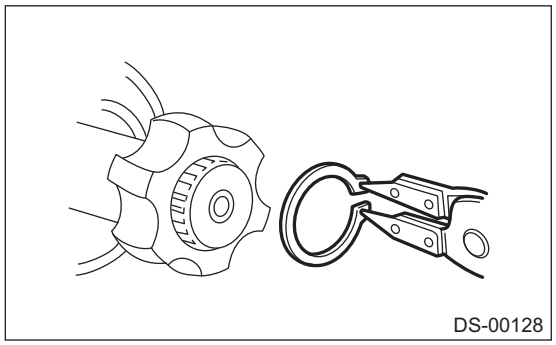
NOTE:
Insert the cage with the cutout portion facing the outer race (DOJ), since the cage has an orientation.



(A) Cage
(B) Cutout portion

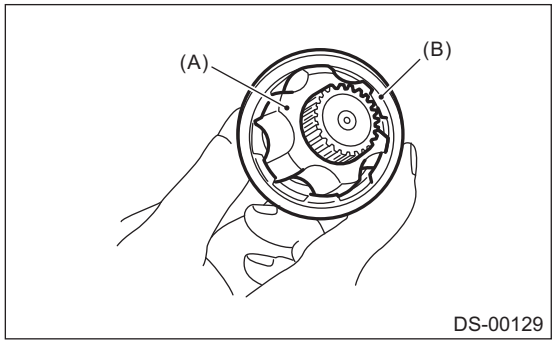
4) Install the inner race on shaft and fix the snap ring in place with pliers.

NOTE:
Confirm that the snap ring is completely fitted in the shaft groove.



5) Install the cage to inner race fixed upon shaft.

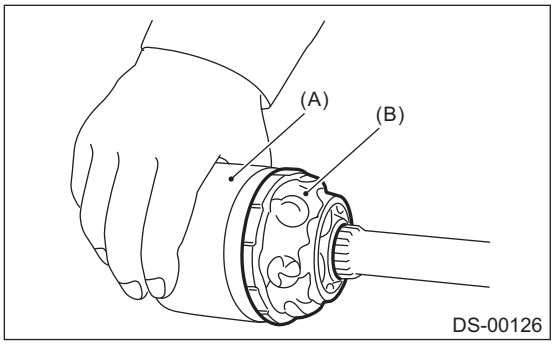
NOTE:
Fit the cage with the protruding section aligned with the track on the inner race, and turn by a half pitch.



(A) Inner race
(B) Cage

6) Fill 80 to 90 g (2.82 to 3.17 oz) of the specified grease into the inner side of the outer race (DOJ).
7) Apply a thin coat of specified grease to the cage pocket and ball.
8) Insert the ball bearings into the cage pocket.

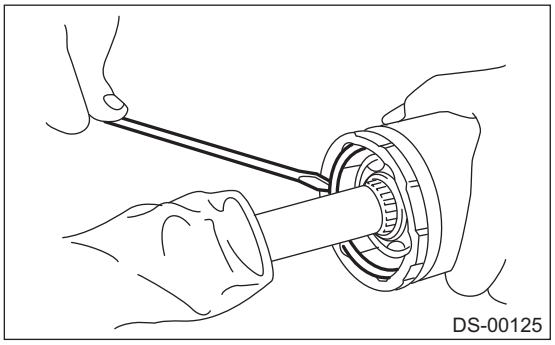
9) Align the outer race track and ball positions, and place the shaft, inner race, cage and ball bearings in the original positions, and then fix outer race (DOJ) in place.



(A) Outer race
(B) Grease

10) Install the snap ring in the groove of the outer race (DOJ).

NOTE:
- Assure that the balls, cage and inner race are completely fitted in the outer race (DOJ).
- Use care not to place the matched position of snap ring in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.



11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to the shaft.
12) Attach the boot (DOJ) taking care not to twist it.

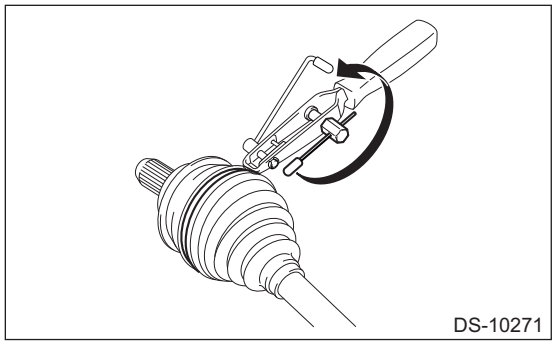
NOTE:
- The inside of the large end of boot (DOJ) and the boot groove shall be cleaned so as to be free from grease and other substances.
- When installing the boot (DOJ), position the outer race (DOJ) at center of the stroke.

13) Put a new band through the clip and wind twice in the band groove of the boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

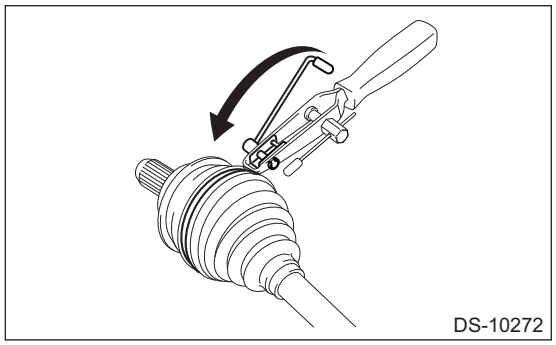
NOTE:
When tightening boot, use care so that the air within the boot is appropriate.
15) Tighten the band using the band tightening tool.

NOTE:
- For the band tightening tool, OTC CV joint banding tool and cutter (Part No. 4623) is recommended.
- Wind the band until it cannot be moved by hand.

- Bend the band using the tool while keeping the band wound tight.



DS-10271



DS-10272

16) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.
17) Install the boot band using the same procedures as for the boot (DOJ).
18) Extend and retract the boot (DOJ) repeatedly to provide an equal coating of grease.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.
- **EDJ (High-Efficiency Compact Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.
- **DOJ (Double Offset Joint):**

Check for seizure, corrosion, damage, wear and excessive play.
- **EBJ (High-Efficiency Compact Ball Fixed Joint):**

Check for seizure, corrosion, damage and excessive play.
- **Shaft:**

Check for excessive bending, twisting, damage and wear.
- **Boot:**

Check for wear, warping, breakage and scratches.
- **Grease:**

Check for discoloration and fluidity.

9. General Diagnostic Table

A: INSPECTION

NOTE:
Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptoms	Possible cause	Corrective action
Noise or vibration from propeller shaft	• Center bearing • Runout of propeller shaft • Loose or play at connections	Inspect the propeller shaft. <Ref. to DS-15, INSPECTION, Propeller Shaft.>
Abnormal wheel vibration	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-45, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>
	Front drive shaft	Check the front drive shaft. <Ref. to DS-57, INSPECTION, Front Drive Shaft.>
	Rear drive shaft	Check the rear drive shaft. <Ref. to DS-73, INSPECTION, Rear Drive Shaft.>
	Front hub unit bearing	Check the front hub unit bearing. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
	Rear hub unit bearing	Check the rear hub unit bearing. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
Noise from the underbody	Wheel is out of balance.	Check the wheel balance. <Ref. to WT-6, WHEEL BALANCING, INSPECTION, Tire and Wheel.>
	Front wheel alignment	Check the front wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>
	Rear wheel alignment	Check the rear wheel alignment. <Ref. to RS-8, INSPECTION, Wheel Alignment.>
	Front strut	Check the front strut. <Ref. to FS-45, INSPECTION, Front Strut.>
	Rear shock absorber	Check the rear shock absorber. <Ref. to RS-31, INSPECTION, Rear Shock Absorber.>

VEHICLE DYNAMICS CONTROL (VDC)

VDC

(7)	Front RH outlet			

Tightening torque: N·m (kgf-m, ft-lb)

T1: 7.5 (0.8, 5.5)
T2: 15 (1.5, 11.1)
T3: 19 (1.9, 14)
T4: 33 (3.4, 24.3)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

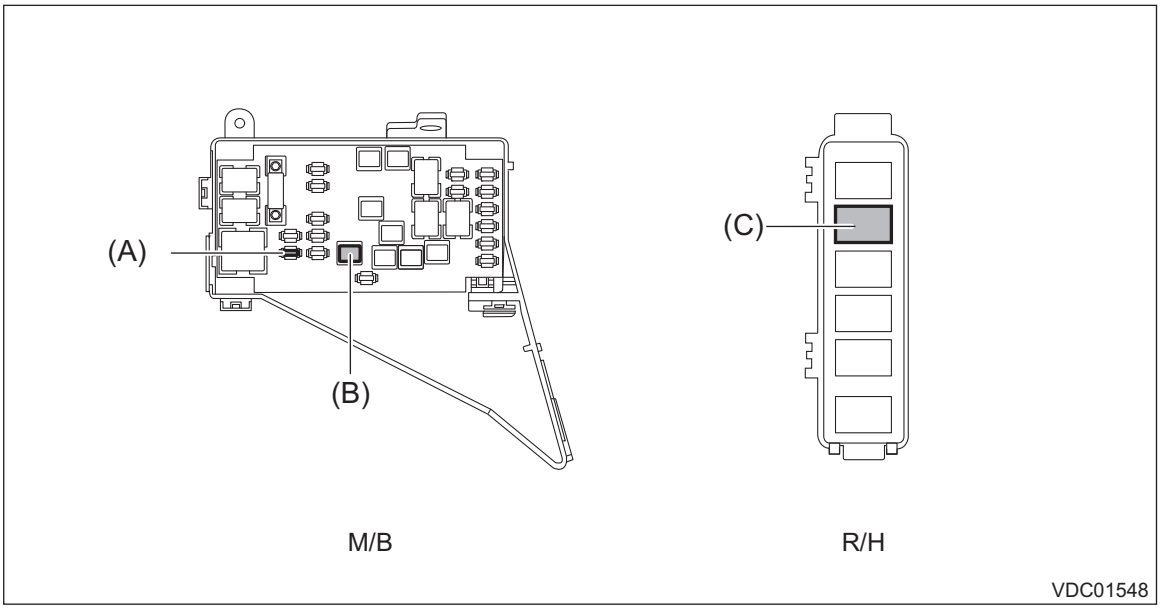
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring the sensor.
Steering wheel puller	Used for removing the steering wheel.

2. Relay and Fuse

A: LOCATION



Main fuse box	Fuse 30A (VDC CM&H/U)	(A)
	Fuse 40 A (VDC CM&H/U)	(B)
Relay holder	Brake light relay*	(C)
*: Model with EyeSight		

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Vehicle Dynamics Control System

A: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-365, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-16, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to the “Vehicle Dynamics Control System (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-140, INSPECTION, General Diagnostic Table.>

D: NOTE

For operation procedures of each component of the vehicle dynamics control system, refer to the respective section.

- VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Yaw rate & G sensor: <Ref. to VDC-26, Yaw Rate and G Sensor.>
- Steering angle sensor: <Ref. to VDC-27, Steering Angle Sensor.>
- Front ABS wheel speed sensor: <Ref. to VDC-31, Front ABS Wheel Speed Sensor.>
- Rear ABS wheel speed sensor: <Ref. to VDC-34, Rear ABS Wheel Speed Sensor.>
- Front magnetic encoder: <Ref. to VDC-38, Front Magnetic Encoder.>
- Rear magnetic encoder: <Ref. to VDC-39, Rear Magnetic Encoder.>
- VDC OFF switch: <Ref. to VDC-40, VDC OFF Switch.>
- Auto vehicle hold switch: <Ref. to VDC-42, Auto Vehicle Hold Switch.>

4. VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: REMOVAL

CAUTION:
• Avoid unnecessary removal of parts in order to prevent fluid leakage.
• When the VDCCM&H/U components are removed, be sure to perform the installation according to the installation procedures. <Ref. to VDC-11, INSTALLATION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

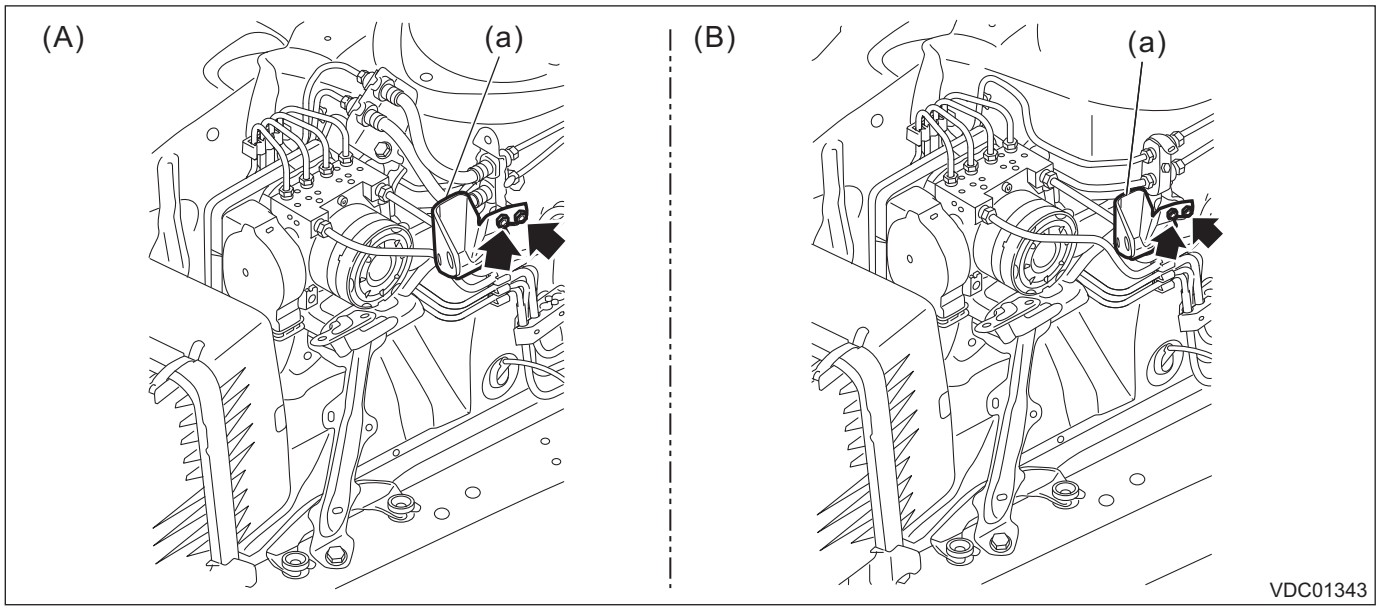
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the engine control module (ECM). (Except for STI model) <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
3) Remove the VDC control module & hydraulic control unit (VDCCM&H/U).

CAUTION:
• Do not pull on the harness when disconnecting the connector.
• Wrap the brake pipe with a vinyl bag so as not to spill the brake fluid on the painted surface of the vehicle body.
• If brake fluid is spilled on the painted surface of the vehicle body, wash it off immediately with water and wipe clean.

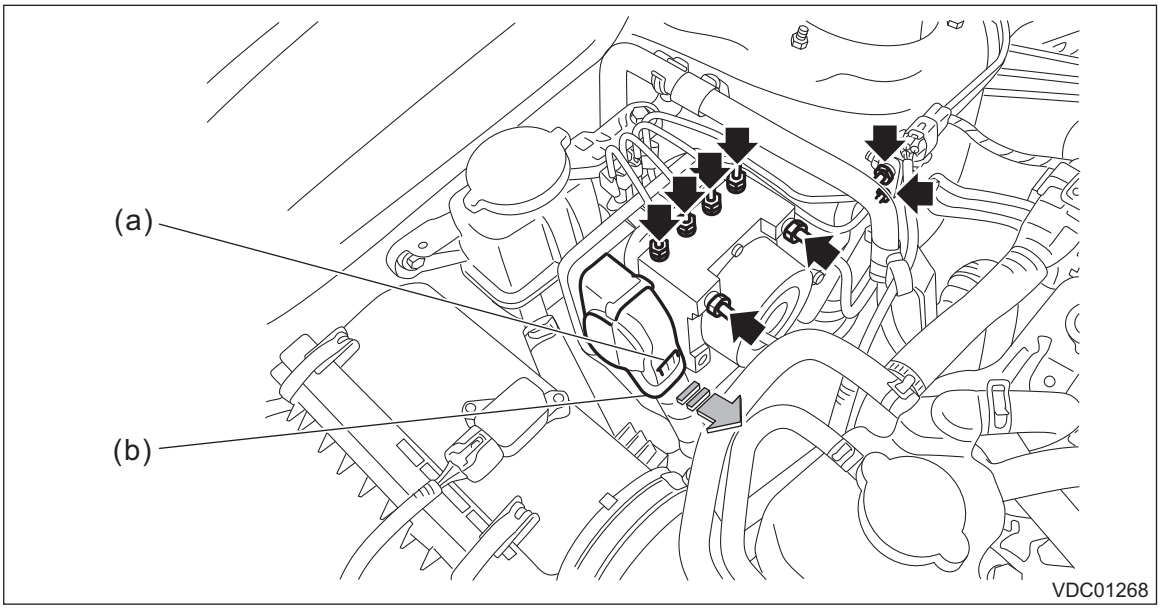
(1) Remove any dirt from around the VDCCM&H/U.
(2) Remove the nuts, and remove the bracket (a) from the bracket - connector front. (Except for STI model)



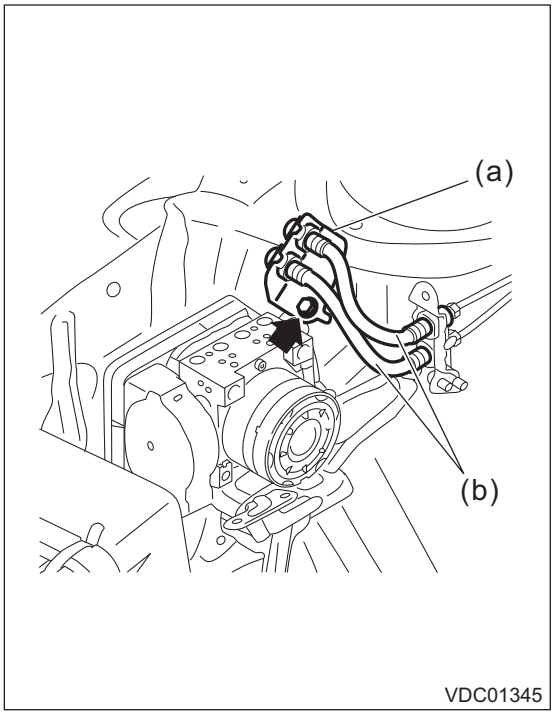
(A) Models with EyeSight (B) Models without EyeSight

(3) Pull up the lock lever (b) while pressing the lock button (a) and disconnect the VDCCM&H/U connector.

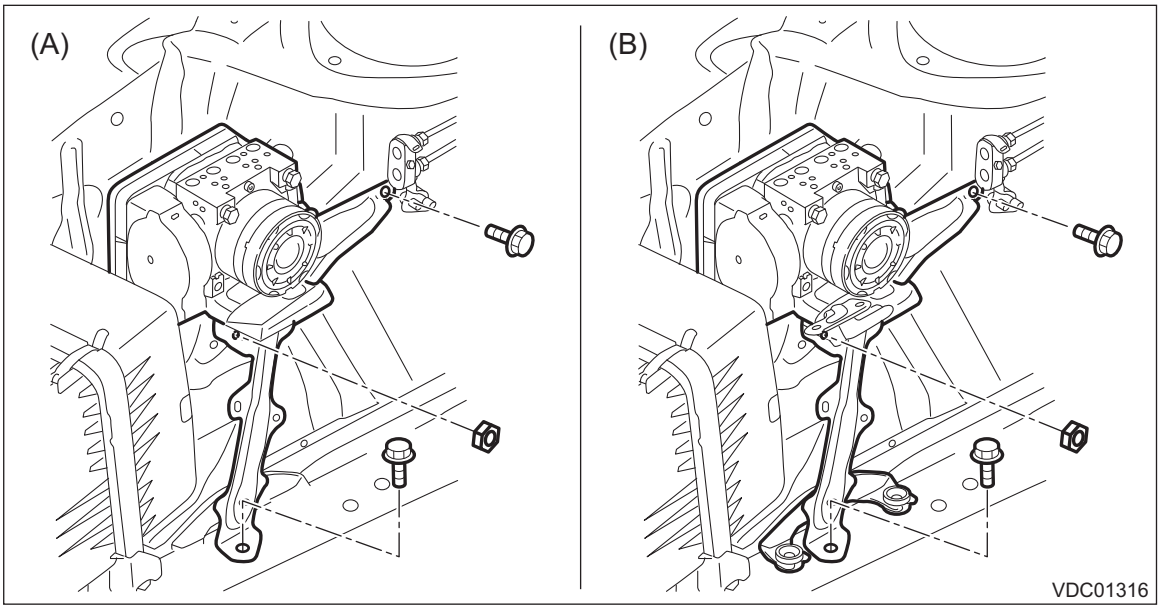
(4) Separate each brake pipe using a flare nut wrench.



(5) Remove the bolts, and remove the bracket (a) and hose (b) from the bracket - hydraulic unit. (Models with EyeSight)

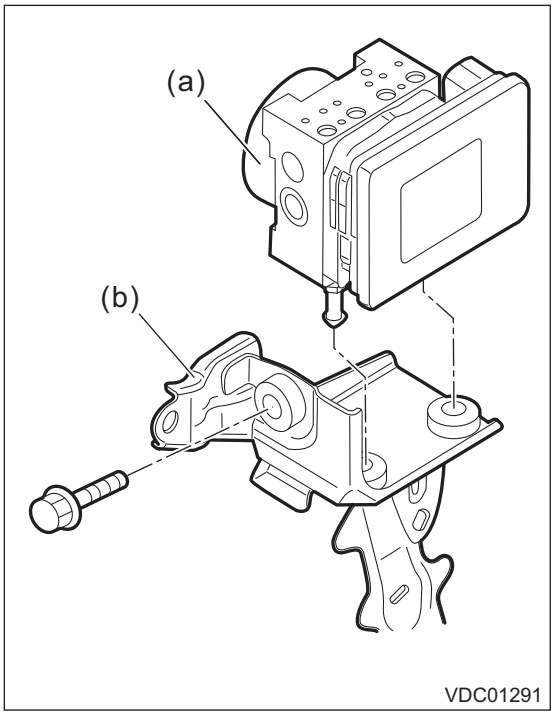


(6) Remove the bolts and nuts, and remove the bracket - hydraulic unit and the VDCCM&H/U.



(A) STI model (B) Except for STI model

(7) Remove the bolts, and remove the VDCCM&H/U (a) from the bracket - hydraulic unit (b).



B: INSTALLATION

CAUTION:

• When installing the VDCCM&H/U to the bracket - hydraulic unit, make sure that there is no oil adhered to the bolts and the threads of VDCCM&H/U. If the oil is adhered, degrease it carefully before tightening.

• Connect the VDCCM&H/U connector securely.

1) Install the bracket - hydraulic unit and the VDCCM&H/U.

(1) Install the VDCCM&H/U to the bracket - hydraulic unit.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(2) Attach the bracket - hydraulic unit.

Tightening torque:
33 N·m (3.4 kgf-m, 23.8 ft-lb)
(3) Attach the bracket to the bracket - connector front. (Except for STI model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
(4) Connect the VDCCM&H/U connector.
(5) Install each brake pipe using a flare nut wrench.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.>

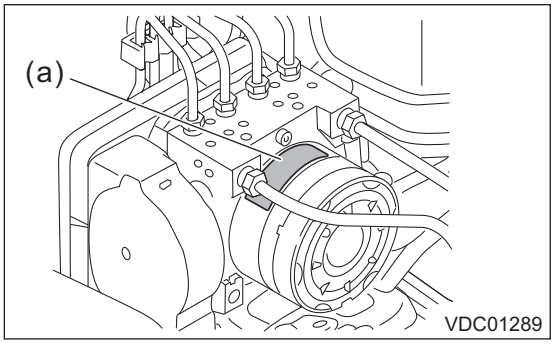
2) Install the engine control module (ECM). (Except for STI model) <Ref. to FU(w/o STI)-126, INSTALLATION, Engine Control Module (ECM).>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Bleed air from the brake system. <Ref. to BR-102, PROCEDURE, Air Bleeding.>
5) Perform parameter confirmation, selection, and registration.

NOTE:
• When the VDCCM&H/U is replaced with a new part, be sure to perform the selection • registration operation.
• When the registration has not been performed, the DTC code "Parameter selection error" is detected together with the ABS/EBD/VDC warning light illumination.
(1) Check that the applied model and grade of the relevant vehicle are included. <Ref. to VDC-18, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
(2) If the applied model and grade of the target vehicle are not included, perform parameter selection and registration. <Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6) Perform "VDC sensor midpoint setting mode". <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1) Check the identification (a) of the VDC control module & hydraulic control unit (VDCCM&H/U).

NOTE:
For the identification, refer to "SPECIFICATION" in "General Description". <Ref. to VDC-2, SPECIFICATION, General Description.>



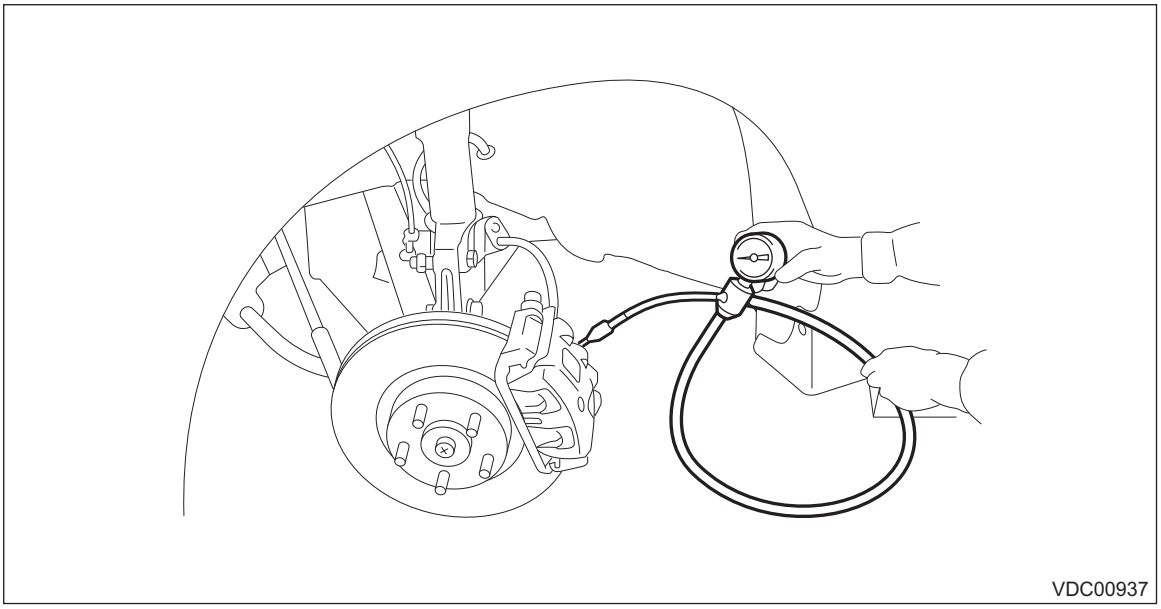
2) Check the condition of connection and settlement of connector, and correct or replace if defective.

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use the pressure gauge used for the measurement of transmission oil. Doing so will cause the piston seal to expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.



4) Bleed air from the pressure gauges and the front LH and front RH caliper bodies.
5) Perform ABS sequence control. <Ref. to VDC-19, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs decompression, hold and compression, and then the front RH side performs decompression, hold and compression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

Inspection conditions	Front wheel	Rear wheel
Initial value	3,500 kPa (36 kgf/cm^2, 511 psi)	3,500 kPa (36 kgf/cm^2, 511 psi)
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less
When pressurized	3,500 kPa (36 kgf/cm^2, 511 psi) or more	3,500 kPa (36 kgf/cm^2, 511 psi) or more

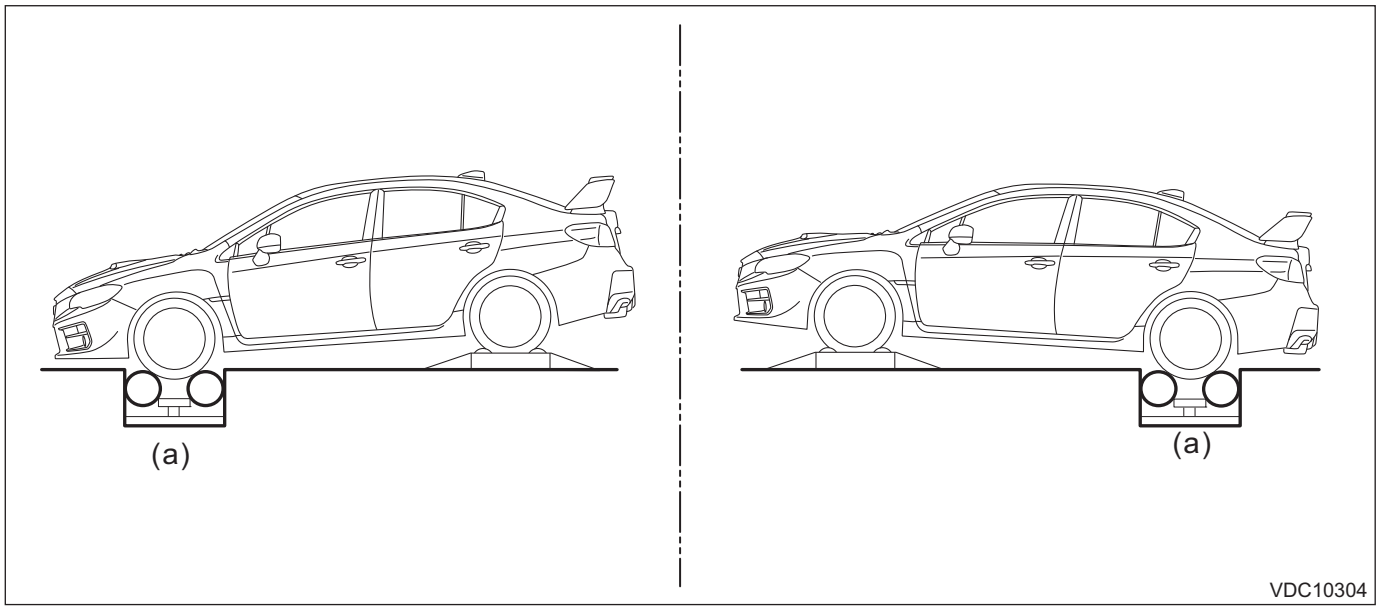
7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform ABS sequence control. <Ref. to VDC-19, ABS Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear LH side performs decompression, hold and compression, and then the rear RH side performs decompression, hold and compression.
13) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-102, Air Bleeding.>

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare for the ABS sequence control operation. <Ref. to VDC-19, ABS Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.



4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6 MPH), the ABS sequence control stops and ABS operation is returned to the normal control mode.

5) Perform ABS sequence control. <Ref. to VDC-19, ABS Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs decompression, hold and compression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs decompression, hold and compression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
Initial value	1,000 N (102 kgf, 225 lb)	1,000 N (102 kgf, 225 lb)
When depressurized	500 N (51 kgf, 112 lb) or less	500 N (51 kgf, 112 lb) or less
When pressurized	1,000 N (102 kgf, 225 lb) or more	1,000 N (102 kgf, 225 lb) or more

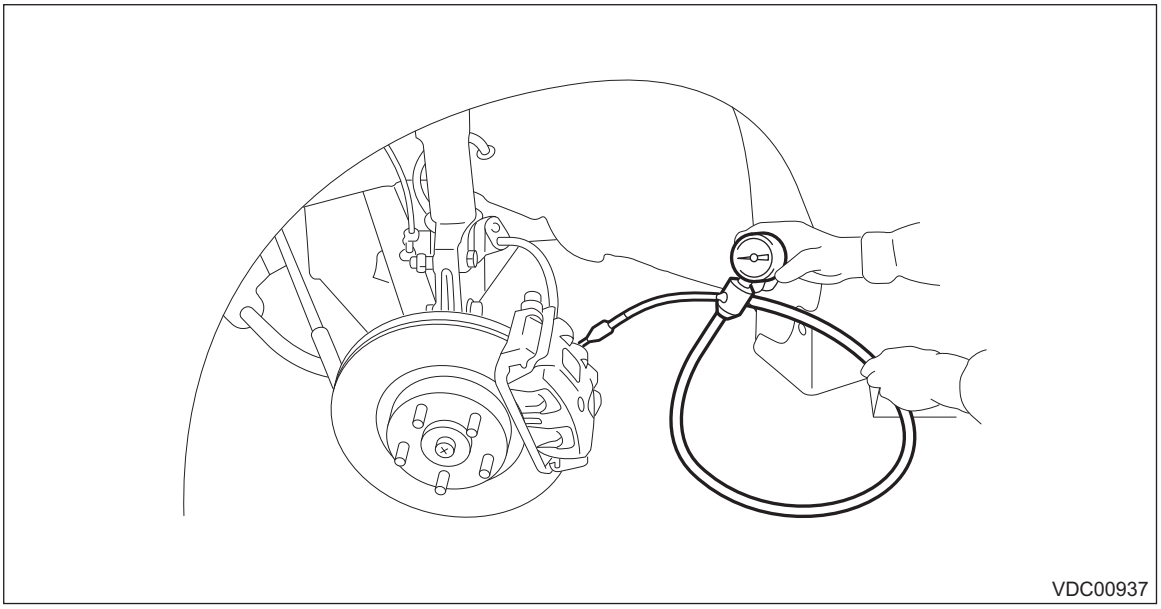
8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION USING A PRESSURE GAUGE

1) Lift up the vehicle, and then remove the wheel.
2) Remove the bleeder - screws from the front LH and front RH caliper bodies.
3) Connect two pressure gauges to front LH and front RH caliper bodies.

CAUTION:
- **Use a pressure gauge used exclusively for brake fluid measurement.**
- **Do not use a pressure gauge used for the measuring transmission oil pressure, as the piston seal may expand and deform.**

NOTE:
Wrap sealing tape around the pressure gauge.



4) Bleed air from the pressure gauge.
5) Perform VDC sequence control. <Ref. to VDC-22, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the front LH side performs compression, hold and decompression, and then the front RH side performs compression, hold and decompression.
6) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

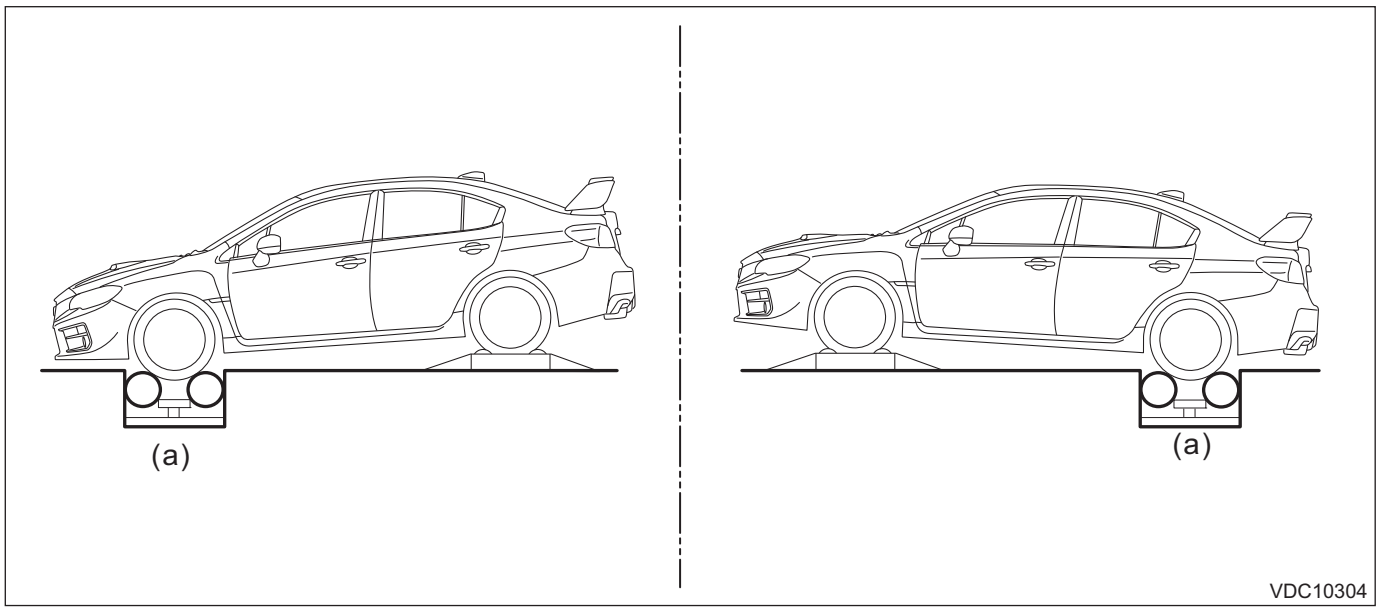
Inspection conditions	Front wheel	Rear wheel
When pressurized	3,000 kPa (31 kgf/cm^2, 441 psi) or more	3,000 kPa (31 kgf/cm^2, 441 psi) or more
When depressurized	500 kPa (5 kgf/cm^2, 73 psi) or less	500 kPa (5 kgf/cm^2, 73 psi) or less

7) Remove the pressure gauge from the front LH and front RH caliper bodies.
8) Install the bleeder - screws of the front LH and front RH caliper bodies.
9) Remove the bleeder - screws from the rear LH and rear RH caliper bodies.
10) Connect two pressure gauges to rear LH and rear RH caliper bodies.
11) Bleed air from the pressure gauges and the rear LH and rear RH caliper bodies.
12) Perform VDC sequence control. <Ref. to VDC-22, VDC Sequence Control.>

NOTE:
When the hydraulic unit begins to work, first the rear RH side performs compression, hold and decompression, and then the rear LH side performs compression, hold and decompression.
13) Read the values indicated on the pressure gauges and check if it is within specification. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
14) Remove the pressure gauge from the rear LH and rear RH caliper bodies.
15) Install the bleeder - screws of the rear LH and rear RH caliper bodies.
16) Bleed air from the brake system. <Ref. to BR-102, Air Bleeding.>

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set wheels other than the one to measure on free rollers.
2) Prepare to operate the VDC sequence control. <Ref. to VDC-22, VDC Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester (a) and set the gear to neutral.



4) Operate the brake tester.

NOTE:
When any wheel speed reaches 10 km/h (6 MPH), the VDC sequence control stops and VDC operation is returned to the normal control mode.

5) Perform VDC sequence control. <Ref. to VDC-22, VDC Sequence Control.>
6) When the hydraulic unit begins to work, check the following work sequence.
   (1) The front LH wheel performs compression, hold and decompression in sequence, and subsequently the front RH wheel repeats the same cycle.
   (2) The rear RH wheel performs compression, hold and decompression in sequence, and subsequently the rear LH wheel repeats the same cycle.
7) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets specification.

Inspection conditions	Front wheel	Rear wheel
When pressurized	2,000 N (204 kgf, 450 lbf) or more	2,000 N (204 kgf, 450 lbf) or more
When depressurized	500 N (51 kgf, 112 lbf) or less	500 N (51 kgf, 112 lbf) or less

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

1. VDC SENSOR MIDPOINT SETTING MODE

After installing, replacing or adjusting the following parts, perform the VDC sensor midpoint setting mode.
- Steering angle sensor
- Steering wheel
- Suspension parts
- Wheel alignment
- VDCCM&H/U
- VDCCM&H/U bracket

1) Park the vehicle on a level surface, and set the steering wheel to the neutral position.
2) Using Subaru Select Monitor, select «Steering Angle Sensor», «Longitudinal G Sensor» and «Lateral G sensor Output» from the data monitor item list. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
(1) Check the value of the steering angle sensor output.

Specification:

- ***When it is within the range of –10 — 10 deg: Perform the VDC sensor 0 point setting mode.***
- ***When it is outside the range of –10 — 10 deg: Check the steering wheel neutral position.***

(2) Check the values of the longitudinal G sensor and the lateral G sensor outputs.

Specification:

- ***When it is within the range of –2 — 2 m/s^2: Perform the VDC sensor 0 point setting mode.***
- ***When it is outside the range of –2 — 2 m/s^2: Check the VDC CM&H/U bracket installation status.***

3) Drive the vehicle for 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.
4) Make sure that the DTC is not stored.

E: MAINTENANCE MODE

1. BRAKE MAINTENANCE MODE

NOTE:
For brake maintenance mode, refer to “PARKING BRAKE” section. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

2. VDCCM PARAMETER READING

1) Perform reading of parameter.
(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Brake Control System» and select «Enter».
(7) On «Select Function» display, select «Work Support».
(8) On «Work Support» display, select «Reading of parameter: ECM to SSM».
2) Save and close the file.

3. VDCCM PARAMETER WRITING

1) Perform writing of parameter.
(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Brake Control System» and select «Enter».
(7) On «Select Function» display, select «Work Support».
(8) On «Work Support» display, select «Writing of parameter: SSM to ECM».
2) Open the file saved in the «Reading of parameter: ECM to SSM» procedure.
3) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the «OK» button.

4. VDCCM PARAMETER SELECTION

NOTE:
• When the VDCCM&H/U is replaced with a replacement part, be sure to perform the parameter selection/registration to the VDCCM&H/U using this function.
• To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
• If you entered a wrong applied model, you can re-write it.
• When the registration has not been performed, the DTC code “Parameter” is detected together with the ABS/EBD/VDC warning light illumination.
• This function can be used for the replacement part of VDCCM&H/U.

1) Perform selection of parameter.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Brake Control System» and select «Enter».
   (7) On «Select Function» display, select «Work Support».
   (8) On «Work Support» display, select «Selection of Parameter».

2) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
3) Enter the applied model of 7-digit alphanumeric characters and press the «Enter» key.
4) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the «Enter» key. When the option code is 3 digits, add “0” (zero) in front and enter the code as 4 digits.
5) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and grade are displayed and click the «OK» button.

NOTE:
When the displayed applied model and grade are different from those of the vehicle, perform registration operations again after clicking the [OK] button.

6) Execute the Clear Memory Mode after parameter selection and registration operations because the DTC for “Parameter selection error” is memorized. <Ref. to VDC(diag)-30, Clear Memory Mode.>

5. VDCCM PARAMETER CHECK

NOTE:
The parameter data registered in the VDCCM is shown on the display.

1) Perform confirming on parameter.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Brake Control System» and select «Enter».
   (7) On «Select Function» display, select «Work Support».
   (8) On «Work Support» display, select «Confirm on parameter».

2) Check that the applied model and grade of the relevant vehicle are included, and click the «OK» button.
3) If the applied model and grade of the target vehicle are not included, perform “parameter selection and registration”. <Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. ABS Sequence Control

A: OPERATION

1) While the ABS sequence control is being performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by the Subaru Select Monitor.

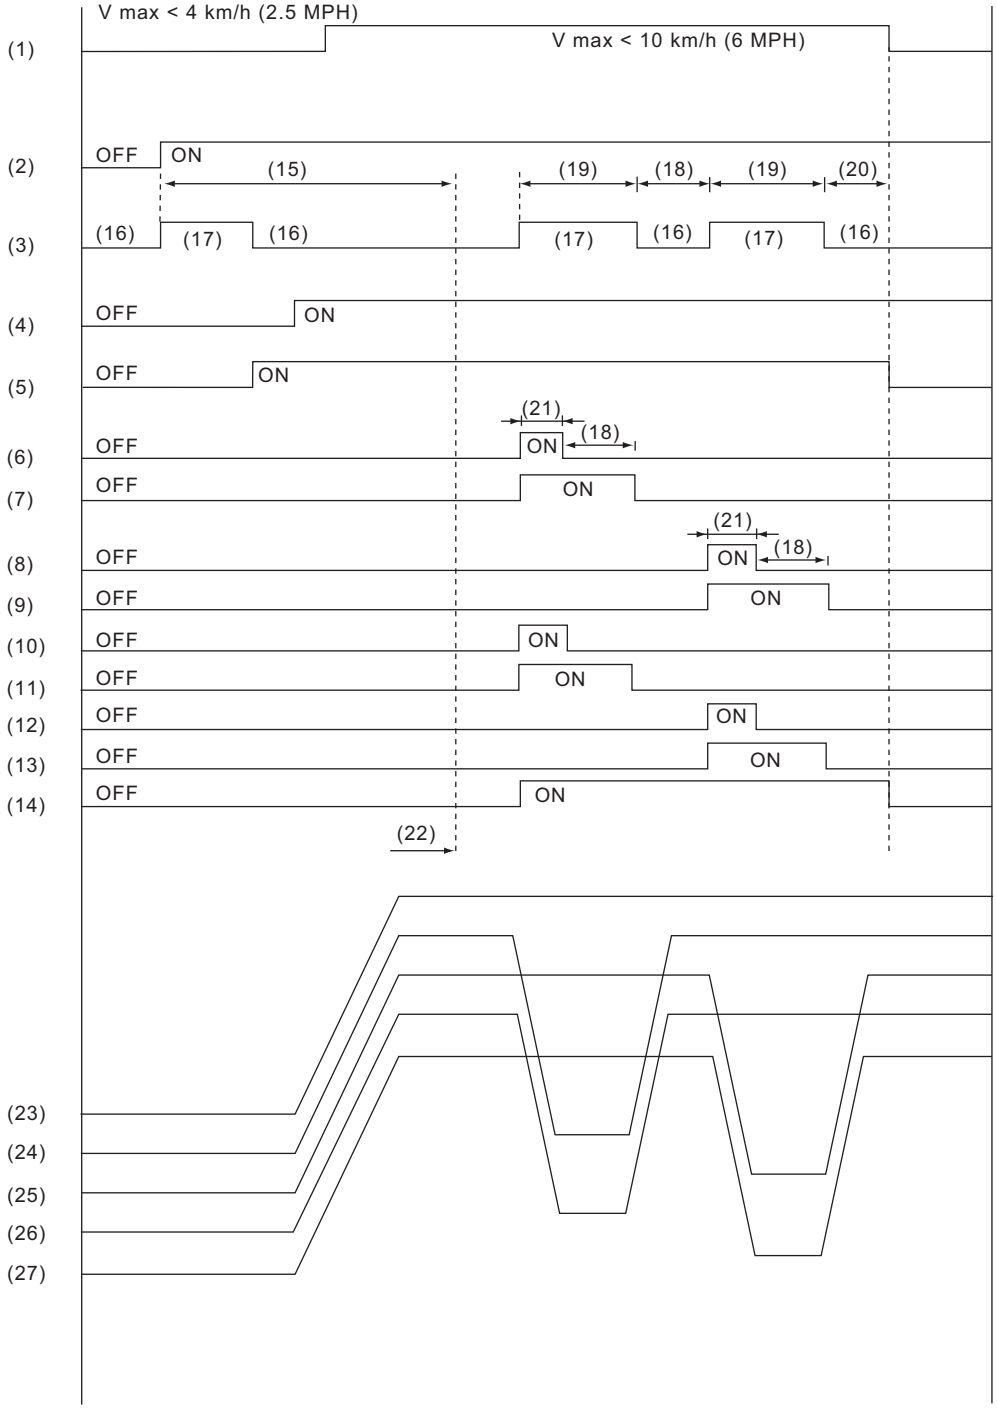
1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control will not operate.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Turn the ignition switch to ON.
(2) On «Start» display, select «Diagnosis».
(3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(4) On «Main Menu» display, select «Each System».
(5) On «Select System» display, select «Brake Control System» and select «Enter».
(6) On «Select Function» display, select «Work Support».
(7) From the work support item list, select «ABS Sequence Control Mode».
2) Follow the procedures displayed in the Subaru Select Monitor to execute the following.
(1) When using a brake tester, depress the brake pedal with a force of 100 N (10.2 kgf, 22.5 lbf).
(2) When using a pressure gauge, press the brake pedal so that the pressure gauge indicates 3,500 kPa (36 kgf/cm^2, 511 psi).
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:
The control operation starts at point A.



VDC01320

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) Switch - stop light
(5) Valve relay
(6) Front LH decompression valve
(7) Front LH compression valve
(8) Front RH decompression valve
(9) Front RH compression valve
(10) Rear RH decompression valve
(11) Rear RH compression valve
(12) Rear LH decompression valve
(13) Rear LH compression valve
(14) Pump motor
(15) A few seconds
(16) Light OFF
(17) Light ON
(18) 1.0 seconds
(19) 1.4 seconds
(20) 0.6 seconds
(21) 0.4 seconds
(22) Point A
(23) Master cylinder pressure
(24) Front LH wheel cylinder pressure
(25) Front RH wheel cylinder pressure
(26) Rear RH wheel cylinder pressure
(27) Rear LH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When the brake pedal is released during ABS sequence control and the switch - stop light becomes OFF.
- After completion of ABS sequence control.
- When a malfunction is detected.

6. VDC Sequence Control

A: OPERATION

1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by Subaru Select Monitor.

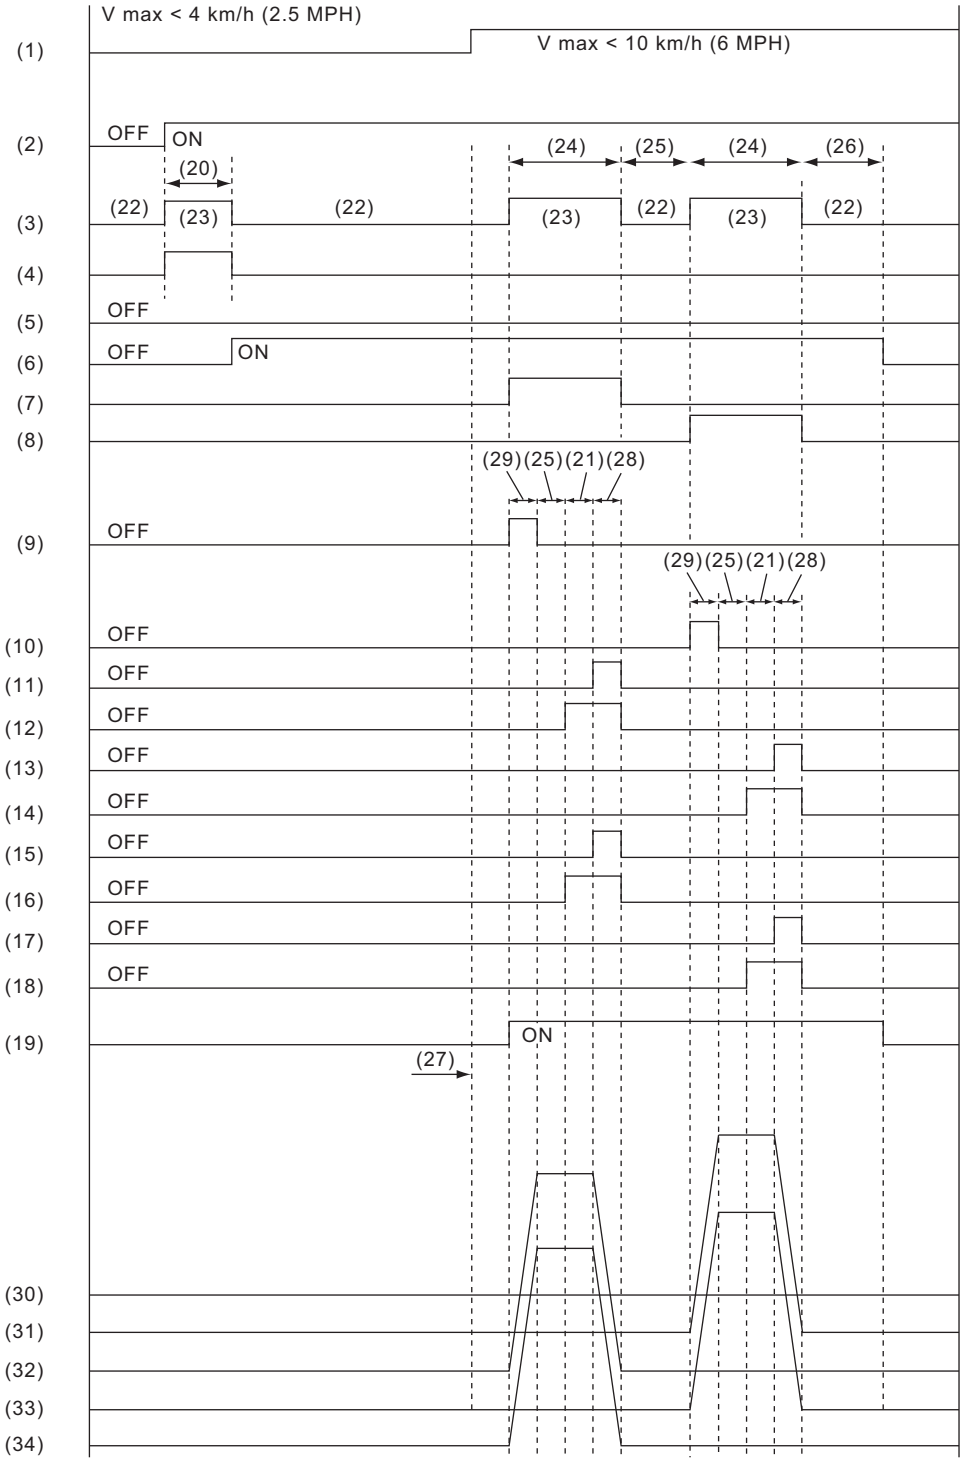
1. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, sequence control will not operate.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) Turn the ignition switch to ON.
(2) On «Start» display, select «Diagnosis».
(3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(4) On «Main Menu» display, select «Each System».
(5) On «Select System» display, select «Brake Control System» and select «Enter».
(6) On «Select Function» display, select «Work Support».
(7) From the work support item list, select «VDC Function Check Mode».
2) Operate according to the procedures displayed in the Subaru Select Monitor.
3) The brake system being operated is displayed on the Subaru Select Monitor.

2. CONDITIONS FOR VDC SEQUENCE CONTROL

NOTE:
The control operation starts at point A.



VDC01434

(1) All wheel speed
(2) Ignition key
(3) ABS warning light
(4) VDC warning light
(5) Switch - stop light
(6) Valve relay
(7) VDC switching valve 1 front LH
(8) VDC switching valve 1 front RH
(9) VDC switching valve 2 front LH
(10) VDC switching valve 2 front RH
(11) Front LH decompression valve
(12) Front LH compression valve
(13) Front RH decompression valve
(14) Front RH compression valve
(15) Rear RH decompression valve
(16) Rear RH compression valve
(17) Rear LH decompression valve
(18) Rear LH compression valve
(19) Pump motor
(20) A few seconds
(21) 1.2 seconds
(22) Light OFF
(23) Light ON
(24) 3.4 seconds
(25) 1 second
(26) 1.6 seconds
(27) Point A
(28) 0.4 seconds
(29) 0.8 seconds
(30) Master cylinder pressure
(31) Front RH wheel cylinder pressure
(32) Front LH wheel cylinder pressure
(33) Rear LH wheel cylinder pressure
(34) Rear RH wheel cylinder pressure

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- After completion of VDC sequence control.
- When a malfunction is detected.

7. Brake Lamp Relay

A: NOTE

For brake light relay, refer to “Relay and Fuse”. <Ref. to VDC-7, Relay and Fuse.>

B: OPERATION

1. BRAKE LIGHT LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR

CAUTION:
For models with EyeSight, performing brake light relay compulsory operation may cause the EyeSight warning light to illuminate. If the brake light relay compulsory operation is performed, refer to “Basic Diagnostic Procedure” of “EyeSight (DIAGNOSTICS)” and check DTCs and then clear memory. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>

1) Connect the Subaru Select Monitor.

NOTE:
- In the event of any trouble, brake light lighting operation mode will not function.
- For detailed operation procedures, refer to “Application help”.
  (1) On «Start» display, select «Diagnosis».
  (2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
  (3) On «Main Menu» display, select «Each System».
  (4) On «Select System» display, select «Brake Control System» and select «Enter».
  (5) On «Select Function» display, select «Work Support».
  (6) From the work support item list, select «Brake Lamp Lighting Operation» mode.

2) Operate according to the procedures displayed in the Subaru Select Monitor.

C: SPECIFICATION

1. CONDITIONS TO COMPLETE BRAKE LIGHT LIGHTING OPERATION MODE

When the following conditions develop, the brake light lighting operation mode stops and the normal control mode is restored.
- When the speed of at least one wheel reaches 10 km/h (6 MPH).
- When brake light lighting operation mode ends.
- When a malfunction is detected.

8. Yaw Rate and G Sensor

A: NOTE

Yaw rate & longitudinal G and lateral G sensor are integrated with the VDC control module & hydraulic control unit (VDCCM&H/U).

B: INSPECTION

1. YAW RATE & LONGITUDINAL G AND LATERAL G SENSOR SIGNAL

	Step	Check	Yes	No
1	**CHECK YAW RATE & G SENSOR.** 1) Check the installation condition of the VDC control module & hydraulic control module (VDCCM&H/U). 2) Using the Subaru Select Monitor, display «Data monitor». 3) Read the output of «Yaw Rate Sensor», «Longitudinal G Sensor» and «Lateral G Sensor».	When the vehicle is placed horizontally, are the displayed values –1.5 — 1.5 m/s^2 for longitudinal G and lateral G sensor, and –4 — 4 deg/s for yaw rate sensor?	Go to step **2**.	Replace the VDC control module & hydraulic control unit (VDCCM&H/U).
2	**PERFORM DRIVING TEST.** Drive for approximately 10 minutes, and check that there is no system malfunction or the warning light illumination while driving.	Is there any abnormal movement or the warning light illumination while driving?	Perform the diagnosis according to DTCs for the VDC system. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	G sensor is normal.

9. Steering Angle Sensor

A: REMOVAL

CAUTION:
• If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Always use the steering wheel puller for removal to avoid deforming the steering wheel.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.

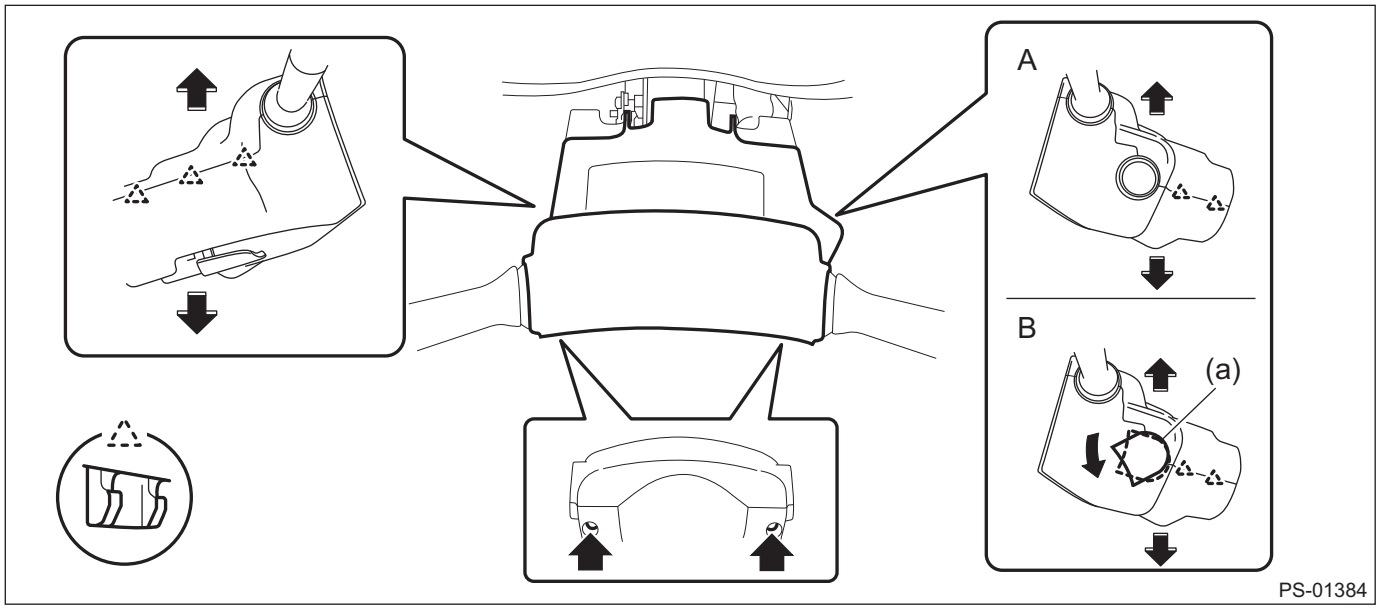
1) Position the front wheels straight ahead.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.

   (2) Remove the screws.
   (3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)

(4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



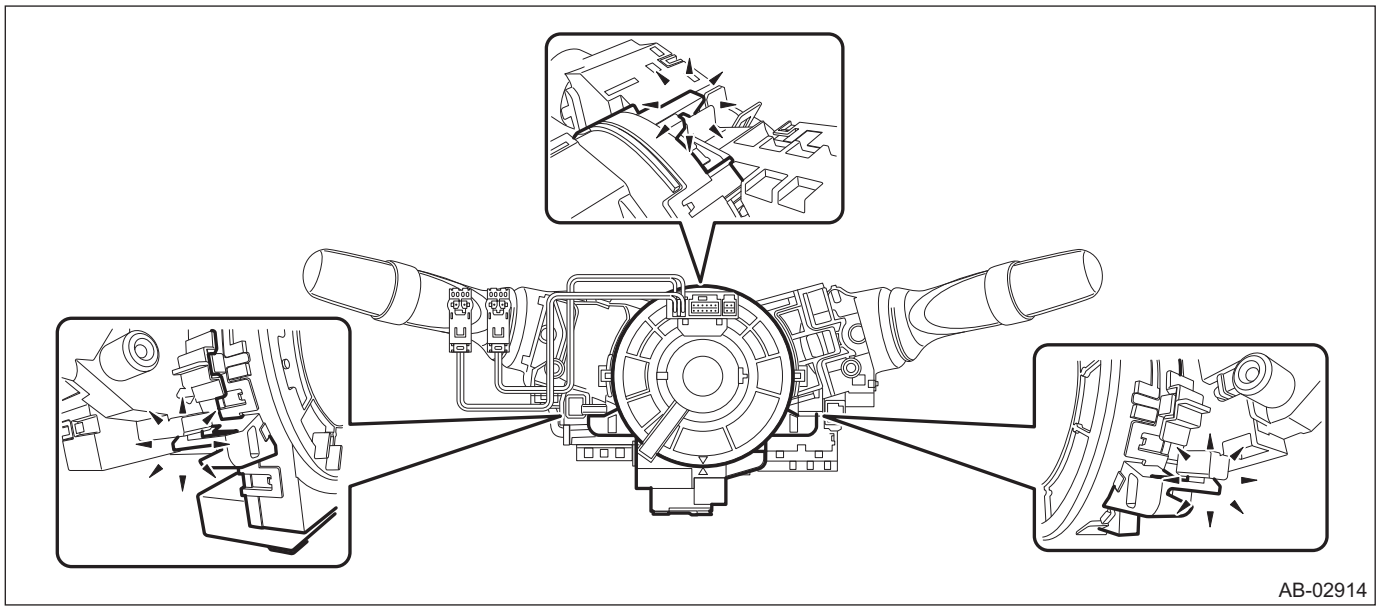
A Model without keyless access with push button start

B Model with keyless access with push button start

6) Remove the steering roll connector.

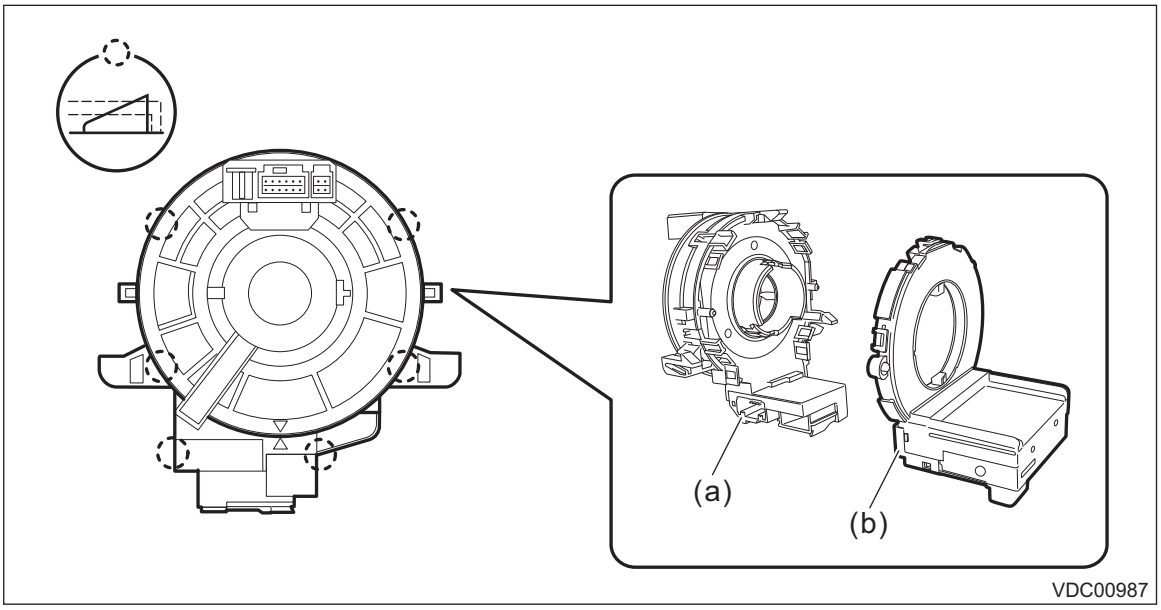
CAUTION:
Make sure that the steering roll connector is not turned from the original position.

(1) Disconnect the connector under the steering roll connector.
(2) Release the claws and remove the steering roll connector.



7) Remove the steering angle sensor.

(1) Release the claws and remove the steering angle sensor (b) from the steering roll connector (a).

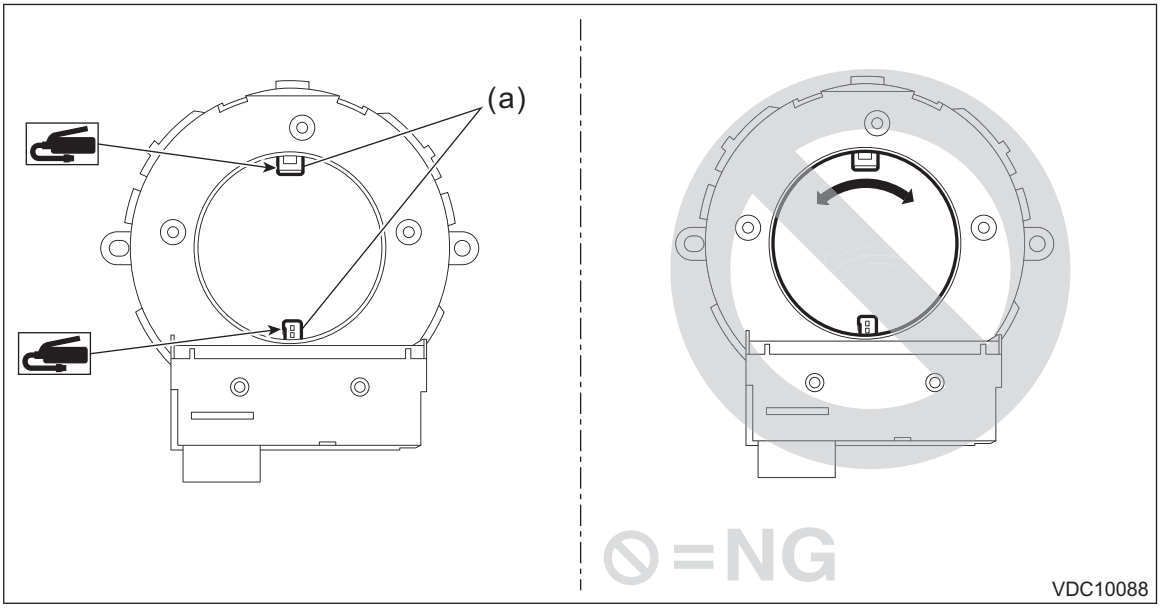


B: INSTALLATION

CAUTION:
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the steering angle sensor.
(1) Apply grease to the protrusion (a) of the new steering angle sensor.

CAUTION:
Do not rotate the steering angle sensor protrusion.



(2) Align the center of steering roll connector. <Ref. to AB-63, INSTALLATION, Roll Connector.>
(3) Align the position of the protrusion and install the steering angle sensor to the steering roll connector.
2) Install the cover assembly - column.
3) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

4) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-16, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

10.Front ABS Wheel Speed Sensor

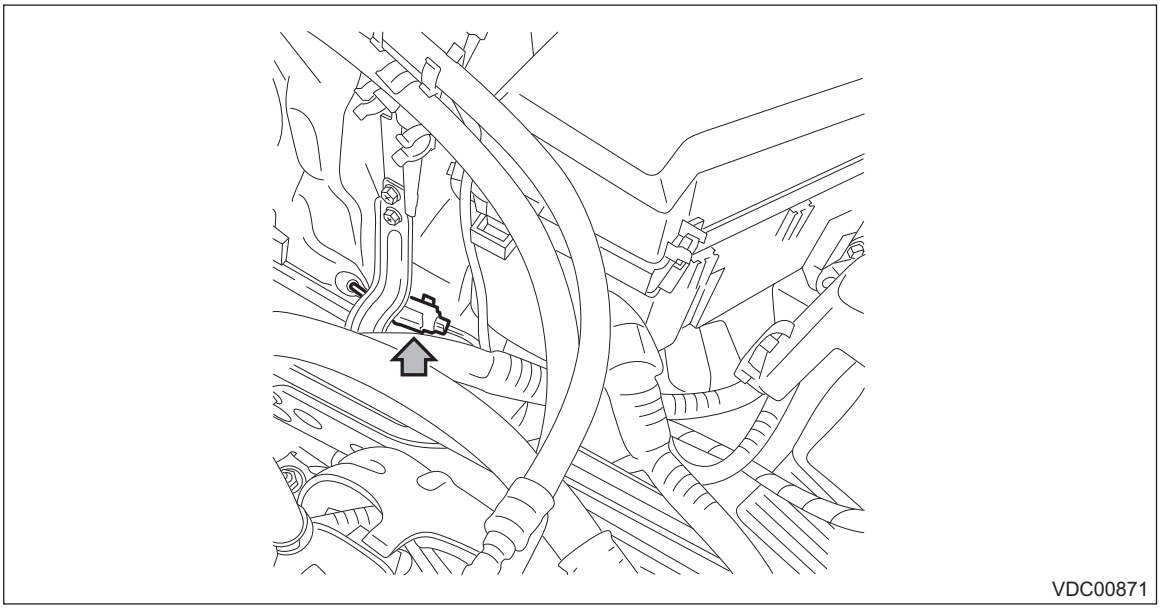
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

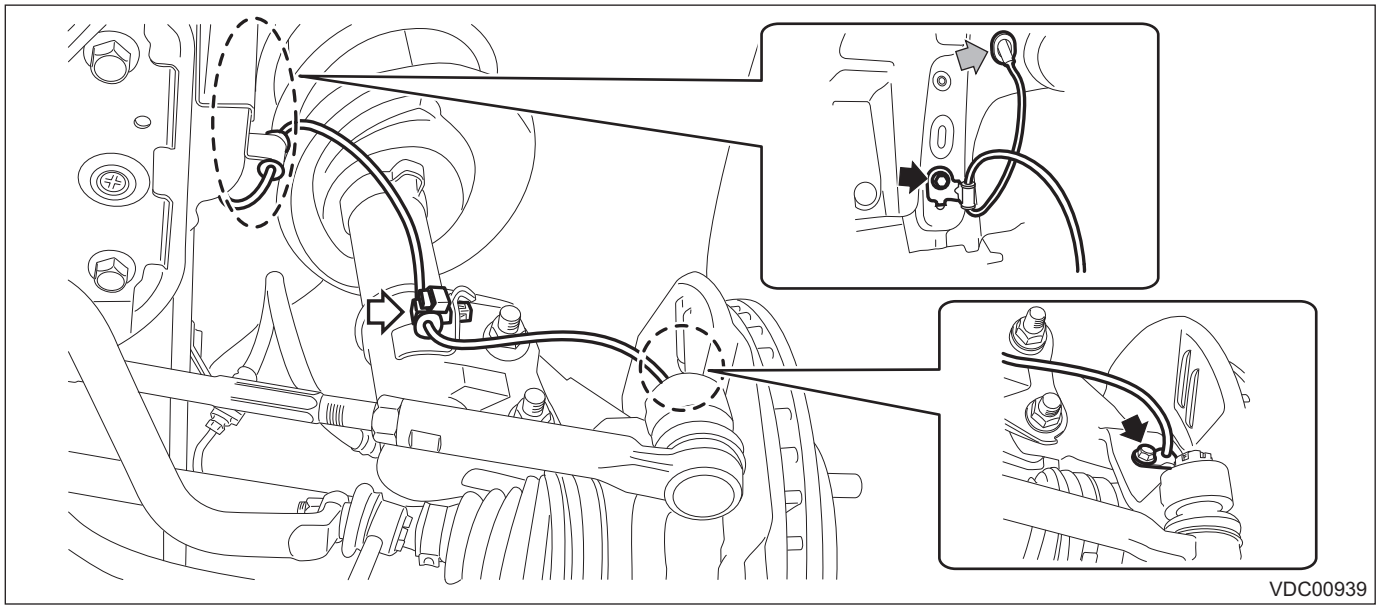
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the front wheels.
3) Remove the front ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp on the vehicle side.**

(1) Disconnect the connector of the front ABS wheel speed sensor in the engine compartment.



(2) Remove each harness clip and grommet.
(3) Remove the bolts, and remove the front ABS wheel speed sensor from the housing assembly - front axle.



B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**

1) Install the front ABS wheel speed sensor.

Tightening torque:
Front ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front ABS wheel speed sensor bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

2) Install the front wheels.

Tightening torque:
Front wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.

NOTE:
Check if the harness is not pulled and does not come in contact with the suspension or body while operating the steering.

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Brake Control System» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «FR Wheel Speed» and «FL Wheel Speed».

2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.

3) If the inspection result shows that the value for either side alone does not change on the display screen, swap the ABS wheel speed sensors between LH and RH and then check again to see if the value changes or not.

NOTE:
Using a tape or the like, mark the one on which the value did not change.

- If the inspection result shows that the value does not change on the sensor marked: Replace the relevant ABS wheel speed sensor.
- If the inspection result shows that the value does not change on the sensor not marked: Place the ABS wheel speed sensor that is not marked to the original position, and perform unit inspection on the ABS wheel speed sensor that is marked. <Ref. to VDC-32, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

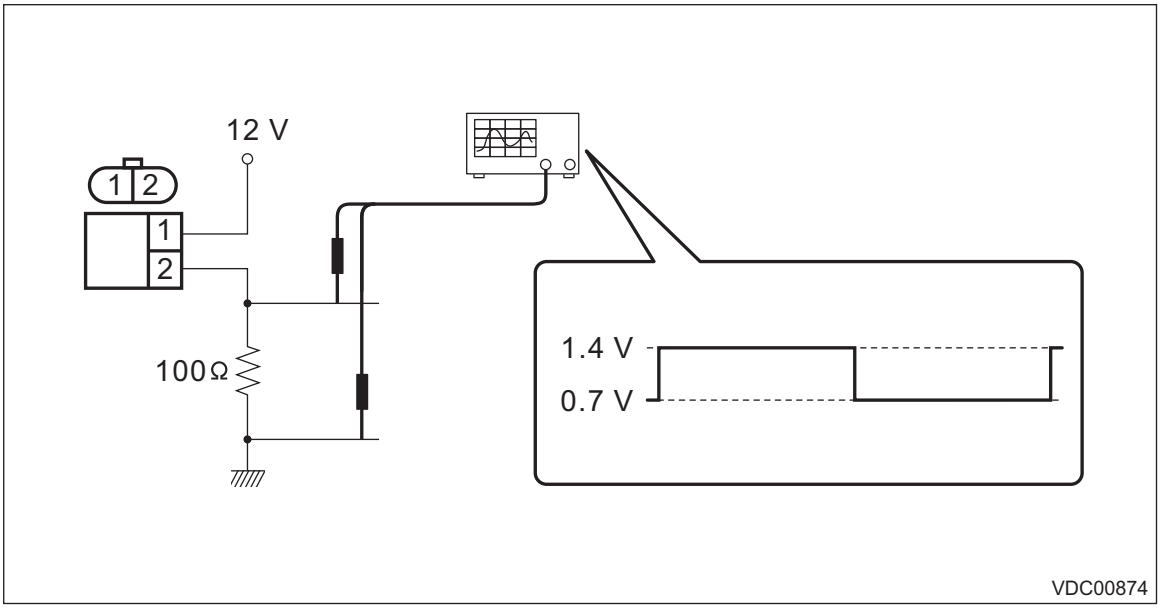
1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.

2) Disconnect the ABS wheel speed sensor connector.

3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.

4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V



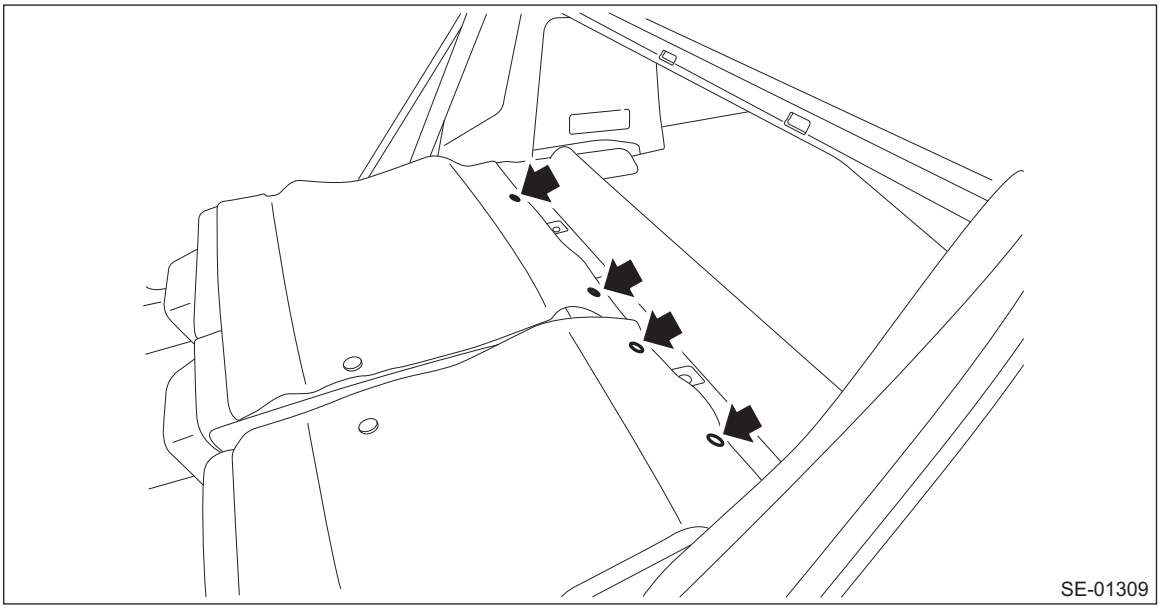
- If the inspection result shows that the output voltage is out of the standard value: Replace the magnetic encoder (hub unit bearing).
- If the inspection result shows that the output voltage is within standard value: Replace the VDCCM&H/U.

11.Rear ABS Wheel Speed Sensor

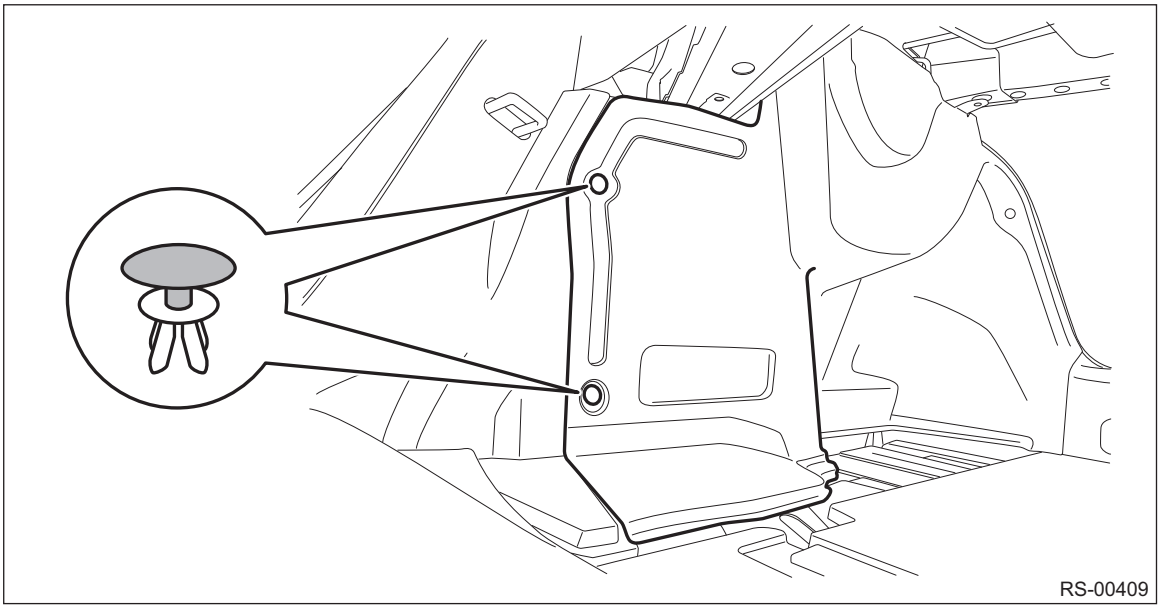
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle, and then remove the rear wheels.
3) Take out the trunk mat.
4) Tilt the backrest assembly of the rear seat forward.
5) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.



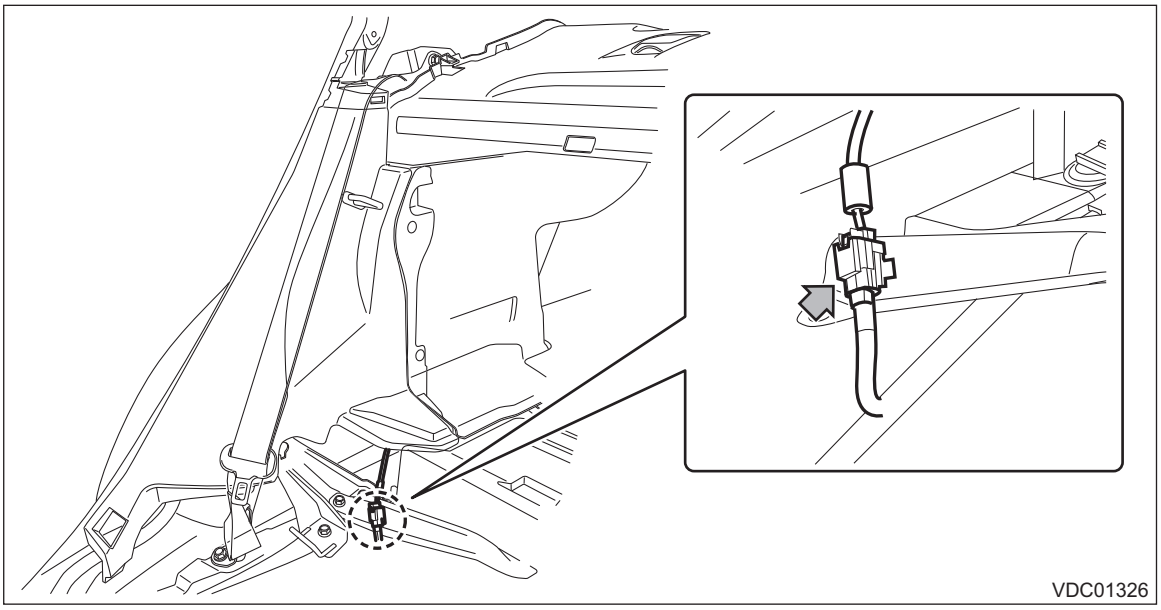
6) Remove the clips, and turn over the trim panel - trunk side.



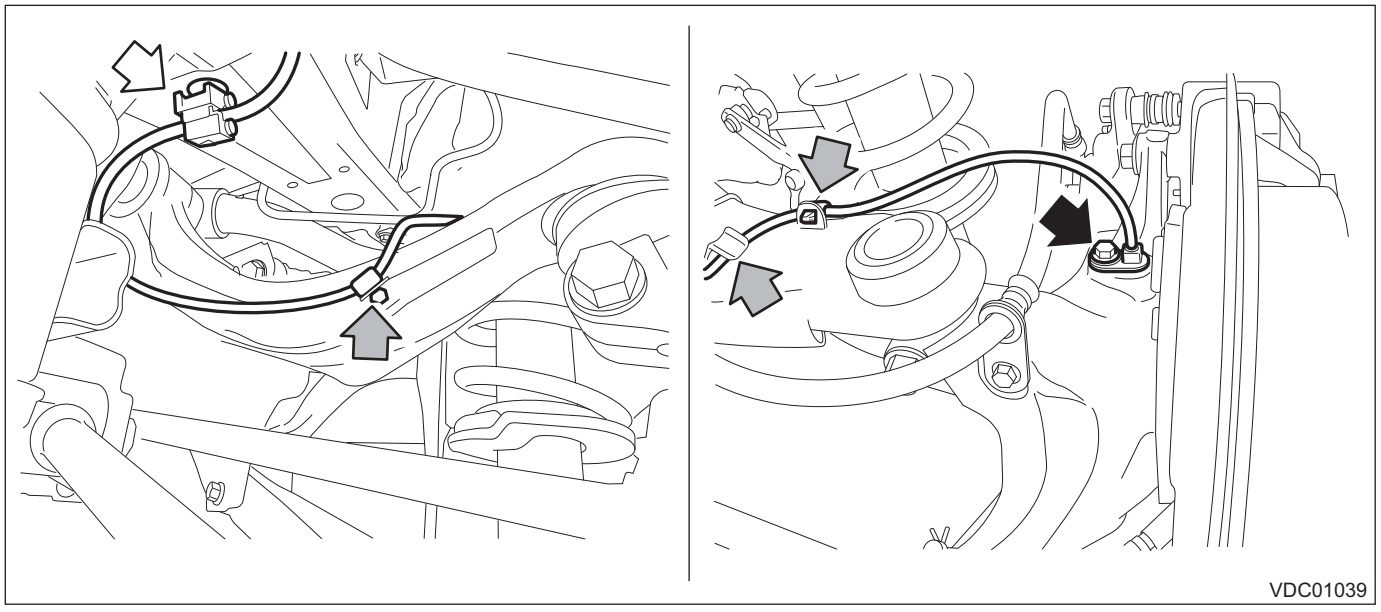
7) Remove the rear ABS wheel speed sensor.

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Leave the sensor harness clamp on the vehicle side.**

(1) Disconnect the connector of the rear ABS wheel speed sensor.



(2) Remove the grommet from the rear wheel housing, and pull out the connector of the rear ABS wheel speed sensor.
(3) Remove the clip and bolt on the harness clamp, and remove the rear ABS wheel speed sensor.



B: INSTALLATION

CAUTION:
- **Be careful not to damage the sensor.**
- **Do not apply excessive force to the sensor harness.**
- **Securely install the sensor harness to the rear upper arm assembly bracket.**

1) Install the rear ABS wheel speed sensor.

NOTE:
Check the identification (mark) on the harness to make sure there is no warpage. <Ref. to VDC-2, SPECIFICATION, General Description.>

Tightening torque:
Rear ABS wheel speed sensor: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the rear wheels.

Tightening torque:
Rear wheel: 120 N·m (12.2 kgf-m, 88.5 ft-lb)

3) Lower the vehicle.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. CHECK WITH SUBARU SELECT MONITOR

1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Brake Control System» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «RR Wheel Speed» and «RL Wheel Speed».

2) Check if the speed indicated on the display changes in the same manner as the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3) If the inspection result shows that the value for either side alone does not change on the display screen, swap the ABS wheel speed sensors between LH and RH and then check again to see if the value changes or not.

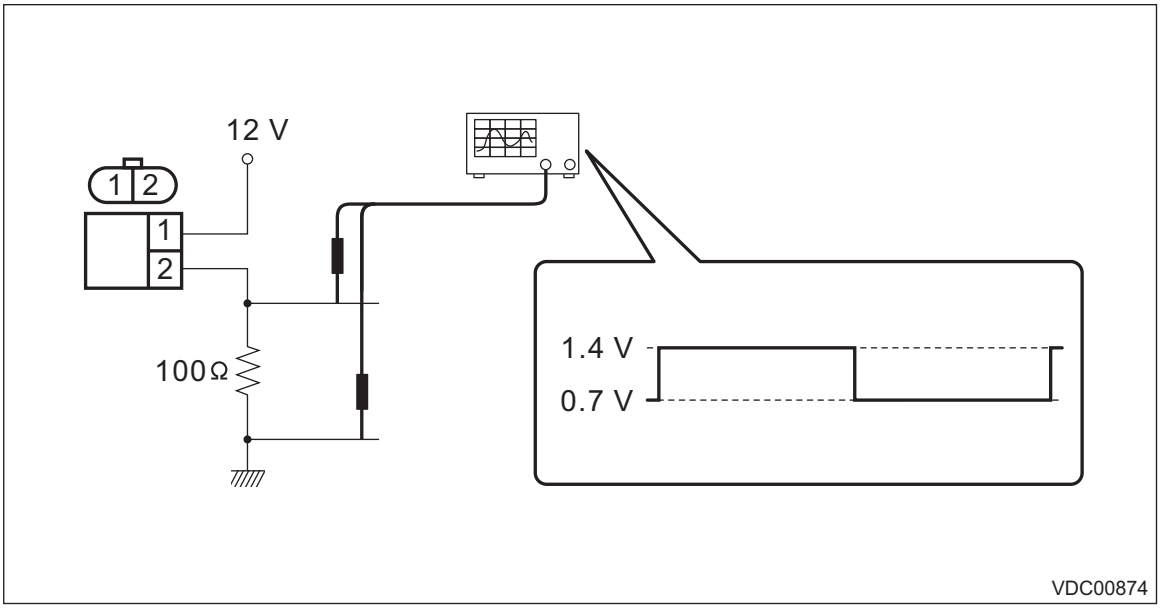
NOTE:
Using a tape or the like, mark the one on which the value did not change.

- If the inspection result shows that the value does not change on the sensor marked: Replace the relevant ABS wheel speed sensor.
- If the inspection result shows that the value does not change on the sensor not marked: Place the ABS wheel speed sensor that is not marked to the original position, and perform unit inspection on the ABS wheel speed sensor that is marked. <Ref. to VDC-36, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>

2. CHECK ABS WHEEL SPEED SENSOR UNIT

1) Visually check the tip of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the tip or replace the ABS wheel speed sensor.
2) Disconnect the ABS wheel speed sensor connector.
3) Check the ABS wheel speed sensor cable for discontinuity. If defective, replace the ABS wheel speed sensor.
4) Connect a 12 V power supply to No. 1 terminal of ABS wheel speed sensor connector, then attach resistance to the No. 2 terminal. Rotate the wheel at about 2.75 km/h (2 MPH), and measure the voltage using an oscilloscope.

Standard value of output voltage:
0.7 — 1.4 V



- If the inspection result shows that the output voltage is out of the standard value: Replace the magnetic encoder (hub unit bearing).
- If the inspection result shows that the output voltage is within standard value: Replace the VDCCM&H/U.

12.Front Magnetic Encoder

A: REMOVAL

Refer to “Front Hub Unit Bearing” for removal, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-23, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION

Refer to “Front Hub Unit Bearing” for installation, because the front magnetic encoder is integrated with the hub unit COMPL - front axle. <Ref. to DS-24, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit COMPL - front axle.

NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

13.Rear Magnetic Encoder

A: REMOVAL

Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-36, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION

Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with the hub unit COMPL - rear axle. <Ref. to DS-37, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION

Visually check the magnetic encoder parts for any damage. If necessary, replace with a new hub unit COMPL - rear axle.

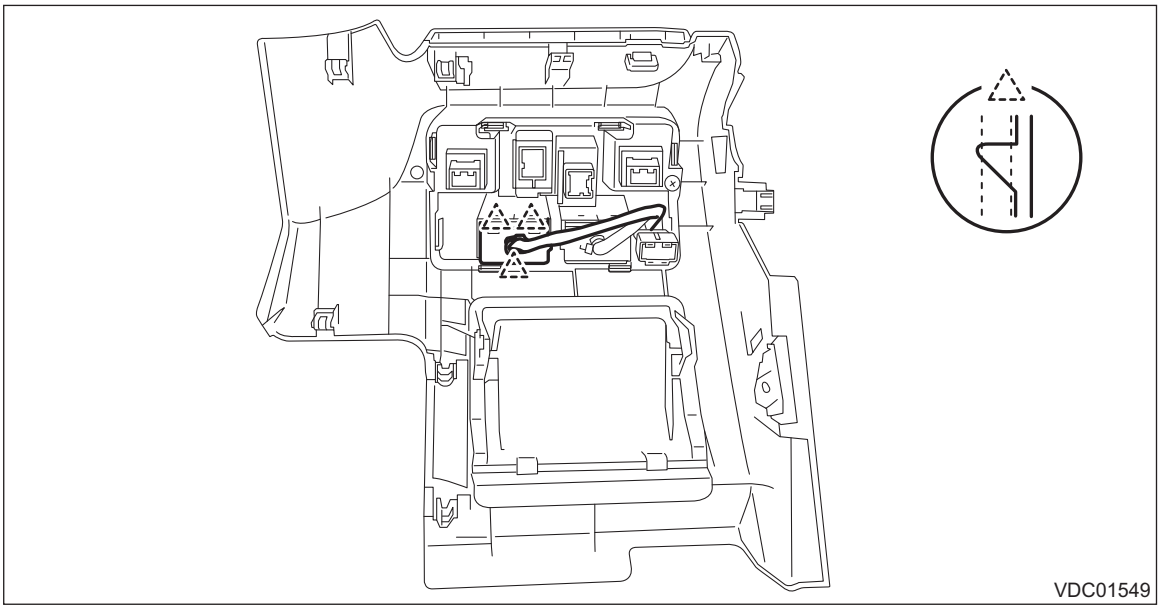
NOTE:
Because the magnetic encoder is integrated with hub unit COMPL, replace the hub unit COMPL with a new part if there is any defect found on the magnetic encoder.

14.VDC OFF Switch

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Release the claws and remove the VDC OFF switch.



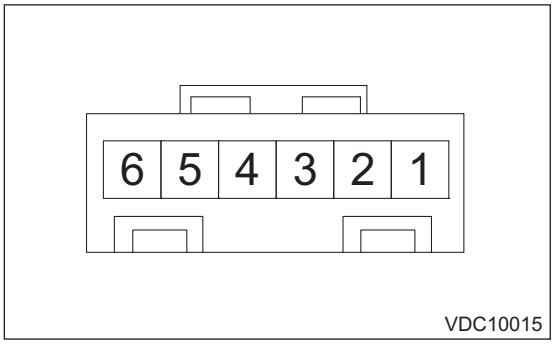
B: INSTALLATION

1) Install the VDC OFF switch.
2) Install the cover assembly - instrument panel LWR driver OUT.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Remove the VDC OFF switch. <Ref. to VDC-40, REMOVAL, VDC OFF Switch.>
2) Measure the resistance between the VDC OFF switch terminals.

Preparation tool:
Circuit tester



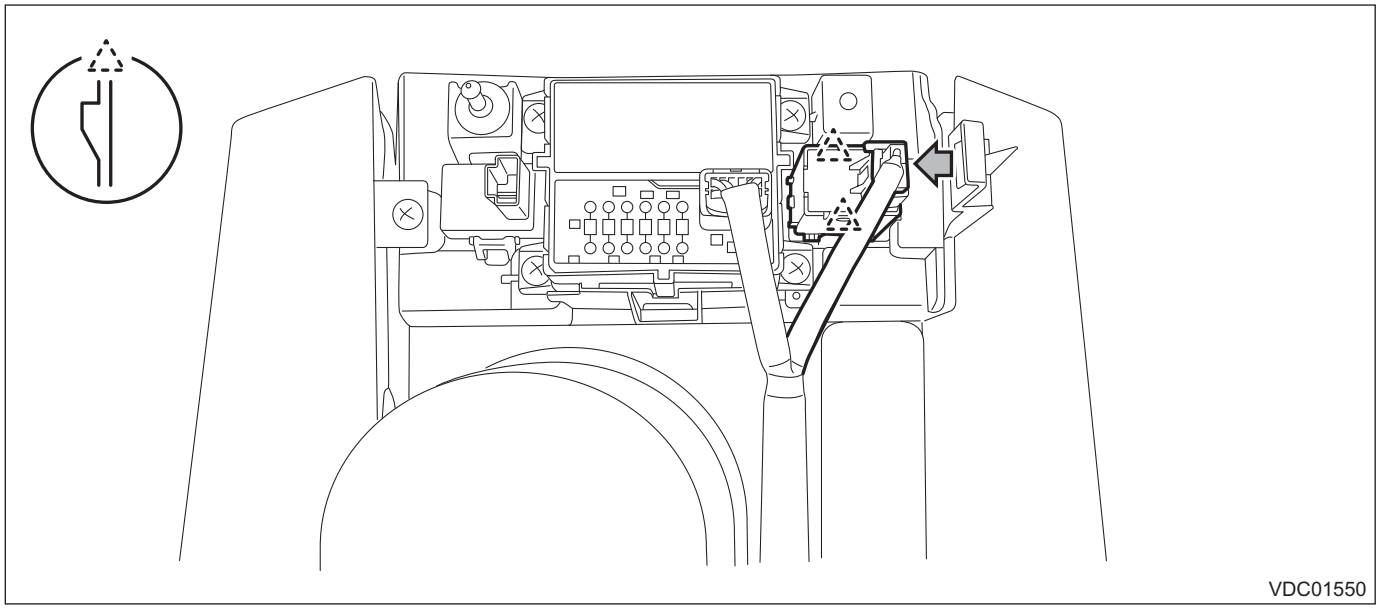
Terminal No.	Inspection conditions	Standard
5 — 6	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

NOTE:
Replace the VDC OFF switch if the inspection result is not within the standard value.
3) Install the VDC OFF switch. <Ref. to VDC-40, REMOVAL, VDC OFF Switch.>

15.Auto Vehicle Hold Switch

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the console box assembly. <Ref. to EI-70, MODEL WITH PARKING BRAKE LEVER, REMOVAL, Console Box.>
3) Remove the parking brake switch. <Ref. to PB-27, REMOVAL, Parking Brake Switch.>
4) Disconnect the connector, and remove the auto vehicle hold switch.



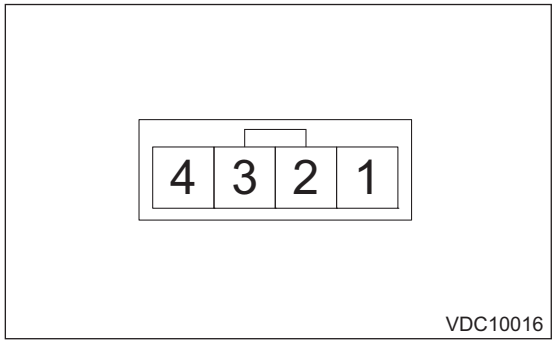
B: INSTALLATION

1) Install the auto vehicle hold switch.
2) Install the parking brake switch. <Ref. to PB-27, INSTALLATION, Parking Brake Switch.>
3) Install the console box assembly. <Ref. to EI-73, MODEL WITH PARKING BRAKE LEVER, INSTALLATION, Console Box.>
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



(1) Measure the resistance between auto vehicle hold switch terminals.

Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

(2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
2 (+) — 3 (–)	Apply battery voltage.	Light ON

2) Replace the auto vehicle hold switch if the inspection result is not within the standard value.

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

VDC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	4
3.	General Description	11
4.	Electrical Component Location	13
5.	Control Module I/O Signal	16
6.	Subaru Select Monitor	19
7.	Read Diagnostic Trouble Code (DTC)	28
8.	Inspection Mode	29
9.	Clear Memory Mode	30
10.	Warning Light Illumination Pattern	31
11.	List of Diagnostic Trouble Code (DTC)	60
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	64
13.	General Diagnostic Table	140

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
Remove foreign matter (dust, water, oil etc.) from the VDCCM&H/U connector during removal and installation.

NOTE:
- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to VDC(diag)-4, Check List for Interview.> 2) Before performing diagnostics, check the component which might affect VDC or parking brake system problems. <Ref. to VDC(diag)-11, INSPECTION, General Description.>	Is the check result OK?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to VDC(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to VDC(diag)-25, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.

	Step	Check	Yes	No
3	**PERFORM GENERAL DIAGNOSTICS.** 1) Perform the inspection by referring to “General Diagnostic Table”. <Ref. to VDC(diag)-140, INSPECTION, General Diagnostic Table.> 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Check that the DTC is not displayed.	Do the VDC warning light & VDC indicator light, VDC OFF indicator light and ABS warning light go off after starting the engine? Does the electronic parking brake operation indicator light go off with the electronic parking brake disengaged?	Finish the diagnosis.	Check the combination meter circuit. <Ref. to VDC(diag)-44, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-45, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-46, ELECTRONIC PARKING BRAKE INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-47, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-60, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-29, PROCEDURE, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

2. STATE OF VDC WARNING LIGHT & VDC INDICATOR LIGHT

VDC warning light & VDC indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)

Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

3. STATE OF VDC OFF INDICATOR LIGHT

VDC OFF indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

4. STATE OF BRAKE WARNING LIGHT

Brake warning light illuminates/goes off/ blinks.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Does not go off ❑ Blinks • When/How long does illuminate/go off/blink?

Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

5. CONDITION OF ELECTRONIC PARKING BRAKE OPERATION INDICATOR LIGHT

Electronic parking brake operation indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)

Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

6. ELECTRONIC PARKING BRAKE WARNING LIGHT CONDITION

Electronic parking brake warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START ❑ When the parking brake switch is pressed ❑ When the parking brake switch is pulled ❑ When the parking brake switch is pressed continually (times) ❑ When the parking brake switch is pulled continually (times)		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

7. CONDITION OF HILL START ASSIST WARNING LIGHT

Hill start assist warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

8. STATE OF AVH OPERATION INDICATOR LIGHT

AVH operation indicator light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH
	❑ When turning to the right	Steering angle:	deg
		Steering time:	Sec.
	❑ When turning to the left	Steering angle:	deg
		Steering time:	Sec.
	❑ When other electrical parts are operating		
	• Part name: • Operating condition:		

9. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
	b) Ambient temperature	°C (°F)
	c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Uphill ❑ Downhill ❑ Paved road ❑ Gravel road ❑ Muddy road ❑ Sandy place ❑ Straight road ❑ Sharp curve ❑ Gentle curve ❑ S-curve ❑ Road with a slope on both sides ❑ Others:
	d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Frozen slope ❑ Others:

Check List for Interview

Condition	a) Brakes	Deceleration:	G
		❑ continuous / ❑ intermittent	
	b) Accelerator	Acceleration:	G
		❑ continuous / ❑ intermittent	
	c) Vehicle speed	km/h	MPH
		❑ Advancing ❑ While accelerating ❑ While decelerating ❑ At low speed ❑ When turning ❑ Others:	
	d) Tire inflation pressure	Front RH tire:	kPa
		Front LH tire:	kPa
		Rear RH tire:	kPa
		Rear LH tire:	kPa
	e) Degree of wear	Front RH tire:	mm (in)
		Front LH tire:	mm (in)
		Rear RH tire:	mm (in)
		Rear LH tire:	mm (in)
	f) Steering wheel	❑ Sharp turning ❑ Gentle turning ❑ Straight forward motion ❑ Gentle return ❑ Sharp return	
	g) Tire/Wheel size	❑ Specified size ❑ Except specification ( )	
	h) Tire variation	❑ Summer tire ❑ Studless tire (brand:)	
	i) Tire chain is attached: ❑ Yes / ❑ No		
	j) Using T-type tires: ❑ Yes / ❑ No		
	k) Condition of suspension alignment:		
	l) Load condition:		
	m) Repaired parts are used: ❑ Yes / ❑ No		
	• Content:		
	n) Others:		

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>

2. GROUND

Check the installation of the ground bolt for VDC.

3. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

4. HYDRAULIC UNIT

Check the hydraulic unit.
• When using the brake tester <Ref. to VDC-14, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH THE BRAKE TESTER, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• When not using the brake tester <Ref. to VDC-12, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. BRAKE DRAG

Check for brake drag.

6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
• Front <Ref. to BR-27, INSPECTION, Front Brake Pad.> <Ref. to BR-31, INSPECTION, Front Disc Rotor.>
• Rear <Ref. to BR-53, INSPECTION, Rear Brake Pad.> <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>

7. PARKING BRAKE ASSEMBLY

Check and adjust the parking brake assembly.
• Check the disc rotor inner diameter and lining thickness. <Ref. to PB-18, INSPECTION, Parking Brake Assembly (Rear Disc Brake).>
• Adjust the shoe clearance. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

8. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

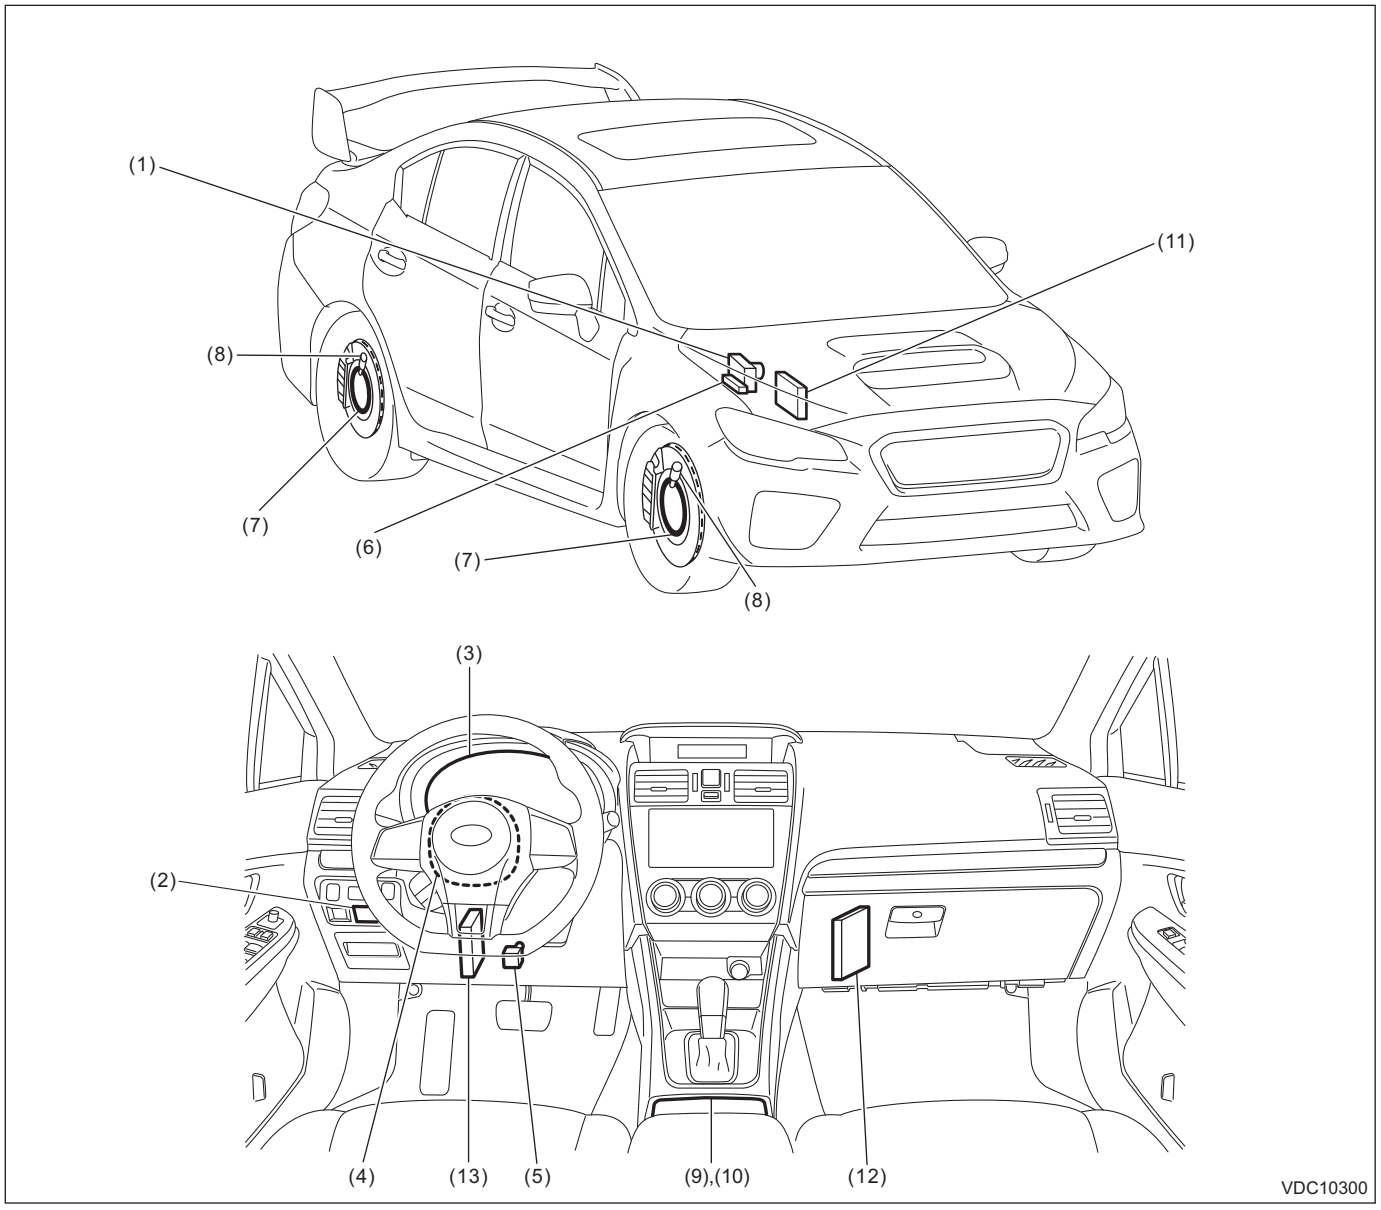
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

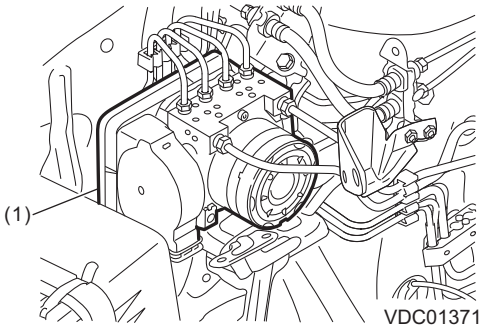
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

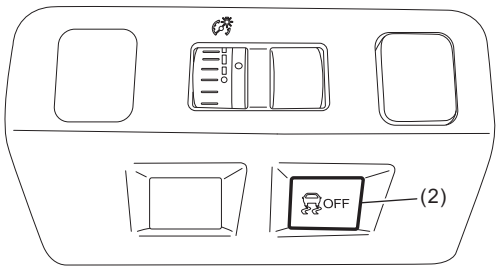
A: LOCATION



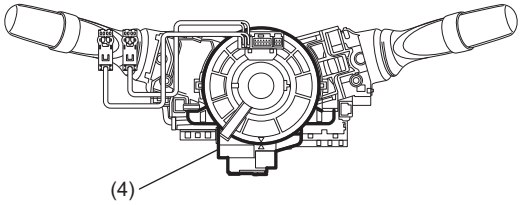
(1) VDC control module and hydraulic control unit (VDCCM&H/U)
(2) VDC OFF switch
(3) Combination meter
(4) Steering angle sensor
(5) Stop light and brake switch
(6) Stop light relay
(7) Magnetic encoder
(8) ABS wheel speed sensor
(9) Electronic parking brake switch (model with EyeSight)
(10) AVH switch (models with EyeSight)
(11) Engine control module (ECM) (CVT model)
(12) Engine control module (ECM) (MT model)
(13) Transmission control module (TCM)



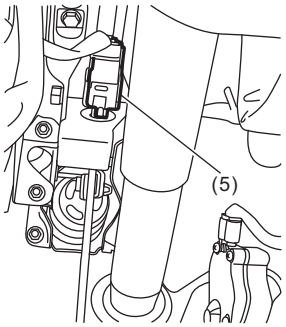
VDC01371



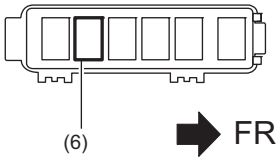
VDC01275



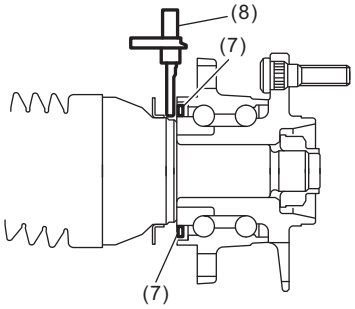
VDC10301



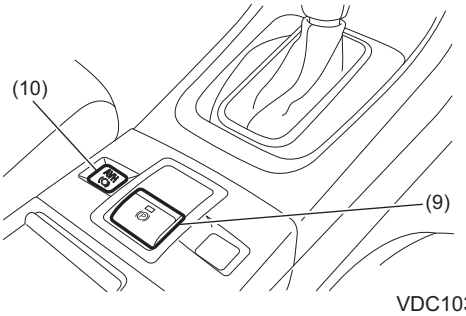
VDC10302



VDC10025

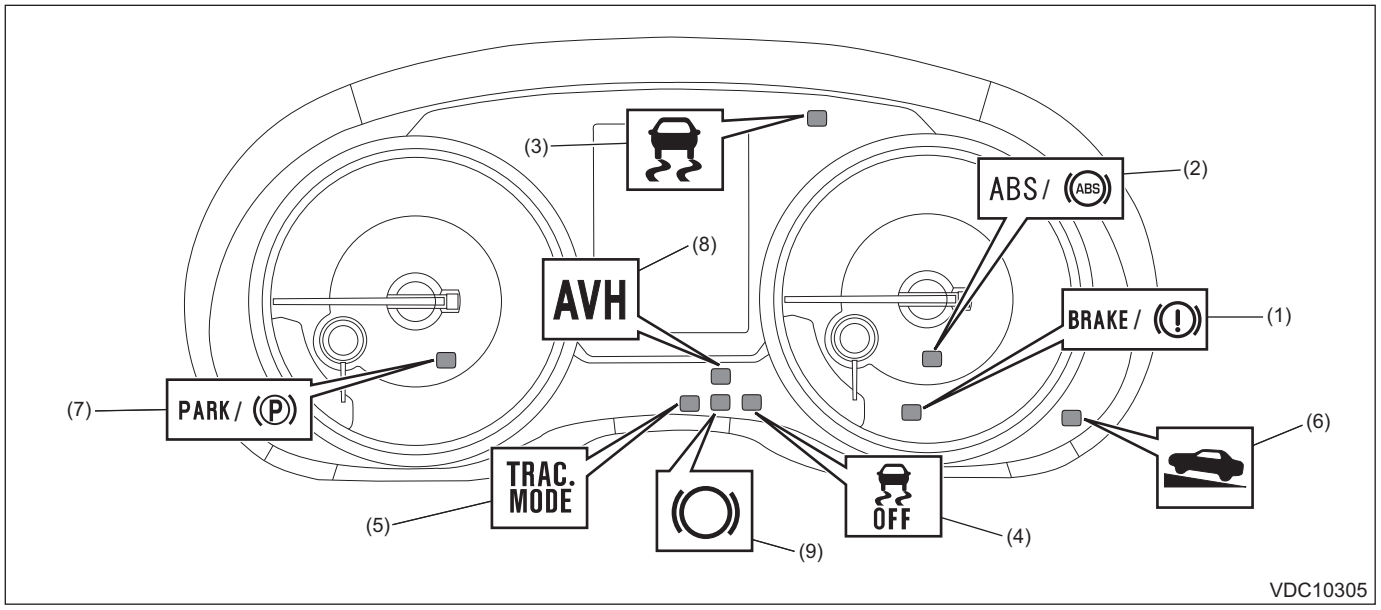


VDC10024



VDC10303

Combination meter

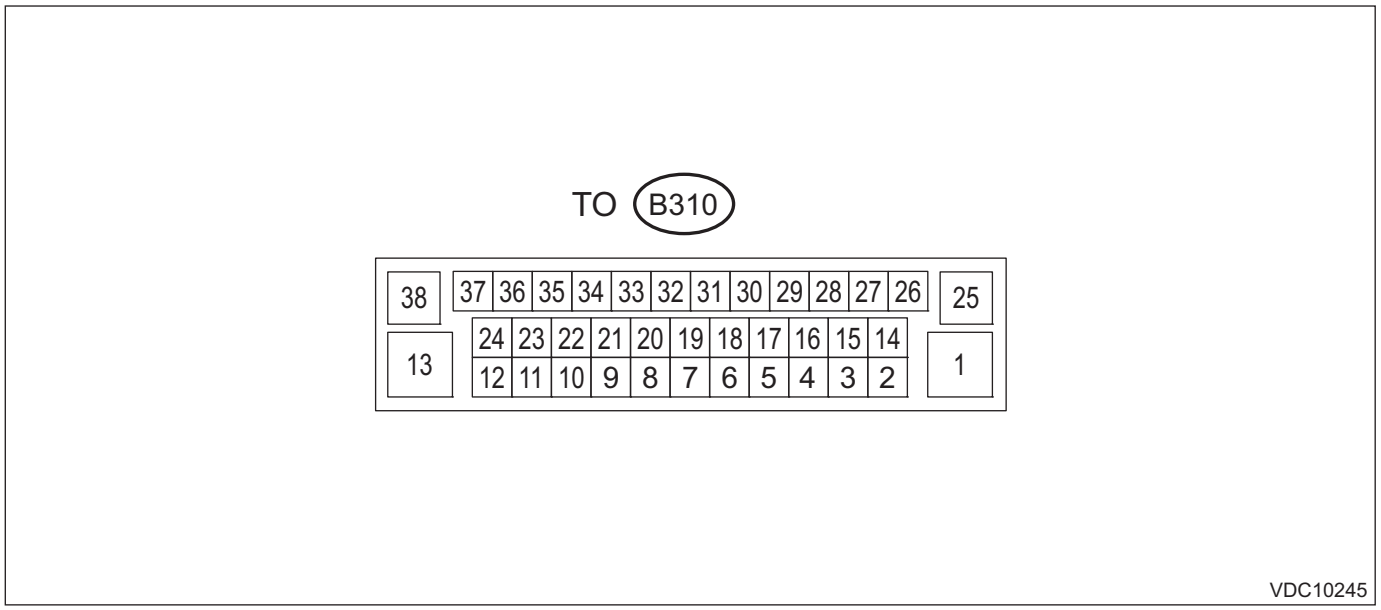


(1) Brake warning light (EBD warning light) (model without EyeSight) Brake warning light (EBD warning light) and electronic parking brake warning light (model with EyeSight)
(2) ABS warning light
(3) VDC warning light & VDC indicator light
(4) VDC OFF indicator light
(5) VDC traction mode indicator light
(6) Hill start assist warning light (model without EyeSight)
(7) Electronic parking brake operation indicator light (model with EyeSight)
(8) AVH ON indicator light (models with EyeSight)
(9) AVH operation indicator light (models with EyeSight)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Models without EyeSight

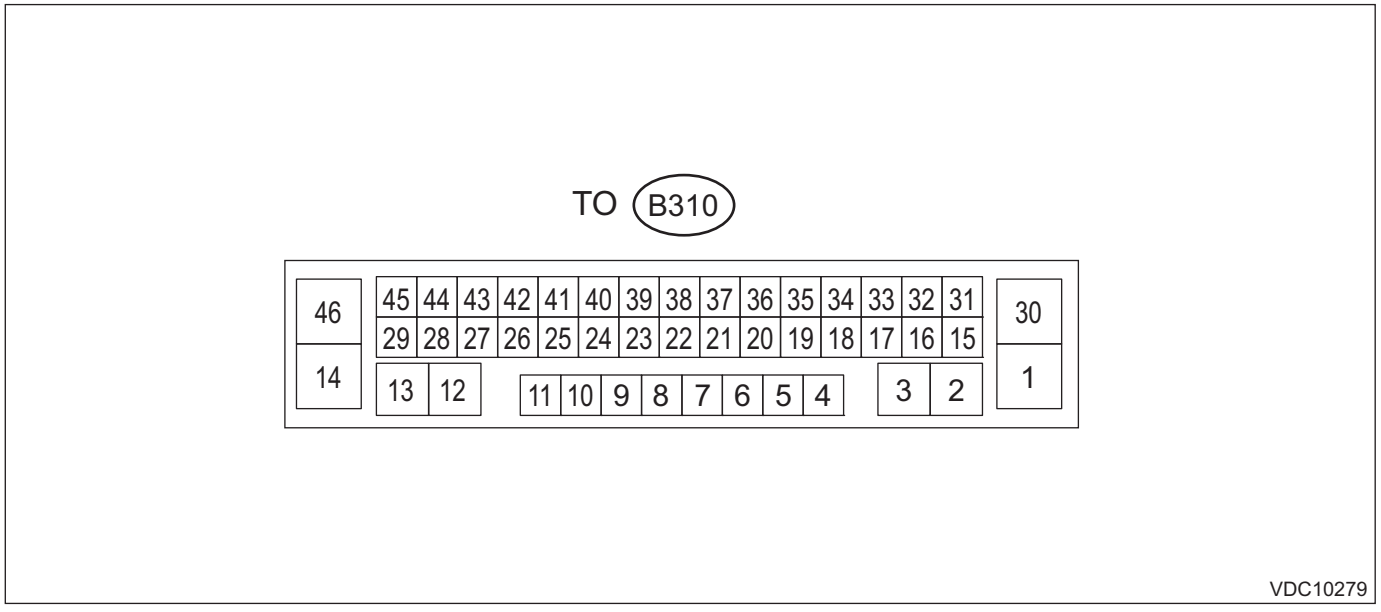


NOTE:

- Terminal numbers in VDCCM&H/U connector (on the control module side) are shown in the figure.
- When the connector is removed from the VDCCM&H/U, the brake warning light (EBD warning light), ABS warning light, VDC warning light & VDC indicator light, VDC OFF indicator light, and the hill start assist warning light illuminate.

Content			Terminal No. (+) — (–)	Input/Output signal
				Measured value and measuring conditions
Power supply			6 — 13	10 — 15 V when the ignition switch is ON.
ABS wheel speed sensor	Front LH wheel	Power supply	36 — 13	0 — 18 V when the ignition switch is ON.
		Signal	37	7 — 14 mA: Rectangle waveform
	Front RH wheel	Power supply	27 — 13	0 — 18 V when the ignition switch is ON.
		Signal	26	7 — 14 mA: Rectangle waveform
	Rear LH wheel	Power supply	29 — 13	0 — 18 V when the ignition switch is ON.
		Signal	30	7 — 14 mA: Rectangle waveform
	Rear RH wheel	Power supply	34 — 13	0 — 18 V when the ignition switch is ON.
		Signal	33	7 — 14 mA: Rectangle waveform
Valve relay power supply			25 — 13	10 — 15 V
Motor relay power supply			1 — 13	10 — 15 V
Stop light switch			2 — 13	1.5 V or less when the stop light is OFF; 10 — 15 V when the stop light is ON.
Vehicle speed output signal			5	0 ←→ 12 V pulse
VDC OFF switch			20 — 13	1 Ω or less when the OFF switch is “ON”; 1 MΩ or more when the switch is “OFF”.
CAN communication line (H)			11	Pulse signal
CAN communication line (L)			10	Pulse signal
Ground			13	—

- Models with EyeSight



NOTE:

- Terminal numbers in VDCCM&H/U connector (on the control module side) are shown in the figure.
- When the connector is removed from the VDCCM&H/U, the brake warning light (EBD warning light), ABS warning light, VDC warning light & VDC operation indicator light and VDC OFF indicator light illuminate.

Content			Terminal No. (+) — (–)	Input/Output signal
				Measured value and measuring conditions
Power supply			35 — 14	10 — 15 V when the ignition switch is ON.
ABS wheel speed sensor	Front LH wheel	Power supply	9 — 14	0 — 18 V when the ignition switch is ON.
		Signal	8	7 — 14 mA: Rectangle waveform
	Front RH wheel	Power supply	5 — 14	0 — 18 V when the ignition switch is ON.
		Signal	4	7 — 14 mA: Rectangle waveform
	Rear LH wheel	Power supply	7 — 14	0 — 18 V when the ignition switch is ON.
		Signal	6	7 — 14 mA: Rectangle waveform
	Rear RH wheel	Power supply	11 — 14	0 — 18 V when the ignition switch is ON.
		Signal	10	7 — 14 mA: Rectangle waveform
Valve relay power supply			30 — 14	10 — 15 V
Motor relay power supply			1 — 14	10 — 15 V
Stop light switch			15 — 14	1.5 V or less when the stop light is OFF; 10 — 15 V when the stop light is ON.
Stop light relay power supply			25 — 14	10 — 15 V when the ignition switch is ON.
Vehicle speed output signal			22	0 ←→ 12 V pulse
VDC OFF switch			31 — 14	1 Ω or less when the OFF switch is “ON”; 1 MΩ or more when the switch is “OFF”.
Parking brake switch			17	Pulse signal
Parking brake switch			18	Pulse signal
Parking brake switch			19	Pulse signal
Parking brake switch			24	Pulse signal
Rear brake caliper RH			2 — 3	Pulse signal
Rear brake caliper LH			12 — 13	Pulse signal
AVH switch			36 — 14	10 — 15 V when the AVH switch is ON
Electronic parking brake operation indicator light			33 — 14	0 V when the light is on; 10 — 15 V when the light is off.
CAN communication line (H)			42	Pulse signal
CAN communication line (L)			43	Pulse signal
Ground			14	—

B: WIRING DIAGRAM

Refer to “Vehicle Dynamics Control System” in the wiring diagram. <Ref. to WI-365, Vehicle Dynamics Control System.>

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «Data Monitor».

- Models without EyeSight

Display	Contents to be displayed	Unit of measure
Trip Count	Total number of ignition switch ON	times
Count	Counter	—
Time [msec]	Elapsed time after ignition switch ON	ms
FR Wheel Speed	Wheel speed detected by front ABS wheel speed sensor RH is displayed.	km/h or MPH
FL Wheel Speed	Wheel speed detected by front ABS wheel speed sensor LH is displayed.	km/h or MPH
RR Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor RH is displayed.	km/h or MPH
RL Wheel Speed	Wheel speed detected by rear ABS wheel speed sensor LH is displayed.	km/h or MPH
Steering Angle Sensor	Steering angle detected by steering angle sensor is displayed.	deg
Yaw Rate Sensor	Angle of the vehicle detected by yaw rate sensor is displayed.	deg/s
Master Cylinder Pressure Sensor	Brake fluid pressure detected by pressure sensor is displayed.	bar
Longitudinal G Sensor	Vehicle longitudinal acceleration detected by longitudinal G sensor is displayed.	m/s^2
Lateral G Sensor	Vehicle lateral acceleration detected by lateral G sensor is displayed.	m/s^2
Ignition Voltage	Voltage supplied to VDCCM&H/U is displayed.	V
M. Relay monitor Voltage	Voltage applied to the motor relay is displayed.	V
Motor Relay Signal	Motor relay driving signal is displayed.	ON or OFF
Valve Relay Signal	Valve relay driving signal is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF

Motor Relay Signal	Motor relay driving signal is displayed.	ON or OFF
Valve Relay Signal	Valve relay driving signal is displayed.	ON or OFF
EBD Warning Light	ON operation of the EBD warning light is displayed.	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF
VDC Warning Lamp	ON operation of the VDC warning light is displayed.	ON or OFF
EBD Control Flag	EBD operation condition is displayed.	ON or OFF
ABS Control Flag	ABS operation condition is displayed.	ON or OFF
TCS Control Flag	TCS operation condition is displayed.	ON or OFF
VDC Control Flag	VDC operation condition is displayed.	ON or OFF
E/G Torque Down Control Stop Flag	Engine control command signal is displayed.	1 or 0
Stop-lamp relay drive signal	Brake light relay driving signal is displayed.	ON or OFF
E/G torques up Control Stop Flag	Engine control command signal is displayed.	1 or 0
VDC-OFF Light	ON/OFF condition of VDC OFF indicator light is displayed.	ON or OFF
OFF SW Signal	Operation condition of VDC OFF switch is displayed.	ON or OFF
Brake Light Switch	Brake ON/OFF is displayed.	ON or OFF
Incline	Incline of the vehicle is displayed.	%
Total Operation Number	Total number of the electronic parking brake operation is displayed.	times
Auto Vehice Hold Operation Number	Number of times that the AVH function activated is displayed.	times
Auto Operation Number	Number of times that an electronic parking brake operated automatically while using the adaptive cruise control is displayed.	times
Auto Cancel Number	Number of times that an automatic accelerator interlock cancel function operated at starting is displayed.	times

Display	Contents to be displayed	Unit of measure
Parking Operation Number when driving	Number of the parking brake operation while driving is displayed.	times
Engine Torque	Engine torque is displayed.	N·m
Ambient Temp Sensor	Ambient temperature is displayed.	°C
Manual Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Auto Parking Operation	Parking brake operation condition is displayed.	ON or OFF
Parking Operation when driving	Parking brake operation condition is displayed.	ON or OFF
Parking Cancel	Parking brake operation condition is displayed.	ON or OFF
Auto Vehice Hold ON Lamp	AVH ON indicator control condition is displayed.	ON or OFF
Ignition Signal	Input condition of ignition signal is displayed.	ON or OFF
Brake Warning Light	Brake warning light control condition is displayed.	ON or OFF
Parking System Warning Light	Control condition of electric parking brake warning light is displayed.	ON or OFF
Neutral Signal	Input condition of neutral signal is displayed.	ON or OFF
Engine idle flag	Engine speed condition is displayed.	ON or OFF
Door Signal	Input condition of door (4 locations) open/close signal is displayed.	ON or OFF
Driver Seat Belt Signal	Input condition of driver's seat belt buckle signal is displayed.	ON or OFF
Auto Vehice Hold Switch State	Input condition of AVH switch is displayed.	ON or OFF

NOTE:
For detailed operation procedures, refer to "Application help".

3. FUNCTION CHECK

Display	Contents of display	Index No.
ABS Sequence Control Mode	Operate the valve and pump motor continuously to perform the ABS sequence control.	<Ref. to VDC-19, ABS Sequence Control.>
VDC Check Mode	Operate the valve and pump motor continuously to perform the VDC sequence control.	<Ref. to VDC-22, VDC Sequence Control.>
Brake Lamp Lighting Operation	Forcibly activate the stop light relay to illuminate the stop light.	<Ref. to VDC-25, BRAKE LIGHT LIGHTING OPERATION MODE BY SUBARU SELECT MONITOR, OPERATION, Brake Lamp Relay.>
VSC(VDC) Centering Mode	Set the steering angle sensor neutral position, and the lateral G sensor and longitudinal G sensor "0" point.	<Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

4. MAINTENANCE MODE

Display	Contents of display	Index No.
Brake Maintenance Mode	Used when inspecting and repairing parts related to rear brake.	<Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>
Reading of parameter: ECM to SSM	Read VDCCM parameter data.	<Ref. to VDC-17, VDCCM PARAMETER READING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Writing of parameter: SSM to ECM	Write the parameter data to the VDCCM.	<Ref. to VDC-17, VDCCM PARAMETER WRITING, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
Select Parameter	Select and register parameters in the VDCCM.	<Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

Display	Contents of display	Index No.
Confirm on parameter	Parameters registered in the VDCCM are displayed.	<Ref. to VDC-18, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

5. READ FREEZE FRAME DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

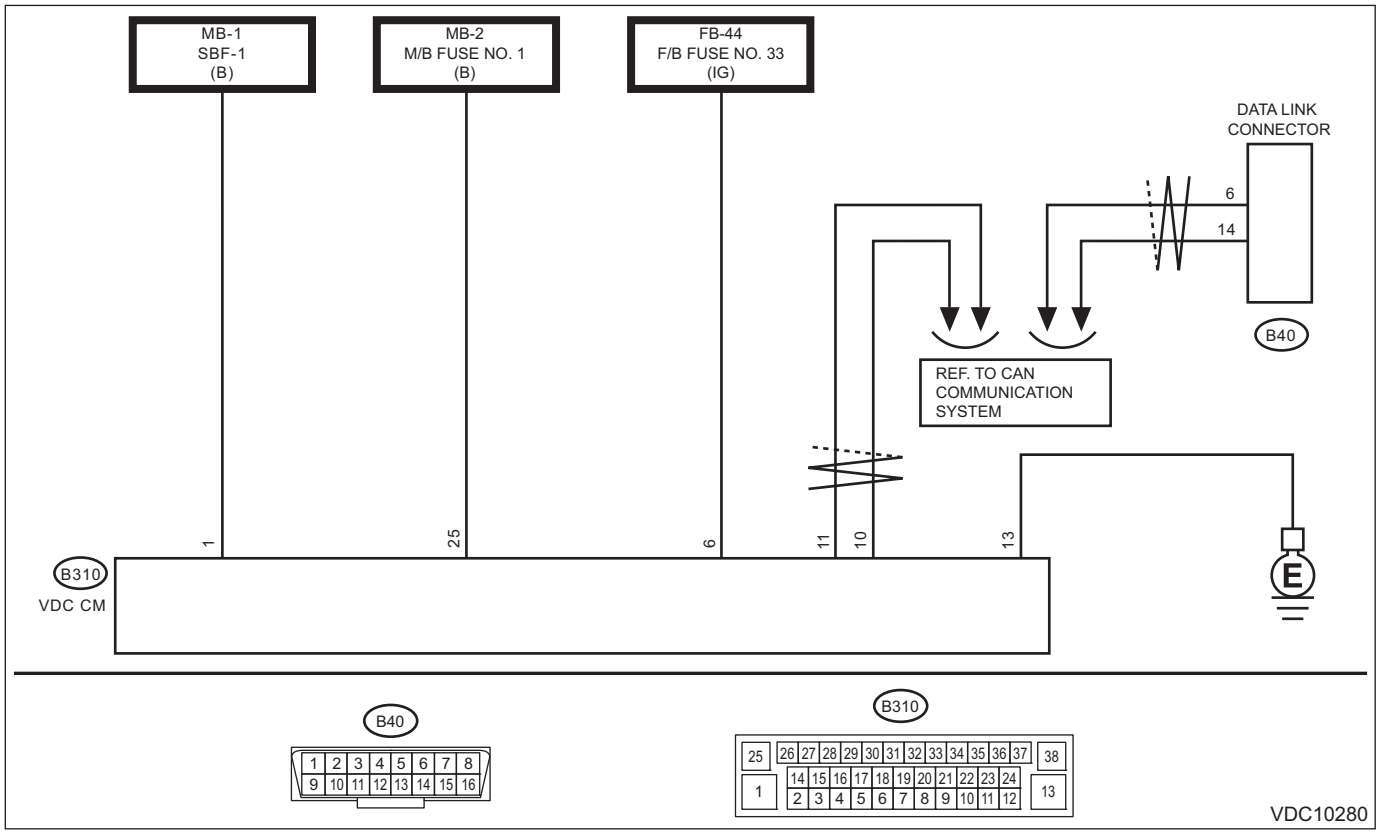
NOTE:
- Freeze frame data stored at the time of trouble occurrence is shown on the display.
- Each time a trouble occurs, the latest information is stored in the freeze frame data in memory.
- For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between VDC and Subaru Select Monitor.
WIRING DIAGRAM:
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



• Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select VDC using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** Turn the ignition switch to OFF.	Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it?	Go to step **5**.	Insert VDCCM&H/U connector into VDCCM&H/U.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to VDC system can be executed normally.	Is «Select Function» displayed?	Check the DTC in VDC system. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.	Does the Subaru Select Monitor communicate normally?	Go to step **8**.	Repair or replace the Subaru Select Monitor.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 6 (+) — Chassis ground (–):*** ***(B310) No. 25 (+) — Chassis ground (–):*** ***Models with EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **9**.	Repair open circuit in harness between VDCCM&H/U and battery.
9	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance of harness between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of VDCCM&H/U ground circuit and poor contact of connector.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».

NOTE:
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

1. VDC SYSTEM

1) Delete the DTC.
2) Drive the vehicle at least ten minutes. (Reproduce nearly the same condition as occurred when the DTC was recorded.)

NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.

2. ELECTRONIC PARKING BRAKE SYSTEM

1) Start the engine, and operate and release the electronic parking brake a few times with the vehicle at a standstill.
2) Check if the warning light illuminates and DTC is displayed.

NOTE:
If the DTC is displayed, perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-64, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3) Drive the vehicle at least 10 minutes, and operate and release the electronic parking brake a few times.

CAUTION:
Do not drive the vehicle with the warning light illuminated.

9. Clear Memory Mode

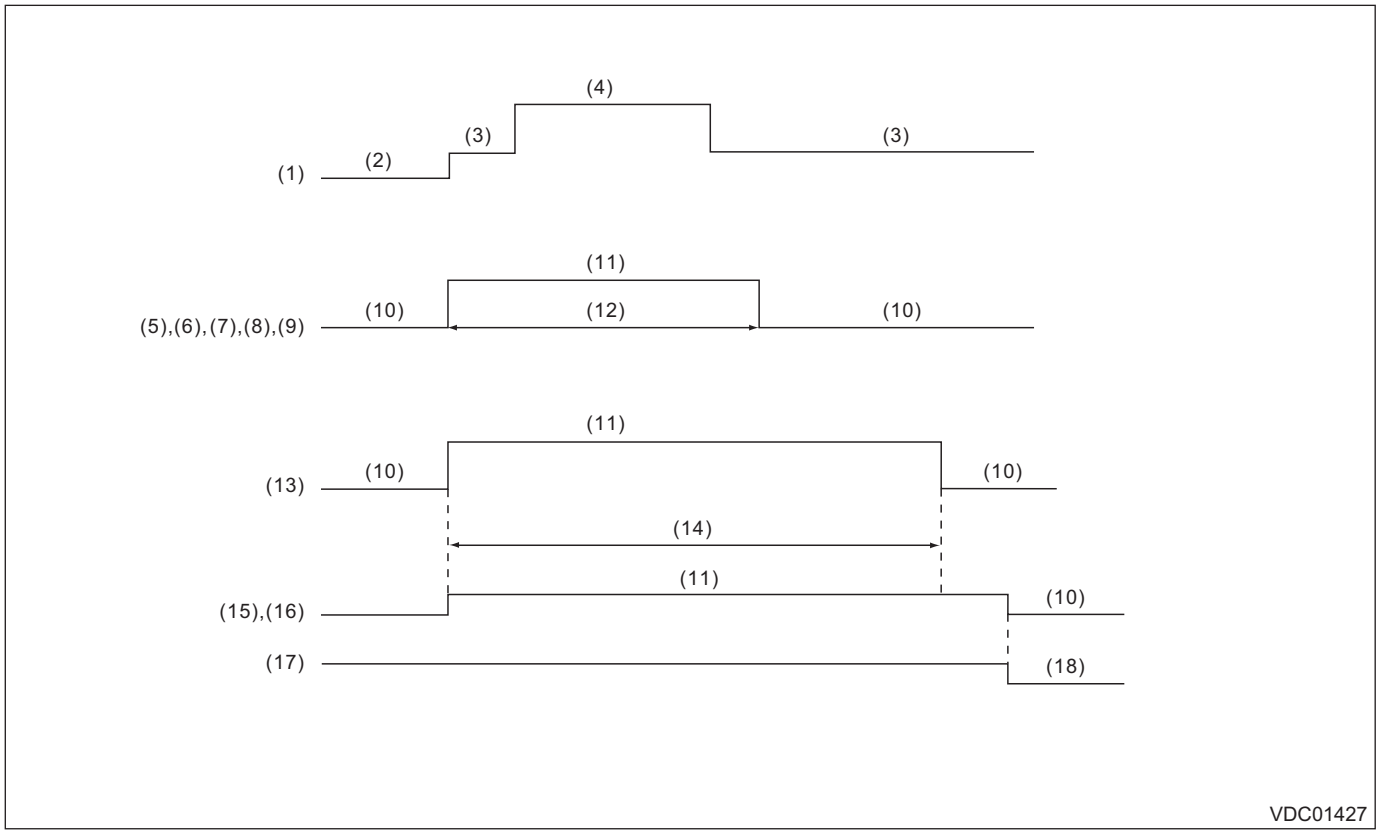
A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Control System».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Warning Light Illumination Pattern

A: INSPECTION



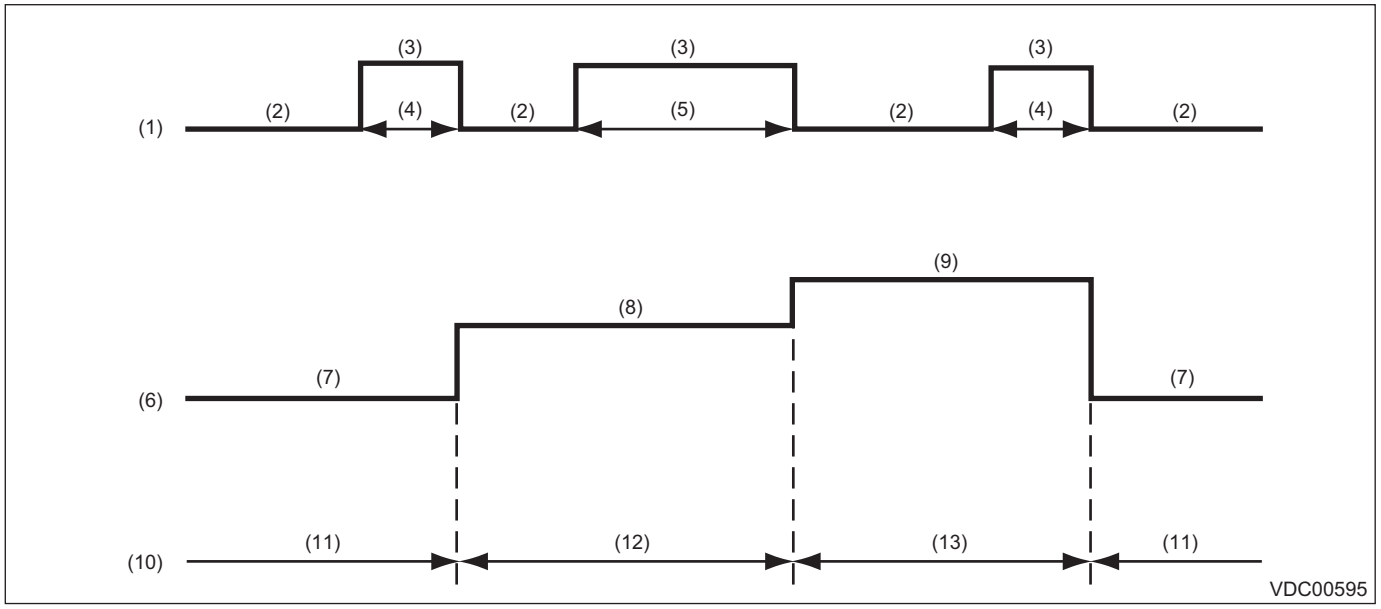
(1)	Ignition switch	(7)	VDC OFF indicator light	(13)	VDC warning light & VDC indicator light
(2)	OFF	(8)	Hill start assist warning light (model without EyeSight)	(14)	2 seconds or more
(3)	ON	(9)	VDC traction mode indicator light	(15)	Brake warning light (EBD warning light) (model without EyeSight)
(4)	Engine start	(10)	Light OFF	(16)	Electronic parking brake operation indicator light (model with EyeSight)
(5)	ABS warning light	(11)	Light ON	(17)	Parking brake
(6)	Brake warning light (EBD warning light) and electronic parking brake warning light (model with EyeSight)	(12)	2 seconds	(18)	Released

NOTE:
- Hill start assist warning light always illuminates when the hill start assist is in the OFF mode.
- The AVH ON indicator light illuminates/goes off when the AVH switch is operated with the ignition switch ON or after the engine is started.
- The AVH operation indicator light illuminates when the AVH is activated, and goes off when the AVH is deactivated.

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.
2) When the warning lights or indicator lights remain constantly OFF, check the combination meter circuit. <Ref. to VDC(diag)-35, EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-36, HILL START ASSIST WARNING LIGHT DOES NOT COME ON, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-37, ELECTRONIC PARKING BRAKE INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.>
3) When the ABS warning light, VDC OFF indicator light, VDC warning light & VDC indicator light, and hill start assist warning light do not go off, check the combination meter circuit or CAN communication circuit. <Ref. to VDC(diag)-44, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-46, ELECTRONIC PARKING BRAKE INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-47, VDC OFF INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-45, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF, Warning Light Illumination Pattern.> <Ref. to VDC(diag)-49, HILL START ASSIST WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.>

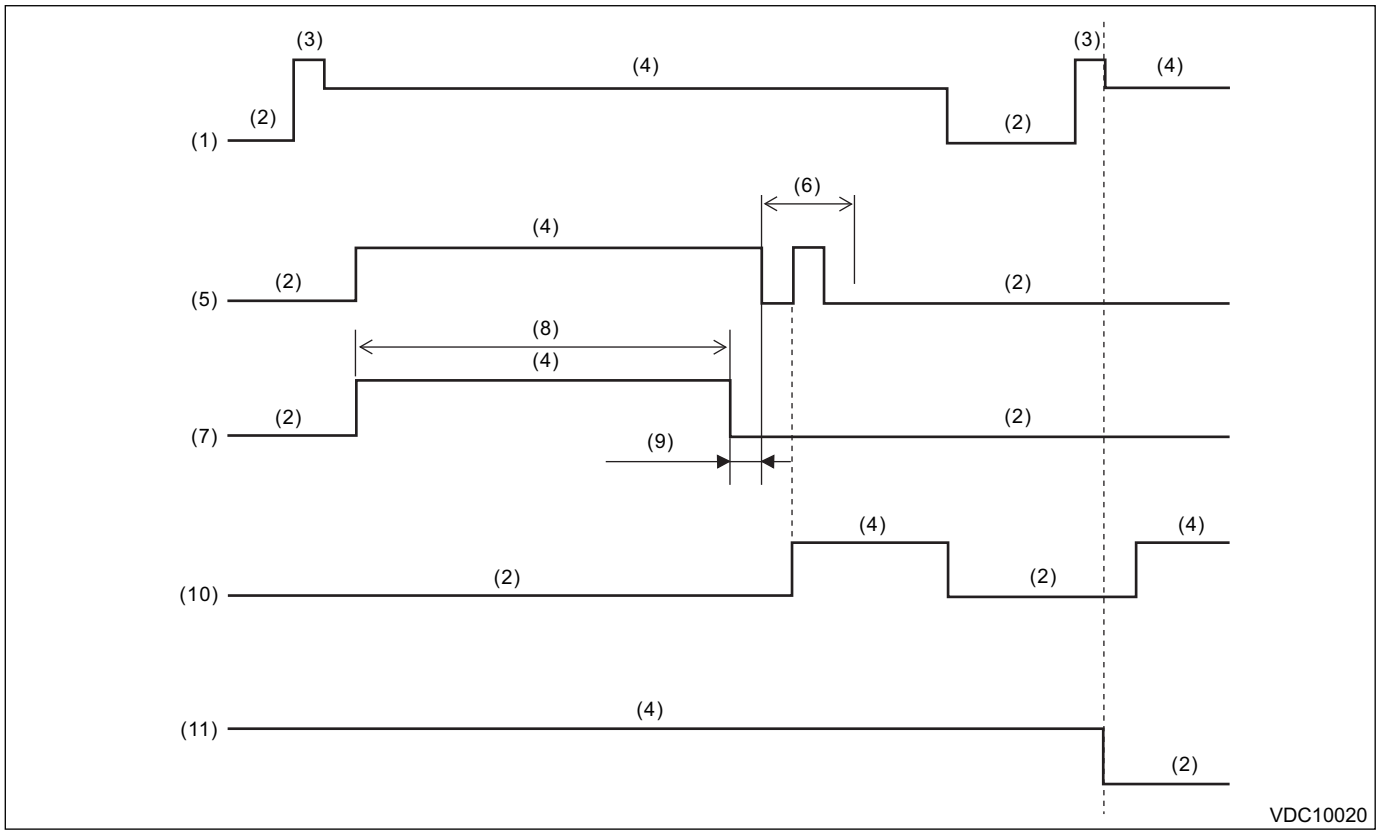
NOTE:
• Even when the ABS warning light and the VDC warning light & VDC indicator light do not go off in 2 seconds after illuminating, the ABS and VDC functions are normal if the warning lights go off while the vehicle is driven. However, while these lights are on, the functions with their warning lights illuminated do not operate.
• It may take several minutes before the VDC warning light & VDC indicator light goes off, if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature. Perform the Clear Memory Mode because DTC may be recorded at this time. <Ref. to VDC(diag)-30, Clear Memory Mode.>
• With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, and VDC warning light & VDC indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensor or longitudinal G sensor. In this case, this is not a malfunction. Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.>
• When operation and release of the electronic parking brake is repeated excessively, the electronic parking brake warning light may illuminate or the electronic parking brake operation indicator light may blink and then the parking brake switch operation may not be accepted; this is not malfunction.

4) Warning light illumination pattern at VDC mode change
If illumination patterns of the VDC OFF indicator light and the VDC traction mode indicator light do not match the followings when the VDC OFF switch is operated, check the VDC OFF switch circuit, CAN communication circuit or combination meter circuit. <Ref. to VDC(diag)-55, VDC TRACTION MODE, VDC MODE DOES NOT CHANGE, Warning Light Illumination Pattern.>



(1)	VDC OFF switch	(6)	VDC OFF indicator light and VDC traction mode indicator light	(10)	VDC mode
(2)	OFF	(7)	Light OFF	(11)	Normal mode
(3)	ON	(8)	VDC OFF indicator light and VDC traction mode indicator light ON	(12)	Traction mode
(4)	Less than 2 seconds	(9)	VDC OFF indicator light ON VDC traction mode indicator light OFF	(13)	OFF mode
(5)	2 seconds or more and less than 30 seconds				

5) Warning light illumination pattern at hill start assist OFF mode change (model without EyeSight)
When the VDC OFF switch is kept pressed, VDC OFF indicator light illuminates, then goes off in approx. 30 seconds. If the switch is released in 5 seconds after the light goes off then pressed again in 2 seconds, hill start assist warning light illuminates then mode is changed to hill start assist OFF mode. If hill start assist function ON/OFF does not change, check VDC OFF switch circuit, CAN communication circuit or combination meter circuit. <Ref. to VDC(diag)-57, HILL START ASSIST ON/OFF MODE, VDC MODE DOES NOT CHANGE, Warning Light Illumination Pattern.>



(1) Ignition key
(2) OFF
(3) Start
(4) ON
(5) VDC OFF switch
(6) Less than 2 seconds
(7) VDC OFF indicator light
(8) Approx. 30 seconds (until (7) goes off)
(9) 5 seconds or less
(10) Hill start assist warning light
(11) Hill start assist function

NOTE:
Hill start assist warning light always illuminates to inform that the hill start assist does not operate during hill start assist OFF mode.

B: EBD WARNING LIGHT, ABS WARNING, VDC OFF INDICATOR LIGHT, VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), EBD warning light, ABS warning light, VDC OFF indicator light, and VDC warning light & VDC indicator light do not illuminate.

NOTE:
When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON.	Immediately after the ignition switch is turned to ON, do all the indicator lights for VDC system and others illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «EBD Warning Light» ON?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «ABS Warning Lamp» ON?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC-OFF Light» ON?	Go to step **5**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5	**CHECK VDCCM.** When the engine does not start, display the current data of VDCCM using Subaru Select Monitor.	Immediately after the ignition switch is turned to ON, is the «VDC Warning Lamp» ON?	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: HILL START ASSIST WARNING LIGHT DOES NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), hill start assist warning light does not illuminate.

	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Do other indicator lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

D: ELECTRONIC PARKING BRAKE INDICATOR LIGHT DO NOT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON (engine OFF), electronic parking brake operation indicator light does not illuminate.

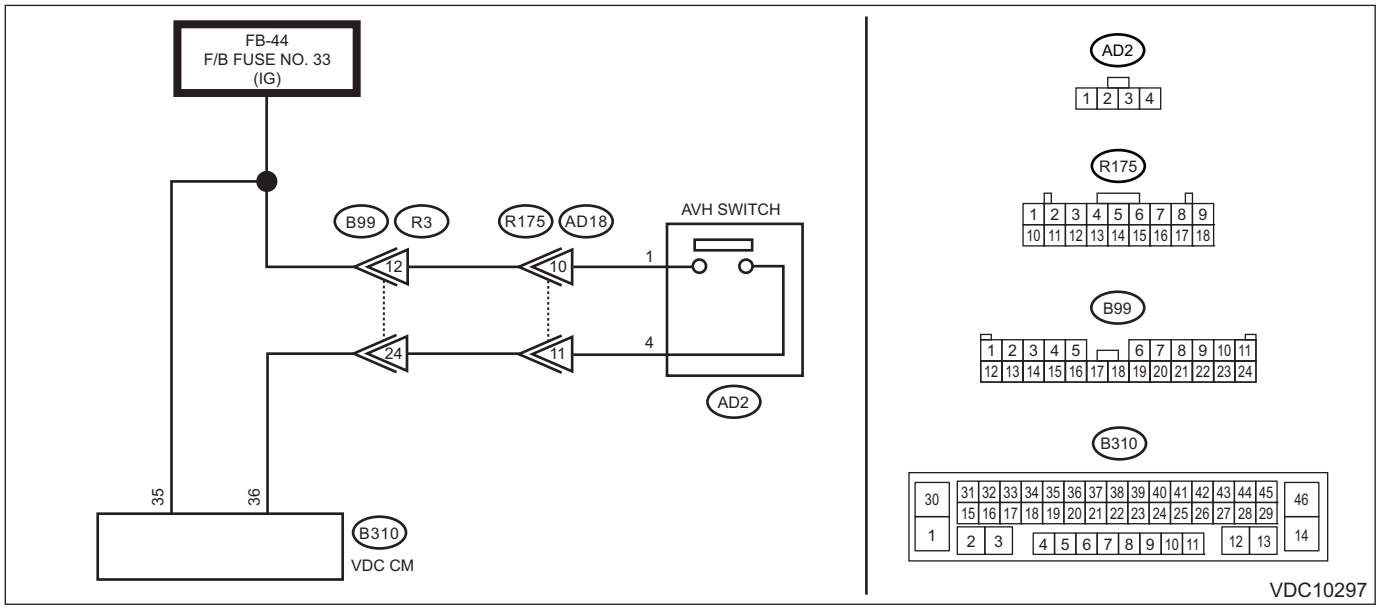
	Step	Check	Yes	No
1	**CHECK OTHER INDICATOR LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Do other indicator lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

E: AVH ON INDICATOR LIGHT DO NOT COME ON

Detecting condition:
- Defective combination meter
- Defective AVH switch

Trouble symptom:
When the ignition switch is turned to ON, the AVH ON indicator light does not illuminate even when the AVH switch is operated.

Wiring diagram:
Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY OF AVH SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the AVH switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit of AVH switch.
2	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and AVH switch connector. ***Connector & terminal*** ***(AD2) No. 4 — (B310) No. 36:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and AVH switch connector.
3	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and AVH switch connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and AVH switch connector.
5	**CHECK AVH SWITCH.** Check the AVH switch. <Ref. to VDC-42, INSPECTION, Auto Vehicle Hold Switch.>	Is the check result OK?	Go to step **6**.	Replace the AVH switch. <Ref. to VDC-42, Auto Vehicle Hold Switch.>
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

F: ELECTRONIC PARKING BRAKE INDICATOR LIGHT IS BLINKING

Detecting condition:

- When VDCCM&H/U was replaced
- When fault was detected or electronic parking brake switch was operated under faulty condition
- During the maintenance mode
- When electronic parking brake was operated while the vehicle was running on the free roller or while the tires were rotating with a help of the free roller
- When electronic parking brake was operated with the brake high in temperature or operated on a steep slope

Trouble symptom:

Electronic parking brake may not operate properly.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U.** NOTE: If VDCCM&H/U was not replaced, start the diagnosis from step 2.	Was electronic parking brake operated after replacement of VDCCM&H/U?	Go to step **2**.	It is normal if the electronic parking brake operation indicator light comes on by operating the electronic parking brake and goes off by disengaging.
2	**CHECK ELECTRONIC PARKING BRAKE WARNING LIGHT.** Turn the ignition switch to ON. (Engine OFF)	Does electronic parking brake warning light illuminate?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK VEHICLE CONDITION.**	Is the brake condition other than overheating? Is the electronic parking brake is operated except on a steep road?	Normal.	Go to step **4**.
4	**CHECK DRIVING CONDITION.**	Was the vehicle running except on the free roller?	Normal.	Go to step **5**.
5	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.>	Does electronic parking brake operation indicator light blink?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Electronic parking brake was temporarily prohibited.

G: AVH ON INDICATOR LIGHT COME ON

Detecting condition:

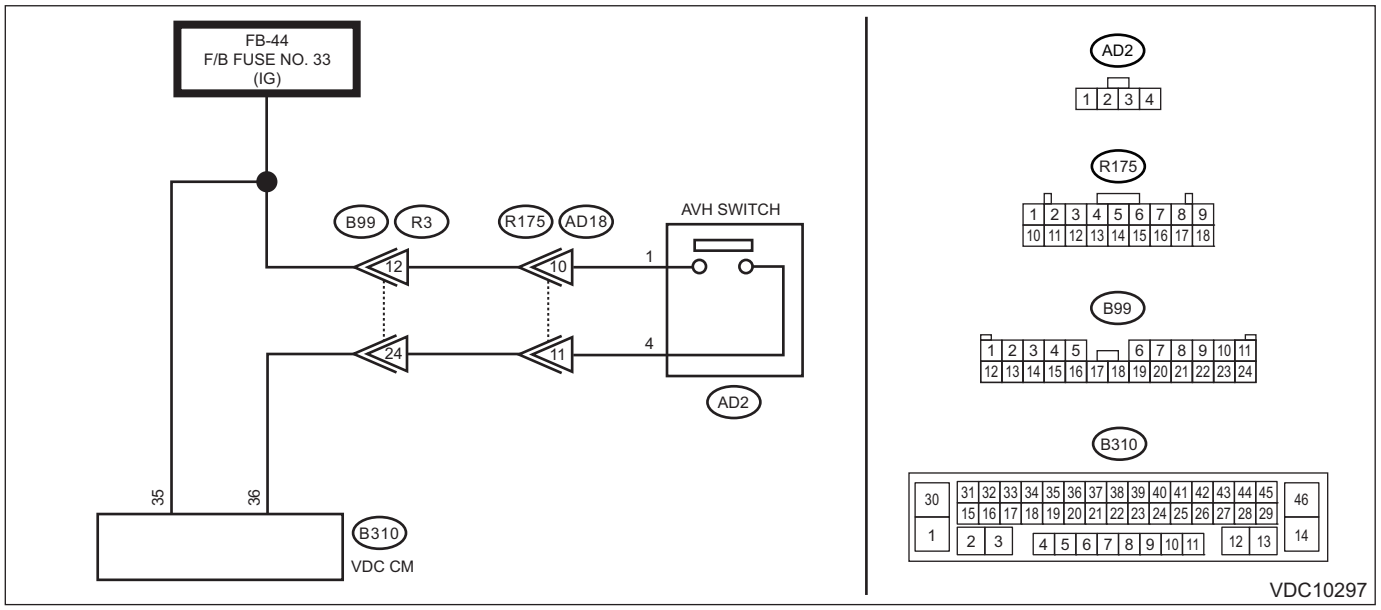
- Defective combination meter
- Defective CAN communication
- Defective AVH switch

Trouble symptom:

When the ignition switch is turned to ON, the AVH ON indicator light illuminates with the AVH switch not operated.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY OF AVH SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the AVH switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit of AVH switch.

	Step	Check	Yes	No
4	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and AVH switch connector. ***Connector & terminal*** ***(AD2) No. 4 — (B310) No. 36:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair harness and connector between VDCCM&H/U and AVH switch connector.
5	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair ground short of harness between VDCCM&H/U and AVH switch connector.
6	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Repair short to power supply of harness between VDCCM&H/U and AVH switch connector.
7	**CHECK AVH SWITCH.** Check the AVH switch. <Ref. to VDC-42, INSPECTION, Auto Vehicle Hold Switch.>	Is the check result OK?	Go to step **8**.	Replace the AVH switch. <Ref. to VDC-42, Auto Vehicle Hold Switch.>
8	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

H: AVH OPERATION INDICATOR LIGHT COME ON

Detecting condition:
Defective combination meter
Trouble symptom:
When the ignition switch is turned to ON, the AVH operation indicator light illuminates.

NOTE:
- When the ignition switch is turned to OFF and turned to ON again, the AVH function becomes OFF.
- The AVH operation indicator light and the AVH ON indicator light do not illuminate immediately after the ignition switch is turned to ON.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

I: ABS WARNING LIGHT DOES NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:
ABS warning light does not go off when starting the engine.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «ABS Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.>	Does the ABS warning light go off?	Normal. Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

J: VDC WARNING LIGHT AND VDC INDICATOR LIGHT DO NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective engine
- Defective CAN communication

Trouble symptom:
VDC warning light and VDC indicator light do not go off when starting the engine.

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM.** Display the current data of VDCCM using Subaru Select Monitor.	Is the «VDC Warning Lamp» ON?	Go to step **3**.	Go to step **5**.
3	**CHECK WARNING LIGHT.** 1) Save the freeze frame data. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.>	Does the VDC warning light & VDC operation indicator light go off?	Normal. Perform the Inspection Mode to check that the light does not turn ON again.	Go to step **4**.
4	**READ DTC.** Read the DTC after driving the vehicle at 40 km/h (25 MPH) or more.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

K: ELECTRONIC PARKING BRAKE INDICATOR LIGHT DO NOT GO OFF

Detecting condition:
Defective combination meter
Trouble symptom:
When starting the engine, the electronic parking brake operation indicator light does not go off.

	Step	Check	Yes	No
1	**CHECK INDICATOR LIGHT.** 1) Start the engine. 2) Operate the electronic parking brake switch.	Does electronic parking brake operation indicator light go off?	Normal.	Go to step **2**.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK VDCCM&H/U.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	Is «Parking System Warning Light» ON?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

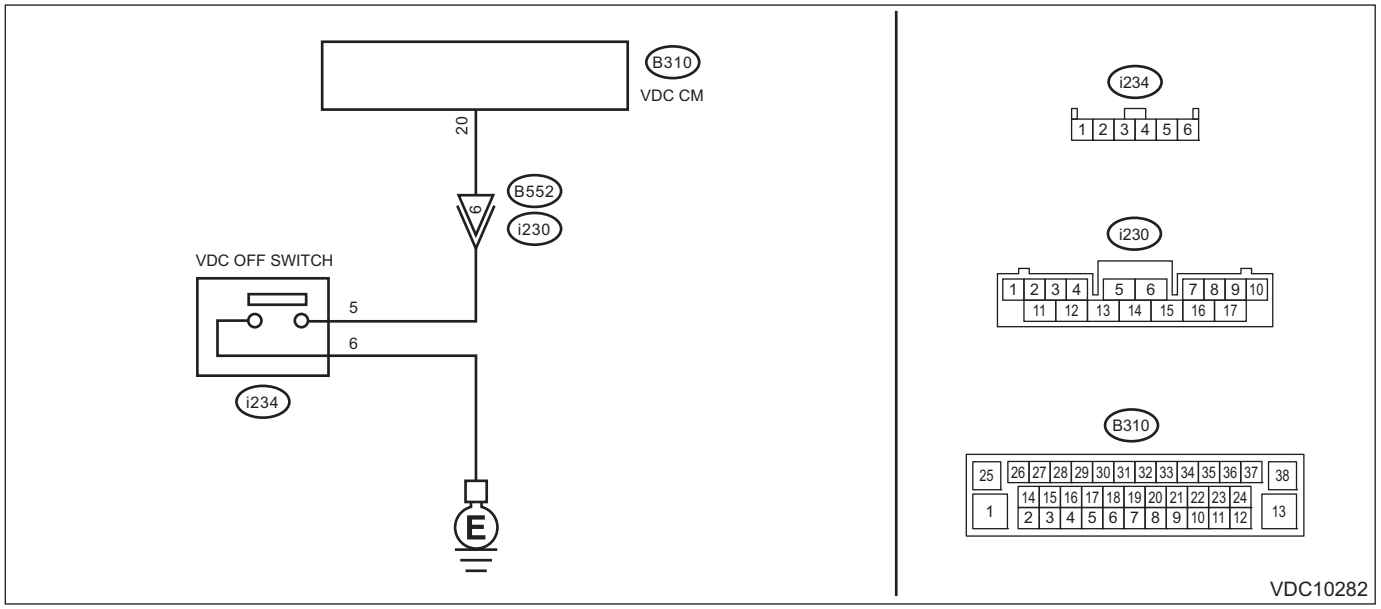
L: VDC OFF INDICATOR LIGHT DOES NOT GO OFF

Detecting condition:
- Defective combination meter
- Defective CAN communication
- VDC OFF switch is shorted.

Trouble symptom:
VDC OFF indicator light does not go off when starting the engine.

Wiring diagram:
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDC OFF SWITCH.** Connect the Subaru Select Monitor, and display the current data of VDCCM with the engine started.	Does «OFF SW Signal» change according to operation of VDC OFF switch?	Go to step **5**.	Go to step **3**.
3	**CHECK VDC OFF SWITCH.** Remove and check VDC OFF switch. <Ref. to VDC-40, VDC OFF Switch.>	Is the check result OK?	Go to step **4**.	Replace the VDC OFF switch.
4	**CHECK VDC OFF SWITCH CIRCUIT.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 20 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 31 — Chassis ground:***	Is the resistance less than 10 Ω?	Check the VDC OFF switch circuit.	Go to step **5**.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

M: HILL START ASSIST WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Defective combination meter
- Defective CAN communication

Trouble symptom:

Hill start assist warning light does not go off when starting the engine.

	Step	Check	Yes	No
1	**CHECK HILL START ASSIST MODE.**	Is the hill start assist OFF?	Normal.	Go to step **2**.
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

N: BRAKE WARNING LIGHT DOES NOT GO OFF

Detecting condition:

- Brake warning light circuit is shorted.
- Defective sensor/connector
- Defective CAN communication

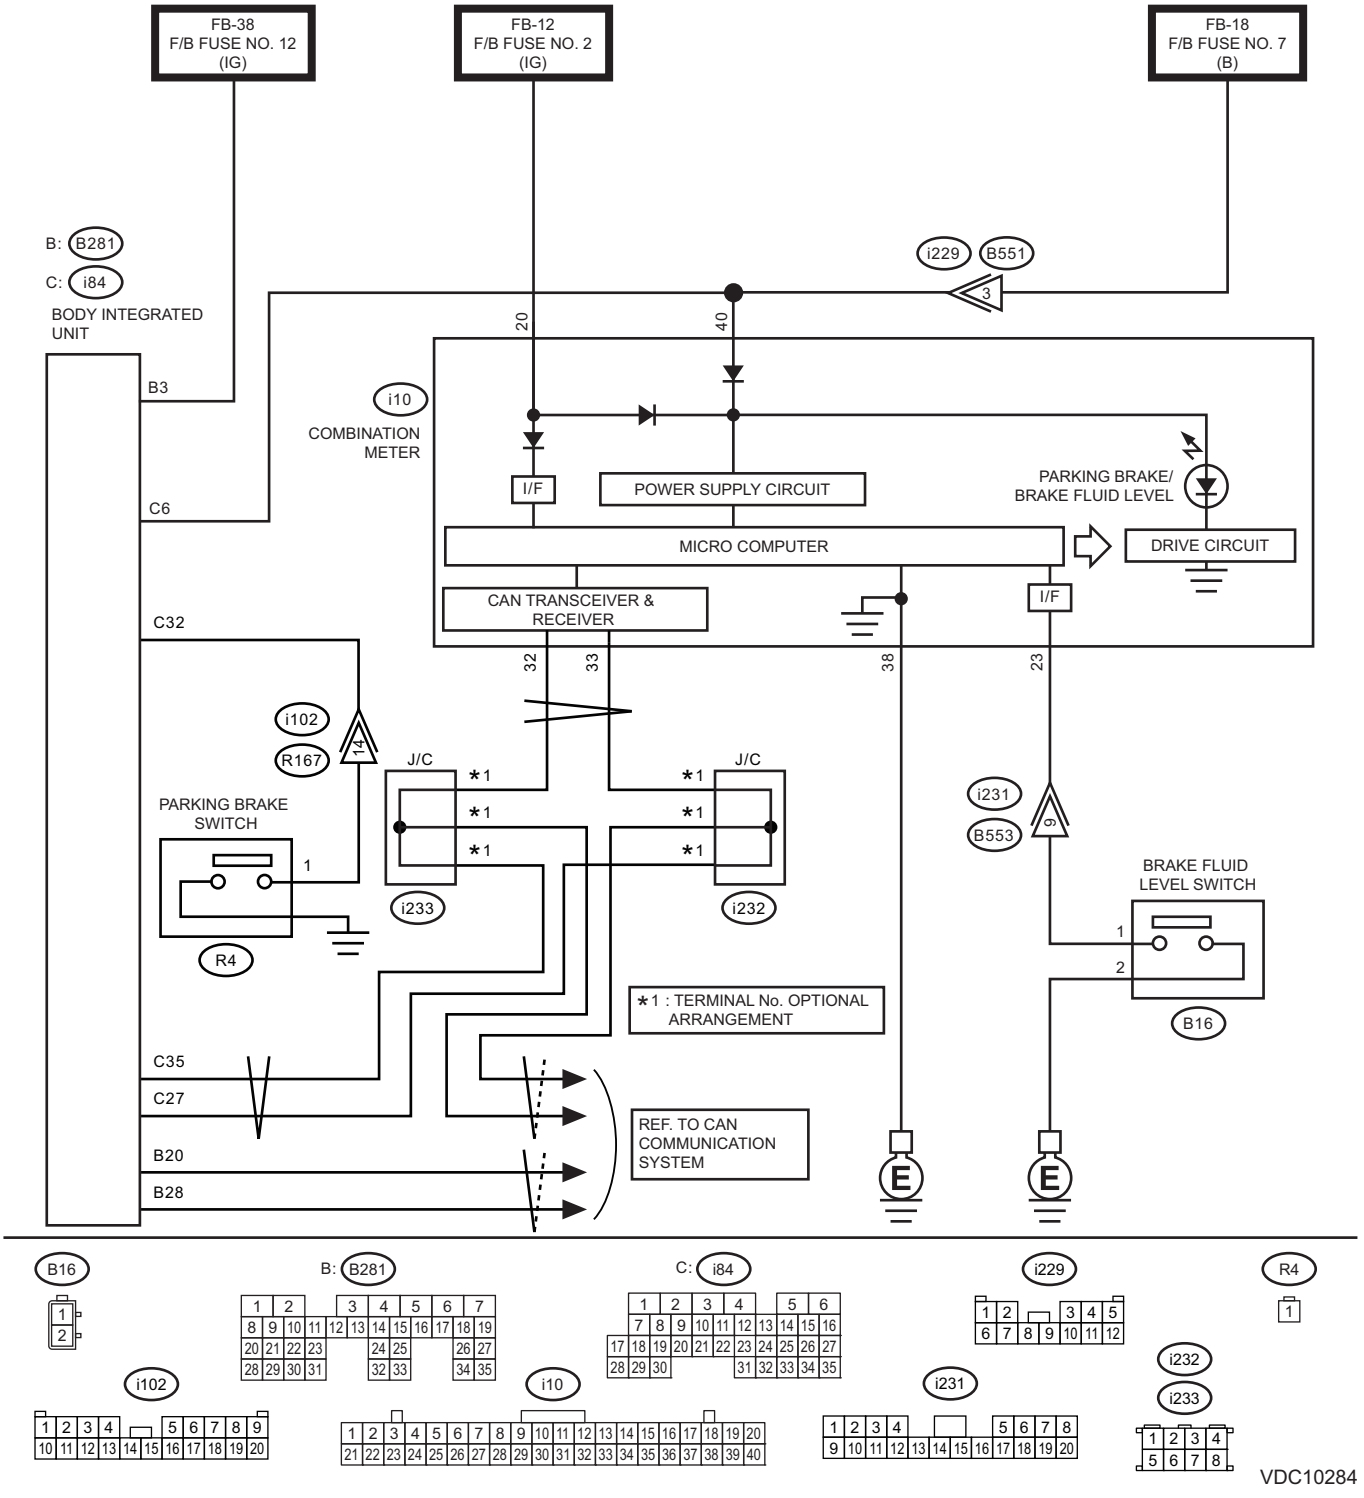
Trouble symptom:

After starting the engine, the brake warning light does not go off even though the parking lever is released.

Wiring diagram:

- Models without EyeSight

Parking brake / brake fluid level warning light system <Ref. to WI-293, WITHOUT EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



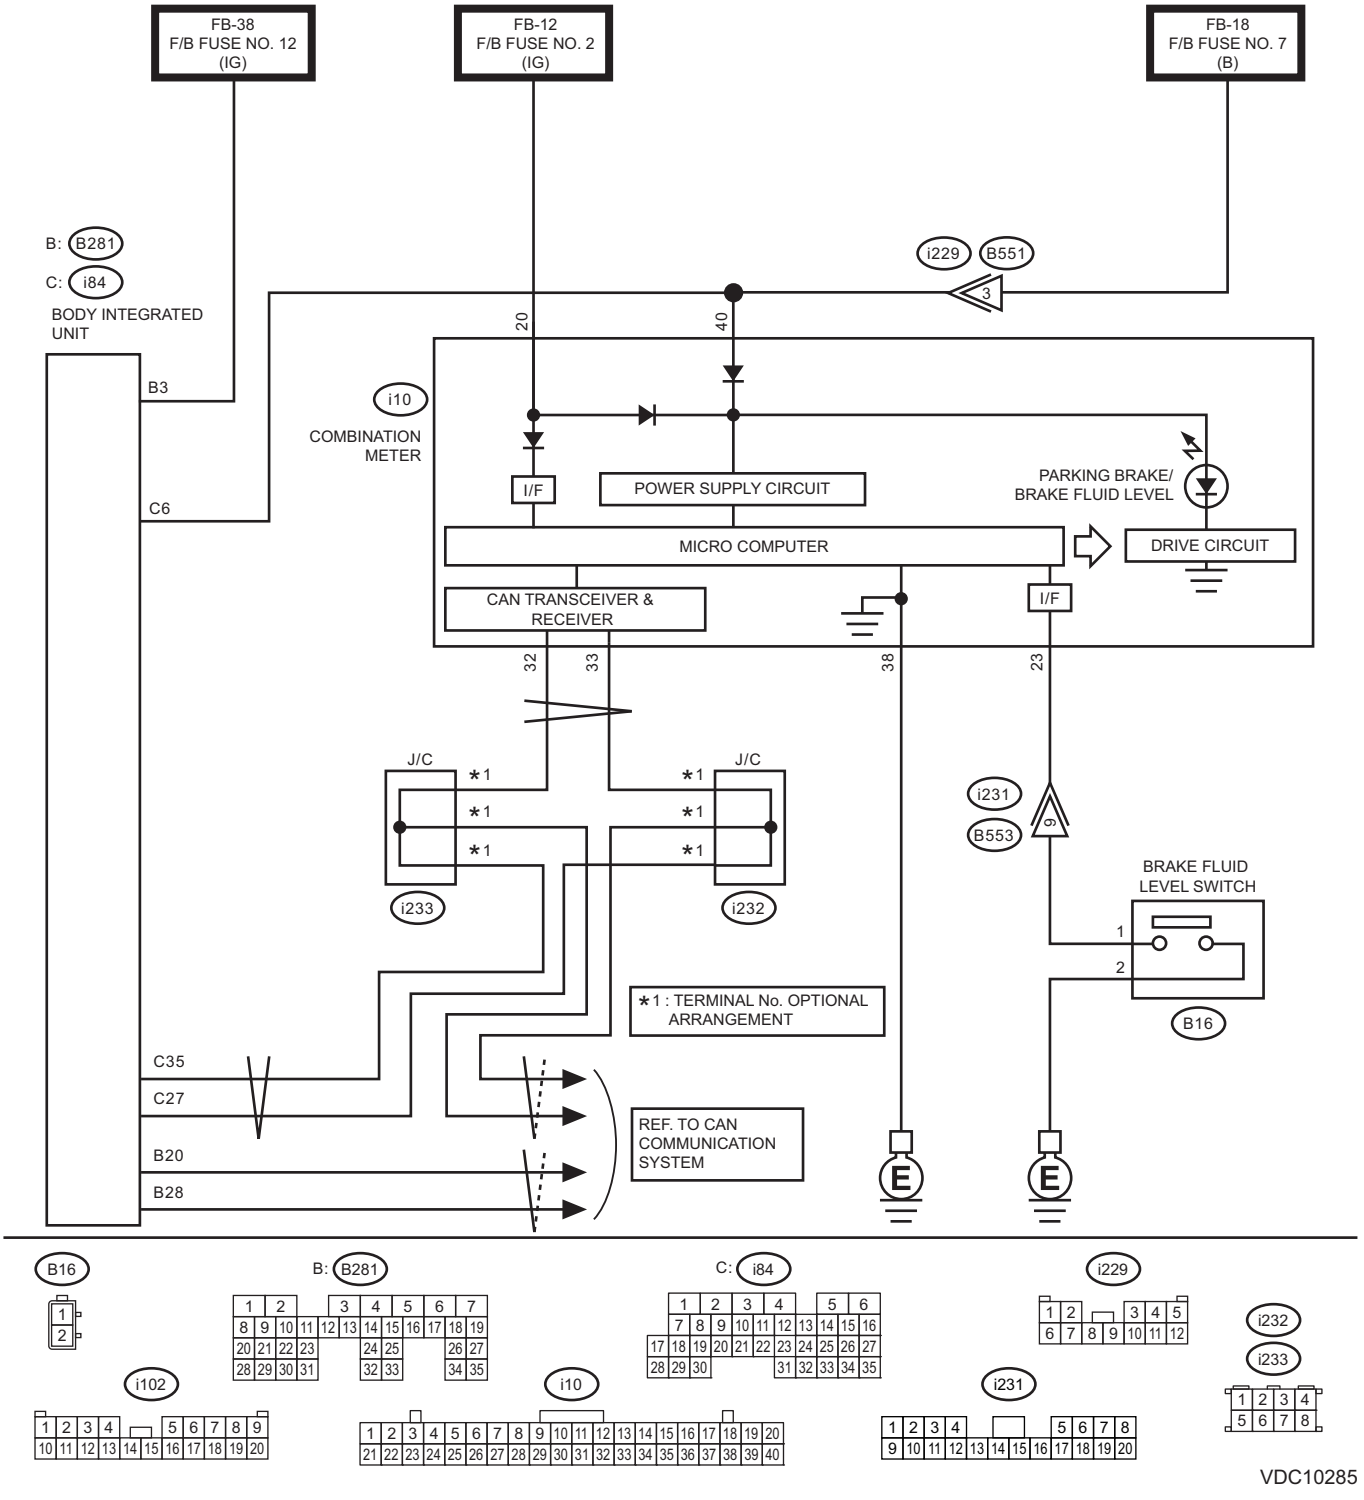
Step		Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2**.	Insert the VDCCM&H/U connector until it is locked by clamp.

	Step	Check	Yes	No
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of "MAX" and "MIN"?	Go to step **5**.	Replenish brake fluid to the specified value.
5	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the master cylinder. <Ref. to BR-87, Master Cylinder.>
6	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i10) from combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the harness between combination meter and brake fluid level switch.
7	**CHECK PARKING BRAKE SWITCH.** 1) Disconnect the connector (R4) from parking brake switch. 2) Release the parking brake. 3) Measure the resistance between parking brake switch terminal and chassis ground.	Is the resistance 1 MΩ or more?	Go to step **8**.	Replace the parking brake switch.
8	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector (i84) from body integrated unit. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 32 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Repair the harness between body integrated unit and parking brake switch.
9	**CHECK POOR CONTACT OF CONNECTOR.** Check for poor contact of all connectors.	Is there poor contact?	Repair the connector.	Go to step **10**.
10	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

Wiring diagram:

- Models with EyeSight

Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check that the VDCCM&H/U connector is inserted until it is locked by clamp.	Is the connector firmly inserted?	Go to step **2**.	Insert the VDCCM&H/U connector until it is locked by clamp.

	Step	Check	Yes	No
2	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BRAKE FLUID AMOUNT.** Check the amount of brake fluid in the reservoir tank of master cylinder.	Does the level of the brake fluid amount fall between the lines of "MAX" and "MIN"?	Go to step **5**.	Replenish brake fluid to the specified value.
5	**CHECK BRAKE FLUID LEVEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the level switch connector (B16) from master cylinder. 3) Measure the resistance of master cylinder terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the master cylinder. <Ref. to BR-87, Master Cylinder.>
6	**CHECK GROUND SHORT OF HARNESS.** 1) Disconnect the connector from the combination meter. 2) Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the harness connector between combination meter and brake fluid level switch.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

O: VDC MODE DOES NOT CHANGE

1. VDC TRACTION MODE

Detecting condition

- Defective combination meter
- Defective CAN communication
- Defective VDC OFF switch

Trouble symptom

Even when the VDC OFF switch is operated, the VDC traction mode indicator light does not illuminate, or the illumination color does not change. (The VDC mode does not change)

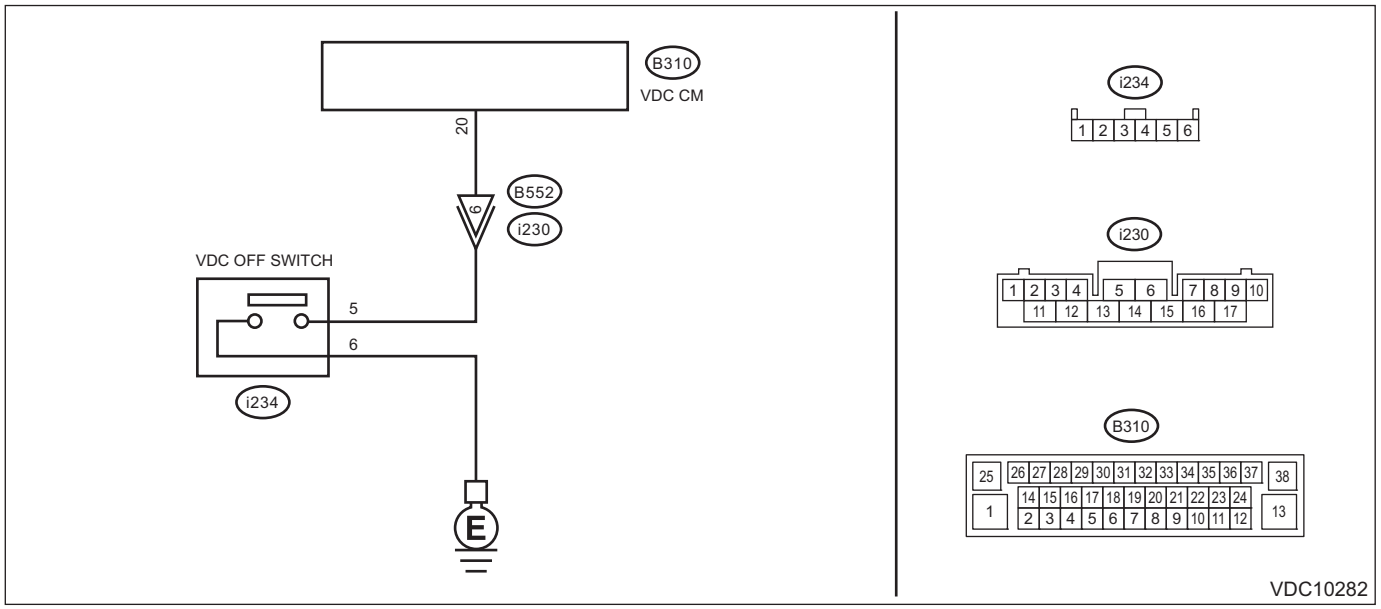
NOTE:

- When the VDC OFF switch is pressed (2 seconds or less), the VDC traction mode indicator light illuminates in green and the VDC OFF indicator light illuminates in yellow. (Traction mode)
- When the VDC OFF switch is held down (2 seconds or more), the VDC OFF indicator light illuminates in yellow. (VDC OFF mode)
- When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

Wiring diagram:

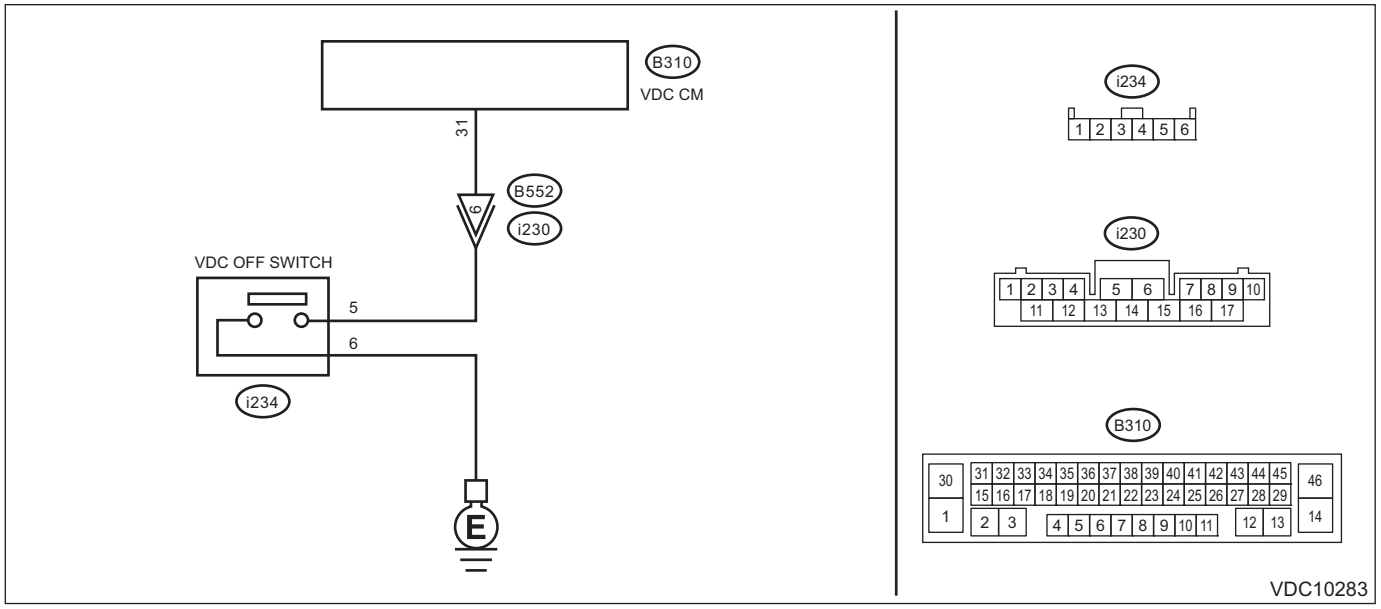
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



• Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U and VDC OFF switch. 3) Measure the resistance of harness between the VDCCM&H/U and VDC OFF switch connectors. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 20 — (i234) No. 5:*** ***Models with EyeSight*** ***(B310) No. 31 — (i234) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 20 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
4	**CHECK HARNESS.** Measure the resistance of harness between VDC OFF switch connector and chassis ground. ***Connector & terminal*** ***(i234) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness between the VDC OFF switch connector and chassis ground.

	Step	Check	Yes	No
5	**CHECK VDC OFF SWITCH.** Check the VDC OFF switch. <Ref. to VDC-40, INSPECTION, VDC OFF Switch.>	Is the check result OK?	Go to step **6**.	Replace the VDC OFF switch. <Ref. to VDC-40, VDC OFF Switch.>
6	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

2. HILL START ASSIST ON/OFF MODE

NOTE:
This diagnosis is applied only to the model without EyeSight.

Detecting condition

- Defective combination meter
- Defective CAN communication
- Defective VDC OFF switch

Trouble symptom

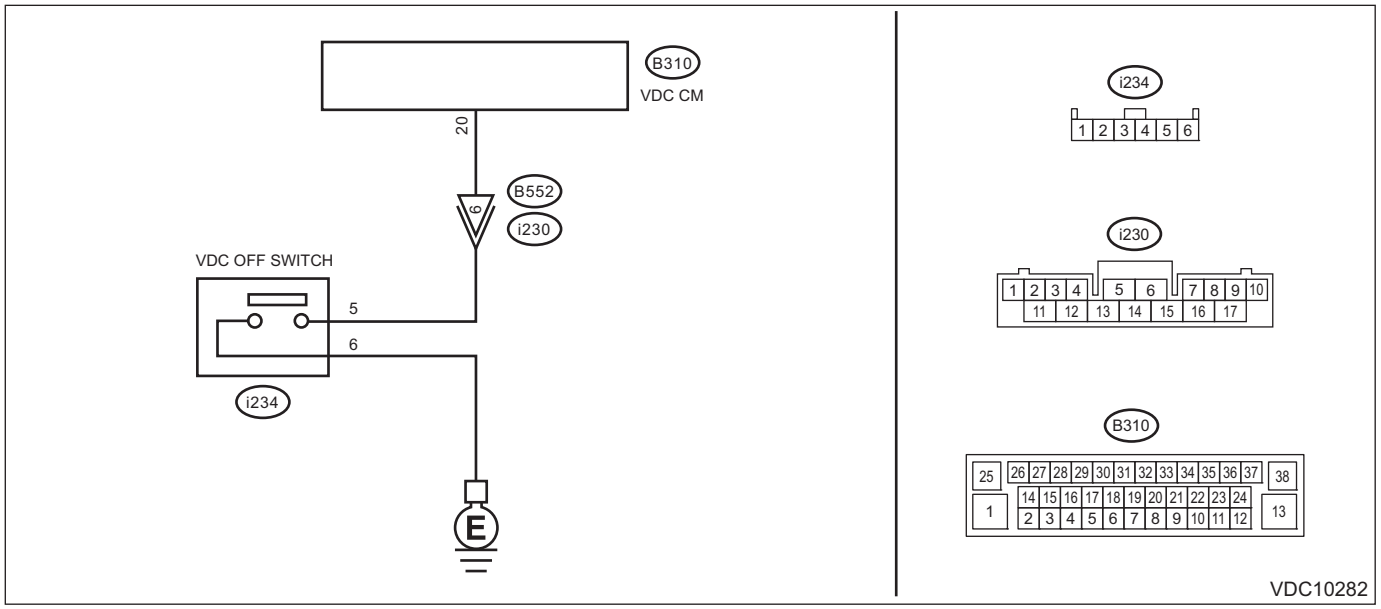
Hill start assist warning light does not illuminate or go off when hill start assist function ON/OFF is changed. (Hill start assist mode does not change.)

NOTE:

- When the VDC OFF switch is kept pressed, VDC OFF indicator light illuminates in yellow, then goes off in approx. 30 seconds. If the switch is released in 5 seconds after the light goes off then pressed again in 2 seconds, hill start assist warning light illuminates then mode is changed to hill start assist OFF mode.
- Hill start assist warning light always illuminates to inform that the hill start assist does not operate during hill start assist OFF mode.
- When pressing the VDC OFF switch for 30 seconds or more, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the operation enabled status is restored.

Wiring diagram:

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**READ DTC.** Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U and VDC OFF switch. 3) Measure the resistance of harness between the VDCCM&H/U and VDC OFF switch connectors. ***Connector & terminal*** ***(B310) No. 20 — (i234) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness between the VDCCM&H/U and VDC OFF switch connectors.
4	**CHECK HARNESS.** Measure the resistance of harness between VDC OFF switch connector and chassis ground. ***Connector & terminal*** ***(i234) No. 6 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness between the VDC OFF switch connector and chassis ground.
5	**CHECK VDC OFF SWITCH.** Check the VDC OFF switch. <Ref. to VDC-40, INSPECTION, VDC OFF Switch.>	Is the check result OK?	Go to step **6**.	Replace the VDC OFF switch. <Ref. to VDC-40, VDC OFF Switch.>

	Step	Check	Yes	No
6	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>	Is the check result OK?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
C1211	FRONT RIGHT ABS SENSOR CIRCUIT	Open/high input of front ABS wheel speed sensor RH	<Ref. to VDC(diag)-64, DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1212	FRONT RIGHT ABS SENSOR SIGNAL	Front ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-70, DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1221	FRONT LEFT ABS SENSOR CIRCUIT	Open/high input of front ABS wheel speed sensor LH	<Ref. to VDC(diag)-64, DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1222	FRONT LEFT ABS SENSOR SIGNAL	Front ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-70, DTC C1222 FRONT LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1231	REAR RIGHT ABS SENSOR CIRCUIT	Open/high input of rear ABS wheel speed sensor RH	<Ref. to VDC(diag)-64, DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1232	REAR RIGHT ABS SENSOR SIGNAL	Rear ABS wheel speed sensor RH signal malfunction	<Ref. to VDC(diag)-70, DTC C1232 REAR RIGHT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1241	REAR LEFT ABS SENSOR CIRCUIT	Open/high input of rear ABS wheel speed sensor LH	<Ref. to VDC(diag)-65, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1242	REAR LEFT ABS SENSOR SIGNAL	Rear ABS wheel speed sensor LH signal malfunction	<Ref. to VDC(diag)-71, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1311	FR HOLD VALVE	Front inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1311 FR HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1312	FR PRESSURE REDUCING VALVE	Front outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1312 FR PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1321	FL HOLD VALVE	Front inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1321 FL HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1322	FL PRESSURE REDUCING VALVE	Front outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1322 FL PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1331	RR HOLD VALVE	Rear inlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1331 RR HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1332	RR PRESSURE REDUCING VALVE	Rear outlet solenoid valve RH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-73, DTC C1332 RR PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1341	RL HOLD VALVE	Rear inlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-74, DTC C1341 RL HOLD VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1342	RL PRESSURE REDUCING VALVE	Rear outlet solenoid valve LH malfunction in VDCCM&H/U	<Ref. to VDC(diag)-74, DTC C1342 RL PRESSURE REDUCING VALVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1351	NORMAL OPENING VALVE 1	Secondary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-74, DTC C1351 NORMAL OPENING VALVE 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1352	NORMAL OPENING VALVE 2	Primary cut valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-74, DTC C1352 NORMAL OPENING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1361	NORMAL CLOSING VALVE 1	Secondary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-74, DTC C1361 NORMAL CLOSING VALVE 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1362	NORMAL CLOSING VALVE 2	Primary suction valve malfunction in VDCCM&H/U	<Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1411	ELECTRICAL CONTROL MODULE	VDC control module malfunction	<Ref. to VDC(diag)-78, DTC C1411 ELECTRICAL CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1412	SELECTED PARAMETER	VDC control module parameter failure	<Ref. to VDC(diag)-80, DTC C1412 SELECTED PARAMETER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1413	POWER SUPPLY VOLTAGE	Power voltage malfunction	<Ref. to VDC(diag)-81, DTC C1413 POWER SUPPLY VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1422	VDC INTERRUPTION FOR ENGINE CONVENIENCE	VDC interrupted due to some reasons of the engine	<Ref. to VDC(diag)-84, DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1423	DIFFERENT ECU SPECIFICATIONS	Different VDC control module specification	<Ref. to VDC(diag)-86, DTC C1423 DIFFERENT ECU SPECIFICATIONS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1424	ECM	Engine control module is faulty	<Ref. to VDC(diag)-88, DTC C1424 ECM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1431	AT	Transmission control module is faulty	<Ref. to VDC(diag)-89, DTC C1431 AT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1511	VALVE RELAY	Defective valve relay	<Ref. to VDC(diag)-90, DTC C1511 VALVE RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1521	MOTOR RELAY	Motor relay malfunction	<Ref. to VDC(diag)-93, DTC C1521 MOTOR RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1531	BLS OFF STUCK	Stop light switch malfunction	<Ref. to VDC(diag)-96, DTC C1531 BLS OFF STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1532	BLS ON STUCK	Stop light switch malfunction	<Ref. to VDC(diag)-99, DTC C1532 BLS ON STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1571	BRAKE LAMP RELAY OFF STUCK	Brake light relay malfunction	<Ref. to VDC(diag)-102, DTC C1571 BRAKE LAMP RELAY OFF STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1711	STEERING ANGLE SENSOR	Steering angle sensor malfunction	<Ref. to VDC(diag)-104, DTC C1711 STEERING ANGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1721	YAW RATE SENSOR	Defective yaw rate sensor	<Ref. to VDC(diag)-108, DTC C1721 YAW RATE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
C1732	LATERAL G SENSOR	Defective lateral G sensor	<Ref. to VDC(diag)-110, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1733	LONGITUDINAL G SENSOR	Defective longitudinal G sensor	<Ref. to VDC(diag)-112, DTC C1733 LONGITUDINAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1741	PRESSURE SENSOR	Defective pressure sensor	<Ref. to VDC(diag)-113, DTC C1741 PRESSURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1742	WHEEL CYLINDER PRESSURE SENSOR	Defective pressure sensor	<Ref. to VDC(diag)-114, DTC C1742 WHEEL CYLINDER PRESSURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1811	SYSTEM	System malfunction	<Ref. to VDC(diag)-115, DTC C1811 SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1921	PARKING POSITION SWITCH CIRCUIT	Parking switch malfunction	<Ref. to VDC(diag)-117, DTC C1921 PARKING POSITION SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1923	AUTO VEHICLE HOLD SWITCH CIRCUIT	Defective AVH switch	<Ref. to VDC(diag)-120, DTC C1923 AUTO VEHICLE HOLD SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1935	IGNITION SWITCH CIRCUIT	No match of IGN input	<Ref. to VDC(diag)-122, DTC C1935 IGNITION SWITCH CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1942	POWER SUPPLY VOLTAGE	Electronic parking brake power supply voltage is faulty	<Ref. to VDC(diag)-124, DTC C1942 POWER SUPPLY VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1951	ACTUATOR	Electronic parking brake actuator line is faulty	<Ref. to VDC(diag)-126, DTC C1951 ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1954	RH ACTUATOR	Electronic parking brake RH actuator is faulty	<Ref. to VDC(diag)-128, DTC C1954 RH ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1955	LH ACTUATOR	Electronic parking brake LH actuator is faulty	<Ref. to VDC(diag)-130, DTC C1955 LH ACTUATOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1956	RH ACTUATOR CIRCUIT	RH actuator circuit malfunction	<Ref. to VDC(diag)-132, DTC C1956 RH ACTUATOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1957	LH ACTUATOR CIRCUIT	LH actuator circuit malfunction	<Ref. to VDC(diag)-134, DTC C1957 LH ACTUATOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1983	HIGH FREQUENCY OPERATION	Electronic parking brake operation is too frequent	<Ref. to VDC(diag)-136, DTC C1983 HIGH FREQUENCY OPERATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1984	BRAKE MAINTENANCE MODE	Executing brake maintenance mode	<Ref. to VDC(diag)-137, DTC C1984 BRAKE MAINTENANCE MODE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C1985	FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION	Electronic parking brake actuator is faulty	<Ref. to VDC(diag)-138, DTC C1985 FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Defective CAN communication	<Ref. to VDC(diag)-138, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Defective CAN communication	<Ref. to VDC(diag)-138, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Defective CAN communication	<Ref. to VDC(diag)-138, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Defective CAN communication	<Ref. to VDC(diag)-138, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-138, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Defective CAN communication	<Ref. to VDC(diag)-139, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C1211 FRONT RIGHT ABS SENSOR CIRCUIT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-65, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

B: DTC C1221 FRONT LEFT ABS SENSOR CIRCUIT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-65, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC C1231 REAR RIGHT ABS SENSOR CIRCUIT

NOTE:
For the diagnostic procedure, refer to “DTC C1241 REAR LEFT ABS SENSOR CIRCUIT”. <Ref. to VDC(diag)-65, DTC C1241 REAR LEFT ABS SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

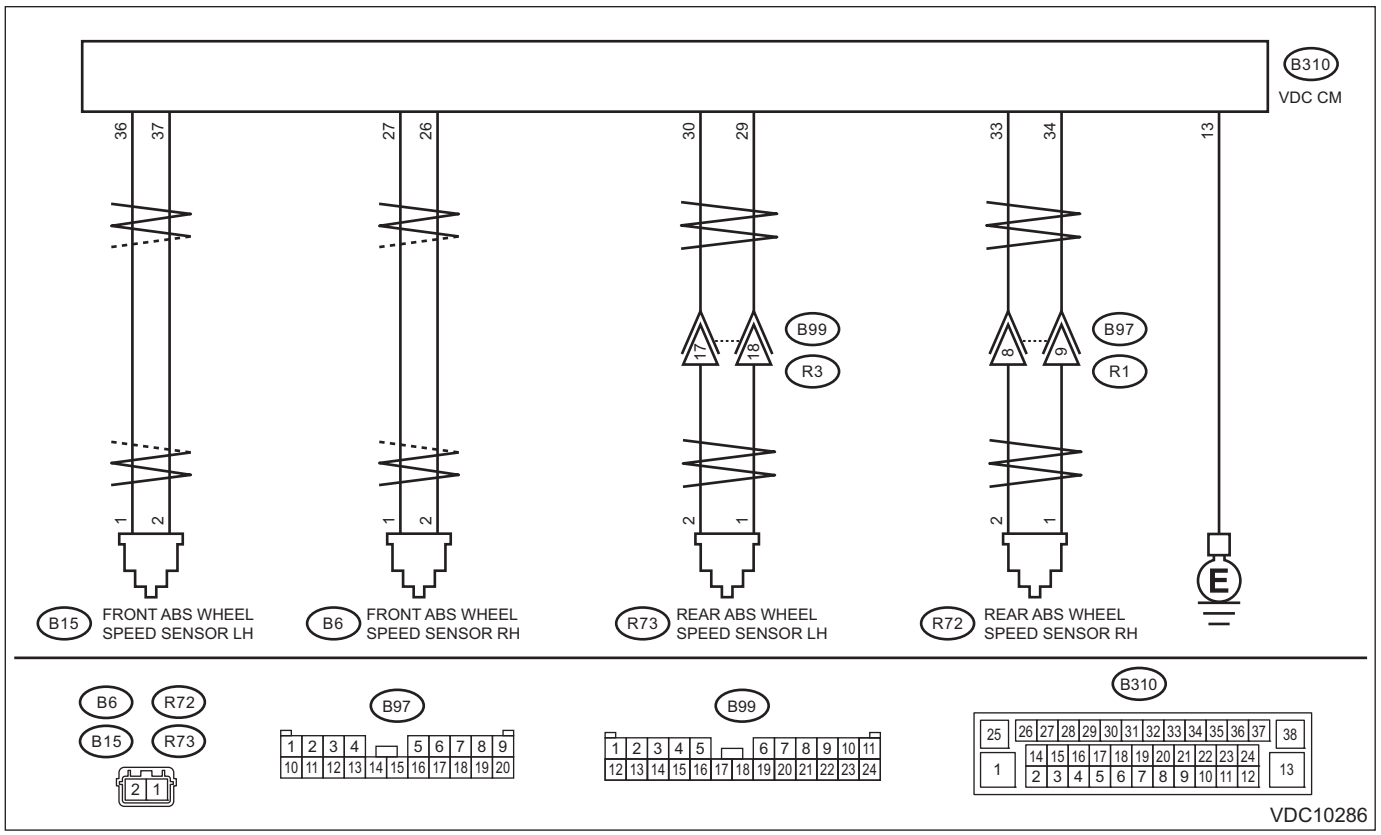
D: DTC C1241 REAR LEFT ABS SENSOR CIRCUIT

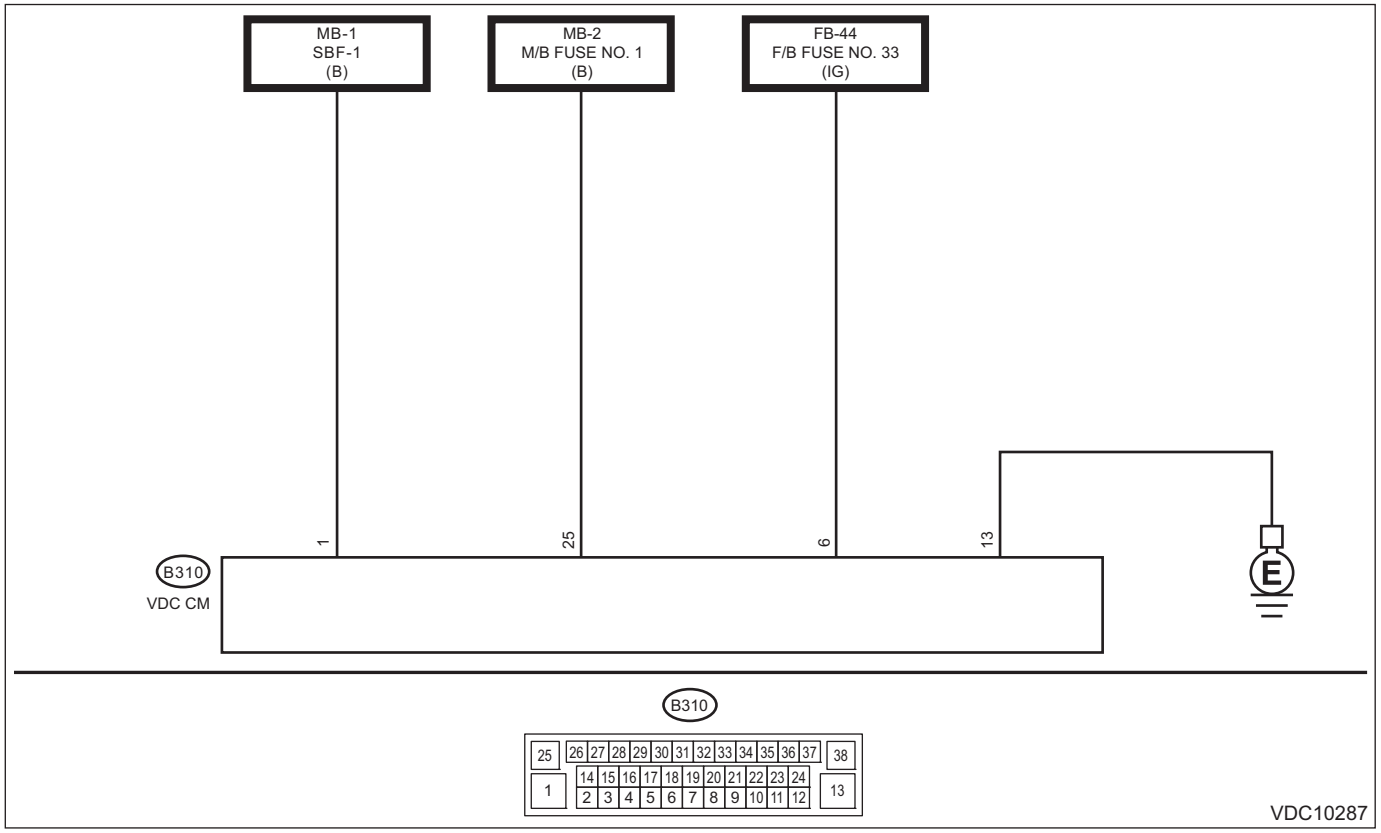
DTC detecting condition:
Judge as malfunction when the current value of the wheel speed sensor is out of normal range for a predetermined time or more.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

NOTE:
This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-30, Clear Memory Mode.>
Wiring diagram:

- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>





- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.** Check if there is poor contact between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact?	Repair the connector.	Go to step **2**.
2	**CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND ABS WHEEL SPEED SENSOR (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B310) from the VDCCM&H/U. 3) Disconnect the connector from ABS wheel speed sensor. 4) Measure the resistance between VDCCM&H/U connector and ABS wheel speed sensor connector. ***Connector & terminal*** ***Models without EyeSight*** ***DTC C1211*** ***(B310) No. 27 — (B6) No. 1:*** ***(B310) No. 26 — (B6) No. 2:*** ***DTC C1221*** ***(B310) No. 36 — (B15) No. 1:*** ***(B310) No. 37 — (B15) No. 2:*** ***DTC C1231*** ***(B310) No. 34 — (R72) No. 1:*** ***(B310) No. 33 — (R72) No. 2:*** ***DTC C1241*** ***(B310) No. 29 — (R73) No. 1:*** ***(B310) No. 30 — (R73) No. 2:*** ***Models with EyeSight*** ***DTC C1211*** ***(B310) No. 5 — (B6) No. 1:*** ***(B310) No. 4 — (B6) No. 2:*** ***DTC C1221*** ***(B310) No. 9 — (B15) No. 1:*** ***(B310) No. 8 — (B15) No. 2:*** ***DTC C1231*** ***(B310) No. 11 — (R72) No. 1:*** ***(B310) No. 10 — (R72) No. 2:*** ***DTC C1241*** ***(B310) No. 7 — (R73) No. 1:*** ***(B310) No. 6 — (R73) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.

	Step	Check	Yes	No
3	**CHECK GROUND SHORT OF HARNESS.** Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***DTC C1211*** ***(B310) No. 26 — Chassis ground:*** ***DTC C1221*** ***(B310) No. 37 — Chassis ground:*** ***DTC C1231*** ***(B310) No. 33 — Chassis ground:*** ***DTC C1241*** ***(B310) No. 30 — Chassis ground:*** ***Models with EyeSight*** ***DTC C1211*** ***(B310) No. 4 — Chassis ground:*** ***DTC C1221*** ***(B310) No. 8 — Chassis ground:*** ***DTC C1231*** ***(B310) No. 10 — Chassis ground:*** ***DTC C1241*** ***(B310) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the harness connector between VDCCM&H/U and ABS wheel speed sensor.
4	**CHECK ABS WHEEL SPEED SENSOR POWER SUPPLY CIRCUIT.** 1) Connect the VDCCM&H/U connector. 2) Connect the ABS wheel speed sensor connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between ABS wheel speed sensor connector and chassis ground. ***Connector & terminal*** ***DTC C1211*** ***(B6) No. 1 (+) — Chassis ground (–):*** ***DTC C1221*** ***(B15) No. 1 (+) — Chassis ground (–):*** ***DTC C1231*** ***(R72) No. 1 (+) — Chassis ground (–):*** ***DTC C1241*** ***(R73) No. 1 (+) — Chassis ground (–):***	Is the voltage 5 — 16 V?	Go to step **6**.	Go to step **5**.
5	**CHECK VDCCM&H/U POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the VDCCM&H/U connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector terminals. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 1 (+) — (B310) No. 13 (–):*** ***(B310) No. 6 (+) — (B310) No. 13 (–):*** ***(B310) No. 25 (+) — (B310) No. 13 (–):*** ***Models with EyeSight*** ***(B310) No. 1 (+) — (B310) No. 14 (–):*** ***(B310) No. 30 (+) — (B310) No. 14 (–):*** ***(B310) No. 35 (+) — (B310) No. 14 (–):***	Is the voltage 10 — 15 V?	Go to step **6**.	Check the generator, battery and VDCCM&H/U power supply circuit.

	Step	Check	Yes	No
6	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-32, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-36, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Is the pattern the same waveform as shown in the figure?	Go to step **7**.	Replace the ABS wheel speed sensor. <Ref. to VDC-31, Front ABS Wheel Speed Sensor.> <Ref. to VDC-34, Rear ABS Wheel Speed Sensor.>
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

E: DTC C1212 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-71, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC C1222 FRONT LEFT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-71, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

G: DTC C1232 REAR RIGHT ABS SENSOR SIGNAL

NOTE:
For the diagnostic procedure, refer to “DTC C1242 REAR LEFT ABS SENSOR SIGNAL”. <Ref. to VDC(diag)-71, DTC C1242 REAR LEFT ABS SENSOR SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

H: DTC C1242 REAR LEFT ABS SENSOR SIGNAL

DTC detecting condition:

- A fault is detected if the time of decompression or hold exceeds the predetermined time.
- A fault is detected if noise of the wheel speed sensor signal is detected.
- A fault is detected if the wheel speed sensor signal is lost, or the wheel speed sensor signal continuously indicates significantly low speed by calculating the difference between maximum speed and minimum speed among the four wheels.
- A fault is detected if the wheel speed sensor signal continuously indicates excessively high or low speed.
- A fault is detected if the wheel speed sensor signal changes irregularly.
- A fault is detected if the wheel speed sensor signal drops cyclically.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

NOTE:
This DTC may be stored when the wheel speed sensor connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-30, Clear Memory Mode.>

	Step	Check	Yes	No
1	**CHECK ABS WHEEL SPEED SENSOR AND FREEZE FRAME DATA USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, check the freeze frame data when DTC is detected. <Ref. to VDC(diag)-22, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Compare «FR Wheel Speed», «FL Wheel Speed», «RR Wheel Speed» and «RL Wheel Speed» to determine a sensor that is not indicating the same value. 3) Check the current data of the wheel speed sensor that is not indicating the same value. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Does the speed indicated on the data monitor change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position? In addition, are the wheel speeds of the freeze frame data for 4 wheels almost the same?	Go to step **2**.	Go to step **7**.
2	**CHECK POOR CONTACT OF CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Check for poor contact of the connector between VDCCM&H/U and ABS wheel speed sensor.	Is there poor contact of connectors between VDCCM&H/U and ABS wheel speed sensor?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.
7	**CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.**	Is the ABS wheel speed sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step **8**.	Tighten the ABS wheel speed sensor installation bolts.
8	**CHECK ABS WHEEL SPEED SENSOR SIGNAL.** 1) Prepare an oscilloscope. 2) Check the ABS wheel speed sensor. <Ref. to VDC-32, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Front ABS Wheel Speed Sensor.> <Ref. to VDC-36, CHECK ABS WHEEL SPEED SENSOR UNIT, INSPECTION, Rear ABS Wheel Speed Sensor.>	Does the oscilloscope indicate the waveform pattern like shown in the figure when the tire is slowly turned? Does the oscilloscope indication repeat the waveform pattern like shown in the figure when the tire is slowly turned in equal speed for one rotation or more?	Go to step **10**.	Go to step **9**.
9	**CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER.**	Are there foreign matter, breakage or damage at the tip of ABS wheel speed sensor or magnetic encoder?	Remove dirt thoroughly. Also replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing if it is broken or damaged.	Go to step **10**.
10	**CHECK CAUSE OF SIGNAL NOISE.** Make sure the radio wave devices and electronic components are installed correctly.	Are the radio wave devices and electronic components installed correctly?	Go to step **11**.	Install the radio wave devices and electronic components properly.
11	**CHECK CAUSE OF SIGNAL NOISE.** Check if the noise sources (such as an antenna) are installed near the sensor harness.	Are noise sources installed?	Install the noise sources apart from sensor harness.	Go to step **12**.
12	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Go to step **13**.	Go to step **14**.
13	**CHECK FREEZE FRAME DATA OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Freeze frame data”. <Ref. to VDC(diag)-22, READ FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Read the ABS wheel speed sensor output.	Is the ABS wheel speed sensor output different compared with other wheels?	Replace the ABS wheel speed sensor which has a difference. <Ref. to VDC-31, Front ABS Wheel Speed Sensor.> <Ref. to VDC-34, Rear ABS Wheel Speed Sensor.>	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
14	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference. NOTE: Though the ABS warning light may remain on at this time, this is normal. Drive the vehicle at 40 km/h (25 MPH) or more in order to turn ABS warning light off. Be sure to drive the vehicle and check that the warning light goes off.

I: DTC C1311 FR HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC C1312 FR PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC C1321 FL HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC C1322 FL PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC C1331 RR HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC C1332 RR PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC C1341 RL HOLD VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC C1342 RL PRESSURE REDUCING VALVE

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC C1351 NORMAL OPENING VALVE 1

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

R: DTC C1352 NORMAL OPENING VALVE 2

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

S: DTC C1361 NORMAL CLOSING VALVE 1

NOTE:
For the diagnostic procedure, refer to “DTC C1362 NORMAL CLOSING VALVE 2”. <Ref. to VDC(diag)-75, DTC C1362 NORMAL CLOSING VALVE 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

T: DTC C1362 NORMAL CLOSING VALVE 2

DTC detecting condition:

A fault is detected if electrical malfunction judgment is generated for VDCH/U solenoid valve.

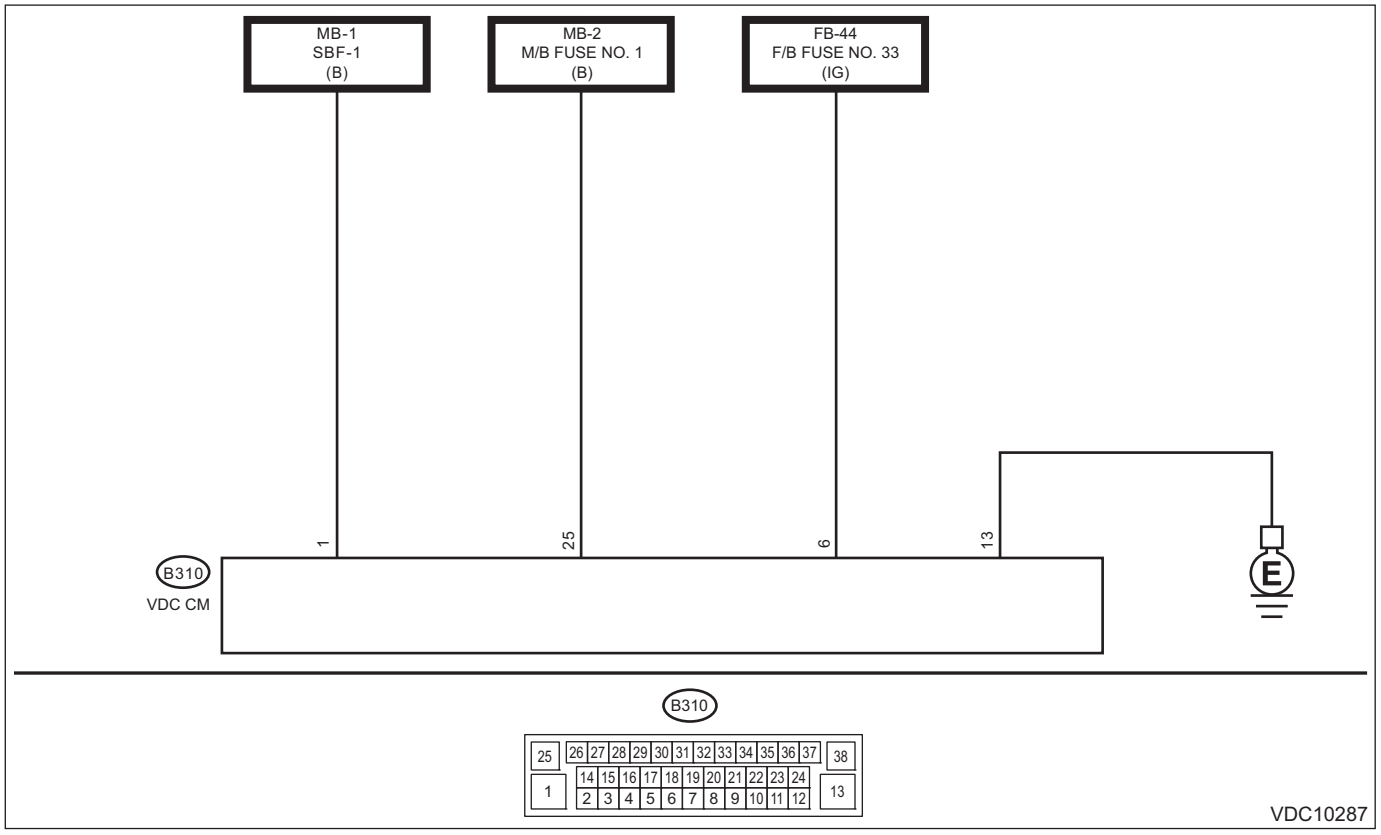
Trouble symptom:

- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

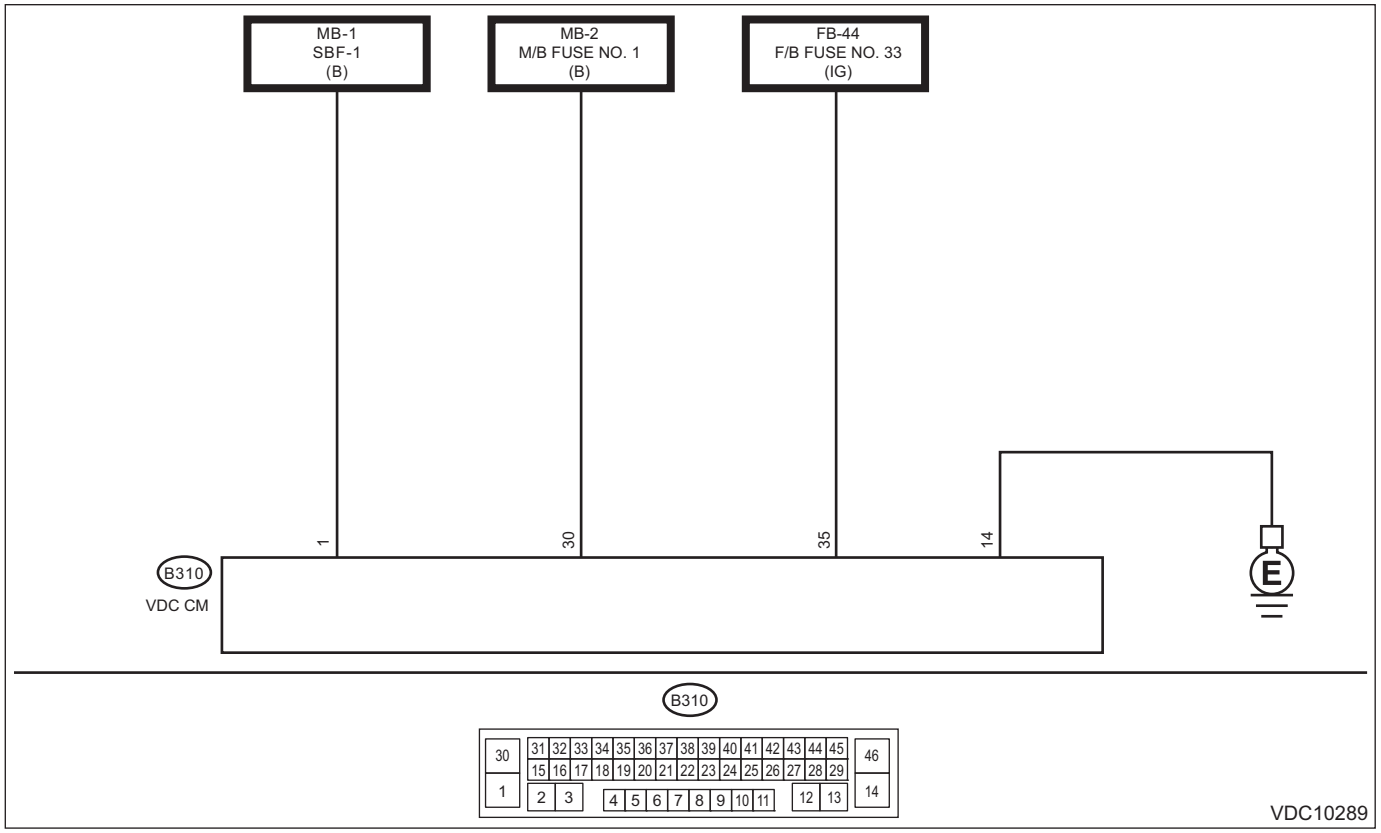
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



• Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 6 (+) — Chassis ground (–):*** ***(B310) No. 25 (+) — Chassis ground (–):*** ***Models with EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit including the battery.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground harness.

	Step	Check	Yes	No
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **4**.
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

U: DTC C1411 ELECTRICAL CONTROL MODULE

DTC detecting condition:

- Judge as malfunction when ECM internal malfunction is detected.
- This malfunction is stored if the fluid pressure request from the electronic parking brake does not operate.

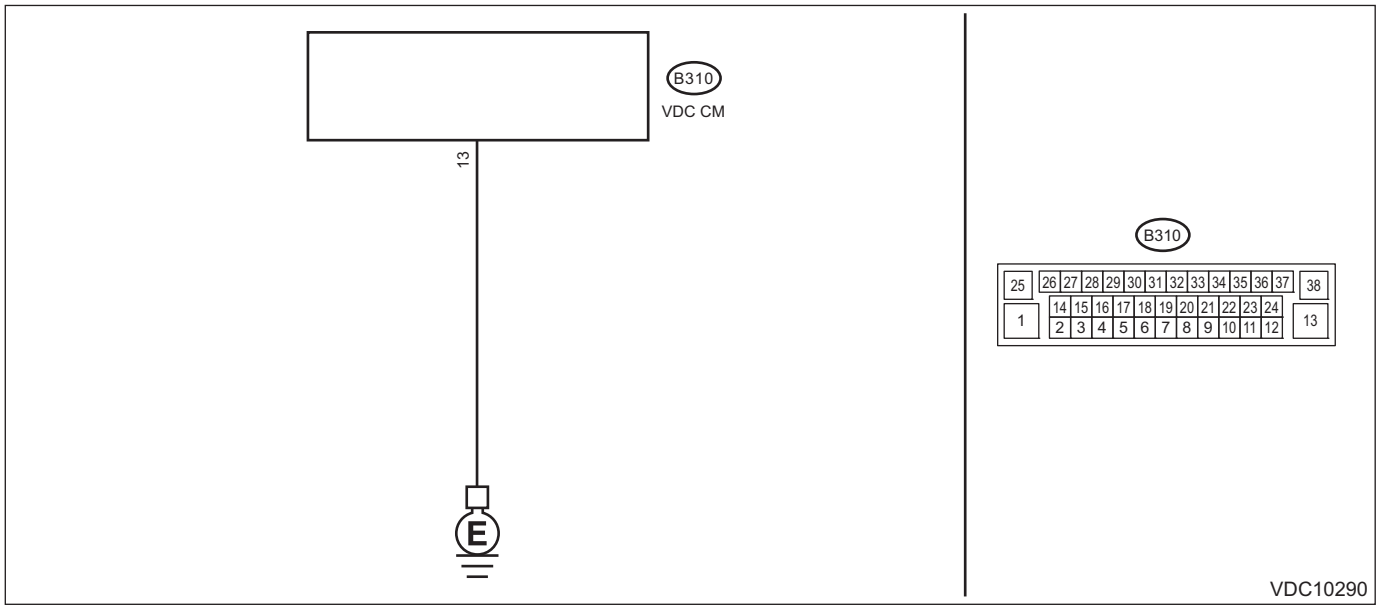
Trouble symptom:

- ABS does not operate sometimes.
- EBD does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Repair the VDCCM&H/U ground harness.
2	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of the connector between the battery, ignition switch and VDCCM&H/U?	Repair the connector.	Go to step **3**.
3	**CHECK CAUSE OF SIGNAL NOISE.**	Are the radio wave devices and electronic components installed correctly?	Go to step **4**.	Install the radio wave devices and electronic components properly.
4	**CHECK CAUSE OF SIGNAL NOISE.**	Is there a noise source (such as an antenna) installed near the sensor harness and VDCCM?	Install the noise sources apart from sensor harness and VDCCM.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

V: DTC C1412 SELECTED PARAMETER

DTC detecting condition:

- A fault is detected if abnormal set value is found on the vehicle model that were given some parameters.
- A fault is detected if 0 point setting compensation of the sensor is not yet performed.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

NOTE:
When the VDCCM&H/U is replaced, this DTC may be stored.

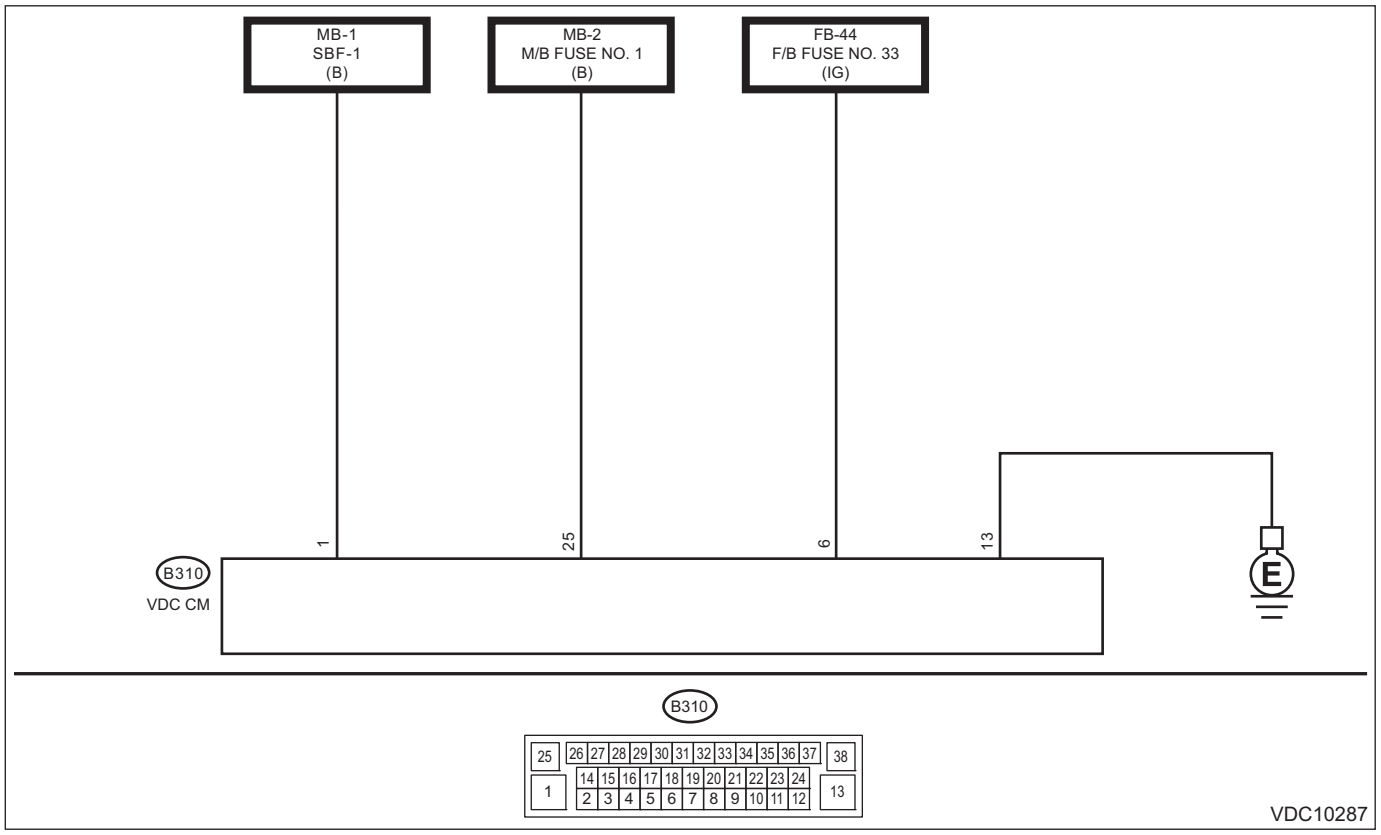
	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-18, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	Go to step **3**.	Select and register the correct parameter. <Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK SPECIFICATIONS OF OTHER CONTROL MODULES.** Check the specifications of ECM and TCM.	Are the specifications of ECM and TCM the same as vehicle specification?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the ECM and TCM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

W: DTC C1413 POWER SUPPLY VOLTAGE

DTC detecting condition:
A fault is detected if the power supply voltage is out of normal range for a predetermined time or more.
Trouble symptom:
- ABS does not operate.
- EBD may not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

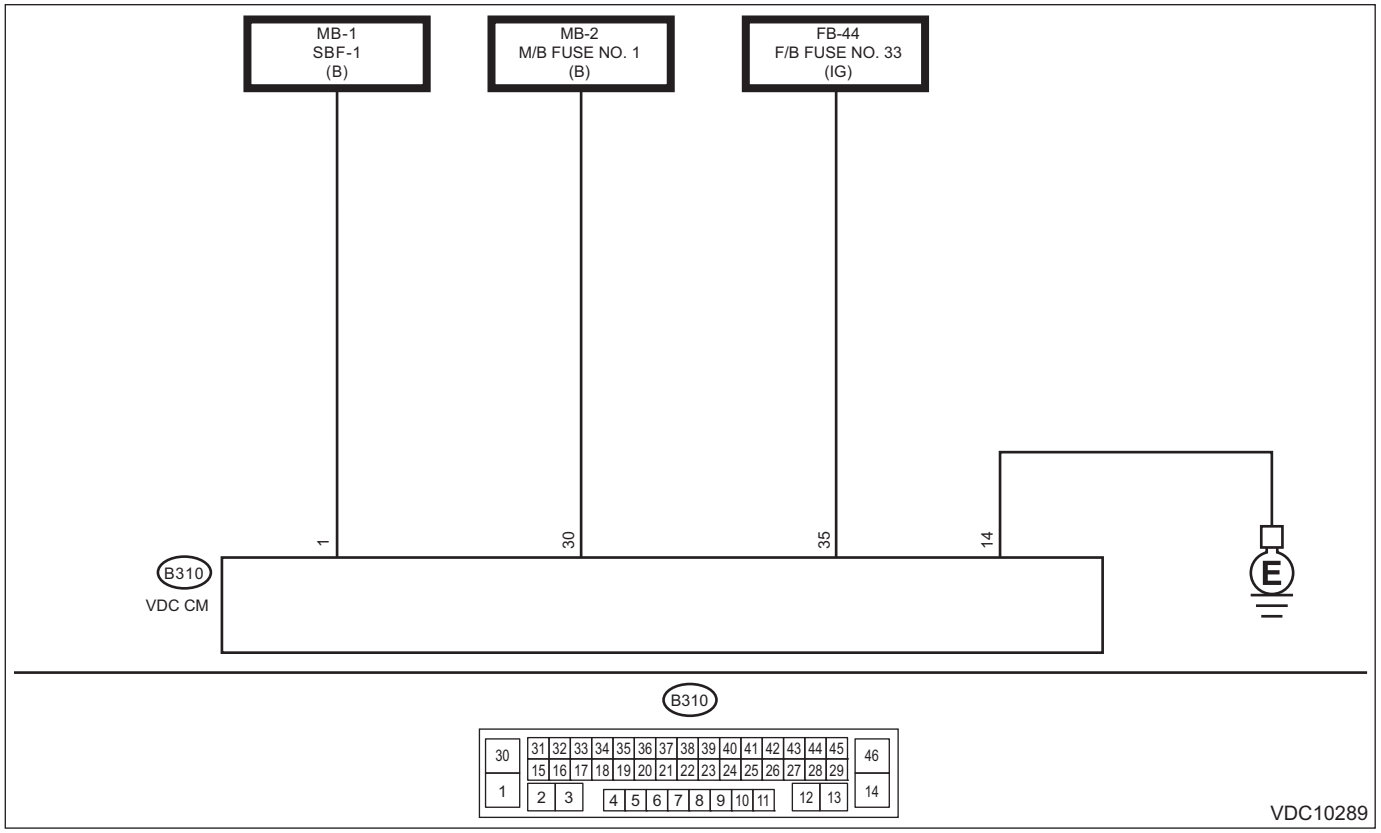
NOTE:
Warning lights go off if voltage returns.
Wiring diagram:
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine. 2) Run the engine at idle after warming up. 3) Measure the voltage between generator terminal B and chassis ground. ***Terminals*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the generator.
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Are the positive and negative battery terminals installed tightly?	Go to step **3**.	Install the battery terminal correctly.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Disconnect the connector from the VDCCM&H/U. 2) Run the engine at idle. 3) Operate devices such as headlights, air conditioner, rear defogger, etc. which produce an electrical load. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 6 (+) — Chassis ground (–):*** ***(B310) No. 25 (+) — Chassis ground (–):*** ***Models with EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness circuit.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

X: DTC C1422 VDC INTERRUPTION FOR ENGINE CONVENIENCE

DTC detecting condition:
A fault is detected if engine control prohibition flag from ECM is received.
Trouble symptom:
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)

NOTE:
Warning lights go off if the cooperation control of ECM returns.

	Step	Check	Yes	No
1	**CHECK COOPERATION CONTROL FEASIBILITY OF ECM USING SUBARU SELECT MONITOR.** 1) Start the engine, and run the engine at idle approximately 5 minutes. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Check the «E/G Torque Down Control Stop Flag» displayed on screen.	Does the «E/G Torque Down Control Stop Flag» indicate “1”?	Go to step **4**.	Go to step **2**.
2	**CHECK WARNING LIGHT.** Check whether the VDC warning light illuminates after driving for 1 minute or more at a speed of 10 km/h (6 MPH) or more.	Does the VDC warning light illuminate?	Go to step **3**.	VDC is normal. Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> NOTE: DTC may be recorded if cranking is performed during driving.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of ECM connector?	Repair the connector.	Go to step **4**.
4	**CHECK DTC OF ECM.** Read the DTC relating the ECM using the Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.

Step		Check	Yes	No
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Y: DTC C1423 DIFFERENT ECU SPECIFICATIONS

DTC detecting condition:
A fault is detected if the vehicle type information obtained from ECM via communication is different from the parameter setting information.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

NOTE:
When parameter selection for VDCCM is improper, this DTC may be memorized.

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U IDENTIFICATION SYMBOL.** Check the identification symbol attached on the H/U. <Ref. to VDC-2, SPECIFICATION, General Description.>	Is the identification symbol correct?	Go to step **2**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
2	**CHECK PARAMETER SELECTED IN VDCCM.** <Ref. to VDC-18, VDCCM PARAMETER CHECK, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Does the parameter registered in the VDCCM match the relevant vehicle?	CVT model: Go to step **3**. MT model: Go to step **5**.	Select and register the correct parameter. <Ref. to VDC-18, VDCCM PARAMETER SELECTION, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK TCM SPECIFICATION.** Check the TCM specification.	Is the specification of TCM same as vehicle specification?	Go to step **4**.	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
4	**CHECK CVT SYSTEM.** 1) Start the engine. 2) Read the DTC of the CVT system. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT system displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK ECM SPECIFICATION.** Check the ECM specification.	Is the specification of ECM same as vehicle specification?	Go to step **6**.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

	Step	Check	Yes	No
6	**CHECK ENGINE SYSTEM.** 1) Start the engine. 2) Read DTC of the engine system. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is engine system DTC displayed?	Perform the diagnosis according to DTC. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

Z: DTC C1424 ECM

DTC detecting condition:
A fault is detected if malfunction judgment flag for the engine system is received from ECM for a predetermined time or more.
Trouble symptom:
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK ECM.** 1) Start the engine. 2) Read the DTC of the ECM. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AA:DTC C1431 AT

DTC detecting condition:
A fault is detected if malfunction flag is received from TCM.
Trouble symptom:
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

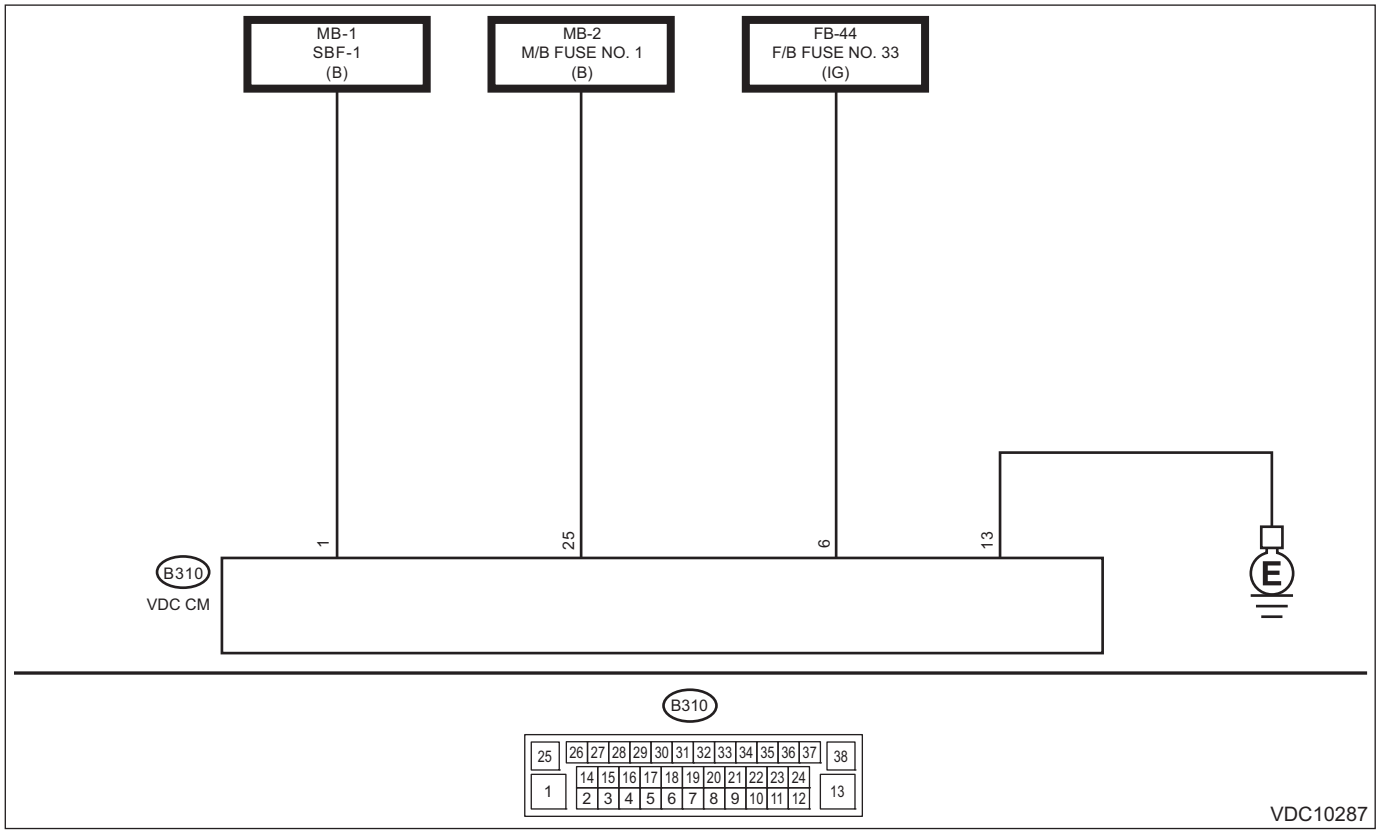
	Step	Check	Yes	No
1	**CHECK TCM.** 1) Start the engine. 2) Read the DTC of the TCM. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis according to DTC. <Ref. to CVT(diag)-35, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) After turning the ignition switch to ON for approx. 10 seconds, turn it to OFF. 3) Turn the ignition switch to ON again. 4) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 6) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AB:DTC C1511 VALVE RELAY

DTC detecting condition:
A fault is detected if valve relay drive voltage failure is detected.
Trouble symptom:
- ABS does not operate.
- EBD does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



• Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Run the engine at idle. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 6 (+) — Chassis ground (–):*** ***(B310) No. 25 (+) — Chassis ground (–):*** ***Models with EyeSight*** ***(B310) No. 30 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. • Models without EyeSight A: (B310) No. 6 (+) — Chassis ground (–): B: (B310) No. 25 (+) — Chassis ground (–): • Models with EyeSight A: (B310) No. 30 (+) — Chassis ground (–): B: (B310) No. 35 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the VDCCM&H/U ground harness.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AC:DTC C1521 MOTOR RELAY

DTC detecting condition:

A fault is detected if the pump motor supply voltage becomes significantly low when the pump motor is not driven.

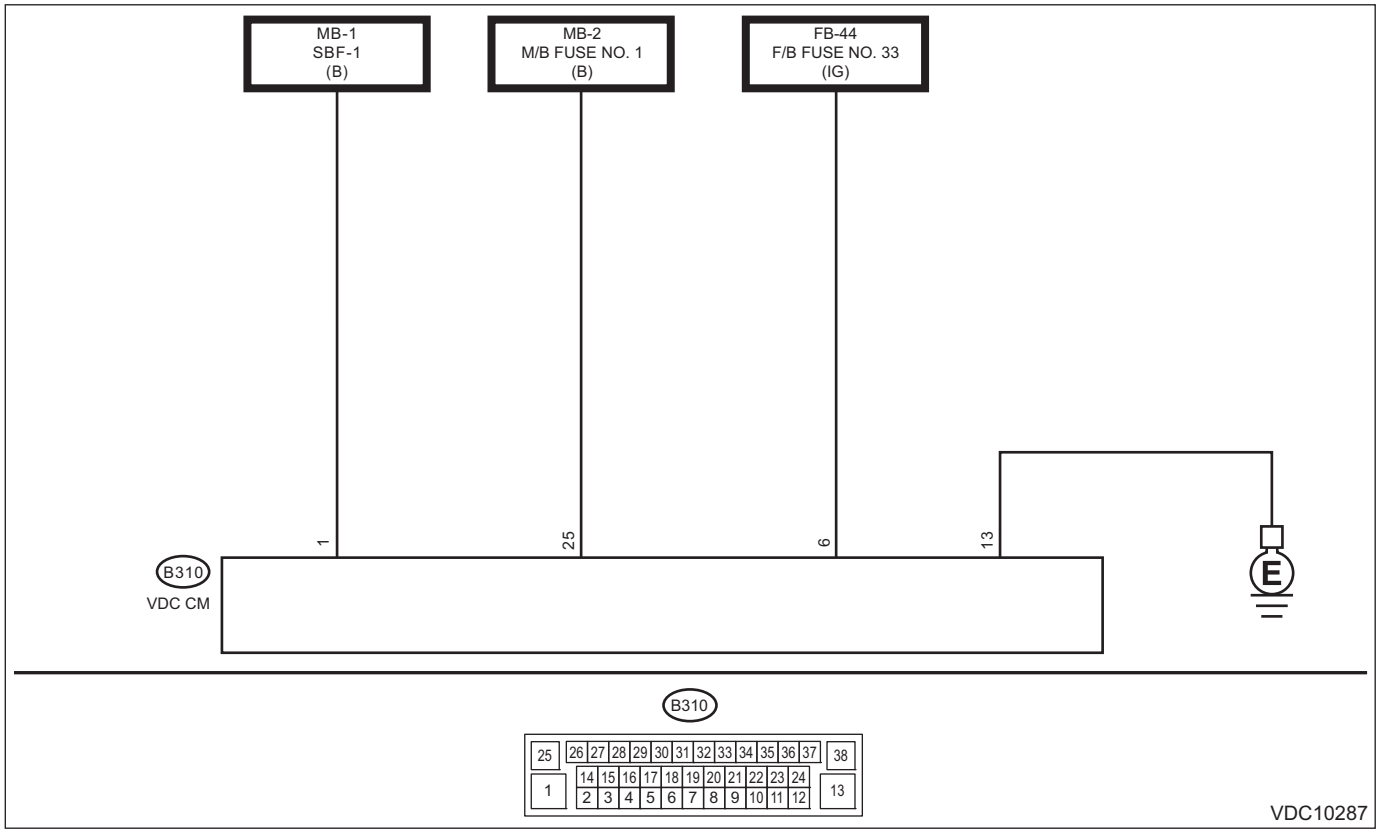
Trouble symptom:

- ABS does not operate sometimes.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



• Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 6 (+) — Chassis ground (–):*** ***Models with EyeSight*** ***(B310) No. 1 (+) — Chassis ground (–):*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the VDCCM&H/U power supply circuit.
2	**CHECK VDCCM&H/U INPUT VOLTAGE.** Calculate the voltage difference measured in step 1. • Models without EyeSight A: (B310) No. 1 (+) — Chassis ground (–): B: (B310) No. 6 (+) — Chassis ground (–): • Models with EyeSight A: (B310) No. 1 (+) — Chassis ground (–): B: (B310) No. 35 (+) — Chassis ground (–):	Is the voltage difference between A and B 2 V or more?	Repair the power supply circuit.	Go to step **3**.
3	**CHECK INSTALLATION OF VDCCM&H/U GROUND.**	Is the VDCCM&H/U ground terminal installation bolt (ground bolt fixing onto the side frame upper face) installed correctly?	Go to step **4**.	Install the VDCCM&H/U ground terminal installation bolt correctly.

	Step	Check	Yes	No
4	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***Models without EyeSight*** ***(B310) No. 13 — Chassis ground:*** ***Models with EyeSight*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the VDCCM&H/U ground harness.
5	**CHECK VDCCM&H/U MOTOR RELAY.** Measure the resistance between VDCCM&H/U terminals. ***Terminals*** ***Models without EyeSight*** ***No. 1 — No. 13:*** ***Models with EyeSight*** ***No. 1 — No. 14:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK POOR CONTACT OF CONNECTORS.** Turn the ignition switch to OFF.	Is there poor contact of connector between generator, battery and VDCCM&H/U?	Repair the connector.	Go to step **7**.
7	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AD:DTC C1531 BLS OFF STUCK

DTC detecting condition:
A fault is detected if stop light switch signal is OFF for a predetermined time or more with the pressure signal of the pressure sensor high.

Trouble symptom:
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

1. MODELS WITHOUT EyeSight

Wiring diagram:
Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** Check the installation position of the stop light switch. <Ref. to BR-118, INSTALLATION, Stop Light Switch.>	Is the check result OK?	Go to step **2**.	Adjust the installation position of the stop light switch. <Ref. to BR-118, INSTALLATION, Stop Light Switch.>
2	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 Ω or less when the stop light switch is ON (when pedal is depressed)?	Go to step **3**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>
3	**CHECK STOP LIGHT POWER SUPPLY.** Measure the voltage between stop light switch terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the stop light power supply circuit.

	Step	Check	Yes	No
4	**CHECK STOP LIGHT SWITCH HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and stop light switch. ***Connector & terminal*** ***(B65) No. 2 — (B310) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the stop light switch circuit.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of connector between stop light switch and VDCCM&H/U?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.

Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

2. MODELS WITH EyeSight

Wiring diagram:

Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH.** Check the installation position of the stop light switch. <Ref. to BR-118, INSTALLATION, Stop Light Switch.>	Is the check result OK?	Go to step **2**.	Adjust the installation position of the stop light switch. <Ref. to BR-118, INSTALLATION, Stop Light Switch.>
2	**CHECK STOP LIGHT SWITCH.** 1) Disconnect the stop light switch connector. 2) Measure the resistance of stop light switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω when the stop light switch is ON (when pedal is depressed)?	Go to step **3**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>
3	**CHECK STOP LIGHT RELAY.** Measure the resistance of stop light relay terminals. ***Terminals*** ***No. 7 — No. 10:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the stop light relay. <Ref. to VDC-7, Relay and Fuse.>
4	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **5**.
5	**CHECK STOP LIGHT SWITCH CIRCUIT (CHECK FOR OPEN CIRCUIT).** Measure the resistance of stop light switch circuit. ***Connector & terminal*** ***(B310) No. 15 — (B567) No. 10:*** ***(B65) No. 2 — (B567) No. 7:*** ***(B65) No. 1 — (F/B fuse) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the stop light switch circuit.
6	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B567) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is ON (when pedal is depressed)?	Go to step **7**.	Repair the stop light switch circuit.
7	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AE:DTC C1532 BLS ON STUCK

DTC detecting condition:

- A fault is detected if a change of the vehicle speed from high to low occurs for a predetermined number of times or more, while a change of the stop light switch from OFF to ON is not detected.
- A fault is detected if stop light switch ON status continues for long time while the vehicle speed is at the predetermined speed or higher.

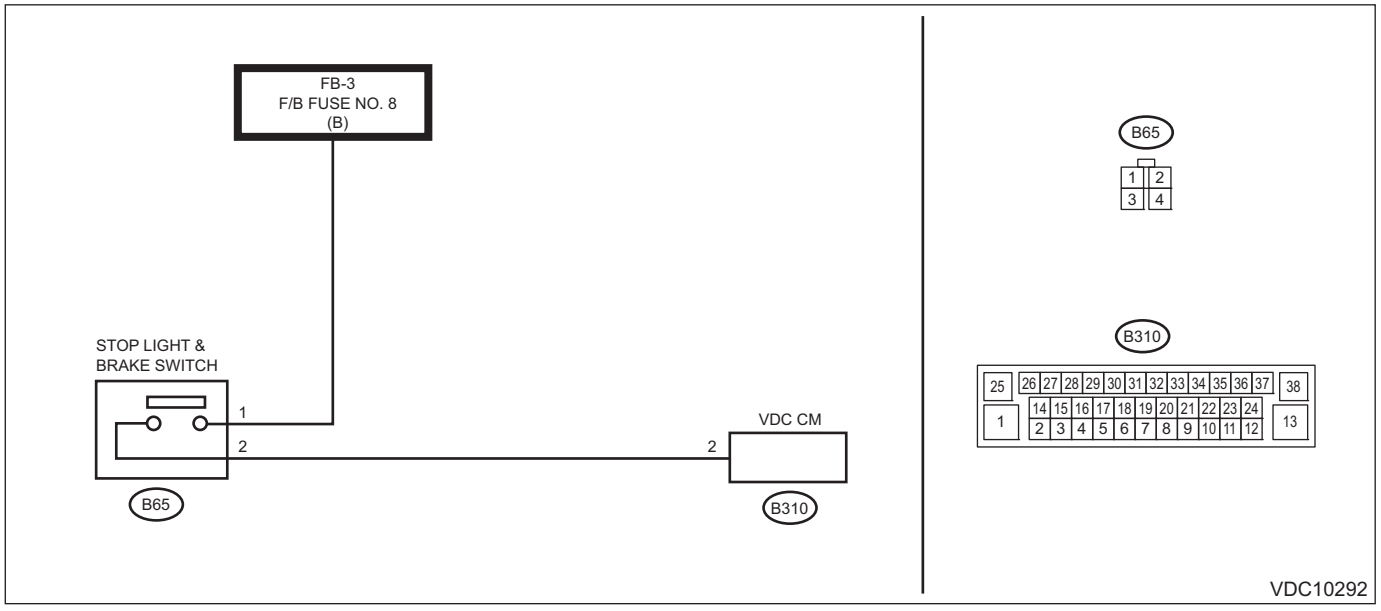
Trouble symptom:

- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate sometimes. (Models with EyeSight)

NOTE:
If the pressure sensor is defective, this DTC may probably be stored in addition to pressure sensor malfunction.

1. MODELS WITHOUT EyeSight

Wiring diagram:
Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>



Step		Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step **2**.
2	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Measure the resistance of stop light switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more when stop light switch is OFF (when pedal is not depressed)?	Go to step **3**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>

	Step	Check	Yes	No
3	**CHECK STOP LIGHT SWITCH HARNESS.** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal (B310) No. 2 — Chassis ground:***	Is the resistance less than 1 MΩ?	Go to step **4**.	Repair the stop light switch circuit.
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

2. MODELS WITH EyeSight

Wiring diagram:
Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>

	Step	Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot).	Were the acceleration pedal and brake pedal depressed simultaneously?	System is normal. (DTC may be recorded if the brake pedal is always depressed while driving.)	Go to step **2**.
2	**CHECK STOP LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of stop light relay terminals. ***Terminals*** ***No. 9 — No. 10:***	Is the resistance less than 1 Ω?	Replace the stop light relay. <Ref. to VDC-7, Relay and Fuse.>	Go to step **3**.
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B567) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more when the stop light switch is OFF (when pedal is not depressed)?	Repair the stop light switch circuit.	Go to step **5**.
5	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AF:DTC C1571 BRAKE LAMP RELAY OFF STUCK

DTC detecting condition:

A fault is detected if the stop light relay operation request were compared with the feedback signal and detected as follows:

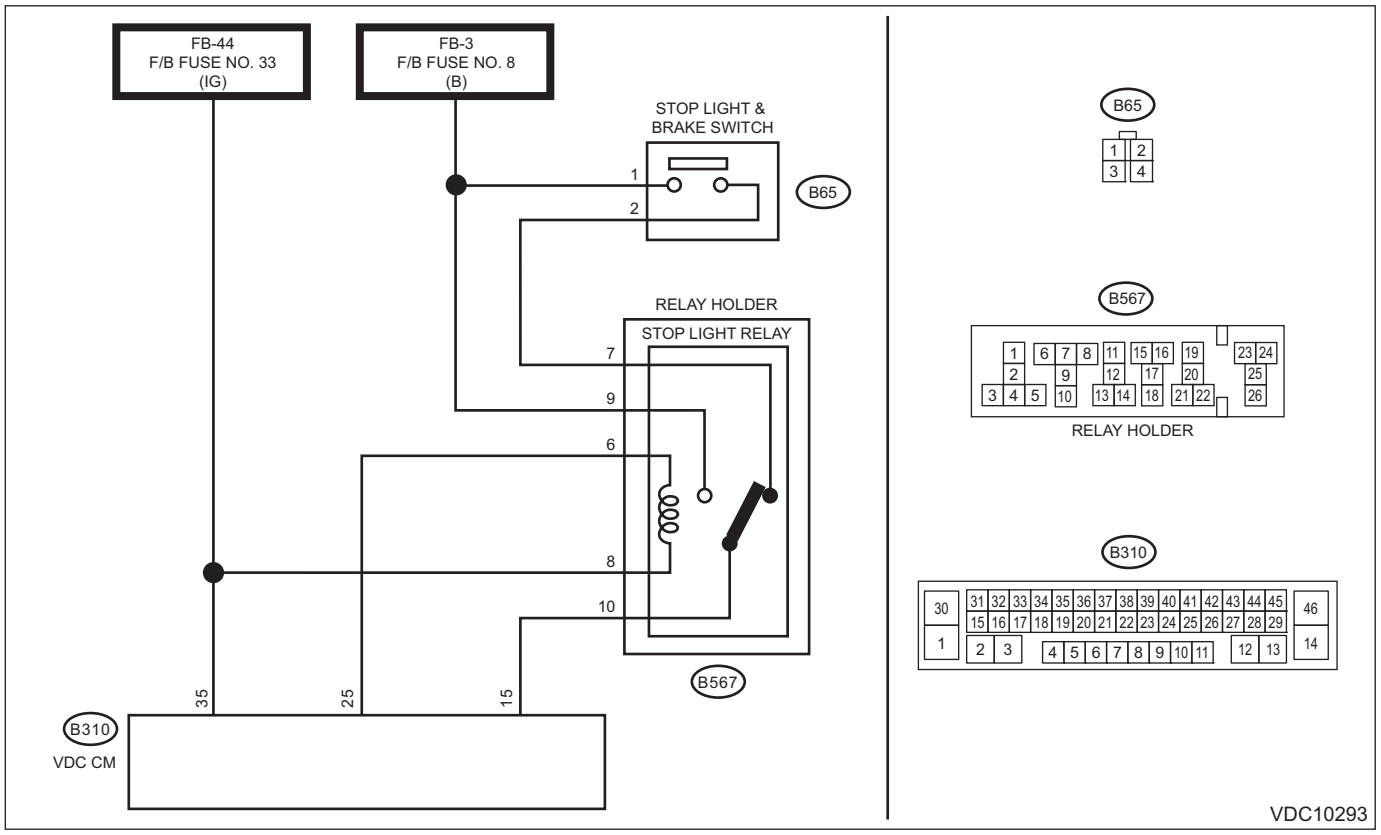
- The feedback signal is OFF.
- The stop light relay operation request is ON.

Trouble symptom:

- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)
- Stop lights do not illuminate sometimes.
- Electronic parking brake warning light illuminates.

Wiring diagram:

Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>



Step		Check	Yes	No
1	**CHECK DTC.** Check the DTC using Subaru Select Monitor. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Are any DTCs related to the stop light switch displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK STOP LIGHT RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the stop light relay. 3) Measure the resistance between stop light relay terminals No. 8 — No. 6 when the battery voltage is applied. ***Terminals*** ***No. 9 — No. 10:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the stop light relay. <Ref. to VDC-7, Relay and Fuse.>

	Step	Check	Yes	No
3	**CHECK VDCCM&H/U CONNECTOR.** Disconnect the connector from the VDCCM&H/U.	Is there poor contact or damage of the VDCCM&H/U connector?	Repair the VDCCM&H/U connector.	Go to step **4**.
4	**CHECK STOP LIGHT SWITCH CIRCUIT.** Measure the resistance between the stop light relay and the fuse. ***Connector & terminal*** ***(B567) No. 9 — (F/B fuse) No. 8:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit in the power supply circuit including the fuse.
5	**CHECK STOP LIGHT SWITCH CIRCUIT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B567) No. 9 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair or replace the open circuit in the power supply circuit including the fuse.
6	**CHECK STOP LIGHT RELAY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the stop light relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B567) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the stop light relay circuit.	Go to step **7**.
7	**CHECK STOP LIGHT RELAY CIRCUIT.** Measure the voltage between stop light relay and chassis ground. ***Connector & terminal*** ***(B567) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the ignition power supply circuit.
8	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Connect all connectors and relays. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **9**.
9	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AG:DTC C1711 STEERING ANGLE SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the yaw rate sensor signal / lateral G sensor signal change while the sensor signal of steering angle sensor indicates a constant value.
- A fault is detected if the communication status of steering angle sensor is abnormal.

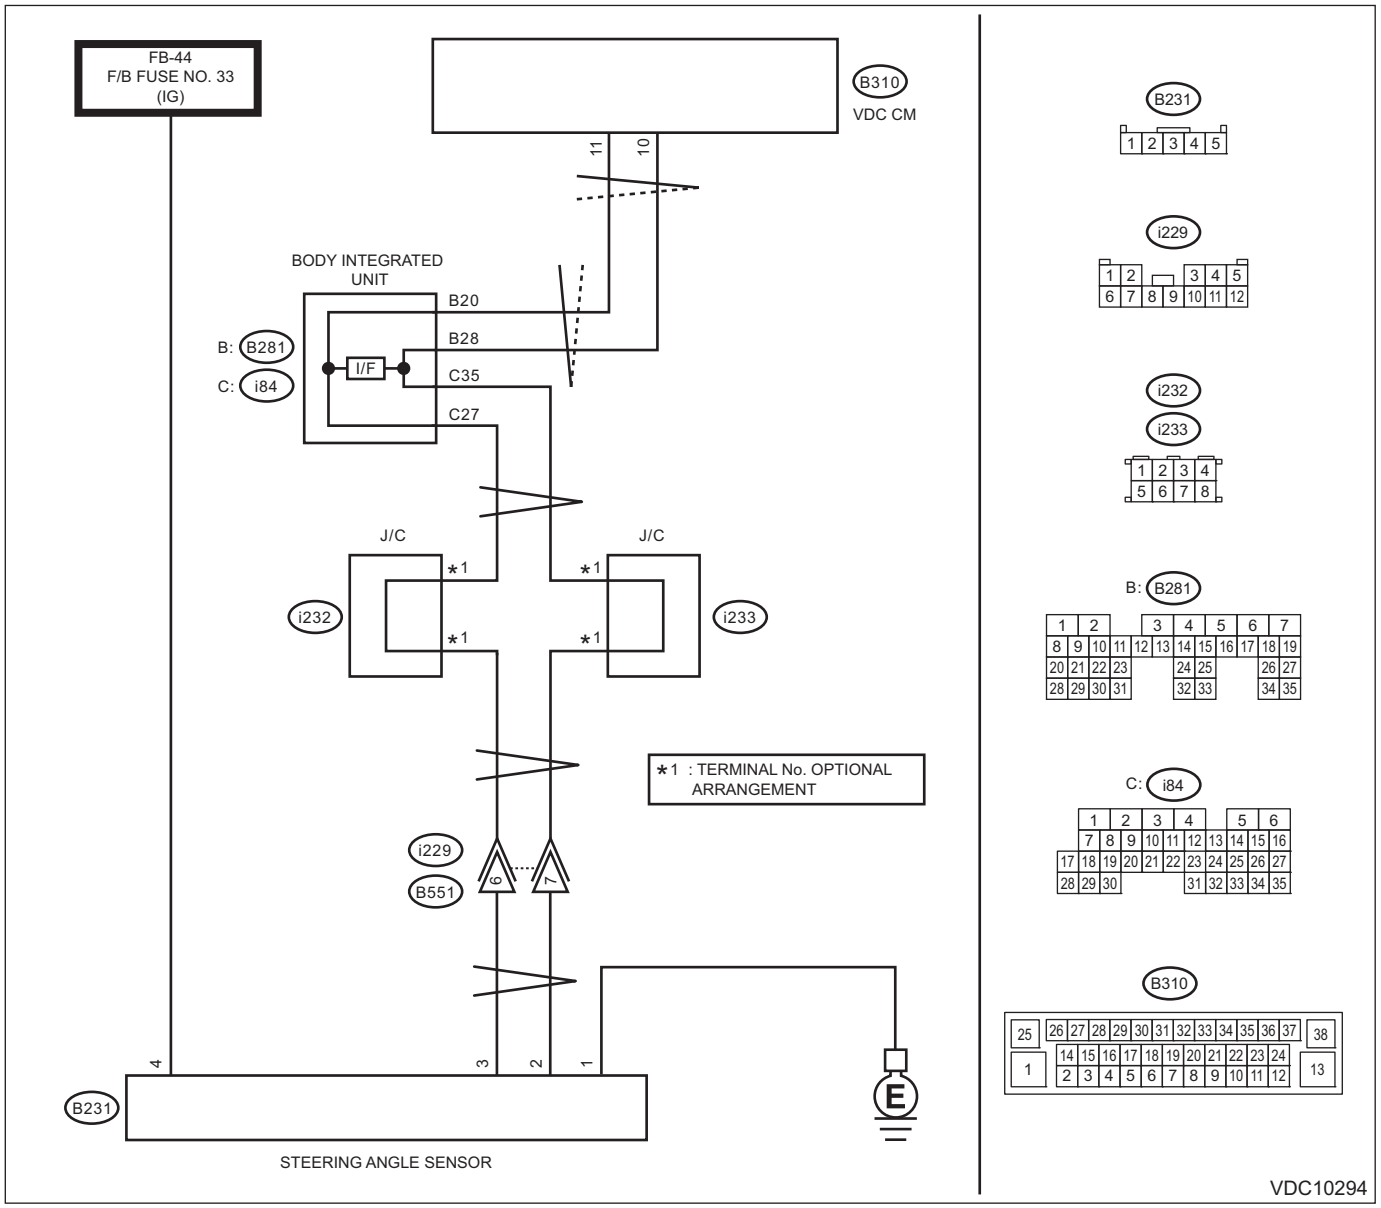
Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

Wiring diagram:

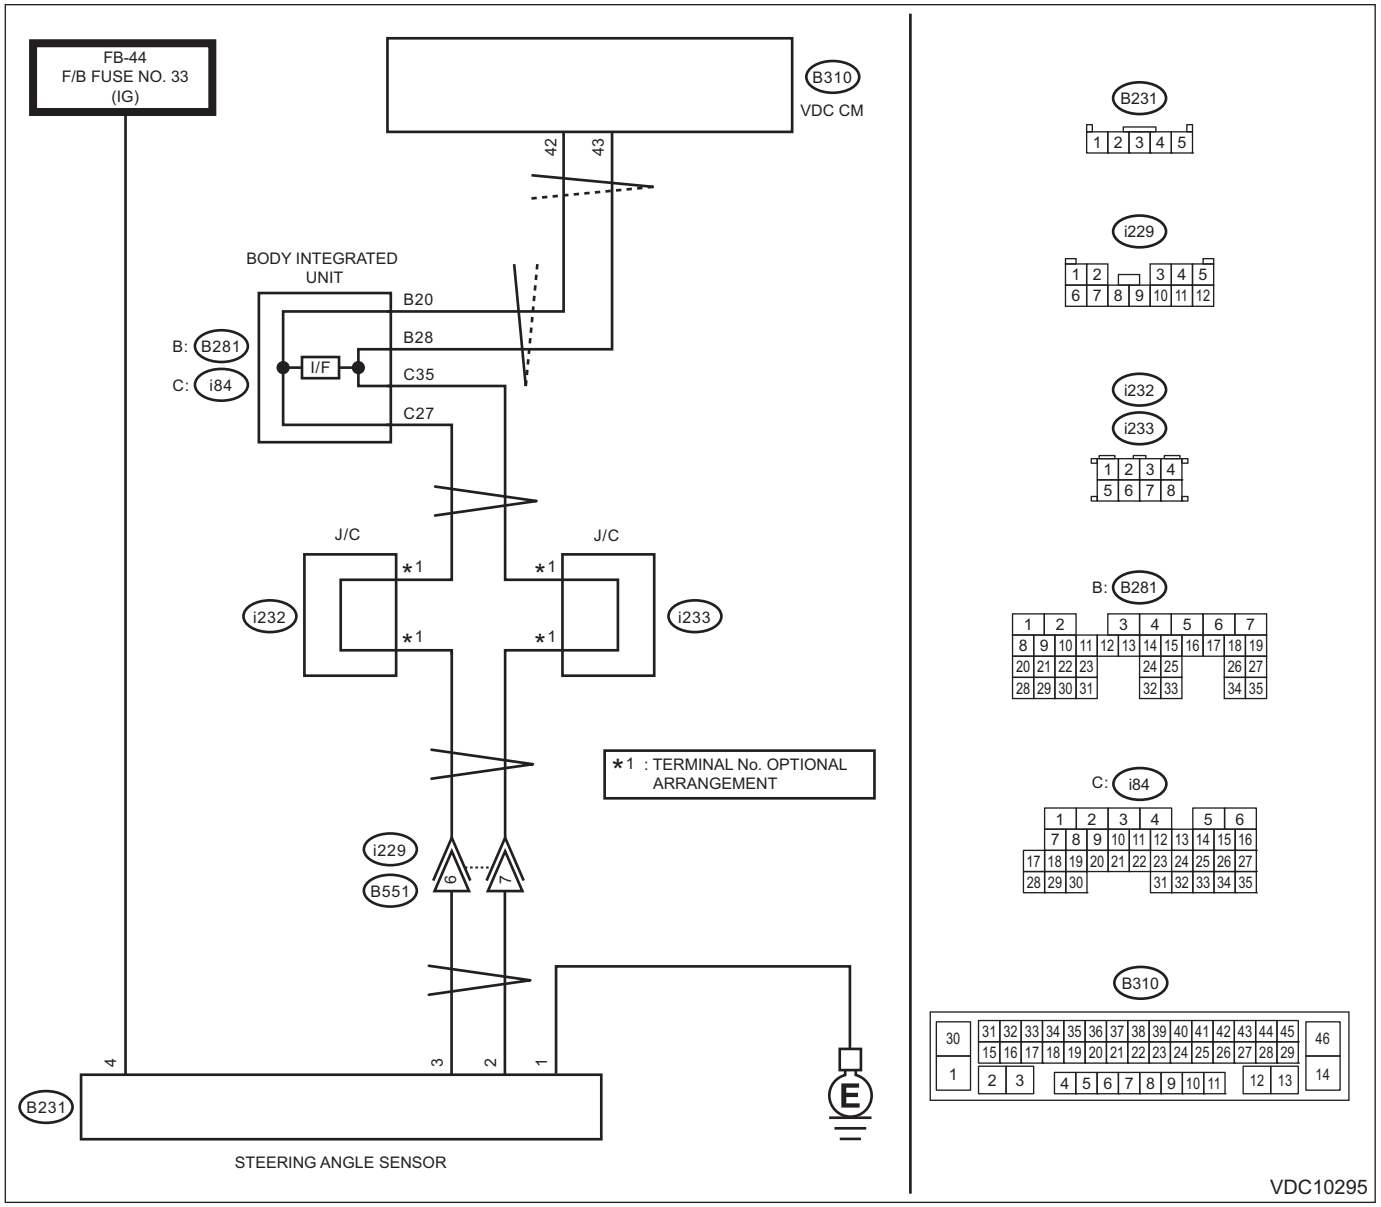
- Models without EyeSight

Vehicle dynamics control system <Ref. to WI-365, WITHOUT EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



- Models with EyeSight

Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY FOR STEERING ANGLE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from steering angle sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the steering angle sensor power supply circuit including the fuse.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR (CHECK FOR OPEN CIRCUIT).** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair ground circuit in the steering angle sensor.
3	**CHECK STEERING ANGLE SENSOR HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Disconnect the connector from the VDCCM&H/U. 2) Measure the resistance between VDCCM&H/U and steering angel sensor. ***Connector & terminal*** ***Models without EyeSight*** ***(B231) No. 2 — (B310) No. 10:*** ***(B231) No. 3 — (B310) No. 11:*** ***Models with EyeSight*** ***(B231) No. 2 — (B310) No. 43:*** ***(B231) No. 3 — (B310) No. 42:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
4	**CHECK GROUND SHORT CIRCUIT OF STEERING ANGLE SENSOR HARNESS.** Measure the resistance between steering angle sensor and chassis ground. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Is the resistance 10 Ω or more?	Go to step **5**.	Repair the harness between the steering angle sensor and VDCCM&H/U.
5	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **6**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
6	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10° — 10°?	Perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step **7**.	Check the installation of the steering wheel and steering angle sensor.

	Step	Check	Yes	No
7	**CHECK STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the steering angle sensor. <Ref. to VDC-27, Steering Angle Sensor.>	Go to step **8**.
8	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AH:DTC C1721 YAW RATE SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / lateral G sensor signal change while the yaw rate sensor signal indicates a constant value.
- A fault is detected if the communication status of yaw rate sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**INTERVIEW CUSTOMERS.** Check if the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Did the vehicle run the road with banks or sandy surface (which does not mean a dirt road)?	VDCCM&H/U may record DTC when the vehicle ran the road with banks or sandy surface (which does not mean a dirt road).	Go to step **2**.
2	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **3**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **3**.
3	**CHECK OUTPUT OF YAW RATE & G SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Yaw Rate Sensor» displayed on display.	Is the reading of «Yaw Rate Sensor» –4 deg/s — 4 deg/s?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

	Step	Check	Yes	No
4	**CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10 — 10°?	Go to step **5**.	Perform the centering adjustment of steering wheel.
5	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AI: DTC C1732 LATERAL G SENSOR

DTC detecting condition:

- A fault is detected if the sensor signal value is not correct.
- A fault is detected if the steering angle sensor signal / yaw rate sensor signal change while the lateral G sensor signal indicates a constant value.
- A fault is detected if the communication status of lateral G sensor is abnormal.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **2**.
2	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10 — 10°?	Go to step **3**.	Check the installation of steering angle sensor.
3	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle straight on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Are the values of «Lateral G Sensor»«Longitudinal G Sensor» –2 — 2 m/s^2?	Go to step **4**.	Recheck from step 1, and if the problem is not solved, Go to step **7**.

	Step	Check	Yes	No
4	**SET 0 POINT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **5**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
5	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-29, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **6**.
6	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	Are the values of «Lateral G Sensor»«Longitudinal G Sensor» –1.5 — 1.5 m/s^2?	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Recheck from step 1, and if the problem is not solved, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
7	**CHECK OUTPUT OF LATERAL G SENSOR AND LONGITUDINAL G SENSOR WITH SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read the «Lateral G Sensor» «Longitudinal G Sensor» displayed on display.	When the VDCCM&H/U is in a horizontal position, are the values of «Lateral G Sensor»«Longitudinal G Sensor» –1.5 — 1.5 m/s^2?	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AJ:DTC C1733 LONGITUDINAL G SENSOR

DTC detecting condition:

- A fault is detected if the communication status of longitudinal G sensor is abnormal.
- A fault is detected if malfunction judgment is generated by self-diagnosis test of the longitudinal G sensor.
- A fault is detected if the longitudinal G sensor signal is out of normal range.
- A fault is detected if the longitudinal G sensor compensation value is out of normal range.

Trouble symptom:

- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

NOTE:
For the diagnostic procedure, refer to “DTC C1732 LATERAL G SENSOR”. <Ref. to VDC(diag)-110, DTC C1732 LATERAL G SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AK:DTC C1741 PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if two fluid pressure signals in master cylinder are out of normal range.
- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.

Trouble symptom:

- VDC does not operate sometimes.
- Hill start assist does not operate sometimes. (Models without EyeSight)
- The AVH function may not be operable. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.** Check the stop light switch circuit and the installation condition.	Is the check result OK?	Go to step **2**.	Repair the stop light switch circuit or correct the installation condition. NOTE: If there is malfunction in the stop light circuit, DTC may be recorded in the memory.
2	**CHECK OUTPUT OF PRESSURE SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	With the brake pedal released, does the value for «Master Cylinder Pressure Sensor» fall within 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Master Cylinder Pressure Sensor» displayed on display.	When the brake pedal is operated, does the value of «Master Cylinder Pressure Sensor» change in accordance with the brake pedal?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AL:DTC C1742 WHEEL CYLINDER PRESSURE SENSOR

DTC detecting condition:

- A fault is detected if the condition that supply voltage for the fluid pressure sensor is out of normal judgment range continues for predetermined time.
- A fault is detected if the communication status of fluid pressure sensor is abnormal.
- A fault is detected if the data of fluid pressure sensor is abnormal.
- A fault is detected if the offset value of fluid pressure sensor signal exceeds a predetermined judgment value.
- A fault is detected if a difference between fluid pressures for the wheels exceeds a predetermined judgment value.
- A fault is detected if master cylinder pressure and fluid pressures for the wheels exceed predetermined judgment values.

Trouble symptom:

EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK STOP LIGHT SWITCH CIRCUIT AND INSTALLATION CONDITION.** Check the stop light switch circuit and the installation condition.	Is the check result OK?	Go to step **2**.	Repair the stop light switch circuit or correct the installation condition.
2	**CHECK OUTPUT OF PRESSURE SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	With the brake pedal released, do the values for «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» fall within 0 — 11 bar?	Go to step **3**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	**CHECK OUTPUT OF PRESSURE SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» displayed on the screen.	When the brake pedal is operated, do the values of «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» change in accordance with the brake pedal operation? At this time, is the difference between «FL wheel cylinder pressure sensor output» and «FR wheel cylinder pressure sensor output» less than 10 bar?	Go to step **4**.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	**CHECK VDCCM&H/U.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 3) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AM:DTC C1811 SYSTEM

DTC detecting condition:
A fault is detected if VDC control status continues for 15 seconds or more.
Trouble symptom:
- ABS does not operate.
- VDC does not operate.
- Hill start assist does not operate. (Models without EyeSight)
- AVH does not function. (Models with EyeSight)
- EyeSight does not operate. (Models with EyeSight)

	Step	Check	Yes	No
1	**CHECK INSTALLATION OF VDCCM&H/U.**	Is VDCCM&H/U installed properly without being tilted? Is the bracket deformation-free? Are the VDCCM&H/U installation bolts installed without missing or getting loose?	Go to step **2**.	Repair the defective part. • Install VDCCM&H/U properly. • Replace the bracket if faulty. • Tighten the VDCCM&H/U installation bolt. <Ref. to VDC-4, VDC CONTROL MODULE AND HYDRAULIC CONTROL UNIT (VDCCM&H/U), COMPONENT, General Description.> Go to step **2**.
2	**CHECK STEERING WHEEL.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Check the steering wheel for deviation from center.	Is the deviation from the center of steering wheel less than 5°?	Go to step **3**.	Perform the centering adjustment of steering wheel, and perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Go to step **3**.
3	**CHECK OUTPUT OF STEERING ANGLE SENSOR USING SUBARU SELECT MONITOR.** 1) Adjust steering wheel to the center position. 2) Using the Subaru Select Monitor, select “Data monitor”. <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read the «Steering Angle Sensor» displayed on display.	Is the reading of «Steering Angle Sensor» –10° — 10°?	Go to step **4**.	Check the installation of the steering wheel and steering angle sensor, and correct the installation if it is improper. If the installation condition is correct, replace the sensor.

	Step	Check	Yes	No
4	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	Is the reading of each sensor following value? «Lateral G Sensor»: –2 — 2 m/s^2 «Longitudinal G Sensor»: –2 — 2 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Go to step **5**.	Recheck from step 1, and if the problem is not solved, Go to step **8**.
5	**SET 0 POINT SETTING OF LONGITUDINAL G SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Work Support". 2) Perform the VDC sensor midpoint setting mode. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Is 0 point setting successful?	Go to step **6**.	Recheck from step 1, and when the 0 point setting is not possible, replace the VDCCM&H/U and steering angle sensor. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to VDC-27, Steering Angle Sensor.>
6	**PERFORM DRIVING TEST.** <Ref. to VDC(diag)-29, Inspection Mode.>	Does the ABS warning light or VDC warning light illuminate during driving? Does ABS or VDC operate abnormally?	Recheck from step 1, and when the warning lights illuminate or improperly operate, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Park the vehicle on a level surface. 2) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 3) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	Is the reading of each sensor following value? «Lateral G Sensor»: –2 — 2 m/s^2 «Longitudinal G Sensor»: –2 — 2 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
8	**CHECK OUTPUT OF SENSORS USING SUBARU SELECT MONITOR.** 1) Remove the VDCCM&H/U installation bolt and bracket. 2) Keep VDCCM&H/U in a horizontal position. 3) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 4) Read «Lateral G Sensor», «Longitudinal G Sensor», and «Yaw Rate Sensor» displayed on display.	When VDCCM&H/U is in a horizontal position, is the reading of each sensor following value? «Lateral G Sensor»: –1.5 — 1.5 m/s^2 «Longitudinal G Sensor»: –1.5 — 1.5 m/s^2 «Yaw Rate Sensor»: –4 deg/s — 4 deg/s	Check the bracket and brake pipe, and install VDCCM&H/U in a horizontal position to the vehicle.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AN:DTC C1921 PARKING POSITION SWITCH CIRCUIT

DTC detecting condition:

- A fault is detected if the switch was positioned at lock or release continuously for 90 seconds while the vehicle is stopped.
- A fault is detected if an irregular switch condition continues for a predetermined period of time immediately after the switch position is changed. A fault is also detected if the switch condition is not confirmed afterwards.
- A fault is detected if the switch harness is open or shorted.

Trouble symptom:

- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

Wiring diagram:

Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>

	Step	Check	Yes	No
1	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** Operate the parking brake switch.	Does the electronic parking brake operate properly?	Ask the customer whether the following switch operation was performed. • Operated slowly over one second or more. • Repeated ON/OFF operation several times within one second. When the case above is true, the system is normal. When it is normal, a temporary poor contact or noise interference is a possible cause.	Go to step **2**.
2	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and parking brake switch. 3) Measure the resistance between VDCCM&H/U and parking brake switch connector. ***Connector & terminal*** ***(B310) No. 17 — (AD3) No. 2:*** ***(B310) No. 18 — (AD3) No. 1:*** ***(B310) No. 19 — (AD3) No. 5:*** ***(B310) No. 24 — (AD3) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and parking brake switch connector.
3	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the parking brake switch connector and chassis ground. ***Connector & terminal*** ***(AD3) No. 2 — Chassis ground:*** ***(AD3) No. 1 — Chassis ground:*** ***(AD3) No. 5 — Chassis ground:*** ***(AD3) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and parking brake switch connector.
4	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between parking brake switch connector and chassis ground. ***Connector & terminal*** ***(AD3) No. 2 (+) — Chassis ground (–):*** ***(AD3) No. 1 (+) — Chassis ground (–):*** ***(AD3) No. 5 (+) — Chassis ground (–):*** ***(AD3) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and parking brake switch connector.
5	**CHECK PARKING BRAKE SWITCH.** Check the parking brake switch. <Ref. to PB-28, INSPECTION, Parking Brake Switch.>	Is the check result OK?	Go to step **6**.	Replace the parking brake switch. <Ref. to PB-27, Parking Brake Switch.>

	Step	Check	Yes	No
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AO:DTC C1923 AUTO VEHICLE HOLD SWITCH CIRCUIT

DTC detecting condition:
A fault is detected if the AVH switch is pressed and held for a long period of time.
Trouble symptom:
AVH function cannot be set.
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF AVH SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the AVH switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair the power supply circuit of AVH switch.
2	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U and AVH switch connector. ***Connector & terminal*** ***(AD2) No. 4 — (B310) No. 36:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair harness and connector between VDCCM&H/U and AVH switch connector.
3	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short of harness between VDCCM&H/U and AVH switch connector.

	Step	Check	Yes	No
4	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the AVH switch connector and chassis ground. ***Connector & terminal*** ***(AD2) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair short to power supply of harness between VDCCM&H/U and AVH switch connector.
5	**CHECK AVH SWITCH.** Check the AVH switch. <Ref. to VDC-42, INSPECTION, Auto Vehicle Hold Switch.>	Is the check result OK?	Go to step **6**.	Replace the AVH switch. <Ref. to VDC-42, Auto Vehicle Hold Switch.>
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AP:DTC C1935 IGNITION SWITCH CIRCUIT

DTC detecting condition:
A fault is detected after a predetermined period of time, if the hardware IGN signal and CAN IGN signal were compared and did not match.

Trouble symptom:
Electronic parking brake warning light illuminates.

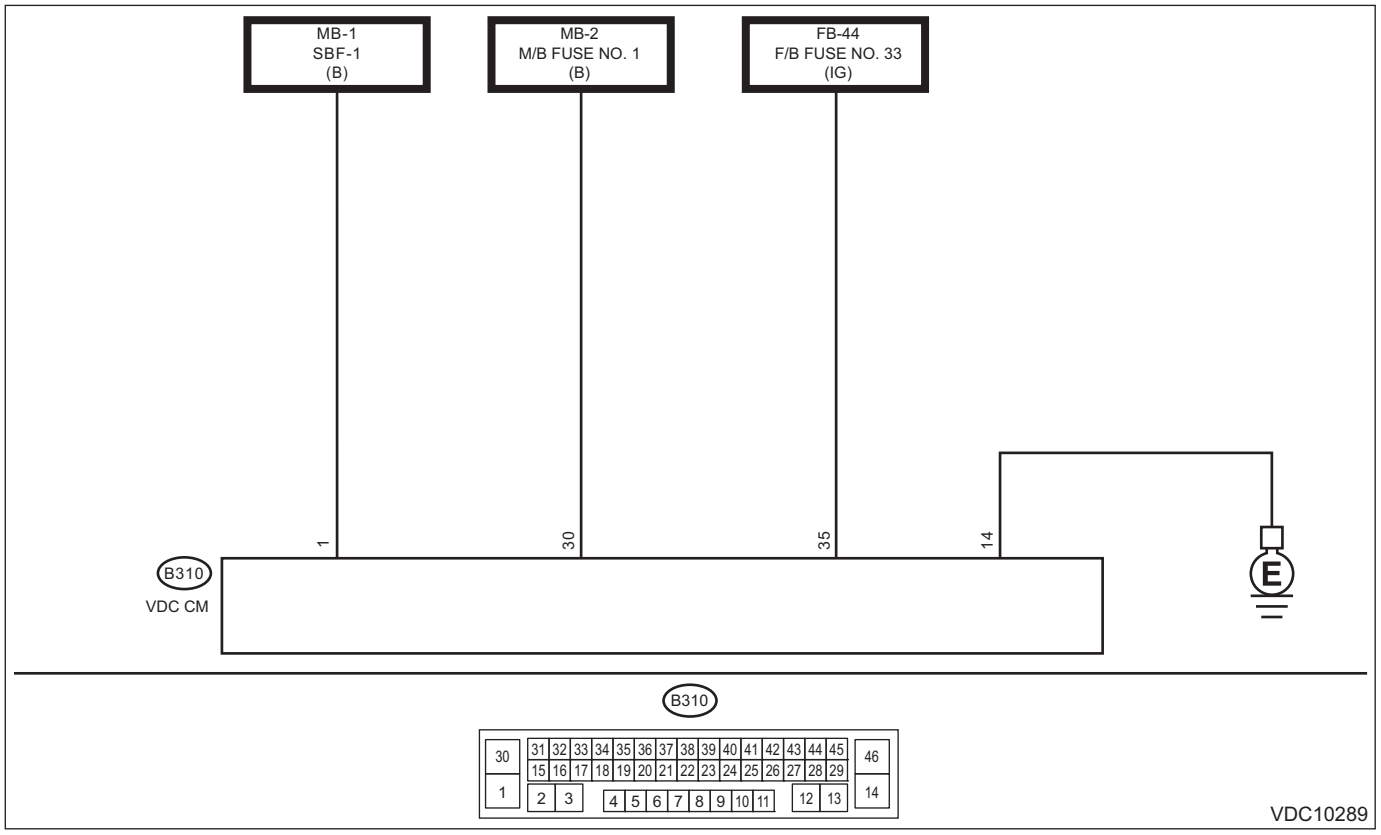
Wiring diagram:
Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>

	Step	Check	Yes	No
1	**CHECK VDCCM&H/U INPUT VOLTAGE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Turn the ignition switch to ON. 4) Measure the voltage between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **2**.	Repair or replace the open circuit in the power supply circuit including the fuse.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK INPUT VOLTAGE OF BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **4**.	Repair the power supply circuit of the body integrated unit.
4	**CHECK LAN SYSTEM.** Check the DTC in LAN system. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC for LAN system displayed?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **6**.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AQ:DTC C1942 POWER SUPPLY VOLTAGE

DTC detecting condition:
A fault is detected if low voltage is detected during the electronic parking brake operation.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate sometimes.

Wiring diagram:
Vehicle dynamics control system <Ref. to WI-369, WITH EyeSight, WIRING DIAGRAM, Vehicle Dynamics Control System.>



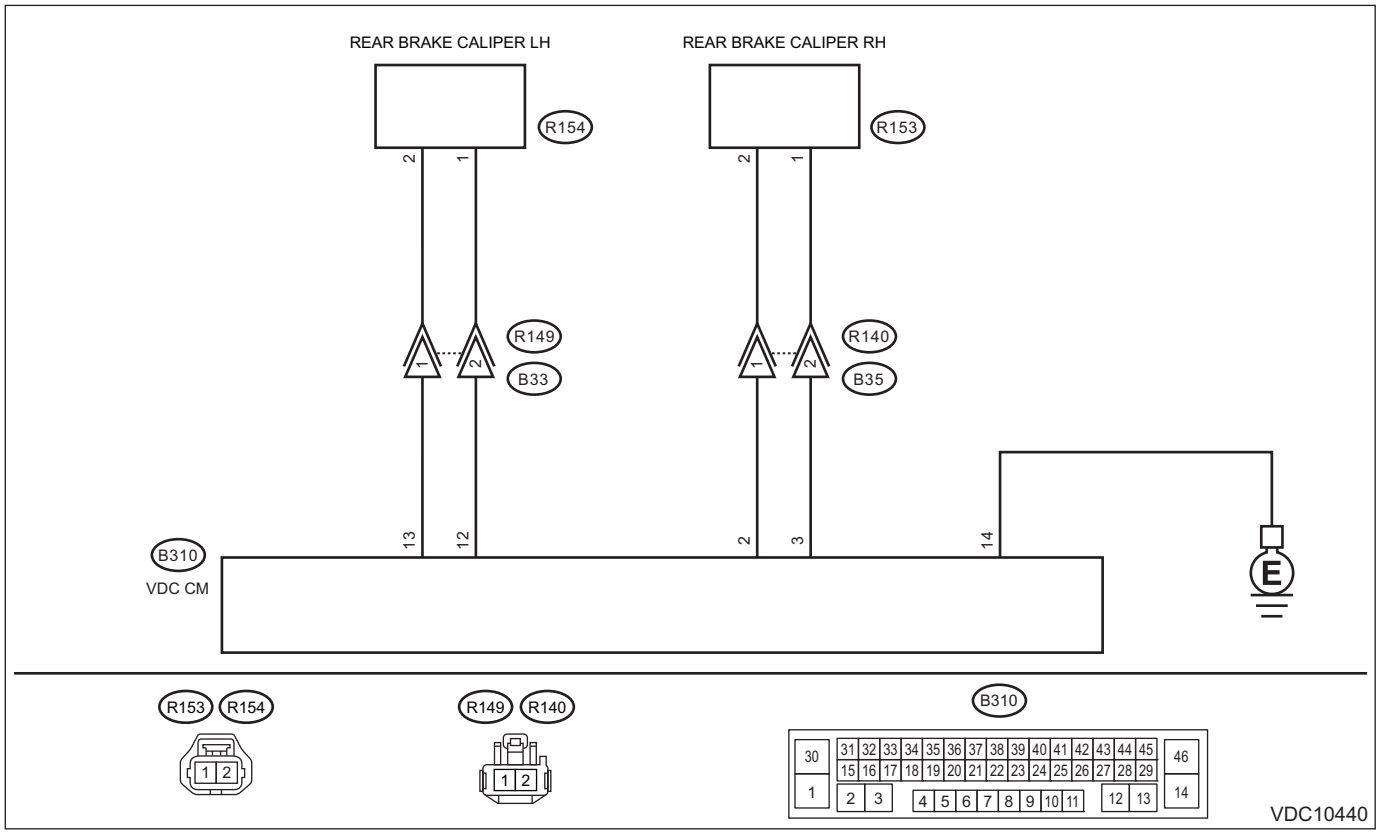
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery voltage. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.
3	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **5**.
5	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AR:DTC C1951 ACTUATOR

DTC detecting condition:
A fault is detected if the electronic parking brake operation status does not match the operation request.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

Wiring diagram:
Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



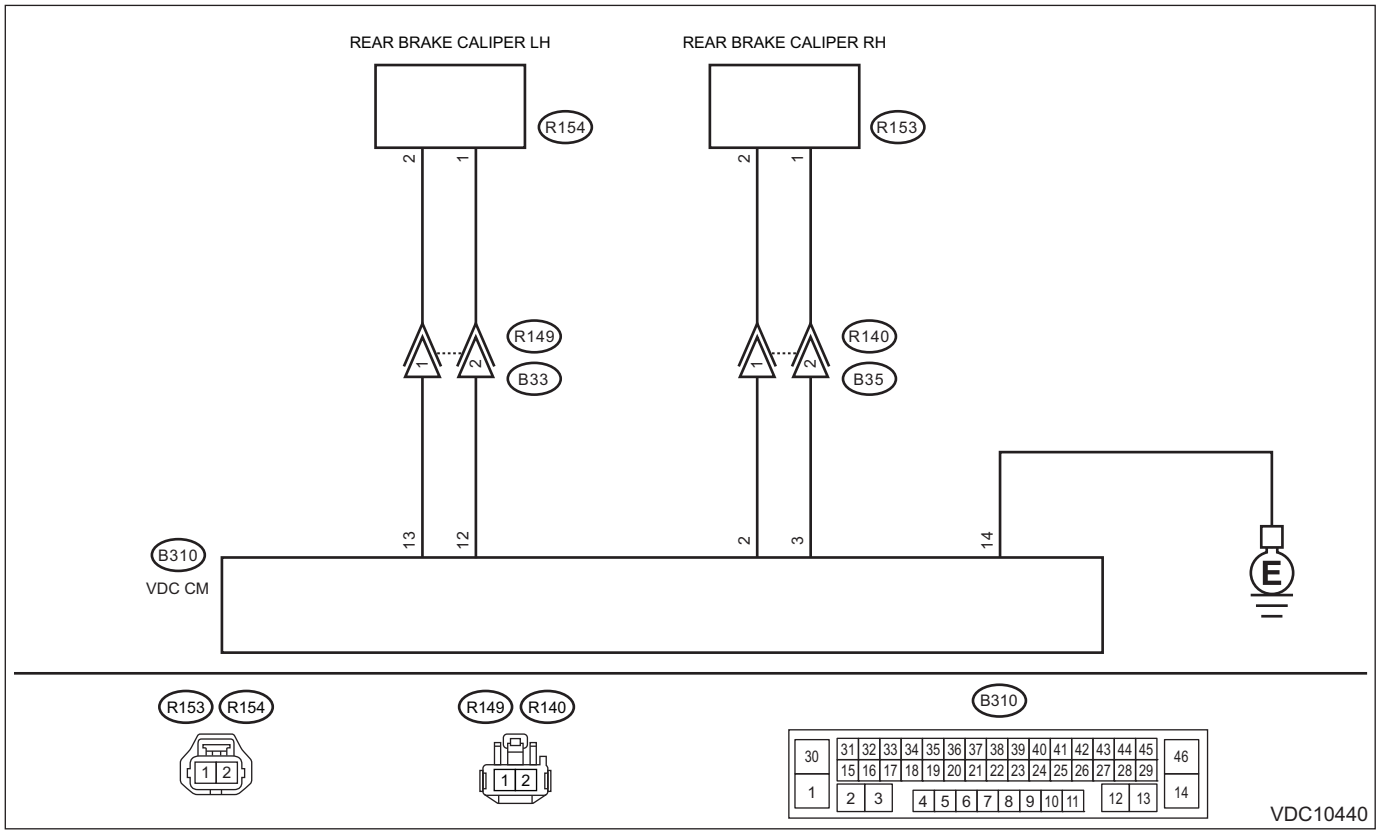
Step		Check	Yes	No
1	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery voltage. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the voltage 10 — 15 V?	Go to step **2**.	Charge or replace the battery. Check the generator circuit.
2	**CHECK VDCCM&H/U GROUND CIRCUIT (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the VDCCM&H/U. 3) Measure the resistance between VDCCM&H/U connector and chassis ground. ***Connector & terminal*** ***(B310) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the VDCCM&H/U ground circuit.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from rear brake caliper. 3) Measure the resistance between VDCCM&H/U and rear brake caliper connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair harness and connector between VDCCM&H/U and rear brake caliper connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK DRIVER'S DOOR SWITCH.** Check the driver's door switch. <Ref. to SL-29, CHECK DOOR SWITCH, INSPECTION, Security System.>	Is the check result OK?	Go to step **6**.	Repair the driver's door switch or circuit.
6	**CHECK VDCCM&H/U.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 3) Set the AVH function to ON. 4) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **7**.
7	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AS:DTC C1954 RH ACTUATOR

DTC detecting condition:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper RH is detected.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

Wiring diagram:
Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



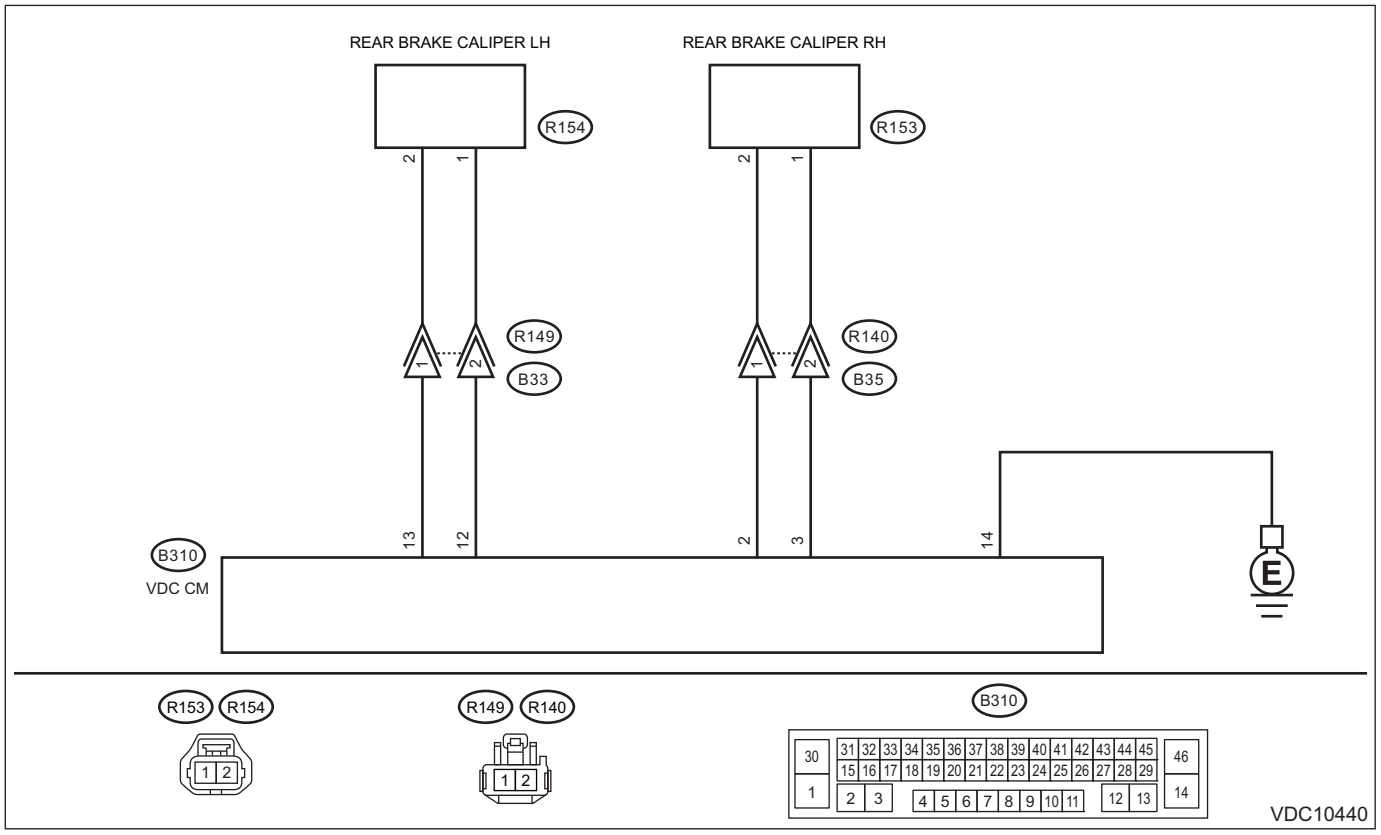
Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between rear brake caliper RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly RH. <Ref. to PB-23, Parking Brake Actuator.>

AT:DTC C1955 LH ACTUATOR

DTC detecting condition:
A fault is detected if mechanical sticking or abnormal operation of the rear brake caliper LH is detected.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

Wiring diagram:
Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 1 — Chassis ground:*** ***(R154) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 1 (+) — Chassis ground (–):*** ***(R154) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between rear brake caliper LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly LH. <Ref. to PB-23, Parking Brake Actuator.>

AU:DTC C1956 RH ACTUATOR CIRCUIT

DTC detecting condition:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

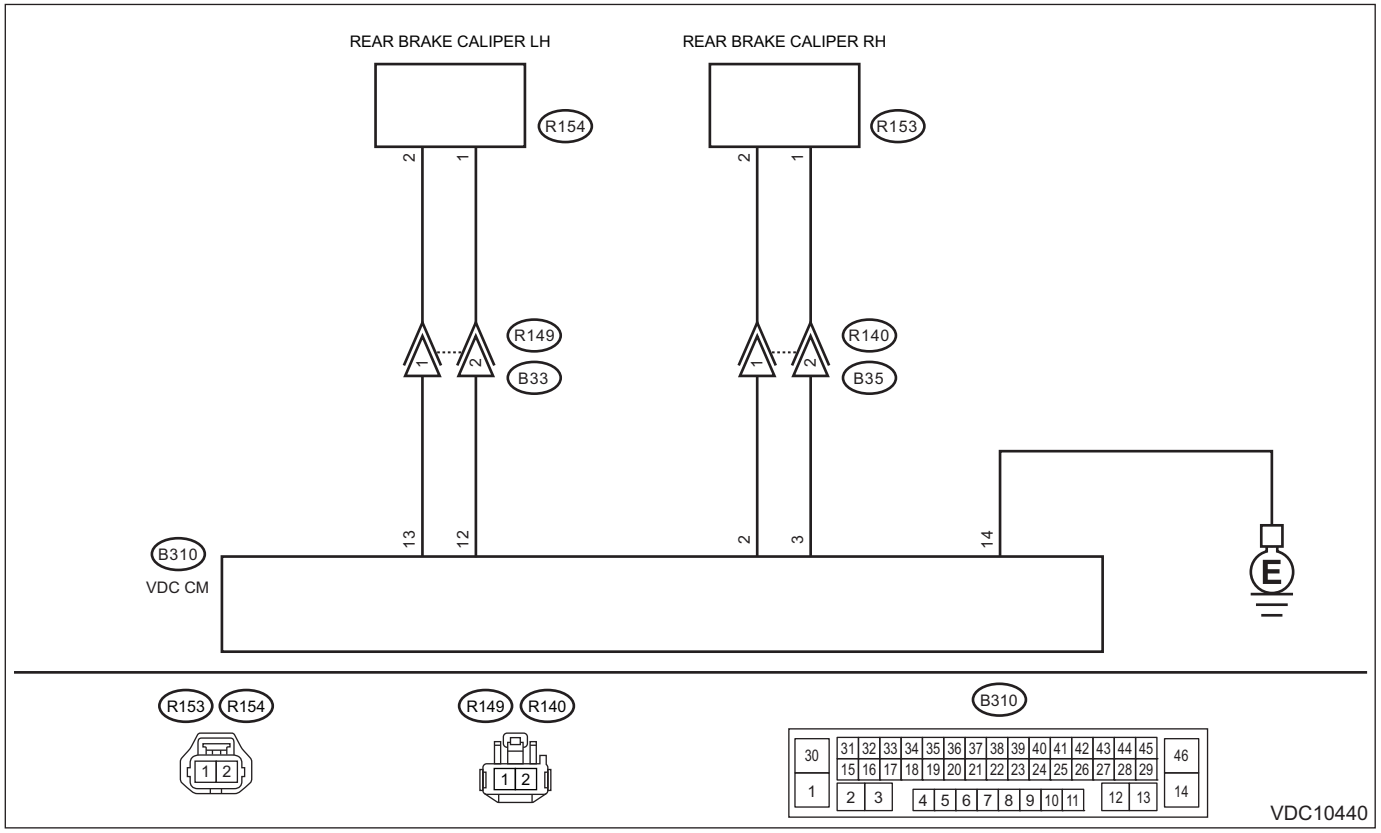
Trouble symptom:

- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

NOTE:
This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-30, Clear Memory Mode.>

Wiring diagram:

Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper RH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper RH connector. ***Connector & terminal*** ***(B310) No. 2 — (R153) No. 2:*** ***(B310) No. 3 — (R153) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper RH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 — Chassis ground:*** ***(R153) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper RH connector.
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper RH connector and chassis ground. ***Connector & terminal*** ***(R153) No. 1 (+) — Chassis ground (–):*** ***(R153) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper RH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between rear brake caliper RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly RH. <Ref. to PB-23, Parking Brake Actuator.>

AV:DTC C1957 LH ACTUATOR CIRCUIT

DTC detecting condition:

- A fault is detected, if the motor control mismatch occurs during the motor operation.
- A fault is detected if the motor circuit or harness is open or shorted.

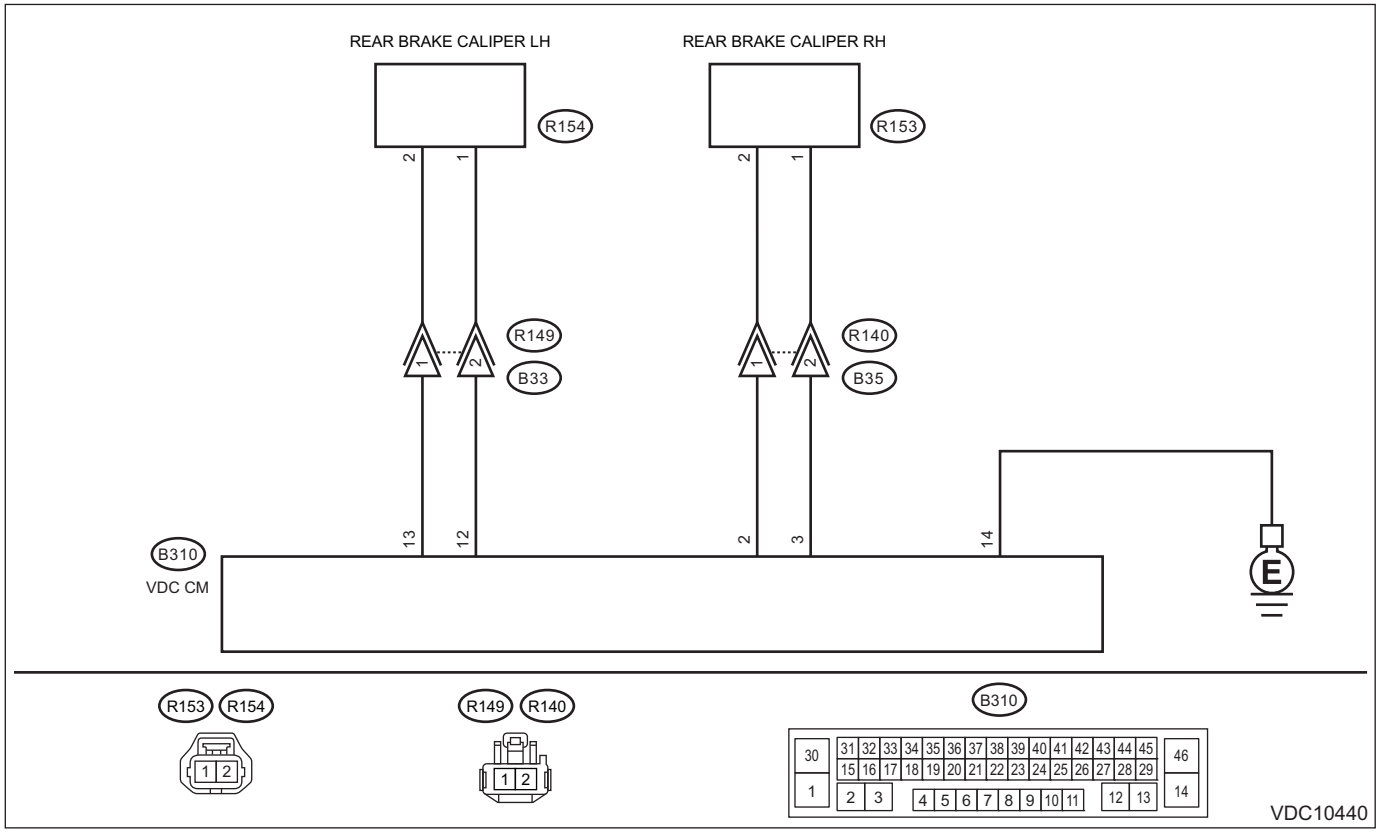
Trouble symptom:

- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

NOTE:
This DTC may be stored when the rear brake caliper connector is disconnected regardless of the ignition switch condition (ON/OFF). Perform the Clear Memory Mode after diagnosis if a DTC is recorded. <Ref. to VDC(diag)-30, Clear Memory Mode.>

Wiring diagram:

Parking brake / brake fluid level warning light system <Ref. to WI-294, WITH EyeSight, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>



Step		Check	Yes	No
1	**CHECK HARNESS (CHECK FOR OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the VDCCM&H/U and rear brake caliper LH. 3) Measure the resistance between VDCCM&H/U and rear brake caliper LH connector. ***Connector & terminal*** ***(B310) No. 12 — (R154) No. 1:*** ***(B310) No. 13 — (R154) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair harness and connector between VDCCM&H/U and rear brake caliper LH connector.

	Step	Check	Yes	No
2	**CHECK HARNESS (CHECK FOR GROUND SHORT CIRCUIT).** Measure the resistance between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 1 — Chassis ground:*** ***(R154) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair ground short of harness between VDCCM&H/U and rear brake caliper LH connector.
3	**CHECK HARNESS (CHECK FOR SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between the rear brake caliper LH connector and chassis ground. ***Connector & terminal*** ***(R154) No. 1 (+) — Chassis ground (–):*** ***(R154) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Repair short to power supply of harness between VDCCM&H/U and rear brake caliper LH connector.
4	**CHECK POOR CONTACT OF CONNECTORS.**	Is there poor contact of power supply circuit, ground circuit and VDCCM&H/U connector?	Repair the connector.	Go to step **5**.
5	**CHECK REAR BRAKE CALIPER.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between rear brake caliper LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 100 Ω?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the parking brake actuator assembly LH. <Ref. to PB-23, Parking Brake Actuator.>

AW:DTC C1983 HIGH FREQUENCY OPERATION

DTC detecting condition:
This malfunction is stored if the electronic parking brake is operated with high frequency in a short period of time.

Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate sometimes.

	Step	Check	Yes	No
1	**CHECK OUTPUT OF AMBIENT SENSOR USING SUBARU SELECT MONITOR.** 1) Using the Subaru Select Monitor, select "Data monitor". <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 2) Read the «Ambient Temp Sensor» displayed on the screen.	Is the reading of «Ambient Temp Sensor» within the range of ±10°C to the ambient temperature?	Go to step **2**.	Repair the ambient sensor circuit.
2	**CHECK VDCCM&H/U.** 1) Turn the ignition switch to OFF. 2) Stop the vehicle for approximately one hour. 3) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.> 5) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AX:DTC C1984 BRAKE MAINTENANCE MODE

DTC detecting condition:
This malfunction is stored when the brake maintenance mode is in progress.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

Step		Check	Yes	No
1	**CHECK ELECTRONIC PARKING MODE.**	Is the brake maintenance mode in progress?	Currently, it is normal. Although DTC C1984 is input during the brake maintenance mode, it is normal. <Ref. to VDC-17, BRAKE MAINTENANCE MODE, MAINTENANCE MODE, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Apply the electronic parking brake several times. 3) Read the DTC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC stored even though the electronic parking brake operates?	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step **3**.
3	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).> Perform the diagnosis from step 1 again, and if the same DTC is stored, replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.

AY:DTC C1985 FORBIDDEN STATE OF DYNAMIC ACTUATOR OPERATION

DTC detecting condition:
This malfunction is stored if dynamic parking through the electronic parking brake actuator does not operate.
Trouble symptom:
- AVH does not function. (Models with EyeSight)
- Parking brake system does not operate.

	Step	Check	Yes	No
1	**CHECK DETECTION OF OTHER DTCS FOR VDC.** <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).> NOTE: This DTC is stored for other malfunctions.	Go to step **2**.
2	**CHECK OPERATION OF ELECTRONIC PARKING BRAKE.** 1) Perform the Clear Memory Mode. <Ref. to VDC(diag)-30, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to VDC(diag)-29, Inspection Mode.>	Does it operate properly?	Currently, it is normal. There may have been a temporary poor contact in the harness and connector or a temporary noise interference.	Replace the VDCCM&H/U. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

AZ:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

13.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• VDCCM&H/U • Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Wheel lock	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Incorrect wiring or piping connections	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pipe
	Brake drag	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Axle and wheels • Brake pedal play	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• VDCCM&H/U • Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Vehicle vertical pitching	• VDCCM&H/U • Road surface (uneven) • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
Poor brake performance	Unstable or uneven braking	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Road surface (uneven) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Master cylinder • Disc rotor • Brake pipe • Axle and wheels • Road with crowns or banks • Suspension play or fatigue (reduced damping)

Symptoms		Main probable cause	Other probable cause
Vibration or noise • When braking suddenly • When accelerating suddenly • While driving on a slippery road	Excessive brake pedal vibration	• Road surface (uneven) • Incorrect wiring or piping connections	• VDCCM&H/U • Brake booster • Suspension play or fatigue (reduced damping)
	Noise from VDCCM&H/U	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Brake pipe	• VDCCM&H/U • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U.
	Noise from the front side of vehicle	• VDCCM&H/U (mount bushing) • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Brake pad • Disc rotor • Brake pipe • Brake booster • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
	Noise from the rear side of vehicle	• Defective ABS wheel speed sensor or sensor gap • Brake caliper • Brake pad • Disc rotor • Parking brake • Brake pipe • Suspension play or fatigue (reduced damping)	• Axle and wheels • Tire specifications, tire wear and air pressures
Engine does not accelerate or goes into a stall when accelerating suddenly or driving on a slippery surface.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Master cylinder • Brake caliper • Parking brake • Incorrect wiring or piping	• Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Brake pipe

General Diagnostic Table

Symptoms		Main probable cause	Other probable cause
Poor change-direction-operation stability of TCS	Deviation to right or left direction	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake caliper • Brake pad • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Disc rotor • Brake pipe • Axle and wheels • Suspension play or fatigue (reduced damping)
	Vehicle spin	• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Brake pad • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Brake caliper • Brake pipe
Steering wheel drag while driving		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Incorrect wiring or piping connections • Power steering system	• Brake caliper • Brake pad • Disc rotor • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures
VDC operates while driving normally.		• VDCCM&H/U • Defective ABS wheel speed sensor or sensor gap • Defective steering angle sensor or improper neutral position • Defective yaw rate & G sensor or improper installation of VDCCM&H/U. • Wheel alignment • Road surface (uneven) • Road with crowns or banks • Suspension play or fatigue (reduced damping) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Power steering system	

Symptoms		Main probable cause	Other probable cause
VDC OFF indicator light does not illuminate when the VDC OFF switch is depressed. NOTE: When pressing VDC OFF switch for 30 seconds or more, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the previous status is restored.		• Harness • Combination meter • VDC OFF switch	
Electronic parking brake warning light illuminates.	Parking brake system does not operate.	• Defective parking brake switch • Defective VDCCM&H/U • Defective CAN communication	
	AVH function and accelerator interlocking release function do not operate.	• Defective AVH switch • Faulty signal received from ECM • Faulty signal received from TCM • Faulty signal received from VDC control module • Defective parameter selection for VDCCM&H/U • No CAN signal received from ECM • No CAN signal received from TCM • No CAN signal received from body integrated unit • Defective longitudinal G sensor	
When the AVH function is set to ON, drugging of brake may occur when the vehicle starts to move.		—	Driver's seat belt is not fastened.

1. General Description

A: SPECIFICATION

NOTE:
Refer to “PARKING BRAKE” for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

1. FRONT DISC BRAKE

- Except for STI model

Item			Specification	
Size			17-inch	
Type			Floating 2-POT piston type Ventilated disc	Opposed 4-POT piston type Ventilated disc (Brembo)
Effective cylinder diameter		mm (in)	42.8 × 2 (1.685 × 2)	40.0 × 2, 46 × 2 (1.575 × 2, 1.811 × 2)
Pad dimension (Length × Width × Thickness)		mm (in)	130 × 53.5 × 11 (5.118 × 2.106 × 0.433)	129.6 × 60.0 × 8.8 (5.102 × 2.362 × 0.35)
Pad thickness	mm (in)	Standard	11 (0.43)	8.8 (0.35)
		Limit	1.5 (0.059)	1.2 (0.047)
Effective disc diameter		mm (in)	261 (10.28)	268 (10.55)
Rotor dimension (O.D. × Thickness)		mm (in)	316 × 30 (12.44 × 1.18)	326 × 30 (12.83 × 1.18)
Disc thickness	mm (in)	Standard	30 (1.18)	
		Limit	28 (1.1)	
Disc runout	mm (in)	Standard	—	
		Limit	0.05 (0.002)	0.075 (0.003)
Clearance adjustment			Automatic adjustment	

- STI model

Item			Specification
Size			18-inch
Type			Opposed 6-POT piston type Ventilated disc (Brembo)
Effective cylinder diameter		mm (in)	30 × 2,34 × 2, 38 × 2 (1.181 × 2, 1.339 × 2, 1.496 × 2)
Pad size (Length × Width × Thickness)		mm (in)	160.7 × 57.2 × 9.5 (6.327 × 2.252 × 0.37)
Pad thickness	mm (in)	Standard	9.5 (0.37)
		Limit	2.8 (0.11)
Effective disc diameter		mm (in)	280 (11.02)
Rotor size (O.D. × Thickness)		mm (in)	340 × 30 (13.39 × 1.18)
Disc thickness	mm (in)	Standard	30 (1.18)
		Limit	28 (1.1)
Disc runout	mm (in)	Standard	—
		Limit	0.075 (0.003)
Clearance adjustment			Automatic adjustment

2. REAR DISC BRAKE

- Except for STI model

Item			Specification	
Size			15-inch	17-inch
Type			Floating 1-POT piston type Solid disc	Opposed 2-POT piston type Ventilated disc (Brembo)
Effective cylinder diameter		mm (in)	38.1 (1.5)	40 × 2 (1.575 × 2)
Pad dimension (Length × Width × Thickness)		mm (in)	92 × 33 × 9 (3.622 × 1.299 × 0.354)	74.8 × 45 × 9 (2.945 × 1.772 × 0.354)
Pad thickness	mm (in)	Standard	9 (0.354)	
		Limit	1.5 (0.059)	1.55 (0.061)
Effective disc diameter		mm (in)	250 (9.84)	268 (10.55)
Rotor dimension (O.D. × Thickness)		mm (in)	286 × 10 (12.44 × 0.79)	316 × 20 (12.44 × 0.79)
Disc thickness	mm (in)	Standard	10 (0.39)	20 (0.79)
		Limit	8.5 (0.335)	18 (0.71)
Disc runout	mm (in)	Standard	—	
		Limit	0.05 (0.002)	0.07 (0.0028)
Clearance adjustment			Automatic adjustment	

Item			Specification
Size			17-inch
Type			Floating 1-POT piston type (Caliper with electric parking) Ventilated disc
Effective cylinder diameter		mm (in)	40 (1.57)
Pad dimension (Length × Width × Thickness)		mm (in)	86.8 × 43.5 × 9 (3.42 × 1.71 × 0.354)
Pad thickness	mm (in)	Standard	9 (0.354)
		Limit	1.5 (0.059)
Effective disc diameter		mm (in)	255 (10.04)
Rotor dimension (O.D. × Thickness)		mm (in)	300 × 17 (11.81 × 0.67)
Disc thickness	mm (in)	Standard	17 (0.67)
		Limit	15 (0.59)
Disc runout	mm (in)	Standard	—
		Limit	0.05 (0.002)
Clearance adjustment			Automatic adjustment

- STI model

Item			Specification
Size			18-inch
Type			Opposed 2-POT piston type Ventilated disc (Brembo)
Effective cylinder diameter		mm (in)	40 × 2 (1.575 × 2)
Pad size (Length × Width × Thickness)		mm (in)	99.6 × 52.4 × 10 (3.921 × 2.063 × 0.394)
Pad thickness	mm (in)	Standard	10 (0.394)
		Limit	2.8 (0.11)
Effective disc diameter		mm (in)	276 (10.87)
Rotor size (O.D. × Thickness)		mm (in)	326 × 20 (12.83 × 0.79)

Item		Specification
Disc thickness mm (in)	Standard	20 (0.79)
	Limit	18 (0.71)
Disc runout mm (in)	Standard	—
	Limit	0.07 (0.0028)
Clearance adjustment		Automatic adjustment

3. MASTER CYLINDER

Item	Specification
Type	Tandem
Effective diameter mm (in)	25.4 (1)
Reservoir type	Sealed type
Brake fluid reservoir capacity cm^3 (cu in)	240 (14.64)

4. BRAKE BOOSTER

Item	Specification	
Type	Vacuum suspended	
Effective diameter mm (in)	208 + 229 (8.19 + 9.02)	
Brake fluid pressure	Brake pedal force N (kgf, lbf)	Fluid pressure kPa (kgf/cm^2, psi)
When engine is stopped	147 (15, 33)	451 (4.6, 65)
	294 (30, 66)	1,344 (13.7, 195)
When engine is running and vacuum pressure is at 66.7 kPa (500 mmHg, 19.69 inHg)	147 (15, 33)	4,766 (48.6, 691)
	294 (30, 66)	9,885 (100.8, 1,434)

5. BRAKE LINE, BRAKE PEDAL AND BRAKE FLUID

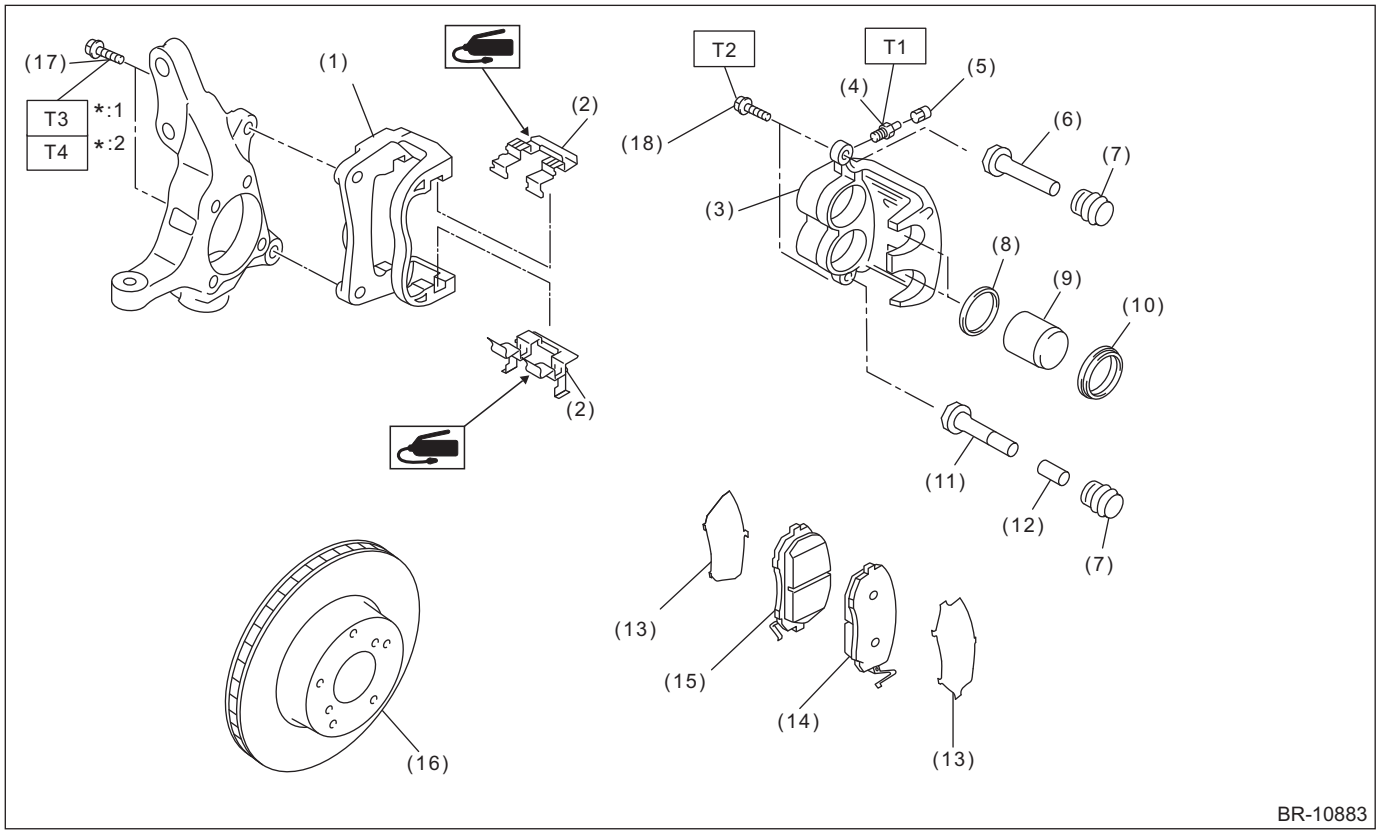
CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• When refilling brake fluid, do not allow dirt or dust to get into the reservoir tank.
• Always use new SUBARU genuine brake fluid when replacing or refilling the fluid. Do not reuse drained brake fluid.

Item		Specification
Brake line		Dual circuit system
Brake pedal	Type	Suspended type
	Free play mm (in)	0.5 — 2.7 (0.02 — 0.11) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf)]
Brake fluid		FMVSS No. 116, DOT3, or DOT4

B: COMPONENT

1. FRONT DISC BRAKE

- Floating 2-POT piston type



(1) Support - front disc brake
(2) Pad clip - front brake
(3) Caliper body
(4) Bleeder - screw
(5) Cap - bleeder
(6) Guide pin - front brake (black)
(7) Pin boot
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Lock pin - front brake (silver)
(12) Lock pin - bushing
(13) Shim - disc brake front
(14) Pad - disc brake front outer
(15) Pad - disc brake front inner
(16) Disc rotor (ventilated type)
(17) Mounting bolt
(18) Caliper bolt

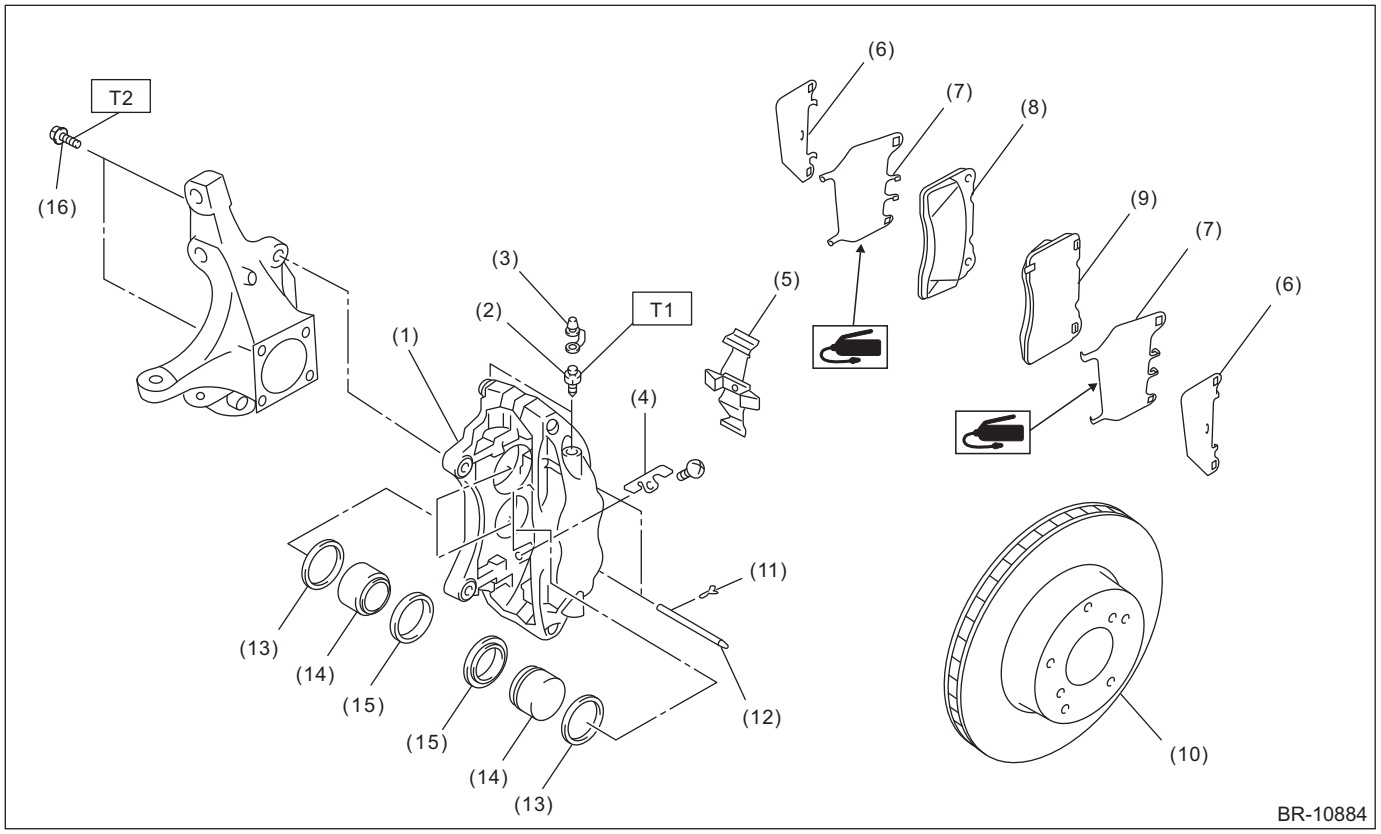
*1: 17 mm (width across flats)
*2: 19 mm (width across flats)

Tightening torque: N·m (kgf-m, ft-lb)

T1: 8 (0.8, 5.9)
T2: 27 (2.8, 20.3)
T3: 80 (8.2, 59)
T4: 135 (13.8, 99.6)

BRAKE

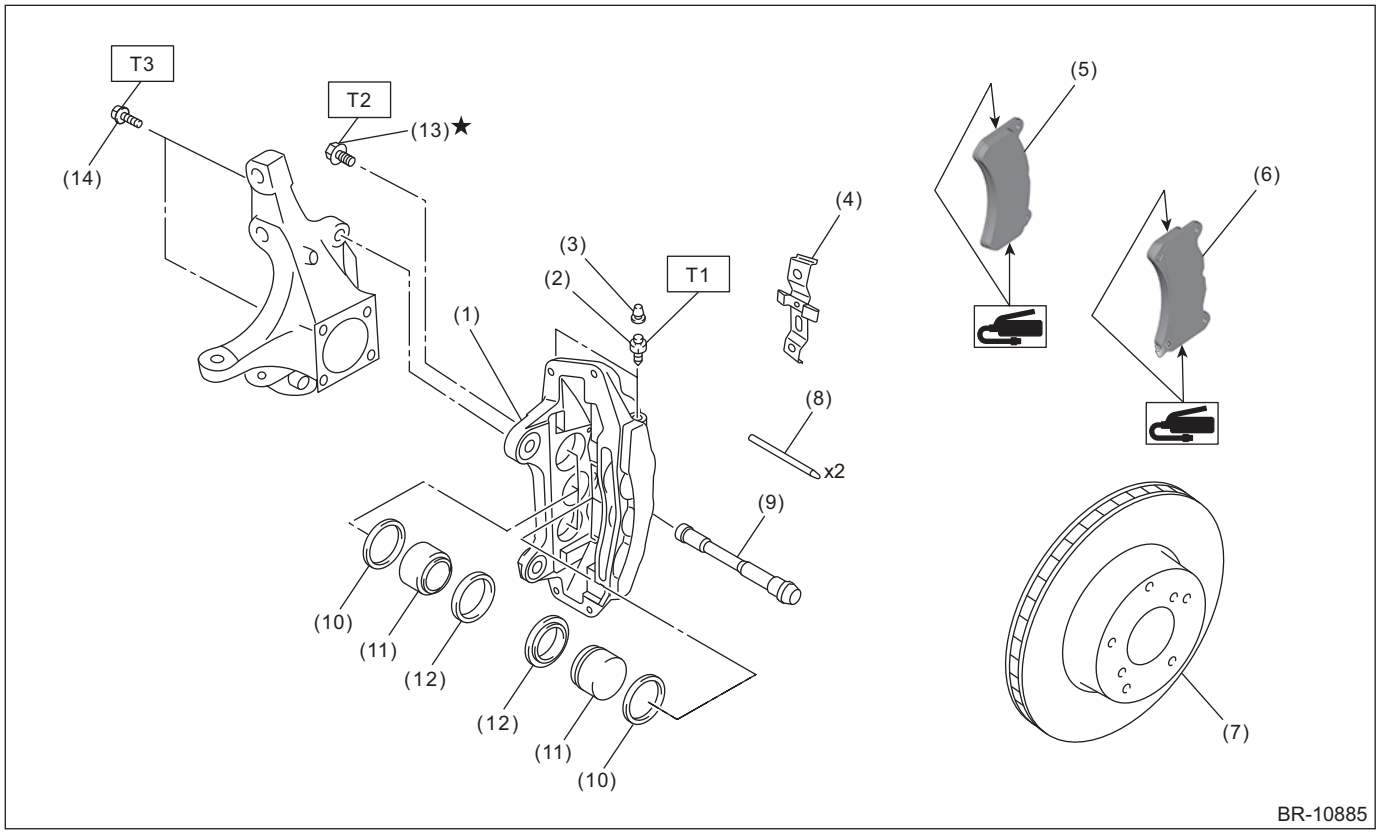
- Opposed 4-POT piston type



(1) Caliper body
(2) Bleeder - screw
(3) Cap - bleeder
(4) Guide plate
(5) Cross spring
(6) Shim - disc brake front outer
(7) Shim - disc brake front inner
(8) Pad - disc brake front inner
(9) Pad - disc brake front outer
(10) Disc rotor (ventilated type)
(11) Clip - slide pin
(12) Pin - disc brake
(13) Piston seal
(14) Piston - disc brake
(15) Piston boot
(16) Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2, 14.8)
T2: 120 (12.2, 88.5)

- Opposed 6-POT piston type



(1)	Caliper body	(8)	Pin - disc brake
(2)	Bleeder - screw	(9)	Pad clip nut
(3)	Cap - bleeder	(10)	Piston seal
(4)	Cross spring	(11)	Piston - disc brake
(5)	Pad - disc brake front inner	(12)	Piston boot
(6)	Pad - disc brake front outer	(13)	Pad clip bolt
(7)	Disc rotor (ventilated type)	(14)	Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)

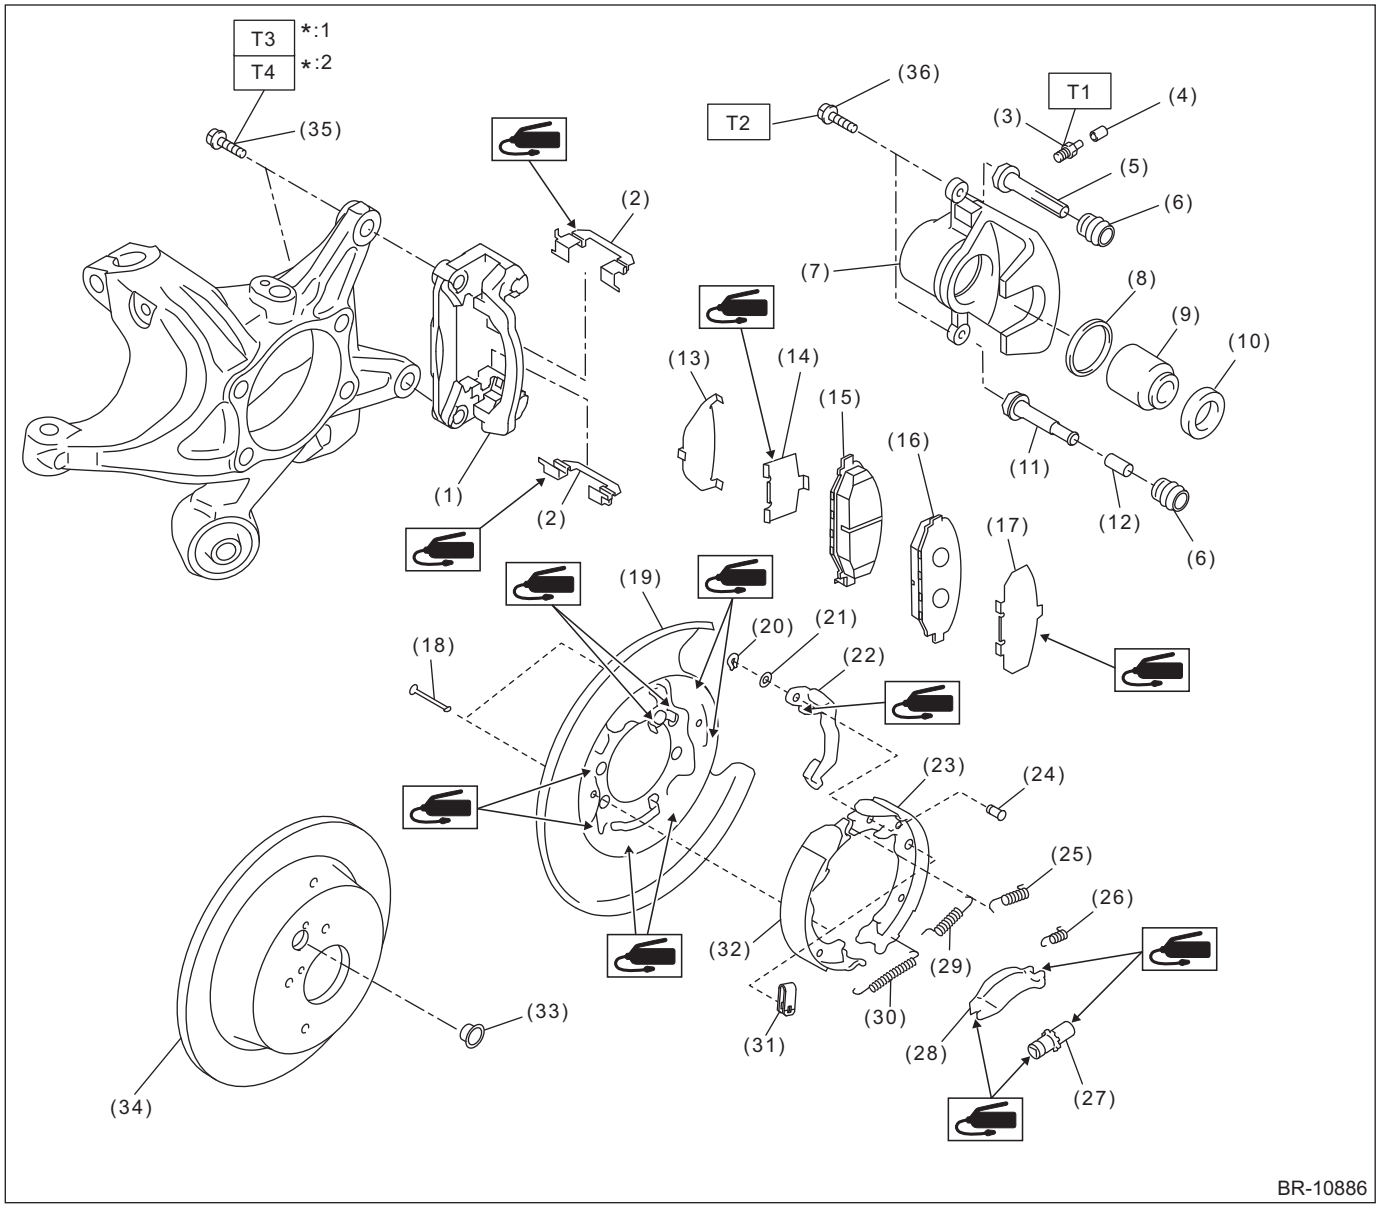
T1: 20 (2, 14.8)

T2: 30 (3.1, 22.1)

T3: 120 (12.2, 88.5)

2. REAR DISC BRAKE (DRUM IN DISC TYPE)

- Floating 1-POT piston type



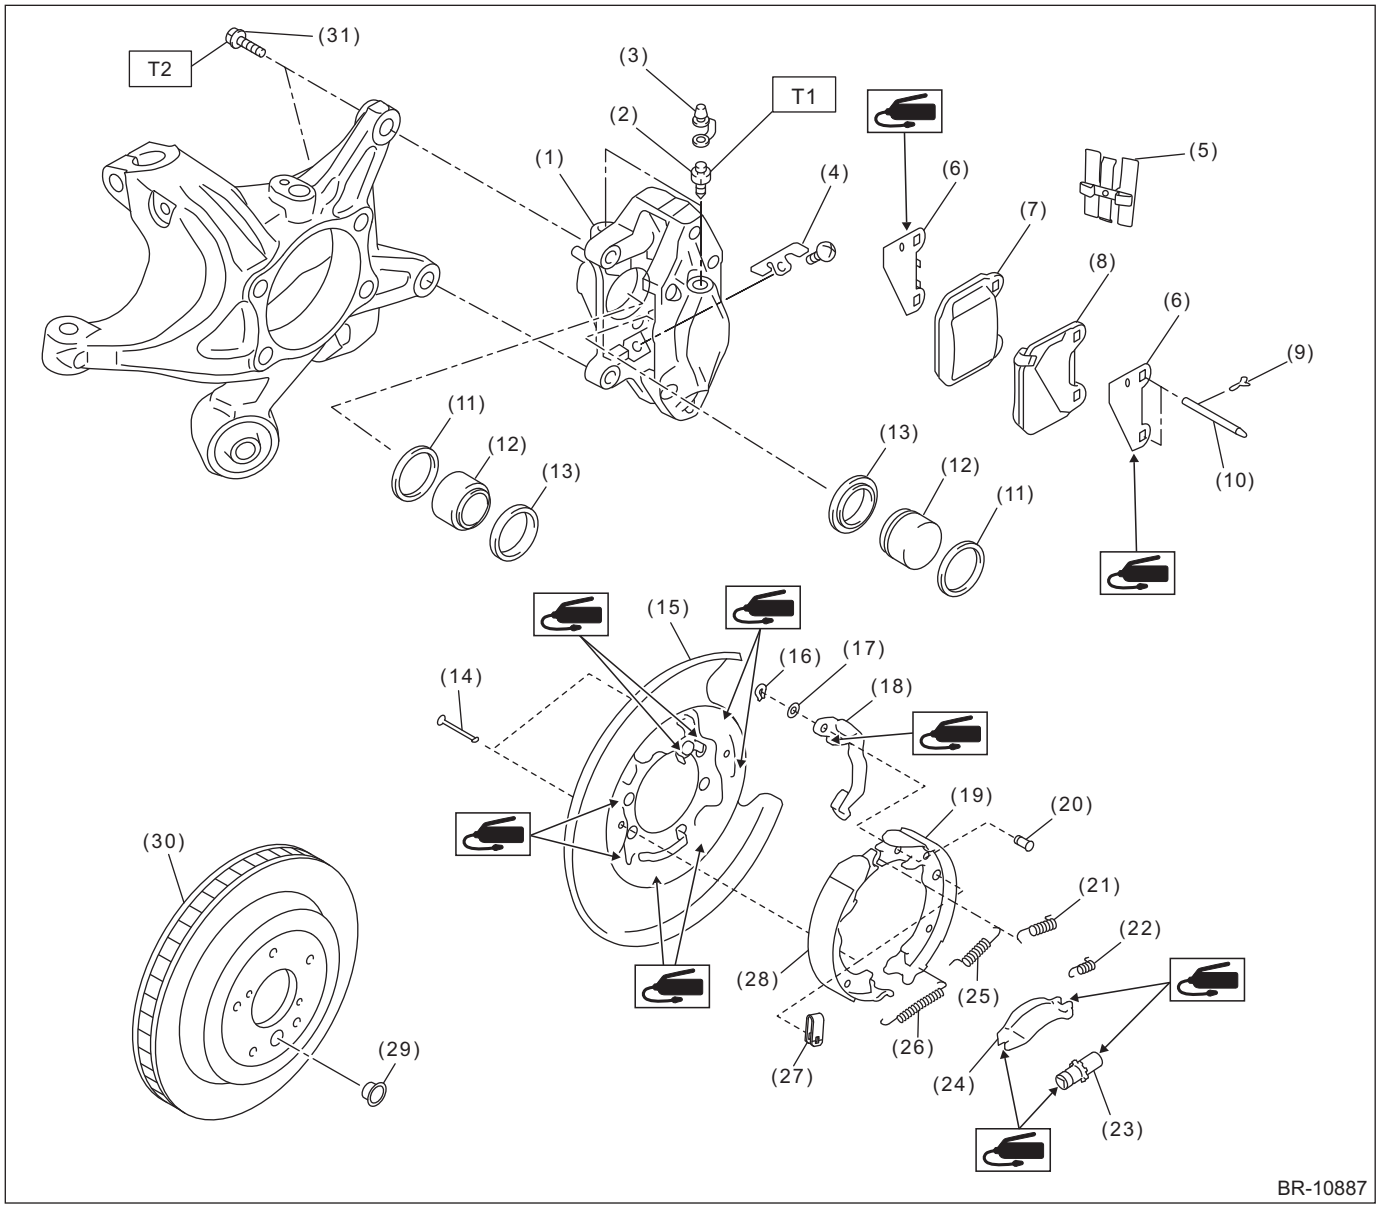
(1) Support - rear disc brake
(2) Pad clip - rear brake
(3) Bleeder - screw
(4) Cap - bleeder
(5) Guide pin - rear brake (black)
(6) Pin boot
(7) Caliper body
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Lock pin - rear brake (silver)
(12) Lock pin - bushing
(13) Shim - disc brake rear outer
(14) Shim - disc brake rear inner
(15) Pad - disc brake rear inner
(16) Pad - disc brake rear outer
(17) Shim - disc brake rear outer and inner
(18) Pin - shoe hold-down
(19) Back plate - rear brake
(20) Retainer - rear brake
(21) Spring washer - rear brake
(22) Parking lever - rear
(23) Parking brake shoe (secondary)
(24) Pin - parking lever
(25) Spring - secondary shoe return
(26) Spring - strut
(27) Adjuster ASSY - rear brake
(28) Strut - brake
(29) Spring - primary shoe return
(30) Spring - adjuster
(31) Spring - shoe clamp
(32) Parking brake shoe (primary)
(33) Adjusting hole cover
(34) Disc rotor (solid type)
(35) Mounting bolt
(36) Caliper bolt

*1: 14 mm (width across flats)
*2: 17 mm (width across flats)

Tightening torque: N·m (kgf-m, ft-lb)

T1: 8 (0.8, 5.9)
T2: 27 (2.8, 19.9)
T3: 66 (6.7, 48.7)
T4: 110 (11.2, 81.1)

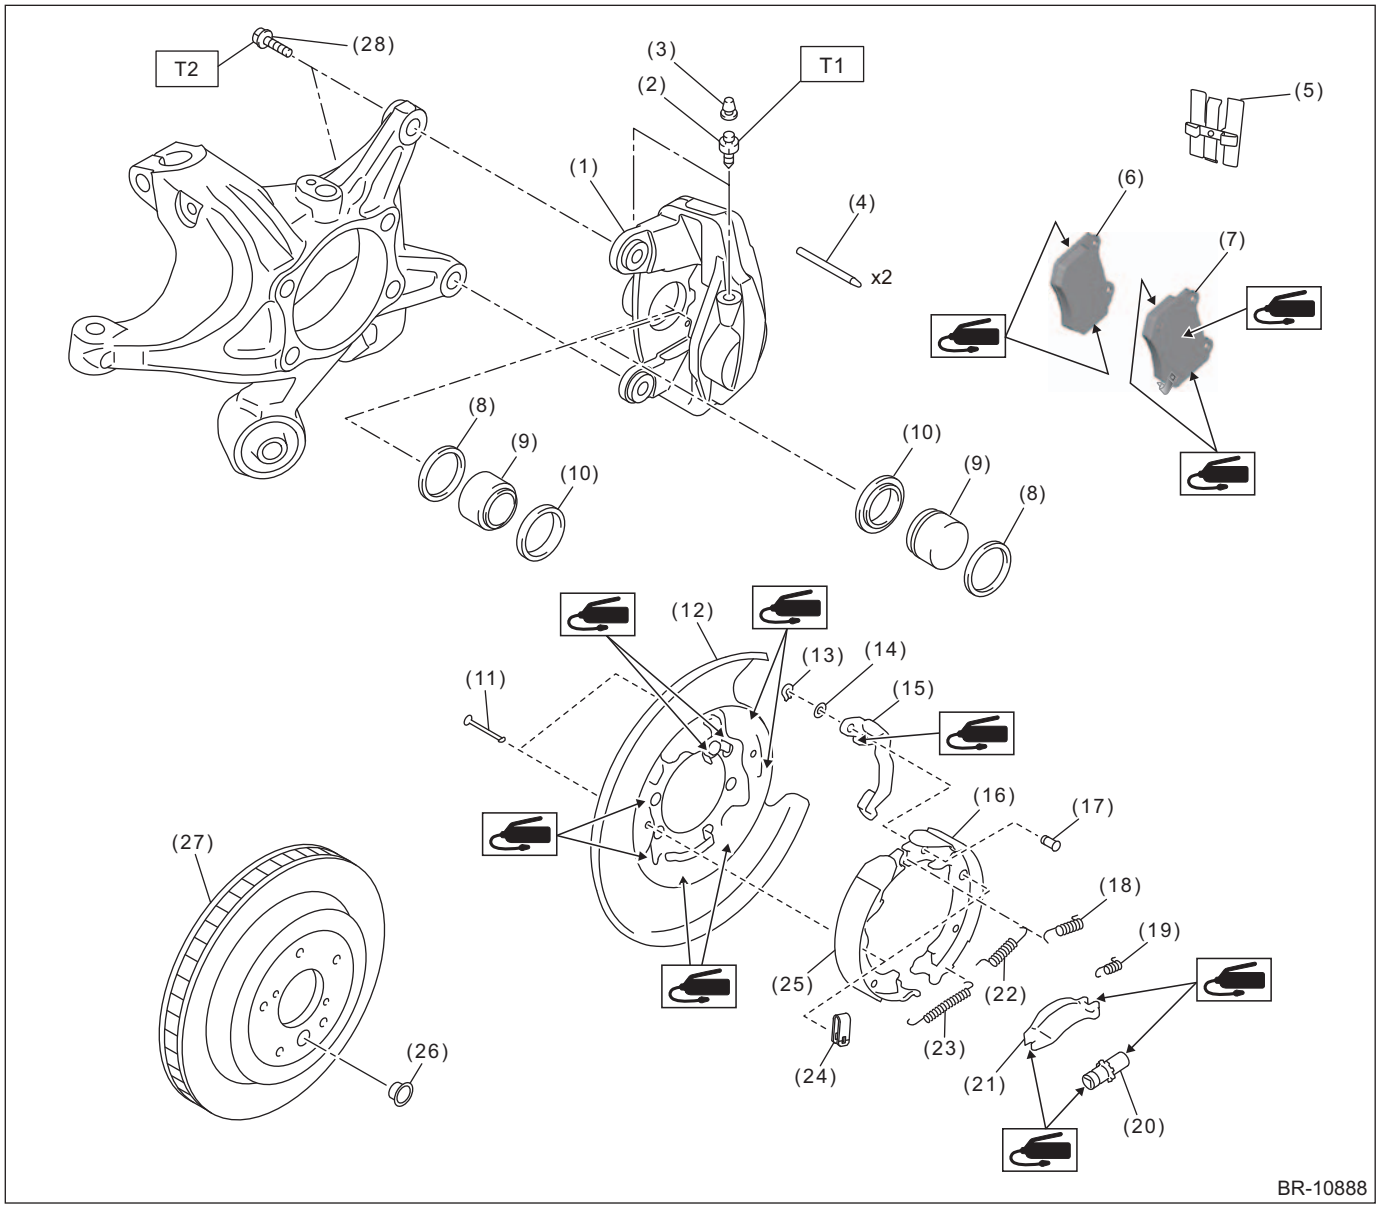
- Opposed 2-POT piston type, except for WRX STI model



(1) Caliper body
(2) Bleeder - screw
(3) Cap - bleeder
(4) Guide plate
(5) Cross spring
(6) Shim - disc brake rear outer and inner
(7) Pad - disc brake rear inner
(8) Pad - disc brake rear outer
(9) Clip - slide pin
(10) Pin - disc brake
(11) Piston seal
(12) Piston - disc brake
(13) Piston boot
(14) Pin - shoe hold-down
(15) Back plate - rear brake
(16) Retainer - rear brake
(17) Spring washer - rear brake
(18) Parking lever - rear
(19) Parking brake shoe (secondary)
(20) Pin - parking lever
(21) Spring - secondary shoe return
(22) Spring - strut
(23) Adjuster ASSY - rear brake
(24) Spring - strut
(25) Spring - primary shoe return
(26) Spring - adjuster
(27) Spring - shoe clamp
(28) Parking brake shoe (primary)
(29) Adjusting hole cover
(30) Disc rotor (ventilated type)
(31) Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2, 14.8)
T2: 73 (7.4, 53.8)

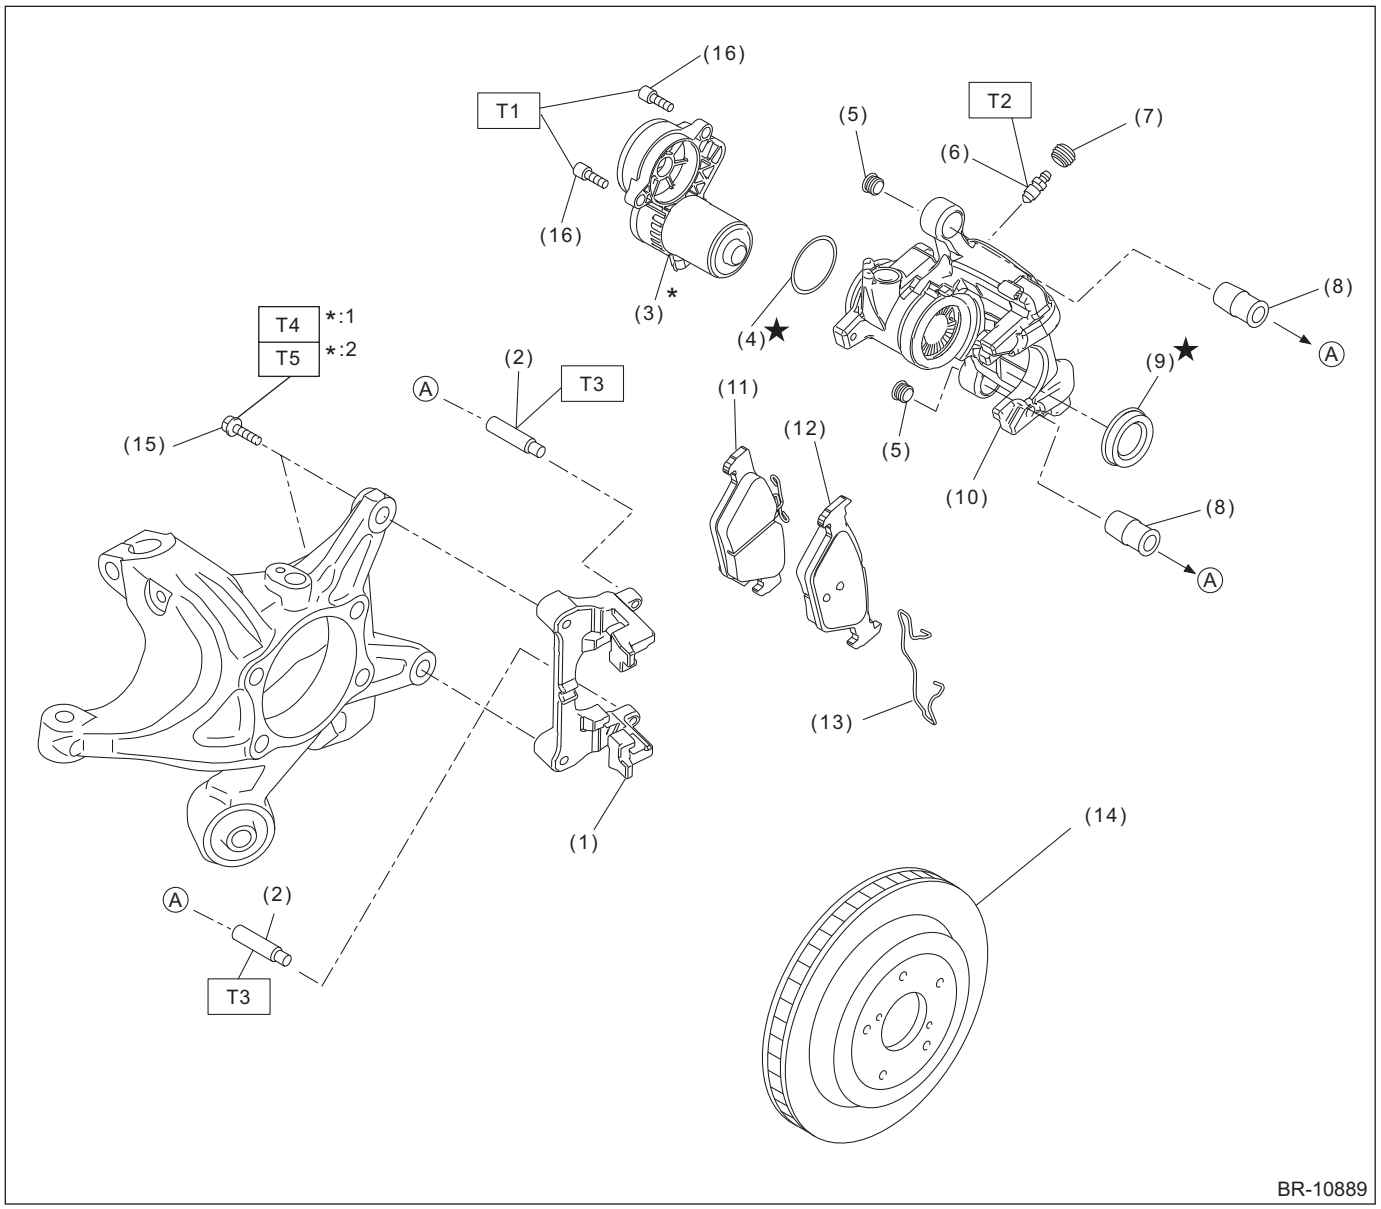
- Opposed 2-POT piston type, for WRX STI model



(1) Caliper body
(2) Bleeder - screw
(3) Cap - bleeder
(4) Pin - disc brake
(5) Cross spring
(6) Pad - disc brake rear inner
(7) Pad - disc brake rear outer
(8) Piston seal
(9) Piston - disc brake
(10) Piston boot
(11) Pin - shoe hold-down
(12) Back plate - rear brake
(13) Retainer - rear brake
(14) Spring washer - rear brake
(15) Parking lever - rear
(16) Parking brake shoe (secondary)
(17) Pin - parking lever
(18) Spring - secondary shoe return
(19) Spring - strut
(20) Adjuster ASSY - rear brake
(21) Spring - strut
(22) Spring - primary shoe return
(23) Spring - adjuster
(24) Spring - shoe clamp
(25) Parking brake shoe (primary)
(26) Adjusting hole cover
(27) Disc rotor (ventilated type)
(28) Mounting bolt

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	***18.5 (1.9, 13.6)***
T2:	***73 (7.4, 53.8)***

3. REAR DISC BRAKE (ELECTRONIC PARKING BRAKE TYPE)

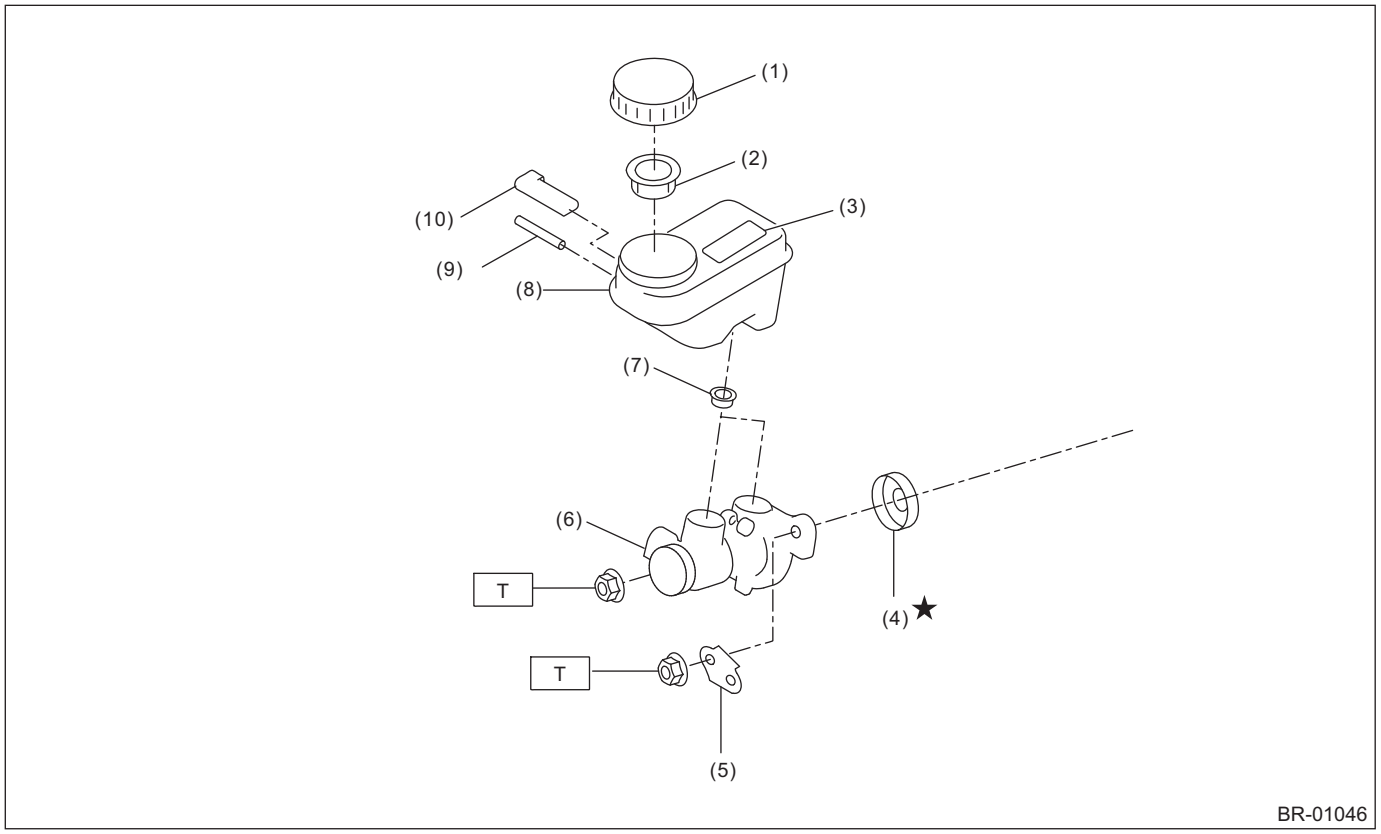


(1) Support - rear disc brake
(2) Guide pin - rear brake
(3) Parking brake actuator ASSY
(4) O-ring
(5) Cap
(6) Bleeder - screw
(7) Cap - bleeder
(8) Pin boot
(9) Piston boot
(10) Caliper body
(11) Pad - disc brake rear inner
(12) Pad - disc brake rear outer
(13) Pat clip
(14) Disc rotor (ventilated type)
(15) Mounting bolt
(16) Caliper bolt

*1: 14 mm (width across flats)
*2: 17 mm (width across flats)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 17 (1.7, 12.5)
T3: 25 (2.5, 18.4)
T4: 66 (6.7, 48.7)
T5: 110 (11.2, 81.1)

4. MASTER CYLINDER

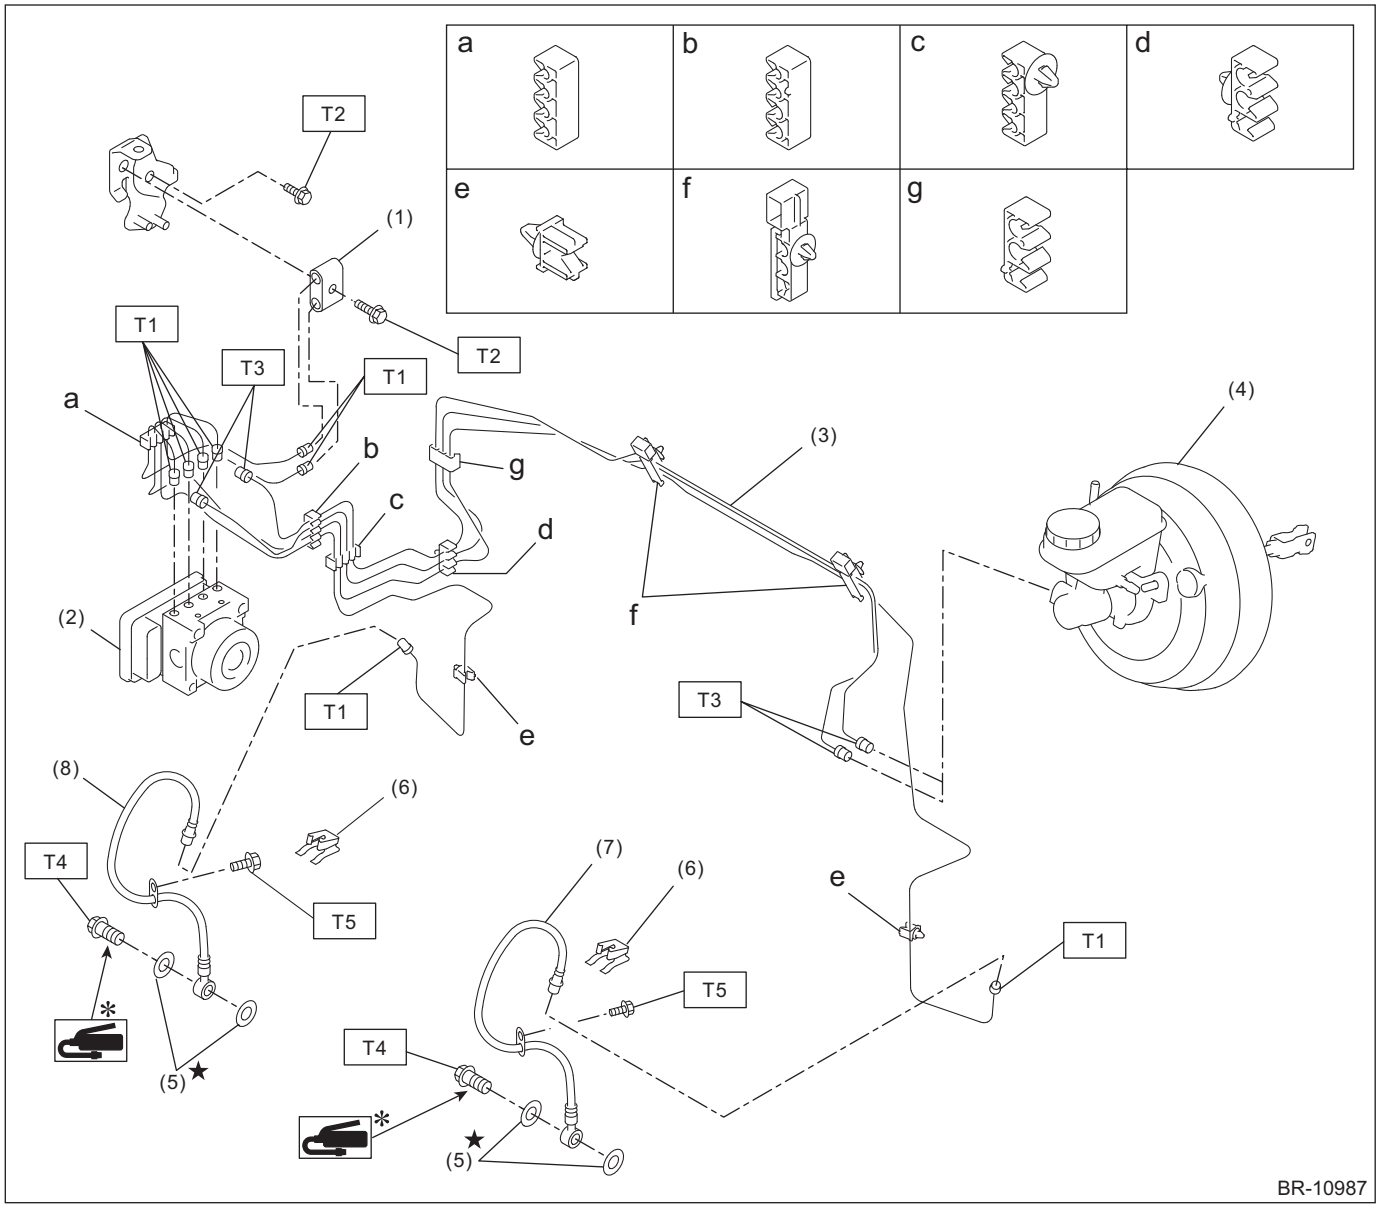


(1)	Cap - reservoir tank	(6)	Cylinder body ASSY
(2)	Filter - master cylinder	(7)	Seal
(3)	Caution label (model with caution label)	(8)	Reservoir tank
(4)	Seal sub ASSY	(9)	Pin
(5)	Bracket - master cylinder	(10)	Level - indicator

Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

5. FRONT BRAKE PIPES AND HOSES

- Models without EyeSight



(1)	Connector - two-way	(5)	Gasket
(2)	VDC control module and hydraulic control unit (VDCCM&H/U)	(6)	Clamp
(3)	Front brake pipe ASSY	(7)	Front brake hose LH
(4)	Master cylinder ASSY	(8)	Front brake hose RH

Tightening torque: N·m (kgf-m, ft-lb)

T1: 15 (1.5, 11.1)

T2: 18 (1.8, 13.3)

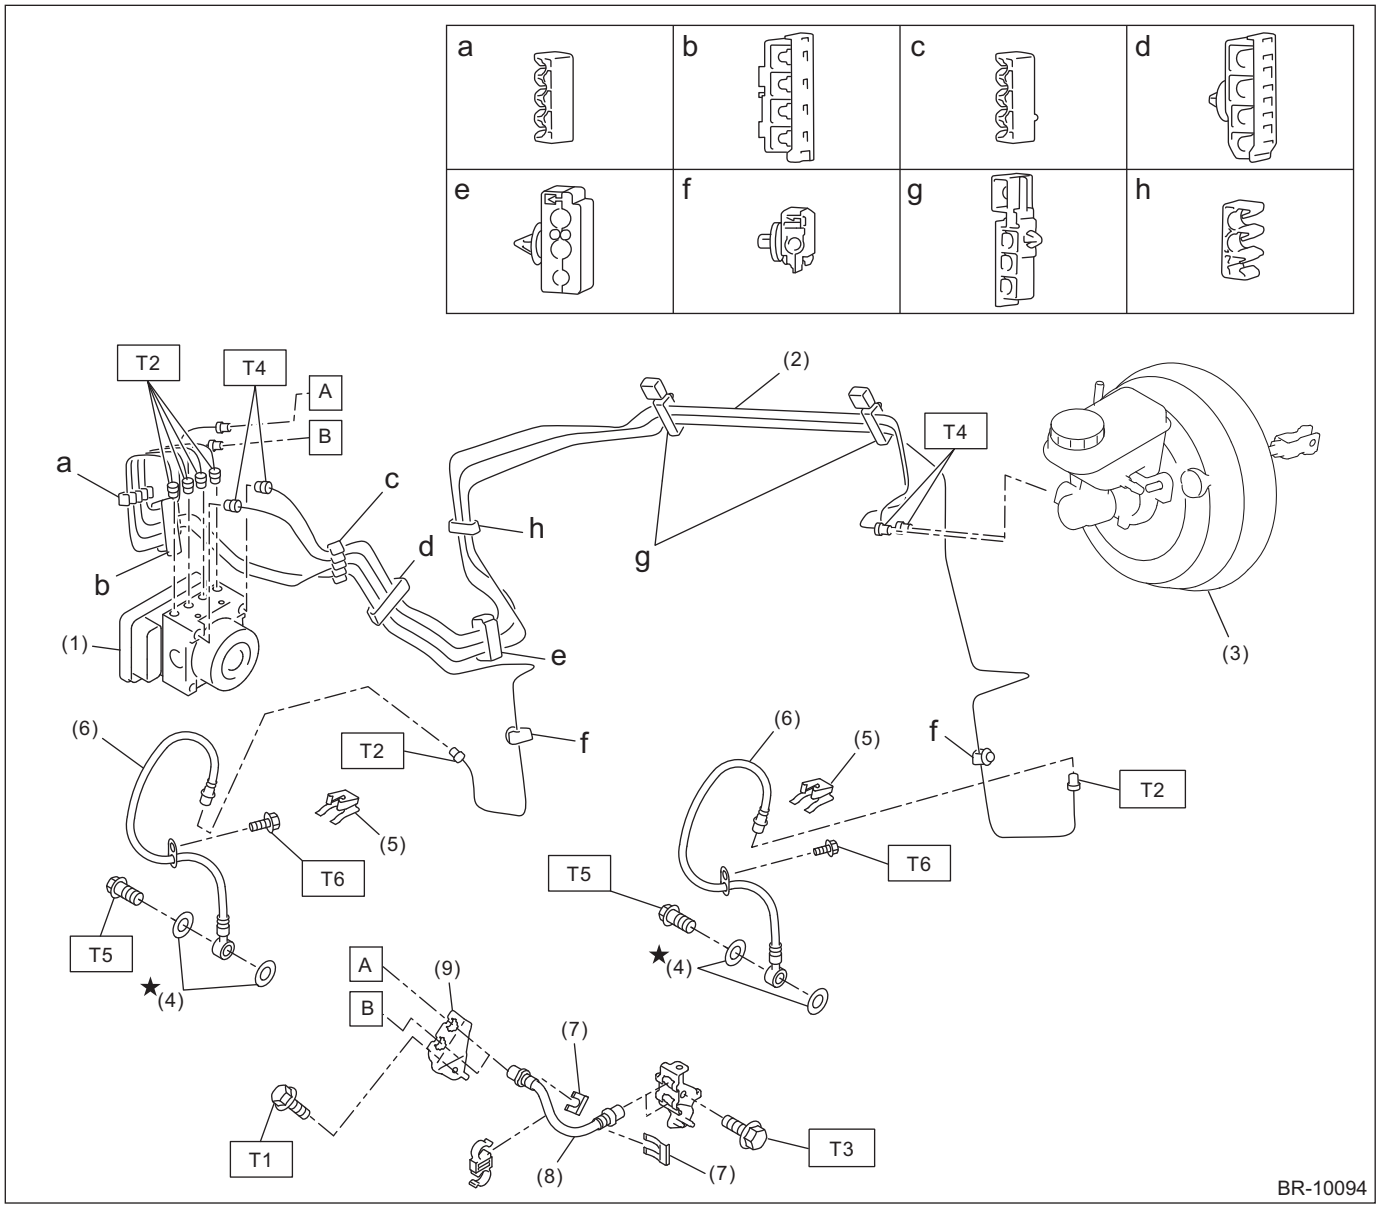
T3: 19 (1.9, 14)

T4: 26 (2.7, 19.2)

T5: 33 (3.4, 24.3)

*: For brembo type only

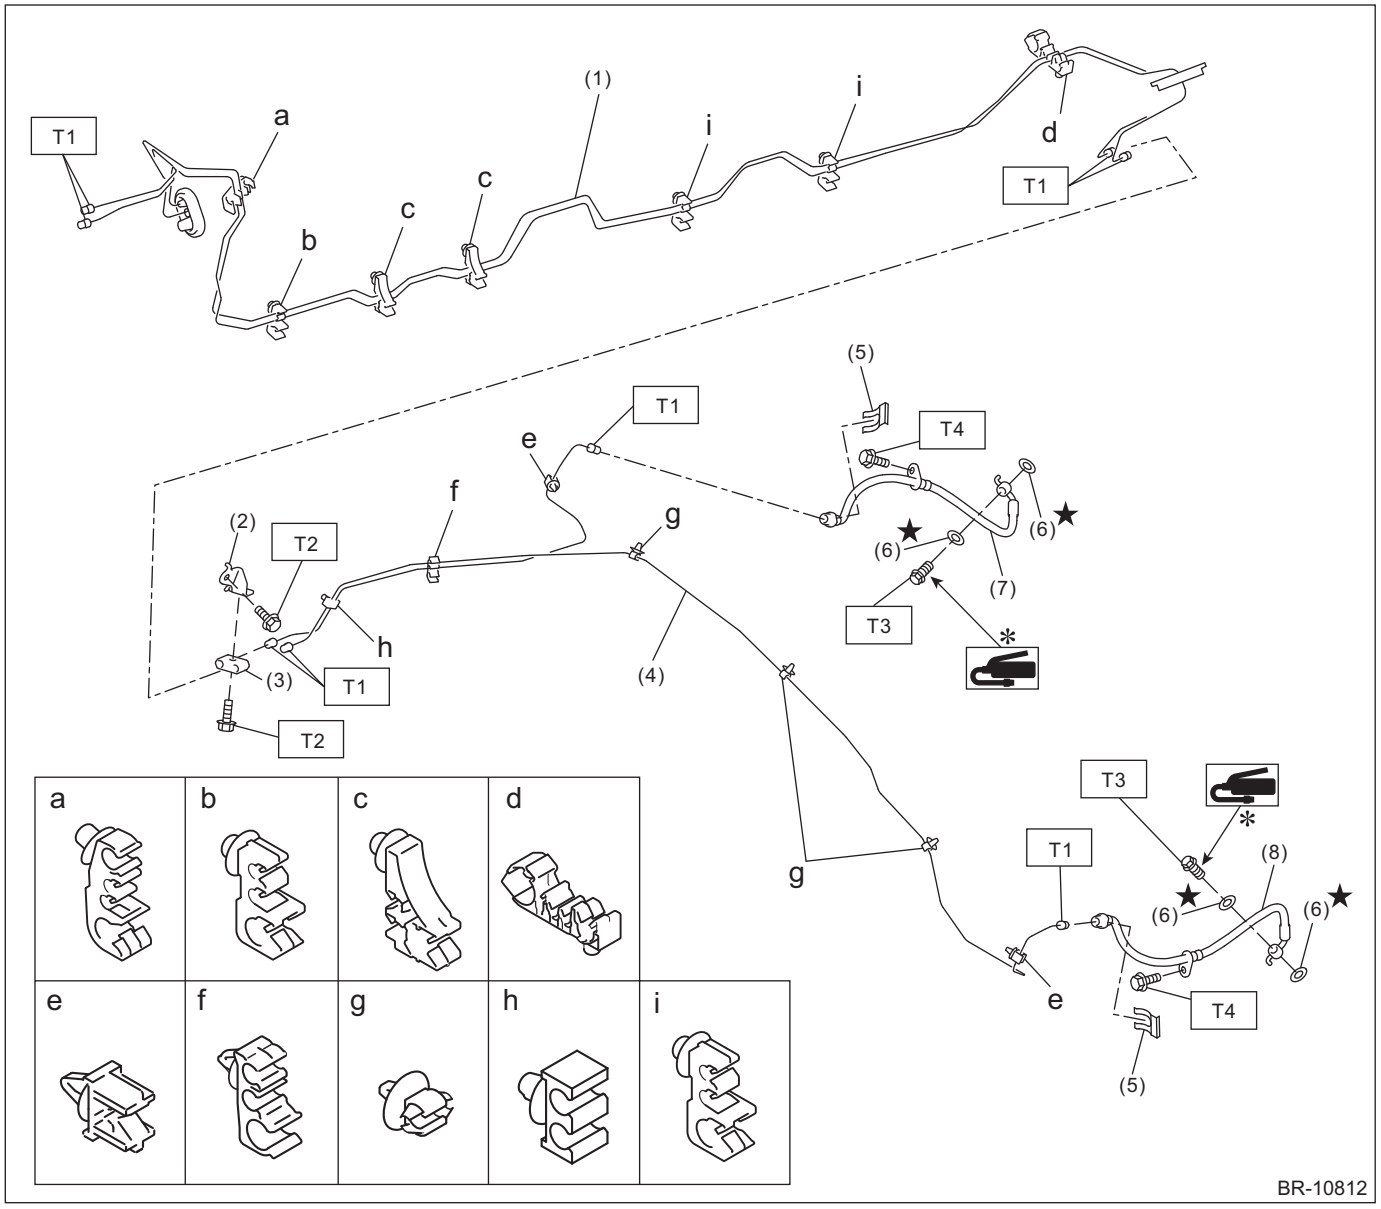
- Models with EyeSight



(1)	VDC control module and hydraulic control module	(6)	Front brake hose ASSY RH/LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Front brake pipe ASSY	(7)	Clamp	***T1: 7.5 (0.8, 5.5)***
(3)	Master cylinder ASSY	(8)	Brake hose ASSY	***T2: 15 (1.5, 11.1)***
(4)	Gasket	(9)	Bracket	***T3: 18 (1.8, 13.3)***
(5)	Clamp			***T4: 19 (1.9, 14)***
				T5: 26 (2.7, 19.2)
				T6: 33 (3.4, 24.3)

6. CENTER AND REAR BRAKE PIPES AND HOSES

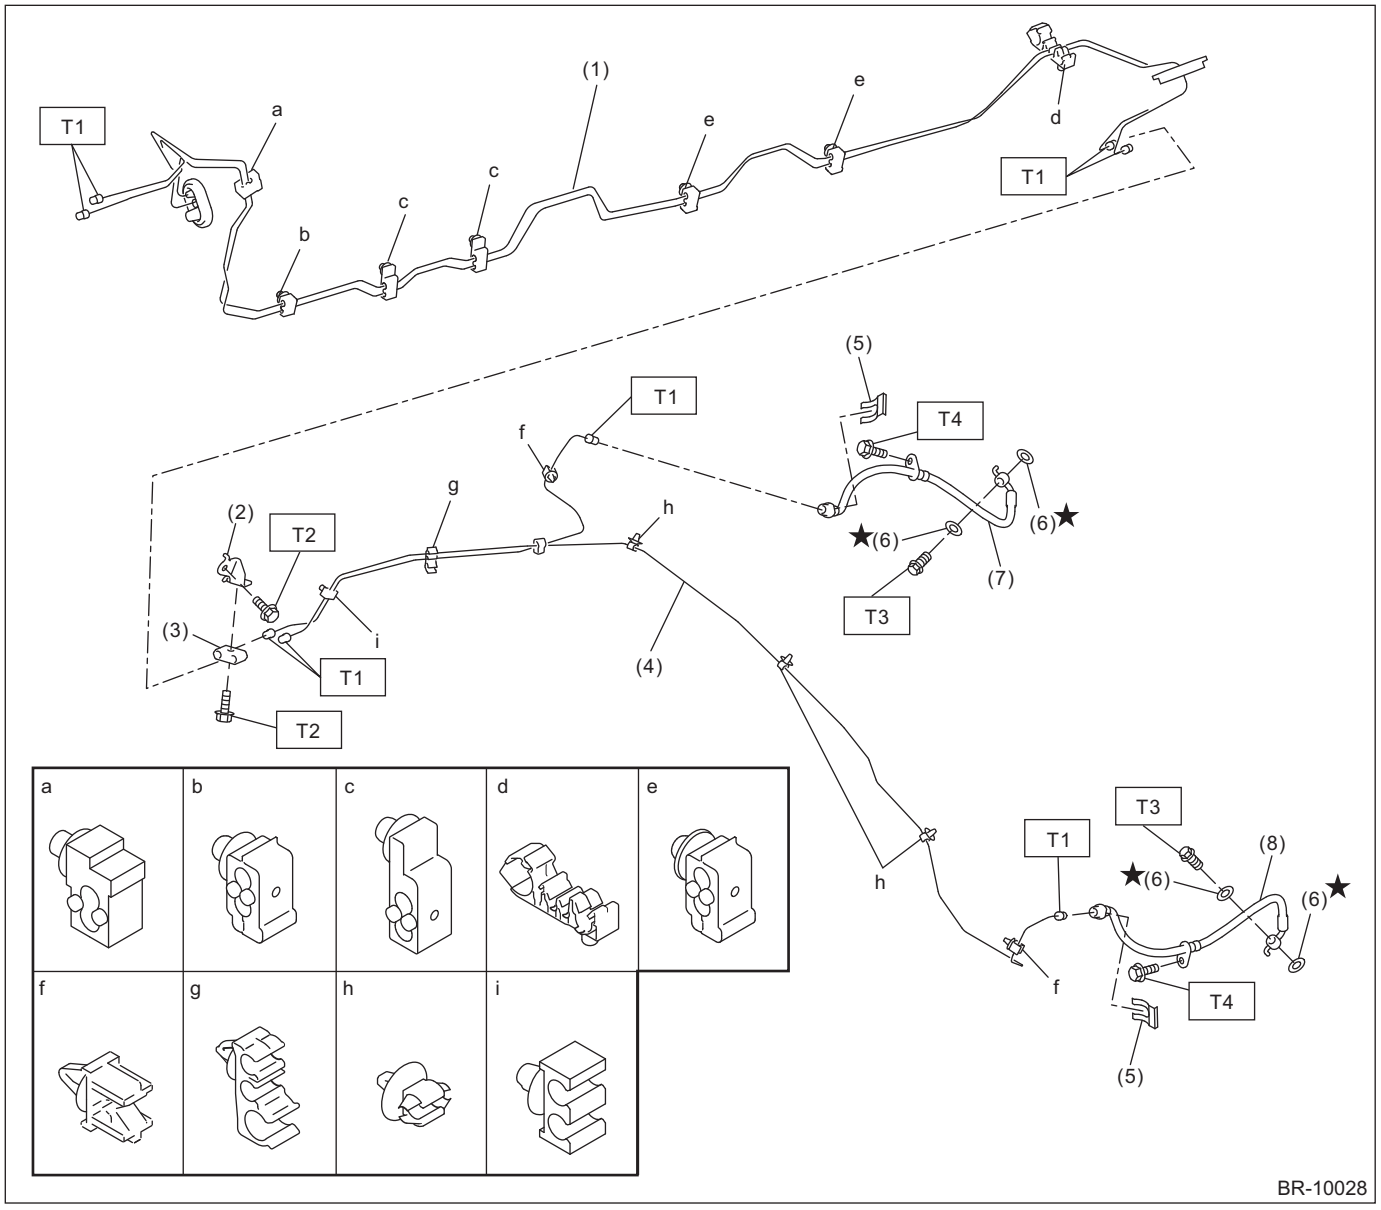
- Models without EyeSight



(1) Center brake pipe ASSY
(2) Bracket
(3) Connector
(4) Rear brake pipe ASSY
*: For brembo type only
(5) Clamp
(6) Gasket
(7) Rear brake hose RH
(8) Rear brake hose LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 26 (2.7, 19.2)
T4: 33 (3.4, 24.3)

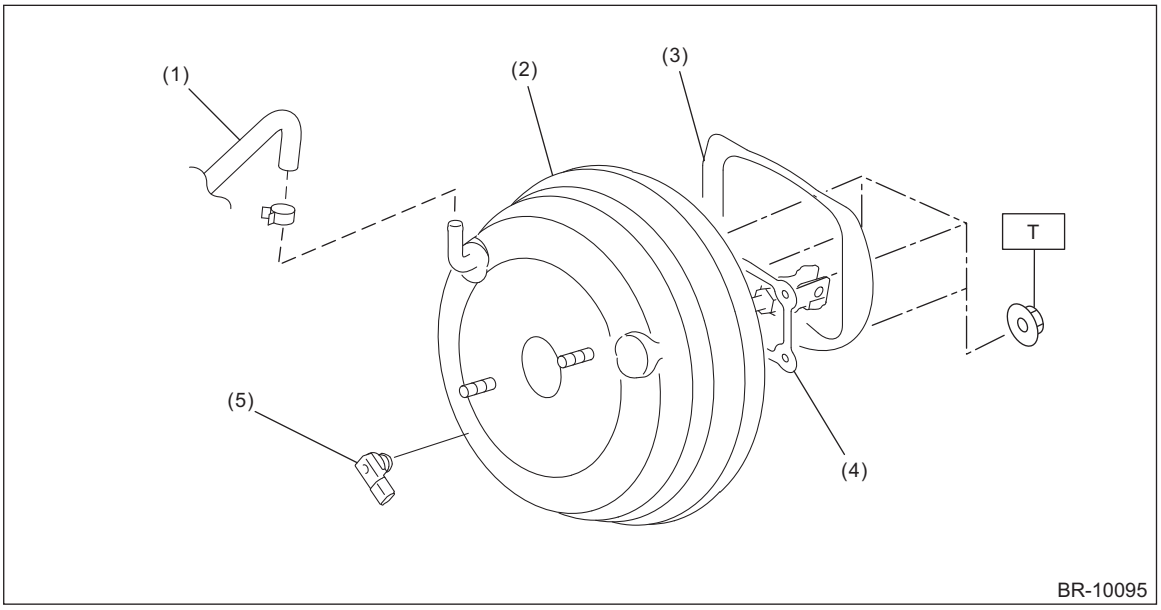
- Models with EyeSight



(1) Center brake pipe ASSY
(2) Bracket
(3) Connector
(4) Rear brake pipe ASSY
(5) Clamp
(6) Gasket
(7) Rear brake hose RH
(8) Rear brake hose LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 15 (1.5, 11.1)
T2: 18 (1.8, 13.3)
T3: 26 (2.7, 19.2)
T4: 33 (3.4, 24.3)

7. BRAKE BOOSTER

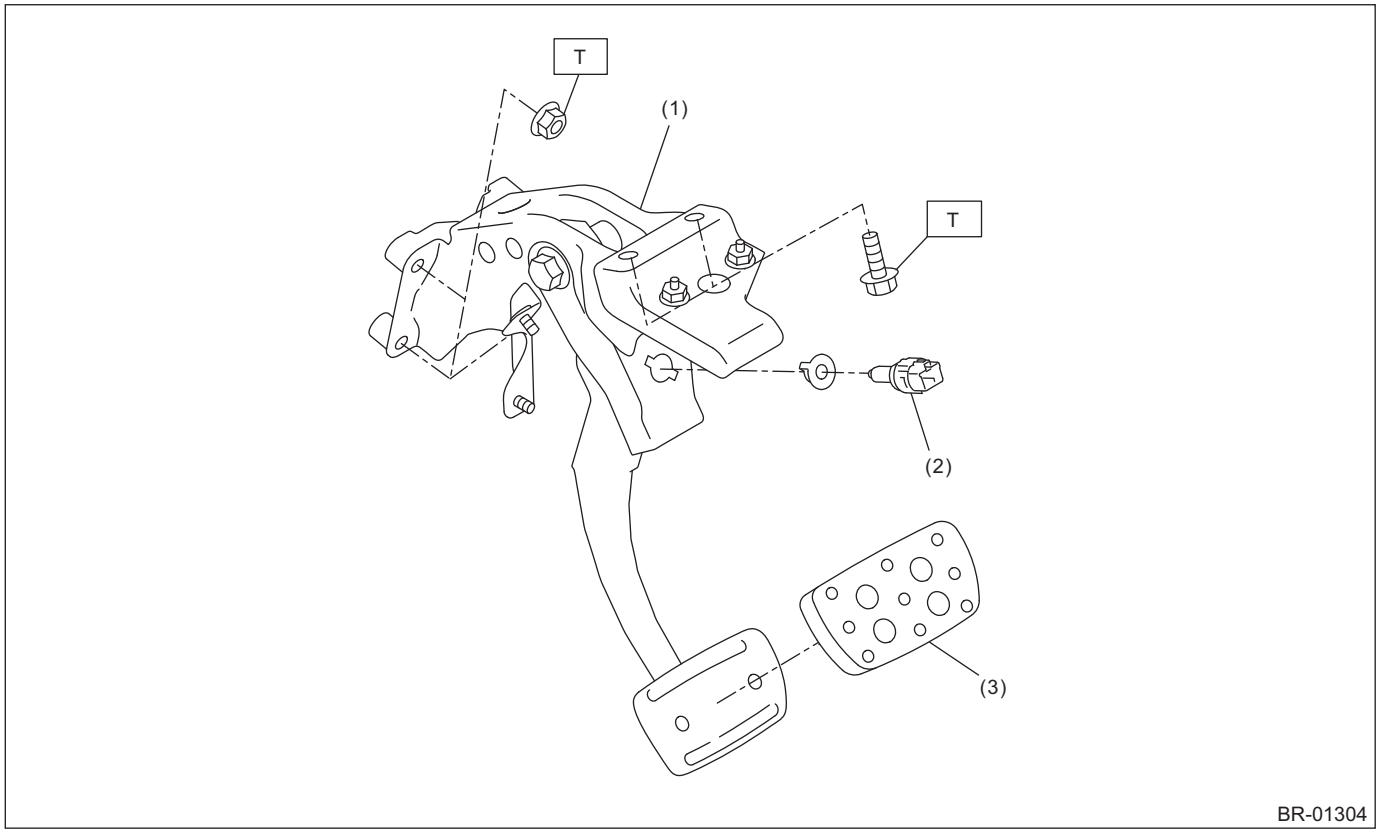


(1) Vacuum hose
(2) Vacuum booster ASSY
(3) Damping seat (model with EyeSight)
(4) Gasket
(5) Vacuum sensor

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

8. BRAKE PEDAL

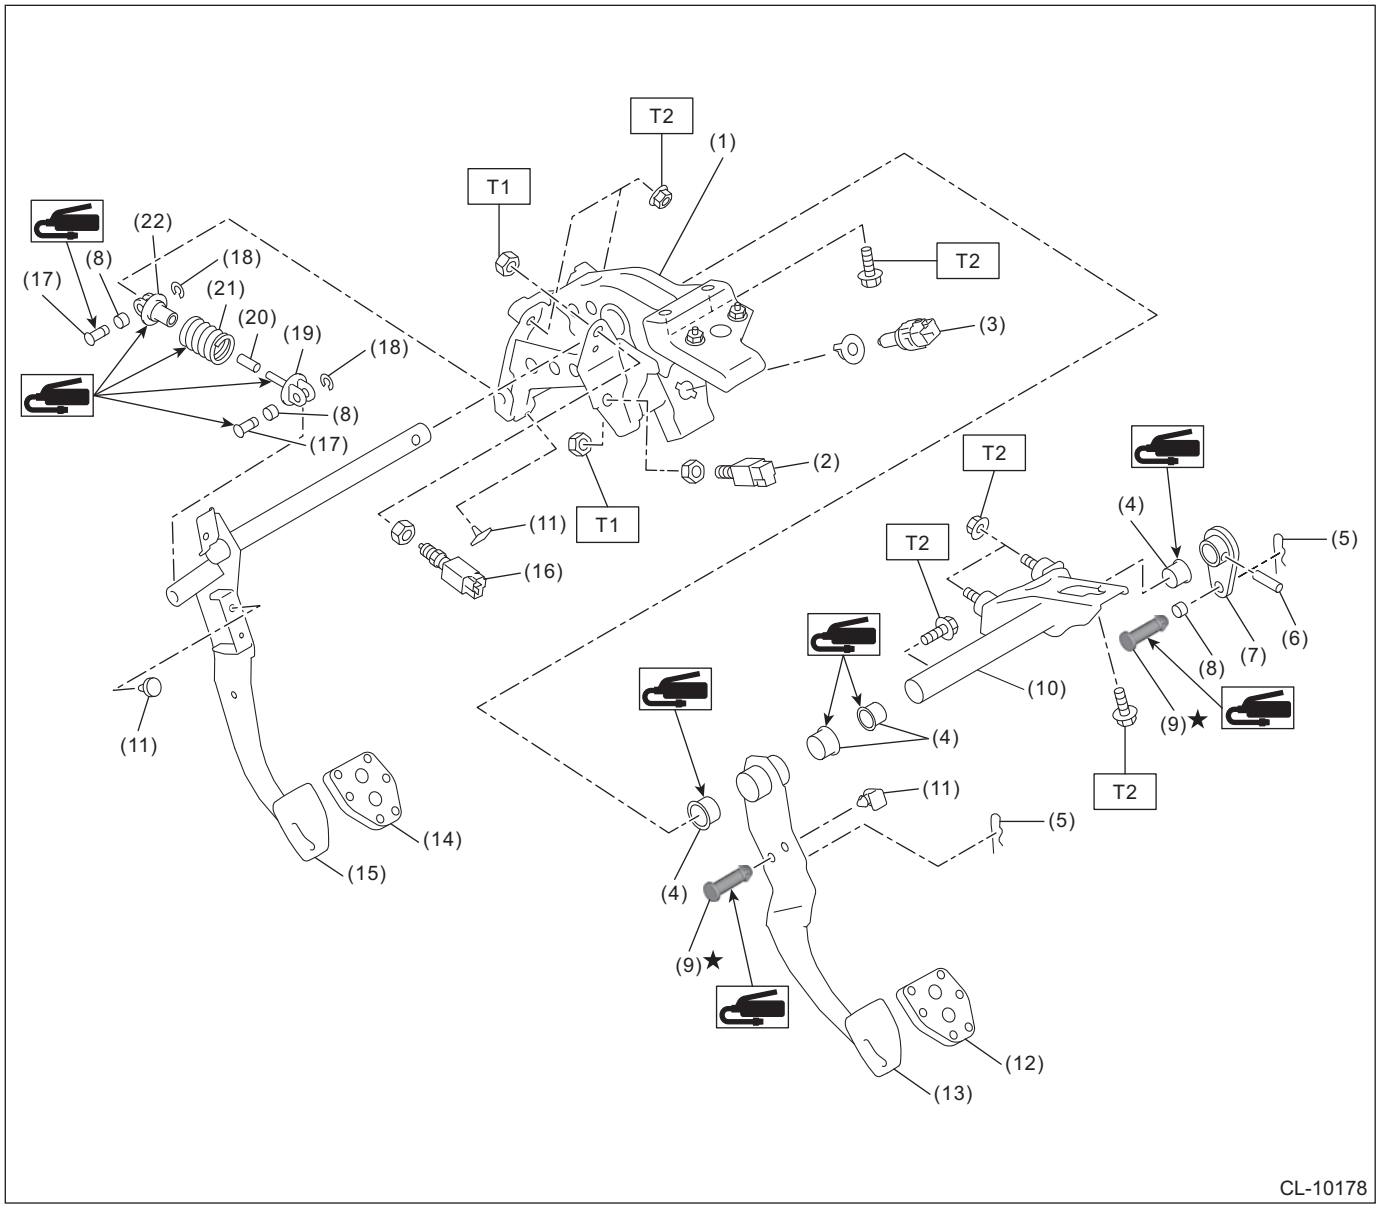
- AT model



(1) Brake pedal ASSY
(2) Stop light switch
(3) Pad - brake pedal (sport type)

Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

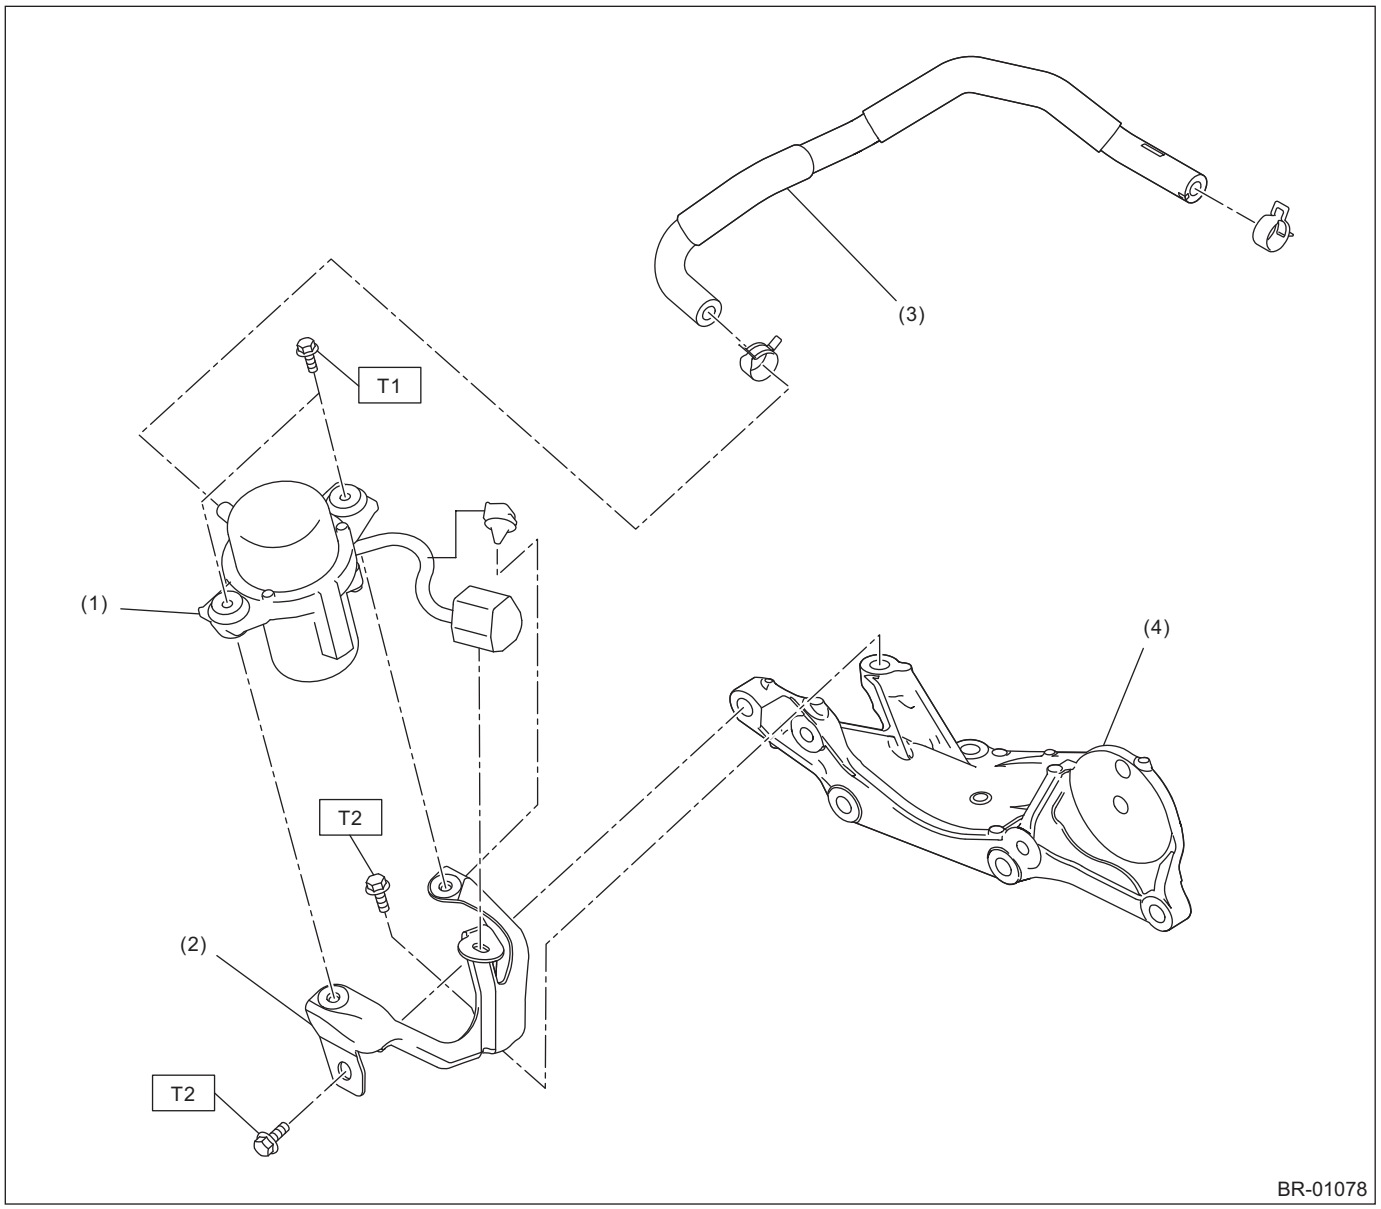
- MT model



(1) Pedal bracket
(2) Clutch switch
(3) Stop light switch
(4) Bushing
(5) Snap pin
(6) Spring pin
(7) Lever
(8) Bushing C
(9) Clevis pin
(10) Clutch master cylinder bracket
(11) Stopper
(12) Pad - brake pedal (sport type)
(13) Brake pedal
(14) Pad - clutch pedal (sport type)
(15) Clutch pedal
(16) Clutch start switch
(17) Assist pin
(18) Clip
(19) Assist rod A
(20) Assist bushing
(21) Assist spring
(22) Assist rod B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 18 (1.8, 13.3)

9. BRAKE VACUUM PUMP



(1)	Vacuum pump ASSY	(3)	Vacuum hose COMPL
(2)	Bracket COMPL - vacuum pump	(4)	Bracket - generator

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 19 (1.9, 14)

C: CAUTION

- When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Apply grease onto sliding or revolving surfaces before installation.

- Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST99099AL000	99099AL000	PISTON BOOT INSTALLER	Used for installing the piston boot.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Pressure gauge	Used for measuring the operation and airtightness of the brake booster.
Vacuum gauge	Used for measuring the operation and airtightness of the brake booster.
Dial gauge	Used for measuring brake disc rotor run-out.
Magnet stand	Used for measuring brake disc rotor run-out.
Cap	Used for brake hose installing portion of brake disc caliper.
Disc brake piston tool	Used for pushing back the electronic parking brake piston. • KTC disc parking tool rotor • OTC brake caliper tool adapter or equivalent

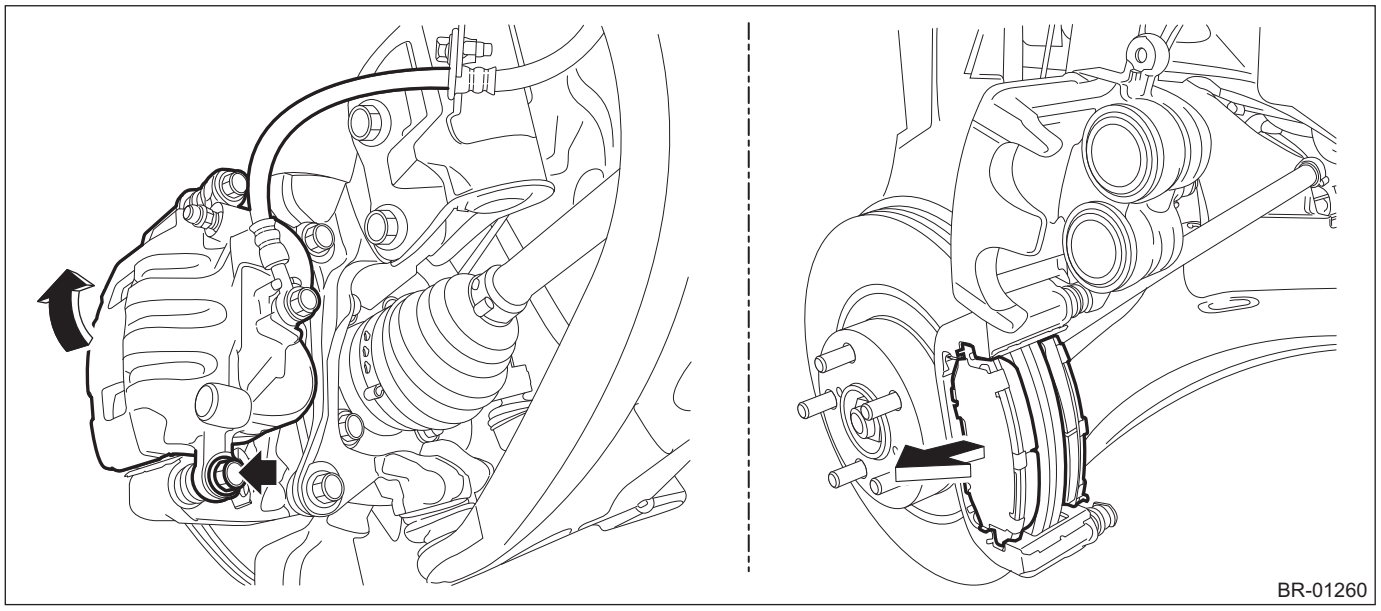
2. Front Brake Pad

A: REMOVAL

1. FLOATING 2-POT PISTON TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the caliper bolt on the lower side.
   (2) Raise the caliper body assembly and remove the pad - disc brake front.

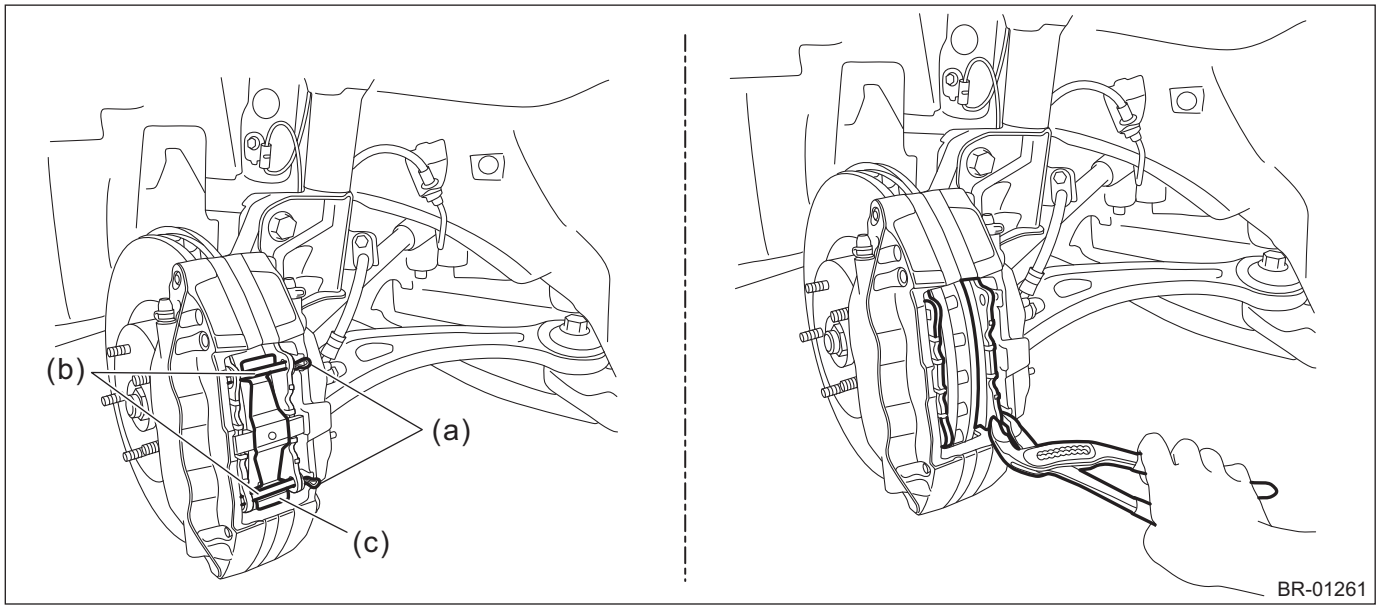
NOTE:
Do not disconnect the brake hose from the caliper body assembly.



BR-01260

2. OPPOSED 4-POT PISTON TYPE

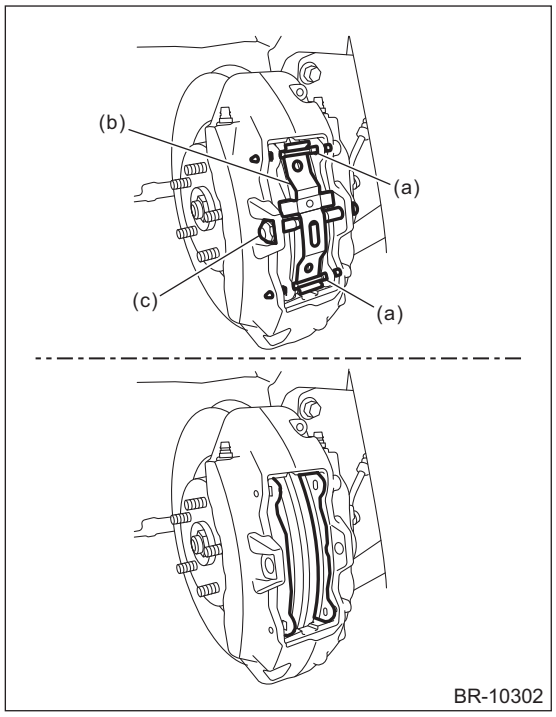
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the clip - slide pin (a), and remove the pin - disc brake (b) and cross spring (c).
   (2) While pushing back the piston with a wrench, remove the pad - disc brake front.



BR-01261

3. OPPOSED 6-POT PISTON TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front.
   (1) Remove the pin - disc brake (a), cross spring (b) and pad clip bolt (c).
   (2) Remove the pad - disc brake front.

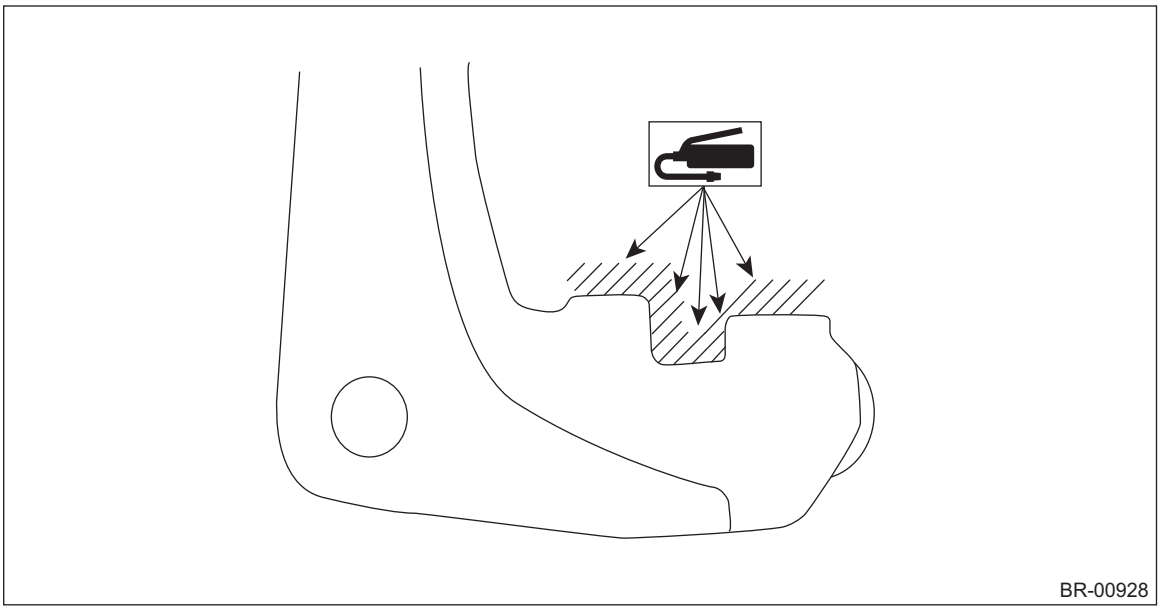


B: INSTALLATION

1. FLOATING 2-POT PISTON TYPE

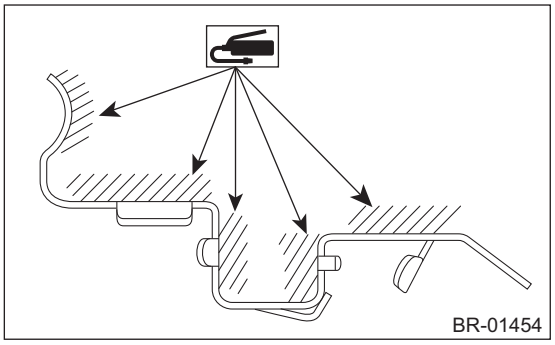
NOTE:
Remove the pad clip before installation, and remove mud, foreign matter and rust from the caliper body assembly and the support - front disc brake.
1) Apply a thin coat of the brake grease or the grease contained in pad kit to the support - front disc brake.

Preparation items:
Grease: An item contained in the pad kit, or brake grease (Part No. 003602001)



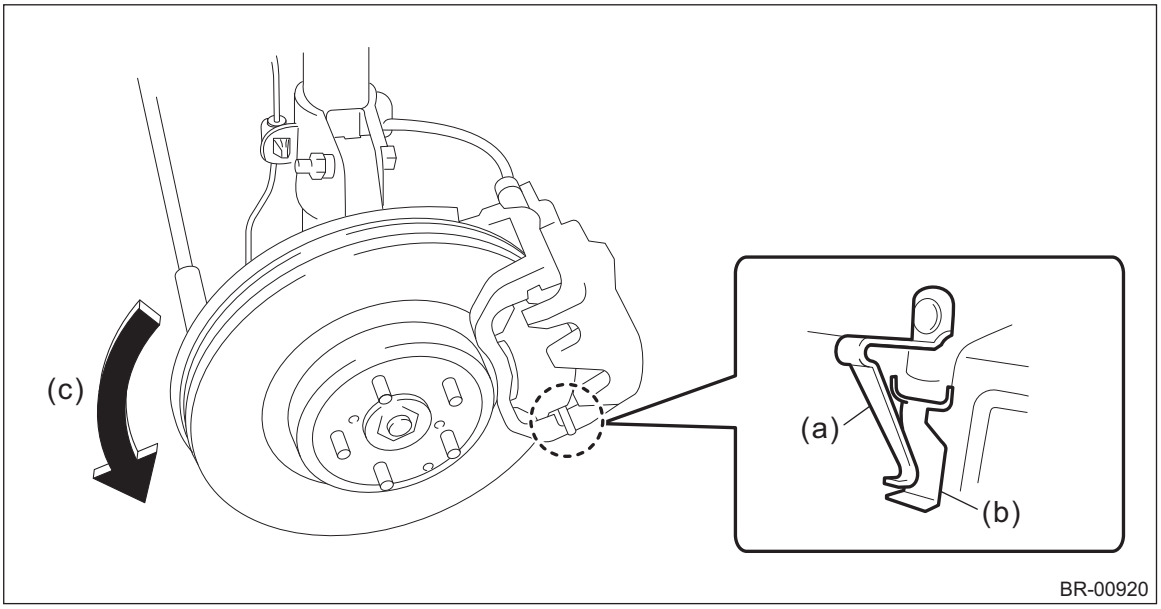
2) Check the brake pad. <Ref. to BR-27, INSPECTION, Front Brake Pad.>
3) Apply a thin coat of grease to the pad clip.

Preparation items:
Grease: An item contained in the pad kit or equivalent



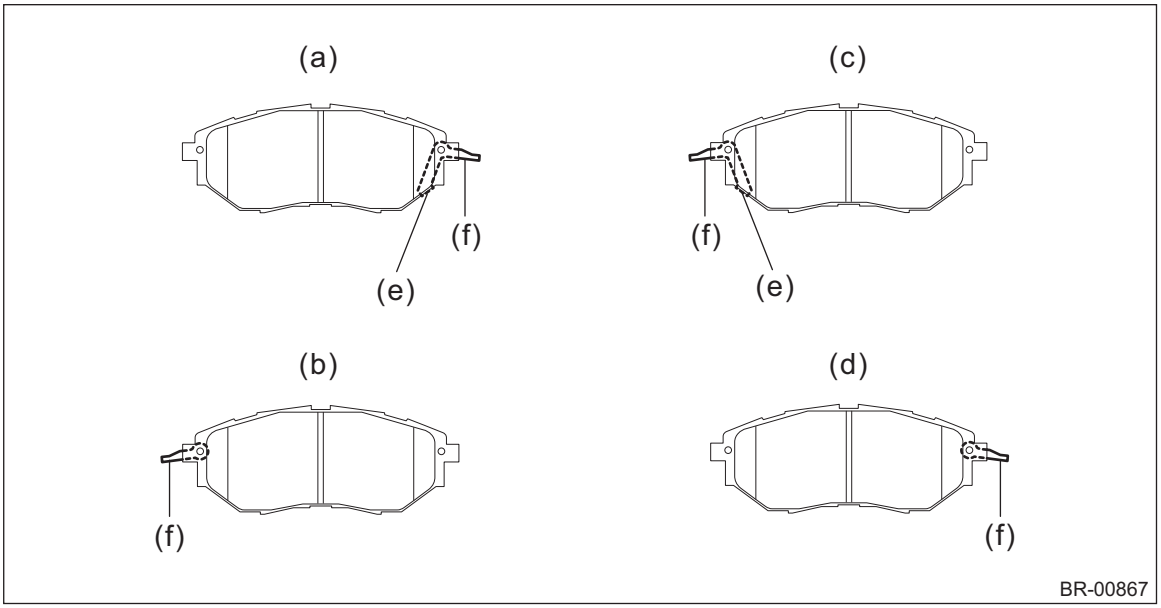
4) Install the pad clip.
5) Install the brake pad to the support - front disc brake.

CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of disc rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the pad - disc brake front with a new part.



(a) Pad return spring (b) Supporting surface of pad clip (c) Disc rotor rotation direction

NOTE:
Install the pad wear indicator in proper direction.



(a) LH — IN
(b) LH — OUT
(c) RH — IN
(d) RH — OUT
(e) Pad wear indicator
(f) Pad return spring

6) Install the caliper body assembly.

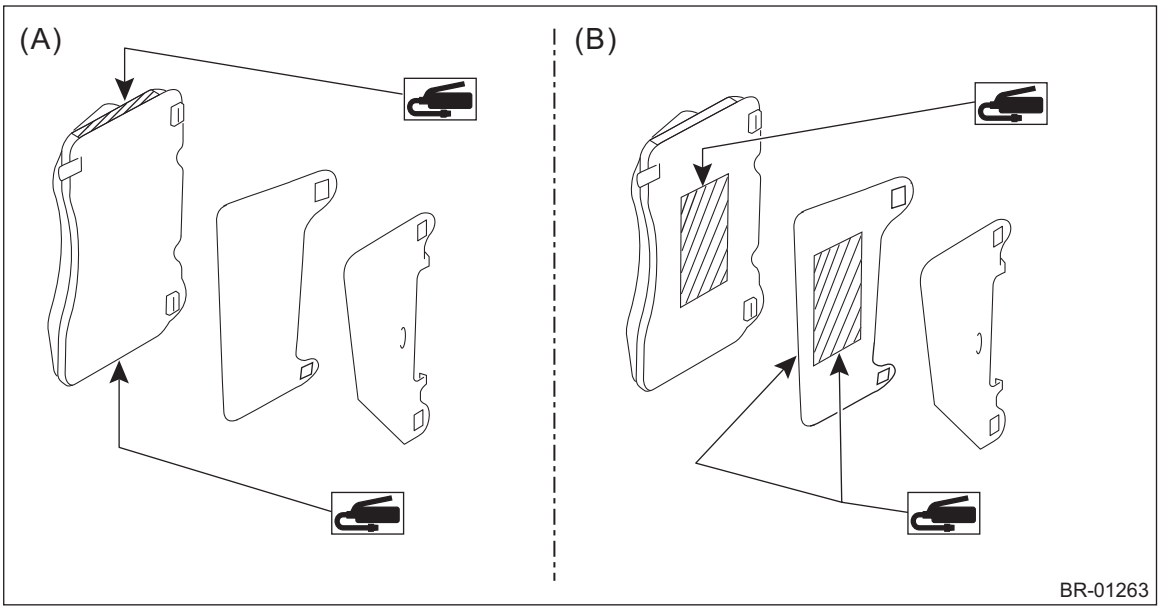
Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
7) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. OPPOSED 4-POT PISTON TYPE

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the side of the pad - disc brake front, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Preparation items:
Grease (pad side (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



2) Install the pad - disc brake front.
