This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

SUBARU CORPORATION G1740BE1

FOREWORD

1. Foreword 2

1. Foreword

A: FOREWORD

These manuals are used when performing maintenance, repair or diagnosis of SUBARU WRX and SUBARU WRX STI.
Applicable model: 2020 MY VAG**** and VAF****
The manuals contain the latest information at the time of publication. Changes in the specifications, methods, etc. may be made without notice.

HOW TO USE THIS MANUAL

HU

Page
1. How to Use This Manual 2

1. How to Use This Manual

A: HOW TO USE THIS MANUAL

1. STRUCTURE

Each section consists of SCT that are broken down into SC that are divided into sections for each component. The specification, maintenance and other information for the components are included, and the diagnostic information has also been added where necessary.

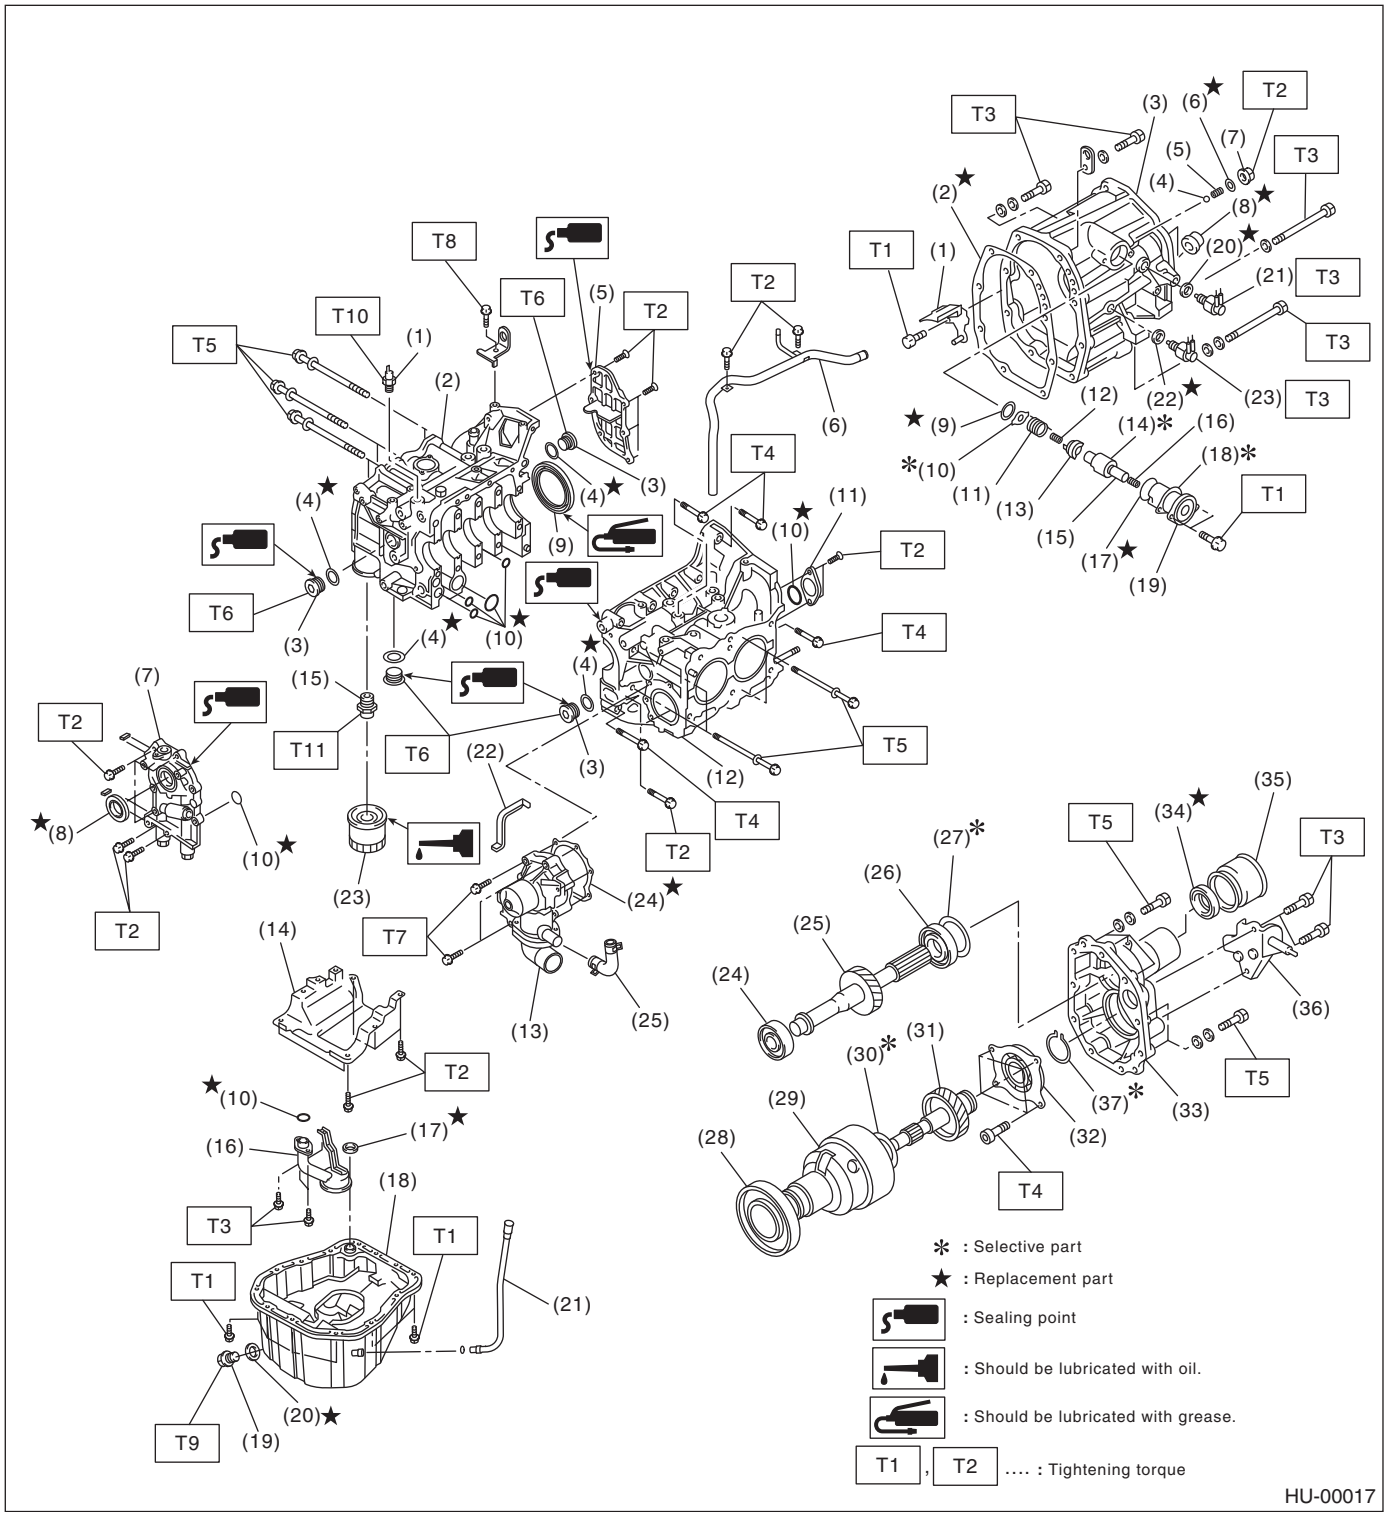
2. CONTENTS

The first page has an index with tabs.

3. COMPONENT

Illustrations are provided for each component. The information necessary for repair work (tightening torque, grease up points, etc.) is described on these illustrations. Information is described using symbol.
To order parts, refer to parts catalogue.

Example:



4. DEFINITIONS OF “NOTE”, “CAUTION” AND “WARNING”

- NOTE:

Describes additional information to make works easier.

- CAUTION:

Describes prohibited matters to prevent vehicle or parts damage, or matters that requires special attention during work.

• WARNING:
Describes matters that may cause serious damage to the operator or other person, or that may cause damage or accident.

5. SPECIFICATIONS

If necessary, specifications are also included.

6. INSPECTION

Inspections to be carried out before and after maintenance are included.

7. MAINTENANCE

• Maintenance instructions for serviceable parts describe work area and detailed step with illustration. It also describes the use of special tool, tightening torque, caution for each procedure.
• If many serviceable parts are included in one service procedure, appropriate reference is provided for each part.

Example:

15.Main Shaft ← (A)

A: REMOVAL ← (B)

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-33, REMOVAL, Manual Transmission Assembly.> ← (C)

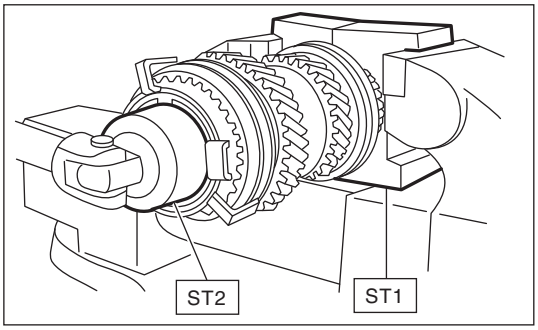
---

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE: ← (D)
Secure the lock nuts in two places after tightening.

ST1 498937000 TRANSMISSION HOLDER
ST2 499987003 (E) SOCKET WRENCH (35) (F)

Tightening torque:
118 N·m (12.0 kgf-m, 86.8 ft-lb) ← (G)



← (H)

HU-00020

(A) Component
(B) Process
(C) Reference
(D) Cautions
(E) Tool number of special tool
(F) Name of special tool
(G) Tightening torque
(H) Illustration

8. DIAGNOSIS

Step-by-step process is employed for easier diagnosis.

9. SI UNITS

Measurements in these manuals are according to the SI units. Metric and yard/pound measurements are also included.

Example:

Tightening torque:
44 N·m (4.5 kgf-m, 33 ft-lb)

List of SI unit

Item	SI units	Conventional unit	Remarks
Force	N (Newton)	kgf	1 kgf = 9.807 N
Mass (weight)	kg, g	kg, g	
Capacity	L, mL or cm^3	L or cc	1 cc = 1 cm^3 = 1 mL
Torque	N·m	kgf-m, kgf-cm	1 kgf-m = 9.807 N·m
Rotating speed	r/min	rpm	
Pressure	kPa (Kilopascal)	kgf/cm^2	1 kgf/cm^2 = 98.07 kPa
		mmHg	1 mmHg = 0.1333 kPa
Power	W	PS	1 PS = 0.7355 kW
Calorie	W·h	cal	1 kcal = 1.163 W·h
Fuel consumption rate	g/kW·h	g/PS·h	1 g/PS·h = 1.3596 g/kW·h

The figure used in these manuals are described in the SI units and conventional units are described in ( ).

10.EXPLANATION OF TERMINOLOGY

List

2ndr	Secondary
AAI	Air Assist Injection
AAR	Angular Adjusted Roller
A/B	Airbag
ABS	Anti-lock Brake System
A/C	Air Conditioner
AC	Angular Contact
ACC	Accessory
A/F	Air Fuel Ratio
ALT	Generator
API	American Petroleum Institute
APS	Accessory Power Supply Socket
ASSY	Assembly
AT	Automatic Transmission
ATF	Automatic Transmission Fluid
AUX	Auxiliary Storage Unit (External storage)
AVCS	Active Valve Control System
AVH	Auto Vehicle Hold
AWD	All Wheel Drive
BATT	Battery
BCM	Brake Control Module
BECM	Battery Energy Control Module
BJ	Bell Joint
BRKT	Bracket
BSD/RCTA	Blind Spot Detection / Rear Cross Traffic Alert
CAN	Controller Area Network

CCA	Cold Cranking Ampere
CD	Compact Disc
CD-R/RW	CD Recordable/Rewritable
COMPL	Complete
CPC	Canister Purge Control Solenoid Valve
CPU	Central Processing Unit
CTR	Center
CM	Control Module
CVT	Continuously Variable Transmission
CVTF	Continuously Variable Transmission Fluid
CWP	Cold Weather Package
DCCD	Driver's Control Center Differential
DMCM	Drive Motor Control Module
DOHC	Double Overhead Camshaft
DOJ	Double Offset Joint
D/R	Dual-range
DTC	Diagnosis Trouble Code
DU	Drive Unit
DVD	Digital Versatile Disc or Digital Video Disc
EBD	Electronic Brake Distribution
EBJ	High-Efficiency Compact Ball Fixed Joint
ECM	Engine Control Module
ECV	Exhaust Pressure Control Valve
EDJ	High-Efficiency Compact Double Offset Joint
E/G	Engine
EGI	Electronic Gasoline Injection
EGR	Exhaust Gas Recirculation
ELR	Emergency Locking Retractor
EPB	Electronic Parking Brake
ETC	Electronic Throttle Control
EX	Exhaust
F/B	Fuse & Joint Box
FL	Fusible Link
Ft	Front
FWD	Front Wheel Drive
GPS	Global Positioning System
HBA	High Beam Assist
HI	High
HID	High-Intensity Discharge
H/K	Harman/Kardon Audio
HPCM	Hybrid Powertrain Control Module
H/L	Headlight
H/U	Hydraulic Unit
HVAC	Heater, Ventilator and Air Conditioner
I/F	Interface
IG	Ignition
ILSAC	International Lubricants Standardization and Approval Committee
IN	Intake
INT	Intermittent
I/O	Input/Output
IR	Infrared Ray

ISC	Idle Speed Control
ISG	Integrated Starter Generator
K/A	Keyless Access
LAN	Local Area Network
LCD	Liquid Crystal Display
LED	Light Emitting Diode
LH	LH (Left Hand)
LHD	Left Hand Drive
Lo	Low
LSD	Limited Slip Differential
LWR	Lower
M/B	Main Fuse & Relay Box
MD	Mini Disc
MID	Multi Information Display
MFI	Multi-Point Fuel Injection
MP-T	Multi-Plate Transfer
M/R	Moon Roof
MT	Manual Transmission
NA	Natural Aspiration
NC	Normal Close (Relay)
NO	Normal Open (Relay)
OBD	On-Board Diagnosis
OP	Option Parts
PC	Personal Computer
PCD	Pitch Circle Diameter
PCV	Positive Crankcase Ventilation
PID	Parameter Identification
Pr	Primary
PRG	Power Rear Gate
P/S	Power Steering
PTJ	Pillow Tripod Joint
P/W	Power Window
RAB	Reverse Automatic Braking
RAM	Random Access Memory
RH	RH (Right Hand)
RHD	Right Hand Drive
ROM	Read Only Memory
Rr	Rear
SDI	Subaru Diagnostic Interface
SI	Subaru Intelligent
SOHC	Single Overhead Camshaft
SRH	Steering Responsive Headlight
SRS	Supplemental Restraint System
SSM	Subaru Select Monitor
ST	Special Tool
STD	Standard
SW	Switch
T/B	Turbocharger
TCS	Traction Control System
TCM	Transmission Control Module
TGV	Tumble Generator Valve

T/M	Transmission
TPMS	Tire Pressure Monitoring System
UJ	Universal Joint
UPR	Upper
UV	Ultraviolet
VDC	Vehicle Dynamics Control
V.I.N.	Vehicle Identification Number
ViS-C	Viscous Coupling
VSV	Vacuum Switching Valve
VTD	Variable Torque Distribution
W/H	Wiring Harness

1. WRX 2
2. WRX STI 9

1. WRX

A: DIMENSION

Model			2.0 L DOHC turbo
Overall length		mm (in)	4,595 (180.9)
Overall width		mm (in)	1,795 (70.7)
Overall height		mm (in)	1,475 (58.1)
Compartment	Length	mm (in)	2,005 (78.9)
	Width	mm (in)	1,490 (58.7)
	Height	mm (in)	1,205 (47.4), 1,180 (46.5)*
Wheelbase		mm (in)	2,650 (104.3)
Tread	Front	mm (in)	1,530 (60.2)
	Rear	mm (in)	1,540 (60.6)
Minimum road clearance		mm (in)	125 (4.9)

*: With sunroof

B: ENGINE

Model		2.0 L DOHC turbo
Engine type		Horizontally opposed, liquid cooled, 4-cylinder, 4-stroke gasoline engine
Valve arrangement		DOHC
Bore × stroke	mm (in)	86.0 × 86.0 (3.39 × 3.39)
Displacement	cm^3 (cu in)	1,998 (122)
Compression ratio		10.6
Ignition order		1 — 3 — 2 — 4
Idle speed at parking or neutral position	r/min	700±100
Maximum output	kW (HP)/(r/min)	200 (268)/5,600
Maximum torque	N·m (kgf-m, ft-lb)/(r/min)	350 (35.7, 258)/2,000 — 5,200

C: ELECTRICAL

Model		2.0 L DOHC turbo	
		CVT	6MT
Ignition timing (at idling)	BTDC	8°±10°	6°±10°
Spark plug	Type and manufacturer	NGK: ILKAR8H6	
Generator		12 V — 130 A	
Battery	Type	75D23L	
	Nominal capacity	5 HR: 53 Ah [25°C (77°F)]	
	Nominal voltage	12 V	
	CCA	470 A	
	BCI group number*	35	

*: This is a reference information for battery size, and is not guaranteed by SUBARU CORPORATION.

D: TRANSMISSION

1. MT

Model	2.0 L DOHC turbo
Transmission type	6MT
Clutch type	DSPD

Gear ratio	1st	3.455
	2nd	1.947
	3rd	1.296
	4th	0.972
	5th	0.780
	6th	0.667
	Rev.	3.636
Reduction gear (front)	Type of gear	Hypoid
	Gear ratio	4.111
Transfer reduction	Type of gear	Helical
	Gear ratio	1.000
Reduction gear (rear)	Type of gear	Hypoid
	Gear ratio	4.111

6MT: 6-forward speeds and 1-reverse with synchromesh
DSPD: Dry Single Plate Diaphragm

2. CVT

Model		2.0 L DOHC turbo
Transmission type		CVT
Clutch type		TCC
Gear ratio (including transfer reduction ratio)	Forward	3.508 — 0.545
	Rev.	2.350
Reduction gear (front)	Type of gear	Hypoid
	Gear ratio	3.900
Transfer reduction ratio		1.000
Reduction gear (rear)	Type of gear	Hypoid
	Gear ratio	3.900

CVT: Forward continuously variable speed change, 1-reverse
TCC: Torque Converter Clutch

E: STEERING

Model	2.0 L DOHC turbo	
Type	Rack and pinion	
	Electric power steering	
Turns, lock to lock	2.8[*1]	2.7[*2]
Minimum turning radius m (ft)	5.4 (17.72)[*1]	5.5 (18.05)[*2]

[*1]: When 235/45R17 are attached
[*2]: When 245/40R18 are attached

F: SUSPENSION

Model	2.0 L DOHC turbo
Front	Macpherson strut type suspension
Rear	Double-wishbone type suspension

G: BRAKE

Model	2.0 L DOHC turbo	
Service brake system	Dual circuit hydraulic with vacuum suspended power unit	
Front	Ventilated disc brake	
Rear	Solid disc brake	Ventilated disc brake
Parking brake	Mechanical on rear brakes	Electrical on rear brakes

H: TIRE

Model	2.0 L DOHC turbo	
Wheel size	17 × 8 J	18 × 8 1/2 J
Tire size	235/45R17 94W	245/40R18 97W
Type	Tubeless, steel belted radial	

I: CAPACITY

Model			2.0 L DOHC turbo	
			CVT	6MT
Fuel tank		L (US gal, Imp gal)	60 (15.9, 13.2)	
Engine oil	Total capacity (at overhaul)	L (US qt, Imp qt)	6.0 (6.3, 5.3)	
	Filling amount of engine oil	When replacing engine oil and oil filter	5.1 (5.4, 4.5)	
	L (US qt, Imp qt)	When replacing engine oil only	4.9 (5.2, 4.3)	
Transmission gear oil		L (US qt, Imp qt)	—	3.3 (3.5, 2.9)
CVTF		L (US qt, Imp qt)	12.11 — 12.61 (12.8 — 13.3, 10.7 — 11.1)	—
CVT front differential gear oil		L (US qt, Imp qt)	1.3 — 1.5 (1.4 — 1.6, 1.1 — 1.3)	—
Rear differential gear oil		L (US qt, Imp qt)	0.8 (0.8, 0.7)	
Engine coolant		L (US qt, Imp qt)	8.3 (8.8, 7.3)	8.1 (8.6, 7.2)

Compression ratio		8.2
Ignition order		1 — 3 — 2 — 4
Idle speed at parking or neutral position	r/min	700±100
Maximum output	kW (HP)/(r/min)	231 (310)/6,000
Maximum torque	N·m (kgf-m, ft-lb)/(r/min)	393 (40.2, 290)/4,000 — 5,200

C: ELECTRICAL

Model		2.5 L DOHC high power turbo
Ignition timing (at idling)	BTDC	15°±10°
Spark plug	Type and manufacturer	NGK: ILFR7H
Generator		12 V — 110 A
Battery	Type	75D23L
	Nominal capacity	5 HR: 53 Ah [25°C (77°F)]
	Nominal voltage	12 V
	CCA	470 A
	BCI group number*	35

*: This is a reference information for battery size, and is not guaranteed by SUBARU CORPORATION.

D: TRANSMISSION

1. MT

Model	2.5 L DOHC high power turbo
Transmission type	6MT
Clutch type	DSPD

Gear ratio	1st	3.636
	2nd	2.235
	3rd	1,591
	4th	1.138
	5th	0.971
	6th	0.756
	Rev.	3.545
Reduction gear (front)	Type of gear	Hypoid
	Gear ratio	3.900
Transfer reduction	Type of gear	Helical
	Gear ratio	1.103
Reduction gear (rear)	Type of gear	Hypoid
	Gear ratio	3.545

6MT: 6-forward speeds and 1-reverse with synchromesh
DSPD: Dry Single Plate Diaphragm

E: STEERING

Model	2.5 L DOHC high power turbo
Type	Rack and pinion
	Hydraulic power steering
Turns, lock to lock	2.5
Minimum turning radius m (ft)	5.5 (18.05)

F: SUSPENSION

Model	2.5 L DOHC high power turbo
Front	Macpherson strut type suspension
Rear	Double-wishbone type suspension

G: BRAKE

Model	2.5 L DOHC high power turbo
Service brake system	Dual circuit hydraulic with vacuum suspended power unit
Front	Ventilated disc brake
Rear	Ventilated disc brake
Parking brake	Mechanical on rear brakes

H: TIRE

Model	2.5 L DOHC high power turbo	
Wheel size	18 × 8 1/2J	19 × 8 1/2J
Tire size	245/40R18 97W	245/35R19 89W
Type	Tubeless, steel belted radial	

I: CAPACITY

Model	2.5 L DOHC high power turbo
Fuel tank L (US gal, Imp gal)	60 (15.9, 13.2)

Engine oil	Total capacity (at overhaul) L (US qt, Imp qt)		5.0 (5.3, 4.4)
	Filling amount of engine oil L (US qt, Imp qt)	When replacing engine oil and oil filter	4.3 (4.5, 3.8)
		When replacing engine oil only	4.0 (4.2, 3.5)
Transmission gear oil L (US qt, Imp qt)			4.1 (4.3, 3.6)
Rear differential gear oil L (US qt, Imp qt)			1.0 (1.1, 0.9)
Power steering fluid L (US qt, Imp qt)			0.7 (0.7, 0.6)
Engine coolant L (US qt, Imp qt)			7.7 (8.2, 6.8)

PRECAUTION

PC

Page
1. Precaution 2

1. Precaution

A: CAUTION

Please clearly understand and adhere to the following general precautions. They must be strictly followed to avoid minor or serious injury to the person doing the work or people in the area.

1. VEHICLE DYNAMICS CONTROL (VDC)

Handle the VDC as a total system. Do not disassemble or attempt to repair parts which are not instructed in this manual. Follow the directions in this manual when performing maintenance on the VDCCM&H/U. When parts other than those specified are disassembled, it could prevent the VDC system from operating when needed or cause it to operate incorrectly and result in injury.

2. ELECTRONIC PARKING BRAKE

Handle the electronic parking brake as a total system. Do not disassemble or attempt to repair individual parts. When parts are disassembled, it is possible that the electronic parking brake will not operate when needed or cause it to operate incorrectly and result in injury.

3. BRAKE FLUID

If brake fluid gets in your eyes or on your skin, do the following:
- Wash eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

4. RADIATOR FAN

The radiator fan may rotate without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items near the fan at any time.

5. ROAD TEST

Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

6. AIRBAG

To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on the airbag components and nearby, around front of the vehicle (radiator panel, front wheel apron, front side frame, front bumper, front hood panel, front fender panel), around side of the vehicle (front door panel, rear door panel, center pillar, rear fender panel, side sill, rear wheel apron), around rear of the vehicle (the rear seat cushion, rear floor pan, rear sub frame assembly) and the airbag wiring harnesses and nearby.
To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 60 seconds to discharge electricity before starting work. Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.

7. AIRBAG AND SEAT BELT PRETENSIONER DISPOSAL

To prevent bodily injury from unexpected airbag deployment, do not dispose the airbag modules or seat belt pretensioner in the same way as other waste. Follow the special instructions for disposal in this manual. Follow all government regulations concerning disposal of refuse.

8. AIRBAG MODULE

Adhere to the following when handing and storing the airbag module to prevent bodily injury from unexpected deployment:
- Do not hold the harnesses or connectors to carry the module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

9. AIRBAG SPECIAL TOOL

To prevent unexpected deployment, always use special tools for the area where the operation with special tools are required.

10.WINDOW

Always wear protective goggles when working around any glass to prevent glass fragments from damaging your eyes.

11.WINDOW ADHESIVE

Always use the recommended or equivalent adhesive when attaching glass to prevent it from coming off and being removed, resulting in accidents and injury.

12.OIL

When handling oil, adhere to the following to prevent unexpected accident.

- Prepare a container and cloth to prevent scattering of oil when performing work where oil can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

13.FUEL

When handling and storing fuel, adhere to the following to prevent from unexpected accident.

- The fuel is flammable. Do not put it close to a fire or spark.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

14.ENGINE COOLANT

When handling engine coolant, adhere to the following to prevent from unexpected accident.

- Never remove the radiator cap since engine coolant may blow out when it is hot.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

15.AIR CONDITIONER REFRIGERANT

In order to prevent from global warming, avoid releasing air conditioner refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and recycle it.

16.REMOVAL AND INSTALLATION OPERATION OF HOSES, ETC.

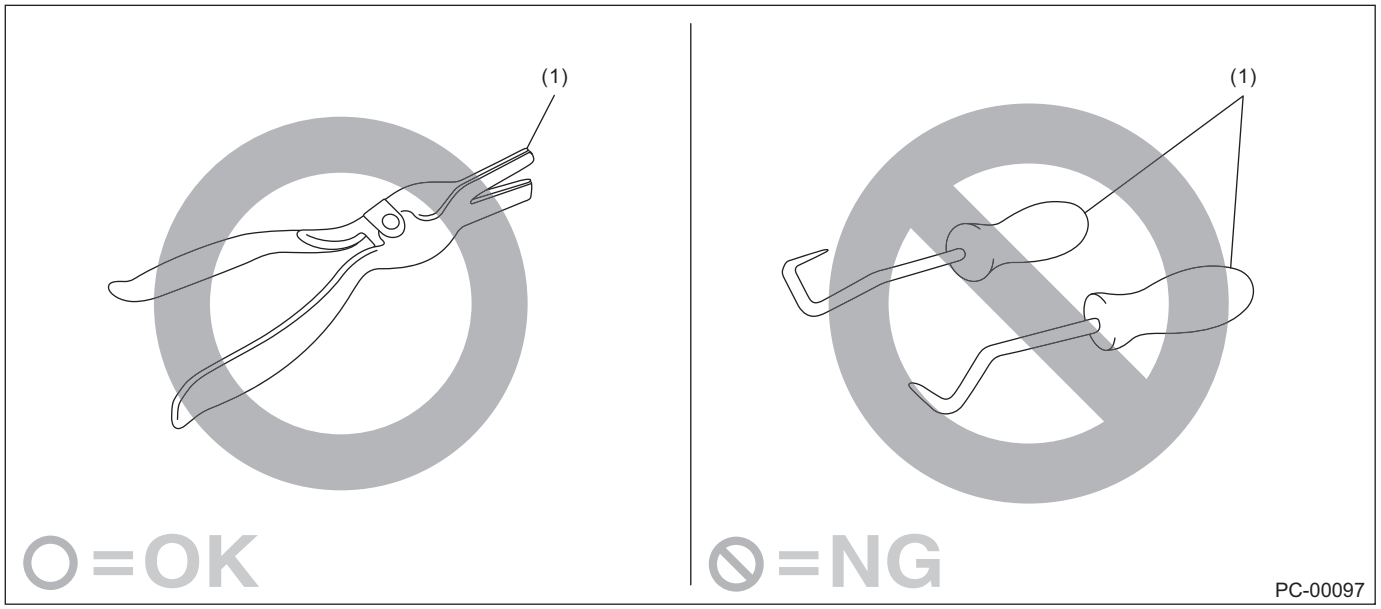
1. Before the removal and installation operation of hoses, etc.

- If you keep using the damaged or deformed hose, it results bleeds or leakage of the fat adheres or disconnection of the hose. Be careful not to spill fat adheres on exhaust pipes, etc. during maintenance to prevent emitting smoke or causing fires.
- Perform the operation with the hose removed. If the operation is performed without removing the hose, it may damage inner surface of the hose.

2. Removal and installation operation of hoses, etc. during the inspection

- **Follow the instructions below when removing hose.**

- When removing the hose, do not use a pointed hose remover (hose plucker). Inner portion of the hose can be damaged.

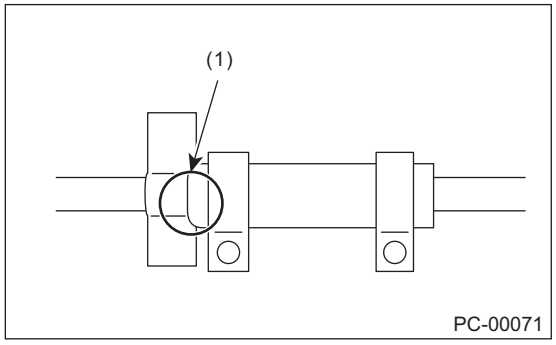


(1) Hose remover

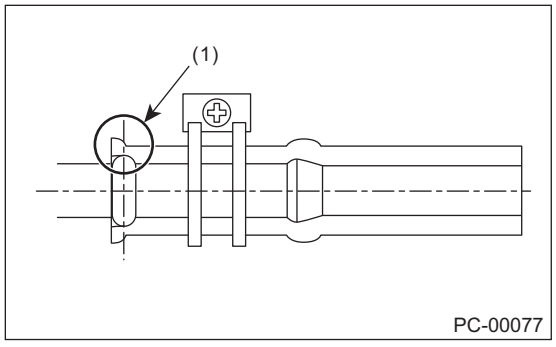
- When removing the hose using pliers, be sure to cover the hose with cloth and rotate the hose slightly to extract straight.

• If you keep using the hose, perform the inspection below and replace the hose with a new part if faulty.

- Replace the hose with a new part if it rides over the stay or the top of spool.



(1) Hose rides over the stay

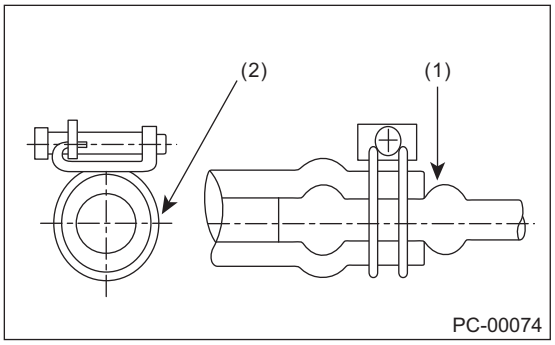


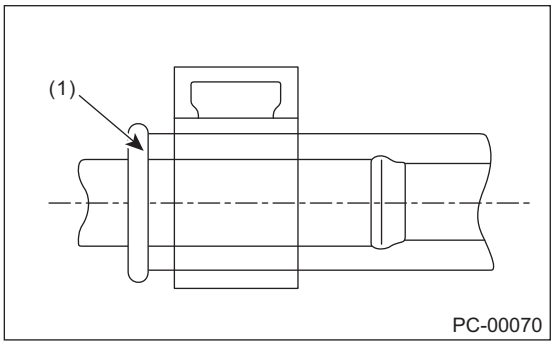
(1) Hose rides over the top of spool

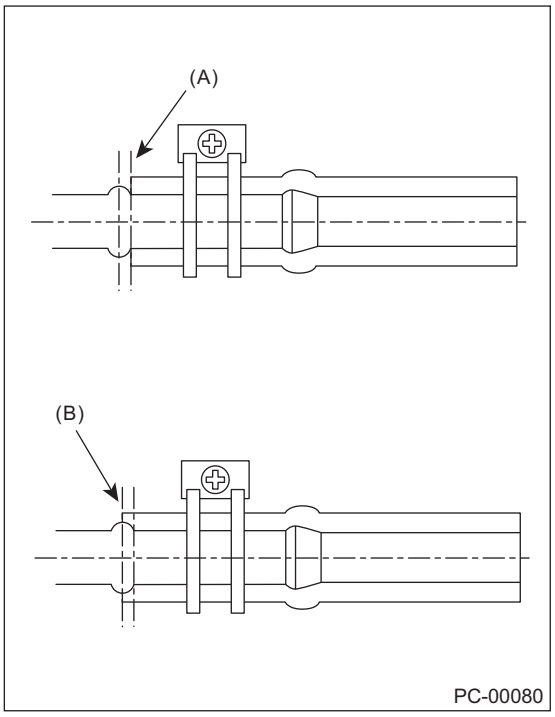
- Check if the surface and the inner surface of the hose are damaged, cracked, bend, hardened, softened, swelled, peeled or deformed due to the adherence or the entry of the foreign matter by bending the hose. Replace with the new part if faulty.

- **Follow the instructions below during installation.**
  - Check carefully for assembling position.
  - Never use lubricants.

• Insert the hose to the specified position (stopper or spool) securely. (The hose should stop at the position between the spool top and root.)







(1) Push against the spool. (Insert the hose and prevent it from becoming wrinkled.)
(2) Fully tighten the hose clamp.
(A) OK position (bottom of spool)
(B) OK position (top of spool)

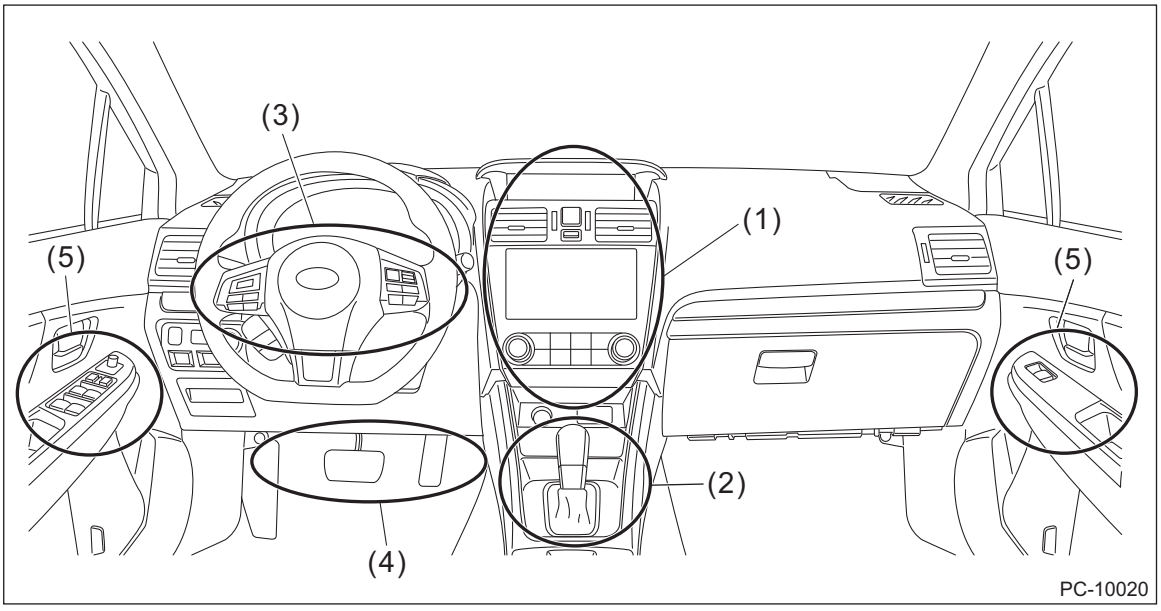
• Check if the position, direction and hose layout of the hose clamp are correct. (Check if the position, direction, length and the gap around are correct, or if it is different from the condition before the work)
• After the installation, check that the hose is installed securely and there is no leakage. (Check if it is fixed securely with the clamp)

- **For hose clips and hose clamps, perform the inspection below and replace them with a new part if faulty.**
  - Check for deformation, rust, damage or foreign matters.
  - For hose clip, check if it works and has clamping force.
  - For hose clamp, check if it can tighten screw, not ovalized or the screw is not damaged.
- **For hose pipes, perform the inspection below and replace with a new part if faulty.**
  Check if the pipe is not damaged, rusted, peeled (peeled plates included), covered with foreign matter, bent, compressed or cracked.
- **For the parts below, replaces with a new part when the hose is removed or the installation position is changed.**
  CVTF oil cooler hose, oil hose, power steering suction hose, power steering return hose, fuel hose (delivery/return) (except for those with quick connector)

17.HANDLING PRECAUTIONS FOR SILICON-CONTAINING SPRAY

When a silicon-containing lubricant is used, rust inhibitor or glazing agent adheres to the electrical contact of the relay or switch, which may produce silica dioxide (SiO_2). This may cause poor connection.

- Never spray directly to the electrical equipment.
- When using the spray close to the electrical equipment, always put the cover on it. Special care must be exercised especially when using the spray to the locations shown in the figure below and their surrounding areas.



(1)	Audio, heater control switch	(3)	Combination switch, steering switch, paddle shift switch	(5)	Power window switch
(2)	Shift/select lever switch, parking switch	(4)	Stop light switch, brake light switch, clutch switch, clutch start switch		

- If the residual silicon remains in the vicinity of the electrical equipment after the spray has been used, the vaporized silicon stands around the electrical equipment and it may adhere to electrical contact. After using the spray, be sure to wipe the silicon off with a cloth.
- Even when using the spray to the place away from the electrical equipment, the droplet of the spray may be splashed to the periphery. Use as small amount of spray as possible, and take care not to splash the silicon to the periphery.

NOTE:
The “silicon” used in this section refers to “silicone”, that is, silicon polymer.

18.CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight

1. Prohibited area for sticker attachment and inspection

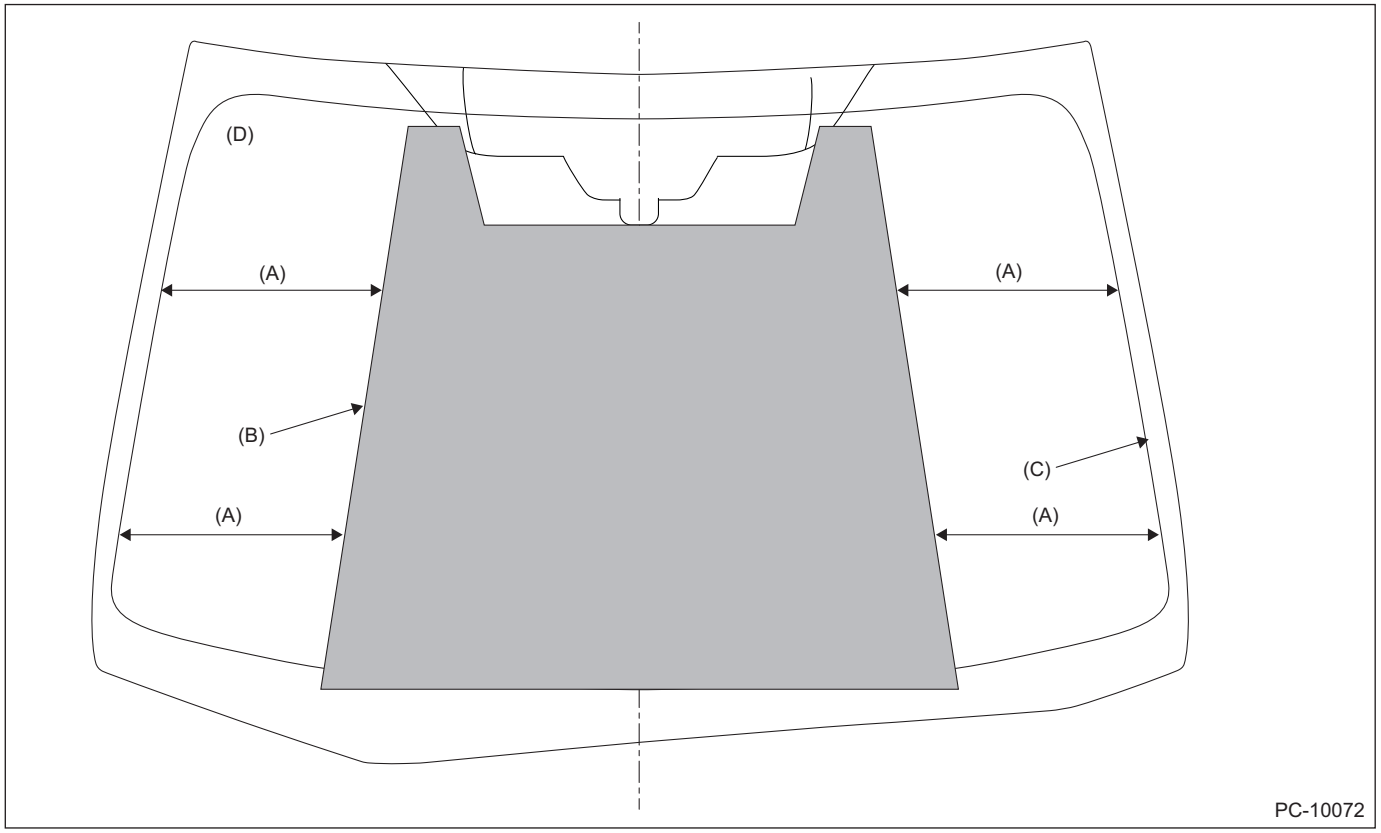
Do not attach stickers in the prohibited area on the windshield as follows. In addition, there must be no oil film, dirt or scratch in the prohibited area that obstructs the visibility of the stereo camera. Clean the windshield glass if oil film, dirt or fogging is found on the glass, and repair or replace if the windshield is scratched. The vehicle inspection label that is required to be attached on the windshield should be attached on the specified position. If stickers or windshield-related issues adversely affect the visibility of the camera, the functions of HBA and EyeSight may not work properly.

NOTE:

- Clean the windshield glass if dirt or fogging is found on the glass. Repair or replace the glass if damage is found.
- Be careful not to leave scratch or anything else on the lens.
- Do not attach any foreign matter such as oil and fluid.
- When cleaning the inner side of the windshield glass, be careful not to touch the lens of the stereo camera. Take care so that the glass cleaner is not applied to the lens. Before starting the operation, cover the camera cover opening with dust-free paper such as copy paper to avoid interference with the camera lens, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. If the lens is touched, replace the stereo camera.
- When replacing the windshield glass, be sure to replace the part for the EyeSight.
- If the glass is removed or replaced, always perform the stereo camera adjustment and inspection.

Prohibited area for model with EyeSight (including with HBA)

The illustration below shows from the passenger compartment.

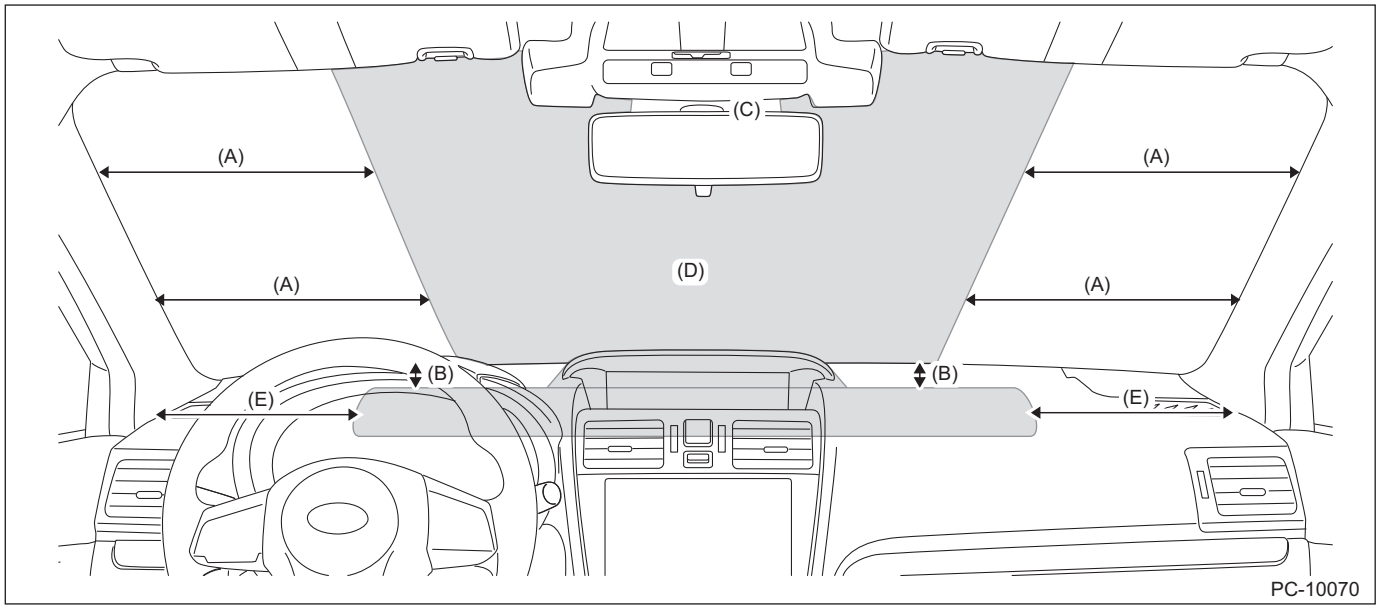


(A) 360 mm (14.2 in)
(B) Prohibited area
(C) Ceramic line
(D) Vehicle inspection label

2. Prohibited area of dashboard and inspection

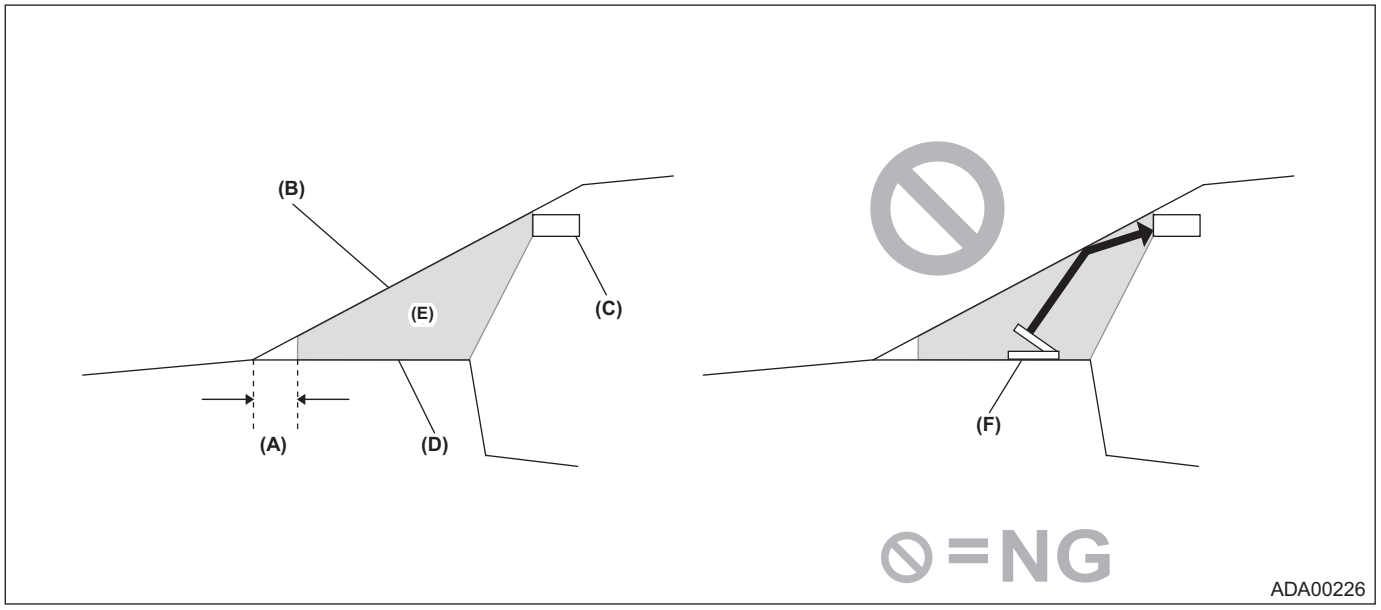
There must be no oil film, dirt, scratch or fogging that obstructs the forward visibility of the stereo camera. Do not stick or attach the aftermarket parts on the prohibited area (E) shown as follows. If abnormality of the function occurs due to light reflection or glass reflection, even though placed outside the prohibited area, change the attachment position or installation position. Attaching a sticker or antenna or installing a wide type mirror will affect the visibility of the stereo camera, causing the function not to operate correctly. In addition, placing a navigation system, ETC device or an object on the dashboard will cause reflection on the windshield glass, affecting the recognition of the stereo camera, thus causing the function not to operate correctly.

- Front view



(A) 360 mm (14.2 in)
(B) 70 mm (2.8 in)
(C) Ceramic area
(D) Prohibited area of windshield
(E) 230 mm (9.1 in)

- Side view

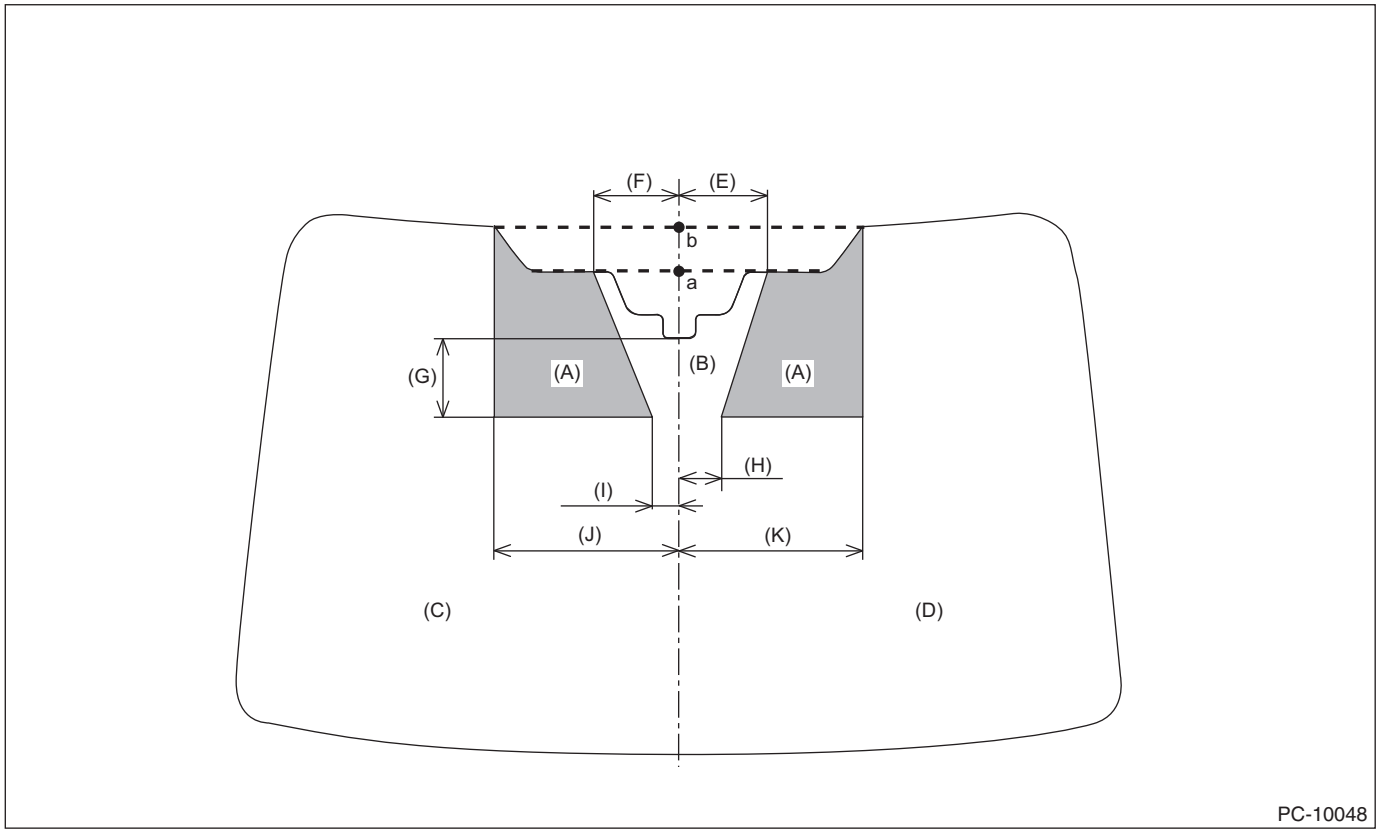


(A) 70 mm (2.8 in)
(B) Windshield glass
(C) Stereo camera cover
(D) Dashboard
(E) Prohibited area
(F) External monitor etc.

3. Prohibited area for repair and inspection

The illustration below shows from the passenger compartment.
If the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

NOTE:
The center of the glass should be aligned the line connecting “a” and “b” in the figure (the center positions of upper/lower end dotted lines on the black ceramics area).



(A)	Glass repair prohibited area	(E)	135 mm (5.3 in)	(I)	40 mm (1.6 in)
(B)	Glass repairable area	(F)	130 mm (5.1 in)	(J)	280 mm (11.0 in)
(C)	Glass repairable area (LH side)	(G)	93.6 mm (3.7 in)	(K)	280 mm (11.0 in)
(D)	Glass repairable area (RH side)	(H)	65 mm (2.6 in)		

NOTE

NT

Page
1. Note 2

1. Note

A: BASIC REPAIR HINT

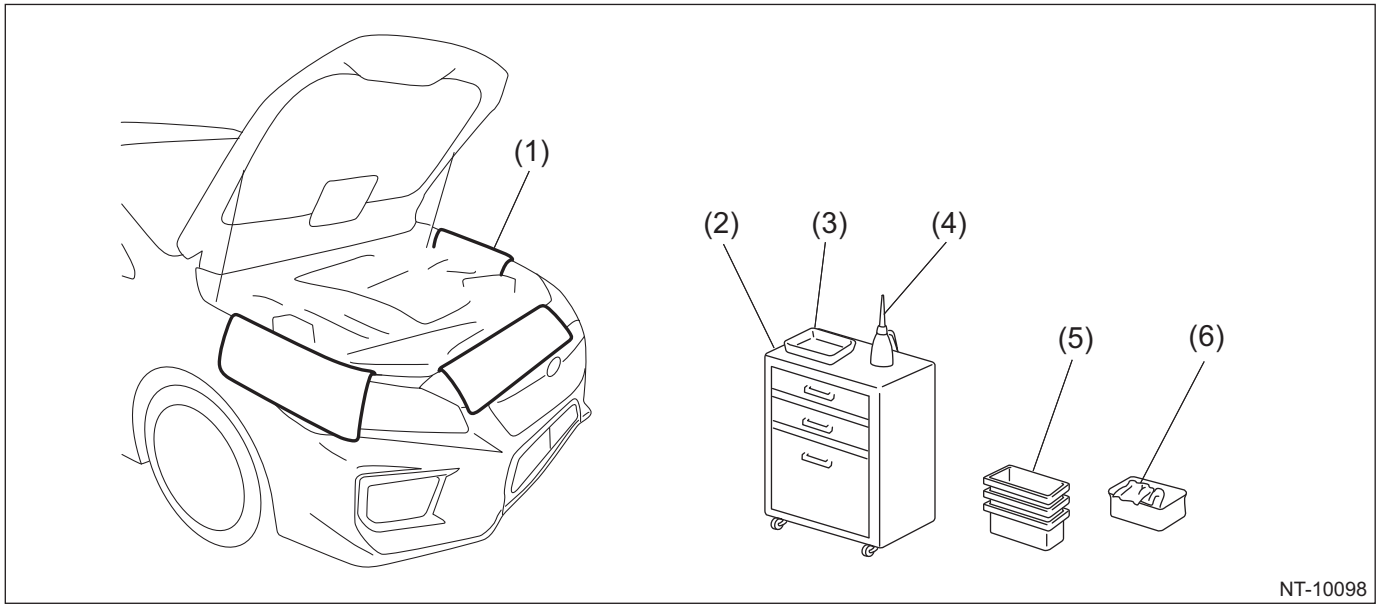
This section describes basic points that the service operator must understand before performing the service operation.

1. APPEARANCE

- Always wear clean work clothing.
- Wear a cap and protective shoes.

2. PROTECTION OF VEHICLE UNDER MAINTENANCE AND PREPARATION OF TOOLS/ EQUIPMENT

- Before work, cover the vehicle body. (Ex. grille cover, fender cover, seat cover and floor mat cover)
- Before performing the service operation, prepare tools, equipment, container box, grease and cloth etc.



(1)	Fender cover	(3)	Tray	(5)	Container box
(2)	Tools/equipment case	(4)	Oil	(6)	Cloth

3. SAFETY

- Before work, set the wheel stoppers to secure the vehicle.
- When performing work by multiple workers, call to each other to make sure that service operation is performed safely.
- Ventilate the room when starting the engine.
- When performing the service operation of high-temperature parts like muffler, or rotating parts like fan and other movable parts, be careful not to get burned or injured.
- For the jack-up and lift up, set the tool to the proper location to support the vehicle correctly. And use the safety device properly when lifting up.

4. SERVICE OPERATION

- By identifying the vehicle problems thoroughly before service operation, diagnostics work will be performed effectively.
- Before removing parts, confirm the installation condition or the damage of the parts.
- To reinstall parts properly, leave a note of the condition before work as necessary.
- For a part which needs positioning, take appropriate action such as putting alignment marks.
- For a removed part, clean it as necessary and check for damage and defect before installation. If a part is damaged or does not work properly, replace it with a new part.
- Reconnect the harness connectors for each control module one or more minutes after disconnecting them.

• For installation of the bolt, nut, and screws, use tools suitable for each dimension, and use them vertically and securely.
• Removing or installing the components or the connectors with the ignition switch ON will electrically impair them.

5. REMOVED PART

• A removed part must be organized to avoid mixing up with similar parts. When same parts are used in multiple locations, such as pistons in engine, manage the parts by using labels with cylinder No. so that the parts are not installed to the wrong location.
• Always replace nonreusable parts such as gasket and O-ring with new parts.
• After work, have a customer confirm the replaced part.

6. WHEN REMOVING BATTERY

When removing battery, power supply is cut off and the information stored in the computer memory is volatilized. Therefore, setting information of some devices is initialized to the factory default. The device and functions initialized by removing battery are as follows.

No.	Item	Job contents when connecting battery
1	MFD	Set to the date checked before disconnecting the battery.
2	Audio (settings that the customer set)	Set to the contents checked before disconnecting the battery.
3	Navigation system (settings that the customer set)	• Time setting is not necessary because the time information is received via GPS. • Set the sound and other settings (items that were set in the selection) to the contents checked before disconnecting the battery.
4	Temperature setting of fully automatic air conditioner (settings that the customer set)	Set to the contents checked before disconnecting the battery.
5	Power window system	Initialize automatic full open/close of driver's window (power window system). For the initialization procedure, refer to "GW" section. <Ref. to GW-9, OPERATION, Power Window System.>
6	Steering lock system (model with keyless access with push button start)	If the engine does not start, initialize the steering lock system. For the initialization procedure, refer to "KPS" section. <Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
7	EyeSight (model with EyeSight)	Set to the contents checked before disconnecting the battery.
8	Electronic throttle system	Turn the ignition switch to ON, wait for 10 seconds or more, and start the engine.
9	Engine control system	Let the engine run at idle until it fully warms up (the radiator fan turns 2 times or more) under no electrical load condition.
10	Past trouble history (memory code)	—

NOTE

7. OTHER ADJUSTMENT OPERATIONS BEFORE DELIVERING THE VEHICLE TO CUSTOMER

Due to service and parts replacement convenience, perform the following operations before delivering the vehicle to the customer.

No.	Item	Check operation	Adjustment operation	Additional adjustment operations when replacing parts
1	Positions of devices • Steering • Room mirror • Door mirror • Seat • Air conditioner vent grille	Is the device set to the same position when the vehicle was received from the customer?	Adjust the device to the similar position when the vehicle was received from the customer.	When removing/installing each device • Meter, instrument panel, steering column, etc. • Room mirror, roof trim, sunroof assembly, etc. • Door mirror, door panel, etc. • Seat, floor carpet, parking brake lever, etc. • Vent grille, instrument panel, console box, etc.
2	Positions of switches • SI-DRIVE • Wiper, light (AUTO or OFF) • Headlight beam leveler • Illumination control • Room light • Seat heater, etc.	Is the switch set to the same position when the vehicle was received from the customer?	Set the switch to the same position when the vehicle was received from the customer.	When removing/installing each switch

B: NOTE

This information will improve the efficiency of maintenance and assure the sound work.

1. CLEANING

- Perform the operation in a clean location and use extra caution in dust proofing.
- Clean the items (except for assembly components) with steam, etc. before disassembly. During steam cleaning, wrap the air breather, oil level gauge, connectors, etc. with vinyl tape to prevent steam from entering inside the parts.
- Use an appropriate cleaning solvent.
- Do not clean rubber parts such as O-ring, gasket and oil seal with cleaning solution.

2. FASTENERS NOTICE

Fasteners must be tightened to the specified torque.
Do not apply paint, lubricant, rust retardant or other substance to the surface around bolts, nuts, etc. in order to avoid loosening.

3. ABOUT SCREWS

Use an appropriate sized tool. Insert a screw vertically into the hole. Check for any loose screws after installation.
If improper tools are used or screws are inserted obliquely to the hole, the screws cannot be installed correctly, which may result in insufficient tightening force or damage on the hole.

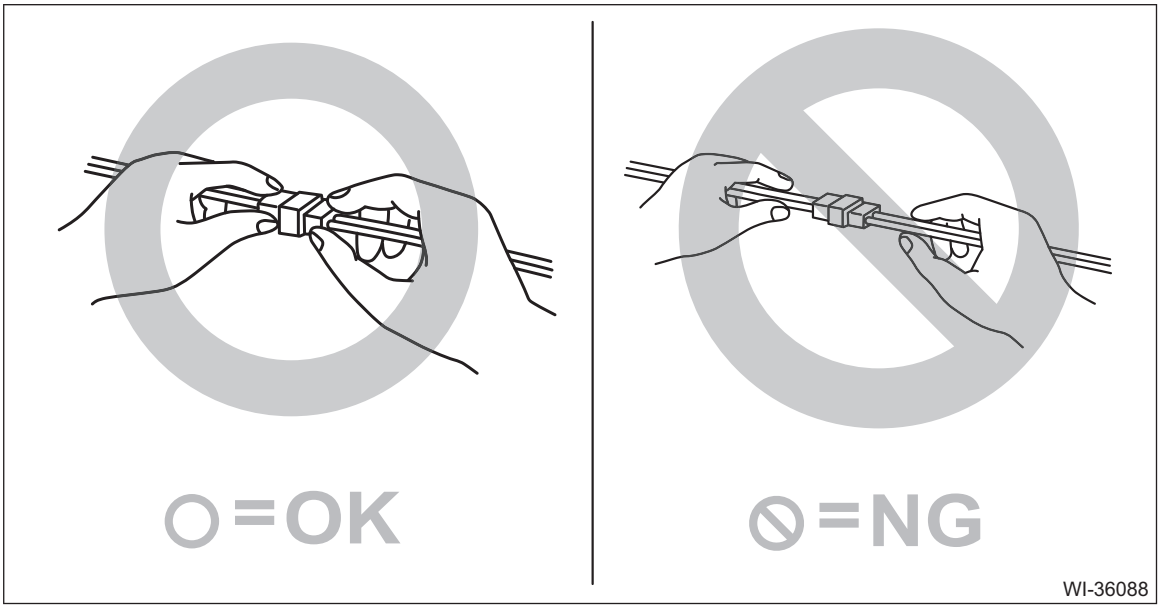
4. STATIC ELECTRICITY DAMAGE

Do not touch the control modules, connectors, logic boards and other such parts when there is a risk of static electricity. Always use a static electricity prevention cord or touch grounded metal for the elimination of static electricity before conducting work.

5. TROUBLESHOOTING OF ELECTRICAL SYSTEM

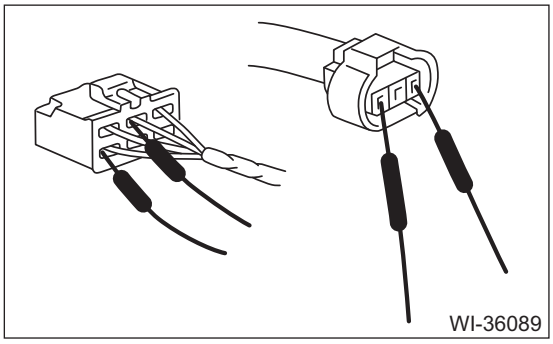
1) Always refer to “CAUTION” of “General Description” in the same models service manual before starting the diagnostics and repair.
2) Always refer to the cautions of each section when diagnosing and repairing each system and component.

3) The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
4) When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.



5) Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in the connector until a click sounds when connecting a connector.
6) Be sure to prevent water or oil from contacting the connector terminal of non-fluid connector.
7) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe(s) to terminals from the harness side.
When measuring the waterproof type connector terminal voltage, or the resistance between the terminals, use the check board.
If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
8) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

CAUTION:
If a taper pin or the like has been inserted into the connector terminal, replace the connector.
9) To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.



10) Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
11) When installing a harness and a component, be careful not to catch them on the harness.
12) Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
13) When inspecting the airbag system, in order to avoid malfunction, always refer to “CAUTION” of “General Description” of the airbag system in the same model’s service manual.

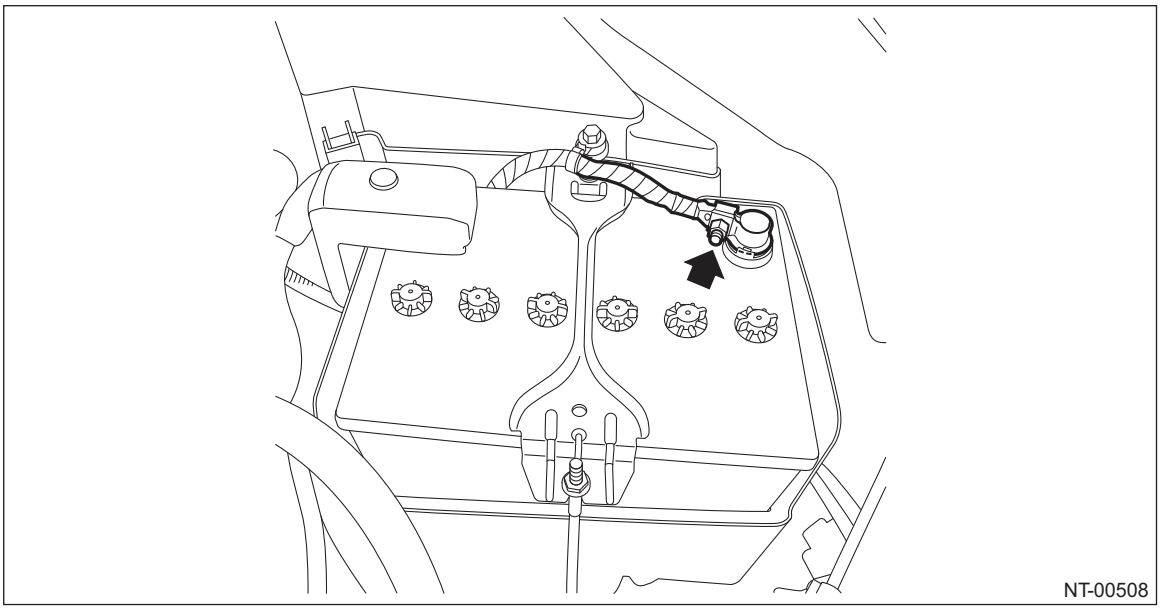
NOTE

6. BATTERY

When removing the battery terminal, always be sure to turn the ignition switch to OFF and disconnect the battery ground terminal first.

- **Ground terminal removal or installation (model without battery sensor)**

1) Disconnect the ground cable from battery.



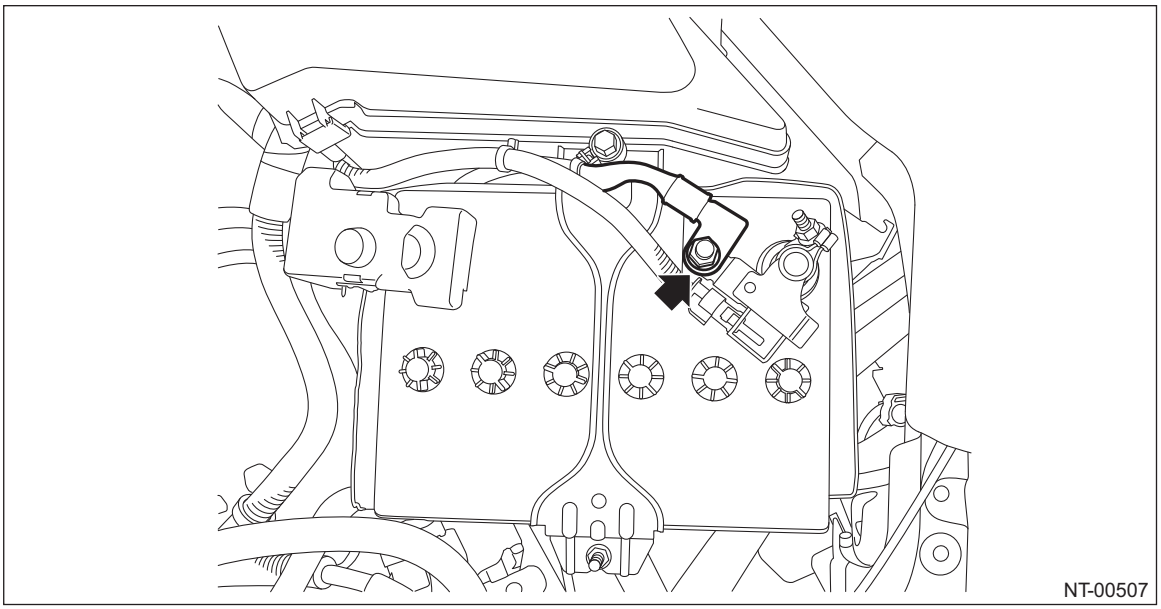
NOTE:
If necessary, open the trunk before disconnecting the negative terminal of the battery.
2) Connect the battery ground terminal.

NOTE:
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (-) terminal of the battery.
- Since DTCs may be detected, after the battery ground terminal is connected, wait for 10 seconds or more to turn the ignition switch to ON.
- After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For battery replacement procedures, refer to the “SC” section. <Ref. to SC(STI)-24, REMOVAL, Battery.>

Tightening torque:
6.0 N·m (0.6 kgf-m, 4.4 ft-lb)

• **Ground terminal removal or installation (model with battery sensor)**

1) Disconnect the ground terminal from battery sensor.



NOTE:
If necessary, open the trunk before disconnecting the negative terminal or ground terminal of the battery.

2) Install the ground terminal to the battery sensor.

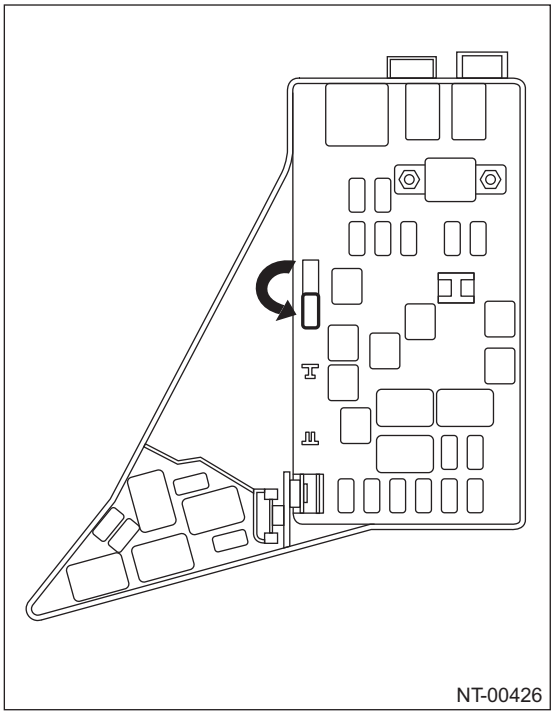
NOTE:
- Install the battery sensor while holding it by hand to prevent rotating.
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (-) terminal of the battery.
- Since DTCs may be detected, after the battery ground terminal is connected, wait for 10 seconds or more to turn the ignition switch to ON.
- After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For battery replacement procedures, refer to the “SC” section. <Ref. to SC(w/o STI)-50, REMOVAL, Battery.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE

7. BACKUP/POWER SUPPLY FUSE

Backup fuse (20A) remains removed to prevent the battery consumption when vehicles are delivered. Install the backup fuse by following the illustration.



8. IMMOBILIZER RELATED PART

- Do not replace the immobilizer related parts with the parts from other vehicle.
- Registration of the immobilizer is necessary when a immobilizer-related control module has been replaced. For detailed operation procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.

9. SERVICE PARTS

Use genuine parts for maximum performance and maintenance when conducting repairs. Subaru will not be responsible for poor performance resulting from the use of parts except for genuine parts.

10.PROTECTING VEHICLE UNDER MAINTENANCE

Make sure to attach the fender cover, seat covers, etc. before work.

11.ENSURING SECURITY DURING WORK

When working in a group of two or more, perform the work with calling each other to ensure mutual safety.

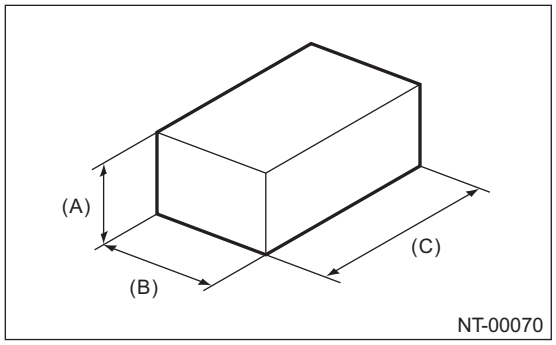
12.LIFT AND JACK

When using a lift or shop jack to raise a vehicle or using rigid rack to support a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful that the vehicle is balanced before raising it. Be sure to set the wheel stoppers when jacking-up only the front or rear side of the vehicle.

CAUTION:
Select the lift attachment so that the spoiler assembly side does not contact the lift arm.

NOTE:
- When using a lift, follow its operation manual.
- When the spoiler assembly side contacts the lift arm, use a lift attachment.
- Do not work or leave unattended while the vehicle is supported with jack, support it with rigid racks.
- Be sure to use the rigid racks with rubber attached to cradle to support the vehicle.
- When using a lift, use an attachment or something similar.

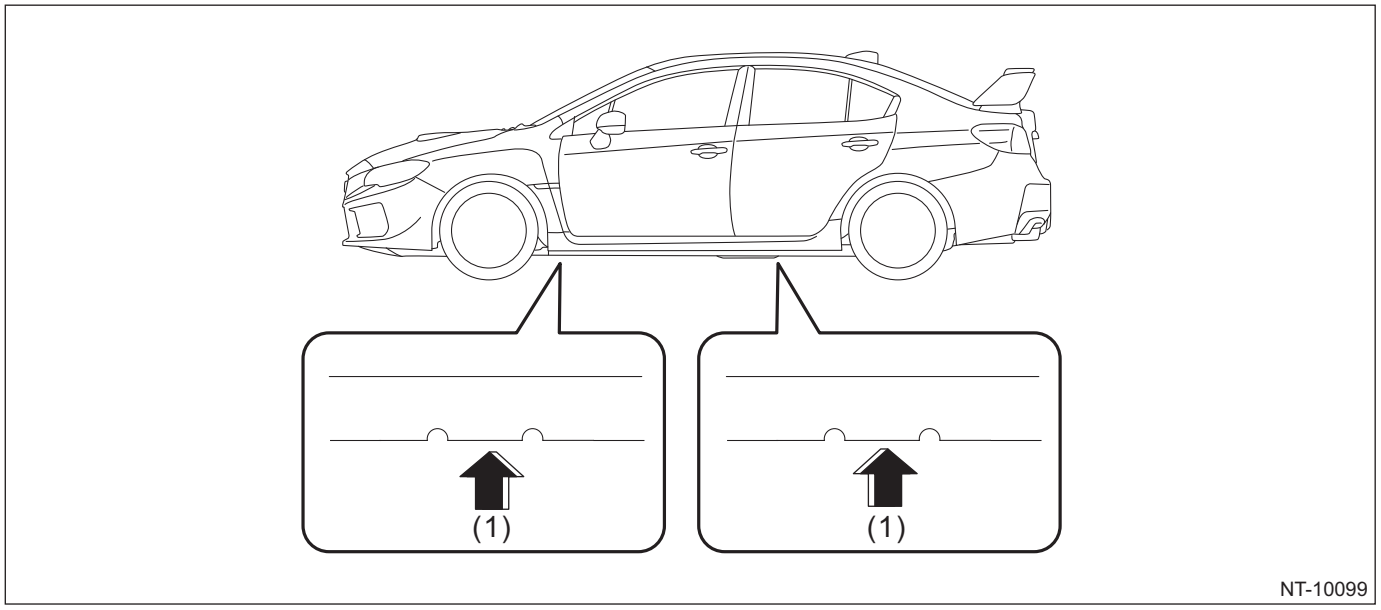
• When using a plate lift, use a rubber attachment. Place the attachment to the specified position of the vehicle, by adjusting front/rear and left/right sides accordingly.



(A) 80 mm (3.1 in) or more
(B) 80 — 100 mm (3.15 — 3.94 in)
(C) 120 — 200 mm (4.72 — 7.87 in)

• Align the cushion rubber center part of plate lift with the center part of rubber attachment.
• Do not use the plate lift whose attachment does not reach the supporting locations.

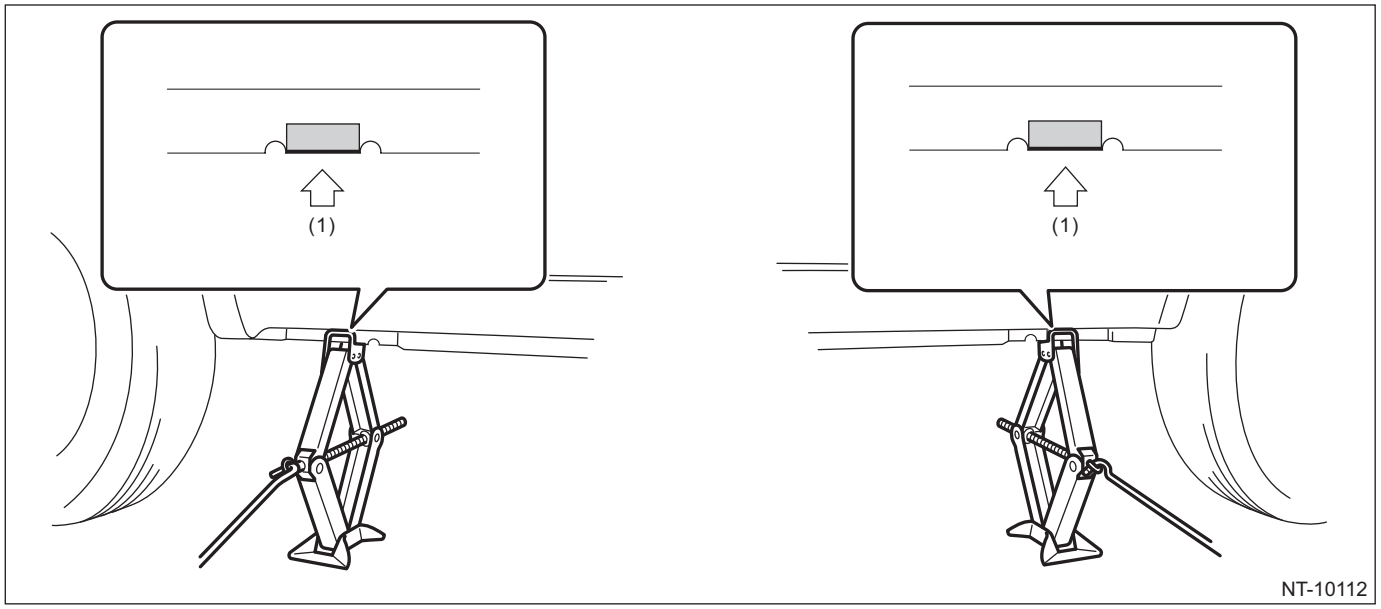
• Support locations



(1) Jack-up point

NOTE

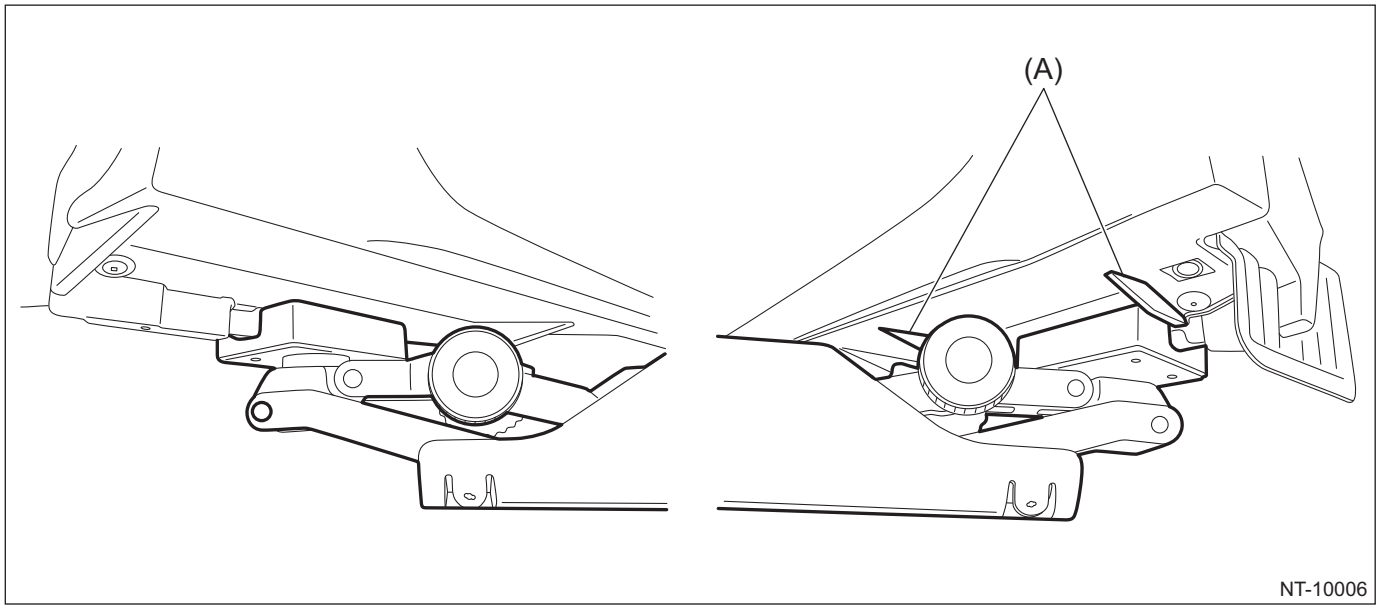
- **Pantograph jack**



(1) Jack-up point

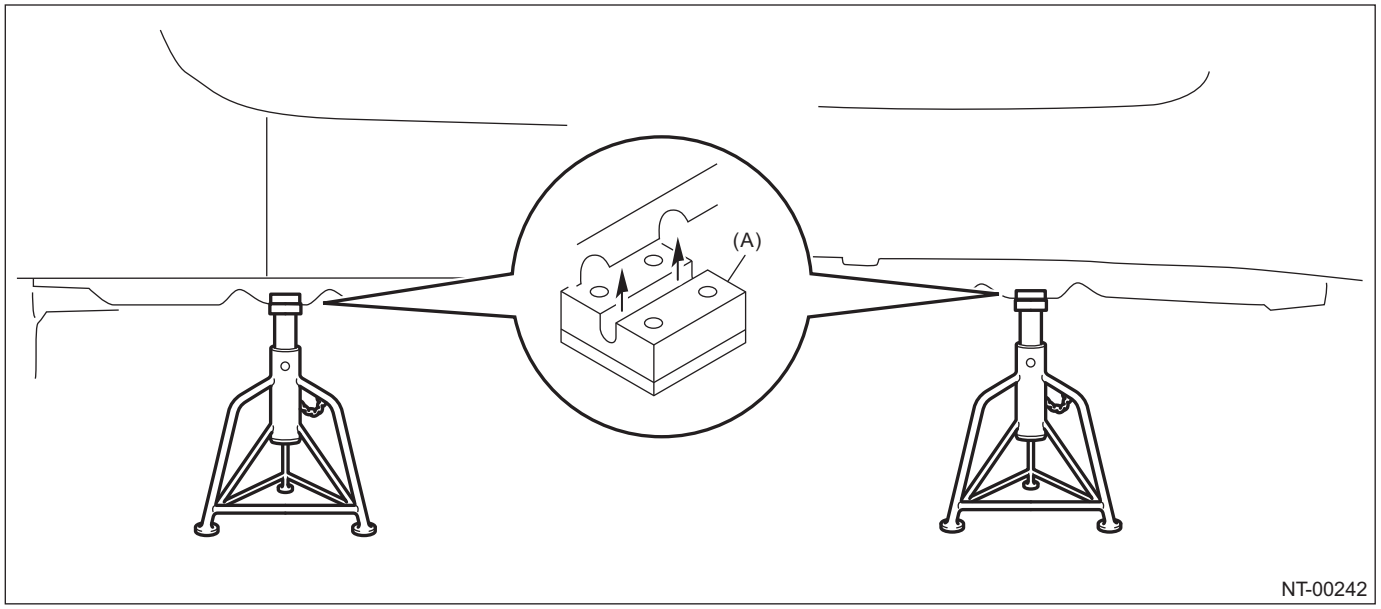
- **Lift**

CAUTION:
• Depending on the type of the two-post lift, the spoiler assembly side may contact the arm. In such a case, use the attachment of the regular option for the two-post lift.
• Adjust the rear jack-up point so that the attachment should not contact the chipping guard on the spoiler assembly side.



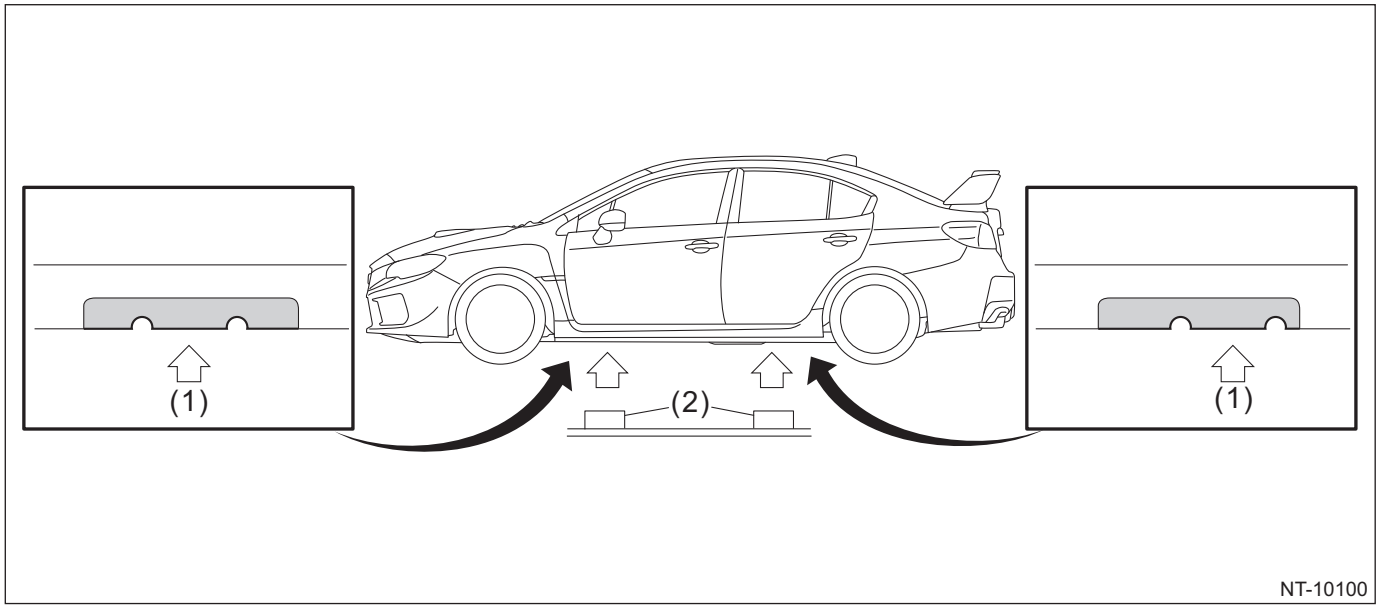
(A) Chipping guard

- **Rigid rack**



(A) Attachment

- **Plate lift**



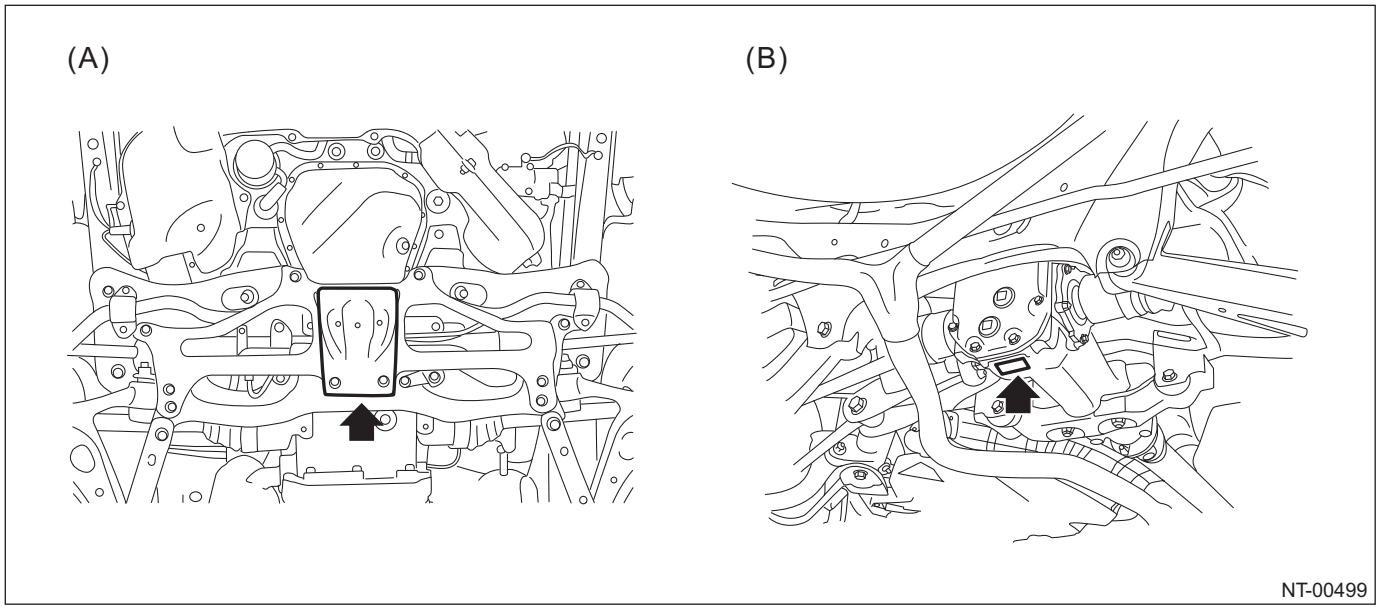
(1) Jack-up point (2) Attachment

- **Jack-up point (when using a garage jack)**

CAUTION:
If jacking up the front side of the vehicle, make sure that the jack is attached at the center of the jack-up plate not at the sides.

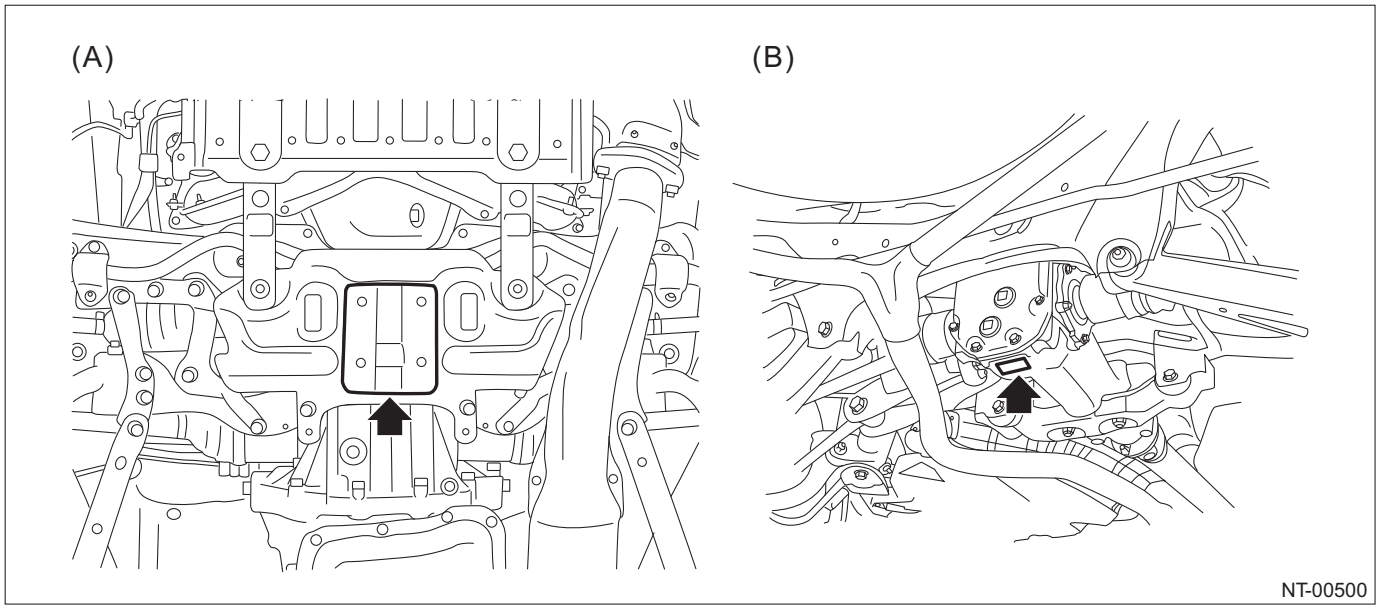
NOTE

STI model



(A) Front (B) Rear

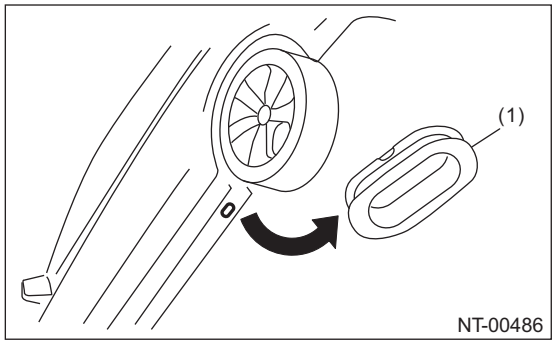
Except for STI model



(A) Front (B) Rear

13.TIE-DOWNS

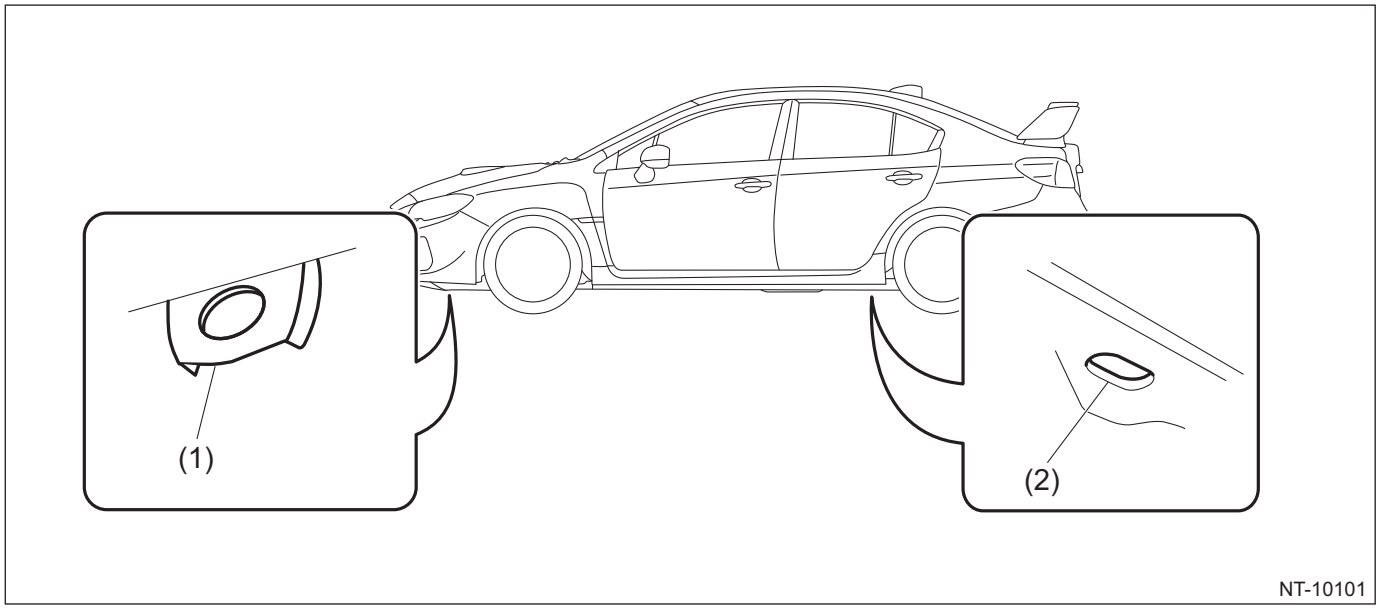
Tie-downs are used when transporting vehicles. Remove the grommet of the tie-down hole and install the tie-down only to the specified locations on the vehicle.



(1) Grommet

- **Tie-down location**

CAUTION:
Make sure that the rear tie-down hole is firmly plugged with the grommet after the rear tie-down hole is used. Otherwise, dust, smell, etc. may come into the passenger compartment indirectly from the rear quarter, via the side sill from the rear tie-down hole.



(1) Hook for tie-down (2) Tie-down hole

- **Chain direction at tie-down condition**

CAUTION:
• Pull the front and rear of the vehicle in the opposite direction, and pull the left and right of the vehicle in the same direction.

NOTE

- **Patterns except for the followings (recommended) are not allowed.**

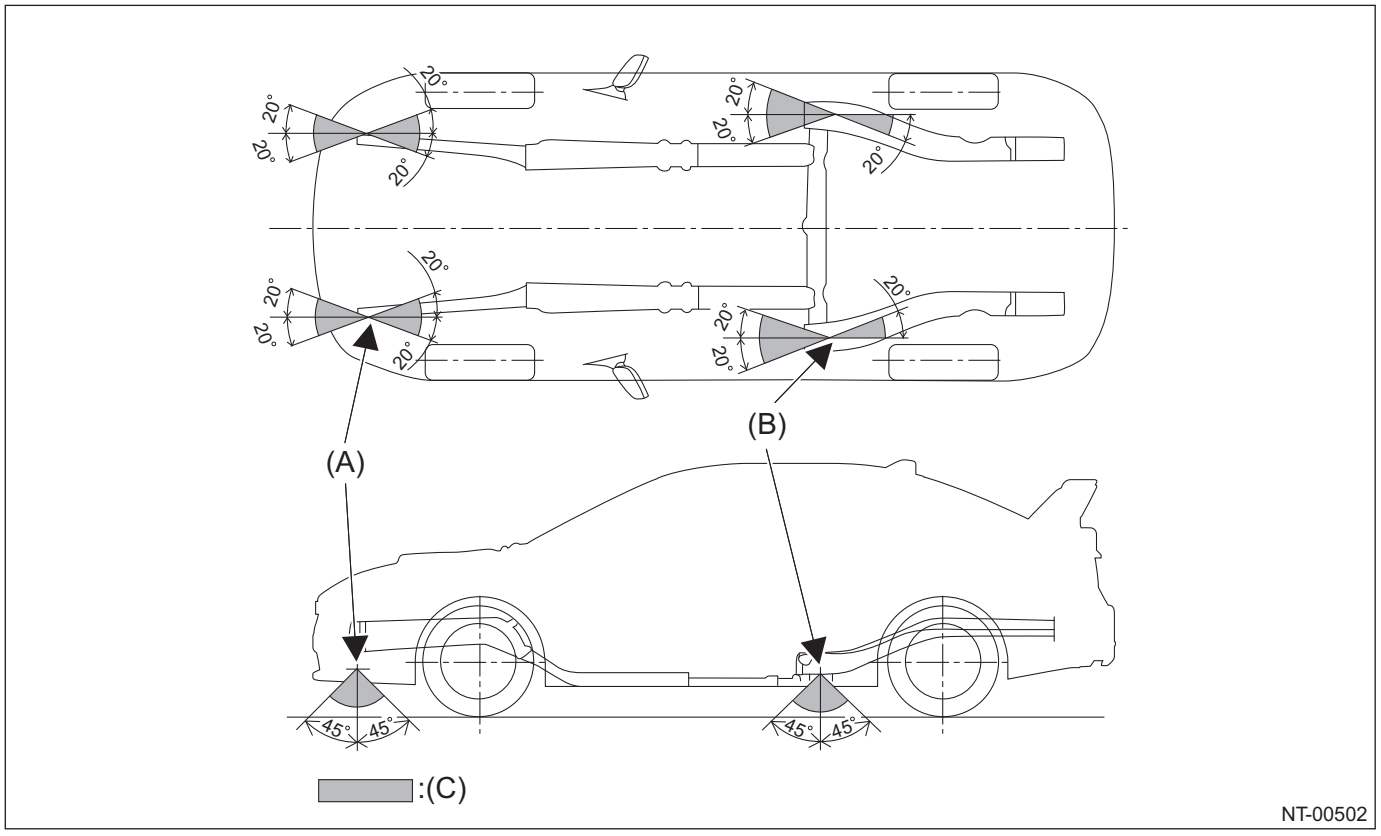
	Recommended
Tie-down direction	 NT-00214

- **Tie-down range**

For ground transportation

CAUTION:

When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain on the rear tie-down holes from vehicle inside. When the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain on the rear tie-down hooks from vehicle outside.



(A) Front tie-down hook

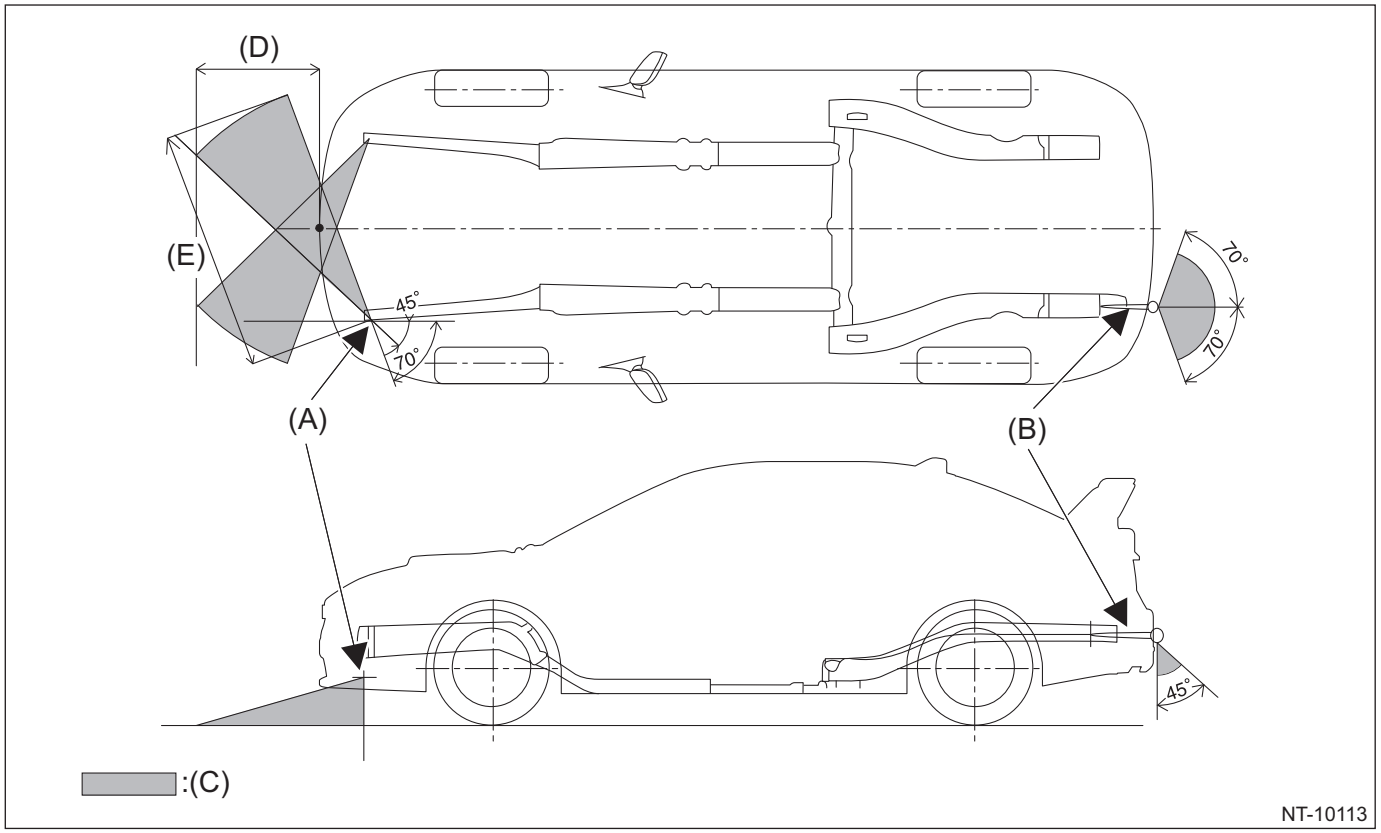
(B) Rear tie-down hole

(C) Chain pulling range at tie-down condition

NOTE

For sea transportation

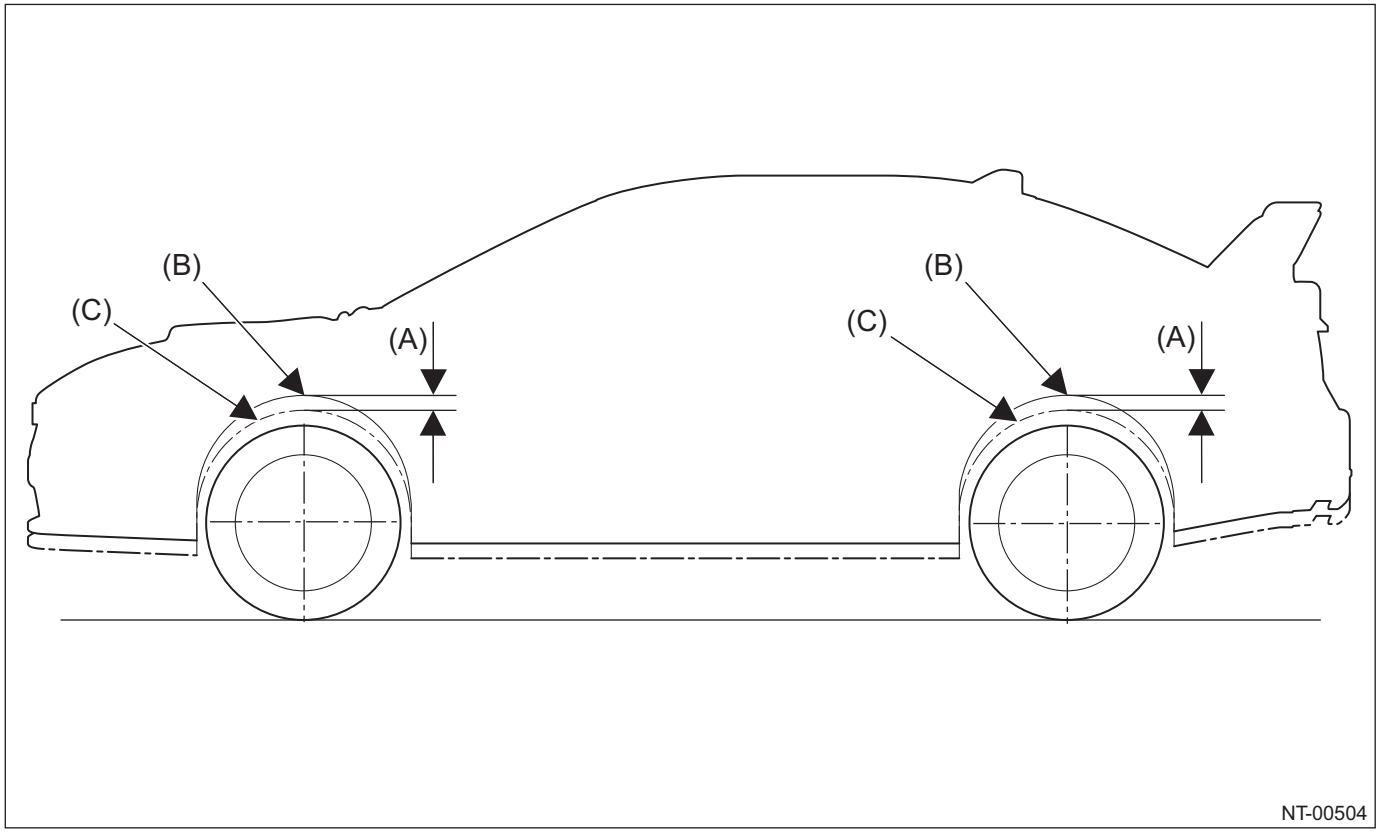
CAUTION:
The eyebolts are exclusively used for towing and sea transportation tie-down, and do not use them for ground and freight transportation.



(A) Front tie-down hook
(B) Eyebolt
(C) Chain pulling range at tie-down condition
(D) 400 mm (15.7 in)
(E) 1,320 mm (52.0 in)

- **Vehicle sinking volume at tie-down condition**

CAUTION:
The vehicle sinking volume at tie-down condition should be less than 50 mm (2 in) and make sure to fix the vehicle securely.
Check to see if the tensions of chains or belts at tie-down condition are appropriate in the following procedures.
1) Before tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
2) After tie-down, measure the distance between the highest tire point and highest arch point at the center of wheel.
3) If the distance (A) between the measured value of 1) and 2) above, is less than 50 mm (2 in), it is judged as OK. If the distance is 50 mm (2 in) or more, it is judged as NG because the tension is too high.



(B) Arch position before tie-down (C) Arch position after tie-down

- **Notes for the use of tie-down hook**

When the vehicle is tied down from vehicle inside, hook the hooks of tie-down chain from vehicle inside, and when the vehicle is tied down from vehicle outside, hook the hooks of tie-down chain from vehicle outside.
For front tie-down hook, use S hook and J hook, and for rear tie-down hole, use S hook, J hook and T hook. T hook can be used only for rear tie-down hole.

14.TOWING

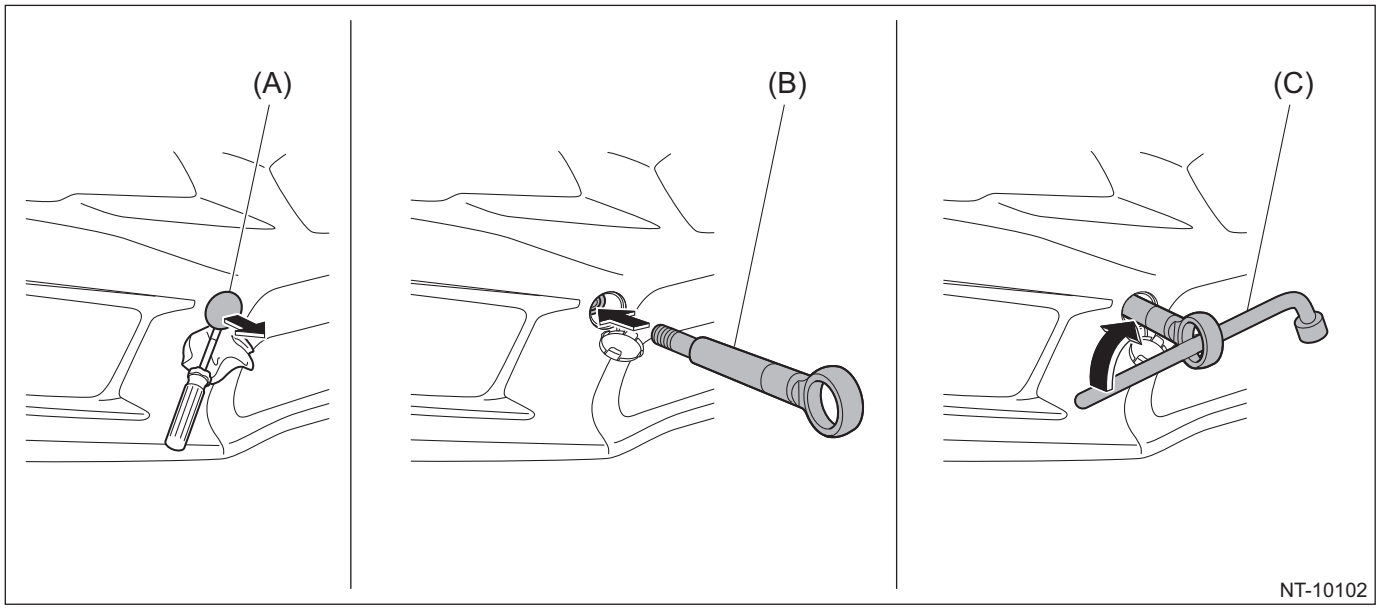
Avoid towing vehicles except when the vehicle cannot be driven. Use a loader instead of towing. When towing other vehicles, pay attention to the following to prevent hook or vehicle damage resulting from excessive weight.
- Do not tow other vehicles with a front tie-down hook.
- Make sure the vehicle towing is heavier than the vehicle being towed.
- When towing the vehicle equipped with Subaru EyeSight, be sure to hold down the pre-collision brake OFF switch to turn OFF the pre-collision brake function. (Check that the pre-collision brake OFF indicator light in the meter lights up.)

NOTE

- Front

Remove the hook cover, and install the towing hook (eyebolt).

CAUTION:
Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, airbag may not operate properly when receiving a shock from front side. And it may also affect the crash performance of the vehicle.

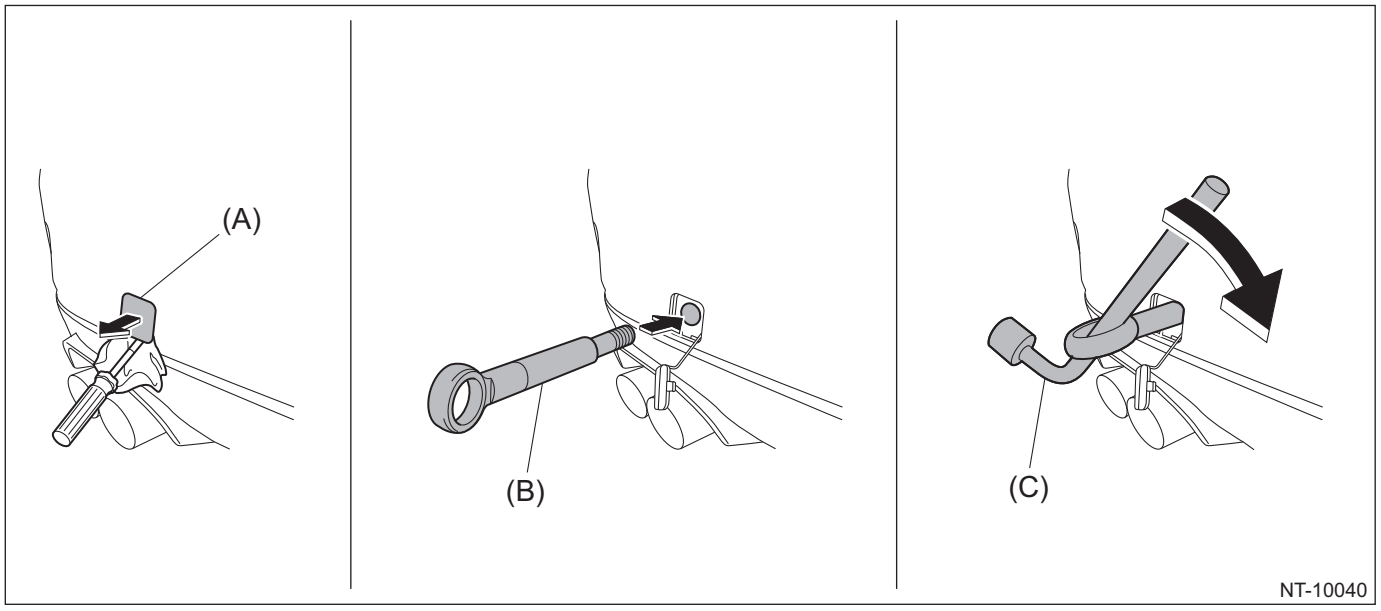


(A) Hook cover (B) Towing hook (eyebolt) (C) Wheel nut wrench

- Rear

Remove the hook cover, and install the towing hook (eyebolt).

CAUTION:
Make sure to detach the towing hook (eyebolt) after towing. If the hook remains attached, the fuel leakage control function of the fuel pump may not operate properly when receiving a shock from rear side. And it may also affect the crash performance of the vehicle.



(A) Hook cover rear (B) Towing hook (eyebolt) (C) Wheel nut wrench

- Precautions

Towing	Precautions	AWD	
		MT	CVT
Lifting up four wheels (on a trailer)  NT-00023	Towing the vehicle after lifting up all four wheels is a basic rule for AWD model. **CAUTION:** **When loading on a carrier transport, make sure to follow the procedures for "LOADING ONTO CAR CARRIER TRUCK". <Ref. to NT-21, LOADING ONTO CAR CARRIER TRUCK, NOTE, Note.>**	❍	❍
Rope NT-00024	• Check if both front and rear wheels are rotated normally. • CVT model driving conditions: Driving speed of 32 km/h (20 MPH) or less Allow driving distance 50 km (31 miles) or less	❍	▲
Raising the front wheels  NT-00025	Prohibited for full-time AWD model.	×	×
Lifting up the front wheels  NT-00026	• Prohibited, due to damage on bumper, front grille, etc. • Do not raise the vehicle with bumper.	×	×

Marked ○: OK, Marked ×: Prohibited, Marked ▲: Conditionally OK

CAUTION:

- **Place the shift lever in "N" position during towing.**
- **Do not lift up the rear wheels to avoid unsteady rotation.**

NOTE

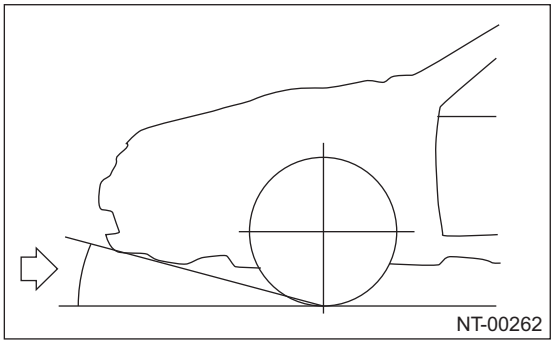
- **Turn the ignition key to “ACC”, then check the steering wheel moves freely. (Models without the keyless access with push button start)**
- **Turn the ignition switch to “ACC” or “ON” position, and check that the steering wheel moves freely. (Model with keyless access with push button start)**
- **Release the parking brake to avoid tire dragging.**
- **Since the power steering does not work, be careful for the heavy steering effort. (When engine is stopped)**
- **Since the servo brake does not work, be careful that the brake is not applied effectively. (When engine is stopped)**
- **In case of the malfunction of internal transmission or drive system, lift up four wheels (on a trailer) for towing.**
- **Do not use towing hook (eyebolt) except when towing.**
- **While being towed with all four wheels on the ground, turn the engine switch to ON but do not start the engine.**

15.LOADING ONTO CAR CARRIER TRUCK

When carrying the vehicle onto a car carrier truck, observe the following precautions.

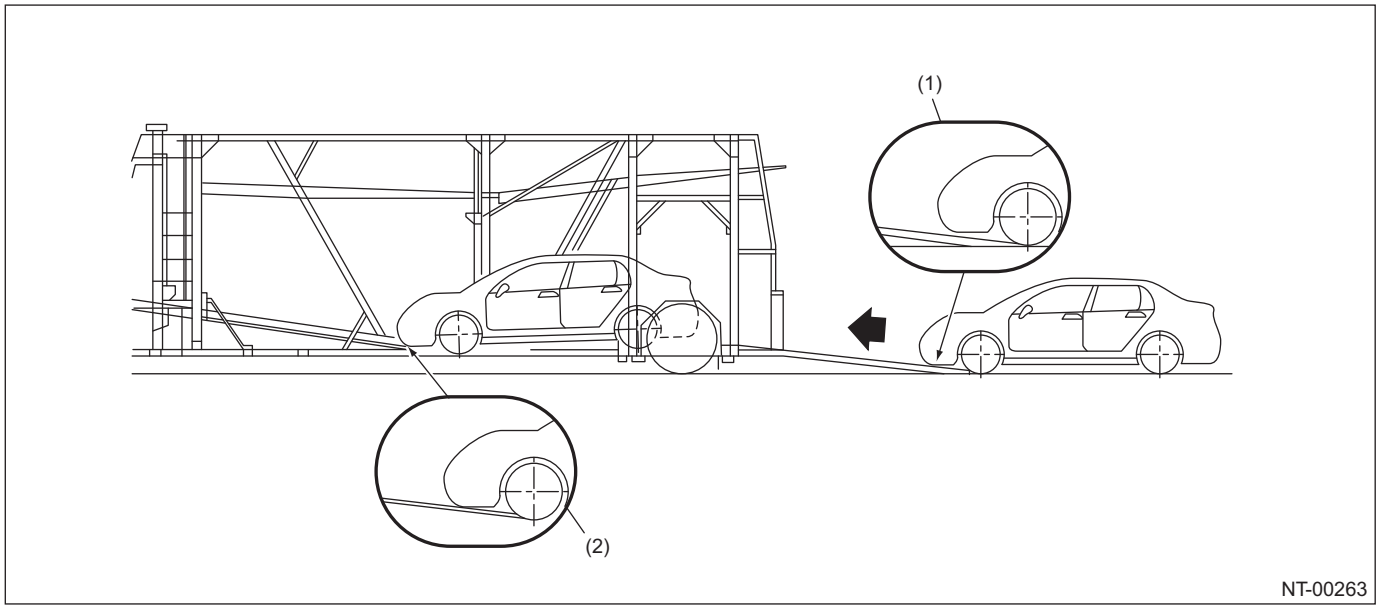
CAUTION:

• When carrying the vehicle onto a car carrier truck, perform the operation being careful with the gap between the height of the carrier's floor and the vehicle lower side because of little clearance under the front bumper.



• Use a supporting board (rubber) where the clearance is too small.

• Perform the operation being careful with the position shown in the figure below.



(1) Use a supporting board (rubber) to ensure clearance from the ramp.

(2) Before carrying the vehicle completely, lower the lower center floor until it is level to make clearance.

Before lowering the vehicle from the carrier car, perform the following operations.

CAUTION:

Always perform the following operations before lowering the vehicle from the carrier car. Otherwise, the power unit will rotate reversely, which may cause the damage to the engine, vacuum pump, and transmission.

1) Start the engine.

2) Set the transmission shift position into driving direction of the vehicle. (When the vehicle drives forward, do not shift the transmission in R range. When the vehicle drives rearward, do not shift the transmission in 1st through 6th gear or D range.)

CAUTION:

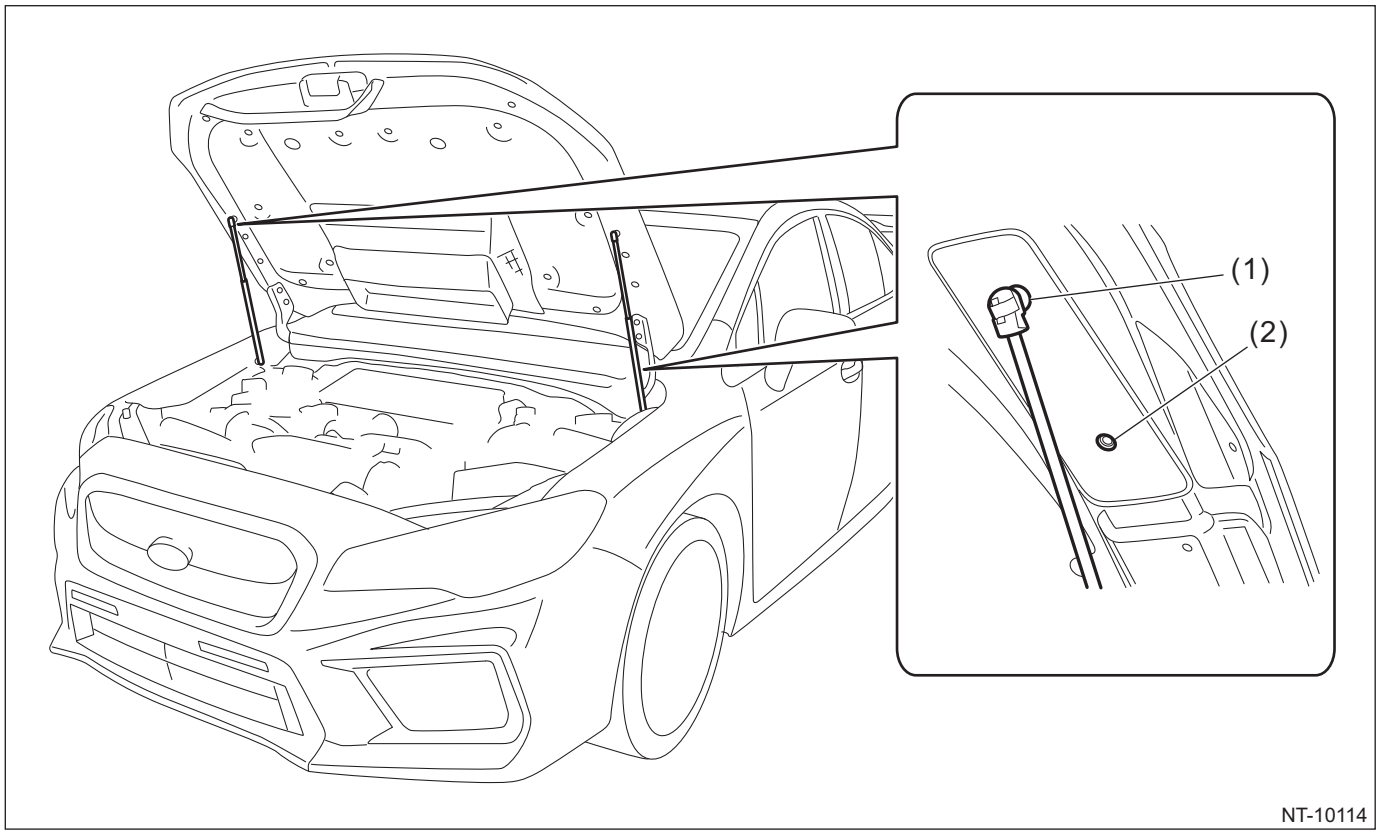
Be sure to perform 2) mentioned above even if the engine cannot be started in some reasons.

NOTE

16.FRONT HOOD GAS STAY

1) Always perform works such as inspections and maintenance with both gas stays attached.

CAUTION:
At the inspection and general maintenance, do not detach the gas stays.



(1) Normal attached position (2) Installation position at full open

2) When wider hood opening is necessary, set the gas stay below as shown in the figure.

Tightening torque:
<Ref. to EB-2, FRONT HOOD, COMPONENT, General Description.>

CAUTION:
• The hood cannot be closed with the hood damper on the full open side. When it is necessary to close, tie the hood striker and the radiator panel with a string etc. to fix them.
• After work, set the gas stays back to the normal position and tighten the bolts to the specified torque.

17.GENERAL SCAN TOOL

Using general scan tools will greatly improve the efficiency of repairing engine electronic controls. Subaru Select Monitor can be used to diagnose the engine, VDC, air conditioner and other electrically controlled parts.

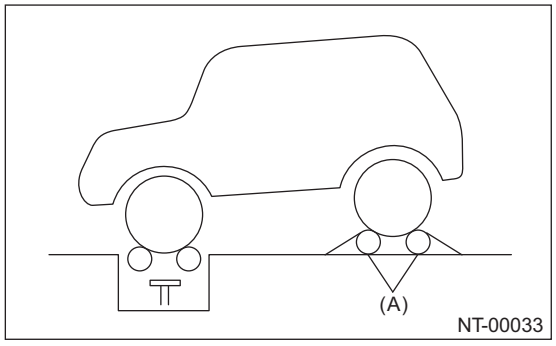
18.AWD CIRCUIT MEASURES

1) Full time AWD 6MT (STI model)
Since the driver's control center differential (DCCD) is used in the center differential, cut-off of AWD circuit cannot be carried out.
2) Full time AWD 6MT (except for STI model)
Since viscous coupling (limited slip differential) is used in the center differential, cut-off of AWD circuit cannot be carried out.
3) Full-time AWD CVT model
Since VTD type is used in the center differential, cut-off of AWD circuit cannot be carried out.

19.SPEEDOMETER TEST

1) Rear wheel free roller system
   (1) Set the free roller on the floor of rear wheel side securely according to the wheel base and rear tread of the vehicle.
   (2) Let the vehicle ride on the tester and free roller gently.

CAUTION:
- **Hold the vehicle using a pulling metal (chain or wire).**
- **Do not operate the accelerator pedal, brake pedal and steering wheel abruptly.**
- **Perform the measurement while driving the vehicle at 50 km/h (31 MPH) or less and complete within one minute.**



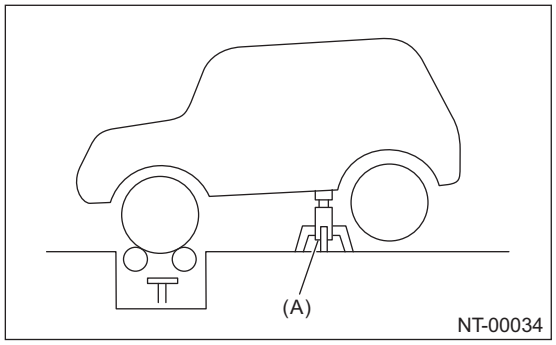
(A) Free roller

   (3) Set the speedometer tester.
   (4) Conduct the speedometer test work.

2) Rear wheel jack-up system
   (1) Set the vehicle on speedometer tester.

CAUTION:
- **Hold the vehicle using a pulling metal (chain or wire).**
- **Do not operate the accelerator pedal, brake pedal and steering wheel abruptly.**
- **Perform the measurement while driving the vehicle at 50 km/h (31 MPH) or less and complete within one minute.**

   (2) Jack up the rear wheels and set the rigid racks to the specified locations of side sill.



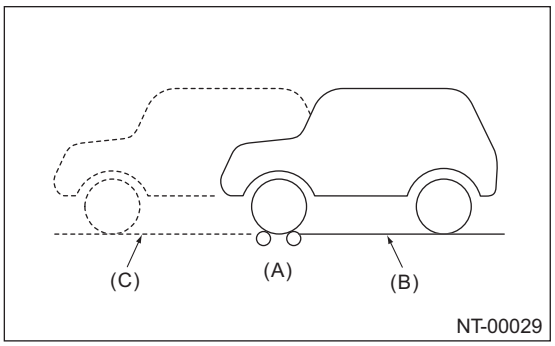
(A) Rigid rack

   (3) Conduct the speedometer test work.

20.BRAKE TEST

1) Full time AWD 6MT (except for STI model)
   (1) Perform this test after driving the vehicle 2 to 3 km (1.24 to 1.86 miles) on road in order to stabilize the viscous torque of viscous coupling.
   (2) Keep the front or rear wheels on the ground for this test.

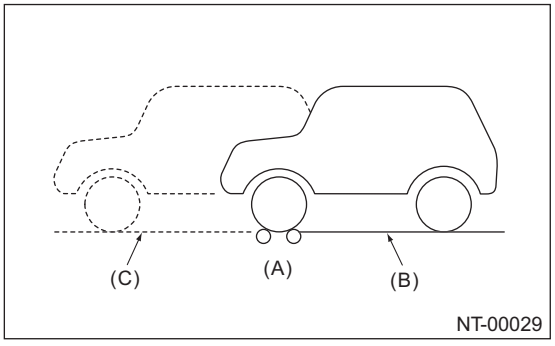
NOTE:
Effect of the viscous torque on braking force will be added approx. 25 kg compared with FWD model.



(A) Brake tester
(B) Position for measuring front wheel
(C) Position for measuring rear wheel

(3) When the brake dragging force is large.
- Check the dragging of brake pad or brake shoe.
- Since it may be affected by the viscosity of viscous coupling, jack up either of the front or rear two wheels to check the each wheel rotation condition with the viscous coupling affection removed.

2) Full time AWD 6MT (STI model) and CVT model
(1) Keep the front or rear wheels on the ground during measurement.



(A) Brake tester
(B) Position for measuring front wheel
(C) Position for measuring rear wheel

(2) When the brake dragging force is large.
- Check the dragging of brake pad or brake shoe.

Specifications:

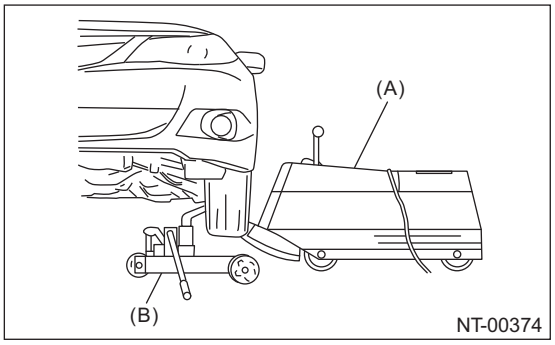
	Braking force
Rear wheel total	10% or more of load on front or rear wheels
Difference between right and left wheels	8% or less of load on front or rear wheels
Grand total	50% or more of vehicle weight at the time of test

- When measurement is difficult to carry out because both of front wheels are locked, brake force measurement in this condition conforms to standard grand total.

21.ON THE CAR WHEEL BALANCING

CAUTION:
- **Carry out the procedures after measuring the balance of each single tire.**
- **Set the vehicle so that the front and rear wheels are the same height.**
- **Make sure that the VDC is deactivated.**
- **Release the parking brake during measurement.**
- **Rotate each wheel by hands, and make sure it rotates without dragging.**
- **Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.**
- **When an error is indicated during engine drive, do not use the motor drive together.**

1) Set the rigid rack to the specified locations of side sill, jack up the front or rear two wheels of non-measuring side and set the pickup stands to two wheels of measuring side.



(A) Balancer body
(B) Pickup stand (left and right)

2) For drive wheel, drive the tires with engine for measurement.
3) For non-drive wheel, drive the tires from the on the car wheel balancer for measurement.

NOTE

IDENTIFICATION

ID

Page
1. Identification 2

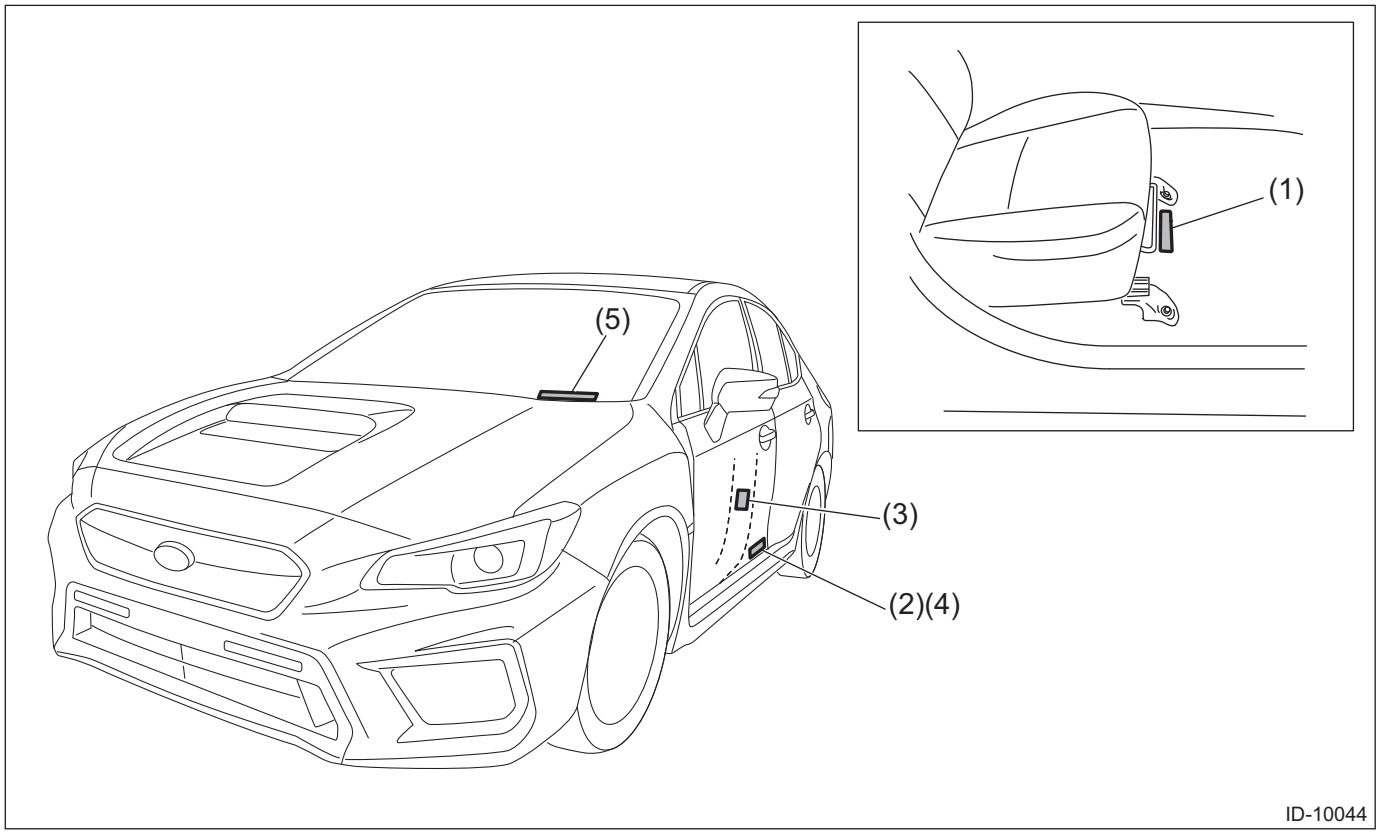
1. Identification

A: IDENTIFICATION

1. IDENTIFICATION NUMBER & LABEL LOCATIONS

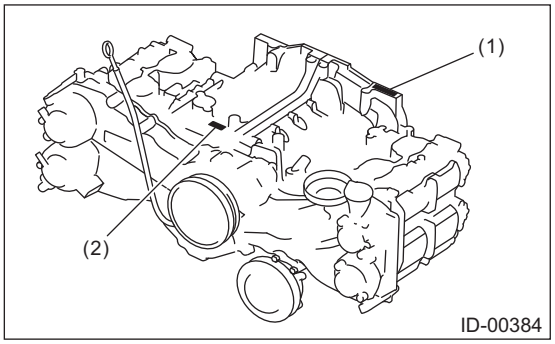
The V.I.N. (Vehicle Identification Numbers) is used to classify the vehicle.

- **Positioning of the plate label for identification**



(1) VIN (Vehicle Identification Number) (below right front floor carpet)
(2) FMVSS and CMVSS label (attached to left side of vehicle)
(3) Tire inflation pressure label (driver's side)
(4) Model number label (attached to right side of vehicle)
(5) VIN plate

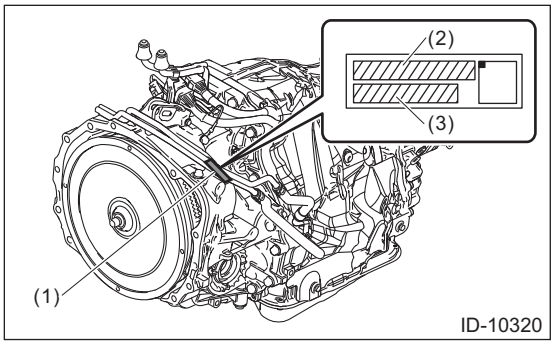
- **Engine**



(1) Engine serial number (punch mark)
(2) Engine type (casting) crankcase upper side

- **Automatic transmission**

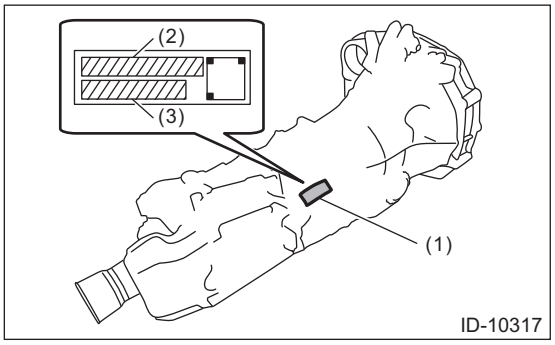
CVT



(1) Label
(2) CVT type
(3) Transmission serial No.

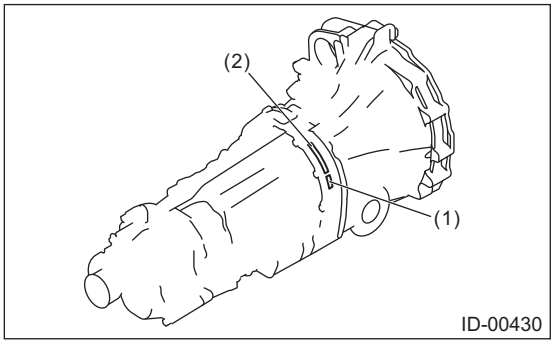
- **Manual transmission**

Except for STI model



(1) Label
(2) MT type
(3) Transmission serial No.

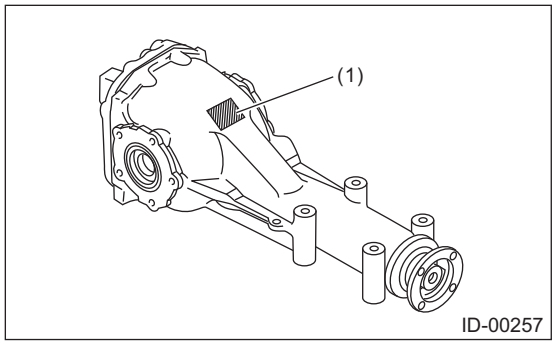
STI model



(1) Transmission serial No. label
(2) MT type label

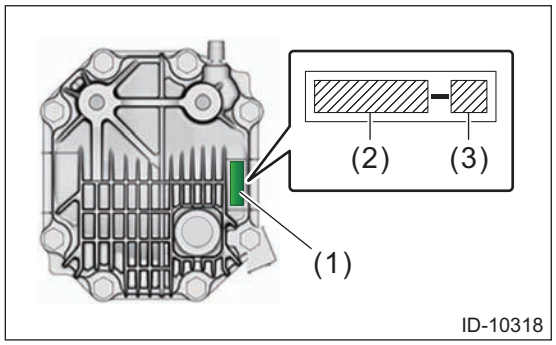
- **Rear differential**

T-type



(1) Identification (white paint)

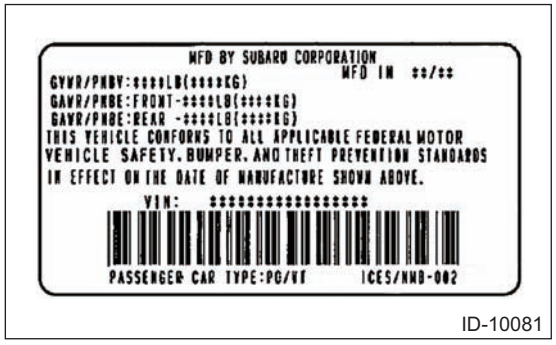
VB-type



(1) Label
(2) Rear differential serial No.
(3) Rear differential ID

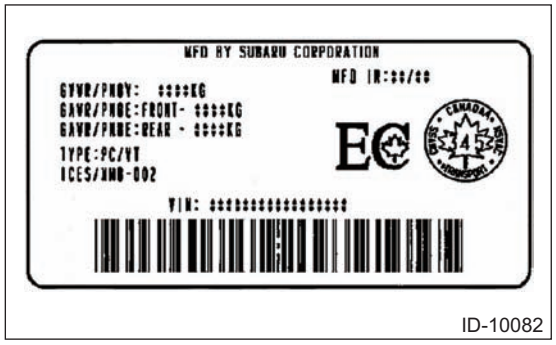
- **FMVSS label**

For U4

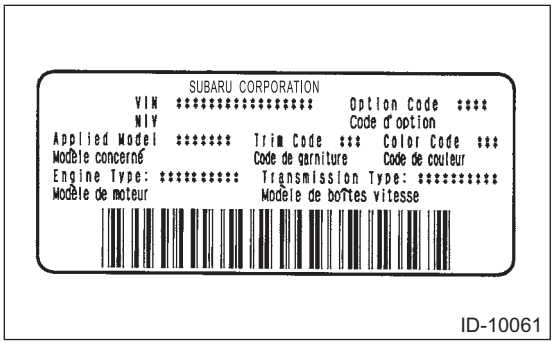


- **CMVSS label**

For C0



- **Model number label**



2. MEANING OF V.I.N.

The meaning of the V.I.N. is as follows:
]JF1VA1A6XL8800001[
The starting and ending brackets ( ] [ ) are stop marks.

Digits	Code	Meaning	Details
1 — 3	JF1	Manufacturer body area	JF1: Passenger car, SUBARU CORPORATION made
4	V	Car line	V: WRX
5	A	Body type	A: Sedan
6	1	Displacement class	1: 2.0 L AWD DI turbo 4-CYLINDERS GASOLINE 268HP 2: 2.5 L AWD high power turbo 4-CYLINDERS GASOLINE 310HP

Refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

RECOMMENDED MATERIALS

RM

Page
1. Recommended Materials 2

1. Recommended Materials

A: RECOMMENDED MATERIALS

1. GENERAL

To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

2. FUEL

- Use unleaded gasoline because using leaded gasoline may cause a malfunction.
- Do not use the low quality gasoline, or improper fuel such as diesel fuel, fuel alcohol, or gasoline additive because they will adversely affect on engine components and fuel system components.
- Always use gasoline that is equivalent to that prescribed in the owner's manual or that of high octane value. There is the possibility of damaging or improper operation of the engine and fuel injection system if the specifications are not observed. Use the prescribed gasoline type to maintain proper vehicle performance.

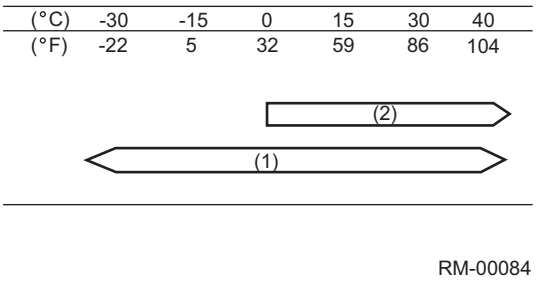
3. LUBRICANT

Use the lubricants shown in the table below, or equivalent. See the table below to choose the correct SAE viscosity.

Item	Recommended materials
	Engine oil standard
Engine oil Choose oil suitable for the standard from the right.	 RM-00081 Those with SN or SN PLUS "Resource Conserving" logo in case of API standard. or RM-00002 Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.
SAE viscosity No. and applicable temperature	
 RM-00082 (1) 5W-30 (synthetic oil) Specified	

Item	Recommended materials
	API standard
Manual transmission gear oil (TY85)[*1] and rear differential gear oil[*2]	GL-5
SAE viscosity No. and applicable temperature	

Item	Recommended materials
	API standard



(1) 75W-90 (recommended)
(2) 90

*1

CAUTION:
Applicable to TY85 only.

*2

CAUTION:
Do not mix two different kinds or makes of gear oil.

CAUTION:
If an alternative transmission gear oil (TY75) is used, expected functionality and performance may not be obtained.

Item	Recommended materials	Item number	Alternative
Transmission gear oil (TY75)	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)
CVT front differential gear oil	SUBARU GEAR OIL EXTRA MT	—	GL-5 (75W-90)

4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

CAUTION:
Be sure to use the recommended CVTF. Using material except recommended one would cause trouble.

Item	Recommended materials	Item number	Alternative
Transmission fluid	Subaru High Torque CVT Fluid	K0421Y0700	—
Power steering fluid	SUBARU ATF	K0410Y0700	DEXRON III
Brake fluid and clutch fluid	FMVSS No. 116 DOT3, or DOT4	—	—

5. ENGINE COOLANT

Use genuine engine coolant to protect the engine.

Item	Recommended materials	Item number	Alternative
Engine coolant	SUBARU SUPER COOLANT (Concentrated type)	—	—
	SUBARU SUPER COOLANT (Diluted type)	K0670Y0001	—
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

6. REFRIGERANT

The standard air conditioner installed on this vehicle uses HFC134a refrigerant. Do not mix it with other refrigerants. Also, do not use any air compressor oil except for DH-PR (ZXL200PG).

Item	Recommended materials	Item number	Alternative
Refrigerant	HFC134a	—	—
Compressor oil	DH-PR (ZXL200PG)	—	—

7. GREASE

Use grease and supplementary lubricants shown in the table below.

Item	Application point	Application point	Recommended materials (Item number)	Alternative
Supplementary lubricants	Exhaust	Oxygen sensor	Spray type lubricant (004301003)	—

Item	Application point	Application point	Recommended materials (Item number)	Alternative
Grease	MT	MT main shaft (spline parts)	NICHIMOLY N-130	—
		MT main shaft (oil seal lip)		
		Transfer driven gear (front roller bearing, rear roller bearing) (TY75)		
		Clutch operating cylinder		
		Release bearing (inner circumference)		
		Release bearing (contact surface of release bearing guide) (STI model)		
		Release lever shaft (STI model)		
		Clutch release lever (contact surface of release bearing, contact surface of operating cylinder) (STI model)		
		Clutch release lever (contact surface of release bearing, contact surface (dented portion) of pivot, contact surface (dented portion) of operating cylinder, contact surface of transmission case) (except for STI model)		
		Clutch master cylinder push rod	SILICONE GREASE G-40M	—

PRE-DELIVERY INSPECTION

PI

Page
1. Pre-delivery Inspection 2

1. Pre-delivery Inspection

A: GENERAL DESCRIPTION

The purposes of the pre-delivery inspection (PDI) are as follows.
- Remove the vehicle protective parts for transportation.
- Check that the vehicle or parts before delivery are not damaged during transportation or storage.
- Check that the vehicle after repair is normal.
- Make sure to provide a complete vehicle to customer.

For above reasons, all SOA service center must carry out the PDIs before delivery of vehicle.
Besides, all SOA service center and PDI center check the condition of all vehicles to make sure to take responsibility.

B: PRE-DELIVERY INSPECTION (PDI) PROCEDURE

Static checks just after vehicle receipt

Item	Check point
1. Appearance	1. If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents. If the protective coating has been removed, visually check the painted body surfaces in detail for damage or rust. 2. Visually check the glass and light lenses for any damage, cracks or excessive gaps between body panels. 3. Visually check the plated parts for any damage. 4. Check the instrument panel, console and trim for stains or dirt.
2. Tire	1. Check the tires for damage, defective, and dents on wheels. 2. Check the tire air pressure.
3. Fuses	If the vehicle is about to be delivered to customer, attach a back-up fuse.
4. Lock/unlock and open/close operation of doors	1. Using the key, check the door can be locked or unlocked normally. 2. Open and close all doors to check that there are no defective. 3. Operate the power door lock switch to check that all doors lock and unlock normally.
5. Child safety lock	Check the child safety lock system operates normally.
6. Trunk lid open/close operations	1. Operate the trunk opener button to check that the trunk lid opens normally. 2. Open and close the trunk lid to see that there are no abnormal conditions.
7. Operation check of trunk lid release lever	Operate the trunk lid release lever to check that the trunk lock is unlocked normally.
8. Fuel lid opener lever	Operate the fuel lid opener to check that the fuel lid is unlocked normally.
9. Towing hook (eyebolt)	At factory shipment, the towing hook (eyebolt) is installed to the rear bumper. Remove the towing hook (eyebolt), store it in the holder.
10. Accessory	Check that the following accessories are provided. • Owner's manual • Warranty booklet • Maintenance note • Spare key • Key number plate • Jack • Jack handle • Tool set • Spare tire • Towing hook (eyebolt)
11. Front hood lock release system	Operate the front hood lock release lever to check that the front hood opens normally.
12. Battery	Check the battery for any abnormal conditions such as rust or traces of battery fluid leaks.
13. Brake fluid	Check the brake fluid amount.
14. Engine oil	Check the engine oil amount.
15. CVTF	Check for leakage of CVTF.

Item	Check point
16. Transmission gear oil	• Check that the transmission gear oil level is normal. (Except for STI model) • Check for leakage of the transmission gear oil. (STI model)
17. CVT front differential gear oil	Check for no leakage of CVT front differential gear oil.
18. Rear differential gear oil	Check for leakage of gear oil from the rear differential.
19. Engine coolant	Check the engine coolant level.
20. Clutch fluid	Check the clutch fluid amount.
21. Window washer fluid	Check the window washer fluid amount.
22. Front hood latch	Check that the front hood is closed normally and locked securely.
23. Keyless entry system	Check that the keyless entry system operates normally.
24. Keyless access system	Check that the keyless access system operates normally.
25. Alarm system	Check that the alarm system operates normally.
26. Seat	1. Check the seat surfaces for stains or dirt. 2. Check the seat installation conditions and functionality.
27. Seat belt	1. Check the seat belt installation conditions and functionality. 2. Check the seat belt warning system operates normally.
28. TPMS (U.S. model)	If the display of TPMS warning light does not operate normally, perform the diagnosis by referring to TPMS (Diagnosis).
29. Grommet installation	Install the grommet provided in the rear seat to the tie-down hole.

Checks with the engine running

Item	Check point
30. Delivery (test) mode	Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.
31. Immobilizer system	1. Check that the engine starts with all keys that are equipped on vehicle. 2. Check that the security indicator light operates normally.
32. Push button start	Using the push button start function of the access key equipped with the vehicle, check that the engine starts and stops.
33. Starting condition	Start the engine and check that the engine starts smoothly.
34. Exhaust system	Check that the exhaust noise is normal and no leaks are found.
35. Indicator and warning lights	Check that all indicator lights and warning lights are operating correctly.
36. Heater & ventilation	Check that the heater & ventilation system operates normally.
37. Air conditioner	Check that the air conditioner operates normally.
38. Multi-function display (MFD)	Check that the Multi-Function Display (MFD) function operates normally.
39. Audio	Check that all audio functions operate normally.
40. Navigation system	1. Check all display functions for normal operation. 2. Check that the navigation, audio and AUX systems operate normally. 3. Check that the rearview camera operates normally.
41. Telematics system	Check that the indicator light on the overhead console or on the stereo camera cover assembly goes off.
42. Accessory power supply socket	Check that the accessory power supply socket operates normally.
43. Lighting system	Check that the lighting system operates normally.
44. Wiper deicer	Check that the wiper deicer operates normally.
45. Illumination control	Check that the illumination control operates normally.
46. Window washer system	Check that the window washer system operates normally.
47. Wiper system	Check that the wiper system operates normally.
48. Power window	Check that the power window operates normally.
49. Sunroof	Check that the sunroof operates normally.
50. Rear defogger system	Check that the rear defogger system operates normally.
51. Door mirror	Check that the mirror heater and remote control mirror operate normally.
52. Parking brake	Check that the parking brake operates normally.

Item	Check point
53. Blind Spot Detection / Rear Cross Traffic Alert (BSD/RCTA)	1. Press the BSD/RCTA OFF switch several times to check that the system is activated and deactivated correctly. 2. Check the rear bumper around the sensor for dirt, scratch, affixed stickers and poor paint coating.
54. Reverse Automatic Braking (RAB)	1. Check that the RAB system is activated and deactivated correctly. 2. Check the sonar sensor installed on the rear bumper for parts missing, dirt, scratch, foreign objects, etc.
55. Diagnostic trouble code (DTC) check	Check that the diagnostic trouble code (DTC) is not detected.
56. EyeSight assist monitor	Check that the EyeSight assist monitor operates normally.
57. Auto vehicle hold (AVH) system	Check that the AVH system is activated and deactivated correctly.
58. Front view monitor	Check that the front view monitor operates normally.

Dynamic test with the vehicle running

Item	Check point
59. Brake test	Check the foot brake for normal operations.
60. Shift control	Check that the MT, CVT shifts normally.
61. Cruise control	Check that the cruise control system operates normally.
62. Subaru EyeSight	Check that the Subaru EyeSight operates normally.

Checks after dynamic test

Item	Check point
63. Power steering fluid (hydraulic power steering model)	Check that the power steering fluid level is normal.
64. Power steering system (electric power steering model)	Check the steering warning light operation.
65. Fluid leakage	Check for fluid/oil leaks.
66. Water leakage	Spray the vehicle with water and check for water leaks.
67. Appearance 2	1. Remove the protective coat. (If attached) 2. Check the body paints for damage and stain. 3. Check the plated parts for damage and rust.

1. APPEARANCE

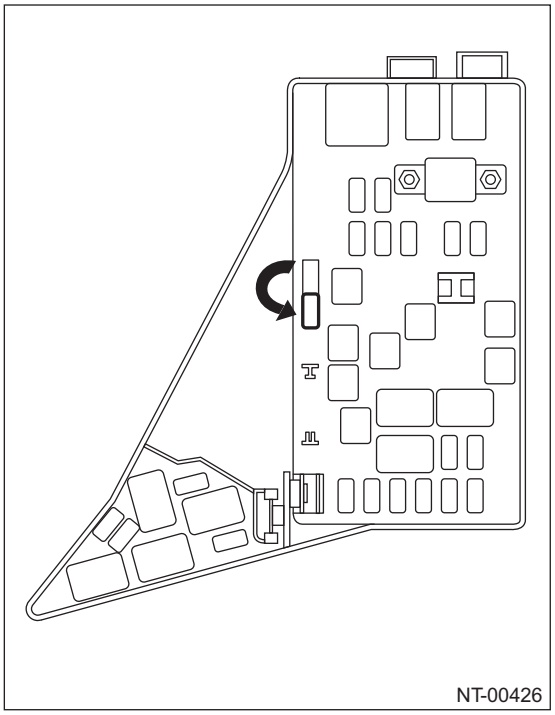
- If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents.
- If the protective coating has been removed, visually check the body painted area for damage or stains in detail and repair as necessary.
- Visually check the windshield glass, door glasses and light lenses for any damage, cracks or excessive gaps to the body panel and replace as necessary.
- Visually check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and replace the parts as necessary.
- Check the instrument panel, console and trim for stains or dirt.
- Check the keyless key or access key for dirt, and wipe off if necessary.

2. TIRE

- Check the tires for damage, defective, and dents on wheels.
- Check and correct the tire size, spare tire and tire air pressure described on the tire air pressure label (driver's side).

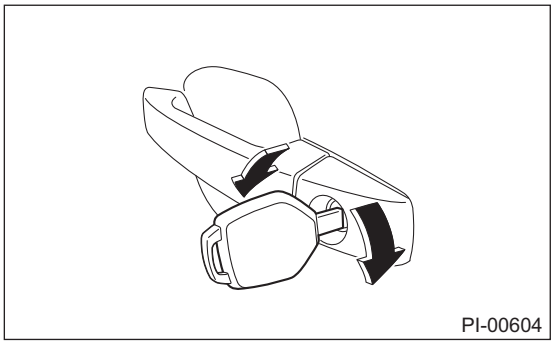
3. FUSE

Fuses for the back-up circuit on initially delivered vehicles are removed to prevent battery discharge. Attach the 20 A fuse as shown in the figure.

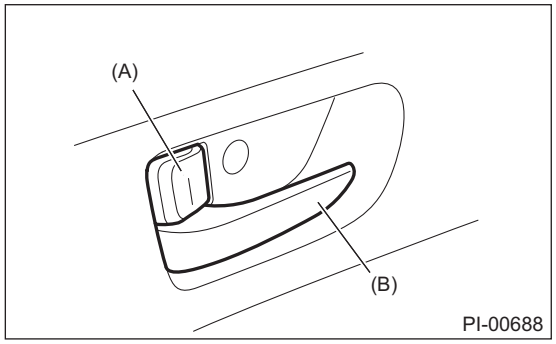


4. LOCK/UNLOCK AND OPEN/CLOSE OPERATION OF DOORS

1) Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

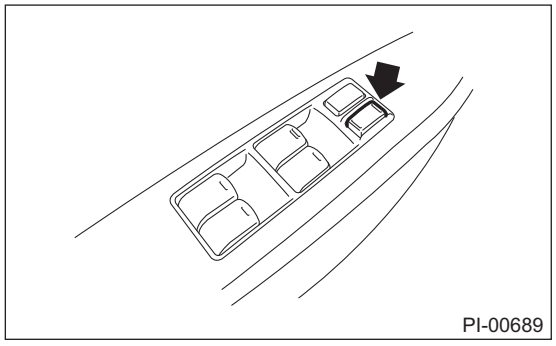


2) Completely close the driver's door, and then check the smooth movement with operating door lock knob from lock to unlock several times. Set the door lock knob (A) to lock position. Then pull the inner remote (B) to ensure that doors will not open.
For other doors, place the door lock knob (A) to lock position and then pull the inner remote (B) to ensure that doors will not open.

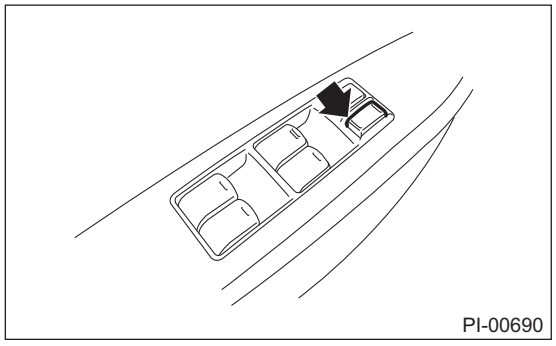


(A) Door lock knob
(B) Inner remote

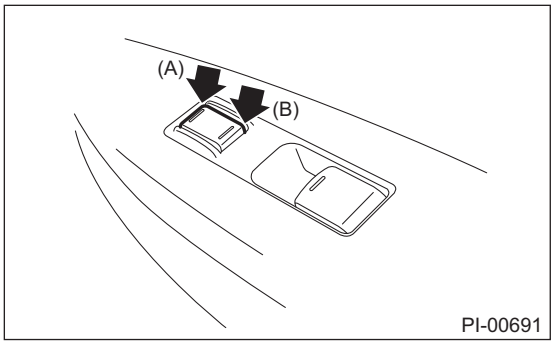
3) Close all the doors, and then press the lock on power door lock switch at driver's side. Check that all doors lock.



4) Press the driver's side power door lock switch to unlock side. Check that all doors are unlocked.



5) Check that the passenger's power door lock switch locks and unlocks normally in the same manner.

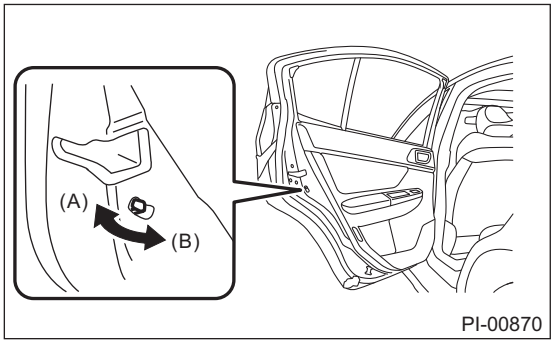


(A) Lock
(B) Unlock

6) With ACC ON or IGN ON, open the driver's door. Press lock on power door lock. Check that the door is not locked.

5. CHILD SAFETY LOCK SYSTEM

1) Set the child safety lock on both rear doors to the lock position.
2) Close the rear doors completely.
3) Check that the lock levers of the rear doors are in the unlock position. Then, pull inner remote of rear doors to ensure that the doors will not open.



(A) Unlock
(B) Lock

4) Pull the outer handles of rear doors to ensure that the doors will open.

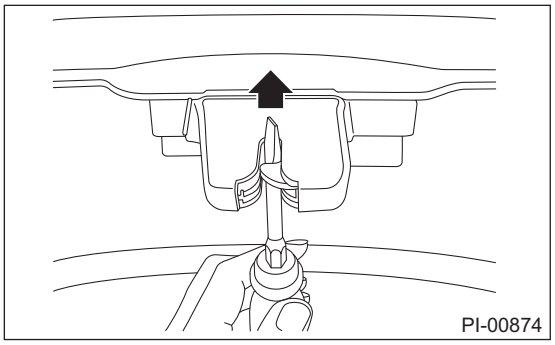
6. TRUNK LID OPEN/CLOSE OPERATIONS

1) Operate the trunk opener button to check that the trunk lid opens.
2) Open and close the trunk lid several times for smooth movement.

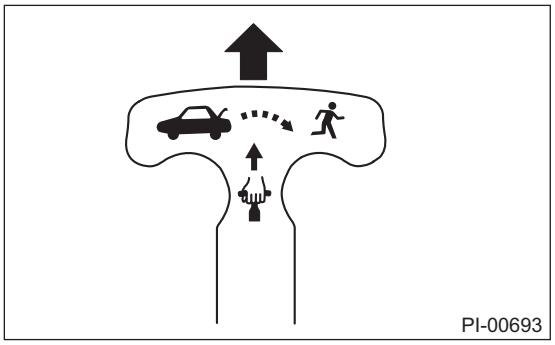
7. OPERATION CHECK OF TRUNK LID RELEASE HANDLE

CAUTION:
Do not check the trunk lid release handle when in the trunk. If the trunk lid release handle is defective, you may be trapped in.

1) Use a flat tip screwdriver. Slide the screwdriver blade from the slit aperture of the lock assembly fully to the end until you hear a click. This places the latch in the locked position.



2) Make sure the latch is released by pulling the yellow trunk lid release handle in the direction of arrow.

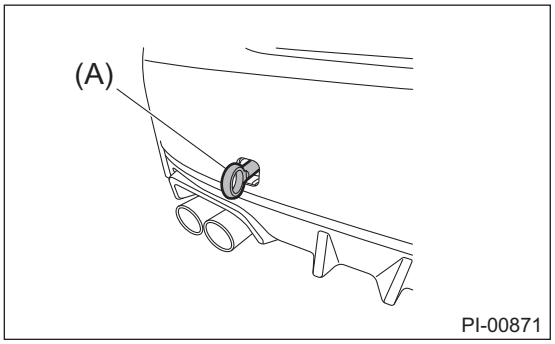


8. FUEL LID OPENER LEVER

Operate the fuel lid opener to check that the fuel lid is unlocked normally. Check that the filler cap is securely closed.

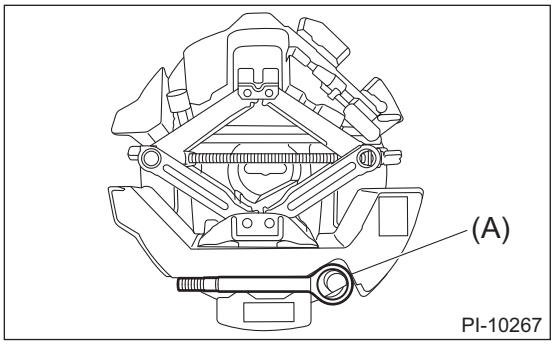
9. TOWING HOOK (EYEBOLT)

NOTE:
At factory shipment, the towing hook (eyebolt) is installed to the rear bumper for securing the vehicle during transportation. Follow the procedure below to store the towing hook (eyebolt) to the holder in the spare tire.
1) Remove the towing hook (eyebolt) from the rear bumper.



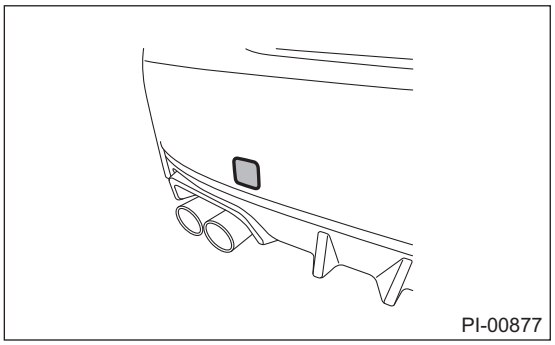
(A) Towing hook (eyebolt)

2) Store the towing hook (eyebolt) to the holder in the spare tire.



(A) Towing hook (eyebolt)

3) Install the supplied hook cover rear to the rear bumper.

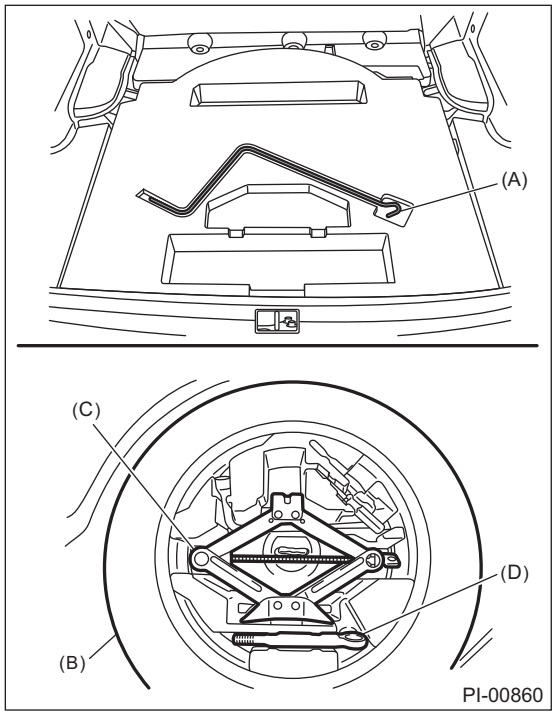


10.ACCESSORY

Check that the following accessories are provided.

- Owner's manual
- Warranty booklet
- Maintenance note
- Spare key
- Key number plate
- Jack
- Jack handle
- Tool set
- Spare tire

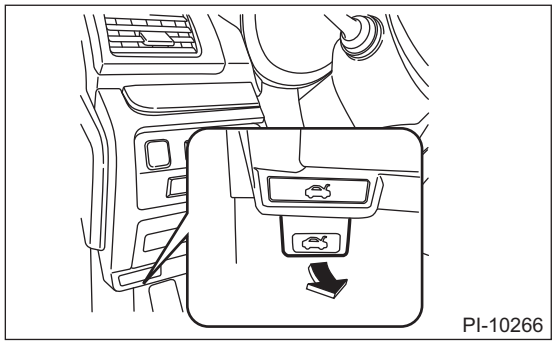
- Towing hook (eyebolt)



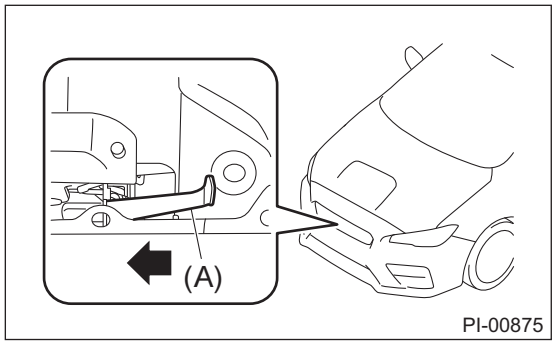
(A) Jack handle
(B) Spare tire
(C) Jack
(D) Towing hook (eyebolt)

11.FRONT HOOD LOCK RELEASE SYSTEM

Operate the front hood lock release lever to check that the front hood is unlocked normally.

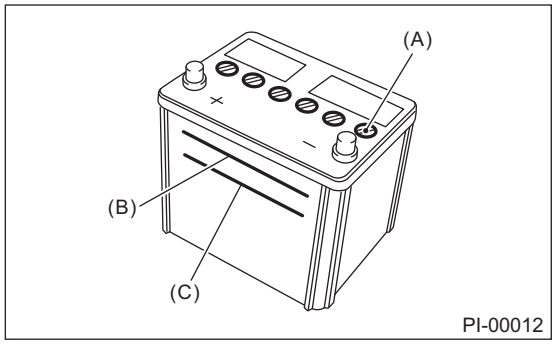


Operate the lever (A) and check that the front hood is opened normally. Check that the front hood can be supported by damper stay.



12.BATTERY

Check the battery terminals to make sure that there are no rust or corrosion due to fluid leaks. Check that the battery caps are securely tightened.

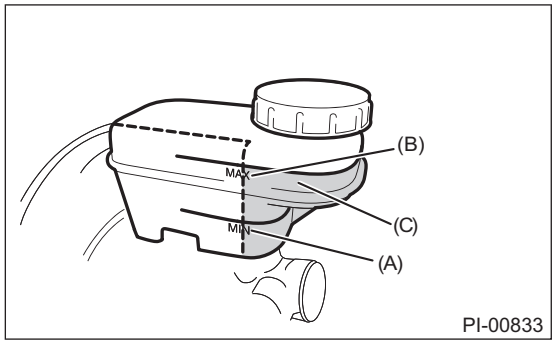


(A) Cap
(B) Upper level
(C) Lower level

13.BRAKE FLUID

CAUTION:
• If the brake fluid is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.
• Always check the level using the specified direction because there is a partition in the reservoir tank.

Check that the brake fluid level is normal from a straight view or within 90° to the right and left forward. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the brake fluid tank with the specified type of fluid.



(A) MIN. level
(B) MAX. level
(C) Brake fluid

14.ENGINE OIL

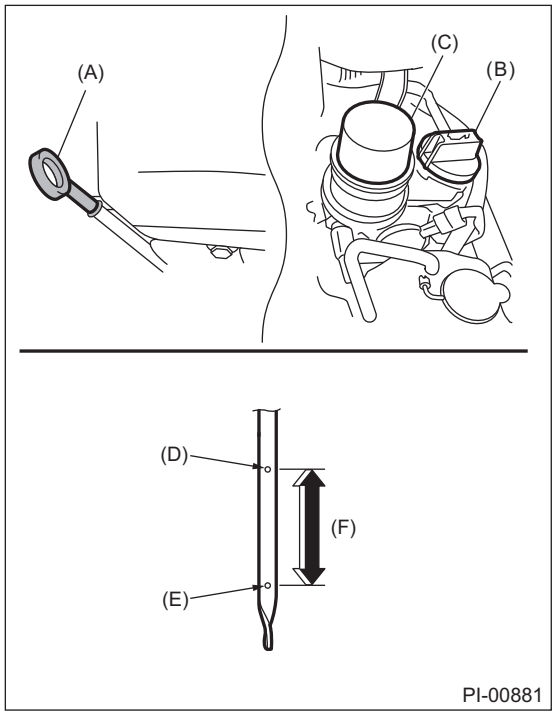
CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe away the oil.
3) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
4) Pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below “L” line, add oil to bring the level up to “F” line.
5) Start the engine, and spread the oil in engine room.

6) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the oil level.

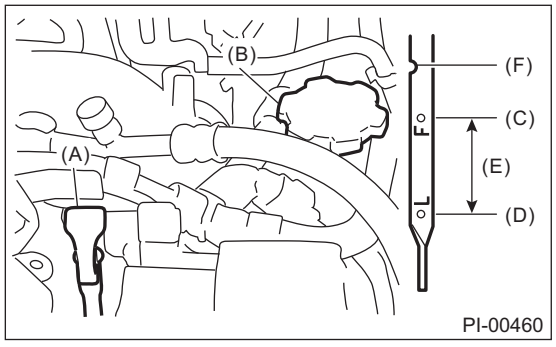
NOTE:
To prevent overfilling of engine oil, do not add oil above “F” line when the engine is cold.

- Except for STI model



(A) Engine oil level gauge
(B) Engine oil filler cap
(C) Engine oil filter
(D) “F” line
(E) “L” line
(F) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

- STI model



(A) Engine oil level gauge
(B) Engine oil filler cap
(C) “F” line
(D) “L” line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)
(F) Notch mark

15.CVTF

CAUTION:
If the CVTF is spilt over exhaust pipe, wipe it off completely with cloth to avoid emitting smoke or causing a fire.
Check for leakage of CVTF.

16.TRANSMISSION GEAR OIL

CAUTION:
If transmission gear oil is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.

Except for STI model

Check that the transmission gear oil level is normal. If the amount of gear oil is insufficient, check that no leaks are found. Then, add the necessary amount of specified transmission gear oil.
Refer to “6MT” section for transmission gear oil inspection. <Ref. to 6MT(TY75)-24, INSPECTION, Transmission Gear Oil.>

STI model

Check for leakage of the transmission gear oil.

17.CVT FRONT DIFFERENTIAL GEAR OIL

CAUTION:
If gear oil is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.
Check for no leakage of CVT front differential gear oil.

18.REAR DIFFERENTIAL GEAR OIL

CAUTION:
If the rear differential gear oil is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.
Check for leakage of gear oil from the rear differential.

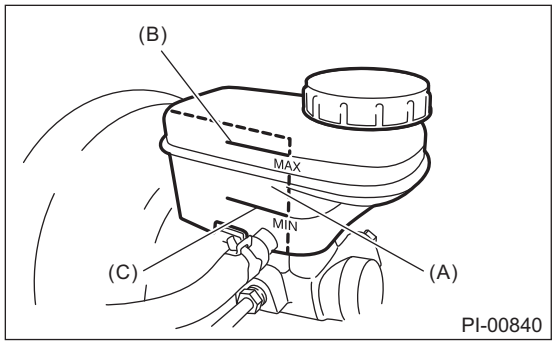
19.ENGINE COOLANT

CAUTION:
If the engine coolant is spilt over exhaust pipe, wipe it off with cloth to avoid emitting smoke or causing a fire.
Check that the engine coolant level on the reservoir tank is normal. If the amount of engine coolant is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

20.CLUTCH FLUID

CAUTION:
- **If any clutch fluid is spilt on the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.**
- **This reservoir tank has the brake fluid chamber and the clutch fluid chamber. When checking the fluid level, always check the fluid from the clutch fluid chamber side where the tank hose is connected.**

Check that the clutch fluid level is normal. If the amount of fluid is insufficient, check that no leaks are found. Then, add the necessary amount of specified fluid.

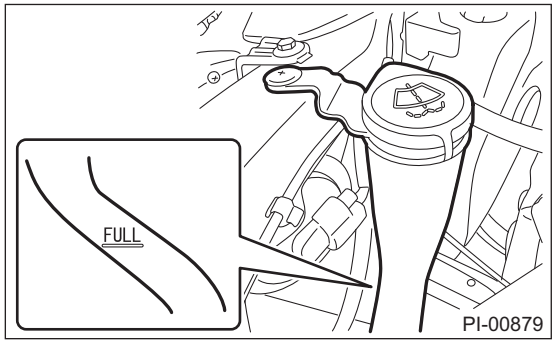


(A) Clutch fluid chamber
(B) MAX. level
(C) MIN. level

21.WINDOW WASHER FLUID

Check that the window washer fluid level is normal. If the amount of washer fluid is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid.

NOTE:
If there is the vibration, water comes into the layer of air in the washer tank and the water level may drop. This is not a malfunction.

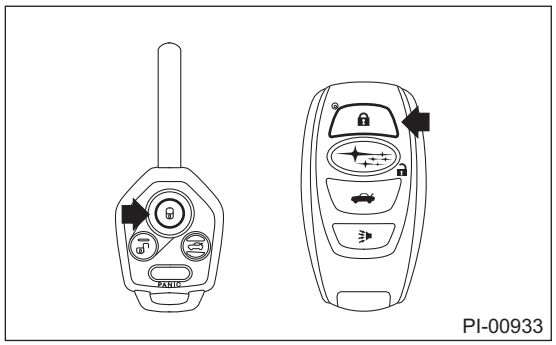


22.FRONT HOOD LATCH

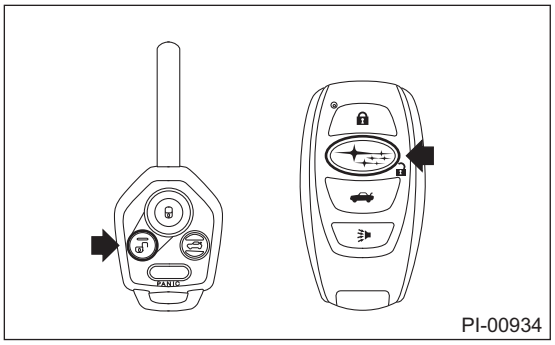
Close the front hood. Check that the front hood is securely latched.

23.KEYLESS ENTRY SYSTEM

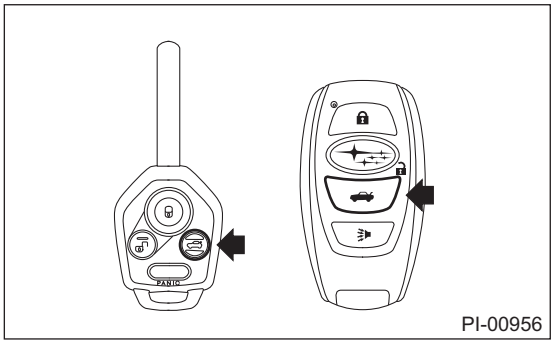
Check the keyless entry system operations as follows:
- Fully open all the door windows.
- Remove the key from ignition switch, and then close all doors.
- Press the “LOCK” button momentarily. Check that all the doors become locked, the buzzer sounds once, and the hazard lights flash once.



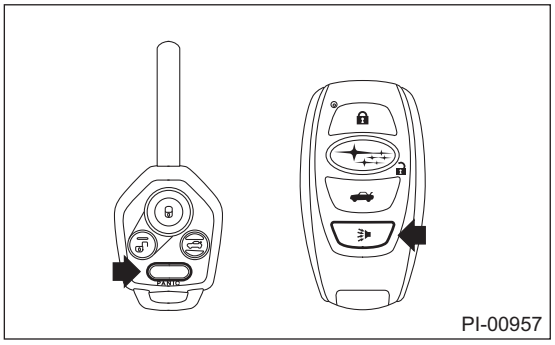
• Press the “UNLOCK” button momentarily. Check that the driver’s door is unlocked, the buzzer sounds twice, and the hazard lights flash twice.



• Within 5 seconds, press the “UNLOCK” button momentarily. Check that all doors are unlocked, the buzzer sounds twice, and the hazard lights flash twice.
• Check that the buzzer sounds twice, and the hazard lights flash twice, when the trunk lid unlock button is held down to unlock the trunk lid.

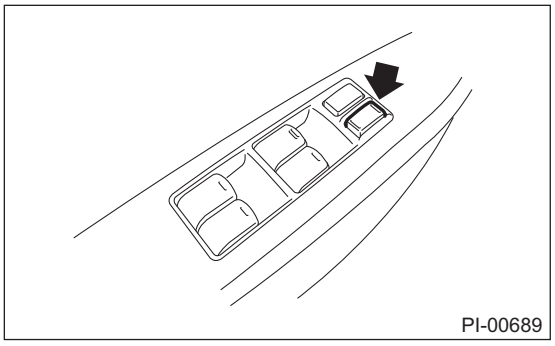


• Press the “PANIC” button. Check that the panic mode (the horn keeps sounding, hazard light flashes) is initiated. Also, check that this condition continues for 30 seconds or until when any of the buttons on the key are pressed.



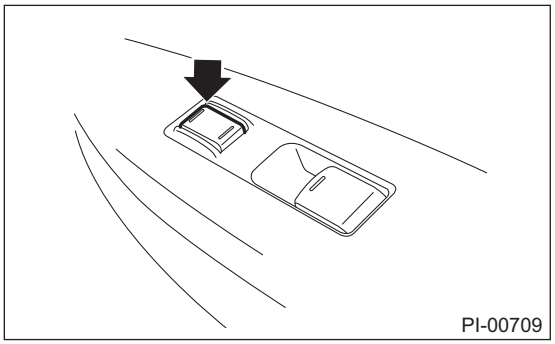
• Press the “LOCK” button momentarily with one of the doors opened. Check that the buzzer sounds 5 times, and the hazard light flashes 5 times to notify the door not being fully closed. Then, close all doors. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.
• With one of the doors open, press the “LOCK” side of the power door lock switch. Then, close all doors. Check if all doors are locked and buzzer sounds once and the hazard light flashes once.

- Driver's side



PI-00689

- Passenger's side



PI-00709

Check keyless answer-back buzzer operation

• The system uses the buzzer and sounds the keyless answer-back buzzer when the door is locked or unlocked. The keyless answer-back buzzer can be turned OFF. To turn the keyless answer-back buzzer from ON to OFF, close all doors, (with the key not inserted into the key cylinder), hold down the "UNLOCK" side of the power door lock switch and insert the key into the key cylinder. Within 10 seconds, insert and take out the key for 5 times or more, and within 10 seconds after that, open and close the driver's door. With the door closed, the hazard light will flash 3 times, indicating that the keyless answer-back buzzer has been turned OFF. To turn the keyless answer-back buzzer from OFF to ON, perform this procedure again. The hazard light will flash 3 times, indicating that the keyless answer-back buzzer has been turned ON.

24.KEYLESS ACCESS SYSTEM

CAUTION:

- **When performing the check, check one access key at a time, separating individual keys.**
- **Do not leave any separated access keys in the vehicle.**
- **Fully open all the door windows.**

NOTE:

The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to BC(diag)-20, OPERATION, Read Current Data.>

• While carrying the access key, check that the room light illuminates when you move close to the front door handles of the vehicle whose doors are all locked.

• While carrying the access key, check that the driver's door is unlocked, the buzzer sounds, and the hazard light blinks by grasping the front door knob (touching the touch sensor on the driver's side (unlock)).

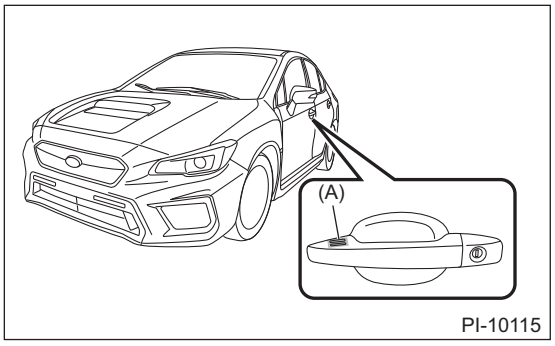
• While carrying the access key, check that all doors are unlocked, the buzzer sounds, and the hazard light blinks by grasping the front door knob (touching the touch sensor on the passenger's side (unlock)).

• While carrying the access key, check that all doors are locked, the buzzer sounds, and the hazard light blinks by touching the touch sensor (lock) of the front door.

NOTE:

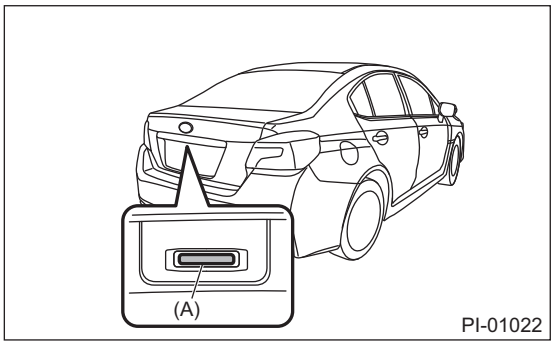
- The hazard lights flash twice and the buzzer sounds twice when unlocking.

- The hazard lights flash once and the buzzer sounds once when locking.



(A) Touch sensor (lock)

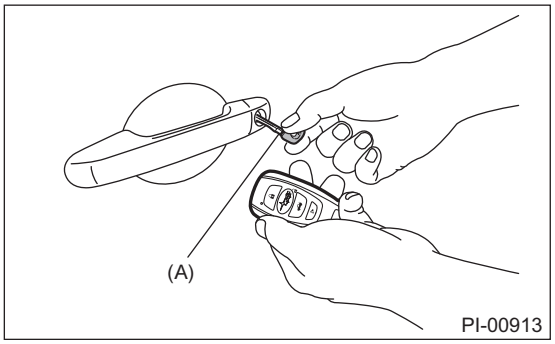
- Check that the trunk unlocks, the hazard lights flash twice, and the buzzer sounds twice when the trunk opener button is pressed while carrying the access key.



(A) Trunk opener button

- Manually operate the access key button to check the lock/unlock of doors, and the flashing of hazard lights.
- Check the mechanical key attached to the access key can be used for locking/unlocking.

CAUTION:
The mechanical key is a single groove type. Insert the mechanical key with the groove side facing the front side of the vehicle.



(A) Mechanical key

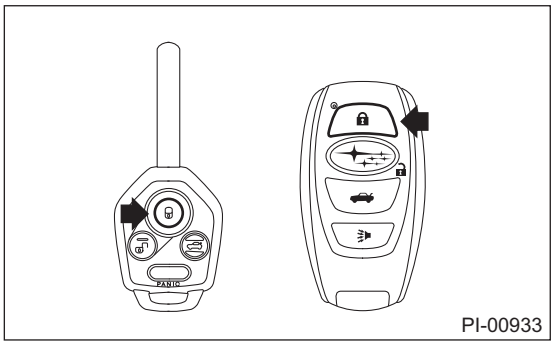
- With the access key in the vehicle, check that warning buzzer sounds and locking does not occur when you touch the touch sensor on the door (lock).

CAUTION:
Remove the mechanical key from the access key and hold the mechanical key.

- With the access key in the trunk, check that the warning buzzer sounds and the trunk unlocks when you press the trunk opener button.

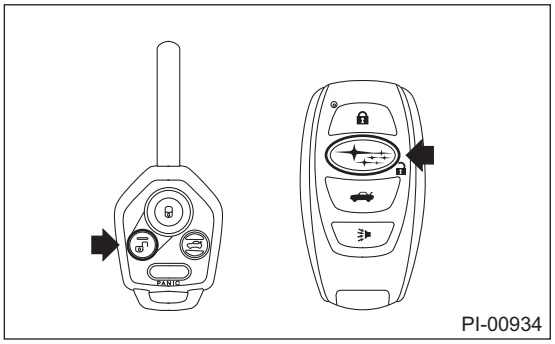
25.ALARM SYSTEM

NOTE:
The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to BC(diag)-29, OPERATION, Registration Body Integrated Unit.>
1) Fully open all the door windows.
2) Remove the key from ignition switch, and then close all doors, trunk and front hood.
3) Press the “LOCK” button momentarily on the keyless transmitter or the access key. All doors are locked and the security indicator light flashes quickly for 30 seconds (5 flashes in 2 seconds). After that, it flashes slowly (2 times in 2 seconds), and the alarm system is in set condition.



PI-00933

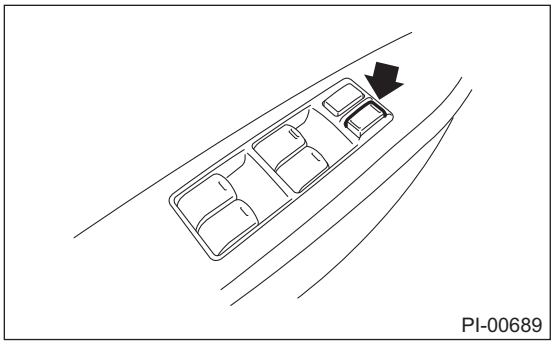
4) Press the “UNLOCK” button momentarily on the keyless transmitter or the access key. When the door of the driver’s seat is unlocked, the security indicator light operates (flashes once in three seconds), and the alarm system enters the release mode.



PI-00934

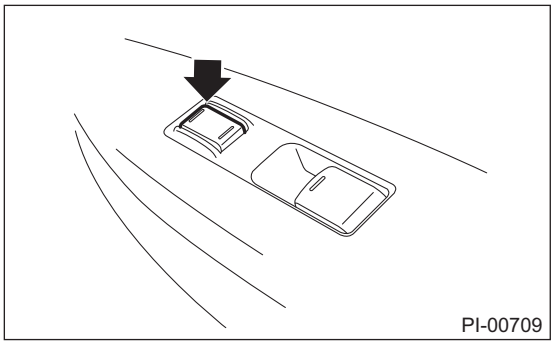
5) Press the “LOCK” button once on the keyless transmitter with one of the doors open. Check that the buzzer sounds 5 times to give the door not fully closed warning. All doors are locked when closed, and the security indicator light flashes quickly for 30 seconds. After that, it flashes slowly twice, and the alarm system is in set condition.
6) Press the “UNLOCK” button momentarily on the keyless transmitter. When the door of the driver’s seat is unlocked, the security indicator operates (flashes once in three seconds), and the alarm system enters the release mode.
7) With one of the doors open, press the “LOCK” side of the power door lock switch. All doors are locked when closed, and the security indicator light flashes quickly for 30 seconds. After that, it flashes slowly twice, and the alarm system is in set condition.

- Driver's side



PI-00689

- Passenger's side



PI-00709

8) When the alarm system is in the set condition, use the inner lock knob to unlock the door, and open the door. Check if the alarm condition happens (horn sounds continuously, hazard light blinks, security indicator illuminates). Check if this condition lasts for a maximum of three minutes or until the "UNLOCK" button of the keyless transmitter or the access key is pressed.

NOTE:
The alarm condition will continue for 3 minutes with the door opened, and the alarm condition will cease within 30 seconds once the door is closed after alarm activation.

9) On models equipped with an impact sensor, hit the windshield glass with your hand with the alarm system in the monitoring set condition, to check that the alarm condition occurs.

10) Turn the ignition switch to ON and check that the security indicator light indicates the alarm history.

NOTE:
- When alarm history for the opening of door is present, the security indicator light illuminates for one second and then blinks 5 times.
- When alarm history for the opening of trunk is present, the security indicator light illuminates for one second and then blinks 4 times.
- When alarm history for the opening of front hood is present, the security indicator light illuminates for one second and then blinks 3 times.
- When alarm history for the impact sensor is present, the security indicator light illuminates for one second and then blinks twice.
- When warning history for the impact sensor is present, the security indicator light illuminates for one second and then blinks once.
- When more than one histories are present, the alarm history with higher priority is indicated. (Items with higher priority are listed above.)

11) Press the "LOCK" button on the keyless transmitter or access key momentarily to arm the alarm system. Press the "UNLOCK" button on the keyless transmitter momentarily to disarm the alarm system.

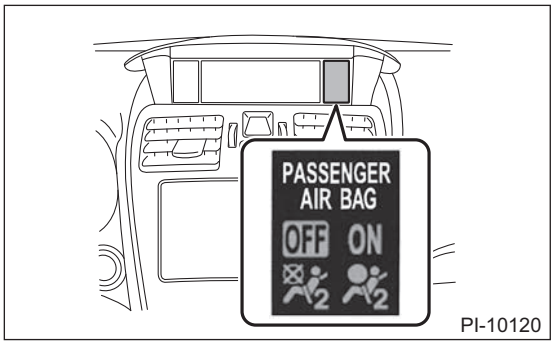
12) Turn the ignition switch to ON and check that the security indicator light does not indicate the alarm history. (The security indicator light remains OFF.)

13) When none of above is applicable, perform troubleshooting for the security system.

26.SEAT

1) Check the seat surfaces for stains or dirt.

2) Check that each seat provides full functionality in sliding, reclining, lifter, and tilting. Check all available functions of the rear seat such as backrest tilt knob.
3) Check the passenger's seat occupant detection system.
(1) Empty the passenger's seat and turn the ignition switch to ON.
(2) Check that the passenger airbag ON/OFF indicator lights both turn on simultaneously for approximately six seconds, and after turning off for two seconds, only the OFF light illuminates.



PI-10120

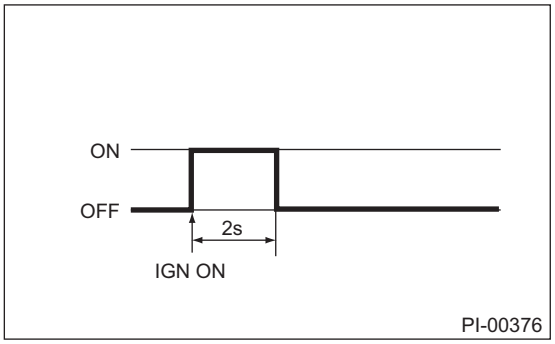
4) With a person weighing approximately 70 kg (155 lb) or more sitting in the passenger's seat, check whether the ON light of the passenger's airbag ON/OFF indicator illuminates or not.
5) Have the passenger get out of the passenger's seat, and check whether the OFF light of the passenger side airbag ON/OFF indicator illuminates.

27.SEAT BELT

1) Check installation condition of seat belt.
2) Pull out the seat belt and then release it. Check that the belt retracts smoothly.
3) Check seat belt warning function.
(1) Turn the ignition switch to ON with the driver's and passenger's seat belt detached.
(2) Check the driver's and passenger's seat belt warning light blink for approx. 6 seconds and the buzzer sounds intermittently.
(3) Then, check the seat belt warning light illuminates and blinks repeatedly at a cycle of approx. 15 seconds. (If no passenger is on the passenger's seat, the seat belt warning light on passenger's seat does not operate.)

28.TPMS (U.S. MODEL)

1) Turn the ignition switch to ON, and check that the TPMS warning light is in a normal operation condition.
- Normal operation (IG ON (light check))



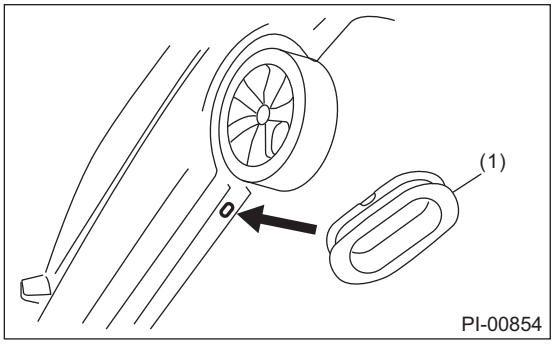
PI-00376

2) If the TPMS warning light display does not operate normally, check and repair the system. <Ref. to TPM(diag)-2, Basic Diagnostic Procedure.>

29.GROMMET INSTALLATION

Install the grommet provided in the rear seat to the tie-down hole.

CAUTION:
Make sure that the tie-down hole is firmly plugged with the grommet. Otherwise, dust, smell, etc. may come into the passenger compartment indirectly from the rear quarter, via the side sill from the tie-down hole.

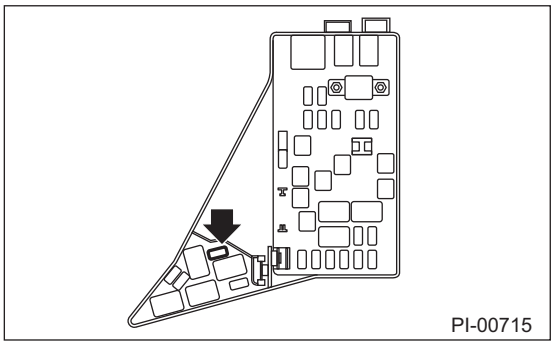


(1) Grommet

30.DELIVERY (TEST) MODE

1) Install the delivery (test) mode fuse with ignition switch to OFF.

CAUTION:
Do not use any fuses that are installed on the vehicle.

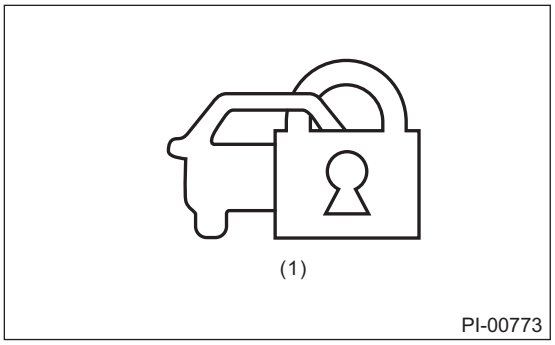


2) Turn the ignition switch to ON and check that the malfunction indicator light starts blinking.
3) If the malfunction indicator light blinks, return the ignition key to LOCK.
4) Remove the delivery (test) mode fuse and attach it to the spare fuse holder provided on the fuse box cover.
5) Then, turn the ignition key to ON again.
6) Make sure that the malfunction indicator light is off. If the malfunction indicator light blinks, carry out an engine diagnosis.

31.IMMOBILIZER SYSTEM

1) Check that the engine starts with all keys that are equipped on vehicle.
2) When starting the engine, check that the security indicator light goes off.
3) Check that the security indicator light blinks in 60 seconds after turning the ignition switch from ON to ACC or to OFF, or immediately after removing the key. (Models without the keyless access with push button start)

4) Immediately after turning ignition switch from ON to OFF, or with the key not in the vehicle and when opening/closing a door while the ignition switch is in ON or ACC with the engine stopped, check that the security indicator light is blinking. (Model with keyless access with push button start)



(1) Security indicator light

NOTE:
If malfunctions occur, refer to “IMMOBILIZER (DIAGNOSTICS)”. <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>

32.PUSH BUTTON START FUNCTION

• CVT model

1) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal OFF, and check that it cycles through ACC → IGN ON → IGN OFF every time the push button ignition switch is pressed, and that the indicator light for the push button ignition switch is illuminated in orange when the ignition switch is in the ACC ON and IGN ON positions.
2) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the indicator light for the push button ignition switch is illuminated in green.

NOTE:
While the select lever button is being pressed, the indicator light of the push button ignition switch does not illuminate in green even if the shift position is in the P range.
3) Get into the vehicle while carrying the access key, with the vehicle in P range and the brake pedal ON, check that the engine starts when you press the push button ignition switch.
4) With the vehicle stopped, the engine running and in P range, check that the engine stops when you press the push button ignition switch.
5) With the vehicle stopped, the engine running and in N range, check that the engine stops when you press the push button ignition switch, and cycles through ACC → IGN ON each time you press the push button ignition switch.

• MT model

1) Get into the vehicle while carrying the access key, with the clutch pedal OFF, and check that it cycles through ACC → IGN ON → IGN OFF every time the push button ignition switch is pressed, and that the indicator light for the push button ignition switch is illuminated in orange when the ignition switch is in the ACC ON and IGN ON positions.
2) Get into the vehicle while carrying the access key, with the clutch pedal ON, check that the indicator light for the push button ignition switch is illuminated in green.
3) Get into the vehicle while carrying the access key, with the clutch pedal ON, check that the engine starts when you press the push button ignition switch.
4) With the vehicle stopped and the engine running, check that the engine stops when you press the push button ignition switch.

33.STARTING CONDITION

Start the engine and check that the engine starts smoothly. If the battery voltage is low, recharge or replace the battery. If any noises are observed, immediately stop the engine and check and repair the abnormal components.

34.EXHAUST SYSTEM

Listen to the exhaust noise to see if no exhaust gas leak or abnormal noises are observed.

35.INDICATOR LIGHT AND WARNING LIGHT

Check that all indicator lights and warning lights operate normally.

36.HEATER & VENTILATION

Operate the heater & ventilation system to check for normal airflow outlet control, air inlet control, airflow capacity and heating performance.

37.AIR CONDITIONER

Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

NOTE:
To prevent the insufficient lubrication of the air conditioner, operate the air conditioner for five minutes at idling.

38.MULTI-FUNCTION DISPLAY (MFD)

Check that the Multi-Function Display (MFD) function operates normally. (Refer to the owner's manual for the operation procedures.)

39.AUDIO

Check that all radio functions operate, the speakers emit sound properly and the noise is at an acceptable level. Also check the CD unit and AUX unit operations.

40.NAVIGATION SYSTEM

1) Check all display functions for normal operation. (Refer to the owner's manual for the operation procedures.)
2) Check that the navigation system operates normally.
3) Check that the rearview camera operates normally.

41.TELEMATICS SYSTEM

Check that the indicator light on the overhead console or on the stereo camera cover assembly goes off.

42.ACCESSORY POWER SUPPLY SOCKET

1) Check the operation of the front accessory power supply socket.
2) Check operation of the accessory power supply socket in console box.

43.LIGHTING SYSTEM

1) Check the headlight operations.
2) Check the stop light operation.
3) Check other lights for normal operations.

44.WIPER DEICER

Check that the wiper deicer operates normally.

NOTE:
When an ambient temperature is 5°C or more, wiper deicer operation is cancelled. Press the switch for 3 seconds or more to perform the compulsory operation.

45.ILLUMINATION CONTROL

Check that the illumination control operates normally.

46.WINDOW WASHER SYSTEM

Check that the window washer system injects the washer fluid to the specified area of the windshield. <Ref. to WW-34, ADJUSTMENT, Front Washer Nozzle and Hose.>

47.WIPER SYSTEM

Check that the front wiper operates normally.

48.POWER WINDOW

• Operate the power window switches one by one to check that each of the power windows goes up and down without noises.
• Check AUTO UP/AUTO DOWN operate properly by operating the power window switch on driver's seat side.

CAUTION:
If battery has been removed, AUTO UP does not operate properly because initialized. In this case, perform the initial setting (reset A) and check AUTO UP operates properly.

NOTE:
Check the power window if the door glass of the driver's seat does not open/close automatically. <Ref. to GW-9, INSPECTION, Power Window System.>

49.SUNROOF

Check that the sunroof operates normally.

NOTE:
For details concerning sunroof initialization, refer to the "SR" section. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

50.REAR DEFOGGER SYSTEM

Check that the rear defogger system operates normally.

51.DOOR MIRROR

Check that the mirror heater and remote control mirror operate normally.

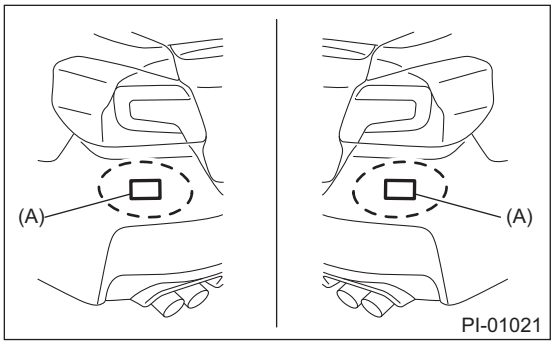
52.PARKING BRAKE

• Check that the parking brake operates normally. When pulling the parking brake lever with a force of 200 N (20 kgf, 45 lb), check that the lever stroke of parking brake lever is 7 to 8 notches.
• Check that the electronic parking brake operates properly by pressing the electronic parking brake switch while depressing the brake pedal.

53.BLIND SPOT DETECTION / REAR CROSS TRAFFIC ALERT (BSD/RCTA)

1) Check that the BSD/RCTA system is activated and deactivated correctly.
   (1) Press the BSD/RCTA OFF switch to check that "BSD/RCTA OFF" is displayed in the combination meter.
   (2) Press the BSD/RCTA OFF switch again to check that the indicators of the right and left side door mirrors illuminate → go off and "BSD/RCTA OFF" is displayed in the combination meter.
   (3) Check that the BSD/RCTA error message is not displayed.
2) Check the rear bumper around the radar sensor for dirt, scratch, affixed stickers and poor paint coating.
• If any dirt is found, clean it off so that the rear bumper is not damaged.
• If any stickers are affixed, remove it so that the rear bumper is not damaged.

• If the bumper is damaged or has poor paint coating, refer to “CAUTION” in “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)”. <Ref. to RVD(diag)-4, CAUTION, General Description.>



(A) Radar sensor

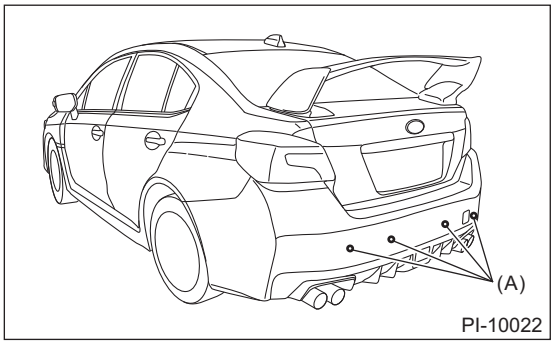
54.Reverse Automatic Braking (RAB)

1) Check that the RAB system is activated and deactivated correctly.
   (1) Start the engine and let the engine idle for 6 seconds or more, and then shift the select lever to “R” range.
   (2) Check that “RAB” and “RAB OFF” turn off in the combination meter.
   (3) Check that the RAB warning screen is displayed on the MFD and “RAB” and “P△” indicators illuminate in green.
   (4) Select “RAB” displayed on the screen, and check that “RAB OFF” is displayed in the combination meter when “RAB OFF/ON” is switched and “RAB OFF” is conducted.
   (5) Select “P△” displayed on the screen, and check that “P△ OFF/ON” can be switched.
2) Check the sonar sensor installed on the rear bumper for parts missing, dirt, scratch, foreign objects, etc.
• The sensor surface must not stick out or sink in at 0.5 mm or more from the rear bumper surface.

If the sensor surface largely sinks in, the sensor may not engaged in the holder behind the bumper. In this case, check the installation condition of the sensor after removing the bumper.

• Make sure that there are no foreign objects (tape, stickers, dust or dirt) on the sonar sensor surface.

If there is a layer of foreign objects on the sensor surface, remove completely so that no residue remains.



(A) Sonar sensor

55.DIAGNOSTIC TROUBLE CODE (DTC) CHECK

Read the diagnostic trouble code and check that the diagnostic trouble code is not detected.
If any diagnostic trouble code is detected, clear all.
1) Read Diagnostic Trouble Code

NOTE:
For detailed operation procedures, refer to “Application help”.
2) Clear Memory Mode

NOTE:
For detailed operation procedures, refer to “Application help”.

56.EyeSight ASSIST MONITOR

Check that the indicator light illuminates with the ignition ON.

57.AUTO VEHICLE HOLD (AVH) SYSTEM

Check that the AVH system is activated and deactivated correctly.
- Press the AVH switch, and check that the AVH ON indicator illuminates in the combination meter.
- Check that the vehicle hold condition is still maintained when the engine is started, the select lever is placed in “D” range and the brake pedal is released.
- Check that the AVH indicator illuminates in the combination meter while in the vehicle hold condition.
- Check that the vehicle hold condition is deactivated by depressing the accelerator pedal in the vehicle hold condition.

58.FRONT VIEW MONITOR

Press the MFD/VIEW switch while the vehicle is at a standstill, and check if an image ahead of the vehicle is displayed on MFD.

59.BRAKE TEST

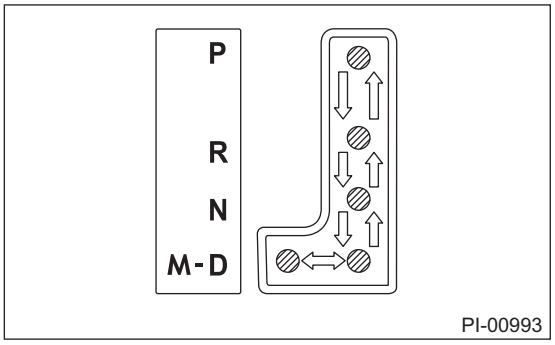
Check the foot brake for normal operations.

NOTE:
On the model with brake assist mechanism, the brake pedal feels lighter when the brake pedal is depressed hard or quickly. However, those are not malfunction but the phenomena that occur when the brake assist mechanism functions properly.

60.SHIFT CONTROL

• CVT

1) Turn the ignition switch to ON.
2) While brake pedal is not depressed, check if the select lever does not move from “P” range.
3) While brake pedal is depressed, check if the select lever moves from “P” range.
4) Set the selector lever to each gear position and check the shifting while driving the vehicle. Operate the paddle shift at manual mode and check the shifting while driving the vehicle.



Selector position	Gear position							
	1st	2nd	3rd	4th	5th	6th	7th*1	8th*1
D	Continuously variable speed change							
Manual mode	OK	OK	OK	OK	OK	OK	OK	OK

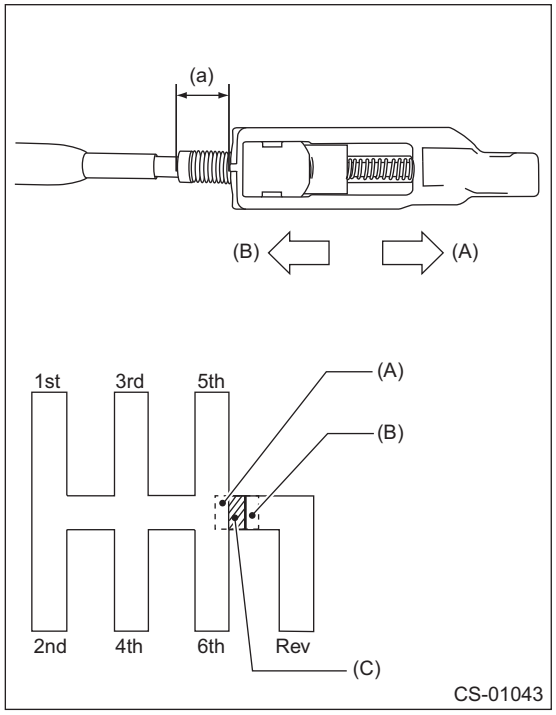
*1: In S# mode

5) Set the select lever to other than “P” range. (Models without the keyless access with push button start)
6) When the ignition switch is turned to OFF, check if the ignition key switch cannot be removed. (Models without the keyless access with push button start)

• 6MT (Except for STI model)

1) Check for smooth operation to each position. Especially, shift to 5th ←→ 6th and to Rev, and check for stuck.

2) Check the slider returns to the original position by shifting to the Rev and then back in neutral while pulling up the slider.
3) If the shifting operation is not smooth, readjust the exposed length (a) of MT gear select cable by referring to the following figure.



(a) Exposed length of MT gear select cable
(A) Extend direction of exposed length of MT gear select cable
(B) Shorten direction of exposed length of MT gear select cable
(C) Specification of exposed length (a)

- If the shift cannot be inserted to push the reverse lock bracket 5th and 6th.

→ Extend the exposed length (a) of MT gear select cable.

- When operate the select lever to 4th → 5th, it cannot be operated at select lever crank line.

→ Shorten the exposed length (a) of MT gear select cable.

- **6MT (STI model)**

1) Check for smooth operation to each position.
2) Check that the lever cannot be moved to the reverse position unless the slider is pulled up.
3) Check that the lever can be moved to the reverse position when the slider is pulled up.

61.CRUISE CONTROL

Operate the cruise control system. Check that the system is activated and deactivated correctly.

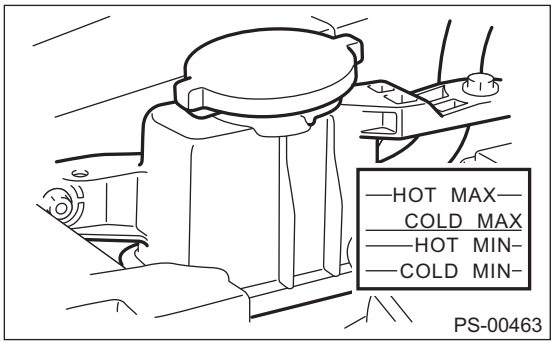
62.SUBARU EyeSight

- Operate the EyeSight system. Check that the system is activated and deactivated correctly.
- Check the stereo camera cover opening for foreign matter.
- Check the glass in front of stereo camera for dirt and stickers.
- Check the lens and filter of the stereo camera for dirt such as fingerprints.
- Check the filter at lens portion of stereo camera for damage.
- According to the “PC” section, check the windshield glass and dashboard in front of stereo camera to make sure that no aftermarket part is adhered or attached in the prohibited area. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>

• When delivering the vehicle, explain to the customer to make sure not to touch the filter at lens portion of the stereo camera.

63.POWER STEERING FLUID (HYDRAULIC POWER STEERING MODEL)

CAUTION:
If any power steering fluid is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.
Check that the power steering fluid level is normal. If the amount of power steering fluid is insufficient, check that no leaks are found. Then, add the necessary amount of specified power steering fluid.



64.POWER STEERING SYSTEM (ELECTRIC POWER STEERING MODEL)

Check that the electric power steering warning light illuminates when the ignition switch is turned to ON, and that the electric power steering warning light goes off after the engine is started.

65.FLUID LEAKAGE

Check entire areas of the vehicle for any trace of coolant/oil (such as engine and gear oil)/fluid (such as transmission and brake) leaks.

66.WATER LEAK TEST

Spray the vehicle with water using a hose and check that no water enters the passenger compartment.
• Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
• Close all the windows and doors securely. Close the front hood and trunk lid before starting the test.
• Spray the vehicle with water using a hose. The rate of water spray must be approx. 20 to 25 L (5.3 — 6.6 US gal, 4.4 — 5.5 Imp gal) per minute.
When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When spraying water on areas other than the floor and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.

NOTE:
Be sure to keep the hose at least 10 cm (3.9 in) away from vehicle.
Check the following areas.
• Front window and body framework mating portion
• Door mating portions
• Glass mating portions
• Rear quarter window mating portions
• Rear window and body framework mating portion
• Around roof drips
If any dampness in the compartments is discovered after the water has been applied, carefully check all the areas that may have possibly contributed to the leak.

67.APPEARANCE 2

1) If protective coating sheet (wrap guard and Tyvek®*) is applied, remove it.

NOTE:
• It is easier to remove the protective coating sheet using steam.

• For a vehicle left for a long time or at low temperature, sprinkle some water heated to 50 — 60°C (122 — 140°F) over the vehicle to raise its surface temperature before peeling off the protective coating sheet. Do not use the water heated to over 60°C (140°F).
• Keep solvent from touching the resin or rubber parts. Do not use coating wax or solvent while the component surface temperature is high due to hot weather etc.
• Dispose of the protective coating sheet as burnable industrial garbage.
• If any label is attached to the fog light lens, remove it.

2) Check the whole vehicle body for flaking paint, damage by transportation, corrosion, dirt, cracks or blisters.

NOTE:
• It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.
• Do not repair the body paint unless absolutely necessary. Also, if the vehicle is in need of repair to remove scratches or corroded paint, the repair area must be limited to the minimum. Re-painting and spray painting must be avoided as much as possible.

3) Check each window glass for scratches carefully. Slight damage may be removed by polishing with cerium oxide. (Fill a cap half with cerium oxide, and add warm water to it. Then agitate the content until it turns to wax. Apply this wax to a soft cloth, and polish the glass with it.)

4) Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with sandpaper of #80 to #180 and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.

5) Check each portion of body and all of the exterior parts for deformation or distortion. Also, check each light lens for cracks.

6) Peel the protective tape, vinyl wrapping and identification seal attached to the following places.
• Seat
• Door trim
• Door trim SW PNL (each door)
• Floor carpet
• Side sill (with SUS plate RH/LH)
• Fuel opener lever
• Door mirror
• Front fog light
• Rear shelf
• Aluminum pedal
• Steering wheel (model with ultra suede steering wheel)

Symbol
R: Replace
I: Inspection
P: Perform

NOTE:
1. When the vehicle is used under severe conditions, replace the engine oil and engine oil filter every 3 months or 4,800 km (3,000 miles).
2. When the vehicle is used under extremely low or high temperature conditions, the fuel filter may become dirty. Therefore, it should be replaced frequently.
3. When the vehicle is used in high humidity area or mountain area, replace the brake fluid every 15 months or 24,000 km (15,000 miles).
4. When the vehicle is used under severe conditions, replace every 6 months or 9,600 km (6,000 miles).
5. This inspection is not required to maintain emission warranty eligibility and it does not affect the manufacturer's obligations under EPA's in-use compliance program.
6. When the vehicle is used in extremely dusty conditions, it should be replaced more often.

7. A tire should be replaced when the tread wear indicator appears as a solid band across the tread. The indicators appear when the remaining tread has been worn to 1.6 mm (0.063 in) or less.
8. To prevent cooling system leakage, be sure to add SUBARU genuine cooling system conditioner when replacing coolant.

Examples of severe conditions

a. Drive repeatedly at short distance. (Maintenance items 1 and 2)
b. Drive repeatedly on bumpy muddy road. (Maintenance items 15, 17 and 19)
c. Drive repeatedly in dusty conditions. (Maintenance items 7 and 23)
d. Drive in extremely cold weather. (Maintenance items 1, 2, 16, 18, 20 and 22)
e. Area where salt or other corrosive used. (Maintenance items 5, 15, 16, 17 and 20)
f. Coastal area. (Maintenance item 5)

3. Engine Oil

A: INSPECTION

Refer to “LU” section for engine oil inspection. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.> <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>

B: REPLACEMENT

Refer to “LU” section for engine oil replacement. <Ref. to LU(STI)-11, REPLACEMENT, Engine Oil.> <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>

4. Engine Oil Filter

A: REPLACEMENT

Refer to “LU” section for engine oil filter replacement. <Ref. to LU(STI)-28, REMOVAL, Engine Oil Filter.>
<Ref. to LU(w/o STI)-49, REMOVAL, Engine Oil Filter.>

5. Spark Plug

A: REPLACEMENT

Refer to “IG” section for spark plug replacement. <Ref. to IG(STI)-5, REMOVAL, Spark Plug.> <Ref. to IG(w/o STI)-4, REMOVAL, Spark Plug.>

6. V-belt

A: INSPECTION

Refer to “ME” section for V-belt inspection. <Ref. to ME(STI)-47, INSPECTION, V-belt.> <Ref. to ME(w/o STI)-81, INSPECTION, V-belt.>

B: REPLACEMENT

Refer to “ME” section for V-belt replacement. <Ref. to ME(STI)-42, REMOVAL, V-belt.> <Ref. to ME(w/o STI)-77, REMOVAL, V-belt.>

7. Timing Belt

A: INSPECTION

Refer to “ME” section for timing belt inspection. <Ref. to ME(STI)-59, INSPECTION, Timing Belt.>

B: REPLACEMENT

Refer to “ME” section for timing belt replacement. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>

8. Fuel Line

A: INSPECTION

The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose damage, loose band, etc. If faulty parts are found, repair or replace them. <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>

9. Fuel Filter

A: REPLACEMENT

For fuel filter replacement procedure, refer to “FU” section. <Ref. to FU(STI)-91, REMOVAL, Fuel Filter.> <Ref. to FU(w/o STI)-181, REMOVAL, Fuel Filter.>

B: INSPECTION

If the filter is clogged, or if the replacement interval has been reached, replace it.

10.Air Cleaner Element

A: REPLACEMENT

Refer to “IN” section for air cleaner element replacement. <Ref. to IN(STI)-7, REMOVAL, Air Cleaner Element.> <Ref. to IN(w/o STI)-11, REMOVAL, Air Cleaner Element.>

11.Cooling System

A: INSPECTION

1. RADIATOR

Check that there are no engine coolant leaks from the hose connections. Refer to “CO” section for radiator inspection. <Ref. to CO(STI)-22, INSPECTION, Radiator.> <Ref. to CO(w/o STI)-44, INSPECTION, Radiator.>

2. RADIATOR CAP

Refer to “CO” section for radiator cap inspection. <Ref. to CO(STI)-23, INSPECTION, Radiator Cap.> <Ref. to CO(w/o STI)-46, INSPECTION, Radiator Cap.>

3. COOLING FAN

Refer to “CO” section for cooling fan inspection. <Ref. to CO(STI)-8, INSPECTION, Radiator Fan System.> <Ref. to CO(w/o STI)-9, INSPECTION, Radiator Fan System.>

4. COOLING SYSTEM

Start the engine, and then inspect that it does not overheat or it is not cooled excessively. If it overheats or it is cooled excessively, check the cooling system.

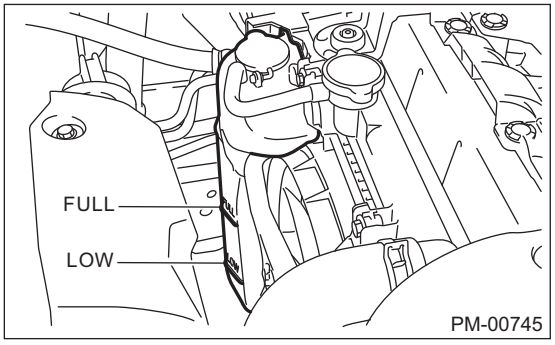
12.Engine Coolant

A: INSPECTION

CAUTION:
- **Do not use water instead of coolant.**
- **Refer to "RM" section for the recommended engine coolant. <Ref. to RM-3, ENGINE COOLANT, RECOMMENDED MATERIALS, Recommended Materials.>**

1) Park the vehicle on a level surface.
2) Make sure the engine coolant level in the reservoir tank is between "FULL" and "LOW" when the engine is cold.

NOTE:
If the engine coolant level drops, make sure that there are no engine coolant leakage, and add engine coolant to the "FULL" line.



3) Remove the radiator cap and make sure that the radiator is filled with engine coolant up to the filler neck position.

B: REPLACEMENT

Refer to "CO" section for engine coolant replacement. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.> <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

13.Clutch System

A: INSPECTION AND ADJUSTMENT

Refer to “CL” section for inspection and adjustment of clutch system. <Ref. to CL-33, INSPECTION, Clutch Pedal.> <Ref. to CL-34, ADJUSTMENT, Clutch Pedal.>

14.Transmission Gear Oil

A: INSPECTION

Refer to “6MT (TY75)” or “6MT (TY85)” section for transmission gear oil inspection. <Ref. to 6MT(TY75)-24, INSPECTION, Transmission Gear Oil.> <Ref. to 6MT(TY85)-27, INSPECTION, Transmission Gear Oil.>

B: REPLACEMENT

Refer to “6MT (TY75)” or “6MT (TY85)” section for transmission gear oil replacement. <Ref. to 6MT(TY75)-24, REPLACEMENT, Transmission Gear Oil.> <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>

15.CVTF

A: INSPECTION

Refer to “CVT (TR690)” section for CVTF inspection. <Ref. to CVT(TR690)-36, INSPECTION, CVTF.>

B: REPLACEMENT

Refer to “CVT (TR690)” section for CVTF replacement. <Ref. to CVT(TR690)-37, REPLACEMENT, CVTF.>

16.Front & Rear Differential Gear Oil

A: INSPECTION

1. FRONT DIFFERENTIAL (MT MODEL)

Front differential gear oil of MT model lubricates the transmission and differential together. Refer to “6MT (TY75)” or “6MT (TY85)” section for inspection. <Ref. to 6MT(TY75)-24, INSPECTION, Transmission Gear Oil.> <Ref. to 6MT(TY85)-27, INSPECTION, Transmission Gear Oil.>

2. FRONT DIFFERENTIAL (CVT MODEL)

Refer to “CVT (TR690)” section for inspection of CVT model front differential gear oil. <Ref. to CVT(TR690)-40, INSPECTION, Differential Gear Oil.>

3. REAR DIFFERENTIAL

Refer to “DI” section for rear differential gear oil inspection. <Ref. to DI-19, INSPECTION, Differential Gear Oil.>

B: REPLACEMENT

1. FRONT DIFFERENTIAL (MT MODEL)

Front differential gear oil of MT model lubricates the transmission and differential together. Refer to “6MT (TY75)” or “6MT (TY85)” section for replacement. <Ref. to 6MT(TY75)-24, REPLACEMENT, Transmission Gear Oil.> <Ref. to 6MT(TY85)-27, REPLACEMENT, Transmission Gear Oil.>

2. FRONT DIFFERENTIAL (CVT MODEL)

Refer to CVT (TR690) section for replacement of CVT model front differential gear oil. <Ref. to CVT(TR690)-41, REPLACEMENT, Differential Gear Oil.>

3. REAR DIFFERENTIAL

Refer to “DI” section for rear differential gear oil replacement. <Ref. to DI-19, REPLACEMENT, Differential Gear Oil.>

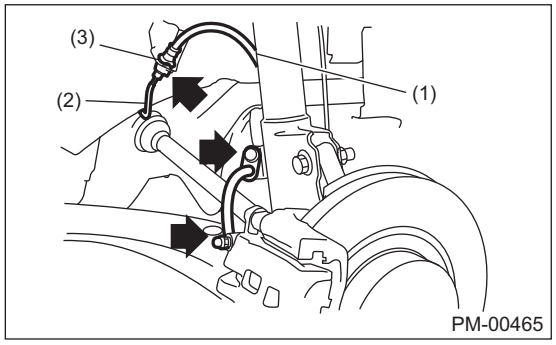
17.Brake Line

A: INSPECTION

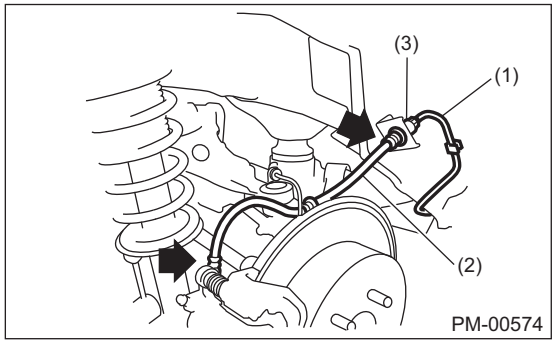
1. BRAKE LINE

1) Check for scratches, swelling, corrosion, traces of fluid leakage on the brake hoses or pipe joints.
2) Make sure that brake pipes/hoses do not interfere with adjacent parts and there is no loose connector/clamp during driving.
3) Check any trace of fluid leakage, scratches, etc. on master cylinder, wheel cylinder and hydraulic unit.

NOTE:
• When the brake fluid level in the reservoir tank is lower than specified limit, the brake warning light on the combination meter will illuminate.
• Visually check the brake hose for damage. (Use a mirror where it is difficult to see)



(1) Front brake hose
(2) Front brake pipe
(3) Clamp



(1) Brake pipe
(2) Rear brake hose
(3) Clamp

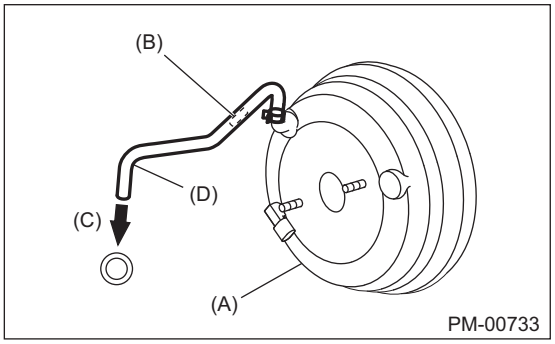
2. SERVICE BRAKE

Refer to “BR” section for foot brake inspection. <Ref. to BR-116, INSPECTION, Brake Pedal.>

3. BRAKE SERVO SYSTEM

1) With the engine off, depress the brake pedal several times applying the same pedal force. Check that the travel distance should not change.
2) With the brake pedal depressed, start the engine. Check that the pedal moves slightly toward the floor.
3) With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds. Check that the pedal height does not change.

4) A check valve is built into the brake booster nipple. Disconnect the vacuum hose to inspect function of check valve.
Check that check valve ventilates from booster side to engine side. Also, check that there is no ventilation from engine side to booster side.



(A) Brake booster
(B) Check valve
(C) Engine side
(D) Vacuum hose

5) Check the vacuum hose for cracks or other damage.

CAUTION:
When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.
6) Check that the vacuum hose is securely tightened.

18.Brake Fluid

A: INSPECTION

Refer to “BR” section for brake fluid inspection. <Ref. to BR-100, INSPECTION, Brake Fluid.>

B: REPLACEMENT

Refer to “BR” section for brake fluid replacement. <Ref. to BR-100, REPLACEMENT, Brake Fluid.>

19.Disc Brake Pad and Disc

A: INSPECTION

Refer to “BR” section for disc brake pad and disc inspection. <Ref. to BR-27, INSPECTION, Front Brake Pad.> <Ref. to BR-53, INSPECTION, Rear Brake Pad.> <Ref. to BR-31, INSPECTION, Front Disc Rotor.> <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>

20.Parking Brake

A: INSPECTION

1. DRUM IN DISC TYPE MODEL

Refer to “PB” section for drum in disc type model parking brake inspection. <Ref. to PB-18, INSPECTION, Parking Brake Assembly (Rear Disc Brake).>

2. ELECTRONIC PARKING BRAKE MODEL

Refer to “VDC (DIAGNOSTICS)” section for electronic parking brake model parking brake inspection. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: ADJUSTMENT

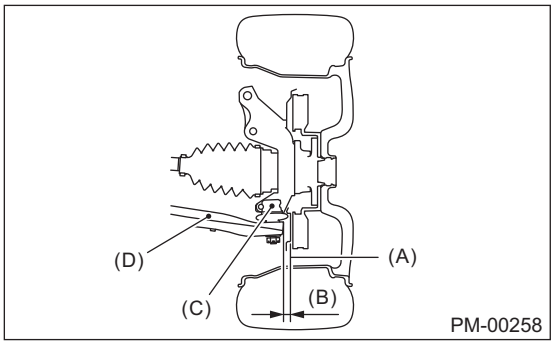
Refer to “PB” section for parking brake adjustment. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

21.Suspension

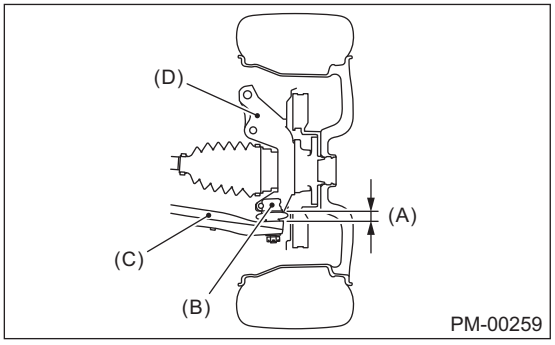
A: INSPECTION

1. FRONT SUSPENSION BALL JOINT

1) Lift up the vehicle until front wheels are off ground.
2) Grasp the bottom of tire and move it in and out in axial direction. If movement (B) is observed between the brake disc cover (A) and end of front arm (D), ball joint (C) may be excessively worn.



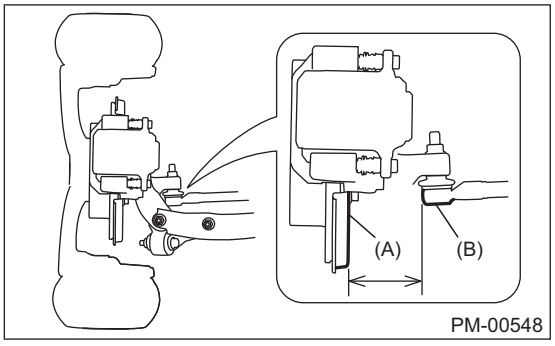
3) Next, grasp the end of front arm (C) and move it up and down. If movement (A) between the housing (D) and front arm (C) boss is observed, ball joint (B) may be excessively worn.



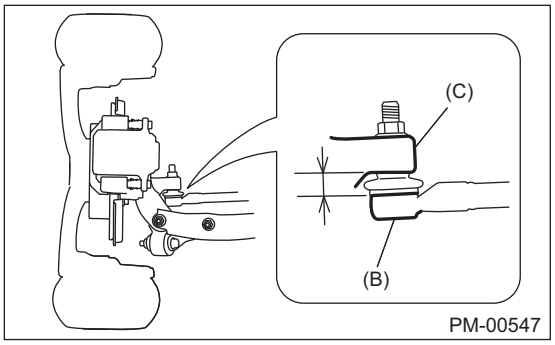
4) If the relative movement is observed in the preceding two steps, remove and inspect the ball joint. If the free play exceeds standard value, replace the ball joint. <Ref. to FS-31, Front Ball Joint.>
5) Damage of dust boots
Visually inspect the ball joint dust boots. Replace if ball joint is damaged.

2. REAR SUSPENSION BALL JOINT

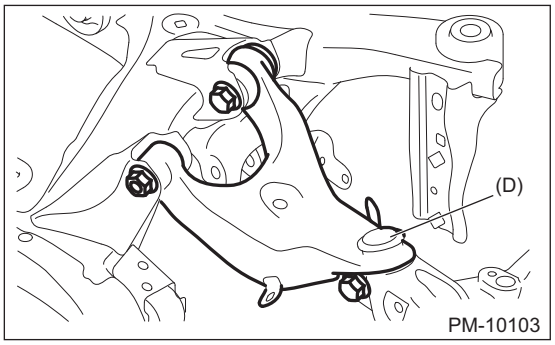
1) Lift up the vehicle until rear wheels are off ground.
2) Grasp the bottom of tire and move it in and out in axial direction.
3) If movement is observed between the brake disc cover (A) and end of front lateral link (B), ball joint may be excessively worn.



4) Grasp the end of front lateral link (B) and move it up and down. If movement is observed between the housing (C) and front lateral link (B) boss, ball joint may be excessively worn.



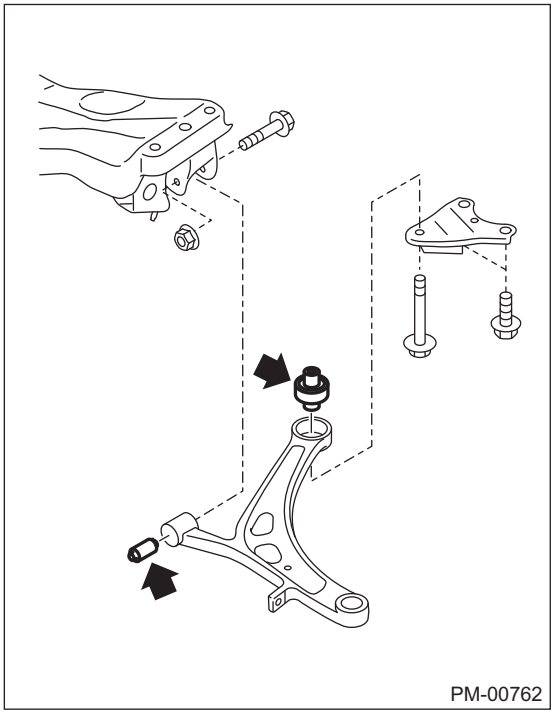
5) If the movement related to the previous two steps is observed, replace the front lateral link. <Ref. to RS-21, Front Lateral Link.>
6) Damage of dust boots
Visually inspect the ball joint dust boots. Replace if front lateral link is damaged.
7) Check upper arm ball joint (D) in the same manner.



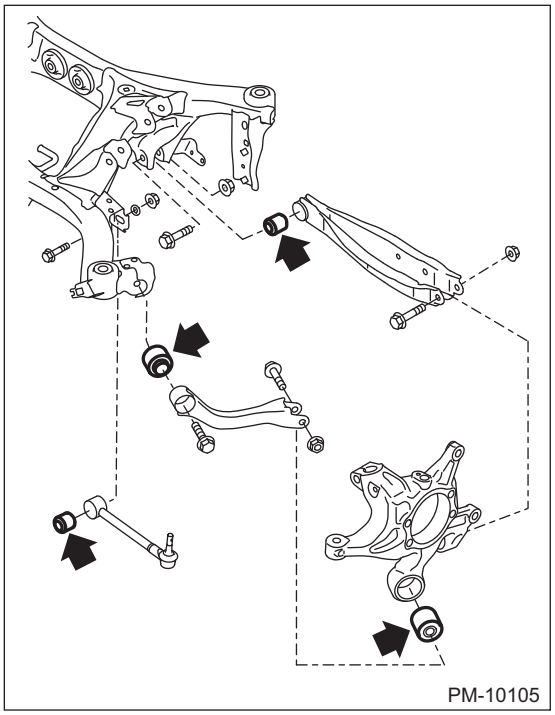
3. FRONT, REAR SUSPENSION BUSHING

1) Apply pressure with tire lever etc, and inspect the bushing for excessive wear or damage. If defective, replace the bushing.

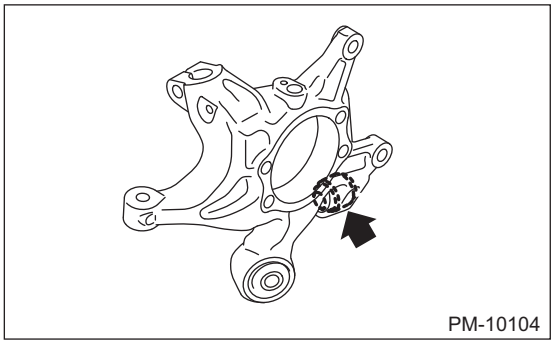
- Front suspension bushing



- Rear suspension bushing



2) Visually check the pillow ball bushing of housing. Replace the housing if damaged.



4. WHEEL ARCH HEIGHT

Refer to “FS” section for wheel arch height inspection. <Ref. to FS-10, WHEEL ARCH HEIGHT, INSPECTION, Wheel Alignment.>

5. WHEEL ALIGNMENT

Measure and adjust the front and rear wheel alignment at a time. Refer to “FS” section for measurement and adjustment of wheel alignment. <Ref. to FS-10, INSPECTION, Wheel Alignment.>

6. OIL LEAKAGE OF STRUT AND SHOCK ABSORBER

Visually inspect the front strut and rear shock absorber for oil leakage. Replace the front strut and rear shock absorber if oil leaks excessively.

7. TIGHTNESS OF BOLTS AND NUTS

Check the bolts and nuts for looseness. Retighten the bolts and nuts to specified torque. If non-reusable parts are removed, replace them with new parts. <Ref. to FS-2, General Description.> <Ref. to RS-2, General Description.>

8. DAMAGE TO SUSPENSION PARTS

Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. Thoroughly remove the deposits of the lower spring seat of strut where dust or mud are likely piled up. If necessary, replace the damaged parts with new parts. If minor rust formation, pitting, etc. are noted, remove the rust and take rust prevention measure.

- Front suspension
  - Front arm
  - Front crossmember
  - Strut
- Rear suspension
  - Sub frame
  - Front lateral link
  - Rear lateral link
  - Upper arm
  - Trailing link
  - Shock absorber
- In the area where salt is sprayed to melt snow on a road in winter, check suspension parts for damage caused by rust every 12 months after lapse of 60 months. Take rust prevention measures as required.

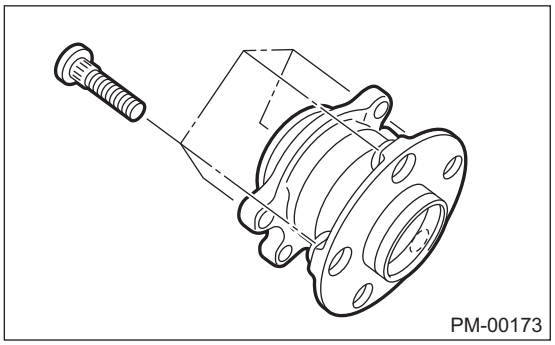
22.Wheel Bearing

A: INSPECTION

1. FRONT WHEEL BEARING

NOTE:
Inspect the condition of front wheel bearing grease.
1) Jack-up the front side of vehicle.
2) While holding the front wheel by hand, swing it in and out to check bearing free play.
3) Loosen the wheel nuts, and remove the front wheel.
4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:
Straight-ahead position within 0.05 mm (0.0020 in)
5) Remove the bolts and self-locking nuts, and extract the front arm from front crossmember.
6) Remove the joint of front drive shaft from transmission. <Ref. to DS-17, Front Axle.>
7) While supporting the front drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
If the hub is noisy or binds, replace the front axle.

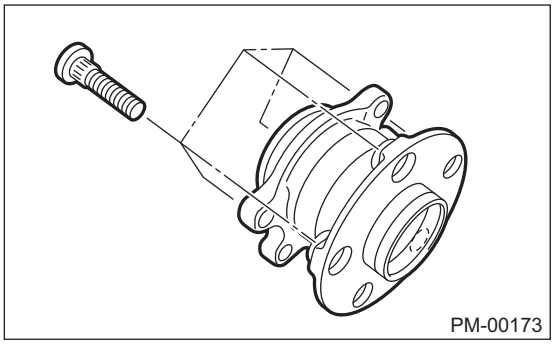


PM-00173

2. REAR WHEEL BEARING

1) Jack-up the rear side of vehicle.
2) While holding the rear wheel by hand, swing it in and out to check bearing free play.
3) Loosen the wheel nuts, and remove the rear wheel.
4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:
Straight-ahead position within 0.05 mm (0.0020 in)
5) Remove the joint of rear drive shaft from rear differential. <Ref. to DS-59, Rear Drive Shaft.>
6) While supporting rear drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
If the hub is noisy or binds, replace the rear axle.



PM-00173

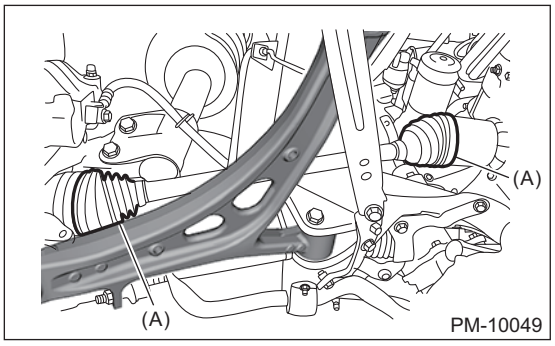
23.Axle Boots & Joints

A: INSPECTION

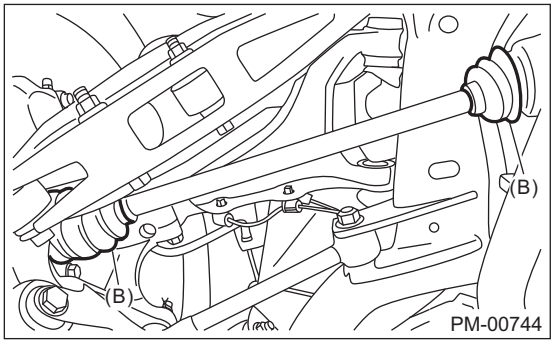
1. FRONT AND REAR AXLE BOOTS

Inspect the front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace with new part. <Ref. to DS-43, Front Drive Shaft.> <Ref. to DS-59, Rear Drive Shaft.>

- Front



- Rear



2. PROPELLER SHAFT

Inspect the propeller shaft for damage or failure. If faulty, replace with new part. <Ref. to DS-12, Propeller Shaft.>

24.Tire Inspection and Rotation

A: INSPECTION

Refer to “WT” section for tire inspection and rotation. <Ref. to WT-5, INSPECTION, Tire and Wheel.>

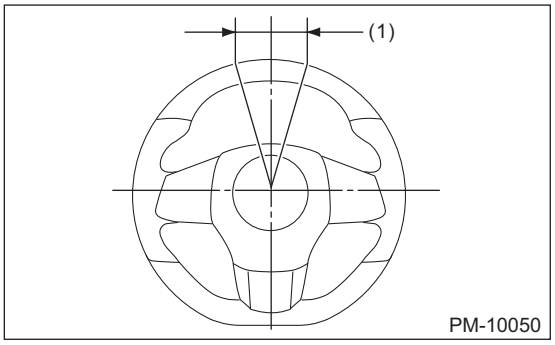
25.Steering System (Power Steering)

A: INSPECTION

1. STEERING WHEEL

1) Set the steering wheel in a straight-ahead position, and check the wheel spokes to make sure they are correctly set in their specified positions.
2) Lightly turn the steering wheel to the left and right to determine the point where front wheels start to move. Measure the distance of the movement of steering wheel (periphery).

Steering wheel free play:
0 — 17 mm (0 — 0.67 in)



(1) Steering wheel free play

Move the steering wheel toward the shaft to check if there is play in the direction.

Play limit:
0.5 mm (0.020 in)

3) Drive the vehicle and check the following items.
(1) Steering force:
The effort required for steering should be smooth and even at all points, and should not vary.
(2) Pulled to one side:
Steering wheel should not be pulled to one side while driving on a level surface.
(3) Wheel runout:
Steering wheel should not show any sign of runout.
(4) Return status:
Steering wheel should return to its original position after it has been turned and then released.

2. STEERING SHAFT JOINT

If steering wheel play is excessive, disconnect the universal joint of steering shaft and then check the play where the joints cross and yawing torque. Also, check the seal for damage or serrations for wear. If the joint is loose, retighten the mounting bolts to the specified torque. <Ref. to PS-19, Universal Joint.>

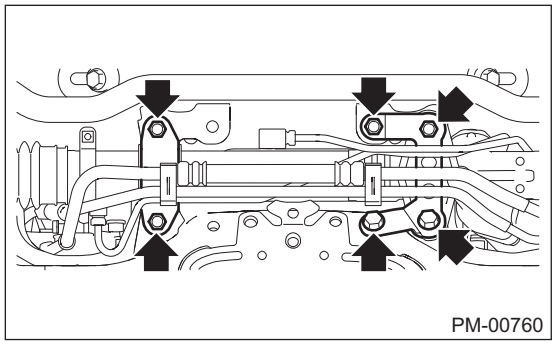
Tightening torque:
24 N·m (2.4 kgf-m, 17.4 ft-lb)

3. GEARBOX

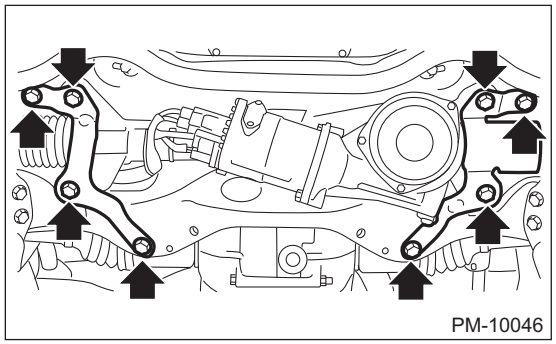
1) Set the steering wheel in the straight position, then rotate it 90° in both the left and right directions. While steering wheel is being rotated, check the looseness of the gearbox.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

- Hydraulic power steering

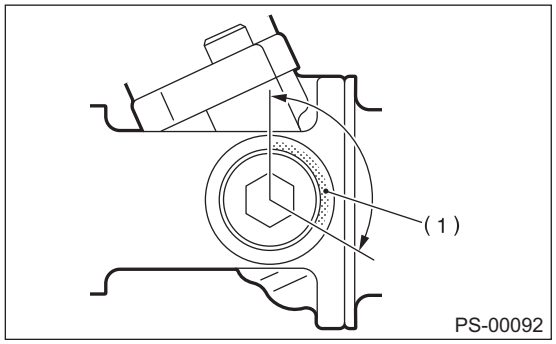


- Electric power steering



2) Check the boot for damage, cracks or deterioration.
3) With the vehicle stopped on a level surface, quickly turn the steering wheel to the left and right.
While steering wheel is being rotated, check the gear backlash. If any noise is noticed, adjust the gear backlash. <Ref. to PS-76, GEARBOX BACKLASH ADJUSTMENT, ADJUSTMENT, Electric Power Steering Gearbox.>
Adjust the hydraulic power steering as follows.
(1) Loosen the adjusting screw, and apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1102



(1) Apply liquid gasket to 1/3 or more of the entire perimeter.

(2) Tighten the adjusting screw, then loosen it.

CAUTION:
Adjust the steering rack to the straight forward position.

Tightening torque:
25 N·m (2.5 kgf-m, 18 ft-lb)
(3) Tighten the adjusting screw, then loosen it.
(4) Tighten the adjusting screw.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.2 ft-lb)

(5) Then, return the adjusting screw by 5° and fix it.

(6) Install the lock nut. While holding the adjusting screw with wrench, tighten the lock nut using ST.

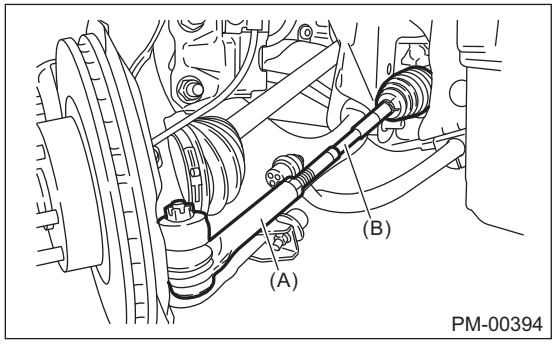
ST 926230000 SPANNER

Tightening torque (lock nut):
25 N·m (2.5 kgf-m, 18 ft-lb)

Hold the adjusting screw with wrench to prevent it from turning while tightening the lock nut.

4. TIE-ROD

1) Check the tie-rod and tie-rod end for bend, cracks or other damages.



(A) Tie-rod end
(B) Tie-rod

2) Confirm that the connections of knuckle ball joints for play, and then check for damage on dust boots and free play of ball studs. If castle nut is loose, retighten it to the specified torque, then tighten further up to a maximum of 60° until the cotter pin hole is aligned.

Tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)

3) Check the tightening of tie-rod end lock nut. If it is loose, tighten it to the specified torque.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

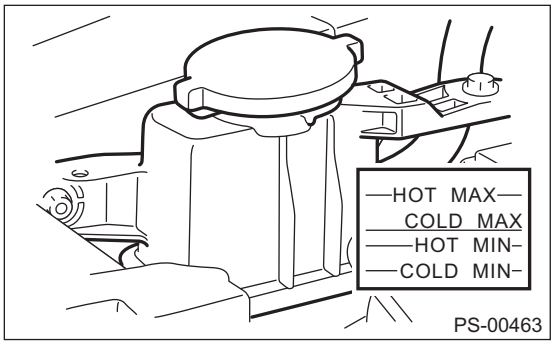
5. POWER STEERING FLUID LEVEL

CAUTION:
If any power steering fluid is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.

NOTE:
- For electric power steering model, inspection is not necessary.
- When the power steering fluid temperature is 20°C (68°F), check the fluid level on the “COLD” side.
- When the power steering fluid temperature is 80°C (176°F), check the fluid level on the “HOT” side.

1) Stop the engine to park the vehicle on a level surface.

2) Check the fluid level using the scale on the outside of the reservoir tank. If the level is below “MIN”, fill fluid up to “MAX” level.



NOTE:
If fluid level is at “MAX” level or above, drain fluid to keep the level in the specified range of indicator by using a syringe or the like.

Recommended fluid:
<Ref. to RM-3, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

Fluid capacity:
<Ref. to SPC-10, CAPACITY, WRX STI.>

6. POWER STEERING FLUID FOR LEAKS

CAUTION:
• Wipe the leaked fluid off after correcting fluid leaks.
• Also pay attention to interference between hoses or pipes and other parts when inspecting fluid leaks.
• If any power steering fluid is spilt over the exhaust pipe, wipe it off with a cloth to avoid emitting smoke or causing a fire.
For hydraulic power steering model, inspect the underside of oil pump, gearbox of power steering system, hoses, pipes and their couplings for fluid leaks.
If fluid leakage is found, tighten the mounting bolt (or nut) again or replace with a new part.

7. HOSES OF OIL PUMP FOR DAMAGES

For model with hydraulic power steering, check the pressure hose or return hose of the oil pump for cracks, swelling, damages. Replace the hose with a new part if necessary.

CAUTION:
When installing the hose, do not twist or bend.

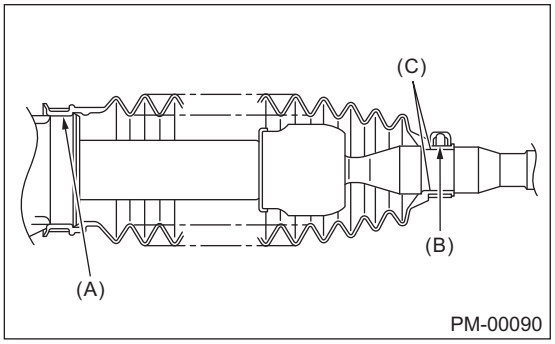
8. POWER STEERING PIPES FOR DAMAGES

For model with hydraulic power steering, check the power steering pipe for corrosion or damages.
Replace the pipe with a new part if necessary.

9. GEARBOX BOOTS

Inspect both sides of the gearbox boot as follows, and correct the defects if necessary.
1) The (A) and (B) positions of the gearbox boot are fitted in (A) and (C) grooves of gearbox and the rod.
2) Clips are fitted onto the boot grooves to the positions (A) and (B) of the boot.
3) Check that there is no cracks or holes in the boot.

NOTE:
Rotate (B) position of gearbox boot against the torsion produced by the adjustment of toe-in etc.



10.MOUNTING BOLT & NUT

Inspect the fitting bolts and nuts of oil pump and bracket for looseness, and retighten them if necessary.

11.HARNESS INSPECTION (ELECTRIC POWER STEERING MODEL)

Check the harness of the electric power steering for cracks or damages.
Replace the electric power steering gear box with a new part if necessary.

12.ELECTRIC POWER STEERING CONTROL MODULE INSPECTION (ELECTRIC POWER STEERING MODEL)

Check for the electric power steering diagnostic trouble codes. If the diagnostic trouble code is detected, perform the diagnosis. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>
Replace the steering gear box with a new part if necessary.

26.A/C Filter

A: REPLACEMENT

Refer to “AC” section for A/C filter replacement. <Ref. to AC-96, REPLACEMENT, A/C Filter.>

ENGINE 1 SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

(3)	O-ring	(7)	Clip	(11)	Cushion
(4)	Fuel pump harness	(8)	Spacer	(12)	Fuel level sensor

* When removing the cushion from the fuel chamber assembly, replace it with a new part.

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Place “NO OPEN FLAMES” signs near the working area.
- Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Always inspect for fuel leaks after removing/installing the fuel system components.
- Follow all government and local regulations concerning disposal of refuse when disposing fuel.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18471AA000	18471AA000	FUEL PIPE ADAPTER	Used for draining fuel.
 ST42099AE000	42099AE000	QUICK CONNECTOR RELEASE	Used for removing the quick connector.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

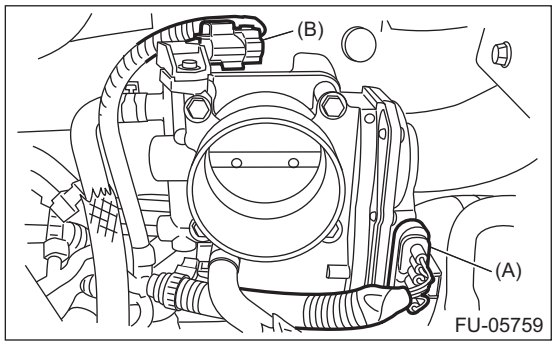
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for inspecting the waveform of each sensor.
Mighty Vac	Used for inspecting the manifold absolute pressure sensor.
DST-i	Used together with Subaru Select Monitor 4.

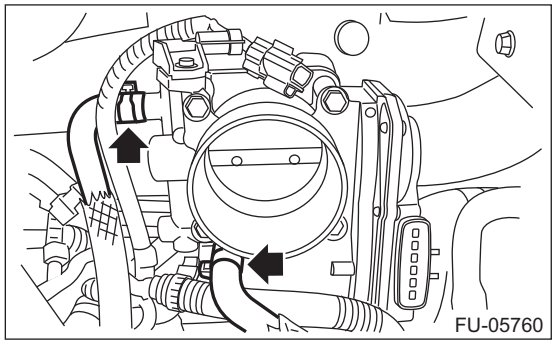
2. Throttle Body

A: REMOVAL

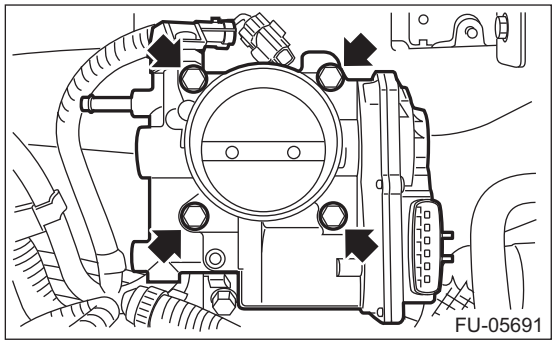
1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
6) Disconnect the connector (A) from the throttle position sensor, and the connector (B) from the manifold pressure sensor.



7) Disconnect the engine coolant hose from throttle body.



8) Remove the throttle body from the intake manifold.



B: INSTALLATION

Install in the reverse order of removal.

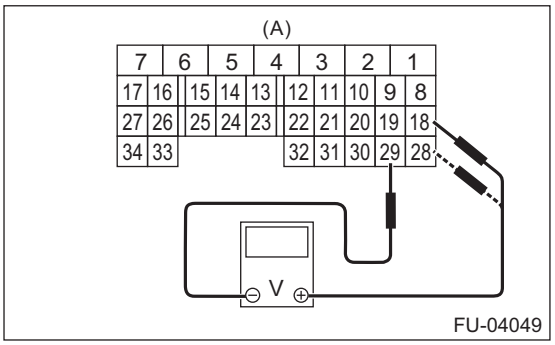
NOTE:
Use a new gasket.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

C: INSPECTION

1. THROTTLE SENSOR INSPECTION (METHOD WITH CIRCUIT TESTER)

1) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
2) Start and warm up the engine.
3) Measure the voltage between ECM connector terminals at idling.



(A) To ECM connector

Throttle sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	18 (+) and 29 (–)	Approx. 0.6 V
	Depressed (full opened)		Approx. 4.0 V
Sub	Not depressed (full closed)	28 (+) and 29 (–)	Approx. 1.48 V
	Depressed (full opened)		Approx. 4.17 V

4) After inspection, install the related parts in the reverse order of removal.

2. THROTTLE SENSOR INSPECTION (METHOD WITH SUBARU SELECT MONITOR)

1) Turn the ignition switch to ON. (Engine OFF)
2) Read the throttle opening angle signal and voltage of throttle sensor using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>

Throttle sensor	Throttle opening angle signal	Standard
Main	0.0%	Approx. 0.6 V
	100.0%	Approx. 3.96 V

Throttle sensor	Throttle opening angle signal	Standard
Sub	0.0%	Approx. 1.48 V
	100.0%	Approx. 4.17 V

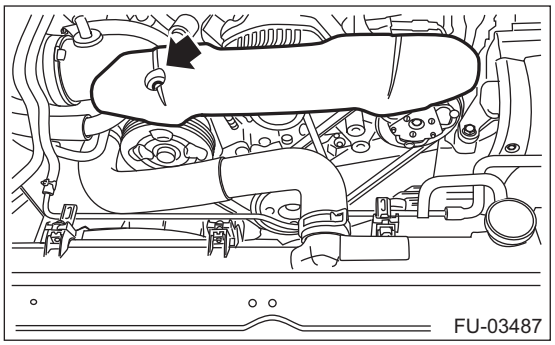
3. OTHER INSPECTIONS

1) Check that the throttle body has no deformation, cracks or other damages.
2) Check that the engine coolant hose has no cracks, damage or loose part.

3. Intake Manifold

A: REMOVAL

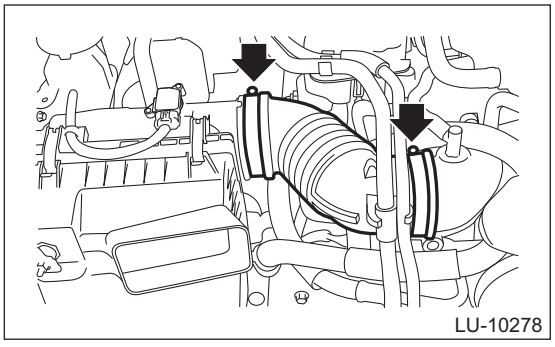
1) Remove the V-belt covers.



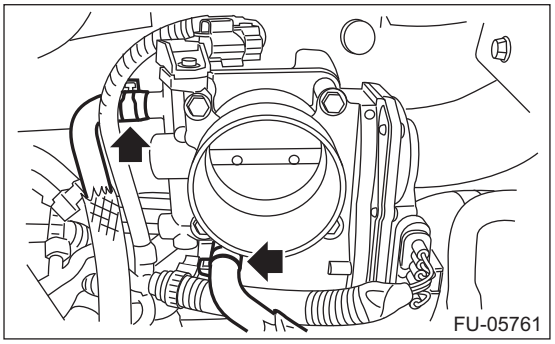
2) Collect the refrigerant from A/C system. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
4) Disconnect the ground cable from battery.
5) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.

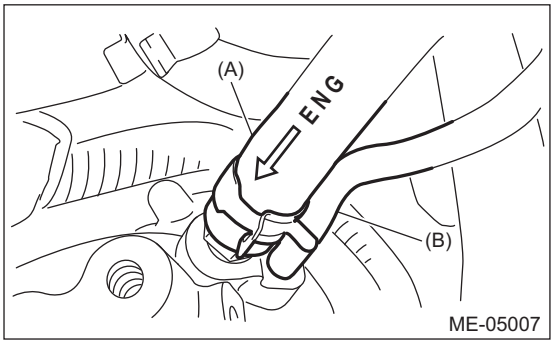
6) Lift up the vehicle.
7) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
8) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
9) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
10) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
11) Remove the air intake boot.



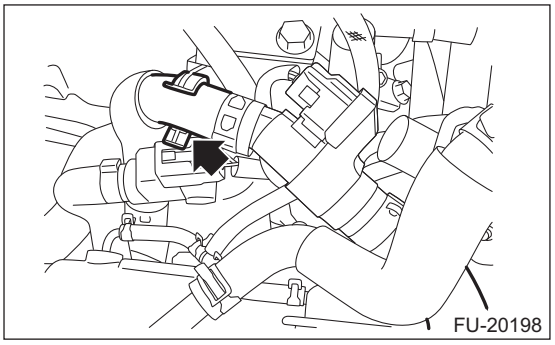
12) Remove the air by-pass valve. <Ref. to IN(STI)-19, REMOVAL, Air By-pass Valve.>
13) Remove the generator. <Ref. to SC(STI)-18, REMOVAL, Generator.>
14) Remove the coolant filler tank. <Ref. to CO(STI)-29, REMOVAL, Coolant Filler Tank.>
15) Disconnect the A/C pressure hoses from A/C compressor. <Ref. to AC-63, REMOVAL, Hose and Pipe.>
16) Disconnect the engine coolant hose from throttle body.



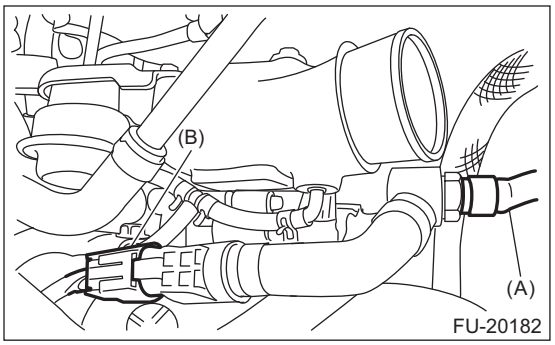
17) Disconnect the brake booster vacuum hose (A) and pressure regulator vacuum hose (B) from the intake manifold.



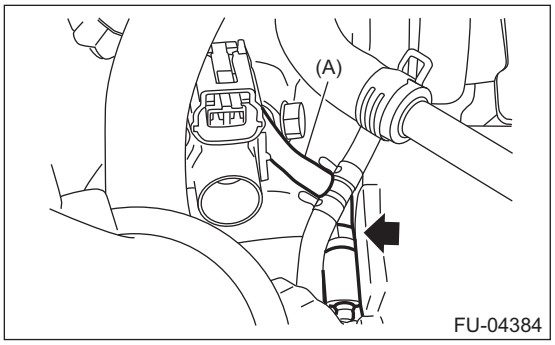
18) Remove the PCV hose from the clip.



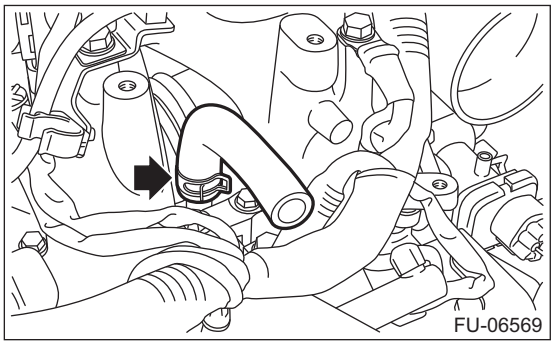
19) Disconnect the vacuum hose (A) and the connector (B) from the PCV hose assembly B.



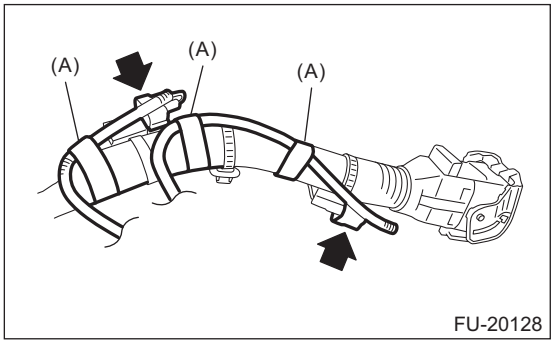
20) Disconnect the air control hose (A) from the waste gate actuator, and loosen the clamp which holds the intake duct to the turbocharger.



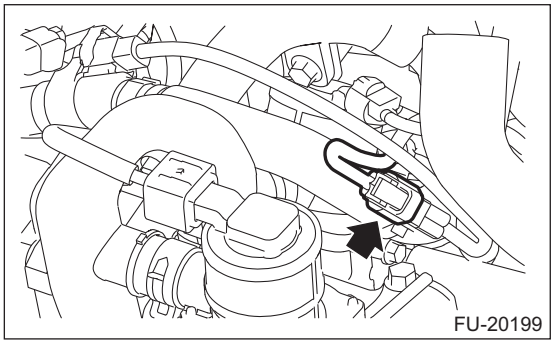
21) Remove the engine coolant hose from the water tank pipe.



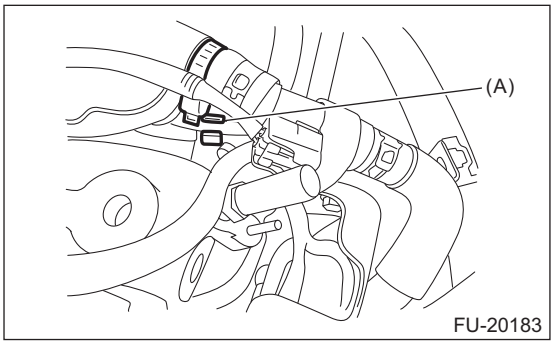
22) Remove the tape (A) fixing the leak diagnosis connector harness, and disconnect the leak diagnosis connector from the engine harness.



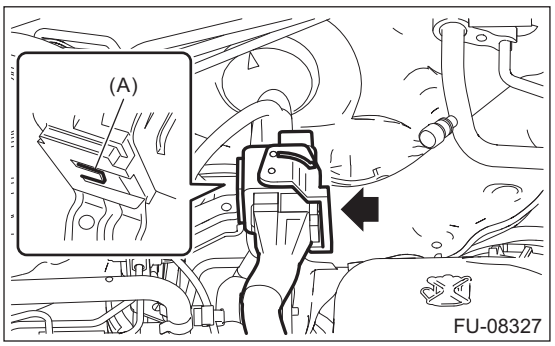
23) Disconnect the leak diagnosis connector from the leak diagnosis connector harness.



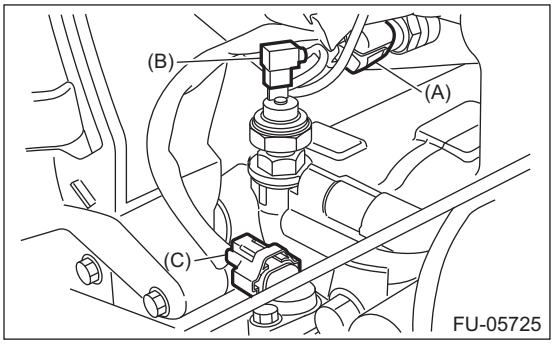
24) Remove the engine harness from clip (A).



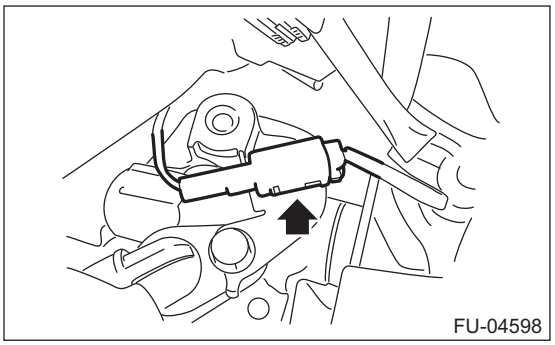
25) Disconnect the bulkhead harness connectors from the engine harness connectors.
26) Lift the claw (A) and remove the engine harness connector from the engine harness bracket.



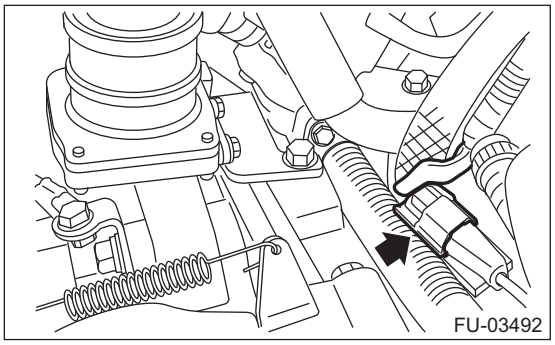
27) Disconnect the connector (A) from the engine coolant temperature sensor, connector (B) from the oil pressure switch, and connector (C) from the crankshaft position sensor.



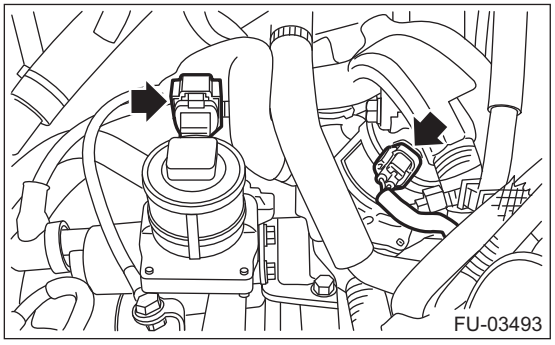
28) Disconnect the connector from power steering pump switch.



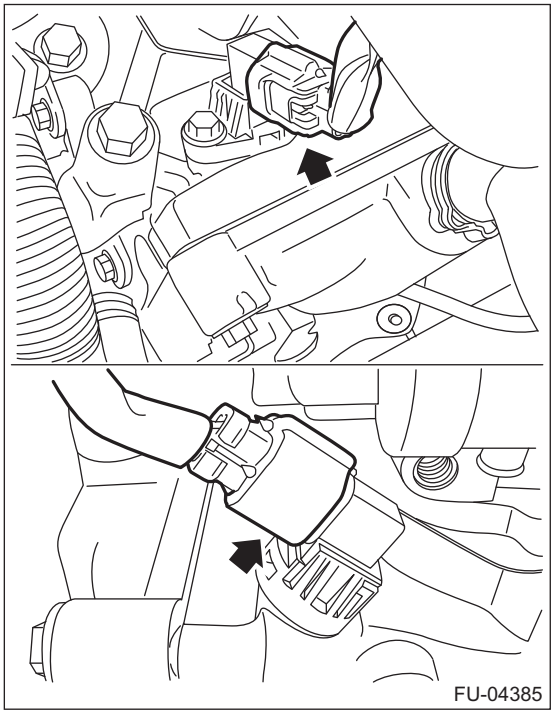
29) Disconnect the connector from the knock sensor.



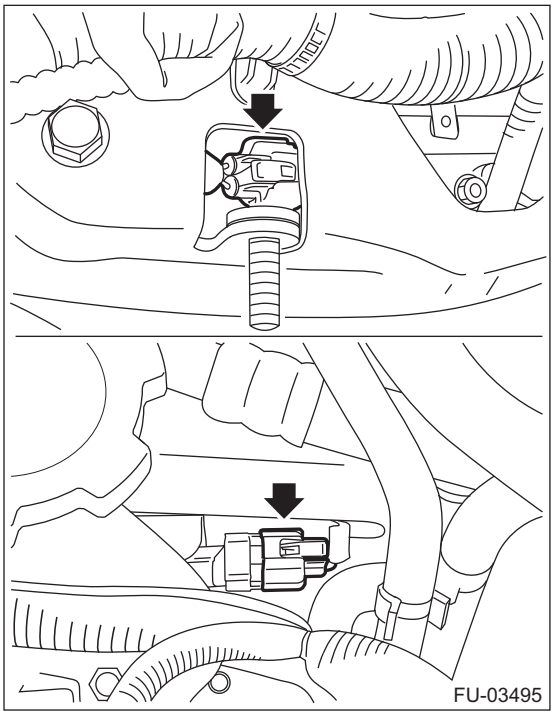
30) Disconnect the connector from the secondary air combination valve.



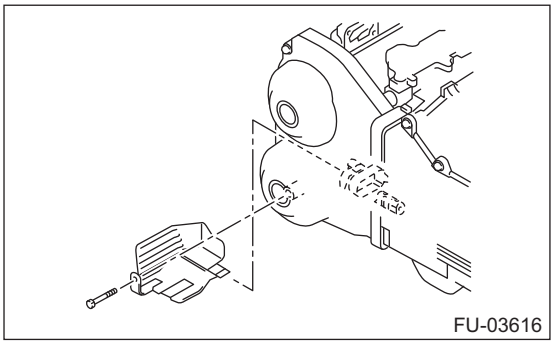
31) Disconnect the connector from the intake camshaft position sensor.



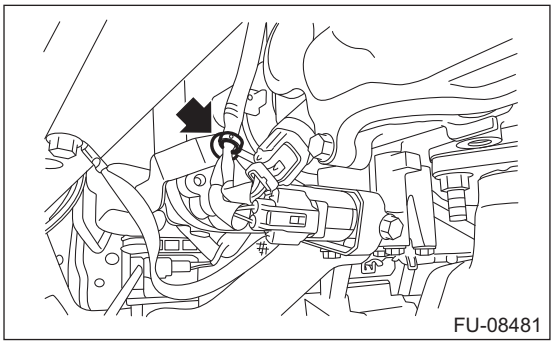
32) Disconnect the connector from the intake oil flow control solenoid valve.



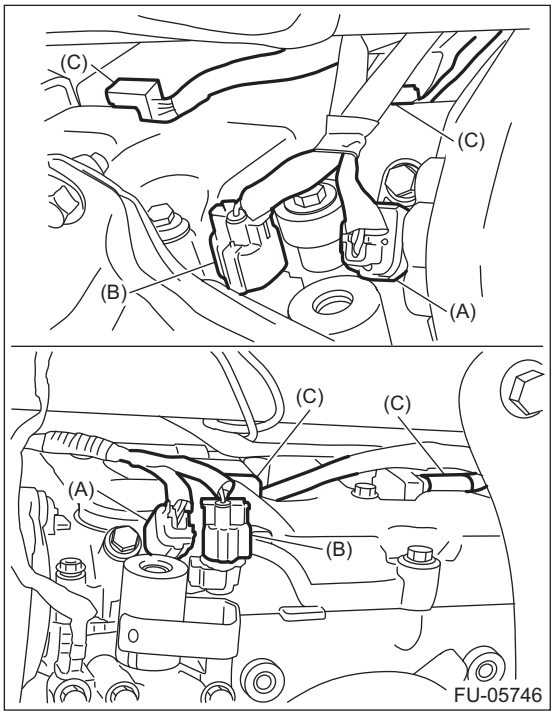
33) Lift up the vehicle.
34) Remove the engine harness cover. (Right side only)



35) Remove the clip holding the engine harness. (Left side only)

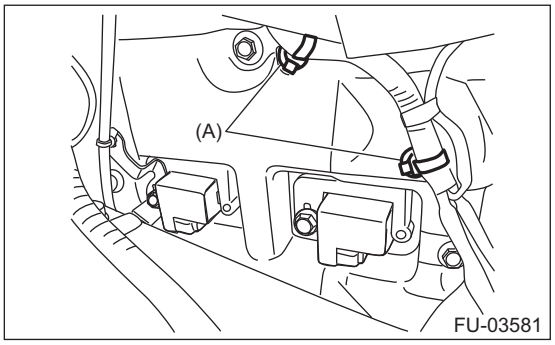


36) Disconnect connector (A) from the exhaust camshaft position sensor, connector (B) from the exhaust oil flow control solenoid valve, and connector (C) from the ignition coil.

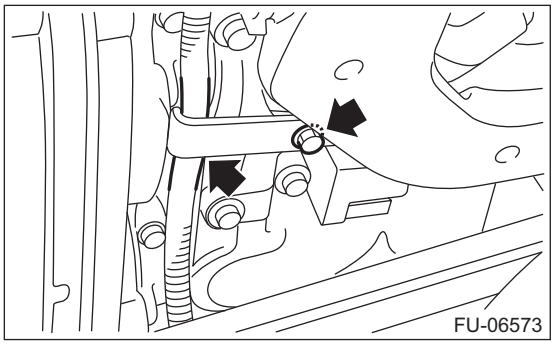


37) Lower the vehicle.

38) Remove the clip (A) which hold the engine harness to the rocker cover RH.



39) Remove the bolts that secure the air duct to the rocker cover LH, and remove the engine harness.



40) Disconnect the fuel delivery hose, fuel return hose and evaporation hose.

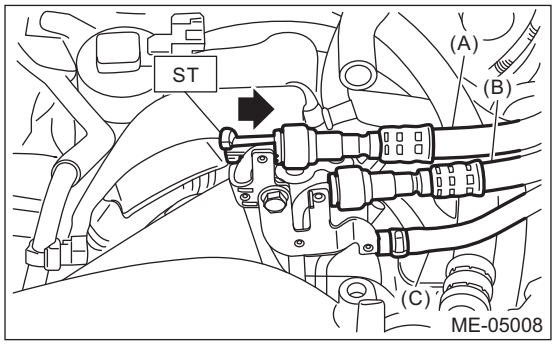
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

(1) Set the ST to the fuel pipe.

ST 42099AE000 QUICK CONNECTOR RELEASE

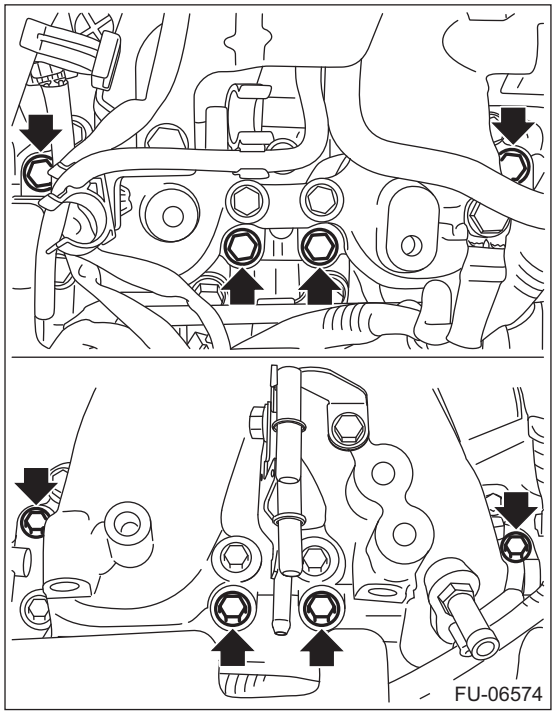
(2) Disconnect the quick connector of the fuel delivery hose and fuel return hose by pushing the ST in the direction of the arrow.

(3) Remove the clip and disconnect the evaporation hose from the fuel pipe.



(A) Fuel delivery hose
(B) Fuel return hose
(C) Evaporation hose

41) Remove the intake manifold from cylinder head.

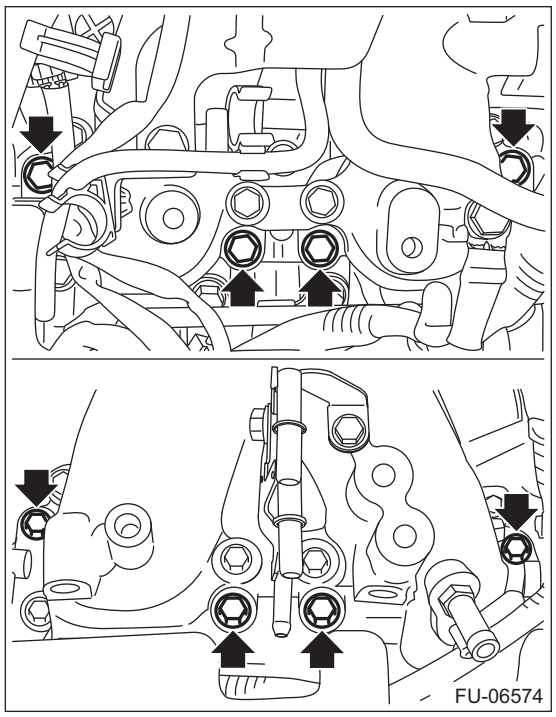


B: INSTALLATION

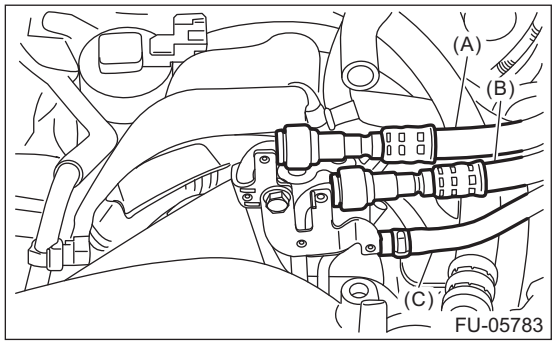
1) Install the intake manifold onto cylinder heads.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



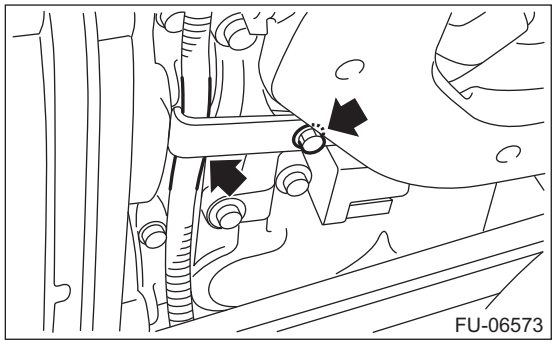
2) Connect the fuel delivery hose, fuel return hose, and evaporation hose.



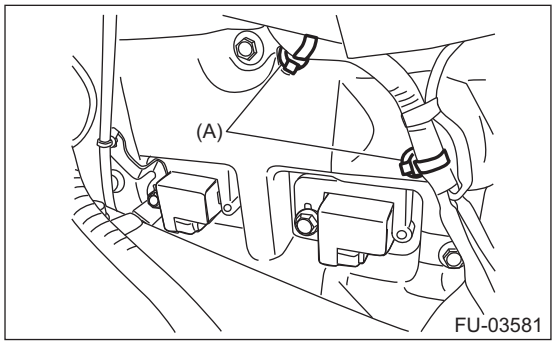
(A) Fuel delivery hose
(B) Fuel return hose
(C) Evaporation hose

3) Fix the engine harness to the rocker cover LH with the air duct.

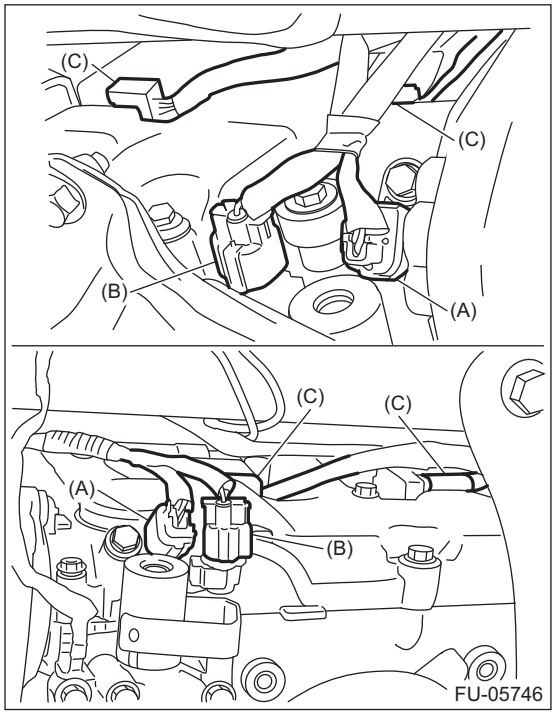
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



4) Fix the engine harness to the rocker cover RH with clips (A).

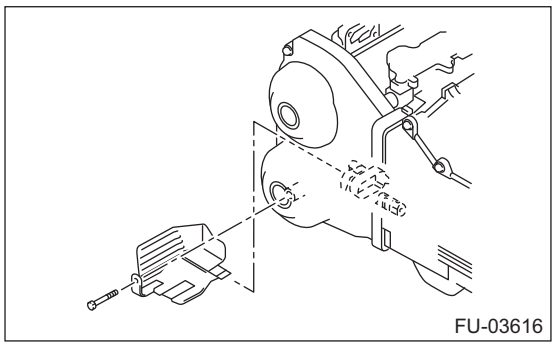


5) Lift up the vehicle.
6) Connect connector (A) to the exhaust camshaft position sensor, connector (B) to the exhaust oil flow control solenoid valve, connector (C) to the ignition coil.

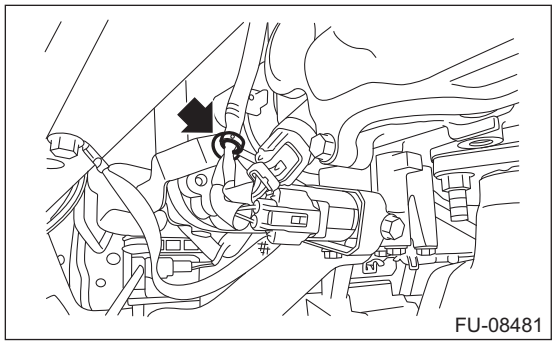


7) Install the engine harness cover. (Right side only)

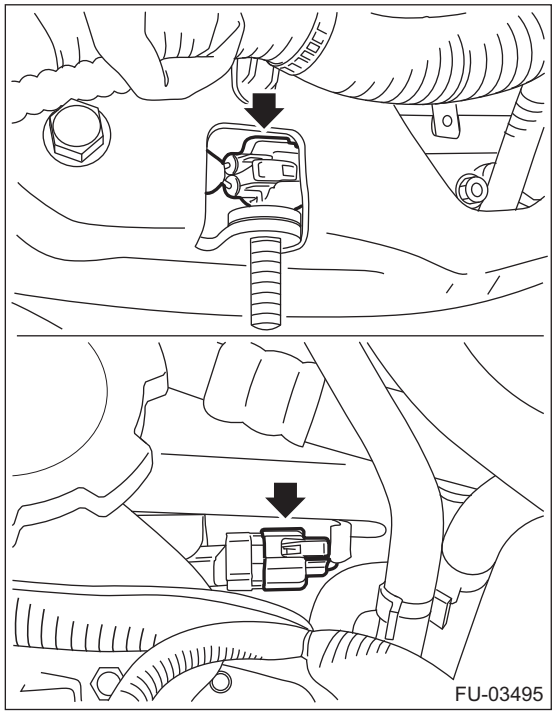
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



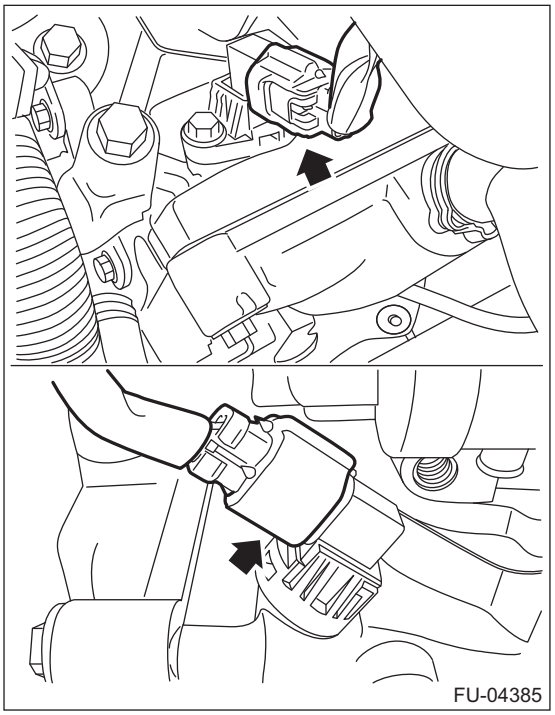
8) Install the clip securing the engine harness. (Left side only)



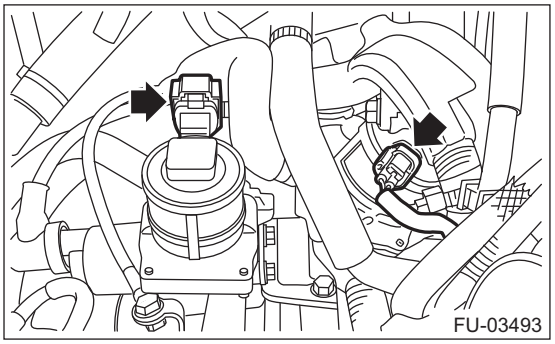
9) Lower the vehicle.
10) Connect the connector to the intake oil flow control solenoid valve.



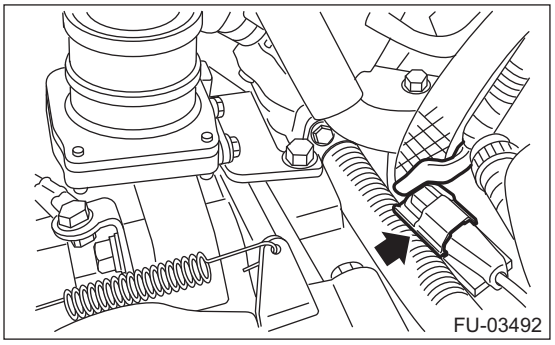
11) Connect the connector to the intake camshaft position sensor.



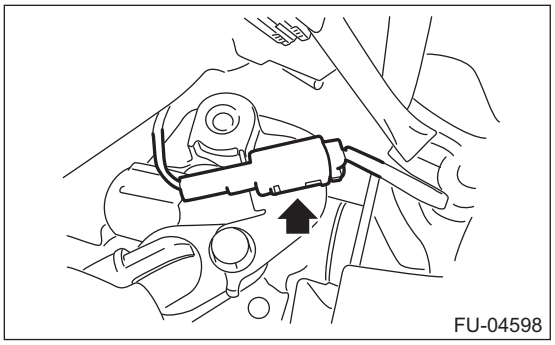
12) Connect the connector to the secondary air combination valve.



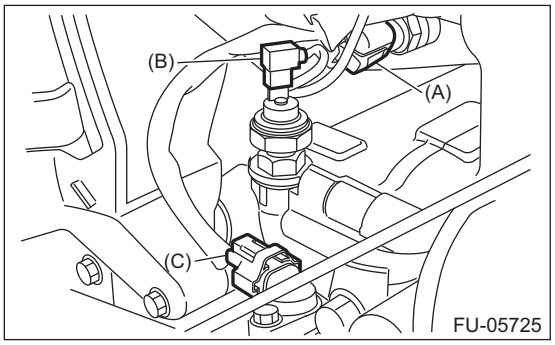
13) Connect the connector to the knock sensor.



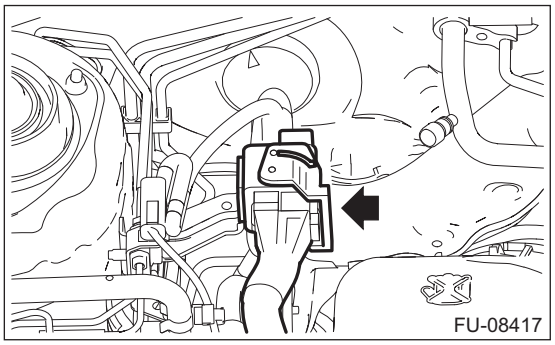
14) Connect the connector to the power steering pump switch.



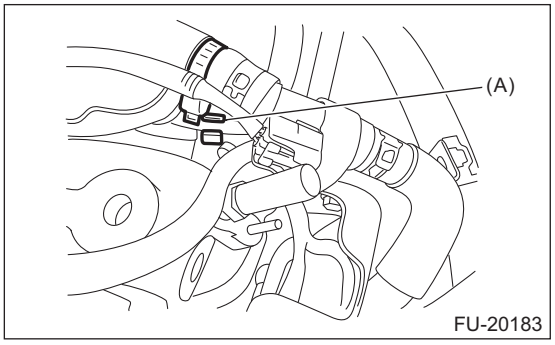
15) Connect the connector (A) to the engine coolant temperature sensor, connector (B) to the oil pressure switch, and the connector (C) to the crankshaft position sensor.



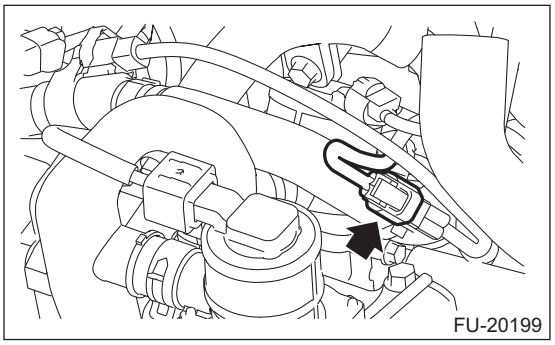
16) Install the engine harness connector to engine harness bracket, then connect the bulkhead harness connector to the engine harness connector.



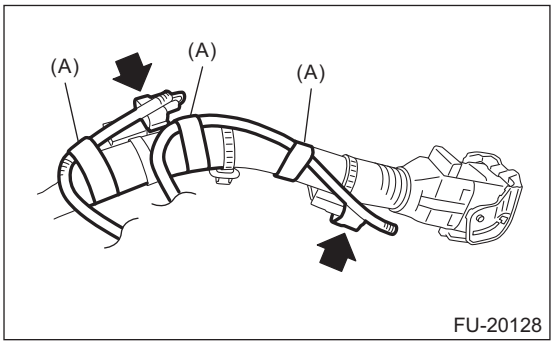
17) Install the engine harness to clip (A).



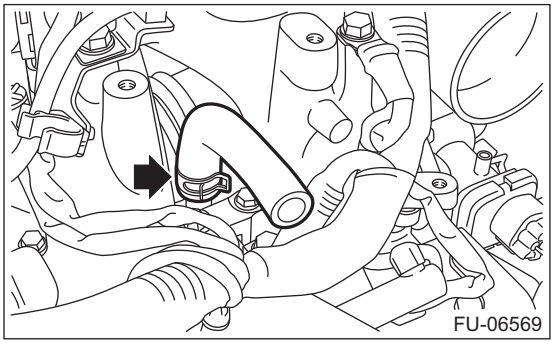
18) Connect the leak diagnosis connector to the leak diagnosis connector harness.



19) Connect the leak diagnosis connector to the engine harness, and secure the leak diagnosis connector harness with the tape (A) as shown in the figure below.

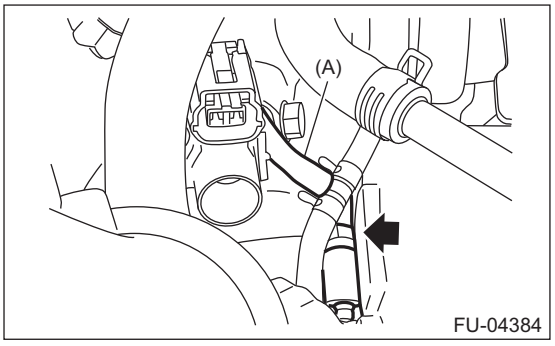


20) Install the engine coolant hose to the water tank pipe.

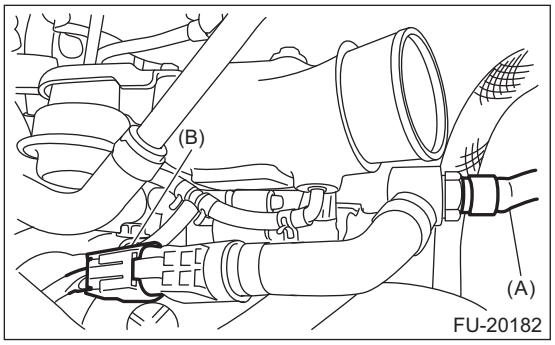


21) Connect the air control hose (A) to the wastegate actuator, and install the turbocharger to the intake duct.

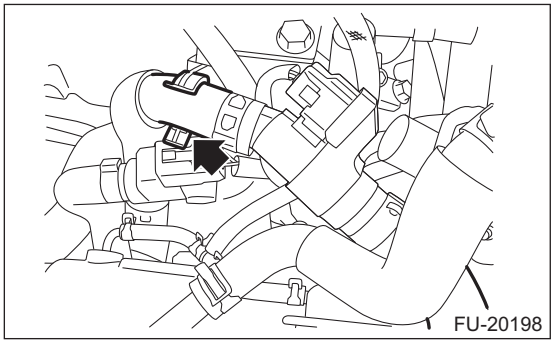
Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)



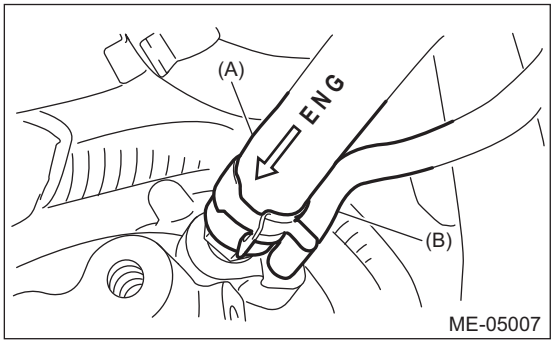
22) Connect the vacuum hose (A) and connector (B) to the PCV hose assembly B.



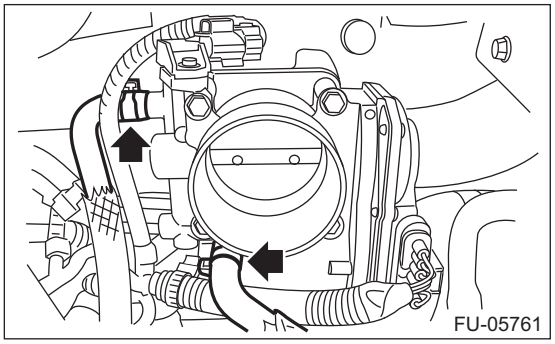
23) Install the PCV hose to the clip.



24) Connect the brake booster vacuum hose (A) and pressure regulator vacuum hose (B) to the intake manifold.

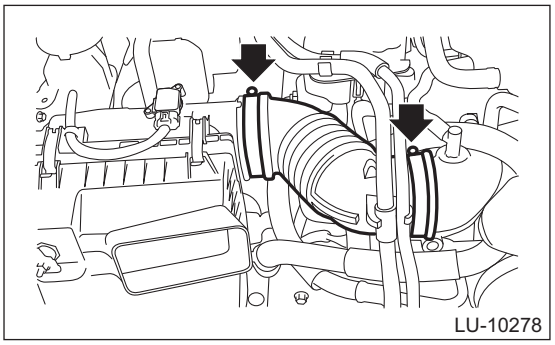


25) Connect the engine coolant hoses to throttle body.



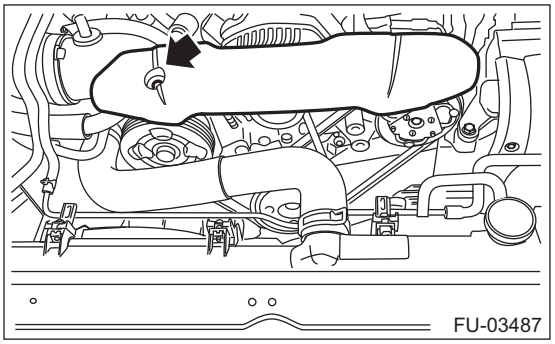
26) Install the A/C pressure hoses to A/C compressor. <Ref. to AC-67, INSTALLATION, Hose and Pipe.>
27) Install the coolant filler tank. <Ref. to CO(STI)-29, INSTALLATION, Coolant Filler Tank.>
28) Install the generator. <Ref. to SC(STI)-18, INSTALLATION, Generator.>
29) Install the air by-pass valve. <Ref. to IN(STI)-19, INSTALLATION, Air By-pass Valve.>
30) Install the air intake boot.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)



31) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
32) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
33) Connect the battery ground terminal.
34) Lift up the vehicle.
35) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
36) Lower the vehicle.
37) Install the V-belt cover.

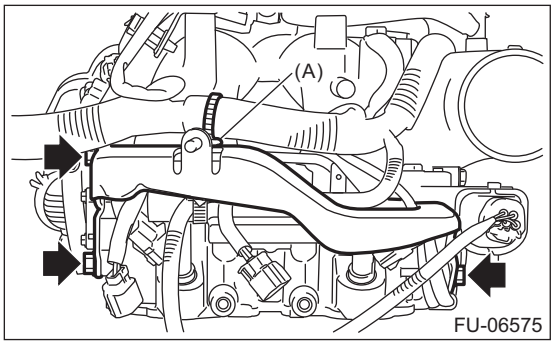
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



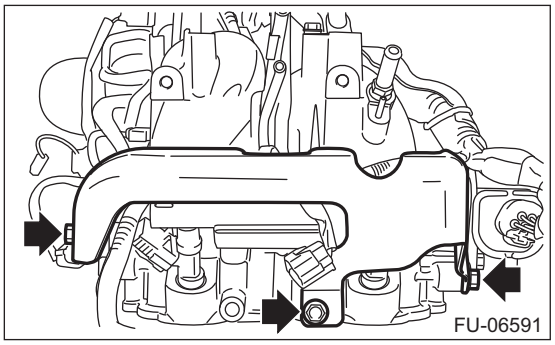
38) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
39) Charge the A/C system with refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

C: DISASSEMBLY

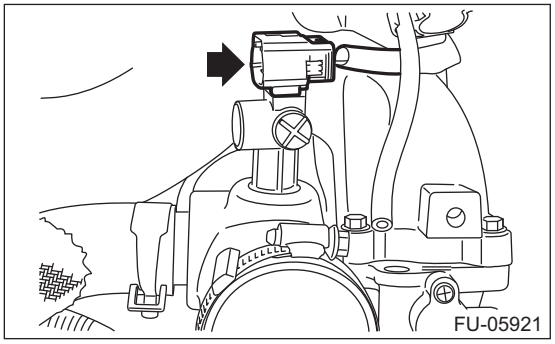
1) Remove clamp (A) holding the fuel pipe protector RH to the engine harness, and remove the fuel pipe protector RH.



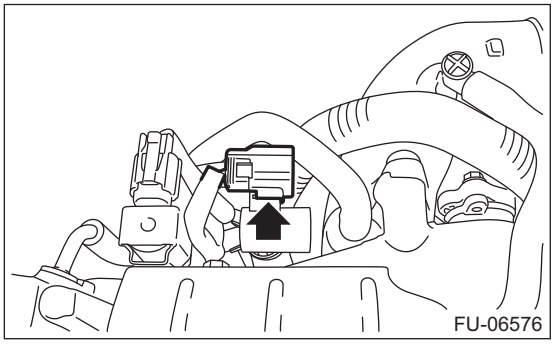
2) Remove the fuel pipe protector LH.



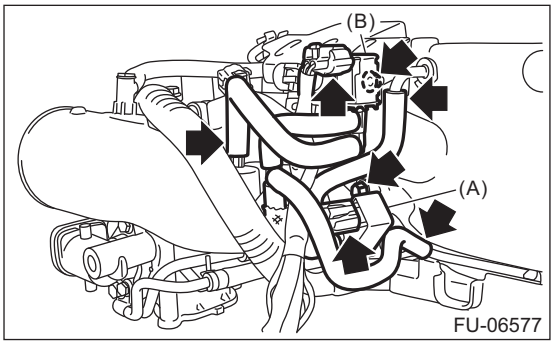
3) Remove the connector from the intake duct.



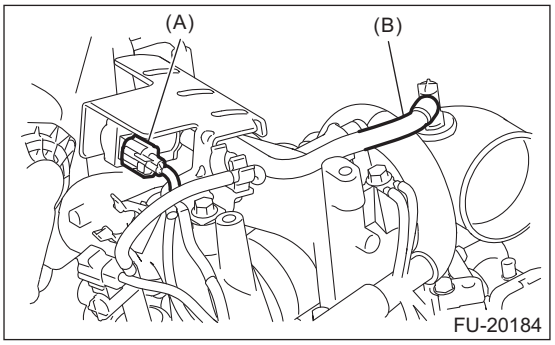
4) Remove the connector from the PCV hose assembly.



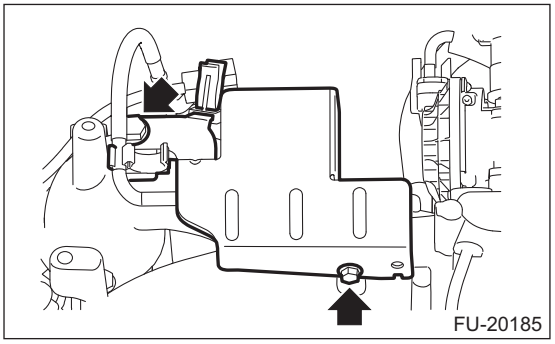
5) Remove purge control solenoid valve 1 (A) and purge control solenoid valve 2 (B).



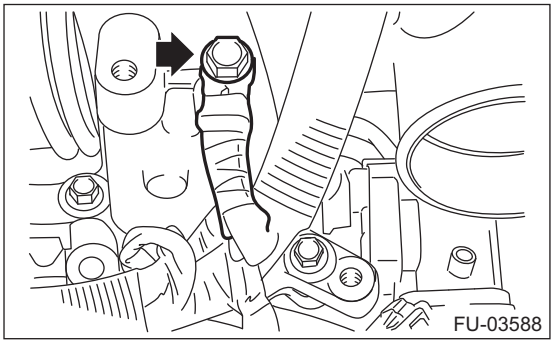
6) Disconnect the connector (A) from the wastegate control solenoid valve, and disconnect the vacuum hose (B) from the intake duct.



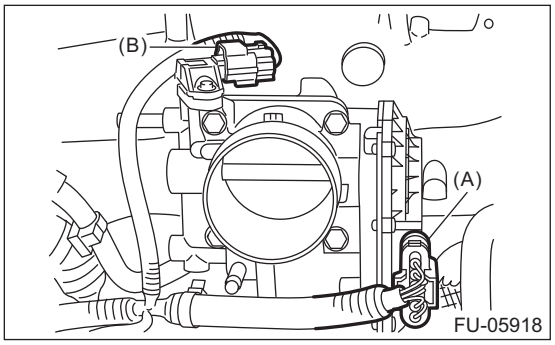
7) Remove the solenoid valve bracket together with the wastegate control solenoid valve.



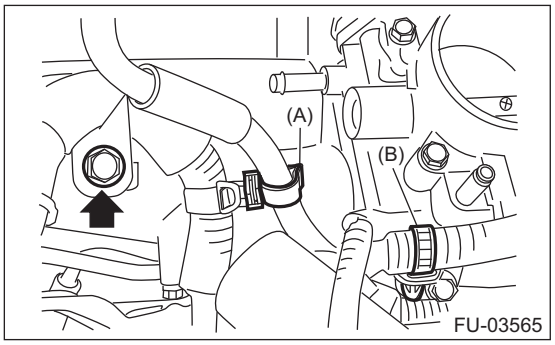
8) Remove the engine ground terminals from the intake manifold.



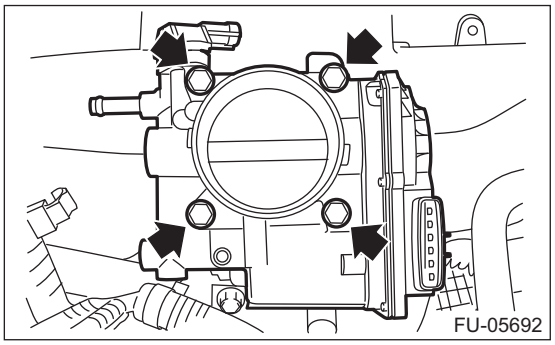
9) Disconnect the connector (A) from the throttle position sensor, and the connector (B) from the manifold pressure sensor.



10) Remove clip (A) holding the engine harness and vacuum hose, clip (B) holding the engine harness to the engine harness stay, and the bolt holding the engine harness to the intake manifold.

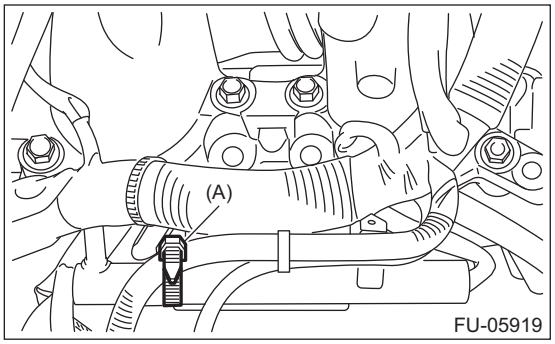


11) Remove the throttle body from the intake manifold.

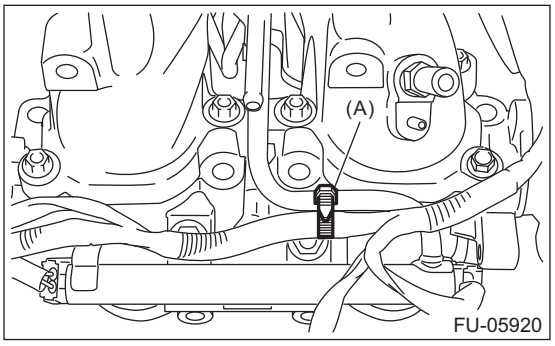


12) Remove the harness band (A) which holds the engine harness to the fuel injector pipe.

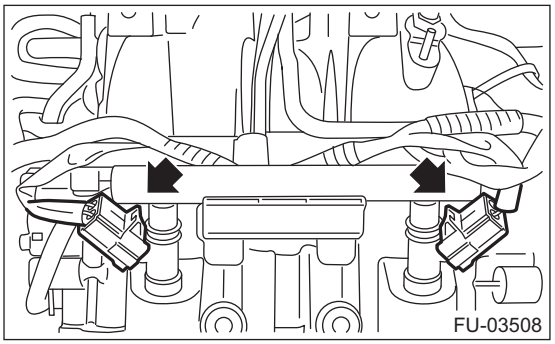
- RH side



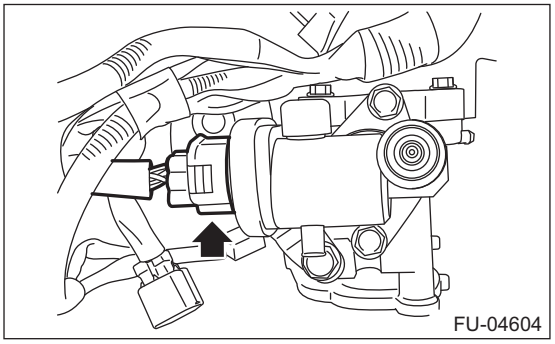
- LH side



13) Disconnect the connector from fuel injector.

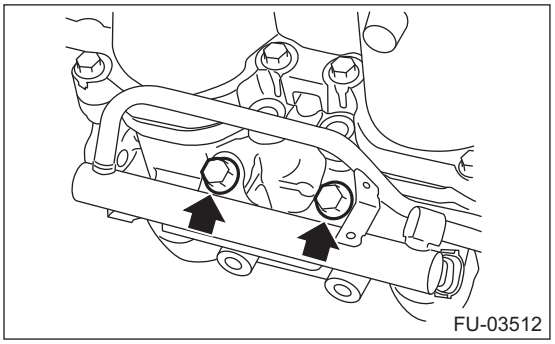


14) Disconnect the connector from the tumble generator valve assembly.

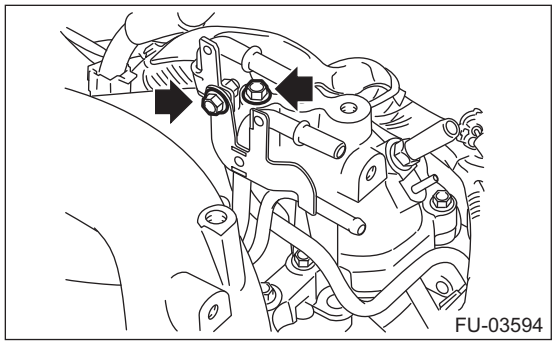


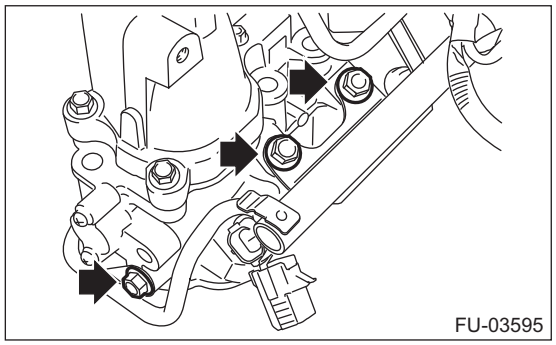
15) Remove the bolts which hold fuel injector pipe.

- RH side

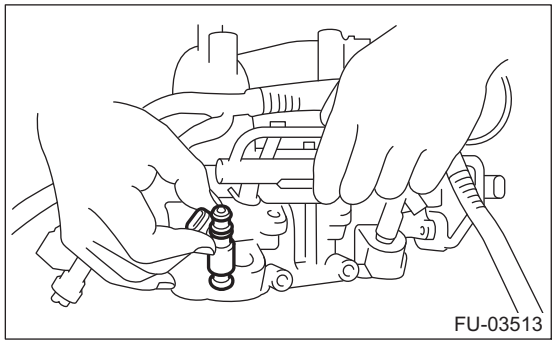


- LH side

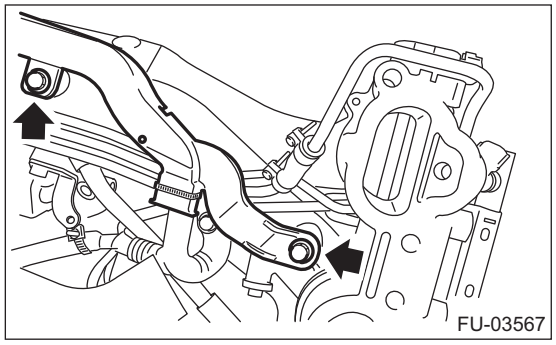




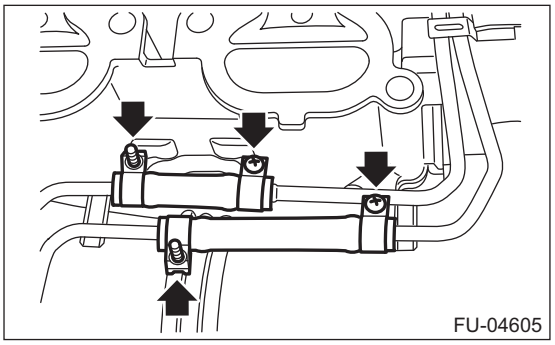
16) Remove the fuel injector.



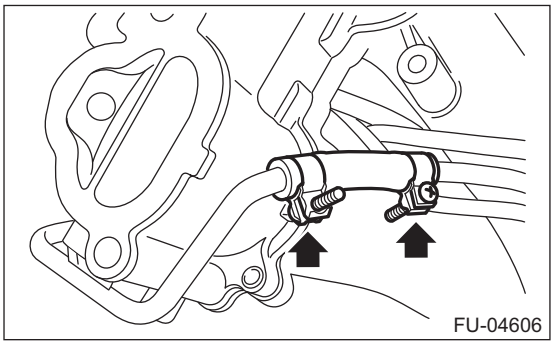
17) Remove the harness brackets holding the engine harness to the intake manifold, and remove the engine harness.



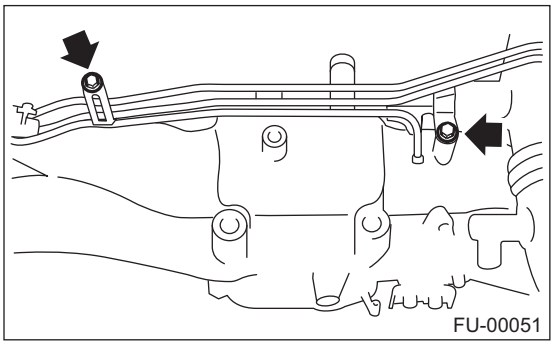
18) Loosen the clamp holding the RH side fuel hose to the fuel injector pipe RH, and remove the fuel injector pipe RH.



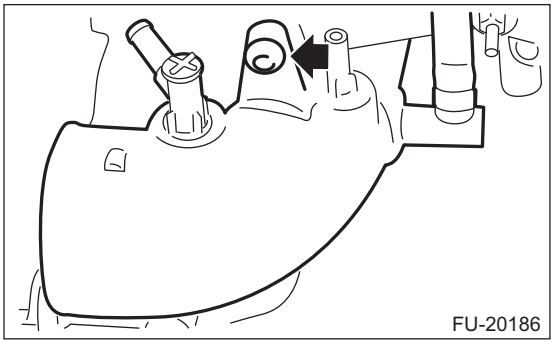
19) Loosen the clamp holding the LH side fuel hose to the fuel injector pipe LH, and remove the fuel injector pipe LH.



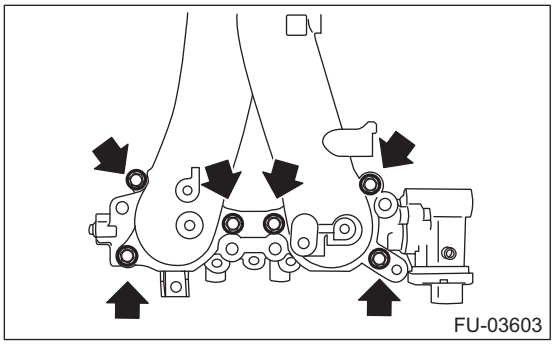
20) Remove the bolts holding the fuel pipe assembly to the intake manifold, and remove the fuel pipe assembly.



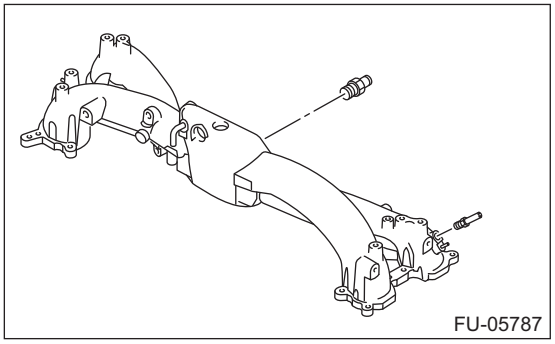
21) Remove the intake duct from intake manifold.



22) Remove the tumble generator valve assembly from the intake manifold.



23) Remove the nipple from the intake manifold.

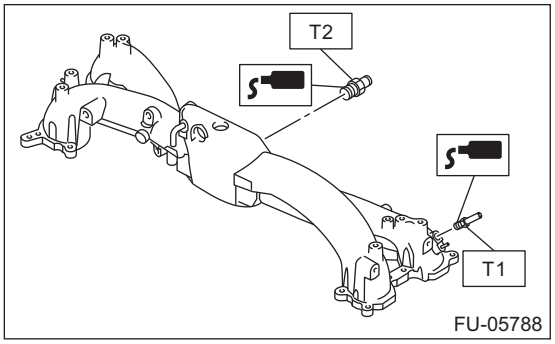


D: ASSEMBLY

1) Apply liquid gasket to the nipple threads, and install the nipple to the intake manifold.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

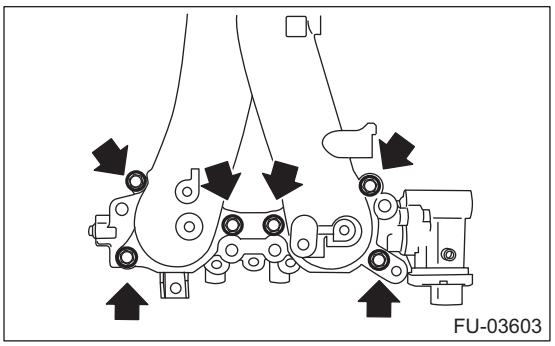
Tightening torque:
T1: 17 N·m (1.7 kgf-m, 12.5 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



2) Install the tumble generator valve assembly onto intake manifold.

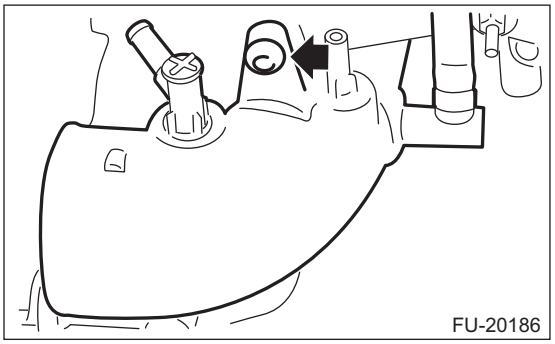
NOTE:
Use a new gasket.

Tightening torque:
8.2 N·m (0.8 kgf-m, 6.0 ft-lb)



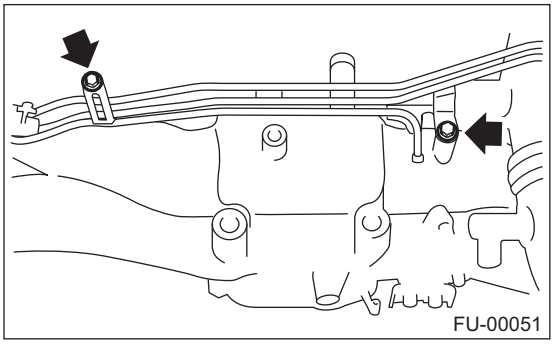
3) Install the air intake duct to the intake manifold.

Tightening torque:
17 N·m (1.7 kgf-m, 12.5 ft-lb)



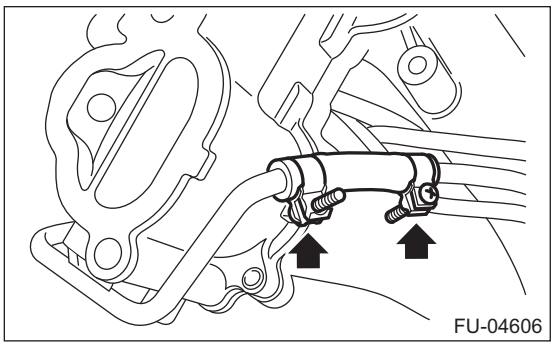
4) Install the fuel pipe assembly to the intake manifold.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



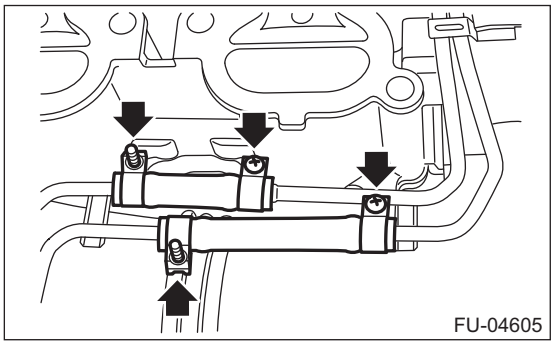
5) Install the fuel injector pipe LH and connect the LH side fuel hose to the fuel injector pipe LH. <Ref. to FU(STI)-102, CONNECTING THE FUEL DELIVERY HOSE, FUEL RETURN HOSE AND FUEL HOSE, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

NOTE:
Use a new fuel hose.



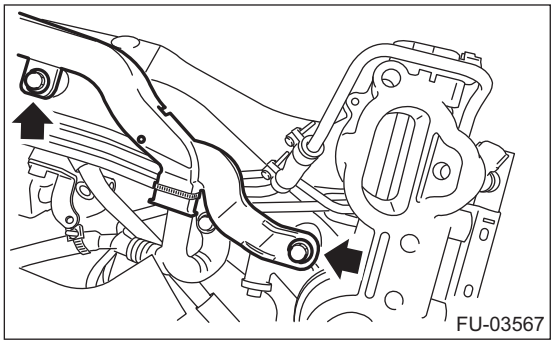
6) Install the fuel injector pipe RH and connect the RH side fuel hose to the fuel injector pipe RH. <Ref. to FU(STI)-102, CONNECTING THE FUEL DELIVERY HOSE, FUEL RETURN HOSE AND FUEL HOSE, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

NOTE:
Use a new fuel hose.



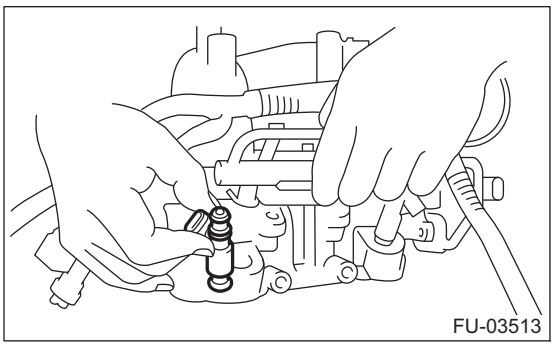
7) Install the engine harness to the intake manifold and attach the harness brackets holding the engine harness.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



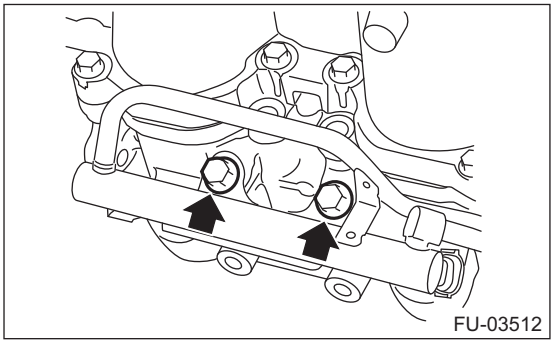
8) Install the fuel injector.

NOTE:
Use new O-rings, rubbers and seal rings.



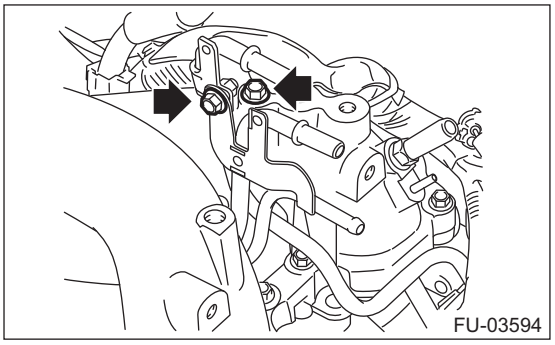
9) Install the bolts which hold fuel injector pipe.
- RH side

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

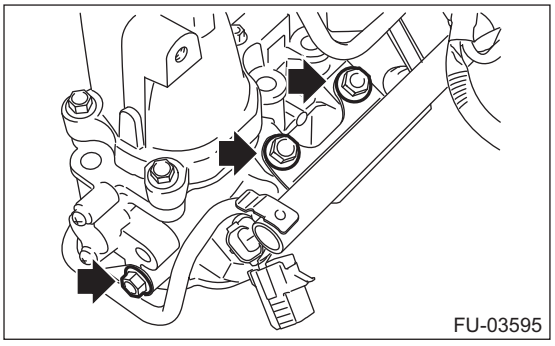


- LH side

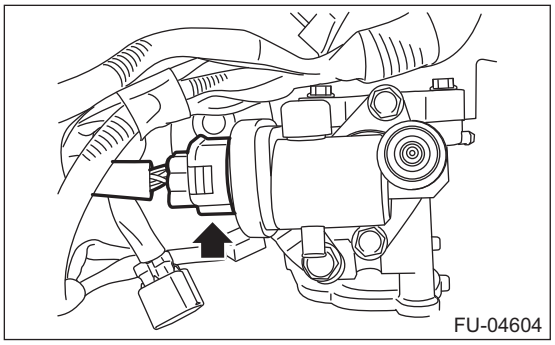
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



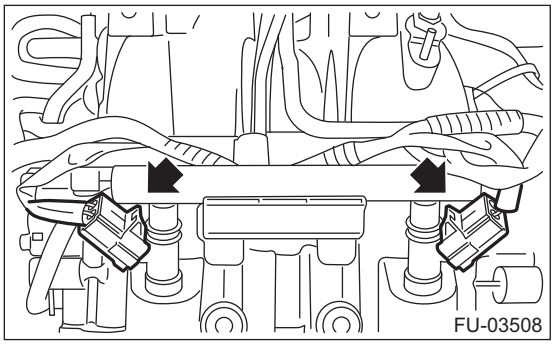
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



10) Connect the connector to the tumble generator valve assembly.

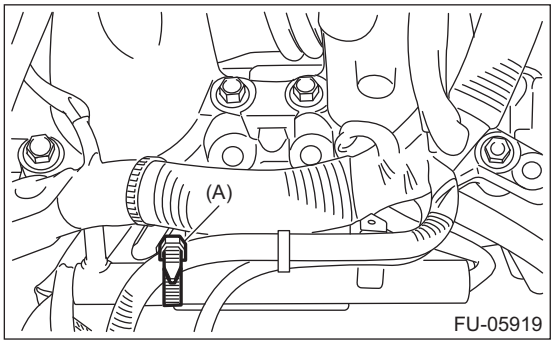


11) Connect the connectors to the fuel injector.

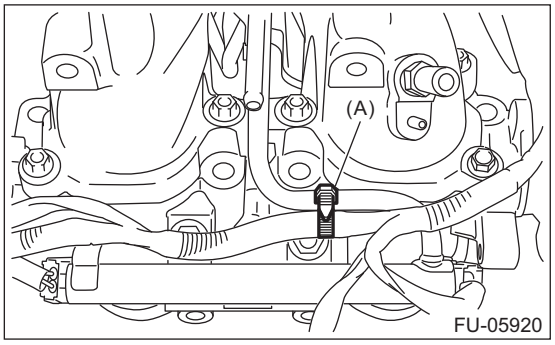


12) Secure the engine harness to the fuel injector pipe with the harness band (A).

- RH side



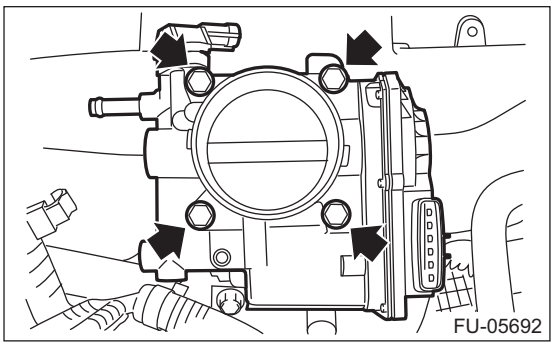
- LH side



13) Install the throttle body to the intake manifold.

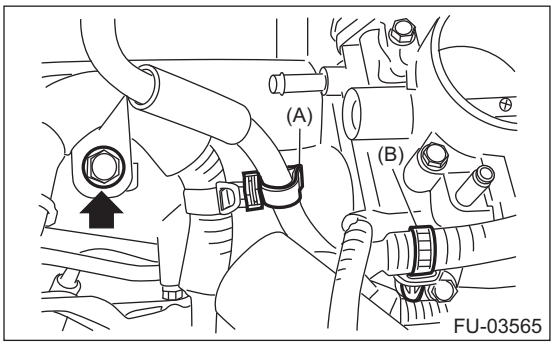
NOTE:
Use a new gasket.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

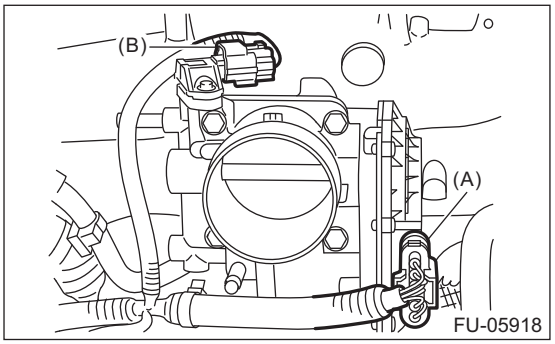


14) Secure the engine harness and vacuum hose using the clip (A), and secure the engine harness to the engine harness stay using the clip (B), and install the bolt which holds the engine harness to the intake manifold.

Tightening torque:
19 N·m (1.9 kgf-m,14.0 ft-lb)

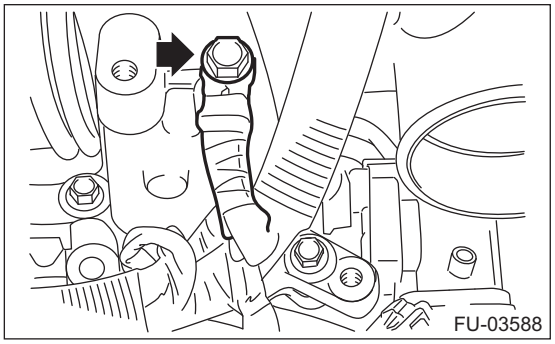


15) Connect connector (A) to the throttle position sensor and connector (B) to the manifold pressure sensor.



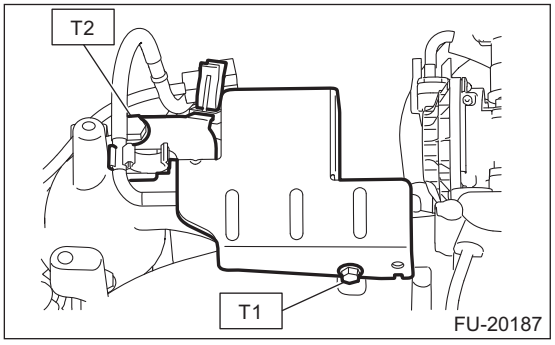
16) Install the engine ground terminal to intake manifold.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

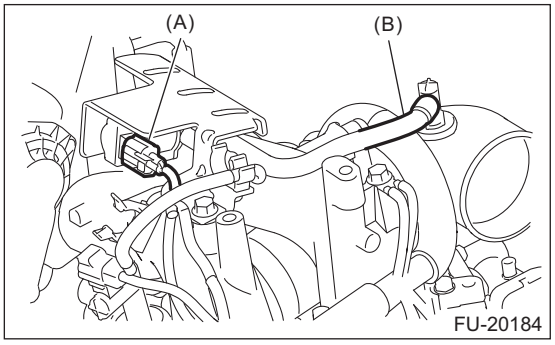


17) Install the solenoid valve bracket together with the wastegate control solenoid valve.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

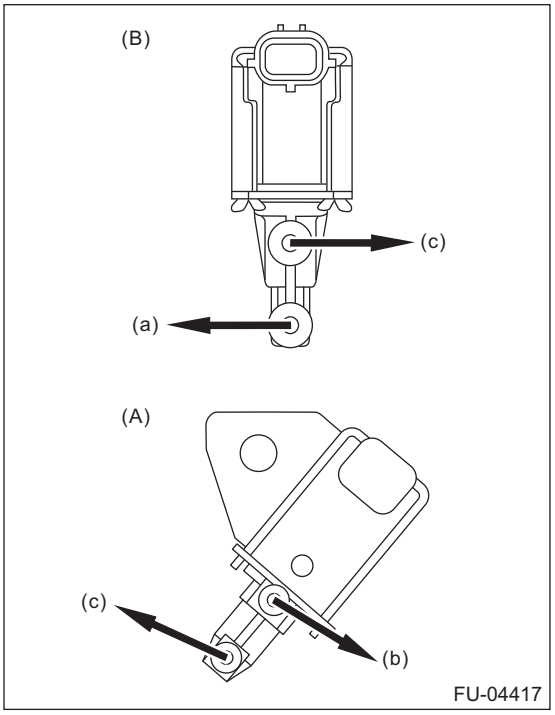


18) Connect the vacuum hose (B) to the intake duct, then connect the connector (A) to the wastegate control solenoid valve.



19) Install purge control solenoid valve 1 and purge control solenoid valve 2.

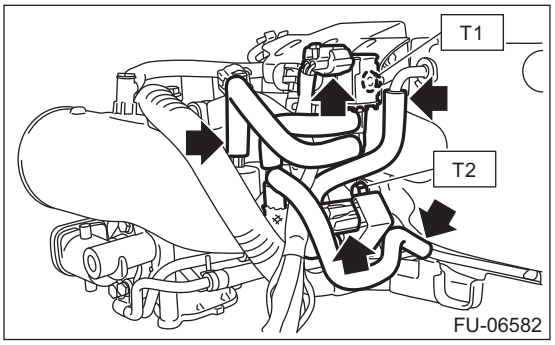
NOTE:
Connect the vacuum hose and vacuum control hose as shown in the figure.



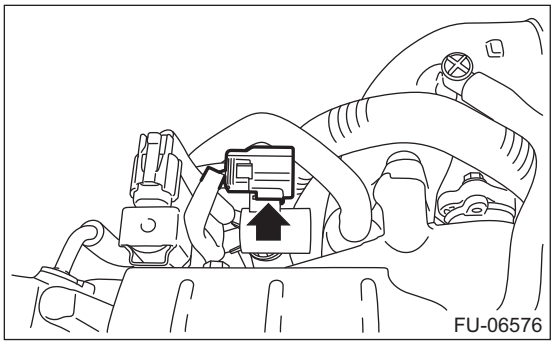
(A) Purge control solenoid valve 1
(B) Purge control solenoid valve 2

(a) To intake duct
(b) To intake manifold
(c) To branching pipe → fuel pipe

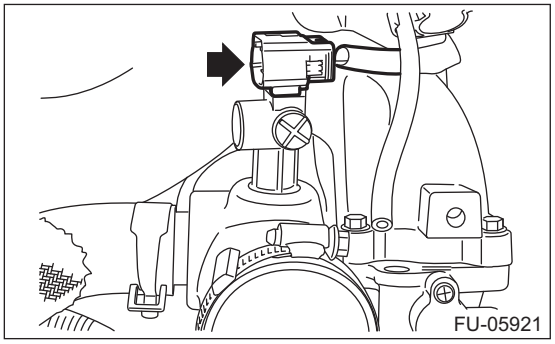
Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)



20) Attach the connector to the PCV hose assembly.

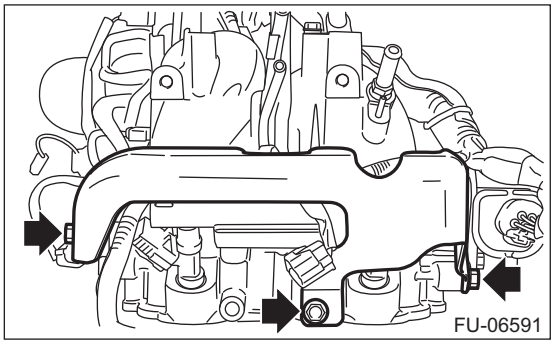


21) Install the connector to the intake duct.



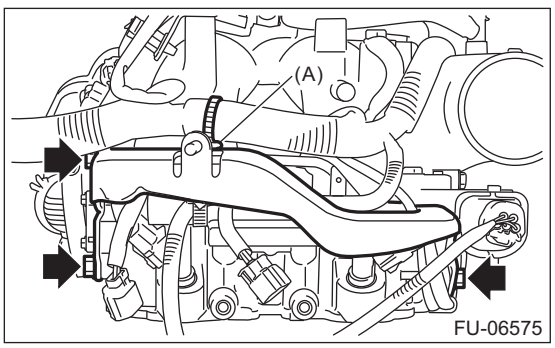
22) Install the fuel pipe protector LH.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



23) Install the fuel pipe protector RH, and secure the engine harness to the fuel pipe protector RH using the clip (A).

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



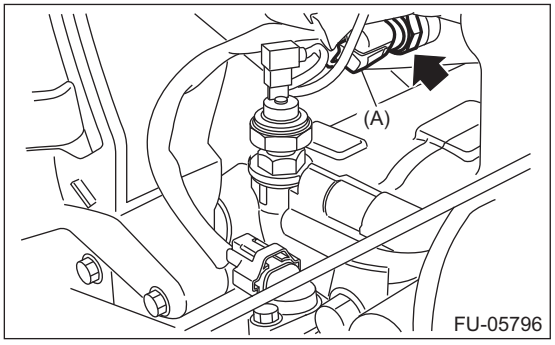
E: INSPECTION

1) Check that the intake manifold and fuel pipe have no deformation, cracks and other damages.
2) Check that the hose has no cracks, damage or loose part.

4. Engine Coolant Temperature Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the generator. <Ref. to SC(STI)-18, REMOVAL, Generator.>
3) Drain engine coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Disconnect the connector (A) from the engine coolant temperature sensor, and remove the engine coolant temperature sensor.



B: INSTALLATION

Install in the reverse order of removal.

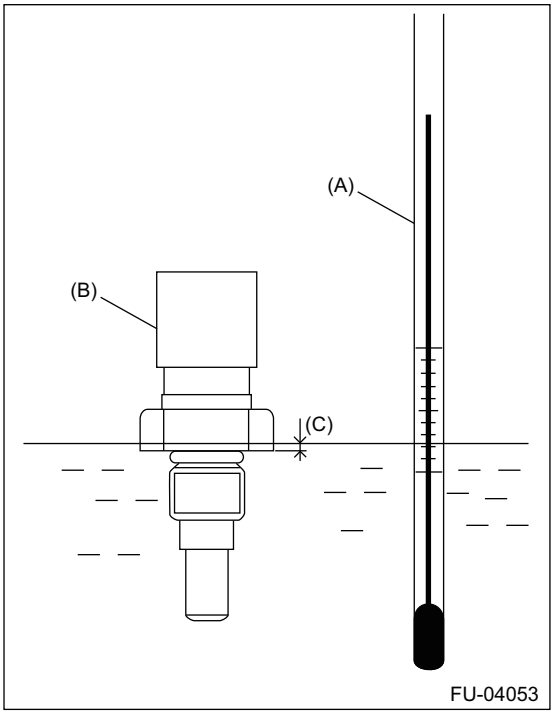
NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

C: INSPECTION

1) Check that the engine coolant temperature sensor has no deformation, cracks or other damages.
2) Immerse the engine coolant temperature sensor and a thermometer in water.

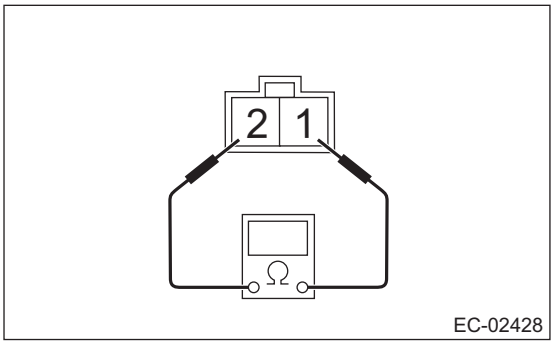
CAUTION:
Take care not to allow water to get into the engine coolant temperature sensor connector. Completely remove any water inside.



(A) Thermometer
(B) Engine coolant temperature sensor
(C) Hexagonal part height: To approx. $^1/_3$

3) Raise water temperature gradually, measure the resistance between the engine coolant temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:
Agitate the water for even temperature distribution.

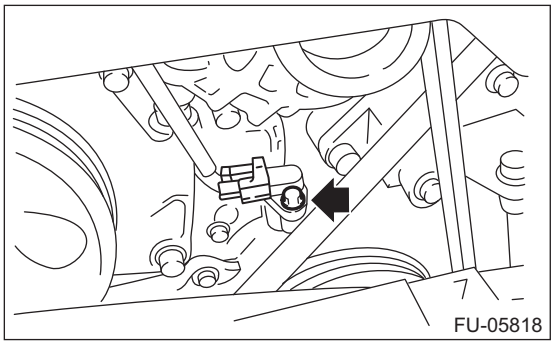


Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	2.45±0.2 kΩ
80°C (176°F)		0.318±0.013 kΩ

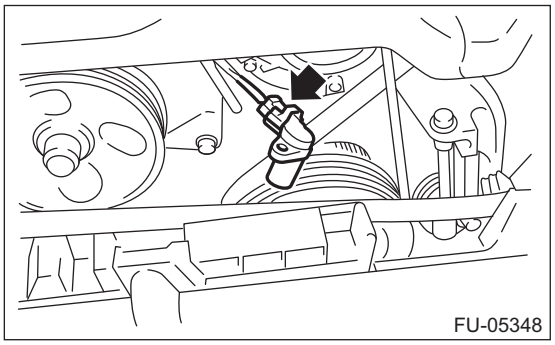
5. Crankshaft Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the bolt which secures crankshaft position sensor to oil pump.



3) Remove the crankshaft position sensor, and disconnect the connector from the crankshaft position sensor.



B: INSTALLATION

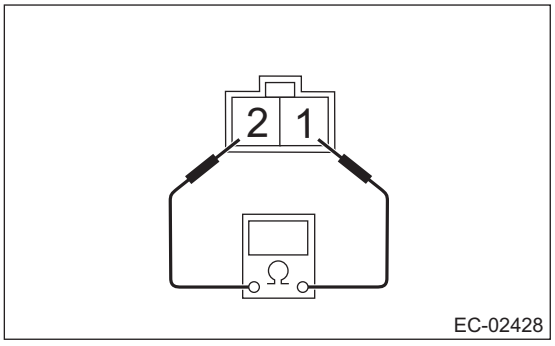
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1. CRANKSHAFT POSITION SENSOR (METHOD WITH CIRCUIT TESTER)

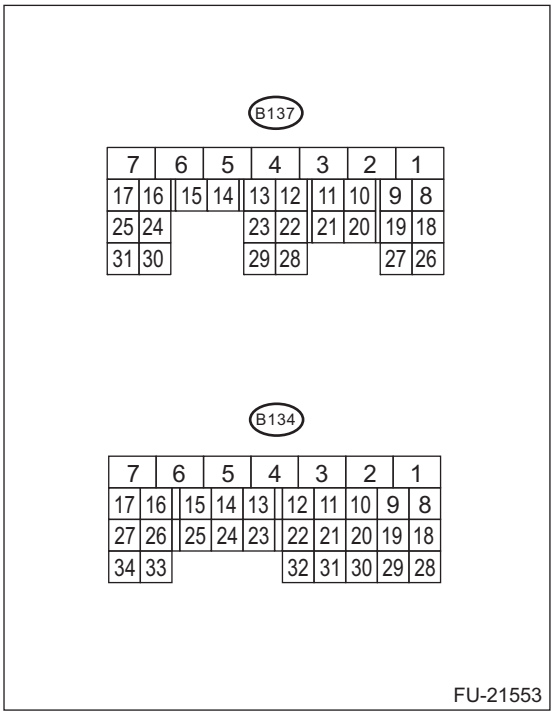
Measure the resistance between crankshaft position sensor terminals.



Terminal No.	Standard
1 and 2	2.04±0.204 kΩ

2. CRANKSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

1) Prepare an oscilloscope.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Connect the probe to ECM connector.



Terminal No.	Probe
(B137) No. 17	+
(B134) No. 3	–

4) Start the engine and let it idle.
5) Check the waveforms and voltage.

NOTE:
For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(STI)(diag)-21, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>
6) After inspection, install the related parts in the reverse order of removal.

3. OTHER INSPECTIONS

Check that the crankshaft position sensor has no deformation, cracks or other damages.

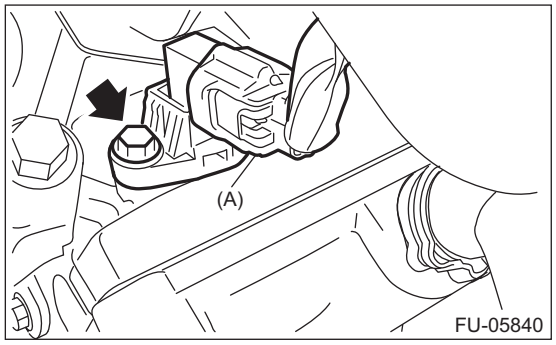
6. Camshaft Position Sensor

A: REMOVAL

1. INTAKE SIDE

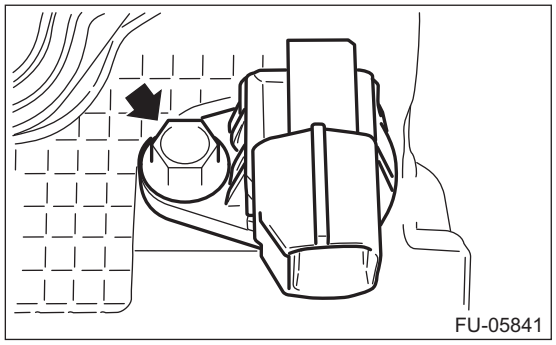
• Camshaft position sensor RH

1) Disconnect the ground cable from battery.
2) Disconnect the connector (A) from the camshaft position sensor RH, and remove the camshaft position sensor RH from the rear side of the cylinder head.



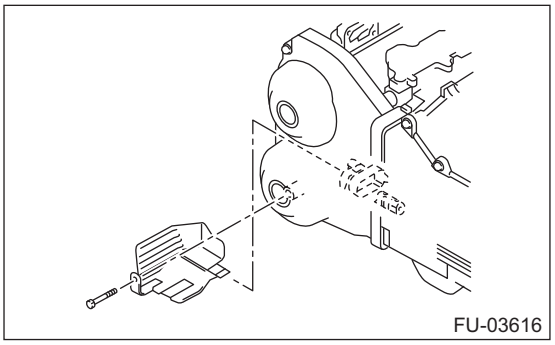
• Camshaft position sensor LH

1) Disconnect the ground cable from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the camshaft position sensor LH.

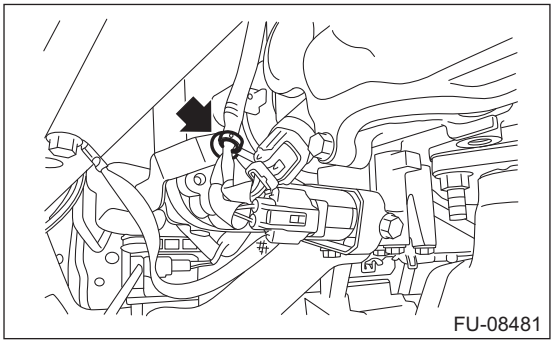


2. EXHAUST SIDE

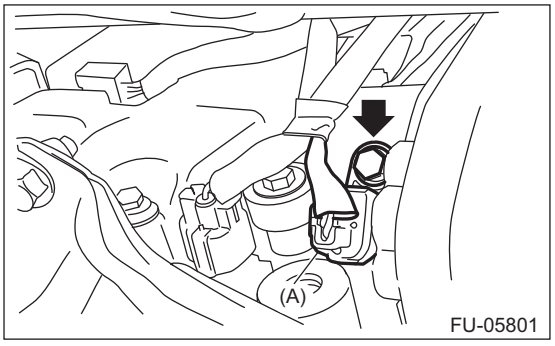
1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the engine harness cover. (Right side only.)



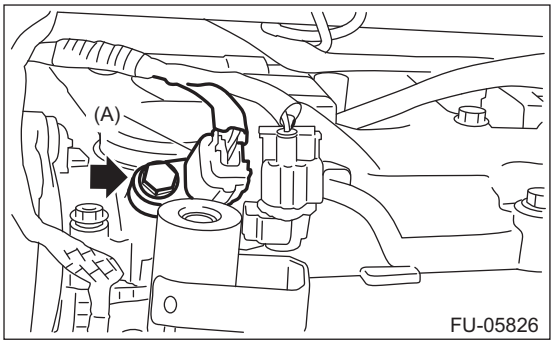
5) Remove the clip holding the engine harness. (Left side only)



6) Disconnect connector (A) from the camshaft position sensor, and remove the camshaft position sensor from under the cylinder head.
• RH side



• LH side



B: INSTALLATION

1. INTAKE SIDE

Install in the reverse order of removal.

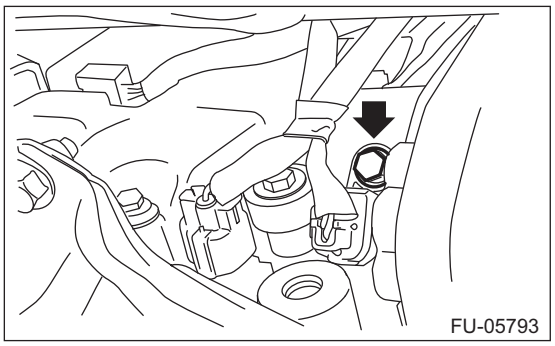
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

2. EXHAUST SIDE

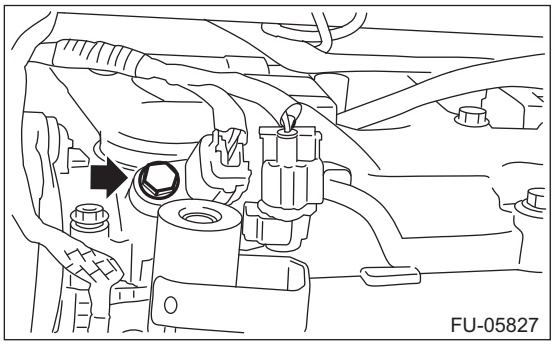
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

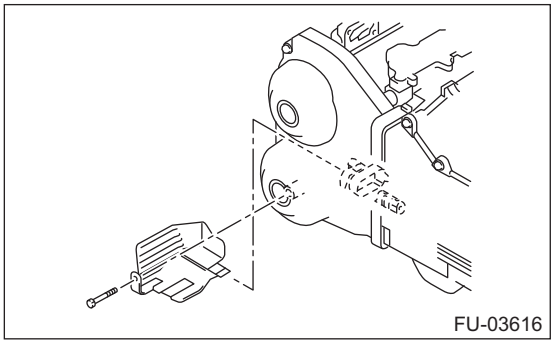
- RH side



- LH side



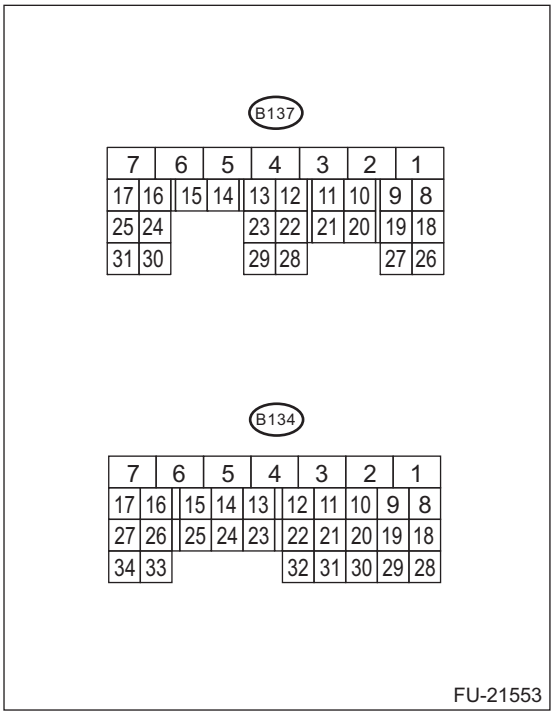
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



C: INSPECTION

1. CAMSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

1) Prepare an oscilloscope.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Connect the probe to ECM connector.



Camshaft position sensor		Terminal No.	Probe
Intake	RH	(B137) No. 24	+
	LH	(B137) No. 16	+
Exhaust	RH	(B137) No. 23	+
	LH	(B137) No. 29	+
RH and LH		(B134) No. 3	–

4) Start the engine and let it idle.
5) Check the waveforms and voltage.

NOTE:
For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(STI)(diag)-21, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>
6) After inspection, install the related parts in the reverse order of removal.

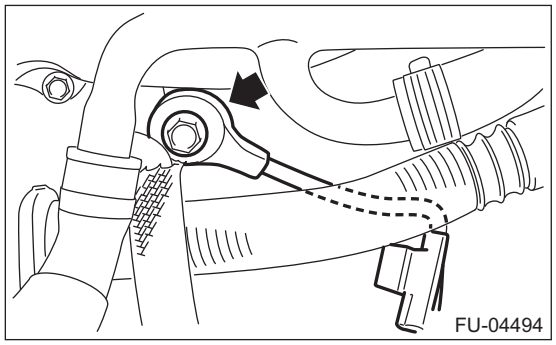
2. OTHER INSPECTIONS

Check that the camshaft position sensor has no deformation, cracks or other damages.

7. Knock Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
4) Remove the secondary air combination valve RH. <Ref. to EC(STI)-57, REMOVAL, Secondary Air Combination Valve.>
5) Remove the knock sensor from cylinder block.

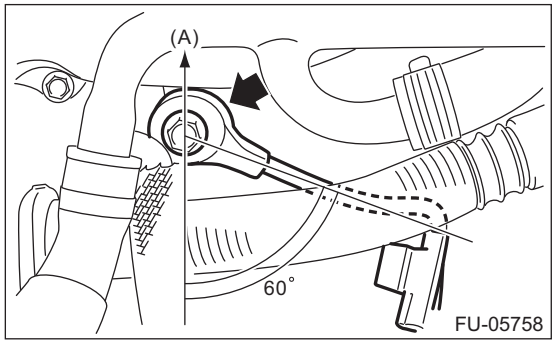


B: INSTALLATION

1) Install the knock sensor to the cylinder block.

NOTE:
The portion of the knock sensor cord that is pulled out must be positioned at a 60° angle relative to the engine rear.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

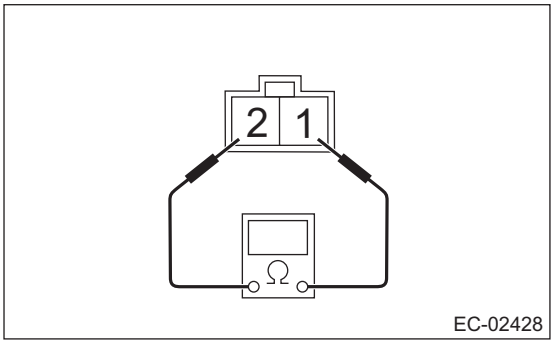


(A) Front side of vehicle

2) Install the secondary air combination valve RH. <Ref. to EC(STI)-58, SECONDARY AIR COMBINATION VALVE RH, INSTALLATION, Secondary Air Combination Valve.>
3) Install the intake manifold. <Ref. to FU(STI)-20, INSTALLATION, Intake Manifold.>
4) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
5) Connect the battery ground terminal.

C: INSPECTION

1) Check that the knock sensor has no deformation, cracks or other damages.
2) Measure the resistance between knock sensor terminals.



Terminal No.	Standard
1 and 2	560±28 kΩ

8. Throttle Position Sensor

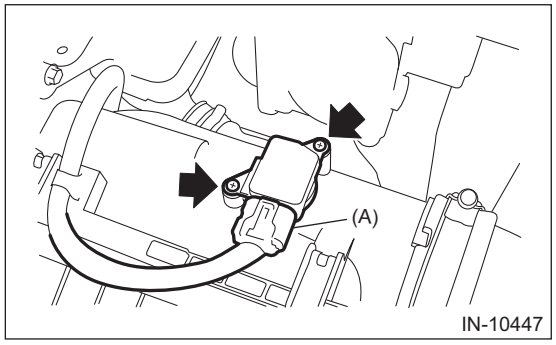
A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body.
Refer to “Throttle Body” for removal and installation procedure. <Ref. to FU(STI)-15, REMOVAL, Throttle Body.> <Ref. to FU(STI)-15, INSTALLATION, Throttle Body.>

9. Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the mass air flow and intake air temperature sensor.



B: INSTALLATION

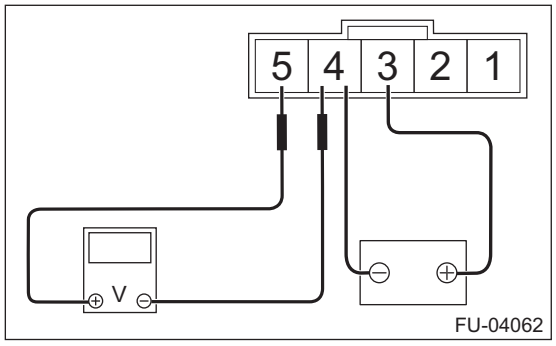
Install in the reverse order of removal.

Tightening torque:
1 N·m (0.1 kgf-m, 0.7 ft-lb)

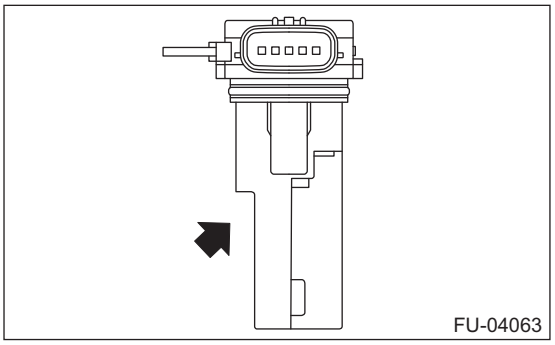
C: INSPECTION

1. CHECK THE MASS AIR FLOW SENSOR UNIT

1) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and connect the circuit tester positive terminal to terminal No. 5 and the circuit tester ground terminal to terminal No. 4.

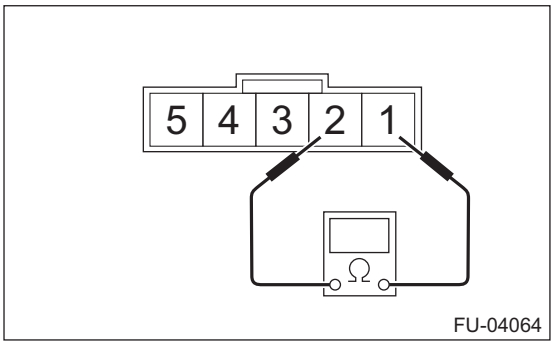


2) Check the voltage changes when air is blown to the mass air flow sensor unit in arrow direction.



2. CHECK THE INTAKE AIR TEMPERATURE SENSOR UNIT

Measure the resistance between intake air temperature sensor terminals.



Temperature	Terminal No.	Standard
–20°C (–4°F)	1 and 2	16.0±2.4 kΩ
20°C (68°F)		2.45±0.24 kΩ
60°C (140°F)		0.580±0.087 kΩ

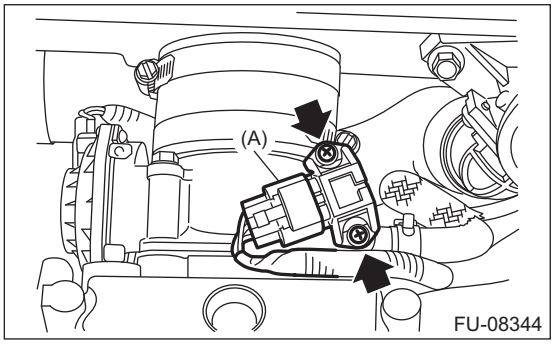
3. OTHER INSPECTIONS

1) Check that the mass air flow and intake air temperature sensor has no deformation, cracks or other damages.
2) Check that the mass air flow and intake air temperature sensor has no dirt.

10.Manifold Absolute Pressure Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector (A) from the manifold absolute pressure sensor, and remove the manifold absolute pressure sensor from throttle body.



B: INSTALLATION

Install in the reverse order of removal.

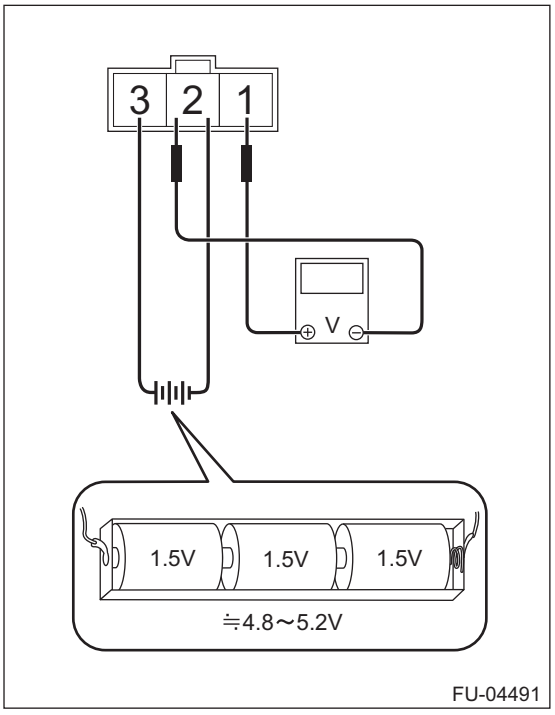
NOTE:
Use new O-rings.

Tightening torque:
2 N·m (0.2 kgf-m, 1.5 ft-lb)

C: INSPECTION

1) Check that the manifold absolute pressure sensor has no deformation, cracks or other damages.
2) Connect dry-cell battery positive terminal to terminal No. 3 and dry-cell battery ground terminal to terminal No. 2, circuit tester positive terminal to terminal No. 1 and the circuit tester ground terminal to terminal No. 2.

NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC constant voltage power source can also be used.

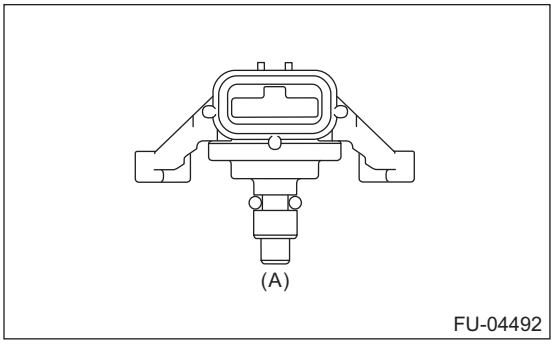


3) Check the voltage at a normal atmospheric pressure.

NOTE:
The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
1 (+) and 2 (–)	Approx. 2.0 V (when 25°C (77°F))

4) Connect the Mighty Vac to the pressure port (A) of manifold absolute pressure sensor.



5) Check the voltage when generating vacuum and positive pressure using Mighty Vac.

CAUTION:
Do not apply or reduce pressure out of the range of –88 — 200 kPa (–0.9 — 2.04 kgf/cm^2, –12.8 — 29.0 psi). Doing so may damage the manifold absolute pressure sensor.

NOTE:
When vacuum occurs at the pressure port of manifold absolute pressure sensor, the voltage will drop from the value as in step 3). When positive pressure occurs, on the other hand, the voltage will rise.

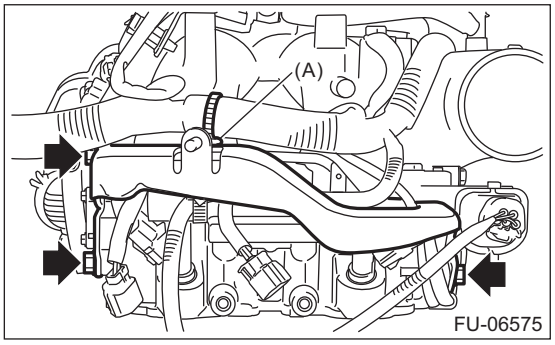
Pressure	Terminal No.	Standard
–88 kPa (–0.9 kgf/cm^2, –12.8 psi)	1 (+) and 2 (–)	Approx. 0.8 V (when 25°C (77°F))
181 kPa (1.85 kgf/cm^2, 26.2 psi)		Approx. 4.7 V (when 25°C (77°F))

11.Fuel Injector

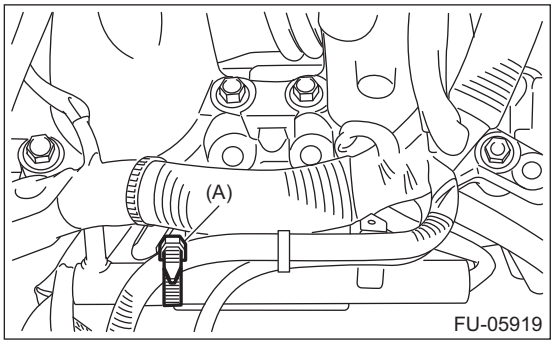
A: REMOVAL

1. RH SIDE

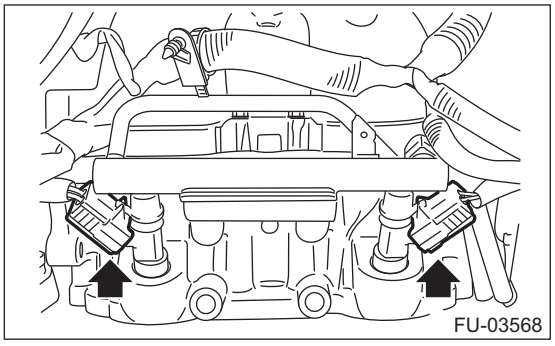
1) Disconnect the ground cable from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove clip (A) holding the engine harness to the fuel pipe protector RH, and remove the fuel pipe protector RH from the intake manifold.



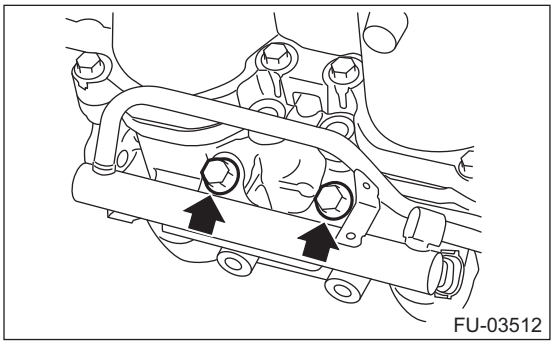
4) Remove the harness band (A) which holds the engine harness to the fuel injector pipe RH.



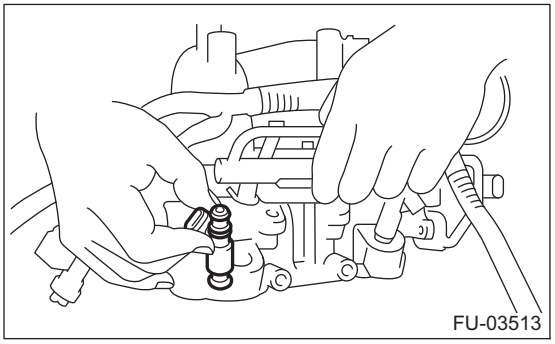
5) Disconnect the connector from fuel injector.



6) Remove the bolts which hold fuel injector pipe RH.

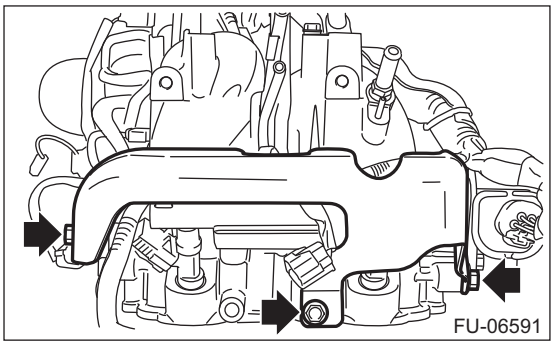


7) Remove the fuel injector.

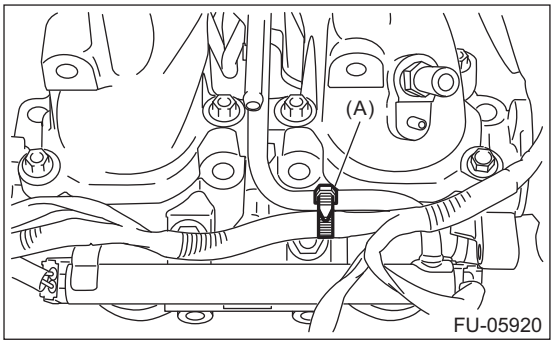


2. LH SIDE

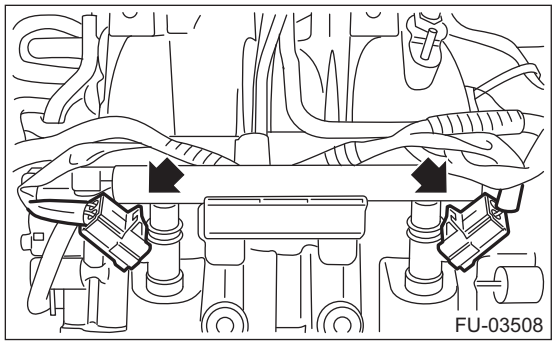
1) Disconnect the ground cable from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the fuel pipe protector LH from the intake manifold.



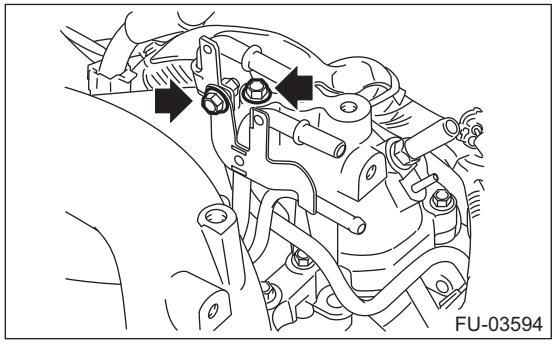
4) Remove the harness band (A) which holds the engine harness to the fuel injector pipe LH.

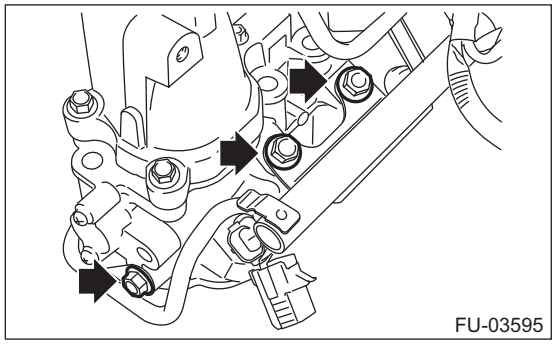


5) Disconnect the connector from fuel injector.

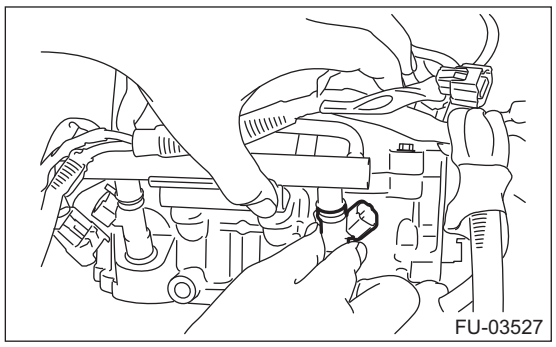


6) Remove the bolts which hold fuel injector pipe LH.





7) Remove the fuel injector.



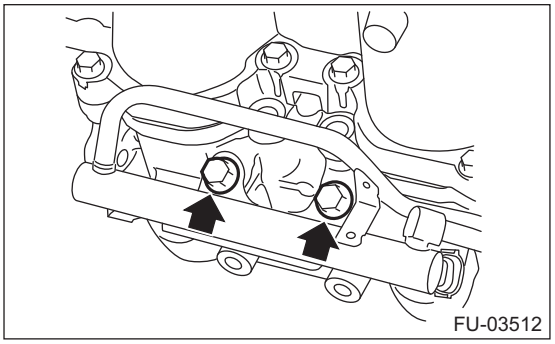
B: INSTALLATION

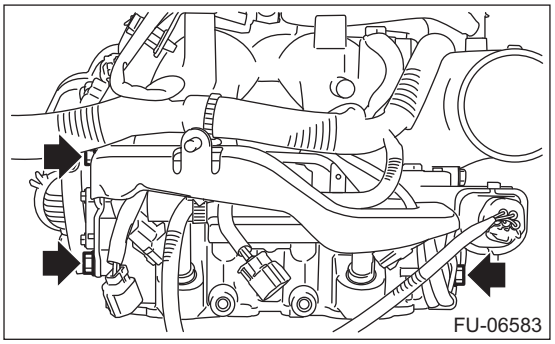
1. RH SIDE

Install in the reverse order of removal.

NOTE:
Use new O-rings, rubbers and seal rings.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



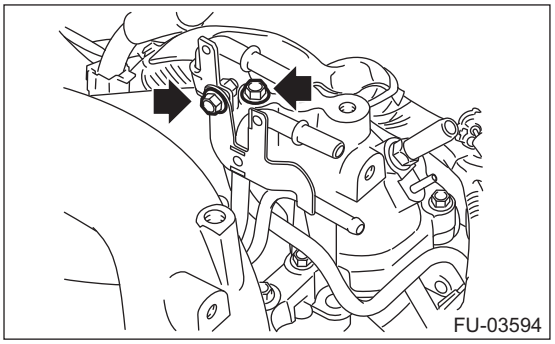


2. LH SIDE

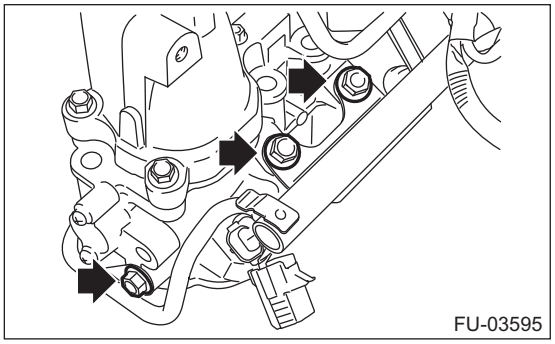
Install in the reverse order of removal.

NOTE:
Use new O-rings, rubbers and seal rings.

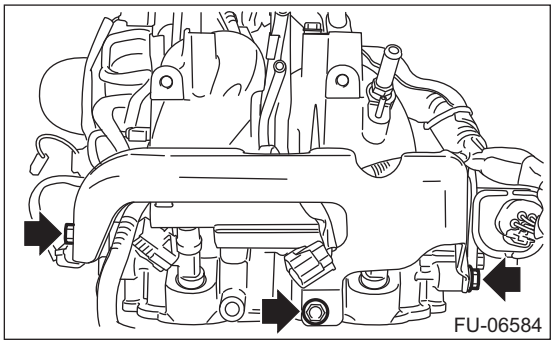
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



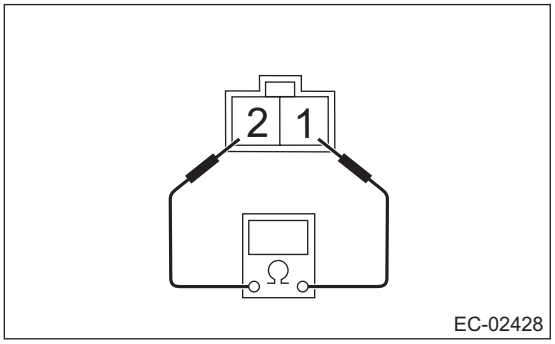
FU-03595



FU-06584

C: INSPECTION

1) Check that the fuel injector has no deformation, cracks or other damages.
2) Measure the resistance between fuel injector terminals.



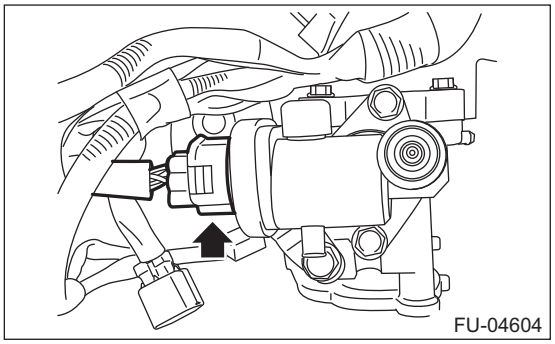
EC-02428

Terminal No.	Standard
1 and 2	Approx. 12.0 Ω (when 20°C (68°F))

12. Tumble Generator Valve Assembly

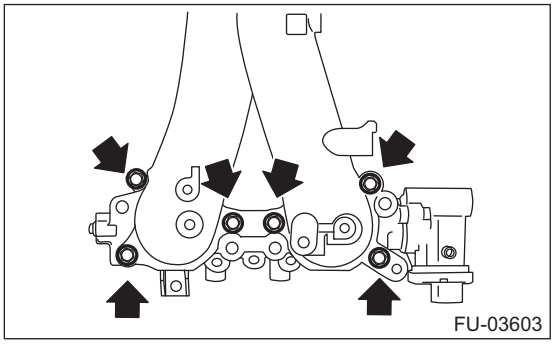
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Disconnect the connector from the tumble generator valve assembly.



FU-04604

4) Remove the fuel injector. <Ref. to FU(STI)-42, REMOVAL, Fuel Injector.>
5) Remove the tumble generator valve assembly from the intake manifold.



FU-03603

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
8.2 N·m (0.8 kgf-m, 6.0 ft-lb)

C: INSPECTION

1) Check that the tumble generator valve assembly has no deformation, cracks or other damages.
2) Check tumble generator valve for contamination or clogging.

13. Tumble Generator Valve Actuator

A: SPECIFICATION

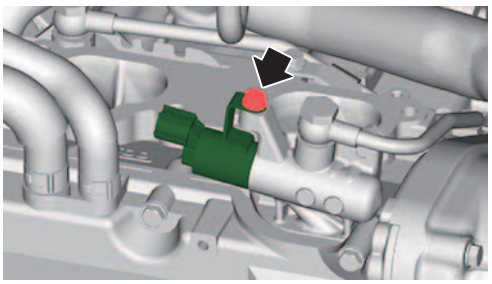
The tumble generator valve assembly cannot be disassembled.
Refer to “Tumble Generator Valve Assembly” for removal and installation procedures. <Ref. to FU(STI)-45, REMOVAL, Tumble Generator Valve Assembly.> <Ref. to FU(STI)-45, INSTALLATION, Tumble Generator Valve Assembly.>

14.Oil Flow Control Solenoid Valve

A: REMOVAL

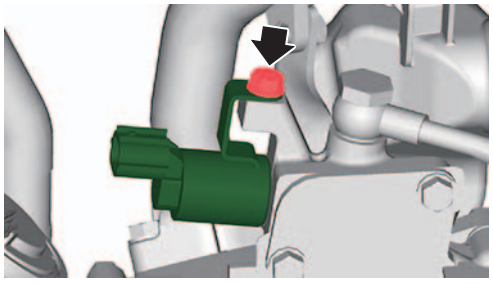
1. INTAKE SIDE

1) Disconnect the ground terminal from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the oil flow control solenoid valve.
- RH



FU-21500

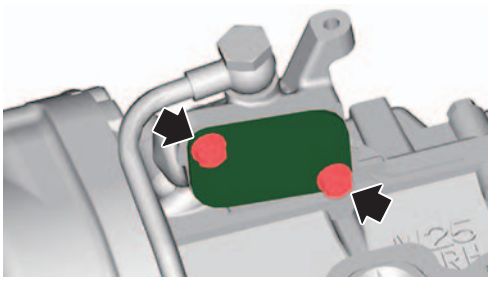
- LH



FU-21501

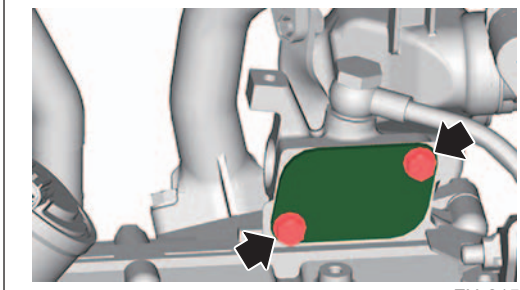
4) Remove the oil return cover.

NOTE:
Perform this procedure only when it is necessary.
- RH



FU-21498

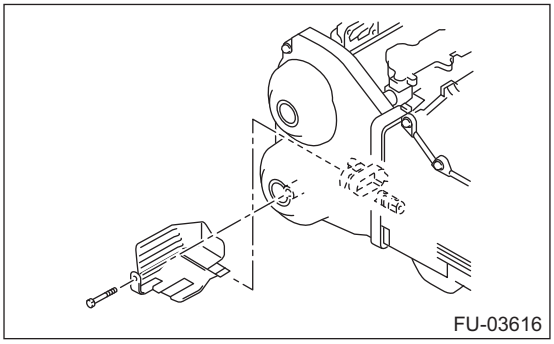
- LH



FU-21502

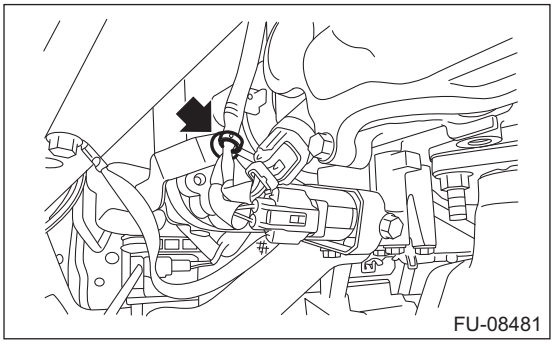
2. EXHAUST SIDE

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the front exhaust pipe. (Right side only.) <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
5) Remove the engine harness cover. (Right side only.)



FU-03616

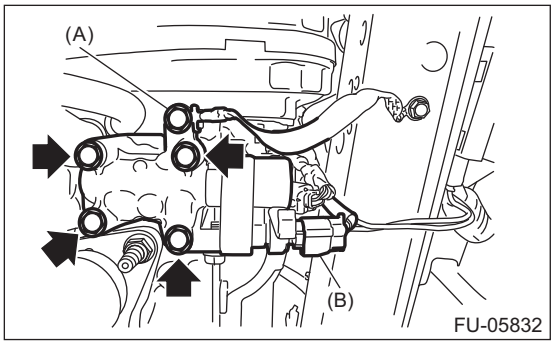
6) Remove the clip holding the engine harness. (Left side only)



FU-08481

7) Disconnect the ground cable (A). (Left side only)

8) Disconnect the connector (B) from the oil flow control solenoid valve, and remove the oil flow control solenoid valve from the cylinder head.



B: INSTALLATION

1. INTAKE SIDE

1) Apply liquid gasket to the two bolts securing oil return cover.

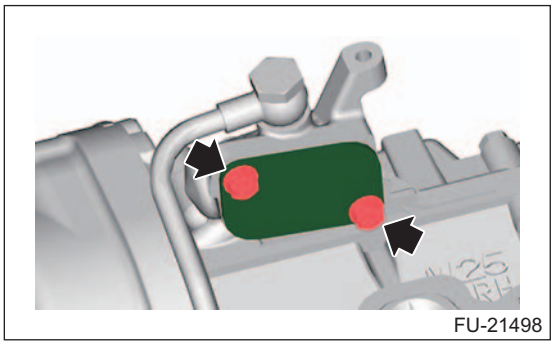
Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

2) Install the oil return cover.

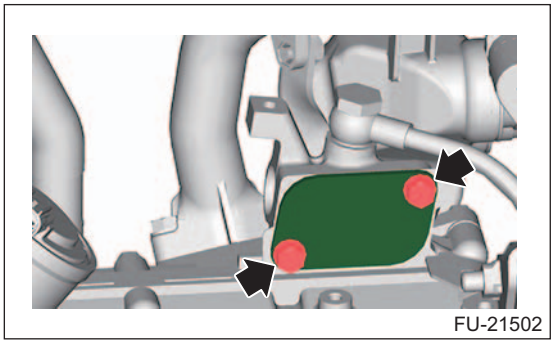
NOTE:
Use a new gasket.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

- RH



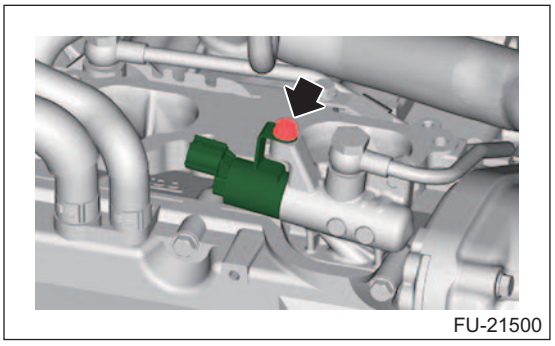
- LH



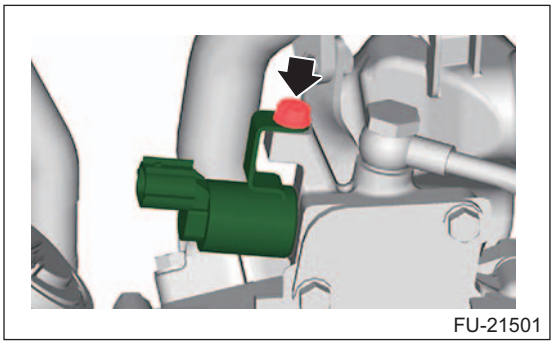
3) Install the oil flow control solenoid valve.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

- RH



- LH



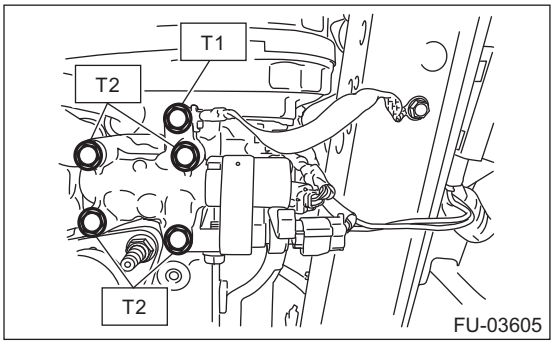
4) Install the intake manifold. <Ref. to FU(STI)-20, INSTALLATION, Intake Manifold.>
5) Connect the battery ground terminal.

2. EXHAUST SIDE

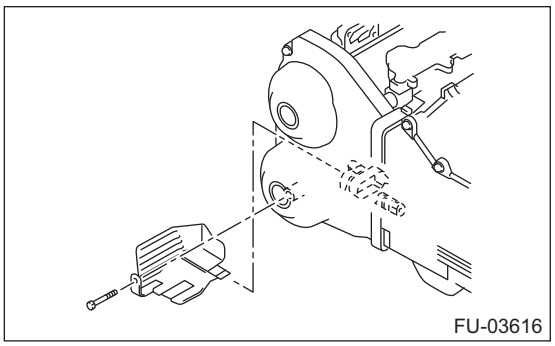
Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
T1: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
T2: 10 N·m (1.0 kgf-m, 7.4 ft-lb)



Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



FU-03616

C: DISASSEMBLY

1. INTAKE SIDE

The case of the oil flow control solenoid valve on the intake side is a single unit with the front camshaft cap.

2. EXHAUST SIDE

The oil flow control solenoid valve on the exhaust side cannot be disassembled.

D: ASSEMBLY

1. INTAKE SIDE

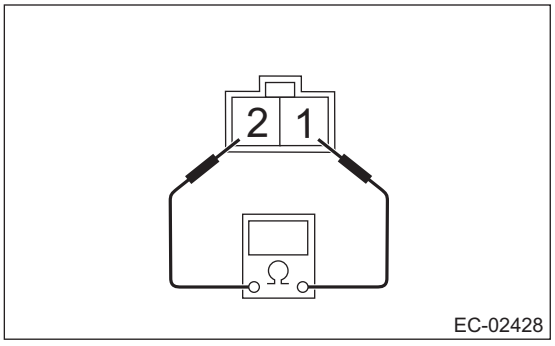
The case of the oil flow control solenoid valve on the intake side is a single unit with the front camshaft cap.

2. EXHAUST SIDE

The oil flow control solenoid valve on the exhaust side cannot be disassembled.

E: INSPECTION

1) Check that the oil flow control solenoid valve has no deformation, cracks or other damages.
2) Measure the resistance between the oil flow control solenoid valve terminals.



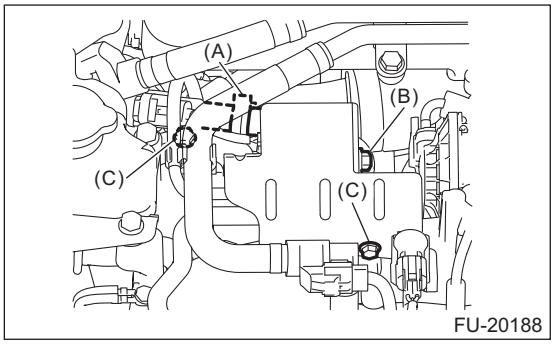
EC-02428

Terminal No.	Standard
1 and 2	7.4±0.5 Ω (when 20°C (68°F))

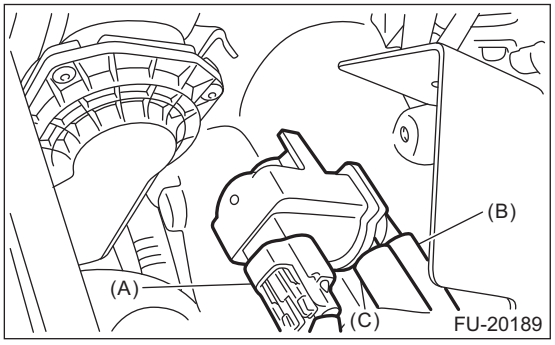
15. Wastegate Control Solenoid Valve

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the vacuum hose from clip (A), and remove the bolt (B) which secures the wastegate control solenoid valve.
3) Remove the bolts (C) which secure solenoid valve bracket onto intake manifold.



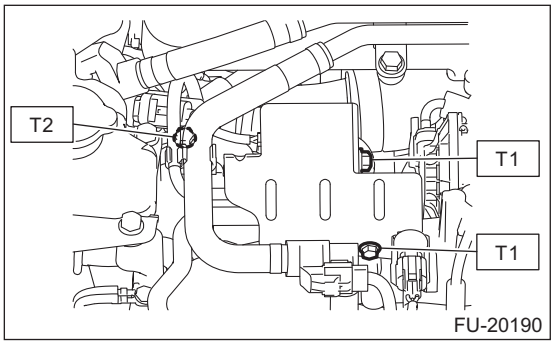
4) Disconnect the connector (A) from the wastegate control solenoid valve.
5) Disconnect the vacuum hose (B) and air control hose (C) from the wastegate control solenoid valve, and remove the wastegate control solenoid valve.



B: INSTALLATION

Install in the reverse order of removal.

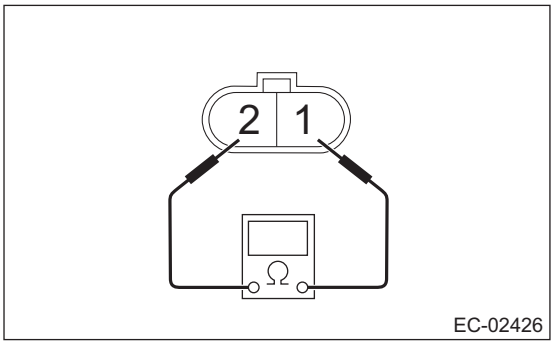
Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)



C: INSPECTION

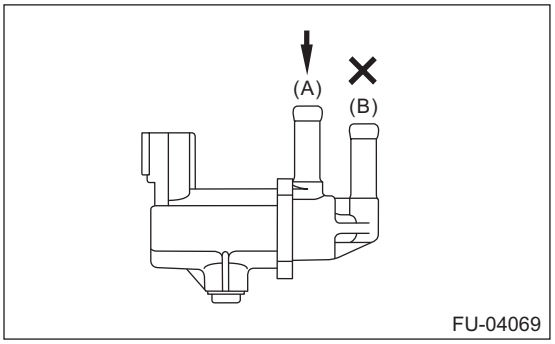
1. WASTEGATE CONTROL SOLENOID VALVE

1) Check that the wastegate control solenoid valve has no deformation, cracks or other damages.
2) Check the resistance between the wastegate control solenoid valve terminals.

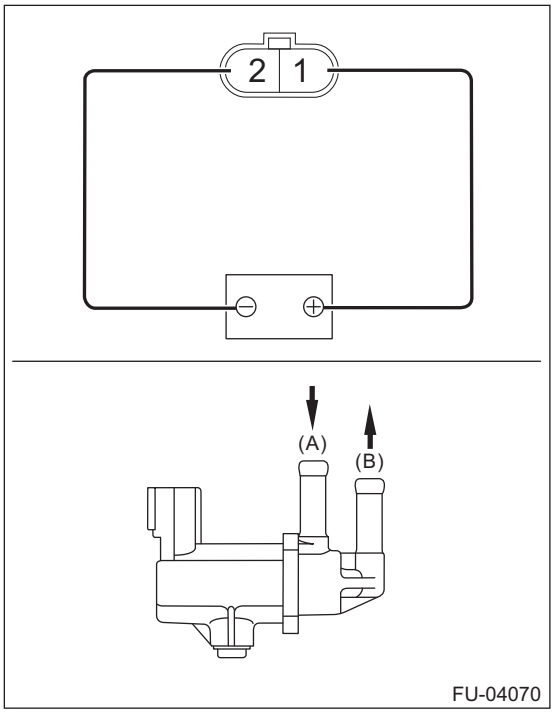


Terminal No.	Standard
1 and 2	28±2 Ω (when 20°C (68°F))

3) Check that air does not come out from (B) when air is blown into (A).



4) Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).



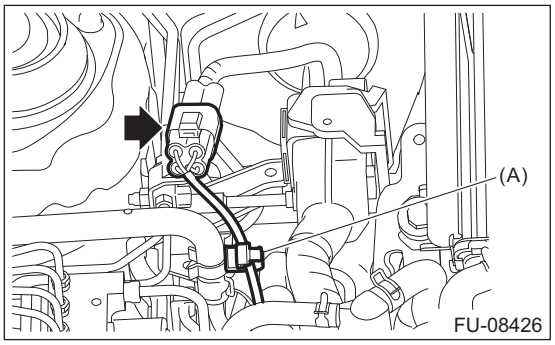
2. OTHER INSPECTIONS

Check that the vacuum hose and air control hose have no cracks, damage or loose part.

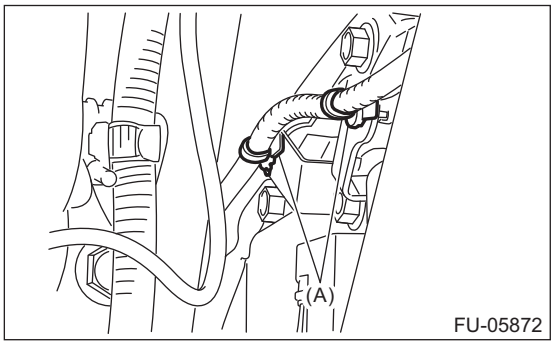
16.Front Oxygen (A/F) Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector from the front oxygen (A/F) sensor, and remove the clip (A) holding the return hose and front oxygen (A/F) sensor harness.

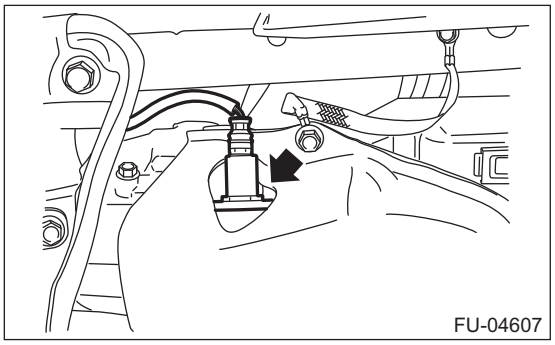


3) Remove the clips (A) holding the front oxygen (A/F) sensor harness to the engine harness stay.



4) Lift up the vehicle.
5) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
6) Apply spray-type lubricant (004301003) to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
7) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.



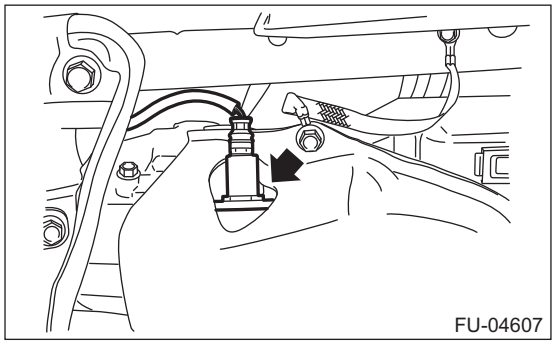
B: INSTALLATION

CAUTION:
If lubricant is spilt onto the exhaust pipe, wipe it off completely with cloth to avoid emission of smoke or causing a fire.
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

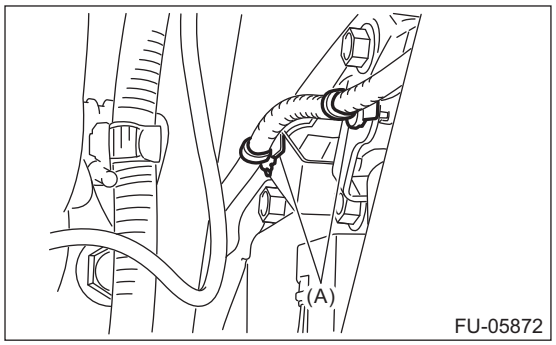
CAUTION:
Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

Anti-seize compound:
NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent
2) Install the front oxygen (A/F) sensor.

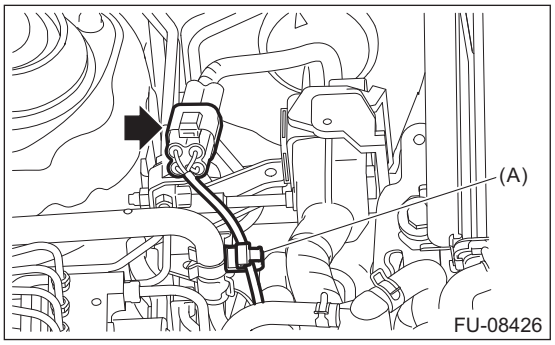
Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



3) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
4) Lower the vehicle.
5) Secure the front oxygen (A/F) sensor harness to the engine harness stay using the clips (A).



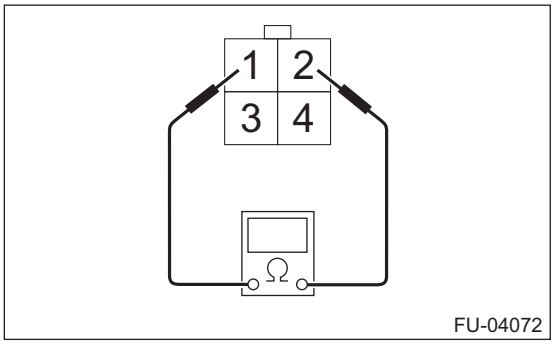
6) Connect the connector to the front oxygen (A/F) sensor, and secure the return hose and front oxygen (A/F) sensor harness using the clip (A).



7) Connect the battery ground terminal.

C: INSPECTION

1) Check that the front oxygen (A/F) sensor has no deformation, cracks or other damages.
2) Measure the resistance between front oxygen (A/F) sensor terminals.

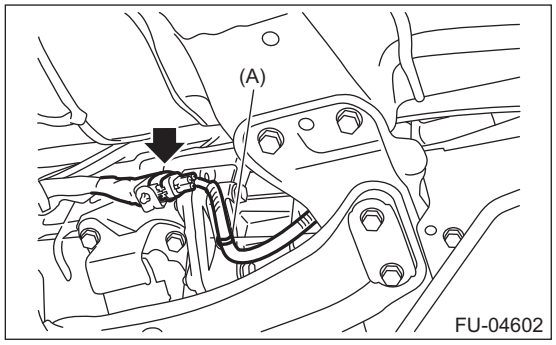


Terminal No.	Standard
1 and 2	2.4±0.24 Ω (when 20°C (68°F))

17.Rear Oxygen Sensor

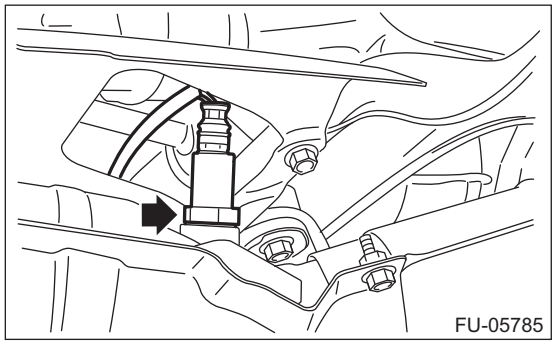
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the transmission under cover.
4) Disconnect the connector from the rear oxygen sensor, and remove the clip (A) holding the rear oxygen sensor harness.



5) Apply spray-type lubricant (004301003) to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
6) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.



B: INSTALLATION

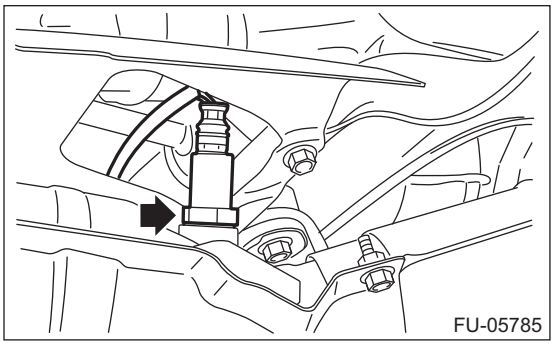
CAUTION:
If lubricant is spilt onto the exhaust pipe, wipe it off completely with cloth to avoid emission of smoke or causing a fire.
1) Before installing rear oxygen sensor, apply the anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

CAUTION:
Never apply anti-seize compound to the protector of rear oxygen sensor.

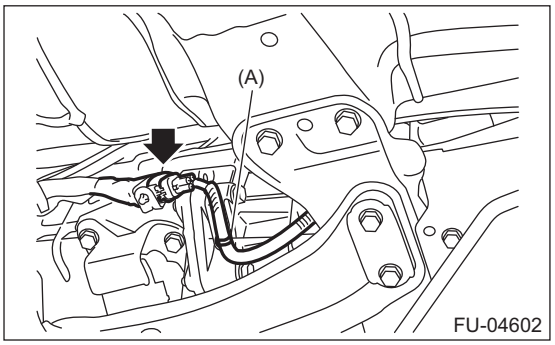
Anti-seize compound:
NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent

2) Install the rear oxygen sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



3) Connect the connector to the rear oxygen sensor, and hold the rear oxygen sensor harness with the clip (A).

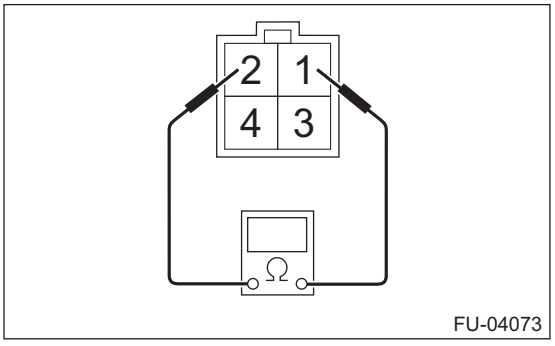


4) Install the transmission under cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
5) Lower the vehicle.
6) Connect the battery ground terminal.

C: INSPECTION

1) Check that the rear oxygen sensor has no deformation, cracks or other damages.
2) Measure the resistance between rear oxygen sensor terminals.

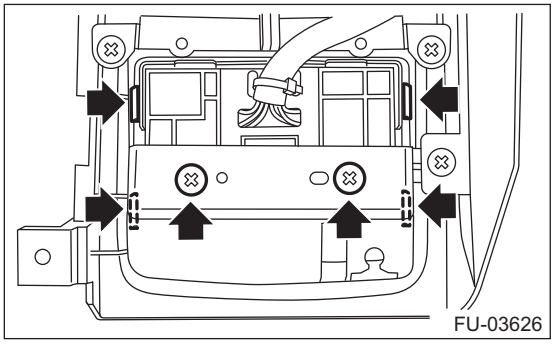


Terminal No.	Standard
1 and 2	$5.6^{+0.8}_{-0.6}$ Ω (when 20°C (68°F))

18.SI-DRIVE (SUBARU Intelligent Drive) Selector

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the multi-selector switch connector from the console box.
4) Remove the screws and tabs holding the multi-selector switch to the console box and the multi-selector switch.



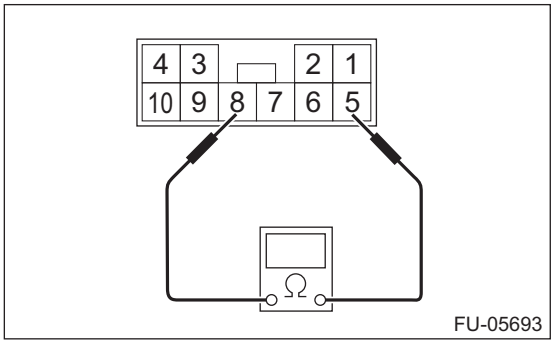
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)

C: INSPECTION

1) Check that the multi select switch does not have deformation, cracks, or damage.
2) Check the resistance between the terminals at the SI-DRIVE selector.

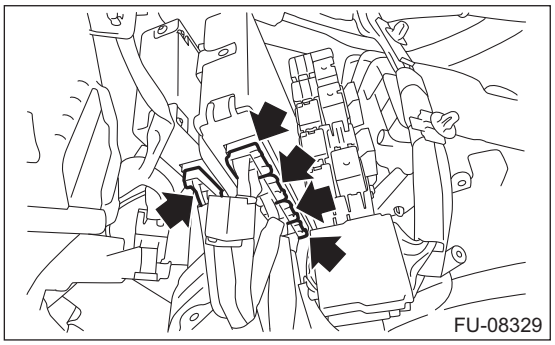


Switch position	Terminal No.	Standard
Sport (when turning the SI-DRIVE selector to the left)	5 and 8	Less than 1 Ω
Intelligent (when pressing the SI-DRIVE selector)		1±0.05 kΩ
Sport Sharp (when turning the SI-DRIVE selector to the right)		3.67±0.1835 kΩ

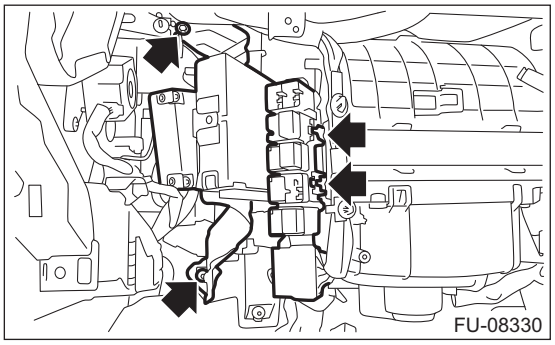
19.Engine Control Module (ECM)

A: REMOVAL

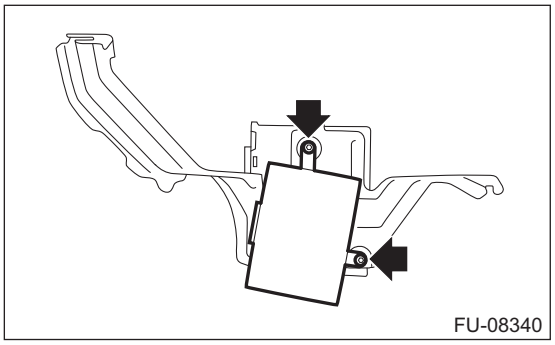
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Disconnect the connectors from the ECM and driver's control center differential control module.



4) Push down the claws, and remove the relay block.
5) Remove the bolts and nuts, and remove the ECM.



6) Remove the driver's control center differential control module.



B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
• When the ECM of model with immobilizer has been replaced, be sure to perform the registration of immobilizer system.
• For model without keyless access with push button start, refer to the Type B in "REGISTRATION MANUAL FOR IMMOBILIZER".
• For model with keyless access with push button start, refer to the Type D in "REGISTRATION MANUAL FOR IMMOBILIZER".
• If replacing ECM or the bracket, replace both parts with new parts at a time.
• After installing the bracket to ECM, do not separate the bracket.
• If the bracket has been installed to ECM in the wrong direction, replace both parts to new parts.

NOTE:
When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

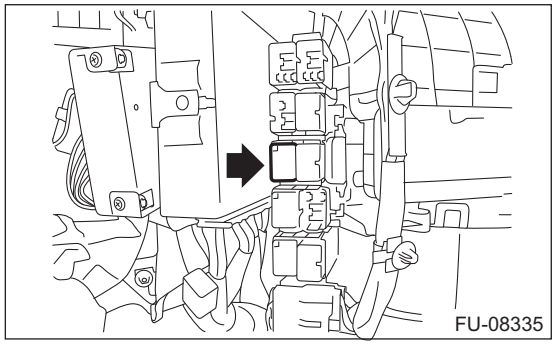
C: INSPECTION

Check that the ECM has no deformation, cracks or other damages.

20.Main Relay

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the main relay from relay block.

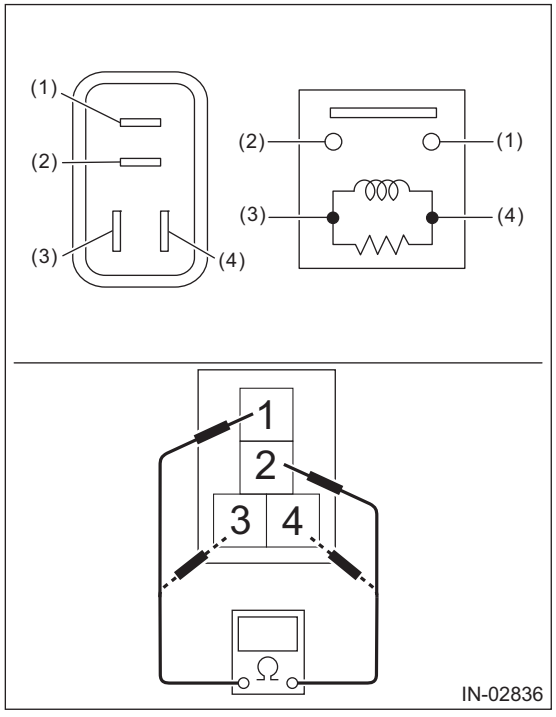


B: INSTALLATION

Install in the reverse order of removal.

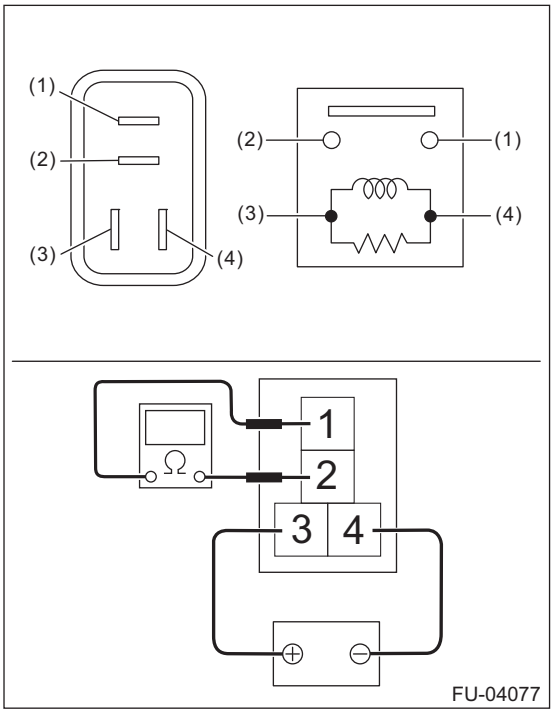
C: INSPECTION

1) Check that the main relay has no deformation, cracks or other damages.
2) Measure the resistance between main relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	130.4 — 230.8 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the main relay terminals.

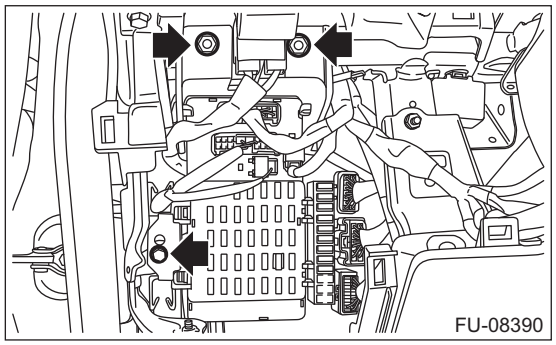


Terminal No.	Standard
1 and 2	Less than 1 Ω

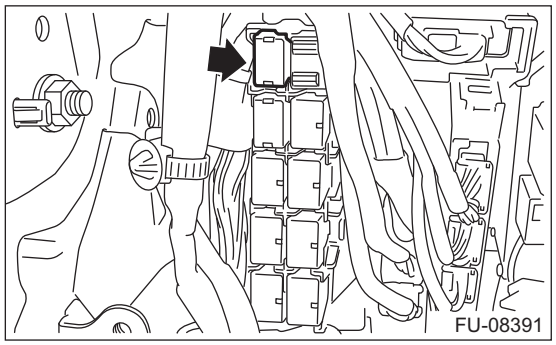
21.Oxygen Sensor Relay

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts and nuts securing the fuse block and move down the fuse block.



4) Remove the oxygen sensor relay from the relay block.



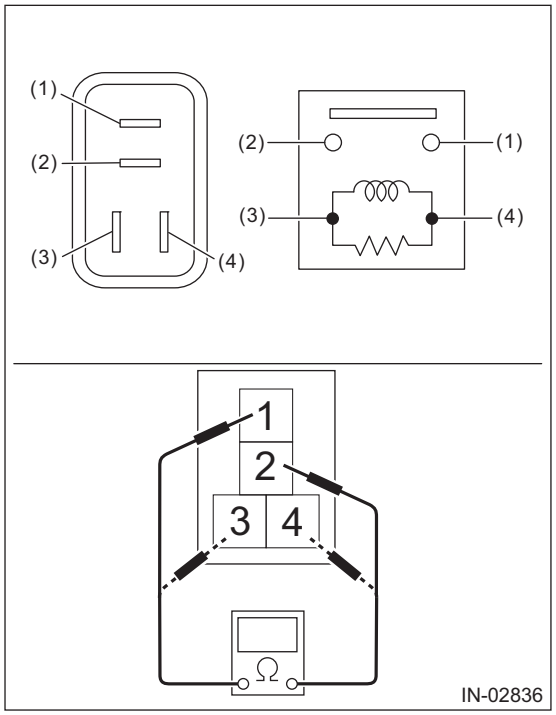
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

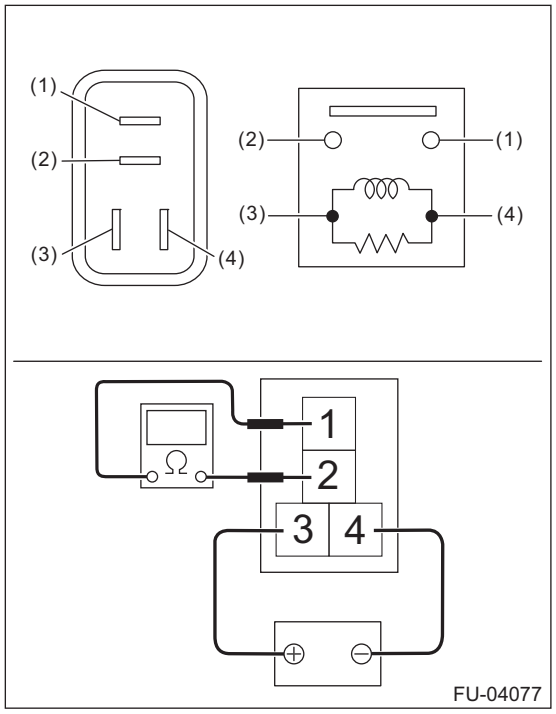
C: INSPECTION

1) Check that the oxygen sensor relay has no deformation, cracks or other damages.
2) Measure the resistance between oxygen sensor relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	130.4 — 230.8 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between oxygen sensor relay terminals.

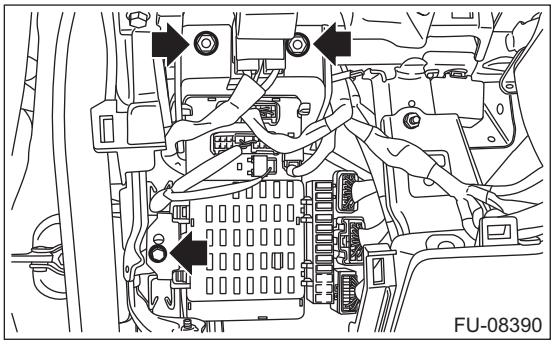


Terminal No.	Standard
1 and 2	Less than 1 Ω

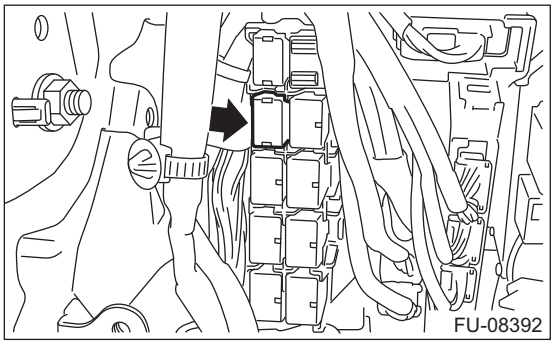
22. Electronic Throttle Control Relay

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the bolts and nuts securing the fuse block and move down the fuse block.



4) Remove the electronic throttle control relay from the relay block.



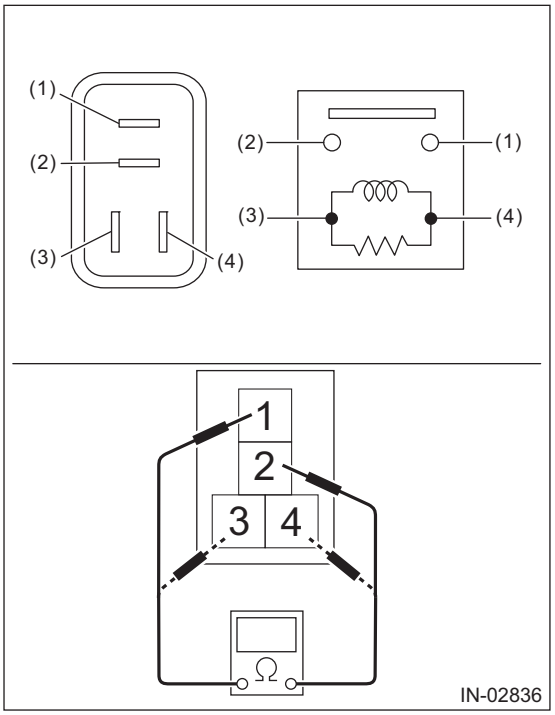
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

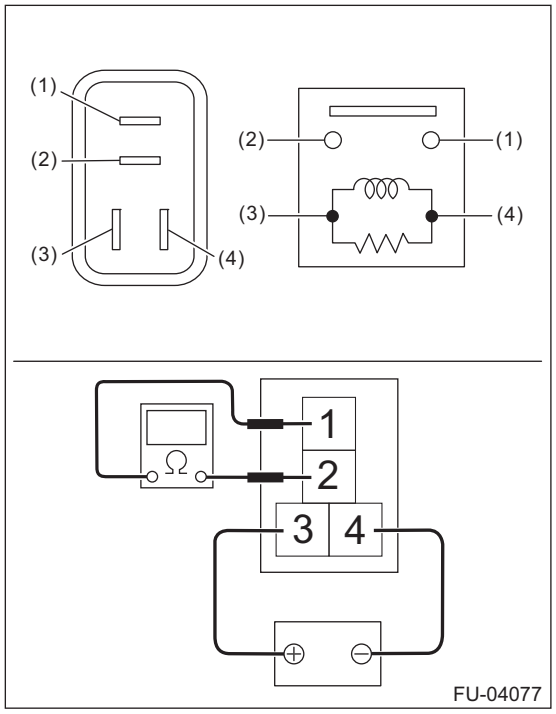
C: INSPECTION

1) Check that the electronic throttle control relay has no deformation, cracks or other damages.
2) Measure the resistance between electronic throttle control relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the electronic throttle control relay terminals.

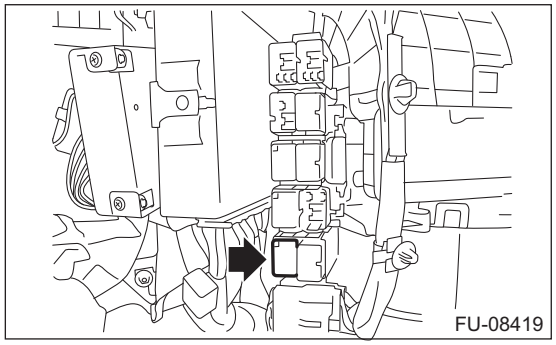


Terminal No.	Standard
1 and 2	Less than 1 Ω

23.Fuel Pump Relay

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the fuel pump relay from relay block.

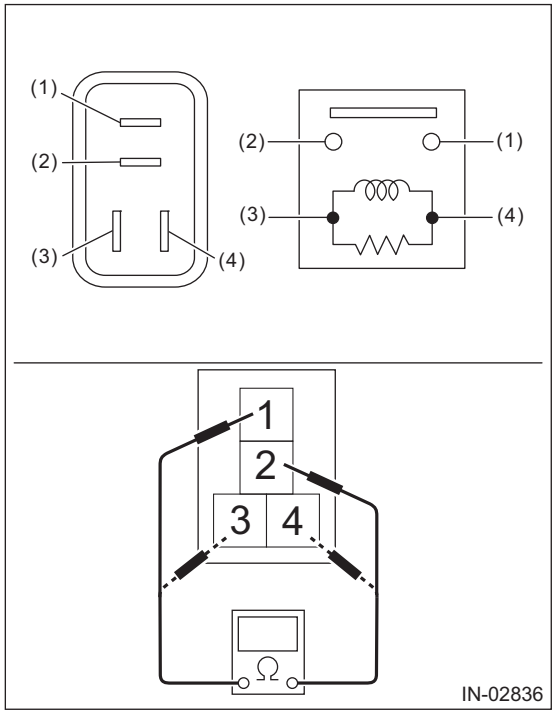


B: INSTALLATION

Install in the reverse order of removal.

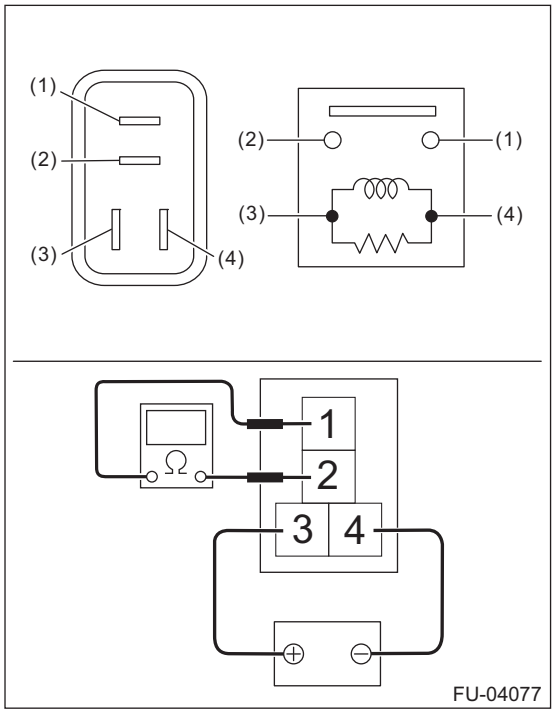
C: INSPECTION

1) Check that the fuel pump relay has no deformation, cracks or other damages.
2) Measure the resistance between fuel pump relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 2	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the fuel pump relay terminals.

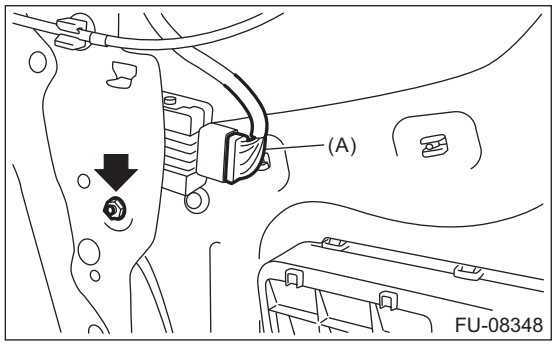


Terminal No.	Standard
1 and 2	Less than 1 Ω

24.Fuel Pump Control Unit

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the right side trunk side trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Disconnect the connector (A) from the fuel pump control unit, and remove the fuel pump control unit.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

Check that the fuel pump control unit has no deformation, cracks or other damages.

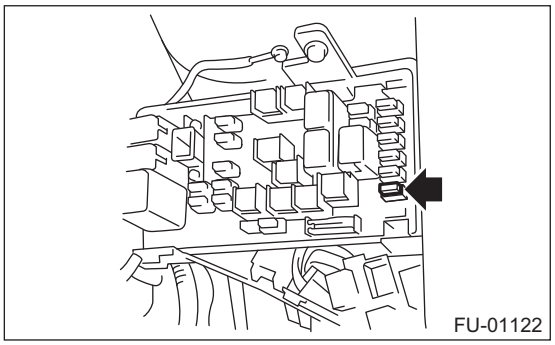
25.Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
Be careful not to spill fuel.
1) Remove the fuse of fuel pump from main fuse box.



2) Start the engine and run it until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.
5) Install the fuse of fuel pump to the main fuse box.

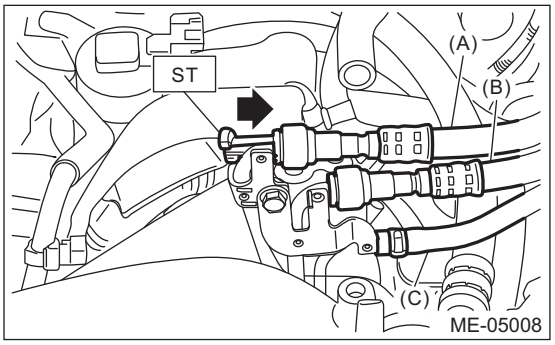
2. DRAINING FUEL (WITH SUBARU SELECT MONITOR)

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
Be careful not to spill fuel.

NOTE:
• If the fuel pump cannot be driven, refer to the procedures for draining from the fuel filler hose. <Ref. to FU(STI)-64, DRAINING FUEL (THROUGH THE FUEL FILLER HOSE), PROCEDURE, Fuel.>
• Be careful not to let the battery run-out.
• Be aware that the fuel may remain in the fuel tank after draining the fuel.
1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Attach ST to the fuel delivery pipe and push ST in the direction of arrow mark to disconnect the fuel delivery hose.
ST 42099AE000 QUICK CONNECTOR RELEASE

CAUTION:
• Be careful not to spill fuel.
• Catch the fuel from hoses using a container or cloth.



(A) Fuel delivery hose
(B) Fuel return hose
(C) Evaporation hose

3) Connect ST to the fuel delivery hose.
ST 18471AA000 FUEL PIPE ADAPTER
4) Connect the gasoline proof hose to ST and put the end of the hose in the container.
5) Drive the fuel pump and drain the fuel using Subaru Select Monitor. <Ref. to EN(STI)(diag)-80, OPERATION, Active Test.>

CAUTION:
Be careful not to spill fuel.
6) Install the related parts in the reverse order after draining the fuel.

3. DRAINING FUEL (THROUGH THE FUEL FILLER HOSE)

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

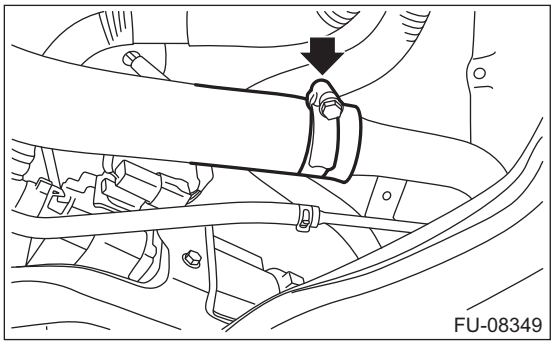
CAUTION:
• Be careful not to spill fuel.
• Fuel may remain in the fuel filler pipe. Drain the fuel from the fuel filler pipe through the fill opening using the gasoline proof pump and the gasoline proof hose (ø10 or less) before the operation.

NOTE:
Be aware that the fuel may remain in the fuel tank after draining the fuel.
1) Lift up the vehicle.
2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.
3) Drain the fuel from the fuel filler pipe through the filler opening using the gasoline proof pump and the gasoline proof hose (ø10 or less).

4) Disconnect the fuel filler hose from the fuel filler pipe assembly.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**



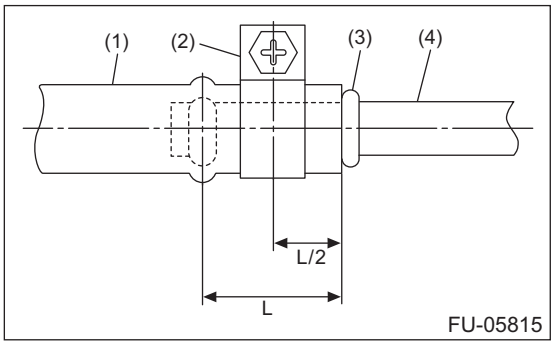
5) Set the container under the vehicle and insert the gasoline proof hose (ø10 or less) into the fuel filler hose to drain the fuel.

CAUTION:
Be careful not to spill fuel.

6) Install the related parts in the reverse order after draining the fuel.

NOTE:
Correctly insert the fuel filler hose to the spool, and then install the clamp as shown.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

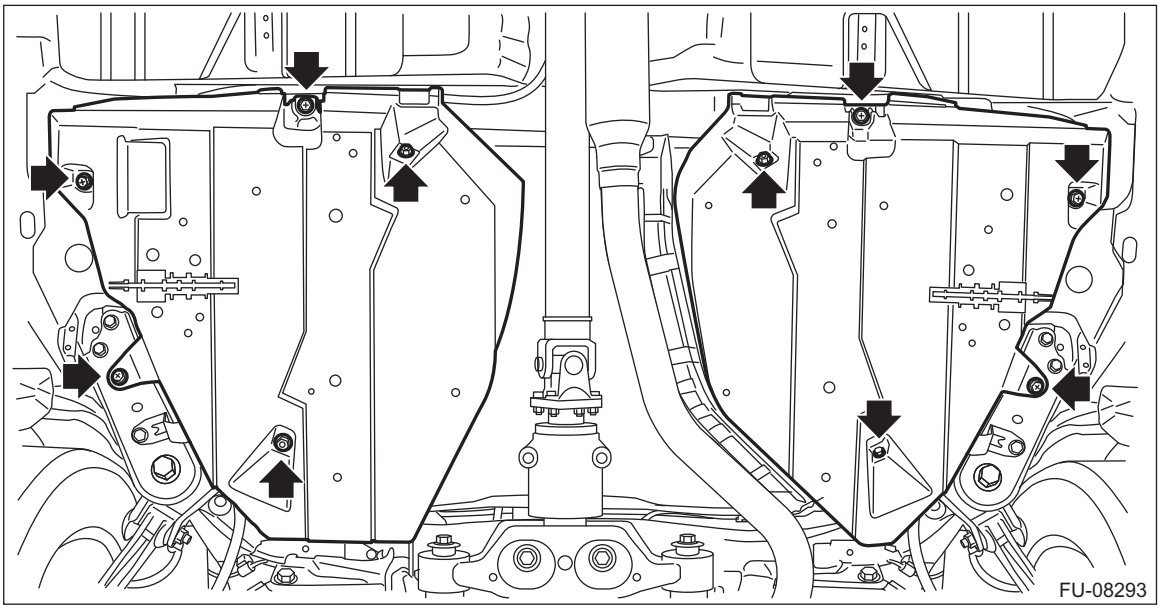


(1) Fuel filler hose
(2) Clamp
(3) Spool
(4) Fuel filler pipe

26.Fuel Tank Protector

A: REMOVAL

1) Lift up the vehicle.
2) Remove the bolt and nuts and remove the fuel tank protector.

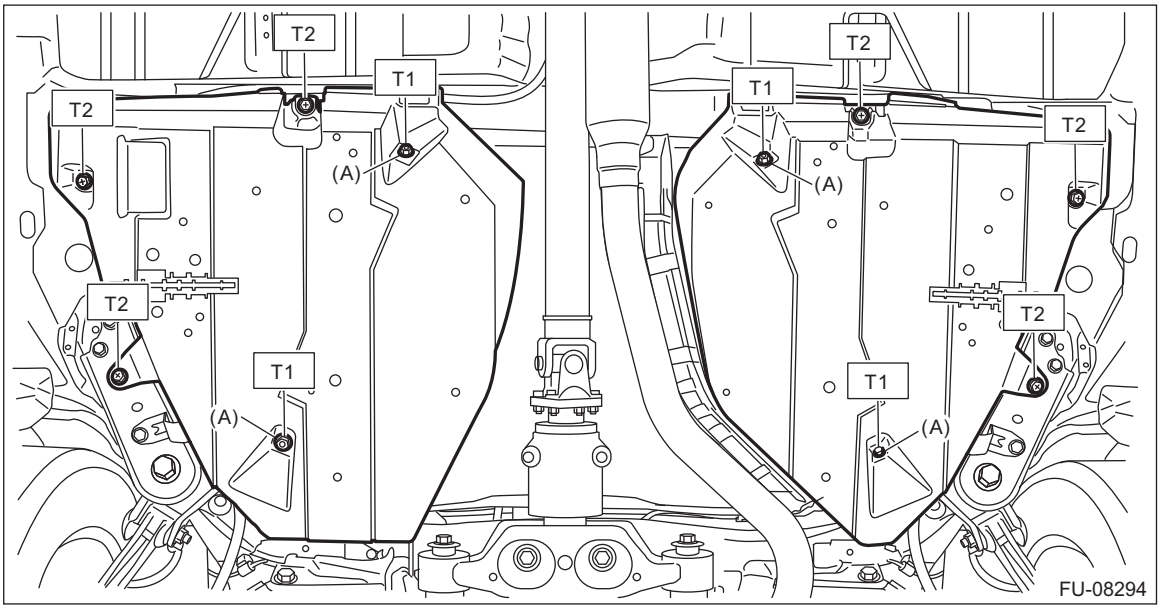


B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new self-locking nut.

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Self-locking nut

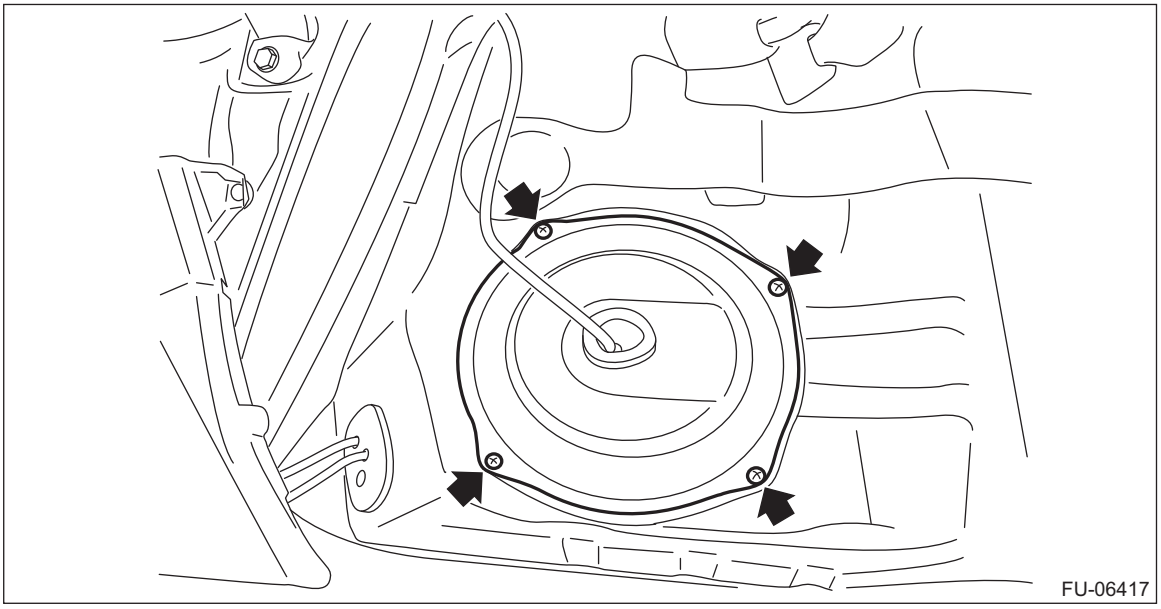
27.Fuel Tank

A: REMOVAL

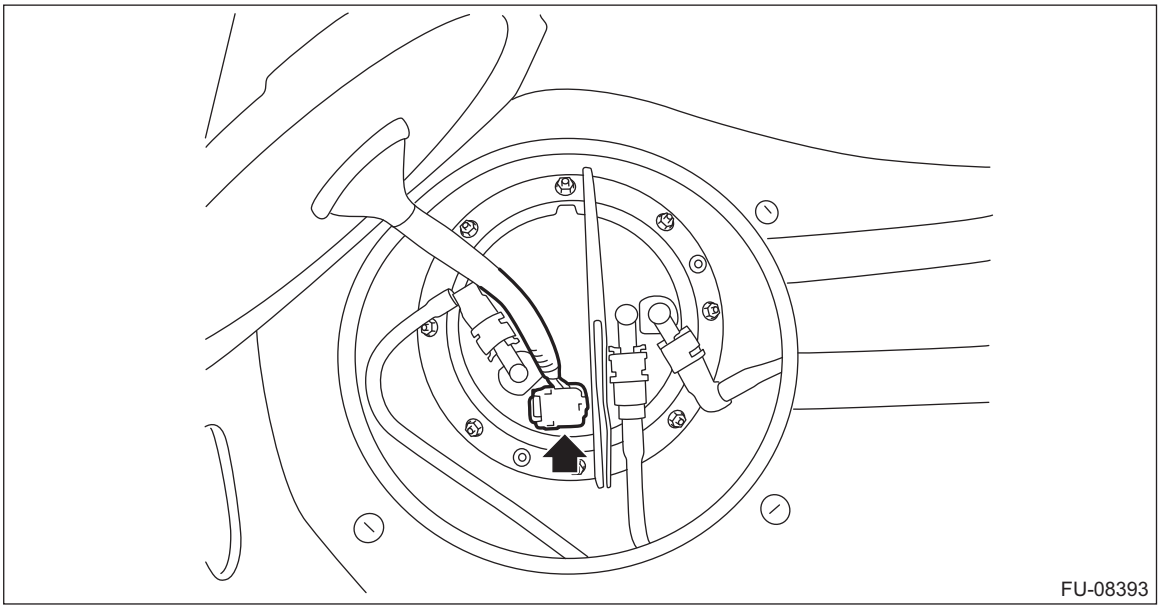
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

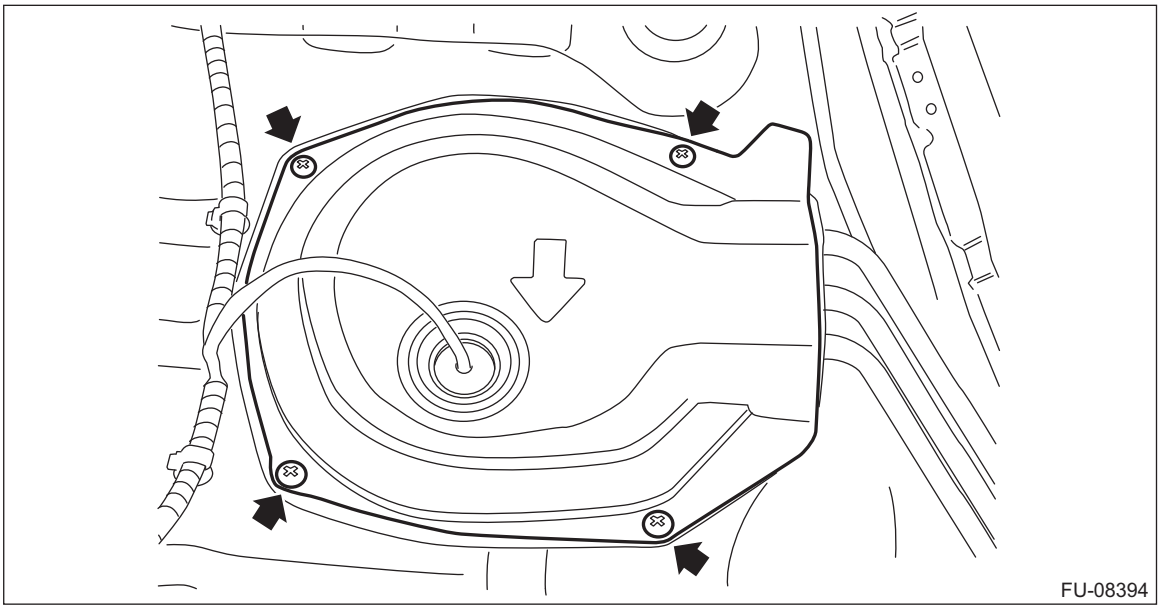
1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover of fuel pump.



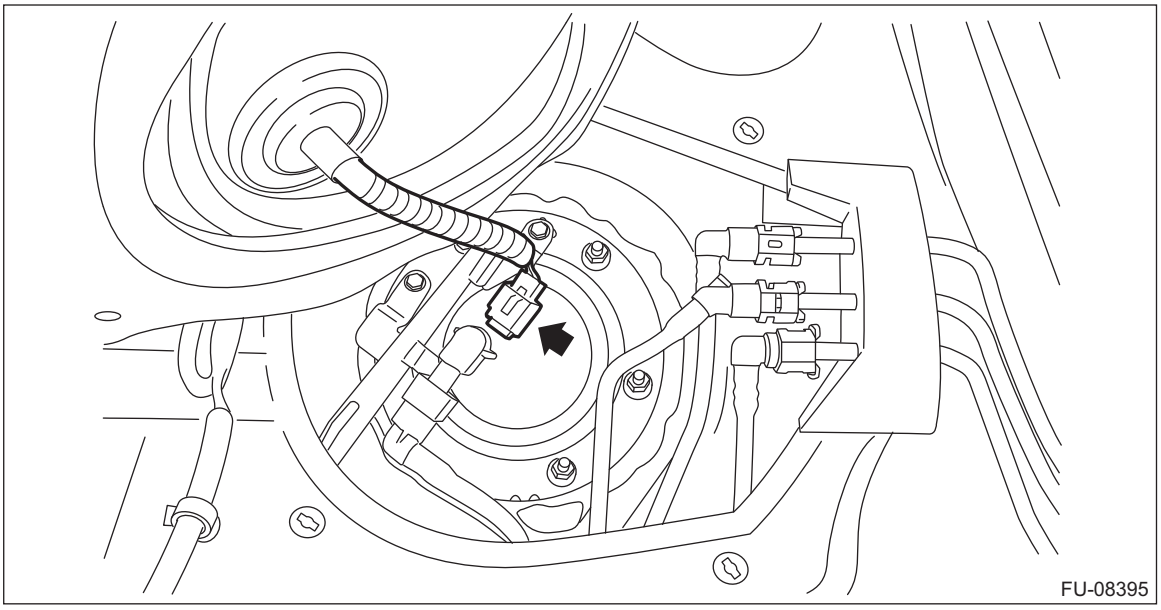
6) Disconnect connectors from the fuel pump, and move aside the service hole cover.



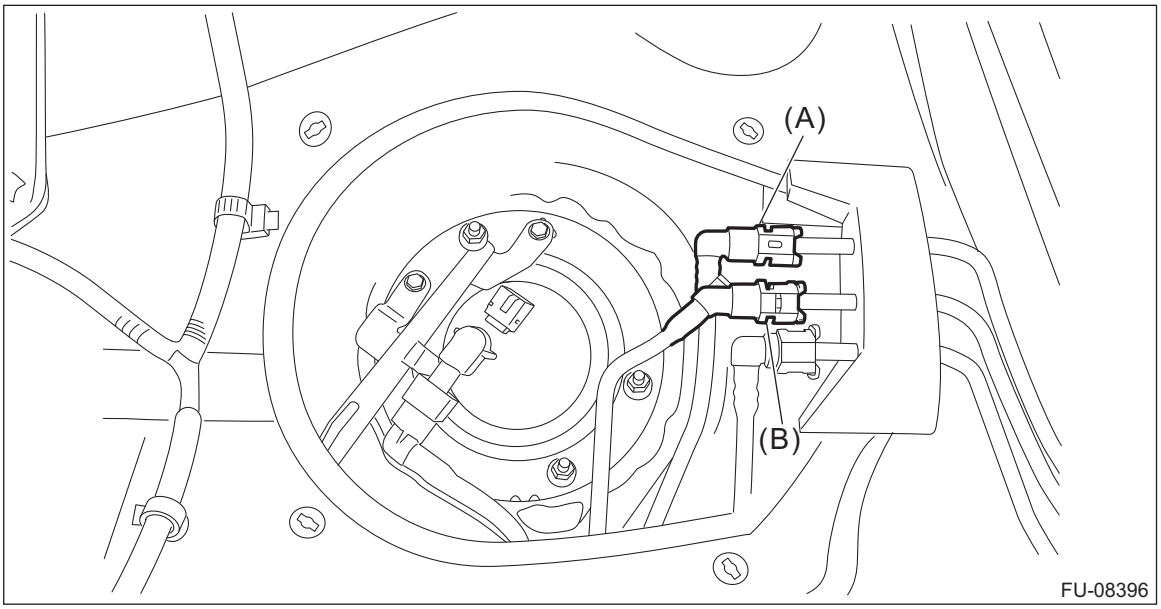
7) Remove the service hole cover of fuel sub level sensor.



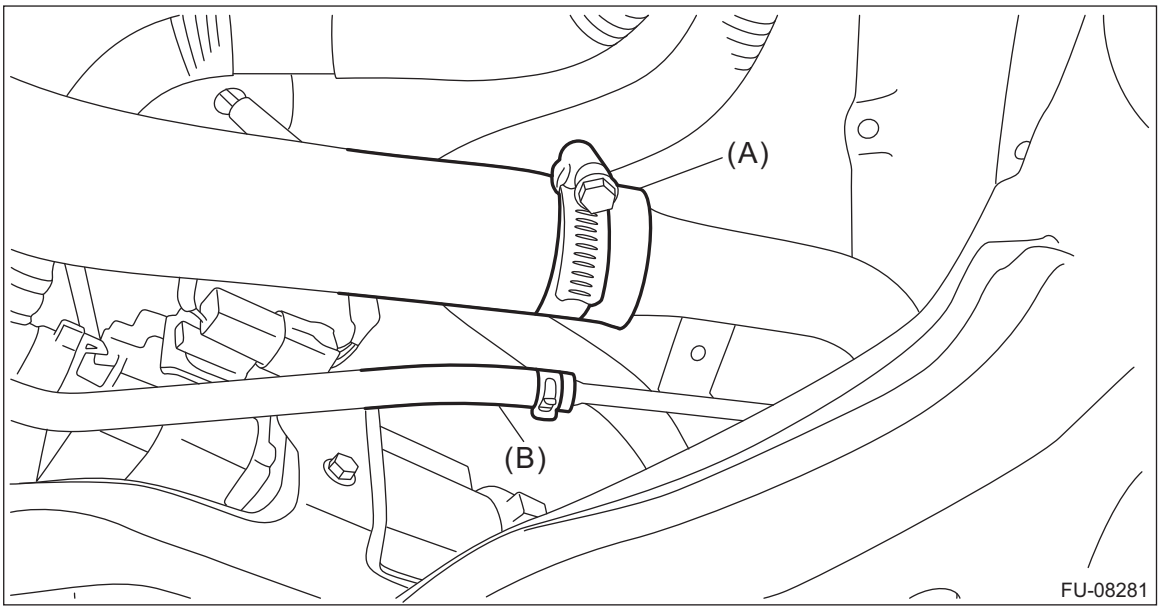
8) Disconnect the connector from the fuel sub level sensor, and move aside the service hole cover.



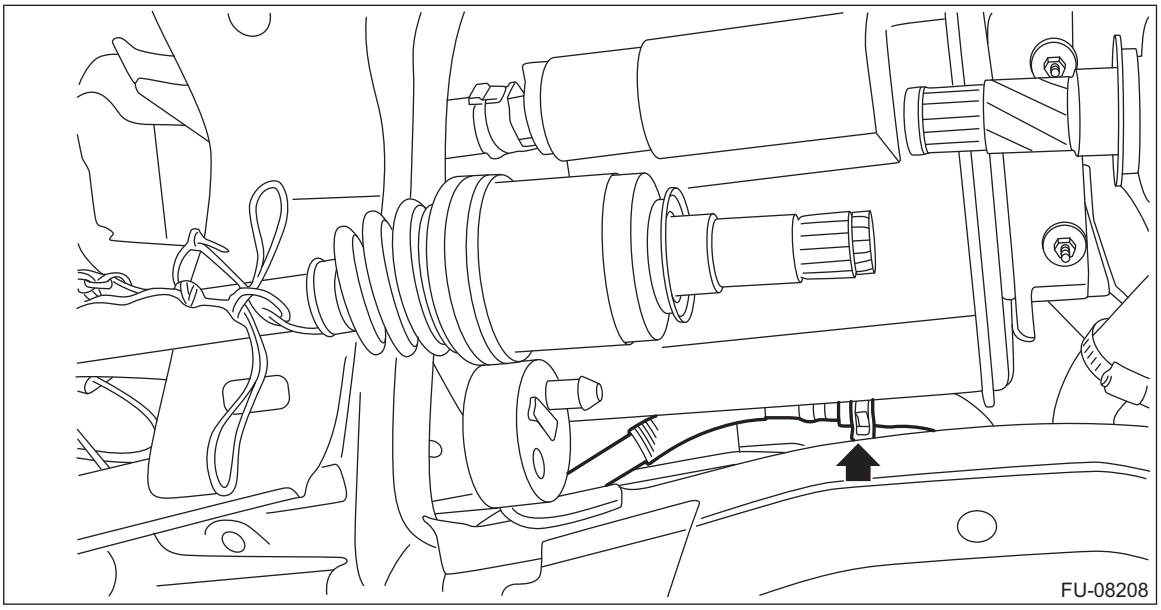
9) Disconnect the quick connector of fuel delivery tube (A) and fuel return tube (B). <Ref. to FU(STI)-98, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>



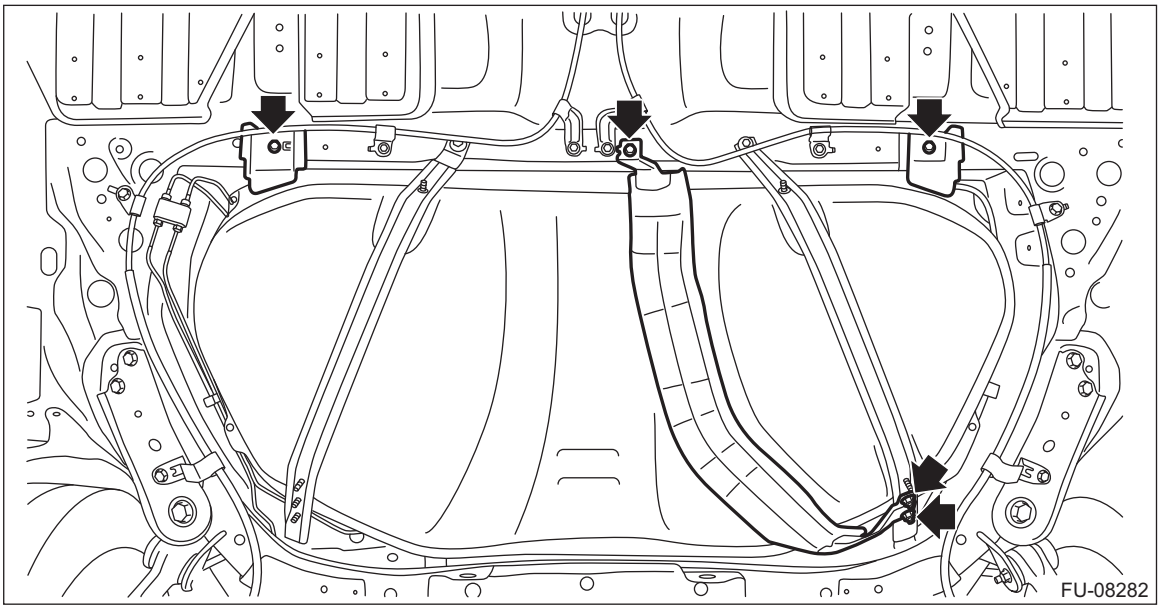
10) Lift up the vehicle.
11) Remove the rear exhaust pipe. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
12) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).>
13) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.



14) Disconnect the vent tube from vent hose.



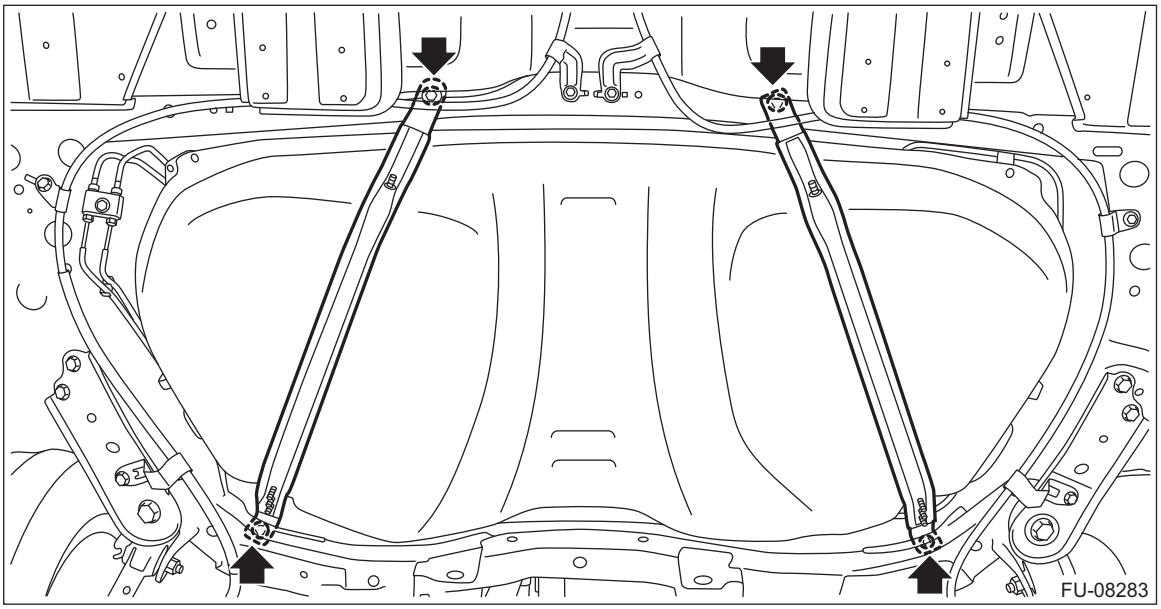
15) Remove the fuel tank protector. <Ref. to FU(STI)-66, REMOVAL, Fuel Tank Protector.>
16) Remove the heat shield cover and stopper.



17) Support the fuel tank with a transmission jack, remove the bolts from the fuel tank band, and remove the fuel tank from the vehicle.

WARNING:
- **A helper is required to perform this work.**

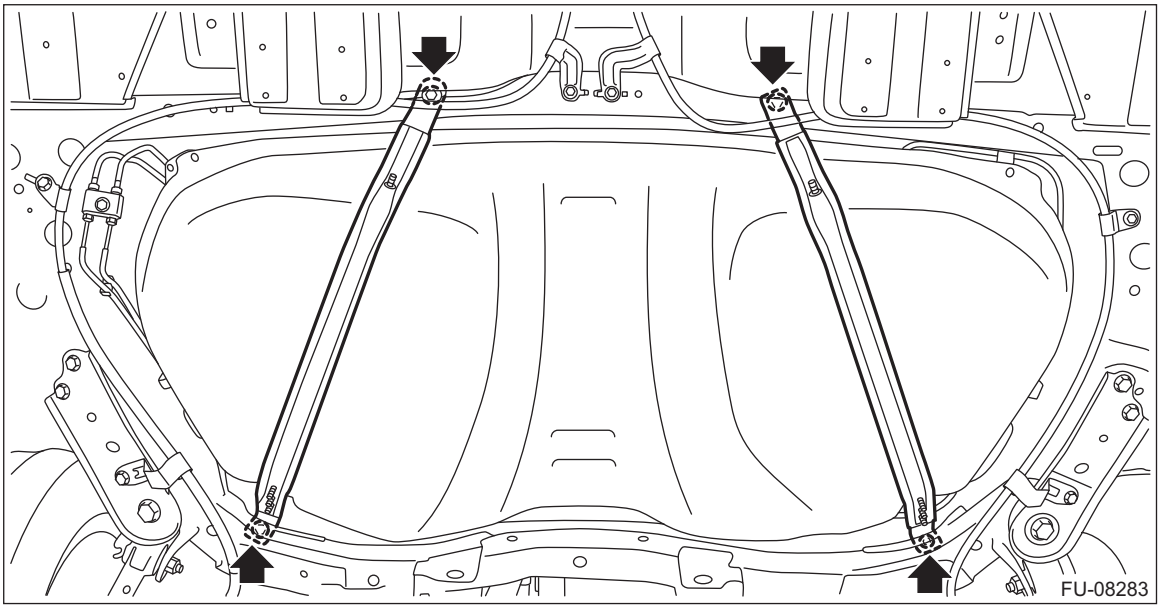
• **Fuel may remain in the fuel tank. This will cause the left and right sides to be unbalanced. Be careful not to drop the fuel tank.**



B: INSTALLATION

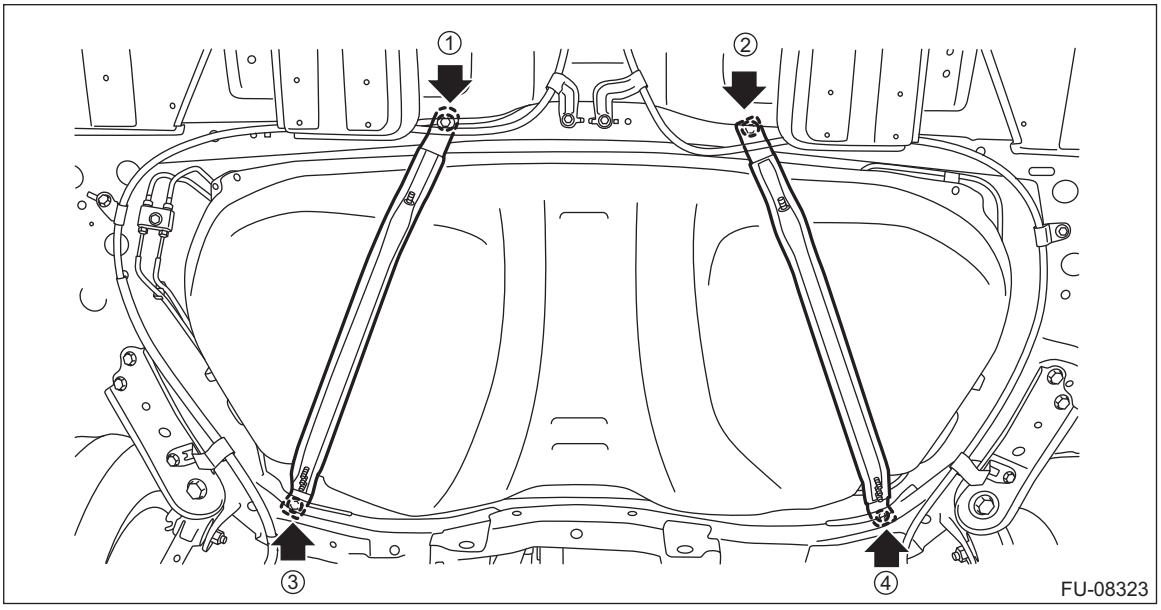
1) Support the fuel tank with a transmission jack, set the fuel tank in place, and temporarily tighten the bolts of the fuel tank band.

WARNING:
A helper is required to perform this work.



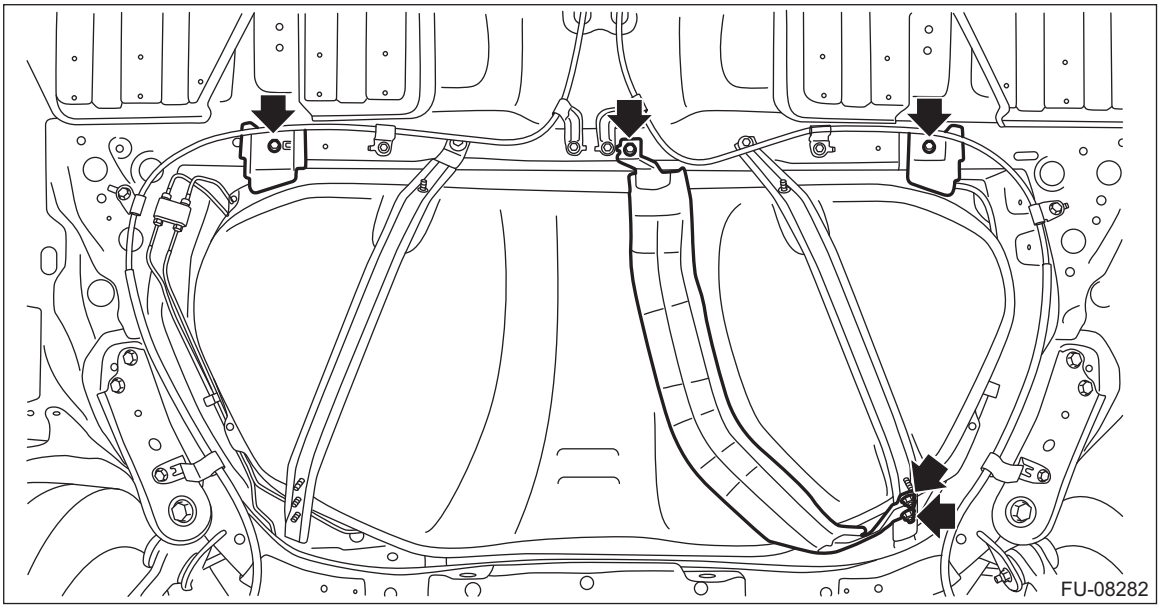
2) Tighten the bolts of the fuel tank band in the order shown in the figure.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



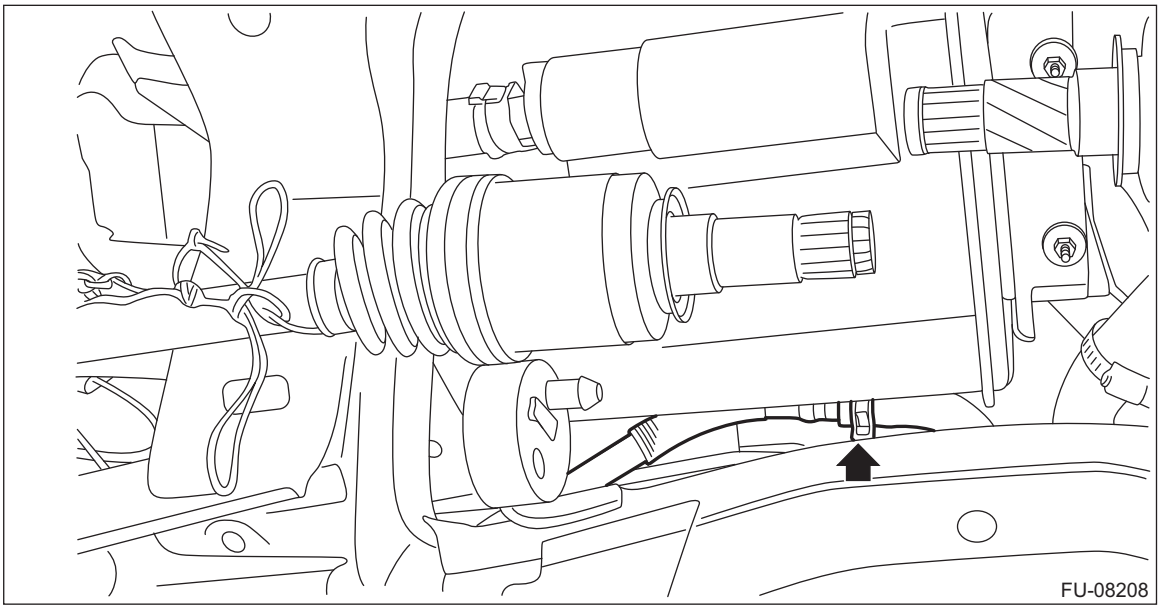
3) Install the heat shield cover and stopper.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



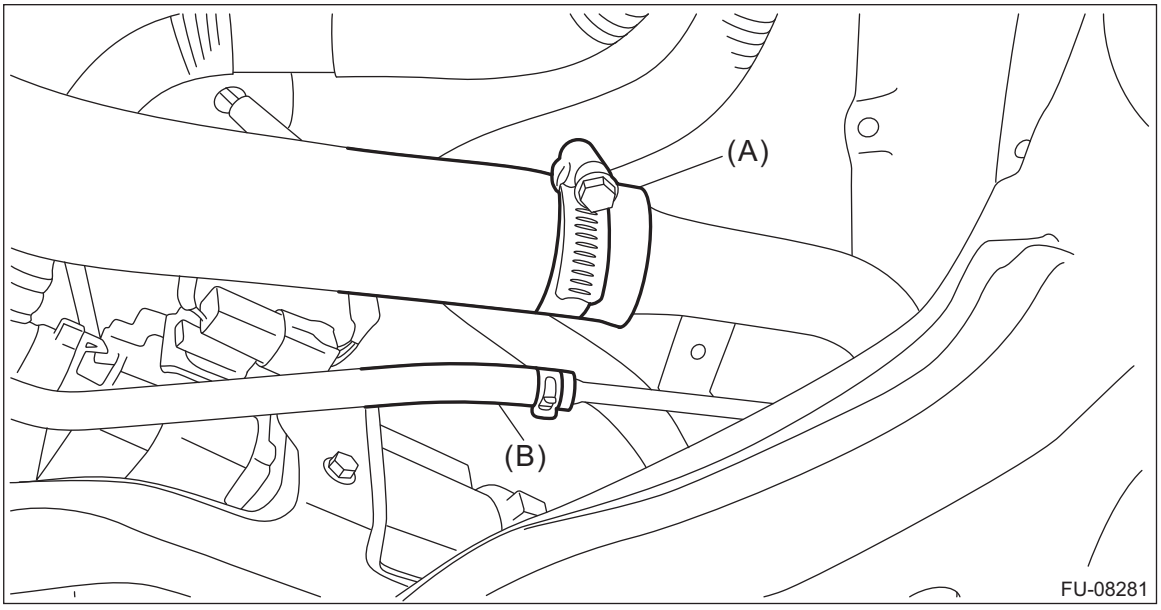
4) Install the fuel tank protector. <Ref. to FU(STI)-66, INSTALLATION, Fuel Tank Protector.>

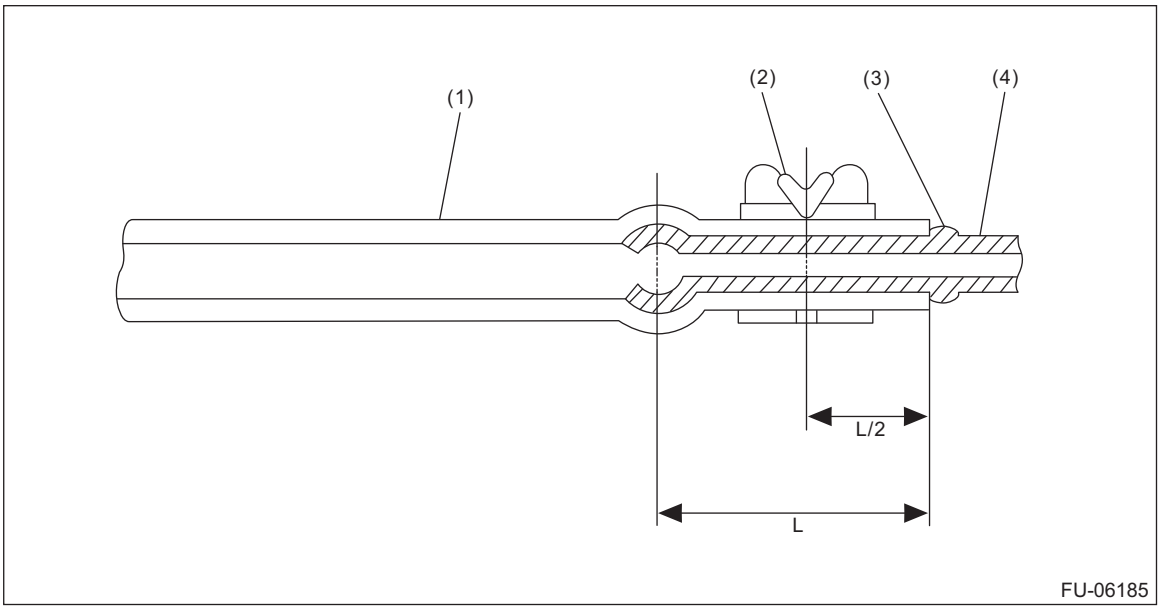
5) Connect the vent tube to the vent hose.



6) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

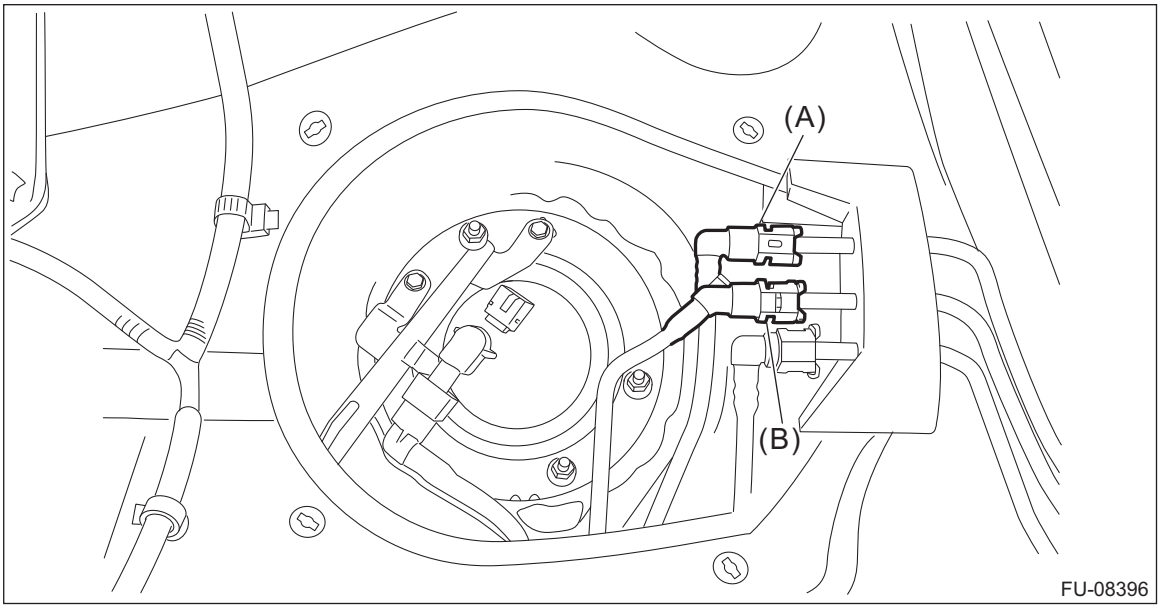




(1) Hose
(2) Clamp or clip
(3) Spool
(4) Pipe

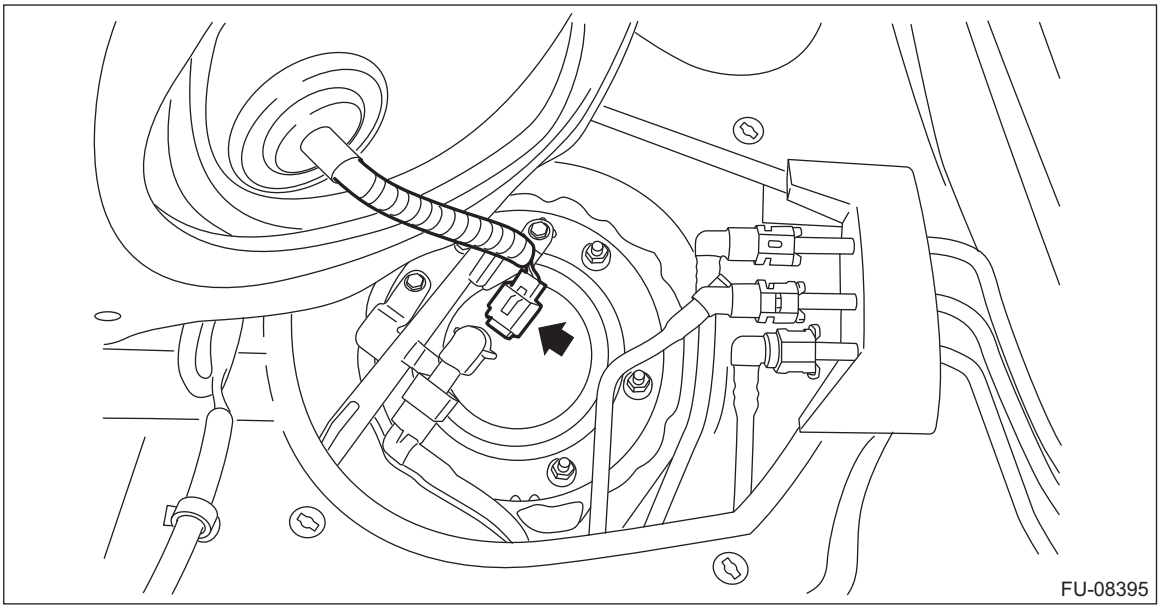
7) Install the rear differential. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>
8) Install the rear exhaust pipe. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
9) Connect the quick connector of fuel delivery tube (A) and fuel return tube (B). <Ref. to FU(STI)-100, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

NOTE:
When connecting, be careful not to reverse the delivery side and return side.

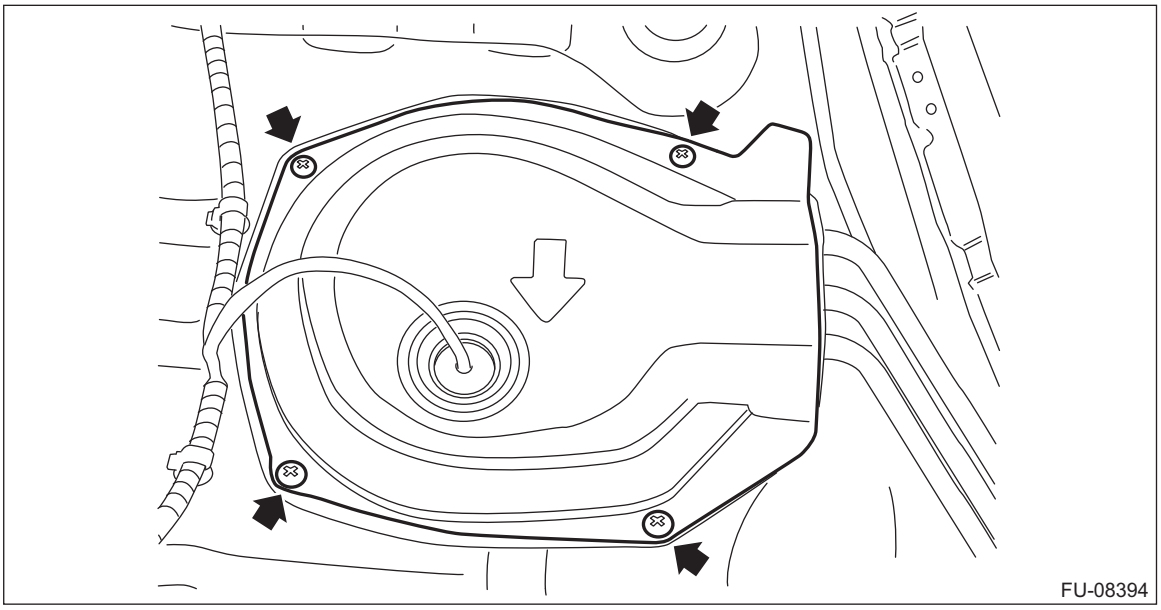


10) Connect the connector to the fuel sub level sensor.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel sub level sensor and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.

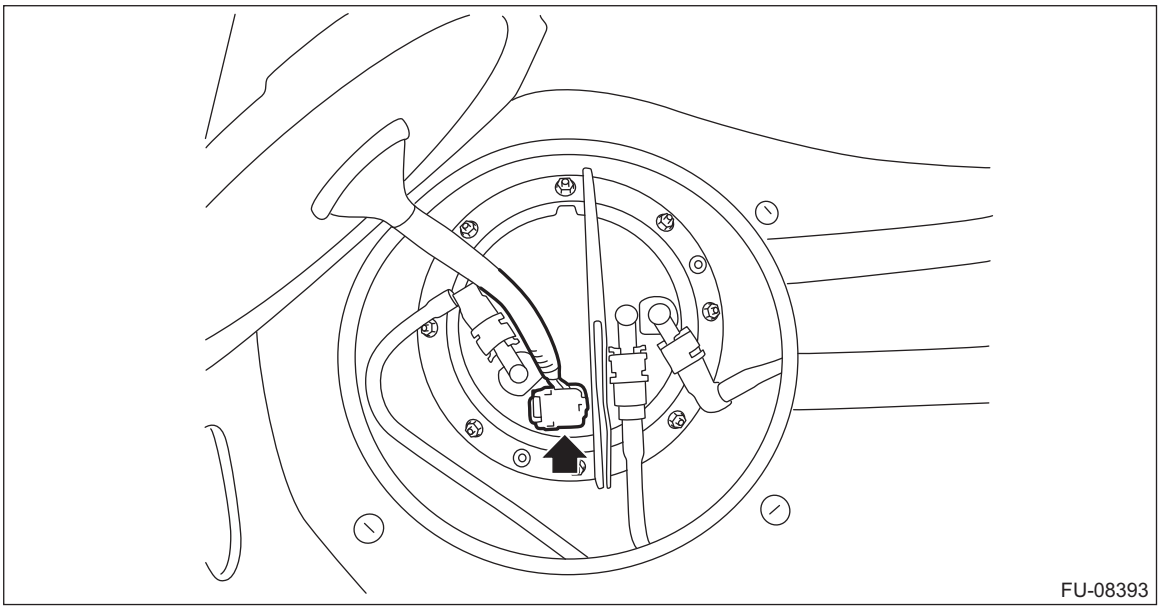


11) Install the service hole cover of fuel sub level sensor.

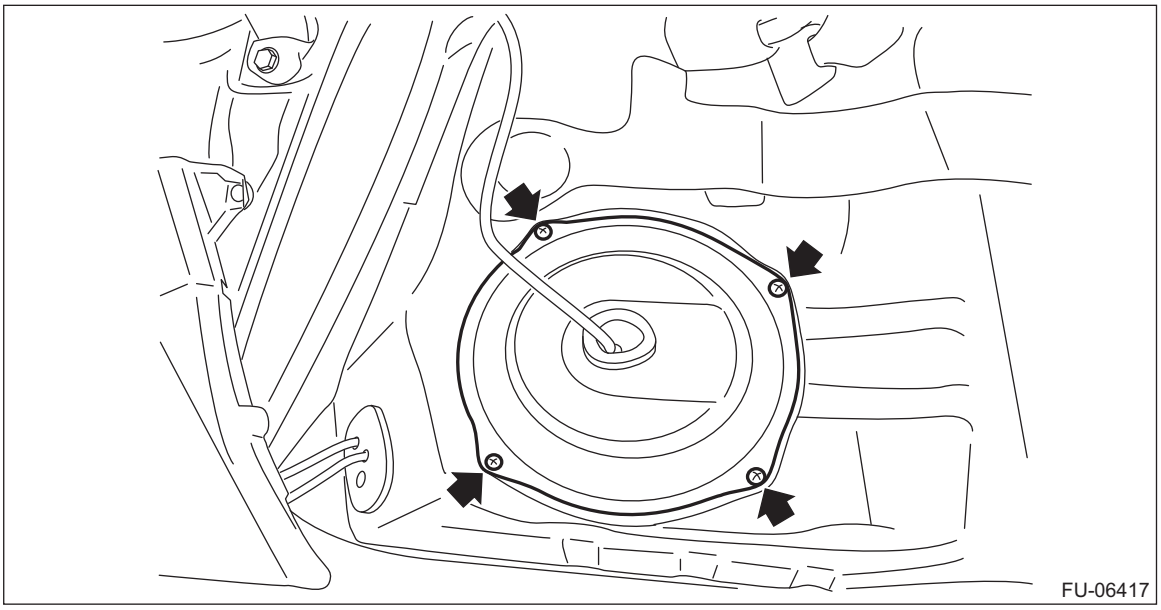


12) Connect the connector to the fuel pump.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel pump and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



13) Install the service hole cover of fuel pump.



14) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
15) Connect the battery ground terminal.

C: INSPECTION

1) Check that the fuel tank and fuel pipe have no deformation, cracks and other damages.
2) Check that the fuel hose and tube have no cracks, damage or loose part.

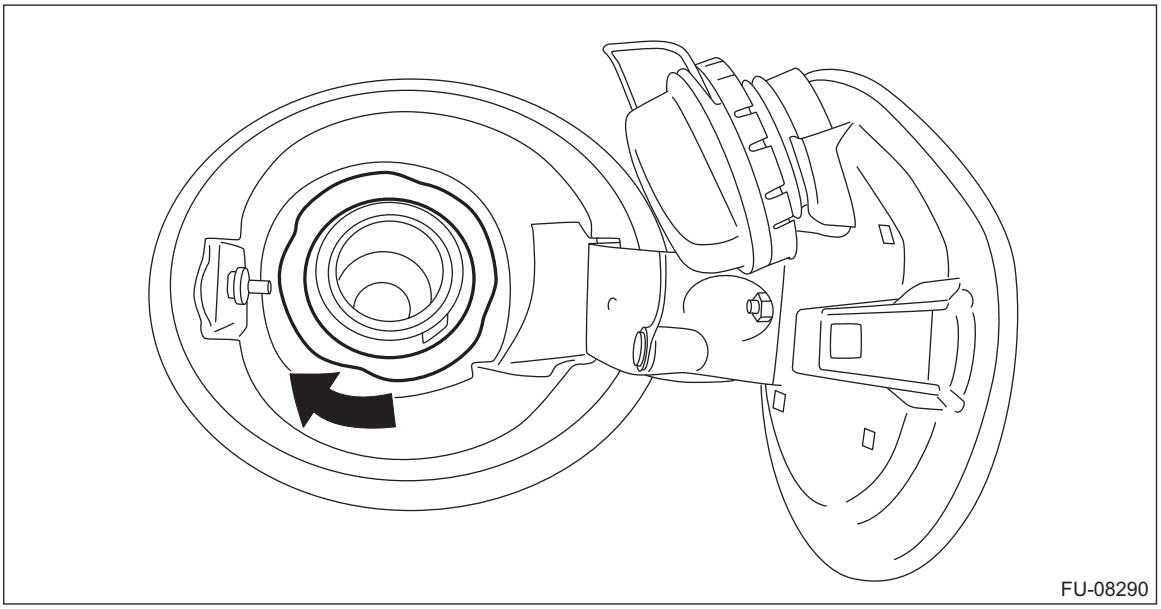
28.Fuel Filler Pipe

A: REMOVAL

WARNING:
Place “NO OPEN FLAMES” signs near the working area.

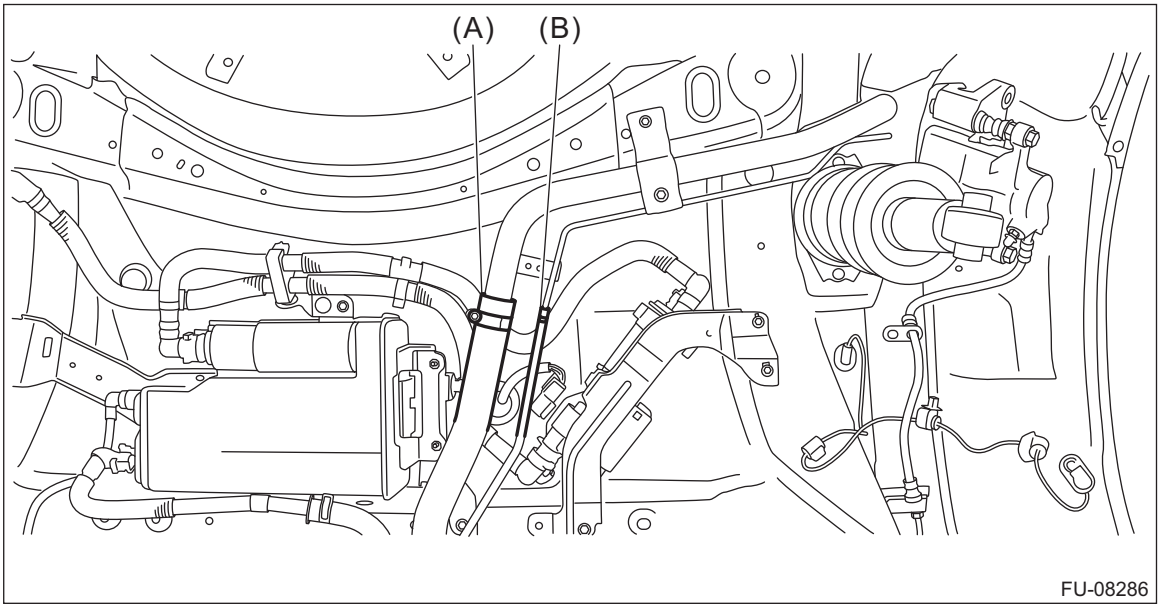
CAUTION:
Be careful not to spill fuel.

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Open the fuel filler lid and remove the fuel filler cap.
5) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.



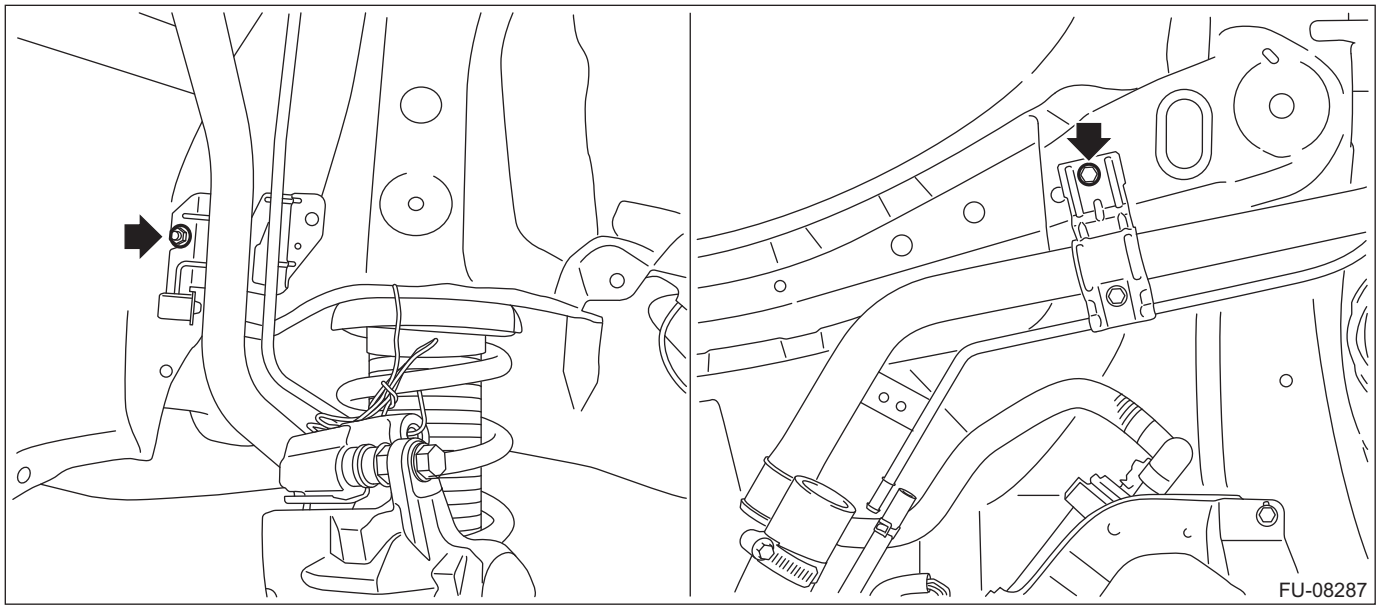
FU-08290

6) Remove the rear sub frame assembly. <Ref. to RS-9, REMOVAL, Rear Sub Frame.>
7) Remove the rear mud guard RH. <Ref. to EI-24, REMOVAL, Mud Guard.>
8) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.



FU-08286

9) Remove the bolts and nuts which secure the fuel filler pipe assembly to the vehicle.

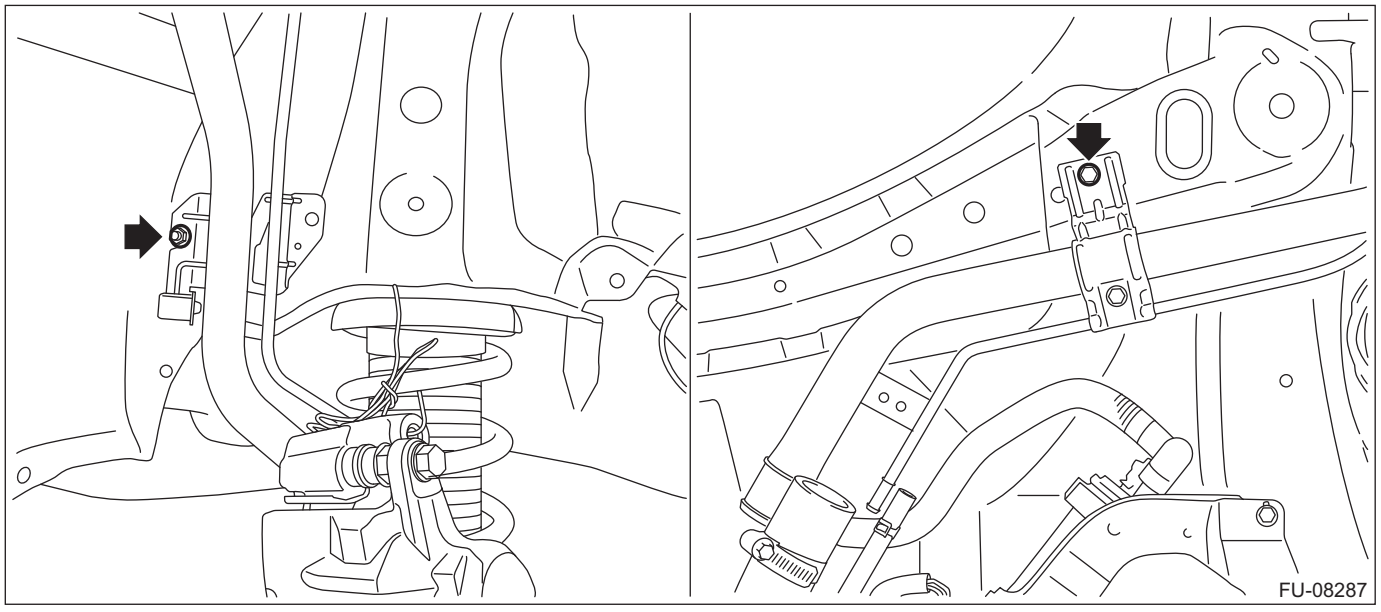


10) Remove the fuel filler pipe assembly from the underside of the vehicle.

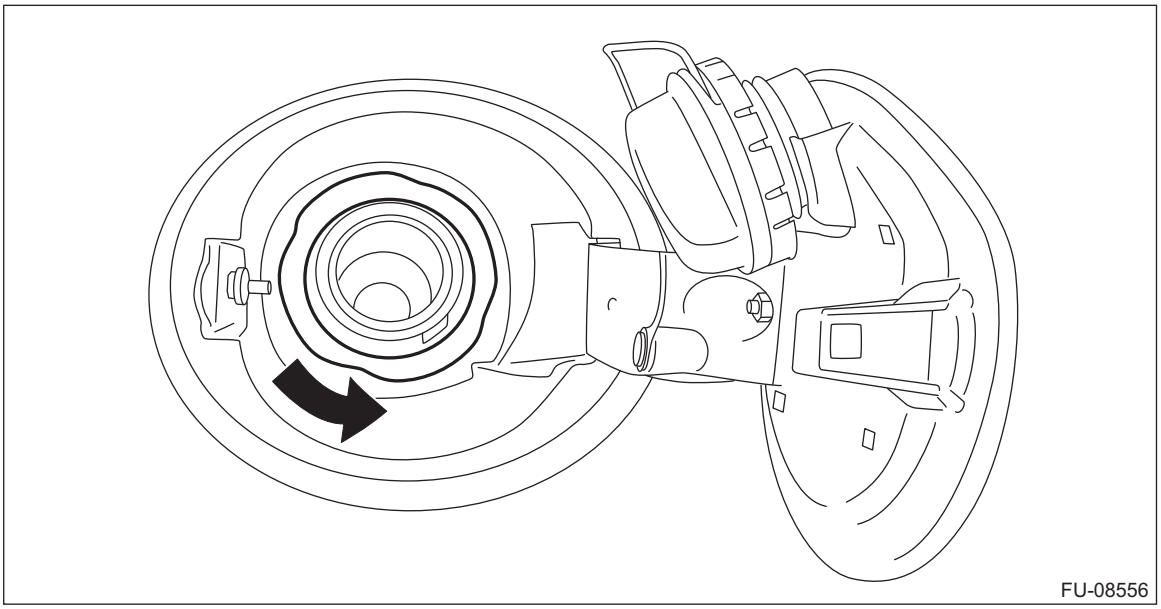
B: INSTALLATION

1) Open the fuel filler lid.
2) Insert the fuel filler pipe assembly from inside of the rear fender.
3) Install the fuel filler pipe assembly to the vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

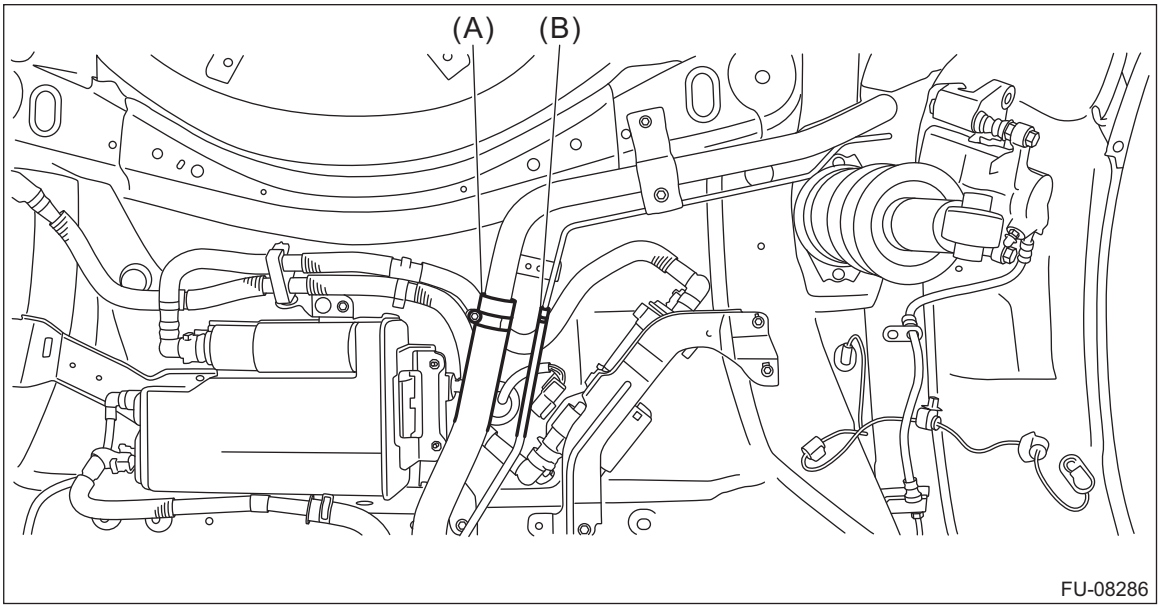


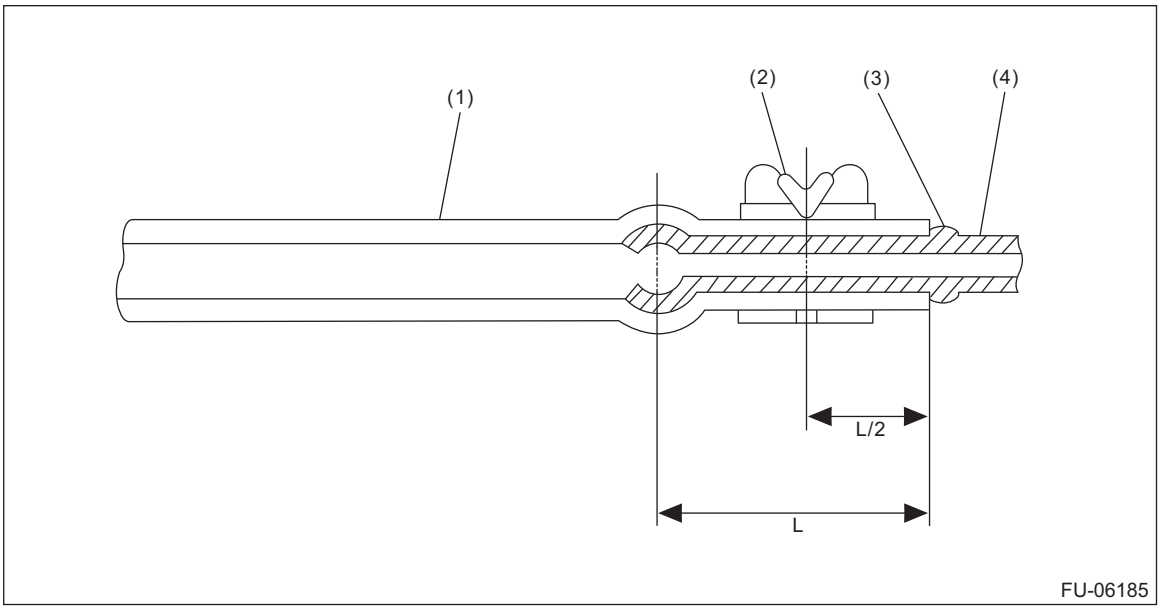
4) Align the cutout on the fuel filler pipe protector and the protrusion of the neck holder and insert them all the way, and then turn the fuel filler pipe protector in the direction of the arrow until it is locked.



5) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)





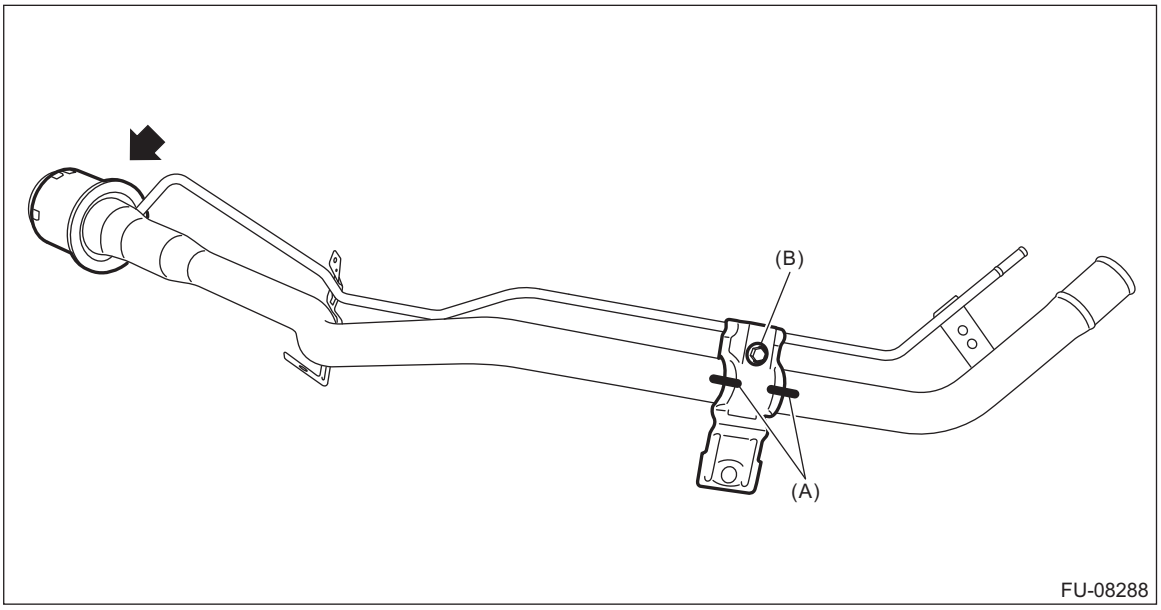
(1) Hose
(2) Clamp or clip
(3) Spool
(4) Pipe

6) Install the rear mud guard RH. <Ref. to EI-25, INSTALLATION, Mud Guard.>
7) Install the rear sub frame assembly. <Ref. to RS-11, INSTALLATION, Rear Sub Frame.>
8) Connect the battery ground terminal.

C: DISASSEMBLY

1) Using a marker pen, make alignment marks (A) on the fuel filler pipe and the bracket.
2) Remove the bracket bolt (B) which secures the fuel filler pipe.

3) Remove the neck holder from the fuel filler pipe.

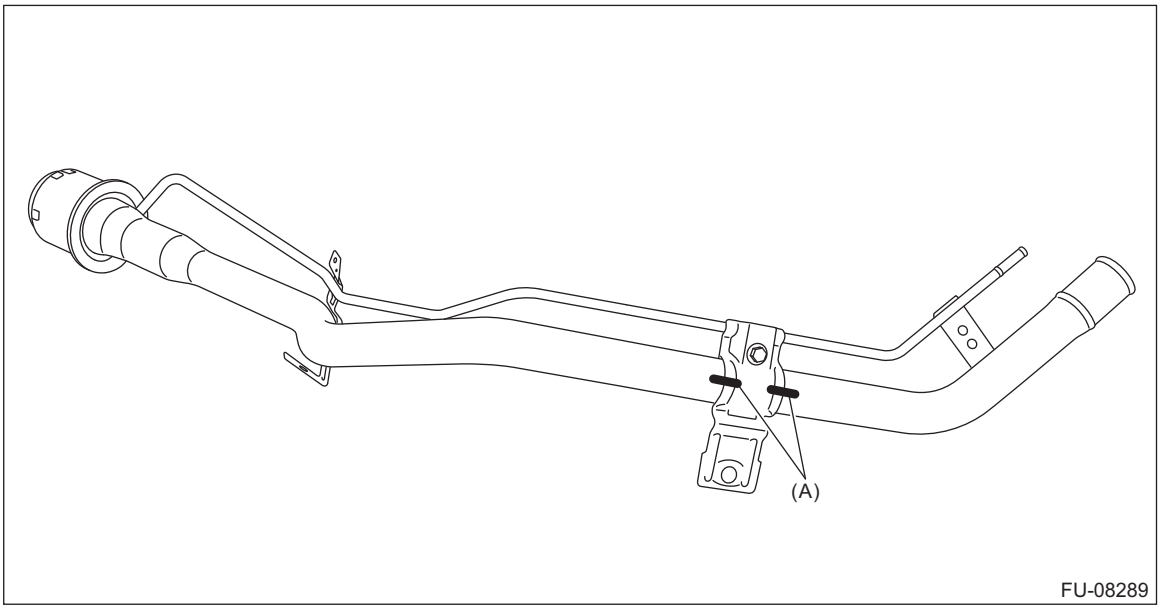


D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:
- Use a new neck holder.
- Install the bracket to the fuel filler pipe by aligning the alignment marks (A).

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



E: INSPECTION

1) Check that the fuel filler pipe assembly has no deformation, cracks or other damages.
2) Check that the fuel hose has no cracks, damage or loose part.

29.Fuel Pump

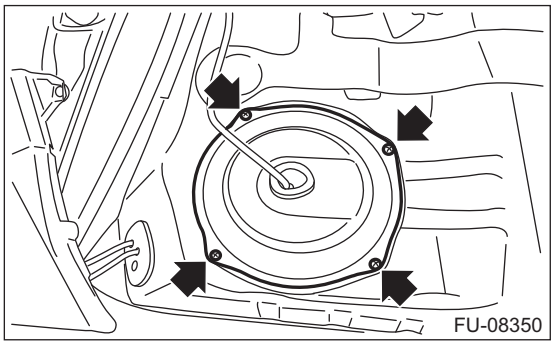
A: REMOVAL

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

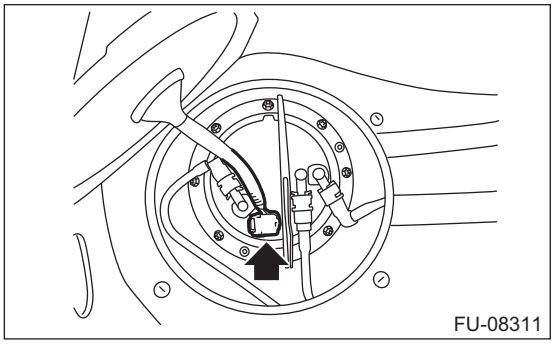
NOTE:
Fuel pump assembly consists of fuel pump, fuel filter and fuel level sensor.

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover.



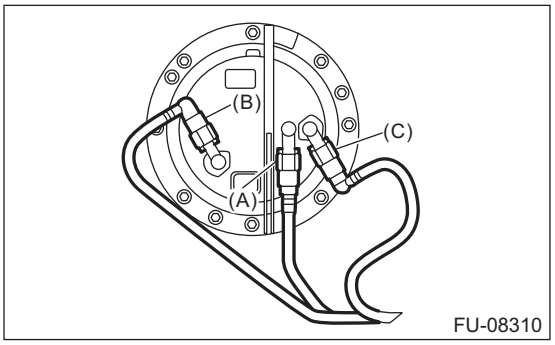
FU-08350

6) Disconnect the connector from fuel pump.



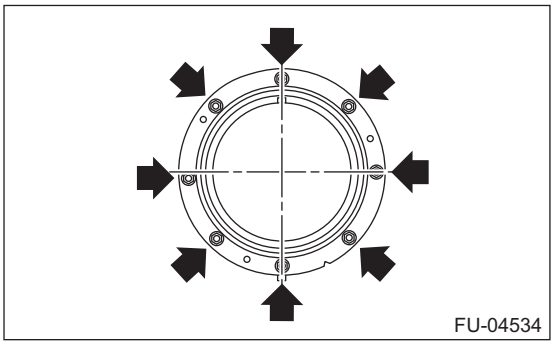
FU-08311

7) Disconnect the quick connectors of fuel delivery tube (A), fuel return tube (B), and jet pump tube (C). <Ref. to FU(STI)-98, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>



FU-08310

8) Remove the nuts which hold the fuel pump upper plate to the fuel tank.



FU-04534

9) Remove the fuel pump assembly from the fuel tank.

B: INSTALLATION

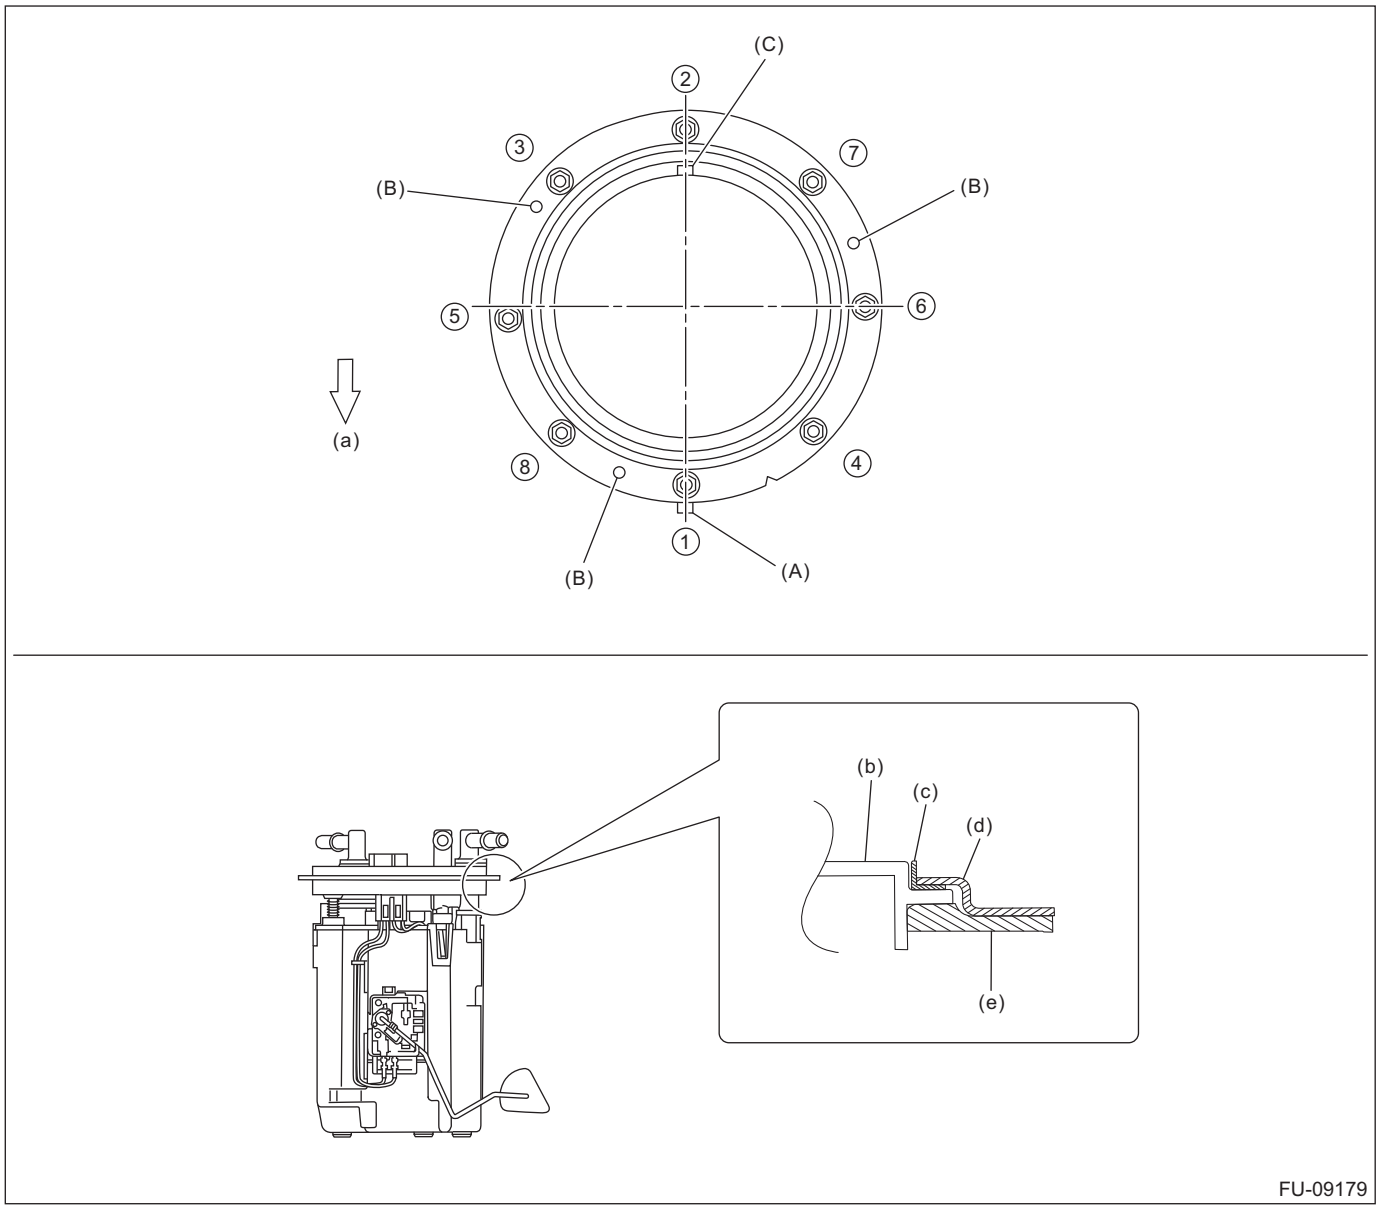
1) Install the fuel pump assembly to the fuel tank.
   (1) Make sure the sealing portion is free from fuel or foreign matter before installation.
   (2) Align the protrusion (A) of the gasket to the position shown in the figure, and install the gasket from the lower side of the fuel pump assembly.

NOTE:
Use a new gasket.

   (3) Align the protrusion (C) of fuel pump upper plate cushion with the protrusion (C) of the fuel pump assembly as shown in the figure, and install the fuel pump upper plate cushion from the upper side of the fuel pump assembly.
   (4) Align the cutout of the fuel pump upper plate with the protrusion (C), and install the fuel pump upper plate from the upper side of the fuel pump assembly so that the protrusions (B) (3 places) of the gasket fit the holes of the fuel pump upper plate.
   (5) Install the fuel pump assembly to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

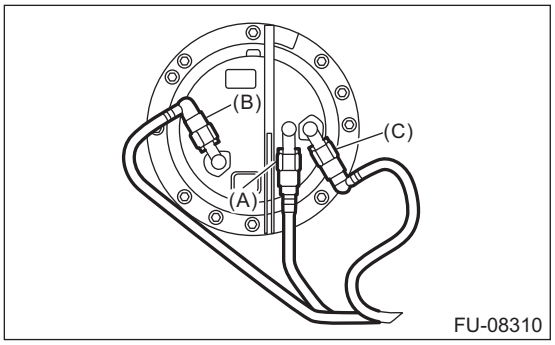
CAUTION:
Set the arm and float of the fuel level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel level sensor is bent, the fuel gauge may not read correctly.

Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)



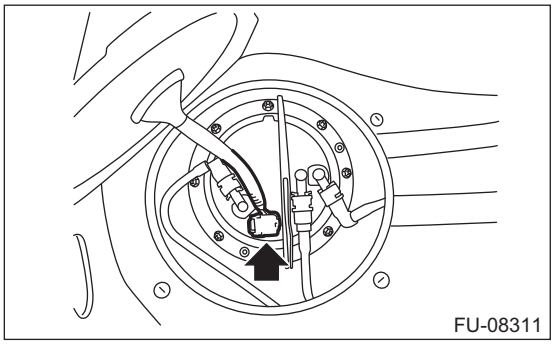
(a) Front side of vehicle
(b) Fuel pump ASSY
(c) Fuel pump upper plate cushion
(d) Fuel pump upper plate
(e) Gasket

2) Connect the quick connectors of fuel delivery tube (A), fuel return tube (B), and jet pump tube (C). <Ref. to FU(STI)-100, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

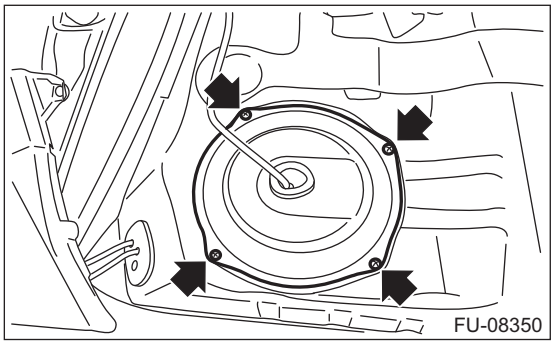


3) Connect the connector to the fuel pump.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel pump and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



4) Install the service hole cover.

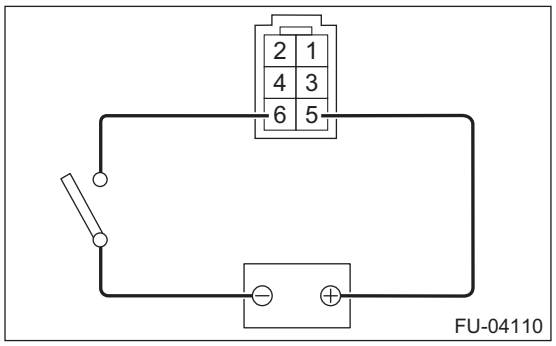


5) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
6) Connect the battery ground terminal.

C: INSPECTION

1) Check that the fuel pump has no deformation, cracks or other damages.
2) Connect the battery positive terminal to terminal No. 5 and the battery ground terminal to terminal No. 6, and inspect the fuel pump operation.

WARNING:
• Wipe off fuel completely.
• Keep the battery as far apart from fuel pump as possible.
• Do not run the fuel pump for a long time under non-load condition.



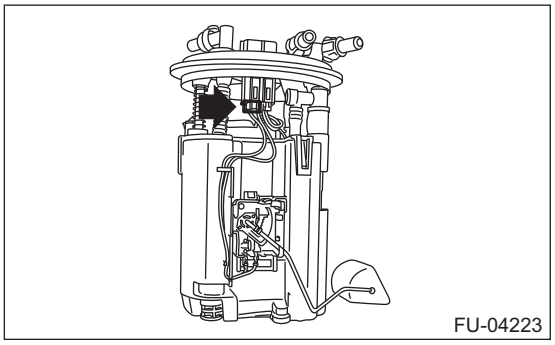
30.Fuel Level Sensor

A: REMOVAL

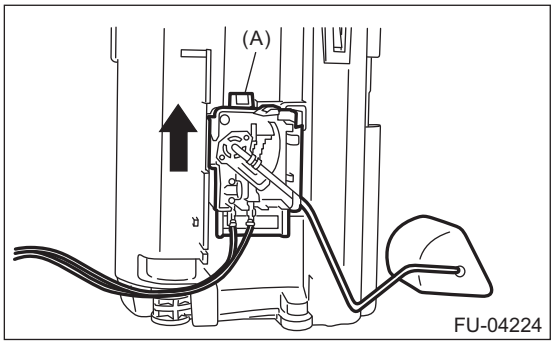
WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

NOTE:
The fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(STI)-83, REMOVAL, Fuel Pump.>
2) Disconnect the fuel level sensor connector.



3) Slide the fuel level sensor in the direction of the arrow and remove the fuel level sensor by pressing the claw (A) of the fuel level sensor.



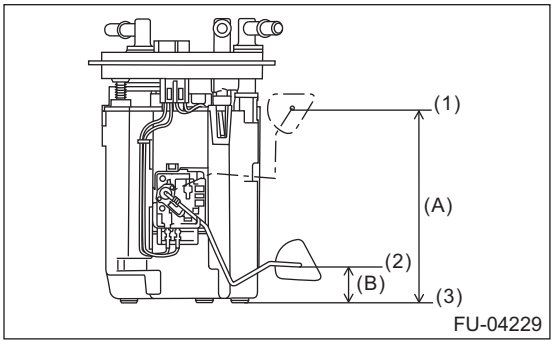
B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Check that the fuel level sensor has no damage.
2) Measure the fuel level sensor float position.

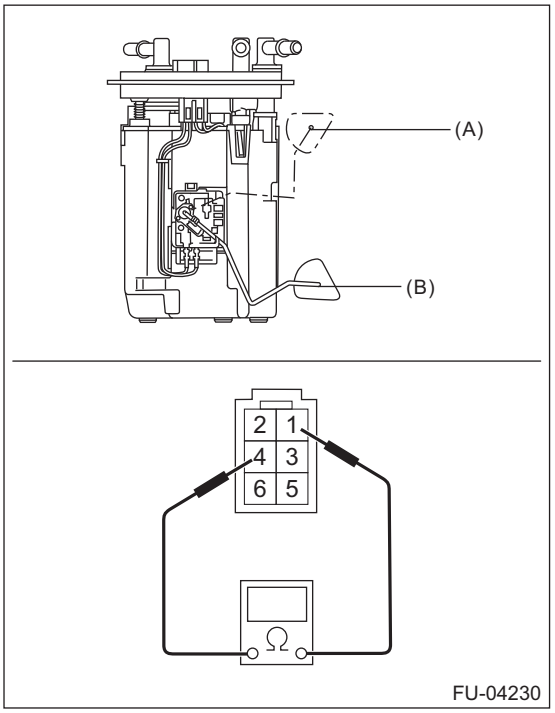
NOTE:
When inspecting the fuel level sensor, perform the work with the sensor installed to the fuel pump.



(1) FULL
(2) EMPTY
(3) Fuel tank seating surface

Float position	Standard
FULL to Fuel tank seating surface (A)	135±4 mm (5.315±0.157 in)
EMPTY to Fuel tank seating surface (B)	23.7±4 mm (0.933±0.157 in)

3) Measure the resistance between fuel level sensor terminals.



Float position	Terminal No.	Standard
FULL (A)	1 and 4	8.7±1.0 Ω
EMPTY (B)		139.1±2.0 Ω

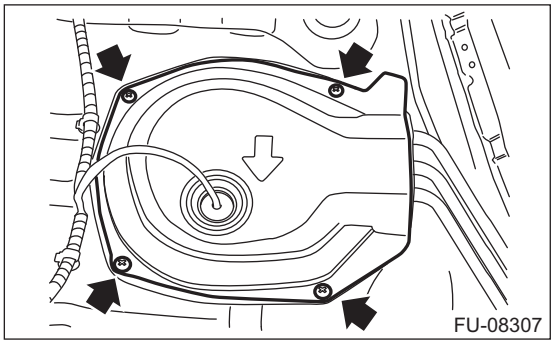
31.Fuel Sub Level Sensor

A: REMOVAL

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

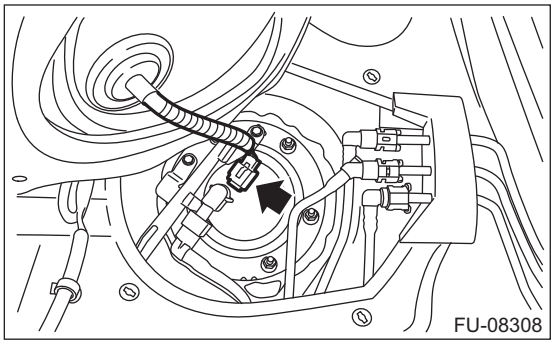
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover.



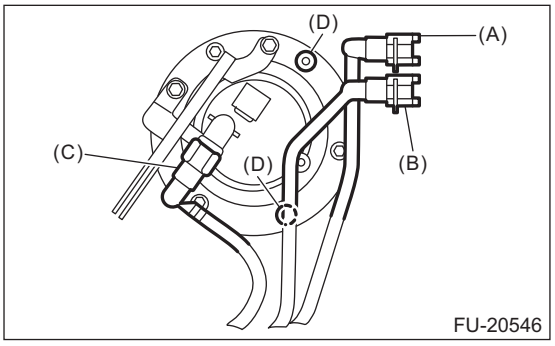
FU-08307

6) Disconnect the connector from the fuel sub level sensor.



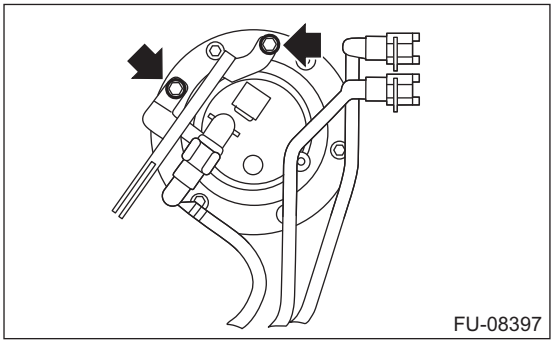
FU-08308

7) Disconnect the quick connectors of fuel delivery tube (A), fuel return tube (B), and jet pump tube (C). <Ref. to FU(STI)-98, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
8) Remove the rubber cap (D) from the nut.

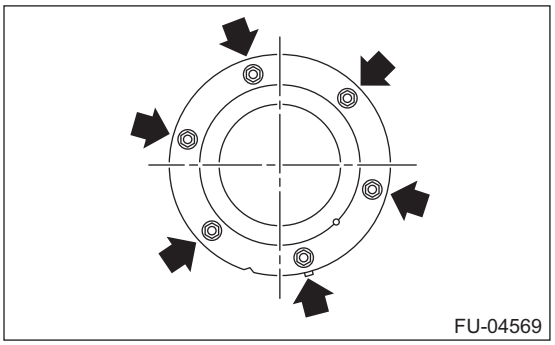


FU-20546

9) Remove the bolts and nuts which hold fuel sub level sensor protector and fuel sub level sensor upper plate to the fuel tank.



FU-08397



FU-04569

10) Remove the fuel sub level sensor from the fuel tank.

B: INSTALLATION

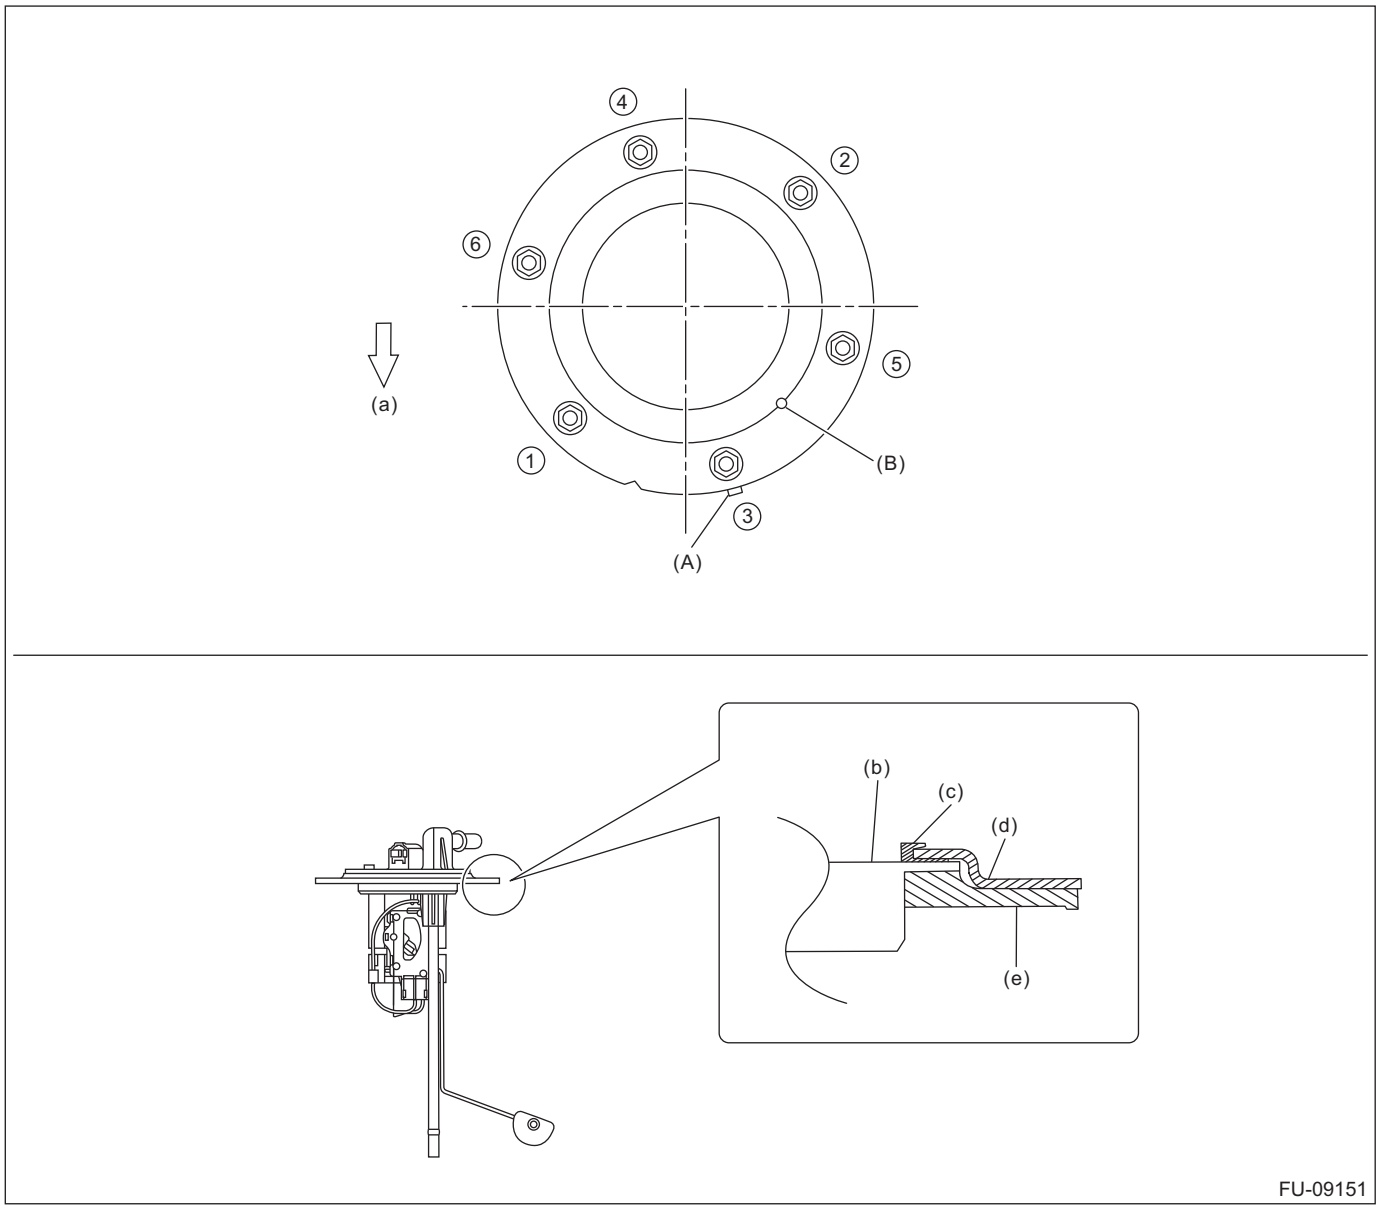
1) Install the fuel sub level sensor to the fuel tank.
   (1) Make sure the sealing portion is free from fuel or foreign matter before installation.
   (2) Align the cutout (B) as shown in the figure, and install the fuel sub level sensor upper plate cushion to the fuel sub level sensor upper plate.
   (3) Align the cutout of the fuel sub level sensor upper plate with the protrusion (B) of the fuel sub level sensor as shown in the figure, and install the fuel sub level sensor upper plate from the upper side of the fuel sub level sensor.
   (4) Install the gasket from the lower side of the fuel sub level sensor so that the protrusion (B) of the fuel sub level sensor and the protrusion (A) of the gasket are positioned as shown in the figure.

NOTE:
Use a new gasket.

(5) Install the fuel sub level sensor to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

CAUTION:
Set the arm and float of the fuel sub level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel sub level sensor is bent, the fuel gauge may not read correctly.

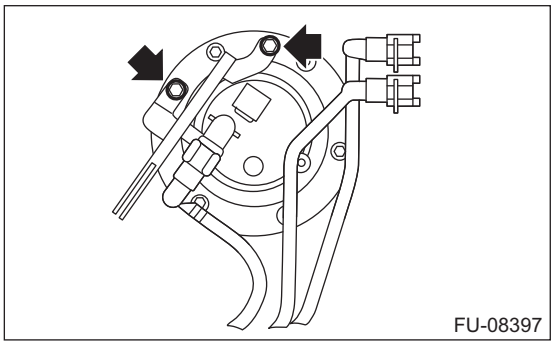
Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)



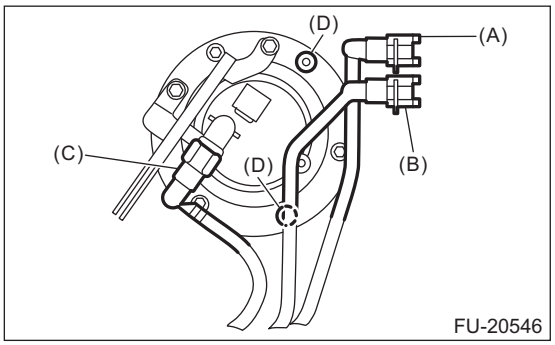
(a) Front side of vehicle
(b) Fuel sub level sensor
(c) Fuel sub level sensor upper plate cushion
(d) Fuel sub level sensor upper plate
(e) Gasket

2) Install the bolt which secures the fuel sub level sensor protector to the fuel tank.

Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)

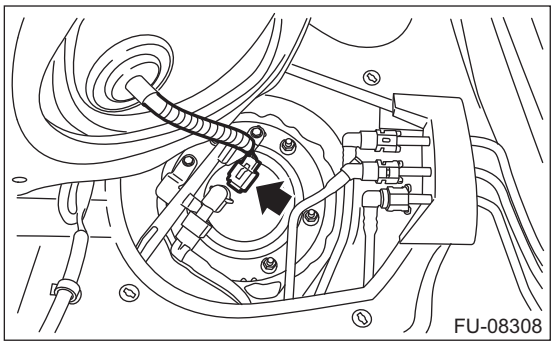


3) Connect the quick connectors of fuel delivery tube (A), fuel return tube (B), and jet pump tube (C). <Ref. to FU(STI)-100, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>
4) Attach the rubber cap (D) to the nut.

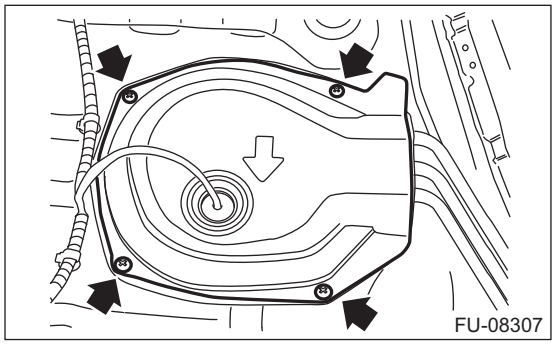


5) Connect the connector to the fuel sub level sensor.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel sub level sensor and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



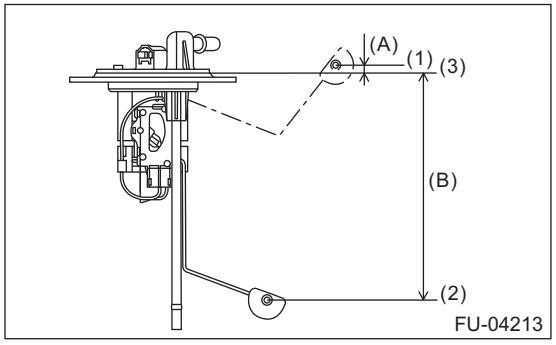
6) Install the service hole cover.



7) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
8) Connect the battery ground terminal.

C: INSPECTION

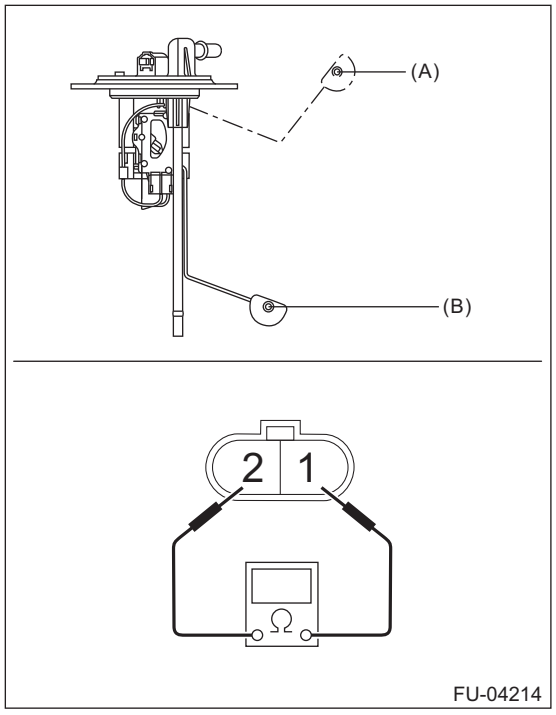
1) Check that the fuel sub level sensor has no damage.
2) Measure the fuel sub level sensor float position.



(1) FULL
(2) EMPTY
(3) Datum points

Float position	Standard
FULL to Datum point (A)	5.31±3.5 mm (0.209±0.138 in)
EMPTY to Datum point (B)	160.6±3.5 mm (6.323±0.138 in)

3) Measure the resistance between fuel sub level sensor terminals.



Float position	Terminal No.	Standard
FULL (A)	1 and 2	8.7±1.0 Ω
EMPTY (B)		270.9±4.0 Ω

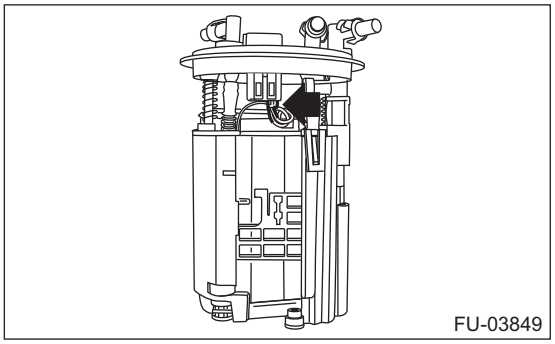
32.Fuel Filter

A: REMOVAL

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**
- **Be careful not to drop or apply any impact to the fuel pump during work. This may deteriorate its performance.**

NOTE:
The fuel filter is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(STI)-83, REMOVAL, Fuel Pump.>
2) Remove the fuel level sensor. <Ref. to FU(STI)-86, REMOVAL, Fuel Level Sensor.>
3) Disconnect the pump assembly connector from sub tank bracket assembly.

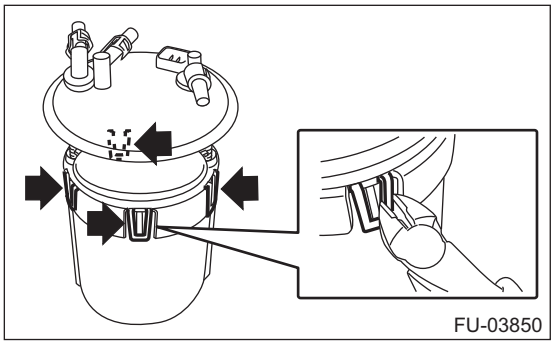


FU-03849

4) Cut off the tab holders connecting the sub tank bracket assembly and the sub tank in four locations, and separate the sub tank bracket assembly and the sub tank.

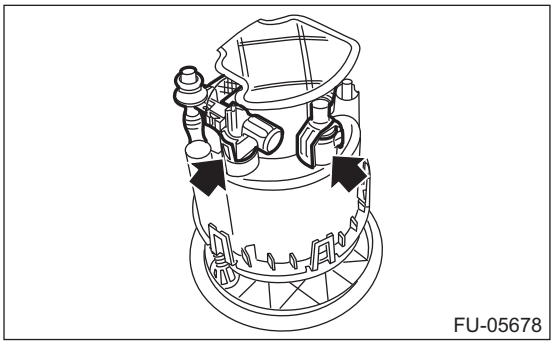
CAUTION:
Be careful not to damage the sub tank.

NOTE:
If the O-ring is remaining on the sub tank, remove.



FU-03850

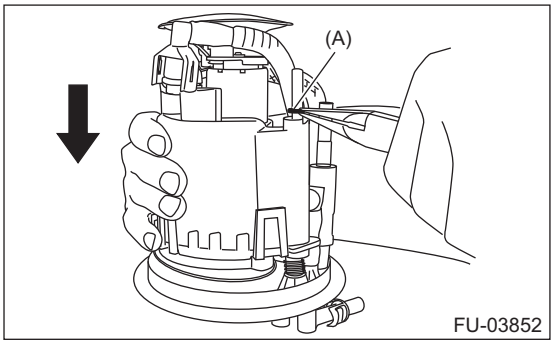
5) Disconnect two connectors of fuel delivery pipe from fuel filter assembly.



FU-05678

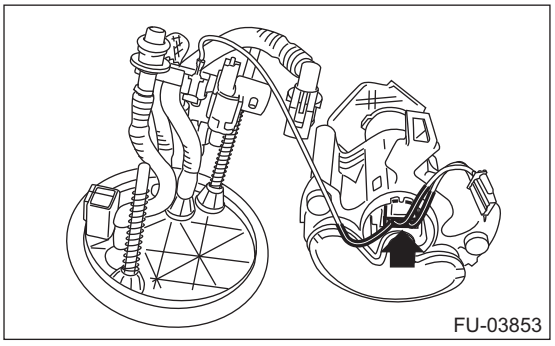
6) Push to compress the fuel filter assembly in the direction of the arrow, remove clip (A), and separate the sub tank bracket assembly and the fuel filter assembly.

CAUTION:
When separating the sub tank bracket assembly and the fuel filter assembly, be careful not to damage the ground wire.



FU-03852

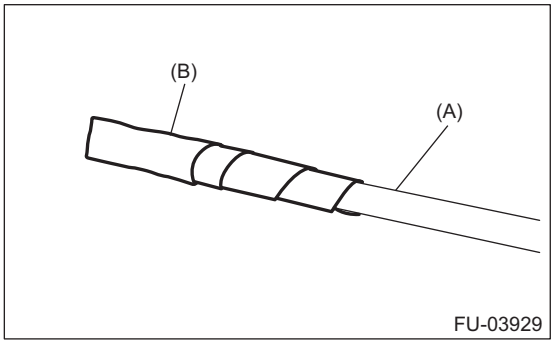
7) Disconnect the connector from the pump assembly.



FU-03853

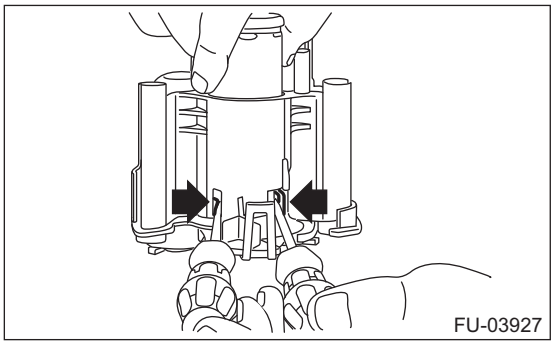
8) Lift the two tab holders connecting the pump assembly to the fuel filter using a flat tip screwdriver (with a shaft diameter of approx. 3 mm (0.12 in)), etc., and separate the fuel filter and pump assembly.

CAUTION:
• To prevent damaging the tabs of the pump assembly, wrap the tip of flat tip screwdriver (A), etc. with tape (B).



• Be careful not to drop or apply any impact to the pump assembly.

NOTE:
If the spacer and O-ring are remaining on the pump assembly, remove them.

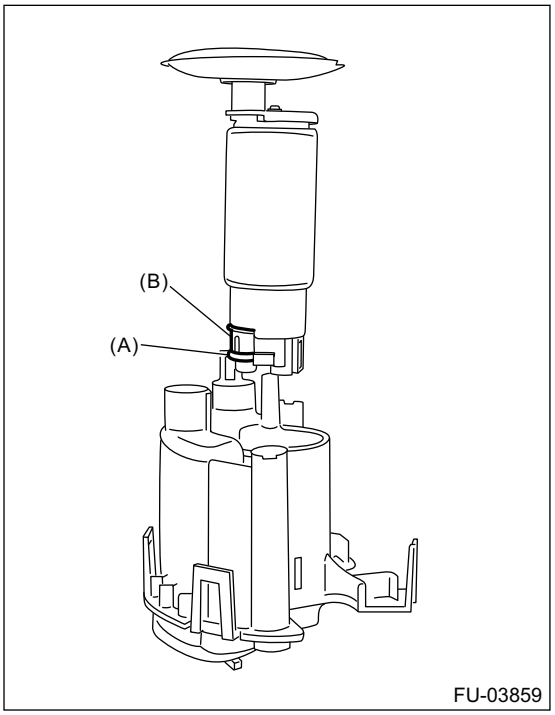


B: INSTALLATION

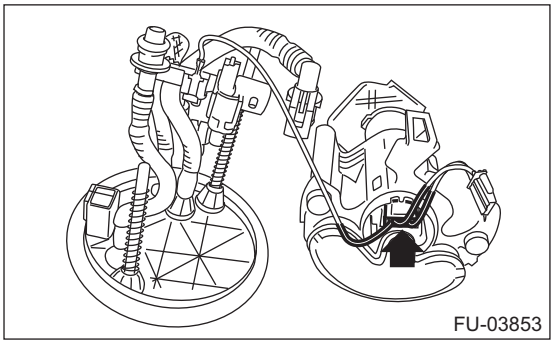
1) Assemble O-ring (A) and spacer (B) to the pump assembly and attach the pump assembly to the fuel filter.

NOTE:
- Use new O-rings (8 mm (0.31 in) inner diameter).
- Use a new spacer.
- Apply gasoline to the O-ring.

- Insert the pump assembly until a click is heard.

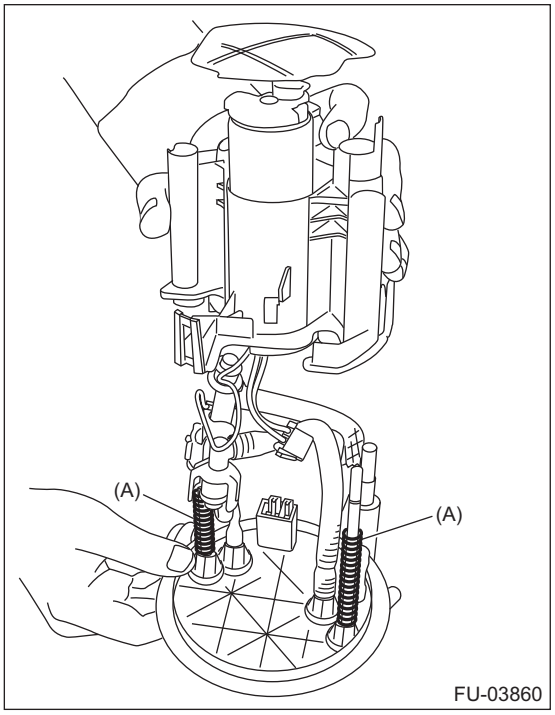


2) Connect the connector to the pump assembly.



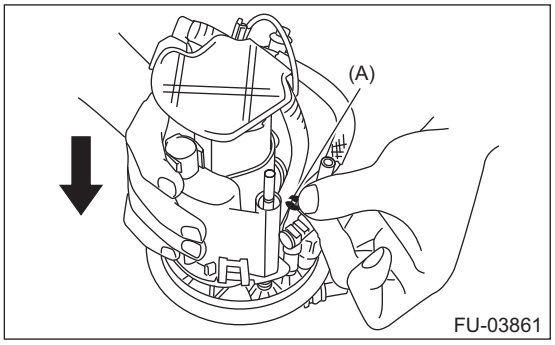
3) Attach spring (A) to the metal rod of the sub tank bracket assembly, and assemble the fuel filter assembly.

NOTE:
Use a new spring.



4) Push the fuel filter assembly in the direction of the arrow to compress, and attach clip (A).

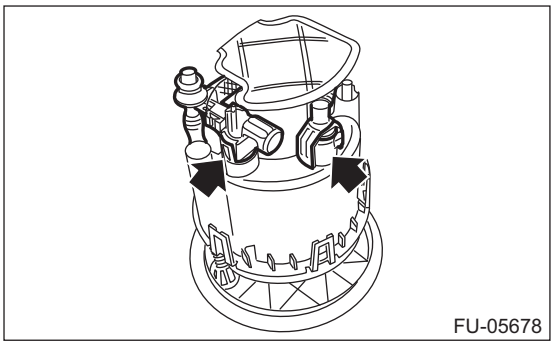
NOTE:
Use a new clip.



5) Connect the fuel piping connector to the fuel filter assembly.

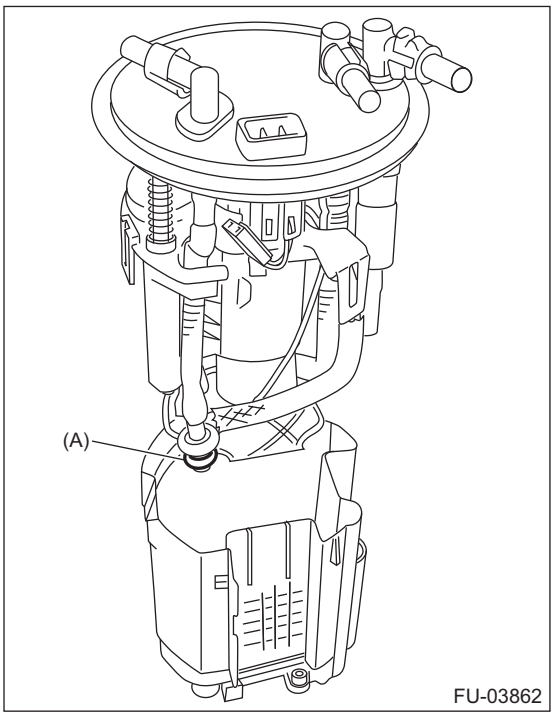
NOTE:
- Use new O-rings.
- Apply gasoline to the O-ring.
- The O-rings of the black and white connectors are identified by a difference in diameter. Be careful not to confuse the two during assembly.

O-ring inner diameter:
Black connector O-ring [Approx. 7 mm (0.28 in)]
White connector O-ring [Approx. 8 mm (0.31 in)]

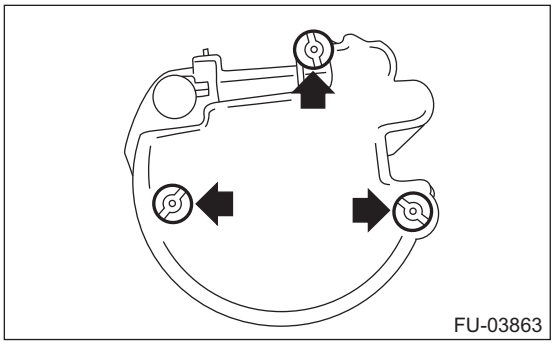


6) Attach the O-ring (A) to the fuel filter assembly, and attach the sub tank to the sub tank bracket assembly.

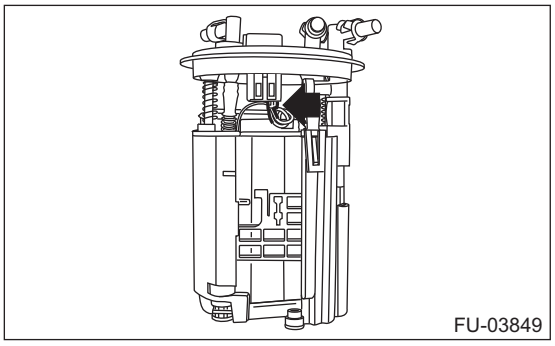
NOTE:
- Use new O-rings (8 mm (0.31 in) inner diameter).
- Apply gasoline to the O-ring.
- Insert the pump assembly until a “pop” is heard.



7) When removing the cushion from the sub tank, replace it with a new part.



8) Connect the pump assembly connector to the sub tank bracket assembly.



9) Install the fuel level sensor. <Ref. to FU(STI)-86, INSTALLATION, Fuel Level Sensor.>
10) Inspect the fuel level sensor. <Ref. to FU(STI)-86, INSPECTION, Fuel Level Sensor.>
11) Install the fuel pump assembly. <Ref. to FU(STI)-83, INSTALLATION, Fuel Pump.>

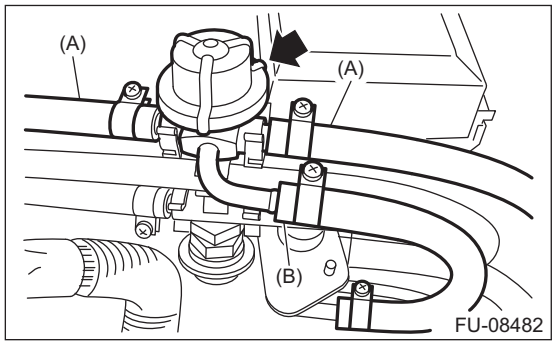
33.Pulsation Damper Assembly

A: REMOVAL

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Disconnect the fuel delivery hose (A) and fuel hose (B) from the pulsation damper assembly, and remove the pulsation damper assembly.



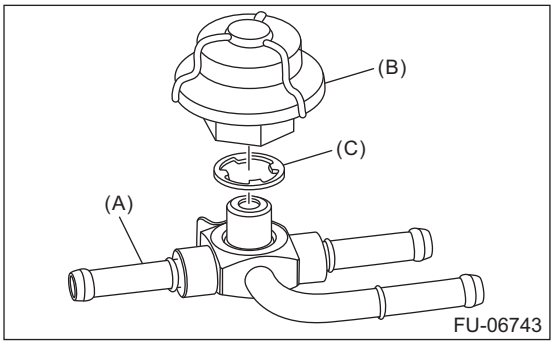
B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use new fuel delivery hose and fuel hose.
- For the information about connecting the fuel delivery hose and fuel hose, refer to "Fuel Delivery, Return and Evaporation Lines". <Ref. to FU(STI)-102, CONNECTING THE FUEL DELIVERY HOSE, FUEL RETURN HOSE AND FUEL HOSE, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

C: DISASSEMBLY

Remove the pulsation damper and fuel pipe gasket from the fuel by-pass pipe.



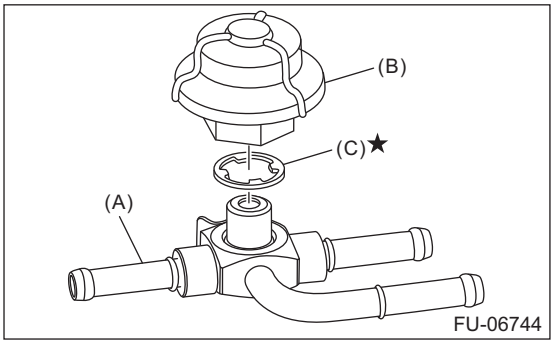
(A) Fuel by-pass pipe
(B) Pulsation damper
(C) Fuel pipe gasket

D: ASSEMBLY

Install the fuel pipe gasket and pulsation damper to the fuel by-pass pipe.

NOTE:
Use a new fuel pipe gasket.

Tightening torque:
21.6 N·m (2.2 kgf-m, 15.9 ft-lb)



(A) Fuel by-pass pipe
(B) Pulsation damper
(C) Fuel pipe gasket

E: INSPECTION

1) Check that the pulsation damper assembly has no deformation, cracks or other damages.
2) Check that the fuel delivery hose and fuel hose have no cracks, damage or loose part.

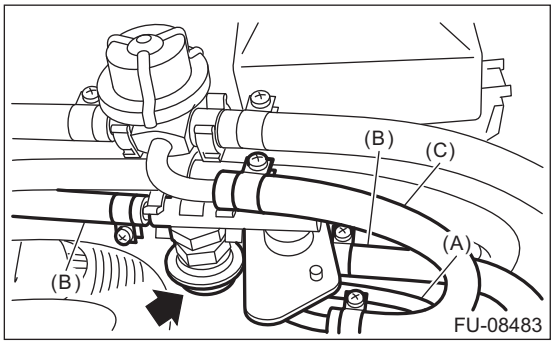
34.Pressure Regulator & Damper Assembly

A: REMOVAL

WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Disconnect the vacuum hose (A) from the pressure regulator and damper assembly.
3) Disconnect the fuel return hose (B) and fuel hose (C) from the pressure regulator & damper assembly, and remove the fuel regulator & damper assembly.



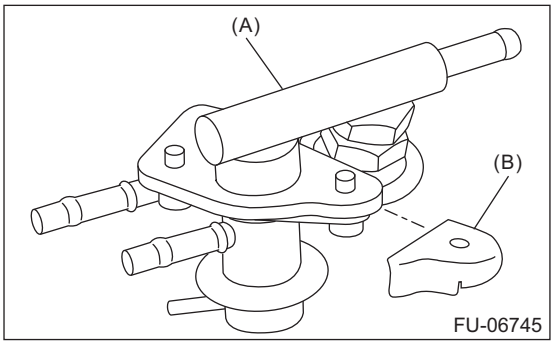
B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use new fuel return hose and fuel hose.
- For the information about connecting the fuel return hose and fuel hose, refer to "Fuel Delivery, Return and Evaporation Lines". <Ref. to FU(STI)-102, CONNECTING THE FUEL DELIVERY HOSE, FUEL RETURN HOSE AND FUEL HOSE, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

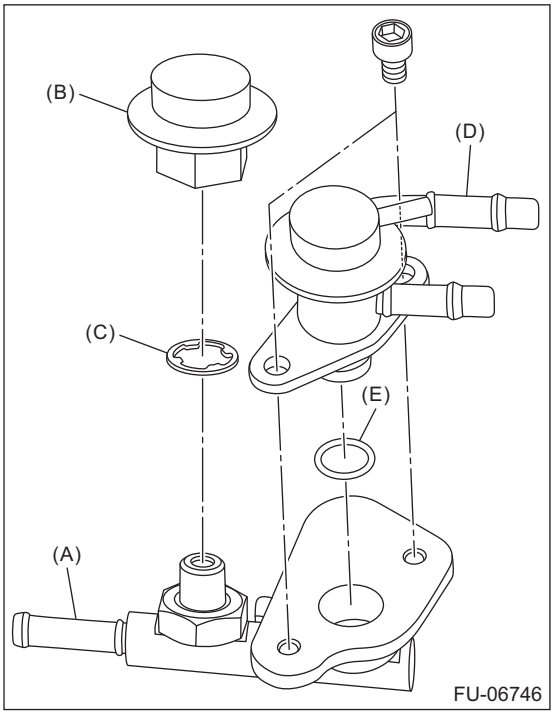
C: DISASSEMBLY

1) Remove the fuel pipe protector from the pressure regulator and damper assembly.



(A) Pressure regulator & damper ASSY
(B) Fuel pipe protector

2) Remove the pulsation damper and fuel pipe gasket from the fuel holder assembly, and remove the pressure regulator from the fuel holder assembly.



(A) Fuel holder ASSY
(B) Pulsation damper
(C) Fuel pipe gasket
(D) Pressure regulator
(E) O-ring

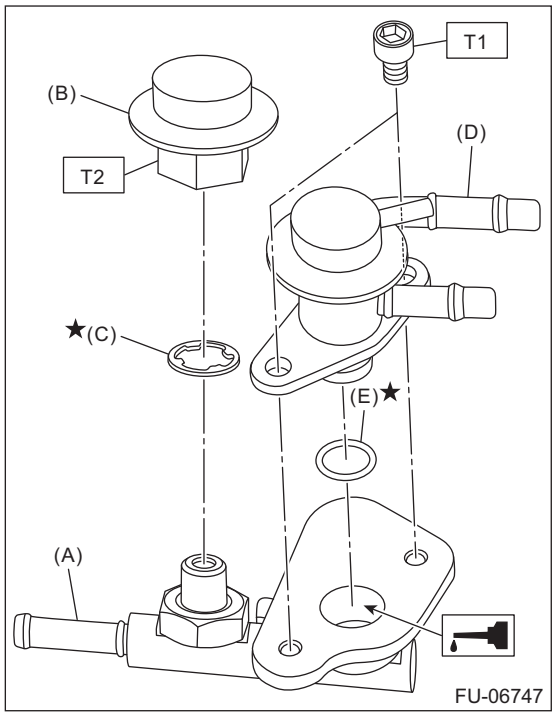
D: ASSEMBLY

1) Install the pressure regulator to the fuel holder assembly, and install the fuel pipe gasket and pulsation damper to the fuel holder assembly.

NOTE:
- Use new O-rings and fuel pipe gaskets.

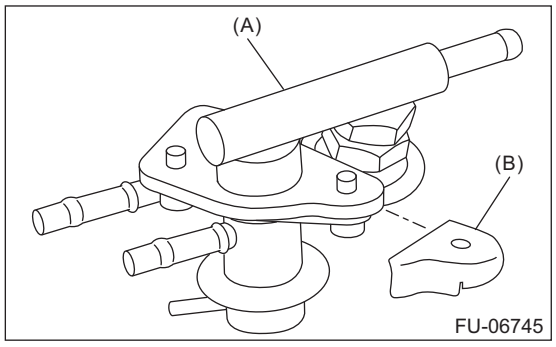
• Apply a thin coat of engine oil to the pressure regulator installation hole of fuel holder assembly.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 21.6 N·m (2.2 kgf-m, 15.9 ft-lb)



(A) Fuel holder ASSY
(B) Pulsation damper
(C) Fuel pipe gasket
(D) Pressure regulator
(E) O-ring

2) Install the fuel pipe protector to the pressure regulator and damper assembly.



(A) Pressure regulator & damper ASSY
(B) Fuel pipe protector

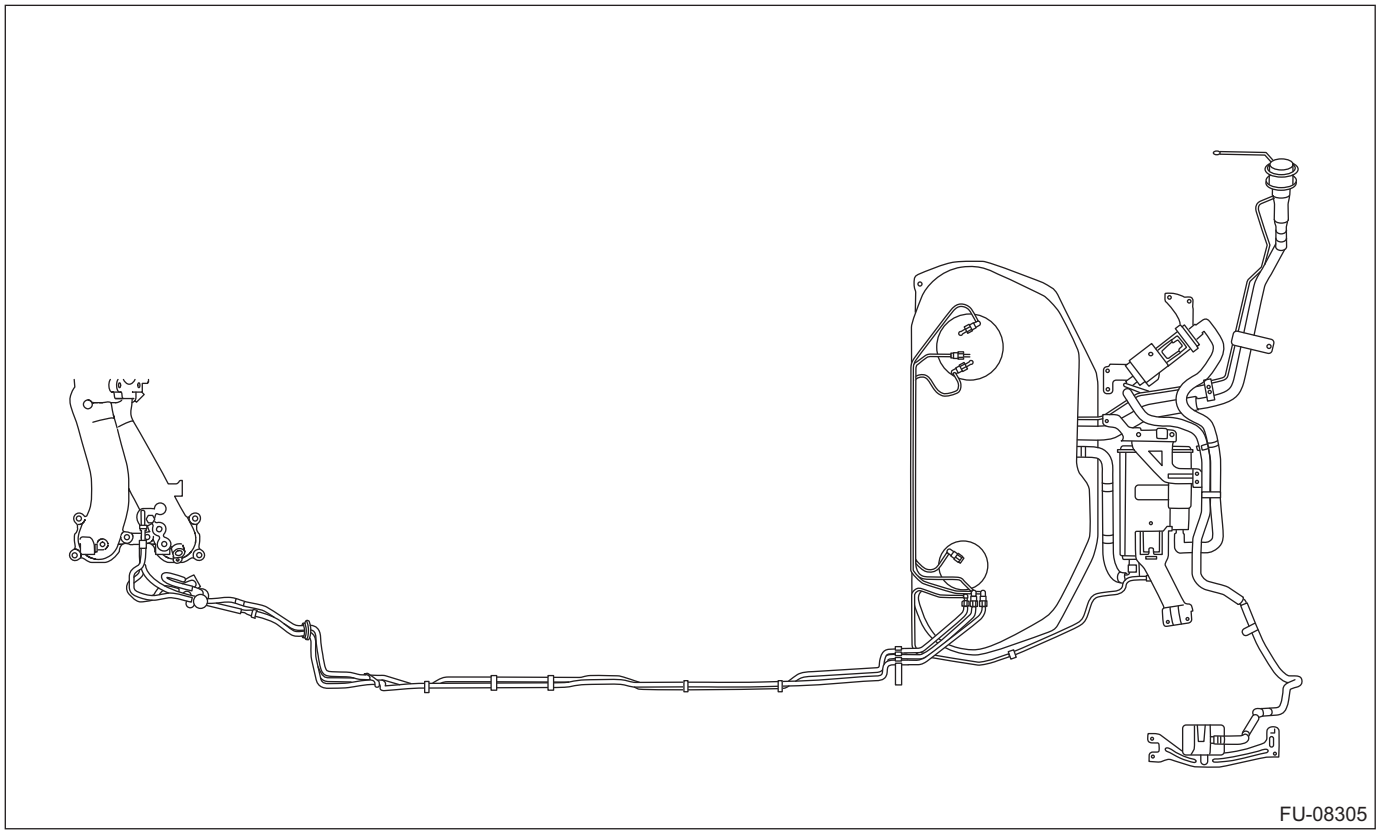
E: INSPECTION

1) Check that the pressure regulator and damper assembly has no deformation, cracks or other damages.

2) Check that the vacuum hose, fuel return hose and fuel hose have no cracks, damage or loose part.

35.Fuel Delivery, Return and Evaporation Lines

A: REMOVAL



WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
Be careful not to spill fuel.

1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.

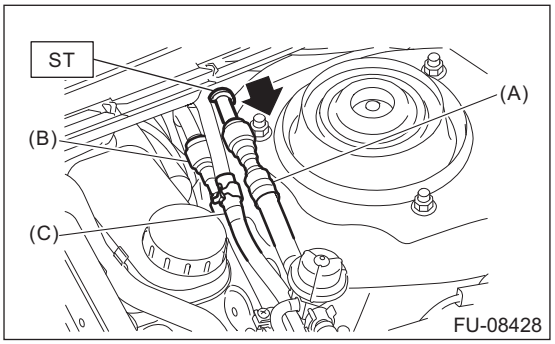
3) Remove the floor mat. <Ref. to EI-106, REMOVAL, Floor Mat.>
4) In the engine compartment, disconnect the fuel delivery hoses, fuel return hoses and evaporation hoses.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

(1) Set the ST to the fuel pipe.

ST 42099AE000 QUICK CONNECTOR RELEASE

(2) Disconnect the quick connector of the fuel delivery hose and fuel return hose by pushing the ST in the direction of the arrow.
(3) Remove the clip and disconnect the evaporation hose from the fuel pipe.



(A) Fuel delivery hose
(B) Fuel return hose
(C) Evaporation hose

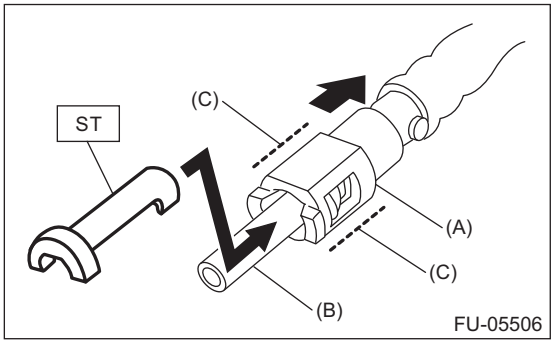
5) Remove the fuel tank. <Ref. to FU(STI)-67, REMOVAL, Fuel Tank.>
6) Disconnect the quick connector, and remove the fuel delivery tube, fuel return tube, and jet pump tube from the fuel tank.
- When using ST

1. Attach ST to the pipe and push ST in the direction of arrow mark to disconnect the quick connector.

ST 42099AE000 QUICK CONNECTOR RELEASE

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **To disconnect the connector, hold (C) shown in the figure and pull in axial direction.**
- **If the connector and pipe are sticking to each other, push and pull the connector with ST pushed, and then pull the connector after it starts moving freely.**
- **When disconnecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.**

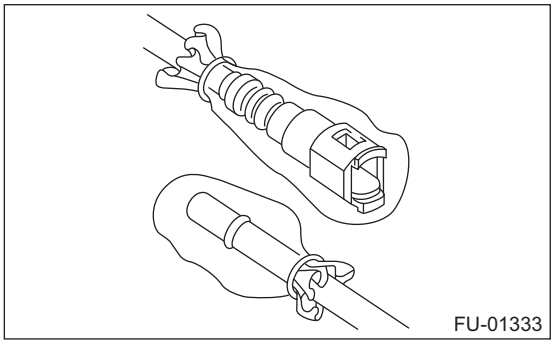
NOTE:
Clean the pipe and quick connector, if they are covered with dust.



(A) Quick connector
(B) Pipe
(C) Connector holding position

2. To prevent from damaging or entering foreign matter, wrap the pipes and quick connectors with plastic bag etc.

CAUTION:
When reusing the retainer, do not disconnect the retainer from the connector.

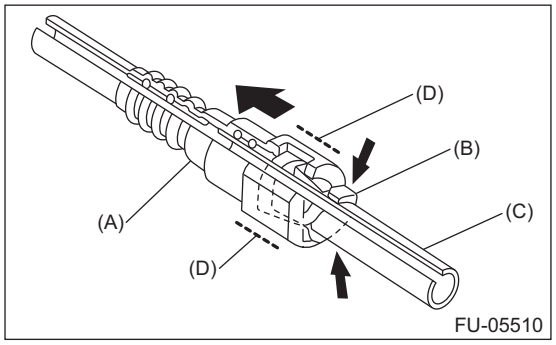


- When not using ST

1. Push the retainer in the direction of the arrow, disconnect the quick connector from pipe.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **To disconnect the connector, hold (D) shown in the figure and pull in axial direction.**
- **If the connector and pipe are sticking to each other, push and pull the connector with the retainer pushed in the direction of the arrow, and then pull the connector after it starts moving freely.**
- **When disconnecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.**

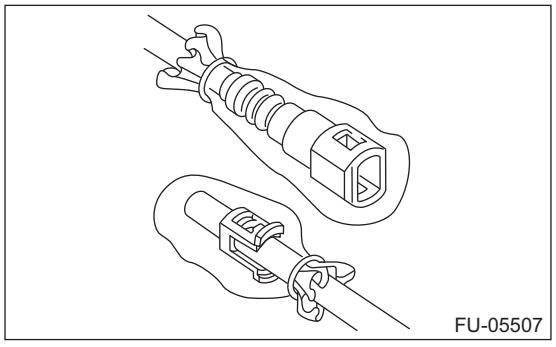
NOTE:
Clean the pipe and quick connector, if they are covered with dust.



(A) Quick connector
(B) Retainer
(C) Pipe
(D) Connector holding position

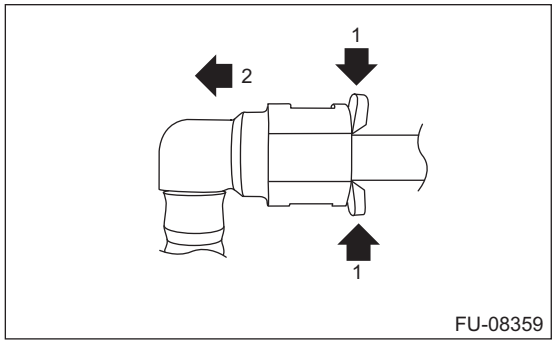
2. To prevent from damaging or entering foreign matter, wrap the pipes and quick connectors with plastic bag etc.

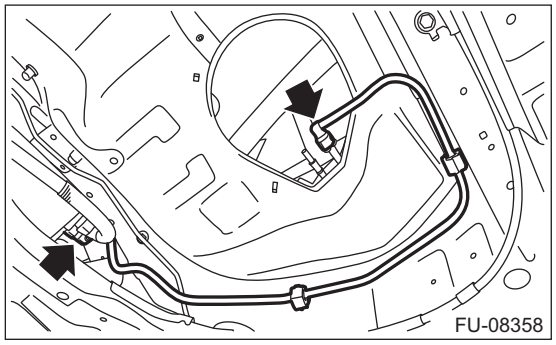
CAUTION:
When reusing the retainer, do not disconnect the retainer from the pipe.



7) Disconnect the quick connector and remove the purge pipe.

NOTE:
Disconnect the quick connector as shown in the figure.





8) Remove the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
9) Remove the fuel pipe assembly from vehicle.

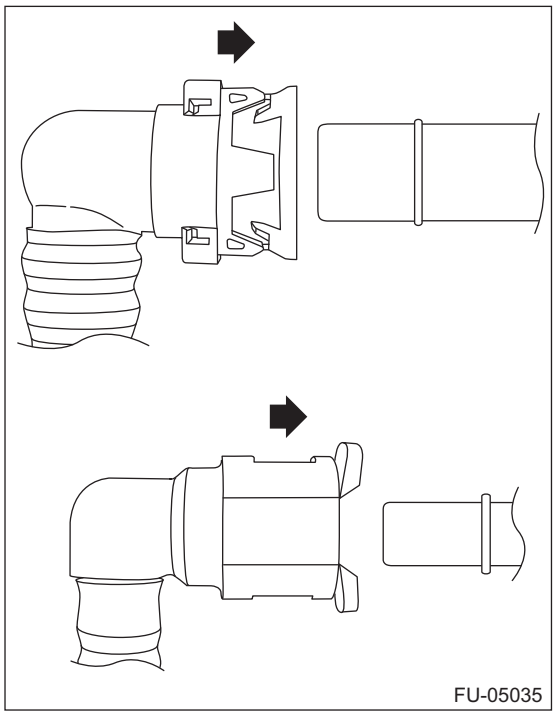
B: INSTALLATION

Install in the reverse order of removal while being careful of the following.

1. CONNECTING THE EVAPORATION LINE QUICK CONNECTOR

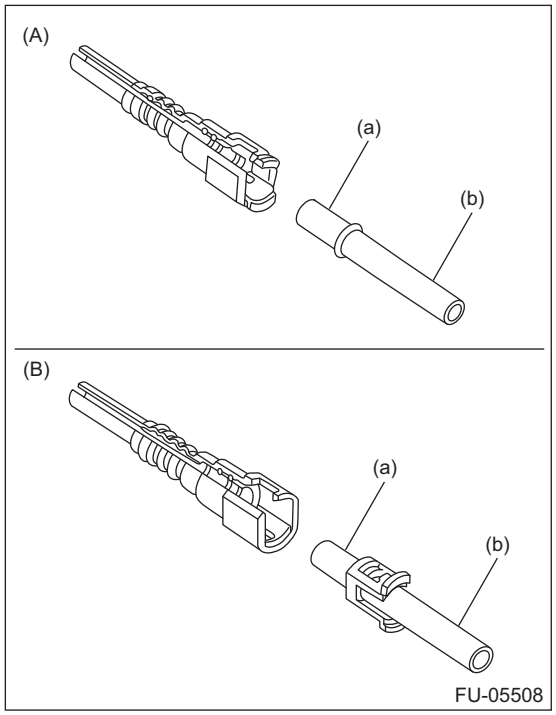
NOTE:
Connect the quick connector as shown in the figure.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.



2. CONNECTING THE FUEL LINE QUICK CONNECTOR

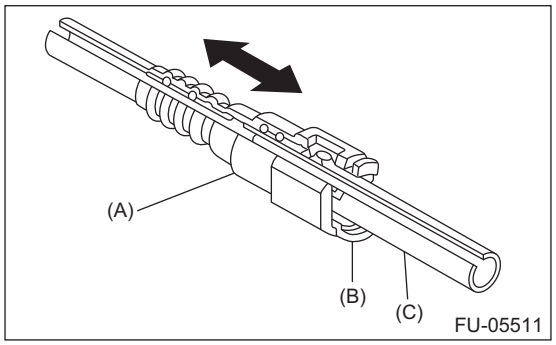
CAUTION:
• Make sure there are no damage or dust on connections. If necessary, clean seal surface of pipe.



(A) When removed using the ST
(B) When removed without using the ST
(a) Seal surface
(b) Pipe

• When reusing the retainer, make sure that neither scratches nor deformation exist on the retainer. If it is faulty, use a new part.
1) Connect the quick connector to pipe.

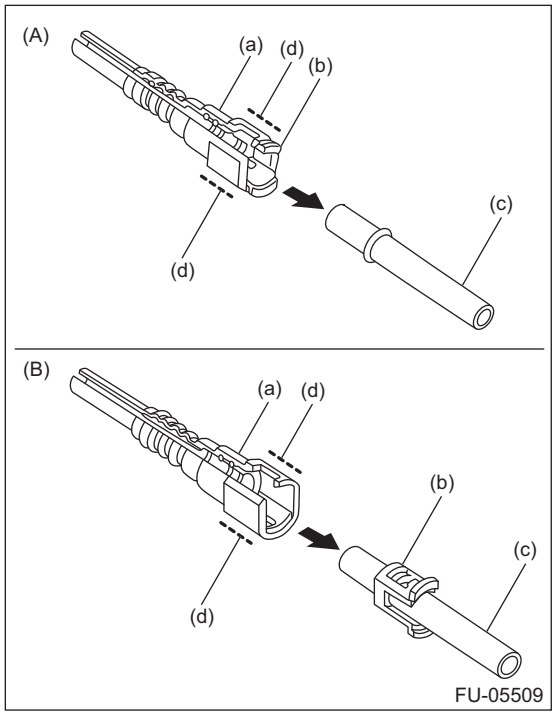
CAUTION:
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.



(A) Quick connector
(B) Retainer
(C) Pipe

• Make sure the two retainer pawls are engaged in their mating positions in the quick connector.
• Be sure to inspect tubes and their connections for any leakage of fuel.
• To connect the connector, hold (d) shown in the figure and push in axial direction.

• When connecting the connector, do not bend or twist the tube forcibly. If the tube is bent, replace with a new part.



(A) When removed using the ST
(B) When removed without using the ST
(a) Quick connector
(b) Retainer
(c) Pipe
(d) Connector holding position

3. CONNECTING THE FUEL DELIVERY HOSE, FUEL RETURN HOSE AND FUEL HOSE

Connect the fuel delivery hose, fuel return hose, and fuel hose as shown in the figure.

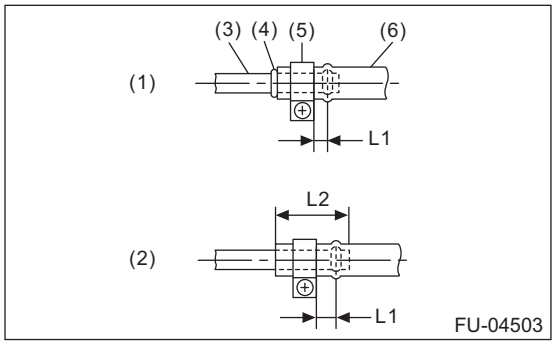
CAUTION:
• If the connection portion has a spool or stopper, do not allow the end of the hose to bend or ride over by inserting the hose too deep.
• Be sure to inspect hoses and their connections for any leakage of fuel.

NOTE:
Use new fuel delivery hose, fuel return hose, and fuel hose.

Tightening torque:
1.25 N·m (0.1 kgf-m, 0.9 ft-lb)

L1: 2.5±1.5 mm (0.098±0.059 in)

L2: 22.5±2.5 mm (0.886±0.098 in)

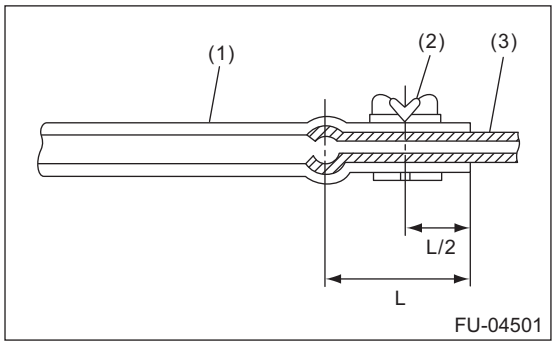


(1) When there is a spool or bump
(2) When there is no spool or bump
(3) Pipe
(4) Spool or bump
(5) Clamp
(6) Hose

4. EVAPORATION HOSE CONNECTION

Connect the evaporation hose to the pipe with an overlap of 15 to 20 mm (0.59 to 0.79 in).

L = 17.5±2.5 mm (0.689±0.098 in)



(1) Hose
(2) Clip
(3) Pipe

C: INSPECTION

1) Check that the fuel pipe has no deformation, cracks or other damages.
2) Check that the hose and tube have no cracks, damage or loose part.

36.Fuel System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Insufficient fuel supply to fuel injector	a. Fuel pump does not operate.	
	❍ Defective terminal contact	Inspect contact, especially ground, and tighten it securely.
	❍ Trouble in electromagnetic or electronic circuit parts	Replace the faulty parts.
	b. Decline of fuel pump function	Replace the fuel pump.
	c. Clogged fuel filter	Replace the fuel filter. Clean or replace the fuel tank if necessary.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
	e. Air is mixed in fuel system.	Check the fuel line connections, correct or replace the defective part.
	f. Damaged diaphragm of pressure regulator	Replace the pressure regulator.
Leakage or blow out of fuel	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Cracked fuel line pipe, hose or tube	Replace the fuel line pipe, hose or tube.
	c. Cracked fuel tank or defective welding part	Replace the fuel tank.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
Gasoline smell inside of compartment	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Defective canister	Replace the canister.
Defective fuel gauge	a. Defective operation of fuel level sensor	Replace the fuel level sensor.
	b. Defective operation of combination meter	Replace the combination meter.
Noise	a. Large operation noise or vibration of fuel pump	Replace the fuel pump.

NOTE:
• When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent the problem.
• In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop to 0°C (32°F) or less throughout the winter season, use a water removing agent in the fuel system to prevent freezing fuel system and accumulating water.
• When water is accumulated in fuel filter, fill the water removing agent in the fuel tank.
• Before using water removing agent, follow the cautions noted on the bottle.

(A)	To secondary air pump	(B)	To resonator

(1)	Gasket	(7)	Air duct A
(2)	Gasket	(8)	Air duct B
(3)	Gasket	(9)	Secondary air combination valve LH
(4)	Clip	(10)	Secondary air pipe LH
(5)	Secondary air pipe RH	(11)	Gasket
(6)	Secondary air combination valve RH		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 9 (0.9, 6.6)
T3: 19 (1.9, 14.0)

B: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.

3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.

- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Clamp pincer	• Used for installing the PCV hose assembly. • This tool is made by OETIKER. Product No. 14100134

2. Front Catalytic Converter

A: REMOVAL

The front catalytic converter is integrated into the center exhaust pipe (front). Refer to “Center Exhaust Pipe” for removal procedures. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The front catalytic converter is integrated into the center exhaust pipe (front). Refer to “Center Exhaust Pipe” for installation procedures. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

3. Rear Catalytic Converter

A: REMOVAL

The rear catalytic converter is integrated into the center exhaust pipe (rear). Refer to “Center Exhaust Pipe” for removal procedures. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The rear catalytic converter is integrated into the center exhaust pipe (rear). Refer to “Center Exhaust Pipe” for installation procedures. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

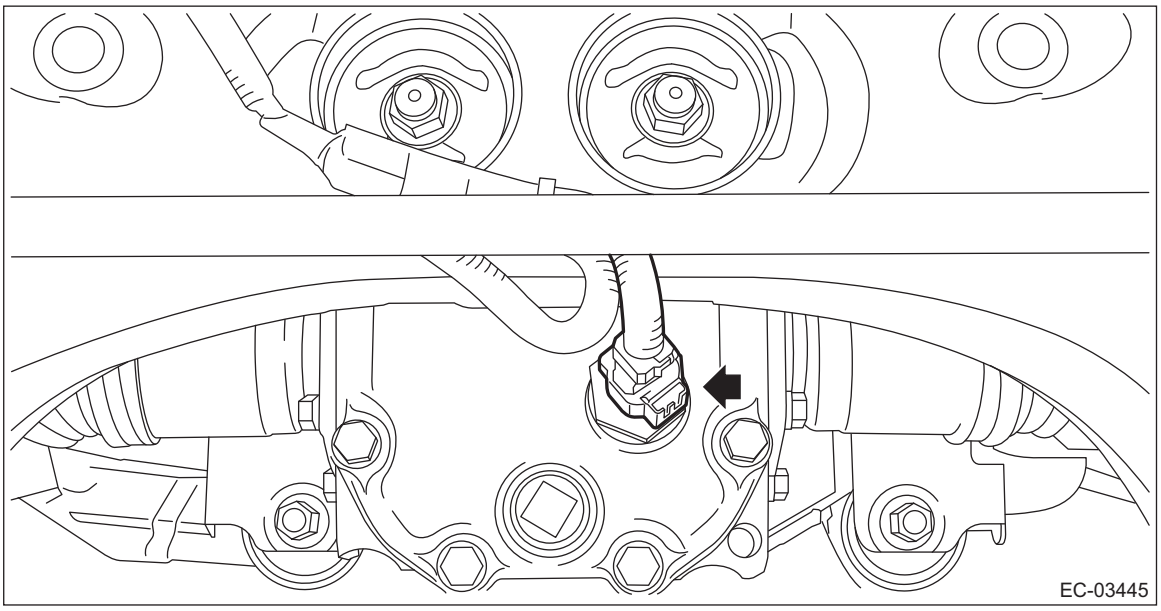
4. Canister

A: REMOVAL

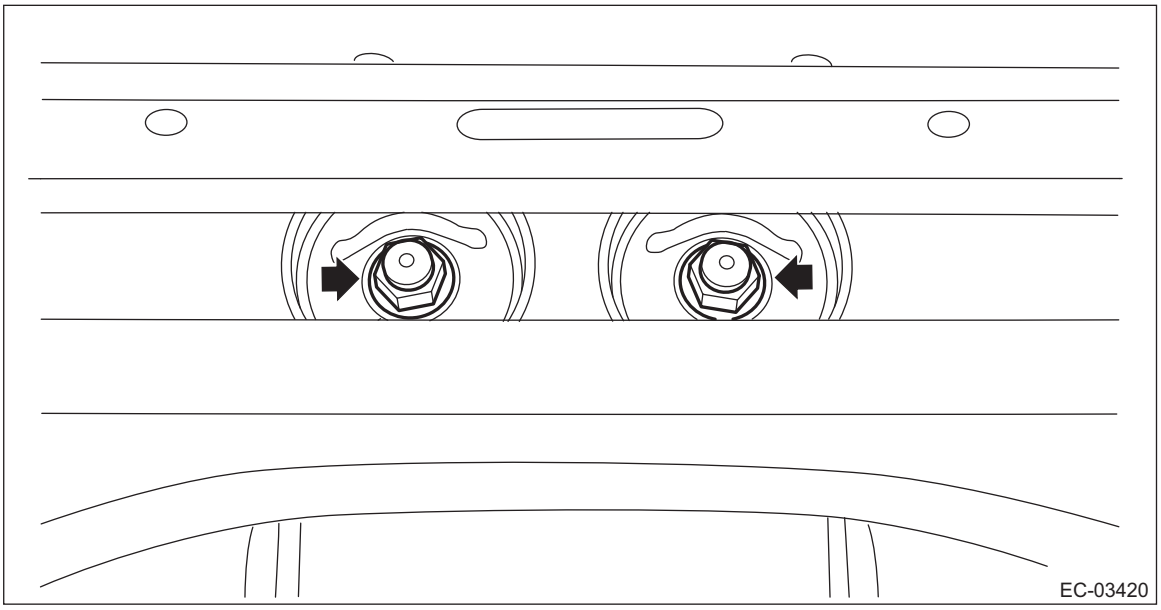
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
Be careful not to spill fuel.

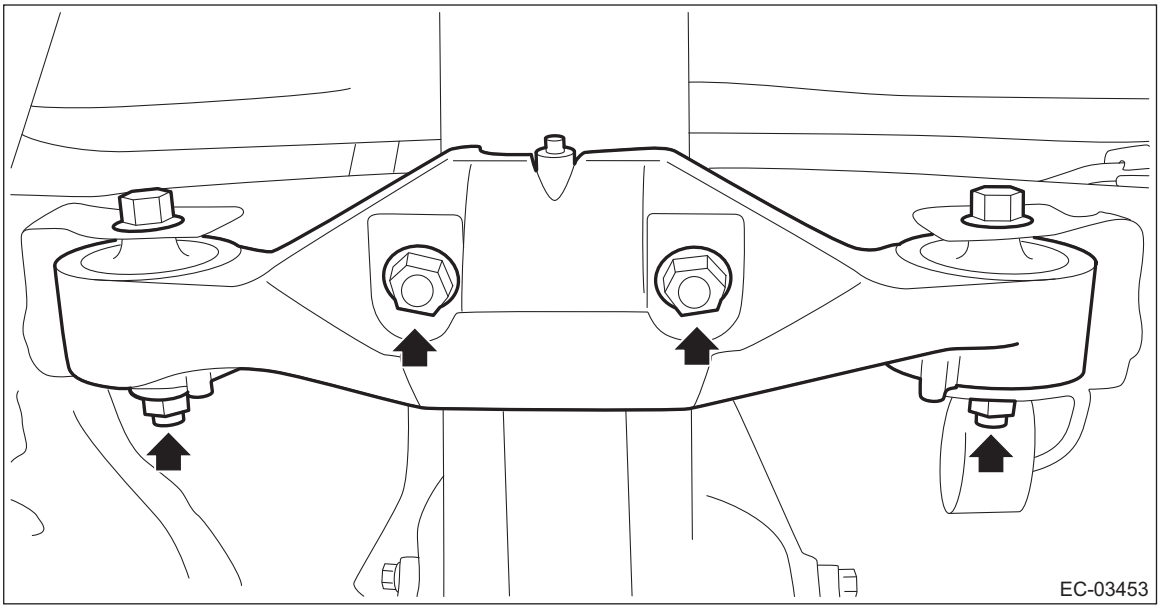
1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Lift up the vehicle.
5) Remove the rear exhaust pipe. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
6) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
7) Support the rear differential with the transmission jack.
8) Disconnect the connector from oil temperature sensor.



9) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

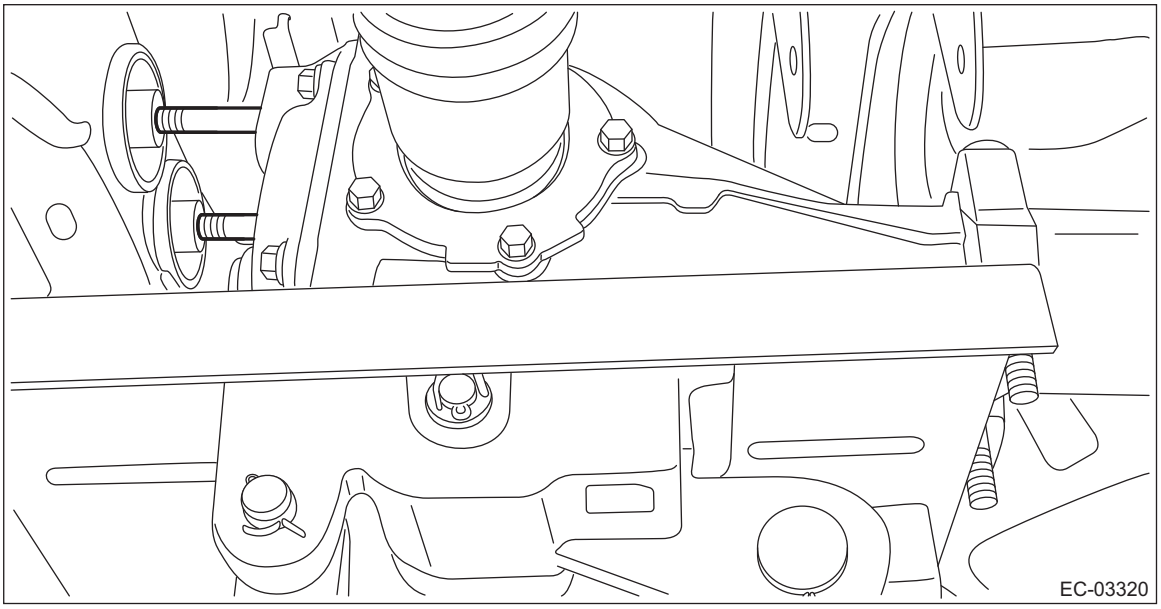


10) Remove the rear differential member from the rear sub frame assembly and the rear differential.

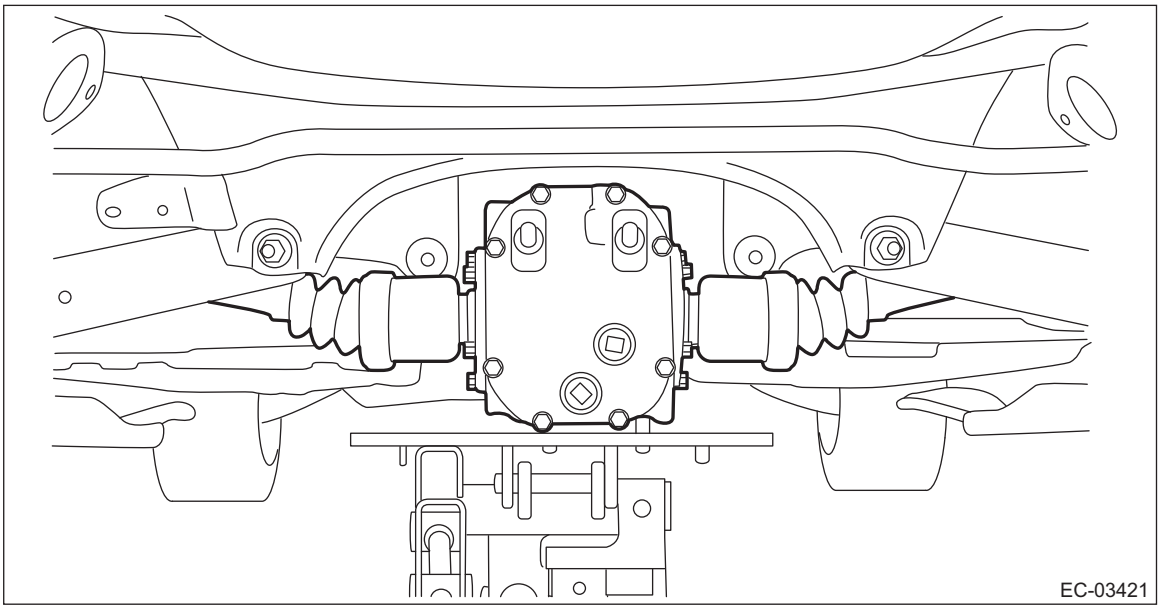


11) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

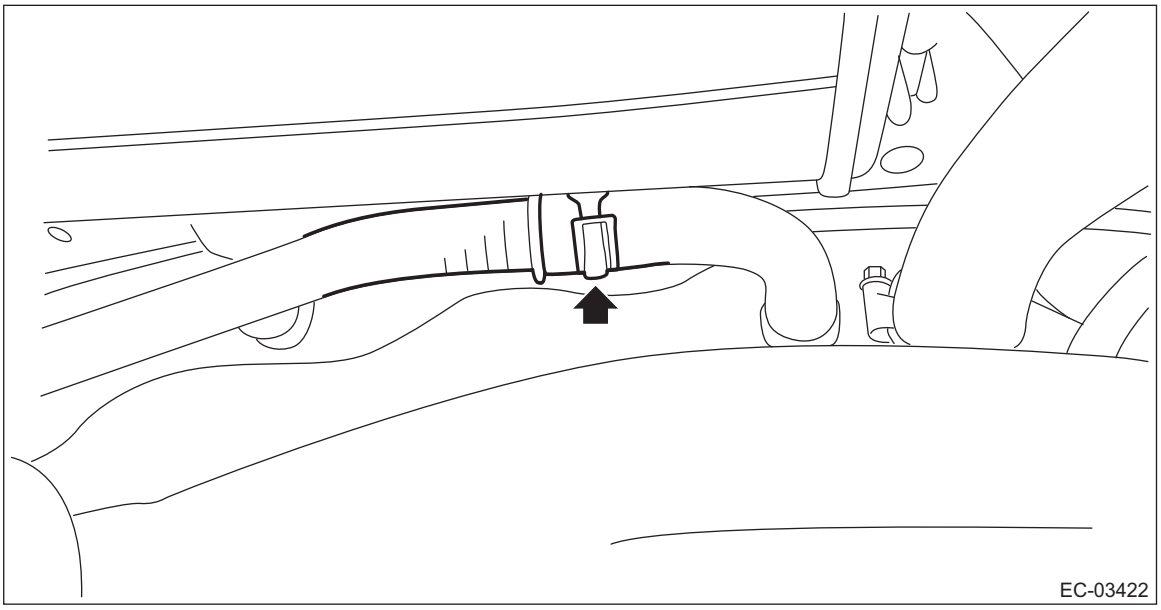
NOTE:
• When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



• Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

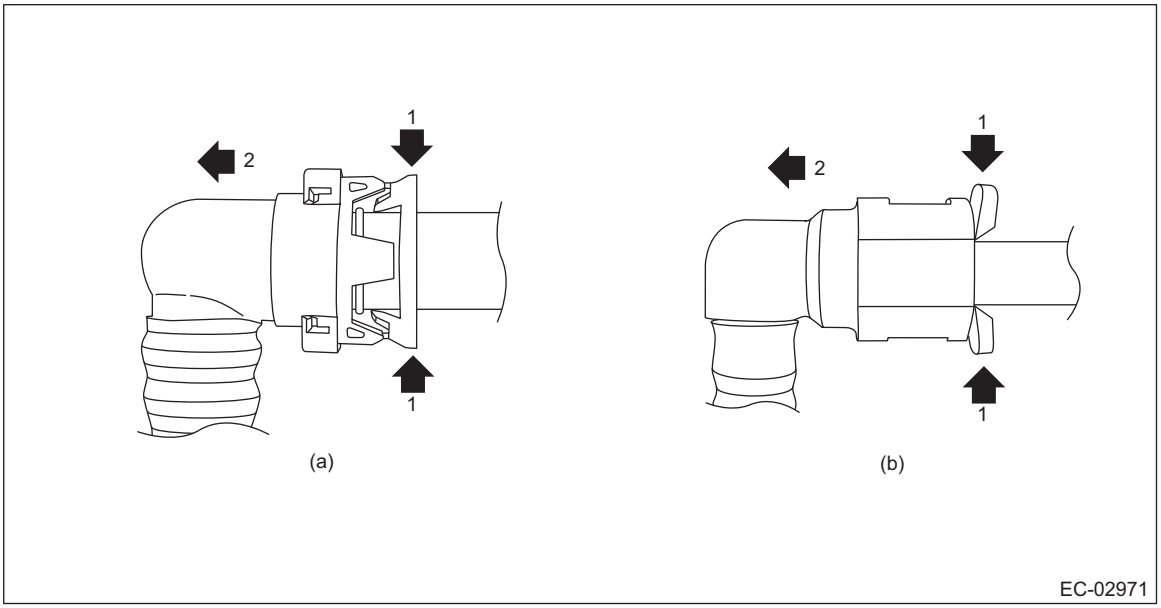


12) Disconnect the vent tube from vent hose.

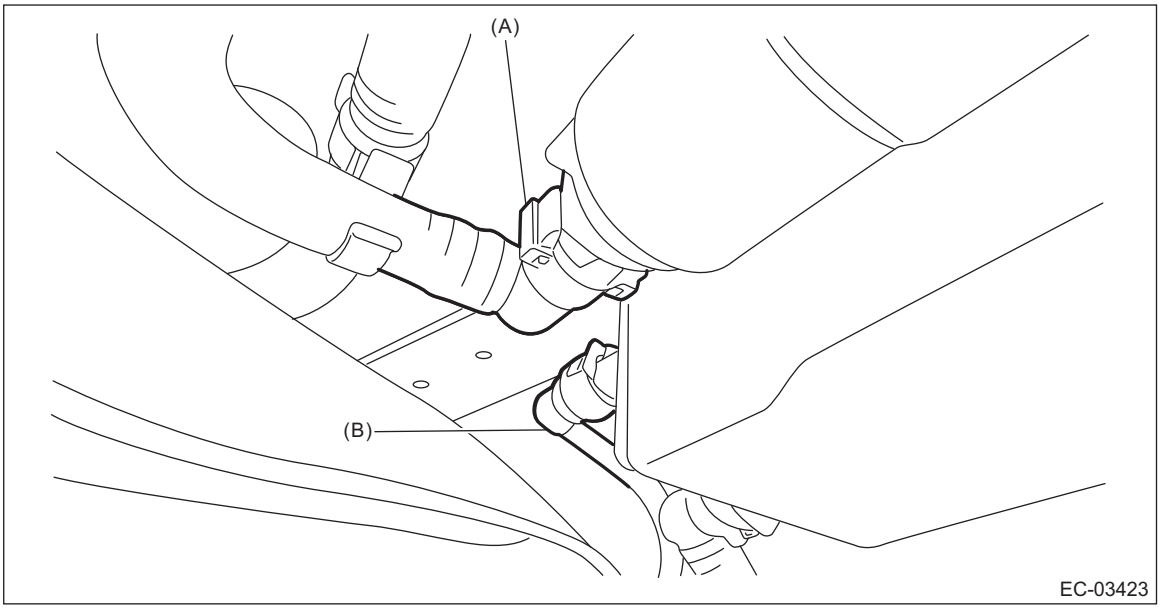


13) Disconnect the drain tube (A) and purge tube (B) from the canister.

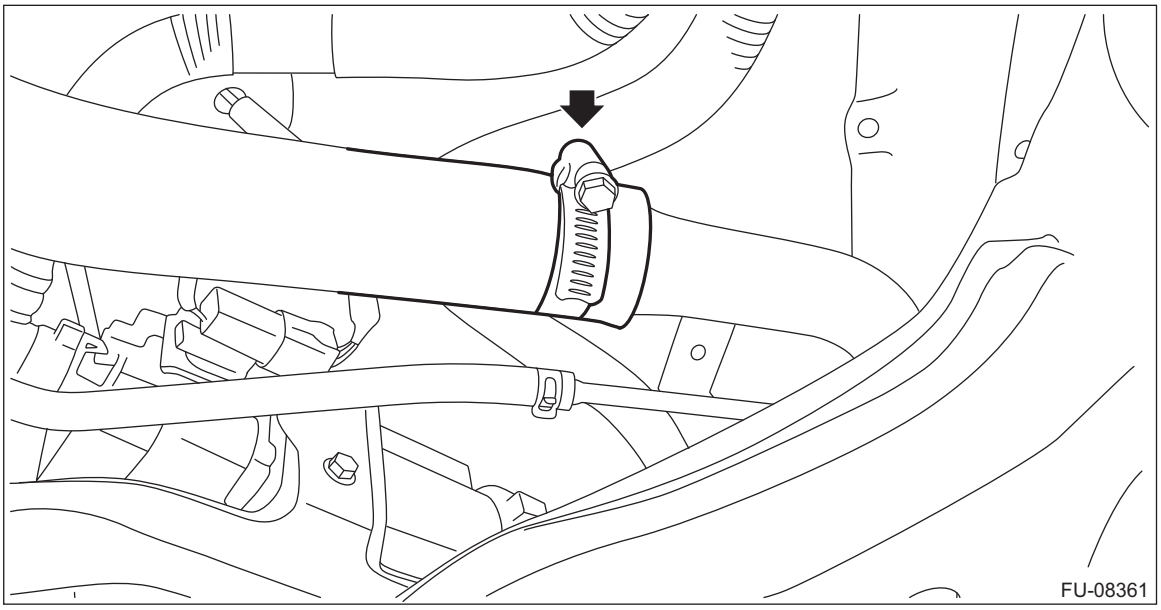
NOTE:
Disconnect the quick connector as shown in the figure.



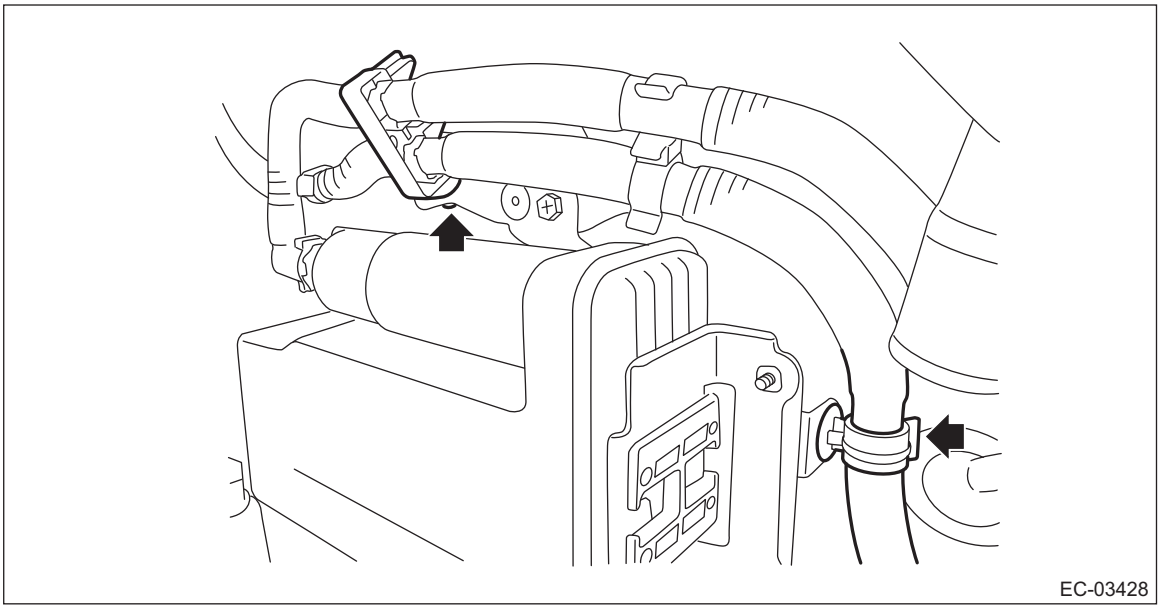
(a) Drain tube (b) Purge tube



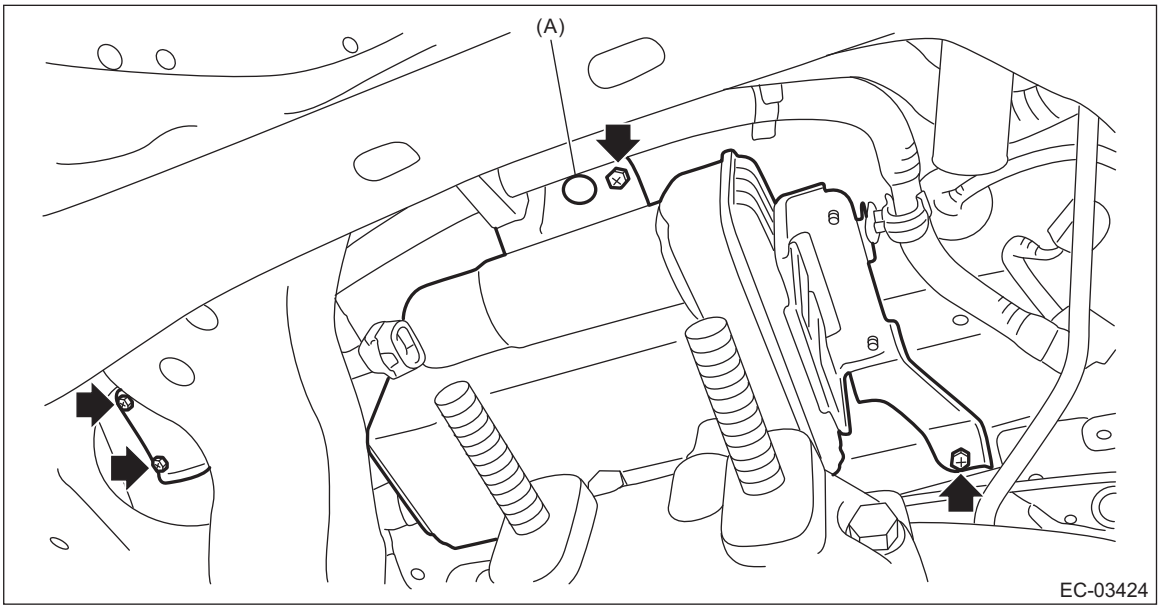
14) Disconnect the fuel filler hose from the fuel filler pipe assembly.



15) Remove the tube clamp from the canister bracket A, and remove the drain tube from the tube clamp.



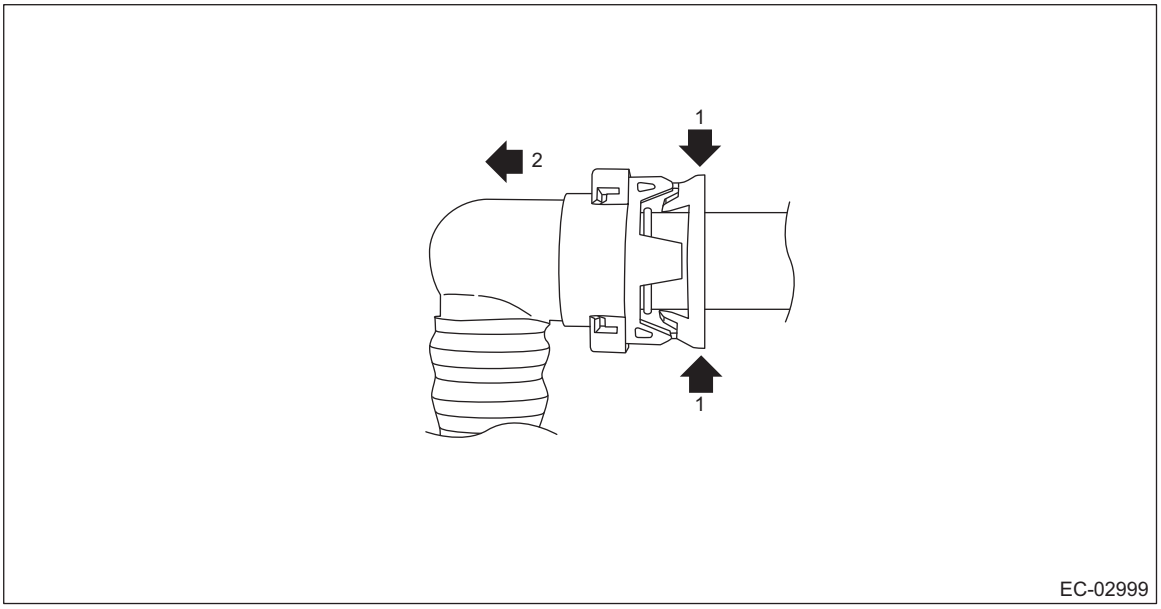
16) Remove the bolts and clip (A) securing the canister to the vehicle, and remove the canister.



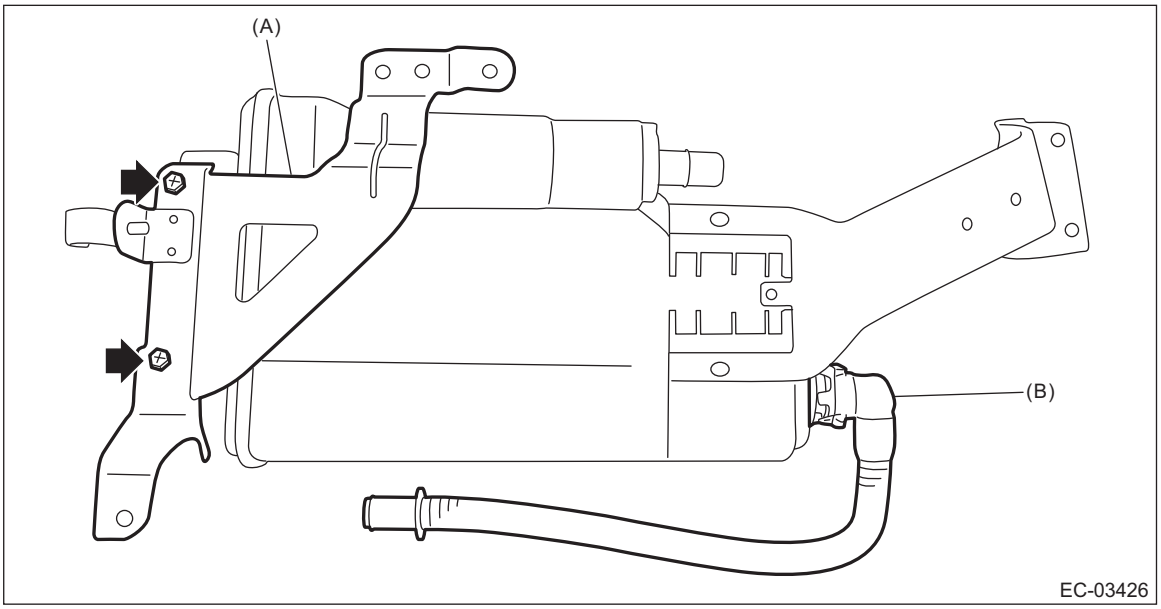
17) Disconnect the vent tube (B) from the canister and remove the canister bracket A (A).

NOTE:

- Disconnect the quick connector as shown in the figure.



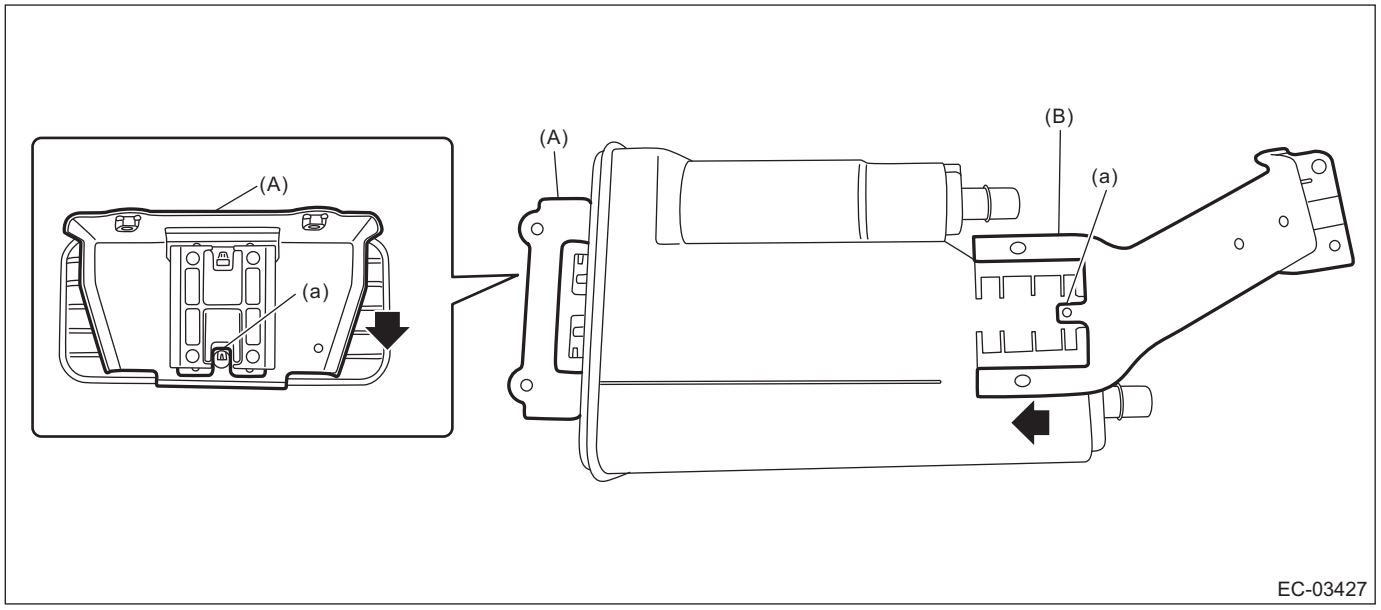
• The canister bracket cannot be separated from the canister. Therefore, be sure to replace both of them with new ones when replacing the canister or canister bracket.



B: INSTALLATION

1) Move it in the direction of the arrow and install the canister bracket B (A) and canister bracket C (B) to the canister.

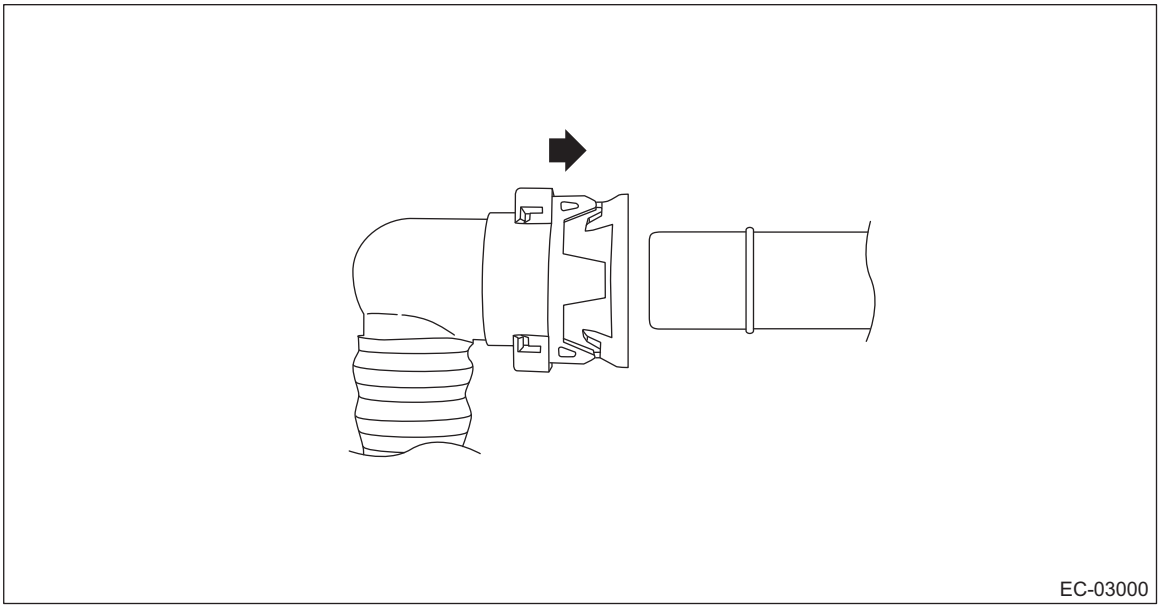
NOTE:
• Use a new canister and a canister bracket.
• Check that the claw (a) is securely tightened.



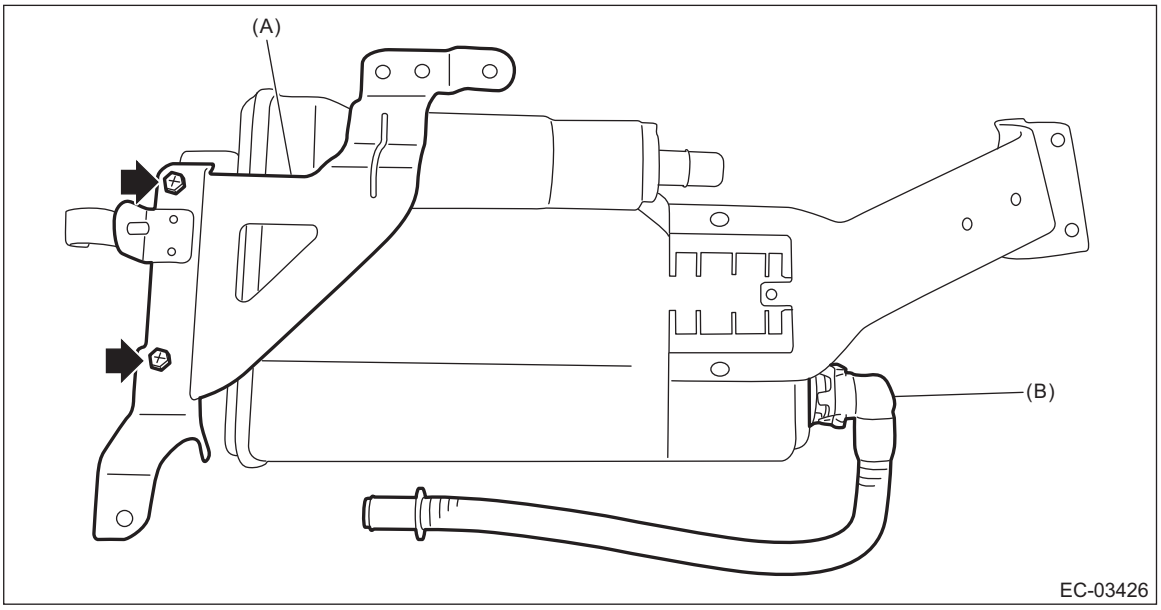
2) Connect the vent tube (B) to the canister and remove the canister bracket A (A).

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Install the quick connector as shown in the figure.

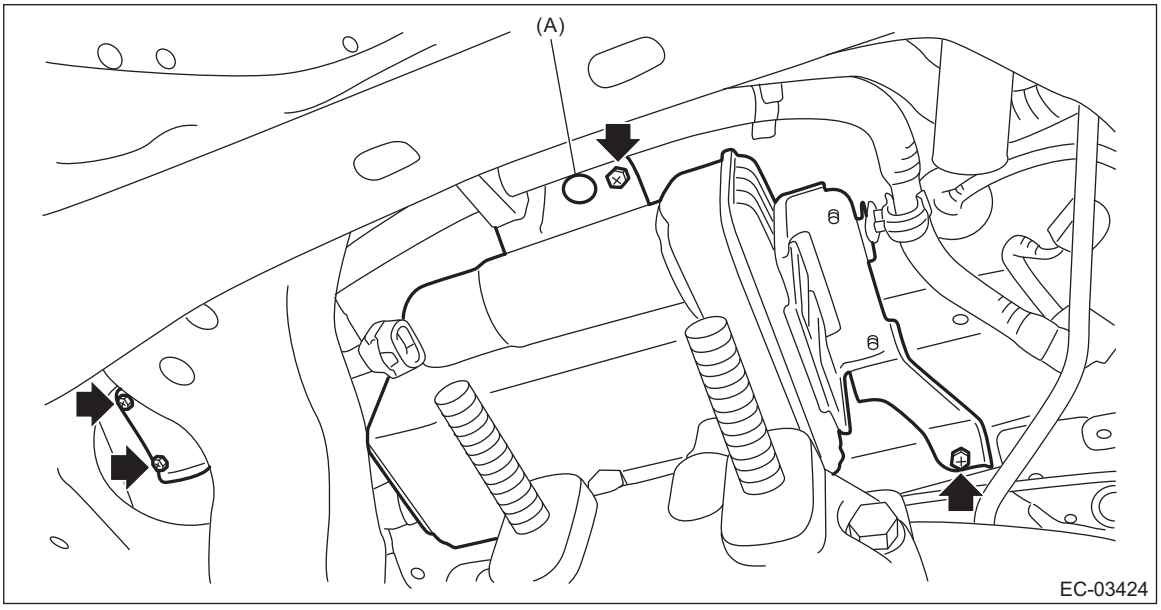


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



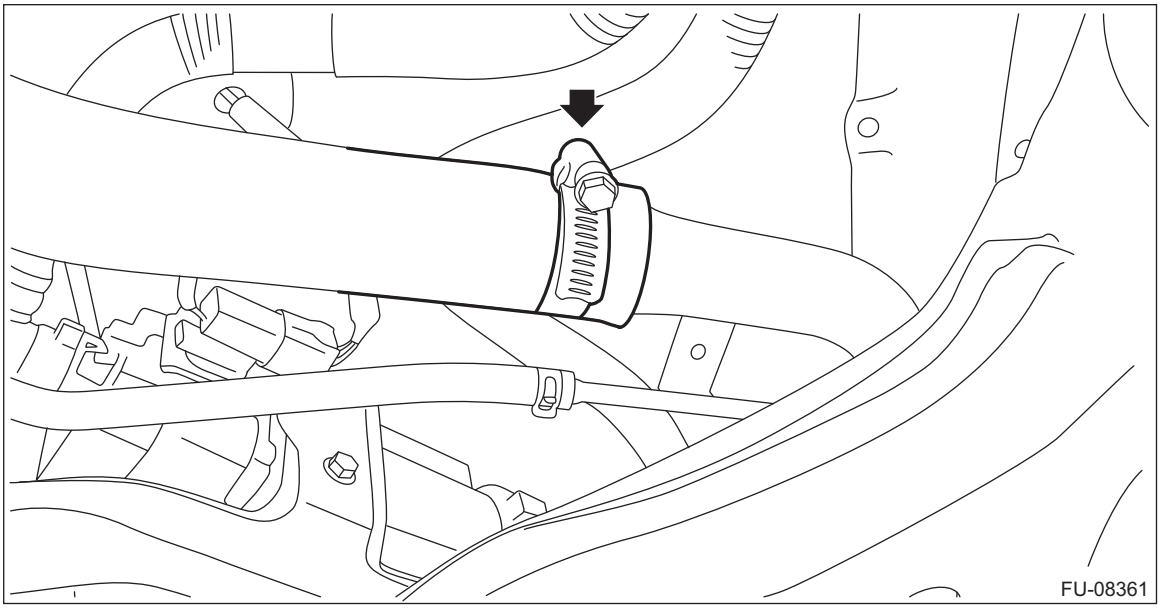
3) Set the canister to the vehicle, and attach the bolts and clip (A) which secure the canister.

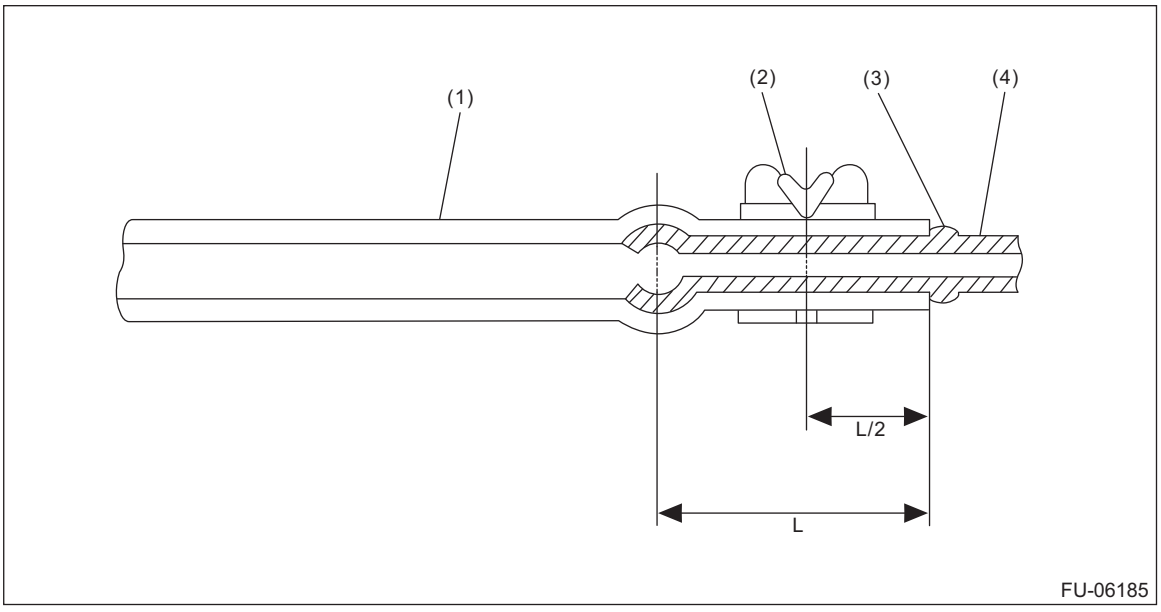
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



4) Correctly insert the fuel filler hose to the spool, and then install the clamp as shown.

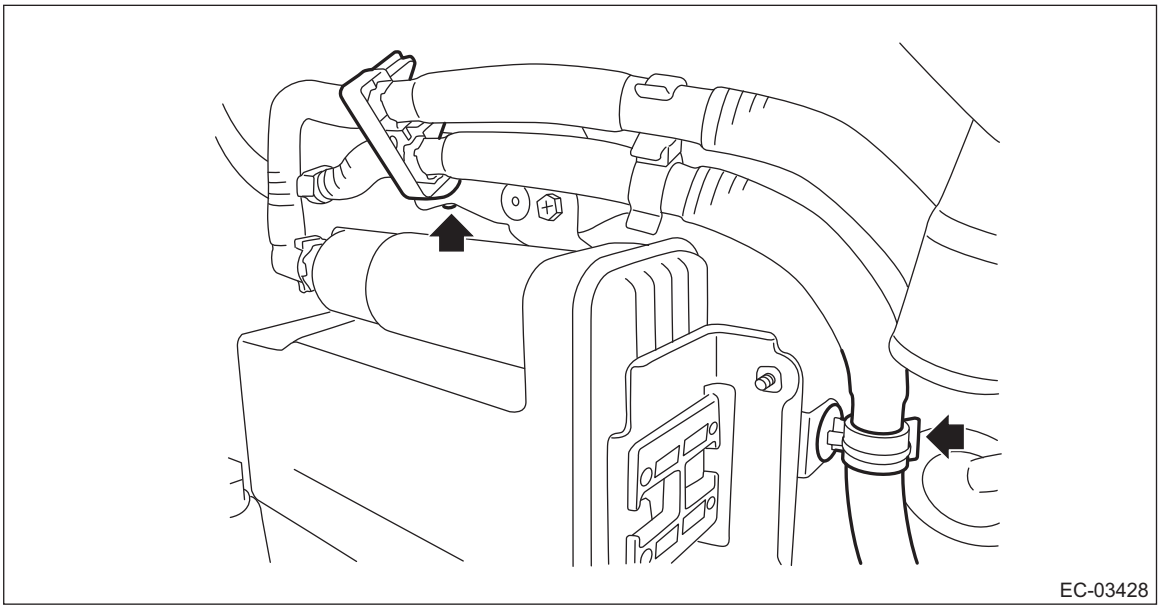
Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)





(1) Hose
(2) Clamp
(3) Spool
(4) Pipe

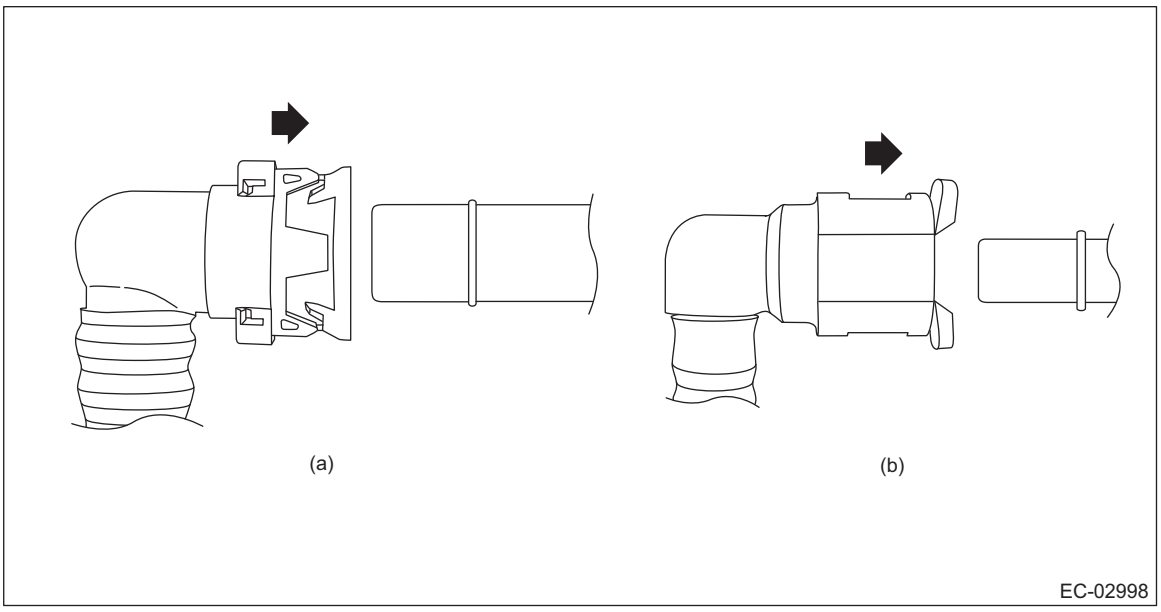
5) Install the tube clamp to the canister bracket A, and install the drain tube to the tube clamp.



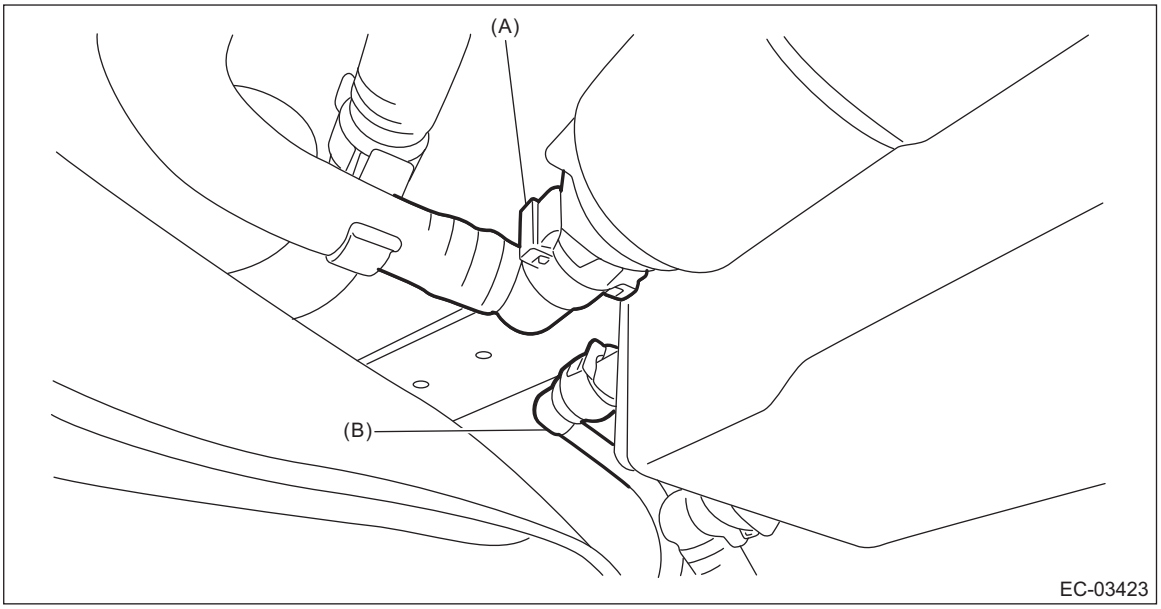
6) Connect the drain tube (A) and purge tube (B) to the canister.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

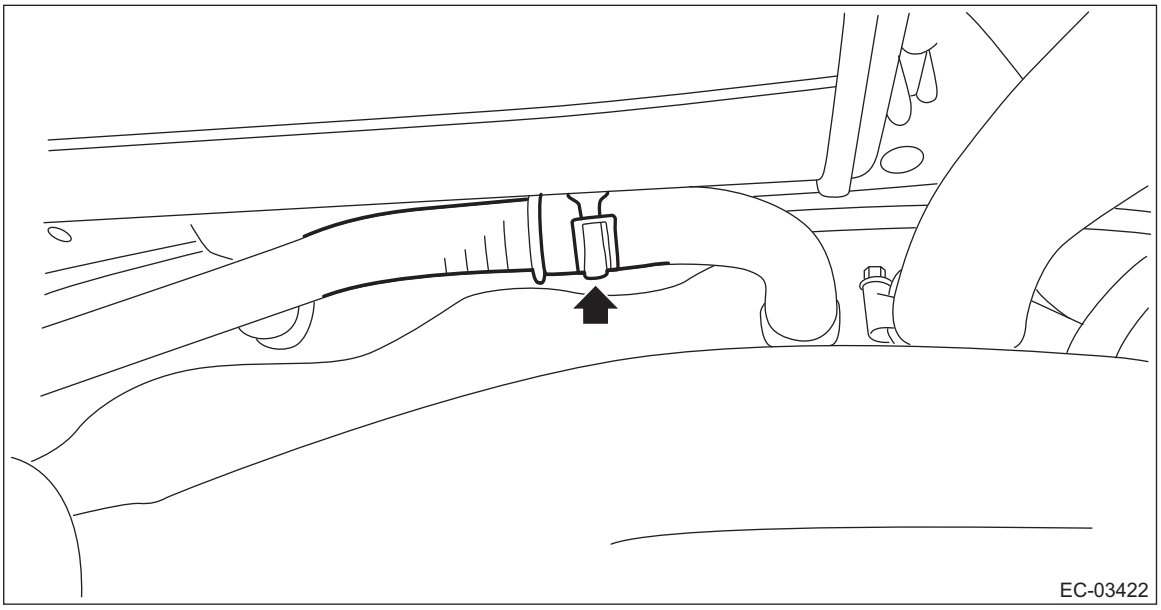
NOTE:
Install the quick connector as shown in the figure.



(a) Drain tube (b) Purge tube

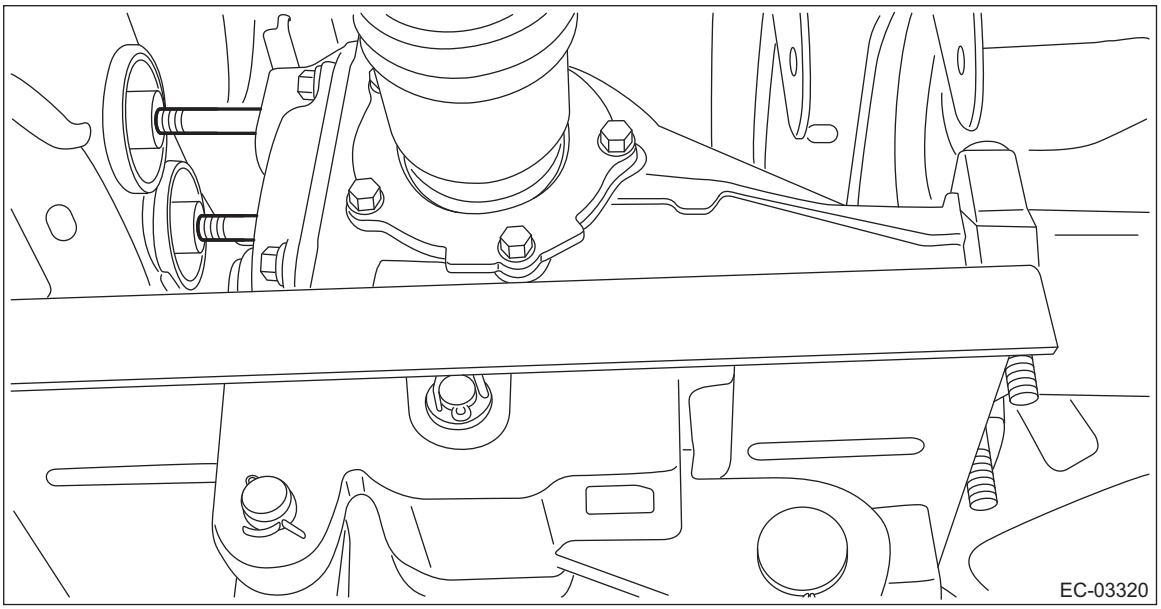


7) Connect the vent tube to the vent hose.



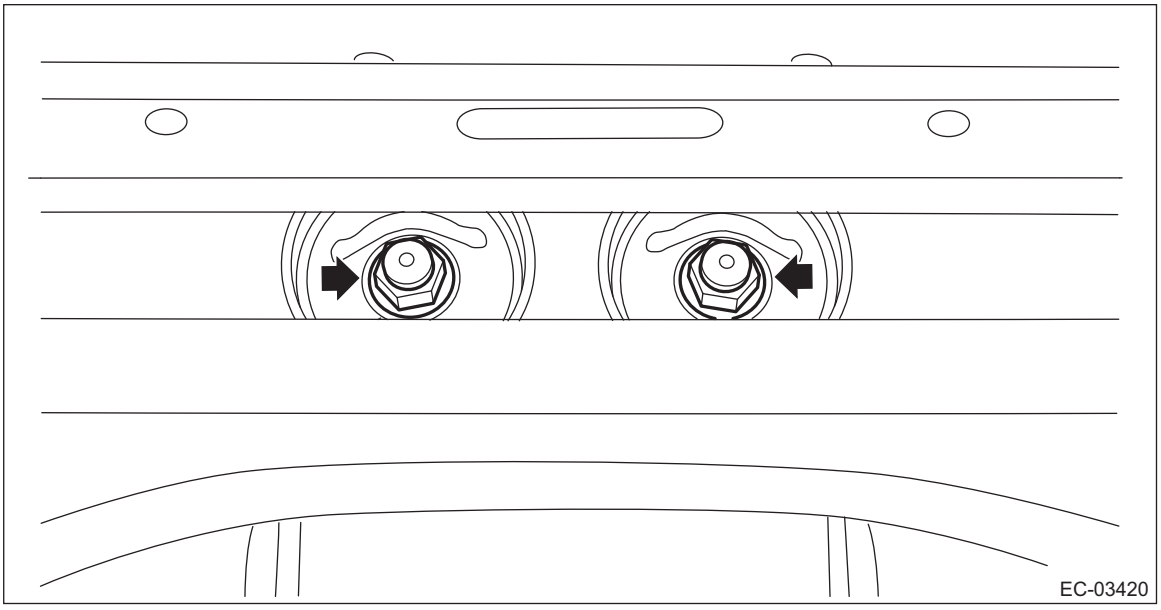
8) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:
When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



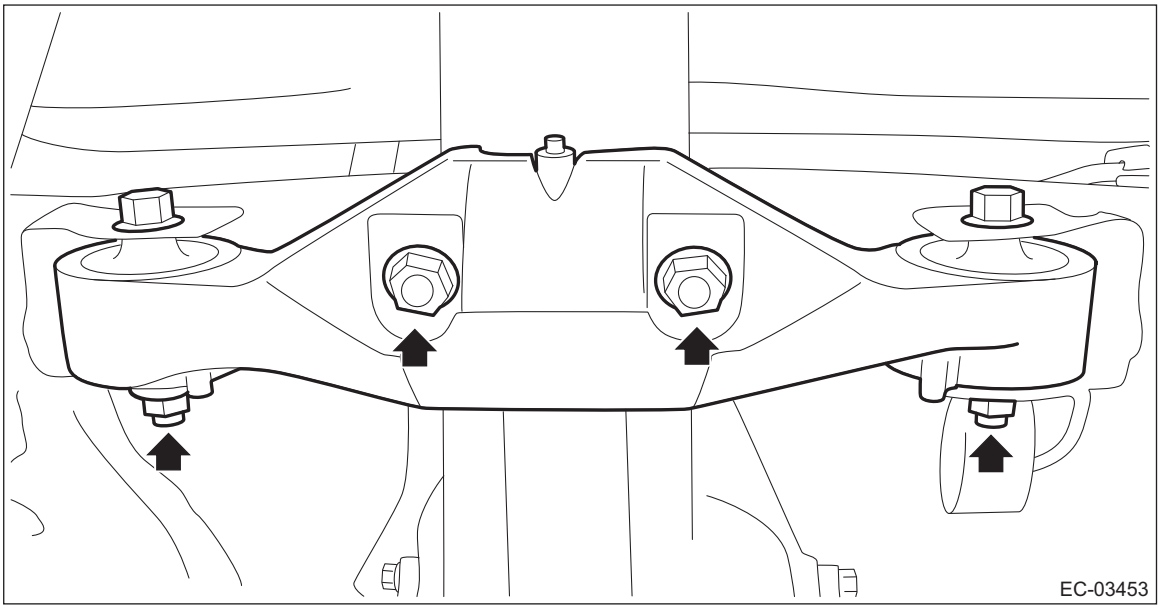
9) Temporarily tighten the self-locking nuts which hold the rear differential to the rear sub frame assembly.

NOTE:
Use a new self-locking nut.



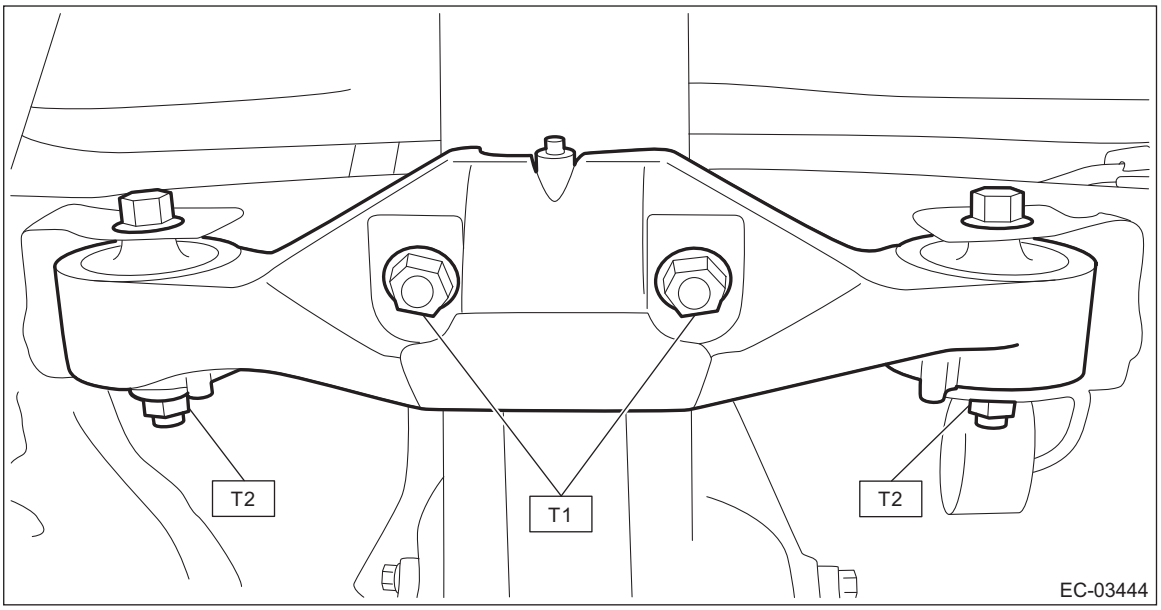
10) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:
Use a new self-locking nut.



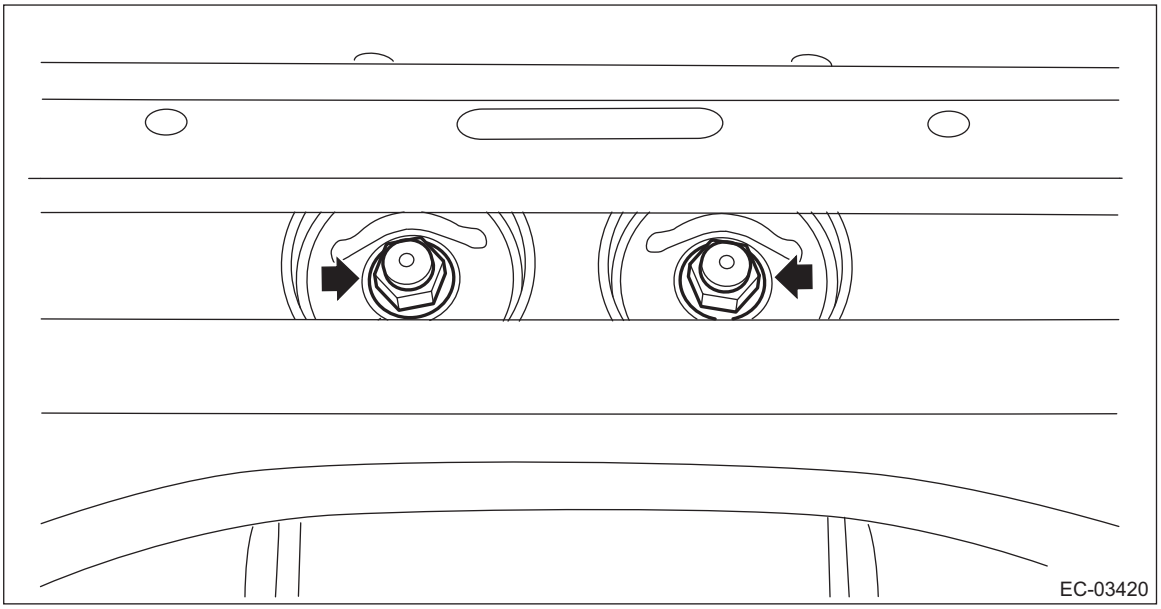
11) Remove the transmission jack from the rear differential.
12) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

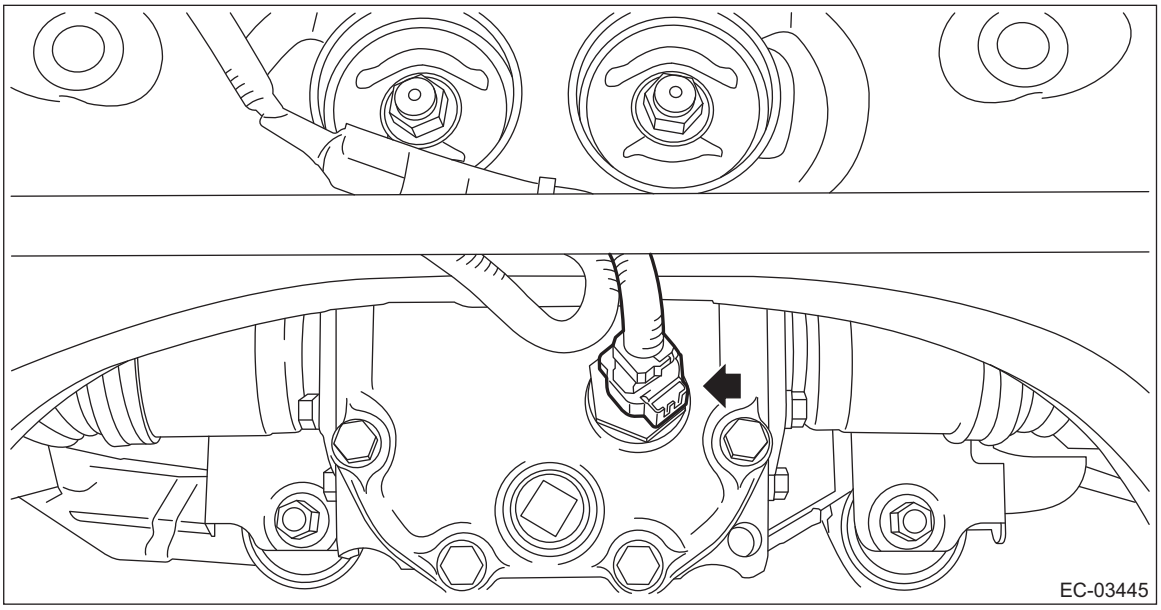


13) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)



14) Connect the connector to the oil temperature sensor.



15) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
16) Install the rear exhaust pipe. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
17) Lower the vehicle.
18) Connect the ground terminal to the battery.

C: INSPECTION

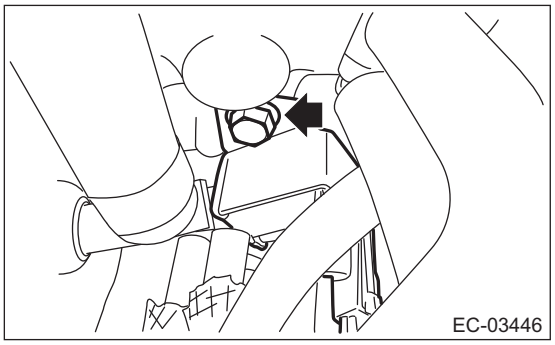
1) Check that the canister has no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

5. Purge Control Solenoid Valve

A: REMOVAL

1. PURGE CONTROL SOLENOID VALVE 1

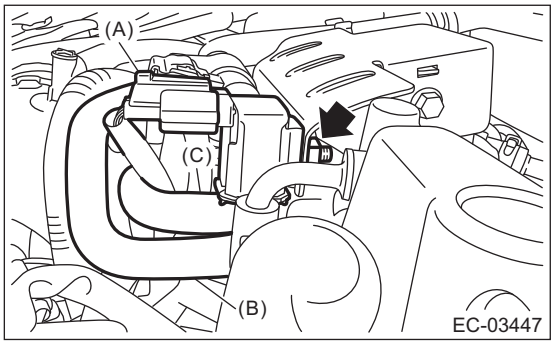
1) Disconnect the ground cable from battery.
2) Remove the bolts which secure purge control solenoid valve 1 to the intake manifold, and disconnect the connector from the purge control solenoid valve 1.



3) Disconnect the vacuum hose and the vacuum control hose from purge control solenoid valve 1.

2. PURGE CONTROL SOLENOID VALVE 2

1) Disconnect the ground cable from battery.
2) Disconnect connector (A), vacuum hose (B), and vacuum control hose (C) from purge control solenoid valve 2.
3) Remove purge control solenoid valve 2 from the solenoid valve bracket.

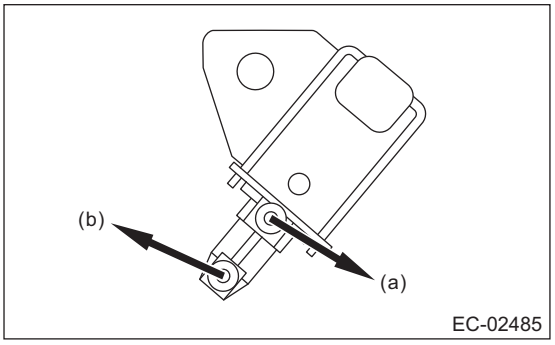


B: INSTALLATION

1. PURGE CONTROL SOLENOID VALVE 1

Install in the reverse order of removal.

NOTE:
Connect the vacuum hose and vacuum control hose as shown in the figure.



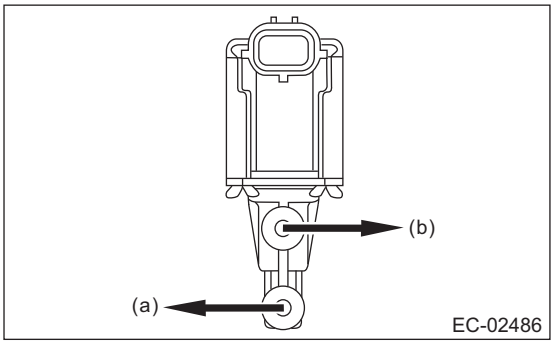
(a) To intake manifold
(b) To branching pipe → fuel pipe

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

2. PURGE CONTROL SOLENOID VALVE 2

Install in the reverse order of removal.

NOTE:
Connect the vacuum hose and vacuum control hose as shown in the figure.



(a) To intake duct
(b) To branching pipe → fuel pipe

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1. PURGE CONTROL SOLENOID VALVE

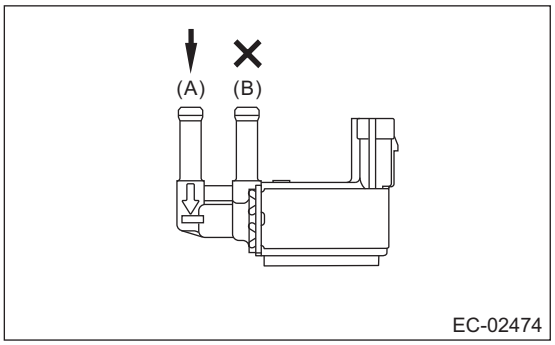
1) Check that the purge control solenoid valve has no deformation, cracks or other damages.

2) Measure the resistance between the purge control solenoid valve terminals.

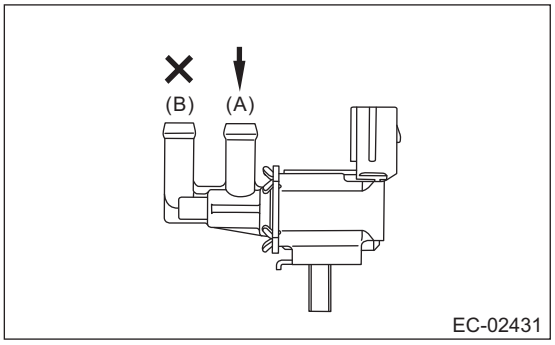
	Terminal No.	Standard
Purge control solenoid valve 1	1 and 2	32±2 Ω (when 20°C (68°F))
Purge control solenoid valve 2		24±3 Ω (when 20°C (68°F))

3) Check that air does not come out from (B) when air is blown into (A).

- Purge control solenoid valve 1

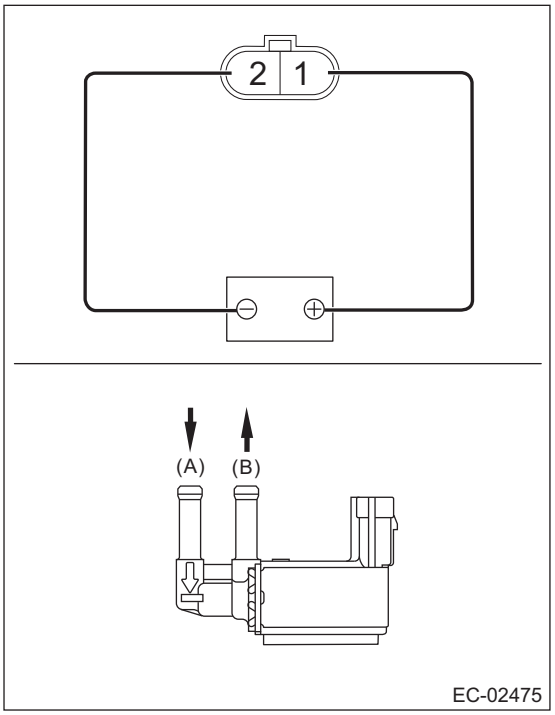


- Purge control solenoid valve 2

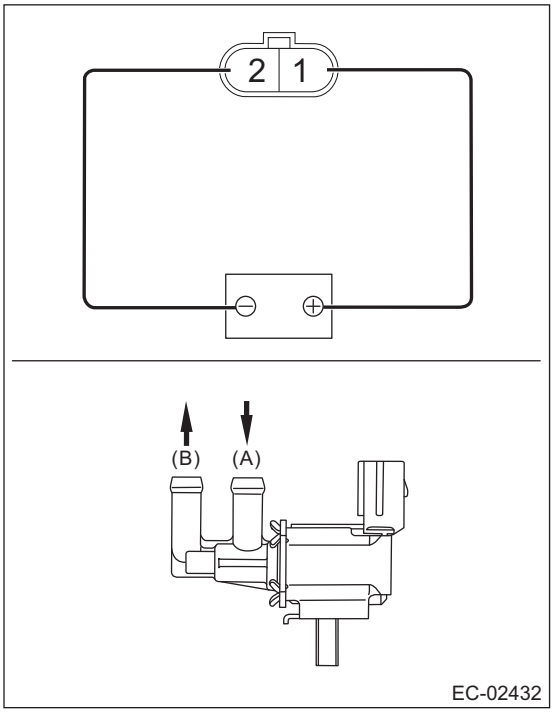


4) Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).

- Purge control solenoid valve 1



- Purge control solenoid valve 2



2. OTHER INSPECTIONS

Make sure the vacuum hoses and vacuum control hoses are not cracked or loose.

6. Fuel Level Sensor

A: REMOVAL

For removal procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-86, REMOVAL, Fuel Level Sensor.>

B: INSTALLATION

For installation procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-86, INSTALLATION, Fuel Level Sensor.>

C: INSPECTION

For inspection procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-86, INSPECTION, Fuel Level Sensor.>

7. Fuel Sub Level Sensor

A: REMOVAL

For removal procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-87, REMOVAL, Fuel Sub Level Sensor.>

B: INSTALLATION

For installation procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-87, INSTALLATION, Fuel Sub Level Sensor.>

C: INSPECTION

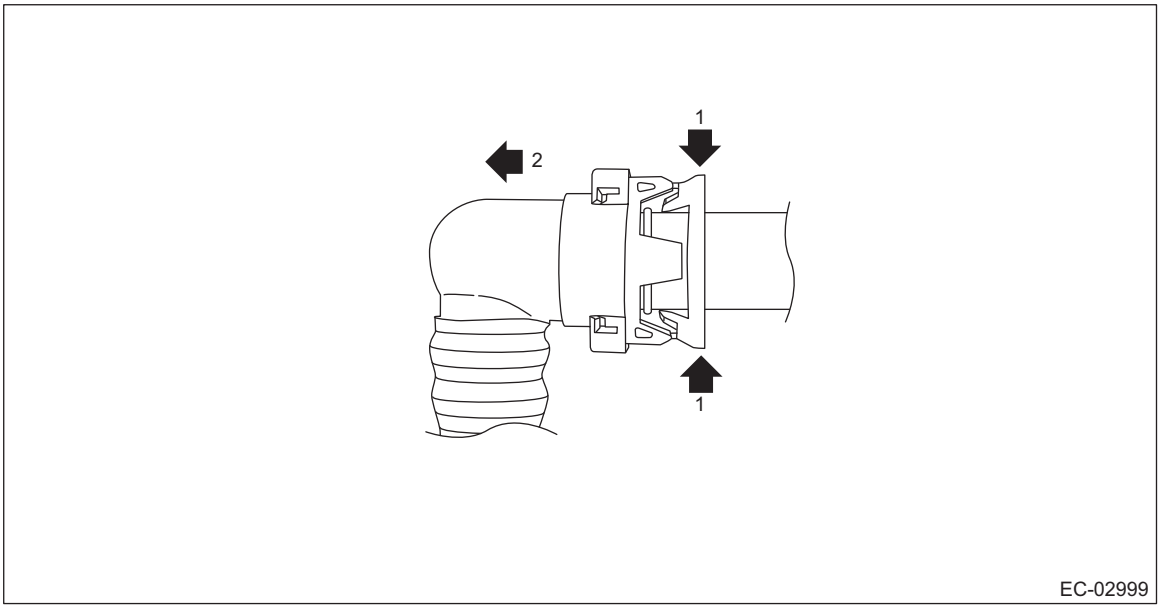
For inspection procedures, refer to the “FU(STI)” section. <Ref. to FU(STI)-89, INSPECTION, Fuel Sub Level Sensor.>

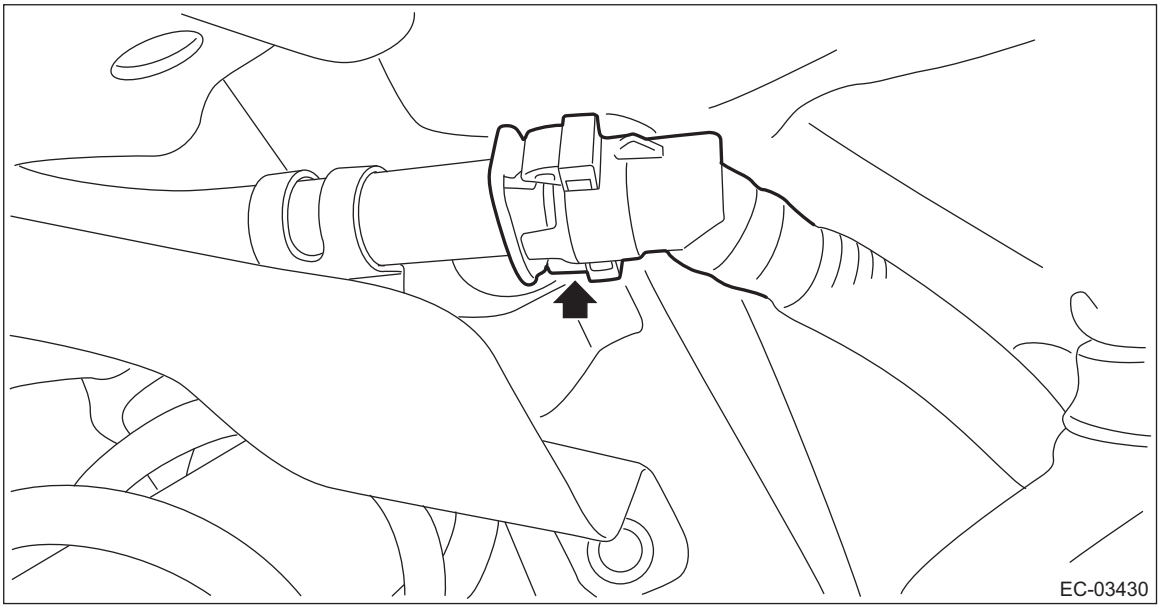
8. Drain Filter

A: REMOVAL

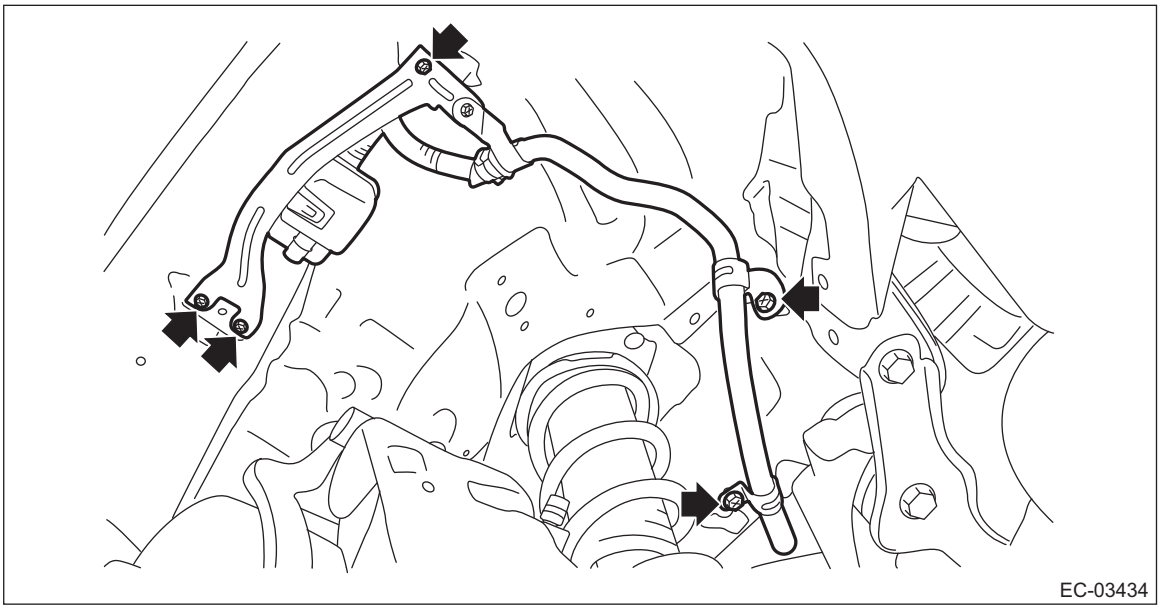
1) Remove the rear wheel LH. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the rear mud guard LH. <Ref. to EI-24, REMOVAL, Mud Guard.>
4) Disconnect the drain tube from the drain pipe.

NOTE:
Disconnect the quick connector as shown in the figure.



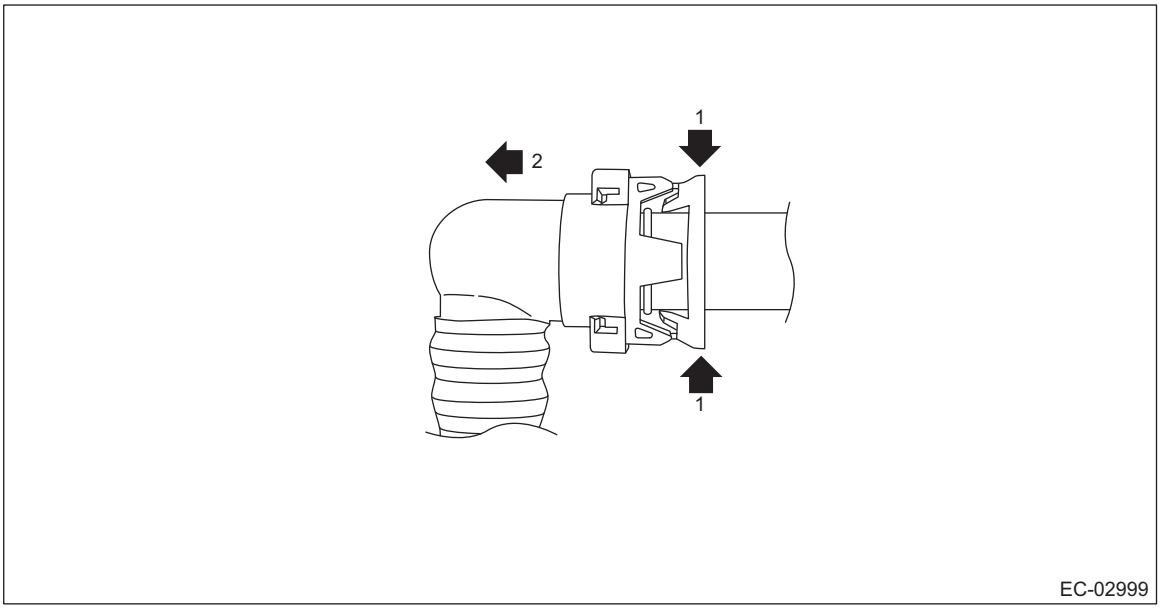


5) Remove the drain bracket and drain pipe from vehicle as a unit.

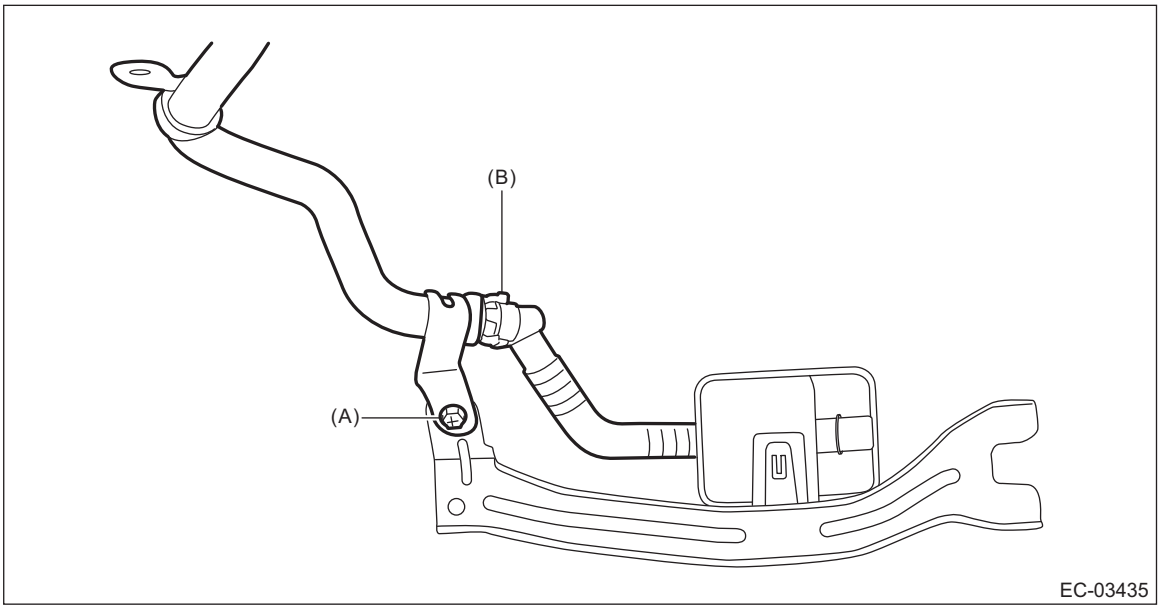


6) Remove the bolt (A) which holds drain pipe from the drain bracket.
7) Disconnect the drain tube (B) from the drain pipe.

NOTE:
- Disconnect the quick connector as shown in the figure.



• The drain filter cannot be separated from the drain bracket. Therefore, be sure to replace both of them with new ones when replacing the drain bracket or drain filter.

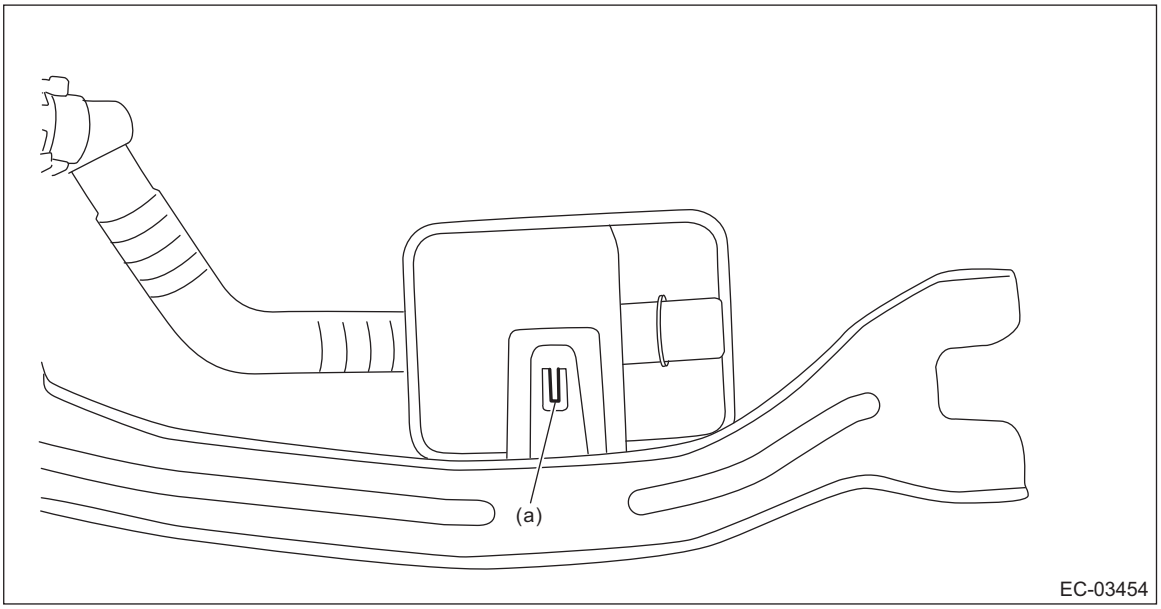


B: INSTALLATION

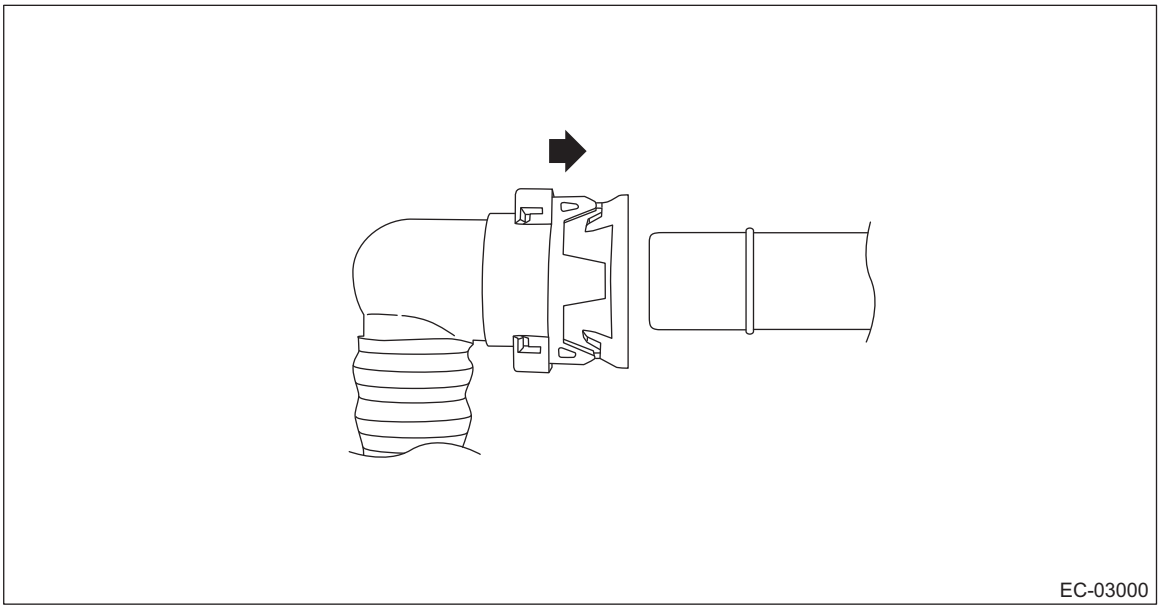
Install in the reverse order of removal.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
• Use a new drain bracket and a drain filter.
• Before installing the drain filter to the drain bracket, check that the claw (a) is securely tightened.



- Install the quick connector as shown in the figure.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: INSPECTION

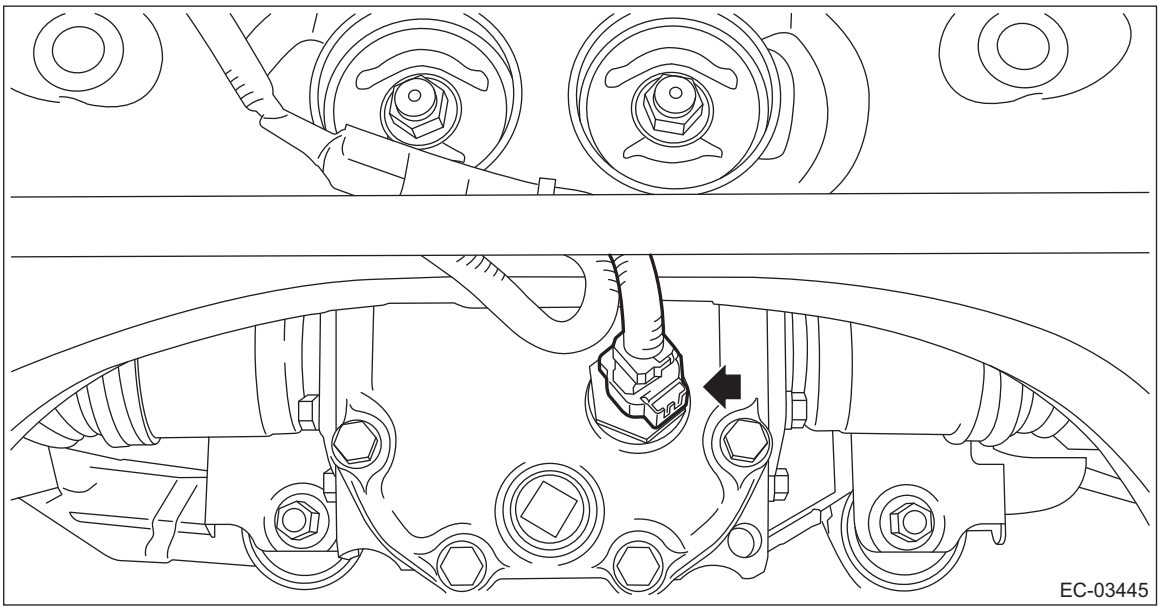
1) Check that the drain filter has no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

9. Leak Check Valve Assembly

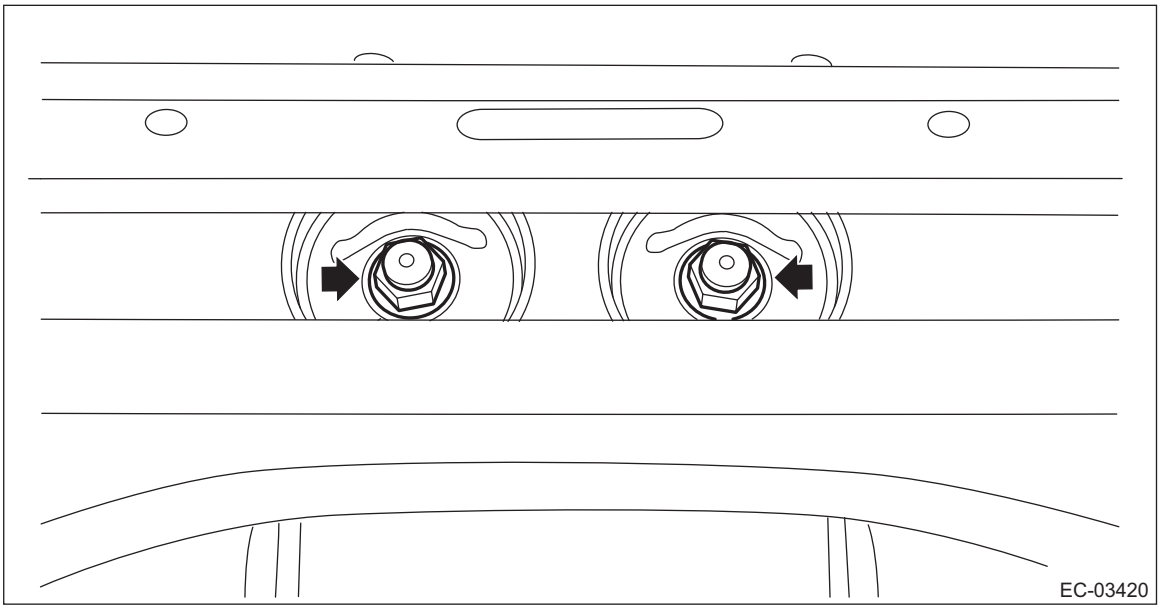
A: REMOVAL

WARNING:
Place “NO OPEN FLAMES” signs near the working area.

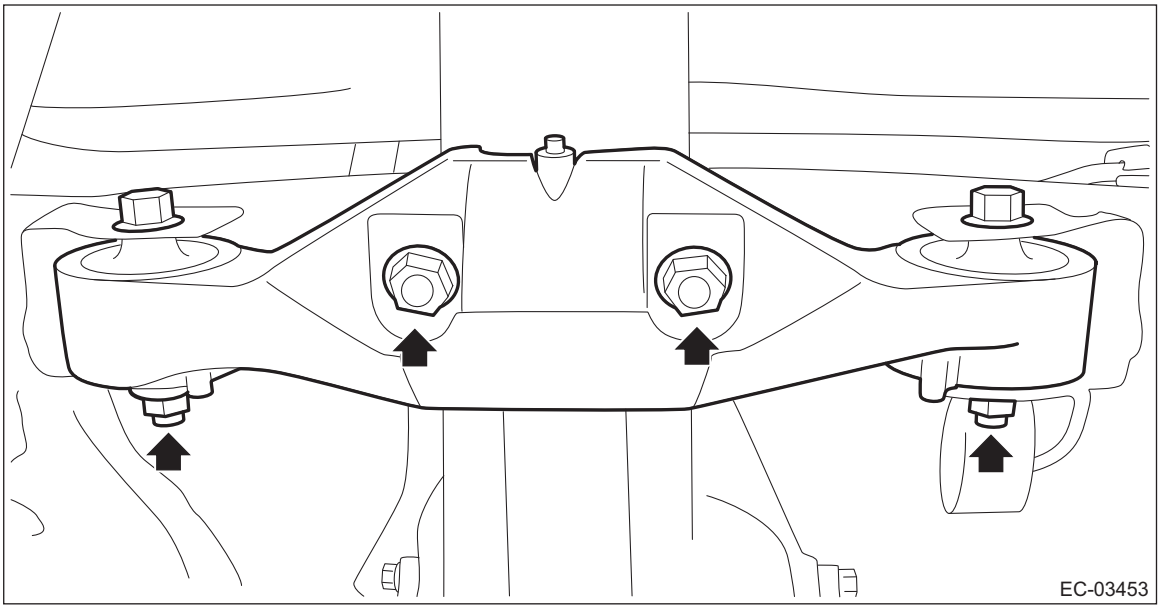
CAUTION:
Be careful not to spill fuel.
1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(STI)-64, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground cable from battery.
4) Lift up the vehicle.
5) Remove the rear exhaust pipe. <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
6) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
7) Support the rear differential with the transmission jack.
8) Disconnect the connector from oil temperature sensor.



9) Remove the self-locking nuts which hold the rear differential to the rear sub frame assembly.

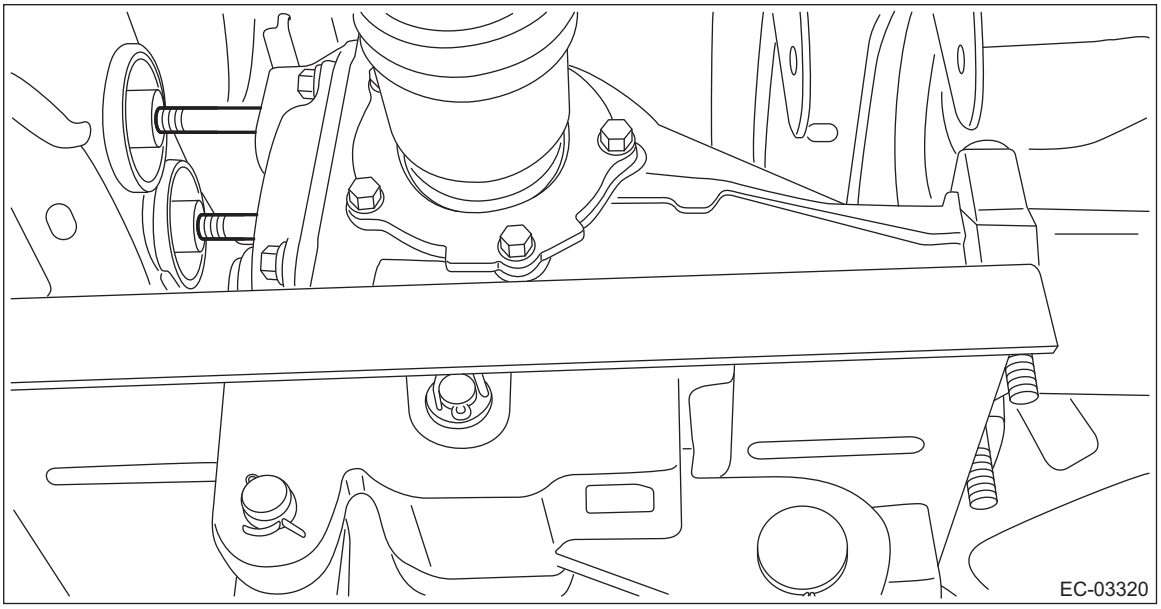


10) Remove the rear differential member from the rear sub frame assembly and the rear differential.

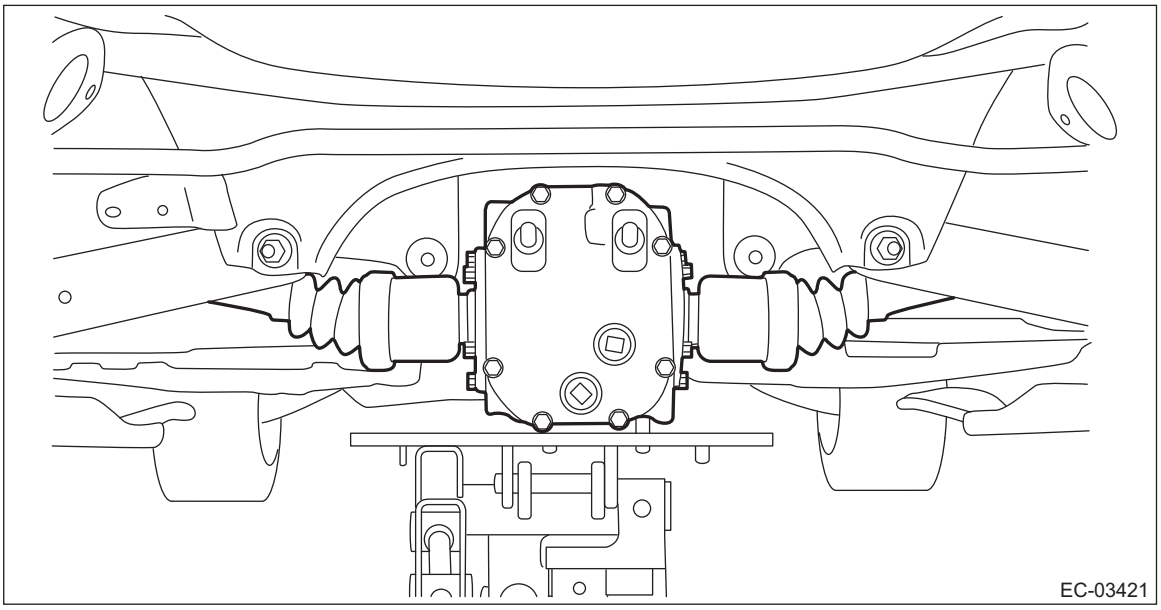


11) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

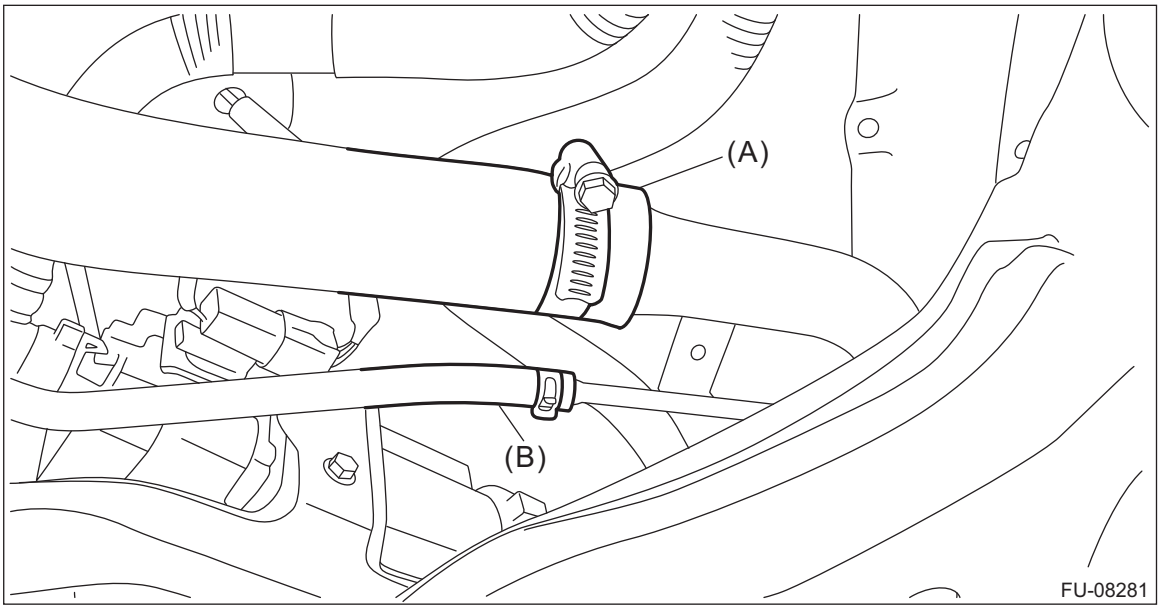
NOTE:
• When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



• Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

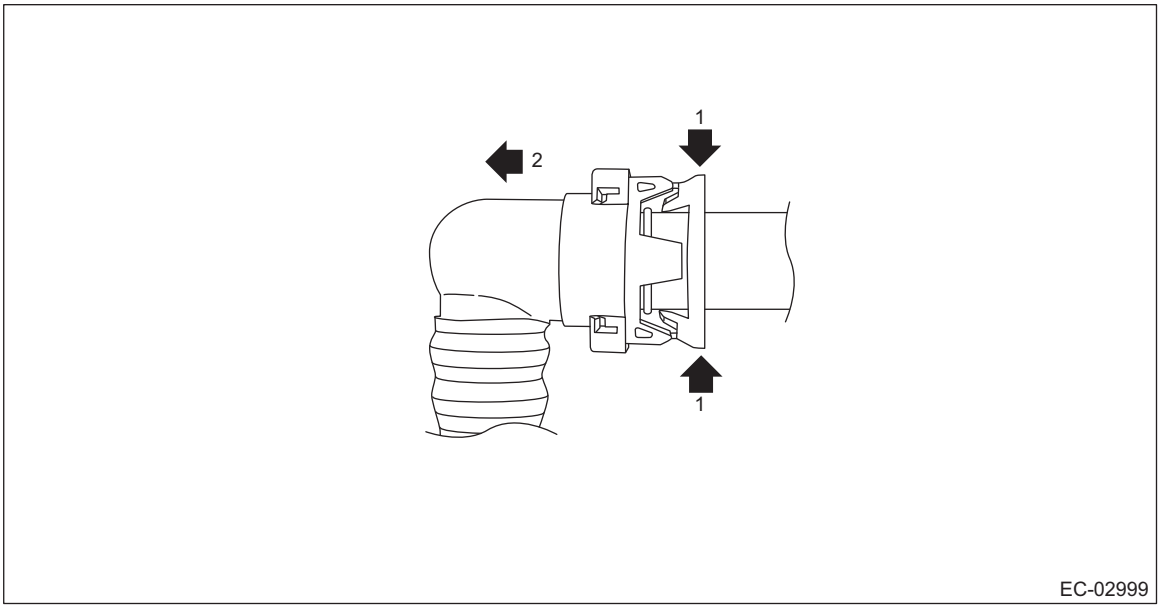


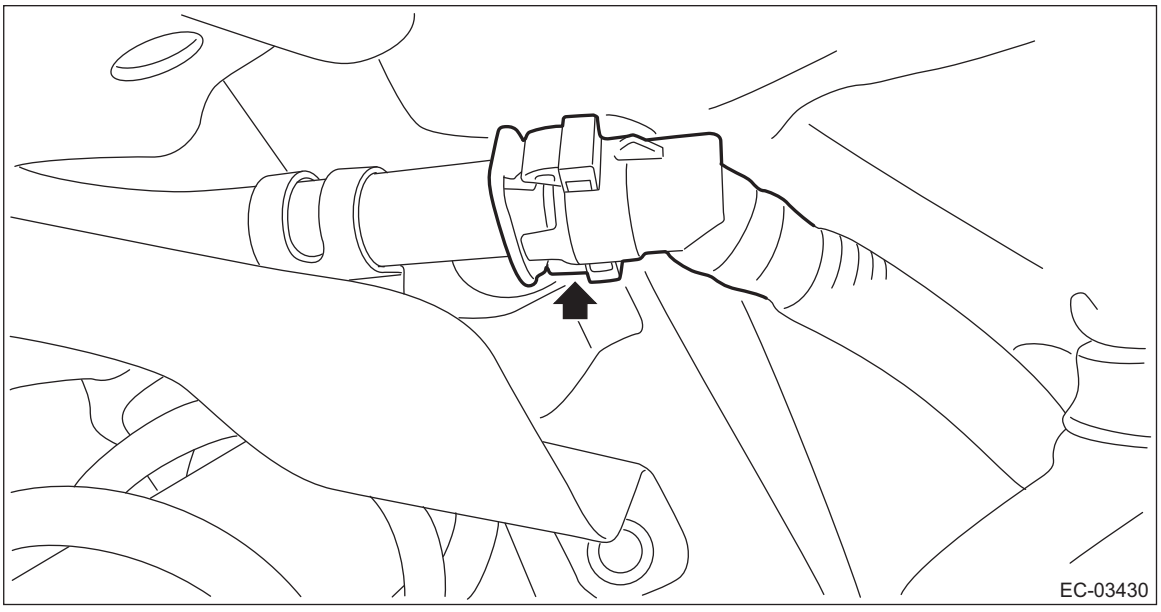
12) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.



13) Disconnect the drain tube from the drain pipe.

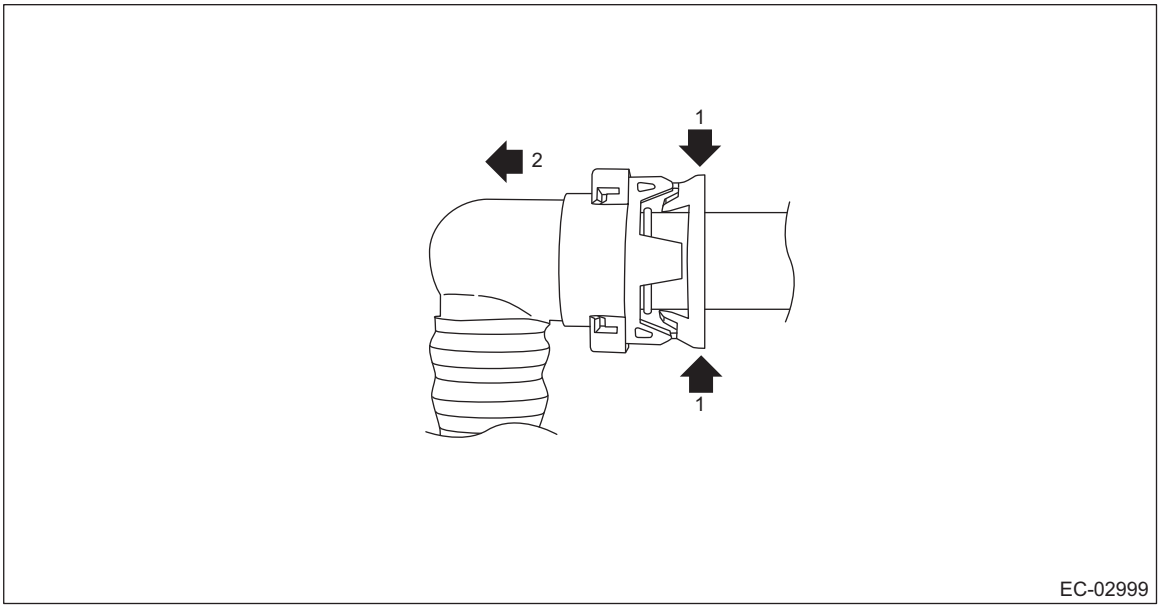
NOTE:
Disconnect the quick connector as shown in the figure.



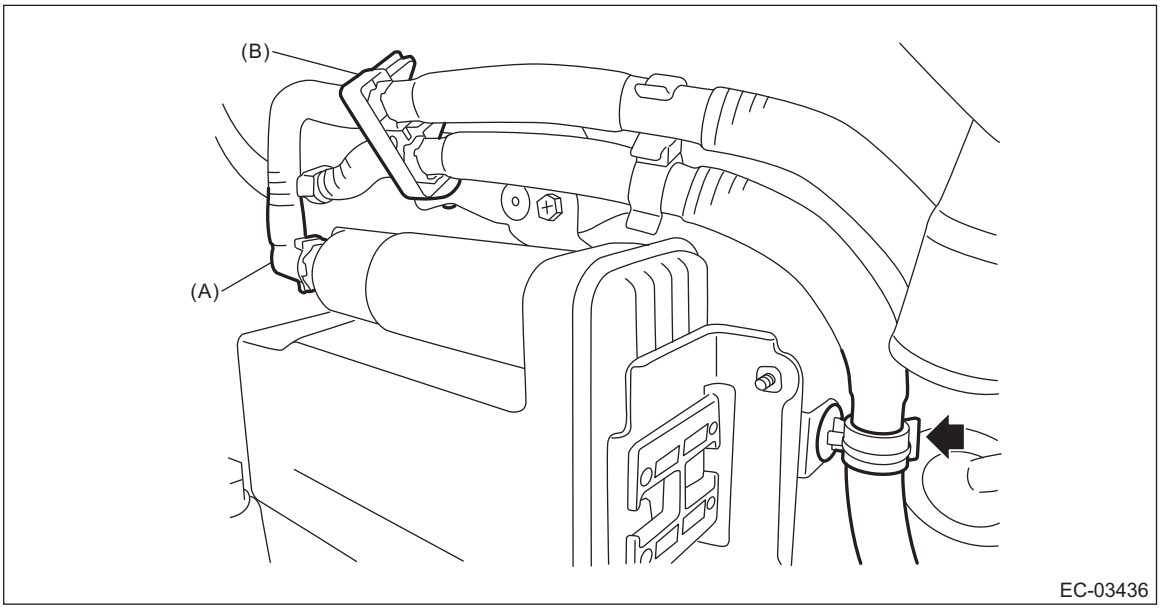


14) Disconnect the drain tube (A) from the canister.

NOTE:
Disconnect the quick connector as shown in the figure.

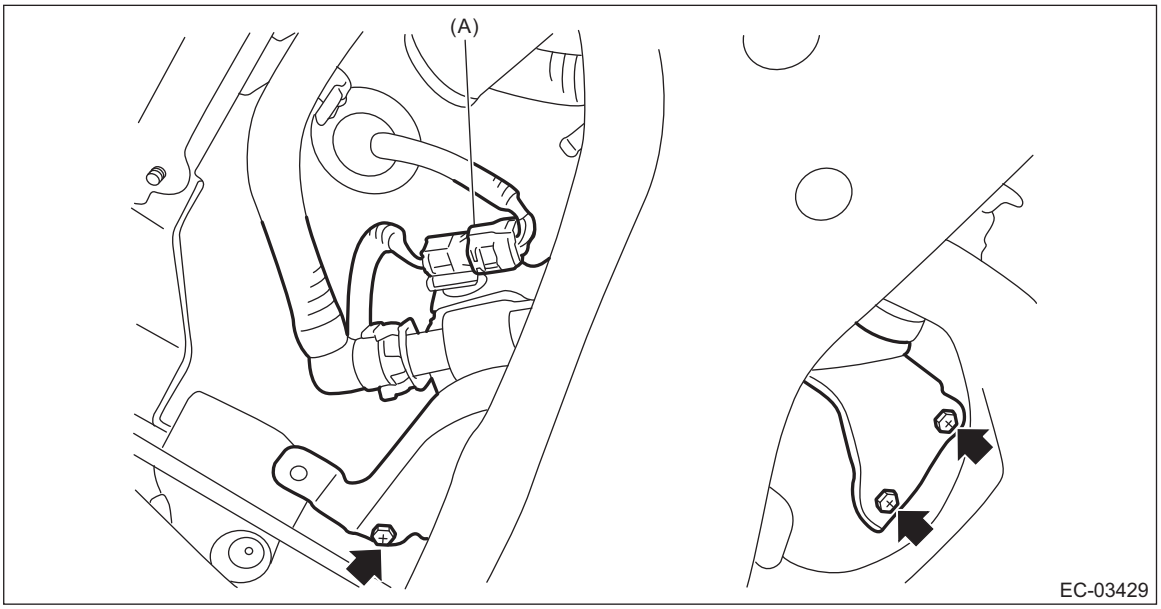


15) Remove the tube clamp (B) from the canister bracket A, and remove the drain tube from the tube clamp.



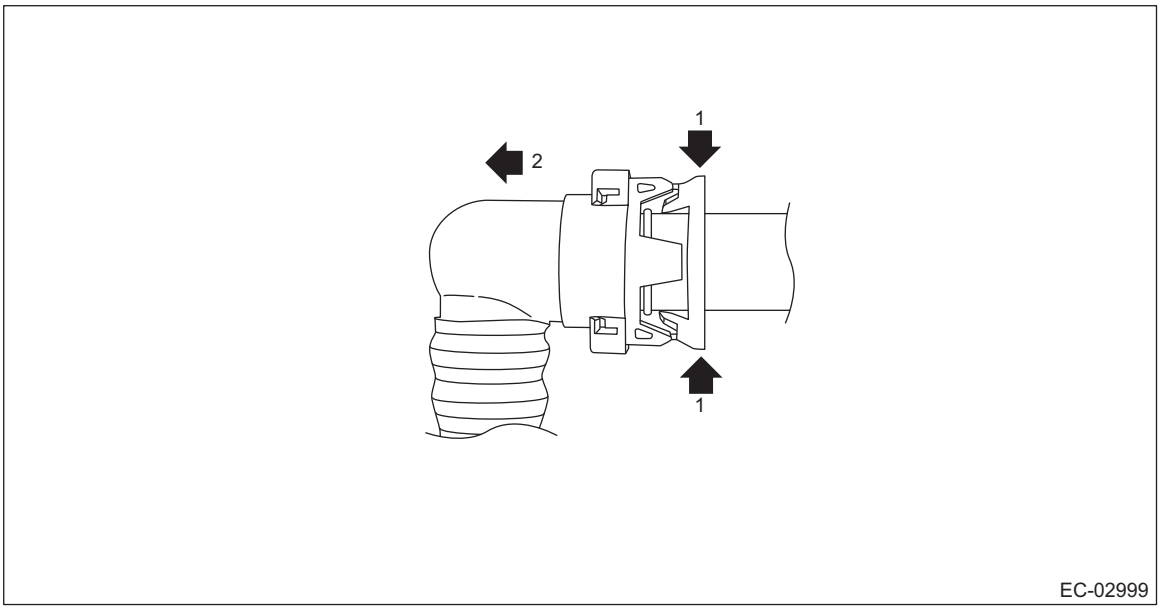
16) Disconnect the connector (A) from the leak check valve assembly.

17) Remove the bolts which hold the leak check valve assembly and remove the leak check valve assembly together with drain tube from vehicle.

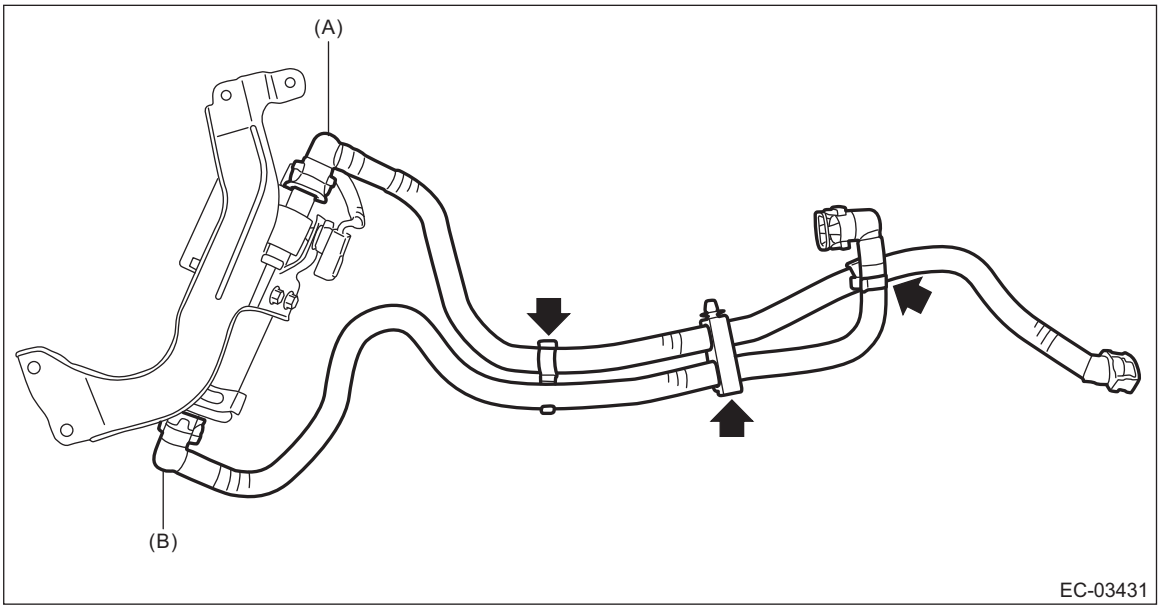


18) Disconnect the drain tube A (A) and drain tube B (B) from the leak check valve assembly.

NOTE:
Disconnect the quick connector as shown in the figure.



19) Remove the tube clamp from the drain tube A (A) and drain tube B (B).

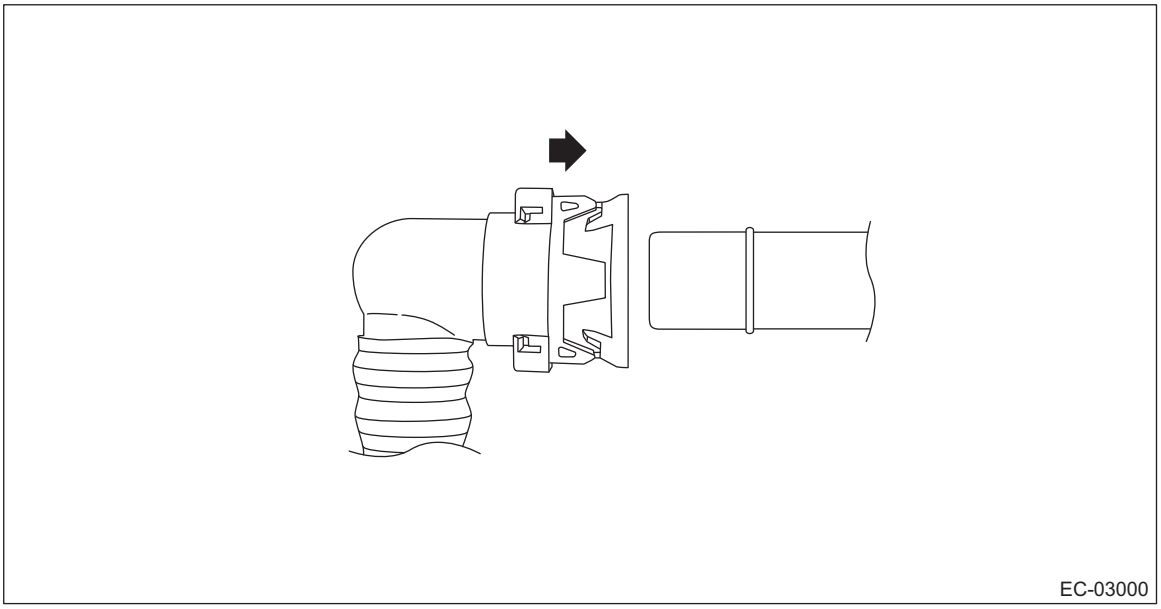


B: INSTALLATION

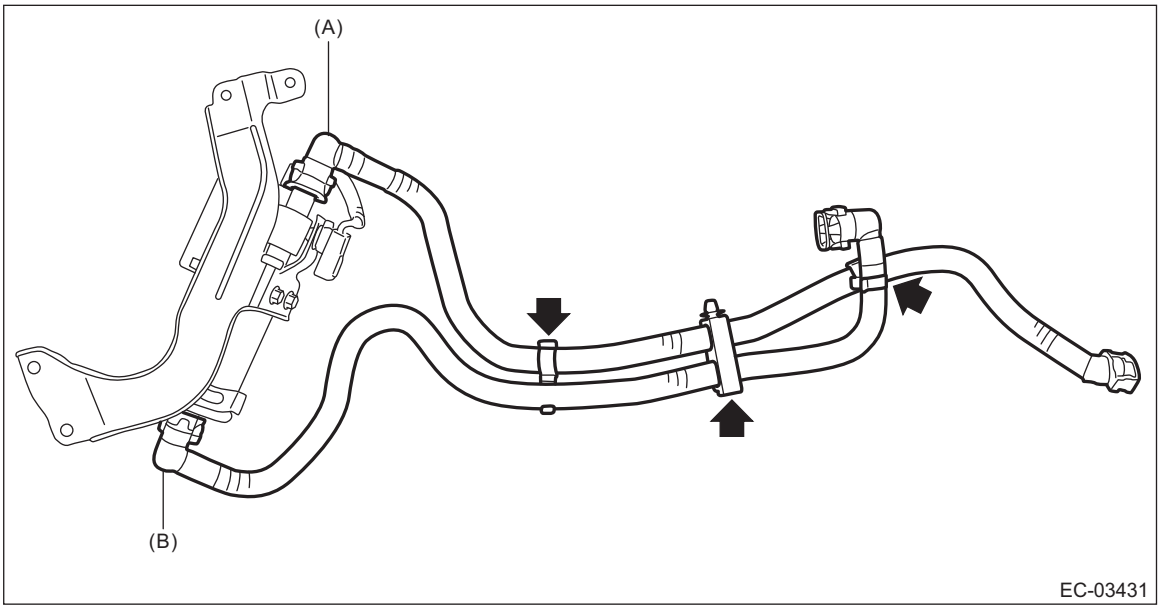
1) Connect the drain tube A (A) and drain tube B (B) to the leak check valve assembly.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.



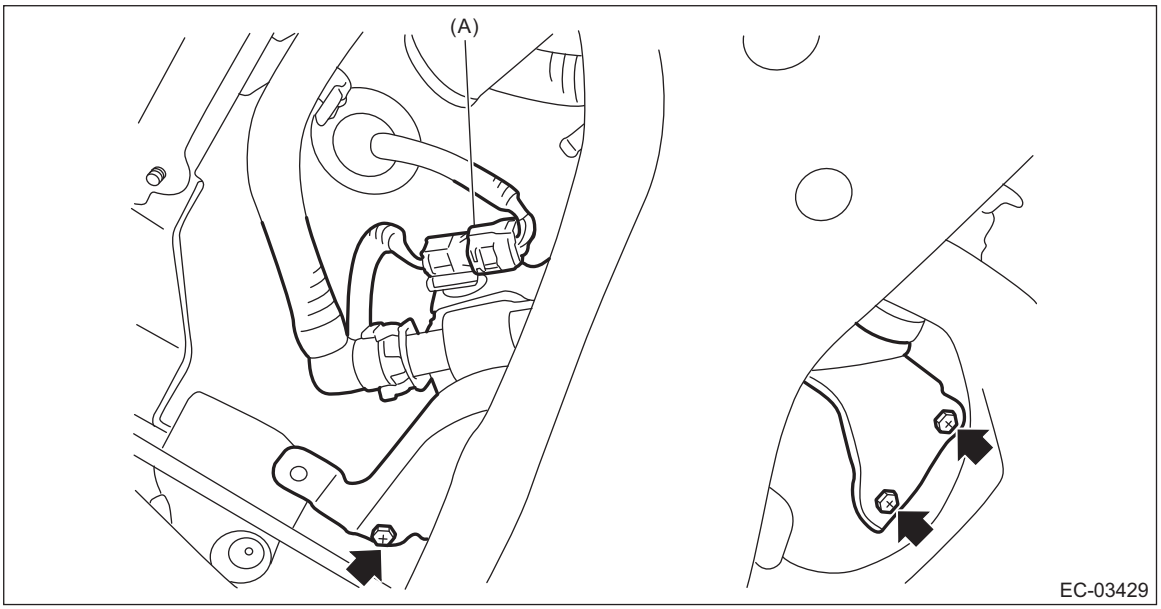
2) Install the tube clamp to the drain tube A (A) and drain tube B (B).



3) Set the leak check valve assembly together with drain tube to the vehicle and install the bolt which holds the leak check valve assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

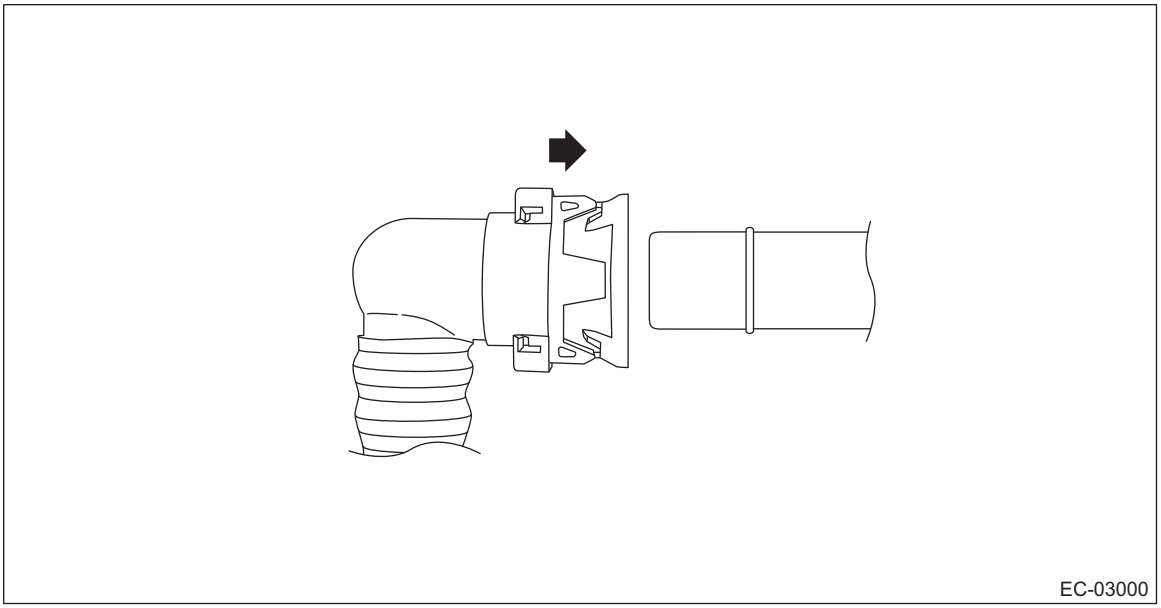
4) Connect the connector (A) to the leak check valve assembly.



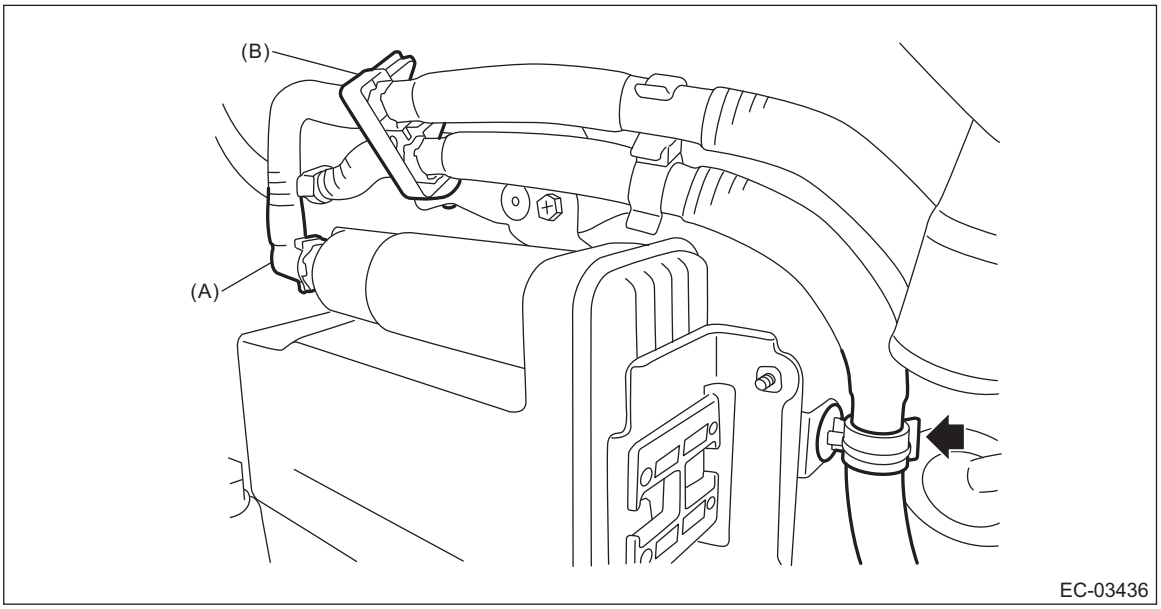
5) Connect the drain tube (A) to the canister.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.



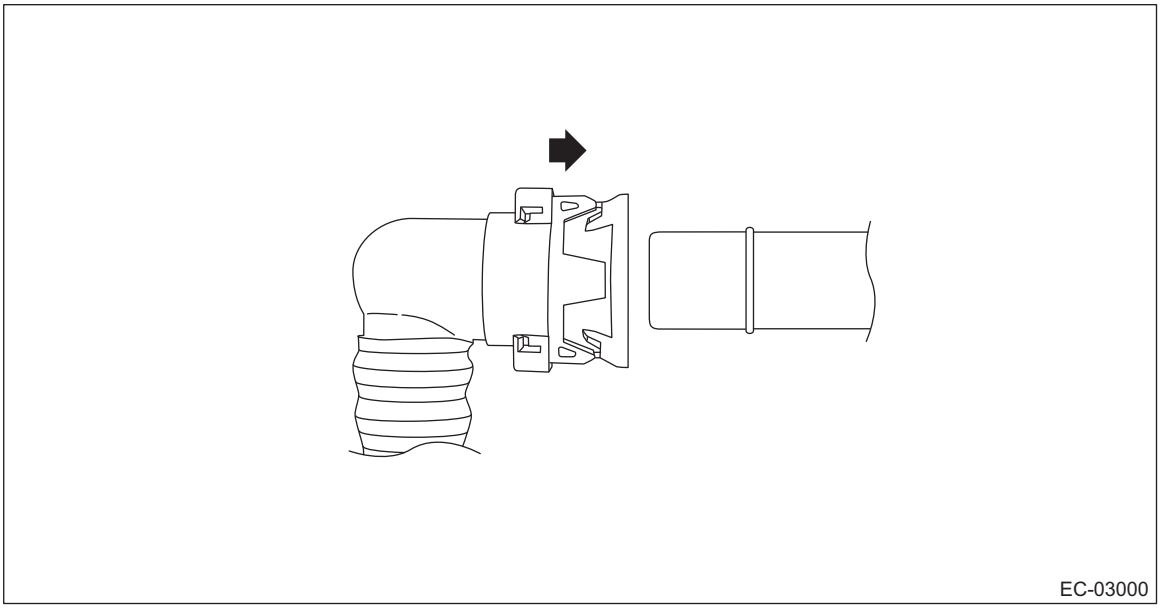
6) Install the tube clamp (B) to the canister bracket A, and install the drain tube to the tube clamp.

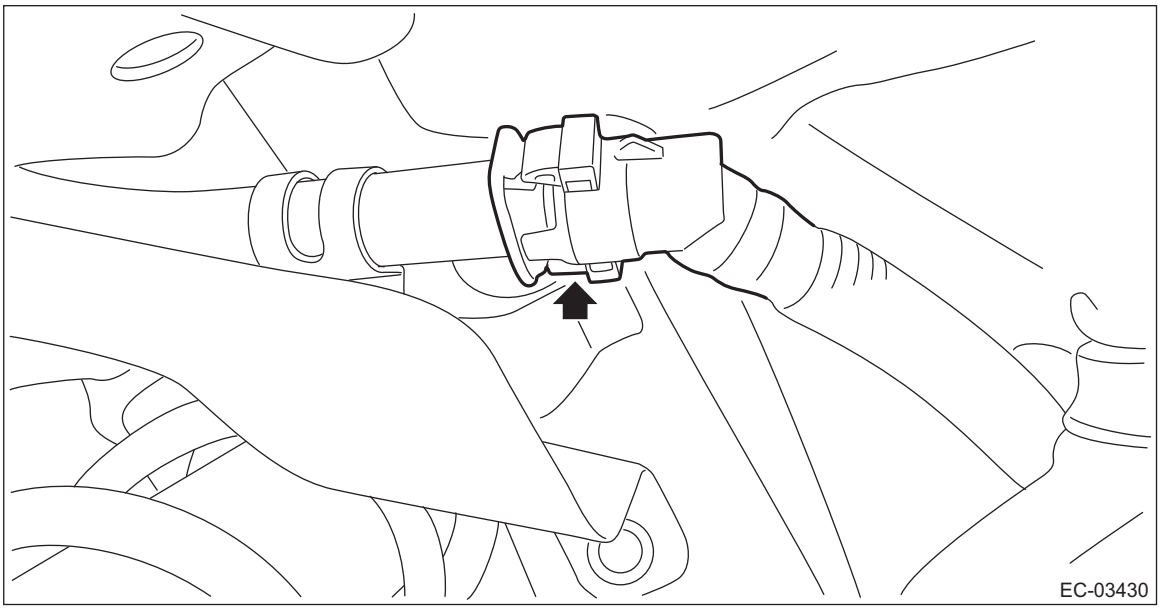


7) Connect the drain tube to the drain pipe.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

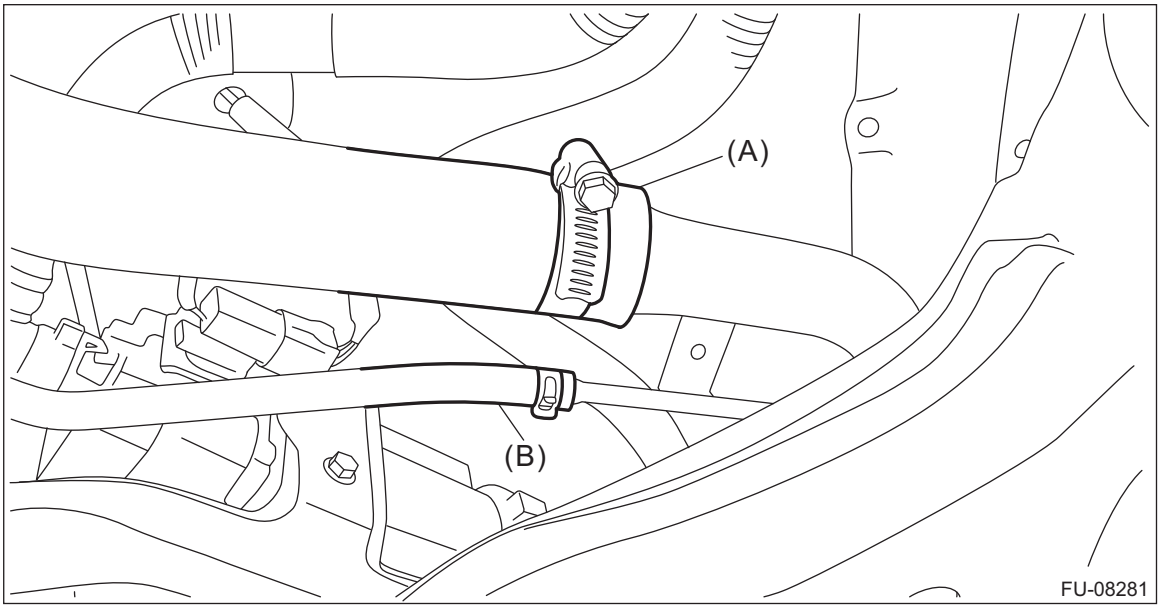
NOTE:
Connect the quick connector as shown in the figure.

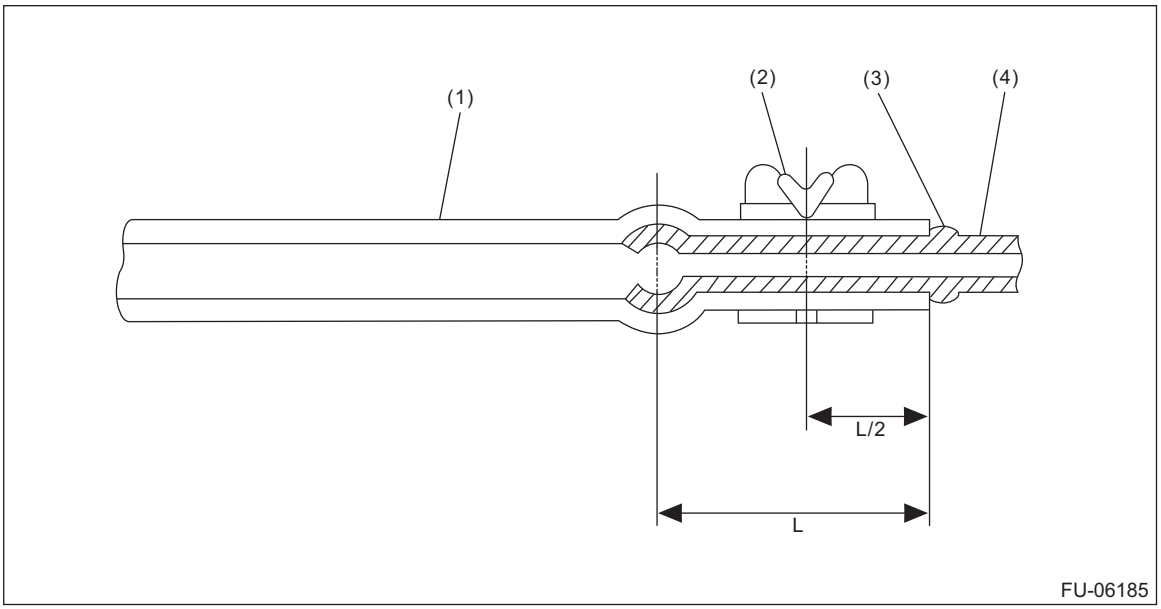




8) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp and clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

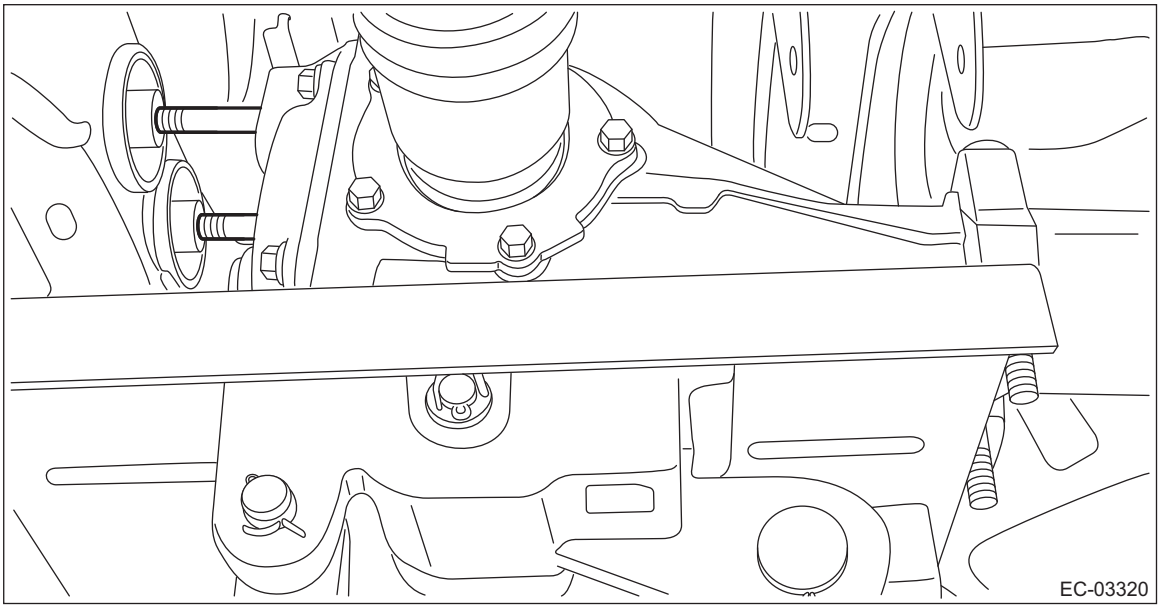




(1) Hose
(2) Clamp and clip
(3) Spool
(4) Pipe

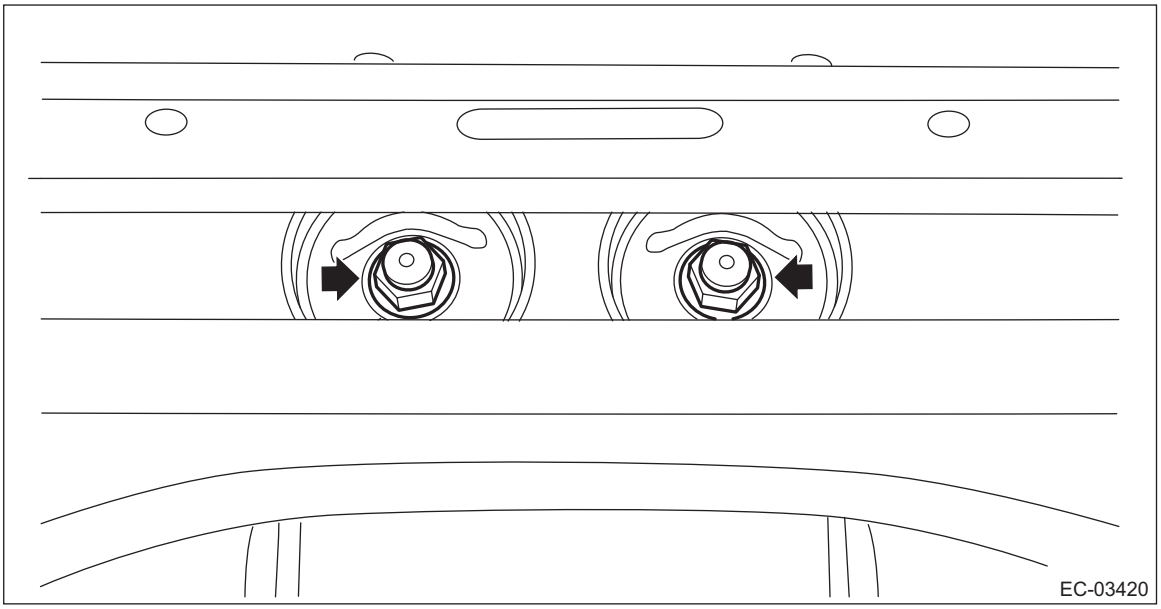
9) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:
When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



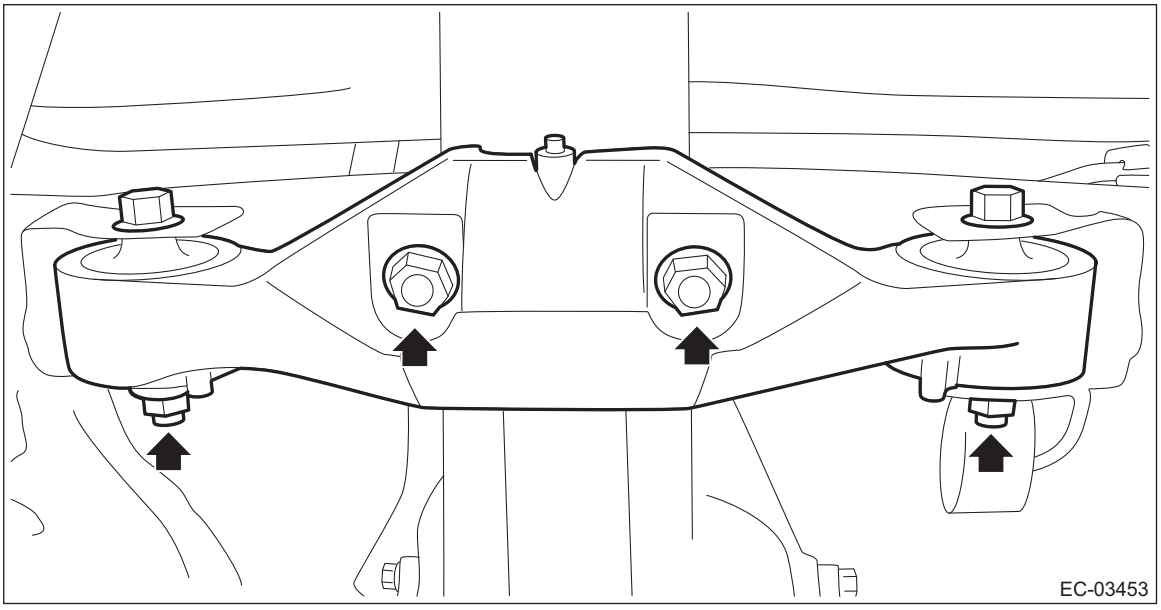
10) Temporarily tighten the self-locking nuts which hold the rear differential to the rear sub frame assembly.

NOTE:
Use a new self-locking nut.



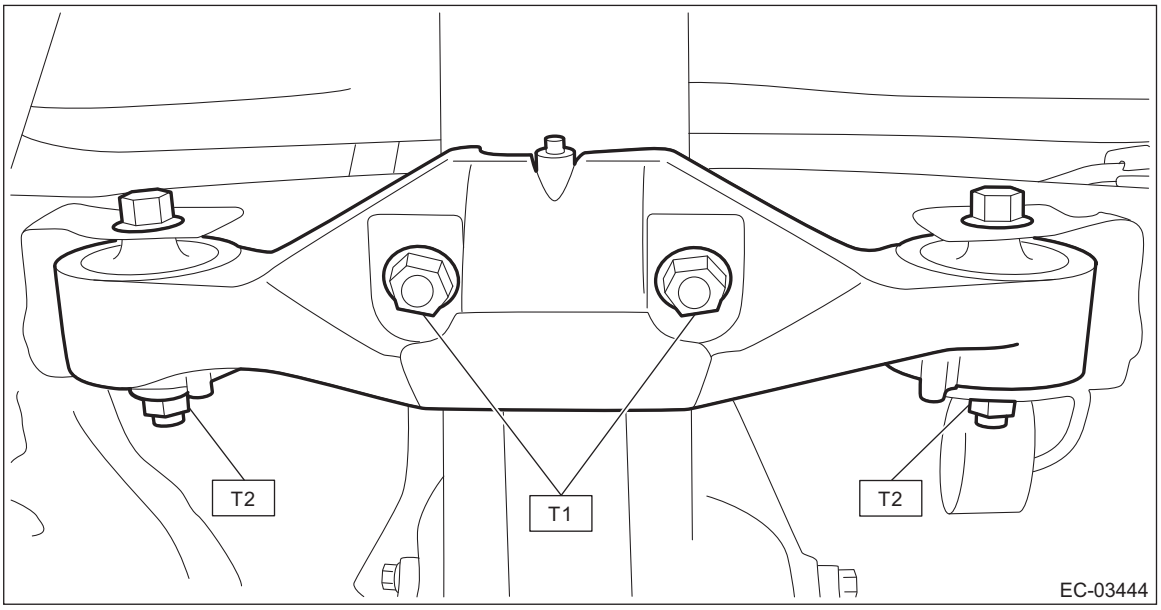
11) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:
Use a new self-locking nut.



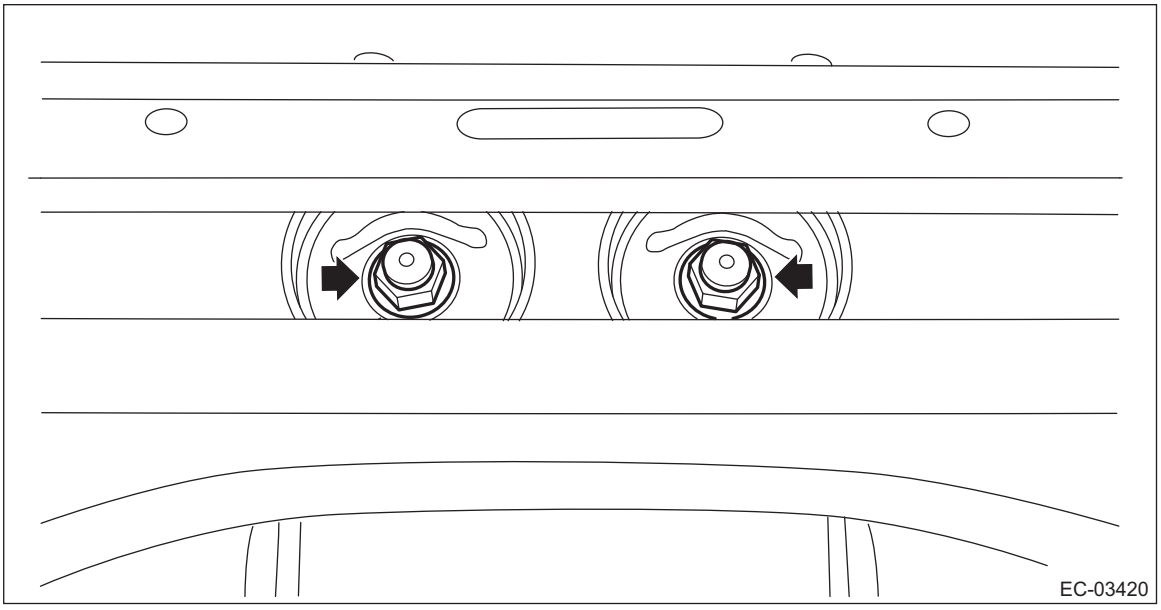
12) Remove the transmission jack from the rear differential.
13) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)

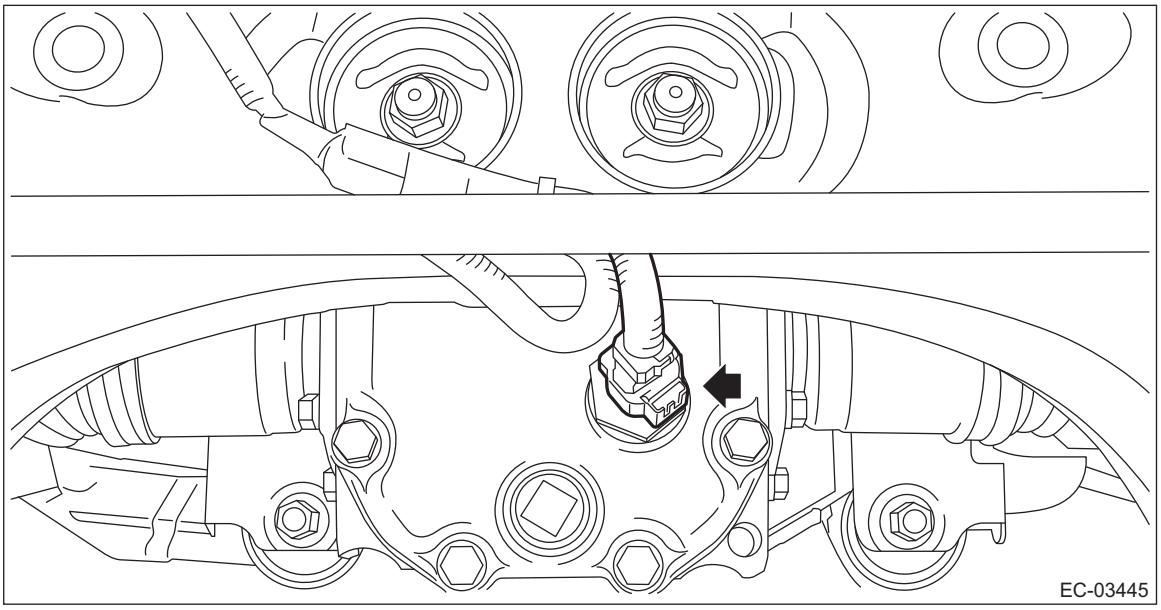


14) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)



15) Connect the connector to the oil temperature sensor.

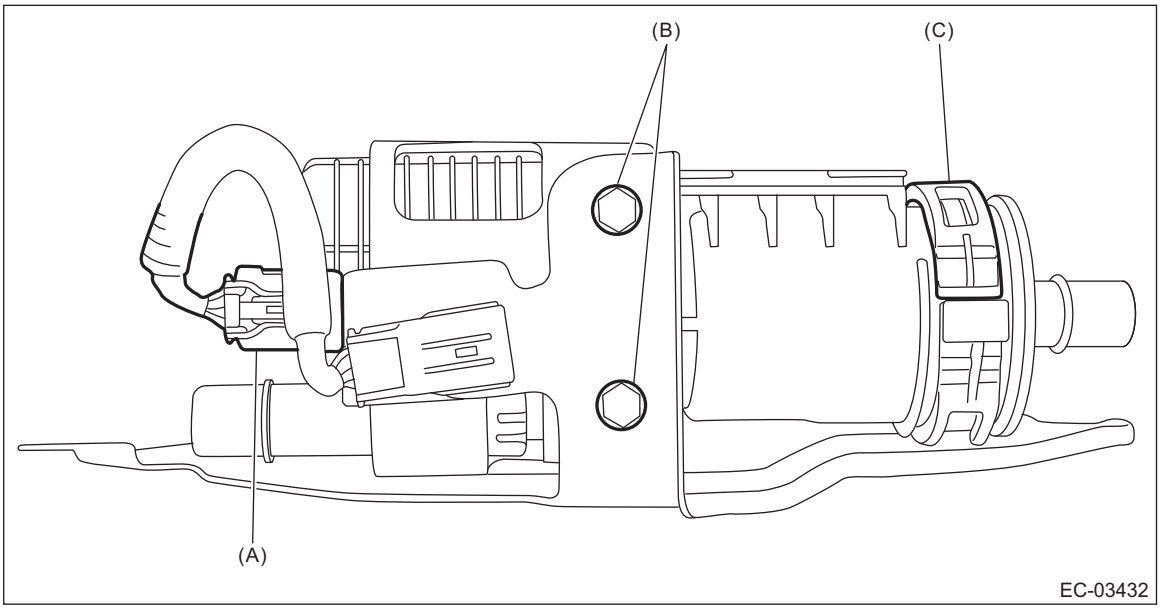


16) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
17) Install the rear exhaust pipe. <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
18) Lower the vehicle.
19) Connect the ground terminal to the battery.

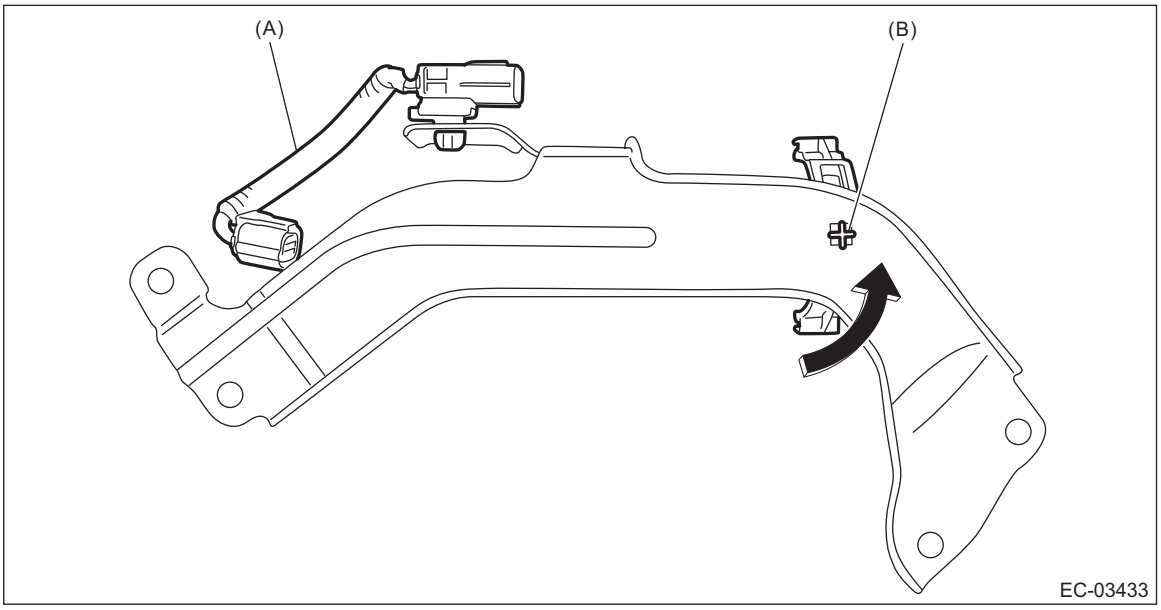
C: DISASSEMBLY

1) Disconnect the connector (A) from the leak check valve assembly.
2) Remove the bolt (B) securing the leak check valve assembly to the leak check valve bracket.

3) Remove the clamp B (C) which secures the leak check valve assembly, and remove the leak check valve assembly.



4) Remove the harness (A) from the leak check valve bracket.
5) Rotate the clamp A (B) in the direction of the arrow and remove it from the leak check valve bracket.



D: ASSEMBLY

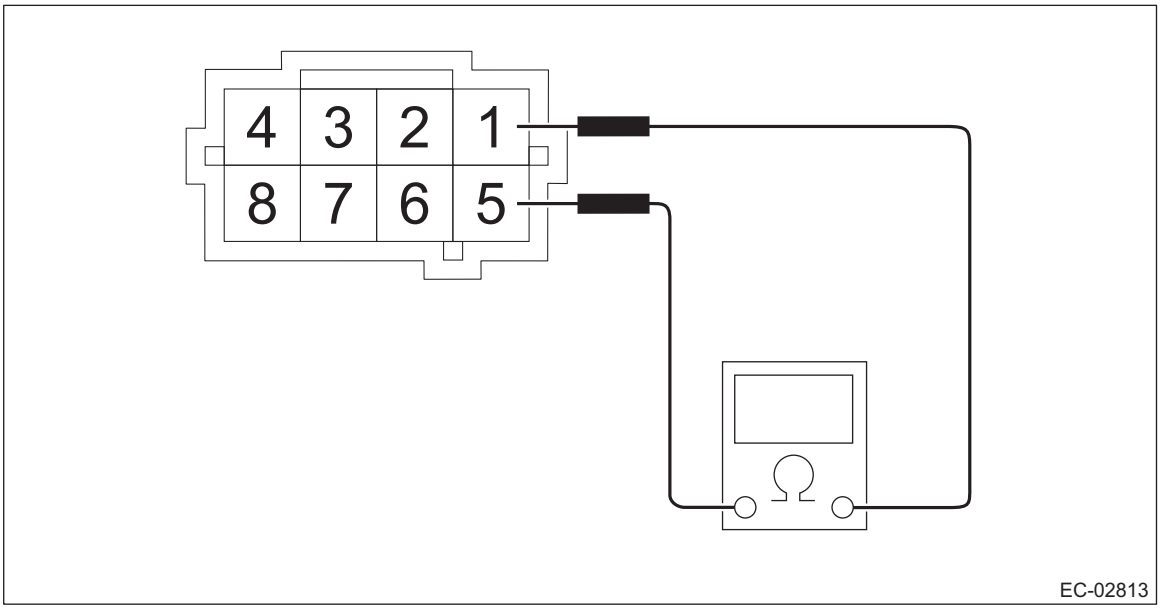
Assemble in the reverse order of disassembly.

Tightening torque:
5.4 N·m (0.6 kgf-m, 4.0 ft-lb)

E: INSPECTION

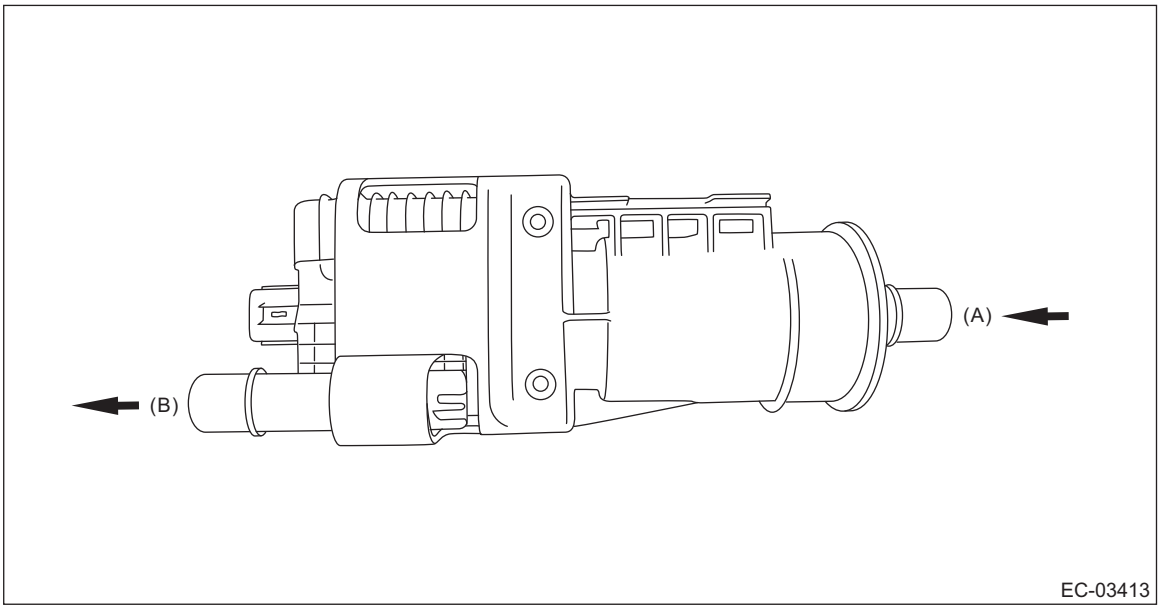
1. CHECK SWITCHING VALVE

1) Check the resistance between switching valve terminals.



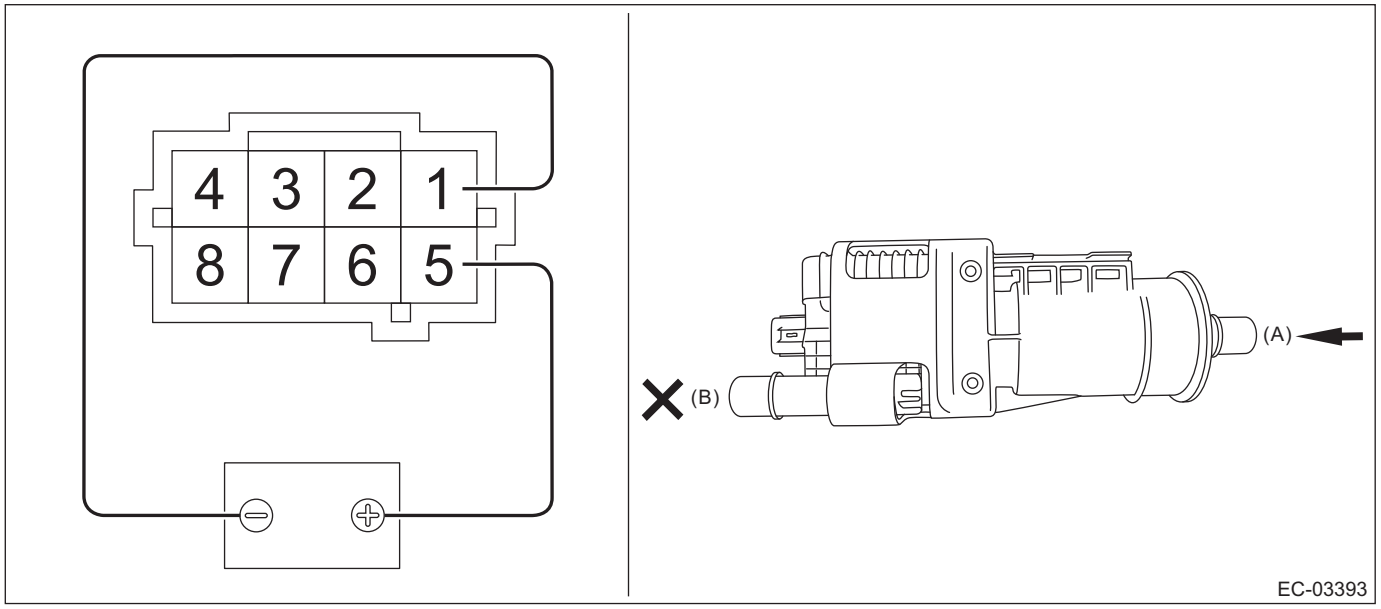
Terminal No.	Standard
1 and 5	27^{+3}_{-2} Ω (when 20°C (68°F))
	31±4 Ω (60°C (140°F))

2) Check that air is discharged from (B) when air is blown into (A).



3) Connect the battery positive terminal to the terminal No. 5 and the battery negative terminal to the terminal No. 1. Check that air does not come out from (B) when air is blown into (A).

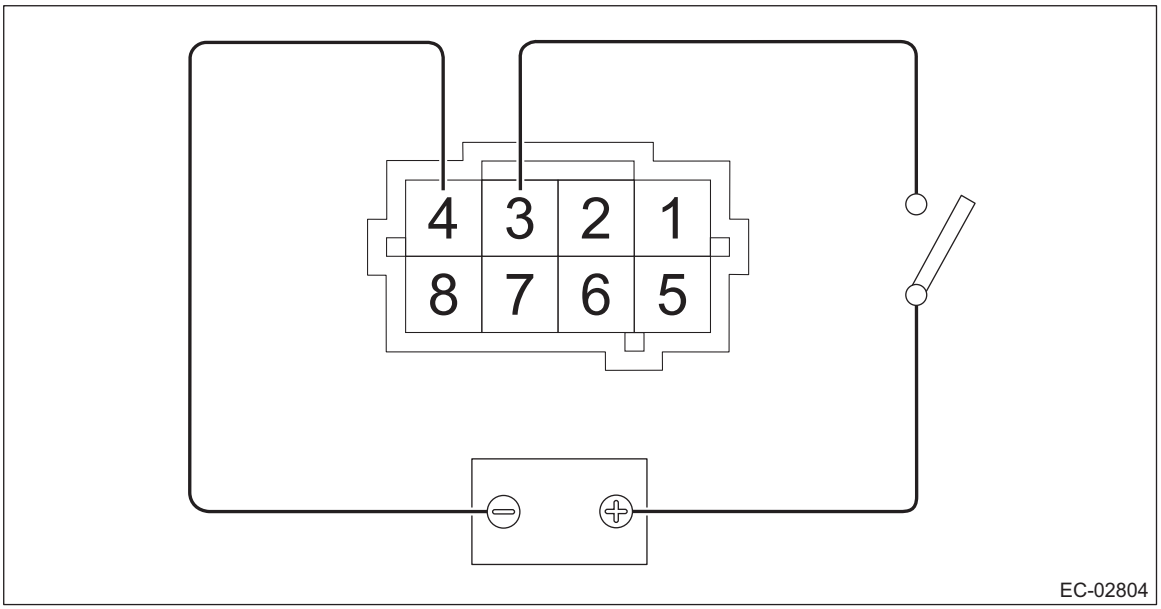
NOTE:
The purpose of this inspection is to check the valve movement, and it would be success if a large change of flow can be checked resulting from valve opening/closing. Therefore, it does not indicate a malfunction if a small amount of flow from (B) is detected when the valve is closed.



2. CHECK VACUUM PUMP

1) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the vacuum pump operation.

CAUTION:
Do not operate the vacuum pump for 5 minutes or more.

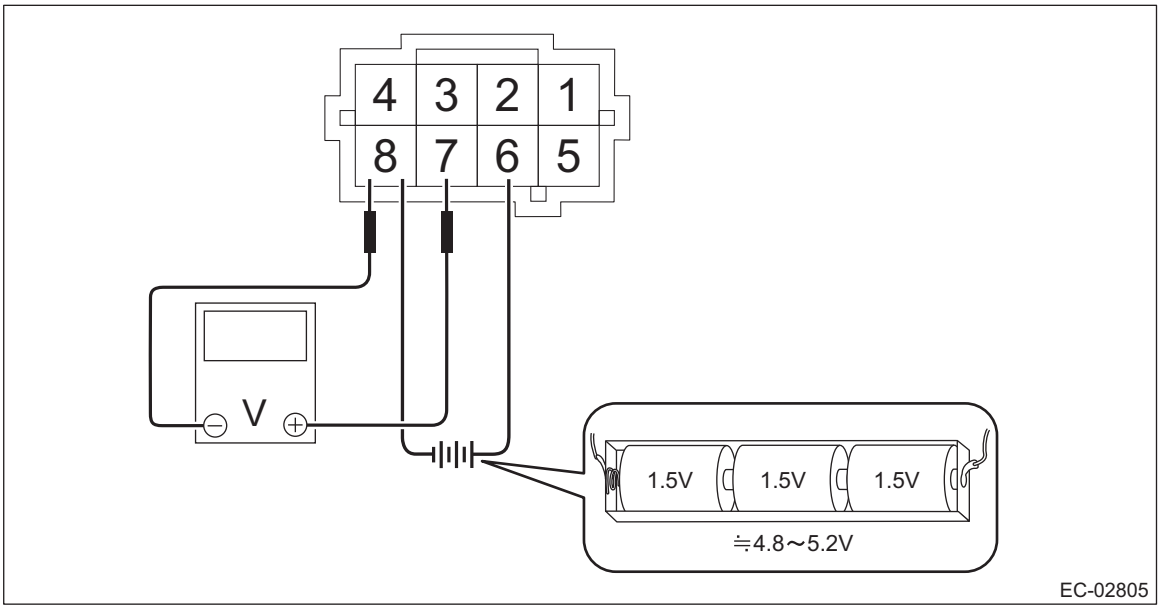


3. CHECK PRESSURE SENSOR

1) Connect dry-cell battery positive terminal to terminal No. 6 and dry-cell battery ground terminal to terminal No. 8, circuit tester positive terminal to terminal No. 7 and the circuit tester ground terminal to terminal No. 8.

NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.

- For power supply, 5 V DC constant voltage power source can also be used.

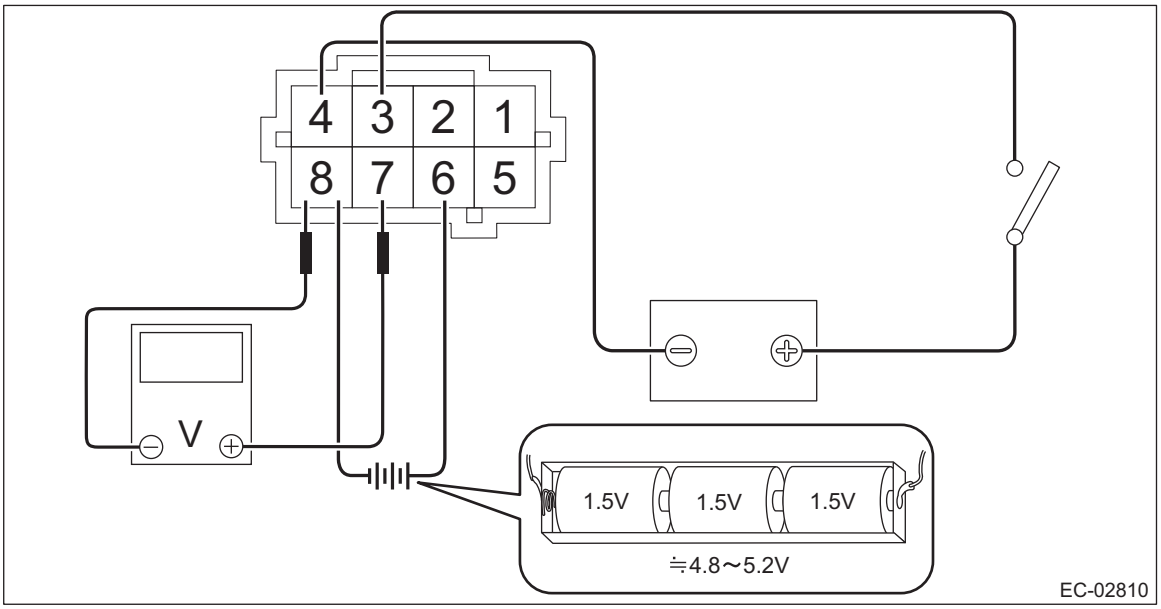


2) Check the voltage at a normal atmospheric pressure.

NOTE:
The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
7 (+) and 8 (–)	Approx. 3.5 V (when 25°C (77°F))

3) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and check that there is a voltage drop from the voltage measured in step 2) when the vacuum pump is operated.



4. OTHER INSPECTIONS

1) Check that the leak check valve assembly and leak check valve bracket have no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

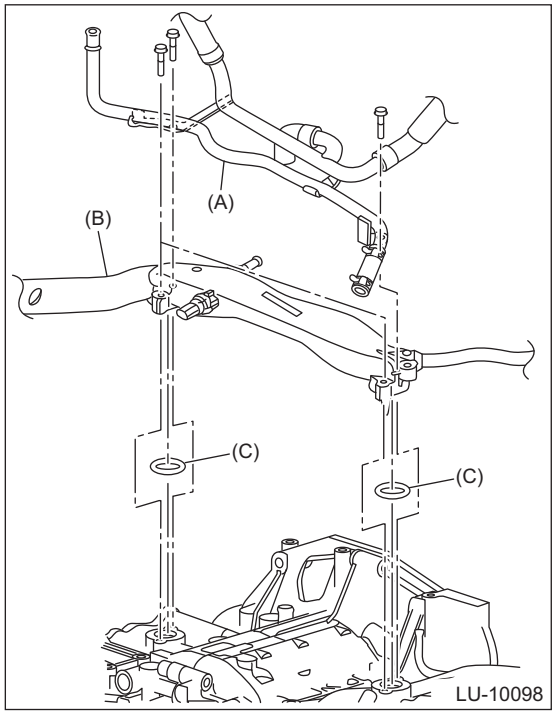
10.PCV Hose Assembly

A: REMOVAL

CAUTION:
Do not remove unless the hose and the leak diagnosis connector are broken.

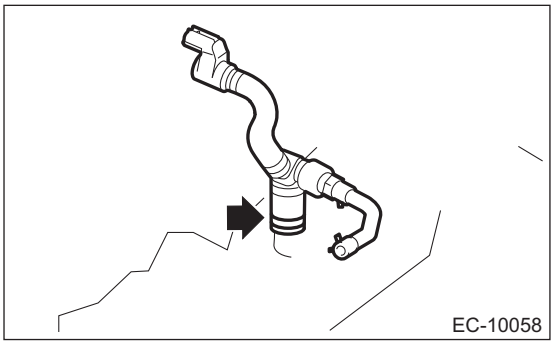
1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, REMOVAL, Engine Assembly.>
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the bolt securing the water tank pipe assembly, and place the water tank pipe assembly aside so that it does not interfere with the work.
4) Remove the water pipe assembly.

NOTE:
Do not remove the radiator inlet hose and heater outlet hose.



(A) Water tank pipe ASSY
(B) Water pipe ASSY
(C) O-ring

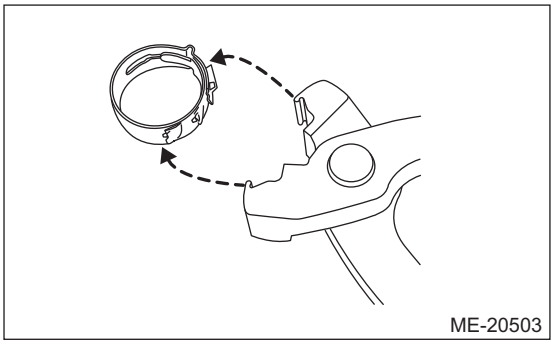
5) Remove the secondary air pipe RH. <Ref. to EC(STI)-57, SECONDARY AIR COMBINATION VALVE RH, REMOVAL, Secondary Air Combination Valve.>
6) Break the clamp, and remove the PCV hose assembly from the cylinder block RH.

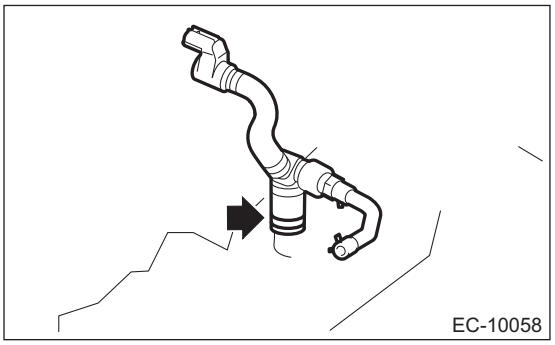


B: INSTALLATION

1) Install the PCV hose assembly to the cylinder block RH, and install the clamp using the Clamp pincer (14100134).

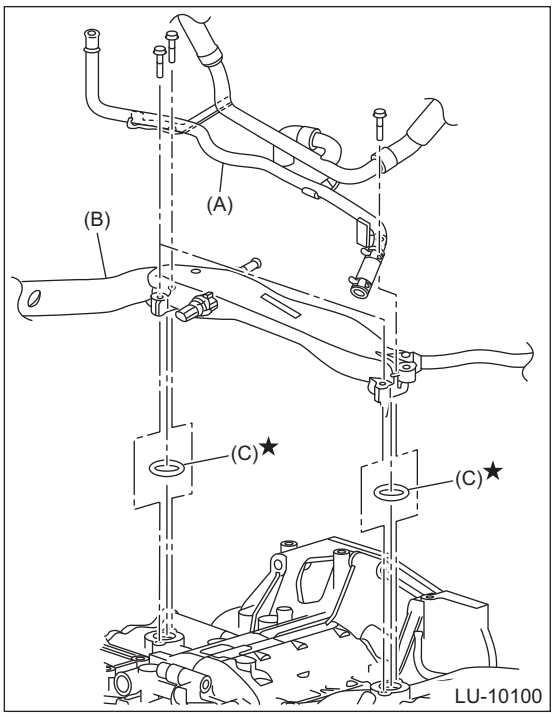
NOTE:
Use a new clamp.





2) Install the secondary air pipe RH. <Ref. to EC(STI)-58, SECONDARY AIR COMBINATION VALVE RH, INSTALLATION, Secondary Air Combination Valve.>
3) Install the water tank pipe assembly and water pipe assembly.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



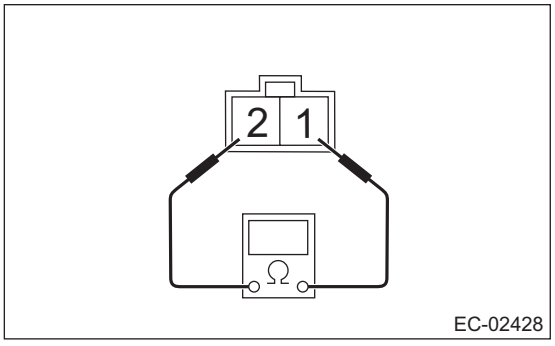
(A) Water tank pipe ASSY
(B) Water pipe ASSY
(C) O-ring

4) Install the intake manifold. <Ref. to FU(STI)-20, INSTALLATION, Intake Manifold.>
5) Install the engine to the vehicle. <Ref. to ME(STI)-36, INSTALLATION, Engine Assembly.>

C: INSPECTION

1. LEAK DIAGNOSIS CONNECTOR

1) Check that the leak diagnosis connector has no deformation, cracks or other damages.
2) Check the resistance between leak diagnosis connector terminals.



Terminal No.	Standard
1 and 2	Less than 1 Ω

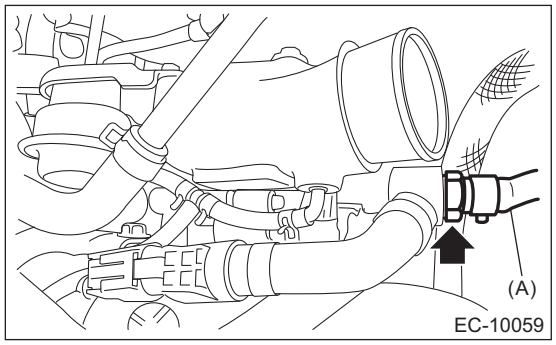
2. OTHER INSPECTIONS

Check that the hose has no cracks, damage or loose part.

11.PCV Valve

A: REMOVAL

CAUTION:
Do not remove unless the PCV valve is broken.
1) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
2) Disconnect the vacuum hose (A) from the PCV valve and remove the PCV valve from the PCV connector.



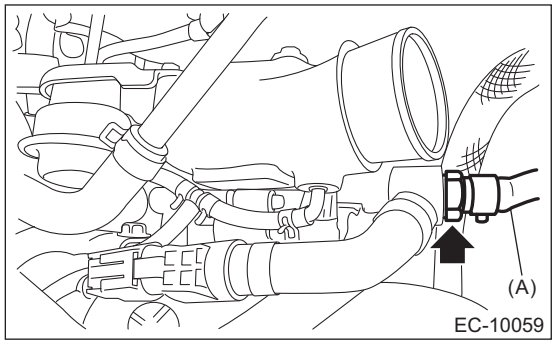
B: INSTALLATION

1) Install the PCV valve to the PCV connector and connect the vacuum hose (A) to the PCV valve.

NOTE:
Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

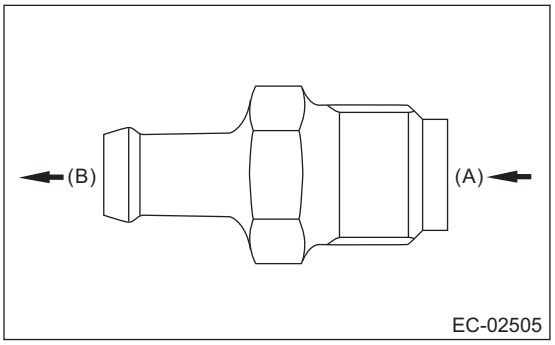


2) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

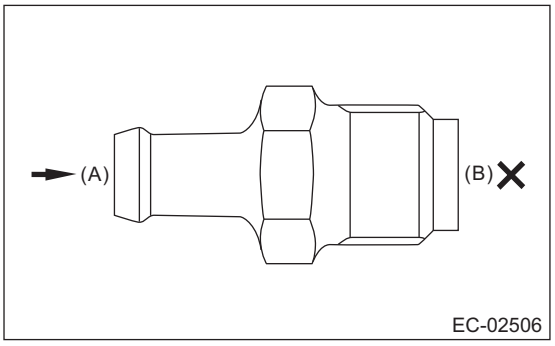
C: INSPECTION

1. PCV VALVE

1) Check that the PCV valve has no deformation, cracks or other damages.
2) Check that air is discharged from (B) when air is blown into (A).



3) Check that air does not come out from (B) when air is blown into (A).



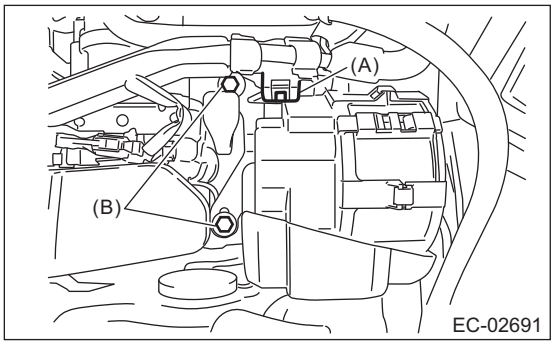
2. OTHER INSPECTIONS

Check the vacuum hose for cracks, damage or looseness.

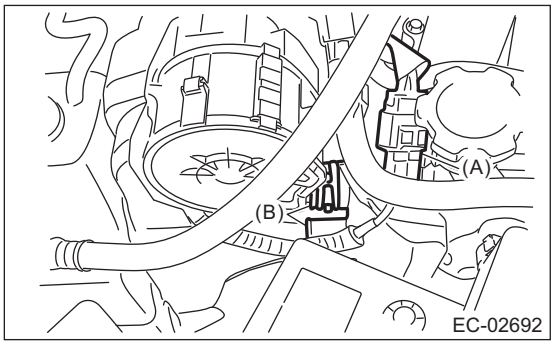
12.Secondary Air Pump

A: REMOVAL

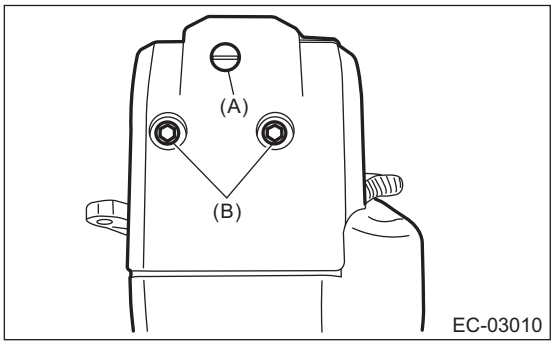
1) Disconnect the ground cable from battery.
2) Remove the clip (A) which holds the harness on the harness stay and remove the bolt (B) which holds the secondary air pump on the vehicle.



3) Disconnect the connector (A) and air duct (B) from secondary air pump.



4) Remove the secondary air pump from the vehicle and the resonator from the secondary air pump.

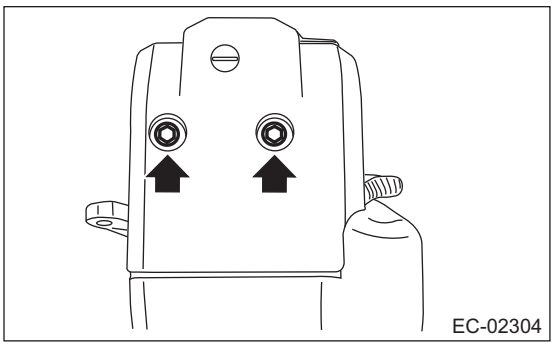


(A) Clip
(B) Bolt

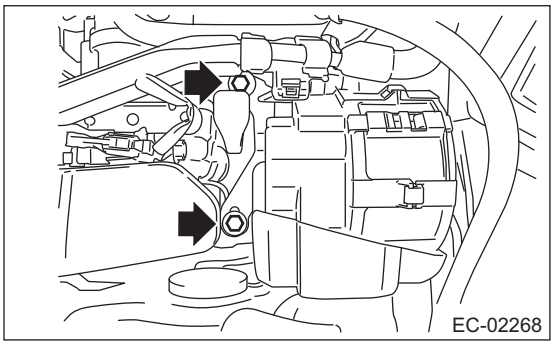
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

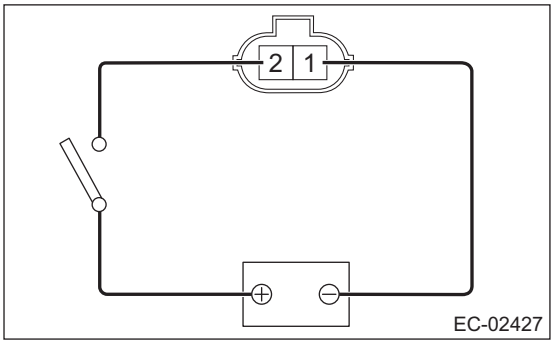


C: INSPECTION

1. SECONDARY AIR PUMP

1) Check that the secondary air pump has no deformation, cracks or other damages.
2) Connect battery positive terminal to the terminal No. 2 and battery negative terminal to the terminal No. 1, and inspect the secondary air pump operation.

CAUTION:
Do not operate the secondary air pump continuously for 80 seconds or more.



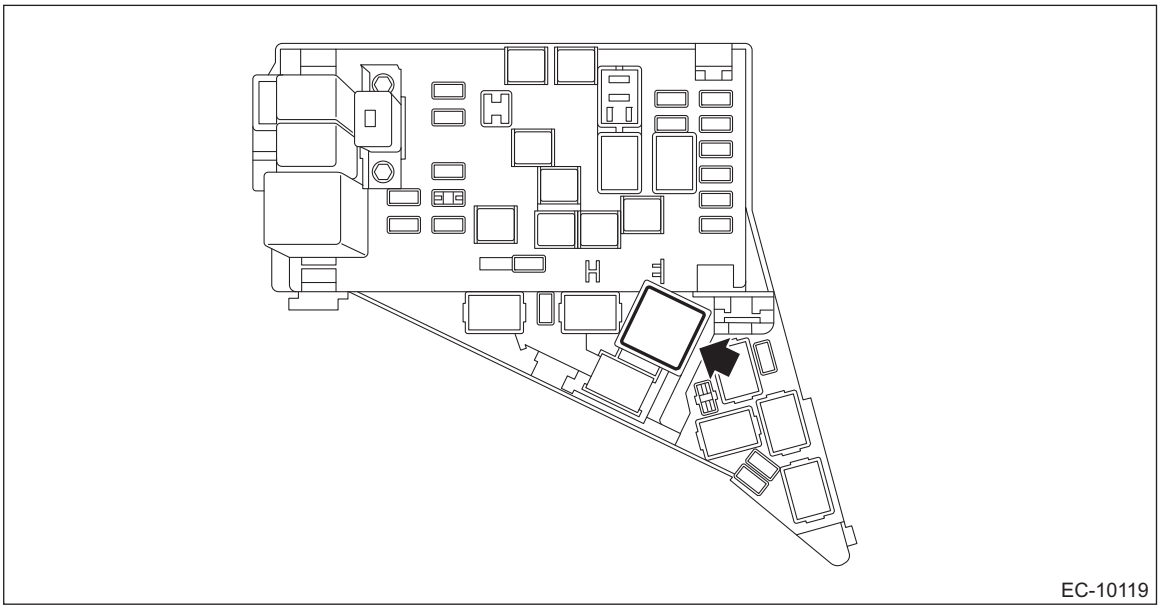
2. OTHER INSPECTIONS

Check that the air duct or resonator has no cracks, damage or loose part.

13.Secondary Air Pump Relay

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the secondary air pump relay from the main fuse box.

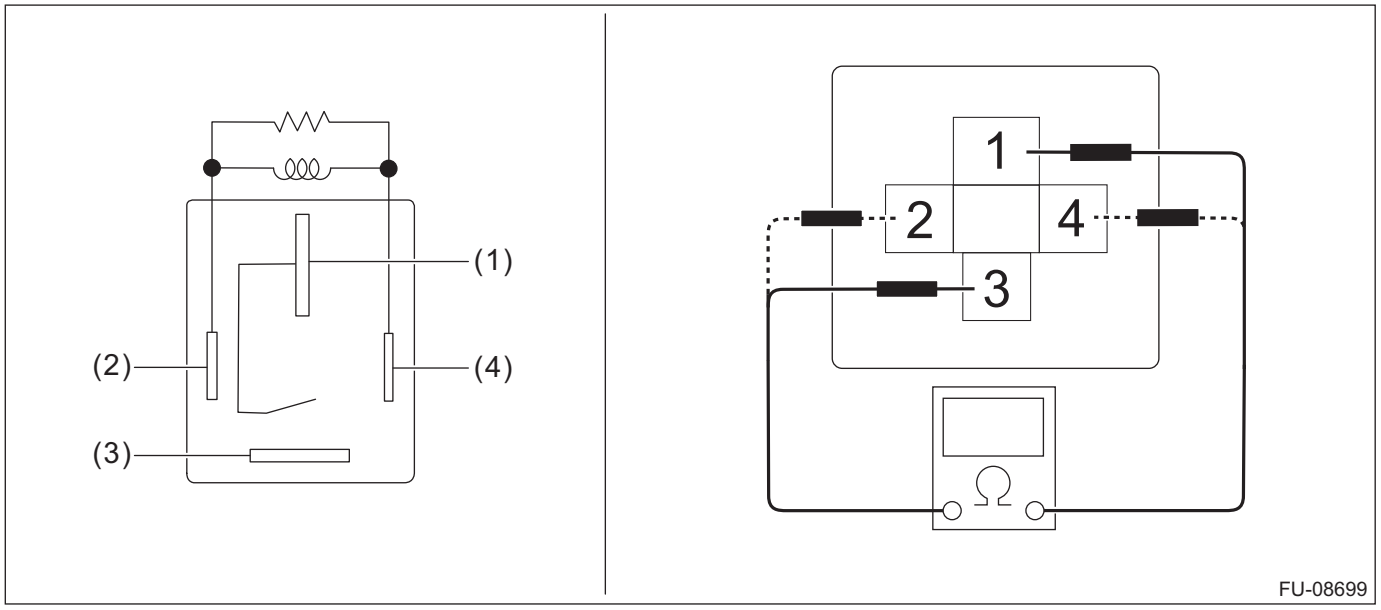


B: INSTALLATION

1) Install the secondary air pump relay to the main fuse box.
2) Connect the ground terminal to the battery.

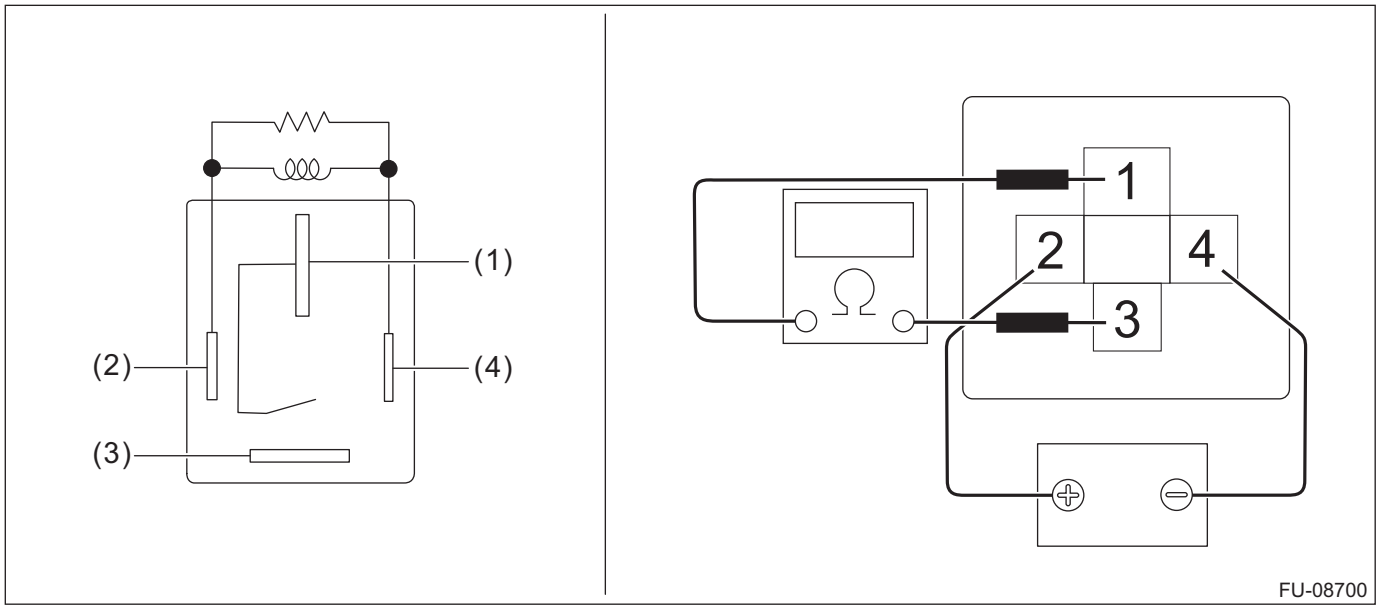
C: INSPECTION

1) Check that the secondary air pump relay has no deformation, cracks or other damages.
2) Check the resistance between secondary air pump relay terminals.



Terminal No.	Standard
1 and 3	1 MΩ or more
2 and 4	81.9 — 100.1 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 2 and battery ground terminal to terminal No. 4, and check the resistance between the secondary air pump relay terminals.



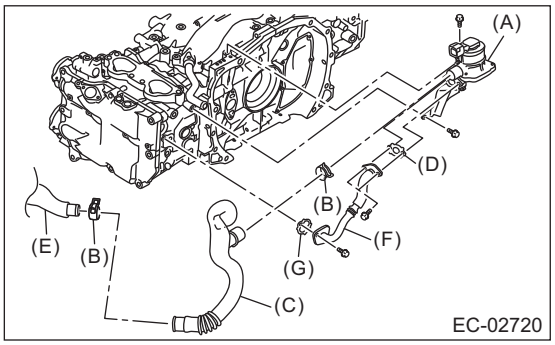
Terminal No.	Standard
1 and 3	Less than 1 Ω

14.Secondary Air Combination Valve

A: REMOVAL

1. SECONDARY AIR COMBINATION VALVE LH

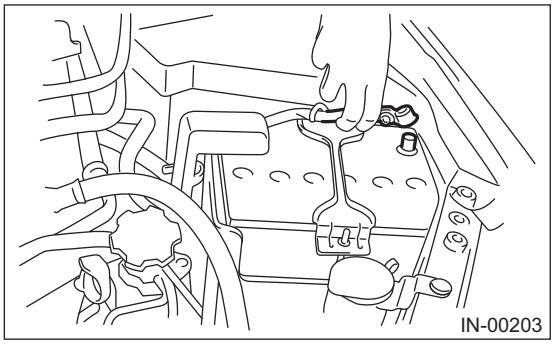
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Disconnect the connector from the secondary air combination valve LH.
4) Disconnect the air duct A.
5) Remove the secondary air pipe LH.
6) Remove the secondary air combination valve LH.



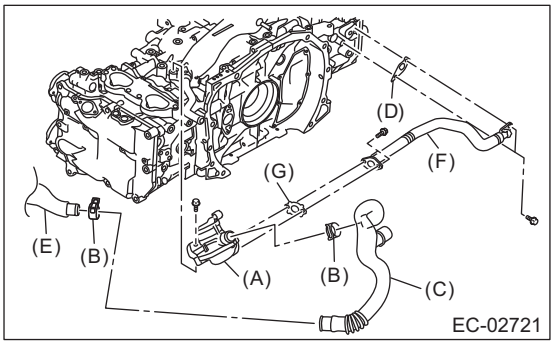
(A) Secondary air combination valve LH
(B) Clip
(C) Air duct A
(D) Gasket
(E) Air duct B
(F) Secondary air pipe LH
(G) Gasket

2. SECONDARY AIR COMBINATION VALVE RH

1) Disconnect the ground cable from battery.



2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
4) Disconnect the air duct A.
5) Disconnect the secondary air pipe RH.
6) Remove the secondary air combination valve RH.



(A) Secondary air combination valve RH
(B) Clip
(C) Air duct A
(D) Gasket
(E) Air duct B
(F) Secondary air pipe RH
(G) Gasket

7) Remove the turbocharger. <Ref. to IN(STI)-15, REMOVAL, Turbocharger.>
8) Remove the secondary air pipe RH.

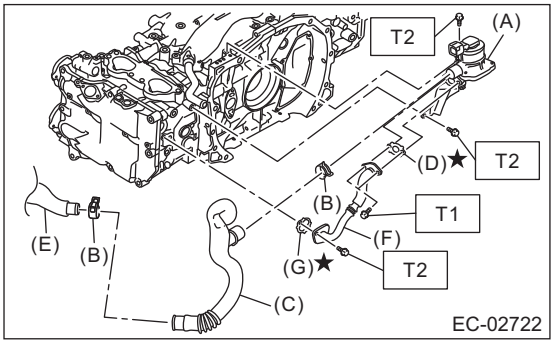
B: INSTALLATION

1. SECONDARY AIR COMBINATION VALVE LH

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)



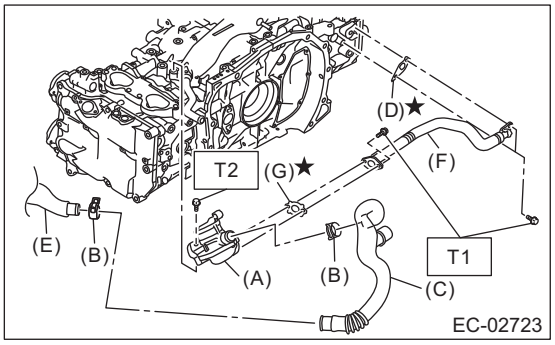
(A) Secondary air combination valve LH
(B) Clip
(C) Air duct A
(D) Gasket
(E) Air duct B
(F) Secondary air pipe LH
(G) Gasket

2. SECONDARY AIR COMBINATION VALVE RH

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)

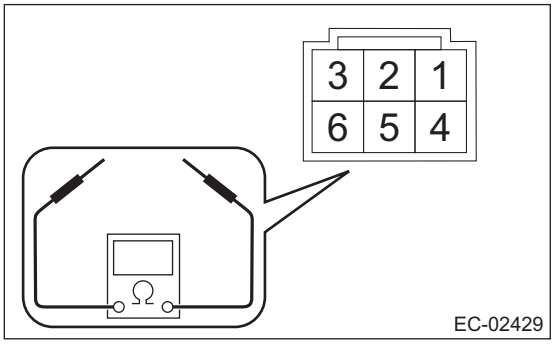


(A) Secondary air combination valve RH
(B) Clip
(C) Air duct A
(D) Gasket
(E) Air duct B
(F) Secondary air pipe RH
(G) Gasket

C: INSPECTION

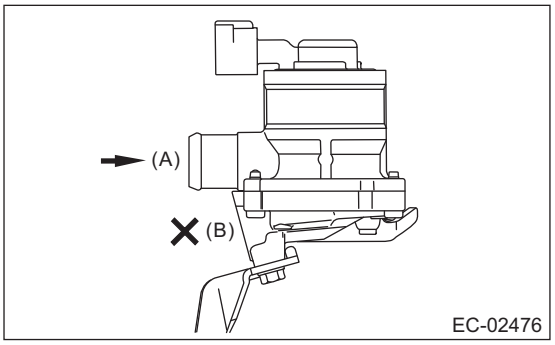
1. SECONDARY AIR COMBINATION VALVE LH

1) Check that the secondary air combination valve LH has no deformation, cracks or other damages.
2) Check the resistance between the terminals of secondary air combination valve LH.

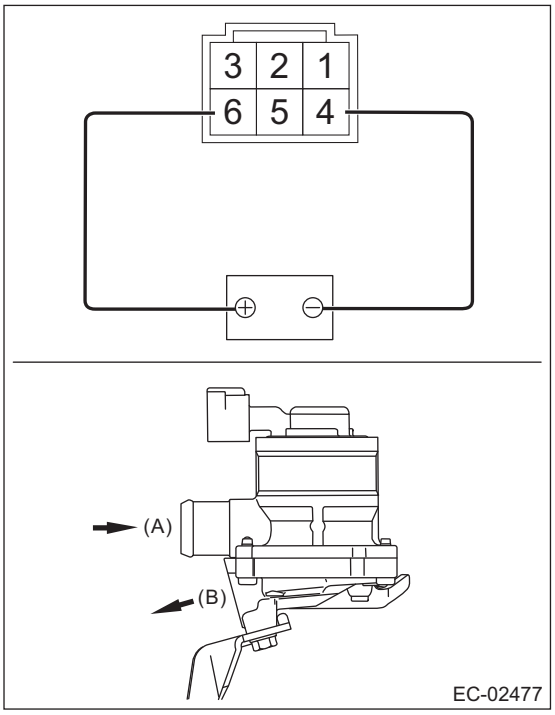


Terminal No.	Standard
4 and 6	5.0±0.5 Ω (when 20°C (68°F))
2 and 3	15 kΩ or less
1 and 2	4.5 kΩ or less

3) Check that air does not come out from (B) when air is blown into (A).



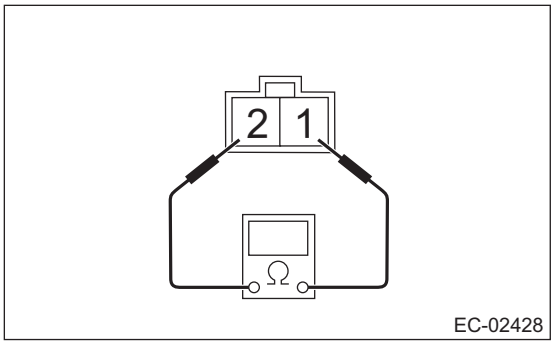
4) Connect the battery positive terminal to the terminal No. 6 and the battery negative terminal to the terminal No. 4. Check that air is discharged from (B), when supplying air to (A).



2. SECONDARY AIR COMBINATION VALVE RH

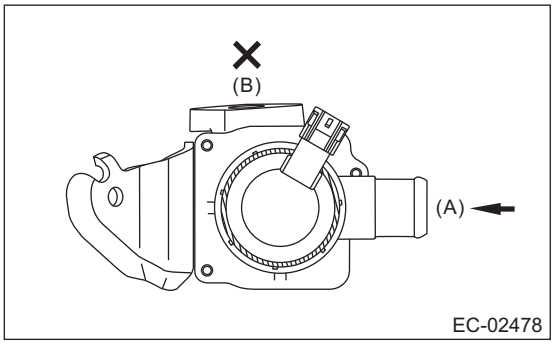
1) Check that the secondary air combination valve RH has no deformation, cracks or other damages.

2) Check the resistance between the terminals of secondary air combination valve RH.

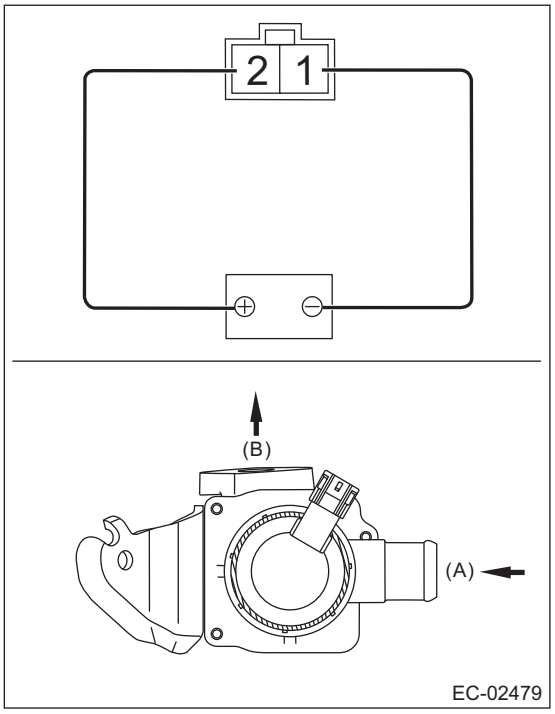


Terminal No.	Standard
1 and 2	5.0±0.5 Ω (when 20°C (68°F))

3) Check that air does not come out from (B) when air is blown into (A).



4) Connect the battery positive terminal to the terminal No. 2 and the battery negative terminal to the terminal No. 1. Check that air is discharged from (B), when supplying air to (A).



3. OTHER INSPECTIONS

1) Check that the secondary air pipe has no deformation, cracks or other damages.
2) Check that the air duct has no cracks, damage or loose part.

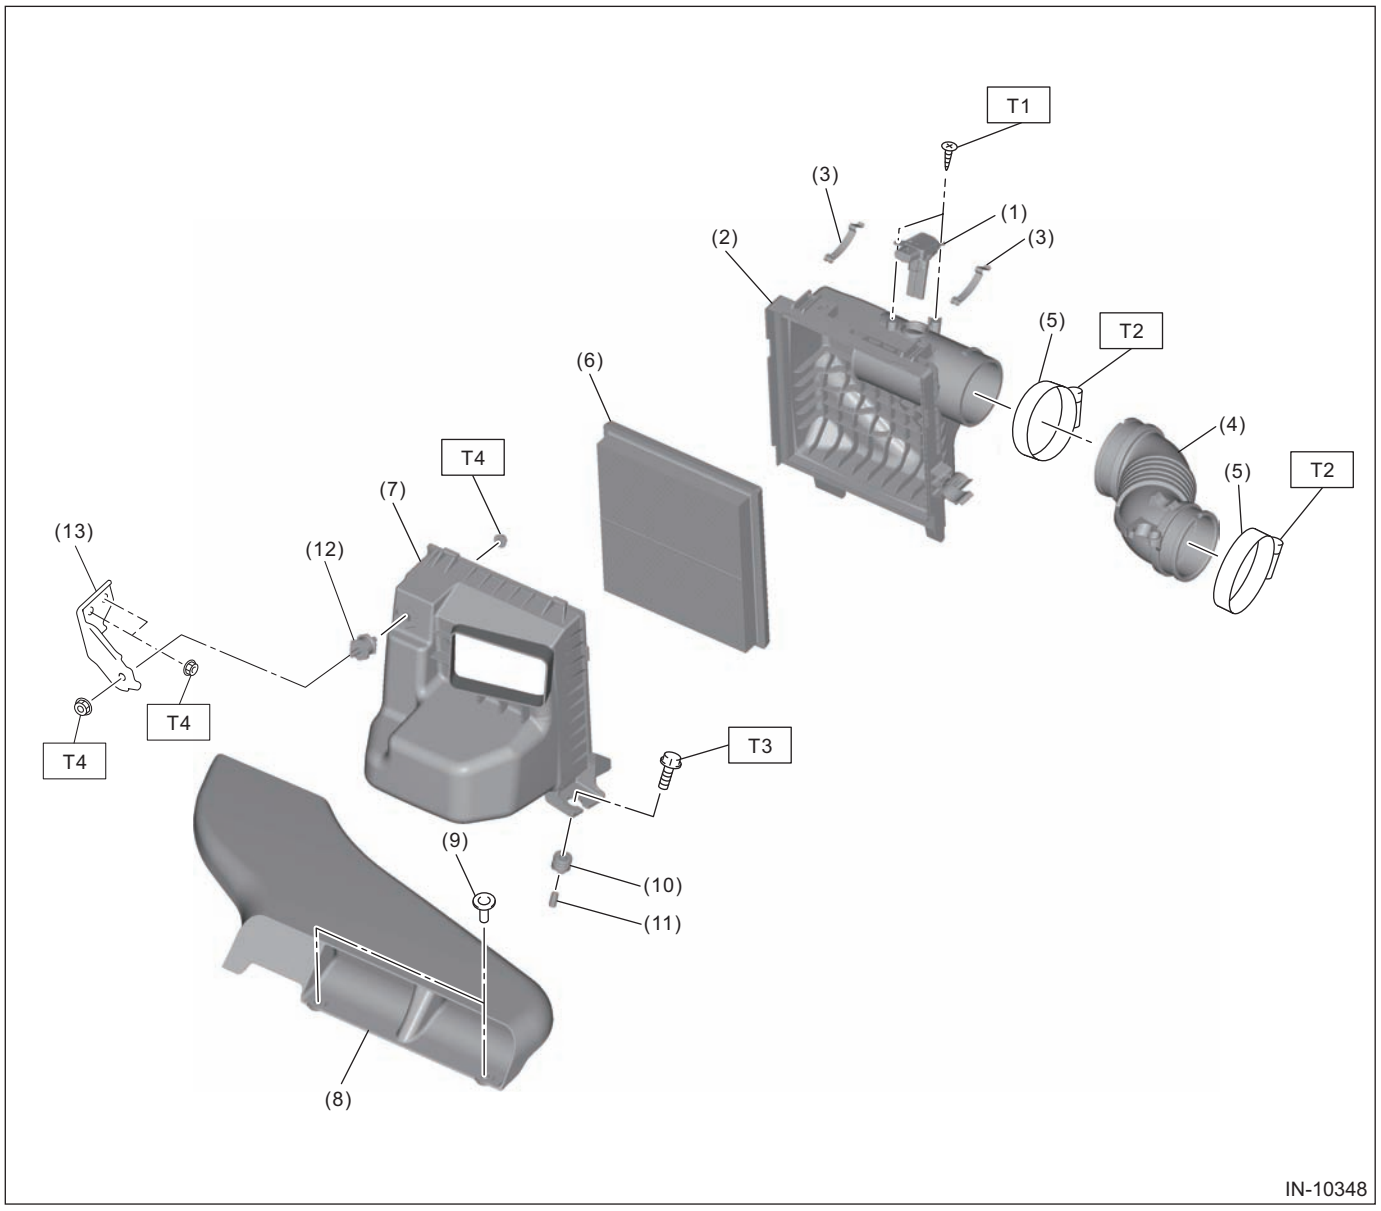
1. General Description

A: COMPONENT

1. AIR CLEANER

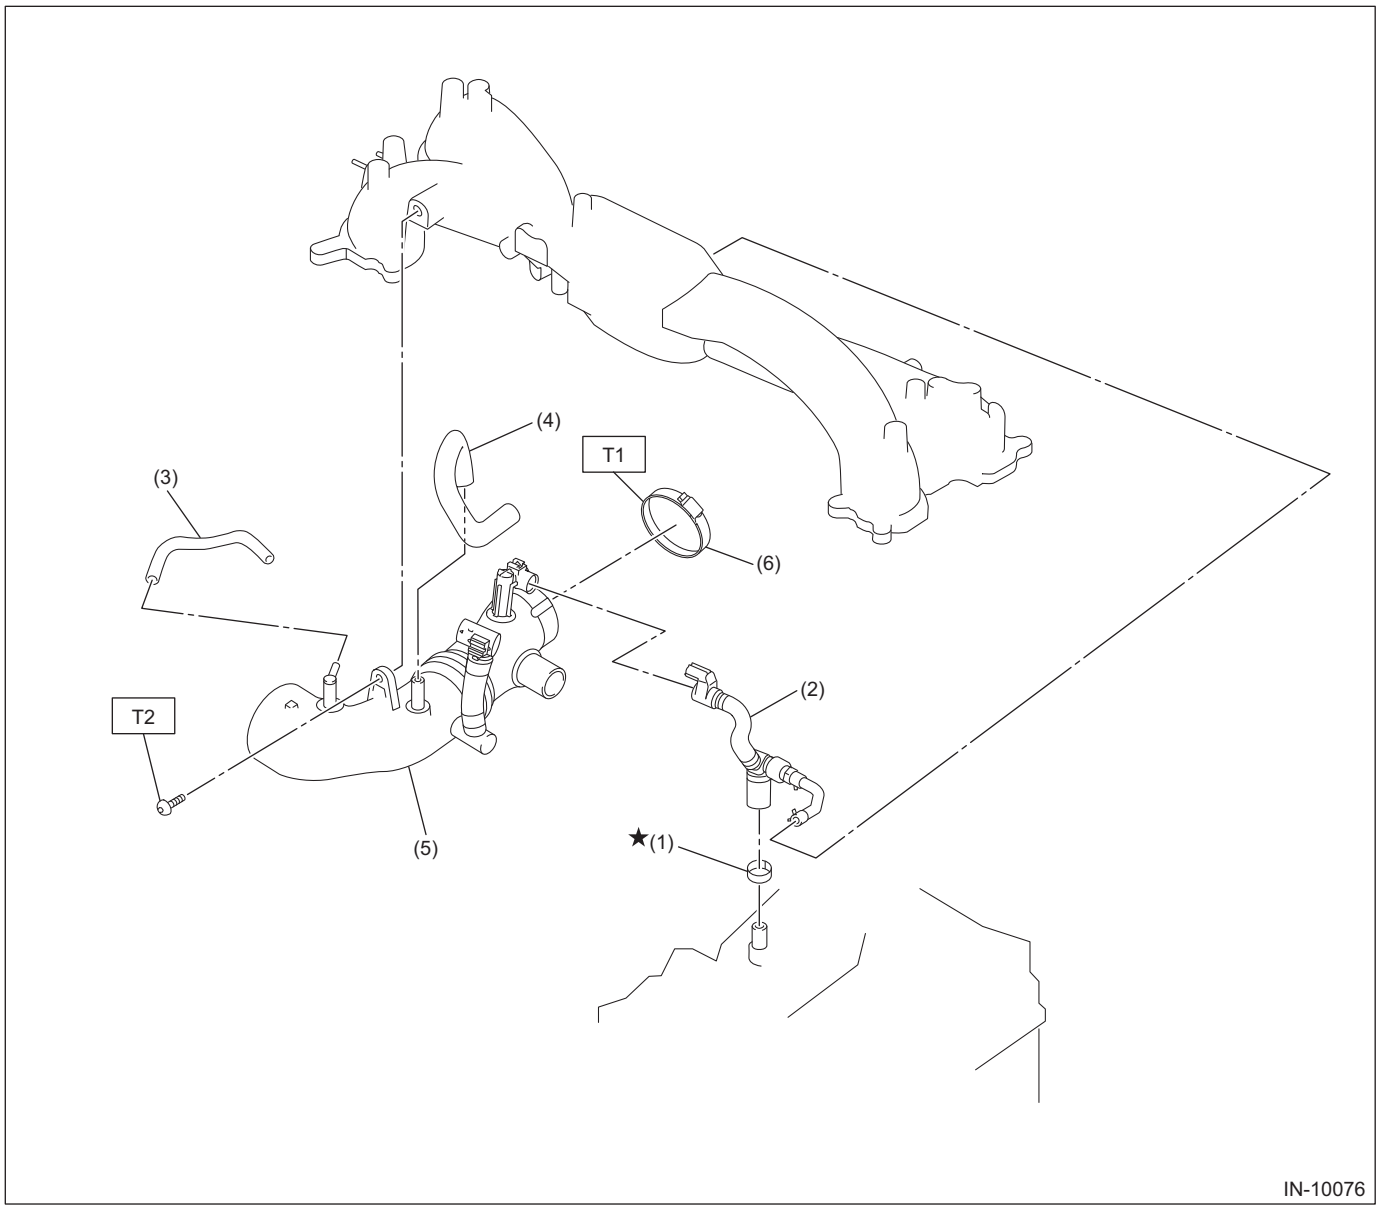


(1)	Mass air flow and intake air temperature sensor	(8)	Air intake duct
(2)	Air cleaner case (rear)	(9)	Clip
(3)	Clip	(10)	Cushion
(4)	Air intake boot	(11)	Spacer
(5)	Clamp	(12)	Cushion
(6)	Air cleaner element	(13)	Air cleaner case bracket
(7)	Air cleaner case (front)		

Tightening torque: N·m (kgf-m, ft-lb)

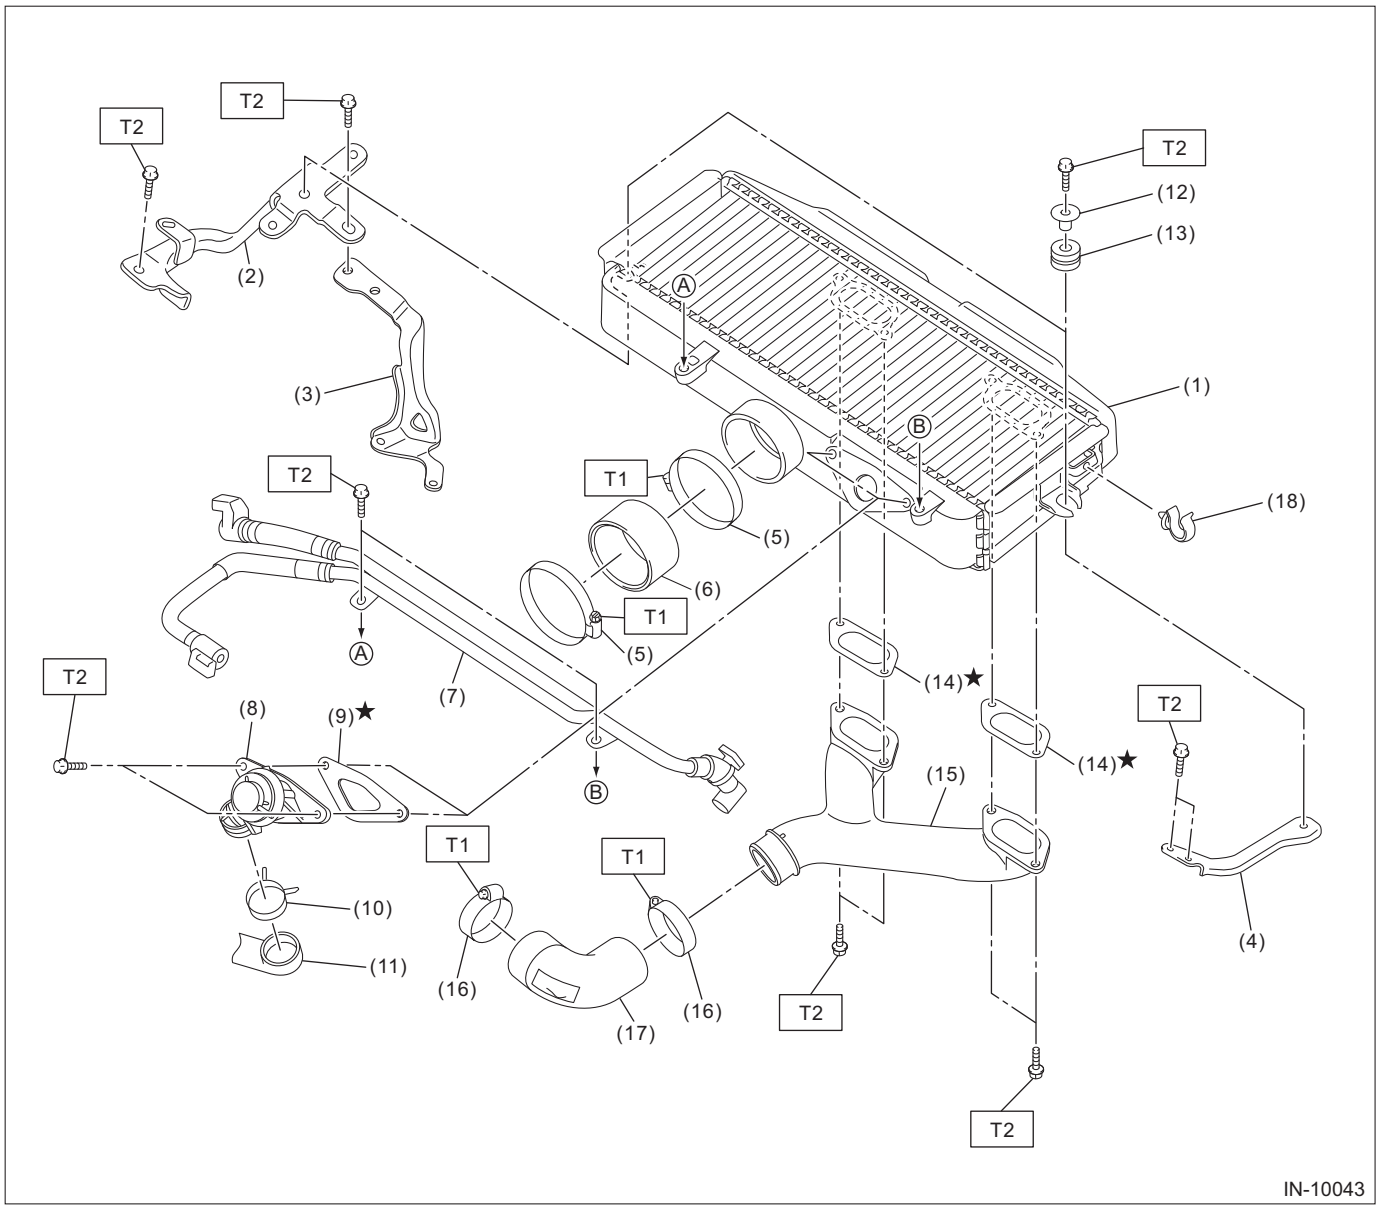
T1: 1 (0.1, 0.7)
T2: 2.5 (0.3, 1.8)
T3: 6 (0.6, 4.4)
T4: 7.5 (0.8, 5.5)

2. INTAKE DUCT



(1)	Clamp	(4)	Vacuum hose B	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	PCV hose ASSY	(5)	Intake duct	***T1: 3 (0.3, 2.2)***
(3)	Vacuum hose A	(6)	Clamp	***T2: 17 (1.7, 12.5)***

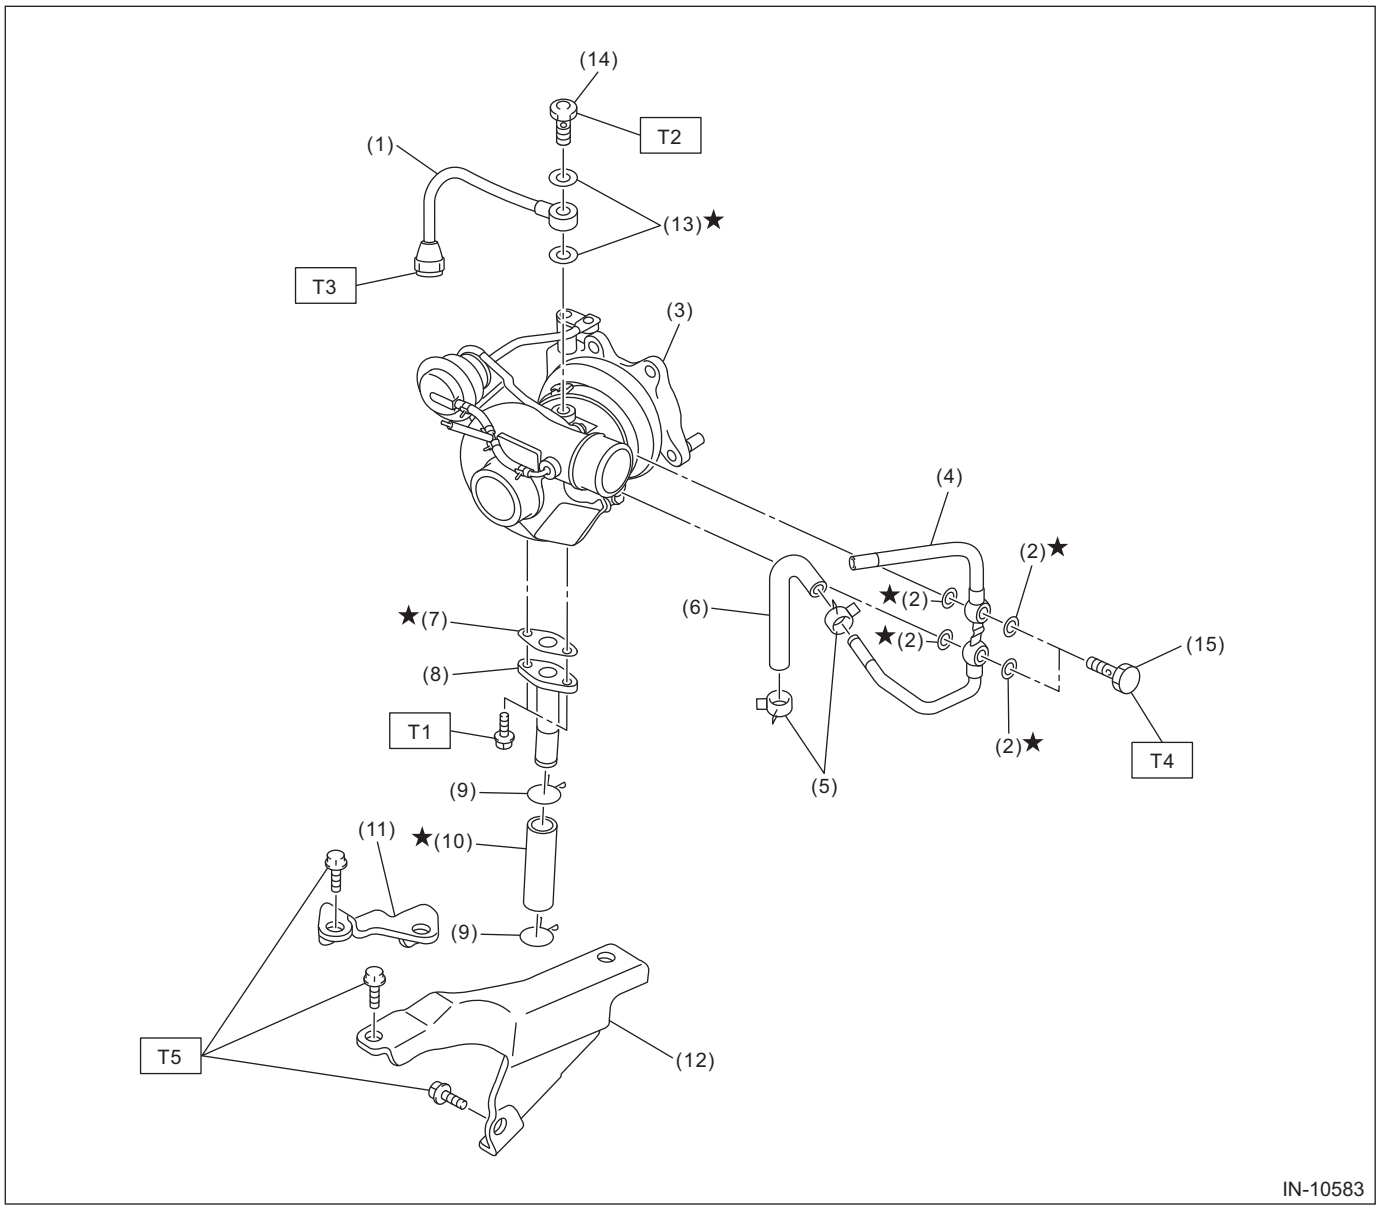
3. INTERCOOLER



(1) Intercooler
(2) Intercooler stay RH No. 1
(3) Intercooler stay RH No. 2
(4) Intercooler stay LH
(5) Clamp
(6) Air duct hose
(7) PCV pipe ASSY
(8) Air by-pass valve
(9) Gasket
(10) Clip
(11) Air by-pass hose
(12) Spacer
(13) Cushion
(14) Gasket
(15) Intercooler duct
(16) Clamp
(17) Intake duct
(18) Clip

Tightening torque: N·m (kgf-m, ft-lb)
T1: 3 (0.3, 2.2)
T2: 16 (1.6, 11.8)

4. TURBOCHARGER



(1)	Oil inlet pipe	(9)	Clip	
(2)	Gasket	(10)	Oil outlet hose	
(3)	Turbocharger	(11)	Turbocharger stay RH	
(4)	Water pipe	(12)	Turbocharger stay LH	
(5)	Clip	(13)	Gasket	
(6)	Engine coolant hose	(14)	Union bolt A	
(7)	Gasket	(15)	Union bolt B	
(8)	Oil outlet pipe			

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.9 (0.5, 3.6)
T2: 16 (1.6, 11.8)
T3: 20 (2.0, 14.8)
T4: 23 (2.3, 17.0)
T5: 33 (3.4, 24.3)

B: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.

• Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• Keep the removed parts in order and protect them from dust and dirt.
• All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
• Bolts, nuts and washers should be replaced with new parts as required.
• Be sure to tighten the fasteners including bolts and nuts to the specified torque.

C: PREPARATION TOOL

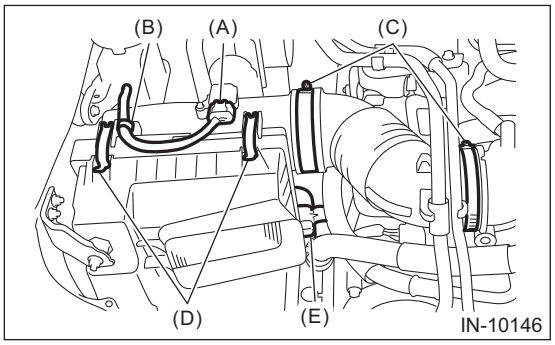
1. GENERAL TOOL

TOOL NAME	REMARKS
Mighty Vac	Used for checking waste gate actuator and air by-pass valve.

2. Air Cleaner Element

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the harness clip (B).
3) Loosen the clamp (C) which holds the air intake boot.
4) Remove the clips (D) from the air cleaner case (front).
5) Remove the power steering oil pressure hose (suction hose) (E) from the air cleaner case (rear).



6) Remove the air cleaner case (rear) and air intake boot.
7) Remove the air cleaner element.

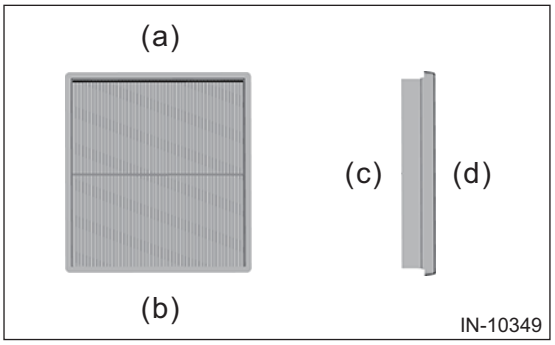
B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be sure to use SUBARU genuine air cleaner element depending on the engine type when replacing the air cleaner elements. Using other air cleaner element may affect the engine performance.

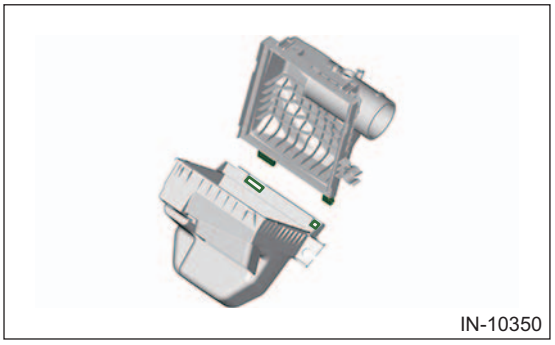
NOTE:
• Check that there is no dirt or dust within the air cleaner case. If any dirt or dust is found, clean it.

• Install the air cleaner element as shown in the figure.



(a) Upside
(b) Downside
(c) Air cleaner case (front) side
(d) Air cleaner case (rear) side

• When setting the air cleaner case (rear), align the protrusion of the air cleaner case (rear) to the air cleaner case (front) to insert.



Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

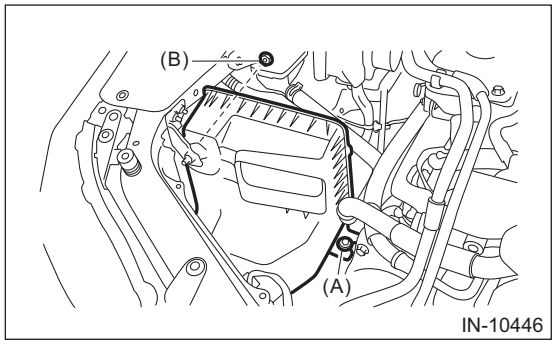
C: INSPECTION

1) Check that the air cleaner element has no deformation, cracks or other damages.
2) Check the air cleaner element for excessive dirt.

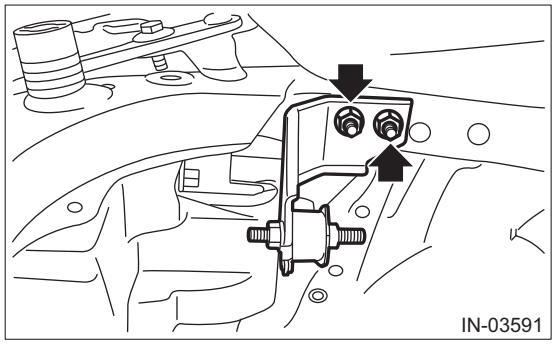
3. Air Cleaner Case

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
3) Remove the air cleaner element. <Ref. to IN(STI)-7, REMOVAL, Air Cleaner Element.>
4) Remove the bolt (A) and nut (B), and remove the air cleaner case (front).



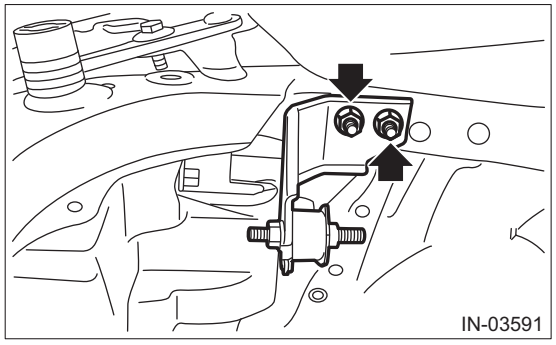
5) Remove the air cleaner case bracket from the vehicle.



B: INSTALLATION

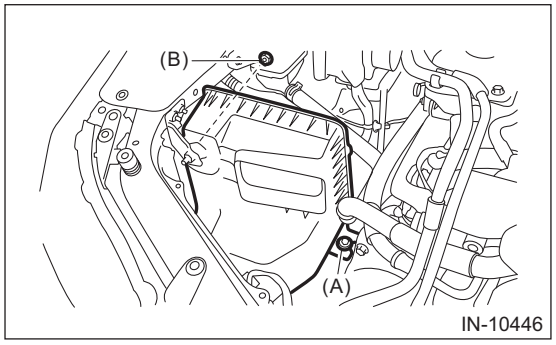
1) Install the air cleaner case bracket to the vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



2) Set the air cleaner case (front) and install the bolt (A) and nut (B).

Tightening torque:
Bolt (A)
6 N·m (0.6 kgf-m, 4.4 ft-lb)
Nut (B)
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



3) Install the air cleaner element. <Ref. to IN(STI)-7, INSTALLATION, Air Cleaner Element.>
4) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
5) Connect the battery ground terminal.

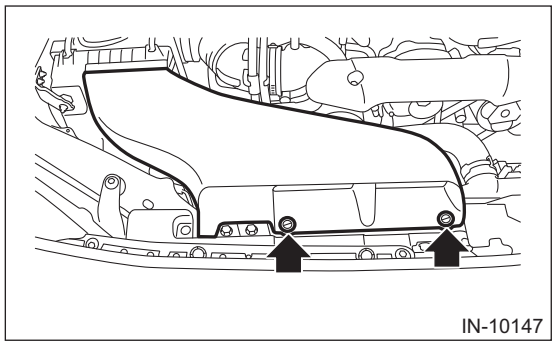
C: INSPECTION

1) Check that the air cleaner case has no deformation, cracks or other damages.
2) Check that the air intake boot has no cracks, damage or loose part.

4. Air Intake Duct

A: REMOVAL

Remove the clip which secures the air intake duct, and remove the air intake duct.



B: INSTALLATION

Install in the reverse order of removal.

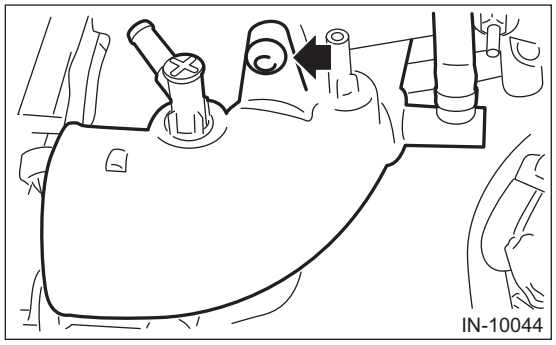
C: INSPECTION

1) Check that the air intake duct has no deformation, cracks or other damages.
2) Inspect that no foreign objects are mixed in the air intake duct.

5. Intake Duct

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the sensor, engine harness and fuel pipe from the intake manifold. <Ref. to FU(STI)-25, DISASSEMBLY, Intake Manifold.>
4) Remove the intake duct from intake manifold.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
17 N·m (1.7 kgf-m, 12.5 ft-lb)

C: INSPECTION

1. LEAK DIAGNOSIS CONNECTOR

Refer to “PCV Pipe Assembly” for inspection of leak diagnosis connector. <Ref. to EC(STI)-52, LEAK DIAGNOSIS CONNECTOR, INSPECTION, PCV Hose Assembly.>

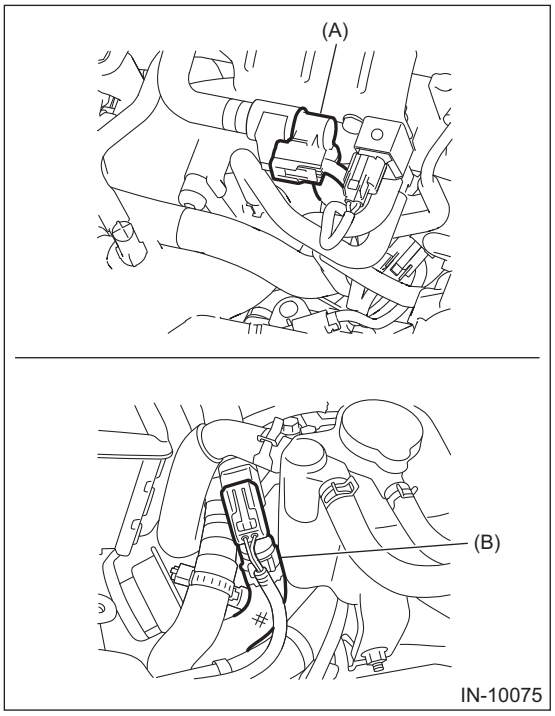
2. OTHER INSPECTIONS

Check that the intake duct has no deformation, cracks or other damages.

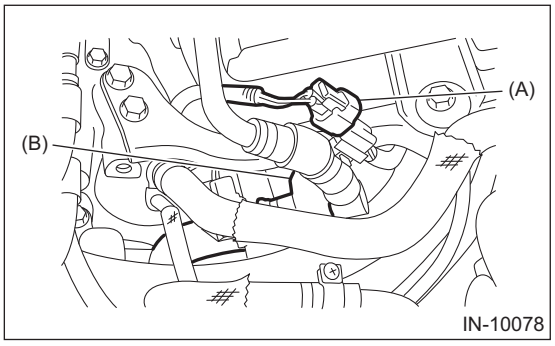
6. Intercooler

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Unlock the leak diagnosis connector, and disconnect the PCV hoses (A) and (B) from the PCV pipe assembly.

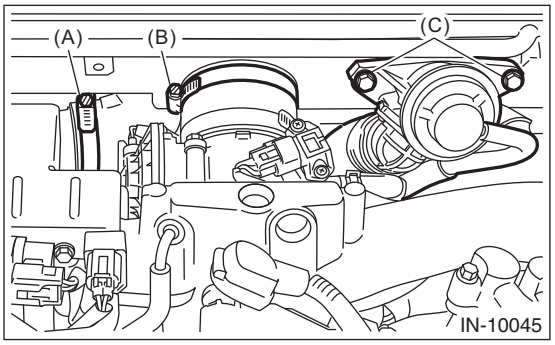


3) Disconnect the connector (A) from the PCV pipe assembly.
4) Unlock the leak diagnosis connector, and disconnect the PCV hose (B) from the PCV pipe assembly.

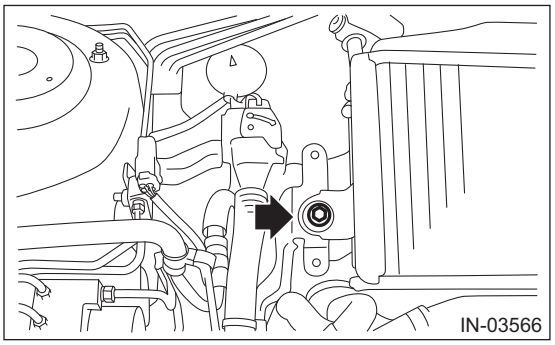


5) Loosen the clamp (A) holding the intake duct to the turbocharger.
6) Loosen the clamp (B) holding the air duct hose to the intercooler.

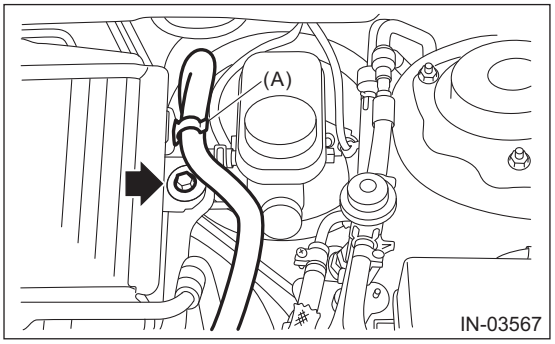
7) Remove the bolts (C) securing the air by-pass valve to the intercooler, and disconnect the air by-pass valve.



8) Remove the bolts which secure the intercooler to the intercooler stay RH No. 1.



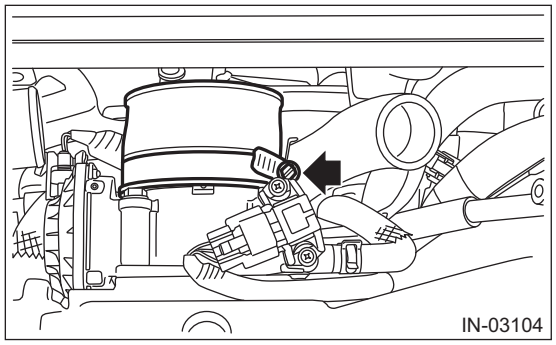
9) Remove the brake booster vacuum hose from the intercooler clip (A), and remove the bolts which secure the intercooler to the intercooler stay LH.



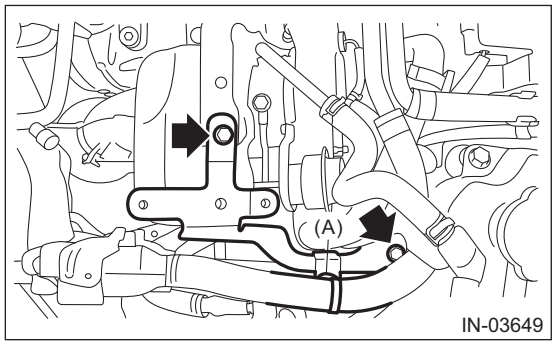
10) Remove the intercooler stay LH.

11) Remove the intercooler.

12) Remove the air duct hose from the throttle body.



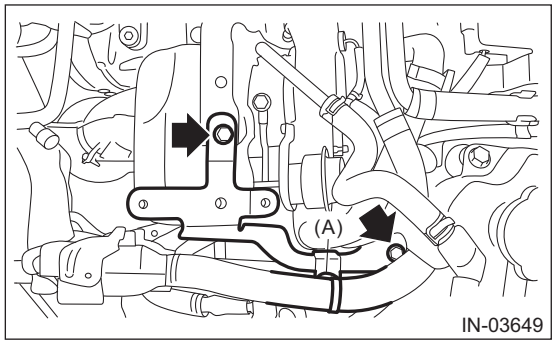
13) Remove clip (A) holding the engine harness to the intercooler stay RH No. 1, and remove the intercooler stay RH No. 1.



B: INSTALLATION

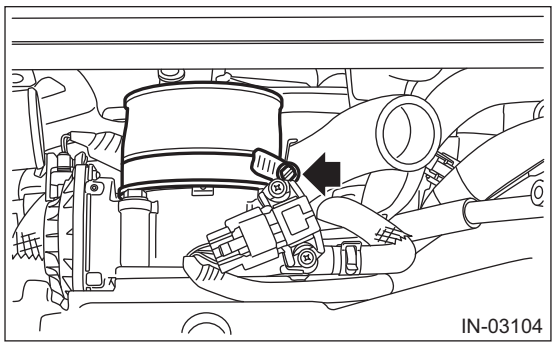
1) Install the intercooler stay RH No. 1, and install the clip (A) which secures the engine harness to the intercooler stay RH No. 1.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



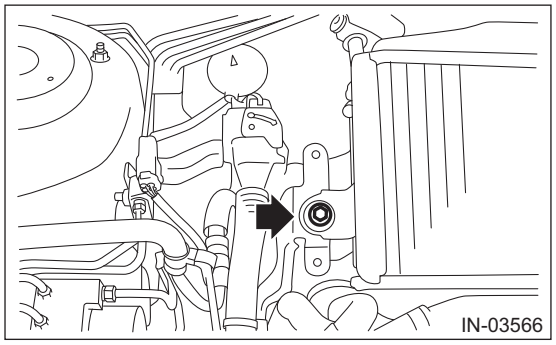
2) Attach the air duct hose to the throttle body.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)



3) Set the intercooler to the vehicle, and install the bolts securing the intercooler to the intercooler stay RH No. 1.

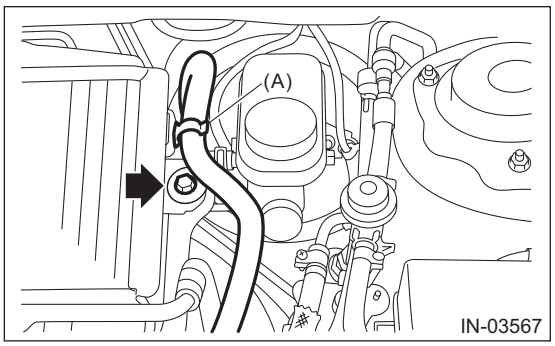
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



4) Temporarily tighten the bolt securing the intercooler stay LH to the intake manifold.

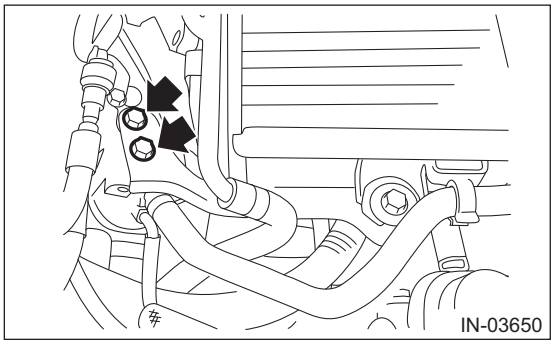
5) Install the bolts which secure the intercooler to the intercooler stay LH, and install the brake booster vacuum hose to the clip (A).

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



6) Tighten the bolt securing the intercooler stay LH to the intake manifold.

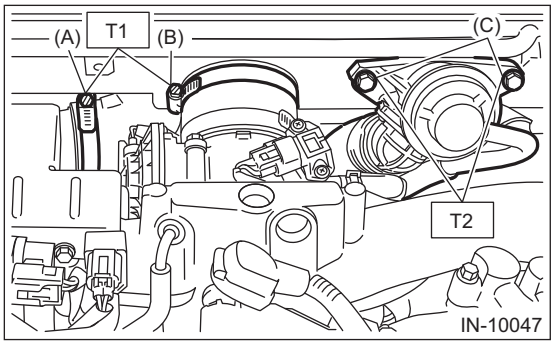
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



7) Tighten the clamp (A) which secures the intake duct to the turbocharger.
8) Tighten the clamp (B) which secures the air duct hose to the intercooler.
9) Install the bolts (C) which secures the air bypass valve to the intercooler, and install the air bypass valve.

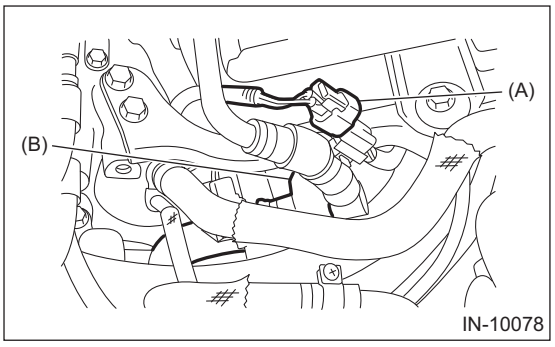
NOTE:
Use a new gasket.

Tightening torque:
T1: 3 N·m (0.3 kgf-m, 2.2 ft-lb)
T2: 16 N·m (1.6 kgf-m, 11.8 ft-lb)



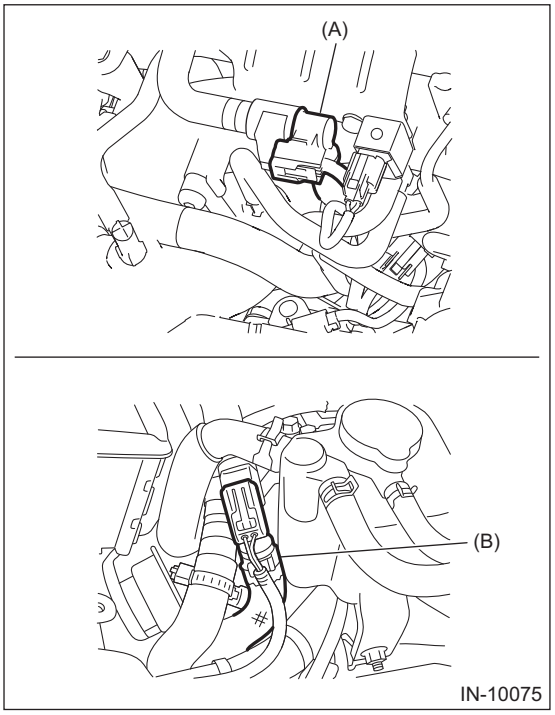
10) Connect the PCV hose (B) to PCV pipe assembly.

NOTE:
Make sure that the leak diagnosis connector is connected securely.
11) Connect the connector (A) to the PCV pipe assembly.



12) Connect the PCV hoses (A) and (B) to the PCV pipe assembly.

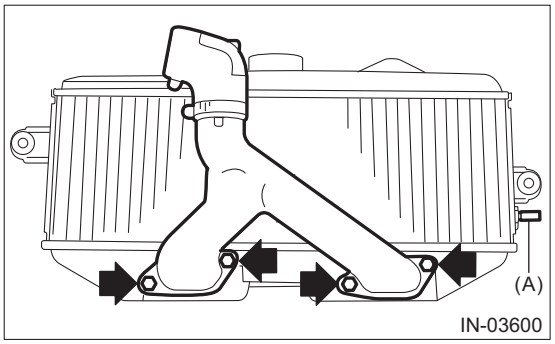
NOTE:
Make sure that the leak diagnosis connector is connected securely.



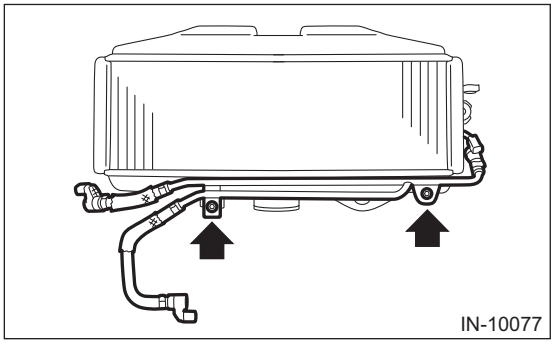
13) Connect the battery ground terminal.

C: DISASSEMBLY

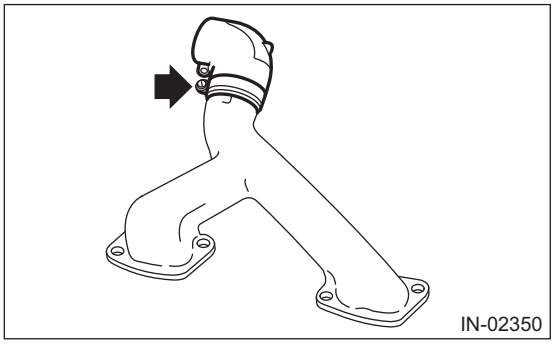
1) Remove the clip (A) and intercooler duct from the intercooler.



2) Remove the PCV pipe assembly from the intercooler.



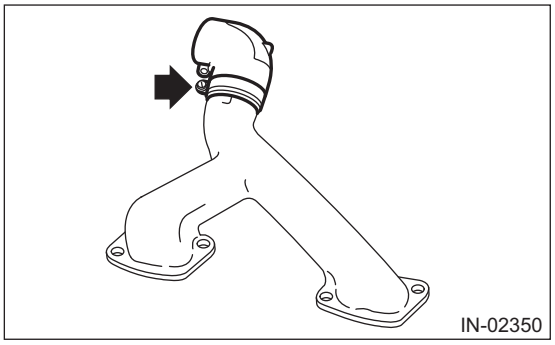
3) Remove the intake duct from intercooler duct.



D: ASSEMBLY

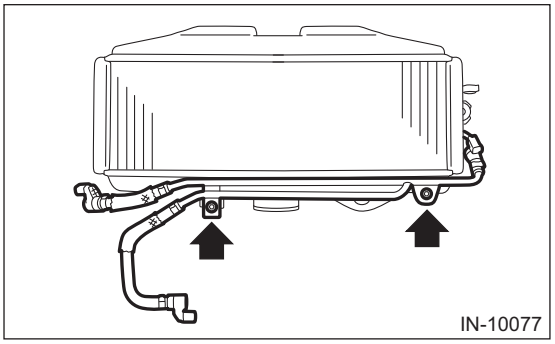
1) Install the intake duct to the intercooler duct.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)



2) Install the PCV pipe assembly to the intercooler.

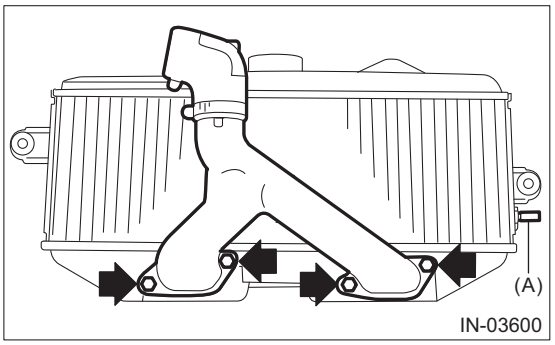
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



3) Install the clip (A) and intercooler duct to the intercooler.

NOTE:
Use a new gasket.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



E: INSPECTION

1. LEAK DIAGNOSIS CONNECTOR

Refer to “PCV Pipe Assembly” for inspection of leak diagnosis connector. <Ref. to EC(STI)-52, LEAK DIAGNOSIS CONNECTOR, INSPECTION, PCV Hose Assembly.>

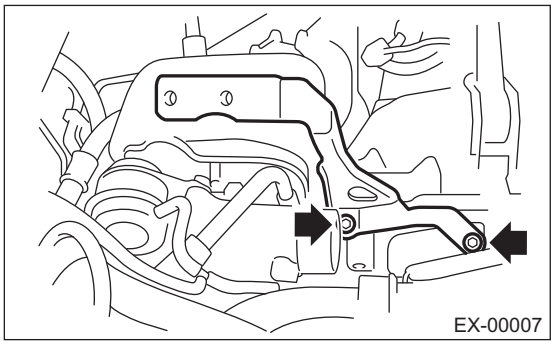
2. OTHER INSPECTIONS

1) Check that the intercooler, intercooler ducts and PCV pipe assembly have no deformation, cracks or other damages.
2) Check that the hose and intake duct have no cracks, damage or loose part.

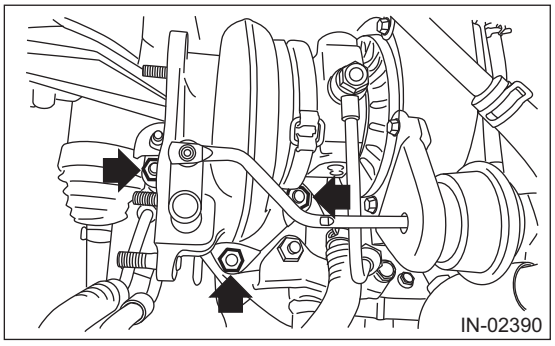
7. Turbocharger

A: REMOVAL

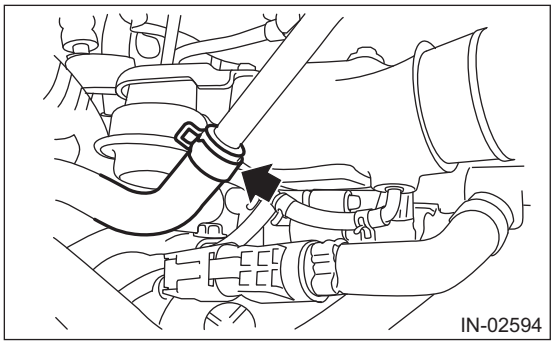
1) Disconnect the ground cable from battery.
2) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
3) Lower the vehicle.
4) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
5) Remove the intercooler stay RH No. 2.



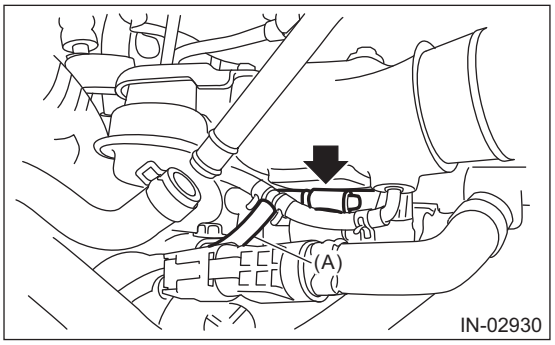
6) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
7) Lower the vehicle.
8) Remove the joint pipe from the turbocharger.



9) Disconnect the engine coolant hose from the upper side of the water pipe.

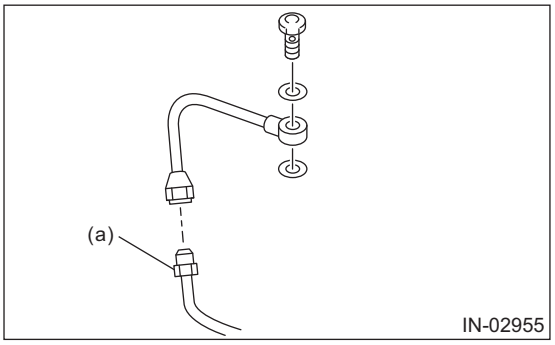


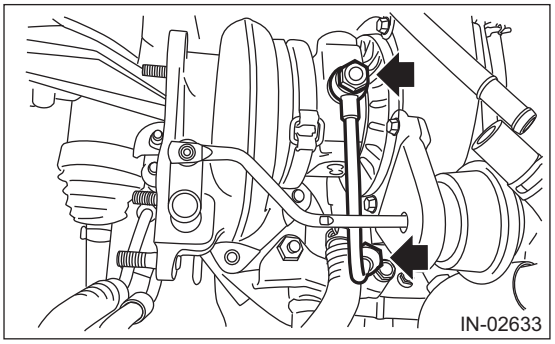
10) Disconnect the air control hose (A), and loosen the clamp holding the intake duct to the turbocharger.



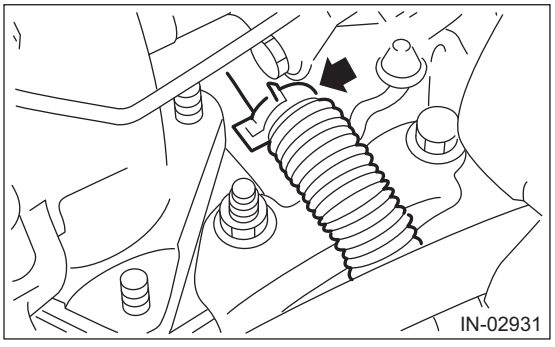
11) Remove the oil inlet pipe from the turbocharger.

CAUTION:
In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when loosing the oil inlet pipe flare nut, and avoid the part from rotating together while loosening the nut.

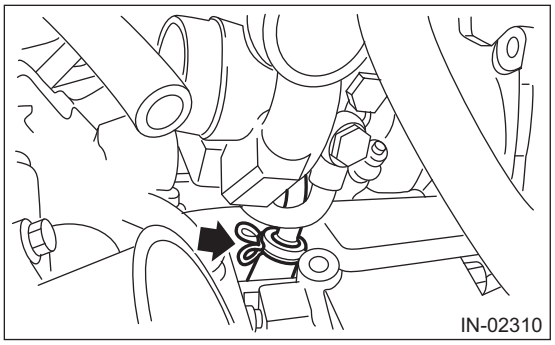




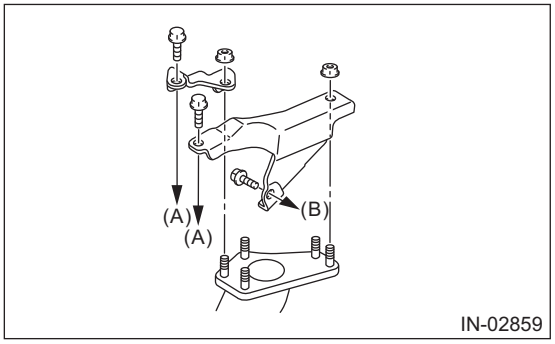
12) Disconnect the engine coolant hose from the lower side of the water pipe.



13) Disconnect the oil outlet hose from the oil outlet pipe, and remove the turbocharger.



14) Remove the turbocharger stay.

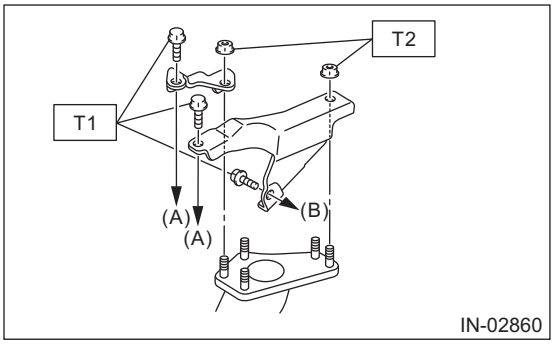


(A) To cylinder head RH
(B) To cylinder block RH

B: INSTALLATION

1) Install the turbocharger stay.

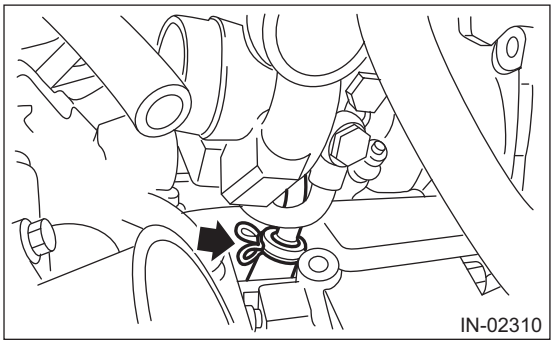
Tightening torque:
T1: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
T2: 42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



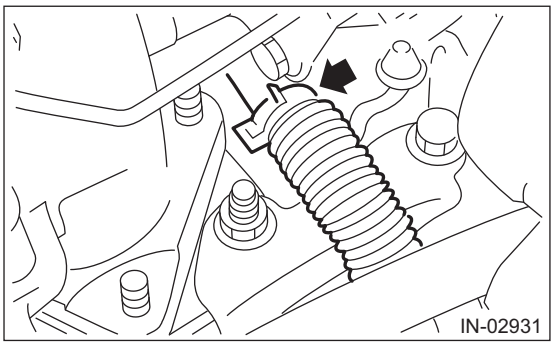
(A) To cylinder head RH
(B) To cylinder block RH

2) Connect the oil outlet hose to the oil outlet pipe.

NOTE:
Use a new oil outlet hose.

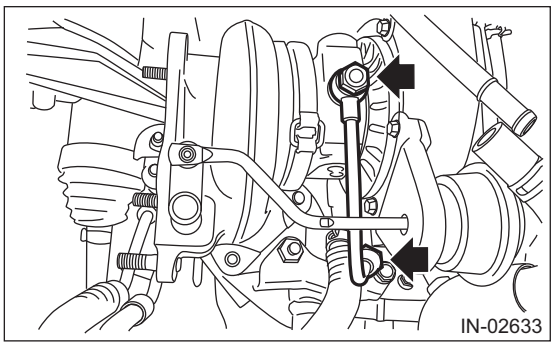


3) Connect the engine coolant hose to the lower side of the water pipe.



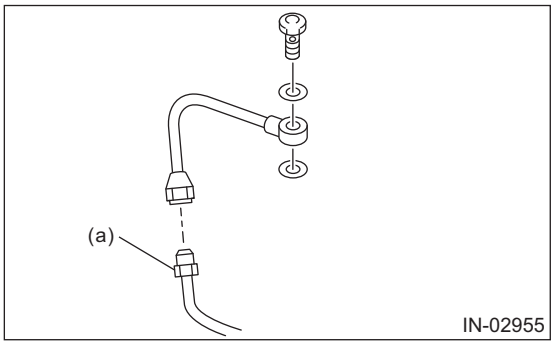
4) Temporarily tighten the union bolts and flare nuts which secure the oil inlet pipe to the turbocharger.

NOTE:
Use a new gasket.

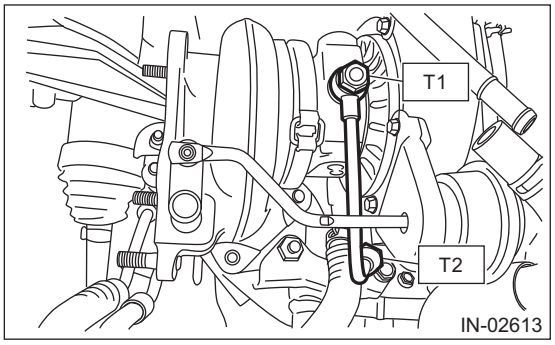


5) Tighten the union bolts and flare nuts which secure the oil inlet pipe to the turbocharger.

CAUTION:
In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when tightening the oil inlet pipe flare nut, and avoid the part from rotating together while tightening the nut.

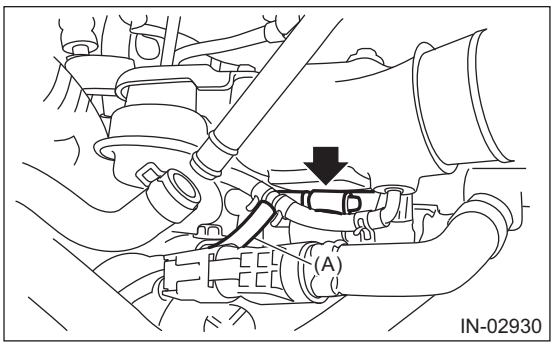


Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)

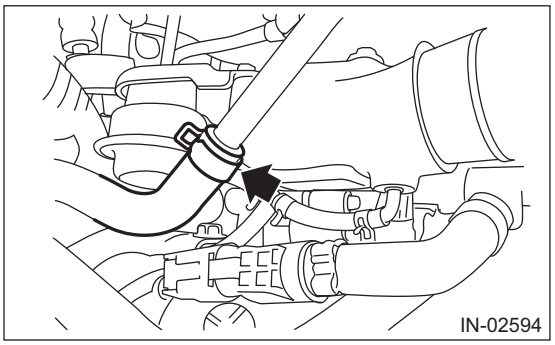


6) Connect the air control hose (A), and install the intake duct to the turbocharger.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)



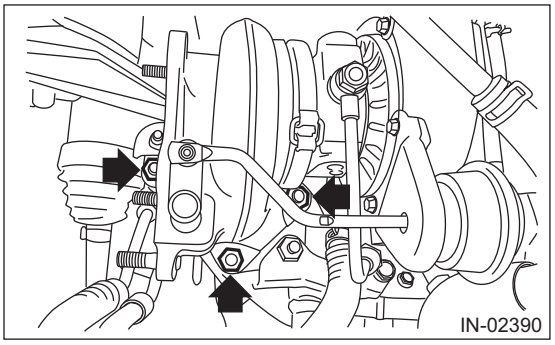
7) Connect the engine coolant hoses to the upper side of the water pipe.



8) Install the joint pipe to turbocharger.

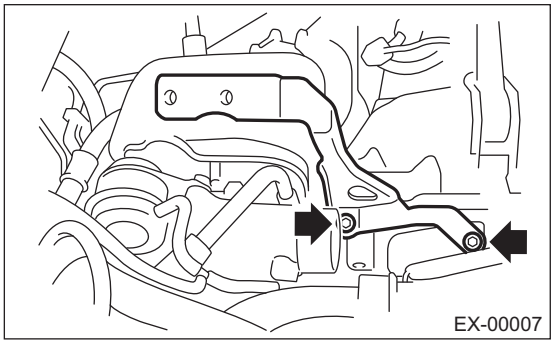
NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



9) Lift up the vehicle.
10) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
11) Lower the vehicle.
12) Install the intercooler stay RH No. 2.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

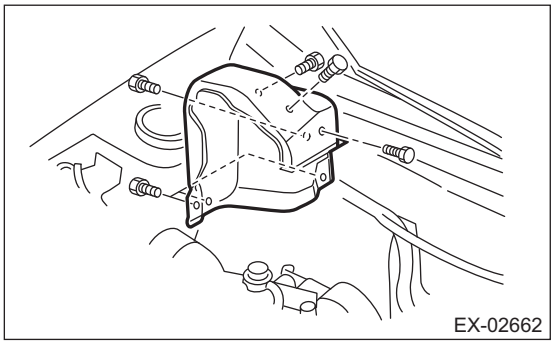


13) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
14) Connect the battery ground terminal.
15) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

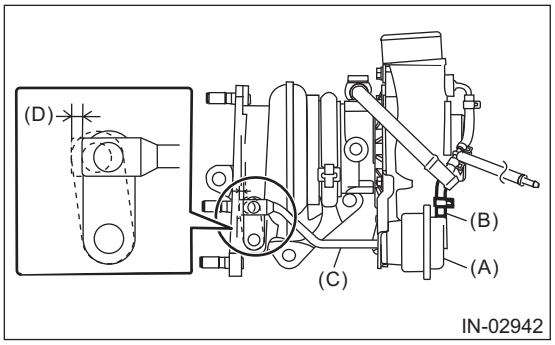
C: INSPECTION

1. WASTE GATE ACTUATOR

1) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
2) Remove the turbocharger upper cover.



3) Remove the boost hose (B) from the waste gate actuator (A) of the turbocharger, and connect the Mighty Vac to the waste gate actuator (A).



(A) Waste gate actuator
(B) Boost hose
(C) Control rod
(D) Control rod stroke

4) Pressurize slowly with the Mighty Vac, and measure the pressure when the control rod stroke (D) becomes 2 mm (0.08 in). If it is not within the standard, replace the turbocharger assembly.

CAUTION:
Do not pressurize over 89.9 kPa (0.92 kg/cm^2, 13.0 psi) to prevent damaging the waste gate actuator.

Operating pressure (control rod stroke 2 mm (0.08 in)):
Standard
74.7 — 80.8 kPa (0.76 — 0.82 kg/cm^2, 10.8 — 11.7 psi)

5) After inspection, install the related parts in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

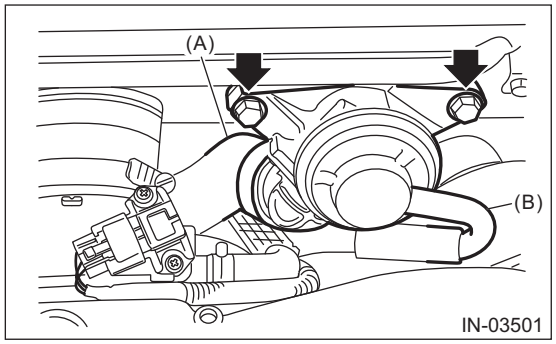
2. OTHER INSPECTIONS

1) Check that the turbocharger, turbocharger stay and pipe have no deformation, cracks or other damages.
2) Check that the hose and intake duct have no cracks, damage or loose part.
3) Check that there are no oil leakage or water leakage from the pipe attachment section.

8. Air By-pass Valve

A: REMOVAL

Remove the air by-pass valve from the intercooler, and then disconnect air by-pass hose (A) and vacuum hose (B) from the air by-pass valve.



B: INSTALLATION

Install in the reverse order of removal.

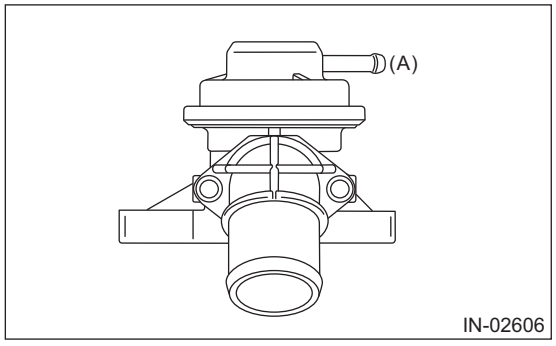
NOTE:
Use a new gasket.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

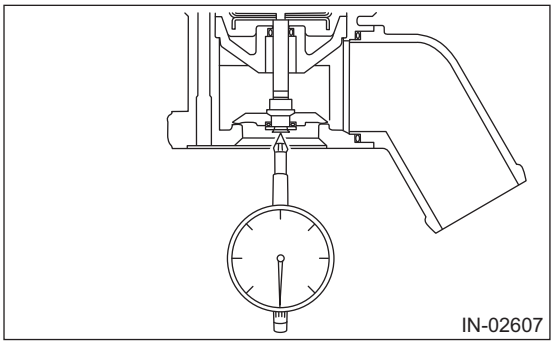
C: INSPECTION

1. AIR BY-PASS VALVE

1) Check that the air by-pass valve has no deformation, cracks or other damages.
2) Connect the Mighty Vac to the nipple (A) of the air by-pass valve.



3) Using the Mighty Vac, generate the vacuum pressure to –93.3 kPa (–0.95 kg/cm^2, –13.5 psi). Check that the Mighty Vac gauge needle indication holds 10 seconds without dropping down to lower than –92.6 kPa (–0.94 kg/cm^2, –13.4 psi).
4) Set a dial gauge to the end of valve rod of the air by-pass valve.



5) Slowly generate vacuum pressure with the Mighty Vac and check the pressure when the needle of the dial gauge (valve stroke) becomes 0.5 mm (0.02 in). If it is not within the standard, replace the air by-pass valve.

Opening pressure (valve stroke 0.5 mm (0.02 in)):
Standard
–62.7 — –70.7 kPa (–0.64 — –0.72 kg/cm^2, –9.09 — –10.3 psi)

6) Increase vacuum pressure more than 5) and check the pressure when the needle of the dial gauge (valve stroke) becomes 7.5 mm (0.3 in). If it is not within the standard, replace the air by-pass valve.

Full open pressure (valve stroke 7.5 mm (0.3 in)):
Standard
–102.7 — –117.3 kPa (–1.05 — –1.20 kg/cm^2, –14.9 — –17.0 psi)

2. OTHER INSPECTIONS

Check that the vacuum hose and air by-pass pipe have no cracks, damage or loose part.

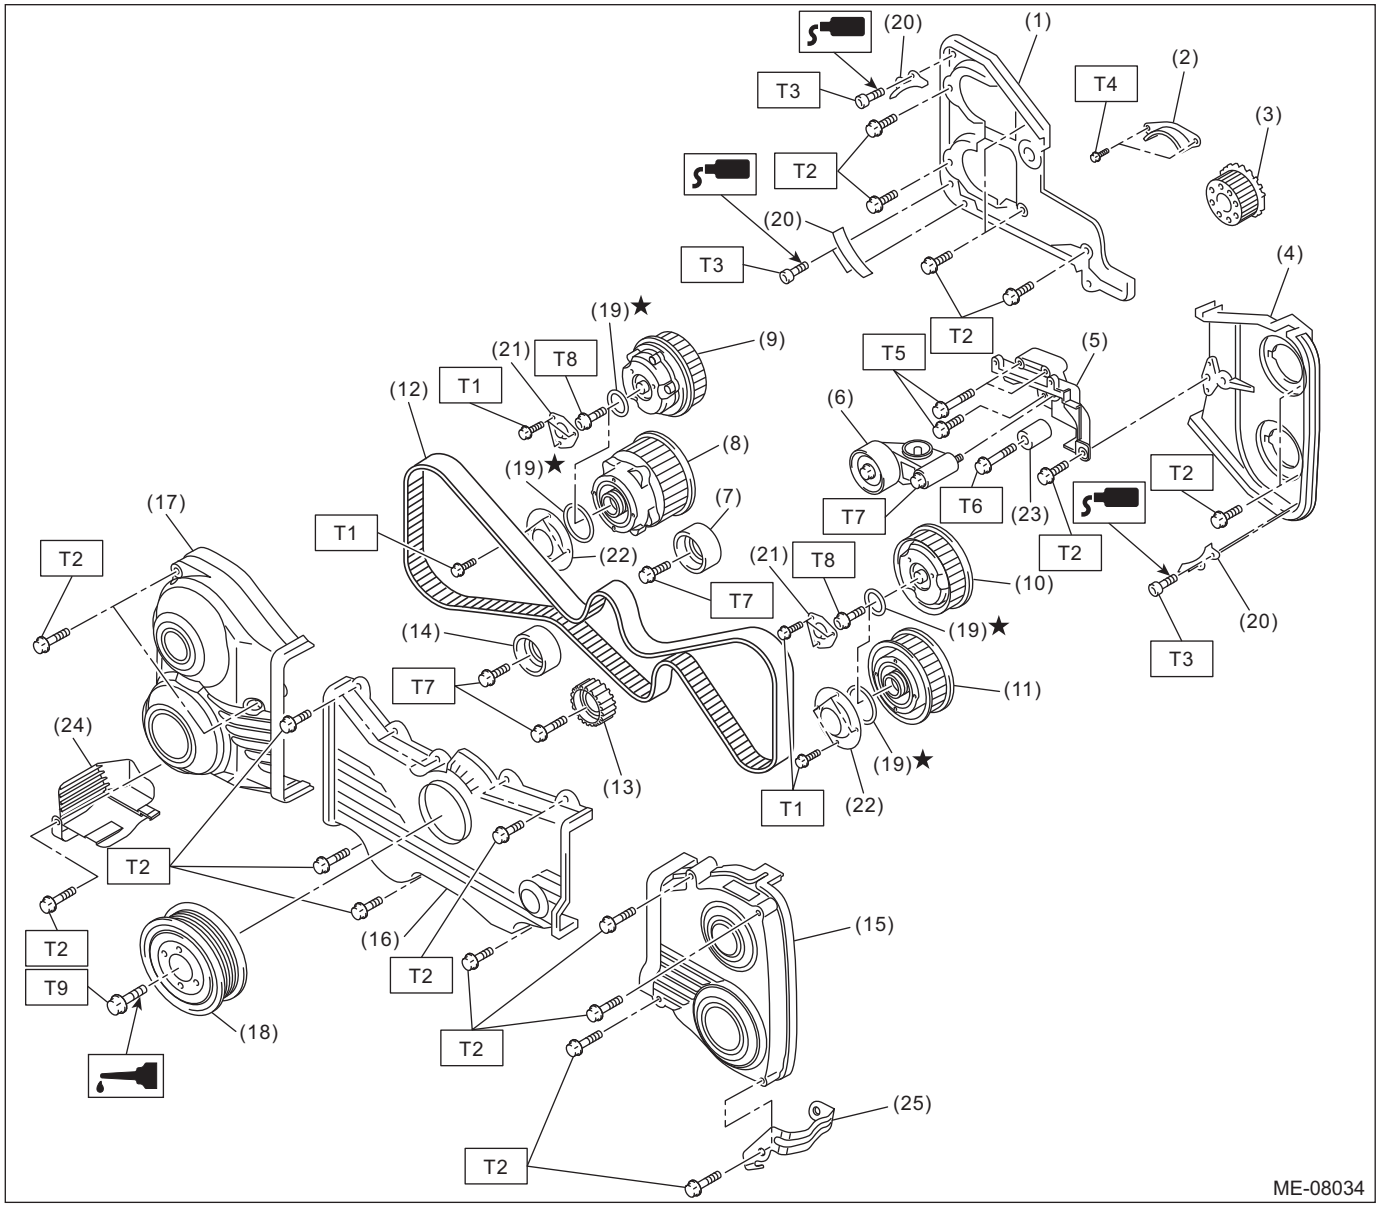
B: COMPONENT

1. TIMING BELT

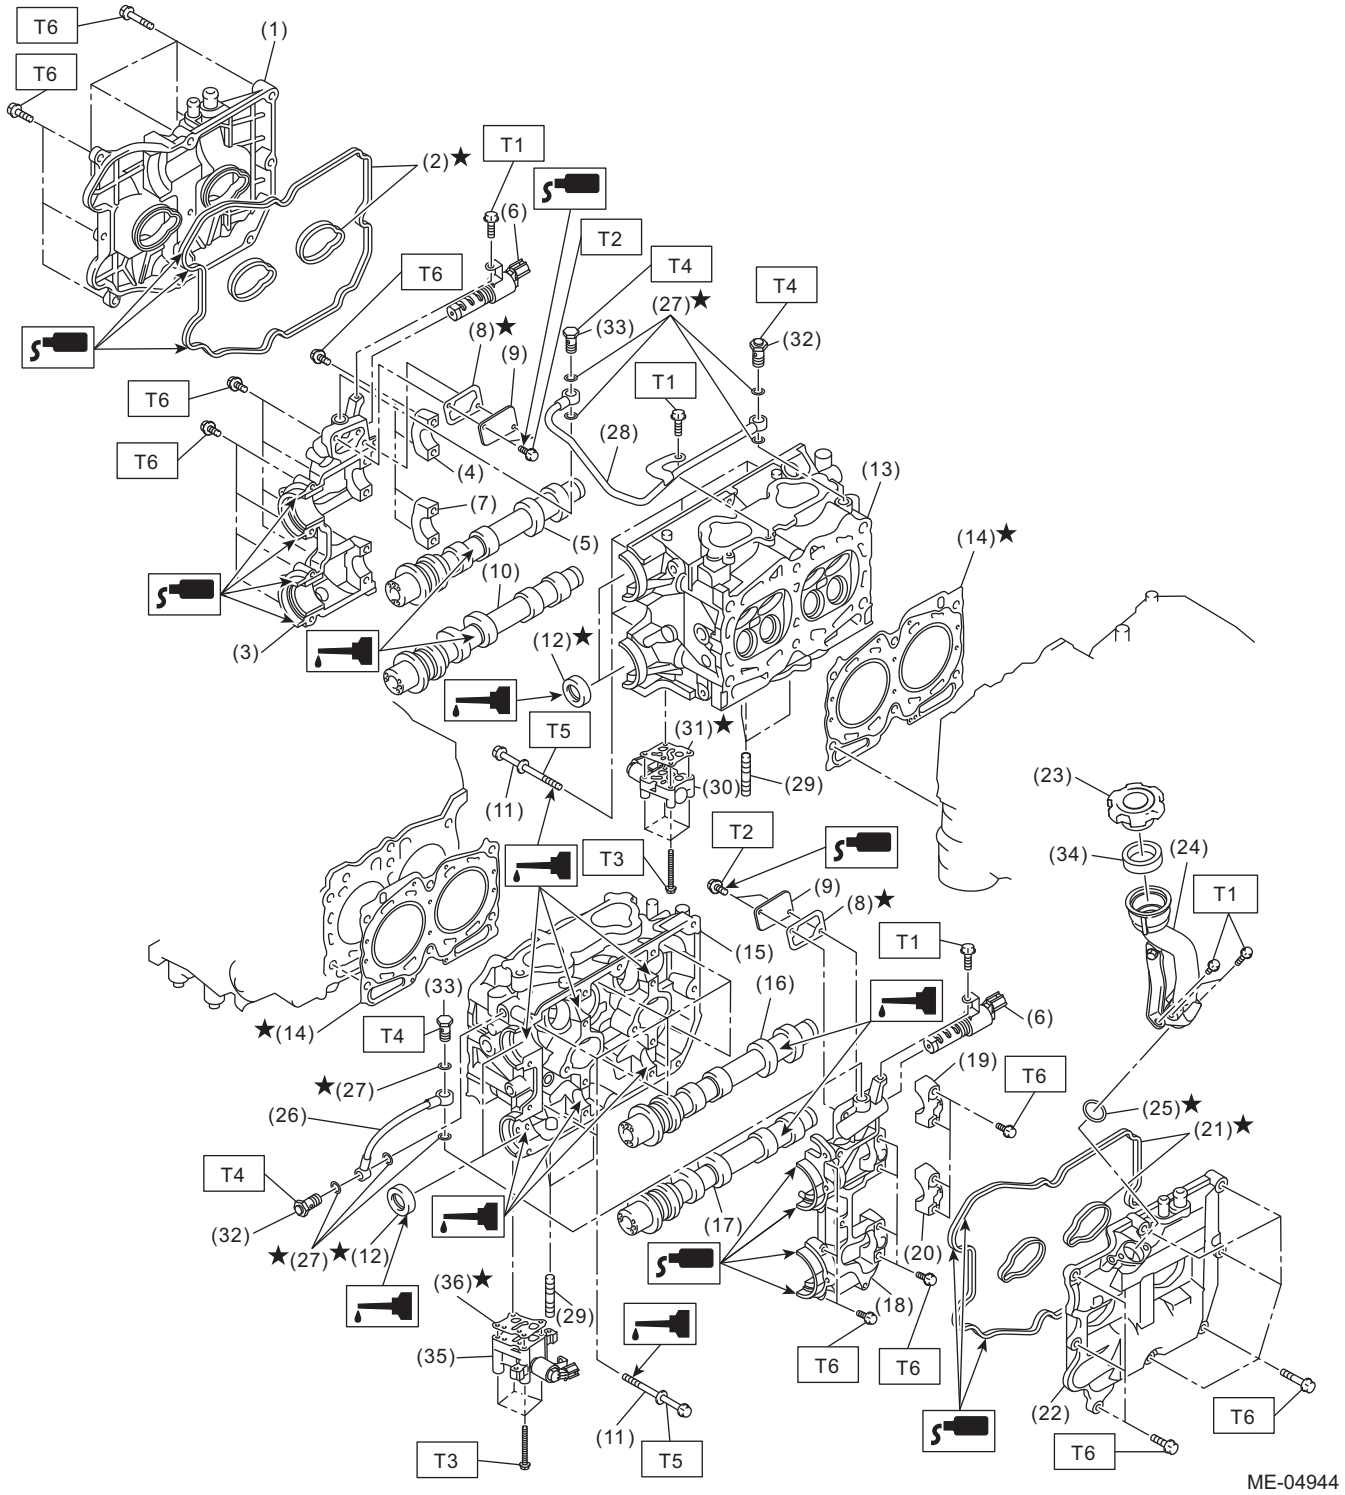


(1) Timing belt cover No. 2 RH
(2) Timing belt guide
(3) Crank sprocket
(4) Timing belt cover No. 2 LH
(5) Tensioner bracket
(6) Automatic belt tension adjuster ASSY
(7) Belt idler
(8) Exhaust cam sprocket RH
(9) Intake cam sprocket RH
(10) Intake cam sprocket LH
(11) Exhaust cam sprocket LH
(12) Timing belt
(13) Belt idler No. 2
(14) Belt idler
(15) Timing belt cover LH
(16) Front belt cover
(17) Timing belt cover RH
(18) Crank pulley
(19) O-ring
(20) Timing belt guide
(21) Intake actuator cover
(22) Exhaust actuator cover
(23) Belt idler
(24) Engine harness cover
(25) Engine harness stay

Tightening torque: N·m (kgf-m, ft-lb)

T1: 3.4 (0.3, 2.5)
T2: 5 (0.5, 3.7)
T3: 6.4 (0.7, 4.7)
T4: 9.75 (1.0, 7.2)
T5: 24.5 (2.5, 18.1)
T6: 25 (2.5, 18.4)
T7: 39 (4.0, 28.8)
T8: <Ref. to ME(STI)-61, INSTALLATION, Cam Sprocket.>
T9: <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>

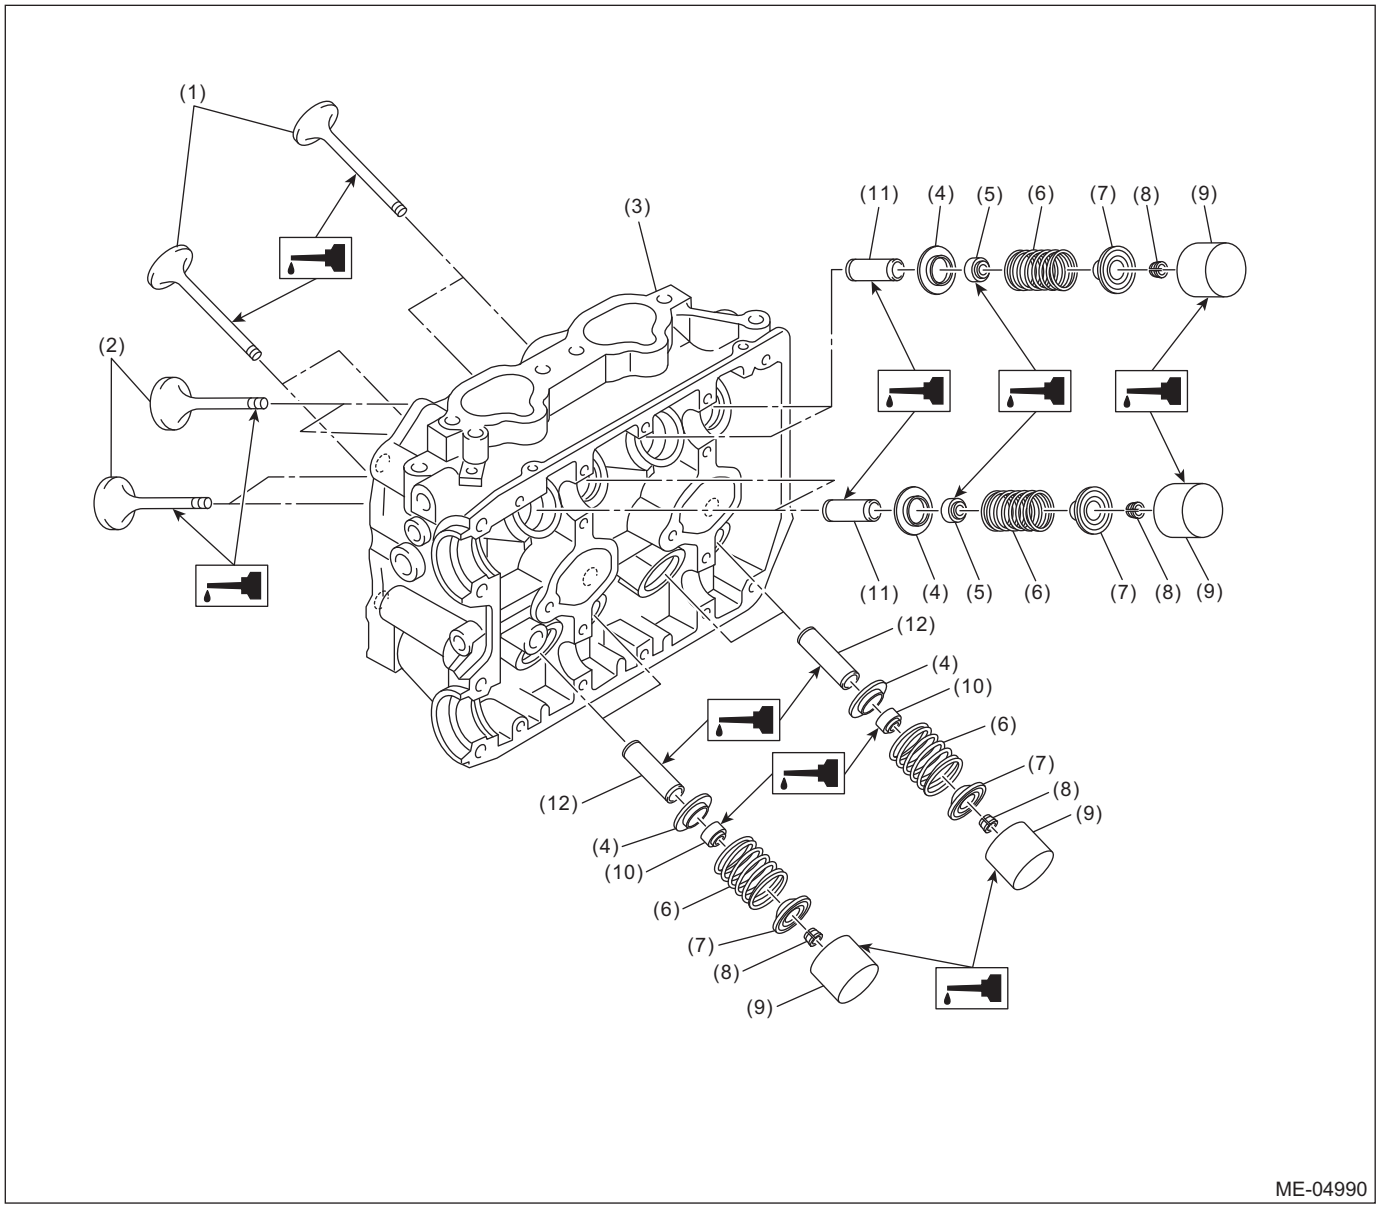
2. CYLINDER HEAD AND CAMSHAFT



(1) Rocker cover RH
(2) Rocker cover gasket RH
(3) Front camshaft cap RH
(4) Intake camshaft cap RH
(5) Intake camshaft RH
(6) Intake oil flow control solenoid valve
(7) Exhaust camshaft cap RH
(8) Gasket
(9) Oil return cover
(10) Exhaust camshaft RH
(11) Cylinder head bolt
(12) Oil seal
(13) Cylinder head RH
(14) Cylinder head gasket
(15) Cylinder head LH
(16) Intake camshaft LH
(17) Exhaust camshaft LH
(18) Front camshaft cap LH
(19) Intake camshaft cap LH
(20) Exhaust camshaft cap LH
(21) Rocker cover gasket LH
(22) Rocker cover LH
(23) Oil filler cap
(24) Oil filler duct
(25) O-ring
(26) Oil pipe LH
(27) Gasket
(28) Oil pipe RH
(29) Stud bolt
(30) Exhaust oil flow control solenoid valve RH
(31) Gasket RH
(32) Union bolt with filter (with protrusion)
(33) Union bolt without filter (without protrusion)
(34) Gasket
(35) Exhaust oil flow control solenoid valve LH
(36) Gasket LH

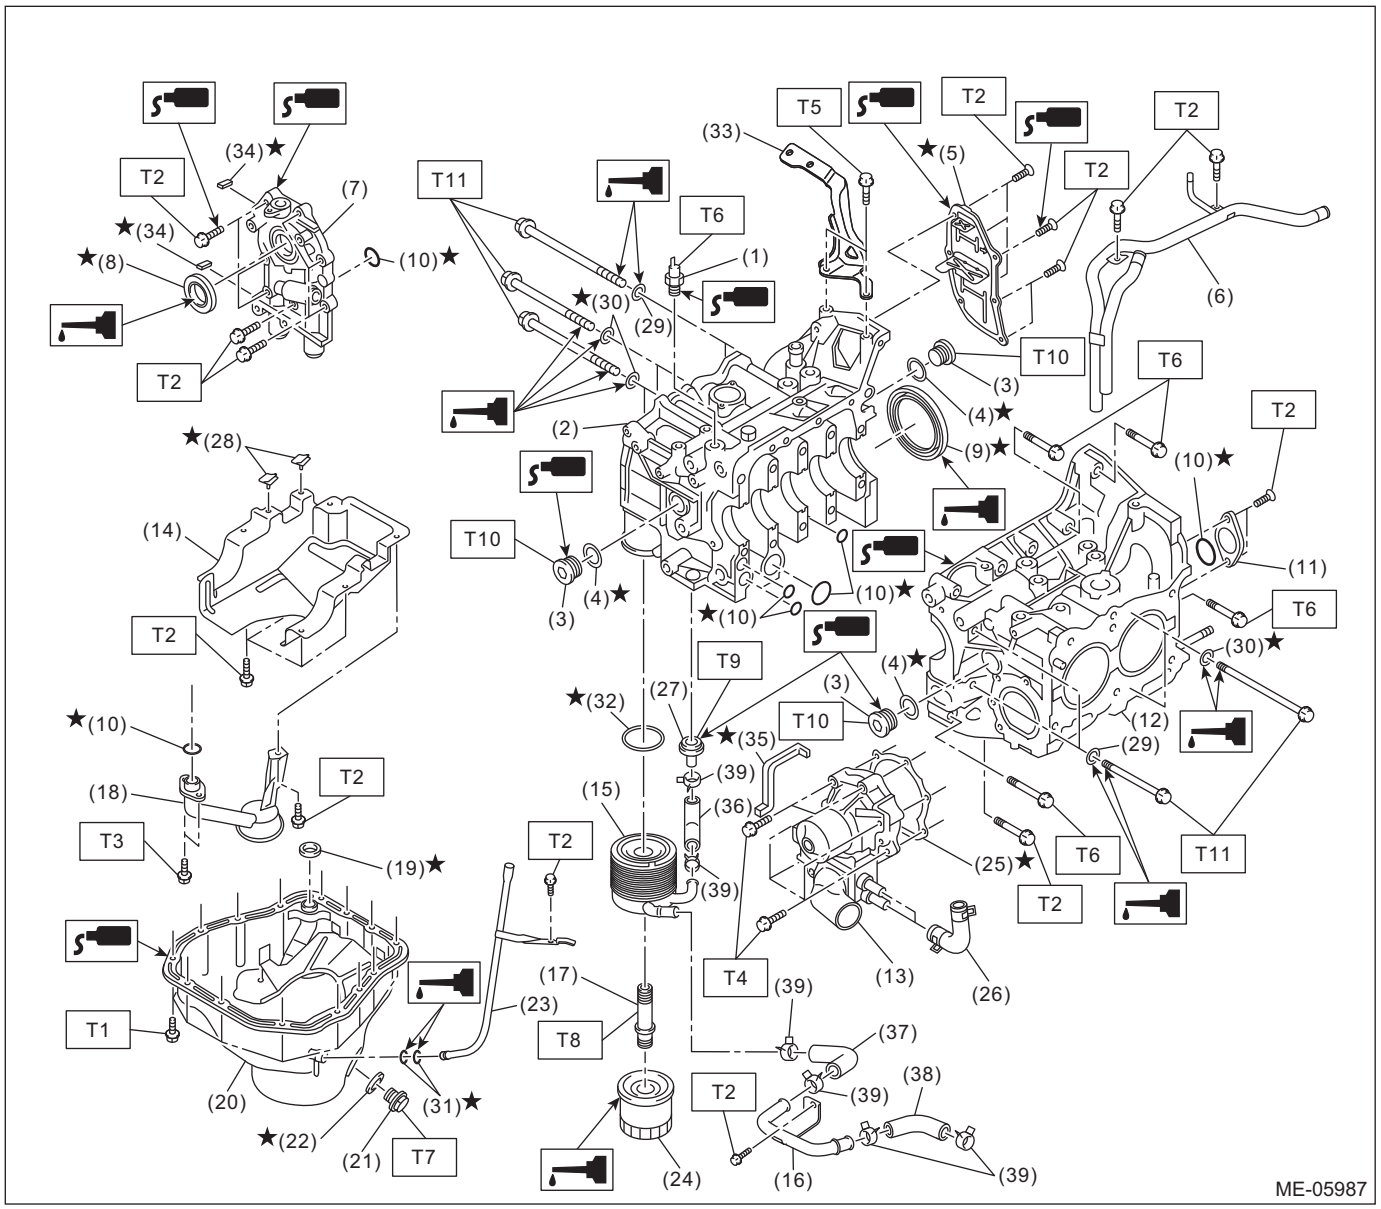
Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 9 (0.9, 6.6)
T3: 10 (1.0, 7.4)
T4: 31.5 (3.2, 23.2)
T5: <Ref. to ME(STI)-72, INSTALLATION, Cylinder Head.>
T6: <Ref. to ME(STI)-65, INSTALLATION, Camshaft.>

3. CYLINDER HEAD AND VALVE ASSEMBLY



(1) Exhaust valve
(2) Intake valve
(3) Cylinder head
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Valve spring retainer
(8) Valve spring retainer key
(9) Valve lifter
(10) Exhaust valve oil seal
(11) Intake valve guide
(12) Exhaust valve guide

4. CYLINDER BLOCK



(1) Oil pressure switch
(2) Cylinder block RH
(3) Service hole plug
(19) Gasket
(20) Oil pan
(21) Drain plug
(37) Oil cooler hose B
(38) Oil cooler hose C
(39) Clip

(4) Gasket
(5) Oil separator cover
(6) Water by-pass pipe
(7) Oil pump
(8) Front oil seal
(9) Rear oil seal
(10) O-ring
(11) Service hole cover
(12) Cylinder block LH
(13) Water pump
(14) Baffle plate
(15) Oil cooler
(16) Oil cooler pipe
(17) Connector
(18) Oil strainer
(22) Drain plug gasket
(23) Oil level gauge guide
(24) Oil filter
(25) Gasket
(26) Water pump hose
(27) Nipple
(28) Seal
(29) Washer
(30) Seal washer
(31) O-ring
(32) Gasket
(33) Intercooler stay RH No. 2 (engine rear hanger)
(34) Oil pump seal
(35) Water pump sealing
(36) Oil cooler hose A

Tightening torque: N·m (kgf-m, ft-lb)	
T1:	*5 (0.5, 3.7)*
T2:	*6.4 (0.7, 4.7)*
T3:	*10 (1.0, 7.4)*
T4:	*First 12 (1.2, 8.9)*
	Second 12 (1.2, 8.9)

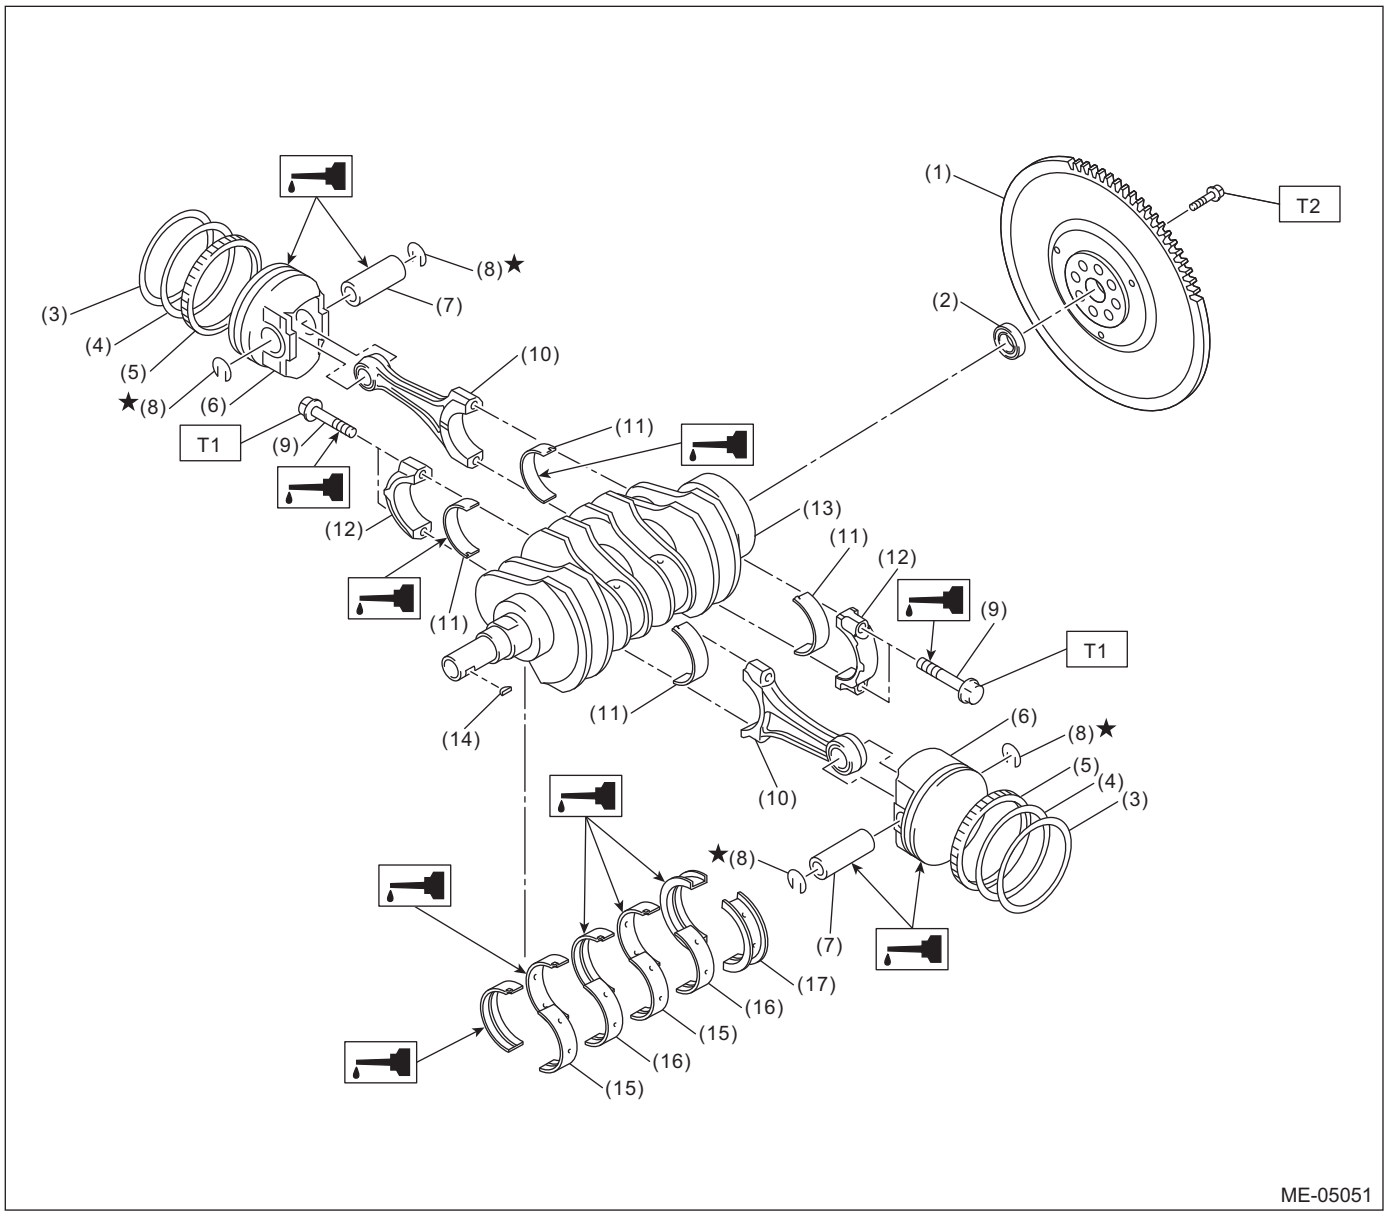
T11:	*<Ref. to ME(STI)-83, INSTALLATION, Cylinder Block.>*

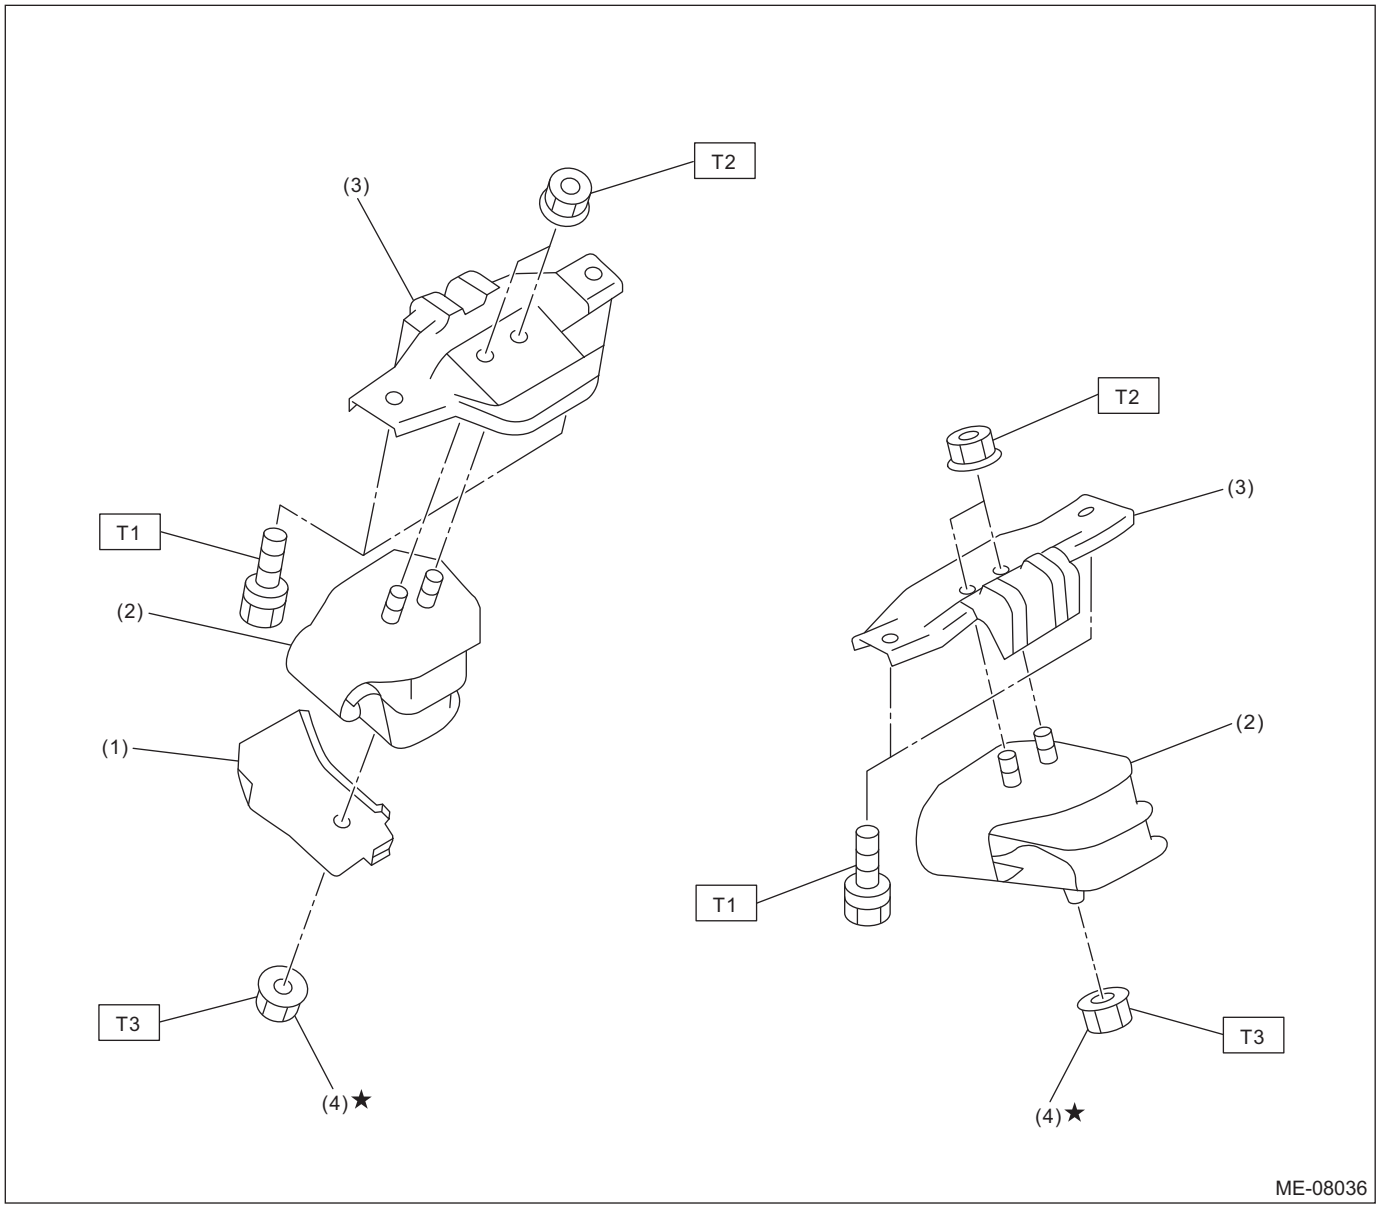
5. CRANKSHAFT AND PISTON



(1) Flywheel
(2) Ball bearing
(3) Top ring
(4) Second ring
(5) Oil ring
(6) Piston
(7) Piston pin
(8) Snap ring
(9) Connecting rod bolt
(10) Connecting rod
(11) Connecting rod bearing
(12) Connecting rod cap
(13) Crankshaft
(14) Woodruff key
(15) Crankshaft bearing #1, #3
(16) Crankshaft bearing #2, #4
(17) Crankshaft bearing #5

Tightening torque: N·m (kgf-m, ft-lb)
T1: 52 (5.3, 38.4)
T2: <Ref. to CL-15, INSTALLATION, Flywheel.>

6. ENGINE MOUNTING



(1)	Heat shield cover	(3)	Front engine mounting bracket
(2)	Front cushion rubber	(4)	Nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 42 (4.3, 31.0)
T3: 60 (6.1, 44.3)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.

- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use. When lifting up the vehicle, make sure to support the vehicle at the jack-up points.
- Be careful not to let any oil or grease contact the clutch disc, flywheel or timing belt.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil when being assembled.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498267600	498267600	CYLINDER HEAD TABLE	• Used for replacing valve guides. • Used for removing and installing valve spring.
 ST-498457000	498457000	ENGINE STAND ADAPTER RH	Used together with ENGINE STAND (499817100).
 ST-498457100	498457100	ENGINE STAND ADAPTER LH	Used together with ENGINE STAND (499817100).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-498747300	498747300	PISTON GUIDE	Used for installing the piston into the cylinder.
 ST-498857100	498857100	VALVE OIL SEAL GUIDE	Used for press-fitting of intake valve guide oil seals and exhaust valve guide oil seals.
 ST-499017100	499017100	PISTON PIN GUIDE	Used for installing piston pin, piston and connecting rod.
 ST-499097700	499097700	PISTON PIN REMOVER ASSY	Used for removing piston pin.
 ST-499587100	499587100	OIL SEAL INSTALLER	Used for installing oil pump oil seal.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499587200	499587200	CRANKSHAFT OIL SEAL INSTALLER	• Used for installing crankshaft oil seal. • Used together with CRANKSHAFT OIL SEAL GUIDE (499597100).
 ST-499587600	499587600	OIL SEAL INSTALLER	Used for installing the camshaft oil seal.
 ST-499597100	499597100	CRANKSHAFT OIL SEAL GUIDE	• Used for installing crankshaft oil seal. • Used together with CRANKSHAFT OIL SEAL INSTALLER (499587200).
 ST-499597200	499597200	OIL SEAL GUIDE	• Used for installing the camshaft oil seal. • Used together with OIL SEAL INSTALLER (499587600).
 ST-499718000	499718000	VALVE SPRING REMOVER	Used for removing and installing valve spring.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499767200	499767200	VALVE GUIDE REMOVER	Used for removing valve guides.
 ST-499767400	499767400	VALVE GUIDE REAMER	Used for reaming valve guides.
 ST-499817100	499817100	ENGINE STAND	• Used for disassembling and assembling engine. • Used together with ENGINE STAND ADAPTER RH (498457000) & LH (498457100).
 ST-499977100	499977100	CRANK PULLEY WRENCH	Used for removing and installing the crank pulley.
 ST-499977500	499977500	CAM SPROCKET WRENCH	Used for removing and installing intake cam sprocket and exhaust cam sprocket.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499987500	499987500	CRANKSHAFT SOCKET	Used for rotating crankshaft.
 ST18251AA020	18251AA020	VALVE GUIDE ADJUSTER	Used for installing intake valve guides and exhaust valve guides.
 ST18471AA000	18471AA000	FUEL PIPE ADAPTER	Used for inspecting the fuel pressure.
 ST42099AE000	42099AE000	QUICK CONNECTOR RELEASE	Used for removing the quick connector.
 ST42075AG690	42075AG690	FUEL HOSE	Used for inspecting the fuel pressure. NOTE: This is the SUBARU genuine part.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

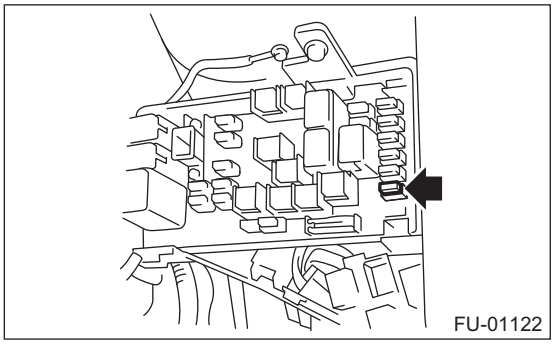
TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.
Timing light	Used for measuring ignition timing.
Vacuum gauge	Used for measuring intake manifold vacuum.
Oil pressure gauge	Used for measuring engine oil pressure.
Fuel pressure gauge	Used for measuring fuel pressure.
Thickness gauge	Used for various inspections.
DST-i	Used together with Subaru Select Monitor 4.
Clamp pincer	• Used for installing the PCV hose, vacuum hose and water tank pipe assembly. • This tool is made by OETIKER. Product No. 14100134

2. Compression

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

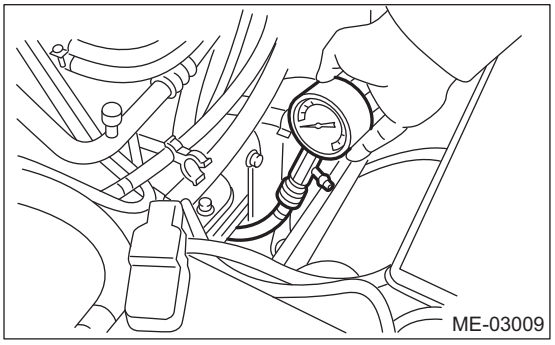
NOTE:
• Before checking the compression pressure, the compression condition of each cylinder can be confirmed as a guide by using the compression measurement mode in Subaru Select Monitor. <Ref. to EN(STI)(diag)-80, OPERATION, Active Test.>
• In the compression measurement mode, the compression condition is judged by each cylinder speed. The high speed cylinder has low compression pressure and low speed cylinder has high compression pressure.
1) After warming-up the engine, turn the ignition switch to OFF.
2) Make sure that the battery is fully charged.
3) Remove the fuse of fuel pump from main fuse box.



FU-01122

4) Start the engine and run it until it stalls.
5) After the engine stalls, crank it for five more seconds.
6) Turn the ignition switch to OFF.
7) Remove all spark plugs. <Ref. to IG(STI)-5, REMOVAL, Spark Plug.>
8) Depress the accelerator pedal to full throttle.
9) Check the starter motor for satisfactory performance and operation.
10) Install the compression gauge to the spark plug hole.

NOTE:
When using a screw-in type compression gauge, the screw should be less than 18 mm (0.71 in) long.



ME-03009

11) Crank the engine by starter motor and read the value when the needle of the compression gauge becomes stable.

NOTE:
• Perform at least two measurements per cylinder, and make sure that the values are correct.
• If the compression pressure is out of standard, check or adjust the pistons, valves and cylinders.

Compression pressure:
At 200 — 300 r/min
Standard
981 — 1,177 kPa (10 — 12 kg/cm^2, 142 — 171 psi)
Difference between cylinders
49 kPa (0.5 kg/cm^2, 7 psi) or less

12) After inspection, install the related parts in the reverse order of removal.

3. Idle Speed

A: INSPECTION

1) Before checking the idle speed, check the following item:
   (1) Check the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2) Warm up the engine.
3) Read the engine idle speed using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>

NOTE:
• Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted.
• If idle speed is out of standard, refer to the General Diagnosis Table under “Engine Control System”. <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>
   (1) Check the idle speed when no-loaded. (Headlight, heater fan, rear defroster, radiator fan, A/C and etc. are OFF)

Idle speed (no load and gear shift lever in neutral position):
Standard
700±100 r/min
   (2) Check the idle speed when loaded. (Turn the A/C switch to ON and operate the compressor for at least one minute before measurement.)

Idle speed (A/C ON and gear shift lever in neutral position):
Standard
750±100 r/min

4. Ignition Timing

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

1. METHOD WITH SUBARU SELECT MONITOR

1) Before checking the ignition timing, check the following item:
   (1) Check the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2) Warm up the engine.
3) Read the ignition timing using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>

NOTE:
If ignition timing is out of standard, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>

Ignition timing [BTDC/{r/min}]:
Standard
15°±10°/700

2. METHOD WITH TIMING LIGHT

1) Before checking the ignition timing, check the following item:
   (1) Check the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2) Warm up the engine.
3) Stop the engine, and turn the ignition switch to OFF.
4) Disconnect the ground cable from battery.
5) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
6) Remove the air cleaner case. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
7) Connect the timing light to the power wire of #1 ignition coil.
8) Install the air cleaner case. <Ref. to IN(STI)-8, INSTALLATION, Air Cleaner Case.>
9) Connect the battery ground terminal.
10) Start the engine, turn the timing light to the crank pulley, and check the ignition timing through the timing belt cover gauge.

NOTE:
If ignition timing is out of standard, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>

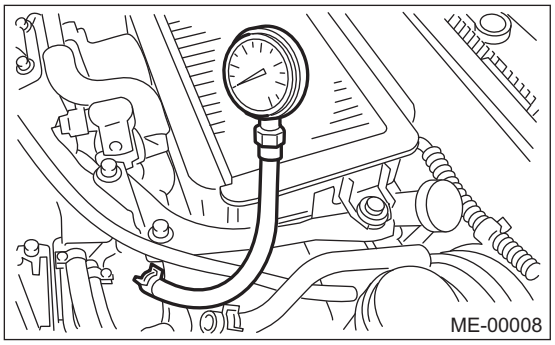
Ignition timing [BTDC/{r/min}]:
Standard
15°±10°/700

11) After inspection, install the related parts in the reverse order of removal.

5. Intake Manifold Vacuum

A: INSPECTION

1) Warm up the engine.
2) Disconnect the brake booster vacuum hose from the intake manifold, and attach the vacuum gauge.



3) Keep the engine at idle speed and read the vacuum gauge indication.

NOTE:
Condition of engine inside can be diagnosed by observing the behavior of the vacuum gauge needle as described in table below.

Intake manifold vacuum (at idling, A/C OFF):
Standard
–65.3 kPa (–490 mmHg, –19.29 inHg) or more

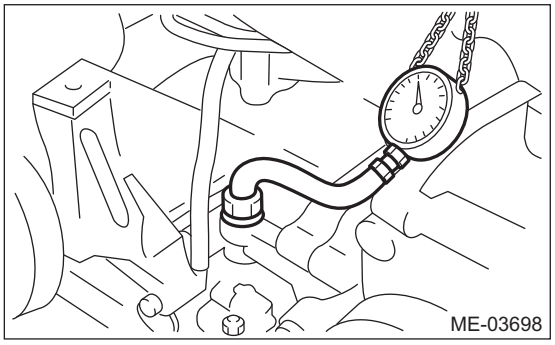
4) After inspection, install the related parts in the reverse order of removal.

Diagnosis of engine condition by inspection of intake manifold vacuum	
Vacuum gauge needle behavior	Possible engine condition
1. Needle is steady but lower than standard value. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket, disconnection or damage of vacuum hose
2. Needle intermittently drops to position lower than standard value.	Leakage around cylinder
3. Needle drops suddenly and intermittently from standard value.	Sticky valve
4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
5. Needle vibrates above and below standard value in narrow range.	Defective ignition system

6. Engine Oil Pressure

A: INSPECTION

1) Disconnect the ground cable from battery.
2) Remove the oil pressure switch. <Ref. to LU(STI)-21, REMOVAL, Oil Pressure Switch.>
3) Install the oil pressure gauge to cylinder block.



4) Install the generator. <Ref. to SC(STI)-18, INSTALLATION, Generator.>
5) Connect the battery ground terminal.
6) Start the engine, and check the oil pressure.

NOTE:
• Standard value is based on an engine oil temperature of 80°C (176°F).
• If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(STI)-29, INSPECTION, Engine Lubrication System Trouble in General.>
• If the oil pressure warning light is ON and oil pressure is within specification, check the oil pressure switch. <Ref. to LU(STI)-29, INSPECTION, Engine Lubrication System Trouble in General.>

Engine oil pressure:
At 600 r/min
Standard
98 kPa (1.0 kg/cm^2, 14 psi) or more
At 6,000 r/min
Standard
392 kPa (4.0 kg/cm^2, 57 psi) or more

7) After inspection, install the related parts in the reverse order of removal.

7. Fuel Pressure

A: INSPECTION

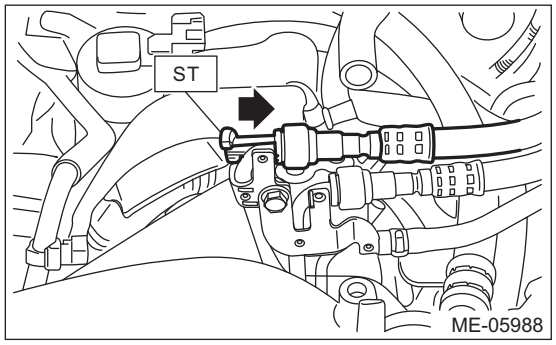
1) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.
3) Disconnect the fuel delivery hose from the fuel delivery pipe, and connect the fuel pressure gauge.

CAUTION:
• Be careful not to spill fuel.
• Catch the fuel from hoses using a container or cloth.

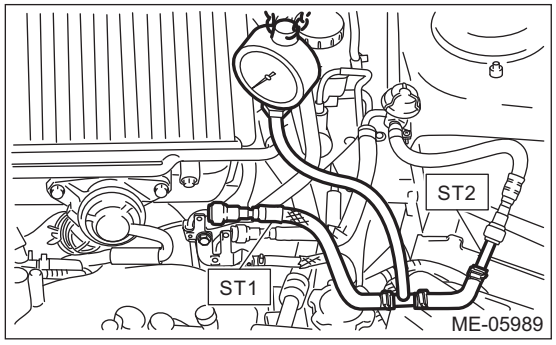
(1) Attach ST to the fuel delivery pipe and push ST in the direction of arrow mark to disconnect the quick connector of the fuel delivery hose.

ST 42099AE000 QUICK CONNECTOR RELEASE



(2) Connect the fuel pressure gauge with ST1 and ST2.

NOTE:
ST1 is a SUBARU genuine part.
ST1 42075AG690 FUEL HOSE
ST2 18471AA000 FUEL PIPE ADAPTER



4) Start the engine.
5) Check the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

NOTE:
• The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm^2, 1 to 3 psi) higher than standard values during high-altitude operations.
• If the fuel pressure is out of specification, check or replace the fuel pump, fuel line, pressure regulator & damper assembly, and pressure regulator vacuum hose.

Fuel pressure:
Standard
284 — 314 kPa (2.9 — 3.2 kg/cm^2, 41 — 46 psi)

6) After connecting the vacuum hose to the pressure regulator, check the fuel pressure again.

NOTE:
• The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm^2, 1 to 3 psi) higher than standard values during high-altitude operations.
• If the fuel pressure is out of specification, check or replace the fuel pump, fuel line, pressure regulator & damper assembly, and pressure regulator vacuum hose.

Fuel pressure:
Standard
230 — 260 kPa (2.4 — 2.7 kg/cm^2, 33 — 38 psi)

7) After inspection, install the related parts in the reverse order of removal.

CAUTION:
• Before removing the fuel pressure gauge, release the fuel pressure.
• Be careful not to spill fuel.
• Catch the fuel from hoses using a container or cloth.

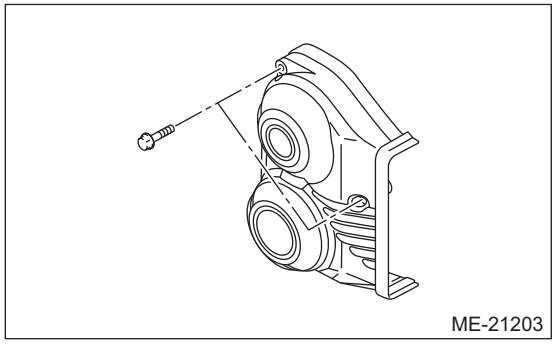
8. Valve Clearance

A: INSPECTION

CAUTION:
If engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

NOTE:
Inspection and adjustment of valve clearance should be performed while engine is cold.

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
3) Remove the bolts (2 places) which secures timing belt cover RH.



4) Lift up the vehicle.
5) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
6) Remove the remaining bolts which secure timing belt cover RH together with engine harness cover, then remove the timing belt cover RH.
7) Lower the vehicle.
8) When inspecting #1 and #3 cylinders
   (1) Remove the air cleaner case. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
   (2) Disconnect the connector (A) from the exhaust camshaft position sensor RH and the connector (B) form the exhaust oil flow control solenoid valve RH.

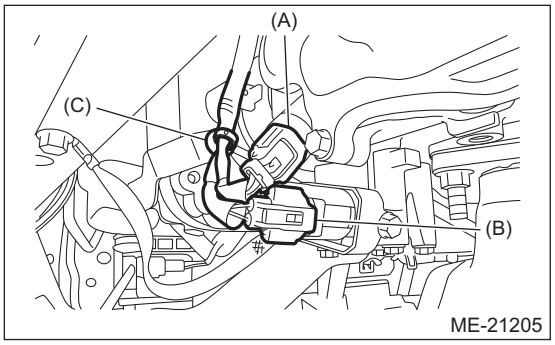
   (3) Remove the clip (A) which hold the engine harness to the rocker cover RH.

   (4) Remove the ignition coil. <Ref. to IG(STI)-8, REMOVAL, Ignition Coil.>
   (5) Place a suitable container under the vehicle.
   (6) Remove the tape (A) fixing the leak diagnosis connector harness, and disconnect the leak diagnosis connector from the engine harness.

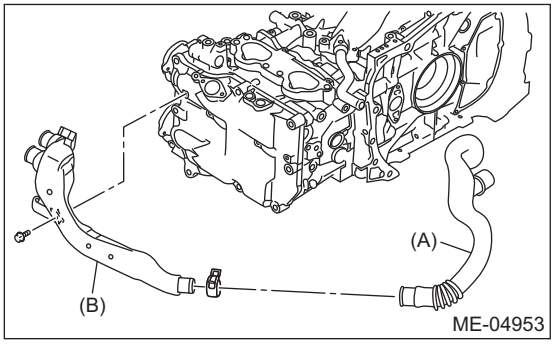
   (7) Unlock the leak diagnosis connector, and disconnect the PCV hose (A) and vacuum hose (B).

   (8) Remove the rocker cover RH.
9) When inspecting #2 and #4 cylinders
   (1) Remove the battery. <Ref. to SC(STI)-24, REMOVAL, Battery.>
   (2) Remove the secondary air pump. <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>
   (3) Disconnect the connector (A) from the exhaust camshaft position sensor LH and the connector (B) form the exhaust oil flow control solenoid valve LH.

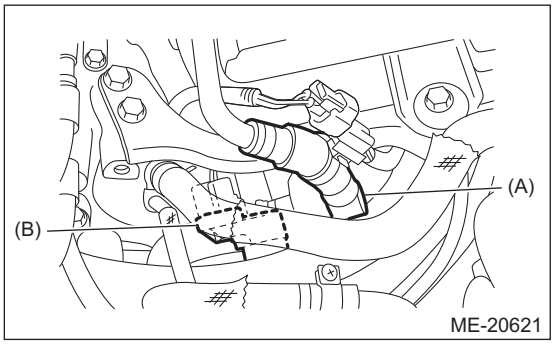
(4) Remove the clip (C) holding the engine harness.



(5) Remove the air duct B (B) from the rocker cover LH and the air duct A (A).



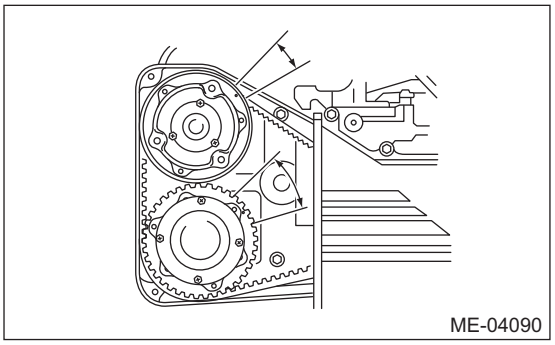
(6) Remove the ignition coil. <Ref. to IG(STI)-8, REMOVAL, Ignition Coil.>
(7) Place a suitable container under the vehicle.
(8) Unlock the leak diagnosis connector, and disconnect the PCV hose (A) and vacuum hose (B).



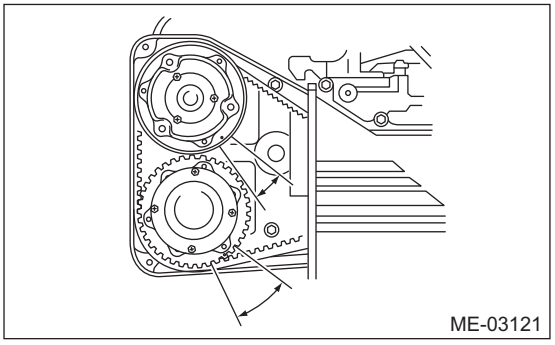
(9) Remove the rocker cover LH.
10) Turn the crank pulley clockwise until the round mark on the camshaft sprocket is set to position shown in the figure.

NOTE:
Turn the crank pulley using a socket wrench.

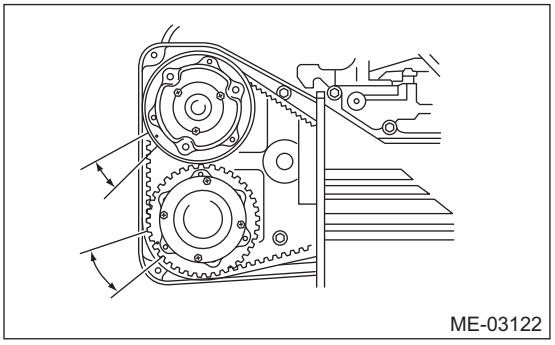
• Measurement of clearance of #1 cylinder intake valve and #3 cylinder exhaust valve



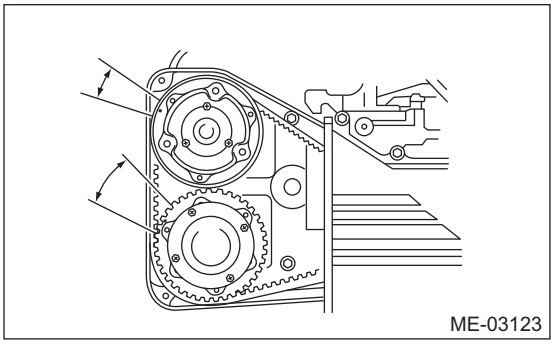
• Measurement of clearance of #2 cylinder exhaust valve and #3 cylinder intake valve



• Measurement of clearance of #2 cylinder intake valve and #4 cylinder exhaust valve



• Measurement of clearance of #1 cylinder exhaust valve and #4 cylinder intake valve

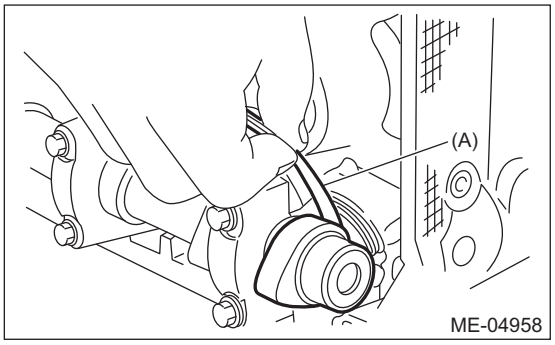


11) Measure the clearance of intake valve and exhaust valve using thickness gauge (A).

NOTE:
• Insert a thickness gauge in a direction as horizontal as possible with respect to the valve lifter.

• Lift up the vehicle, and then measure the exhaust valve clearances.
• If the measured value is not within the inspection value, take notes of the value in order to adjust the valve clearance later on.

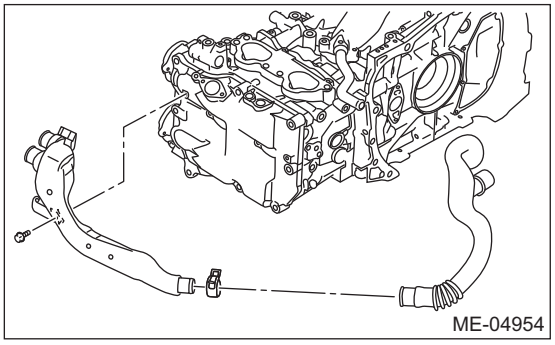
Valve clearance (inspection value):
Intake
$0.20^{+0.04}_{-0.06}$ mm ($0.0079^{+0.0016}_{-0.0024}$ in)
Exhaust
0.35±0.05 mm (0.0138±0.0020 in)



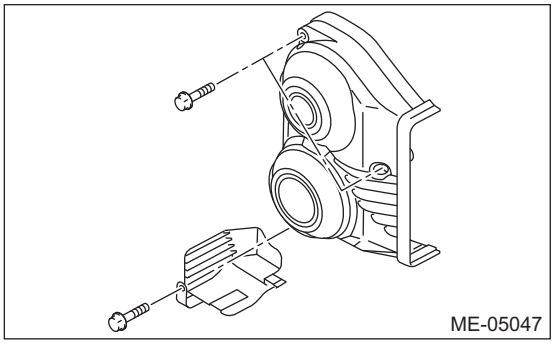
12) If necessary, adjust the valve clearance. <Ref. to ME(STI)-29, ADJUSTMENT, Valve Clearance.>
13) After inspection, install the related parts in the reverse order of removal.

NOTE:
Refer to “Camshaft” when installing the rocker cover. <Ref. to ME(STI)-65, INSTALLATION, Camshaft.>

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

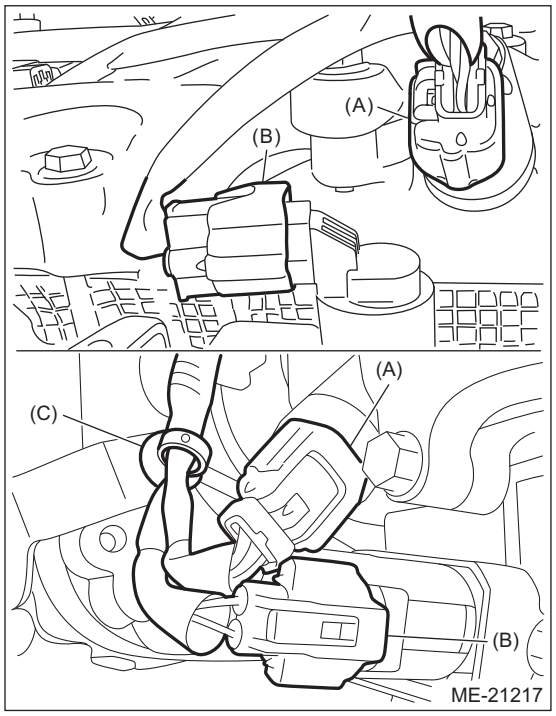


Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

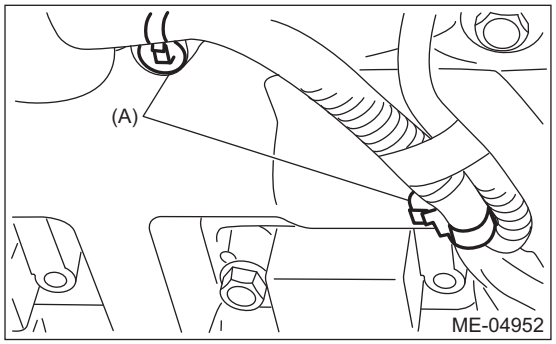


B: ADJUSTMENT

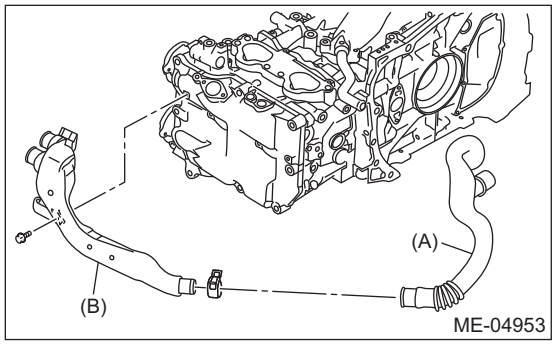
1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, REMOVAL, Engine Assembly.>
2) Measure all the valve clearances.
(1) Remove the timing belt cover RH. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
(2) Disconnect the connector (A) from the exhaust camshaft position sensor and the connector (B) from the exhaust oil flow control solenoid valve LH.
(3) Remove the clip (C) holding the engine harness.



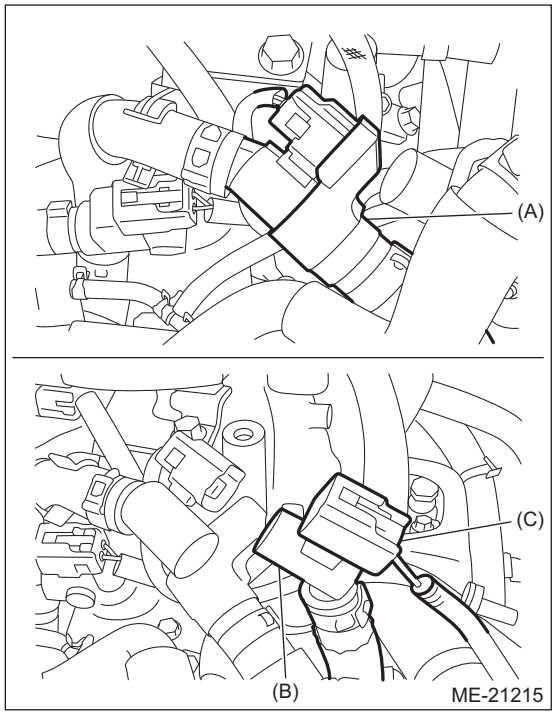
(4) Remove the clip (A) which hold the engine harness to the rocker cover RH.



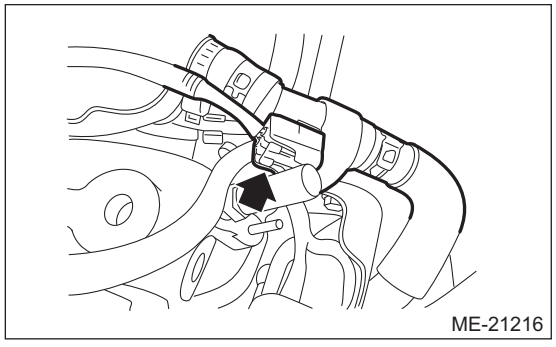
(5) Remove the air duct B (B) from the rocker cover LH and the air duct A (A).



(6) Remove the ignition coil. <Ref. to IG(STI)-8, REMOVAL, Ignition Coil.>
(7) Unlock the leak diagnosis connector, and disconnect the vacuum hose (A).
(8) Remove the leak diagnosis connector (C) from the PCV hose (B).



(9) Unlock the leak diagnosis connector, and disconnect the vacuum hose.

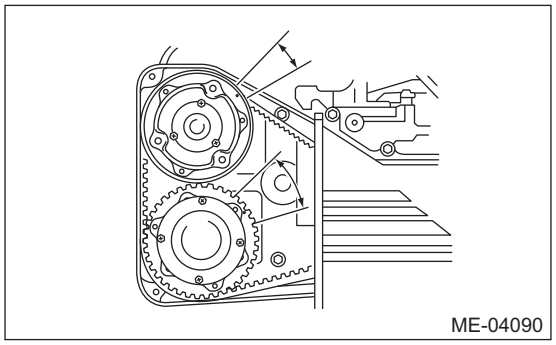


(10) Remove the rocker cover.

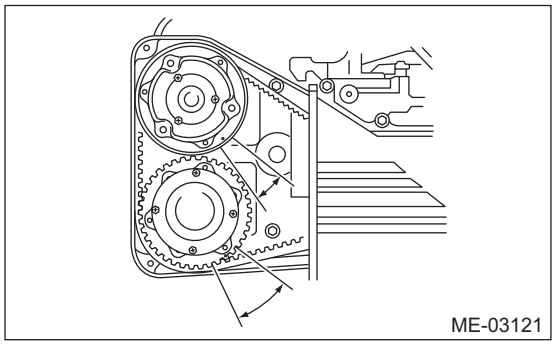
(11) Turn the crank pulley clockwise until the round mark on the camshaft sprocket is set to position shown in the figure.

NOTE:
Turn the crank pulley using a socket wrench.

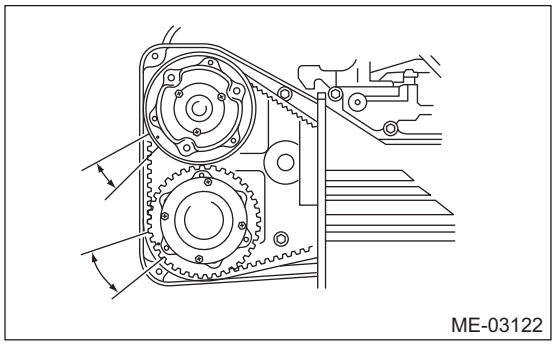
• Measurement of clearance of #1 cylinder intake valve and #3 cylinder exhaust valve



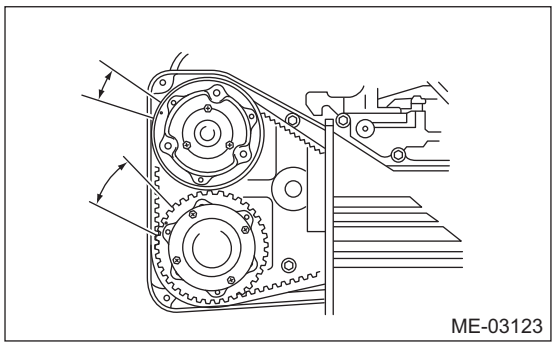
• Measurement of clearance of #2 cylinder exhaust valve and #3 cylinder intake valve



• Measurement of clearance of #2 cylinder intake valve and #4 cylinder exhaust valve

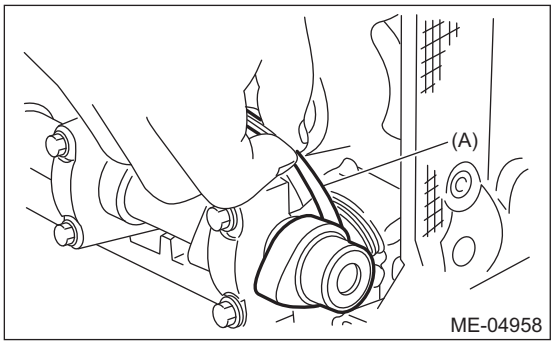


• Measurement of clearance of #1 cylinder exhaust valve and #4 cylinder intake valve

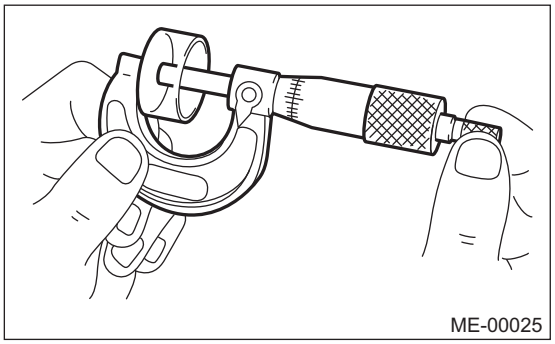


(12) Measure the clearance of intake valve and exhaust valve using thickness gauge (A).

NOTE:
• Insert a thickness gauge in a direction as horizontal as possible with respect to the valve lifter.
• Record the measured value of each valve clearance.



3) Remove the camshaft. <Ref. to ME(STI)-63, REMOVAL, Camshaft.>
4) Remove the valve lifter.
5) Measure the thickness of valve lifter using micrometer.



6) Select a valve lifter of suitable thickness using the measured valve clearance and valve lifter thickness, and install it.

NOTE:
Use a new valve lifter.

Unit: mm (in)
Intake valve: S = (V + T) – 0.19 (0.0075) Exhaust valve: S = (V + T) – 0.35 (0.0138)
S: Valve lifter thickness required V: Measured valve clearance T: Current valve lifter thickness

7) Install the camshaft. <Ref. to ME(STI)-65, INSTALLATION, Camshaft.>
8) Install the cam sprocket. <Ref. to ME(STI)-61, INSTALLATION, Cam Sprocket.>
9) Install the timing belt. <Ref. to ME(STI)-55, TIMING BELT, INSTALLATION, Timing Belt.>
10) Measure all valves for valve clearance again at this time. If the valve clearance is not within the adjustment value, repeat the procedure over again from step 3).

Valve clearance (adjustment value):
Intake
$0.20^{+0.01}_{-0.03}$ mm ($0.0079^{+0.0004}_{-0.0012}$ in)
Exhaust
0.35 ± 0.02 mm (0.0138 ± 0.0008 in)

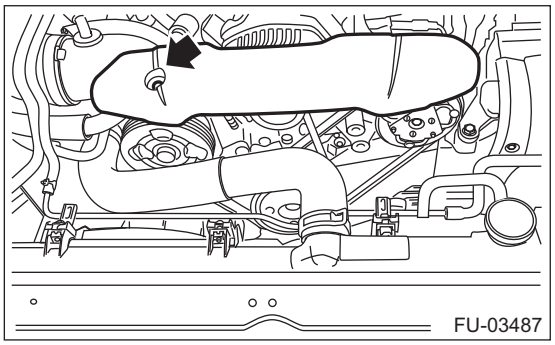
11) After adjustment, install the related parts in the reverse order of removal.

NOTE:
Refer to “Camshaft” when installing the related parts. <Ref. to ME(STI)-65, INSTALLATION, Camshaft.>

9. Engine Assembly

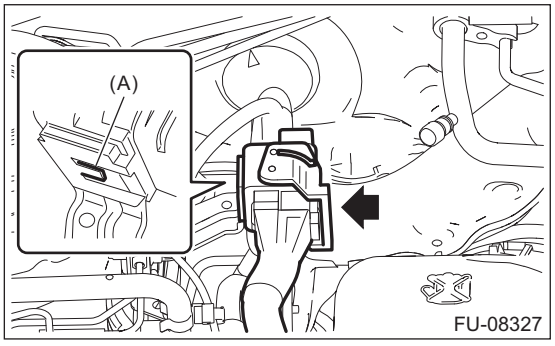
A: REMOVAL

1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
3) Remove the V-belt covers.

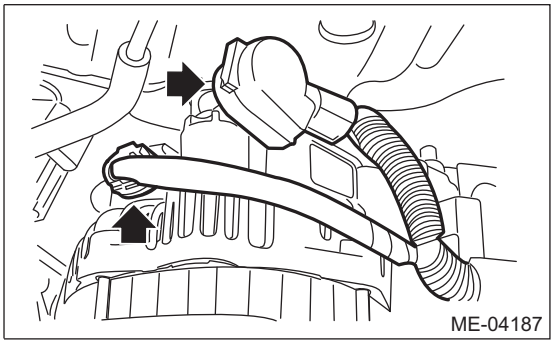


4) Collect the refrigerant from A/C system. <Ref. to AC-26, Refrigerant Recovery Procedure.>
5) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
6) Remove the battery. <Ref. to SC(STI)-24, REMOVAL, Battery.>
7) Open the fuel filler lid and remove the fuel filler cap.

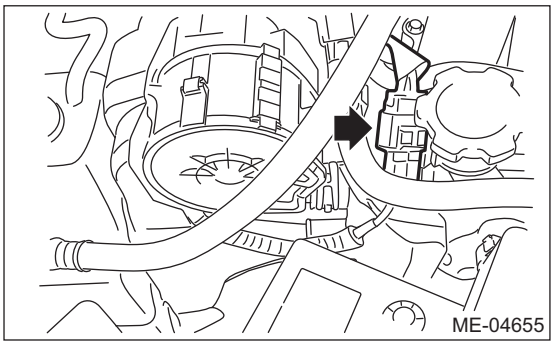
NOTE:
This operation is required to release the inner pressure of the fuel tank.
8) Remove the air intake duct and air cleaner case (rear). <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
9) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
10) Remove the radiator. <Ref. to CO(STI)-20, REMOVAL, Radiator.>
11) Remove the coolant filler tank. <Ref. to CO(STI)-29, REMOVAL, Coolant Filler Tank.>
12) Disconnect the bulkhead harness connectors from the engine harness connectors.
13) Lift the claw (A) and remove the engine harness connector from the engine harness bracket.



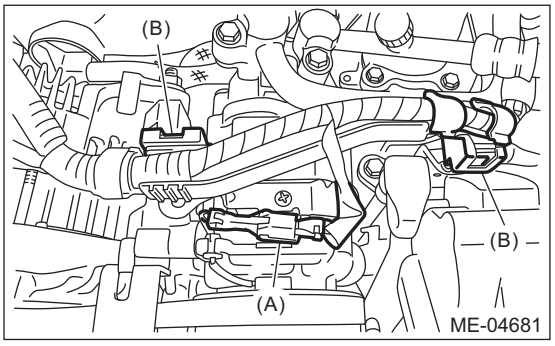
14) Disconnect the following connectors and terminals.
(1) Generator connector and terminal



(2) Secondary air pump connector

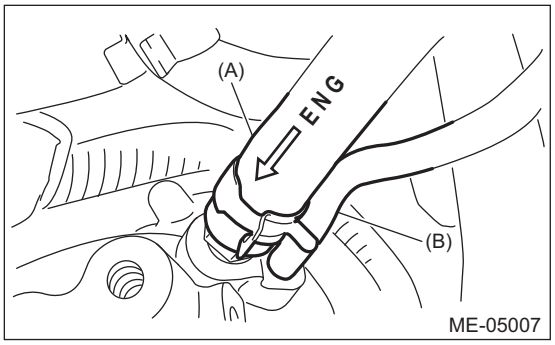


15) Disconnect connector (A) from the A/C compressor.
16) Remove the clip (B) securing the generator cord, and move the generator cord to the left side wheel apron.

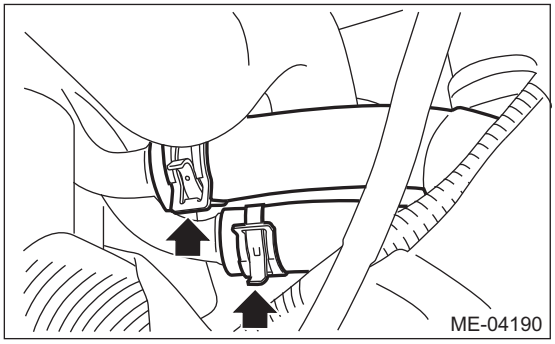


17) Disconnect the following hoses.
(1) A/C pressure hose <Ref. to AC-63, REMOVAL, Hose and Pipe.>

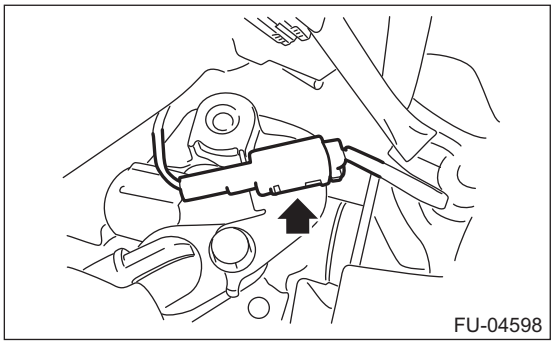
(2) Brake booster vacuum hose (A) and pressure regulator vacuum hose (B)



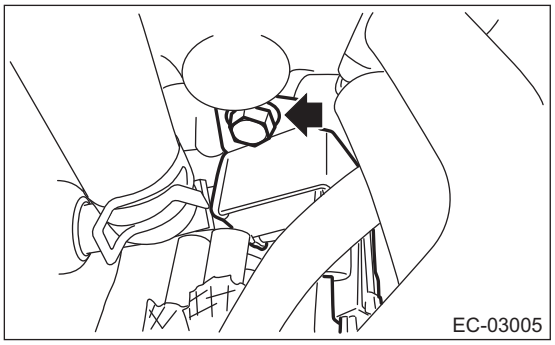
(3) Heater inlet hose and heater outlet hose



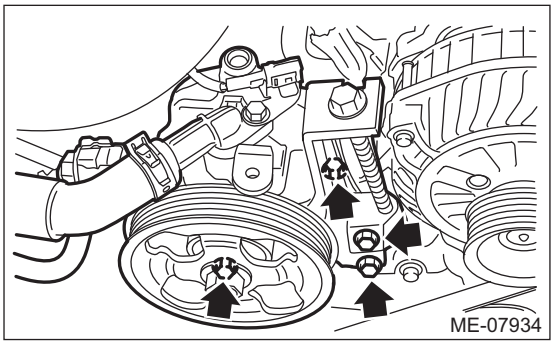
18) Remove the power steering pump.
(1) Remove the front side belt. <Ref. to ME(STI)-42, FRONT SIDE BELT, REMOVAL, V-belt.>
(2) Disconnect the connector from power steering pump switch.



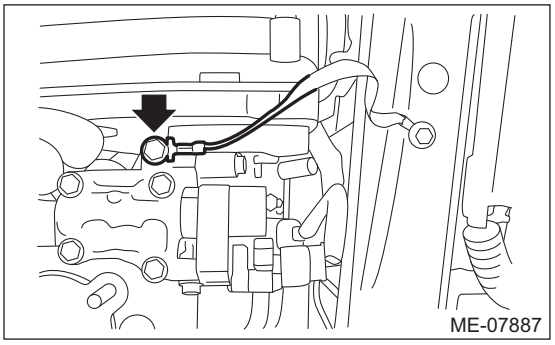
(3) Remove the bolt which holds purge control solenoid valve 1 onto intake manifold.



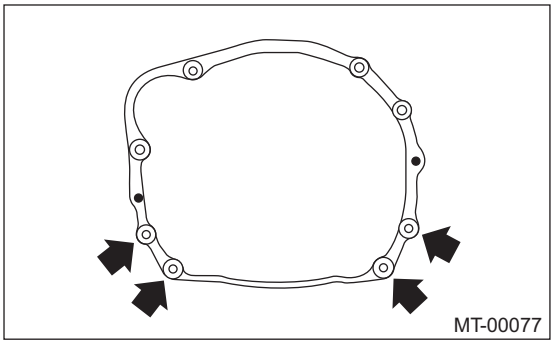
(4) Remove the power steering pump from the engine.



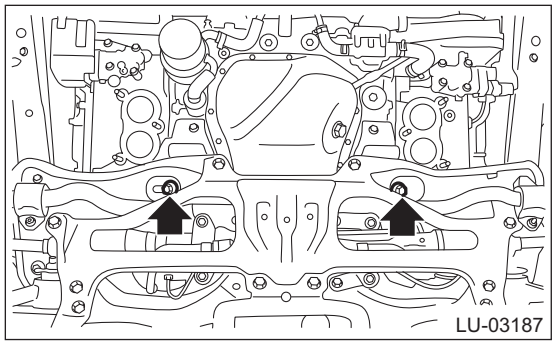
(5) Place the power steering pump on the right side wheel apron.
19) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
20) Remove the turbocharger. <Ref. to IN(STI)-15, REMOVAL, Turbocharger.>
21) Remove the joint pipe and front exhaust pipe. <Ref. to EX(STI)-11, REMOVAL, Joint Pipe.> <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
22) Disconnect the ground cable on the engine side.



23) Remove the bolts and nuts which hold the lower side of transmission to the engine.



24) Remove the nuts which secure the engine mounting to the front crossmember.

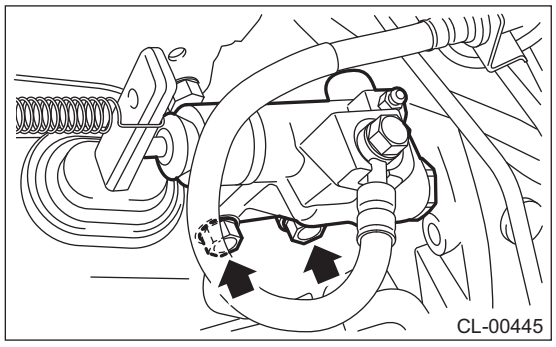


25) Lower the vehicle.
26) Remove the starter. <Ref. to SC(STI)-7, REMOVAL, Starter.>
27) Separate the release lever from the release bearing.

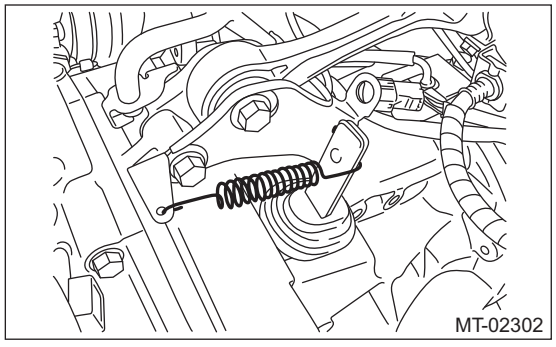
NOTE:
This procedure is required to remove engine with the release bearing assembled to the clutch cover.

(1) Remove the operating cylinder from the transmission.

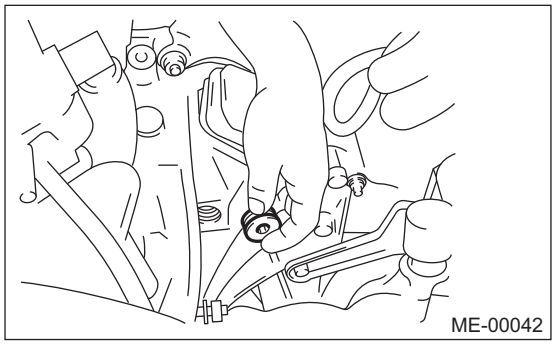
NOTE:
Move the removed operating cylinders to a location that does not interfere operation.



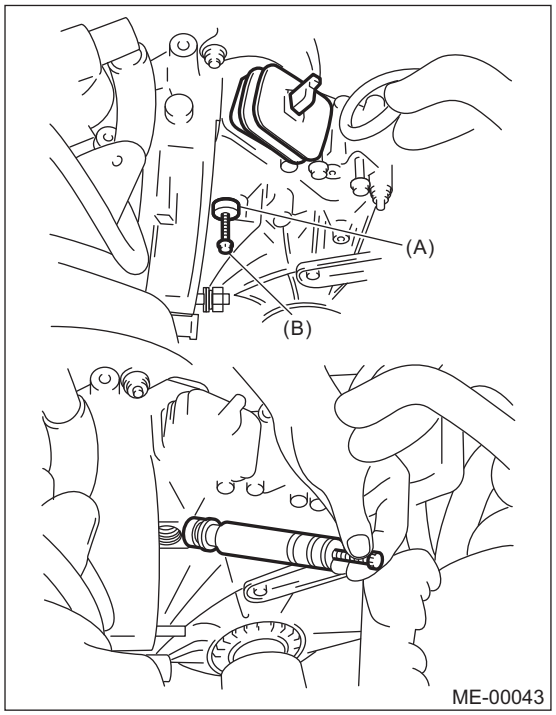
(2) Remove the return spring from the release lever.



(3) Remove the service hole plug using a hexagon wrench.



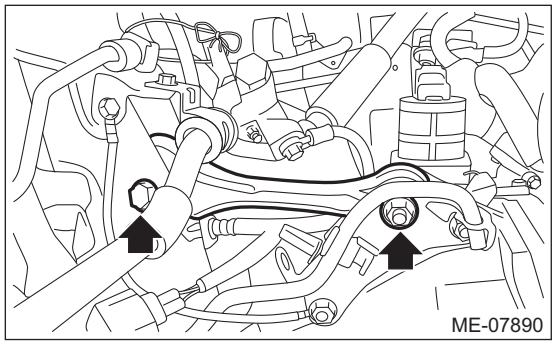
(4) Attach a 6-mm bolt to the clutch release lever shaft, and pull out the clutch release lever shaft.



(A) Clutch release lever shaft
(B) Bolt

(5) Lift the release lever, and remove the release lever from the claw of the release bearing. Pull the release lever to the engine side, and make it so that it moves freely.

28) Remove the pitching stopper.



29) Disconnect the fuel delivery hose, fuel return hose and evaporation hose.

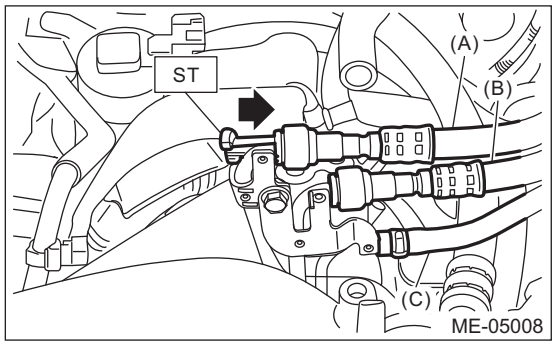
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

(1) Set the ST to the fuel pipe.

ST 42099AE000 QUICK CONNECTOR RELEASE

(2) Disconnect the quick connector of the fuel delivery hose and fuel return hose by pushing the ST in the direction of the arrow.

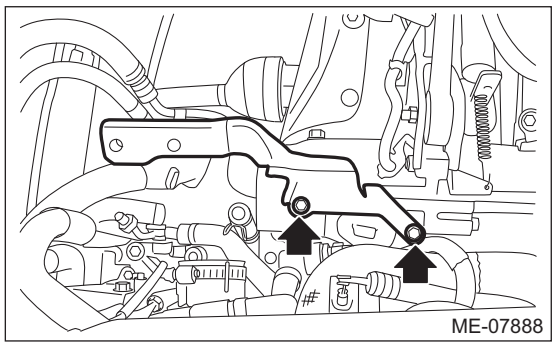
(3) Remove the clip and disconnect the evaporation hose from the fuel pipe.



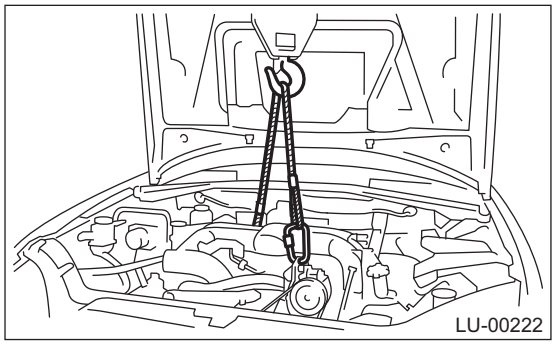
(A) Fuel delivery hose
(B) Fuel return hose
(C) Evaporation hose

30) Install the intercooler stay RH No. 2.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

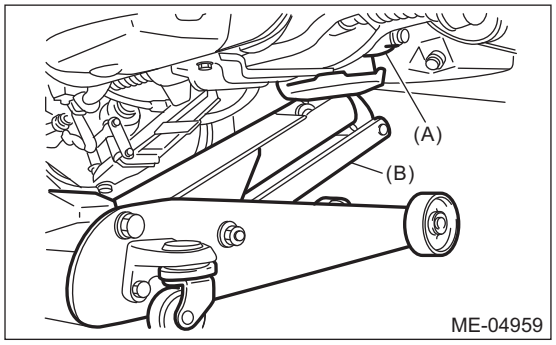


31) Support the engine with a lifting device and wire ropes.



32) Support the transmission with a garage jack.

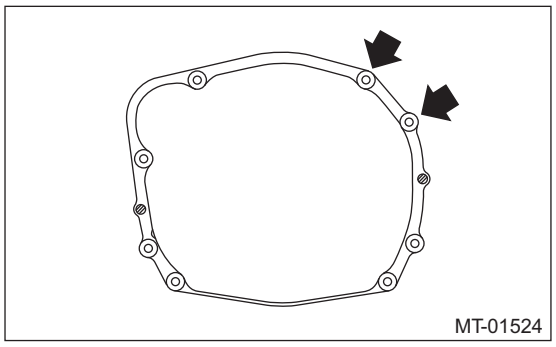
CAUTION:
Be sure to perform this procedure to prevent the transmission from lowering by its own weight.



(A) Transmission
(B) Garage jack

33) Remove the bolts which hold the upper side of the transmission to the engine.

CAUTION:
Before removing the engine away from transmission, check to be sure no work has been overlooked.



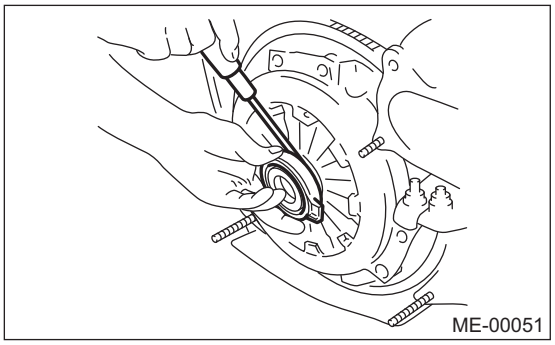
34) Remove the engine from the vehicle.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

(1) Slightly raise the engine.
(2) Raise the transmission with garage jack.

(3) Move the engine horizontally until main shaft is withdrawn from clutch cover.
(4) Slowly move the engine away from engine compartment.

35) Remove the engine mounting from the engine.
36) Using a flat tip screwdriver, remove the release bearing from the clutch cover.



ME-00051

B: INSTALLATION

1) Set the release lever, release bearing and clutch release lever shaft to the transmission. <Ref. to CL-17, STI MODEL, INSTALLATION, Release Bearing and Lever.>
2) Install the engine mounting onto the engine.

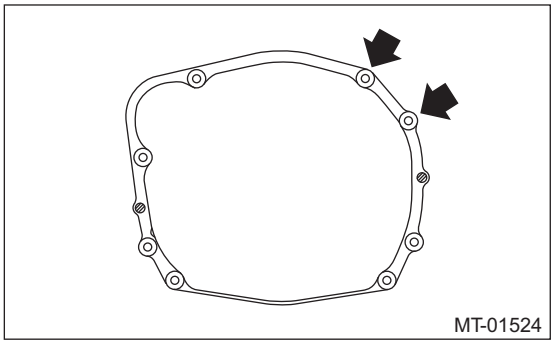
Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

3) Position the engine in engine compartment and align it with transmission.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

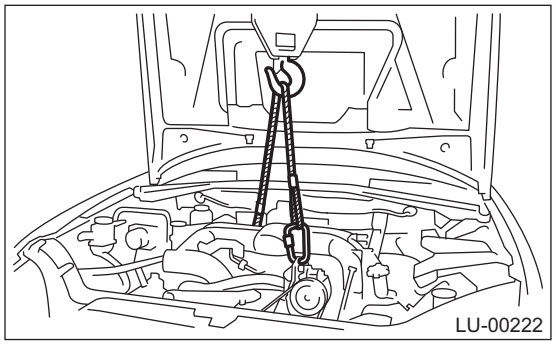
4) Install the bolts which hold upper side of transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)



MT-01524

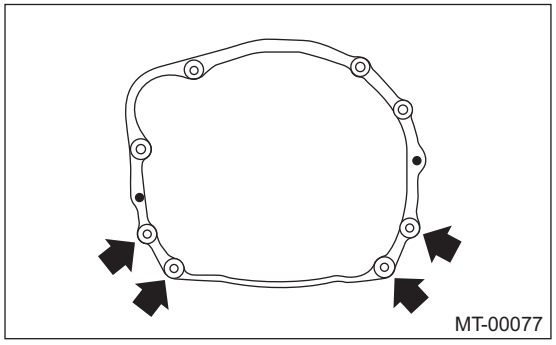
5) Remove the lifting device and wire ropes.



LU-00222

6) Remove the garage jack.
7) Lift up the vehicle.
8) Install the bolts and nuts which hold lower side of the transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

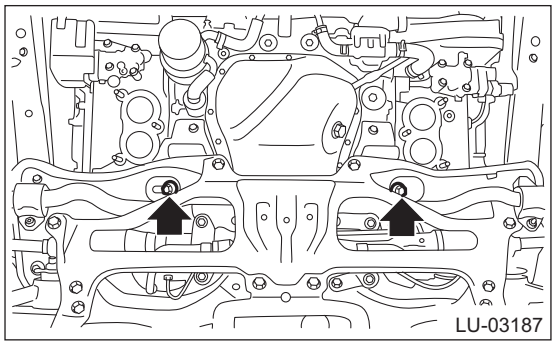


MT-00077

9) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
Use a new nut.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

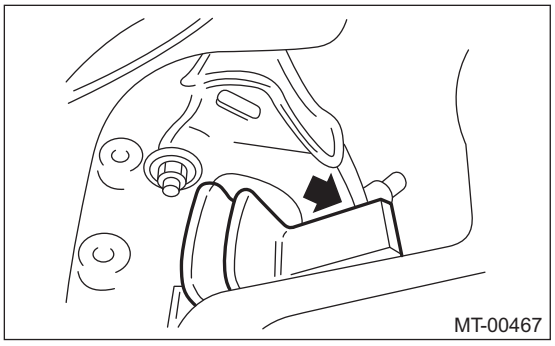


LU-03187

10) Lower the vehicle.
11) Make sure that the release bearing is completely inserted.

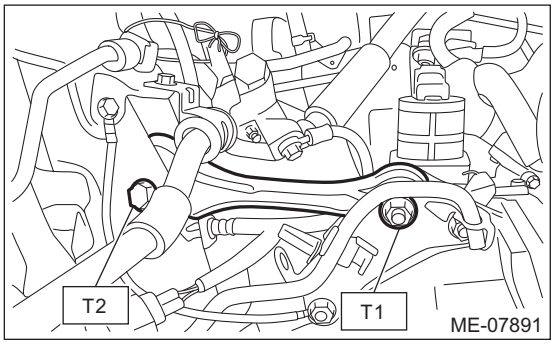
NOTE:
• Push the release lever towards the operating cylinder side until a clicking sound is heard. Pull the release lever towards the engine side. If the release lever is not in contact with the case, the setting is complete.

- Confirm that the boot cover is set securely.

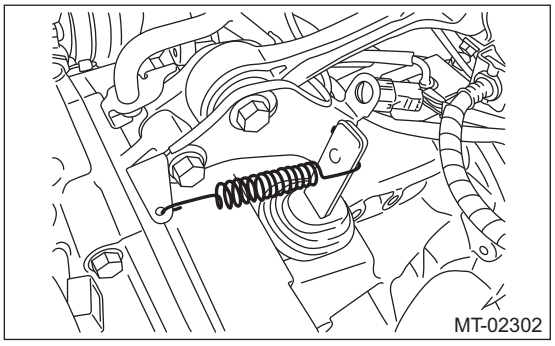


12) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



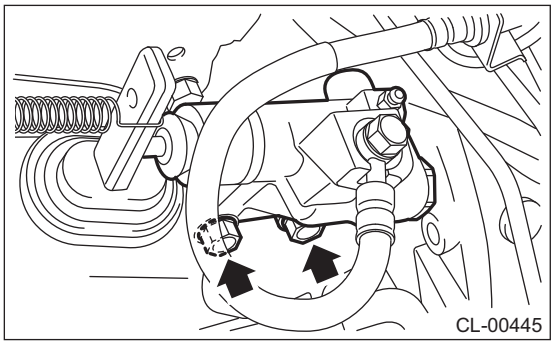
13) Install the return spring.



14) Install the operating cylinder.

NOTE:
Check that the clutch hose is routed properly.

Tightening torque:
41 N·m (4.2 kgf-m, 30.2 ft-lb)

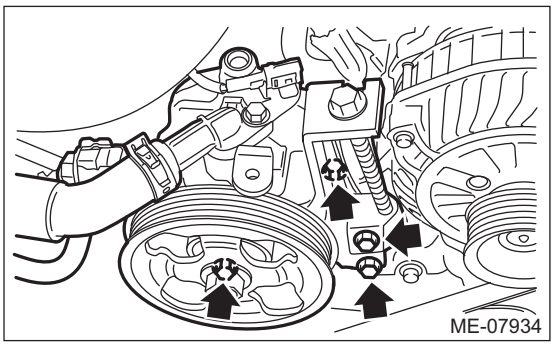


15) Install the starter. <Ref. to SC(STI)-7, INSTALLATION, Starter.>

16) Install the power steering pump.

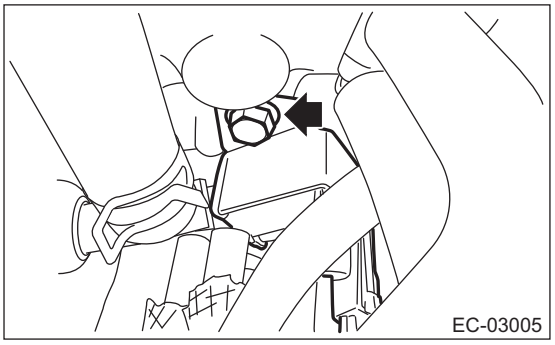
(1) Install the power steering pump onto the engine.

Tightening torque:
Refer to "COMPONENT" of "Power Steering" for the tightening torque. <Ref. to PS-4, COMPONENT, General Description.>

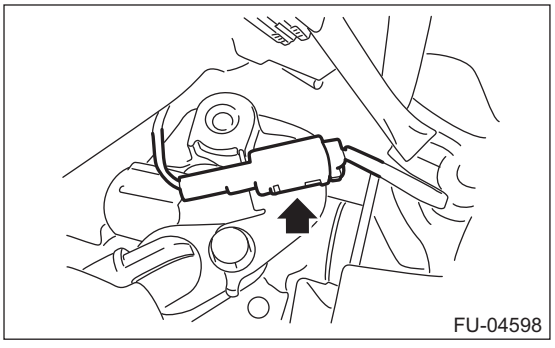


(2) Install the purge control solenoid valve 1 to the intake manifold.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

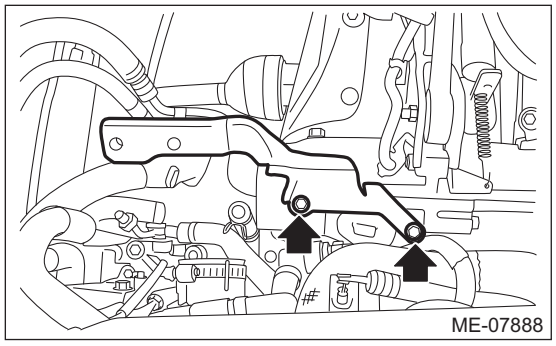


(3) Connect the connector to the power steering pump switch.



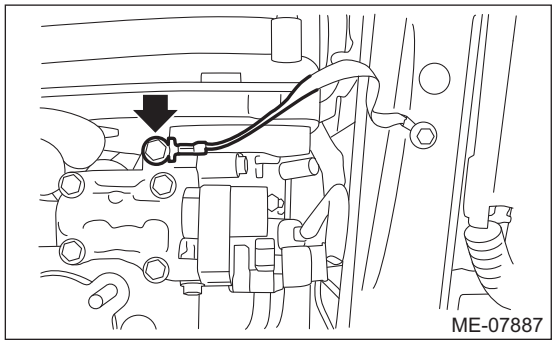
(4) Install the front side belt. <Ref. to ME(STI)-42, FRONT SIDE BELT, INSTALLATION, V-belt.>

17) Remove the intercooler stay RH No. 2.

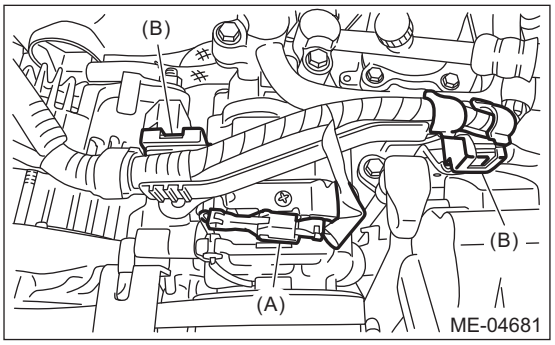


18) Lift up the vehicle.
19) Connect the ground cable.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

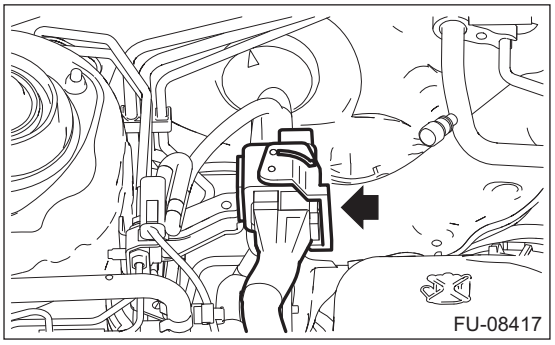


20) Install the joint pipe and front exhaust pipe. <Ref. to EX(STI)-5, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(STI)-11, INSTALLATION, Joint Pipe.>
21) Install the turbocharger. <Ref. to IN(STI)-16, INSTALLATION, Turbocharger.>
22) Install the center exhaust pipe. <Ref. to EX(STI)-8, INSTALLATION, Center Exhaust Pipe.>
23) Connect the following hoses.
(1) Fuel delivery hose, fuel return hose and evaporation hose
(2) Heater inlet hose and heater outlet hose
(3) Brake booster vacuum hose and pressure regulator vacuum hose
(4) A/C pressure hose <Ref. to AC-67, INSTALLATION, Hose and Pipe.>
24) Secure the generator cord using the clip (B) and connect the connector (A) to A/C compressor.



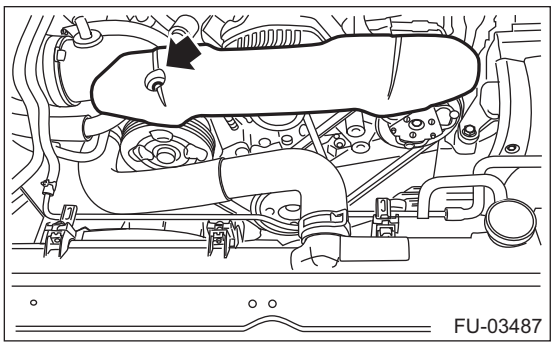
25) Connect the following connectors and terminals.
(1) Generator connector and terminal

Tightening torque:
15.5 N·m (1.6 kgf-m, 11.4 ft-lb)
(2) Secondary air pump connector
26) Install the engine harness connector to engine harness bracket, then connect the bulkhead harness connector to the engine harness connector.



27) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
28) Install the radiator. <Ref. to CO(STI)-21, INSTALLATION, Radiator.>
29) Install the coolant filler tank. <Ref. to CO(STI)-29, INSTALLATION, Coolant Filler Tank.>
30) Install the air cleaner case and air intake duct. <Ref. to IN(STI)-8, INSTALLATION, Air Cleaner Case.> <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
31) Install the battery. <Ref. to SC(STI)-24, INSTALLATION, Battery.>
32) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
33) Charge the A/C system with refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
34) Install the V-belt cover.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



35) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
36) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
37) Close the front hood.

C: INSPECTION

1) Check that pipes, hoses, connectors and clamps are installed firmly.
2) Check the engine coolant is at specified level.
3) Start the engine and check for exhaust gas, engine coolant, leaks of fuel, etc. Also check for noise and vibrations.

10.Engine Mounting

A: REMOVAL

1) Remove the front crossmember. <Ref. to FS-20, REMOVAL, Front Crossmember.>
2) Remove the engine mounting from the engine.

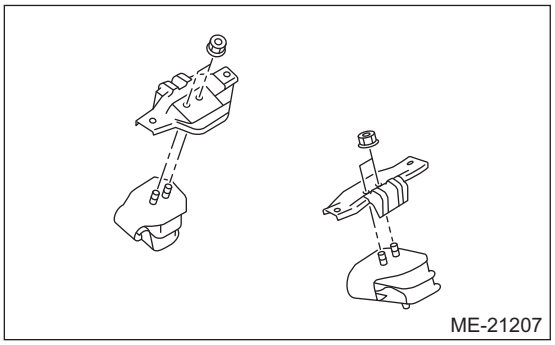
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: DISASSEMBLY

Remove the front cushion rubber from the front engine mounting bracket.



D: ASSEMBLY

Install in the reverse order of removal.

Tightening torque:
42 N·m (4.3 kgf-m, 31.0 ft-lb)

E: INSPECTION

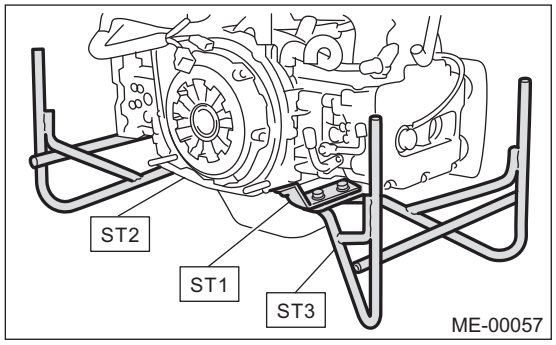
Make sure that there are no cracks or other damages.

11.Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from vehicle body, attach the ST to the engine as shown in the figure.

ST1	498457000	ENGINE STAND ADAPTER RH
ST2	498457100	ENGINE STAND ADAPTER LH
ST3	499817100	ENGINE STAND



2) In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process.
Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

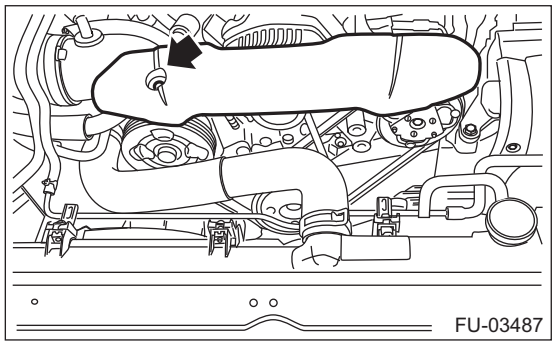
12.V-belt

A: REMOVAL

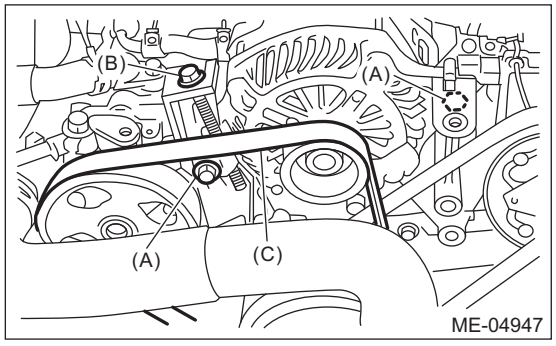
NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.

1. FRONT SIDE BELT

1) Remove the V-belt covers.

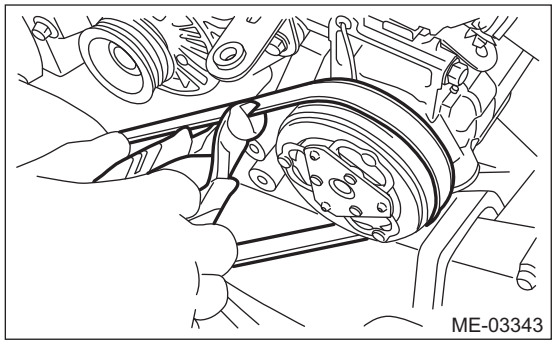


2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
3) Loosen the bolt (A).
4) Loosen the slider bolt (B).
5) Remove the front side belt (C).



2. REAR SIDE BELT

1) Remove the front side belt. <Ref. to ME(STI)-42, FRONT SIDE BELT, REMOVAL, V-belt.>
2) Cut the rear side belt with a wire cutter, etc., and discard.

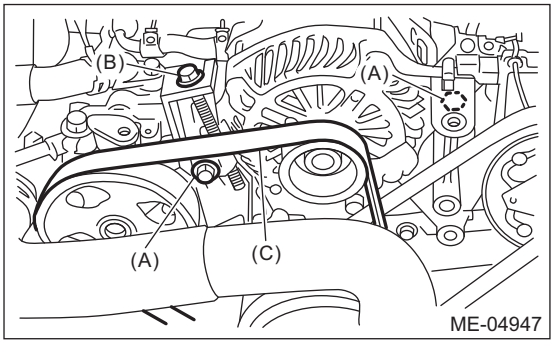


B: INSTALLATION

1. FRONT SIDE BELT

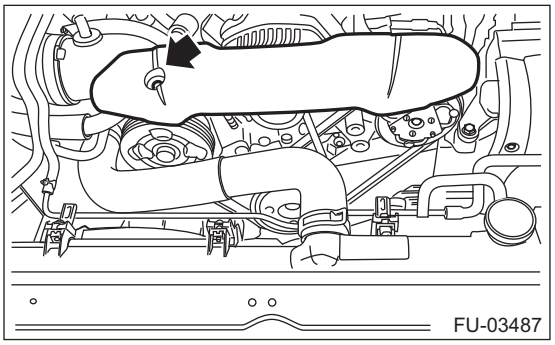
CAUTION:
• When reusing the front side belt, wipe off dust and water with cloth.
• Do not use the front side belt if there is any oil, grease or coolant on the belt.
• Be careful not to rub the belt end surface with bare hands; exposed core may cause injury.
1) Wipe off any dust, oil and water on the groove of each pulley with cloth.
2) Install the front side belt (C), and adjust the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(STI)-47, INSPECTION, V-belt.>
3) Tighten the bolt (A).
4) Tighten the slider bolt (B).

Tightening torque:
Bolt (A)
25 N·m (2.5 kgf-m, 18.4 ft-lb)
Slider bolt (B)
8 N·m (0.8 kgf-m, 5.9 ft-lb)



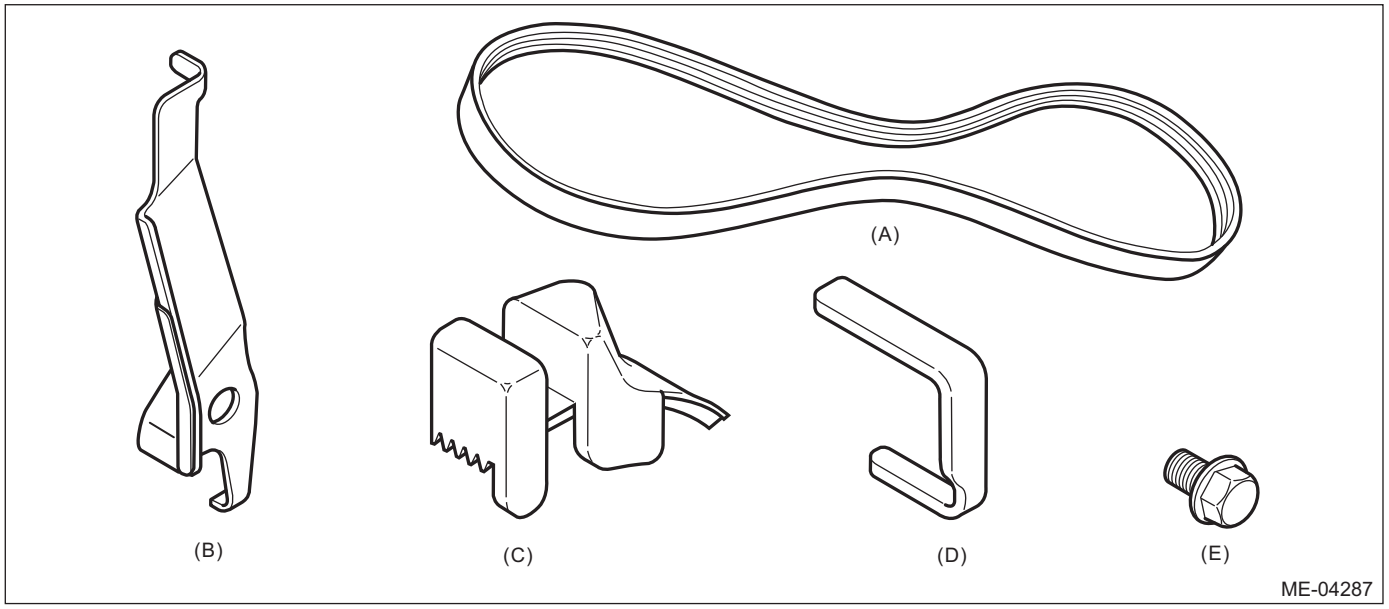
5) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
6) Install the V-belt cover.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



2. REAR SIDE BELT

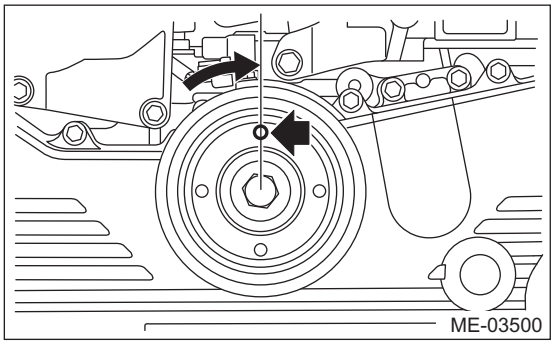
CAUTION:
- **Do not re-use the rear side belt.**
- **Be careful not to let oil, grease or coolant contact a new rear side belt.**
- **Be careful not to rub the belt end surface with bare hands; exposed core may cause injury.**
- **To install the rear side belt, always use the provided tools (belt stopper, belt guide, belt guide holder, and bolt).**



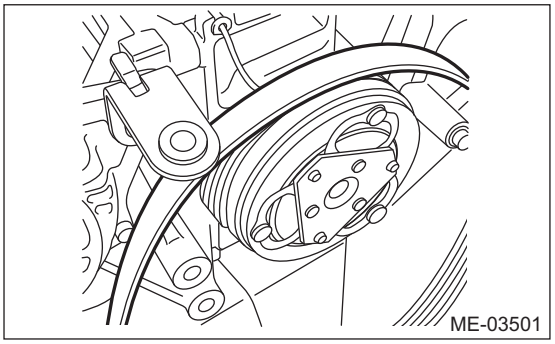
(A) Rear side belt
(B) Belt stopper
(C) Belt guide
(D) Belt guide holder
(E) Bolt

1) Wipe off any dust, oil and water on the groove of each pulley with cloth.
2) Wipe off any oil, water, dirt, and rust on the front of the crank pulley with cloth.
3) Slowly turn the crank pulley clockwise so that the service hole of the crank pulley comes around the top.

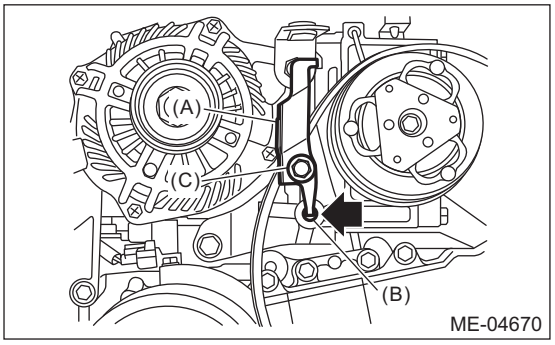
CAUTION:
Do not turn the crank pulley counterclockwise.



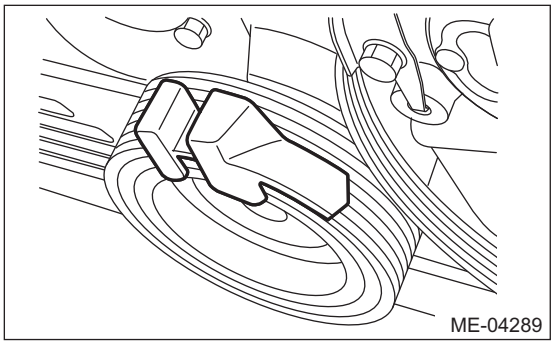
4) Hook a new rear side belt on the A/C compressor pulley.



5) As shown in the figure, insert the claw of the belt stopper (A) to the lower hole (B) of the compressor bracket, then attach with bolt (C).

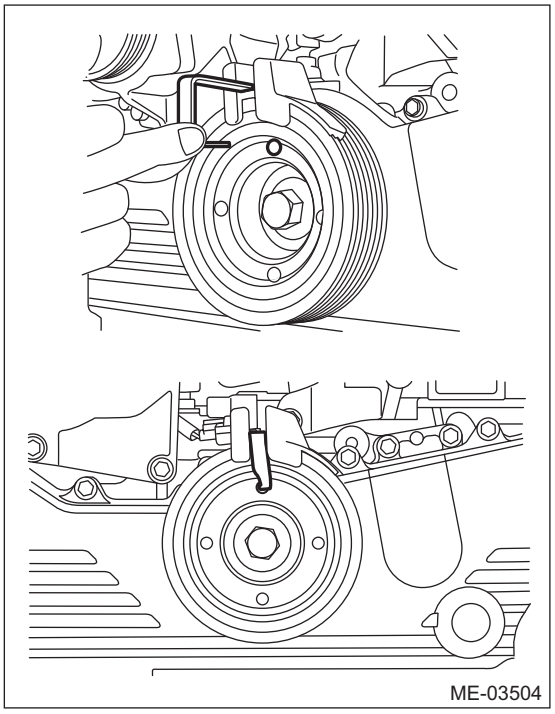


6) Place the belt guide while aligning it with the belt line of the crank pulley on the front side belt side.

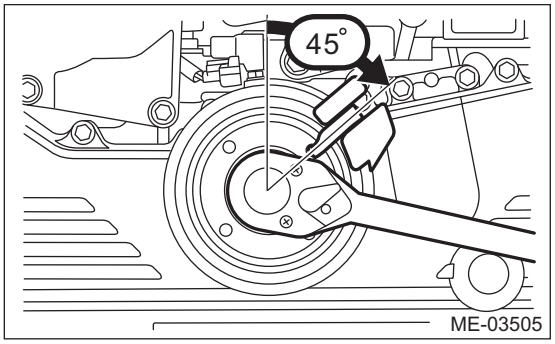


7) Insert the belt guide holder into the service hole of the crank pulley so that the belt guide comes in between.

NOTE:
Place the belt guide holder with the longer side up.

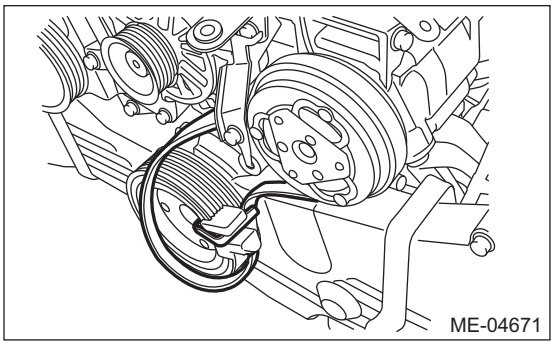


8) Slowly turn the crank pulley clockwise until the belt guide comes to approximately 45°.

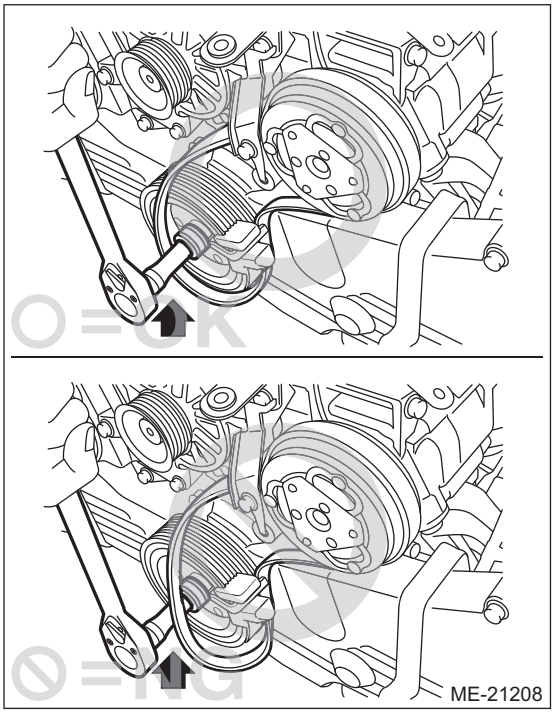


9) Place the rib surface of the rear side belt into the crank pulley groove, so that the rear side belt comes in between the belt guide holder.

CAUTION:
When it is difficult to place the rear side belt to the crank pulley groove, pull out the belt guide holder half way, then place the rear side belt into the groove so that it comes in between the belt guide holder.

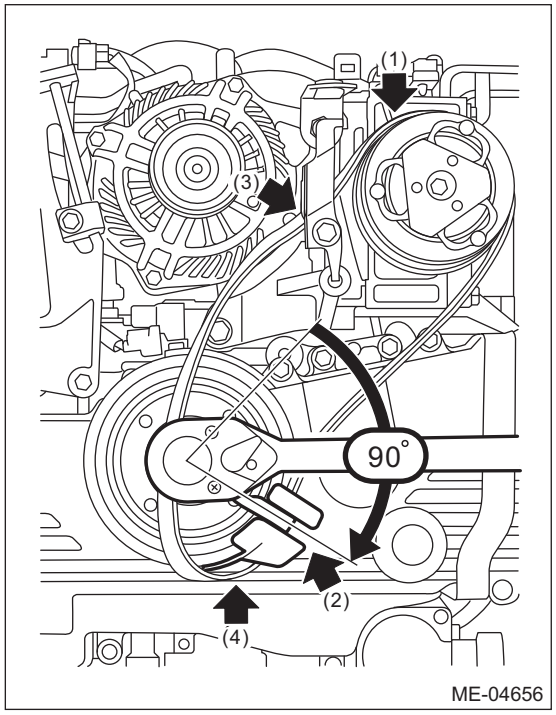


10) Place the tool through the loop of the rear side belt, and set on the crank pulley bolt.

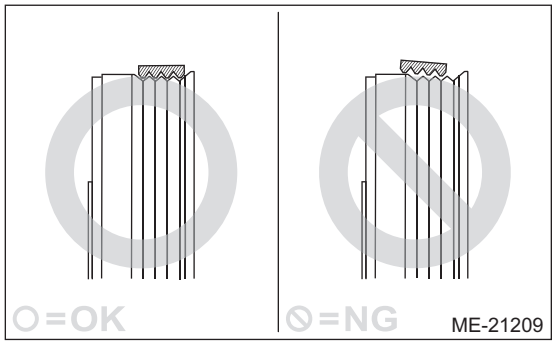


11) While checking the following, slowly turn the crank pulley approximately 90° clockwise so that the belt guide comes to the position shown in the figure.

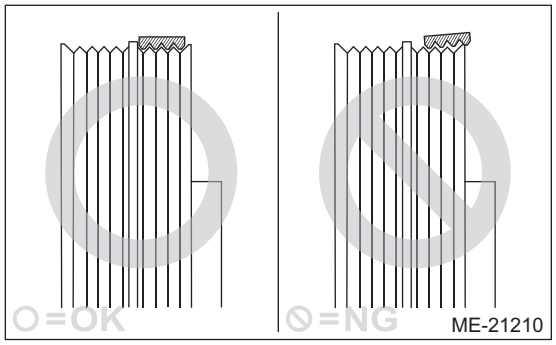
CAUTION:
When turning the crank pulley, always make sure that the belt guide is not off from the crank pulley groove.



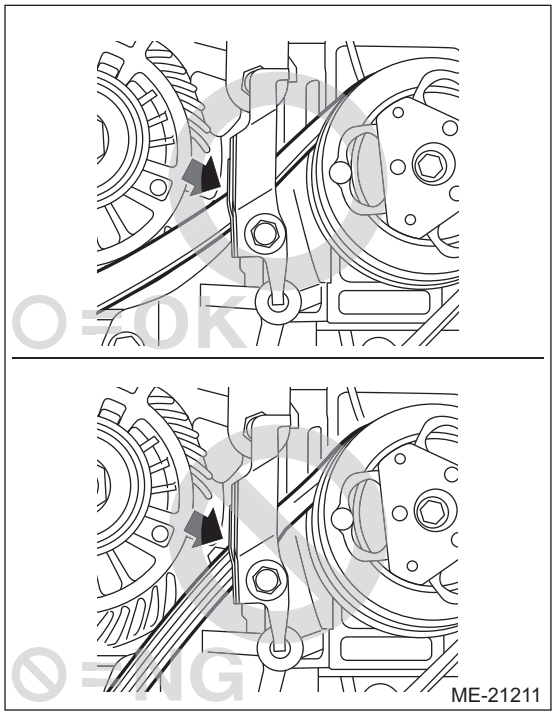
(1) The rib of the rear side belt is securely placed on the groove of the A/C compressor pulley.



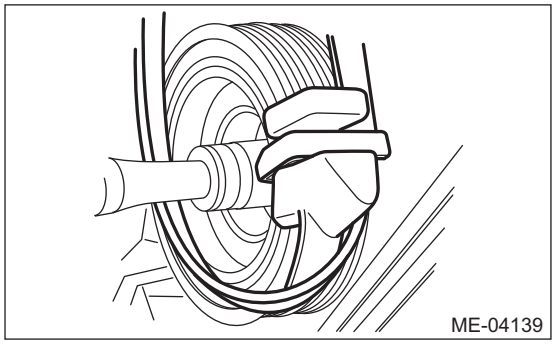
(2) The rib of the rear side belt is securely placed on the groove of the crank pulley.



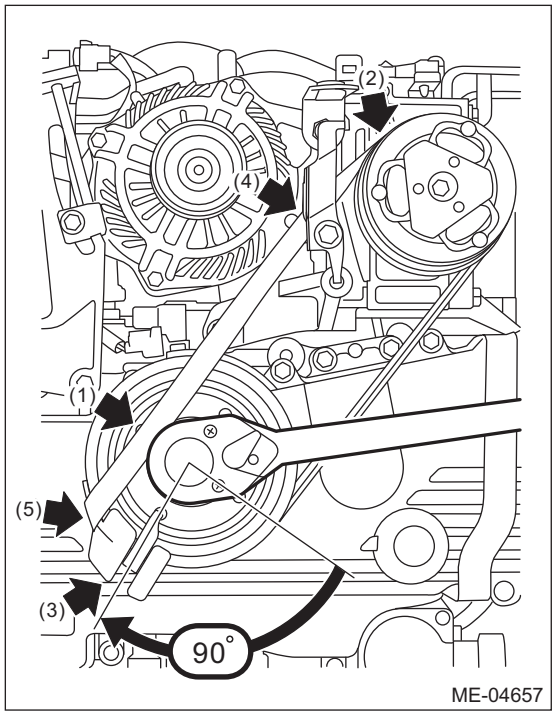
(3) The surface of the rear side belt is held by the belt stopper.



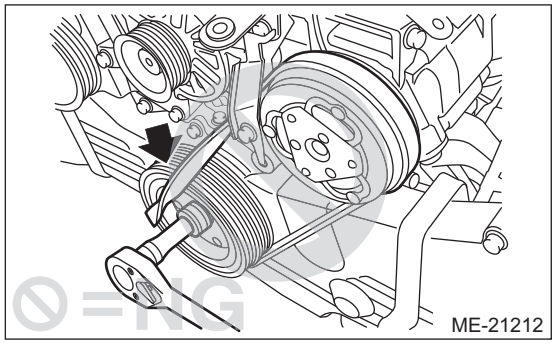
(4) The rear side belt is securely placed on the belt guide.



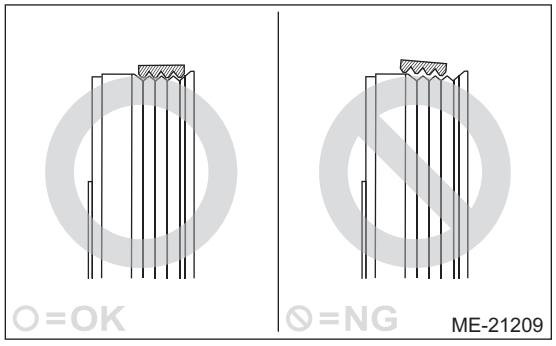
12) While checking the following, slowly turn the crank pulley approximately 90° clockwise so that the belt guide comes to the position shown in the figure.



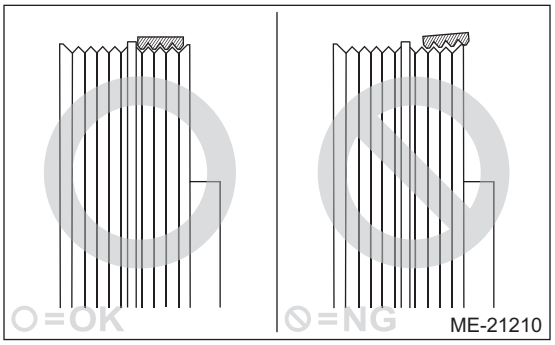
(1) The rear side belt is not twisted.



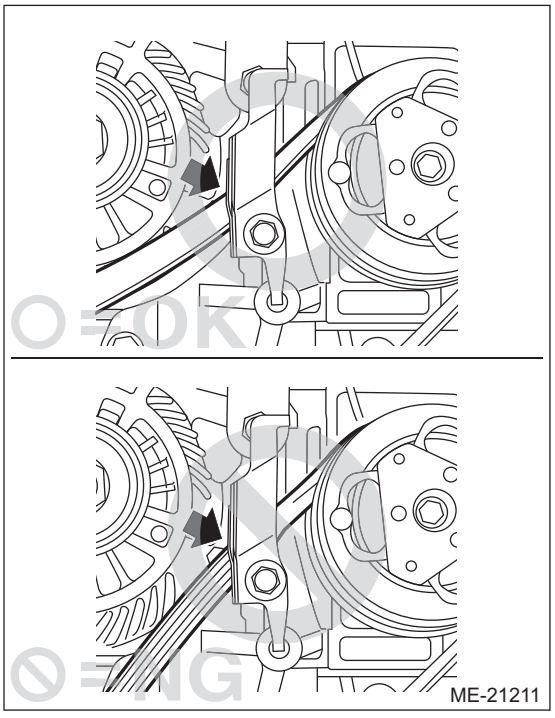
(2) The rib of the rear side belt is securely placed on the groove of the A/C compressor pulley.



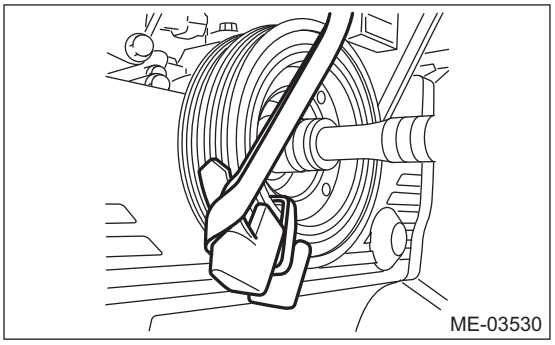
(3) The rib of the rear side belt is securely placed on the groove of the crank pulley.



(4) The surface of the rear side belt is held by the belt stopper.

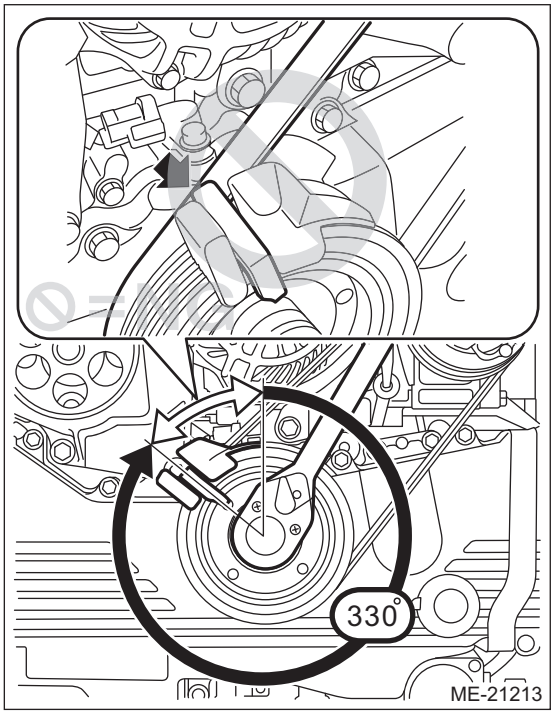


(5) The rear side belt is securely placed on the belt guide.

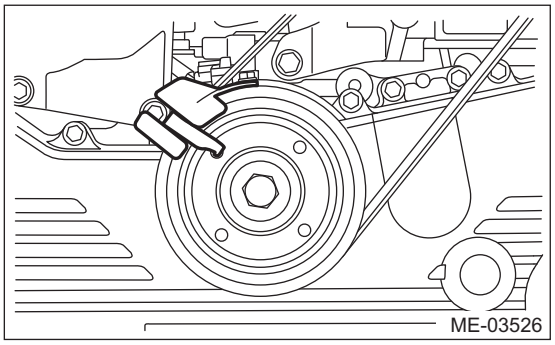


13) Slowly turn the crank pulley clockwise, and install the rear side belt.

CAUTION:
Be careful that the total of procedures 8), 11), 12) and 13) does not exceed 330°; failure to do so may cause damage to the rear side belt and fall of the belt guide holder.

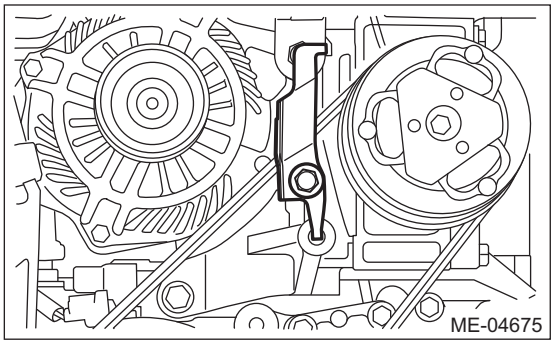


14) Remove the belt guide and belt guide holder from the crank pulley.

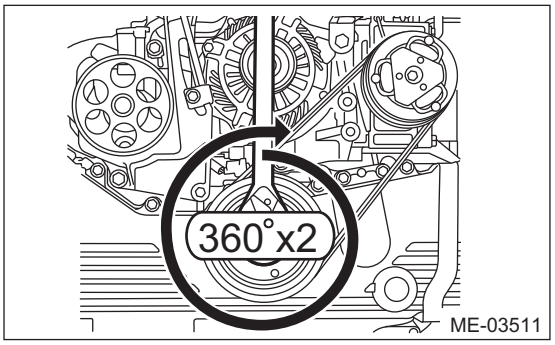


15) Remove the belt stopper from the compressor bracket.

CAUTION:
Always remove the belt stopper; failure to do so may cause smoke, fire, or belt cutting.



16) Make sure that the belt rib is securely installed on the groove of each pulley, then turn the crank pulley slowly, twice in the clockwise direction, to seat the rear side belt properly.



17) Discard the provided tools (belt stopper, belt guide, belt guide holder, and bolt) that are used.
18) Install the front side belt. <Ref. to ME(STI)-42, FRONT SIDE BELT, INSTALLATION, V-belt.>

C: INSPECTION

1. FRONT SIDE BELT

CAUTION:
Check and adjust the front side belt tension so that it is within the specified range. Using the belt with a tension out of the specified range may result in a fault such as the following:
• If the front side belt tension is higher, unexpected force is generated at the power steering oil pump, generator and crankshaft bearing, causing abnormal noise due to abnormal wear of the bearing.
• If the front side belt tension is lower, the front side belt and crank pulley slip, causing abnormally high temperature on the crank pulley due to frictional heat. If this condition repeatedly occurs, the front side belt may abnormally wear, causing abnormal noise, front side belt damage or crank pulley damage.
1) Replace the front side belt, if crack, fraying or wear is found.
2) Check the front side belt tension and adjust it if necessary by changing the generator installing position.

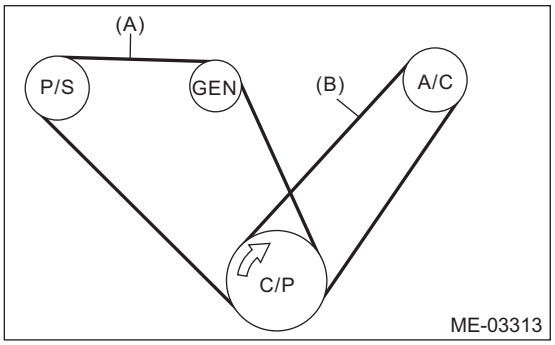
Front side belt tension (with belt tension gauge):

When installing new parts

640 — 780 N (65 — 80 kgf, 144 — 175 lbf)

At inspection

490 — 640 N (50 — 65 kgf, 110 — 144 lbf)



(A) Front side belt
(B) Rear side belt
C/P Crank pulley
GEN Generator pulley
P/S Power steering oil pump pulley
A/C A/C compressor pulley

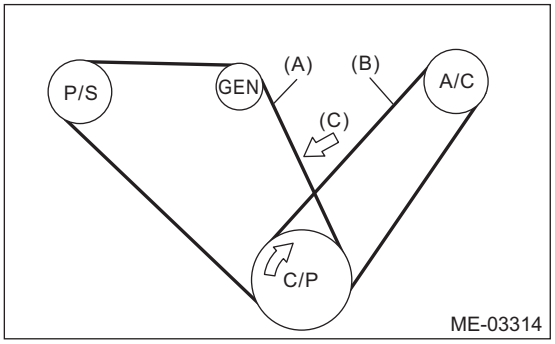
Front side belt tension (without belt tension gauge):

When installing new parts

7 — 9 mm (0.276 — 0.354 in)

At inspection

9 — 11 mm (0.354 — 0.433 in)



(A) Front side belt
(B) Rear side belt
(C) 98 N (10 kgf, 22 lbf)
C/P Crank pulley
GEN Generator pulley
P/S Power steering oil pump pulley
A/C A/C compressor pulley

3) Start the engine and confirm that the V-belt rotates smoothly and no abnormal noise is emitted.

2. REAR SIDE BELT

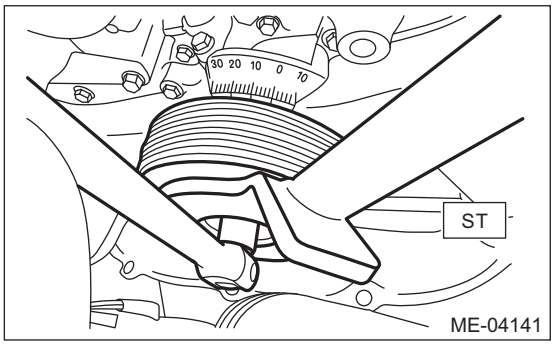
Replace the rear side belt, if crack, fraying or wear is found, or noise is emitted.

NOTE:
For the rear side belt, a stretch type belt is used, and therefore, it is not necessary to check deflection nor tension.

13.Crank Pulley

A: REMOVAL

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) Remove the V-belts. <Ref. to ME(STI)-42, REMOVAL, V-belt.>
2) Use the ST to lock the crank pulley, and remove the crank pulley bolt.
ST 499977100 CRANK PULLEY WRENCH

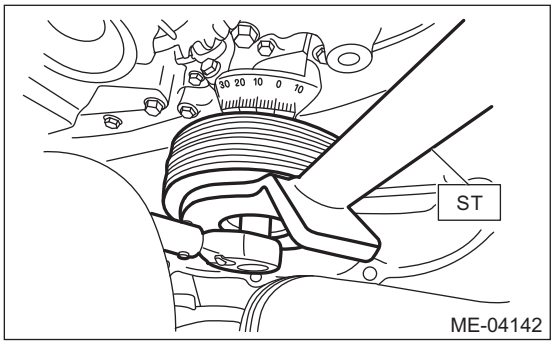


3) Remove the crank pulley.

B: INSTALLATION

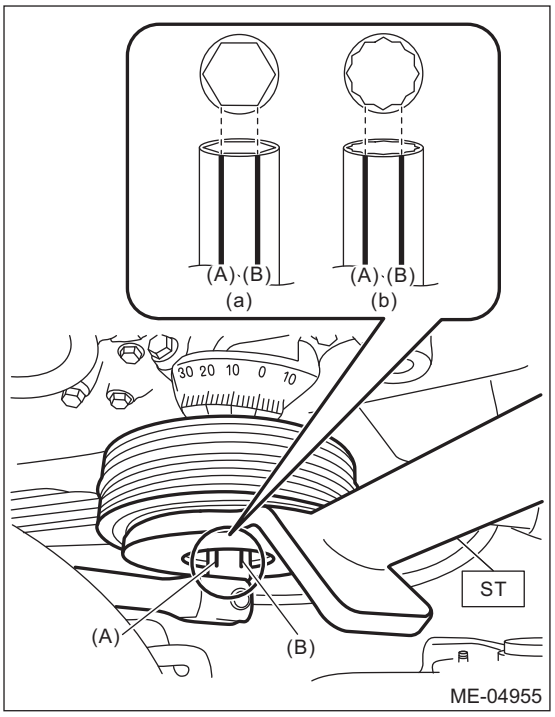
1) Clean the crankshaft thread using compressed air.
2) Install the crank pulley.
3) Apply engine oil to the crank pulley bolt seat and thread.
4) Tighten the crank pulley bolts.
(1) Use the ST to lock the crank pulley, and temporarily tighten the crank pulley bolt.
ST 499977100 CRANK PULLEY WRENCH

Tightening torque:
47 N·m (4.8 kgf-m, 34.7 ft-lb)



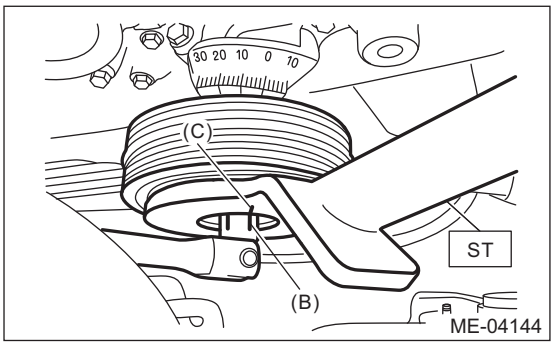
(2) Draw reference lines (A) and (B) using a marker to set the socket to the crank pulley bolt as shown in the figure.

NOTE:
Set the socket onto the crank pulley bolt so that reference lines (A) and (B) is visible.
ST 499977100 CRANK PULLEY WRENCH



(a) When using 6-point socket
(b) When using 12-point socket

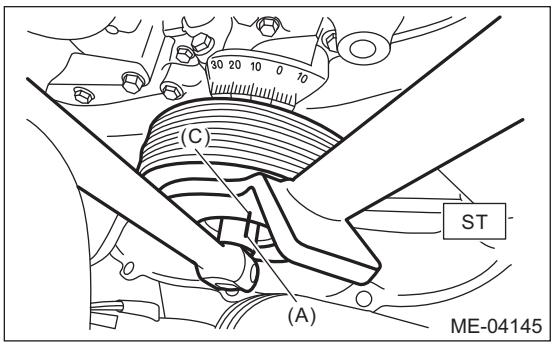
(3) Draw end line (C) on ST using a marker at the same position as reference line (B) drawn on the socket in step (2).
ST 499977100 CRANK PULLEY WRENCH



(4) Use the ST to lock the crank pulley, and tighten the crank pulley bolt to the angle where reference line (A) and end line (C) are aligned.

NOTE:
It should be approx. 60° when reference line (A) and end line (C) are aligned.
ST 499977100 CRANK PULLEY WRENCH

Tightening angle:
60°±5°



5) Install the V-belts. <Ref. to ME(STI)-42, INSTALLATION, V-belt.>

C: INSPECTION

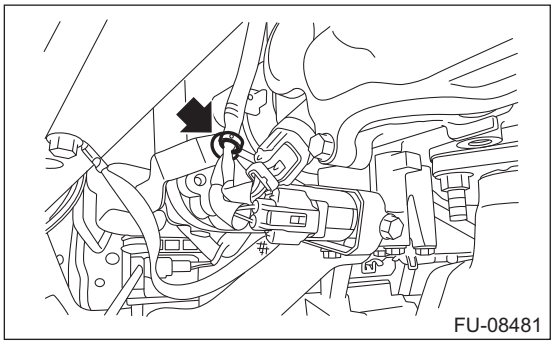
1) Check that the crank pulley has no deformation, cracks or other damages.

14.Timing Belt Cover

A: REMOVAL

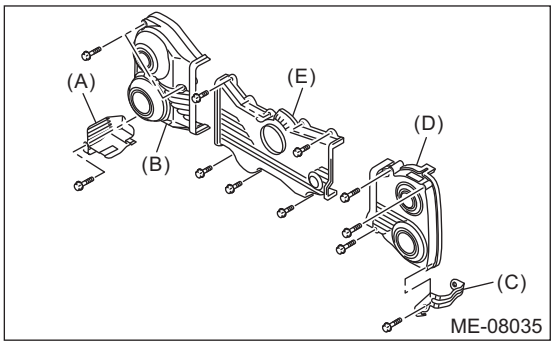
NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Remove the front under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
2) Remove the secondary air pump. <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>
3) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
4) Remove the clip holding the engine harness on the engine harness stay.



FU-08481

5) Remove the timing belt cover RH (B) together with the engine harness cover (A).
6) Remove the timing belt cover LH (D) together with the engine harness stay (C).
7) Remove front timing belt cover (E).



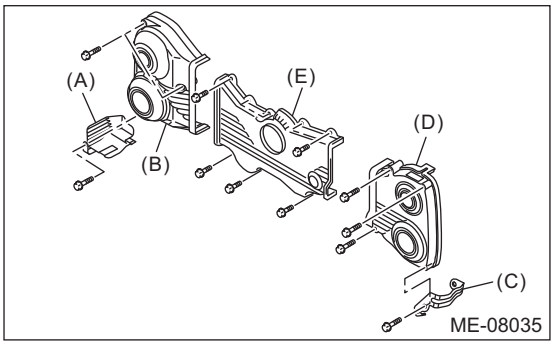
B: INSTALLATION

1) Install front timing belt cover (E).

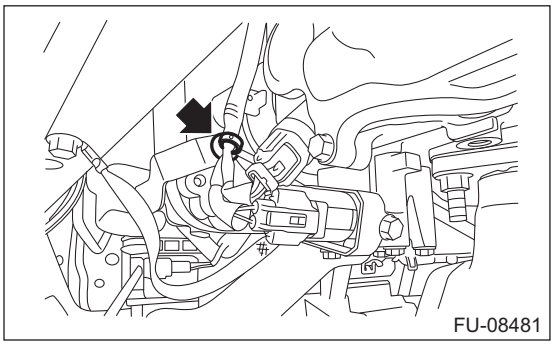
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
2) Install the timing belt cover LH (D) together with the engine harness stay (C).

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
3) Install the timing belt cover RH (B) together with the engine harness cover (A).

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



4) Secure the engine harness to the engine harness stay using the clip.



FU-08481

5) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>
6) Install the secondary air pump. <Ref. to EC(STI)-54, INSTALLATION, Secondary Air Pump.>
7) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Install the front under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>

C: INSPECTION

Check the timing belt cover for damage.

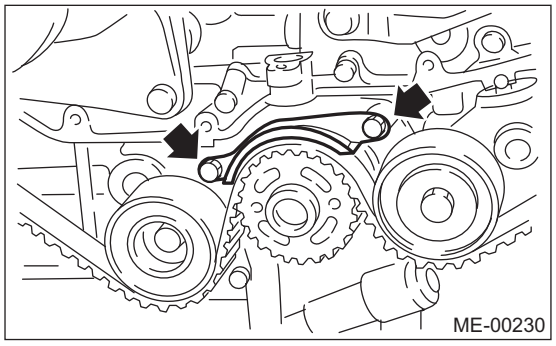
15.Timing Belt

A: REMOVAL

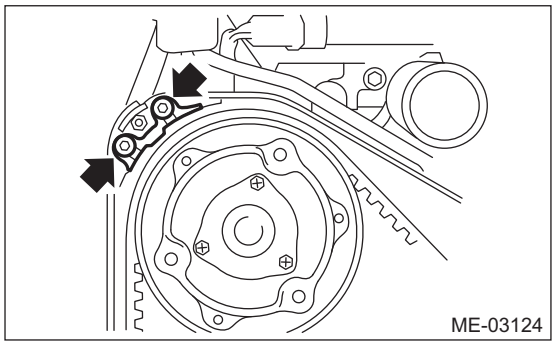
NOTE:
• When replacing a single part, perform the work with the engine assembly installed to body.
• When performing the work with the engine installed to body, the following parts must also be removed/installed.
  • Radiator main fan motor assembly <Ref. to CO(STI)-24, REMOVAL, Radiator Main Fan and Fan Motor.> <Ref. to CO(STI)-24, INSTALLATION, Radiator Main Fan and Fan Motor.>
  • Radiator sub fan motor assembly <Ref. to CO(STI)-26, REMOVAL, Radiator Sub Fan and Fan Motor.> <Ref. to CO(STI)-26, INSTALLATION, Radiator Sub Fan and Fan Motor.>
• When performing the work with the engine installed to body, protect the radiator with cardboards or blankets.

1. TIMING BELT

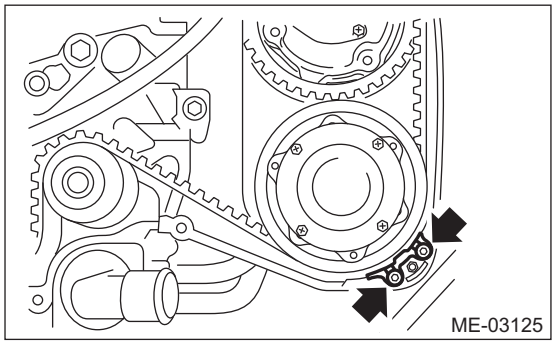
1) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
2) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
3) Remove the timing belt guide.



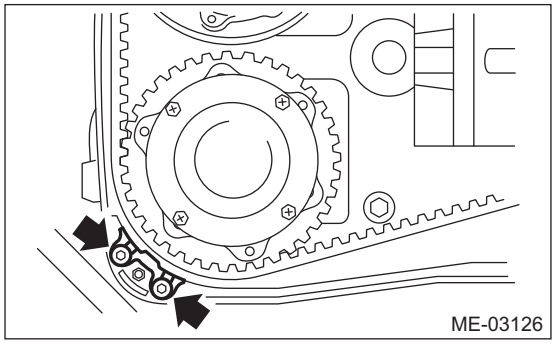
ME-00230



ME-03124



ME-03125

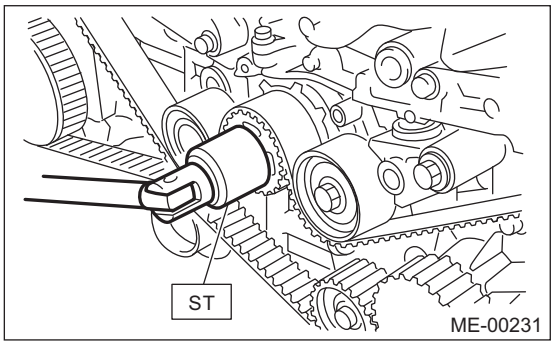


ME-03126

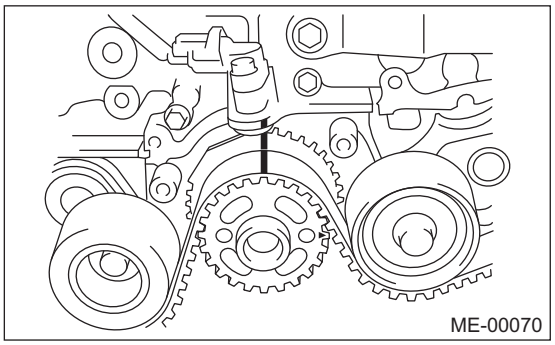
4) If the alignment mark or arrow mark (which indicates the direction of rotation) on timing belt fade away, put new marks before removing the timing belt as shown in procedures below.

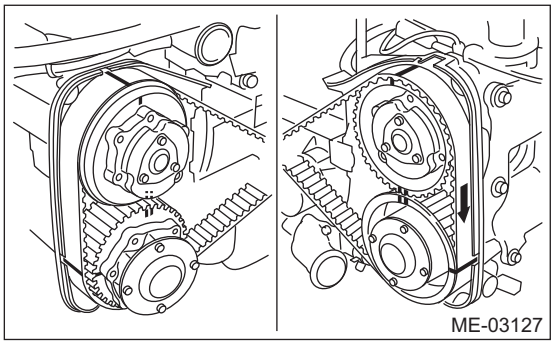
(1) Turn the crankshaft using ST, and align the alignment marks on crank sprocket, intake cam sprocket LH, exhaust cam sprocket LH, intake cam sprocket RH and exhaust cam sprocket RH with marks on oil pump and notches of timing belt cover.

ST 499987500 CRANKSHAFT SOCKET

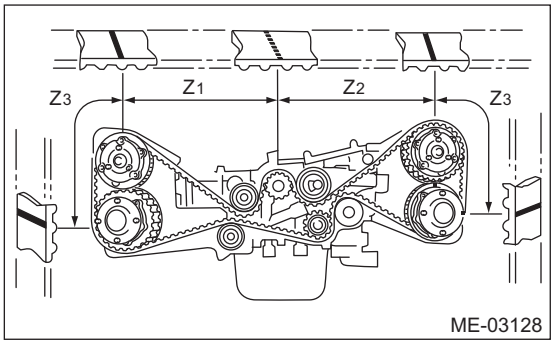


(2) Using white paint, put an alignment mark or an arrow mark on timing belts in relation to the crank sprocket and cam sprockets.

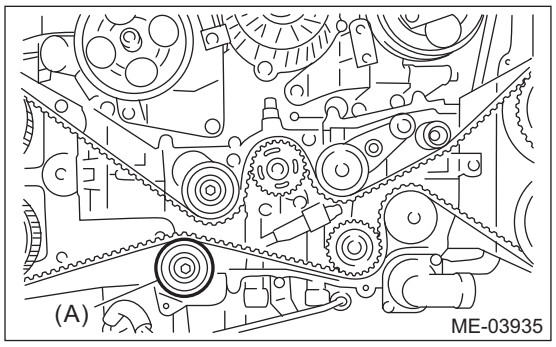




Z_1: 54.5 teeth
Z_2: 51 teeth
Z_3: 28 teeth



5) Remove the belt idler (A).

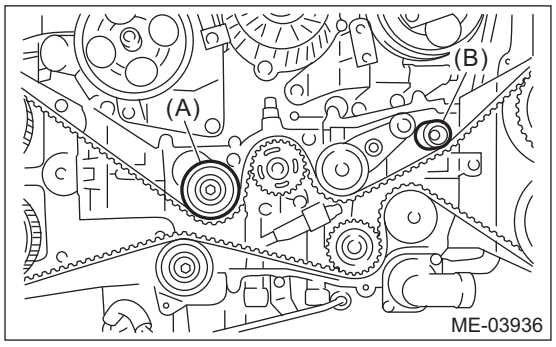


6) Remove the timing belt.

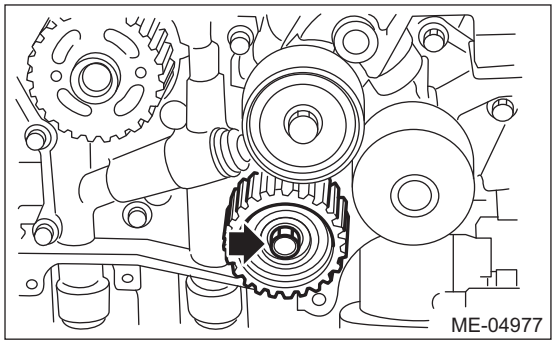
CAUTION:
After the timing belt has been removed, never rotate the intake and exhaust sprocket. If the cam sprocket is rotated, the intake and exhaust valve heads strike together and valve stems are bent.

2. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER

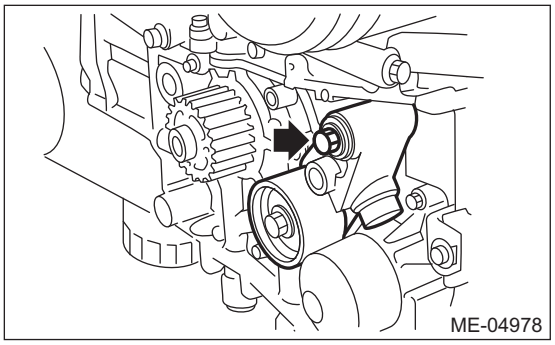
1) Remove the belt idler (A) and (B).



2) Remove the belt idler No. 2.



3) Remove the automatic belt tension adjuster assembly.



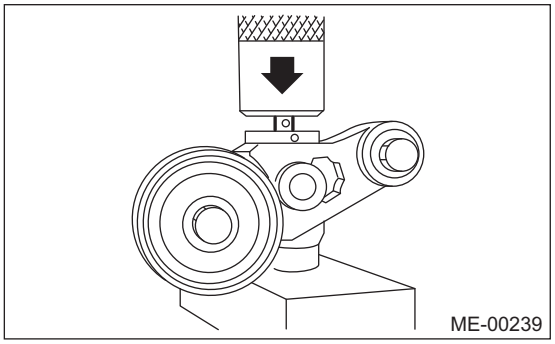
B: INSTALLATION

1. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER

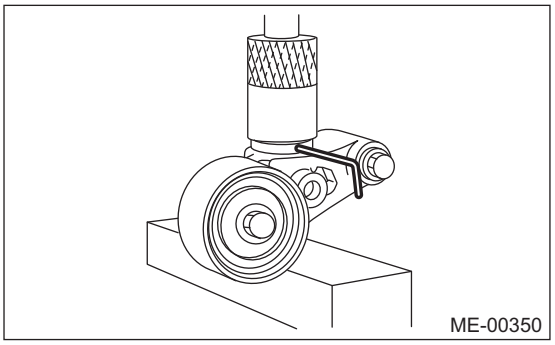
1) Prepare for installation of the automatic belt tension adjuster assembly.

CAUTION:
• Always use a vertical type pressing tool to move the adjuster rod down.
• Do not use a lateral type vise.
• Push the adjuster rod vertically.
• Press-in the push adjuster rod gradually taking three minutes or more.
• Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
• Push in the adjuster rod to the end face of the cylinder. However, do not press the adjuster rod below the end face of the cylinder. Doing so may damage the cylinder.
• Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to vertical pressing tool.
(2) Slowly push in the adjuster rod with a pressure of 165 N (16.8 kgf, 37.1 lbf) or more until the adjuster rod is aligned with the stopper pin hole in the cylinder.

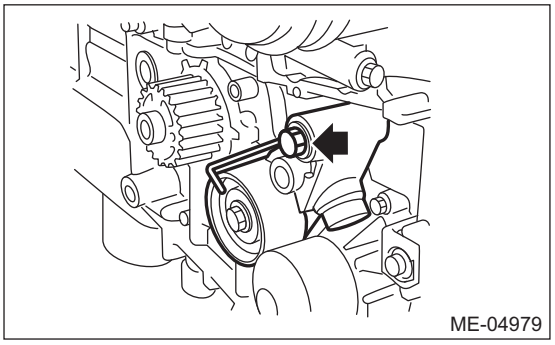


(3) With a 2 mm (0.0787 in) dia. stopper pin or a 2 mm (nominal) dia. hex wrench inserted into the stopper pin hole in cylinder, secure the adjuster rod.



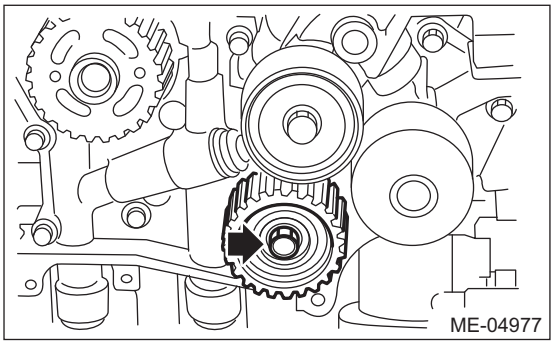
2) Install the automatic belt tension adjuster assembly.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)



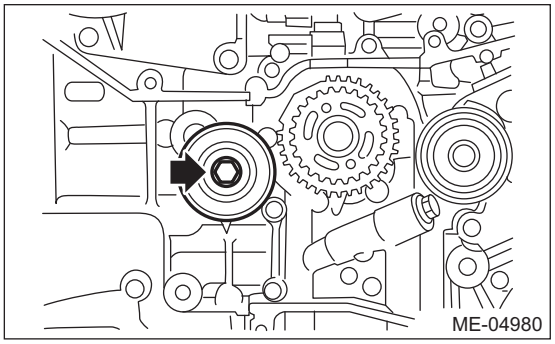
3) Install the belt idler No. 2.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

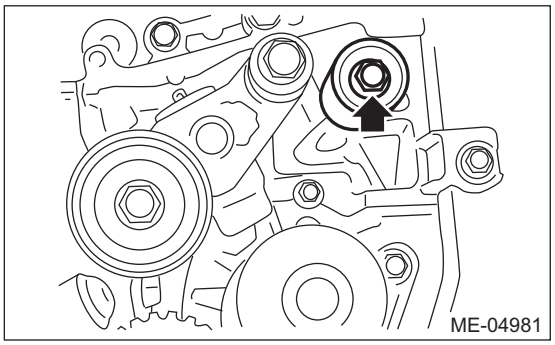


4) Install the belt idlers.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

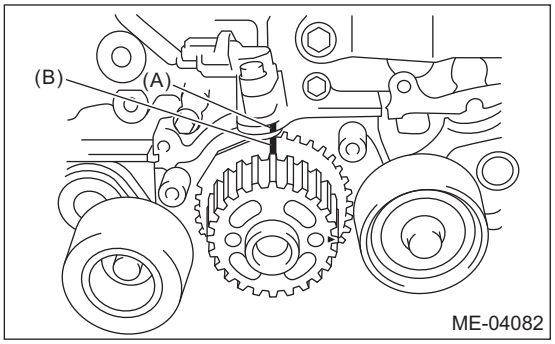


Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

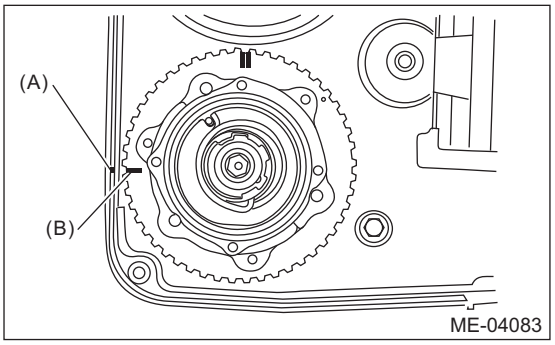


2. TIMING BELT

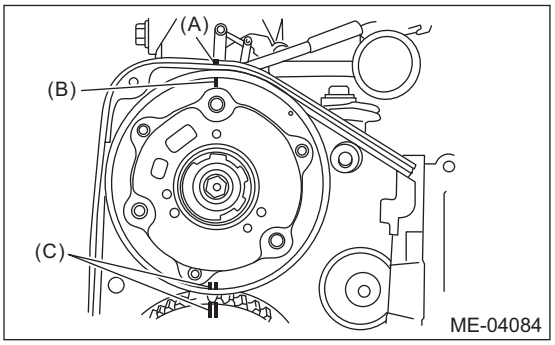
1) Prepare for installation of the automatic belt tension adjuster assembly. <Ref. to ME(STI)-54, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>
2) Align the mark (B) on crank sprocket with the mark (A) on oil pump.



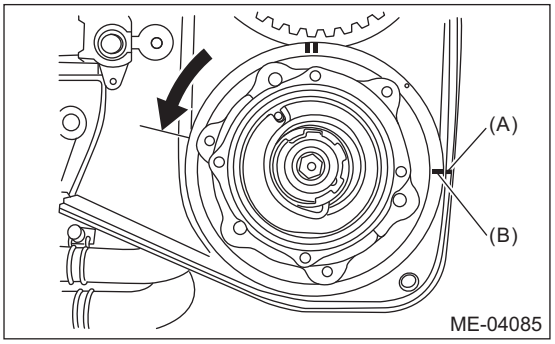
3) Align the single line mark (B) on the exhaust cam sprocket RH with notch (A) on the timing belt cover.



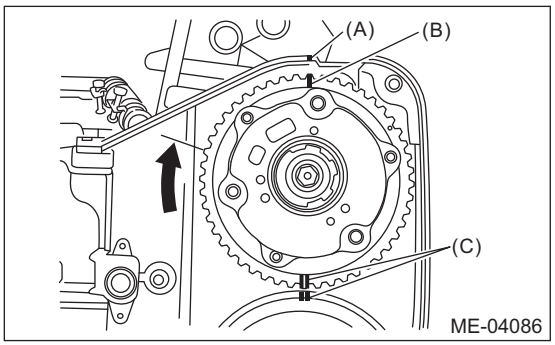
4) Align the single line mark (B) on the intake cam sprocket RH with notch (A) on the timing belt cover. Make sure that the double line marks (C) on intake cam sprocket and exhaust cam sprocket are aligned.



5) Align the single line mark (B) on exhaust cam sprocket LH with notch (A) on the timing belt cover by turning the sprocket counterclockwise (as viewed from front of engine).



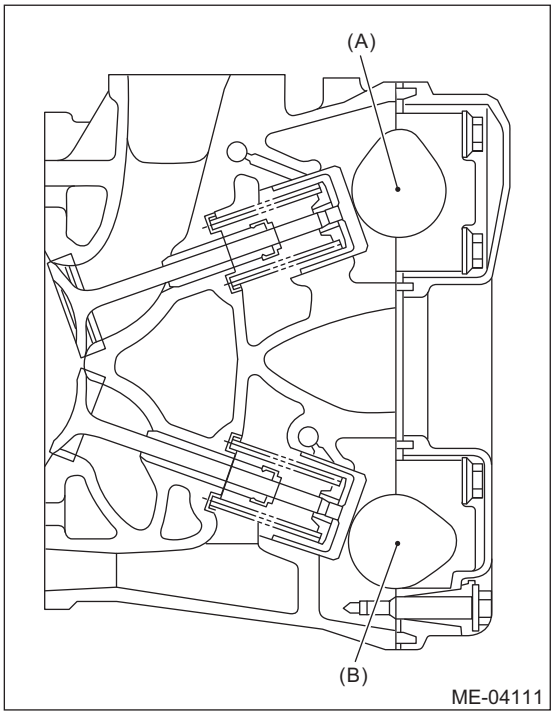
6) Align the single line mark (B) on intake cam sprocket LH with notch (A) on the timing belt cover by turning the sprocket clockwise (as viewed from front of engine). Make sure that the double line marks (C) on intake cam sprocket and exhaust cam sprocket are aligned.



7) Make sure that the cam and crank sprockets are positioned properly.

CAUTION:

• Intake camshaft and exhaust camshaft for DOHC engine can be independently rotated with the timing belts removed. As can be seen from the figure, if the intake and exhaust valves are lifted simultaneously, heads will interfere with each other, resulting in bent valves.



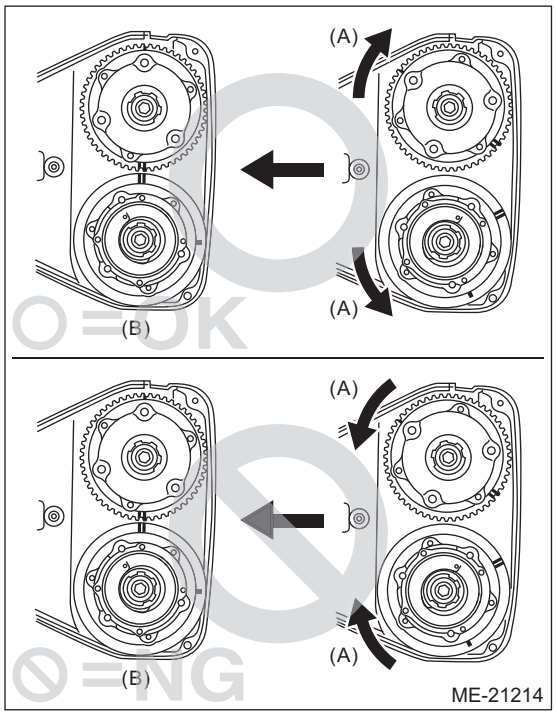
(A) Intake camshaft
(B) Exhaust camshaft

• When the timing belts are not installed, four camshafts are held at the "zero-lift" position, where all cams on camshafts are not pushing down on the intake and exhaust valves. (Under this condition, all valves remain unlifted.)

• When the camshafts are rotated to install the timing belts, #2 intake and #4 exhaust cam of camshaft LH are held, pushing their corresponding valves down. (Under this condition, these valves are held lifted.) Camshaft RH are held so that their cams do not push the valves down.

• Camshafts LH must be rotated from the zero-lift position to the position where the timing belt is to be installed with the smallest possible angle, in order to prevent mutual interference of intake and exhaust valve heads.

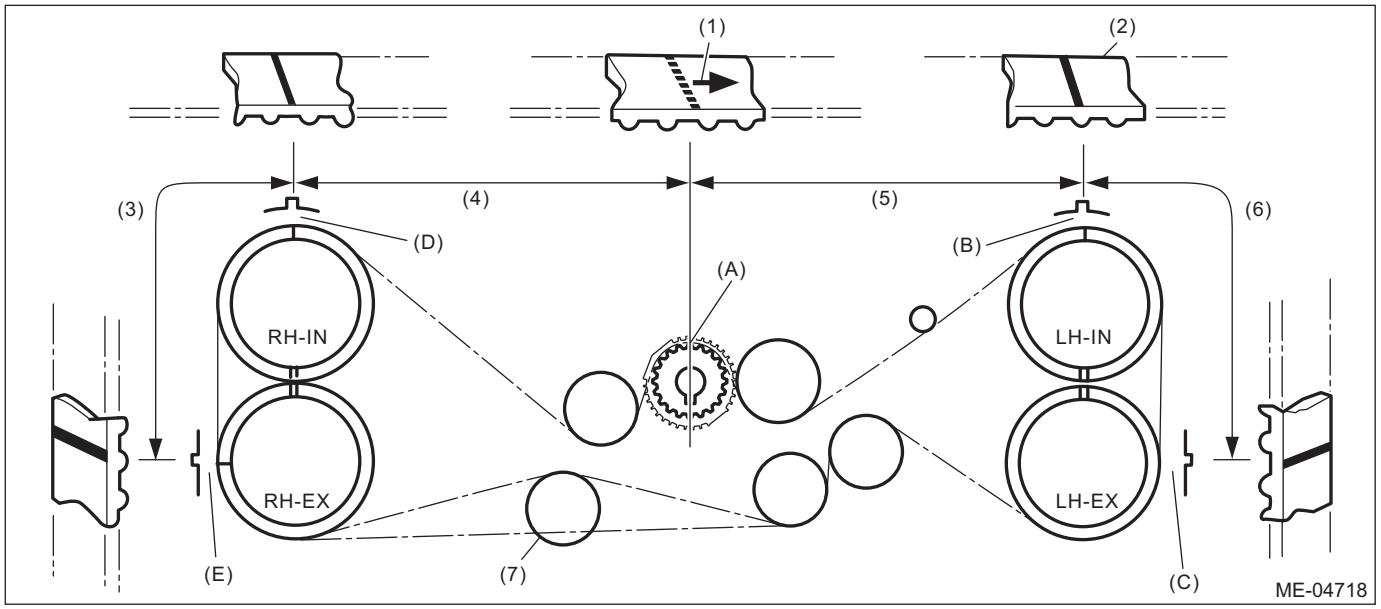
• Do not allow the camshafts to rotate in the direction shown in the lower side of the figure. Doing this may cause both the intake and exhaust valves to lift simultaneously, resulting in mutual interference of valve heads.



(A) Direction of rotation
(B) Timing belt installation position

8) Align the alignment mark on the timing belt with marks on the sprockets in the alphabetical order shown in the figure. While aligning marks, position the timing belt properly, and install the timing belt.

CAUTION:
- **If the timing belt slips by 1 or more teeth, the valve and piston may hit each other.**
- **Make sure that the direction of belt rotation is correct.**

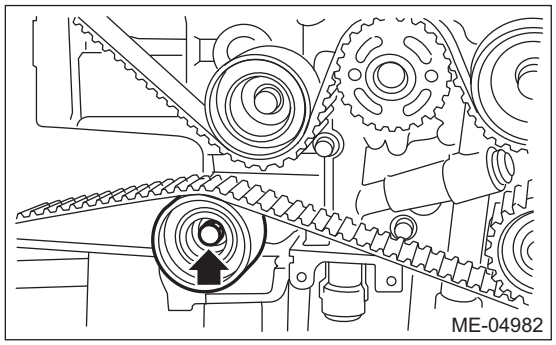


(1) Arrow mark
(2) Timing belt
(3) 28 teeth
(4) 54.5 teeth
(5) 51 teeth
(6) 28 teeth
(7) Install it in the end

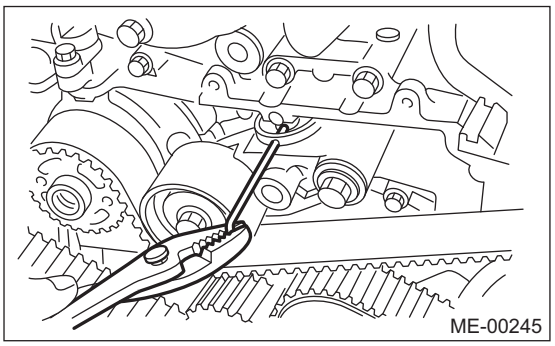
9) Install the belt idlers.

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)

NOTE:
Make sure that the marks on the timing belt and sprockets are aligned.



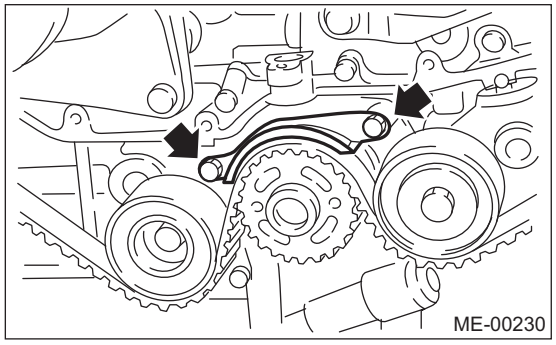
10) After ensuring that the marks on the timing belt and sprockets are aligned, remove the stopper pin from tensioner adjuster.



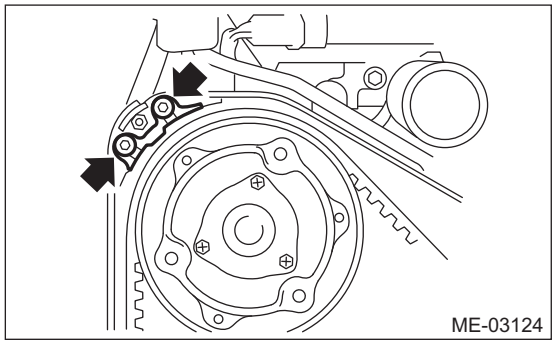
11) Install the timing belt guide.
(1) Temporarily tighten the bolts mounting the timing belt guide.

NOTE:
- Before installing the timing belt guide, clean the timing belt guide mounting bolt holes of the timing belt cover No. 2.
- Apply liquid gasket to the thread of the timing belt guide mounting bolt on the cam sprocket section. (When reusing bolts)

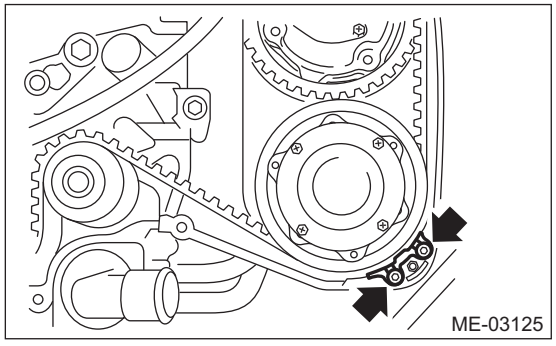
Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent



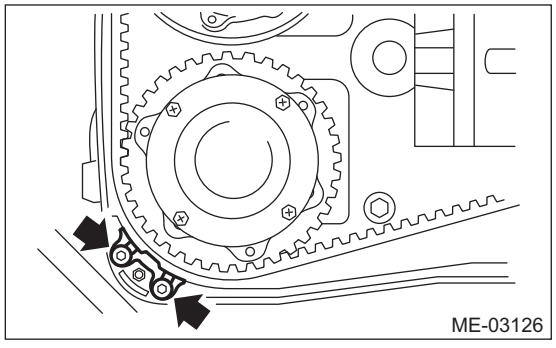
ME-00230



ME-03124



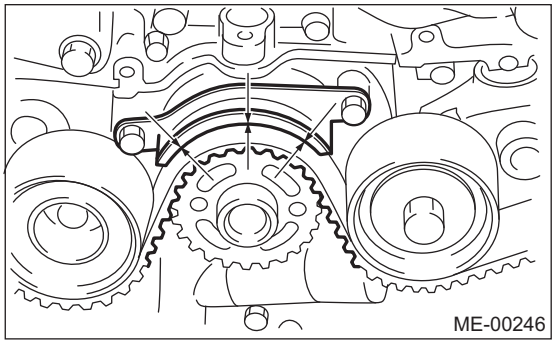
ME-03125



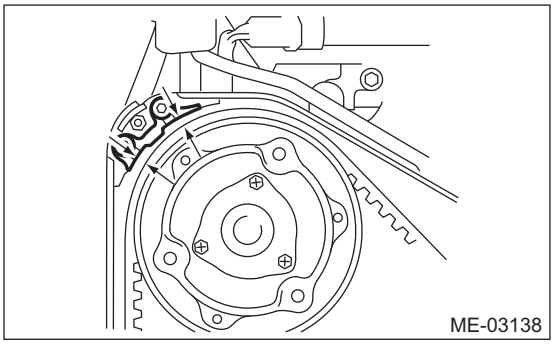
ME-03126

(2) Adjust the clearance between timing belt and timing belt guide using a thickness gauge and tighten.

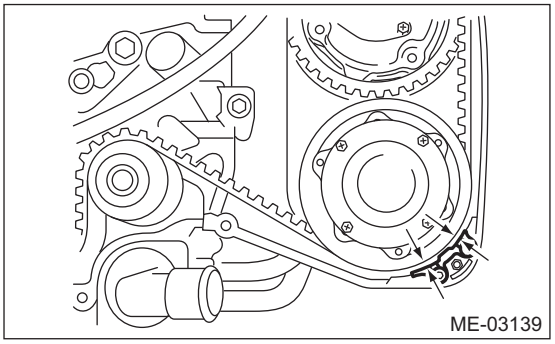
Clearance:
1.0±0.5 mm (0.0394±0.0197 in)



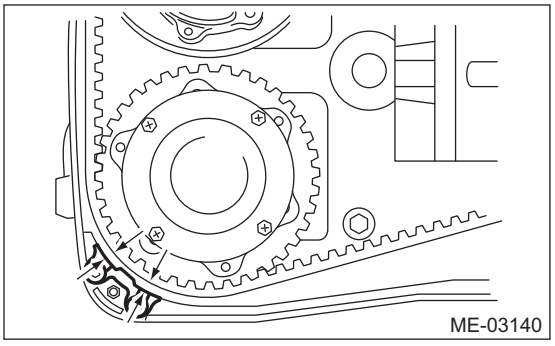
ME-00246



ME-03138

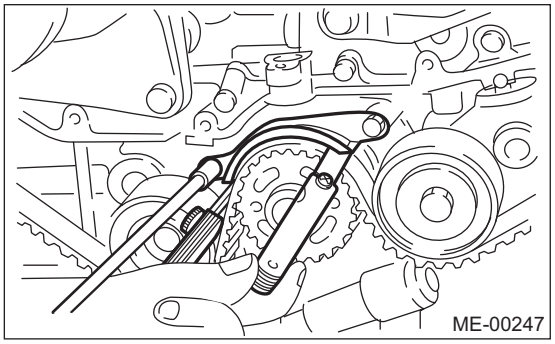


ME-03139

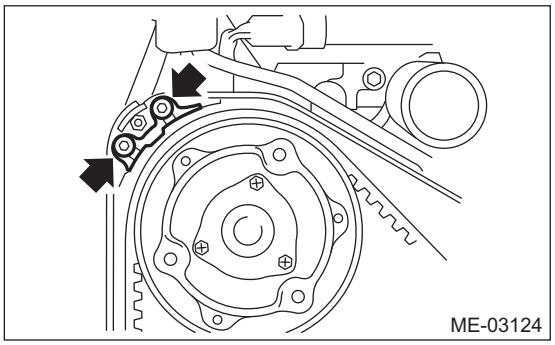


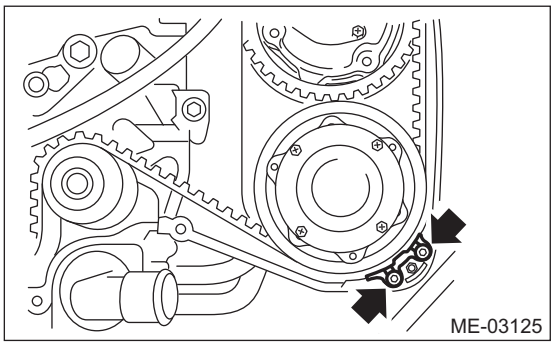
ME-03140

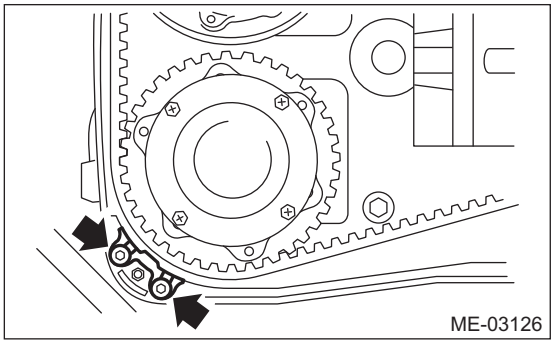
Tightening torque:
9.75 N·m (1.0 kgf-m, 7.2 ft-lb)



Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)







12) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
13) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>

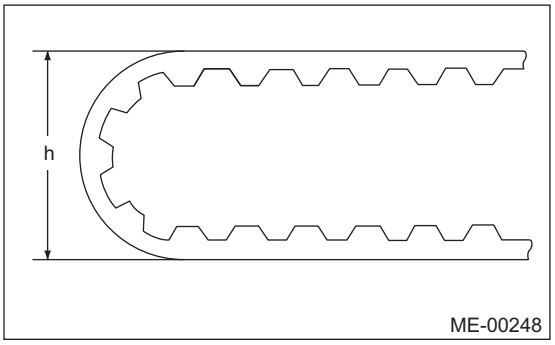
C: INSPECTION

1. TIMING BELT

1) Check the timing belt teeth for breaks, cracks or wear. If any fault is found, replace the timing belt.
2) Check the condition on the back surface of the timing belt. If cracks are found, replace the timing belt.

CAUTION:
• Be careful not to let oil, grease or coolant contact the timing belt. Remove quickly and thoroughly if this happens.
• Do not bend the timing belt sharply.

In radial diameter h:
60 mm (2.36 in) or more



2. AUTOMATIC BELT TENSION ADJUSTER

1) Visually check the oil seals for leaks, and rod ends for abnormal wear and scratches. If necessary, replace the automatic belt tension adjuster assembly.

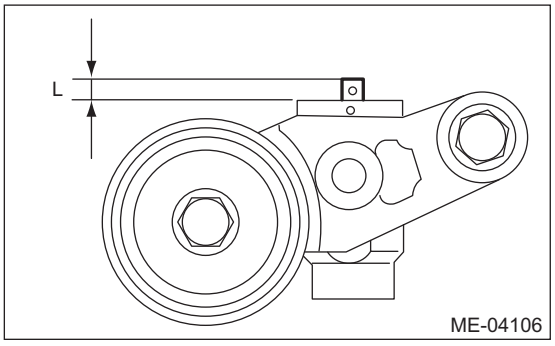
NOTE:
Slight traces of oil at the rod oil seal does not indicate a problem.
2) Check that the adjuster rod does not move when a pressure of 165 N (16.8 kgf, 37.1 lbf) is applied to it. This is to check adjuster rod stiffness.
3) If the adjuster rod is not stiff enough and moves freely when applying 165 N (16.8 kgf, 37.1 lbf), check it using the following procedures:
(1) Slowly press the adjuster rod down to the end surface of cylinder. Repeat this operation two to three times.
(2) With the adjuster rod moved all the way up, apply a pressure of 165 N (16.8 kgf, 37.1 lbf) to it, and check the adjuster rod stiffness.
(3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new part.

CAUTION:
• Always use a vertical type pressing tool to move the adjuster rod down.
• Do not use a lateral type vise.

• Push the adjuster rod vertically.
• Press-in the push adjuster rod gradually taking three minutes or more.
• Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
• Push in the adjuster rod to the end face of the cylinder. However, do not press the adjuster rod below the end face of the cylinder. Doing so may damage the cylinder.

4) Measure the amount of adjuster rod protrusion "L" from the end surface of the cylinder. If it is not within specifications, replace the automatic belt tension adjuster assembly with a new part.

Protrusion amount of adjuster rod L:
5.2 — 6.2 mm (0.2047 — 0.2441 in)



3. BELT TENSION PULLEY

1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the automatic belt tension adjuster assembly with a new part if faulty.
2) Check the belt tension pulley for smooth rotation. Replace the automatic belt tension adjuster assembly with a new part if abnormal noise or excessive play occurs.
3) Check the belt tension pulley for grease leakage.

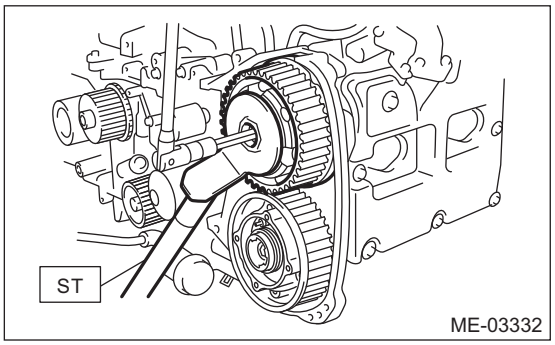
4. BELT IDLER

1) Check the belt idler for smooth rotation. Replace if noise or excessive play occurs.
2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.
3) Check the belt idler for grease leakage.

16.Cam Sprocket

A: REMOVAL

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
2) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
3) Remove the timing belt. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>
4) Remove the actuator covers of the intake and exhaust cam sprockets.
5) Use the ST to lock the cam sprocket, and remove the cam sprocket bolt.
ST 499977500 CAM SPROCKET WRENCH



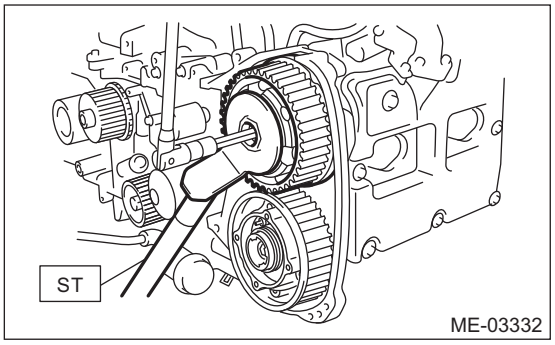
6) Remove the cam sprocket.

B: INSTALLATION

1) Install the cam sprocket.
2) Use the ST to lock the cam sprocket, and install the cam sprocket bolt.

NOTE:
Do not confuse cam sprockets (LH) and (RH), and (INT) and (EXH) during installation.
ST 499977500 CAM SPROCKET WRENCH

Tightening torque:
Tighten to 30 N·m (3.1 kgf-m, 22.1 ft-lb) of torque, and then tighten further by 45°.



3) Attach the actuator covers of the intake and exhaust cam sprockets.

NOTE:
Use new O-rings.

Tightening torque:
3.4 N·m (0.3 kgf-m, 2.5 ft-lb)
4) Install the timing belt. <Ref. to ME(STI)-54, INSTALLATION, Timing Belt.>
5) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
6) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>

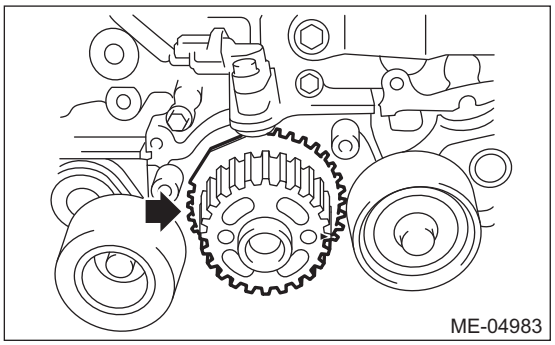
C: INSPECTION

1) Check the cam sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between cam sprocket and key.

17.Crank Sprocket

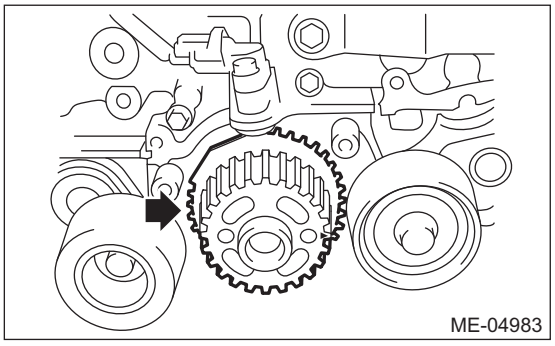
A: REMOVAL

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
2) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
3) Remove the timing belt. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>
4) Remove the crank sprocket.



B: INSTALLATION

1) Install the crank sprocket.



2) Install the timing belt. <Ref. to ME(STI)-54, INSTALLATION, Timing Belt.>
3) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
4) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>

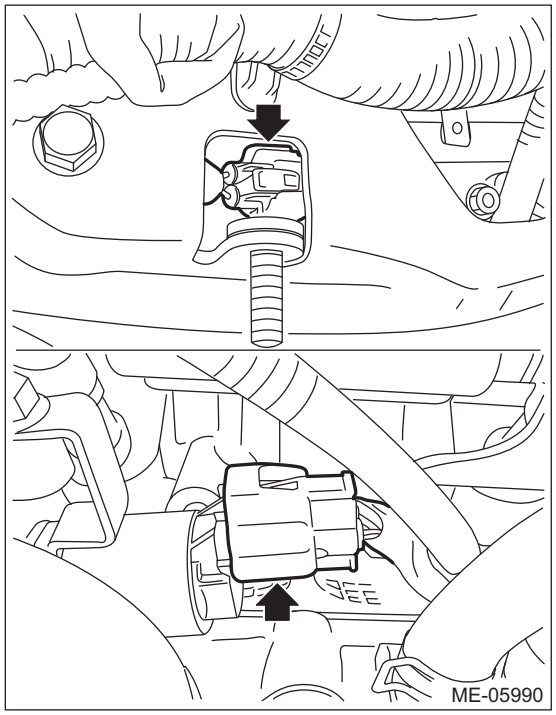
C: INSPECTION

1) Check the crank sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between crank sprocket and key.
3) Check the crank sprocket protrusion used for sensor for damage and contamination of foreign matter.

18.Camshaft

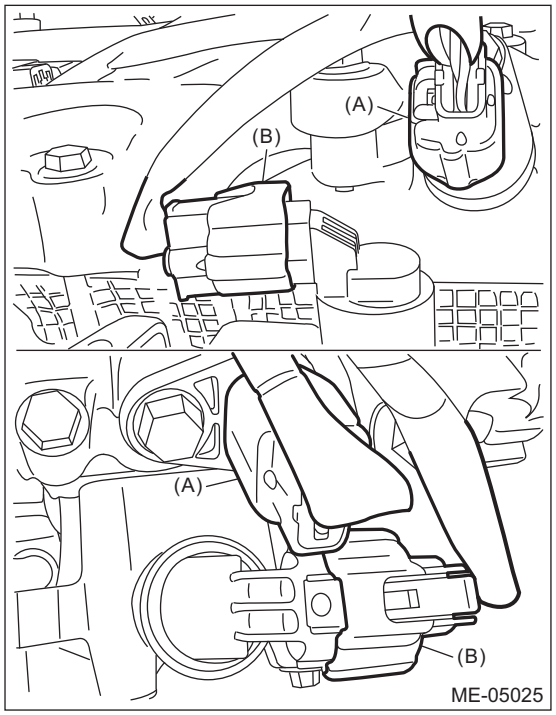
A: REMOVAL

1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, REMOVAL, Engine Assembly.>
2) Remove the rear side belt. <Ref. to ME(STI)-42, REAR SIDE BELT, REMOVAL, V-belt.>
3) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
4) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
5) Remove the timing belt. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>
6) Remove the cam sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.>
7) Disconnect the connector from the intake oil flow control solenoid valve.



ME-05990

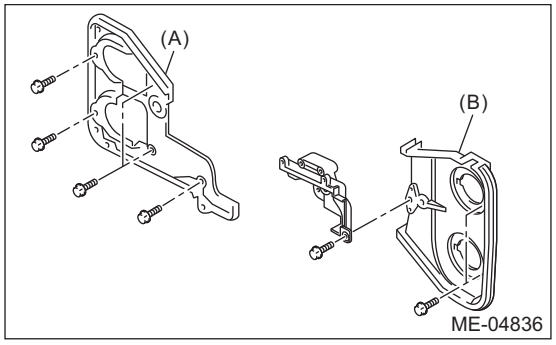
8) Disconnect the connector (A) from the exhaust camshaft position sensor and the connector (B) from the exhaust oil flow control solenoid valve LH.



ME-05025

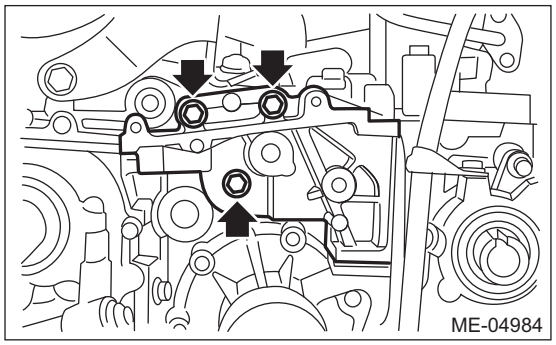
9) Remove the timing belt cover No. 2 RH (A) and timing belt cover No. 2 LH (B).

NOTE:
When removing the timing belt cover, be careful not to damage the seal rubber.



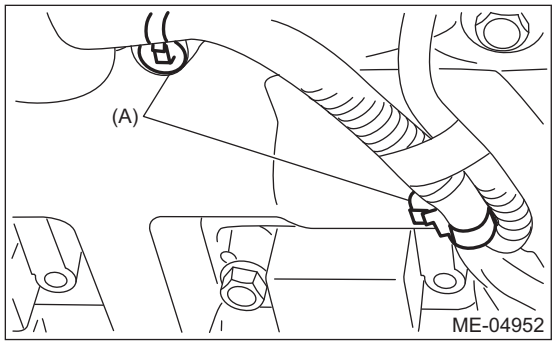
ME-04836

10) Remove the tensioner bracket.

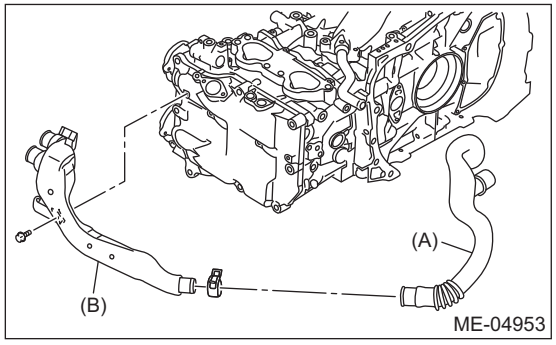


ME-04984

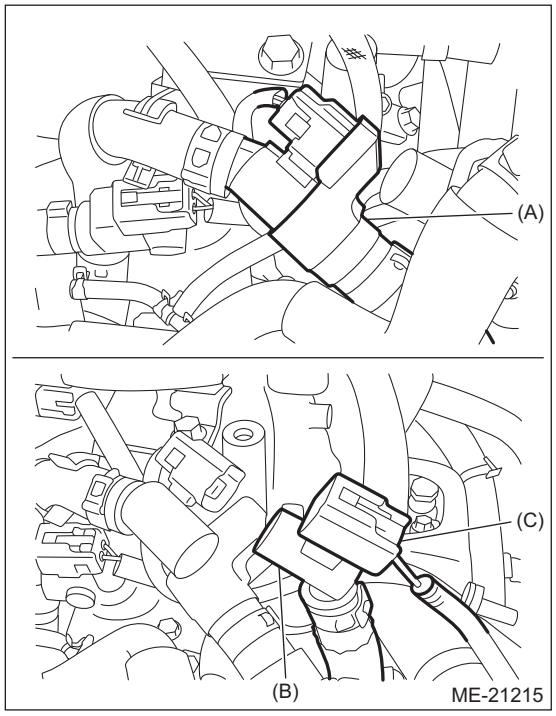
11) Remove the clip (A) which hold the engine harness to the rocker cover RH.



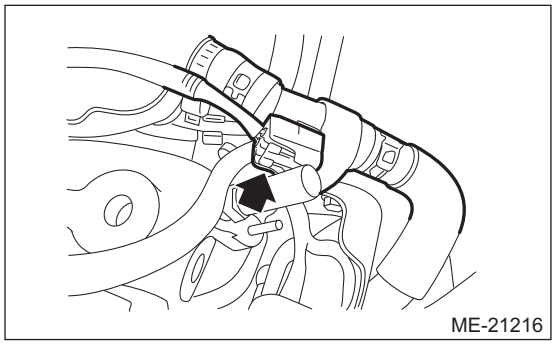
12) Remove the air duct B (B) from the rocker cover LH and the air duct A (A).



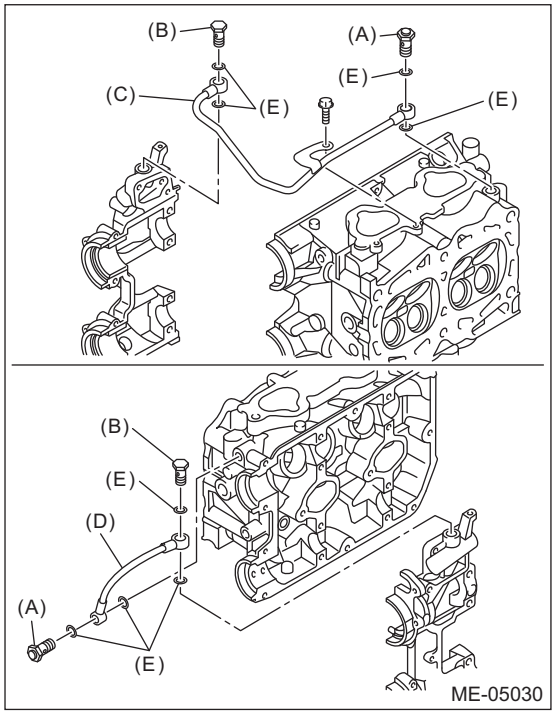
13) Remove the ignition coil. <Ref. to IG(STI)-8, REMOVAL, Ignition Coil.>
14) Unlock the leak diagnosis connector, and disconnect the vacuum hose (A).
15) Remove the leak diagnosis connector (C) from the PCV hose (B).



16) Unlock the leak diagnosis connector, and disconnect the vacuum hose.



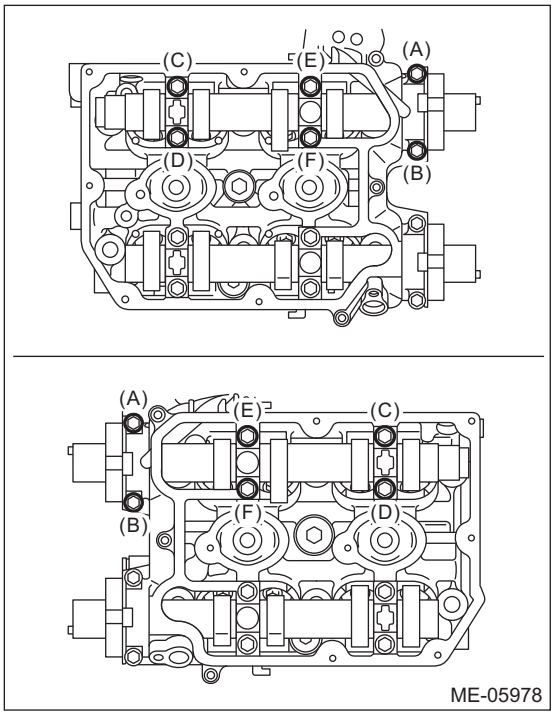
17) Remove the rocker cover.
18) Remove the union bolt without filter (without protrusion) which secures the oil pipe to the front camshaft cap. (If cylinder head is not removed)



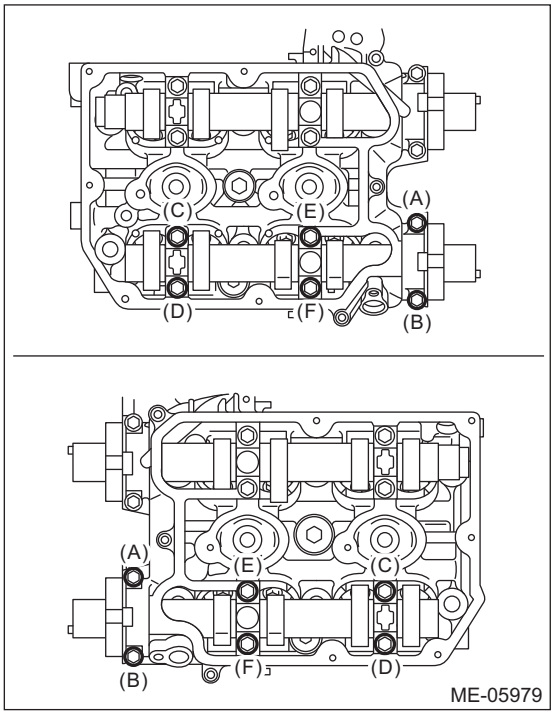
(A) Union bolt with filter (with protrusion)
(B) Union bolt without filter (without protrusion)
(C) Oil pipe RH
(D) Oil pipe LH
(E) Gasket

19) Remove the oil pipe. (If cylinder head is removed) <Ref. to LU(STI)-23, REMOVAL, Oil Pipe.>

20) Loosen the upper side of the front camshaft cap and the intake camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.



21) Loosen the lower side of the front camshaft cap and the exhaust camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.



22) Remove the front camshaft cap.
23) Remove the intake camshaft caps and intake camshaft.
24) Remove the exhaust camshaft caps and exhaust camshaft.

NOTE:
Arrange camshaft caps in order so that they can be installed in their original positions.
25) Remove the oil seal.

CAUTION:
Do not scratch the journal surface when removing the oil seal.

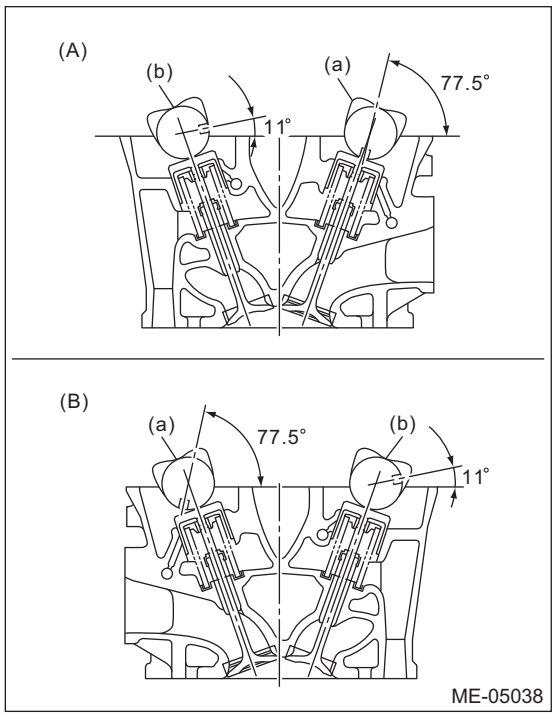
B: INSTALLATION

1) Install the camshaft.
Apply engine oil to the cylinder head at camshaft journal installation location before installing the camshaft. Install the camshaft so that each valve is close to or in contact with base circle of the cam lobe.

NOTE:
- Set the camshaft to the position shown in the figure.
- When set at the position shown in the figure, it is not necessary to rotate the camshaft RH when installing the timing belt, but it is necessary to rotate the camshaft LH slightly.

Intake camshaft LH:
Rotate 80° clockwise.

Exhaust camshaft LH:
Rotate 45° counterclockwise.



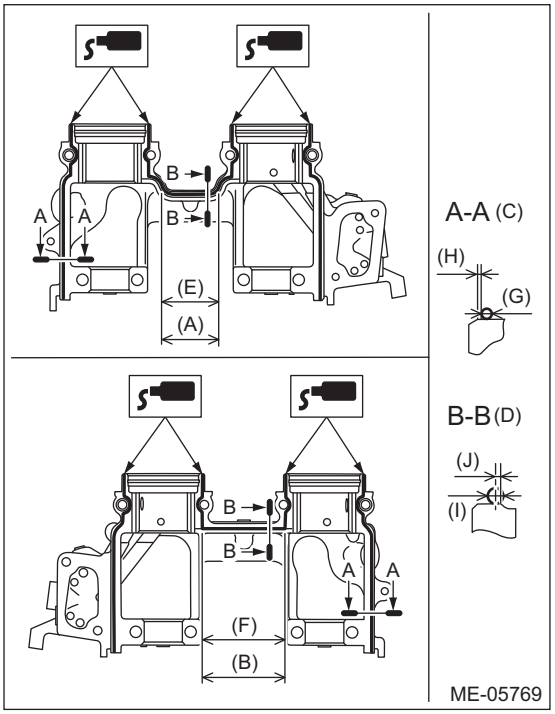
(A) Cylinder head RH
(B) Cylinder head LH
(a) Intake camshaft
(b) Exhaust camshaft

2) Install the camshaft cap.
(1) Apply small amount of liquid gasket to the mating surface of cap.

NOTE:
• Install within 5 min. after applying liquid gasket.
• Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to come out and flow toward oil seal, resulting in oil leak.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

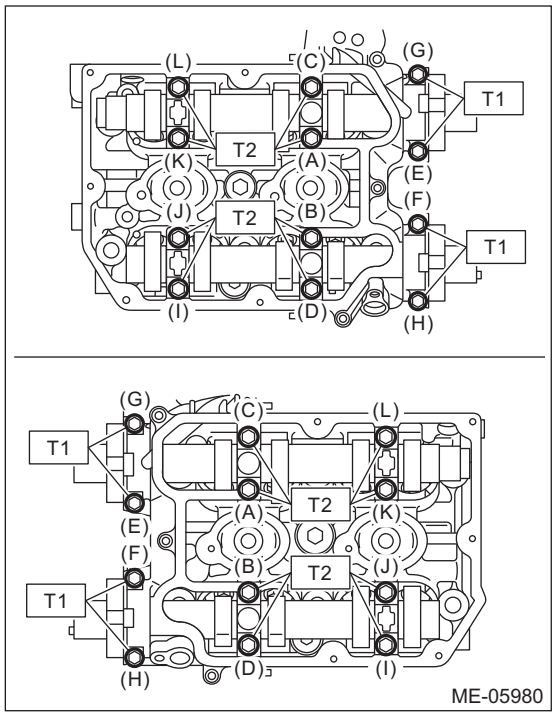
Liquid gasket applying diameter:
Mating surfaces other than ranges A and B
2±0.5 mm (0.0787±0.0197 in)
Mating surfaces of ranges A and B
3±1 mm (0.1181±0.0394 in)



(A) Range A
(B) Range B
(C) Liquid gasket applying position of mating surfaces of ranges other than A and B
(D) Liquid gasket applying position of mating surfaces of ranges A and B
(E) 44.8 mm (1.7638 in)
(F) 65 mm (2.5591 in)
(G) ϕ2±0.5 mm (0.0787±0.0197 in)
(H) 0.5±0.5 mm (0.0197±0.0197 in)
(I) ϕ3±1 mm (0.1181±0.0394 in)
(J) 1 mm (0.0394 in) or less

(2) Apply a thin coat of engine oil to the cap journal surface, and install the camshaft cap to the camshaft.
(3) Gradually tighten the camshaft cap in at least two steps, in alphabetical order shown in the figure, and then tighten to the specified torque.

Tightening torque:
T1: 9.75 N·m (1.0 kgf-m, 7.2 ft-lb)
T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)

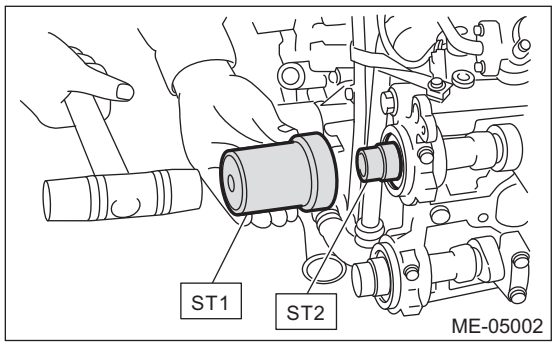


(4) After tightening the camshaft cap, ensure the camshaft rotates only slightly while holding it at base circle.

3) Apply a thin coat of engine oil to the periphery of the camshaft oil seal and oil seal lip, and install the oil seal on the camshaft using ST1 and ST2.

NOTE:
Use a new oil seal.

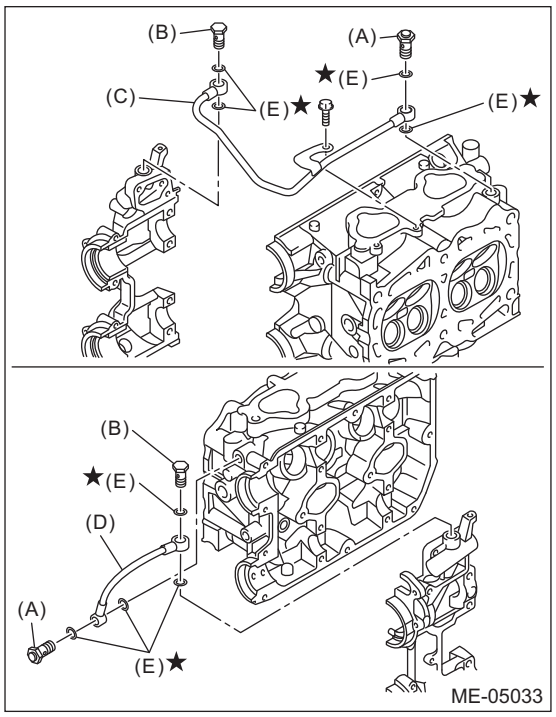
ST1	499587600	OIL SEAL INSTALLER
ST2	499597200	OIL SEAL GUIDE



4) Install the oil pipe to the front camshaft cap using the union bolt without filter (without protrusion). (If cylinder head is not removed)

NOTE:
Use a new gasket.

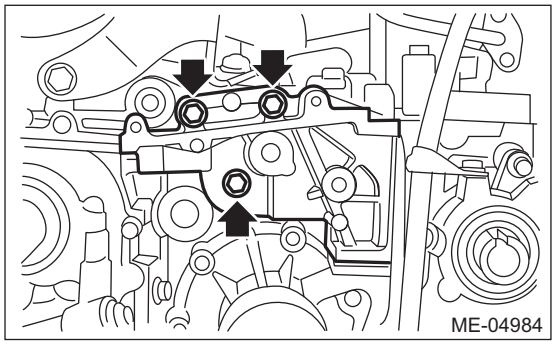
Tightening torque:
31.5 N·m (3.2 kgf-m, 23.2 ft-lb)



(A) Union bolt with filter (with protrusion)
(B) Union bolt without filter (without protrusion)
(C) Oil pipe RH
(D) Oil pipe LH
(E) Gasket

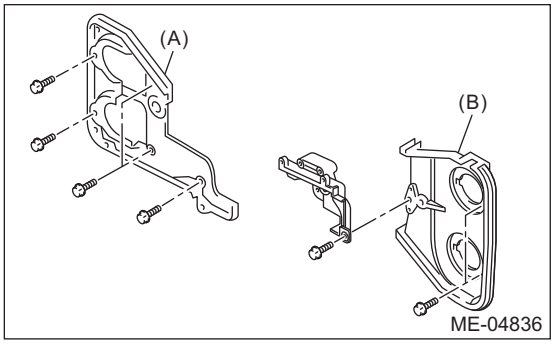
5) Install the oil pipe. (If cylinder head is removed) <Ref. to LU(STI)-24, INSTALLATION, Oil Pipe.>
6) Install the tensioner bracket.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)



7) Install the timing belt cover No. 2 RH (A) and timing belt cover No. 2 LH (B).

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



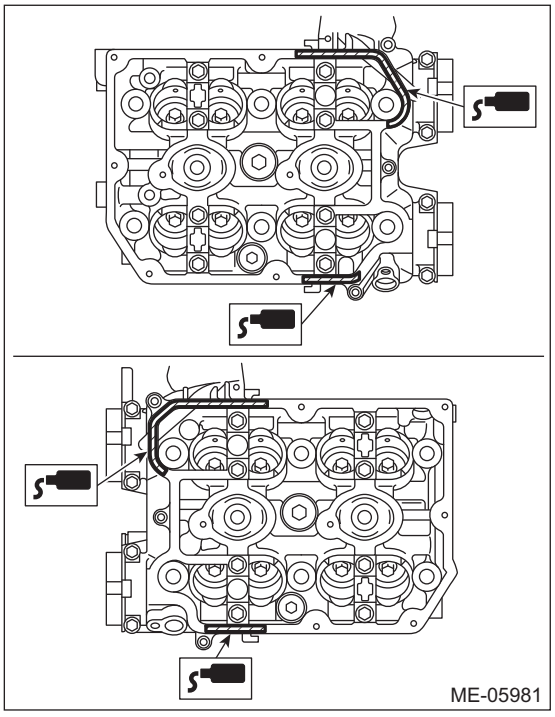
8) Install the cam sprocket. <Ref. to ME(STI)-61, INSTALLATION, Cam Sprocket.>
9) Install the timing belt. <Ref. to ME(STI)-54, INSTALLATION, Timing Belt.>
10) Adjust the valve clearance. <Ref. to ME(STI)-29, ADJUSTMENT, Valve Clearance.>
11) Install the rocker cover.
(1) Install the rocker cover gasket to the rocker cover. (Outer section and ignition coil section)

NOTE:
Use a new rocker cover gasket.

(2) Apply liquid gasket to the specified point of the cylinder head.

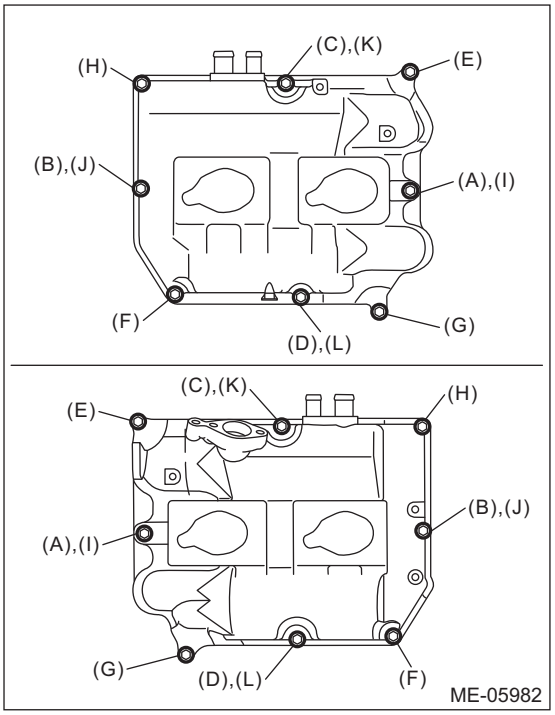
NOTE:
Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



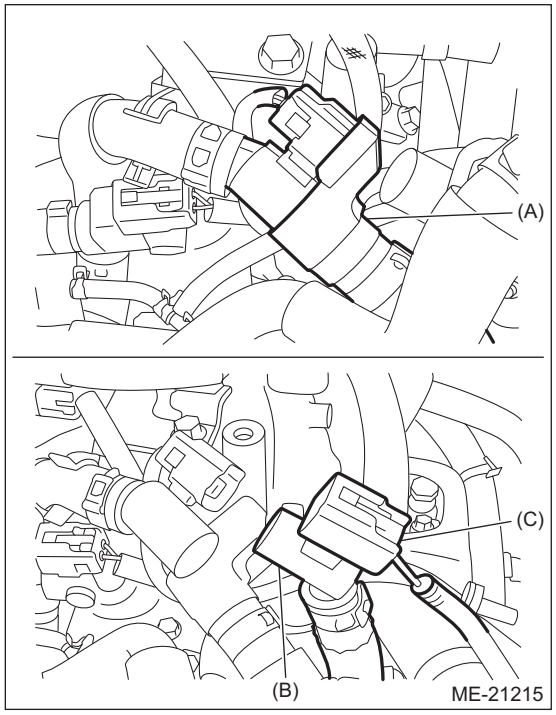
(3) Install the rocker cover onto cylinder heads. Ensure the gasket is properly positioned during installation.
(4) Temporarily tighten the rocker cover bolts in alphabetical order shown in the figure, and then tighten to specified torque in alphabetical order.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



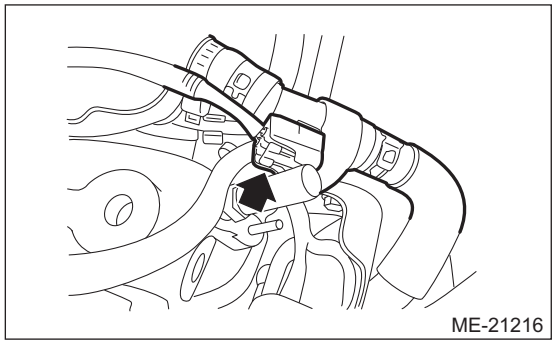
12) Install the leak diagnosis connector (C) to the PCV hose (B).
13) Connect the vacuum hose (A).

NOTE:
Make sure that the leak diagnosis connector is connected securely.

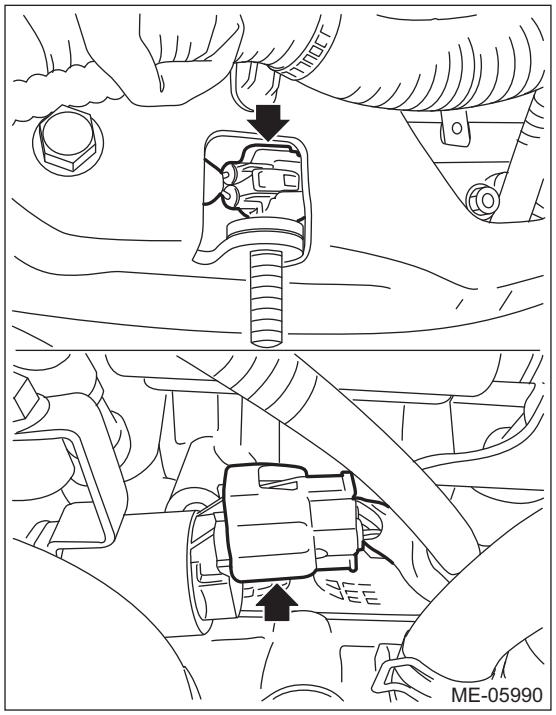


14) Connect the vacuum hose.

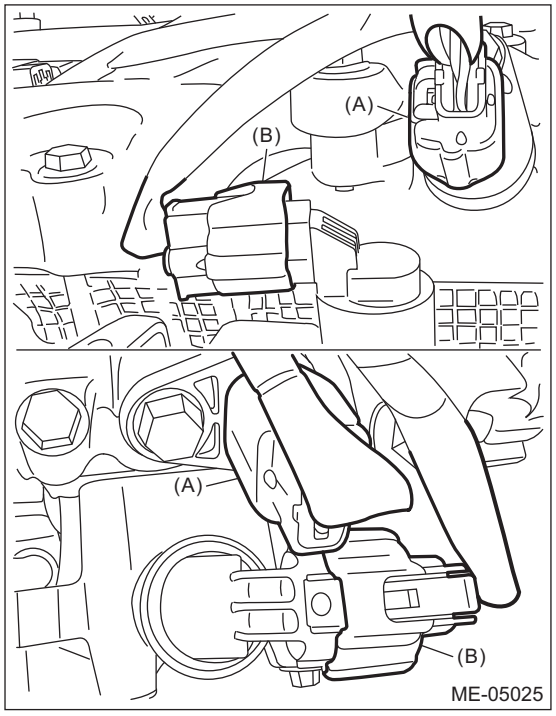
NOTE:
Make sure that the leak diagnosis connector is connected securely.



15) Connect the connector to the intake oil flow control solenoid valve.

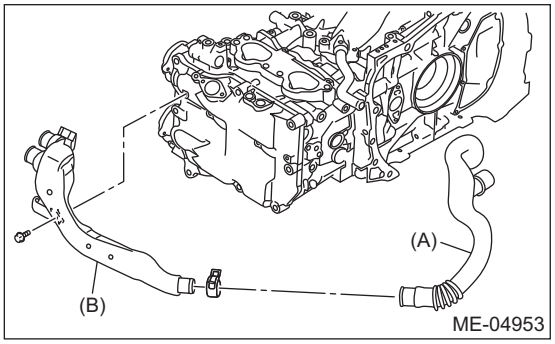


16) Connect the connector (A) to the exhaust camshaft position sensor and the connector (B) to the exhaust oil flow control solenoid valve LH.

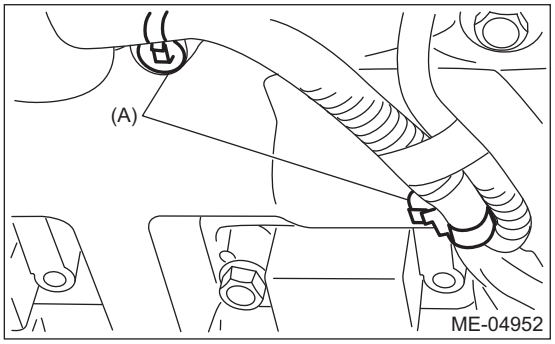


17) Install the ignition coil. <Ref. to IG(STI)-8, INSTALLATION, Ignition Coil.>
18) Install the air duct B (B) to the rocker cover LH and the air duct A (A).

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



19) Fix the engine harness to the rocker cover RH with clips (A).

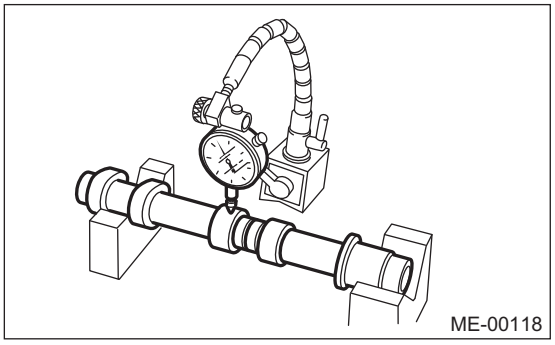


20) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
21) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>
22) Install the rear side belt. <Ref. to ME(STI)-43, REAR SIDE BELT, INSTALLATION, V-belt.>
23) Install the engine to the vehicle. <Ref. to ME(STI)-36, INSTALLATION, Engine Assembly.>

C: INSPECTION

1) Measure the bend, and repair or replace if necessary.

Camshaft bend limit:
0.020 mm (0.0008 in)

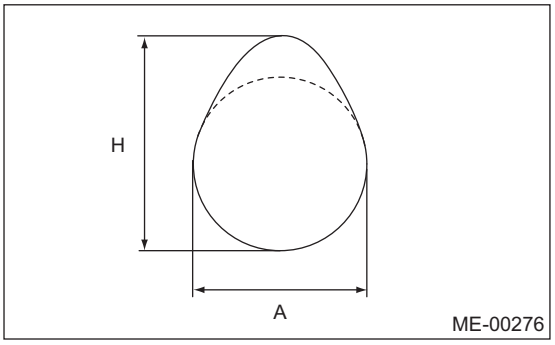


2) Check the journal for damage and wear. Replace if faulty.
3) Check the cutout portion used for camshaft sensor for damage. Replace if faulty.
4) Check the cam face condition, and remove the minor faults by grinding with oil stone. If offset wear occurs, replace it.
5) Measure the cam lobe height “H” and cam base circle diameter “A”. If it exceeds the standard or offset wear occurs, replace it.

Cam lobe height H:

Standard
Intake
46.55 — 46.65 mm (1.8327 — 1.8366 in)
Exhaust
46.75 — 46.85 mm (1.8405 — 1.8445 in)

Cam base circle diameter A:
Standard
37.0 mm (1.4567 in)

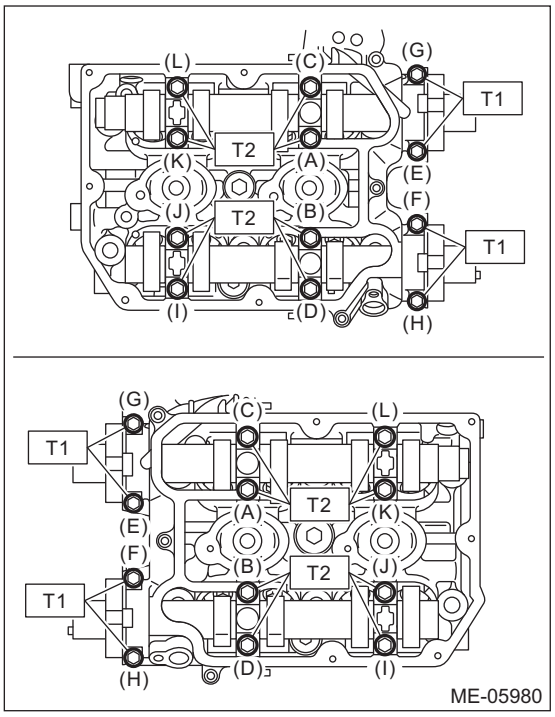


6) Measure the outside diameter of camshaft journal. If the journal diameter is not within specification, check the oil clearance.

	Camshaft journal	
	Front	Center, rear
Standard mm (in)	37.946 — 37.963 (1.4939 — 1.4946)	29.946 — 29.963 (1.1790 — 1.1796)

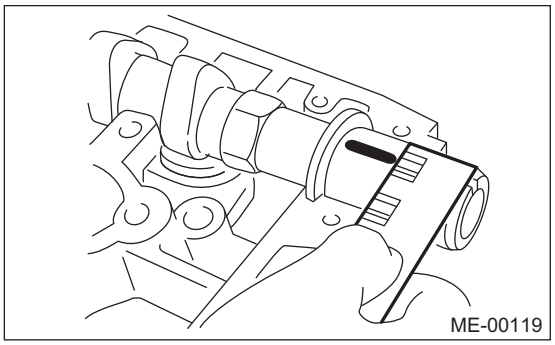
7) Measure the oil clearance of camshaft journal.
(1) Clean the camshaft cap and cylinder head camshaft journal.
(2) Place the camshaft on cylinder head. (Without installing the valve lifter)
(3) Place a plastigauge across each camshaft journals.
(4) Gradually tighten the camshaft cap in at least two steps, in alphabetical order shown in the figure, and then tighten to the specified torque. Do not turn the camshaft.

Tightening torque:
T1: 9.75 N·m (1.0 kgf-m, 7.2 ft-lb)
T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)



(5) Remove the camshaft cap.
(6) Measure the widest point of the plastigauge on each journal. If oil clearance exceeds the standard, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

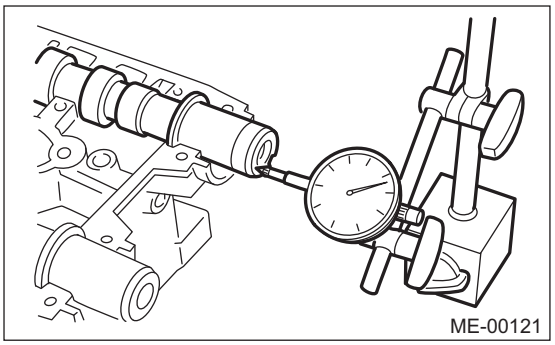
Camshaft oil clearance:
Standard
0.037 — 0.072 mm (0.0015 — 0.0028 in)



(7) Completely remove the plastigauge.

8) Measure the thrust clearance with setting the dial gauge at end surface of camshaft. If the thrust clearance is not within the standard or there is offset wear, replace the camshaft caps and cylinder head as a set. If necessary replace the camshaft.

Camshaft thrust clearance:
Standard
0.068 — 0.116 mm (0.0027 — 0.0047 in)

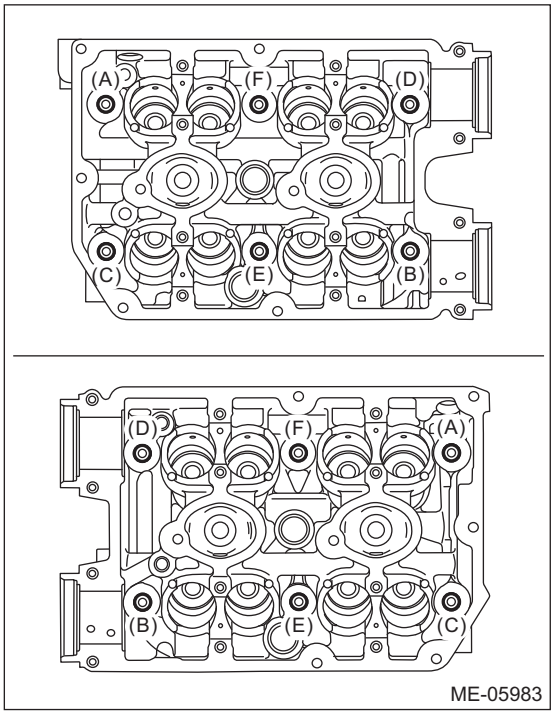


19.Cylinder Head

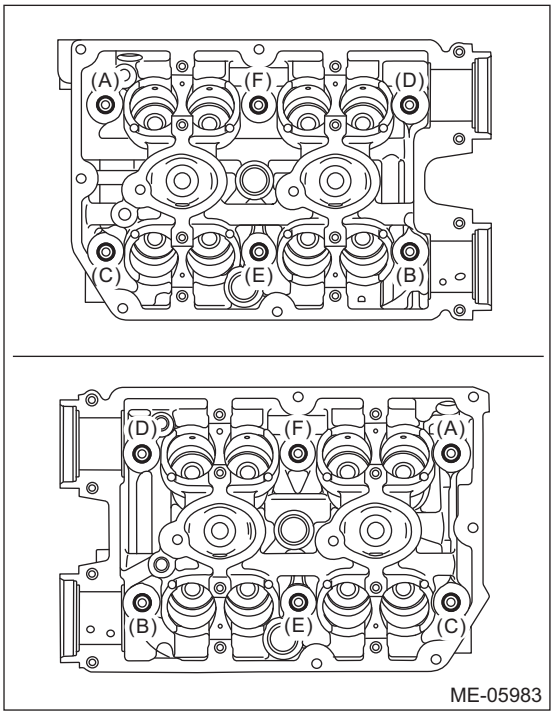
A: REMOVAL

1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, REMOVAL, Engine Assembly.>
2) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
3) Remove the secondary air combination valve. <Ref. to EC(STI)-57, REMOVAL, Secondary Air Combination Valve.>
4) Remove the camshaft. <Ref. to ME(STI)-63, REMOVAL, Camshaft.>
5) Remove the A/C compressor. <Ref. to AC-46, STI MODEL, REMOVAL, Compressor.>
6) Remove the oil level gauge guide. (LH side only)
7) Remove the cylinder head bolts in alphabetical order shown in the figure.

NOTE:
Leave the bolts (A) and (D) engaged by three or four threads to prevent the cylinder head from falling.



8) While tapping the cylinder head with a plastic hammer, separate it from cylinder block. Remove the bolts (A) and (D) to remove cylinder head.



9) Remove the cylinder head gasket.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.

B: INSTALLATION

1) Install the cylinder head to the cylinder block.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.

NOTE:
Use a new cylinder head gasket.

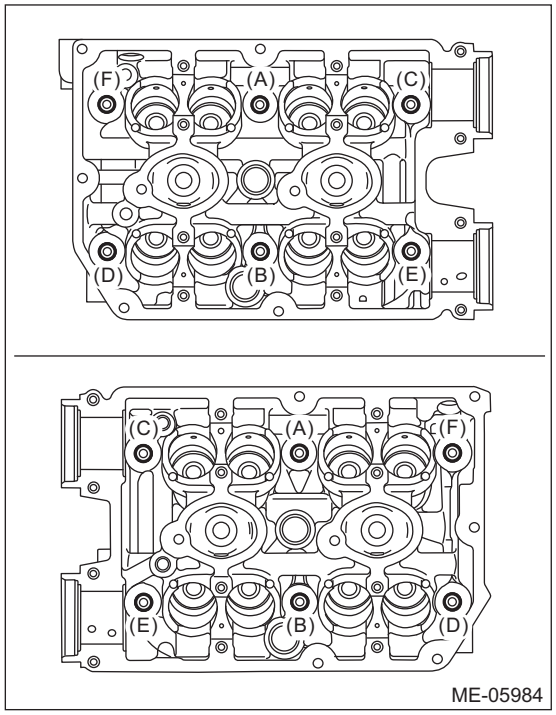
(1) Clean the bolt threads and the bolt holes in the cylinder block.

CAUTION:
To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.

(2) Apply a sufficient coat of engine oil to the washer and bolt thread.
(3) Tighten all bolts to 40 N·m (4.1 kgf-m, 29.5 ft-lb) in alphabetical order.
(4) Retighten all bolts to 69 N·m (7.0 kgf-m, 50.9 ft-lb) in alphabetical order.

CAUTION:
If the bolt makes stick-slip sound during tightening, repeat the procedure from step (1). In this case, the cylinder head gasket can be reused.

(5) Loosen all the bolts by 180° in the reverse order of installing, and loosen them further by 180°.
(6) Tighten all bolts to 40 N·m (4.1 kgf-m, 29.5 ft-lb) in alphabetical order.
(7) Retighten all bolts to 69 N·m (7.0 kgf-m, 50.9 ft-lb) in alphabetical order.
(8) Loosen the bolts E, D, and A by 360° in this order.
(9) Tighten the bolts A, D, and E to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in this order.
(10) Tighten the bolts A, D, and E to 30 N·m (3.1 kgf-m, 22.1 ft-lb) in this order.
(11) Further tighten the bolts A, D, and E by 98 — 102° in this order.
(12) Further tighten the bolt A by 123 — 127°.
(13) Further tighten the bolts D and E by 78 — 82° in this order.
(14) Loosen the bolts F, C, and B by 360° in this order.
(15) Tighten the bolts B, C, and F to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in this order.
(16) Tighten the bolts B, C, and F to 30 N·m (3.1 kgf-m, 22.1 ft-lb) in this order.
(17) Further tighten the bolts B, C, and F by 98 — 102° in this order.
(18) Further tighten the bolt B by 123 — 127°.
(19) Further tighten the bolts C and F by 78 — 82° in this order.



2) Install the oil level gauge guide. (LH side only)

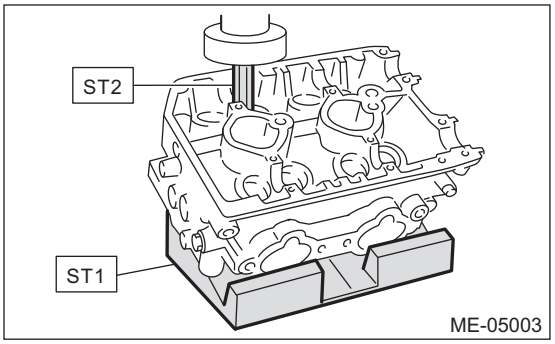
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3) Install the A/C compressor. <Ref. to AC-49, STI MODEL, INSTALLATION, Compressor.>
4) Install the camshaft. <Ref. to ME(STI)-65, INSTALLATION, Camshaft.>
5) Install the secondary air combination valve. <Ref. to EC(STI)-57, INSTALLATION, Secondary Air Combination Valve.>
6) Install the intake manifold. <Ref. to FU(STI)-20, INSTALLATION, Intake Manifold.>
7) Install the engine to the vehicle. <Ref. to ME(STI)-36, INSTALLATION, Engine Assembly.>

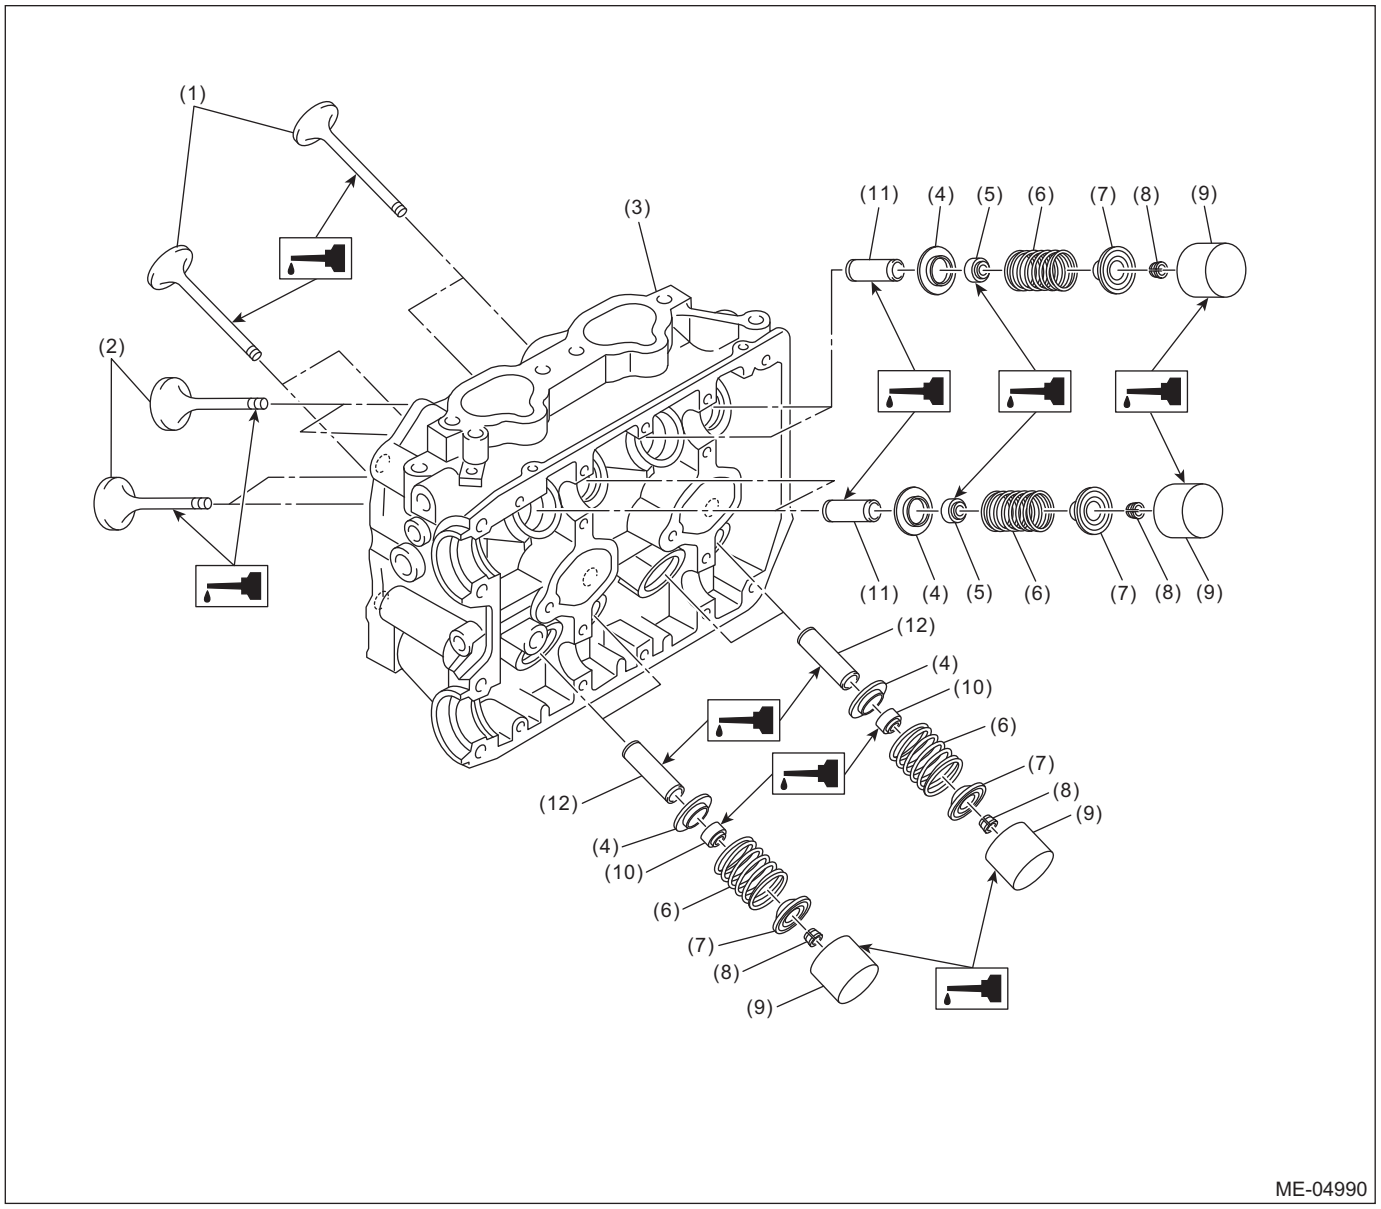
C: DISASSEMBLY

1) Remove the valve lifter.
2) Place the cylinder head on ST1.
ST1 498267600 CYLINDER HEAD TABLE
3) Using ST2, compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.
ST2 499718000 VALVE SPRING REMOVER

NOTE:
- Mark each valve to prevent confusion.
- Pay careful attention not to damage the lips of intake valve oil seals and exhaust valve oil seals.
- Keep all the removed parts in order for re-installing in their original positions.
- For removal and installation procedures of the valve guide, intake valve oil seal and exhaust valve oil seal, refer to “INSPECTION”. <Ref. to ME(STI)-75, VALVE GUIDE, INSPECTION, Cylinder Head.> <Ref. to ME(STI)-77, INTAKE AND EXHAUST VALVE OIL SEAL, INSPECTION, Cylinder Head.>



D: ASSEMBLY



(1) Exhaust valve
(2) Intake valve
(3) Cylinder head
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Valve spring retainer
(8) Valve spring retainer key
(9) Valve lifter
(10) Exhaust valve oil seal
(11) Intake valve guide
(12) Exhaust valve guide

1) Install the valve spring and valve.
(1) Coat the valve stem of each valve with engine oil and insert the valve into valve guide.

NOTE:
When inserting the valve into valve guide, use special care not to damage the oil seal lip.

(2) Set the cylinder head on ST1.

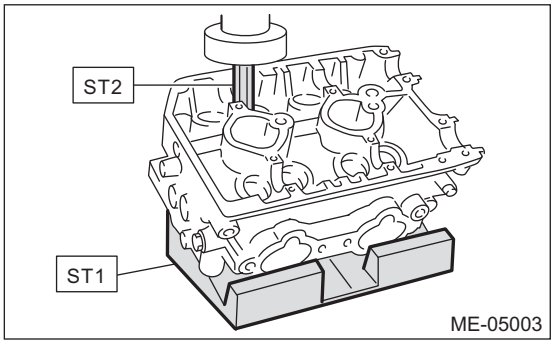
ST1 498267600 CYLINDER HEAD TABLE

(3) Install the valve spring and valve spring retainer.

NOTE:
Be sure to install the valve spring with its close-coiled end facing the cylinder head side.

(4) Set the ST2 on valve spring.

ST2 499718000 VALVE SPRING REMOVER



(5) Compress the valve spring and fit the valve spring retainer key.
(6) After installing, tap the valve spring retainers lightly with a plastic hammer for better seating.

2) Apply oil to the surface of valve lifter.
3) Install the valve lifter.

E: INSPECTION

1. CYLINDER HEAD

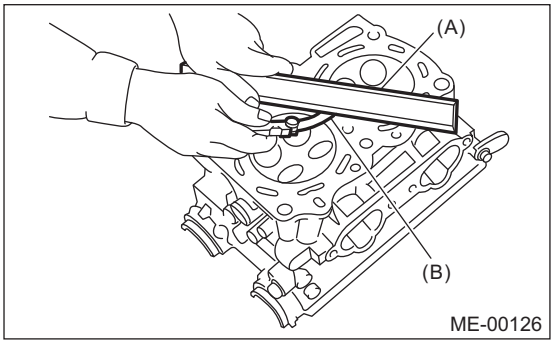
1) Check for cracks or damage. Use liquid penetrant tester on the important sections to check for fissures. Check that there are no marks of gas leaking or water leaking on gasket installing surface.
2) Measure the warping of the cylinder head surface that mates with cylinder block using a straight edge (A) and thickness gauge (B).
If the warping exceeds the limit, correct the surface by grinding it with a surface grinder.

Warping limit:
0.035 mm (0.0014 in)

Grinding limit:
0.3 mm (0.0118 in)

Standard height of cylinder head:
127.5 mm (5.0197 in)

NOTE:
Uneven torque for the cylinder head bolts can cause warpage. When reinstalling, pay special attention to the torque so as to tighten evenly.

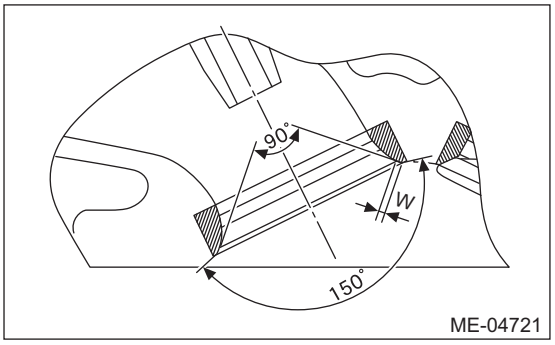


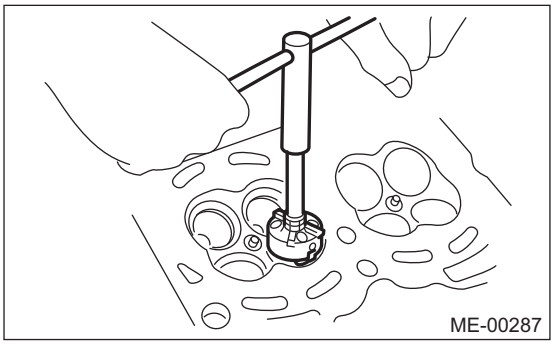
2. VALVE SEAT

Inspect the intake and exhaust valve seats, and correct the contact surfaces with a valve seat cutter if they are defective or when valve guides are replaced.

Contacting width W between valve and valve seat:

Standard
Intake
0.6 — 1.4 mm (0.0236 — 0.0551 in)
Exhaust
1.2 — 1.8 mm (0.0472 — 0.0709 in)





3. VALVE GUIDE

1) Check the clearance between valve guide and valve stem. The clearance can be checked by measuring the outer diameter of valve stem with a micrometer and the inner diameter of valve guide with a caliper gauge respectively.

Clearance between the valve guide and valve stem:

Standard
Intake
0.030 — 0.057 mm (0.0012 — 0.0022 in)
Exhaust
0.040 — 0.067 mm (0.0016 — 0.0026 in)

2) If the clearance between valve guide and valve stem exceeds the standard, replace the valve guide or valve itself, whichever shows the greater amount of wear or damage. See the following procedure for valve guide replacement.

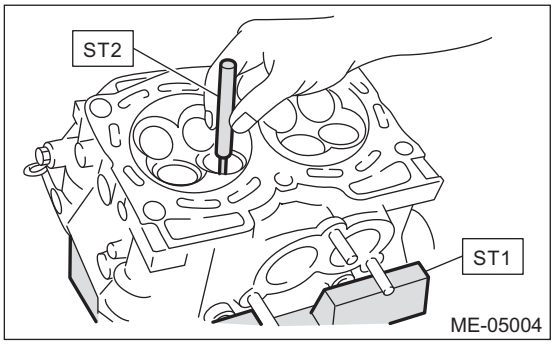
Valve guide inner diameter:
6.000 — 6.012 mm (0.2362 — 0.2367 in)

Valve stem outer diameters:
Intake
5.955 — 5.970 mm (0.2344 — 0.2350 in)
Exhaust
5.945 — 5.960 mm (0.2341 — 0.2346 in)

(1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides fit the holes in ST1.

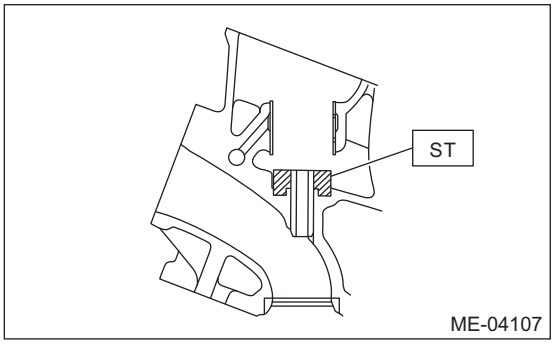
(2) Insert the ST2 into valve guide and press it down to remove the valve guide.

ST1 498267600 CYLINDER HEAD TABLE
ST2 499767200 VALVE GUIDE REMOVER



(3) Turn the cylinder head upside down and place the ST as shown in the figure.

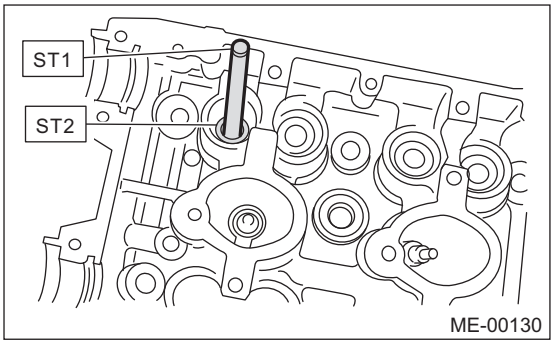
ST 18251AA020 VALVE GUIDE ADJUSTER



(4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inner surface of valve guide holes in cylinder head.

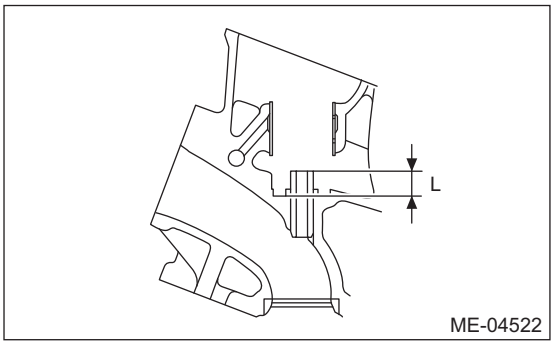
(5) Put a new valve guide, coated with sufficient oil, in the cylinder head, and insert the ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER
ST2 18251AA020 VALVE GUIDE ADJUSTER



(6) Check the valve guide protrusion amount "L".

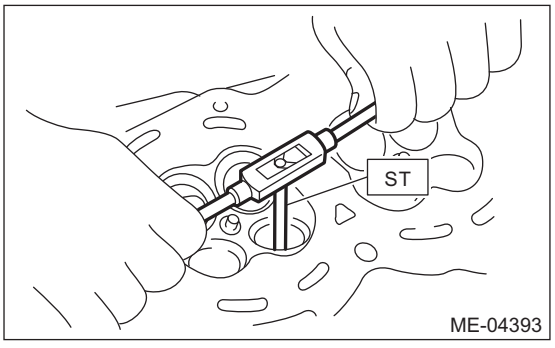
Valve guide protrusion amount L:
15.8 — 16.2 mm (0.6220 — 0.6378 in)



(7) Ream the inside of valve guide using ST. Put the ST in valve guide, and rotate the ST slowly clockwise while pushing it lightly. Bring the ST back while rotating it clockwise.

NOTE:
• Apply engine oil to the ST when reaming.
• If the inner surface of valve guide is damaged, the edge of ST should be slightly ground with oil stone.
• If the inner surface of valve guide becomes lustrous and the ST does not chip, use a new ST or remedy the ST.

ST 499767400 VALVE GUIDE REAMER



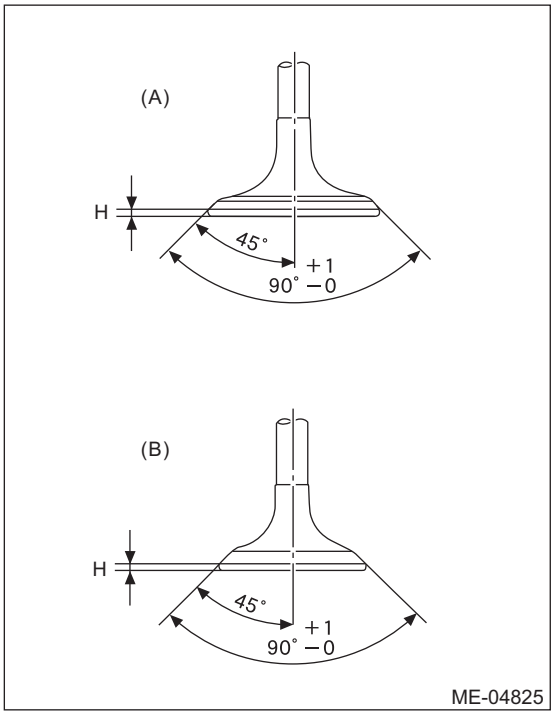
(8) After reaming, clean the valve guide to remove chips.
(9) Recheck the contact condition between valve and valve seat after replacing the valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange of valve and valve stem, and replace the valve with a new part if damaged, worn, deformed, or if dimension "H" in the figure is outside of the specified limit.

Head edge thickness H:

Standard
Intake (A)
1.0 — 1.4 mm (0.0394 — 0.0551 in)
Exhaust (B)
1.3 — 1.7 mm (0.0512 — 0.0669 in)



2) Put a small amount of grinding compound on the valve seat surface, and lap the valve and valve seat surface. Replace with a new valve oil seal after lapping.

NOTE:
It is possible to differentiate between the intake valve and the exhaust valve by their overall length.

Valve overall length:
Intake
104.4 mm (4.1102 in)
Exhaust
104.65 mm (4.1201 in)

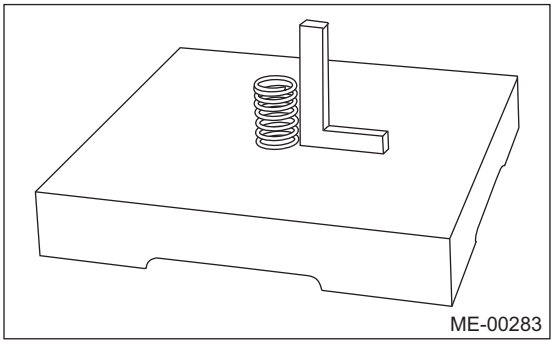
5. VALVE SPRING

1) Check the valve springs for damage, free length (reference), and tension. Replace the valve spring if it is not within the standard value presented in the table.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• The free length of the valve spring is described as a reference. There is no need to replace the valve spring if the free length of the valve spring alone is out of standard.

2) To measure the squareness of the valve spring, stand the valve spring on a surface plate and measure its deflection at the top of the valve spring using a try square.

Free length (reference) mm (in)		53.48 (2.1055)
Tension/spring height N (kgf, lbf)/mm (in)	Set	204.6 — 235.4 (20.86 — 24.00, 46.00 — 52.93)/ 36.0 (1.4173)
	Lift	363.5 — 401.7 (37.07 — 40.96, 81.73 — 90.32)/ 26.7 (1.0512)
Squareness		2.5°, 2.3 mm (0.0906 in) or less



6. INTAKE AND EXHAUST VALVE OIL SEAL

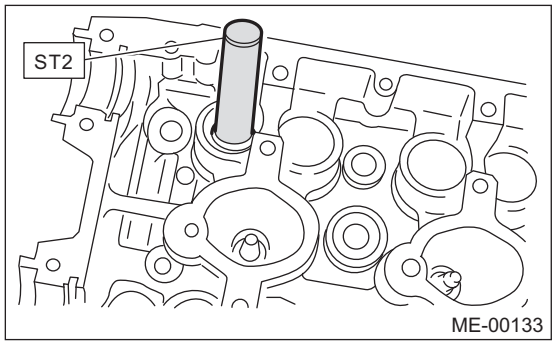
1) For the following, replace the oil seal with a new part. See the procedure 2) and subsequent for replacement procedures.
• When the lip is damaged.
• When the spring is out of the specified position.
• When readjusting the surfaces of valve and valve seat.
• When replacing the valve guide.

2) Place the cylinder head on ST1, and use ST2 to press-fit the oil seal.
ST1 498267600 CYLINDER HEAD TABLE
ST2 498857100 VALVE OIL SEAL GUIDE

NOTE:
• Apply engine oil to oil seal before press-fitting.

• When press-fitting the oil seal, do not use a hammer to strike in.
• The intake valve oil seals and exhaust valve oil seals are distinguished by their colors.

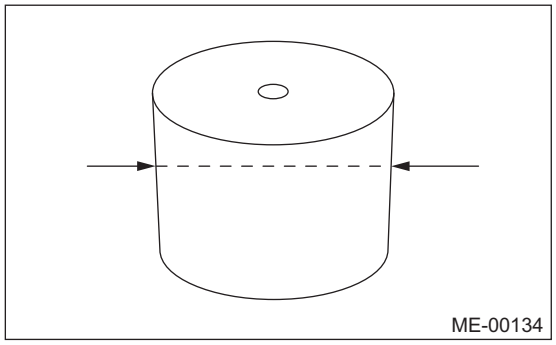
Color of rubber part:
Intake [Gray]
Exhaust [Green]



7. VALVE LIFTER

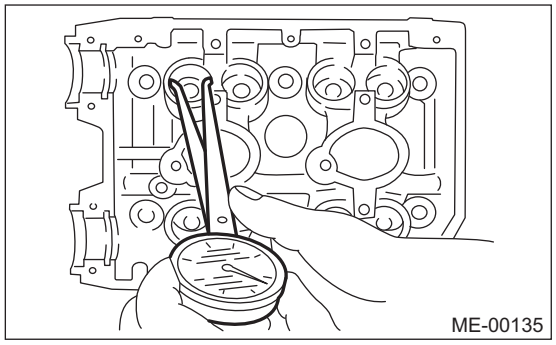
1) Check the valve lifter visually.
2) Measure the outer diameter of valve lifter.

Outer diameter of valve lifter:
Standard
34.959 — 34.975 mm (1.3763 — 1.3770 in)



3) Measure the inner diameter of valve lifter mating surface on cylinder head.

Valve lifter mating surface inner diameter:
Standard
34.994 — 35.016 mm (1.3777 — 1.3786 in)



4) Check the clearance between valve lifter and valve lifter mating surface. The clearance can be checked by measuring the outer diameter of valve lifter and the inner diameter of valve lifter. If it exceeds the standard or offset wear occurs, replace the cylinder head.

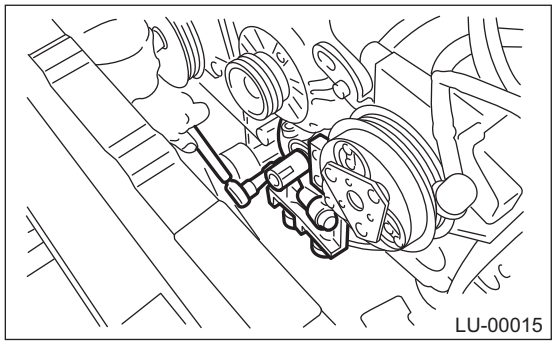
Valve lifter and valve lifter mating surface clearance:
Standard
0.019 — 0.057 mm (0.0007 — 0.0022 in)

20.Cylinder Block

A: REMOVAL

NOTE:
Before conducting this procedure, drain the engine oil completely.
1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, REMOVAL, Engine Assembly.>
2) Remove the cylinder head. <Ref. to ME(STI)-72, REMOVAL, Cylinder Head.>
3) Remove the crank sprocket. <Ref. to ME(STI)-62, REMOVAL, Crank Sprocket.>
4) Remove the clutch disc and cover. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
5) Remove the flywheel. <Ref. to CL-15, REMOVAL, Flywheel.>
6) Remove the oil separator cover.
7) Remove the water by-pass pipe for heater.
8) Remove the oil filter. <Ref. to LU(STI)-28, REMOVAL, Engine Oil Filter.>
9) Remove the oil cooler. <Ref. to LU(STI)-22, REMOVAL, Engine Oil Cooler.>
10) Remove the water pump. <Ref. to CO(STI)-16, REMOVAL, Water Pump.>
11) Remove the bolts which secure oil pump to cylinder block.

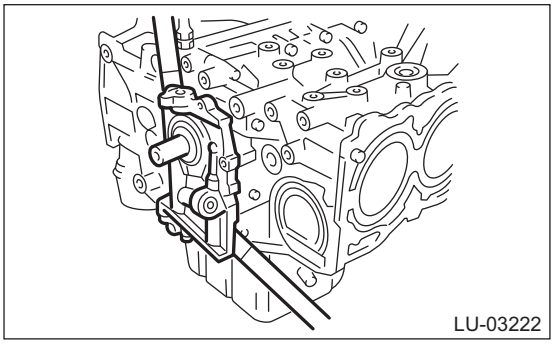
NOTE:
When disassembling and checking the oil pump, loosen the relief valve plug before removing the oil pump.



LU-00015

12) Remove the oil pump from cylinder block using a crowbar.

CAUTION:
Be careful not to scratch the mating surface of the cylinder block and oil pump.

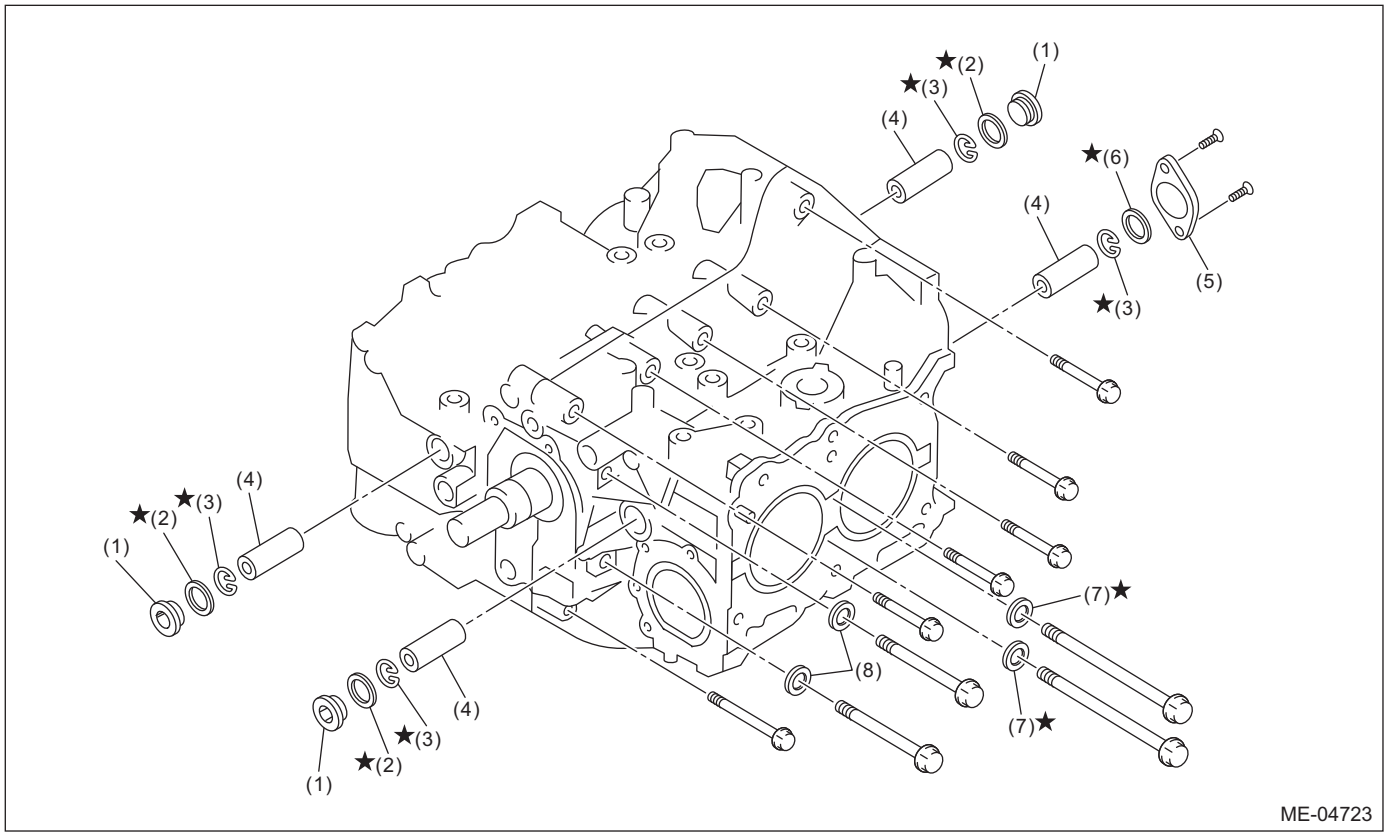


LU-03222

13) Remove the front oil seal from the oil pump.
14) Remove the oil pan.
(1) Set the part so that the cylinder block LH is on the upper side.
(2) Remove the bolts which secure oil pan to cylinder block.
(3) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance and remove the oil pan.

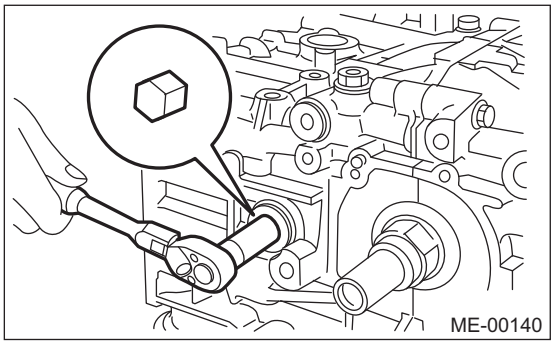
CAUTION:
Do not use a screwdriver or similar tools in place of oil pan cutter.
15) Remove the oil strainer.
16) Remove the baffle plate.

17) Break the clamp which secures the water tank pipe assembly to the cylinder block RH, and remove the water pipe assembly along with the water tank pipe assembly from the cylinder block RH.



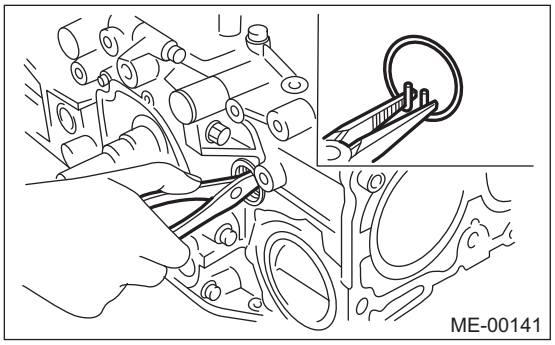
(1) Service hole plug
(2) Gasket
(3) Snap ring
(4) Piston pin
(5) Service hole cover
(6) O-ring
(7) Seal washer
(8) Washer

18) Remove the service hole plugs using a hexagon wrench [14 mm].



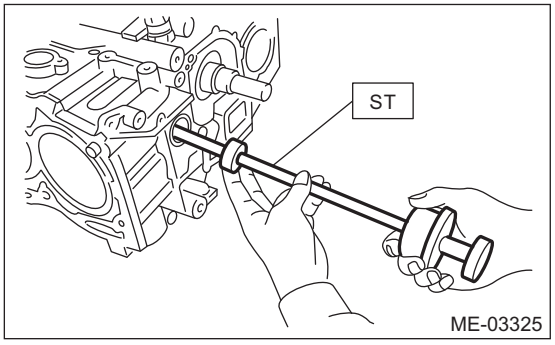
19) Remove the service hole cover.

20) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, then remove the piston snap ring through service hole of #1 and #2 cylinders.



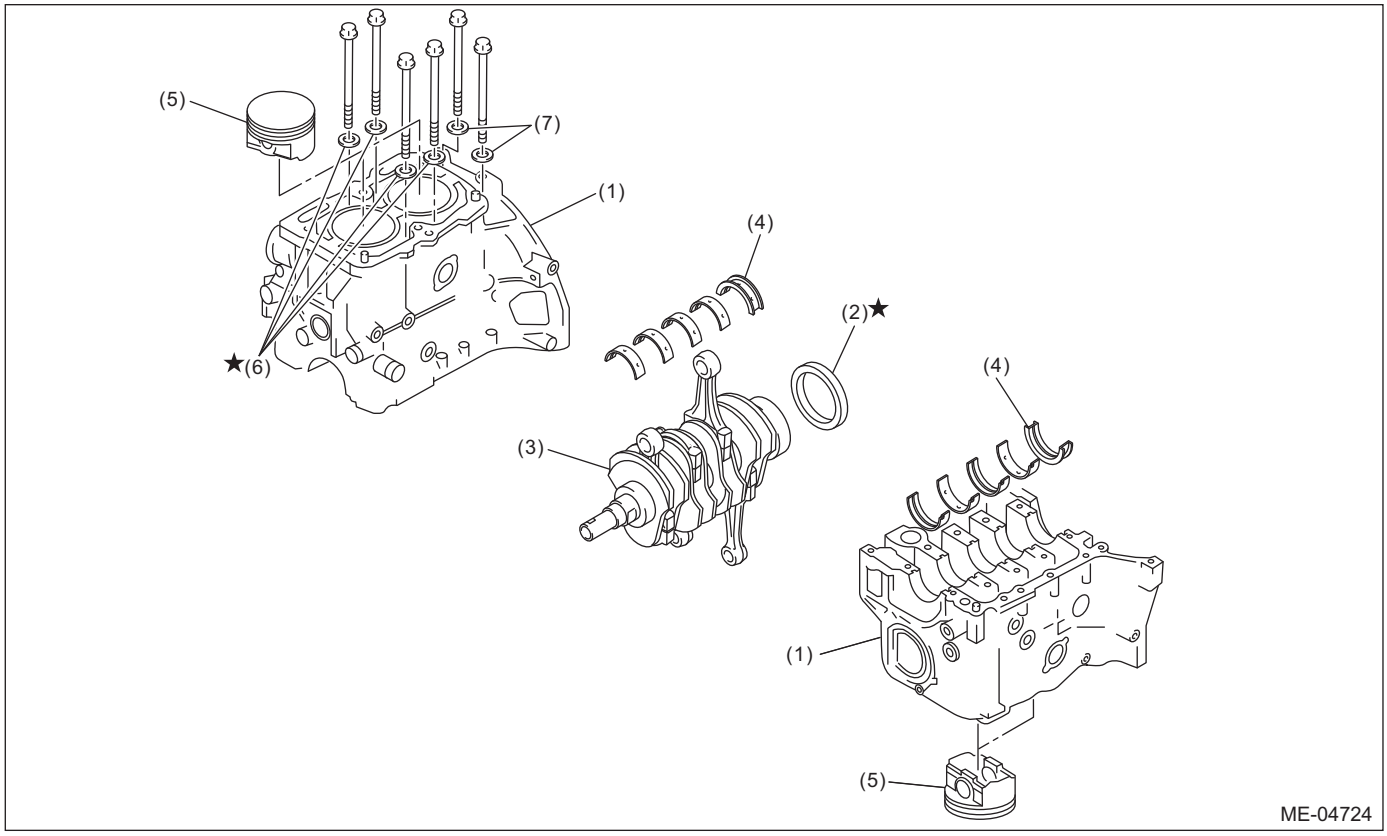
21) Draw out the piston pin from #1 and #2 pistons using ST.
ST 499097700 PISTON PIN REMOVER ASSY

NOTE:
Be careful not to confuse the original combination of piston, piston pin and cylinder.



22) Similarly draw out the piston pins from #3 and #4 pistons.
23) Remove the cylinder block connecting bolt on the RH side.
24) Loosen the cylinder block connecting bolt on the LH side by 2 to 3 turns.
25) Set the part so that the cylinder block LH is on the upper side, and remove the cylinder block connecting bolt.
26) Separate the cylinder block LH and RH.

NOTE:
When separating the cylinder block, do not allow the connecting rod to fall or damage the cylinder block.



(1) Cylinder block
(2) Rear oil seal
(3) Crankshaft
(4) Crankshaft bearing
(5) Piston
(6) Seal washer
(7) Washer

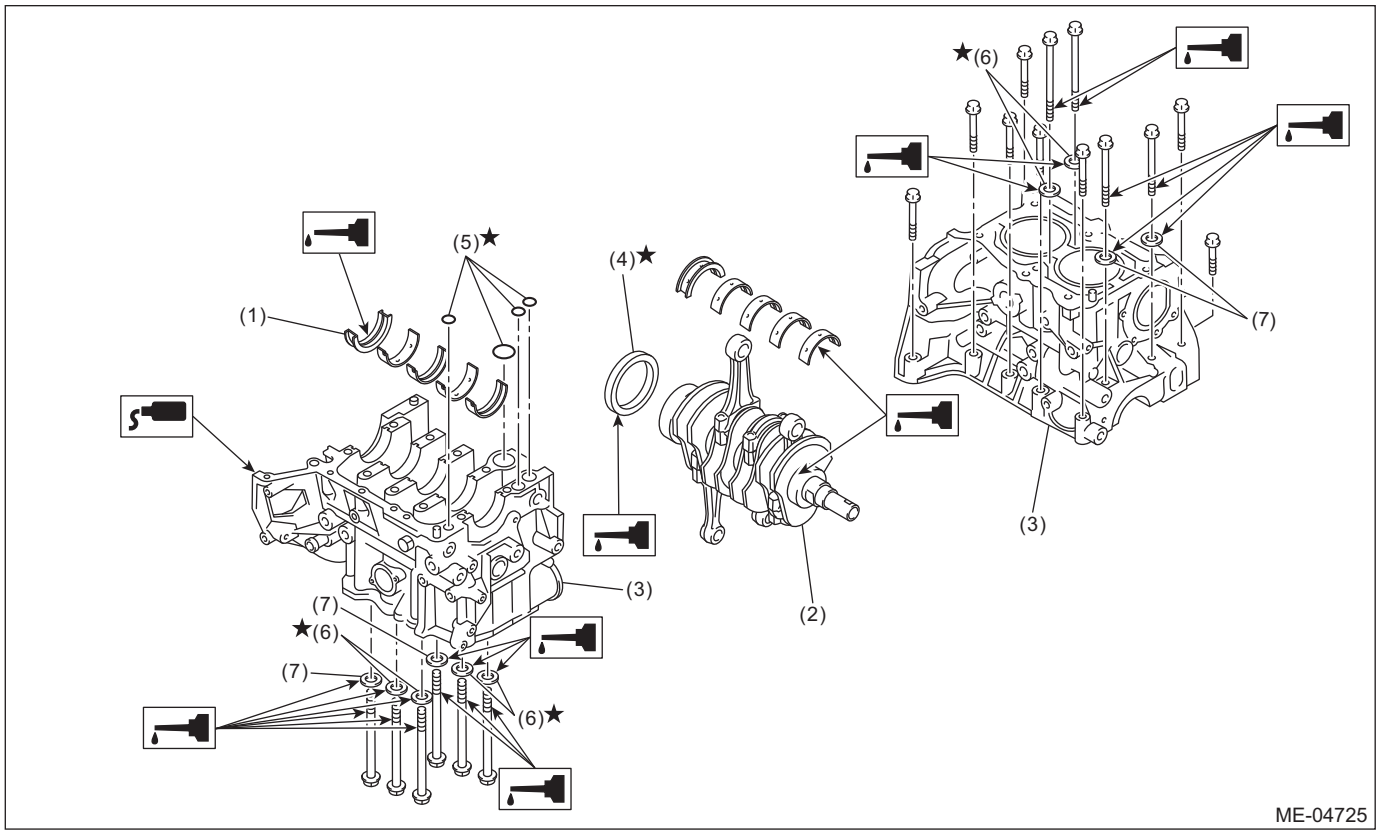
27) Remove the rear oil seal.
28) Remove the crankshaft together with connecting rod.
29) Remove the crankshaft bearings from cylinder block using a hammer handle.

NOTE:
- Press the crankshaft bearing at the end opposite to locking lip to remove.
- Be careful not to confuse the crankshaft bearing combination.

30) Remove each piston from the cylinder block using a wooden bar or hammer handle.

NOTE:
Be careful not to confuse the original combination of piston and cylinder.

B: INSTALLATION



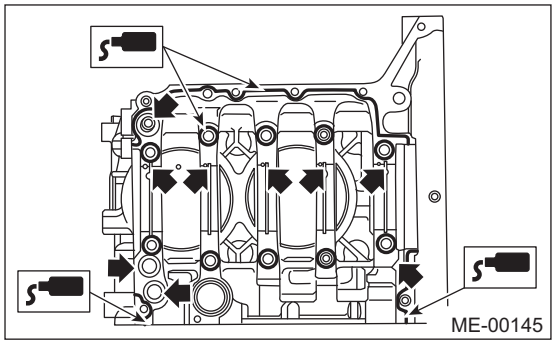
(1) Crankshaft bearing
(2) Crankshaft
(3) Cylinder block
(4) Rear oil seal
(5) O-ring
(6) Seal washer
(7) Washer

1) Remove oil on the mating surface of cylinder block before installation. Apply a coat of engine oil to the bearing and crankshaft journal.
2) Position the crankshaft and O-ring on cylinder block RH.

NOTE:
Use new O-rings.
3) Apply liquid gasket to the mating surfaces of cylinder block RH, and position cylinder block LH.

NOTE:
• Install within 5 min. after applying liquid gasket.
• Do not allow liquid gasket to jut into O-ring grooves, oil passages, bearing grooves, etc.

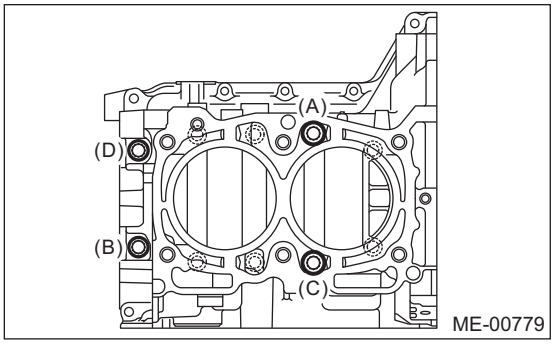
Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



4) Apply a coat of engine oil to the washer and bolt thread.

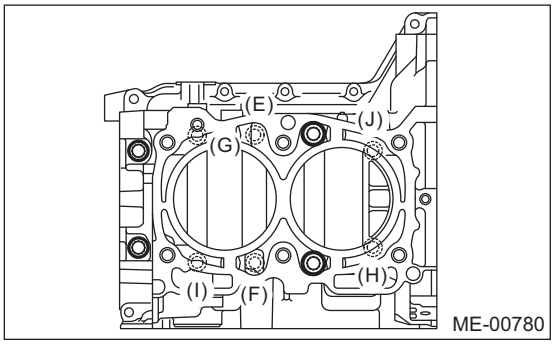
NOTE:
Use a new seal washer.
5) Tighten the 10 mm cylinder block connecting bolts on the LH side (A — D) in alphabetical order.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



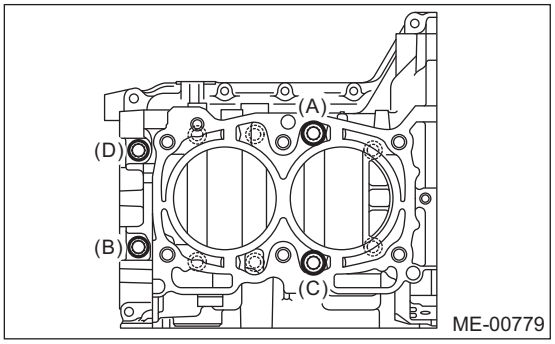
6) Tighten the 10 mm cylinder block connecting bolts on the RH side (E — J) in alphabetical order.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



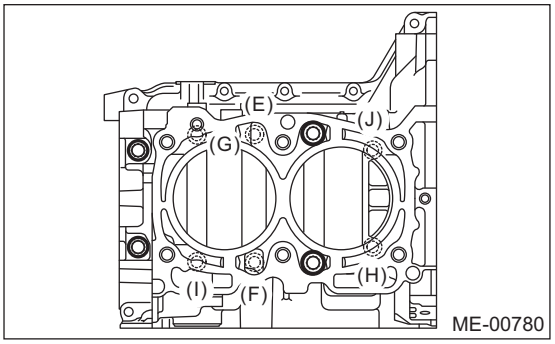
7) Tighten the LH side cylinder block connecting bolts (A — D) further in alphabetical order.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



8) Tighten the RH side cylinder block connecting bolts (E — J) further in alphabetical order.

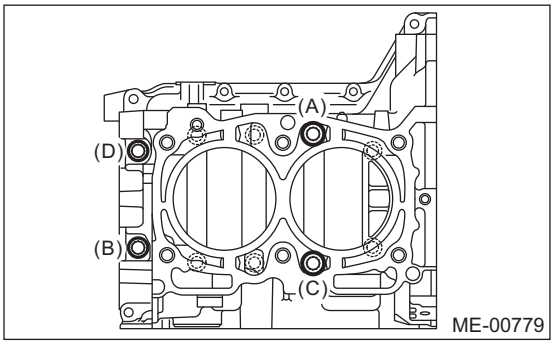
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



9) Tighten the LH side cylinder block connecting bolts (A — D) further in alphabetical order.
- (A), (C): Angle tightening

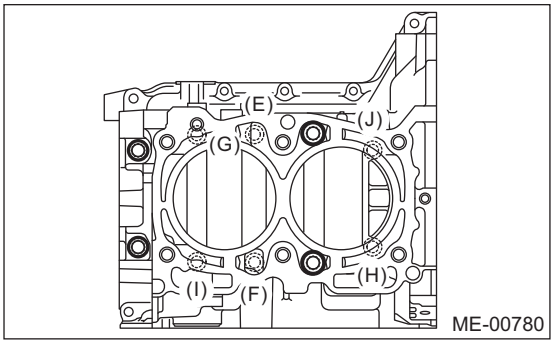
Tightening angle:
90°
- (B), (D): Torque tightening

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



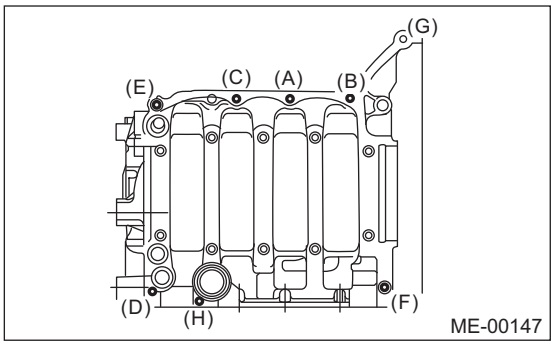
10) Tighten the RH side cylinder block connecting bolts (E — J) further in alphabetical order.

Tightening angle:
90°



11) Tighten the 8 mm and 6 mm cylinder block connecting bolts on the LH side (A — H) in alphabetical order.

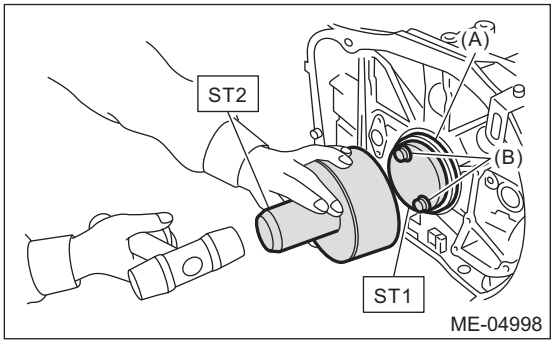
Tightening torque:
(A) — (G): 25 N·m (2.5 kgf-m, 18.4 ft-lb)
(H): 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



12) Apply a coat of engine oil to the oil seal inner periphery and outer periphery, and install the rear oil seal using ST1 and ST2.

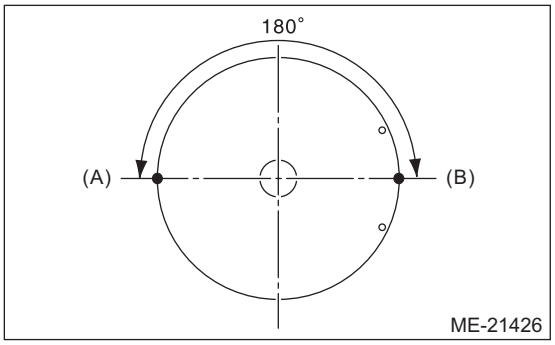
NOTE:
Use a new rear oil seal.

ST1	499597100	CRANKSHAFT OIL SEAL GUIDE
ST2	499587200	CRANKSHAFT OIL SEAL INSTALLER

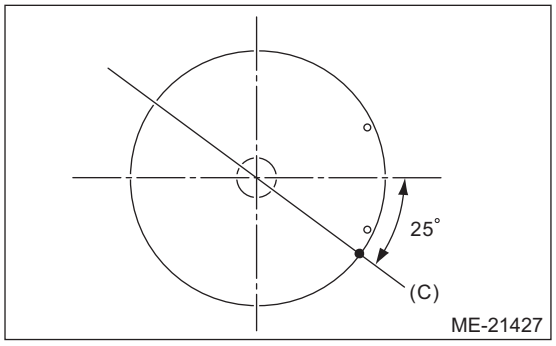


(A) Rear oil seal
(B) Flywheel attachment bolt

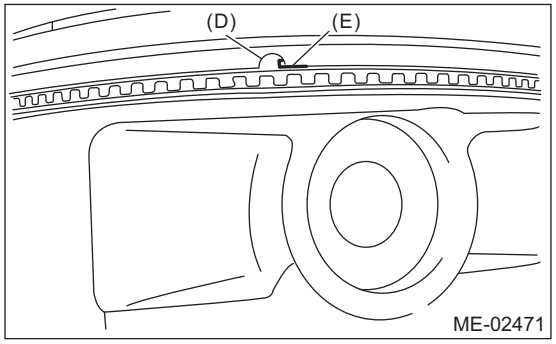
13) Position the top ring gap at (A) or (B) in the figure.
14) Position the second ring gap at 180° on the reverse side the top ring gap.



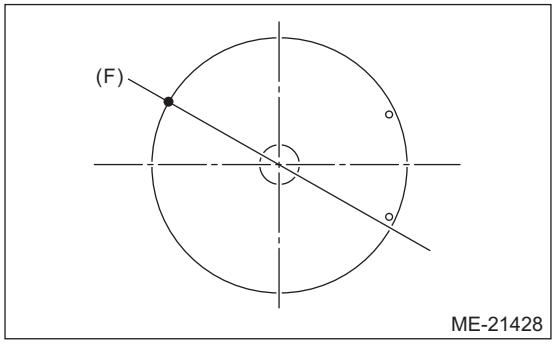
15) Position the upper rail gap at (C) in the figure.



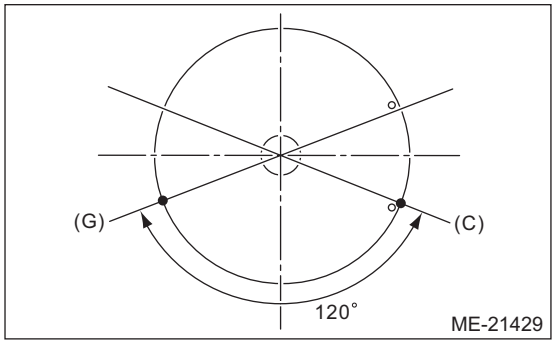
16) Align the upper rail spin stopper (E) to the side hole (D) on the piston.



17) Position the expander gap at (F) in the figure on the 180° opposite direction of (C).



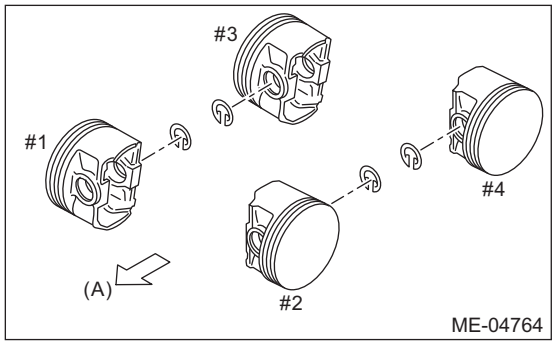
18) Set the lower rail gap at position (G), located 120° clockwise from (C) in the figure.



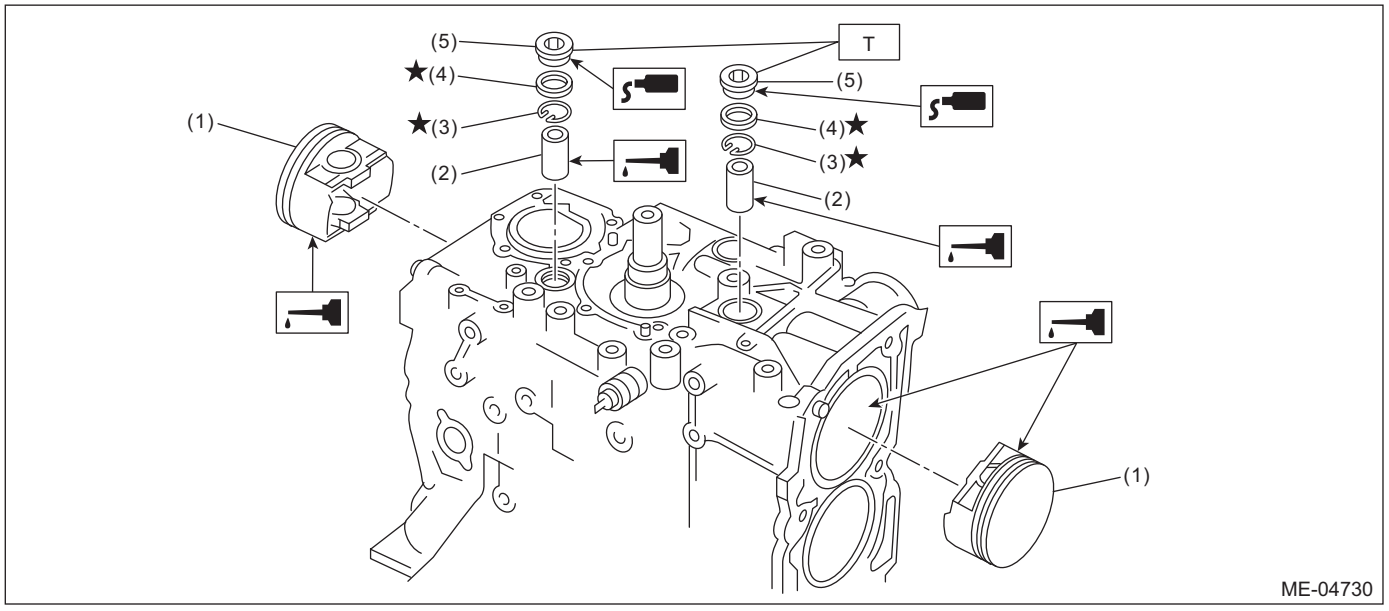
NOTE:
• Make sure ring gaps do not face the same direction.
• Make sure ring gaps are not within the piston skirt area.

19) Install the snap ring.
Before positioning the piston on the cylinder block, attach the snap ring in the service hole of the cylinder block, and the piston hole on the opposite side.

NOTE:
Use new snap rings.



(A) Front side



(1) Piston
(2) Piston pin
(3) Snap ring
(4) Gasket
(5) Service hole plug

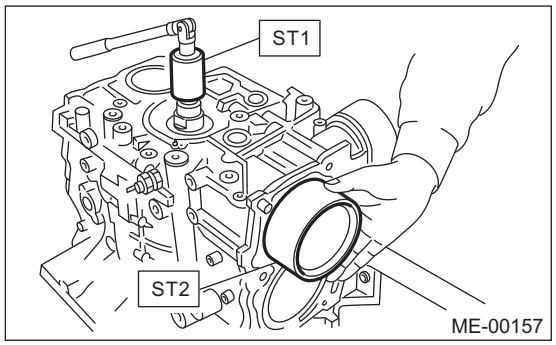
Tightening torque: N·m (kgf-m, ft-lb)
T: 70 (7.1, 51.6)

20) Install the piston.
(1) Set the parts so that the #1 and #2 cylinders are on the upper side.
(2) Using the ST1, turn the crankshaft so that #1 and #2 connecting rods are set at bottom dead center.

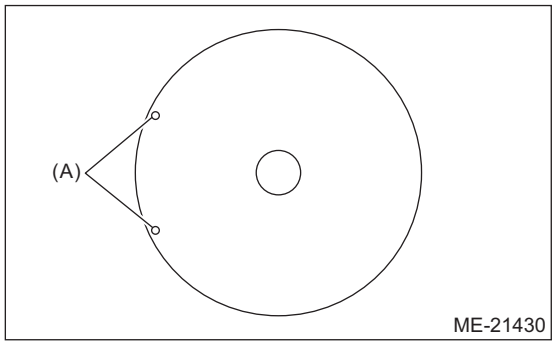
ST1 499987500 CRANKSHAFT SOCKET

(3) Apply a coat of engine oil to the pistons and cylinders and insert pistons in their cylinders using ST2.

ST2 498747300 PISTON GUIDE



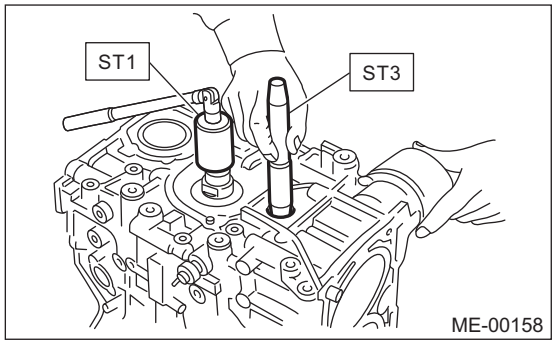
NOTE:
Face the piston front mark towards the front of the engine.



(A) Front mark

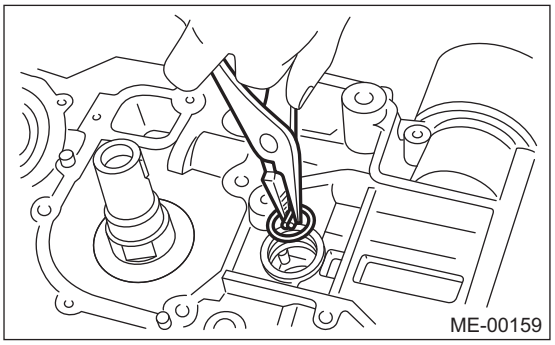
21) Install the piston pin.
(1) Apply a coat of engine oil to ST3.
(2) Insert ST3 into the service hole to align the piston pin hole and the connecting rod small end.

ST3 499017100 PISTON PIN GUIDE



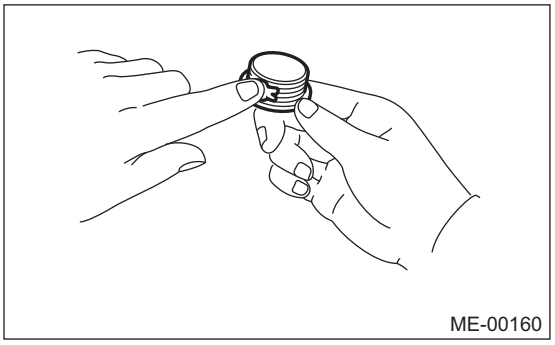
(3) Apply a thin coat of engine oil to piston pin, and insert the piston pin into piston and connecting rod through service hole.
(4) Install the snap ring.

NOTE:
Use new snap rings.



(5) Apply liquid gasket to the threaded portion of the service hole plug.

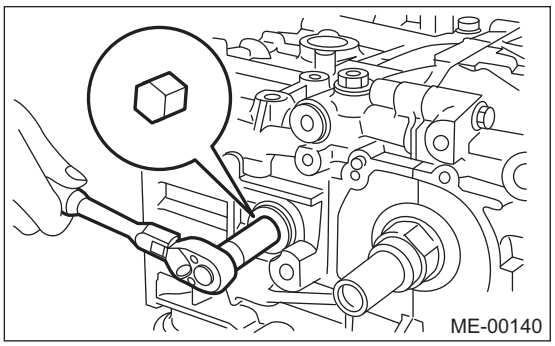
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

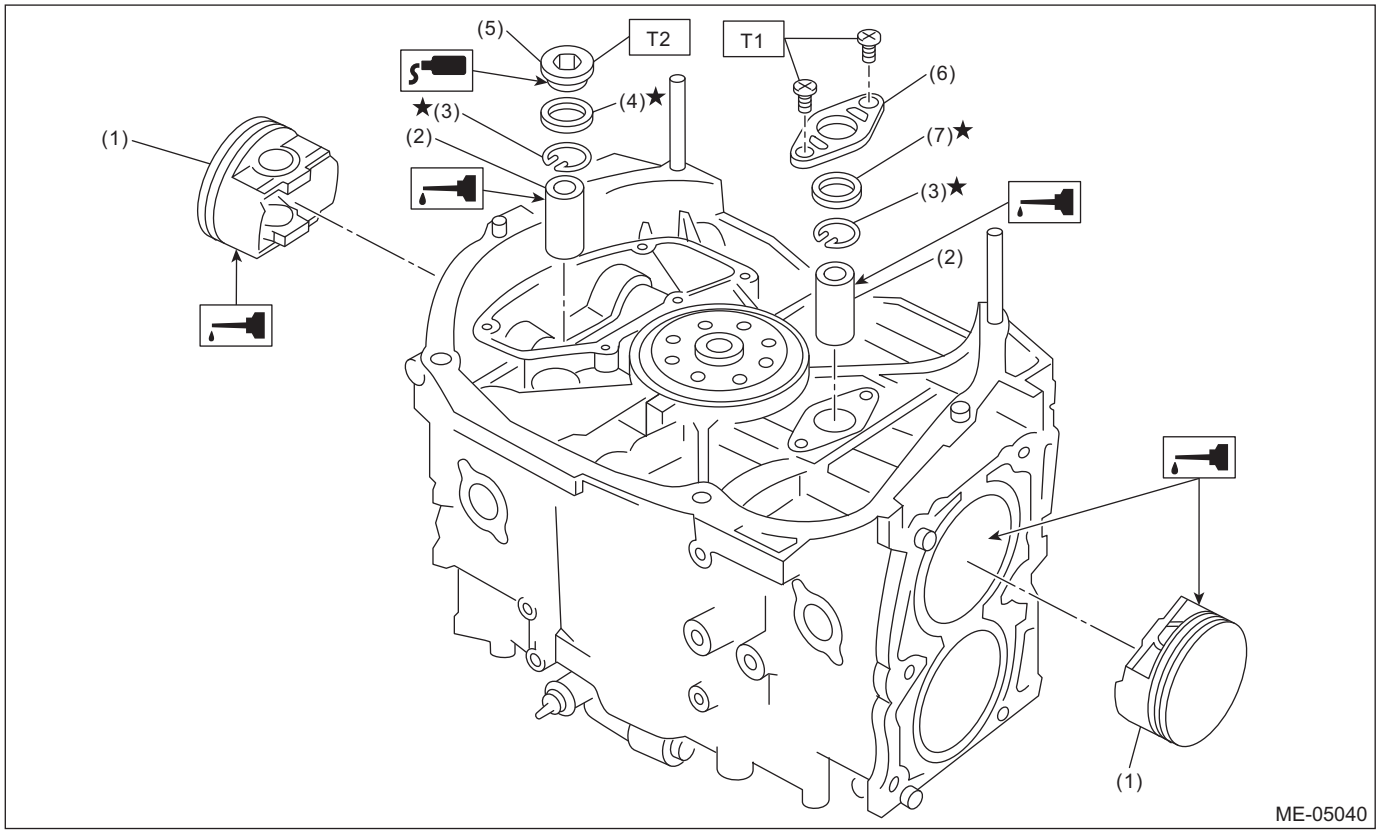


(6) Install the service hole plug and gasket.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)





(1)	Piston	(5)	Service hole plug	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Piston pin	(6)	Service hole cover	***T1: 6.4 (0.7, 4.7)***
(3)	Snap ring	(7)	O-ring	***T2: 70 (7.1, 51.6)***
(4)	Gasket			

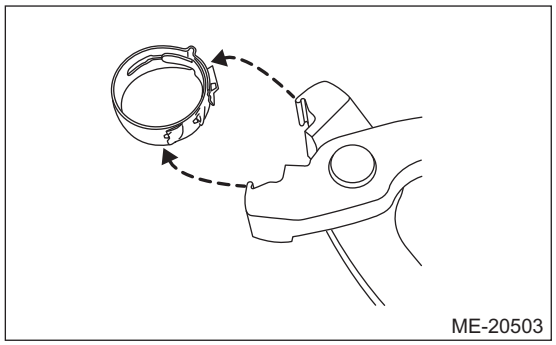
(7) Set the parts so that the #3 and #4 cylinders are on the upper side. Following the same procedures as used for #1 and #2 cylinders, install the pistons and piston pins.
(8) Install the service hole cover.

NOTE:
Use new O-rings.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

22) Install the water pipe assembly along with the water tank pipe assembly to the cylinder block RH, and install the clamp using the Clamp pincer (14100134).

NOTE:
Use new O-rings and clamps.



Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

23) Install the baffle plate.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

24) Install the oil strainer.

NOTE:
Use new O-rings.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

25) Tighten the oil strainer stay together with the baffle plate.

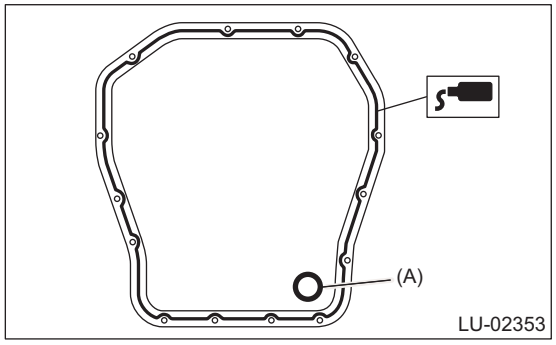
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

26) Apply liquid gasket to the mating surfaces of oil pan, and install the oil pan.

NOTE:
Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



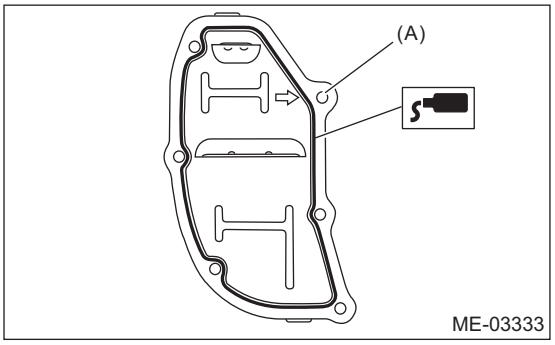
(A) Gasket

27) Apply liquid gasket to the mating surface of oil separator cover and the threaded portion of bolt (A) shown in the figure (when reusing the bolt), and then install the oil separator cover.

NOTE:
- Install within 5 min. after applying liquid gasket.
- Use new oil separator cover.

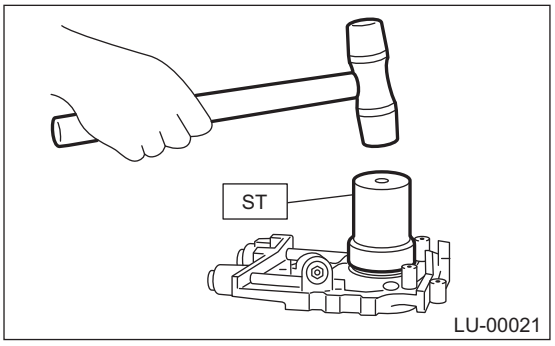
Liquid gasket:
Mating surface
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent
Bolt thread (A) (when reusing the bolt)
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)



28) Install the flywheel. <Ref. to CL-15, INSTALLATION, Flywheel.>
29) Install the clutch disc and cover. <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
30) Install the oil pump.
(1) Using the ST, install the front oil seal.
ST 499587100 OIL SEAL INSTALLER

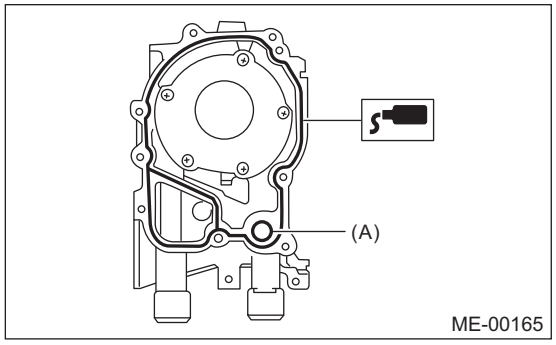
NOTE:
Use a new front oil seal.



(2) Apply liquid gasket to the mating surfaces of oil pump.

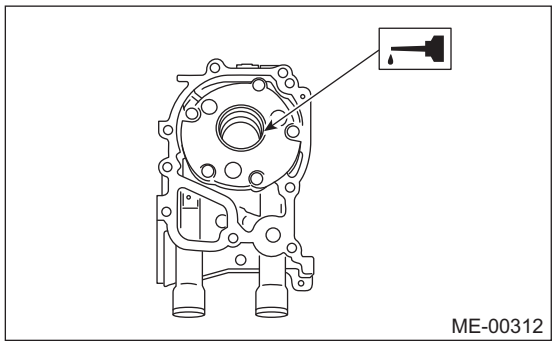
NOTE:
Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



(A) O-ring

(3) Apply a thin coat of engine oil to the inside of front oil seal.



(4) Install the oil pump to cylinder block.

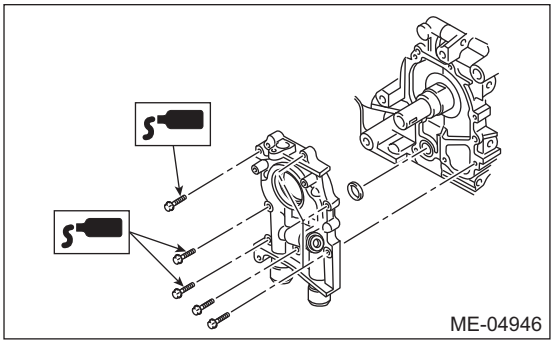
CAUTION:
• Be careful not to damage the front oil seal during installation.
• Make sure the front oil seal lip is not folded.

NOTE:
• Align the flat surface of oil pump's inner rotor with that of crankshaft before installation.
• Use new O-rings.
• Do not forget to assemble O-rings.

(5) Apply liquid gasket to the three bolts thread shown in figure. (When reusing bolts)

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

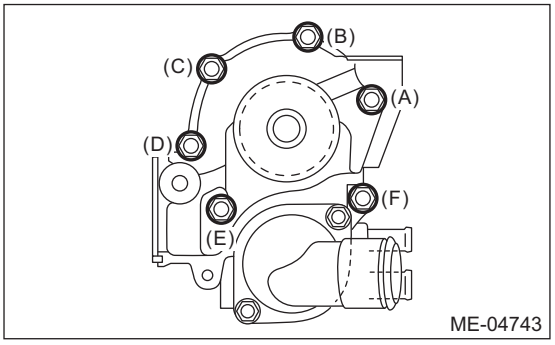
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



31) Install the water pump and gasket.

NOTE:
• When installing the water pump, tighten bolts in two stages in alphabetical order as shown in the figure.
• Use a new gasket.

Tightening torque:
First: 12 N·m (1.2 kgf-m, 8.9 ft-lb)
Second: 12 N·m (1.2 kgf-m, 8.9 ft-lb)

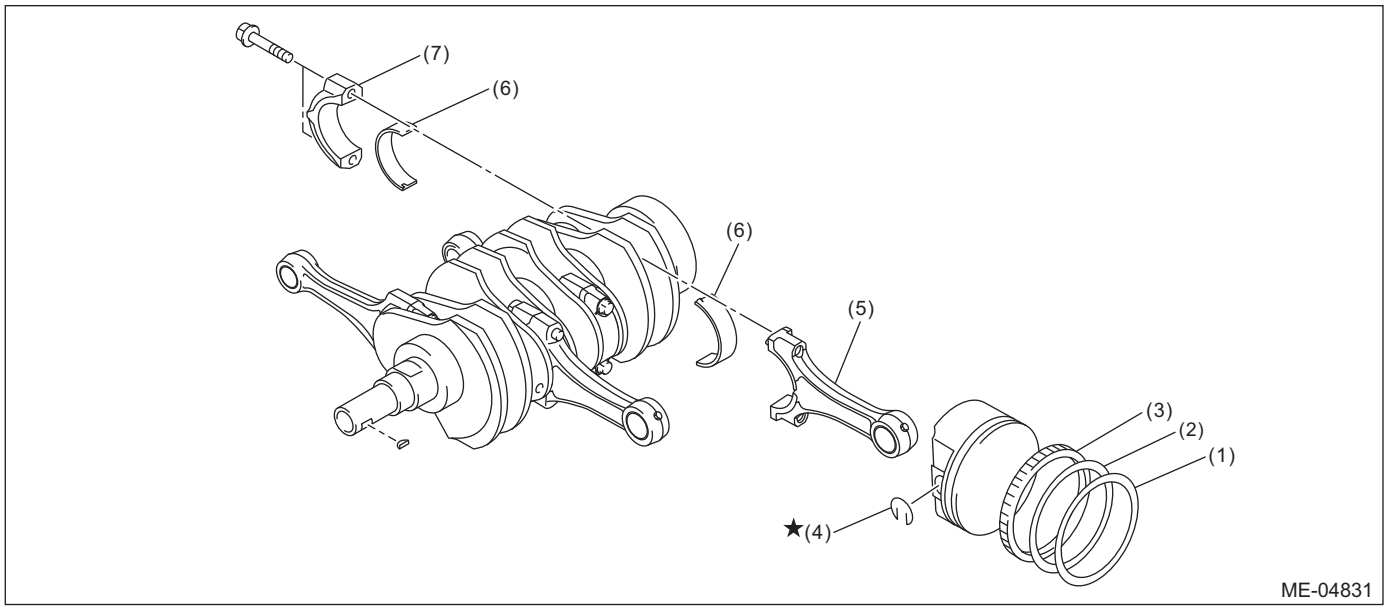


32) Install the water by-pass pipe for heater.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

33) Install the oil cooler. <Ref. to LU(STI)-22, INSTALLATION, Engine Oil Cooler.>
34) Install the oil filter. <Ref. to LU(STI)-28, INSTALLATION, Engine Oil Filter.>
35) Install the crank sprocket. <Ref. to ME(STI)-62, INSTALLATION, Crank Sprocket.>
36) Install the cylinder head. <Ref. to ME(STI)-72, INSTALLATION, Cylinder Head.>
37) Install the engine to the vehicle. <Ref. to ME(STI)-36, INSTALLATION, Engine Assembly.>

C: DISASSEMBLY



(1) Top ring
(2) Second ring
(3) Oil ring
(4) Snap ring
(5) Connecting rod
(6) Connecting rod bearing
(7) Connecting rod cap

1) Remove the connecting rod cap.
2) Remove the connecting rod bearing.

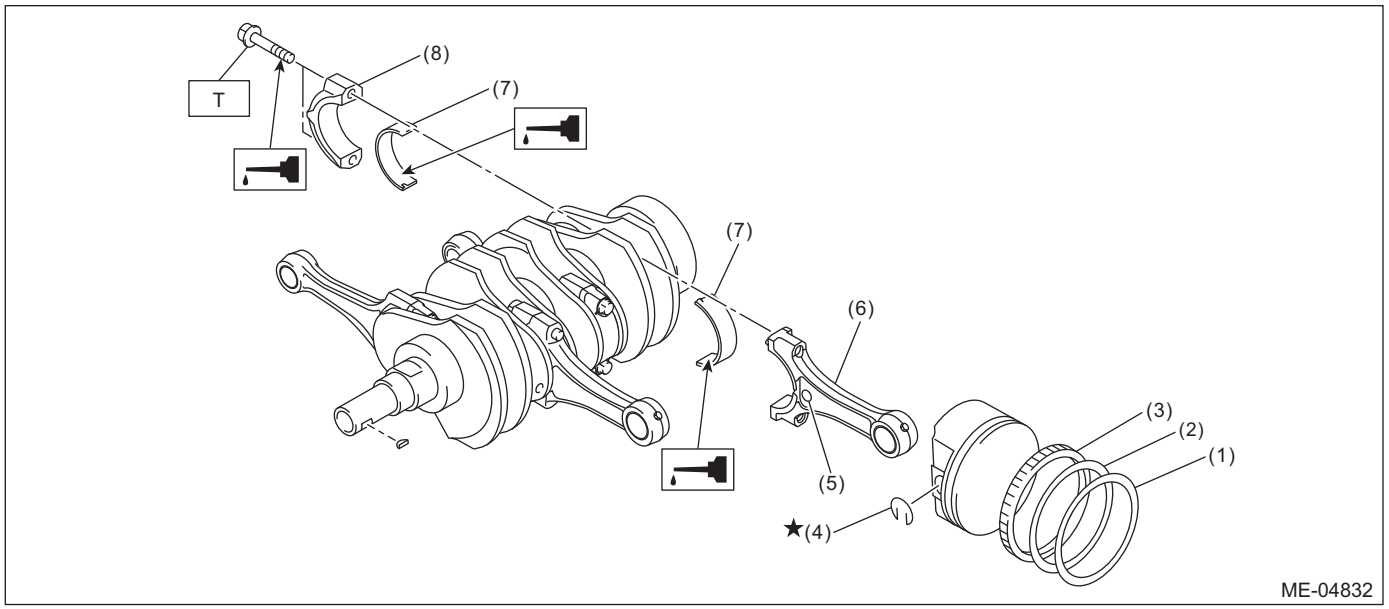
NOTE:
Keep the removed connecting rods, connecting rod caps and bearings in order so that they are kept in their original combinations/groups, and not mixed together.

3) Remove the piston rings using piston ring expander.
4) Remove the oil ring by hand.

NOTE:
Arrange the removed piston rings in proper order, to prevent confusion.

5) Remove the snap ring.

D: ASSEMBLY



(1) Top ring
(2) Second ring
(3) Oil ring
(4) Snap ring
(5) Side mark
(6) Connecting rod
(7) Connecting rod bearing
(8) Connecting rod cap

Tightening torque: N·m (kgf-m, ft-lb)
T: 52 (5.3, 38.4)

1) Apply engine oil to the surface of the connecting rod bearings, and install the connecting rod bearings on connecting rods and connecting rod caps.
2) Position each connecting rod with the side with a side mark facing forward, and install it.
3) Attach the connecting rod cap and tighten it with connecting rod bolt. Make sure the arrow on connecting rod cap faces the front during installation.

NOTE:
• Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
• When tightening the connecting rod bolts, apply oil on the threads.

Tightening torque:
52 N·m (5.3 kgf-m, 38.4 ft-lb)

4) Install the oil ring upper rail, expander and lower rail by hand.
5) Install the second ring using piston ring expander.

NOTE:
Assemble so that the piston ring mark “R” faces the top side of the piston.
6) Install the top ring using piston ring expander.

NOTE:
Assemble so that the piston ring mark “RV” faces the top side of the piston.

E: INSPECTION

1. CYLINDER BLOCK

1) Check for cracks or damage. Use liquid penetrant tester on the important sections to check for fissures. Check that there are no marks of gas leaking or water leaking on gasket installing surface.
2) Check the oil passages for clogging.
3) Inspect the cylinder head surface that mates with cylinder block for warping by using a straight edge, and correct by grinding if necessary.

Warping limit:
0.025 mm (0.0010 in)

Grinding limit:
0.1 mm (0.0039 in)

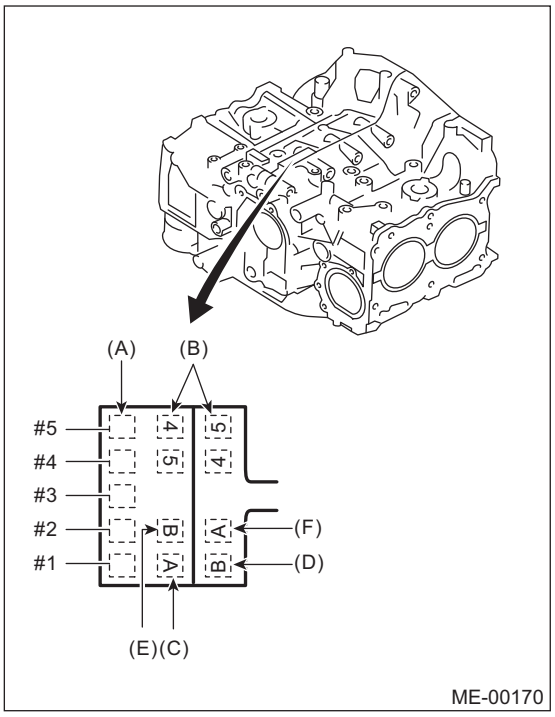
Standard height of cylinder block:
201.0 mm (7.9134 in)

2. CYLINDER AND PISTON

1) The cylinder bore size is stamped on the front upper face of the cylinder block.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.

Standard diameter:
A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)
B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)



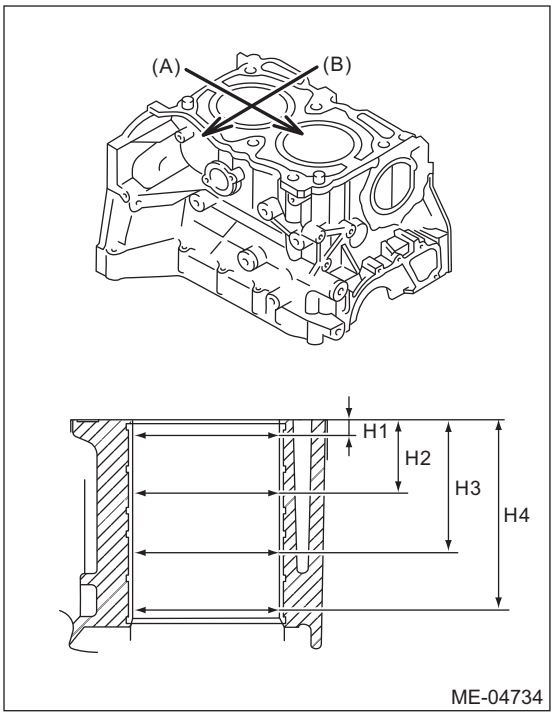
(A) Main journal size mark
(B) Cylinder block (RH) – (LH) combination mark
(C) #1 cylinder bore size mark
(D) #2 cylinder bore size mark
(E) #3 cylinder bore size mark
(F) #4 cylinder bore size mark

2) Measure inner diameter of each cylinder.
Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights as shown in the figure, using a cylinder bore gauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Cylindricality:
Limit
0.015 mm (0.0006 in)

Out-of-roundness:
Limit
0.010 mm (0.0004 in)



(A) Piston pin direction
(B) Thrust direction
H1: 10 mm (0.3937 in)
H2: 45 mm (1.7717 in)
H3: 80 mm (3.1496 in)
H4: 115 mm (4.5276 in)

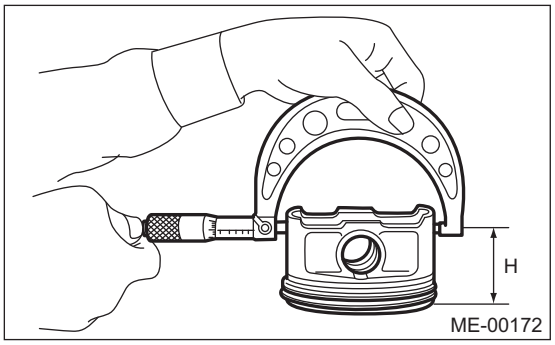
3) When the piston is to be replaced due to general or cylinder wear, select a suitable sized piston by measuring the piston clearance.
4) Measure outer diameter of each piston.
Measure the outer diameter of each piston at the height as shown in the figure. (Thrust direction)

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:
38.2 mm (1.5039 in)

Piston outer diameter:

Standard
A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)
B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)
0.25 mm (0.0098 in) oversize
99.745 — 99.765 mm (3.9270 — 3.9278 in)
0.50 mm (0.0197 in) oversize
99.995 — 100.015 mm (3.9368 — 3.9376 in)



5) Calculate the clearance between cylinder and piston.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Clearance between cylinder and piston at 20°C (68°F):
Standard
–0.010 — 0.010 mm (–0.0004 — 0.0004 in)

6) Boring and honing
(1) If any of the measured value of cylindricality, out-of-roundness or cylinder-to-piston clearance is out of standard or if there is any damage on the cylinder wall, rebore it to replace with an oversize piston.

CAUTION:
When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and replaced with oversize pistons.

(2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the cylinder block.

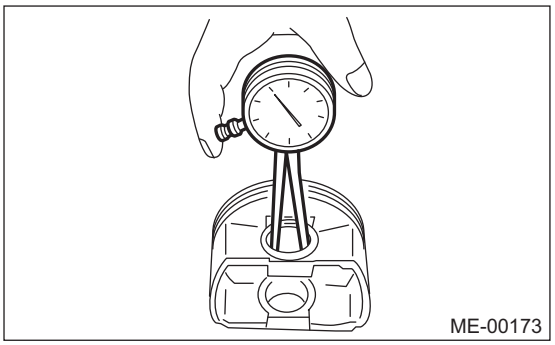
NOTE:
Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, when measuring the cylinder diameter, wait until it has cooled to room temperature.

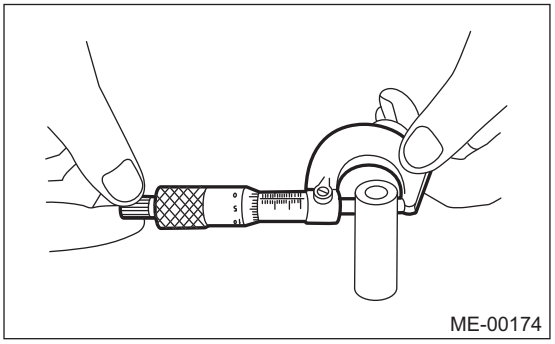
Cylinder inner diameter boring limit (diameter):
To 100.005 mm (3.9372 in)

3. PISTON AND PISTON PIN

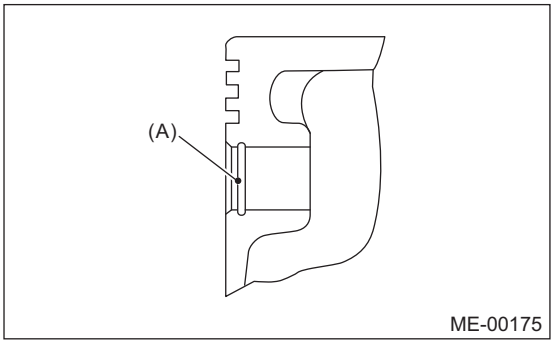
1) Check the piston and piston pin for damage, cracks or wear. Replace if faulty.
2) Check the piston ring groove for wear or damage. Replace if faulty.
3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if faulty.

Clearance between piston pin hole and piston pin:
Standard
0.004 — 0.008 mm (0.0002 — 0.0003 in)





4) Check the snap ring installation groove (A) on the piston for burr. If necessary, remove burr from the groove so that the piston pin can lightly move.



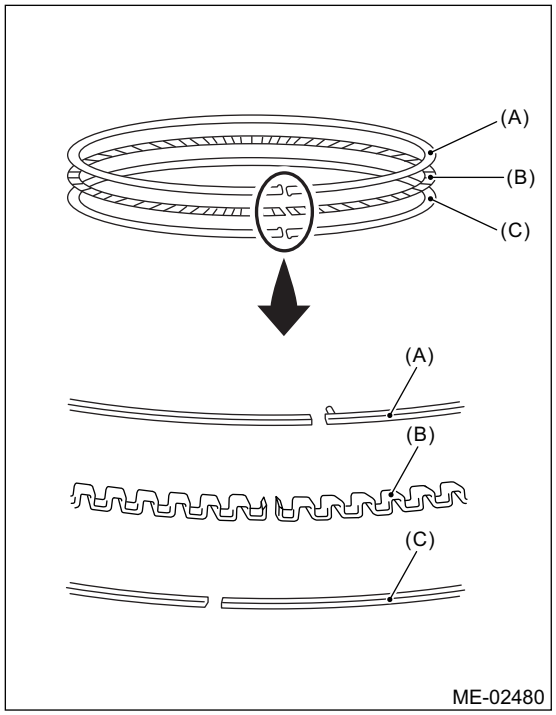
5) Check the snap ring for distortion, cracks and wear.

4. PISTON RING

1) If the piston ring is broken, damaged or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new part of the same size as piston.

NOTE:
• The top ring and second ring have the mark to determine the direction for installing. When installing the ring to piston, face marks to the top side.

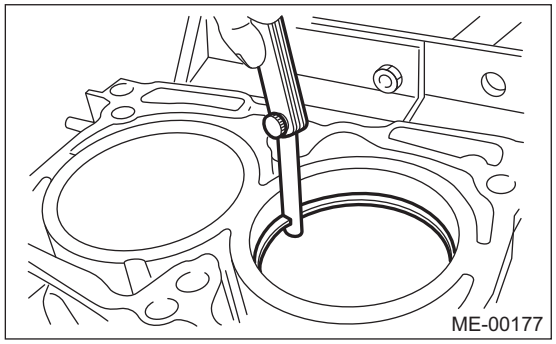
• Oil ring consists of the upper rail, expander and lower rail. When installing oil ring on piston, be careful of the direction of each rail.



(A) Upper rail
(B) Expander
(C) Lower rail

2) Using the piston, insert the piston ring and oil ring into the cylinder block so that they are perpendicular to the cylinder wall, and measure the piston ring gap using a thickness gauge.

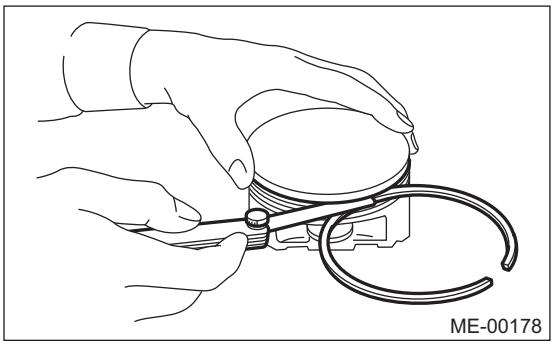
		Standard mm (in)
Piston ring gap	Top ring	0.23 — 0.28 (0.0091 — 0.0110)
	Second ring	0.37 — 0.52 (0.015 — 0.0205)
	Oil ring rail	0.20 — 0.50 (0.0079 — 0.0197)



3) Fit the piston ring straight into the piston ring groove, then measure the clearance between piston ring and piston ring groove with a thickness gauge.

NOTE:
Before measuring the clearance, clean the piston ring groove and piston ring.

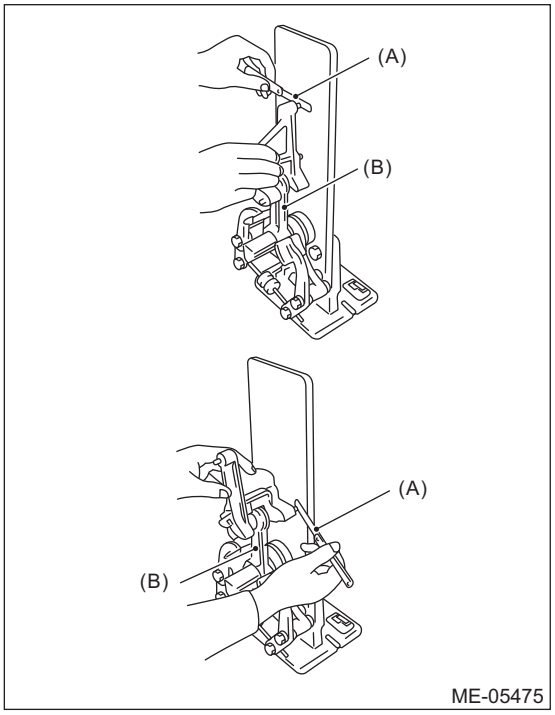
		Standard mm (in)
Clearance between piston ring and piston ring groove	Top ring	0.040 — 0.080 (0.0016 — 0.0031)
	Second ring	0.030 — 0.070 (0.0012 — 0.0028)



5. CONNECTING ROD

1) Replace the connecting rod, if the large or small end thrust surface is damaged.
2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

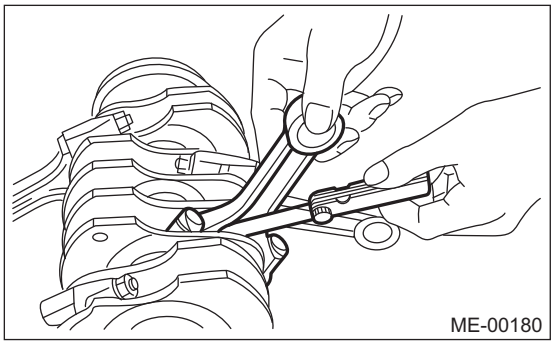
Limit of bend or twist per 100 mm (3.9370 in) in length:
0.10 mm (0.0039 in)



(A) Thickness gauge
(B) Connecting rod

3) Install the connecting rod with bearings attached to the crankshaft, and using a thickness gauge, measure the thrust clearance. If the thrust clearance exceeds the standard or uneven wear is found, replace the connecting rod.

Connecting rod thrust clearance:
Standard
0.070 — 0.330 mm (0.0028 — 0.0130 in)



4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.
5) Measure the oil clearance on each connecting rod bearing using plastigauge. If any oil clearance is not within the standard, replace the defective bearing with a new part of standard size or undersize as necessary.

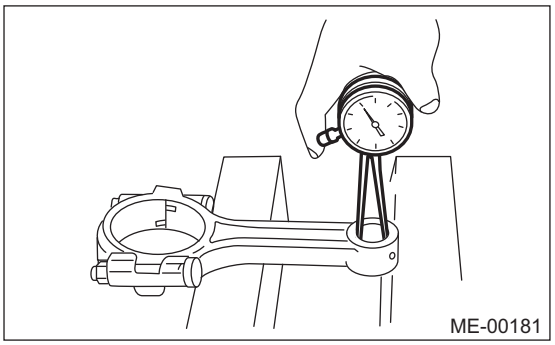
Connecting rod oil clearance:
Standard
0.017 — 0.045 mm (0.0007 — 0.0018 in)

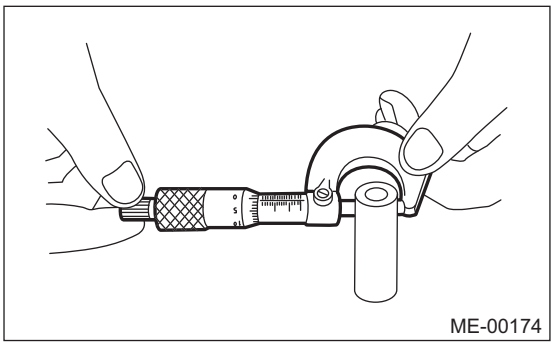
Unit: mm (in)

Bearing	Bearing size (Thickness at center)	Outer diameter of crank pin
Standard	1.490 — 1.506 (0.0587 — 0.0593)	51.976 — 52.000 (2.0463 — 2.0472)
0.03 (0.0012) Undersize	1.504 — 1.512 (0.0592 — 0.0595)	51.954 — 51.970 (2.0454 — 2.0461)
0.05 (0.0020) Undersize	1.514 — 1.522 (0.0596 — 0.0599)	51.934 — 51.950 (2.0447 — 2.0453)
0.25 (0.0098) Undersize	1.614 — 1.622 (0.0635 — 0.0639)	51.734 — 51.750 (2.0368 — 2.0374)

6) Inspect the bushing at connecting rod small end, and replace the connecting rod if it is worn or damaged.
7) Measure the piston pin clearance at connecting rod small end. If the measured value is not within the standard, replace the connecting rod and piston pin as a set.

Clearance between piston pin and bushing:
Standard
0 — 0.022 mm (0 — 0.0009 in)



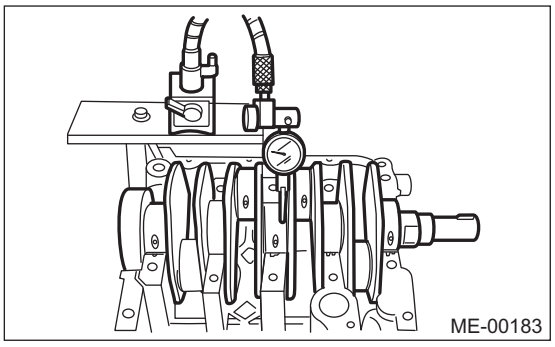


6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using liquid penetrant tester. If defective, replace the crankshaft.
2) Measure warping of the crankshaft. If it exceeds the limit, correct or replace it.

NOTE:
If a suitable V-block is not available, using just the #1 and #5 crankshaft bearings on cylinder block, position the crankshaft on cylinder block. Then, measure the crankshaft bend using a dial gauge.

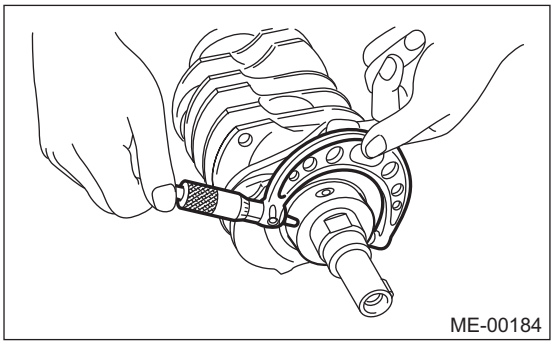
Crankshaft bend limit:
0.035 mm (0.0014 in)



3) Inspect the crank journal and crank pin for wear. If they are not within the standard, replace the bearing with a suitable (undersize) one, and replace or grind to correct the crankshaft as necessary. When grinding the crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.

Crank pin:
Cylindricality
Limit
0.004 mm (0.0002 in)
Out-of-roundness
Limit
0.003 mm (0.0001 in)
Grinding limit (dia.)
To 51.734 mm (2.0368 in)

Crank journal:
Cylindricality
Limit
0.006 mm (0.0002 in)
Out-of-roundness
Limit
0.005 mm (0.0002 in)
Grinding limit (dia.)
To 59.742 mm (2.3520 in)



Unit: mm (in)

		Crank journal diameter		Crank pin outer diameter
		#1, #3	#2, #4, #5	
Standard	Journal O.D.	59.984 — 60.008 (2.3616 — 2.3625)	59.984 — 60.008 (2.3616 — 2.3625)	51.976 — 52.000 (2.0463 — 2.0472)

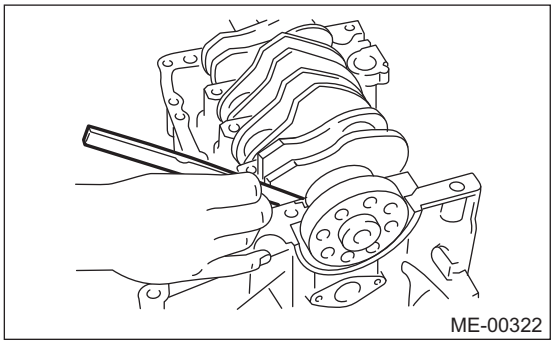
0.03 (0.0012) Undersize	Journal O.D.	59.962 — 59.978 (2.3607 — 2.3613)	59.962 — 59.978 (2.3607 — 2.3613)	51.954 — 51.970 (2.0454 — 2.0461)
	Bearing size (Thickness at center)	2.017 — 2.020 (0.0794 — 0.0795)	2.019 — 2.022 (0.0795 — 0.0796)	1.504 — 1.512 (0.0592 — 0.0595)
0.05 (0.0020) Undersize	Journal O.D.	59.942 — 59.958 (2.3599 — 2.3605)	59.942 — 59.958 (2.3599 — 2.3605)	51.934 — 51.950 (2.0447 — 2.0453)
	Bearing size (Thickness at center)	2.027 — 2.030 (0.0798 — 0.0799)	2.029 — 2.032 (0.0799 — 0.0800)	1.514 — 1.522 (0.0596 — 0.0599)

				Unit: mm (in)
		Crank journal diameter		Crank pin outer diameter
		#1, #3	#2, #4, #5	
0.25 (0.0098) Undersize	Journal O.D.	59.742 — 59.758 (2.3520 — 2.3527)	59.742 — 59.758 (2.3520 — 2.3527)	51.734 — 51.750 (2.0368 — 2.0374)
	Bearing size (Thickness at center)	2.127 — 2.130 (0.0837 — 0.0839)	2.129 — 2.132 (0.0838 — 0.0839)	1.614 — 1.622 (0.0635 — 0.0639)

4) Use a thickness gauge to measure the thrust clearance of crankshaft at #5 crank journal bearing. If clearance exceeds the standard, replace the bearing.

Crankshaft thrust clearance:
Standard
0.030 — 0.115 mm (0.0012 — 0.0045 in)



ME-00322

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting and wear.
6) Measure the oil clearance on each crankshaft bearing using plastigauge. If the measured value is out of standard, replace the defective bearing with an undersize one, and replace or grind to correct the crankshaft as necessary.

Crankshaft oil clearance:
Standard
0.010 — 0.030 mm (0.0004 — 0.0012 in)

21.Intake and Exhaust Valve

A: SPECIFICATION

25.Symptoms and causes

A: INSPECTION

NOTE:
The “RANK” shown in the chart shows the possibilities of the cause of trouble in order from “Very often” to “Rarely”.
A — Very often
B — Sometimes
C — Rarely

Symptoms	Problem parts etc.	Possible cause	RANK
1. Engine does not start.			
1) Starter does not turn.	Starter	Defective battery-to-starter harness	B
		Defective starter switch	C
		Defective clutch start switch	C
		Defective starter	B
	Battery	Improper connection of terminal	A
		Run-down battery	A
		Defective charging system	B
	Friction	Seizure of crankshaft and connecting rod bearing	C
		Seized camshaft	C
		Seized or stuck piston and cylinder	C
	Immobilizer system <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>		A
2) Initial combustion does not occur.	Starter	Defective starter	C
	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Fuel line	Defective fuel pump and relay	A
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing belt	Degradation, etc.	B
		Defective timing	B
	Compression	Incorrect valve clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
3) Initial combustion occurs.	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Defective intake manifold gasket	B
		Defective throttle body gasket	B
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing belt	Degradation, etc.	B
		Defective timing	B
	Compression	Incorrect valve clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B
4) Engine stalls after initial combustion.	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	B
		Loosened or cracked PCV hose	C
		Loosened or cracked vacuum hose	C
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Dirty air cleaner element	C
		Air by-pass valve malfunction	C
	Fuel line	Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing belt	Degradation, etc.	B
		Defective timing	B
	Compression	Incorrect valve clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
2. Rough idle and engine stall	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	A
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	C
		Loosened oil filler cap	B
		Dirty air cleaner element	C
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing belt	Defective timing	C
	Compression	Incorrect valve clearance	B
		Loosened spark plug or defective gasket	B
		Loosened cylinder head bolt or defective cylinder head gasket	B
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	B
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Lubrication system	Incorrect oil pressure	B
		Defective rocker cover gasket	C
	Cooling system	Over-heating	C
	Other	Evaporative emission control system malfunction	A
		Stuck or damaged throttle valve	B

Symptoms	Problem parts etc.	Possible cause	RANK
3. Low output, hesitation and poor acceleration	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	B
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	B
		Loosened oil filler cap	B
		Dirty air cleaner element	A
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	B
		Clogged fuel line	B
		Lack of fuel or insufficient fuel	C
	Timing belt	Defective timing	B
	Compression	Incorrect valve clearance	B
		Loosened spark plug or defective gasket	B
		Loosened cylinder head bolt or defective cylinder head gasket	B
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Lubrication system	Incorrect oil pressure	B
	Cooling system	Over-heating	C
		Over-cooling	C
	Other	Evaporative emission control system malfunction	A

Symptoms	Problem parts etc.	Possible cause	RANK
4. Surging	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	A
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	B
		Loosened oil filler cap	B
		Dirty air cleaner element	B
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	B
		Clogged fuel line	B
		Lack of fuel or insufficient fuel	C
	Timing belt	Defective timing	B
	Compression	Incorrect valve clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Cooling system	Over-heating	B
	Other	Evaporative emission control system malfunction	C
5. Engine does not return to idle.	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked vacuum hose	A
	Other	Stuck or damaged throttle valve	A
6. Dieseling (run-on)	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Cooling system	Over-heating	B
	Other	Evaporative emission control system malfunction	B

Symptoms	Problem parts etc.	Possible cause	RANK
7. After burning in exhaust system	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	C
		Loosened or cracked PCV hose	C
		Loosened or cracked vacuum hose	B
		Defective PCV valve	B
		Loosened oil filler cap	C
		Air by-pass valve malfunction	C
	Timing belt	Defective timing	B
	Compression	Incorrect valve clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
	Lubrication system	Incorrect oil pressure	C
	Cooling system	Over-cooling	C
	Other	Evaporative emission control system malfunction	C
8. Knocking	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened oil filler cap	B
	Timing belt	Defective timing	B
	Compression	Incorrect valve clearance	C
		Incorrect valve timing	B
	Cooling system	Over-heating	A
9. Excessive engine oil consumption	Intake system	Loosened or cracked PCV hose	A
		Defective PCV valve	B
		Loosened oil filler cap	C
	Compression	Defective valve stem	A
		Worn or stuck piston rings, cylinder and piston	A
	Lubrication system	Loosened oil pump attaching bolts and defective gasket	B
		Defective oil filter gasket	B
		Defective crankshaft oil seal	B
		Defective rocker cover gasket	B
		Loosened oil drain plug or defective gasket	B
		Loosened oil pan fitting bolts or defective oil pan	B

Symptoms	Problem parts etc.	Possible cause	RANK
10. Excessive fuel consumption	Engine control system <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Dirty air cleaner element	A
	Timing belt	Defective timing	B
	Compression	Incorrect valve clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	B
		Incorrect valve timing	B
	Lubrication system	Incorrect oil pressure	C
	Cooling system	Over-cooling	C

26.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	• Valve mechanism is defective • Incorrect valve clearance • Worn camshaft • Broken valve spring
Heavy and dull clank	Oil pressure is low.	• Worn crankshaft main bearing • Worn connecting rod bearing (large end)
	Oil pressure is normal.	• Loosened flywheel mounting bolt • Damaged engine mounting
High-pitched clank	Sound is noticeable when accelerating with an overload condition.	• Ignition timing advanced • Accumulation of carbon inside combustion chamber • Wrong heat range of spark plug • Improper octane value gasoline
Clank noise when engine speed is between 1,000 and 2,000 r/min	Sound is reduced when the fuel injector connector of the noisy cylinder is disconnected.*	• Worn crankshaft main bearing • Worn connecting rod bearing (large end)
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when the fuel injector connector of the noisy cylinder is disconnected.*	• Worn cylinder liner and piston ring • Broken or stuck piston ring • Worn piston pin and hole at piston end of connecting rod
	Sound is not reduced if each fuel injector connector is disconnected in turn.*	• Unusually worn valve lifter • Worn cam sprocket • Worn camshaft journal bore in cylinder head
Squeaky sound	—	• Insufficient generator lubrication
Rubbing sound	—	• Poor contact of generator brush and rotor
Gear scream when starting engine	—	• Defective ignition starter switch • Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	• Loose V-belt • Defective water pump shaft
Hissing sound	—	• Insufficient compression • Air leakage in air intake system, hose, connection or manifold
Timing belt noise	—	• Loose timing belt • Timing belt contacting with adjacent part
Valve noise	—	• Incorrect valve clearance

* When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, perform the Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.> after connecting the fuel injector connector.

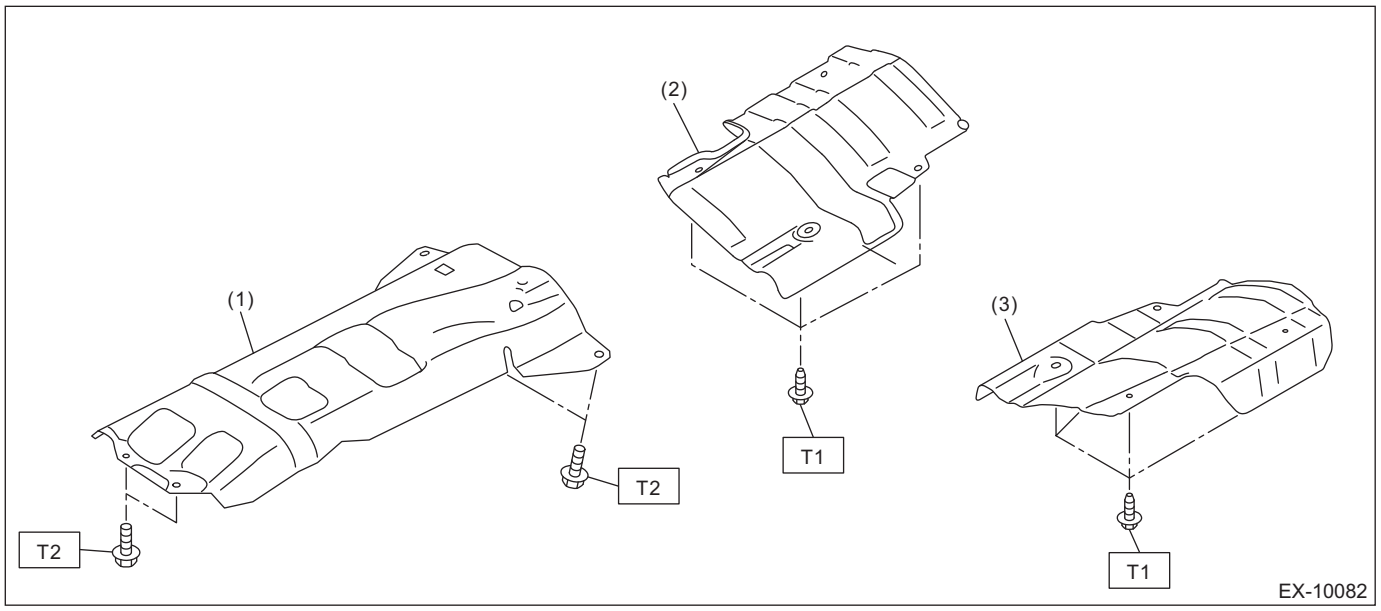
3. HEAT SHIELD COVER



(1) Center exhaust cover
(2) Rear exhaust cover RH
(3) Rear exhaust cover LH

Tightening torque: N·m (kgf-m, ft-lb)
T1: 10 (1.0, 7.4)
T2: 18 (1.8, 13.3)

B: CAUTION

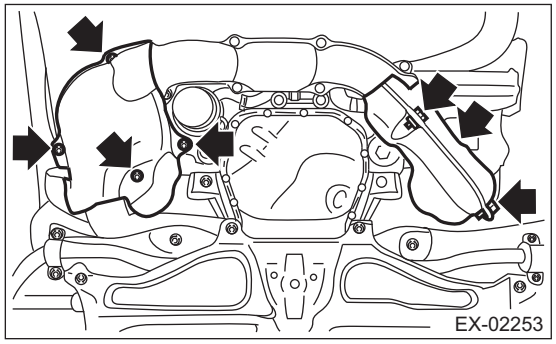
- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If any grease adheres to the exhaust pipe, wipe it off. Otherwise a fire may happen.

2. Front Exhaust Pipe

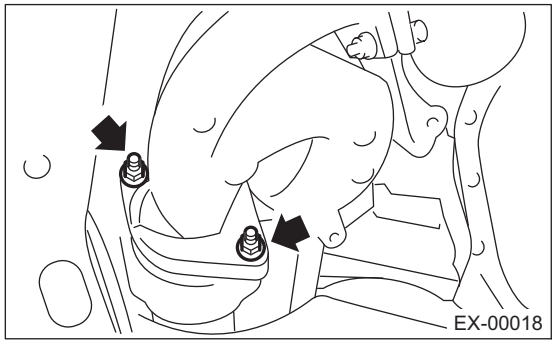
A: REMOVAL

CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

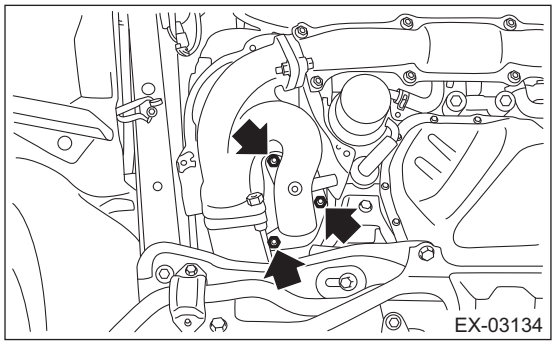
1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, REMOVAL, Front Oxygen (A/F) Sensor.>
5) Remove the exhaust manifold RH lower cover and exhaust manifold LH cover.

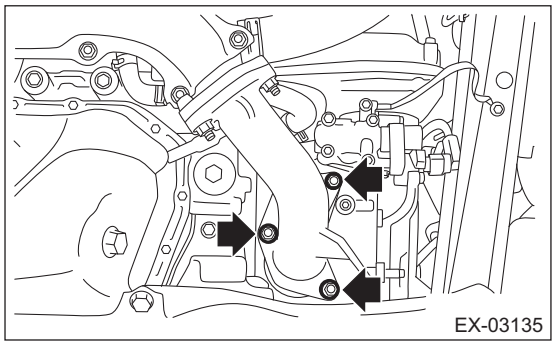


6) Remove the bolts and nuts which hold joint pipe onto exhaust manifold RH.



7) While holding the front exhaust pipe with one hand, remove the nuts which hold the exhaust manifold to the cylinder head exhaust port and remove the front exhaust pipe.



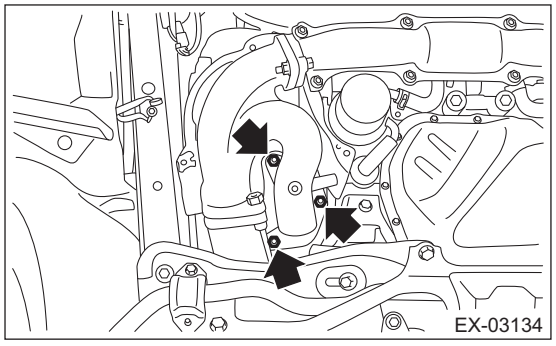


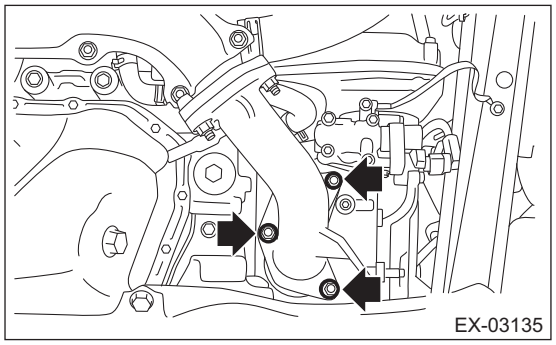
B: INSTALLATION

1) Install the front exhaust pipe.

NOTE:
Use a new gasket.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)

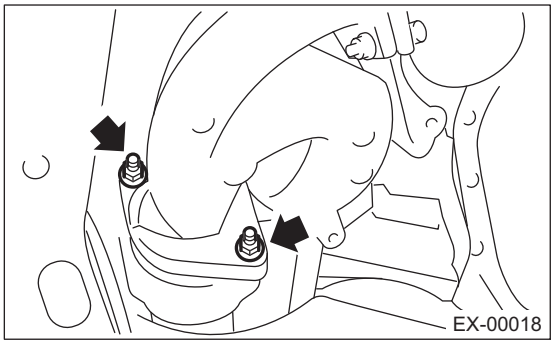




2) Install the joint pipe to the exhaust manifold RH.

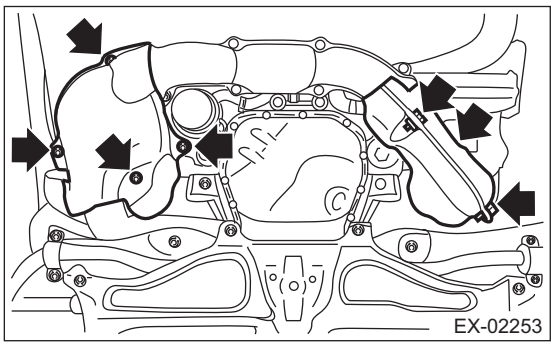
NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



3) Install the exhaust manifold RH lower cover and exhaust manifold LH cover.

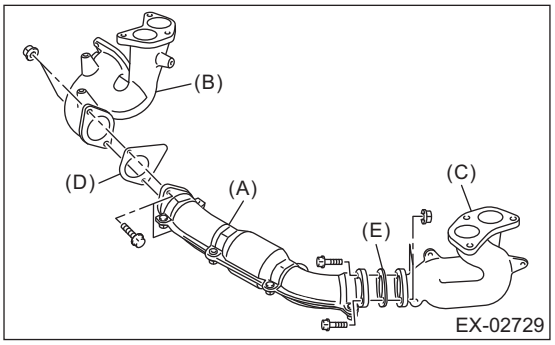
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



4) Install the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, INSTALLATION, Front Oxygen (A/F) Sensor.>
5) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
6) Lower the vehicle.
7) Connect the battery ground terminal.

C: DISASSEMBLY

1) Remove the exhaust manifold RH upper cover.
2) Remove the exhaust manifold RH and the exhaust manifold LH from the front exhaust pipe.



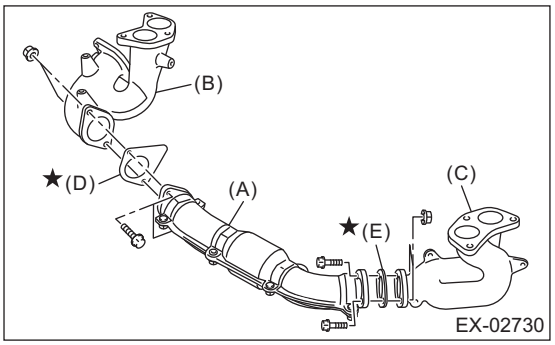
(A) Front exhaust pipe
(B) Exhaust manifold RH
(C) Exhaust manifold LH
(D) Gasket
(E) Gasket

D: ASSEMBLY

1) Install the exhaust manifold RH and the exhaust manifold LH to the front exhaust pipe.

NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



(A) Front exhaust pipe
(B) Exhaust manifold RH
(C) Exhaust manifold LH
(D) Gasket
(E) Gasket

2) Install the exhaust manifold RH upper cover.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

E: INSPECTION

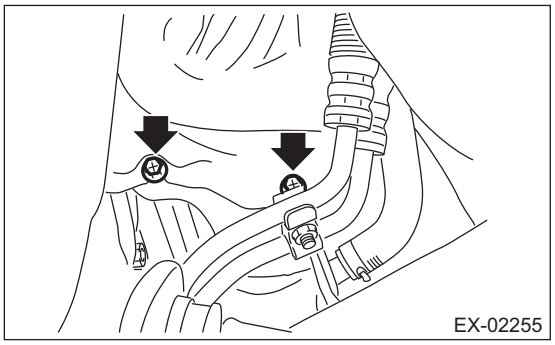
1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

3. Center Exhaust Pipe

A: REMOVAL

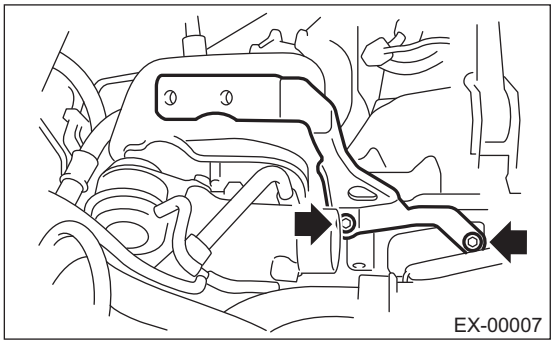
CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Lift up the vehicle.
4) Remove the transmission under cover.
5) Remove the bolts which secure the lower side of the turbocharger lower cover.



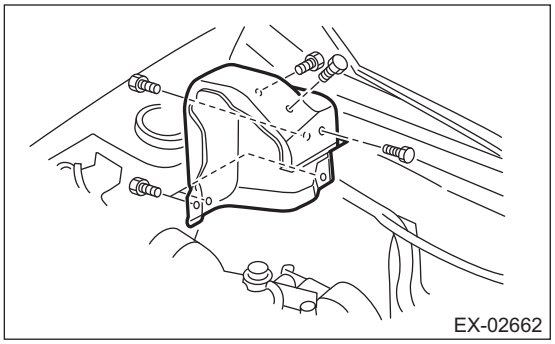
EX-02255

6) Lower the vehicle.
7) Remove the intercooler stay RH No. 2.



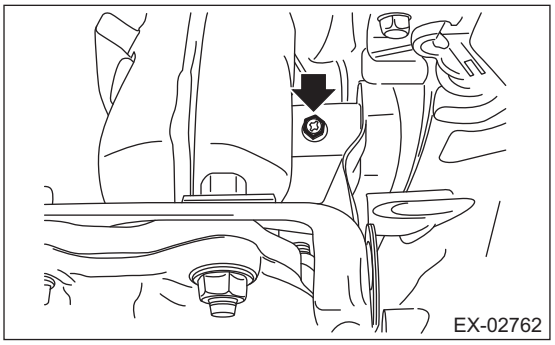
EX-00007

8) Remove the turbocharger upper cover.



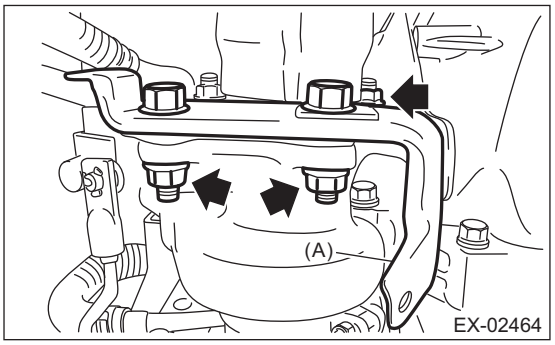
EX-02662

9) Remove the bolts which hold the upper side of the turbocharger lower cover.



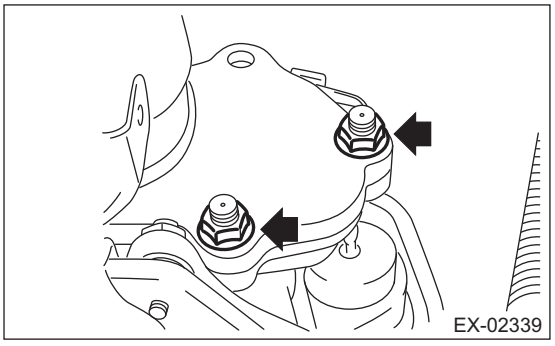
EX-02762

10) Remove the upper side bolts and nuts that hold the center exhaust pipe on the turbocharger, and remove the turbocharger cover stay (A).



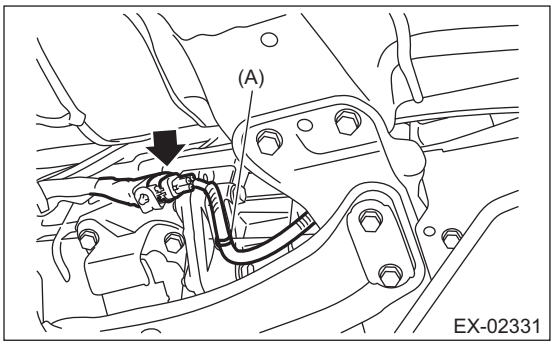
EX-02464

11) Lift up the vehicle.
12) Remove the lower side nuts (two places) that hold the center exhaust pipe on the turbocharger.



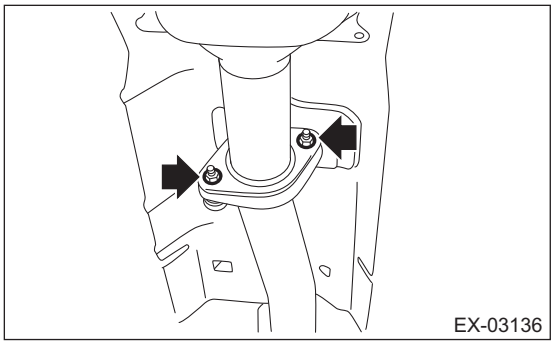
EX-02339

13) Disconnect the connector from the rear oxygen sensor, and remove the clip (A) holding the rear oxygen sensor harness.

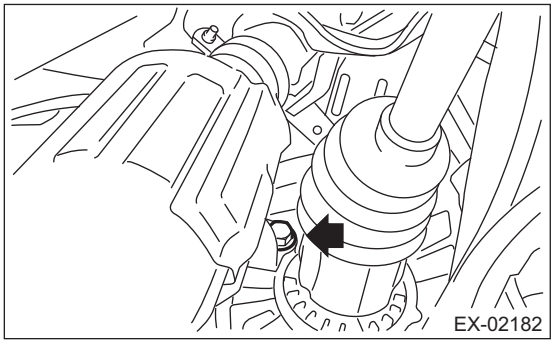


EX-02331

14) Remove the rear exhaust pipe from center exhaust pipe.

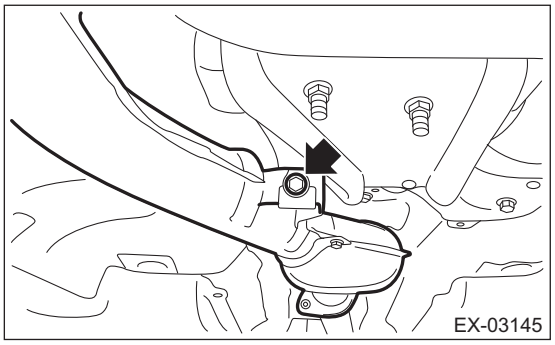


15) Remove the bolt which holds center exhaust pipe to transmission.



16) Remove the bolt which holds center exhaust pipe to hanger bracket, and remove the center exhaust pipe.

CAUTION:
Be careful not to drop the center exhaust pipe.



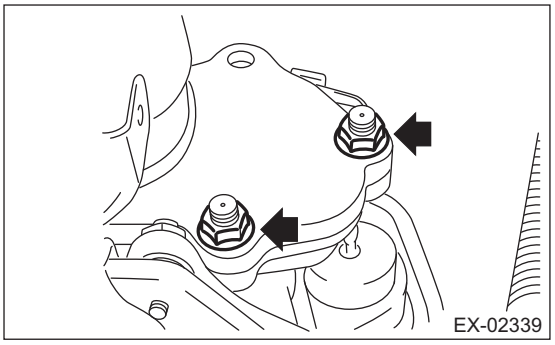
17) Remove the turbocharger lower cover.

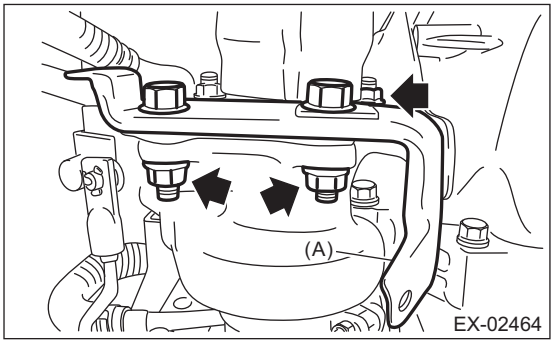
B: INSTALLATION

1) Set the turbocharger lower cover, and temporarily tighten the bolts that hold the lower side of the turbocharger lower cover.
2) Install the center exhaust pipe and temporarily tighten the bolt which holds center exhaust pipe to hanger bracket.
3) Temporarily tighten the bolt which holds the center exhaust pipe to the transmission.
4) Install the center exhaust pipe along with the turbocharger cover stay (A) to the turbocharger.

NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)

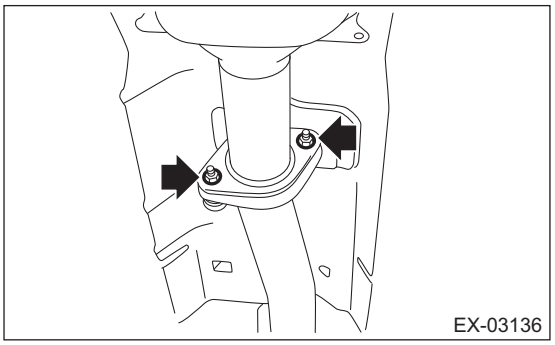




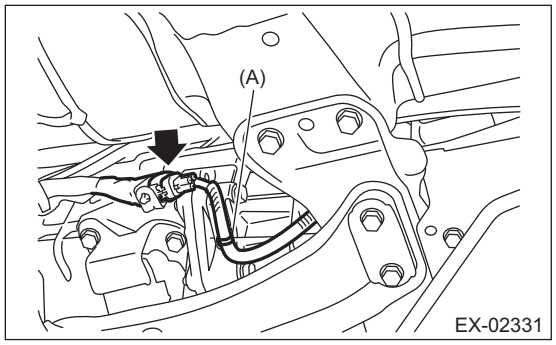
5) Install the rear exhaust pipe to center exhaust pipe.

NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

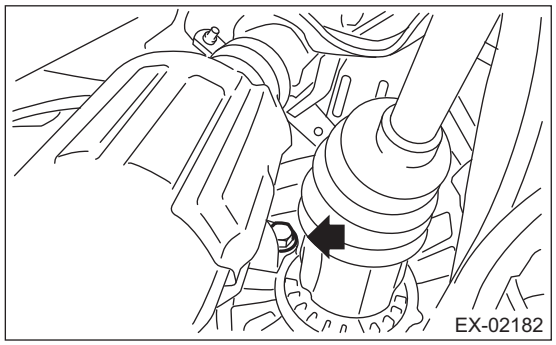


6) Connect the connector to the rear oxygen sensor, and hold the rear oxygen sensor harness with the clip (A).



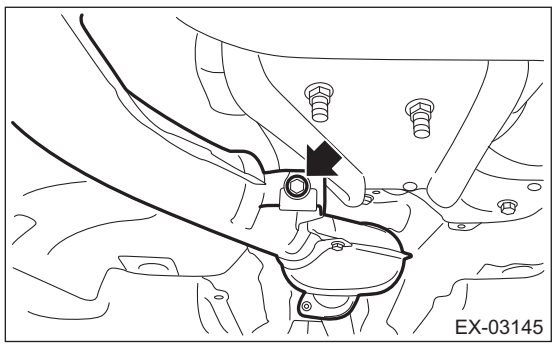
7) Tighten the bolt which holds center exhaust pipe to transmission.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



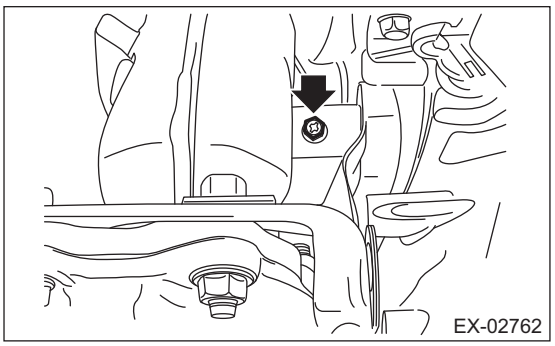
8) Tighten the bolts which secure the center exhaust pipe to the hanger bracket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)



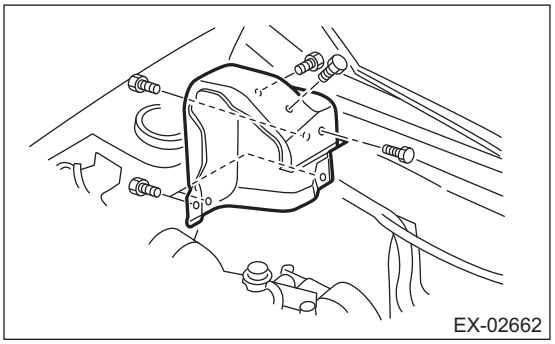
9) Lower the vehicle.
10) Attach the bolt which holds the upper side of the turbocharger lower cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



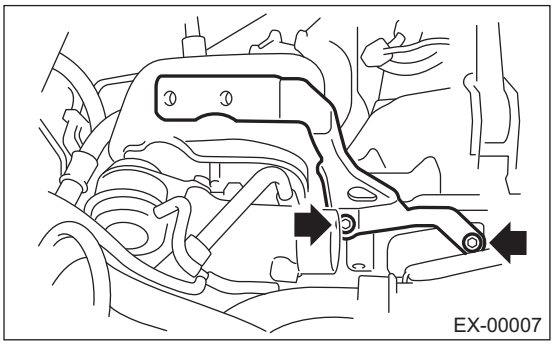
11) Attach the turbocharger upper cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



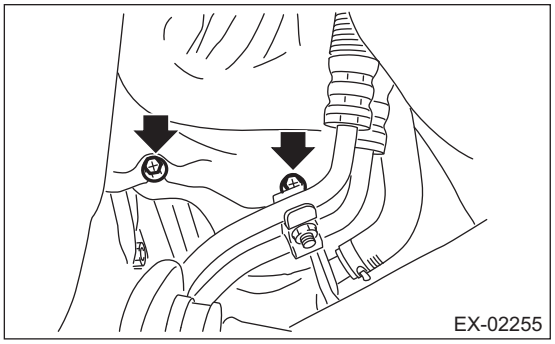
12) Install the intercooler stay RH No. 2.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



13) Lift up the vehicle.
14) Tighten the bolts that secure the lower side of the turbocharger lower cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



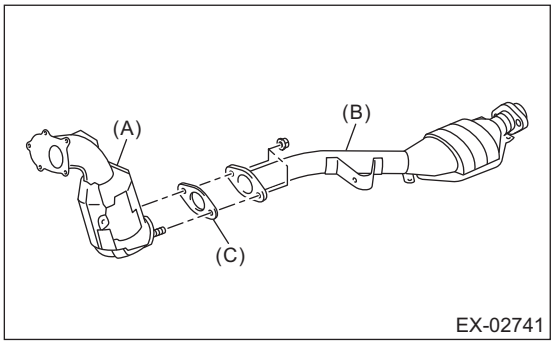
15) Install the transmission under cover.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

16) Lower the vehicle.
17) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
18) Connect the battery ground terminal.

C: DISASSEMBLY

1) Remove the rear oxygen sensor from the center exhaust pipe (rear). <Ref. to FU(STI)-54, REMOVAL, Rear Oxygen Sensor.>
2) Remove the center exhaust pipe upper cover.
3) Remove the center exhaust pipe (rear) from the center exhaust pipe (front).



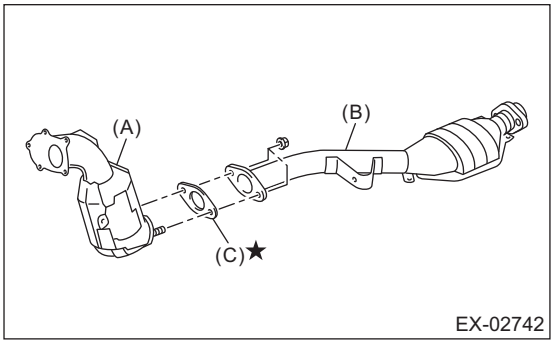
(A) Center exhaust pipe (front)
(B) Center exhaust pipe (rear)
(C) Gasket

D: ASSEMBLY

1) Assemble the center exhaust pipe (rear) to the center exhaust pipe (front).

NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



(A) Center exhaust pipe (front)
(B) Center exhaust pipe (rear)
(C) Gasket

2) Install the center exhaust pipe upper cover.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Install the rear oxygen sensor to the center exhaust pipe (rear). <Ref. to FU(STI)-54, INSTALLATION, Rear Oxygen Sensor.>

E: INSPECTION

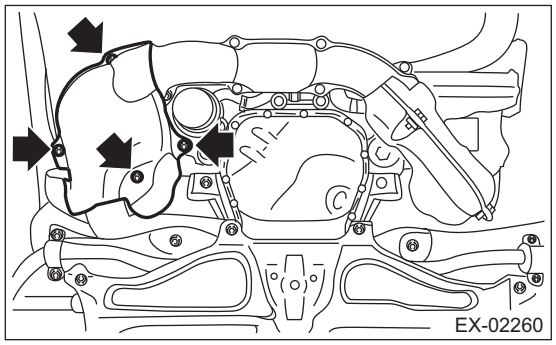
1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

4. Joint Pipe

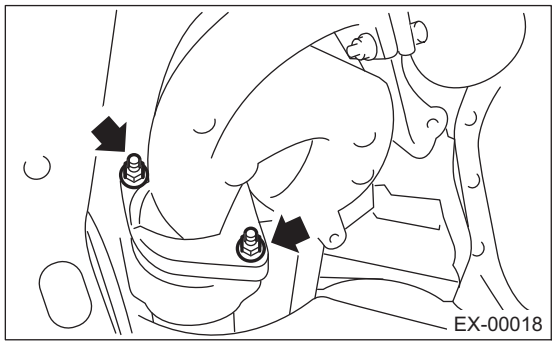
A: REMOVAL

CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, REMOVAL, Front Oxygen (A/F) Sensor.>
5) Remove the exhaust manifold RH lower cover.



6) Remove the bolts and nuts which hold exhaust manifold RH onto joint pipe.



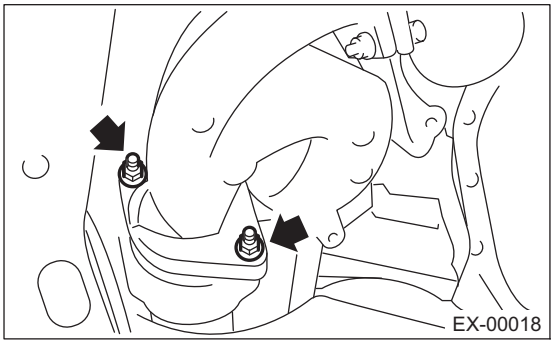
7) Remove the center exhaust pipe. <Ref. to EX(STI)-7, REMOVAL, Center Exhaust Pipe.>
8) Remove the turbocharger. <Ref. to IN(STI)-15, REMOVAL, Turbocharger.>
9) Take off the joint pipe in the upward direction.

B: INSTALLATION

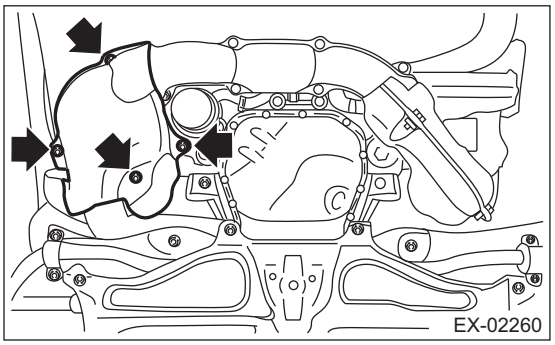
Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



C: INSPECTION

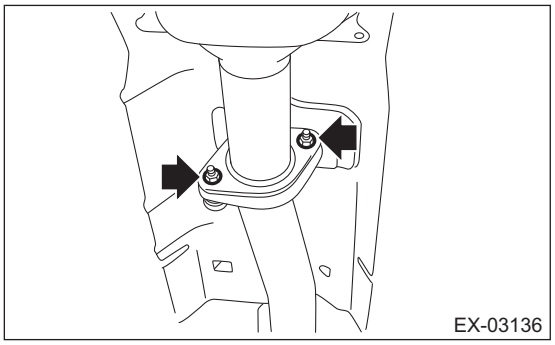
1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

5. Rear Exhaust Pipe

A: REMOVAL

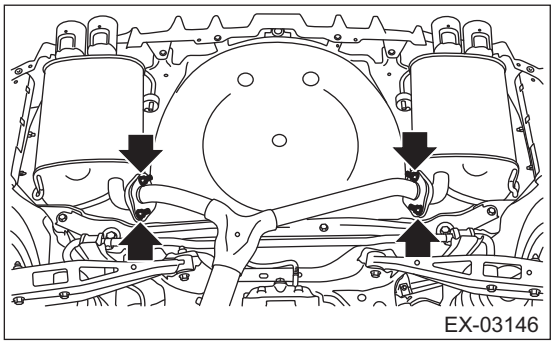
CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.

1) Lift up the vehicle.
2) Remove the center exhaust pipe from rear exhaust pipe.



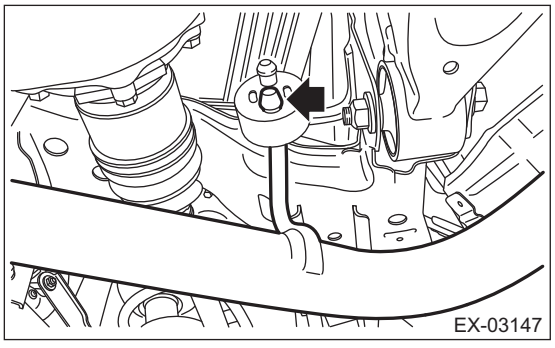
3) Remove the muffler from rear exhaust pipe.

CAUTION:
Be careful not to drop the rear exhaust pipe.



4) Apply a coat of spray type lubricant to the mating area of cushion rubber.
5) Remove the rear exhaust pipe from the cushion rubber.

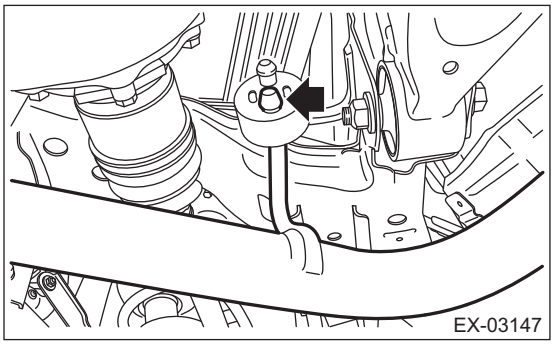
CAUTION:
Be careful not to let the muffler contact the rear bumper.



B: INSTALLATION

1) Apply a coat of spray type lubricant to the mating area of cushion rubber.
2) Install the rear exhaust pipe to cushion rubber.

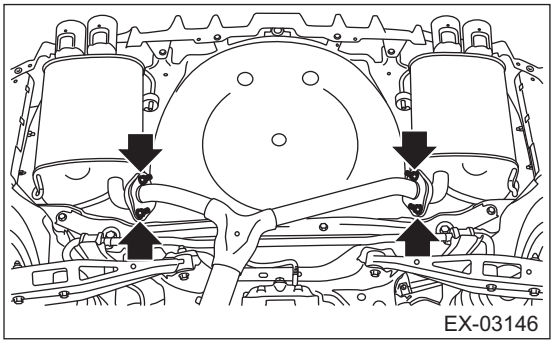
NOTE:
After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.



3) Install the rear exhaust pipe to the muffler.

NOTE:
Use a new gasket and self-locking nut.

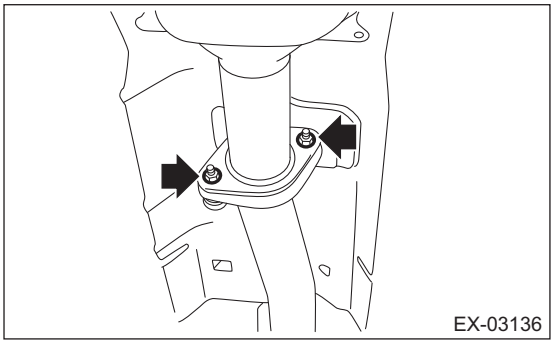
Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



4) Install the center exhaust pipe to rear exhaust pipe.

NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



5) Lower the vehicle.

C: INSPECTION

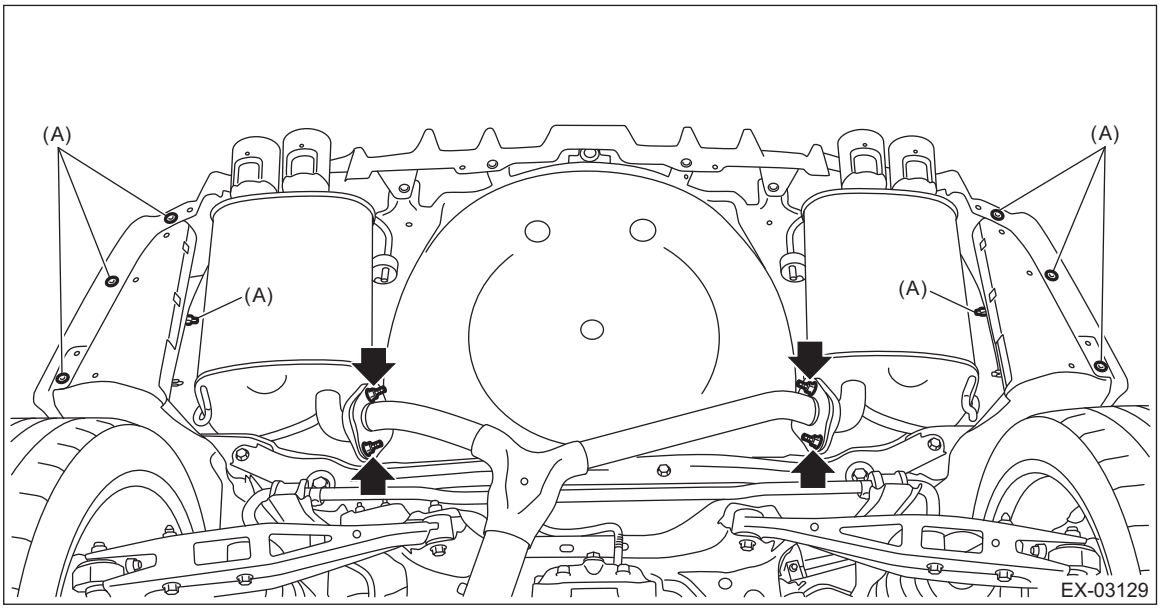
1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.
3) Check the cushion rubber for wear or crack.

6. Muffler

A: REMOVAL

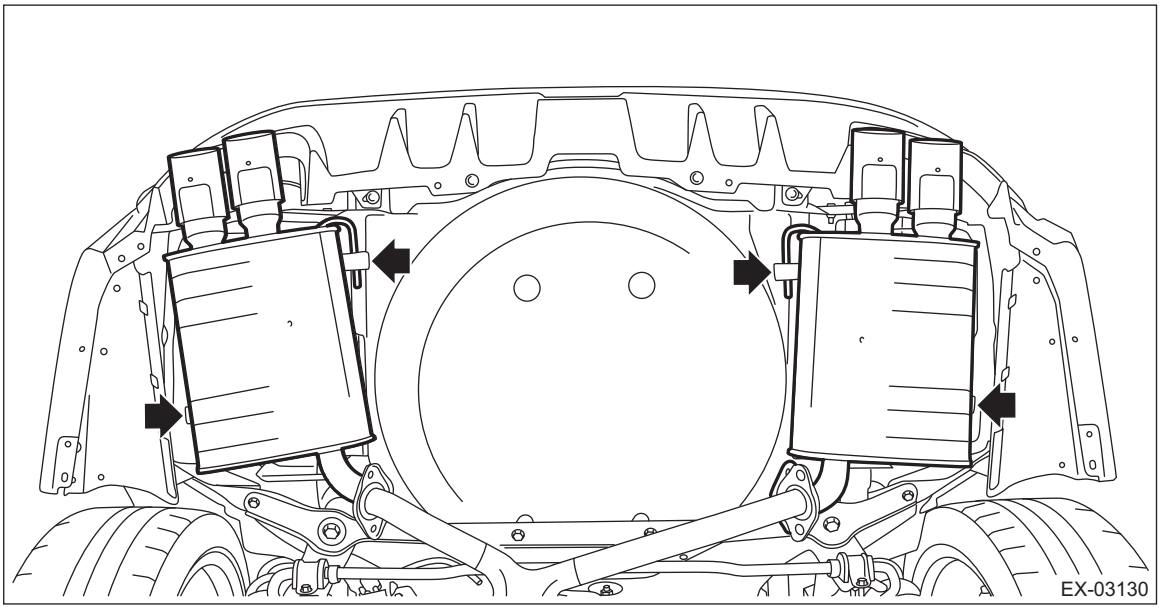
CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
1) Lift up the vehicle.
2) Remove the clip (A) which holds the cover - rear bumper side to the vehicle and rear bumper.

NOTE:
This procedure is required to facilitate the removal/installation of the muffler.
3) Remove the bolts and self-locking nuts which secure the rear exhaust pipe to the muffler.

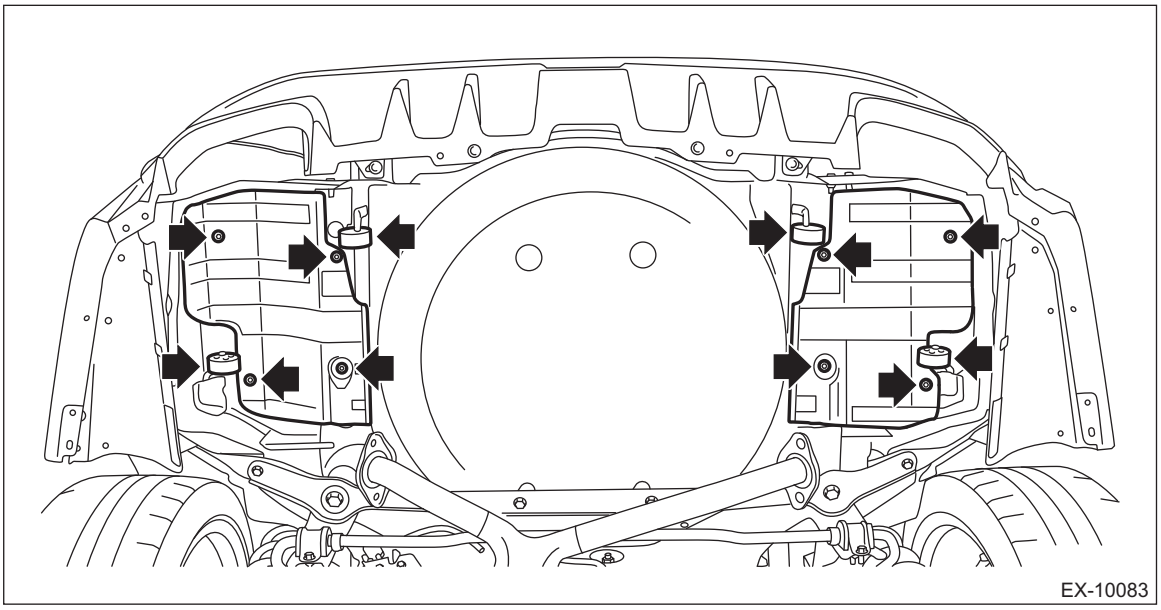


4) Apply a coat of spray type lubricant to the mating area of cushion rubber.
5) Remove the muffler from the cushion rubber.

CAUTION:
Be careful not to drop the muffler during removal.



6) Remove the cushion rubber and rear exhaust cover from the vehicle.

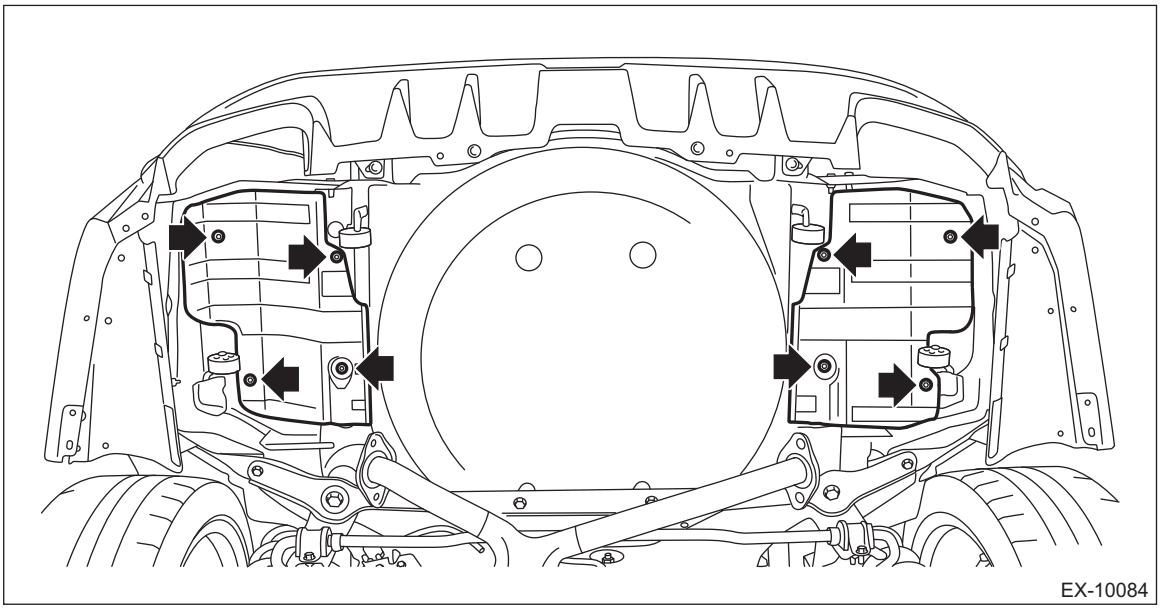


B: INSTALLATION

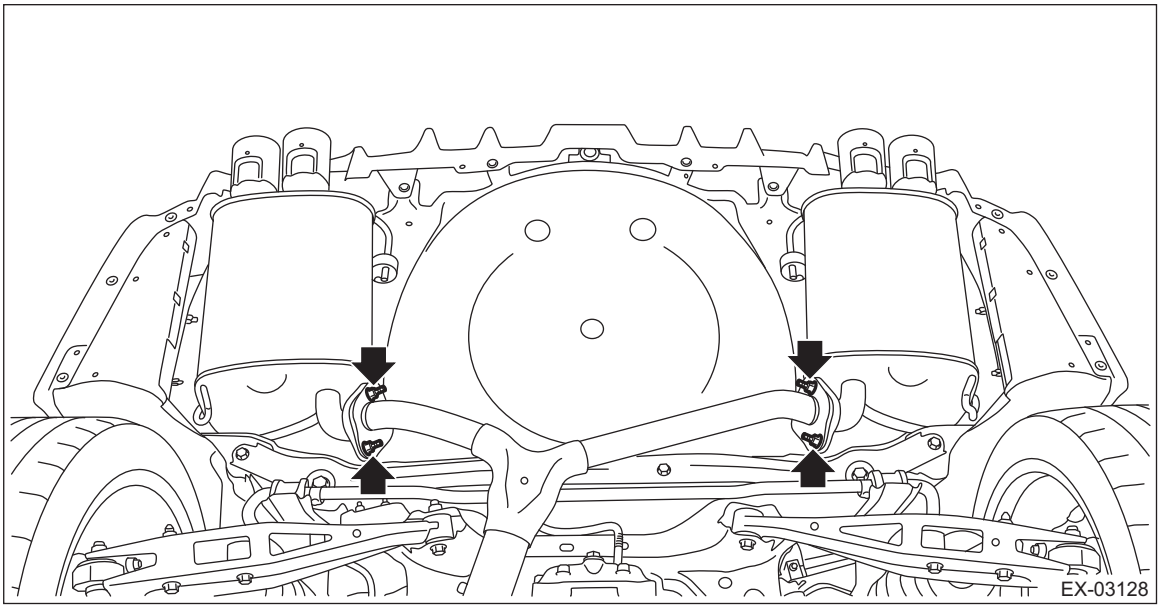
Install in the reverse order of removal.

NOTE:
- Use a new gasket and self-locking nut.
- After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.
3) Check the cushion rubber for wear or crack.

12. Engine Cooling System Trouble in General 30

1. General Description

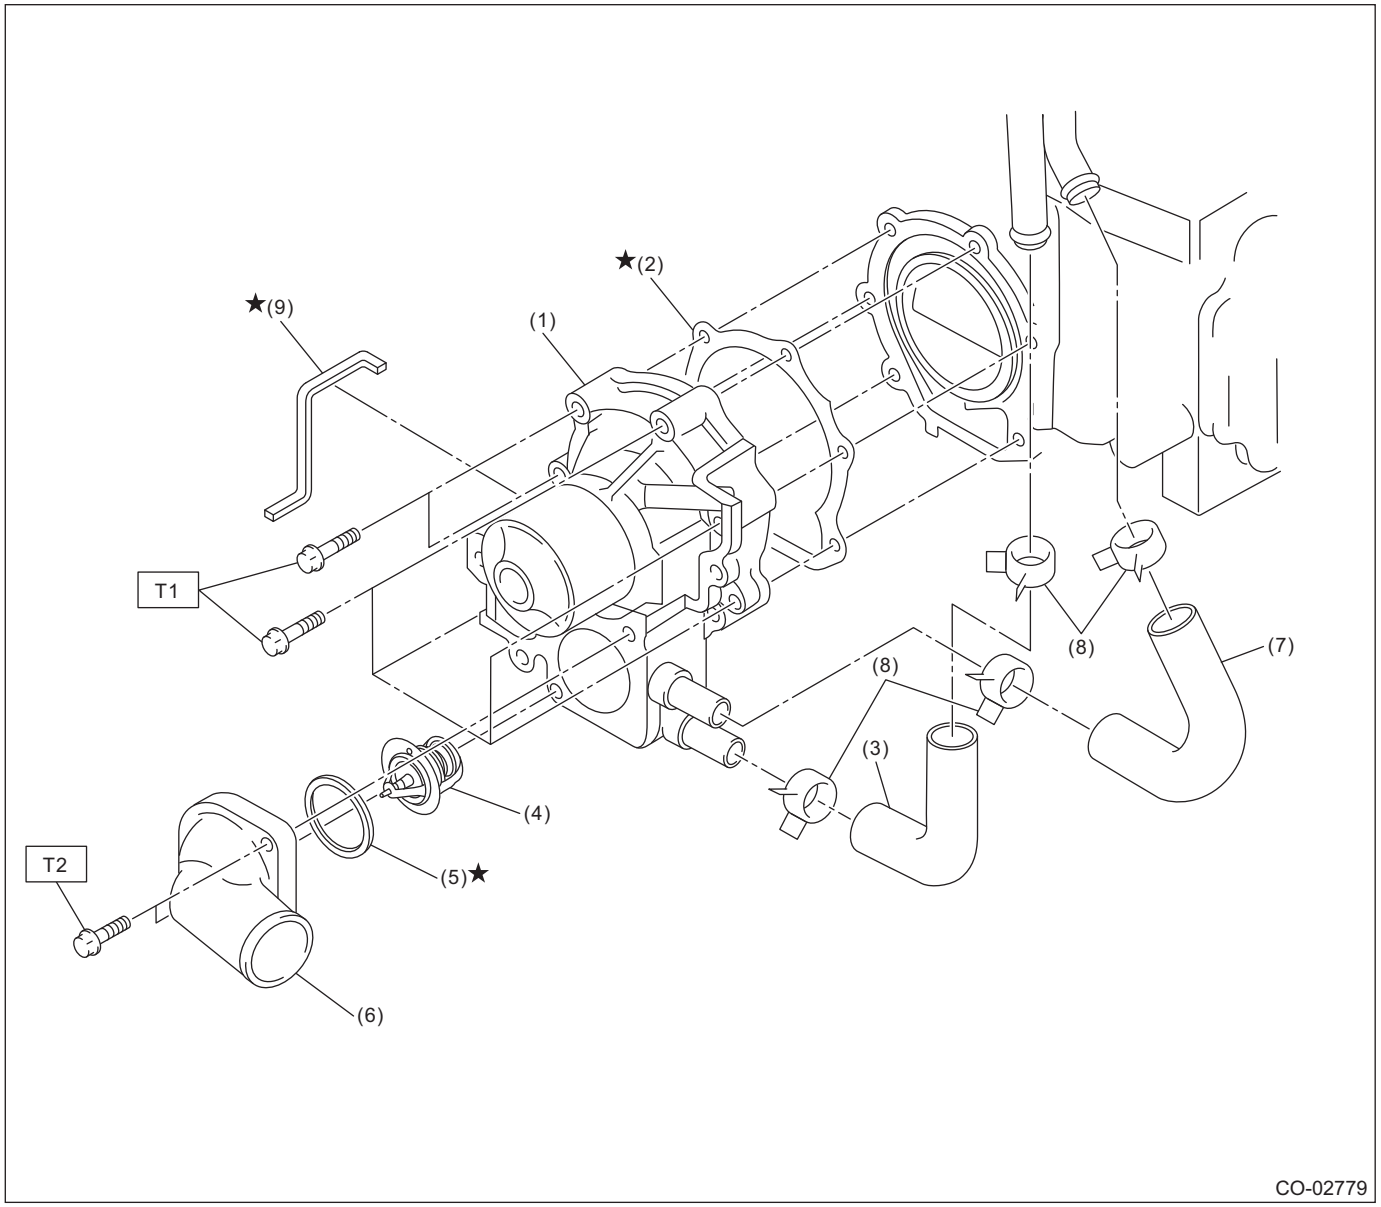
A: SPECIFICATION

Cooling system					Electric fan + Forced engine coolant circulation system
Total engine coolant capacity			L (US qt, Imp qt)		Approx. 7.7 (8.2, 6.8)
Water pump	Type				Centrifugal impeller type
	Discharge performance	Discharge rate	L (US gal, Imp gal)/min		200 (52.8, 44.0)
		Pump speed — Discharge pressure			6,000 r/min — 225.4 kPa (23.0 mAq)
		Engine coolant temperature			80°C (176°F)
	Impeller diameter		mm (in)		76 (2.99)
	Number of impeller vanes				8
	Pump pulley diameter		mm (in)		60 (2.36)
	Clearance between impeller and pump case		mm (in)	Standard	0.5 — 1.5 (0.020 — 0.059)
Thermostat	Type				Wax pellet type
	Starting temperature to open				76 — 80°C (169 — 176°F)
	Fully opens				91°C (196°F)
	Valve lift		mm (in)		9.0 (0.354) or more
	Valve opening size		mm (in)		35 (1.38)
Radiator fan	Motor input	Main fan	W		160
		Sub fan	W		160
	Fan diameter / Blade	Main fan			320 mm (12.6 in)/9
		Sub fan			320 mm (12.6 in)/11
Radiator	Type				Down flow
	Core dimensions	Width × Height × Thickness	mm (in)		687.4 × 340 × 16 (27.06 × 13.39 × 0.63)
	Pressure range in which cap valve is open	Coolant filler tank side	kPa (kg/cm^2, psi)	Positive pressure side / Standard	93 — 123 (0.95 — 1.25, 14 — 18)
				Positive pressure side / Limit	83 (0.85, 12)
				Negative pressure side / Standard	–1.0 — –4.9 (–0.01 — –0.05, –0.1 — –0.7)
		Radiator side	kPa (kg/cm^2, psi)	Positive pressure side only / Standard	122 — 152 (1.24 — 1.55, 18 — 22)
				Positive pressure side only / Limit	112 (1.14, 16)
	Fins				Corrugated fin type
Reservoir tank	Capacity		L (US qt, Imp qt)		0.45 (0.48, 0.40)

	Recommended materials	Item number	Alternative
Engine coolant	SUBARU SUPER COOLANT (concentrated type)	—	—
	SUBARU SUPER COOLANT (diluted type)	K0670Y0001	
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

B: COMPONENT

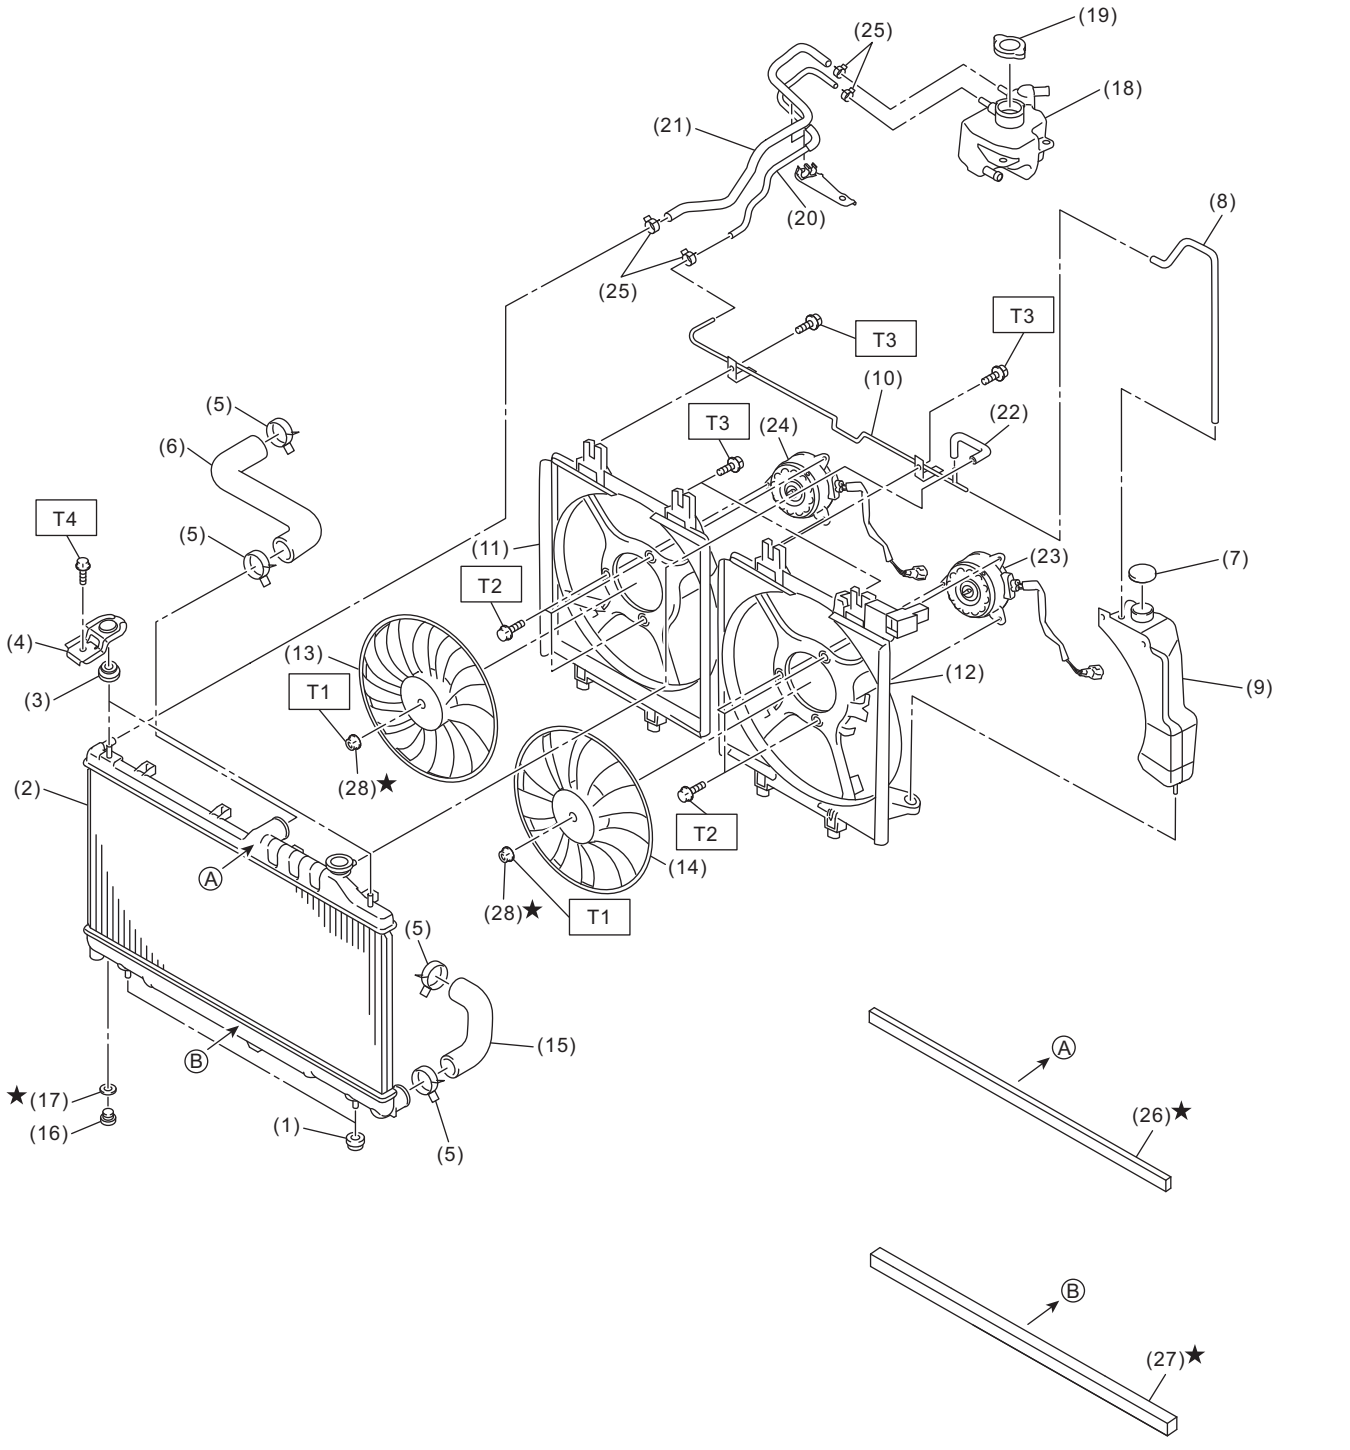
1. WATER PUMP



(1) Water pump ASSY
(2) Gasket
(3) Heater by-pass hose
(4) Thermostat
(5) Gasket
(6) Thermostat cover
(7) Coolant filler by-pass hose
(8) Clip
(9) Water pump sealing

Tightening torque: N·m (kgf-m, ft-lb)
T1: First 12 (1.2, 8.9)
Second 12 (1.2, 8.9)
T2: 12 (1.2, 8.9)

2. RADIATOR & RADIATOR FAN



(1) Radiator lower cushion
(2) Radiator
(3) Radiator upper cushion
(4) Radiator upper bracket
(5) Clip
(6) Radiator inlet hose
(7) Engine coolant reservoir tank cap
(8) Over flow hose A
(9) Engine coolant reservoir tank
(10) Over flow pipe
(11) Radiator sub fan shroud
(12) Radiator main fan shroud
(13) Radiator sub fan
(14) Radiator main fan
(15) Radiator outlet hose
(16) Radiator drain plug
(17) O-ring
(18) Engine coolant filler tank
(19) Radiator cap (coolant filler tank cap)
(20) Engine coolant hose A
(21) Engine coolant hose B
(22) Over flow hose B
(23) Main fan motor
(24) Sub fan motor
(25) Clip
(26) Radiator upper gasket
(27) Radiator lower gasket
(28) Nut (with lock agent)

Tightening torque: N·m (kgf-m, ft-lb)
T1: 3.43 (0.35, 2.53)
T2: 4.41 (0.45, 3.25)
T3: 7.5 (0.8, 5.5)
T4: 12 (1.2, 8.9)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Follow all government and local regulations concerning disposal of refuse when disposing engine coolant.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499977100	499977100	CRANK PULLEY WRENCH	Used for removing and installing the crank pulley.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499977500	499977500	CAM SPROCKET WRENCH	Used for removing and installing intake cam sprocket and exhaust cam sprocket.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

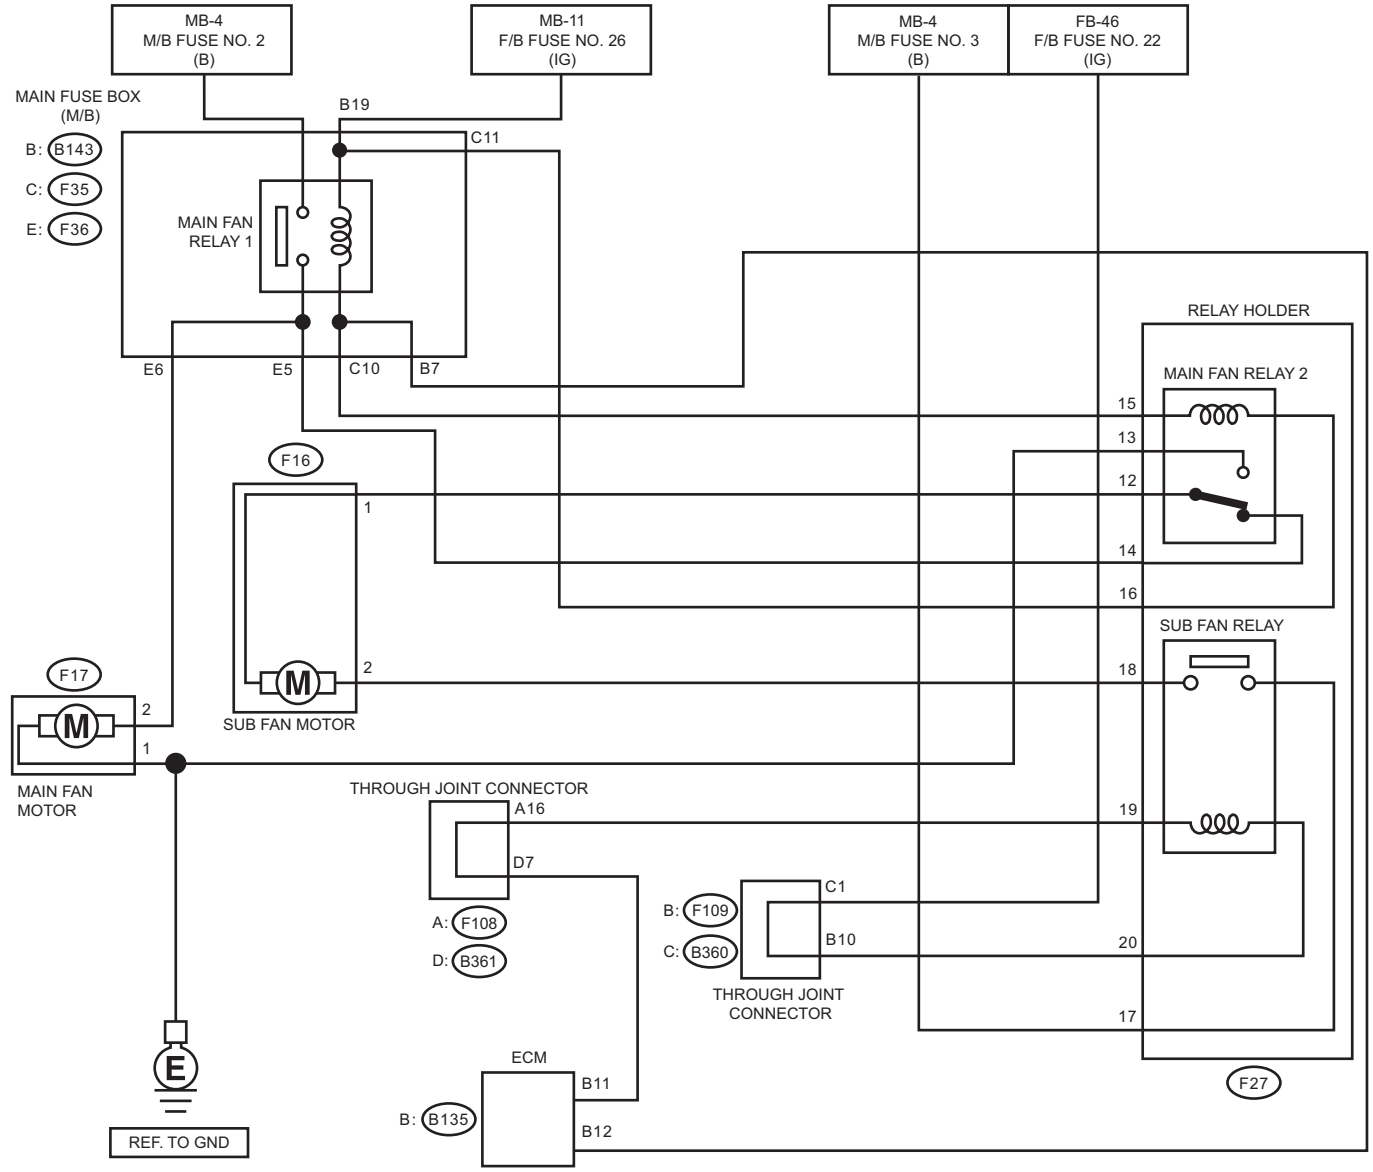
2. GENERAL TOOL

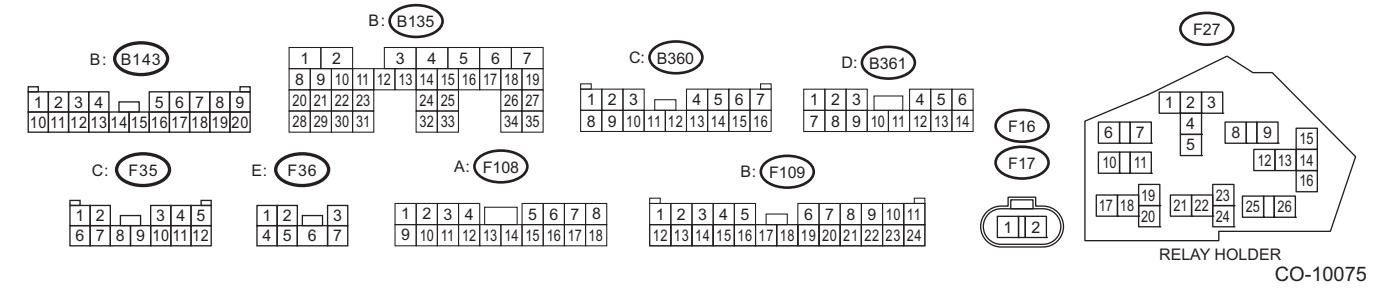
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Radiator cap tester	Used for checking radiator and radiator cap.
DST-i	Used together with Subaru Select Monitor 4.

2. Radiator Fan System

A: WIRING DIAGRAM

Radiator fan system <Ref. to WI-310, WIRING DIAGRAM, Radiator Fan System.>





CO-10075

B: INSPECTION

Operating condition:

Vehicle speed	A/C compressor load	Engine coolant temperature		
		Increase: 89°C (192°F) or less Decrease: 87°C (189°F) or less	Increase: 90 — 95°C (194 — 203°F) Decrease: 88 — 90°C (190 — 194°F)	Increase: 96°C (205°F) or more Decrease: 91°C (196°F) or more
		Radiator fan operation	Radiator fan operation	Radiator fan operation
During acceleration: 19 km/h (12 MPH) or less* During deceleration: 10 km/h (6 MPH) or less*	OFF	OFF	Low-Speed	High-Speed
	Low	Low-Speed	Low-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 20 — 69 km/h (12 — 43 MPH) During deceleration: 11 — 64 km/h (7 — 40 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	High-Speed	High-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 70 — 105 km/h (43 — 65 MPH) During deceleration: 65 — 100 km/h (40 — 62 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	High-Speed	High-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 106 km/h (66 MPH) or more During deceleration: 101 km/h (63 MPH) or more	OFF	OFF	High-Speed	High-Speed
	Low	High-Speed	High-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed

*: Including the condition under which vehicle is stopped (0 km/h (0 MPH)).

Diagnosis:

Radiator main fan and radiator sub fan do not rotate under the above operating conditions.

	Step	Check	Yes	No
1	**CHECK OPERATION OF RADIATOR FAN.** 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at low speed?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK OPERATION OF RADIATOR FAN.** Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at high speed?	Radiator main fan system is normal.	Go to step **27**.
3	**CHECK POWER SUPPLY TO SUB FAN RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the sub fan relay. 3) Measure the voltage between the sub fan relay terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK POWER SUPPLY TO SUB FAN RELAY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the sub fan relay terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Go to step **6**.
5	**CHECK FUSE.** 1) Remove the fuse No. 3. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
6	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
7	**CHECK SUB FAN RELAY.** Measure the resistance between sub fan relay switch terminals.	Is the resistance 1 MΩ or more?	Go to step **8**.	Replace the sub fan relay. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
8	**CHECK SUB FAN RELAY.** 1) Connect the battery to the terminal on the sub fan relay coil side. 2) Measure the resistance between sub fan relay switch terminals.	Is the resistance less than 1 Ω?	Go to step **9**.	Replace the sub fan relay. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN SUB FAN RELAY TERMINAL AND SUB FAN MOTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the sub fan motor. 3) Measure the resistance of harness between the sub fan relay terminal and sub fan motor connector. ***Connector & terminal*** ***(F16) No. 2 — (F27) No. 18:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair the open circuit of harness between sub fan relay terminal and sub fan motor connector.
10	**CHECK HARNESS BETWEEN SUB FAN MOTOR CONNECTOR AND MAIN FAN RELAY 2 CONNECTOR.** 1) Remove the main fan relay 2. 2) Measure the resistance of harness between sub fan motor connector and main fan relay 2 connector. ***Connector & terminal*** ***(F16) No. 1 — (F27) No. 12:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of the harness between sub fan motor connector and main fan relay 2 connector.
11	**CHECK FOR POOR CONTACT.** Check poor contact of sub fan motor connector.	Is there poor contact of the sub fan motor connector?	Repair the poor contact of sub fan motor connector.	Go to step **12**.
12	**CHECK SUB FAN MOTOR.** Connect the battery positive (+) terminal to terminal No. 2 of the sub fan motor, and the ground (–) terminal to terminal No. 1.	Does the radiator sub fan rotate?	Go to step **13**.	Replace the sub fan motor. <Ref. to CO(STI)-26, Radiator Sub Fan and Fan Motor.>
13	**CHECK MAIN FAN RELAY 2.** Measure the resistance between terminals of main fan relay 2 switch (always ON side).	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the main fan relay 2. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
14	**CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND MAIN FAN MOTOR CONNECTOR.** 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 2 terminal and main fan motor connector. ***Connector & terminal*** ***(F17) No. 2 — (F27) No. 14:***	Is the resistance less than 1 Ω?	Go to step **15**.	Repair the open circuit of the harness between main fan relay 2 terminal and main fan motor connector.
15	**CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.** Measure the resistance between main fan motor connector and chassis ground. ***Connector & terminal*** ***(F17) No. 1 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **16**.	Repair the open circuit of the harness between main fan motor connector and chassis ground.
16	**CHECK FOR POOR CONTACT.** Check poor contact of main fan motor connector.	Is there poor contact of the main fan motor connector?	Repair the poor contact of main fan motor connector.	Go to step **17**.

	Step	Check	Yes	No
17	**CHECK MAIN FAN MOTOR.** Connect the battery positive (+) terminal to terminal No. 2 of the main fan motor, and the ground (–) terminal to terminal No. 1.	Does the radiator main fan rotate?	Go to step **18**.	Replace the main fan motor. <Ref. to CO(STI)-24, Radiator Main Fan and Fan Motor.>
18	**CHECK HARNESS BETWEEN SUB FAN RELAY AND ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the sub fan relay terminal and ECM connector. ***Connector & terminal*** ***(B135) No. 11 — (F27) No. 19:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the open circuit of harness between sub fan relay terminal and ECM.
19	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Check the DTC. Repair the trouble cause. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>
20	**CHECK MAIN FAN RELAY 1.** 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 1. 3) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance 1 MΩ or more?	Go to step **21**.	Replace the main fan relay 1. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
21	**CHECK MAIN FAN RELAY 1.** 1) Connect the main fan relay 1 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance less than 1 Ω?	Go to step **22**.	Replace the main fan relay 1. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
22	**CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND MAIN FAN MOTOR CONNECTOR.** 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 1 terminal and main fan motor connector. ***Connector & terminal*** ***(F17) No. 2 — (F36) No. 6:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair the open circuit of the harness between main fan relay 1 terminal and main fan motor connector.

	Step	Check	Yes	No
23	**CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between main fan relay 1 terminal and ECM connector. ***Connector & terminal*** ***(B135) No. 12 — (B143) No. 7:***	Is the resistance less than 1 Ω?	Go to step **24**.	Repair the open circuit of the harness between main fan relay 1 terminal and ECM.
24	**CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND ECM.** Measure the resistance between main fan relay 2 terminal and ECM connector. ***Connector & terminal*** ***(B135) No. 12 — (F27) No. 15:***	Is the resistance less than 1 Ω?	Go to step **25**.	Repair the open circuit of the harness between main fan relay 2 terminal and ECM.
25	**CHECK FUSE.** 1) Remove the fuse No. 2 and No. 26. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **26**.
26	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Repair the power supply circuit to the main fuse box.
27	**CHECK OPERATION OF RADIATOR FAN.** If the both fans do not rotate at high speed in the condition of step 2, check whether the radiator sub fan is rotating.	Does the radiator sub fan rotate?	Go to step **20**.	Go to step **28**.
28	**CHECK GROUND CIRCUIT OF MAIN FAN RELAY 2.** 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 2. 3) Measure the resistance between main fan relay 2 terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 13 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **29**.	Repair the open circuit of harness between main fan relay 2 and chassis ground.
29	**CHECK POWER SUPPLY TO MAIN FAN RELAY 2.** 1) Turn the ignition switch to ON. 2) Measure the voltage between main fan relay 2 terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **30**.	Repair the power supply line.
30	**CHECK MAIN FAN RELAY 2.** Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance 1 MΩ or more?	Go to step **31**.	Replace the main fan relay 2. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

Step		Check	Yes	No
31	**CHECK MAIN FAN RELAY 2.** 1) Connect the main fan relay 2 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance less than 1 Ω?	Go to step **23**.	Replace the main fan relay 2. <Ref. to EN(STI)(diag)-16, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

3. Engine Coolant

A: INSPECTION

NOTE:
When adding the engine coolant, always use SUBARU Super Coolant.
1) Park the vehicle on a level surface.
2) Check the engine coolant amount, and if the coolant level is low, check for the coolant leakage, and then add the engine coolant.
(1) Make sure the engine coolant level in the reservoir tank is between "FULL" and "LOW" with the engine in a cold condition.
(2) Open the cap of coolant filler tank, and check that the engine coolant is filled up to the filler neck position.

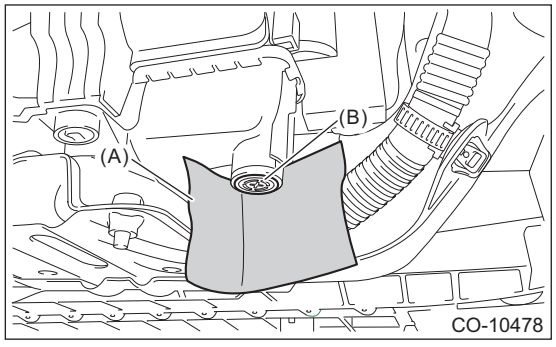
B: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

1) Lift up the vehicle.
2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Set a vinyl sheet (A), etc. at the base of drain plug.

CAUTION:
This operation is required to prevent engine coolant from scattering around.
4) Remove the drain plug (B) to drain engine coolant into container.

NOTE:
Remove the coolant filler tank cap so that engine coolant will drain faster.



5) Install the drain plug.

NOTE:
Use new O-rings.
6) Remove the vinyl sheet, etc.
7) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>

2. FILLING OF ENGINE COOLANT

CAUTION:
During work, set the gear shift lever to the neutral position and do not shift the lever.
1) Pour cooling system conditioner through the filler neck of coolant filler tank.

Cooling system protective agent:
Refer to "SPECIFICATION" for cooling system protective agent. <Ref. to CO(STI)-2, SPECIFICATION, General Description.>
2) Fill the engine coolant into coolant filler tank up to the filler neck position.

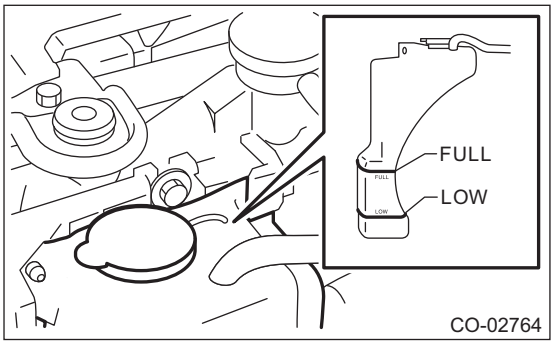
Recommended engine coolant:
Refer to "SPECIFICATION" for recommended engine coolant. <Ref. to CO(STI)-2, SPECIFICATION, General Description.>

Engine coolant level:
Refer to "SPECIFICATION" for engine coolant level. <Ref. to CO(STI)-2, SPECIFICATION, General Description.>

Engine coolant concentration:
Refer to "ADJUSTMENT" for the recommended engine coolant concentration. <Ref. to CO(STI)-15, ADJUSTMENT, Engine Coolant.>

CAUTION:
Do not confuse the cap of coolant filler tank and cap of radiator.

NOTE:
• When pouring the engine coolant, the radiator side cap must not be removed.
• The SUBARU Super Coolant contains anti-freeze and anti-rust agents, and is especially made for Subaru engines with an aluminum cylinder block. Be sure to use SUBARU Super Coolant, since other coolant may cause corrosion.
3) Fill engine coolant into the reservoir tank up to "FULL" level.



4) Close the coolant filler tank cap, and start the engine. Race 5 to 6 times at 3,000 r/min or less, then stop the engine. (Complete this operation within 40 seconds.)
5) Wait for one minute after the engine stops, then open the coolant filler tank cap. If the engine coolant level drops, add engine coolant into coolant filler tank up to the filler neck position.
6) Perform the procedures 4) and 5) again.

7) Attach the coolant filler tank and reservoir tank cap properly.
8) Start the engine and operate the heater at maximum hot position and the blower speed setting to “LO”. (A/C OFF)
9) Run the engine at 3,000 r/min or less until radiator fan starts and stops.

NOTE:
Be careful with the engine coolant temperature to prevent overheating.
10) Stop the engine and wait until the engine coolant temperature lowers to 30°C (86°F) or less.
11) Open the coolant filler tank cap. If the engine coolant level drops, add engine coolant into the coolant filler tank up to the filler neck position and the reservoir tank to “FULL” level.
12) Attach the coolant filler tank and reservoir tank cap properly.
13) Set the heater setting to maximum hot position and the blower speed setting to “LO” and start the engine. Perform racing at 3,000 r/min or less. If the flowing sound is heard from the heater core, repeat the procedures from step 9).

C: ADJUSTMENT

1. PROCEDURE TO ADJUST THE SUBARU SUPER COOLANT CONCENTRATION

CAUTION:
Use the SUBARU Super Coolant with a 50 — 60% concentration in order to obtain maximum anti-freeze and anti-rust performance.
To adjust the concentration of SUBARU Super Coolant according to temperature, find the proper SUBARU Super Coolant concentration in the table, and add dilution water to the SUBARU Super Coolant (concentrated type) until it reaches the proper dilution.

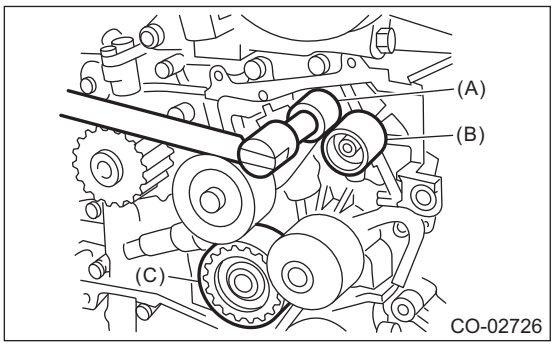
Relationship of SUBARU Super Coolant concentration and freezing temperature			
SUBARU Super Coolant concentration	50%	55%	60%
Freezing temperature	–36°C (–33°F)	–41°C (–42°F)	–50°C (–58°F)

Engine coolant and diluting water:
Refer to “SPECIFICATION” for recommended engine coolant and diluting water. <Ref. to CO(STI)-2, SPECIFICATION, General Description.>

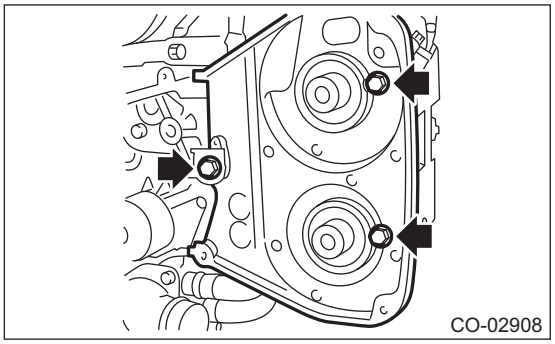
4. Water Pump

A: REMOVAL

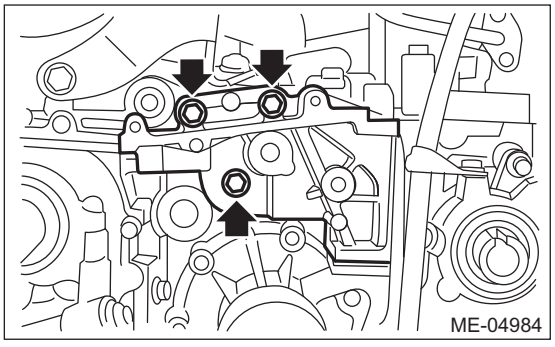
1) Remove the radiator. <Ref. to CO(STI)-20, REMOVAL, Radiator.>
2) Remove the V-belts. <Ref. to ME(STI)-42, REMOVAL, V-belt.>
3) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
4) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
5) Remove the timing belt. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>
6) Remove the automatic belt tension adjuster (A).
7) Remove the belt idler (B).
8) Remove the belt idler No. 2 (C).



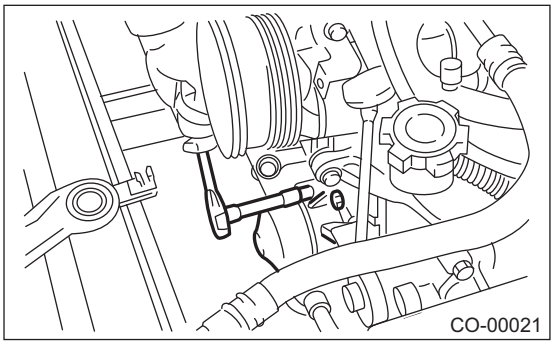
9) Remove the cam sprocket LH. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.>
10) Remove the belt cover No. 2 LH.



11) Remove the tensioner bracket.



12) Disconnect the hose from water pump.
13) Remove the water pump.

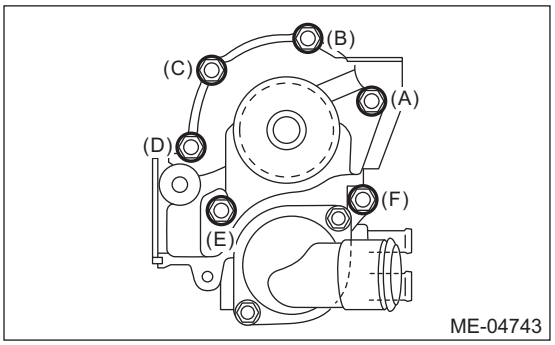


B: INSTALLATION

1) Install the water pump onto cylinder block LH.

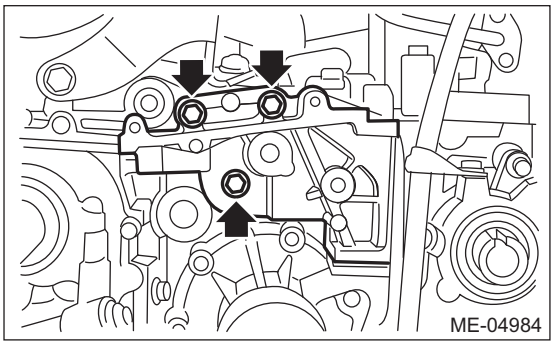
NOTE:
- Use a new gasket.
- When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in figure.

Tightening torque:
First:
12 N·m (1.2 kgf-m, 8.9 ft-lb)
Second:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



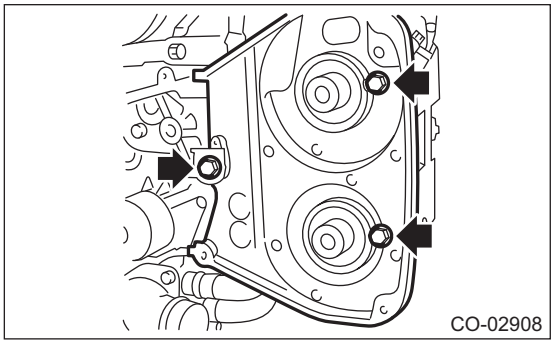
2) Install the hose to water pump.
3) Install the tensioner bracket.

Tightening torque:
24.5 N·m (2.5 kgf-m, 18.1 ft-lb)



4) Install the belt cover No. 2 LH.

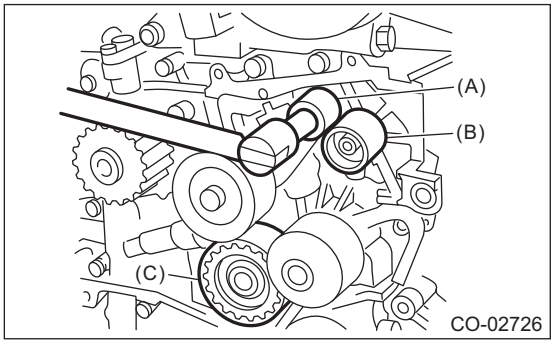
Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



5) Install the cam sprocket LH. <Ref. to ME(STI)-61, INSTALLATION, Cam Sprocket.>
6) Install the belt idler No. 2 (C).

Tightening torque:
39 N·m (4.0 kgf-m, 28.8 ft-lb)
7) Install the belt idler (B).

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
8) Install the automatic belt tension adjuster (A) with the tension rod held by a pin. <Ref. to ME(STI)-54, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

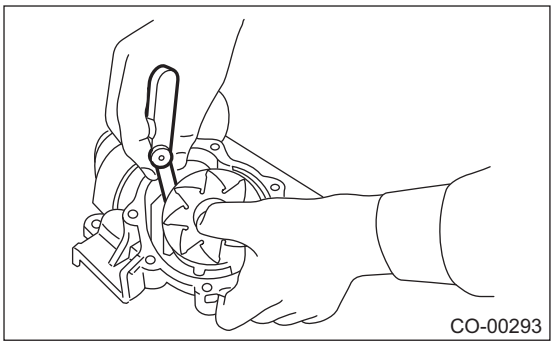


9) Install the timing belt. <Ref. to ME(STI)-55, TIMING BELT, INSTALLATION, Timing Belt.>
10) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
11) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>
12) Install the V-belts. <Ref. to ME(STI)-42, INSTALLATION, V-belt.>
13) Install the radiator. <Ref. to CO(STI)-21, INSTALLATION, Radiator.>

C: INSPECTION

1) Check the water pump bearing for smooth rotation.
2) Check the water pump pulley for abnormalities.
3) Make sure the impeller is not abnormally deformed or damaged.
4) Inspect the clearance between impeller and pump case.

Clearance between impeller and pump case:
Standard
0.5 — 1.5 mm (0.020 — 0.059 in)

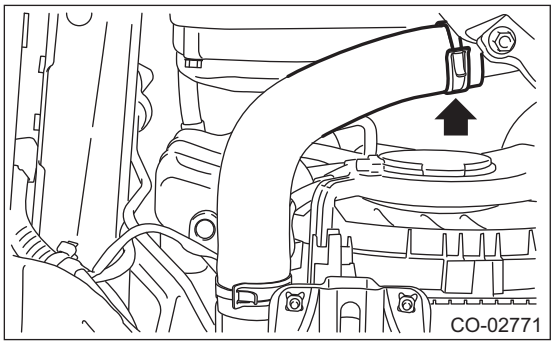


5) After water pump installation, check pulley shaft for engine coolant leaks or noise. If leaks or noise are noted, replace the water pump assembly.

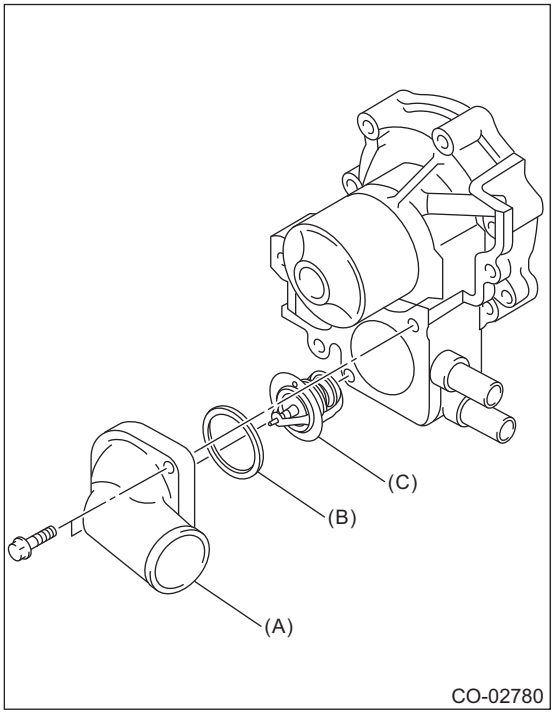
5. Thermostat

A: REMOVAL

1) Drain engine coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
2) Disconnect the radiator outlet hose from thermostat cover.



3) Remove the thermostat cover, and then remove the gasket and thermostat.



(A) Thermostat cover
(B) Gasket
(C) Thermostat

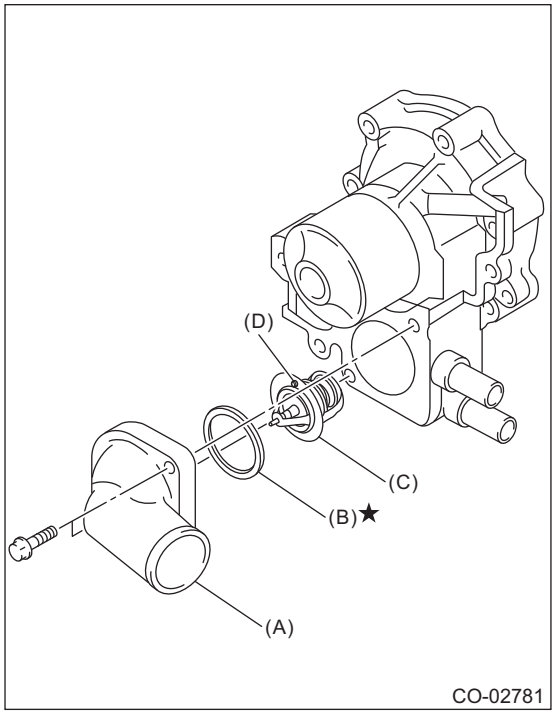
B: INSTALLATION

1) Install a gasket to thermostat.

NOTE:
Use a new gasket.
2) Install the thermostat and thermostat cover.

NOTE:
Install the parts with the jiggle pin facing upward.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



(A) Thermostat cover
(B) Gasket
(C) Thermostat
(D) Jiggle pin

3) Connect the radiator outlet hose to thermostat cover.
4) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle.
6) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

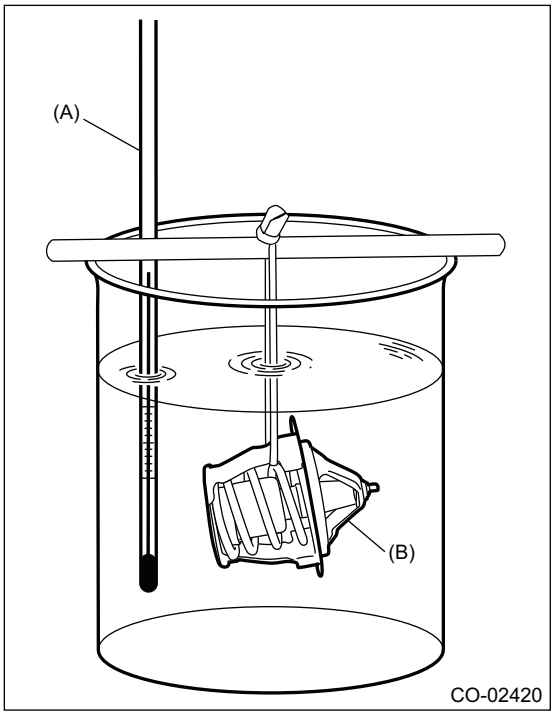
1) Check that the thermostat does not have deformation, cracks or damage.
2) Check that the thermostat valve closes completely at an ambient temperature.
3) Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and check the temperature and valve lift when the valve begins to open and when the valve is fully opened. Replace the thermostat if faulty.

NOTE:
• During the test, agitate the water for even temperature distribution.
• Leave the thermostat in the boiling water for five minutes or more before measuring the valve lift.
• Hold the thermostat with a wire or the like to avoid contacting the container.

Starting temperature to open:
76 — 80°C (169 — 176°F)

Full open temperature:
91°C (196°F)

Total valve lift:
9.0 mm (0.354 in) or more



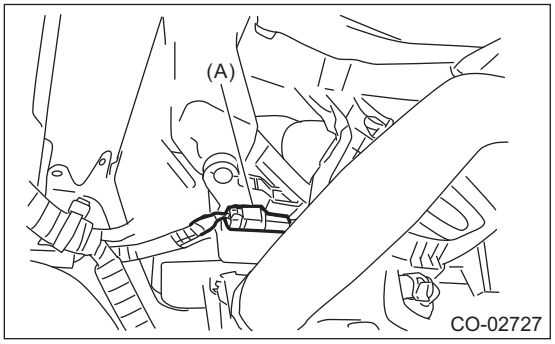
(A) Thermometer
(B) Thermostat

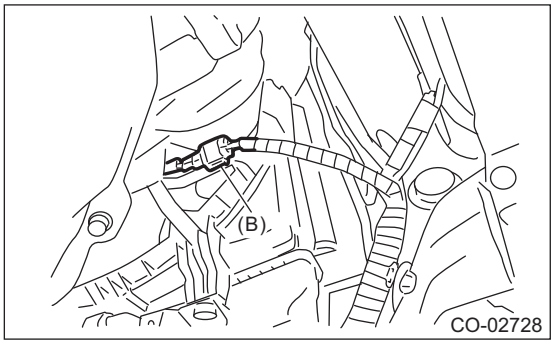
6. Radiator

A: REMOVAL

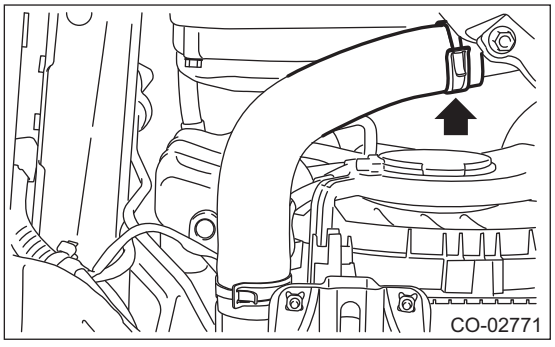
CAUTION:
The radiator is pressurized when the engine and radiator are hot. Wait until engine and radiator cool down before working on the radiator.

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
3) Remove the reservoir tank. <Ref. to CO(STI)-28, REMOVAL, Reservoir Tank.>
4) Drain engine coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Disconnect the connector (A) from the main fan motor and the connector (B) from the sub fan motor.

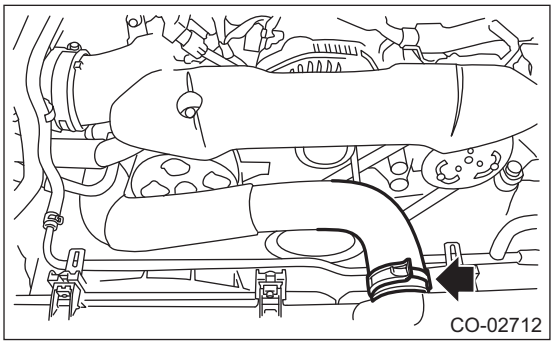




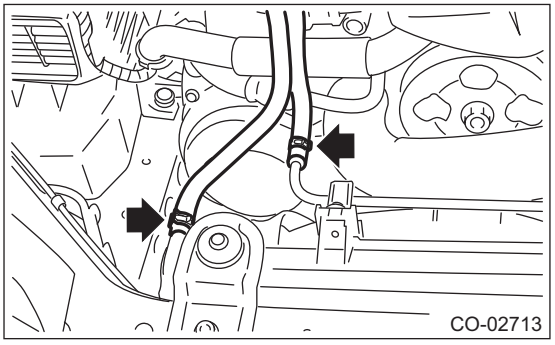
6) Disconnect the radiator outlet hose from thermostat cover.



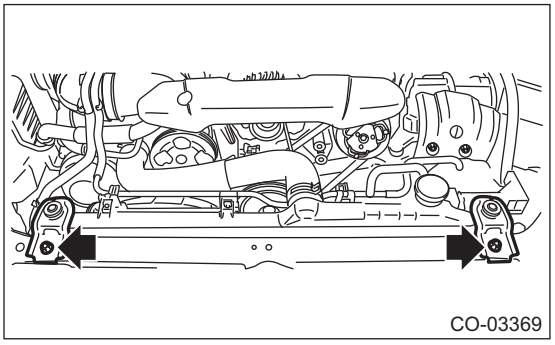
7) Lower the vehicle.
8) Disconnect the radiator inlet hose from the radiator.



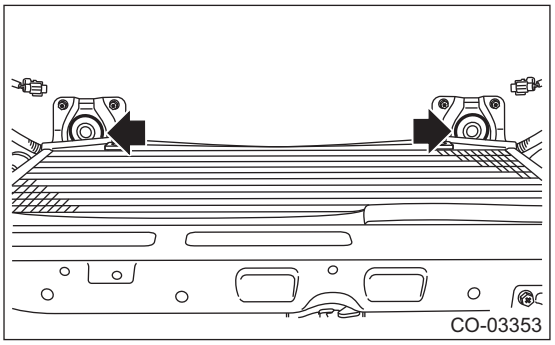
9) Disconnect the two engine coolant hoses from the radiator and over flow pipe.



10) Remove the radiator upper brackets.

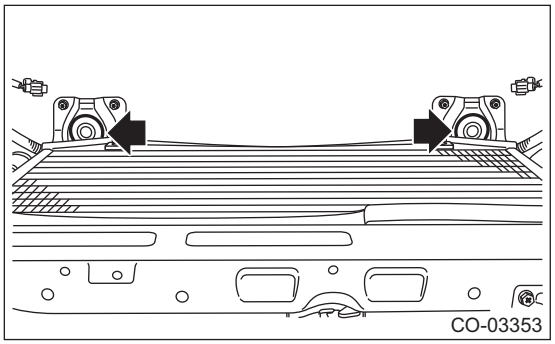


11) Move the radiator to the left while lifting it upward.
12) Lift the radiator up and remove the radiator from vehicle.
13) Remove the radiator lower cushion from the radiator lower bracket.



B: INSTALLATION

1) Attach the radiator lower cushion to the radiator lower bracket.

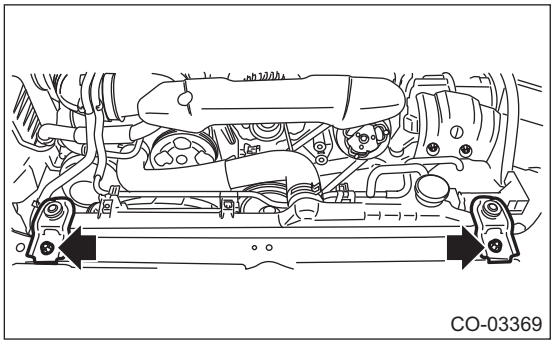


2) Install the radiator to vehicle.

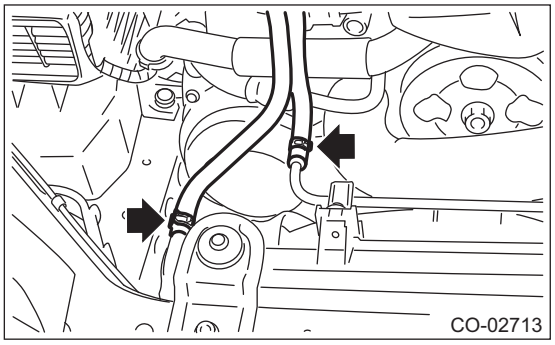
NOTE:
Make pins on the lower side of radiator be fitted into the radiator lower cushions.

3) Install the radiator upper brackets.

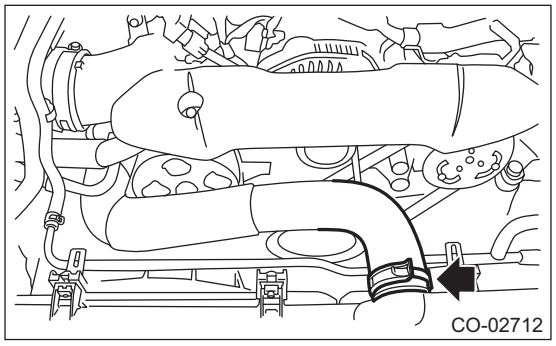
Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



4) Connect the two engine coolant hoses to the radiator and over flow pipe.

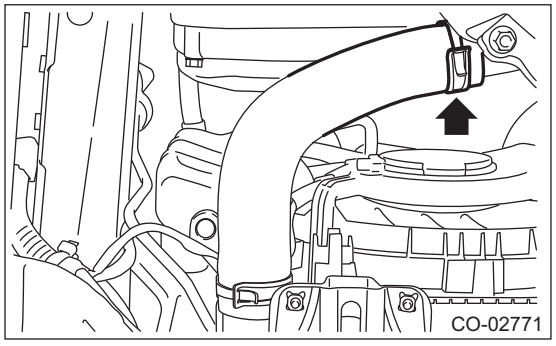


5) Connect the radiator inlet hose.

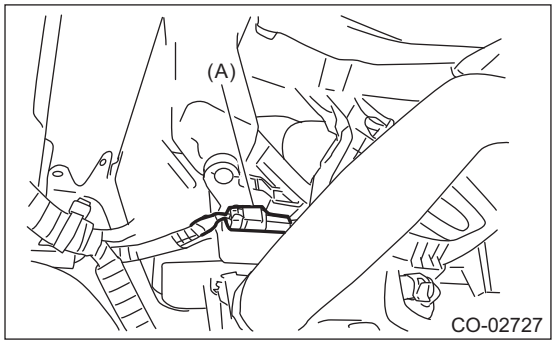


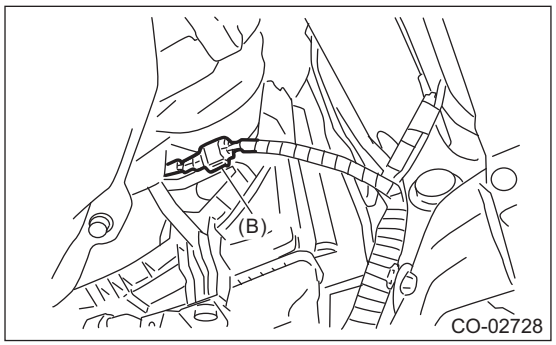
6) Lift up the vehicle.

7) Connect the radiator outlet hose.



8) Connect the connector (A) to the main fan motor and the connector (B) to the sub fan motor.





9) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>

10) Lower the vehicle.

11) Install the reservoir tank. <Ref. to CO(STI)-28, INSTALLATION, Reservoir Tank.>

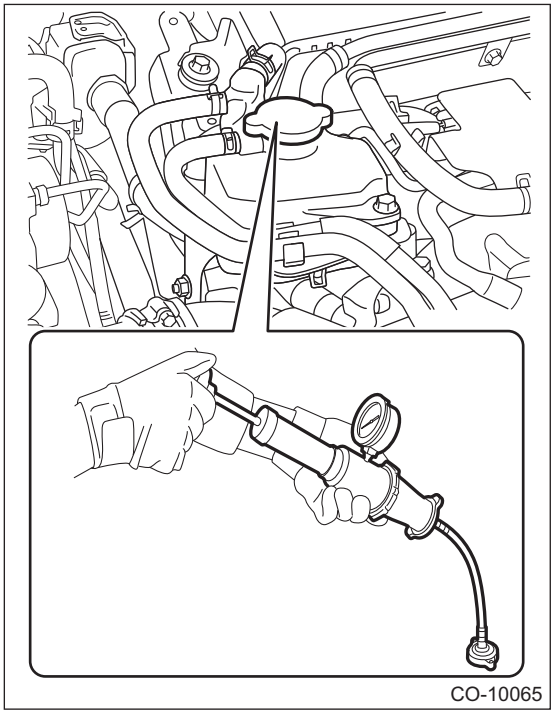
12) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>

13) Connect the battery ground terminal.

14) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

1) Check that the radiator does not have deformation, cracks or damage.
2) Check that the hose has no cracks, damage or loose part.
3) Remove the coolant filler tank cap, fill the coolant filler tank with engine coolant, then install the radiator cap tester to the filler neck of coolant filler tank.



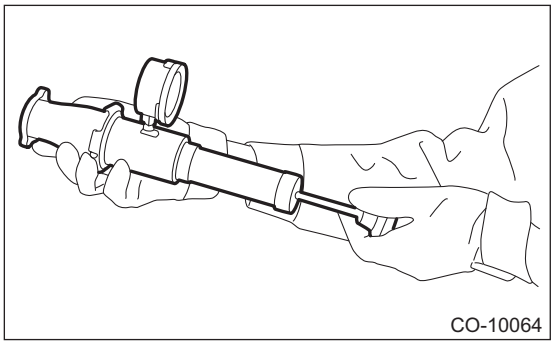
4) Apply a pressure of 122 kPa (1.2 kg/cm^2, 18 psi) to the radiator and check the following points:
- Leakage from the radiator or its vicinity
- Leakage from the hose or its connections

CAUTION:
• Inspection must be carried out at the side of coolant filler tank, not at the side of radiator.
• Engine should be turned off.
• Wipe engine coolant from check points in advance.
• Be careful not to deform the filler neck of the coolant filler tank when installing and removing the radiator cap tester.
• Be careful of engine coolant from spurting out when removing the radiator cap tester.

7. Radiator Cap

A: INSPECTION

1) Check that the radiator cap does not have deformation, cracks or damage.
2) Attach the radiator cap tester to radiator cap.



3) Increase pressure until the radiator cap tester gauge needle stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 — 6 seconds. Replace the radiator cap if its valve opens at less than the service limit.

CAUTION:
• Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.
• Do not confuse the cap of coolant filler tank and cap of radiator.

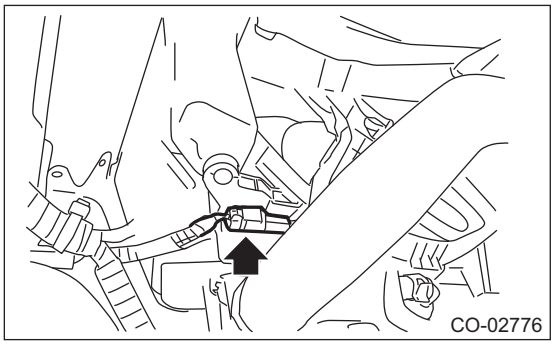
Coolant filler tank side:
Standard
93 — 123 kPa (0.95 — 1.25 kg/cm^2, 14 — 18 psi)
Limit
83 kPa (0.85 kg/cm^2, 12 psi)

Radiator side:
Standard
122 — 152 kPa (1.24 — 1.55 kg/cm^2, 18 — 22 psi)
Limit
112 kPa (1.14 kg/cm^2, 16 psi)

8. Radiator Main Fan and Fan Motor

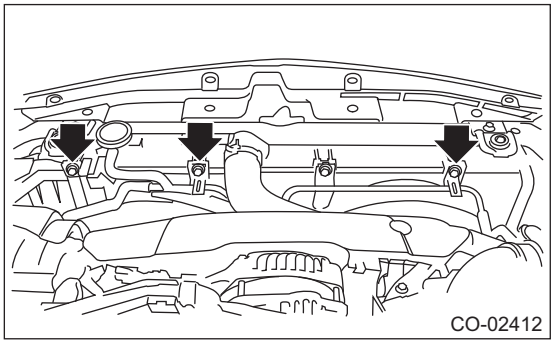
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Disconnect the connector from the main fan motor.



CO-02776

5) Lower the vehicle.
6) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
7) Remove the reservoir tank. <Ref. to CO(STI)-28, REMOVAL, Reservoir Tank.>
8) Remove the bolts which secure the radiator main fan motor assembly and the over flow pipe.



CO-02412

9) Remove the radiator main fan motor assembly from the upper side of the vehicle.

B: INSTALLATION

Install in the reverse order of removal.

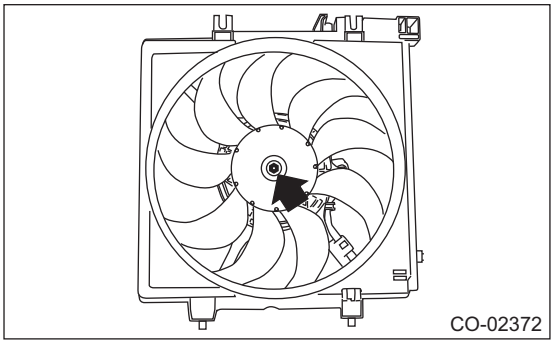
CAUTION:
Check if the radiator hose and the over flow hose are properly connected.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

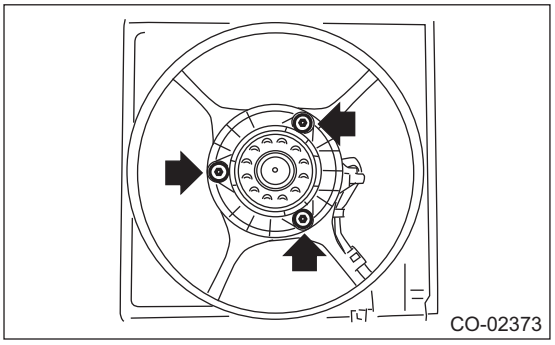
1) Remove the clip which holds the main fan motor connector onto the radiator main fan shroud.
2) Disconnect the radiator main fan from the main fan motor.

NOTE:
Remove the lock agent from the threaded portion of the main fan motor.



CO-02372

3) Disconnect the main fan motor from the radiator main fan shroud.

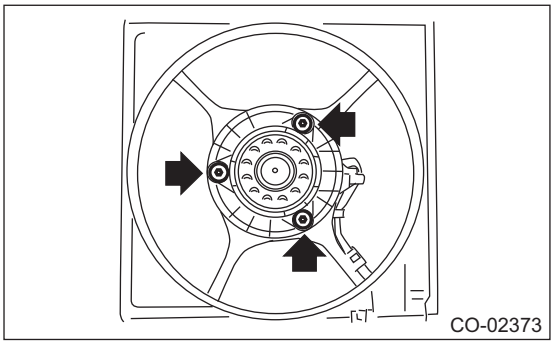


CO-02373

D: ASSEMBLY

Assemble in the reverse order of disassembly.

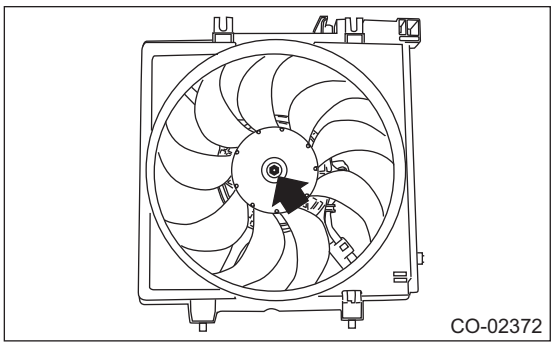
Tightening torque:
4.41 N·m (0.45 kgf-m, 3.25 ft-lb)



CO-02373

CAUTION:
Be sure to use a new nut (with lock agent).

Tightening torque:
3.4 N·m (0.3 kgf-m, 2.5 ft-lb)



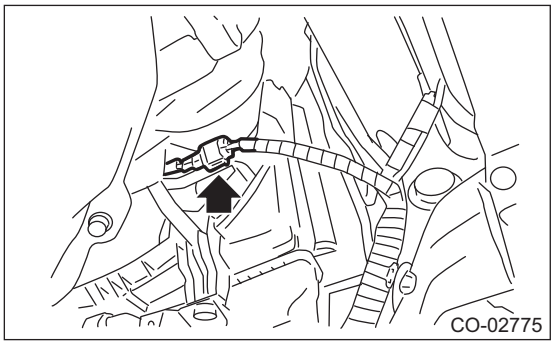
E: INSPECTION

Check that the radiator main fan, radiator main fan shroud and main fan motor do not have deformation, cracks or damage.

9. Radiator Sub Fan and Fan Motor

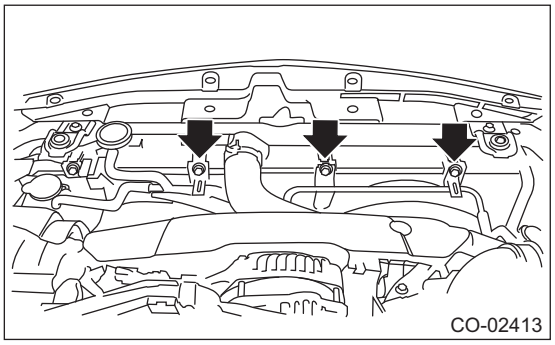
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Disconnect the connector from the sub fan motor.



CO-02775

5) Lower the vehicle.
6) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
7) Remove the bolts which secure the radiator sub fan motor assembly and the over flow pipe.



CO-02413

8) Raise the radiator sub fan motor assembly slightly, remove the pin at the lower part of the radiator sub fan motor assembly from the radiator hole, and remove the radiator sub fan motor assembly from the lower side of the vehicle.

B: INSTALLATION

Install in the reverse order of removal.

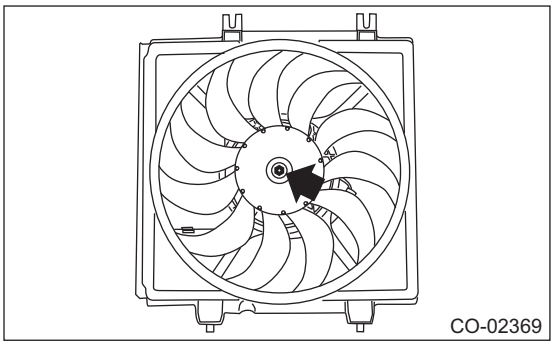
CAUTION:
Check if the radiator hose and the over flow hose are properly connected.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

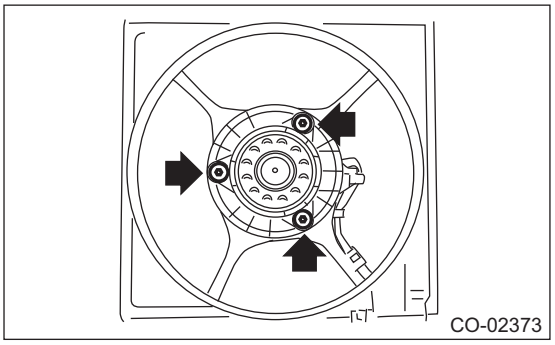
1) Remove the clip which holds the sub fan motor connector onto the radiator sub fan shroud.
2) Disconnect the radiator sub fan from the sub fan motor.

NOTE:
Remove the lock agent from the threaded portion of the sub fan motor.



CO-02369

3) Disconnect the sub fan motor from the radiator sub fan shroud.

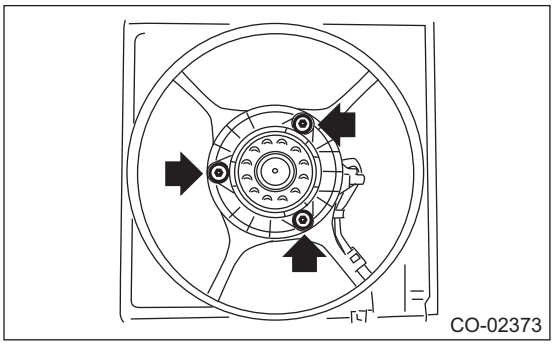


CO-02373

D: ASSEMBLY

Assemble in the reverse order of disassembly.

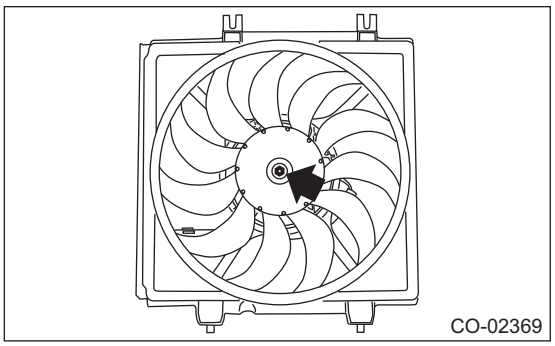
Tightening torque:
4.41 N·m (0.45 kgf-m, 3.25 ft-lb)



CO-02373

CAUTION:
Be sure to use a new nut (with lock agent).

Tightening torque:
3.4 N·m (0.3 kgf-m, 2.5 ft-lb)



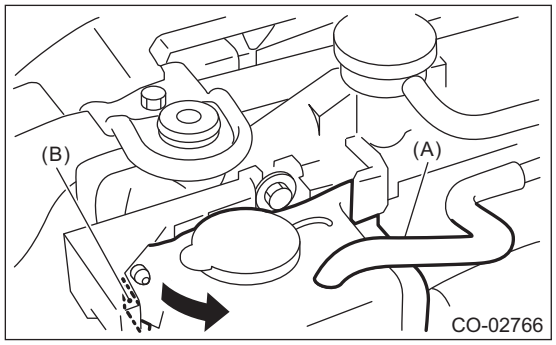
E: INSPECTION

Check that the radiator sub fan, radiator sub fan shroud and sub fan motor do not have deformation, cracks or damage.

10.Reservoir Tank

A: REMOVAL

1) Pull out the over flow hose (A).
2) Pull out the reservoir tank to the arrow direction while pushing the claw (B).



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

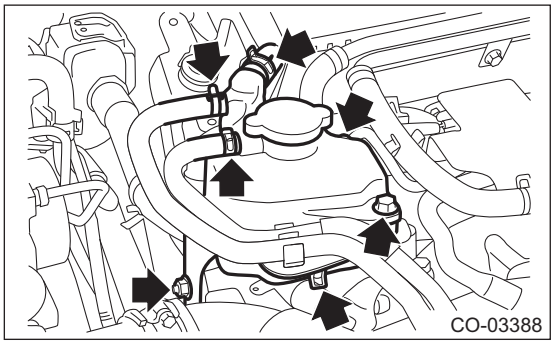
1) Check that the reservoir tank does not have deformation, cracks or damage.
2) Make sure the over flow hoses are not cracked, damaged or loose.
3) Make sure the engine coolant level is between “FULL” and “LOW”.

11.Coolant Filler Tank

A: REMOVAL

CAUTION:
The coolant filler tank is pressurized when the engine and radiator are hot. Wait until engine and radiator cool down before working on the coolant filler tank.

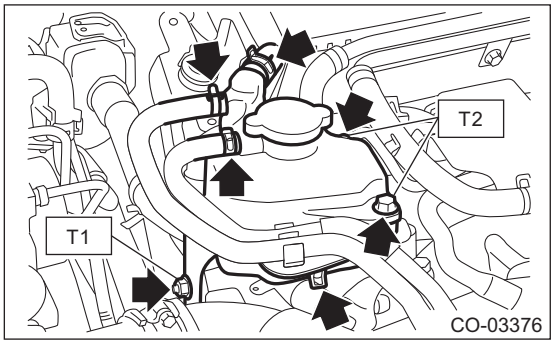
1) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
2) Disconnect the engine coolant hoses from coolant filler tank.
3) Remove the bolt and nut which secure the coolant filler tank.
4) Remove the coolant filler tank.



B: INSTALLATION

1) Install in the reverse order of removal.

Tightening torque:
T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)
T2: 16 N·m (1.6 kgf-m, 11.8 ft-lb)



C: INSPECTION

1) Check that the coolant filler tank does not have deformation, cracks or damage.
2) Check that the engine coolant hose has no cracks, damage or loose part.

12.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair it if necessary.
	b. Loose timing belt	Repair or replace timing belt tensioner.
	c. Oil on timing belt	Replace.
	d. Malfunction of thermostat	Replace.
	e. Malfunction of water pump	Replace.
	f. Clogged engine coolant passage	Clean.
	g. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	h. Clogged or leaking radiator	Clean, repair or replace.
	i. Defective radiator fan	Replace.
	j. Improper engine oil in engine coolant	Replace the engine coolant. If ineffective, check, repair or replace engine components.
	k. Air/fuel mixture ratio too lean	Inspect and repair the fuel injection system. <Ref. to EN(STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
	l. Excessive back pressure in exhaust system	Clean or replace.
	m. Insufficient clearance between piston and cylinder	Adjust or replace.
	n. Slipping clutch	Repair or replace.
	o. Dragging brake	Adjust.
	p. Defective radiator fan	Inspect the radiator fan relay, engine coolant temperature sensor or fan motor and replace them.
Over-cooling	a. Ambient temperature extremely low	Partly cover radiator front area.
	b. Defective thermostat	Replace.
Engine coolant leaks	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace cylinder head gasket.
	e. Damaged or cracked cylinder head and cylinder block	Repair or replace.
	f. Damaged or cracked thermostat cover	Repair or replace.
	g. Leakage from radiator	Repair or replace.
Noise	a. Timing belt problem	Replace.
	b. Defective radiator fan	Replace.
	c. Defective water pump bearing	Replace water pump.
	d. Defective water pump mechanical seal	Replace water pump.

LUBRICATION

LU(STI)

10.	Engine Lubrication System Trouble in General	29

1. General Description

A: SPECIFICATION

Lubrication method					Forced lubrication
Oil pump	Pump type				Trochoid type
	Number of teeth	Inner rotor			9
		Outer rotor			10
	Outer rotor diameter × Thickness			mm (in)	78 × 11 (3.07 × 0.43)
	Tip clearance between inner and outer rotors			mm (in)	Standard: 0.04 — 0.14 (0.0016 — 0.0055)
	Case clearance between outer rotor and pump case			mm (in)	Standard: 0.10 — 0.175 (0.0039 — 0.0069)
	Side clearance between inner rotor and pump case			mm (in)	Standard: 0.02 — 0.07 (0.0008 — 0.0028)
	Relief valve spring	Free length		mm (in)	73.7 (2.902)
		Installed length		mm (in)	54.7 (2.154)
		Load when installed		N (kgf, lbf)	93.1 (9.49, 20.93)
	Performance (Oil temperature 80°C (176°F))	600 r/min	Discharge pressure	kPa (kg/cm^2, psi)	98 (1.0, 14)
			Discharge rate	L (US qt, Imp qt)/min	6.4 (6.8, 5.6) or more
		6,000 r/min	Discharge pressure	kPa (kg/cm^2, psi)	392 (4.0, 56.8)
			Discharge rate	L (US qt, Imp qt)/min	63.0 (66.6, 55.4) or more
	Relief valve working pressure			kPa (kg/cm^2, psi)	538 (5.5, 78)
Oil filter	Filter type				Full-flow filter type
	Filtration area	cm^2 (sq in)	Outer diameter: 68 mm (2.68 in) (black)		800 (124)
			Outer diameter: 67.4 mm (2.65 in) (blue)		555 (86)
	By-pass valve opening pressure			kPa (kg/cm^2, psi)	160 (1.63, 23.2)
	Outer diameter × Width	mm (in)	Outer diameter: 68 mm (2.68 in) (black)		68 × 65 (2.68 × 2.56)
			Outer diameter: 67.4 mm (2.65 in) (blue)		67.4 × 65.3 (2.65 × 2.57)
	Installation screw specifications				M 20 × 1.5
Oil pressure switch	Type				Immersed contact point type
	Operating voltage — power consumption				12 V — 3.4 W or less
	Warning light operating pressure			kPa (kg/cm^2, psi)	14.7 (0.15, 2.1)
	Proof pressure			kPa (kg/cm^2, psi)	981 (10, 142) or more
Engine oil	Total capacity (at overhaul)			L (US qt, Imp qt)	5.0 (5.3, 4.4)
	When replacing engine oil and oil filter			L (US qt, Imp qt)	4.3 (4.5, 3.8)
	When replacing engine oil only			L (US qt, Imp qt)	4.0 (4.2, 3.5)

Specified oil:

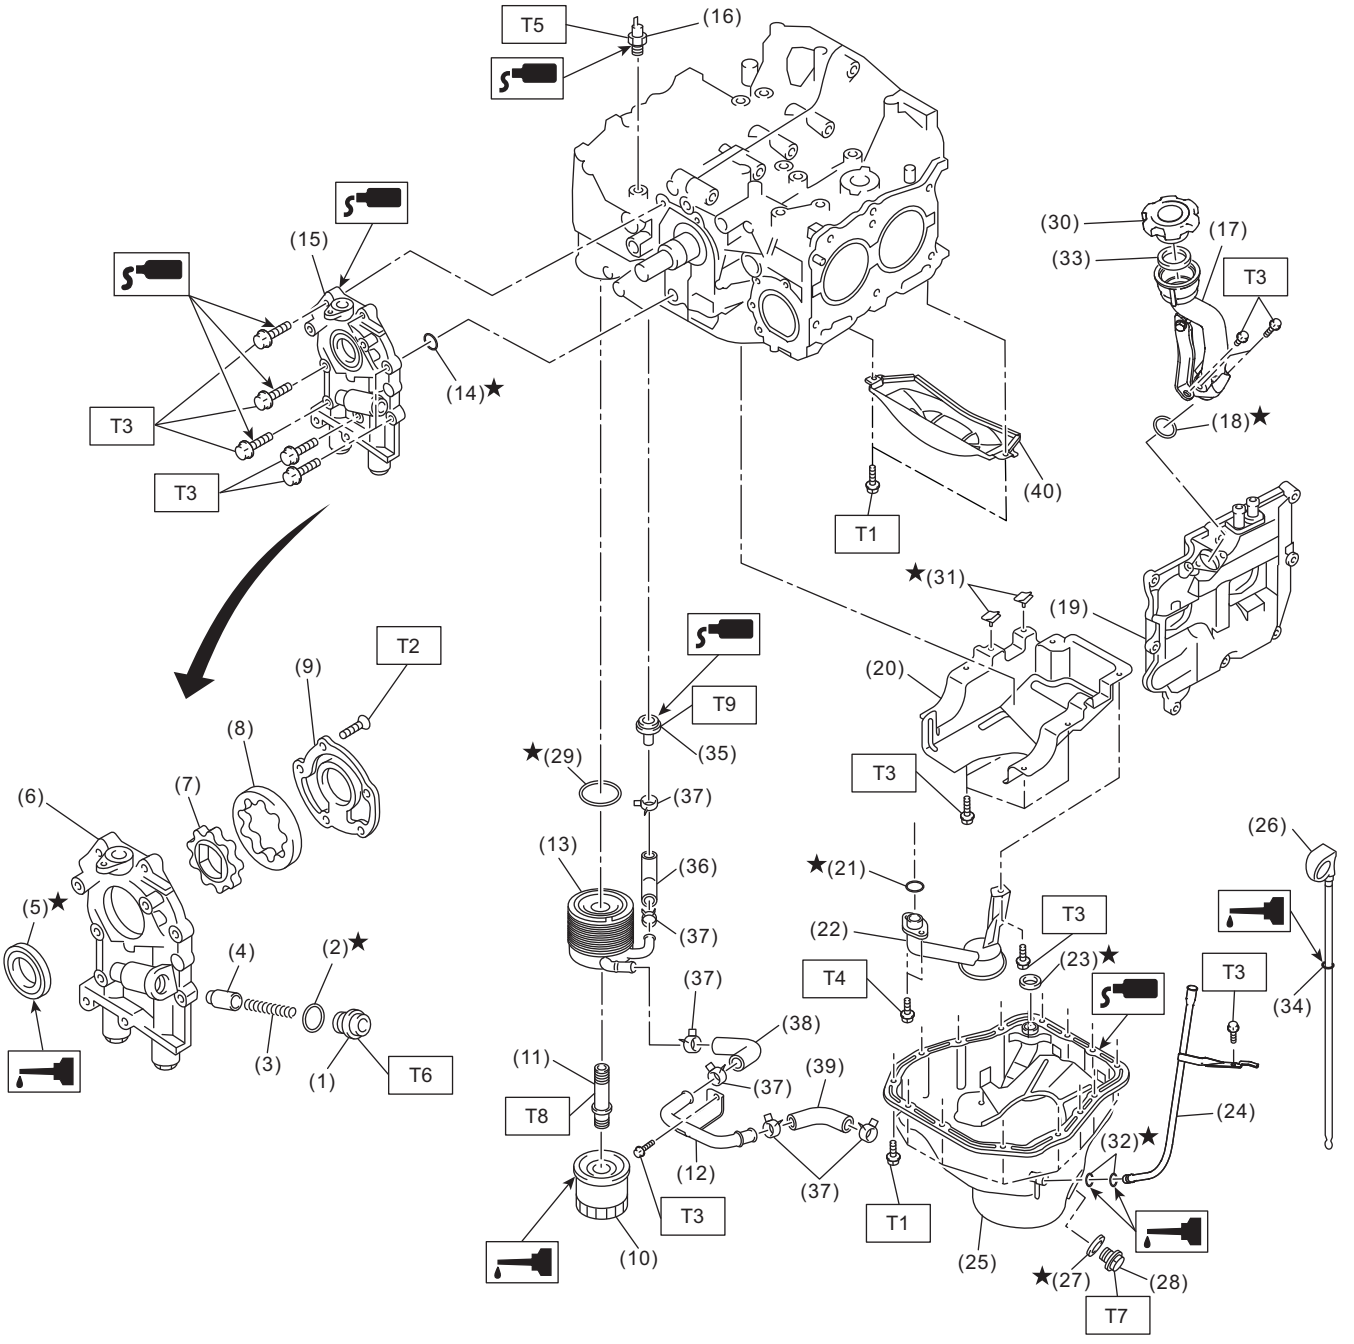
CAUTION:
- **Use 5W-30 (synthetic oil).**
- **It is acceptable to fill an engine with oil of another brand when replacing the oil, but make sure to use the following engine oil specified by Subaru.**

Engine oil standard		SAE viscosity No.
 RM-00081 Those with SN or SN PLUS "Resource Conserving" logo in case of API standard.	or	 RM-00002 Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.	5W-30 (synthetic oil)

NOTE:
The proper viscosity oil helps the engine maintain its ideal temperature, and cranking speed increased by reducing viscosity friction in hot condition.

B: COMPONENT

1. OIL PUMP AND OIL PAN

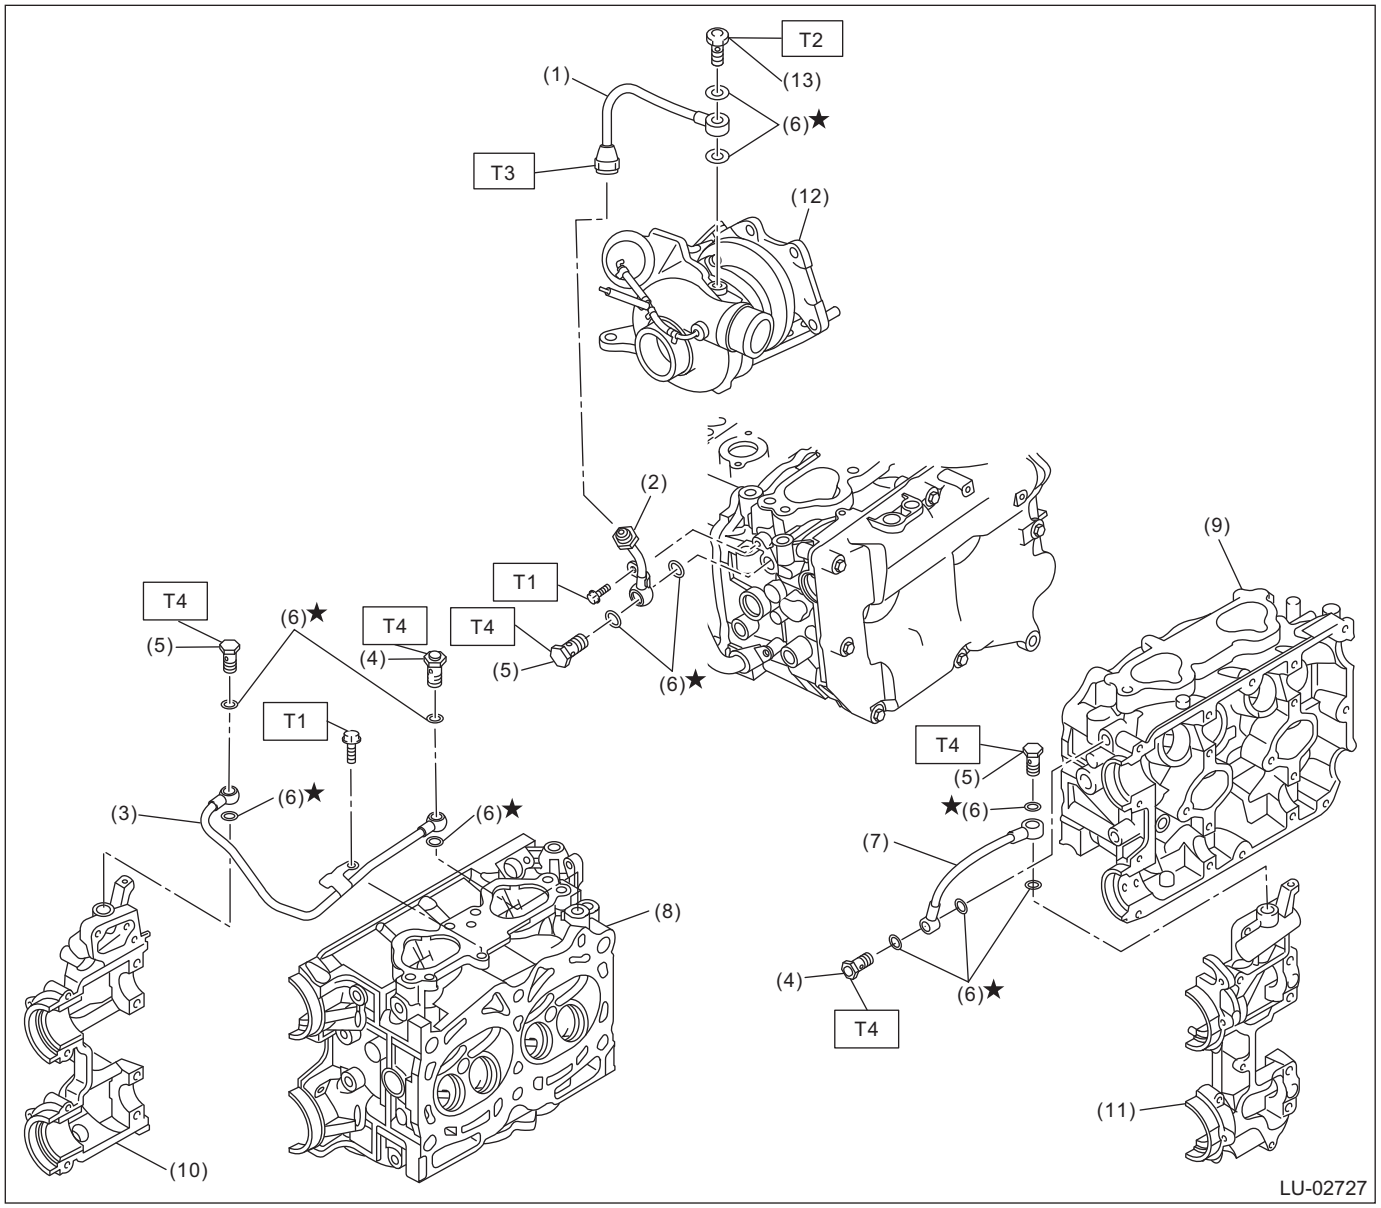


LU-10099

(1) Plug
(2) Gasket
(3) Relief valve spring
(4) Relief valve
(5) Front oil seal
(6) Oil pump case
(7) Inner rotor
(8) Outer rotor
(9) Oil pump cover
(10) Oil filter
(11) Oil cooler connector
(12) Oil cooler pipe
(13) Oil cooler
(14) O-ring
(15) Oil pump ASSY
(16) Oil pressure switch
(17) Oil filler duct
(18) O-ring
(19) Rocker cover
(20) Baffle plate
(21) O-ring
(22) Oil strainer
(23) Gasket
(24) Oil level gauge guide
(25) Oil pan
(26) Oil level gauge
(27) Drain plug gasket
(28) Drain plug
(29) Gasket
(30) Oil filler cap
(31) Seal
(32) O-ring
(33) Gasket
(34) O-ring
(35) Nipple
(36) Oil cooler hose A
(37) Clip
(38) Oil cooler hose B
(39) Oil cooler hose C
(40) Clutch housing cover

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5 (0.5, 3.7)
T2: 5.4 (0.6, 4.0)
T3: 6.4 (0.7, 4.7)
T4: 10 (1.0, 7.0)
T5: 25 (2.5, 18.4)
T6: 44 (4.5, 32.5)
T7: 46.5 (4.7, 34.3)
T8: 54 (5.5, 39.8)
T9: 69 (7.0, 50.9)

2. OIL PIPE



(1)	Oil inlet pipe	(8)	Cylinder head RH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Turbocharger oil pipe	(9)	Cylinder head LH	***T1: 6.4 (0.7, 4.7)***
(3)	Oil pipe RH	(10)	Front camshaft cap RH	***T2: 16 (1.6, 11.8)***
(4)	Union bolt with filter (with protrusion)	(11)	Front camshaft cap LH	***T3: 20 (2.0, 14.8)***
(5)	Union bolt without filter (without protrusion)	(12)	Turbocharger	***T4: 31.5 (3.2, 23.2)***
(6)	Gasket	(13)	Union bolt without filter (with protrusion)	
(7)	Oil pipe LH			

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.

3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.

- Prepare a container and cloth when performing work which oil possibly spills. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.
- Follow all government and local regulations concerning disposal of refuse when disposing of oil.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18332AA000	18332AA000	OIL FILTER WRENCH	Used for removing and installing oil filter (black). (Outer diameter: 68 mm (2.68 in))
 ST-499587100	499587100	OIL SEAL INSTALLER	Used for installing oil seal into oil pump.
SSM 4 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

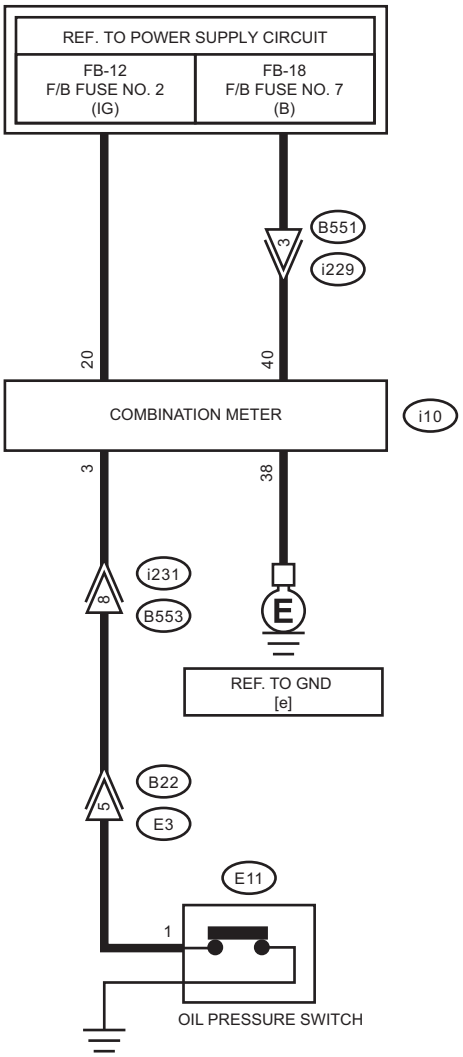
2. GENERAL TOOL

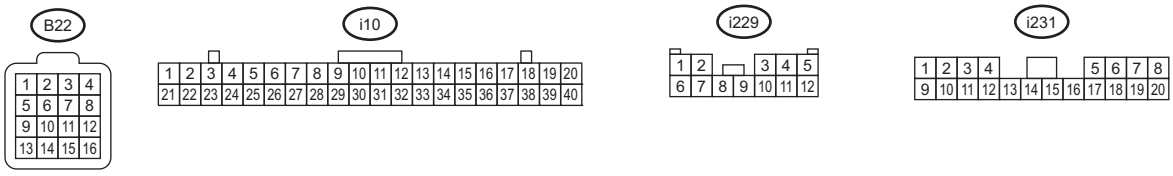
TOOL NAME	REMARKS
Oil filter wrench (65/67 mm 14 Flutes)	Used for removing and installing oil filter (blue). (Outer diameter: 67.4 mm (2.65 in)) **CAUTION:** **When using this oil filter wrench, be careful not to damage the oil filter.**
Circuit tester	Used for measuring resistance, voltage and current.

2. Oil Pressure System

A: WIRING DIAGRAM

Oil pressure warning system <Ref. to WI-292, WIRING DIAGRAM, Oil Pressure Warning Light System.>





LU-10085

B: INSPECTION

Step		Check	Yes	No
1	**CHECK ENGINE OIL AMOUNT.**	Is the engine oil amount normal? <Ref. to LU(STI)-11, INSPECTION, Engine Oil.>	Go to step **2**.	Adjust the engine oil amount. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.> After the operation is complete, go to the next step. Go to step **2**.
2	**CHECK DTC.**	Is DTC for engine displayed? <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY TO OIL PRESSURE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the terminal from oil pressure switch. 3) Turn the ignition switch to ON (engine OFF). 4) Measure the voltage of harness between oil pressure switch harness terminal and chassis ground. ***Terminals*** ***(E11) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the oil pressure switch. <Ref. to LU(STI)-21, Oil Pressure Switch.>	Go to step **4**.
4	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter to check if there are any faults in the combination meter. <Ref. to IDI-6, OPERATION, Combination Meter System.>	Is combination meter OK?	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit of harness between combination meter and oil pressure switch • Poor contact of combination meter connector • Poor contact of oil pressure switch terminal • Poor contact of coupling connector	Repair or replace the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>

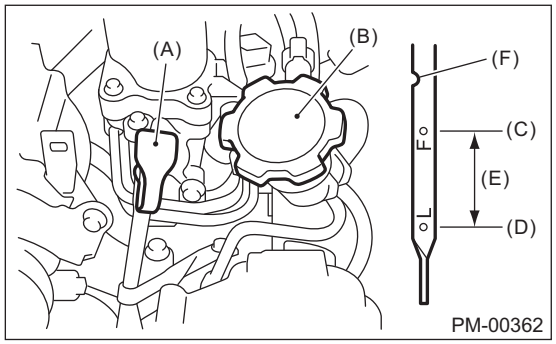
3. Engine Oil

A: INSPECTION

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe away the oil.
3) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
4) Pull out the oil level gauge again, and check the oil level. If the engine oil level is below "L" line, make sure that there is no oil leakage from the engine, then add oil to raise the level up to the "F" line.
5) Start the engine, and spread the oil in engine room.
6) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the level.

NOTE:
• Just after driving or while the engine is warm, engine oil level shows in the range between the "F" line and the notch mark. This is caused by thermal expansion of engine oil.
• To prevent overfilling of engine oil, do not add oil above "F" line when the engine is cold.
• As the oil level gauge is used for daily maintenance, "F" line and "L" line is set assuming that the engine is cold.



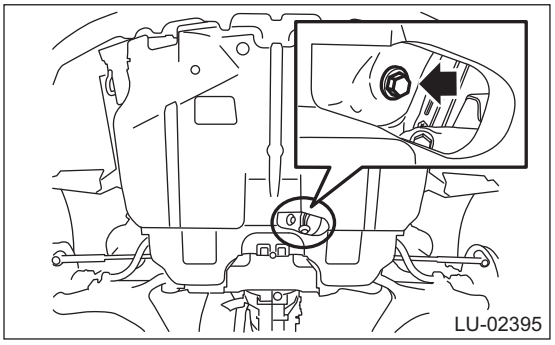
(A) Oil level gauge
(B) Engine oil filler cap
(C) "F" line
(D) "L" line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)
(F) Notch mark

B: REPLACEMENT

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Open the engine oil filler cap for quick draining of engine oil.
2) Lift up the vehicle.
3) Drain engine oil by loosening the engine oil drain plug.

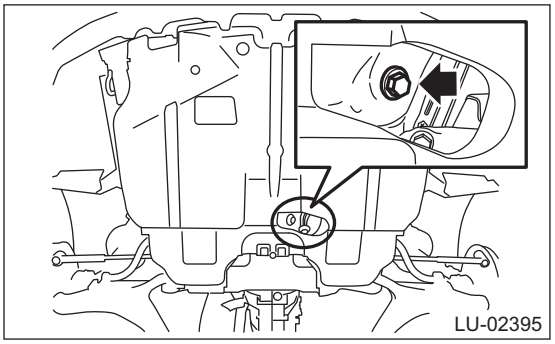
NOTE:
Prepare the container for draining of engine oil.



4) Tighten the engine oil drain plug after draining engine oil.

NOTE:
Use a new drain plug gasket.

Tightening torque:
46.5 N·m (4.7 kgf-m, 34.3 ft-lb)



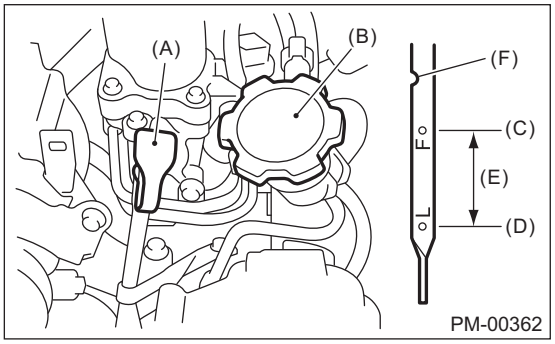
5) Lower the vehicle.
6) Using engine oil of proper quality and viscosity, fill engine oil through the filler duct to the "F" line on the oil level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:
Refer to "SPECIFICATION" for recommended oil. <Ref. to LU(STI)-2, SPECIFICATION, General Description.>

Engine oil capacity:
Refer to "SPECIFICATION" for engine oil capacity. <Ref. to LU(STI)-2, SPECIFICATION, General Description.>

7) Close the engine oil filler cap.

8) Start the engine to circulate the oil in engine.
9) After stopping the engine, recheck the oil level. If necessary, add engine oil up to the “F” line on oil level gauge.

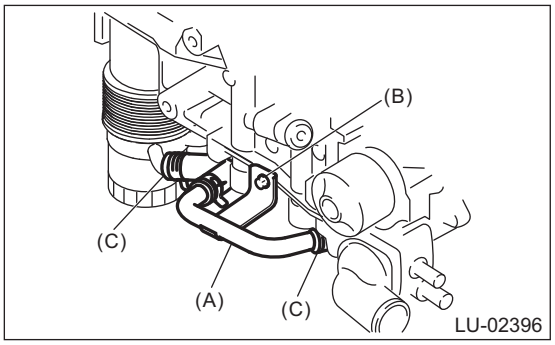


(A) Oil level gauge
(B) Engine oil filler cap
(C) “F” line
(D) “L” line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)
(F) Notch mark

4. Oil Pump

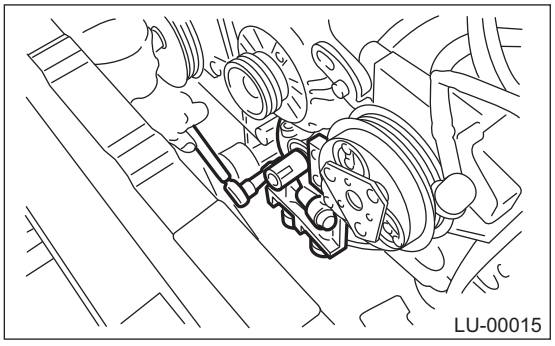
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the radiator. <Ref. to CO(STI)-20, REMOVAL, Radiator.>
3) Lift up the vehicle.
4) Remove the bolt (B) which secures oil cooler pipe (A) to oil pump.
5) Remove the oil cooler pipe (A) and hose (C).



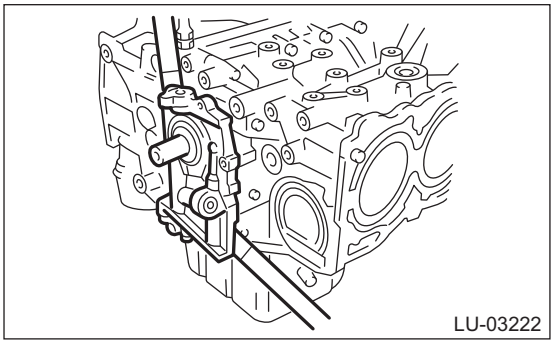
6) Lower the vehicle.
7) Remove the crankshaft position sensor.
<Ref. to FU(STI)-34, REMOVAL, Crankshaft Position Sensor.>
8) Remove the water pump. <Ref. to CO(STI)-16, REMOVAL, Water Pump.>
9) Remove the crank sprocket. <Ref. to ME(STI)-62, REMOVAL, Crank Sprocket.>
10) Remove the bolts which install oil pump onto cylinder block.

NOTE:
When disassembling and checking the oil pump, loosen the relief valve plug before removing the oil pump.



11) Remove the oil pump from cylinder block using a crowbar.

CAUTION:
Be careful not to scratch mating surfaces of cylinder block and oil pump.

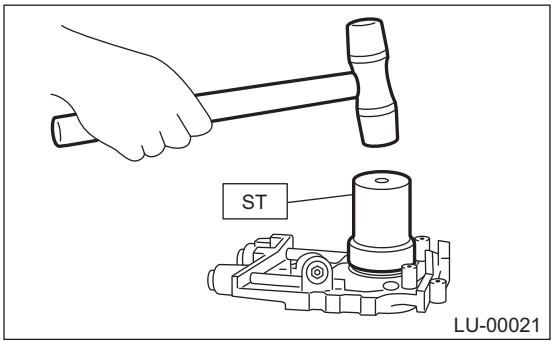


12) Remove the front oil seal from the oil pump.

B: INSTALLATION

1) Using the ST, install the front oil seal.
ST 499587100 OIL SEAL INSTALLER

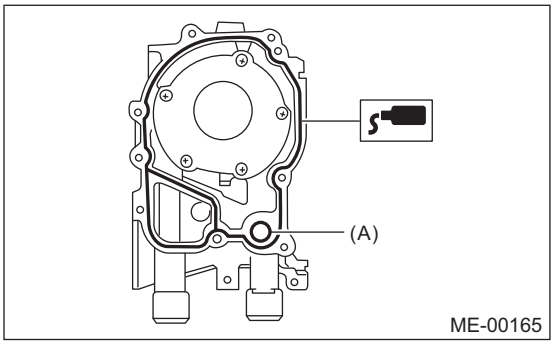
NOTE:
Use a new front oil seal.



2) Apply liquid gasket to the mating surfaces of oil pump.

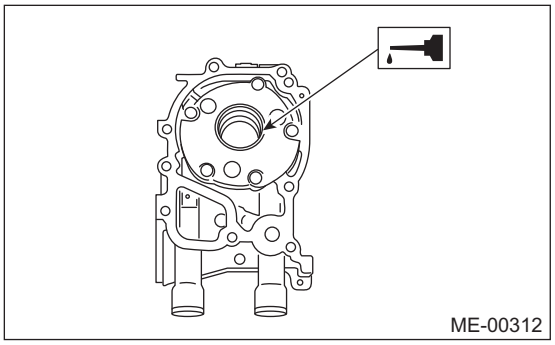
NOTE:
Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



(A) O-ring

3) Apply a coat of engine oil to the inside of front oil seal.



4) Install the oil pump to cylinder block.

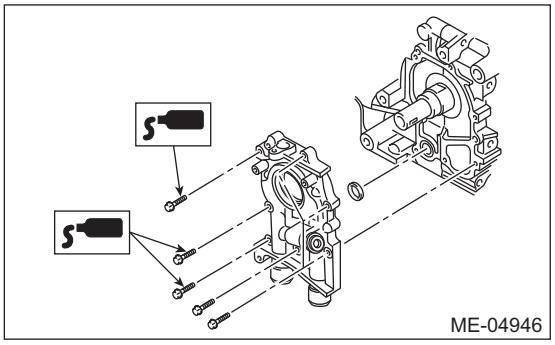
CAUTION:
• Be careful not to damage the front oil seal during installation.
• Make sure the front oil seal lip is not folded.

NOTE:
• Align the flat surface of oil pump's inner rotor with that of crankshaft before installation.
• Use new O-rings.
• Do not forget to install O-rings.

5) Apply liquid gasket to the three bolts thread shown in figure. (When reusing bolts)

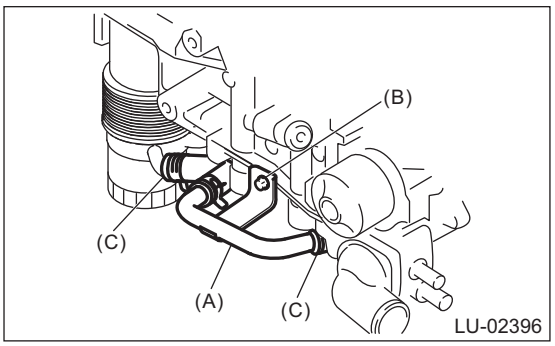
Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



6) Install the crank sprocket. <Ref. to ME(STI)-62, INSTALLATION, Crank Sprocket.>
7) Install the water pump. <Ref. to CO(STI)-16, INSTALLATION, Water Pump.>
8) Install the crankshaft position sensor. <Ref. to FU(STI)-34, INSTALLATION, Crankshaft Position Sensor.>
9) Lift up the vehicle.
10) Install oil cooler pipe (A) and hose (C).
11) Install the oil cooler pipe (A) to oil pump using the bolts (B).

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

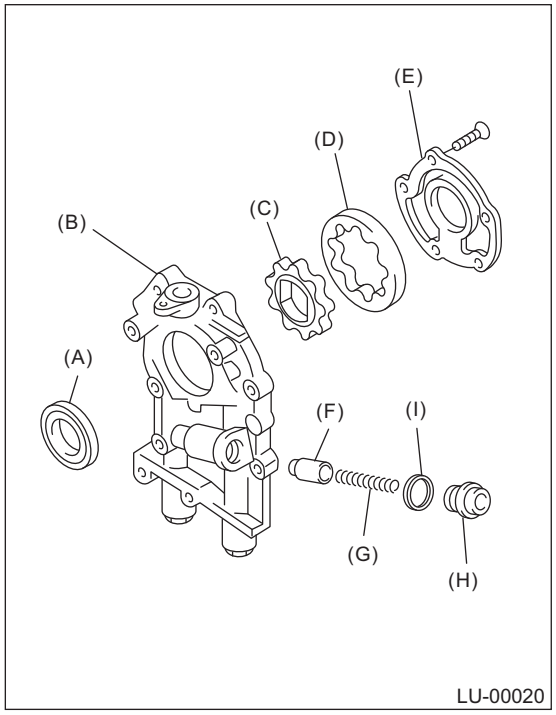


12) Lower the vehicle.
13) Install the radiator. <Ref. to CO(STI)-21, INSTALLATION, Radiator.>
14) Connect the battery ground terminal.

C: DISASSEMBLY

Remove the screw which secures oil pump cover and then disassemble oil pump. Inscribe alignment marks on the inner rotor and outer rotor so that they can be replaced in their original positions during re-assembly.

NOTE:
Before disassembling the oil pump, remove the relief valve.

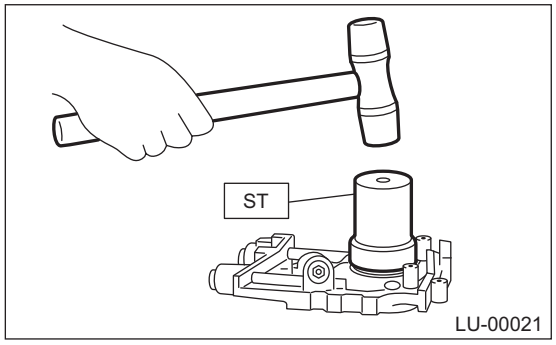


(A) Front oil seal
(B) Oil pump case
(C) Inner rotor
(D) Outer rotor
(E) Oil pump cover
(F) Relief valve
(G) Relief valve spring
(H) Plug
(I) Gasket

D: ASSEMBLY

1) Using the ST, install the front oil seal.
ST 499587100 OIL SEAL INSTALLER

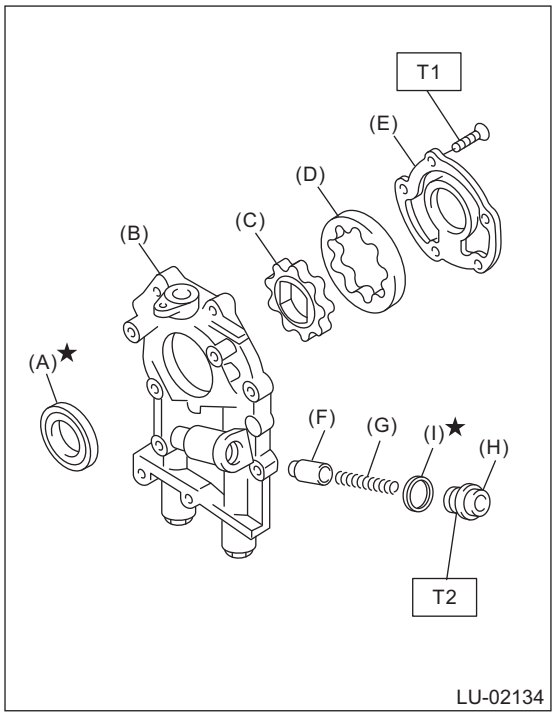
NOTE:
Use a new front oil seal.



2) Apply a coat of engine oil to the inner rotor and outer rotor.
3) Install the inner rotor and outer rotor.
4) Assemble the oil relief valve and install relief valve spring and plug.

NOTE:
Use a new gasket.
5) Install the oil pump cover.

Tightening torque:
T1: 5.4 N·m (0.6 kgf-m, 4.0 ft-lb)
T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)



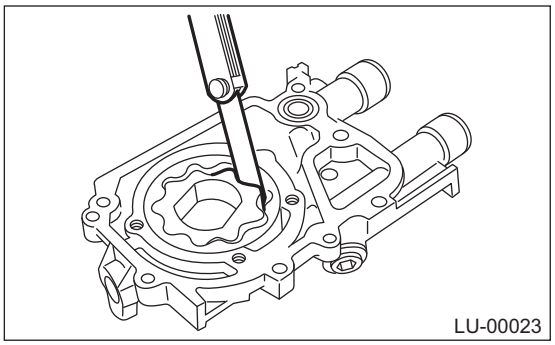
(A) Front oil seal
(B) Oil pump case
(C) Inner rotor
(D) Outer rotor
(E) Oil pump cover
(F) Relief valve
(G) Relief valve spring
(H) Plug
(I) Gasket

E: INSPECTION

1. TIP CLEARANCE

Measure the tip clearance of rotors. If the clearance is out of standard, replace the rotors as a set.

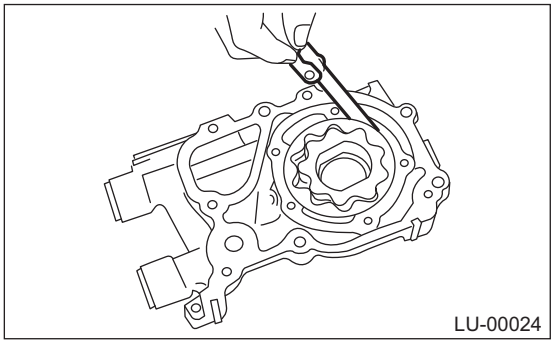
Tip clearance between inner and outer rotors:
Standard
0.04 — 0.14 mm (0.0016 — 0.0055 in)



2. CASE CLEARANCE

Measure the clearance between outer rotor and oil pump case. If clearance exceeds the standard, replace the oil pump case.

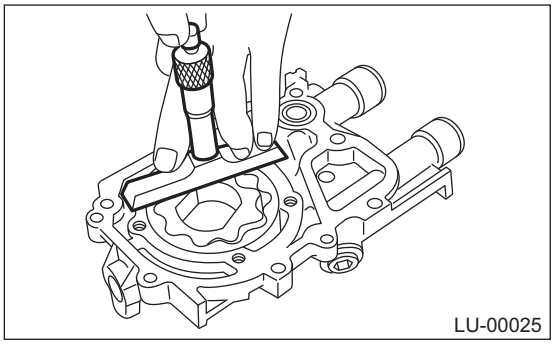
Case clearance between outer rotor and pump case:
Standard
0.10 — 0.175 mm (0.0039 — 0.0069 in)



3. SIDE CLEARANCE

Measure the gap between the inner rotor and the oil pump case to measure the clearance between the inner rotor and the oil pump cover as shown in the figure. If clearance is out of standard, replace the rotor or the oil pump case.

Side clearance between inner rotor and pump case:
Standard
0.02 — 0.07 mm (0.0008 — 0.0028 in)



4. OIL RELIEF VALVE

Check the valve for assembly condition and damage, and the relief valve spring for damage and deterioration.
Replace the parts if defective.

Relief valve spring:
Free length
73.7 mm (2.902 in)
Installed length
54.7 mm (2.154 in)
Load when installed
93.1 N (9.49 kgf, 20.93 lbf)

5. OIL PUMP CASE

Check for worn shaft hole, clogged oil passage, worn rotor chamber, cracks and other faults.

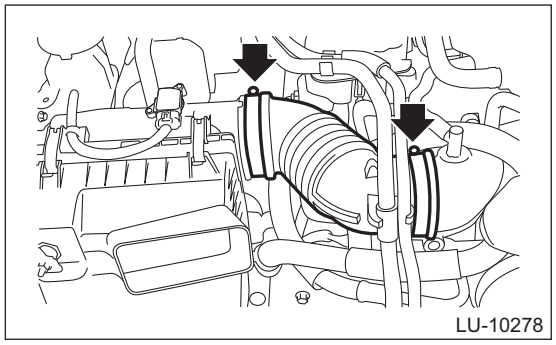
6. FRONT OIL SEAL

Check the front oil seal lips for deformation, hardening, wear, etc. and replace if defective.

5. Oil Pan and Strainer

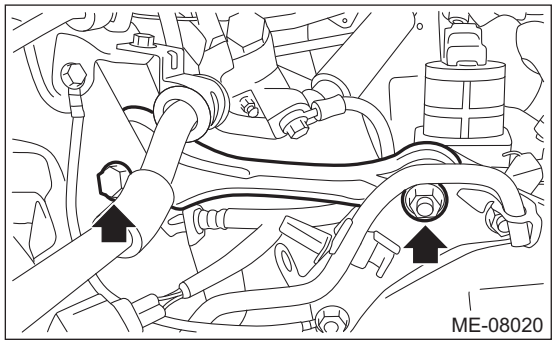
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
3) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
4) Remove the air intake boot.



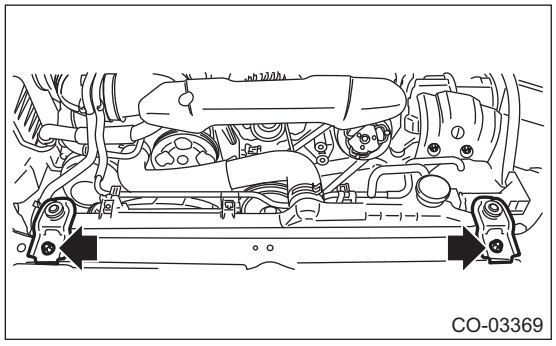
LU-10278

5) Remove the pitching stopper.



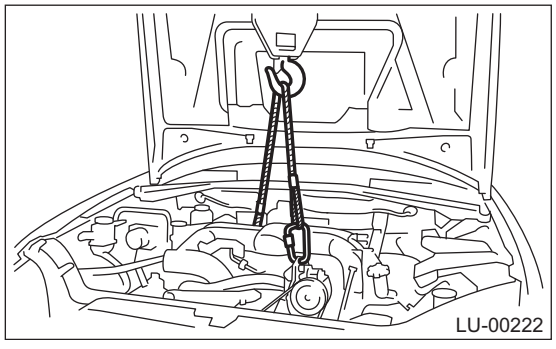
ME-08020

6) Remove the radiator upper brackets.



CO-03369

7) Support the engine with a lifting device and wire ropes.

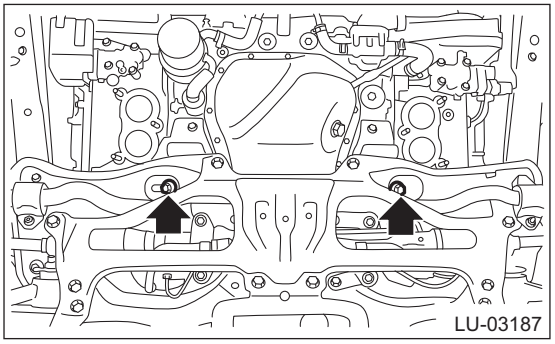


LU-00222

8) Lift up the vehicle.

CAUTION:
When lifting up the vehicle, raise up wire ropes at the same time.

9) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
10) Drain the engine oil. <Ref. to LU(STI)-11, REPLACEMENT, Engine Oil.>
11) Remove the front exhaust pipe. <Ref. to EX(STI)-5, REMOVAL, Front Exhaust Pipe.>
12) Remove the nuts which secure the engine mounting to the front crossmember.



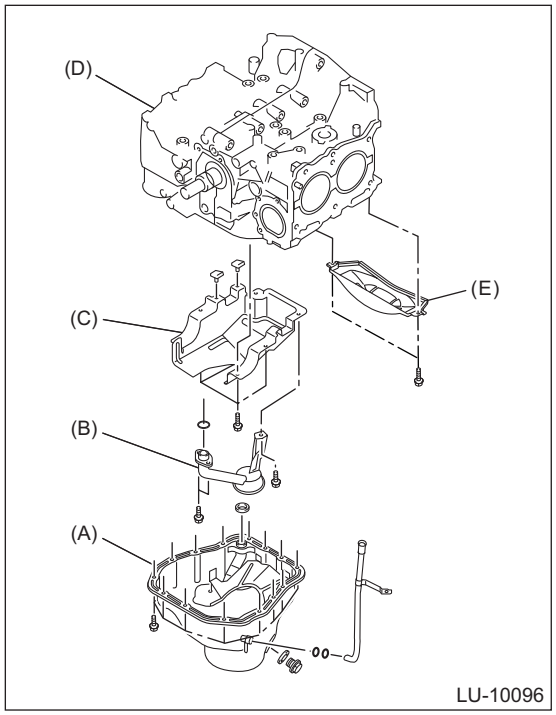
LU-03187

13) Remove the bolts which secure oil pan on cylinder block with the engine raised up.
14) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance and remove the oil pan.

CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.

15) Remove the oil strainer.
16) Remove the baffle plate.

17) Remove the clutch housing cover.



(A) Oil pan
(B) Oil strainer
(C) Baffle plate
(D) Cylinder block
(E) Clutch housing cover

B: INSTALLATION

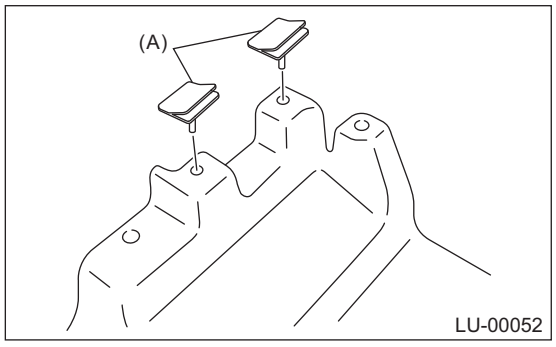
NOTE:
Before installing the oil pan, clean the mating surface of oil pan and engine block.

1) Install the clutch housing cover.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

2) Make sure that the seals (A) are installed securely on the baffle plate in a direction as shown in the figure below.

NOTE:
Use a new seal.



3) Install the baffle plate.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

4) Install the oil strainer to cylinder block.

NOTE:
Use new O-rings.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)

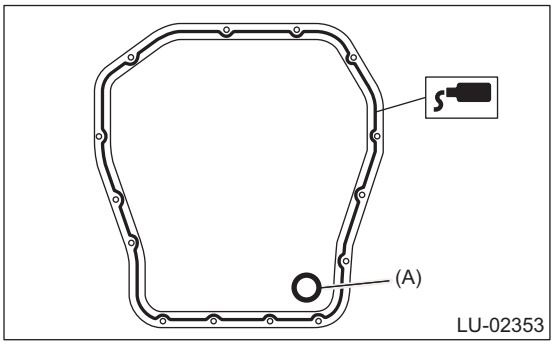
5) Tighten the oil strainer stay together with the baffle plate.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

6) Apply liquid gasket to the mating surfaces of oil pan, and install the oil pan.

NOTE:
- Use a new gasket.
- Install within 5 min. after applying liquid gasket.

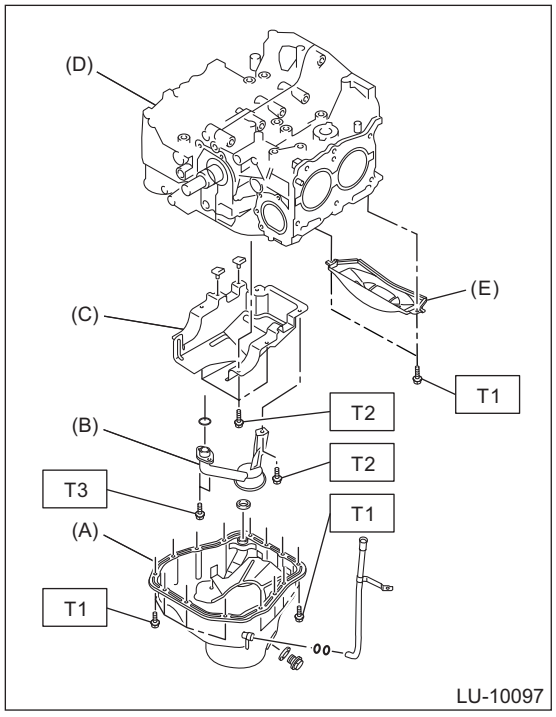
Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent



(A) Gasket

7) Tighten the bolts which install oil pan to cylinder block.

Tightening torque:
T1: 5 N·m (0.5 kgf-m, 3.7 ft-lb)
T2: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T3: 10 N·m (1.0 kgf-m, 7.4 ft-lb)

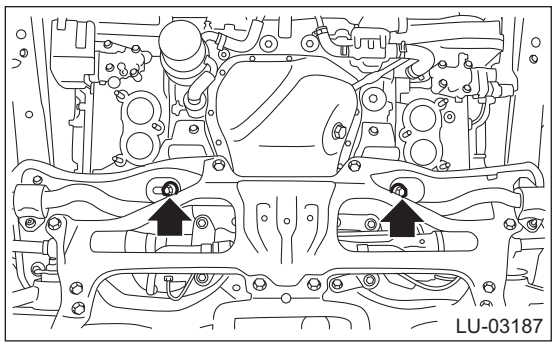


(A) Oil pan
(B) Oil strainer
(C) Baffle plate
(D) Cylinder block
(E) Clutch housing cover

8) Lower the engine onto front crossmember.
9) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
Use a new nut.

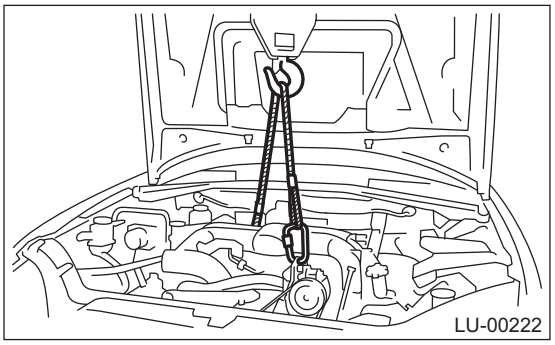
Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



10) Install the front exhaust pipe. <Ref. to EX(STI)-5, INSTALLATION, Front Exhaust Pipe.>
11) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
12) Lower the vehicle.

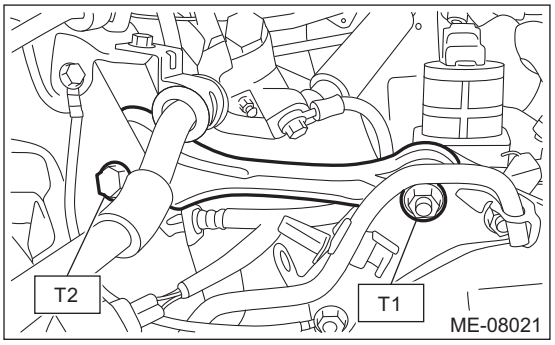
CAUTION:
When lowering the vehicle, lower the lift up device and wire ropes at the same time.

13) Remove the lifting device and wire ropes.



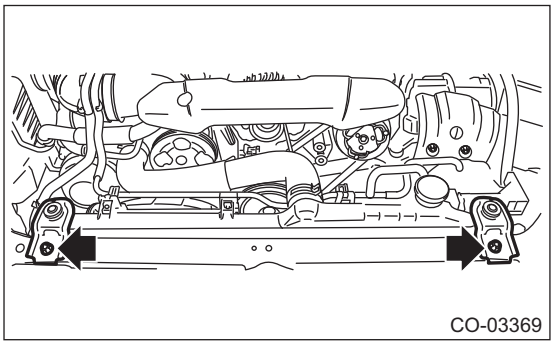
14) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



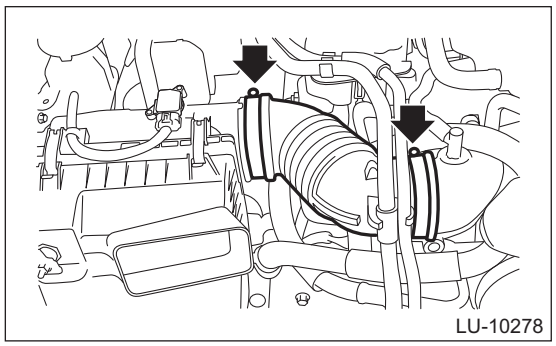
15) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)



16) Install the air intake boot.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)



17) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
18) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
19) Connect the battery ground terminal.
20) Refill the engine oil. <Ref. to LU(STI)-11, REPLACEMENT, Engine Oil.>

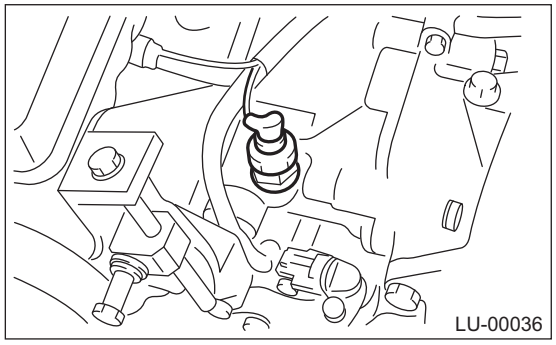
C: INSPECTION

Check that the oil pan, oil strainer and baffle plate do not have deformation, cracks or damage.

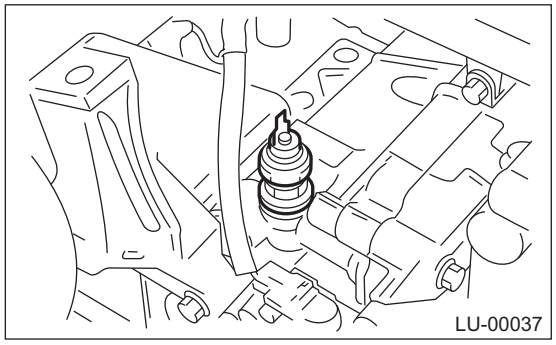
6. Oil Pressure Switch

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the generator from the bracket. <Ref. to SC(STI)-18, REMOVAL, Generator.>
3) Disconnect the terminal from oil pressure switch.



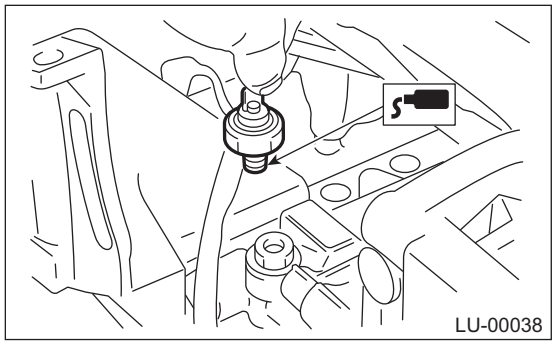
4) Remove the oil pressure switch.



B: INSTALLATION

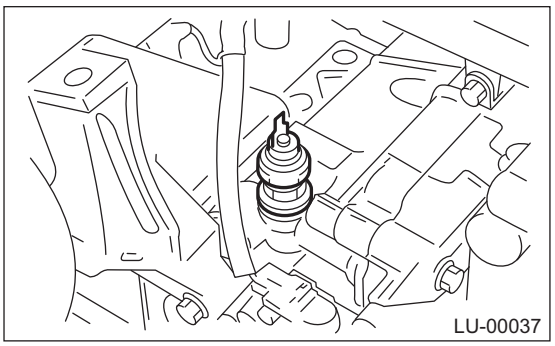
1) Apply liquid gasket to the oil pressure switch threads.

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

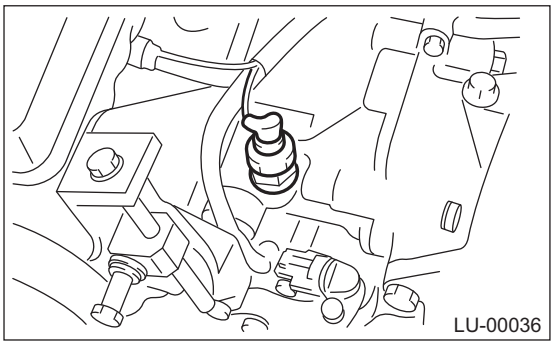


2) Install the oil pressure switch to cylinder block.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



3) Connect the terminal to the oil pressure switch.



4) Install the generator to the bracket. <Ref. to SC(STI)-18, INSTALLATION, Generator.>
5) Connect the battery ground terminal.

C: INSPECTION

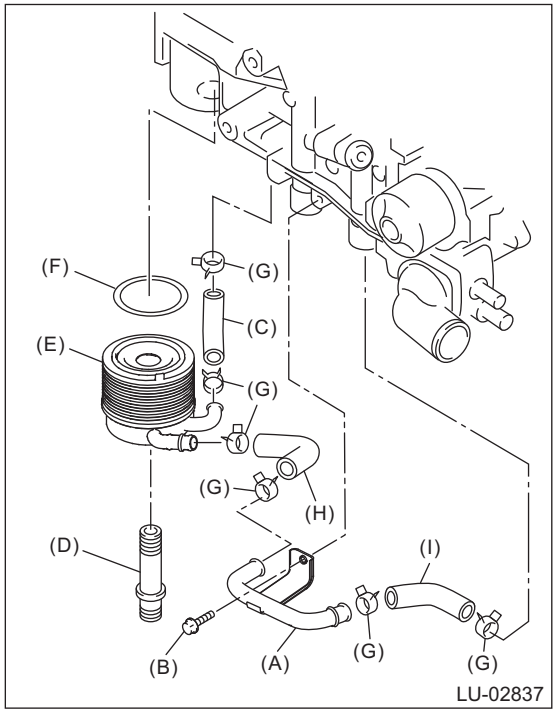
1) Check that the oil pressure switch does not have deformation, cracks or damage.
2) Check that there are no oil leaks or oil oozing from the oil pressure switch installation portion.

7. Engine Oil Cooler

A: REMOVAL

CAUTION:
If engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Drain engine coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
2) Remove the engine oil filter. <Ref. to LU(STI)-28, REMOVAL, Engine Oil Filter.>
3) Remove the bolt (B) holding the oil cooler pipe (A) to the oil pump.
4) Remove the oil cooler pipe (A), oil cooler hose A (C), oil cooler hose B (H), and oil cooler hose C (I).
5) Remove the oil cooler connector (D) and oil cooler (E).



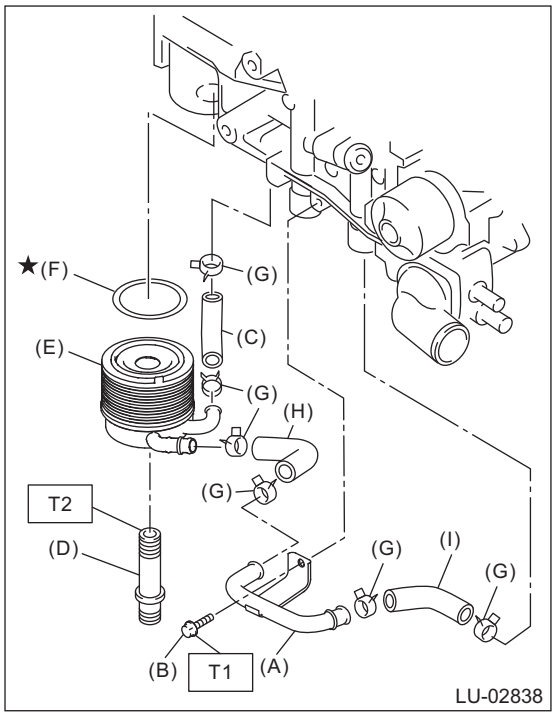
(A) Oil cooler pipe
(B) Bolt
(C) Oil cooler hose A
(D) Oil cooler connector
(E) Oil cooler
(F) Gasket
(G) Clip
(H) Oil cooler hose B
(I) Oil cooler hose C

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• Use a new gasket.
• After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.>

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 54 N·m (5.5 kgf-m, 39.8 ft-lb)



(A) Oil cooler pipe
(B) Bolt
(C) Oil cooler hose A
(D) Oil cooler connector
(E) Oil cooler
(F) Gasket
(G) Clip
(H) Oil cooler hose B
(I) Oil cooler hose C

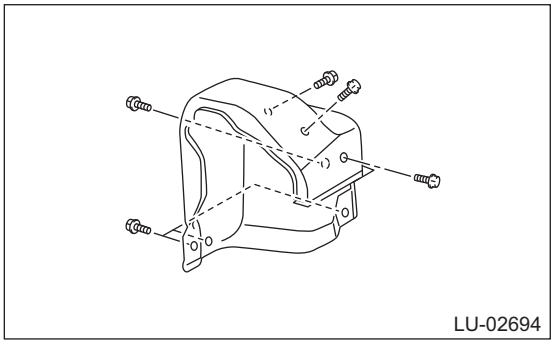
C: INSPECTION

1) Check that the engine oil cooler, oil cooler pipe and oil cooler connector do not have deformation, cracks or damage.
2) Make sure the oil cooler hoses are not cracked, damaged or loose.
3) Blow with compressed air to make sure the coolant passages are not clogged.
4) Make sure the mating surfaces of the cylinder block do not have damage.

8. Oil Pipe

A: REMOVAL

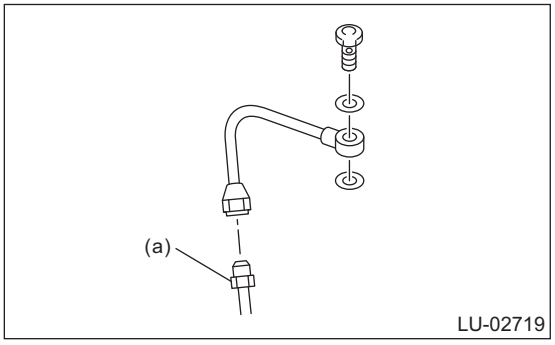
1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Remove the turbocharger upper cover.



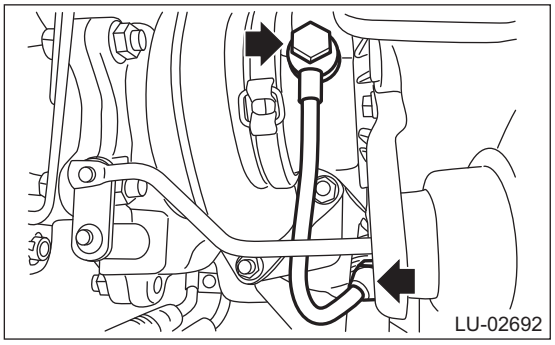
LU-02694

4) Remove the oil inlet pipe from the turbocharger.

CAUTION:
In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when loosing the oil inlet pipe flare nut, and avoid the part from rotating together while loosening the nut.

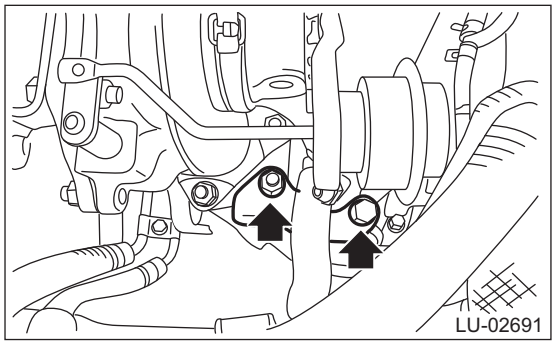


LU-02719



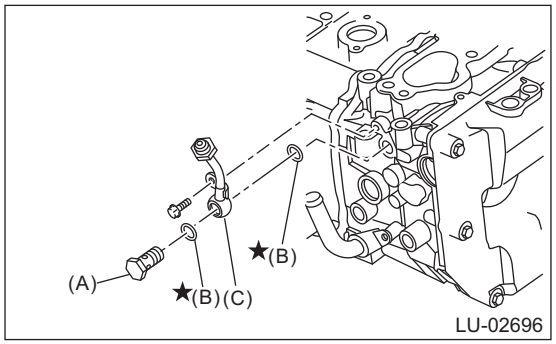
LU-02692

5) Remove the turbocharger stay.



LU-02691

6) Remove the turbocharger oil pipe.

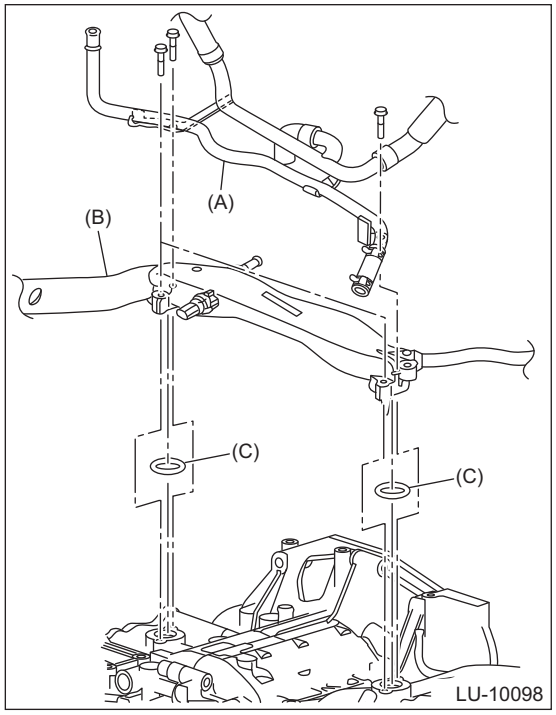


LU-02696

(A) Union bolt without filter (without protrusion)
(B) Gasket
(C) Turbocharger oil pipe

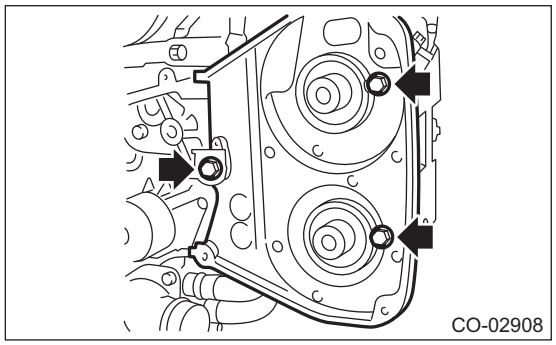
7) Drain engine coolant. <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
8) Remove the intake manifold. <Ref. to FU(STI)-17, REMOVAL, Intake Manifold.>
9) Remove the secondary air pump. (Oil pipe LH only) <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>
10) Remove the bolt securing the water tank pipe assembly, and place the water tank pipe assembly aside so that it does not interfere with the work. (Oil pipe RH only)
11) Remove the water pipe assembly. (Oil pipe RH only)

NOTE:
Do not remove the radiator inlet hose and heater outlet hose.

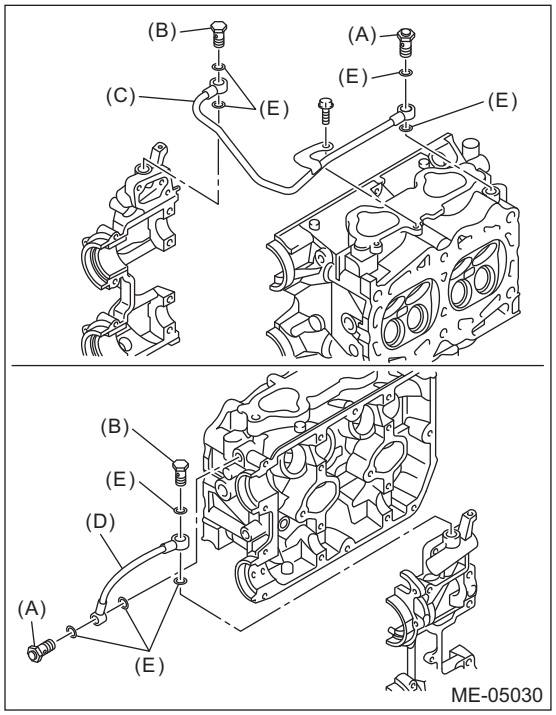


(A) Water tank pipe ASSY
(B) Water pipe ASSY
(C) O-ring

12) Remove the radiator main fan and radiator sub fan. <Ref. to CO(STI)-24, REMOVAL, Radiator Main Fan and Fan Motor.> <Ref. to CO(STI)-26, REMOVAL, Radiator Sub Fan and Fan Motor.>
13) Remove the V-belts. <Ref. to ME(STI)-42, REMOVAL, V-belt.>
14) Remove the crank pulley. <Ref. to ME(STI)-49, REMOVAL, Crank Pulley.>
15) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.>
16) Remove the timing belt. <Ref. to ME(STI)-52, REMOVAL, Timing Belt.>
17) Remove the cam sprocket LH. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.>
18) Remove the timing belt cover No. 2 LH.



19) Remove the oil pipe.



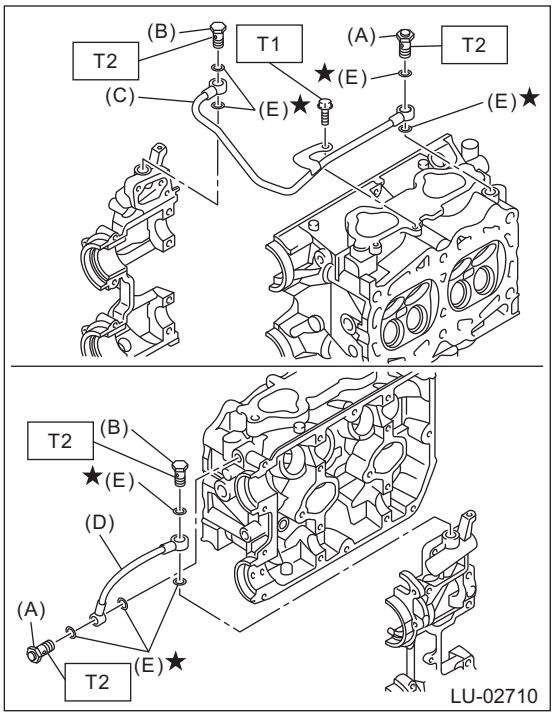
(A) Union bolt with filter (with protrusion)
(B) Union bolt without filter (without protrusion)
(C) Oil pipe RH
(D) Oil pipe LH
(E) Gasket

B: INSTALLATION

1) Inspect the union bolt with filter. <Ref. to LU(STI)-27, INSPECTING UNION BOLT WITH FILTER, INSPECTION, Oil Pipe.>
2) Install the oil pipe.

NOTE:
• Be careful of the install location of the union bolt; the location will differ depending on the presence of filter.
• Use a new gasket.

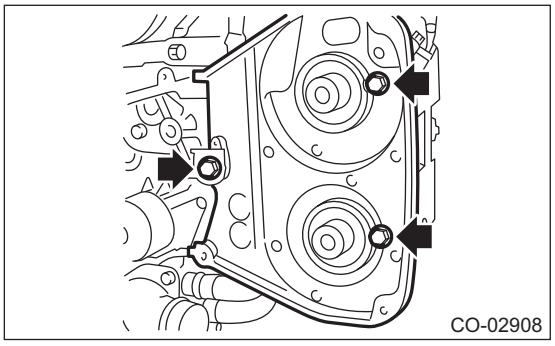
Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 31.5 N·m (3.2 kgf-m, 23.2 ft-lb)



(A) Union bolt with filter (with protrusion)
(B) Union bolt without filter (without protrusion)
(C) Oil pipe RH
(D) Oil pipe LH
(E) Gasket

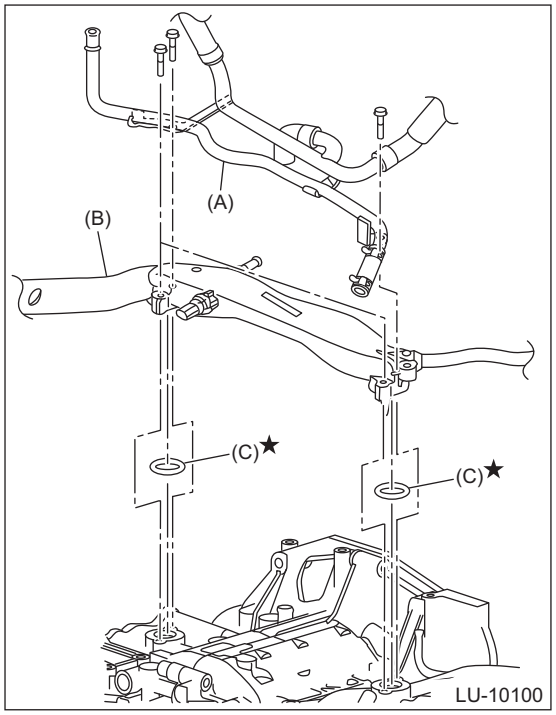
3) Install the timing belt cover No. 2 LH.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)



4) Install the cam sprocket LH. <Ref. to ME(STI)-61, INSTALLATION, Cam Sprocket.>
5) Install the timing belt. <Ref. to ME(STI)-55, TIMING BELT, INSTALLATION, Timing Belt.>
6) Install the timing belt cover. <Ref. to ME(STI)-51, INSTALLATION, Timing Belt Cover.>
7) Install the crank pulley. <Ref. to ME(STI)-49, INSTALLATION, Crank Pulley.>
8) Install the V-belts. <Ref. to ME(STI)-42, INSTALLATION, V-belt.>
9) Install the radiator main fan and the radiator sub fan. <Ref. to CO(STI)-24, INSTALLATION, Radiator Main Fan and Fan Motor.> <Ref. to CO(STI)-26, INSTALLATION, Radiator Sub Fan and Fan Motor.>
10) Install the water tank pipe assembly and water pipe assembly. (Oil pipe RH only)

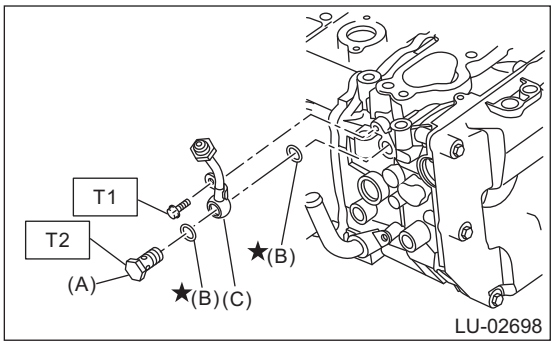
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



(A) Water tank pipe ASSY
(B) Water pipe ASSY
(C) O-ring

11) Install the secondary air pump. (Oil pipe LH only) <Ref. to EC(STI)-54, INSTALLATION, Secondary Air Pump.>
12) Install the intake manifold. <Ref. to FU(STI)-20, INSTALLATION, Intake Manifold.>
13) Install the turbocharger oil pipe.

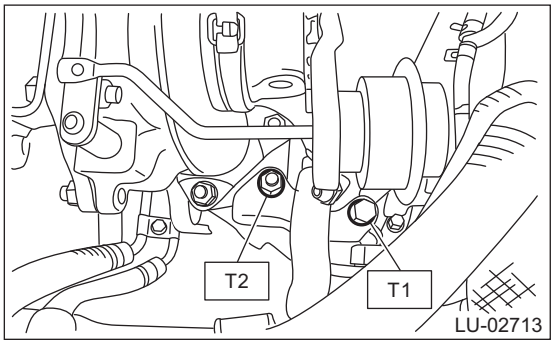
Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 31.5 N·m (3.2 kgf-m, 23.2 ft-lb)



(A) Union bolt without filter (without protrusion)
(B) Gasket
(C) Turbocharger oil pipe

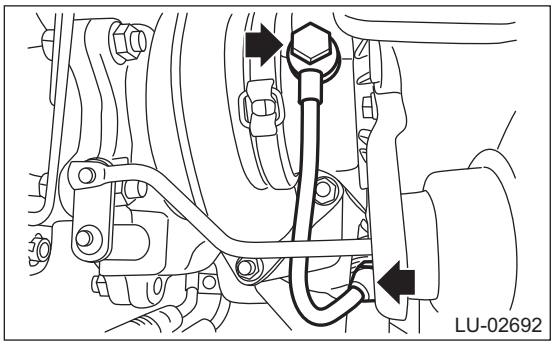
14) Install the turbocharger stay.

Tightening torque:
T1: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
T2: 42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



15) Temporarily tighten the bolts and flare nuts which secure the oil inlet pipe to the turbocharger.

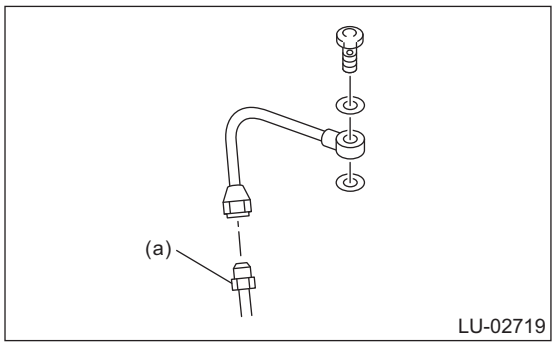
NOTE:
Use a new gasket.

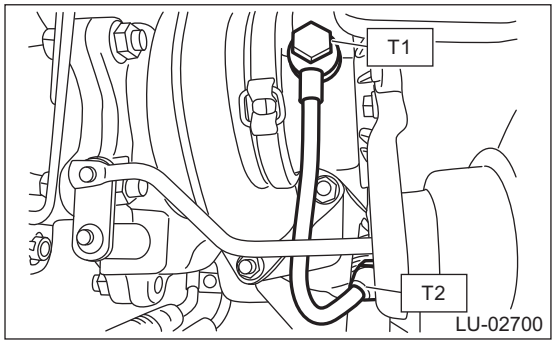


16) Tighten the union bolts and flare nuts which secure the oil inlet pipe to the turbocharger.

CAUTION:
In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when tightening the oil inlet pipe flare nut, and avoid the part from rotating together while tightening the nut.

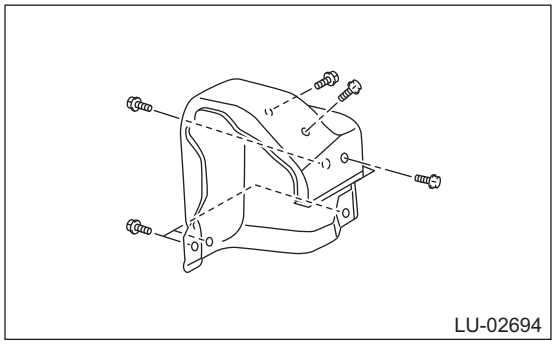
Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)





17) Attach the turbocharger upper cover.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

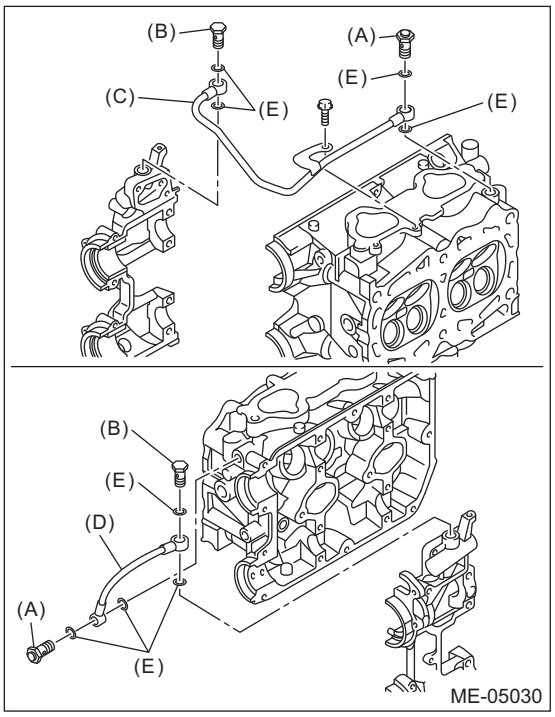


18) Install the intercooler. <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
19) Connect the battery ground terminal.
20) Fill engine coolant. <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

1. INSPECTING UNION BOLT WITH FILTER

Check the filter part of union bolt for clogging or damage, and if defective, replace the union bolt with filter with the new part.



(A) Union bolt with filter (with protrusion)
(B) Union bolt without filter (without protrusion)
(C) Oil pipe RH
(D) Oil pipe LH
(E) Gasket

2. OTHER INSPECTIONS

1) Check that the oil pipe and union bolt have no deformation, cracks and other damages.
2) Check that there are no oil leaks or oil oozing from the oil pipe attachment section.

9. Engine Oil Filter

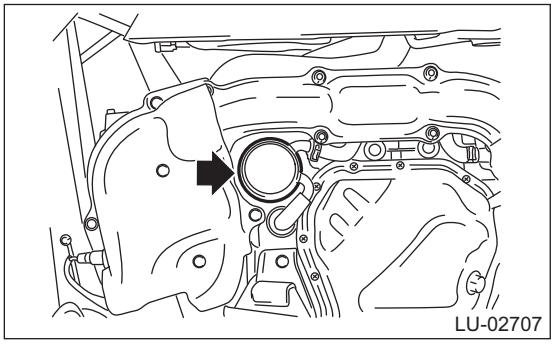
A: REMOVAL

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

1) Lift up the vehicle.
2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the oil filter.
• Oil filter (black)
Remove using the ST.

ST 18332AA000 OIL FILTER WRENCH (OUTER DIAMETER: 68 MM (2.68 IN) FOR OIL FILTER)

• Oil filter (blue)
Remove using a general tool (65/67 mm 14 Flutes).



B: INSTALLATION

CAUTION:
Do not tighten excessively, or oil may leak.

1) Clean the oil filter installation surface of the oil cooler.
2) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
3) Install the oil filter by turning it by hand, being careful not to damage the seal rubber of the oil filter.
• Tighten the oil filter (black) with an outer diameter of 68 mm (2.68 in) (approx. 1 rotation) after the seal rubber of the oil filter comes in contact with oil cooler. When using a torque wrench, tighten to 14 N·m (1.4 kgf-m, 10.3 ft-lb).
• Tighten the oil filter (blue) with an outer diameter of 67.4 mm (2.65 in) (approx. 7/8 rotation) after the seal rubber of the oil filter comes in contact with cylinder block. When using a torque wrench, tighten to 12 N·m (1.2 kgf-m, 8.9 ft-lb).
4) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle.
6) After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.>

C: INSPECTION

1) After installing the oil filter, run the engine and check for oil leakage around seal rubber.

NOTE:
The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.

2) Check the engine oil level. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.>

10.Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause	Corrective action
Warning light remains ON.	a. Oil pressure switch failure	
	❍ Cracked diaphragm or oil leakage within switch	Replace.
	❍ Broken spring or seized contacts	Replace.
	b. Low oil pressure	
	❍ Clogging of oil filter	Replace.
	❍ Malfunction of oil by-pass valve in oil filter	Replace.
	❍ Malfunction of oil relief valve in oil pump	Clean or replace.
	❍ Clogged oil passage	Clean.
	❍ Excessive tip clearance and side clearance of oil pump rotor	Replace.
	❍ Clogged oil strainer or broken pipe	Clean or replace.
	c. No oil pressure	
	❍ Insufficient engine oil (degradation, etc.)	Replace.
	❍ Broken pipe of oil strainer	Replace.
	❍ Stuck oil pump rotor	Replace.
Warning light does not illuminate.	a. Malfunction of combination meter	Replace.
	b. Poor contact of switch contact points	Replace.
	c. Disconnection of wiring	Repair.
Warning light flickers momentarily.	a. Defective terminal contact	Repair.
	b. Defective wiring harness	Repair.
	c. Oil pressure switch failure	
	❍ Cracked diaphragm or oil leakage within switch	Replace.
	❍ Broken spring or seized contacts	Replace.
	d. Low oil pressure	
	❍ Clogging of oil filter	Replace.
	❍ Malfunction of oil by-pass valve in oil filter	Replace.
	❍ Malfunction of oil relief valve in oil pump	Clean or replace.
	❍ Clogged oil passage	Clean.
	❍ Excessive tip clearance and side clearance of oil pump rotor	Replace.
	❍ Clogged oil strainer or broken pipe	Clean or replace.

SPEED CONTROL SYSTEMS

SP(STI)

Page

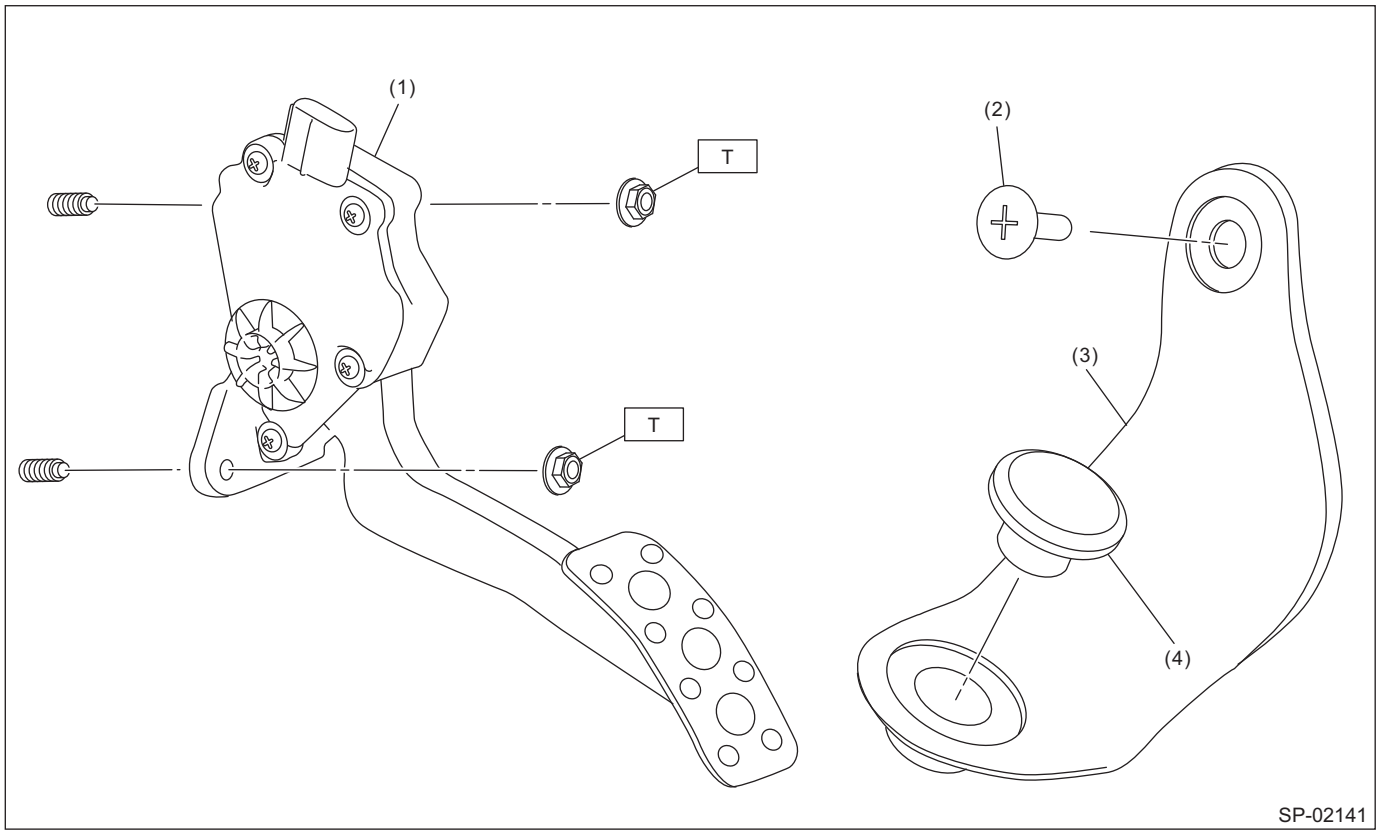
1. General Description 2
2. Accelerator Pedal 4

1. General Description

A: SPECIFICATION

Accelerator pedal	Stroke	At pedal pad	50 — 59 mm (1.97 — 2.32 in)

B: COMPONENT



(1) Accelerator pedal ASSY
(2) Clip
(3) Accelerator plate
(4) Accelerator stopper

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

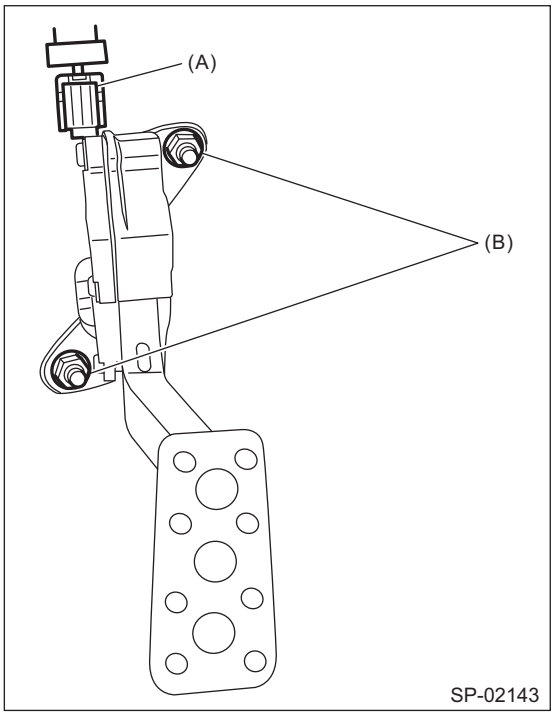
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Accelerator Pedal

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector (A).
3) Remove the nut (B) securing accelerator pedal assembly, and remove the accelerator pedal assembly.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

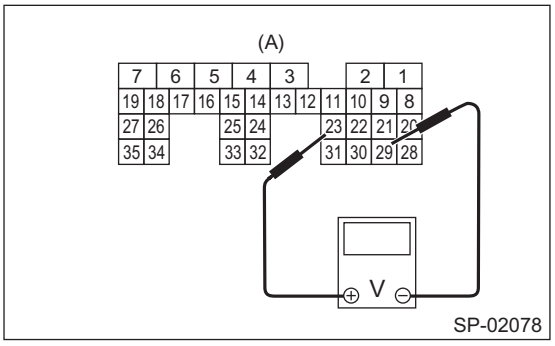
NOTE:
The accelerator pedal cannot be disassembled.

D: INSPECTION

1. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH CIRCUIT TESTER)

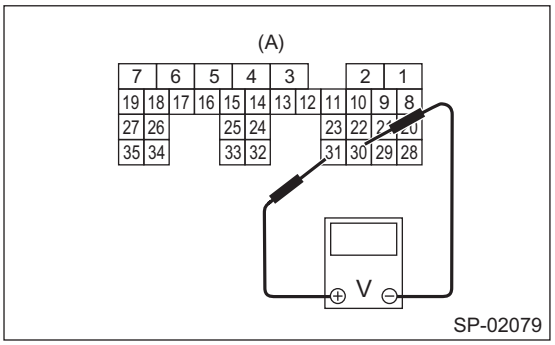
1) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
2) Turn the ignition switch to ON. (Engine OFF)
3) Measure the voltage between ECM connector terminals.

- Main sensor side



(A) To ECM connector

- Sub sensor side



(A) To ECM connector

Accelerator pedal sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	23 (+) and 29 (–)	0.4 — 1.0 V
	Depressed (full opened)		2.4 — 3.7 V
Sub	Not depressed (full closed)	31 (+) and 30 (–)	0.3 — 1.1 V
	Depressed (full opened)		2.3 — 3.8 V

4) After inspection, install the related parts in the reverse order of removal.

2. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH SUBARU SELECT MONITOR)

1) Turn the ignition switch to ON. (Engine OFF)

2) Read the accelerator pedal opening angle signal and voltage of accelerator pedal sensor using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>

Accelerator pedal sensor	Accelerator pedal opening angle signal	Standard
Main	0.0%	0.4 — 1.0 V
	100.0%	2.4 — 3.7 V
Sub	0.0%	0.3 — 1.1 V
	100.0%	2.3 — 3.8 V

3. OTHER INSPECTIONS

1) Check that the accelerator pedal does not have deformation, cracks or damage.
2) Check for smooth operation when the accelerator pedal is depressed.
3) Check if the accelerator pedal returns to its original position smoothly when the pedal is released.

IGNITION

IG(STI)

Page

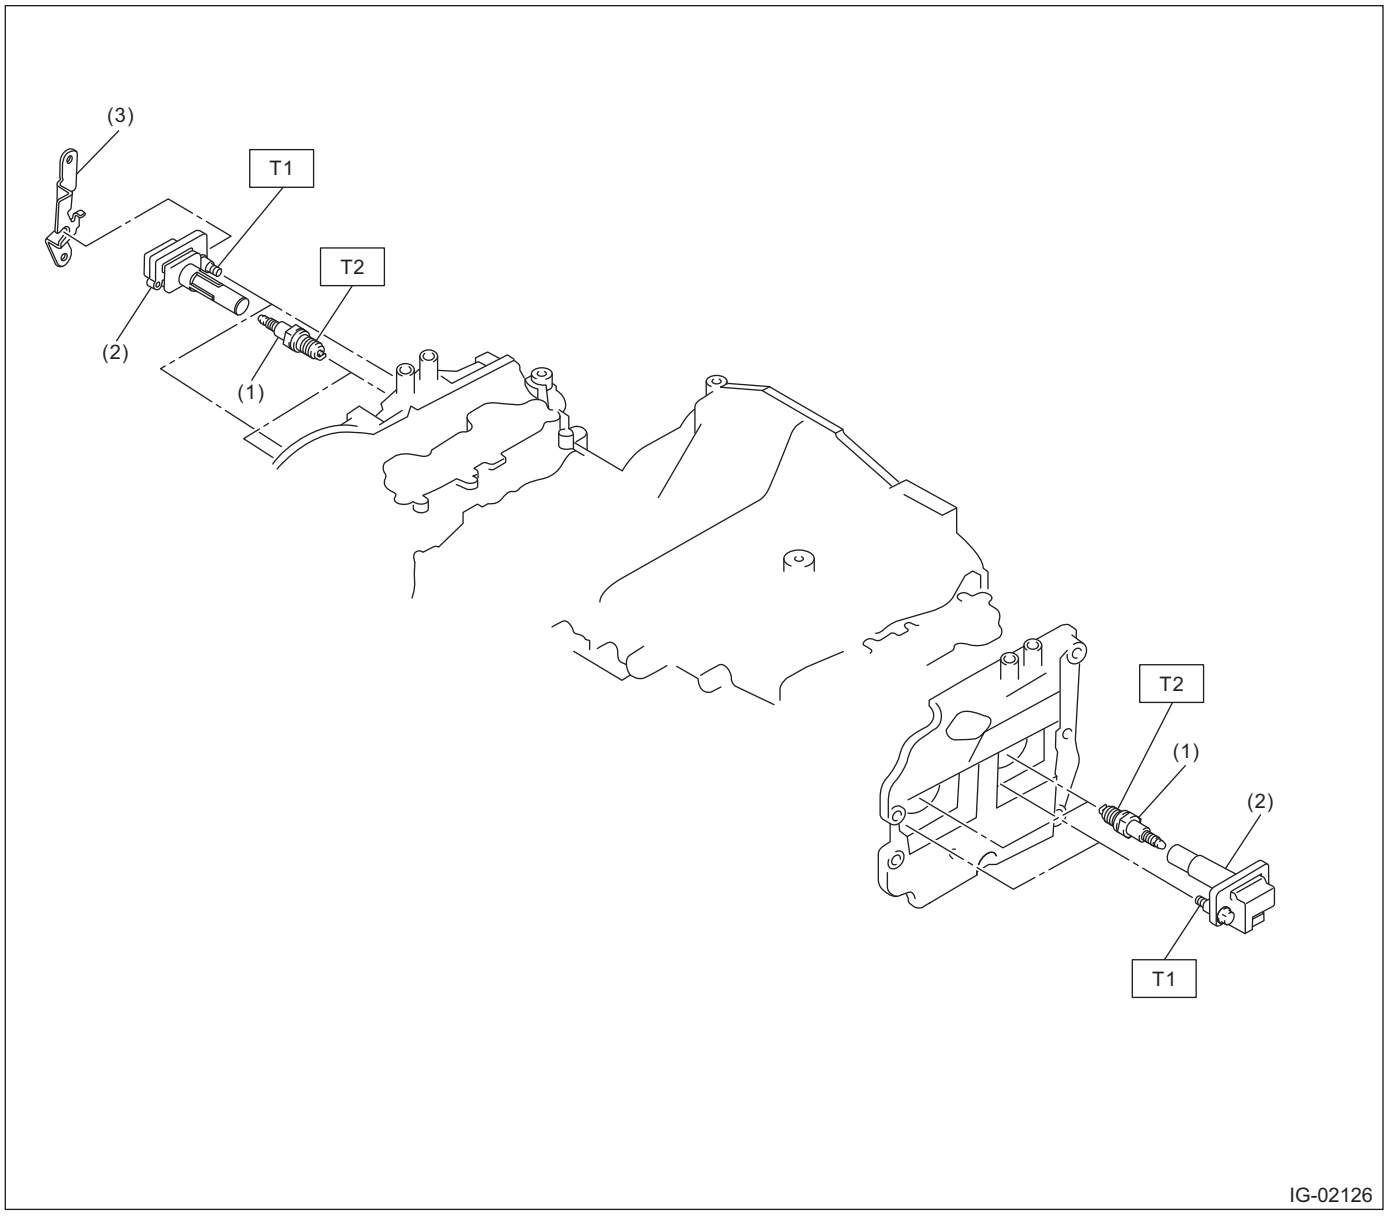
1. General Description 2
2. Spark Plug 5
3. Ignition Coil 8

1. General Description

A: SPECIFICATION

Item			Specifications
Ignition coil	Type		FK0368
	Ignition system		Independent ignition coil
	Manufacturer		Diamond Electric
Spark plug	Manufacturer and type		NGK: ILFR7H
	Thread size (diameter, pitch, length) mm		14, 1.25, 26.5
	Spark plug gap mm (in)	Standard	0.5 — 0.6 (0.019 — 0.023)
	Electrode		Center electrode: Iridium Ground electrode: Platinum

B: COMPONENT



(1)	Spark plug	(3)	Engine harness stay (#3 ignition coil side only)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Ignition coil			***T1: 16 (1.6, 11.8)***
				T2: 21 (2.1, 15.5)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.

- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

2. Spark Plug

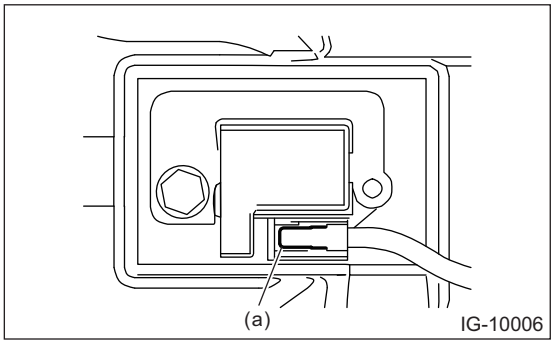
A: REMOVAL

Spark plug:
Refer to "SPECIFICATION" for spark plug. <Ref. to IG(STI)-2, SPECIFICATION, General Description.>

1. RH SIDE

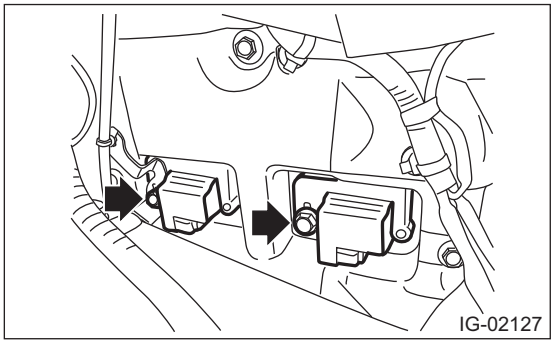
1) Disconnect the ground cable from battery.
2) Remove the air cleaner case. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
3) Disconnect the connector from ignition coil.

CAUTION:
Be careful not to damage the claw (a) of the connector.



4) Remove the ignition coil.

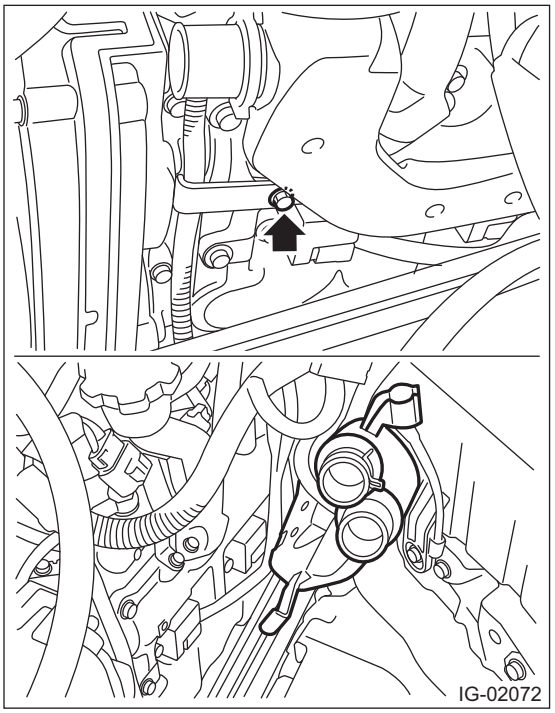
NOTE:
Turn the ignition coil by 180° to remove it.



5) Remove the spark plug with a spark plug socket.

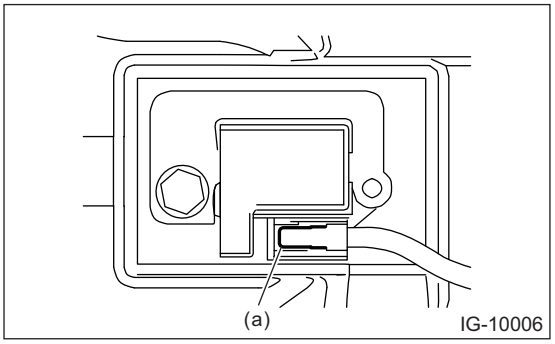
2. LH SIDE

1) Remove the battery. <Ref. to SC(STI)-24, REMOVAL, Battery.>
2) Remove the secondary air pump. <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>
3) Remove the bolts that secure the air duct to the rocker cover LH, and lift the air duct.



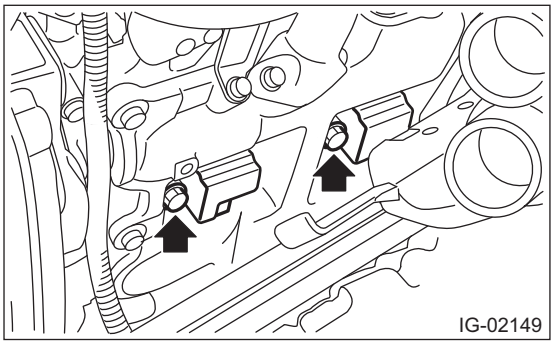
4) Disconnect the connector from ignition coil.

CAUTION:
Be careful not to damage the claw (a) of the connector.



5) Remove the ignition coil.

NOTE:
Turn #4 ignition coil by 180° to remove it.



6) Remove the spark plug with a spark plug socket.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

Tightening torque (spark plug):
21 N·m (2.1 kgf-m, 15.5 ft-lb)

Tightening torque (ignition coil):
16 N·m (1.6 kgf-m, 11.8 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

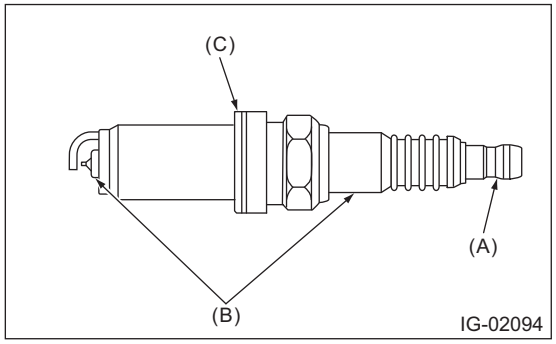
Tightening torque (spark plug):
21 N·m (2.1 kgf-m, 15.5 ft-lb)

Tightening torque (ignition coil):
16 N·m (1.6 kgf-m, 11.8 ft-lb)

Tightening torque (air duct):
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

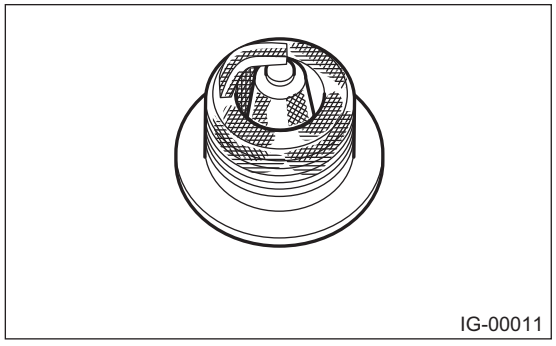
1) Check the spark plug for abnormalities. If defective, replace the spark plug.



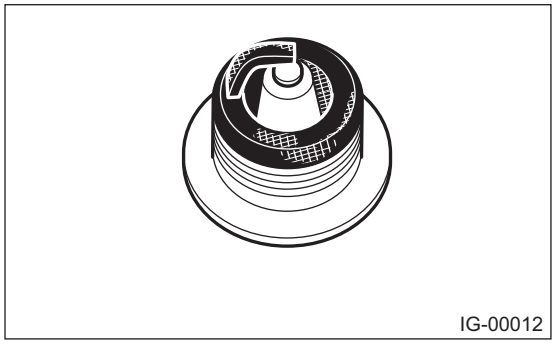
(A) Terminal damage
(B) Crack or damage in insulator
(C) Damaged gasket

2) Check the spark plug electrode and condition of the insulator. If abnormal, check and repair the cause and replace the spark plug.

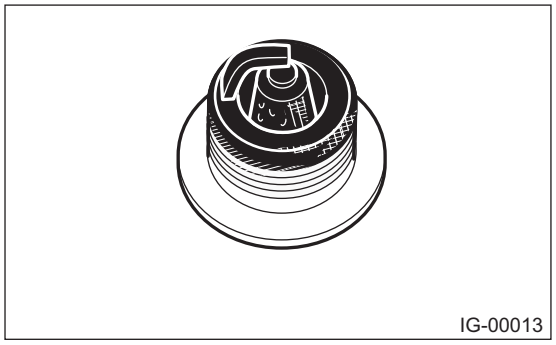
(1) Normal:
Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.



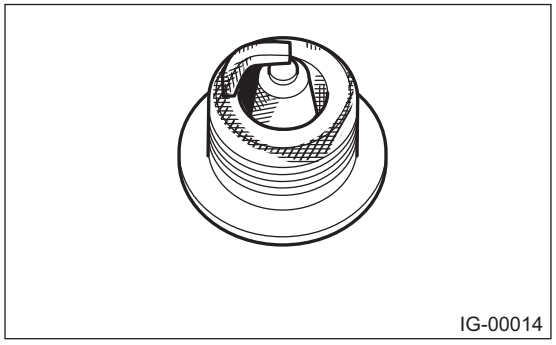
(2) Carbon fouled:
Dry fluffy carbon deposits on the insulator and electrode are mostly caused by slow-speed driving in town, weak ignition, too rich fuel mixture, etc.



(3) Oil fouled:
Wet black deposits show oil entrance into combustion chamber through worn piston rings or increased clearance between valve guides and valve stems.



(4) Overheating:
A white or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating, wrong selection of fuel, or loose spark plugs.

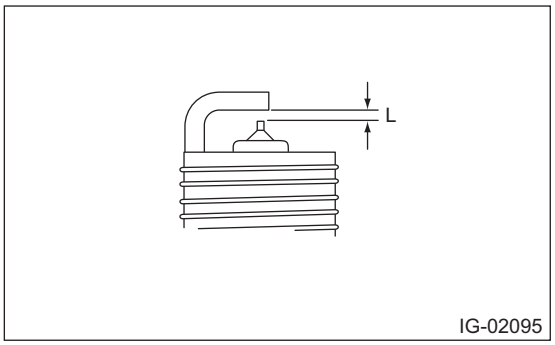


3) Using a nylon brush, etc., clean and remove the carbon or oxide deposits from the spark plug. If deposits are too stubborn, replace the spark plugs. After cleaning the spark plugs, check the spark plug gap “L” using a gap gauge. If it is not within the standard, replace the spark plug.

NOTE:
- Never use a plug cleaner.

• Do not use a metal brush as it may damage the electrode area.

Spark plug gap L:
Standard
0.5 — 0.6 mm (0.019 — 0.023 in)



3. Ignition Coil

A: REMOVAL

Direct ignition type is adopted. Refer to “Spark Plug” for removal procedure. <Ref. to IG(STI)-5, REMOVAL, Spark Plug.>

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

C: INSPECTION

For inspection procedure, refer to “Diagnostics for Engine Starting Failure”. <Ref. to EN(STI)(diag)-99, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

STARTING/CHARGING SYSTEMS

SC(STI)

Page

1. General Description 2
2. Starter 7
3. Generator 18
4. Battery 24

1. General Description

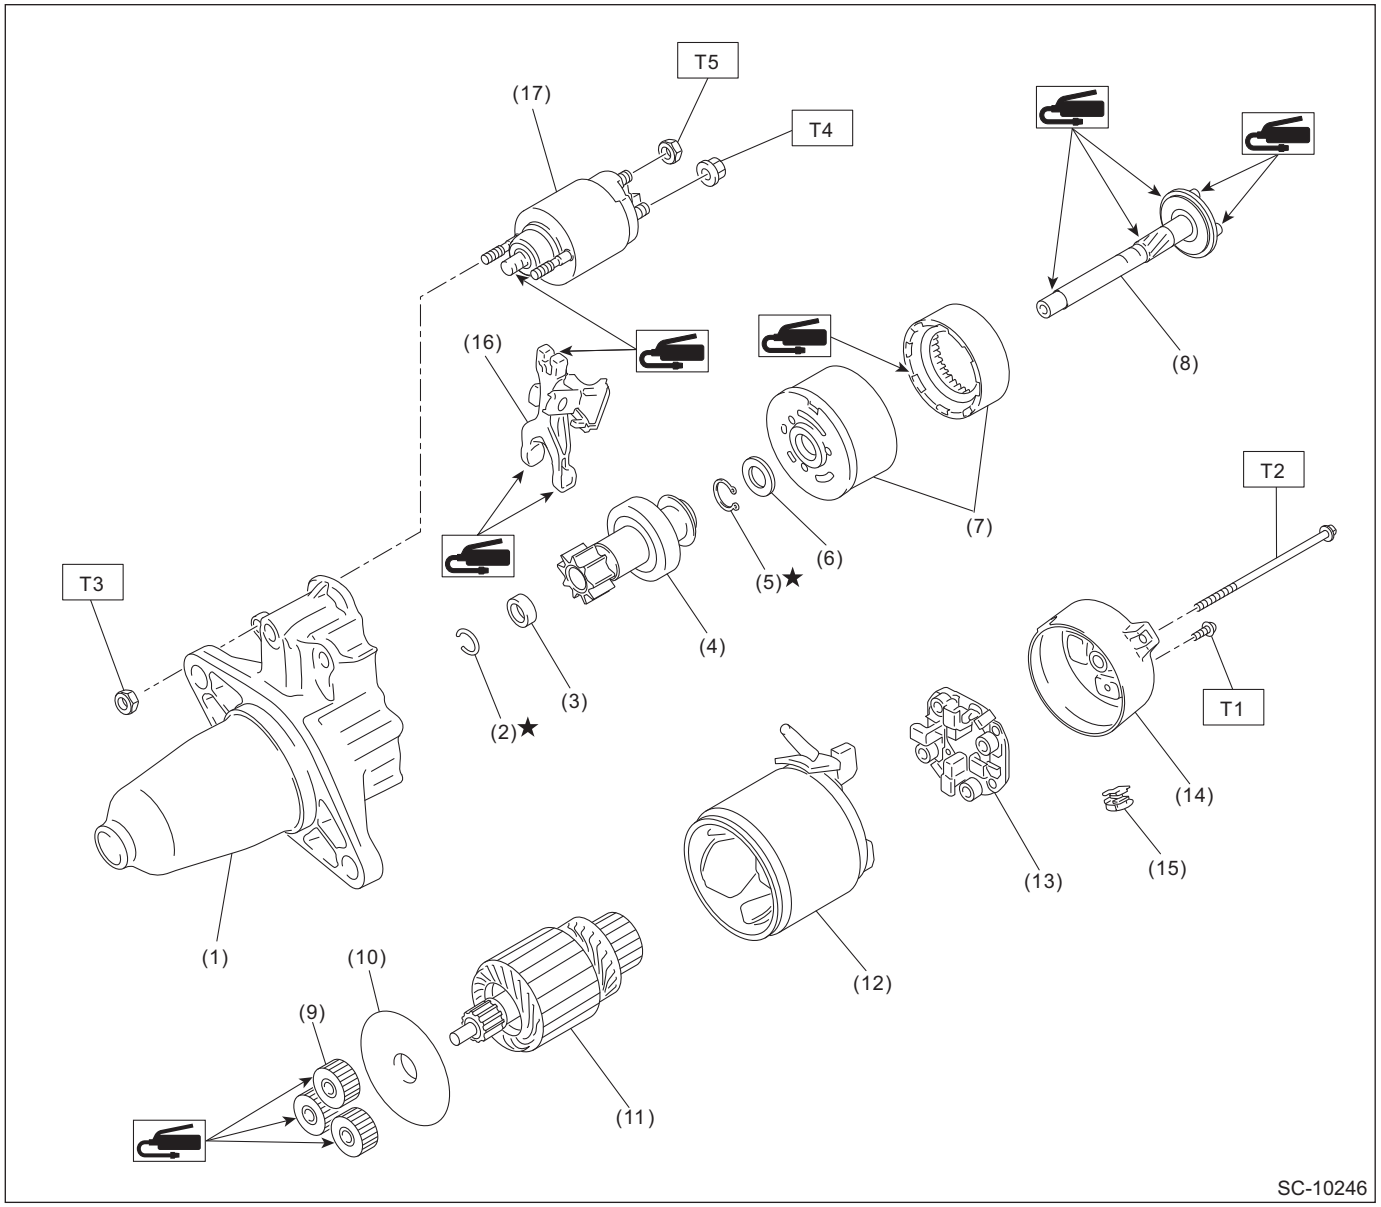
A: SPECIFICATION

Item			Specifications
Starter	Type		Reduction type
	Model		428000-5760
	Manufacturer		DENSO
	Voltage and output		12 V — 1.0 kW
	Direction of rotation		Counterclockwise (when observed from pinion)
	Number of pinion teeth		9
	Armature commutator runout	Standard	0.05 mm (0.0020 in)
		Limit	0.10 mm (0.0039 in)
	Armature depth of segment mold	Standard	0.5 mm (0.020 in)
	Brush length	Standard	12.3 mm (0.484 in)
		Limit	7.0 mm (0.276 in)
	Brush spring force	Standard	15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf)
		Limit	2.5 N (0.25 kgf, 0.56 lbf)
	No-load characteristics	Voltage	11 V
		Current	90 A or less
Generator	Type		Rotating-field three-phase type, voltage regulator built-in type, each with load response control system
	Model		A3TG6591
	Manufacturer		Mitsubishi Electric
	Voltage and output		12 V — 110 A
	Polarity on ground side		Negative
	Direction of rotation		Clockwise (when observed from pulley side)
	Stator connection		3-phase Y-type
	Output current		1,500 r/min — 50 A or more 2,500 r/min — 91 A or more 5,000 r/min — 105 A or more
	Regulated voltage		14.1 — 14.8 V [20°C (68°F)]
	Rotor slip ring outer diameter	Standard	22.7 mm (0.894 in)
		Limit	22.1 mm (0.870 in)
	Brush length	Standard	18.5 mm (0.728 in)
		Limit	5.0 mm (0.197 in)
Battery	Type		75D23L
	Nominal capacity		5 HR: 53 Ah [25°C (77°F)]
	Nominal voltage		12 V
	CCA		470 A
	BCI group number*		35

*: This is a reference information for battery size, and is not guaranteed by SUBARU CORPORATION.

B: COMPONENT

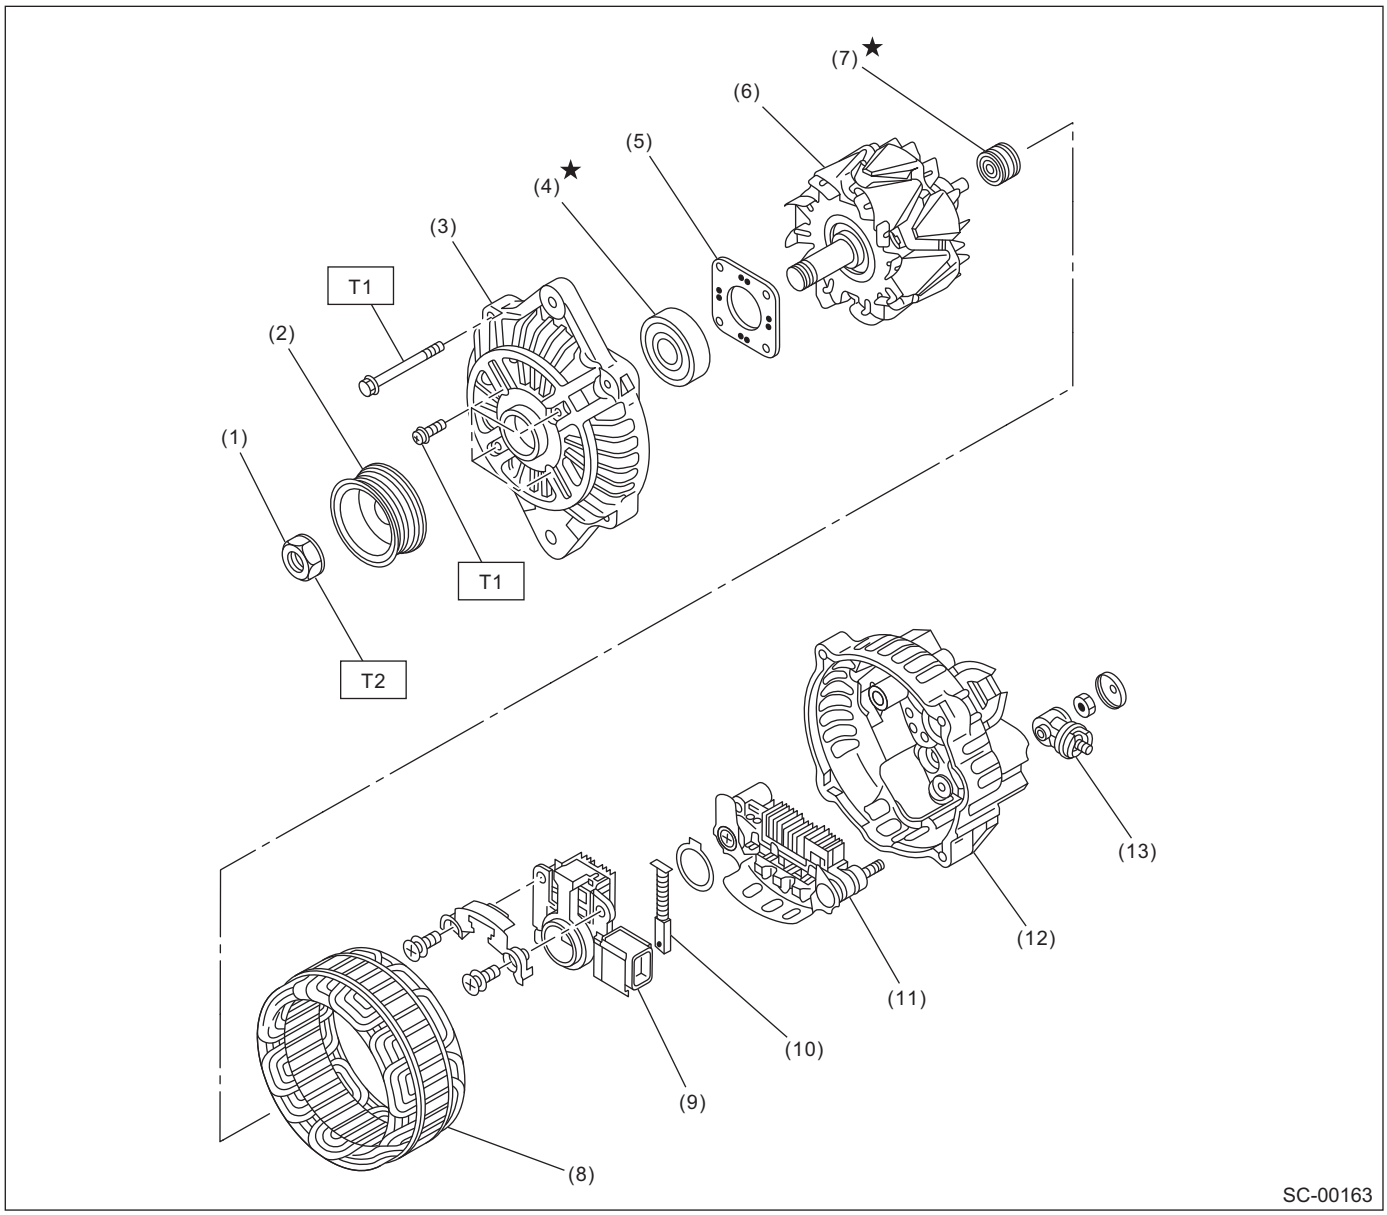
1. STARTER



(1) Starter housing ASSY
(2) Snap ring
(3) Stopper
(4) Overrunning clutch
(5) Snap ring
(6) Washer
(7) Internal gear ASSY
(8) Shaft
(9) Pinion gear
(10) Starter plate
(11) Armature
(12) Yoke ASSY
(13) Brush holder ASSY
(14) Starter cover ASSY
(15) Drain duct
(16) Shift lever
(17) Magnet switch ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 1.4 (0.1, 1.0)
T2: 6 (0.6, 4.4)
T3: 7.5 (0.8, 5.5)
T4: 10 (1.0, 7.4)
T5: 11 (1.1, 8.1)

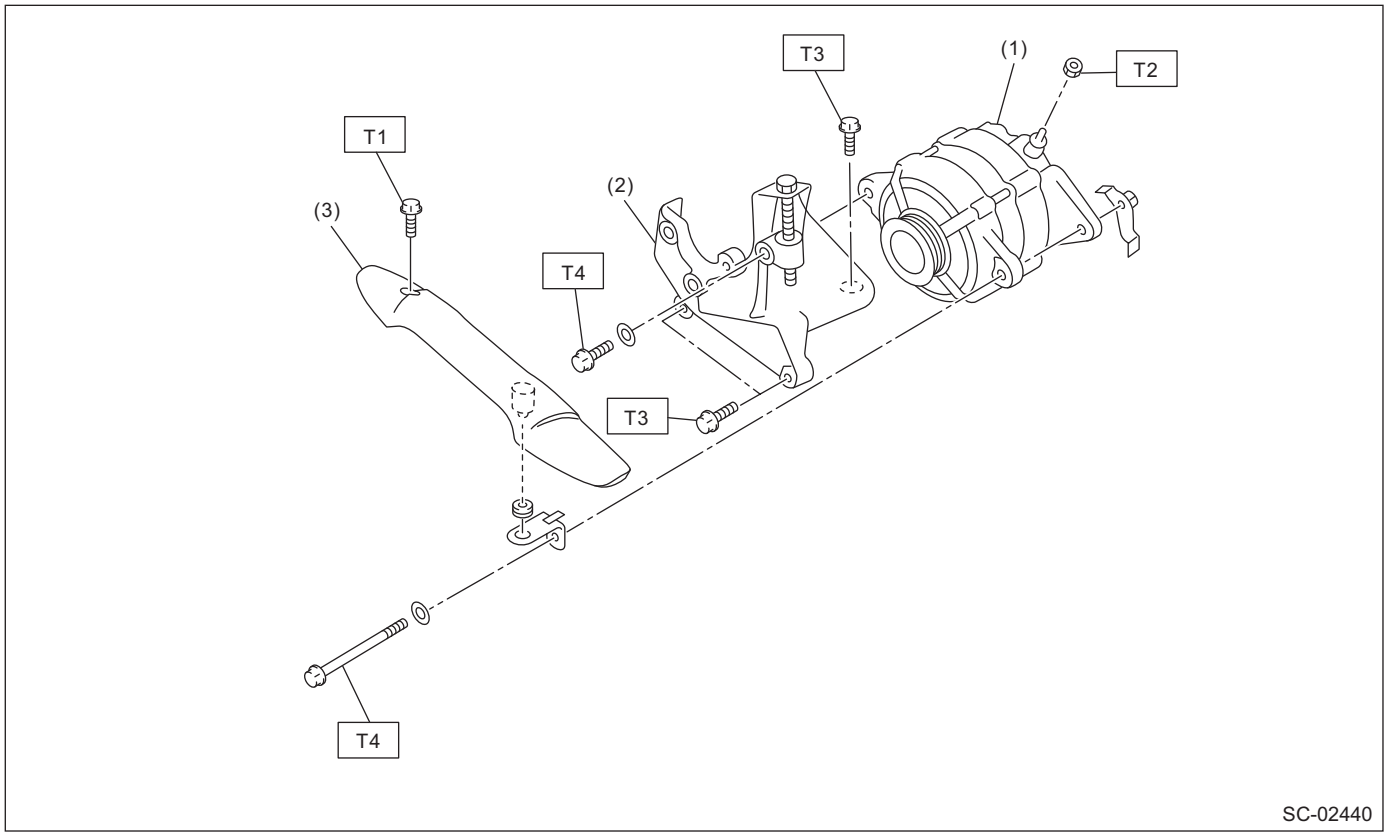
2. GENERATOR



(1) Pulley nut
(2) Pulley
(3) Front cover
(4) Ball bearing
(5) Bearing retainer
(6) Rotor
(7) Bearing
(8) Stator coil
(9) IC regulator
(10) Brush
(11) Rectifier
(12) Rear cover
(13) Terminal B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 4.7 (0.5, 3.5)
T2: 108 (11.0, 79.8)

3. GENERATOR BRACKET



(1) Generator
(2) Power steering pump bracket
(3) V-belt cover

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7 (0.7, 5.2)
T2: 15.5 (1.6, 11.4)
T3: 22 (2.2, 16.2)
T4: 25 (2.5, 18.4)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

D: PREPARATION TOOL

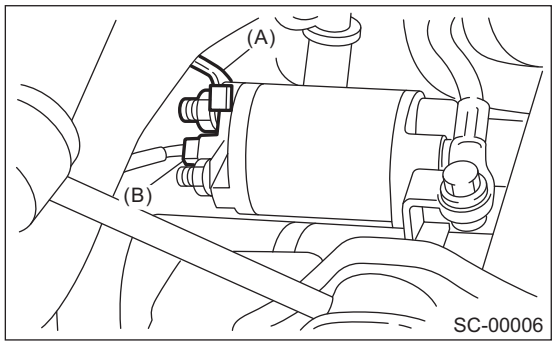
1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current. NOTE: • When measuring the standby current, prepare a circuit tester which can measure down to 1 mA. • When measuring the standby current for models with keyless access function, prepare an analog type.

2. Starter

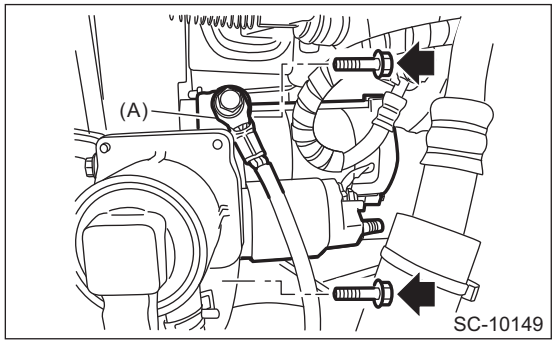
A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
3) Disconnect the connector (B) and terminal (A) from starter.



4) Disconnect the terminal (A) from the cable stay and remove the cable stay and starter from the transmission.

CAUTION:
In order to prevent damaging the terminal (A), fix the terminal (A) when loosing the bolt, and avoid the part from rotating together while loosening the bolt.

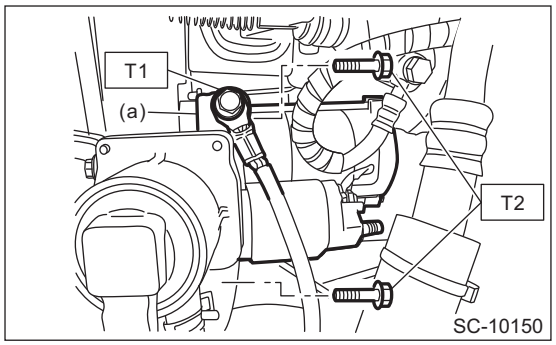


B: INSTALLATION

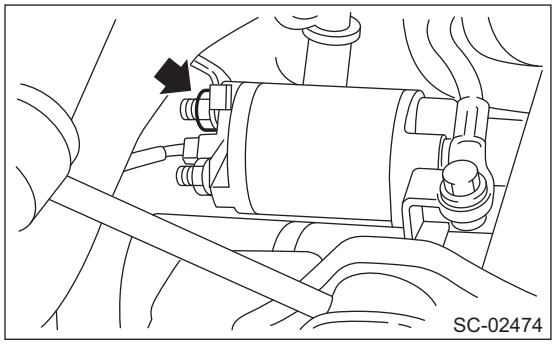
Install in the reverse order of removal.

NOTE:
Tighten the starter and cable stay (a) together using the upper bolt securing the starter.

Tightening torque:
T1: 14 N·m (1.4 kgf-m, 10.3 ft-lb)
T2: 50 N·m (5.1 kgf-m, 36.9 ft-lb)

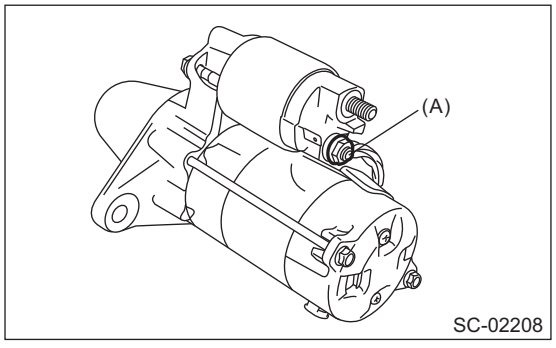


Tightening torque:
11 N·m (1.1 kgf-m, 8.1 ft-lb)

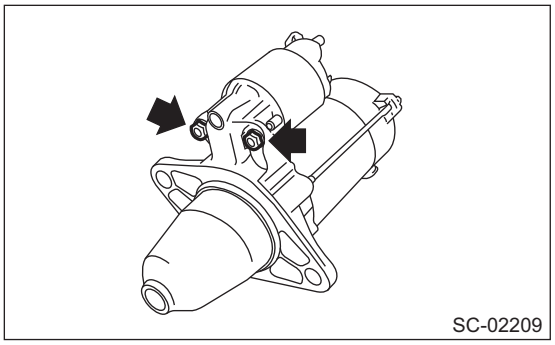


C: DISASSEMBLY

CAUTION:
The starter should be placed through a no-load test whenever it has been overhauled.
1) Disconnect cable from terminal M (A) of the magnet switch assembly.

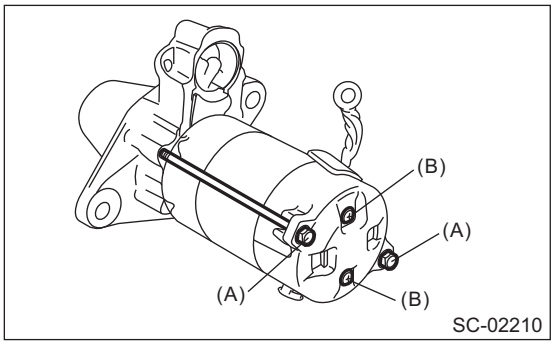


2) Remove the magnet switch assembly from the starter housing assembly.



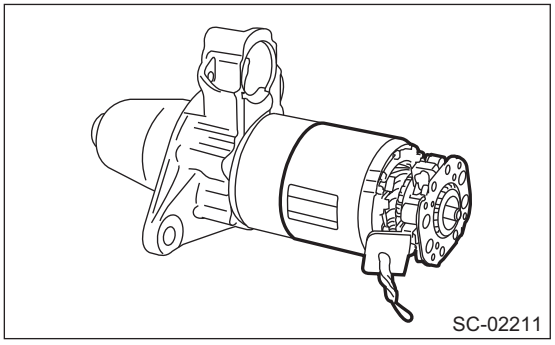
SC-02209

3) Remove through bolts (A) and screws (B) on both sides, and remove the starter cover assembly.



SC-02210

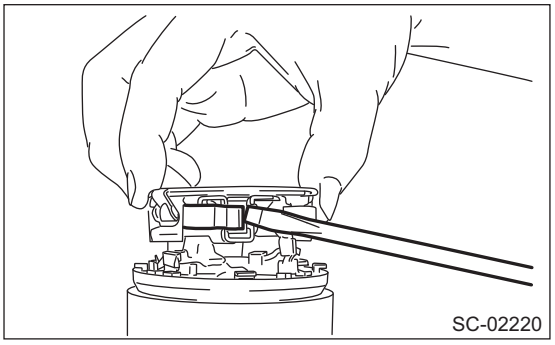
4) Remove the yoke assembly and brush holder assembly as a unit.



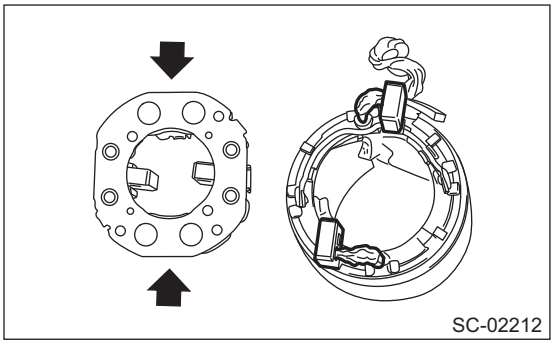
SC-02211

5) Remove the two brushes wired to the yoke assembly, and separate the yoke assembly and the brush holder assembly.

NOTE:
As shown in the figure, use a flat tip screwdriver, etc. to hold the brush spring and remove the brush.

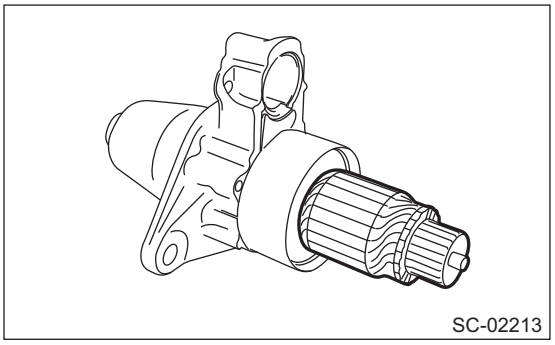


SC-02220



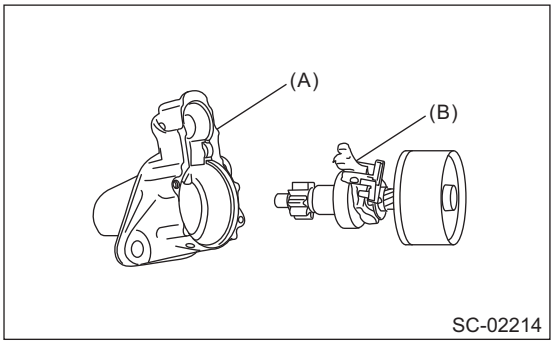
SC-02212

6) Remove the armature from the internal gear assembly.



SC-02213

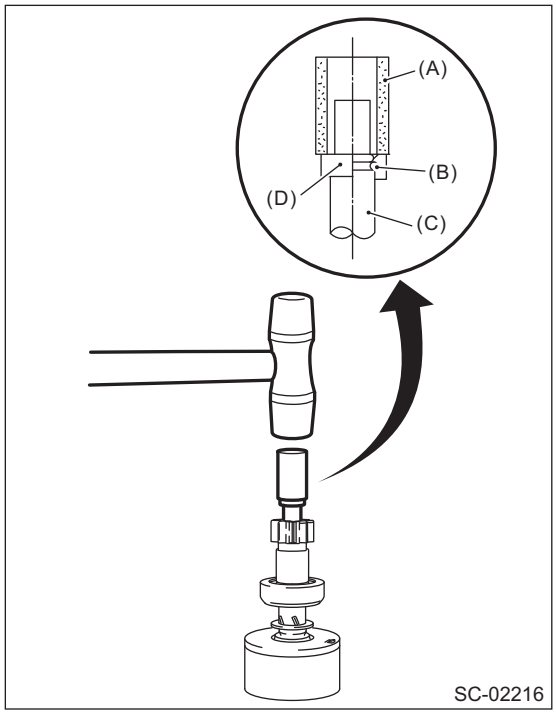
7) Remove the starter housing assembly (A) then remove the shift lever (B).



SC-02214

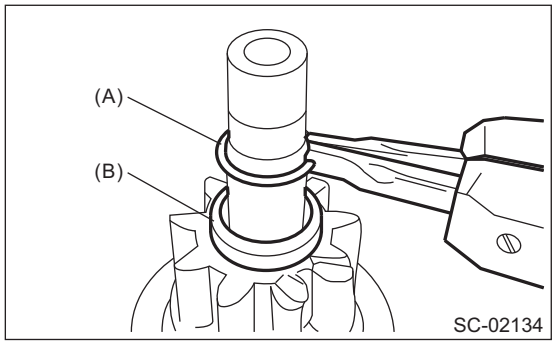
8) Use the following procedures to remove the overrunning clutch from the shaft.

(1) Use an appropriate tool (such as a fit socket wrench), and remove the stopper from snap ring by lightly tapping the stopper with a plastic hammer.

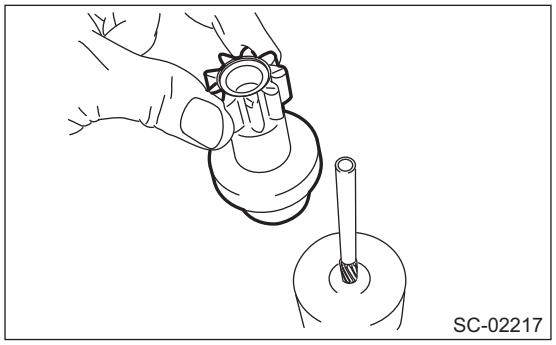


(A) Appropriate tool
(B) Snap ring
(C) Shaft
(D) Stopper

(2) Remove snap ring (A) from the shaft, and remove stopper (B).

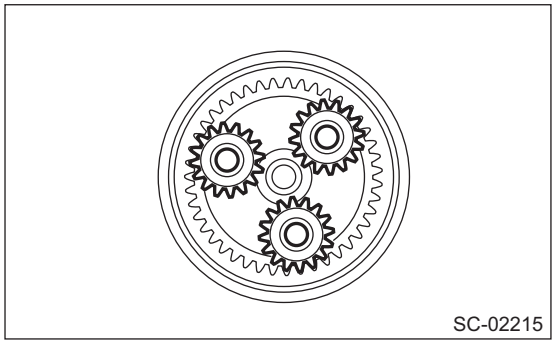


(3) Remove the overrunning clutch from the shaft.

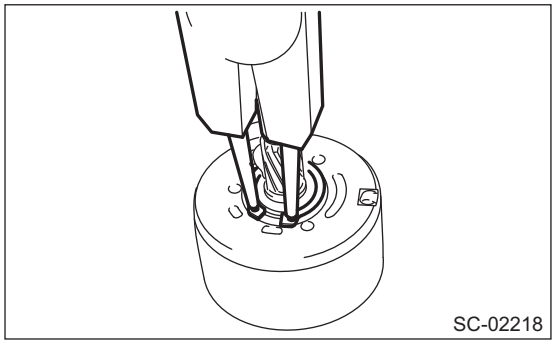


9) Use the following procedures to remove the shaft.

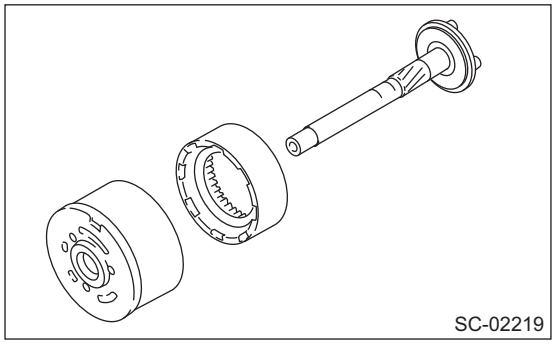
(1) Remove the starter plate, and remove the pinion gear.



(2) Remove the snap ring from the shaft.



(3) Remove the shaft from the internal gear assembly.



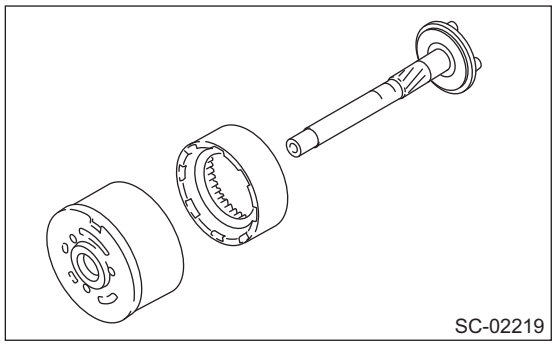
D: ASSEMBLY

1) Use the following procedures to install the shaft.

(1) Apply grease to the shaft sliding surfaces of the internal gear assembly.

Grease:
DENSO HL50

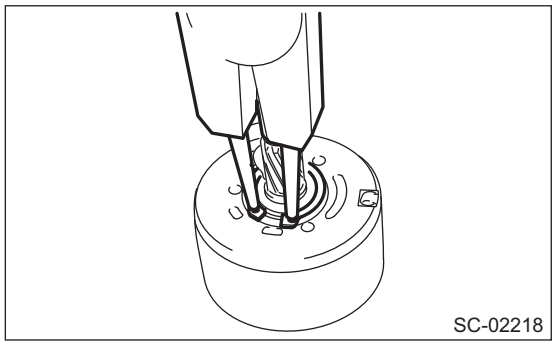
(2) Assemble the shaft to the internal gear assembly.



SC-02219

(3) Install the snap ring to shaft.

NOTE:
Use new snap rings.



SC-02218

(4) Apply grease to the pinion gear attachment area.

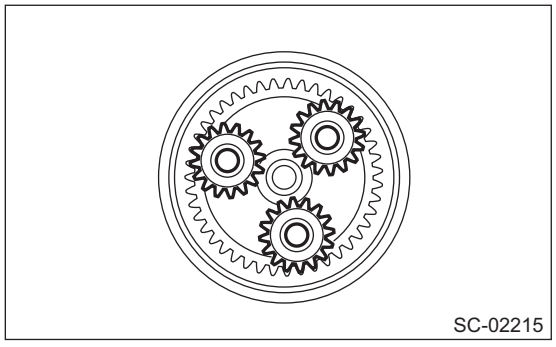
Grease:
DENSO HL50

(5) Attach the pinion gear to the pin.

(6) Apply grease to the pinion gear, internal gear assembly, and on top of the shaft pin.

NOTE:
- Apply grease so that it contacts each gear.
- Be careful not to allow dirt to get in.

Grease:
DENSO HL50



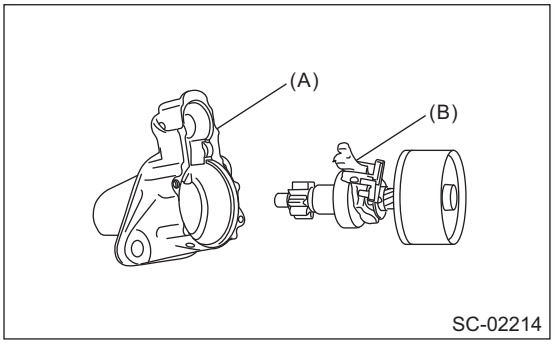
SC-02215

(7) Install the starter plate.

2) Assemble the overrunning clutch and shift lever (B) to the starter housing (A) as a unit.

NOTE:
Apply grease to the contact portion of the shift lever.

Grease:
DENSO HL50



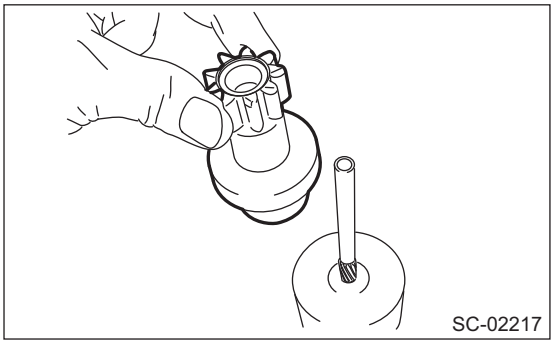
SC-02214

3) Assemble the overrunning clutch as follows:

(1) Apply grease to the spline portion of the shaft.

Grease:
DENSO HL50

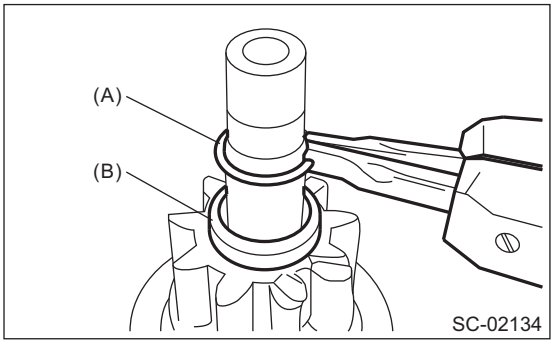
(2) Install the overrunning clutch to shaft.



SC-02217

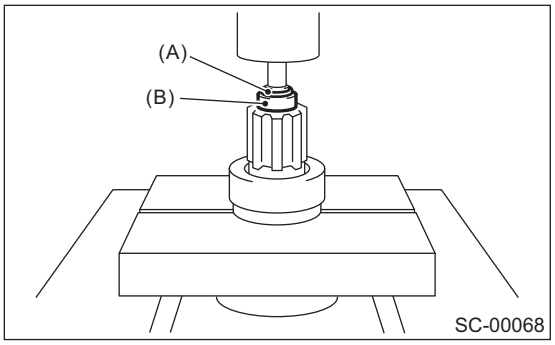
(3) Pass stopper (B) through the shaft, and attach snap ring (A).

NOTE:
Use new snap rings.

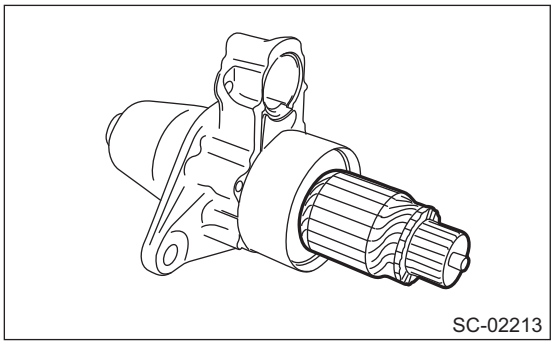


SC-02134

(4) Using a press, pressure fit stopper (B) into snap ring (A).

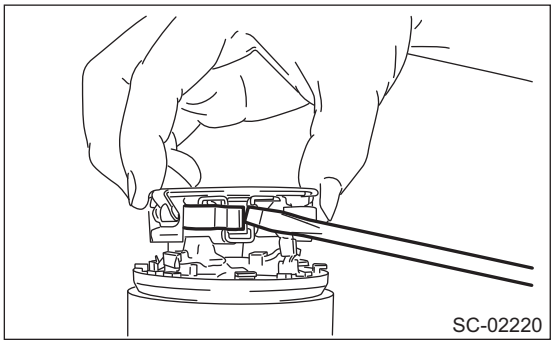


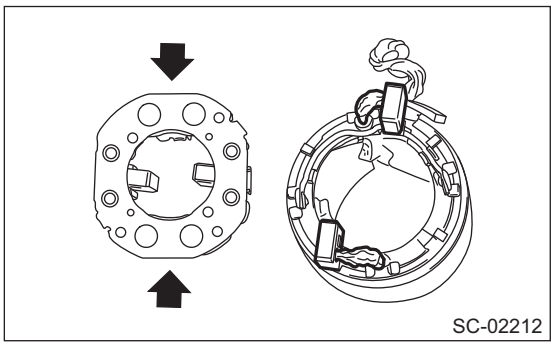
4) Install the armature to the internal gear assembly.



5) Attach the two brushes wired to the yoke assembly to the brush holder assembly.

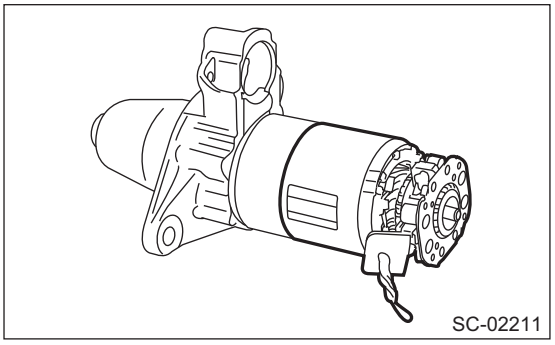
NOTE:
As shown in the figure, use a flat tip screwdriver, etc. to hold the brush spring and insert the brush while being careful not to damage the brush.





6) Install the yoke assembly and brush holder assembly as a single unit to the armature.

NOTE:
Spread the brush with your fingers, being careful not to damage the brush.

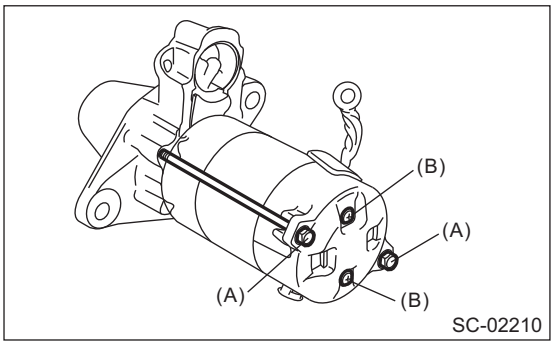


7) Install starter cover assembly to the brush holder assembly with screws (B).

Tightening torque:
1.4 N·m (0.1 kgf-m, 1.0 ft-lb)

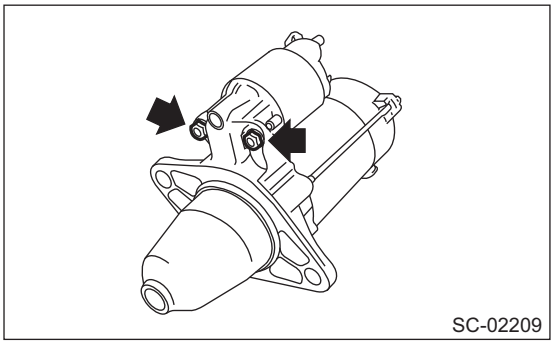
8) Tighten the through bolts (A) on both sides.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)



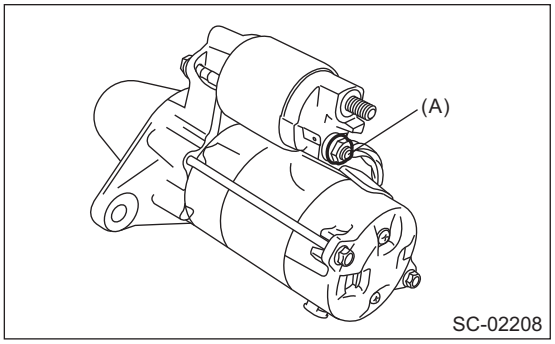
9) Attach the magnet switch assembly to the starter housing assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



10) Connect the cable to terminal M (A) of the magnet switch assembly.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



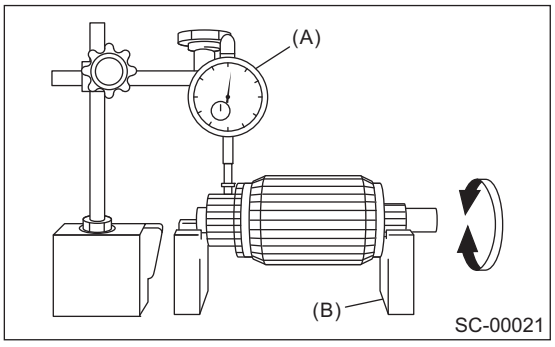
E: INSPECTION

NOTE:
• After the inspection, reinstall the disassembled or removed parts during the inspection in the reverse order of disassembly/removal procedure.
• Refer to component for tightening torque of each part. <Ref. to SC(STI)-3, STARTER, COMPONENT, General Description.>

1. ARMATURE

1) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.
2) Check for runout on the commutator. If excessive, replace the armature.

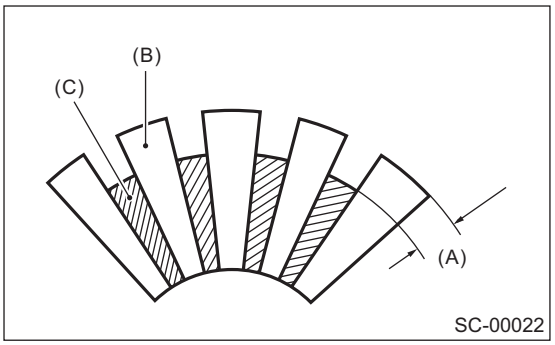
Commutator runout:
Standard
0.05 mm (0.0020 in)
Limit
0.10 mm (0.0039 in)



(A) Dial gauge
(B) V-block

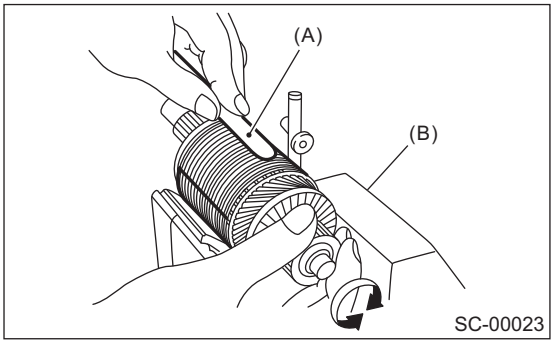
3) Check the depth of the segment mold. If it is not within the standard, replace the armature.

Depth of segment mold:
Standard
0.5 mm (0.020 in)



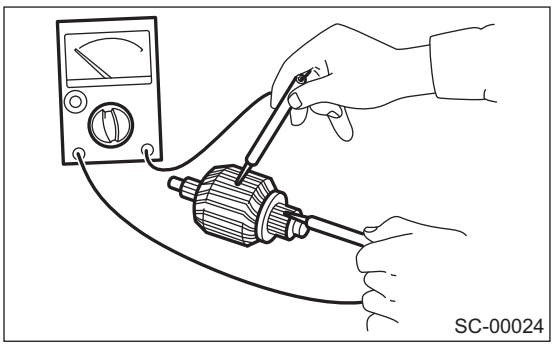
(A) Depth of mold
(B) Segment
(C) Mold

4) Place the armature on the growler tester to check for short circuits. While slowly turning the armature, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.



(A) Steel sheet
(B) Growler tester

5) Use a circuit tester to touch the probe of one side to the commutator segment, and the other probe to the shaft. If there is continuity, replace the armature.



2. YOKE

Make sure that the pole is set at the predetermined position.

3. OVERRUNNING CLUTCH

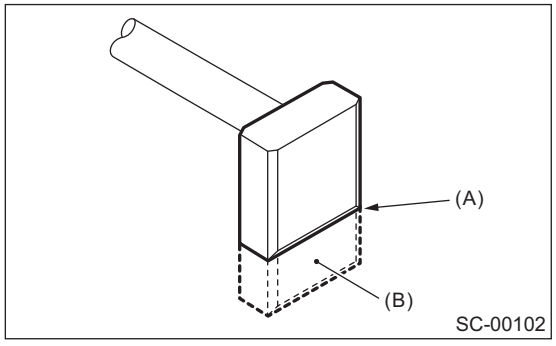
Check that there is no wear or damage to the piston teeth. Replace the overrunning clutch if it is damaged.
Check that it rotates smoothly when rotated in the correct direction (counterclockwise) and does not return to the other direction. Replace the overrunning clutch if any fault is found.

CAUTION:
To prevent spilling of grease, do not clean the overrunning clutch with oil.

4. BRUSH AND BRUSH HOLDER

1) Measure the length of the brush. Replace if it exceeds service limits or there is abnormal wear or cracks.

Brush length:
Standard
12.3 mm (0.484 in)
Limit
7.0 mm (0.276 in)



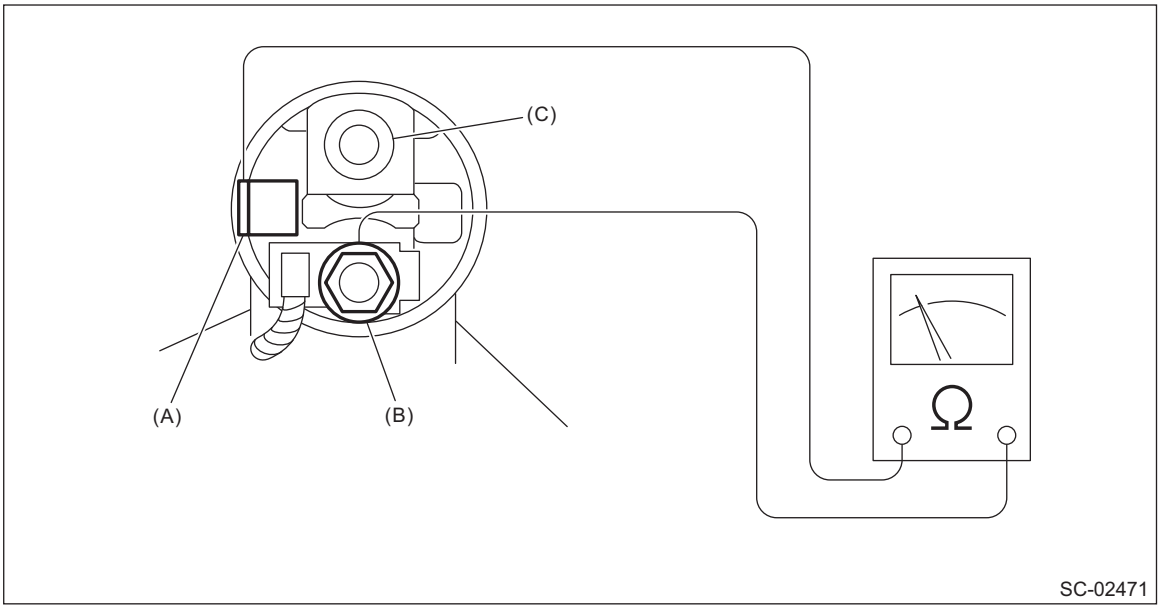
(A) Service limit line
(B) Brush

2) Check that the brush moves smoothly in the brush holder.
3) Measure the brush spring force with a spring scale. Replace the brush holder if below the service limit.

Brush spring force:
Standard
15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf) (when new)
Limit
2.5 N (0.25 kgf, 0.56 lbf)

5. SWITCH ASSEMBLY

Using a circuit tester, check there is continuity between S terminal and M terminal, and between S terminal and ground. Also, check that there is no continuity between M terminal and B terminal.



(A) Terminal S (B) Terminal M (C) Terminal B

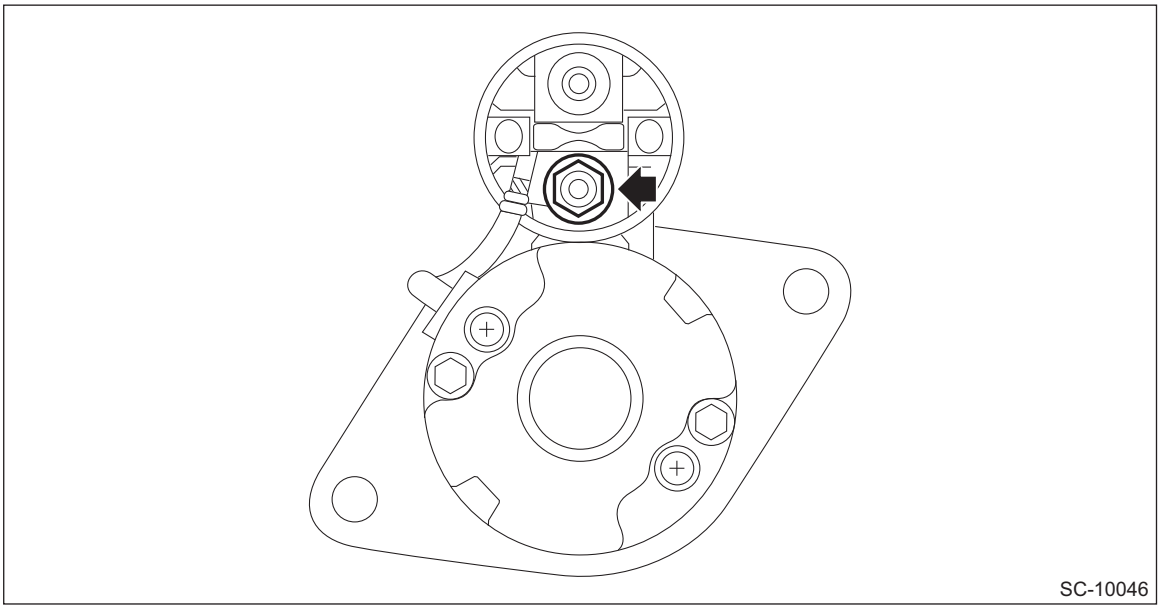
Terminals	Standard
Terminal S — terminal M	1 Ω or less
Terminal S — Ground	1 Ω or less
Terminal M — terminal B	1 MΩ or more

6. SWITCH ASSEMBLY OPERATION

CAUTION:
Perform the inspection in a short period of time. (Within 3 to 5 seconds)

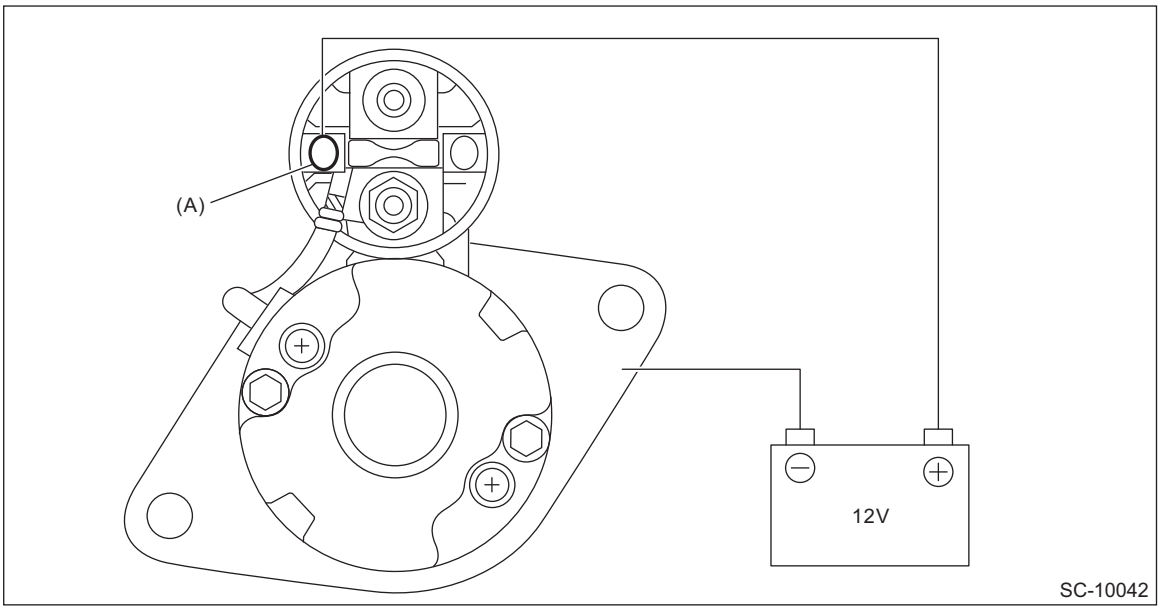
1) Loosen the nut which holds the cable to the M terminal.

NOTE:
This procedure is required to facilitate the cable removal from the M terminal.



2) Connect the battery positive terminal to the switch assembly S terminal, and connect the battery negative terminal to the starter body. Then, if the pinion protrudes, it is normal.

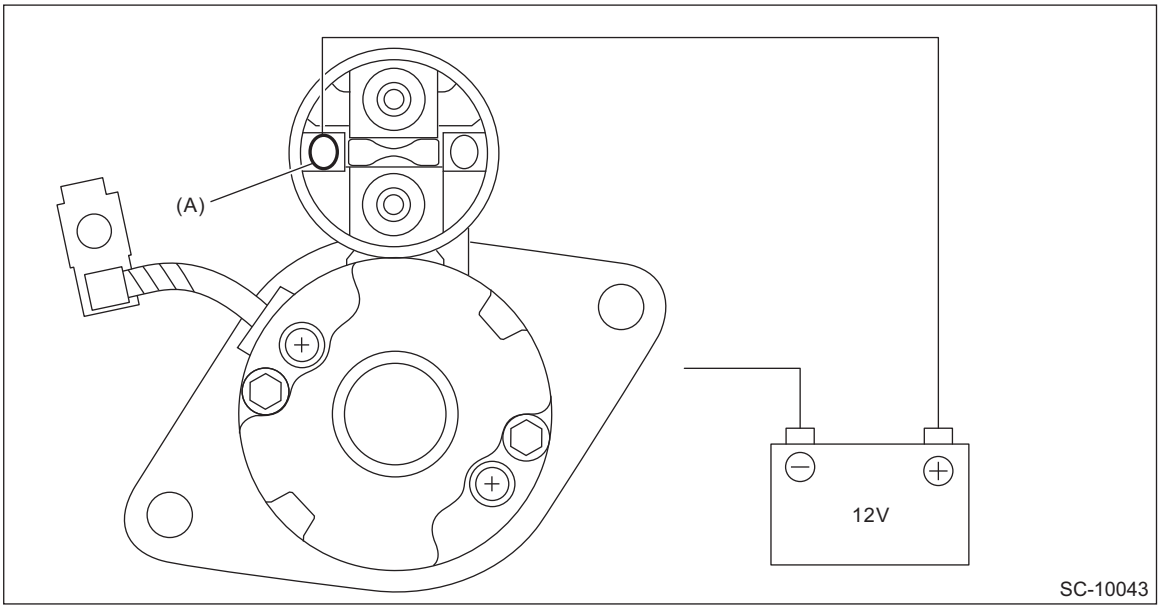
NOTE:
The starter motor may rotate while the pinion protrudes. This occurs due to current that flows to the motor via pull-in coil. This is not a problem.



(A) Terminal S

3) Disconnect the cable from the M terminal. Check that the pinion is being protruded at this time.

CAUTION:
Hold the disconnected cable so that it does not contact the terminal or wiring.
4) Disconnect the battery negative terminal from the starter body. Then, if the pinion returns to its original position, it is normal.

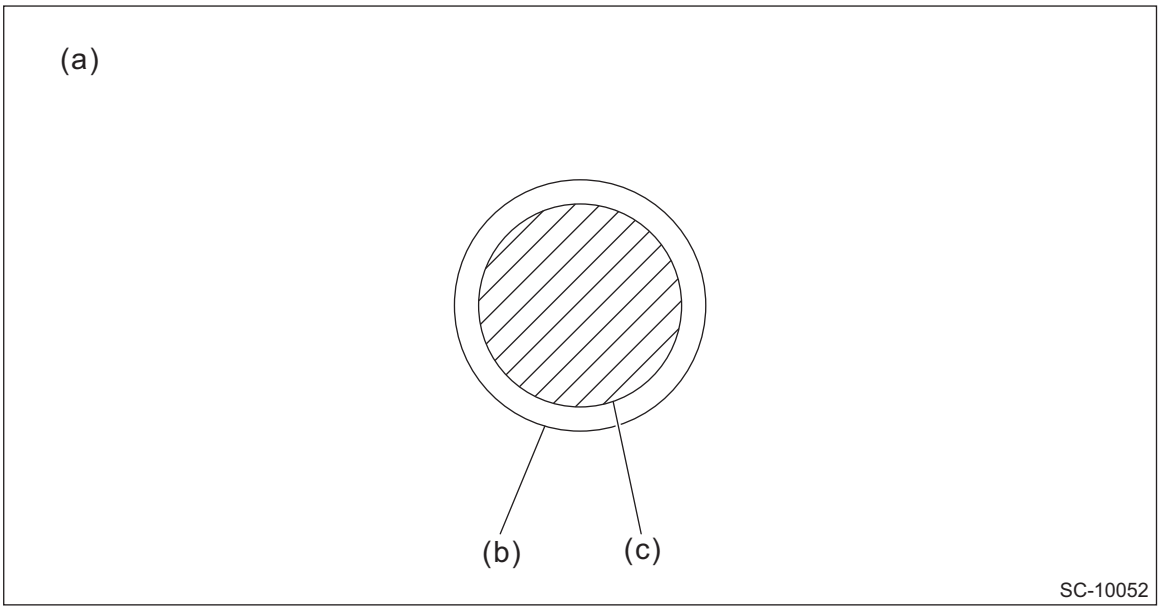


(A) Terminal S

7. NO-LOAD TEST

CAUTION:

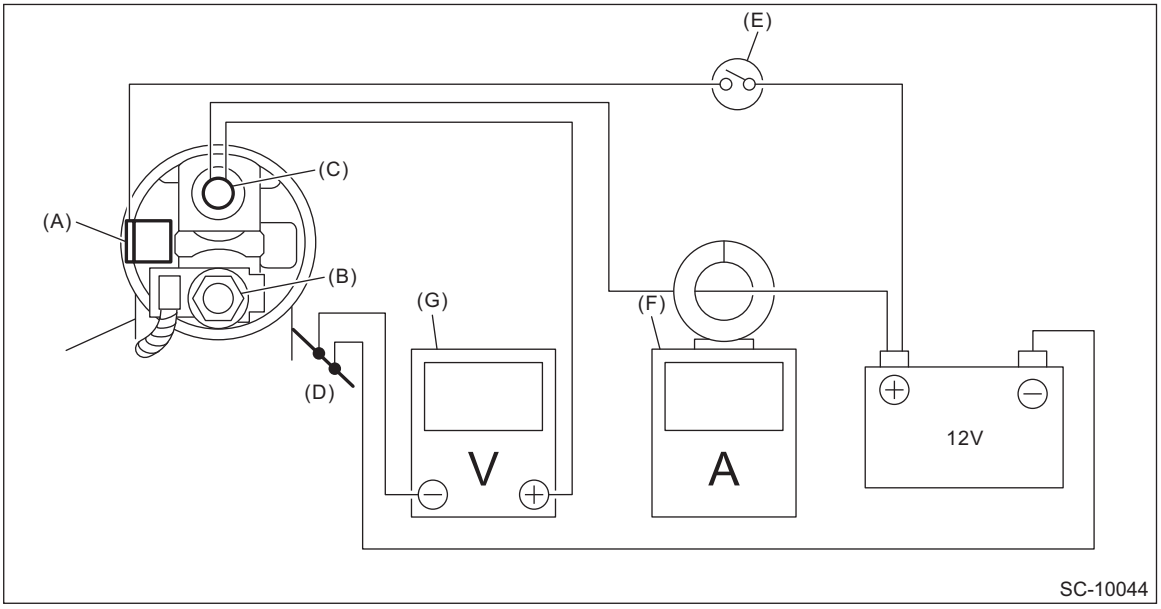
- **Use a thick cable due to large current flowing through the cable.**
  - **It is recommended that the cross-section area of continuity part (shaded part) should be 20 mm^2 (0.00310 sq in) or more for terminal B and ground, and 1.25 mm^2 (0.00194 sq in) or more for terminal S.**



(a) Cable cross-section (b) Cable shield part (c) Cable continuity part

  - **It is possible to use a booster cable instead of wiring.**
- **Be careful not to burn yourself and cause a fire due to heat.**
- **Perform the no-load test in a short period of time. (Within 3 to 5 seconds)**

NOTE:
For no-load test, use the circuit shown in figure.



(A) Terminal S (B) Terminal M (C) Terminal B
(D) Magnet switch (E) Switch (F) Circuit tester with clamp-type ammeter
(G) Circuit tester

1) Using a vise, secure the starter.

CAUTION:
Be careful not to deform or damage the starter.
2) Turn the switch ON, and check that the pinion protrudes rapidly into the specified position and rotates powerfully without noise.
3) Check the current and voltage after its rotation speed stabilizes.

Current/Voltage
90 A or less (approx. 11 V)

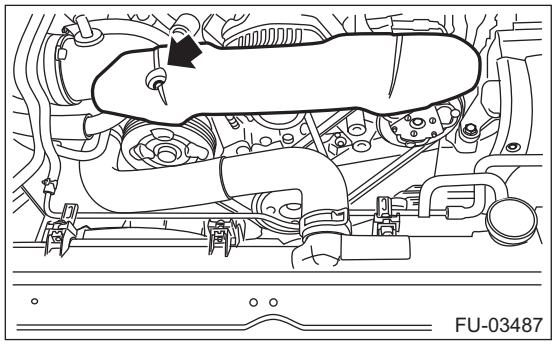
8. OTHER INSPECTIONS

Check that the starter does not have deformation, cracks and any other damage.

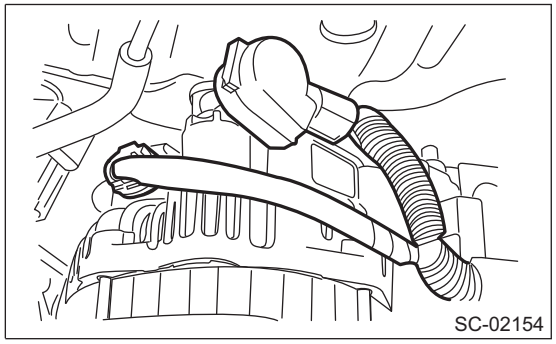
3. Generator

A: REMOVAL

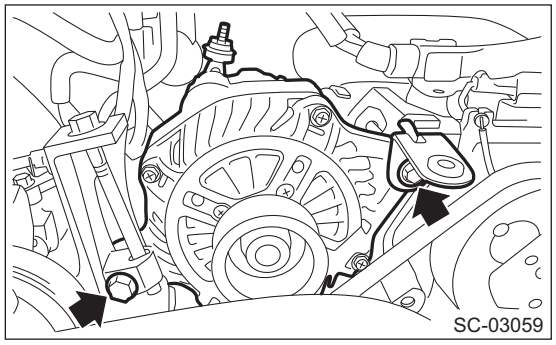
1) Disconnect the ground cable from battery.
2) Remove the V-belt covers.



3) Disconnect the connector and terminal from generator.



4) Remove the front side belt. <Ref. to ME(STI)-42, FRONT SIDE BELT, REMOVAL, V-belt.>
5) Remove the bolts which install the generator onto bracket.

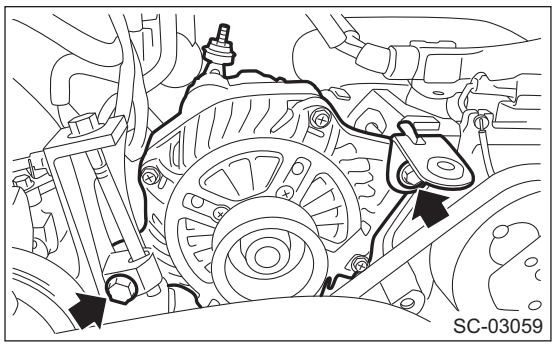


B: INSTALLATION

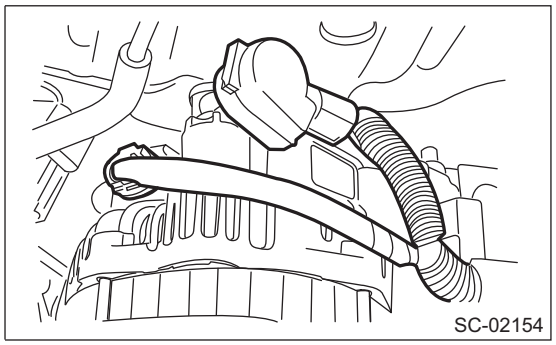
Install in the reverse order of removal.

CAUTION:
Check and adjust the front side belt tension. <Ref. to ME(STI)-47, FRONT SIDE BELT, INSPECTION, V-belt.>

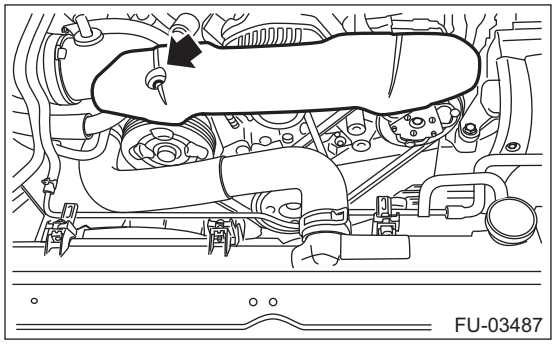
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



Tightening torque:
15.5 N·m (1.6 kgf-m, 11.4 ft-lb)

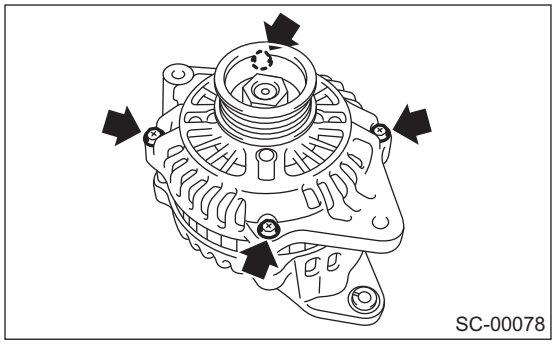


Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

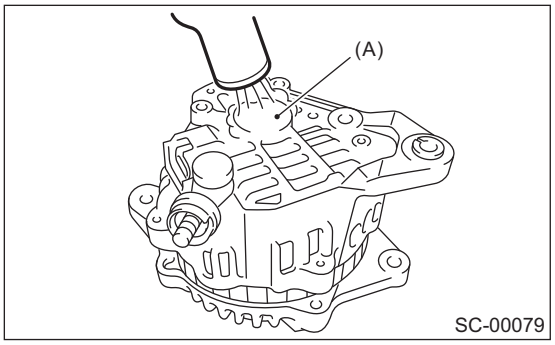


C: DISASSEMBLY

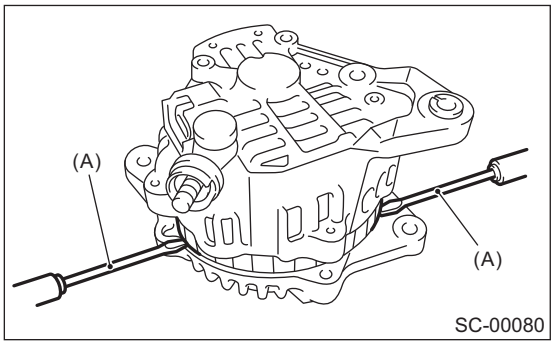
1) Remove the four through-bolts.



2) Use a drier to heat the rear cover (A) portion to 50°C (122°F).



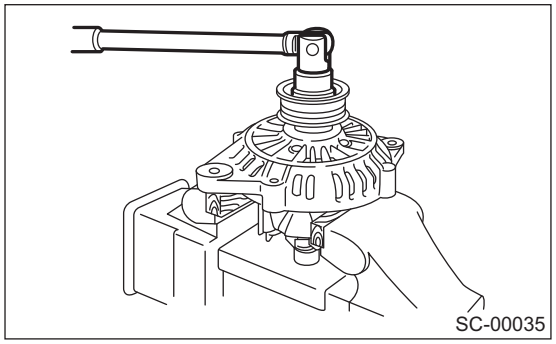
3) Insert the end of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

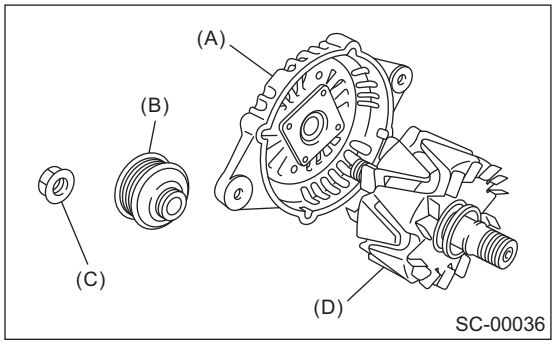


(A) Screwdriver

4) Using a vise, support the rotor and remove the pulley nut, then remove the rotor from the front cover.

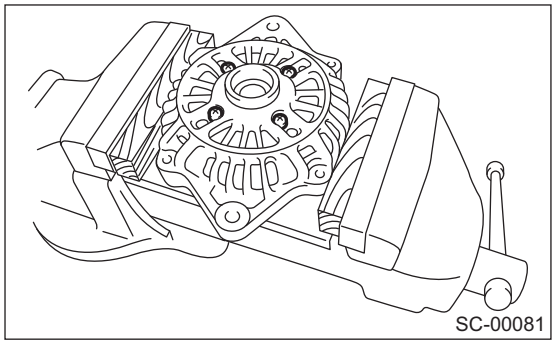
CAUTION:
When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.



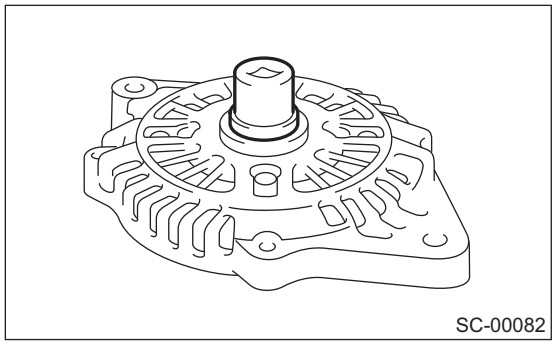


(A) Front cover
(B) Pulley
(C) Pulley nut
(D) Rotor

5) Use the following procedures to remove the ball bearings.
(1) Remove the bolt, and then detach the bearing retainer.



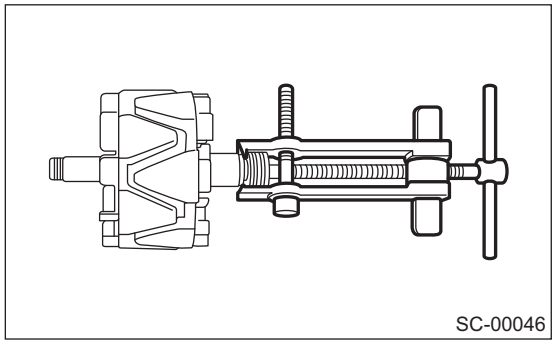
(2) Firmly attach an appropriate tool (such as a correct size socket wrench) to the bearing inner race.



SC-00082

(3) Use the press to push the ball bearings out from the front cover.

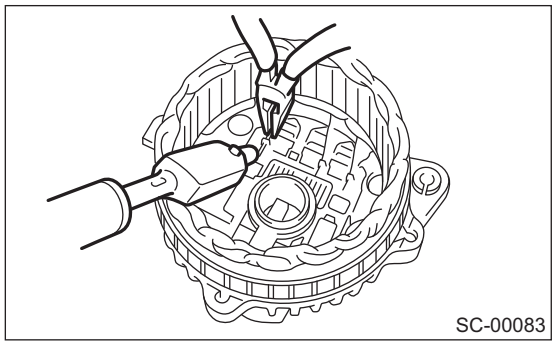
6) Using the bearing puller, remove the bearings from the rotor.



SC-00046

7) Disconnect the connection between the rectifier and stator coil, then remove the stator coil.

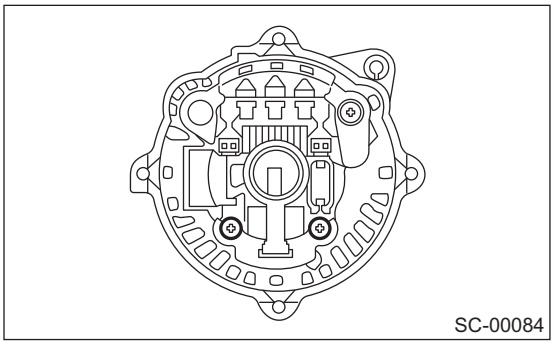
CAUTION:
The rectifier is easily damaged by heat. Do not allow a 180 — 270 W soldering iron to contact the terminals for 5 seconds or more at a time.



SC-00083

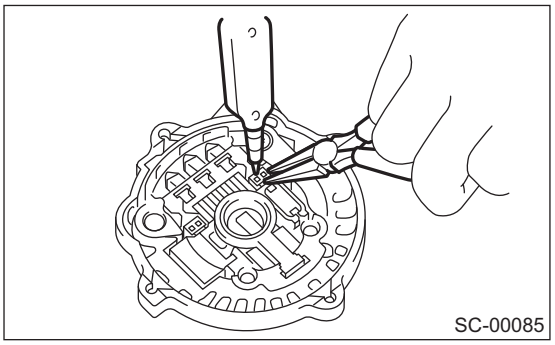
8) Use the following procedures to remove the IC regulator.

(1) Remove the screws which secure the IC regulator to the rear cover.



SC-00084

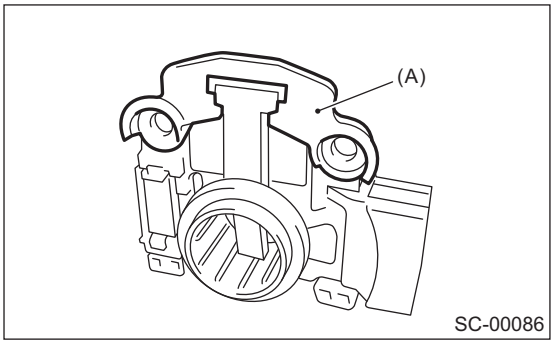
(2) Disconnect the connection between the IC regulator and rectifier, then remove the IC regulator.



SC-00085

9) Use the following procedures to remove the brush.

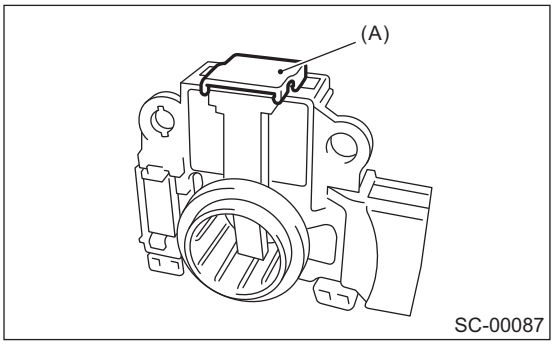
(1) Remove the cover A.



SC-00086

(A) Cover A

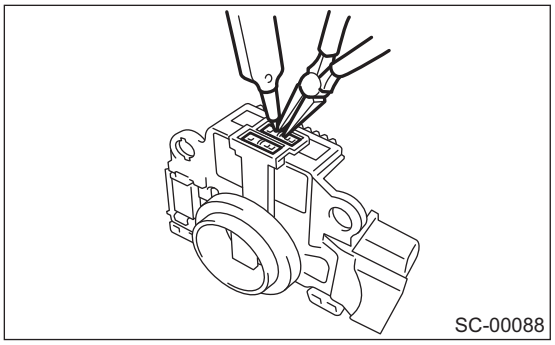
(2) Remove the cover B.



SC-00087

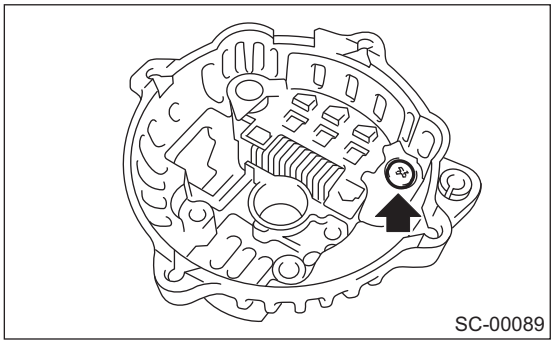
(A) Cover B

(3) Disconnect the connection and remove the brush.



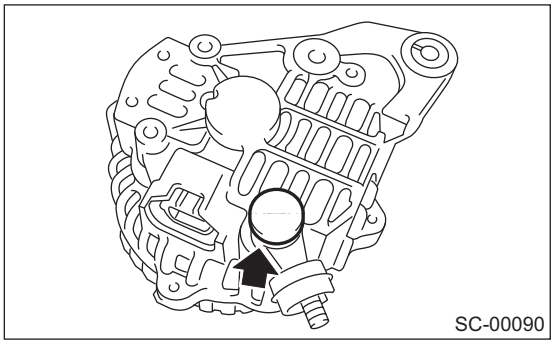
SC-00088

10) Remove the rectifier as follows.
(1) Remove the bolts which secure the rectifier.



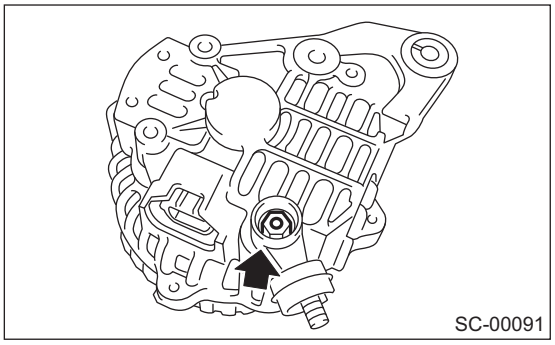
SC-00089

(2) Remove the cover on terminal B.



SC-00090

(3) Remove the nuts of terminal B, then remove the rectifier.



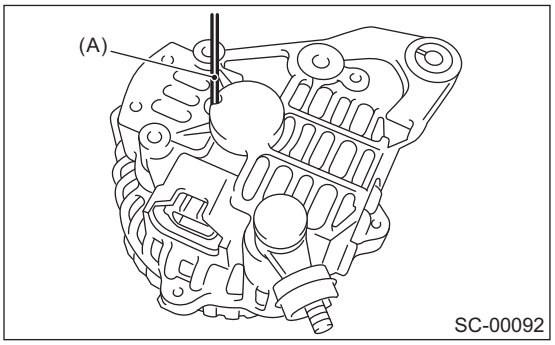
SC-00091

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:
• Refer to component for tightening torque of each part. <Ref. to SC(STI)-4, GENERATOR, COMPONENT, General Description.>
• After assembling, manually turn the pulley to check that the rotor rotates smoothly.
1) Push of the brush
Before assembling the front and rear parts, press the brush down into the brush holder, then fix the brush in that position by inserting a [1 mm (0.04 in) dia., 40 — 50 mm (1.6 — 2.0 in) long] wire through the hole as shown in the figure.

CAUTION:
After assembling, remove the wire.



SC-00092

(A) Wire

2) Install the ball bearings.
(1) Set the ball bearings in the front cover, then securely install an appropriate tool (such as a socket wrench of proper size) to the bearing outer race.
(2) Using a press to press the ball bearings into the specified location.
(3) Install the bearing retainer.
3) Install the bearings.

CAUTION:
Do not apply grease to the bearings. If there is any oil on the bearing box, remove it completely.

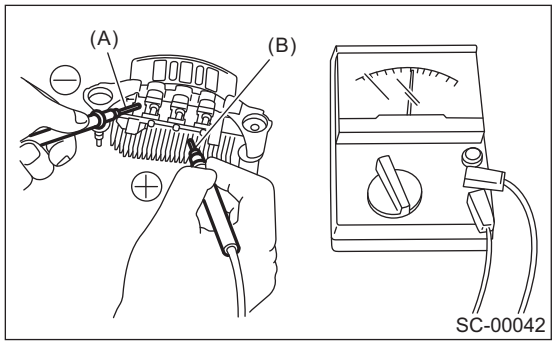
(1) Use a press to install the bearings to the rotor shaft.
(2) Heat the bearing box in rear cover at 50 to 60°C (122 to 140°F), and then press the bearing into rear cover.

E: INSPECTION

1. DIODE

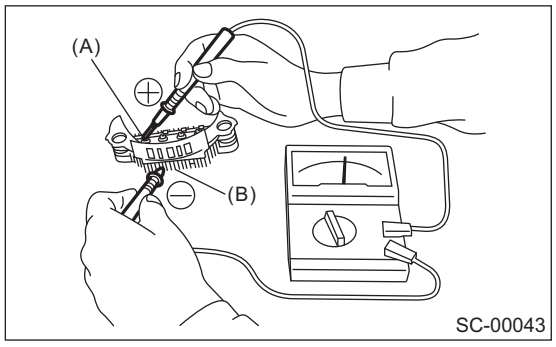
CAUTION:
There is the possibility of damaging the diodes if a mega-tester (used to measure high voltages) or a similar measuring instrument is used. Never use a mega tester or equivalent for this test.

1) Check for continuity between the diode lead and positive side heat sink. If resistance is 1 Ω or more only in the direction from the diode lead to the heat sink, replace the rectifier.



(A) Diode lead
(B) Heat sink (positive side)

2) Check for continuity between the negative side heat sink and diode lead. If resistance is 1 Ω or more only in the direction from the heat sink to the diode lead, replace the rectifier.



(A) Diode lead
(B) Heat sink (negative side)

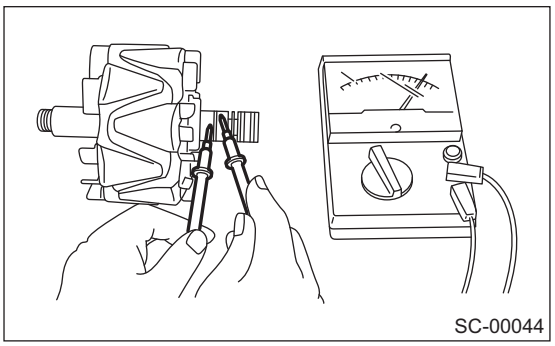
2. ROTOR

1) Inspect the slip rings for contamination or any roughness on the sliding surface. Repair the slip ring surface using a lathe or sand paper.
2) Measure the slip ring outer diameter. Replace the rotor if the slip ring is worn.

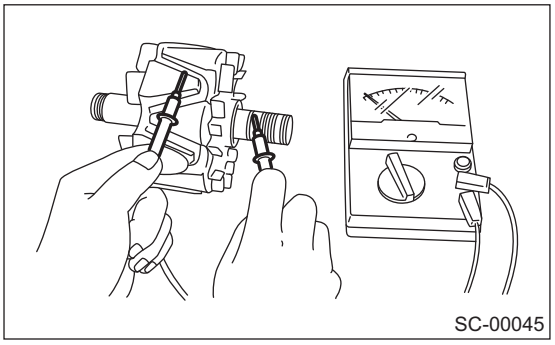
Slip ring outer diameter:
Standard
22.7 mm (0.894 in)
Limit
22.1 mm (0.870 in)

3) Using a circuit tester, check the resistance between slip rings. If resistance exceeds the standard, replace the rotor.

Standard:
Approx. 1.8 — 2.2 Ω



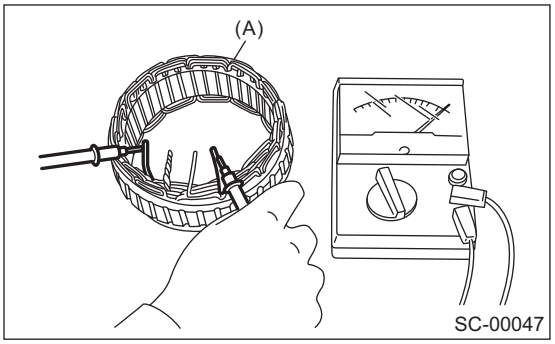
4) Check the continuity between slip ring and rotor core or shaft. If there is continuity, replace the rotor because the rotor coil is grounded.



5) Check the bearings. If there is any noise, or the rotor does not rotate smoothly, replace the bearings.

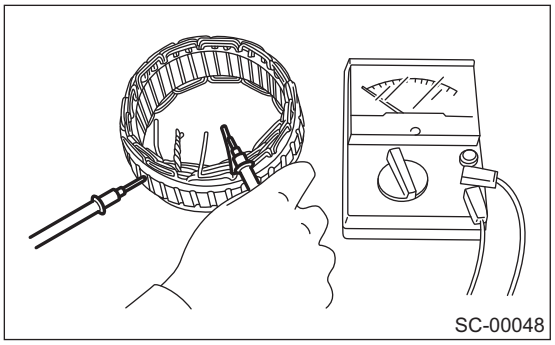
3. STATOR COIL

1) Inspect continuity between the stator coil lead wire terminals. If the resistance is 1 MΩ or more, replace the stator coil.



(A) Stator coil

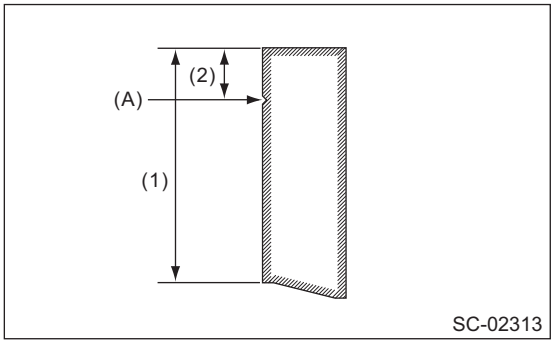
2) Inspect the continuity between the stator coil stator core and lead wire terminals. If the resistance is 1 Ω or less, replace the stator coil.



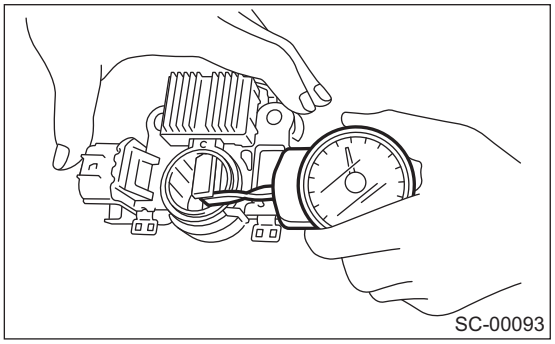
4. BRUSH

1) Measure the length of each brush. Replace the brush if wear exceeds service limits. There is a service limit mark (A) on each brush.

Brush length:
Standard (1)
18.5 mm (0.728 in)
Limit (2)
5.0 mm (0.197 in)



2) Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is 2.648 N (270 g, 9.52 oz) or less, replace the brush spring with a new part. 4.609 — 5.786 N (470 — 590 g, 16.58 — 20.810 oz) pressure is required on the new spring.



5. BALL BEARING

Check the ball bearings. Replace the ball bearings if there is resistance in the rotation, or if there is any abnormal noise.

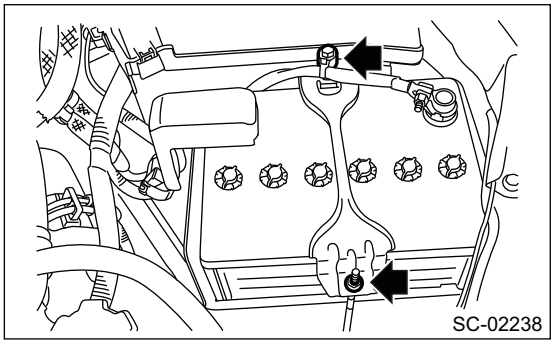
6. OTHER INSPECTIONS

Check that the generator does not have deformation, cracks and any other damage.

4. Battery

A: REMOVAL

1) Disconnect the positive (+) terminal after disconnecting the negative (-) terminal of battery.
2) Remove the harness clip of the negative terminal from the battery rod.
3) Remove the flange nut from battery rod and remove battery holder.



4) Remove the battery.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Battery holder
3.5 N·m (0.4 kgf-m, 2.6 ft-lb)
Positive terminal
6 N·m (0.6 kgf-m, 4.4 ft-lb)
Ground terminal
6 N·m (0.6 kgf-m, 4.4 ft-lb)

NOTE:
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (-) terminal of the battery.
- After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

C: INSPECTION

WARNING:
- **As batteries produce flammable gases, be careful not to bring an open flame close to the batteries.**
- **Ventilate sufficiently when using or charging battery in enclosed space.**
- **Electrolyte is corrosive acid, and has toxicity; be careful of handling the fluid.**
- **For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. In addition, never lean over the battery.**
- **Be careful that the electrode does not come into contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.**
- **Be careful not to let the electrode contact with the coated parts.**
- **Before starting work, remove rings, metal watch-bands, and other metal jewelry.**
- **Be careful not to let the metal tools contact the positive battery terminal and anything connected to it. When the operation using a metal tool to the positive terminal or anything connected to it is required, disconnect the battery ground terminal before starting the operation.**

1. APPEARANCE

Check the battery case, top cover and terminal posts for dirt or cracks, and perform the following work as necessary.
- Clean the battery with water and wipe with a dry cloth.
- Apply a thin coat of grease on the terminal posts to prevent corrosion.

Check

- ***Normal → Go to the check item 2.***
- ***Abnormal → Replace the battery.***

2. ELECTROLYTE LEVEL

Check the electrolyte level in each cell.

CAUTION:
Do not fill beyond MAX level.

NOTE:
If the level is below the middle point between MIN level and MAX level, pour distilled water into the battery cell to bring the level to MAX.

Check

- ***MAX level → Go to the check item 3.***
- ***Below the middle point between MIN level and MAX level → Fill → Go to the check item 3.***

3. SPECIFIC GRAVITY OF ELECTROLYTE

Check the specific gravity of the electrolyte using a hydrometer and a thermometer.

NOTE:
- Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following calculation:

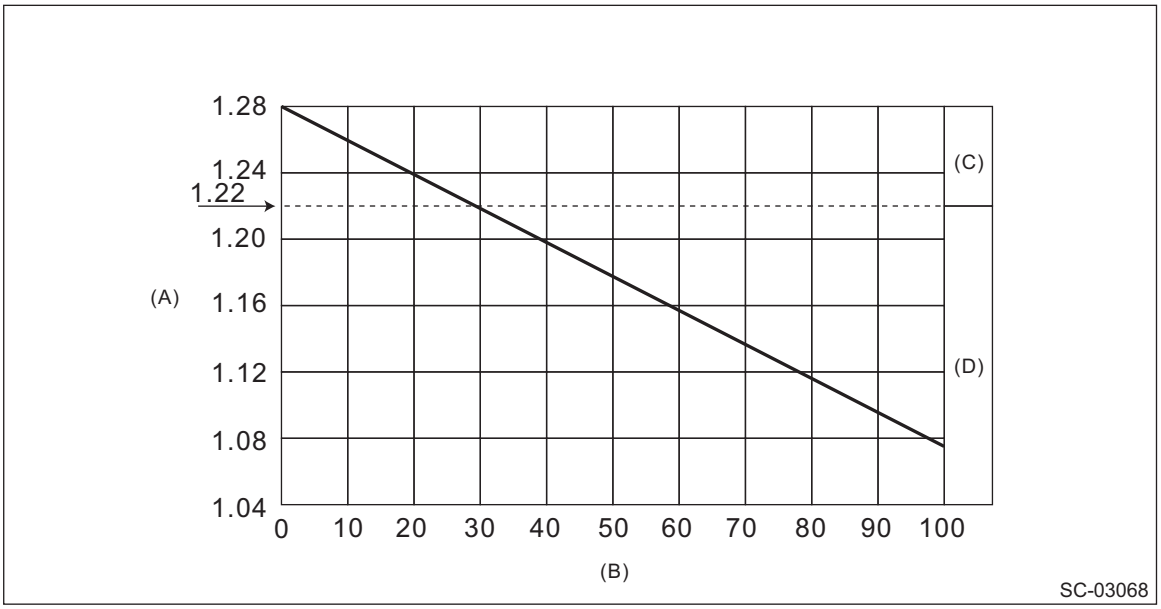
S_{20} = St + 0.0007 × (t – 20)
S_{20}: Specific gravity corrected at electrolyte temperature of 20°C
St: Measured specific gravity
t: Measured temperature (°C)

- When measuring in a simplified manner using the battery terminal voltage, calculate the specific gravity by the following formula.

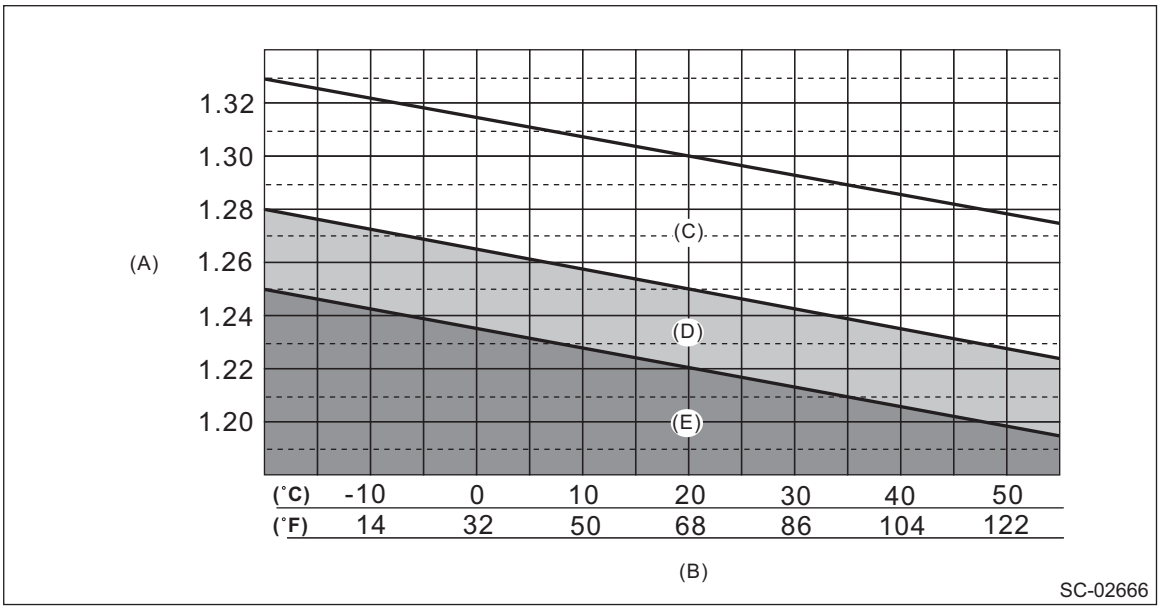
Specific gravity = [0.187 × battery terminal voltage (V)] – 1.1

Perform the steps 1) and 2) before measuring the voltage in order to stabilize the voltage.
1) Turn the ignition switch to OFF and illuminate the headlight for 30 seconds.
2) After turning off the headlight, leave the vehicle for one minute.

• Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.



(A) Specific gravity [20°C (68°F)] (B) Amount of discharge (%) (C) Good
(D) Need to charge or replace



(A) Specific gravity [20°C (68°F)] (B) Electrolyte temperature (C) Good
(D) Caution (E) Need charging

Check

- ***Specific gravity: 1.250 — 1.290, and difference between cells is 0.04 or less → Battery is normal***
- ***Specific gravity: Less than 1.250, or difference between cells is 0.04 or more → Battery needs to be charged or replaced***

4. STANDBY CURRENT

1) Prepare the circuit tester which can measure down to 1 mA.

NOTE:
For model with keyless access function, the standby current changes regularly. Therefore, prepare the analog type circuit tester.
2) Using the circuit tester, check the standby current.

NOTE:
The standby current may be displayed lower than the actual value if the battery is weak, so be sure to check the battery. Charge or replace if necessary.

(1) Check the battery. <Ref. to SC(STI)-24, APPEARANCE, INSPECTION, Battery.> <Ref. to SC(STI)-25, ELECTROLYTE LEVEL, INSPECTION, Battery.> <Ref. to SC(STI)-25, SPECIFIC GRAVITY OF ELECTROLYTE, INSPECTION, Battery.>
(2) Check that the fuse is not blown out and is properly inserted.
(3) When non-genuine electrical parts (including parts sold in authorized workshops) are installed, remove all parts except for genuine electrical parts.
(4) Check that back-up fuse is inserted. <Ref. to PI-5, FUSE, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
(5) Start the engine, and set the switch positions for each system as shown in the following table.

NOTE:
Some of the listed systems are not equipped depending on the vehicle. Set only the systems equipped on the vehicle to the positions as shown.

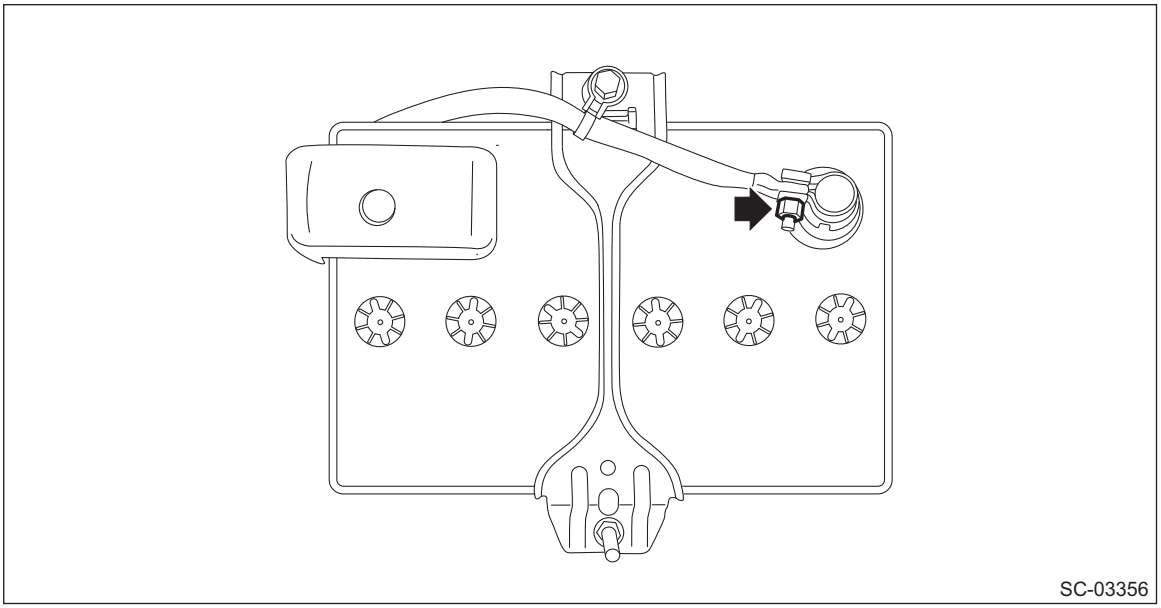
System	Position
Headlight	ON or Auto
Fog light	ON
Wiper (front and rear)	ON or Low speed
Audio and navigation system	ON
Rear defogger	ON
Room light	DOOR
Luggage light	DOOR
Map light	OFF
Auto A/C	ON (AUTO)
Manual A/C	ON (Speed 1)
Electronic parking brake	ON
Electrical parts other than listed above (electrical parts that users can confirm the operation with the key removed)	OFF

(6) Turn the ignition switch to OFF.
(7) Operate the front hood lock release lever to unlock the front hood.
(8) Close all the doors (including rear gate and trunk lid) and then lock the doors. (Security alarm is in set condition)

NOTE:
For model with keyless access function, take the access key 1.5 m or more away from the vehicle after the door lock. And do not put the access key close to the vehicle while measuring the standby current.

(9) Wait for 5 minutes after door lock until the standby current stabilizes.
(10) Loosen the nut which holds the negative terminal to the battery.

NOTE:
Do not remove the negative terminal.

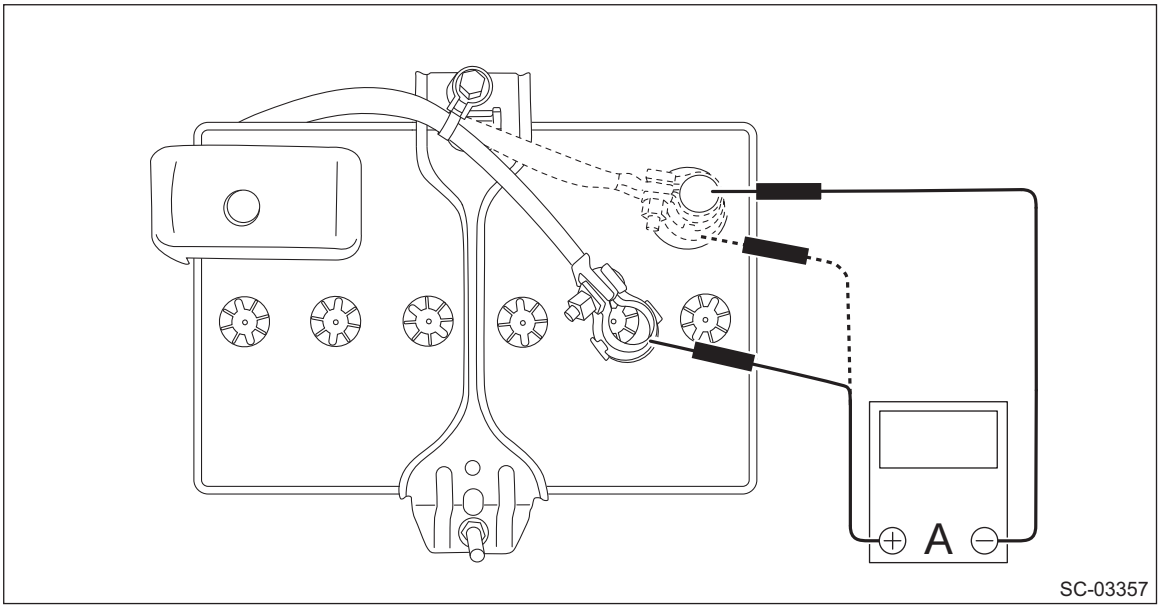


(11) Connect the circuit tester positive terminal to the negative terminal.

NOTE:
To prevent the damage to the circuit tester, set the circuit tester range to a large value first, then gradually change it to smaller values.

(12) Connect the circuit tester negative terminal to the negative terminal installation part of the battery.

(13) While connecting the circuit tester positive terminal with the negative terminal as shown in the figure below, remove the negative terminal from the battery.

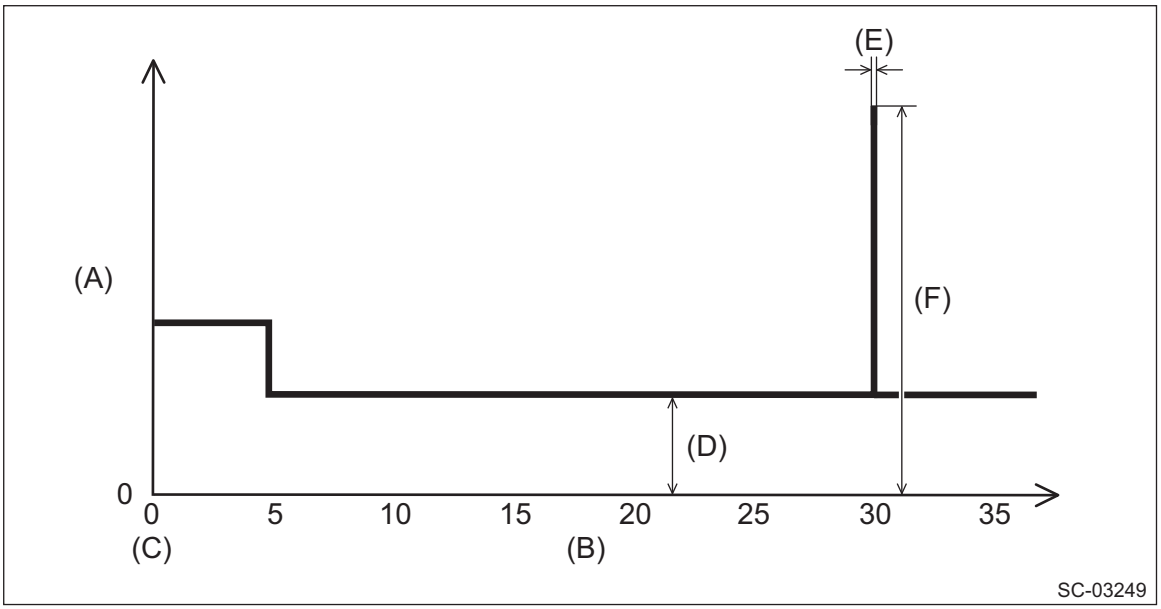


(14) Check the standby current.

CAUTION:
If the circuit tester is disconnected from any terminal during standby current check, reconnect the ground terminal of the battery and restart the procedure back in the step (9).

NOTE:
• For model with keyless access function, the standby current changes periodically because the keyless access system continuously searches the access key (polling).

• When measuring the standby current, the reading of the circuit tester oscillates. Therefore, read the average value (median value).
• The standby current may become large when the vehicle system is activated 5 times at 30-minute intervals or 5 hours after turning the ignition switch to OFF. Therefore, the measurement should be completed in 20 minutes after turning the ignition switch to OFF. If it takes more than 20 minutes, start the engine and turn the ignition switch to OFF again before performing the inspection.



(A) Current/mA
(B) Time/min
(C) Ignition OFF
(D) Less than 70 mA
(E) 5 seconds (system operation)
(F) 300 mA or more

Check

- ***When the maximum measurement value is less than 70 mA → Standby current is normal.***
- ***When the maximum measurement value is 70 mA or more → Go to step (15).***
  (15) Remove all fuses one by one to identify which system changes the standby current value significantly. <Ref. to WI-20, Fuse And Relay.>
  (16) Check the harness and connector of the system whose standby current has changed significantly.

D: CHARGE

WARNING:
• Do not bring an open flame close to the battery when working.

CAUTION:
• Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.
• Be careful while charging the battery because it produces flammable gasses.
• Observe instructions when handling the battery charger.
• Before charging the battery on the vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical units.

1. NORMAL CHARGE (CONSTANT CURRENT CHARGE)

Charge the battery with the current value specified by manufacturer or with approximately 1/10 of battery's rating capacity. (See the table below.)

Type	Charging current (A)	CCA (A)
75D23L	5.0 — 6.0	470

CAUTION:
• The charge control feature and specifications for judgment of charge completion depend on the device. Follow the instruction manual of the charger used.
• Keep the electrolyte temperature at 45°C (113°F) or less while charging. Stop charging when the temperature exceeds this value.

NOTE:
The characteristics of typical charging methods are as follows.
• Constant current charging
This method makes it easy to charge to 100%, since the electrolyte is agitated by the gassing occurred at the end of charging. However, the time for charging is comparatively long because the current value is kept constant.
• Constant voltage charging
This method completes charging in a short period of time due to the large current. However, it is difficult to charge to 100% because no gassing occurred at the end of charging and the electrolyte is not agitated. Therefore, the combined use with the constant current charging is preferable.
• Quasi-constant voltage charging
This method is widely used for commercially available chargers.
Compared to the constant voltage charging whose charging current at the beginning of charging becomes large, it reduces the charging current by lowering the voltage at the initial stage, resulting in battery load reduction. The time for charging is comparatively long. However, this type of chargers can be manufactured comparatively inexpensive due to the simple control circuit (or manual settings). After the initial stage of charging is completed, it gradually raises the charging voltage so that the charging current is within the specification, until the battery is fully charged.
• Constant voltage/current charging
In addition to the constant voltage charging, this method controls the upper limit of the current.
The constant current charging is applied at the beginning of charging, and the constant voltage charging is applied at the end. This makes battery charge comparatively efficient in a short period of time. Charging by generators is similar to this method.
Judgment of charge completion
1) Specific gravity of electrolyte should be held within the specific range of 1.250 — 1.290 for one hour or more.
2) Voltage while charging should be held within the specified range of 15.0 — 16.8 V for one hour or more.
3) Gas is actively generated in all cells.
4) The amount of charge reaches 1.2 — 1.5 times of the amount of discharge.

NOTE:
The amount of discharge/charge can be calculated by the following formula.
Amount of discharge (Ah) = Remaining capacity (%) calculated by specific gravity × 5 hour rate capacity (Ah)
Amount of charge (Ah) = Charging current value (A) × Time for charging

2. QUICK CHARGING

Charge the battery in a short period of time with a relatively large current by using a quick charger.
Charge the battery with the current value at approximately 1/2 of battery's rating capacity. (See the table below.)

CAUTION:
• Quick charging is accompanied by a large amount of heat generation. Charging should be completed in up to 30 minutes regardless of battery size.
• Quick charging is used to recover the battery until it can start the vehicle. For full charging, use the normal charging method.
• Keep the electrolyte temperature at 55°C (131°F) or less while quick charging. Stop charging when the temperature exceeds this value.

Type	Charging current (A)	CCA (A)
75D23L	24.0 — 29.0	470

1. Basic Diagnostic Procedure

A: PROCEDURE

1. ENGINE

	Step	Check	Yes	No
1	**CHECK ENGINE START FAILURE.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(STI)(diag)-3, CHECK, Check List for Interview.> 2) Start the engine.	Does the engine start?	Go to step **2**.	Inspection using "Diagnostics for Engine Starting Failure". <Ref. to EN(STI)(diag)-88, Diagnostics for Engine Starting Failure.>
2	**CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT.** Check the lighting condition of the malfunction indicator light.	Does the malfunction indicator light illuminate?	Go to step **3**.	Inspection using "General Diagnostic Table". <Ref. to EN(STI)(diag)-697, General Diagnostic Table.>
3	**CHECK COMMUNICATION STATUS.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor or general scan tool to the data link connector. 3) Turn the ignition switch to ON, and run the Subaru Select Monitor or general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to the "Subaru Select Monitor". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Does Subaru Select Monitor or general scan tool communicate with vehicle normally?	Go to step **4**.	Inspection using "Diagnostic Procedure for Subaru Select Monitor Communication". <Ref. to EN(STI)(diag)-105, Diagnostic Procedure for Subaru Select Monitor Communication.>
4	**CHECK DTC.** Read DTC using Subaru Select Monitor or general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is DTC displayed on Subaru Select Monitor or general scan tool?	Record DTC and freeze frame data, then repair the trouble cause. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).> After repair, go to the next step. Go to step **5**.	Repair the related parts. NOTE: If DTC is not shown on display although the malfunction indicator light illuminates, perform the diagnosis of malfunction indicator light circuit or combination meter. <Ref. to EN(STI)(diag)-81, Malfunction Indicator Light.>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Perform the Inspection Mode or Drive Cycle. <Ref. to EN(STI)(diag)-51, Inspection Mode.> <Ref. to EN(STI)(diag)-58, Drive Cycle.>	Is DTC displayed on Subaru Select Monitor or general scan tool?	Inspect using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-117, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. CHECK LIST NO. 1

Check the following item when problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name		Engine No.	
Date of purchase		Fuel type	
Date of repair		Odometer reading	km
V.I.N.			miles
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Various/Others:		
Ambient air temperature	°C (°F)		
	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Place	❑ Highway ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Others:		
Engine temperature	❑ Cold ❑ Warming-up ❑ After warming-up ❑ Any temperature ❑ Others:		
Engine speed	rpm		
Vehicle speed	km/h (MPH)		
Driving conditions	❑ Not affected ❑ At starting ❑ While idling ❑ At racing ❑ While accelerating ❑ While cruising ❑ While decelerating ❑ While turning (RH/LH)		
Headlight	❑ ON/❑ OFF	Rear defogger	❑ ON/❑ OFF
Blower	❑ ON/❑ OFF	Audio	❑ ON/❑ OFF
A/C compressor	❑ ON/❑ OFF	Rear entertainment system	❑ ON/❑ OFF
Radiator fan	❑ ON/❑ OFF	Car phone	❑ ON/❑ OFF
Front wiper	❑ ON/❑ OFF	Wireless device	❑ ON/❑ OFF
Rear wiper	❑ ON/❑ OFF		
Type of engine oil			
• Grade • Viscosity			
Use of additives (engine oil): ❑ Yes / ❑ No			
• Parts			
Refueling of wrong fuel: ❑ Yes / ❑ No			

• Date of refueling • Type of fuel
Refueling at a gas station that is not usually used: ❑ Yes / ❑ No
• Date of refueling • Type of fuel
Use of additives (fuel): ❑ Yes / ❑ No
• Parts

2. CHECK LIST NO. 2

Check the following items about the vehicle's state when the malfunction indicator light turns on and DTC is recorded.

NOTE:
Use copies of this page for interviewing customers.

a) Other warning lights or indicators illuminate: ❑ Yes / ❑ No
❑ Fuel level warning light ❑ Charge warning light ❑ Engine coolant temperature warning light ❑ Oil pressure warning light ❑ ATF temperature warning light or Sport indicator light ❑ Driver's control center differential indicator light ❑ ABS warning light ❑ VDC warning light ❑ Cruise indicator light ❑ SI-CRUISE warning light ❑ Immobilizer indicator light ❑ STEERING warning light ❑ Electronic parking brake warning light ❑ Glow indicator light ❑ Sedimenter warning light ❑ Others:
b) Fuel level
• Lack of fuel: ❑ Yes / ❑ No • Indicator position of fuel gauge: • Experienced running out of fuel: ❑ Yes / ❑ No
c) Intentional connecting or disconnecting of connectors or spark plug cords: ❑ Yes / ❑ No
• What:
d) Intentional connecting or disconnecting of hoses: ❑ Yes / ❑ No
• What:
e) Installing of other parts except genuine parts: ❑ Yes / ❑ No
• What: • Where:
f) Occurrence of noise: ❑ Yes / ❑ No
• From where: • What kind:
g) Occurrence of smell: ❑ Yes / ❑ No
• From where: • What kind:
h) Intrusion of water into engine compartment or passenger compartment: ❑ Yes / ❑ No
i) Troubles occurred

Check List for Interview

- ❑ Engine does not start.
- ❑ Engine stalls during idling.
- ❑ Engine stalls while driving.
- ❑ Engine speed decreases.
- ❑ Engine speed does not decrease.
- ❑ Rough idling
- ❑ Poor acceleration
- ❑ Back fire
- ❑ After fire
- ❑ Does not shift.
- ❑ Excessive shift shock

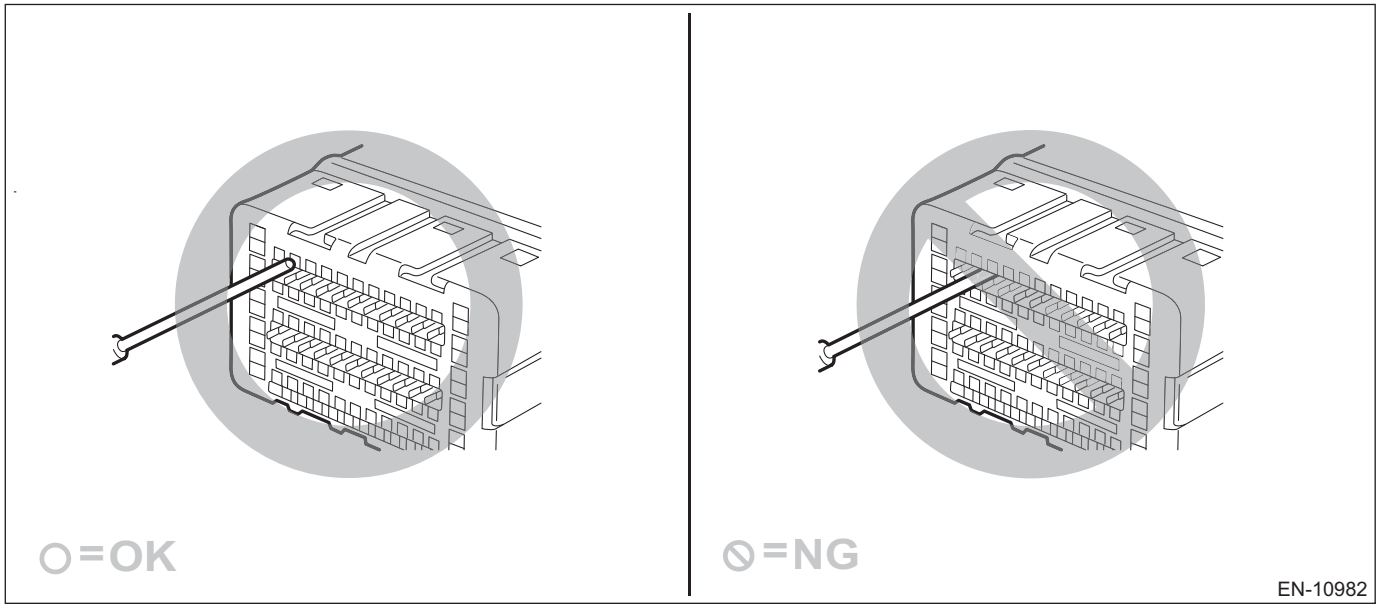
3. General Description

A: CAUTION

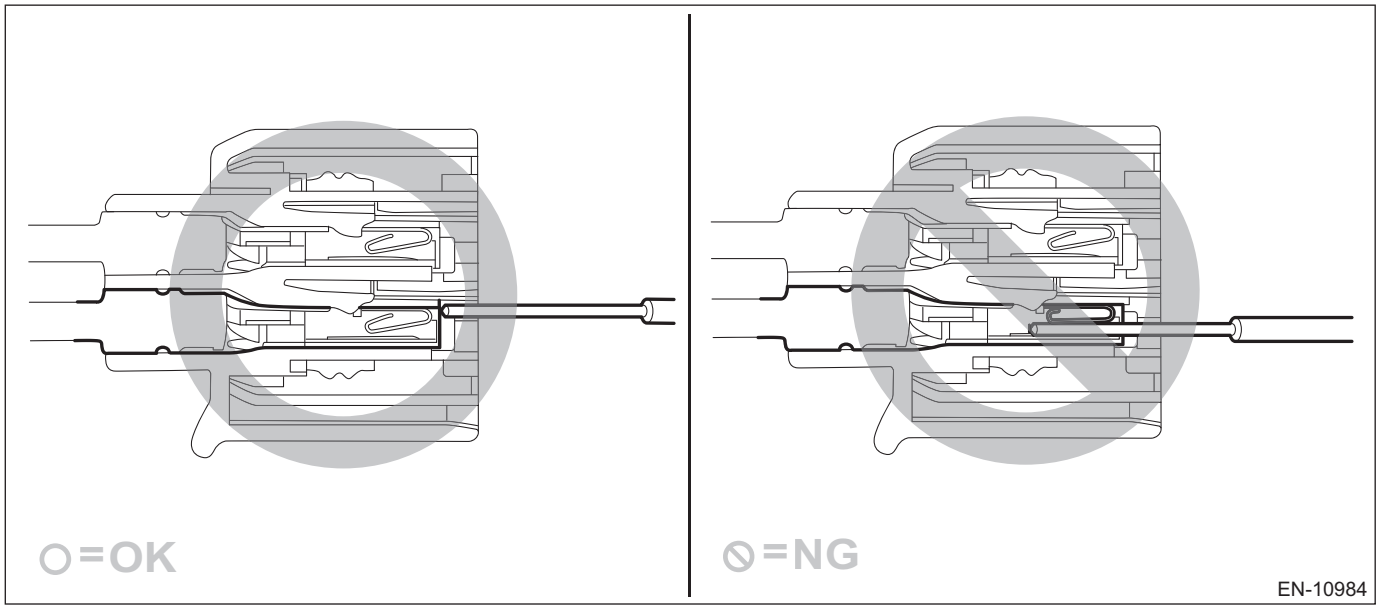
1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:
- **Do not use electrical test equipment on the airbag system circuits.**
- **Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.**

2) Never connect the battery in reverse polarity. Doing so will damage the ECM instantly, and other parts will also be damaged.
3) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM etc.
4) When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF. Perform the Clear Memory Mode after connecting the connectors. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
5) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal.

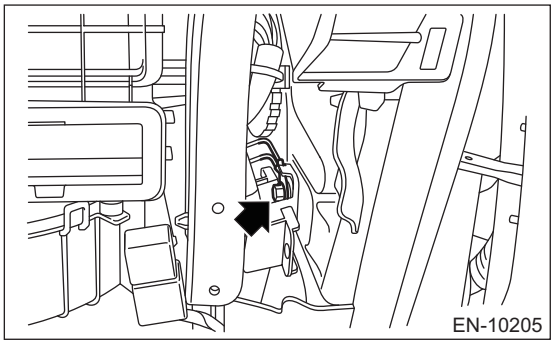


Never insert the tapered pin into the terminal because it deforms inside which may lead to a malfunction.



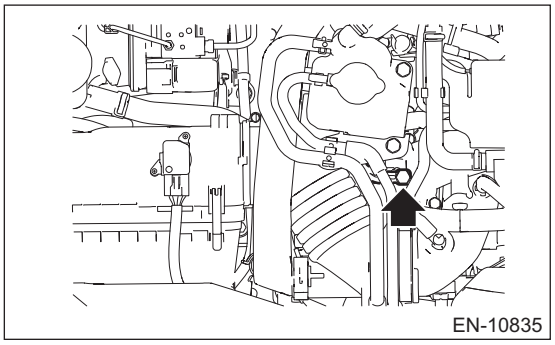
CAUTION:
When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

NOTE:
When replacing the ECM of the models with immobilizer, immobilizer system must be registered. For detailed operation procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
6) Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.
7) Use the ground terminal of the bulkhead harness for the grounding point when measuring voltage and resistance inside the passenger compartment.



EN-10205

8) Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.



EN-10835

9) All parts related to the engine control system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.
10) Observe the following cautions when installing a radio in vehicle.

CAUTION:
• The antenna must be kept as far apart as possible from the ECM. <Ref. to EN(STI)(diag)-10, CONTROL MODULE, LOCATION, Electrical Component Location.>
• The antenna feeder must be placed as far apart as possible from the ECM and engine control system harness.
• Carefully adjust the antenna for correct matching.
• When mounting a large power type radio, pay special attention to the three items mentioned above.
• Incorrect installation of the radio may affect the operation of ECM.
11) When disconnecting the fuel hose, be sure to release the fuel pressure beforehand. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
12) Warning lights may illuminate when performing driving test with jacked-up or lifted-up condition, but this is not a system malfunction. The reason for this is the rotating speed difference between the front and rear wheels. After diagnosis of engine control system, perform the VDC memory clear procedure of self-diagnosis function. <Ref. to VDC(diag)-30, Clear Memory Mode.>

B: INSPECTION

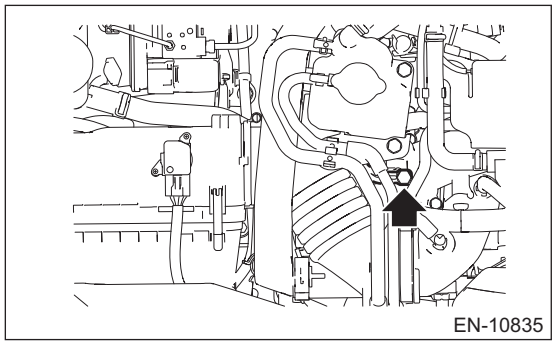
Before performing diagnostics, check the following item which might affect engine problems.

1. BATTERY

1) Check the battery voltage. <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND

Make sure that the engine ground terminal is properly connected to the engine.



C: NOTE

• The on-board diagnostic (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
• Further, against any failure of sensors that would cause the vehicle to stop running, the fail-safe function is provided to ensure the minimal drivability.
• The OBD system incorporated with the vehicles within this type of engine complies with OBD-II regulations. The OBD system monitors the components and the system malfunction listed in “Engine Section” which affects on emissions.
• When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
• The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction.
• Freeze frame engine condition data are stored until the DTCs are cleared. However when such malfunctions as fuel trim fault and misfire are detected with the freeze frame engine condition data stored, they are rewritten into those related to the fuel trim fault and misfire.
• When the malfunction does not occur again for three consecutive driving cycles*, malfunction indicator light is turned off, but DTC remains at on-board computer.
*: One driving cycle means the period between the ignition switch ON and the ignition switch OFF after driving.
• When performing diagnosis, connect the Subaru Select Monitor or general scan tool to the vehicle.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499987500	499987500	CRANKSHAFT SOCKET	Used for rotating crankshaft.

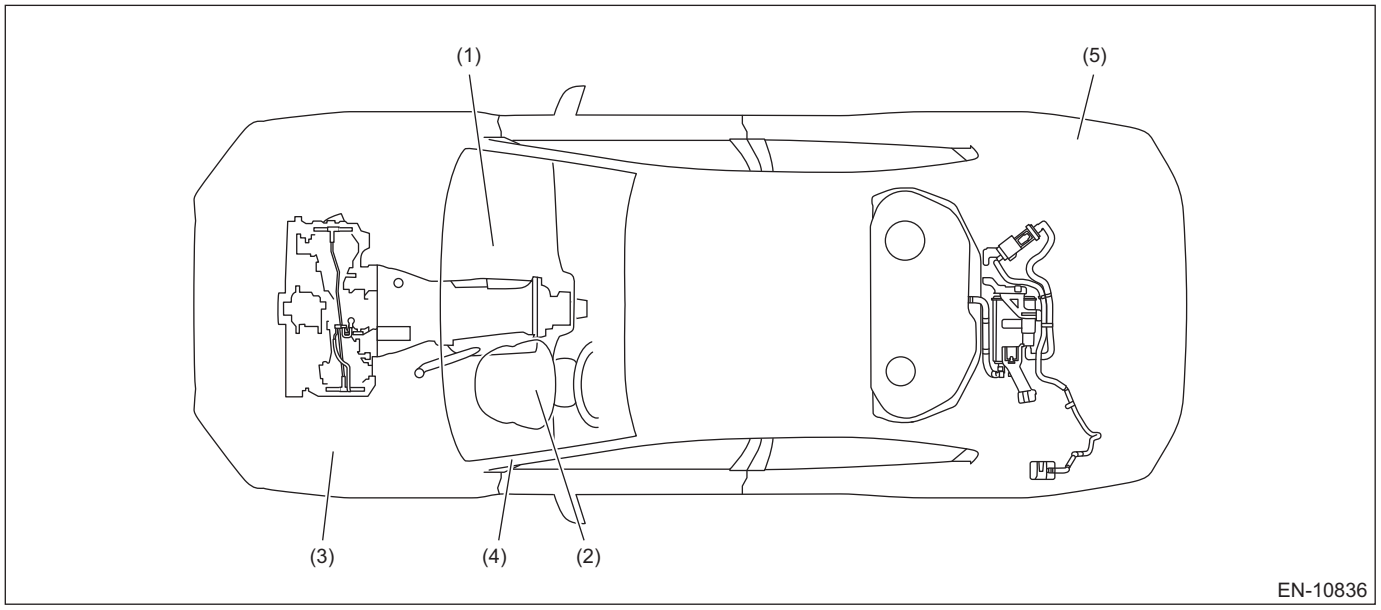
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION

1. CONTROL MODULE



(1) Engine control module (ECM)

Measuring condition:

NOTE:
- Perform measurement after warming up the engine.
- For measurement of the waveform of the crankshaft position sensor, we recommend using the DST-i oscilloscope function or a general oscilloscope.
- Place the gear shift lever in the neutral position.
- Turn the A/C to OFF.
- Turn all the accessory switches to OFF.
- Waveforms vary depending on a measurement environment and vehicle condition.

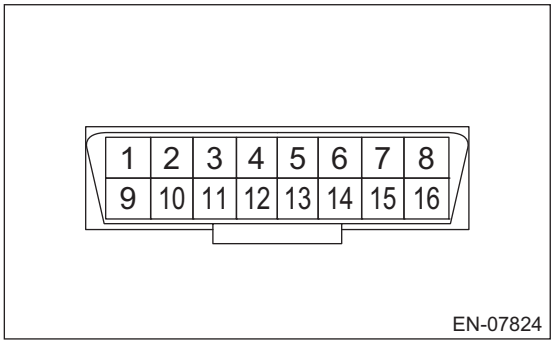
6. Data Link Connector

A: NOTE

This connector is used for Subaru Select Monitor.

CAUTION:
Do not connect any scan tools other than Subaru Select Monitor or general scan tool because the circuit for Subaru Select Monitor may be damaged.



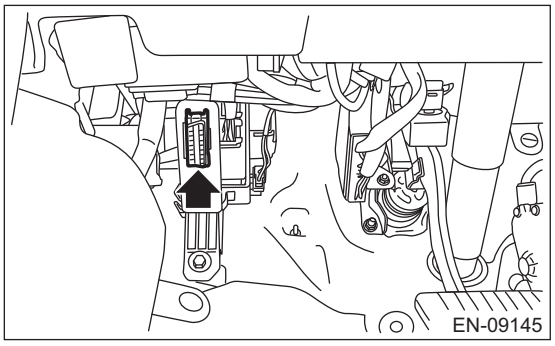
Terminal No.	Contents	Terminal No.	Contents
1	Blank	9	Blank
2	Blank	10	Blank
3	Blank	11	Blank
4	Ground	12	Blank
5	Ground	13	Blank
6	CAN communication (Hi)	14	CAN communication (Lo)
7	Subaru Select Monitor signal	15	A/B batch operation
8	IG	16	Power supply

7. General Scan Tool

A: OPERATION

1. HOW TO USE GENERAL SCAN TOOL

1) Prepare a scan tool (general scan tool) required by SAE J1978.
2) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side).



3) Using the general scan tool, call up each data. General scan tool functions consist of:
   (1) MODE $01: Current powertrain diagnostic data
   (2) MODE $02: Powertrain freeze frame data
   (3) MODE $03: Emission-related powertrain DTC
   (4) MODE $04: Clear/Reset emission-related diagnostic information
   (5) MODE $06: Request on-board monitoring test results for intermittently monitored systems
   (6) MODE $07: Initial emission-related powertrain DTC
   (7) MODE $08: Request control for on-board system, test, and component
   (8) MODE $09: Request vehicle information
   (9) MODE $0A: Emission-related DTC (with Permanent Status)
4) Read out the data according to repair procedures. (For detailed operation procedures, refer to the general scan tool operation manual.)

NOTE:
For details concerning DTC, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit
$01	Number of emission-related powertrain DTC, and malfunction indicator light status and diagnosis support information	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	°C
$06	Short term fuel trim	%
$07	Long term fuel trim	%
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH
$0E	Ignition timing advance	°
$0F	Intake air temperature	°C
$10	Intake air amount	g/s
$11	Throttle valve absolute opening angle	%

PID	Data	Unit
$12	Secondary air control status	—
$13	Check whether oxygen sensor is installed.	—
$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor	V and %
$1C	Supporting OBD system	-
$1F	Elapsed time after starting the engine	sec
$21	Running distance after MIL turns on	miles
$24	A/F value and A/F sensor output voltage	— and V
$2E	Evaporative purge	%
$2F	Fuel level	%
$30	Number of warm ups after DTC clear	Time
$31	Travel distance after DTC clear	miles
$33	Barometric pressure	kPa
$34	A/F value and A/F sensor current (bank 1 sensor 1)	— and mA
$3C	Catalyst temperature #1	°C
$41	Diagnostic monitor of each drive cycle	—
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%
$46	Ambient temperature	°C
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$4D	Engine operation time during MIL on	min
$4E	Elapsed time after DTC clear	min
$51	Fuel used	—
$53	ELCM pressure	kPa
$5A	Relative accelerator opening angle	%
$62	Actual engine illustrated torque	%
$63	Engine reference torque	Nm
$65	Neutral status	—
$8E	Engine friction torque	%
$9D	Engine fuel consumption and vehicle fuel consumption	g/s
$9E	Engine exhaust flow	kg/h
$A6	Vehicle Odometer	km

NOTE:
Refer to general scan tool manufacturer's operation manual to access current powertrain diagnostic data (MODE $01).

3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit
$02	DTC that caused freeze frame data to be stored	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	°C
$06	Short term fuel trim	%
$07	Long term fuel trim	%

PID	Data	Unit
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH
$0E	Ignition timing advance	°
$0F	Intake air temperature	°C
$10	Intake air amount	g/s
$11	Throttle valve absolute opening angle	%
$12	Secondary air control status	—
$13	Air fuel ratio sensor	—
$15	Rear oxygen sensor voltage, compensation value	V and %
$1F	Elapsed time after starting the engine	sec
$2E	Evaporative purge	%
$2F	Fuel level	%
$33	Barometric pressure	kPa
$34	A/F value and A/F sensor current (bank 1 sensor 1)	— and mA
$3C	Catalyst temperature #1	°C
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%
$46	Ambient temperature	°C
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$65	Neutral status	—

NOTE:
Refer to general scan tool manufacturer's operation manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to "List of Diagnostic Trouble Code (DTC)" for information about data denoting emission-related powertrain DTC. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

NOTE:
Refer to the manufacturer's operation manual for the general scan tool to clear the emission-related diagnostic information (MODE $04).

6. MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS)

Refer to diagnostic value of troubleshooting and data of test limit indicated on the support data bit sequence table. A list of the support data is shown in the following table.

NOTE:
- Subaru Select Monitor

For detailed operation procedures, refer to "Application help".
- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.
- Some items are not displayed according to the specifications.

- Measurement items for each DTC of “VVT Monitor Bank 1” and “VVT Monitor Bank 2”

A list of the measurement items is shown in List 2. (Used to check on-board monitor test results of DTC P000A, P000B, P000C, P000D, P0011, P0014, P0016, P0017, P0018, P0019, P0021 and P0024.)
List 1

OBDMID	TID	SID	Diagnostic item
$01	$84	$1E	A/F sensor range failure (Bank 1 Sensor 1)
	$85	$1E	
	$91	$20	A/F sensor response failure (Bank 1 Sensor 1)
	$92	$10	
	$A3	$20	
	$A4	$10	
	$AC	$10	
	$AD	$10	
	$AE	$10	
	$AF	$10

	$0C	$24	
$A3	$0B	$24	Misfire monitoring (#2 cylinder)
	$0C	$24	
$A4	$0B	$24	Misfire monitoring (#3 cylinder)
	$0C	$24	
$A5	$0B	$24	Misfire monitoring (#4 cylinder)
	$0C	$24	

List 2

OBDMID	TID	SID	Diagnostic item		
$35	$8B	$9D	+	Intake air	VVT Monitor Bank 1
	$8C	$9D	-		
	$8D	$9D	+	Exhaust	
	$8E	$9D	-		
$36	$8B	$9D	+	Intake air	VVT Monitor Bank 2
	$8C	$9D	-		
	$8D	$9D	+	Exhaust	
	$8E	$9D	-		

7. MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC)

Refer to the data of DTC (pending code) for troubleshooting result about emission in the first time.

8. MODE $08 (REQUEST CONTROL FOR ON-BOARD SYSTEM, TEST, AND COMPONENT)

Perform “Active Test” of the on-board system.

9. MODE $09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

10.MODE $0A (EMISSION-RELATED DTC (WITH PERMANENT STATUS))

Refer to “List of Diagnostic Trouble Code (DTC)” for information about data denoting emission-related DTC.
<Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

8. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

NOTE:
For detailed operation procedures, refer to “Application help”.

2. DISPLAY CURRENT ENGINE DATA (NORMAL MODE)

NOTE:
- For detailed operation procedures, refer to “Application help”.
- A list of the support data is shown in the following table.
- *: For models without cruise control, the brake switch signal does not change.

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

Display	Contents	Note (at idling)	Unit
Calculated LOAD Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	21	%
Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	80 — 100 or 176 — 212	°C or °F
Short Term Fuel Trim-Bank1	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	–10 — +10	%
Long Term Fuel Trim-Bank1	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	–15 — +15	%
Intake Manifold Absolute Pressure	Value calculated from the manifold pressure sensor.	220 — 275, 29.5 — 37, 8.7 — 10 or 4.2 — 5.3	mmHg, kPa, inHg or psig
Engine RPM	Value calculated from crankshaft position sensor output value.	630 — 770 (agree with tachometer indication)	rpm
Vehicle Speed	Value calculated from vehicle speed sensor output value.	0 (when stopped)	km/h or MPH
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	10 — 15	deg
Intake Air Temperature	Value calculated from the intake air temperature sensor output value.	20 — 50 or 68 — 122	°C or °F
Mass Air Flow	Value calculated from air flow sensor output value.	2.1 — 3.1 or 0.35 — 0.4	g/s or lb/m
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	2 — 2.4	%
Rear O2 Sensor Voltage	Rear oxygen sensor output value. Input value to ECM.	0 — 1	V
ECU ACC	ECM input power supply voltage.	12 — 15 V	V
Air Flow Sensor Voltage	Air flow sensor output value. Input value to ECM.	1 — 1.7	V
Fuel Injection #1 Pulse	Control value of fuel injection time for the RH bank by ECM.	1.2 — 2.2	ms
Atmospheric Pressure	Value calculated from atmospheric pressure sensor output value.	—	mmHg, kPa, inHg or psig
Mani. Relative Pressure	Value calculated from manifold pressure sensor output value. (Absolute value) (Air intake absolute pressure – Atmospheric pressure)	Mani. Absolute Pressure – Atmospheric Pressure	mmHg, kPa, inHg or psig

Display	Contents	Note (at idling)	Unit
Learned Ignition Timing	Ignition timing learning value. Advance angle amount or retard angle amount when knocking occurs.	0	deg
Accelerator Opening Angle	Accelerator pedal opening angle (in percentage) calculated from accelerator pedal position sensor output value.	0	%
Primary Control	Boost pressure control value. Control duty ratio of the boost pressure control solenoid valve. ECM output value.	0	%
CPC Valve Duty Ratio	Control duty ratio of the purge control solenoid valve. ECM output value.	0 — 25	%
TGV Position Sensor R	Tumble generator valve position sensor RH output value. Input value to ECM.	0.81	V
TGV Position Sensor L	Tumble generator valve position sensor LH output value. Input value to ECM.	0.81	V
Fuel Pump Duty	Fuel pump duty ratio. Supply voltage to the fuel pump is under a duty control by the ECM. This value shows the duty ratio. While the amount of fuel supply is small, such as during idling, the duty value is lowered to decrease the supply voltage.	30 — 40	%
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	±5	deg
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	±5	deg
OCV Duty R	Control duty ratio of the intake side oil control solenoid on the RH bank. ECM output value.	0 — 20	%
OCV Duty L	Control duty ratio of the intake side oil control solenoid on the LH bank. ECM output value.	0 — 20	%
OCV Current R	Actual current value of the intake side oil control solenoid on the RH bank. Input value to ECM.	40 — 100	mA
OCV Current L	Actual current value of the intake side oil control solenoid on the LH bank. Input value to ECM.	40 — 100	mA
A/F Sensor #1 Current	Front oxygen (A/F) sensor output current value. Input value to ECM.	–20 — 20	mA
A/F Sensor #1 Resistance	Value calculated from the front oxygen (A/F) sensor output value.	27 — 35	Ω
A/F Sensor #1	Actual lambda value calculated from the front oxygen (A/F) sensor output value.	1	—
A/F Correction #3	Sub correction value of A/F feedback control.	0	%
A/F Learning #3	Sub learning value of A/F feedback control.	0	%
SI Drive mode(Display)	SI-DRIVE mode status. ECM output value. Displayed only on models with SI-DRIVE.	I, S or S#	—
Throttle Motor Duty	Throttle motor control duty ratio. ECM output value.	–5	%
Throttle Motor Voltage	Power supply voltage of the throttle motor. Input value to ECM.	12 — 15	V
Sub-Throttle Sensor	Voltage value of the sub throttle position sensor. Input value to ECM.	1.5	V
Main-Throttle Sensor	Voltage value of the main throttle position sensor. Input value to ECM.	0.6	V

Display	Contents	Note (at idling)	Unit
Sub-Accelerator Sensor	Voltage value of the sub accelerator pedal position sensor. Input value to ECM.	1.1	V
Main-Accelerator Sensor	Voltage value of the main accelerator pedal position sensor. Input value to ECM.	1	V
Sec. Air Piping Pressure	Secondary air supply piping pressure value.	765, 102, 30.1 or 14.8	mmHg, kPa, inHg or psig
Sec. Air Flow	Secondary airflow volume.	0	g/s or lb/m
Memorized Cruise Speed	Cruise control system target vehicle speed. (Set speed)	—	km/h or MPH
Fuel level resistance	Fuel level sensor resistance value. Input value to ECM.	20 — 400	Ω
Odometer	Value of the total cumulative travel distance that ECM calculates from the vehicle speed separately from the odometer in the combination meter. Small difference from the odometer will be possible, but if there is a big difference, ECM or the combination meter may need to be replaced.	—	km
Exh. VVT Retard Ang. R	AVCS actual retard angle amount for the RH bank on the exhaust side.	±5	deg
Exh. VVT Retard Ang. L	AVCS actual retard angle amount for the LH bank on the exhaust side.	±5	deg
Exh. OCV Duty R	Control duty ratio of the exhaust side oil control solenoid on the RH bank. ECM output value.	0 — 20	%
Exh. OCV Duty L	Control duty ratio of the exhaust side oil control solenoid on the LH bank. ECM output value.	0 — 20	%
Exh. OCV Current R	Actual current value of the exhaust side oil control solenoid on the RH bank. Input value to ECM.	40 — 100	mA
Exh. OCV Current L	Actual current value of the exhaust side oil control solenoid on the LH bank. Input value to ECM.	40 — 100	mA
Roughness Monitor #1	#1 cylinder roughness monitor count value.	0	—
Roughness Monitor #2	#2 cylinder roughness monitor count value.	0	—
Roughness Monitor #3	#3 cylinder roughness monitor count value.	0	—
Roughness Monitor #4	#4 cylinder roughness monitor count value.	0	—
Ignition Control Check 1	Detailed status of the engine ignition control information.	0	—
VVT Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	30	° CA
VVT Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	31	° CA
VVT Ex Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	78.5	° CA

Display	Contents	Note (at idling)	Unit
VVT Ex Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	77	° CA
D-check Require Flag	Forced operation of solenoid. Set to “ON” when an activation of compulsory adjusting function for engine speed or for A/F is requested.	OFF	—
Delivery Mode Connector	Delivery mode terminal fuse installation status. Shows the status of delivery mode.	OFF	—
Neutral switch	Neutral switch signal. Signal when in neutral (MT) or in P or N range (AT). Input value to ECM.	Neutral	—
Idle Switch Signal	Idle signal. Set to “Idle” while idling.	Idle	—
Ignition SW	Ignition switch signal. Set to “ON” when the ignition switch is ON.	ON	—
P/S Switch	Power steering switch signal. Set to “ON” when the steering is operated. (Model without electric power steering)	OFF (when OFF)	—
A/C Switch	Air conditioner switch signal. Set to “ON” when the air conditioner switch of the heater control is ON. Input value to ECM.	OFF (when OFF)	—
Starter Switch	Starter switch signal. Set to “ON” when the starter is ON. Input value to ECM.	OFF	—
Rear O2 Rich Signal	Rear oxygen sensor output value. Displays “Rich” when the air fuel ratio of rear oxygen sensor is rich. Displays “Lean” when the air fuel ratio of rear oxygen sensor is lean.	Rich/Lean	—
Knocking Signal	Knock sensor output signal. Judges if a knocking occurs or not. Input value to ECM.	OFF	—
Crankshaft Position Sig.	Crankshaft position sensor output signal. Set to “ON” when the engine is running. Input value to ECM.	ON	—
Camshaft Position Sig.	Camshaft position sensor output signal. Set to “ON” when the engine is running. Input value to ECM.	ON	—
Rear Defogger SW	Rear defogger switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Blower Fan SW	Blower fan switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Light Switch	Light switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Wiper Switch	Wiper switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—

Display	Contents	Note (at idling)	Unit
A/C Compressor Signal	A/C compressor drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #1	Radiator fan relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #2	Radiator fan relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Blow-by leak Connector	PCV hose assembly diagnosis signal.	Connection	—
TGV Output	Drive signal to tumble generator valve motor. Set to “ON” when the tumble generator valve is activated (when the duty output is other than 0%). ECM output value.	OFF	—
TGV Drive	Tumble generator valve drive status. Set to “Open” when the tumble generator valve is open. ECM control status.	Close	—
CPC Solenoid 2	Drive status of the evaporative purge solenoid located upstream of the throttle, equipped with turbo models. ECM output value.	OFF (when OFF)	—
Ban of Torque Down VDC	Torque down prohibition notification signal to the vehicle dynamics control (VDC) module. Set to “OFF” when the prohibition signal is output. ECM output value.	ON	—
Request Torque Down VDC	Torque down request signal transmitted from the vehicle dynamics control (VDC) module. Set to “ON” when the request signal is sent. Vehicle dynamics control (VDC) module input value.	OFF	—
ETC Motor Relay	Drive signal to the electronic throttle motor relay. Set to “ON” when the drive signal is output. ECM output value.	ON	—
Clutch switch	Clutch switch signal. Set to “ON” when the clutch switch is ON. (MT model)	OFF (when OFF)	—
Stop Light Switch	Stop light switch signal. Set to “ON” when the stop light illuminates. Input value to ECM.	OFF (when OFF)	—
SET/COAST Switch	Cruise control system SET/COAST SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
RESUME/ACCEL Switch	Cruise control system RESUME/ACCEL SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
Brake Switch	Brake switch signal. Set to “ON” when the brake pedal is depressed. Input value to ECM.	OFF (when OFF)	—
Main switch	Cruise control system main switch signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
Sec. Air Combi V Relay 2	Secondary air combination valve relay 2 drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Sec. Air Pump Relay	Secondary air pump drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
Sec. Air Combi V Relay 1	Secondary air combination valve relay 1 drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—

Display	Contents	Note (at idling)	Unit
CC Cancel SW	Cruise control cancel switch signal of the cruise control system. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
MIL Status	Malfunction indicator light illumination status.	OFF (when light OFF)	—
ELCM switching valve	Leak check valve assembly switching valve drive signal. Set to “Close” when closing the switching valve. ECM output value.	Open	—
ELCM pump	Leak check valve assembly pump drive signal. Set to “ON” when the leak check valve assembly decompression pump is activated. ECM output value.	OFF	—
Target Engine Speed	ECM target engine speed.	700	rpm
Increasing Rate	Increase rate of injector injection amount.	0	%
Target No. of EGR steps	Number of EGR target steps.	0	STEP
Duty	Output duty value of the wastegate solenoid.	0	%

3. DISPLAY CURRENT ENGINE DATA (OBD MODE)

NOTE:
- For detailed operation procedures, refer to “Application help”.
- A list of the support data is shown in the following table.

Display	Contents	Note (at idling)	Unit
Number of DTCs	The number of trouble codes recorded in the ECM.	0	—
MIL Status	Malfunction indicator light illumination status.	OFF	—
Misfire monitoring(Supp)	Support status of the misfire diagnosis.	YES	—
Misfire monitoring(Rdy)	Status of the misfire diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Fuel system monitoring(Supp)	Support status of the fuel system diagnosis.	YES	—
Fuel system monitoring(Rdy)	Status of the fuel system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Component monitoring(Supp)	Support status of the component diagnosis.	YES	—
Component monitoring(Rdy)	Status of the component diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Catalyst Diagnosis(Supp)	Support status of the catalyst diagnosis.	YES	—
Catalyst Diagnosis(Rdy)	Status of the catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Heated catalyst(Supp)	Support status of the heated catalyst diagnosis.	NO	—
Heated catalyst(Rdy)	Status of the heated catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Supp)	Support status of the evaporative purge system diagnosis.	YES	—
Evaporative purge system(Rdy)	Status of the evaporative purge system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Secondary air system(Supp)	Support status of the secondary air system diagnosis.	YES	—

Display	Contents	Note (at idling)	Unit
Secondary air system(Rdy)	Status of the secondary air system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
A/C system refrigerant(Supp)	Support status of the A/C system refrigerant diagnosis.	NO	—
A/C system refrigerant(Rdy)	Status of the A/C system refrigerant diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor(Supp)	Support status of the oxygen sensor diagnosis.	YES	—
Oxygen sensor(Rdy)	Status of the oxygen sensor diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
O2 Heater Diagnosis(Supp)	Support status of the oxygen sensor heater diagnosis.	YES	—
O2 Heater Diagnosis(Rdy)	Status of the oxygen sensor heater diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
EGR system(Supp)	Support status of the EGR diagnosis.	NO	—
EGR system(Rdy)	Status of the EGR diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	Cl_normal	—
Load Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	15.3	%
Engine Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	96 or 204.8	°C or °F
A/F Correction #1	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	0.8	%
A/F Learning #1	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	1.6	%
Intake Manifold Absolute Pressure	Value calculated from the manifold pressure sensor.	32, 240.1, 9.5 or 4.6	kPa, mmHg, inHg or psig
Engine RPM	Value calculated from crankshaft position sensor output value.	675	rpm
Vehicle speed	Value calculated from vehicle speed sensor output value.	0	km/h or MPH
Ignition timing cyl. #1	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	5.5	deg
Intake Air Temperature	Value calculated from the intake air temperature sensor output value.	50 or 122	°C or °F
Mass Air Flow	Value calculated from air flow sensor output value.	2.5 or 0.3	g/s or lb/m
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	13	%
Secondary air system	Secondary air control status.	Stop	—
Oxygen sensor #12	Rear oxygen sensor output voltage value.	0.7	V
O2 Sensor #11	Installation status of the front oxygen (A/F) sensor.	Support	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	Support	—
Short term fuel trim #12	Air fuel ratio correction control value of the rear oxygen sensor.	0	%

Display	Contents	Note (at idling)	Unit
OBD System	Shows the OBD regulation to be followed. This is the information recorded in the ECM, and it does not mean that the unit automatically judges the compliance to the OBD regulations.	OBD/OBD2	—
Time Since Engine Start	Elapsed time after starting the engine.	—	sec
Distance Traveled While MIL is Illuminated	Travel distance after the warning light illuminated.	—	km or mile
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	0.951	—
A/F Sensor #11	Front oxygen (A/F) sensor output voltage.	2.468	V
Commanded Evaporative Purge	Evaporative purge rate displayed by the OBD.	0	%
Fuel Level	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	—	%
Number of Warm-ups since DTC(s) cleared	Number of warm ups after DTC clear. 1 cycle is the time from the cold start till warmed up and stop. (Engine start after a warm-up is not counted.)	—	times
Distance traveled since DTC(s) cleared	Travel distance after DTC clear.	—	km or mile
Atmospheric Pressure	Value calculated from atmospheric pressure sensor output value.	101, 757.7, 29.8 or 14.6	kPa, mmHg, inHg or psig
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	1.001	—
A/F Sensor #11	Front oxygen (A/F) sensor current value.	2.193	V
Catalyst Temperature #11	Estimated temperature of the front catalytic converter.	305.1 or 581.2	°C or °F
Misfire monitoring(Enable)	Shows whether or not the execution condition of misfire diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Misfire monitoring(Comp)	Shows whether or not the continuous misfire diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Fuel system monitoring(Enable)	Shows whether or not the execution condition of fuel system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Fuel system monitoring(Comp)	Shows whether or not the fuel system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Component monitoring(Enable)	Shows whether or not the execution condition of component diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	NO	—
Component monitoring(Comp)	Shows whether or not the component diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—

Display	Contents	Note (at idling)	Unit
Catalyst Diagnosis(Enable)	Shows whether or not the execution condition of catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Catalyst Diagnosis(Comp)	Shows whether or not the catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Heated catalyst monitoring	Shows whether or not the execution condition of heated catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Heated catalyst(Comp)	Shows whether or not the heated catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Enable)	Shows whether or not the execution condition of evaporative purge system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Evaporative purge system(Comp)	Shows whether or not the evaporative purge system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Secondary air system(Enable)	Shows whether or not the execution condition of the secondary air system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Secondary air system(Comp)	Shows whether or not the secondary air system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
A/C system refrigerant(Enable)	Shows whether or not the execution condition of A/C system refrigerant diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
A/C system refrigerant(Comp)	Shows whether or not the A/C system refrigerant diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor(Enable)	Shows whether or not the execution condition of oxygen sensor diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Oxygen sensor(Comp)	Shows whether or not the oxygen sensor diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—

O2 Heater Diagnosis(Enable)	Shows whether or not the execution condition of oxygen heater diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
O2 Heater Diagnosis(Comp)	Shows whether or not the oxygen heater diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
EGR system(Enable)	Shows whether or not the execution condition of EGR diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
EGR system(Comp)	Shows whether or not the EGR diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
ECU Voltage	ECM input power supply voltage.	14.176	V
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	21	%
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1.0 aiming at a theoretical air fuel ratio.	0.996	—
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	1.6	%
Ambient air temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	Ambient Air Temperature	°C or °F
Absolute Throttle Pos.#2	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	31	%
Accelerator Pedal Pos.#1	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	13	%
Accelerator Pedal Pos.#2	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	13	%
Target Throttle Opening Angle	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	0	%
Time while MIL lighted	Engine operating time from when the malfunction indicator light illuminated till when it went off.	—	min
Time since DTC(s) cleared	Elapsed time after DTC clear.	—	min
Type of fuel	Fuel information recorded in the ECM. Not the fuel information currently used.	GAS	—
Relative Accelerator Pedal Position	Accelerator opening angle with a full close point learning value taken into consideration.	0	%
MT gear status	Neutral condition. Information input from the neutral switch.	NEUT	—

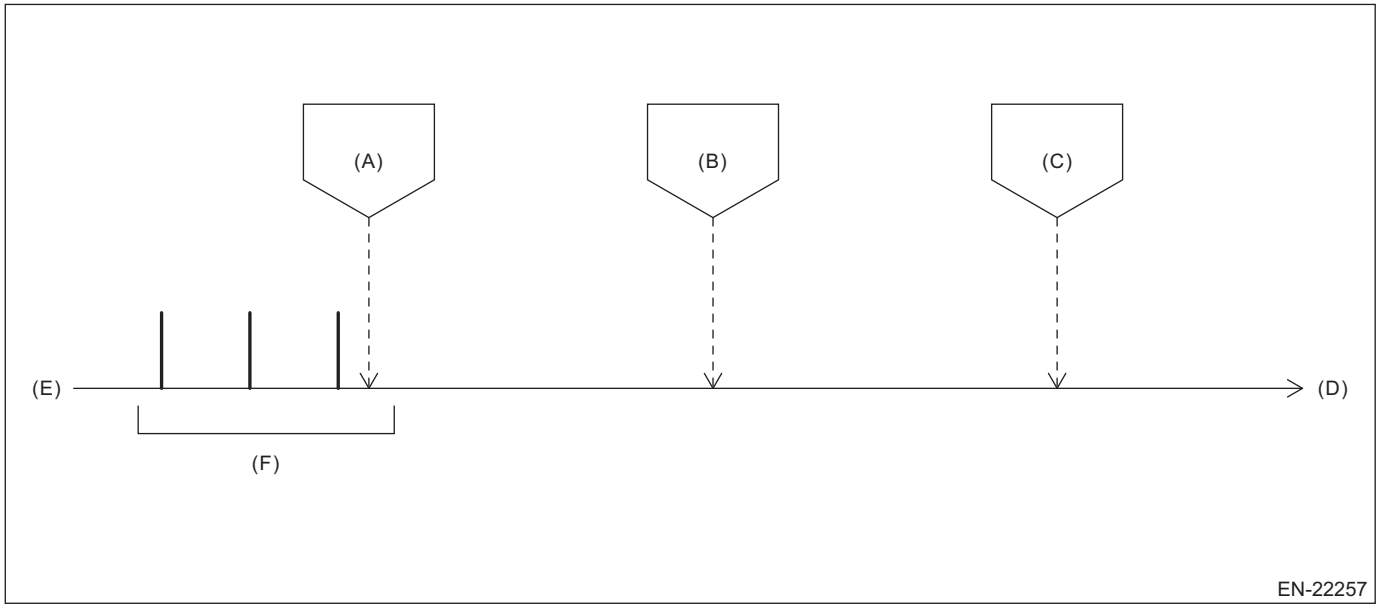
4. DISPLAY OF FREEZE FRAME DATA (OBD MODE)

1. Freeze frame data

ECM records engine condition at the time when DTC is detected. (Freeze frame data)
The freeze frame data is recorded for up to the second detected DTC, but not for the third detected DTC and later.

NOTE:

- The freeze frame data is recorded at the same time when DTC is detected, and therefore cannot be always monitored.
- Time-series freeze frame data is recorded for the first detected DTC.
- When performing diagnosis, you can utilize the freeze frame data to guess the vehicle status when the DTC was detected.
- For detailed operation procedures, refer to “Application help”.



(A)	First detected DTC	(C)	Third detected DTC or later	(E)	Past
(B)	Second detected DTC	(D)	Current	(F)	Time-series freeze frame data

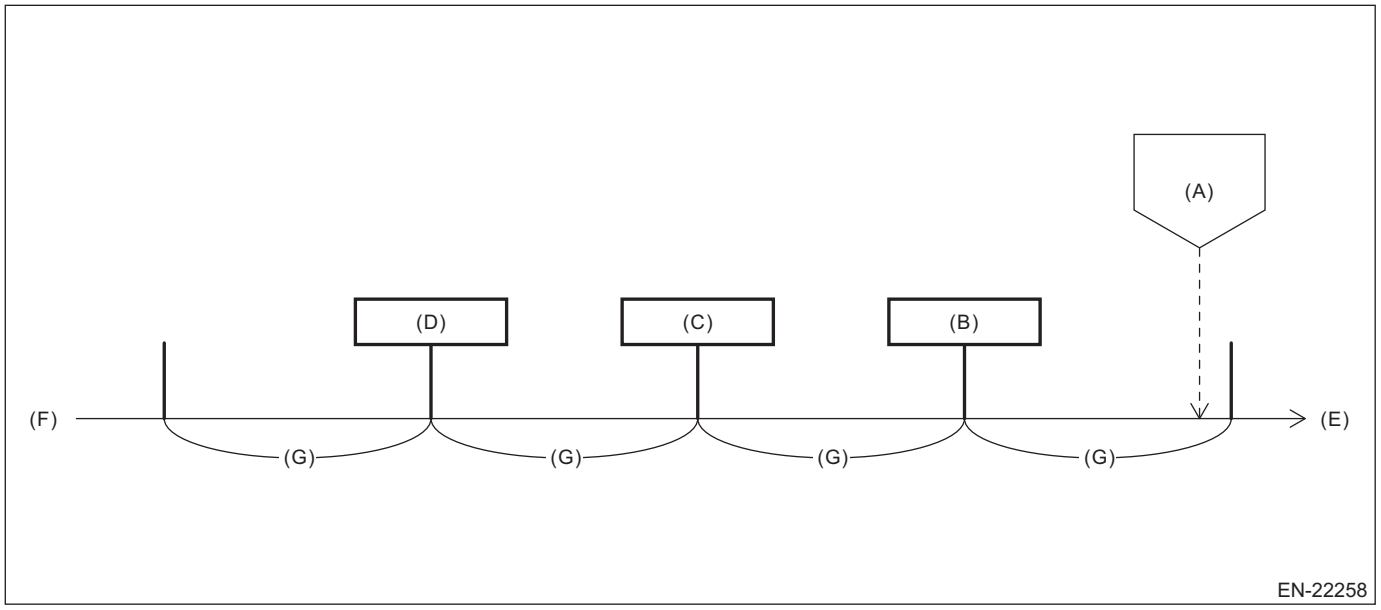
2. Time-series freeze frame data

ECM obtains the freeze frame data every 0.5 seconds, and when DTC is detected, the following freeze frame data are stored: «Detect», «1 block before», «2 blocks before», and «3 blocks before». (Time-series freeze frame data)

NOTE:

- When performing diagnosis, you can utilize the time-series freeze frame data to check data change status from DTC detection to three times before when the DTC was detected.

- For detailed operation procedures, refer to “Application help”.



(A) «When detected»
(B) «Previous time»
(C) «Two times before»
(D) «Three times before»
(E) Current
(F) Past
(G) 0.5 seconds

Display	Contents	Unit
Freeze frame data	Trouble code when memorizing freeze frame data.	—
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	—
Load Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	%
Engine Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	°C or °F
A/F Correction #1	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	%
A/F Learning #1	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	%
Intake Manifold Absolute Pressure	Value calculated from the manifold pressure sensor.	mmHg, kPa, inHg or psig
Engine RPM	Value calculated from crankshaft position sensor output value.	rpm
Vehicle speed	Value calculated from vehicle speed sensor output value.	km/h or MPH
Ignition timing cyl. #1	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	deg
Intake Air Temperature	Value calculated from the intake air temperature sensor output value.	°C or °F
Mass Air Flow	Value calculated from air flow sensor output value.	g/s or lb/m
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	%
Secondary air system	Secondary air control status.	—
Oxygen sensor #12	Rear oxygen sensor output voltage value.	V
Short term fuel trim #12	Air fuel ratio correction control value of the rear oxygen sensor.	%

Display	Contents	Unit
OBD System	Shows the OBD regulation to be followed. This is the information recorded in the ECM, and it does not mean that the unit automatically judges the compliance to the OBD regulations.	—
O2 Sensor #11	Installation status of the front oxygen (A/F) sensor.	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	—
Time Since Engine Start	Elapsed time after starting the engine.	sec
Commanded Evaporative Purge	Evaporative purge rate displayed by the OBD.	%
Fuel Level	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	%
Atmospheric Pressure	Value calculated from atmospheric pressure sensor output value.	mmHg, kPa, inHg or psig
ECU Voltage	ECM input power supply voltage.	V
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	%
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1.0 aiming at a theoretical air fuel ratio.	—
Relative Throttle Position	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	%
Ambient air temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	°C or °F
Absolute Throttle Pos.#2	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Pos.#1	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Pos.#2	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Target Throttle Opening Angle	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	%
MT gear status	Neutral condition. Information input from the neutral switch.	—

5. V.I.N REGISTRATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Entry VIN».
7) Perform the procedures shown on the display screen.

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

2. GENERAL SCAN TOOL

NOTE:
- Refer to general scan tool manufacturer’s instruction manual to access powertrain DTC (MODE $03).
- Refer to data denoting emission-related powertrain DTC.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

10.Inspection Mode

A: PROCEDURE

Perform the diagnosis shown in the following DTC table.
When performing the diagnosis not listed in “List of Diagnostic Trouble Code (DTC)”, refer to the item on the drive cycle. <Ref. to EN(STI)(diag)-58, Drive Cycle.>

DTC	Item	Condition	Number of driving cycles on the detecting condition

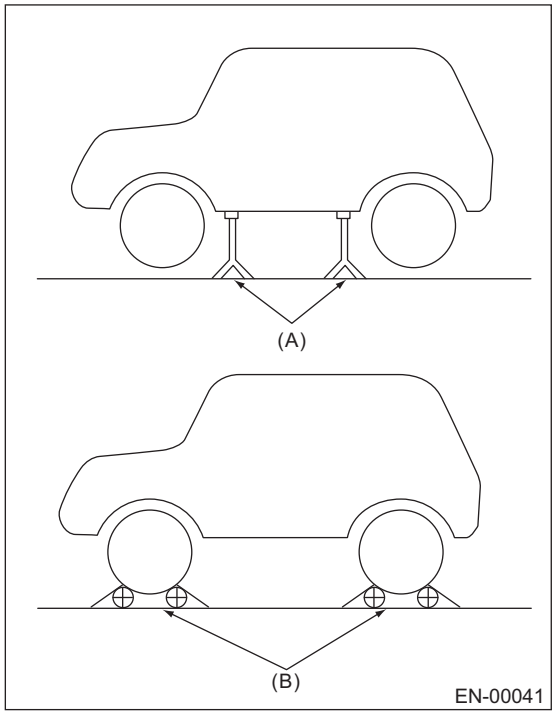
1. PREPARATION FOR THE INSPECTION MODE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Lift up the vehicle using a garage jack and place it on rigid racks, or drive the vehicle onto free rollers.

WARNING:
• Before lifting up the vehicle, ensure parking brake is applied.
• Do not use a pantograph jack in place of a rigid rack.
• Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
• Before rotating the wheels, make sure that there is no one in front of the vehicle. Besides while the wheels are rotating, make sure that no one approaches the vehicle front side.
• Make sure that there is nothing around the wheels. For AWD model, pay attention to all four wheels.
• While servicing, do not depress or release the clutch pedal or accelerator pedal quickly regardless of the engine speed. Quick operation may cause the vehicle to drop off the free roller.
• To prevent the vehicle from slipping due to vibration, do not place anything between rigid rack and the vehicle.



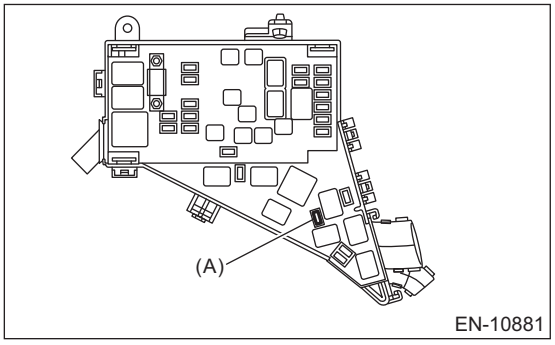
(A) Rigid rack
(B) Free roller

2. SUBARU SELECT MONITOR

1) Check that no DTC remains after clearing memory. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
2) Warm up the engine.
3) Prepare the Subaru Select Monitor 4. <Ref. to EN(STI)(diag)-8, PREPARATION TOOL, General Description.>
4) Prepare PC with Subaru Select Monitor installed.
5) Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

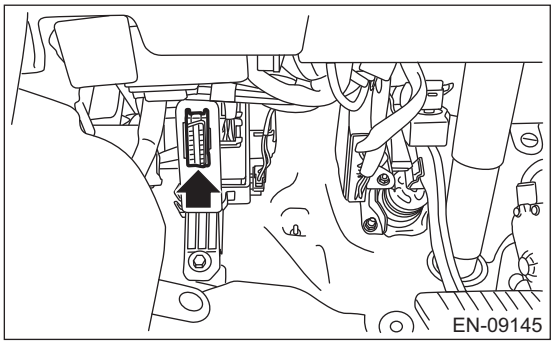
NOTE:
The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.
6) Connect the diagnosis cable to DST-i.
7) Install the delivery mode fuse (A).

CAUTION:
Do not use any fuses that are installed on the vehicle.



8) Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor and general scan tool.



9) Start the PC.
10) Turn the ignition switch to ON (engine OFF) and run the "PC application for Subaru Select Monitor".
11) On «Start» display, select «Diagnosis».
12) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
13) On «Main Menu» display, select «Each System».
14) On «Select System» display, select «Engine Control System» and then select «Enter».
15) On «Select Function» display, select «Work Support».
16) On the «Work Support» display, select «Dealer Check Mode Procedure».
17) When the "Perform Inspection (Dealer Check) Mode ?" is shown on the screen, click the [Next] button.
18) Perform subsequent procedures as instructed on the display screen.
- If trouble still remains in the memory, the corresponding DTC appears on the display screen.

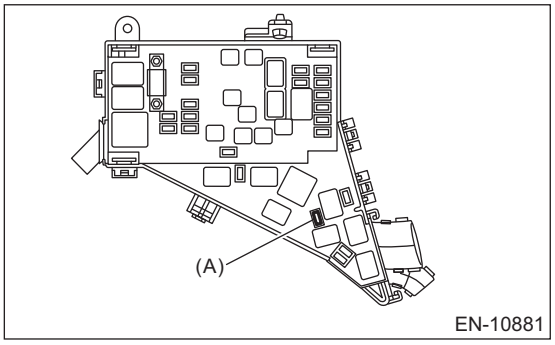
NOTE:
- For detailed operation procedures, refer to "Application help".

- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”.
<Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>
- Release the parking brake.
- The rotating speed difference between front and rear wheels may illuminate the ABS warning light, but this does not indicate a malfunction. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-30, Clear Memory Mode.>

3. GENERAL SCAN TOOL

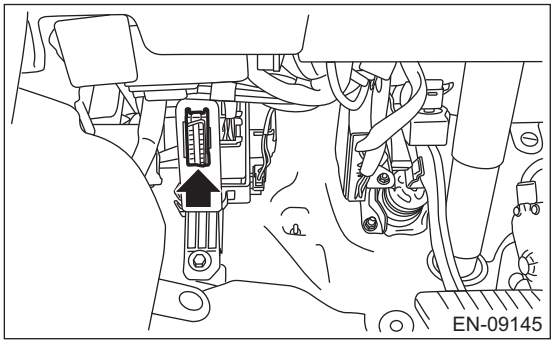
1) Check that no DTC remains after clearing memory. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
2) Warm up the engine.
3) Install the delivery mode fuse (A).

CAUTION:
Do not use any fuses that are installed on the vehicle.



4) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor and general scan tool.



5) Start the engine.

NOTE:
Depress the clutch pedal when starting engine.
6) Turn the neutral position switch to ON using gear shift lever.
7) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.
8) Place the gear shift lever in 1st gear and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:
- For AWD model, release the parking brake.
- The rotating speed difference between front and rear wheels may illuminate the ABS warning light, but this does not indicate a malfunction. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-30, Clear Memory Mode.>

9) Using the general scan tool, check for DTC and record the result(s).

NOTE:
- For detailed operation procedures, refer to the general scan tool operation manual.

- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”.
<Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>

11.Drive Cycle

A: PROCEDURE

It is necessary to perform the drive cycle listed below if DTC is not found in the Inspection Mode. It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
3) Make sure that the delivery mode fuse is removed.

NOTE:
Perform the drive cycle after warming up the engine except when the engine coolant temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition	Number of driving cycles on the detecting condition

P2195	A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 1	—	2
P2196	A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 1	—	2
P226B	TURBOCHARGER/SUPERCHARGER BOOST PRESSURE TOO HIGH - MECHANICAL	—	1
P2270	O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 2	—	2
P2271	O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2	—	2

1) Drive for 20 minutes or more at a constant speed of 80 km/h (50 MPH) or more.
2) Stop the vehicle and idle for one minute.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

3. DRIVE CYCLE B

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0125	INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL	«Coolant Temp.» at engine start: Less than – 15°C (5°F)	2
P0137	O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2	—	2
P0138	O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2	—	2
P0171	SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle A as well.	2
P0172	SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle A as well.	2
P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0301	CYLINDER 1 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0302	CYLINDER 2 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0303	CYLINDER 3 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0304	CYLINDER 4 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	—	1
P0506	IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	—	2
P0507	IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	—	2
P2096	POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle A as well.	2
P2097	POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle A as well.	2

1) Drive at 10 km/h (6 MPH) or more.
2) Stop the vehicle and idle for ten minutes.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

4. DRIVE CYCLE E

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0461	FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—	2

1) Make sure that the battery voltage is 10.9 V or more.
2) Perform the Clear Memory Mode. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
3) Drive for approximately 30 L (7.9 US gal, 6.6 Imp gal) of fuel.

NOTE:
- It is acceptable to drive the vehicle intermittently.
- Do not disconnect the battery terminals while diagnosing. (Data will be cleared by disconnecting the battery terminals.)

4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

5. DRIVE CYCLE F

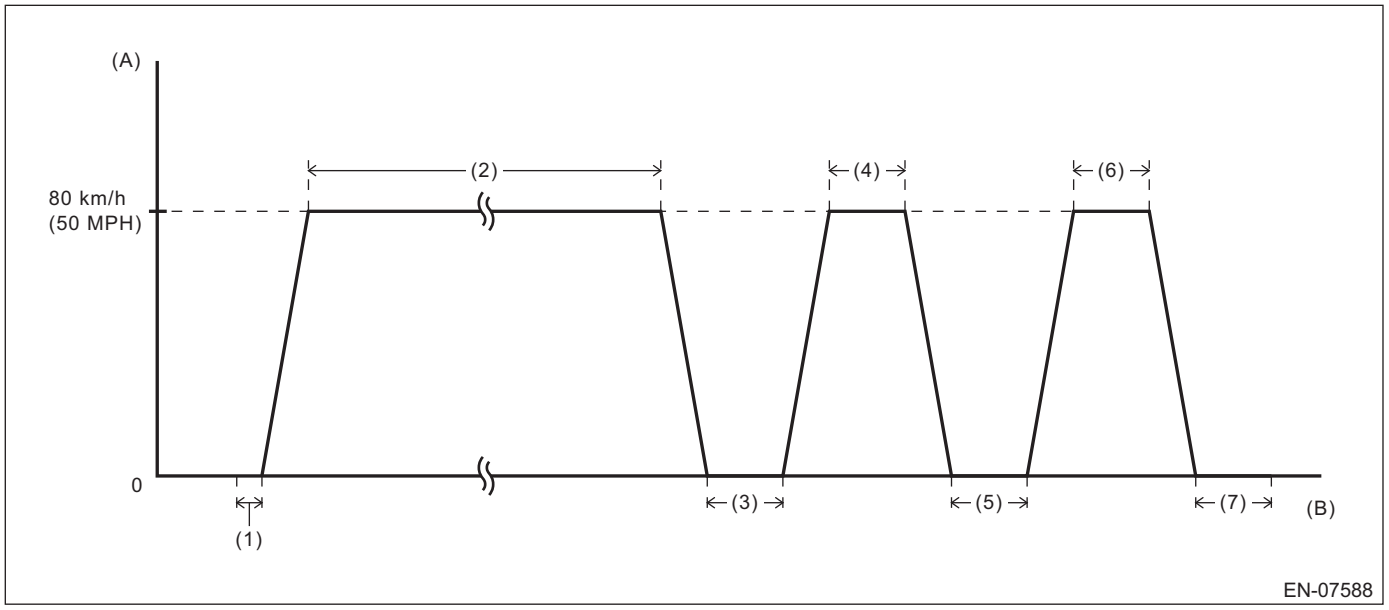
DTC	Item	Condition	Number of driving cycles on the detecting condition
P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

1) With the ignition switch ON (engine stopped), read the value in «Coolant Temp.» and «Intake Air Temperature». <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>
2) If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.

Condition:
|Engine coolant temperature — Intake air temperature| ≤ 5°C (9°F)

NOTE:
- If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.
- Do not move the gear shift lever from neutral position during idling.

3) Drive according to the drive pattern described below.



(A) Vehicle speed
(B) Elapsed time
(1) Idle the engine for 2 minutes or more.
(2) Drive for a total period of 15 minutes or more at a speed of 80 km/h (50 MPH) or more.
(3) Stop the vehicle and idle for 30 seconds or more.
(4) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.
(5) Stop the vehicle and idle for 30 seconds or more.
(6) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.
(7) Stop the vehicle and idle for 30 seconds.

NOTE:
• In pattern (2), it is acceptable to decelerate to less than 80 km/h (50 MPH) or to stop the vehicle depending on the traffic conditions. Drive the vehicle at 80 km/h (50 MPH) or more until the total driving time reaches or exceeds 15 minutes.
• There is no given transition time between idling and cruising.
• Driving at constant speed only on a downhill causes smaller engine load and may result in failure to obtain a right diagnostic result.
• If the ignition switch is turned to OFF during driving cycle F, perform this driving cycle again after satisfying the conditions listed in the table.
4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

6. DRIVE CYCLE G

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0410	SECONDARY AIR SYSTEM	—	2
P0411	SECONDARY AIR SYSTEM INCORRECT FLOW DETECTED	—	2
P0414	SECONDARY AIR SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED	—	1
P0417	SECONDARY AIR SYSTEM SWITCHING VALVE "B" CIRCUIT SHORTED	—	1
P1410	SECONDARY AIR INJECTION SYSTEM COMBINATION VALVE STUCK OPEN	—	1

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2258	SECONDARY AIR SYSTEM CONTROL "A" CIRCUIT HIGH	—	1
P2440	SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 1	—	2
P2441	SECONDARY AIR SYSTEM SWITCHING VALVE STUCK CLOSED BANK 1	—	2
P2442	SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 2	—	2
P2443	SECONDARY AIR SYSTEM SWITCHING VALVE STUCK CLOSED BANK 2	—	2

1) Disconnect the battery negative terminal, and reconnect after at least 10 seconds have passed.
2) Idle the engine until engine coolant temperature is 80°C (176°F) or more.
3) Stop the engine to decrease the engine coolant temperature down to 40°C (104°F) or less.

NOTE:
Do not let engine coolant temperature drop to 5°C (41°F) or less.
4) Idle the engine until engine coolant temperature is 80°C (176°F) or more.
5) Stop the engine to decrease the engine coolant temperature down to 40°C (104°F) or less.

NOTE:
Do not let engine coolant temperature drop to 5°C (41°F) or less.
6) Idle the engine.
7) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

7. DRIVE CYCLE H

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P050A	COLD START IDLE CONTROL SYSTEM PERFORMANCE	—	2
P050B	COLD START IGNITION TIMING PERFORMANCE	—	2
P2431	SECONDARY AIR SYSTEM AIR FLOW/PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1	—	2
P24B9	EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE	60 seconds have elapsed since ignition switch is OFF.	2

1) With the ignition switch ON (engine stopped), read the value in «Coolant Temp.» and «Intake Air Temperature». <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>
2) If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.

Condition:
|Engine coolant temperature — Intake air temperature| ≤ 5°C (9°F)

NOTE:
- If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.
- Do not move the gear shift lever from neutral position during idling.

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

8. DRIVE CYCLE I

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0455	EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)	«Coolant Temp.»: 5 — 45°C (41 — 113°F) «Intake Air Temp.»: 5 — 50°C (41 — 122°F)	2
P0456	EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)		2
P04AF	EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED		2
P1451	EVAP SYSTEM CLOG DETECTED (PIPE)		2
P2402	EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH		1
P2404	EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE		2
P2420	EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH		1

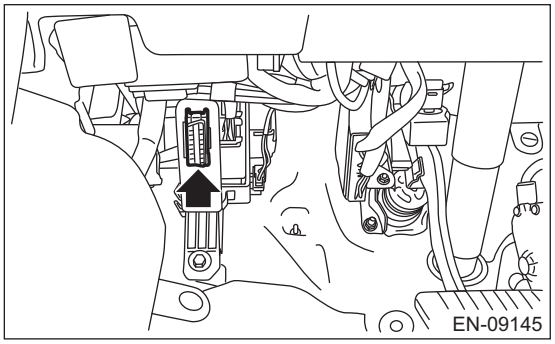
CAUTION:
Be careful of the state of the battery when performing the drive cycle I consecutively. Performing the drive cycle I consecutively without the engine running may cause a low battery voltage and battery discharge.

NOTE:
• If it is necessary to perform drive cycle I consecutively, drive the vehicle under the following conditions to release accumulated evaporating gas. Performing the drive cycle I consecutively without starting the engine causes a large amount of evaporating gas to accumulate in the canister, which hinders an accurate diagnosis.
  • After engine is warmed up
  • Drive for 10 minutes or more at a speed of 48 km/h (30 MPH) or more (duration of drive can be an accumulation)
• To obtain an accurate diagnostic result, perform the procedures according to the following points.
  • Do not refuel gas immediately before performing drive cycle I. There will be a large amount of evaporating gas immediately after refuel, which may cause a less accurate diagnostic performance.
  • Do not shake the vehicle while performing drive cycle I. Shaking the vehicle causes evaporating gas to increase inside the fuel tank, which may cause a less accurate diagnostic performance.
  • Do not perform any service operation including installation or removal of parts or connectors while performing drive cycle I. Performing service operation could affect on the functions of related parts, which may cause a less accurate diagnostic performance.

1) Prepare the Subaru Select Monitor 4. <Ref. to EN(STI)(diag)-8, PREPARATION TOOL, General Description.>
2) Prepare PC with Subaru Select Monitor installed.
3) Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:
The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.
4) Connect the diagnosis cable to DST-i.
5) Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor and general scan tool.



6) Start the PC.
7) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
8) On «Start» display, select «OBD System» and then «Enter».
9) On «Select System» display, select «Engine Control System» and then select «Enter».
10) On «Select Function» display, select «Active Test».
11) On «Active Test» display, select «Evaporative System Leak Test».
12) On «Evaporative System Leak Test is running. Press Cancel to exit this function.» display, click the [OK] button to perform evaporative system leak test.
13) When «Conditions have been enabled to control this function. Turn the ignition switch off to terminate the test.» display appears, wait for 30 minutes without clicking the [OK] button.

CAUTION:
Do not leave the vehicle for an extended period of time after the test is complete. This may cause early deterioration of the battery or discharged battery.

NOTE:
• Clicking the [OK] button bring the «Evaporative System Leak Test» display back, although the test is continuing.
• The Subaru Select Monitor screen does not change after the evaporative system leak test is complete or when the test is aborted by turning off the ignition switch.
• If «Test conditions are not correct» display appears, check that the values in «Coolant Temp.» and «Intake Air Temperature» are within the specified range using Subaru Select Monitor. If the conditions are satisfied, make the necessary preparation for the drive cycle again. <Ref. to EN(STI)(diag)-58, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
14) After 30 minutes passed from the start of step 14), click the [OK] button to return to the «Evaporative System Leak Test» display.
15) Click buttons until the «OBD System» display appears, then select {On-board monitor test result}.
16) In the {On-board monitor test result}, check TID $C1 — $CA of MID $3C.

Result of on-board monitor test

Display	Details	Remarks
$0000 is stored in all Val.	During the evaporative system leak test, the test conditions were not met and the test was canceled.	Once the test conditions are met, perform the test again.
All Val. are stored with values and OK is set to all the results.	Evaporative system leak test is completed correctly.	While the ignition switch is ON, read temporary codes using the Subaru Select Monitor.
Some results were no good.	The evaporative system leak test completed successfully but the results were faulty.	While the ignition switch is ON, read temporary codes using the Subaru Select Monitor.

17) When the evaporative system leak test is completed correctly, read the temporary codes with the ignition switch turned to ON position. If the DTC is recorded, check the appropriate DTC. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

NOTE:
The temporary code will be cleared by turning ignition switch to OFF.

9. DRIVE CYCLE J

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2610	ECM/PCM ENGINE OFF TIMER PERFORMANCE	—	2

1) Idle the engine for 15 minutes or more.
2) Turn the ignition switch to OFF.
3) After 10 hours passed from the start of step 2), read the temporary code using the Subaru Select Monitor. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

10.DRIVE CYCLE N

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0016	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A	«Coolant Temp.»: 80°C (176°F) or more	2
P0017	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B		2
P0018	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A		2
P0019	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B		2

WARNING:
When performing drive cycle N on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.
1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:
- Subaru Select Monitor

For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>
- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.
2) While the conditions in the list are satisfied, race the engine at the speed of approx. 2,500 rpm for 40 seconds or more.
3) Start the vehicle, then accelerate the vehicle to 50 km/h (31.1 MPH) or more.
4) When the speed reaches 50 km/h (31.1 MPH) or more, release the accelerator pedal, brake pedal and clutch pedal to decelerate the vehicle without shifting the gear. At this time, select an appropriate gear beforehand so that the engine speed can decrease from 2,500 rpm to 1,900 rpm for 5 seconds or more.

NOTE:
- The vehicle speed does not matter so long as the engine speed can maintain from 2,500 rpm to 1,900 rpm for 5 seconds or more.

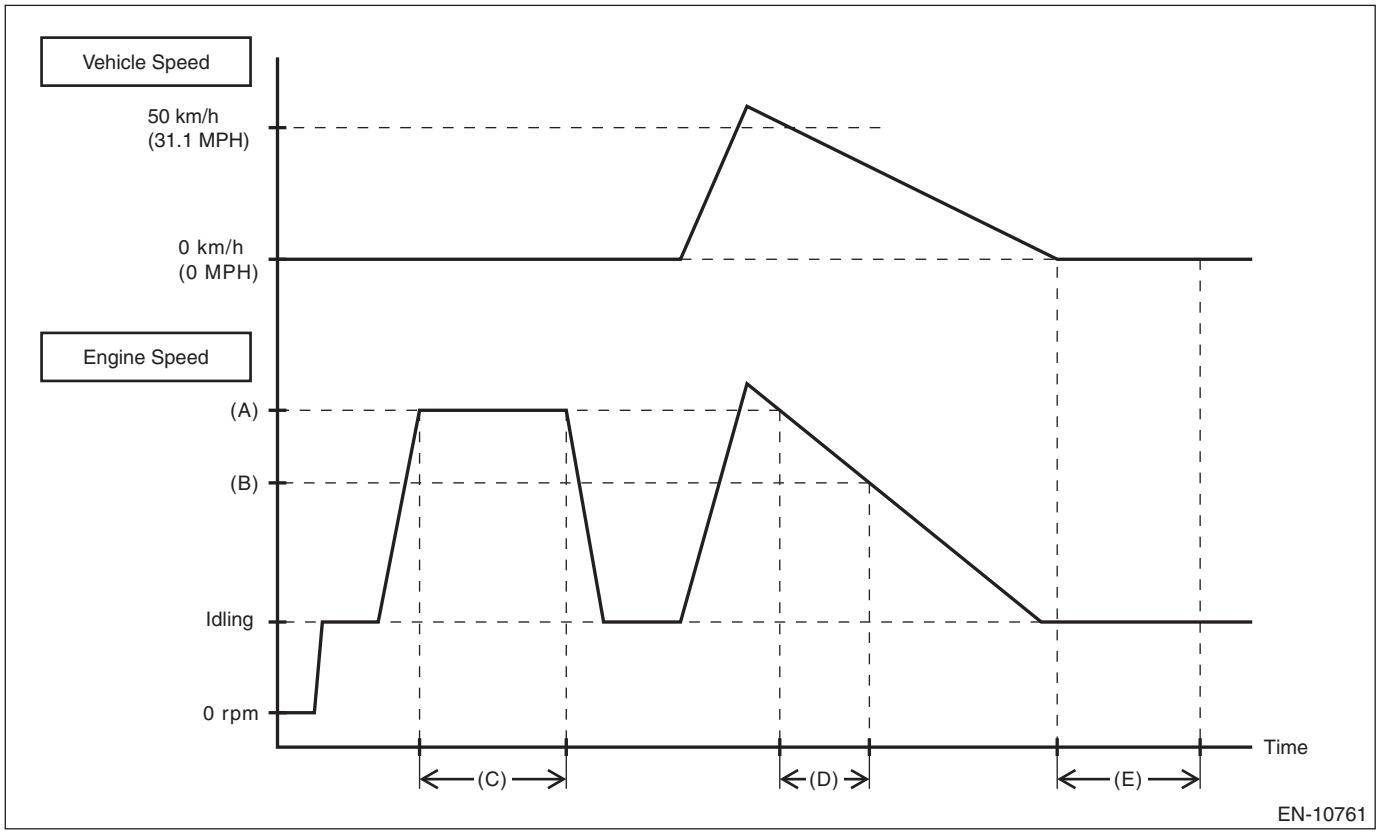
Example: On a downhill grade, it can be performed with a low speed gear and at a low vehicle speed.
- When it is performed with the electrical load such as the air conditioner, etc. turned OFF or the vehicle driven on a downhill grade, the engine speed decreases slowly. Therefore, the continuous time can be maintained easily.

5) Bring the vehicle to a stop in a safe place, and idle it for 5 minutes or more.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.

6) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>
• In the step 6), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.



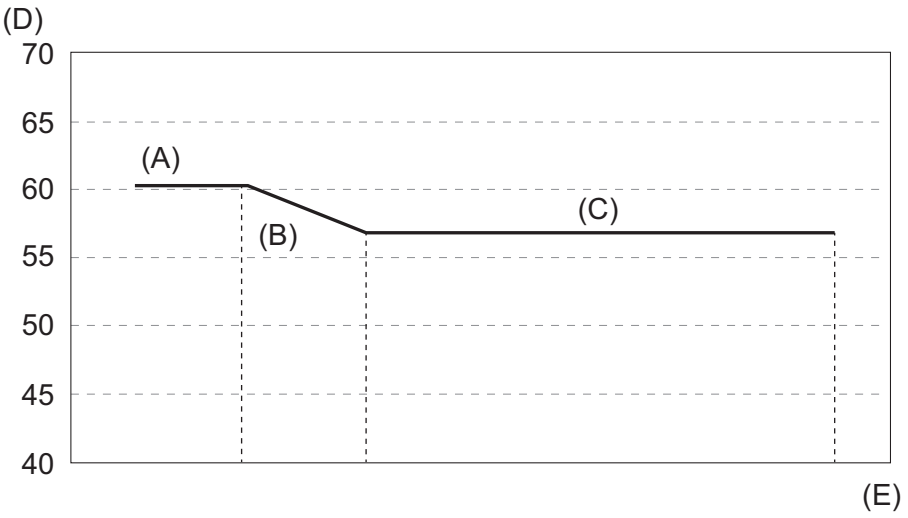
(A) 2500 rpm
(B) 1900 rpm
(C) 40 seconds or more
(D) 5 seconds or more
(E) 5 minutes or more

11.DRIVE CYCLE O

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0441	EVAP SYSTEM (CPC) INCORRECT PURGE FLOW	—	2

WARNING:
When performing drive cycle O on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Drive according to the drive pattern described below.



(A) Drive the vehicle at 60 km/h (37 MPH) or faster for at least 5 minutes in fully warm-up condition.
(B) Decelerate with the throttle fully closed for at least 3 seconds.
(C) Drive the vehicle at a constant vehicle speed by depressing the accelerator pedal for at least 30 seconds.
(D) Vehicle speed km/h (MPH)
(E) Sec.

2) Park the vehicle on a safe place.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.
3) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

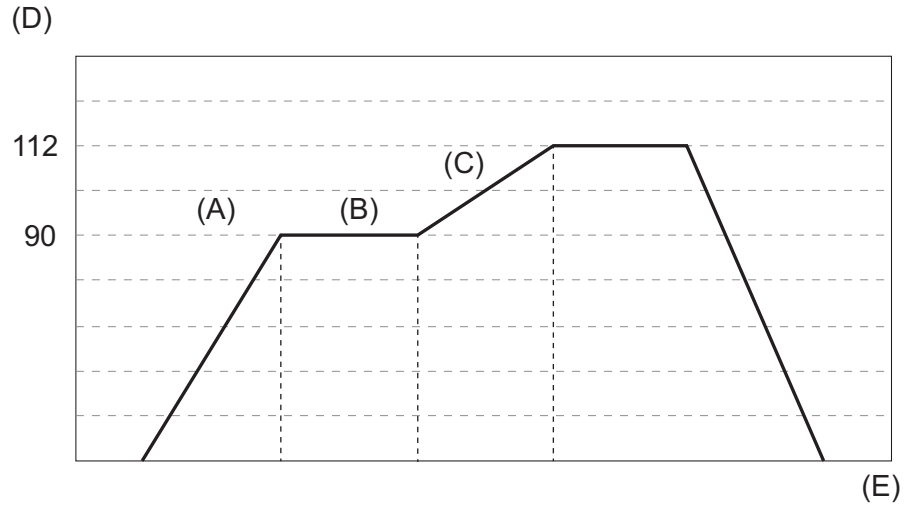
NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>
• In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

12.DRIVE CYCLE P

DTC	Item	Condition	Number of driving cycles on the detecting condition
P04F0	EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE	Remaining fuel level 20 L or more	2

WARNING:
When performing drive cycle P on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Drive according to the drive pattern described below.



(A) Accelerate the vehicle to 80 km/h (50 MPH) or more in a fully warm-up condition.
(B) Keep a constant vehicle speed of 50 km/h (31.1 MPH) or more for at least five minutes.
(C) While depressing the accelerator pedal without gear shifting, take at least 10 seconds to accelerate to 112 km/h (70 MPH) or more.
(D) Vehicle speed km/h (MPH)
(E) Sec.

2) Park the vehicle on a safe place.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.
3) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>
• In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

13.DRIVE CYCLE R

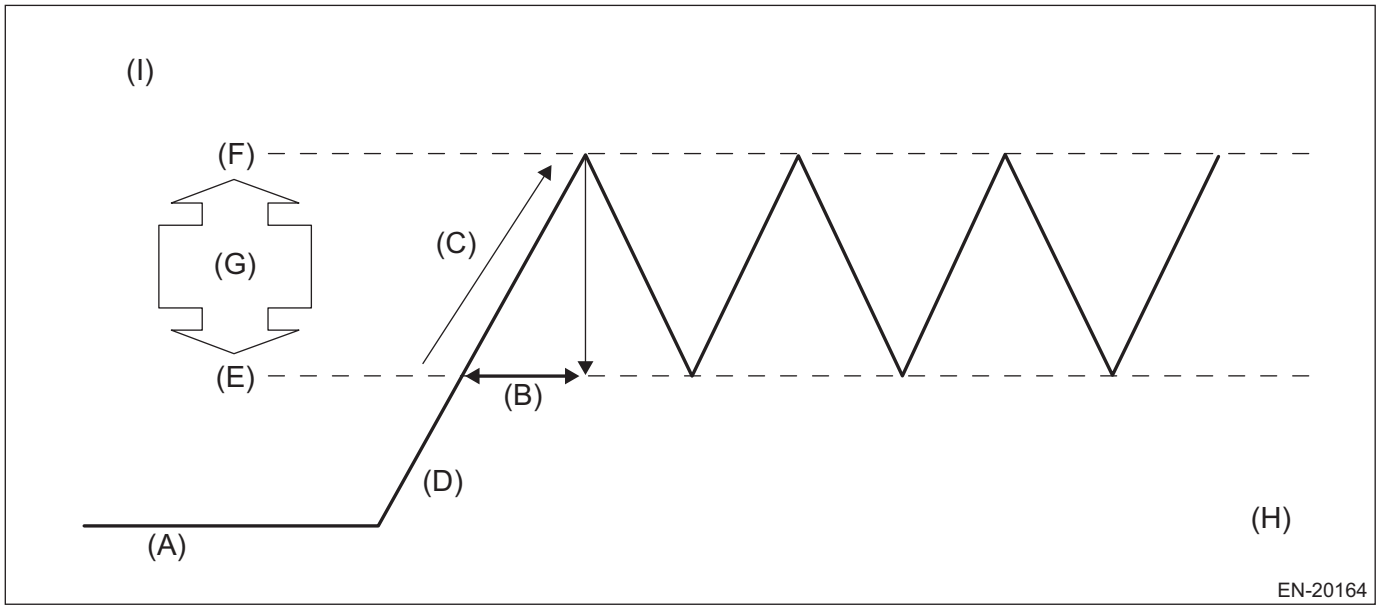
DTC	Item	Condition	Number of driving cycles on the detecting condition
P219A	BANK 1 AIR-FUEL RATIO IMBALANCE	—	2

WARNING:
When performing the drive cycle R on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:
• Subaru Select Monitor
For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>

- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.
2) Keep the engine at idle for at least 30 seconds in a fully warm-up condition.
3) Start the driving.
4) With the gear position in the 4th, take 10 seconds to accelerate from 1600 rpm to 3200 rpm.
5) Decelerate to 1600 rpm in the 4th gear position. (There is no restrictions to the deceleration duration and how to use the brake.)
6) Repeat steps 4) and 5) 10 times (end when the temporary code is acquired).



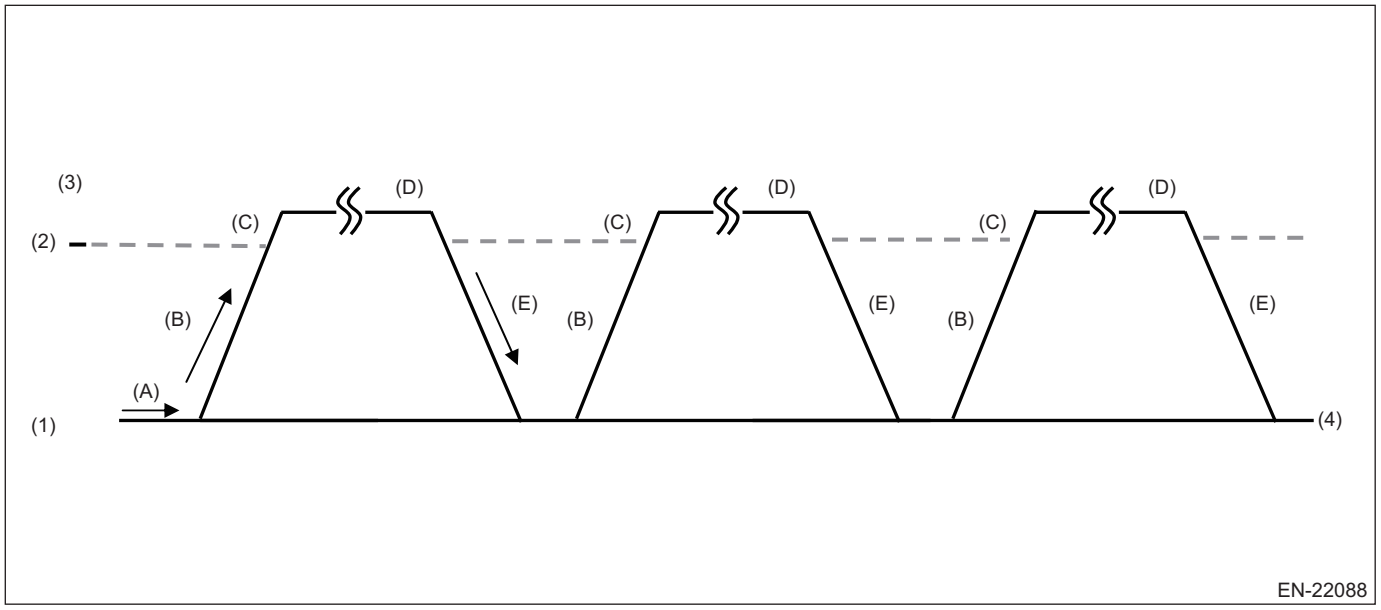
(A)	Idle the engine for at least 30 seconds in a fully warm-up condition.	(D)	Engine speed	(G)	Accelerate and decelerate in the 4th gear position.
(B)	10 seconds	(E)	1600 rpm	(H)	Time
(C)	Accelerating	(F)	3200 rpm	(I)	Accelerating and decelerating

14.DRIVE CYCLE S

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0246	TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH	—	1
P04AD	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH	—	2
P0851	PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW	—	2
P0852	PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH	—	2

WARNING:
When performing the drive cycle S on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>

2) Drive three times according to the drive pattern described below.



(1) 0 km/h (0 MPH)
(2) 65 km/h (40 MPH)
(3) Vehicle speed
(4) Time

(A) Idle the engine for five seconds or more.
(B) Accelerating
(C) Vehicle speed exceeds 65 km/h (40 MPH) with 4th gear.
(D) Driving duration (no restriction for driving duration)
(E) Deceleration (no restriction for deceleration method)

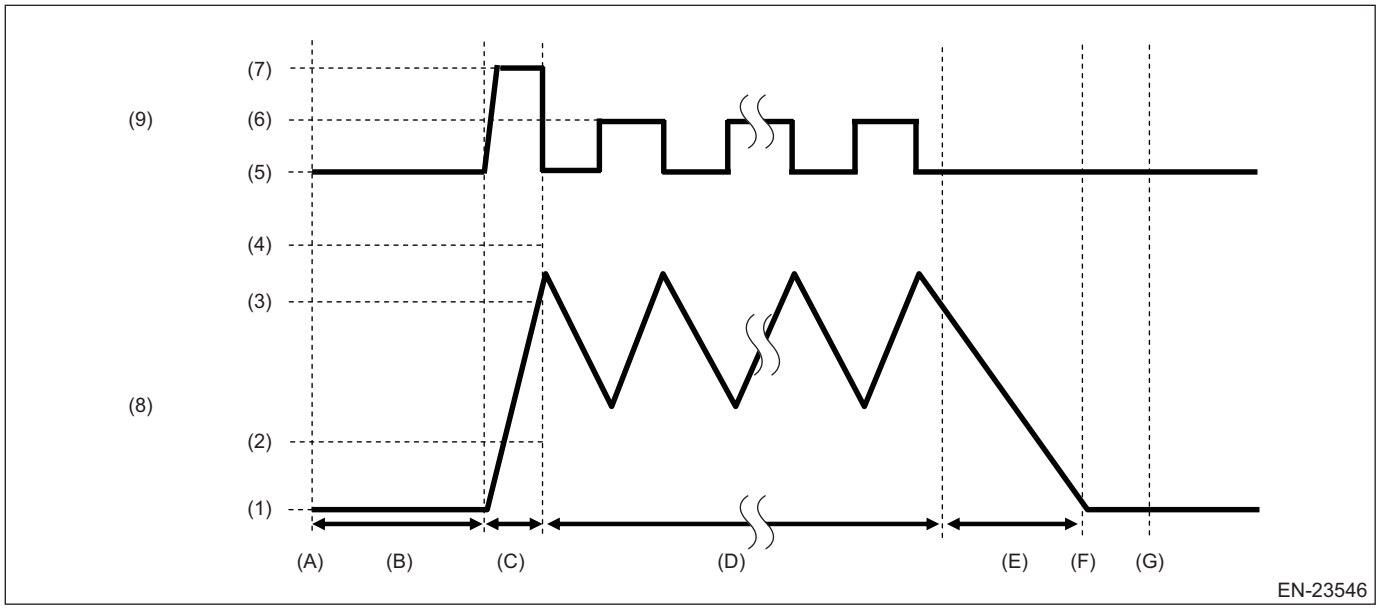
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

15.DRIVE CYCLE T

DTC	Item	Condition	Number of driving cycles on the detecting condition
P000A	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 1	Coolant temperature: 70°C (158°F) or more	2
P000B	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 1		2
P000C	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 2		2
P000D	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 2		2
P0011	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1		2
P0014	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1		2
P0021	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2		2
P0024	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2		2

WARNING:
When performing the drive cycle T on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>

2) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(4)	80 km/h (49.7 MPH)	(7)	30 — 60%
(2)	20 km/h (12.4 MPH)	(5)	0%	(8)	Vehicle speed
(3)	60 km/h (37.3 MPH)	(6)	20%	(9)	Accelerator pedal opening angle

(A)	Start the engine.	(D)	With the vehicle speed of 60 km/h (37.3 MPH) as a reference, repeat accelerator pedal opening angle 0% (five seconds) ←→ 20% (five seconds) for 20 minutes or more.	(G)	Stop the engine.
(B)	Idle the engine at least three minutes.	(E)	Decelerate with the accelerator pedal fully closed for at least five seconds.		
(C)	Accelerate the vehicle to 60 km/h (37.3 MPH).	(F)	Park the vehicle. (Driving method while vehicle is driven to a stop at safe place is not restricted)		

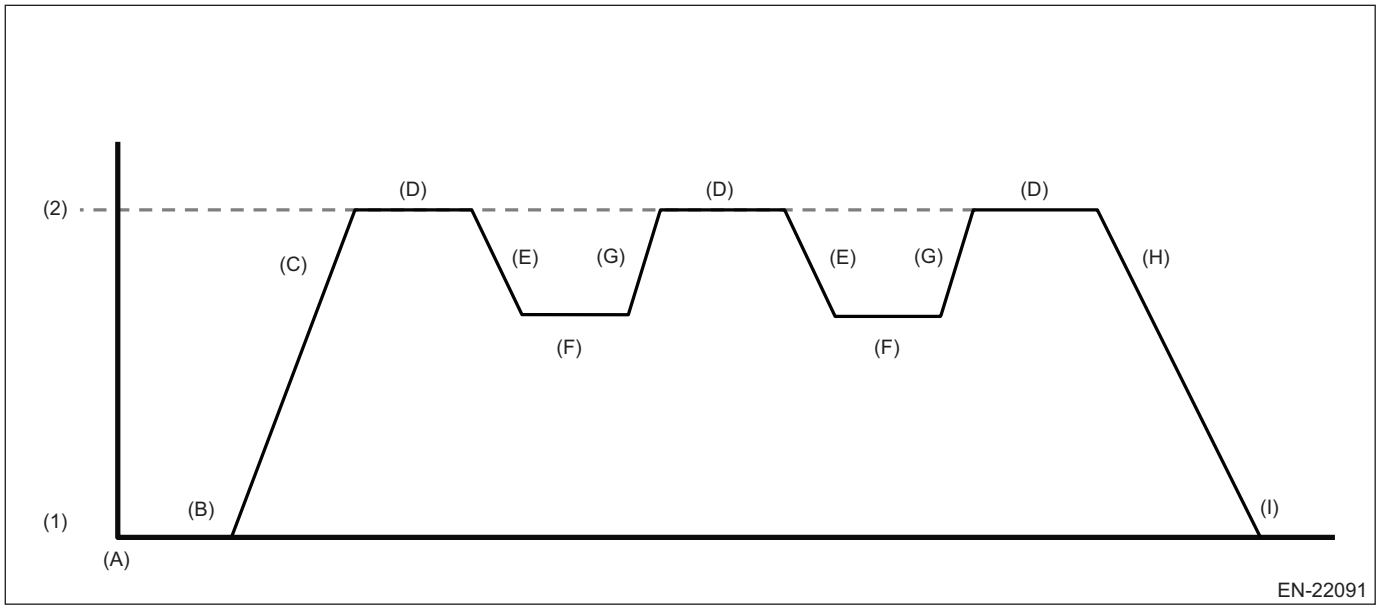
NOTE:
In pattern (D), it is acceptable to stop the vehicle according to the traffic condition. Drive the vehicle until the total time of accelerator opening angle 0% (five seconds) ←→ 20% (five seconds) becomes 20 minutes or more.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

16.DRIVE CYCLE V

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1	—	2

WARNING:
When performing the drive cycle V on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

1) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(2)	60 km/h (37 MPH)		
(A)	Start the engine.	(D)	Drive for 10 seconds at a constant speed of 60 km/h (37.3 MPH).	(G)	Accelerate the vehicle to 60 km/h (37.3 MPH).
(B)	Idle the engine for five minutes or more.	(E)	With the vehicle speed of 60 km/h (37.3 MPH) maintained, set accelerator opening angle to 0% and perform fuel cut for 5 seconds or more.	(H)	With the vehicle speed of 60 km/h (37.3 MPH) maintained, set accelerator opening angle to 0% and take 5 seconds or more to slow down and stop the vehicle.
(C)	Accelerate the vehicle to 60 km/h (37.3 MPH).	(F)	Drive for 10 seconds or more with the accelerator opening angle 10 — 20%.	(I)	Idle the engine for 20 seconds or more.

NOTE:
- Acceleration and constant speed conditions may be adjusted depending on road conditions.
- If a diagnostic value is not input after driving, do not stop the engine and repeat the procedure (C) again.

2) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

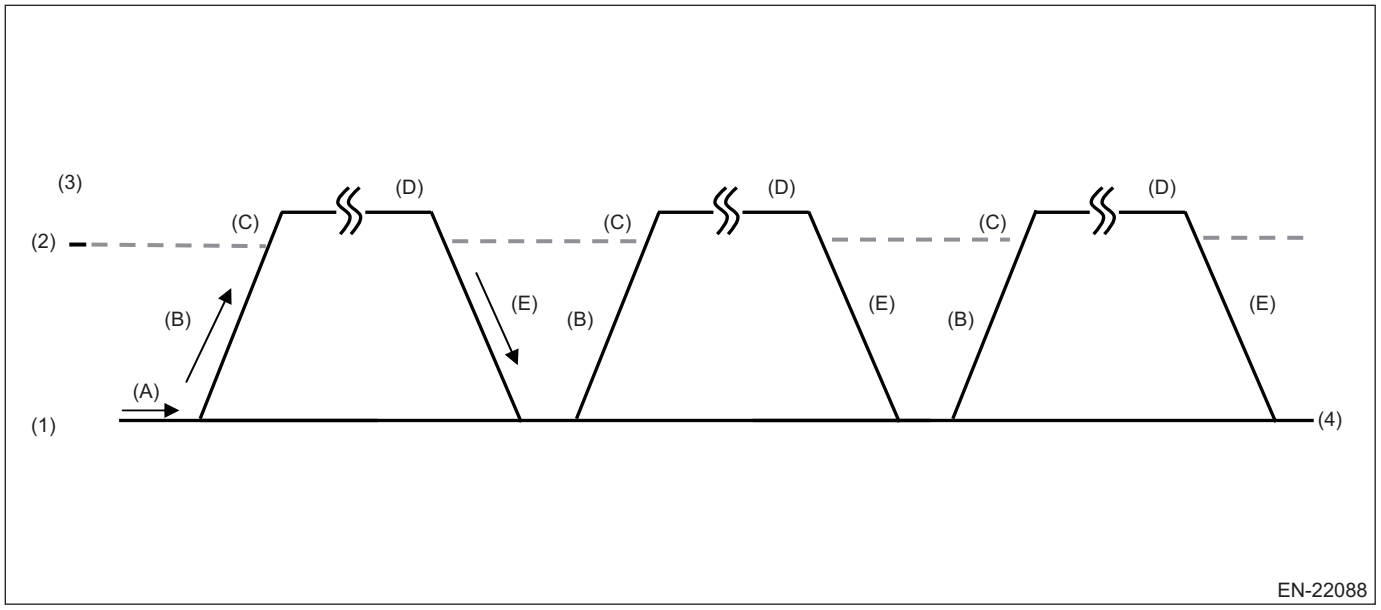
17.DRIVE CYCLE W

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0134	A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1	—	1

WARNING:
When performing the drive cycle W on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>

2) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(3)	Vehicle speed	(4)	Time
(2)	45 km/h (27 MPH)				
(A)	Idle the engine for five seconds or more.	(C)	Vehicle speed exceeds 45 km/h (27 MPH).	(E)	Deceleration (no restriction for deceleration method)
(B)	Accelerating	(D)	Driving duration (no restriction for duration)		

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

18.DRIVE CYCLE X

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2004	TGV CONTROL STUCK OPEN BANK 1	—	1
P2005	TGV CONTROL STUCK OPEN BANK 2	—	1
P2006	TGV CONTROL STUCK CLOSED BANK 1	—	1
P2007	TGV CONTROL STUCK CLOSED BANK 2	—	1

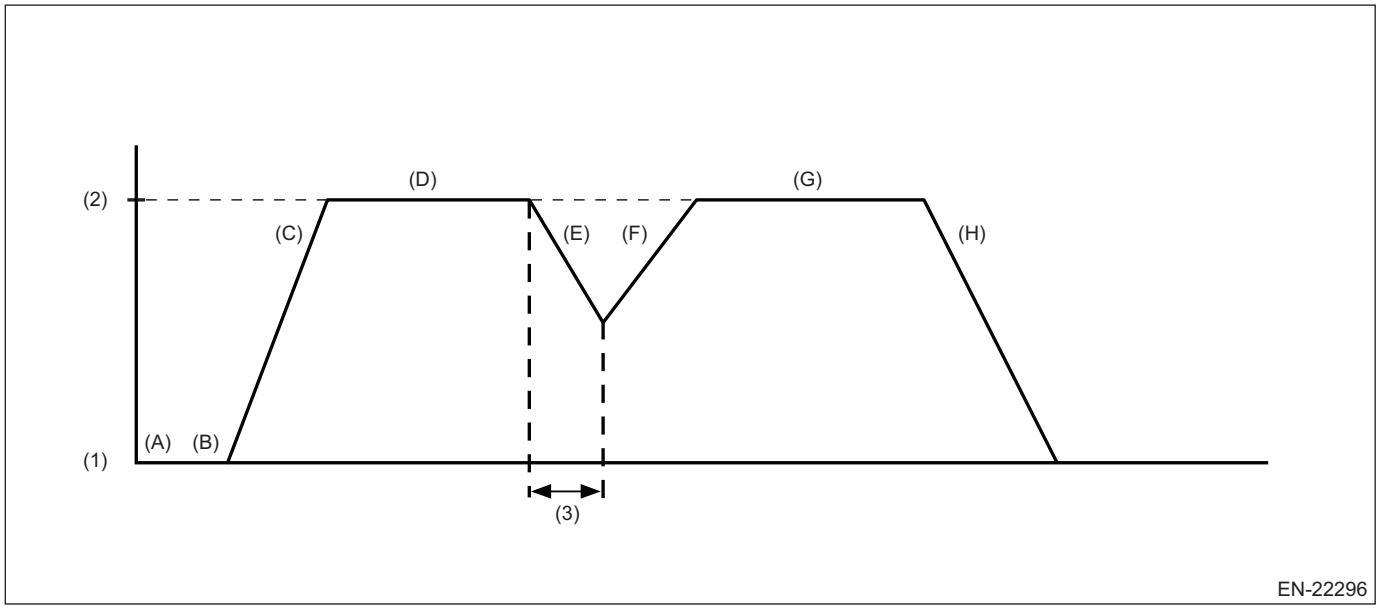
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>
2) Start the engine.
3) Place the gear shift lever in neutral position, and race the engine for 10 seconds or more.

NOTE:
Keep the engine speed at 3500 rpm or more.
4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

19.DRIVE CYCLE Y

DTC	Item	Condition	Number of driving cycles on the detecting condition
P013E	O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	—	2
P013F	O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	—	2

WARNING:
When performing the drive cycle Y on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Perform the Clear Memory Mode. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.>
2) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(2)	60 km/h (37 MPH)	(3)	10 seconds
(A)	Start the engine.	(D)	Maintain the vehicle at 60 km/h (37 MPH) and drive at the constant speed.	(G)	Maintain the vehicle at 60 km/h (37 MPH) and drive at the constant speed.
(B)	Idle the engine at least five minutes.	(E)	With the vehicle speed of 60 km/h (37 MPH) maintained, set accelerator pedal opening angle to 0% and perform fuel cut for 10 seconds.	(H)	Decelerate and park the vehicle.
(C)	Accelerate the vehicle to 60 km/h (37 MPH).	(F)	Accelerate the vehicle to 60 km/h (37 MPH).		

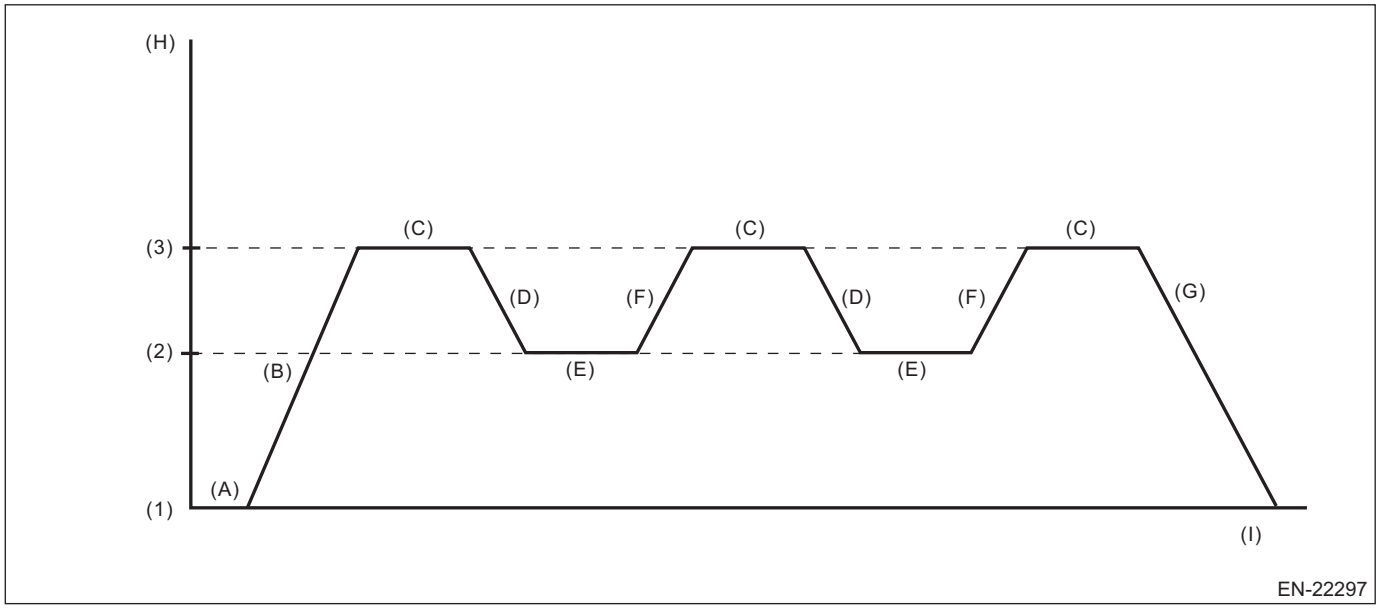
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

NOTE:
- Acceleration and constant speed conditions may be adjusted depending on road conditions.
- If a diagnostic value is not input after driving, do not stop the engine and repeat the procedure (C) again.
- Do not use the cruise control.

20.DRIVE CYCLE Z

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0068	MAP/MAF - THROTTLE POSITION CORRELATION	—	2
P0101	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—	2

WARNING:
When performing the drive cycle Z on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>
2) Drive according to the drive pattern described below.



(1)	0 (km/h or second)	(2)	60 km/h (37 MPH)	(3)	88 km/h (55 MPH)
(A)	Shift the select lever to “P” range or the gear shift lever to the neutral position, and let the engine idle for 10 seconds or more.	(D)	Decelerate with fully closed throttle to 60 km/h (37 MPH).	(G)	Stop vehicle with the throttle fully closed.
(B)	Open the throttle half way, then accelerate the vehicle to 88 km/h (55 MPH) or more.	(E)	Drive for 20 seconds or more at 60 km/h (37 MPH) or less.	(H)	Vehicle speed km/h (MPH)
(C)	Drive for 20 seconds or more at 88 km/h (55 MPH) or more.	(F)	Open the throttle half way, then accelerate the vehicle to 88 km/h (55 MPH) or more.	(I)	Sec.

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

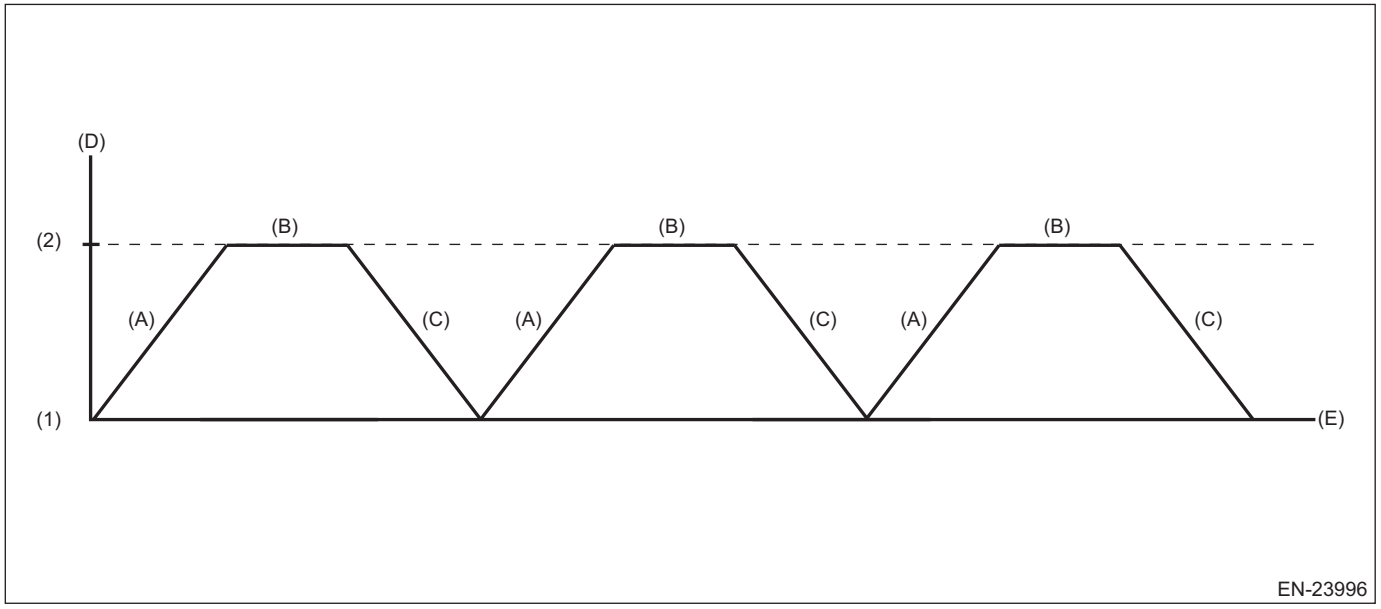
21.DRIVE CYCLE AA

DTC	Item	Condition	Number of driving cycles on the detecting condition
P1449	EVAP SYSTEM CLOG DETECTED (AIR FILTER)	—	2

Drive Cycle

WARNING:
When performing the drive cycle AA on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

NOTE:
Always perform the inspection mode after warming up the engine except when the engine coolant temperature at engine start is specified.
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Using the Subaru Select Monitor, perform the clear memory for [Engine]. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>
3) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(2)	60 km/h (37 MPH)		
(A)	Accelerate at the vehicle speed of 60 km/h or more. (Rapid acceleration not permitted)	(C)	Deceleration	(E)	Driving duration
(B)	Three minute constant driving	(D)	Vehicle speed		

4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

12.Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «Work Support».
6) On «DTC» display, select «Clear Memory».

NOTE:
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For detailed operation procedures, refer to “Application help”.

2. GENERAL SCAN TOOL

For procedures clearing memory using the general scan tool, refer to the general scan tool operation manual.

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

13.Active Test

A: OPERATION

CAUTION:
After the active test is completed, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>.

1. ENGINE

NOTE:
For detailed operation procedures, refer to “Application help”.

Active test items	Contents	Execution condition
Fuel Pump Relay	ON/OFF of the fuel pump can be set.	Ignition switch is ON (engine OFF)
CPC Solenoid Valve	ON/OFF of the purge control solenoid valve can be set.	
Radiator Fan Relay	ON/OFF of the radiator fan relay can be set.	
A/C Compressor Relay	ON/OFF of the A/C relay can be set.	
Turbocharger Wastegate Solenoid	ON/OFF of the wastegate control solenoid valve can be set.	
Secondary Air Combi Valve 1	ON/OFF of the secondary air combination valve relay 1 can be set.	
Secondary Air Combi Valve 2	ON/OFF of the secondary air combination valve relay 2 can be set.	
Sec. Air Pump Relay	ON/OFF of the secondary air pump relay can be set.	
CPC Solenoid 2	ON/OFF of the purge control solenoid valve 2 can be set.	
ELCM switching valve	ON/OFF of the leak check valve assembly switching valve can be set.	
ELCM pump	ON/OFF of the leak check valve assembly vacuum pump can be set.	
Fuel Pump Control (OFF Drive)	Fuel pump can be set to OFF.	At idling
Fuel Pump Control (ON/OFF Dr.)	ON/OFF of the fuel pump can be set.	
Fixed Idle Ignition Timing	Idle ignition timing can be set.	
Idle Speed Control	Idle speed can be set.	
Injection Stop Mode (Injector 1) Injection Stop Mode (Injector 2) Injection Stop Mode (Injector 3) Injection Stop Mode (Injector 4)	Injector of each cylinder can be set to stop the fuel injection.	
Injection Quantity Control	The amount of fuel injection can be set.	

14.Malfunction Indicator Light

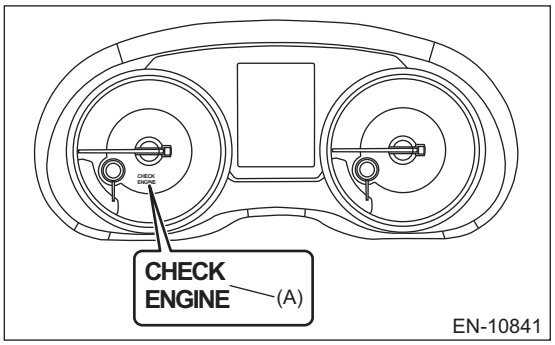
A: PROCEDURE

1. Activation of malfunction indicator light <Ref. to EN(STI)(diag)-81, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>
↓
2. Malfunction indicator light does not come on <Ref. to EN(STI)(diag)-84, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>
↓
3. Malfunction indicator light does not go off <Ref. to EN(STI)(diag)-84, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF, Malfunction Indicator Light.>
↓
4. Malfunction indicator light does not blink <Ref. to EN(STI)(diag)-85, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK, Malfunction Indicator Light.>
↓
5. Malfunction indicator light remains blinking <Ref. to EN(STI)(diag)-87, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING, Malfunction Indicator Light.>

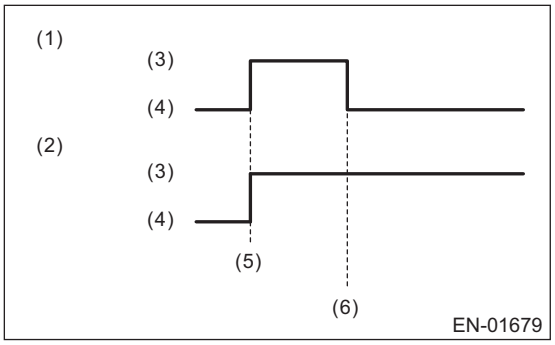
B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

NOTE:
If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(STI)(diag)-84, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

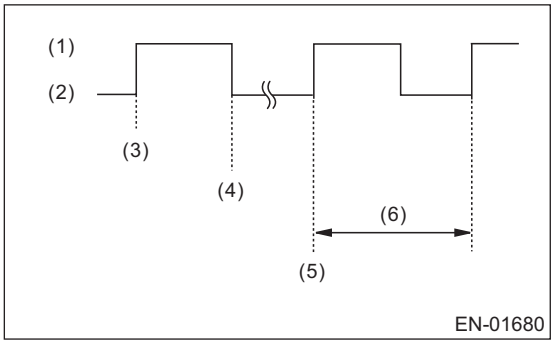


2) After starting the engine, the malfunction indicator light goes out. If it does not go off, any of the engine and emission control system has malfunction.



(1) No DTC
(2) Trouble occurs
(3) ON
(4) OFF
(5) Ignition switch ON
(6) Engine start

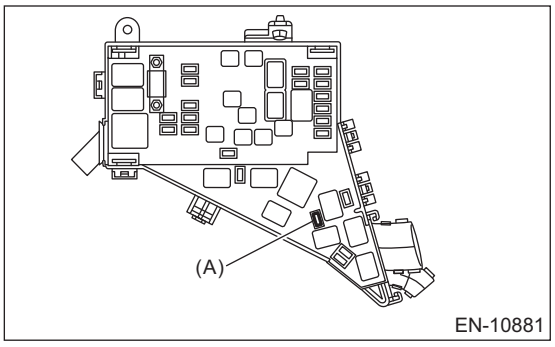
3) If the diagnostic system detects a misfire which could damage the catalyst, the malfunction indicator light will blink at a cycle of 1 Hz.



(1) ON
(2) OFF
(3) Ignition switch ON
(4) Engine start
(5) Misfire start
(6) 1 second

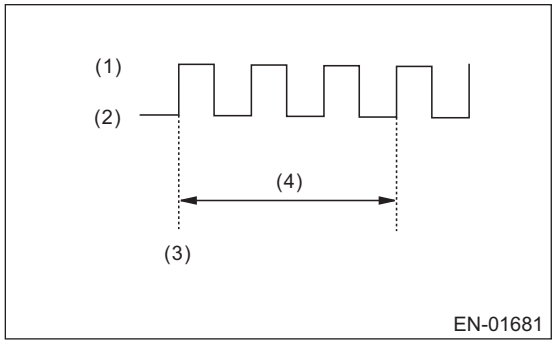
4) Turn the ignition switch to OFF and install the delivery mode fuse (A).

CAUTION:
Do not use any fuses that are installed on the vehicle.



(1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.

(2) After the engine starts, malfunction indicator light blinks in a cycle of 0.5 Hz. (During diagnosis)
(3) Malfunction indicator light blinks at a cycle of 3 Hz after diagnosis if there is no trouble. Malfunction indicator light illuminates if faulty.



(1) ON
(2) OFF
(3) Ignition switch ON
(4) 1 second

C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

Trouble symptom:
When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not illuminate.

NOTE:
For the diagnostic procedure, refer to the combination meter section. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF

Trouble symptom:
Although malfunction indicator light comes on when the engine runs, DTC is not shown on the Subaru Select Monitor or general scan tool display.

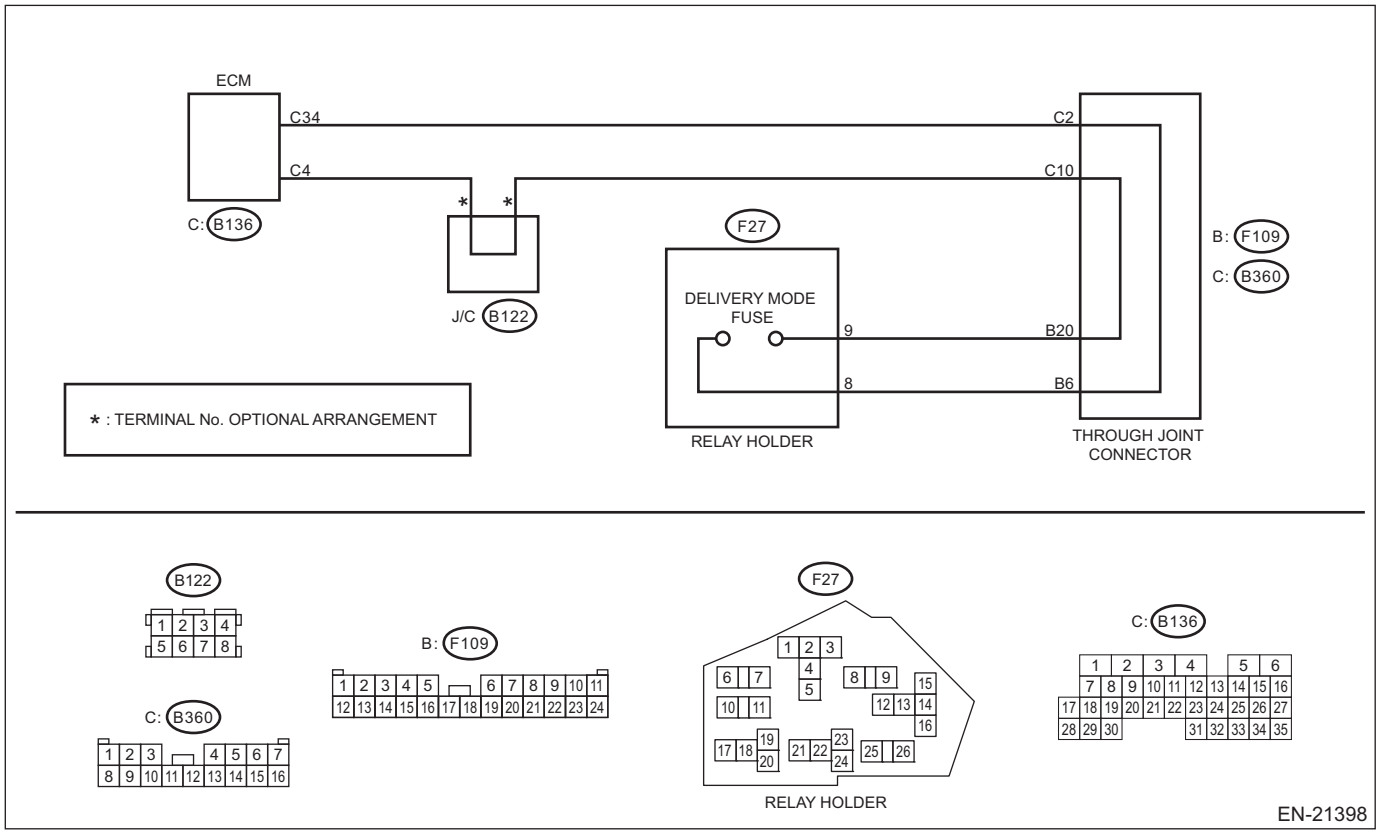
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTCs for the engine and the LAN system using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC of engine or LAN system displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Check the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

E: MALFUNCTION INDICATOR LIGHT DOES NOT BLINK

Diagnosis:
- The malfunction indicator light circuit is open or shorted.
- Delivery mode fuse circuit is open.

Trouble symptom:
Malfunction indicator light does not blink during Inspection Mode.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

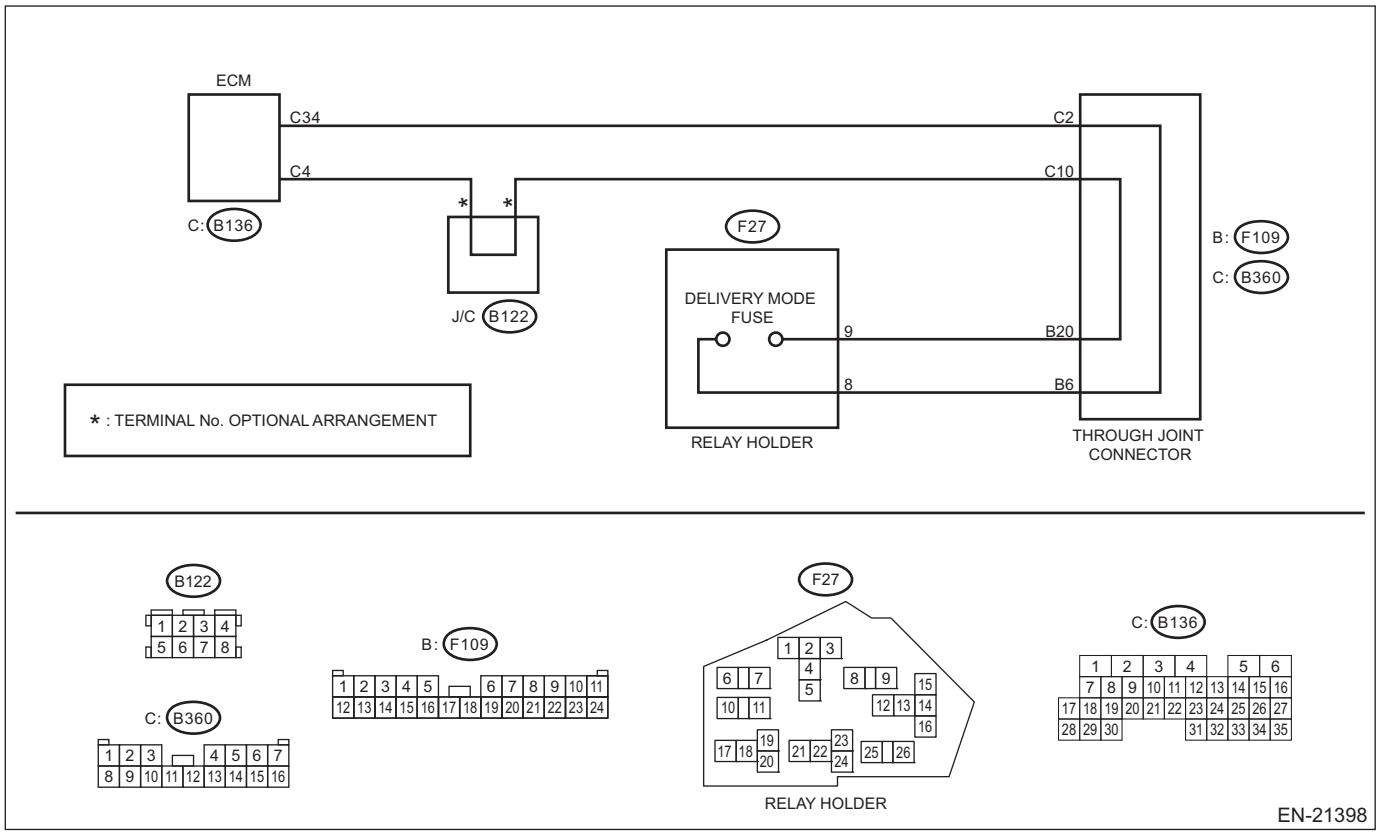


Step		Check	Yes	No
1	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Turn the ignition switch to OFF. 2) Make sure that the delivery mode fuse is removed. 3) Turn the ignition switch to ON. (Engine OFF)	Does the malfunction indicator light illuminate?	Go to step **2**.	Repair the malfunction indicator light circuit. <Ref. to EN(STI)(diag)-84, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>
2	**CHECK HARNESS BETWEEN ECM AND DELIVERY MODE FUSE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Install the delivery mode fuse. 4) Measure the resistance of harness between ECM connectors. ***Connector & terminal*** ***(B136) No. 34 — (B136) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector • Poor contact of each connector between ECM connector

Step		Check	Yes	No
3	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

F: MALFUNCTION INDICATOR LIGHT REMAINS BLINKING

Diagnosis:
Delivery mode fuse circuit is shorted to ground.
Trouble symptom:
Malfunction indicator light blinks when delivery mode fuse is not installed.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK DELIVERY MODE FUSE.** 1) Make sure that the delivery mode fuse is removed. 2) Turn the ignition switch to ON.	Does the malfunction indicator light blink?	Go to step **2**.	System is normal. NOTE: Malfunction indicator light blinks at a cycle of 3 Hz when delivery mode fuse is installed.
2	**CHECK HARNESS BETWEEN ECM AND DELIVERY MODE FUSE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 34 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the short circuit to ground in harness between ECM connector and delivery mode fuse.

15.Diagnostics for Engine Starting Failure

A: PROCEDURE

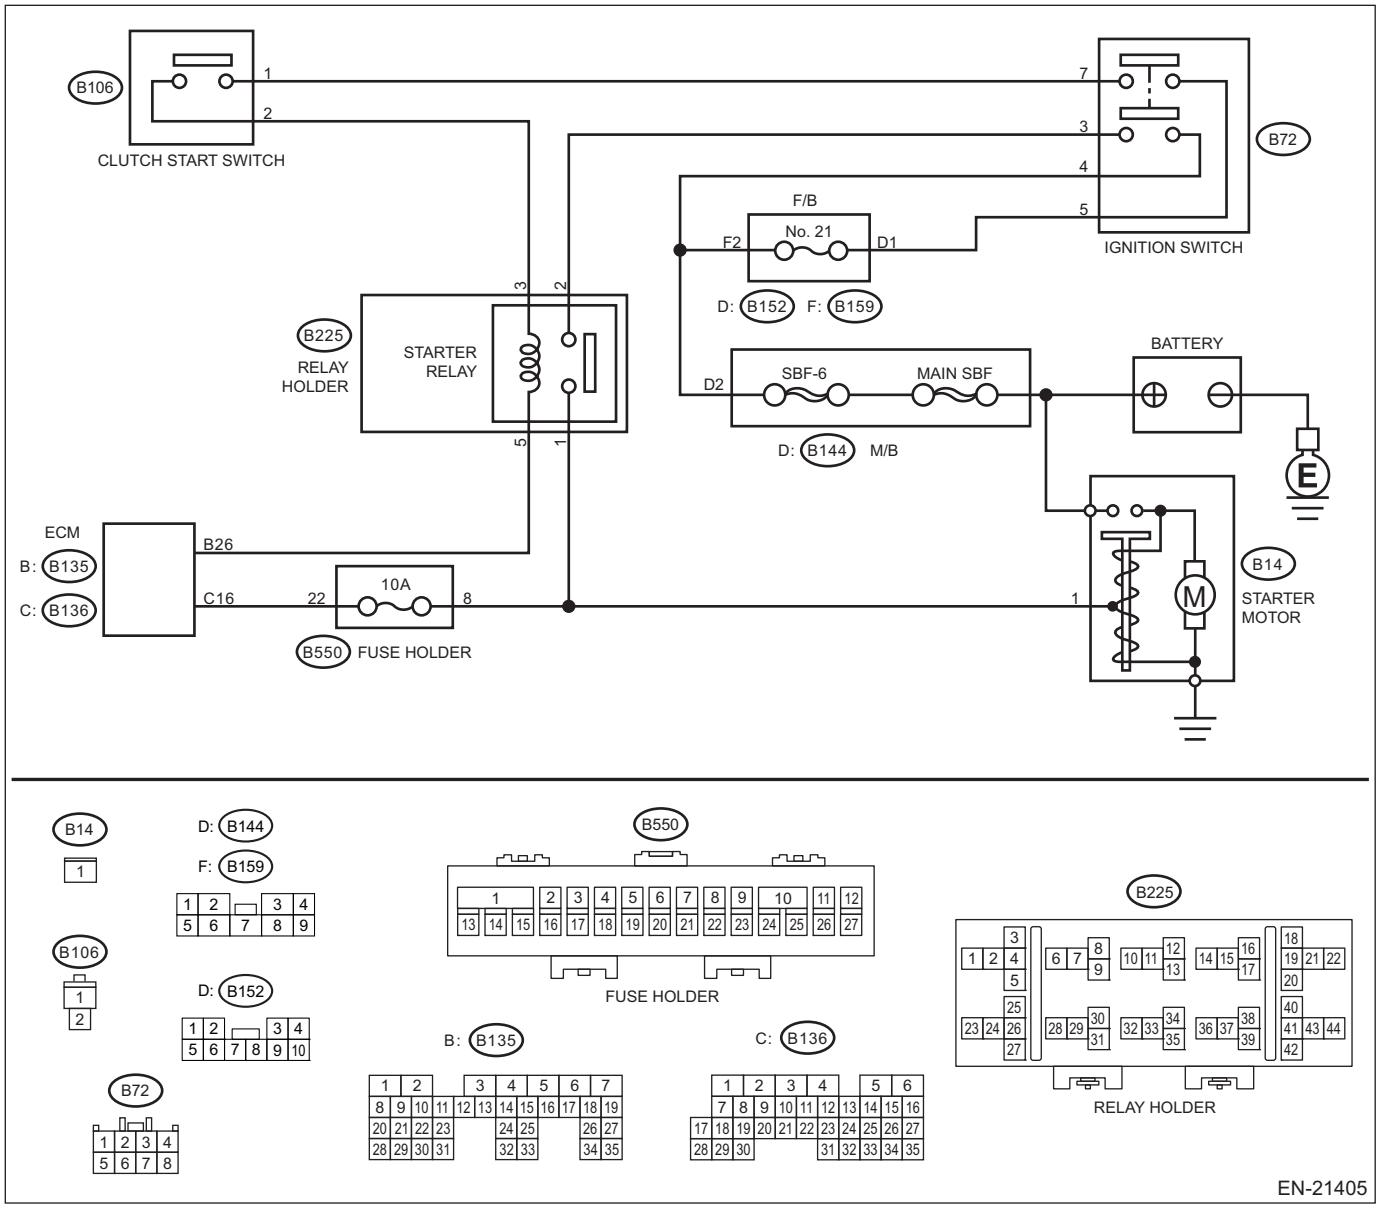
1. Check of the fuel amount
↓
2. CHECK IMMOBILIZER. • Model without push button start <Ref. to IM(diag)-2, Basic Diagnostic Procedure.> • Model with push button start <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
↓
3. Inspection of starter motor circuit <Ref. to EN(STI)(diag)-88, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
4. Inspection of ECM power supply and ground line <Ref. to EN(STI)(diag)-97, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>
↓
5. Inspection of ignition control system <Ref. to EN(STI)(diag)-99, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
6. Inspection of fuel pump circuit <Ref. to EN(STI)(diag)-102, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
7. Inspection of fuel injector circuit <Ref. to EN(STI)(diag)-103, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

B: STARTER MOTOR CIRCUIT

1. MODEL WITHOUT PUSH BUTTON START

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery. <Ref. to SC(STI)-24, Battery.>
2	**CHECK OPERATION OF STARTER MOTOR.** Check the starter motor operation.	Does the starter motor operate?	Go to step **3**.	Go to step **4**.
3	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Check ignition control system. <Ref. to EN(STI)(diag)-99, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

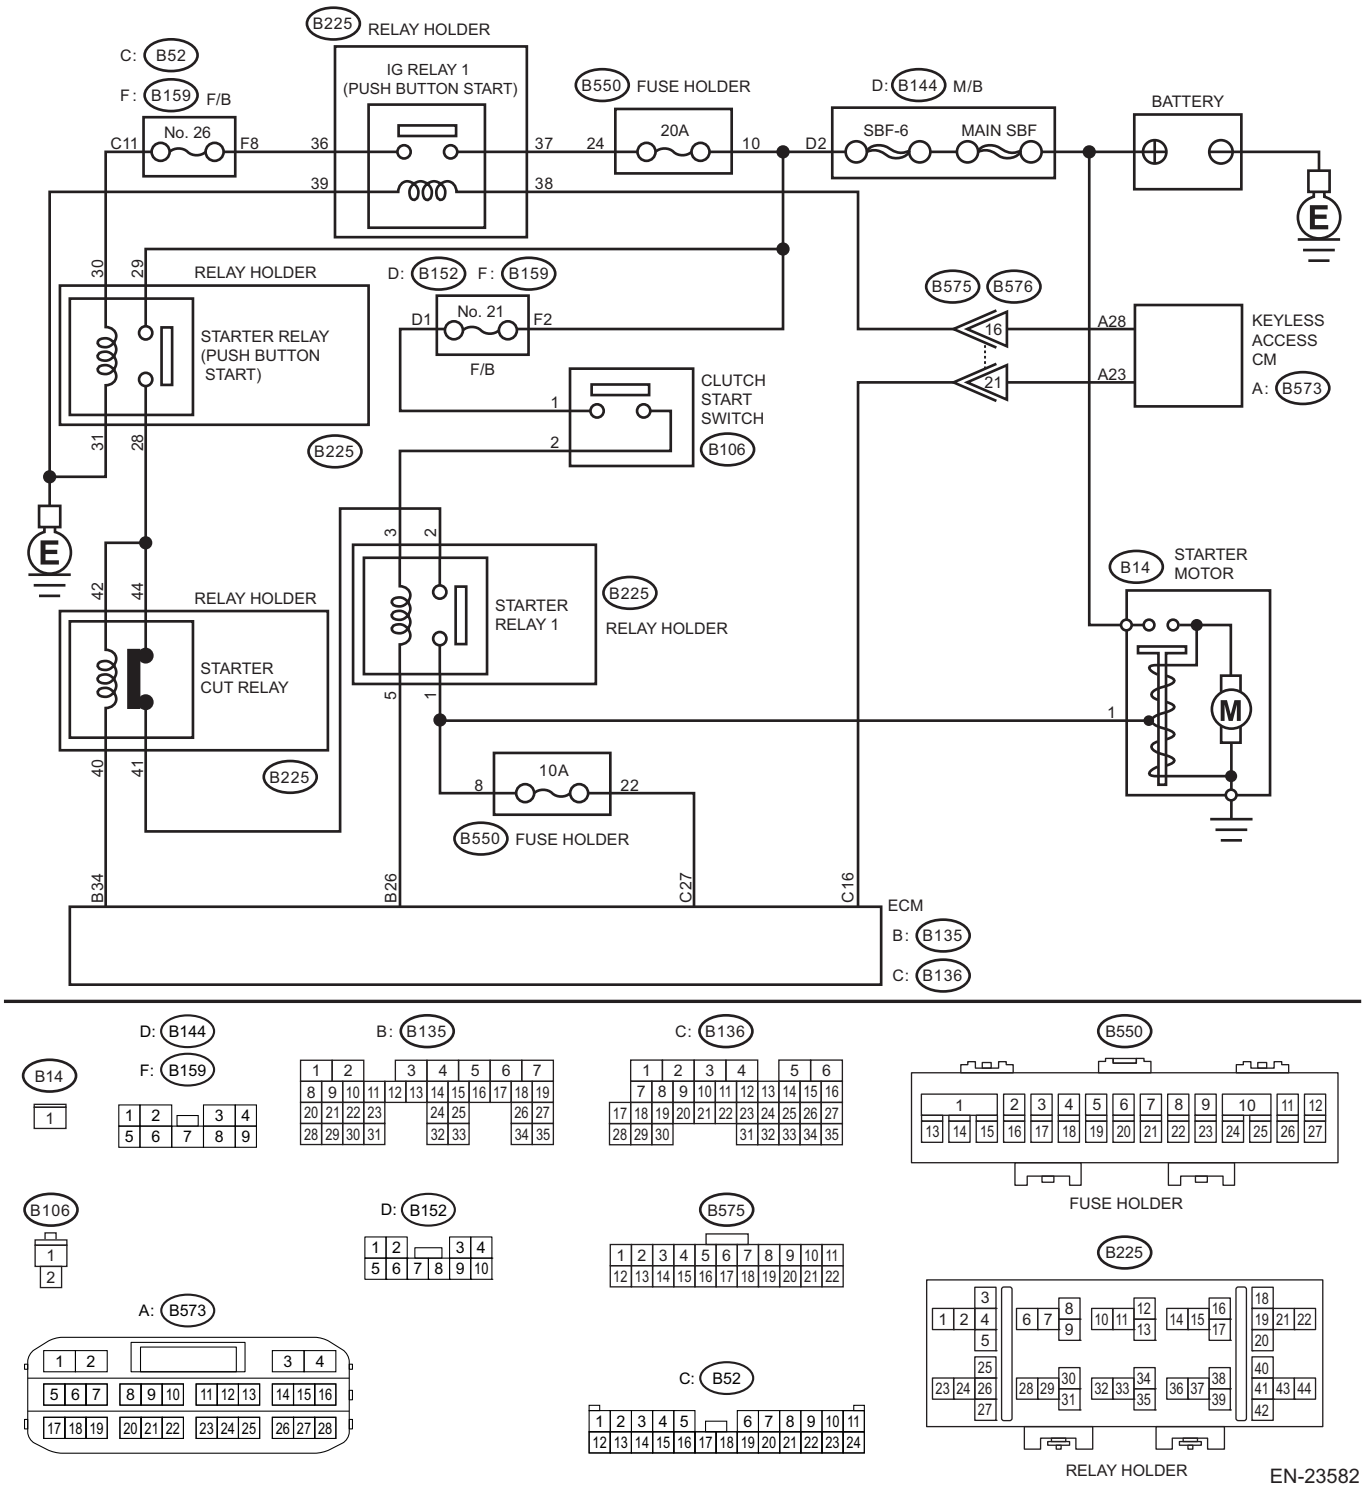
	Step	Check	Yes	No
4	**CHECK INPUT SIGNAL FOR STARTER MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from starter motor. 3) Depress the clutch pedal. 4) Turn the ignition switch to START. 5) Measure the voltage between the starter motor connector and the engine ground. ***Connector & terminal*** ***(B14) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(STI)-7, Starter.>	Go to step **5**.
5	**CHECK INPUT SIGNAL FOR STARTER MOTOR.** 1) Depress the clutch pedal. 2) Turn the ignition switch to START. 3) Measure the voltage between starter relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the open circuit of the harness between starter relay connector and starter motor.	Go to step **6**.
6	**CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition switch. 3) Measure the voltage between ignition switch connector and chassis ground. ***Connector & terminal*** ***(B72) No. 4 (+) — Chassis ground (–):*** ***(B72) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the power supply circuit.
7	**CHECK IGNITION SWITCH.** Measure the resistance between ignition switch terminals after turning the ignition switch to START position. ***Terminals*** ***No. 3 — No. 4:*** ***No. 5 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **8**.	Replace the ignition switch. <Ref. to SL-63, REPLACEMENT, Ignition Key Lock.>
8	**CHECK INPUT VOLTAGE OF CLUTCH START SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from clutch start switch. 3) Connect the connector to ignition switch. 4) Turn the ignition switch to START. 5) Measure the voltage between the clutch start switch connector and chassis ground. ***Connector & terminal*** ***(B106) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Check the following item and repair if necessary. • Blown out of fuse (F/B No. 21) • Open or short circuit to ground in harness between ignition switch connector and clutch start switch connector
9	**CHECK HARNESS BETWEEN STARTER RELAY CONNECTOR AND CLUTCH START SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the starter relay. 3) Measure the resistance of harness between starter relay connector and clutch start switch connector. ***Connector & terminal*** ***(B225) No. 3 — (B106) No. 2:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair the open circuit in harness between starter relay connector and clutch start switch connector.

	Step	Check	Yes	No
10	**CHECK INPUT VOLTAGE OF STARTER RELAY.** 1) Connect the connector to the clutch start switch. 2) Depress the clutch pedal. 3) Turn the ignition switch to START. 4) Measure the voltage between starter relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Replace the clutch start switch. <Ref. to CL-36, Clutch Switch.>
11	**CHECK INPUT VOLTAGE OF STARTER RELAY.** 1) Turn the ignition switch to START. 2) Measure the voltage between starter relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	Repair the open circuit of harness between starter relay connector and ignition switch connector.
12	**CHECK STARTER RELAY.** 1) Connect the battery to starter relay terminals No. 3 and No. 5. 2) Measure the resistance between starter relay terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **13**.	Replace the starter relay.
13	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and starter relay connector. ***Connector & terminal*** ***(B136) No. 16 — (B225) No. 1:***	Is the resistance less than 1 Ω?	Go to step **14**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and starter relay connector • Blown out of fuse
14	**CHECK ECM INPUT VOLTAGE.** 1) Install the starter relay. 2) Depress the clutch pedal. 3) Turn the ignition switch to START. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 26 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check the ECM power supply and ground line. <Ref. to EN(STI)(diag)-97, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Repair the open circuit of harness between ECM connector and starter relay connector.

2. MODEL WITH PUSH BUTTON START

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-23582

Step		Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery. <Ref. to SC(STI)-24, Battery.>
2	**CHECK OPERATION OF STARTER MOTOR.** Check the starter motor operation.	Does the starter motor operate?	Go to step **3**.	Go to step **4**.

	Step	Check	Yes	No
3	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Check ignition control system. <Ref. to EN(STI)(diag)-99, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
4	**CHECK PUSH BUTTON IGNITION SWITCH.** Press the push button ignition switch twice with the ignition OFF (ACC OFF). NOTE: Release the clutch pedal.	Does the ignition turn to ON?	Go to step **5**.	Check the push button start system. <Ref. to KPS(diag)-127, POWER SUPPLY SWITCHING SYSTEM, LIST, Diagnostics with Phenomenon.>
5	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Depress the clutch pedal. 2) Check the push button ignition switch indicator light.	Does the indicator light turn to green?	Go to step **6**.	Check the push button start system. <Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
6	**CHECK START SWITCH SIGNAL.** 1) Read the waveform of start switch signal using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> 2) While depressing the clutch pedal, press the push button ignition switch once.	Does waveform of the start switch signal occur?	Go to step **10**.	Go to step **7**.
7	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the keyless access CM. 4) Measure the resistance of harness between ECM connector and keyless access CM. ***Connector & terminal*** ***(B136) No. 16 — (B573) No. 23:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and keyless access CM connector • Poor contact of coupling connector
8	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Repair the short circuit to ground in harness between ECM connector and keyless access CM connector.

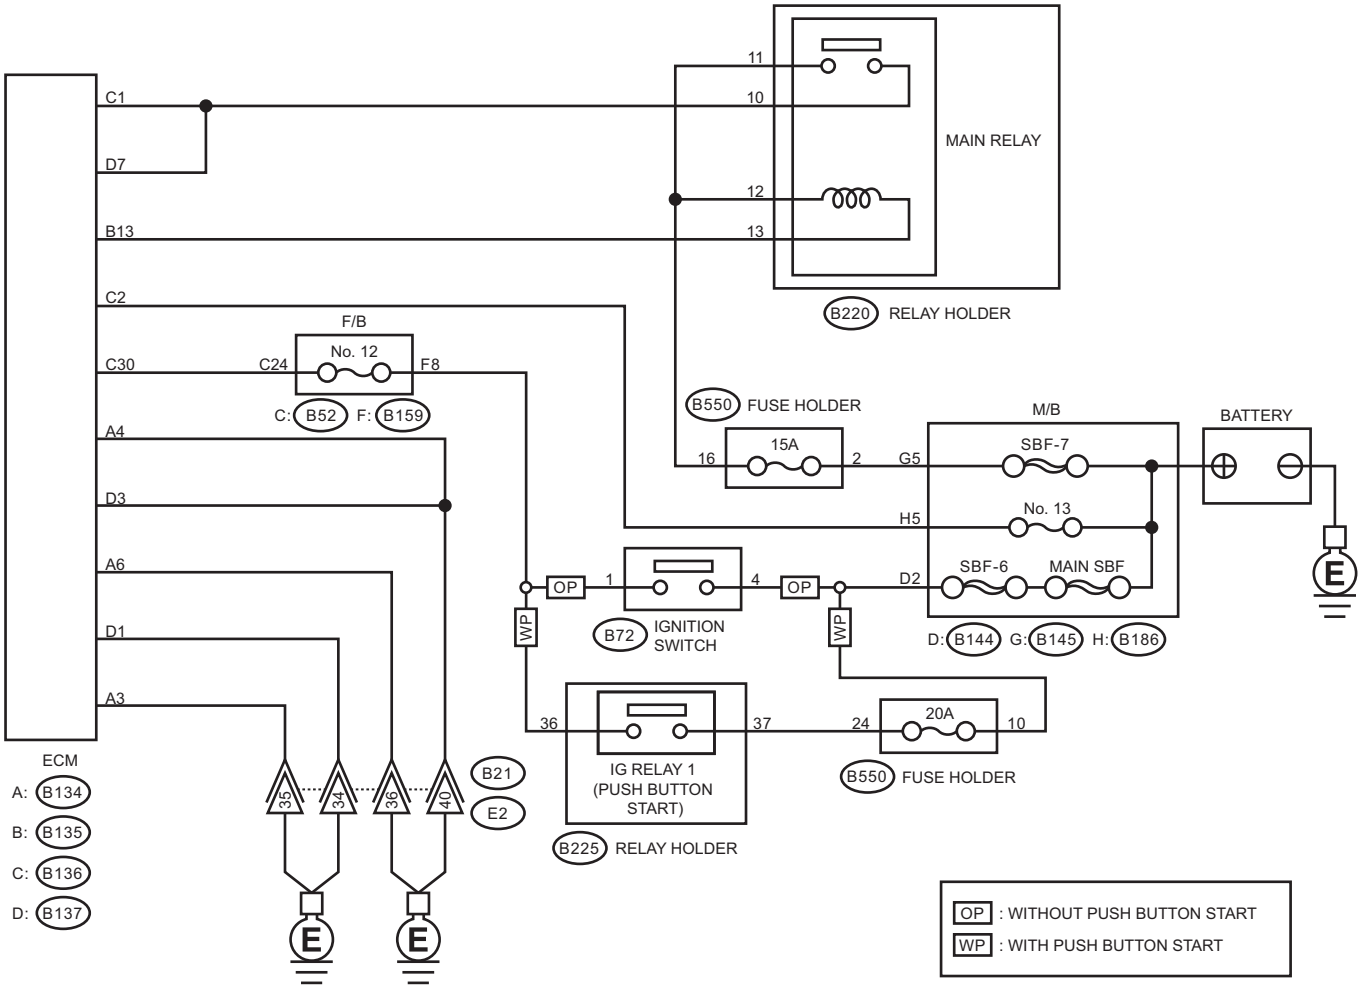
	Step	Check	Yes	No
9	**CHECK START SWITCH SIGNAL.** 1) Connect the connector to ECM. 2) Connect the connector to the keyless access CM. 3) Read the waveform of start switch signal using an oscilloscope. 4) While depressing the clutch pedal, press the push button ignition switch once. ***Connector & terminal*** ***(B136) No. 16 (+) — Chassis ground (–):***	Does waveform of the start switch signal occur?	Repair the poor contact of ECM connector.	Repair the poor contact of keyless access CM connector.
10	**CHECK INPUT SIGNAL FOR STARTER MOTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from starter motor. 3) Place the gear shift lever in neutral. 4) While depressing the clutch pedal, press the push button ignition switch once. 5) Measure the voltage between the starter motor connector and the engine ground. ***Connector & terminal*** ***(B14) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(STI)-7, Starter.>	Go to step **11**.
11	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND STARTER MOTOR CONNECTOR.** 1) Remove the starter relay 1. 2) Measure the resistance of harness between starter relay 1 connector and starter motor connector. ***Connector & terminal*** ***(B225) No. 1 — (B14) No. 1:***	Is the resistance less than 1 Ω?	Go to step **12**.	Repair the open circuit of the harness between starter relay 1 connector and starter motor connector.
12	**CHECK IG RELAY 1 (PUSH BUTTON START) POWER SUPPLY.** 1) Remove the IG relay 1 (push button start). 2) Turn the ignition to ON. 3) Measure the voltage between the IG relay 1 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 37 (+) — Chassis ground (–):*** ***(B225) No. 38 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Check the following item and repair or replace if necessary. • Blown out of fuse • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and keyless access CM connector • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and battery
13	**CHECK HARNESS BETWEEN IG RELAY 1 (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition to OFF. 2) Measure the resistance of harness between the IG relay 1 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 39 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **14**.	Repair the open circuit in harness between the IG relay 1 (push button start) connector and chassis ground.

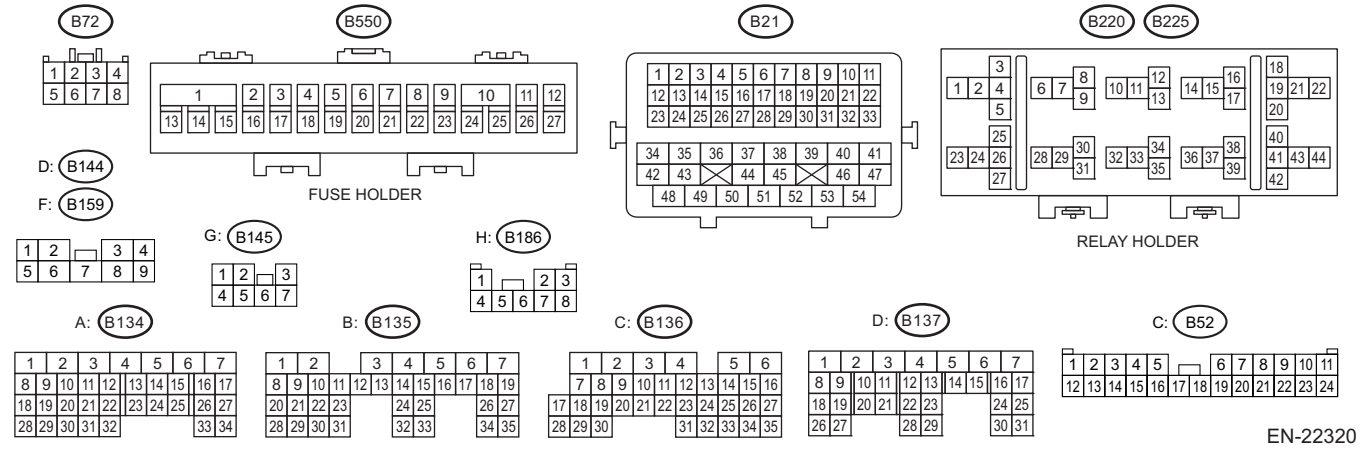
	Step	Check	Yes	No
14	**CHECK IG RELAY 1 (PUSH BUTTON START).** 1) Connect the battery to IG relay 1 (push button start) terminals No. 38 and No. 39. 2) Measure the resistance between IG relay 1 (push button start) terminals. ***Terminals*** ***No. 36 — No. 37:***	Is the resistance less than 1 Ω?	Go to step **15**.	Replace the IG relay 1 (push button start). <Ref. to SL-107, IG Relay1 (Push Button Start).>
15	**CHECK STARTER RELAY (PUSH BUTTON START) POWER SUPPLY.** 1) Install the IG relay 1 (push button start). 2) Remove the starter relay (push button start). 3) Turn the ignition to ON. 4) Measure the voltage between starter relay (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 29 (+) — Chassis ground (–):*** ***(B225) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **16**.	Check the following item and repair or replace if necessary. • Blown out of fuse (F/B No. 26) • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and IG relay 1 (push button start) connector • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and battery
16	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition to OFF. 2) Measure the resistance of harness between starter relay (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 31 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **17**.	Repair the open circuit in harness between starter relay (push button start) connector and chassis ground.
17	**CHECK STARTER RELAY (PUSH BUTTON START).** 1) Connect the battery to starter relay (push button start) terminals No. 30 and No. 31. 2) Measure the resistance between starter relay (push button start) terminals. ***Terminals*** ***No. 28 — No. 29:***	Is the resistance less than 1 Ω?	Go to step **18**.	Replace the starter relay (push button start). <Ref. to SL-105, Starter Relay (Push Button Start).>
18	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR.** 1) Remove the starter cut relay. 2) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector. ***Connector & terminal*** ***(B225) No. 28 — (B225) No. 42:*** ***(B225) No. 28 — (B225) No. 44:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.

	Step	Check	Yes	No
19	**CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between starter cut relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **20**.	Repair the short circuit to ground in harness between ECM connector and starter cut relay connector.
20	**CHECK STARTER CUT RELAY.** Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance less than 1 Ω?	Go to step **21**.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.>
21	**CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR.** 1) Remove the starter relay 1. 2) Measure the resistance of harness between starter cut relay connector and starter relay 1 connector. ***Connector & terminal*** ***(B225) No. 41 — (B225) No. 2:***	Is the resistance less than 1 Ω?	Go to step **22**.	Repair the open circuit of harness between starter cut relay connector and starter relay 1 connector.
22	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND CLUTCH START SWITCH CONNECTOR.** Measure the resistance of harness between starter relay 1 connector and clutch start switch connector. ***Connector & terminal*** ***(B225) No. 3 — (B106) No. 2:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair the open circuit in harness between starter relay 1 connector and clutch start switch connector.
23	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** Measure the resistance of harness between ECM connector and starter relay 1 connector. ***Connector & terminal*** ***(B135) No. 26 — (B225) No. 5:*** ***(B136) No. 27 — (B225) No. 1:***	Is the resistance less than 1 Ω?	Go to step **24**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and starter relay 1 connector • Blown out of fuse
24	**CHECK STARTER RELAY 1.** 1) Connect the battery to starter relay 1 terminals No. 3 and No. 5. 2) Measure the resistance between starter relay 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Check the ECM power supply and ground line. <Ref. to EN(STI)(diag)-97, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Replace the starter relay 1. <Ref. to EN(STI)(diag)-10, LOCATION, Electrical Component Location.>

C: CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM)

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



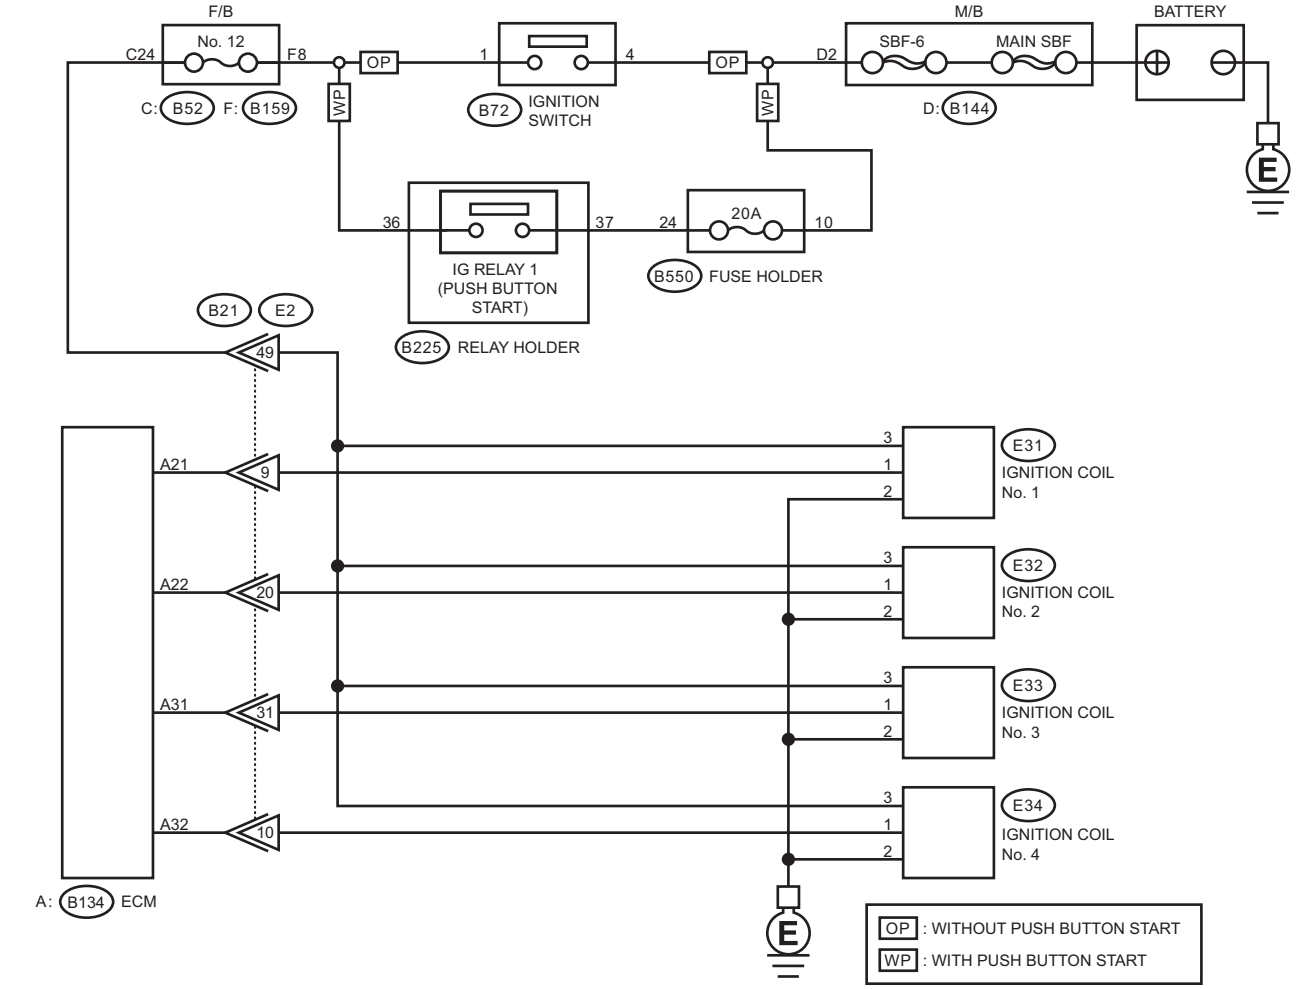


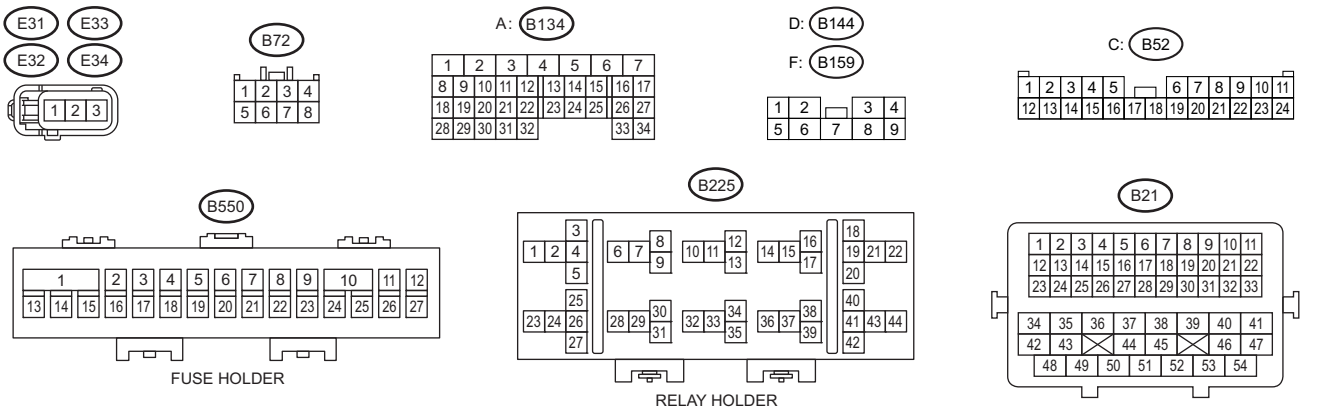
Diagnostics for Engine Starting Failure

	Step	Check	Yes	No
1	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Connect the battery to main relay terminals No. 12 and No. 13. 4) Measure the resistance between main relay terminals. ***Terminals*** ***No. 10 — No. 11:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the main relay. <Ref. to FU(STI)-57, Main Relay.>
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
3	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 2 (+) — Chassis ground (–):*** ***(B136) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the open or ground short in the harness of power supply circuit.
4	**CHECK INPUT VOLTAGE OF MAIN RELAY.** Measure the voltage between main relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 11 (+) — Chassis ground (–):*** ***(B220) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or ground short in the harness of power supply circuit.
5	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to OFF. 2) Install the main relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open or ground short circuit of harness between ECM connector and main relay connector.
6	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to OFF. 2) Connect the connector to ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 1 (+) — Chassis ground (–):*** ***(B137) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check ignition control system. <Ref. to EN(STI)(diag)-99, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and main relay connector • Poor contact of main relay connector • Poor contact of ECM connector

D: IGNITION CONTROL SYSTEM

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-21427

Diagnostics for Engine Starting Failure

	Step	Check	Yes	No
1	**CHECK SPARK PLUG CONDITION.** 1) Remove the spark plug. <Ref. to IG(STI)-5, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(STI)-6, INSPECTION, Spark Plug.>	Is the check result OK?	Go to step **2**.	Replace the spark plug. <Ref. to IG(STI)-5, Spark Plug.>
2	**CHECK IGNITION SYSTEM FOR SPARKS.** 1) Connect the spark plug to ignition coil. 2) Release the fuel pressure. <Ref. to FU(STI)-64, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.> 3) Contact the spark plug thread portion to engine. 4) While opening the throttle valve fully, crank the engine to check that spark occurs at each cylinder.	Does spark occur at each cylinder?	Check fuel pump system. <Ref. to EN(STI)(diag)-102, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step **3**.
3	**CHECK IGNITION COIL POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 3 (+) — Engine ground (–):*** ***(E32) No. 3 (+) — Engine ground (–):*** ***(E33) No. 3 (+) — Engine ground (–):*** ***(E34) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open or short to ground in power supply circuit • Poor contact of coupling connector • Blown out of fuse
4	**CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 2 — Engine ground:*** ***(E32) No. 2 — Engine ground:*** ***(E33) No. 2 — Engine ground:*** ***(E34) No. 2 — Engine ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in harness between ignition coil connector and engine ground.
5	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from ignition coil. 4) Measure the resistance of harness between ECM connector and ignition coil connector. ***Connector & terminal*** ***(B134) No. 21 — (E31) No. 1:*** ***(B134) No. 22 — (E32) No. 1:*** ***(B134) No. 31 — (E33) No. 1:*** ***(B134) No. 32 — (E34) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and the ignition coil connector • Poor contact of coupling connector
6	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 21 — Engine ground:*** ***(B134) No. 22 — Engine ground:*** ***(B134) No. 31 — Engine ground:*** ***(B134) No. 32 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.

Step		Check	Yes	No
7	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ignition coil. <Ref. to IG(STI)-8, Ignition Coil.>

E: FUEL PUMP CIRCUIT

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

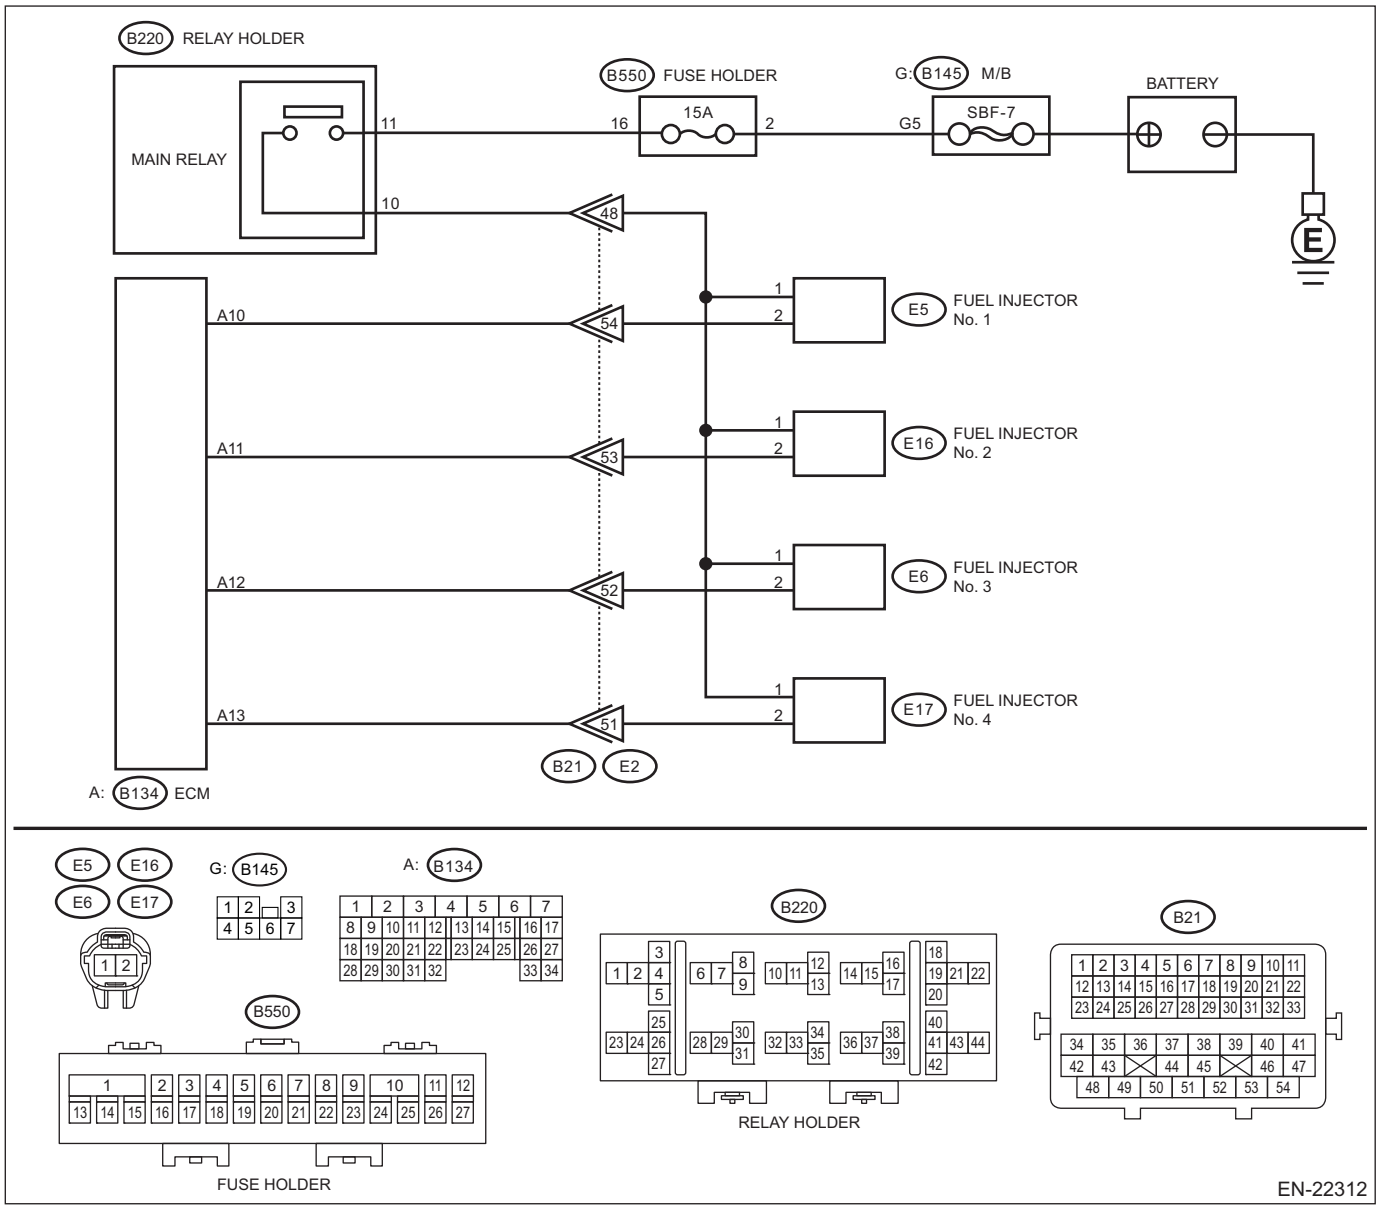
	Step	Check	Yes	No
1	**CHECK OPERATING SOUND OF FUEL PUMP.** Make sure that the fuel pump operates for two seconds when turning the ignition switch to ON. NOTE: Fuel pump operation can be executed using the Subaru Select Monitor. Refer to “Active Test” for the procedures. <Ref. to EN(STI)(diag)-80, Active Test.>	Does the fuel pump emit operating sound?	Check the fuel injector circuit. <Ref. to EN(STI)(diag)-103, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>	Display the DTC. <Ref. to EN(STI)(diag)-50, OPERATION, Read Diagnostic Trouble Code (DTC).>

F: FUEL INJECTOR CIRCUIT

CAUTION:
- **Check or repair only faulty parts.**
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



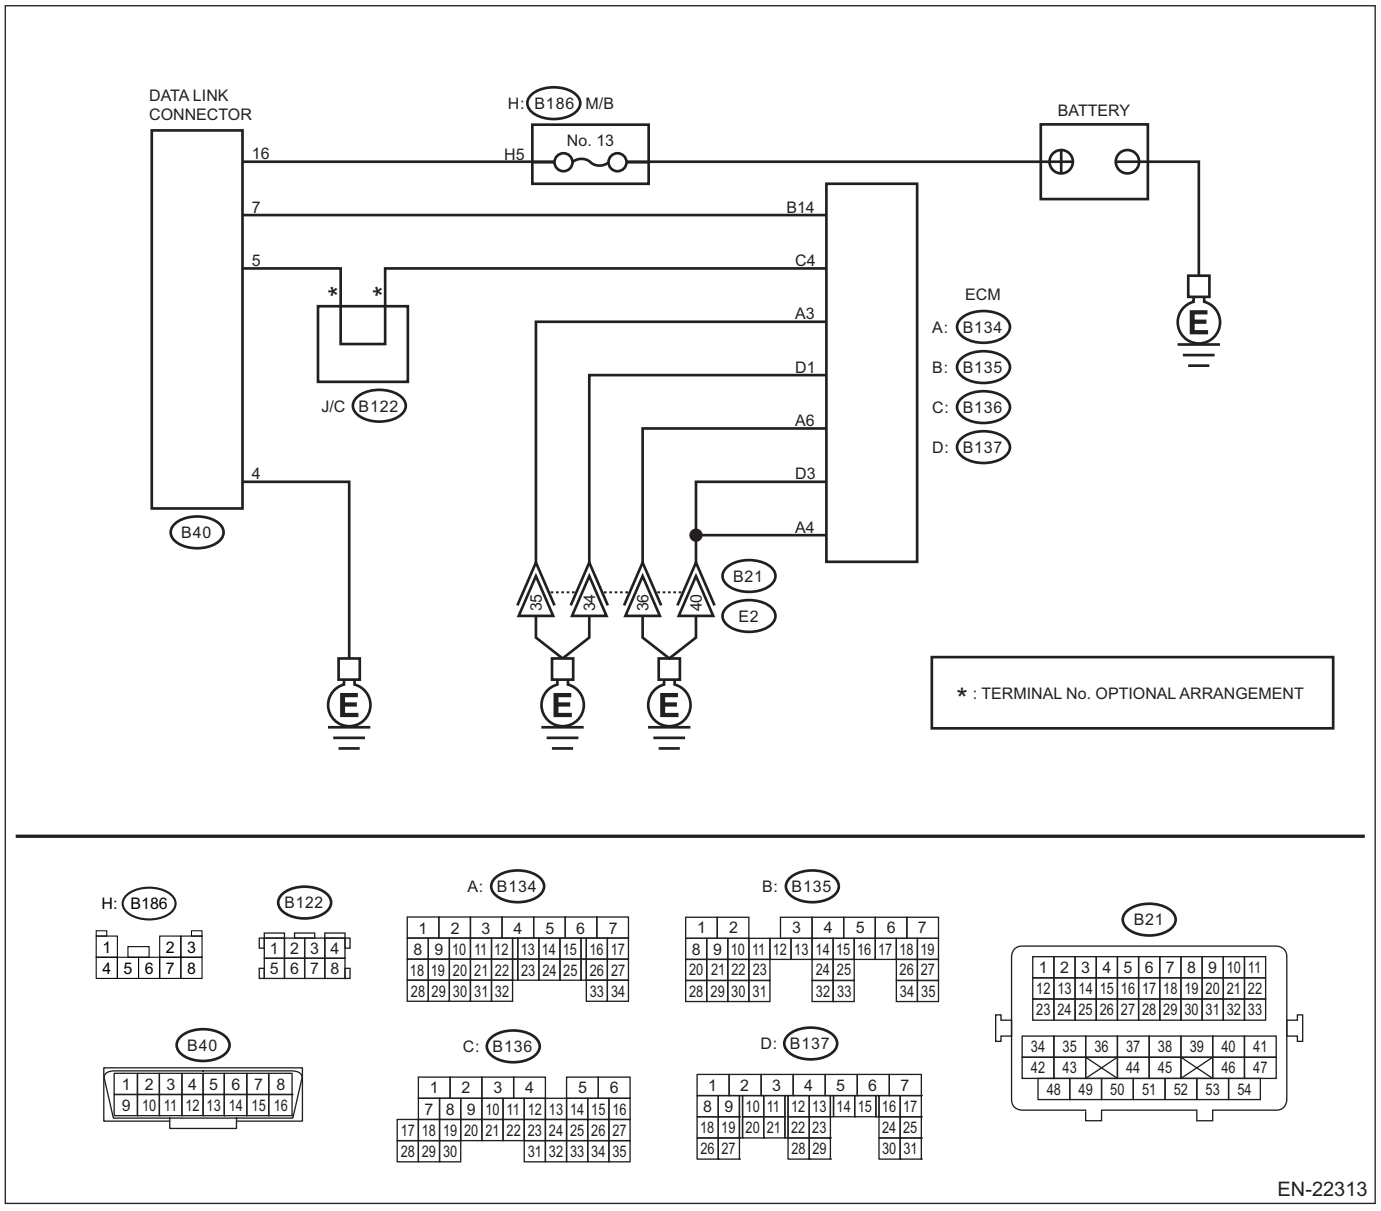
Step		Check	Yes	No
1	**CHECK OPERATION OF EACH FUEL INJECTOR.** While cranking the engine, check each fuel injector emits operating sound. Use a sound scope or attach a screwdriver to the injector for this check.	Does the fuel injector emit operating sound?	Check the fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY TO EACH FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage between fuel injector connector and the engine ground. ***Connector & terminal*** ***#1 (E5) No. 1 (+) — Engine ground (–):*** ***#2 (E16) No. 1 (+) — Engine ground (–):*** ***#3 (E6) No. 1 (+) — Engine ground (–):*** ***#4 (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay connector and fuel injector connector • Poor contact of main relay connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (B134) No. 10 — (E5) No. 2:*** ***#2 (B134) No. 11 — (E16) No. 2:*** ***#3 (B134) No. 12 — (E6) No. 2:*** ***#4 (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***#1 (B134) No. 10 — Chassis ground:*** ***#2 (B134) No. 11 — Chassis ground:*** ***#3 (B134) No. 12 — Chassis ground:*** ***#4 (B134) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
5	**CHECK EACH FUEL INJECTOR.** Check all fuel injectors. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **6**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
6	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Inspection using “General Diagnostic Table”. <Ref. to EN(STI)(diag)-697, INSPECTION, General Diagnostic Table.>

16.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Open or short circuit in data link connector
Trouble symptom:
Subaru Select Monitor communication failure
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect DST-i or a general scan tool to the data link connector.	Is the DST-i or the general scan tool turned to ON?	Go to step **4**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY CIRCUIT.** Measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 13)
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of data link connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and data link connector • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of joint connector
4	**CHECK HARNESS BETWEEN ECM AND DATA LINK CONNECTOR.** 1) Disconnect the connectors from ECM, DCCD CM, VDC CM, airbag CM, impact sensor, TPMS & keyless entry CM, and body integrated unit. **CAUTION:** **When disconnecting the connector from airbag CM, always follow the precautions on AB section. <Ref. to AB-9, CAUTION, General Description.>** 2) Measure the resistance of harness between ECM connector and data link connector. ***Connector & terminal*** ***(B135) No. 14 — (B40) No. 7:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between ECM connector and data link connector.
5	**CHECK HARNESS BETWEEN ECM AND DATA LINK CONNECTOR.** Measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector or data link connector.	Repair the short circuit to ground in harness between ECM connector and data link connector.

17.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	<Ref. to IM(diag)-16, DTC B1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-48, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	<Ref. to IM(diag)-17, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-49, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	<Ref. to IM(diag)-21, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-54, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	<Ref. to IM(diag)-21, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-55, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1578	METER	<Ref. to IM(diag)-22, DTC B1578 METER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000A	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 1	<Ref. to EN(STI)(diag)-117, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000B	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 1	<Ref. to EN(STI)(diag)-118, DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000C	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 2	<Ref. to EN(STI)(diag)-118, DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000D	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 2	<Ref. to EN(STI)(diag)-119, DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0011	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1	<Ref. to EN(STI)(diag)-120, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0014	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1	<Ref. to EN(STI)(diag)-128, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0016	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A	<Ref. to EN(STI)(diag)-136, DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0017	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B	<Ref. to EN(STI)(diag)-144, DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0018	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A	<Ref. to EN(STI)(diag)-152, DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0019	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B	<Ref. to EN(STI)(diag)-160, DTC P0019 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0021	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2	<Ref. to EN(STI)(diag)-168, DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0024	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2	<Ref. to EN(STI)(diag)-175, DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0030	A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-182, DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0031	A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-185, DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0032	A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-188, DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0037	A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-191, DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0038	A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-194, DTC P0038 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0068	MAP/MAF - THROTTLE POSITION CORRELATION	<Ref. to EN(STI)(diag)-197, DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	<Ref. to EN(STI)(diag)-200, DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0072	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW	<Ref. to EN(STI)(diag)-202, DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0073	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH	<Ref. to EN(STI)(diag)-203, DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0101	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(STI)(diag)-205, DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0102	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW	<Ref. to EN(STI)(diag)-208, DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0103	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH	<Ref. to EN(STI)(diag)-211, DTC P0103 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0107	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW	<Ref. to EN(STI)(diag)-214, DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0108	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH	<Ref. to EN(STI)(diag)-217, DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1	<Ref. to EN(STI)(diag)-220, DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0112	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1	<Ref. to EN(STI)(diag)-223, DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0113	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1	<Ref. to EN(STI)(diag)-226, DTC P0113 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(STI)(diag)-229, DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0117	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW	<Ref. to EN(STI)(diag)-232, DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0118	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH	<Ref. to EN(STI)(diag)-235, DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0122	THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW	<Ref. to EN(STI)(diag)-238, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0123	THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH	<Ref. to EN(STI)(diag)-242, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0125	INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL	<Ref. to EN(STI)(diag)-246, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0128	COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)	<Ref. to EN(STI)(diag)-248, DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0131	A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-251, DTC P0131 A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0132	A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-254, DTC P0132 A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0134	A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-257, DTC P0134 A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0137	O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-261, DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0138	O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-265, DTC P0138 O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013A	O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-268, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013B	O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-272, DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013E	O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-274, DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013F	O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-276, DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0141	O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2	<Ref. to EN(STI)(diag)-278, DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P014C	A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-280, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P014D	A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	<Ref. to EN(STI)(diag)-282, DTC P014D A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note

18.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0011. <Ref. to EN(STI)(diag)-120, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

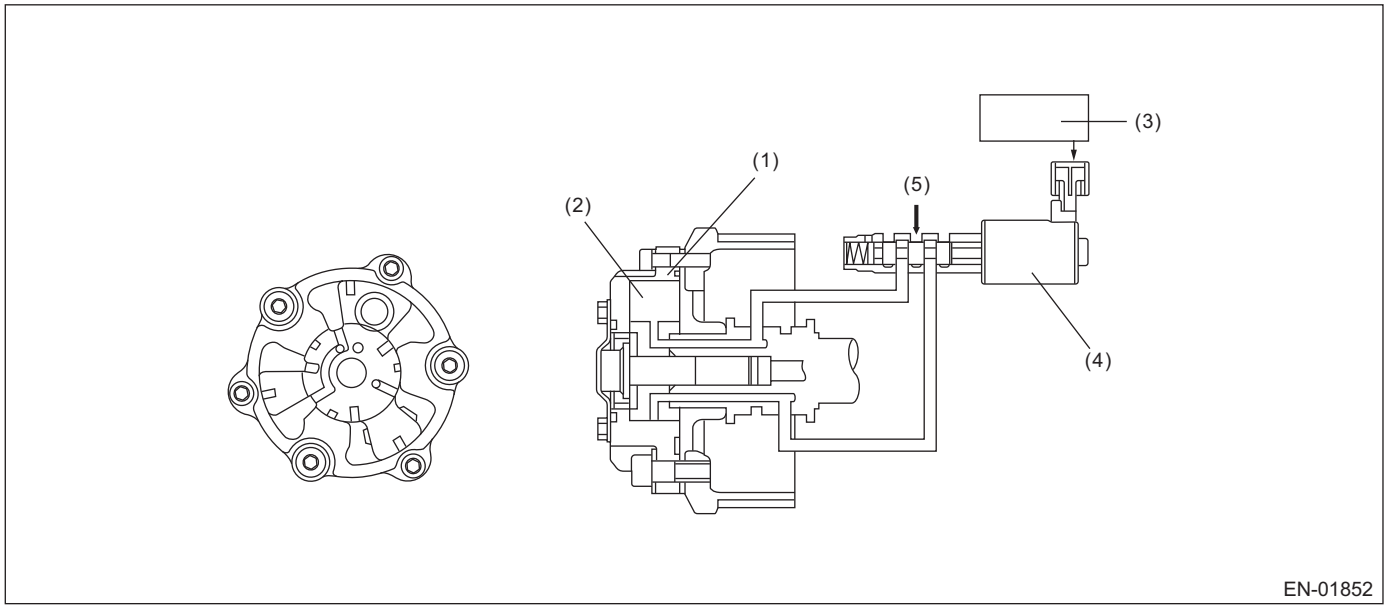
- Intake side

Detect the AVCS system malfunction.
Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

- Exhaust side

Detect the exhaust AVCS system malfunction.
Judge NG when the amount of exhaust AVCS actual timing advance does not approach the amount of exhaust AVCS target timing advance.

2. COMPONENT DESCRIPTION



(1) AVCS timing controller
(2) Vane
(3) Engine control module (ECM)
(4) Oil flow control solenoid valve
(5) Hydraulic

3. EXECUTION CONDITION

Secondary parameters	Execution condition	DTC
Intake side		
Battery voltage	≥ 10.9 V	P000A P000C
AVCS control	In operation	
|Target timing advance change amount (per 64 ms)|	< 10 °CA	
|VVT target angle|	> 10 °CA	
Exhaust side		
Battery voltage	≥ 10.9 V	P000B P000D
Exhaust AVCS control	In operation	
|Target timing advance change amount (per 64 ms)|	< 10 °CA	

Secondary parameters	Execution condition	DTC
|VVT target angle|	> 10 °CA	

4. GENERAL DRIVING CYCLE

- Intake side

Perform the diagnosis continuously while AVCS is operating.

- Exhaust side

Perform the diagnosis continuously while exhaust AVCS is operating.

5. DIAGNOSTIC METHOD

- Intake side

When the differences of target timing advance amount and actual timing advance amount is calculated during AVCS control, and the difference per predetermined time is the specified value or larger.
Judge as NG when the following conditions are established within the predetermined time.

- Exhaust side

When the differences of target timing advance amount and actual timing advance amount is calculated during exhaust AVCS control, and the difference per predetermined time is the specified value or larger.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Intake side Σ(Target position – Actual position)	> 4000 °CA or < –4000 °CA	P000A P000C
Exhaust side Σ(Target position – Actual position)	> 4000 °CA or < –4000 °CA	P000B P000D

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

B: DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0014. <Ref. to EN(STI)(diag)-128, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to the exhaust side of P000A. <Ref. to EN(STI)(diag)-117, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

C: DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0021. <Ref. to EN(STI)(diag)-168, DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to the intake side of P000A. <Ref. to EN(STI)(diag)-117, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0024. <Ref. to EN(STI)(diag)-175, DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

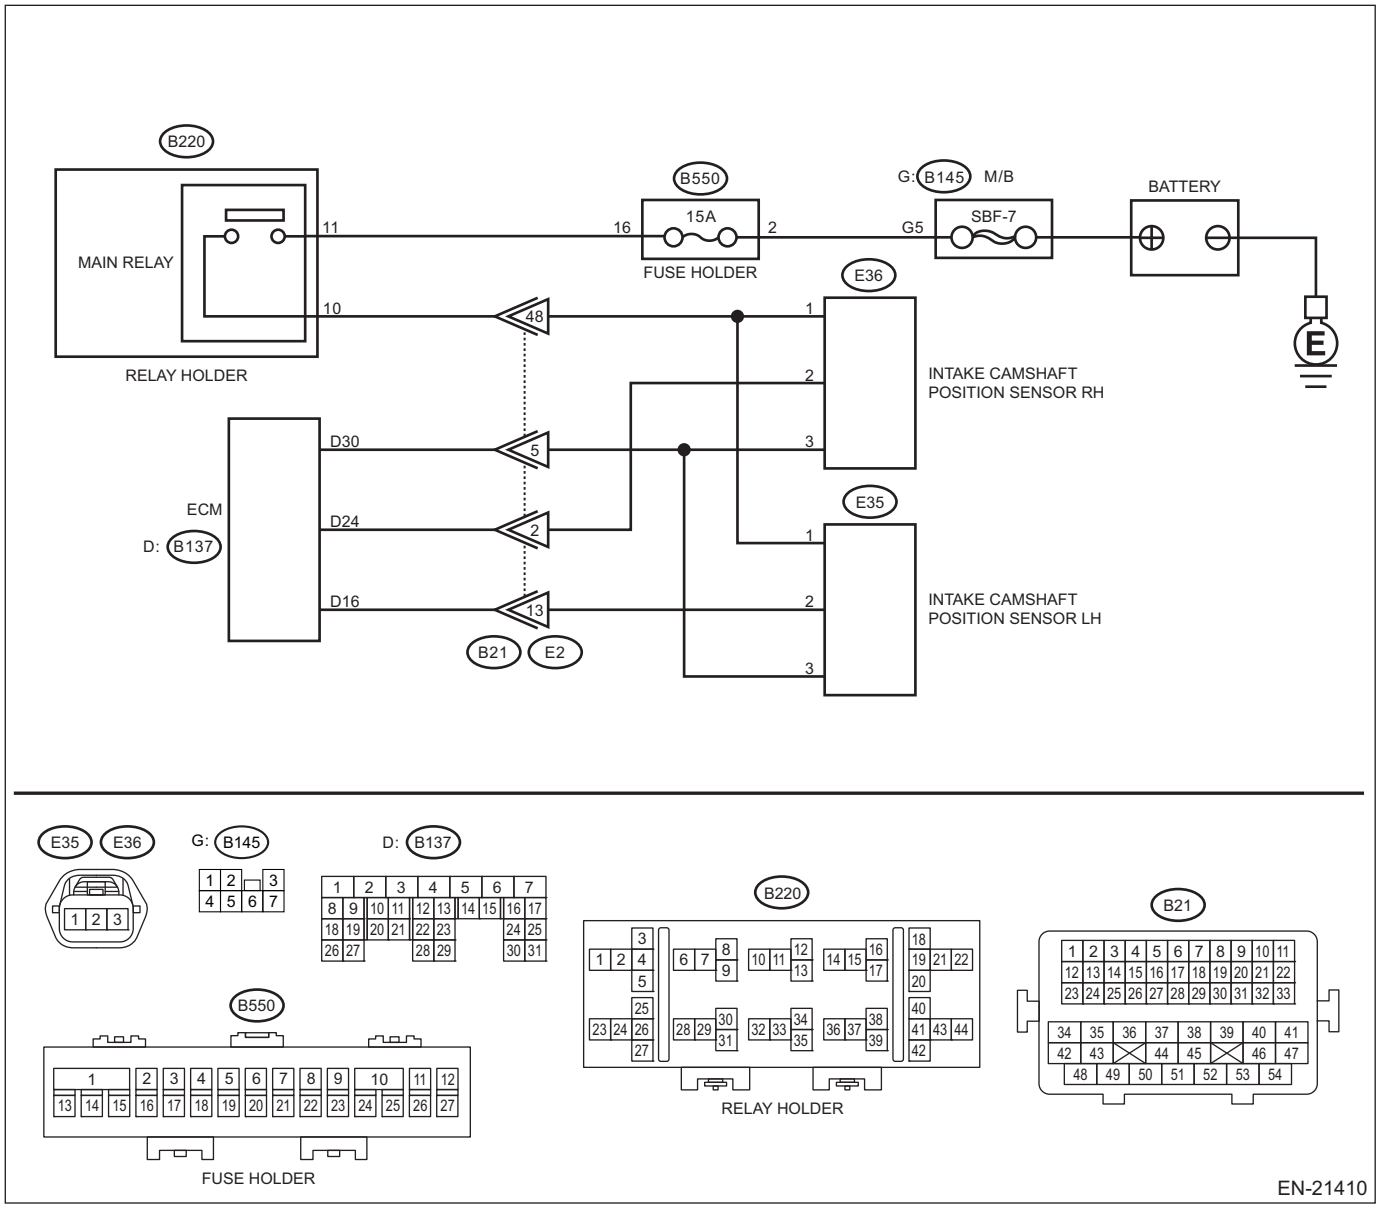
NOTE:
For the detection standard, refer to the exhaust side of P000B. <Ref. to EN(STI)(diag)-118, DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

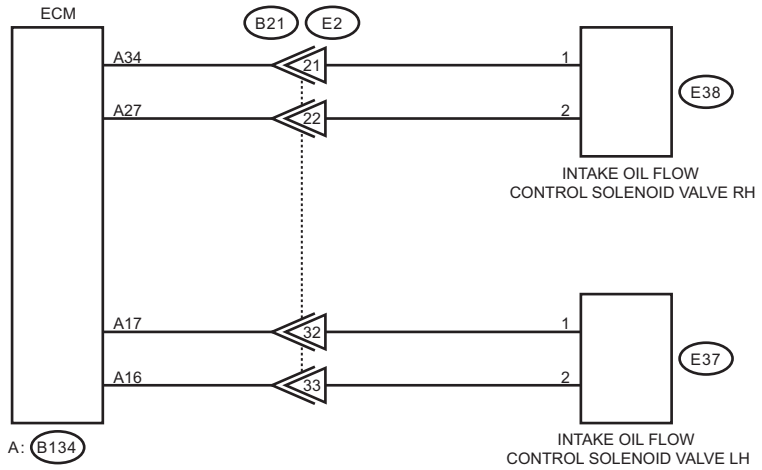
E: DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

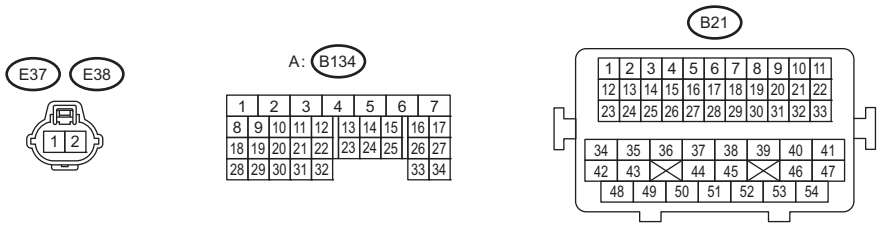
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

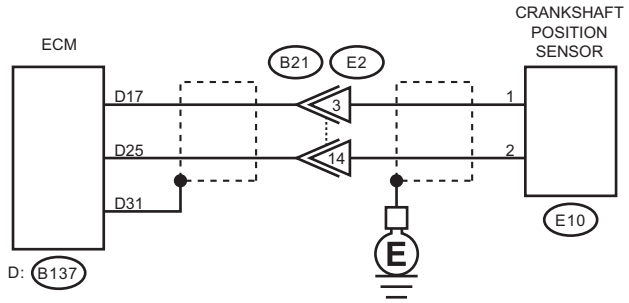
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

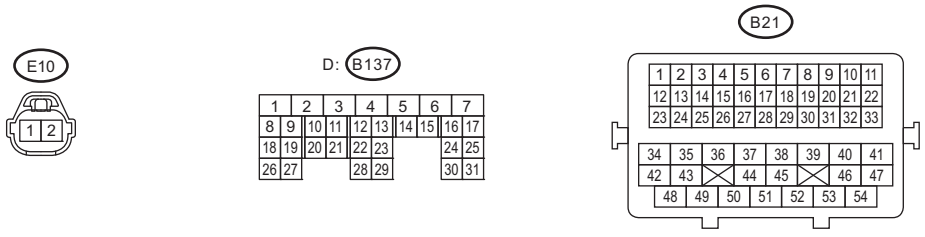






EN-21107





EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000A and P0011 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil flow control solenoid valve RH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 3.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **5**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.
5	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil flow control solenoid valve RH. 4) Measure the resistance of harness between ECM connector and intake oil flow control solenoid valve RH connector. ***Connector & terminal*** ***(B134) No. 27 — (E38) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **13**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake camshaft position sensor RH. 4) Measure the resistance between intake camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 24 — (E36) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **13**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **13**.

	Step	Check	Yes	No
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **11**.	Go to step **11**.
11	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **12**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **12**.
12	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **13**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.

Step		Check	Yes	No
13	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 3) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" 1000 or more?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Go to step **14**.
14	**CHECK CURRENT DATA.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 13.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge as NG when the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS control	In operation
|VVT target angle|	> 10 °CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while AVCS is operating.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues for certain amount of time.

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
|(Target position – Actual position)|	> 10 °CA

Time needed for diagnosis:5000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

F: DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000B and P0014 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil flow control solenoid valve RH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 3.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **5**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.
5	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil flow control solenoid valve RH. 4) Measure the resistance of harness between ECM connector and exhaust oil flow control solenoid valve RH connector. ***Connector & terminal*** ***(B134) No. 15 — (E63) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **13**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust camshaft position sensor RH. 4) Measure the resistance between exhaust camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 23 — (E62) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **13**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **13**.

	Step	Check	Yes	No
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **11**.	Go to step **11**.
11	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **12**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **12**.
12	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **13**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.

Step		Check	Yes	No
13	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 3) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" 1000 or more?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Go to step **14**.
14	**CHECK CURRENT DATA.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 13.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS control	In operation
|VVT target angle|	> 20 °CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while exhaust AVCS is operating.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues for certain amount of time.

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
|(Target position – Actual position)|	> 20 °CA

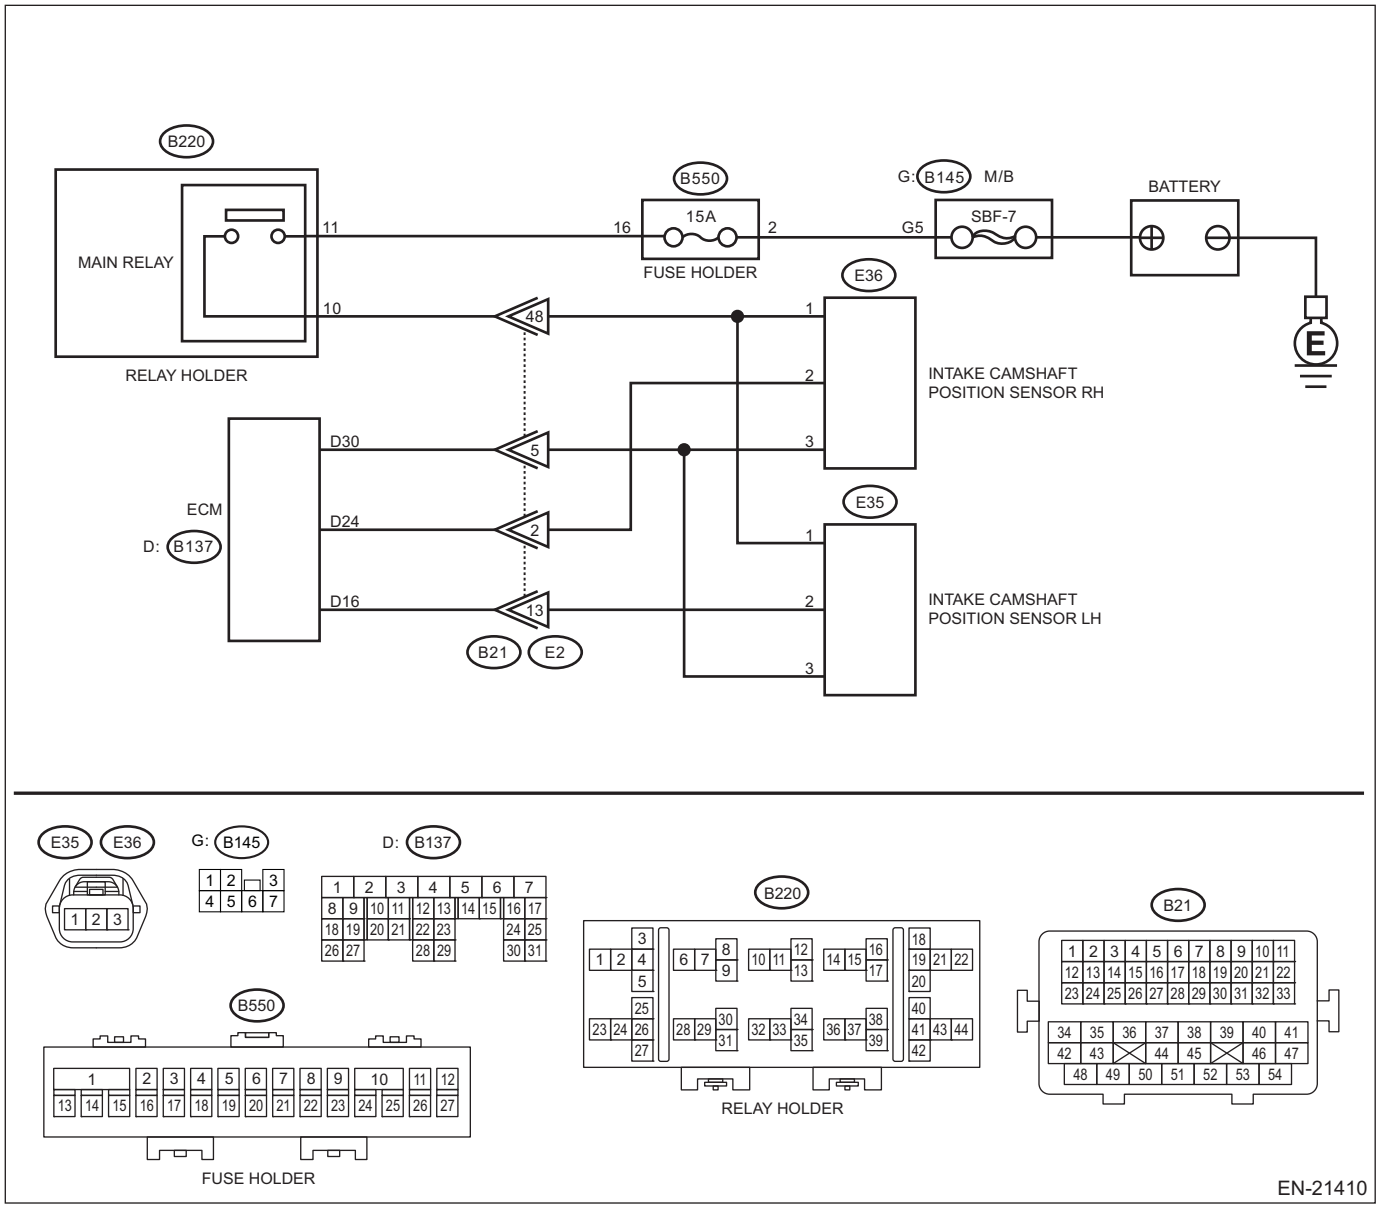
Time needed for diagnosis: 5000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

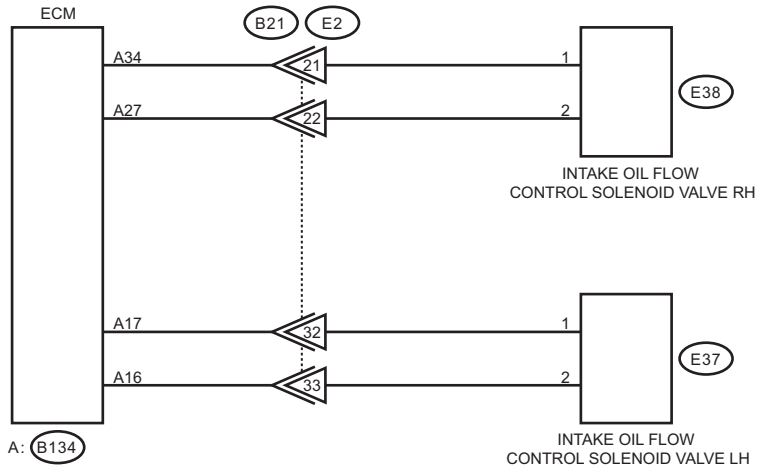
G: DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A

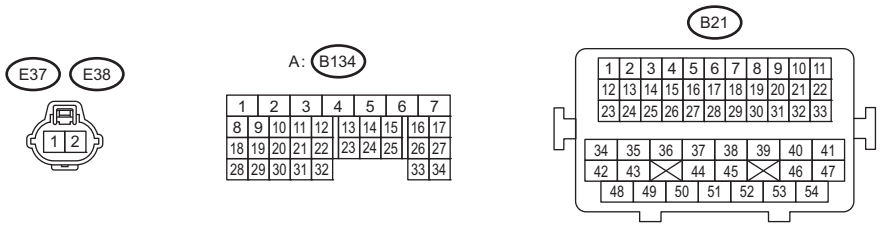
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

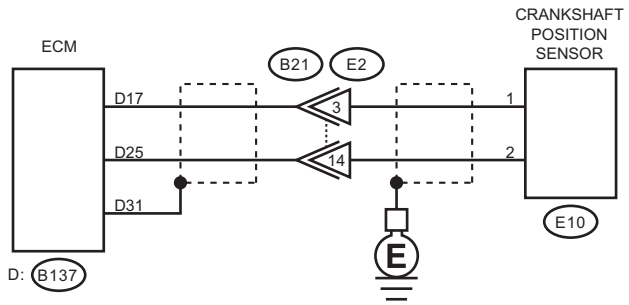
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

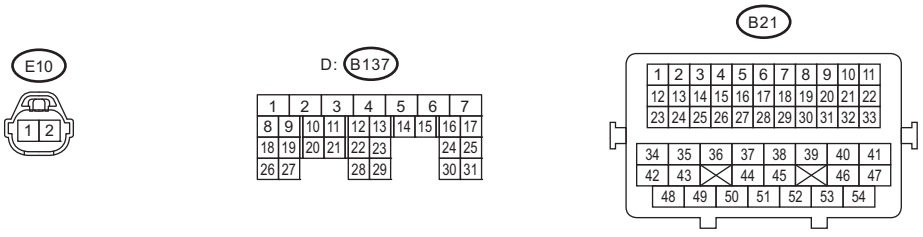






EN-21107





EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0016 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK BELT TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the intake oil flow control solenoid valve RH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «VVT Adv. Ang. Amount R» of the current data display. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «VVT Adv. Ang. Amount R» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «VVT Adv. Ang. Amount R». 9) Stop the engine.	Is «VVT Adv. Ang. Amount R» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the belt timing. <Ref. to ME(STI)-52, Timing Belt.> Go to step **14**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil flow control solenoid valve RH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 4.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **6**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil flow control solenoid valve RH. 4) Measure the resistance of harness between ECM connector and intake oil flow control solenoid valve RH connector. ***Connector & terminal*** ***(B134) No. 27 — (E38) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake camshaft position sensor RH. 4) Measure the resistance between intake camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 24 — (E36) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **14**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **12**.	Go to step **11**.

	Step	Check	Yes	No
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **13**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **14**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.
14	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the current data indication using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 4) Read the current value in «VVT Initial Position Learning Value #1». 5) Calculate sum of the read value in «VVT Initial Position Learning Value #1» and the value in «VVT Adv. Ang. Amount R» recorded in step 3.	Is the summed value within the specified range? Standard: 17 — 43	ECM is normal. End the diagnosis.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting engine and while AVCS is not operating.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Crankshaft position when camshaft position sensor signal is input – Learning value|	> 8.5 °CA

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Camshaft position sensor signal input position (Bank 1)	< 13 °CA or > 55 °CA
Camshaft position sensor signal input position (Bank 2)	< 13 °CA or > 55 °CA

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

NOTE:
Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

H: DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0017 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK BELT TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the exhaust oil flow control solenoid valve RH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «Exh. VVT Retard Ang. R» of the current data display. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «Exh. VVT Retard Ang. R» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «Exh. VVT Retard Ang. R». 9) Stop the engine.	Is «Exh. VVT Retard Ang. R» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the belt timing. <Ref. to ME(STI)-52, Timing Belt.> Go to step **14**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil flow control solenoid valve RH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 4.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **6**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil flow control solenoid valve RH. 4) Measure the resistance of harness between ECM connector and exhaust oil flow control solenoid valve RH connector. ***Connector & terminal*** ***(B134) No. 15 — (E63) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust camshaft position sensor RH. 4) Measure the resistance between exhaust camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 23 — (E62) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **14**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **12**.	Go to step **11**.

	Step	Check	Yes	No
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **13**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **14**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.
14	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the current data indication using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 4) Read the current value in «VVT Ex Initial Position Learning Value #1». 5) Calculate sum of the read value in «VVT Ex Initial Position Learning Value #1» and the value in «Exh. VVT Retard Ang. R» recorded in step 3.	Is the summed value within the specified range? Standard: 61 — 96	ECM is normal. End the diagnosis.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while the exhaust AVCS is not operating after warming up.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Crankshaft position when camshaft position sensor signal is input – Learning value|	> 8.5 °CA

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Camshaft position sensor signal input position (Bank 1)	< 55 °CA or > 105 °CA
Camshaft position sensor signal input position (Bank 2)	< 55 °CA or > 105 °CA

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

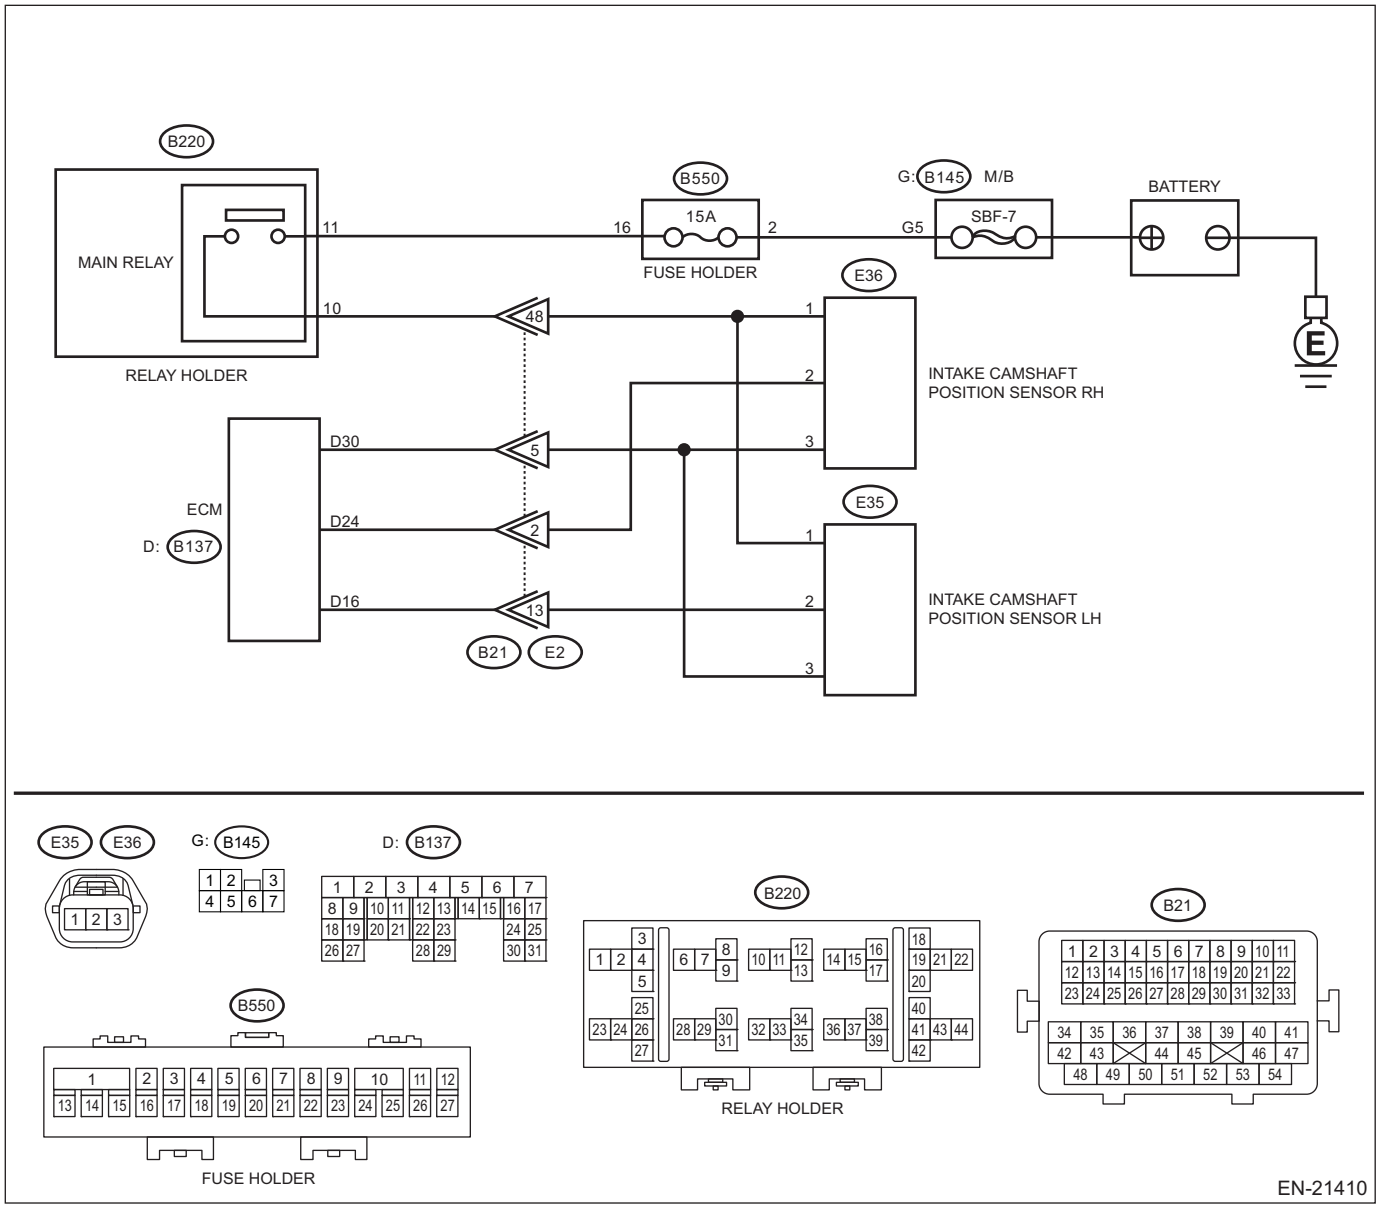
NOTE:
Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

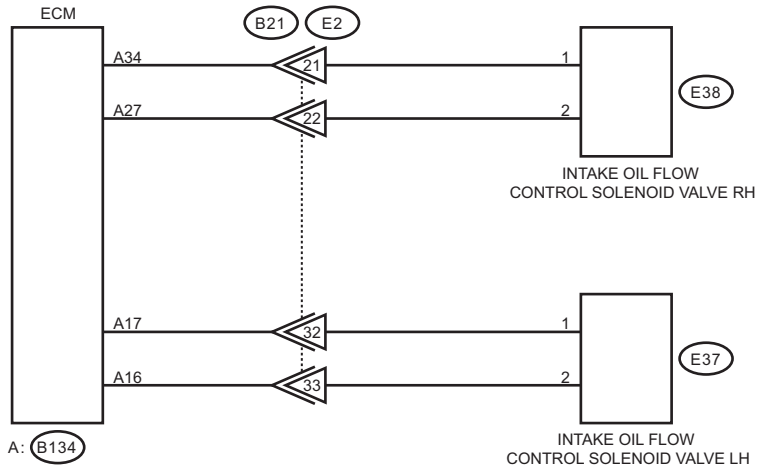
I: DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A

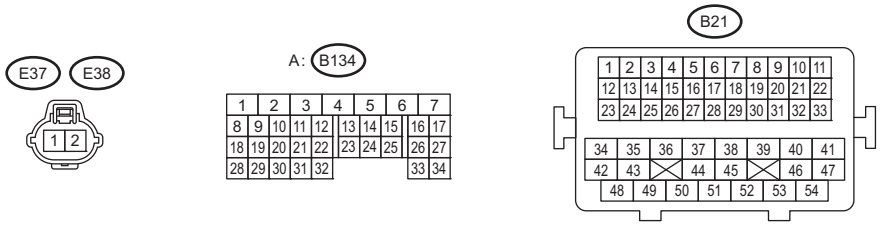
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

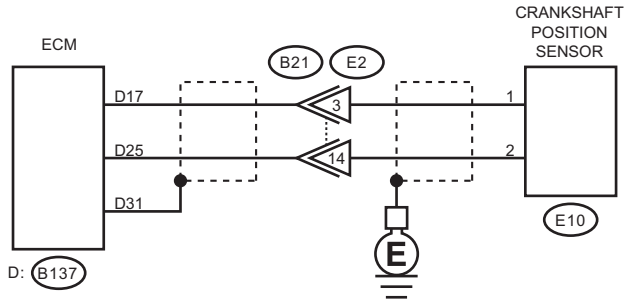
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

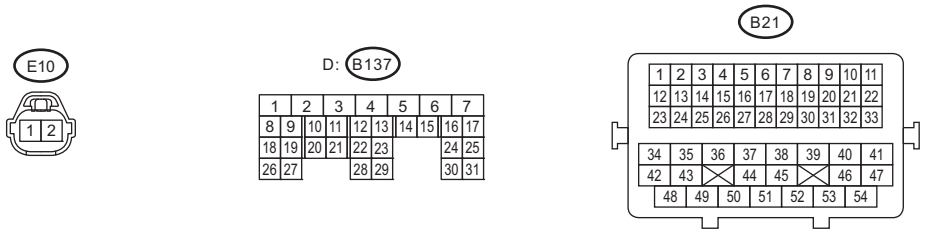






EN-21107





EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0018 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK BELT TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the intake oil flow control solenoid valve LH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «VVT Adv. Ang. Amount L» of the current data display. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «VVT Adv. Ang. Amount L» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «VVT Adv. Ang. Amount L». 9) Stop the engine.	Is «VVT Adv. Ang. Amount L» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the belt timing. <Ref. to ME(STI)-52, Timing Belt.> Go to step **14**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil flow control solenoid valve LH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 4.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **6**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil flow control solenoid valve LH. 4) Measure the resistance of harness between ECM connector and intake oil flow control solenoid valve LH connector. ***Connector & terminal*** ***(B134) No. 16 — (E37) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from intake camshaft position sensor LH. 4) Measure the resistance between intake camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 16 — (E35) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **14**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **12**.	Go to step **11**.

	Step	Check	Yes	No
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **13**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **14**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.
14	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the current data indication using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 4) Read the current value in «VVT Initial Position Learning Value #2». 5) Calculate sum of the read value in «VVT Initial Position Learning Value #2» and the value in «VVT Adv. Ang. Amount L» recorded in step 3.	Is the summed value within the specified range? Standard: 13 — 49	ECM is normal. End the diagnosis.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

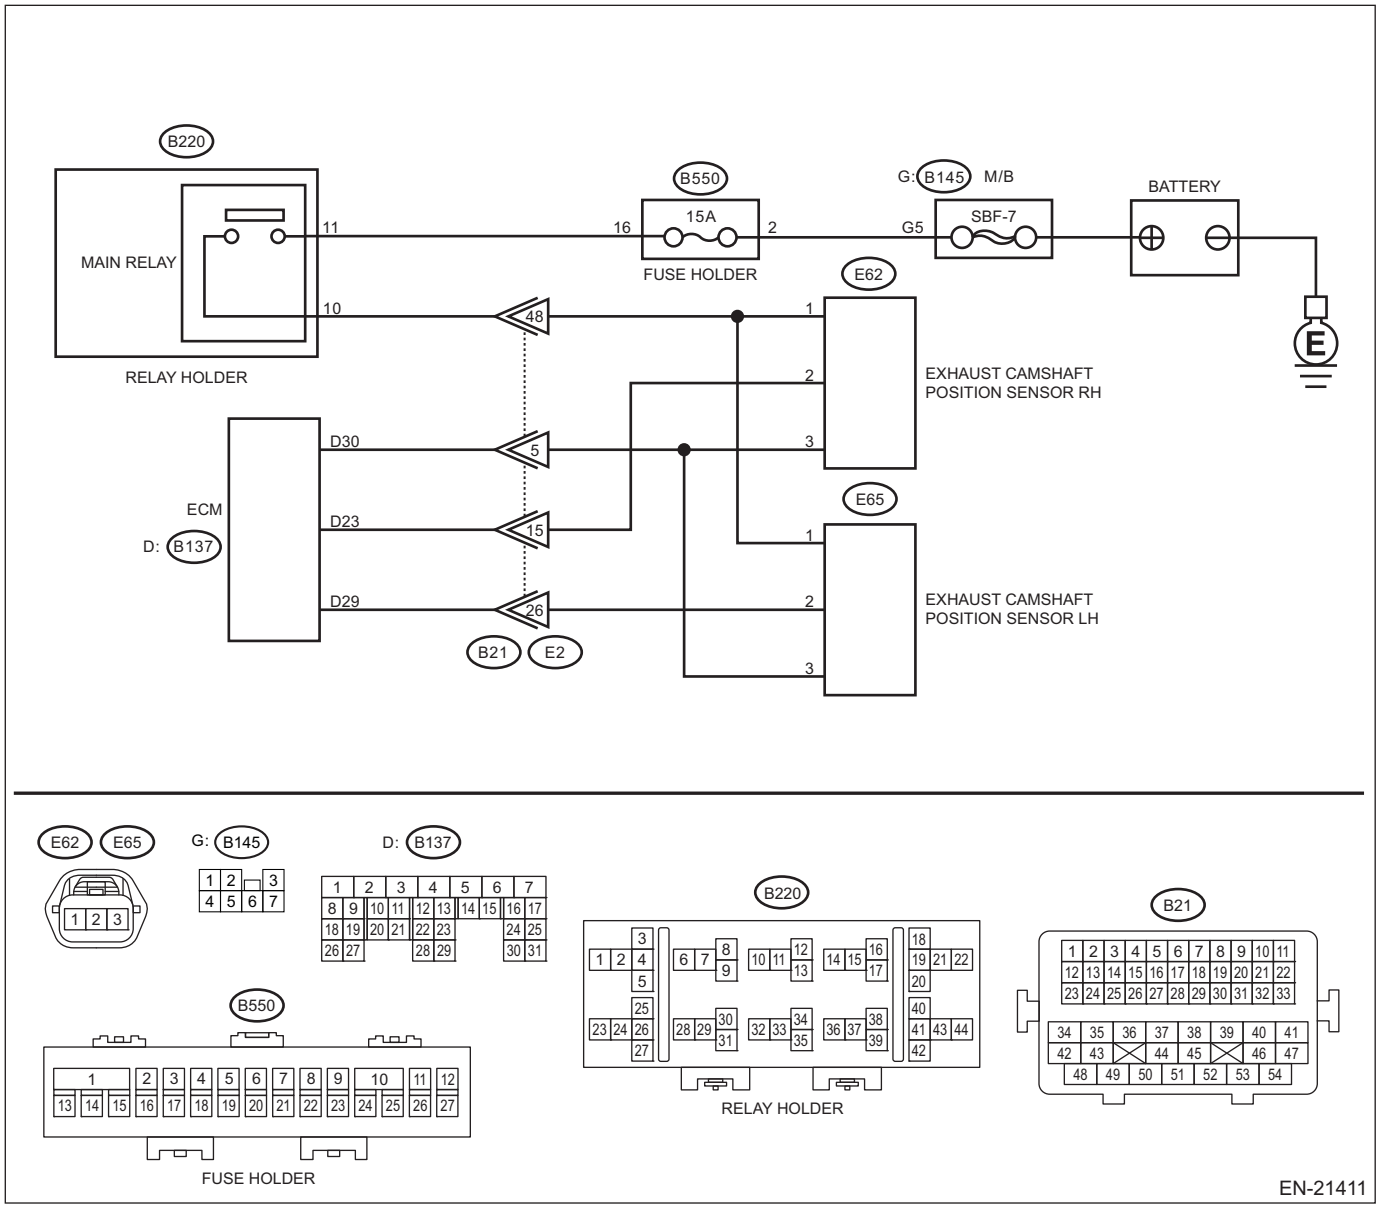
NOTE:
For the detection standard, refer to DTC P0016. <Ref. to EN(STI)(diag)-136, DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

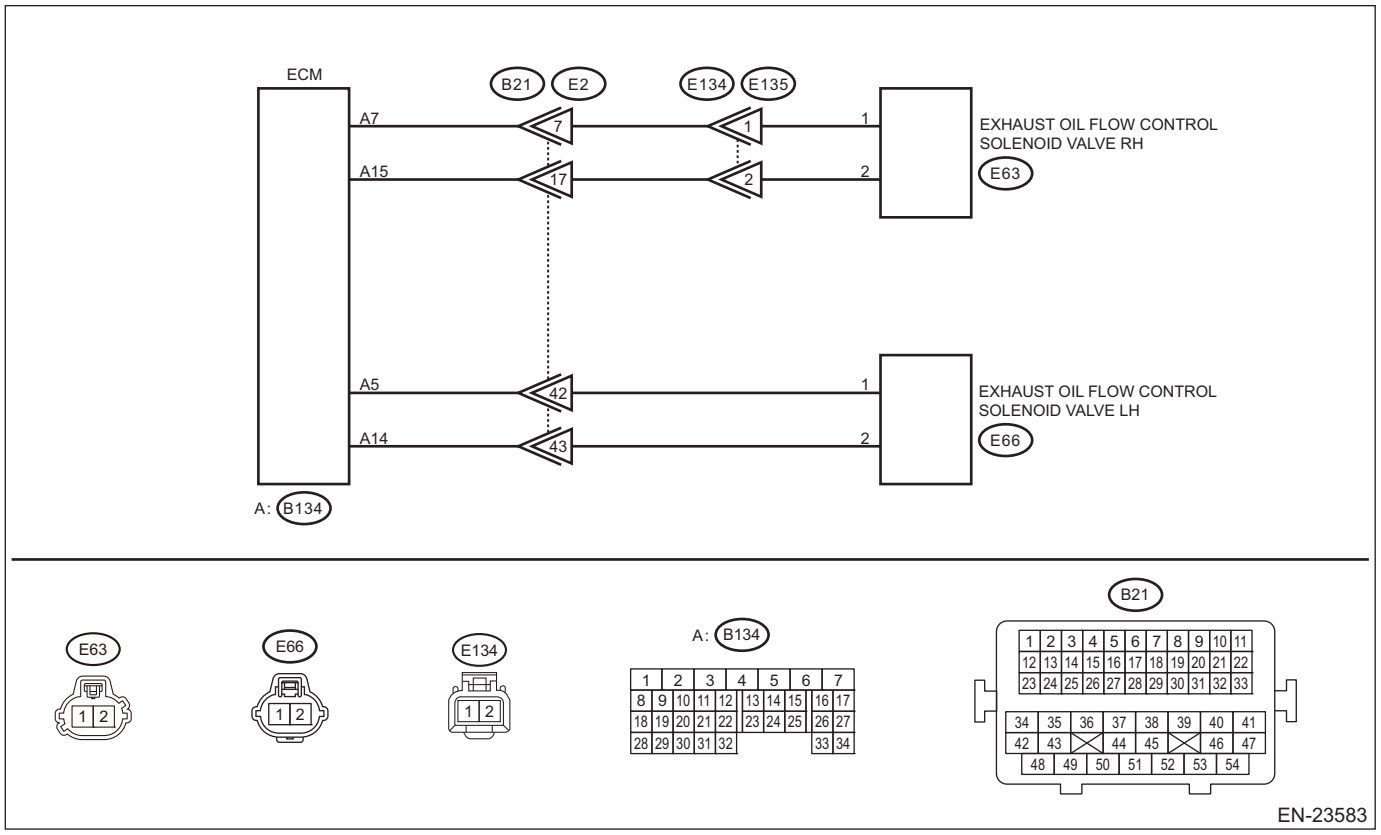
J: DTC P0019 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

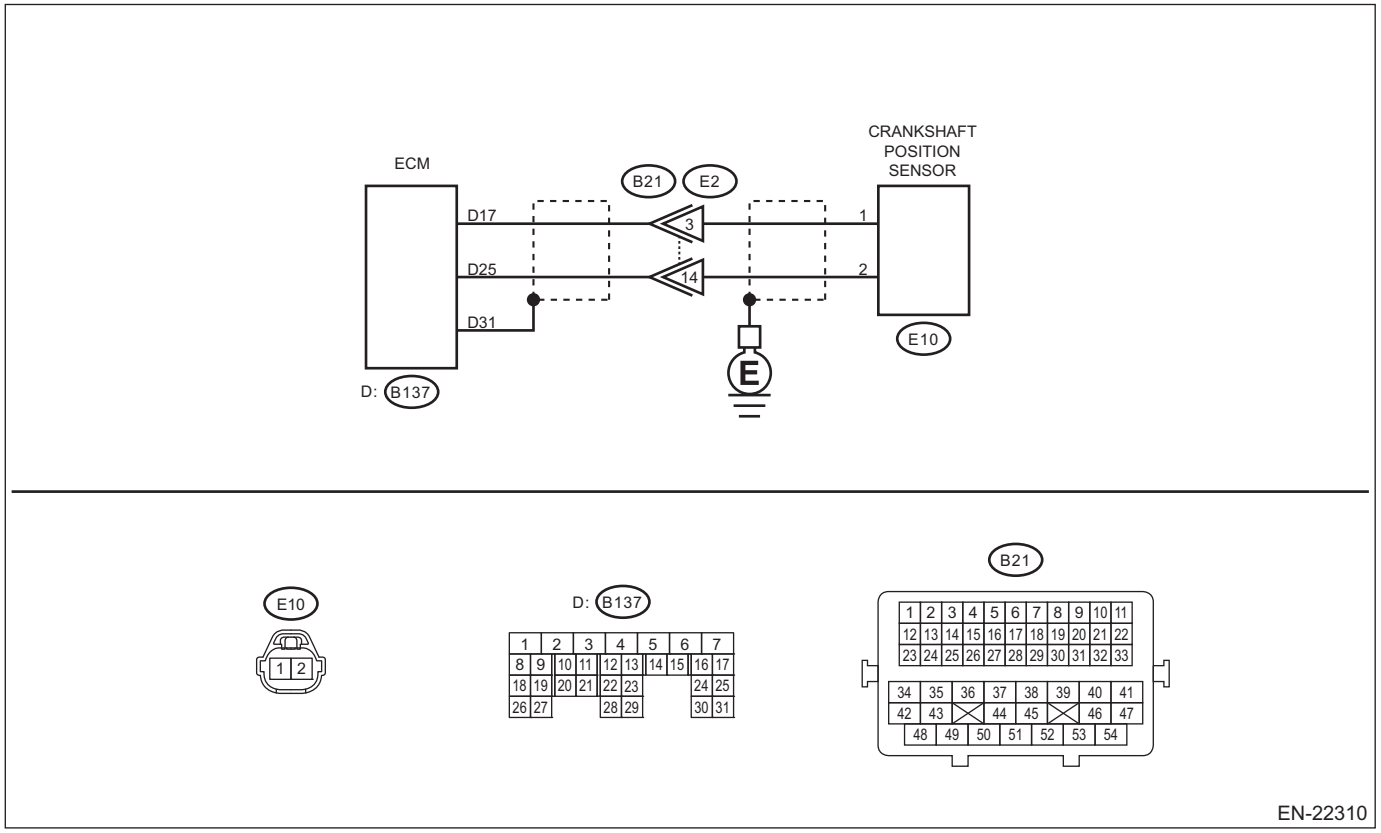
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-23583



EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0019 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK BELT TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the exhaust oil flow control solenoid valve LH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «Exh. VVT Retard Ang. L» of the current data display. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «Exh. VVT Retard Ang. L» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «Exh. VVT Retard Ang. L». 9) Stop the engine.	Is «Exh. VVT Retard Ang. L» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the belt timing. <Ref. to ME(STI)-52, Timing Belt.> Go to step **14**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil flow control solenoid valve LH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 4.	Is the value in "VVT Monitor Bank 2" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 1" ×1.5+100) compared to the value in "VVT Monitor Bank 1"?	Go to step **6**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil flow control solenoid valve LH. 4) Measure the resistance of harness between ECM connector and exhaust oil flow control solenoid valve LH connector. ***Connector & terminal*** ***(B134) No. 14 — (E66) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from exhaust camshaft position sensor LH. 4) Measure the resistance between exhaust camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 29 — (E65) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **14**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **12**.	Go to step **11**.

	Step	Check	Yes	No
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **13**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **14**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **14**.
14	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the current data indication using Subaru Select Monitor. <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.> 4) Read the current value in «VVT Ex Initial Position Learning Value #2». 5) Calculate sum of the read value in «VVT Ex Initial Position Learning Value #2» and the value in «Exh. VVT Retard Ang. L» recorded in step 3.	Is the summed value within the specified range? Standard: 61 — 93	ECM is normal. End the diagnosis.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

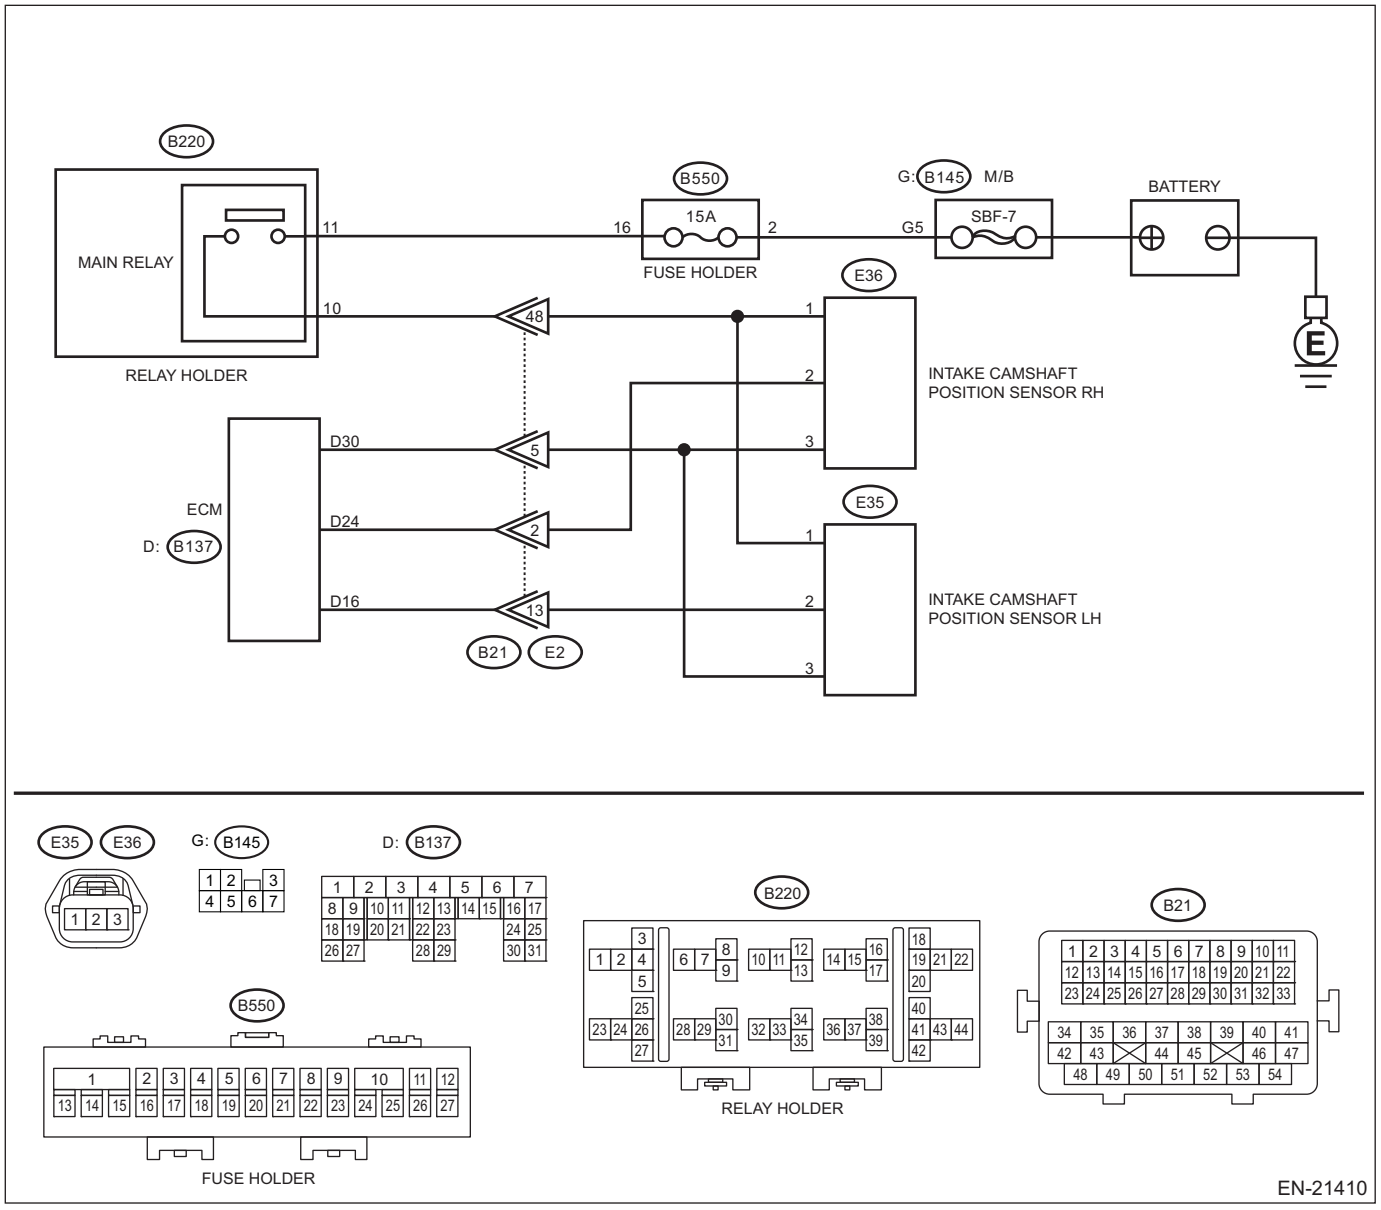
NOTE:
For the detection standard, refer to DTC P0017. <Ref. to EN(STI)(diag)-144, DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

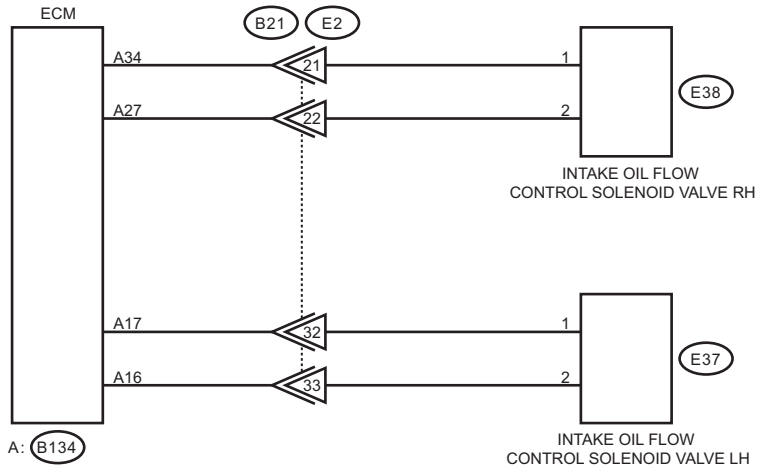
K: DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

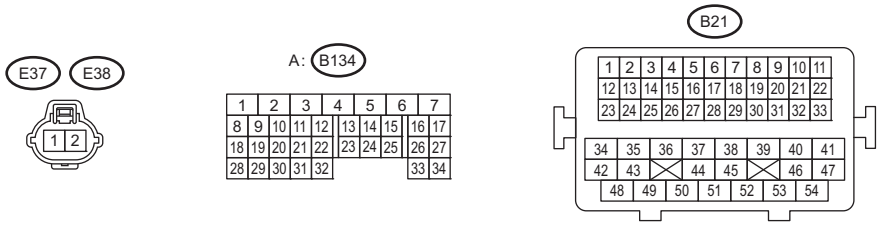
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

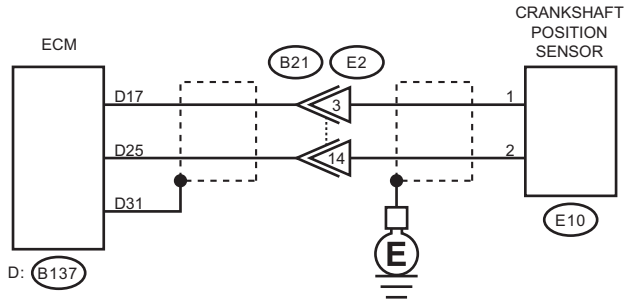
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

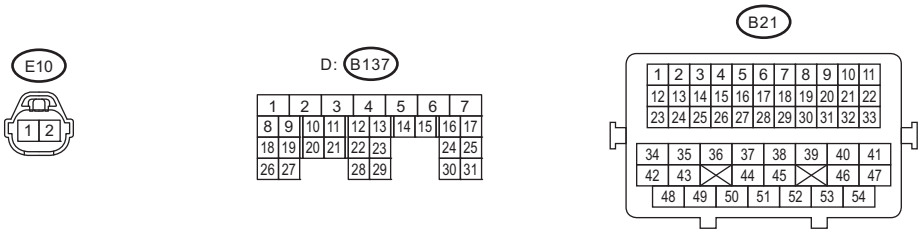






EN-21107





EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000C and P0021 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil flow control solenoid valve LH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 3.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **5**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.
5	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil flow control solenoid valve LH. 4) Measure the resistance of harness between ECM connector and intake oil flow control solenoid valve LH connector. ***Connector & terminal*** ***(B134) No. 16 — (E37) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **13**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from intake camshaft position sensor LH. 4) Measure the resistance between intake camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 16 — (E35) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **13**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **13**.

	Step	Check	Yes	No
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **11**.	Go to step **11**.
11	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **12**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **12**.
12	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **13**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.

	Step	Check	Yes	No
13	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 3) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" 1000 or more?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Go to step **14**.
14	**CHECK CURRENT DATA.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 13.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

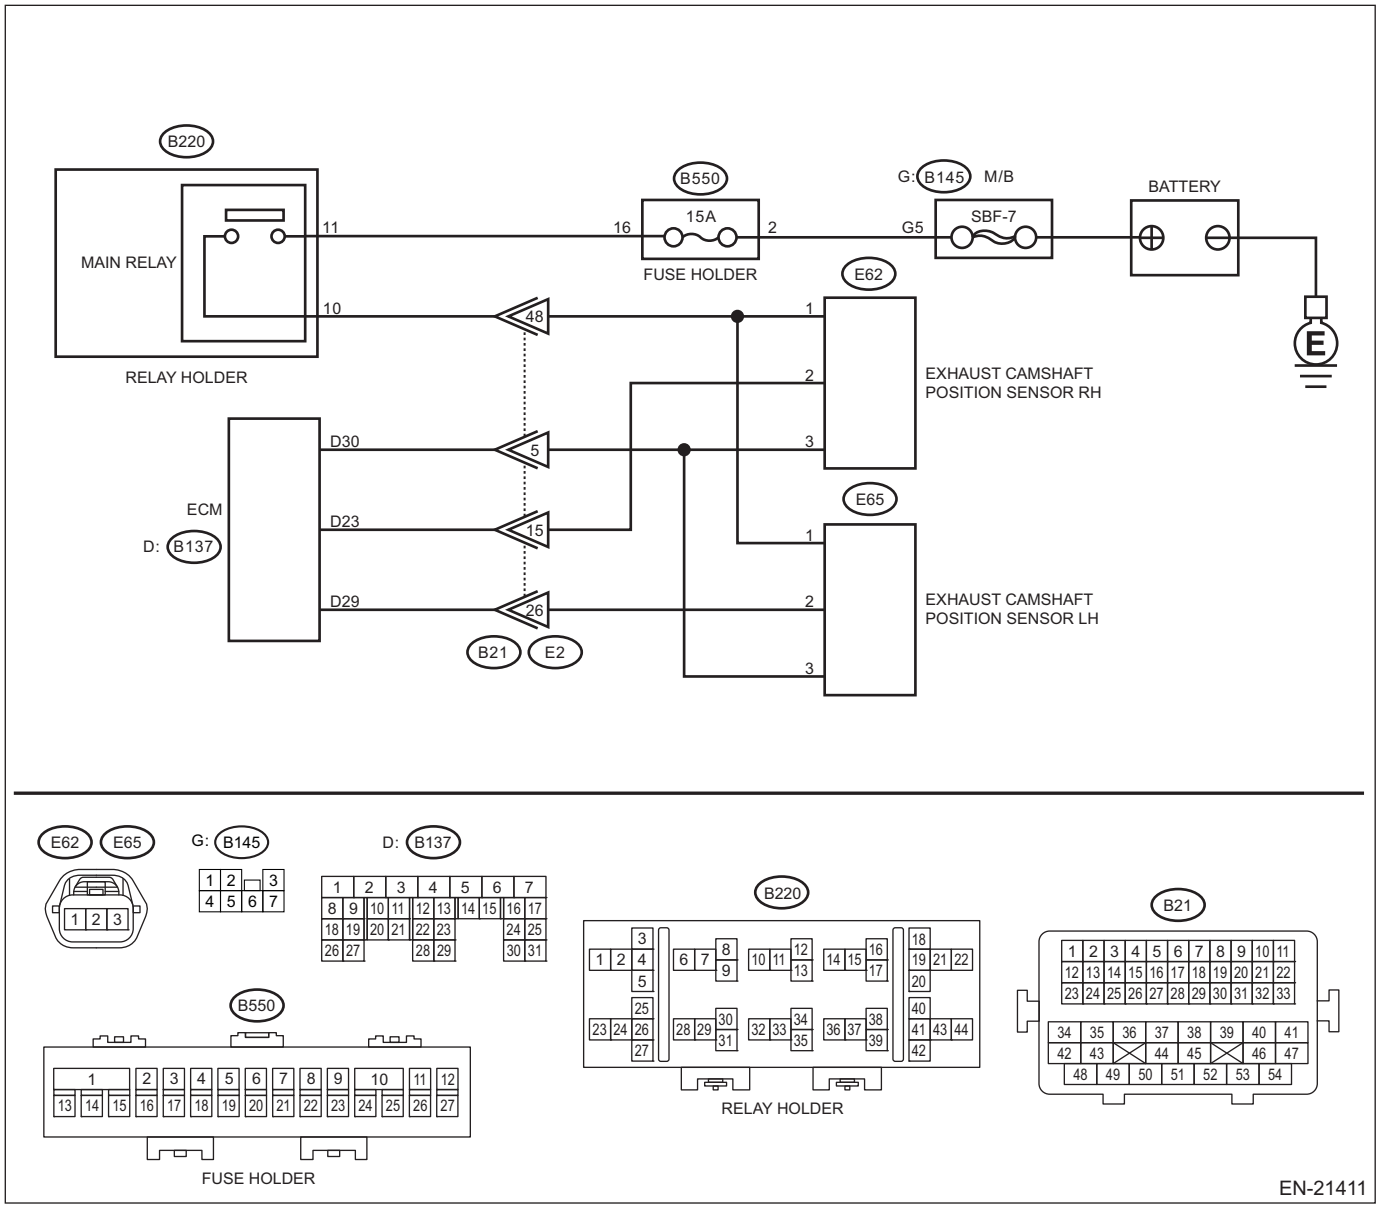
NOTE:
For the detection standard, refer to DTC P0011. <Ref. to EN(STI)(diag)-120, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

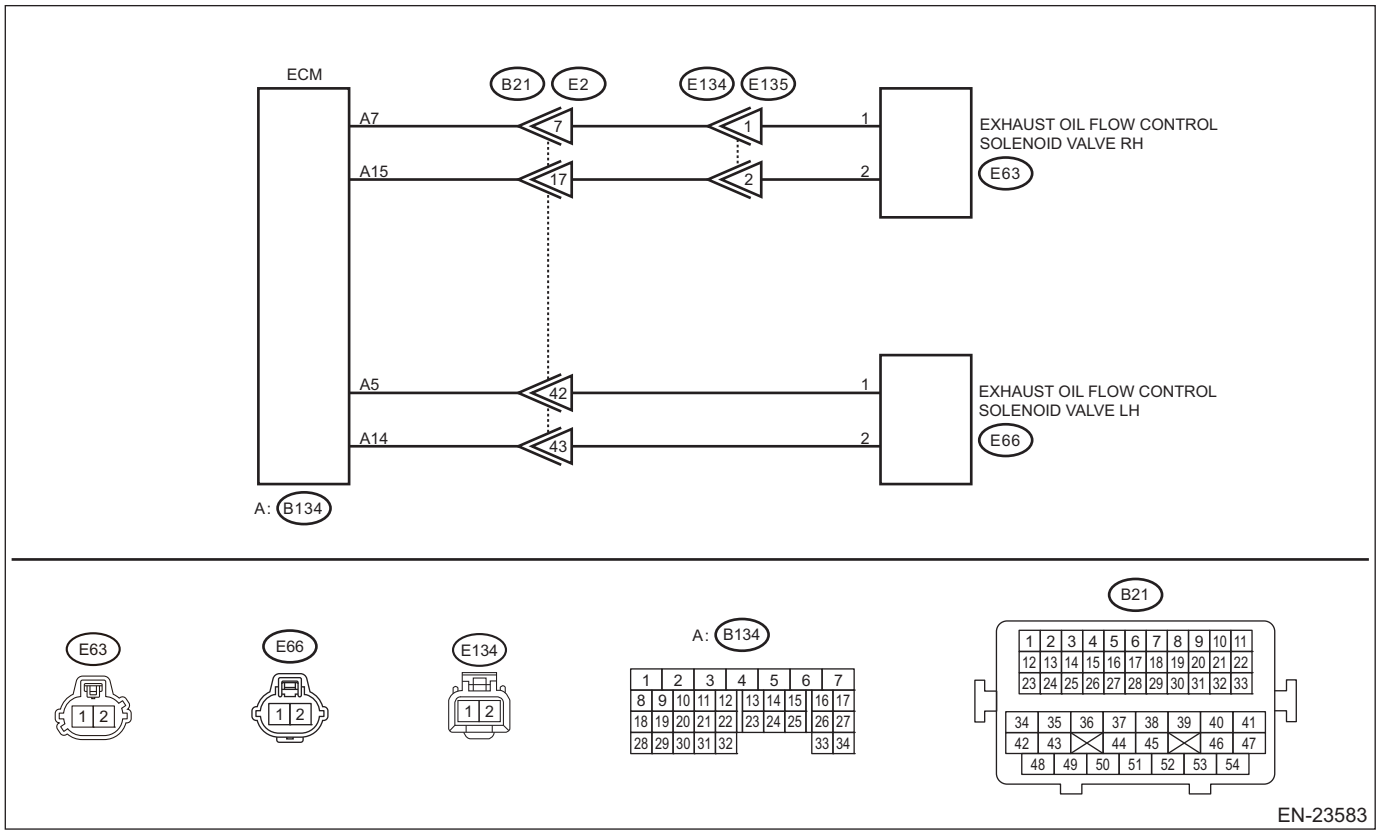
L: DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

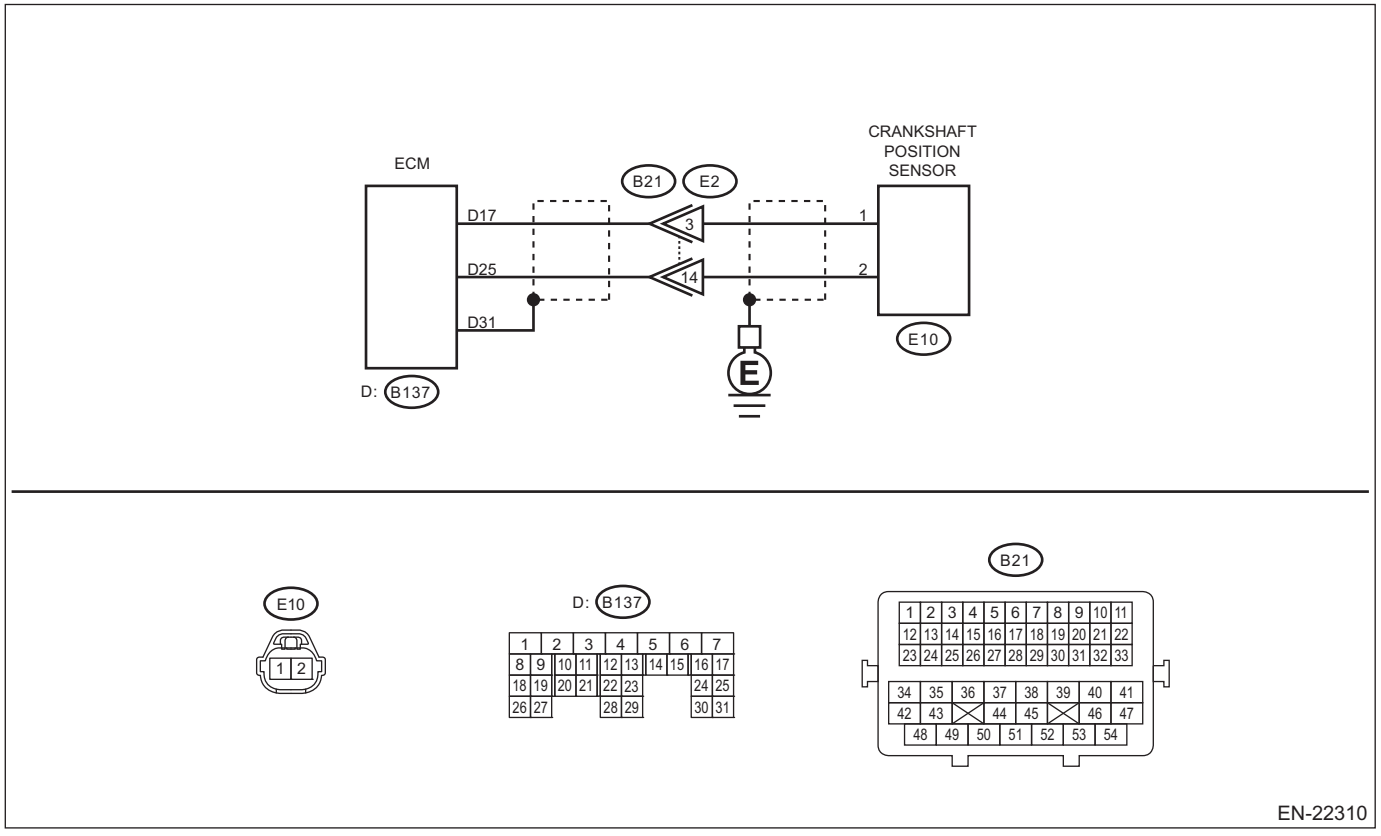
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-23583



EN-22310

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000D and P0024 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **3**.
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil flow control solenoid valve LH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 4) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" of the replaced oil flow control solenoid valve 1000 or more?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 3.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Go to step **5**.	Idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.
5	**CHECK HARNESS AND CONNECTOR.** Check the harness and connector for bending, damage and poor contact. NOTE: Check the following items. • ECM <Ref. to FU(STI)-56, Engine Control Module (ECM).> • Oil flow control solenoid valve <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> • Camshaft position sensor <Ref. to FU(STI)-35, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.> <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil flow control solenoid valve LH. 4) Measure the resistance of harness between ECM connector and exhaust oil flow control solenoid valve LH connector. ***Connector & terminal*** ***(B134) No. 14 — (E66) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **13**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from exhaust camshaft position sensor LH. 4) Measure the resistance between exhaust camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(B137) No. 29 — (E65) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **13**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **13**.

	Step	Check	Yes	No
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(STI)-25, Engine Oil Pressure.>	Is the engine oil pressure normal?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(STI)-17, Oil Pan and Strainer.> Go to step **11**.	Go to step **11**.
11	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. <Ref. to ME(STI)-32, Engine Assembly.> 2) Remove the timing belt. <Ref. to ME(STI)-52, Timing Belt.> 3) Rotate the camshaft by hand to compare the rotational resistances of the four shafts. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to the camshaft • Damage to camshaft (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing not rotating properly	Is the check result OK?	Go to step **12**.	Replace the camshaft. <Ref. to ME(STI)-63, Camshaft.> Go to step **12**.
12	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL FLOW CONTROL SOLENOID VALVE.** Visually check the following portions of oil passages connecting oil pump to oil flow control solenoid valve to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the camshaft cap • Oil passage of the cylinder head side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end • Oil passage of the oil pipe • Oil passage of the union bolt	Is the check result OK?	Replace the sprocket. <Ref. to ME(STI)-61, REMOVAL, Cam Sprocket.> Go to step **13**.	Remove the foreign matter. Replace the union bolt with filter (with protrusion). <Ref. to ME(STI)-63, Camshaft.> NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(STI)-11, Engine Oil.> <Ref. to LU(STI)-28, Engine Oil Filter.> Go to step **13**.

	Step	Check	Yes	No
13	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(STI)(diag)-58, Drive Cycle.> 3) Read values of "VVT Monitor Bank 1" and "VVT Monitor Bank 2" according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-34, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2".	Is the value in "VVT Monitor Bank 1" 1000 or more?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Go to step **14**.
14	**CHECK CURRENT DATA.** Compare the values in "VVT Monitor Bank 1" and "VVT Monitor Bank 2" recorded in step 13.	Is the value in "VVT Monitor Bank 1" 1000 or less, and also larger than the value (value in "VVT Monitor Bank 2" ×1.5+100) compared to the value in "VVT Monitor Bank 2"?	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

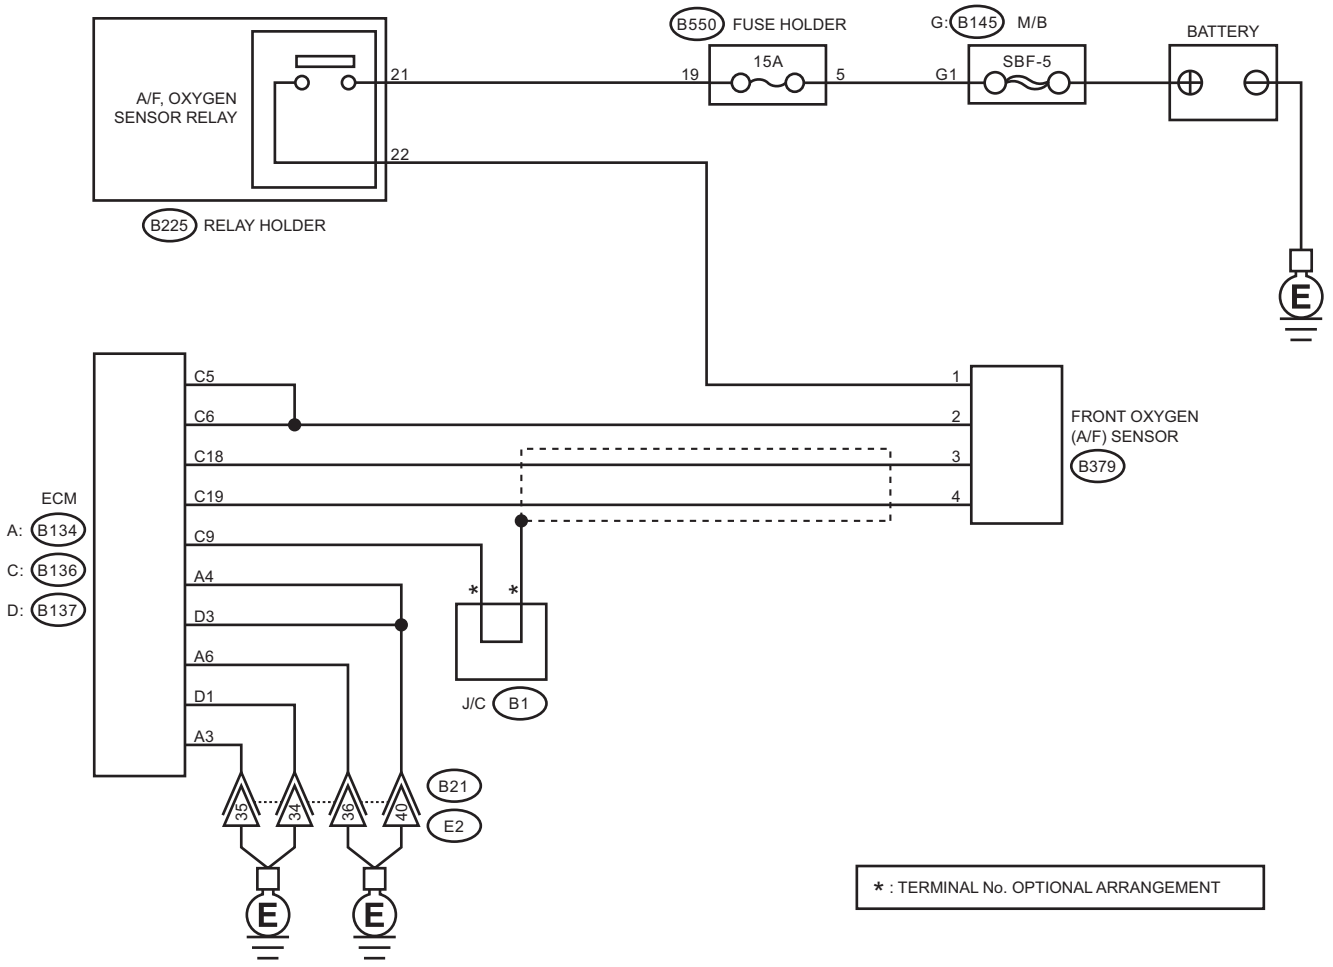
NOTE:
For the detection standard, refer to DTC P0014. <Ref. to EN(STI)(diag)-128, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

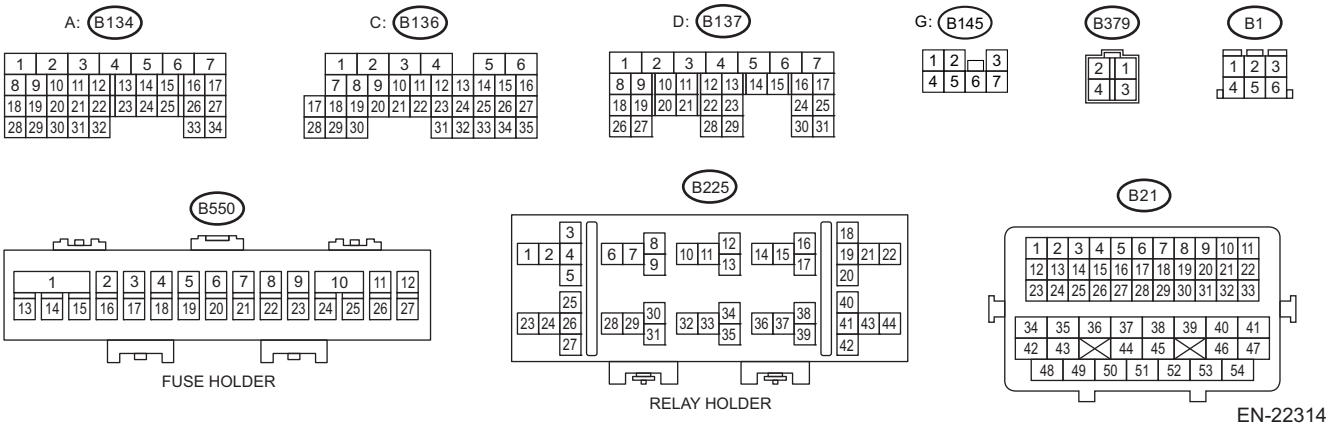
M: DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





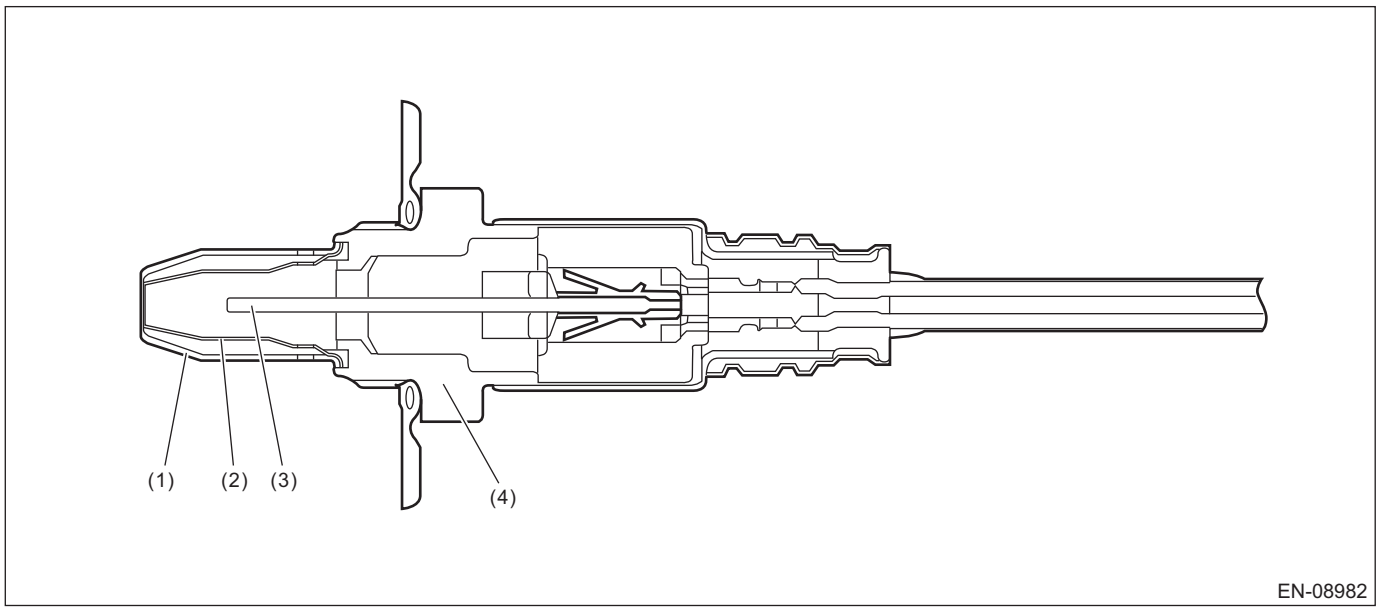
EN-22314

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Start and warm up the engine. 2) Turn the ignition switch to OFF. 3) Disconnect the connector from ECM. 4) Disconnect the connectors from front oxygen (A/F) sensor. 5) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 5 — (B379) No. 2:*** ***(B136) No. 6 — (B379) No. 2:*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
2	**CHECK FRONT OXYGEN (A/F) SENSOR.** Measure the resistance between front oxygen (A/F) sensor terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 2 — 3 Ω?	Go to step **3**.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>
3	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and front oxygen (A/F) sensor connector.	Is there poor contact of ECM or front oxygen (A/F) sensor connector?	Repair the poor contact of ECM or front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect functional errors of the front oxygen (A/F) sensor heater.
Judge as NG when it is determined that the front oxygen (A/F) sensor impedance is large when looking at engine status such as deceleration fuel cut.

2. COMPONENT DESCRIPTION



(1) Element cover (outer)
(2) Element cover (inner)
(3) Sensor element
(4) Sensor housing

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
(A/F sensor heater control duty	> 30 %
Elapsed time from above)	≥ 42000 ms
Non-operating time of fuel shut-off	≥ 20000 ms

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when 20000 ms have elapsed since the fuel cut was initiated after starting the heater control.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	> 38 Ω

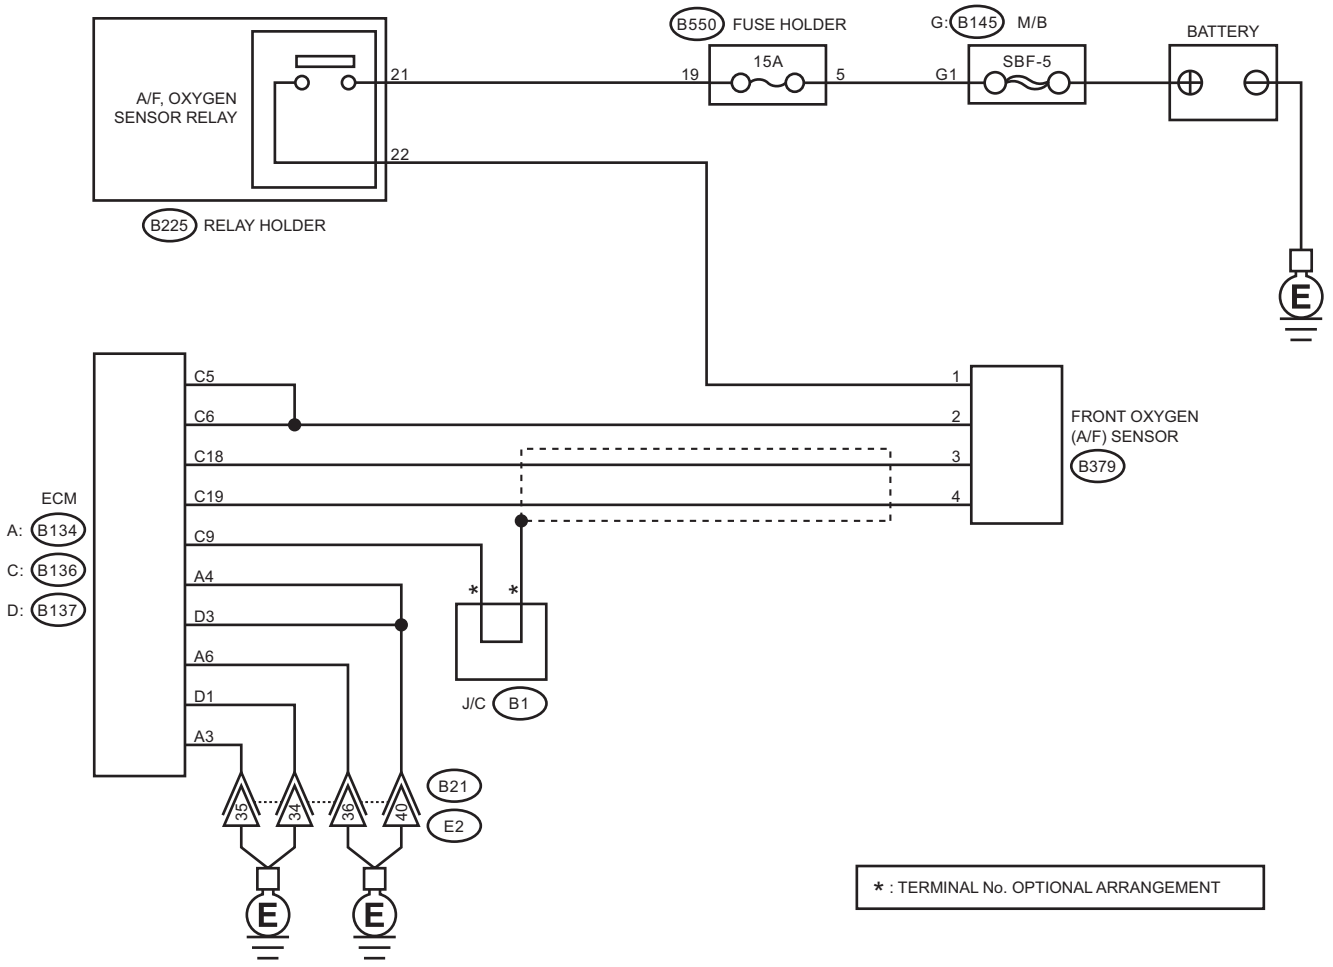
Time needed for diagnosis: 10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

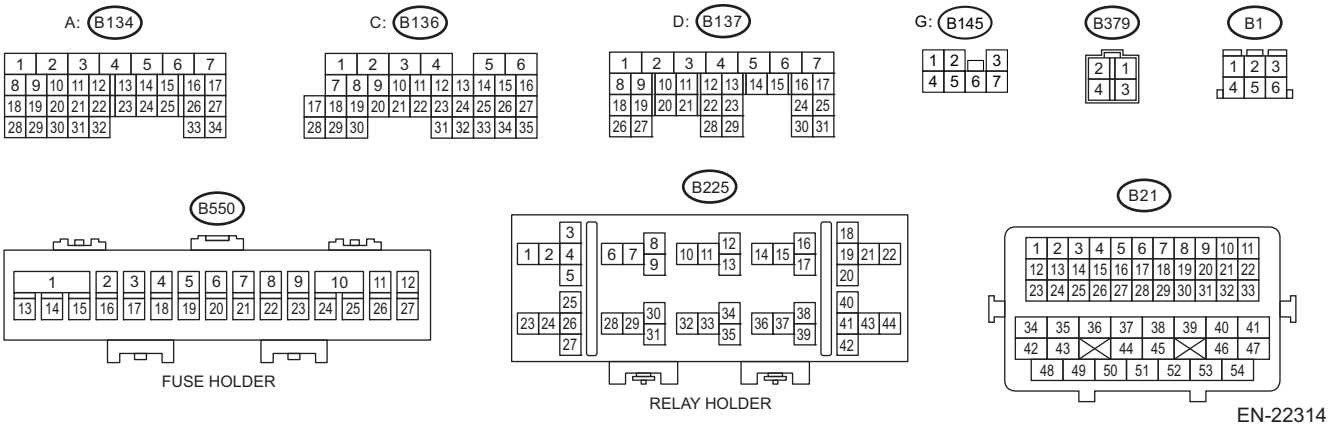
N: DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





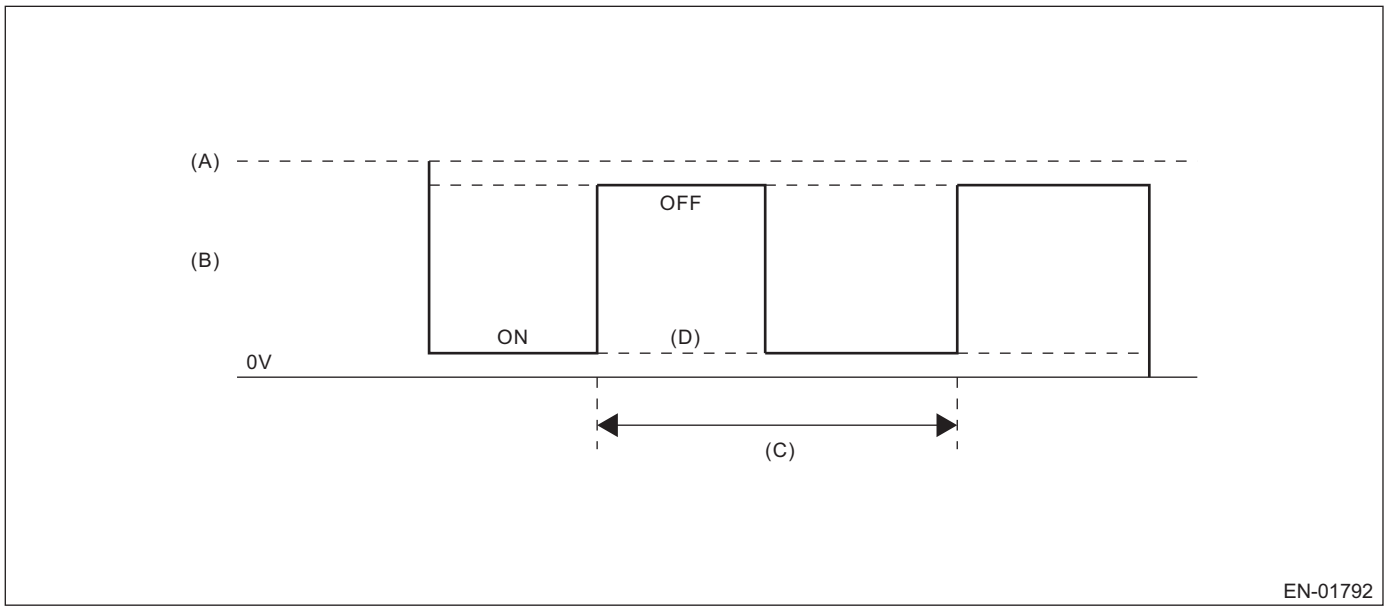
EN-22314

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between front oxygen (A/F) sensor connector and engine ground. ***Connector & terminal*** ***(B379) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector • Poor contact of A/F, oxygen sensor relay connector • Malfunction of A/F, oxygen sensor relay
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 5 — (B379) No. 2:*** ***(B136) No. 6 — (B379) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK GROUND CIRCUIT FOR ECM.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
4	**CHECK FRONT OXYGEN (A/F) SENSOR.** Measure the resistance between front oxygen (A/F) sensor terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 2 — 3 Ω?	Repair the poor contact of ECM connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. COMPONENT DESCRIPTION



(A) Battery voltage
(B) Front oxygen (A/F) sensor heater output voltage
(C) 128 ms
(D) Low error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Front oxygen (A/F) sensor heater control duty	< 87.5 %

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 1.9 V

Time needed for diagnosis: 4 ms × 250 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

O: DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

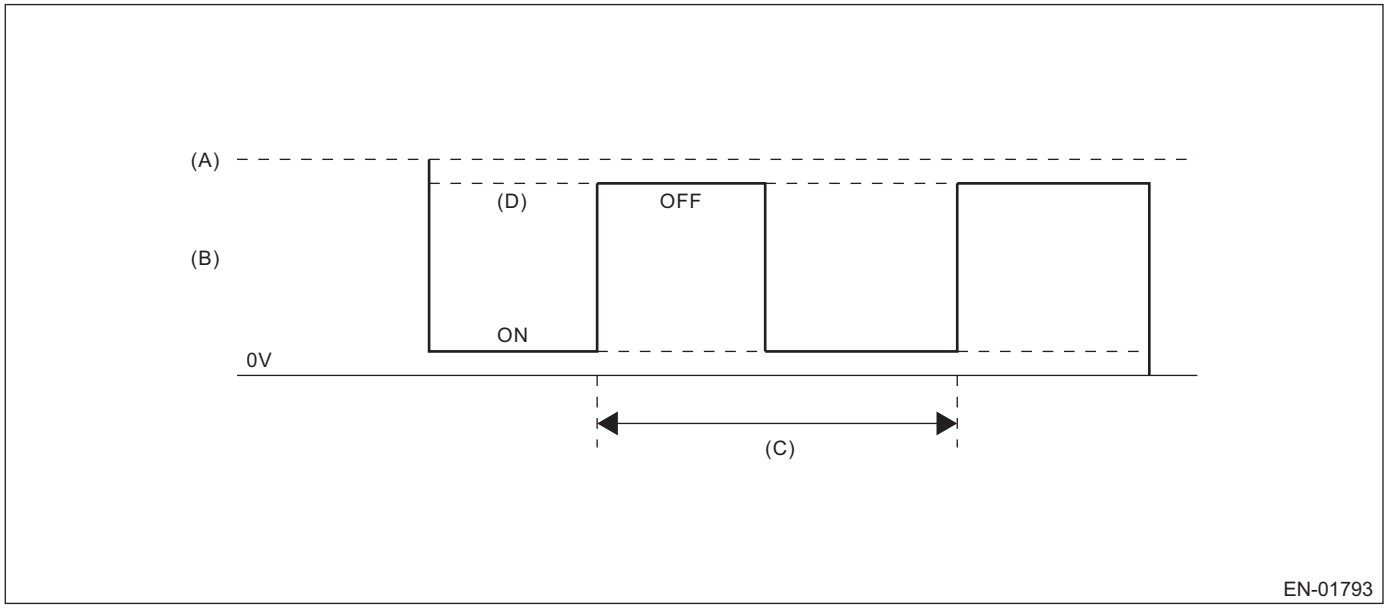
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 5 (+) — Chassis ground (–):*** ***(B136) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Go to step **2**.
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of ECM connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains High.

2. COMPONENT DESCRIPTION



(A) Battery voltage
(B) Front oxygen (A/F) sensor heater output voltage
(C) 128 ms
(D) High error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Secondary parameters	Execution condition
Front oxygen (A/F) sensor heater control duty	> 12.5 %

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 1.9 V

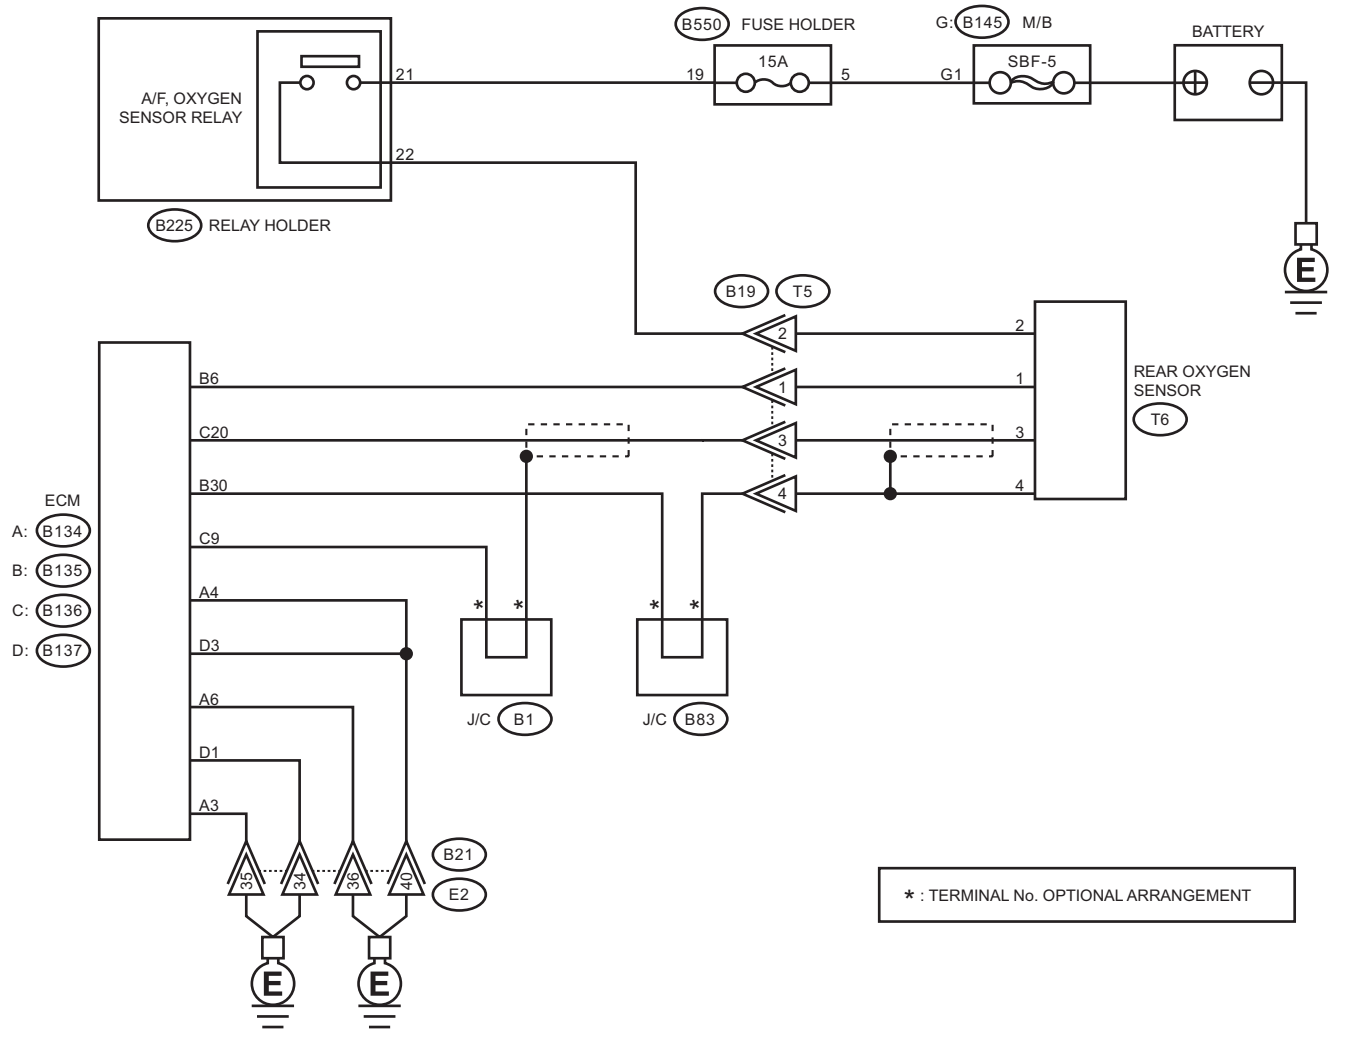
Time needed for diagnosis: 4 ms × 500 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

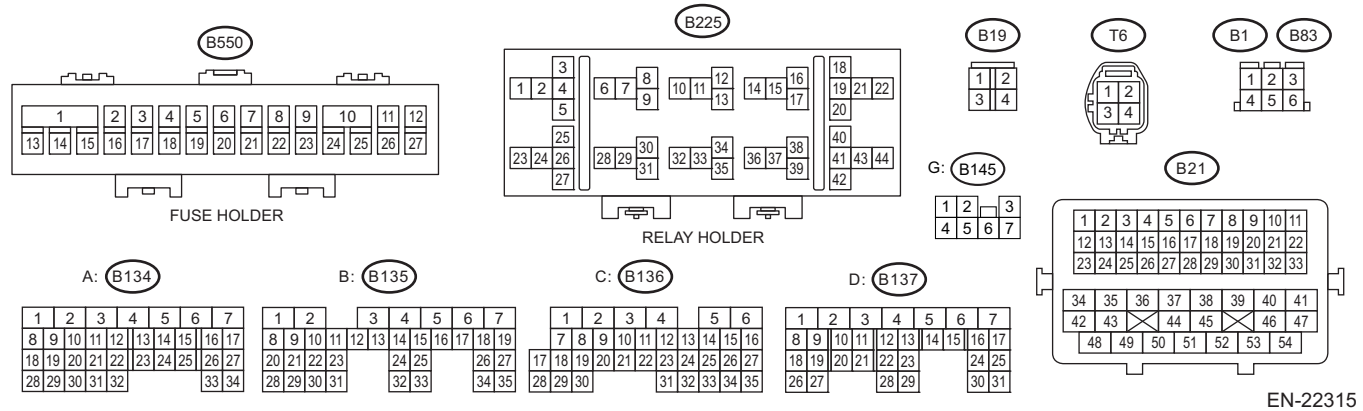
P: DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





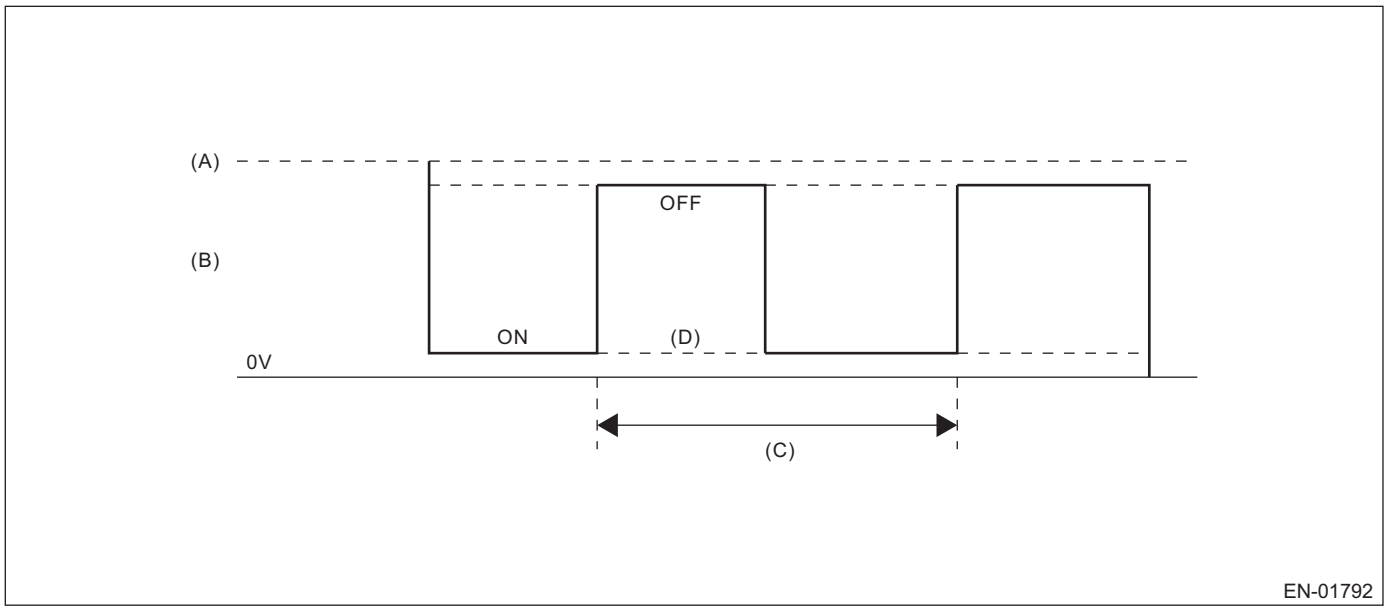
EN-22315

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from rear oxygen sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(T6) No. 2 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and rear oxygen sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B135) No. 6 — (T6) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
3	**CHECK GROUND CIRCUIT FOR ECM.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
4	**CHECK REAR OXYGEN SENSOR.** Measure the resistance between rear oxygen sensor terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 5 — 6.4 Ω?	Repair the poor contact of ECM connector.	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. COMPONENT DESCRIPTION



(A) Battery voltage
(B) Output voltage of the rear oxygen sensor heater
(C) 256 ms (cycles)
(D) Low error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor heater control duty	< 75 %

4. GENERAL DRIVING CYCLE

After starting the engine, perform the diagnosis continuously when engine is low speed.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< Battery voltage × 0.2 V

Time needed for diagnosis: 8 ms × 1250 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Q: DTC P0038 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

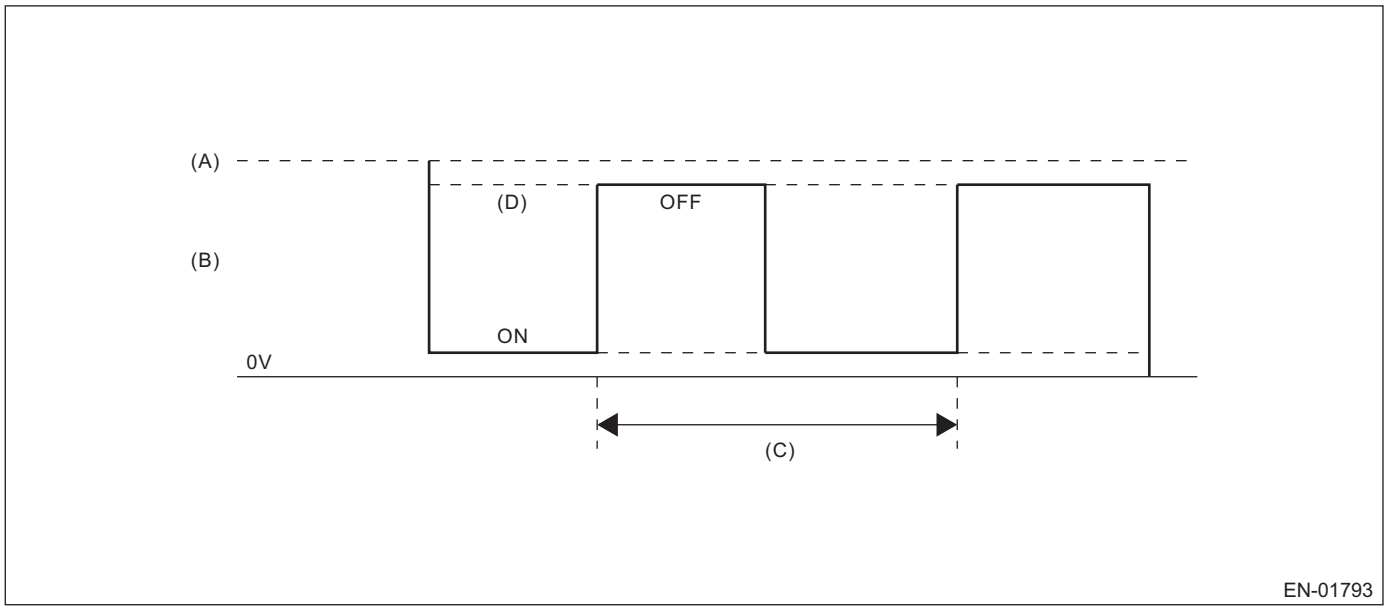
EN-22315

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and rear oxygen sensor connector.	Go to step **2**.
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of ECM connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains High.

2. COMPONENT DESCRIPTION



(A) Battery voltage
(B) Output voltage of the rear oxygen sensor heater
(C) 256 ms (cycles)
(D) High error

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor heater control duty	≥ 25 %

4. GENERAL DRIVING CYCLE

After starting the engine, perform the diagnosis continuously when engine is low speed.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> Battery voltage × 0.3 V

Time needed for diagnosis: 8 ms × 320 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

R: DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

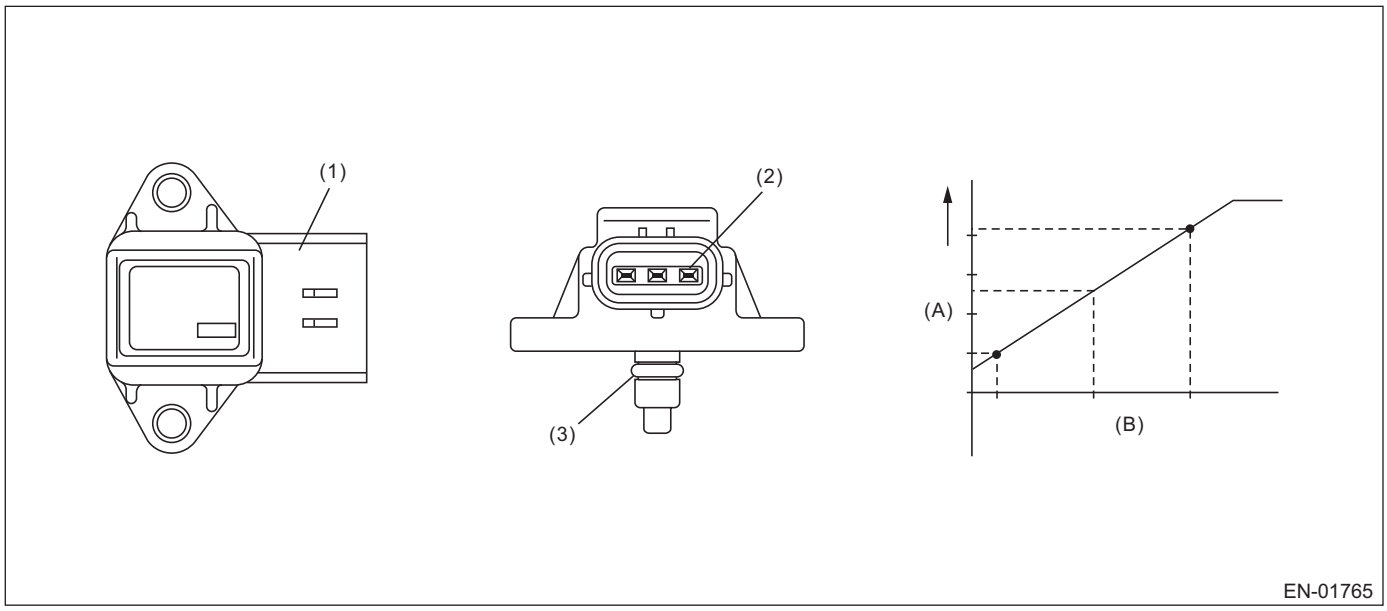
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **2**.
2	**CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mani. Absolute Pressure» 73.3 — 106.6 kPa (550 — 800 mmHg, 21.65 — 31.5 inHg) when the ignition is turned ON, and 20 — 46.7 kPa (150 — 350 mmHg, 5.91 — 13.78 inHg) during idling?	Repair the poor contact of ECM connector.	Replace the manifold absolute pressure sensor. <Ref. to FU(STI)-40, Manifold Absolute Pressure Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect problems in the intake manifold pressure sensor output properties.
Judge as NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

2. COMPONENT DESCRIPTION



(A) Output voltage
(B) Absolute pressure
(1) Connector
(2) Terminals
(3) O-ring

3. EXECUTION CONDITION

Low

Secondary parameters	Execution condition
Engine speed	< 3000 rpm
Charging efficiency (with atmospheric pressure compensation)	> 0.85 g/rev (0.03 oz/rev)
Throttle position	≥ 12 °

High

Secondary parameters	Execution condition
Engine speed	≥ 600 rpm and < 6700 rpm
Charging efficiency (with atmospheric pressure compensation)	≤ 0.25 g/rev (0.01 oz/rev)
Throttle position	< 8 °

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	< 1.22 V
High	
Output voltage	≥ 1.22 V

Time needed for diagnosis:
Low side: 5000 ms
High side: 5000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

S: DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/ PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

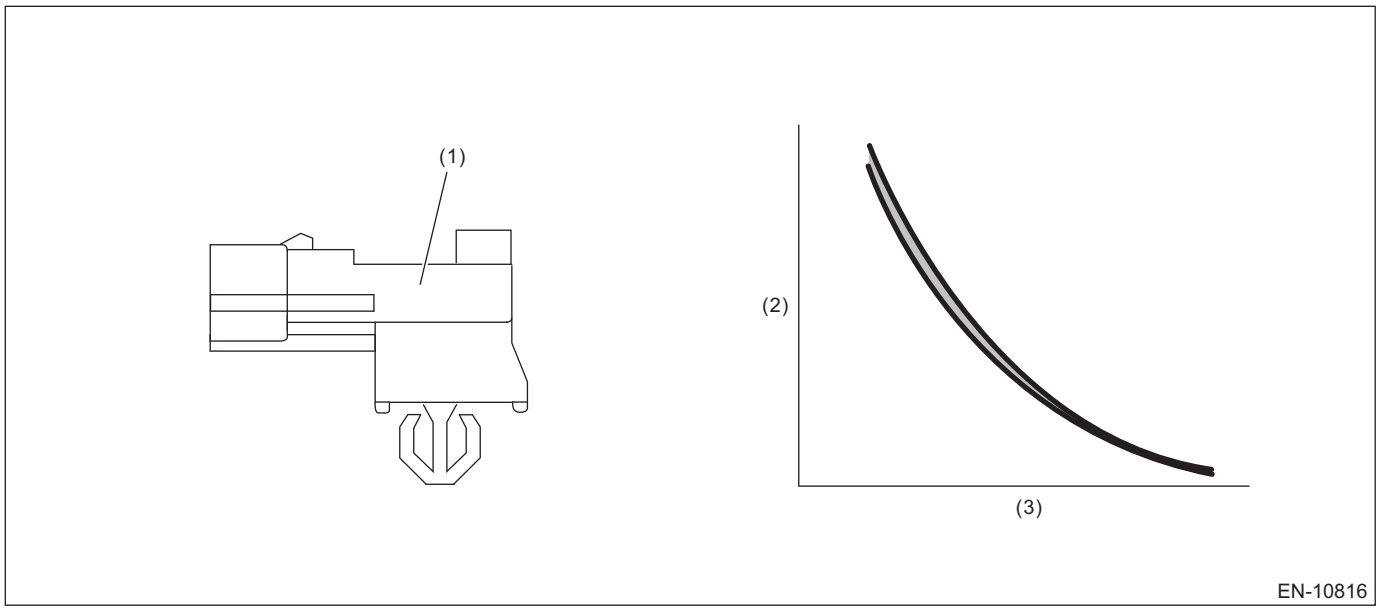
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0071 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Ambient Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For HVAC System”. <Ref. to AC(diag)-45, Read Current Data.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 3) Read the change of the value in «Ambient Air Temperature» while heating and cooling the ambient sensor using a hair dryer. **CAUTION:** **Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.**	Does the value of «Ambient Air Temperature» change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the ambient sensor. <Ref. to AC-71, Ambient Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ambient temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, judge by correlation between ambient temperature sensor value, intake air temperature sensor value and engine coolant temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between ambient air temperature and intake air temperature, ambient air temperature and engine coolant temperature.

2. COMPONENT DESCRIPTION



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Ambient temperature when 21568 ms elapses after engine start – Intake air temperature when 21568 ms elapses after engine start|	> Value from Map
|Ambient air temperature at engine start – Engine coolant temperature at engine start|	> 25 °C (77 °F)

Map

Intake air temperature (°C (°F))	–30 (–22)	45 (113)	60 (140)	80 (176)
|Ambient temperature when 21568 ms elapses after engine start – Intake air temperature when 21568 ms elapses after engine start| (°C (°F))	20 (68)	20 (68)	32 (89.6)	32 (89.6)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

T: DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW

DTC detecting condition:
Immediately at fault recognition

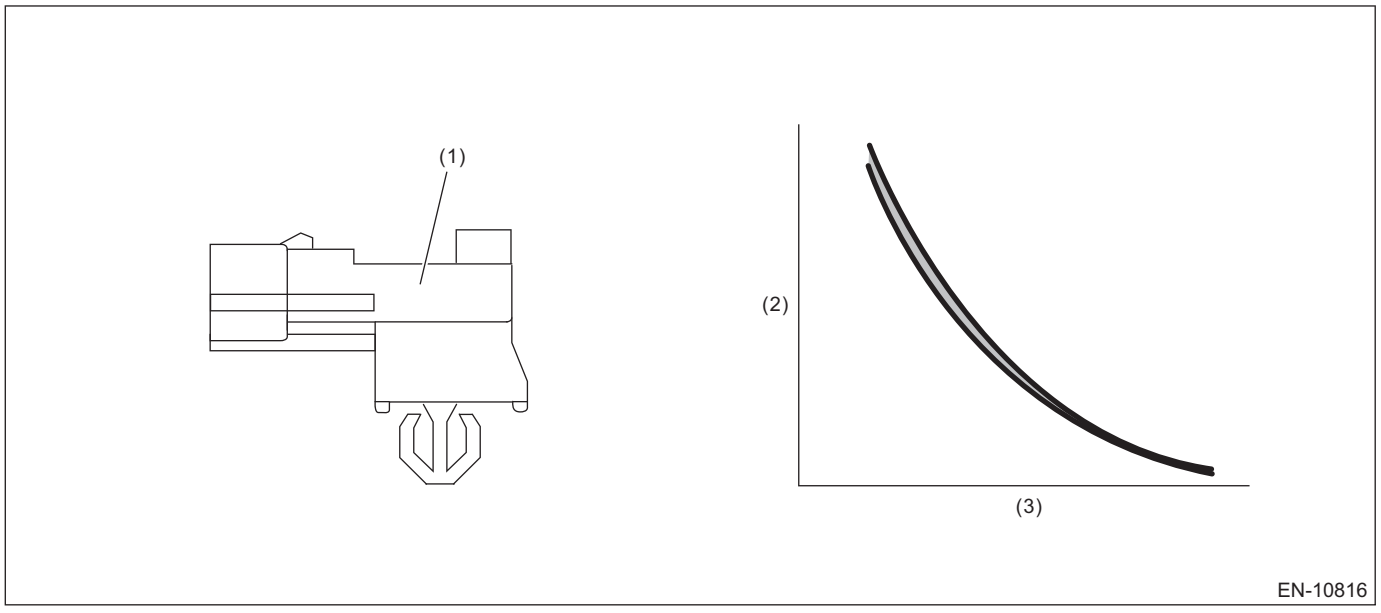
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC P0072 or P0073 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK COMBINATION METER.** Check the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Repair the poor contact of ECM connector.	Repair the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature signals are taken into the instrument/driver information control module, and the data of ambient temperature sensor is received from the instrument/driver information control module via CAN communication.



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.42 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

U: DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH

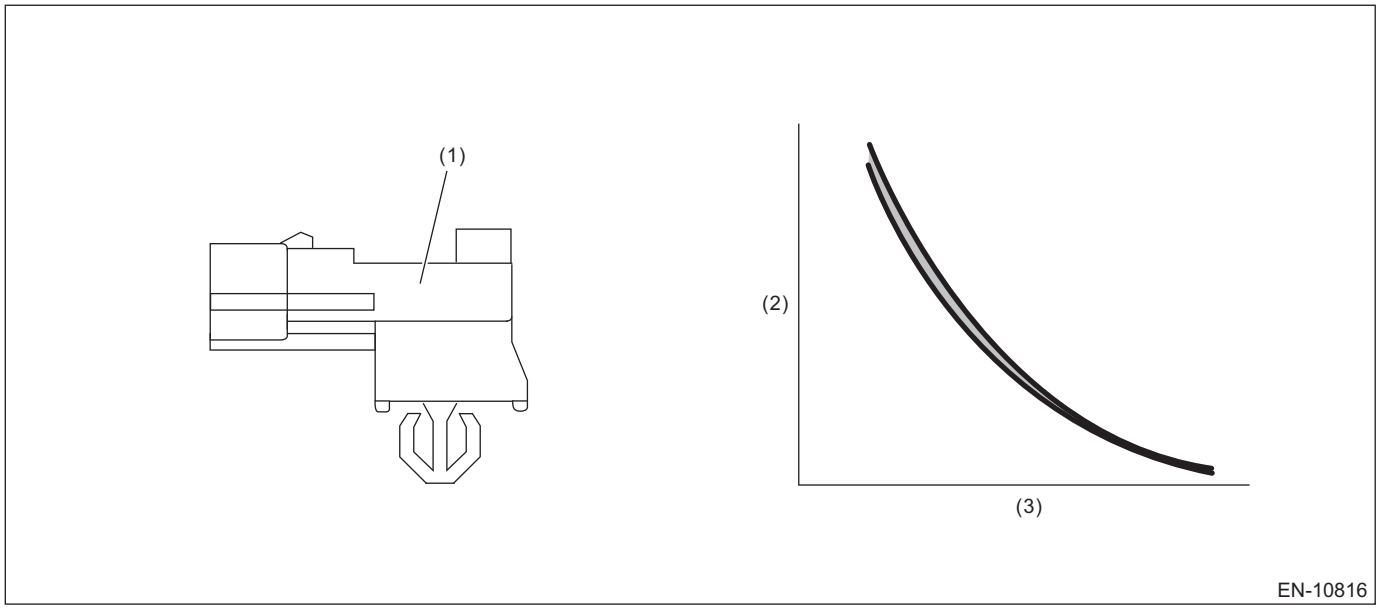
NOTE:
For the diagnostic procedure, refer to DTC P0072. <Ref. to EN(STI)(diag)-202, DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature signals are taken into the instrument/driver information control module, and the data of ambient temperature sensor is received from the instrument/driver information control module via CAN communication.



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.88 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

V: DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

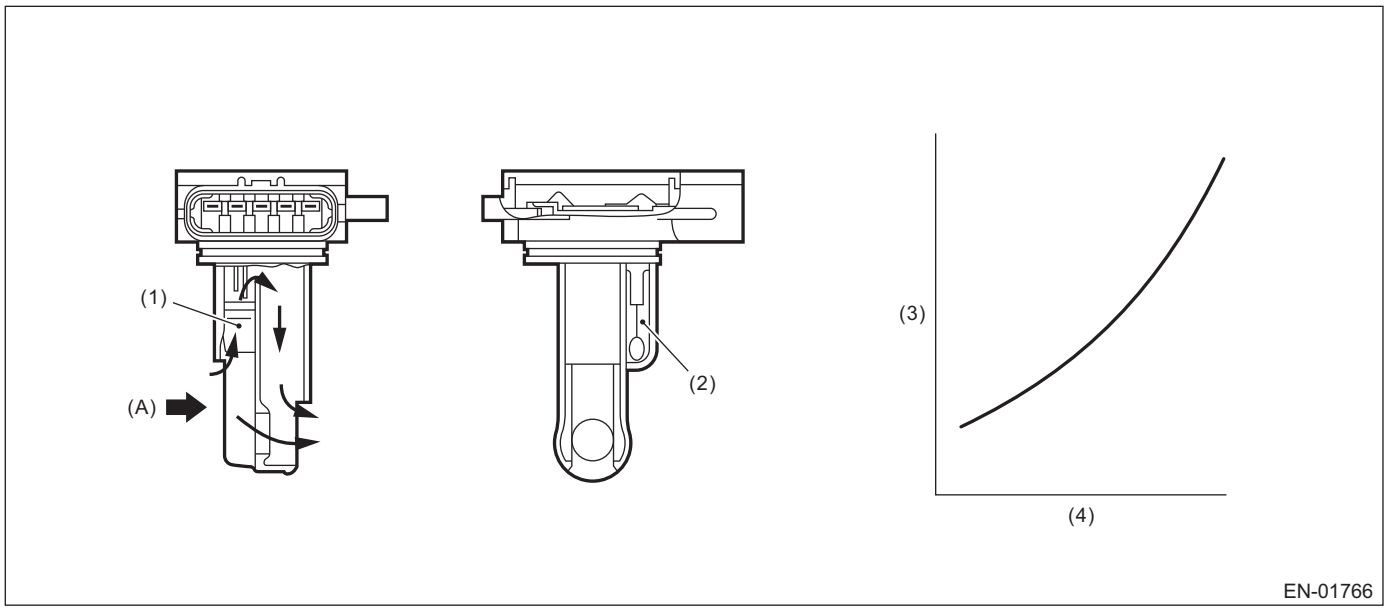
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0101 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output properties.
Judge as NG on the Low side when the displayed value of air flow voltage is small even in a driving condition where it should be large. Judge as NG on the High side when the displayed value of air flow voltage is large even in a driving condition where it should be small. Judge as NG in the air flow sensor property when either the Low side or High side becomes NG.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor
(2) Intake air temperature sensor
(3) Voltage (V)
(4) Intake air amount (kg (lb)/s)

3. EXECUTION CONDITION

Low

Secondary parameters	Execution condition
Engine speed	≥ 1600 rpm
Throttle position	≥ 12 °
Intake manifold pressure (with atmospheric pressure compensation)	≥ 73.3 kPa (550 mmHg, 21.7 inHg)

High

Secondary parameters	Execution condition
Engine speed	≥ 600 rpm and < 900 rpm
Throttle position	< 5 °
Intake manifold pressure (with atmospheric pressure compensation)	< 49.3 kPa (370 mmHg, 14.6 inHg)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	< MAP1
High	
Output voltage	≥ MAP2

Map 1

Engine speed (rpm)	1600	2000	3000	4000	5000	6000	7000
Output voltage (V)	1.848	1.970	2.220	2.420	2.580	2.730	2.850

Map 2

Engine speed (rpm)	600	700	800	900
Output voltage (V)	1.640	1.720	1.790	1.845

Time Needed for Diagnosis:
Low: 5000 ms
High: 5000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

W: DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

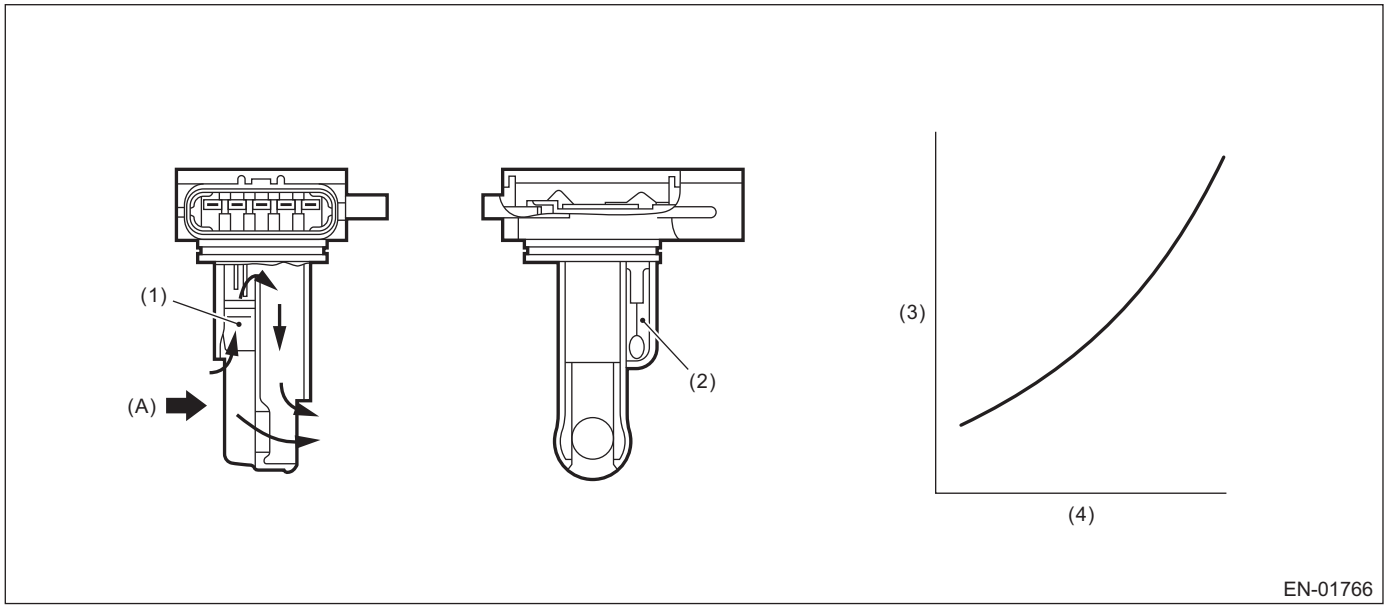
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» less than 0.2 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the mass air flow and intake air temperature sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between mass air flow and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(B3) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay connector and mass air flow and intake air temperature sensor connector • Poor contact of main relay connector
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B136) No. 22 — (B3) No. 5:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 22 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.	Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor
(2) Intake air temperature sensor
(3) Voltage (V)
(4) Intake air amount (kg (lb)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.22 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

X: DTC P0103 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

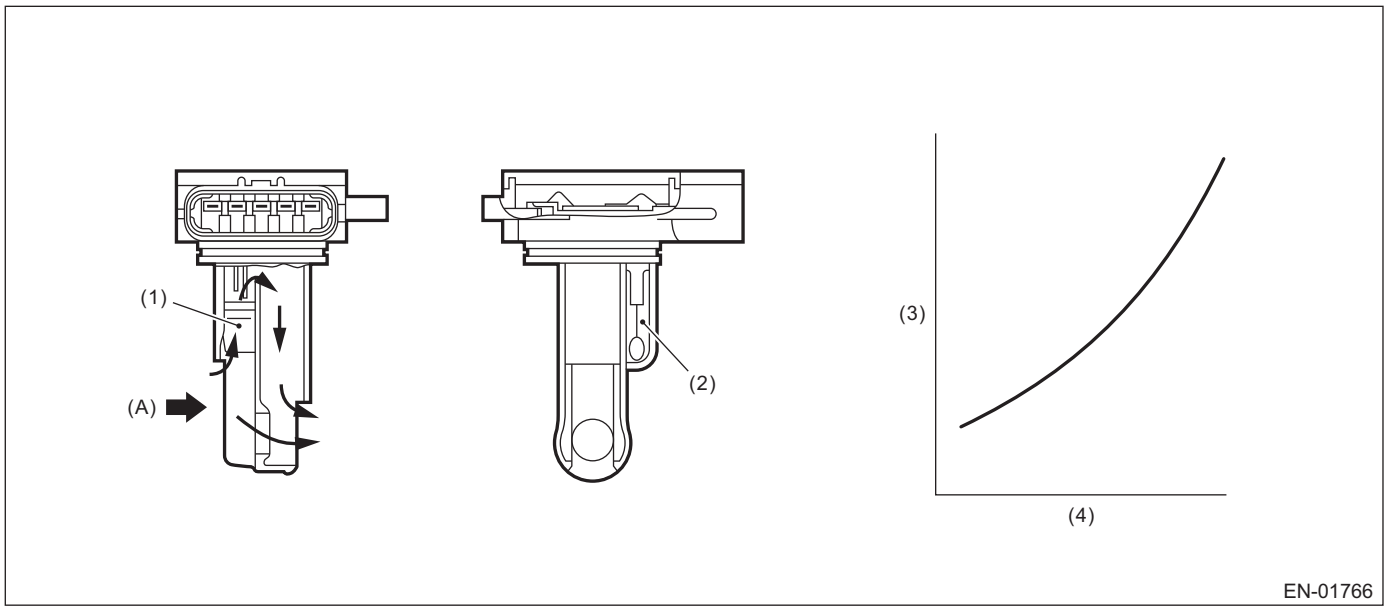
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» 5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the mass air flow and intake air temperature sensor. 3) Start the engine. 4) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between mass air flow and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(B3) No. 4 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector • Poor contact of ECM connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of mass air flow and intake air temperature sensor connector.	Is there poor contact of mass air flow and intake air temperature sensor connector?	Repair the poor contact of mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor
(2) Intake air temperature sensor
(3) Voltage (V)
(4) Intake air amount (kg (lb)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

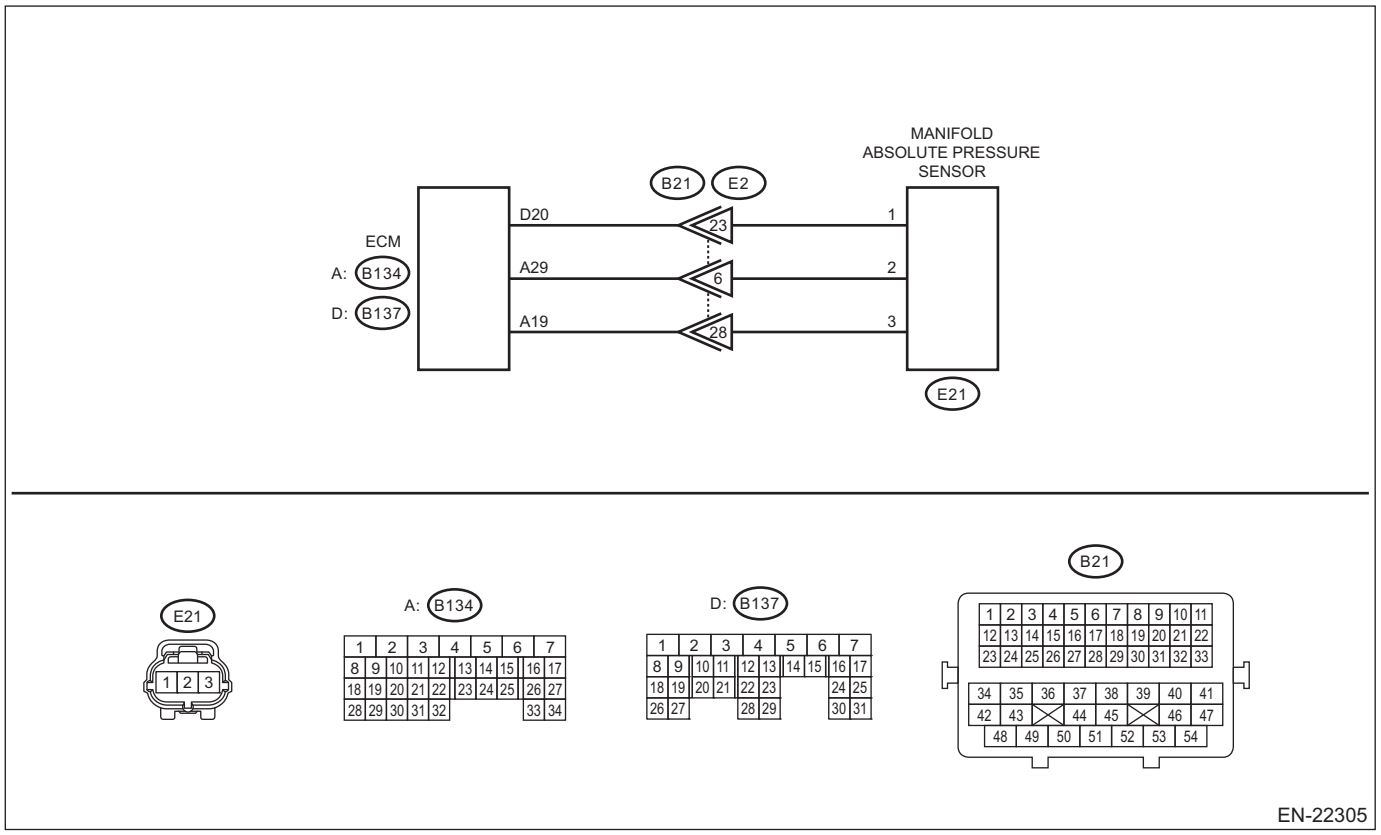
Malfunction Criteria	Threshold Value
Output voltage	≥ 4.952 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Y: DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-22305

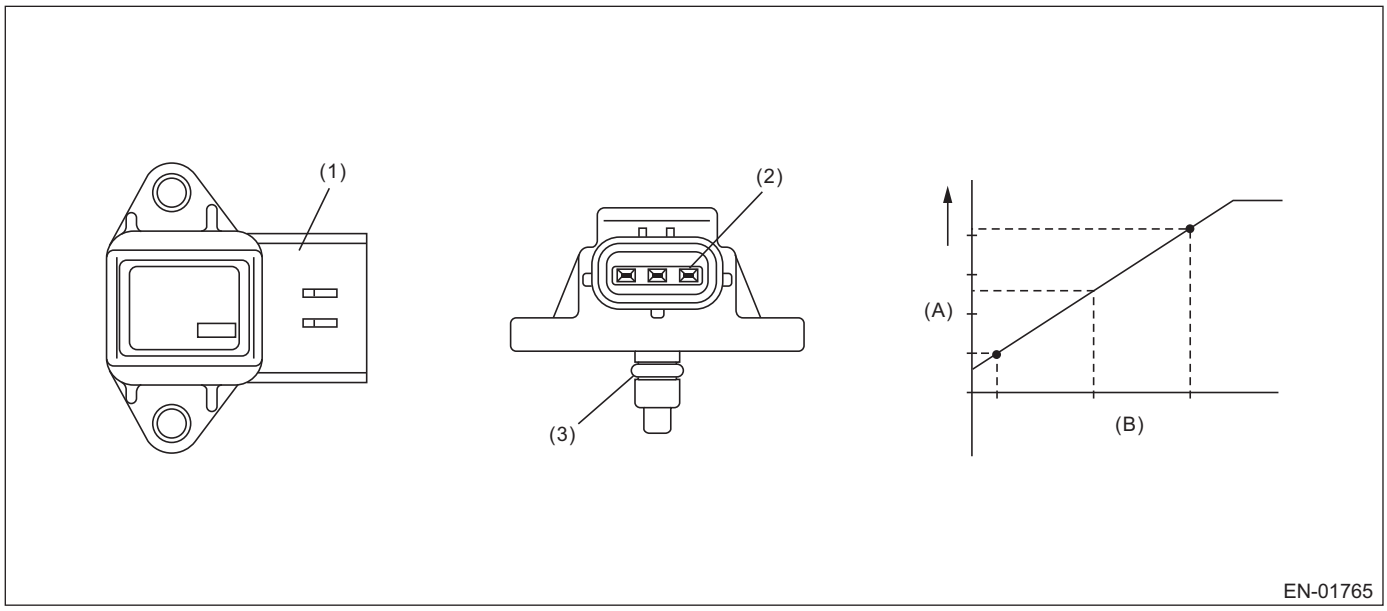
Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» less than 13.3 kPa (100 mmHg, 3.94 inHg)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY OF MANIFOLD ABSOLUTE PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from manifold absolute pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between manifold absolute pressure sensor connector and engine ground. ***Connector & terminal*** ***(E21) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and manifold absolute pressure sensor connector • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and manifold absolute pressure sensor connector. ***Connector & terminal*** ***(B137) No. 20 — (E21) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and manifold absolute pressure sensor connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair short circuit to ground in harness between ECM connector and manifold absolute pressure sensor connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and manifold absolute pressure sensor connector.	Is there poor contact of ECM or manifold absolute pressure sensor connector?	Repair the poor contact of ECM or manifold absolute pressure sensor connector.	Replace the manifold absolute pressure sensor. <Ref. to FU(STI)-40, Manifold Absolute Pressure Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Output voltage
(B) Absolute pressure
(1) Connector
(2) Terminals
(3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.581 V

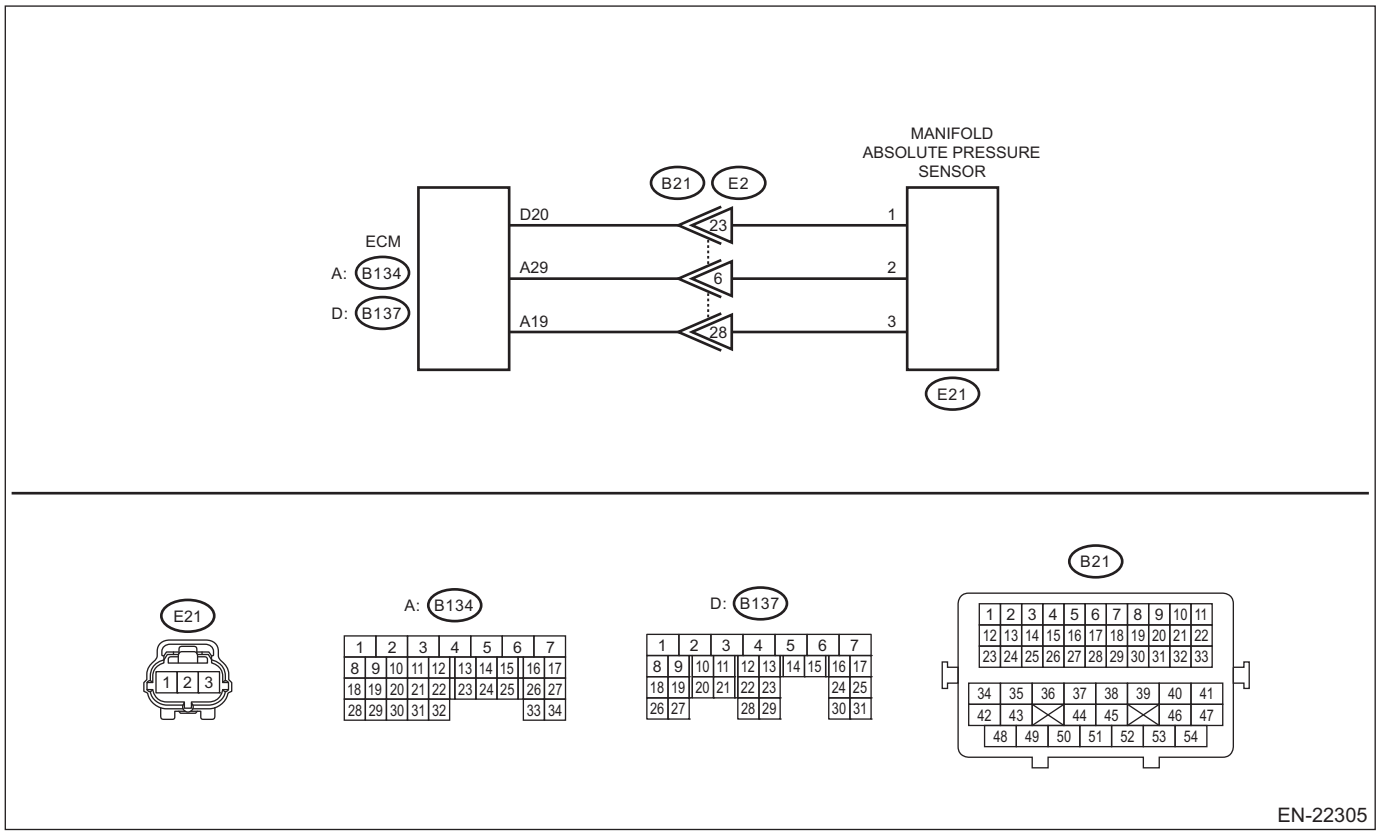
Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Z: DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-22305

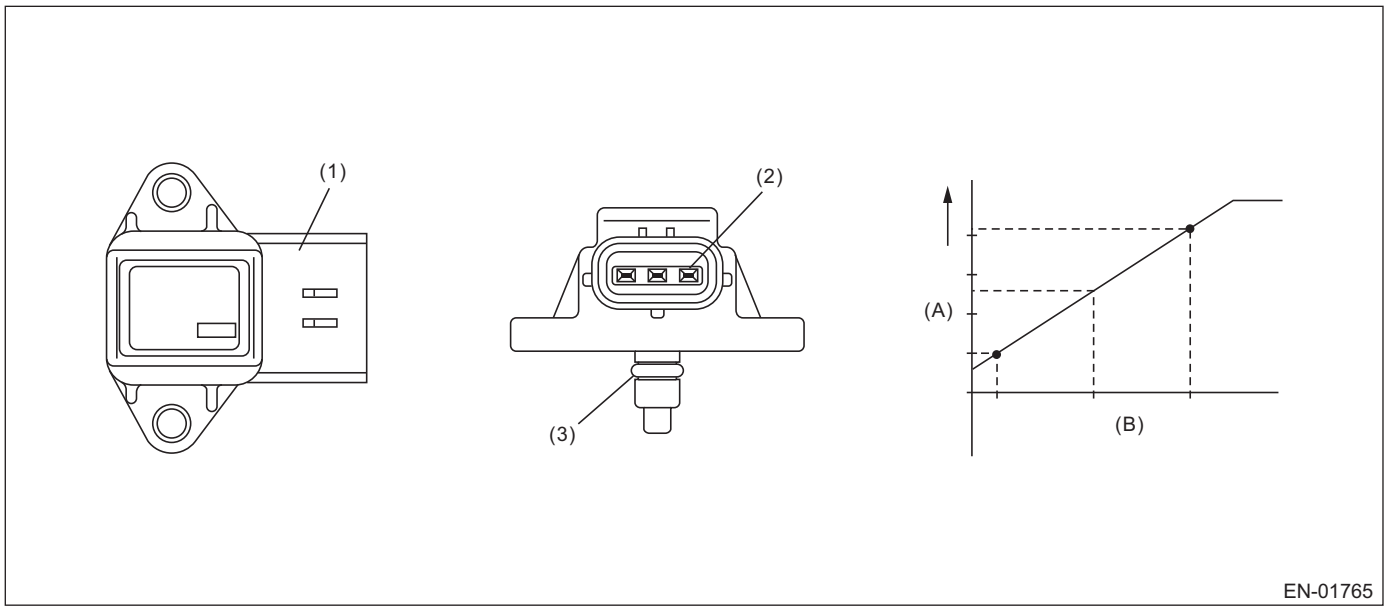
Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» 119.5 kPa (896.5 mmHg, 35.29 inHg) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from manifold absolute pressure sensor. 3) Start the engine. 4) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» 119.5 kPa (896.5 mmHg, 35.29 inHg) or more?	Repair the short circuit to power in harness between ECM connector and manifold absolute pressure sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between manifold absolute pressure sensor connector and engine ground. ***Connector & terminal*** ***(E21) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and manifold absolute pressure sensor connector • Poor contact of ECM connector • Poor contact of coupling connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of manifold absolute pressure sensor connector.	Is there poor contact of manifold absolute pressure sensor connector?	Repair the poor contact of manifold absolute pressure sensor connector.	Replace the manifold absolute pressure sensor. <Ref. to FU(STI)-40, Manifold Absolute Pressure Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Output voltage
(B) Absolute pressure
(1) Connector
(2) Terminals
(3) O-ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.681 V

Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AA:DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

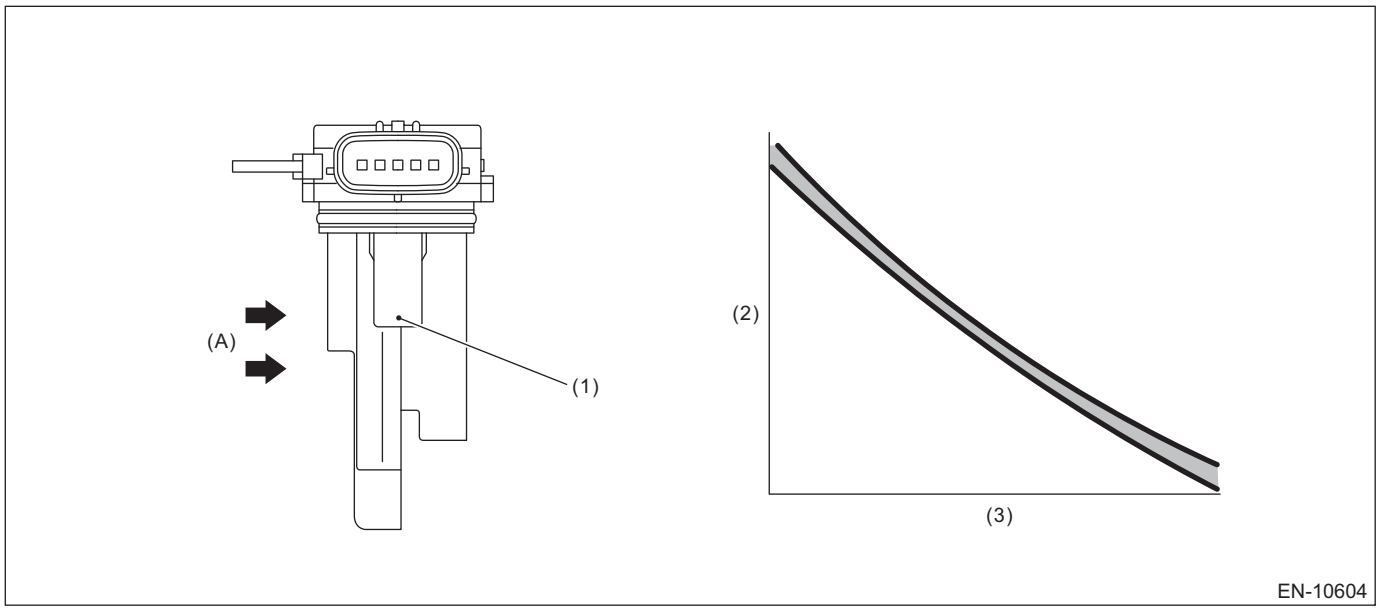
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0111 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 3) Read the change of the value in «Intake Air Temp.» while heating and cooling the mass air flow and intake air temperature sensor using a hair dryer. **CAUTION:** **Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.**	Does the value of «Intake Air Temp.» change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor output properties.
After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between intake air temperature sensor value, engine coolant temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between intake air temperature and engine coolant temperature, intake air temperature and ambient air temperature.

2. COMPONENT DESCRIPTION



(A) Air

(1) Intake air temperature sensor (2) Resistance value (Ω) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Intake air temperature when 21568 ms elapses after engine start – Engine coolant temperature at engine start|	> Value of Map 1
|Intake air temperature when 21568 ms elapses after engine start – Ambient temperature when 21568 ms elapses after engine start|	> Value of Map 2

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AB:DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

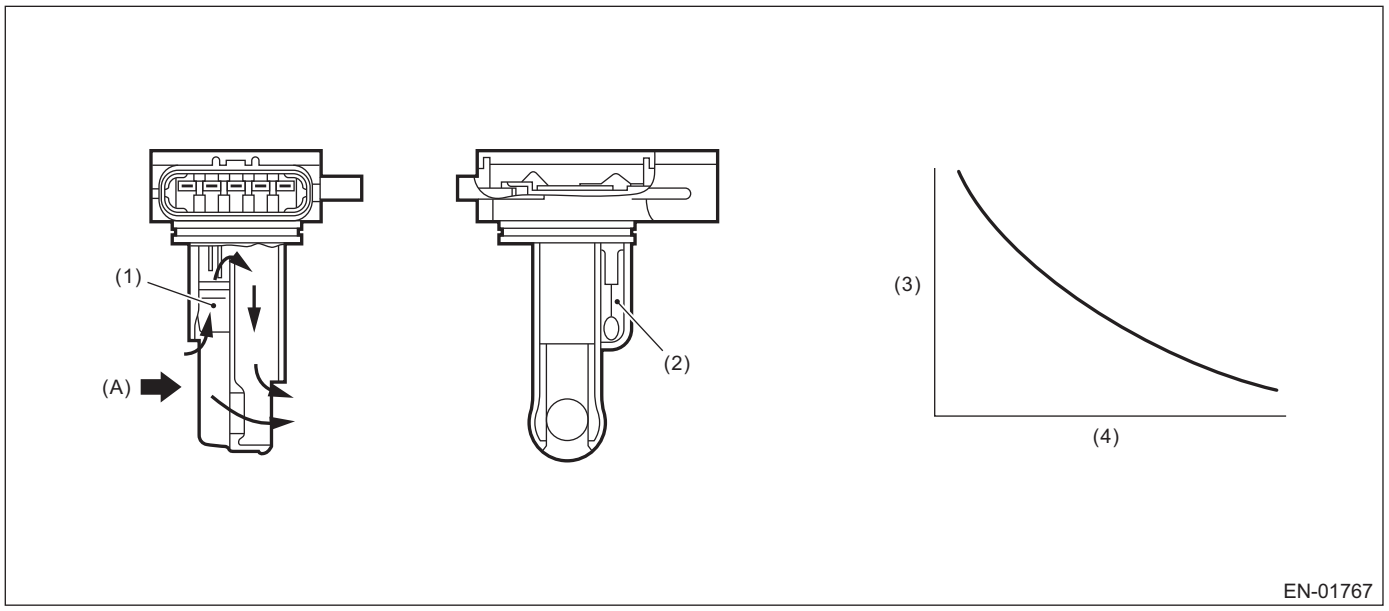
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Intake Air Temp.» 120°C (248°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor
(2) Intake air temperature sensor
(3) Resistance value (Ω)
(4) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.395 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AC:DTC P0113 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

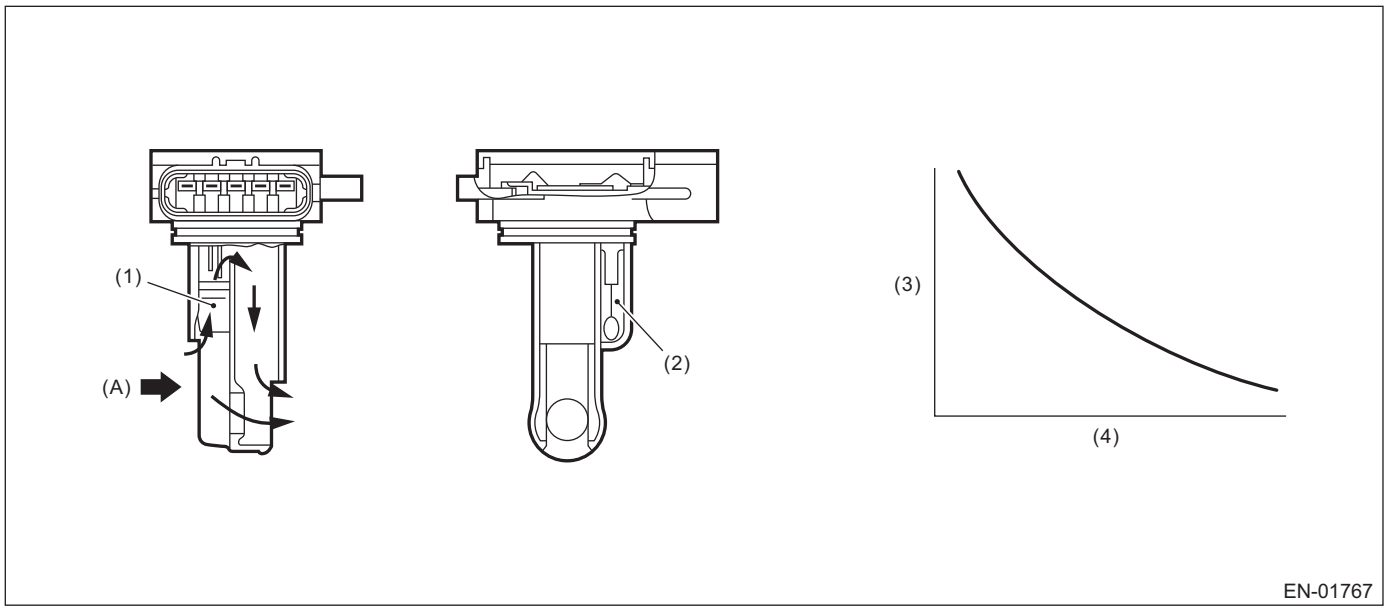
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Intake Air Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Intake Air Temp.» less than –40°C (–40°F)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.	Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B136) No. 31 — (B3) No. 1:*** ***(B135) No. 30 — (B3) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector • Poor contact of joint connector
4	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 31 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor
(2) Intake air temperature sensor
(3) Resistance value (Ω)
(4) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.712 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AD:DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

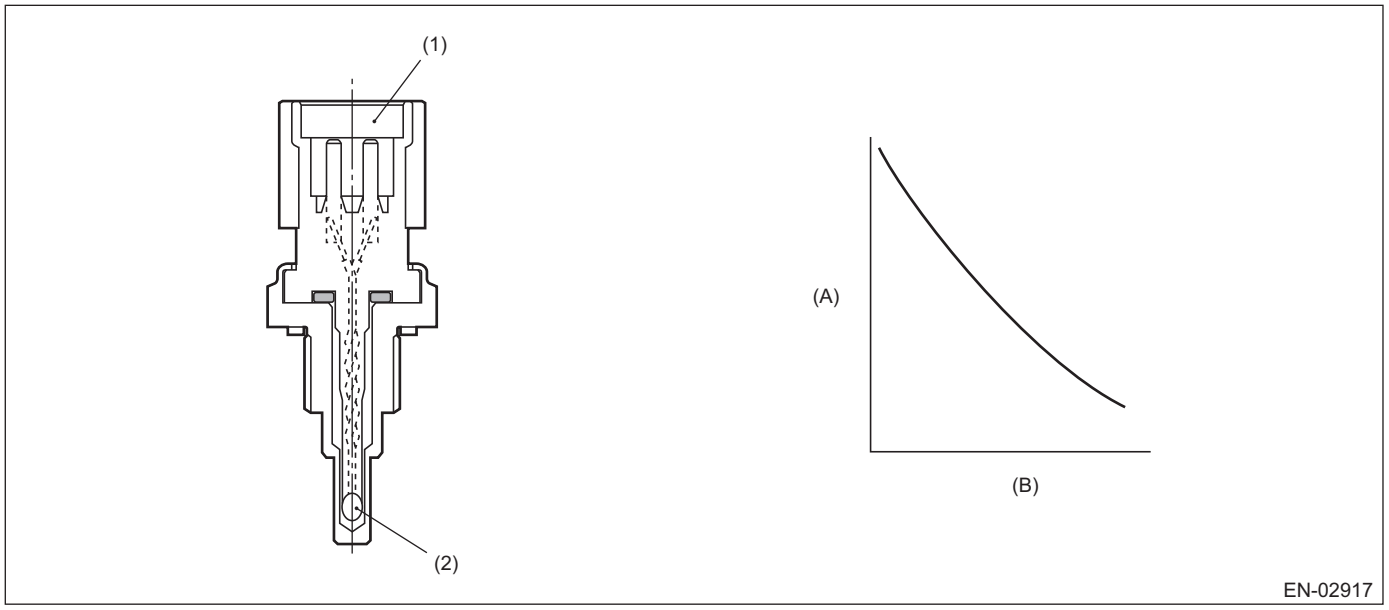
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0116 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Disconnect the connectors from the engine coolant temperature sensor. 2) Measure the resistance between engine coolant temperature sensor terminals when the engine coolant is cold and after warmed up. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance of engine coolant temperature sensor different between when engine coolant is cold and after warmed up?	Repair the poor contact of ECM connector.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine coolant temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine coolant temperature sensor value, intake air temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine coolant temperature and ambient air temperature, engine coolant temperature and intake air temperature.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Engine coolant temperature at engine start – Intake air temperature when 21568 ms elapses after engine start|	> Value from Map
|Engine coolant temperature at engine start – Ambient air temperature at engine start|	> 25 °C (77 °F)

Map

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Engine coolant temperature at engine start – Intake air temperature when 21568 ms elapses after engine start| (°C (°F))	12 (53.6)	12 (53.6)	22 (71.6)	22 (71.6)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AE:DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

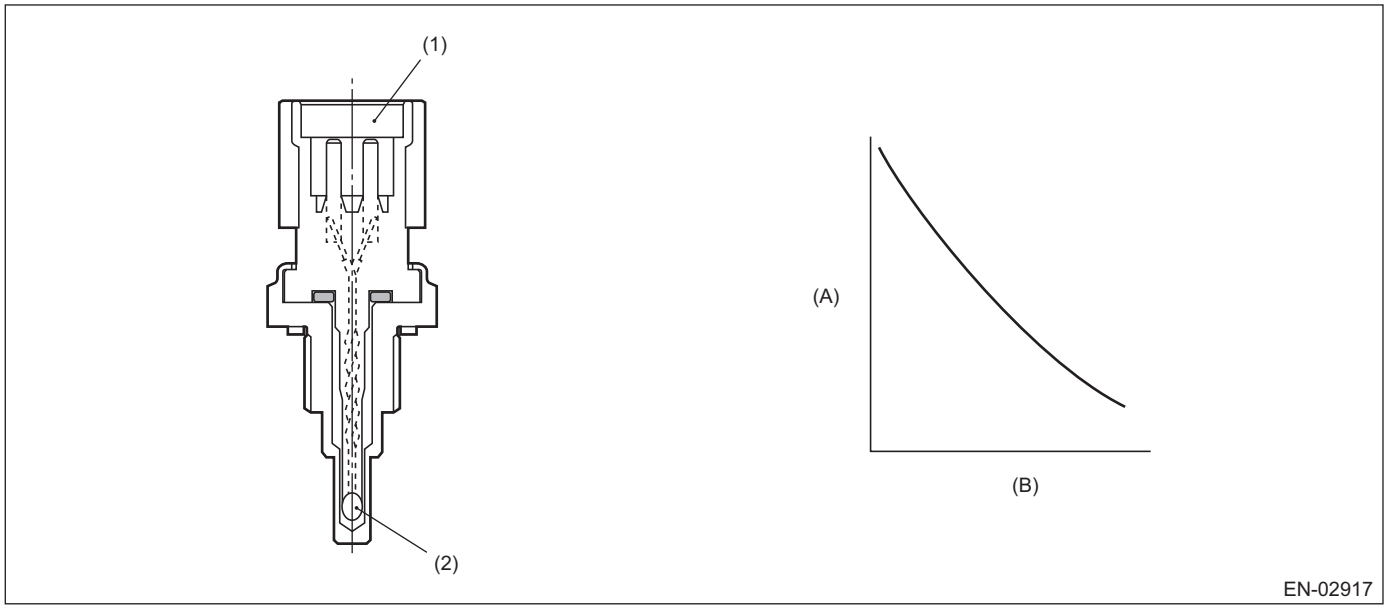
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 150°C (302°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 22 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.343 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AF:DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

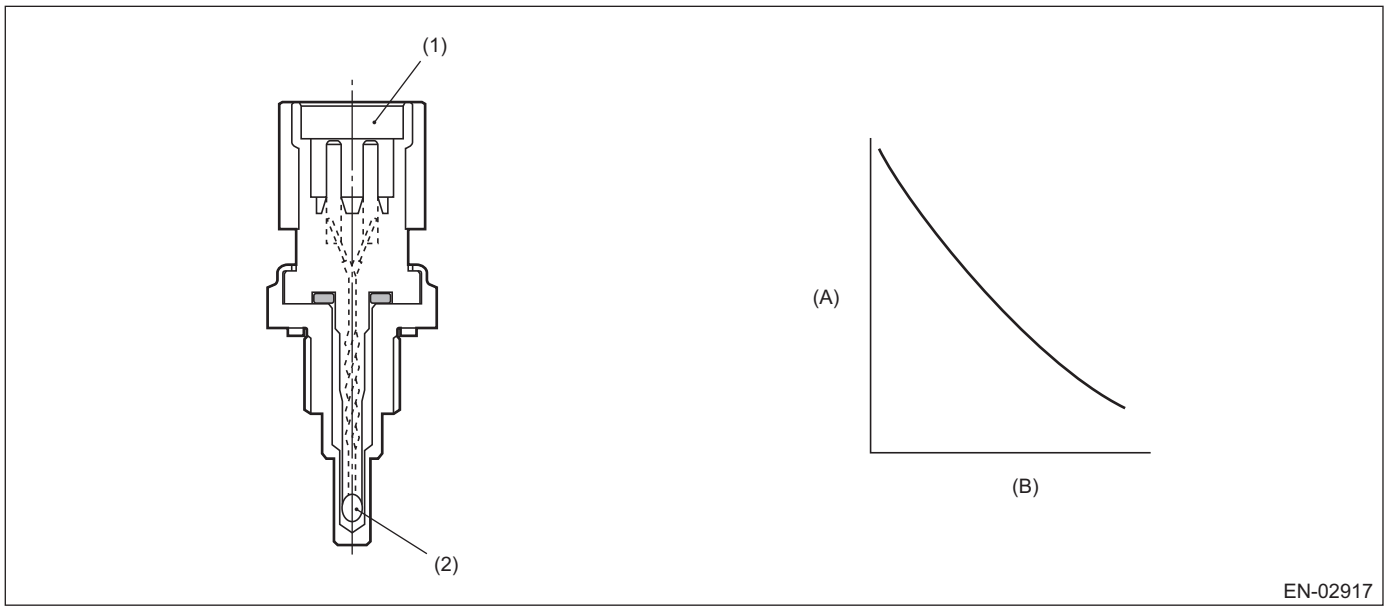
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» less than –40°C (–40°F)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and engine coolant temperature sensor connector.	Is there poor contact of ECM or engine coolant temperature sensor connector?	Repair the poor contact of ECM or engine coolant temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(B134) No. 29 — (E8) No. 1:*** ***(B137) No. 22 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and engine coolant temperature sensor connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 22 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and engine coolant temperature sensor connector.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.702 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AG:DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

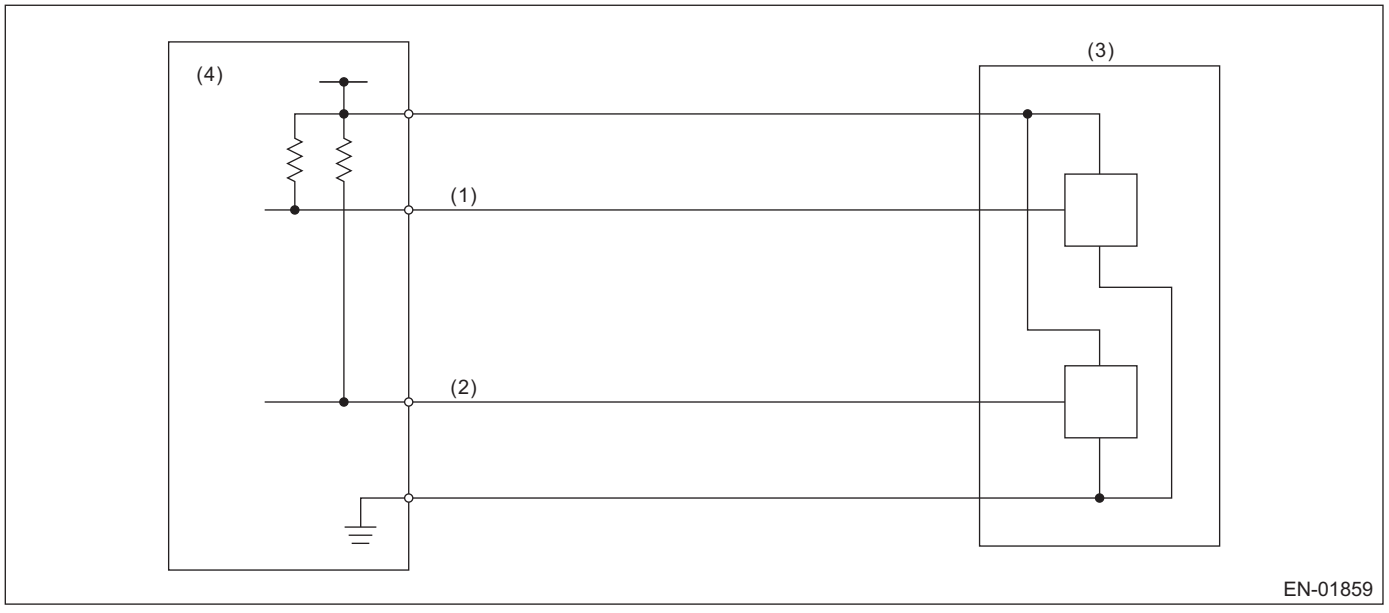
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 19 — Chassis ground:*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 18 — (B136) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 6 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

3. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

5. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	≤ 0.27 V

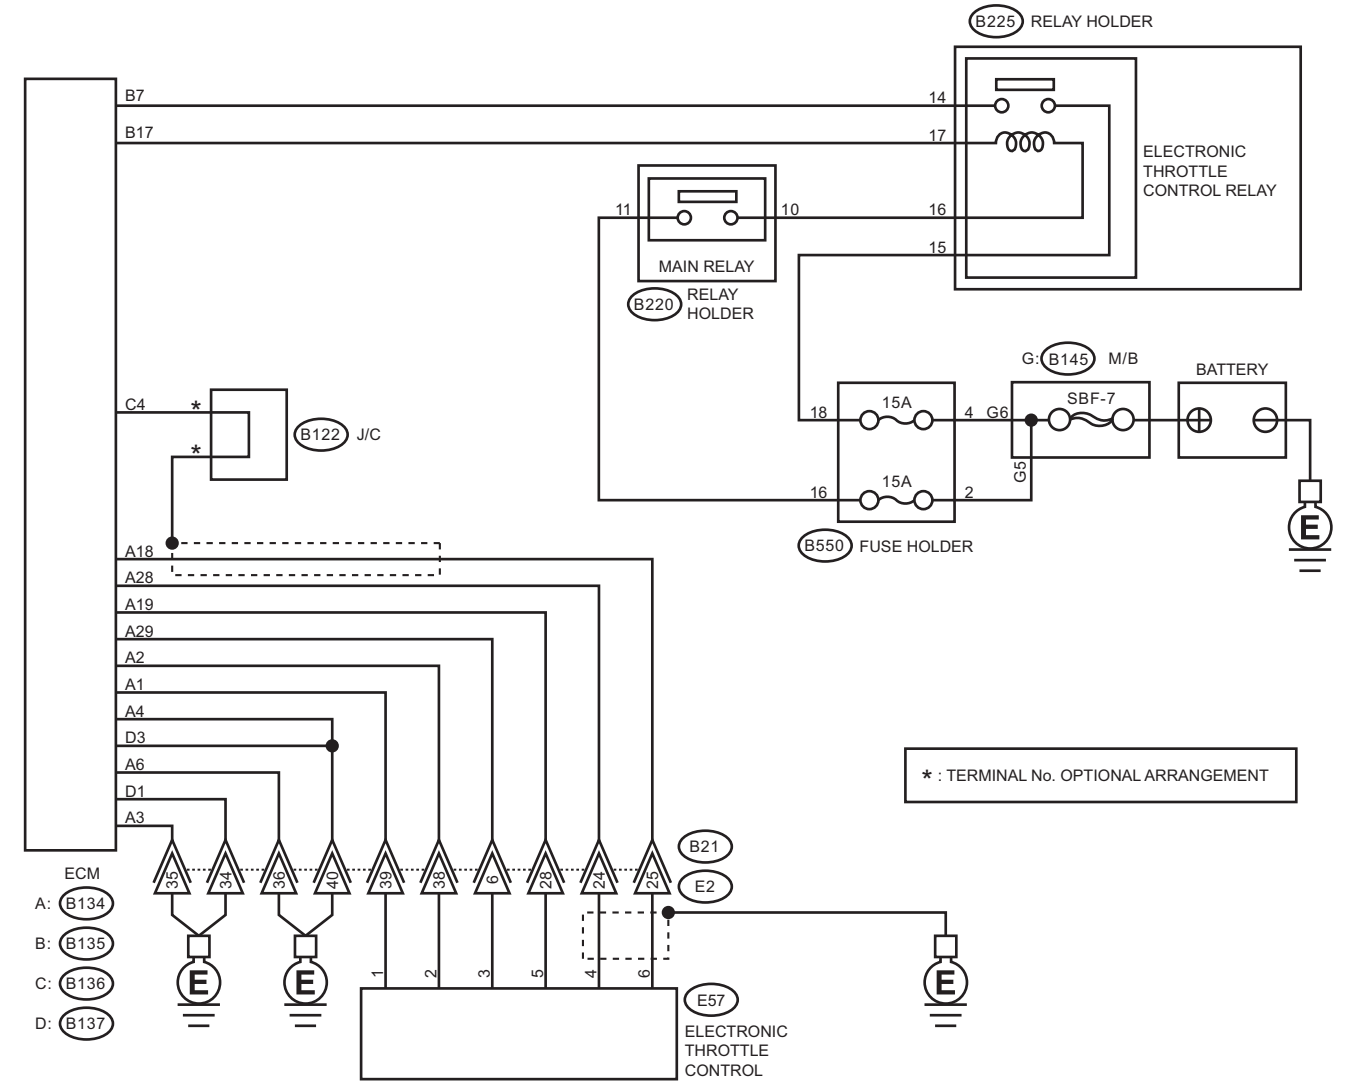
Time Needed for Diagnosis: 24 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

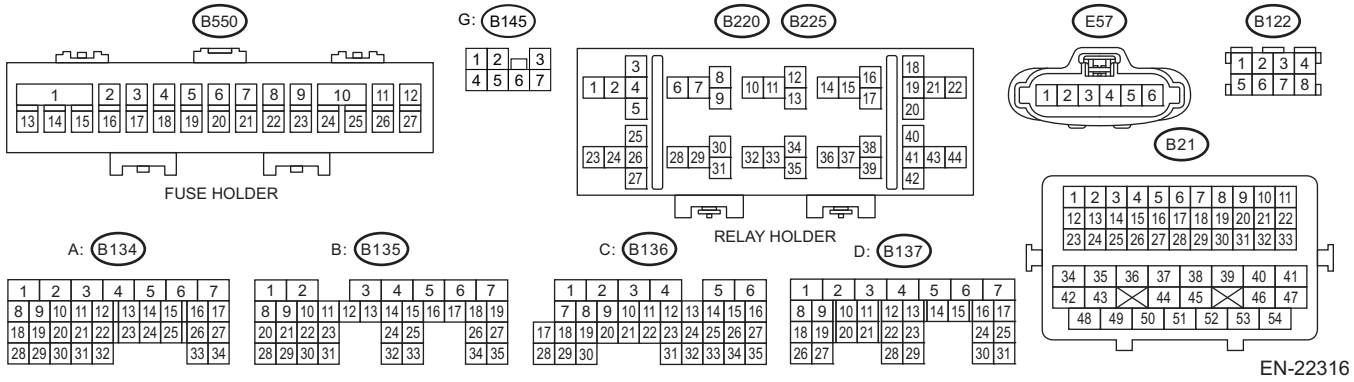
AH:DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





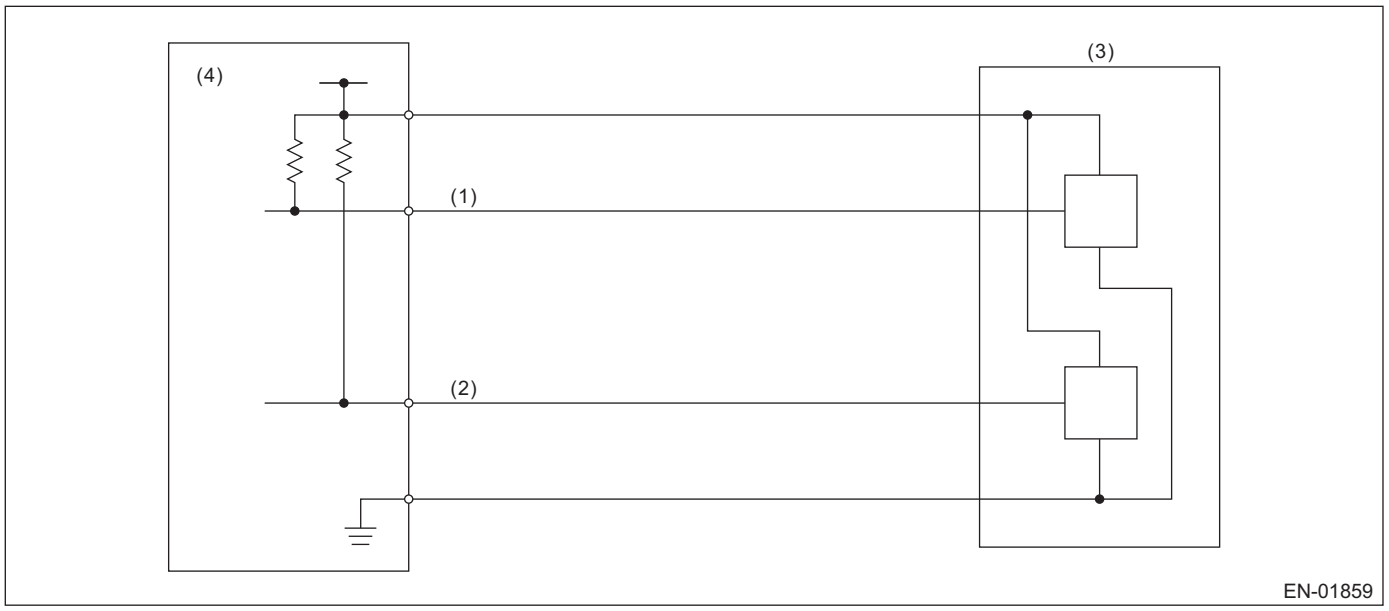
EN-22316

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 18 — (E57) No. 6:*** ***(B134) No. 29 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 6 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B134) No. 19 — (B134) No. 18:***	Is the resistance 1 MΩ or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

2. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

3. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

5. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	≥ 4.858 V

Time Needed for Diagnosis: 24 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AI: DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine does not return to idle.

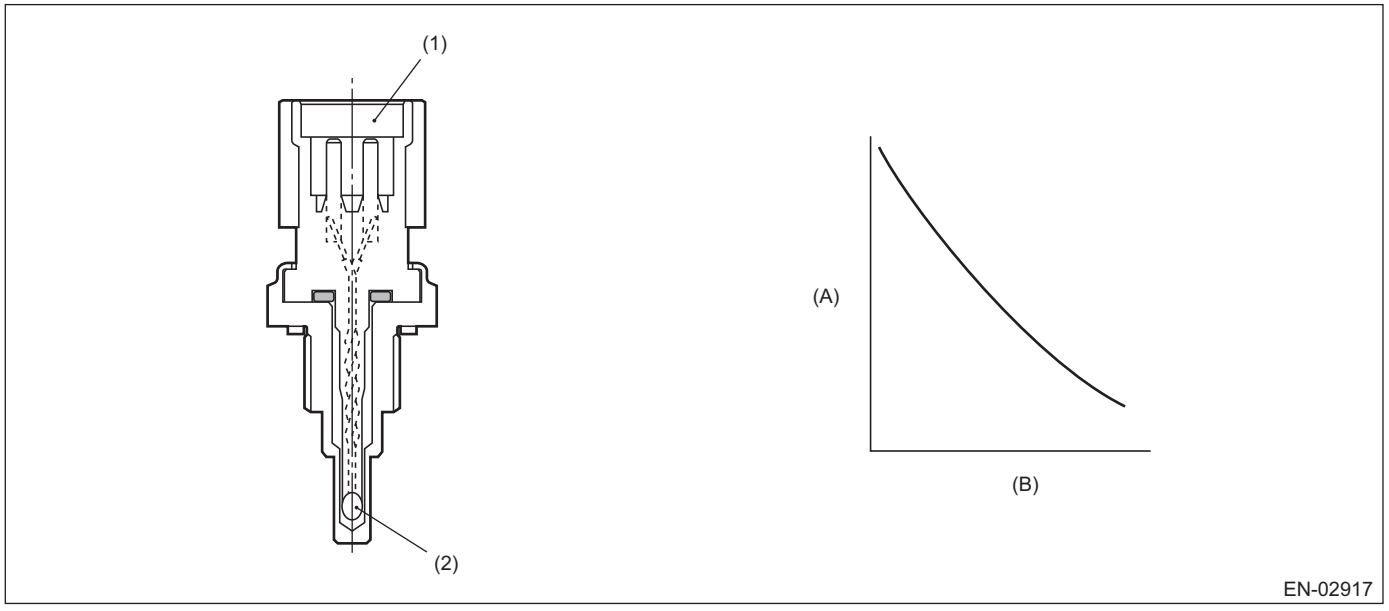
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK ENGINE COOLANT.** Check the following items: • Amount of engine coolant • Engine coolant freeze • Contamination of engine coolant	Is the check result OK?	Go to step **2**.	Fill or replace the engine coolant. <Ref. to CO(STI)-14, Engine Coolant.>
2	**CHECK THERMOSTAT.** Check the thermostat. <Ref. to CO(STI)-18, INSPECTION, Thermostat.>	Does the thermostat remain opened?	Replace the thermostat. <Ref. to CO(STI)-18, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property.
Judge as NG when engine coolant temperature does not rise to the specified value after predetermined time has elapsed since engine start.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 600 rpm
Reference engine coolant temperature	> 80 °C (176 °F)
Engine coolant temperature at engine start	< 80 °C (176 °F)
Perform the following condition A or B	
Condition A:	
Coolant temperature drop judgment	Completed
Coolant temperature drop	Not detected
Condition B:	
Coolant temperature drop judgment	Completed
Coolant temperature drop	Detected
Engine speed integrated value	> 1131 rev (Depending on the ambient temperature)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine coolant temperature	< 80°C
Σ (Reference engine coolant temperature - Actual engine coolant temperature)	> 1731.6 °C (3116.9°F)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AJ:DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Thermostat remains open.
- Coolant temperature rises slowly.

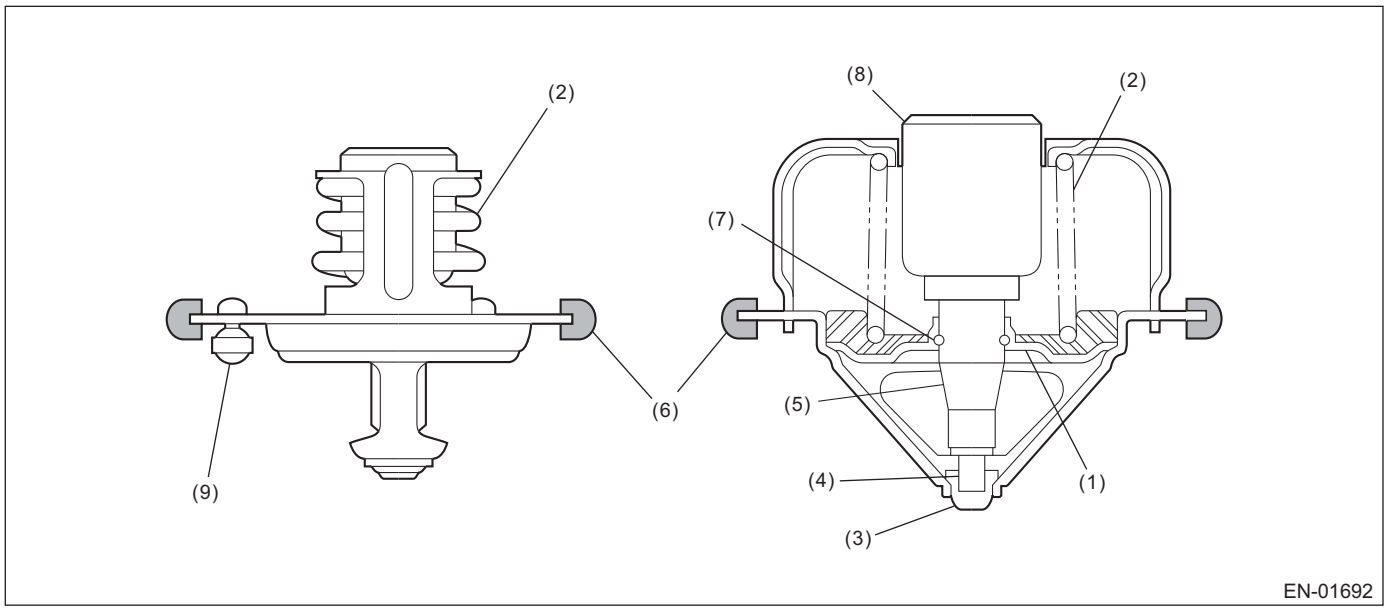
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0128 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE COOLANT.** Check the engine coolant amount.	Is the check result OK?	Go to step **3**.	Refill the engine coolant. <Ref. to CO(STI)-14, Engine Coolant.>
3	**CHECK RADIATOR FAN.** 1) Start the engine. 2) Idle for approximately three minutes. (Accelerator OFF condition) 3) Check the radiator fan operation.	Does the radiator fan continuously rotate for 3 minutes or more during idling?	Repair radiator fan circuit. <Ref. to CO(STI)-24, Radiator Main Fan and Fan Motor.> <Ref. to CO(STI)-26, Radiator Sub Fan and Fan Motor.>	Go to step **4**.
4	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(STI)-33, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Replace the thermostat. <Ref. to CO(STI)-18, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the thermostat function.
Judge as NG when any one of the following conditions is established.
- When the actual engine coolant temperature does not reach the maximum temperature necessary to perform other OBDII diagnosis and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 1)
- When the actual engine coolant temperature does not reach the range within –11°C (–19.8°F) from the regulated temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 2)
- When the actual engine coolant temperature becomes equal to or less than the specified value after it reached -11.1°C (-19.98°F). (Judgment 3)

2. COMPONENT DESCRIPTION



(1) Valve
(2) Spring
(3) Stopper
(4) Piston
(5) Guide
(6) Rubber seal
(7) Stop ring
(8) Wax element
(9) Jiggle valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
<Judgment 1>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ –7 °C (19.4 °F)
Engine coolant temperature at engine start	< 60 °C (140 °F)
<Judgment 2>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ –7 °C (19.4 °F)
Engine coolant temperature at engine start	< 60 °C (140 °F)
<Judgment 3>	
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ –7 °C (19.4 °F)
Actual engine coolant temperature	≥ 77.5 °C (171.5 °F) (Experienced)
Diagnostic mask conditions	Not completed

4. GENERAL DRIVING CYCLE

- Judgment 1 and judgment 2: Perform the diagnosis only once after the engine starts.
- Judgment 3: Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
<Judgment 1>	
Actual engine coolant temperature	< 60 °C (140 °F)
Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 1
Estimated coolant temperature	> 60 °C (140 °F)
<Judgment 2>	
Actual engine coolant temperature	< 77.5 °C (171.5 °F)
Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 2
Estimated coolant temperature	> 77.5 °C (171.5 °F)
<Judgment 3>	
Actual engine coolant temperature	< 60 °C (140 °F)

Map 1

Engine coolant temperature at engine starting (°C (°F))	–7 (19.4)	0 (32)	8 (46.4)	10 (50)	25 (77)	35 (95)
Threshold Value (°C (°F))	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (2160)

Map 2

Engine coolant temperature at engine starting (°C (°F))	–7 (19.4)	0 (32)	8 (46.4)	10 (50)	25 (77)	30 (86)	35 (95)
Threshold Value (°C (°F))	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (3116.9)	1731.6 (2160)

Time needed for diagnosis:
Judgment 1: Less than 1 second
Judgment 2: Less than 1 second
Judgment 3**:** 10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AK:DTC P0131 A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

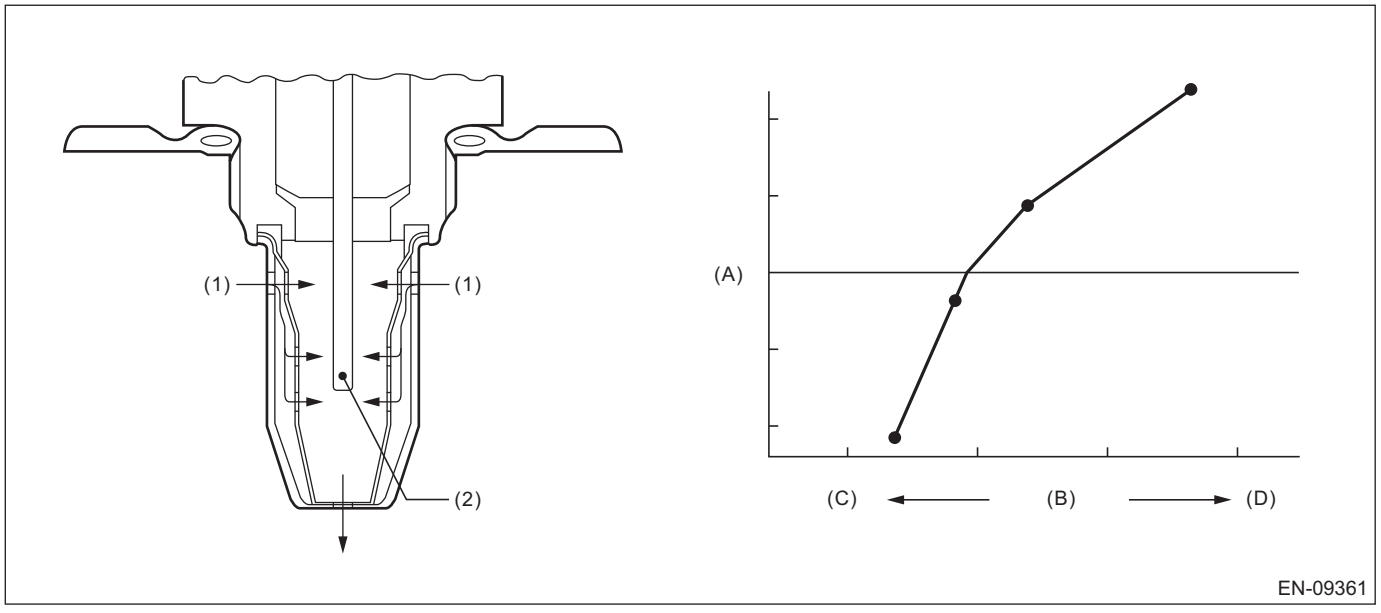
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 — Chassis ground:*** ***(B136) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of the front oxygen (A/F) sensor connector.	Is there poor contact of front oxygen (A/F) sensor connector?	Repair the poor contact of front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.
Judge as NG, when the element voltage is out of the specified range.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean

(1) Exhaust gas
(2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Input voltage (+)	< 1.128 V
or	
Input voltage (–)	< 0.644 V
or	
|Input voltage (+) – Input voltage (–)|	< 0.23 V

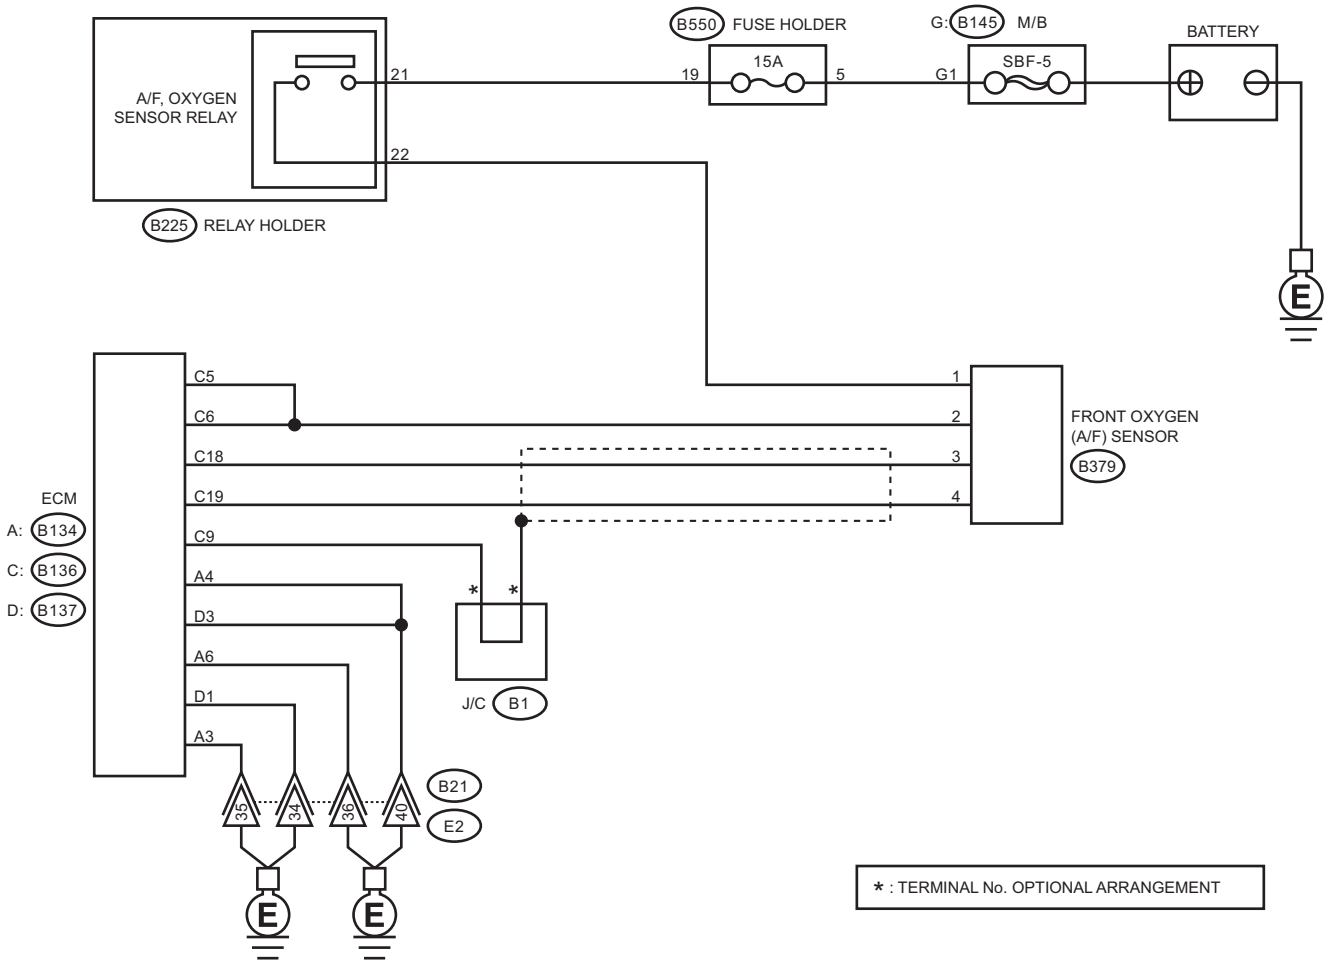
Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

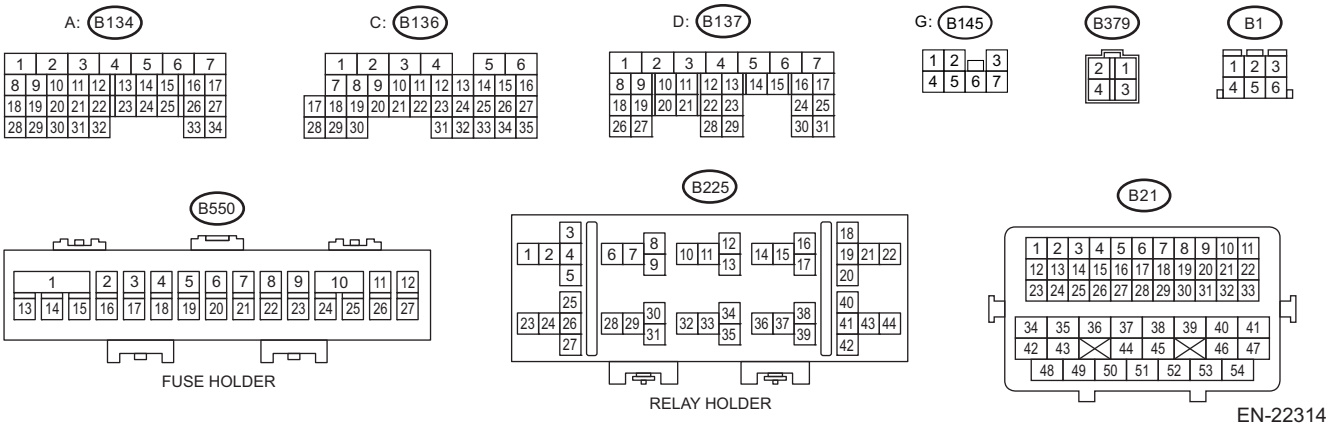
AL:DTC P0132 A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





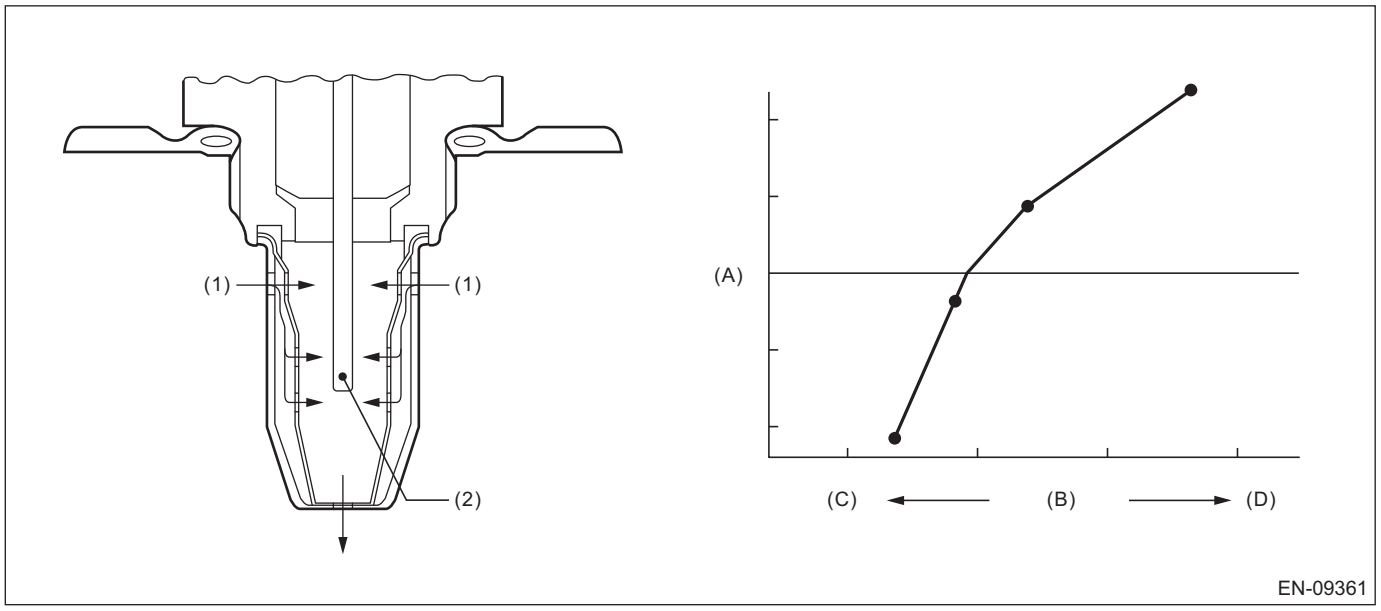
EN-22314

	Step	Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 (+) — Chassis ground (–):*** ***(B136) No. 19 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.
Judge as NG, when the element voltage is out of the specified range.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Input voltage (+) or Input voltage (–)	> 3.589 V > 3.541 V

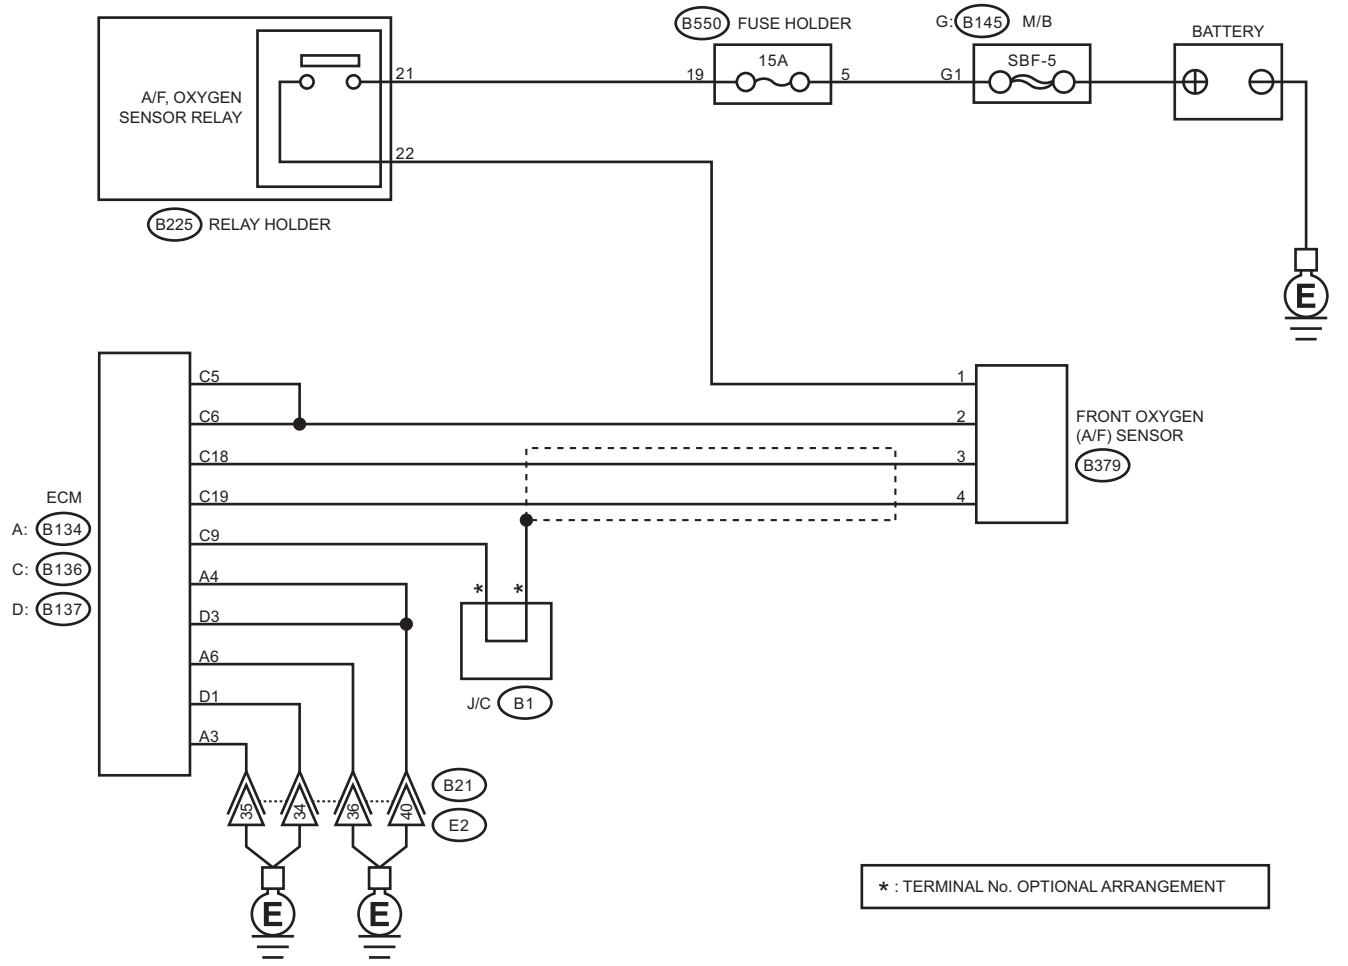
Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

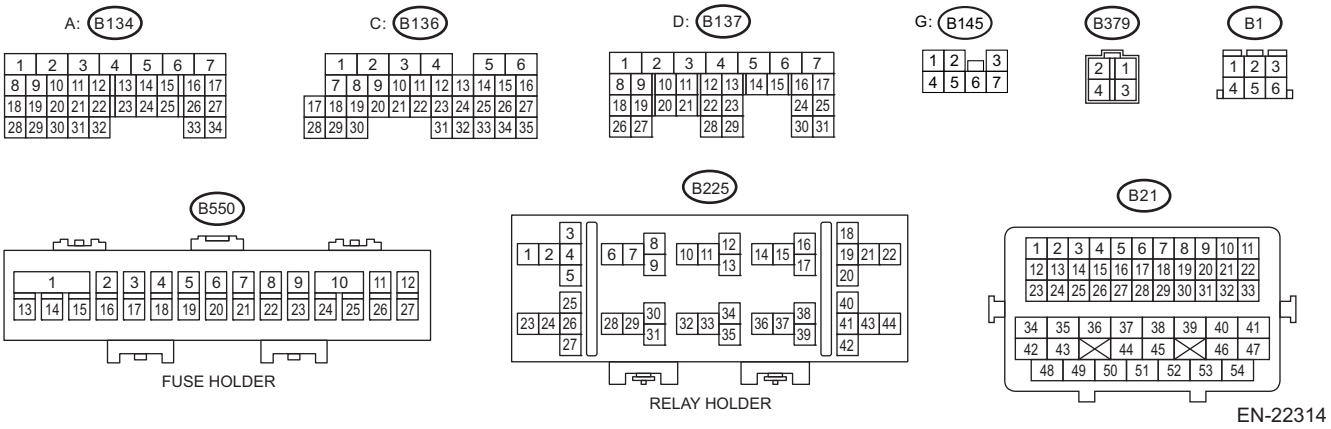
AM:DTC P0134 A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





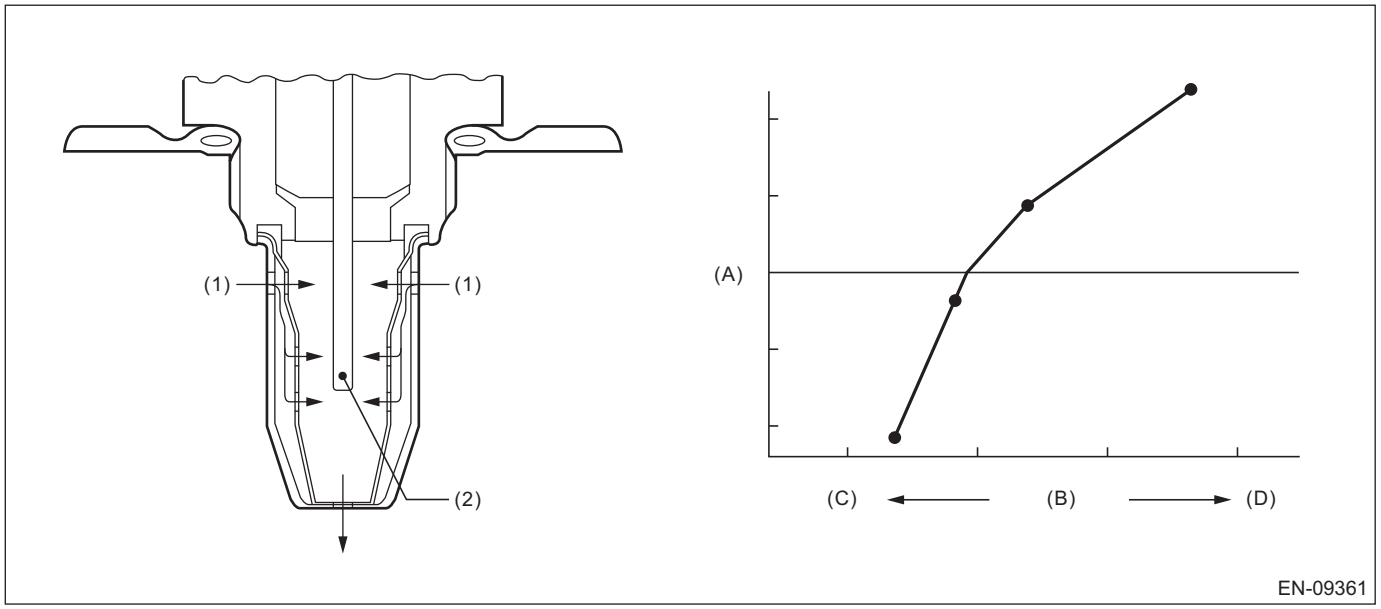
EN-22314

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and front oxygen (A/F) sensor connector.	Is there poor contact of ECM or front oxygen (A/F) sensor connector?	Repair the poor contact of ECM or front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open circuits of the sensor.
Judge as NG when the impedance of the element is large.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Time of heater control duty at 70 % or more	≥ 36000 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	> 500 Ω

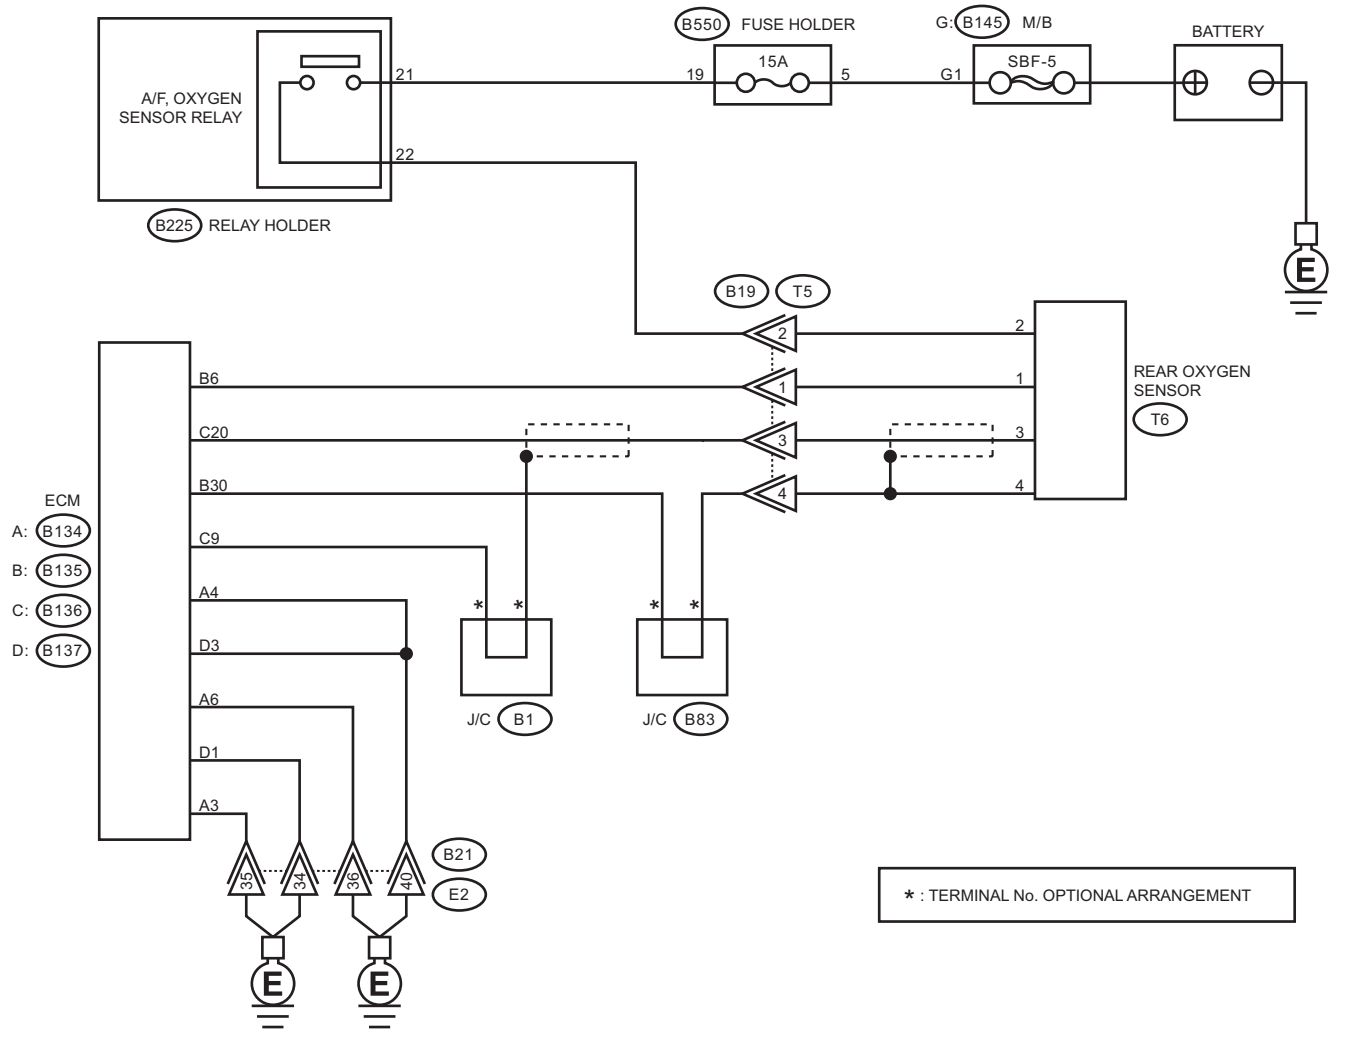
Time needed for diagnosis: 5000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

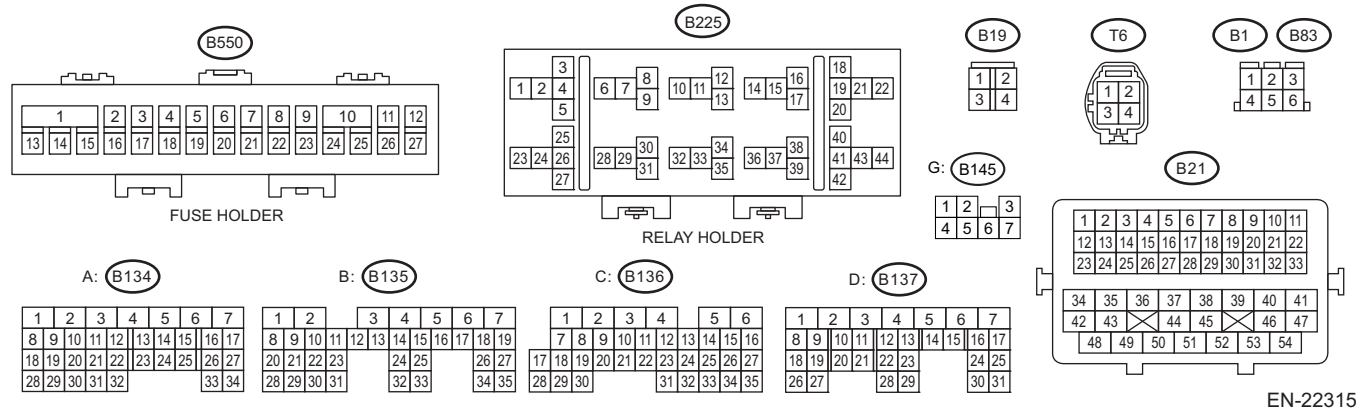
AN:DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





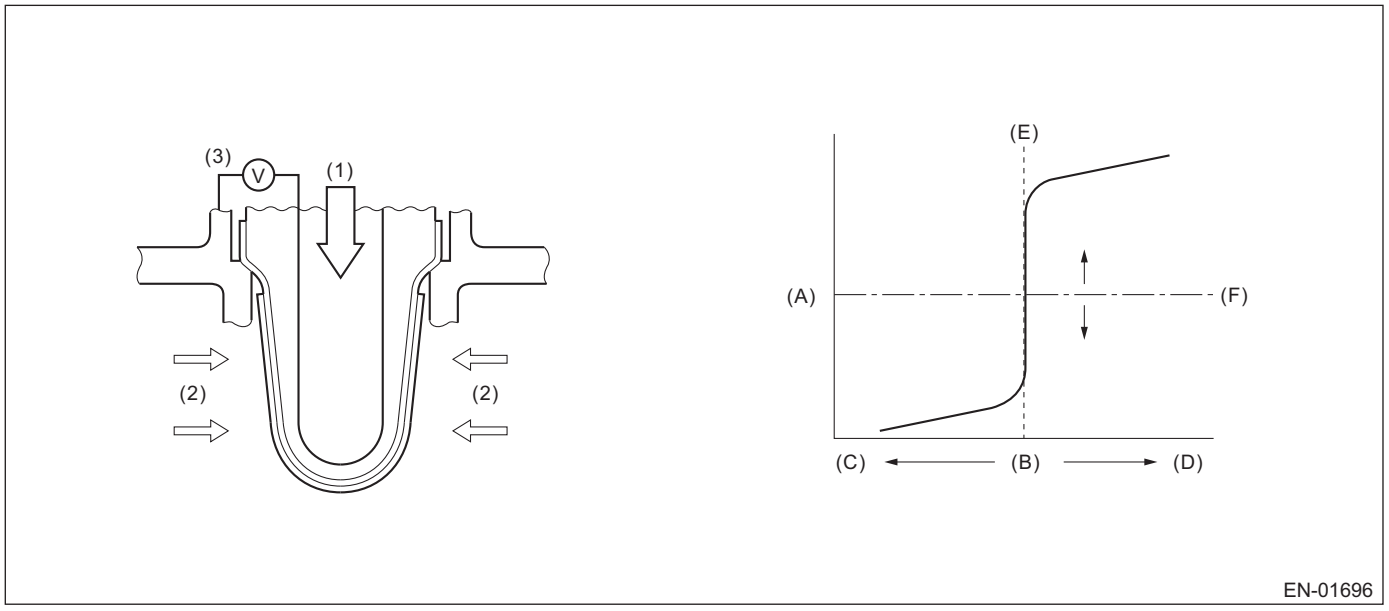
EN-22315

	Step	Check	Yes	No
1	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.490 V or more?	Go to step **6**.	Go to step **2**.
2	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the rear oxygen sensor connector and coupling connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:*** ***(B135) No. 30 — (T6) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E136) No. 20 — Engine ground*** ***(E135) No. 30 — Engine ground***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(T6) No. 3 (+) — Engine ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>
6	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect continuity NG of the oxygen sensor. If the oxygen sensor voltage reading is not within the probable range considering the operating conditions, judge as NG.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution condition
High	
Battery voltage	≥ 10.9 V
Low (1)	
Battery voltage	≥ 10.9 V
Main feedback	In operation
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Secondary air system	Not in operation
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)
Low (2)	
Battery voltage	≥ 10.9 V
Main feedback	In operation
Amount of intake air	< 10 g/s (0.35 oz/s)
Secondary air system	Not in operation
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

After starting the engine, continuously perform the diagnosis with the same engine condition.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
High Sensor output voltage	> 1.2 V	P0138
Low Sensor output voltage	< 0.03 V	P0137

Time needed for diagnosis

High: 2500 ms
Low (1): 5000 ms
Low (2): 10000 ms

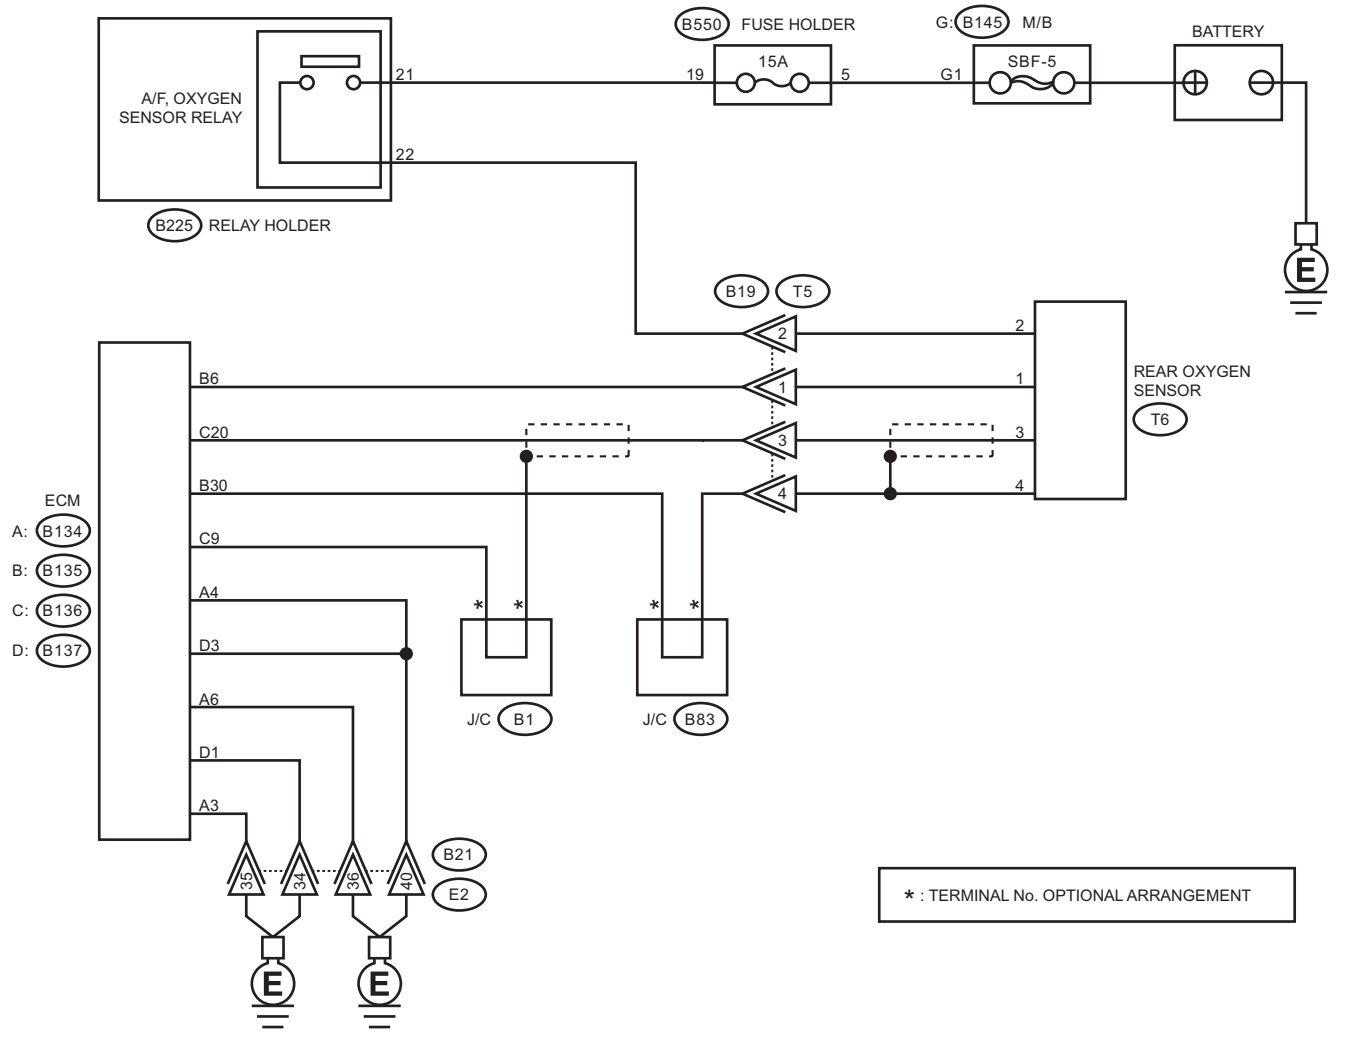
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

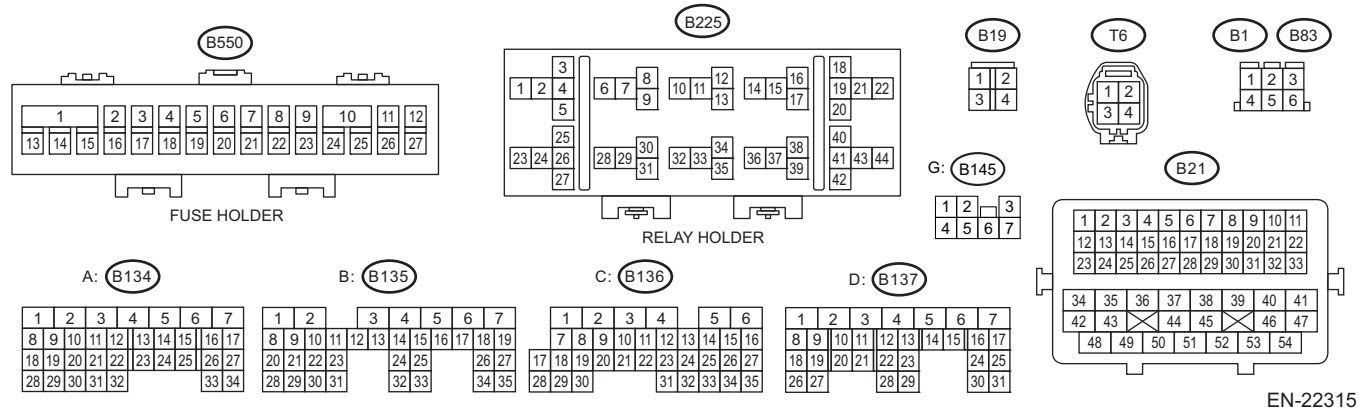
AO:DTC P0138 O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22315

	Step	Check	Yes	No
1	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.250 V or less?	Go to step **5**.	Go to step **2**.
2	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the rear oxygen sensor connector and coupling connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:*** ***(B135) No. 30 — (T6) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(T6) No. 3 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector
5	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

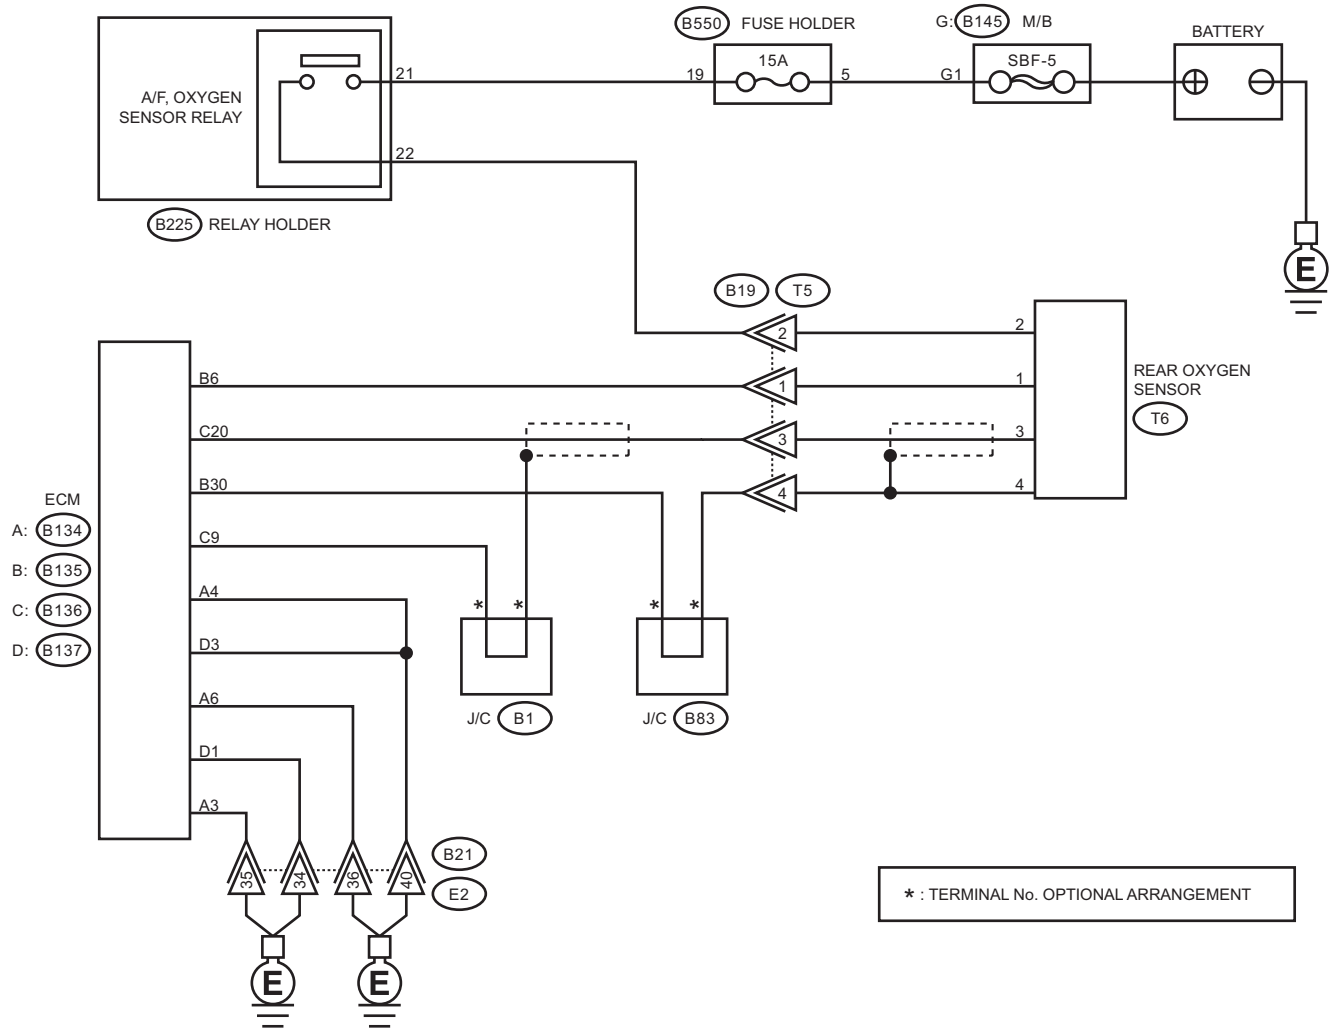
NOTE:
For the detection standard, refer to DTC P0137. <Ref. to EN(STI)(diag)-261, DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

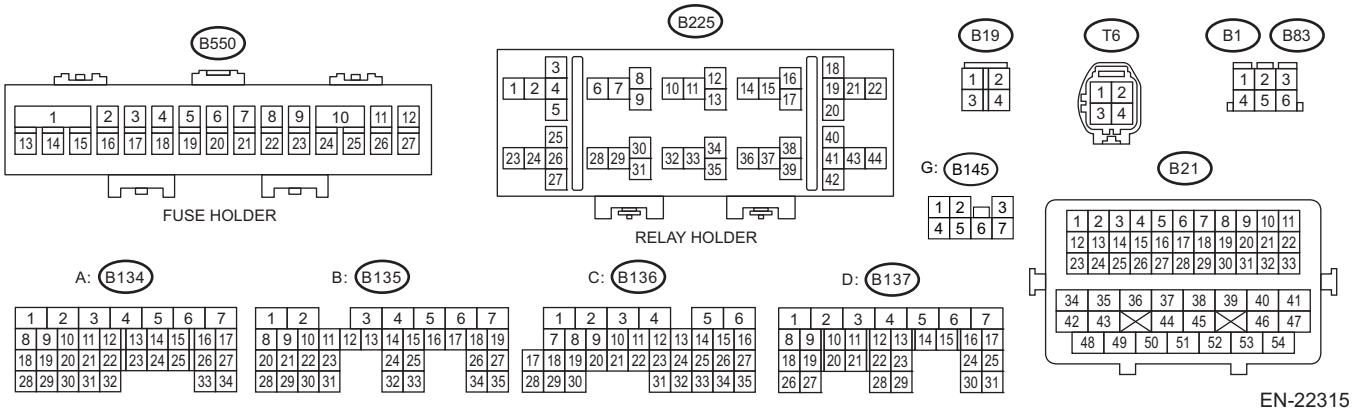
AP:DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





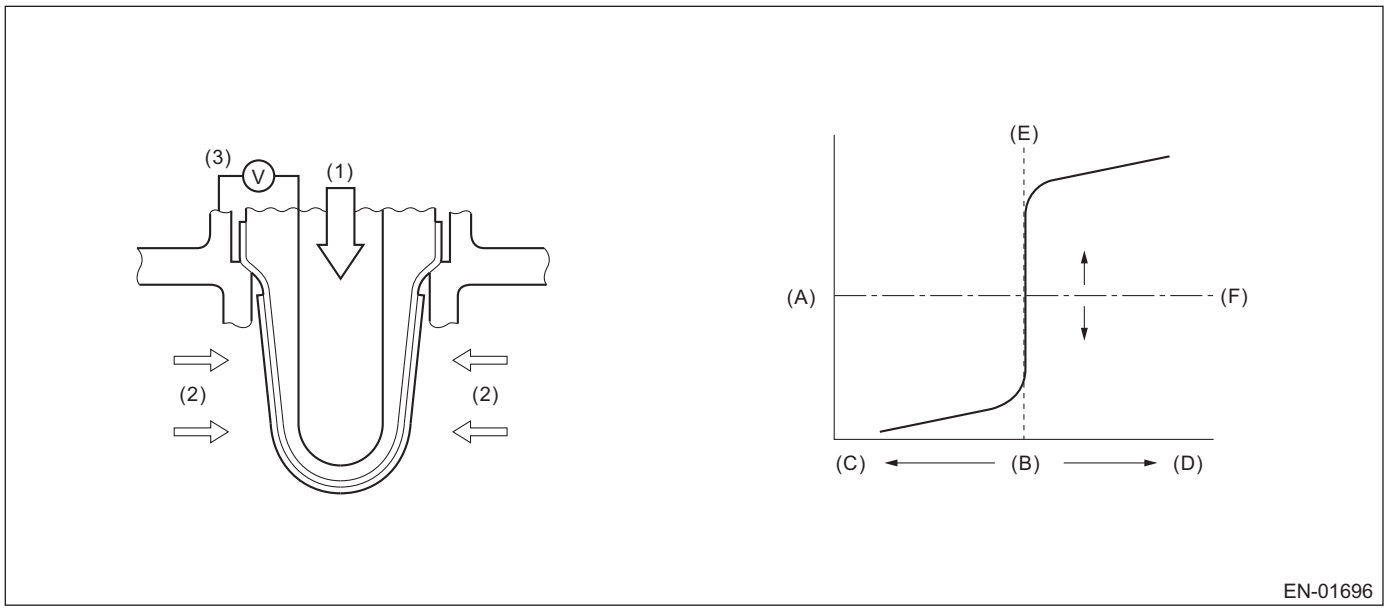
EN-22315

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(T6) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
3	**CHECK REAR OXYGEN SENSOR.** Measure the resistance between rear oxygen sensor terminals. ***Terminals*** ***No. 3 — No. 4***	Is the resistance less than 1 Ω?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the slow response of rich → lean for rear oxygen sensor output.
When the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A)	Electromotive force	(B)	Air fuel ratio	(C)	Rich
(D)	Lean	(E)	Theoretical air fuel ratio	(F)	Comparative voltage
(1)	Atmosphere	(2)	Exhaust gas	(3)	Electromotive force

3. EXECUTION CONDITION

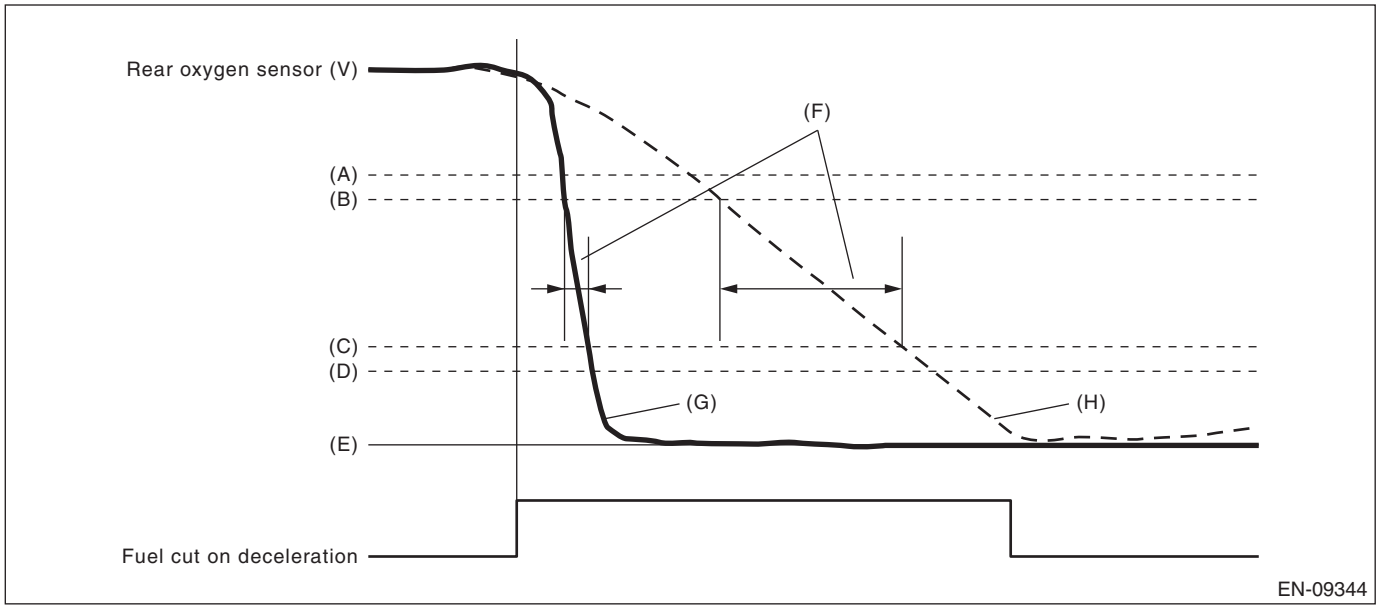
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Current calculation time of the rear oxygen sensor heater after starting	≥ 180000 ms
Rear oxygen sensor voltage when fuel cut starts	≥ 0.55 V
Time of fuel shut-off operation	≥ 5000 ms
Estimated temperature of rear oxygen sensor element when fuel cut starts	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor during fuel cut.



(A) 0.55 V
(B) 0.5 V
(C) 0.2 V
(D) 0.15 V
(E) 0 V
(F) Diagnostic parameter
(G) Normal
(H) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.5 V to 0.2 V	> 837 ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

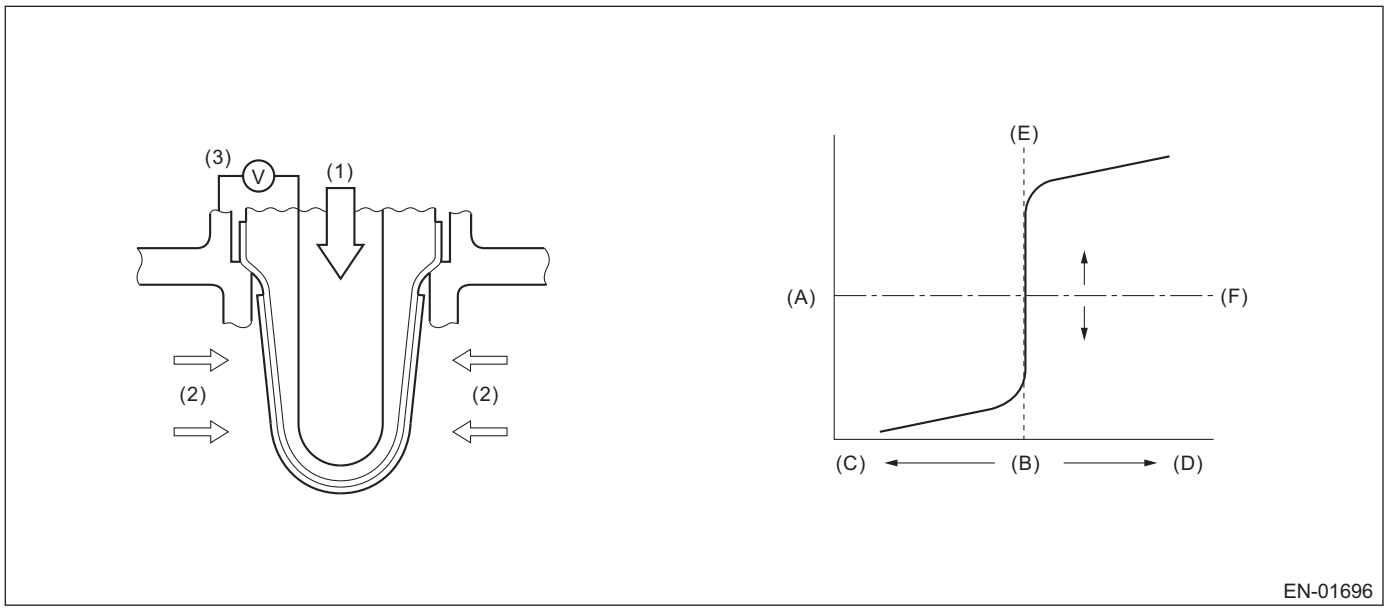
AQ:DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(STI)(diag)-268, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of lean → rich for rear oxygen sensor output.
After the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

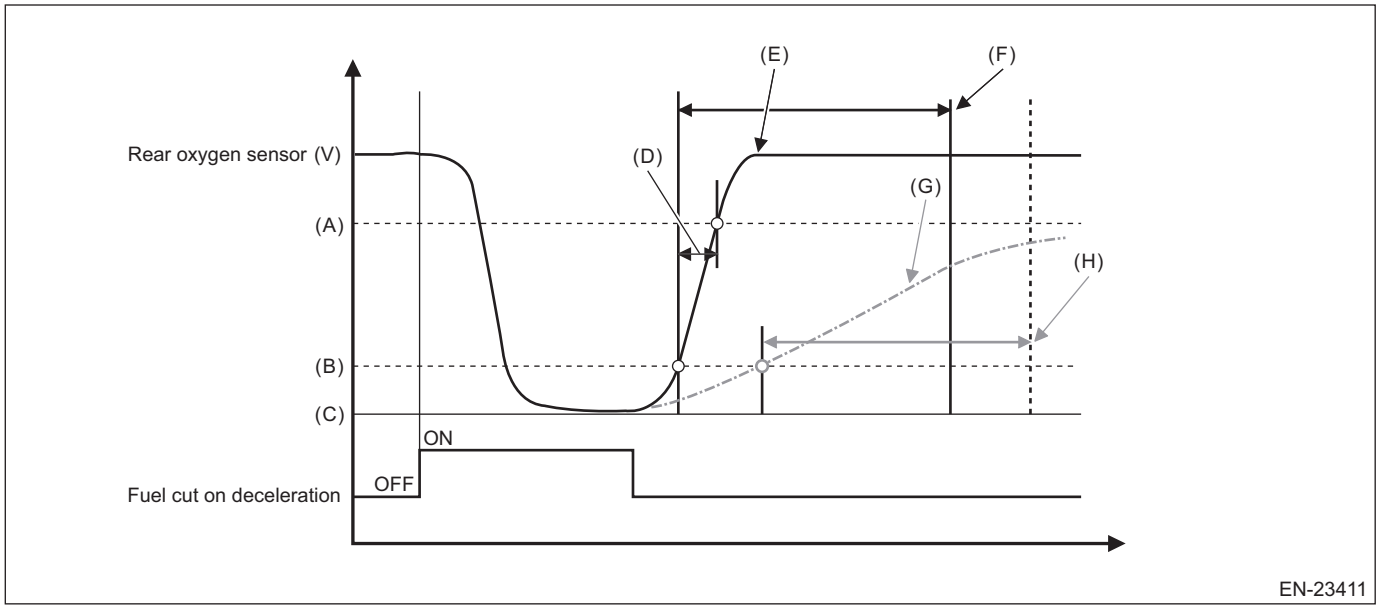
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
(Duration of fuel cut	≥ 3000 ms
Fuel shut-off function from above)	Not in operation
Output voltage value of rear oxygen sensor	≥ 0.2 V
Compensation to rich	Rich
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once after recovering from a deceleration fuel cut continued for more than predetermined time.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor after fuel cut.



(A)	0.5 V	(B)	0.2 V	(C)	0 V
(D)	Diagnostic parameter	(E)	Voltage in normal condition	(F)	Response time in normal condition
(G)	Voltage in abnormal condition	(H)	Response time in abnormal condition		

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage value of rear oxygen sensor	< 0.5 V
Elapsed time	> 3000 ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

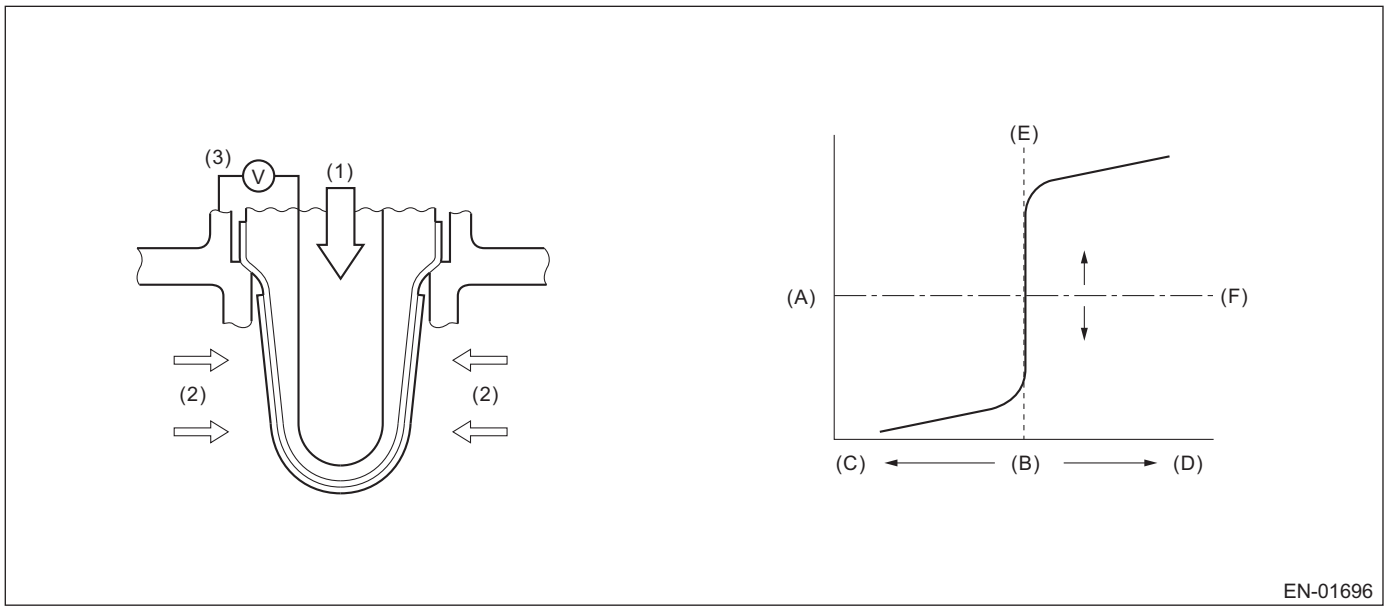
AR:DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(STI)(diag)-268, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for rich → lean.
After the deceleration fuel cut has started, detect the trouble by calculating the time when the rear oxygen sensor output decreases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A)	Electromotive force	(B)	Air fuel ratio	(C)	Rich
(D)	Lean	(E)	Theoretical air fuel ratio	(F)	Comparative voltage
(1)	Atmosphere	(2)	Exhaust gas	(3)	Electromotive force

3. EXECUTION CONDITION

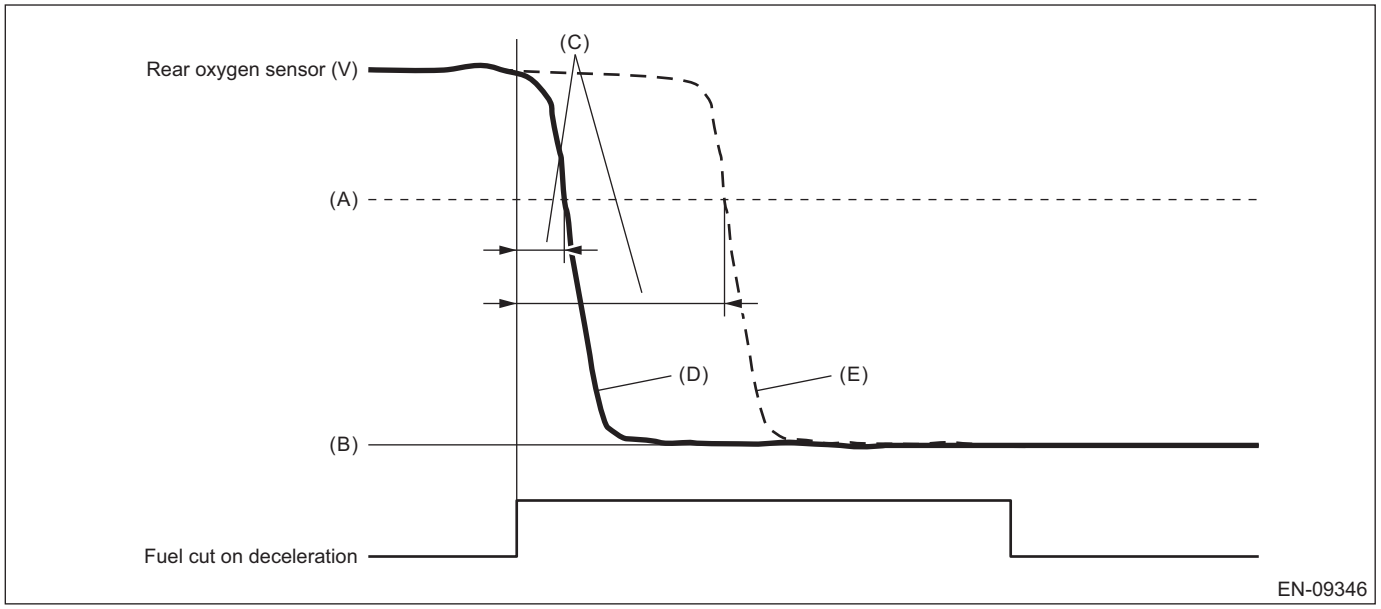
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor voltage when fuel cut starts	> 0.55 V
(Time of fuel shut-off operation	> 5000 ms
Fuel shut-off function after the experience above)	Not in operation
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the beginning of the fuel cut to the beginning of the rear oxygen sensor voltage starting to drop.



(A) 0.5 V
(B) 0 V
(C) Diagnostic parameter
(D) Normal
(E) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time when rear oxygen sensor voltage changed to 0.5 V after the fuel cut started	>3300 ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

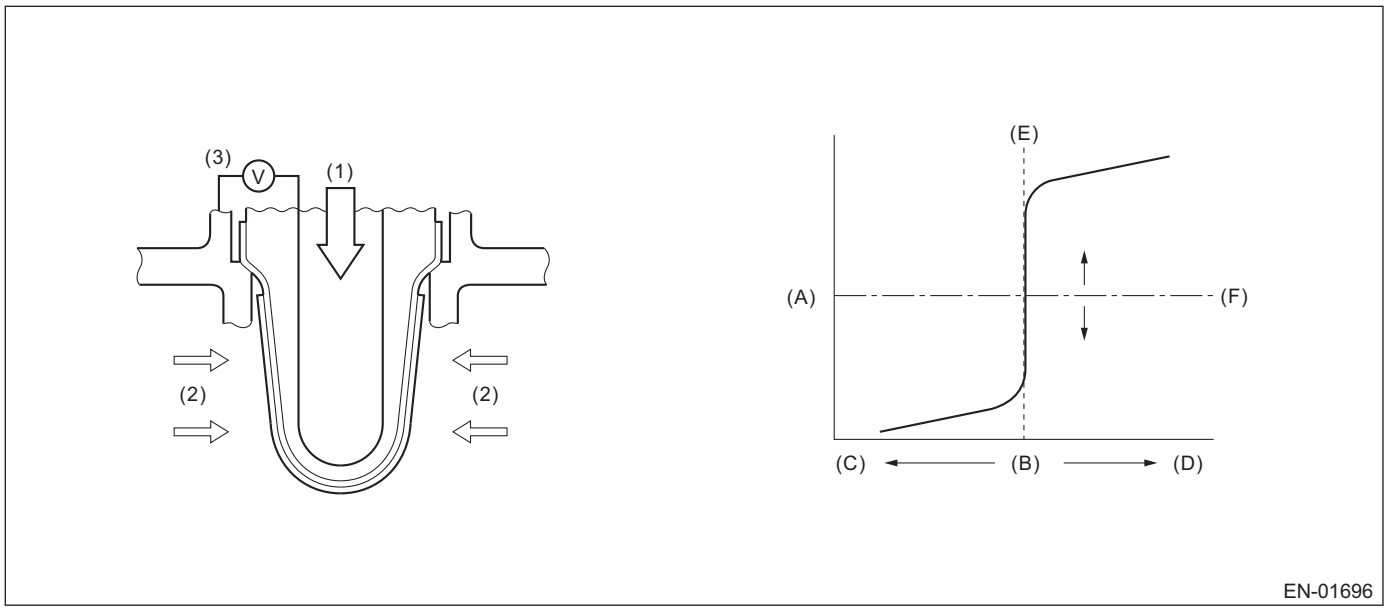
AS:DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(STI)(diag)-268, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for lean → rich.
After the deceleration fuel cut has completed, detect the trouble by calculating the time when the rear oxygen sensor output increases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

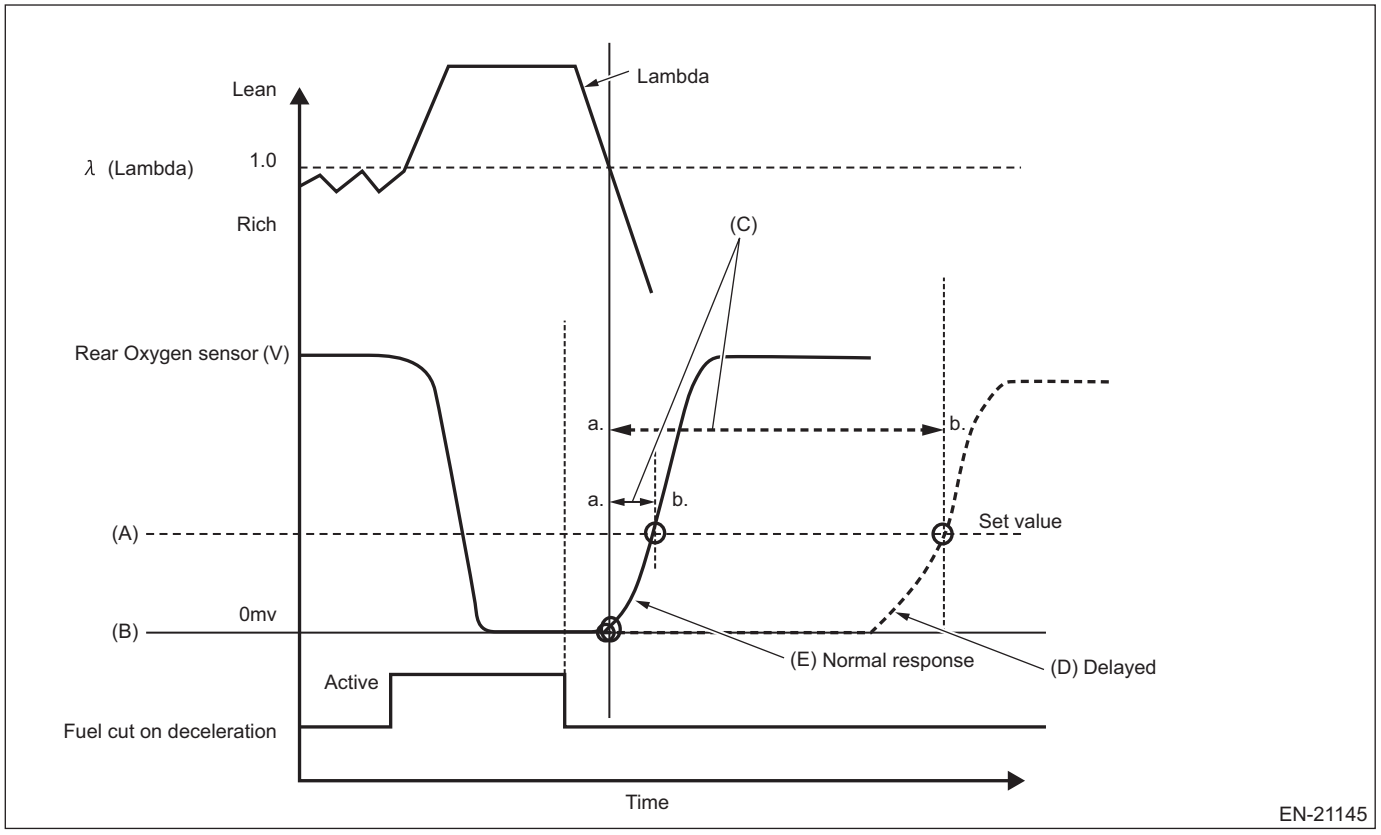
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Rear oxygen sensor voltage when fuel cut has completed	< 0.15 V
(Time of fuel shut-off operation	> 3000 ms
Fuel shut-off function after the experience above)	Not in operation
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)
Compensation to rich	Rich
Amount of intake air	≥ 28 g/s (0.99 oz/s)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once when recovering from the deceleration fuel cut continued for more than predetermined time with the rear oxygen sensor warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the completion of the fuel cut to the beginning of the rear oxygen sensor voltage starting to rise.



(A) 0.3 V
(B) 0 V
(C) Diagnostic parameter
(D) Normal
(E) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage value of rear oxygen sensor	< 0.2 V
Elapsed time*	> Value from Map

*Elapsed time: The time since the λ became less than 1 after the end of fuel cut

Map

Amount of intake air (g/s (oz/s))	28 (0.99)	40 (1.41)	50 (1.76)
Elapsed time (ms)	5000	5000	5000

Time needed for diagnosis: Less than 1 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

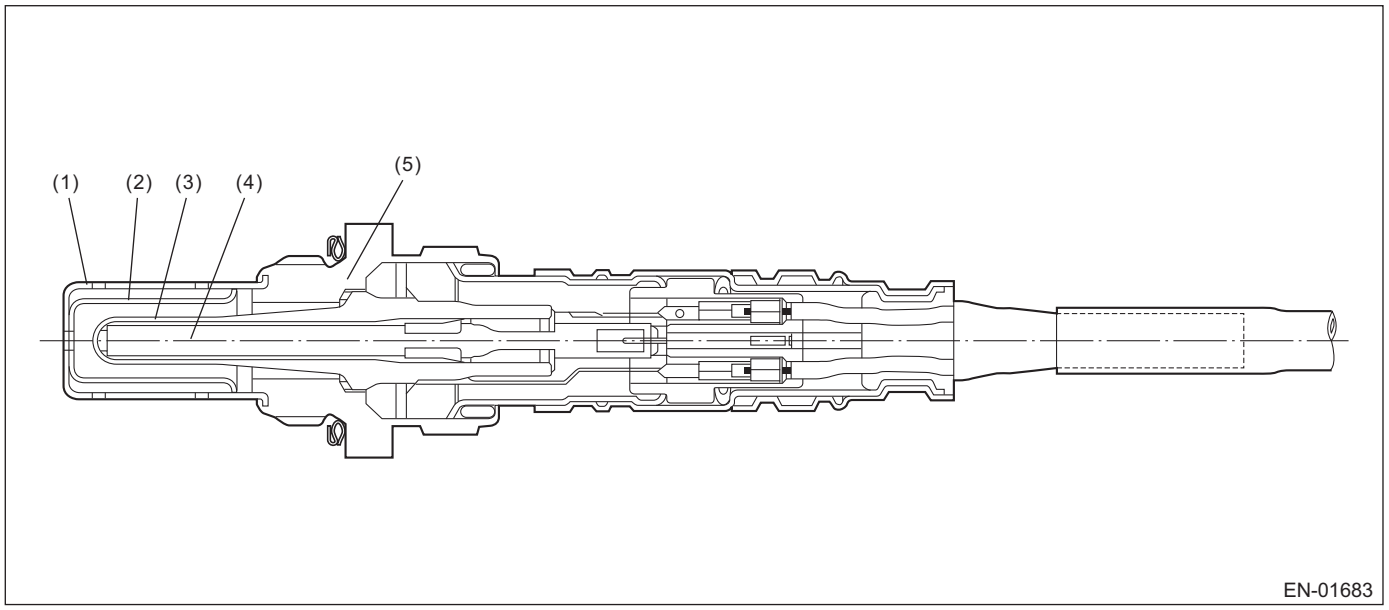
AT:DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P0037. <Ref. to EN(STI)(diag)-191, DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of the rear oxygen sensor heater.
Judge as NG if it is determined that the rear oxygen sensor impedance is large by observing the engine conditions.

2. COMPONENT DESCRIPTION



(1) Element cover (outer)
(2) Element cover (inner)
(3) Sensor element
(4) Ceramic heater
(5) Sensor housing

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 1000 ms
A/F sensor element impedance	≤ 35 Ω
A/F sensor heater control duty	≤ 75 %
Rear oxygen sensor heater control duty	< 75 %

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after 1000 ms seconds or more have passed since the engine started.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< Battery voltage × 0.88

Time needed for diagnosis: 4 ms × 2500 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AU:DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

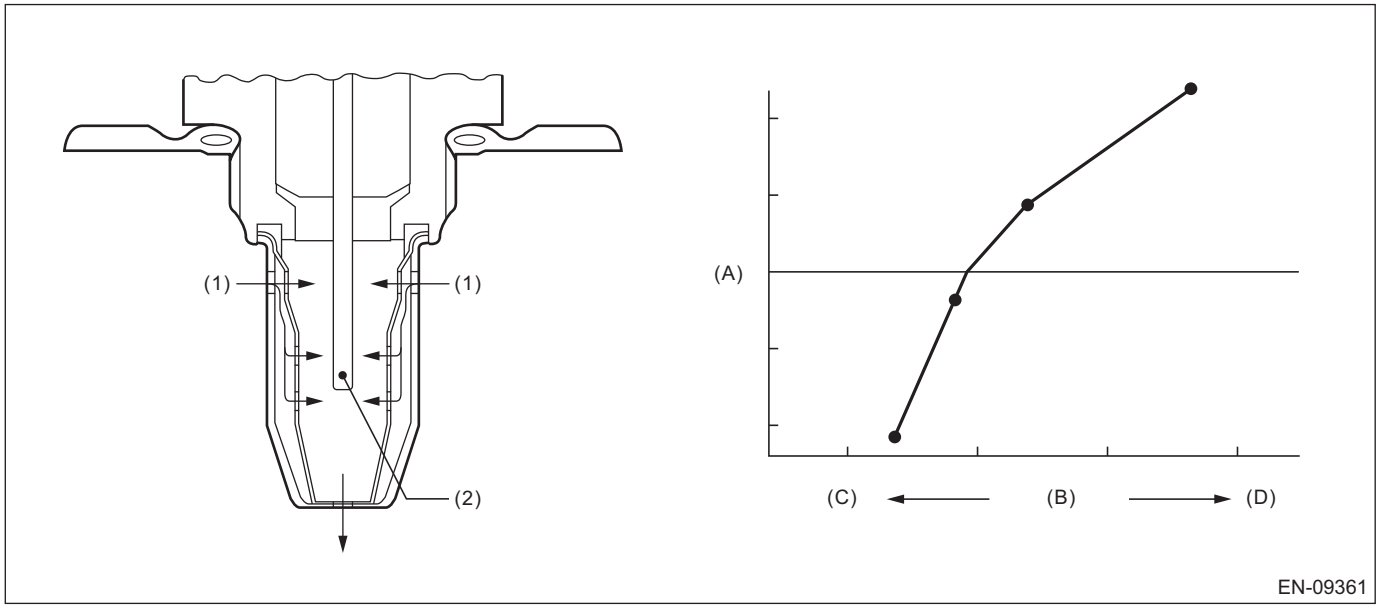
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK EXHAUST SYSTEM.** NOTE: Check the following items. • Loose installation of front portion of exhaust pipe onto cylinder heads • Loose connection between front exhaust pipe and front catalytic converter • Damage of exhaust pipe resulting in a hole	Is there any fault in exhaust system?	Repair the exhaust system.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.
For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)

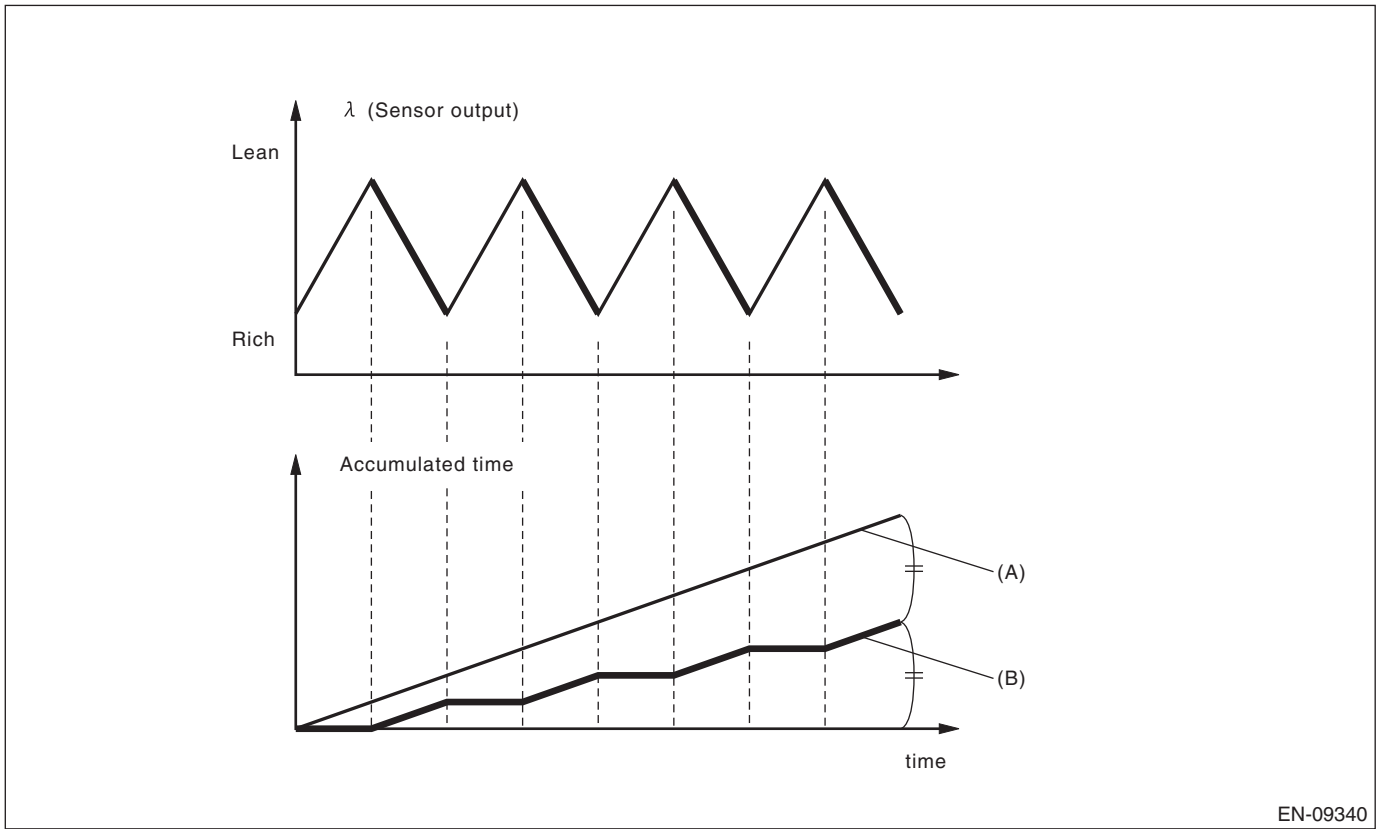
Secondary parameters	Execution condition
Time of main feedback operation	≥ 3000 ms
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction by checking “Cumulative value of time when λ changes from lean → rich” in comparison to “Time during which diagnosis is in progress”.



(A) Time during which diagnosis is in progress

(B) Cumulative value of time when λ changes from lean → rich

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress)	< 0.44	P014C
and		
Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean	> 60 ms	

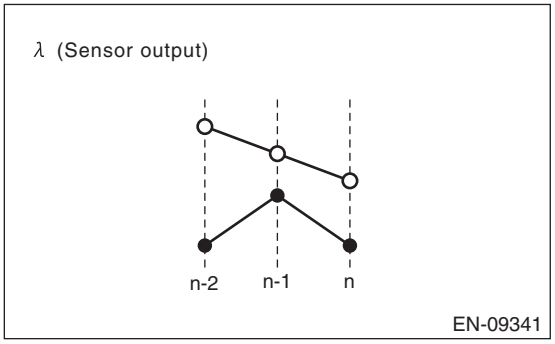
Judgment value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress)	> 0.61	P014D
and		
Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich	> 20 ms	

Time needed for diagnosis:90000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. DIAGNOSTIC METHOD 2

Detect the malfunction by the cumulative value obtained from the amount of variation in λ change.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Cumulative value obtained from the amount of variation in λ change	< Value from Map	P014C and P014D

Map

Cumulative value obtained from the amount of variation in λ	1.00	2.20	6.00
Cumulative value obtained from the amount of variation in λ change	0.00	2.00	6.00

Time needed for diagnosis:90000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AV:DTC P014D A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(STI)(diag)-280, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P014C. <Ref. to EN(STI)(diag)-280, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

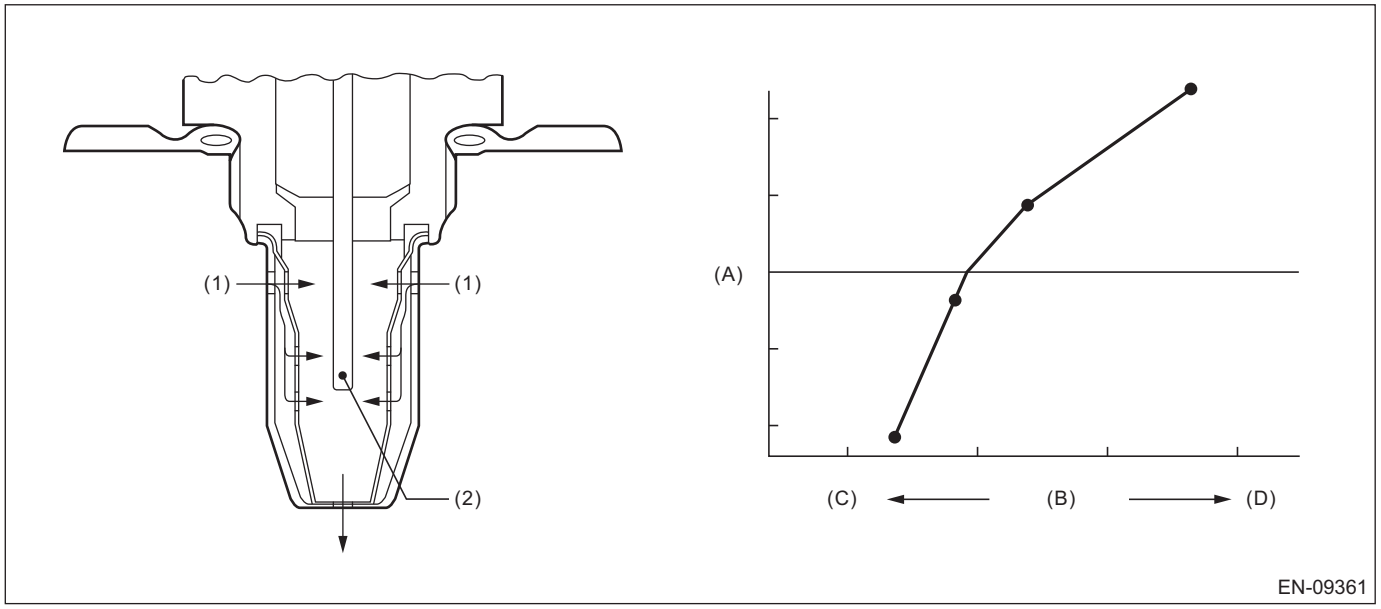
AW:DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(STI)(diag)-280, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.
For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Diagnostic method 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	> 75.1 kPa (563 mmHg, 22.2 inHg)
Time of main feedback operation	≥ 3000 ms
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s)

Diagnostic method 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	> 75.1 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Vehicle speed	> 40 km/h (24.9 MPH)

Diagnostic method 2

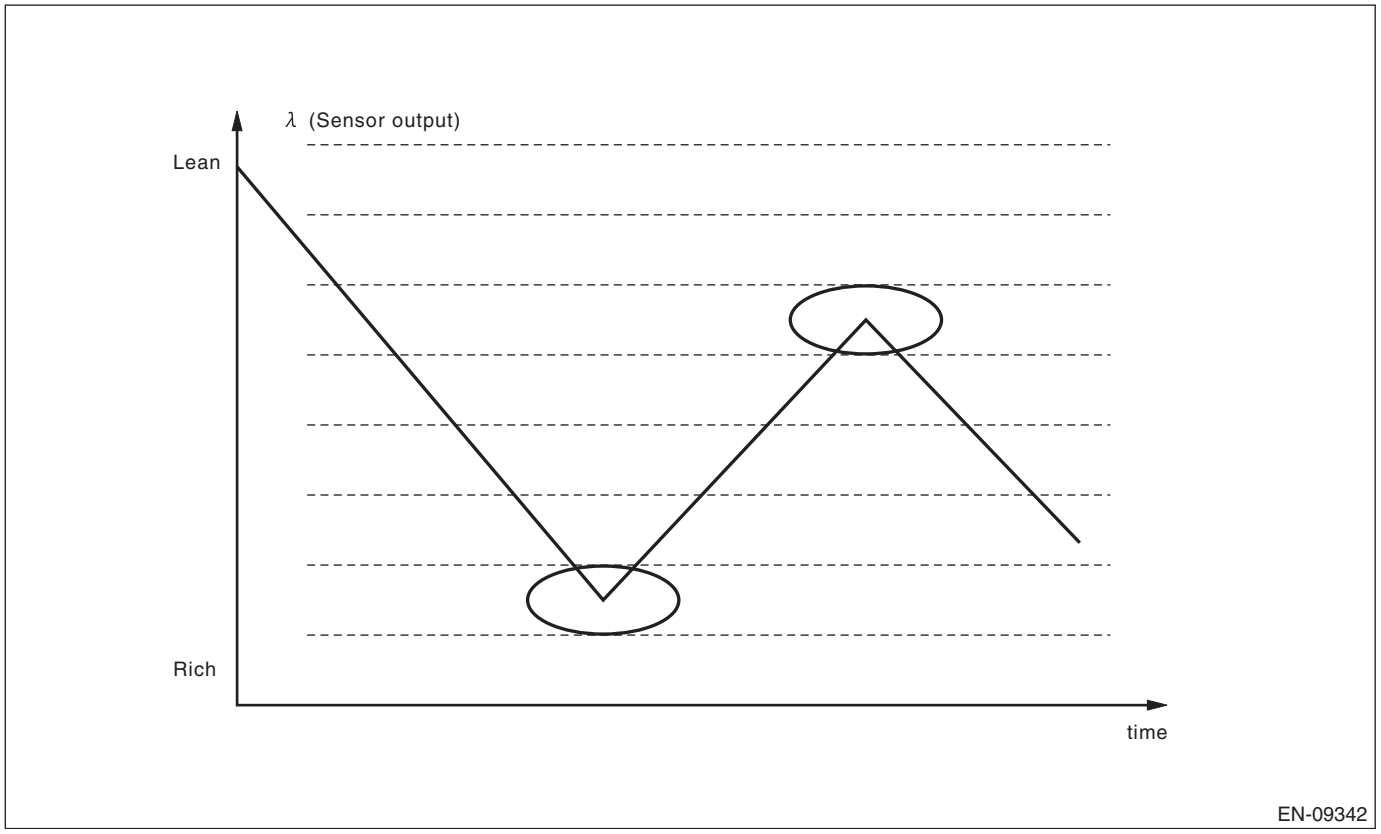
Secondary parameters	Execution condition
Engine speed	≥ 1000 rpm and < 3200 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s) and < 30 g/s (1.06 oz/s)
Status of catalytic converter monitor	Not under diagnosis

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction depending on the average value of time necessary for λ to inverse the air fuel ratio from “Lean → Rich → Lean” to “Rich → Lean → Rich”.



Judge as NG when the following conditions are established.

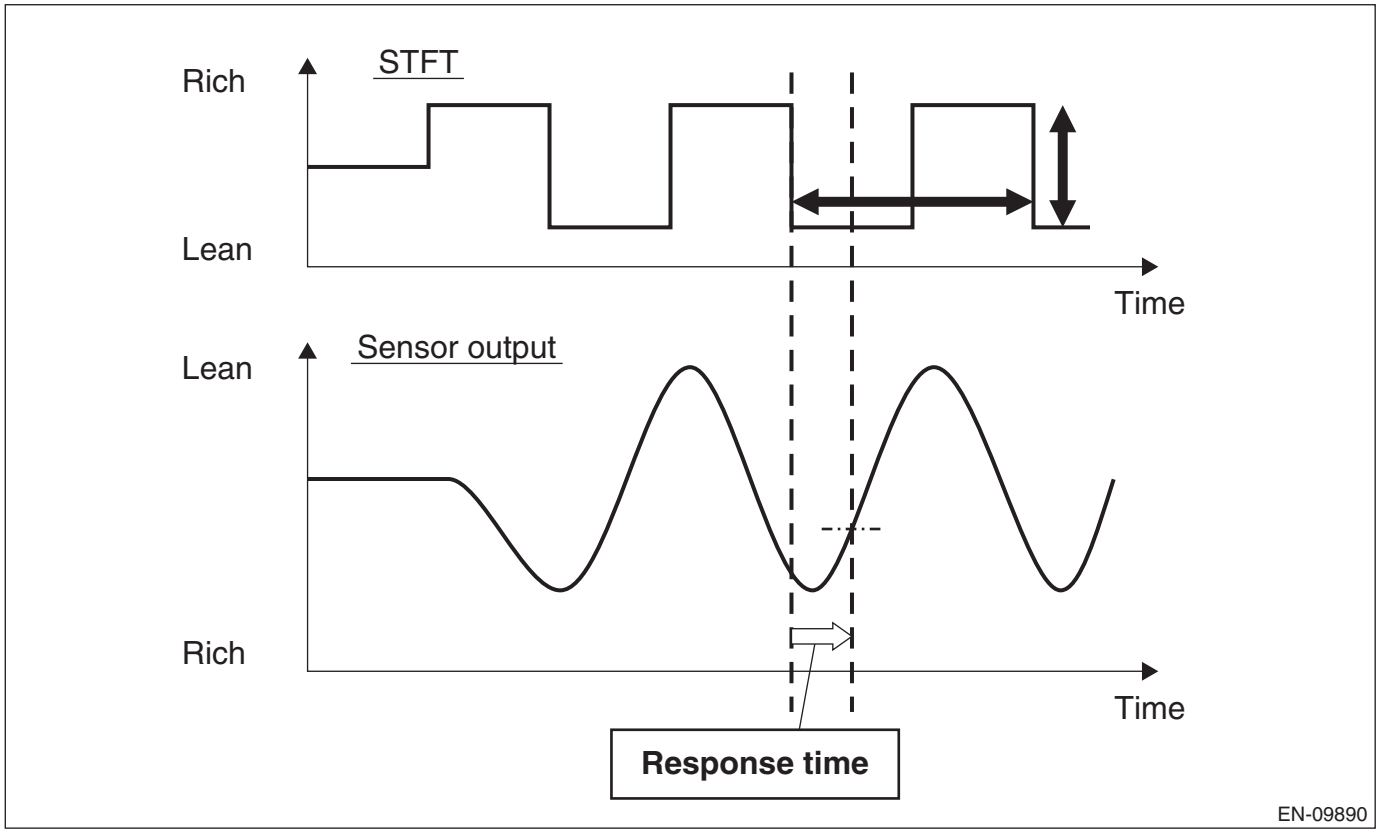
Judgment value

Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean and Average value when λ is lean	> 190 ms > 250 ms	P015A
Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich and Average value when λ is rich	> 180 ms > 220 ms	P015B

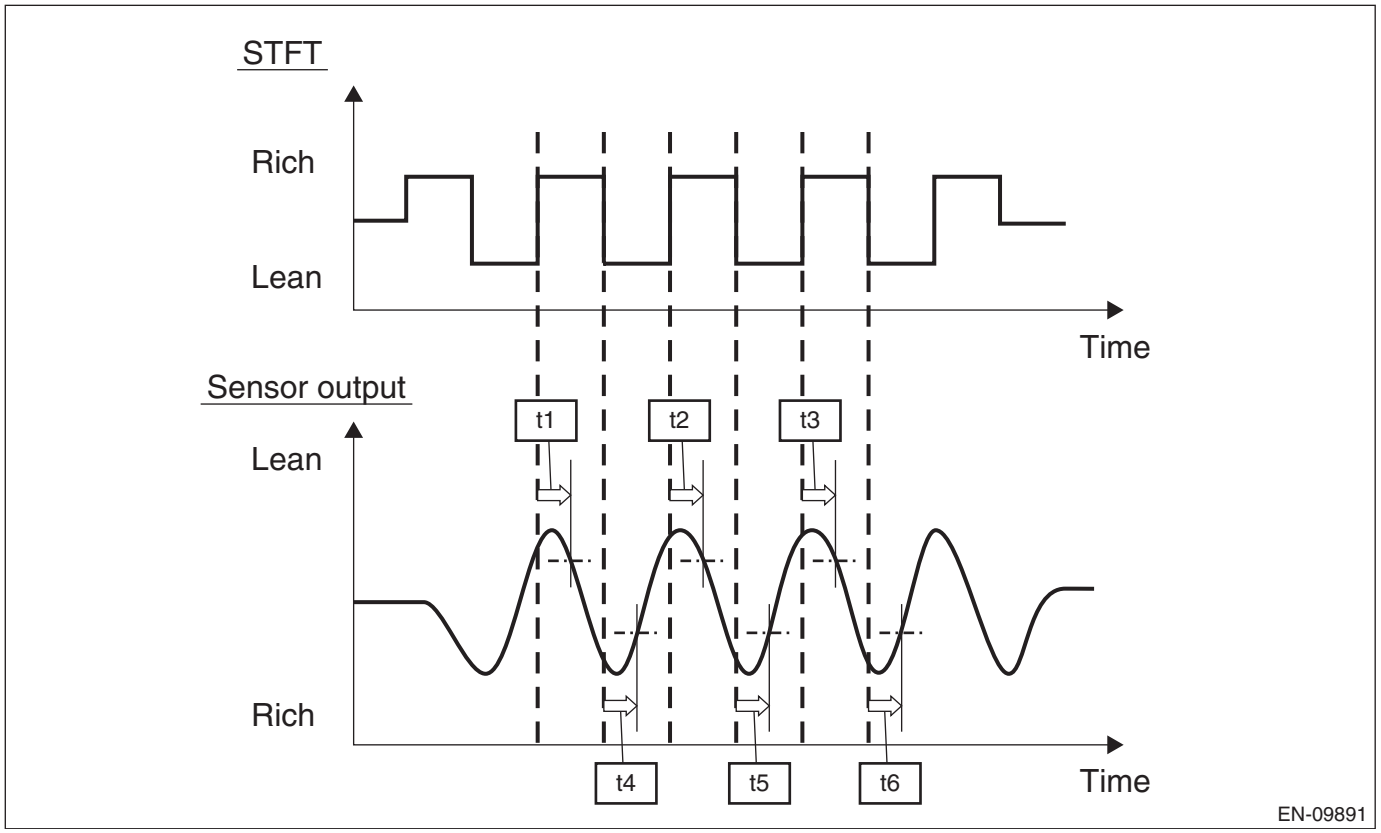
Time needed for diagnosis: 90 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. DIAGNOSTIC METHOD 2

Change STFT (A/F compensation value) by interruption, and measure the reaction time of λ value. When A/F sensor malfunctions, the reaction time takes longer than at normal condition. In this case, judge as abnormal.



Measure reaction time (t1, t2, t3) and reaction time (t4, t5, t6). Use the average value of the reaction time to obtain the diagnostic value.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
(t1 + t2 + t3)/3 and (t4 + t5 + t6)/3	> 480 ms > 480 ms	P015A and P015B

Time needed for diagnosis: 4500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AX:DTC P015B A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(STI)(diag)-280, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P015A. <Ref. to EN(STI)(diag)-283, DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AY:DTC P0171 SYSTEM TOO LEAN BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0172. <Ref. to EN(STI)(diag)-288, DTC P0172 SYSTEM TOO RICH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.
Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling or at a constant speed after warming up the engine.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the malfunction criteria listed below continues for 10 s × 3 time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	≥ 1.35

Time needed for diagnosis: 10 s × 3 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AZ:DTC P0172 SYSTEM TOO RICH BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK EXHAUST SYSTEM.** Check the installation condition of exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **2**.
2	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **3**.
3	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: If fuel pressure does not increase, squeeze the fuel return hose 2 to 3 times, then measure fuel pressure again.	Is the measured value 284 — 314 kPa (2.9 — 3.2 kg/cm^2, 41 — 46 psi)?	Go to step **4**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
4	**CHECK FUEL PRESSURE.** After connecting the pressure regulator vacuum hose, measure fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If the measured value at this step is out of specification, check or replace pressure regulator and pressure regulator vacuum hose.	Is the measured value 230 — 260 kPa (2.4 — 2.7 kg/cm^2, 33 — 38 psi)?	Go to step **5**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>

	Step	Check	Yes	No
5	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **6**.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>
6	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/m)?	Go to step **7**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
7	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature from «Intake Air Temperature». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **8**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
8	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(STI)-53, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(STI)-53, PCV Valve.>	Go to step **9**.

Step		Check	Yes	No
9	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Go to step **10**.
10	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.
Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling or at a constant speed after warming up the engine.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the malfunction criteria listed below continues for 10 s × 3 time(s) or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	< Value from Map

Map

Warm-up increase compensation coefficient	0.00	0.10	0.20	0.30
Threshold Value	0.650	0.547	0.476	0.414

Warm-up increase compensation coefficient	0.39	0.50	0.60
Threshold Value	0.360	0.312	0.301

Perform the diagnosis using the threshold value produced by subtraction.
Time needed for diagnosis: 10 s × 3 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BA:DTC P0201 CYLINDER 1 INJECTOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel injector connector and the engine ground. ***Connector & terminal*** ***DTC P0201; (E5) No. 1 (+) — Engine ground (–):*** ***DTC P0202; (E16) No. 1 (+) — Engine ground (–):*** ***DTC P0203; (E6) No. 1 (+) — Engine ground (–):*** ***DTC P0204; (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay and fuel injector connector • Poor contact of main relay connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between fuel injector connector and engine ground. ***Connector & terminal*** ***DTC P0201; (E5) No. 2 — Engine ground:*** ***DTC P0202; (E16) No. 2 — Engine ground:*** ***DTC P0203; (E6) No. 2 — Engine ground:*** ***DTC P0204; (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***DTC P0201; (B134) No. 10 — (E5) No. 2:*** ***DTC P0202; (B134) No. 11 — (E16) No. 2:*** ***DTC P0203; (B134) No. 12 — (E6) No. 2:*** ***DTC P0204; (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **5**.	Replace the fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Go to step **6**.

Step		Check	Yes	No
6	**CHECK FUEL INJECTOR OPERATION.** 1) Connect all connectors. 2) Start the engine. 3) Check if the corresponding fuel injector emits operating sound. NOTE: Use a sound scope to check the operating sound.	Does the fuel injector emit operating sound?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the poor contact of fuel injector connector.

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the injector driving IC, judge the injector driving circuit as normal or abnormal.
Injector driving IC detects the status of “fuel remains injected” or “fuel is not injected” as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	> 1 s
Engine speed	≥ 500 rpm
Injection status	Not during fuel cut

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Injector driving IC information	Trouble

Time needed for diagnosis: 10 time(s) × 256/1000 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BB:DTC P0202 CYLINDER 2 INJECTOR "A" CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC P0201. <Ref. to EN(STI)(diag)-291, DTC P0201 CYLINDER 1 INJECTOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BE:DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

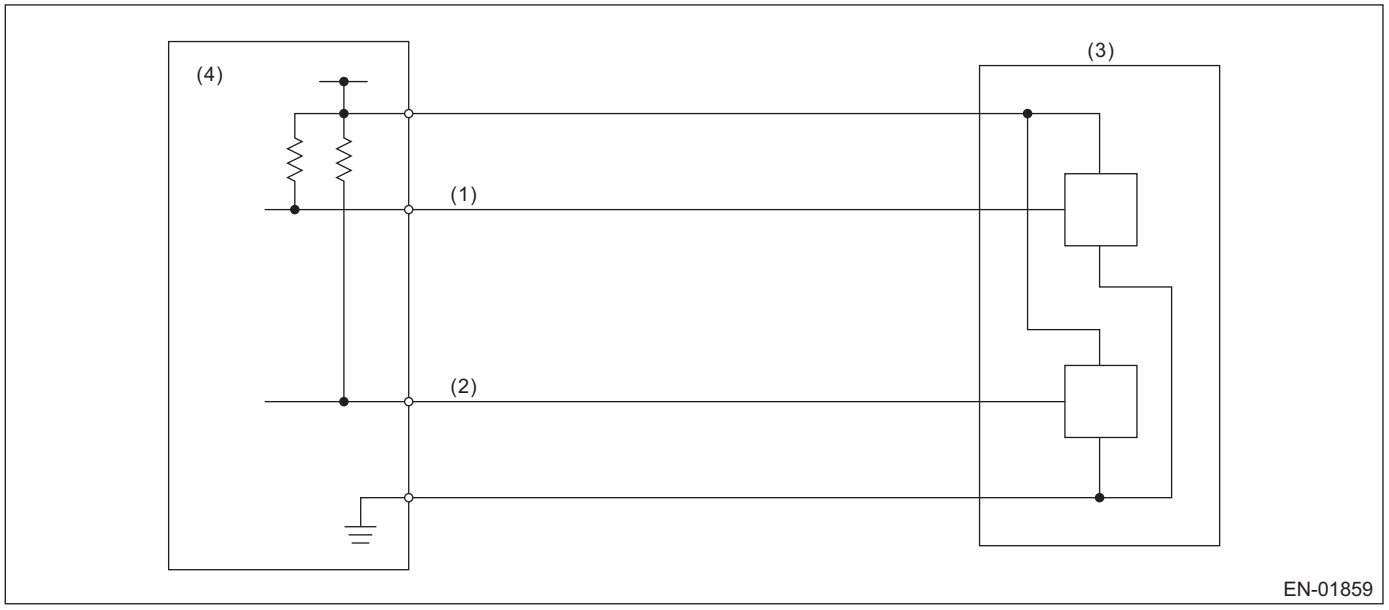
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 19 — Chassis ground:*** ***(B134) No. 28 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	≤ 1.15 V

Time needed for diagnosis: 24 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BF:DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

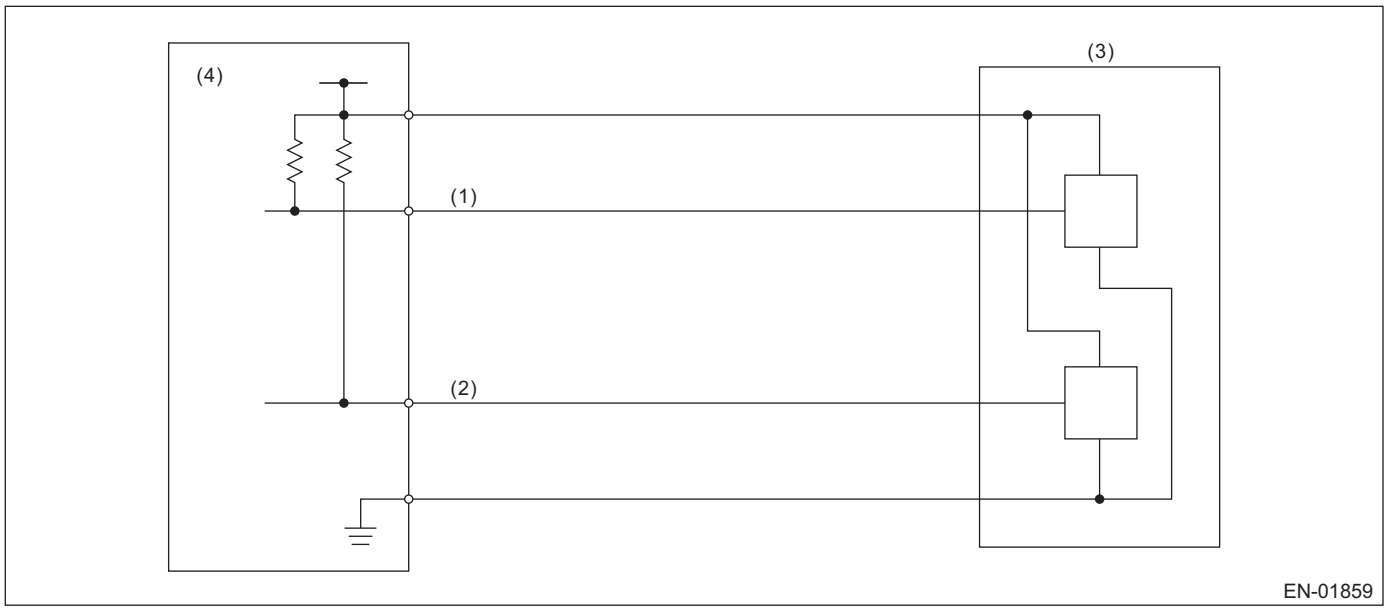
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 28 — (E57) No. 4:*** ***(B134) No. 29 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B134) No. 19 — (B134) No. 28:***	Is the resistance 1 MΩ or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	≥ 4.858 V

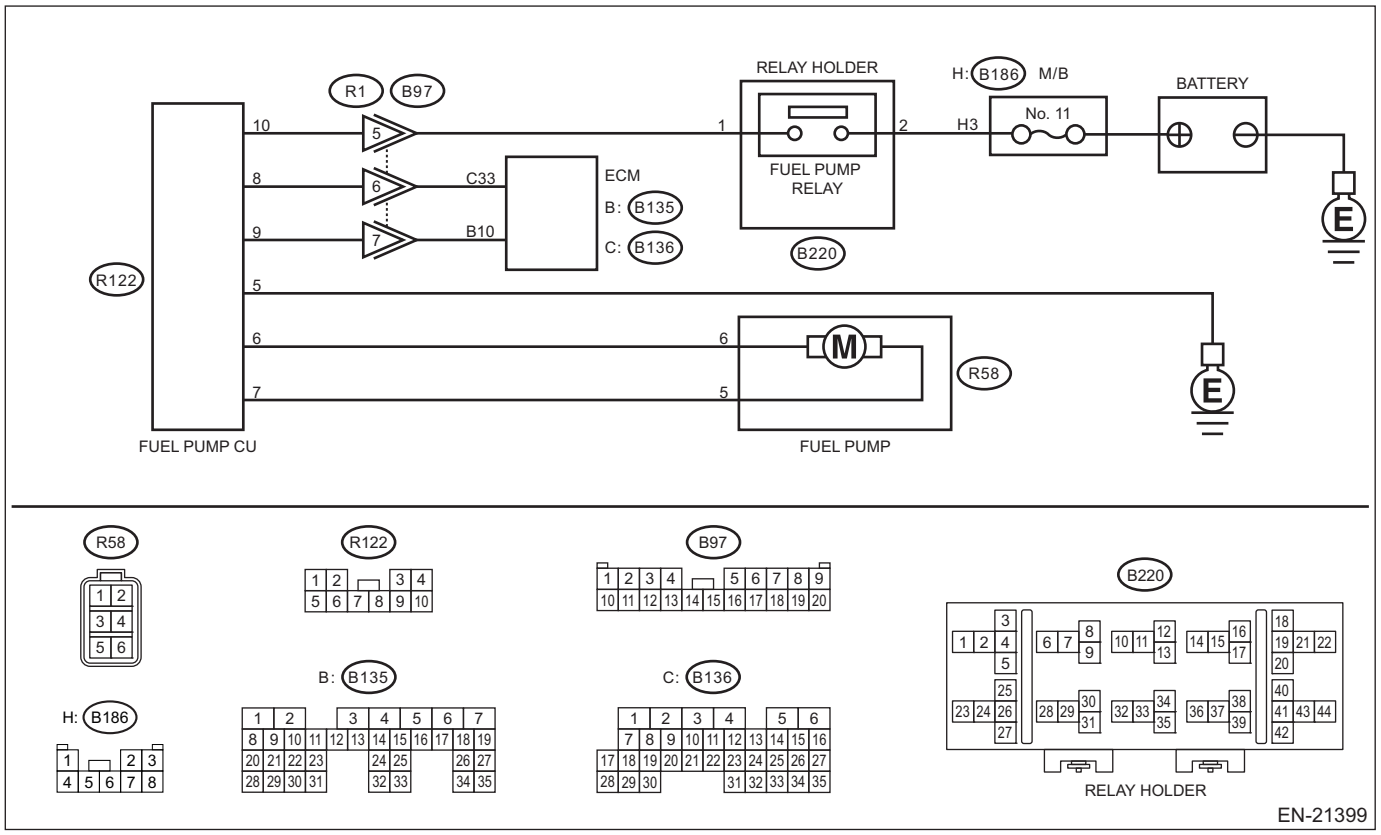
Time needed for diagnosis: 24 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BG:DTC P0230 FUEL PUMP PRIMARY CIRCUIT

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT TO FUEL PUMP CONTROL UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel pump control unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel pump control unit connector and chassis ground. ***Connector & terminal*** ***(R122) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between fuel pump relay connector and fuel pump control unit connector • Poor contact of fuel pump relay connector • Poor contact of coupling connector

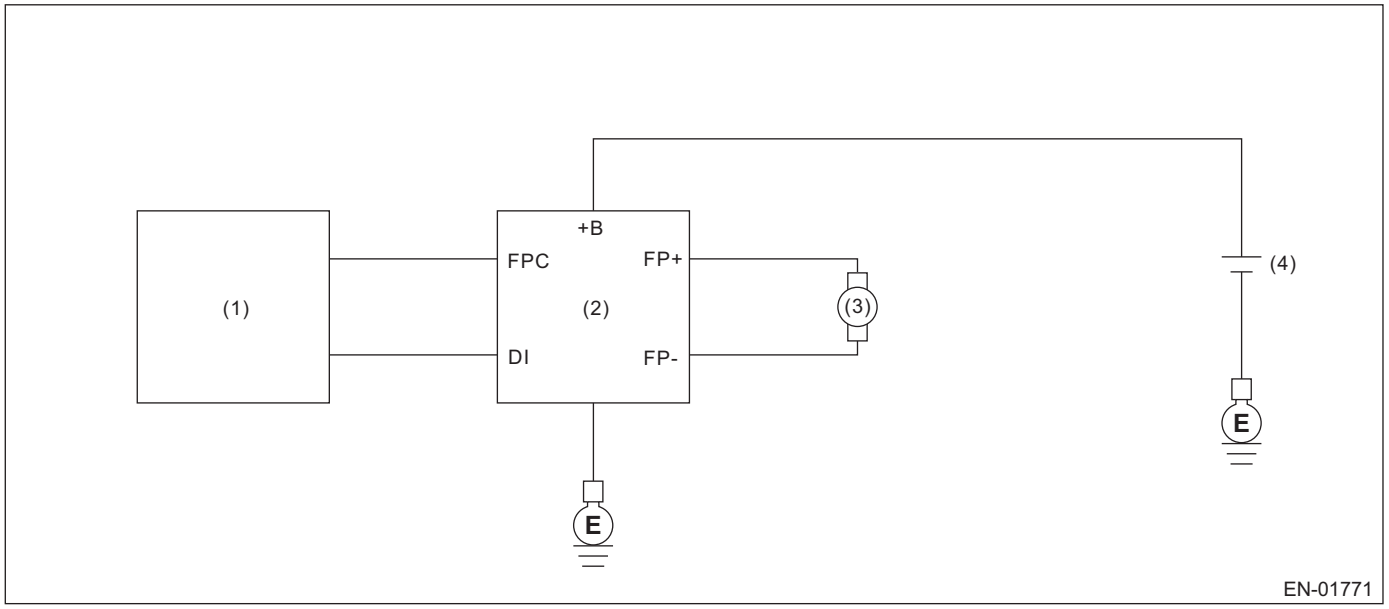
	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT OF FUEL PUMP CONTROL UNIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between fuel pump control unit connector and chassis ground. ***Connector & terminal*** ***(R122) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the open circuit in harness between fuel pump control unit connector and chassis ground.
3	**CHECK HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND FUEL PUMP CONNECTOR.** 1) Disconnect the connector from fuel pump. 2) Measure the resistance of harness between fuel pump control unit and fuel pump connector. ***Connector & terminal*** ***(R122) No. 7 — (R58) No. 5:*** ***(R122) No. 6 — (R58) No. 6:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between fuel pump control unit connector and fuel pump connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND FUEL PUMP CONNECTOR.** Measure the resistance between fuel pump control unit connector and chassis ground. ***Connector & terminal*** ***(R122) No. 7 — Chassis ground:*** ***(R122) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between fuel pump control unit connector and fuel pump connector.
5	**CHECK HARNESS BETWEEN ECM AND FUEL PUMP CONTROL UNIT CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and fuel pump control unit connector. ***Connector & terminal*** ***(B135) No. 10 — (R122) No. 9:*** ***(B136) No. 33 — (R122) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel pump control unit connector • Poor contact of coupling connector
6	**CHECK HARNESS BETWEEN ECM AND FUEL PUMP CONTROL UNIT CONNECTOR.** Measure the resistance between fuel pump control unit connector and chassis ground. ***Connector & terminal*** ***(R122) No. 9 — Chassis ground:*** ***(R122) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit to ground in harness between ECM connector and fuel pump control unit connector.
7	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and fuel pump control unit connector.	Is there poor contact of ECM or fuel pump control unit connector?	Repair the poor contact of ECM or fuel pump control unit connector.	Go to step **8**.

Step		Check	Yes	No
8	**CHECK EXPERIENCE OF RUNNING OUT OF FUEL.** Check “Check List for Interview”.	Has the vehicle experienced running out of fuel?	Finish the diagnosis. NOTE: DTC may be recorded as a result of fuel pump idling while running out of fuel.	Replace the fuel pump control unit. <Ref. to FU(STI)-63, Fuel Pump Control Unit.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel pump control unit.
Judge as NG when the NG signal is sent through a diagnostic line coming from the fuel pump control unit.
Fuel pump control unit detects the open or short circuit malfunction for each line, and then sends NG signals if one of them is found NG.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel pump control unit
(3) Fuel pump
(4) Battery

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Remaining fuel level	≥ 9 L (2.38 US gal, 1.98 Imp gal)
Elapsed time after starting the engine	≥ 180000 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.35 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BH:DTC P0245 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

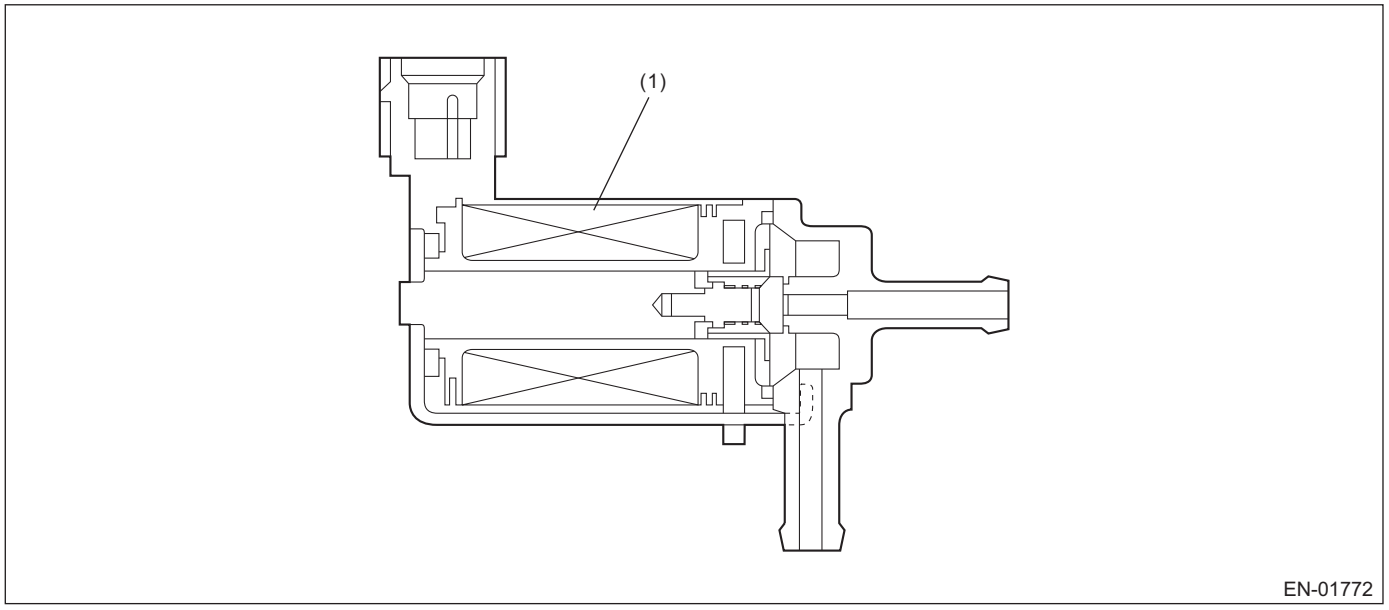
	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 33 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO WASTEGATE CONTROL SOLENOID VALVE.** Measure the voltage between wastegate control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E64) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the wastegate control solenoid valve. 4) Measure the resistance between wastegate control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E64) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between ECM connector and wastegate control solenoid valve connector.
5	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** Measure the resistance of harness between ECM connector and wastegate control solenoid valve connector. ***Connector & terminal*** ***(B134) No. 33 — (E64) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and wastegate control solenoid valve connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK WASTEGATE CONTROL SOLENOID VALVE.** 1) Remove the wastegate control solenoid valve. 2) Measure the resistance between wastegate control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair poor contact of wastegate control solenoid valve connector.	Replace the wastegate control solenoid valve. <Ref. to FU(STI)-50, Wastegate Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the wastegate control solenoid valve.
Judge as NG when the terminal output voltage remains Low during outputting the duty signal.

2. COMPONENT DESCRIPTION



(1) Coil

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of wastegate control	< 75%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34 V

Time needed for diagnosis: 640 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BI: DTC P0246 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Poor driving performance

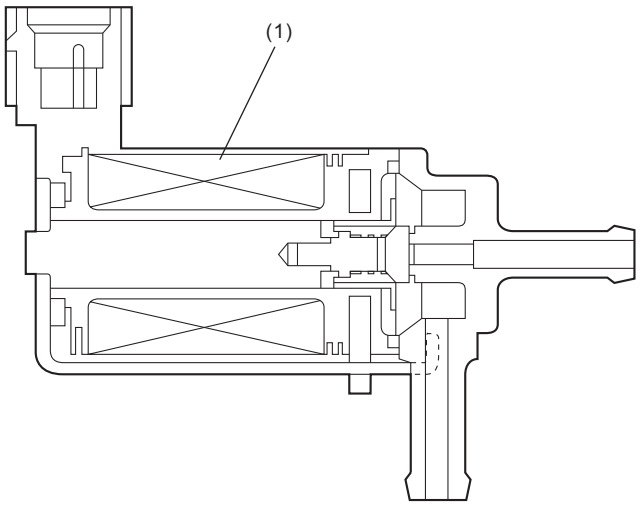
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the wastegate control solenoid valve. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 33 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair short circuit to power in harness between ECM connector and wastegate control solenoid valve connector.	Go to step **2**.
2	**CHECK WASTEGATE CONTROL SOLENOID VALVE.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between wastegate control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the wastegate control solenoid valve. <Ref. to FU(STI)-50, Wastegate Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the wastegate control solenoid valve.
Judge as NG when the terminal output voltage remains Low or High during outputting the duty signal.

2. COMPONENT DESCRIPTION



EN-01772

(1) Coil

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of wastegate control	> 25%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 12 A

Time needed for diagnosis: 640 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BJ:DTC P0300 RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stalls.
- Improper idling
- Rough driving

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground on all cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from all fuel injectors. 3) Measure the resistance between all fuel injector connectors and engine ground. ***Connector & terminal*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on all cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 — (E5) No. 2:*** ***#2 (B134) No. 11 — (E16) No. 2:*** ***#3 (B134) No. 12 — (E6) No. 2:*** ***#4 (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4	**CHECK FUEL INJECTOR.** Check all fuel injectors. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **5**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
5	**CHECK POWER SUPPLY LINE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between all fuel injector connectors and the engine ground. ***Connector & terminal*** ***#1 (E5) No. 1 (+) — Engine ground (–):*** ***#2 (E16) No. 1 (+) — Engine ground (–):*** ***#3 (E6) No. 1 (+) — Engine ground (–):*** ***#4 (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

	Step	Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from all fuel injectors. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground on all cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step **7**.
7	**CHECK FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Check all fuel injectors. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **8**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
8	**CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor/crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Go to step **9**.
9	**CHECK CRANK SPROCKET.** 1) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.> 2) Check the crank sprocket.	Is the crank sprocket rusted or does it have broken teeth?	Replace the crank sprocket. <Ref. to ME(STI)-62, Crank Sprocket.>	Go to step **10**.
10	**CHECK INSTALLATION CONDITION OF TIMING BELT.** Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block. ST 499987500 CRANKSHAFT SOCKET	Is the timing belt dislocated from its proper position?	Repair the installation condition of timing belt. <Ref. to ME(STI)-52, Timing Belt.>	Go to step **11**.
11	**CHECK FUEL LEVEL.** Check remaining amount of fuel.	Is the fuel meter indication higher than the “Lower” level?	Go to step **12**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **12**.

	Step	Check	Yes	No
12	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h.	Does the malfunction indicator light illuminate or blink?	Go to step **13**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector Go to step **13**.
13	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **14**.
14	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(STI)-53, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(STI)-53, PCV Valve.>	Go to step **15**.
15	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Go to step **16**.
16	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Go to step **17**.
17	**CHECK ALL CYLINDERS.** Check the following items for the cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Is there a fault in any cylinder?	Repair or replace the faulty part of the faulty cylinder. NOTE: Check the following items. • Spark plug • Fuel injector • Ignition coil • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(STI)(diag)-318, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BK:DTC P0301 CYLINDER 1 MISFIRE DETECTED

NOTE:
For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(STI)(diag)-326, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the presence of misfire occurrence. (Revolution fluctuation method)
Monitoring (exhaust gas) misfire that adversely affects exhaust gas and monitoring misfire that damages the catalyst are made obligatory by the law. Misfire affecting these two has two patterns below:
- Intermittent misfire (a single cylinder misfires at random times, or different cylinders misfire at random): Exhaust gas misfire
- Every-time misfire (a single cylinder misfires every time): Exhaust gas misfire, catalyst-damaging misfire

The following detecting methods are adopted for these detection.
1) Intermittent misfire: Exhaust gas misfire
- 180° Interval Difference Method
- 360° Interval Difference Method
- 720° Interval Difference Method

2) Every-time misfire: Exhaust gas misfire, catalyst-damaging misfire
- 180° Interval Difference Method
- 360° Interval Difference Method

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Throttle position change during 16 milliseconds	< 14 °
Fuel shut-off function	≠ Fuel cut
Engine speed	≥ 550 rpm to ≤ 6700 rpm
Intake manifold pressure	> Value of Map 1
Elapsed time after starting the engine	≥ 2 crankshaft revolutions
Following condition A or B is met	
A: Engine coolant temperature at engine starting	> –7°C (19.4°F)
B: Following conditions (b1) and (b2) are met	
(b1) Engine coolant temperature at engine starting	≤ –7°C (19.4°F)
(b2) Engine coolant temperature	≥ 21°C (69.8°F)

Map 1

- Normal ignition

3. GENERAL DRIVING CYCLE

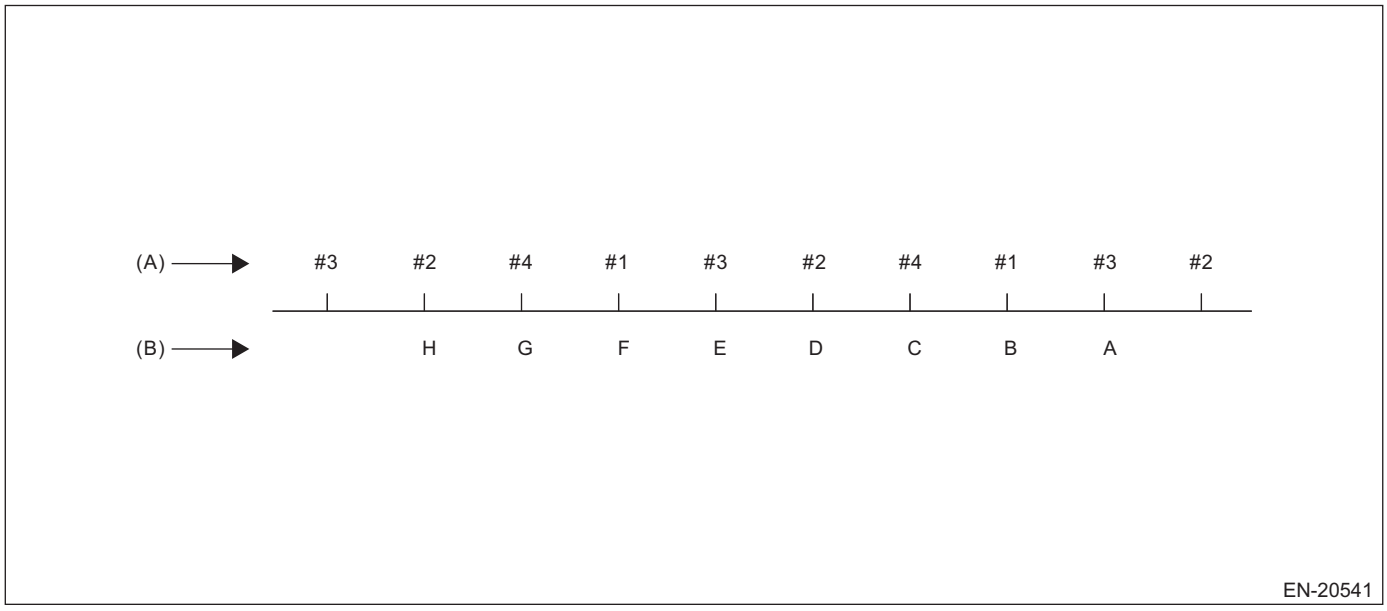
- If conditions are met, it is possible to detect the misfires from idling to high engine speed. However, in case any engine load or breakage occurs, perform with the engine at idle.
- Perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

When a misfire occurs, the engine speed will decrease and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether a misfire is occurring or not comparing the calculated result with judgment value. Count the number of misfires, if the misfire ratio is higher during 1000 revs. or 200 revs., judge corresponding cylinders as NG.

Diagnostic value calculation (Calculate from angle speed) →	Misfire detection in every single ignition (Compare diagnostic value with judgment value) →	NG judgment (Misfire occurrence judgment required by the law) (Compare number of misfire with judgment value)
	• 180 Degree Interval Difference Method • 360 Degree Interval Difference Method • 720 Degree Interval Difference Method	• NG judgment for exhaust gas misfire • NG judgment for catalyst-damaging misfire

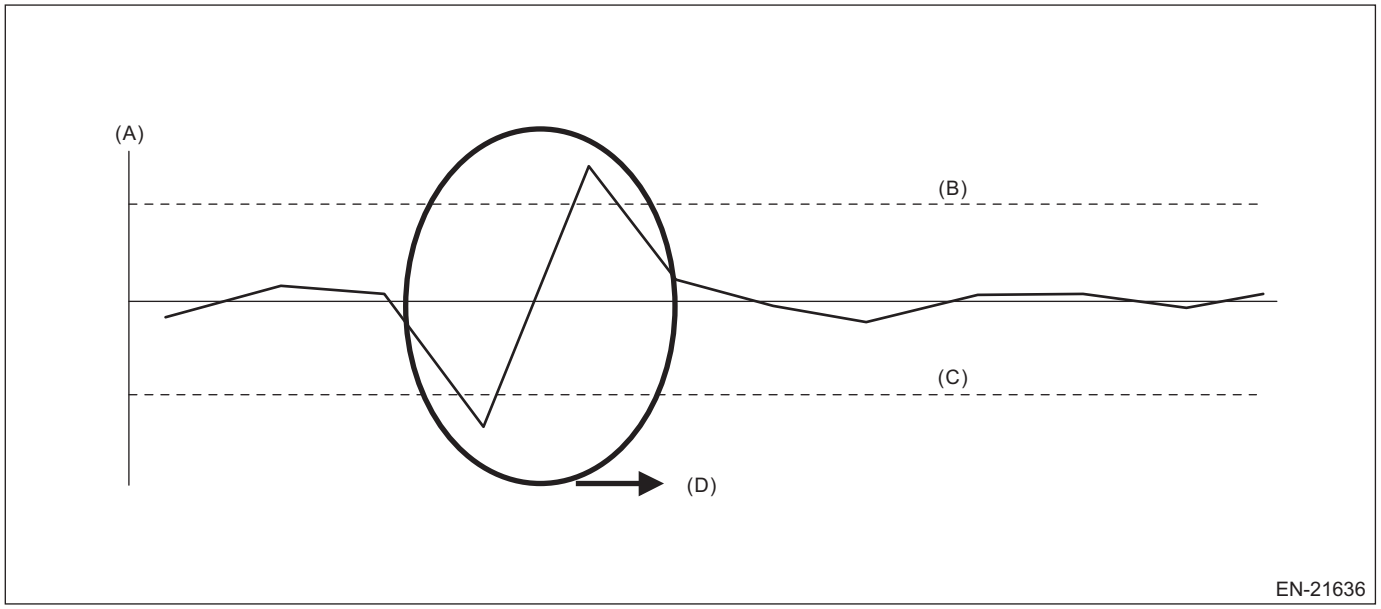
As shown in the following figure, pick a cylinder as the standard and name it A. And the former crankshaft position speed is named B, the second former crankshaft position speed is named C, the third is named D, etc.



(A) Ignition order (B) Crankshaft position speed

180° Interval Difference Method

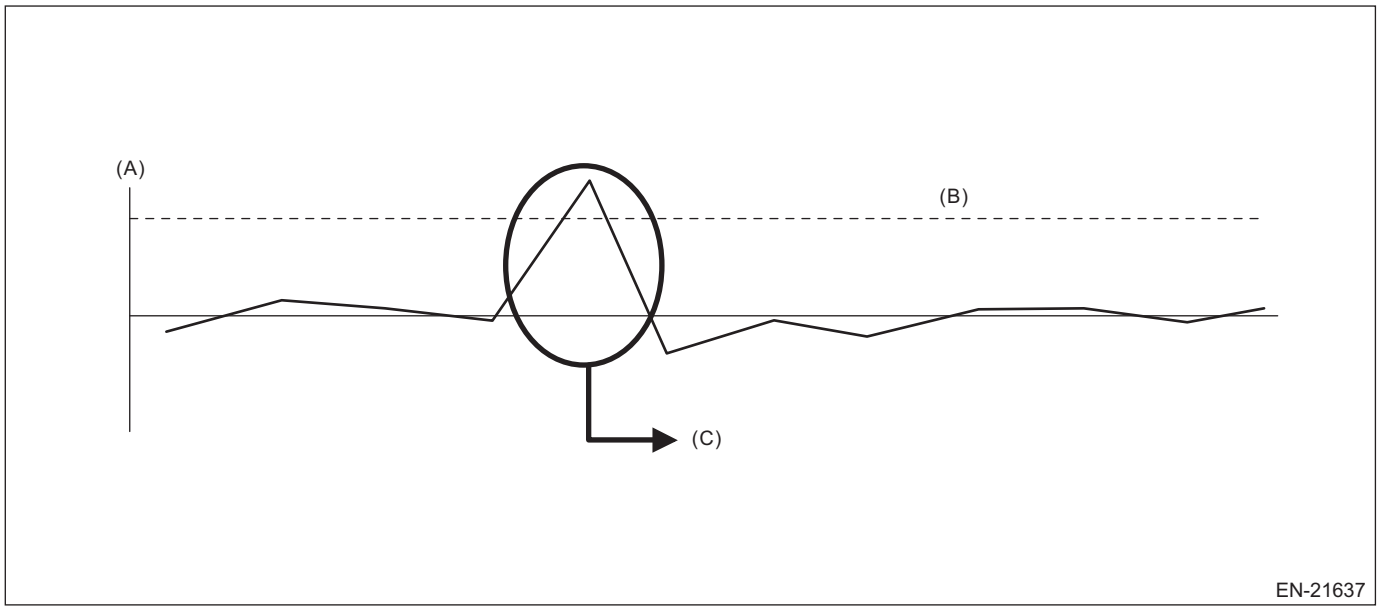
Diagnostic value	180 degree interval difference = (B – A) – (F – B)/4
Judge as a misfire in the following cases. • 180 degree interval difference > Judgment value of positive side • 180 degree interval difference ≤ Judgment value of negative side (Diagnostic value before 180° CA)	



(A) 180 degree interval difference
(B) Threshold value (positive number)
(C) Threshold value (negative number)
(D) Judged as misfire

360° Interval Difference Method

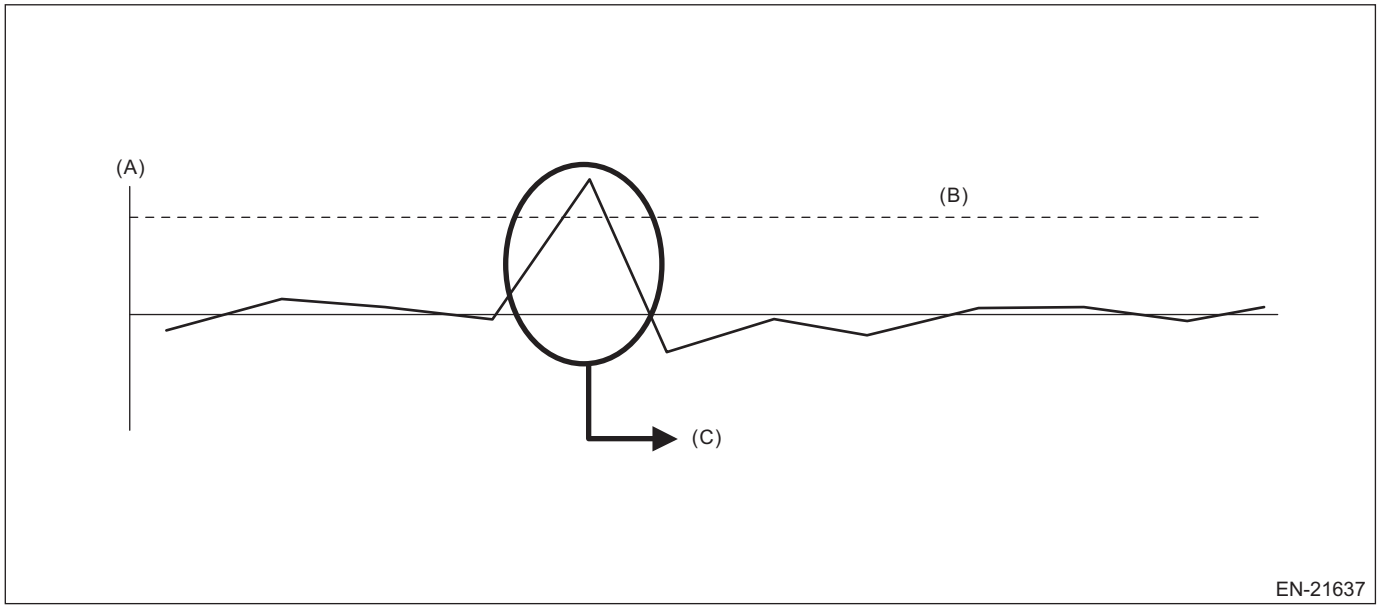
Diagnostic value	360 degree interval difference = (B – A) – (D – C)
Misfire judgment	360 degree interval difference > Judgment value → Judged as misfire



(A) 360 degree interval difference (B) Threshold value (C) Judged as misfire

720° Interval Difference Method

Diagnostic value	720 degree interval difference = (B – A) – (F – E)
Misfire judgment	720 degree interval difference > Judgment value → Judged as misfire



(A) 720 degree interval difference (B) Threshold value (C) Judged as misfire

- **Exhaust gas misfire (misfire occurrence level which influences exhaust gas)**

Judgment value (Judge that malfunction occurs when the misfire ratio is high in 1000 engine revs.)

Malfunction Criteria	Threshold Value
Diagnostic value of exhaust gas misfire	≥ 51 × 100/2000% in 1000 revs.

Time needed for diagnosis: 1000 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

- **Catalyst-damaging misfire (misfire occurrence level that will damage catalyst)**

Judgment value

Malfunction Criteria	Threshold Value
Catalyst-damaging misfire diagnostic value	≥ Value of Map 2

Map 2

		Intake air (g/rev (oz/rev.))									
		0.2 (0.01)	0.4 (0.01)	0.6 (0.02)	0.8 (0.03)	1 (0.04)	1.2 (0.04)	1.4 (0.05)	1.6 (0.06)	1.8 (0.06)	2 (0.07)

	6700	50	50	30	20	20	20	20	20	20	20

Time needed for diagnosis: 200 engine revs.
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BL:DTC P0302 CYLINDER 2 MISFIRE DETECTED

NOTE:
For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(STI)(diag)-326, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(STI)(diag)-318, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BM:DTC P0303 CYLINDER 3 MISFIRE DETECTED

NOTE:
For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(STI)(diag)-326, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(STI)(diag)-318, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BN:DTC P0304 CYLINDER 4 MISFIRE DETECTED

DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stalls.
- Improper idling
- Rough driving

CAUTION:

After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 — (E5) No. 2:*** ***#2 (B134) No. 11 — (E16) No. 2:*** ***#3 (B134) No. 12 — (E6) No. 2:*** ***#4 (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
4	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **5**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
5	**CHECK POWER SUPPLY LINE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector connector of faulty cylinders and engine ground. ***Connector & terminal*** ***#1 (E5) No. 1 (+) — Engine ground (–):*** ***#2 (E16) No. 1 (+) — Engine ground (–):*** ***#3 (E6) No. 1 (+) — Engine ground (–):*** ***#4 (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

	Step	Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step **7**.
7	**CHECK FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **8**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
8	**CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Go to step **9**.
9	**CHECK CRANK SPROCKET.** 1) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.> 2) Check the crank sprocket.	Is the crank sprocket rusted or does it have broken teeth?	Replace the crank sprocket. <Ref. to ME(STI)-62, Crank Sprocket.>	Go to step **10**.
10	**CHECK INSTALLATION CONDITION OF TIMING BELT.** Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block. ST 499987500 CRANKSHAFT SOCKET	Is the timing belt dislocated from its proper position?	Repair the installation condition of timing belt. <Ref. to ME(STI)-52, Timing Belt.>	Go to step **11**.
11	**CHECK FUEL LEVEL.** Inspect the fuel level.	Is the fuel meter indication higher than the “Lower” level?	Go to step **12**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **12**.

	Step	Check	Yes	No
12	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h (37.3 MPH) or more.	Does the malfunction indicator light illuminate or blink?	Go to step **13**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
13	**CHECK AIR INTAKE SYSTEM.** Check the intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **14**.
14	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(STI)-53, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(STI)-53, PCV Valve.>	Go to step **15**.
15	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Go to step **16**.
16	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>	Go to step **17**.
17	**CHECK MISFIRE SYMPTOM.** 1) Turn the ignition switch to ON. 2) Check for DTC. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Does the Subaru Select Monitor or general scan tool indicate only one DTC?	Go to step **20**.	Go to step **18**.
18	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTC P0301 and P0303 displayed? (Current malfunction)	Go to step **21**.	Go to step **19**.
19	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTC P0302 and P0304 displayed? (Current malfunction)	Go to step **22**.	Go to step **23**.

	Step	Check	Yes	No
20	**ONLY ONE CYLINDER.** Check the following items for one cylinder only. • Spark plug • Ignition coil • Fuel injector • Compression	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
21	**GROUP OF #1 AND #3 CYLINDERS.** Check the following items for the #1 and #3 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Are there any faults in #1 and #3 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
22	**GROUP OF #2 AND #4 CYLINDERS.** Check the following items for the #2 and #4 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Are there any faults in #2 and #4 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
23	**CYLINDER AT RANDOM.** 1) Start the engine. 2) Check the idling.	Is the engine idle rough?	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression

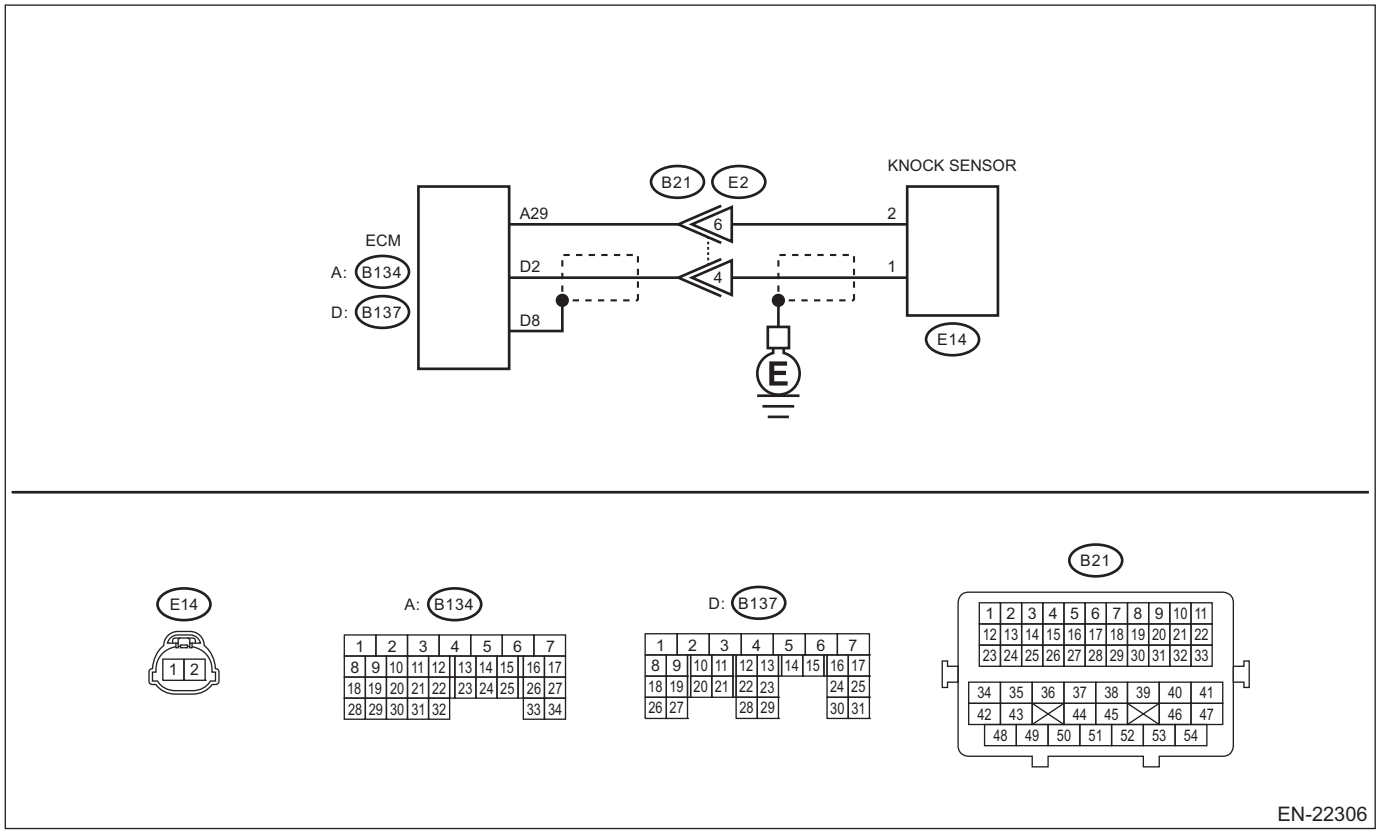
1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(STI)(diag)-318, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BO:DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Poor driving performance
- Knocking occurs

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-22306

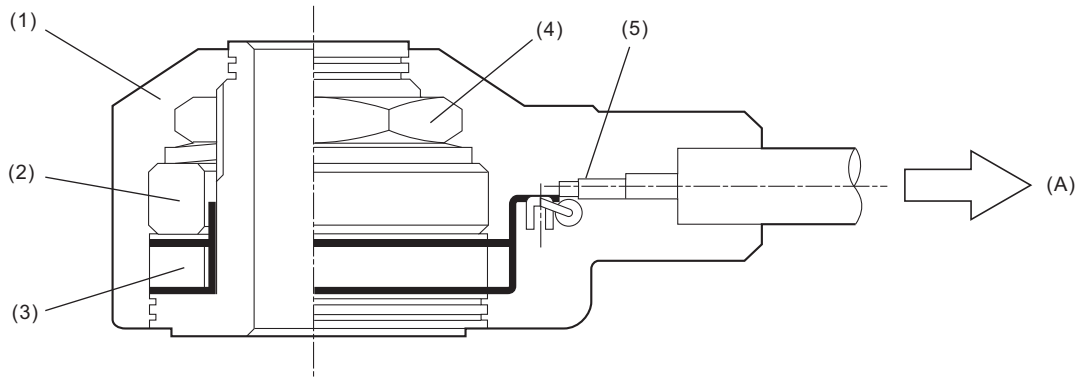
Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B137) No. 2 — (B134) No. 29:***	Is the resistance less than 500 kΩ?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK KNOCK SENSOR.** 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor connectors. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 500 kΩ?	Replace the knock sensor. <Ref. to FU(STI)-37, Knock Sensor.>	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. NOTE: The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.
3	**CHECK INPUT SIGNAL OF ECM.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 2 (+) — Chassis ground (–):***	Is the voltage 2 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. NOTE: The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

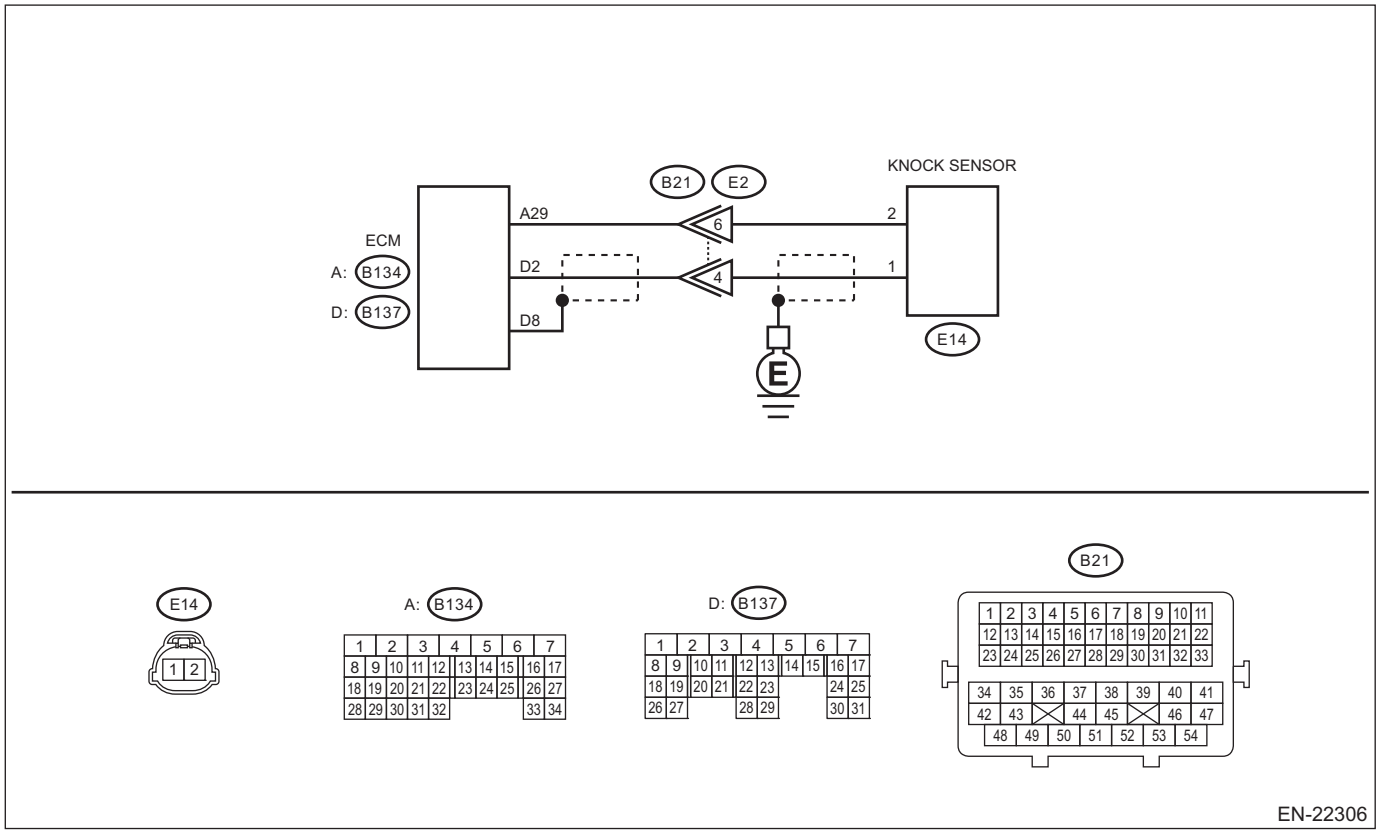
Malfunction Criteria	Threshold Value
Output voltage	< 0.243 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BP:DTC P0328 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Poor driving performance
- Knocking occurs

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-22306

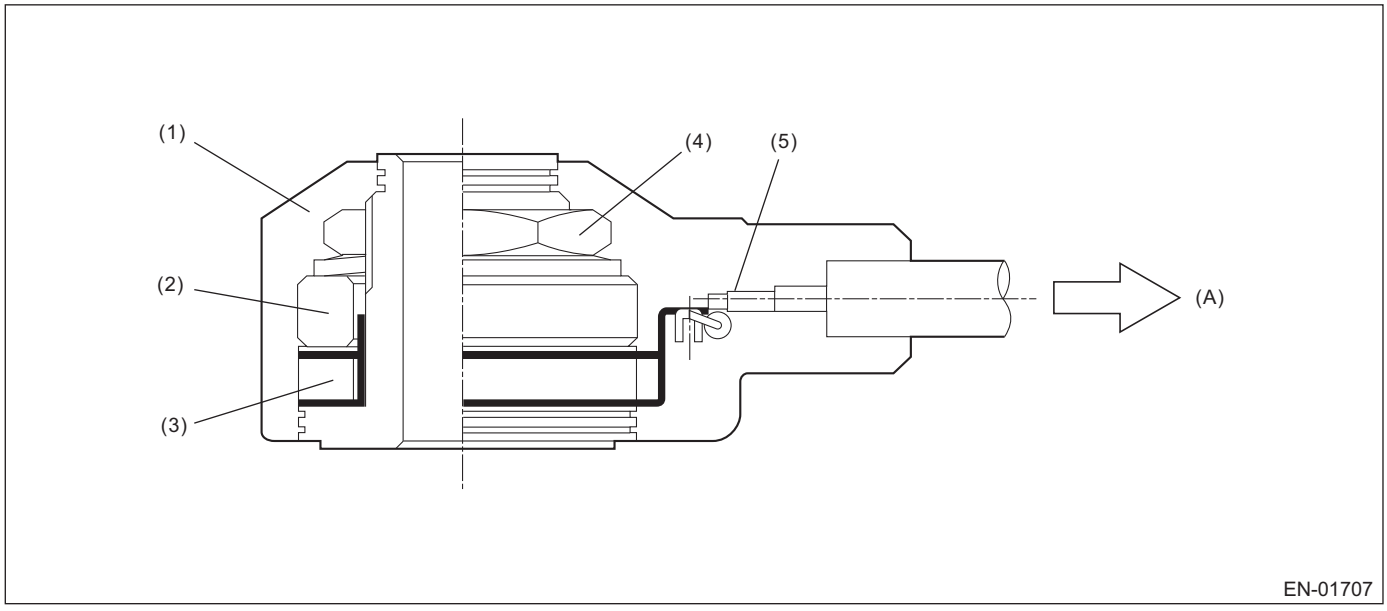
Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B137) No. 2 — (B134) No. 29:***	Is the resistance 600 kΩ or more?	Go to step **2**.	Repair the poor contact of ECM connector.

Step		Check	Yes	No
2	**CHECK KNOCK SENSOR.** 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 600 kΩ or more?	Replace the knock sensor. <Ref. to FU(STI)-37, Knock Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and knock sensor connector • Poor contact of knock sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.709 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BQ:DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

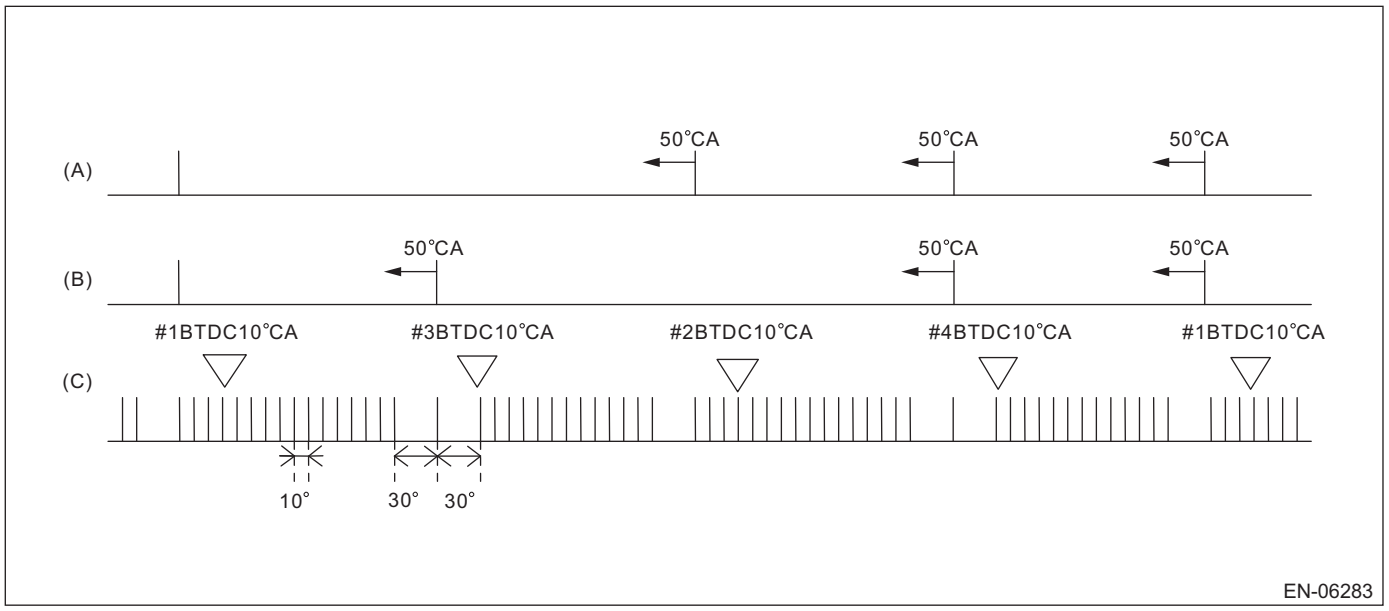
	Step	Check	Yes	No
1	**CHECK CONDITION OF CRANKSHAFT POSITION SENSOR.** Check the crankshaft position sensor.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step **2**.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(STI)-34, Crankshaft Position Sensor.>
2	**CHECK CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Remove the crankshaft position sensor. 3) Measure the resistance between terminals of crankshaft position sensor. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance between 1 and 4 kΩ?	Go to step **3**.	Replace the crankshaft position sensor. <Ref. to FU(STI)-34, Crankshaft Position Sensor.>

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(B137) No. 17 — (E10) No. 1:*** ***(B137) No. 25 — (E10) No. 2:***	Is the resistance less than 1 Ω?	Repair the poor contact of ECM and crankshaft position sensor connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and crankshaft position sensor connector • Poor contact of coupling connector

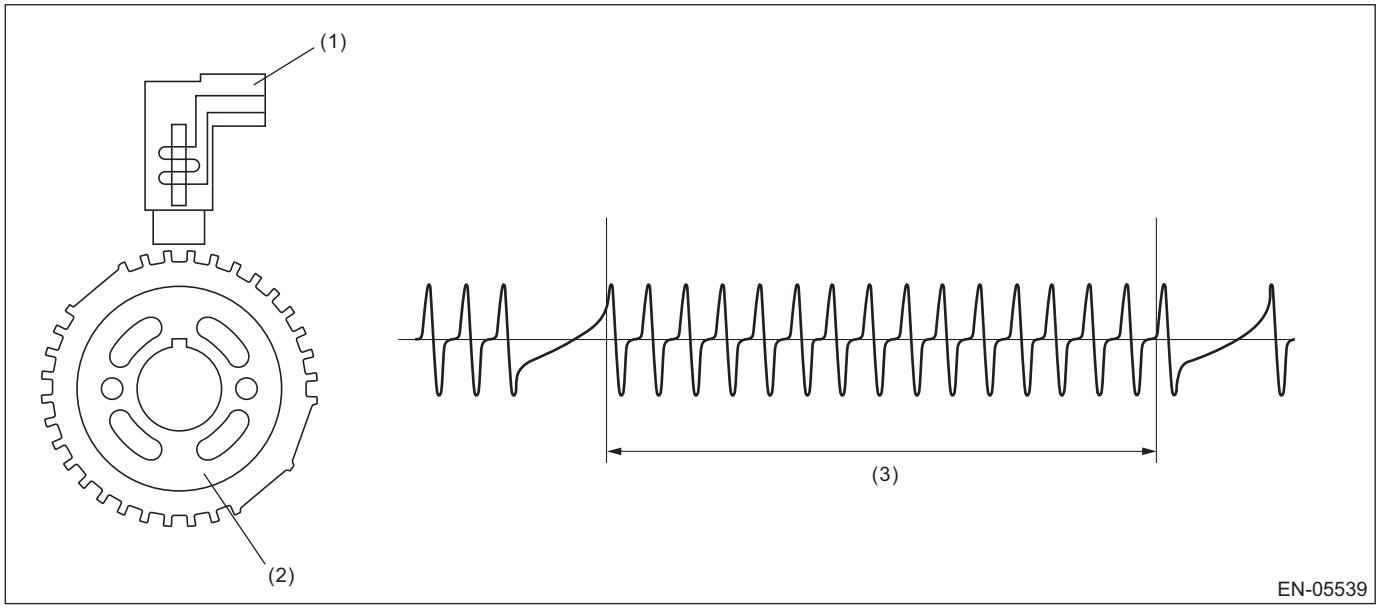
1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the crankshaft position sensor.
Judge as NG when the crank signal is not input even though the starter was rotated.

2. COMPONENT DESCRIPTION



(A) Camshaft signal (RH) (B) Camshaft signal (LH) (C) Crankshaft signal



(1) Crankshaft position sensor (2) Crank sprocket (3) Crankshaft half-turn

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of crankshaft position sensor signals during cranking	= 0

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BR:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Failure of engine to start

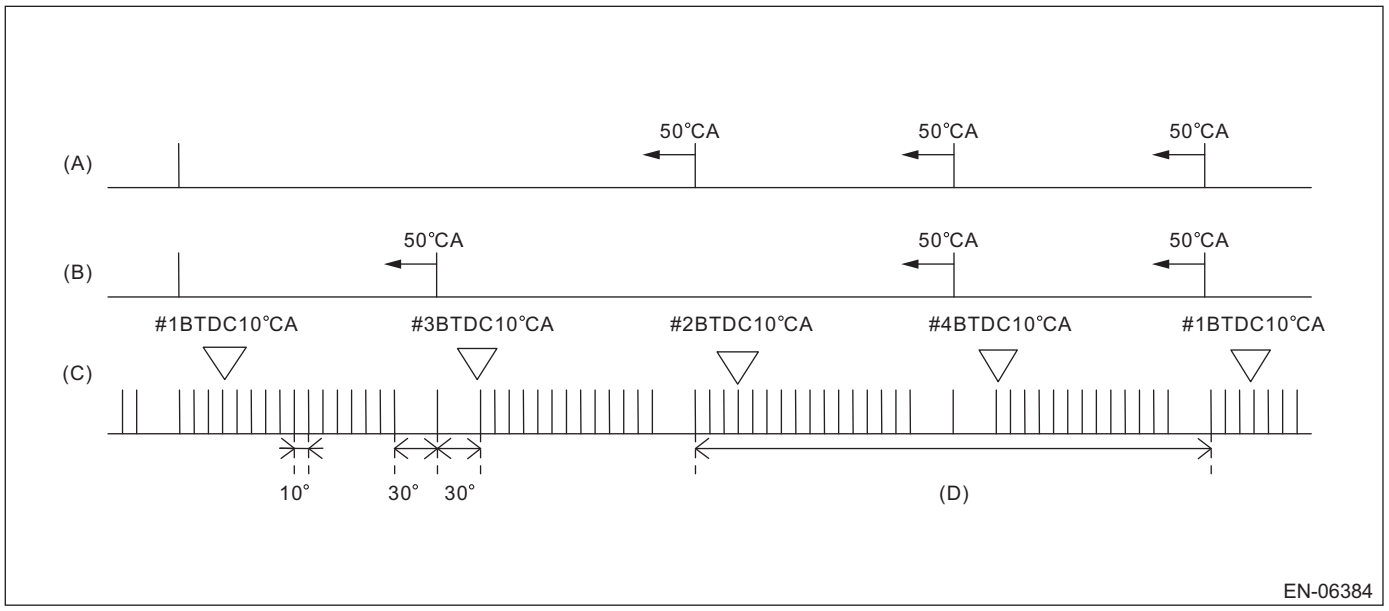
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step **2**.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(STI)-34, Crankshaft Position Sensor.>
2	**CHECK CRANK SPROCKET.** 1) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.> 2) Check the crank sprocket.	Are crank sprocket teeth cracked or damaged?	Replace the crank sprocket. <Ref. to ME(STI)-62, Crank Sprocket.>	Go to step **3**.
3	**CHECK INSTALLATION CONDITION OF TIMING BELT.** Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block. ST 499987500 CRANKSHAFT SOCKET	Is the timing belt dislocated from its proper position?	Repair the installation condition of timing belt. <Ref. to ME(STI)-52, Timing Belt.>	Replace the crankshaft position sensor. <Ref. to FU(STI)-34, Crankshaft Position Sensor.>

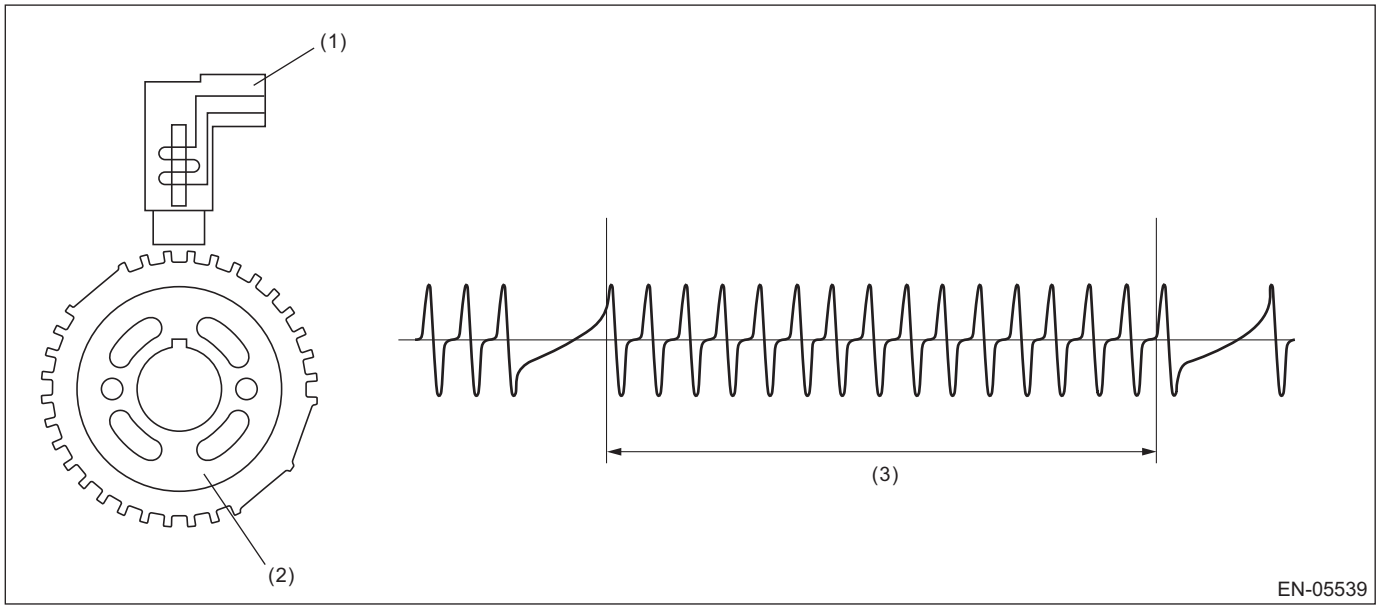
1. OUTLINE OF DIAGNOSIS

Detect for faults in crankshaft position sensor output properties.
Judge as NG when there is a problem in the number of crankshaft signals for every revolution.

2. COMPONENT DESCRIPTION



(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Normal: Number of crankshaft signals = 30



(1) Crankshaft position sensor
(2) Crank sprocket
(3) Crankshaft half-turn

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Amount of crank sensor signal during 1 rev.	≠ 30

Time needed for diagnosis: 10 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BS:DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

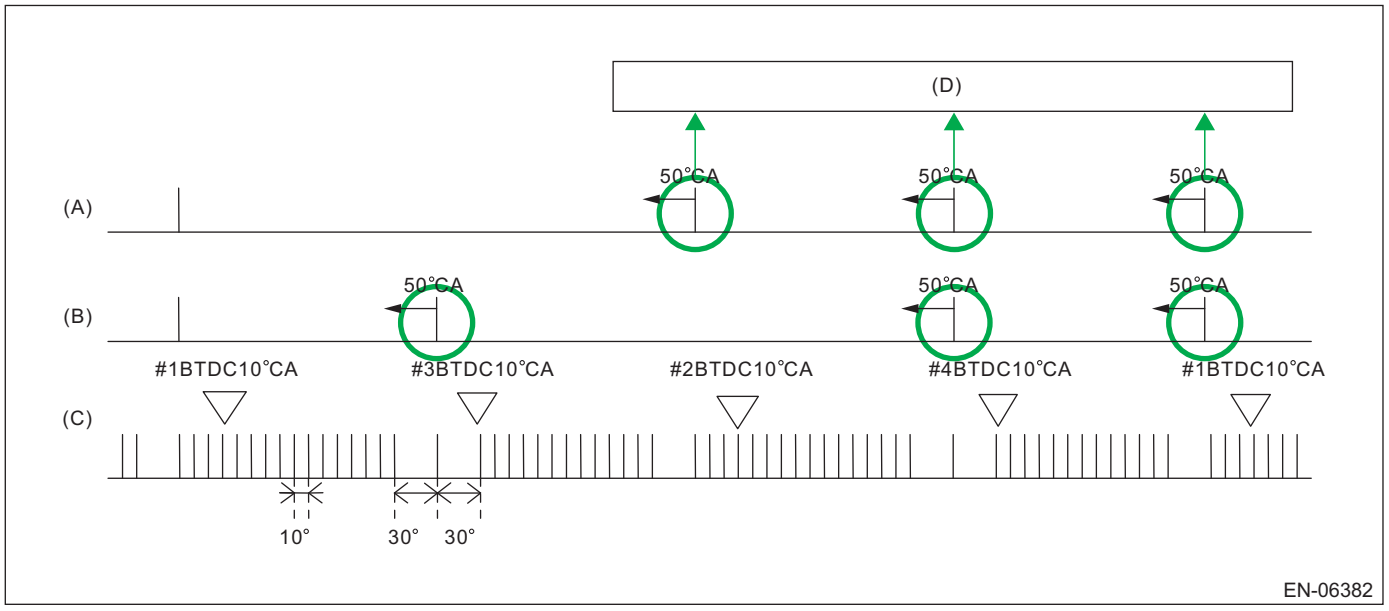
	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor RH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor RH connector. ***Connector & terminal*** ***(B137) No. 24 — (E36) No. 2:*** ***(B137) No. 30 — (E36) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and camshaft position sensor RH connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the resistance between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor RH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor RH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR RH.** Check the camshaft position sensor RH.	Is the camshaft position sensor RH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor RH installation bolt securely. <Ref. to FU(STI)-35, Camshaft Position Sensor.>

Step		Check	Yes	No
6	**CHECK CAMSHAFT POSITION SENSOR RH.** Check the waveform of the camshaft position sensor RH. <Ref. to EN(STI)(diag)-21, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor RH. <Ref. to FU(STI)-35, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor RH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION



(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms

4. GENERAL DRIVING CYCLE

Diagnosis 1: Perform the diagnosis only once.
Diagnosis 2: Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of camshaft position sensor signals during cranking	= 0

Time needed for diagnosis: 3000 ms

Diagnosis 2

Judge as NG when no input status of camshaft position sensor signal continues for (10 time(s) +2)/2 revs.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 0.5 revs of crankshaft	= 0

Time needed for diagnosis: (10 time(s) +2)/2 engine revs.

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

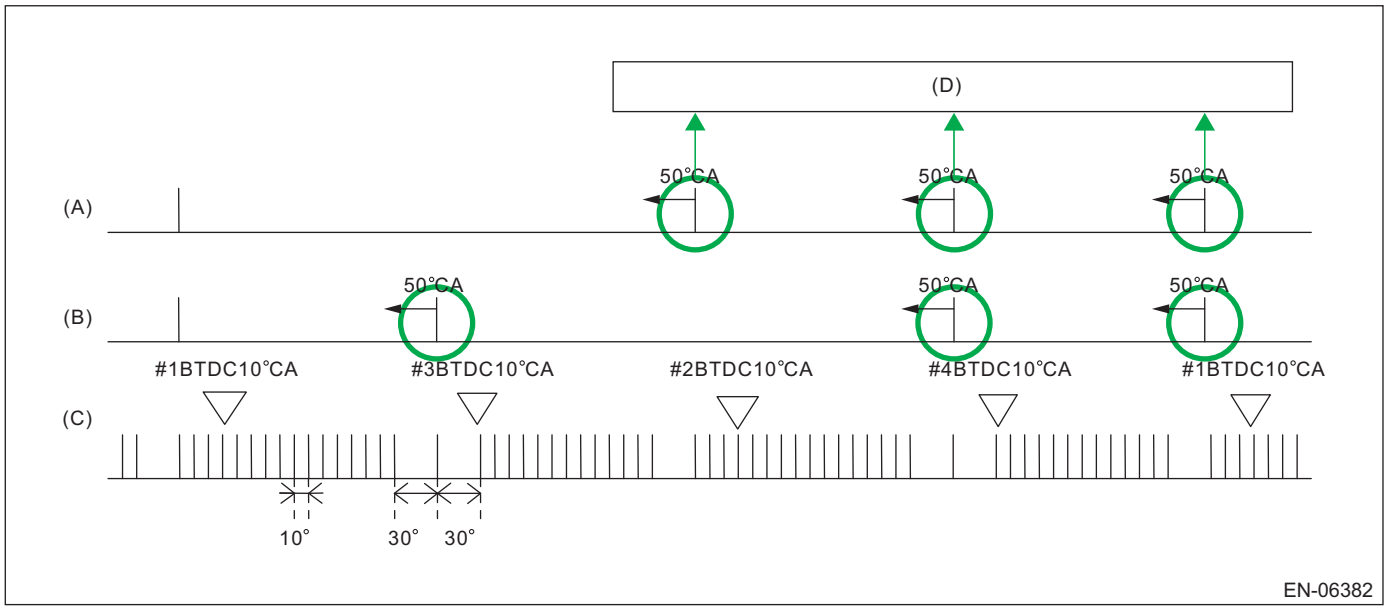
BT:DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR

NOTE:
For the diagnostic procedure, refer to DTC P0340. <Ref. to EN(STI)(diag)-344, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION



(A) Camshaft signal (RH)
(B) Camshaft signal (LH)
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms
Engine speed	< 5000 rpm

Diagnosis 3

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms
Engine speed	≥ 5000 rpm

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1: Judge as NG when the number of camshaft position sensor signals in two crankshaft revolutions is less than 3 time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	< 3 time(s)

Diagnosis 2: Judge as NG when the number of camshaft position sensor signals in two crankshaft revolutions is more than 3 time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	> 3 time(s)

Diagnosis 3: Judge as NG when the number of camshaft position sensor signals in two crankshaft revolutions is more than 12 time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	> 12 time(s)

Time needed for diagnosis: Two engine revs. × 4 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BU:DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor LH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor LH connector. ***Connector & terminal*** ***(B137) No. 16 — (E35) No. 2:*** ***(B137) No. 30 — (E35) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and camshaft position sensor LH connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the resistance between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor LH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor LH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR LH.** Check the camshaft position sensor LH.	Is the camshaft position sensor LH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor LH installation bolt securely. <Ref. to FU(STI)-35, Camshaft Position Sensor.>

	Step	Check	Yes	No
6	**CHECK CAMSHAFT POSITION SENSOR LH.** Check the waveform of the camshaft position sensor LH. <Ref. to EN(STI)(diag)-21, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor LH. <Ref. to FU(STI)-35, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor LH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

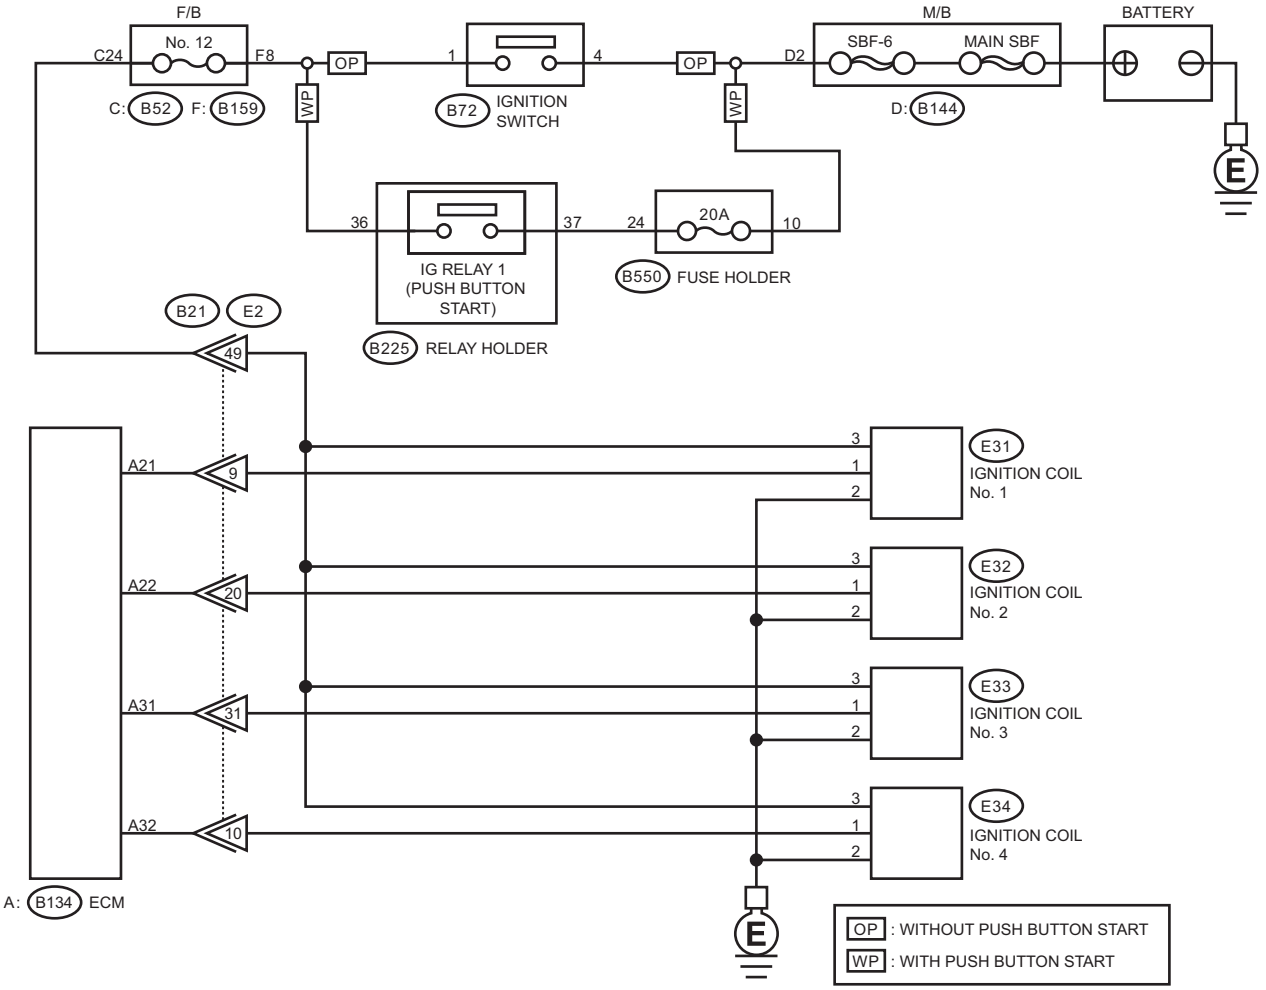
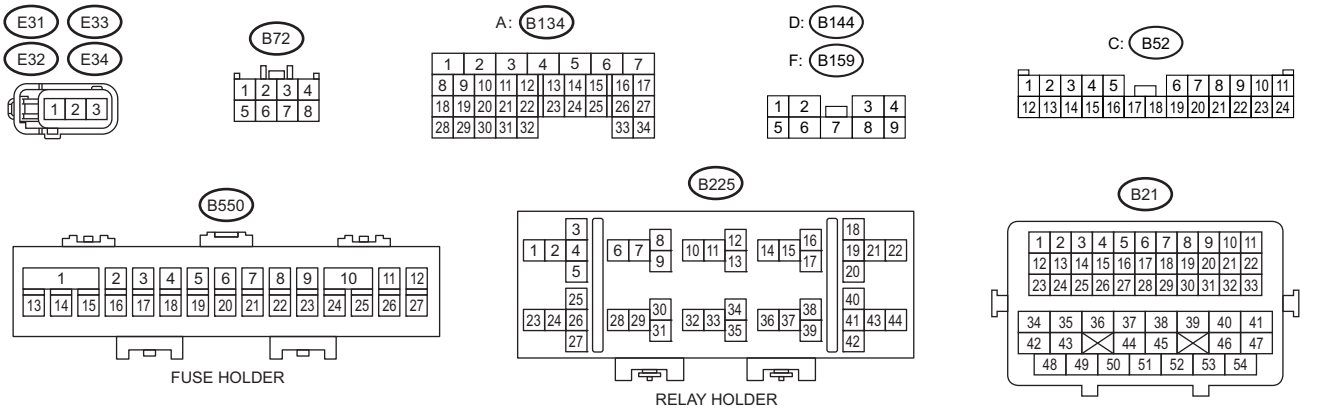
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-21427

	Step	Check	Yes	No
1	**CHECK IGNITION COIL POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the voltage between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 3 (+) — Engine ground (–):*** ***DTC P0352; (E32) No. 3 (+) — Engine ground (–):*** ***DTC P0353; (E33) No. 3 (+) — Engine ground (–):*** ***DTC P0354; (E34) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open or short to ground in harness of power supply circuit • Blown out of fuse • Poor contact of coupling connector
2	**CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 2 — Engine ground:*** ***DTC P0352; (E32) No. 2 — Engine ground:*** ***DTC P0353; (E33) No. 2 — Engine ground:*** ***DTC P0354; (E34) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.
3	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 1 — Engine ground:*** ***DTC P0352; (E32) No. 1 — Engine ground:*** ***DTC P0353; (E33) No. 1 — Engine ground:*** ***DTC P0354; (E34) No. 1 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.
4	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** Measure the resistance of harness between ECM connector and ignition coil connector. ***Connector & terminal*** ***DTC P0351; (B134) No. 21 — (E31) No. 1:*** ***DTC P0352; (B134) No. 22 — (E32) No. 1:*** ***DTC P0353; (B134) No. 31 — (E33) No. 1:*** ***DTC P0354; (B134) No. 32 — (E34) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and the ignition coil connector • Poor contact of coupling connector
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Go to step **6**.
6	**CHECK SPARK PLUG CONDITION.** 1) Remove the spark plug of the corresponding cylinder. <Ref. to IG(STI)-5, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(STI)-6, INSPECTION, Spark Plug.>	Is the check result OK?	Replace the ignition coil. <Ref. to IG(STI)-8, Ignition Coil.>	Replace the spark plug. <Ref. to IG(STI)-5, Spark Plug.>

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the ignition coil driving IC, judge the ignition coil driving circuit as normal or abnormal.
The ignition coil driving IC detects “no ignition” status as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	> 1 s
Engine speed	≥ 500 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Ignition driving IC information	Trouble

Time needed for diagnosis: 10 time(s) × 256/1000 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EN-21411

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor RH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor RH connector. ***Connector & terminal*** ***(B137) No. 23 — (E62) No. 2:*** ***(B137) No. 30 — (E62) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and camshaft position sensor RH connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the resistance between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor RH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor RH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR RH.** Check the camshaft position sensor RH.	Is the camshaft position sensor RH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor RH installation bolt securely. <Ref. to FU(STI)-35, Camshaft Position Sensor.>

	Step	Check	Yes	No
6	**CHECK CAMSHAFT POSITION SENSOR RH.** Check the waveform of the camshaft position sensor RH. <Ref. to EN(STI)(diag)-21, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor RH. <Ref. to FU(STI)-35, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor RH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 200 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when no input status of camshaft position sensor signal continues for (10 time(s) +2)/2 revs.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 0.5 revs of crankshaft	= 0

Time needed for diagnosis: (10 time(s) +2)/2 engine revs.
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CB:DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0365. <Ref. to EN(STI)(diag)-358, DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 200 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the status continues where the number of camshaft position sensor signals in two crankshaft revolutions is other than 2 time(s).

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	≠ 2 time(s)

Time needed for diagnosis: Two engine revs. × 4 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CC:DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Engine stalls.
- Failure of engine to start

CAUTION:

NOTE:
For the diagnostic procedure, refer to DTC P0390. <Ref. to EN(STI)(diag)-362, DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0366. <Ref. to EN(STI)(diag)-361, DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CE:DTC P0410 SECONDARY AIR SYSTEM

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK SECONDARY AIR PUMP FUSE.** Check if the secondary air pump fuse (60 A) is blown out.	Is the fuse blown out?	Go to step **2**.	Go to step **3**.
2	**CHECK HARNESS BETWEEN FUSE BOX AND SECONDARY AIR PUMP CONNECTOR.** 1) Remove the secondary air pump fuse from the fuse box. 2) Disconnect the secondary air pump connector. 3) Measure the resistance between the secondary air pump fuse and secondary air pump connector, and chassis ground. ***Connector & terminal*** ***(F9) No. 16 — Chassis ground:*** ***(F11) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the fuse with a new part, and connect the secondary air pump connector. Go to step **3**.	Repair ground short of the harness between the fuse box and the secondary air pump connector.
3	**CHECK SECONDARY AIR PUMP OPERATION.** **CAUTION:** **Complete the inspection of secondary air pump operation in one try. This inspection will put a heavy workload on the secondary air pump, so the continuous operation may cause damage to the pump. Do not operate the pump continuously for more than three times. If you need to operate the pump further, turn the ignition switch to OFF and wait for at least two hours.** 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Perform operation check for the secondary air pump using the Subaru Select Monitor. NOTE: • Activation by the active test stops in 10 seconds in order to protect the secondary air pump. • When performing the active test again, disconnect the ground cable from battery, wait at least one minute, and perform the clear memory operation of ECM. • For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(STI)(diag)-80, Active Test.>	Does the secondary air pump operate?	Go to step **4**.	Go to step **5**.
4	**CHECK DUCT BETWEEN SECONDARY AIR PUMP AND COMBINATION VALVE.** Check the duct between secondary air pump and combination valve.	Is there damage, clog or disconnection of the duct?	Replace, clean or connect the duct.	Replace the secondary air combination valve LH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>

	Step	Check	Yes	No
5	**CHECK POWER SUPPLY TO SECONDARY AIR PUMP.** 1) Turn the ignition switch to OFF. 2) Disconnect the battery negative terminal, wait for 1 minute, and connect it again. 3) Disconnect the secondary air pump connector. 4) Install the delivery mode fuse. 5) Turn the ignition switch to ON. 6) Using the Subaru Select Monitor, measure the voltage between the secondary air pump connector and chassis ground while the secondary air pump is operating. NOTE: • Activation by the active test stops in 10 seconds in order to protect the secondary air pump. • When performing the active test again, disconnect the ground cable from battery, wait at least one minute, and perform the clear memory operation of ECM. • For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.> ***Connector & terminal*** ***(F11) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the secondary air pump. <Ref. to EC(STI)-54, Secondary Air Pump.>	Go to step **6**.
6	**CHECK HARNESS BETWEEN SECONDARY AIR PUMP RELAY AND SECONDARY AIR PUMP CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the secondary air pump relay. 3) Measure the resistance of harness between secondary air pump relay connector and secondary air pump connector. ***Connector & terminal*** ***(F9) No. 11 — (F11) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit in harness between secondary air pump relay connector and secondary air pump connector.
7	**CHECK HARNESS BETWEEN SECONDARY AIR PUMP CONNECTOR AND CHASSIS GROUND.** Measure the resistance of the harness between secondary air pump connector and chassis ground. ***Connector & terminal*** ***(F11) No. 1 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **8**.	Repair the open circuit of the harness between secondary air pump connector and chassis ground.
8	**CHECK SECONDARY AIR PUMP RELAY.** 1) Connect the battery to terminals No. 12 and No. 13 of the secondary air pump relay. 2) Measure the resistance between secondary air pump relay terminals. ***Terminals*** ***No. 14 — No. 11:***	Is the resistance less than 1 Ω?	Go to step **9**.	Replace the secondary air pump relay. <Ref. to EN(STI)(diag)-10, Electrical Component Location.>
9	**CHECK SECONDARY AIR PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the secondary air pump relay connector and chassis ground. ***Connector & terminal*** ***(F9) No. 14 (+) — Chassis ground (–):*** ***(F9) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	Repair the open or short to ground in the power supply circuit.

Step		Check	Yes	No
10	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and secondary air pump relay connector. ***Connector & terminal (B135) No. 27 — (F9) No. 13:***	Is the resistance less than 1 Ω?	Repair the poor contact of ECM connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air pump relay connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect NG judging from secondary air delivery pipe pressure, pulse of secondary air delivery pipe pressure and secondary air pipe airflow amount.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Pump supply pressure check	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Ambient air temperature	≥ 4.4 °C (39.9 °F)
Secondary air pump	Operating
Combination valve both closed pulse diagnosis	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)/ 1000
Ambient air temperature	≥ 4.4 °C (39.9 °F)
Secondary air pump	Operating
Engine load	≥ 0.2 g/rev (0.01 oz/ rev)
Elapsed time after fuel cut	≥ 1000 ms
Pressure at switching RH combination valve (P2440)	≤ Pressure at switching LH combination valve
Pressure at switching LH combination valve (P2442)	< Pressure at switching RH combination valve
Combination valve changeover pressure diagnosis	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)/ 1000
Ambient air temperature	≥ 4.4 °C (39.9 °F)
Secondary air pump	= ON
Amount of intake air	< 25 g/s (0.88 oz/s)
Elapsed time after fuel cut	≥ 1000 ms
Overflow diagnosis	
Battery voltage	≥ 10.9 V

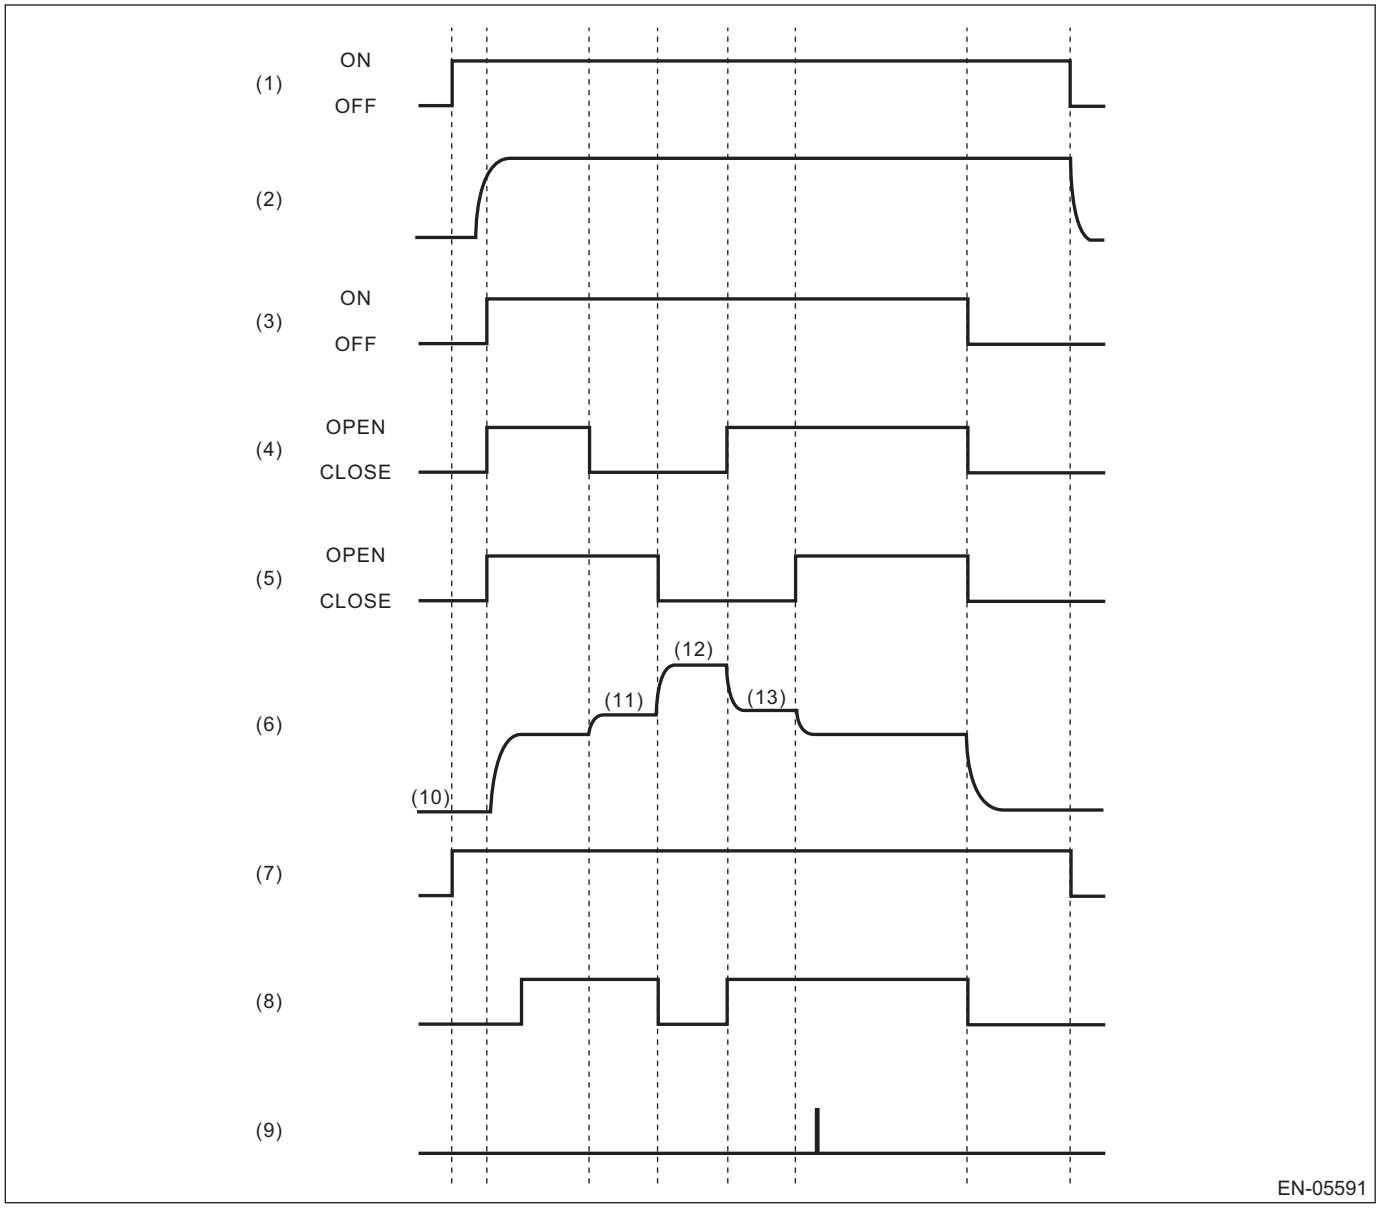
Secondary parameters	Execution condition
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)/ 1000
Ambient air temperature	≥ 4.4 °C (39.9 °F)
Secondary air pump	= ON
Amount of intake air	< 25 g/s (0.88 oz/s)
Elapsed time after fuel cut	≥ 1000 ms

3. GENERAL DRIVING CYCLE

Perform diagnosis during secondary air pump operation.

4. DIAGNOSTIC METHOD

Measure secondary air delivery pipe pressure, pulse of secondary air delivery pipe pressure and secondary air pipe airflow amount.



(1)	Ignition switch	(6)	Secondary air delivery pipe pressure (psi)	(10)	Barometric pressure (Pas) measurement before secondary air control
(2)	Engine speed	(7)	Diagnosis enable condition	(11)	Right bank all closed pressure (P0R) measurement
(3)	Secondary air pump operating status	(8)	Pump supply pressure check (judgment)	(12)	Both banks all closed pressure (P0RL) measurement
(4)	E-COMB valve (right hand) status	(9)	Flow amount check (judgment)	(13)	Left bank all closed pressure (P0L) measurement
(5)	E-COMB valve (left hand) status				

Pump supply pressure check

Perform the system function diagnosis with how much the pressure rises when the secondary air pump is turned from OFF to ON.

Judge as NG if delivery pipe pressure does not rise though it should when the secondary air pump turns OFF → ON.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Secondary air supply pipe pressure (after barometric pressure compensation)	< 0.9 kPa (7 mmHg, 0.3 inHg)	P0410

Time needed for diagnosis:4000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Combination valve both closed pulse diagnosis

Perform open stuck diagnosis of both combination valves using delivery pipe pressure pulse when both combination valves are closed. Determine which side of valves is stuck open by comparing the secondary air flow amount when RH combination valve is closed with that when LH combination valve is closed.
Calculate voltage pulse of the pump delivery pipe pressure when both combination valves are closed. The calculation should be small because there is no pulse from supply pipe pressure with both combination valves closed. When the calculation is large, determine that either of the combination valves is stuck open. Determine which side of valves is stuck open by comparing the secondary air flow amount when RH combination valve is closed with that when LH combination valve is closed. Air flow amount is larger on the open stuck valve.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pulse calculation value when both combination valves are closed Air flow amount when the right bank is closed	> Value of Map 8	P2440
Pulse calculation value when both combination valves are closed Air flow amount when the left bank is closed	> Value of Map 9	P2442

Time needed for diagnosis:992 ms + 992 ms + 992 ms + 4000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Combination valve changeover pressure diagnosis

Perform the RH combination valve stuck closed diagnosis with the variation of delivery pipe pressure when the RH combination valve turns closed → open.
Delivery pipe pressure should vary when the RH combination valve turns closed → open. When the variation is small, determine that the RH combination valve is stuck closed.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure variation value when the RH combination valve is switched	< Value of Map 4	P2441

Time needed for diagnosis:992 ms + 992 ms + 992 ms + 4000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.
Perform the LH combination valve stuck closed diagnosis with the variation of delivery pipe pressure when the LH combination valve turns open → closed.

Delivery pipe pressure should vary when the LH combination valve turns open → closed. When the variation is small, determine that the LH combination valve is stuck closed.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure variation value when the LH combination valve is switched	< Value of Map 5	P2443

Time needed for diagnosis:992 ms + 992 ms + 992 ms + 4000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

Overflow diagnosis

Perform secondary air system flow abnormality diagnosis using both sides of combination valves secondary air amount when both are closed.
Judge as secondary air system flow abnormality either if there is excessive secondary air flow amount with the RH combination valve closed, or if there is excessive secondary air flow amount with the LH combination valve closed.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Air flow amount when the right bank is closed (value from Map 4) or Air flow amount when the left bank is closed (value from Map 5)	> Value of Map 6 > Value of Map 7	P0411

Time needed for diagnosis:992 ms + 992 ms + 992 ms + 4000 ms

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CF:DTC P0411 SECONDARY AIR SYSTEM INCORRECT FLOW DETECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK SECONDARY AIR COMBINATION VALVE.** Check the pipe between the secondary air combination valve and cylinder head.	Is there damage or disconnection of the pipe?	Replace the pipe between secondary air combination valve and cylinder head. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Go to step **2**.
2	**CHECK SECONDARY AIR COMBINATION VALVE.** Race the engine at 2,000 rpm to check whether or not the exhaust leak is heard.	Is there any exhaust leak?	Replace the pipe between secondary air combination valve and cylinder head. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0410. <Ref. to EN(STI)(diag)-366, DTC P0410 SECONDARY AIR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CG:DTC P0413 SECONDARY AIR SYSTEM SWITCHING VALVE "A" CIRCUIT OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the secondary air combination valve relay 1. 4) Measure the resistance of harness between ECM connector and secondary air combination valve relay 1 connector. ***Connector & terminal*** ***(B135) No. 8 — (F9) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve relay 1 connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 1 CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and secondary air combination valve relay 1 connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the ECM output level differs from the actual terminal level.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Secondary air combination valve relay output	OFF

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34 V

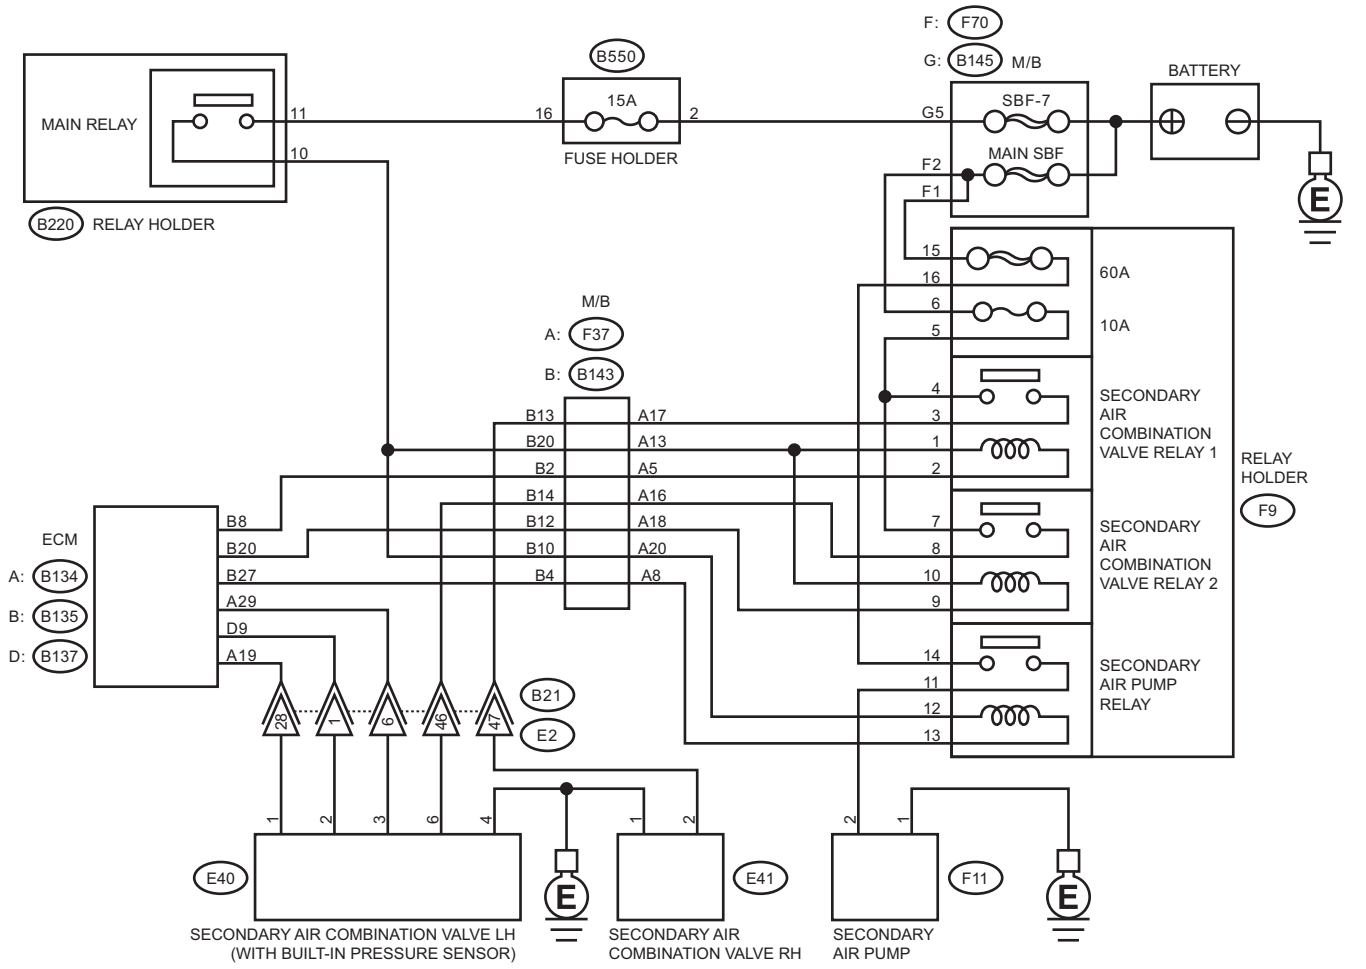
Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

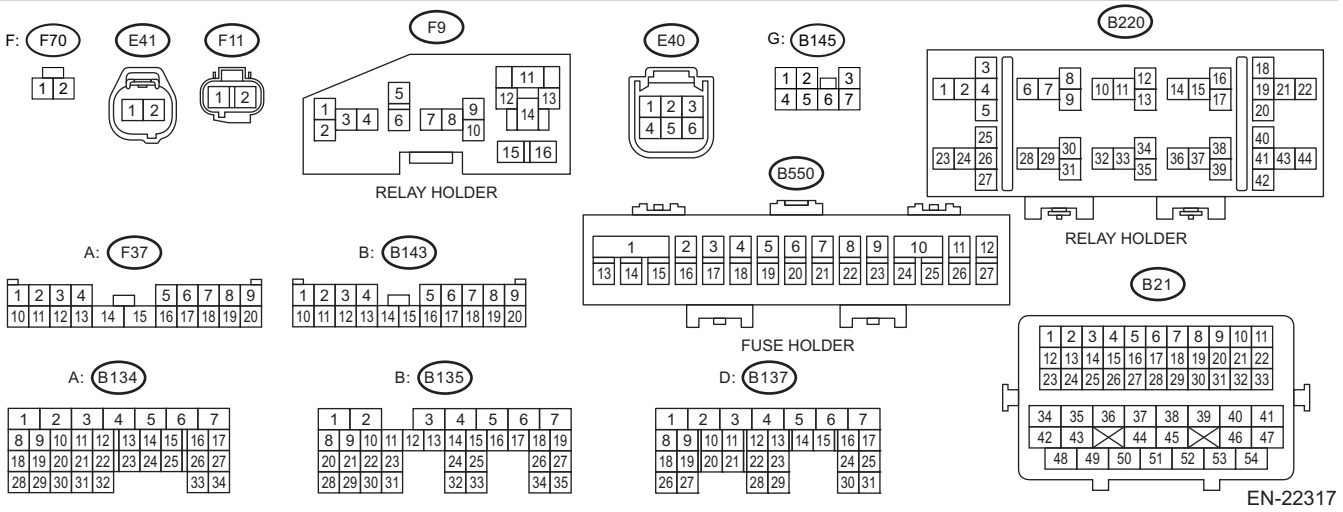
CH:DTC P0414 SECONDARY AIR SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the secondary air combination valve relay 1. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and secondary air combination valve relay 1 connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the ECM output level differs from the actual terminal level.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Secondary air combination valve relay output	ON

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 6 A

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CI: DTC P0416 SECONDARY AIR SYSTEM SWITCHING VALVE "B" CIRCUIT OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the secondary air combination valve relay 2. 4) Measure the resistance of harness between ECM connector and secondary air combination valve relay 2 connector. ***Connector & terminal*** ***(B135) No. 20 — (F9) No. 9:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve relay 2 connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 2 CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and secondary air combination valve relay 2 connector.

1. OUTLINE OF DIAGNOSIS

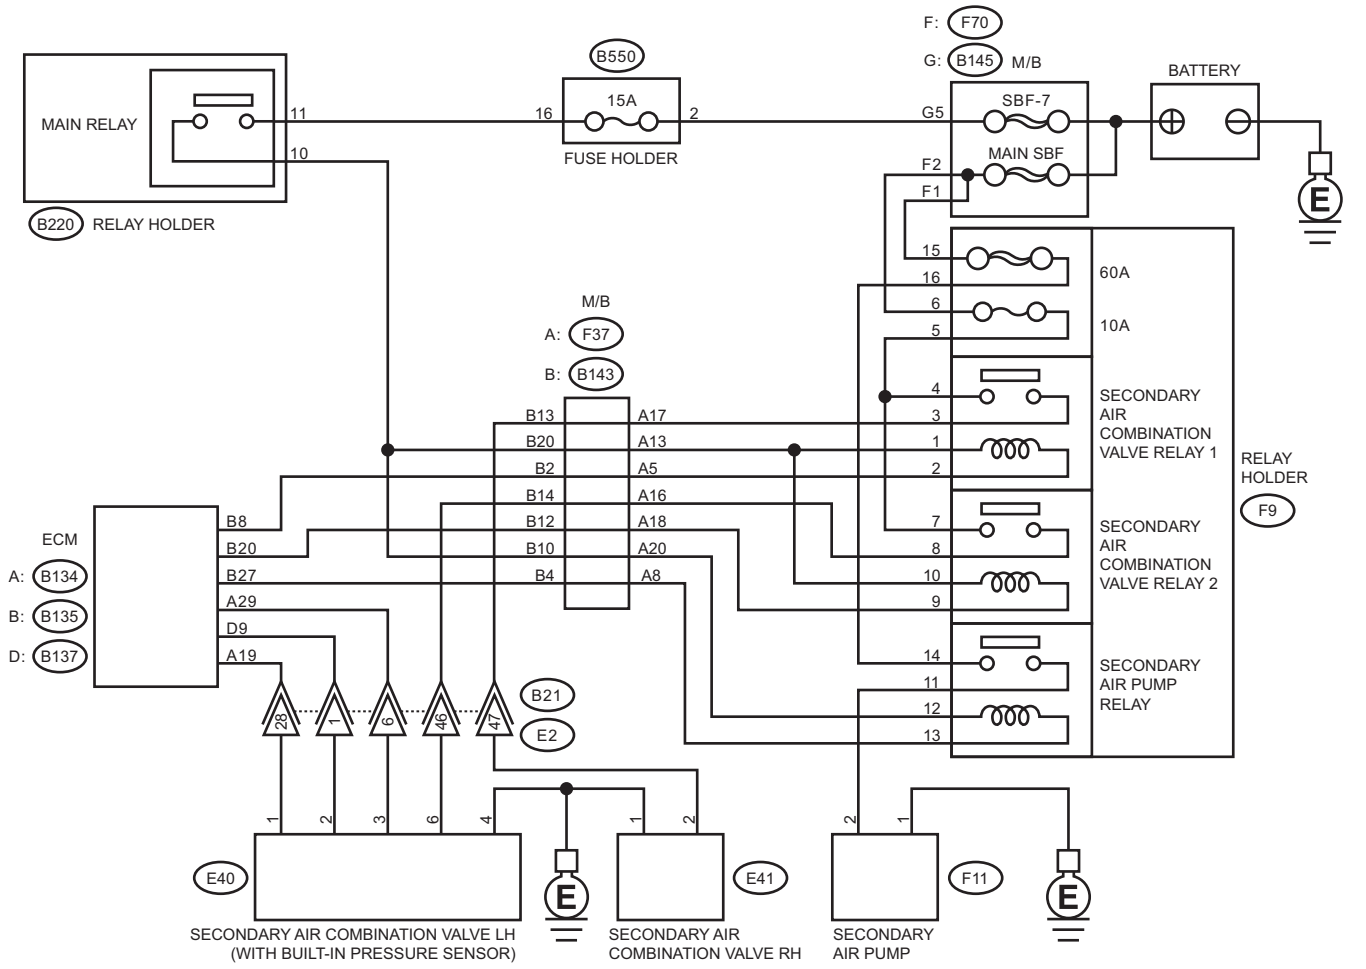
NOTE:
For the detection standard, refer to DTC P0413. <Ref. to EN(STI)(diag)-377, DTC P0413 SECONDARY AIR SYSTEM SWITCHING VALVE "A" CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

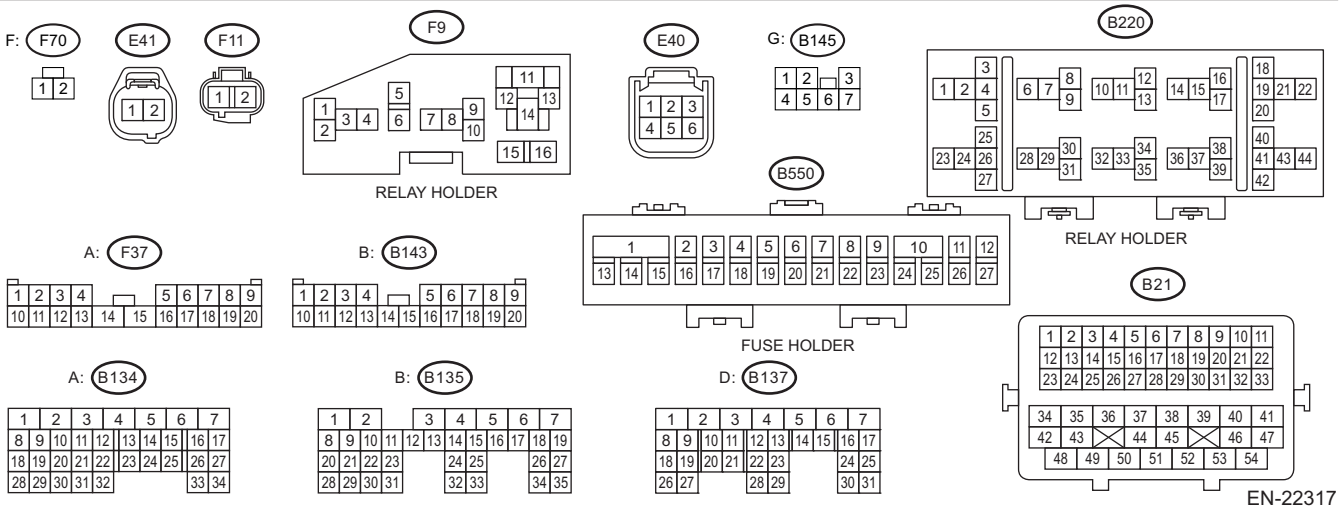
CJ:DTC P0417 SECONDARY AIR SYSTEM SWITCHING VALVE "B" CIRCUIT SHORTED

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the secondary air combination valve relay 2. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and secondary air combination valve relay 2 connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0414. <Ref. to EN(STI)(diag)-380, DTC P0414 SECONDARY AIR SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CK:DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Idle mixture is out of specifications.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

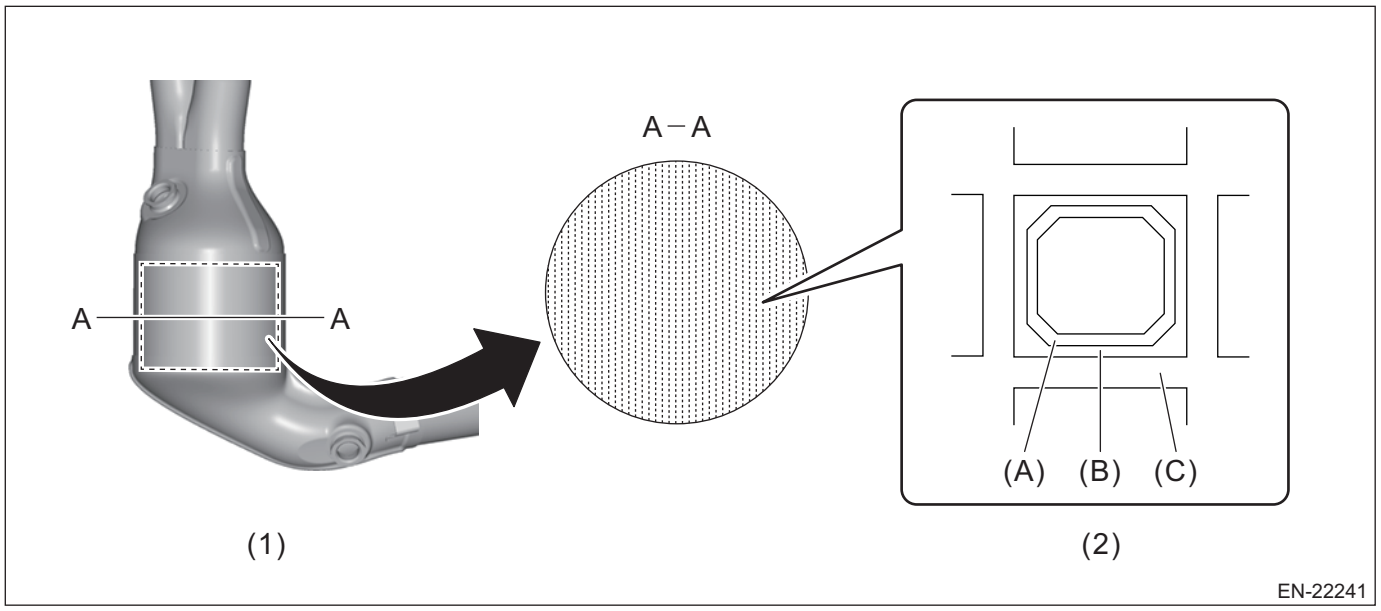
	Step	Check	Yes	No
1	**CHECK DTC AND FREEZE FRAME DATA.** 1) Read «Engine» DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> 2) Read the freeze frame data. <Ref. to EN(STI)(diag)-47, DISPLAY OF FREEZE FRAME DATA (OBD MODE), OPERATION, Subaru Select Monitor.> 3) Store the displayed DTC and freeze frame data.	Is other than DTC P0420 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE OIL CONSUMPTION.** Check the engine oil amount. <Ref. to LU(STI)-11, INSPECTION, Engine Oil.>	Is white smoke emitted from muffler?	Check the engine, and repair the defective part. <Ref. to ME(STI)-103, Symptoms and causes.> After repairing the engine, replace all the catalytic converters. <Ref. to EC(STI)-5, Front Catalytic Converter.> <Ref. to EC(STI)-6, Rear Catalytic Converter.>	Go to step **3**.
3	**CHECK EXHAUST SYSTEM.** Check the following items for the exhaust system. • Looseness and disconnection of nut and bolt • Exhaust gas leakage • Air suction • Hole in exhaust pipe	Is there any trouble?	Repair or replace the exhaust system. <Ref. to EX(STI)-2, General Description.>	Go to step **4**.

Step	Check	Yes	No
4 **CHECK CATALYTIC CONVERTER.** 1) Start the engine and warm up completely. 2) Using the Subaru Select Monitor, read the waveform data of rear oxygen sensor during idling. 3) Shake the connector between ECM and rear oxygen sensor and check the waveform. • At normal condition  • At abnormal condition (noise input) 	Is an abnormal waveform displayed?	Connect the connector after checking the following items, and check the waveform again while shaking the connector. • Check the connector connection condition of the section where waveform is abnormal, and repair or replace them if faulty. • When abnormality is not found, temporary poor contact of connector may be the cause.	Replace all the catalytic converters. <Ref. to EC(STI)-5, Front Catalytic Converter.> <Ref. to EC(STI)-6, Rear Catalytic Converter.>

1. OUTLINE OF DIAGNOSIS

To observe the performance of the Three-way Catalytic Converter (TWC), measure Oxygen Storage Capacity (OSC) using the front oxygen (A/F) sensor and the rear oxygen sensor.

2. COMPONENT DESCRIPTION



(1) Catalytic converter outer diagram
(2) Enlarged view of catalytic converter honeycomb cell
(A) Catalytic converter layer 1
(B) Catalytic converter layer 2
(C) Support

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Amount of intake air	< 8.5 g/s (0.3 oz/s)
Accelerator pedal position	= While idling
Rear oxygen output voltage after fuel cut	≤ 0.15 V
Estimated catalyst temperature	≥ 480 °C (896 °F)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)
(*Fuel shut-off function from the integrated intake air amount during fuel cut)	> 28 g (0.99 oz)
Fuel shut-off function from above	Not in operation

* Five seconds or more of fuel cut.

4. GENERAL DRIVING CYCLE

Perform diagnosis when each of the following conditions is experienced once while TWC, front oxygen (A/F) sensor and rear oxygen sensor are sufficiently warmed up: 10-second idling after more than predetermined time of deceleration fuel cut has passed, and 10-second driving with the accelerator ON after more than predetermined time of deceleration fuel cut has passed.

5. DIAGNOSTIC METHOD

When TWC performance falls, OSC performance also falls. In the diagnosis, malfunction will be detected with estimation of OSC performance by observing the time and air amount, etc. until the rear oxygen sensor voltage starts to rise after more than predetermined time of deceleration fuel cut has passed.

If the duration of time while the following conditions are met is within the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Oxygen Storage Capacity (OSC) of Catalytic	< 0.31 g (0.01 oz)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CL:DTC P0441 EVAP SYSTEM (CPC) INCORRECT PURGE FLOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0441 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE.** Operate the purge control solenoid valve using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.>	Does the purge control solenoid valve operate?	Go to step **3**.	Replace the purge control solenoid valve. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>
3	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** 1) Turn the ignition switch to OFF. 2) Make sure that the delivery mode fuse is removed.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of purge flow by the change of Evaporative Leak Check Module pressure sensor output value before/after purge introduction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Integrated purge gas amount since engine starting	≥ 10 g (0.35 oz)*
(Duration time of the purge control duty ratio = 0%	≥ 1500 ms
Purge control duty ratio from above)	≠ 0%
Ambient air temperature	> –25 °C (–13 °F)
Time when the second purge valve control is OFF	≥ 1500 ms
Time when the evaporative system leak check module switching valve is closed	< 25000 ms

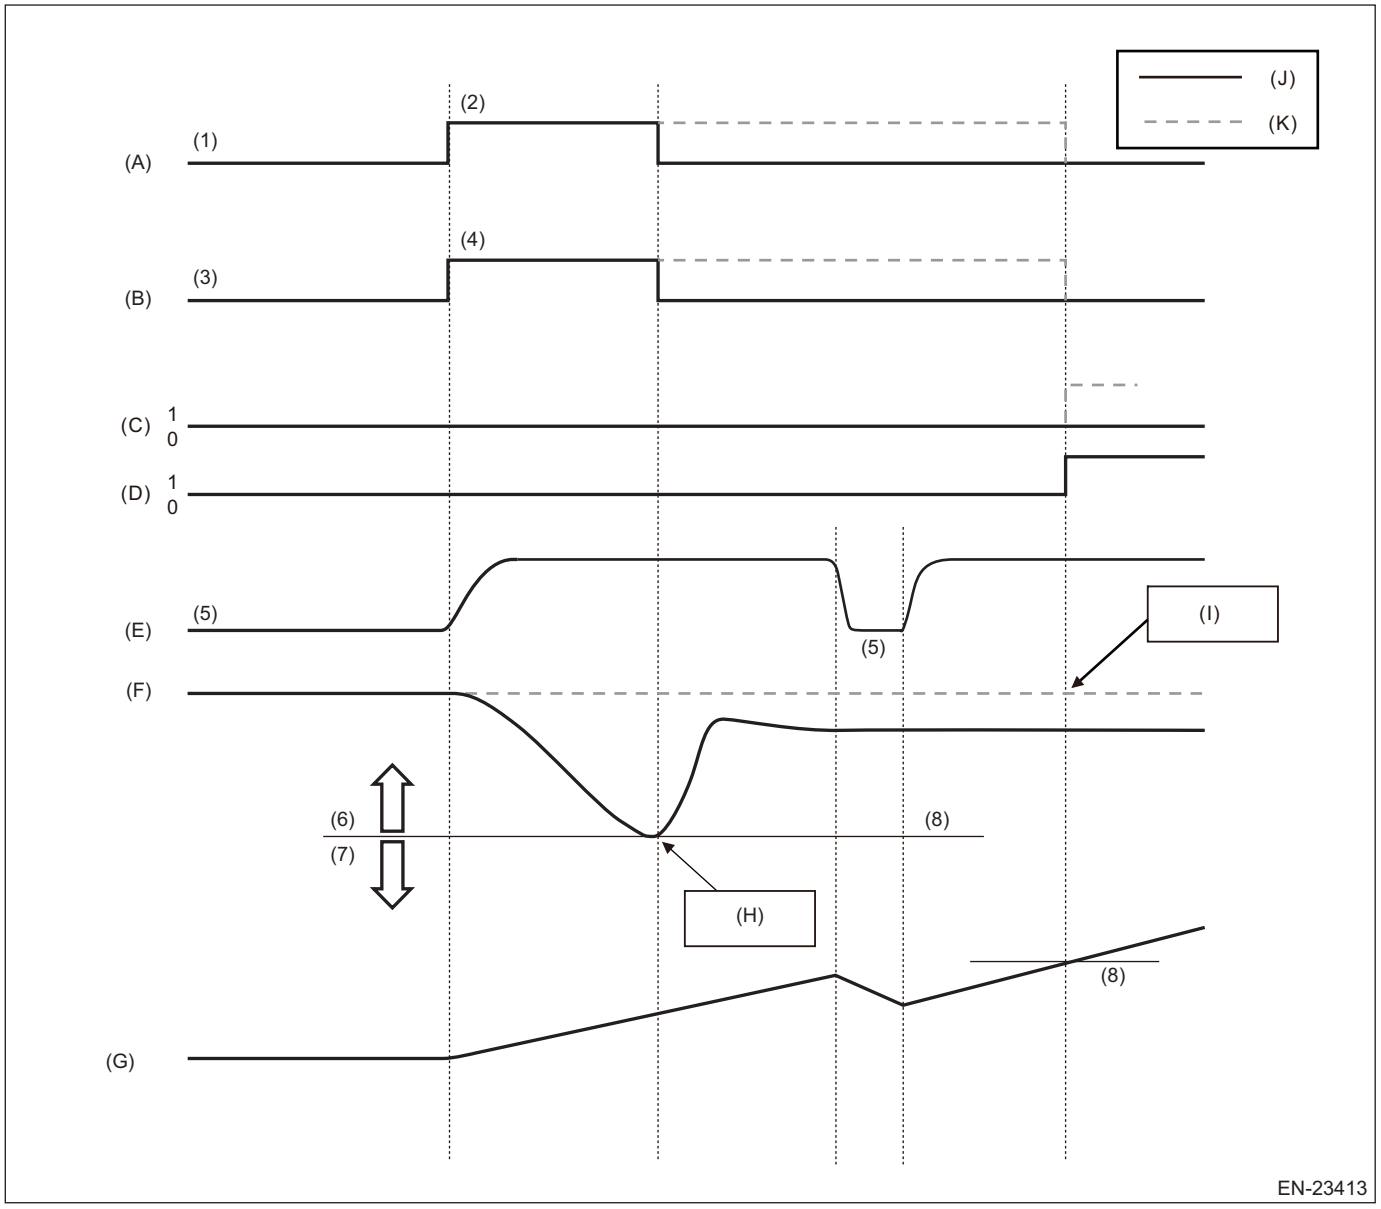
* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after engine start.

4. DIAGNOSTIC METHOD

Close the Evaporative Leak Check Module switching valve, and close the fuel tank completely, and perform the forced purging. If pressure change amount is –0.4 kPa (–3 mmHg, –0.1 inHg) or less, judge as malfunction of purge flow.



(1)	Disable	(4)	Close	(7)	Pass
(2)	Enable	(5)	0%	(8)	Threshold
(3)	Open	(6)	Fail		
(A)	Monitoring	(E)	Purge control duty ratio	(I)	Fail Judgment
(B)	Evaporative Leak Check Module switching valve	(F)	Evaporative Leak Check Module pressure (gauge)	(J)	Normal
(C)	FAIL flag	(G)	Integrated value of (purge gas*1 – the generated evaporative gas*2)	(K)	Malfunction
(D)	Numerator	(H)	Pass Judgment		

*1: The purge gas is calculated from the Manifold Absolute Pressure (MAP) and Commanded purge control duty ratio.
*2: The generated evaporative gas is the value calibrated under the high temperature in which the largest amount of evaporative gas is generated.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Evaporative system leak check module pressure (gauge)	> –0.4 kPa (–3 mmHg, –0.1 inHg)
Integrated purge gas amount	≥ 3 g (0.11 oz)*

* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.
Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CM:DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Fuel odor
- There is a hole of more than 1 mm (0.04 in) dia. in evaporation system or fuel tank.
- Fuel filler cap loose or lost

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK FUEL FILLER CAP.** Check the fuel filler cap. 1) Turn the ignition switch to OFF. 2) Check the fuel filler cap. NOTE: The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain has caught while tightening.	Is the fuel filler cap tightened securely?	Go to step **2**.	Tighten fuel filler cap securely.
2	**CHECK FUEL FILLER CAP.** Check the fuel filler cap.	Is the fuel filler cap genuine?	Go to step **3**.	Replace with a genuine fuel filler cap.
3	**CHECK FUEL FILLER PIPE GASKET.** Check the fuel filler pipe gasket.	Is there any damage to the seal between fuel filler cap and fuel filler pipe?	Repair or replace the fuel filler cap and fuel filler pipe. <Ref. to FU(STI)-78, Fuel Filler Pipe.>	Go to step **4**.
4	**CHECK PURGE CONTROL SOLENOID VALVE.** Check air-tightness of the purge control solenoid valve. <Ref. to EC(STI)-24, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step **5**.	Replace the purge control solenoid valve. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>
5	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** Check the line of evaporative emission control system.	Are there holes on the evaporation line?	Repair or replace the evaporation line. <Ref. to FU(STI)-98, Fuel Delivery, Return and Evaporation Lines.>	Go to step **6**.
6	**CHECK CANISTER.** Check the canister.	Are there holes on the canister?	Replace the canister. <Ref. to EC(STI)-7, Canister.>	Go to step **7**.
7	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the leak check valve assembly.	Are there damage or holes on the leak check valve assembly?	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Go to step **8**.

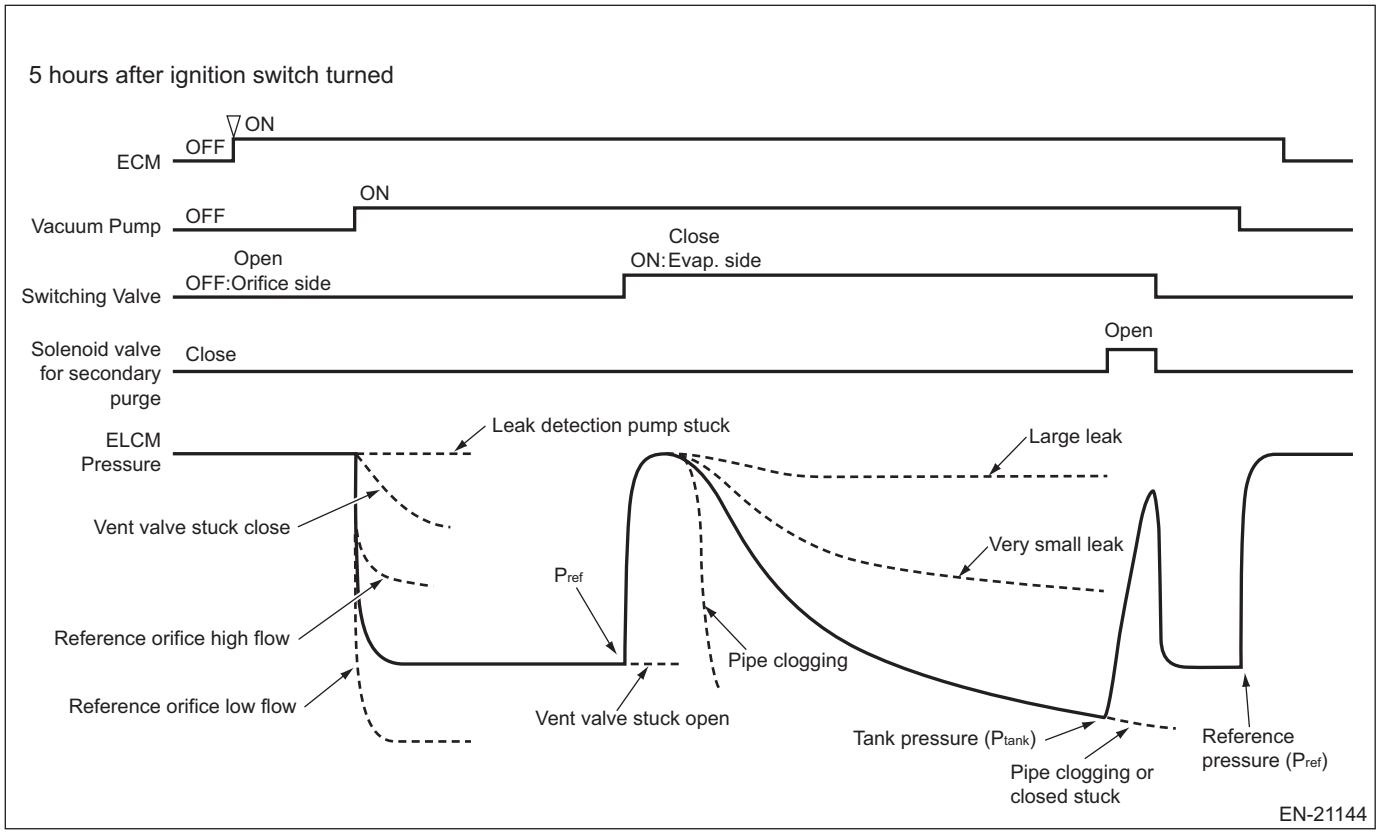
Step		Check	Yes	No
8	**CHECK FUEL TANK.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** 1) Remove the fuel tank. <Ref. to FU(STI)-67, Fuel Tank.> 2) Check the fuel tank condition.	Are there damage or holes on the fuel tank?	Repair or replace the fuel tank. <Ref. to FU(STI)-67, Fuel Tank.>	Go to step **9**.
9	**CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.**	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

This diagnosis judges whether the Evaporative Leak Check Module operation is normal or not, and whether the evaporative emission system has leak and clogging or not.
To purge the canister, after driving, perform the five hours soaking after ignition switch OFF in order to stabilize the evaporative gas status. * After 5 or 7 or 9.5 hours passed, ECM is activated by soaking timer, and the leak check is started.
Judges whether the Evaporative Leak Check Module operation is normal or not, by measuring the reference pressure status via reference orifice (0.02 inch orifice). Judge as malfunction if the reference pressure is out of specified range. Then, judge whether there is a leak or not, by comparing the pressure (leak pressure) when the reference pressure and the evaporative emission system are in negative pressure condition. Judge as system leak in the evaporative emission system if the leak pressure is higher than reference pressure. Judge as clogging of pipe if the leak pressure becomes lower than the reference pressure within the specified amount of time.
0.02 inch leak and 0.04 inch leak can be distinguished by measuring the leak pressure.
The diagnosis results are stored inside ECM until the engine is started again.
*: When the test conditions are not met in 5 hours, perform diagnosis at elapsed time of 7 hours. When the test conditions are not met in 7 hours, perform diagnosis at elapsed time of 9.5 hours.

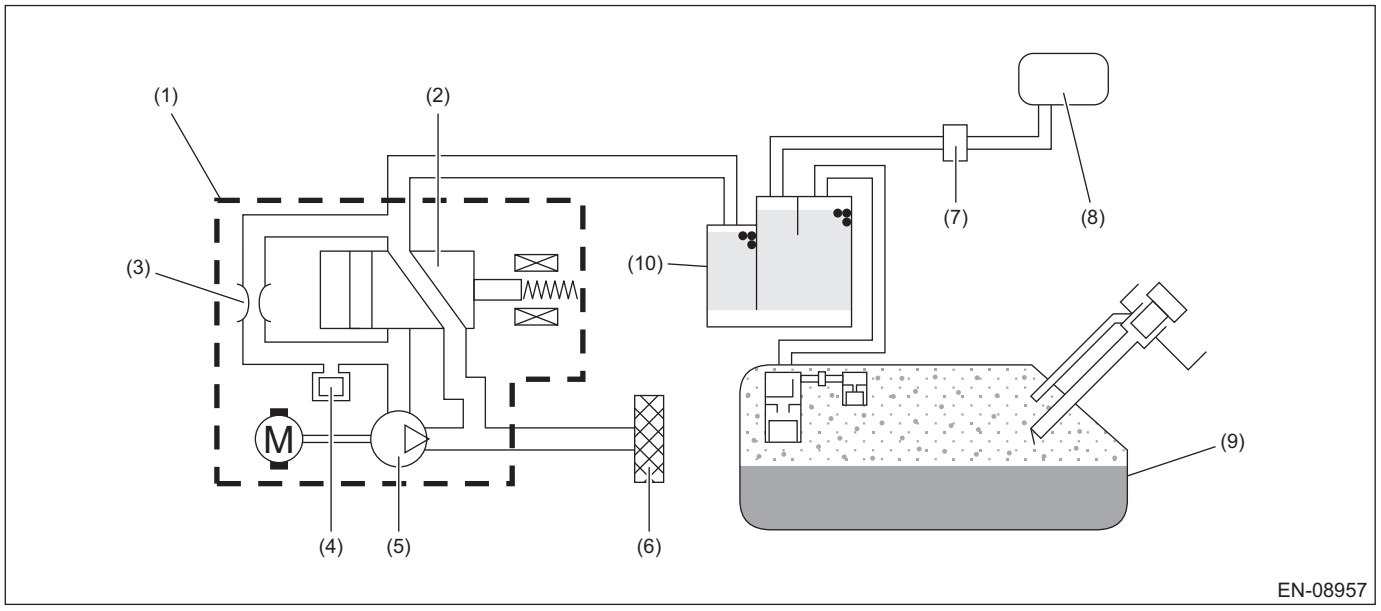
Diagnostic item	
Evaporative Leak Check Module system (Evaporative Leak Check Module main body)	Vacuum pump stuck Switching valve stuck to open Switching valve stuck to close Reference orifice flow large Reference orifice flow small
Leak check	Large leak • 0.04 inch leak • Fuel cap loose • Fuel cap off • System malfunction
	Very small leak • 0.02 inch leak
Clogging of pipe	—

OUTLINE OF DIAGNOSIS



2. COMPONENT DESCRIPTION

Evaporative Leak Check Module consists of the pressure sensor, the reference orifice (diameter of 0.02 inch), the vacuum pump which introduces the negative pressure into evaporative emission system, and the switching valve which switches the passage to introduce the negative pressure.



(1) Evaporative Leak Check Module
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Activation of soaking timer	Completed
Intake air temperature	≥ 4.4 °C (39.9 °F)
Engine coolant temperature	≥ 4.4 °C (39.9 °F) and < 45 °C (113 °F)
Accumulated purge amount during previous driving cycle	≥ Value of Map 1

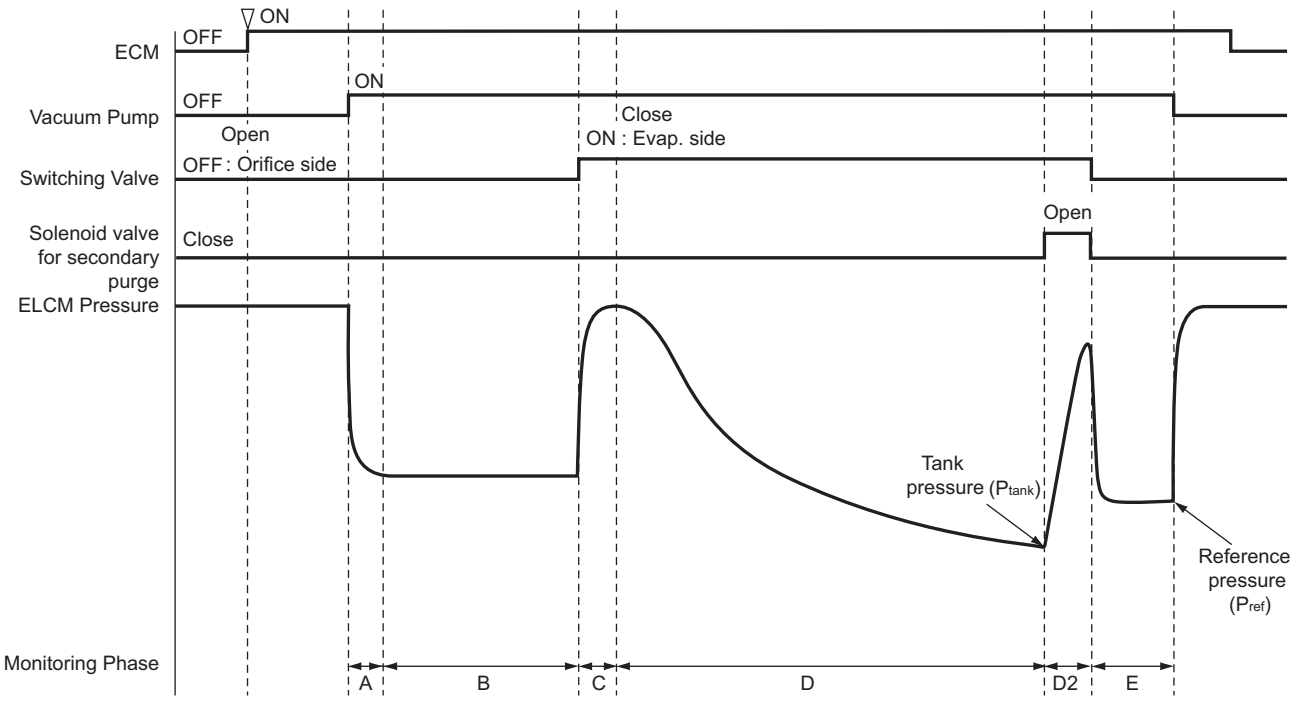
Map 1

Engine coolant temperature when ECM is activated after soak time °C (°F)	0 (32)	30 (86)	35 (95)	40 (104)	45 (113)
Accumulated purge amount during previous driving cycle (g (oz))	128 (4.51)	128 (4.51)	384 (13.54)	640 (22.57)	896 (31.6)

4. GENERAL DRIVING CYCLE

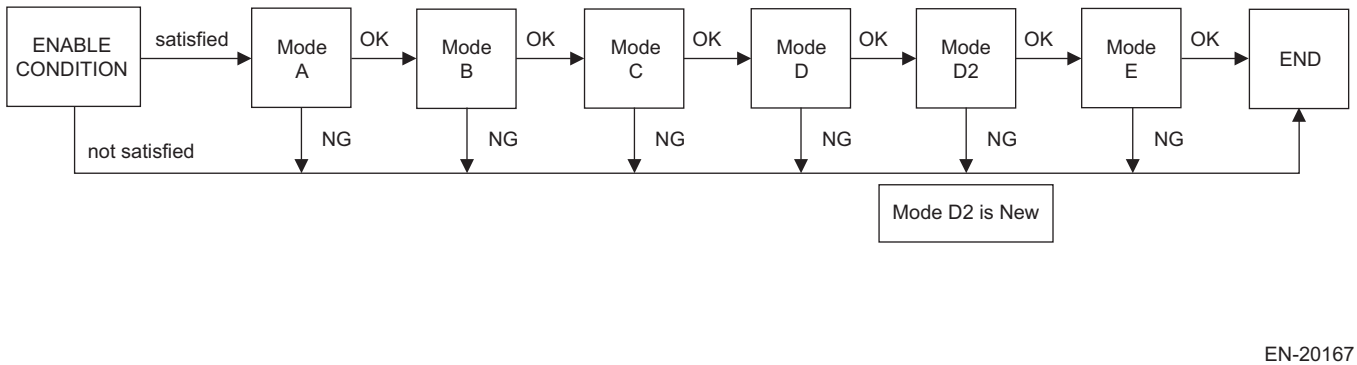
Perform the diagnosis only once when 5 or 7 or 9.5 hours has passed after ignition switch is OFF. For more detail, refer to “OUTLINE OF DIAGNOSIS”. <Ref. to EN(STI)(diag)-397, OUTLINE OF DIAGNOSIS, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

5. DIAGNOSTIC METHOD



EN-23387

Mode	Explanation of Mode	Diagnosis Period
A	Vacuum pump operation confirmation and characteristics stability	7 s
B	Measurement of reference pressure for setting the target negative pressure	350 s
C	Switching valve operation confirmation	12 s
D	Pipe clogging diagnosis and leak pressure measurement	900 s
D2	Pipe clogging diagnosis of high-pressure line	60 s
E	Reference pressure measurement for judgment	50 s



EN-20167

Mode A (Vacuum pump operation confirmation and characteristics stability)

Purpose: Detect the vacuum pump operation trouble.
Judge as NG when the following conditions are established.
Judge as OK if the following conditions are not established, and warm up for five minutes to stabilize the vacuum pump characteristics.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value	> –224 Pa (–1.68 mmHg, –0.1 inHg)	P2404

Mode B (Measurement of reference pressure for setting the target negative pressure)

Judgment 1
Purpose: Judge the reference pressure stability.
Judgment 2
Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1		P2404
|Pressure sensor maximum output value – Pressure sensor minimum output value|	> 314 Pa (2.355 mmHg, 0.1 inHg)	
or		
Judgment 2		
Reference pressure for setting the target negative pressure	< Value of Map 2	
or		
Judgment 3		
Reference pressure for judgment	> Value of Map 3	

Map 2

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure (kPa (mmHg, inHg))	–4 (–29.79, –1.2)	–4.1 (–30.593, –1.2)	–4.2 (–31.395, –1.2)	–4.3 (–32.19, –1.3)

Map 3

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure (kPa (mmHg, inHg))	–0.9 (–7.065, –0.3)	–1 (–7.86, –0.3)	–1.2 (–8.663, –0.3)	–1.3 (–9.465, –0.4)

Mode C (Switching valve operation confirmation)

Purpose: Measure the pressure increase when switching valve is changed from open to close, and detect the stuck to open/close malfunctions of the switching valve.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value – Reference pressure for setting the target negative pressure	< 224 Pa (1.68 mmHg, 0.1 inHg)	P2404

Mode D (Clogging of pipe diagnosis and leak pressure measurement)

1. **Clogging of pipe**
   Purpose: Measure the time required for the evaporative emission system to reach the target negative pressure by the vacuum pump, and detect the clogging of pipe trouble.
   Judge as clogging of pipe malfunction if the evaporative emission system reaches to the target negative pressure within the specified time.
2. **Leak pressure measurement**
   Purpose: Measure the pressure (leak pressure) when the evaporative emission system becomes the negative pressure by the vacuum pump.
   Store the pressure as a leak pressure while the following conditions are met.

Phase D

Judgment value

Malfunction Criteria	Threshold Value	DTC
Phase D Time for reaching the target	≤ 27000 ms	P1451
Phase D2 Reference pressure for setting the target negative pressure	< –0.7 kPa (–5 mmHg, –0.2 inHg)	P04AF
<Large leak (0.04 inch)> Leak pressure	≥ Value of Map 6	P0455
<Very small leak (0.02 inch)> Leak pressure	> Reference pressure of 0.018 inch (Pa) and < Value of Map 6	P0456

Map 6

Reference pressure (Pa)	–4856	–4000	–2750	–1500	–824
Threshold Value (Pa)	–1785	–1463	–991	–520	–265

Formula for threshold value = Reference pressure × 0.377 – –0.341 mmHg
Time needed for diagnosis: 24 min

Mode E (Measurement of reference pressure for judgment)

Judgment 1
Purpose: Judge the reference pressure stability.
Judge as NG when the following conditions are established.
Judgment 2
Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions.
Judge the vacuum pump performance stability.
Judge as NG when the following conditions are established.
Judgment 3
Purpose: Judge the presence of evaporative emission system leak.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Judgment 1 |Pressure sensor maximum output value – Pressure sensor minimum output value|	> 314 Pa (2.355 mmHg, 0.1 inHg)	P2404
or Judgment 2 Reference pressure for judgment	< Value of Map 4 or > Value of Map 5	P2404
or Judgment 3 |Reference pressure for setting the target negative pressure – Reference pressure for judgment|	> 941 Pa (7.058 mmHg, 0.3 inHg)	P2404

Map 4

Barometric pressure (kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment (kPa (mmHg, inHg))	–4.5 (–34.02, –1.3)	–4.6 (–34.815, –1.4)	–4.7 (–35.618, –1.4)	–4.9 (–36.42, –1.4)

Map 5

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment (kPa (mmHg, inHg))	–0.8 (–6.18, –0.2)	–0.9 (–6.983, –0.3)	–1 (–7.785, –0.3)	–1.1 (–8.58, –0.3)

Time needed for diagnosis: Approx. 24 min
Malfunction will be confirmed at next engine start.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CN:DTC P0456 EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)

NOTE:
For the diagnostic procedure, refer to DTC P0455. <Ref. to EN(STI)(diag)-396, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(STI)(diag)-396, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CO:DTC P0458 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

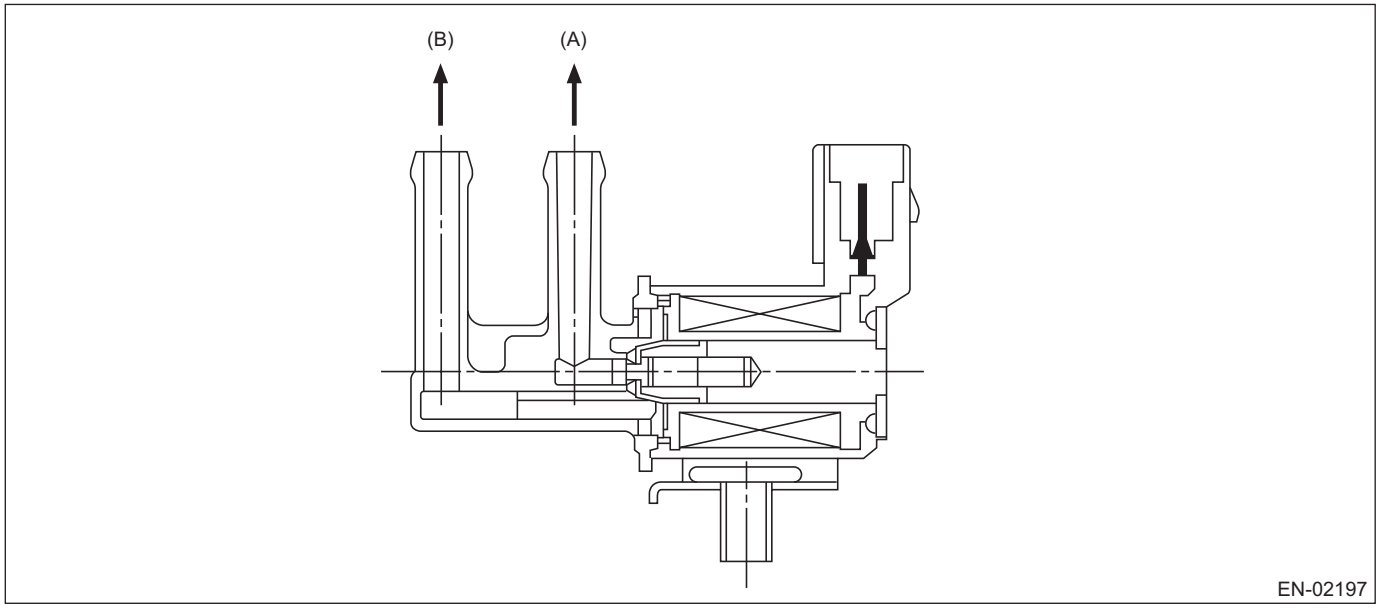
	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE CONNECTOR.** Measure the voltage between purge control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E4) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the purge control solenoid valve. 4) Measure the resistance between the purge control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E4) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and purge control solenoid valve connector.
5	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE CONNECTOR.** Measure the resistance of harness between ECM connector and purge control solenoid valve connector. ***Connector & terminal*** ***(B137) No. 6 — (E4) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and purge control solenoid valve connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK PURGE CONTROL SOLENOID VALVE.** 1) Remove the purge control solenoid valve. 2) Measure the resistance between purge control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair the poor contact of purge control solenoid valve connector.	Replace the purge control solenoid valve. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of “ON”	< 0.75

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CP:DTC P0459 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

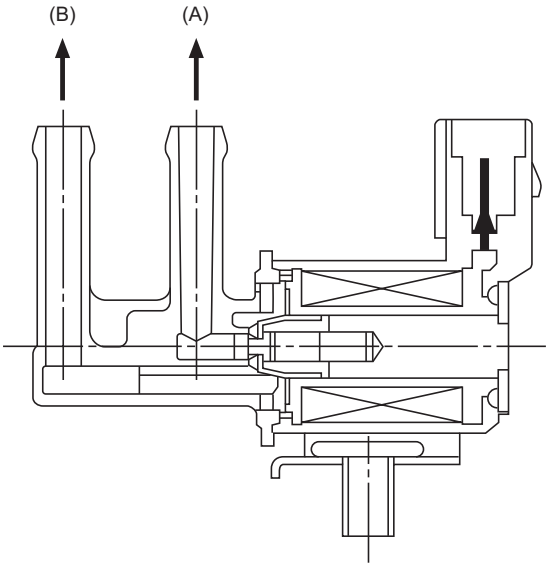
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the purge control solenoid valve. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and purge control solenoid valve connector.	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between purge control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the purge control solenoid valve. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



EN-02197

(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of “ON”	≥ 0.25

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 12 A

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CQ:DTC P0461 FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

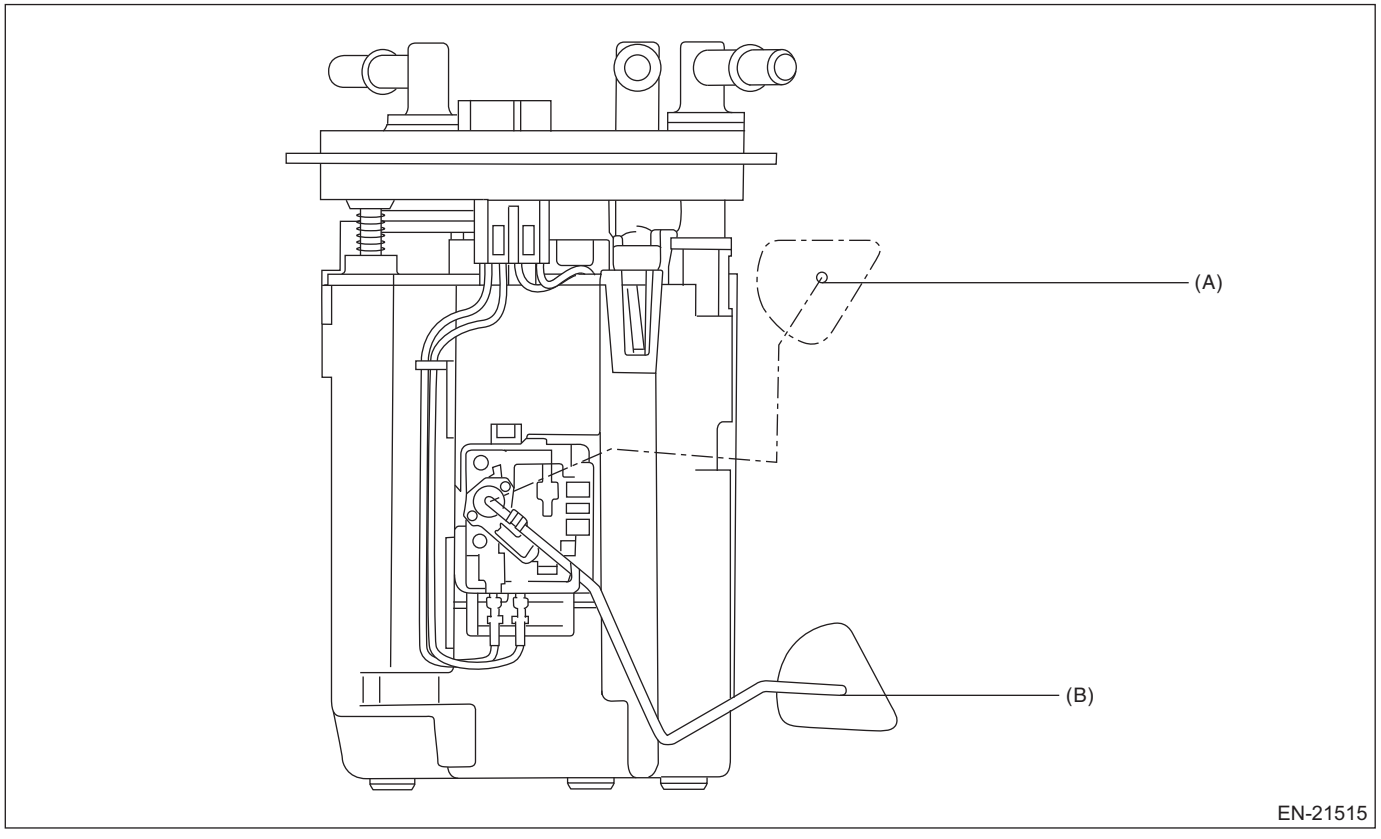
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0461 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Replace the fuel level sensor and fuel sub level sensor. <Ref. to FU(STI)-86, Fuel Level Sensor.> <Ref. to FU(STI)-87, Fuel Sub Level Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the fuel level sensor output property.
If the fuel level does not vary in a particular driving condition / engine condition where it should, judge as NG.

2. COMPONENT DESCRIPTION



(A) FULL 8.7 Ω (B) EMPTY 139.1 Ω

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 5000 ms
Accumulated amount of intake air	≥ 82687.5 g (2916.39 oz)

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Max. – min. values of fuel level output	< 2.6 L (0.69 US gal, 0.57 Imp gal)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

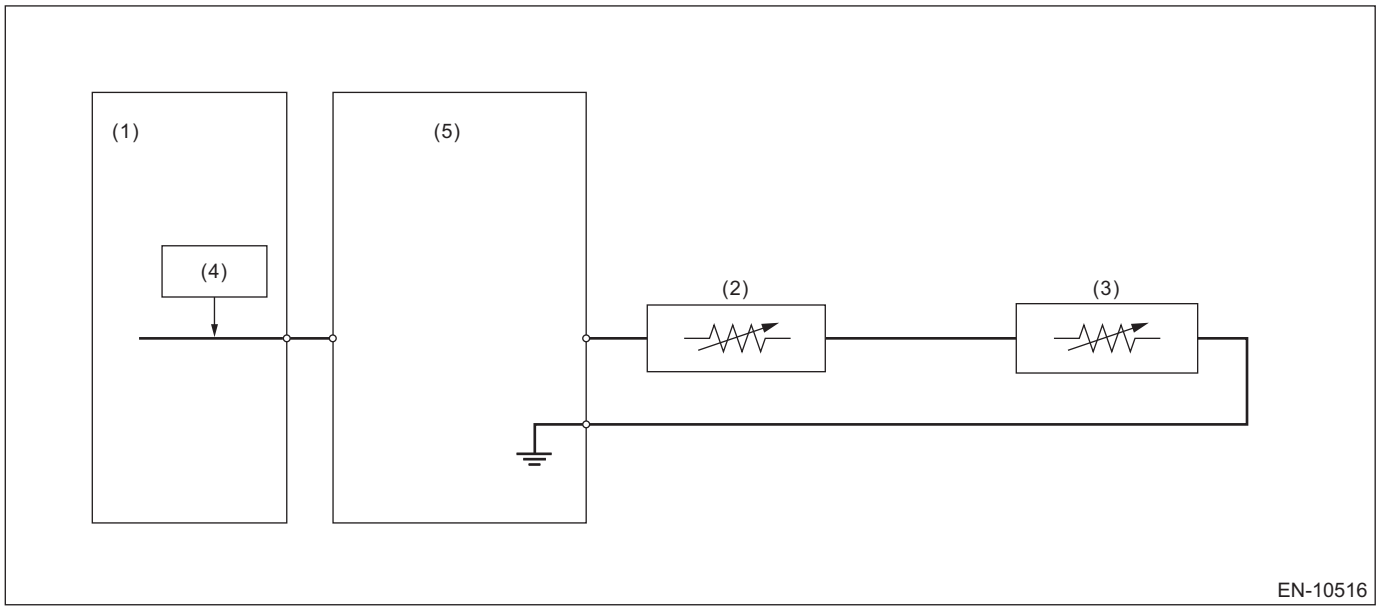
CR:DTC P0462 FUEL LEVEL SENSOR "A" CIRCUIT LOW

NOTE:
For the diagnostic procedure, refer to DTC P0463. <Ref. to EN(STI)(diag)-414, DTC P0463 FUEL LEVEL SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel level sensor. Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel sub level sensor
(3) Fuel level sensor
(4) Detecting circuit
(5) Combination meter

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 3000 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 2.211 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CS:DTC P0463 FUEL LEVEL SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

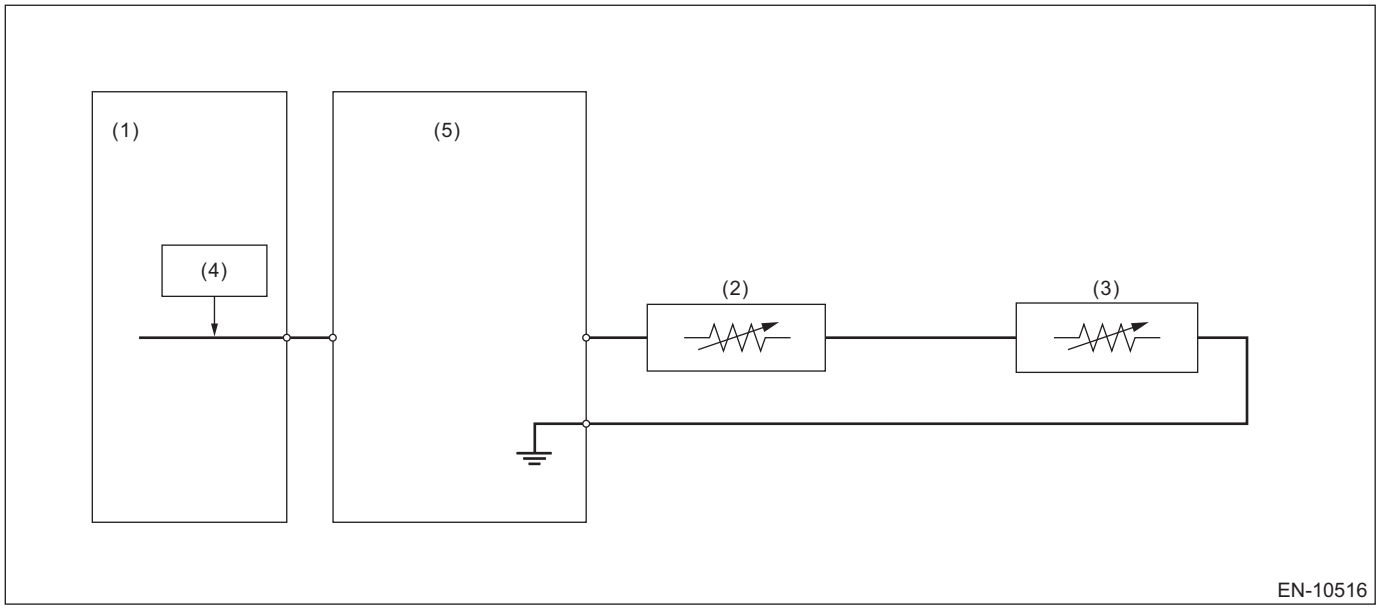
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTC P0462 or P0463 displayed? (Current malfunction)	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel level sensor. Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel sub level sensor
(3) Fuel level sensor
(4) Detecting circuit
(5) Combination meter

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 12 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CT:DTC P04AC EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT LOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** Measure the voltage between purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 2. 4) Measure the resistance between the purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and purge control solenoid valve 2 connector.
5	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** Measure the resistance of harness between ECM connector and purge control solenoid valve 2 connector. ***Connector & terminal*** ***(B137) No. 15 — (E52) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and purge control solenoid valve 2 connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK PURGE CONTROL SOLENOID VALVE 2.** 1) Remove the purge control solenoid valve 2. 2) Measure the resistance between purge control solenoid valve 2 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair the poor contact of the purge control solenoid valve 2 connector.	Replace the purge control solenoid valve 2. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve 2.
Judge as NG when the ECM output level differs from the actual terminal level.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid valve 2 drive signal	OFF

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CU:DTC P04AD EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 2. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and purge control solenoid valve 2 connector.	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE 2.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between purge control solenoid valve 2 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the purge control solenoid valve 2. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve 2.
Judge as NG when the ECM output level differs from the actual terminal level.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid valve 2 drive signal	ON

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 12 A

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CV:DTC P04AF EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK BETWEEN CANISTER AND PURGE CONTROL VALVE 2.** Check the piping between the canister and the purge control valve 2.	Is there clogging in the piping between the canister and the purge control valve 2?	Repair or replace the piping between the canister and the purge control valve 2. <Ref. to FU(STI)-98, Fuel Delivery, Return and Evaporation Lines.>	Go to step **2**.
2	**CHECK BETWEEN CANISTER AND PURGE CONTROL VALVE 2.** Check the piping between the canister and the purge control valve 2.	Is there closed stuck state in the piping between the canister and the purge control valve 2?	Repair or replace the purge control valve 2. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>	Go to step **3**.
3	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there clogging in the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve 2 and the turbocharger. <Ref. to IN(STI)-15, Turbocharger.>	Go to step **4**.
4	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(STI)(diag)-65, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P04AF displayed on the display?	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	End.

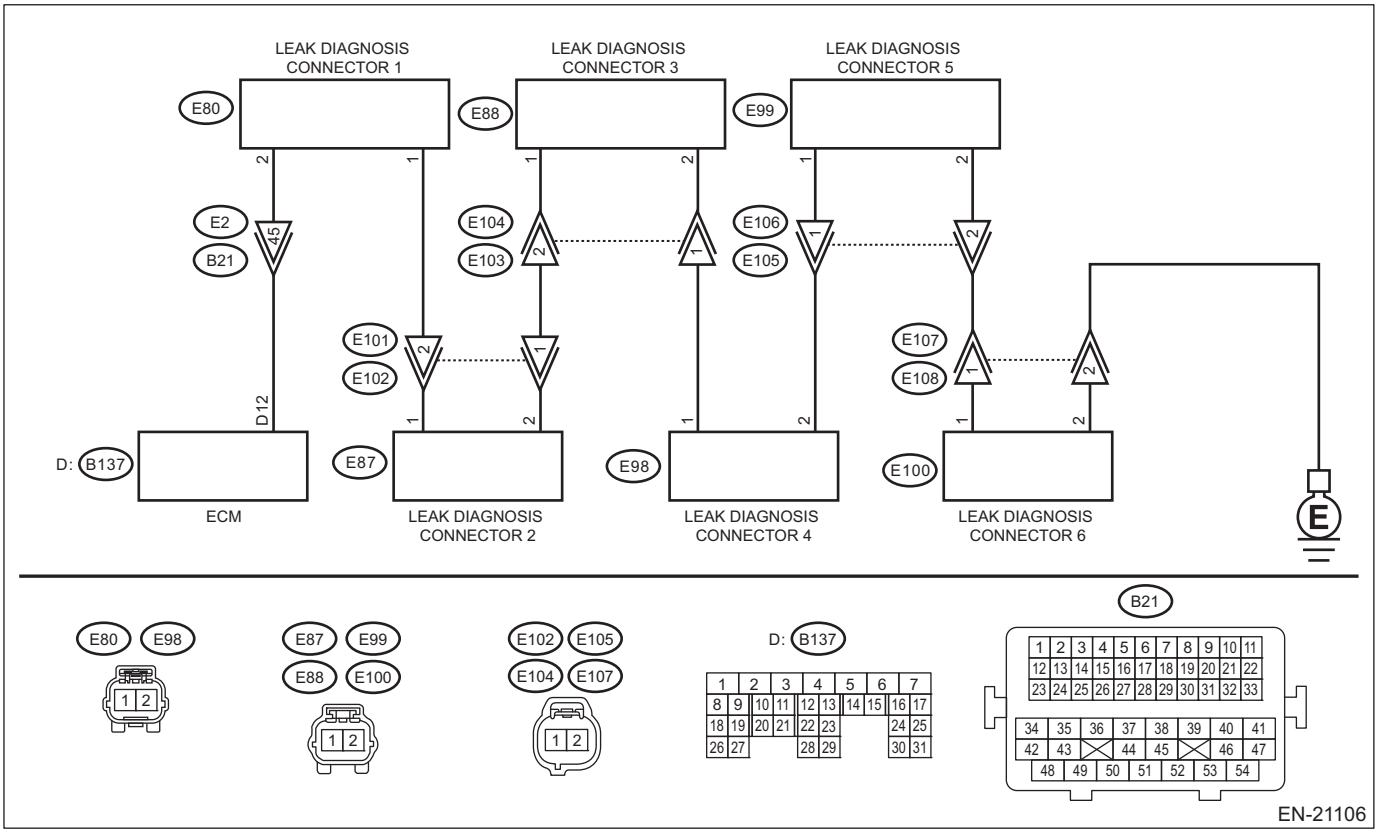
1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(STI)(diag)-396, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CW:DTC P04DB CRANKCASE VENTILATION SYSTEM (PCV) DISCONNECTED

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



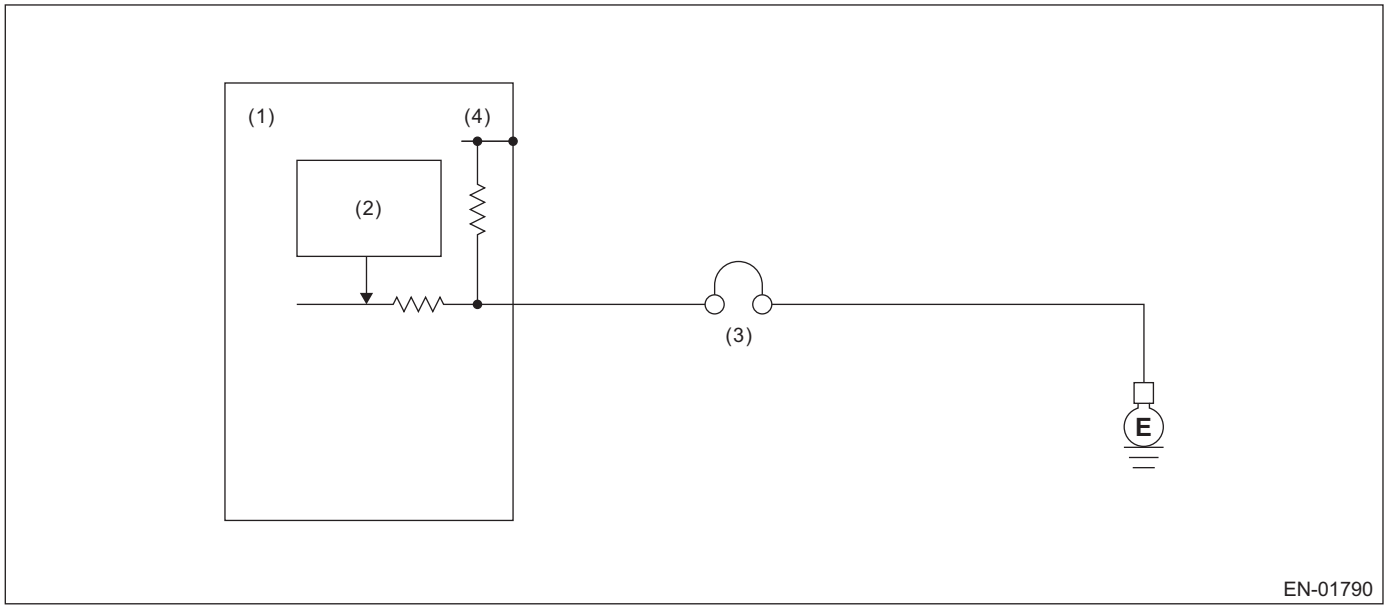
Step		Check	Yes	No
1	**CHECK BLOW-BY HOSE.** Check the blow-by hose condition.	Is there any disconnection or crack in blow-by hose?	Install or replace the blow-by hose.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND PCV HOSE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the PCV hose assembly. 4) Measure the resistance of harness between ECM connector and PCV hose assembly connector. ***Connector & terminal*** ***(B137) No. 12 — (E80) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and PCV hose assembly connector • Poor contact of coupling connector

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND PCV HOSE ASSEMBLY CONNECTOR.** Measure the resistance between PCV hose assembly connector and chassis ground. ***Connector & terminal*** ***(B137) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and PCV hose assembly connector.
4	**CHECK HARNESS BETWEEN LEAK DIAGNOSIS CONNECTORS.** Measure the resistance of harness between each of leak diagnosis connector. ***Connector & terminal*** ***(E80) No. 1 — (E87) No. 1:*** ***(E87) No. 2 — (E88) No. 1:*** ***(E88) No. 2 — (E98) No. 1:*** ***(E98) No. 2 — (E99) No. 1:*** ***(E99) No. 2 — (E100) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in the wiring harness between leak diagnosis connectors.
5	**CHECK GROUND CIRCUIT OF PCV HOSE ASSEMBLY.** Measure the resistance of harness between PCV hose assembly connector and engine ground. ***Connector & terminal*** ***(E87) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **6**.	Repair the open circuit in harness between PCV hose assembly connector and engine ground.
6	**CHECK PCV HOSE ASSEMBLY.** Measure the resistance between terminals of each leak diagnosis connector. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω at all measurement?	Repair the poor contact of ECM and PCV hose assembly connector.	Replace the PCV hose assembly. <Ref. to EC(STI)-51, PCV Hose Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the blow-by hose disconnection abnormality.
Judge as NG when the diagnosis terminal voltage is high.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Detecting circuit
(3) PCV diagnosis connector
(4) 5 V

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Positive crankcase ventilation diagnosis voltage	≥ 5.9 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CX:DTC P04F0 EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P04F0 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there dislocation of the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve 2 and the turbocharger. <Ref. to IN(STI)-15, Turbocharger.>	Go to step **3**.
3	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there clogging in the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve 2 and the turbocharger. <Ref. to IN(STI)-15, Turbocharger.>	Go to step **4**.
4	**CHECK PURGE CONTROL VALVE 2.** Check the purge control valve 2.	Is there closed or open stuck state in the purge control valve 2?	Repair or replace the purge control valve 2 or leak check valve. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.> <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Go to step **5**.
5	**CHECK PURGE CONTROL VALVE 1.** Check the main body of the purge control valve 1.	Is there any leakage in the main body of the purge control valve 1?	Repair or replace the purge control valve 1. <Ref. to EC(STI)-24, Purge Control Solenoid Valve.>	Go to step **6**.
6	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** 1) Turn the ignition switch to OFF. 2) Make sure that the delivery mode fuse is removed.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK VACUUM PUMP OPERATION OF LEAK CHECK VALVE ASSEMBLY.** Check the vacuum pump operation of the leak check valve assembly. <Ref. to EC(STI)-48, INSPECTION, Leak Check Valve Assembly.>	Does the vacuum pump operate?	Go to step **8**.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>
8	**CHECK SWITCHING VALVE OPERATION OF LEAK CHECK VALVE ASSEMBLY.** Check the switching valve operation of the leak check valve assembly. <Ref. to EC(STI)-48, INSPECTION, Leak Check Valve Assembly.>	Does the switching valve operate?	End.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

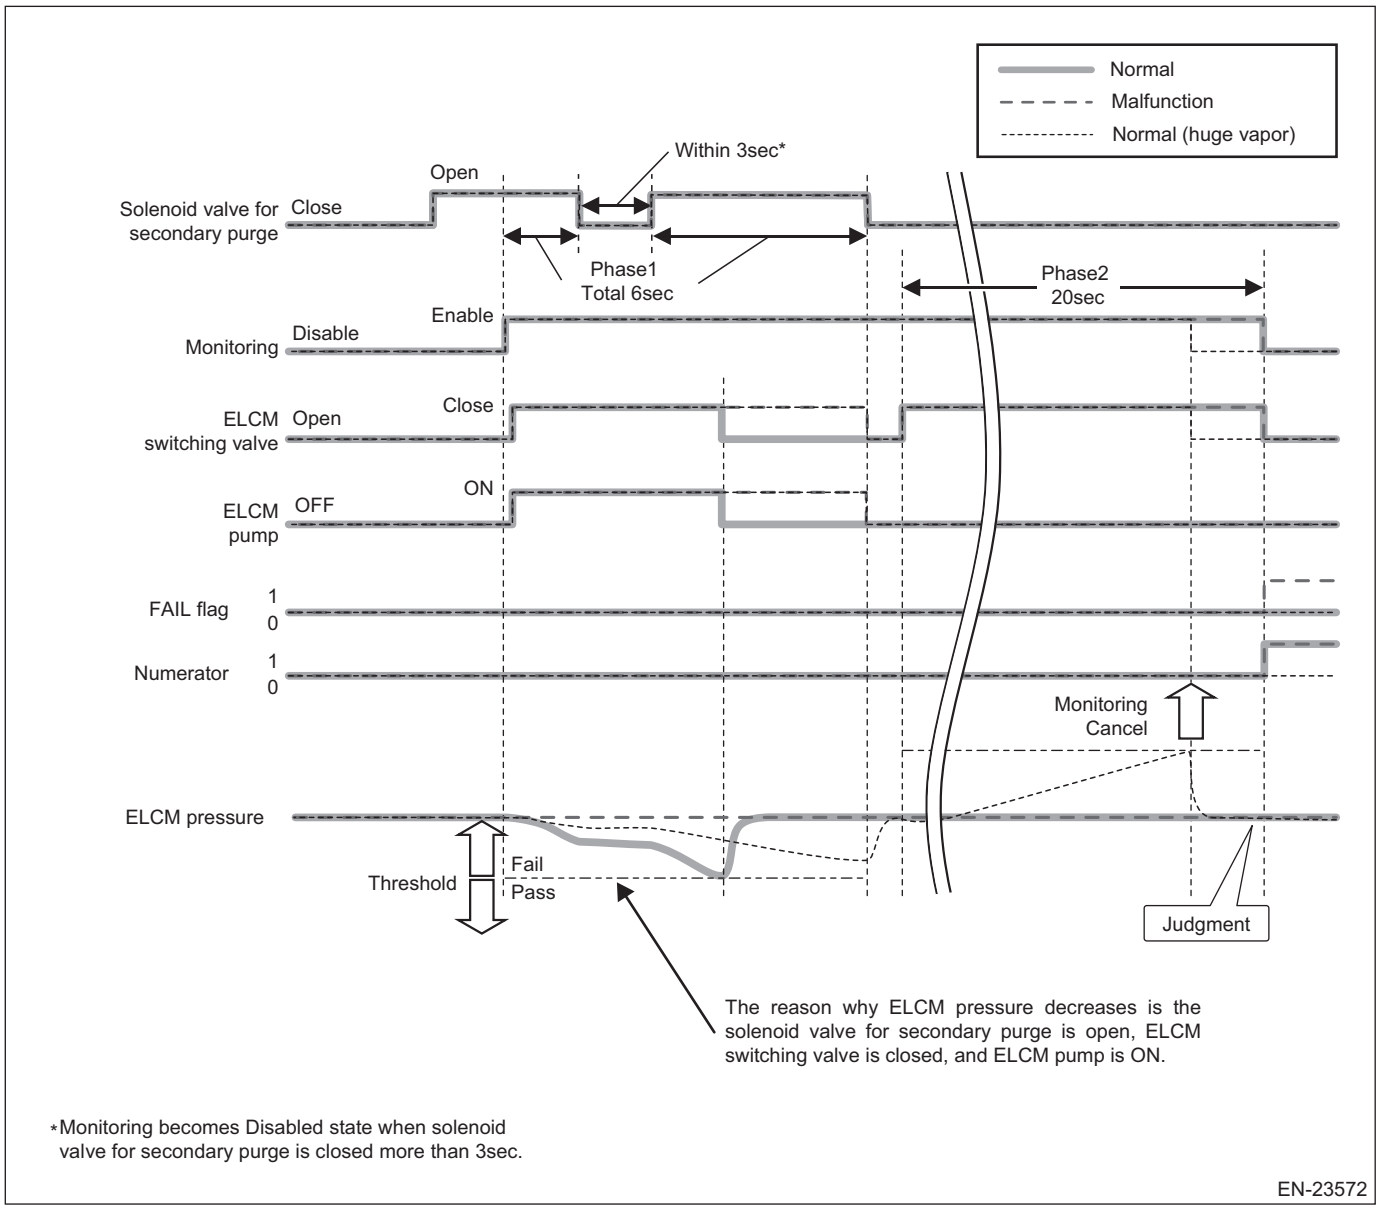
Monitor Method

This monitor intrusively performs a functional check to detect incorrect purge flow when the engine is running in very high boost conditions.

Theory of operation: At very high boost conditions, the pressure drop caused by the air filter creates a slight vacuum in the high pressure purge line. Refer to following Figure 1.

Phase 1: The monitor removes the air in EVAP system by closing the Evaporative Leak Check Module switching valve and Evaporative Leak Check Module pump is intrusively activated when the solenoid valve for high pressure purge is open and all enable conditions are satisfied. In the case of normal condition, Evaporative Leak Check Module pressure (gauge) will decrease to reach the threshold value. However, if the hose is disconnected, the Evaporative Leak Check Module pressure will remain above the threshold value.

Phase 2: Since there is a possibility that a large amount of EVAP vapor is generated during Phase 1, the monitor may determine a false fail. To prevent this condition, the EVAP system is sealed and the pressure is measured again after a predetermined time (following Phase 1). If the measured pressure exceeds a second threshold value, the monitor is cancelled. If the pressure does not reach the second threshold value, the monitor determines a malfunction (disconnection).



2. EXECUTION CONDITION

Secondary parameters	Execution condition
<Phase1>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Integrated purge air amount since engine starting	≥ 72 g (2.54 oz)*
Purge control duty ratio = 0% duration time	≥ 1000 ms
Ambient air temperature	> 4.4 °C (39.9 °F) and < 35 °C (95 °F)

Secondary parameters	Execution condition
Fuel level	≥ 9 L (2.38 US gal, 1.98 Imp gal)
Cumulative time for establishment of the following conditions	≥ 6016 ms
• Intake air amount per 1 second	> Map
• Commanded solenoid valve for secondary purge	Open
<Phase2>	
Establishing time for following conditions	≥ 20 s
• Battery voltage	≥ 10.9 V
• Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
• Fuel level	≥ 9 L (2.38 US gal, 1.98 Imp gal)

* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.

Map

Fuel level (L (US gal))	0 (0)	10 (2.64)	20 (5.28)	30 (7.93)	40 (10.57)	50 (13.21)	60 (15.85)
Intake air amount per 1 second (g/s)	80	80	60	60	60	60	60

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
<Phase1>	
Evaporative Leak Check Module pressure (gauge)	> –266.6 Pa(2 mmHg, 0.1 inHg)
<Phase2>	
Evaporative Leak Check Module pressure (gauge)	< 266.6 Pa(2 mmHg, 0.1 inHg)

Phase1
Time needed for diagnosis: Less than 1 second
Phase2
Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CY:DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC OF VDC.** Read the VDC DTC using the Subaru Select Monitor or general scan tool. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC of VDC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when outside of the judgment value.
Judge NG when the received data from VDCCM&H/U is abnormal vehicle speed, and the vehicle speed data is impossible.

2. COMPONENT DESCRIPTION

Vehicle speed signals are taken in to the VDC control module and hydraulic control unit, and normal/erroneous data of the ABS wheel speed sensor is received by CAN communication from the VDC control module and hydraulic control unit.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Speed of front wheels received from VDC control module & hydraulic control unit	≥ 300 km/h (186.4 MPH)

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CZ:DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start the engine.
- Engine does not start.
- Improper idling
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0506 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK AIR CLEANER ELEMENT.** 1) Turn the ignition switch to OFF. 2) Check the air cleaner element.	Is there excessive clogging on air cleaner element?	Replace the air cleaner element. <Ref. to IN(STI)-7, Air Cleaner Element.>	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Remove the electronic throttle control. <Ref. to FU(STI)-15, REMOVAL, Throttle Body.> 2) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101. <Ref. to EN(STI)(diag)-551, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Vehicle speed	= 0 km/h (0 MPH)

Secondary parameters	Execution condition
Engine coolant temperature	≥ 60 °C (140 °F)
Elapsed time after starting the engine	≥ 10 s
Time of no change in park/neutral position switch	≥ 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Targeted engine speed	< –100 rpm

Time needed for diagnosis: 15 s × 1 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DA:DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine keeps running at higher speed than specified idle speed.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0507 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK AIR INTAKE SYSTEM.** 1) Start and idle the engine. 2) Check the following items. • Loose installation of intake manifold and throttle body • Cracks of intake manifold gasket and throttle body gasket • Disconnection of vacuum hoses	Is there any fault in air intake system?	Repair air suction and leaks.	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control. <Ref. to FU(STI)-15, REMOVAL, Throttle Body.> 3) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the diagnosis of DTC P2101. <Ref. to EN(STI)(diag)-551, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Vehicle speed	= 0 km/h (0 MPH)

Secondary parameters	Execution condition
Engine coolant temperature	≥ 60 °C (140 °F)
Elapsed time after starting the engine	≥ 10 s
Time of no change in park/neutral position switch	≥ 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Targeted engine speed	> 200 rpm

Time needed for diagnosis: 15 s × 1 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DB:DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine keeps running at higher speed than specified idle speed.
- Engine keeps running at a lower speed than the specified idle speed.
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P050A displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE OIL.** Check the engine oil.	Is there a proper amount of engine oil?	Go to step **3**.	Replace engine oil. <Ref. to LU(STI)-11, REPLACEMENT, Engine Oil.>
3	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **4**.
4	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **5**.
5	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: If fuel pressure does not increase, squeeze the fuel return hose 2 to 3 times, then measure fuel pressure again.	Is the measured value 284 — 314 kPa (2.9 — 3.2 kg/cm^2, 41 — 46 psi)?	Go to step **6**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
6	**CHECK FUEL PRESSURE.** After connecting the pressure regulator vacuum hose, measure fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If the measured value at this step is out of specification, check or replace pressure regulator and pressure regulator vacuum hose.	Is the measured value 230 — 260 kPa (2.4 — 2.7 kg/cm^2, 33 — 38 psi)?	Go to step **7**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>

	Step	Check	Yes	No
7	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **8**.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>
8	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/m)?	Go to step **9**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
9	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature from «Intake Air Temperature». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **10**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>

	Step	Check	Yes	No
10	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **15**.	Go to step **11**.
11	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **12**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
12	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 — (E5) No. 2:*** ***#2 (B134) No. 11 — (E16) No. 2:*** ***#3 (B134) No. 12 — (E6) No. 2:*** ***#4 (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **13**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
13	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **14**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
14	**CHECK POWER SUPPLY LINE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 1 (+) — Engine ground (–):*** ***#2 (E16) No. 1 (+) — Engine ground (–):*** ***#3 (E6) No. 1 (+) — Engine ground (–):*** ***#4 (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay connector and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

	Step	Check	Yes	No
15	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step **16**.
16	**CHECK FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **17**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
17	**CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Go to step **18**.
18	**CHECK CRANK SPROCKET.** 1) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.> 2) Check the crank sprocket.	Is the crank sprocket rusted or does it have broken teeth?	Replace the crank sprocket. <Ref. to ME(STI)-62, Crank Sprocket.>	Go to step **19**.
19	**CHECK INSTALLATION CONDITION OF TIMING BELT.** Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block. ST 499987500 CRANKSHAFT SOCKET	Is the timing belt dislocated from its proper position?	Repair the installation condition of timing belt. <Ref. to ME(STI)-52, Timing Belt.>	Go to step **20**.
20	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **21**.	Replace the electronic throttle control relay. <Ref. to FU(STI)-60, Electronic Throttle Control Relay.>
21	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **22**.	Repair the open or short to ground in the power supply circuit.

	Step	Check	Yes	No
22	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **23**.
23	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **24**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
24	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B135) No. 7 — (B225) No. 14:*** ***(B135) No. 17 — (B225) No. 17:***	Is the resistance less than 1 Ω?	Go to step **25**.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.
25	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 19 — Chassis ground:*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 18 — (B136) No. 4:*** ***(B134) No. 28 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **26**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
26	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 6 — Engine ground:*** ***(E57) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **27**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

	Step	Check	Yes	No
27	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 18 — (E57) No. 6:*** ***(B134) No. 28 — (E57) No. 4:*** ***(B134) No. 29 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **28**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
28	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **29**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
29	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 6 (+) — Engine ground (–):*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **30**.
30	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B134) No. 19 — (B134) No. 18:*** ***(B134) No. 19 — (B134) No. 28:***	Is the resistance 1 MΩ or more?	Go to step **31**.	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.
31	**CHECK SENSOR OUTPUT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Read Current Data For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Main-Throttle Sensor» 0.81 — 0.87 V?	Go to step **32**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>

	Step	Check	Yes	No
32	**CHECK SENSOR OUTPUT.** Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Sub-Throttle Sensor» 1.64 — 1.7 V?	Go to step **33**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>
33	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 1 — (E57) No. 1:*** ***(B134) No. 2 — (E57) No. 2:***	Is the resistance less than 1 Ω?	Go to step **34**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
34	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):*** ***(E57) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **35**.
35	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:*** ***(E57) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **36**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
36	**CHECK ELECTRONIC THROTTLE CONTROL MOTOR HARNESS.** Measure the resistance between electronic throttle control connectors. ***Connector & terminal*** ***(E57) No. 1 — (E57) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **37**.	Repair the short circuit in harness between ECM connector and electronic throttle control connector.
37	**CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **38**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector

	Step	Check	Yes	No
38	**CHECK ELECTRONIC THROTTLE CONTROL.** Measure the resistance between electronic throttle control terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 50 Ω or less?	Go to step **39**.	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>
39	**CHECK ELECTRONIC THROTTLE CONTROL.** Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Specified value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>

1. OUTLINE OF DIAGNOSIS

- **When cold, the abnormality in the control of target engine speed increase is detected. (P050A)**
- Idle speed diagnosis

Judge as NG when actual engine speed is not close to target engine speed at cold start.

- **Detect malfunctions of the catalyst advanced idling retard angle control. (P050B)**

Judge as NG when ECM is not controlling the angle properly during catalyst advanced idling retard angle control.

- Final ignition timing diagnosis

Judge as NG when actual retard amount is under the specified value at cold start.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
<Idle speed diagnosis>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Vehicle speed	≤ 2 km/h (1.2 MPH)
Engine coolant temperature	≤ 60 °C (140 °F)
Throttle position	< 0.37 °
Integrated value of intake air amount	< Value of Map 1
Elapsed time after starting the engine	≥ 2000 ms
<Final ignition timing diagnosis>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Engine coolant temperature	≤ 60 °C (140 °F)
Throttle position	< 0.37 °
Integrated value of intake air amount	< Value of Map 2
Target retard amount	≥ 6 °CA

Map 1

Engine coolant temperature at engine starting °C (°F)	–40 (–40)	–30 (–22)	–20 (–4)	–10 (14)	0 (32)	10 (50)	20 (68)	30 (86)
Integrated value of intake air amount (g (oz))	950 (33.51)	925 (32.62)	900 (31.74)	870 (30.68)	840 (29.63)	620 (21.87)	420 (14.81)	310 (10.93)

Engine coolant temperature at engine starting °C (°F)	40 (104)	50 (122)	60 (140)	70 (158)	80 (176)	90 (194)	100 (212)	110 (230)
Integrated value of intake air amount (g (oz))	260 (9.17)	210 (7.41)	170 (6)	170 (6)	170 (6)	170 (6)	170 (6)	170 (6)

Map 2

Engine coolant temperature at engine starting °C (°F)	–40 (–40)	–30 (–22)	–20 (–4)	–10 (14)	0 (32)	10 (50)	20 (68)	30 (86)
Integrated value of intake air amount (g (oz))	950 (33.51)	925 (32.62)	900 (31.74)	870 (30.68)	840 (29.63)	620 (21.87)	420 (14.81)	310 (10.93)

Engine coolant temperature at engine starting °C (°F)	40 (104)	50 (122)	60 (140)	70 (158)	80 (176)	90 (194)	100 (212)	110 (230)
Integrated value of intake air amount (g (oz))	260 (9.17)	210 (7.41)	170 (6)	170 (6)	170 (6)	170 (6)	170 (6)	170 (6)

3. GENERAL DRIVING CYCLE

Perform the diagnosis at cold start.

4. DIAGNOSTIC METHOD

• Idle speed diagnosis

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Target engine speed	< –300 rpm

Time needed for diagnosis:6000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• Final ignition timing diagnosis

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Final ignition timing – ignition timing during CSERS* *: Ignition timing during CSERS (Cold Start Emission Reduction Strategy) = Base ignition timing – retard amount	> 6 °CA

Time needed for diagnosis:6000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DC:DTC P050B COLD START IGNITION TIMING PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P050A. <Ref. to EN(STI)(diag)-434, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

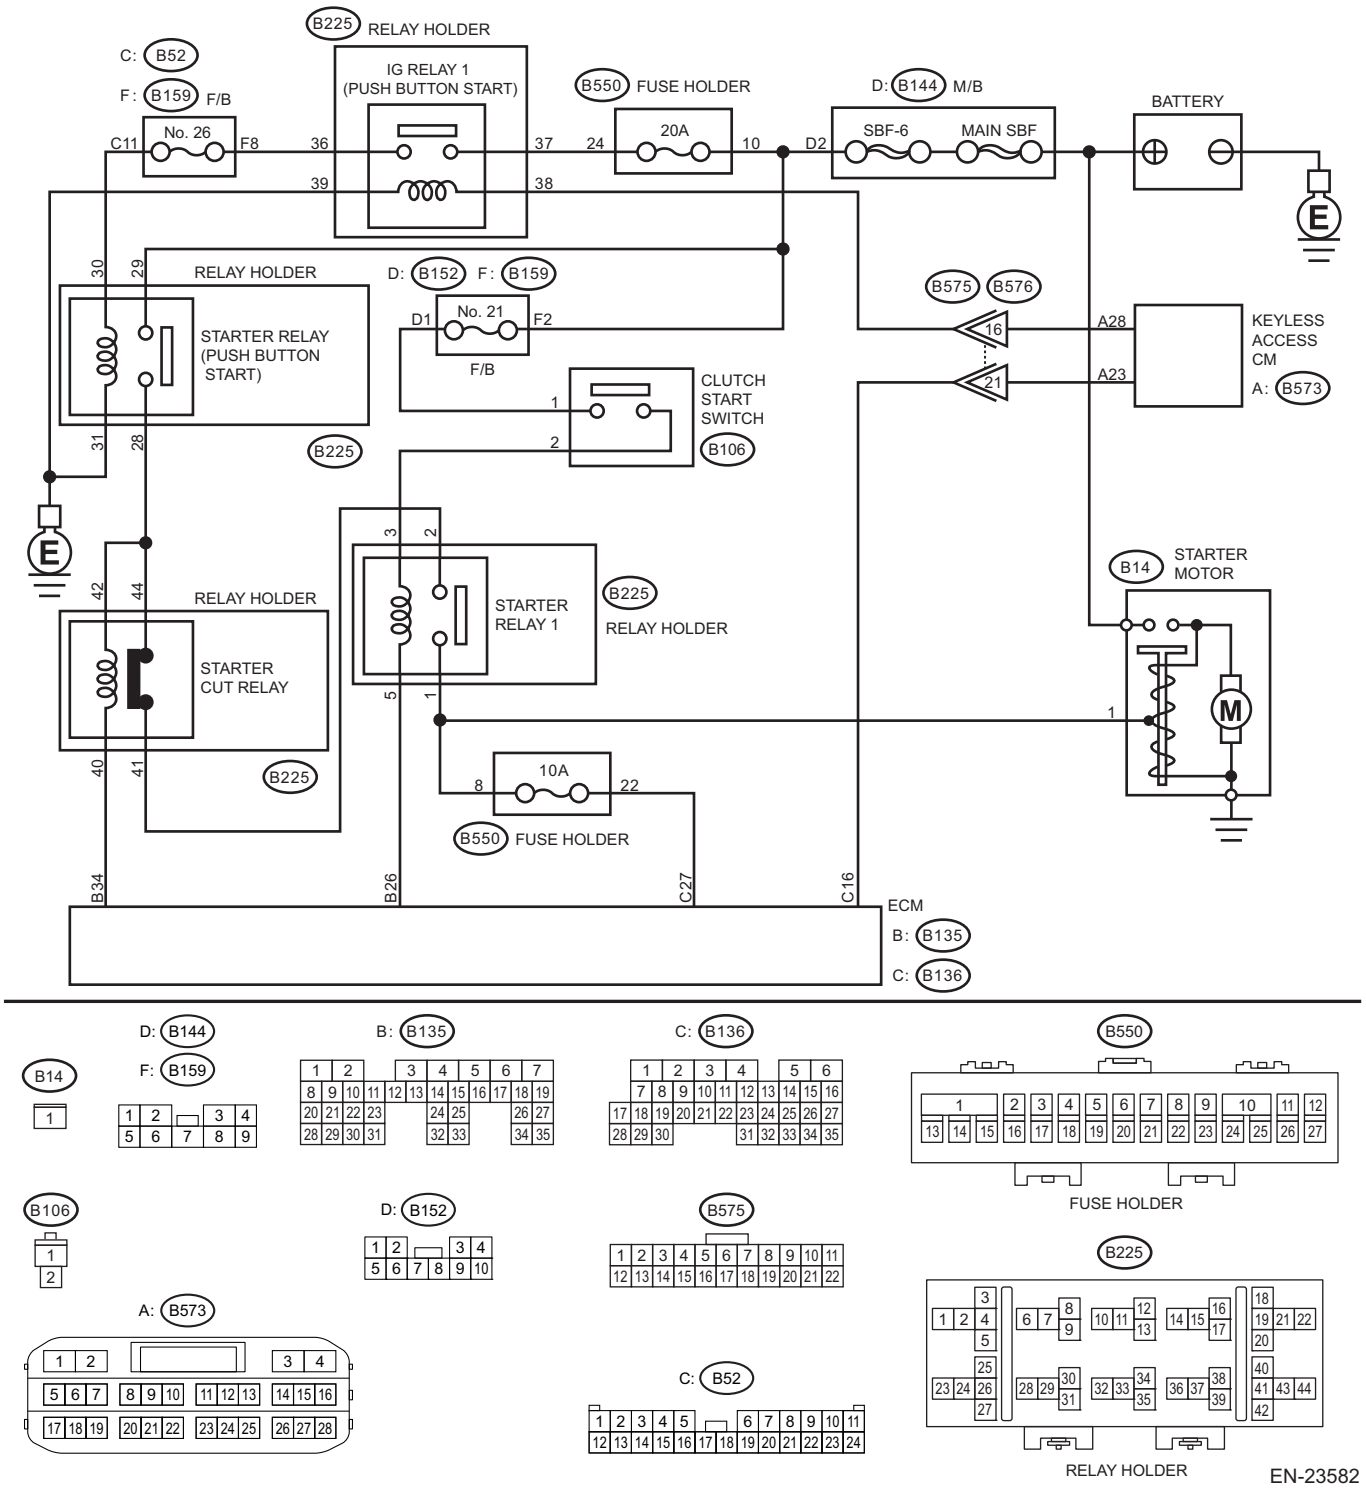
NOTE:
For the detection standard, refer to DTC P050A. <Ref. to EN(STI)(diag)-434, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DD:DTC P0512 STARTER (SWITCH) REQUEST CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK PUSH BUTTON IGNITION SWITCH.** Operate the push button ignition switch.	Does it operate smoothly without catch?	Go to step **2**.	Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Clear the memory using the Subaru Select Monitor. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Start and idle the engine for three minutes or more.	Is DTC P0512 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power supply in harness between ECM connector and keyless access CM connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW1.
Judge as ON NG when the starter SW 1 signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 500 rpm

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW1 voltage	≥ Battery voltage × 0.85 V

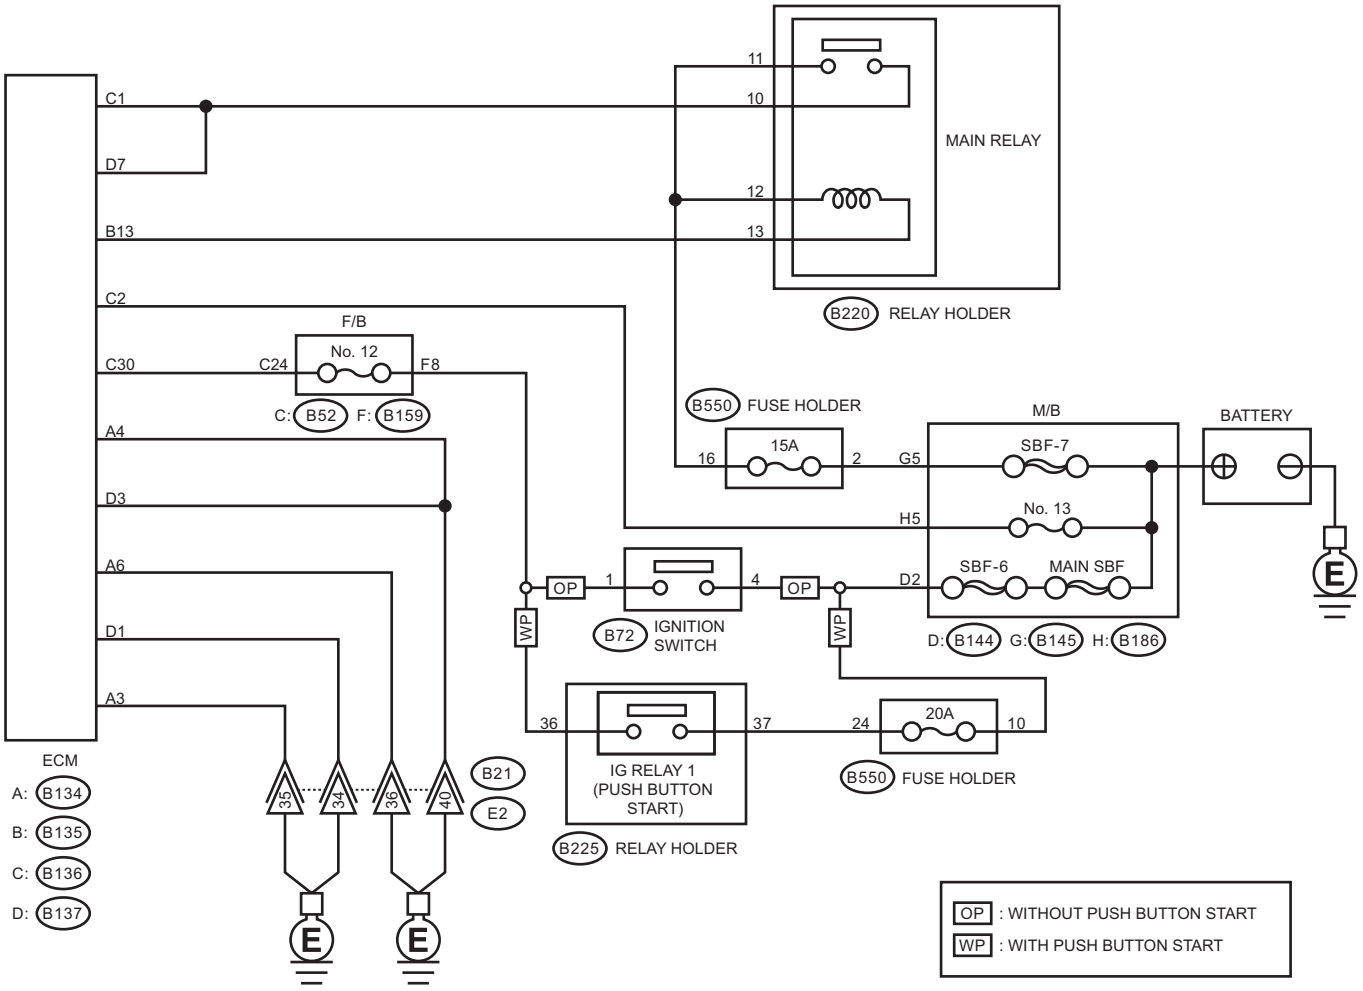
Time needed for diagnosis: 30000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

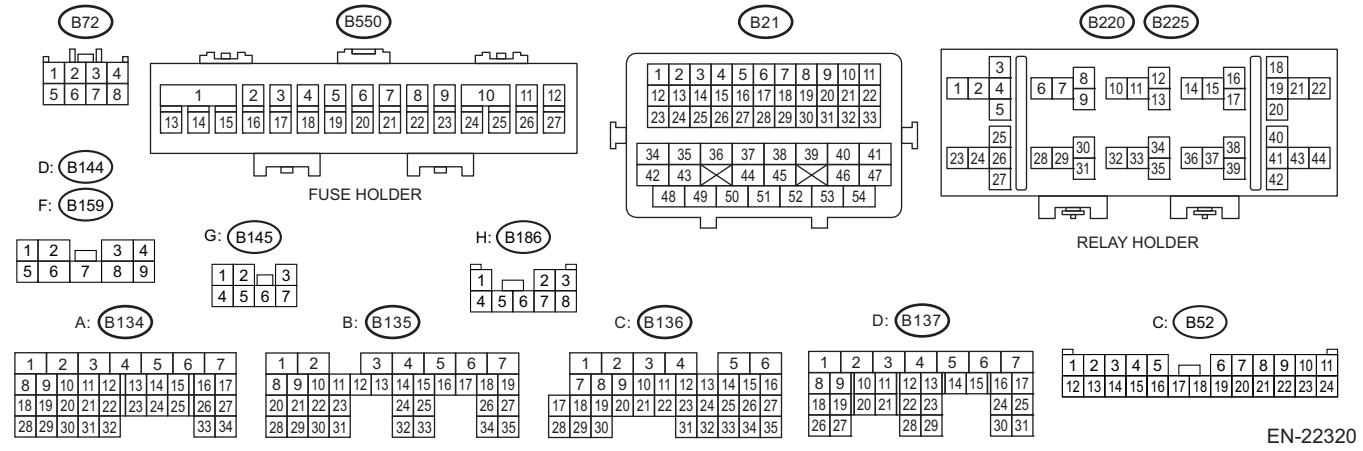
DE:DTC P0560 SYSTEM VOLTAGE

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22320

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND MAIN FUSE BOX CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and battery terminal.
3	**CHECK FUSE NO. 13.** Check the fuse No. 13.	Is the fuse blown out?	Replace the fuse.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and battery • Poor contact of ECM connector • Poor contact of battery terminal

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of back-up power supply circuit.
Judge as NG when the backup power voltage is low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Voltage of back-up power supply	≤ 2.5 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DF:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine does not start.
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0604 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of microcomputer (RAM).
If it is possible to write data to the whole area of RAM in the initial routine, and is possible to read the same data, it is judged as OK, and if not, NG.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
ECM initialization	Execution

Diagnosis with the initial routine.

3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after the ignition switch is to ON.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Write the specified value into the RAM.	Different from written value

Time needed for diagnosis: 512 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DG:DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(STI)(diag)-454, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when SUM value of ROM is outside the standard value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
ECM initialization	Execution

3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after the ignition switch is to ON.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Judgment value

Malfunction Criteria	Threshold Value
SUM value of ROM	Malfunction

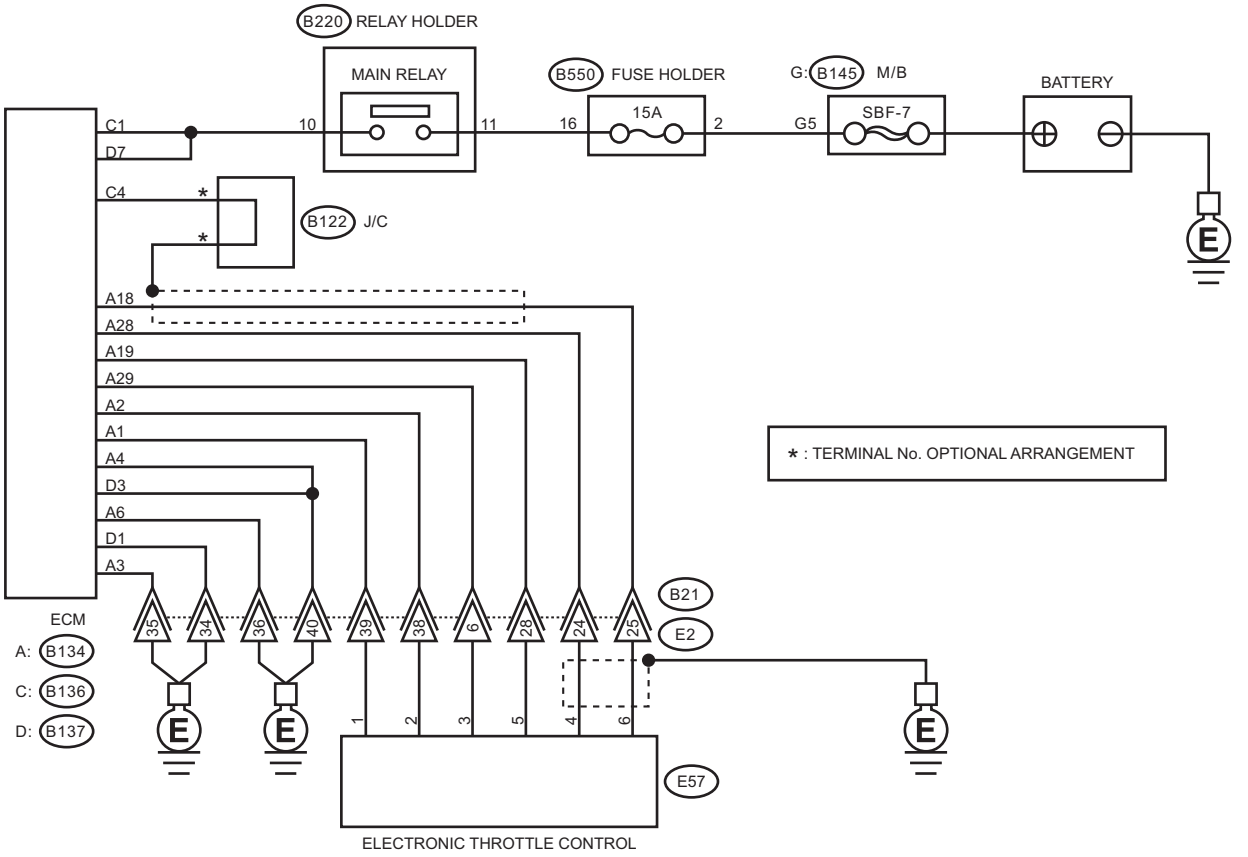
Time needed for diagnosis: 512 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

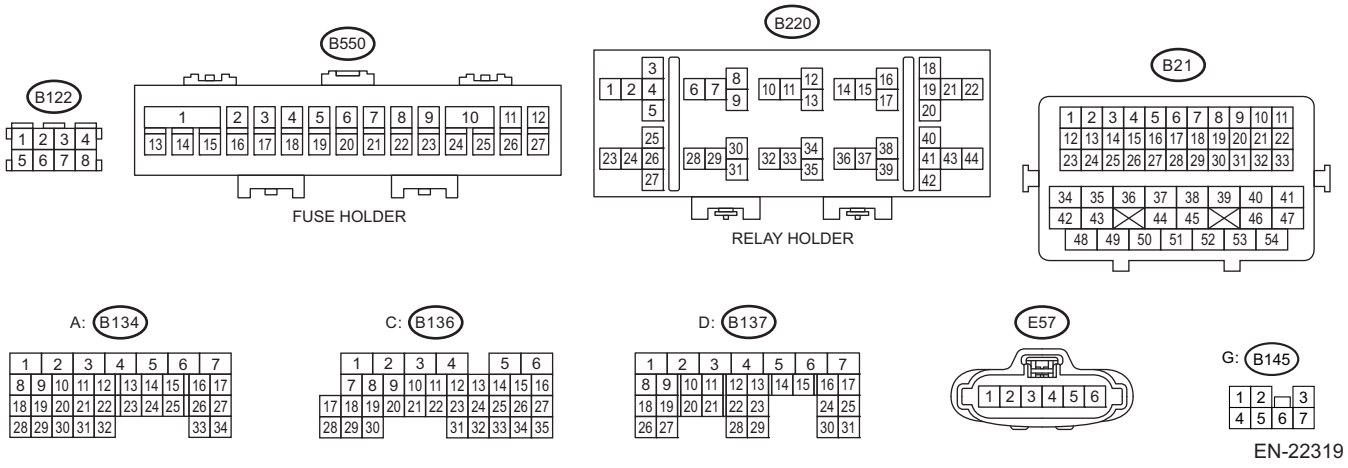
DH:DTC P0606 CONTROL MODULE PROCESSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22319

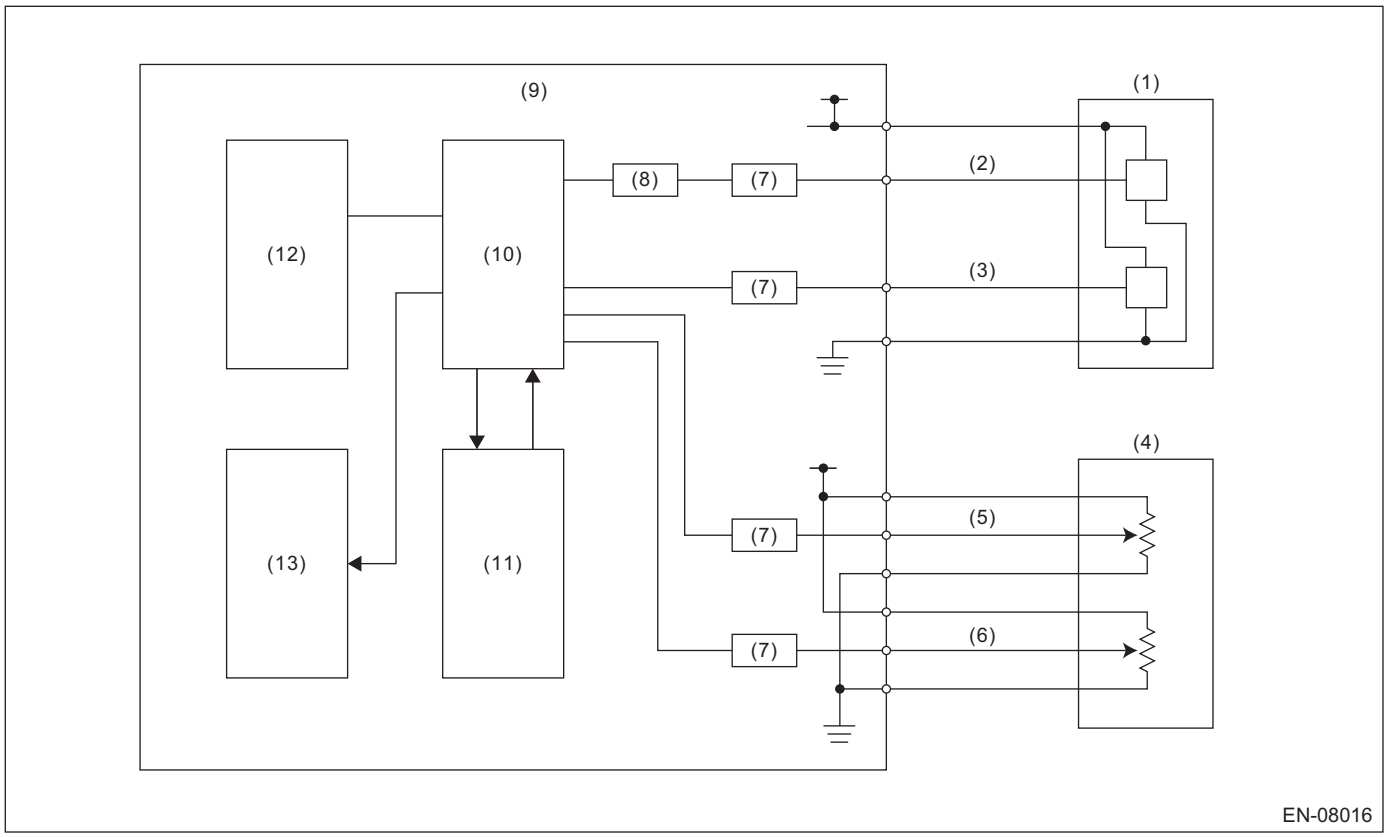
Step		Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 1 (+) — Chassis ground (–):*** ***(B137) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **2**.	Repair the open or short to ground in the power supply circuit.

	Step	Check	Yes	No
2	**CHECK INPUT VOLTAGE OF ECM.** 1) Start the engine. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 1 (+) — Chassis ground (–):*** ***(B137) No. 7 (+) — Chassis ground (–):***	Is the voltage 13 — 15 V?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 19 — (E57) No. 5:*** ***(B134) No. 29 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
4	**CHECK ECM GROUND HARNESS.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 (+) — Chassis ground (–):*** ***(B134) No. 4 (+) — Chassis ground (–):*** ***(B134) No. 6 (+) — Chassis ground (–):*** ***(B137) No. 1 (+) — Chassis ground (–):*** ***(B137) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Check the connector for poor contact and check the harness. Replace the ECM if no fault is found. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in ground circuit • Further tightening of the engine ground terminal • Poor contact of ECM connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Judge as NG when the CPU operation is abnormal.
Judgment1: Instruction check
Judgment2: Soft flow check
Judgment3: Soft monitor check
Judgment4: If the output IC operation is abnormal
Judgment5: CAN register check

2. COMPONENT DESCRIPTION



(1)	Throttle position sensor	(6)	Accelerator pedal position sensor 2	(10)	CPU
(2)	Throttle position sensor 1	(7)	I/F circuit	(11)	Monitoring IC
(3)	Throttle position sensor 2	(8)	Amplifier circuit	(12)	EEPROM
(4)	Accelerator pedal position sensor	(9)	Engine control module (ECM)	(13)	Output IC
(5)	Accelerator pedal position sensor 1				

3. EXECUTION CONDITION

Judgment1: Instruction check (a)

Secondary parameters	Execution condition
Initial routine Main CPU	 Execution in progress

Judgment1: Instruction check (b)

Secondary parameters	Execution condition
Ignition switch	ON
Battery voltage	≥ 6.2 V
Electronic throttle control relay	ON

Judgment2: Soft flow check

Secondary parameters	Execution condition
(2) Ignition switch	ON

Judgment3: Soft monitor check

Secondary parameters	Execution condition
Ignition switch	ON
Battery voltage	≥ 6.2 V
Electronic throttle control relay	ON

Judgment4: If the output IC operation is abnormal

Secondary parameters	Execution condition
Ignition switch	ON

Judgment5: CAN register check

Secondary parameters	Execution condition
(5) Initial routine	Execution in progress

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment1: Instruction check (a)

Judgment value

Malfunction Criteria	Threshold Value
Instruction value	Different from expected value

Judgment1: Instruction check (b)

Judgment value

Malfunction Criteria	Threshold Value
Calculated result from CPU and FPU	Different from expected value

Judgment2: Soft flow check

Judgment value

Malfunction Criteria	Threshold Value
Process flow result	The result and expected value do not match.

Judgment3: Soft monitor check
Judgment value

Malfunction Criteria	Threshold Value
High integrated IC motor continuity cut demand	Exist

Judgment4: If the output IC operation is abnormal
Judgment value

Malfunction Criteria	Threshold Value
Communication between output driver ICs	Communication failure

Judgment5: CAN register check
Judgment value

Malfunction Criteria	Threshold Value
Writing value to CAN register	≠ Read out value

Time needed for diagnosis:
Judgment1 — (a): 2 time(s)
Judgment1 — (b): 512 ms
Judgment2: 504 ms
Judgment3: 48 ms
Judgment4: 2500 ms
Judgment5: Less than 1 s
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

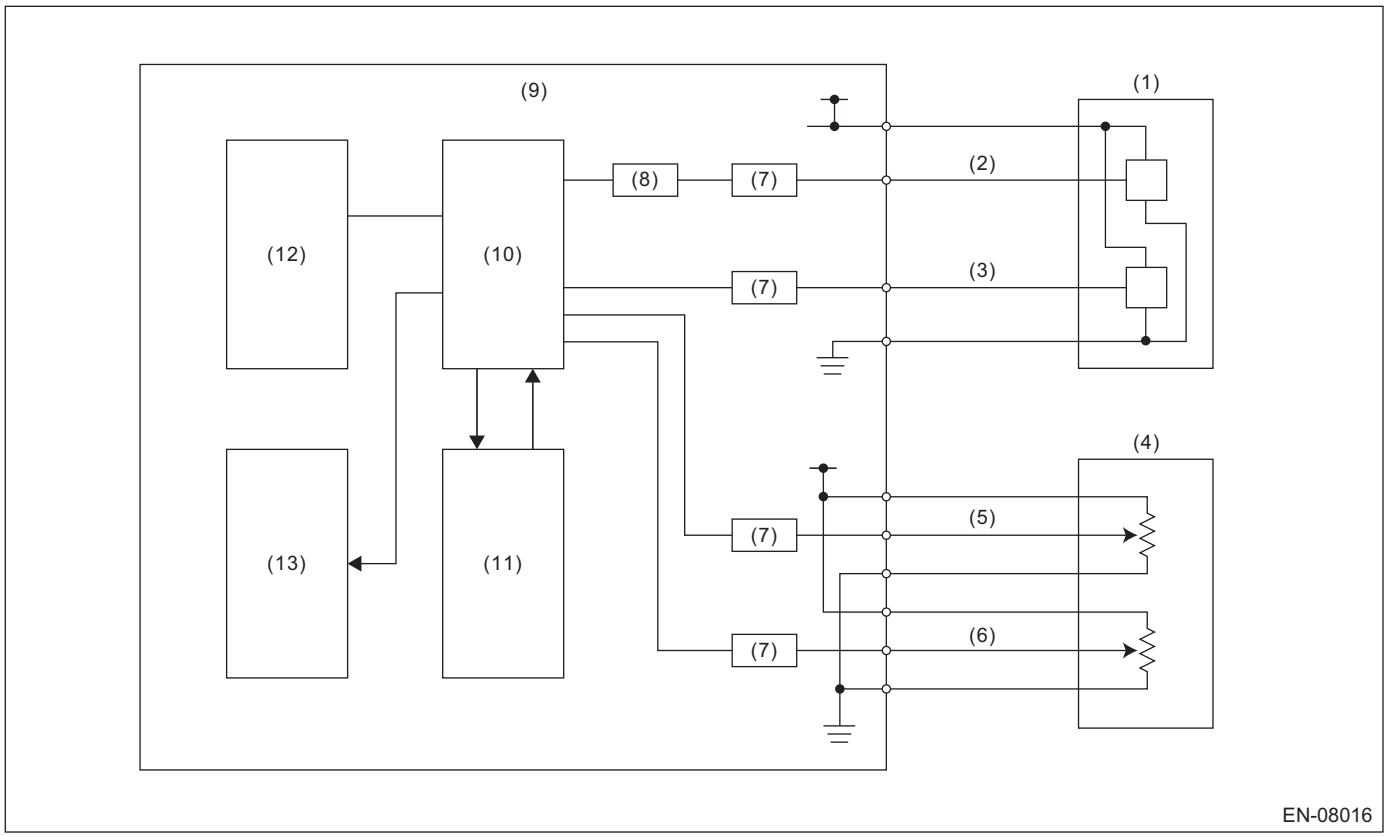
DI: DTC P060A INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(STI)(diag)-454, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitoring IC operation is abnormal. (Monitoring IC malfunction)
Judgment1: Monitoring IC invalidation function
Judgment2: Monitoring IC calculation malfunction
Judgment3: Monitoring IC register observation
Judgment4: Count up timer monitoring

2. COMPONENT DESCRIPTION



(1)	Throttle position sensor	(6)	Accelerator pedal position sensor 2	(10)	CPU
(2)	Throttle position sensor 1	(7)	I/F circuit	(11)	Monitoring IC
(3)	Throttle position sensor 2	(8)	Amplifier circuit	(12)	EEPROM
(4)	Accelerator pedal position sensor	(9)	Engine control module (ECM)	(13)	Output IC
(5)	Accelerator pedal position sensor 1				

3. EXECUTION CONDITION

Judgment1:

Secondary parameters	Execution condition
• Battery voltage • When CPU intentionally sends motor continuity cut demand	≥ 6 V

Judgment2:

Secondary parameters	Execution condition
• Battery voltage • CPU intentionally sends incorrect data	≥ 6 V

Judgment3, 4:

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when one of the following conditions is established.

Judgment1:

Judgment value

Malfunction Criteria	Threshold Value
(1) Main throttle position – Main throttle position when monitoring starts	≥ 2 °

Judgment2:

Judgment value

Malfunction Criteria	Threshold Value
(2) Monitoring IC motor continuity cut demand	Not detected

Judgment3:

Judgment value

Malfunction Criteria	Threshold Value
(3) Monitoring IC register writing value	≠ Reading value

Judgment4:

Judgment value

Malfunction Criteria	Threshold Value
(4) Monitoring IC count up timer	Does not change

Time needed for diagnosis:
Judgment1: 24 ms
Judgment2: 2192 ms
Judgment3: 8 time(s)
Judgment4: 200 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

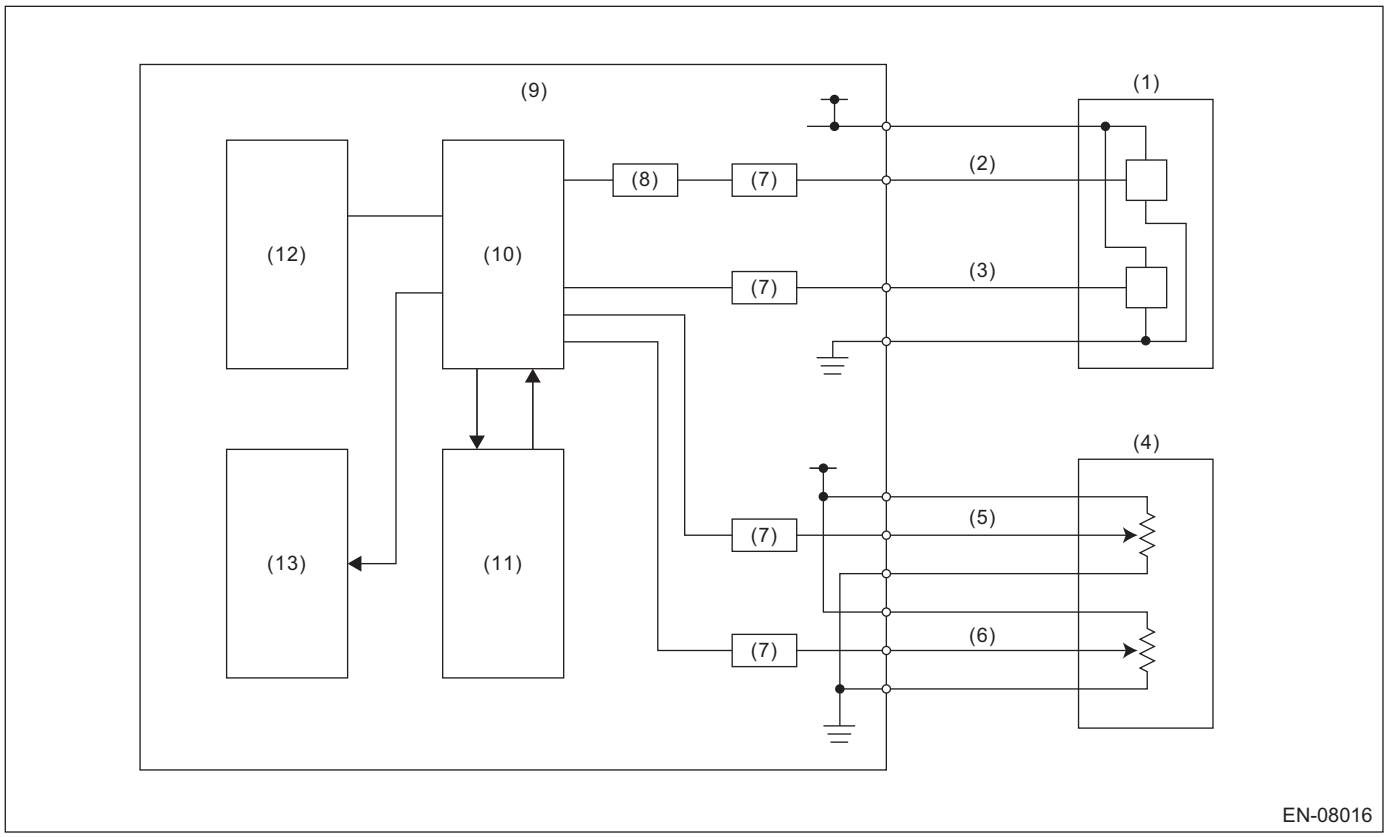
DJ:DTC P060B INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(STI)(diag)-454, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the A/D converter operation is abnormal.
- When the A/D converter operation is abnormal (ADC malfunction)
- When the input amplifier circuit of throttle position sensor 1 is abnormal (quadruple amplification problem).

2. COMPONENT DESCRIPTION



(1)	Throttle position sensor	(6)	Accelerator pedal position sensor 2	(10)	CPU
(2)	Throttle position sensor 1	(7)	I/F circuit	(11)	Monitoring IC
(3)	Throttle position sensor 2	(8)	Amplifier circuit	(12)	EEPROM
(4)	Accelerator pedal position sensor	(9)	Engine control module (ECM)	(13)	Output IC
(5)	Accelerator pedal position sensor 1				

3. EXECUTION CONDITION

Secondary parameters	Execution condition
(1), (2) and (3)	
Battery voltage	≥ 6 V
(4)	
• Battery voltage	≥ 6 V
• Main throttle position	< Value from Map
(5)	
• Battery voltage	≥ 6 V
• Main throttle position	≥ Value from Map

Map

Battery voltage	7.5 V	8 V
Main throttle position	27.5 °	31 °

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when one of the following conditions is established.

Judgment value

Malfunction Criteria	Threshold Value
(1) Absolute value monitoring	
A/D voltages for monitoring or A/D voltages for monitoring	> 2.7 V < 2.5 V
(2) A/D/ changes monitoring	
|(Buffer voltage of AD changes – base voltage of A/D changes)|	> 0.029296875 V
(3) A/D voltages for monitoring	Did not change
(4) |(Throttle position sensor (Main) – (amplified throttle position sensor (Main)) / 4)|	≥ 3 °
(5) (Amplified throttle position sensor (Main))/4	≤ 23.8235 °

Time needed for diagnosis:
(1): 200 ms
(2): 200 ms
(3): 200 ms
(4): 24 ms
(5): 24 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DK:DTC P0616 STARTER RELAY "A" CIRCUIT LOW

1. MODEL WITHOUT PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

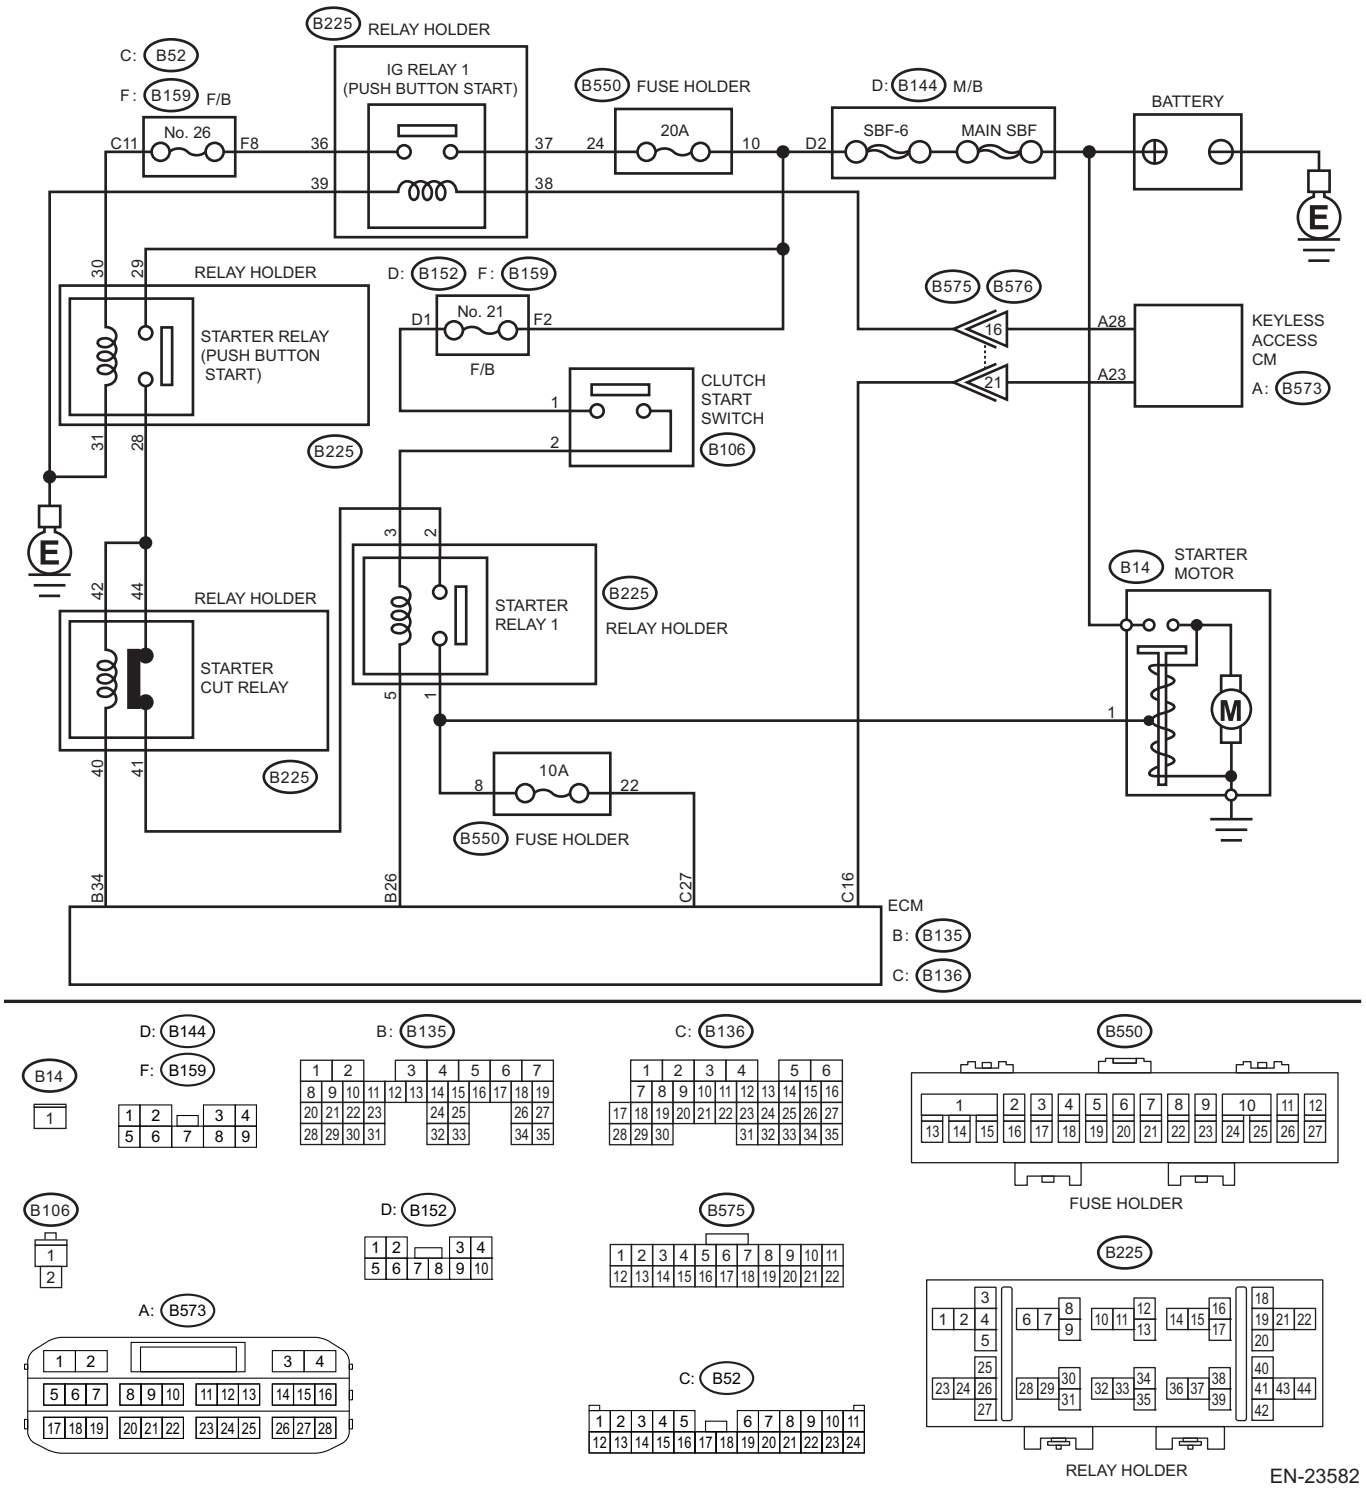
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0616 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the starter relay. 3) Disconnect the connector from ECM. 4) Disconnect the connector from starter motor. 5) Measure the resistance of harness between ECM connector and starter relay connector. ***Connector & terminal*** ***(B136) No. 16 — (B225) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	NOTE: Check the following item and repair or replace if necessary. • Open circuit of harness between ECM connector and starter relay connector • Blown out of fuse
3	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and starter relay connector.

2. MODEL WITH PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-23582

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Remove the starter relay 1. 4) Measure the resistance of harness between ECM connector and starter relay 1 connector. ***Connector & terminal*** ***(B136) No. 27 — (B225) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and starter relay 1 connector • Blown out of fuse
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Disconnect the connector from starter motor. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 27 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.

3. OUTLINE OF DIAGNOSIS

• Model without push button start
Detect abnormal continuity in the starter SW1.
Judge as OFF NG when the starter SW 1 signal remains OFF.
• Model with push button start
Detect abnormal continuity in the starter SW 2.
Judge as OFF NG when the starter SW 2 signal remains OFF.

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	Changes from 0 rpm to 500 rpm or more
Vehicle speed	< 1 km/h (0.6 MPH)
Starter relay drive	ON

5. GENERAL DRIVING CYCLE

Perform the diagnosis only once at engine start.

6. DIAGNOSTIC METHOD

Judge as OFF NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW1 signal (models without push button start) with battery voltage × 0.85 V or more Starter SW2 signal (models with push button start) with battery voltage × 0.85 V or more	Not detected

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DL:DTC P0617 STARTER RELAY "A" CIRCUIT HIGH

1. MODEL WITHOUT PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0617 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and starter relay connector.	Repair the poor contact of ECM connector.

2. MODEL WITH PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK STARTER MOTOR.** 1) Turn the ignition to ON. 2) Check the starter motor condition.	Is the starter motor rotating?	Go to step **2**.	Repair the short circuit to power supply in harness. NOTE: In this case, repair the following harnesses: • Short circuit to power supply in harness between ECM connector and starter relay 1 connector • Short circuit to power supply in harness between ECM connector and starter motor • Short circuit to power supply in harness between starter relay 1 connector and starter motor
2	**CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from starter motor. 3) Remove the starter cut relay. 4) Remove the starter relay 1. 5) Turn the ignition to ON. 6) Measure the voltage between starter relay 1 connector and chassis ground. ***Connector & terminal*** ***(B225) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between starter cut relay connector and starter relay 1 connector.	Go to step **3**.
3	**CHECK STARTER CUT RELAY.** 1) Connect the battery to starter cut relay terminals No. 40 and No. 42. 2) Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.> Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 26 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.
5	**CHECK STARTER RELAY 1.** Measure the resistance between starter relay 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the starter relay 1. <Ref. to EN(STI)(diag)-10, LOCATION, Electrical Component Location.>

Step		Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM, STARTER RELAY 1 CONNECTOR AND STARTER MOTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 27 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power supply in harness. NOTE: In this case, repair the following harnesses: • Short circuit to power supply in harness between ECM connector and starter relay 1 connector • Short circuit to power supply in harness between ECM connector and starter motor • Short circuit to power supply in harness between starter relay 1 connector and starter motor	Repair the poor contact of ECM connector.

3. OUTLINE OF DIAGNOSIS

• Model without push button start
Detect abnormal continuity in the starter SW1.
Judge as ON NG when the starter SW 1 signal remains ON.
• Model with push button start
Detect abnormal continuity in the starter SW 2.
Judge as ON NG when the starter SW 2 signal remains ON.

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 500 rpm
Starter relay drive	OFF

5. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW 1 signal (model without push button start) Starter SW 2 signal (model with push button start)	≥ Battery voltage × 0.85 V

Time needed for diagnosis: 30000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

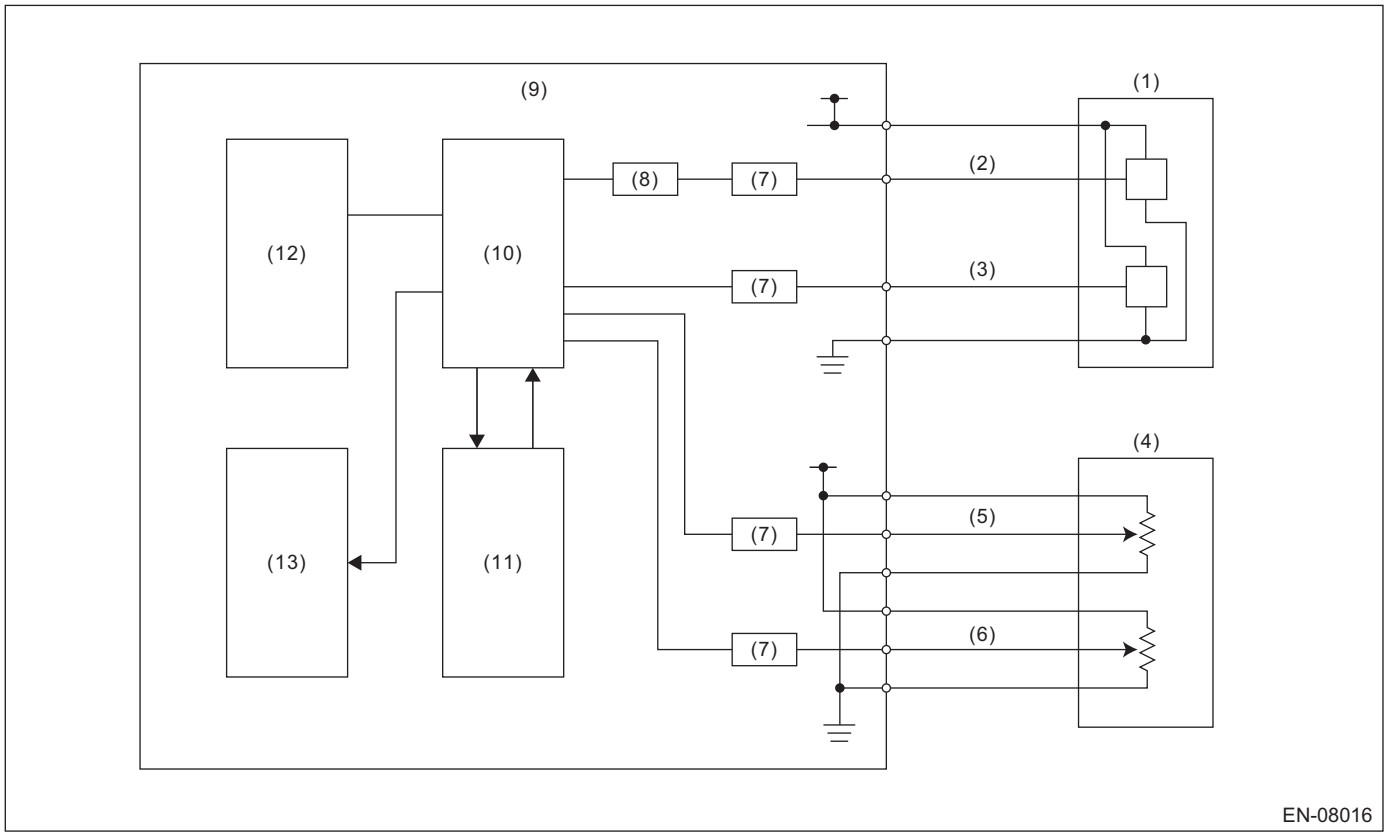
DM:DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(STI)(diag)-454, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the EEPROM operation is abnormal. (EEPROM malfunction)

2. COMPONENT DESCRIPTION



(1)	Throttle position sensor	(6)	Accelerator pedal position sensor 2	(10)	CPU
(2)	Throttle position sensor 1	(7)	I/F circuit	(11)	Monitoring IC
(3)	Throttle position sensor 2	(8)	Amplifier circuit	(12)	EEPROM
(4)	Accelerator pedal position sensor	(9)	Engine control module (ECM)	(13)	Output IC
(5)	Accelerator pedal position sensor 1				

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	ON
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
Time needed for storing data in EEPROM	≥ 48 ms

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
EEPROM writing	Error

Time needed for diagnosis:

- **Diagnosis 1:** 48 ms
- **Diagnosis 2:** 2 times

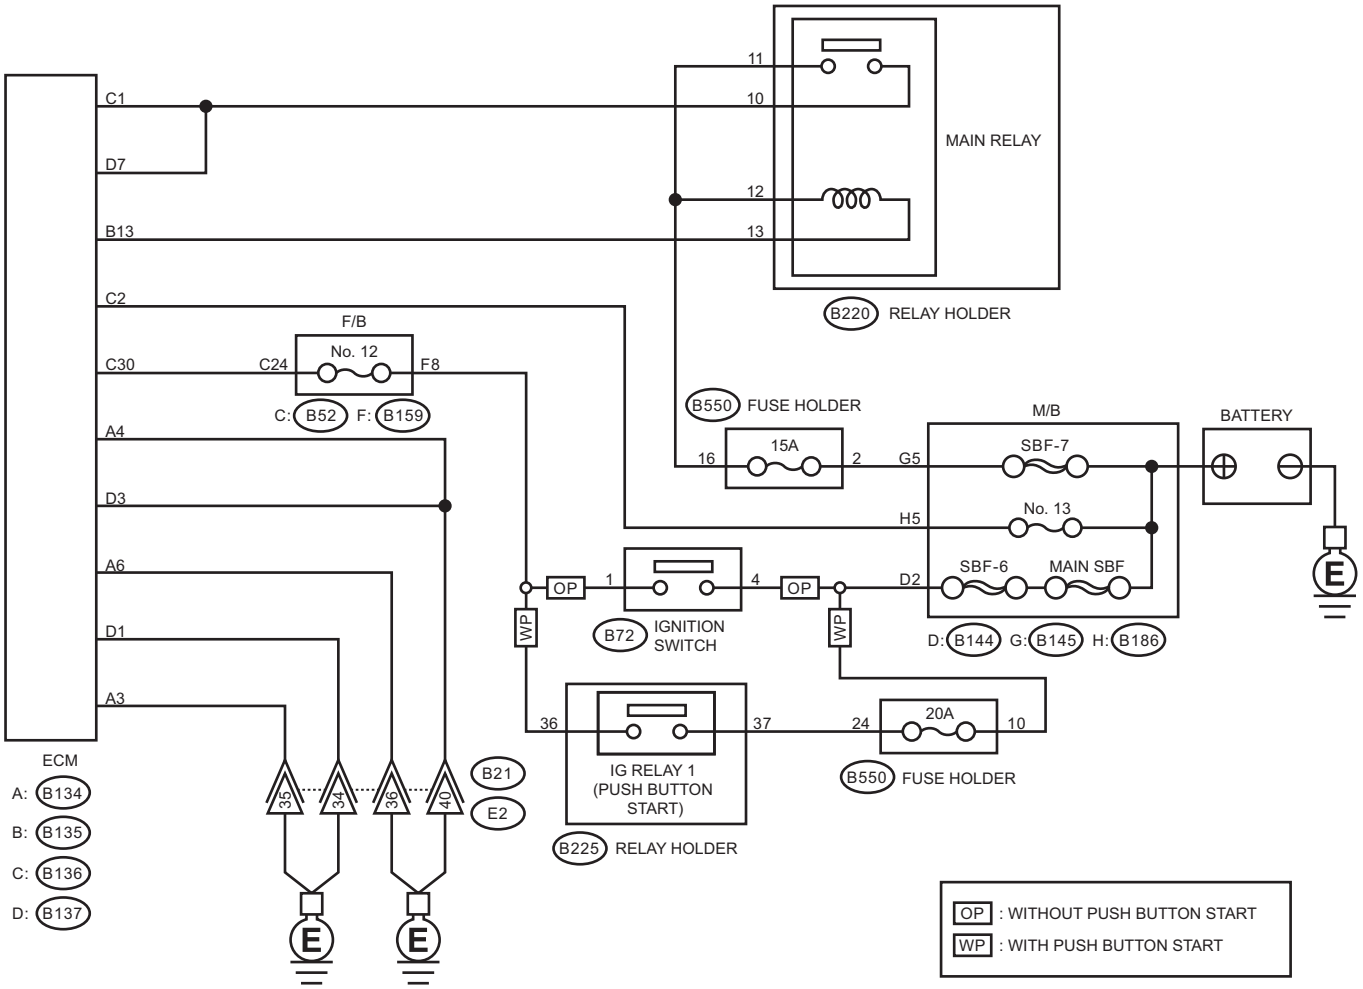
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

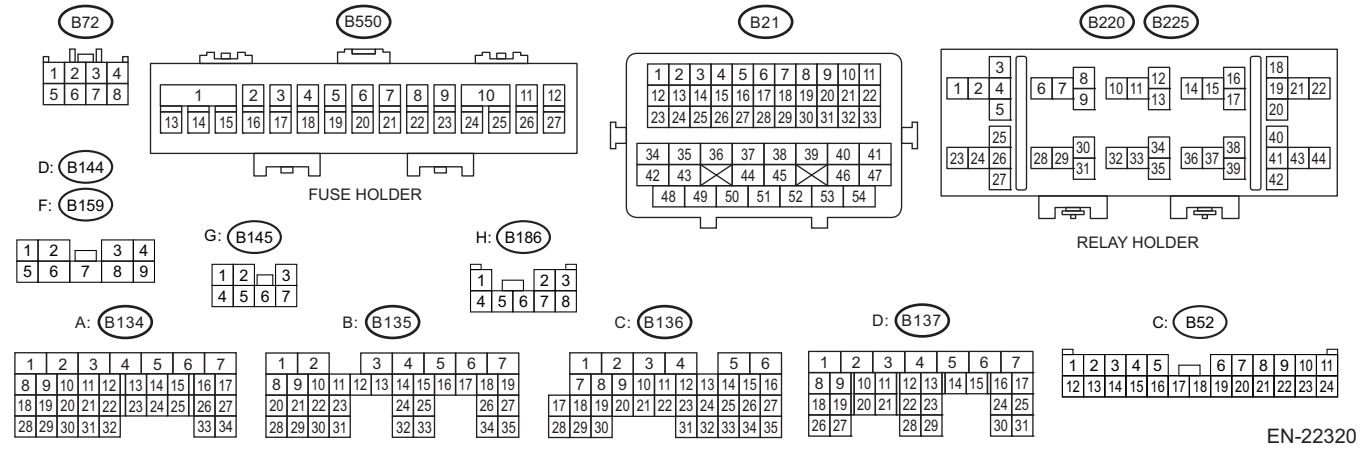
DN:DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22320

	Step	Check	Yes	No
1	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **2**.	Connect the ECM connector correctly.
2	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the connector from ECM. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
3	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Install the main relay. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 1 (+) — Chassis ground (–):*** ***(B137) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply in harness between ECM connector and main relay connector • Defective main relay	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect the main relay stuck to ON.
Judge as NG when ECM keeps operating for more than predetermined time although the main relay does not turn to OFF after ignition switch is turned to OFF.

2. COMPONENT DESCRIPTION

The main relay controls the current in the coil section to switch ON/OFF the ECM by receiving instructions from the ignition switch and Evaporative Leak Check Module.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Main relay	OFF instruction

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the enable conditions are established with the ignition switch OFF → ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ECM status	In operation

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DO:DTC P081A STARTER DISABLE CIRCUIT LOW

Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR.** 1) Turn the ignition to OFF. 2) Remove the starter relay (push button start). 3) Remove the starter cut relay. 4) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector. ***Connector & terminal*** ***(B225) No. 28 — (B225) No. 42:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.
2	**CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and starter cut relay connector. ***Connector & terminal*** ***(B135) No. 34 — (B225) No. 40:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and starter cut relay connector.
3	**CHECK STARTER CUT RELAY.** 1) Connect the battery to starter cut relay terminals No. 40 and No. 42. 2) Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.>

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter cut relay.
Judge as NG when the starter cut relay output line is open.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	Changes from 0 rpm to 500 rpm or more
Vehicle speed	< 1 km/h (0.6 MPH)
Starter cut relay drive	OFF

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once at engine start.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter cut relay control signal that exceeds battery voltage × 0.34 V	Not detected

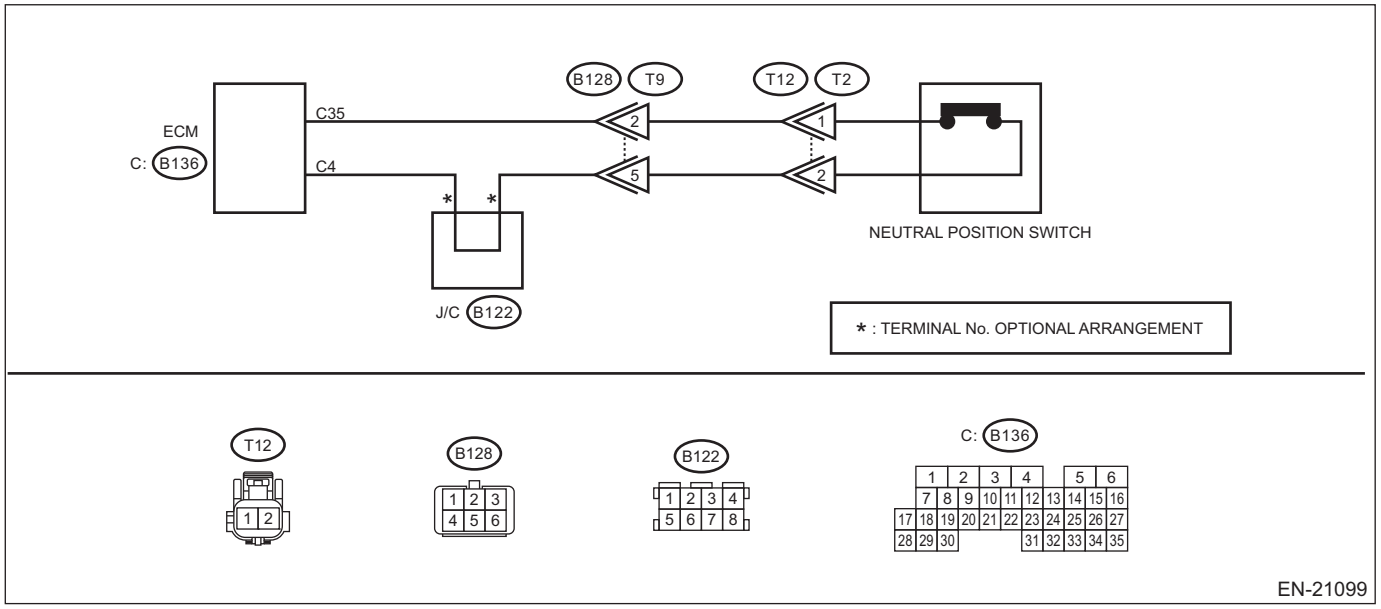
Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DP:DTC P0851 PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Place the gear shift lever in a position other than neutral. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the neutral position switch. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 35 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the neutral position switch. <Ref. to 6MT(TY85)-42, Neutral Position Switch.>	Repair the short circuit to ground harness between ECM connector and neutral position switch connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW regardless of driving condition with shift changes (there should be neutral SW ON/OFF inversion considering the vehicle speed and engine speed).

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
The number of driving condition change from a) to b)	= 1 time(s)
a)	
Vehicle speed	≤ 0 km/h (0 MPH)
and	
Engine speed	≥ 600 rpm and ≤ 900 rpm
b)	
Vehicle speed	≥ 64 km/h (39.8 MPH)
and	
Engine speed	≥ 1400 rpm and ≤ 2200 rpm

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	≤ Battery voltage × 0.19 V

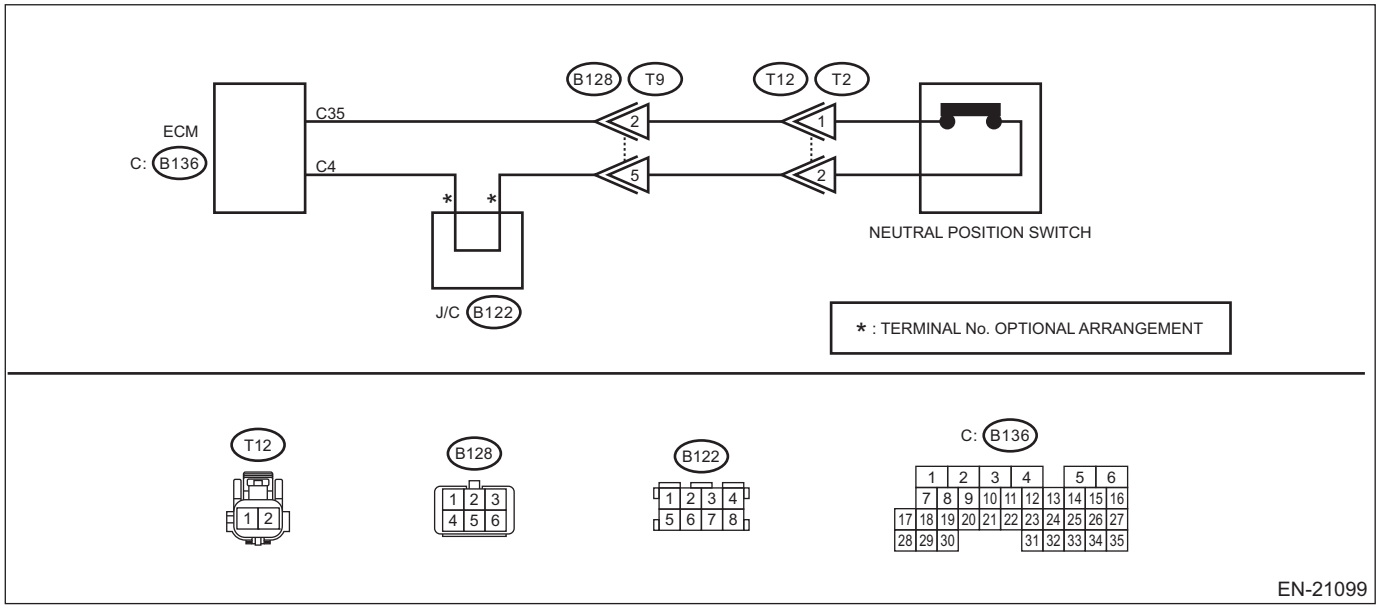
Time needed for diagnosis: 1 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DQ:DTC P0852 PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Place the gear shift lever in neutral. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 35 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Repair the poor contact of ECM connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the neutral position switch. 4) Measure the resistance of harness between ECM connector and transmission harness connector. ***Connector & terminal*** ***(B136) No. 35 — (T12) No. 1:*** ***(B136) No. 4 — (T12) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and transmission harness connector • Poor contact of coupling connector
3	**CHECK NEUTRAL POSITION SWITCH.** 1) Place the gear shift lever in neutral. 2) Measure the resistance between transmission harness connector terminals. ***Connector & terminal*** ***(T2) No. 1 — (T2) No. 2:***	Is the resistance less than 1 Ω?	Repair the poor contact of transmission harness connector.	Replace the neutral position switch. <Ref. to 6MT(TY85)-42, Neutral Position Switch.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW regardless of driving condition with shift changes (there should be neutral SW ON/OFF inversion considering the vehicle speed and engine speed).

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
The number of driving condition change from a) to b)	= 1 time(s)
a)	
Vehicle speed	≤ 0 km/h (0 MPH)
and	
Engine speed	≥ 600 rpm and ≤ 900 rpm
b)	
Vehicle speed	≥ 64 km/h (39.8 MPH)
and	
Engine speed	≥ 1400 rpm and ≤ 2200 rpm

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds after starting the engine.

4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	≥ Battery voltage × 0.6 V

Time needed for diagnosis: 1 time(s)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

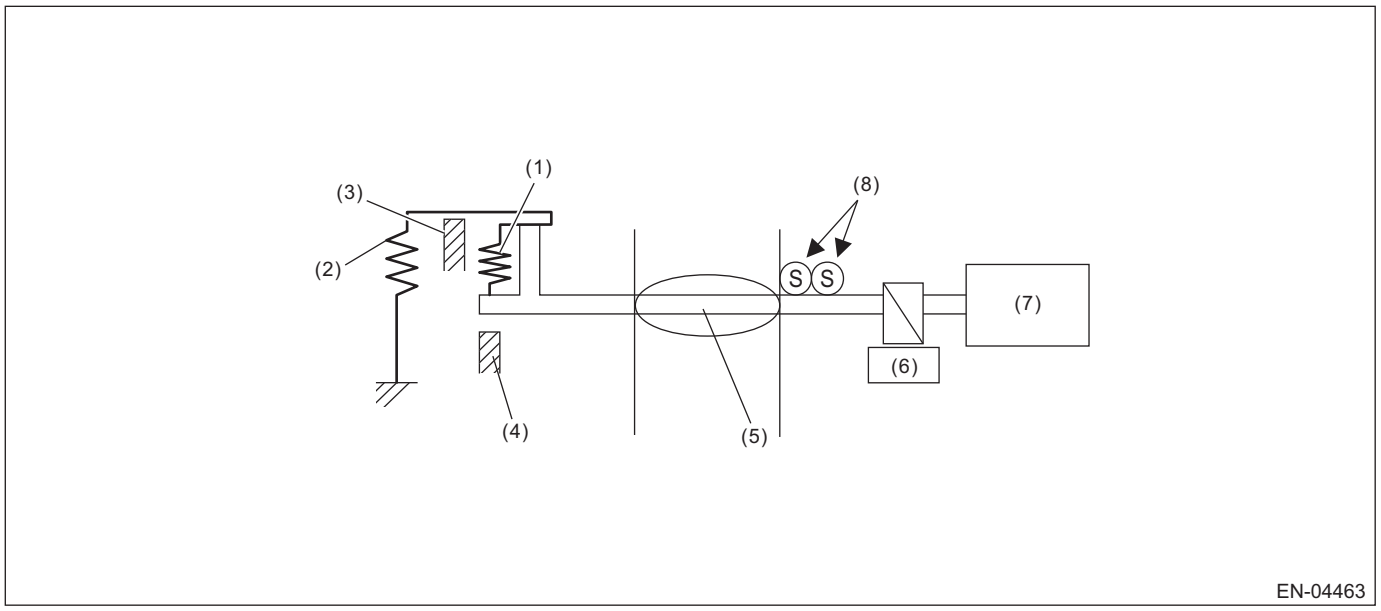
DR:DTC P1160 THROTTLE RETURN SPRING

NOTE:
For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(STI)(diag)-551, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the valve is opened more than the default opening angle, but does not move to the close direction with the motor power stopped.

2. COMPONENT DESCRIPTION



(1) Opener spring
(2) Return spring
(3) Intermediate stopper
(4) Full closed stopper
(5) Throttle valve
(6) Gear
(7) DC motor
(8) Main and sub throttle position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
Ignition switch	OFF
Elapsed time after motor continuity OFF	= 1.6 s

4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (Only after clearing memory)

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 opening angle with power OFF – Sensor 1 opening angle	< 2 °

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DS:DTC P1410 SECONDARY AIR INJECTION SYSTEM COMBINATION VALVE STUCK OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK SECONDARY AIR COMBINATION VALVE.** 1) Remove the secondary air combination valve. <Ref. to EC(STI)-57, Secondary Air Combination Valve.> 2) Blow in air from the secondary air combination valve air inlet, and check whether there are leaks at the pipe connections.	Are there air leaks from the pipe connections?	Replace the secondary air combination valve on the side with the air leak. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Perform the diagnostic procedure of DTC P2440. <Ref. to EN(STI)(diag)-658, DTC P2440 SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Always detect abnormality that both combination valve electromagnetic valve and the reed valve are open failure.
Calculate the integrated value of Max./Min. value and output voltage deviation of the secondary air delivery pipe pressure sensor output voltage in a given time after engine start. Judge as NG if the integrated value and the difference between Max. and Min. values are large.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 500 rpm
Elapsed time after starting the engine	≥ 9000 ms
After secondary air system stops	≥ 9000 ms
After fuel cut	≥ 1000 ms

3. GENERAL DRIVING CYCLE

Perform continuous diagnosis when air flow amount is large during the secondary air pump stop after engine start.

4. DIAGNOSTIC METHOD

When both combination valve electromagnetic valve and the reed valve are open failure, the failure appears as pulses in the secondary air delivery pipe pressure sensor output. Detect abnormality by capturing these pulses using the following method.

Calculate Max./Min. value of the secondary air delivery pipe pressure sensor output voltage and the sum of the output voltage deviation for the given time. Compare the difference between Max. and Min. values with threshold value and also compare the sum value with the threshold value. If both values exceed the threshold value, count up NG counter and then judge as NG if the counter reaches the given times.

Judgment value

Malfunction Criteria	Threshold Value
Difference between maximum and minimum values of pipe inner pressure (value at 40 s)	≥ 0.05 V
Sum of the pipe inner pressure variation value every 4 ms	≥ 5 V

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DT:DTC P1449 EVAP SYSTEM CLOG DETECTED (AIR FILTER)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

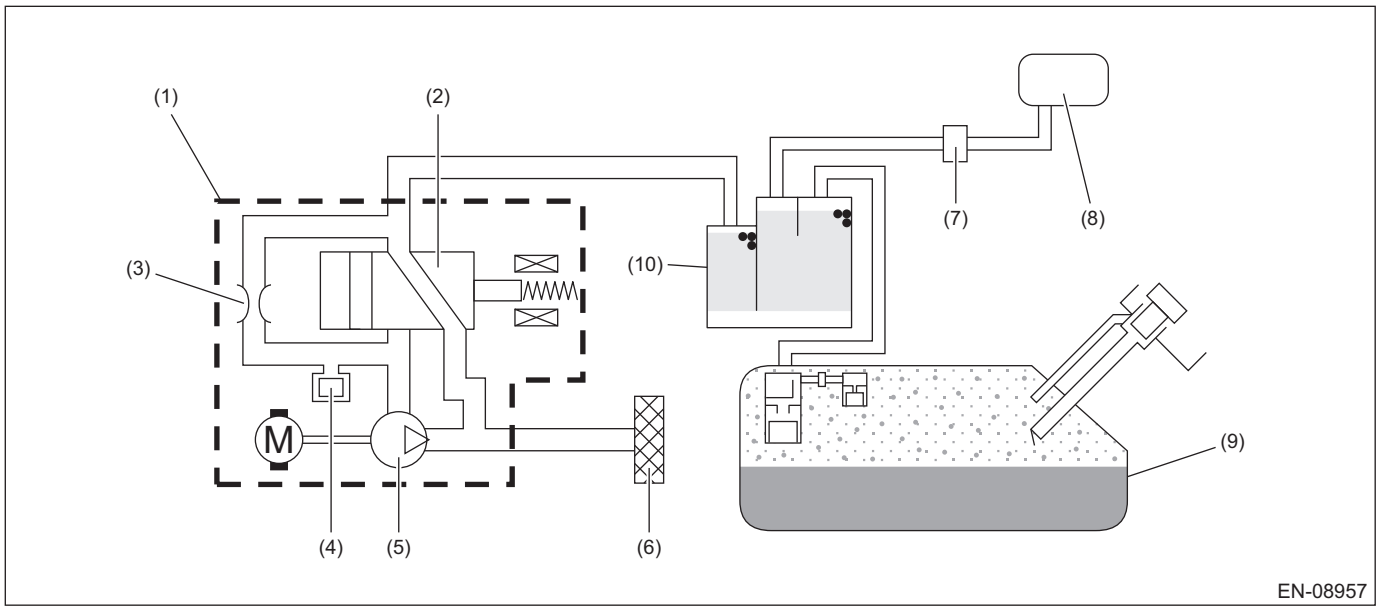
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P1449 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DRAIN TUBE A AND DRAIN PIPE BETWEEN LEAK CHECK VALVE ASSEMBLY AND DRAIN FILTER.** 2 Check the drain tube A or the drain pipe between leak check valve assembly and drain filter.	Is the drain tube A or the drain pipe between leak check valve assembly and drain filter clogged?	Replace the drain tube A or the drain pipe between leak check valve assembly and drain filter. <Ref. to EC(STI)-32, Leak Check Valve Assembly.> <Ref. to EC(STI)-28, Drain Filter.>	Go to step **3**.
3	**CHECK DRAIN FILTER.** Check the drain filter.	Is the drain filter clogged?	Replace the drain filter. <Ref. to EC(STI)-28, Drain Filter.>	Go to step **4**.
4	**CHECK LEAK CHECK VALVE ASSEMBLY (PRESSURE SENSOR).** 1) Turn the ignition switch to ON. 2) Start monitoring «Evap System Absolute Pressure» using «OBD System» on Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help". 3) Read the value of «Evap System Absolute Pressure» while wiggling the harness and connector between the leak check valve assembly and ECM.	Does the value of «Evap System Absolute Pressure» change?	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector • Poor contact of joint connector	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the drain filter clogging by the pressure change during purge introduction.
Judge as drain filter clogging malfunction if the pressure in the evaporative emission system piping suddenly decreases by the purging.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

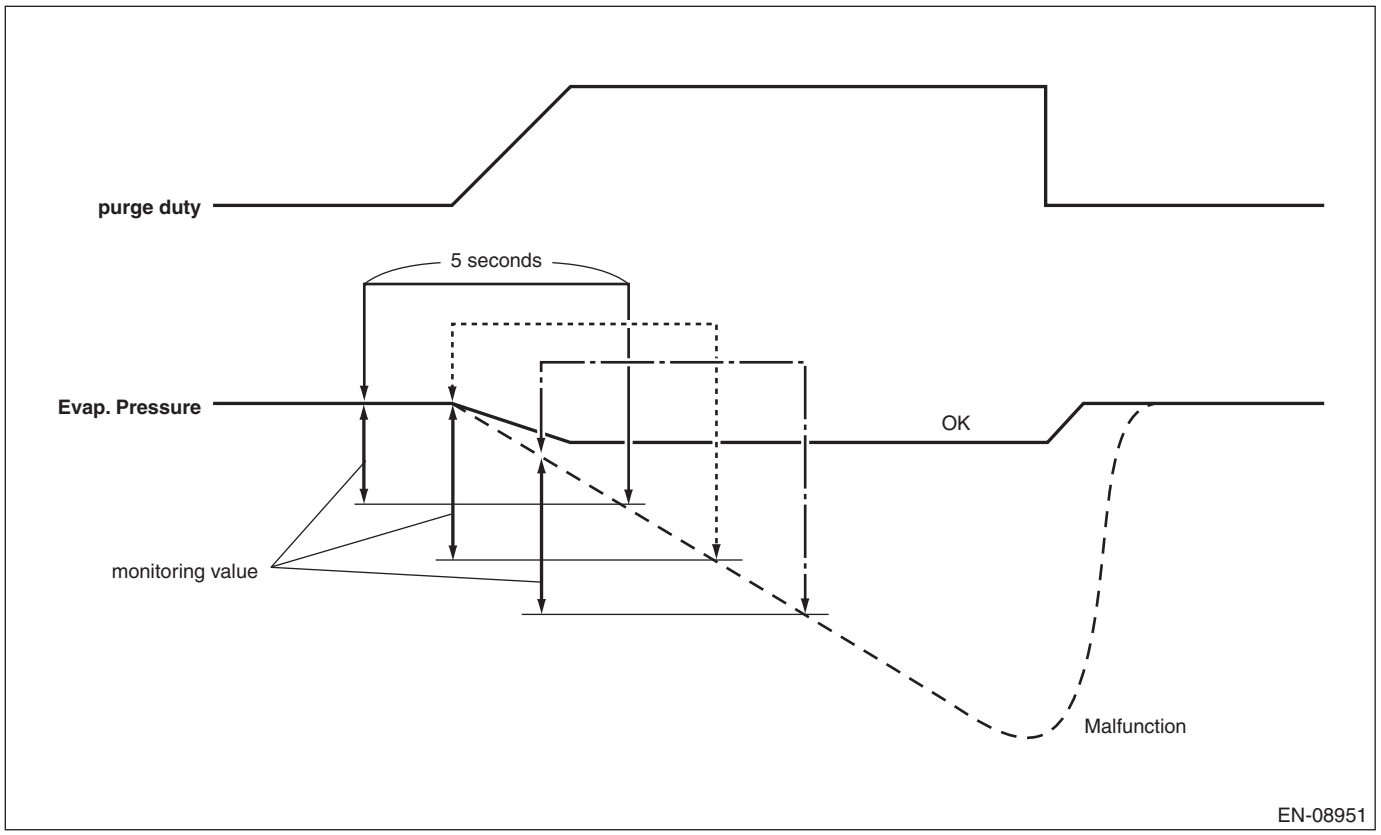
3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 20000 ms
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when purging is performed after 20000 ms have passed since the engine started.

5. DIAGNOSTIC METHOD



Calculate the difference between the Evaporative Leak Check Module pressure sensor output value of 5 seconds ago and the value at the present moment, and if the value is greater than the judgment value, detect as filter clogging trouble and judge as malfunction.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
|Pressure sensor output value as of 5 seconds ago – Current pressure sensor output value|	> 969.3 Pa (7.27 mmHg, 0.3 inHg)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DU:DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DRAIN TUBE BETWEEN CANISTER AND LEAK CHECK VALVE ASSEMBLY.** Check the drain tube between the canister and leak check valve assembly.	Is the drain tube between canister and leak check valve assembly clogged?	Replace the drain tube between the canister and leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Go to step **2**.
2	**CHECK HOSE AND TUBE BETWEEN CANISTER AND FUEL TANK.** Check the hose or tube between the canister and fuel tank.	Are the hose and tube between the canister and fuel tank clogged?	Replace the hose or tube between the canister and fuel tank. <Ref. to EC(STI)-7, Canister.> <Ref. to FU(STI)-67, Fuel Tank.>	Replace the canister. <Ref. to EC(STI)-7, Canister.> After the operation is complete, go to the next step. Go to step **3**.
3	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(STI)(diag)-65, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P1451 displayed on the display?	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	End.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(STI)(diag)-396, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DV:DTC P2004 TGV CONTROL STUCK OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2004 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE RH.** 1) Remove the tumble generator valve assembly RH. 2) Check the tumble generator valve body.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve assembly RH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after tumble generator valve "closed" signal output	≥ 3200 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	≥ 71.4°

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DW:DTC P2005 TGV CONTROL STUCK OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2005 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE LH.** 1) Remove the tumble generator valve assembly LH. 2) Check the tumble generator valve body.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve assembly LH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after tumble generator valve "closed" signal output	≥ 3200 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	≥ 71.4°

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DX:DTC P2006 TGV CONTROL STUCK CLOSED BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2006 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE RH.** 1) Remove the tumble generator valve assembly RH. 2) Check the tumble generator valve body.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve assembly RH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after tumble generator valve "open" signal output	≥ 4600 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	< 71.4°

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DY:DTC P2007 TGV CONTROL STUCK CLOSED BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2007 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE LH.** 1) Remove the tumble generator valve assembly LH. 2) Check the tumble generator valve body.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve assembly LH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after tumble generator valve "open" signal output	≥ 4600 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	< 71.4°

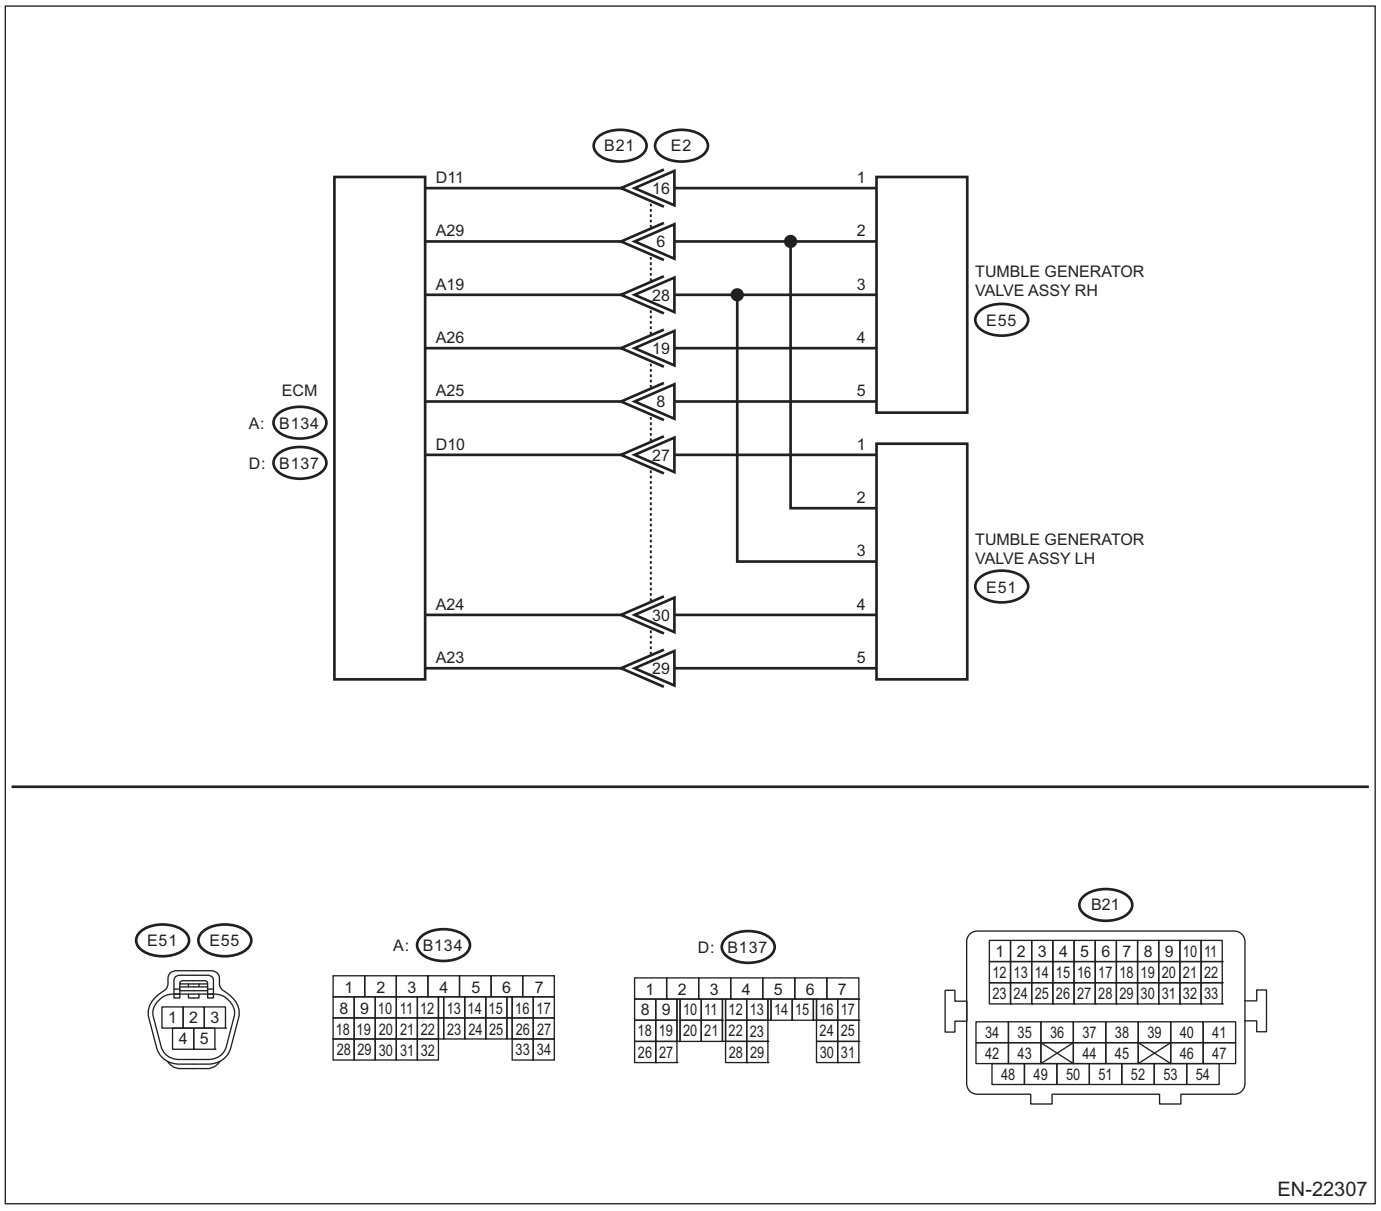
Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DZ:DTC P2008 TGV CONTROL CIRCUIT/OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



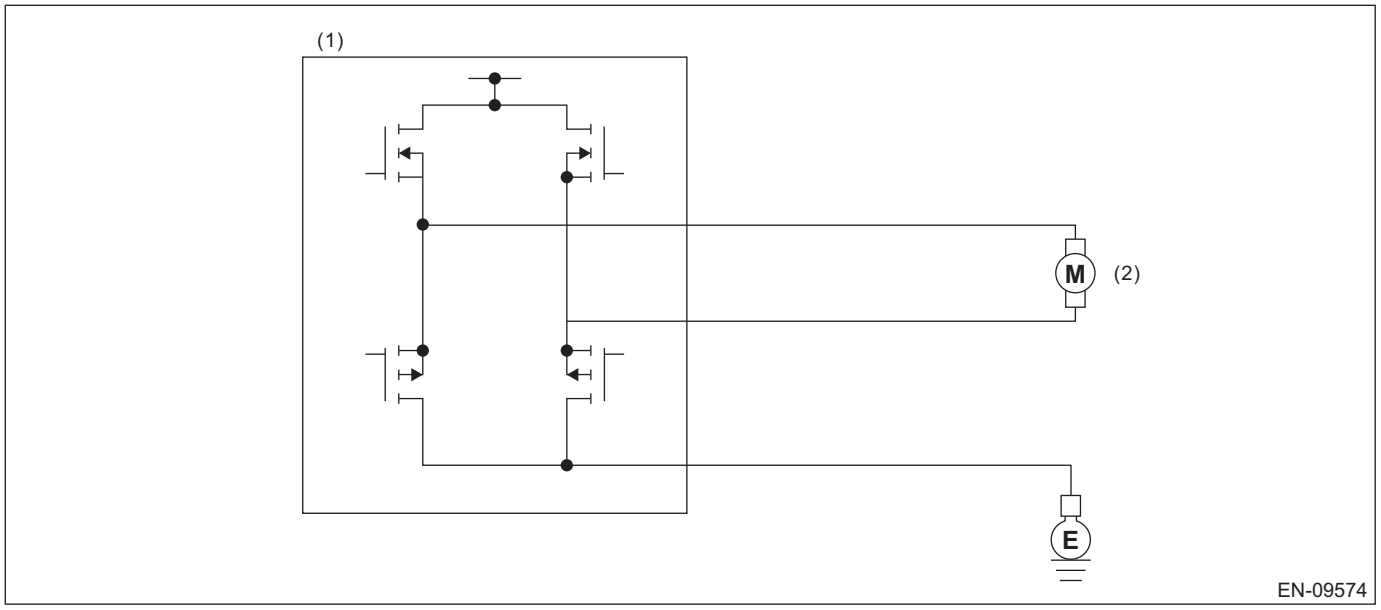
EN-22307

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from tumble generator valve assembly RH. 4) Measure the resistance of harness between ECM connector and tumble generator valve assembly RH connector. ***Connector & terminal*** ***(B134) No. 25 — (E55) No. 5:*** ***(B134) No. 26 — (E55) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve assembly RH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 25 — Chassis ground:*** ***(B134) No. 26 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and tumble generator valve assembly RH connector.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of tumble generator valve assembly RH connector.	Is there poor contact of the tumble generator valve assembly RH connector?	Repair the poor contact of tumble generator valve assembly RH connector.	Replace the tumble generator valve assembly RH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open circuit of tumble generator valve motor.
Judge as NG when the output voltage remains high when the tumble generator valve motor is not energized.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve drive duty	≤ 79.17%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ Battery voltage × 0.55 V

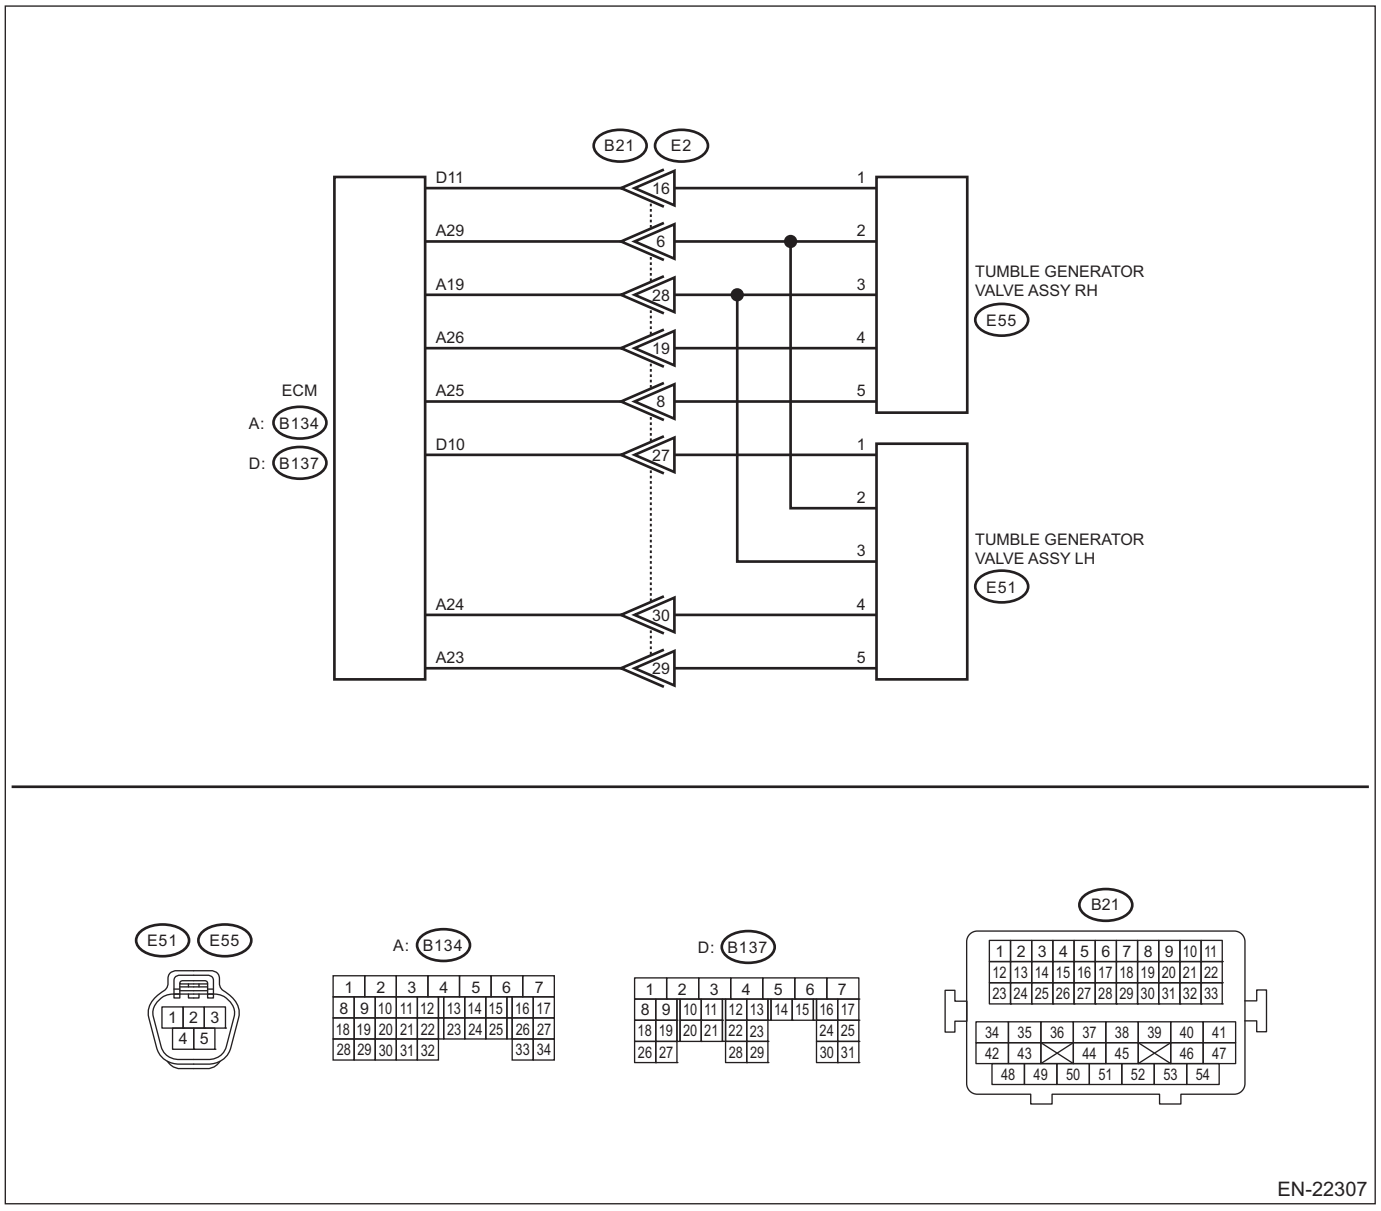
Time needed for diagnosis: 32 ms × 20 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EA:DTC P2009 TGV CONTROL CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



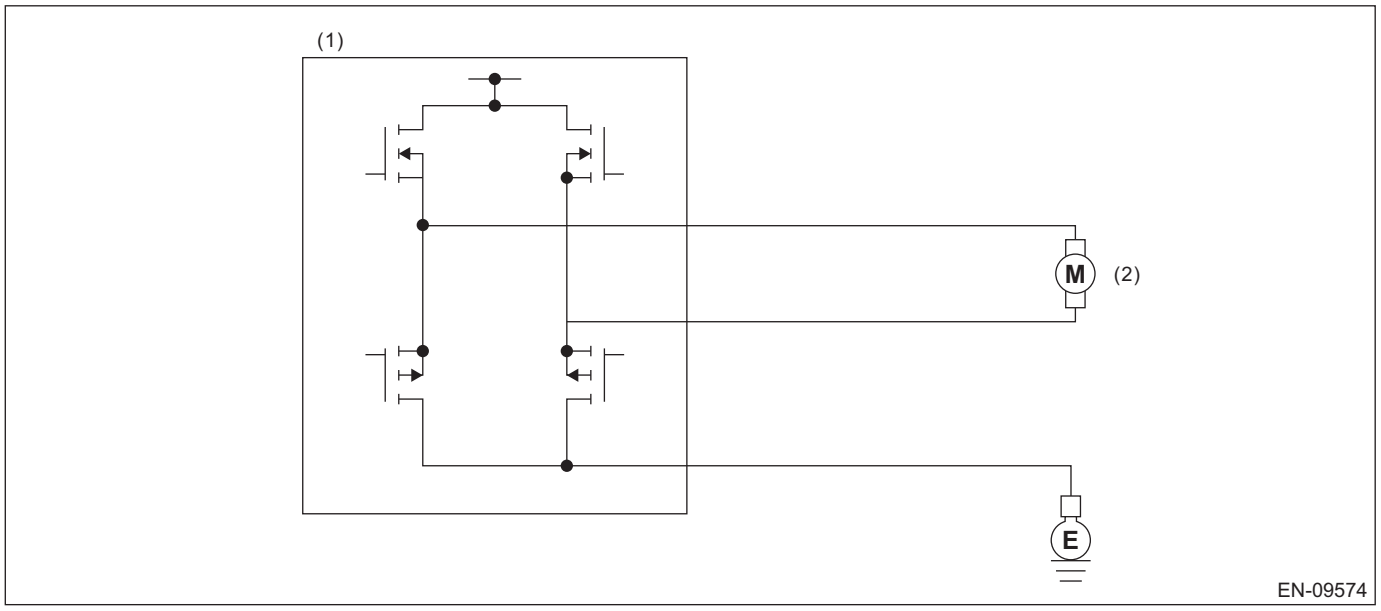
EN-22307

Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 25 (+) — Chassis ground (–):*** ***(B134) No. 26 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve assembly RH connector.	Replace the tumble generator valve assembly RH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of tumble generator valve motor.
Judge as NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve instruction	Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Overcurrent signal from driver	ON

Time needed for diagnosis: 96 ms × 10 time(s)
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EB:DTC P2011 TGV CONTROL CIRCUIT/OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:

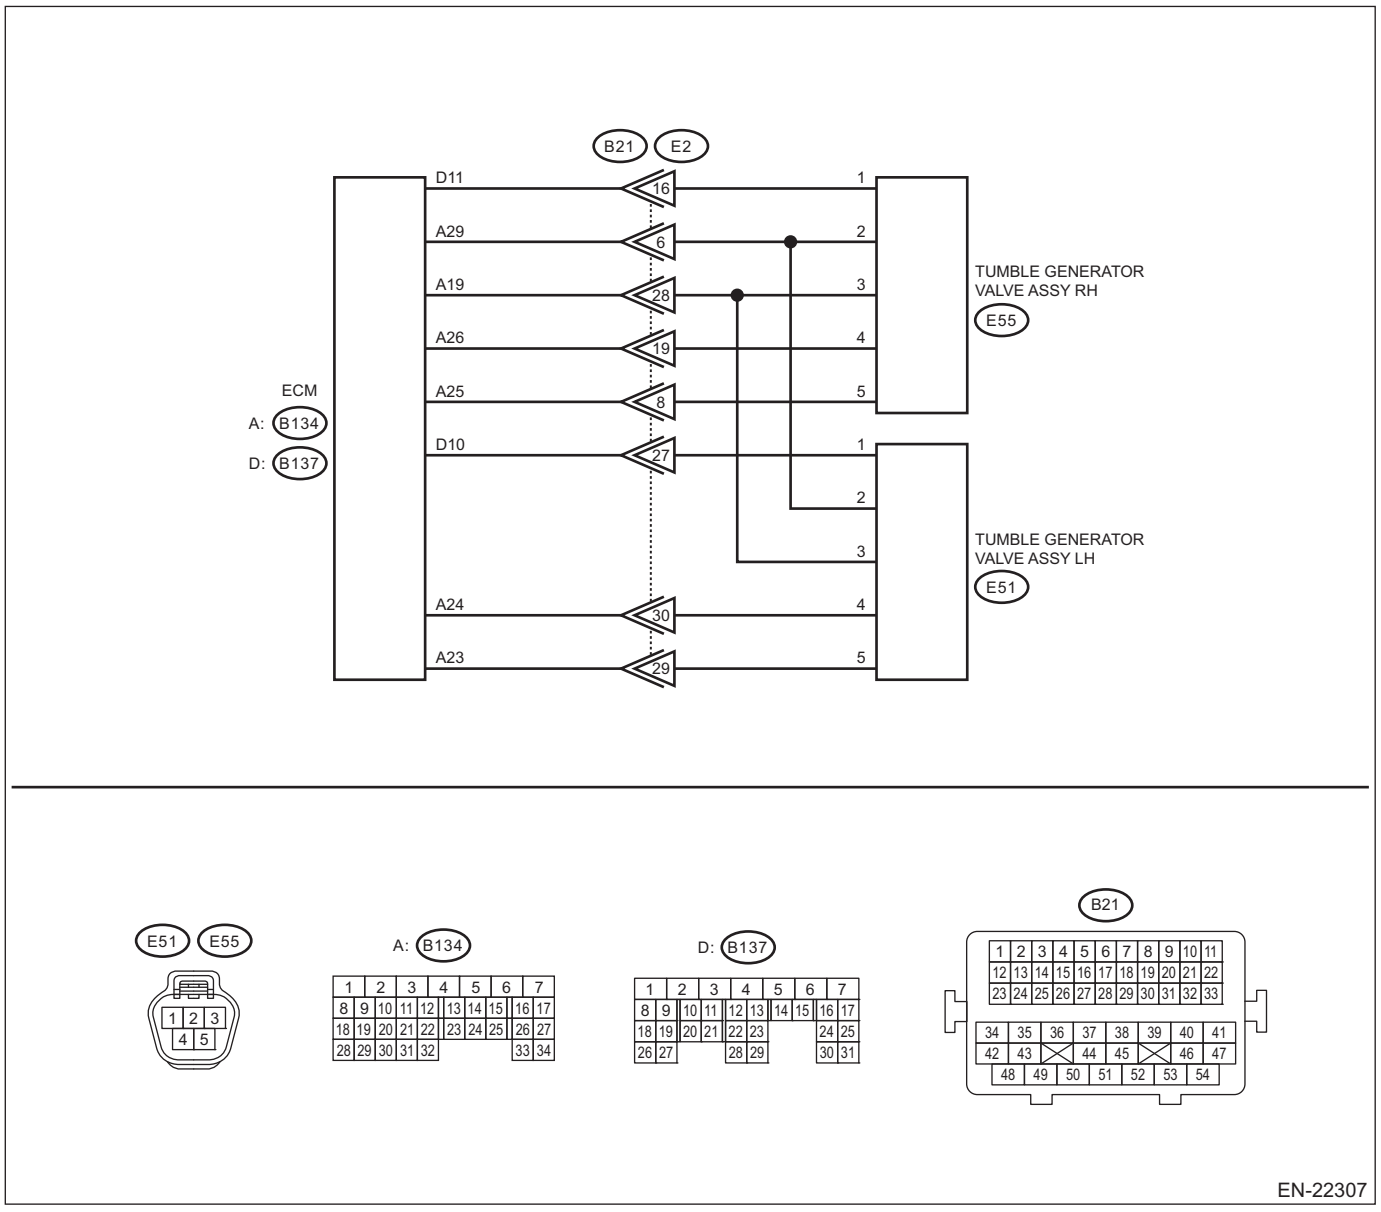
ED:DTC P2016 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



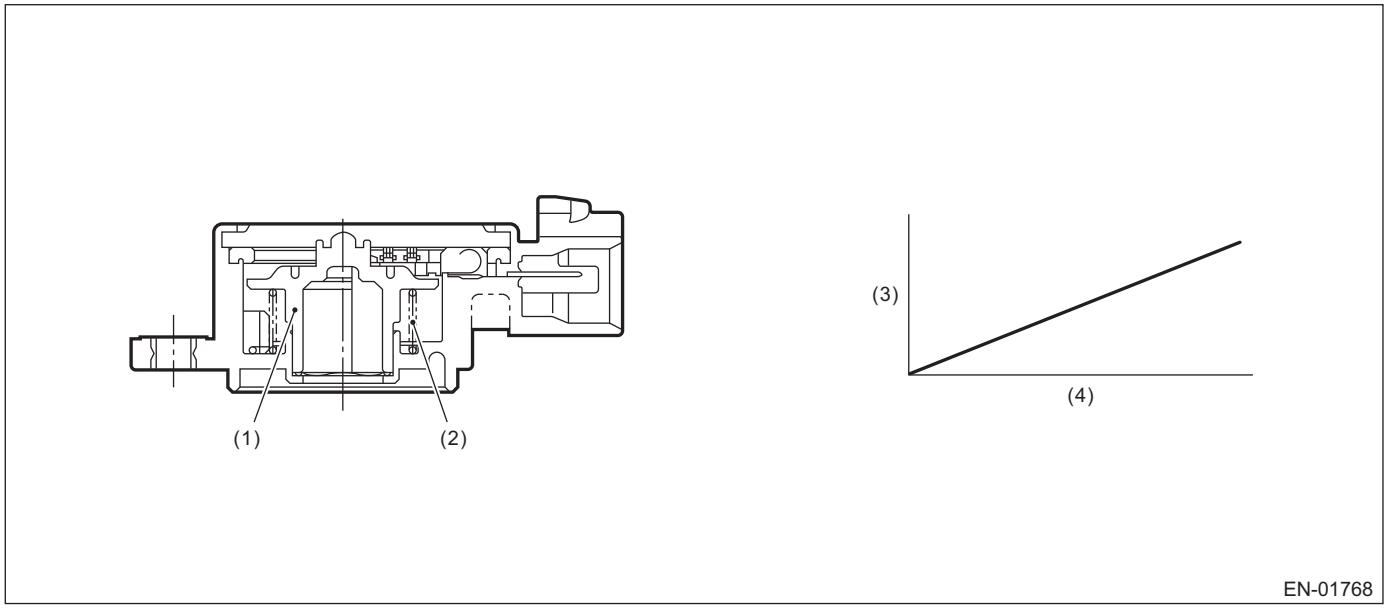
EN-22307

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «TGV Position Sensor R» less than 0.2 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF TUMBLE GENERATOR VALVE ASSEMBLY RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve assembly RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between tumble generator valve assembly RH connector and engine ground. ***Connector & terminal*** ***(E55) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve assembly RH connector • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and tumble generator valve assembly RH connector. ***Connector & terminal*** ***(B137) No. 11 — (E55) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve assembly RH connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY RH CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 11 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and tumble generator valve assembly RH connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and tumble generator valve assembly RH connector.	Is there poor contact of ECM or the tumble generator valve assembly RH connector?	Repair the poor contact of ECM or tumble generator valve assembly RH connector.	Replace the tumble generator valve assembly RH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.264 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EN-22307

	Step	Check	Yes	No
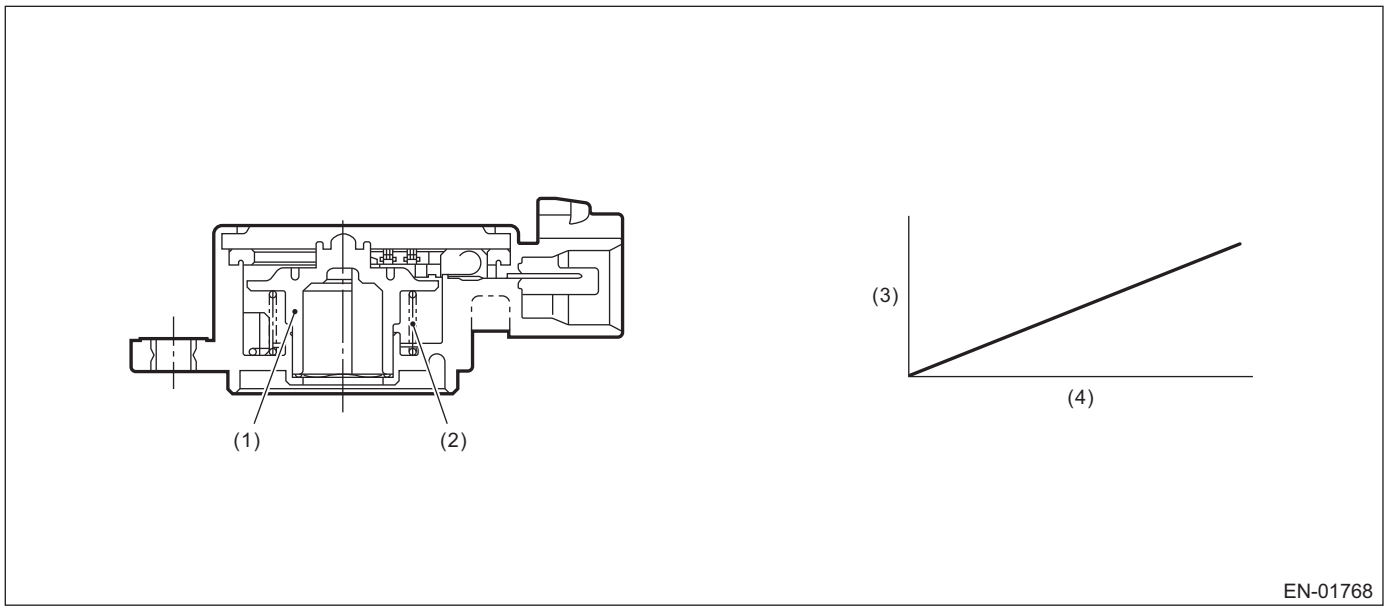
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «TGV Position Sensor L» 5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve assembly LH. 3) Start the engine. 4) Read the value of «TGV Position Sensor L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «TGV Position Sensor L» 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve assembly LH connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ASSEMBLY LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between tumble generator valve assembly LH connector and engine ground. ***Connector & terminal*** ***(E51) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve assembly LH connector • Poor contact of ECM connector • Poor contact of coupling connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of tumble generator valve assembly LH connector.	Is there poor contact of the tumble generator valve assembly LH connector?	Repair the poor contact of tumble generator valve assembly LH connector.	Replace the tumble generator valve assembly LH. <Ref. to FU(STI)-45, Tumble Generator Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.783 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EH:DTC P2088 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND OIL FLOW CONTROL SOLENOID VALVE RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the oil flow control solenoid valve RH. 4) Measure the resistance of harness between ECM connector and oil flow control solenoid valve RH connector. ***Connector & terminal*** ***(B134) No. 34 — (E38) No. 1:*** ***(B134) No. 27 — (E38) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and oil flow control solenoid valve RH connector • Poor contact of coupling connector

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND OIL FLOW CONTROL SOLENOID VALVE RH CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 34 — Chassis ground:*** ***(B134) No. 27 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and oil flow control solenoid valve RH connector.
3	**CHECK OIL FLOW CONTROL SOLENOID VALVE.** Measure the resistance between oil flow control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 6 — 12 Ω?	Repair the poor contact of ECM and oil flow control solenoid valve RH connector.	Replace the oil flow control solenoid valve RH. <Ref. to FU(STI)-47, Oil Flow Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the oil flow control solenoid valve.
Judge as NG when the current is small even though the duty signal is large.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil flow control solenoid valve control duty	≥ 99.61 %

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Oil control solenoid valve control present current	< 0.306 A

Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EI: DTC P2089 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

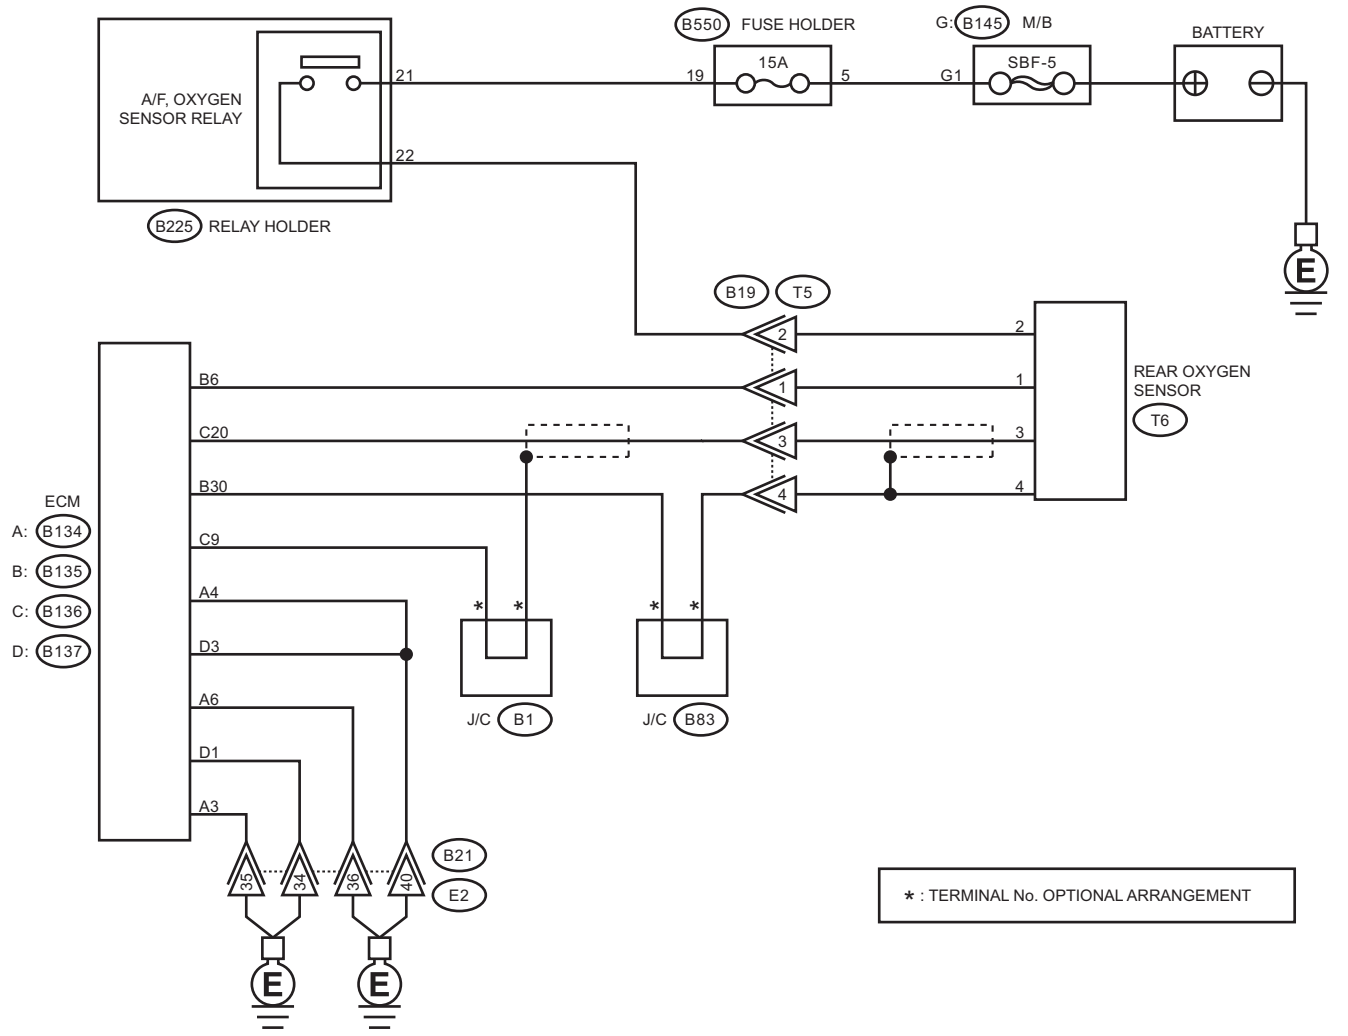
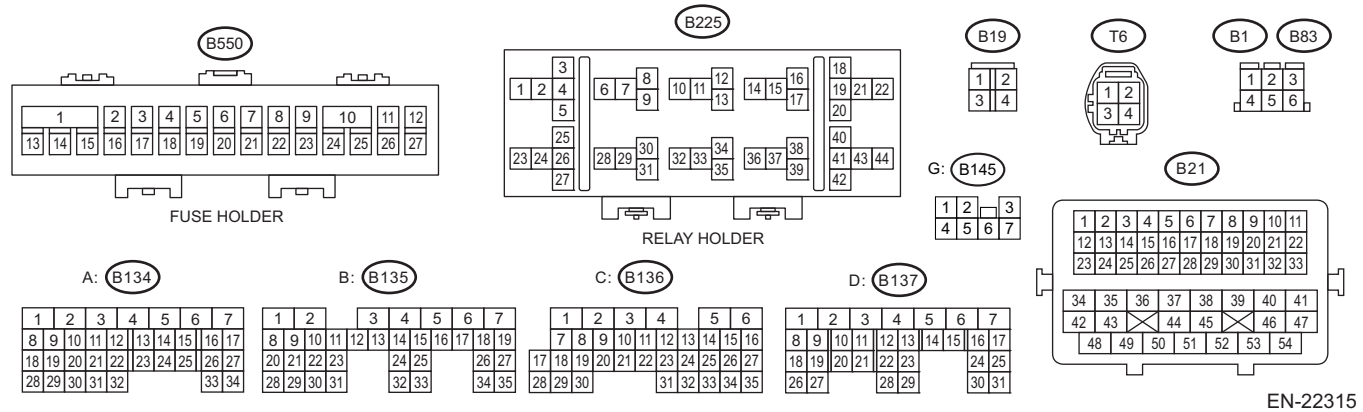
EN-22314





Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2096 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of front oxygen (A/F) sensor. • Front oxygen (A/F) sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of front oxygen (A/F) sensor connector • Poor contact of ECM connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 — Chassis ground:*** ***(B136) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
5	**CHECK OUTPUT SIGNAL FOR ECM.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **7**.	Go to step **6**.
6	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):***	Is the voltage 4.95 V or more?	Go to step **7**.	Go to step **8**.
7	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
8	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **10**.
10	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: If fuel pressure does not increase, squeeze the fuel return hose 2 to 3 times, then measure fuel pressure again.	Is the measured value 284 — 314 kPa (2.9 — 3.2 kgf/cm^2, 41 — 46 psi)?	Go to step **11**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
11	**CHECK FUEL PRESSURE.** After connecting the pressure regulator vacuum hose, measure fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If the measured value at this step is out of specification, check or replace pressure regulator and pressure regulator vacuum hose.	Is the measured value 230 — 260 kPa (2.4 — 2.7 kgf/cm^2, 33 — 38 psi)?	Go to step **12**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
12	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **13**.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
13	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/m)?	Go to step **14**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
14	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature from «Intake Air Temperature». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **15**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
15	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.490 V or more?	Go to step **16**.	Go to step **17**.

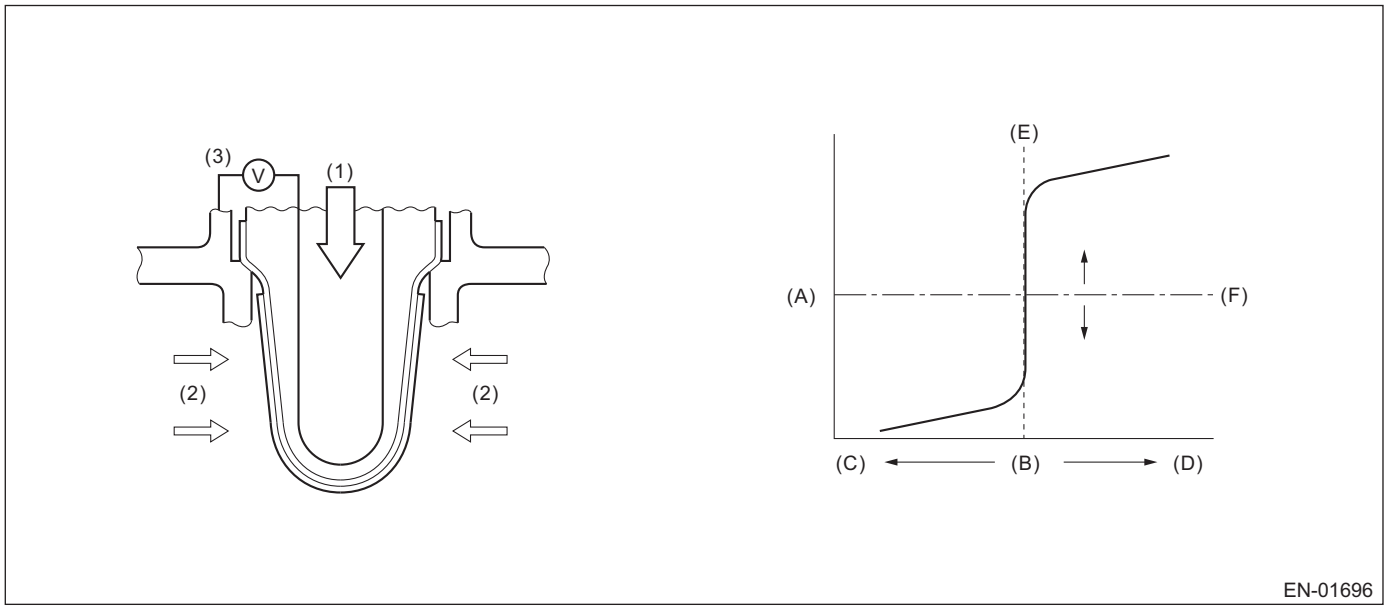
	Step	Check	Yes	No
16	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.250 V or less?	Go to step **18**.	Go to step **17**.
17	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of rear oxygen sensor. • Rear oxygen sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **19**.
18	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Rear O2 Sensor Voltage» kept at 0.250 V or less for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>	Go to step **19**.
19	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:*** ***(B135) No. 30 — (T6) No. 4:***	Is the resistance less than 1 Ω?	Go to step **20**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector

Step		Check	Yes	No
20	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(T6) No. 3 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Control the sub feedback learning and judge as NG when the learning value is in the lean zone.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

(1) Atmosphere
(2) Exhaust gas
(3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Engine load change every 0.5 engine revs.	< 0.02 g/rev (0 oz/rev)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932°F)
Integrated intake air amount in stoichiometric combustion	≥ 750 g (26.5 oz)

Secondary parameters	Execution condition
Fuel level increase	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the vehicle is idling or running at a constant speed of 80 km/h (50 MPH) or more.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	≤ –0.042

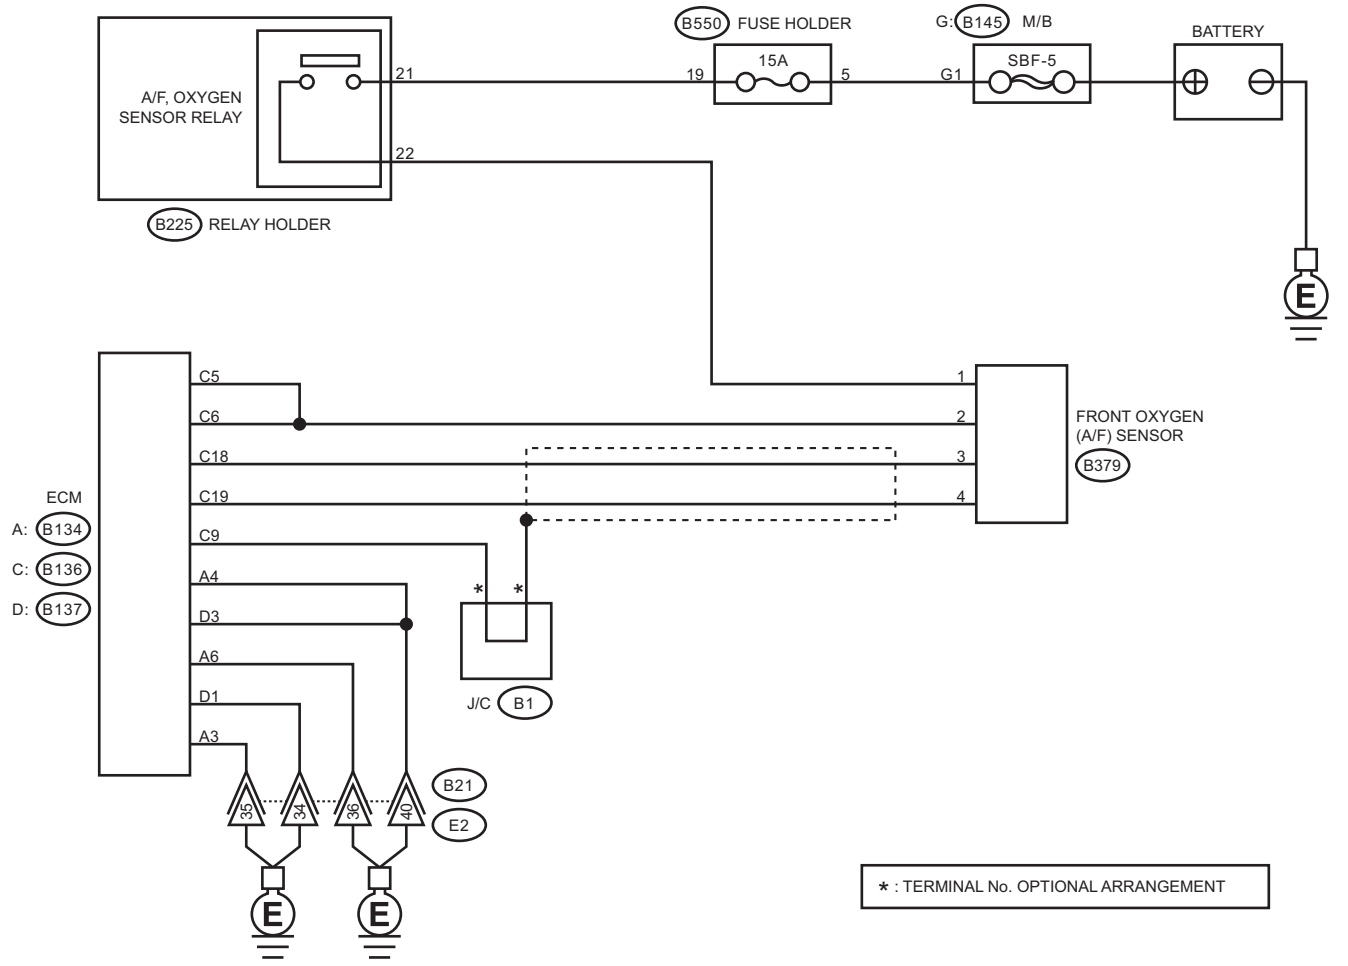
Time needed for diagnosis:1 s
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

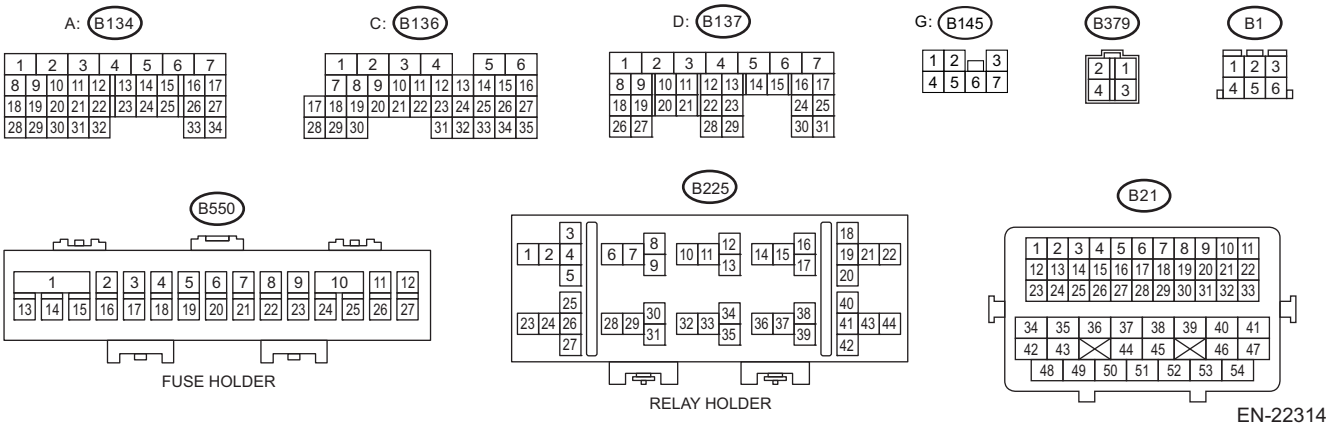
EQ:DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

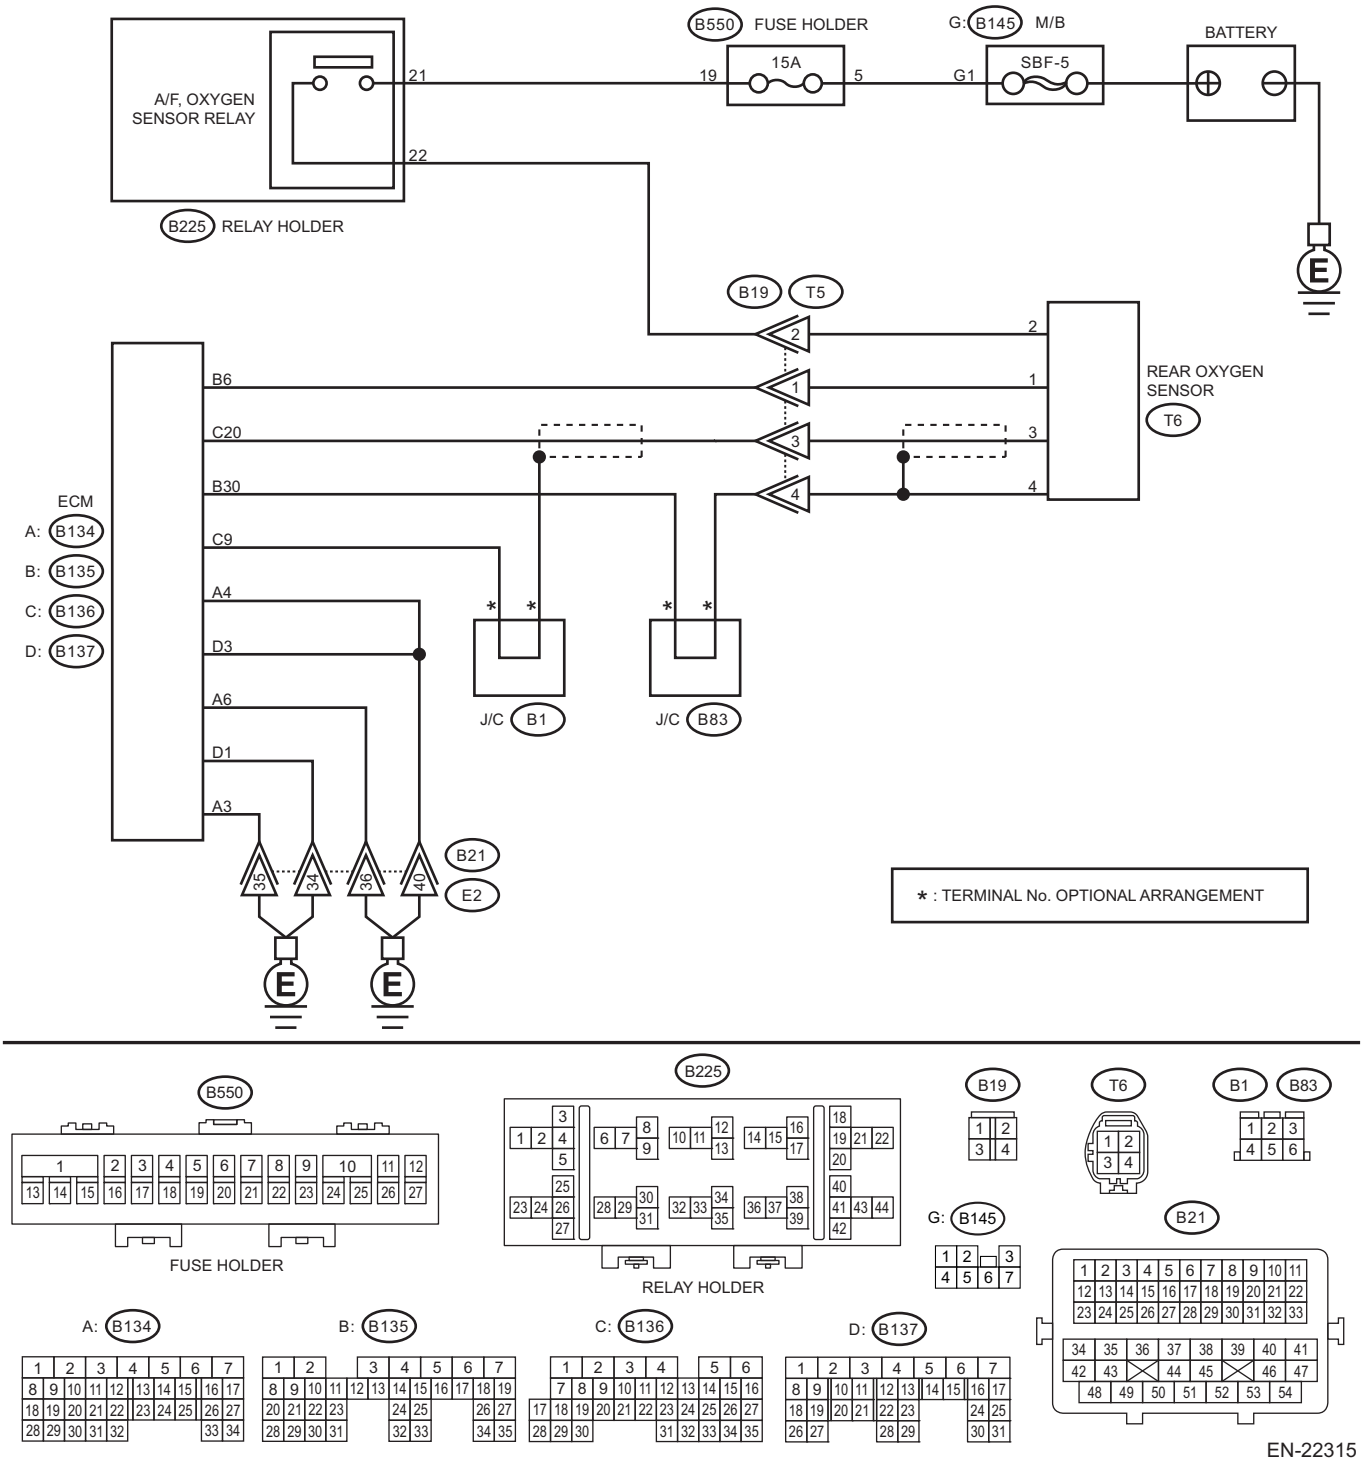
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>







Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2097 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of front oxygen (A/F) sensor. • Front oxygen (A/F) sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 — Chassis ground:*** ***(B136) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
5	**CHECK OUTPUT SIGNAL FOR ECM.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **7**.	Go to step **6**.
6	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):***	Is the voltage 4.95 V or more?	Go to step **7**.	Go to step **8**.
7	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
8	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **9**.
9	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **10**.

	Step	Check	Yes	No
10	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: If fuel pressure does not increase, squeeze the fuel return hose 2 to 3 times, then measure fuel pressure again.	Is the measured value 284 — 314 kPa (2.9 — 3.2 kgf/cm^2, 41 — 46 psi)?	Go to step **11**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
11	**CHECK FUEL PRESSURE.** After connecting the pressure regulator vacuum hose, measure fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If the measured value at this step is out of specification, check or replace pressure regulator and pressure regulator vacuum hose.	Is the measured value 230 — 260 kPa (2.4 — 2.7 kgf/cm^2, 33 — 38 psi)?	Go to step **12**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
12	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **13**.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
13	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/m)?	Go to step **14**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
14	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature from «Intake Air Temperature». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **15**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
15	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.490 V or more?	Go to step **16**.	Go to step **17**.

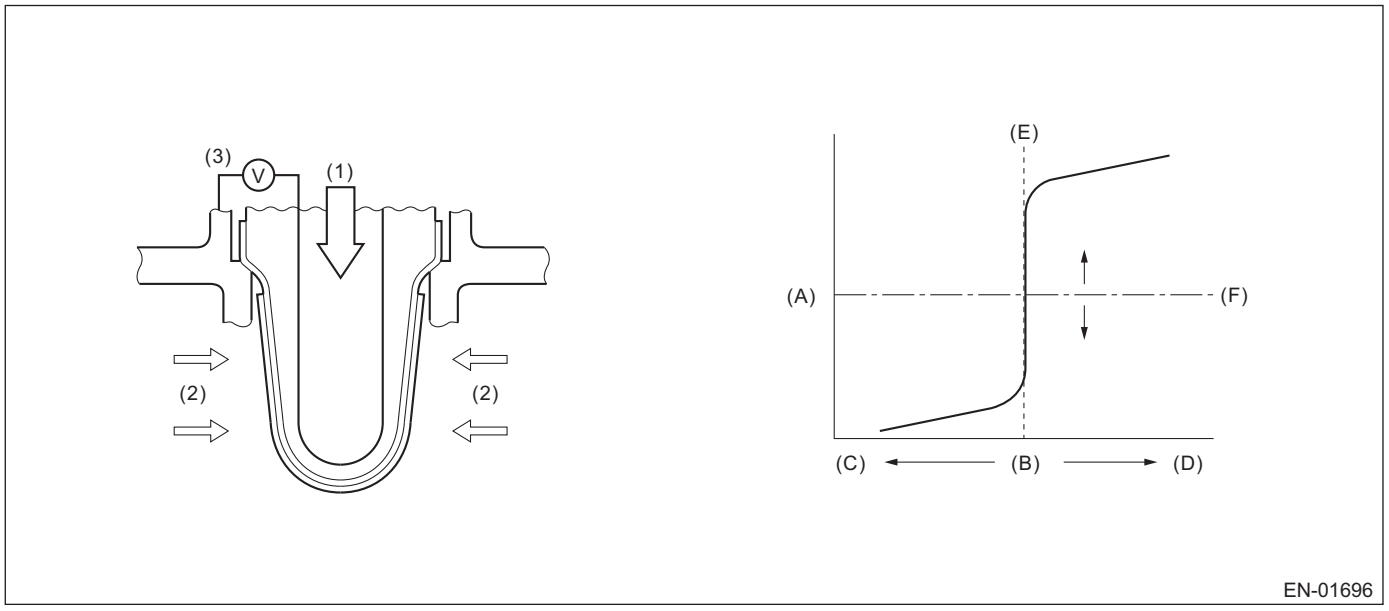
	Step	Check	Yes	No
16	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor Voltage» 0.250 V or less?	Go to step **18**.	Go to step **17**.
17	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the rear oxygen sensor connector and coupling connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **19**.
18	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Rear O2 Sensor Voltage» kept at 0.8 V or more for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>	Go to step **19**.
19	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:*** ***(B135) No. 30 — (T6) No. 4:***	Is the resistance less than 1 Ω?	Go to step **20**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector

Step		Check	Yes	No
20	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(T6) No. 3 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Sub feedback learning is being performed. When the learning value goes to the rich side, judge as NG.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean (E) Theoretical air fuel ratio (F) Comparative voltage

(1) Atmosphere (2) Exhaust gas (3) Electromotive force

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Engine load change every 0.5 engine revs.	< 0.02 g/rev (0 oz/rev)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932°F)
Integrated intake air amount in stoichiometric combustion	≥ 750 g (26.5 oz)

Secondary parameters	Execution condition
Fuel level increase	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the vehicle is idling or running at a constant speed of 80 km/h (50 MPH) or more.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	≥ 0.028

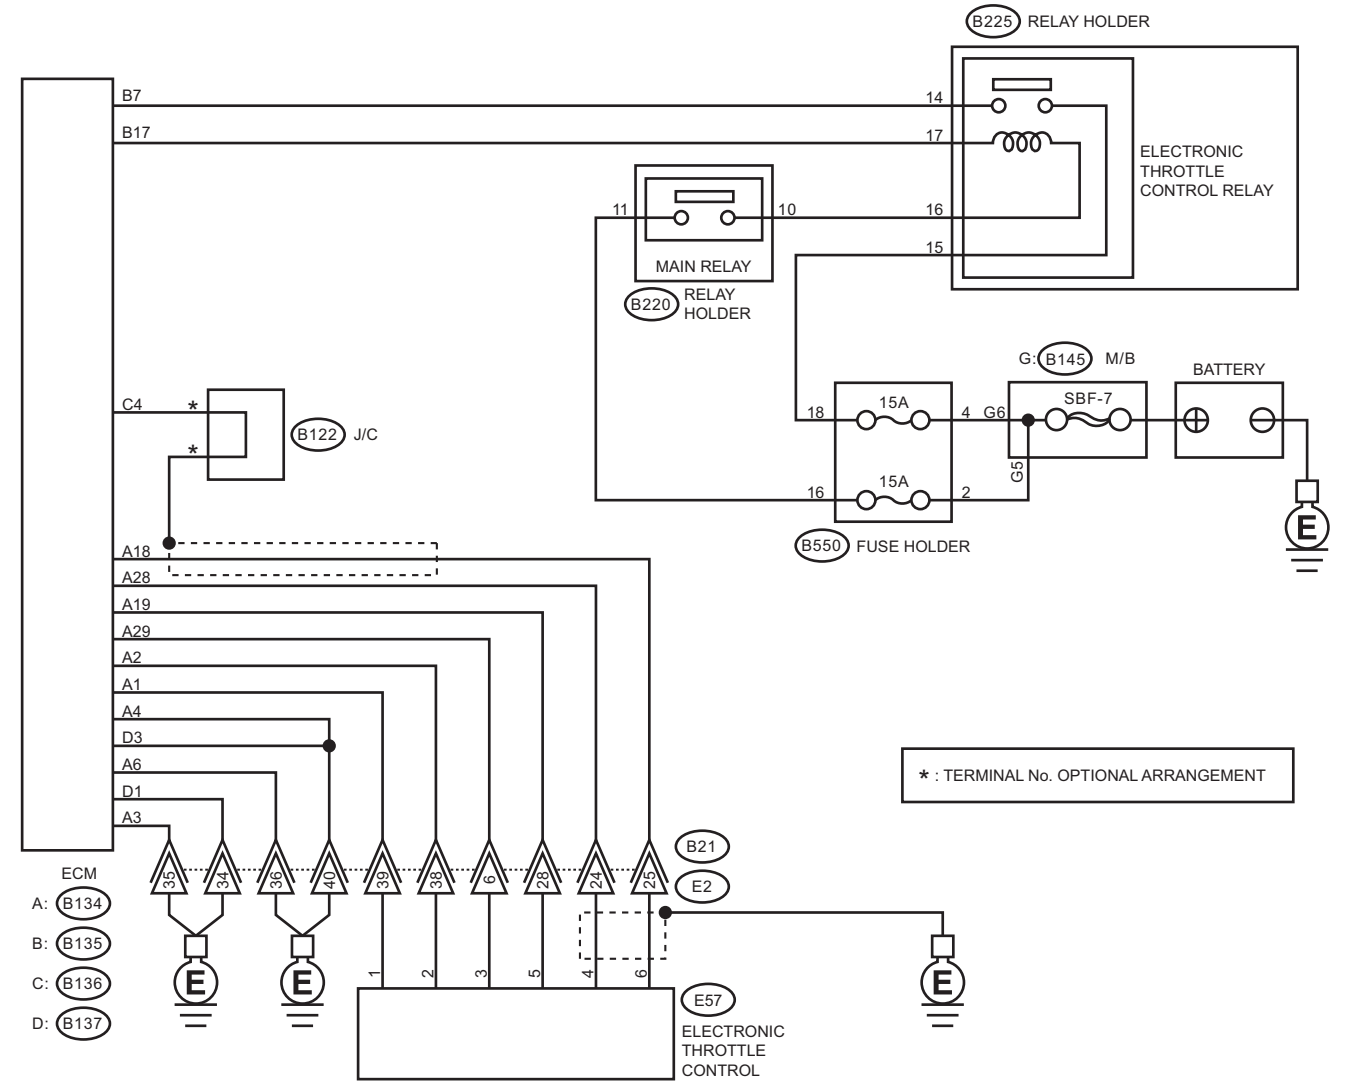
Time needed for diagnosis: 1 s
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

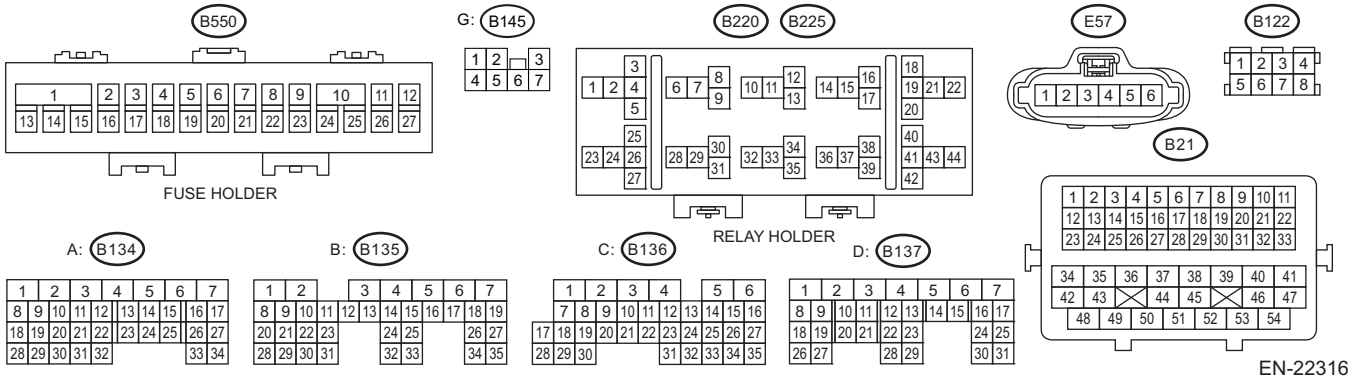
ER:DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22316

	Step	Check	Yes	No
1	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the electronic throttle control relay. <Ref. to FU(STI)-60, Electronic Throttle Control Relay.>
2	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
5	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B135) No. 7 — (B225) No. 14:*** ***(B135) No. 17 — (B225) No. 17:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.
6	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from electronic throttle control. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 19 — Chassis ground:*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 18 — (B136) No. 4:*** ***(B134) No. 28 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
7	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 6 — Engine ground:*** ***(E57) No. 4 — Engine ground:***	Is the resistance 200 kΩ or more?	Go to step **8**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(STI)-56, Engine Control Module (ECM).>
8	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 18 — (E57) No. 6:*** ***(B134) No. 28 — (E57) No. 4:*** ***(B134) No. 29 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
9	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **10**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
10	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 4 (+) — Engine ground (–):*** ***(E57) No. 6 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **11**.
11	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B134) No. 19 — (B134) No. 18:*** ***(B134) No. 19 — (B134) No. 28:***	Is the resistance 1 MΩ or more?	Go to step **12**.	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

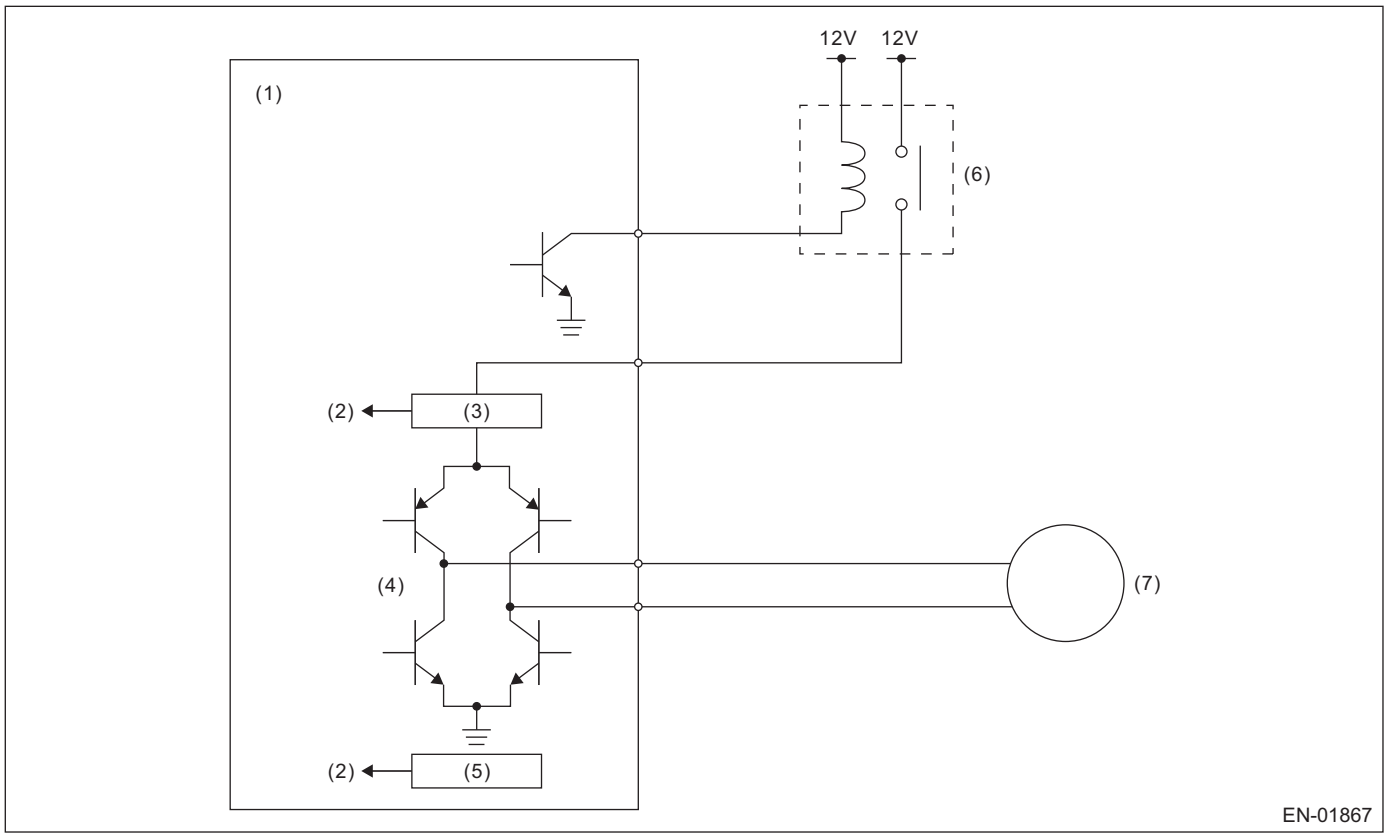
	Step	Check	Yes	No
12	**CHECK SENSOR OUTPUT.** 1) Connect all connectors. 2) Start the engine and warm up completely. 3) Stop the engine, and then turn the ignition switch to ON (engine OFF). 4) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Main-Throttle Sensor» 0.81 — 0.87 V?	Go to step **13**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>
13	**CHECK SENSOR OUTPUT.** Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Sub-Throttle Sensor» 1.64 — 1.7 V?	Go to step **14**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(STI)-15, Throttle Body.>
14	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(B134) No. 1 — (E57) No. 1:*** ***(B134) No. 2 — (E57) No. 2:***	Is the resistance less than 1 Ω?	Go to step **15**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and electronic throttle control connector • Poor contact of coupling connector
15	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):*** ***(E57) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **16**.
16	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:*** ***(E57) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **17**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
17	**CHECK ELECTRONIC THROTTLE CONTROL MOTOR HARNESS.** Measure the resistance between electronic throttle control connectors. ***Connector & terminal*** ***(E57) No. 1 — (E57) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **18**.	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
18	**CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:*** ***(B134) No. 4 — Chassis ground:*** ***(B134) No. 6 — Chassis ground:*** ***(B137) No. 1 — Chassis ground:*** ***(B137) No. 3 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **19**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
19	**CHECK ELECTRONIC THROTTLE CONTROL.** Measure the resistance between electronic throttle control terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 50 Ω or less?	Go to step **20**.	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>
20	**CHECK ELECTRONIC THROTTLE CONTROL.** Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(STI)-15, Throttle Body.>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the motor current becomes large or drive circuit is heated.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Detecting circuit
(3) Overcurrent detection circuit
(4) Drive circuit
(5) Temperature detection circuit
(6) Electronic throttle control relay
(7) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6.2 V
Electronic throttle control relay output	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Overcurrent signal from driver	ON

Time needed for diagnosis: 512 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ES:DTC P2102 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

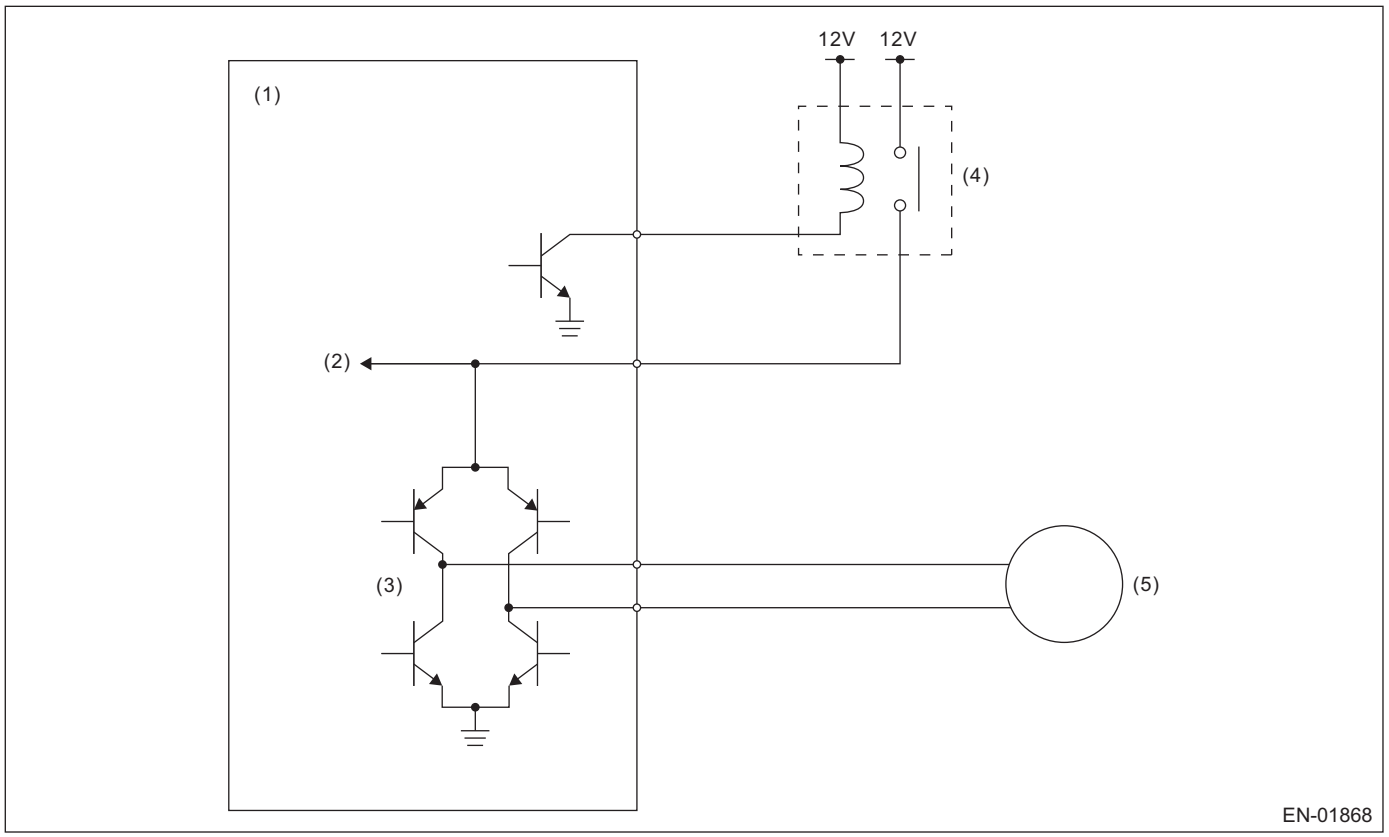
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the electronic throttle control relay. <Ref. to FU(STI)-60, Electronic Throttle Control Relay.>
2	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
5	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B135) No. 7 — (B225) No. 14:*** ***(B135) No. 17 — (B225) No. 17:***	Is the resistance less than 1 Ω?	Repair the poor contact of ECM connector.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the electronic throttle control power is not supplied even when ECM sets the electric control throttle relay to ON.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Voltage detection circuit
(3) Drive circuit
(4) Electronic throttle control relay
(5) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 11 V
Electronic throttle control relay output	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Motor power voltage	≤ 5 V

Time needed for diagnosis: 352 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ET:DTC P2103 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

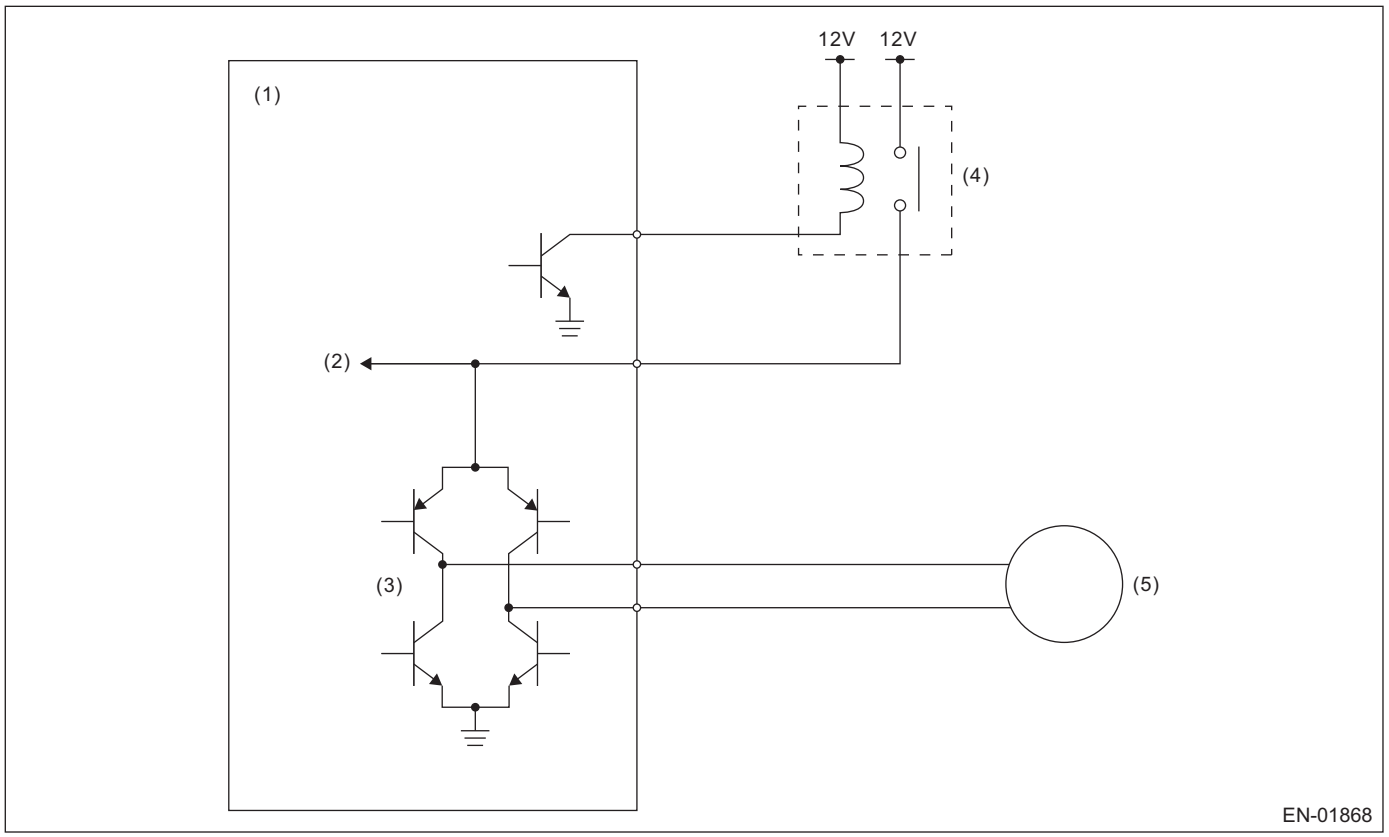
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Replace the electronic throttle control relay. <Ref. to FU(STI)-60, Electronic Throttle Control Relay.>
2	**CHECK SHORT CIRCUIT OF ELECTRONIC THROTTLE CONTROL RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the electronic throttle control power is supplied even when ECM sets the electronic throttle control relay to OFF.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Voltage detection circuit
(3) Drive circuit
(4) Electronic throttle control relay
(5) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
Electronic throttle control relay output	OFF

4. GENERAL DRIVING CYCLE

- When ignition switch ON → OFF
- Ignition switch OFF → ON (Only after clearing memory)

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Motor power voltage	≥ 5 V

Time needed for diagnosis: 600 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

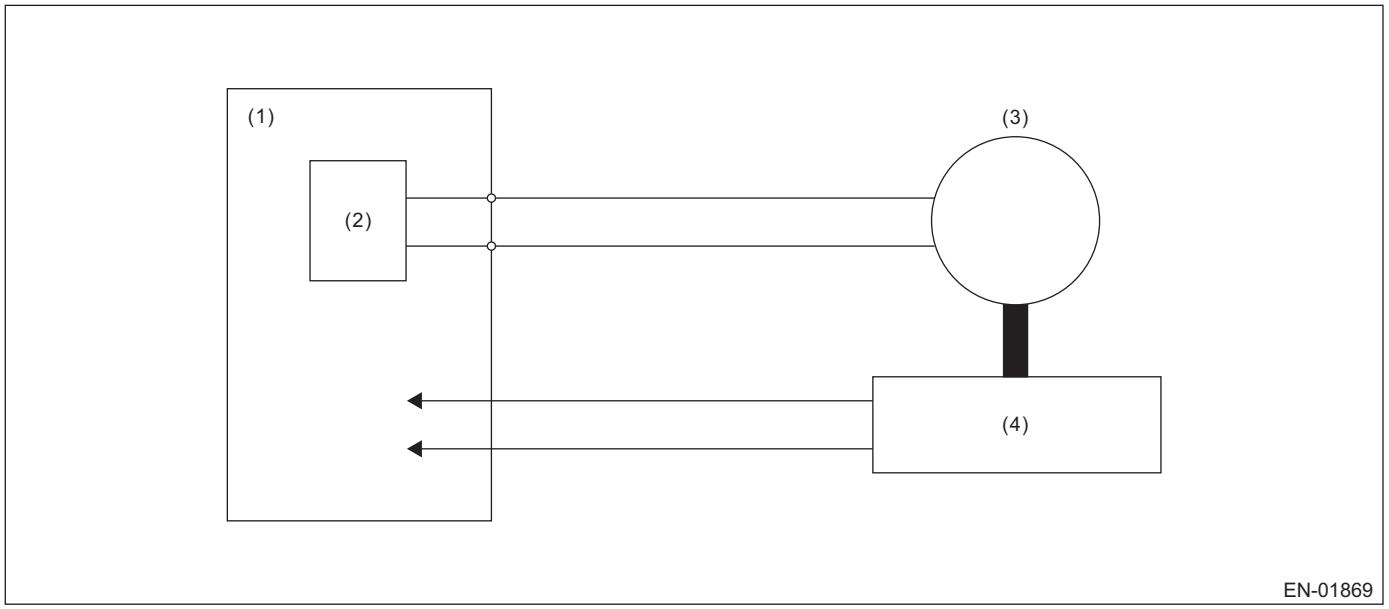
EU:DTC P2109 THROTTLE/PEDAL POSITION SENSOR "A" MINIMUM STOP PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(STI)(diag)-551, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when full close point learning cannot conducted or abnormal value is detected.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Drive circuit
(3) Motor
(4) Throttle position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis at full closed point learning.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Throttle sensor opening angle at full close point learning	< 9.884 ° or > 20.116 °
or	
|(Throttle default position – Minimum throttle halt position)|	< 1.637 °

Time Needed for Diagnosis: 8 ms — 80 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

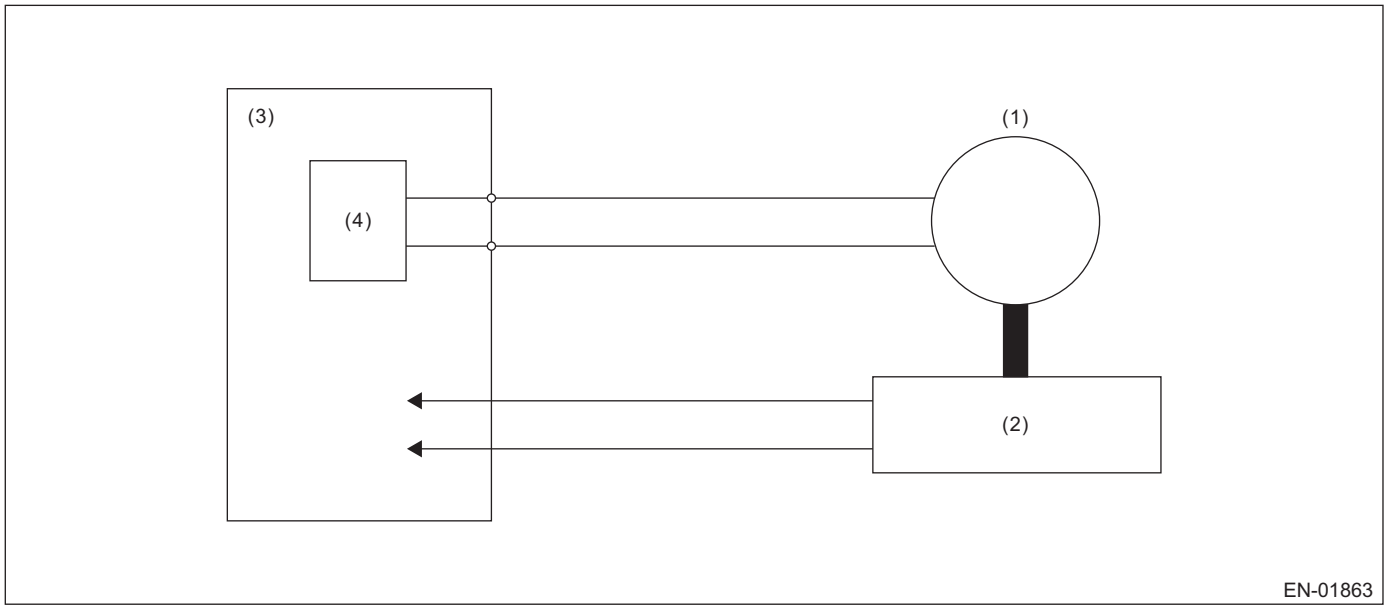
EV:DTC P2119 THROTTLE ACTUATOR "A" CONTROL THROTTLE BODY RANGE/PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(STI)(diag)-551, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the target opening angle and actual opening angle is mismatched or the current to motor is the specified duty or more for specified time continuously.

2. COMPONENT DESCRIPTION



(1) Motor
(2) Throttle position sensor
(3) Engine control module (ECM)
(4) Drive circuit

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6.2 V
Electronic throttle control relay	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

5. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Judgment1

Judgment value

Malfunction Criteria	Threshold Value
Output duty to drive circuit	≥ 95 %

Time needed for diagnosis:

- Engine speed ≥ 500 rpm: 2000 ms
- Engine speed < 500 rpm: 5000 ms

Judgment2

Judgment value

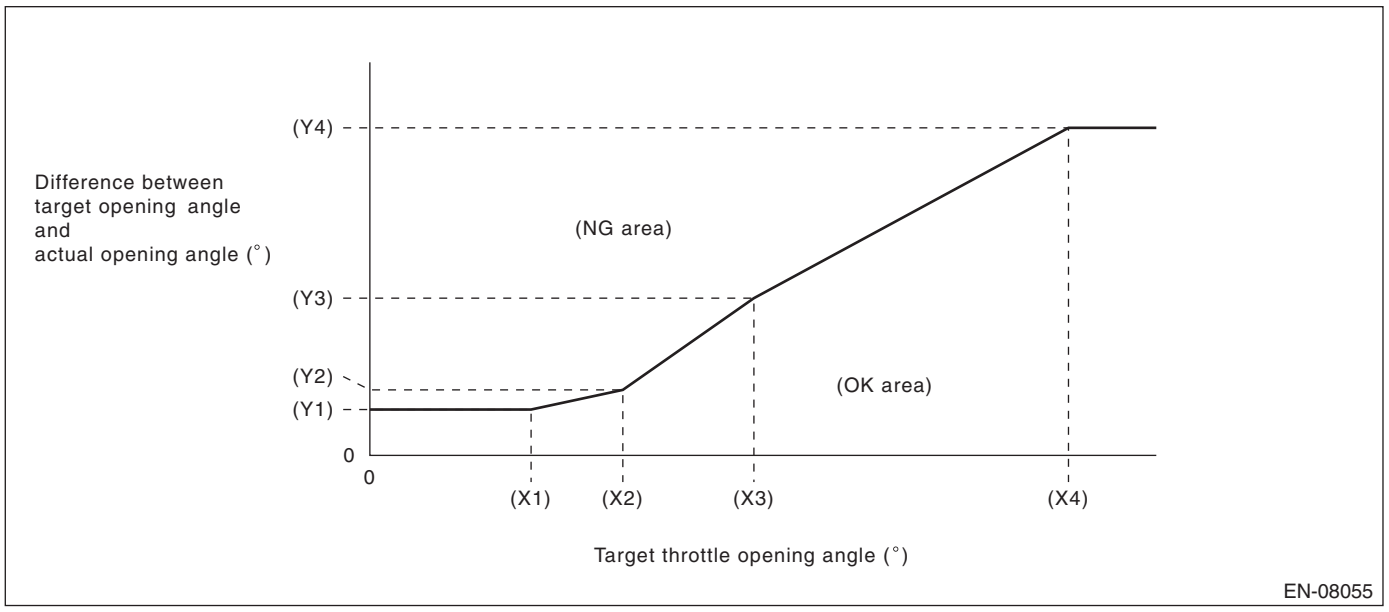
Malfunction Criteria	Threshold Value
|(Target throttle position - Actual throttle position (Main Sensor))|	Within NG range of **Details of judgment value**

Time needed for diagnosis:

- Engine speed ≥ 500 rpm: Refer to **Details of Judgment time**.

- Engine speed < 500 rpm: 5000 ms

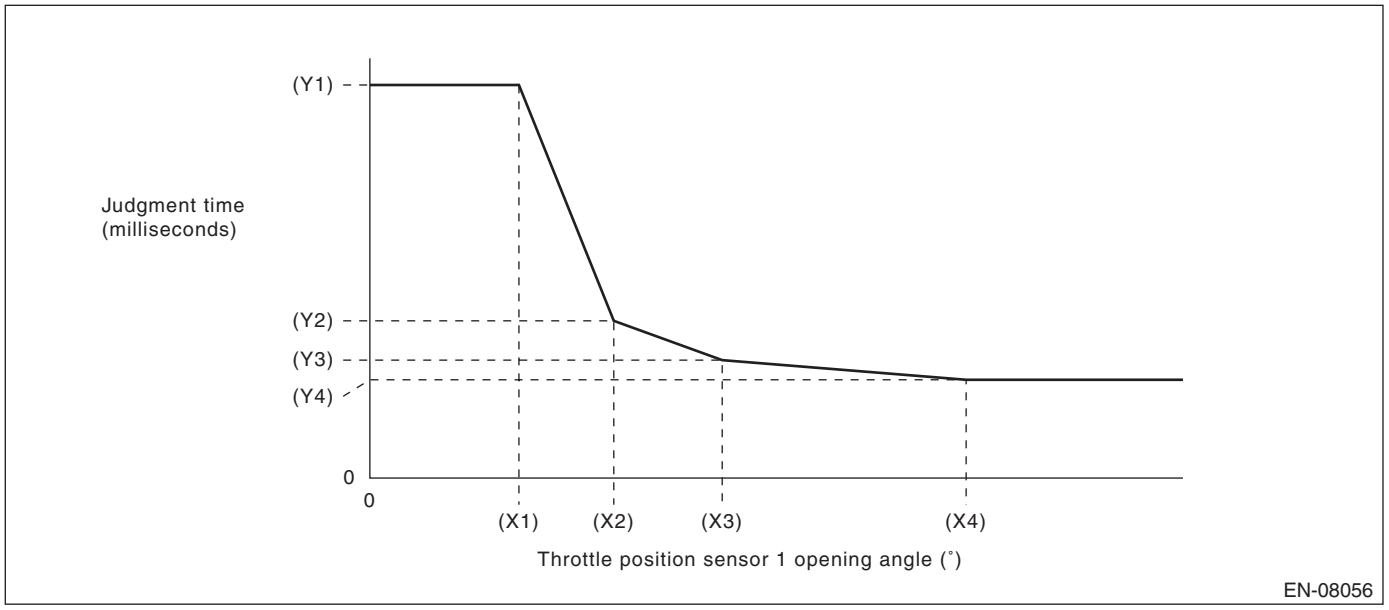
Details of judgment value



(X1) 6.15 °
(X2) 9.65 °
(X3) 14.65 °
(X4) 26.65 °

(Y1) 3.5 °
(Y2) 5 °
(Y3) 12 °
(Y4) 25 °

Details of Judgment time



(X1) 5.5 °	(X2) 9 °	(X3) 13 °
(X4) 22 °		
(Y1) 1000 ms	(Y2) 400 ms	(Y3) 300 ms
(Y4) 250 ms		

NOTE:
Judgment time is always 1000 milliseconds when actual opening angle < target opening angle.
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EW:DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

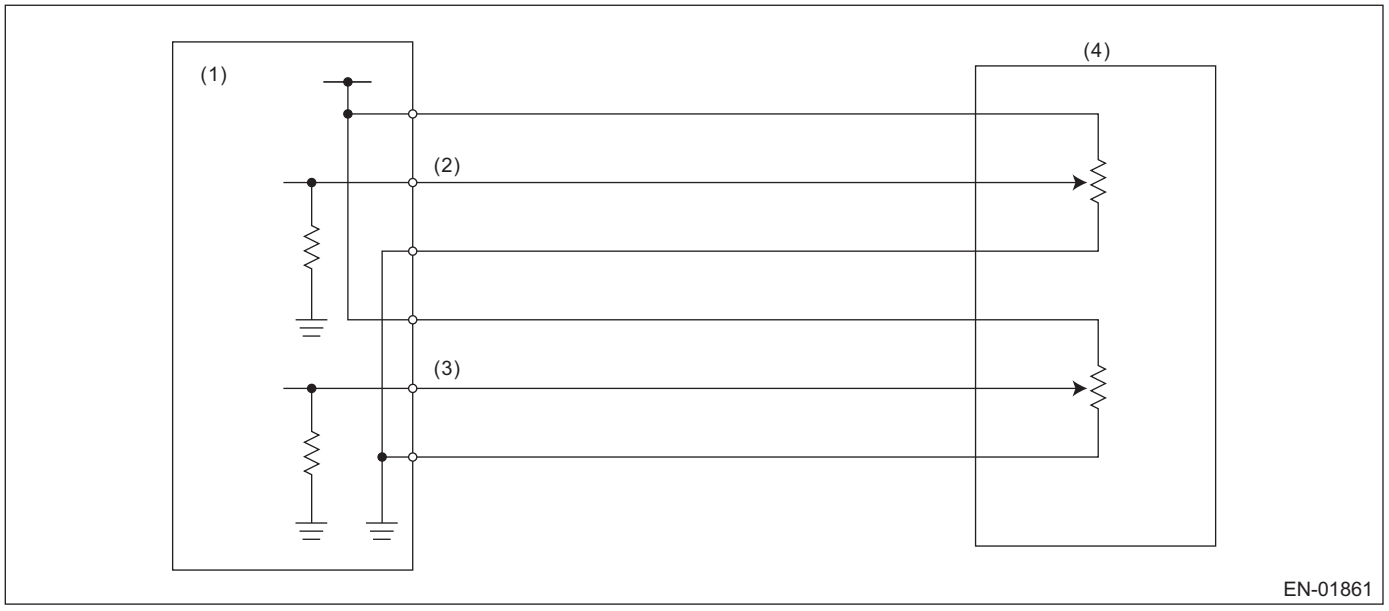
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the accelerator pedal position sensor. 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 21 — Chassis ground:*** ***(B135) No. 23 — Chassis ground:*** ***(B135) No. 23 — (B136) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the accelerator pedal. <Ref. to SP(STI)-4, Accelerator Pedal.>	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector. Replace the ECM if defective. <Ref. to FU(STI)-56, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	< 0.301 V

Time Needed for Diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EX:DTC P2123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

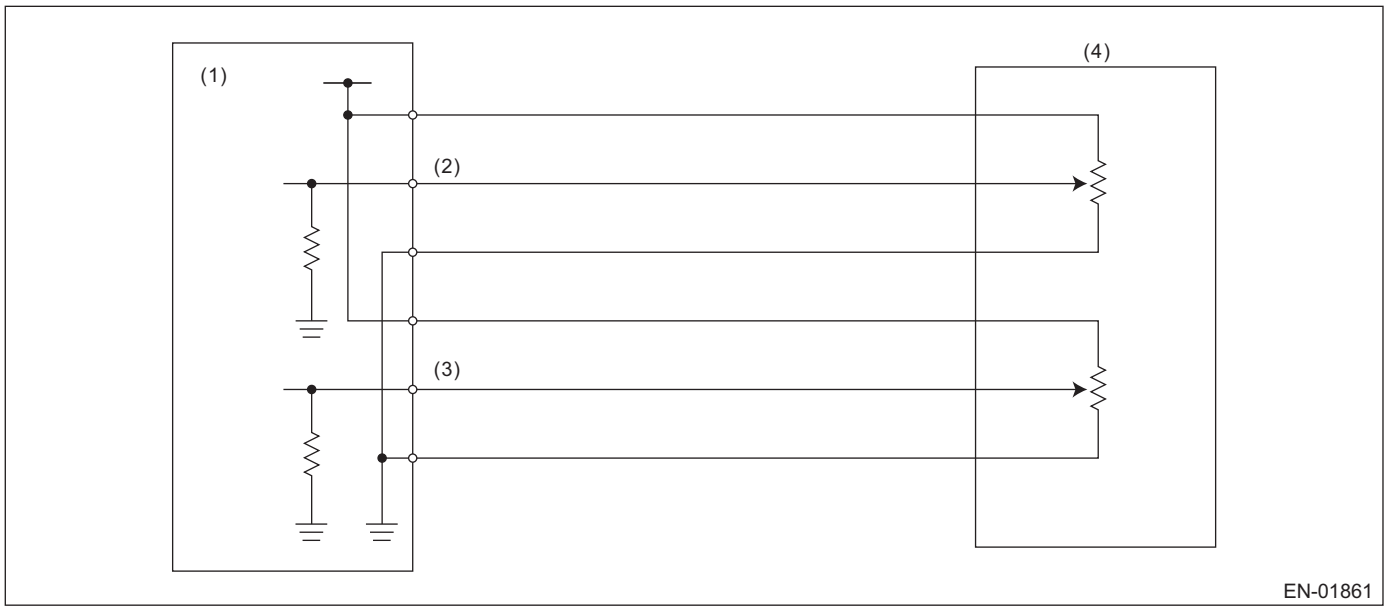
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the accelerator pedal position sensor. 4) Measure the resistance of harness between ECM connector and accelerator pedal position sensor connector. ***Connector & terminal*** ***(B135) No. 23 — (B315) No. 6:*** ***(B135) No. 29 — (B315) No. 5:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and accelerator pedal position sensor connector.
2	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 6 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B135) No. 21 — (B135) No. 23:***	Is the resistance 1 MΩ or more?	Repair the poor contact of accelerator pedal position sensor connector. Replace the accelerator pedal if defective. <Ref. to SP(STI)-4, Accelerator Pedal.>	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	≥ 4.783 V

Time Needed for Diagnosis: 32 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EY:DTC P2127 THROTTLE/PEDAL POSITION SENSOR/SWITCH "E" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
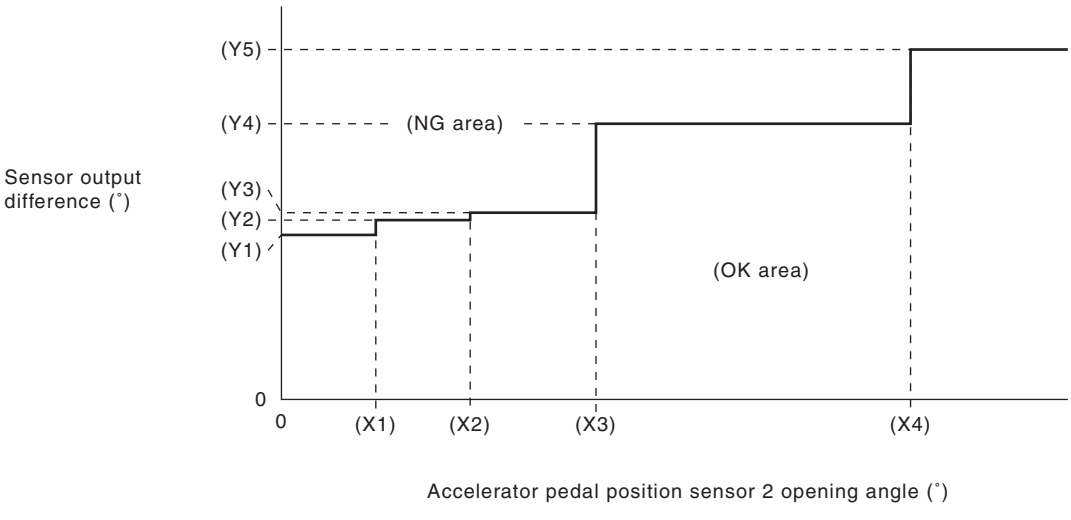
|Signal difference between two sensors|	Within NG range of **Details of judgment value**

Details of judgment value



(X1)	0.6 °	(X2)	1.2 °	(X3)	2 °
(X4)	4 °				
(Y1)	1.465 °	(Y2)	1.597 °	(Y3)	1.663 °
(Y4)	2.455 °	(Y5)	3.116 °		

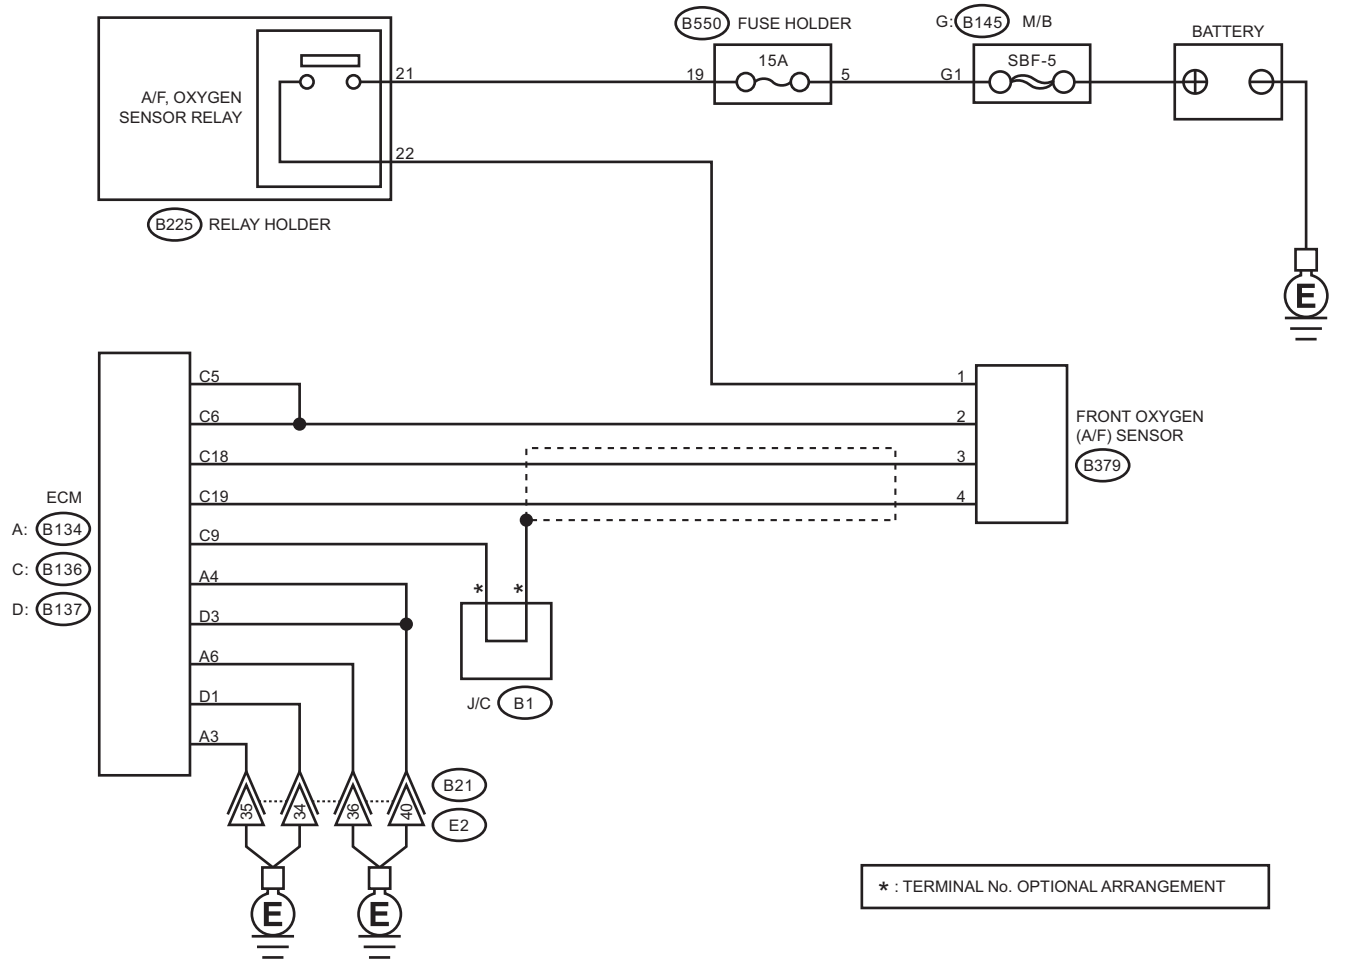
Time Needed for Diagnosis: 116 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

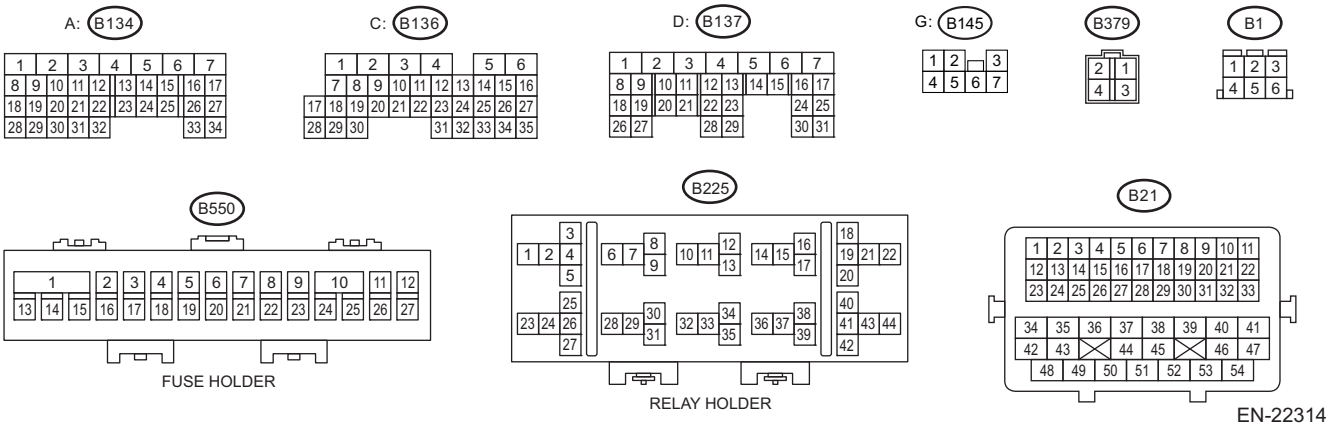
FC:DTC P2195 A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of front oxygen (A/F) sensor. • Front oxygen (A/F) sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

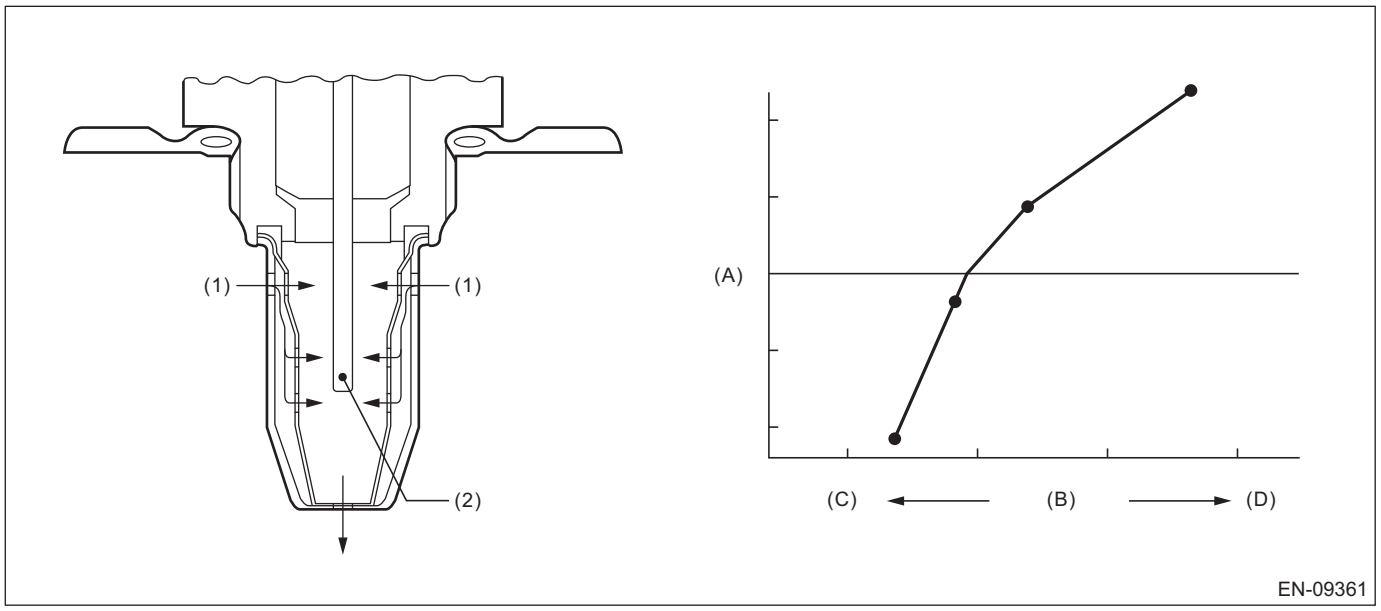
Step		Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 — Chassis ground:*** ***(B136) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK OUTPUT SIGNAL FOR ECM.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 19 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **5**.	Go to step **4**.
4	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 (+) — Chassis ground (–):***	Is the voltage 4.95 V or more?	Go to step **5**.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>
5	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 (+) — Chassis ground (–):*** ***(B136) No. 19 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains lean.
Judge as NG when lambda value is abnormal in accordance with λ value of front oxygen (A/F) sensor and driving conditions such as amount of intake air, main feedback control, etc.

λ value = Actual air fuel ratio/Theoretical air fuel ratio
λ > 1: Lean
λ < 1: Rich

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Amount of intake air	≥ 6 g/s (0.21 oz/s)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	> 1.15
Output voltage value of rear oxygen sensor	> 0.55 V

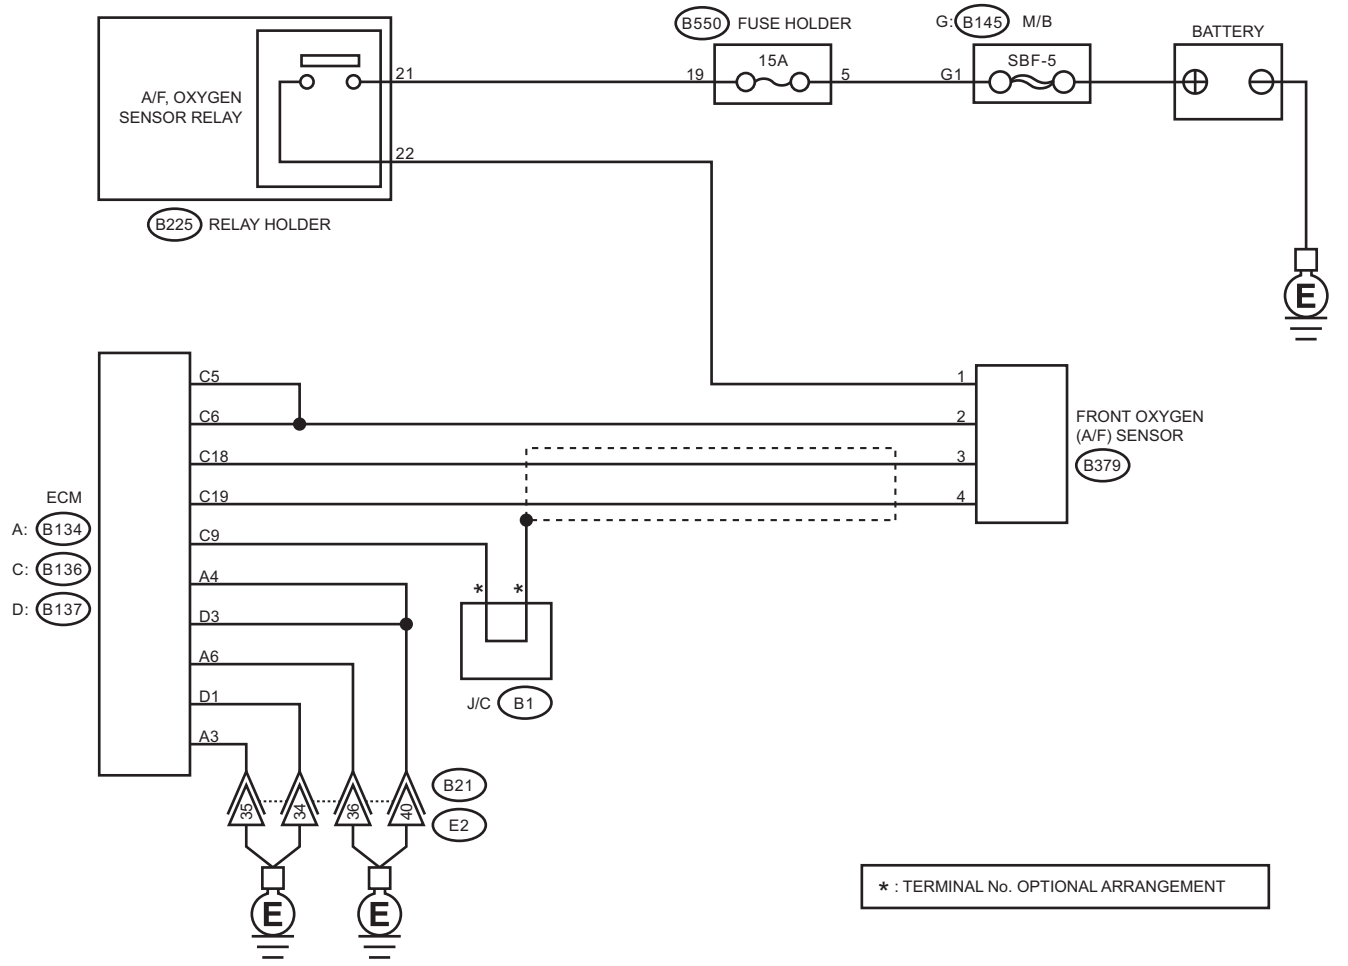
Time needed for diagnosis:10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

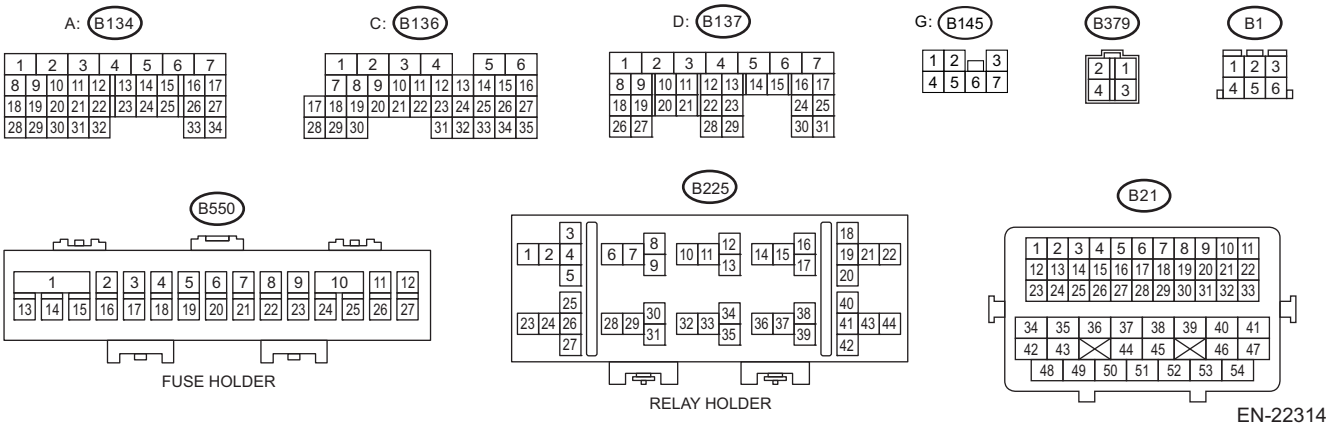
FD:DTC P2196 A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of front oxygen (A/F) sensor. • Front oxygen (A/F) sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

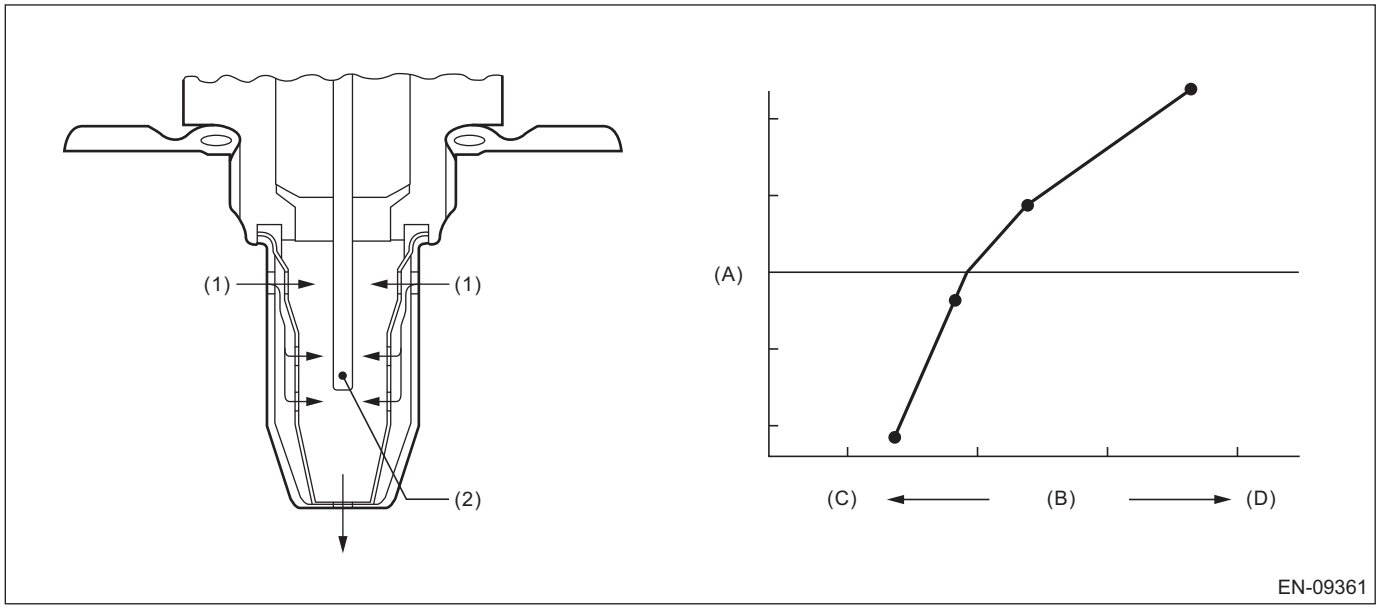
	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of the front oxygen (A/F) sensor connector.	Is there poor contact of front oxygen (A/F) sensor connector?	Repair the poor contact of front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains rich.
Judge as NG when lambda value is abnormal in accordance with λ value of front oxygen (A/F) sensor and driving conditions such as amount of intake air, main feedback control, etc.

λ value = Actual air fuel ratio/Theoretical air fuel ratio
λ > 1: Lean
λ < 1: Rich

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

(1) Exhaust gas (2) Zirconia element oxygen

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	Execution
Amount of intake air	≥ 6 g/s (0.21 oz/s)
Estimated temperature of the rear oxygen sensor element	≥ 500 °C (932 °F)

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	< 0.85
Output voltage value of rear oxygen sensor	< 0.15 V

Time needed for diagnosis:10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FE:DTC P219A BANK 1 AIR-FUEL RATIO IMBALANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the following items of front oxygen (A/F) sensor. • Front oxygen (A/F) sensor connector • Coupling connector	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(B136) No. 18 — (B379) No. 3:*** ***(B136) No. 19 — (B379) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 18 — Chassis ground:*** ***(B136) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
4	**CHECK OUTPUT SIGNAL FOR ECM.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **6**.	Go to step **5**.
5	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):***	Is the voltage 4.95 V or more?	Go to step **6**.	Go to step **7**.
6	**CHECK OUTPUT SIGNAL FOR ECM.** Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(B379) No. 3 (+) — Chassis ground (–):*** ***(B379) No. 4 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector. After repair, replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the poor contact of ECM connector.
7	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **8**.
8	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: If fuel pressure does not increase, squeeze the fuel return hose 2 to 3 times, then measure fuel pressure again.	Is the measured value 284 — 314 kPa (2.9 — 3.2 kg/cm^2, 41 — 46 psi)?	Go to step **10**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
10	**CHECK FUEL PRESSURE.** After connecting the pressure regulator vacuum hose, measure fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.> NOTE: • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If the measured value at this step is out of specification, check or replace pressure regulator vacuum hose.	Is the measured value 230 — 260 kPa (2.4 — 2.7 kg/cm^2, 33 — 38 psi)?	Go to step **11**.	Check the fuel pump and fuel delivery line. <Ref. to FU(STI)-85, INSPECTION, Fuel Pump.> <Ref. to FU(STI)-102, INSPECTION, Fuel Delivery, Return and Evaporation Lines.>
11	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **12**.	Replace the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
12	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/m)?	Go to step **13**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
13	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «Intake Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature from «Intake Air Temperature». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **14**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(STI)-39, Mass Air Flow and Intake Air Temperature Sensor.>
14	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor» 0.490 V or more?	Go to step **15**.	Go to step **16**.

	Step	Check	Yes	No
15	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Depress the clutch pedal. • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Rear O2 Sensor» 0.250 V or less?	Go to step **17**.	Go to step **16**.
16	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the rear oxygen sensor connector and coupling connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **18**.
17	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Rear O2 Sensor Voltage» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Rear O2 Sensor» kept at 0.250 V or less for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(STI)-52, Front Oxygen (A/F) Sensor.>	Go to step **18**.
18	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(B136) No. 20 — (T6) No. 3:*** ***(B135) No. 30 — (T6) No. 4:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
19	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(T6) No. 3 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(STI)-54, Rear Oxygen Sensor.>	Go to step **20**.

	Step	Check	Yes	No
20	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **25**.	Go to step **21**.
21	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **22**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
22	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 — (E5) No. 2:*** ***#2 (B134) No. 11 — (E16) No. 2:*** ***#3 (B134) No. 12 — (E6) No. 2:*** ***#4 (B134) No. 13 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel injector connector • Poor contact of coupling connector
23	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **24**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
24	**CHECK POWER SUPPLY LINE.** 1) Turn the ignition switch to ON. 2) Measure the voltage between fuel injector connector of faulty cylinders and engine ground. ***Connector & terminal*** ***#1 (E5) No. 1 (+) — Engine ground (–):*** ***#2 (E16) No. 1 (+) — Engine ground (–):*** ***#3 (E6) No. 1 (+) — Engine ground (–):*** ***#4 (E17) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of all connectors in fuel injector circuit.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay and fuel injector connector on faulty cylinders • Poor contact of coupling connector • Poor contact of main relay connector

	Step	Check	Yes	No
25	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground on faulty cylinders. ***Connector & terminal*** ***#1 (B134) No. 10 (+) — Chassis ground (–):*** ***#2 (B134) No. 11 (+) — Chassis ground (–):*** ***#3 (B134) No. 12 (+) — Chassis ground (–):*** ***#4 (B134) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and fuel injector connectors.	Go to step **26**.
26	**CHECK FUEL INJECTOR.** 1) Turn the ignition switch to OFF. 2) Check the fuel injector on faulty cylinder. <Ref. to FU(STI)-44, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **27**.	Replace the faulty fuel injector. <Ref. to FU(STI)-42, Fuel Injector.>
27	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(STI)-35, Camshaft Position Sensor.> <Ref. to FU(STI)-34, Crankshaft Position Sensor.>	Go to step **28**.
28	**CHECK CRANK SPROCKET.** 1) Remove the timing belt cover. <Ref. to ME(STI)-51, REMOVAL, Timing Belt Cover.> 2) Check the crank sprocket.	Is there rust or defective teeth on the crank sprocket?	Replace the crank sprocket. <Ref. to ME(STI)-62, Crank Sprocket.>	Go to step **29**.
29	**CHECK INSTALLATION CONDITION OF TIMING BELT.** Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 499987500 CRANKSHAFT SOCKET	Is the timing belt dislocated from its proper position?	Repair the installation condition of timing belt. <Ref. to ME(STI)-52, Timing Belt.>	Go to step **30**.
30	**CHECK FUEL LEVEL.** Check display of fuel gauge.	Is the fuel meter indication higher than the “Lower” level?	Go to step **31**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **31**.

	Step	Check	Yes	No
31	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-79, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h (37 MPH).	Does the malfunction indicator light illuminate or blink?	Go to step **32**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
32	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **33**.
33	**CHECK MISFIRE SYMPTOM.** 1) Turn the ignition switch to ON. 2) Check for DTC. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Does the Subaru Select Monitor or general scan tool indicate only one DTC?	Go to step **36**.	Go to step **34**.
34	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTC P0301 and P0303 displayed? (Current malfunction)	Go to step **37**.	Go to step **35**.
35	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are DTC P0302 and P0304 displayed? (Current malfunction)	Go to step **38**.	Go to step **39**.
36	**ONLY ONE CYLINDER.** Check the following items for one cylinder only. • Spark plug • Ignition coil • Fuel injector • Compression	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
37	**GROUP OF #1 AND #3 CYLINDERS.** Check the items for groups of #1 and #3 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Are there any faults in #1 and #3 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
38	**GROUP OF #2 AND #4 CYLINDERS.** Check the items for groups of #2 and #4 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Are there any faults in #2 and #4 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing belt teeth	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
39	**CYLINDER AT RANDOM.** 1) Start the engine. 2) Check the idling.	Is the engine idle rough?	Go to DTC P0171. <Ref. to EN(STI)(diag)-286, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression

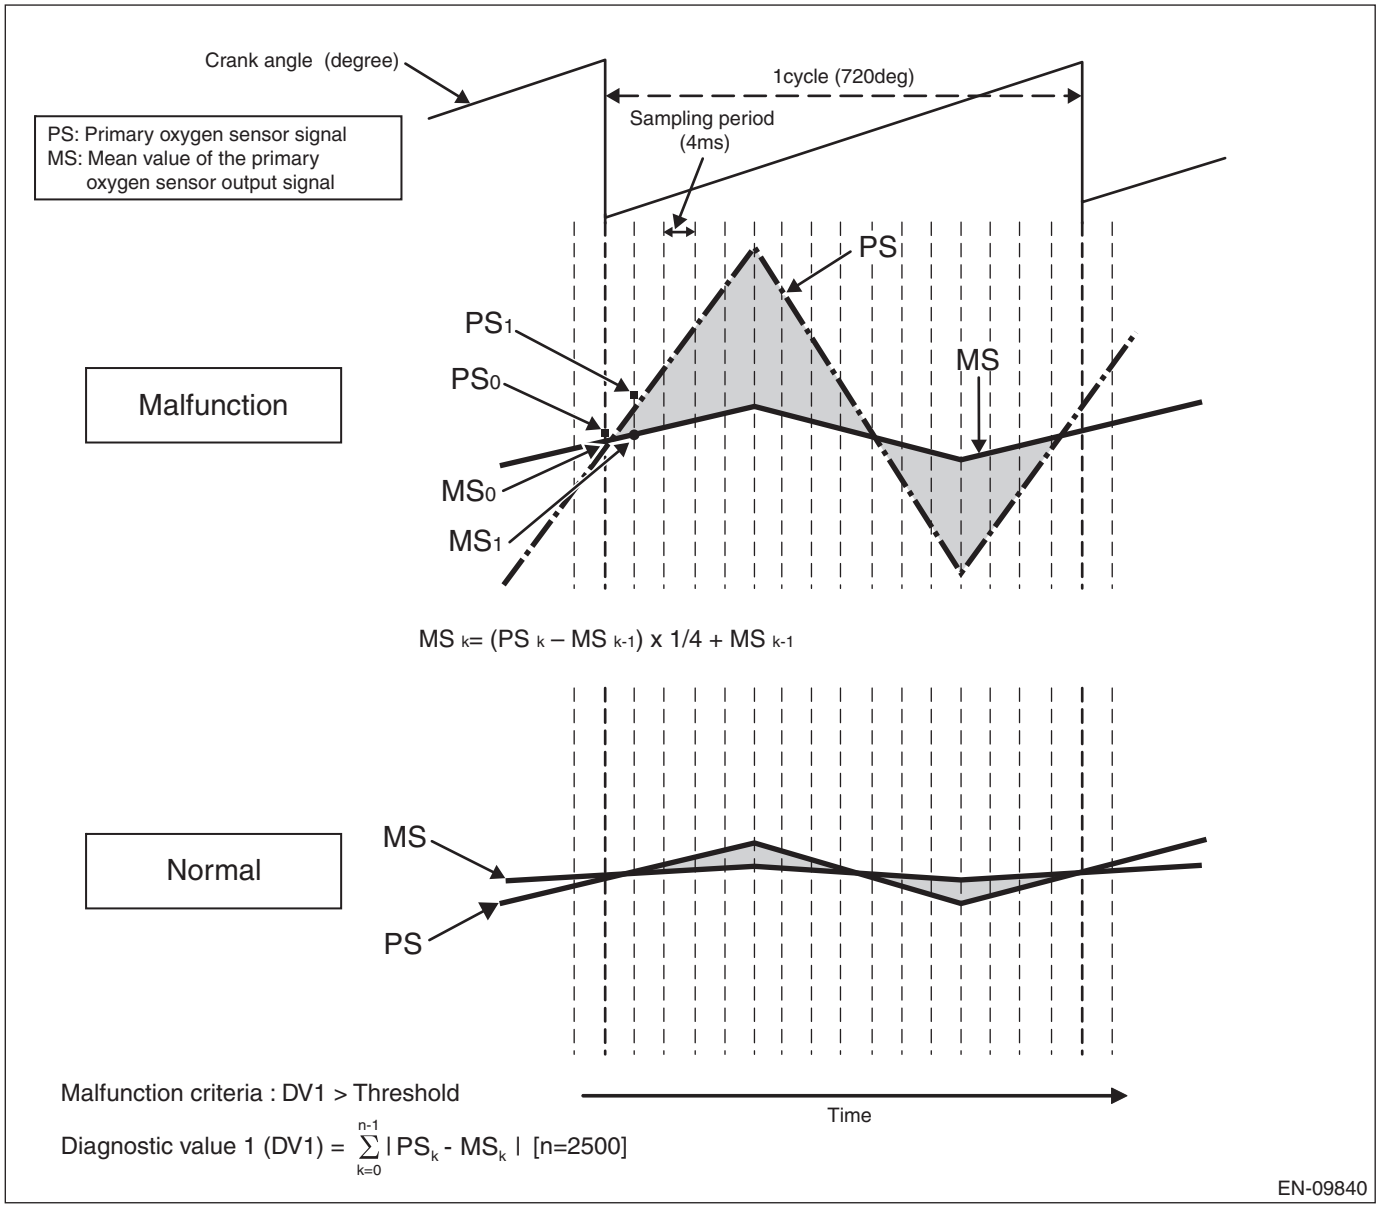
1. OUTLINE OF DIAGNOSIS

This diagnostic monitor performs a functional check of the fuel system to determine an air-fuel ratio cylinder imbalance.
This diagnosis is composed of two monitors.
The outline of “monitor A1” is as follows. When an air-fuel ratio cylinder imbalance occurs, the primary oxygen sensor output signal will oscillate with increased amplitude. This monitor utilizes this behavior to make a diagnosis. The monitor integrates the difference between the amplification value and the mean value of the first oxygen sensor output signal and compares it to a threshold to make a judgment.
The outline of “monitor B1” is as follows. Similarly, when an imbalance occurs, the engine speed also fluctuates with increased amplitude. This monitor utilizes this behavior to make a diagnosis. For reference, it should be noted that this imbalance monitor method is actually similar to the current misfire diagnostic monitor, and the parameter “domg360” (units: degrees CA) is shared between the imbalance and misfire monitors. The imbalance monitor is performed during idle condition when the engine is warm. The monitor integrates the count of “domg360” which exceeds a threshold in 1000 revolution.
When both the “monitor A1” value and the “monitor B1” value exceed a predetermined threshold, this monitor determines a malfunction and stores a fault code.
And then the strategy above is adapted to the rich and the lean side. It means the different malfunction criteria are set up on the both sides because the “Imbalance Diagnostic A1” value and the “Imbalance Diagnostic B1” value show the different behavior according to the A/F of the malfunction cylinder. In addition, the same fault code is used for both sides.

Monitor A1

When there is an air-fuel ratio cylinder imbalance malfunction, the primary oxygen sensor output fluctuates widely compared with a normal sensor, as shown by the chain line in Figure 1 below. This monitor makes a diagnosis based on this phenomenon. Each primary oxygen sensor signal (PS) and mean value of the primary oxygen sensor signal (MS) is calculated from the primary oxygen sensor signal. The absolute values of (PS – MS) are sampled every 4 ms as shown in the figure. Diagnostic value 1 (DV1) is obtained by integrating the absolute value of (PS – MS) for 2500 times. A malfunction is determined when DV1 exceeds the threshold. The judgment values are determined experimentally.

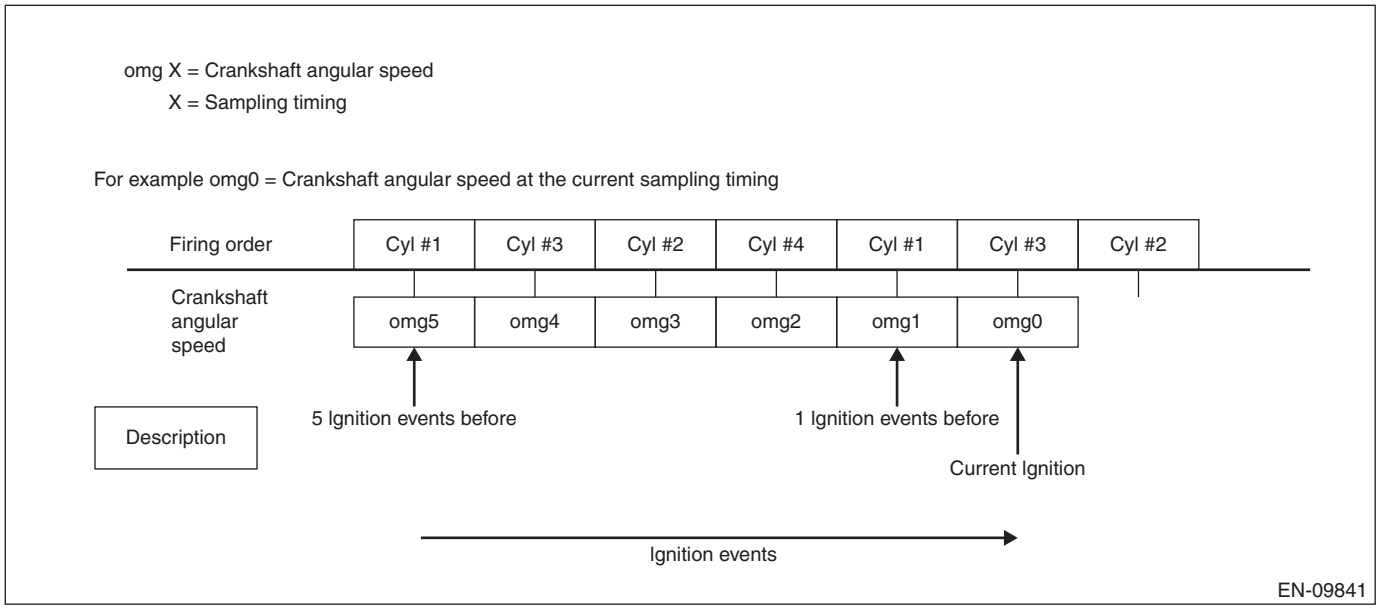
Figure 1. Compare malfunctioned primary oxygen sensor output with a normal sensor



Monitor B1

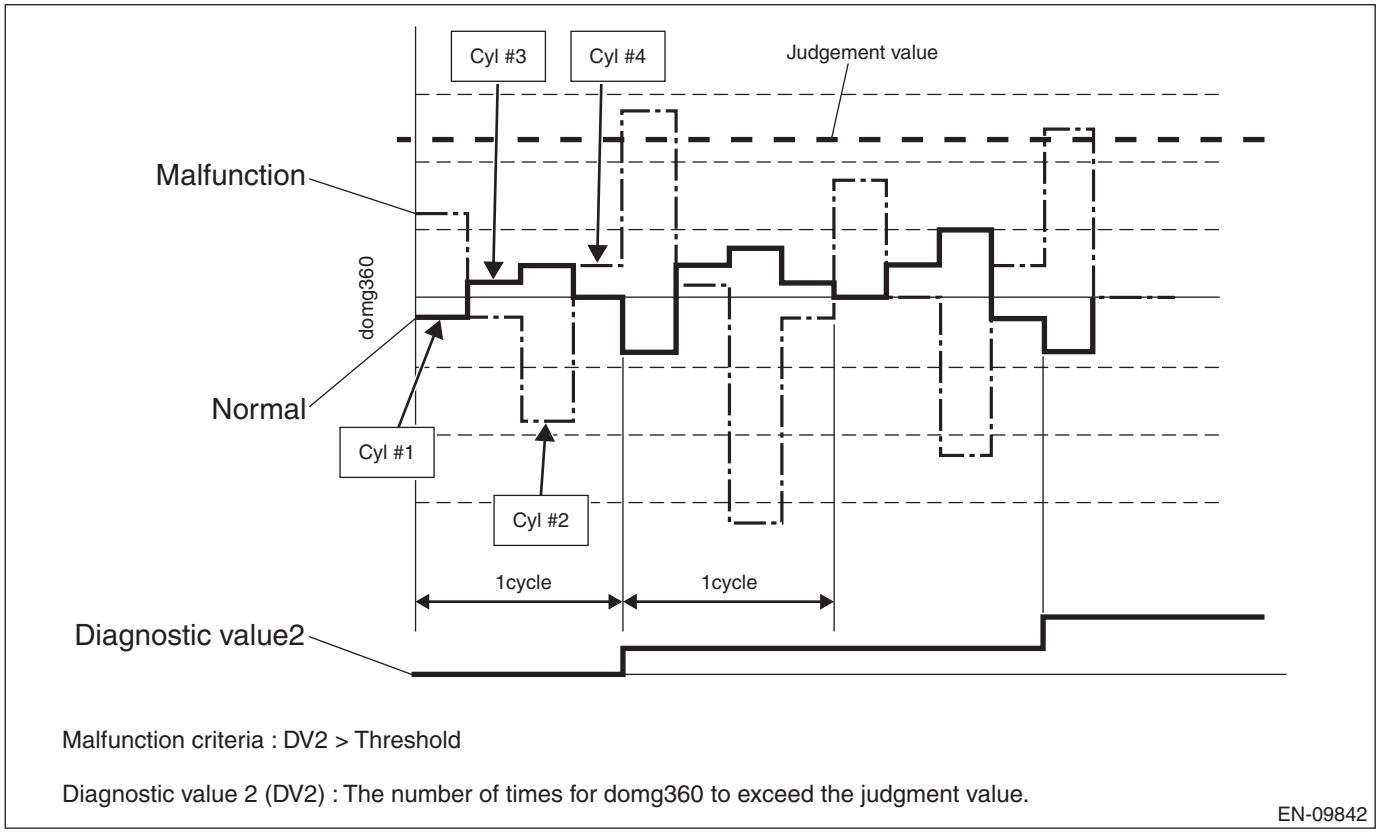
Method used: Difference method of 360 degrees CA
Monitor value: domg360 = (omg 1 – omg 0) – (omg 3 – omg 2) = angular speed
Each crankshaft angular speed is defined as Figure 2 below.

Figure 2. Description of domg360 output



This method uses the fact that the domg360 of lean conditioned cylinder caused by imbalance malfunction indicates big value, as shown by the chain line in Figure 3 below.
The number of times for domg360 to exceed the judgment value in 1000 revolutions (500 cycles) is calculated as diagnostic value 2 (DV2). A malfunction is determined when DV2 exceeds the threshold.

Figure 3. Compare malfunctioned domg360 output with a normal output



2. EXECUTION CONDITION

Monitor A1: Primary oxygen sensor fluctuation

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.1 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Engine speed	> 1600 rpm and < 3200 rpm
Amount of intake air	> 0.80 g/rev (0.03 oz/rev)
Time when not under catalyst neutralization control as well as not under a gradual change	≥ 500 ms
Fuel control for short-term fuel trim by A/F sensor response monitoring	≠ Intrusively changed

Monitor B1: Crankshaft speed fluctuation

Secondary parameters	Execution condition
Misfiring diagnosis monitoring	In operation
Accelerator pedal position	≠ 0%
Main feedback	In operation
Engine speed	> 1800 rpm and < 2800 rpm
Amount of intake air	> 0.8 g/rev (0.03 oz/rev) and < 1.5 g/rev (0.05 oz/rev)

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when Monitor A1 and Monitor B1 are both NG, and when either is OK, judge as OK.

Monitor A1

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnostic value 1 (DV1)	> Threshold value 1 (TV1)

Threshold value 1 (TV1):

Time needed for diagnosis: 4 ms × 2500 time(s)

Monitor B1

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnostic Value2 (DV2)	
(Lean side)	> 72 count
(Rich side)	> 22 count

Time needed for diagnosis: 1000 engine revs.

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FF: DTC P2257 SECONDARY AIR SYSTEM CONTROL "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the secondary air pump relay. 4) Measure the resistance of harness between ECM connector and secondary air pump relay connector. ***Connector & terminal*** ***(B135) No. 27 — (F9) No. 13:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air pump relay connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR PUMP RELAY CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 27 — Chassis ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and secondary air pump relay connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the ECM output level differs from the actual terminal level.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Secondary air pump drive signal	OFF

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FG:DTC P2258 SECONDARY AIR SYSTEM CONTROL "A" CIRCUIT HIGH

EN-22318

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2404 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LEAK CHECK VALVE ASSEMBLY PUMP.** Using the Subaru Select Monitor, operate the leak check valve assembly pump. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.>	Does the leak check valve assembly pump operate?	Go to step **6**.	Go to step **3**.
3	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B137) No. 27 — (R400) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
5	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 27 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

	Step	Check	Yes	No
6	**CHECK LEAK CHECK VALVE ASSEMBLY SWITCHING VALVE.** Using the Subaru Select Monitor, operate the leak check valve assembly switching valve. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.>	Does the leak check valve assembly switching valve operate?	Go to step **10**.	Go to step **7**.
7	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
8	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B135) No. 4 — (R400) No. 1:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
9	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

	Step	Check	Yes	No
10	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(STI)(diag)-65, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P2404 displayed? (Current malfunction)	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

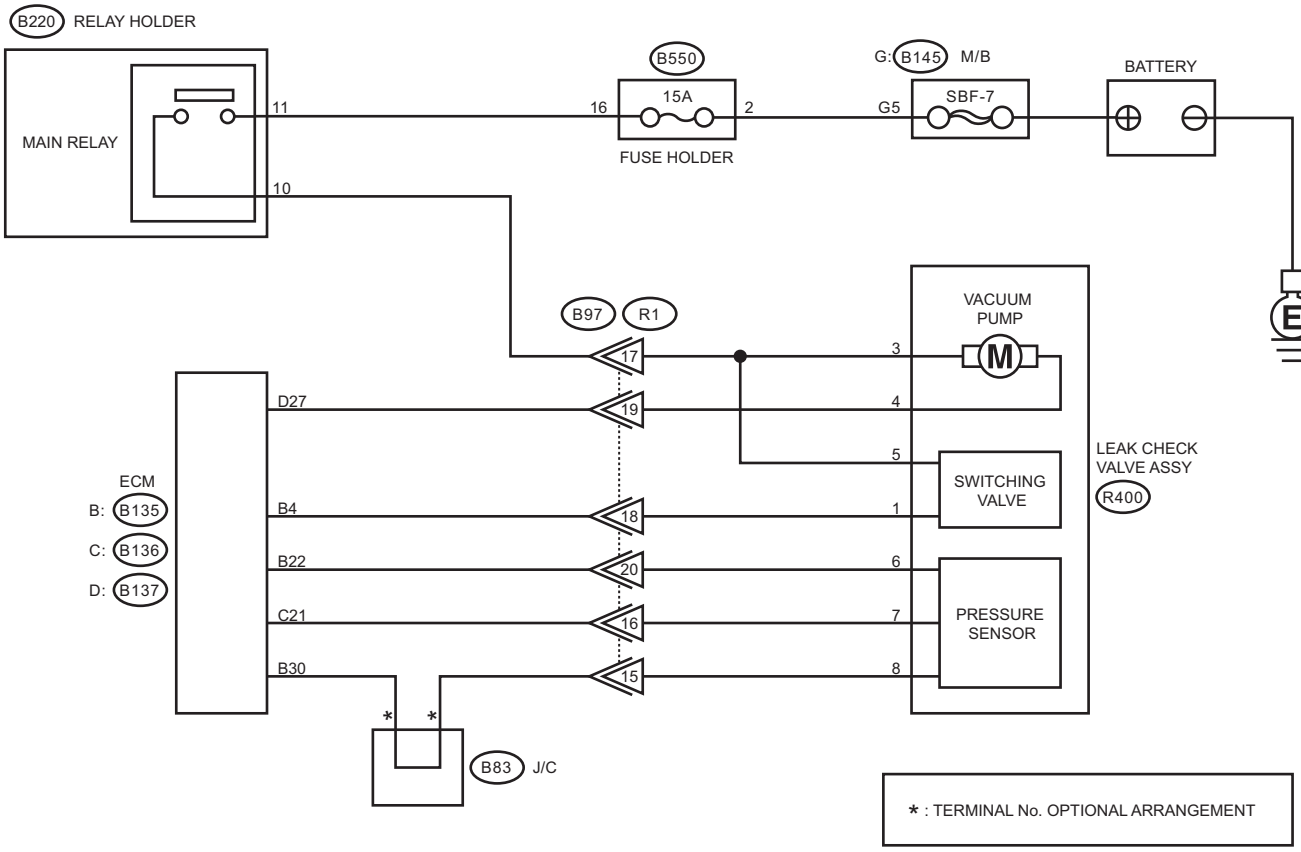
NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(STI)(diag)-396, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

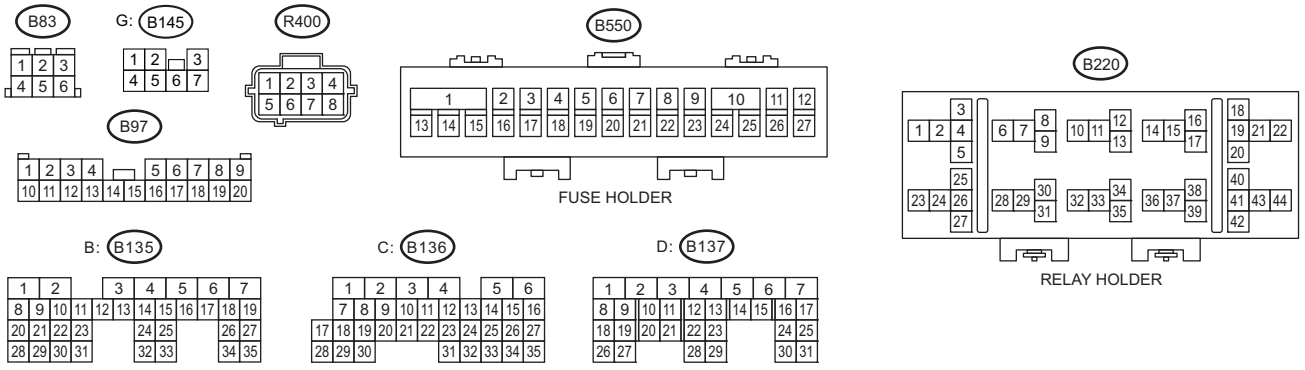
FN:DTC P2419 EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22318

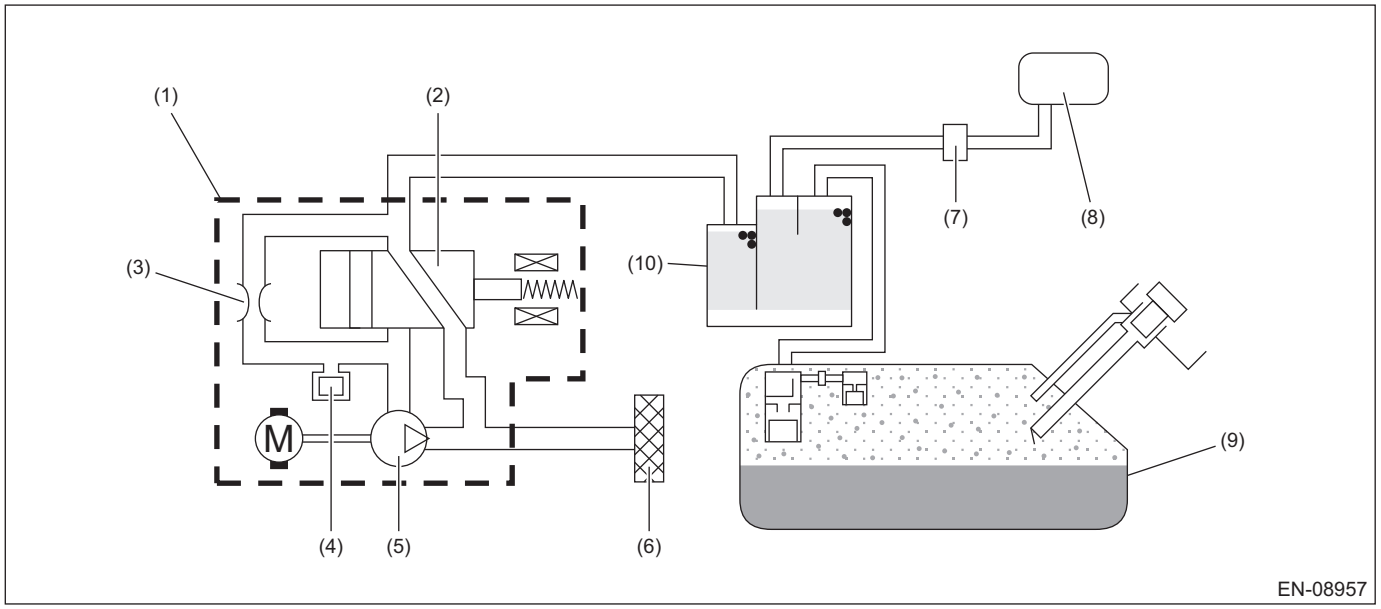
	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B135) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO LEAK CHECK VALVE ASSEMBLY.** Measure the voltage between the leak check valve assembly connector and engine ground. ***Connector & terminal*** ***(R400) No. 5 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the leak check valve assembly. 4) Measure the resistance between leak check valve assembly and chassis ground. ***Connector & terminal*** ***(R400) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.
5	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B135) No. 4 — (R400) No. 1:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the switching valve of the leak check valve assembly. <Ref. to EC(STI)-48, CHECK SWITCHING VALVE, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module switching valve.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Evaporative Leak Check Module switching valve drive signal	OFF

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ Battery voltage × 0.34 V

Time needed for diagnosis: 2500 ms

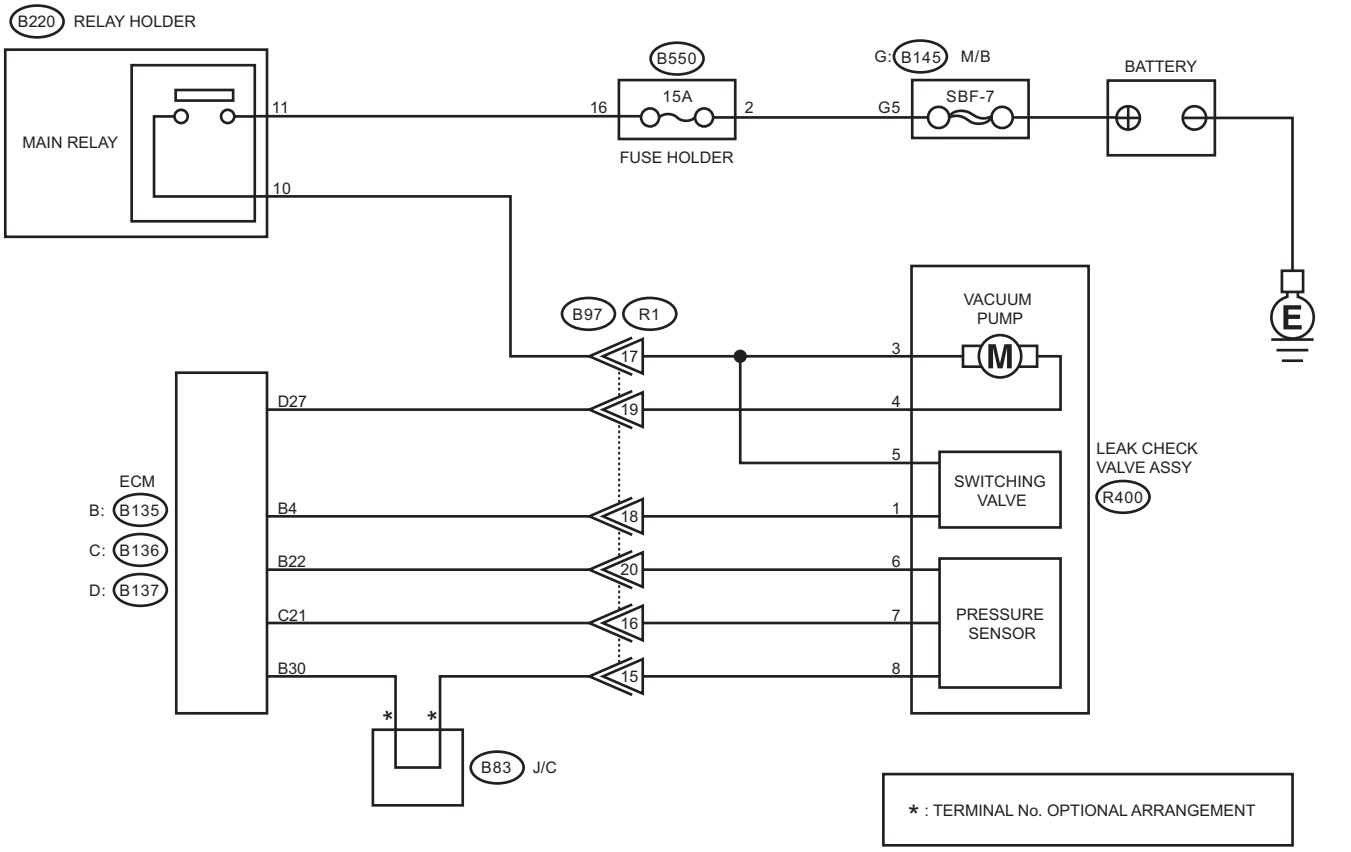
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

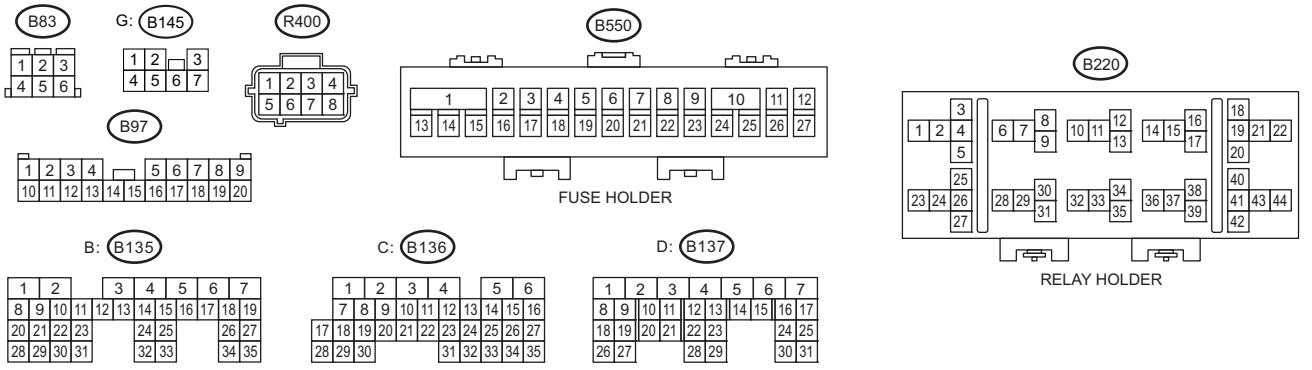
FO:DTC P2420 EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22318

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between leak check valve assembly and chassis ground. ***Connector & terminal*** ***(R400) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and leak check valve assembly connector.	Go to step **2**.
2	**CHECK LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Check the switching valve of the leak check valve assembly. <Ref. to EC(STI)-48, CHECK SWITCHING VALVE, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module switching valve.
Judge as NG if out of specification.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Evaporative Leak Check Module switching valve drive signal	ON

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 12 A

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FP:DTC P2431 SECONDARY AIR SYSTEM AIR FLOW/PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2431 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON (engine OFF). 2) Using the Subaru Select Monitor, read the values in «Sec. Air Piping Pressure», «Mani. Absolute Pressure» and «Atmosphere Pressure», and compare them with actual atmospheric pressure. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Does the displayed value differ from the actual atmospheric pressure by 200 mmHg (27 kPa, 8 inHg, 3.9 psig) or more?	Replace the secondary air combination valve (with built-in pressure sensor). <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of secondary air pressure sensor output property.
Judge as NG when the secondary air pressure sensor output is largely different from the intake manifold pressure at engine start.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch to OFF	< 60000 ms
Soaking time	≥ 60 s
After secondary air system stops	≥ 3000 ms

3. GENERAL DRIVING CYCLE

Perform the diagnosis with ignition switch ON.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Secondary air pipe pressure – Intake manifold pressure|	> 7.9 kPa (59.44 mmHg, 2.3 inHg)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FQ:DTC P2432 SECONDARY AIR SYSTEM AIR FLOW/PRESSURE SENSOR CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Sec. Air Piping Pressure» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Sec. Air Piping Pressure» less than 53.3 kPa (400 mmHg, 15.8 inHg)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF SECONDARY AIR COMBINATION VALVE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the secondary air combination valve LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between the secondary air combination valve LH connector and chassis ground. ***Connector & terminal*** ***(E40) No. 1 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve LH connector • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and secondary air combination valve LH connector. ***Connector & terminal*** ***(B137) No. 9 — (E40) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve LH connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B137) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit in harness between ECM connector and secondary air combination valve LH connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of the ECM and secondary air combination valve LH connector.	Is there poor contact of the ECM or secondary air combination valve LH connector?	Repair the poor contact of the ECM or secondary air combination valve LH connector.	Replace the secondary air combination valve LH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>

1. OUTLINE OF DIAGNOSIS

Judge as NG if out of specification.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.573 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FR:DTC P2433 SECONDARY AIR SYSTEM AIR FLOW/PRESSURE SENSOR CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Sec. Air Piping Pressure» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Sec. Air Piping Pressure» 133.3 kPa (1,000 mmHg, 39.4 inHg) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the secondary air combination valve LH. 3) Turn the ignition switch to ON. 4) Read the value of «Sec. Air Piping Pressure» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the value of «Sec. Air Piping Pressure» 133.3 kPa (1,000 mmHg, 39.4 inHg) or more?	Repair the short circuit to power in harness between ECM connector and secondary air combination valve LH connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of the harness between the secondary air combination valve LH connector and engine ground. ***Connector & terminal*** ***(E40) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve LH connector • Poor contact of ECM connector • Poor contact of coupling connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of the secondary air combination valve LH connector.	Is there poor contact of the secondary air combination valve LH connector?	Repair the poor contact of the secondary air combination valve LH connector.	Replace the secondary air combination valve LH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>

1. OUTLINE OF DIAGNOSIS

Judge as NG if out of specification.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.916 V

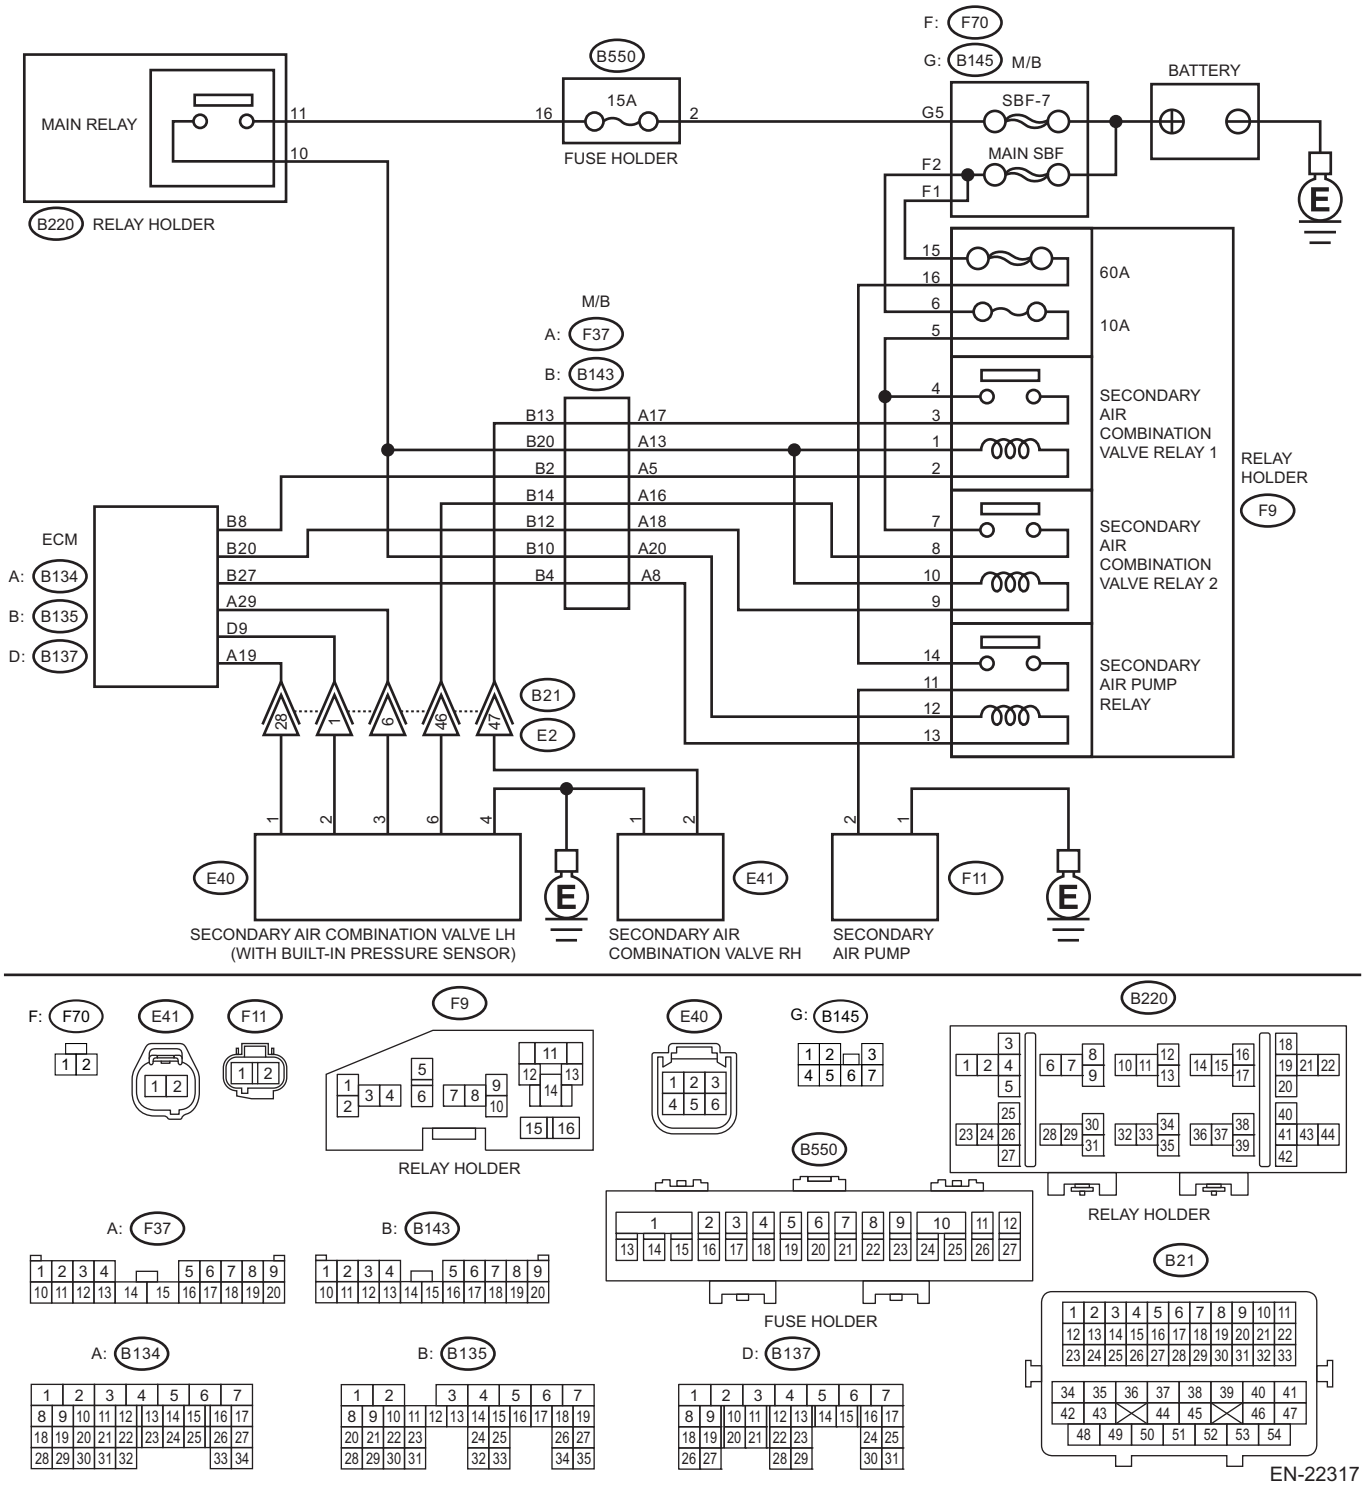
Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FS:DTC P2440 SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK SECONDARY AIR COMBINATION VALVE FUSE.** Check if the secondary air combination valve fuse (10 A) is blown out.	Is the fuse blown out?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN FUSE BOX AND SECONDARY AIR COMBINATION VALVE RH CONNECTOR.** 1) Remove the secondary air combination valve fuse (10 A) from the fuse box. 2) Disconnect the connector from the secondary air combination valve RH. 3) Measure the resistance between the secondary air combination valve fuse and secondary air combination valve RH connector, and chassis ground. ***Connector & terminal*** ***(F9) No. 5 — Chassis ground:*** ***(E41) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the fuse with a new part, and connect the secondary air combination valve RH connector. Go to step **3**.	Repair the short circuit to ground in harness between the fuse box and the secondary air combination valve RH connector.
3	**CHECK SECONDARY AIR COMBINATION VALVE RH OPERATION.** 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Perform operation check for the secondary air combination valve RH using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.>	Does the secondary air combination valve RH repeatedly switch to ON and OFF?	Go to step **4**.	Go to step **6**.
4	**CHECK DUCT BETWEEN SECONDARY AIR PUMP AND SECONDARY AIR COMBINATION VALVE RH.** Check the duct between the secondary air pump and secondary air combination valve RH.	Is there damage, clog or disconnection of the duct?	Replace, clean or connect the duct.	Go to step **5**.
5	**CHECK PIPE BETWEEN SECONDARY AIR COMBINATION VALVE RH AND CYLINDER HEAD.** Check the pipe between the secondary air combination valve RH and cylinder head.	Is there damage, clog or disconnection of the pipe?	Replace, clean or connect the pipe.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK POWER SUPPLY TO SECONDARY AIR COMBINATION VALVE RH.** 1) Disconnect the connector from the secondary air combination valve RH. 2) In the condition of step 3, measure the voltage between secondary air combination valve RH connector and chassis ground. ***Connector & terminal*** ***(E41) No. 2 (+) — Chassis ground (–):***	Does the voltage repeatedly change between 10 V and 0 V?	Replace the secondary air combination valve RH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK HARNESS BETWEEN SECONDARY AIR COMBINATION VALVE RH AND CHASSIS GROUND.** Measure the resistance between the secondary air combination valve RH connector and chassis ground. ***Connector & terminal*** ***(E41) No. 1 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **8**.	Repair the open circuit in harness between secondary air combination valve RH connector and chassis ground.
8	**CHECK HARNESS BETWEEN SECONDARY AIR COMBINATION VALVE RELAY 2 AND SECONDARY AIR COMBINATION VALVE RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the secondary air combination valve relay 2 from the relay box. 3) Measure the resistance of the harness between secondary air combination valve relay 2 connector and secondary air combination valve RH connector. ***Connector & terminal*** ***(F9) No. 8 — (E41) No. 2:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between secondary air combination valve relay 2 connector and secondary air combination valve RH connector • Poor contact of coupling connector
9	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 2.** 1) Connect the battery to terminals No. 9 and No. 10 of the secondary air combination valve relay 2. 2) Measure the resistance between the secondary air combination valve relay 2 terminals. ***Terminals*** ***No. 7 — No. 8:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the secondary air combination valve relay 2. <Ref. to EN(STI)(diag)-10, Electrical Component Location.>
10	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 2.** Measure the resistance between the secondary air combination valve relay 2 terminals with the battery disconnected. ***Terminals*** ***No. 7 — No. 8:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Replace the secondary air combination valve relay 2. <Ref. to EN(STI)(diag)-10, Electrical Component Location.>
11	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 2 POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the secondary air combination valve relay 2 connector and chassis ground. ***Connector & terminal*** ***(F9) No. 7 (+) — Chassis ground (–):*** ***(F9) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	Repair the open or short to ground in the power supply circuit.

	Step	Check	Yes	No
12	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and secondary air combination valve relay 2 connector. ***Connector & terminal*** ***(B135) No. 20 — (F9) No. 9:***	Is the resistance less than 1 Ω?	Go to step **13**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve relay 2 connector • Poor contact of coupling connector
13	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 2 CONNECTOR.** Measure the resistance between the secondary air combination valve relay 2 connector and chassis ground. ***Connector & terminal*** ***(F9) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and secondary air combination valve relay 2 connector.

1. OUTLINE OF DIAGNOSIS

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0410. <Ref. to EN(STI)(diag)-366, DTC P0410 SECONDARY AIR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

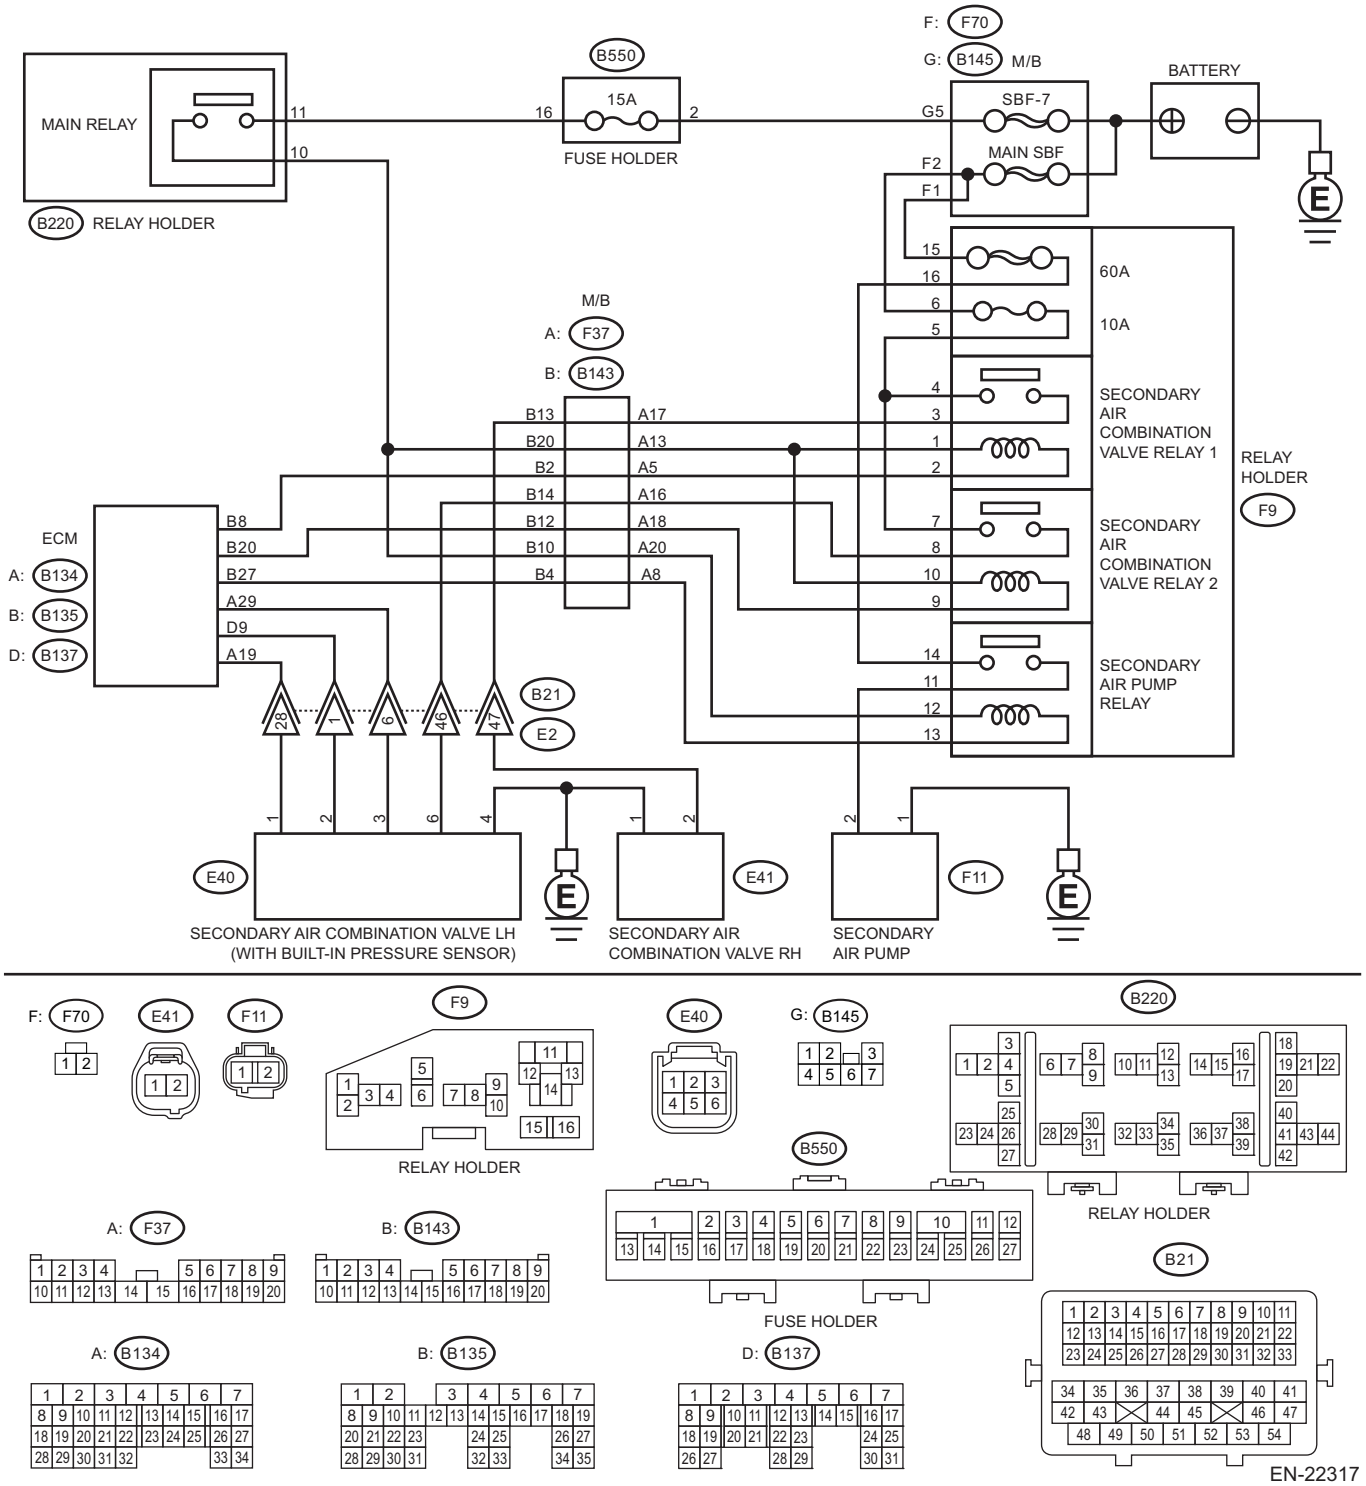
FU:DTC P2442 SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK SECONDARY AIR COMBINATION VALVE FUSE.** Check if the secondary air combination valve fuse (10 A) is blown out.	Is the fuse blown out?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN FUSE BOX AND SECONDARY AIR COMBINATION VALVE LH CONNECTOR.** 1) Remove the secondary air combination valve fuse (10 A) from the fuse box. 2) Disconnect the connector from the secondary air combination valve LH. 3) Measure the resistance between the secondary air combination valve fuse and secondary air combination valve LH connector, and chassis ground. ***Connector & terminal*** ***(F9) No. 5 — Chassis ground:*** ***(E40) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the fuse with a new part, and connect the secondary air combination valve LH connector. Go to step **3**.	Repair the ground short circuit of harness between the fuse box and the secondary air combination valve LH connector.
3	**CHECK SECONDARY AIR COMBINATION VALVE LH OPERATION.** 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Perform operation check for the secondary air combination valve LH using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(STI)(diag)-80, Active Test.>	Does the secondary air combination valve LH repeatedly switch to ON and OFF?	Go to step **4**.	Go to step **6**.
4	**CHECK DUCT BETWEEN SECONDARY AIR PUMP AND SECONDARY AIR COMBINATION VALVE LH.** Check the duct between the secondary air pump and secondary air combination valve LH.	Is there damage, clog or disconnection of the duct?	Replace, clean or connect the duct.	Go to step **5**.
5	**CHECK PIPE BETWEEN SECONDARY AIR COMBINATION VALVE LH AND CYLINDER HEAD.** Check the pipe between the secondary air combination valve LH and cylinder head.	Is there damage, clog or disconnection of the pipe?	Replace, clean or connect the pipe.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
6	**CHECK POWER SUPPLY TO SECONDARY AIR COMBINATION VALVE LH.** 1) Disconnect the connector from the secondary air combination valve LH. 2) In the condition of step 3, measure the voltage between secondary air combination valve LH connector and chassis ground. ***Connector & terminal*** ***(E40) No. 6 (+) — Chassis ground (–):***	Does the voltage repeatedly change between 10 V and 0 V?	Replace the secondary air combination valve LH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK HARNESS BETWEEN SECONDARY AIR COMBINATION VALVE LH AND CHASSIS GROUND.** Measure the resistance between the secondary air combination valve LH connector and chassis ground. ***Connector & terminal*** ***(E40) No. 4 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **8**.	Repair the open circuit in harness between secondary air combination valve LH connector and chassis ground.
8	**CHECK HARNESS BETWEEN SECONDARY AIR COMBINATION VALVE RELAY 1 AND SECONDARY AIR COMBINATION VALVE LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the secondary air combination valve relay 1 from the relay box. 3) Measure the resistance of the harness between the secondary air combination valve relay 1 and secondary air combination valve LH connector. ***Connector & terminal*** ***(F9) No. 3 — (E40) No. 6:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between secondary air combination valve relay 1 connector and secondary air combination valve LH connector • Poor contact of coupling connector
9	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 1.** 1) Connect the battery to terminals No. 1 and No. 2 of the secondary air combination valve relay 1. 2) Measure the resistance between the secondary air combination valve relay 1 terminals. ***Terminals*** ***No. 3 — No. 4:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the secondary air combination valve relay 1. <Ref. to EN(STI)(diag)-10, Electrical Component Location.>
10	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 1.** Measure the resistance between the secondary air combination valve relay 1 terminals with the battery disconnected. ***Terminals*** ***No. 3 — No. 4:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Replace the secondary air combination valve relay 1. <Ref. to EN(STI)(diag)-10, Electrical Component Location.>
11	**CHECK SECONDARY AIR COMBINATION VALVE RELAY 1 POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the secondary air combination valve relay 1 connector and chassis ground. ***Connector & terminal*** ***(F9) No. 4 (+) — Chassis ground (–):*** ***(F9) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	Repair the open or short to ground in the power supply circuit.

	Step	Check	Yes	No
12	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and secondary air combination valve relay 1 connector. ***Connector & terminal*** ***(B135) No. 8 — (F9) No. 2:***	Is the resistance less than 1 Ω?	Go to step **13**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and secondary air combination valve relay 1 connector • Poor contact of coupling connector
13	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR COMBINATION VALVE RELAY 1 CONNECTOR.** Measure the resistance between the secondary air combination valve relay 1 connector and chassis ground. ***Connector & terminal*** ***(F9) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and secondary air combination valve relay 1 connector.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0410. <Ref. to EN(STI)(diag)-366, DTC P0410 SECONDARY AIR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

FV:DTC P2443 SECONDARY AIR SYSTEM SWITCHING VALVE STUCK CLOSED BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P2442. <Ref. to EN(STI)(diag)-664, DTC P2442 SECONDARY AIR SYSTEM SWITCHING VALVE STUCK OPEN BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0410. <Ref. to EN(STI)(diag)-366, DTC P0410 SECONDARY AIR SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

FW:DTC P2444 SECONDARY AIR SYSTEM PUMP STUCK ON BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK SECONDARY AIR PIPING PRESSURE.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read the value of «Sec. Air Piping Pressure», and compare with the actual atmospheric pressure. NOTE: For detailed operation procedures, refer to “Read Current Data For Engine”. <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.>	Is the difference between «Sec. Air Piping Pressure» and atmospheric pressure 50 mmHg (6.7 kPa, 2 inHg, 0.97 psig) or less?	Go to step **2**.	Replace the secondary air combination valve LH. <Ref. to EC(STI)-57, Secondary Air Combination Valve.>
2	**CHECK HARNESS BETWEEN ECM AND SECONDARY AIR PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the secondary air pump relay from the relay holder. 3) Measure the resistance between the secondary air pump relay connector and engine ground terminals. ***Connector & terminal*** ***(F9) No. 13 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and secondary air pump relay connector, and go to the next step. Go to step **3**.
3	**CHECK SECONDARY AIR PUMP FUSE.** 1) Disconnect the secondary air pump connector. 2) Install the secondary air pump relay to the relay holder. 3) Check the MAIN SBF and the secondary air pump fuse (60 A) for blown out.	Is the fuse blown out?	Replace the fuse with a new part, and go to the next step. Go to step **4**.	Go to step **4**.
4	**CHECK SECONDARY AIR PUMP POWER SUPPLY.** 1) Disconnect the positive (+) terminal after disconnecting the negative (-) terminal of battery. 2) Measure the resistance between secondary air pump connector and battery cable positive terminal. ***Connector & terminal*** ***(F11) No. 2 — battery cable positive terminal:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Go to step **5**.
5	**CHECK SECONDARY AIR PUMP RELAY.** 1) Remove the secondary air pump relay from the relay holder. 2) Measure the resistance between the secondary air pump relay terminals. ***Terminals*** ***No. 11 — No. 14:***	Is the resistance 1 MΩ or more?	Repair the short circuit to power of the secondary air pump, and go to the next step. Go to step **6**.	Replace the secondary air pump relay. <Ref. to EN(STI)(diag)-10, LOCATION, Electrical Component Location.> After replacement, go to the next step. Go to step **6**.
6	**CHECK SECONDARY AIR PUMP.** Check the appearance of secondary air pump and the condition of impeller.	Is the secondary air pump free from deformation, cracks and other damages? And does the impeller rotate smoothly?	End.	Replace the secondary air pump. <Ref. to EC(STI)-54, Secondary Air Pump.>

1. OUTLINE OF DIAGNOSIS

Detect the secondary air pump malfunction (always ON).

After the secondary air pump turns to OFF, judge as NG if the secondary air pipe pressure is higher than that before the secondary air pump operation.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 7 V
Time since secondary air control completion	≥ 3000 ms and ≤ 8000 ms

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Secondary air pipe pressure – Secondary air pipe pressure before operation	> 6.7 kPa (50 mmHg, 2 inHg)

Time needed for diagnosis:8000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FX:DTC P24B9 EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

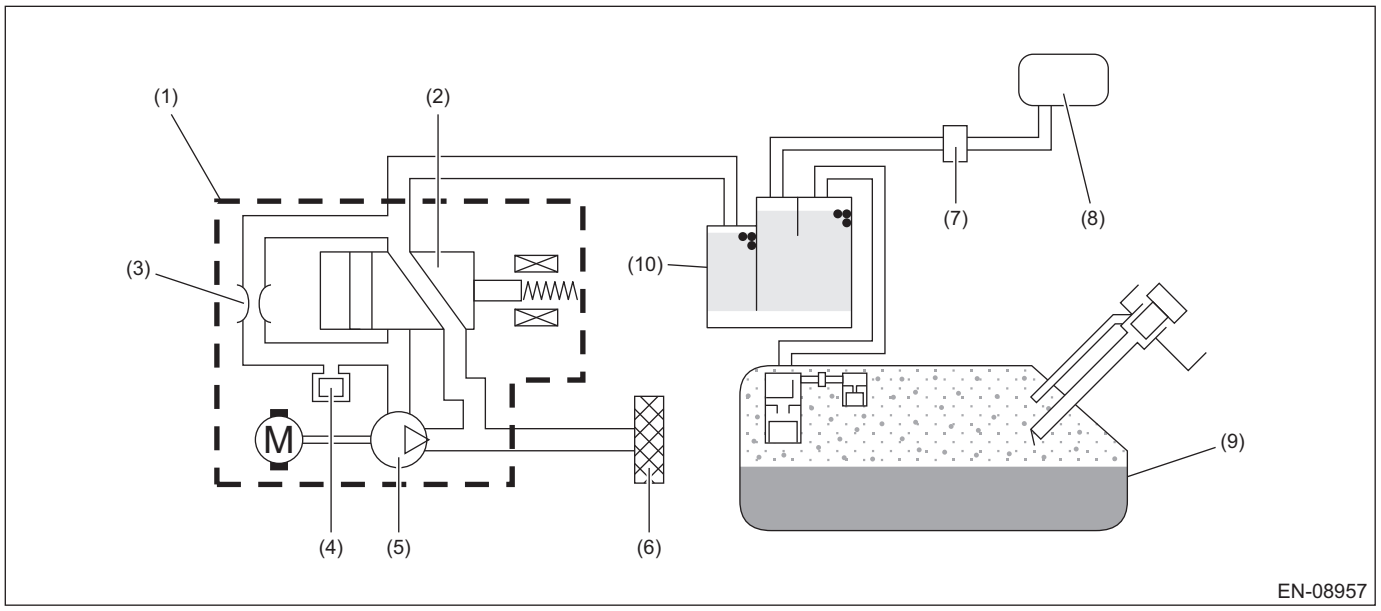
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P24B9 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON (engine OFF). 2) Using the Subaru Select Monitor or general scan tool, read the value in «Atmosphere Pressure» and «Mani. Absolute Pressure», and compare them with the actual atmospheric pressure. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. • To read the actual atmospheric pressure, connect the Subaru Select Monitor or general scan tool to the other known good vehicle.	Is the difference with the actual atmospheric pressure 3.3 kPa (24.8 mmHg, 1 inHg) or more?	Replace the part that showed larger deviation from the actual atmospheric pressure than the other. • If deviations in value for «Atmosphere Pressure» is larger: Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.> • If deviations in value for «Mani. Absolute Pressure» is larger: Replace the manifold absolute pressure sensor. <Ref. to FU(STI)-40, Manifold Absolute Pressure Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the output characteristics malfunction of Evaporative Leak Check Module pressure sensor.
Judge as NG when the Evaporative Leak Check Module pressure sensor output value is largely different from the intake manifold pressure when the ignition switch is ON.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch is turned to ON	≥ 500 ms and < 60000 ms
Soaking time	≥ 60 s
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open
Purge control	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis once at ignition ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Evaporative Leak Check Module pressure sensor output value – intake manifold pressure (absolute pressure) when ignition switch is ON|	≥ 6532.8 Pa (49 mmHg, 1.9 inHg)

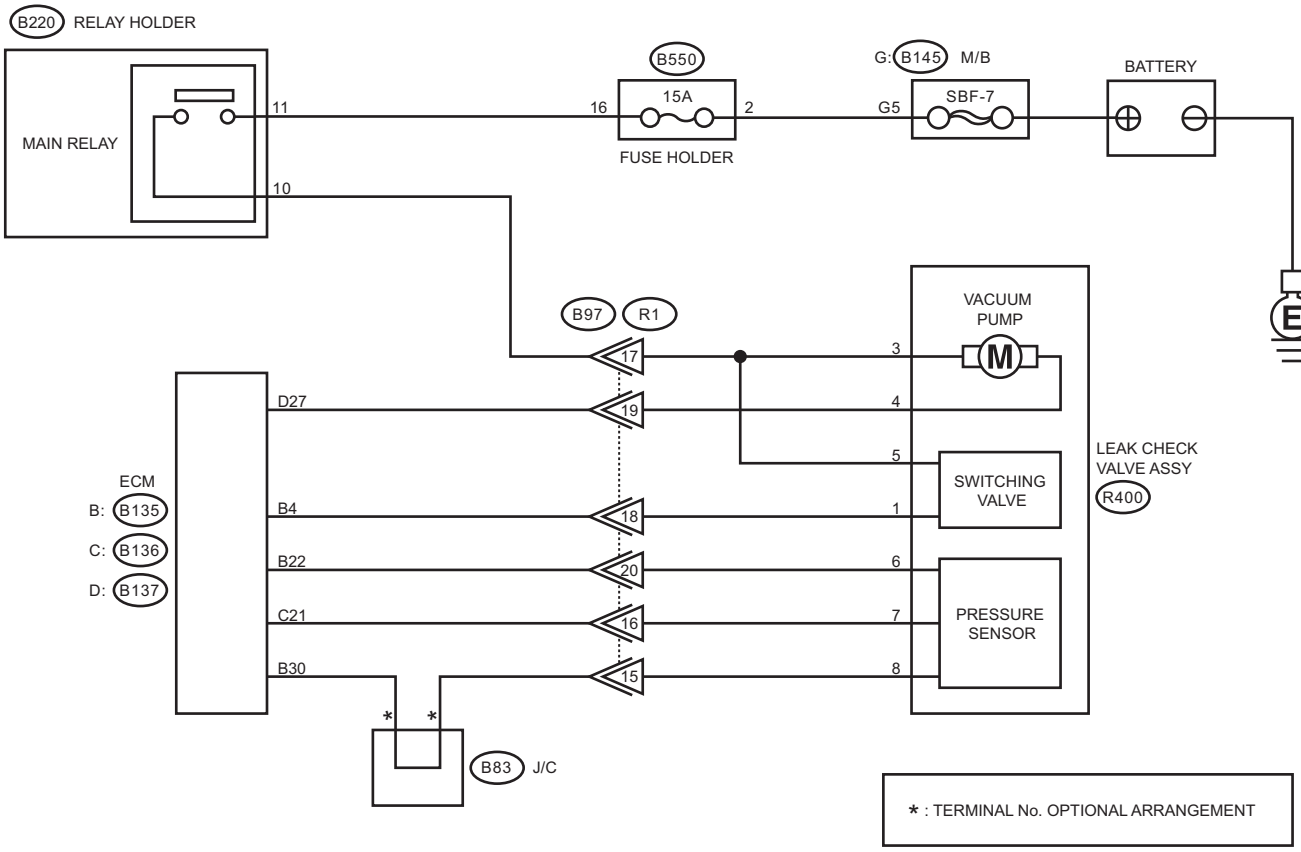
Time needed for diagnosis:320 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

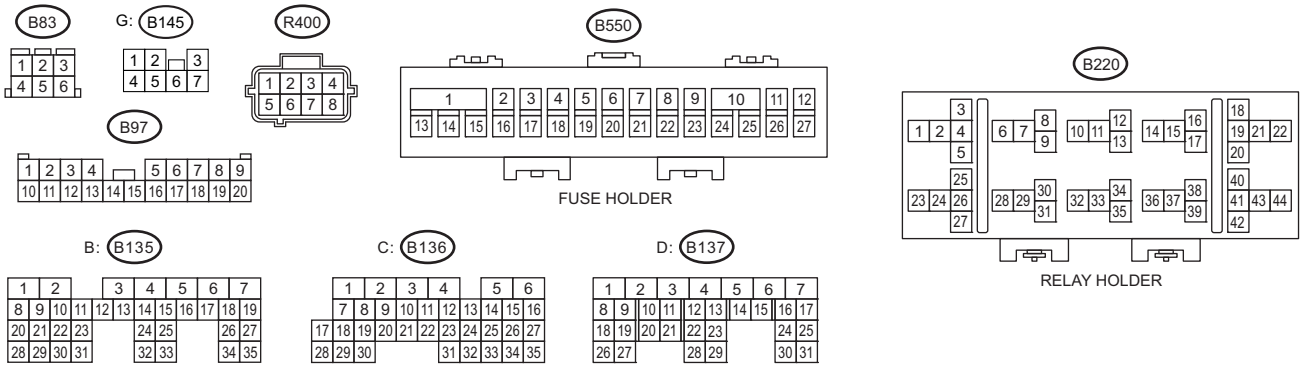
FY:DTC P24BA EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





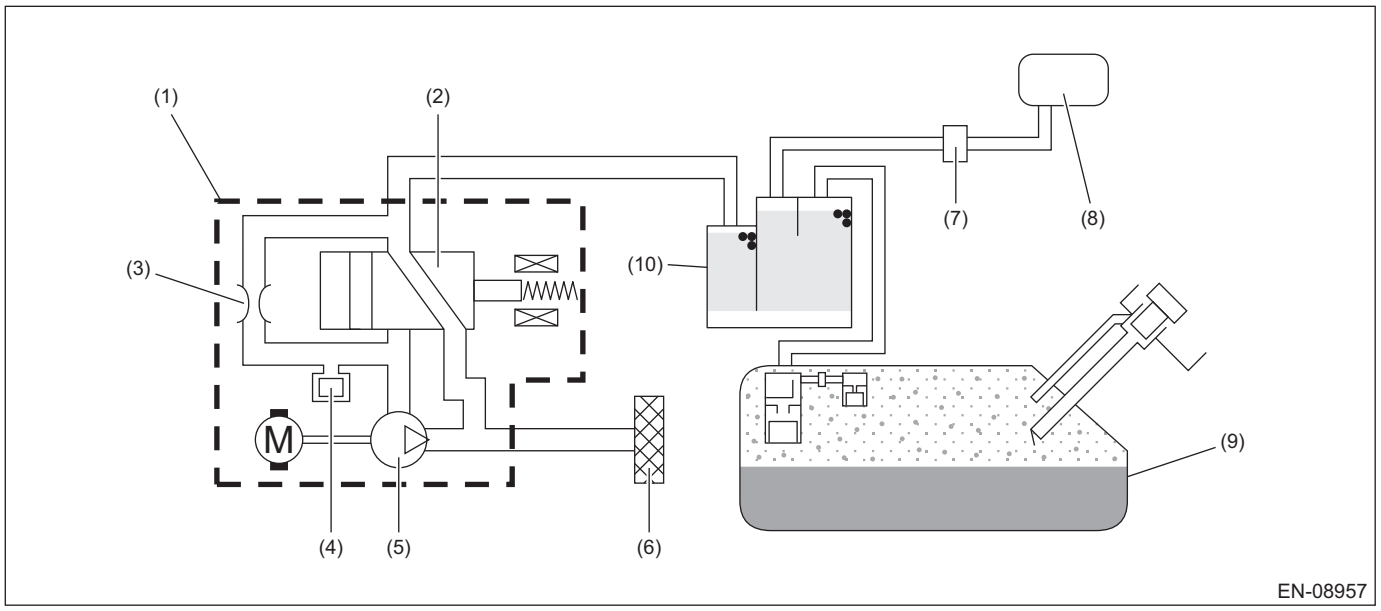
EN-22318

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Atmosphere Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Atmosphere Pressure» 34 kPa (255 mmHg, 10 inHg) or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 6 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B136) No. 21 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.
4	**CHECK FOR POOR CONTACT.** Check for poor contact of leak check valve assembly connector.	Is there poor contact in the leak check valve assembly connector?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.973 V

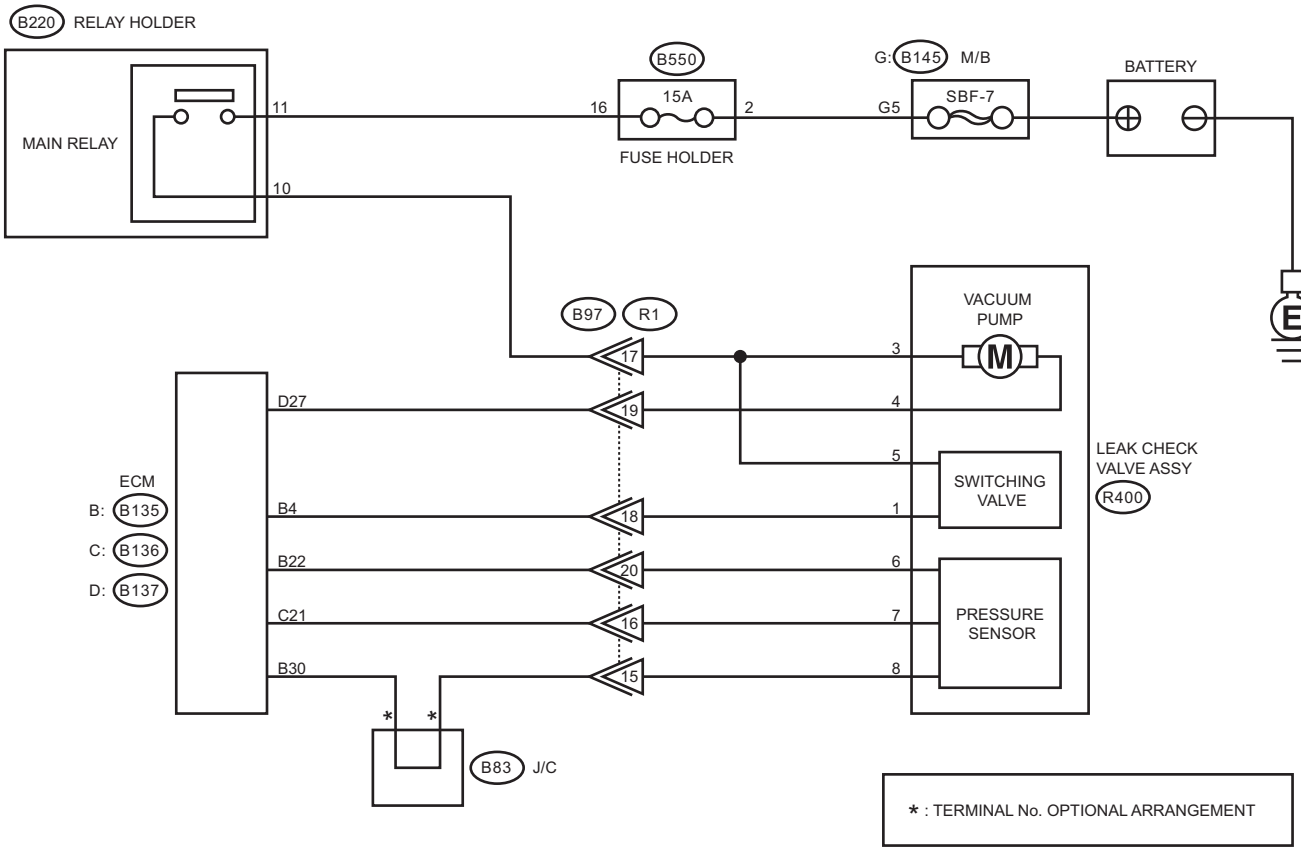
Time needed for diagnosis:1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

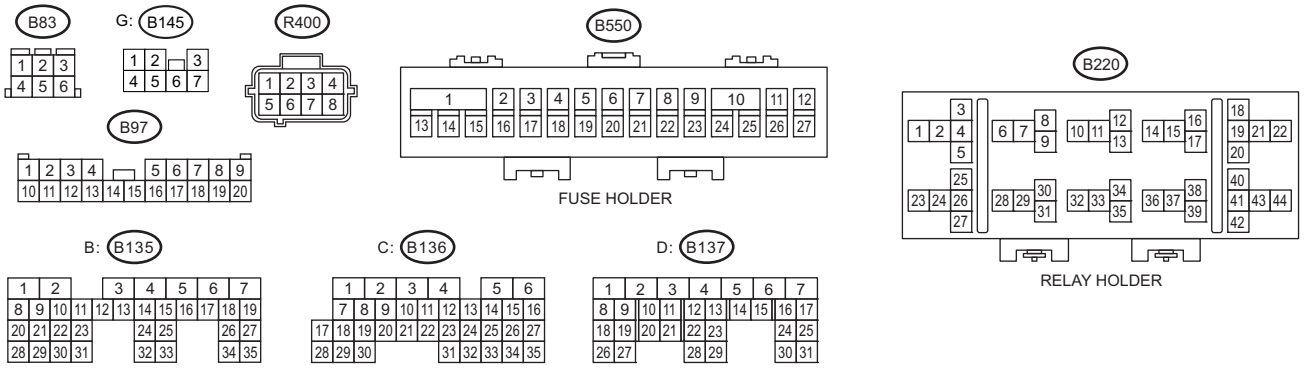
FZ: DTC P24BB EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





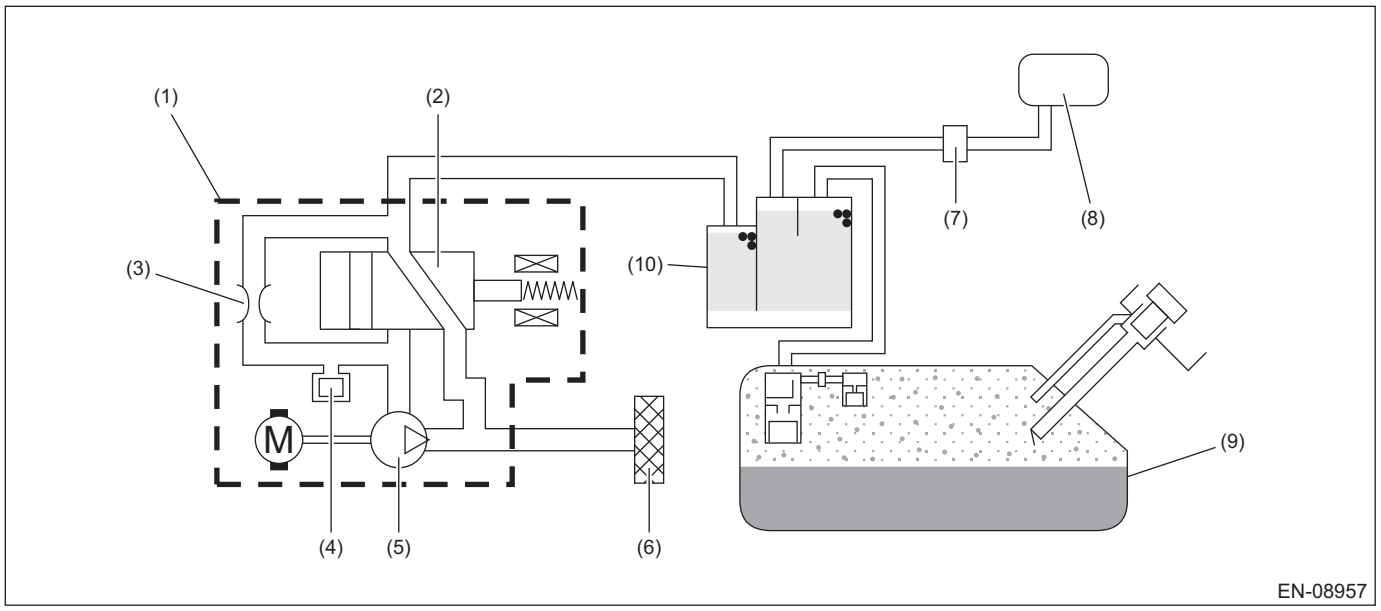
EN-22318

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Atmosphere Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(STI)(diag)-37, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Atmosphere Pressure» 125 kPa (938 mmHg, 36.9 inHg) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the leak check valve assembly. 4) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B136) No. 21 — (R400) No. 7:*** ***(B135) No. 30 — (R400) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector • Poor contact of joint connector
3	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and the leak check valve assembly connector.	Is there poor contact in ECM and the leak check valve assembly connector?	Repair the poor contact of ECM and the leak check valve assembly connector.	Go to step **4**.
4	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the pressure sensor of the leak check valve assembly. <Ref. to EC(STI)-49, CHECK PRESSURE SENSOR, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the short circuit to power in harness between ECM connector and leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(STI)-32, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≥ 4.095 V

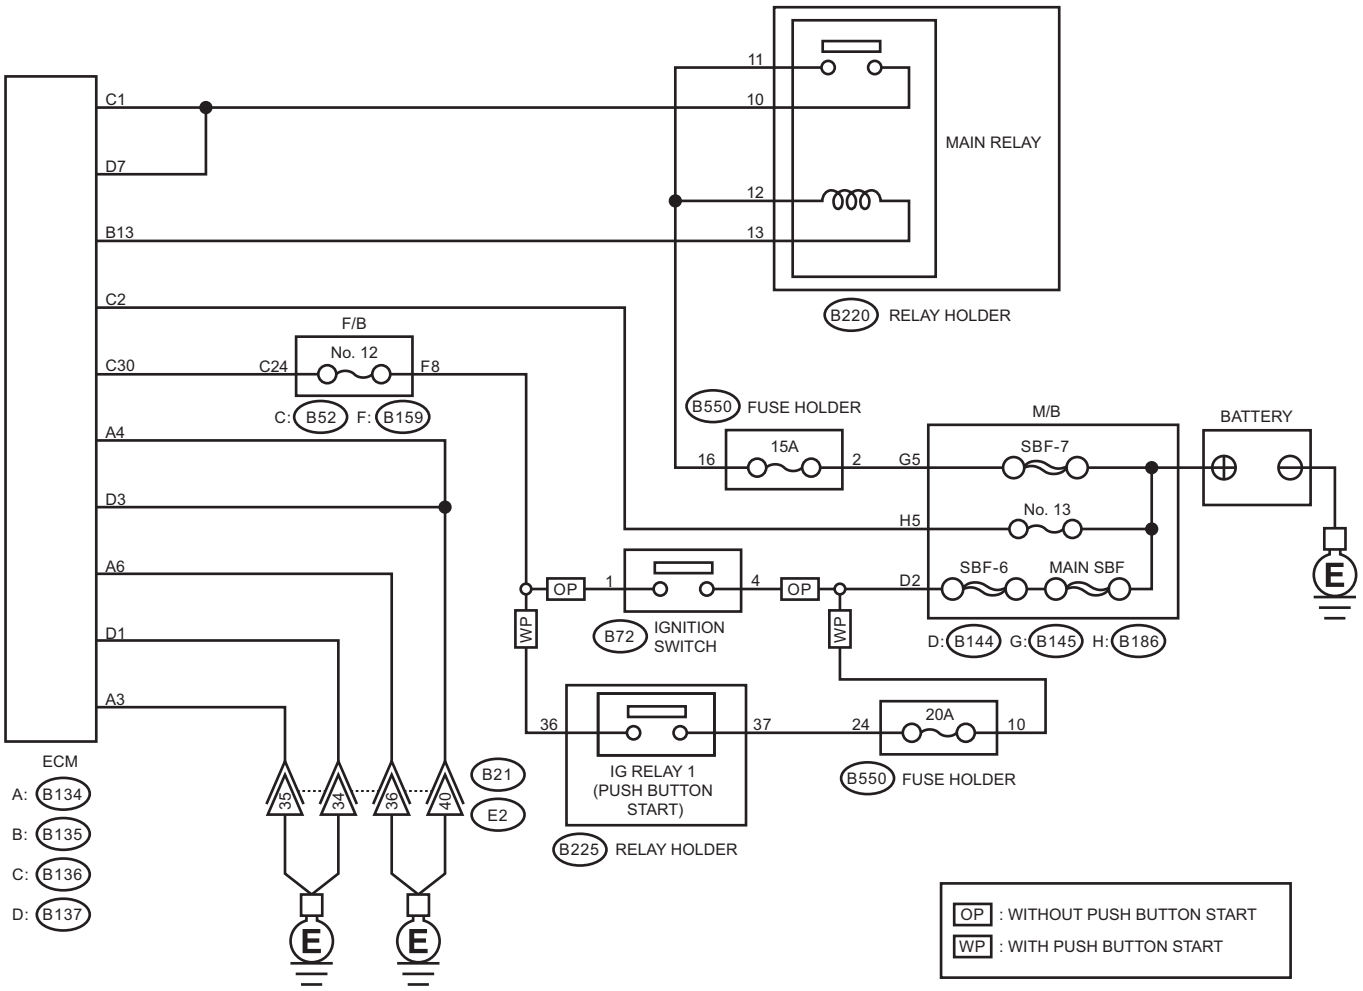
Time needed for diagnosis:1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

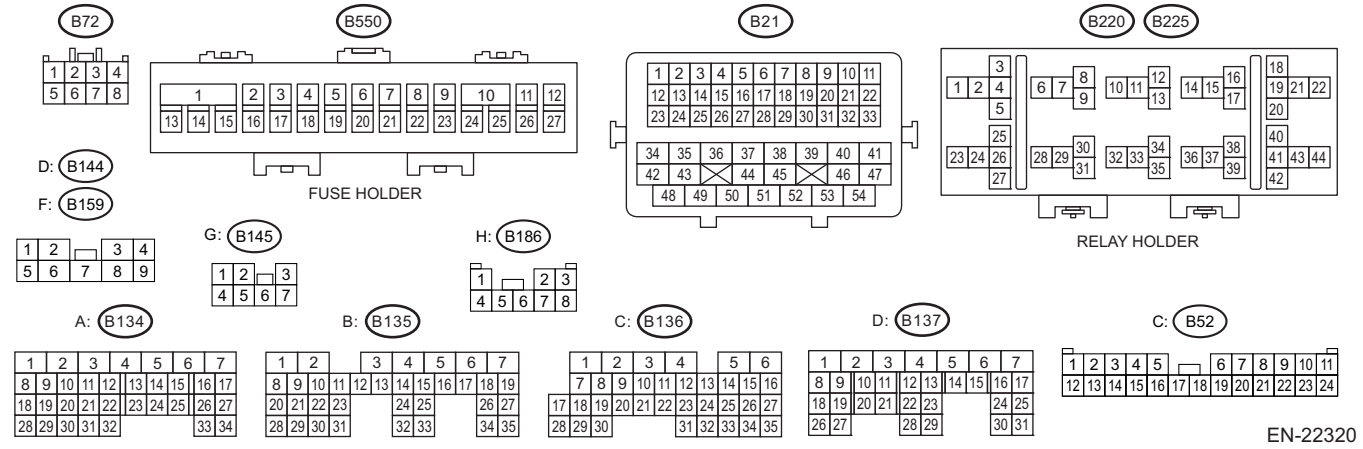
GA:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-22320

Step		Check	Yes	No
1	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **2**.	Connect the ECM connector correctly.

Step		Check	Yes	No
2	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground while wiggling the harness between ECM connector and ignition switch connector (for models without push button start), or between ECM connector and IG relay 1 (push button start) connector (for models with push button start). ***Connector & terminal*** ***(B136) No. 30 (+) — Chassis ground (–):***	Is the voltage 8 V or more all the time?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. Model without push button start • Open circuit or short circuit to ground in harness between ECM connector and ignition switch connector • Poor contact of ignition switch connector • Poor contact of ignition switch Model with push button start • Open circuit or short circuit to ground in harness between ECM connector and IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: Model without push button start • Open circuit or short circuit to ground in harness between ECM connector and ignition switch connector • Poor contact of ignition switch connector • Poor contact of ignition switch • Faulty fuse (F/B No. 12) Model with push button start • Open circuit or short circuit to ground in harness between ECM connector and IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) • Faulty fuse (F/B No. 12)

1. OUTLINE OF DIAGNOSIS

Detect instantaneous open in ignition switch input circuit to ECM.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

ECM monitors the voltage of the ignition switch input circuit. Judge as ignition switch ON when the voltage is the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 600 rpm

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Number of instantaneous opens in ignition switch input circuit	≥ 5 time(s)

Time needed for diagnosis: 5000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GB:DTC P2610 ECM/PCM ENGINE OFF TIMER PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

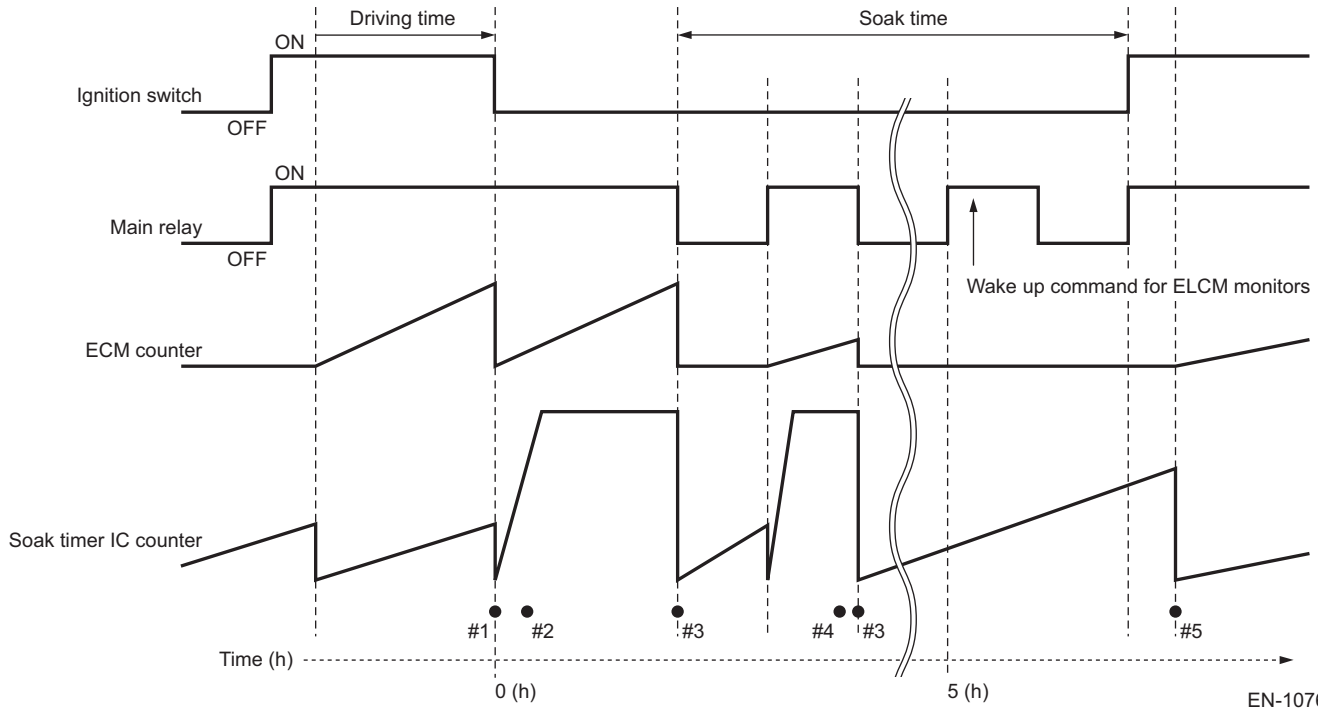
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(STI)(diag)-51, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2610 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).> NOTE: The soaking timer IC is built into the ECM.

1. OUTLINE OF DIAGNOSIS

Detect malfunction of soaking timer IC by the five diagnoses below.

This is an example of ELCM monitor execution at soak time of 5 hours.



This is an example of ELCM monitor execution at soak time of 9.5 hours.

	Monitor Number	Explanation	Time required for diagnosis
#1	Monitor 1 <Timer diagnosis>	Perform diagnosis of the soaking timer IC accuracy	128 ms
#2	Monitor 2 <Full count diagnosis>	Perform diagnosis of the soaking timer IC counter function	128 ms
#3	Monitor 3 <Soaking timer IC setting diagnosis>	Perform diagnosis of communication between ECM and soaking timer IC	128 ms
#4	Monitor 4 <Timer diagnosis (during soaking)>	Perform diagnosis of the soaking timer IC accuracy during soaking	None
#5	Monitor 5 <Wake-up diagnosis>	Perform diagnosis of wake-up function	None

2. COMPONENT DESCRIPTION

The soaking timer IC is built into the ECM.

3. EXECUTION CONDITION

Monitor1:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Ignition switch	OFF
Elapsed time after starting the engine	> 600 s and < 61380 s

Monitor2:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Ignition switch	OFF
Counter in ECM	≥ 4 s

Monitor3:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Ignition switch	OFF

Monitor4:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Ignition switch	OFF

Monitor5:

Secondary parameters	Execution condition
Ignition switch	ON
Time in the soaking timer IC	> 3600 s

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the ignition switch is OFF and when the ignition switch is ON after the soaking of one hour or more.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

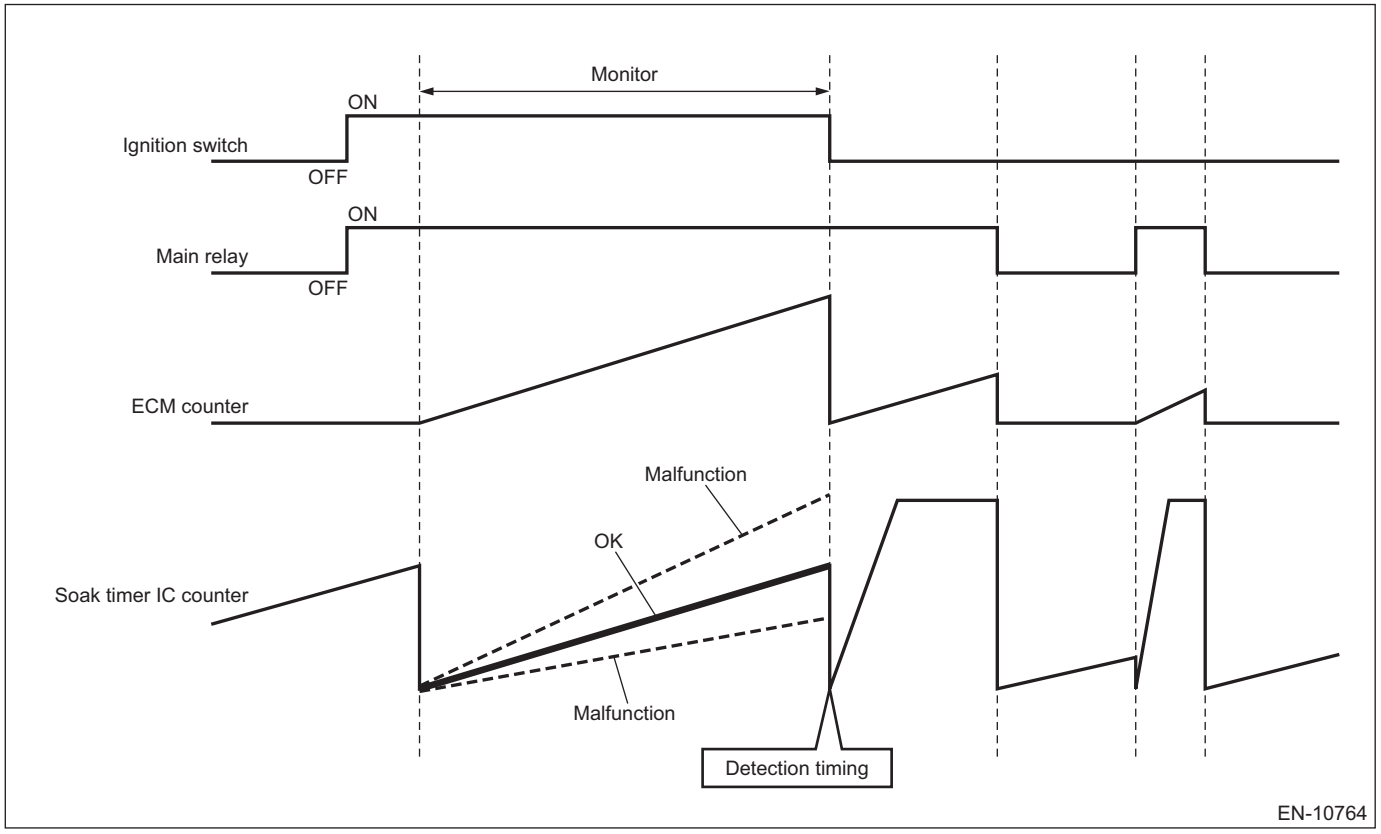
Judgment value

Malfunction Criteria	Threshold Value
Ignition switch	ON
Driving cycle	Completed
When any one of the followings is established:	
• Timer diagnosis	NG
• Full count diagnosis	NG
• Soaking timer IC setting diagnosis	NG
• Timer diagnosis (during soaking)	NG
• Wake-up diagnosis	NG

Time needed for diagnosis: Approx. 5 — 9.5 hours

<Monitor1: Timer diagnosis>

Start the count up operation of counters in ECM and in soaking timer IC when the engine is started. Judge as timer malfunction if the difference between the counter in ECM and counter in soaking timer IC exceeds the allowable limit when the ignition switch is OFF.



Judge as NG when the following conditions are established.

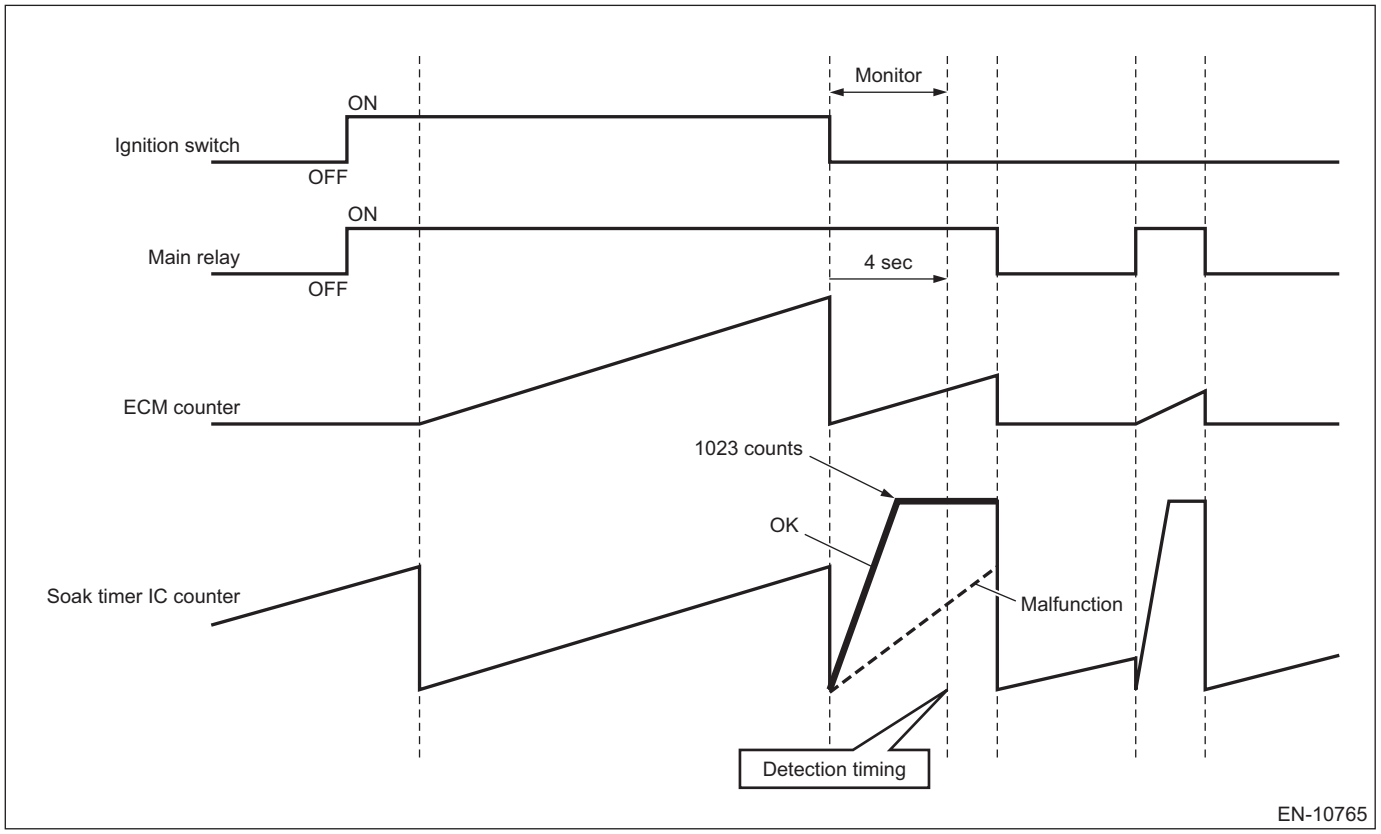
Judgment value

Malfunction Criteria	Threshold Value
|osoaktimcpu – osoaktimic| / osoaktimcpu osoaktimcpu = Counter in ECM osoaktimic = Counter in soaking timer IC	> 0.24

Time needed for diagnosis: 128 ms

<Monitor2: Full count diagnosis>

Reset the counter in soaking timer IC and start the count up operation.
Judge as full count diagnosis malfunction if counter in soaking timer IC is not $3FF (1023 count) after 4 seconds.



Judge as NG when the following conditions are established.

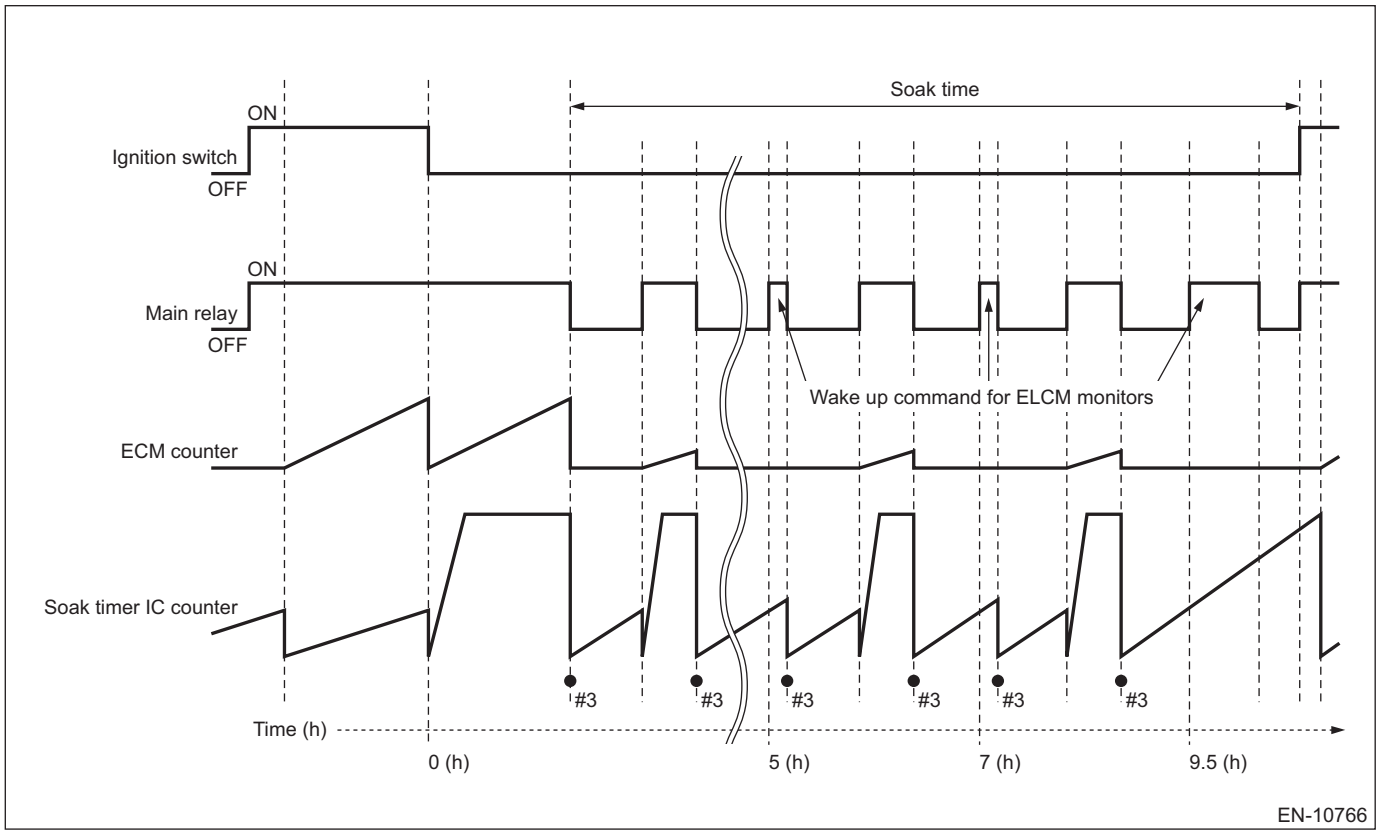
Judgment value

Malfunction Criteria	Threshold Value
osoakfcntic osoakfcntic = Counter in soaking timer IC	≠ $3FF (1023 count)

Time needed for diagnosis: 128 ms

<Monitor3: Soaking timer IC setting diagnosis>

When setting the activation setting time to soaking timer IC, compare the writing value to soaking timer IC with read out value. Judge as malfunction if the values do not match 3 times in a row.



Judge as NG when the following conditions are established.

Judgment value

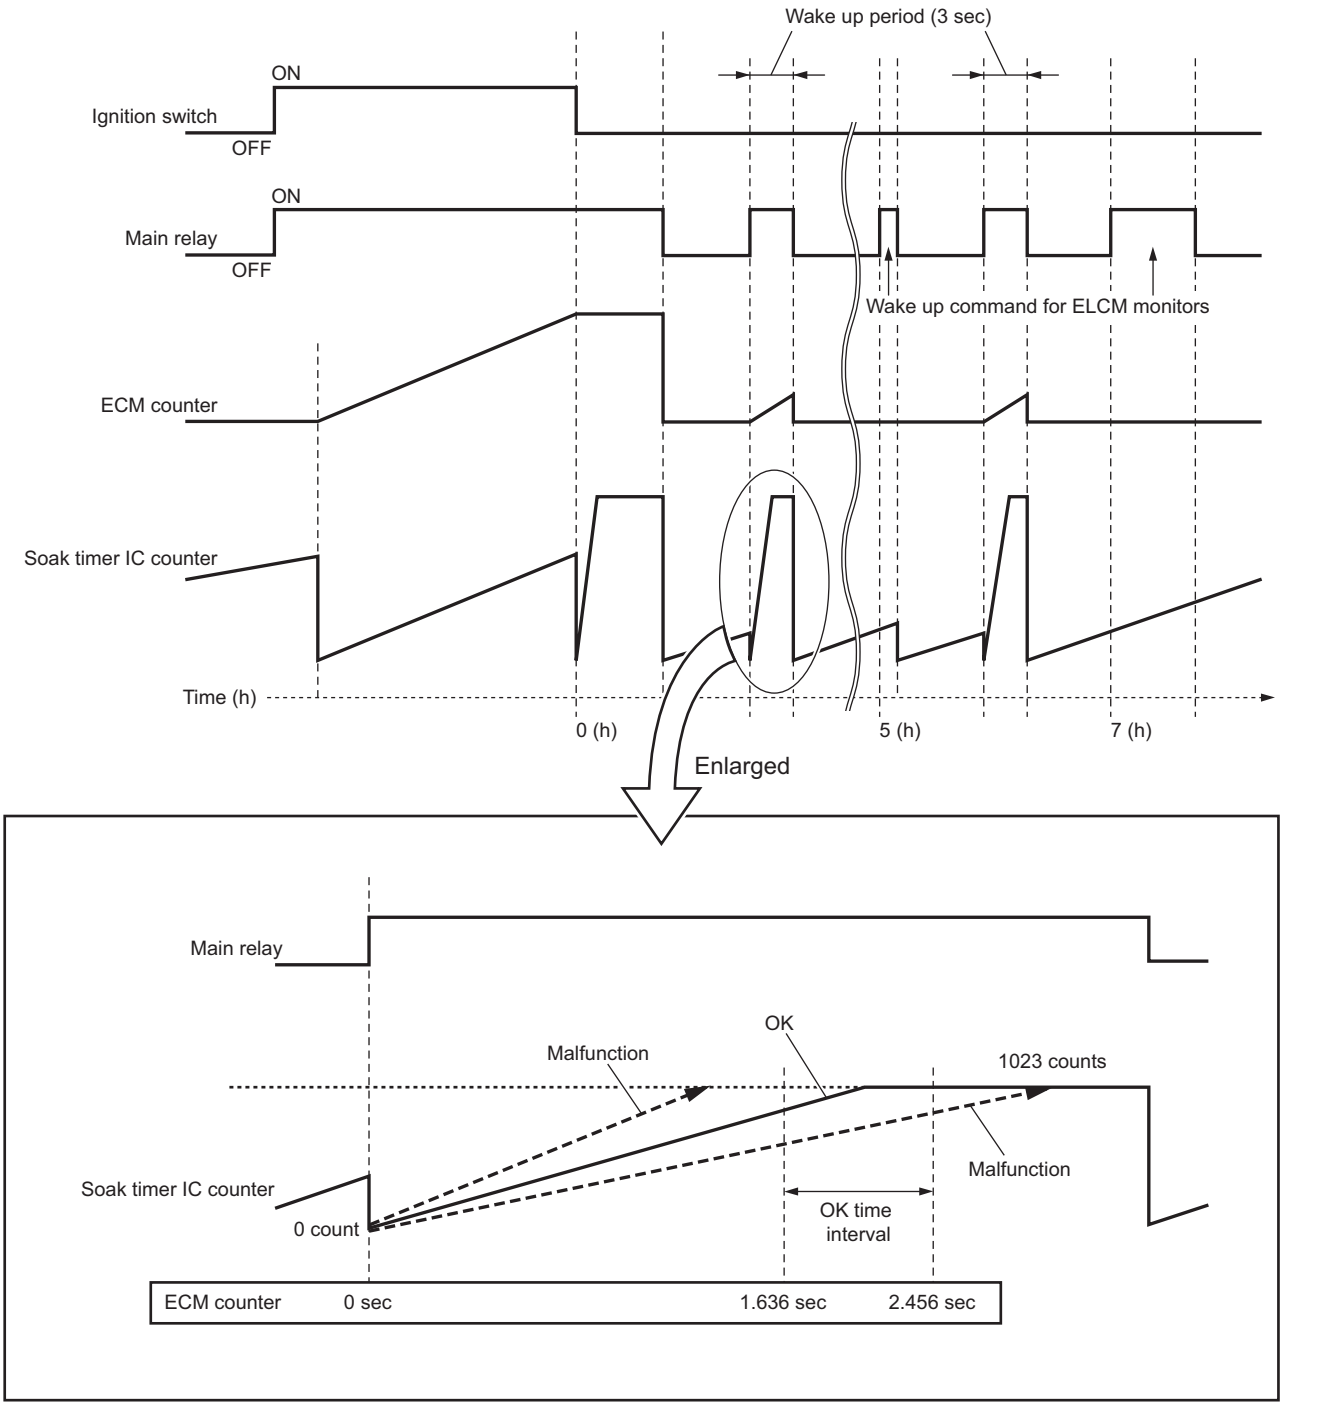
Malfunction Criteria	Threshold Value
Writing value and read out value when setting the soaking timer	Unmatch

Time needed for diagnosis: 128 ms

<Monitor4: Timer diagnosis (during soaking)>

Wake-up at the predetermined interval until 5 or 7 or 9.5 hours have passed after the ignition switch is OFF, and compare the counter in soaking timer IC with the counter in ECM.

Judge as malfunction if the counter in soaking timer IC is counted up to maximum value (1023 count) when the counter in ECM is 1636 ms, or if the counter in soaking timer IC is not counted up to maximum value (1023 count) when the counter in ECM is 2456 ms.



EN-10767

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
• All of the following conditions are established.	

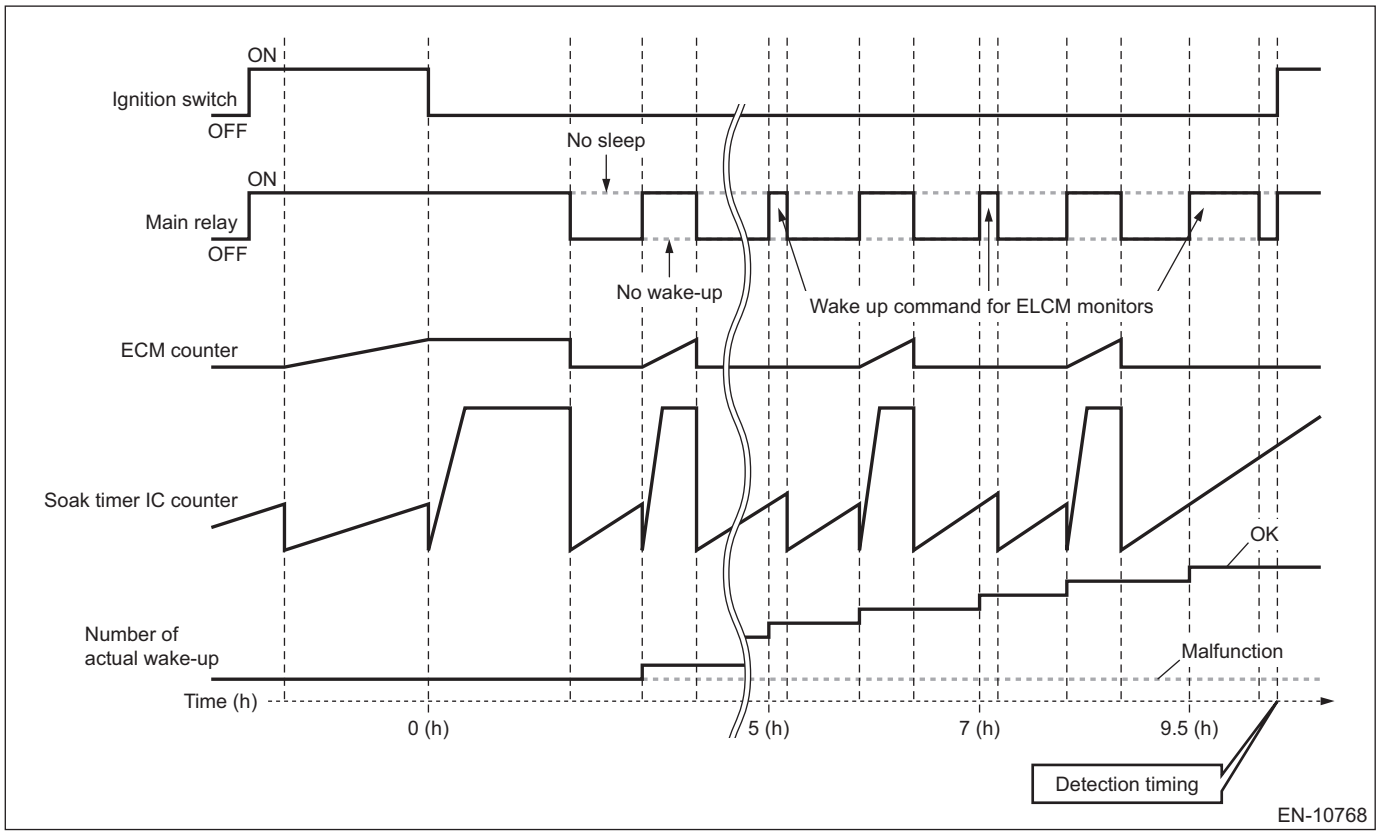
Judgment value

Malfunction Criteria	Threshold Value
Counter in ECM	≤ 1636 ms
Counter in soaking timer IC	= $3FF (1023 count)
• All of the following conditions are established.	
Counter in ECM	≥ 2456 ms
Counter in soaking timer IC	≠ $3FF (1023 count)

Time needed for diagnosis: Less than 1 second

<Monitor5: Wake-up diagnosis>

Store the number of wake-up activation when the ECM wakes up by the soaking timer IC.
Next time when the ignition switch is ON, if the number of wake-up activation does not reach the predetermined value even though the counter in soaking timer IC operates 1 hour or more, judge as wake-up malfunction.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Number of wake-up	≠ Wake-up indication count

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GC:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
CAN bus condition	= “Bus off”

Time needed for diagnosis: 436 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GD:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure between TCM, VDC CM and combination meter has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
ID received from control module connected to CAN	None

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GE:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0122. <Ref. to EN(STI)(diag)-694, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GF:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when data received from TCM, VDC CM and combination meter is not normal.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Data updated from control module connected to CAN	None

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GG:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0416. <Ref. to EN(STI)(diag)-695, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

19.General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:
Malfunction of parts other than those listed is also possible. <Ref. to ME(STI)-103, Symptoms and causes.>

Symptoms	Faulty parts
1. Engine stalls during idling.	1) Electronic throttle control 2) Manifold absolute pressure sensor 3) Mass air flow and intake air temperature sensor 4) Ignition parts (*1) 5) Engine coolant temperature sensor (*2) 6) Crankshaft position sensor (*3) 7) Camshaft position sensor (*3) 8) Fuel injection parts (*4)
2. Rough idling	1) Electronic throttle control 2) Manifold absolute pressure sensor 3) Mass air flow and intake air temperature sensor 4) Engine coolant temperature sensor (*2) 5) Ignition parts (*1) 6) Air intake system (*5) 7) Fuel injection parts (*4) 8) Crankshaft position sensor (*3) 9) Camshaft position sensor (*3) 10) Oxygen sensor 11) Fuel pump and fuel pump relay
3. Engine does not return to idle.	1) Electronic throttle control 2) Engine coolant temperature sensor 3) Manifold absolute pressure sensor 4) Mass air flow and intake air temperature sensor 5) Accelerator pedal position sensor
4. Poor acceleration	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Electronic throttle control 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) A/C switch and A/C relay 10) Engine torque control signal circuit 11) Ignition parts (*1) 12) Accelerator pedal position sensor
5. Engine stalls, hesitates, or sputters at acceleration.	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Purge control solenoid valve 7) Fuel injection parts (*4) 8) Fuel pump and fuel pump relay 9) Electronic throttle control

Symptoms	Faulty parts
6. Surging	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Fuel injection parts (*4) 7) Electronic throttle control 8) Fuel pump and fuel pump relay
7. Spark knock	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor 4) Knock sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay
8. After burning in exhaust system	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay

*1: Check ignition coil and spark plug.
*2: Indicate the symptom occurring only in cold temperatures.
*3: Ensure secure installation.
*4: Check fuel injector, fuel pressure regulator and fuel filter.
*5: Inspect for air leak in air intake system.

ENGINE 2 SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

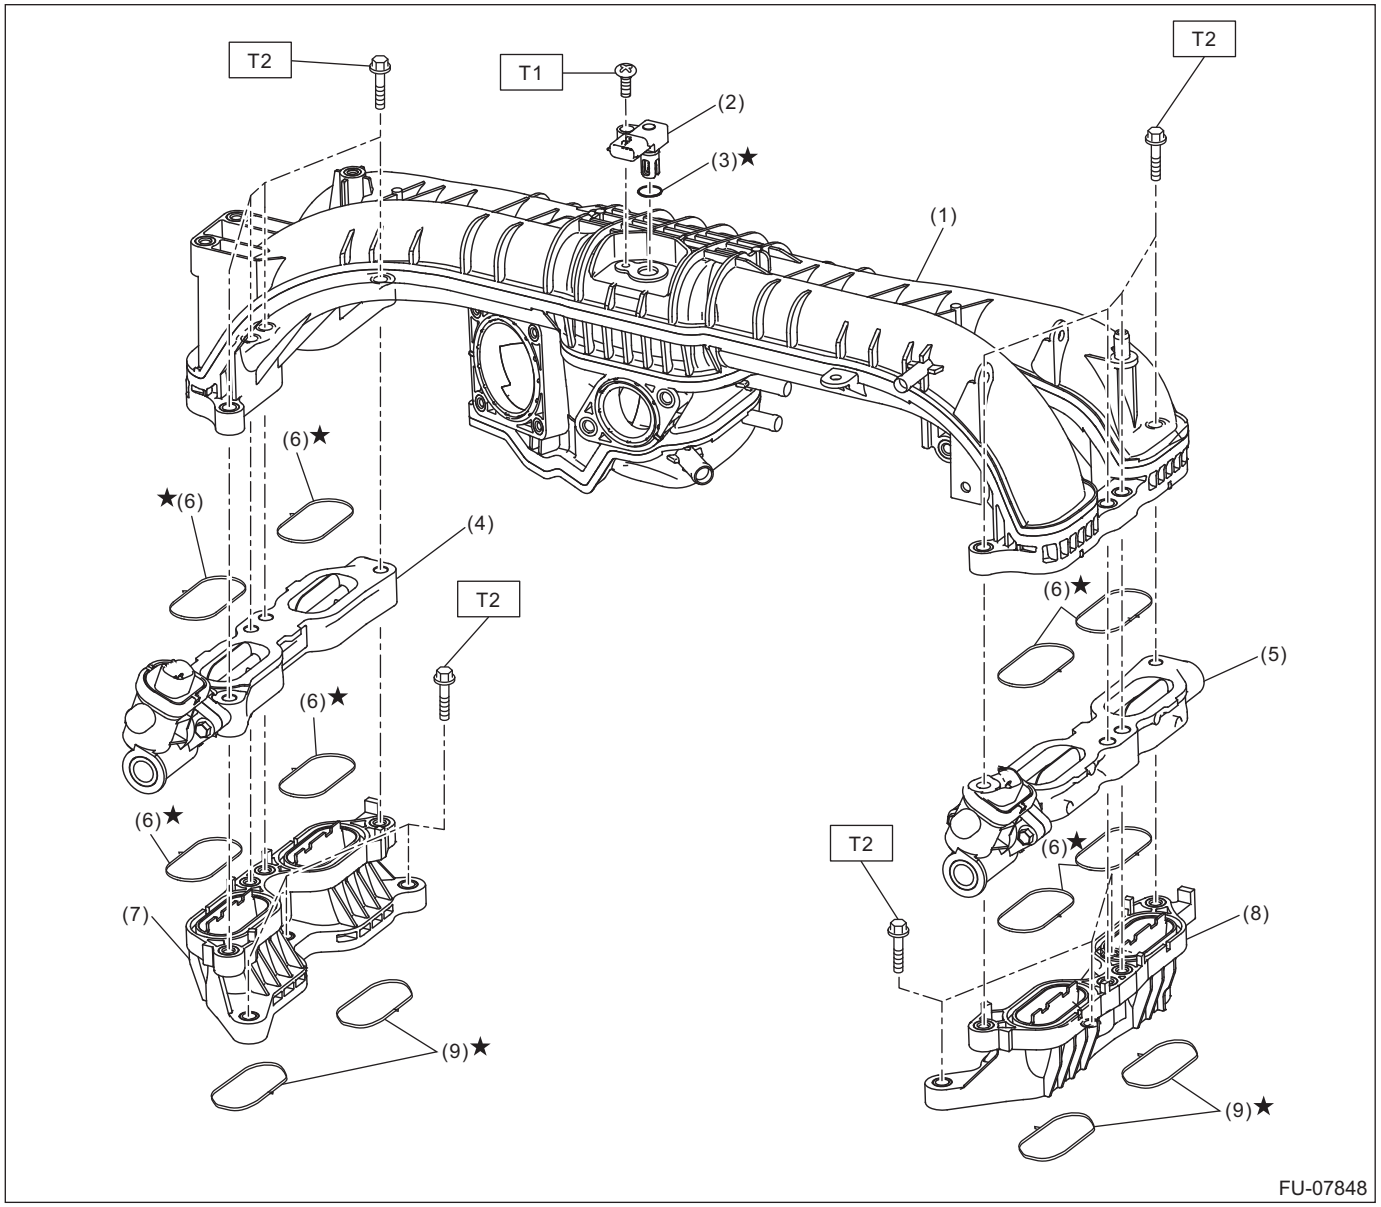
1. General Description

A: SPECIFICATION

Fuel tank	Capacity	60 L (15.9 US gal, 13.2 Imp gal)
	Location	Under rear seat
Fuel pump	Type	Impeller
	Shutoff discharge pressure	940 kPa (9.6 kg/cm^2, 136.3 psi) or less
	Discharge rate	153 L (40.4 US gal, 33.7 Imp gal)/h or more [12.5 V at 343 kPa (3.5 kg/cm^2, 49.7 psi)]
Fuel filter		In-tank type

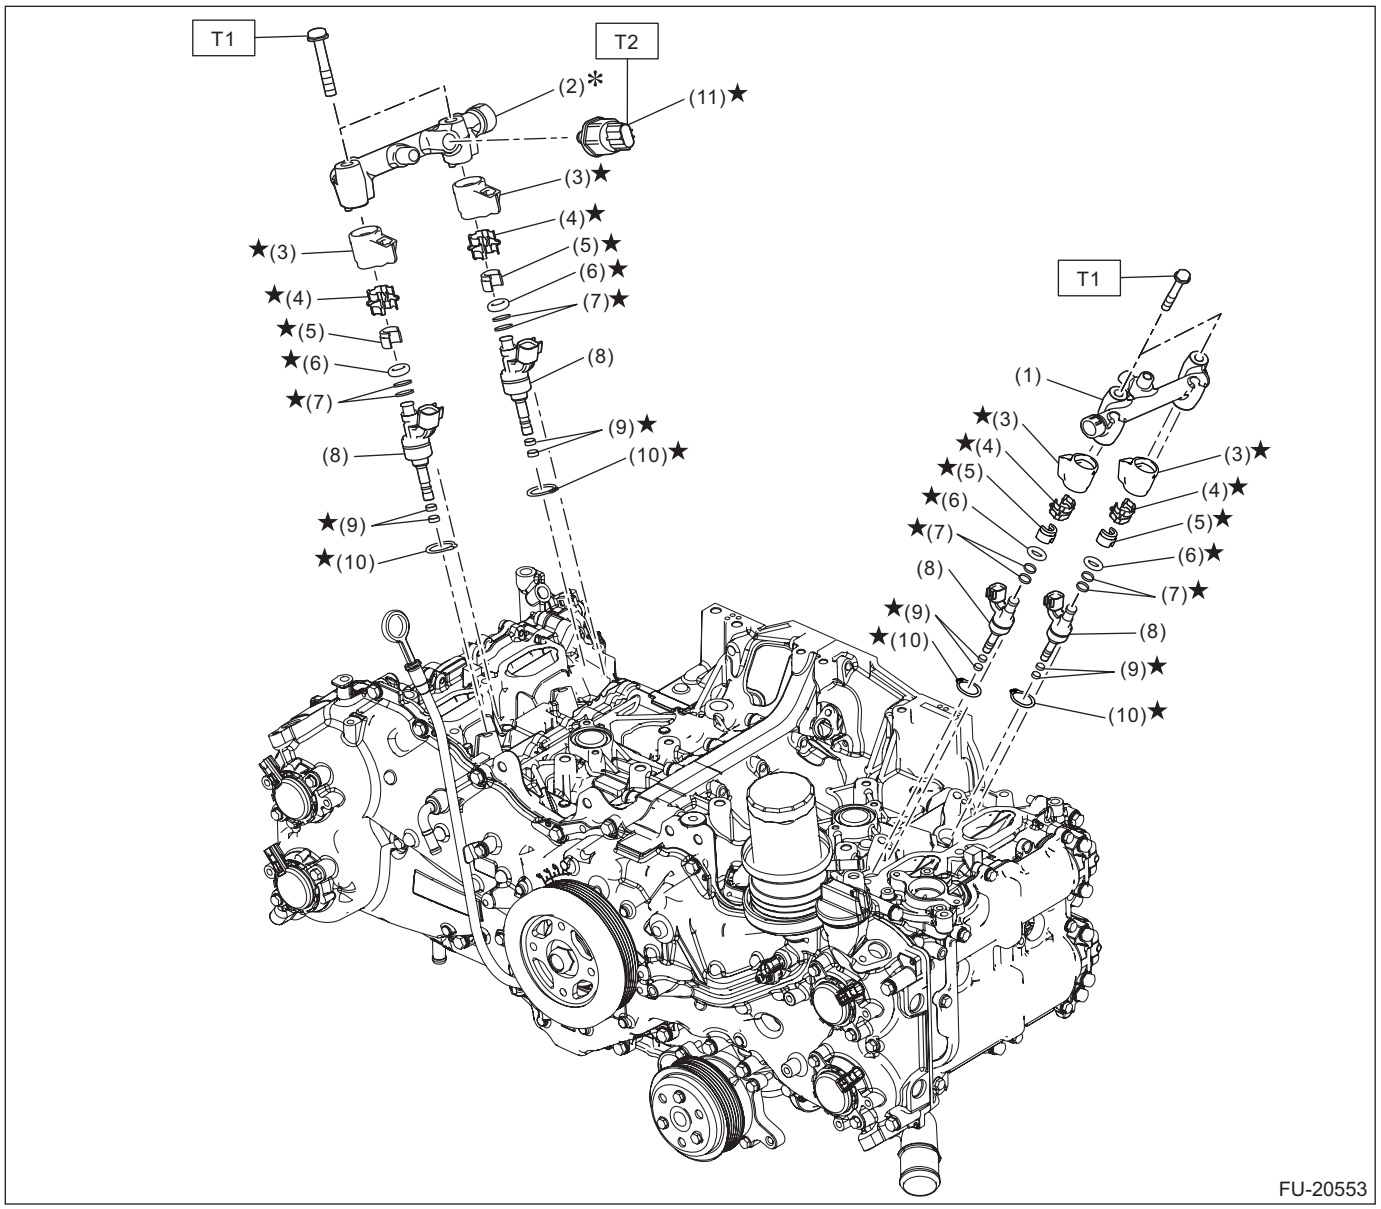
B: COMPONENT

1. INTAKE MANIFOLD



(1)	Intake manifold	(6)	Gasket	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Manifold absolute pressure and intake air temperature sensor	(7)	Air intake adapter LH	***T1: 3.5 (0.4, 2.6)***
(3)	O-ring	(8)	Air intake adapter RH	***T2: 25 (2.5, 18.4)***
(4)	Tumble generator valve ASSY LH	(9)	Gasket	
(5)	Tumble generator valve ASSY RH			

2. FUEL INJECTOR 1

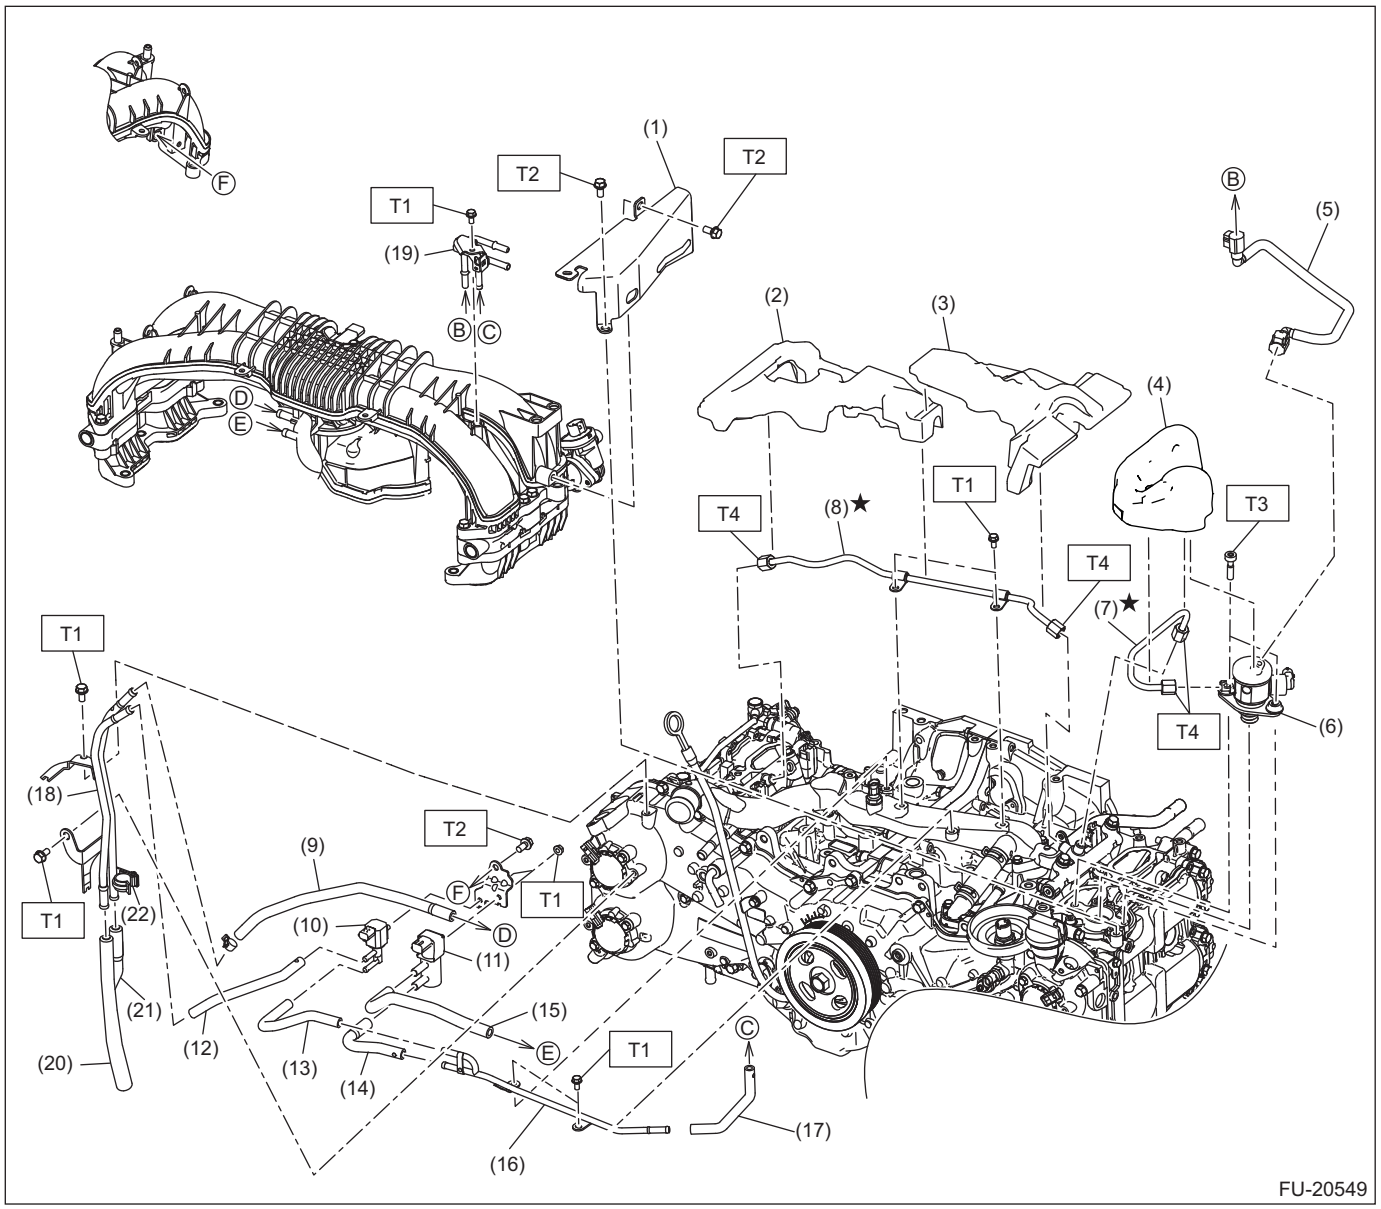


(1) Fuel injector pipe LH
(2) Fuel injector pipe RH
(3) Rubber cover
(4) Holder
(5) Spacer
(6) O-ring
(7) Back-up ring
(8) Fuel injector
(9) Injector seal
(10) Snap ring
(11) Fuel pressure sensor

Tightening torque: N·m (kgf-m, ft-lb)
T1: 19 (1.9, 14.0)
T2: 46 (4.7, 33.9)

* When removing the fuel pressure sensor from the fuel injector pipe RH, replace it with a new one.

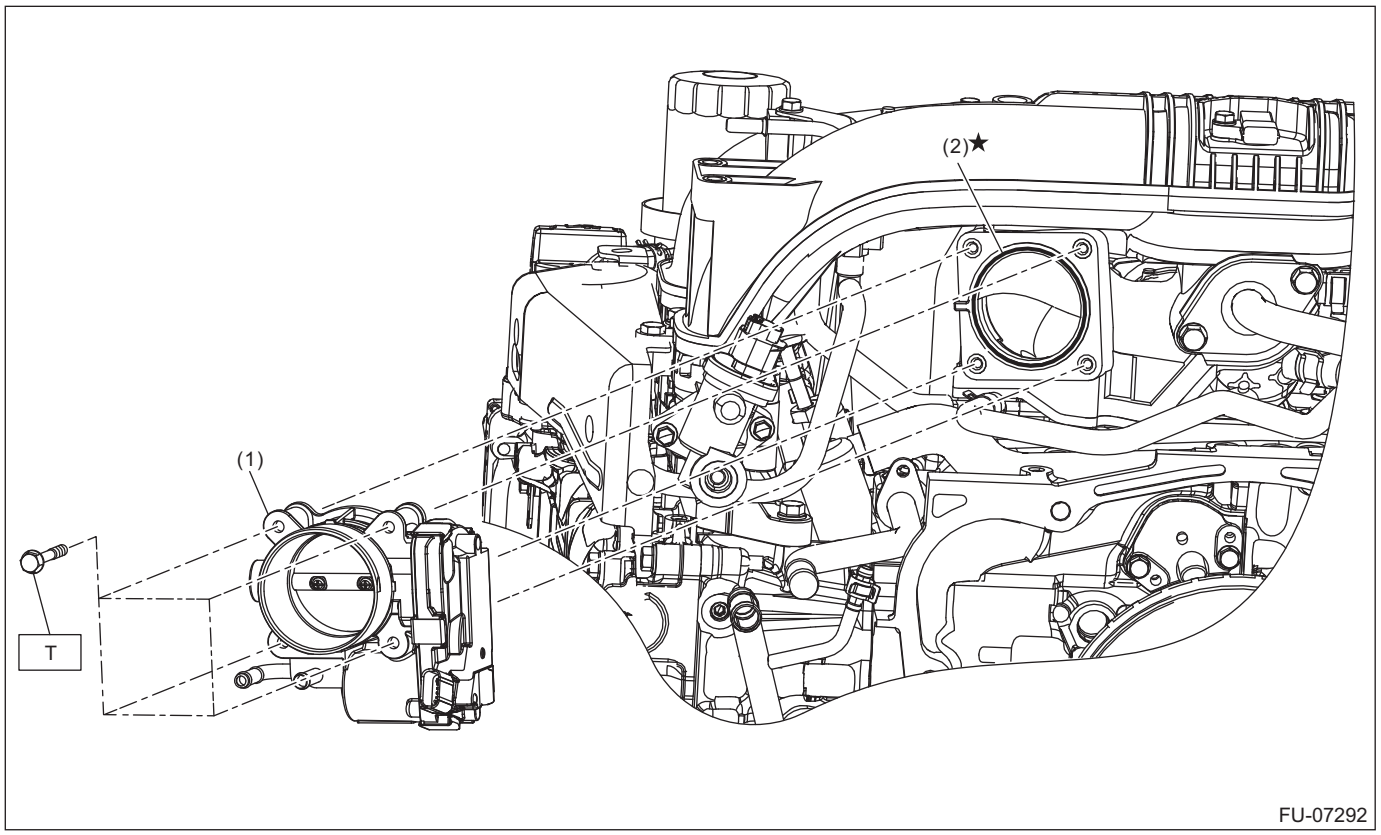
3. FUEL INJECTOR 2



(1) Fuel pipe protector
(2) Fuel pipe insulator No. 3
(3) Fuel pipe insulator No. 2
(4) Fuel pipe insulator No. 1
(5) Fuel delivery pipe
(6) High-pressure fuel pump
(7) High-pressure fuel delivery pipe
(8) High-pressure fuel delivery pipe ASSY
(9) Vacuum control hose
(10) Purge control solenoid valve A
(11) Purge control solenoid valve B
(12) Vacuum hose A
(13) Vacuum hose B
(14) Vacuum hose C
(15) Vacuum hose D
(16) Canister pipe
(17) Vacuum hose E
(18) Vacuum pipe ASSY
(19) Fuel pipe ASSY
(20) Vacuum hose F
(21) Vacuum hose G
(22) Pipe clamp

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 19 (1.9, 14.0)
T3: 21 (2.1, 15.5)
T4: 25 (2.5, 18.4)

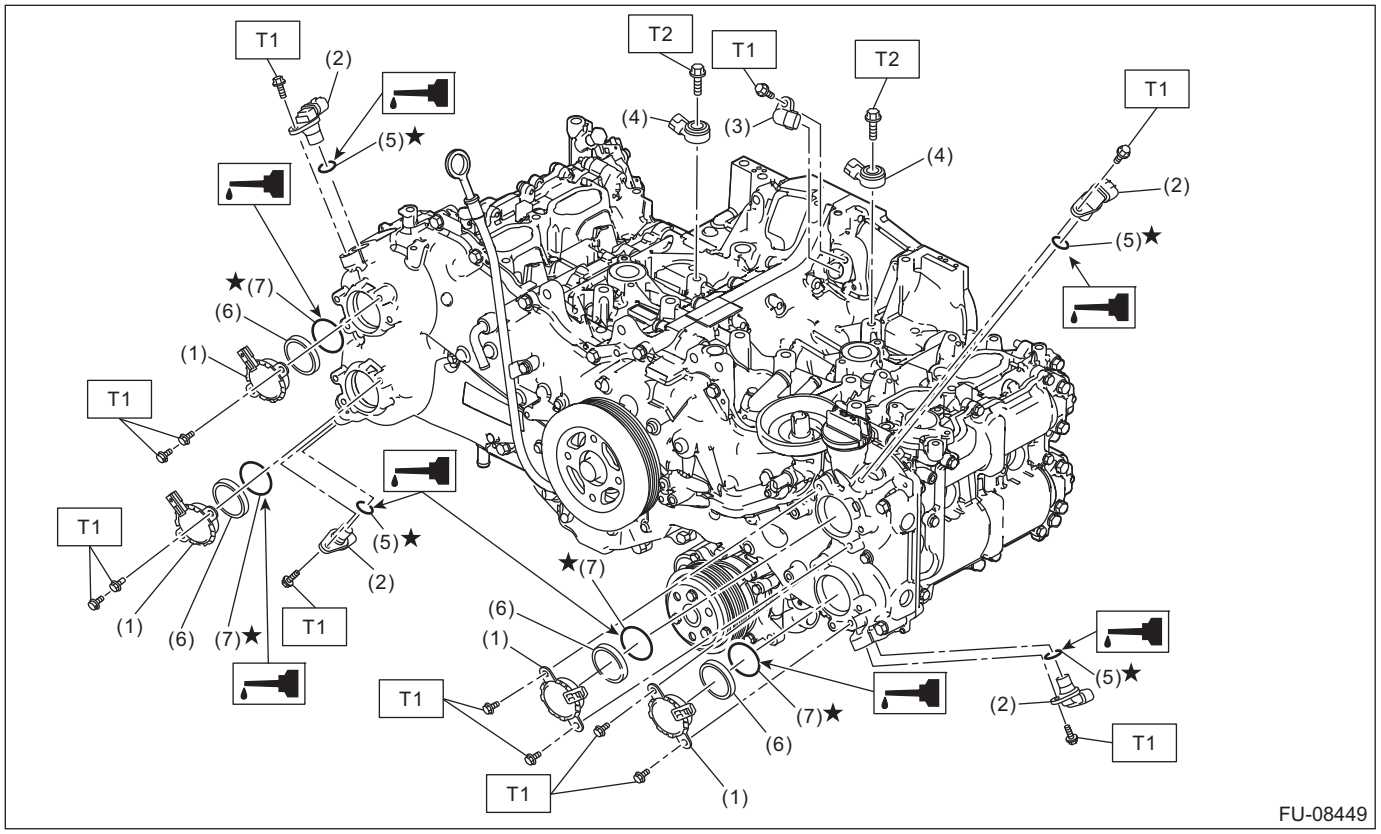
4. THROTTLE BODY



(1) Throttle body
(2) Gasket

Tightening torque: N·m (kgf-m, ft-lb)
T: 8 (0.8, 5.9)

5. CRANKSHAFT POSITION, CAMSHAFT POSITION AND KNOCK SENSORS



(1) Oil control solenoid
(2) Camshaft position sensor
(3) Crankshaft position sensor
(4) Knock sensor
(5) O-ring
(6) Back-up ring
(7) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 24 (2.4, 17.7)

6. FUEL TANK

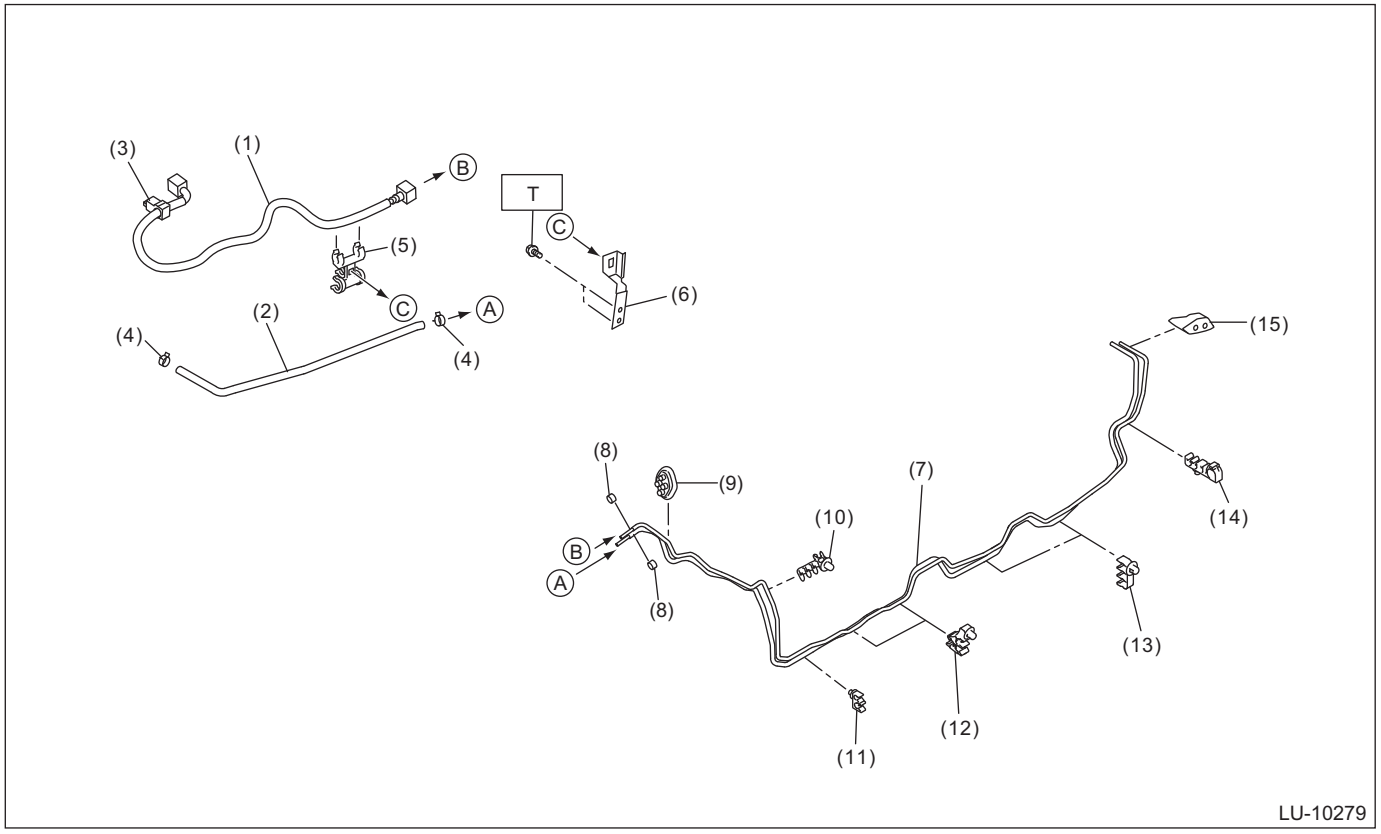
7. FUEL LINE

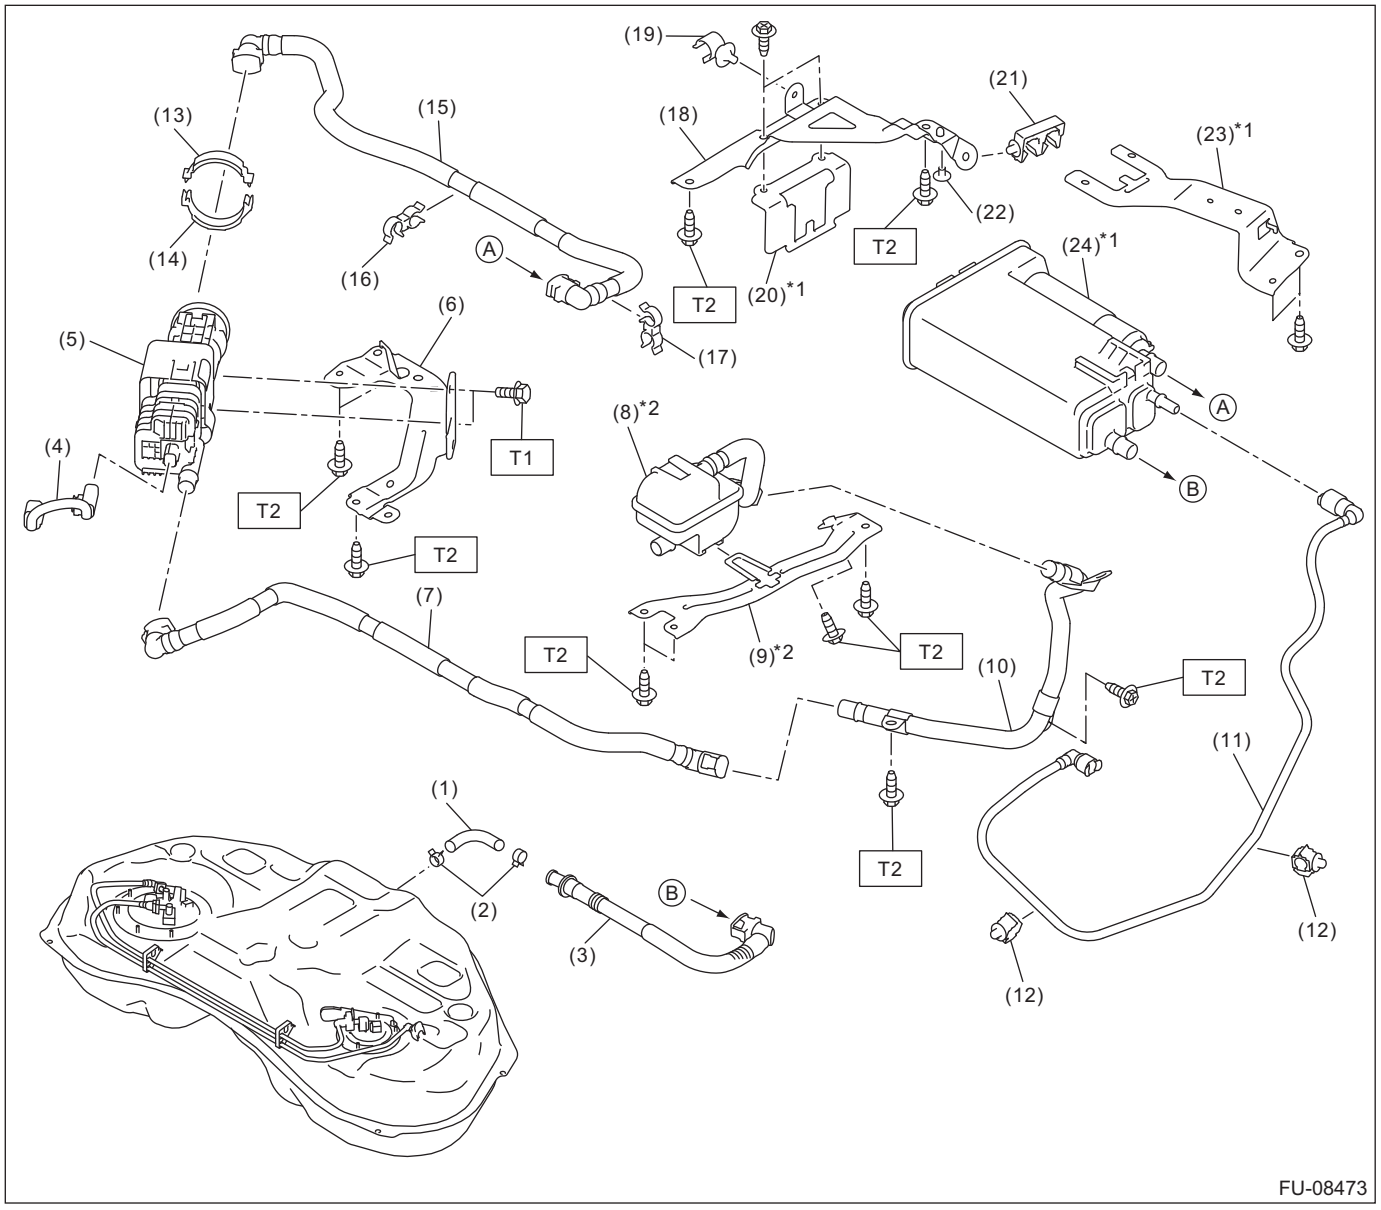
- Fuel line 1



(1) Fuel delivery tube
(2) Evaporation hose
(3) Tube clamp
(4) Clip
(5) Hose clamp
(6) Hose clamp bracket
(7) Fuel pipe ASSY
(8) Bushing
(9) Fuel pipe front grommet
(10) Pipe clamp
(11) Pipe clamp
(12) Pipe clamp
(13) Pipe clamp
(14) Pipe clamp
(15) Fuel pipe rear grommet

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

- Fuel line 2



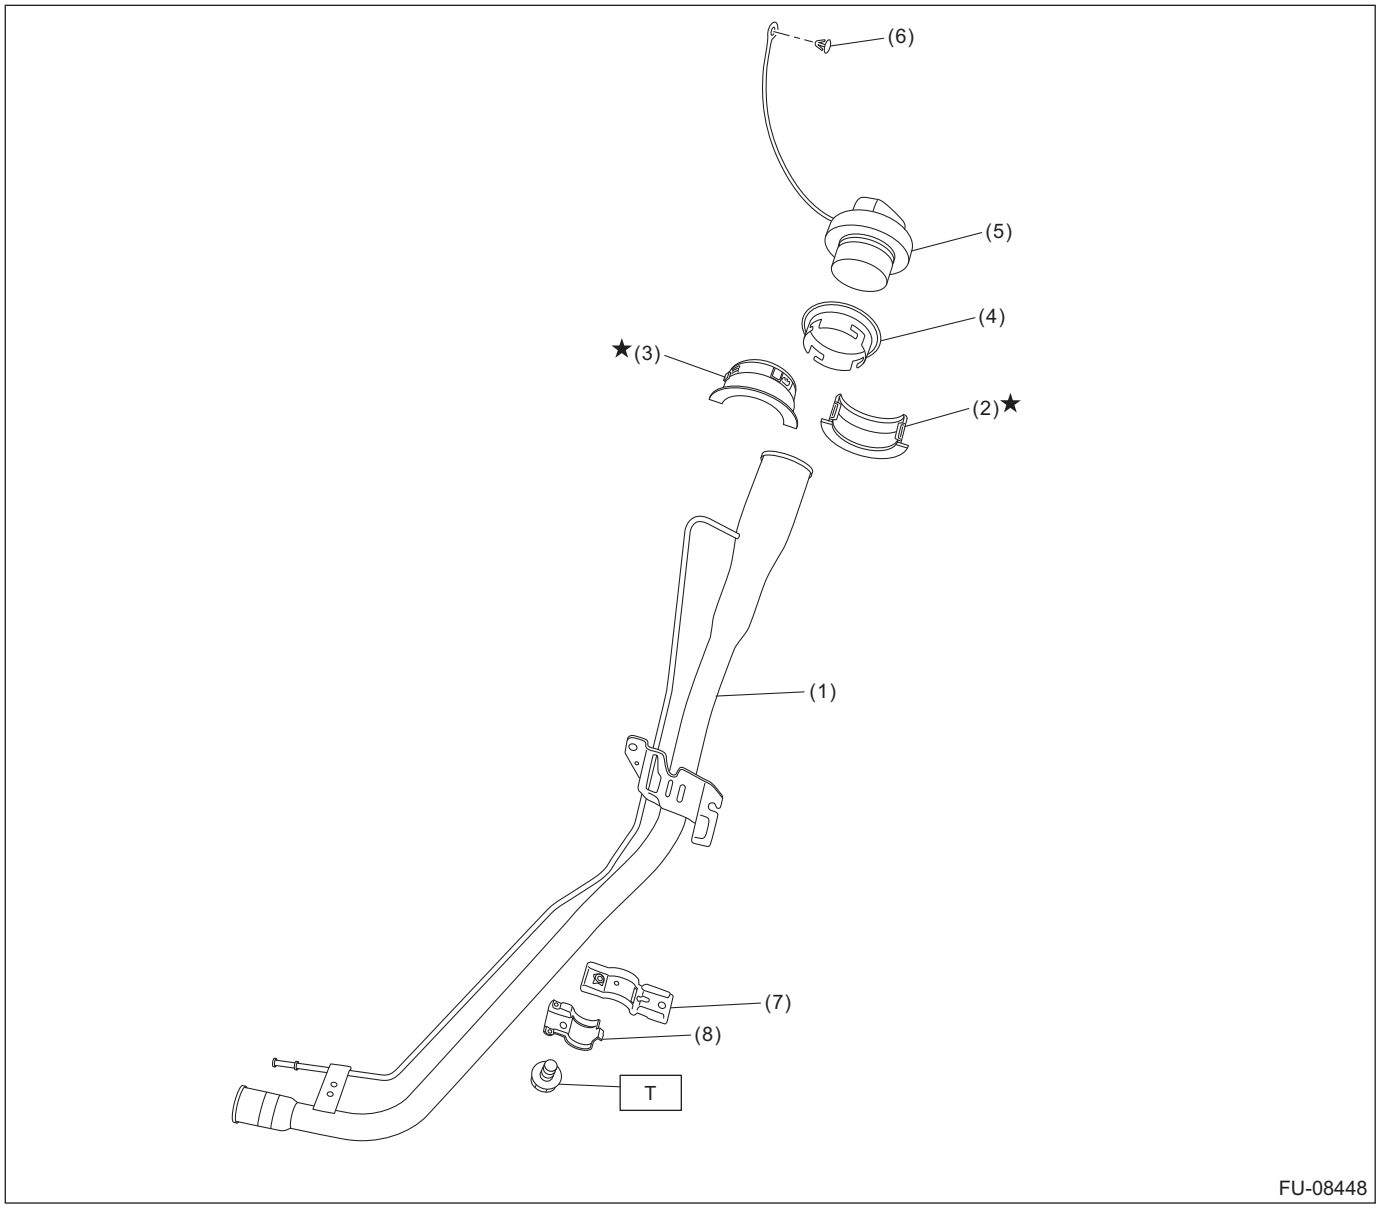
(1) Vent hose
(2) Clip
(3) Vent tube
(4) Harness
(5) Leak check valve ASSY
(6) Leak check valve bracket
(7) Drain tube A
(8) Drain filter
(9) Drain bracket
(10) Drain pipe
(11) Purge tube
(12) Tube clamp
(13) Clamp B
(14) Clamp A
(15) Drain tube B
(16) Tube clamp
(17) Tube clamp
(18) Canister bracket A
(19) Tube clamp
(20) Canister bracket B
(21) Tube clamp
(22) Clip
(23) Canister bracket C
(24) Canister

Tightening torque: N·m (kgf-m, ft-lb)
T1: 5.4 (0.6, 4.0)
T2: 7.5 (0.8, 5.5)

*1 The canister bracket cannot be separated from the canister. Therefore, be sure to replace both of them with new ones when replacing the canister or canister bracket.

*2 The drain filter cannot be separated from the drain bracket. Therefore, be sure to replace both of them with new ones when replacing the drain bracket or drain filter.

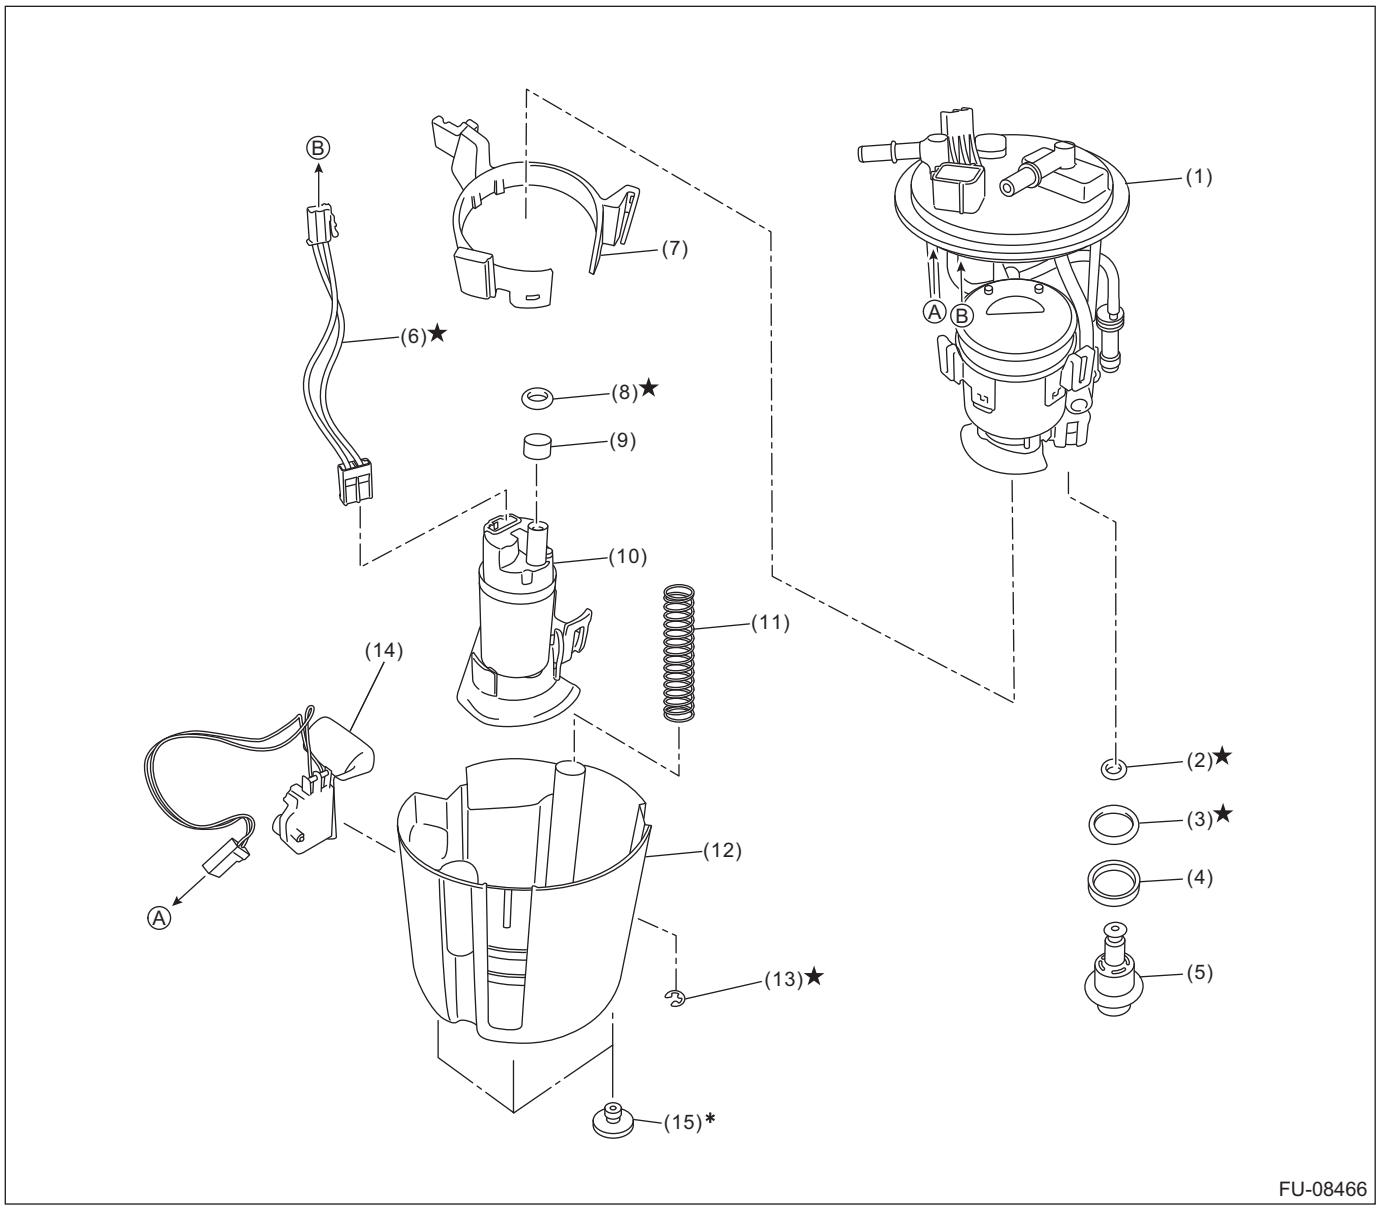
8. FUEL FILLER PIPE



(1) Fuel filler pipe ASSY
(2) Neck holder A
(3) Neck holder B
(4) Fuel filler pipe protector
(5) Fuel filler cap
(6) Clip
(7) Upper bracket
(8) Lower bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

9. FUEL PUMP



(1)	Fuel filter ASSY	(6)	Connector cable	(11)	Spring
(2)	O-ring	(7)	Fuel pump holder	(12)	Fuel chamber ASSY
(3)	O-ring	(8)	O-ring	(13)	Clip
(4)	Back-up ring	(9)	Spacer	(14)	Fuel level sensor
(5)	Pressure regulator	(10)	Fuel pump	(15)	Cushion

* When removing the cushion from the fuel chamber assembly, replace it with a new part.

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Place “NO OPEN FLAMES” signs near the working area.

• Prepare a container and cloth to prevent scattering of fuels when performing work where fuels can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
• Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• Keep the removed parts in order and protect them from dust and dirt.
• All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
• Bolts, nuts and washers should be replaced with new parts as required.
• Always inspect for fuel leaks after removing/installing the fuel system components.
• Follow all government and local regulations concerning disposal of refuse when disposing fuel.
• Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18356AA000	18356AA000	INJECTOR REMOVER	Used for removing the injector.
 ST18460AA030	18460AA030	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18471AA000	18471AA000	FUEL PIPE ADAPTER	Used for draining fuel.
 ST18683AA000	18683AA000	INJECTOR SEAL INSTALLER	Used for installing the injector seal.

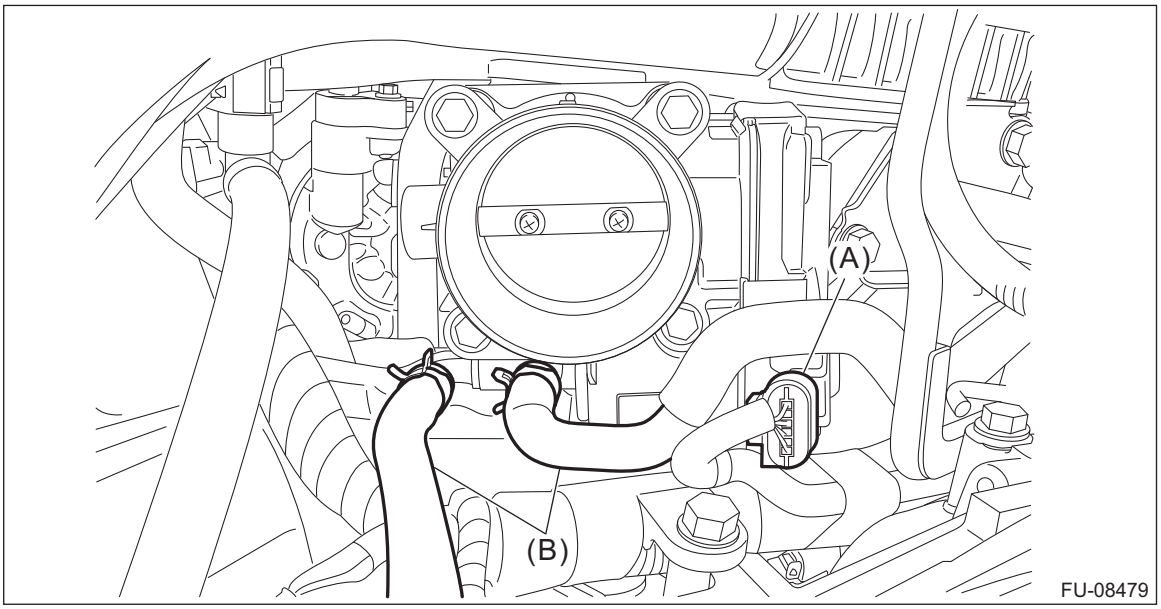
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for inspecting the waveform of each sensor.
TORX PLUS® bit 40IP	Used for removing and installing high-pressure fuel pump.
Mighty Vac	Used for inspecting the manifold absolute pressure and intake air temperature sensor.
DST-i	Used together with Subaru Select Monitor 4.

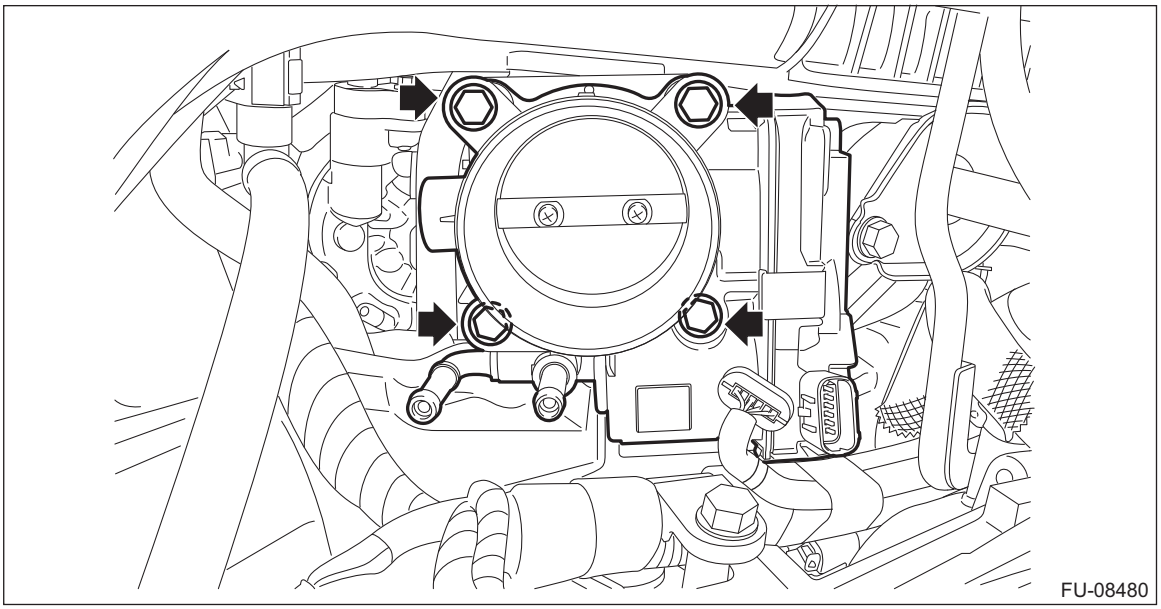
2. Throttle Body

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
6) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
7) Remove the intake duct No. 3. <Ref. to IN(w/o STI)-35, INTAKE DUCT NO. 3, REMOVAL, Intake Duct.>
8) Disconnect the connector (A) from the throttle position sensor, and disconnect the preheater hose (B) from the throttle body.



9) Remove the throttle body from the intake manifold.



B: INSTALLATION

Install in the reverse order of removal.

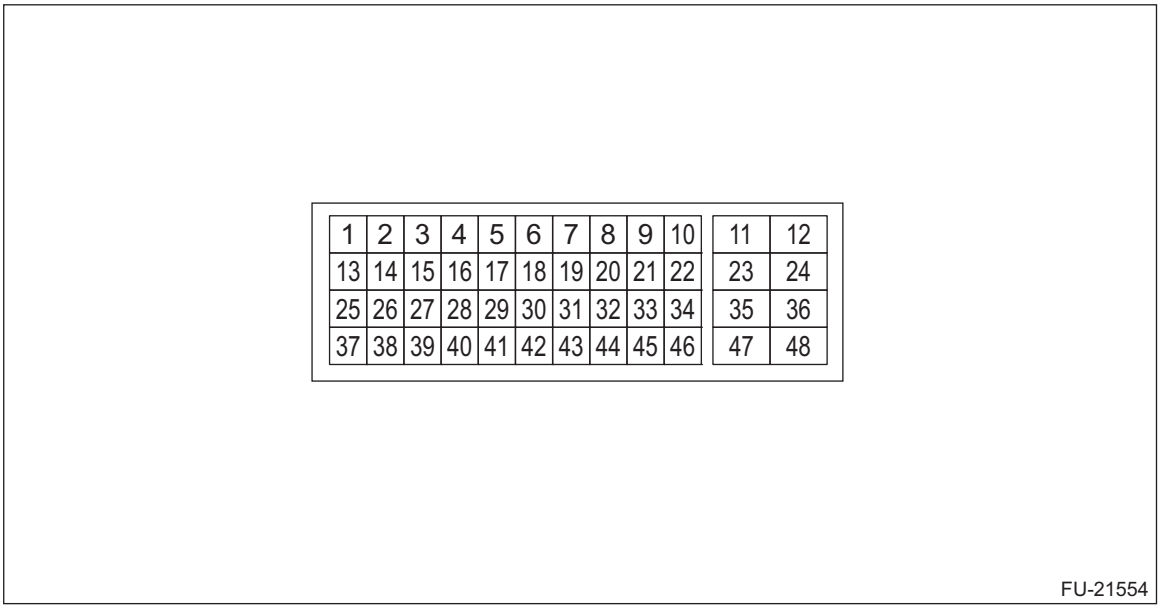
NOTE:
Use a new gasket.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

C: INSPECTION

1. THROTTLE SENSOR (METHOD WITH CIRCUIT TESTER)

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the engine control module (ECM). <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
3) Install the ST between the ECM and bulkhead harness and the engine wiring harness. <Ref. to EN(w/o STI)(diag)-7, CAUTION, General Description.>
ST 18460AA030 CHECK BOARD
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) After warming-up the engine, turn the ignition switch to OFF.
6) Turn the ignition switch to ON. (Engine OFF)
7) Measure the voltage between ECM connector terminals using ST.



(A) To the check board connector (ECM connector)

Throttle sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	17 (+) and 30 (–)	Approx. 0.7 V
	Depressed (full opened)		Approx. 3.9 V
Sub	Not depressed (full closed)	29 (+) and 30 (–)	Approx. 4.4 V
	Depressed (full opened)		Approx. 1.1 V

8) After inspection, install the related parts in the reverse order of removal.

2. THROTTLE SENSOR (METHOD WITH SUBARU SELECT MONITOR)

1) After warming-up the engine, turn the ignition switch to OFF.
2) Turn the ignition switch to ON. (Engine OFF)
3) Read the throttle opening angle signal and voltage of throttle sensor using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>

NOTE:
Due to the specification of the Subaru Select Monitor, value read from the throttle opening angle signal is highlighted and displayed as the voltage readings of sub throttle sensor.

Throttle sensor	Throttle opening angle signal	Standard
Main	0.0%	Approx. 0.7 V
	100.0%	Approx. 3.9 V
Sub	0.0%	Approx. 1.1 V
	100.0%	Approx. 4.4 V

3. OTHER INSPECTIONS

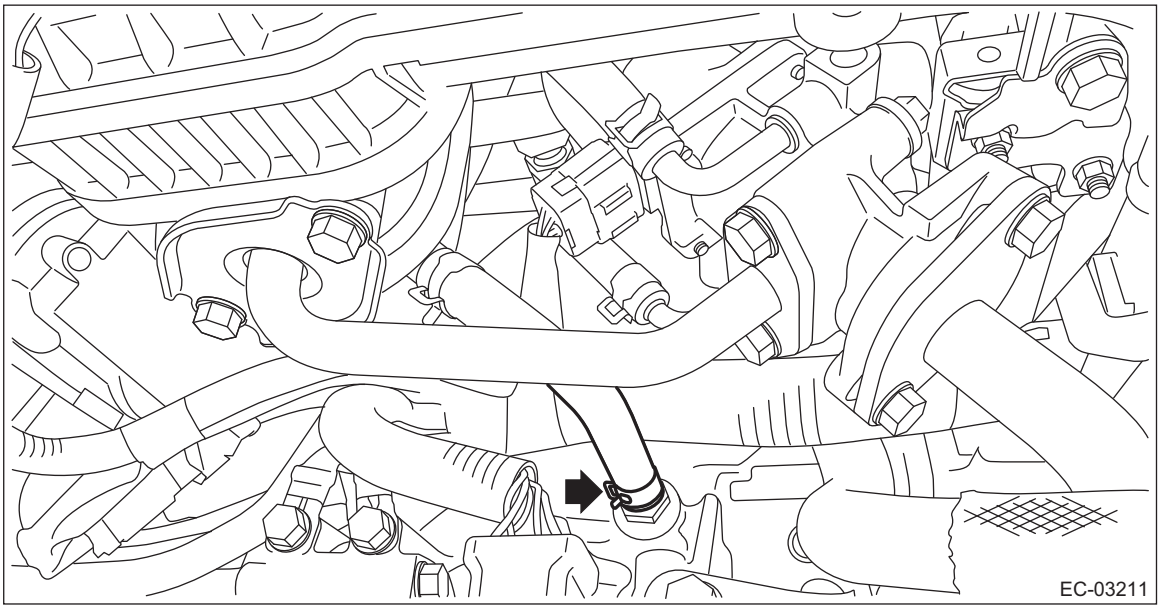
1) Check that the throttle body has no deformation, cracks or other damages.
2) Check that the preheater hose has no cracks, damage or loose part.

3. Intake Manifold

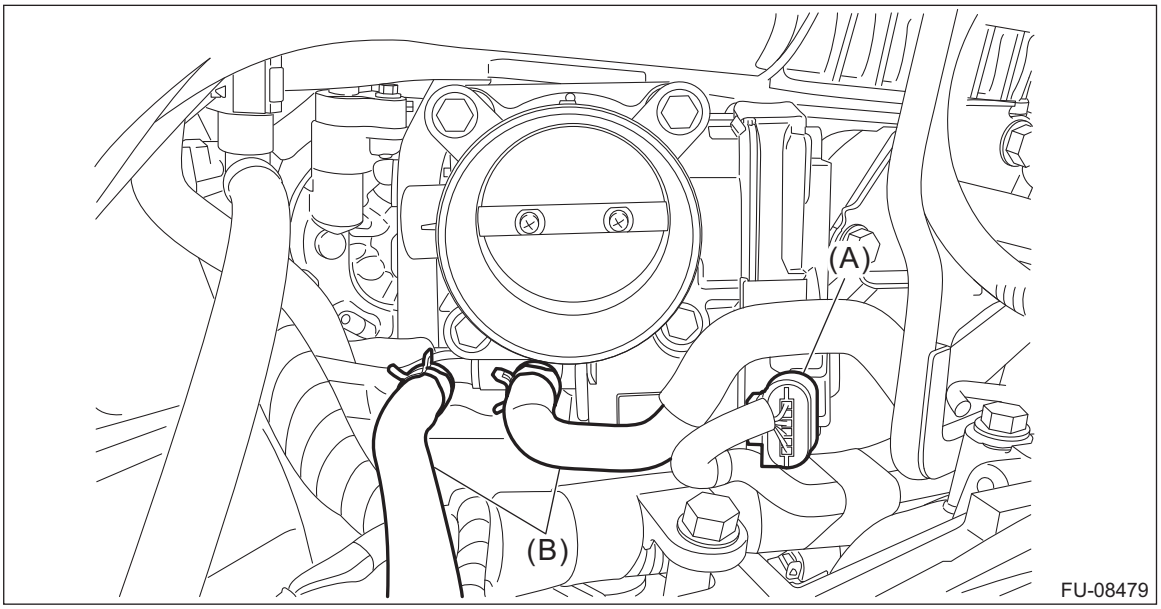
A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Open the fuel filler lid and remove the fuel filler cap.

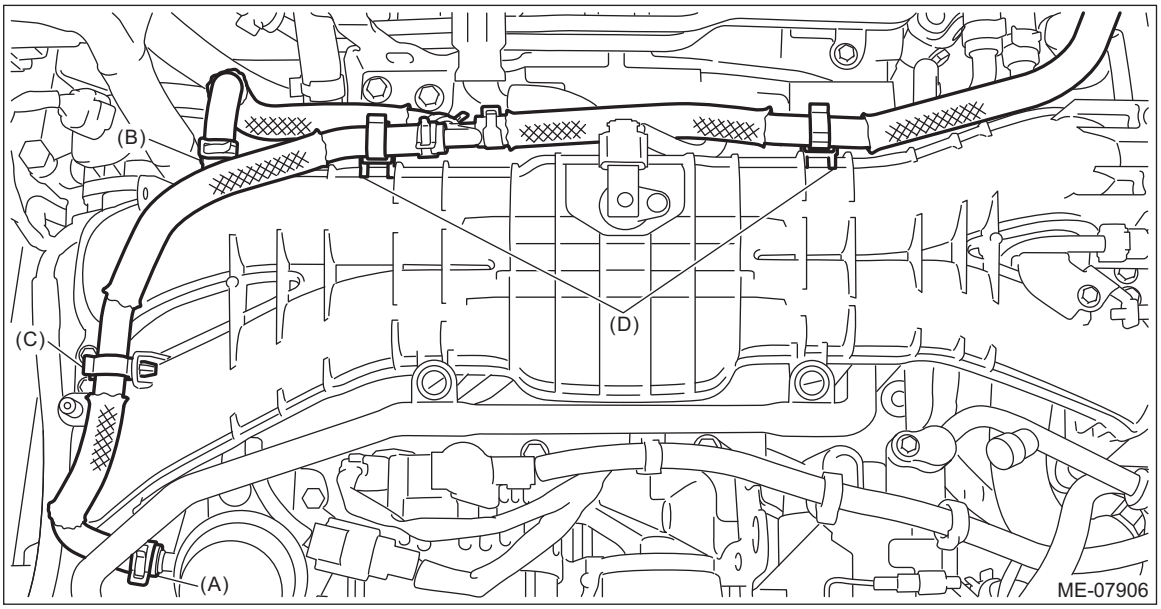
NOTE:
This operation is required to release the inner pressure of the fuel tank.
5) Lift up the vehicle.
6) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
7) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
8) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
9) Remove the intake duct No. 2. <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
10) Remove the intake duct No. 3. <Ref. to IN(w/o STI)-35, INTAKE DUCT NO. 3, REMOVAL, Intake Duct.>
11) Disconnect the PCV hose from the PCV valve.



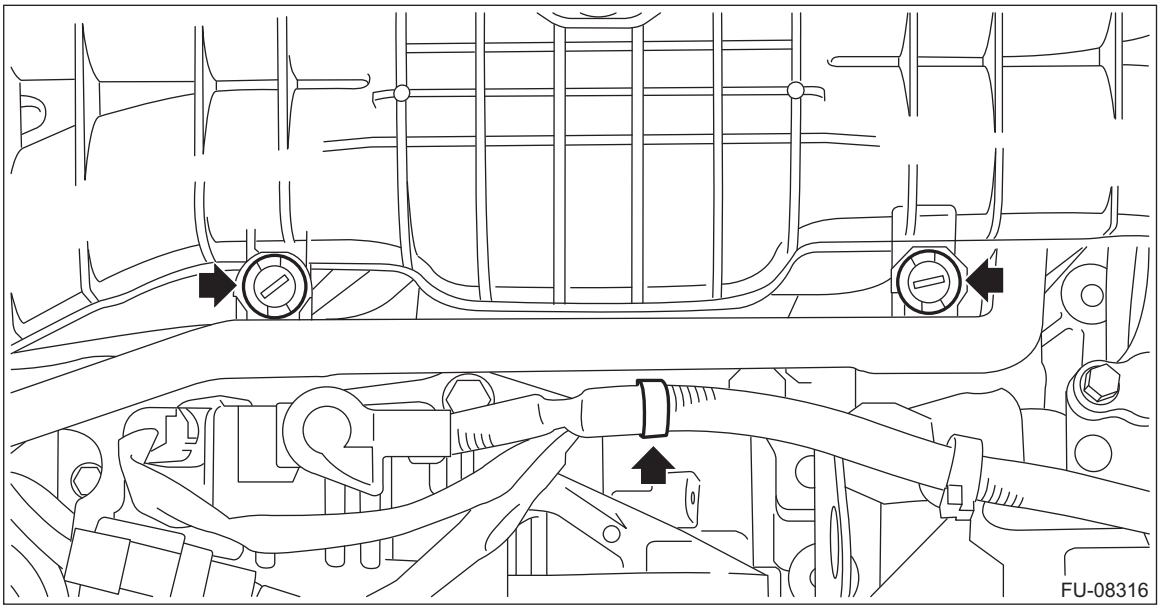
12) Disconnect the connector (A) from the throttle body, and disconnect the preheater hose (B) from the throttle body.



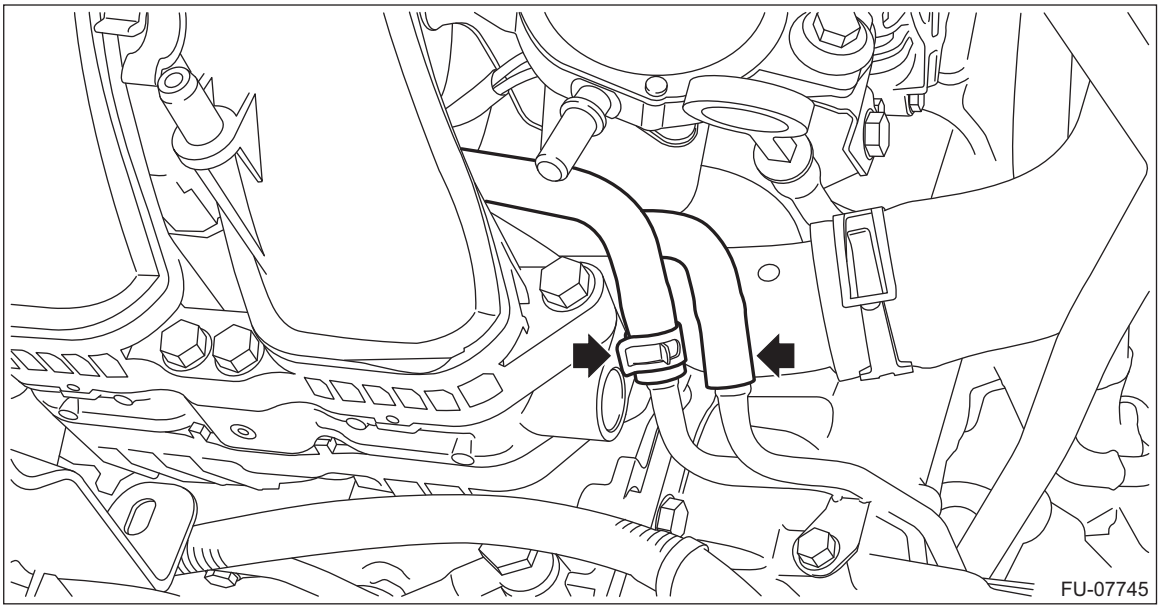
13) Disconnect sections (A) and (B) of the brake booster vacuum hose from the brake vacuum pump and intake manifold, and remove the brake booster vacuum hose from the clip (C).
14) Remove the brake booster vacuum hose from the clip (D), and place the brake booster vacuum hose aside so that it does not interfere with the work.



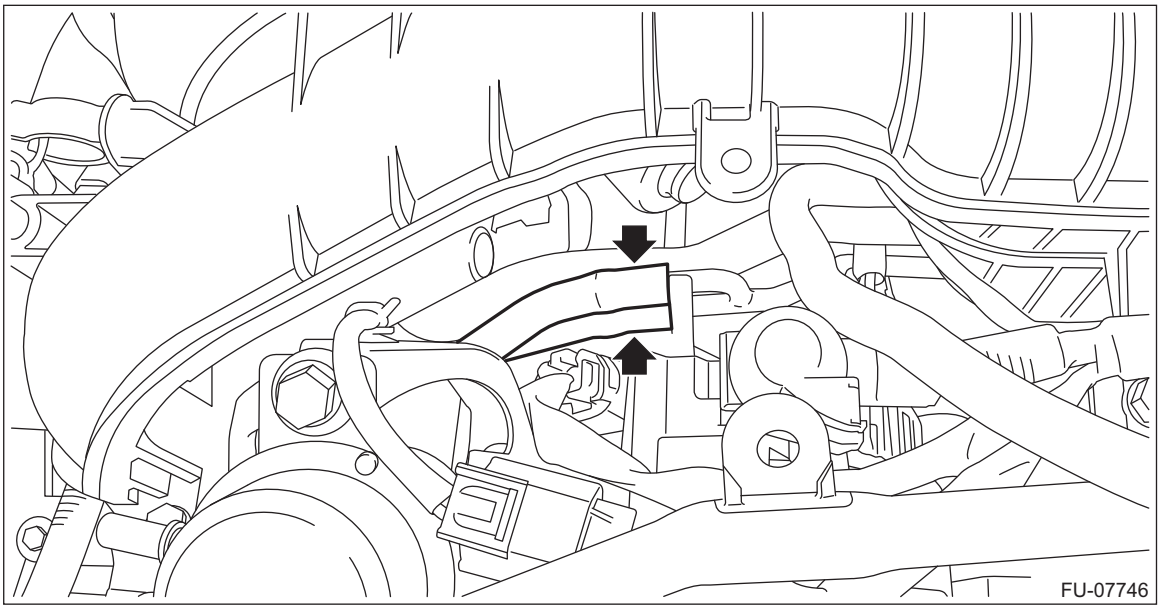
15) Remove the clips securing the PCV pipe and generator cord to the intake manifold.



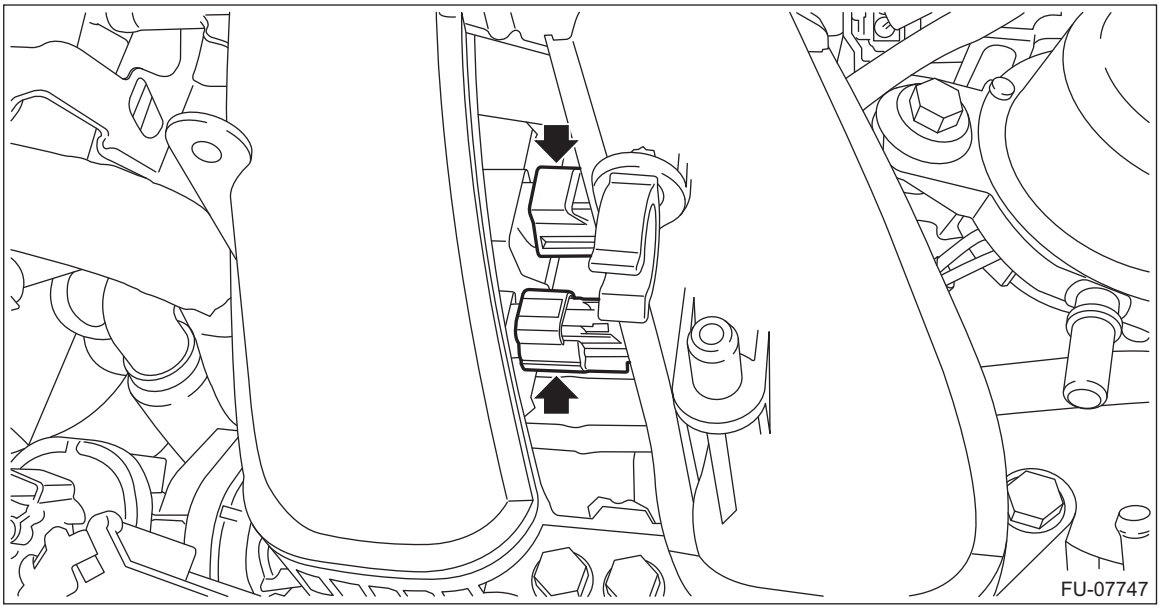
16) Disconnect the vacuum control hose and vacuum hose from the vacuum pipe assembly.



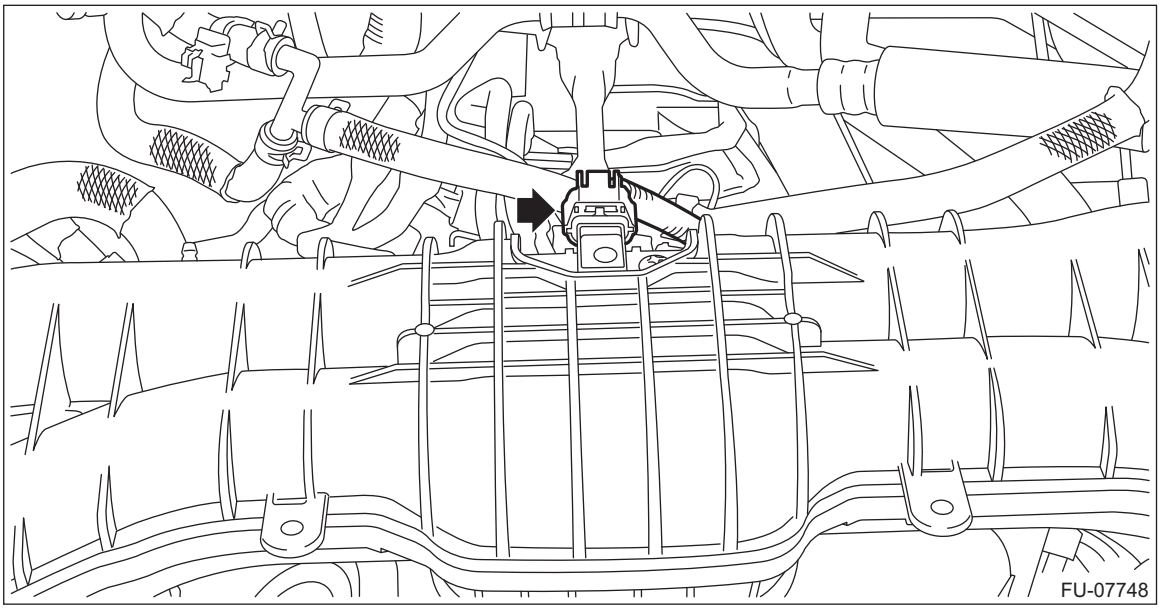
17) Disconnect two vacuum hoses from the canister pipe.



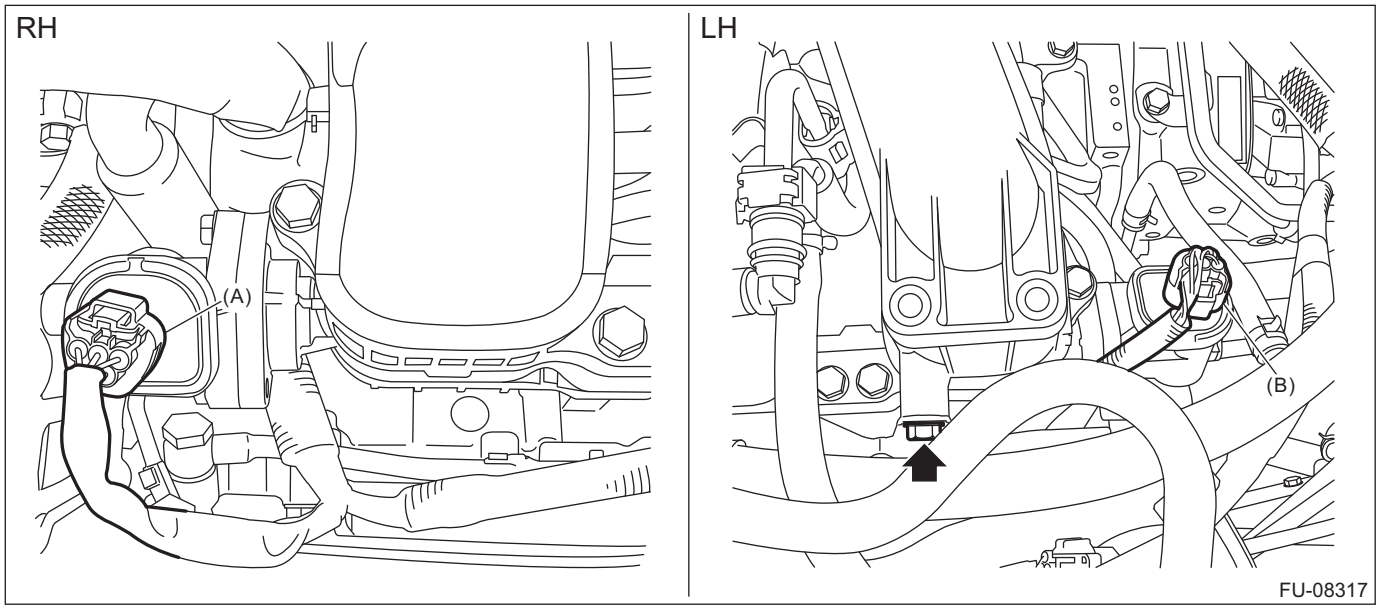
18) Disconnect the connector from the purge control solenoid valve.



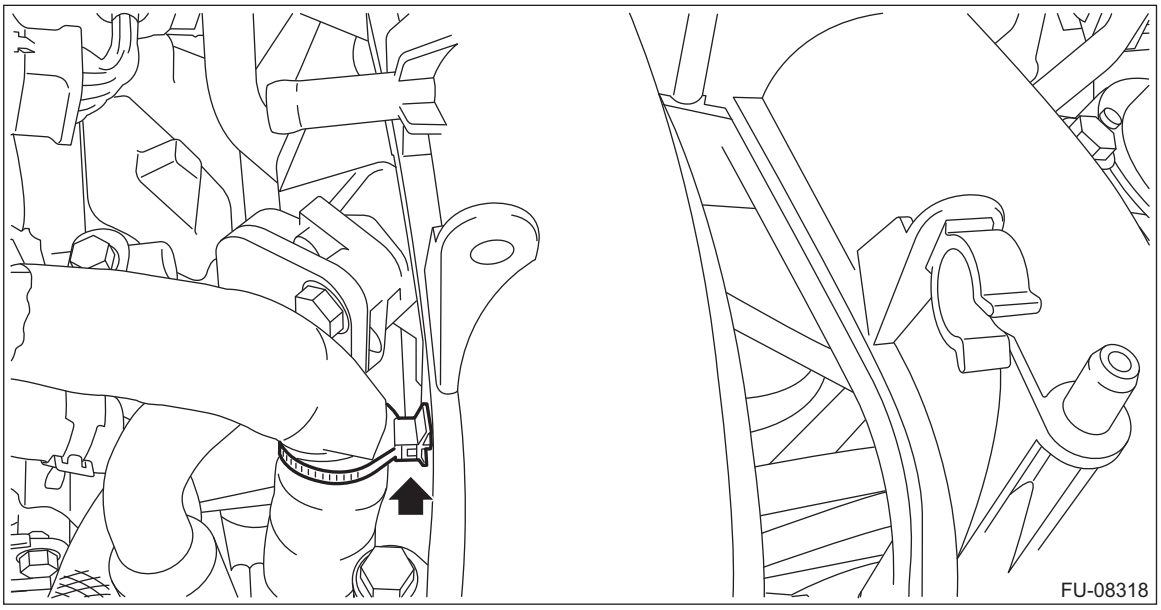
19) Disconnect the connector from the manifold absolute pressure and intake air temperature sensor.



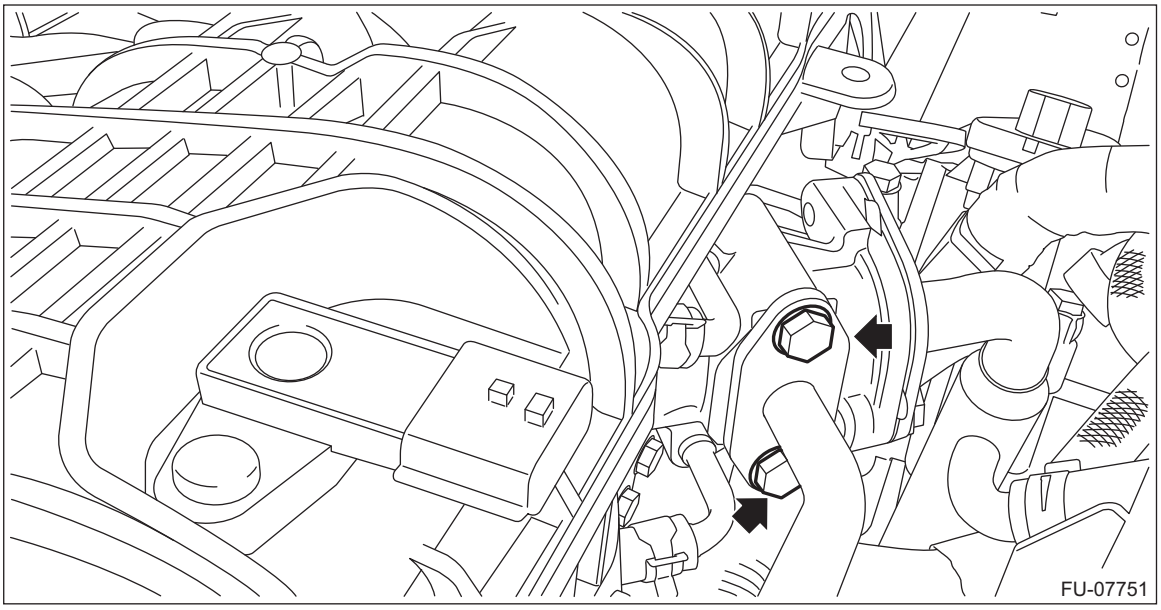
20) Disconnect the connector (A) from the tumble generator valve RH.
21) Disconnect the connector (B) from the tumble generator valve LH, and remove the bolt securing the fuel pipe protector to the intake manifold.



22) Remove the engine wiring harness clip from the intake manifold.



23) Remove the bolt securing the EGR pipe to the EGR valve.

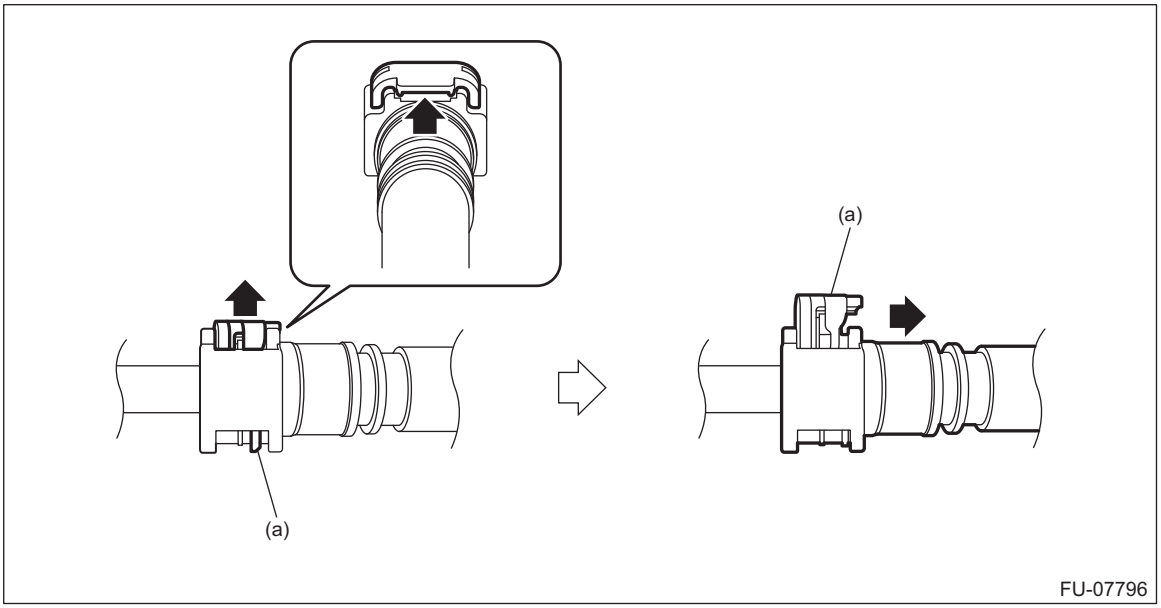


24) Disconnect the fuel delivery tube and evaporation hose.

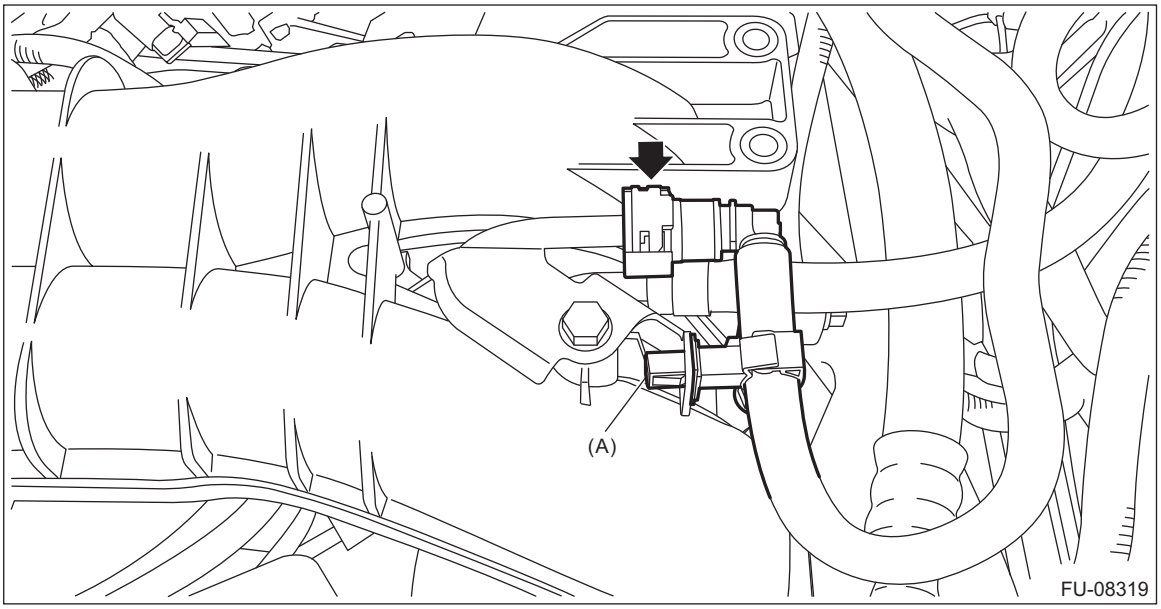
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube.

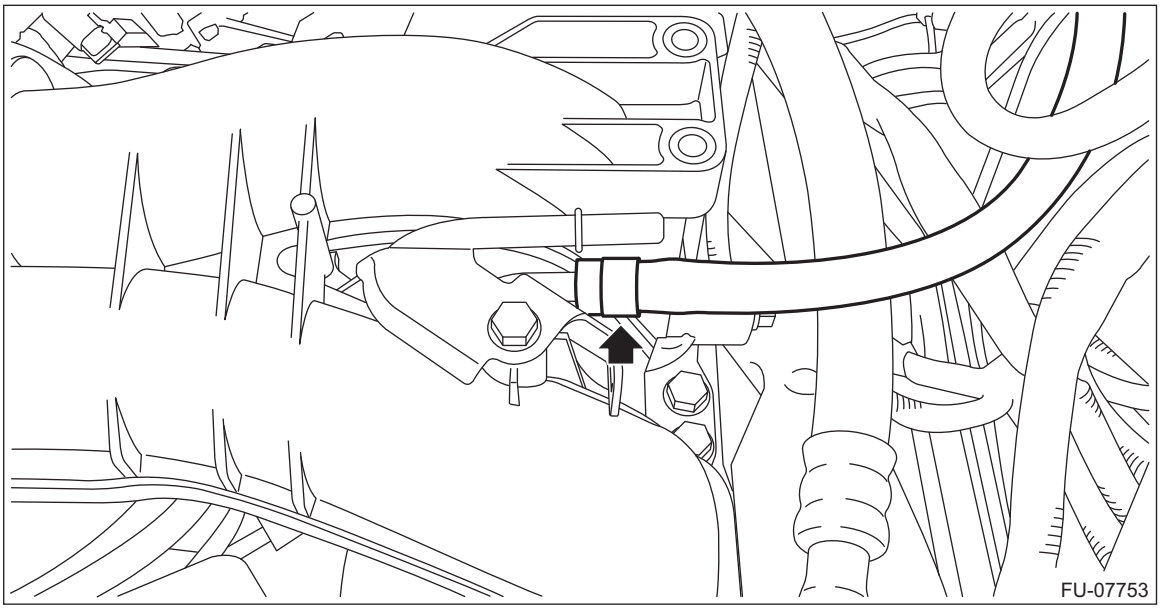
NOTE:
Disconnect the quick connector as shown in the figure.



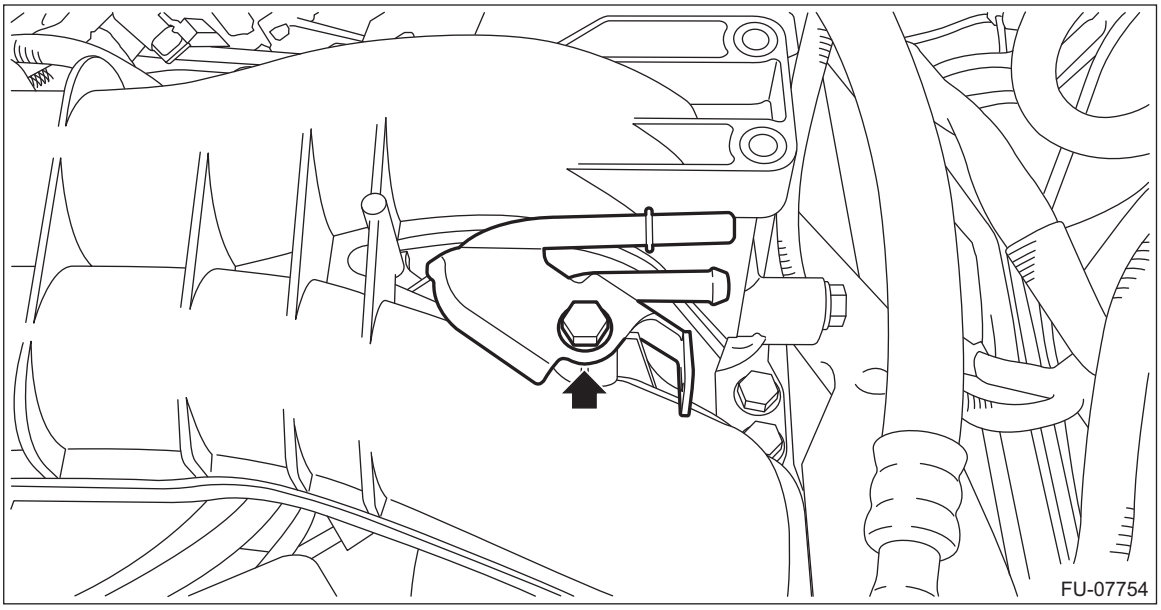
(a) Slider



(2) Disconnect the evaporation hose from the fuel pipe assembly.



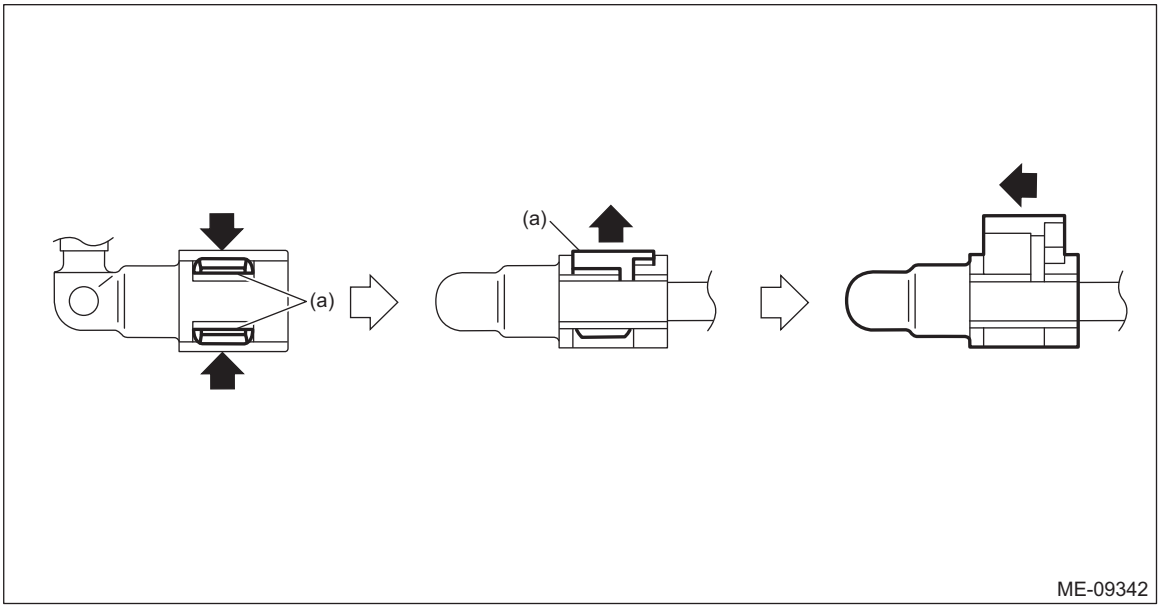
25) Remove the bolts securing the fuel pipe assembly to the intake manifold.



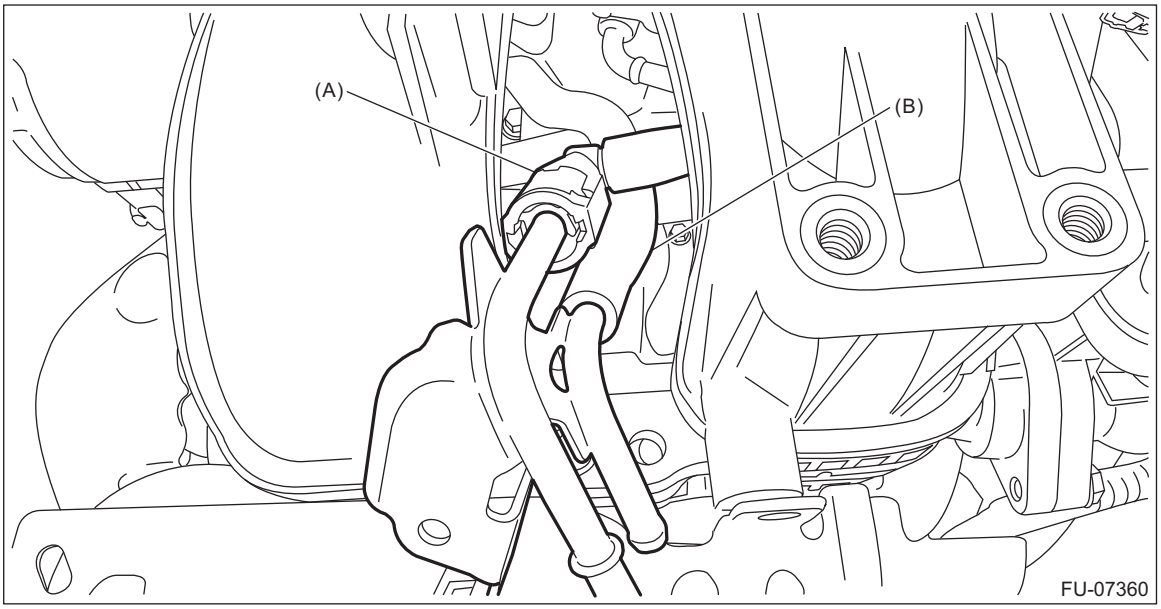
26) Disconnect the fuel delivery pipe (A) and vacuum hose (B), and remove the fuel pipe assembly.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

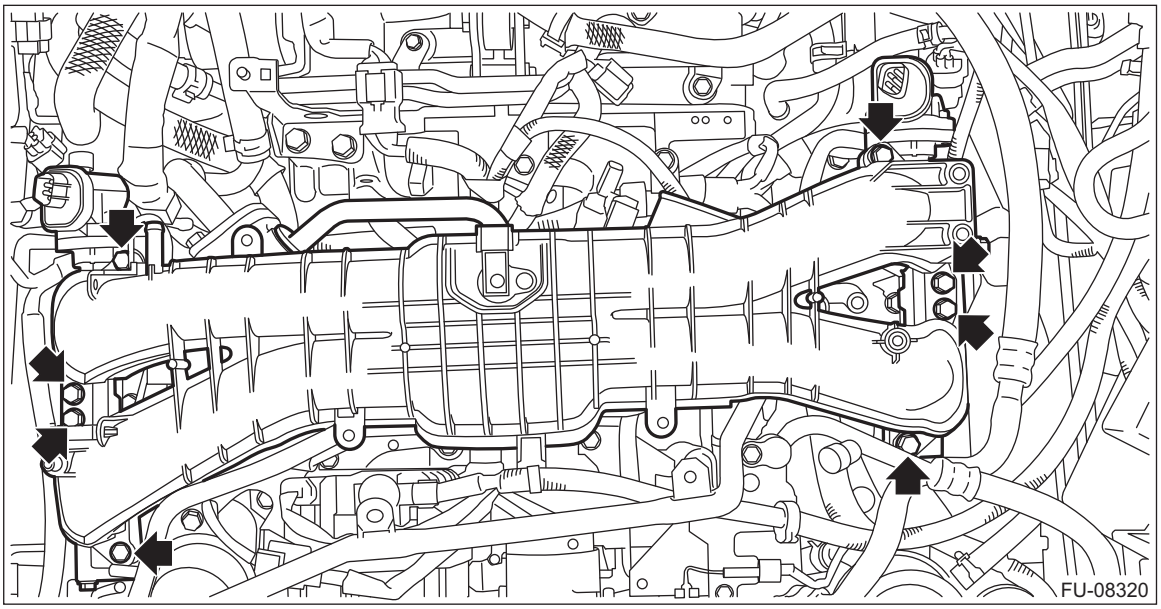
NOTE:
Disconnect the quick connector as shown in the figure.



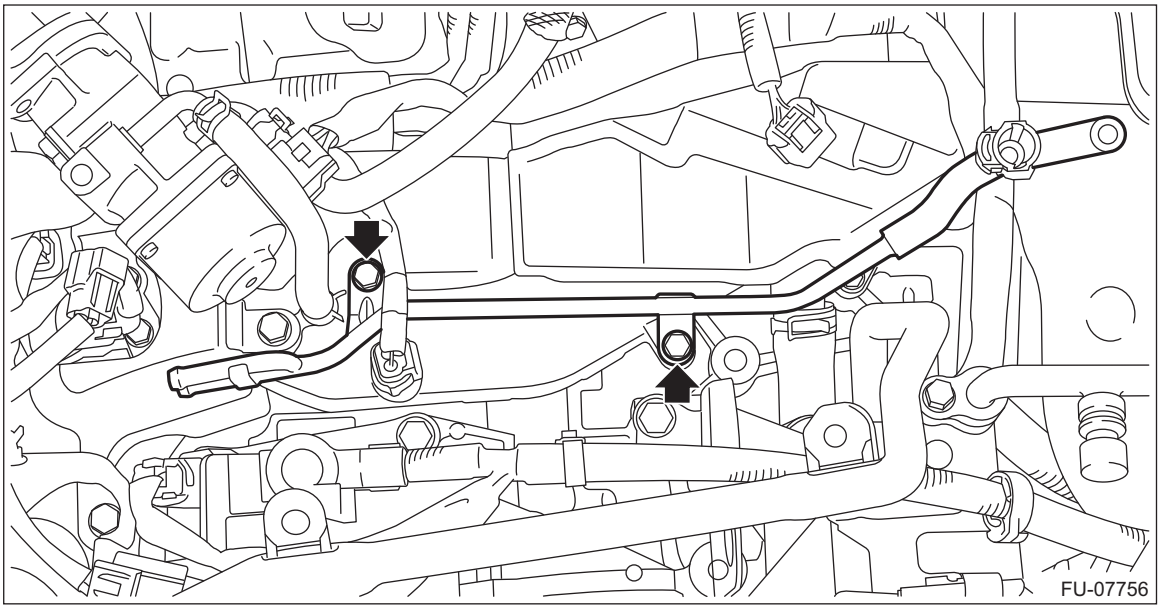
(a) Slider



27) Remove the intake manifold from the air intake adapter together with the tumble generator valve assembly.



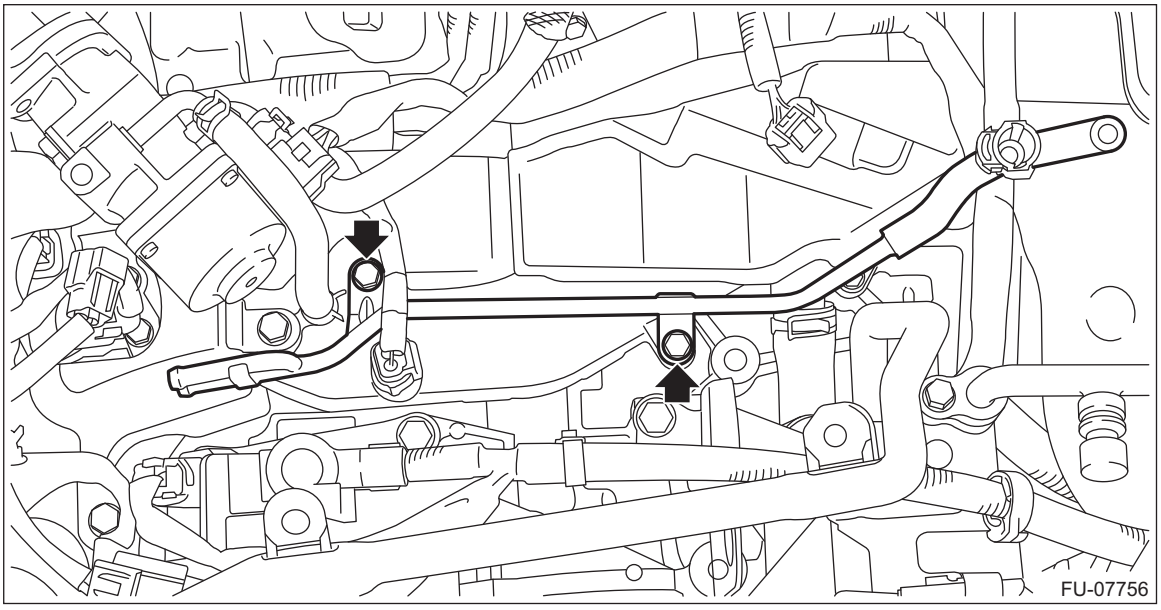
28) Remove the vacuum hose assembly from the water pipe assembly.



B: INSTALLATION

1) Install the vacuum hose assembly to the water pipe assembly.

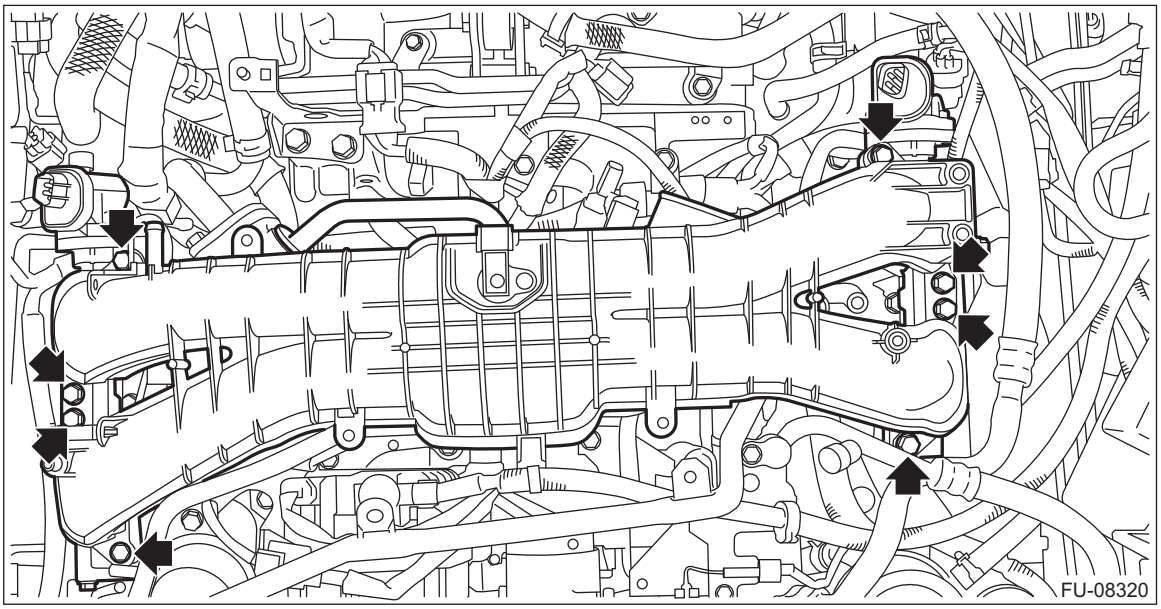
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



2) Install the intake manifold and tumble generator valve assembly to the air intake adapter.

NOTE:
Use a new gasket.

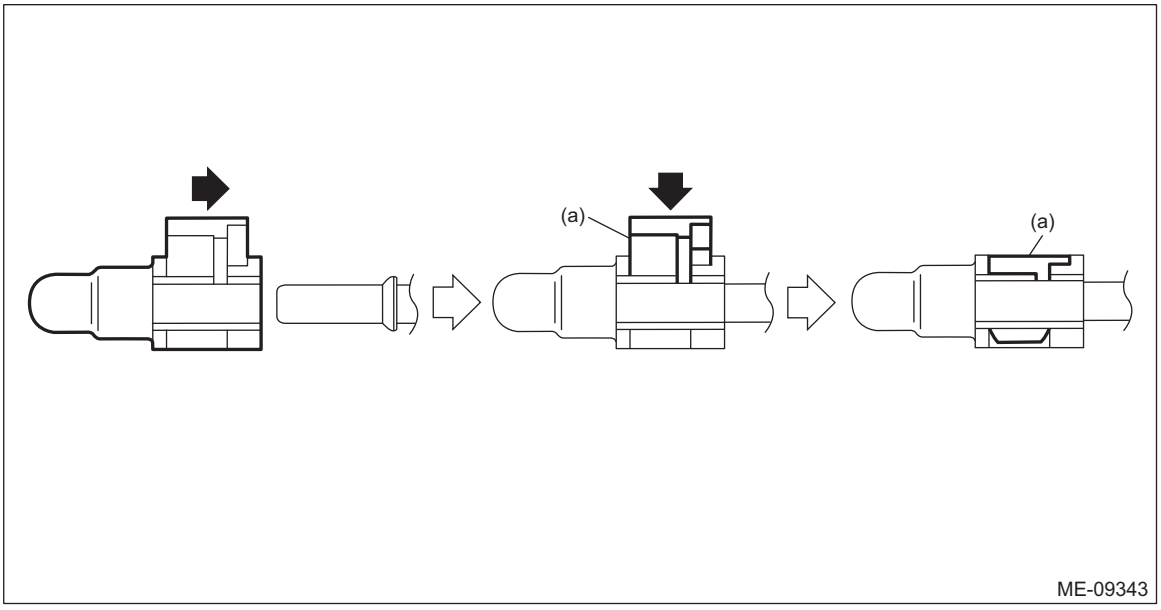
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



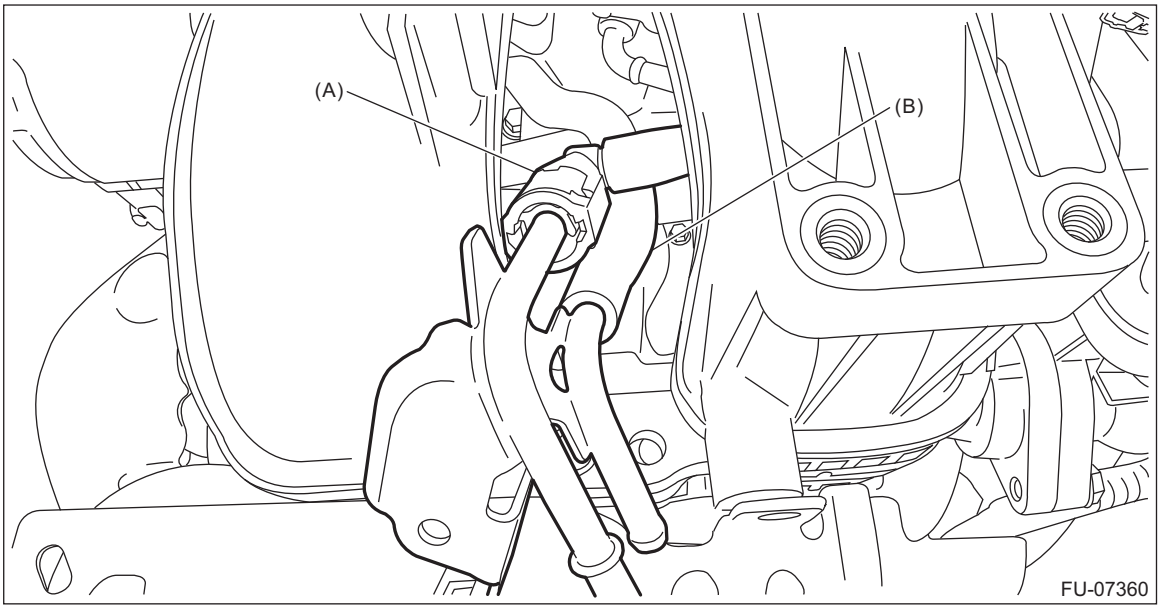
3) Connect the fuel delivery pipe (A) and vacuum hose (B) to the fuel pipe assembly.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.

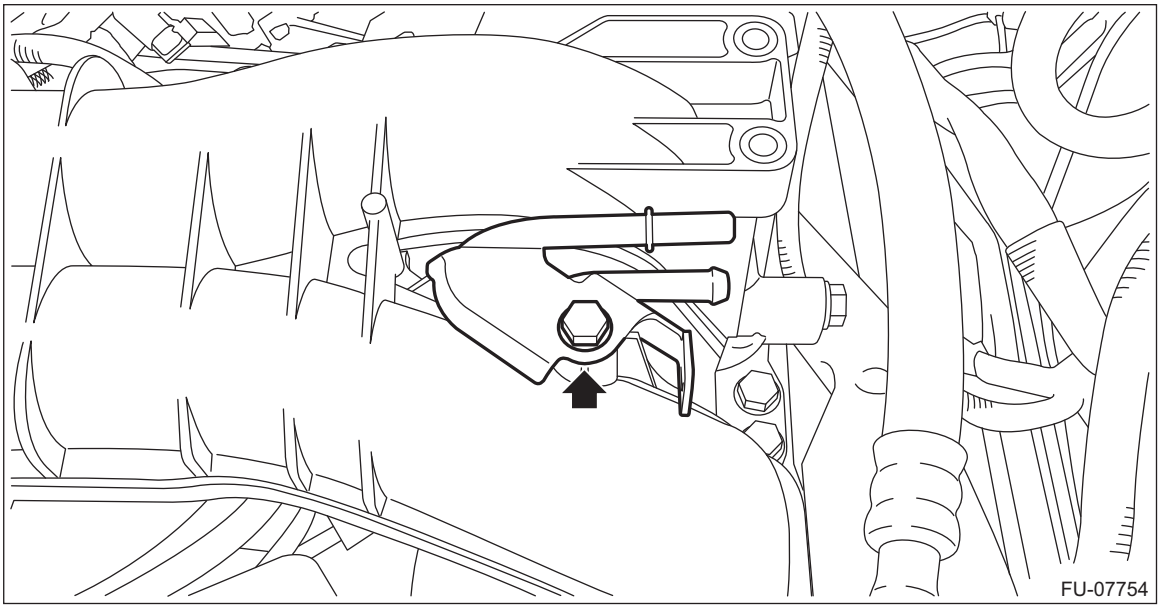


(a) Slider

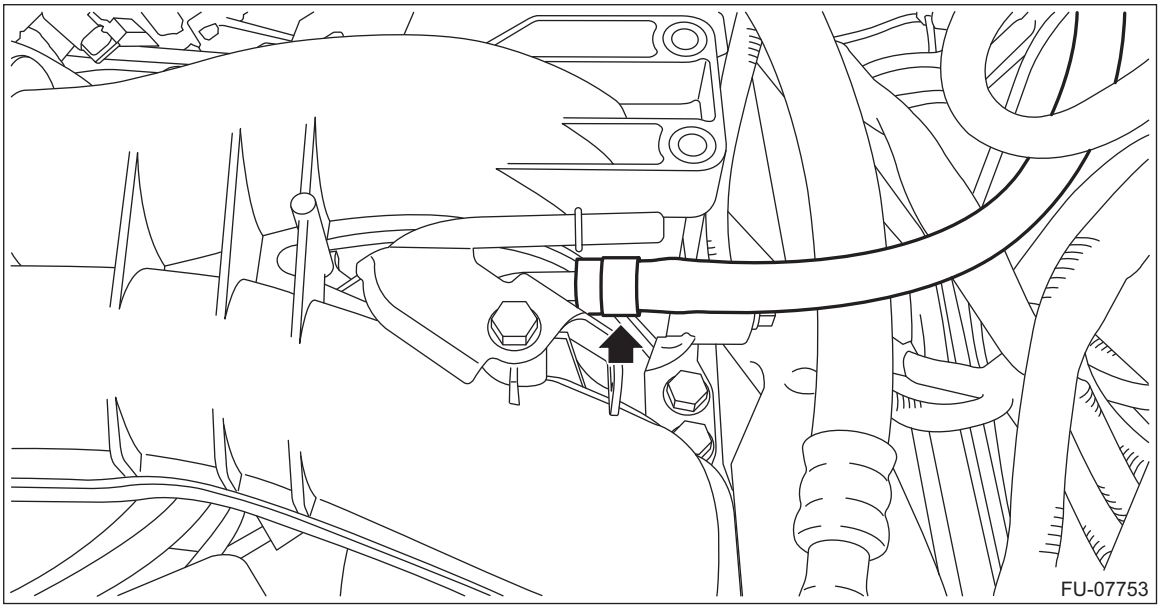


4) Install the fuel pipe assembly to the intake manifold.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



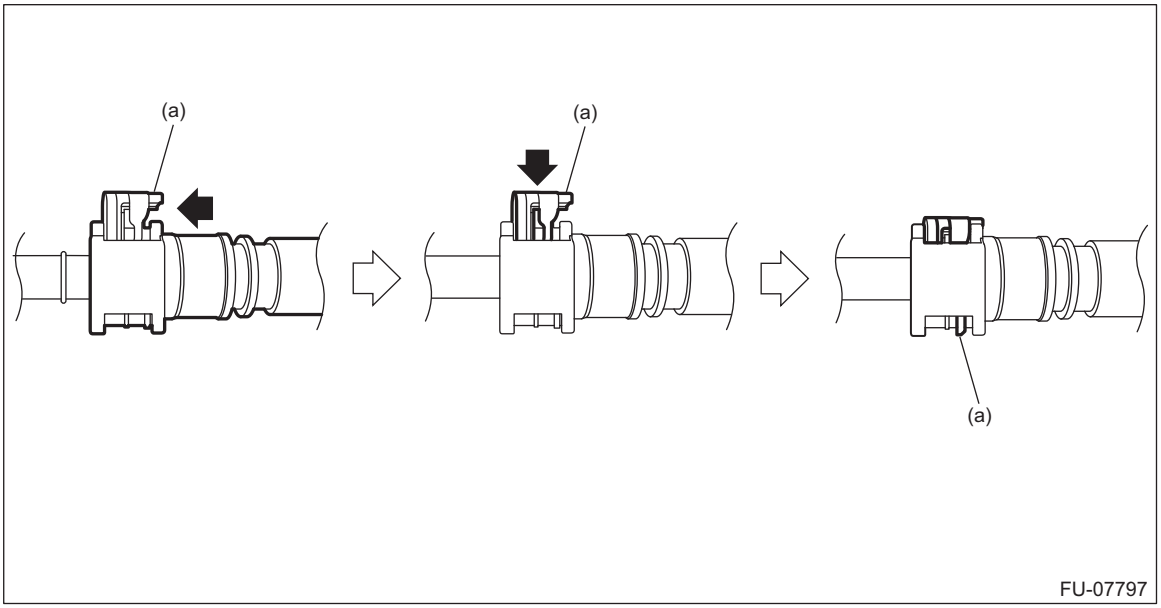
5) Connect the fuel delivery tube and evaporation hose.
(1) Connect the evaporation hose to fuel pipe assembly.



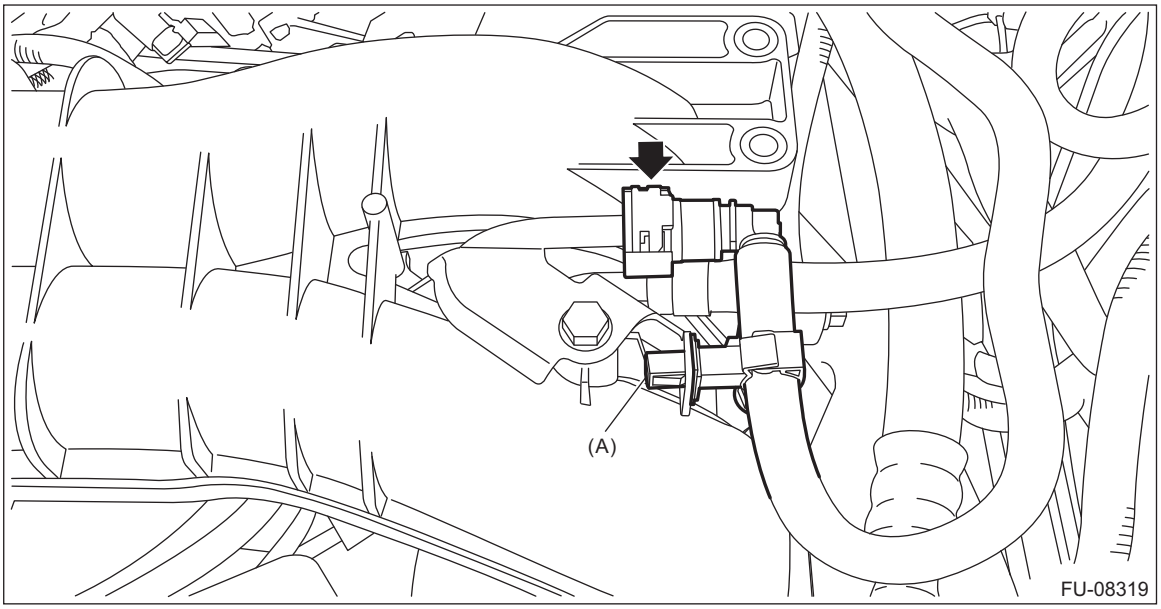
(2) Connect the connector on the fuel delivery tube to the fuel pipe assembly, and secure the fuel delivery tube using clip (A).

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.

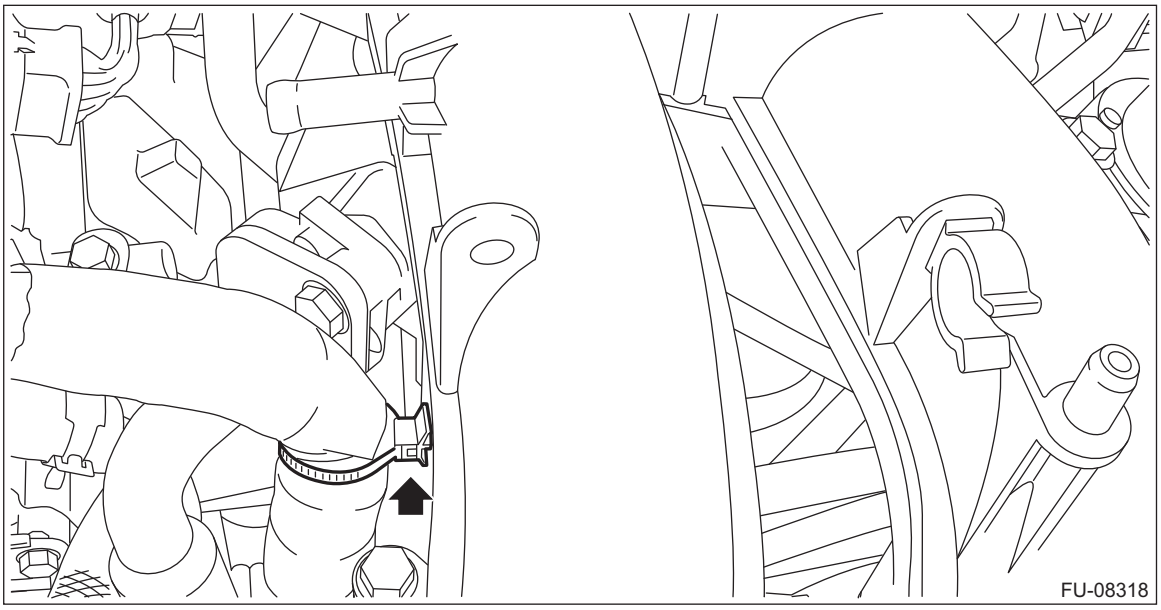


(a) Slider



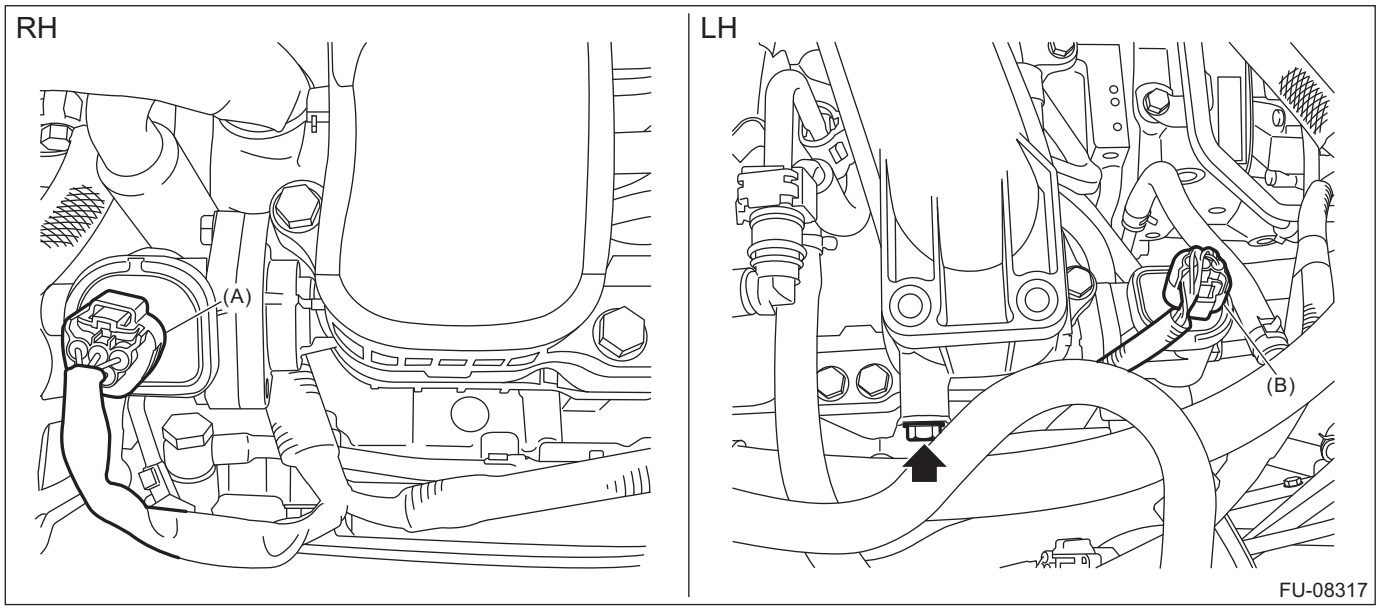
6) Install the EGR pipe. <Ref. to EC(w/o STI)-34, INSTALLATION, EGR Pipe.>

7) Secure the engine wiring harness to the intake manifold using clip.

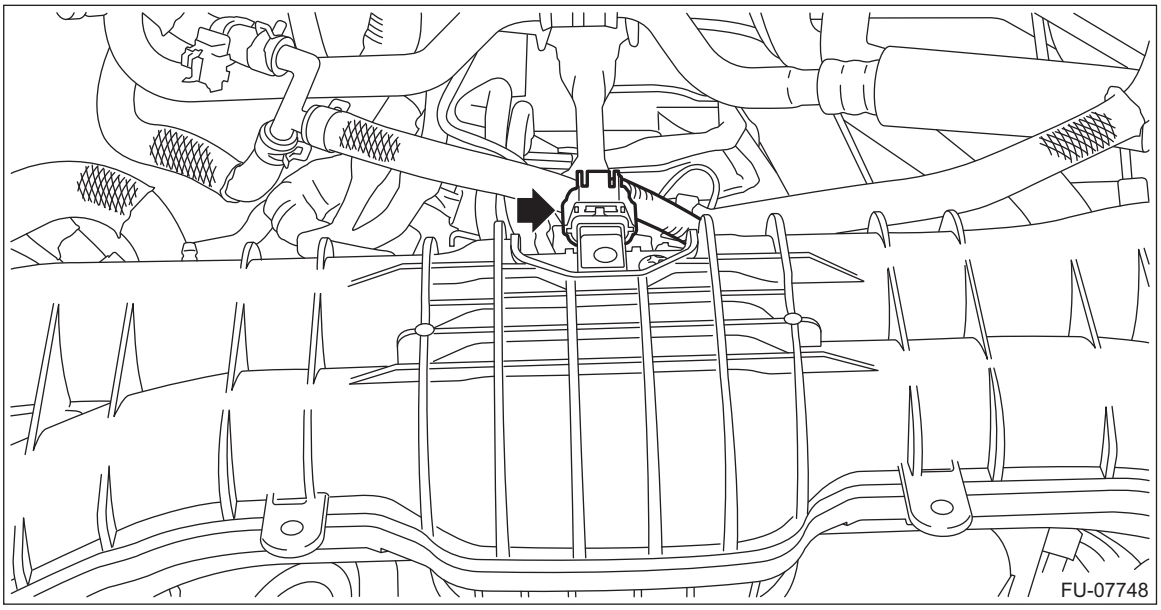


8) Connect the connector (A) to the tumble generator valve RH.
9) Connect the connector (B) to the tumble generator valve LH, and secure the fuel pipe protector to the intake manifold.

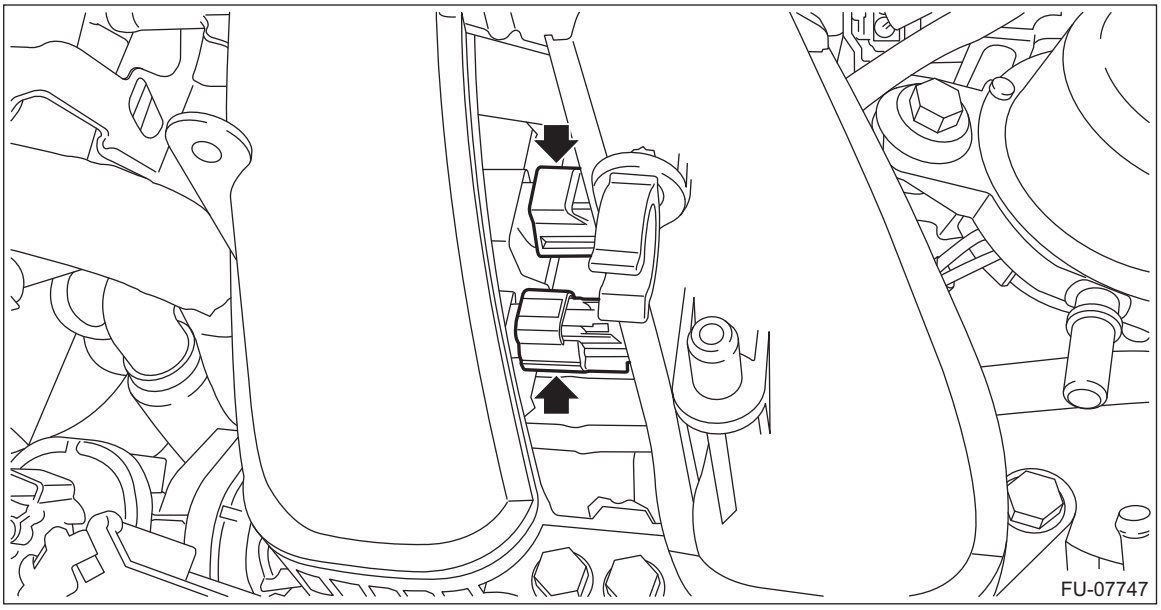
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



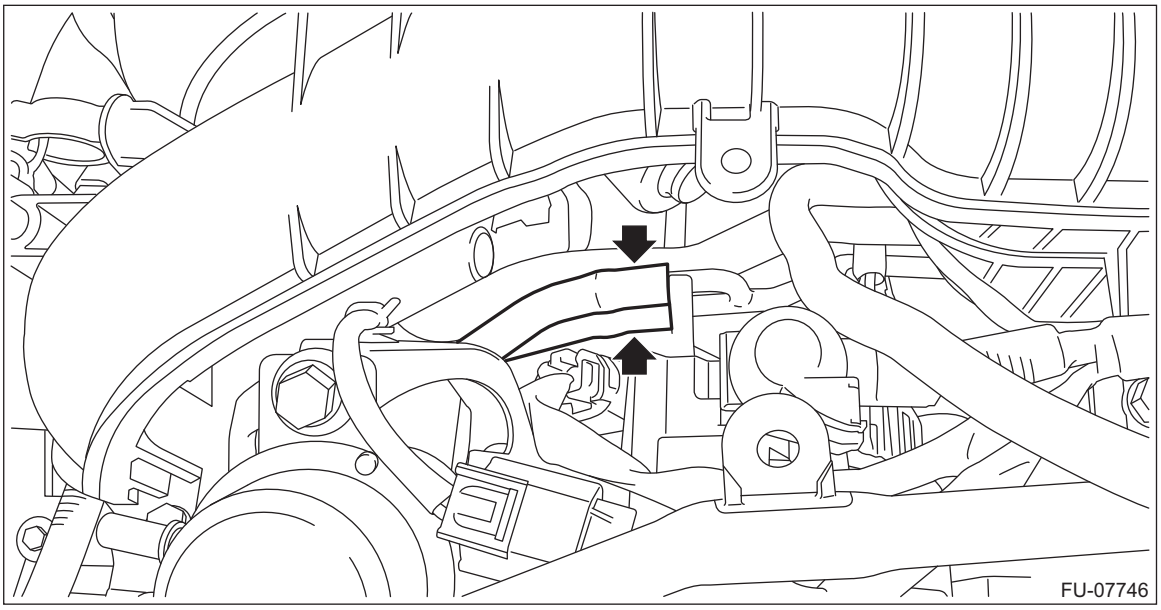
10) Connect connectors to the manifold absolute pressure & intake air temperature sensor.



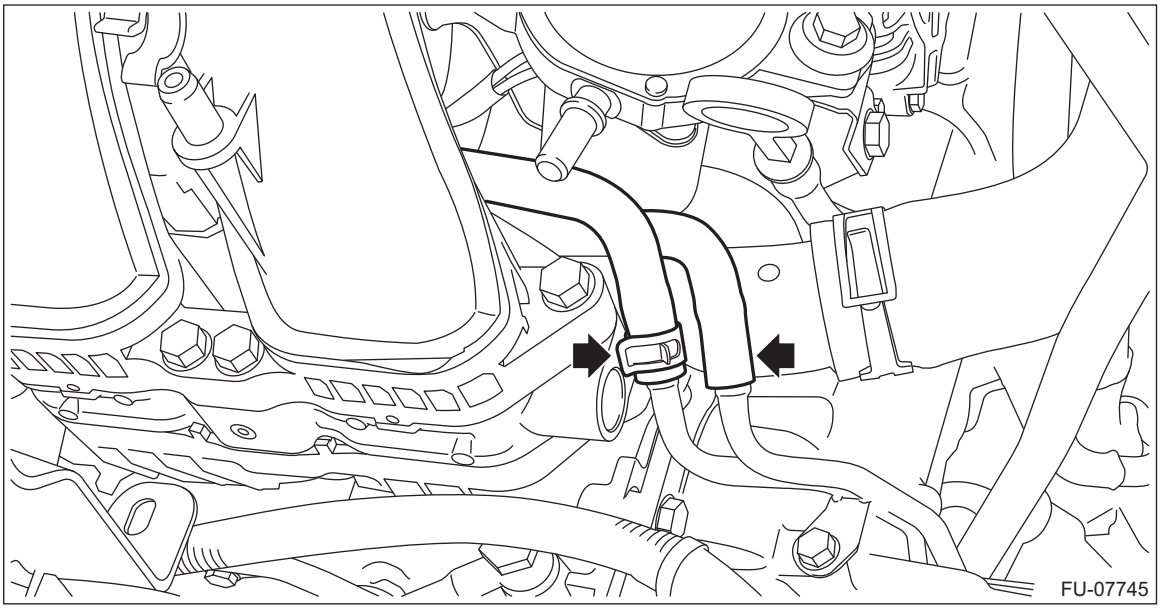
11) Connect the connector to the purge control solenoid valve.



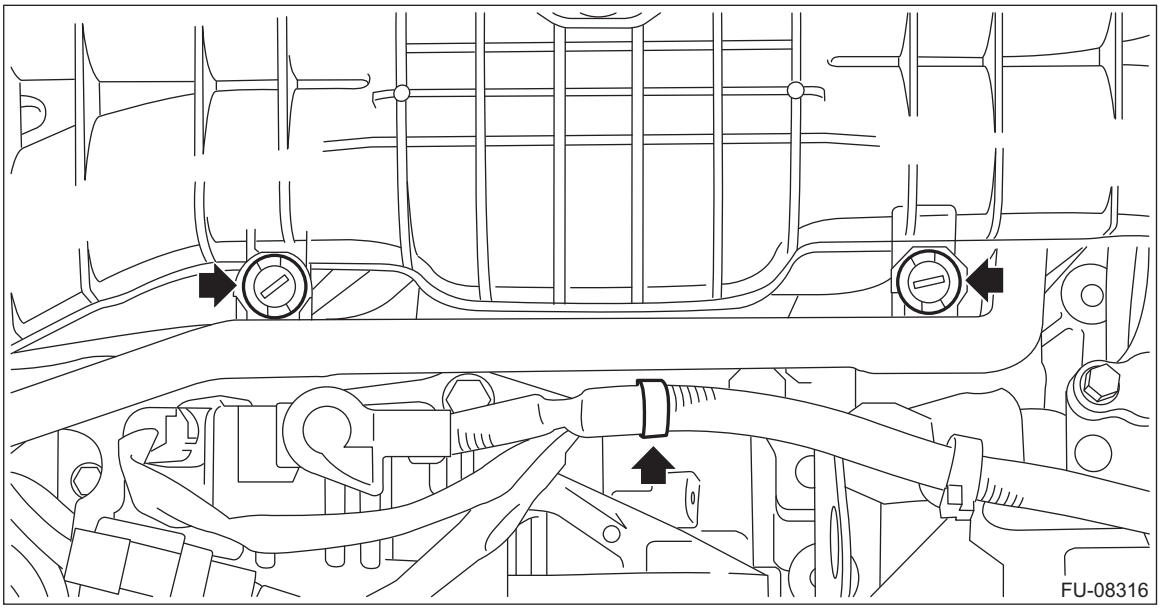
12) Connect the vacuum hose to the canister pipe.



13) Connect the vacuum control hose and vacuum hose to the vacuum pipe assembly.



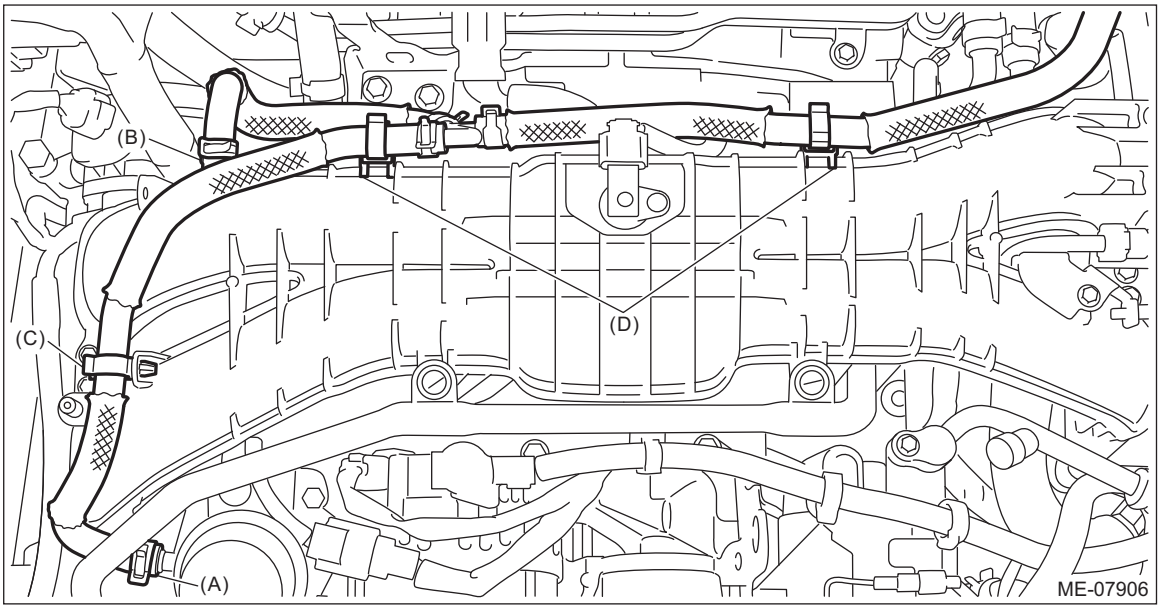
14) Secure the PCV pipe and generator cord to the intake manifold using the clip.



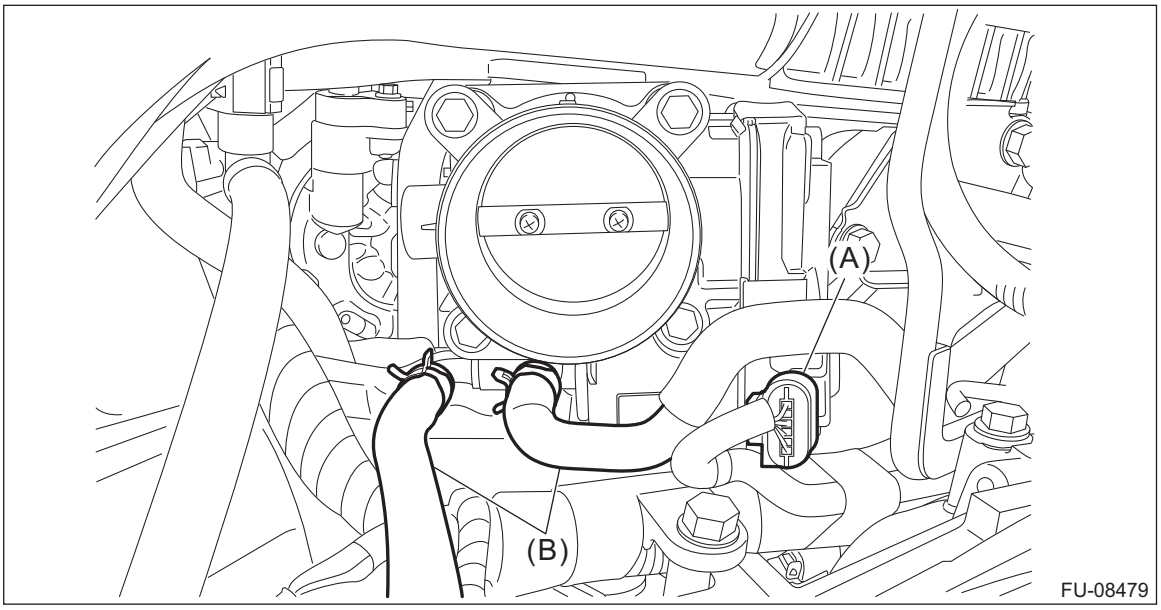
15) Install the brake booster vacuum hose to the clip (D).

NOTE:
If the clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.

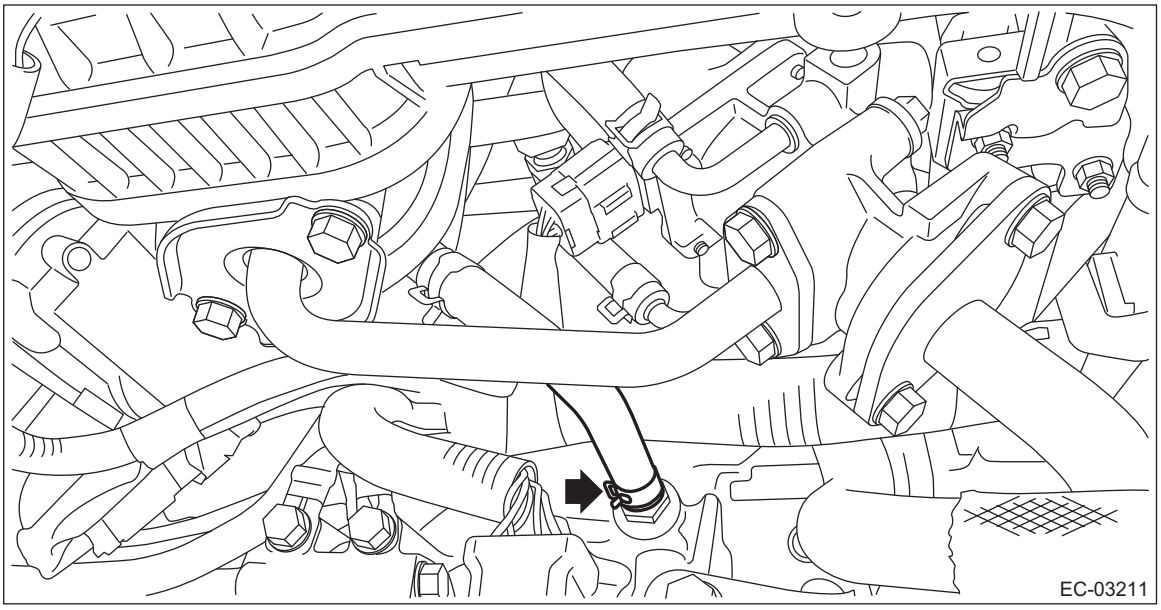
16) Connect sections (A) and (B) of the brake booster vacuum hose to the brake vacuum pump and intake manifold, and install the brake booster vacuum hose to the clip (C).



17) Connect the preheater hose (B) to the throttle body, and connect the connector (A) to the throttle body.



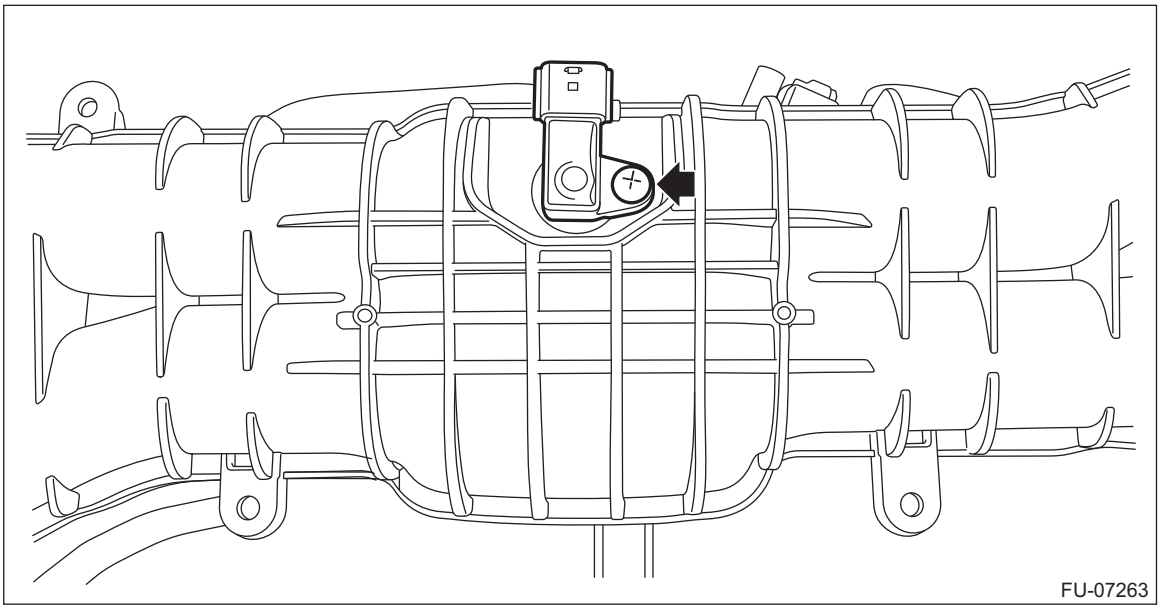
18) Connect the PCV hose to the PCV valve.



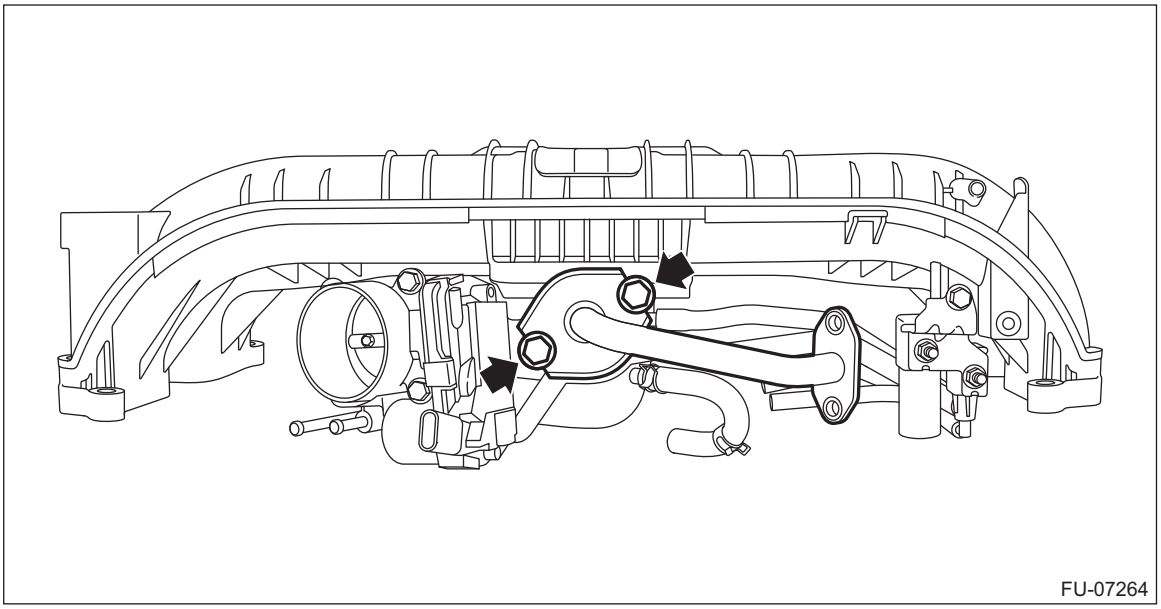
19) Install the intake duct No. 3. <Ref. to IN(w/o STI)-45, INTAKE DUCT NO. 3, INSTALLATION, Intake Duct.>
20) Install the intake duct No. 2. <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
21) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
22) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
23) Lower the vehicle.
24) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
25) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
26) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

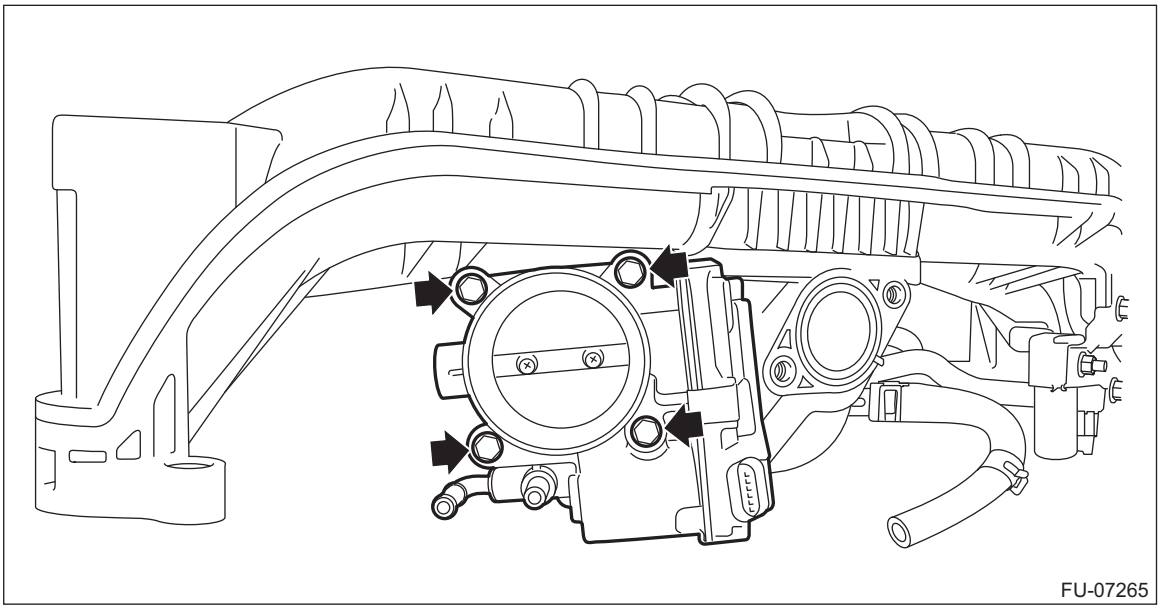
1) Remove the manifold absolute pressure & intake air temperature sensor from the intake manifold.



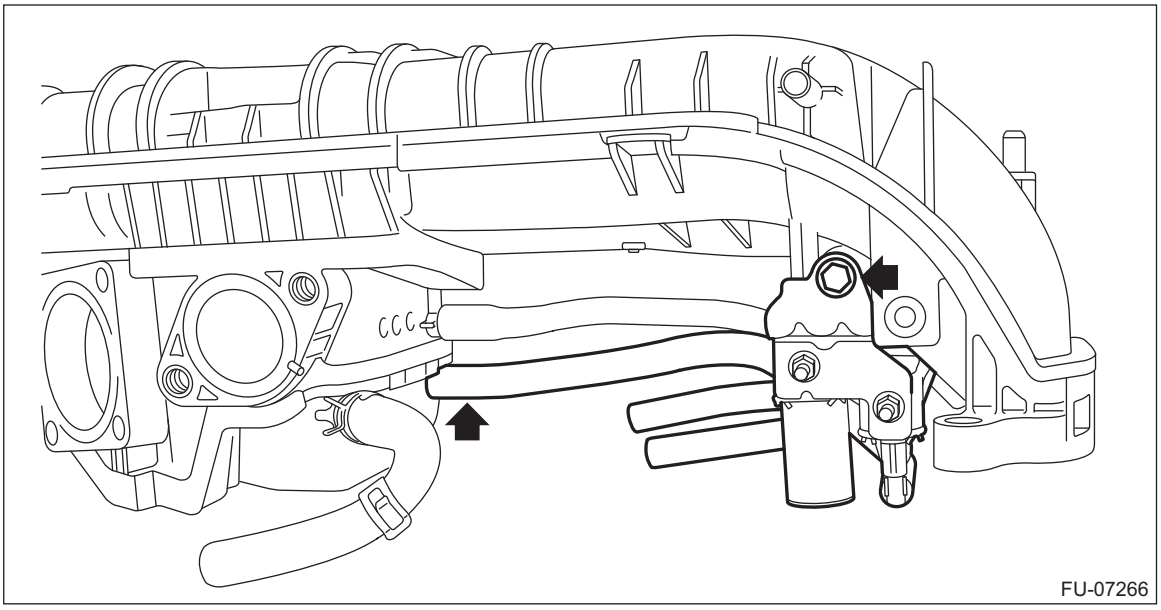
2) Remove the EGR pipe from intake manifold.



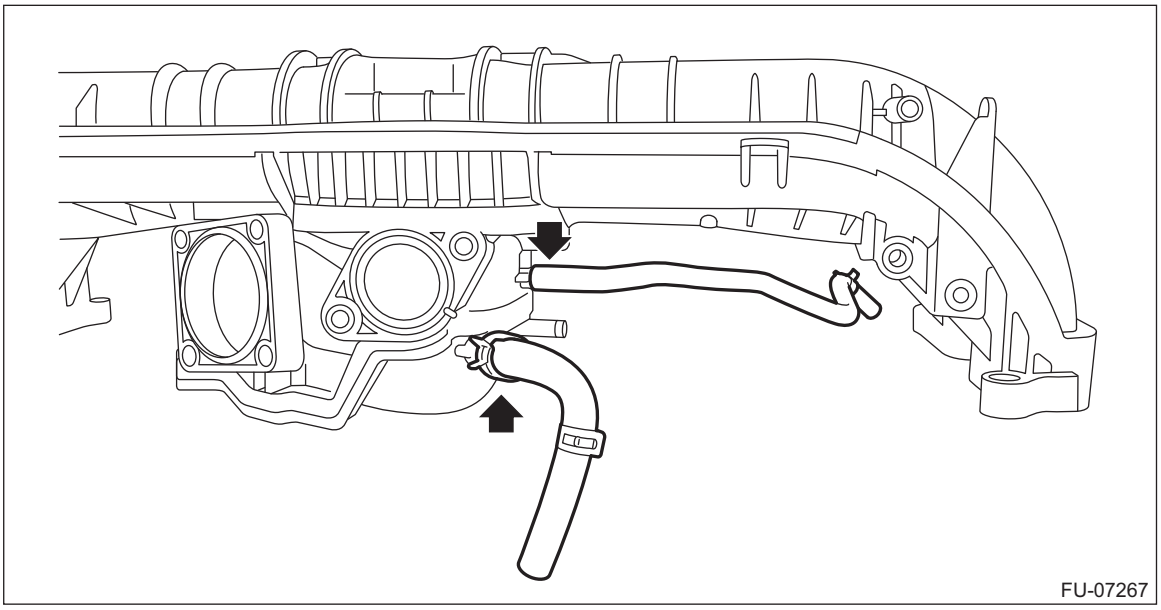
3) Remove the throttle body from the intake manifold.



4) Disconnect the vacuum hose from the intake manifold, and remove the purge control solenoid valve.

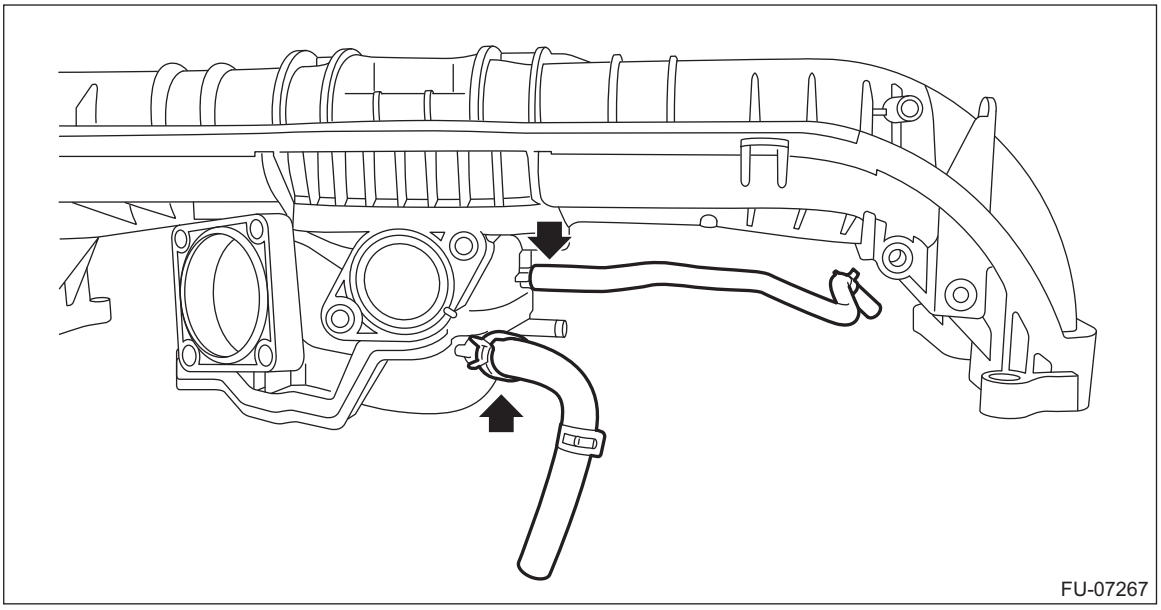


5) Disconnect the PCV hose and vacuum control hose from the intake manifold.



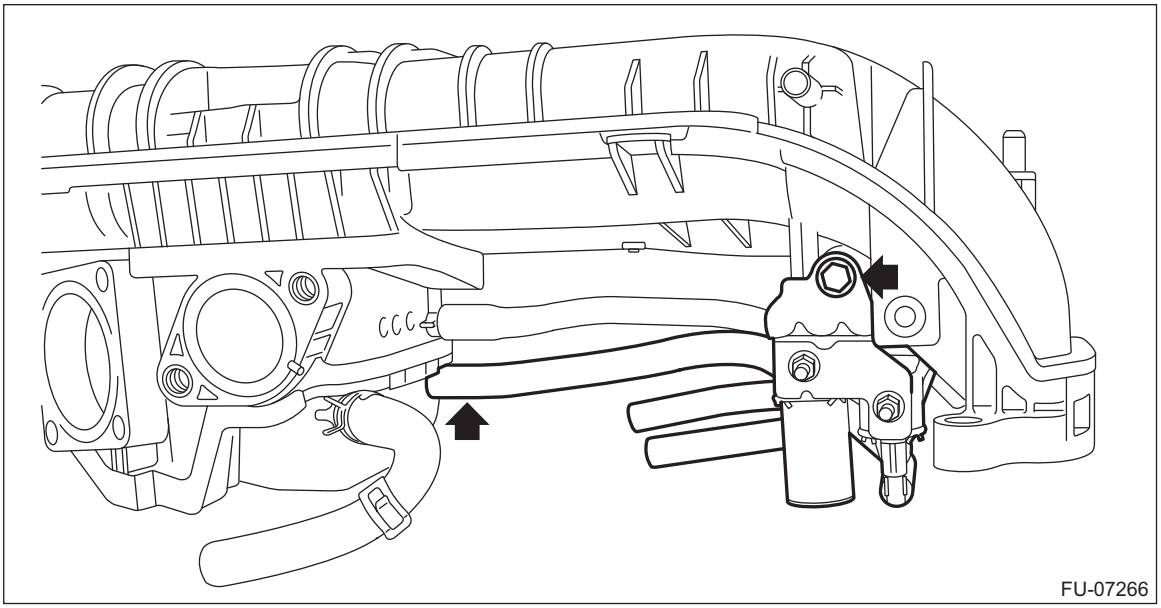
D: ASSEMBLY

1) Connect the PCV hose and vacuum control hose to intake manifold.



2) Connect the vacuum hose to the intake manifold, and install the purge control solenoid valve.

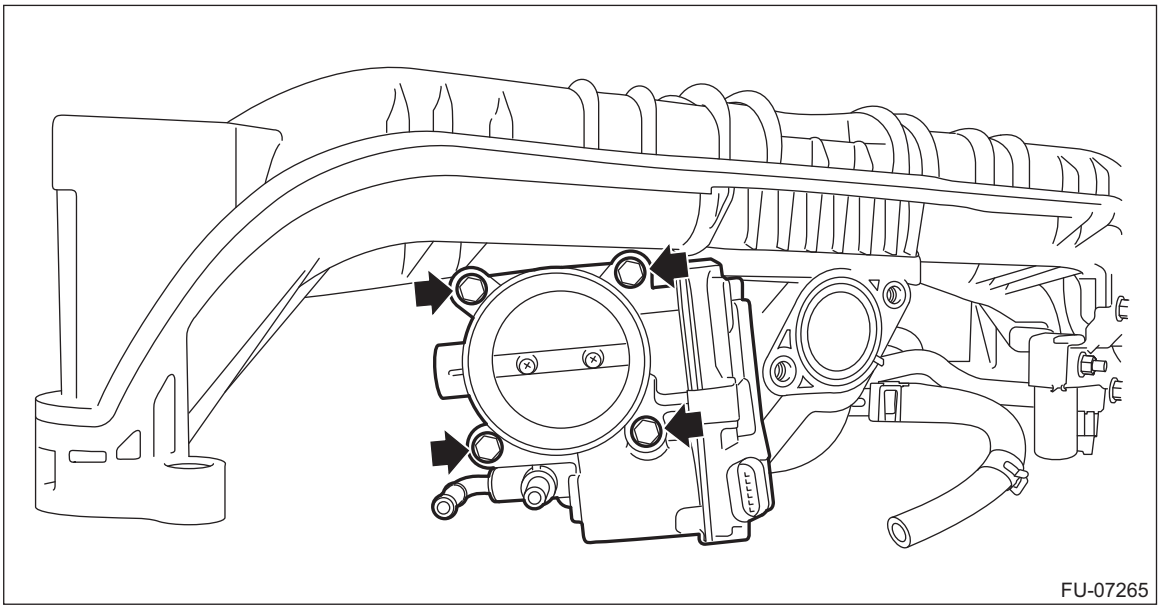
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



3) Install the throttle body to the intake manifold.

NOTE:
Use a new gasket.

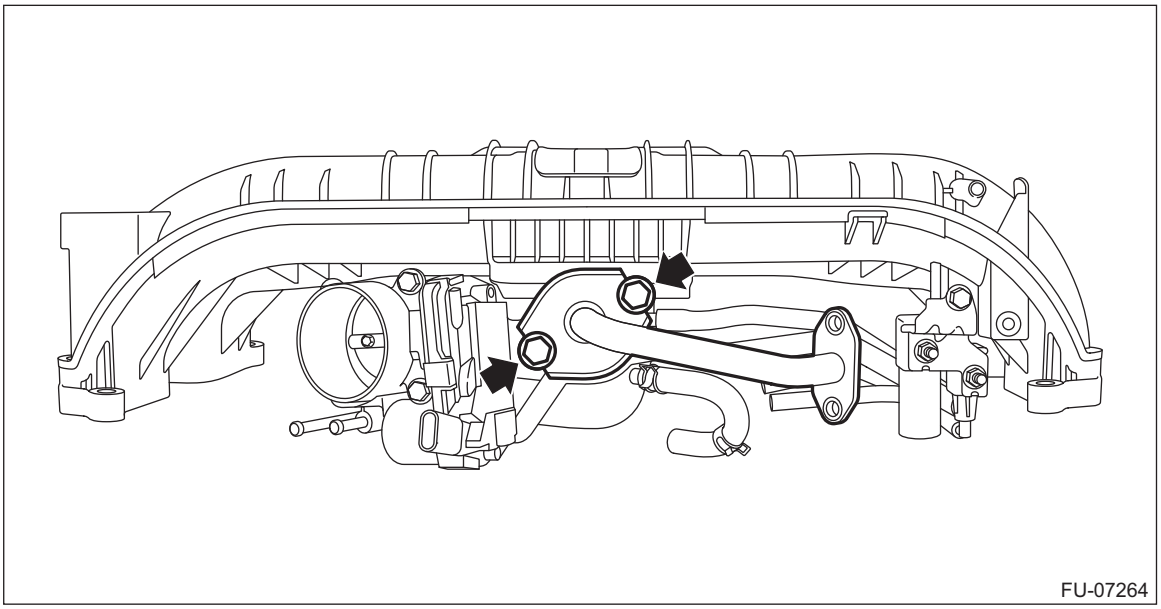
Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)



4) Temporarily install the EGR pipe to the intake manifold.

NOTE:
- Use new O-rings.

• Tighten the EGR pipe when installing the intake manifold. <Ref. to EC(w/o STI)-34, INSTALLATION, EGR Pipe.>

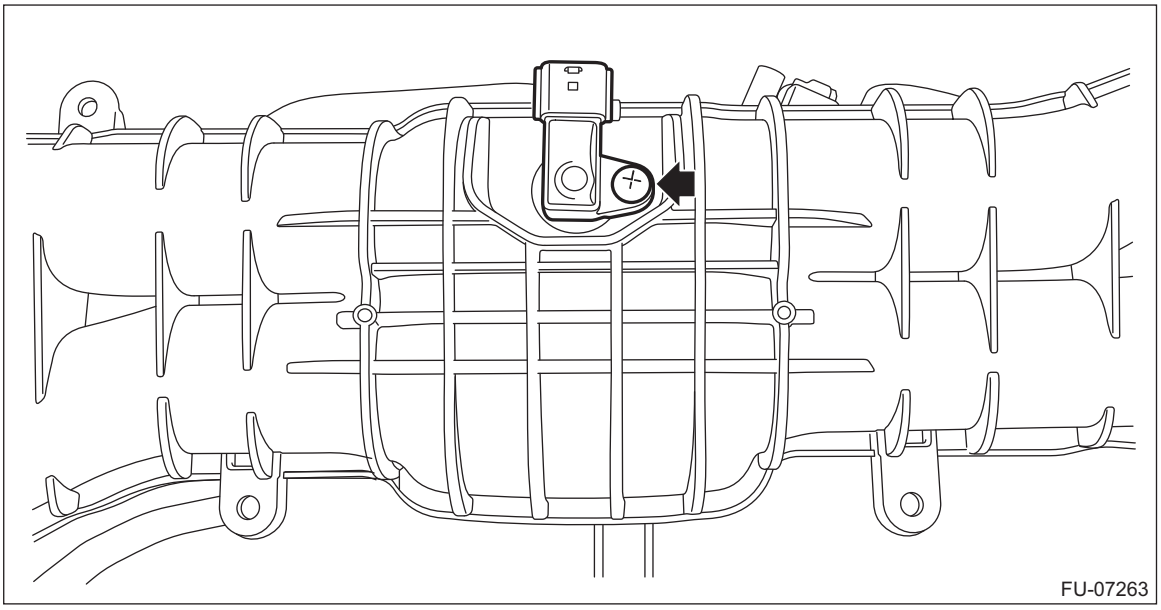


FU-07264

5) Install the manifold absolute pressure & intake air temperature sensor to the intake manifold.

NOTE:
Use new O-rings.

Tightening torque:
3.5 N·m (0.3 kgf-m, 2.5 ft-lb)



FU-07263

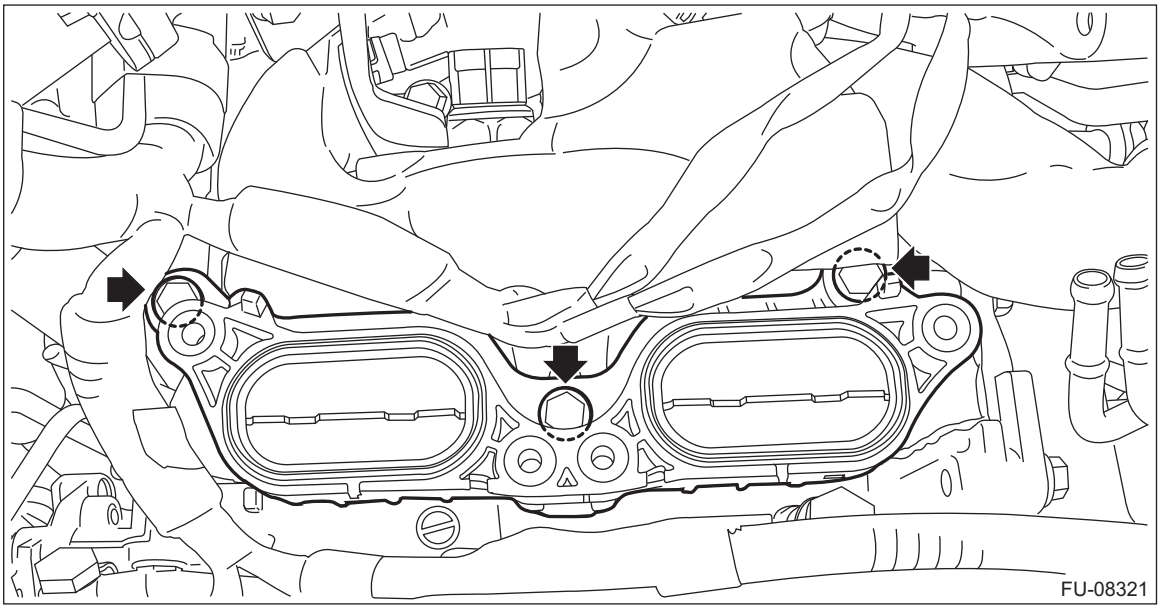
E: INSPECTION

1) Check that the intake manifold and fuel pipe have no deformation, cracks and other damages.
2) Check that the hose has no cracks, damage or loose part.

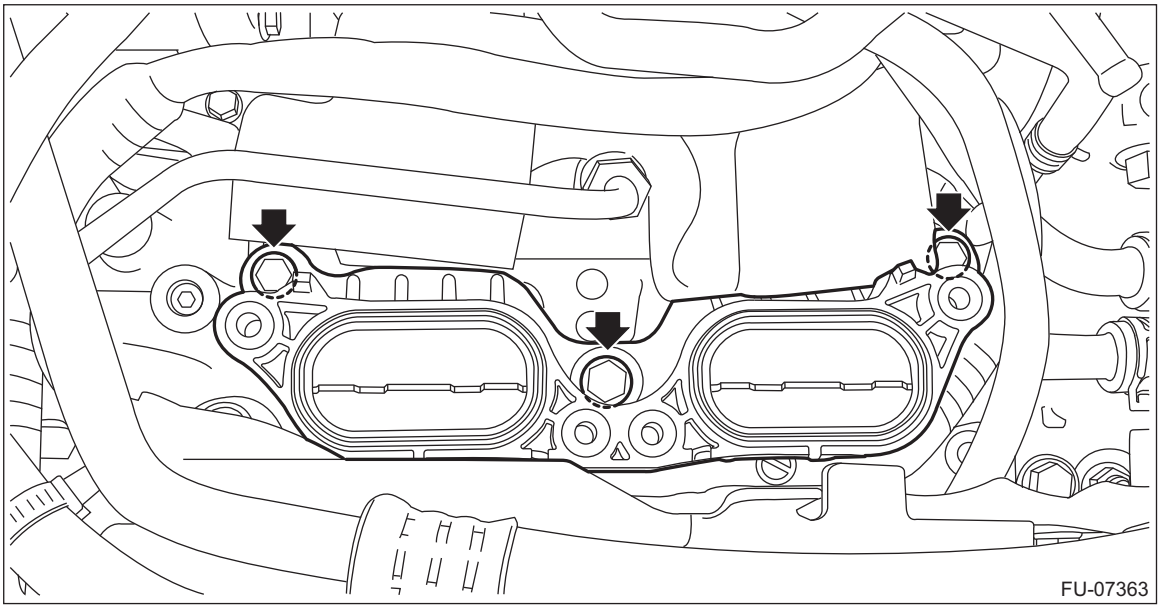
4. Tumble Generator Valve Assembly

A: REMOVAL

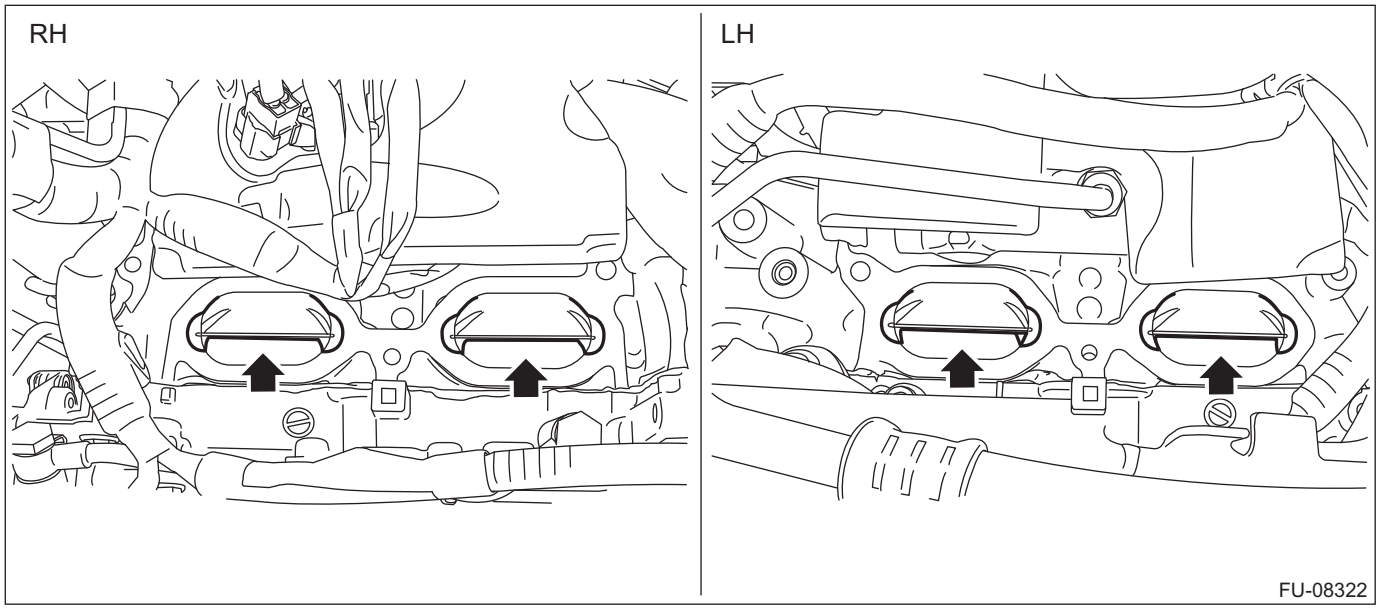
NOTE:
The tumble generator valve assembly is tightened together with the intake manifold.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the air intake adapter from the cylinder head.
- RH side



- LH side



4) Remove the cylinder head plate from cylinder head.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

C: INSPECTION

1) Check that the tumble generator valve assembly or air intake adapter has no deformation, cracks or other damages.
2) Check tumble generator valve assembly or air intake adapter for contamination or clogging.

5. Tumble Generator Valve Actuator

A: SPECIFICATION

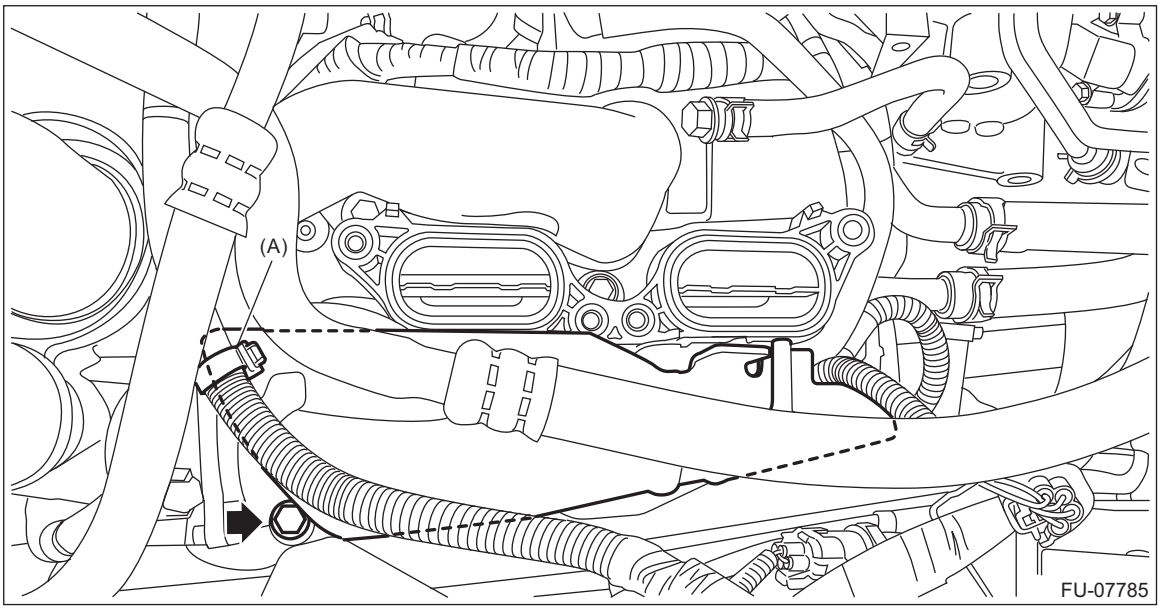
The tumble generator valve assembly cannot be disassembled.
Refer to “Tumble Generator Valve Assembly” for removal and installation procedures. <Ref. to FU(w/o STI)-42, REMOVAL, Tumble Generator Valve Assembly.> <Ref. to FU(w/o STI)-43, INSTALLATION, Tumble Generator Valve Assembly.>

6. Fuel Insulator

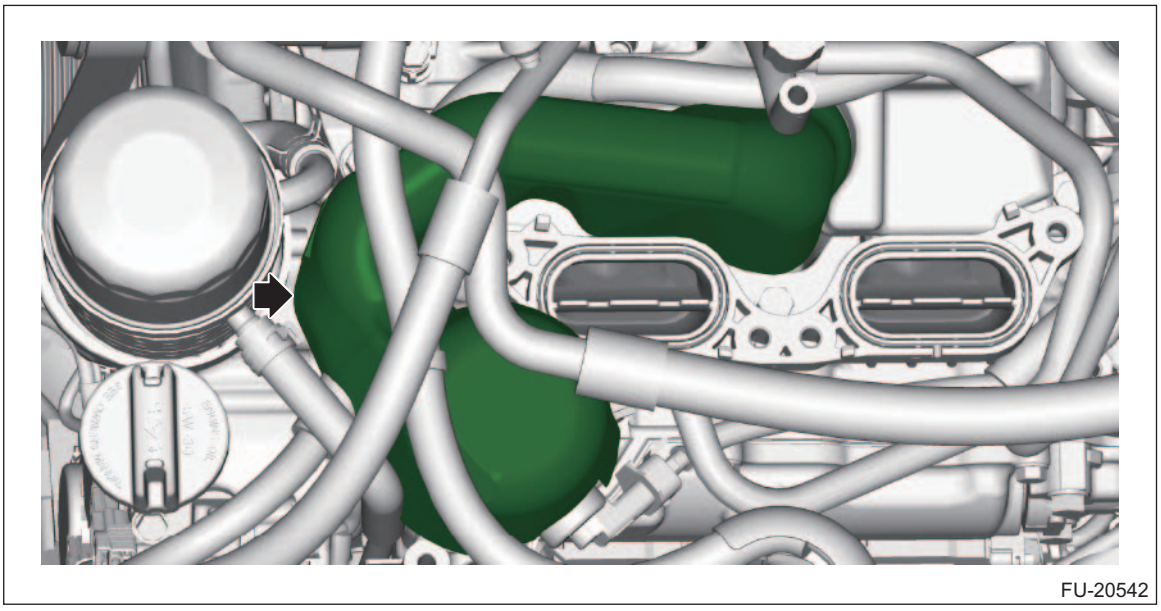
A: REMOVAL

1. FUEL PIPE INSULATOR NO. 1

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the clip (A) on the generator cord, and remove the fuel pipe protector.



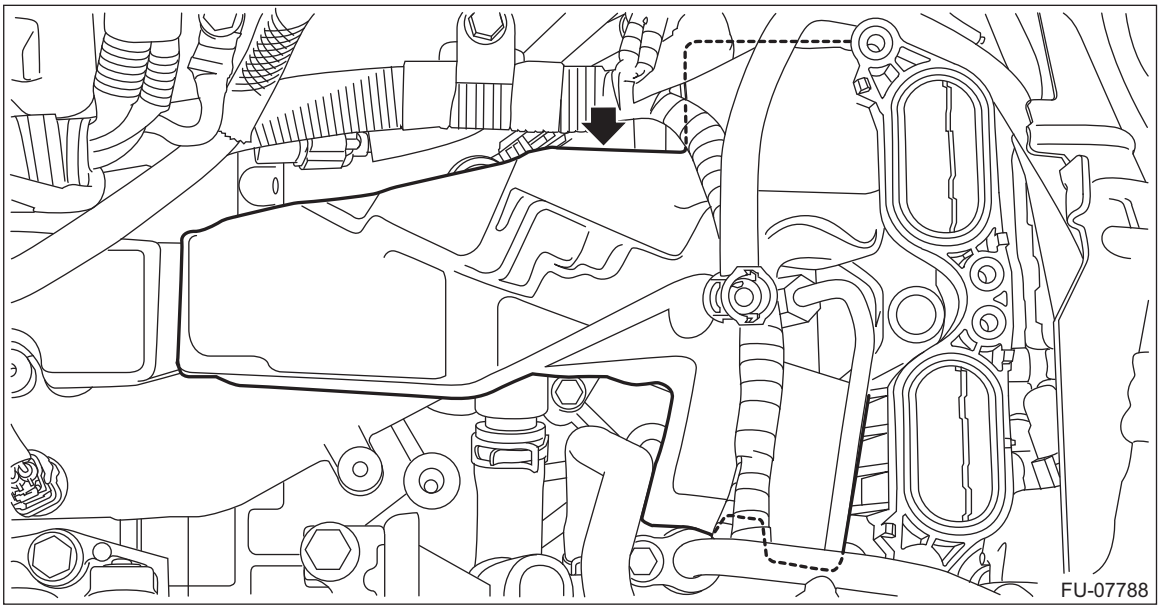
4) Remove the fuel pipe insulator No. 1.



2. FUEL PIPE INSULATOR NO. 2

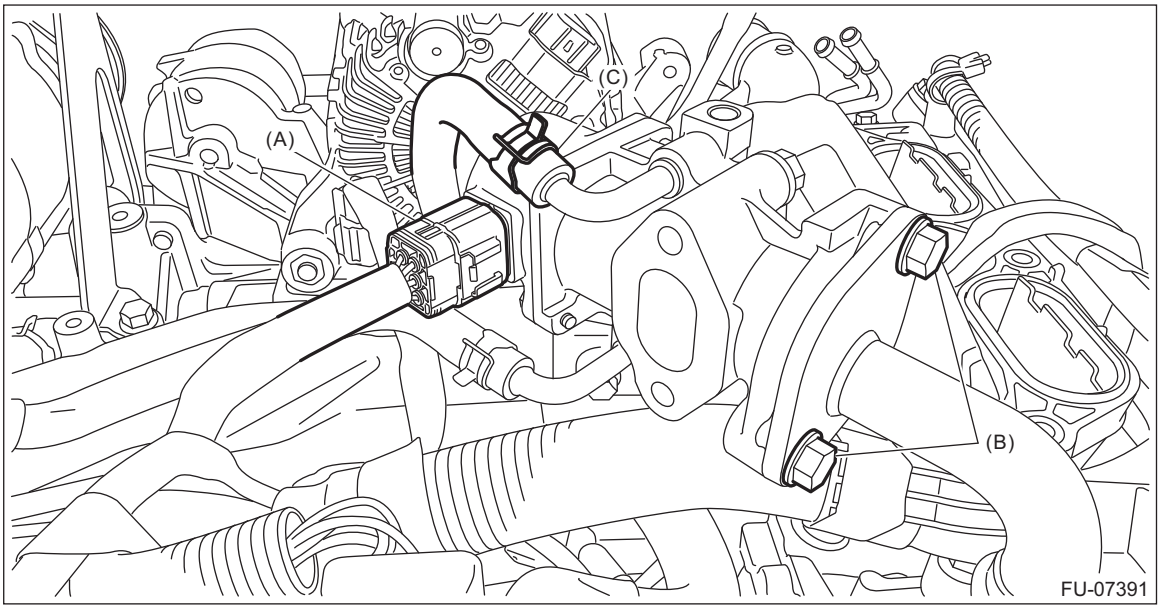
1) Remove the fuel pipe insulator No. 1. <Ref. to FU(w/o STI)-45, FUEL PIPE INSULATOR NO. 1, REMOVAL, Fuel Insulator.>

2) Remove the fuel pipe insulator No. 2.

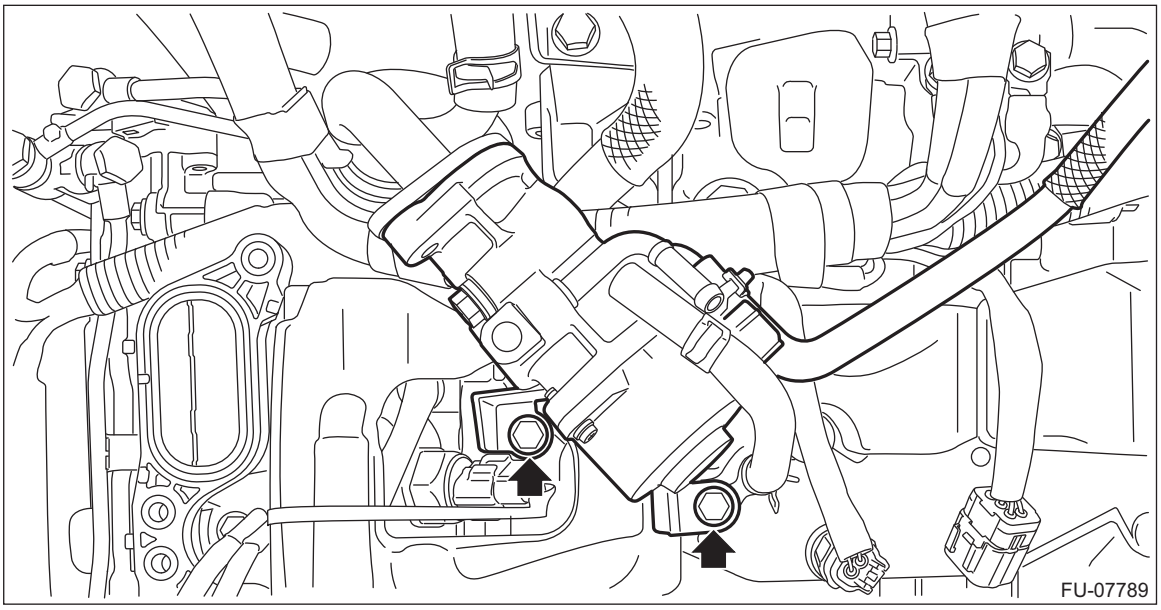


3. FUEL PIPE INSULATOR NO. 3

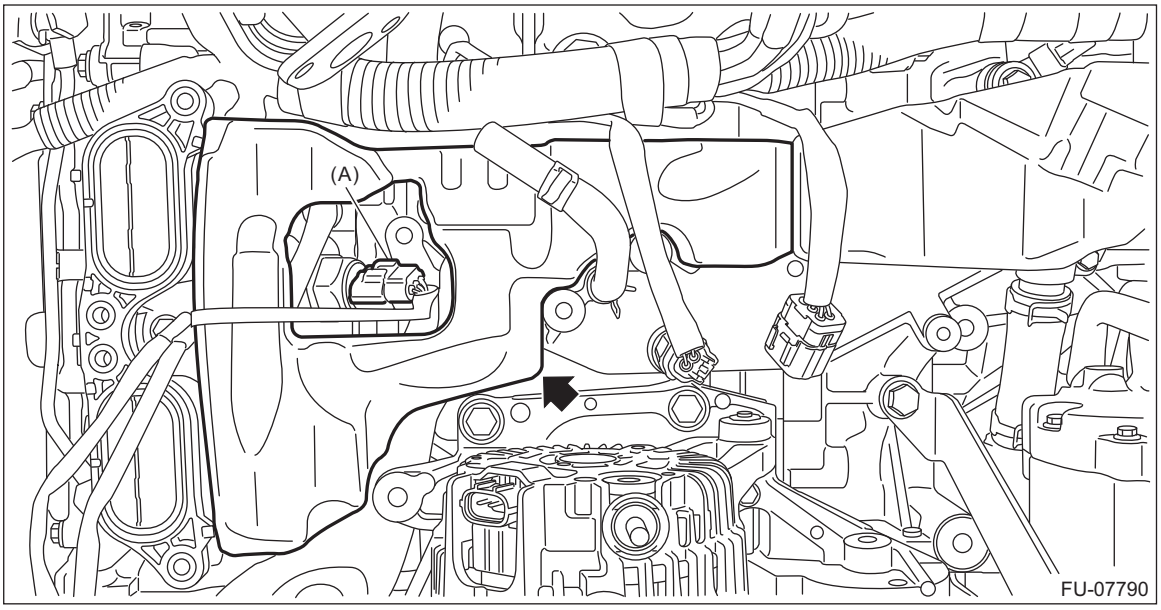
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Disconnect the connector (A) from the EGR control valve.
4) Remove the bolts (B) securing the EGR cooler to the EGR control valve.
5) Remove the preheater hose (C) from the EGR control valve.



6) Remove the EGR control valve.



7) Disconnect the connector (A) on the fuel pressure sensor, and remove the fuel pipe insulator No. 3.



B: INSTALLATION

1. FUEL PIPE INSULATOR NO. 1

Install in the reverse order of removal.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

2. FUEL PIPE INSULATOR NO. 2

Install in the reverse order of removal.

3. FUEL PIPE INSULATOR NO. 3

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

C: INSPECTION

Check that the fuel insulator has no deformation, cracks or other damages.

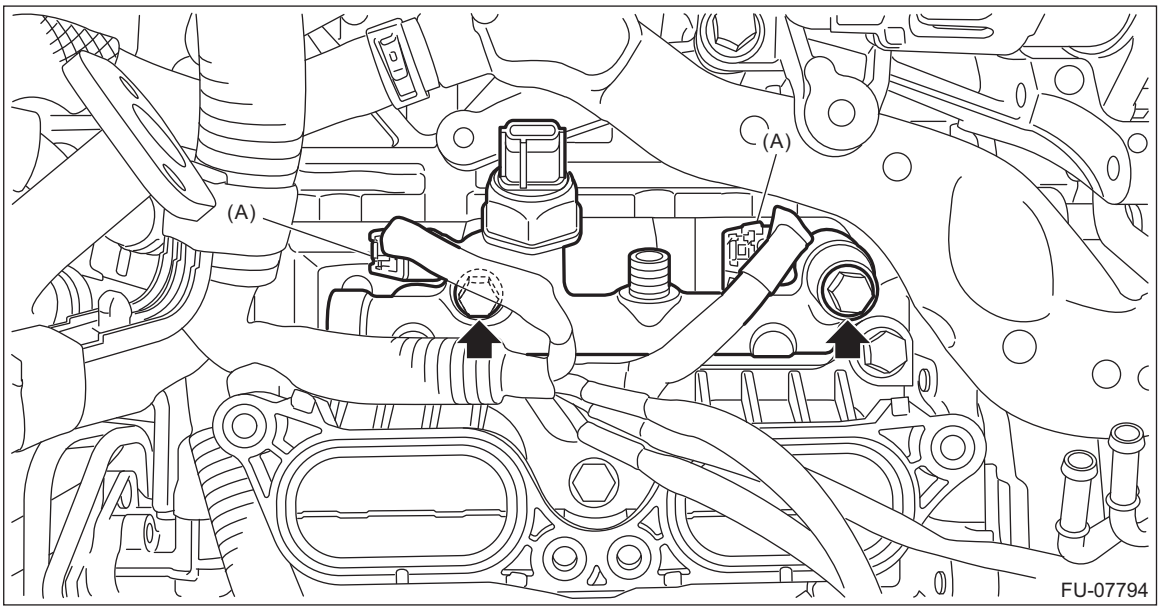
7. Fuel Injector

A: REMOVAL

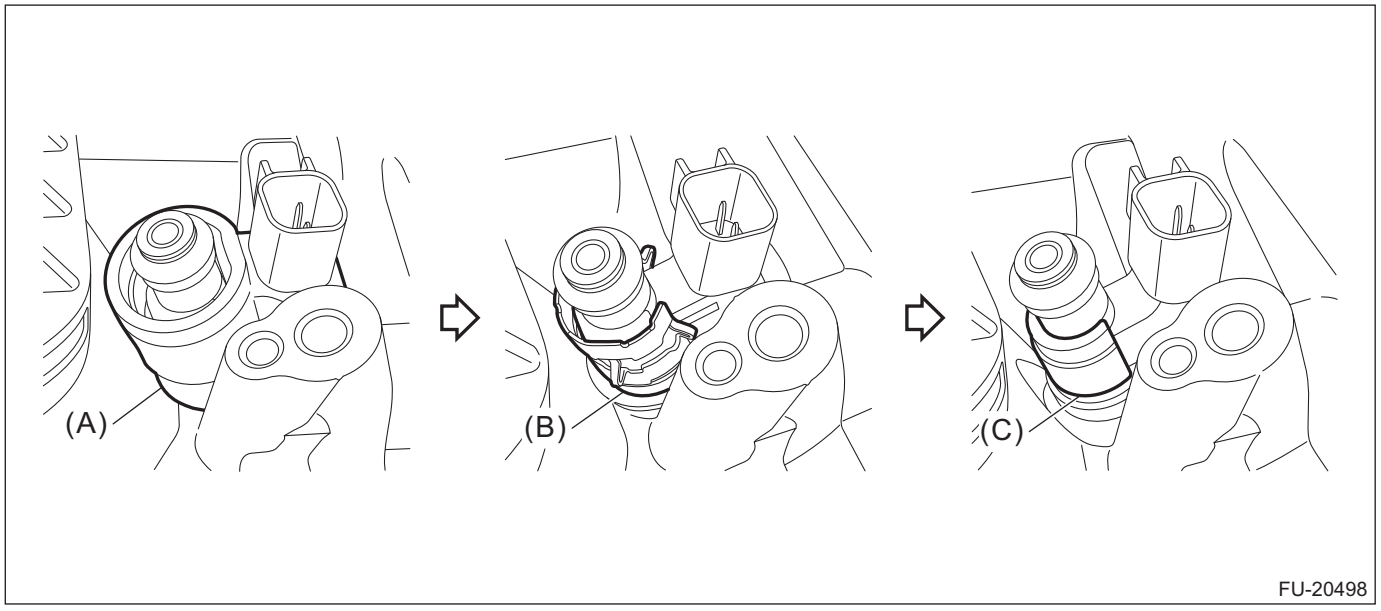
1. FUEL INJECTOR RH

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

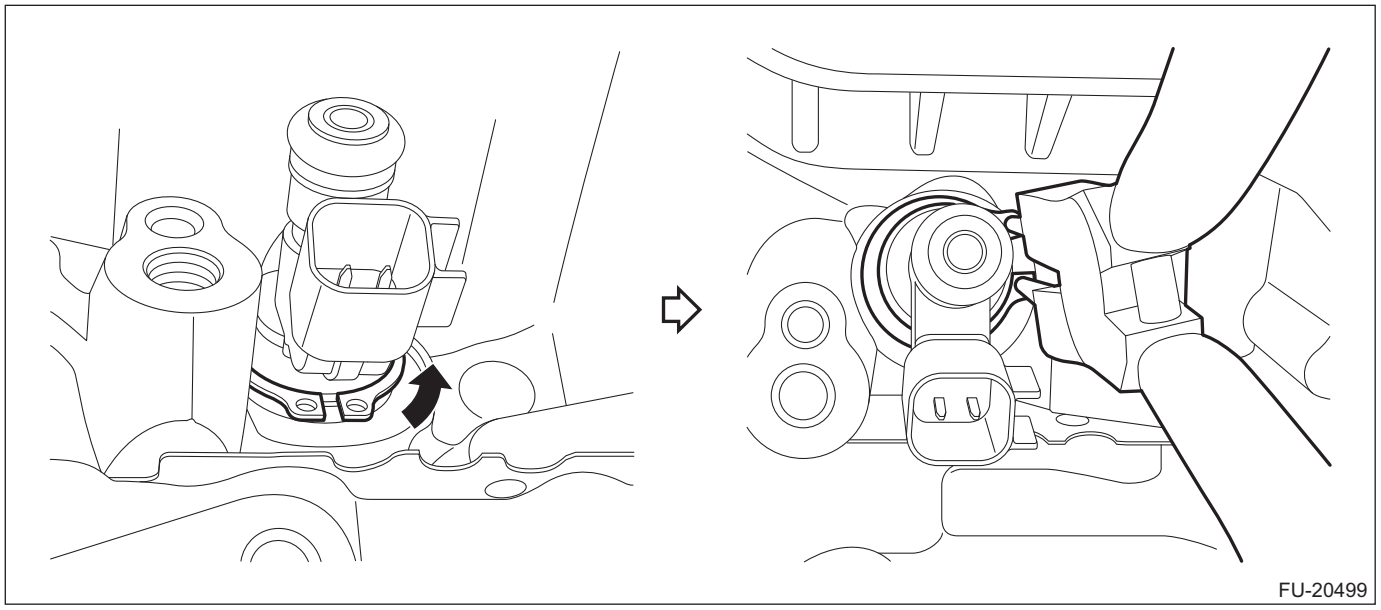
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, REMOVAL, High Pressure Fuel Delivery Pipe.>
3) Disconnect the connector (A) from fuel injector, and remove the fuel injector pipe.



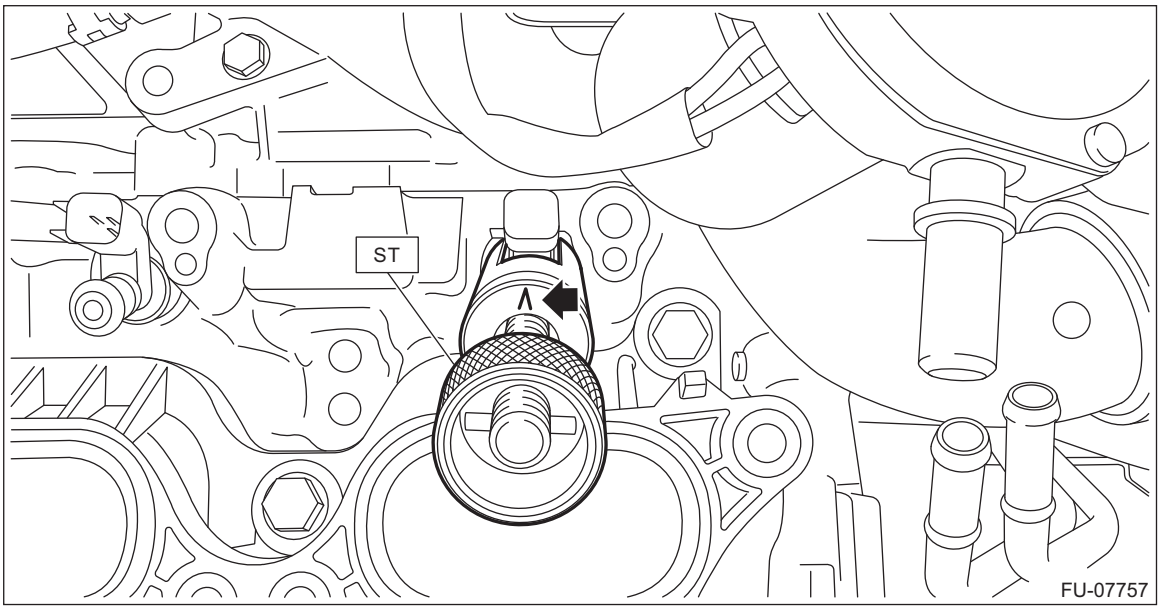
4) Using scissors or the like, remove the rubber cover (A) from the fuel injector.
5) Remove the holder (B) and spacer (C) from the fuel injector.



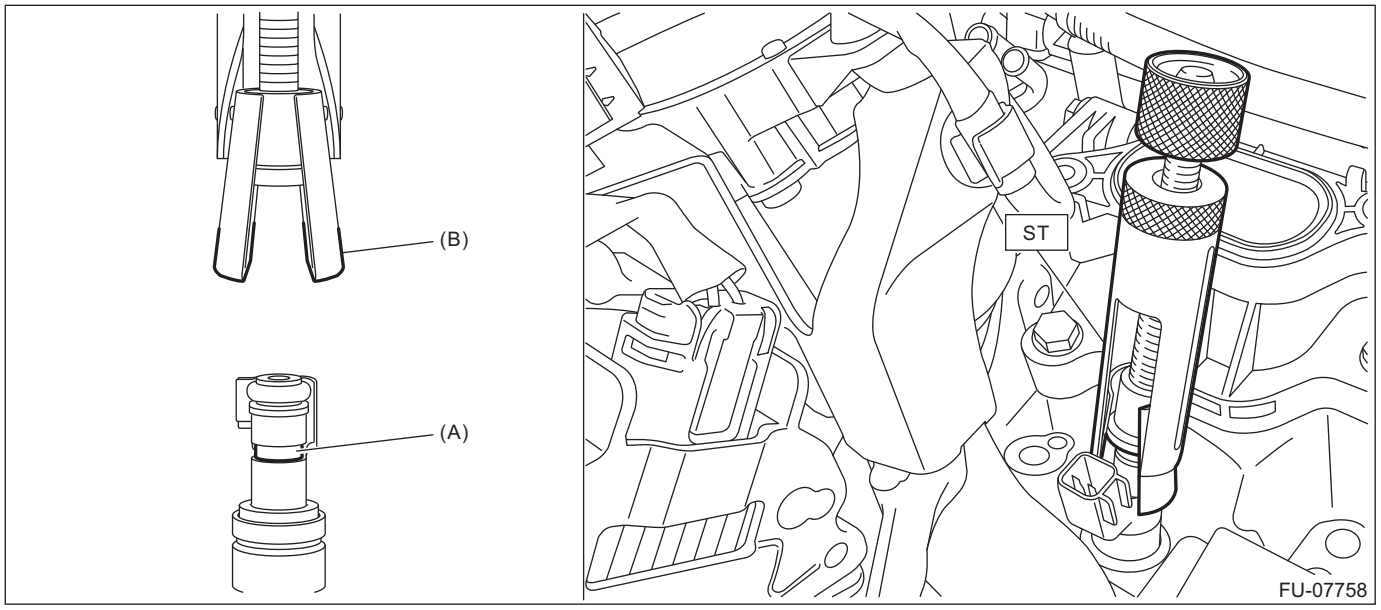
6) Rotate the snap ring to remove it from the fuel injector.



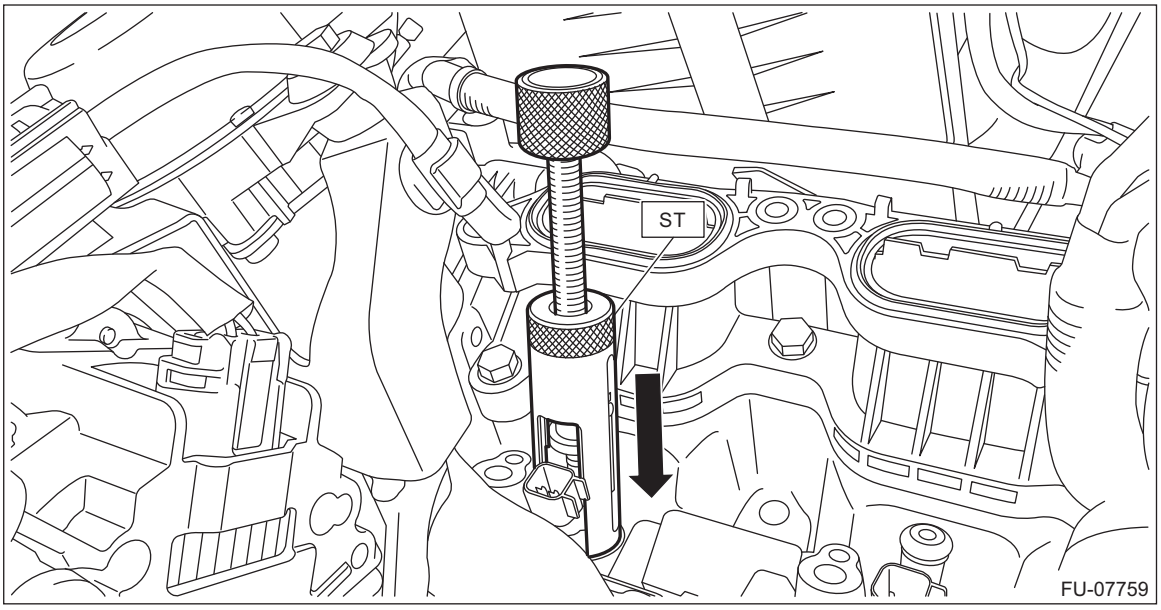
7) Using ST, remove the fuel injector from the cylinder head.
ST 18356AA000 INJECTOR REMOVER
(1) Set the ST so that its mark faces the center of the engine.



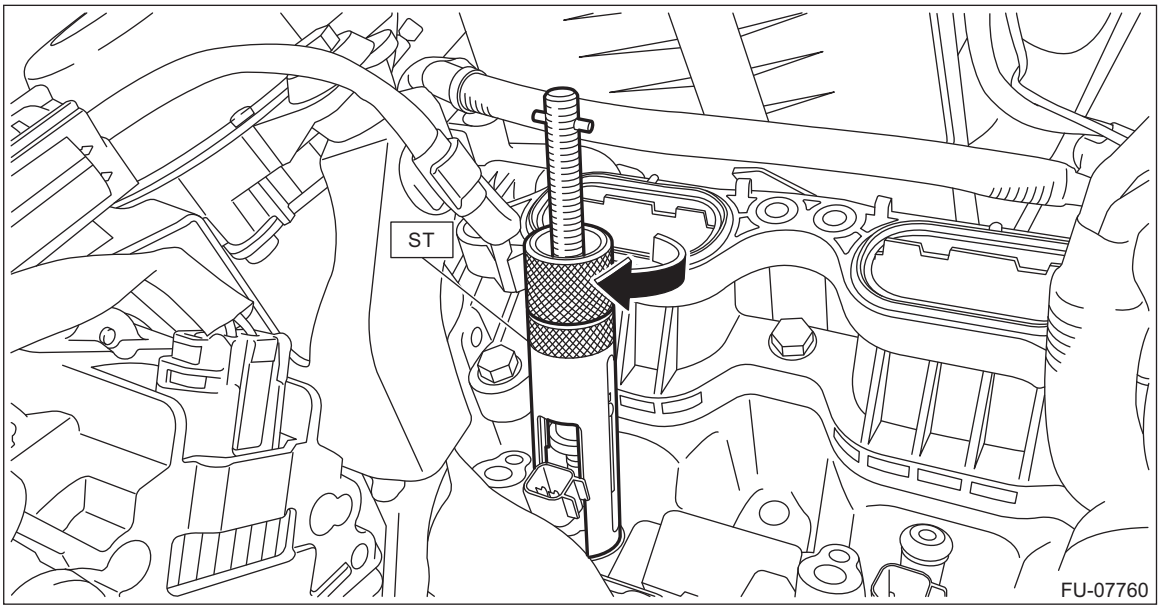
(2) Pinch the fuel injector groove (A) with the claw section (B) of ST.



(3) Press the ST to the cylinder head.



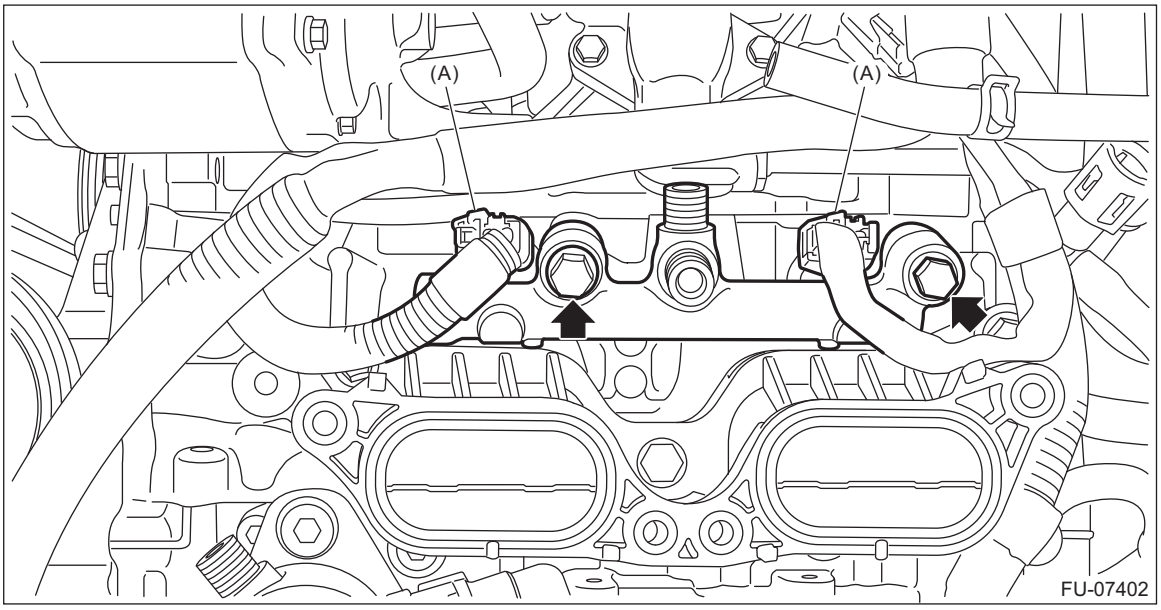
(4) Screw in the threaded section of the ST clockwise, and remove the fuel injector from the cylinder head.



2. FUEL INJECTOR LH

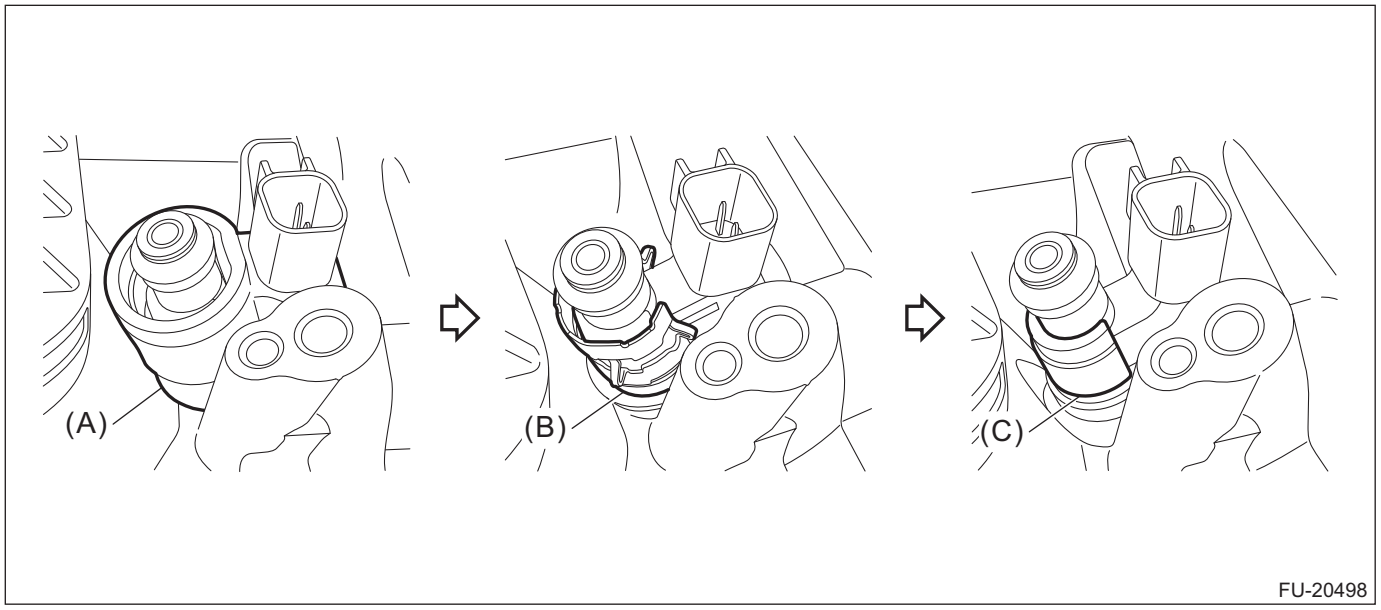
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, REMOVAL, High Pressure Fuel Delivery Pipe.>
3) Remove the high-pressure fuel delivery pipes. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE, REMOVAL, High Pressure Fuel Delivery Pipe.>
4) Disconnect the connector (A) from fuel injector, and remove the fuel injector pipe LH.

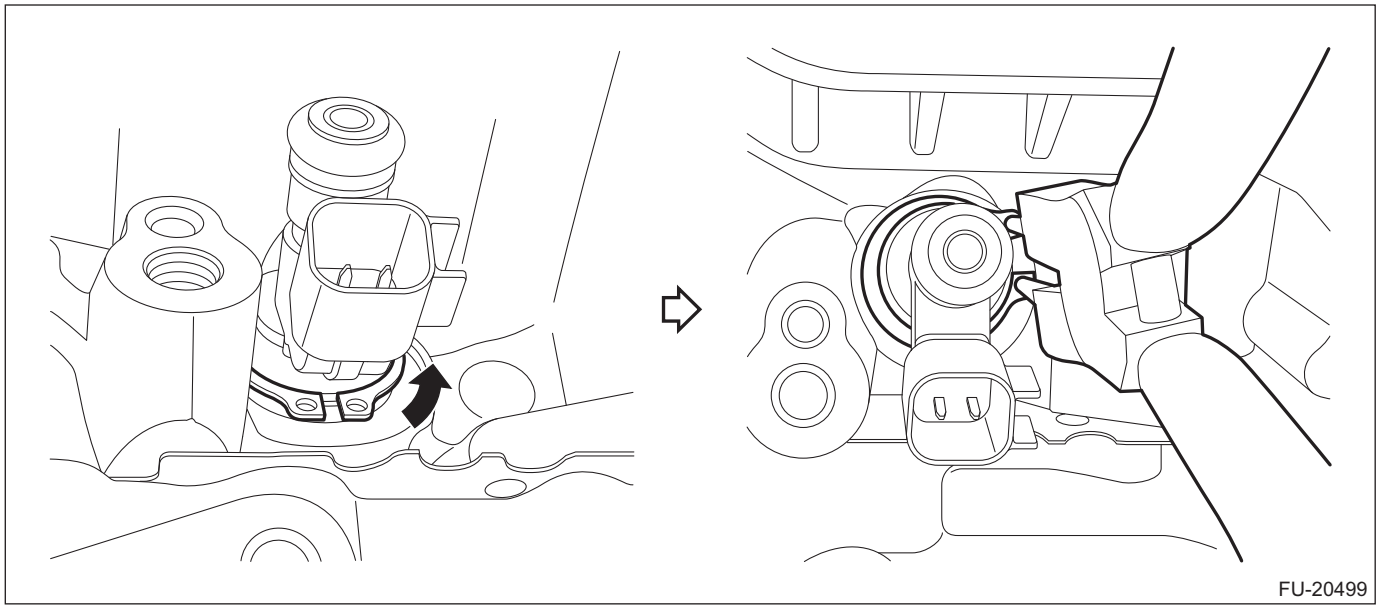


5) Using scissors or the like, remove the rubber cover (A) from the fuel injector.

6) Remove the holder (B) and spacer (C) from the fuel injector.

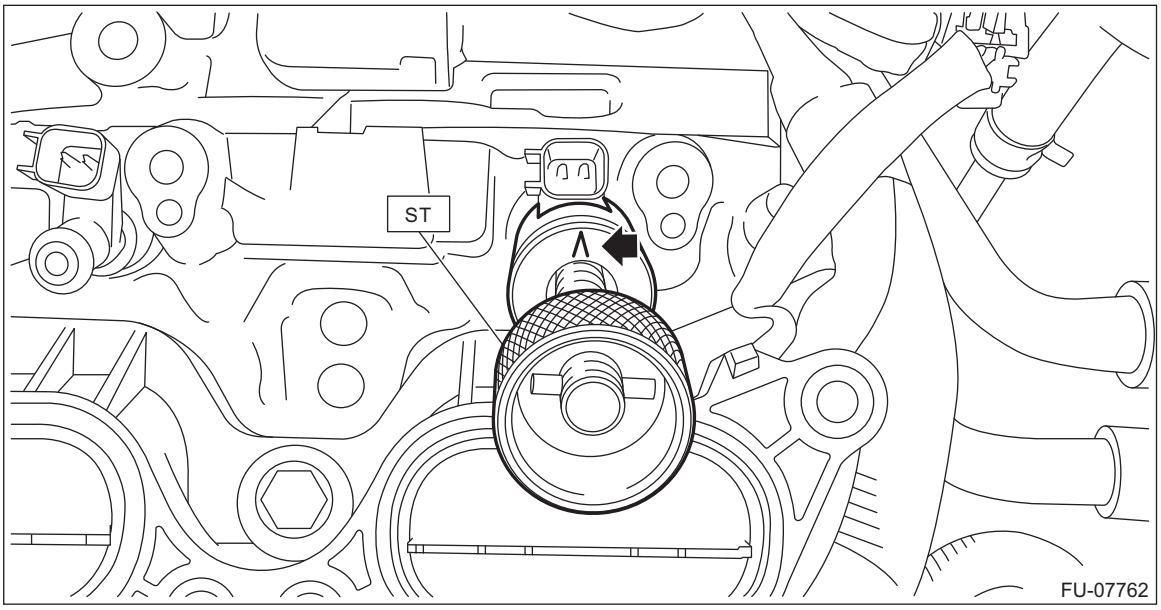


7) Rotate the snap ring to remove it from the fuel injector.

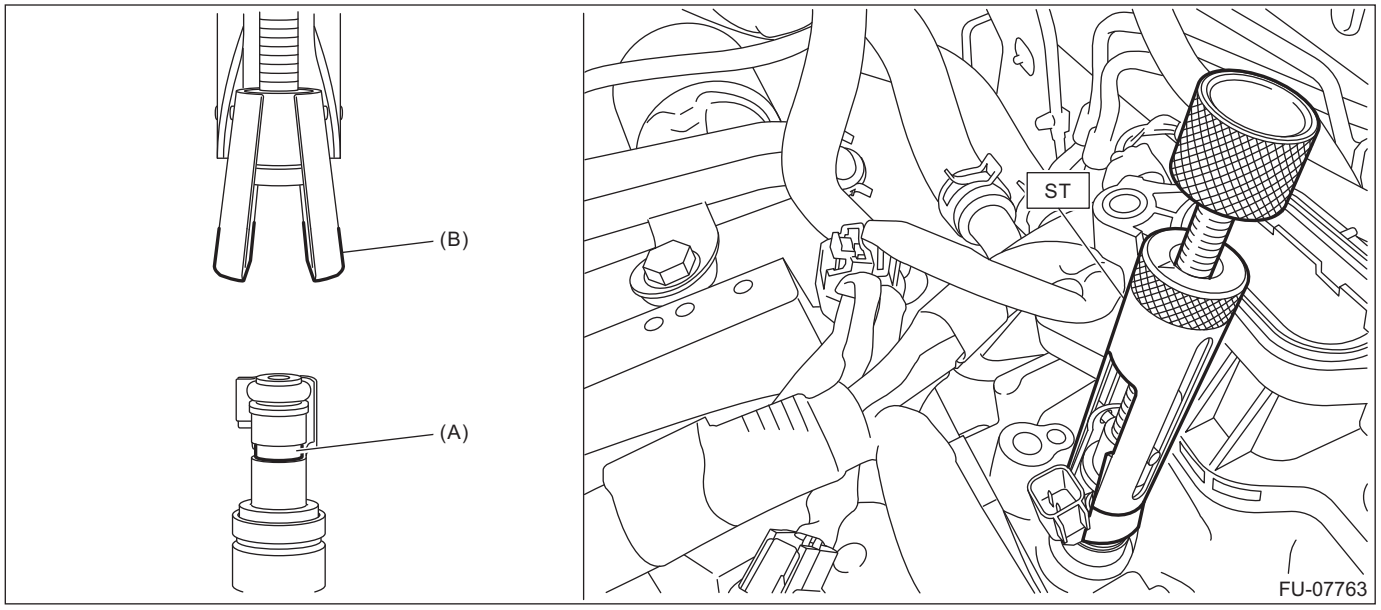


8) Using ST, remove the fuel injector from the cylinder head.
ST 18356AA000 INJECTOR REMOVER

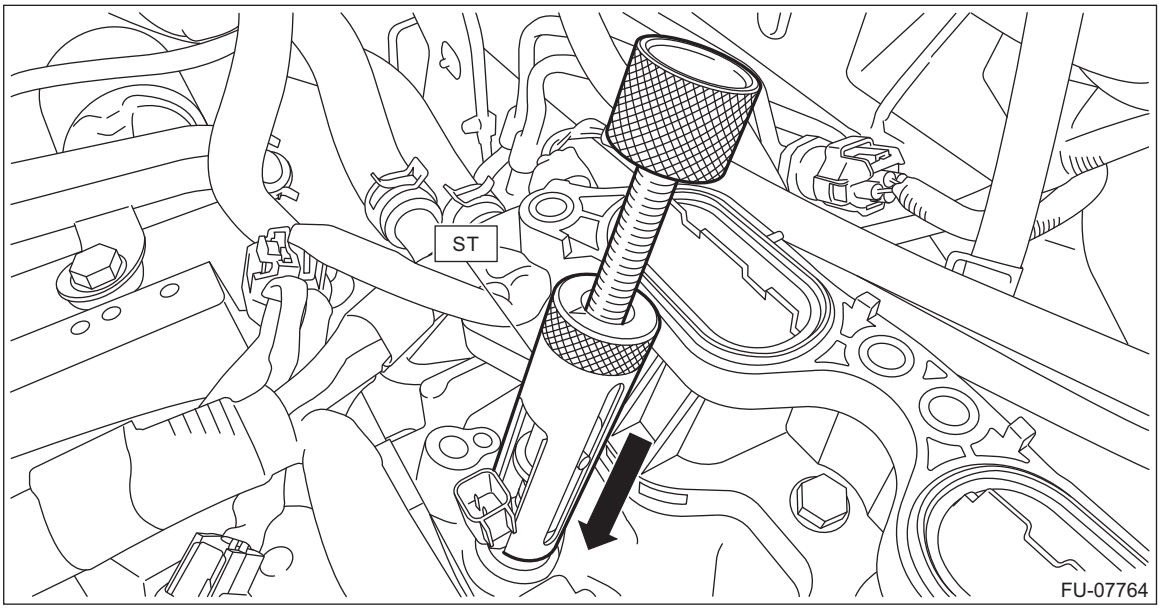
(1) Set the ST so that its mark faces the center of the engine.



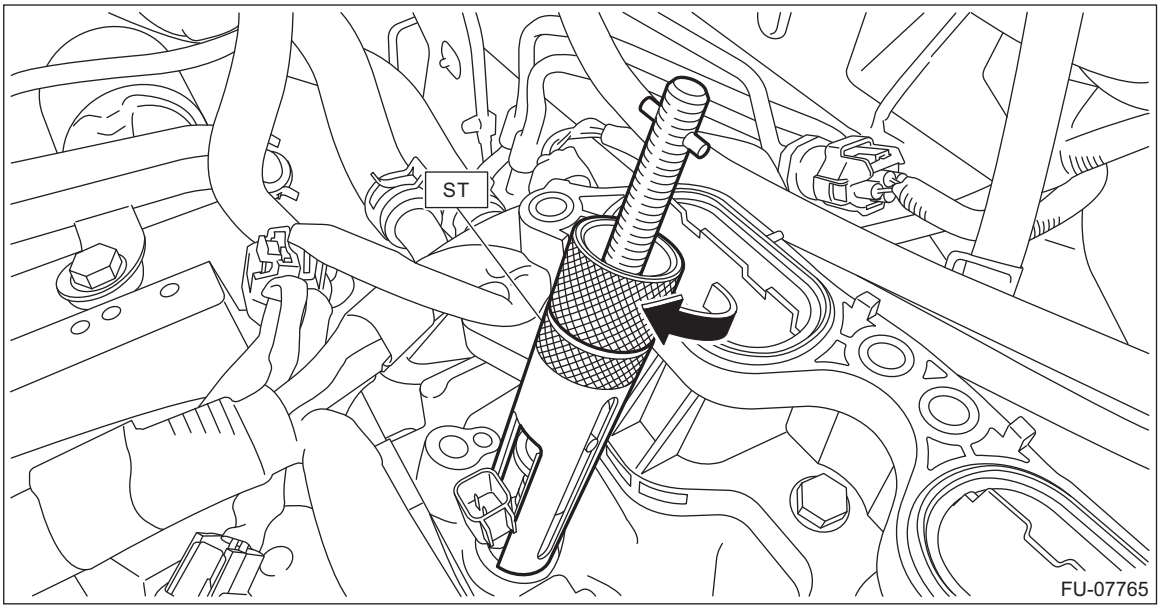
(2) Pinch the fuel injector groove (A) with the claw section (B) of ST.



(3) Press the ST to the cylinder head.



(4) Screw in the threaded section of the ST clockwise, and remove the fuel injector from the cylinder head.

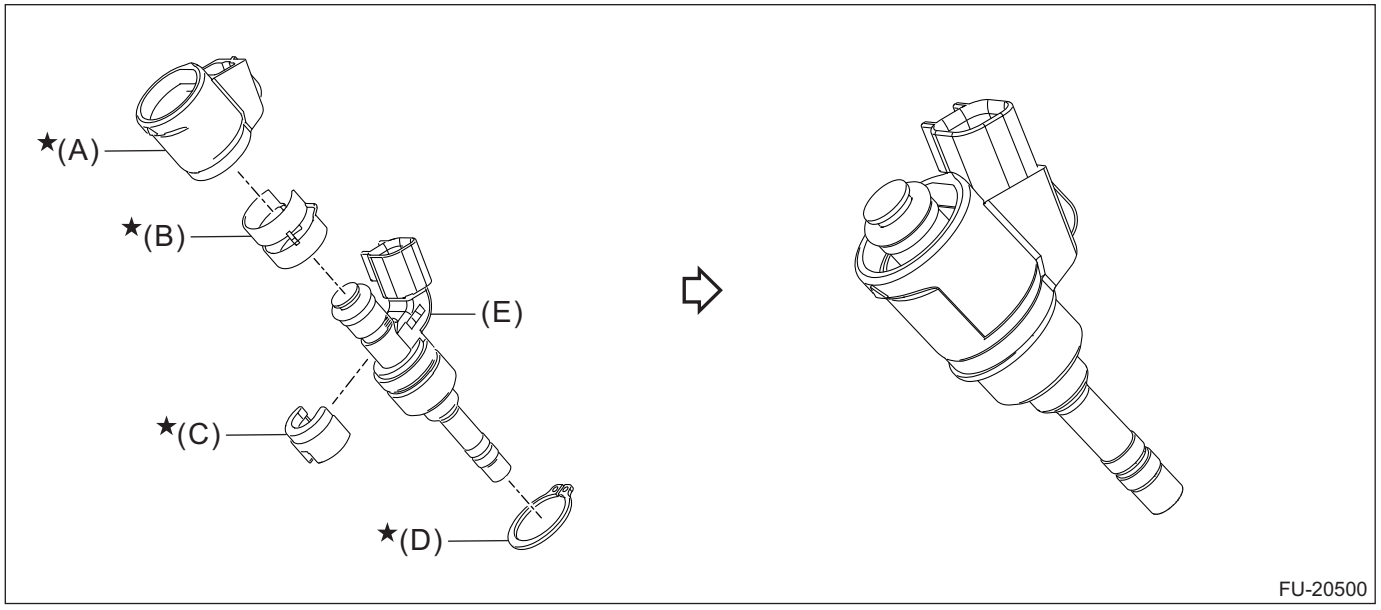


B: INSTALLATION

1. FUEL INJECTOR RH

1) Replace the injector seal, backup ring and O-ring with a new part. <Ref. to FU(w/o STI)-59, REPLACEMENT, Fuel Injector.>
2) Set the spacer, holder, rubber cover and snap ring to the fuel injector, and install it to the fuel injector pipe RH.

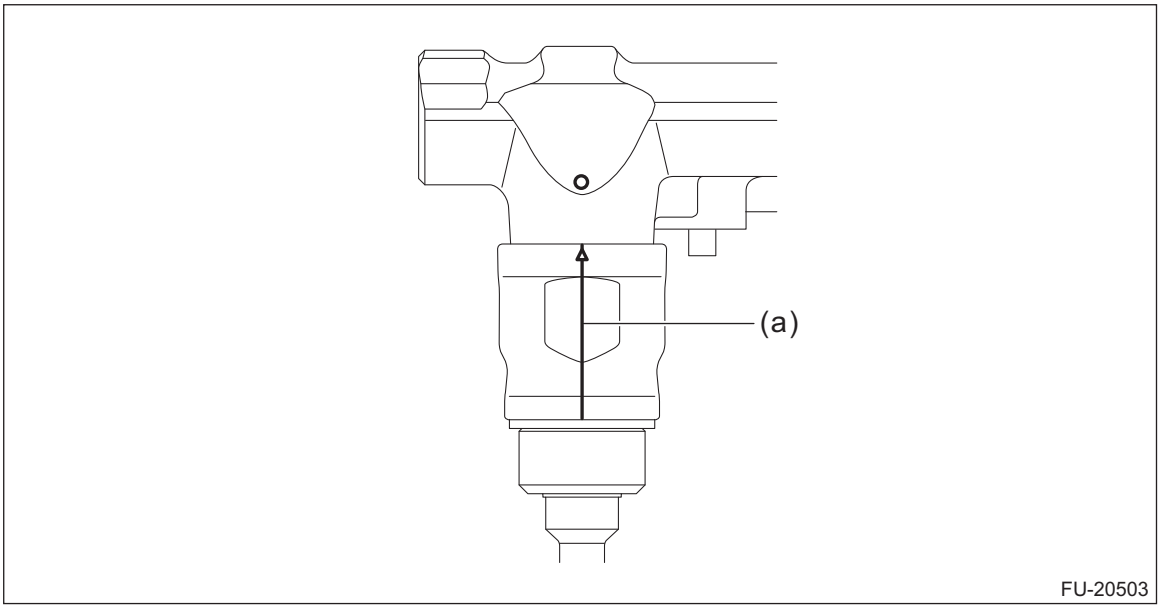
CAUTION:
Always use a new spacer, holder, rubber cover and snap ring.



(A) Rubber cover
(B) Holder
(C) Spacer
(D) Snap ring
(E) Fuel injector

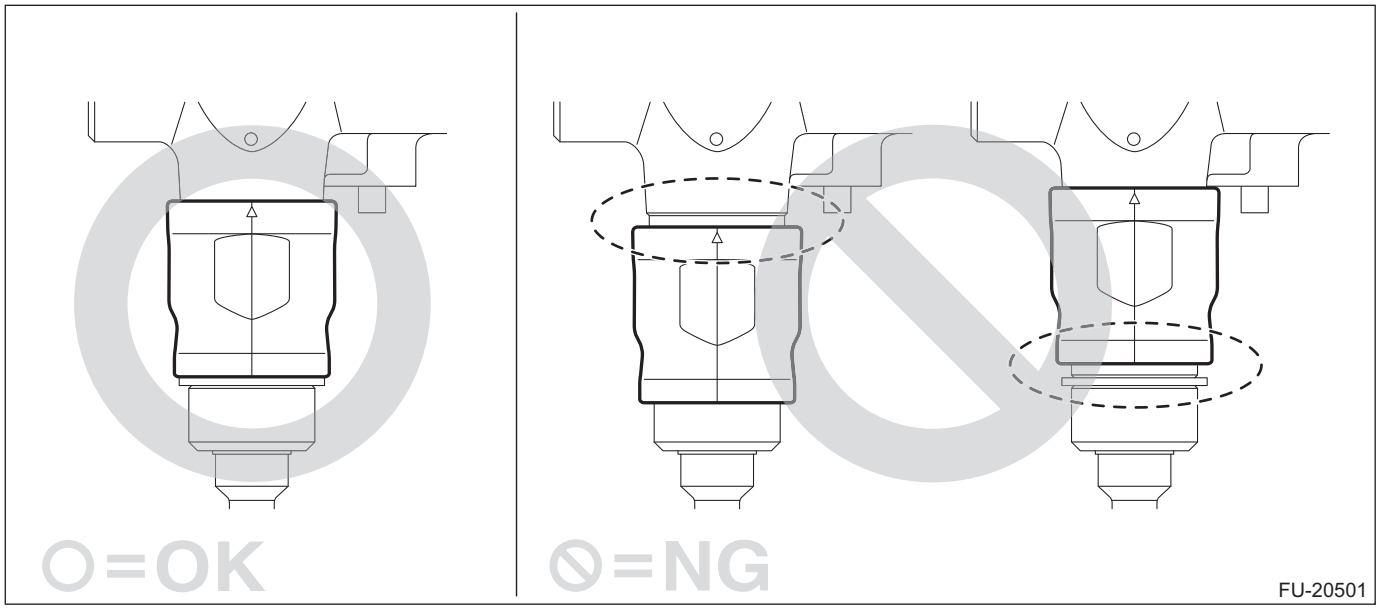
3) Set the fuel injector on the fuel injector pipe RH.

CAUTION:
- **● on the fuel injector pipe RH must be aligned with ▲ on the rubber cover.**
- **Parting line (a) of the rubber cover must be straight.**



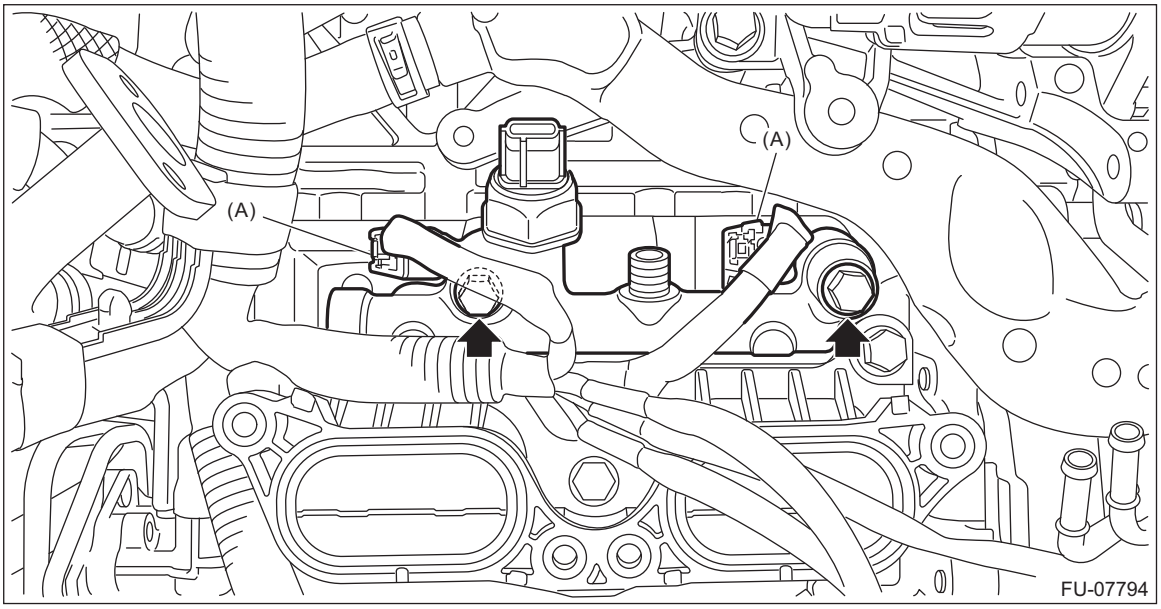
- **The end surface of the fuel injector pipe RH must fit inside the rubber cover.**

- **There must be no gap between the snap ring and rubber cover.**



4) Install the fuel injector pipe RH and fuel injector as a single unit to the cylinder head.
5) Tighten the bolt on fuel pipe RH, and connect the connector (A) to the fuel injector.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

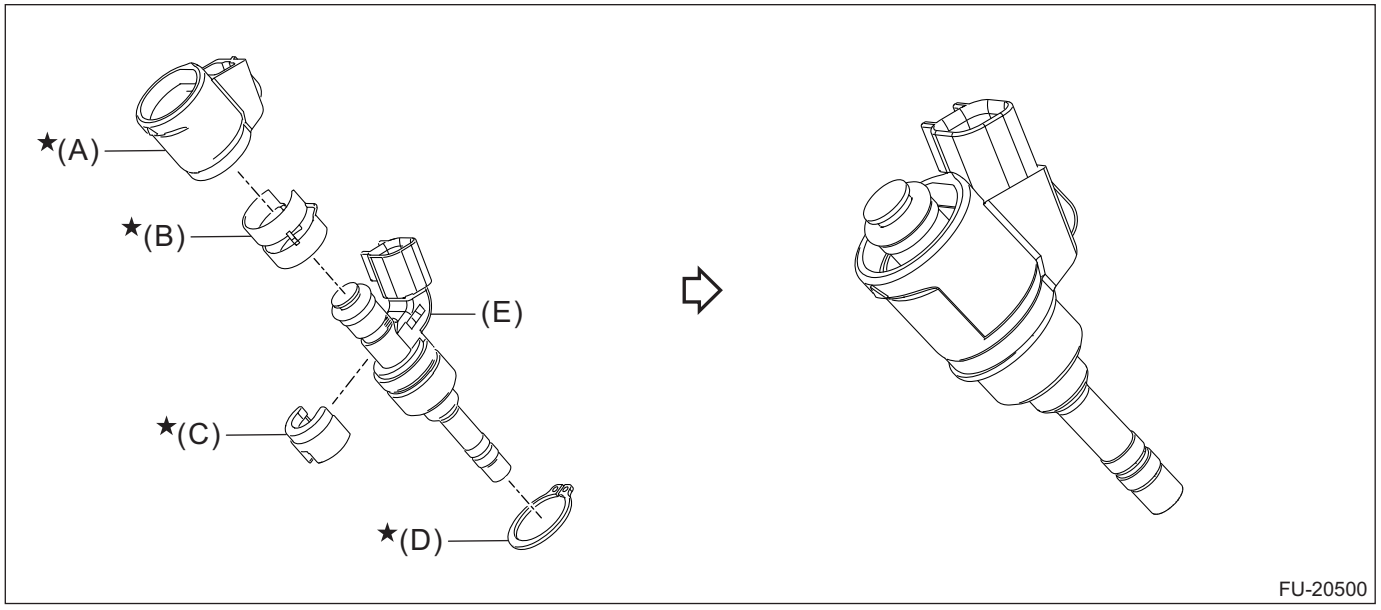


6) Install the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-81, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, INSTALLATION, High Pressure Fuel Delivery Pipe.>
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. FUEL INJECTOR LH

1) Replace the injector seal, backup ring and O-ring with a new part. <Ref. to FU(w/o STI)-59, REPLACEMENT, Fuel Injector.>
2) Set the spacer, holder, rubber cover and snap ring to the fuel injector, and install it to the fuel injector pipe LH.

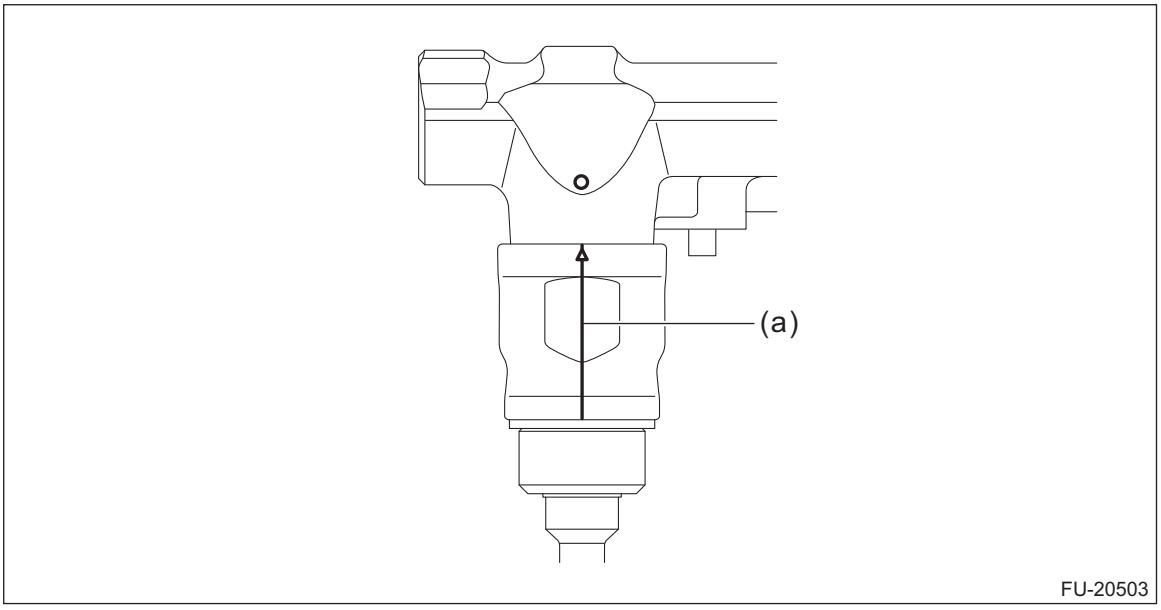
CAUTION:
Always use a new spacer, holder, rubber cover and snap ring.



(A) Rubber cover
(B) Holder
(C) Spacer
(D) Snap ring
(E) Fuel injector

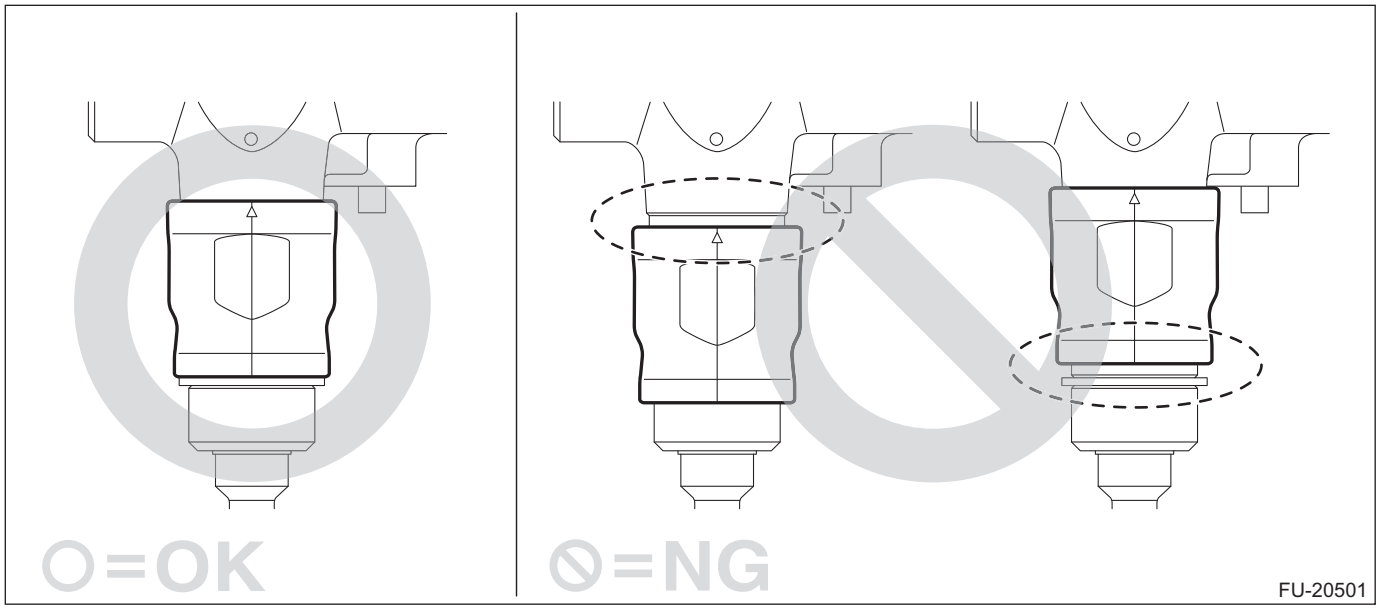
3) Set the fuel injector on the fuel injector pipe LH.

CAUTION:
- **● on the fuel injector pipe LH must be aligned with ▲ on the rubber cover.**
- **Parting line (a) of the rubber cover must be straight.**



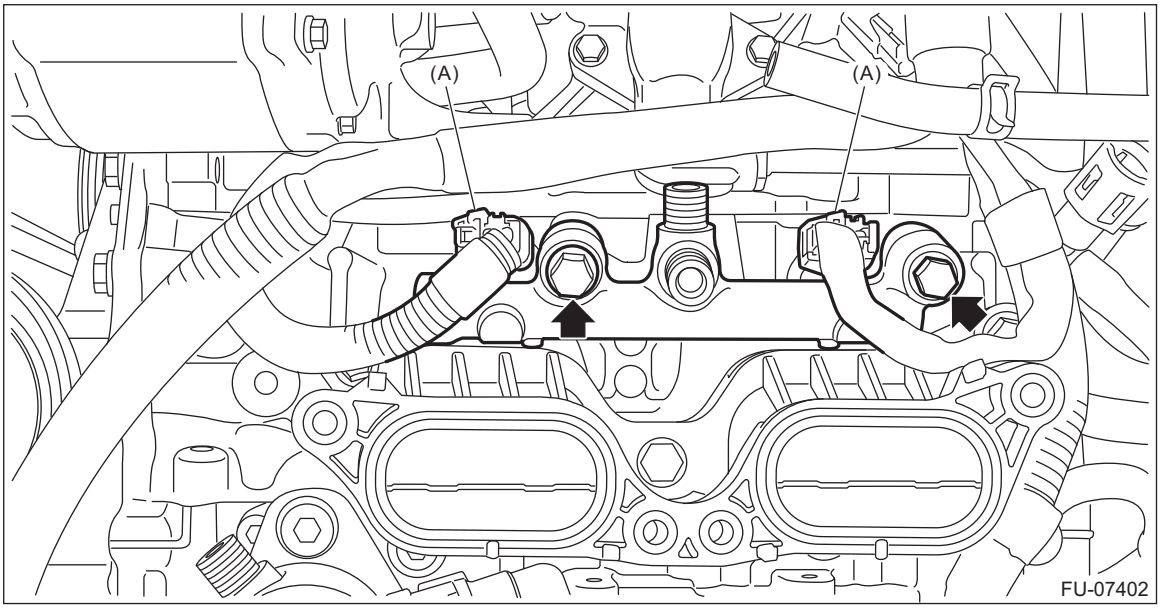
- **The end surface of the fuel injector pipe LH must fit inside the rubber cover.**

- **There must be no gap between the snap ring and rubber cover.**



4) Install the fuel injector pipe LH and fuel injector as a single unit to the cylinder head.
5) Tighten the bolt on fuel injector pipe LH, and connect the connector (A) to the fuel injector.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



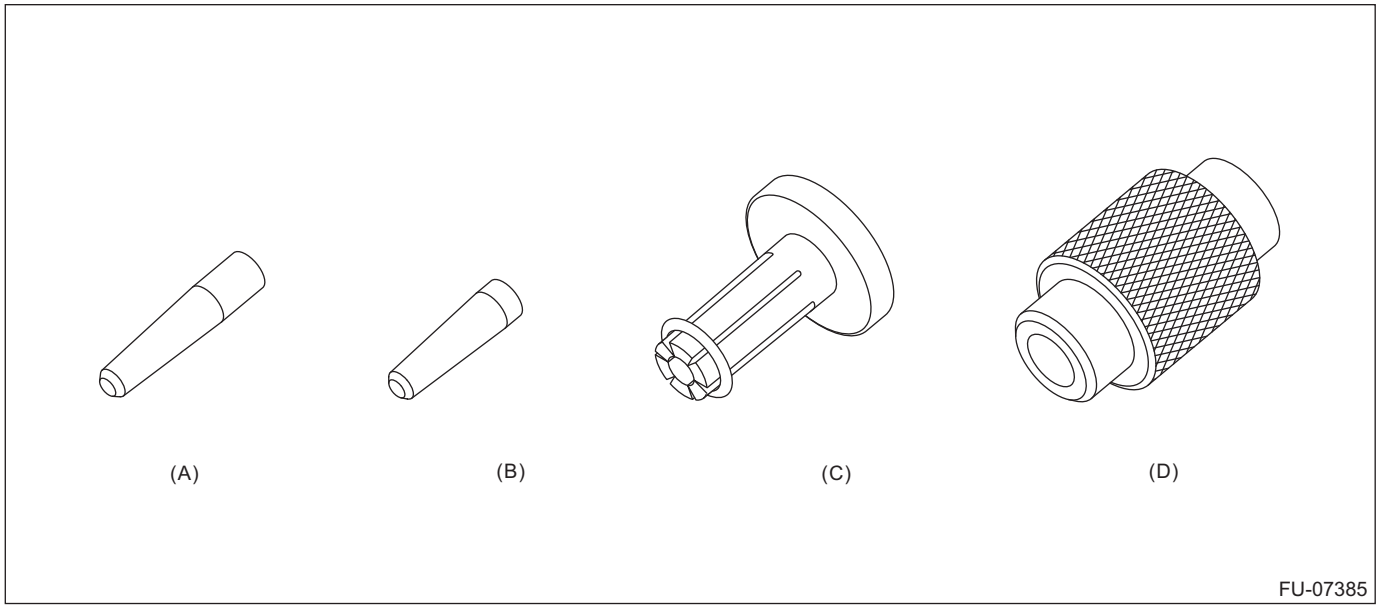
6) Install the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-81, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, INSTALLATION, High Pressure Fuel Delivery Pipe.>
7) Install the high-pressure fuel delivery pipe. <Ref. to FU(w/o STI)-80, HIGH-PRESSURE FUEL DELIVERY PIPE, INSTALLATION, High Pressure Fuel Delivery Pipe.>
8) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: REPLACEMENT

CAUTION:
- **Perform work without using gloves.**

- **Always use the ST when installing the injector seal.**

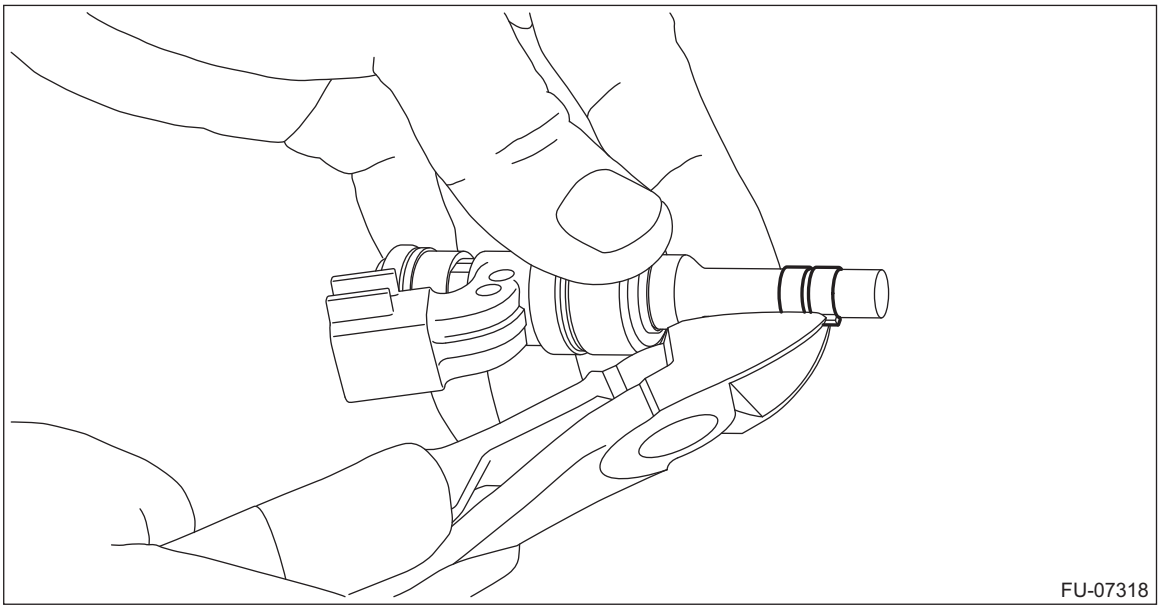
ST 18683AA000 INJECTOR SEAL INSTALLER



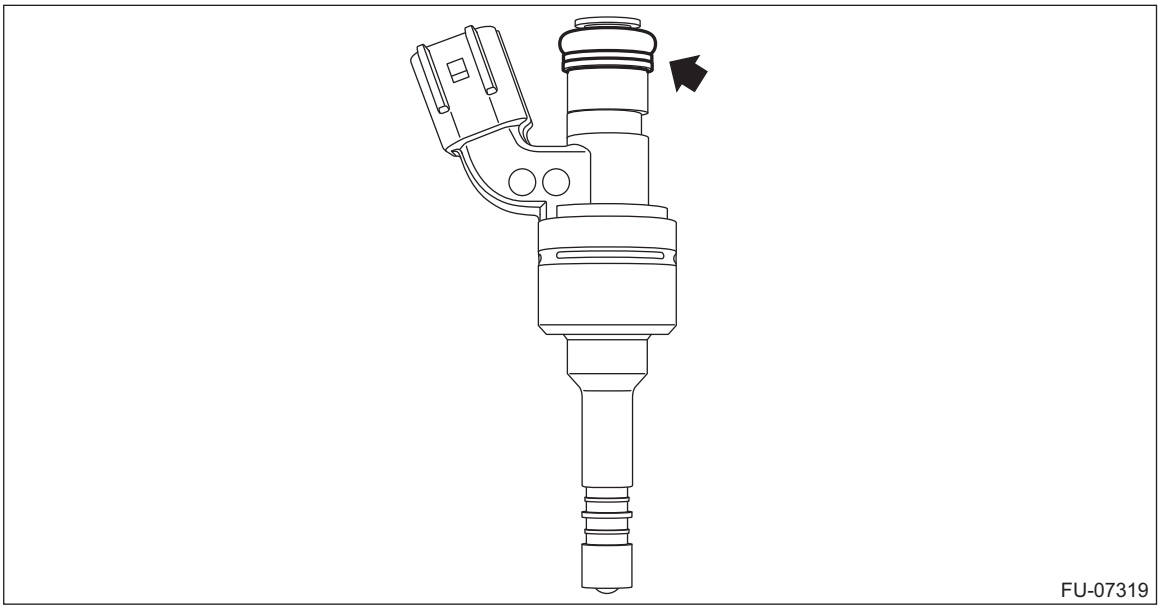
(A) Seal guide A (B) Seal guide B (C) Injector seal installer
(D) Injector seal adjuster

1) Using a pair of nippers, cut off the injector seal by pinching it.

CAUTION:
Be careful not to damage the fuel injector.

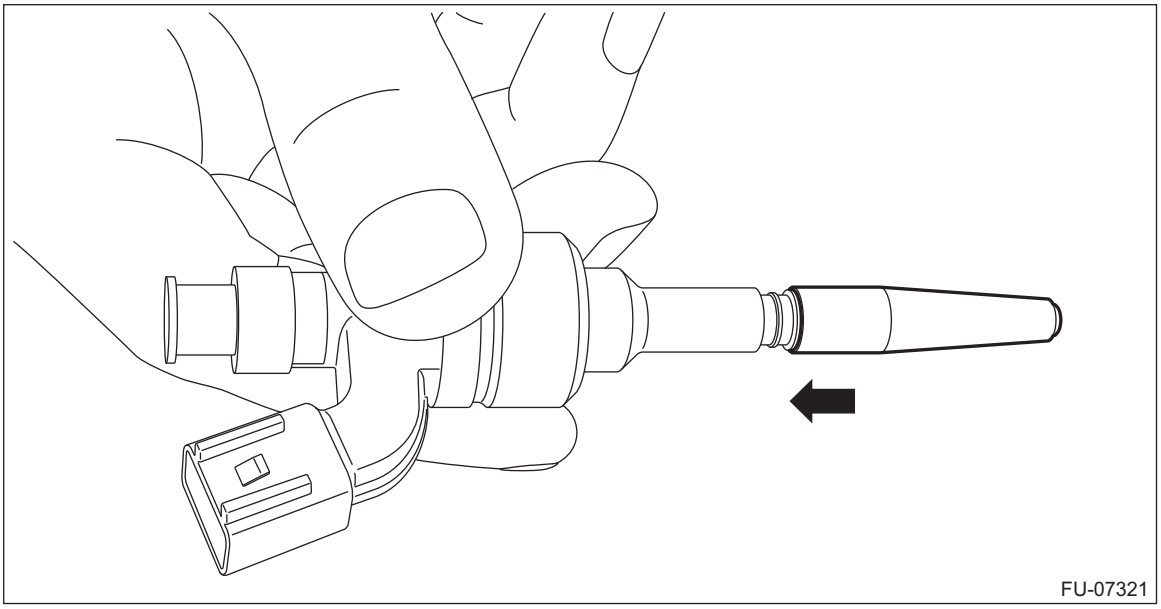


2) Remove the O-ring and backup ring from the fuel injector.

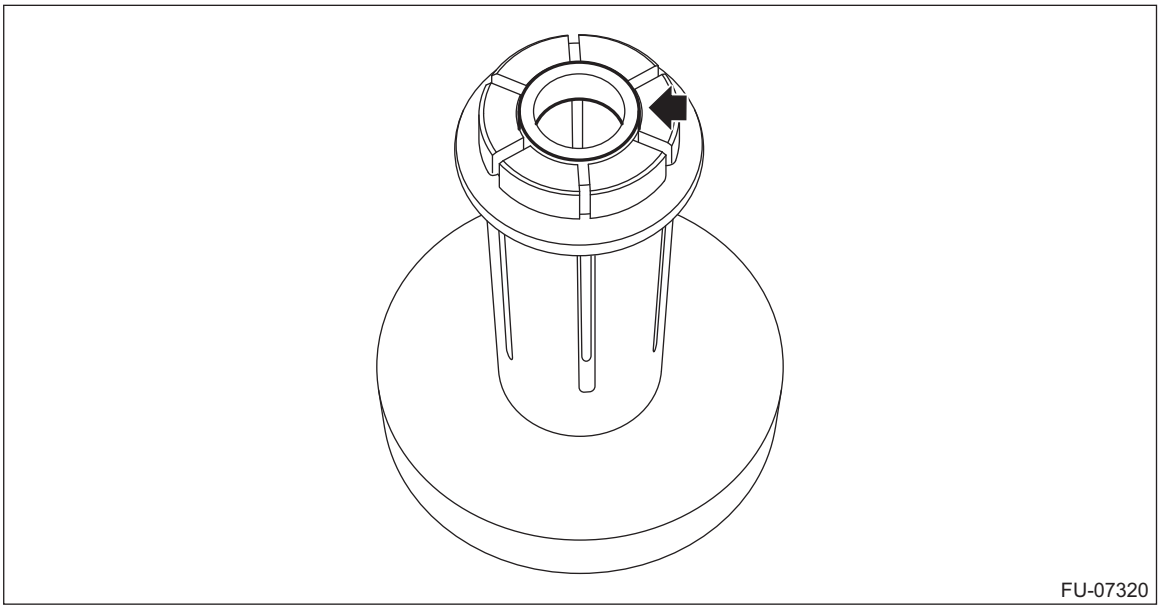


3) Attach the seal guide A to the fuel injector.

NOTE:
Two types of seal guides are provided. So, do not mix up the type to be used.

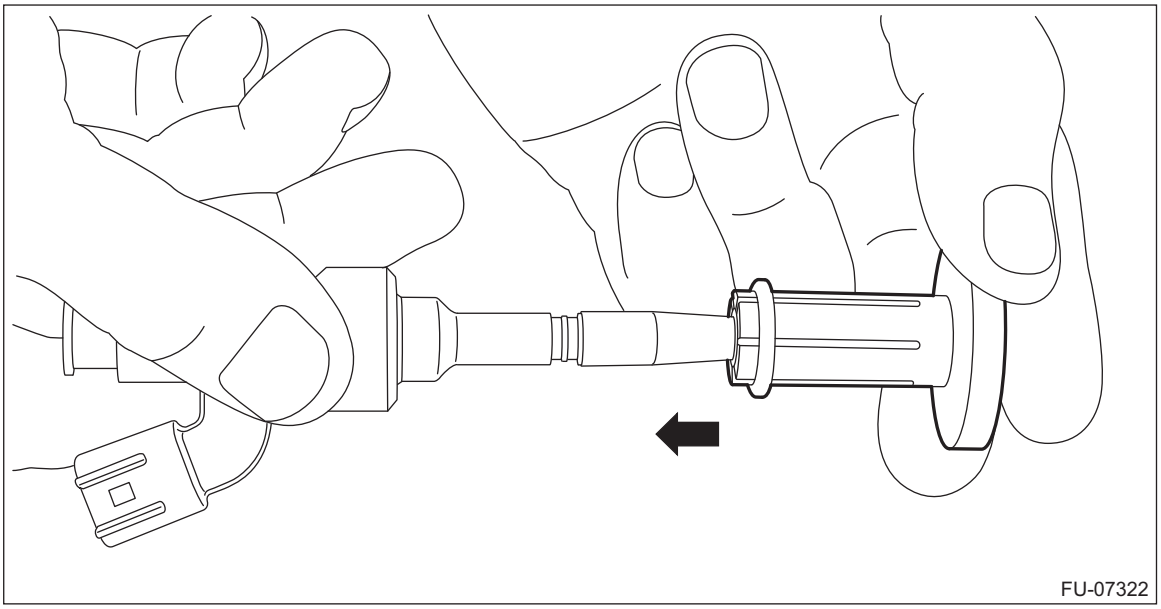


4) Set the injector seal to the injector seal installer.



5) Push in the injector seal installer slowly in the direction of the arrow, and attach the injector seal to the fuel injector.

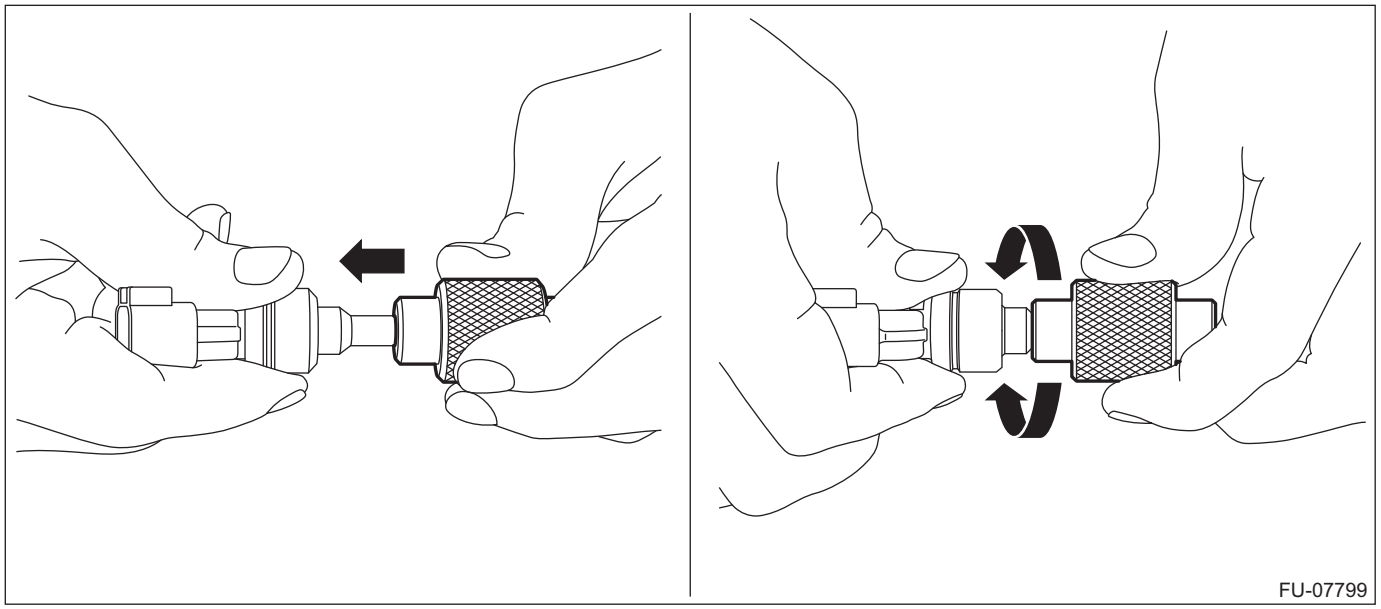
CAUTION:
- **Insert it so that the injector seal is installed straight.**
- **Be careful that the injector seal does not go beyond the fuel injector groove.**



6) While rotating the injector seal adjuster to left and right by 90 degrees for each side, slowly insert it all the way.

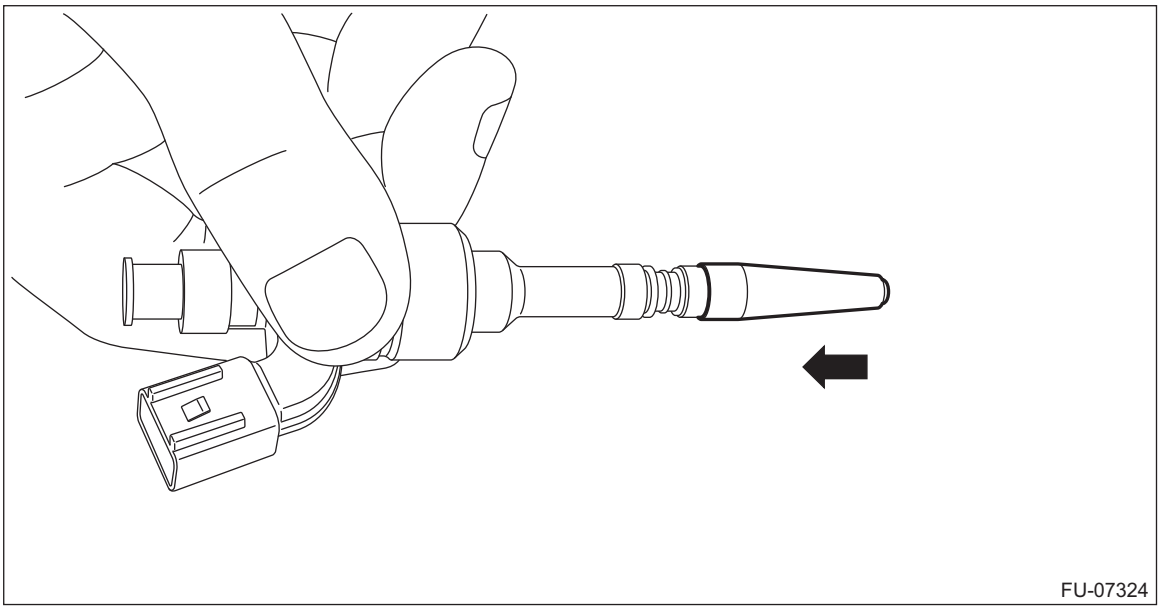
NOTE:
- Apply a thin coat of gasoline to the injector seal and injector seal adjuster.

• With the injector seal adjuster fully inserted, rotate it to left and right approx. ten times by 90 degrees for each side to normalize the injector seal.

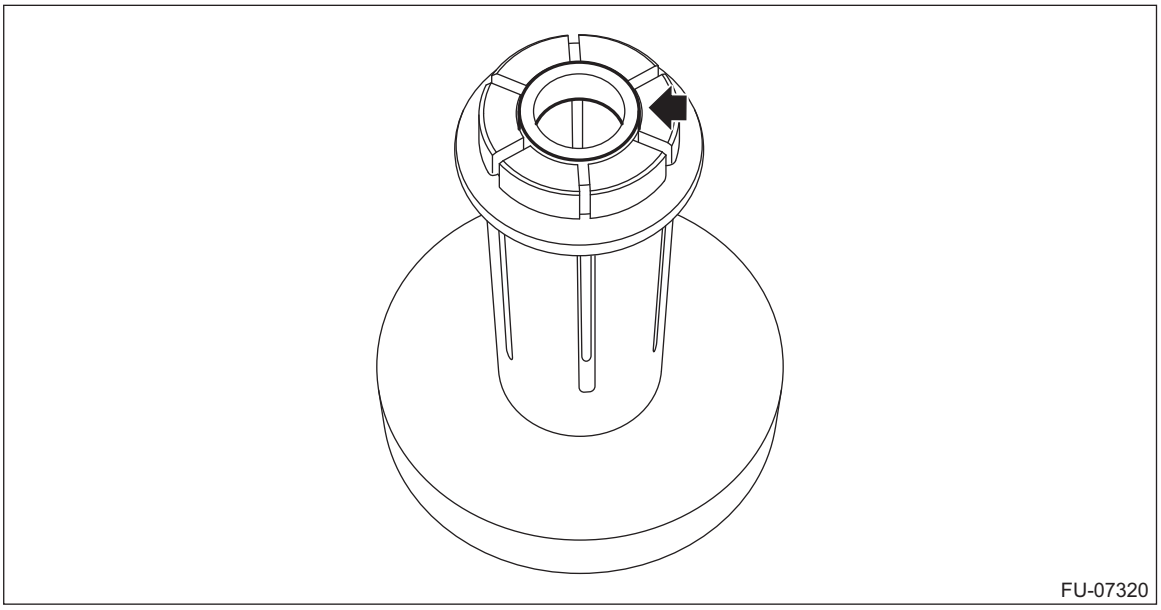


7) Attach the seal guide B to the fuel injector.

NOTE:
Two types of seal guides are provided. So, do not mix up the type to be used.

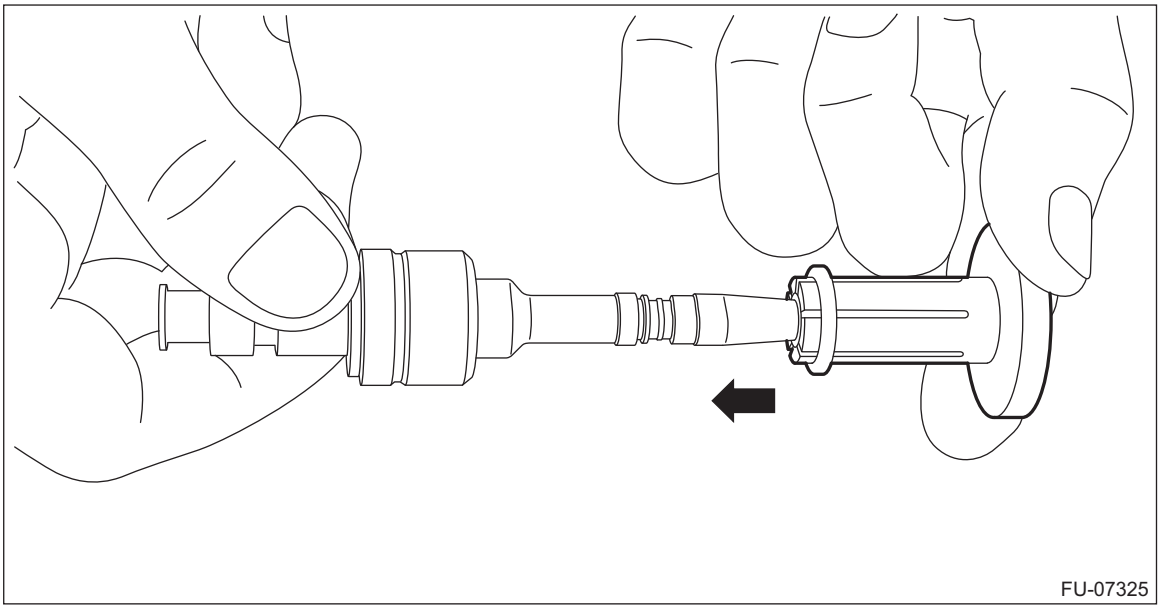


8) Set the injector seal to the injector seal installer.



9) Push in the injector seal installer slowly in the direction of the arrow, and attach the injector seal to the fuel injector.

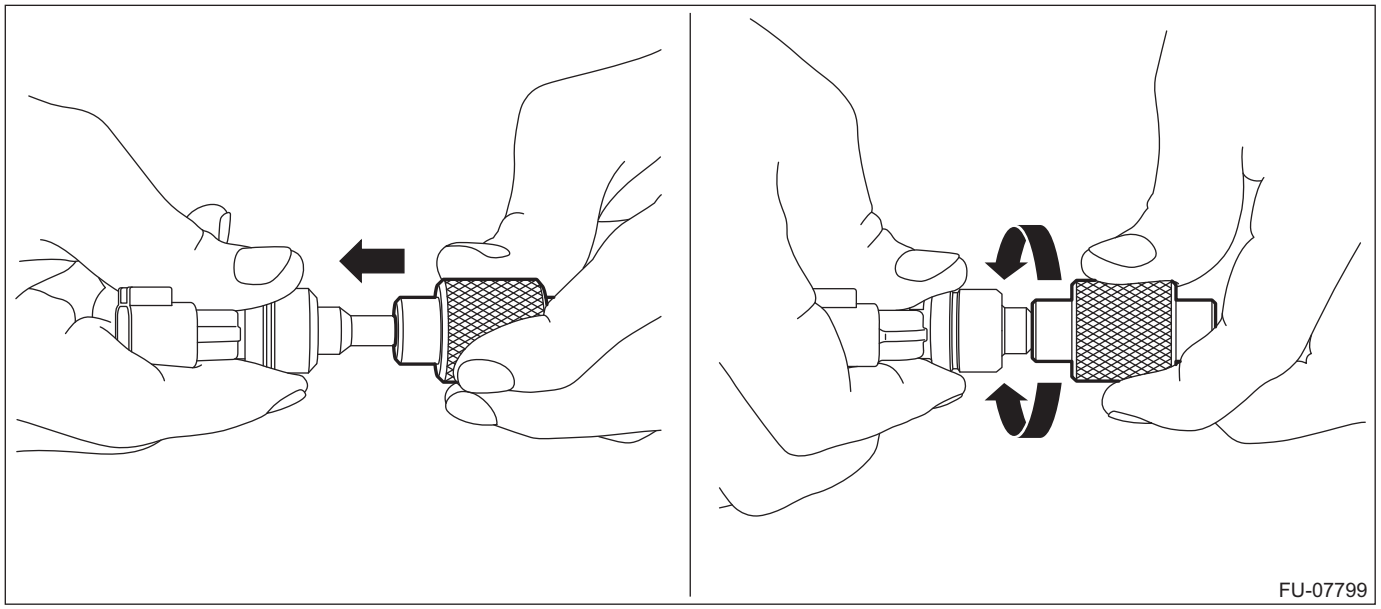
CAUTION:
- **Insert it so that the injector seal is installed straight.**
- **Be careful that the injector seal does not go beyond the fuel injector groove.**



10) While rotating the injector seal adjuster to left and right by 90 degrees for each side, slowly insert it all the way.

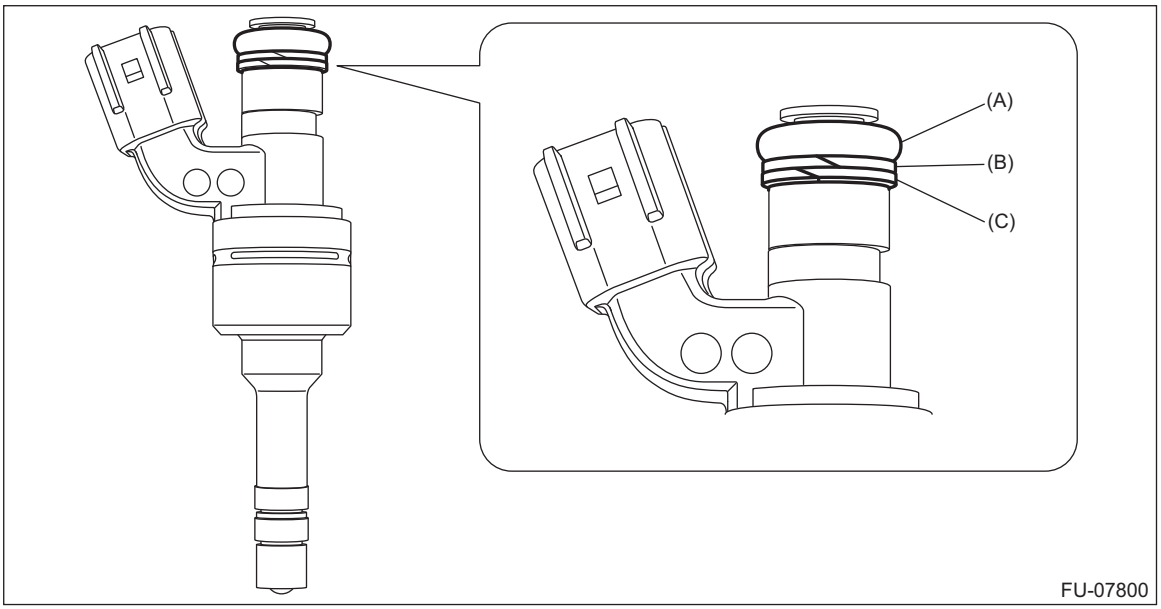
NOTE:
- Apply a thin coat of gasoline to the injector seal and injector seal adjuster.

• With the injector seal adjuster fully inserted, rotate it to left and right approx. ten times by 90 degrees for each side to normalize the injector seal.



11) Attach two backup rings and O-ring to the fuel injector.

NOTE:
Use new backup rings and O-ring.

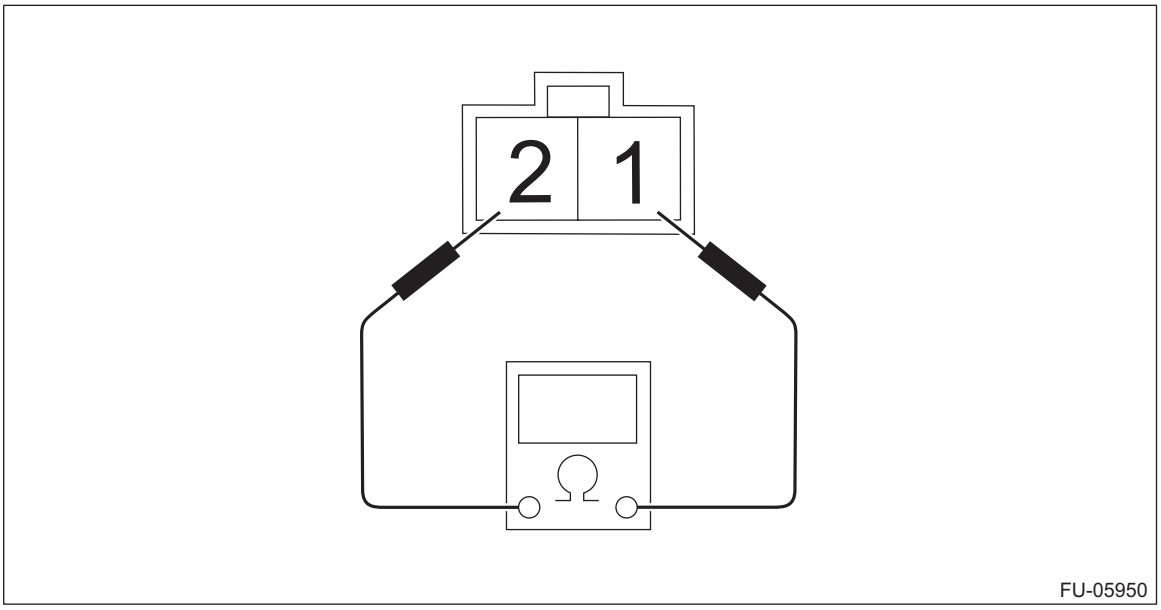


(A) O-ring (B) Backup ring (brown) (C) Backup ring (white)

D: INSPECTION

1) Check that the fuel injector has no deformation, cracks or other damages.

2) Measure the resistance between fuel injector terminals.



Terminal No.	Standard
1 and 2	Approx. 2.1 Ω (when 20°C (68°F))

8. Fuel Pressure Sensor

A: REMOVAL

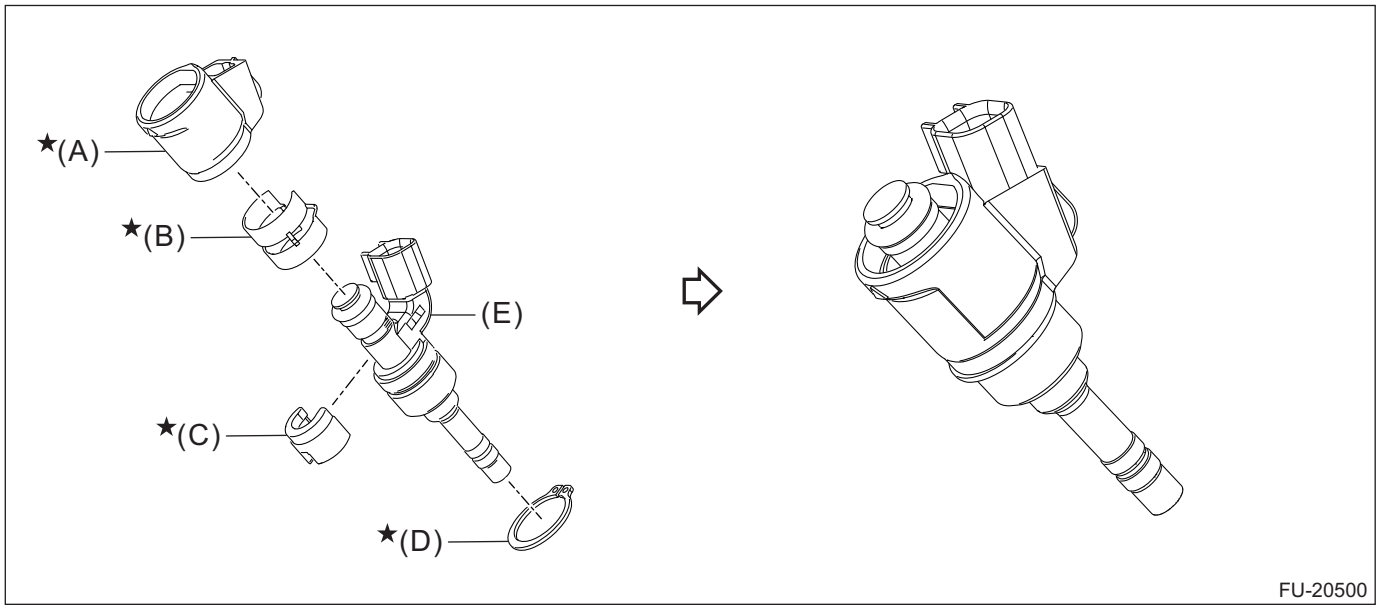
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the fuel injector RH. <Ref. to FU(w/o STI)-49, FUEL INJECTOR RH, REMOVAL, Fuel Injector.>

B: INSTALLATION

1) Replace the injector seal, backup ring and O-ring with a new part. <Ref. to FU(w/o STI)-59, REPLACEMENT, Fuel Injector.>
2) Set the spacer, holder, rubber cover and snap ring to the fuel injector, and install it to the fuel injector pipe RH.

CAUTION:
Always use a new spacer, holder, rubber cover and snap ring.

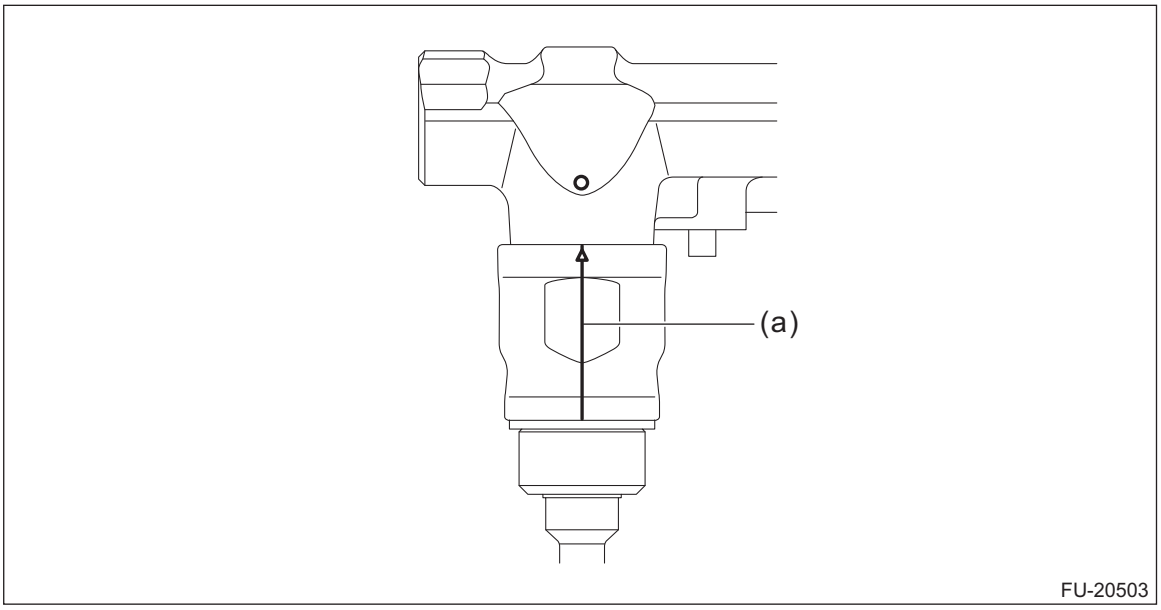


(A) Rubber cover
(B) Holder
(C) Spacer
(D) Snap ring
(E) Fuel injector

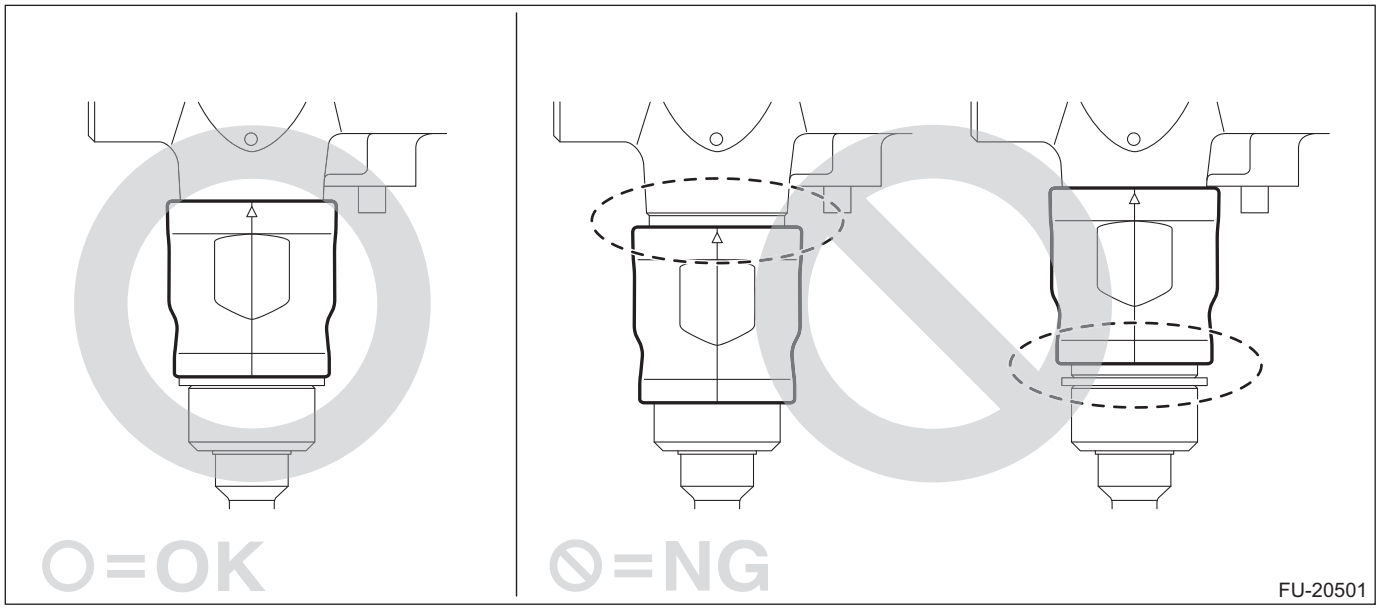
3) Set the fuel injector on the fuel injector pipe RH.

CAUTION:
- **● on the fuel injector pipe RH must be aligned with ▲ on the rubber cover.**

- **Parting line (a) of the rubber cover must be straight.**

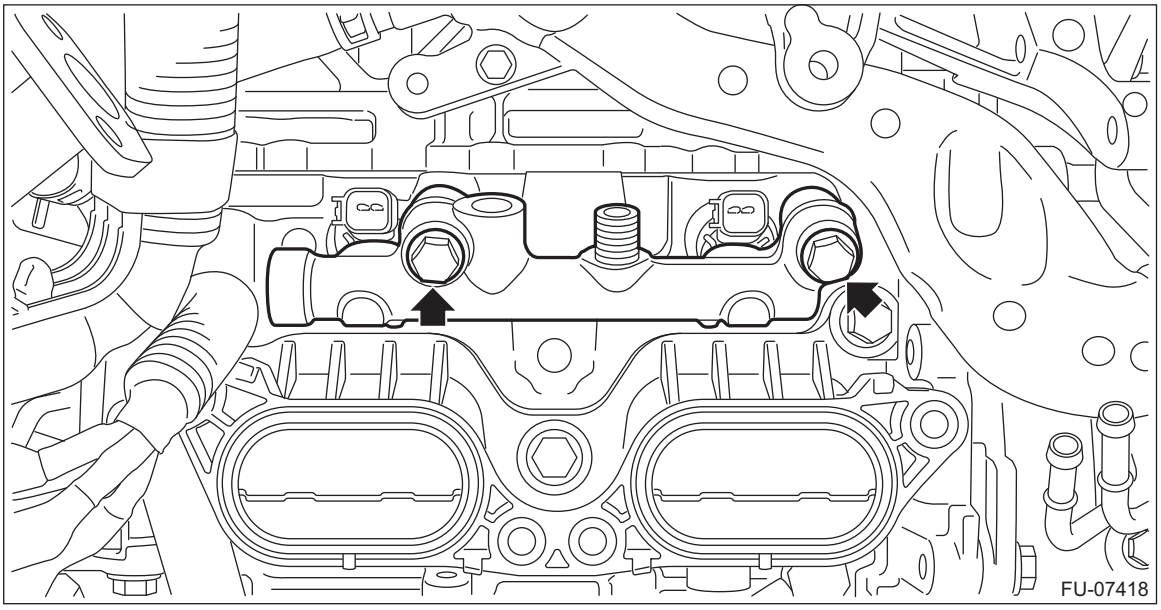


- **The end surface of the fuel injector pipe RH must fit inside the rubber cover.**
- **There must be no gap between the snap ring and rubber cover.**



4) Install the fuel injector pipe RH and fuel injector as a single unit to the cylinder head.
5) Tighten the fuel injector pipe RH.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

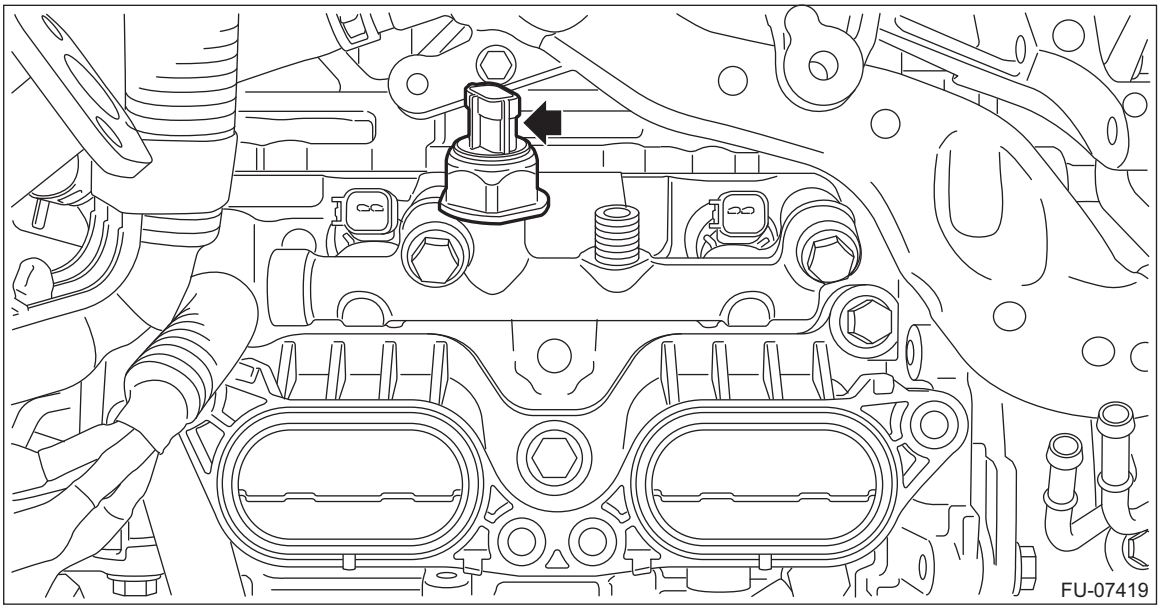


6) Temporarily tighten the fuel pressure sensor to the fuel injector pipe RH until it cannot be turned by hand.

CAUTION:
Always use a new fuel pressure sensor.
7) Tighten the fuel pressure sensor.

CAUTION:
• Be careful not to spill oil on the screw sections of the fuel pressure sensor and the fuel injector pipe RH.
• Be careful not to let foreign matter enter into the fuel pressure sensor during installation.
• Do not recheck the tightening torque after tightening the fuel pressure sensor with specified torque.

Tightening torque:
46 N·m (4.7 kgf-m, 33.9 ft-lb)



8) Install the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-81, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, INSTALLATION, High Pressure Fuel Delivery Pipe.>
9) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Check that the fuel pressure sensor has no deformation, cracks or other damages.

9. High Pressure Fuel Pump

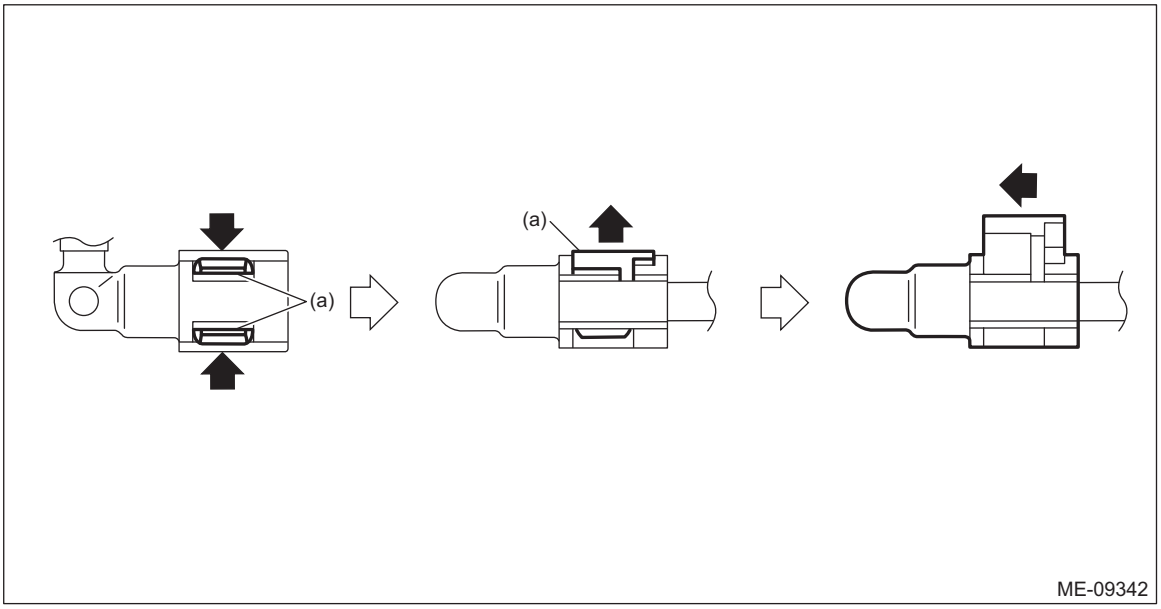
A: REMOVAL

1. HIGH-PRESSURE FUEL PUMP

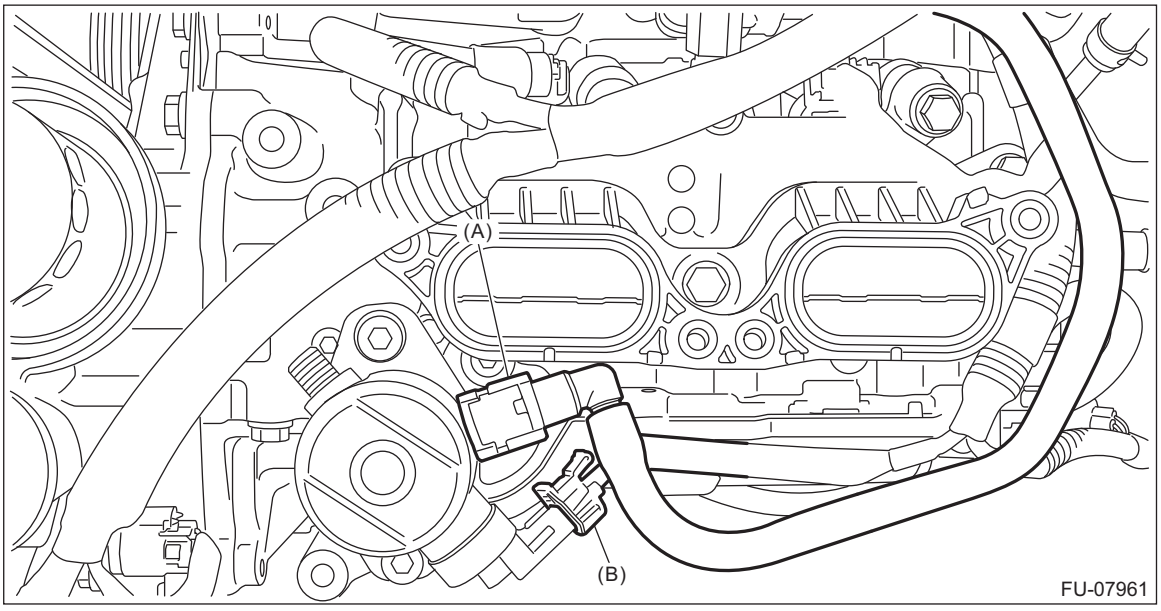
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the high-pressure fuel delivery pipes. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE, REMOVAL, High Pressure Fuel Delivery Pipe.>
3) Remove the fuel delivery pipe (A) from the high-pressure fuel pump, and disconnect the connector (B) from the high-pressure fuel pump.

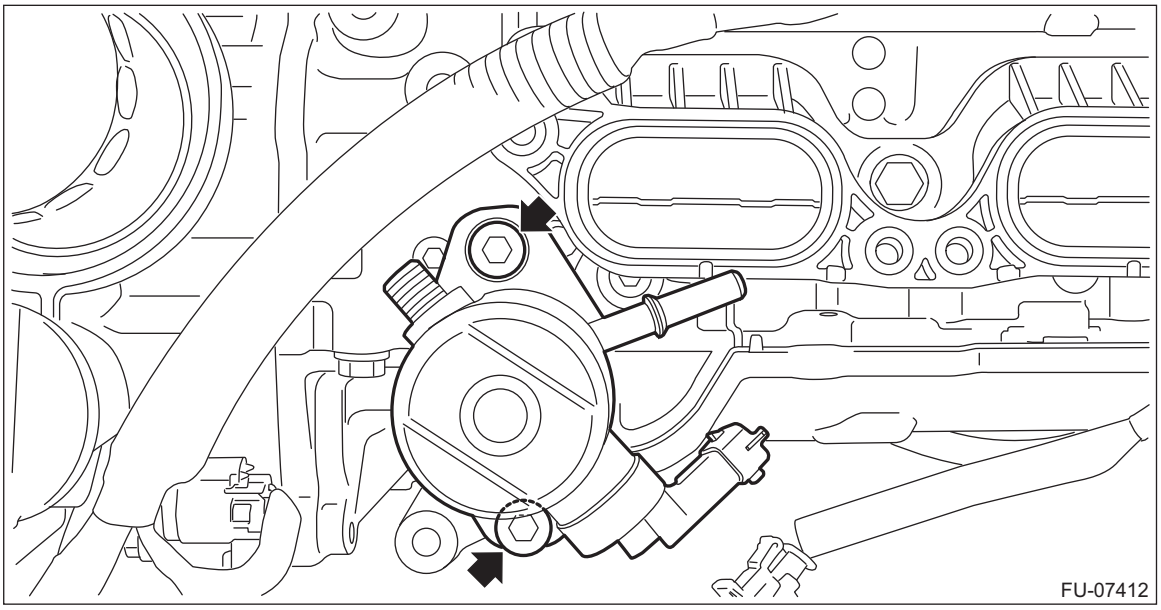
NOTE:
Disconnect the quick connector as shown in the figure.



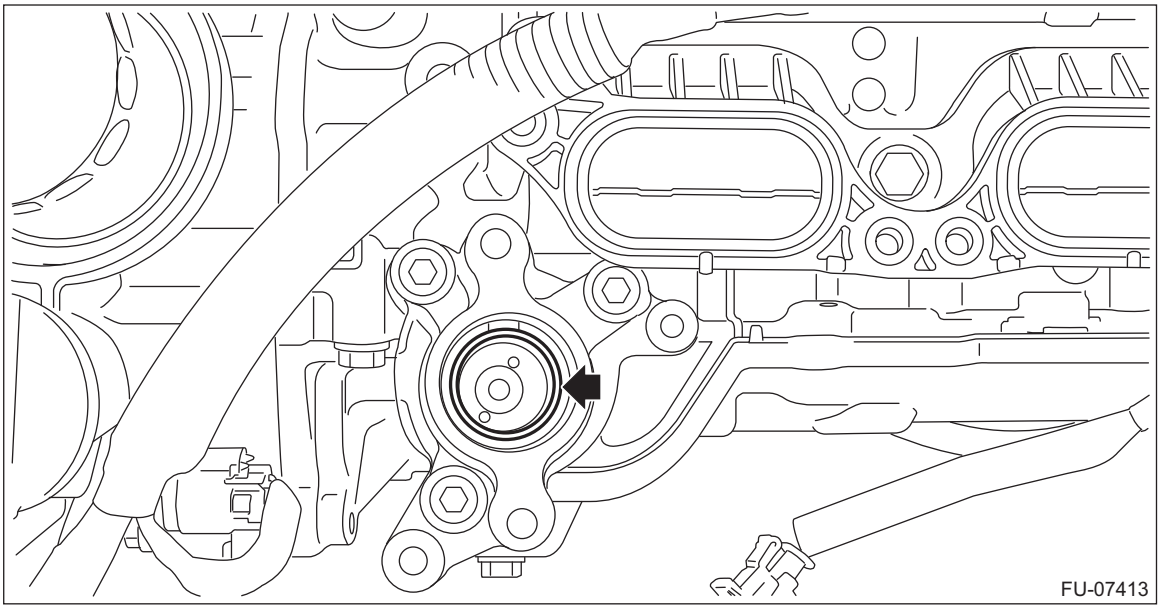
(a) Slider



4) Using TORX PLUS® bit 40IP, remove the high-pressure fuel pump.



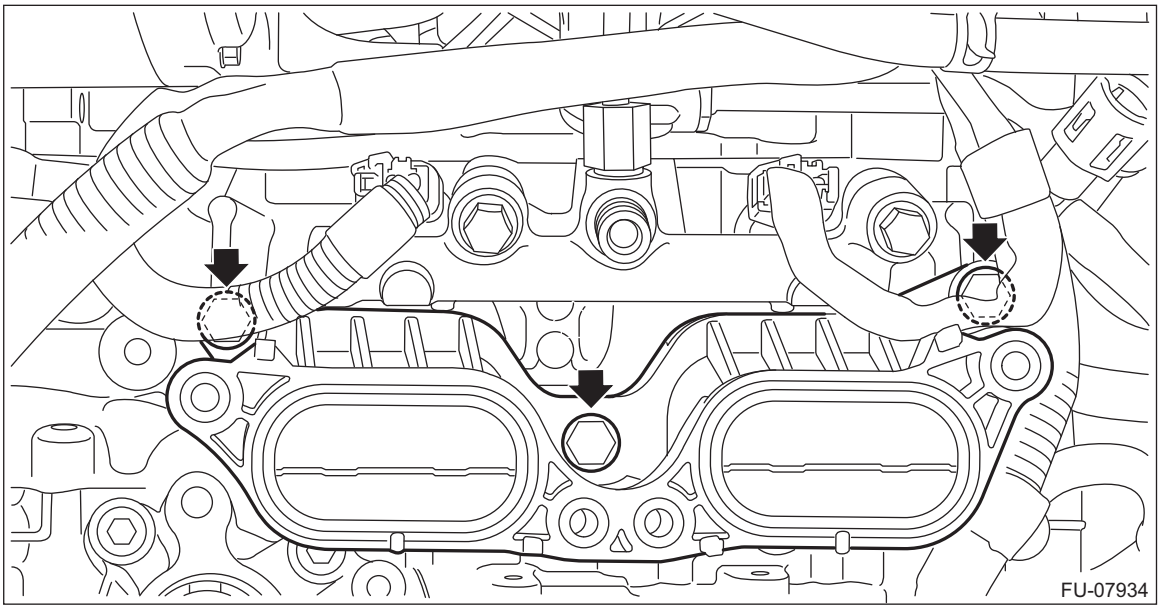
5) Remove the fuel pump lifter from the fuel pump case.



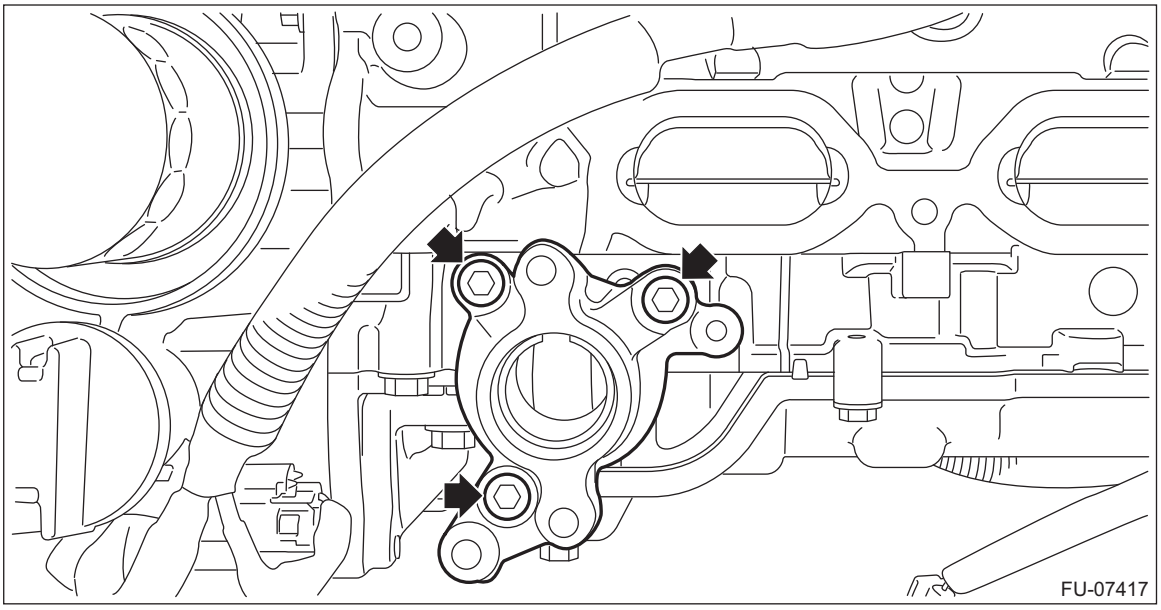
2. HIGH-PRESSURE FUEL PUMP CASE

1) Remove the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, HIGH-PRESSURE FUEL PUMP, REMOVAL, High Pressure Fuel Pump.>

2) Remove the air intake adapter LH from the cylinder head.



3) Remove the high-pressure fuel pump case from the cam carrier assembly LH.

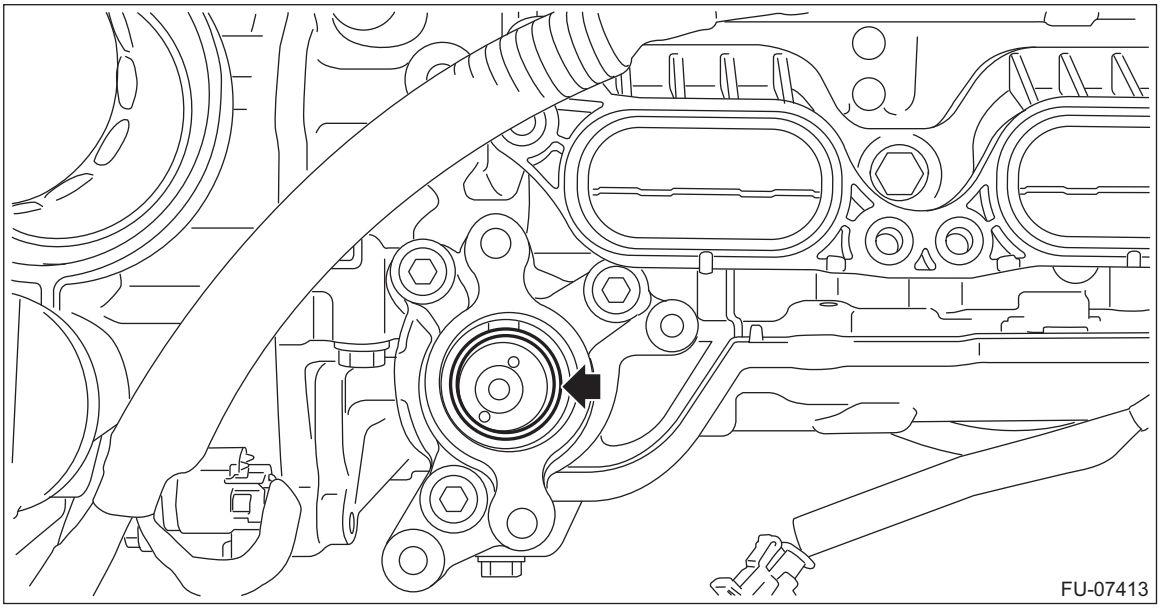


B: INSTALLATION

1. HIGH-PRESSURE FUEL PUMP

1) Install the fuel pump lifter to the high-pressure fuel pump case.

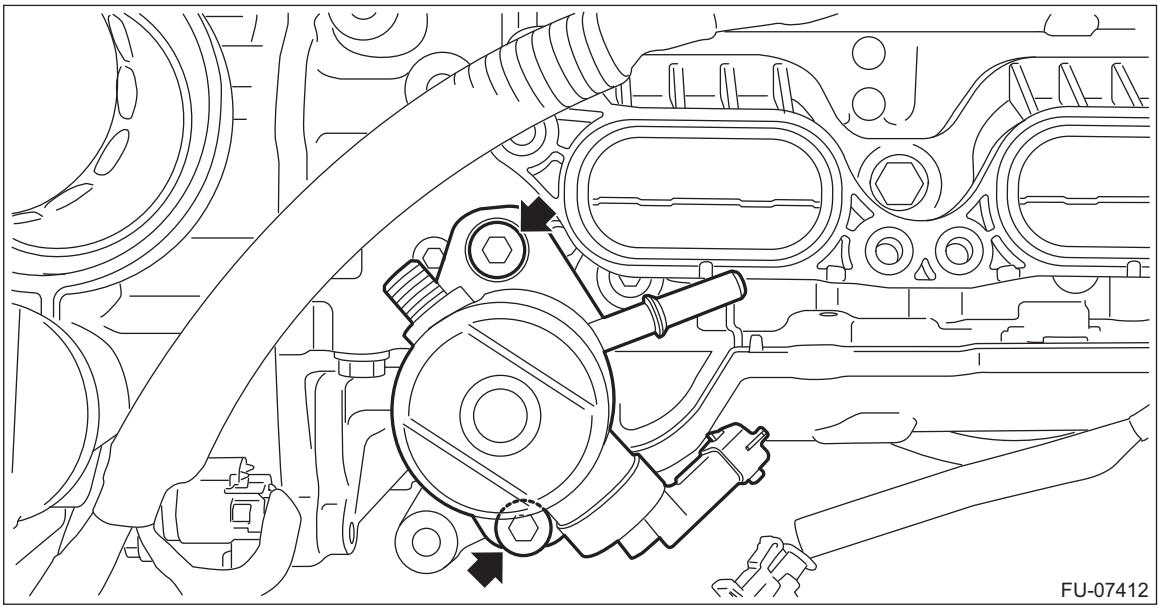
NOTE:
Apply engine oil to the side of the high-pressure fuel pump case and to the bottom surface of the fuel pump lifter.



2) Using TORX PLUS® bit 40IP, install the high-pressure fuel pump.

NOTE:
Use new O-rings.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)

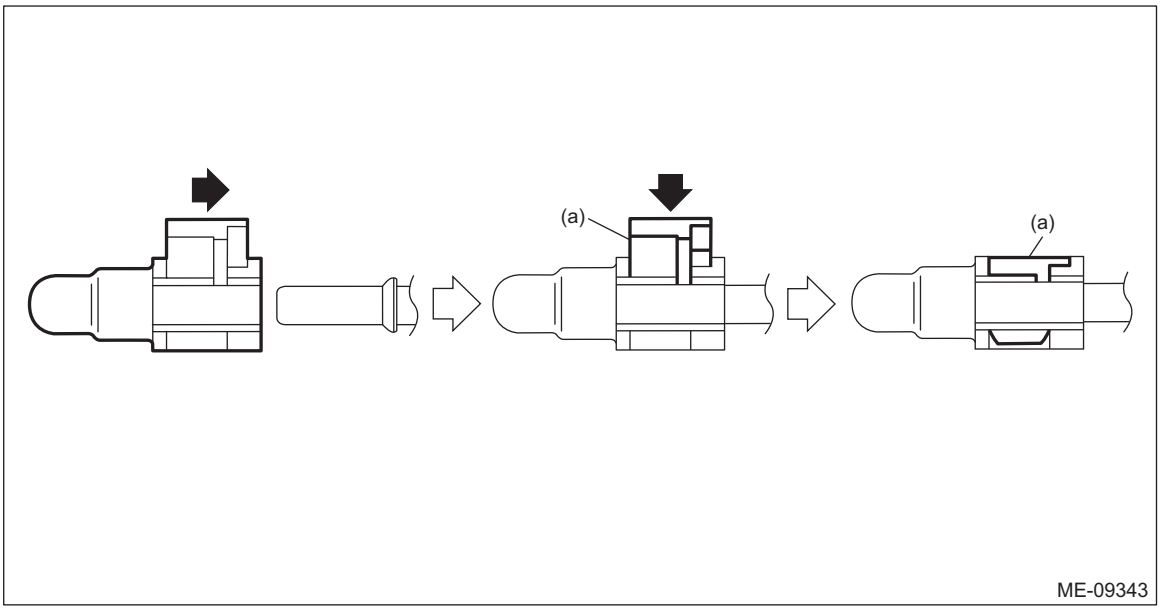


3) Connect the connector (B) to the high-pressure fuel pump, and install the fuel delivery pipe (A) to the high-pressure fuel pump.

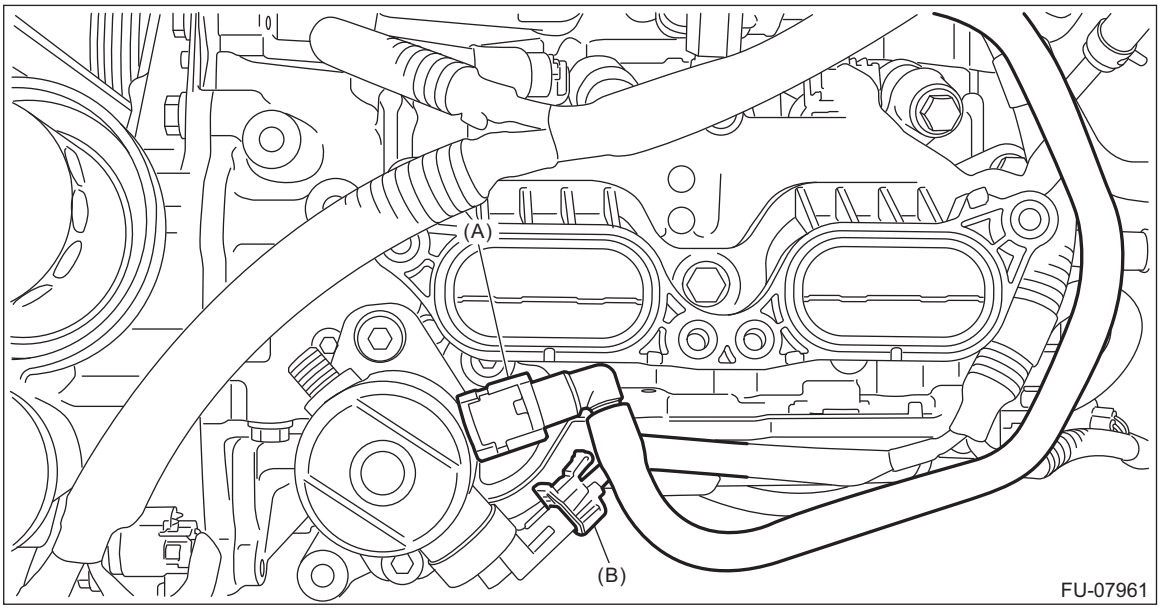
CAUTION:
- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**

• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.



(a) Slider



4) Install the high-pressure fuel delivery pipe. <Ref. to FU(w/o STI)-80, HIGH-PRESSURE FUEL DELIVERY PIPE, INSTALLATION, High Pressure Fuel Delivery Pipe.>
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

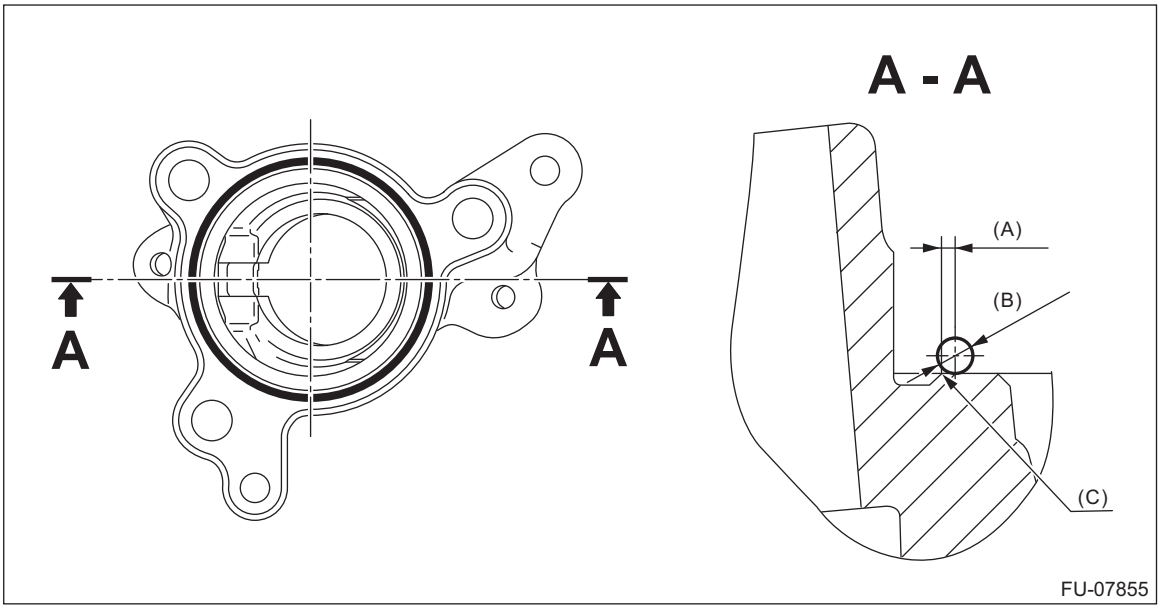
2. HIGH-PRESSURE FUEL PUMP CASE

1) Apply liquid gasket to the mating surfaces of fuel pump case, and install the high-pressure fuel pump case.

NOTE:
- Clean the mating surface of the high-pressure fuel pump case and cam carrier assembly LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

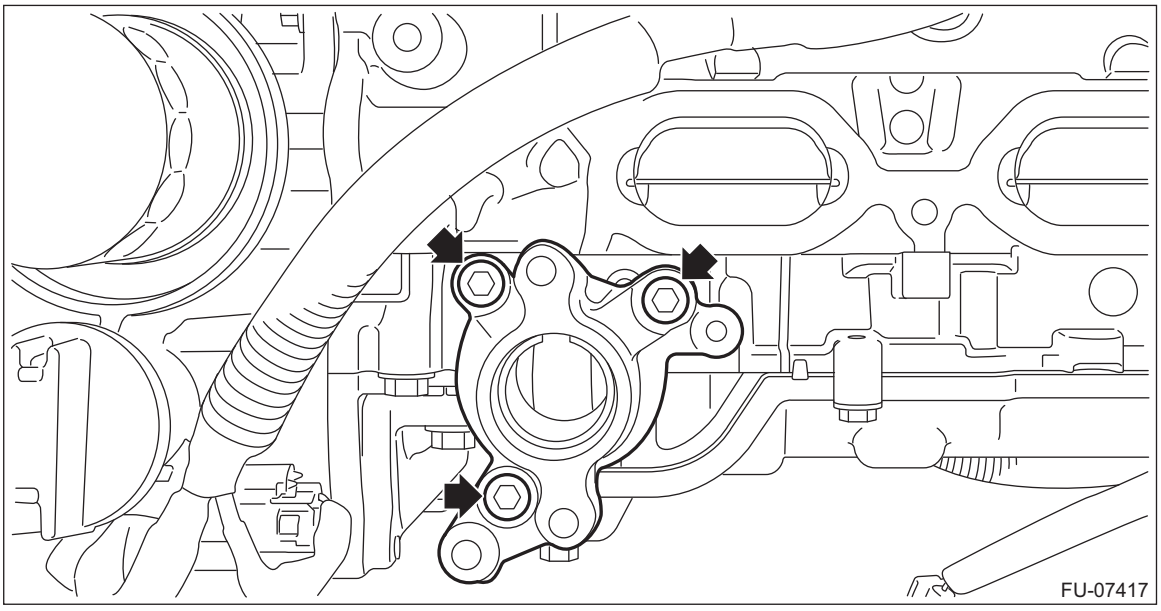
Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



(A) 1 mm or less (0.0394 in or less) (B) 3 mm (0.1181 in) (C) Chamfer edge

2) Install the high-pressure fuel pump case to the cam carrier assembly LH.

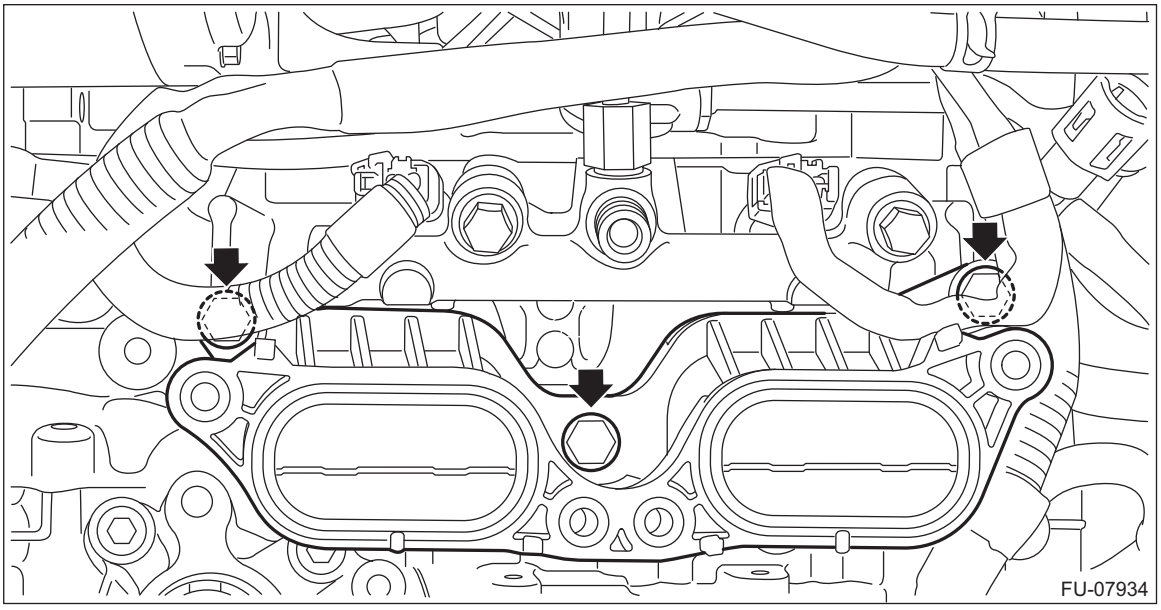
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



3) Install the air intake adapter LH to cylinder heads.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

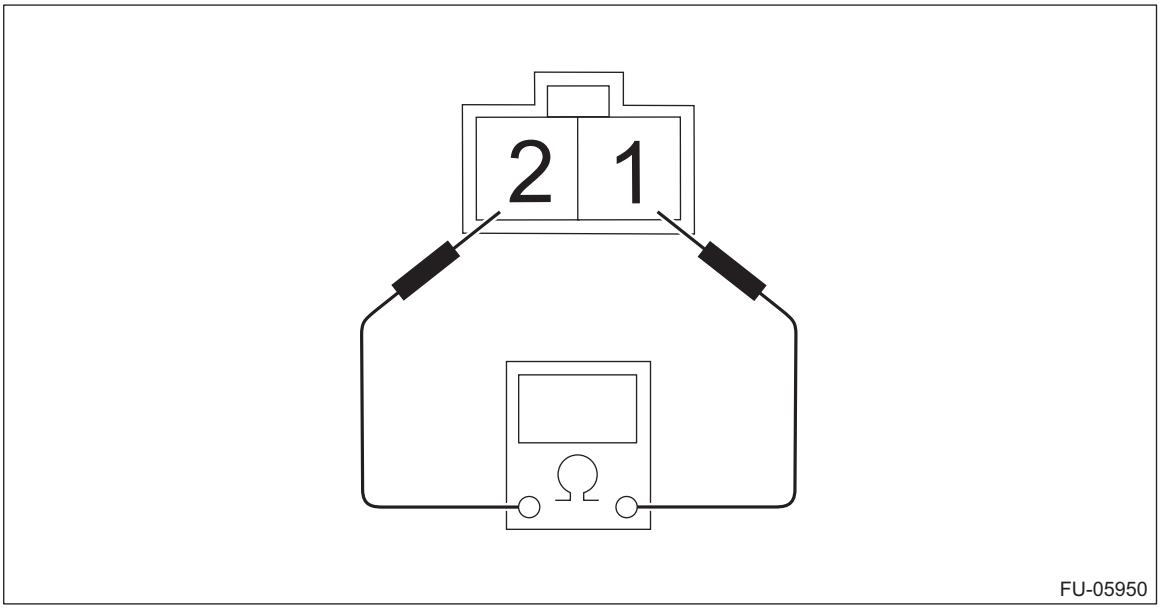


4) Install the high-pressure fuel pump. <Ref. to FU(w/o STI)-73, HIGH-PRESSURE FUEL PUMP, INSTALLATION, High Pressure Fuel Pump.>

C: INSPECTION

1. CHECK HIGH-PRESSURE FUEL PUMP

1) Check that the high-pressure fuel pump has no deformation, cracks or other damages.
2) Measure the resistance between high-pressure fuel pump terminals.



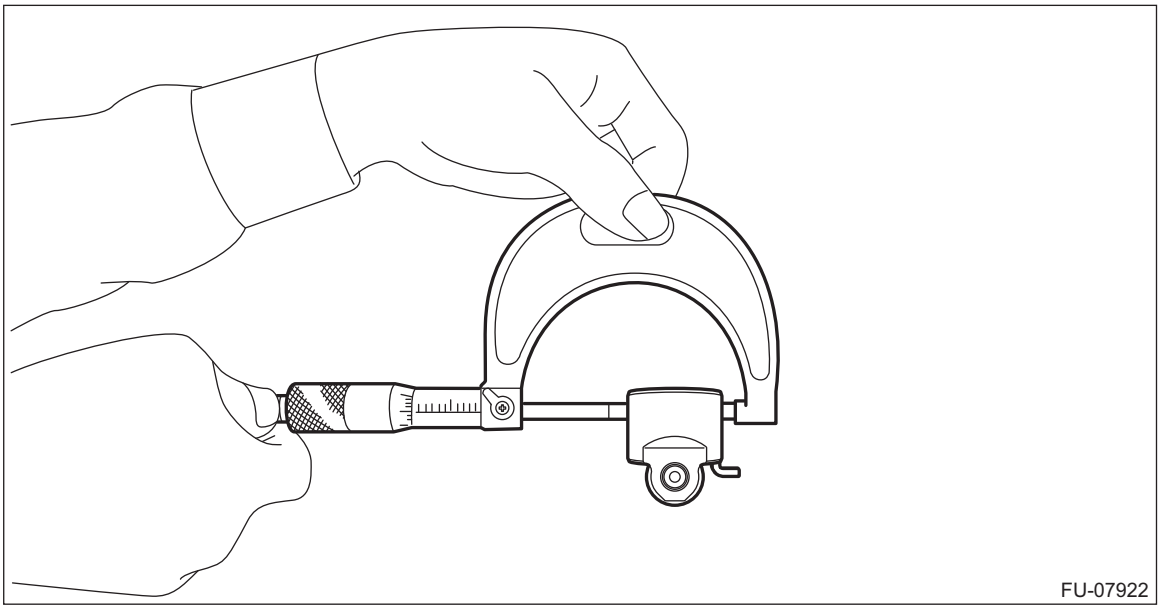
Terminal No.	Standard
1 and 2	10±1 Ω (when 20°C (68°F))

2. CHECK HIGH-PRESSURE FUEL PUMP CASE

1) Check that the high-pressure fuel pump case has no deformation, cracks or other damages.
2) Check the clearance between the fuel pump lifter and high-pressure fuel pump case bore. Check the clearance between fuel pump lifter and high-pressure fuel pump case bore by measuring the outer diameter of fuel pump lifter and the inner diameter of high-pressure fuel pump case bore respectively.

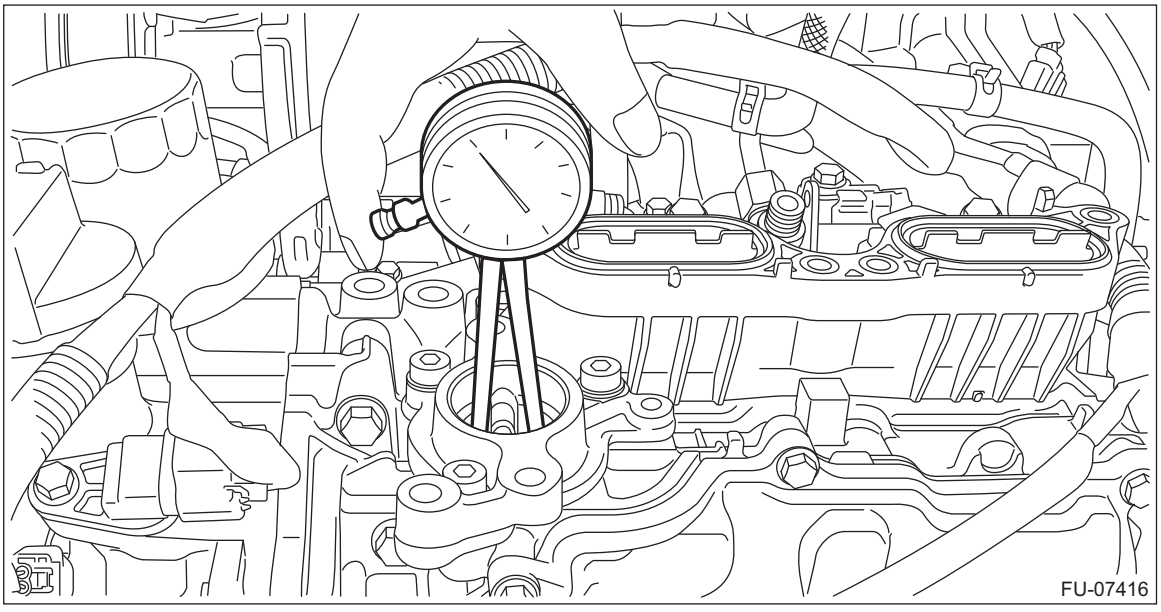
(1) Measure the outer diameter of fuel pump lifter with a micrometer.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Record the measured value.



(2) Using a caliper gauge, measure the inner diameter of high-pressure fuel pump case bore.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Record the measured value.



(3) Calculate the clearance between the fuel pump lifter and high-pressure fuel pump case bore. If it is not within the standard, replace the fuel pump lifter and high-pressure fuel pump case as a set.

Clearance between fuel pump lifter and high-pressure fuel pump case bore:
Standard
0.065 — 0.134 mm (0.0026 — 0.0053 in)

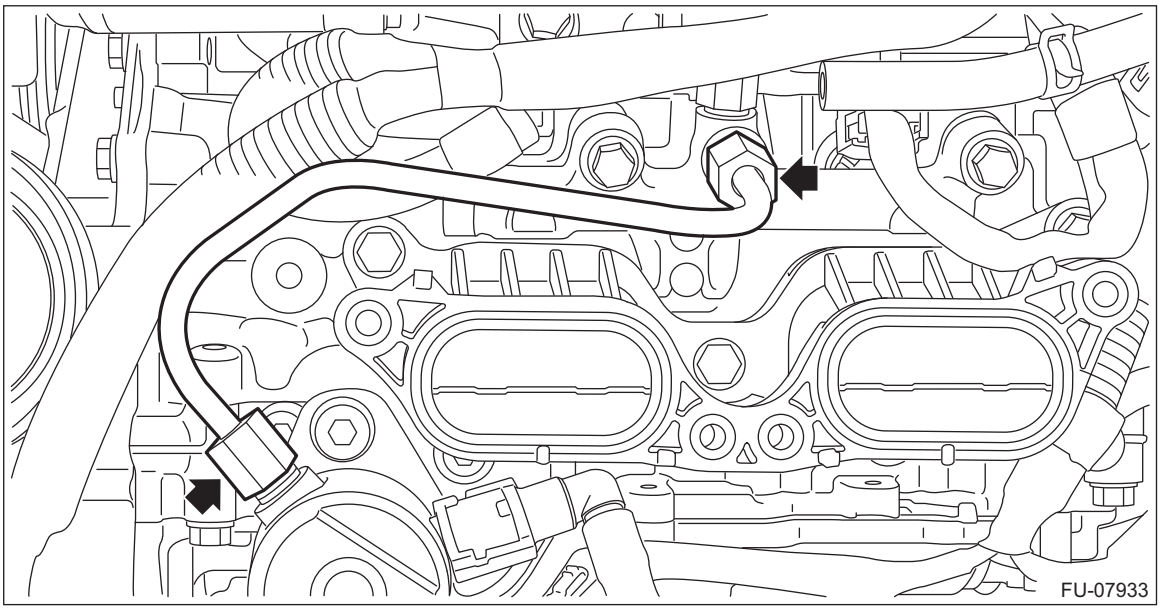
10.High Pressure Fuel Delivery Pipe

A: REMOVAL

1. HIGH-PRESSURE FUEL DELIVERY PIPE

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the fuel pipe insulator No. 1. <Ref. to FU(w/o STI)-45, FUEL PIPE INSULATOR NO. 1, REMOVAL, Fuel Insulator.>
4) Remove the fuel pipe insulator No. 2. <Ref. to FU(w/o STI)-45, FUEL PIPE INSULATOR NO. 2, REMOVAL, Fuel Insulator.>
5) Remove the high-pressure fuel delivery pipes.

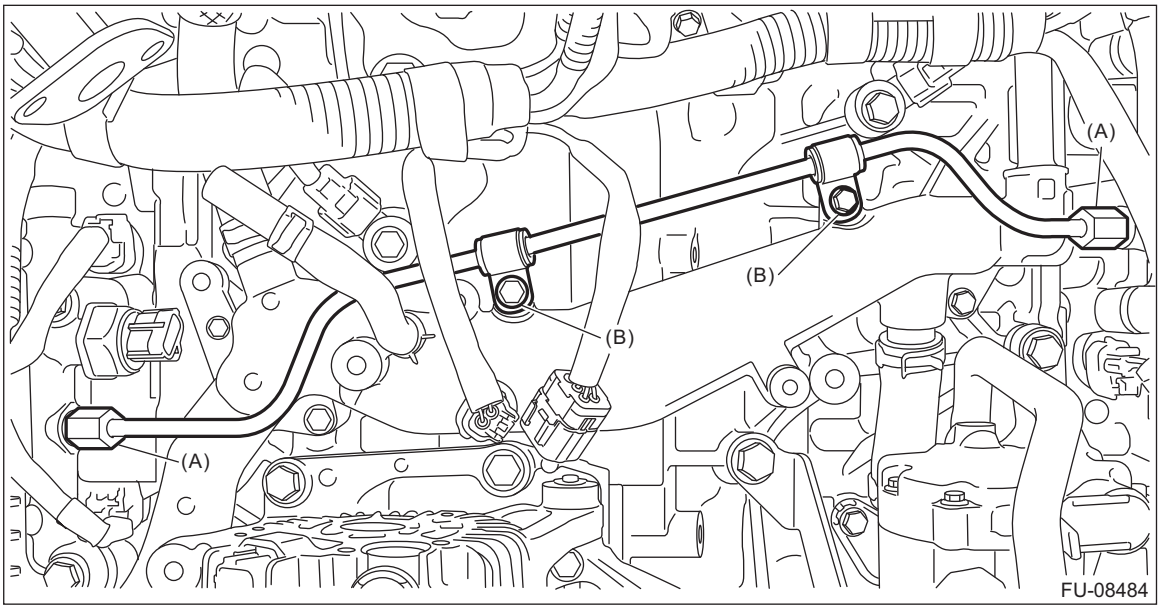


2. HIGH-PRESSURE FUEL DELIVERY PIPE ASSY

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the pipes using a container or cloth.**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the fuel pipe insulator No. 1. <Ref. to FU(w/o STI)-45, FUEL PIPE INSULATOR NO. 1, REMOVAL, Fuel Insulator.>
4) Remove the fuel pipe insulator No. 2. <Ref. to FU(w/o STI)-45, FUEL PIPE INSULATOR NO. 2, REMOVAL, Fuel Insulator.>
5) Remove the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-46, FUEL PIPE INSULATOR NO. 3, REMOVAL, Fuel Insulator.>

6) Remove the flare nut (A) and bolt (B), and then remove the high-pressure fuel delivery pipe assembly.



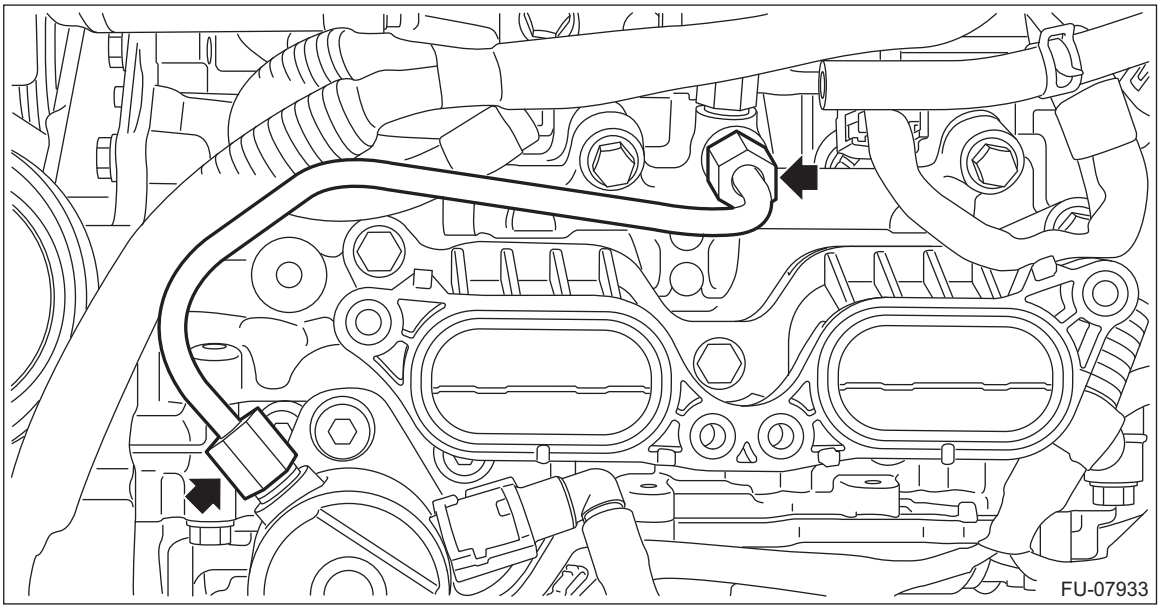
B: INSTALLATION

1. HIGH-PRESSURE FUEL DELIVERY PIPE

1) Temporarily tighten the high-pressure fuel delivery pipe by hand until it is seated, and tighten the flare nuts on both ends.

CAUTION:
Always use a new high-pressure fuel delivery pipe.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



2) Install the fuel pipe insulator No. 2. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 2, INSTALLATION, Fuel Insulator.>
3) Install the fuel pipe insulator No. 1. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 1, INSTALLATION, Fuel Insulator.>
4) Install the intake manifold. <Ref. to FU(w/o STI)-27, INSTALLATION, Intake Manifold.>
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. HIGH-PRESSURE FUEL DELIVERY PIPE ASSY

1) Install the high-pressure fuel delivery pipe assembly.

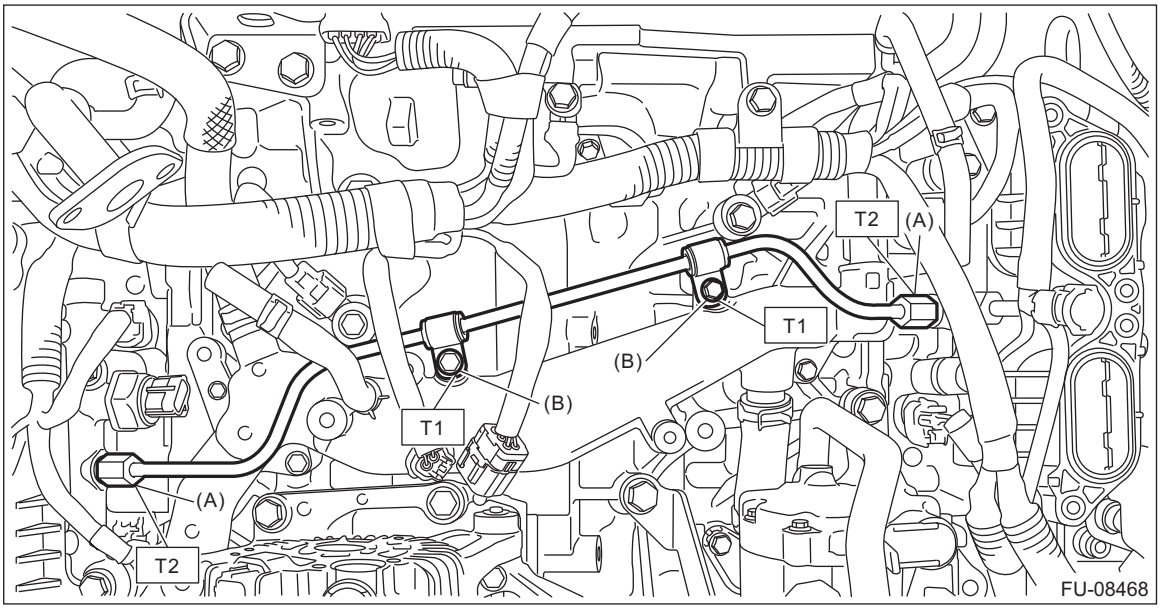
CAUTION:
Always use a new high-pressure fuel delivery pipe assembly.

(1) Temporarily tighten the flare nut (A) to the fuel injector pipe by hand until it is seated, and secure the high-pressure fuel delivery pipe assembly to the water pipe assembly using bolts (B).

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

(2) Tighten the flare nuts (A).

Tightening torque:
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



2) Install the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 3, INSTALLATION, Fuel Insulator.>
3) Install the fuel pipe insulator No. 2. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 2, INSTALLATION, Fuel Insulator.>
4) Install the fuel pipe insulator No. 1. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 1, INSTALLATION, Fuel Insulator.>
5) Install the intake manifold. <Ref. to FU(w/o STI)-27, INSTALLATION, Intake Manifold.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Check that the high-pressure fuel delivery pipe and the high-pressure fuel delivery pipe assembly have no deformation, cracks and other damages.

11.Engine Wiring Harness

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
3) Remove the fuel insulator. <Ref. to FU(w/o STI)-45, REMOVAL, Fuel Insulator.>
4) Remove the engine control module (ECM). <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
5) Disconnect the connector from the engine.

- Structural diagram 1

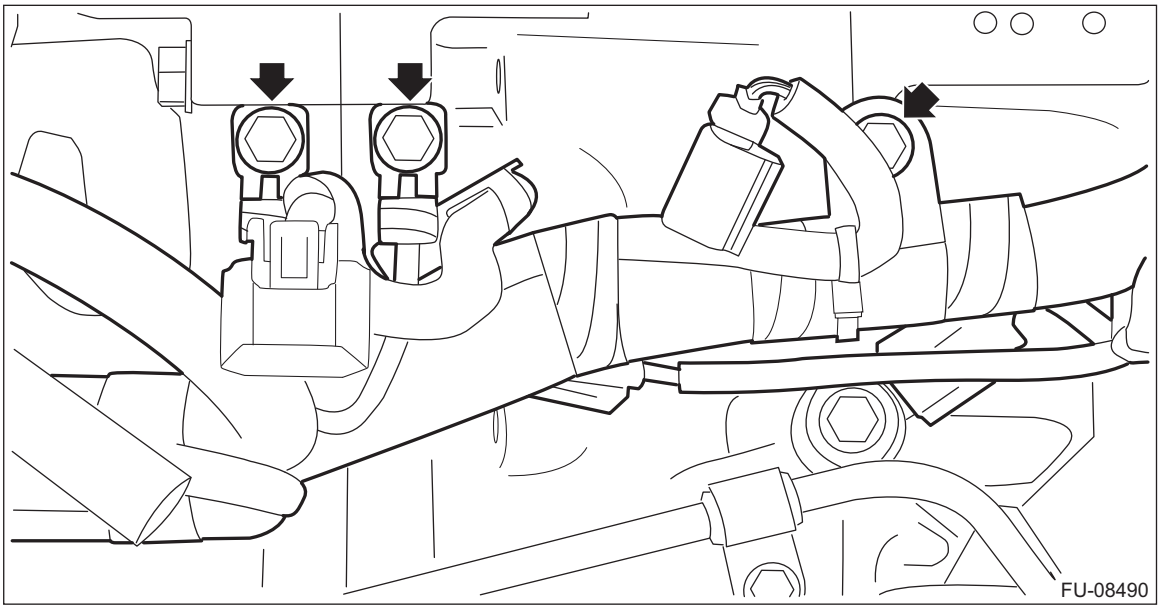
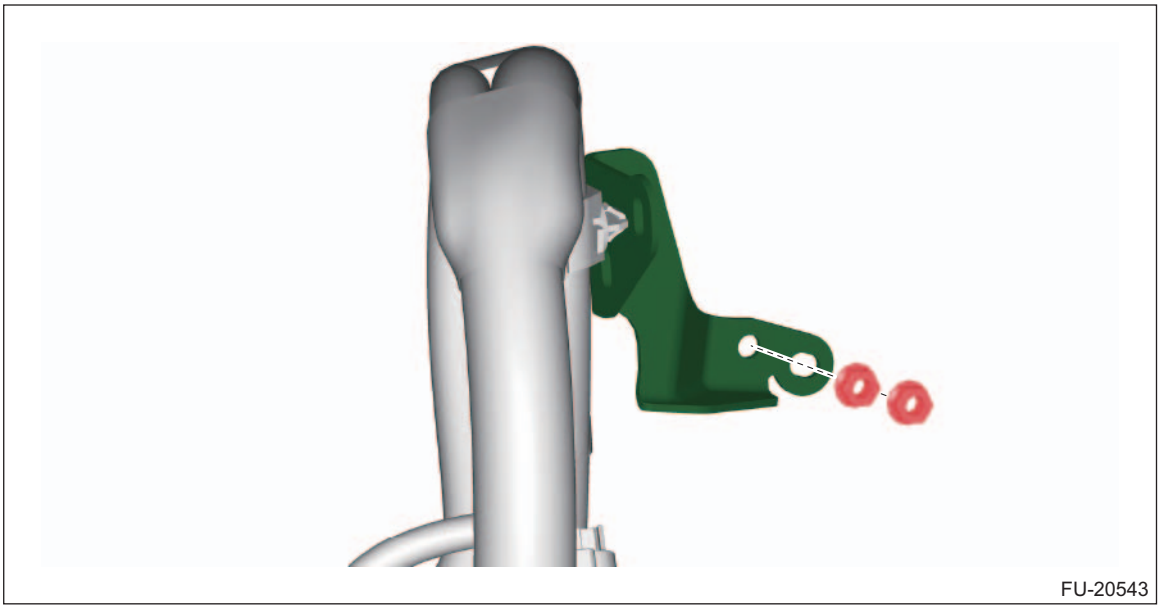
(13) Remove clip from screw hole.
(14) Ignition coil No. 4
(15) Ignition coil No. 2
(16) Oxygen sensor
(17) Exhaust camshaft position sensor LH
(18) Remove clip from screw hole.

6) Remove the engine wiring harness.



7) Remove the harness stay.



B: INSTALLATION

1) Install the harness stay.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Set the engine wiring harness to the engine, and connect the connector.

NOTE:
- If the clip is damaged, replace it with a new part.

• Before replacing the clip, put an alignment mark (a) on both engine wiring harness and clip to remove the clip, and then align to the alignment mark (a) to attach a new clip to the engine wiring harness.

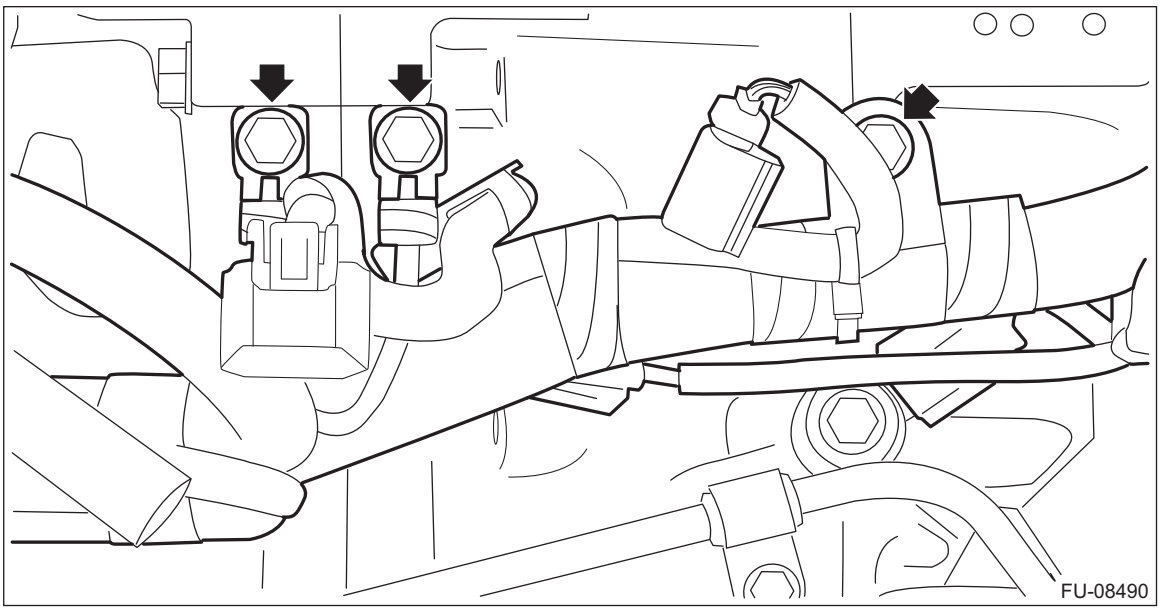
(1) Intake camshaft position sensor RH
(2) Exhaust camshaft position sensor RH
(3) Ignition coil No. 1
(4) Ignition coil No. 3
(5) Secure the clip to the screw hole.
(6) Route under the tumble generator valve.
(7) Secure the clip to the round hole.
(8) Secure the clip to the oil pipe.
(9) Intake camshaft position sensor LH
(10) High-pressure fuel pump
(11) Route outside of the fuel tube.
(12) Route under the tumble generator valve.
(13) Secure the clip to the screw hole.
(14) Ignition coil No. 4
(15) Ignition coil No. 2
(16) Oxygen sensor (secured to the heater pipe)
(17) Exhaust camshaft position sensor LH
(18) Secure the clip to the screw hole.

3) Install the engine wiring harness.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



4) Install the engine control module (ECM). <Ref. to FU(w/o STI)-126, INSTALLATION, Engine Control Module (ECM).>
5) Install the fuel insulator. <Ref. to FU(w/o STI)-47, INSTALLATION, Fuel Insulator.>
6) Install the intake manifold. <Ref. to FU(w/o STI)-27, INSTALLATION, Intake Manifold.>
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

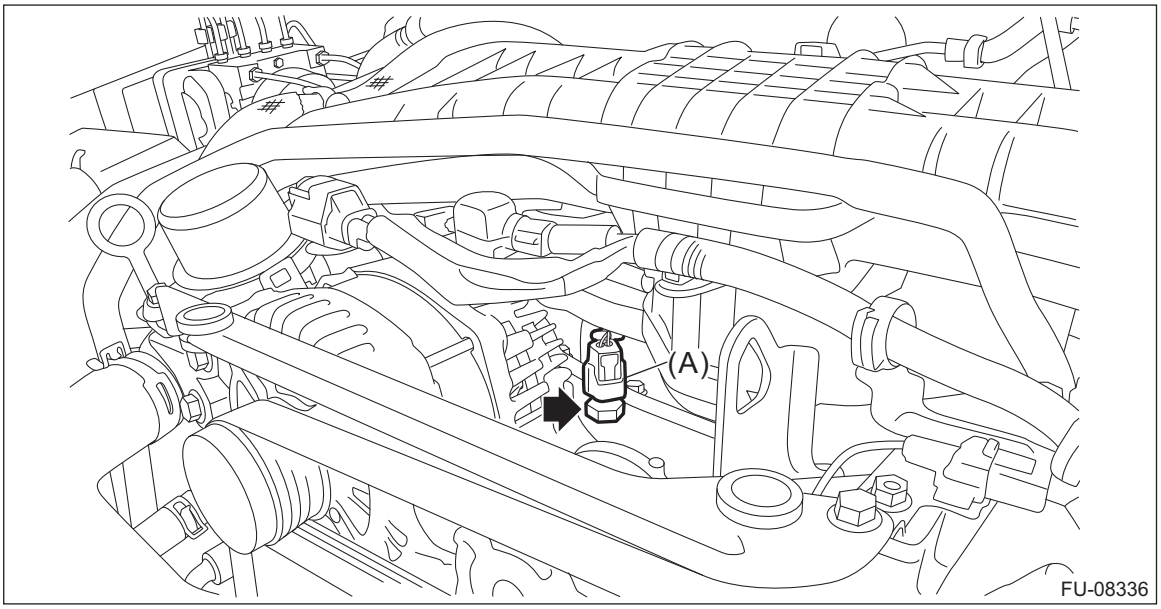
C: INSPECTION

1) Check that the engine wiring harness does not have deformation, cracks and any other damage.
2) Check the engine wiring harness for contamination or clogging.

12.Engine Coolant Temperature Sensor

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Disconnect the connector (A) from the engine coolant temperature sensor, and remove the engine coolant temperature sensor.



B: INSTALLATION

Install in the reverse order of removal.

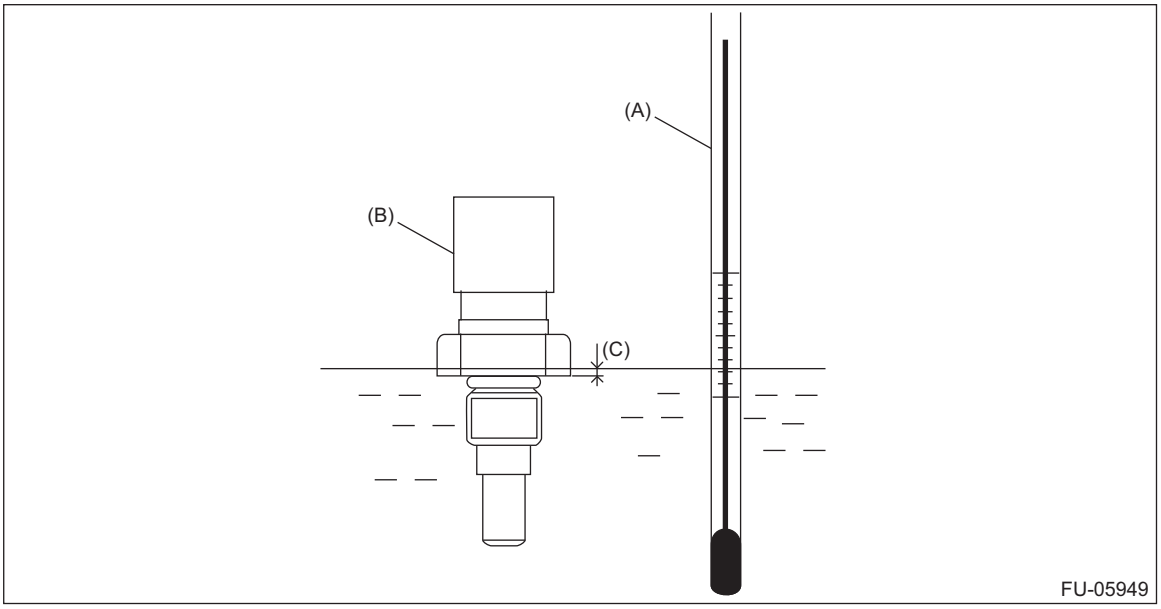
NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

C: INSPECTION

1) Check that the engine coolant temperature sensor has no deformation, cracks or other damages.
2) Immerse the engine coolant temperature sensor and a thermometer in water.

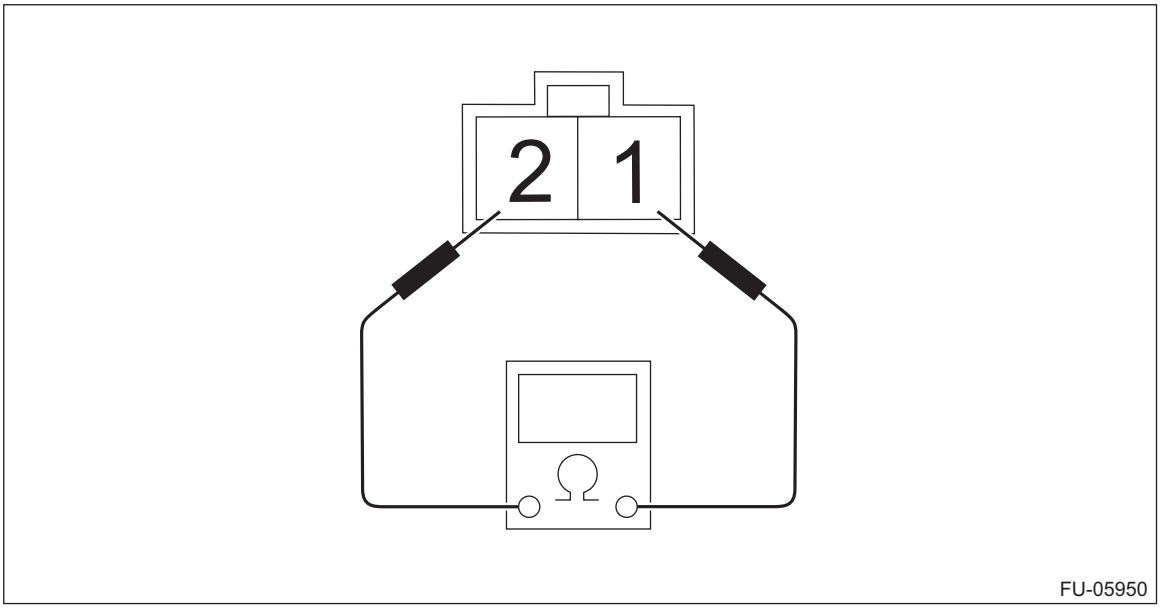
CAUTION:
Take care not to allow water to get into the engine coolant temperature sensor connector. Completely remove any water inside.



(A) Thermometer
(B) Engine coolant temperature sensor
(C) Hexagonal part height: To approx. $^{1}/_{3}$

3) Raise water temperature gradually, measure the resistance between the engine coolant temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:
Agitate the water for even temperature distribution.



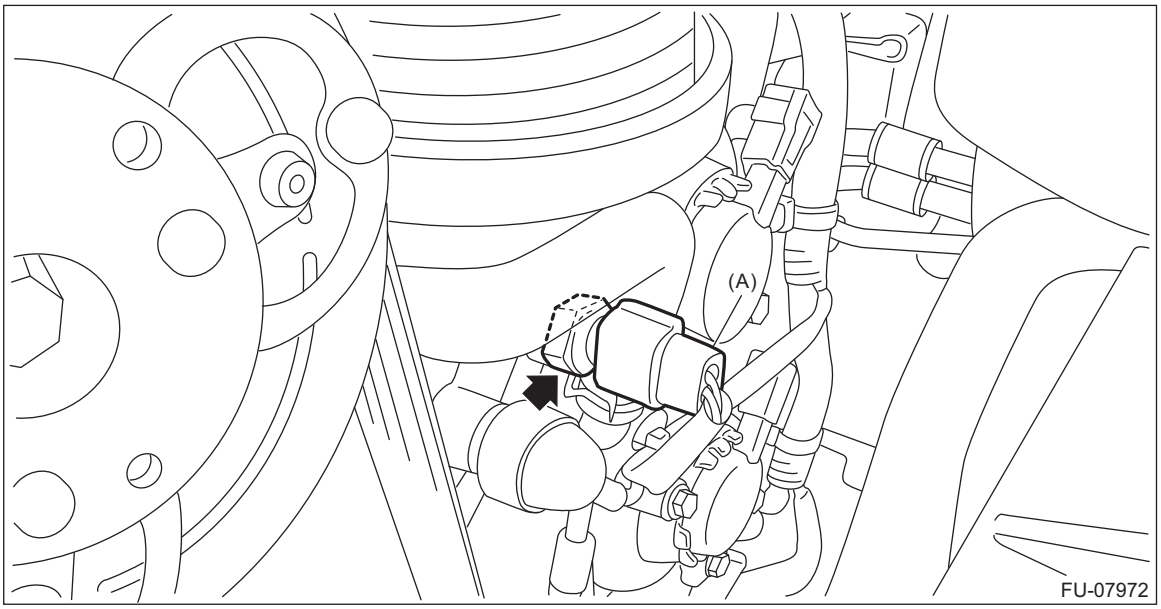
Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	2.45±0.2 kΩ
80°C (176°F)		0.318±0.013 kΩ

13.Engine Oil Temperature Sensor

A: REMOVAL

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Disconnect the connector (A) from the engine oil temperature sensor, and remove the engine oil temperature sensor from the chain cover.



B: INSTALLATION

Install in the reverse order of removal.

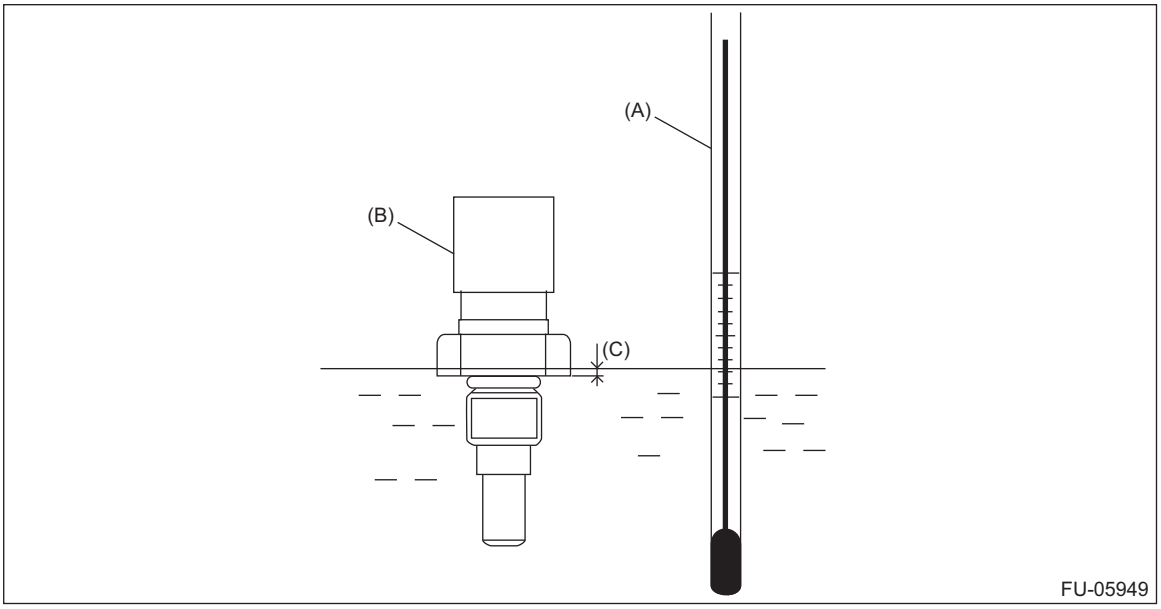
NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

C: INSPECTION

1) Check that the engine oil temperature sensor has no deformation, cracks or other damages.
2) Immerse the engine oil temperature sensor and a thermometer in water.

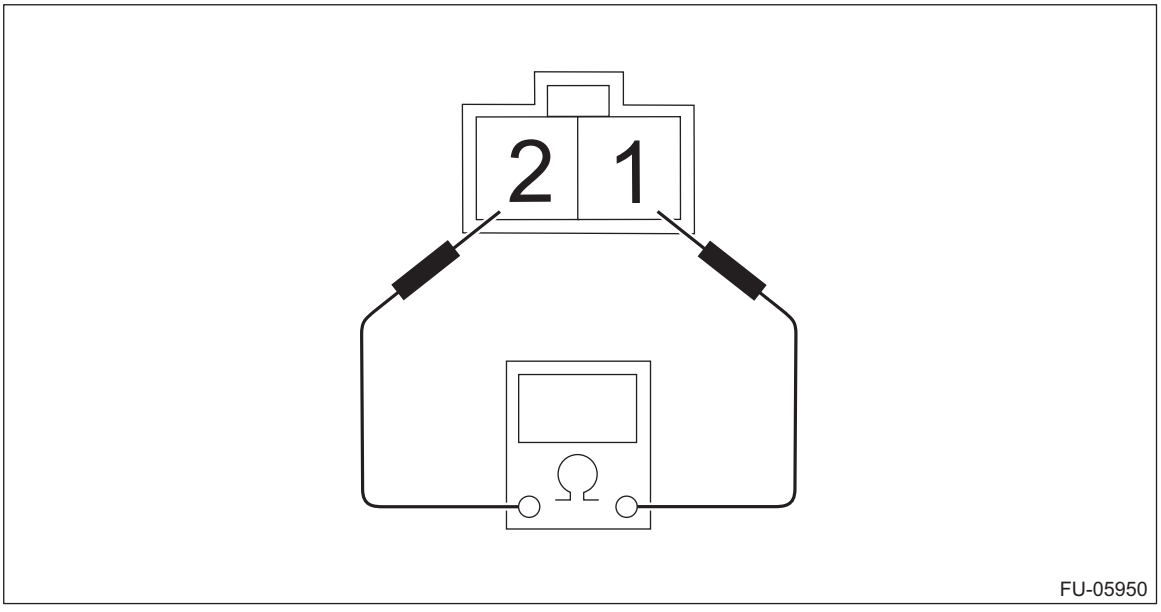
CAUTION:
Take care not to allow water to get into the engine oil temperature sensor connector. Completely remove any water inside.



(A) Thermometer (B) Engine oil temperature sensor (C) Hexagonal part height: To approx. $^1/_3$

3) Raise water temperature gradually, measure the resistance between the engine oil temperature sensor terminals when the temperature is 20°C (68°F) and 80°C (176°F).

NOTE:
Agitate the water for even temperature distribution.

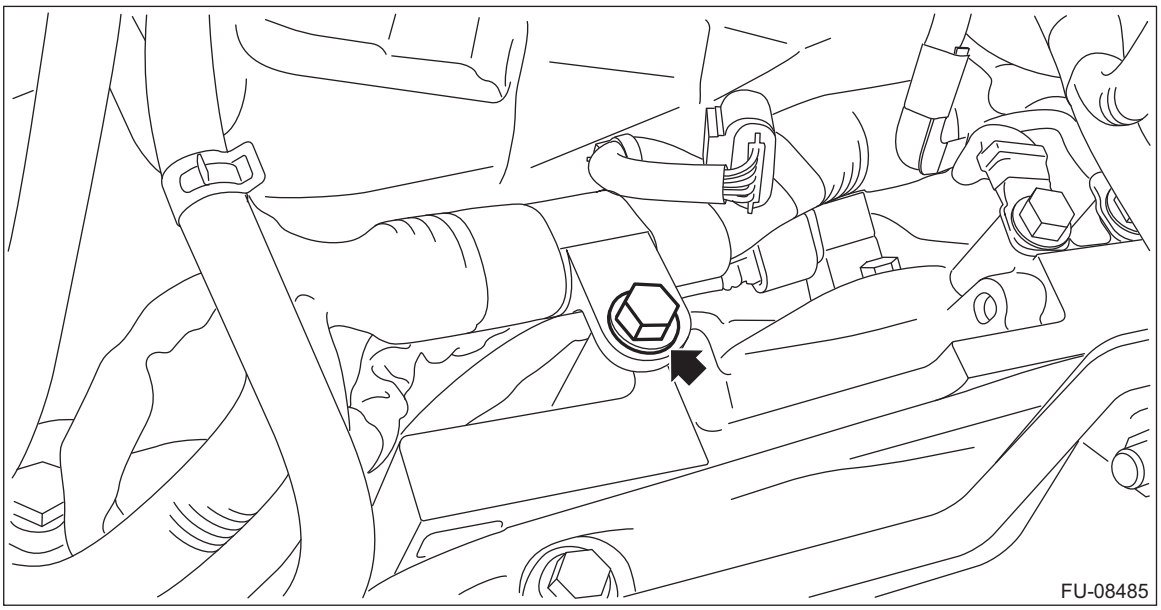


Water temperature	Terminal No.	Standard
20°C (68°F)	1 and 2	2.45±0.2 kΩ
80°C (176°F)		0.318±0.013 kΩ

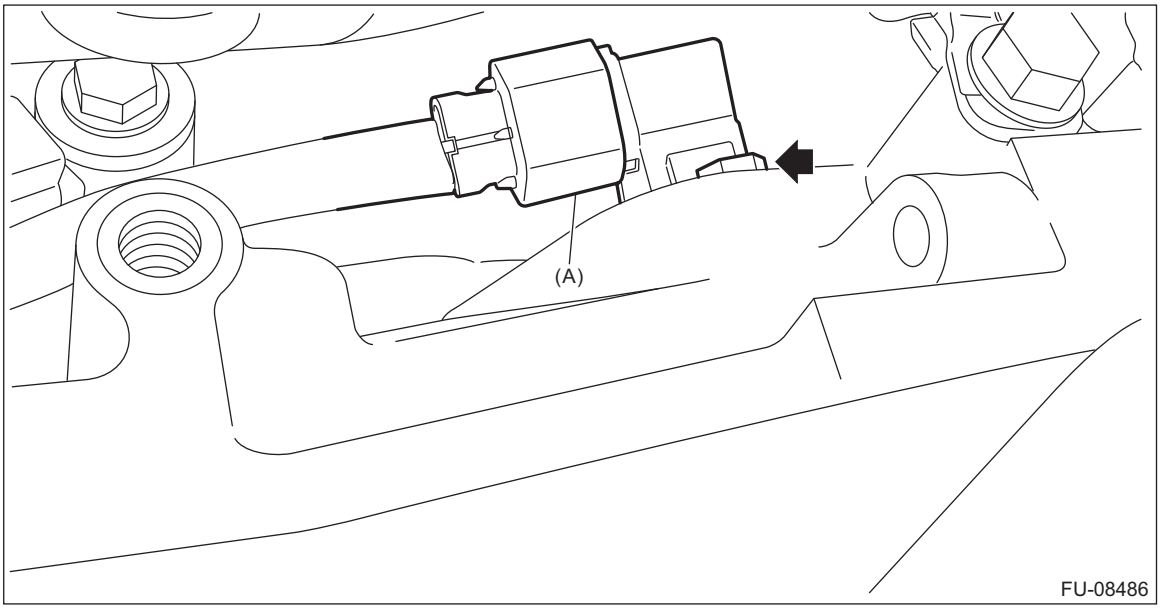
14.Crankshaft Position Sensor

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the throttle body. <Ref. to FU(w/o STI)-15, REMOVAL, Throttle Body.>
5) Remove the bolts securing the engine wiring harness.



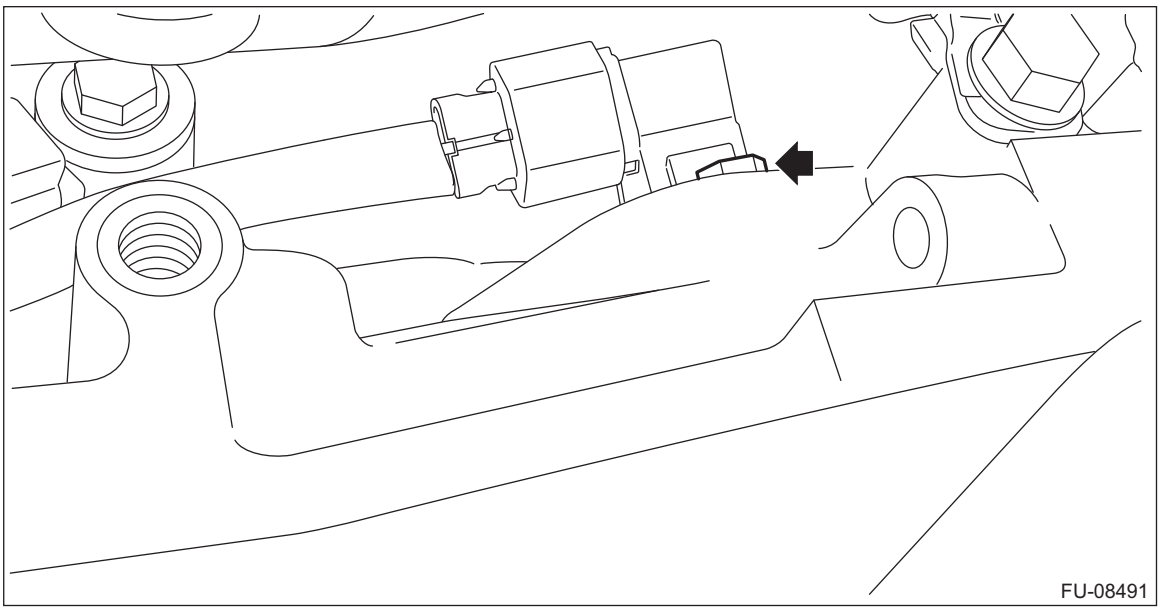
6) Disconnect the connector (A) from the crankshaft position sensor, and remove the crankshaft position sensor from the cylinder block.



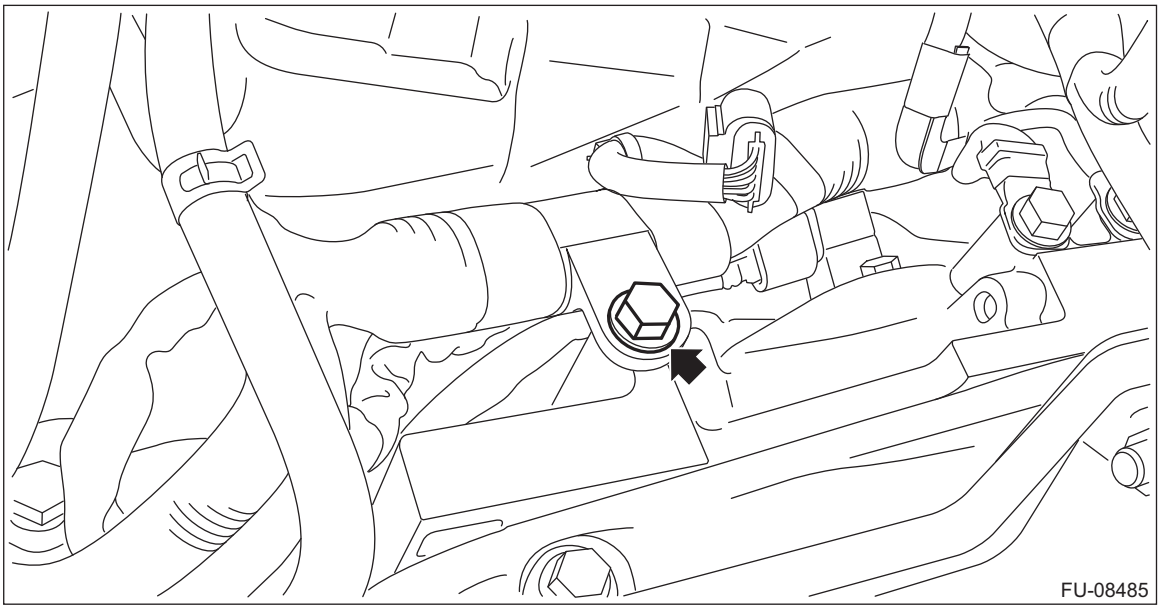
B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

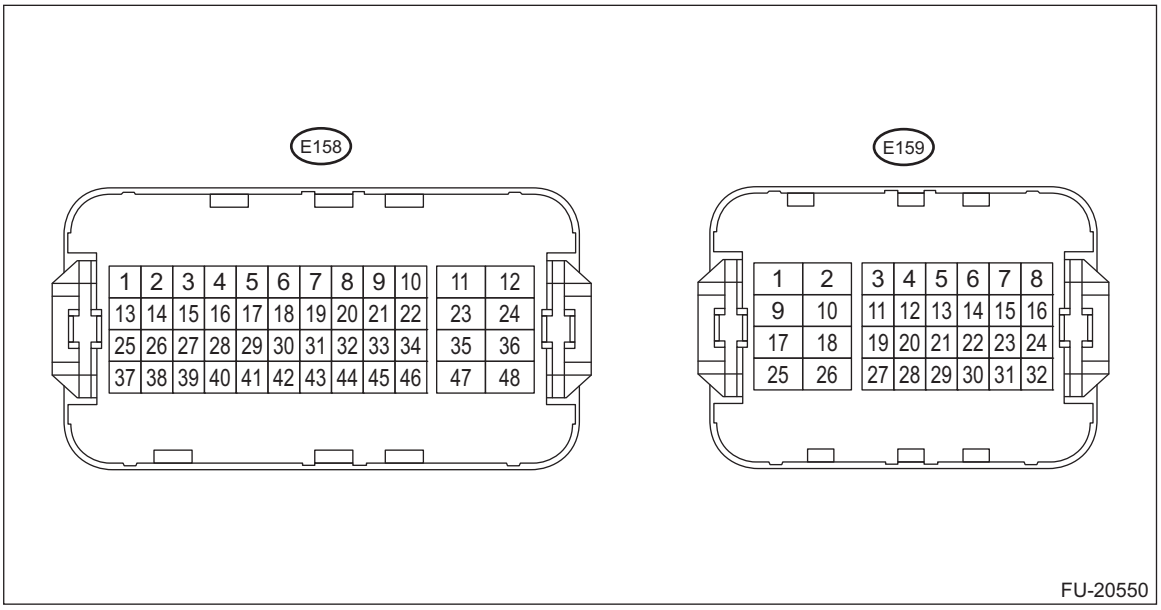


C: INSPECTION

1. CRANKSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Prepare an oscilloscope.
3) Remove the engine control module (ECM). <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
4) Install the ST between the ECM and bulkhead harness and the engine wiring harness. <Ref. to EN(w/o STI)(diag)-7, CAUTION, General Description.>
ST 18460AA030 CHECK BOARD
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

6) Connect the probe to ST.



Terminal No.	Probe
(E158) No. 19	+
(E159) No. 10	–

7) Start the engine and let it idle.
8) Check the waveforms and voltage.

NOTE:
For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>
9) After inspection, install the related parts in the reverse order of removal.

2. OTHER INSPECTIONS

Check that the crankshaft position sensor has no deformation, cracks or other damages.

15.Crankshaft Position Sensor Plate

A: REMOVAL

The crankshaft position sensor plate is tightened together with the drive plate (CVT model) or flywheel (MT model); therefore, refer to “Drive Plate” or “Flywheel” for removal procedure. <Ref. to CVT(TR690)-140, REMOVAL, Drive Plate.> <Ref. to CL-15, REMOVAL, Flywheel.>

B: INSTALLATION

The crankshaft position sensor plate is tightened together with the drive plate (CVT model) or flywheel (MT model); therefore, refer to “Drive Plate” or “Flywheel” for installation procedure. <Ref. to CVT(TR690)-140, INSTALLATION, Drive Plate.> <Ref. to CL-15, INSTALLATION, Flywheel.>

C: INSPECTION

Check that the crankshaft position sensor plate has no deformation, cracks or other damages.

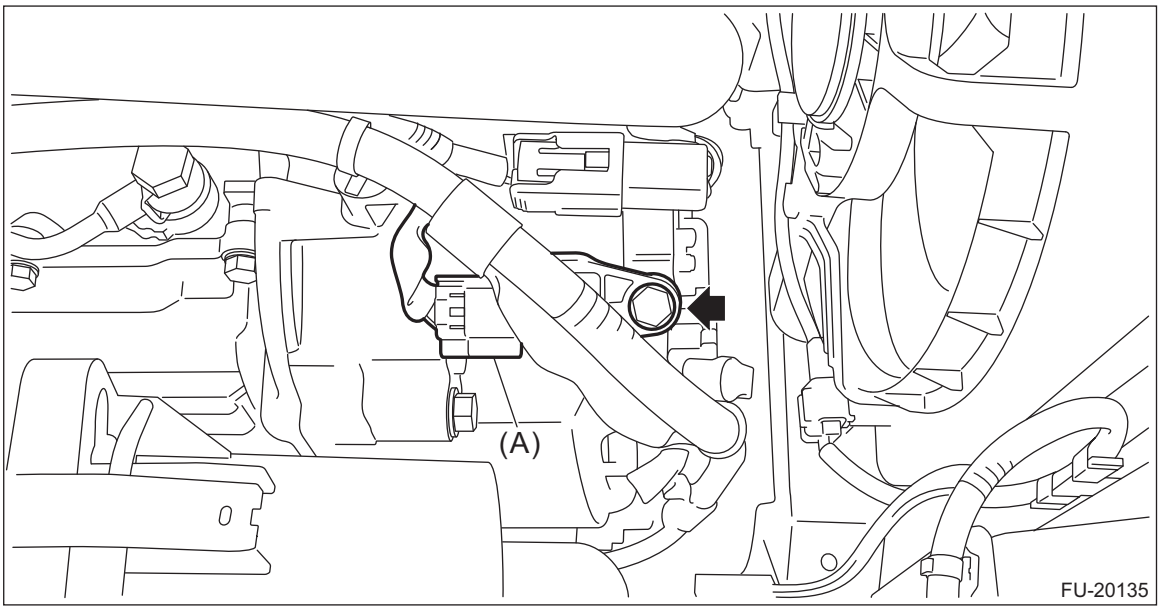
16.Camshaft Position Sensor

A: REMOVAL

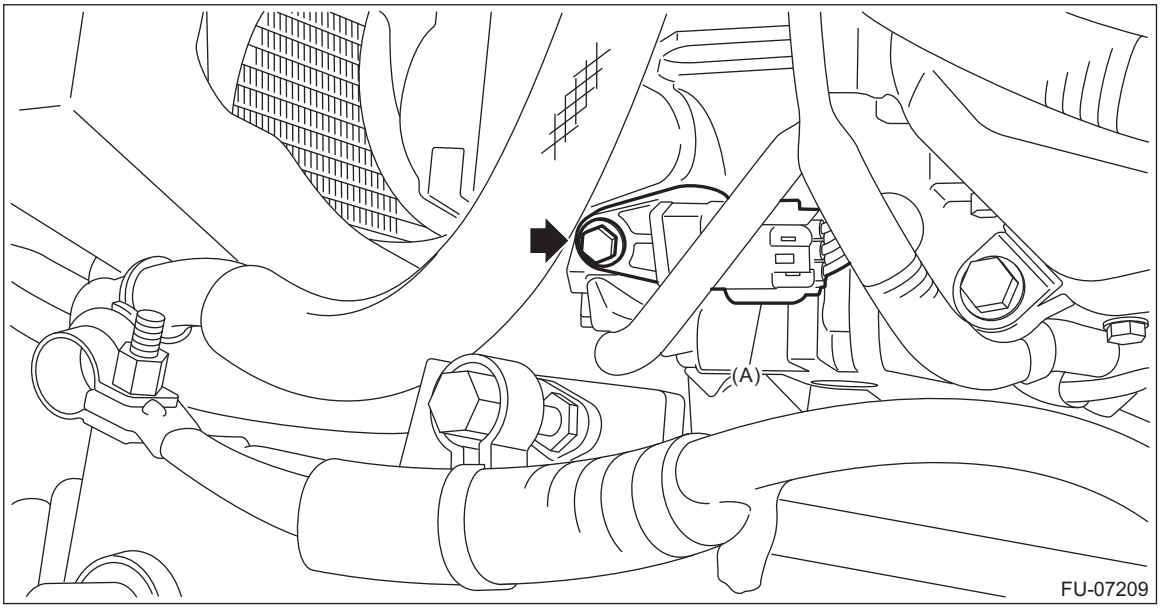
1. INTAKE SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. (RH side only) <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.

- RH side



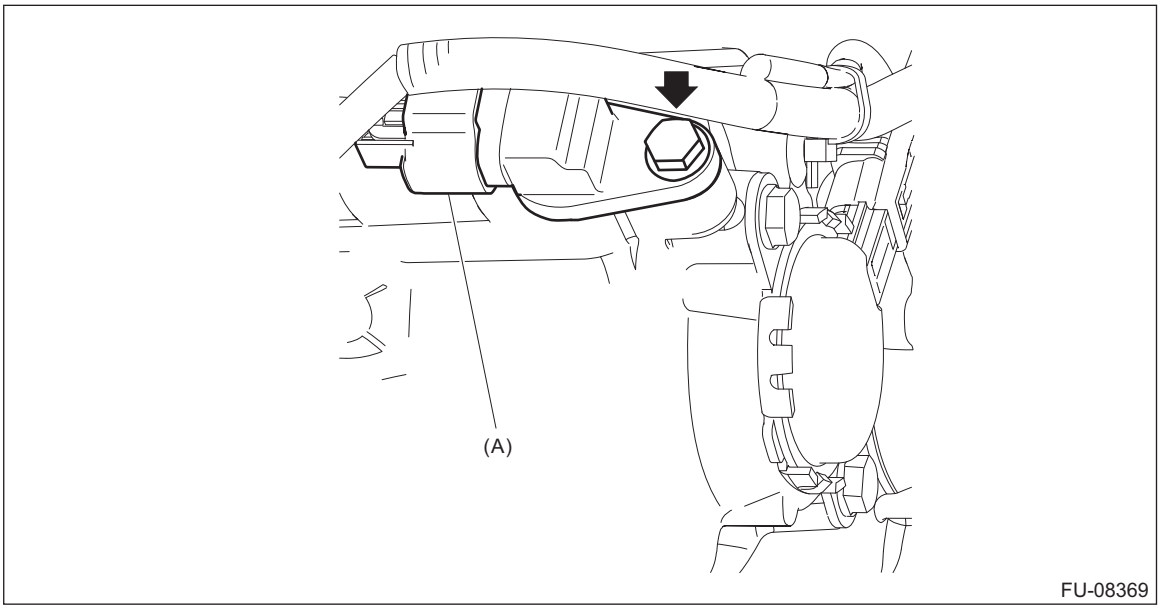
- LH side



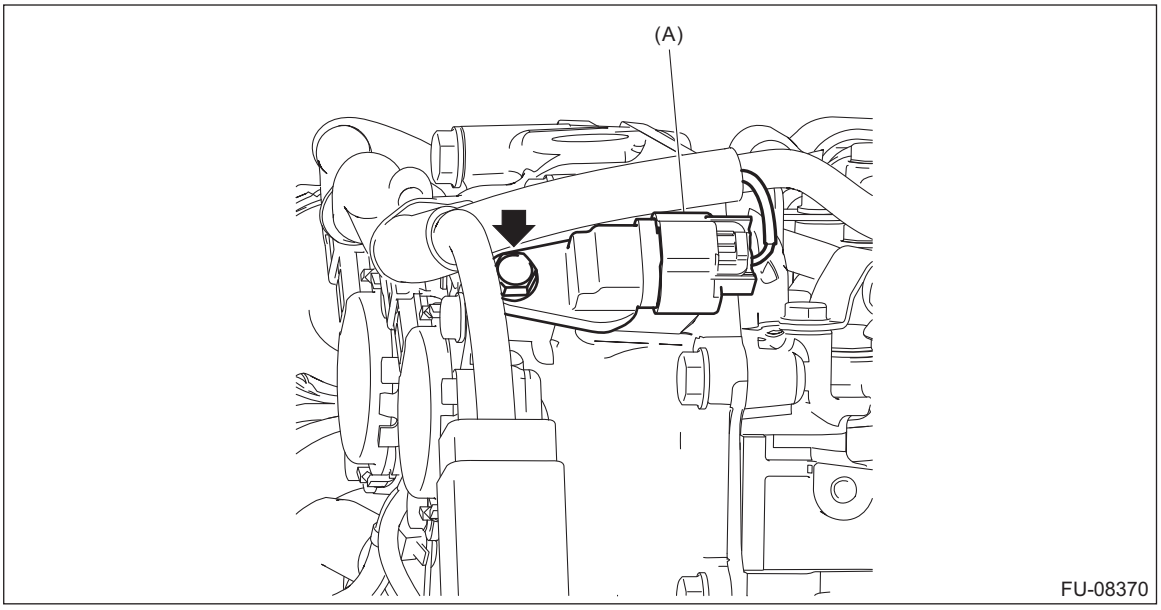
2. EXHAUST SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Disconnect the connector (A) from the camshaft position sensor, and remove the camshaft position sensor from the chain cover.

- RH side



- LH side



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use new O-rings.
- Apply engine oil to O-ring.

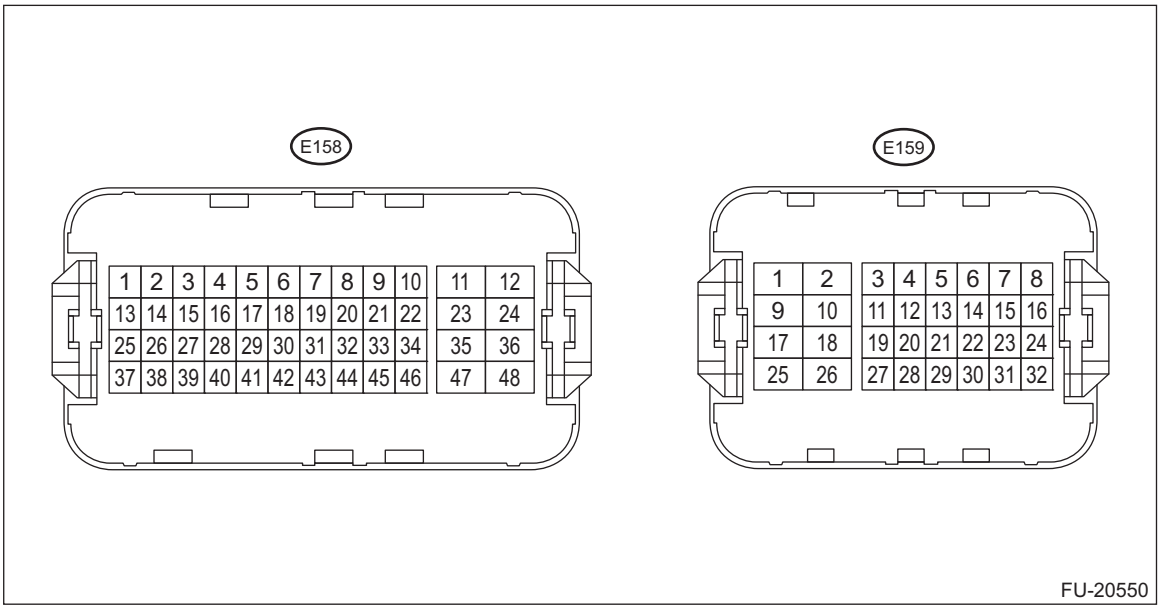
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1. CAMSHAFT POSITION SENSOR (METHOD WITH OSCILLOSCOPE)

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Prepare an oscilloscope.
3) Remove the engine control module (ECM). <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>

4) Install the ST between the ECM and bulkhead harness and the engine wiring harness. <Ref. to EN(w/o STI)(diag)-7, CAUTION, General Description.>
ST 18460AA030 CHECK BOARD
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Connect the probe to ST.



Camshaft position sensor		Terminal No.	Probe
Intake	RH	(E158) No. 20	+
	LH	(E158) No. 21	+
Exhaust	RH	(E158) No. 32	+
	LH	(E158) No. 33	+
RH and LH		(E159) No. 10	–

7) Start the engine and let it idle.
8) Check the waveforms and voltage.

NOTE:
For waveform and voltage, refer to “Engine Control Module (ECM) I/O Signal”. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>
9) After inspection, install the related parts in the reverse order of removal.

2. OTHER INSPECTIONS

Check that the camshaft position sensor has no deformation, cracks or other damages.

17.Oil Control Solenoid

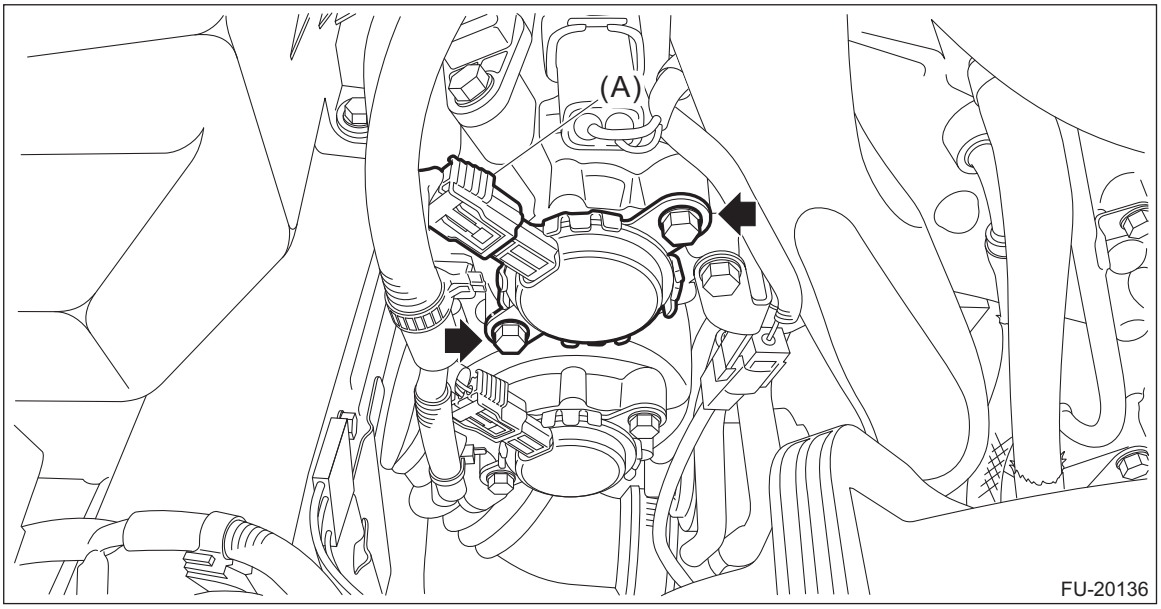
A: REMOVAL

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

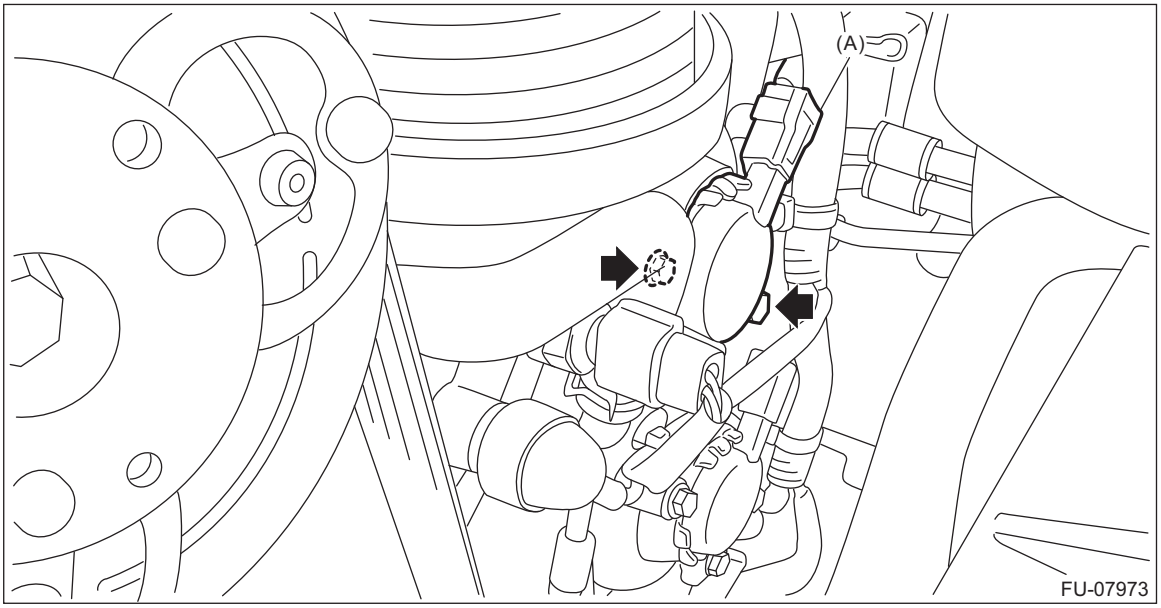
1. INTAKE SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. (RH side only) <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.

- RH side



- LH side

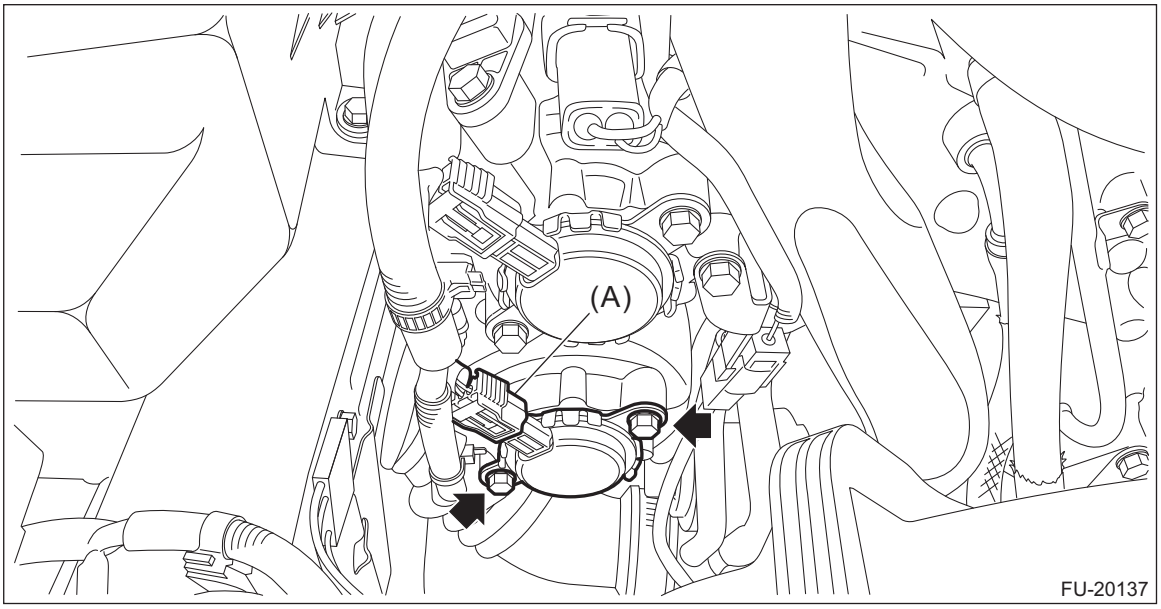


2. EXHAUST SIDE

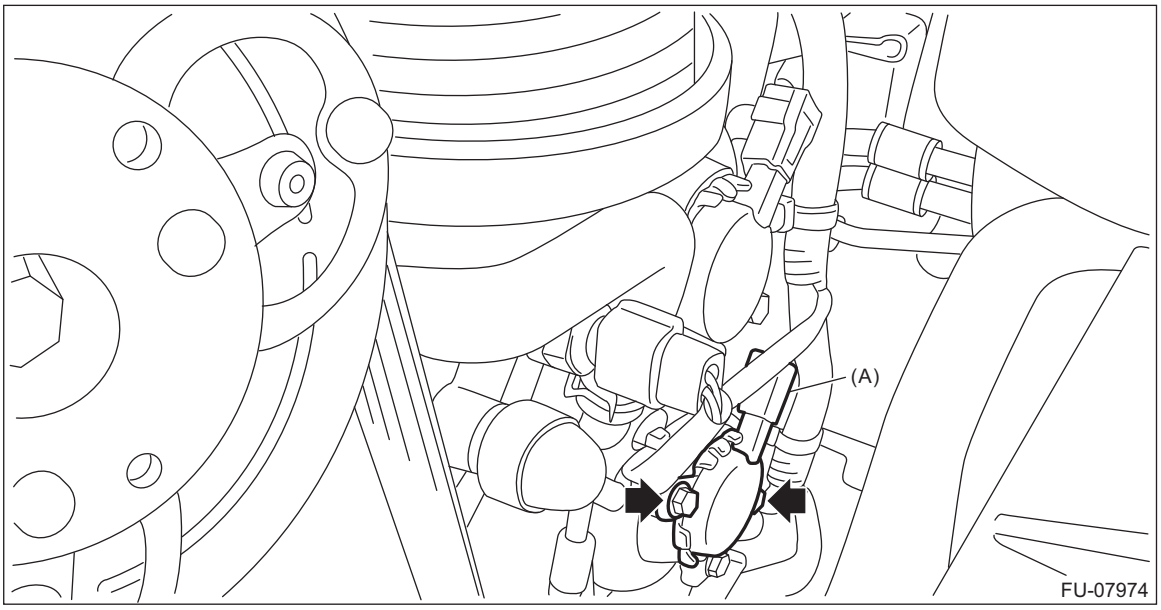
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. (RH side only) <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>

3) Disconnect the connector (A) from the oil control solenoid, and remove the oil control solenoid from the chain cover.

- RH side



- LH side



B: INSTALLATION

Install in the reverse order of removal.

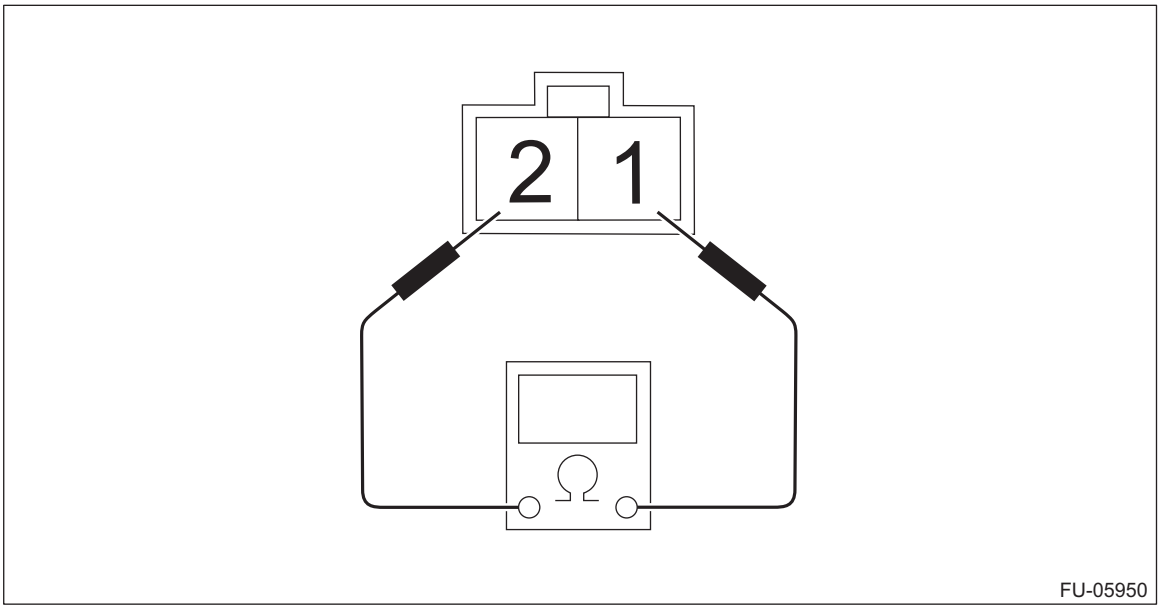
NOTE:
- Use new O-rings.
- Apply engine oil to O-ring.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1) Check that the oil control solenoid has no deformation, cracks or other damages.

2) Measure the resistance between the oil control solenoid terminals.



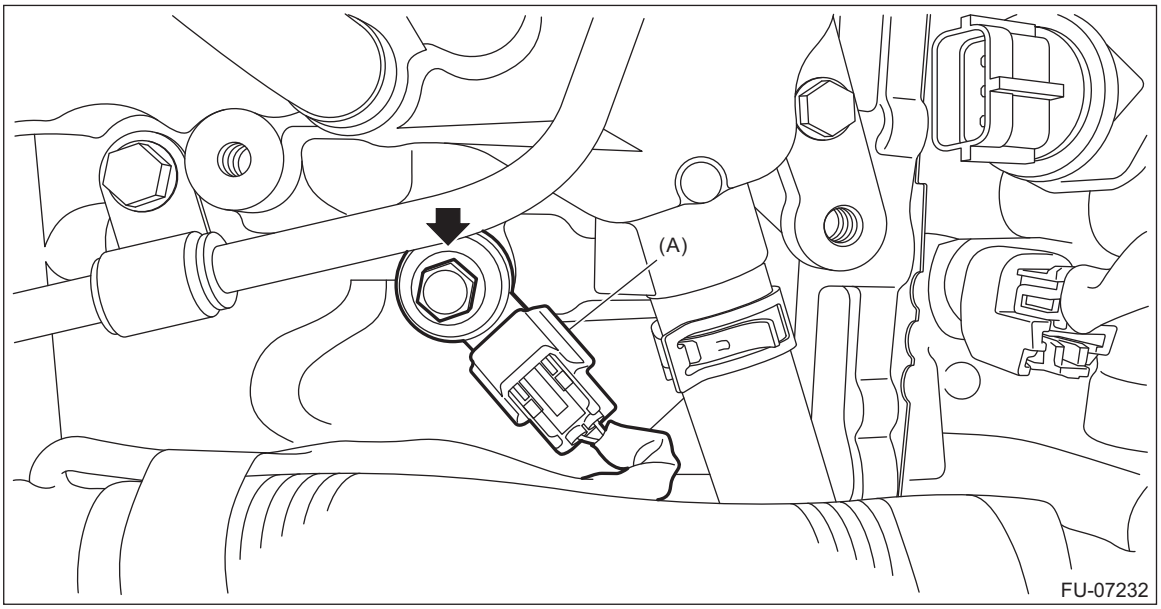
Terminal No.	Standard
1 and 2	7.25±0.4 Ω (when 20°C (68°F))

18.Knock Sensor

A: REMOVAL

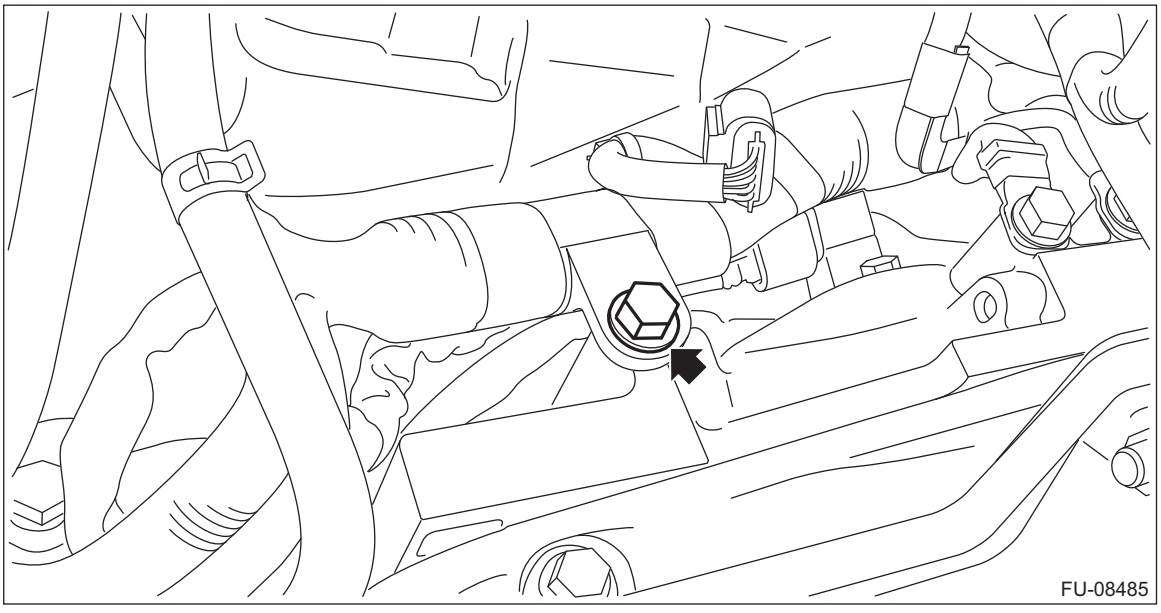
1. RH SIDE

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
4) Remove the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-46, FUEL PIPE INSULATOR NO. 3, REMOVAL, Fuel Insulator.>
5) Disconnect the connector (A) from the knock sensor, and remove the knock sensor from the cylinder block.

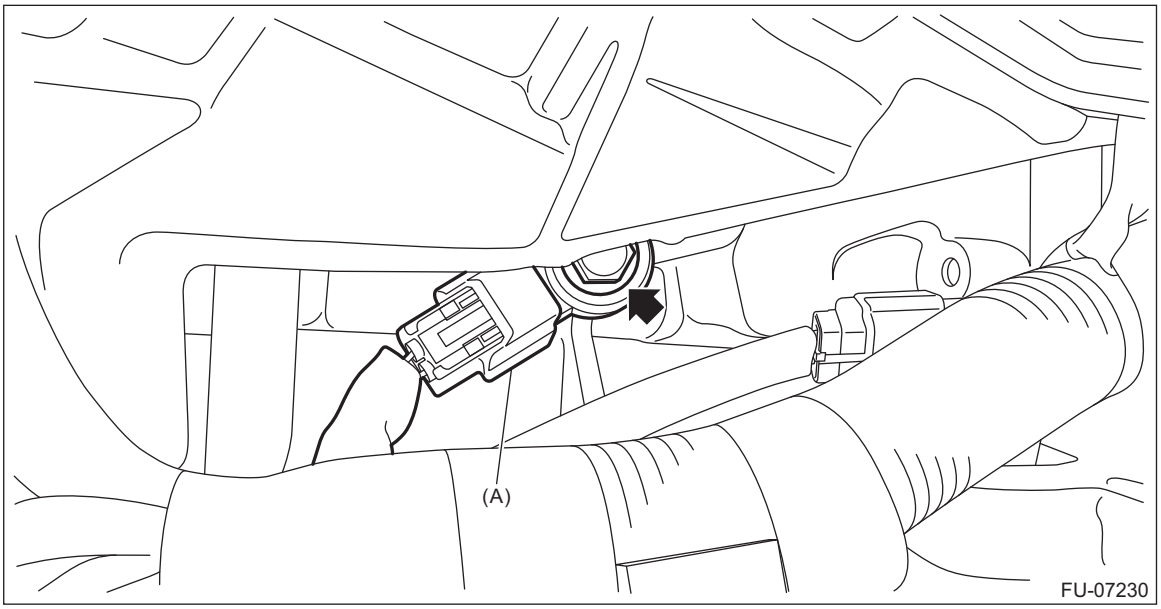


2. LH SIDE

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the throttle body. <Ref. to FU(w/o STI)-15, REMOVAL, Throttle Body.>
5) Remove the bolts securing the engine wiring harness.



6) Disconnect the connector (A) from the knock sensor, and remove the knock sensor from the cylinder block.



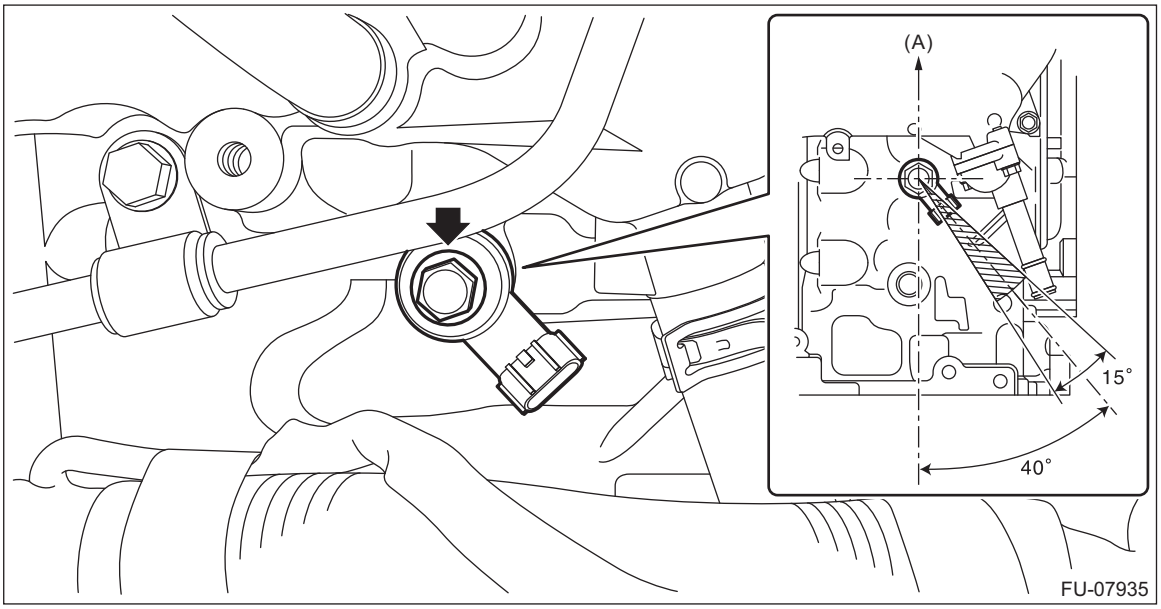
B: INSTALLATION

1. RH SIDE

1) Install the knock sensor to the cylinder block.

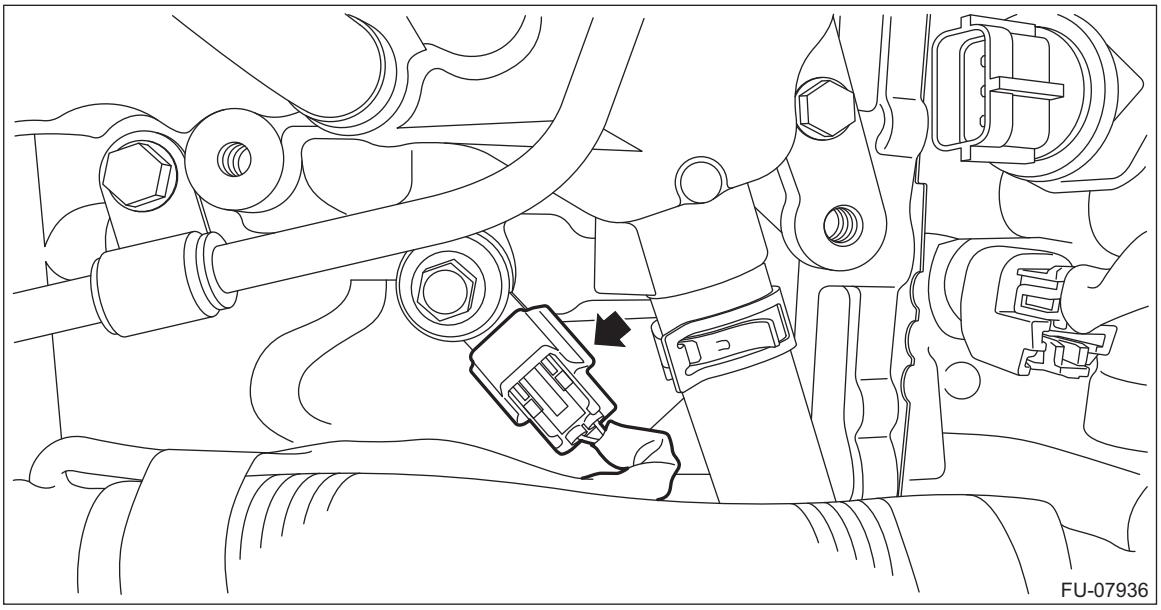
NOTE:
The knock sensor should be installed so that the center of the connector is positioned at a 32.5 — 47.5° angle relative to the rear of engine.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)



(A) Front of engine

2) Connect the connector to the knock sensor.



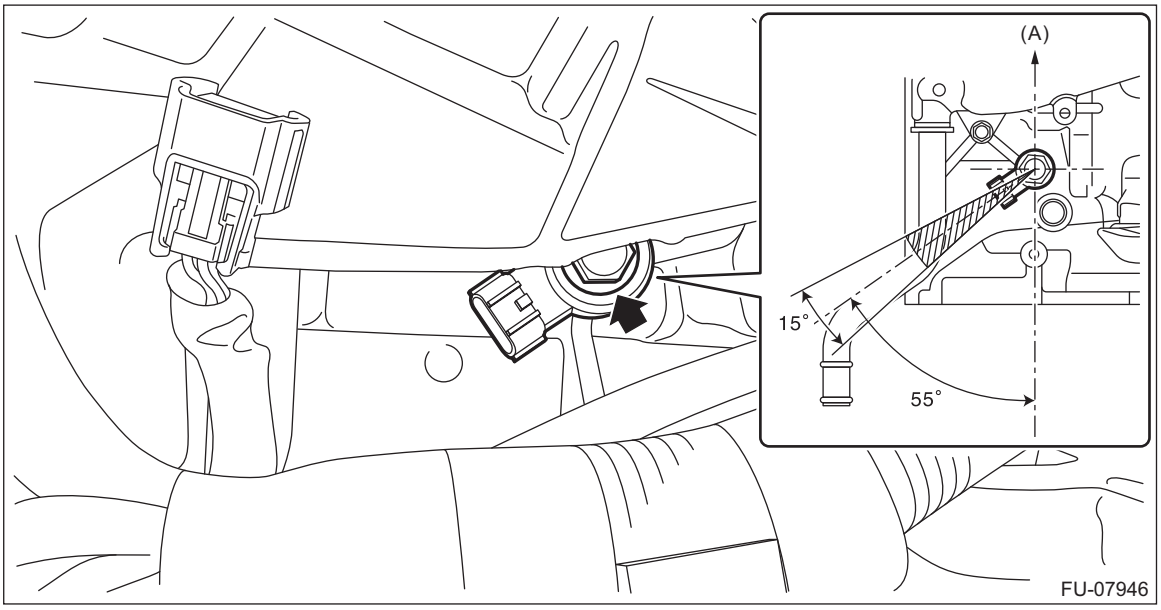
3) Install the fuel pipe insulator No. 3. <Ref. to FU(w/o STI)-47, FUEL PIPE INSULATOR NO. 3, INSTALLATION, Fuel Insulator.>
4) Install the intake manifold. <Ref. to FU(w/o STI)-27, INSTALLATION, Intake Manifold.>
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

2. LH SIDE

1) Install the knock sensor to the cylinder block.

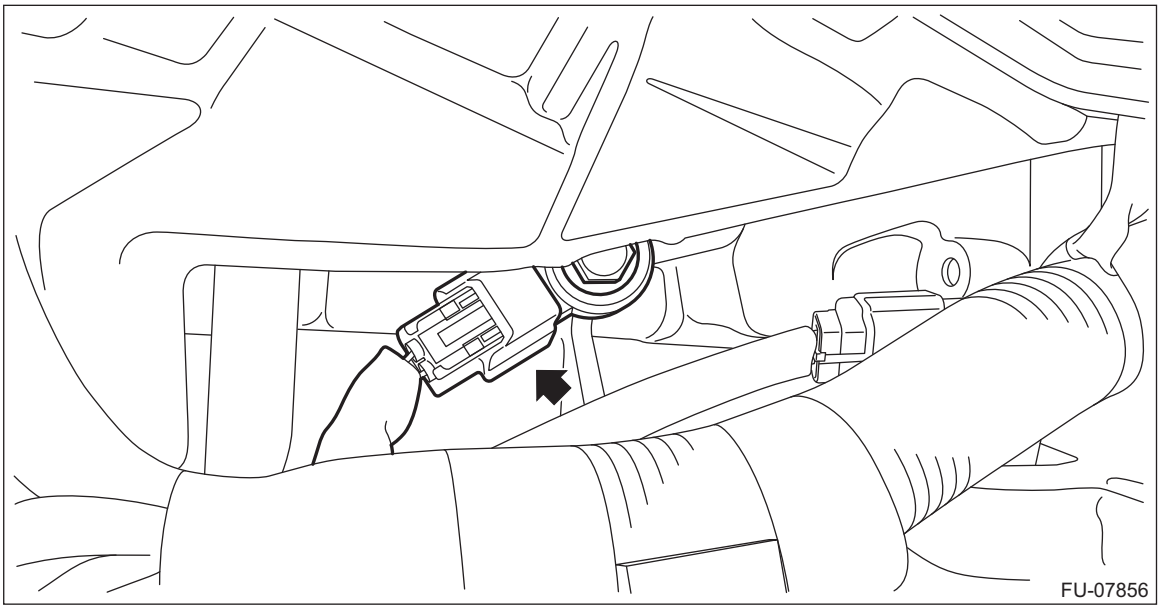
NOTE:
The knock sensor should be installed so that the center of the connector is positioned at a 47.5 — 62.5° angle relative to the rear of engine.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)



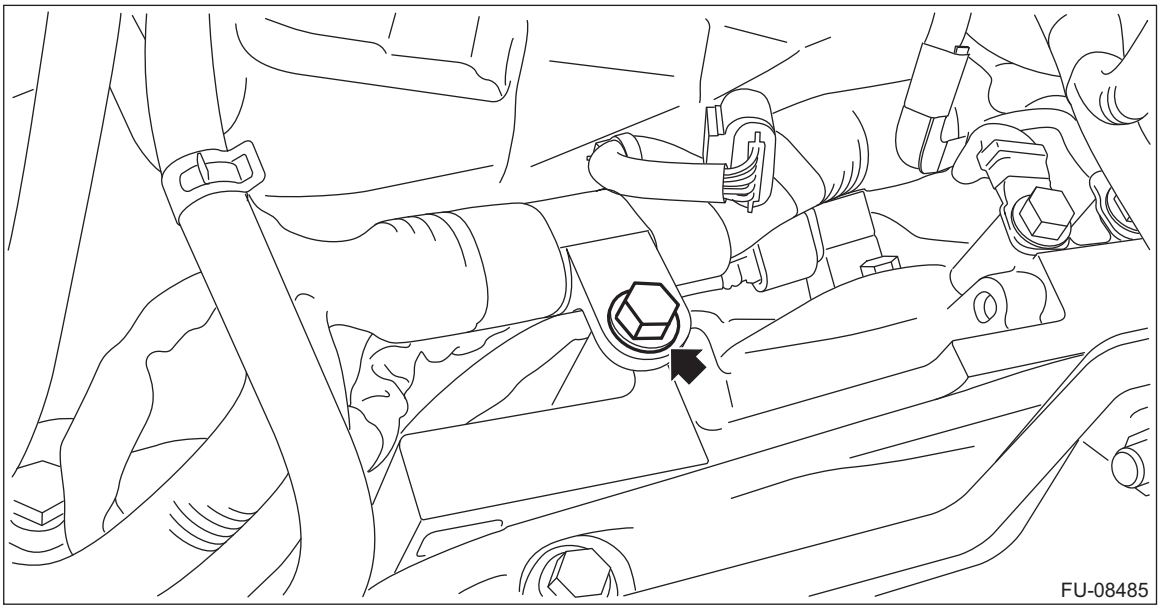
(A) Front of engine

2) Connect the connector to the knock sensor.



3) Install the bolts securing the engine wiring harness.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

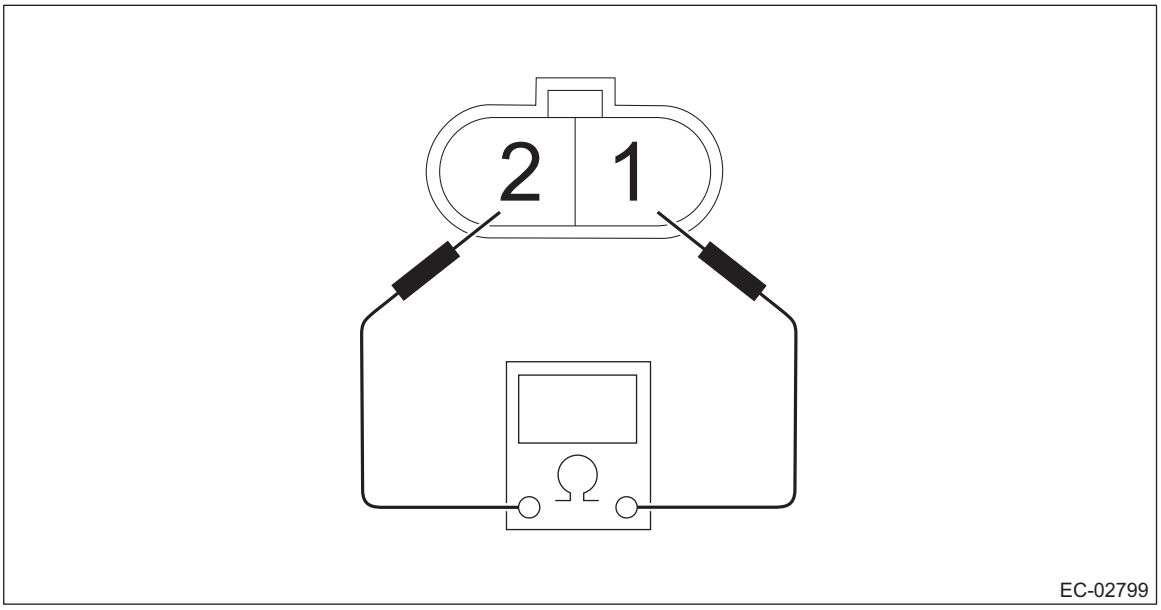


4) Install the throttle body. <Ref. to FU(w/o STI)-15, INSTALLATION, Throttle Body.>
5) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: INSPECTION

1) Check that the knock sensor has no deformation, cracks or other damages.

2) Measure the resistance between knock sensor terminals.



Terminal No.	Standard
1 and 2	560±28 kΩ

19.Throttle Position Sensor

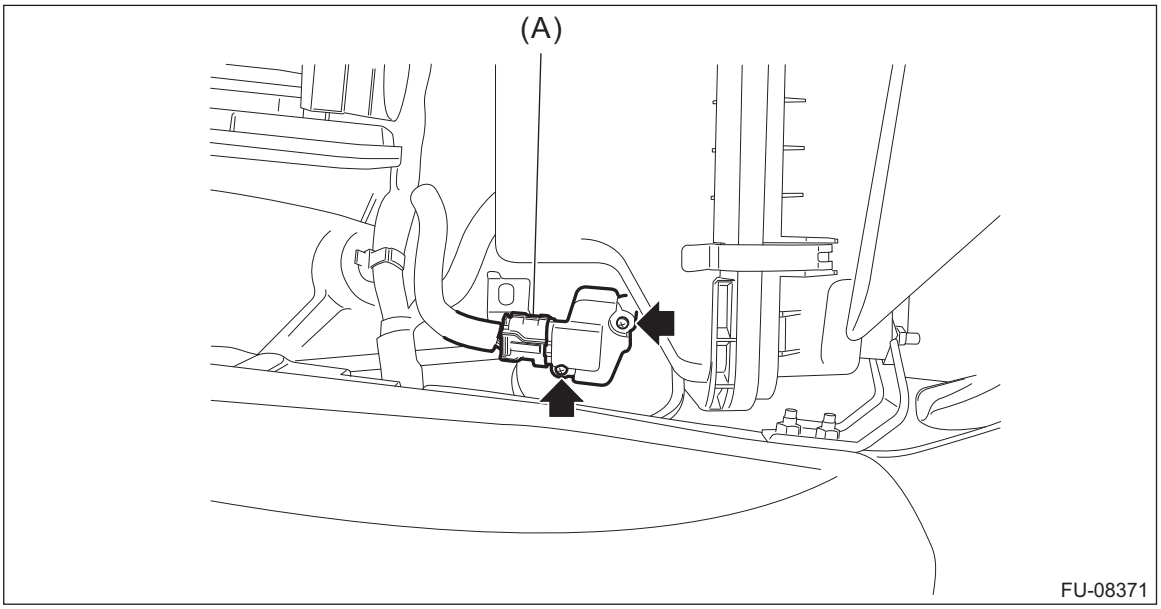
A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body. Refer to “Throttle Body” for removal and installation procedure. <Ref. to FU(w/o STI)-15, REMOVAL, Throttle Body.> <Ref. to FU(w/o STI)-15, INSTALLATION, Throttle Body.>

20.Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the mass air flow and intake air temperature sensor.



B: INSTALLATION

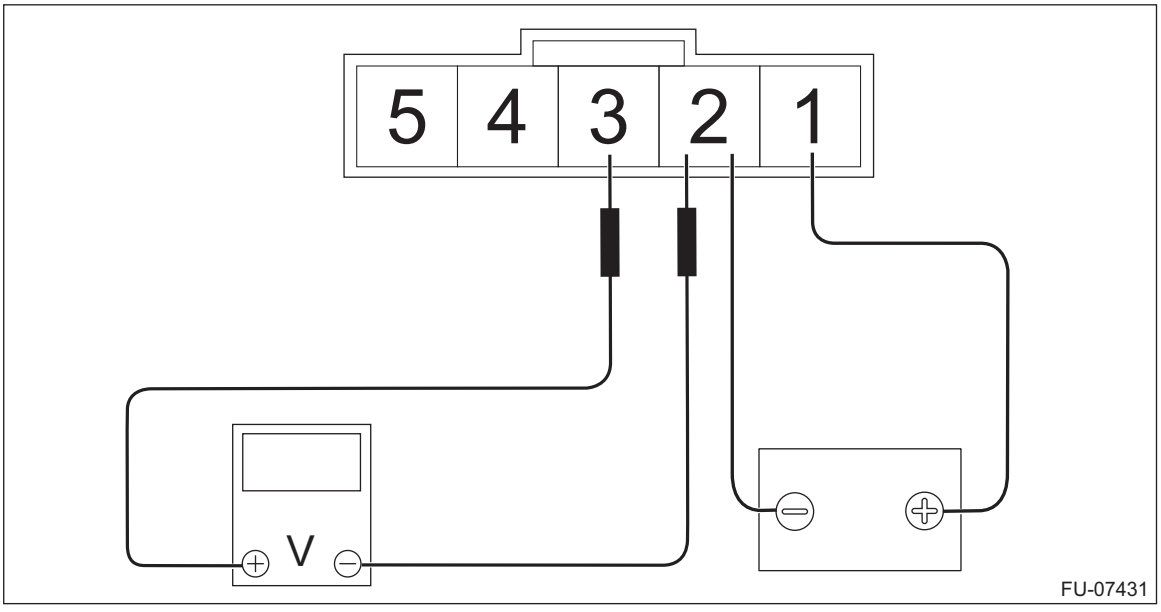
Install in the reverse order of removal.

Tightening torque:
1 N·m (0.1 kgf-m, 0.7 ft-lb)

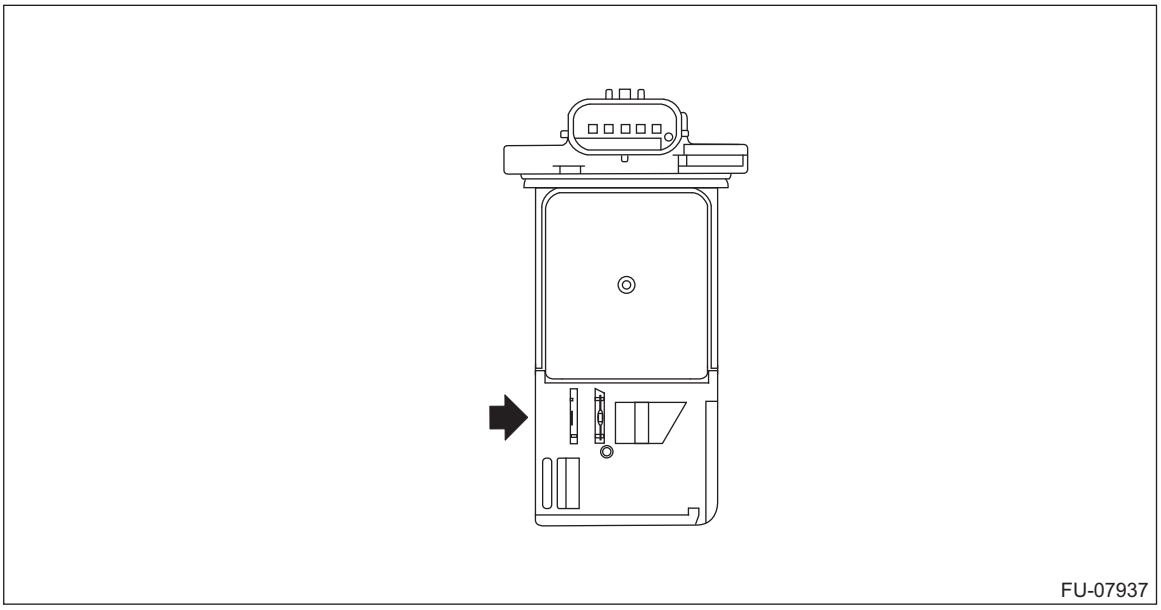
C: INSPECTION

1. CHECK THE MASS AIR FLOW SENSOR UNIT

1) Connect the battery positive terminal to terminal No. 1 and the battery ground terminal to terminal No. 2, and connect the circuit tester positive terminal to terminal No. 3 and the circuit tester ground terminal to terminal No. 2.

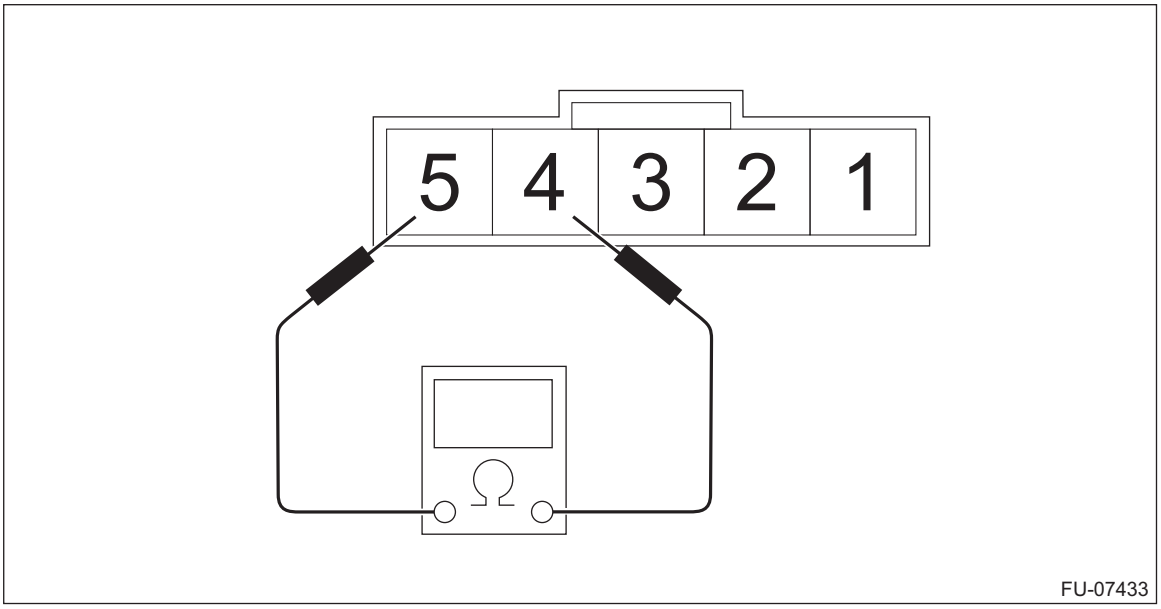


2) Check the voltage changes when air is blown to the mass air flow sensor unit in arrow direction.



2. CHECK THE INTAKE AIR TEMPERATURE SENSOR UNIT

Measure the resistance between intake air temperature sensor terminals.



Temperature	Terminal No.	Standard
–20°C (–4°F)	4 and 5	14.7±2.2 kΩ
25°C (77°F)		2.0±0.2 kΩ
60°C (140°F)		0.59±0.09 kΩ

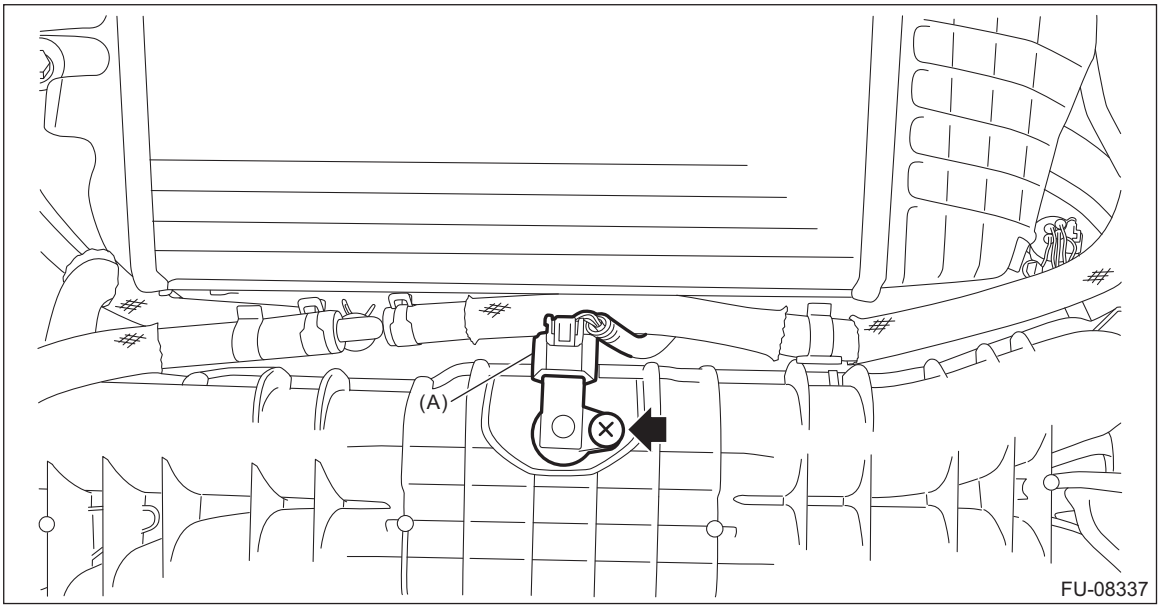
3. OTHER INSPECTIONS

1) Check that the mass air flow and intake air temperature sensor has no deformation, cracks or other damages.
2) Check that the mass air flow and intake air temperature sensor has no dirt.

21.Manifold Absolute Pressure and Intake Air Temperature Sensor

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Disconnect the connector (A) from the manifold absolute pressure & intake air temperature sensor, and remove the manifold absolute pressure & intake air temperature sensor from the intake manifold.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
3.5 N·m (0.4 kgf-m, 2.6 ft-lb)

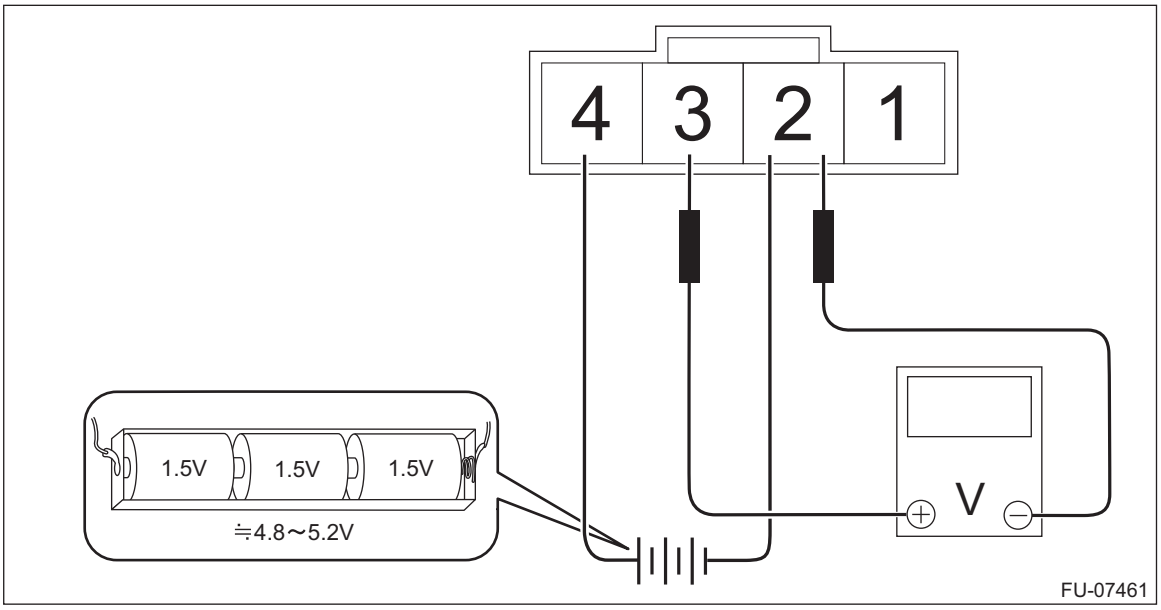
C: INSPECTION

1. CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR

1) Connect dry-cell battery positive terminal to terminal No. 4 and dry-cell battery ground terminal to terminal No. 2, circuit tester positive terminal to terminal No. 3 and the circuit tester ground terminal to terminal No. 2.

NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.

- For power supply, 5 V DC constant voltage power source can also be used.

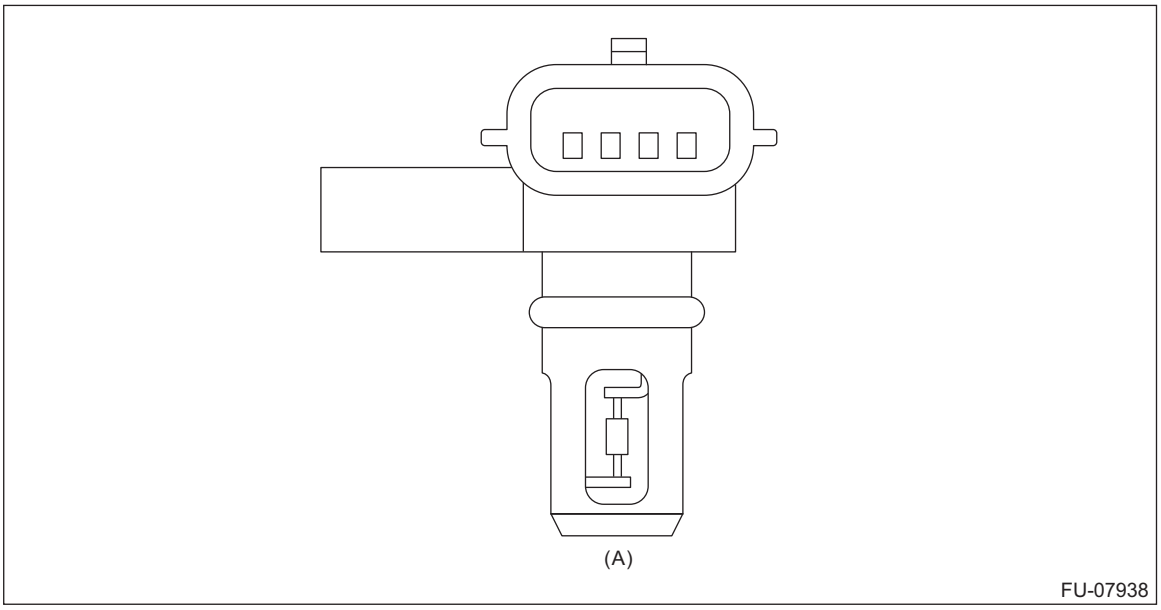


2) Check the voltage at a normal atmospheric pressure.

NOTE:
The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
3 (+) and 2 (–)	Approx. 2 V (when 25°C (77°F))

3) Connect the Mighty Vac to the pressure port (A).



4) Check the voltage when generating vacuum and positive pressure using Mighty Vac.

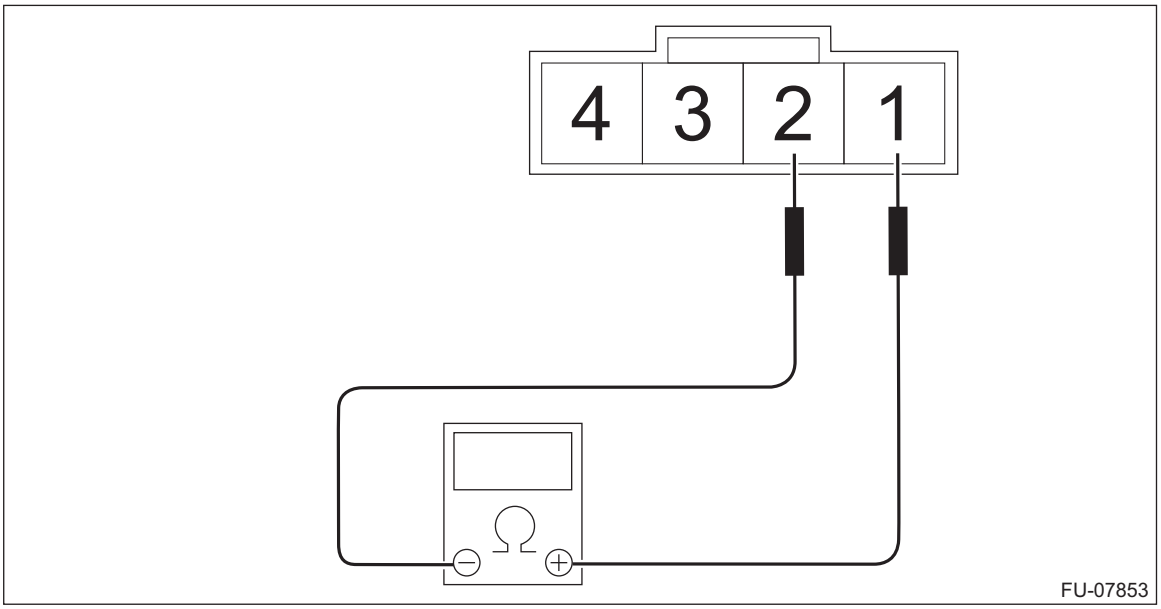
CAUTION:
Do not decompress less than –88 kPa (–0.9 kg/cm^2, –12.8 psi). Doing so may damage the manifold absolute pressure sensor.

NOTE:
When vacuum pressure occurs at the pressure port, the voltage will drop from the value as in step 3). When positive pressure occurs, on the other hand, the voltage will rise.

Pressure	Terminal No.	Standard
–88 kPa (–0.9 kg/cm^2, –12.8 psi)	3 (+) and 2 (–)	Approx. 1 V (when 25°C (77°F))

2. CHECK MANIFOLD TEMPERATURE SENSOR UNIT

1) Measure the resistance between engine coolant temperature sensor terminals.



Temperature	Terminal No.	Standard
–20°C (–4°F)	1 and 2	14.7±2.2 kΩ
25°C (77°F)		2.0±0.2 kΩ
60°C (140°F)		0.59±0.09 kΩ

3. OTHER INSPECTIONS

Check that the manifold pressure & intake air temperature sensor has no deformation, cracks or other damages.

22.Wastegate Control Solenoid Valve

A: REMOVAL

For removal procedures of wastegate control solenoid valve, refer to “Intake Duct No. 1”. <Ref. to IN(w/o STI)-27, INTAKE DUCT NO. 1, REMOVAL, Intake Duct.> <Ref. to IN(w/o STI)-47, INTAKE DUCT NO. 1, DISASSEMBLY, Intake Duct.>

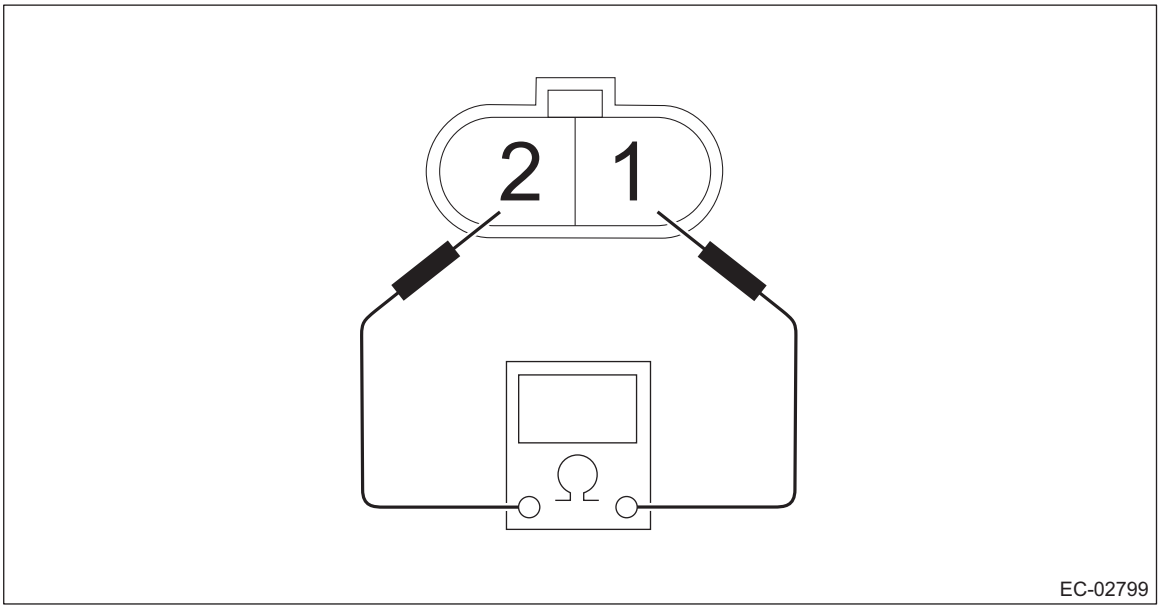
B: INSTALLATION

For installation procedures of wastegate control solenoid valve, refer to “Intake Duct No. 1”. <Ref. to IN(w/o STI)-36, INTAKE DUCT NO. 1, INSTALLATION, Intake Duct.> <Ref. to IN(w/o STI)-49, INTAKE DUCT NO. 1, ASSEMBLY, Intake Duct.>

C: INSPECTION

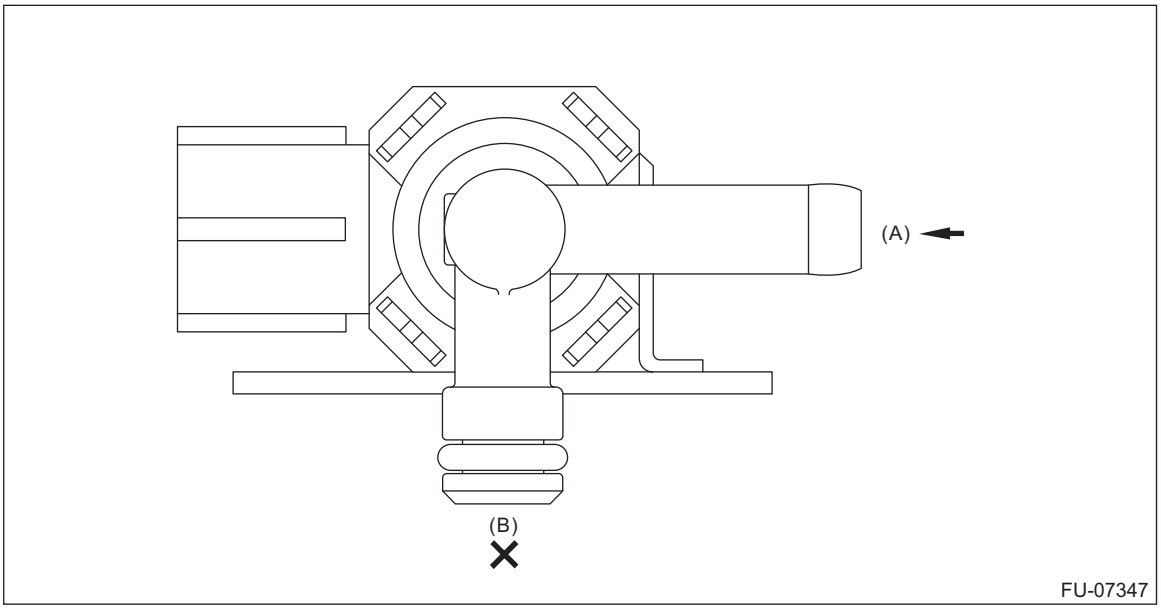
1. WASTEGATE CONTROL SOLENOID VALVE

1) Check that the wastegate control solenoid valve has no deformation, cracks or other damages.
2) Check the resistance between the wastegate control solenoid valve terminals.

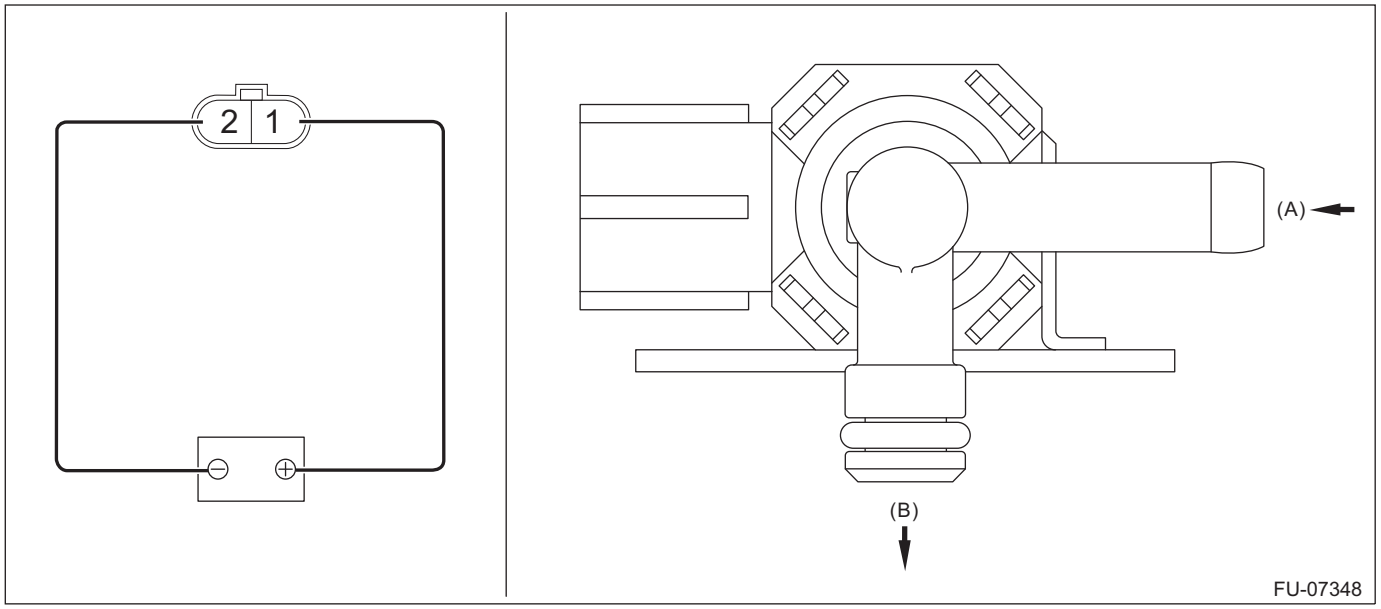


Terminal No.	Standard
1 and 2	24±3 Ω (when 20°C (68°F))

3) Check that air does not come out from (B) when air is blown into (A).



4) Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).



2. OTHER INSPECTIONS

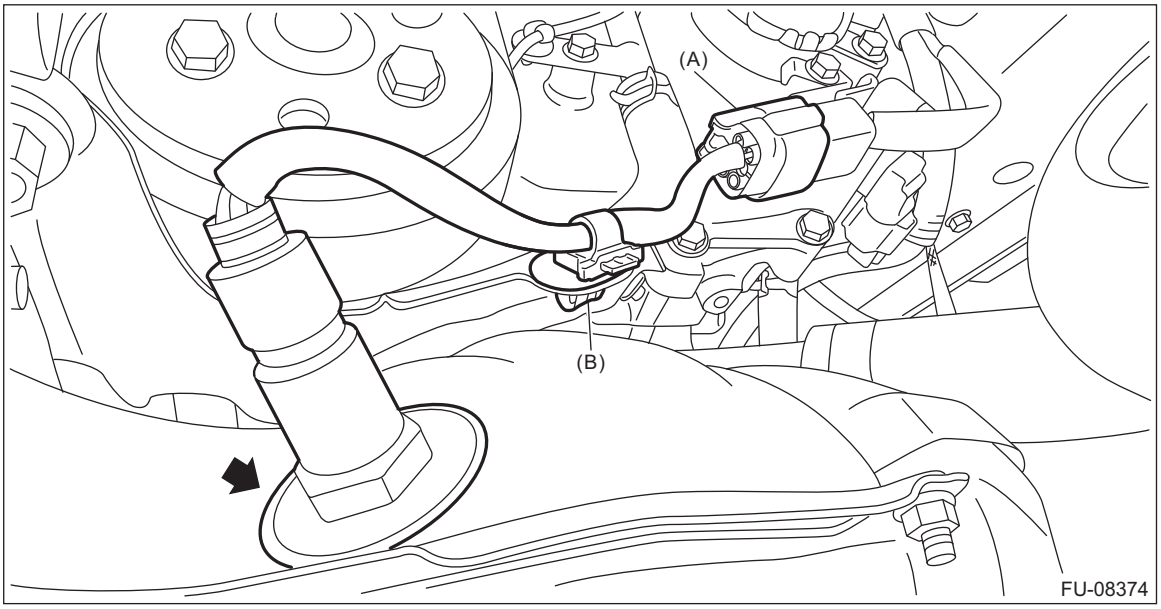
Check that the air control hose has no cracks, damage or loose part.

23.Front Oxygen (A/F) Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the radiator main fan & fan motor assembly. <Ref. to CO(w/o STI)-47, REMOVAL, Radiator Main Fan and Fan Motor.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Disconnect the connector (A) on the front oxygen (A/F) sensor from the engine wiring harness, and remove the clip (B) which secures the front oxygen (A/F) sensor harness to the water pump cover.
6) Apply spray-type lubricant (004301003) to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
7) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.



B: INSTALLATION

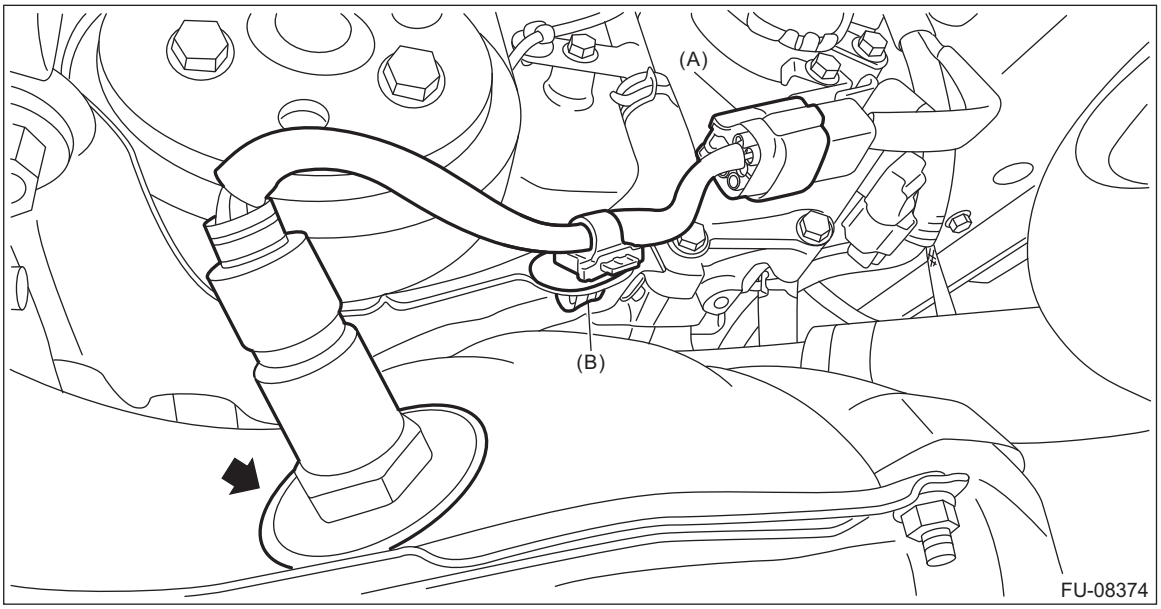
CAUTION:
If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

CAUTION:
Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

Anti-seize compound:
NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent
2) Install the front oxygen (A/F) sensor.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

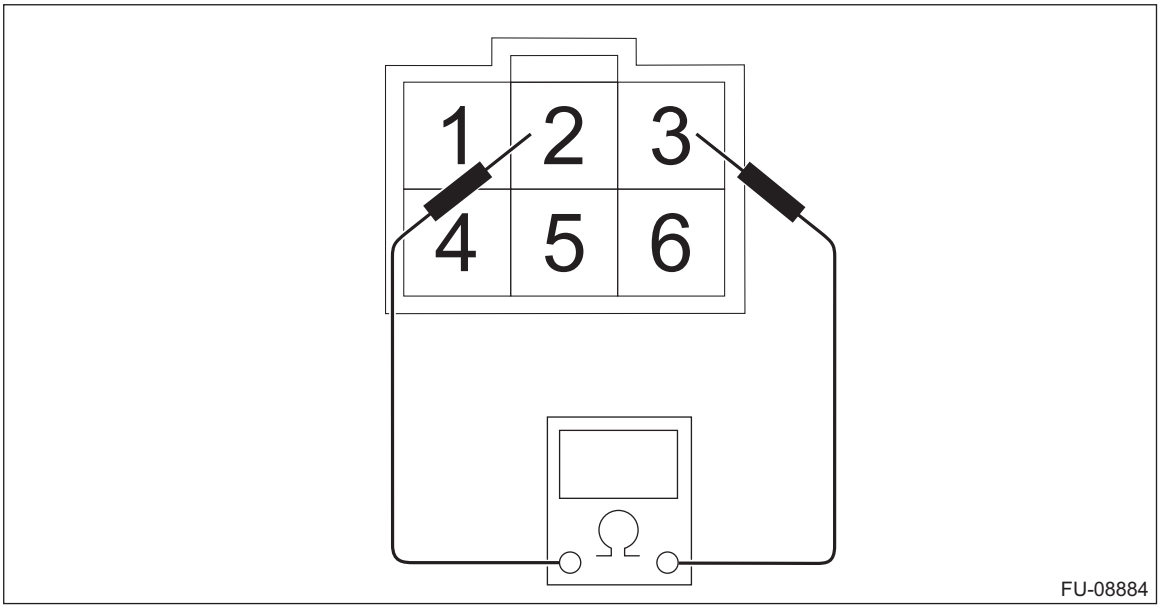
3) Secure the front oxygen (A/F) sensor harness to the water pump cover using clip (B), and connect the front oxygen (A/F) sensor connector (A) to the engine wiring harness.



4) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle.
6) Install the radiator main fan & fan motor assembly. <Ref. to CO(w/o STI)-47, INSTALLATION, Radiator Main Fan and Fan Motor.>
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the front oxygen (A/F) sensor has no deformation, cracks or other damages.
2) Measure the resistance between front oxygen (A/F) sensor terminals.

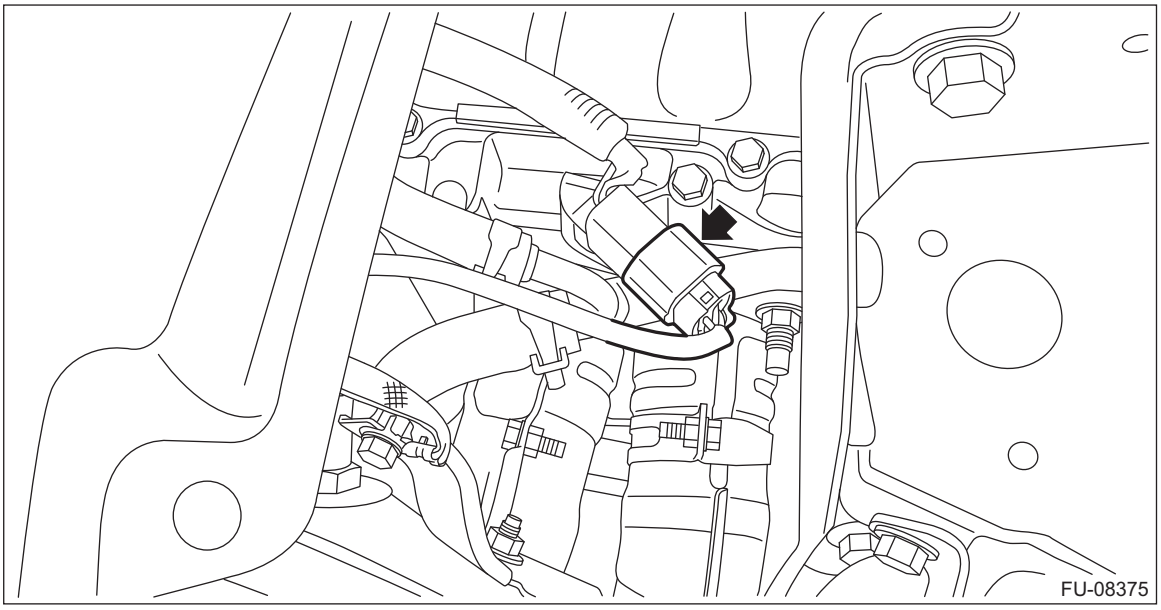


Terminal No.	Standard
2 and 3	2.5 — 4.0 Ω (when 20°C (68°F))

24.Rear Oxygen Sensor

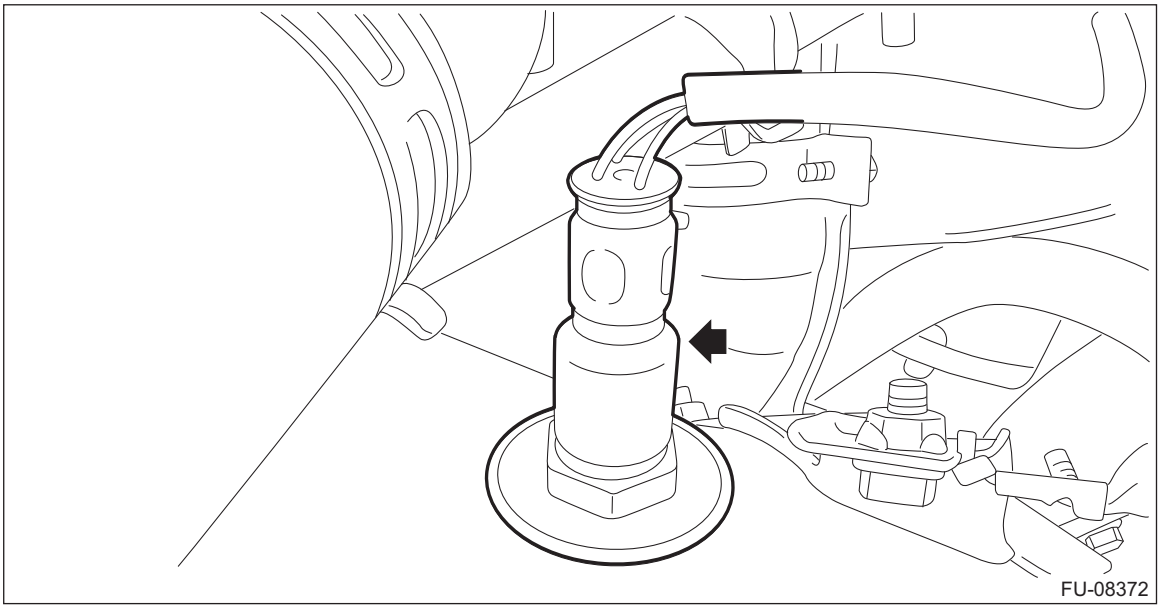
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Lift up the vehicle.
3) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Disconnect the connector on the rear oxygen sensor from the engine wiring harness.



5) Apply spray-type lubricant (004301003) to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
6) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.



B: INSTALLATION

CAUTION:
If lubricant is spilt over the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

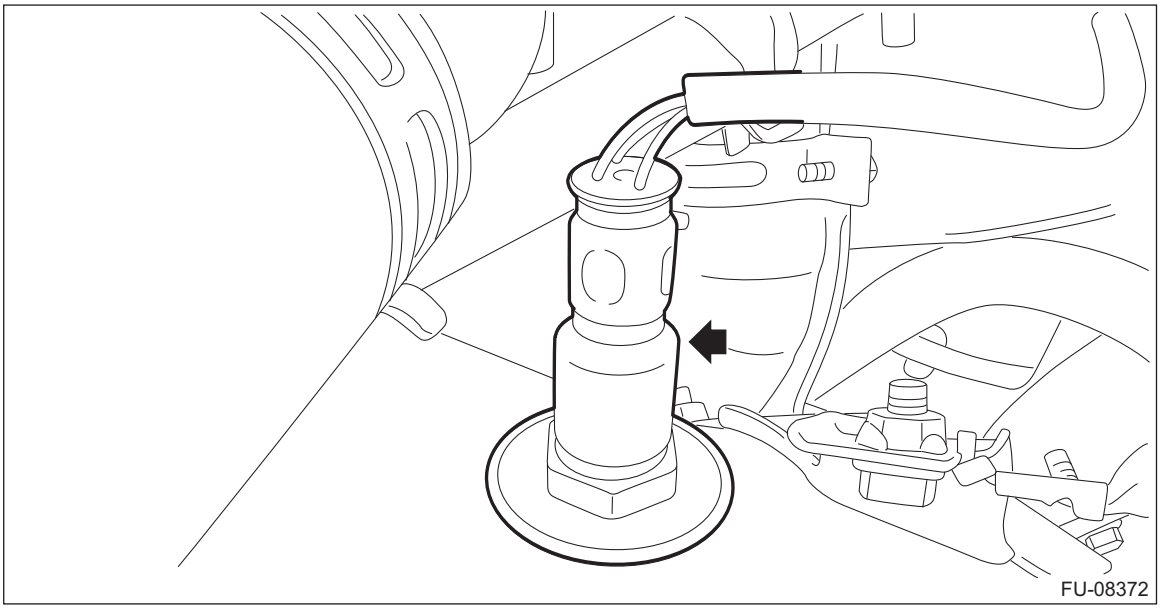
1) Before installing rear oxygen sensor, apply the anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

CAUTION:
Never apply anti-seize compound to the protector of rear oxygen sensor.

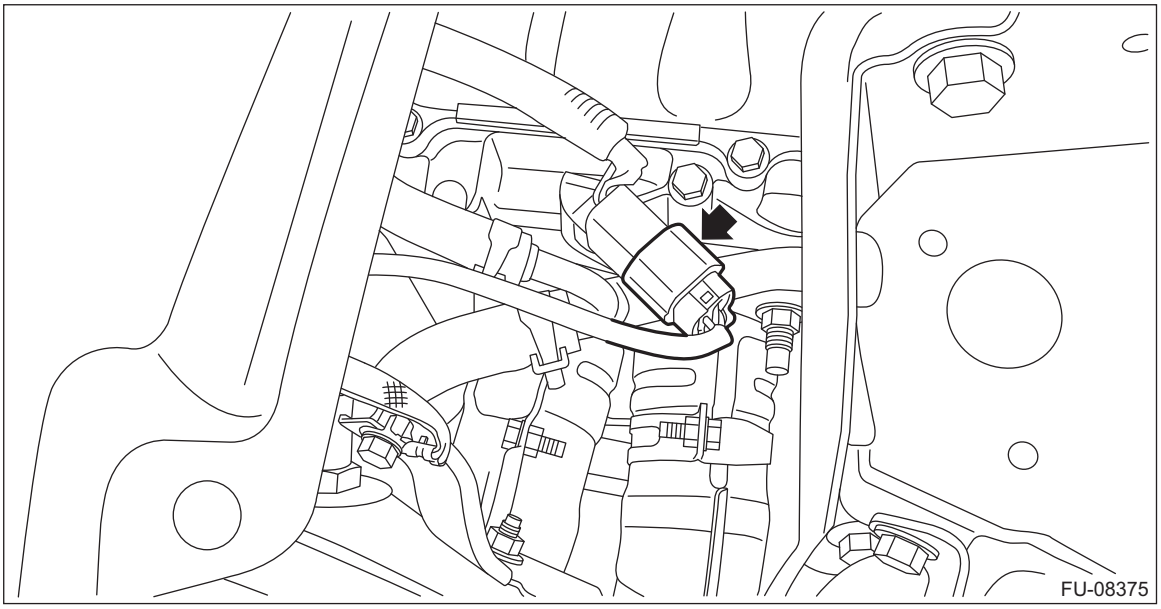
Anti-seize compound:
NEVER-SEEZ NSN, JET LUBE SS-30 or equivalent

2) Install the rear oxygen sensor.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



3) Connect the rear oxygen sensor connector to the engine wiring harness.

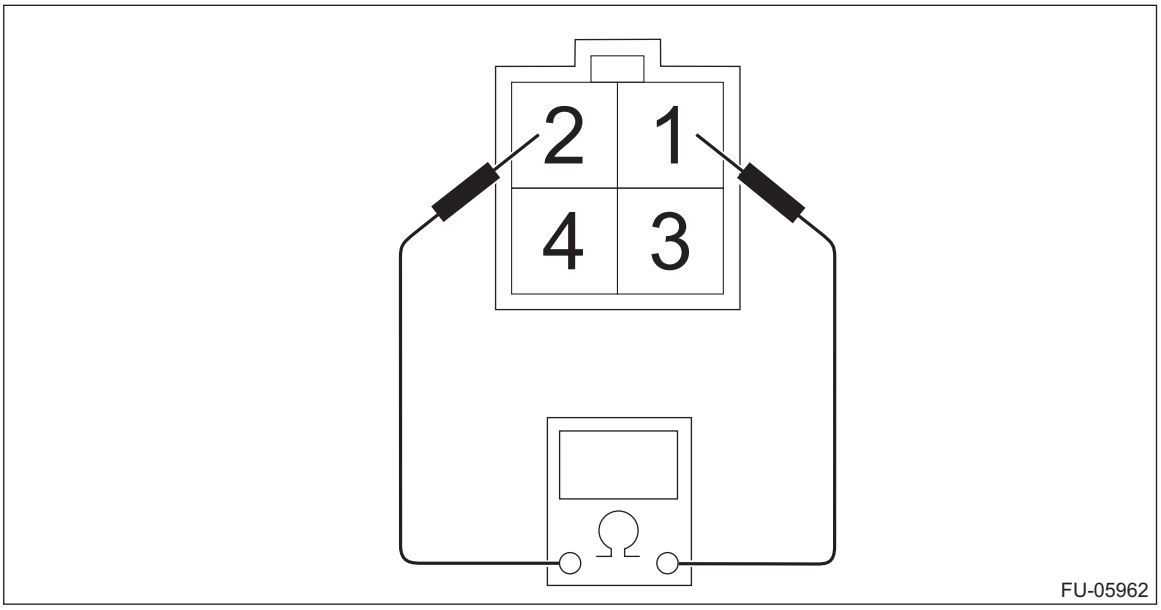


4) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle.
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the rear oxygen sensor has no deformation, cracks or other damages.

2) Measure the resistance between rear oxygen sensor terminals.



Terminal No.	Standard
1 and 2	$6.0^{+0.6}_{-0.6}$ Ω (when 20°C (68°F))

25.SI-DRIVE (SUBARU Intelligent Drive) Selector

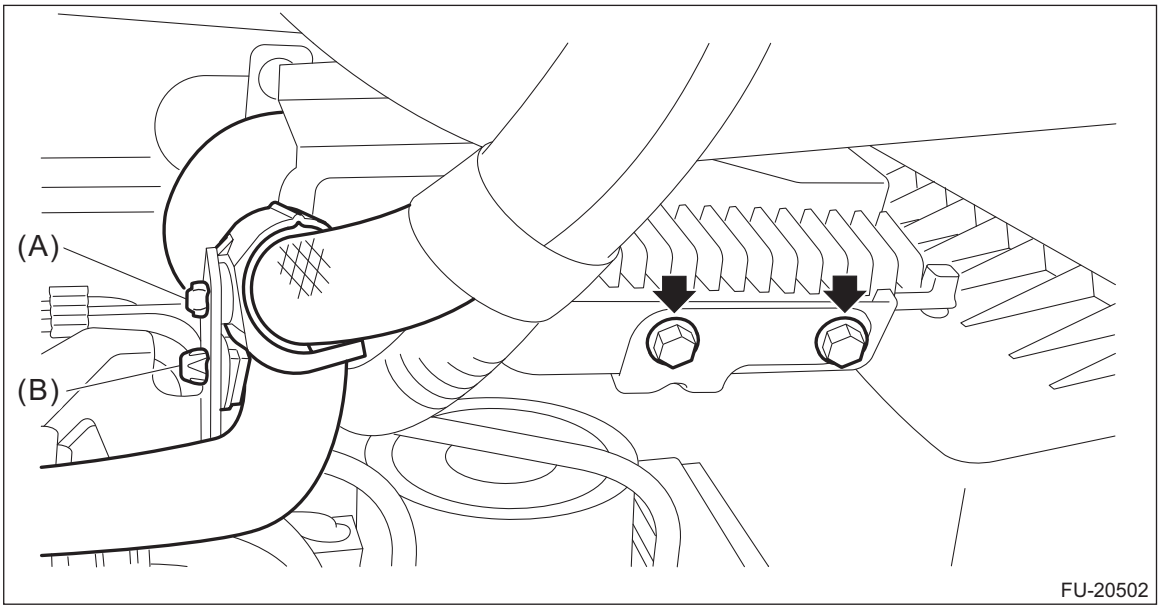
A: SPECIFICATION

SI-DRIVE (SUBARU Intelligent Drive) selector is integrated as a unit with the cruise control command switch. For removal, installation and inspection, refer to “Cruise Control Command Switch”. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> <Ref. to CC-6, INSTALLATION, Cruise Control Command Switch.> <Ref. to CC-6, INSPECTION, Cruise Control Command Switch.>

26.Engine Control Module (ECM)

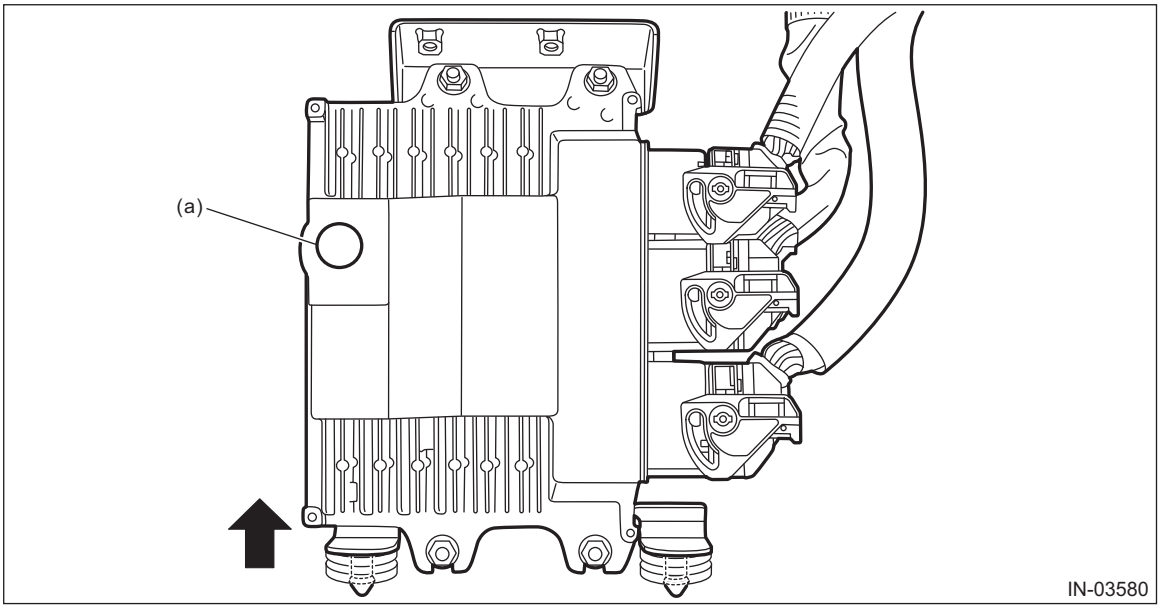
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness from the bracket, and remove the bolt which secures the ECM to the bracket.

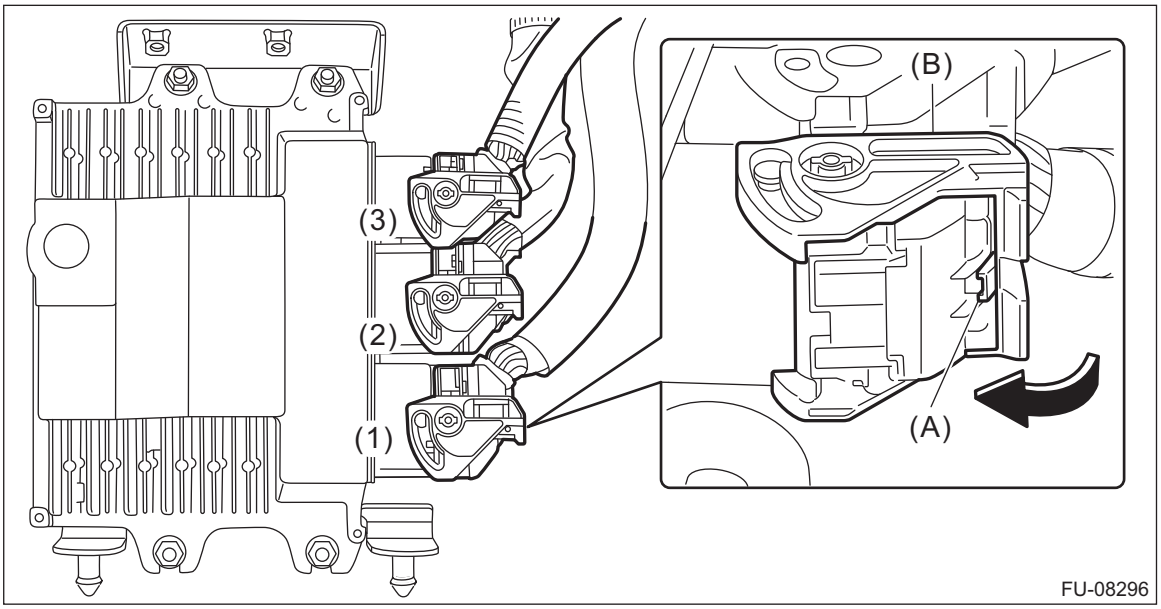


3) Pull out the ECM from the bracket.

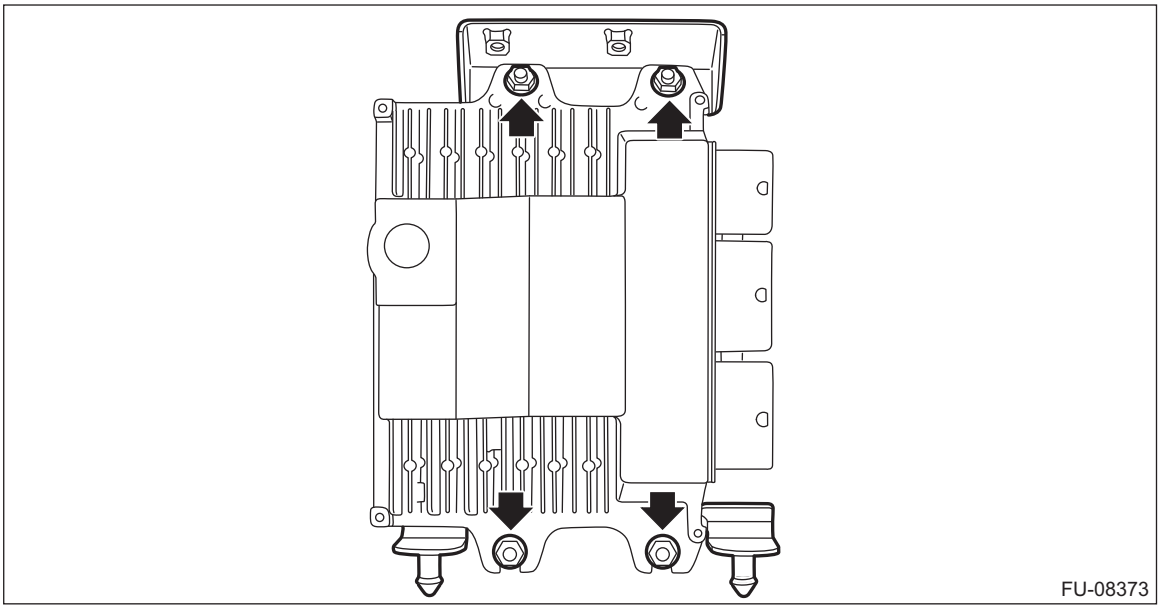
NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.



4) While pressing the section (A) shown in the figure, move the lock lever (B) in the direction of the arrow to disconnect the connectors from the ECM in numerical order as shown in the figure.



5) Remove the bracket from ECM.



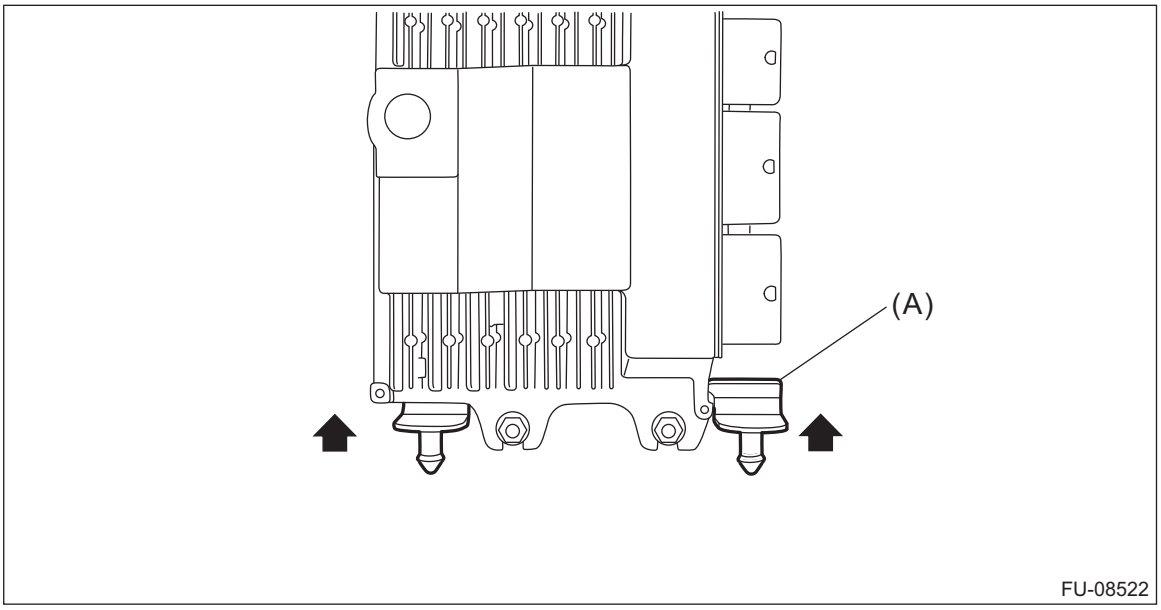
B: INSTALLATION

Install in the reverse order of removal.

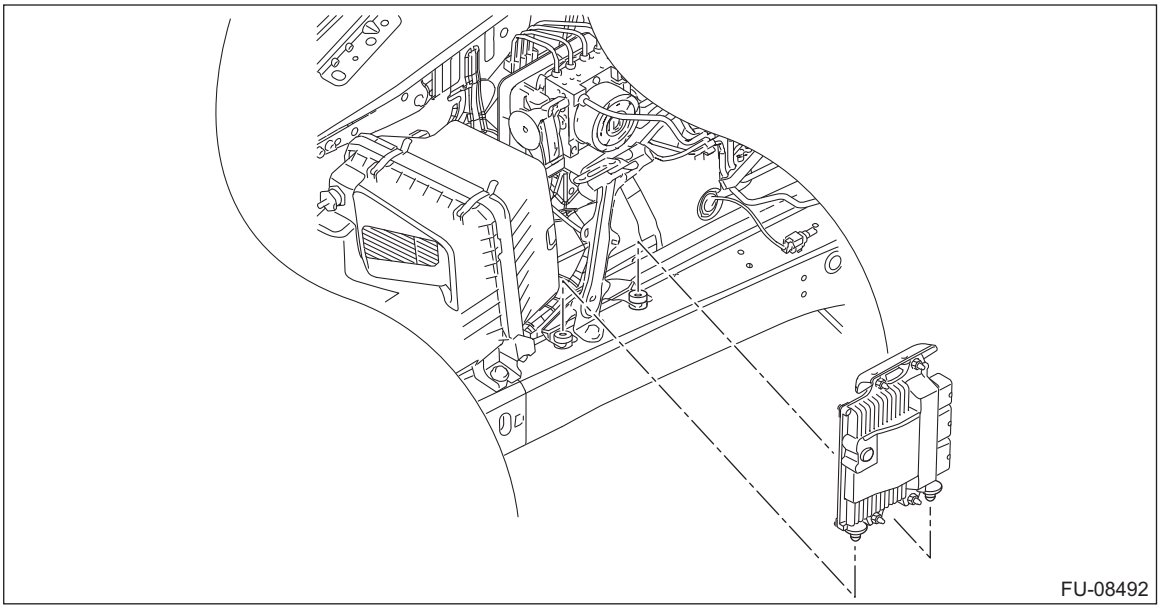
CAUTION:
When the ECM of model with immobilizer has been replaced, be sure to perform the registration of immobilizer system.
- **For model without keyless access with push button start, refer to the Type B in "REGISTRATION MANUAL FOR IMMOBILIZER".**
- **For model with keyless access with push button start, refer to the Type D in "REGISTRATION MANUAL FOR IMMOBILIZER".**

NOTE:
- When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

- When installing the bracket (A) to the ECM, press to install it in the direction of the arrow.



- Insert the ECM into the bracket cushion.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

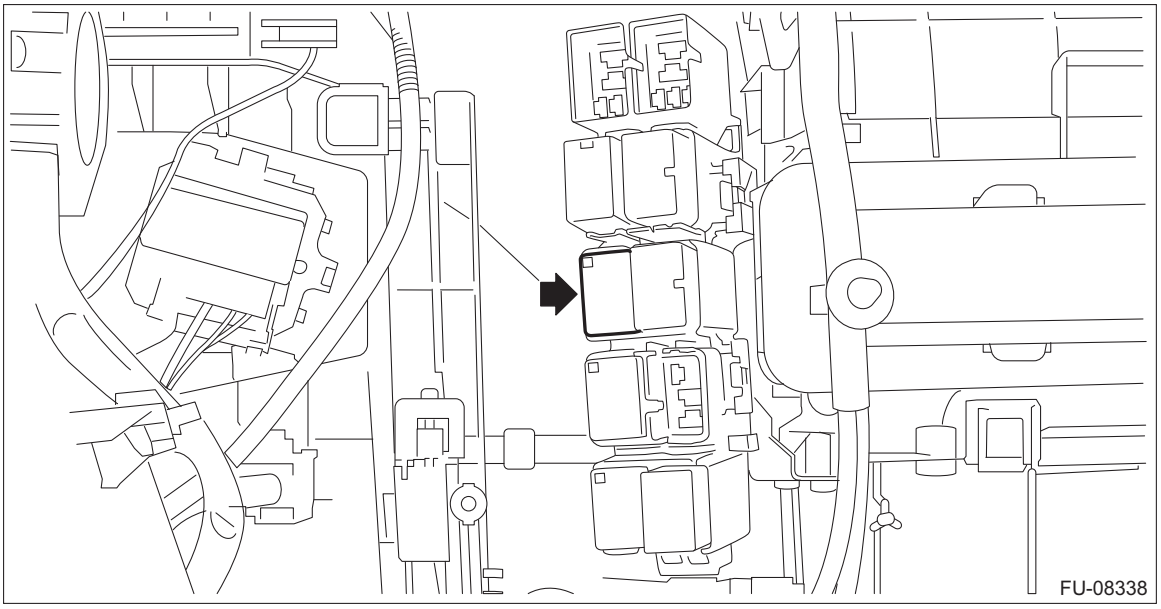
C: INSPECTION

Check that the ECM has no deformation, cracks or other damages.

27.Main Relay

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the main relay.

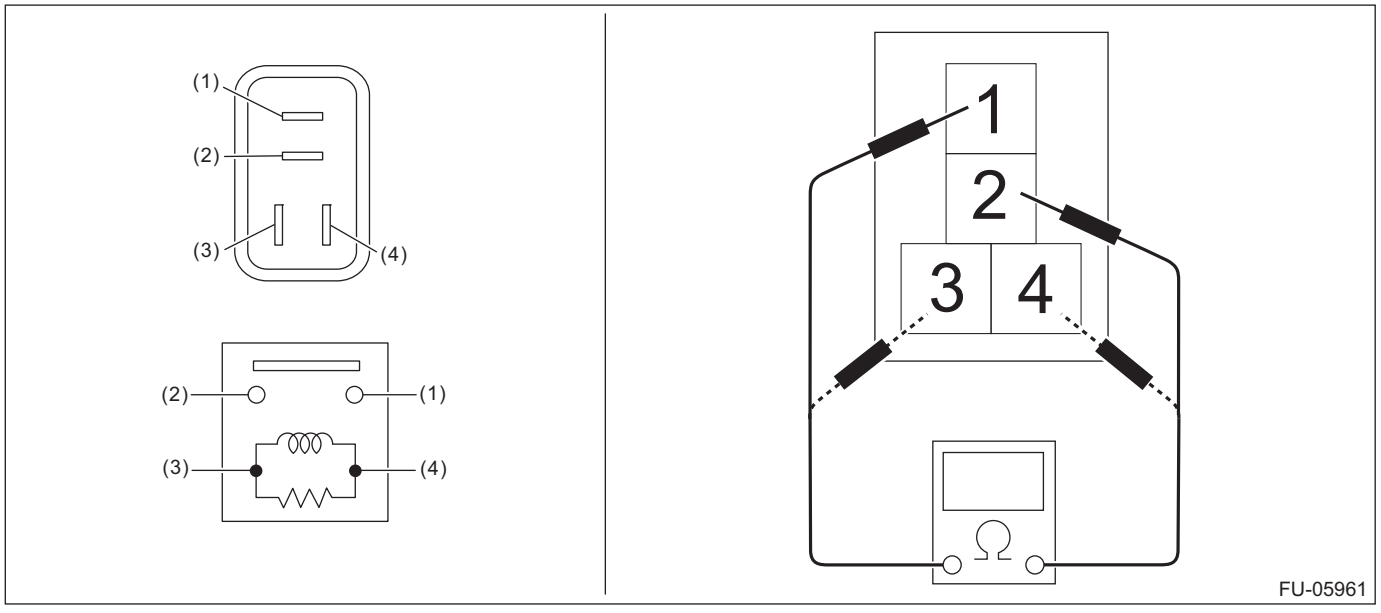


B: INSTALLATION

Install in the reverse order of removal.

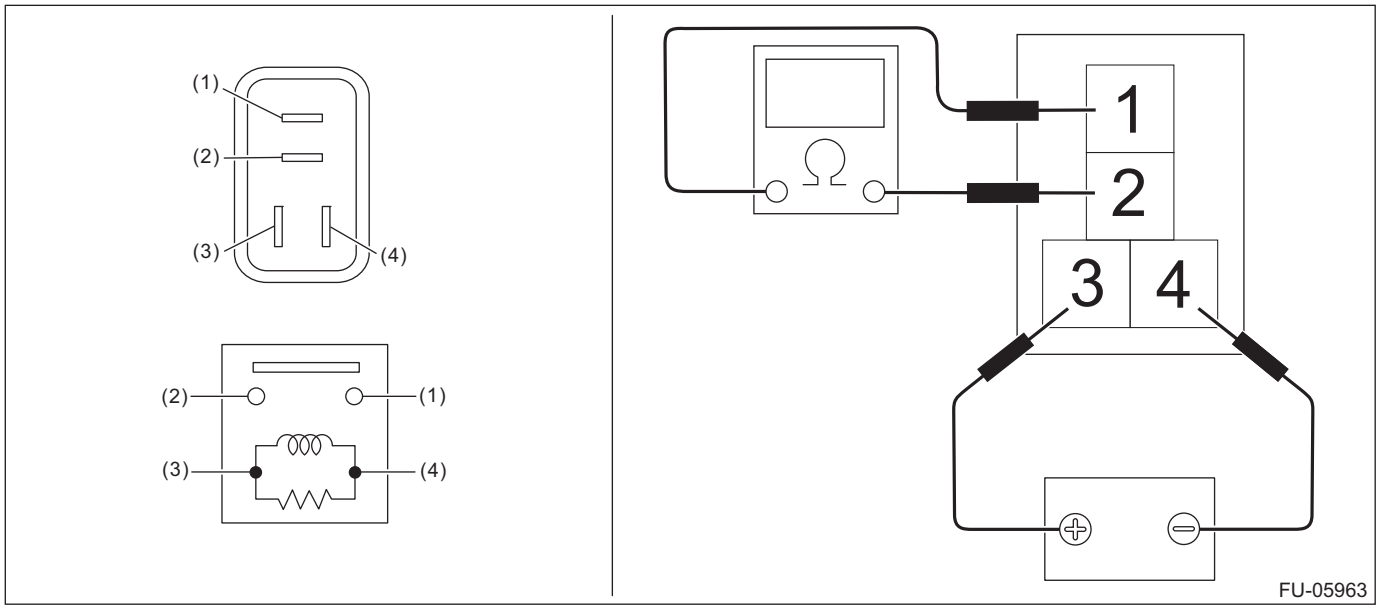
C: INSPECTION

1) Check that the main relay has no deformation, cracks or other damages.
2) Measure the resistance between main relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	130.4 — 230.8 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the main relay terminals.

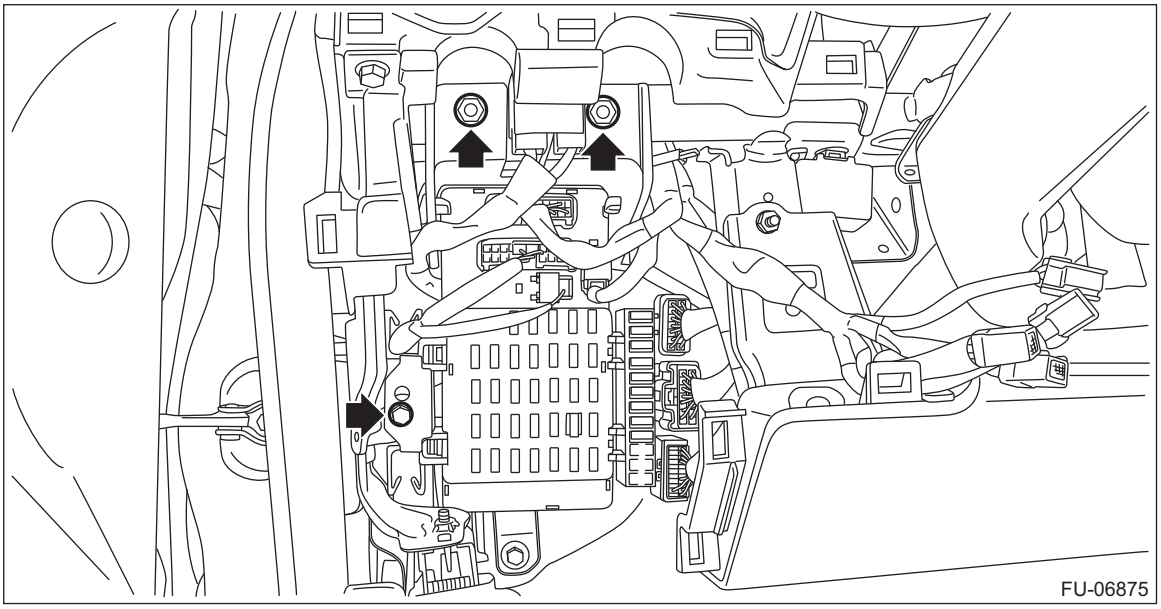


Terminal No.	Standard
1 and 2	Less than 1 Ω

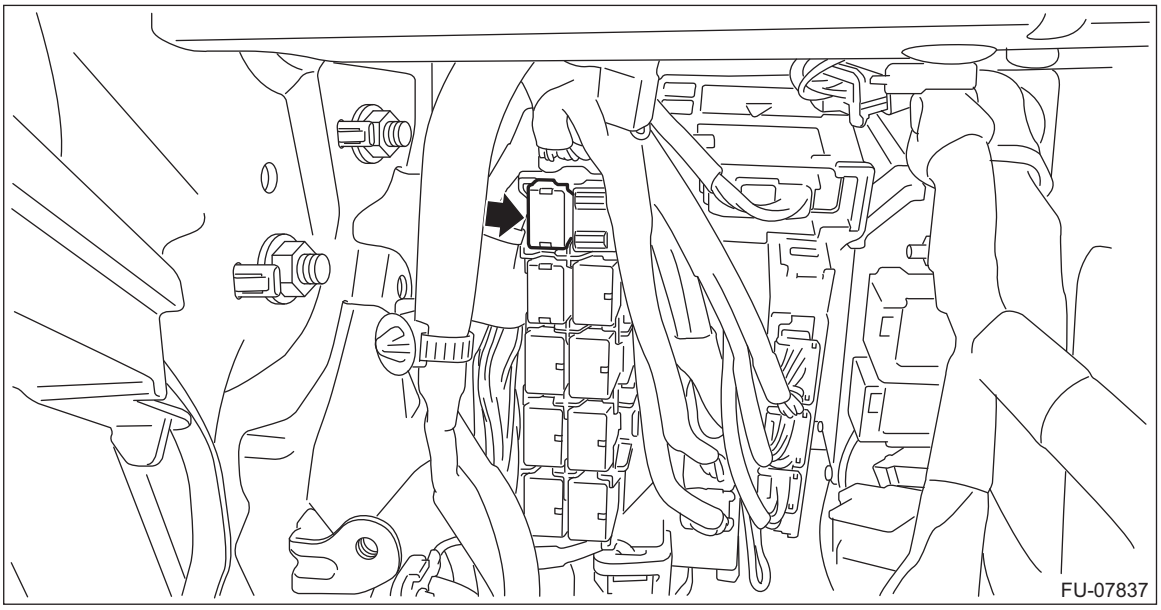
28.Oxygen Sensor Relay

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the nut and bolt, and move the fuse block downwards.



4) Remove the oxygen sensor relay from the relay block.



B: INSTALLATION

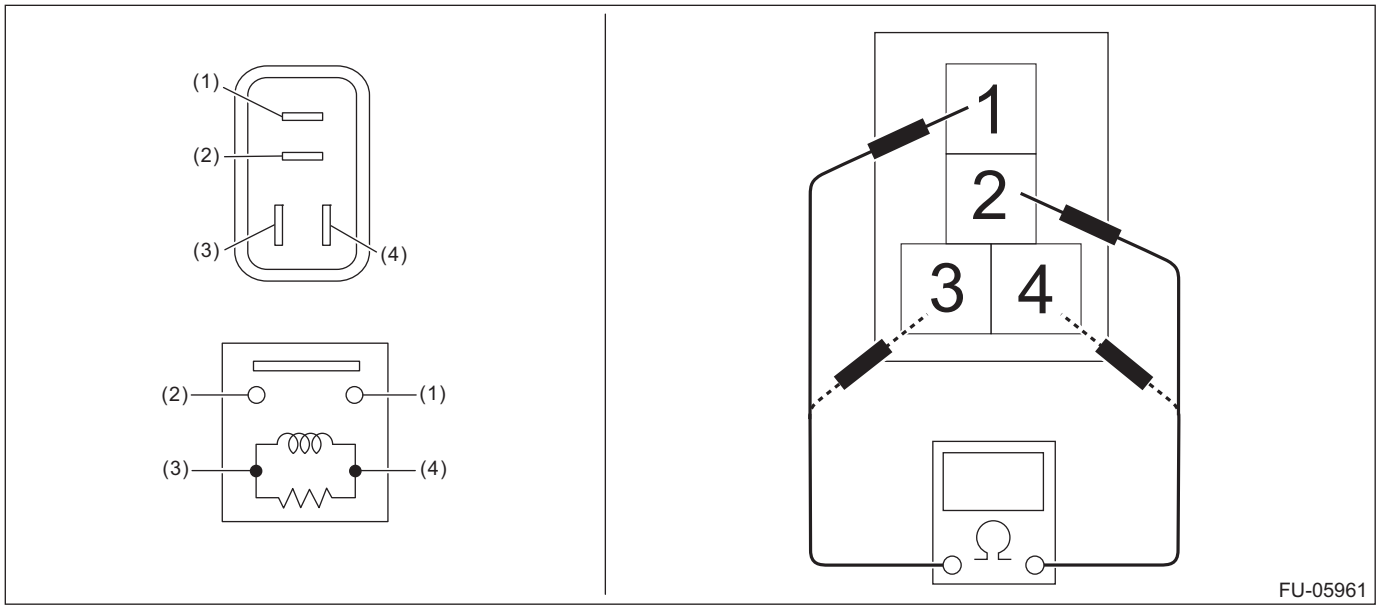
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: INSPECTION

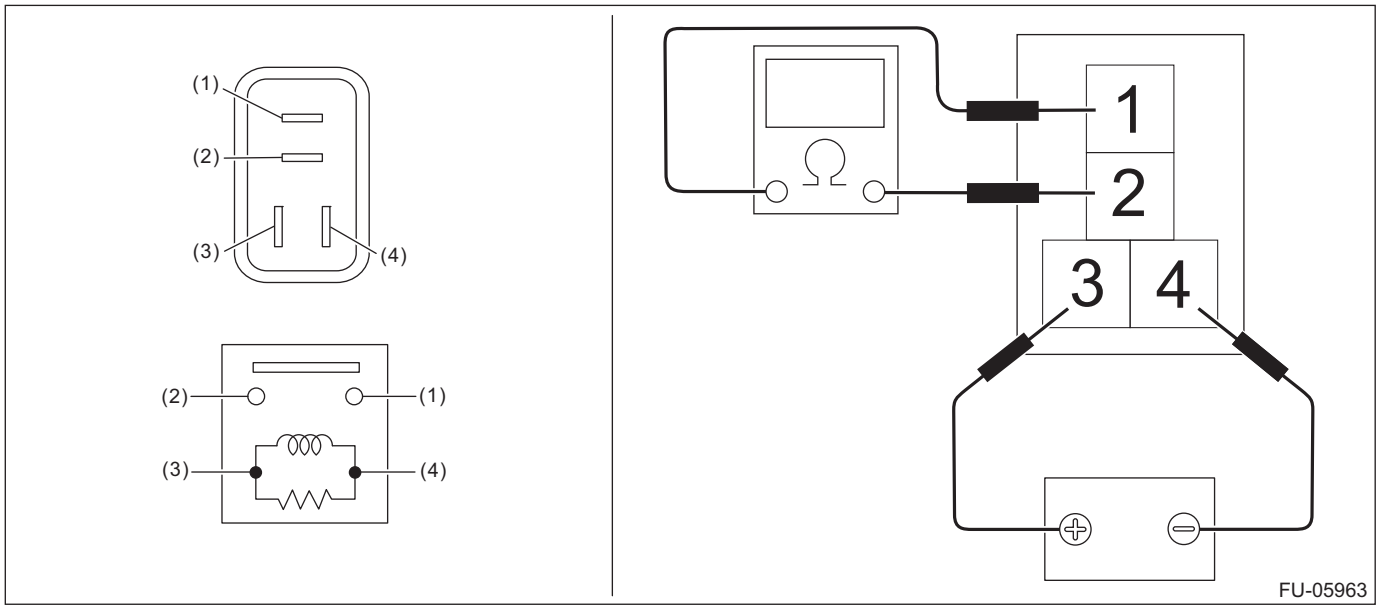
1) Check that the oxygen sensor relay has no deformation, cracks or other damages.

2) Measure the resistance between oxygen sensor relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between oxygen sensor relay terminals.

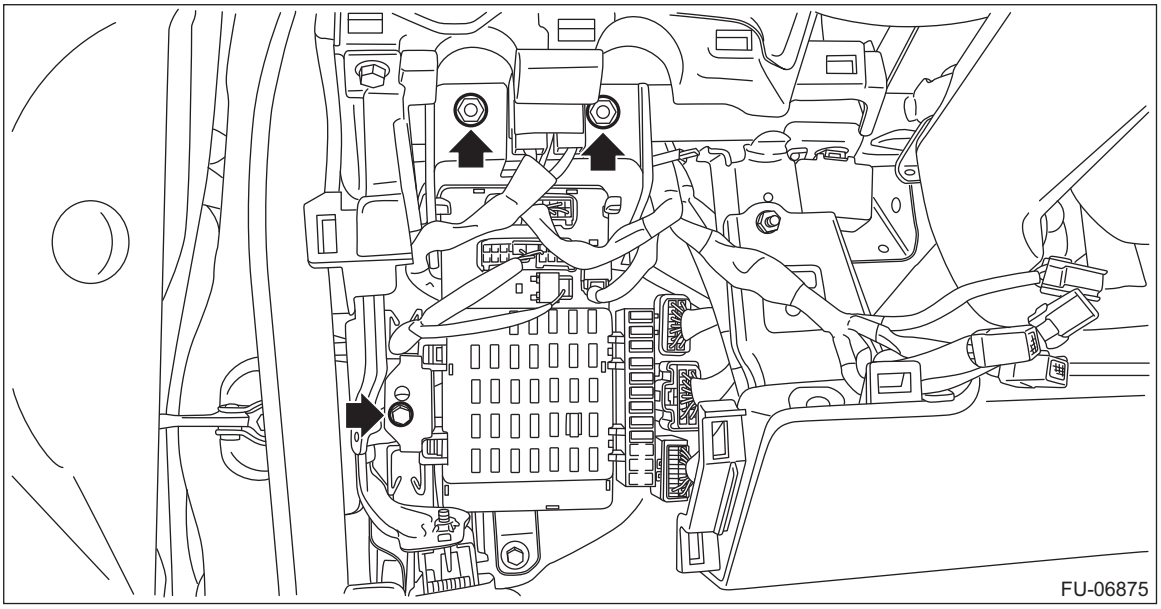


Terminal No.	Standard
1 and 2	Less than 1 Ω

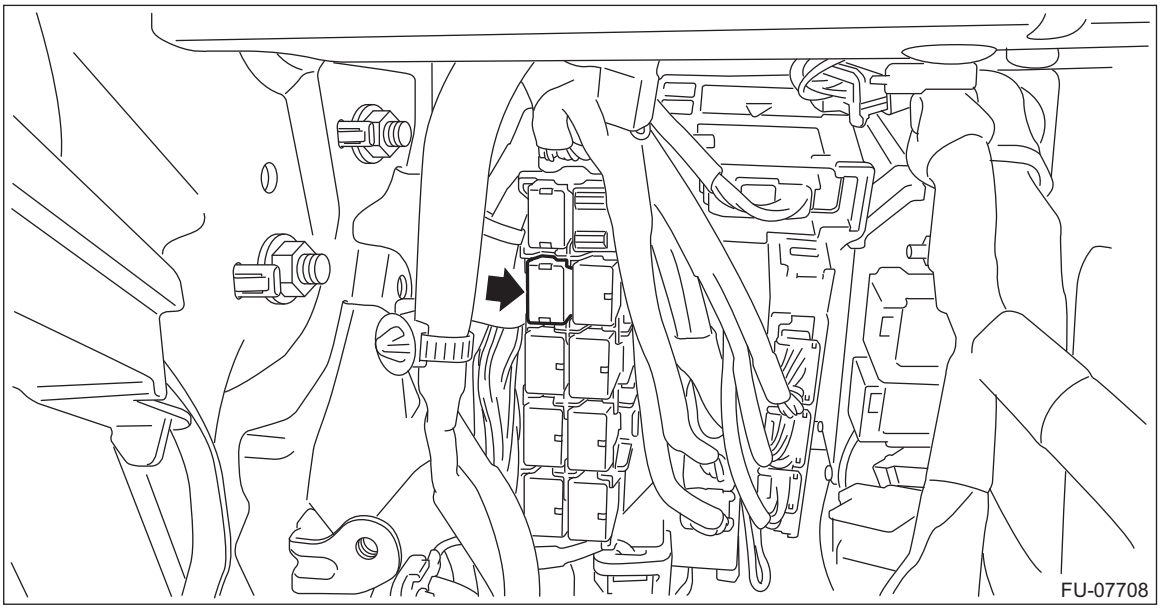
29.Electronic Throttle Control Relay

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the instrument panel lower cover. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the nut and bolt, and move the fuse block downwards.



4) Remove the electronic throttle control relay from the relay block.



B: INSTALLATION

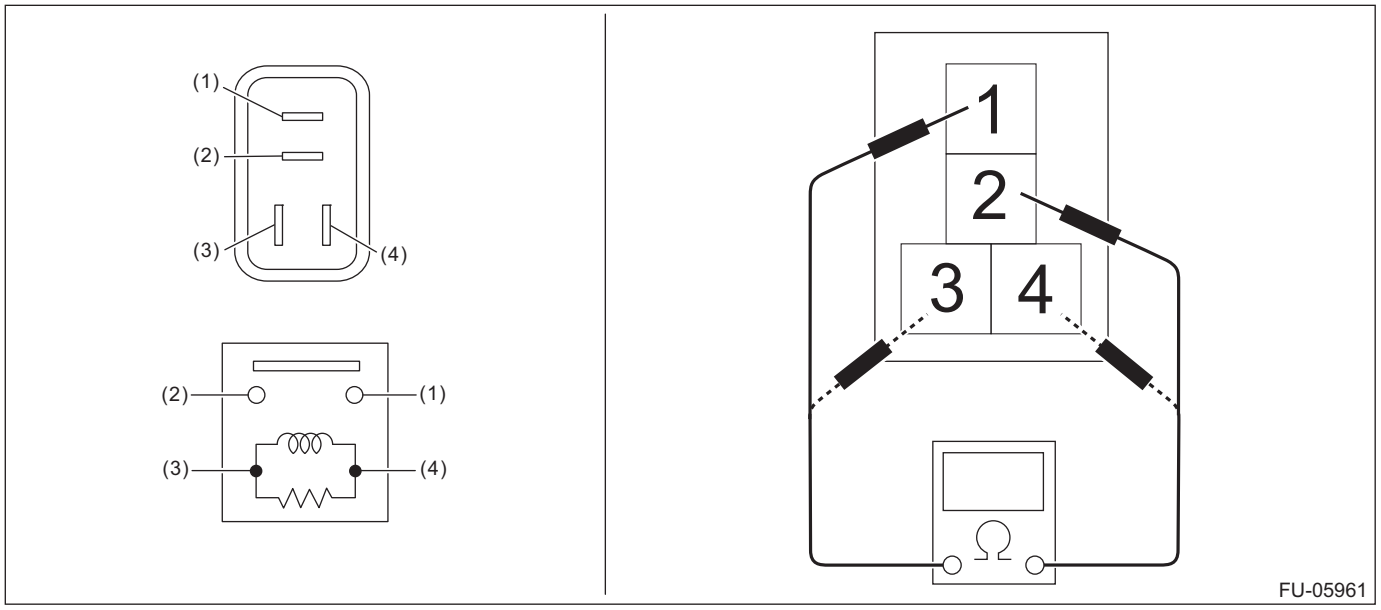
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: INSPECTION

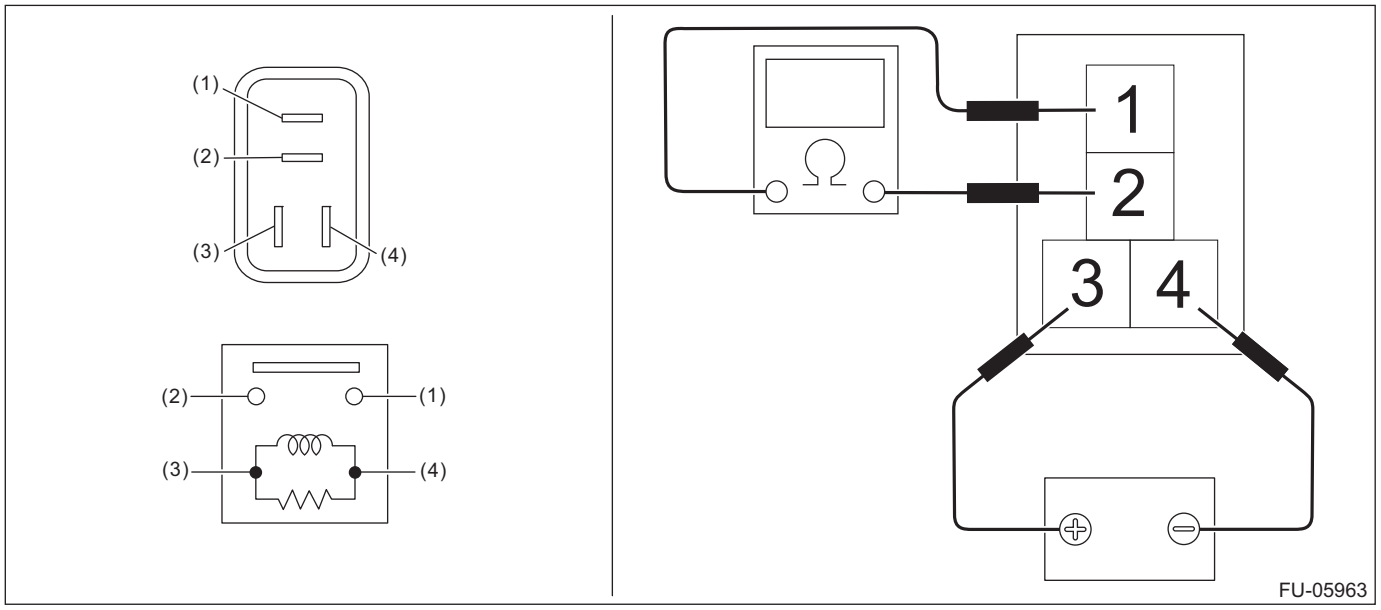
1) Check that the electronic throttle control relay has no deformation, cracks or other damages.

2) Measure the resistance between electronic throttle control relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the electronic throttle control relay terminals.

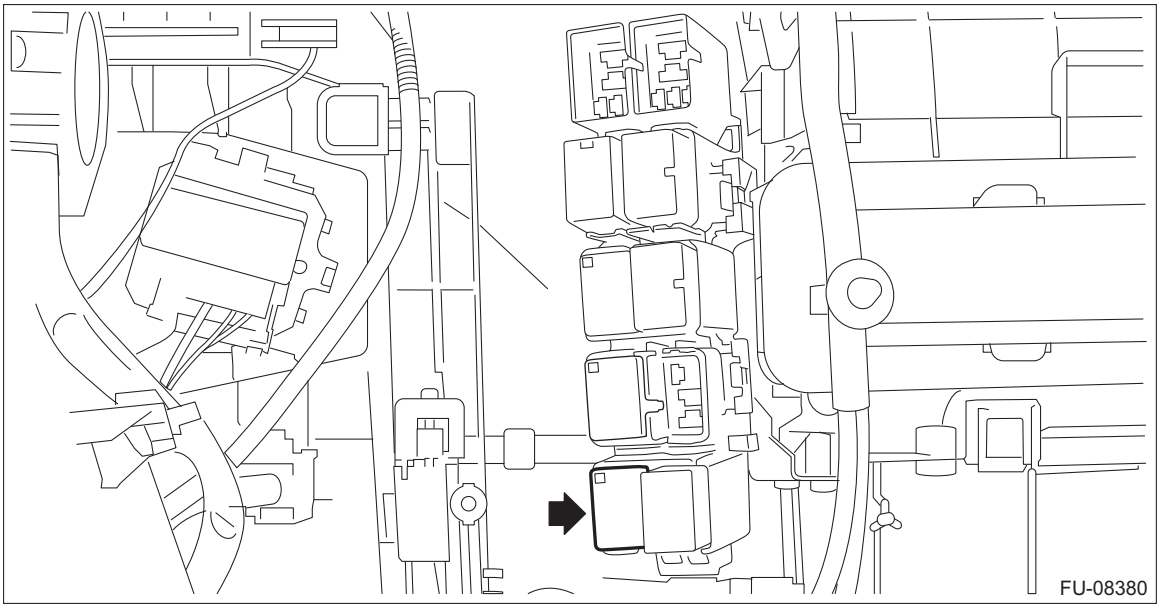


Terminal No.	Standard
1 and 2	Less than 1 Ω

30.Fuel Pump Relay

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the fuel pump relay.

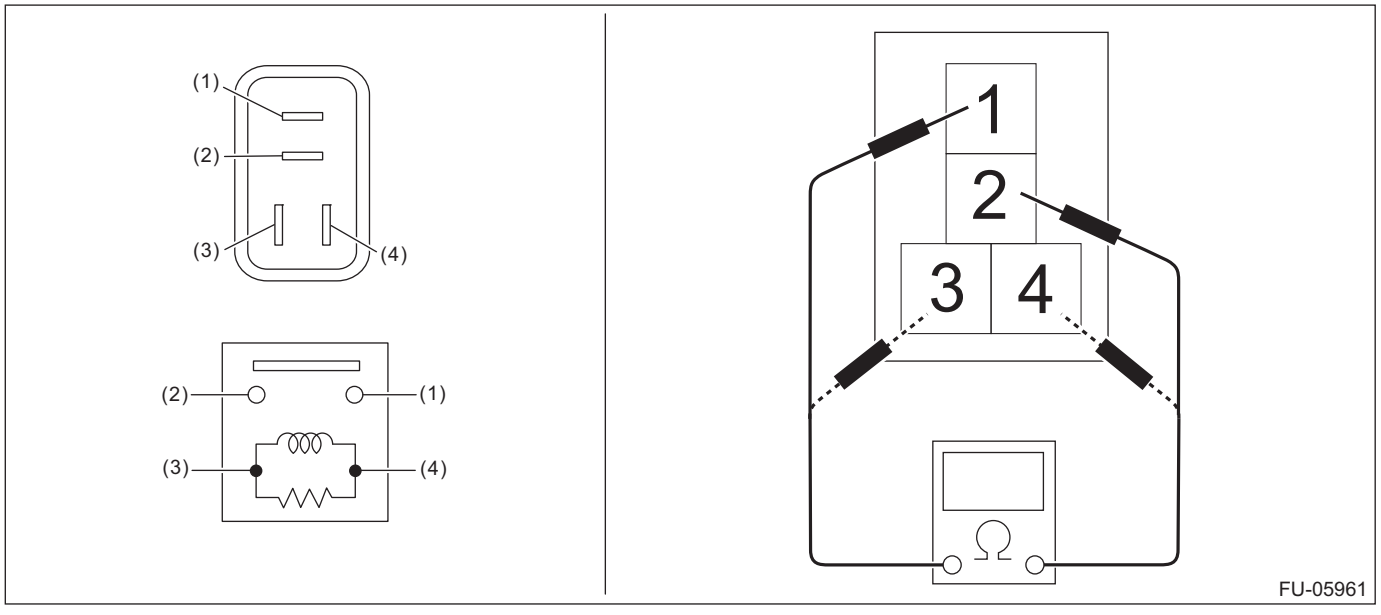


B: INSTALLATION

Install in the reverse order of removal.

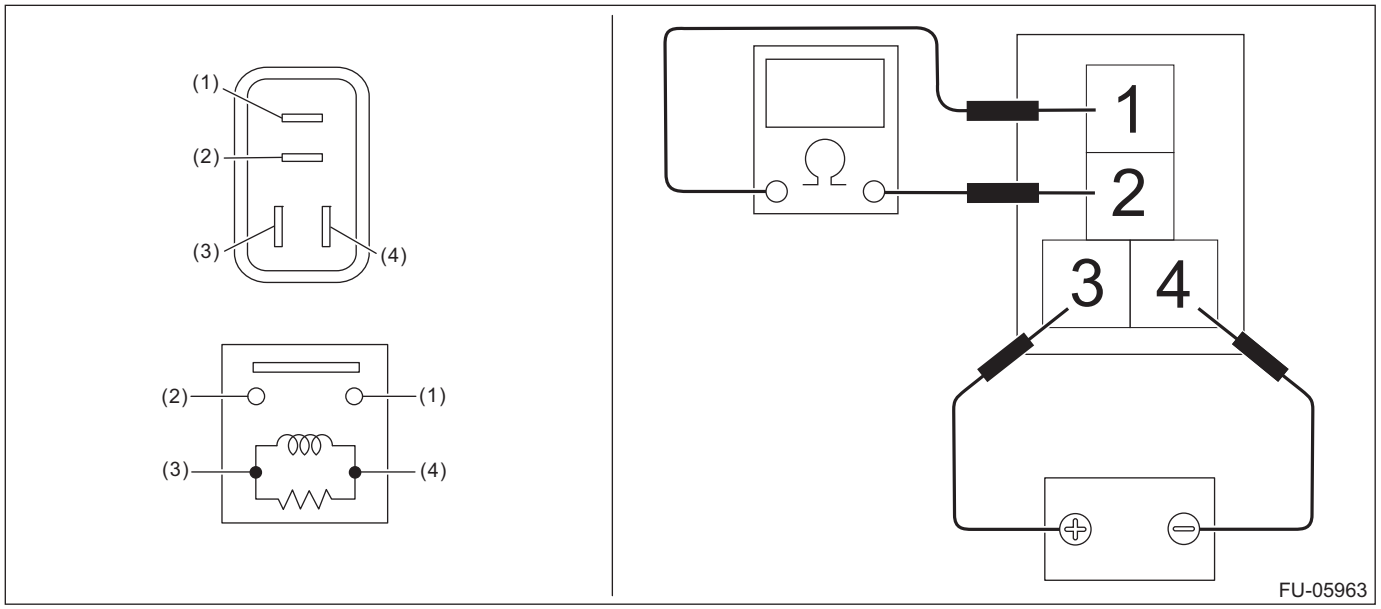
C: INSPECTION

1) Check that the fuel pump relay has no deformation, cracks or other damages.
2) Measure the resistance between fuel pump relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the fuel pump relay terminals.

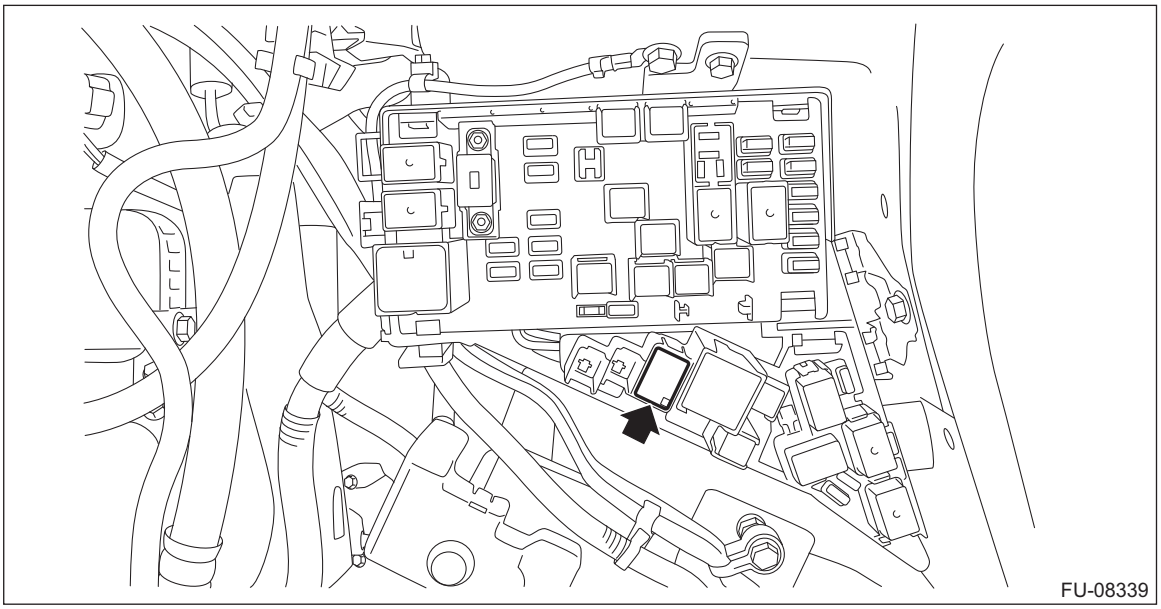


Terminal No.	Standard
1 and 2	Less than 1 Ω

31.Fuel Injector Relay

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the fuel injector relay from main fuse box.

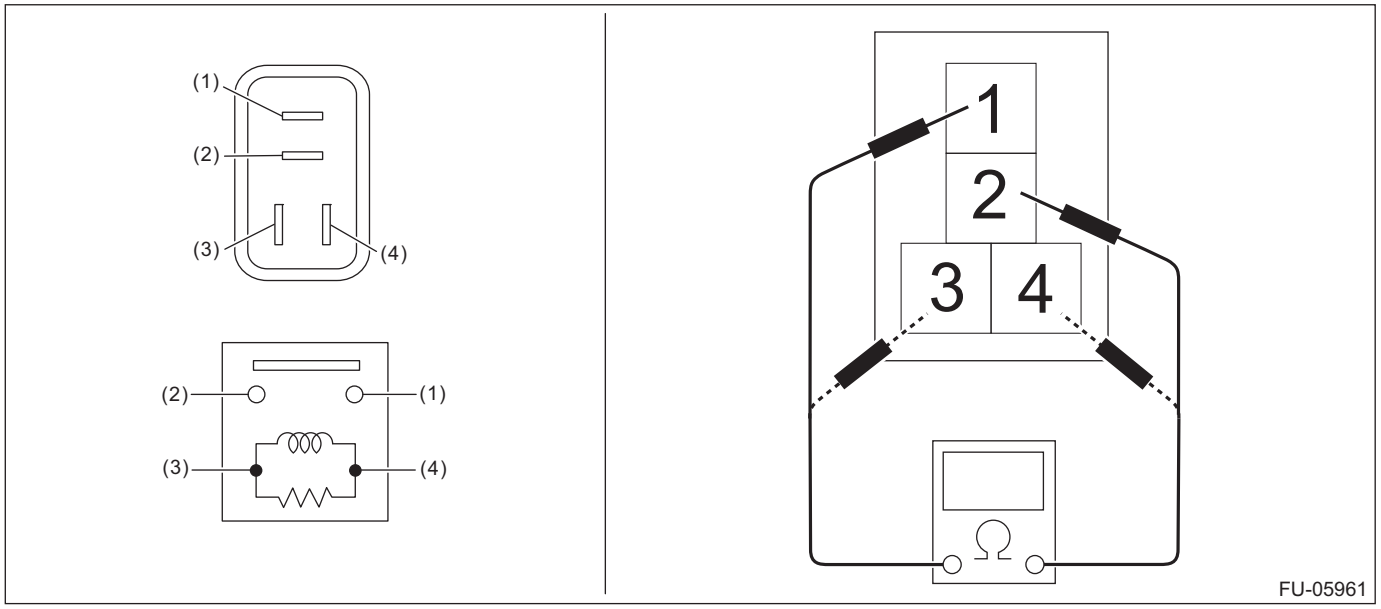


B: INSTALLATION

Install in the reverse order of removal.

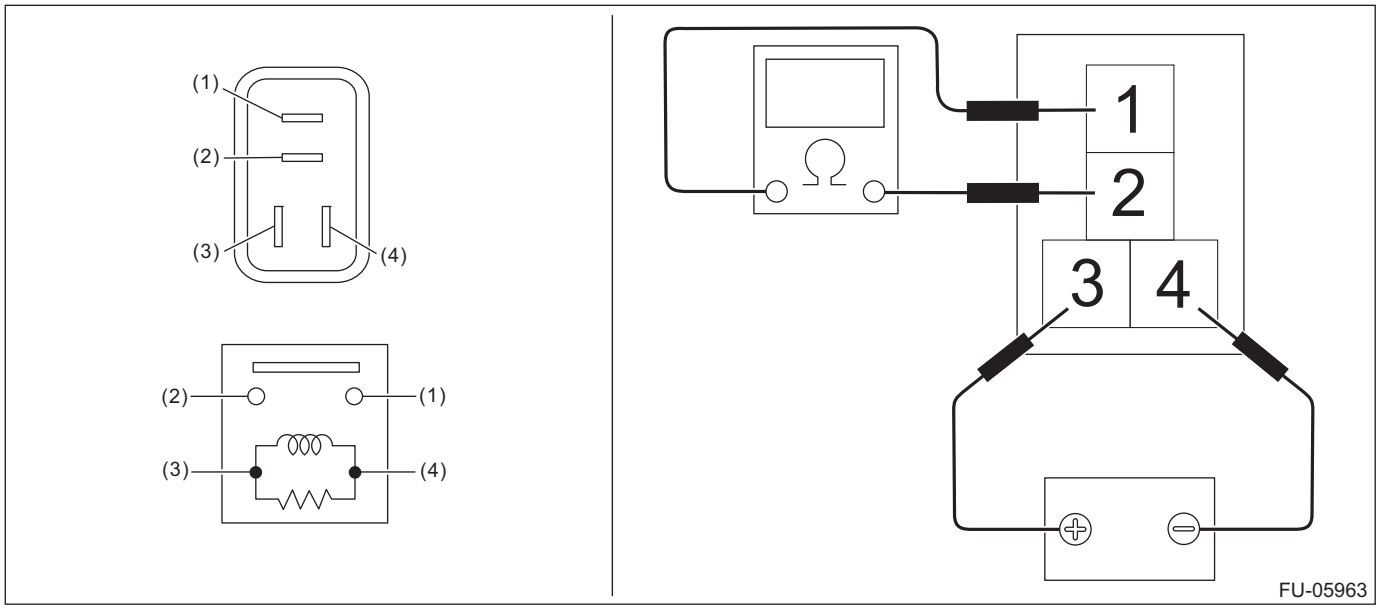
C: INSPECTION

1) Check that the fuel injector relay has no deformation, cracks or other damages.
2) Measure the resistance between fuel injector relay terminals.



Terminal No.	Standard
1 and 2	1 MΩ or more
3 and 4	93.8 — 136.4 Ω (when 20°C (68°F))

3) Connect battery positive terminal to terminal No. 3 and battery ground terminal to terminal No. 4, and measure the resistance between the fuel injector relay terminals.

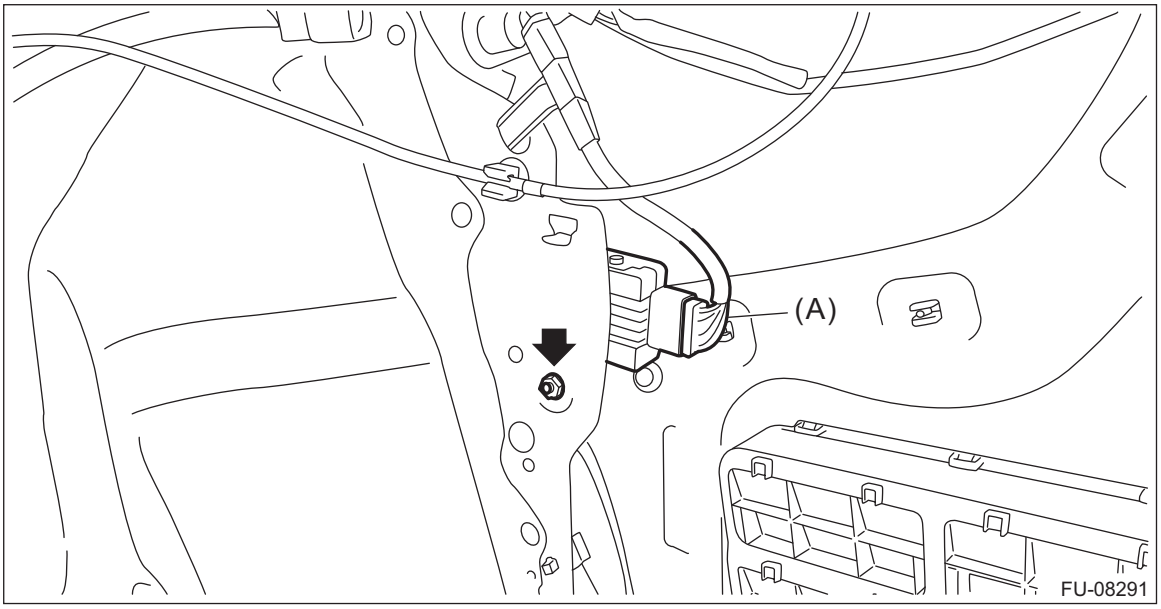


Terminal No.	Standard
1 and 2	Less than 1 Ω

32.Fuel Pump Control Unit

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the right side trunk side trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Disconnect the connector (A), and remove the fuel pump control unit.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)

C: INSPECTION

Check that the fuel pump control unit has no deformation, cracks or other damages.

33.Fuel

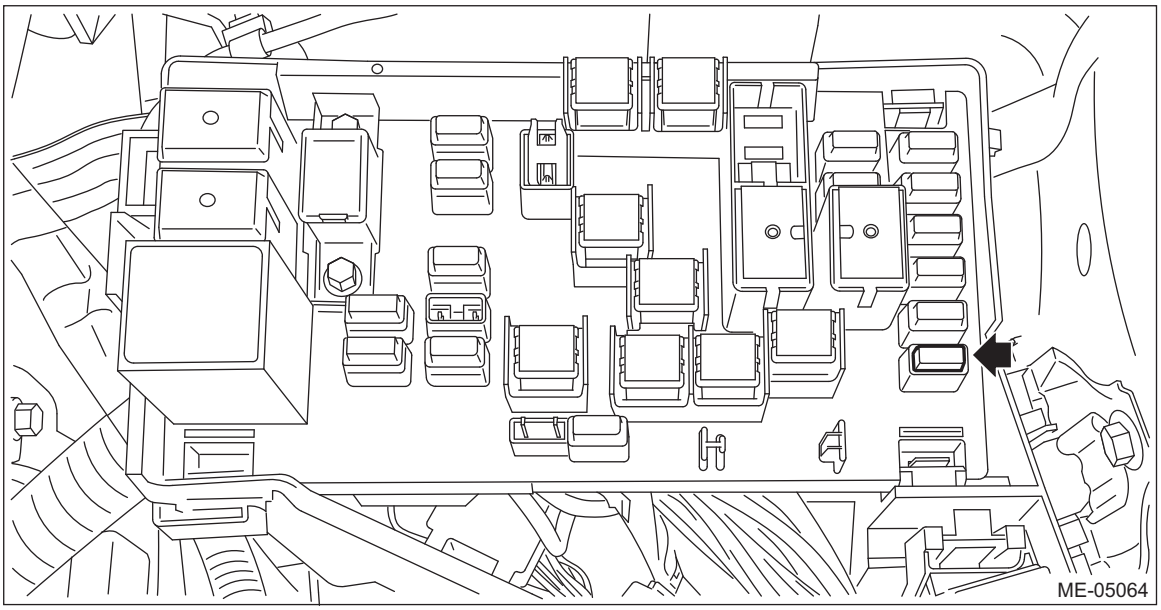
A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
Be careful not to spill fuel.

1) Remove the fuse of fuel pump from main fuse box.



2) Start the engine and run it until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.
5) Install the fuse of fuel pump to the main fuse box.
6) Make sure that the malfunction indicator light is not lit.

NOTE:
When the fuel pressure is released, the malfunction indicator light illuminates and DTC (P0087) may be stored in ECM. When the malfunction indicator light has illuminated, perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>

2. DRAINING FUEL (WITH SUBARU SELECT MONITOR)

WARNING:
Place “NO OPEN FLAMES” signs near the working area.

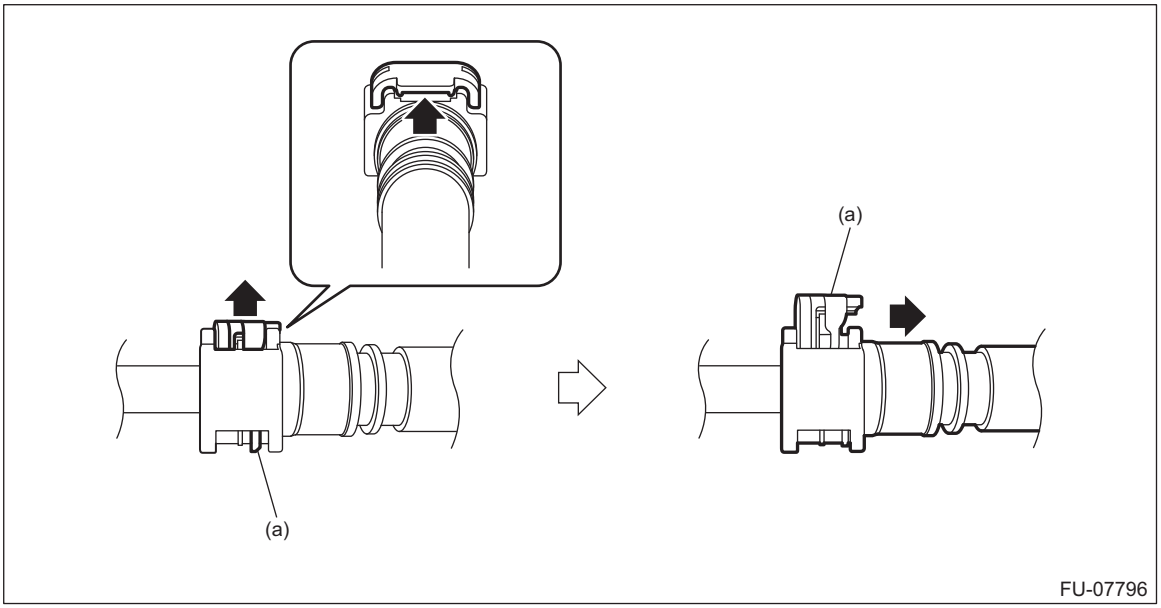
CAUTION:
Be careful not to spill fuel.

NOTE:
• If the fuel pump cannot be driven, refer to the procedures for draining from the fuel filler hose. <Ref. to FU(w/o STI)-142, DRAINING FUEL (THROUGH THE FUEL FILLER HOSE), PROCEDURE, Fuel.>
• Be careful not to let the battery run-out.
• Be aware that the fuel may remain in the fuel tank after draining the fuel.

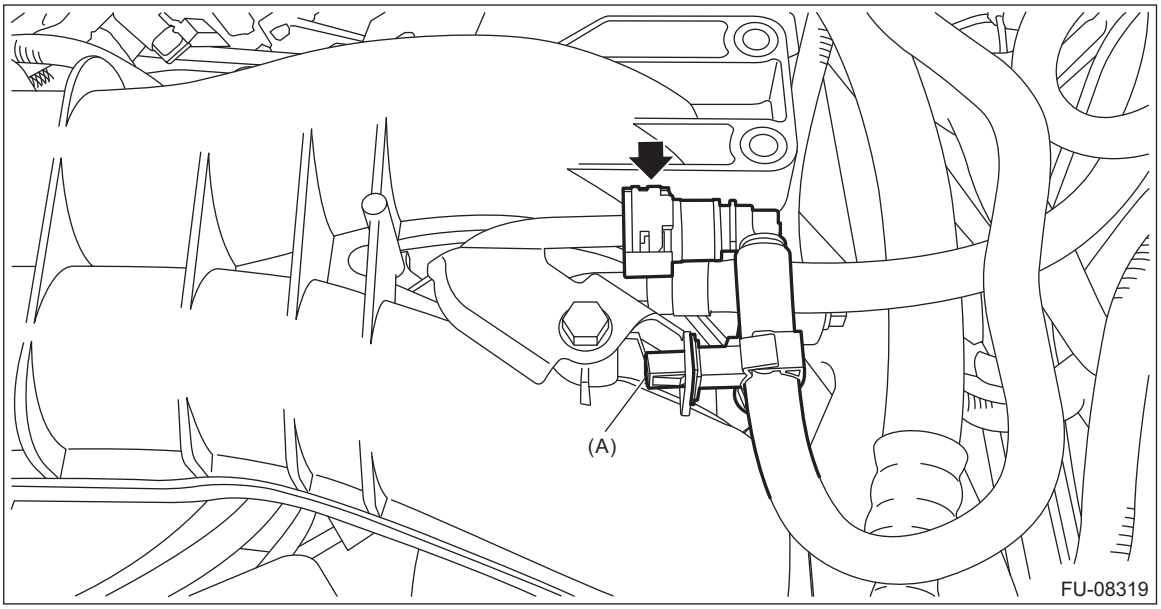
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Disconnect the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

NOTE:
Disconnect the quick connector as shown in the figure.



(a) Slider



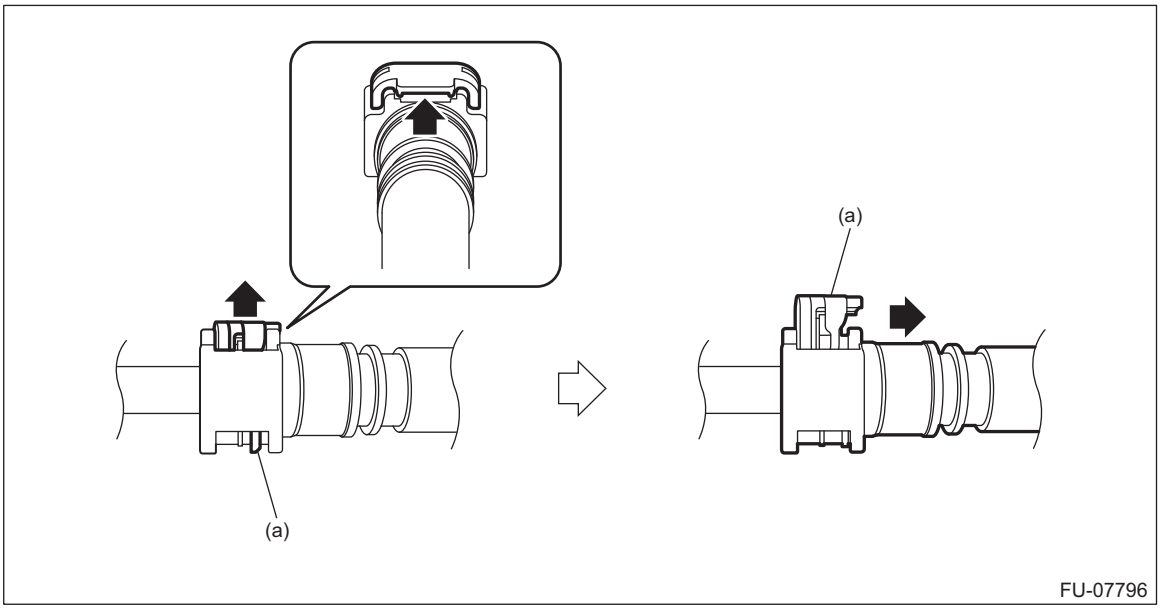
3) Connect ST to the fuel delivery tube.
ST 18471AA000 FUEL PIPE ADAPTER
4) Connect the gasoline proof hose to ST and put the end of the hose in the container.
5) Drive the fuel pump and drain the fuel using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-97, Active Test.>

CAUTION:
Be careful not to spill fuel.
6) Install the related parts in the reverse order after draining the fuel.

CAUTION:
- **Be careful not to spill fuel.**

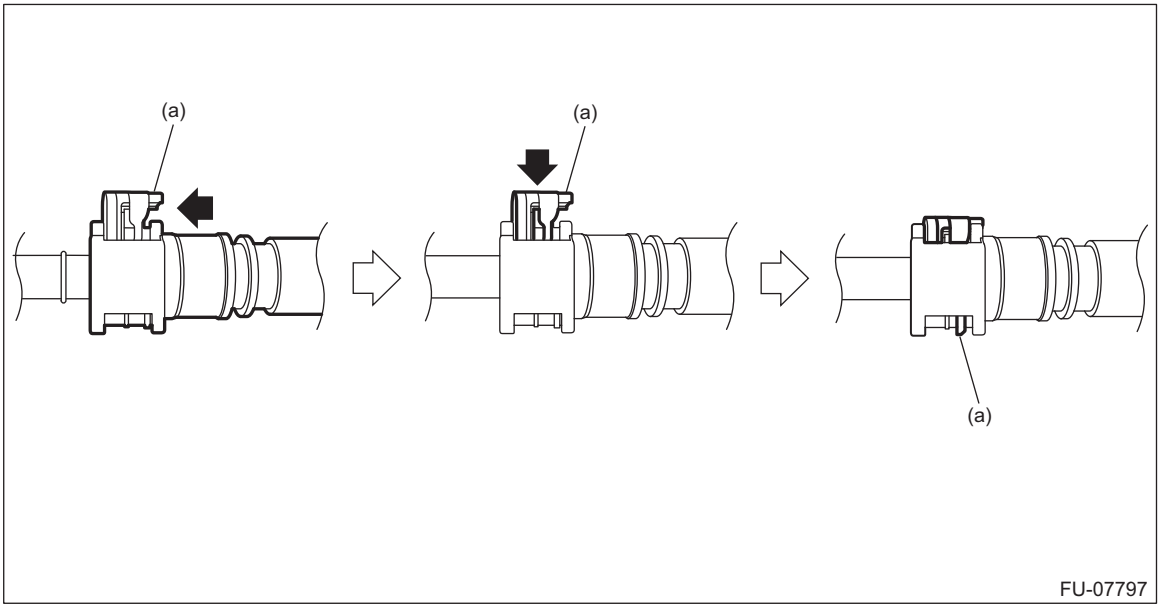
• Catch the fuel from the tubes using a container or cloth.
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
• Disconnect the quick connector on the fuel delivery tube as shown in the figure.



(a) Slider

• Connect the quick connector on the fuel delivery tube as shown in the figure.



(a) Slider

3. DRAINING FUEL (THROUGH THE FUEL FILLER HOSE)

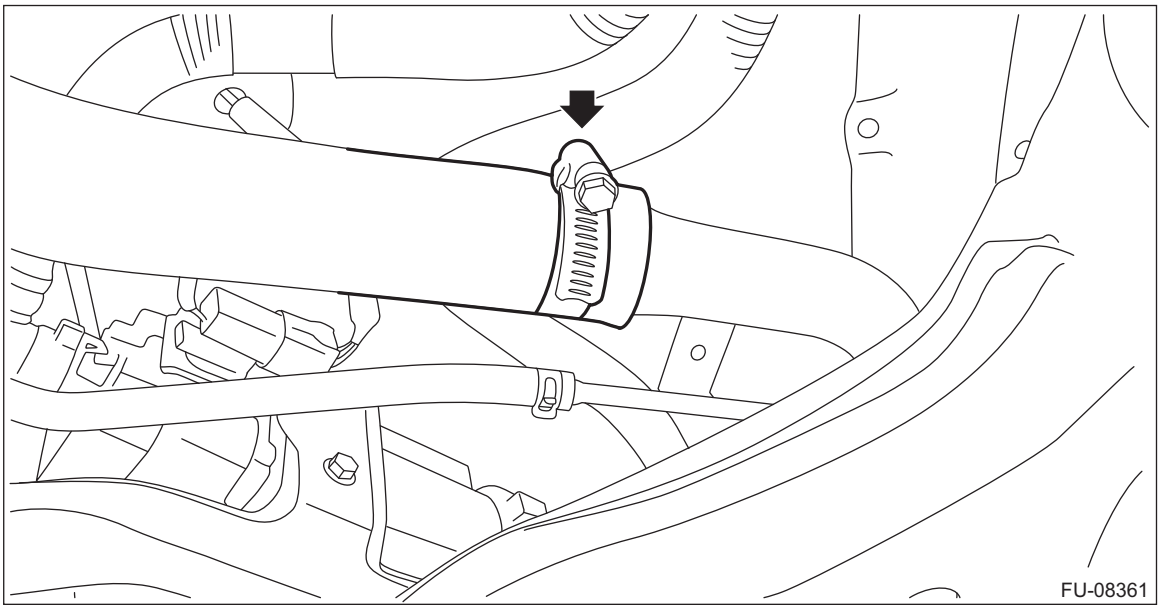
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Fuel may remain in the fuel filler pipe. Drain the fuel from the fuel filler pipe through the fill opening using the gasoline proof pump and the gasoline proof hose (ø10 or less) before the operation.**

NOTE:
Be aware that the fuel may remain in the fuel tank after draining the fuel.
1) Lift up the vehicle.
2) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.
3) Drain the fuel from the fuel filler pipe through the filler opening using the gasoline proof pump and the gasoline proof hose (ø10 or less).
4) Disconnect the fuel filler hose from the fuel filler pipe assembly.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses using a container or cloth.**

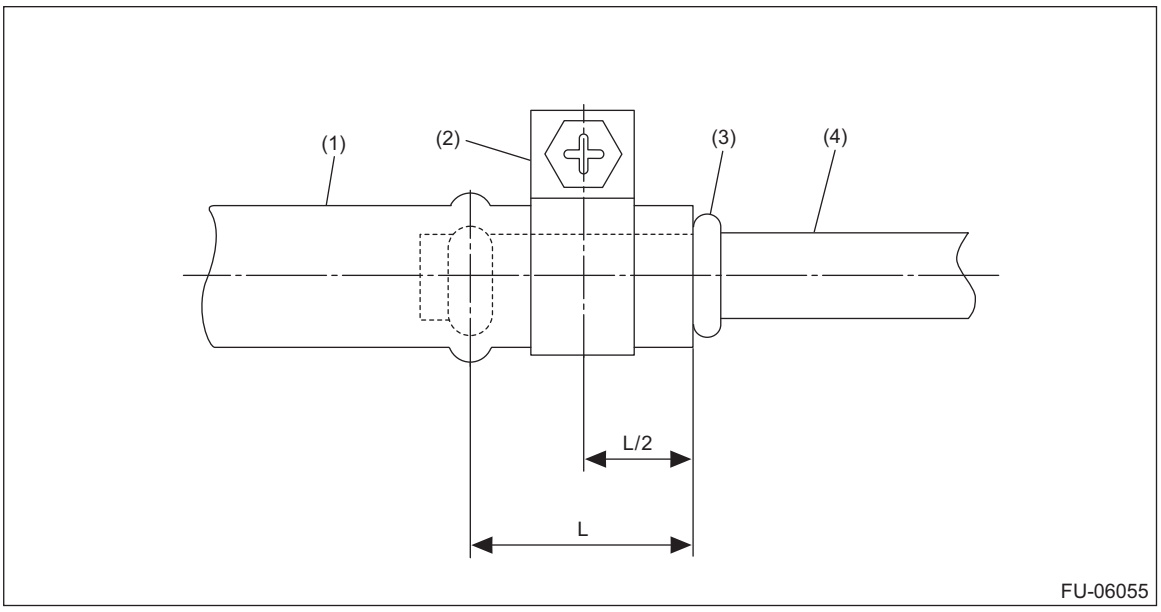


5) Set the container under the vehicle and insert the gasoline proof hose (ø10 or less) into the fuel filler hose to drain the fuel.

CAUTION:
Be careful not to spill fuel.
6) Install the related parts in the reverse order after draining the fuel.

NOTE:
Correctly insert the fuel filler hose to the spool, and then install the clamp as shown.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

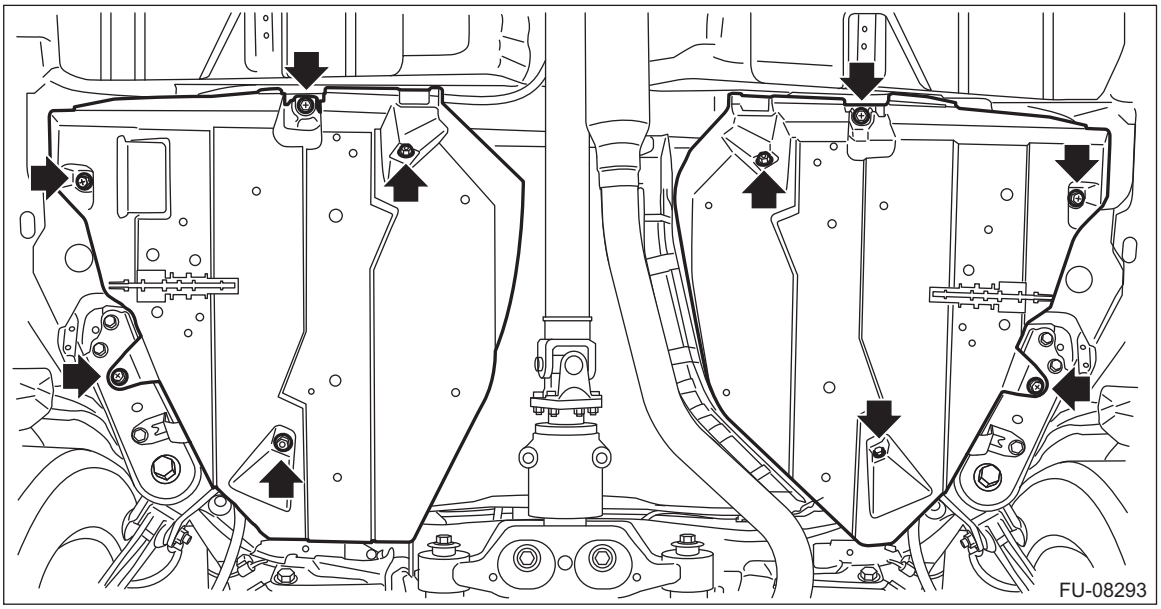


(1) Fuel filler hose
(2) Clamp
(3) Spool
(4) Fuel filler pipe

34.Fuel Tank Protector

A: REMOVAL

1) Lift up the vehicle.
2) Remove the bolt and nuts and remove the fuel tank protector.

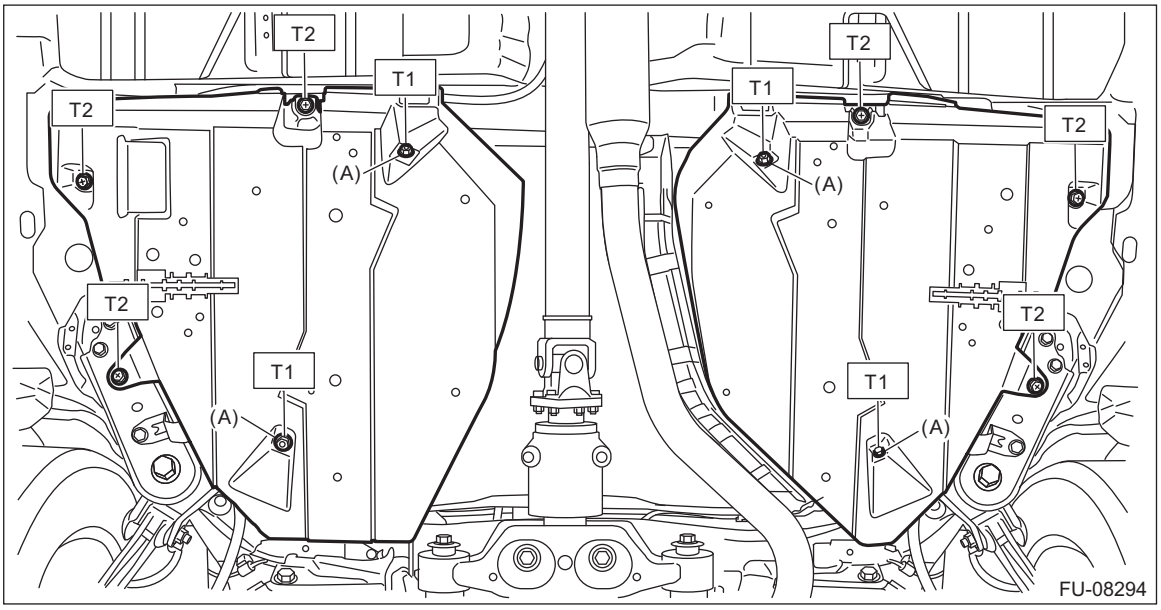


B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new self-locking nut.

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Self-locking nut

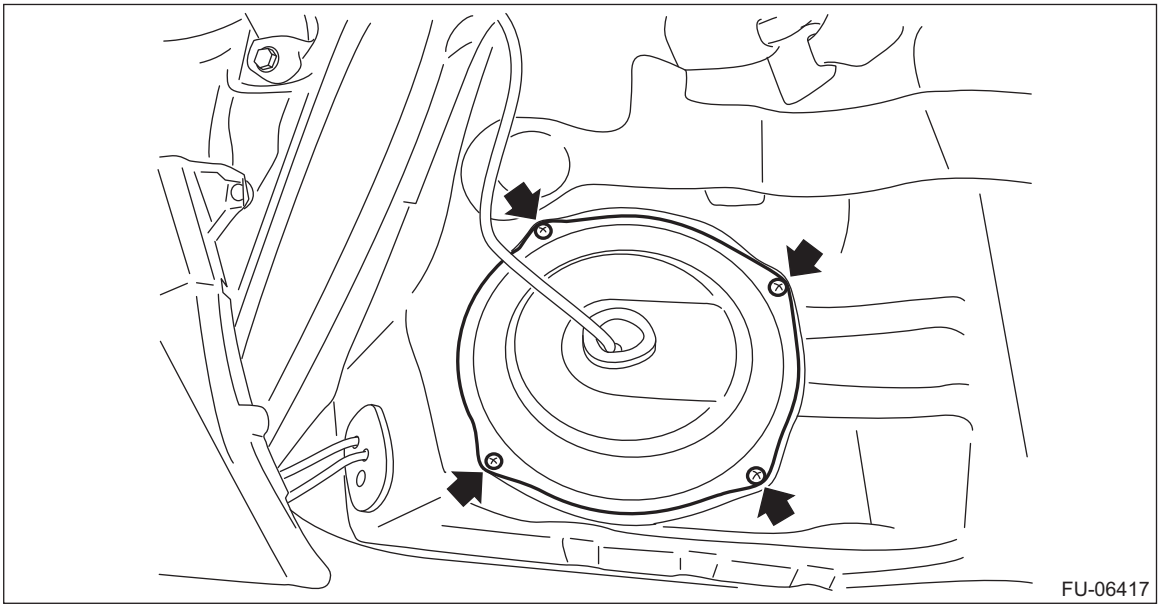
35.Fuel Tank

A: REMOVAL

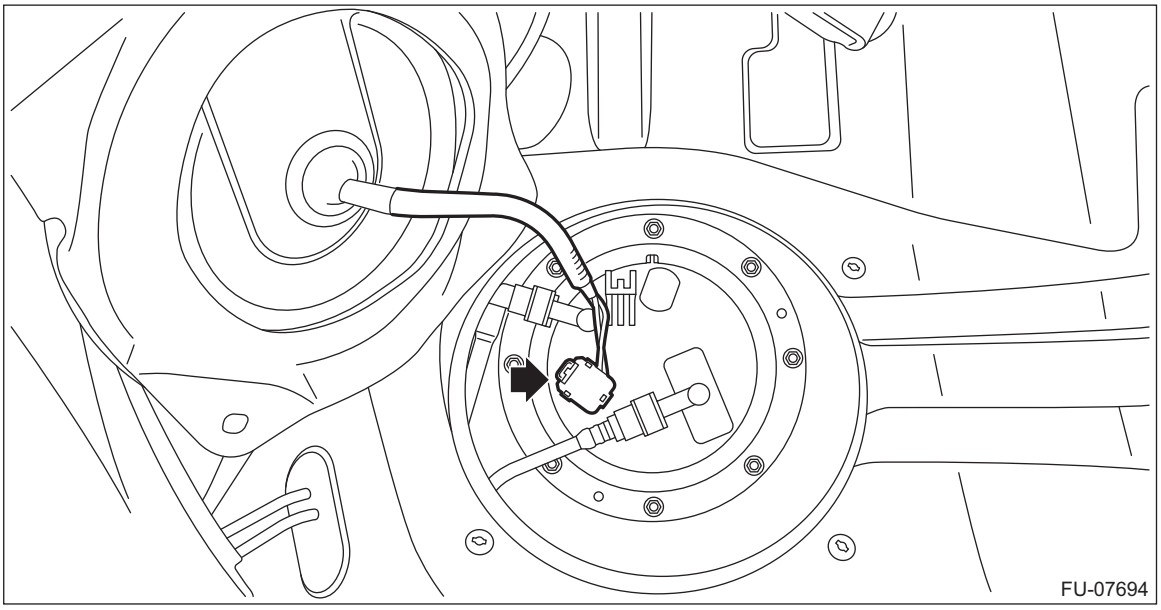
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

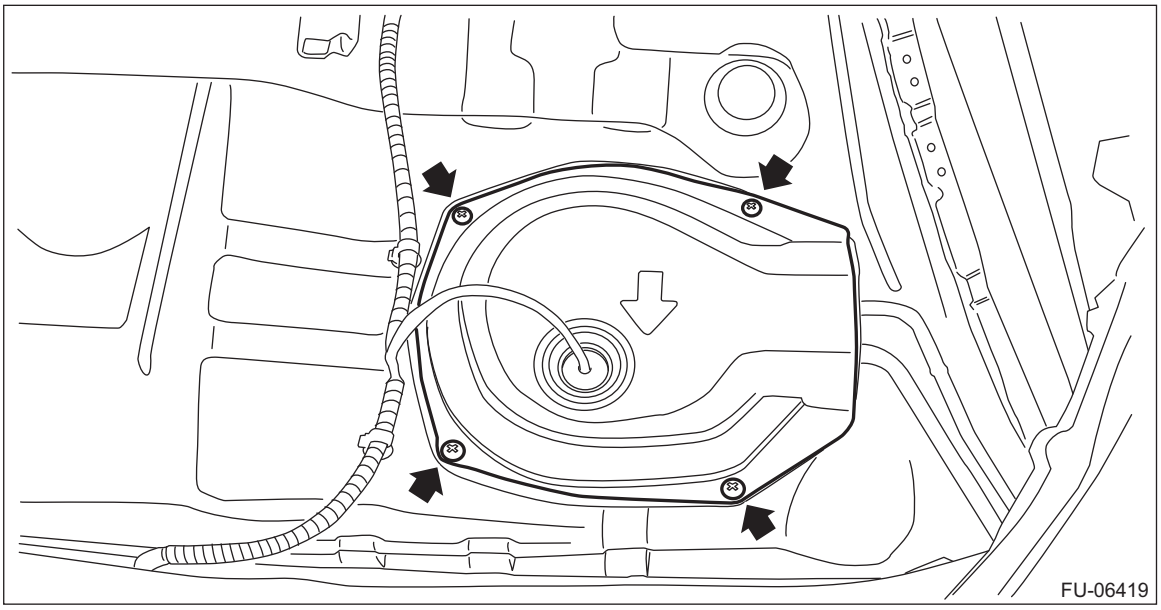
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover of fuel pump.



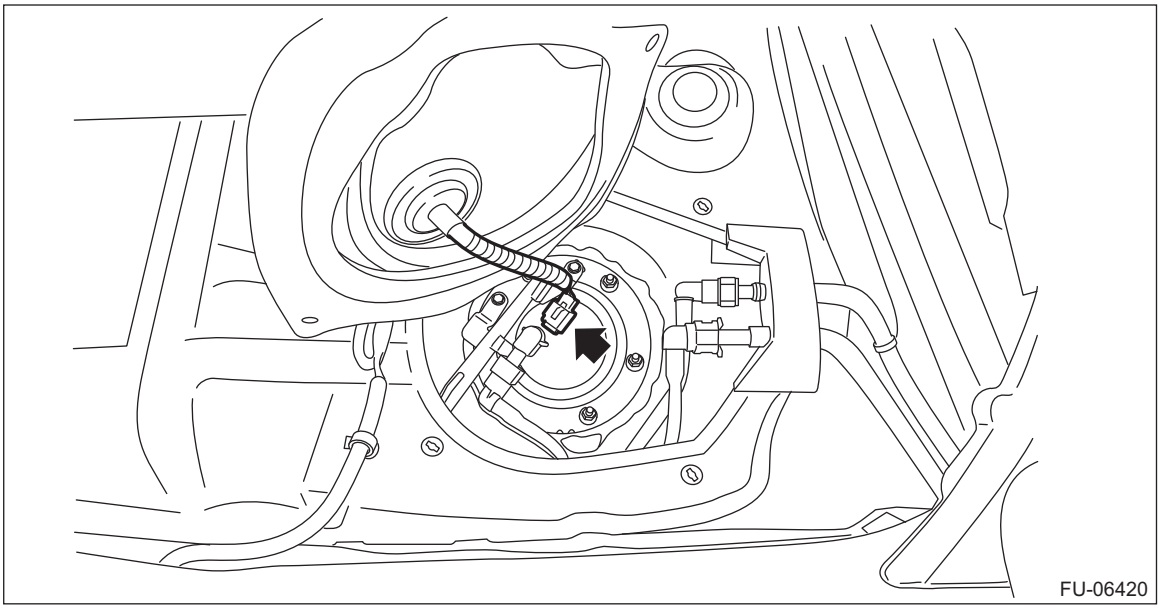
6) Disconnect connectors from the fuel pump, and move aside the service hole cover.



7) Remove the service hole cover of fuel sub level sensor.

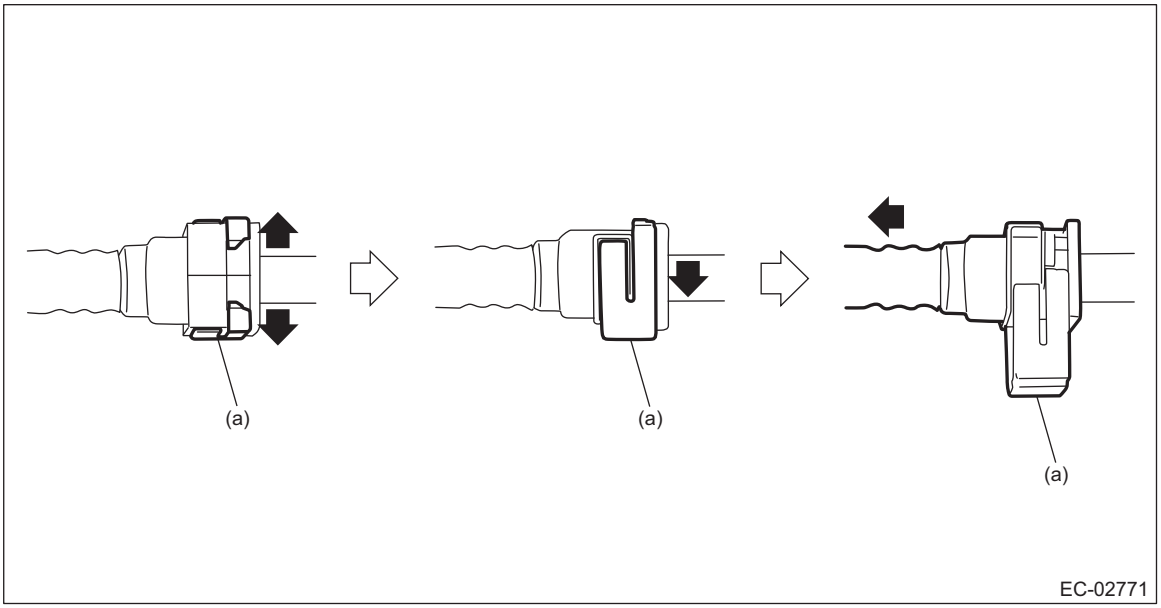


8) Disconnect the connector from the fuel sub level sensor, and move aside the service hole cover.

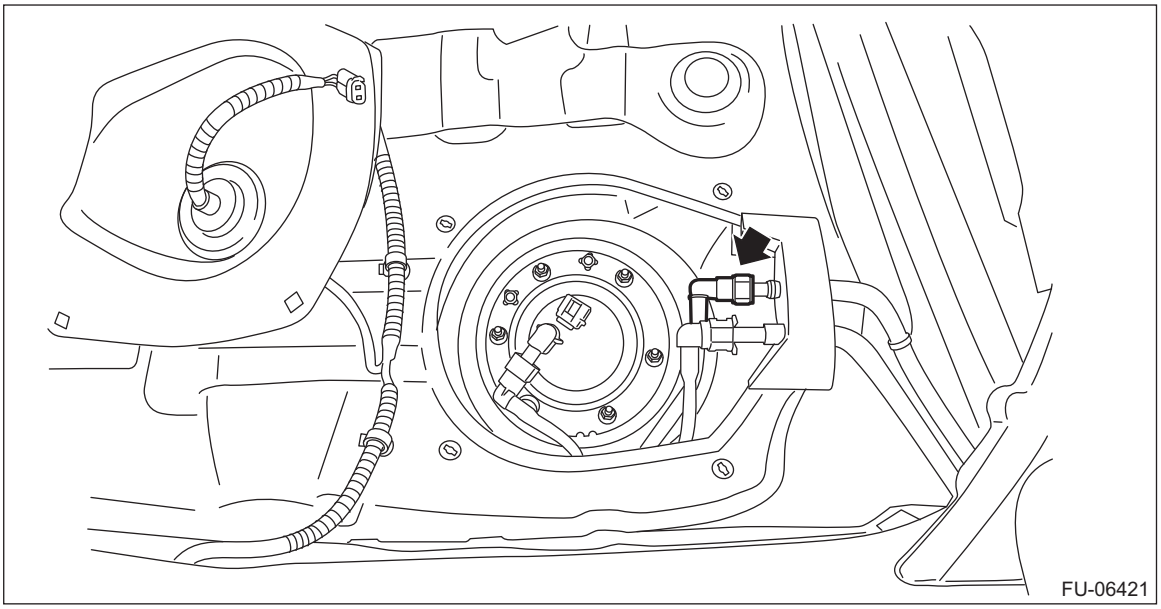


9) Disconnect the quick connector on the fuel delivery tube.

NOTE:
Disconnect the quick connector as shown in the figure.

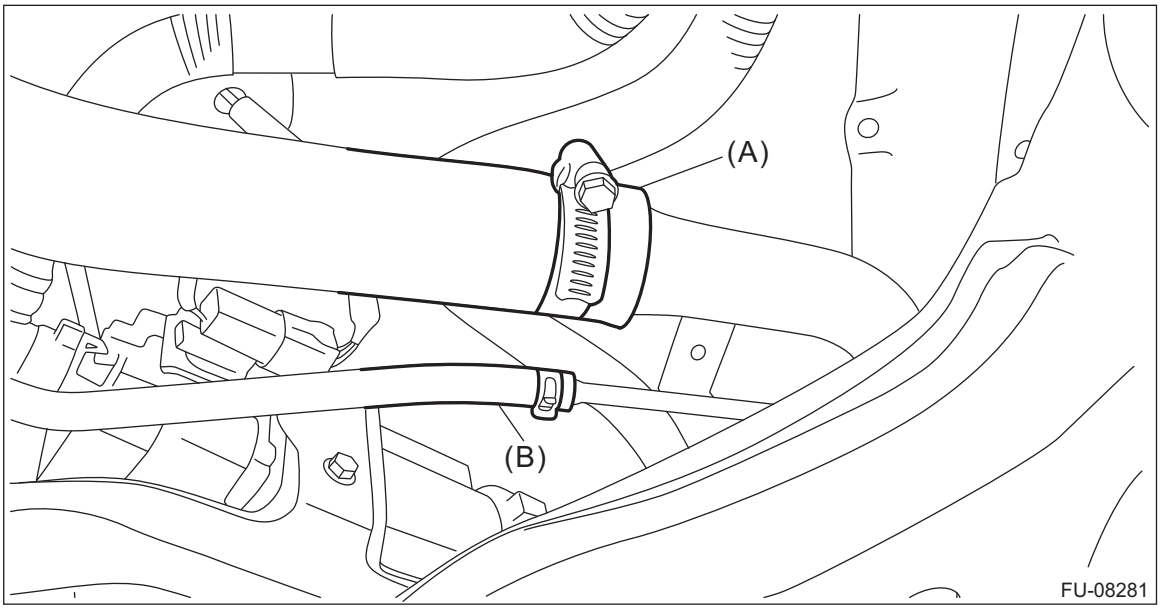


(a) Slider

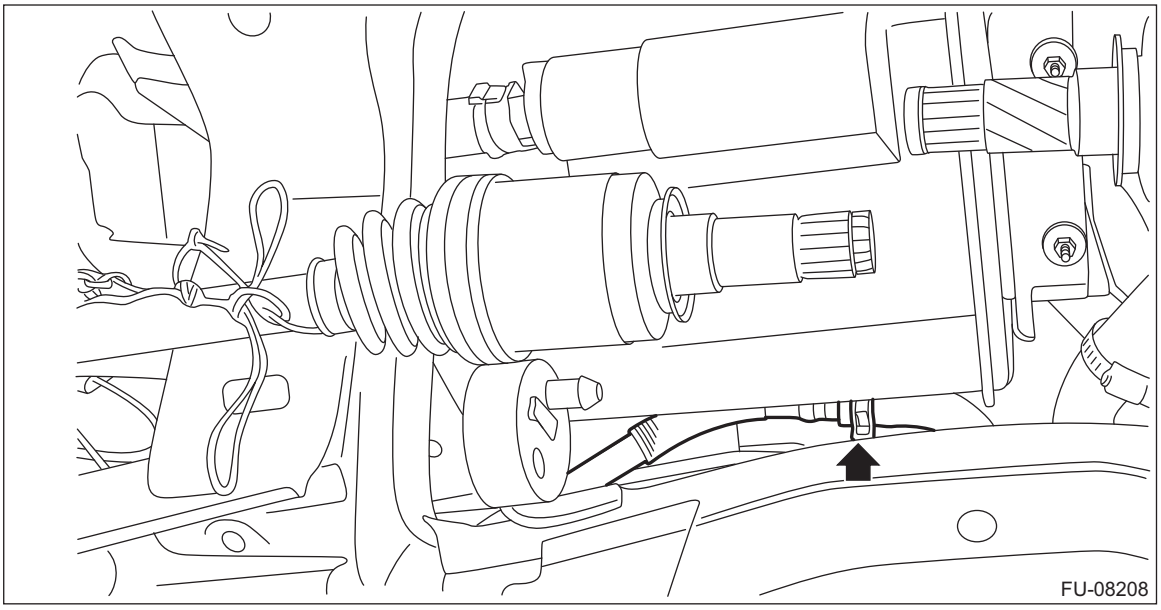


10) Lift up the vehicle.
11) Remove the rear exhaust pipe. <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
12) Remove the rear differential. <Ref. to DI-22, REMOVAL, Rear Differential (T-type).>

13) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.

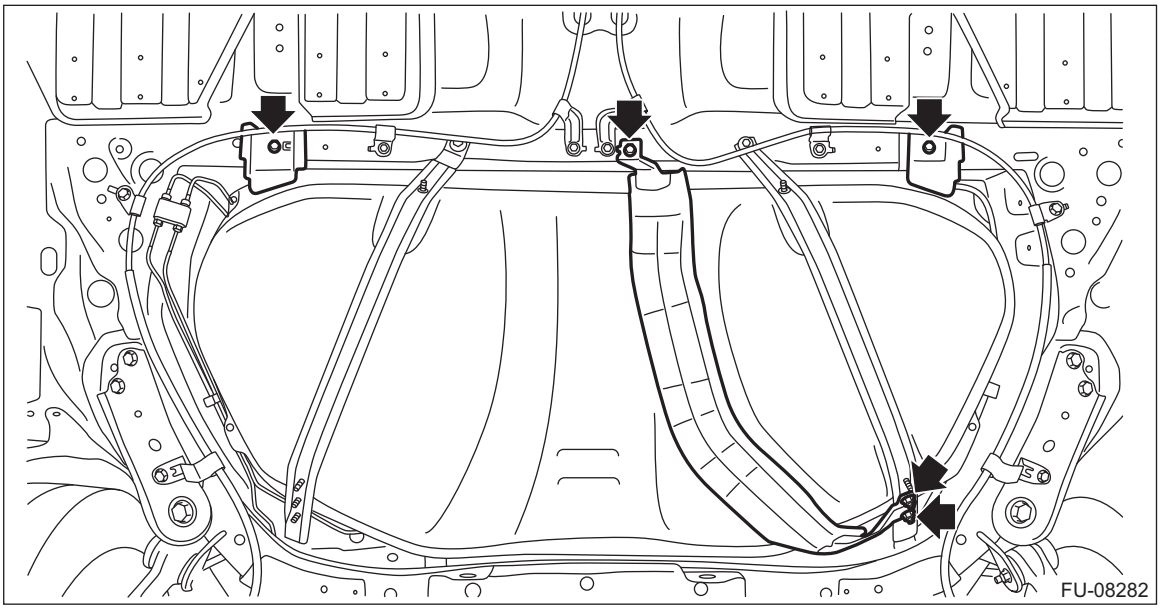


14) Disconnect the vent tube from vent hose.



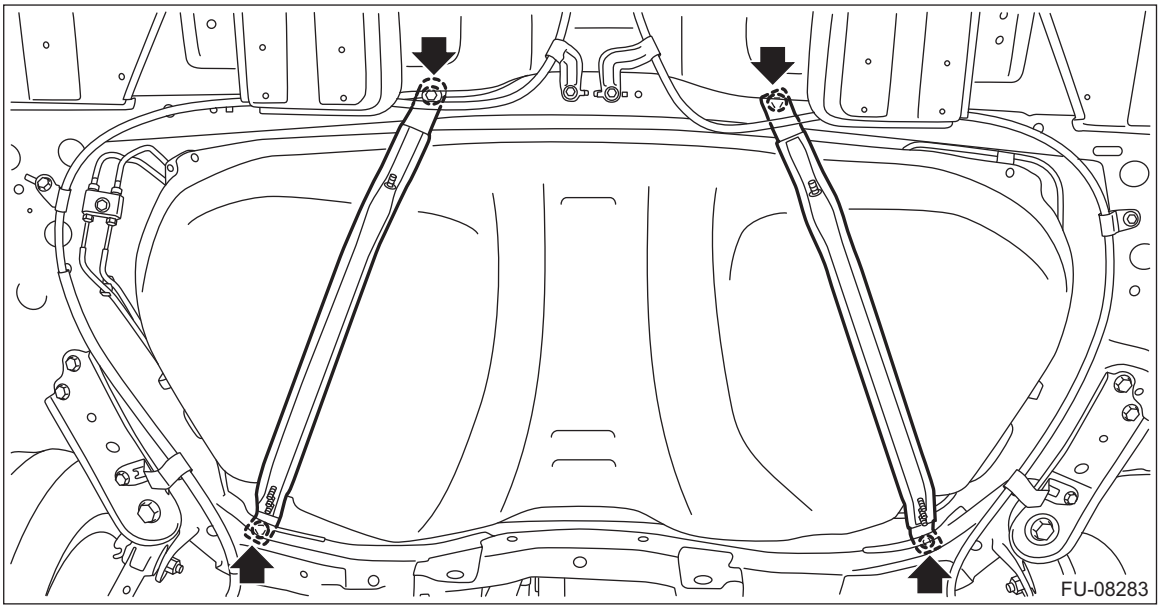
15) Remove the fuel tank protector. <Ref. to FU(w/o STI)-144, REMOVAL, Fuel Tank Protector.>

16) Remove the heat shield cover and stopper.



17) Support the fuel tank with a transmission jack, remove the bolts from the fuel tank band, and remove the fuel tank from the vehicle.

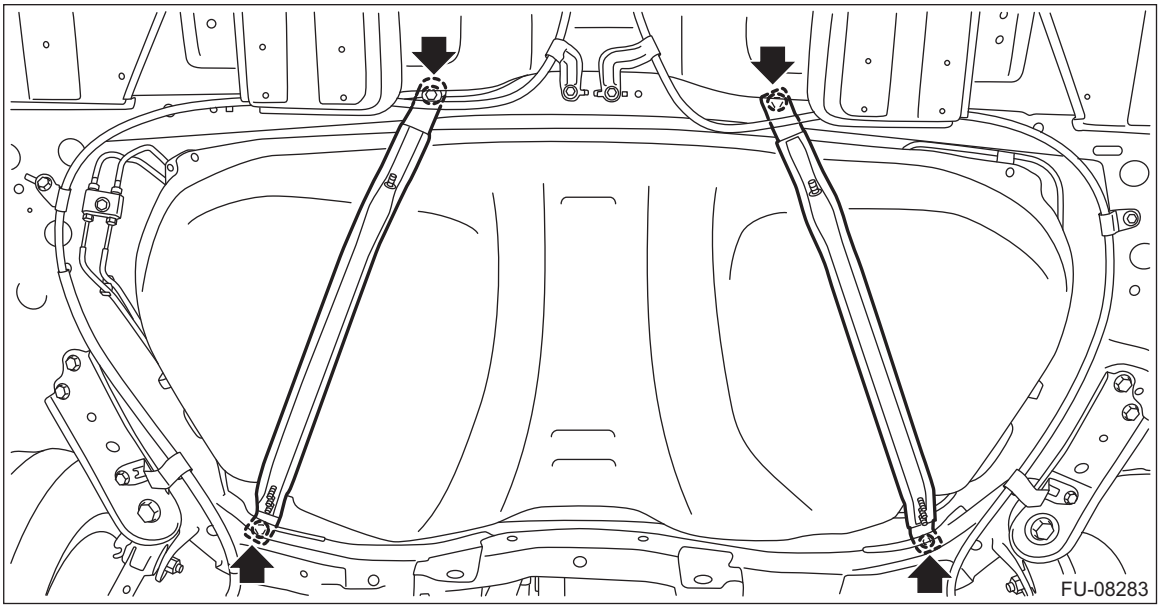
WARNING:
- **A helper is required to perform this work.**
- **Fuel may remain in the fuel tank. This will cause the left and right sides to be unbalanced. Be careful not to drop the fuel tank.**



B: INSTALLATION

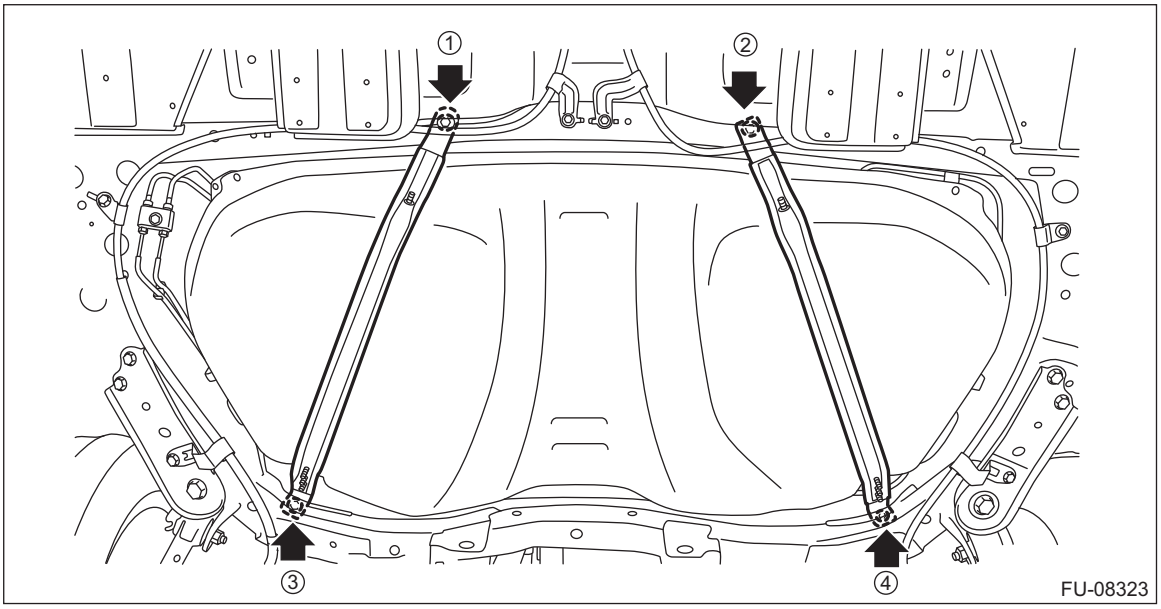
1) Support the fuel tank with a transmission jack, set the fuel tank in place, and temporarily tighten the bolts of the fuel tank band.

WARNING:
A helper is required to perform this work.



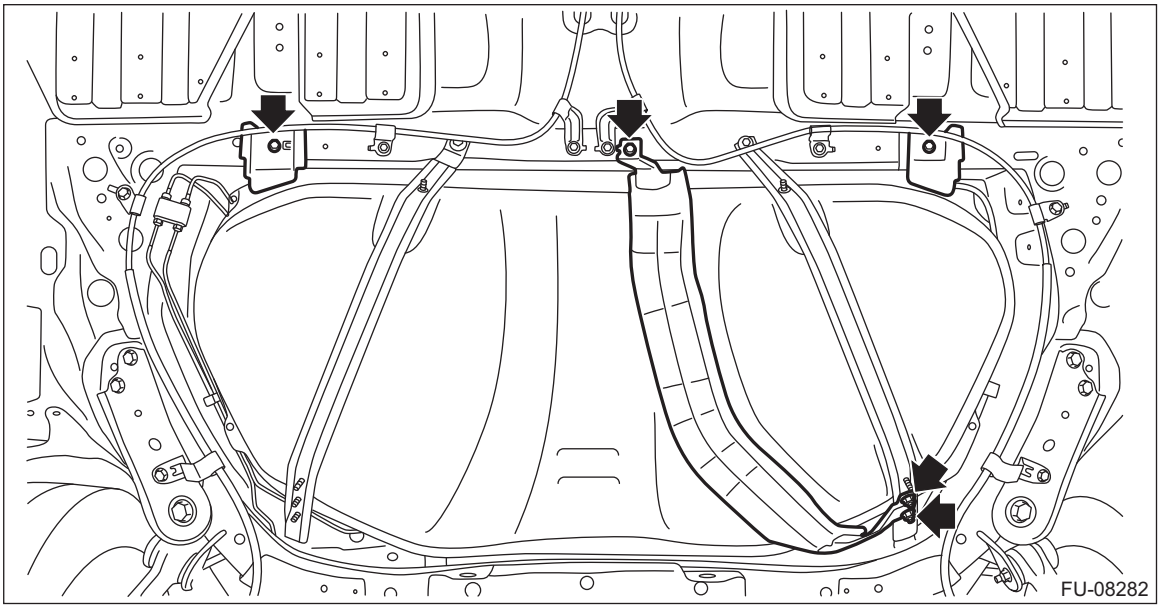
2) Tighten the bolts of the fuel tank band in the order shown in the figure.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

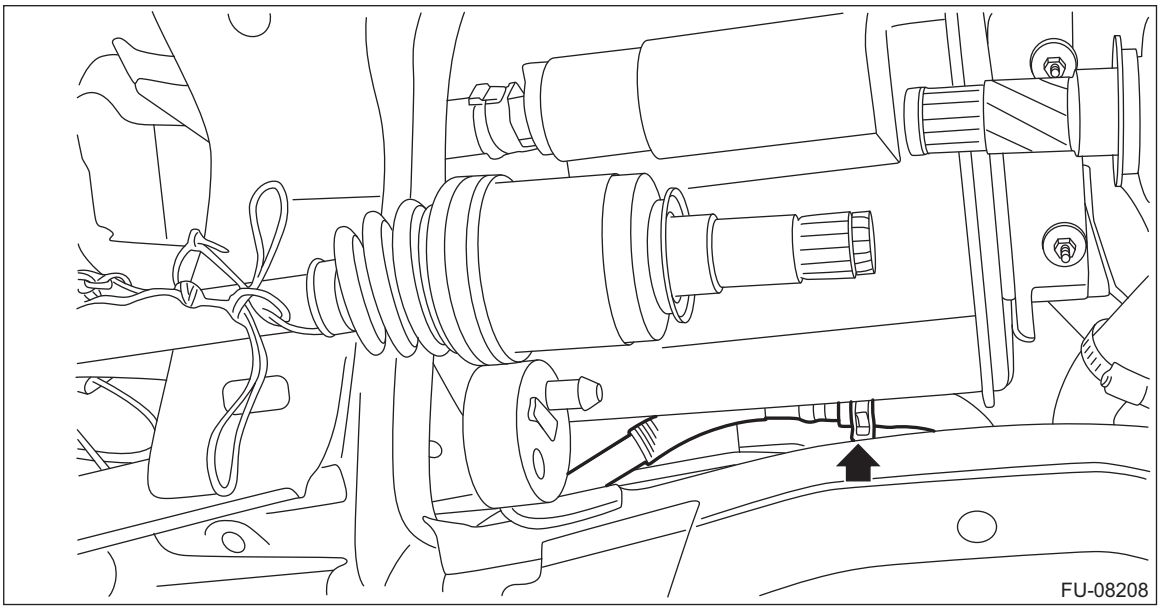


3) Install the heat shield cover and stopper.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

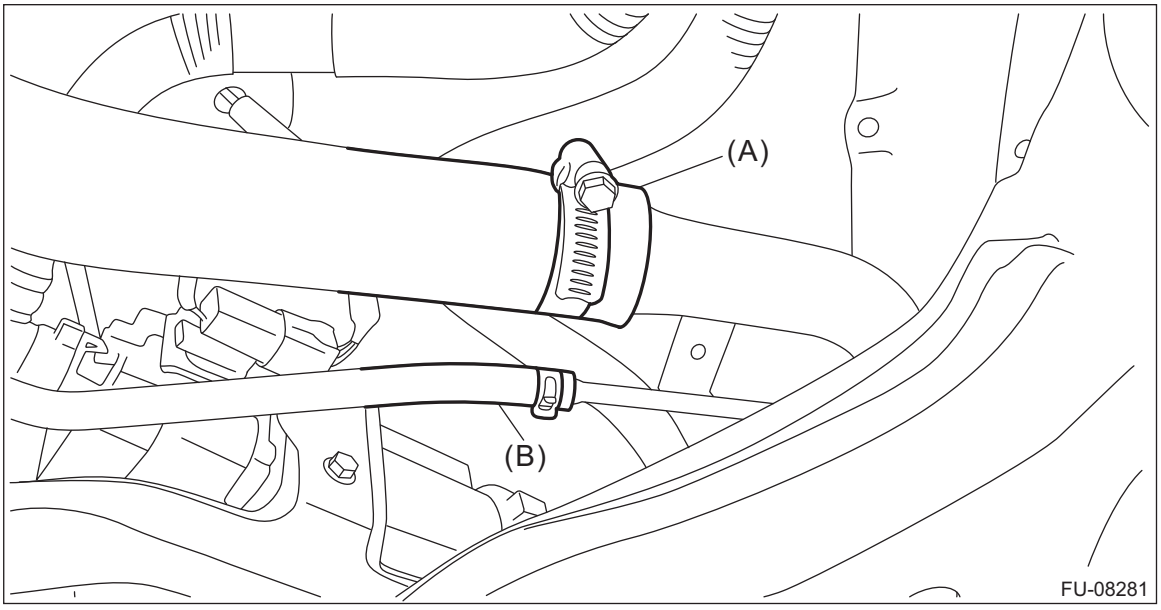


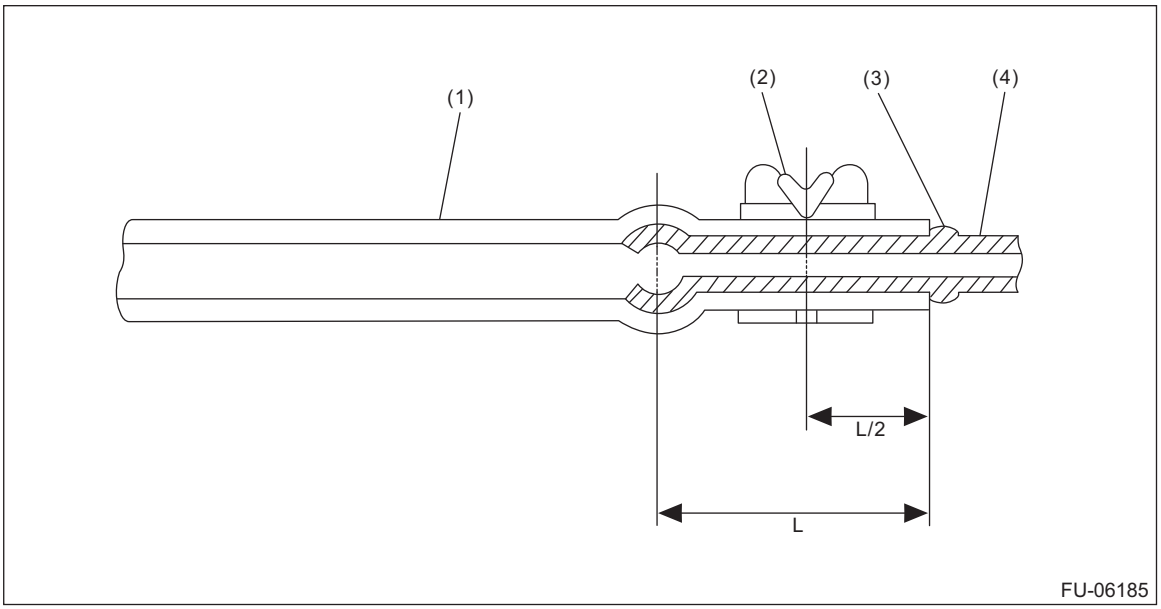
4) Install the fuel tank protector. <Ref. to FU(w/o STI)-144, INSTALLATION, Fuel Tank Protector.>
5) Connect the vent tube to the vent hose.



6) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)



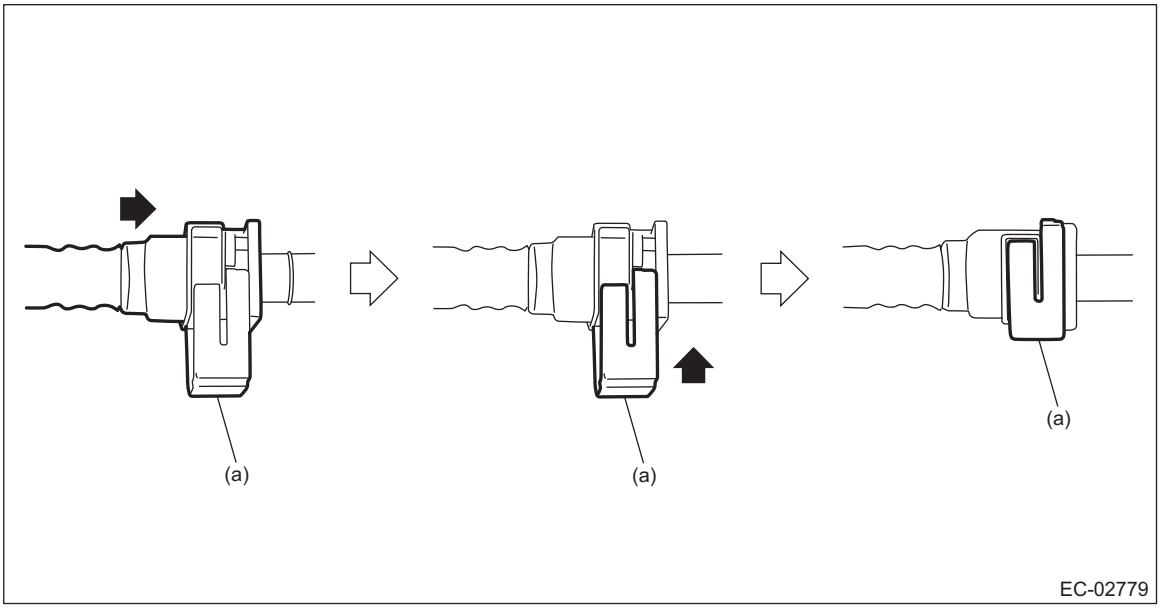


(1) Hose
(2) Clamp or clip
(3) Spool
(4) Pipe

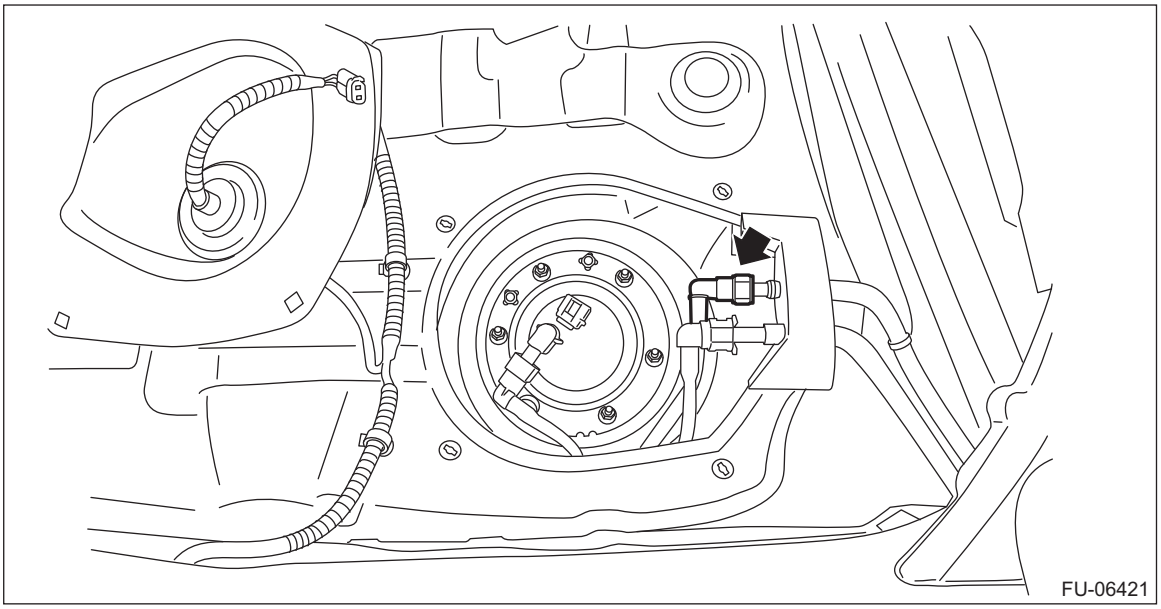
7) Install the rear differential. <Ref. to DI-24, INSTALLATION, Rear Differential (T-type).>
8) Install the rear exhaust pipe. <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
9) Connect the quick connector of the fuel delivery tube.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.

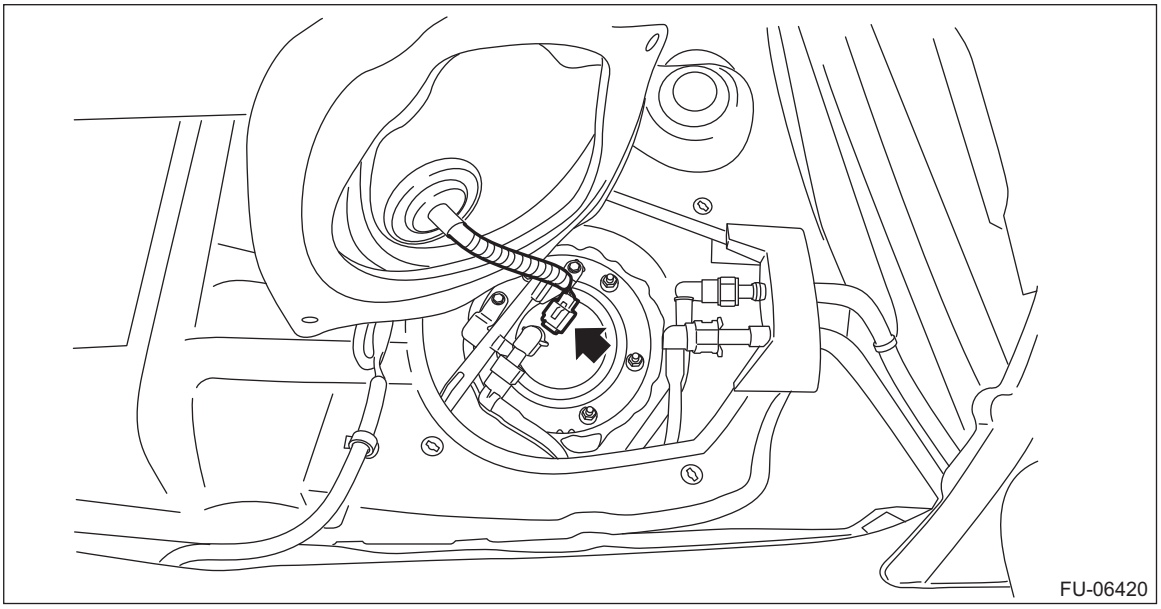


(a) Slider

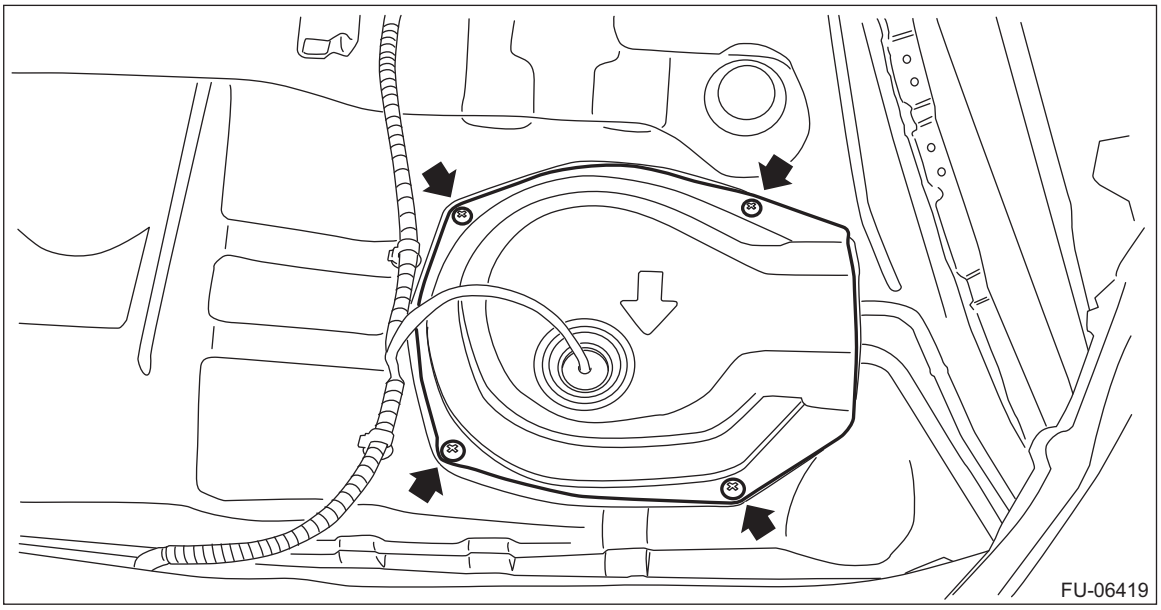


10) Connect the connector to the fuel sub level sensor.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel sub level sensor and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.

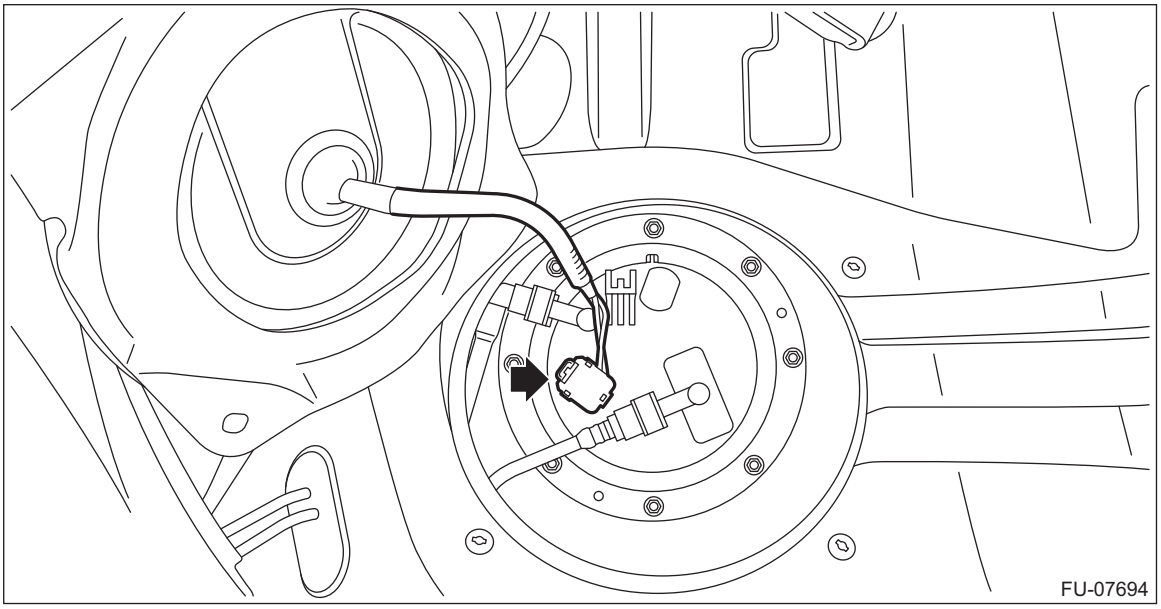


11) Install the service hole cover of fuel sub level sensor.

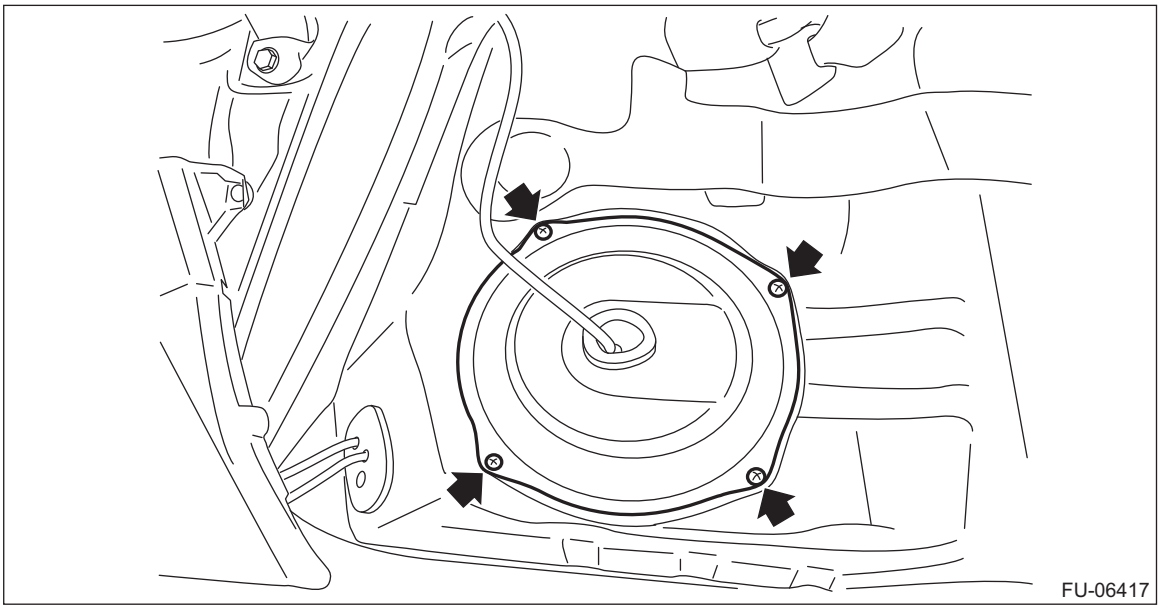


12) Connect the connector to the fuel pump.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel pump and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



13) Install the service hole cover of fuel pump.



14) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
15) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the fuel tank and fuel pipe have no deformation, cracks and other damages.
2) Check that the fuel hose and tube have no cracks, damage or loose part.

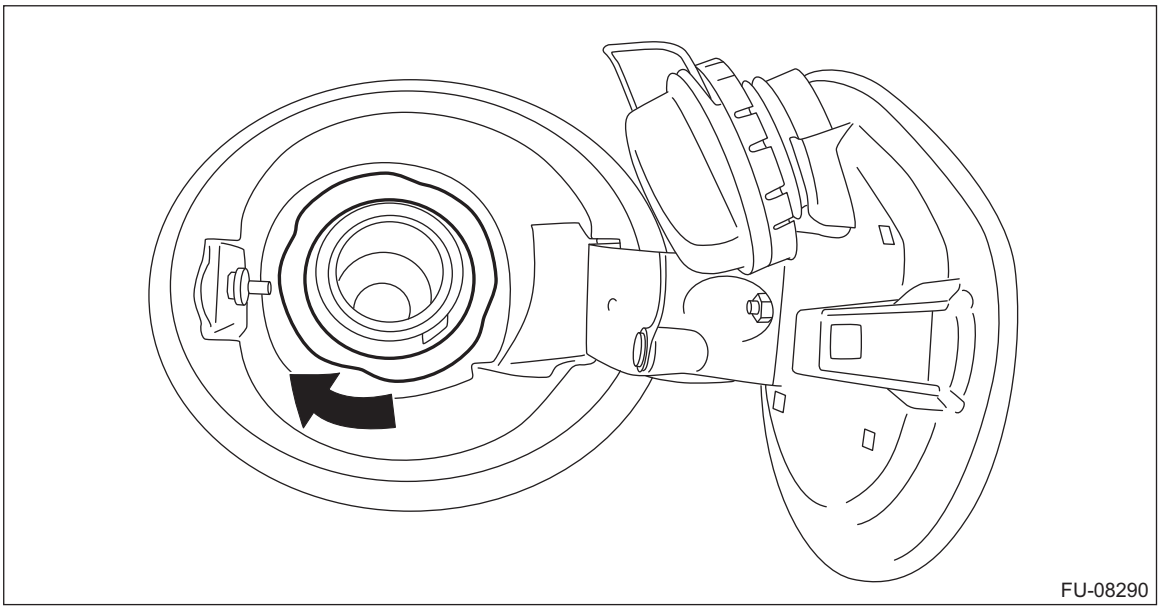
36.Fuel Filler Pipe

A: REMOVAL

WARNING:
Place “NO OPEN FLAMES” signs near the working area.

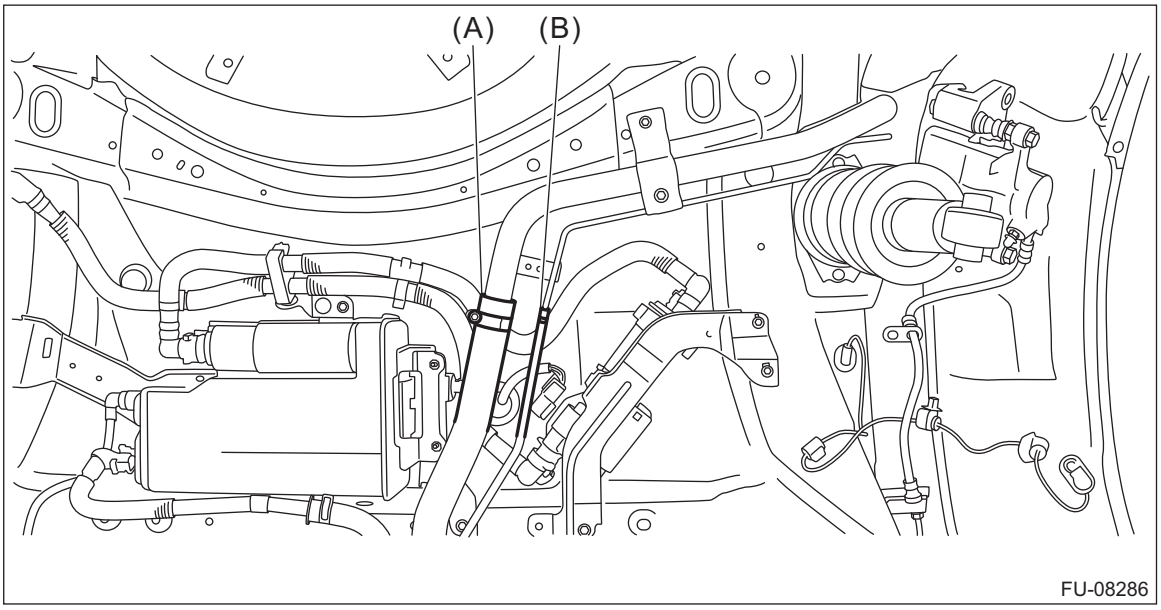
CAUTION:
Be careful not to spill fuel.

1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Open the fuel filler lid and remove the fuel filler cap.
4) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.



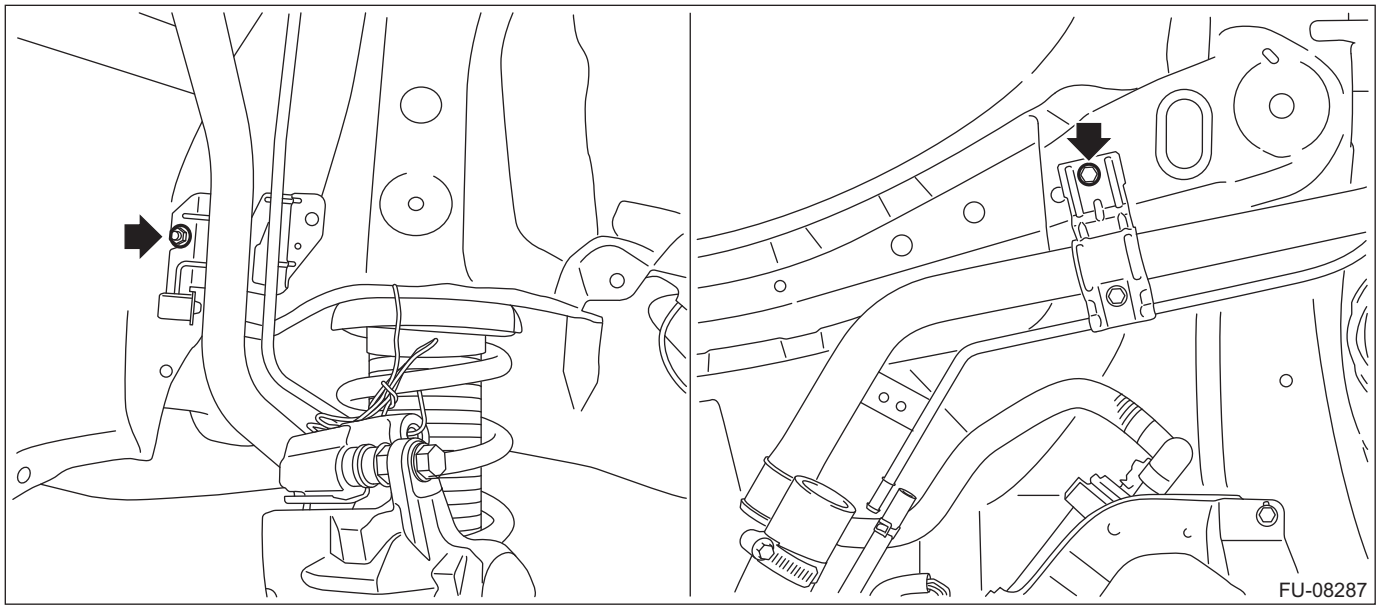
FU-08290

5) Remove the rear sub frame assembly. <Ref. to RS-9, REMOVAL, Rear Sub Frame.>
6) Remove the rear mud guard RH. <Ref. to EI-24, REMOVAL, Mud Guard.>
7) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.



FU-08286

8) Remove the bolts and nuts which secure the fuel filler pipe assembly to the vehicle.

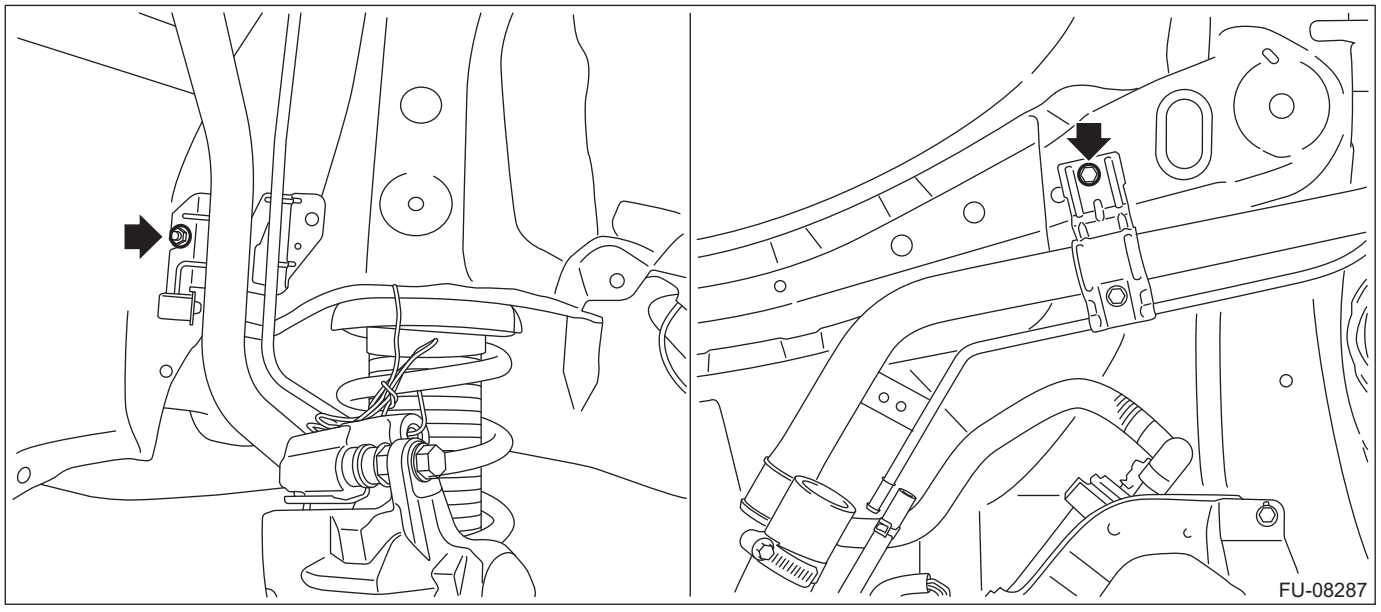


9) Remove the fuel filler pipe assembly from the underside of the vehicle.

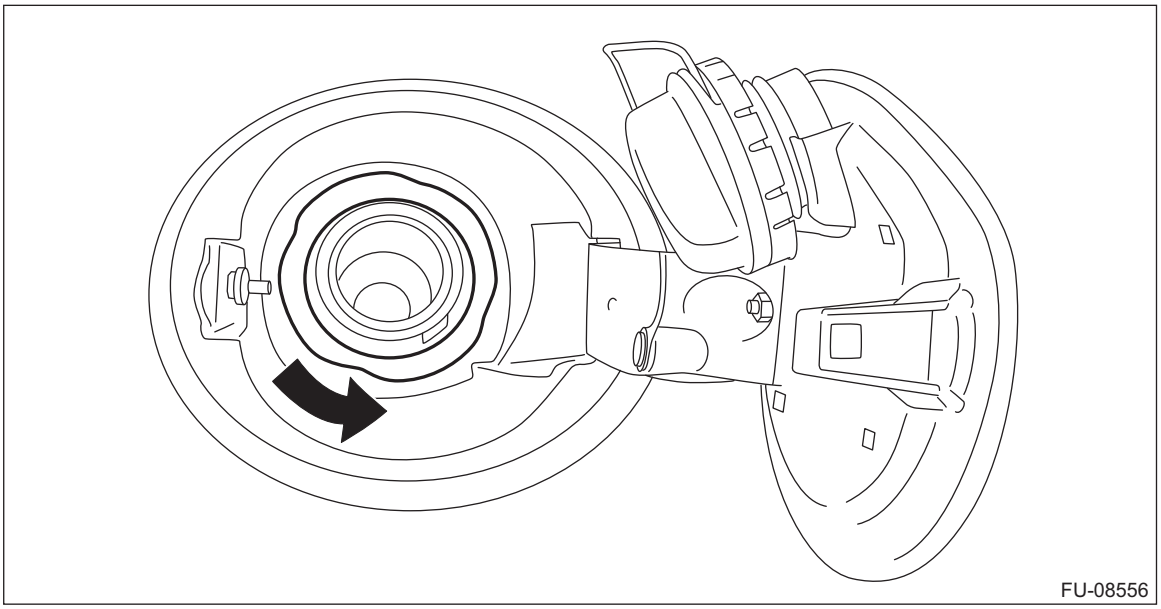
B: INSTALLATION

1) Open the fuel filler lid.
2) Insert the fuel filler pipe assembly from inside of the rear fender.
3) Install the fuel filler pipe assembly to the vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

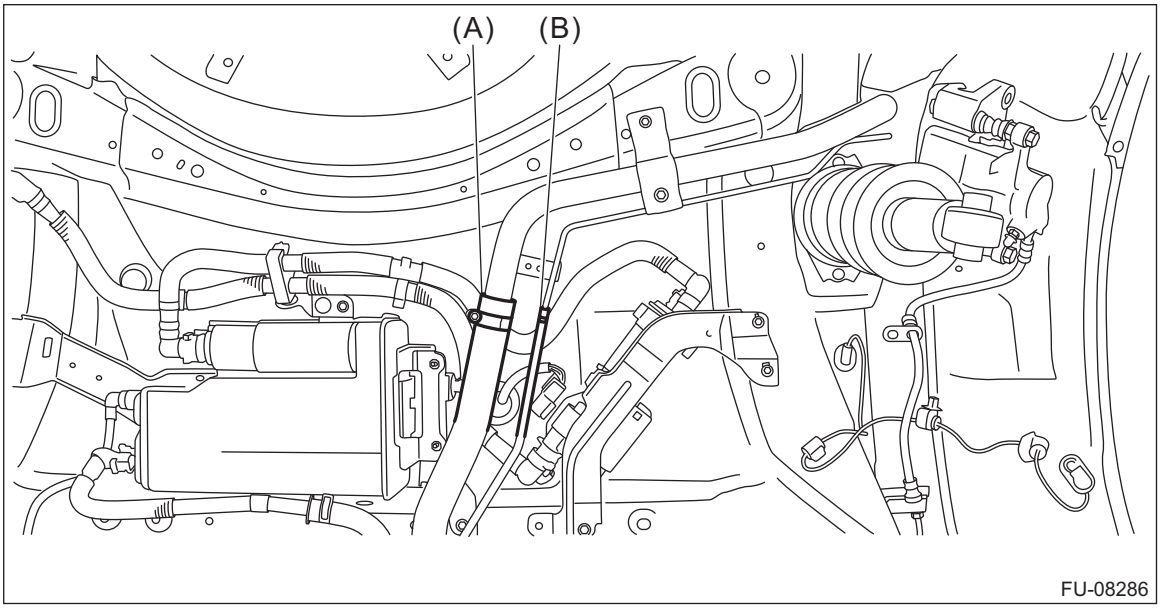


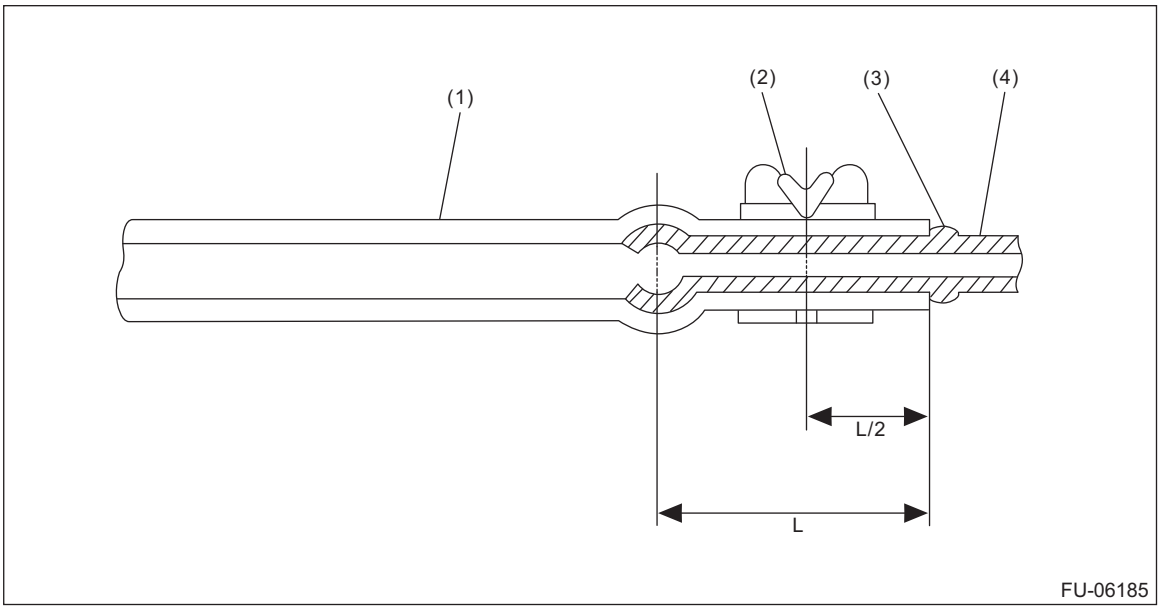
4) Align the cutout on the fuel filler pipe protector and the protrusion of the neck holder and insert them all the way, and then turn the fuel filler pipe protector in the direction of the arrow until it is locked.



5) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp or clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)





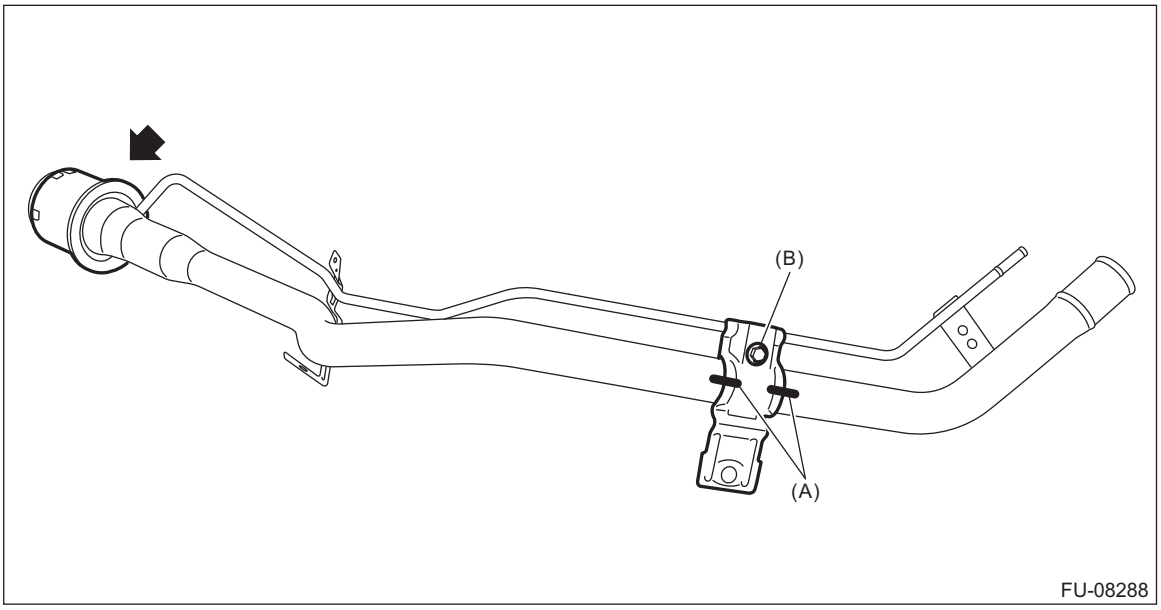
(1) Hose
(2) Clamp or clip
(3) Spool
(4) Pipe

6) Install the rear mud guard RH. <Ref. to EI-25, INSTALLATION, Mud Guard.>
7) Install the rear sub frame assembly. <Ref. to RS-11, INSTALLATION, Rear Sub Frame.>

C: DISASSEMBLY

1) Using a marker pen, make alignment marks (A) on the fuel filler pipe and the bracket.
2) Remove the bracket bolt (B) which secures the fuel filler pipe.

3) Remove the neck holder from the fuel filler pipe.

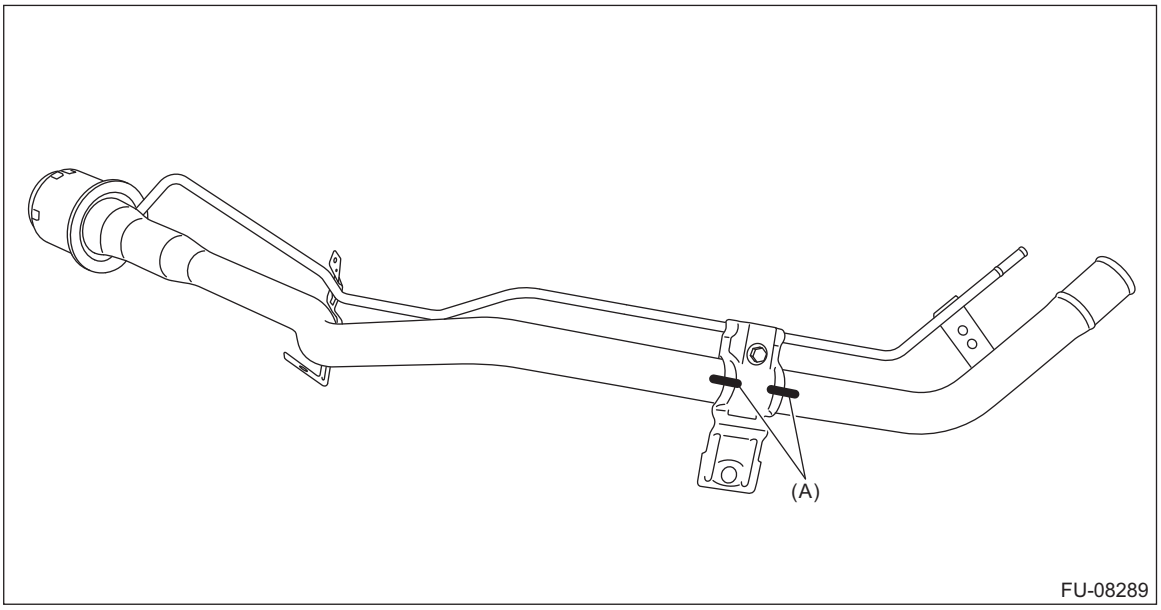


D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:
- Use a new neck holder.
- Install the bracket to the fuel filler pipe by aligning the alignment marks (A).

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



E: INSPECTION

1) Check that the fuel filler pipe assembly has no deformation, cracks or other damages.
2) Check that the fuel hose has no cracks, damage or loose part.

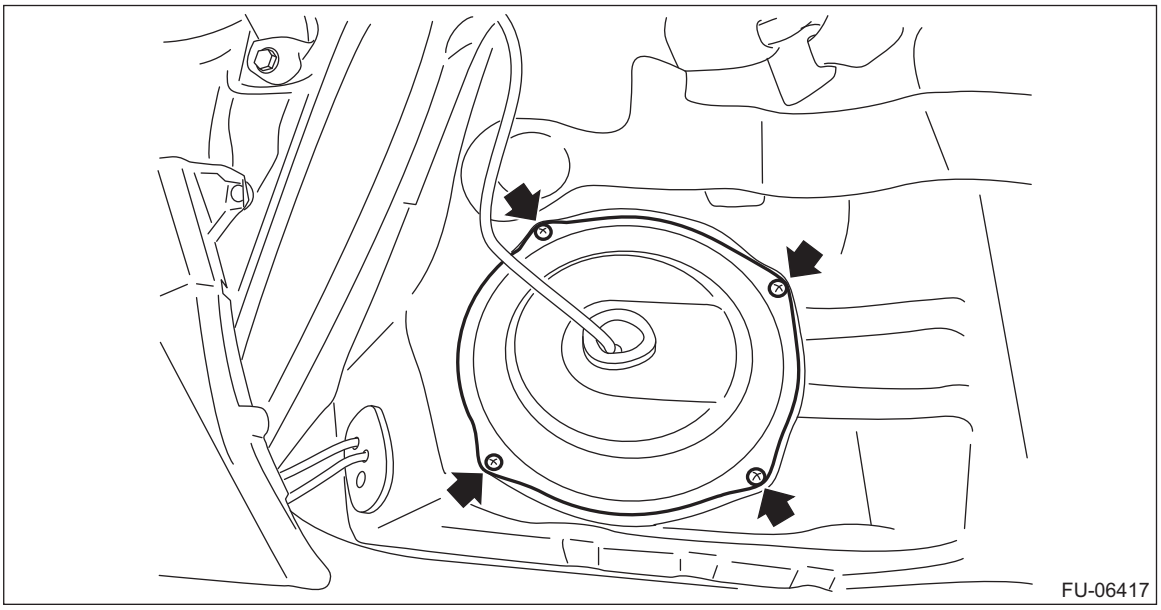
37.Fuel Pump

A: REMOVAL

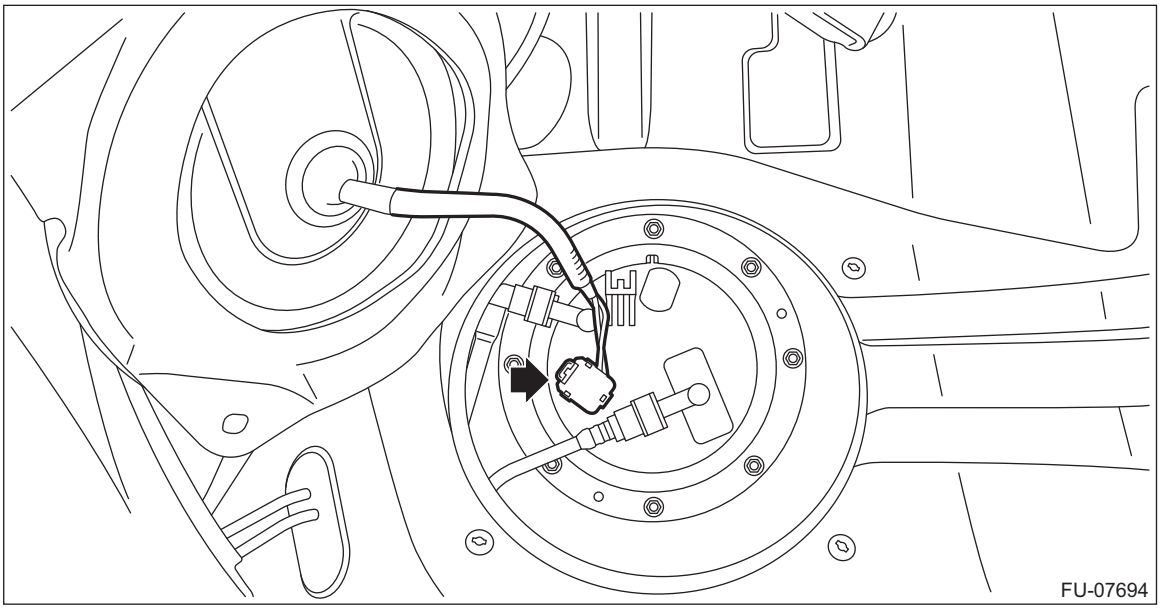
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

NOTE:
Fuel pump assembly consists of fuel pump, fuel filter and fuel level sensor.
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover of fuel pump.

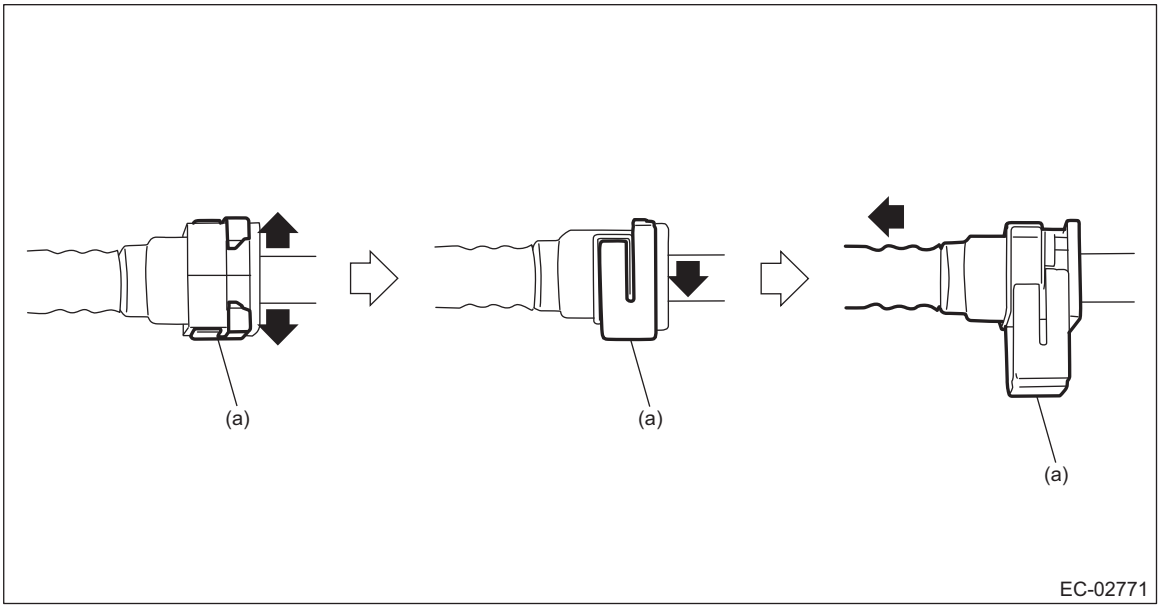


6) Disconnect connectors from the fuel pump, and move aside the service hole cover.

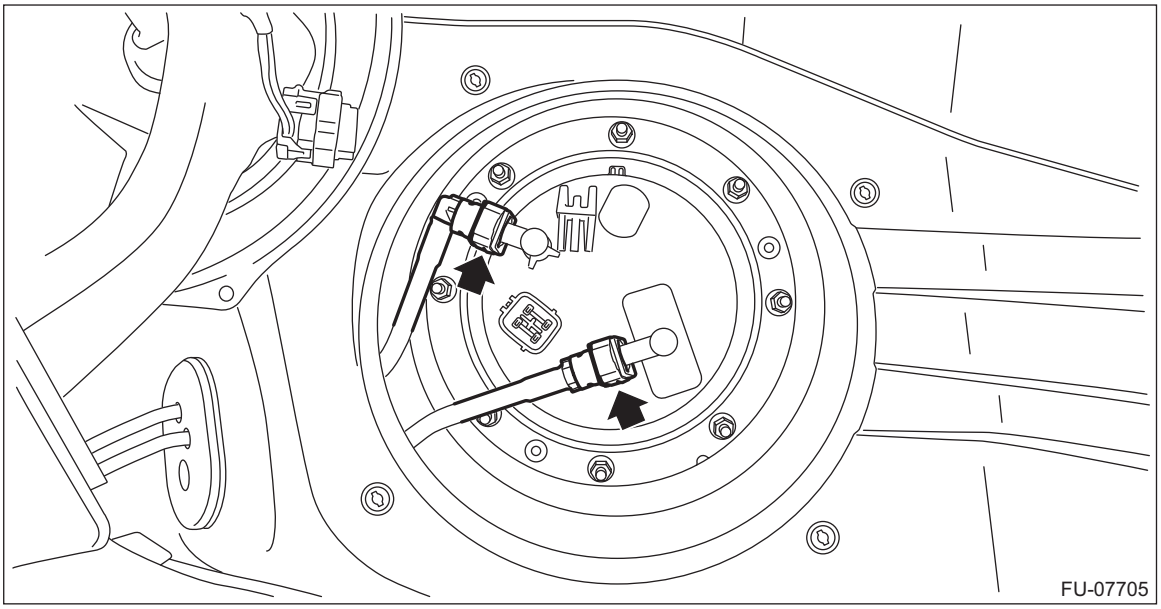


7) Disconnect the quick connector of fuel delivery tube and jet pump tube.

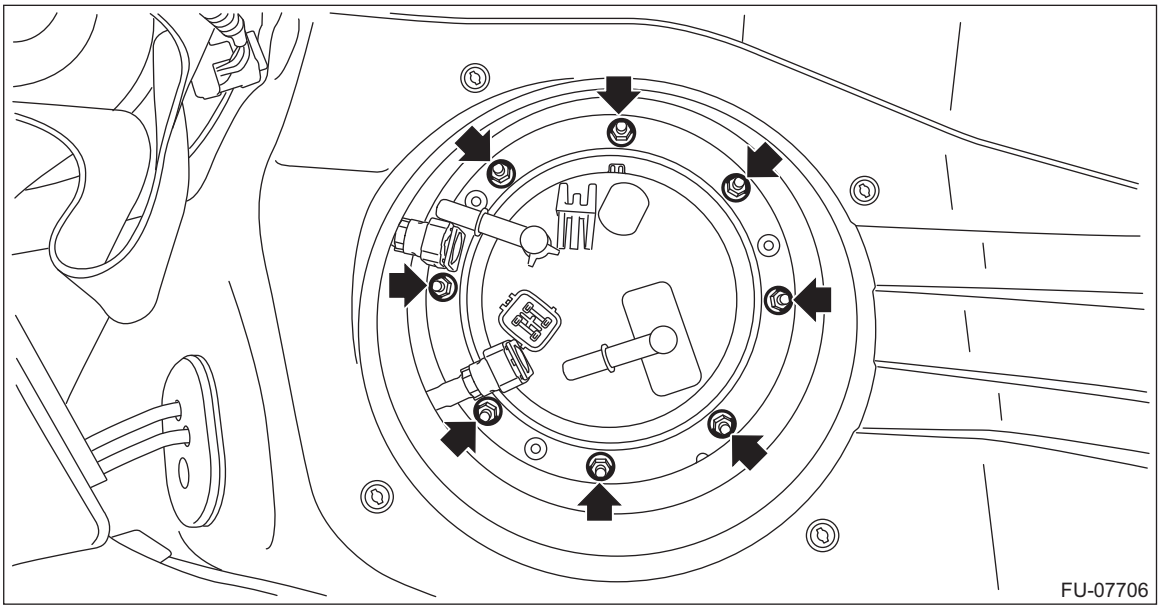
NOTE:
Disconnect the quick connector as shown in the figure.



(a) Slider



8) Remove the nuts which hold the fuel pump upper plate to the fuel tank.



9) Remove the fuel pump assembly from the fuel tank.

CAUTION:
Be careful not to let the arm and float of fuel level sensor contact the fuel tank.

B: INSTALLATION

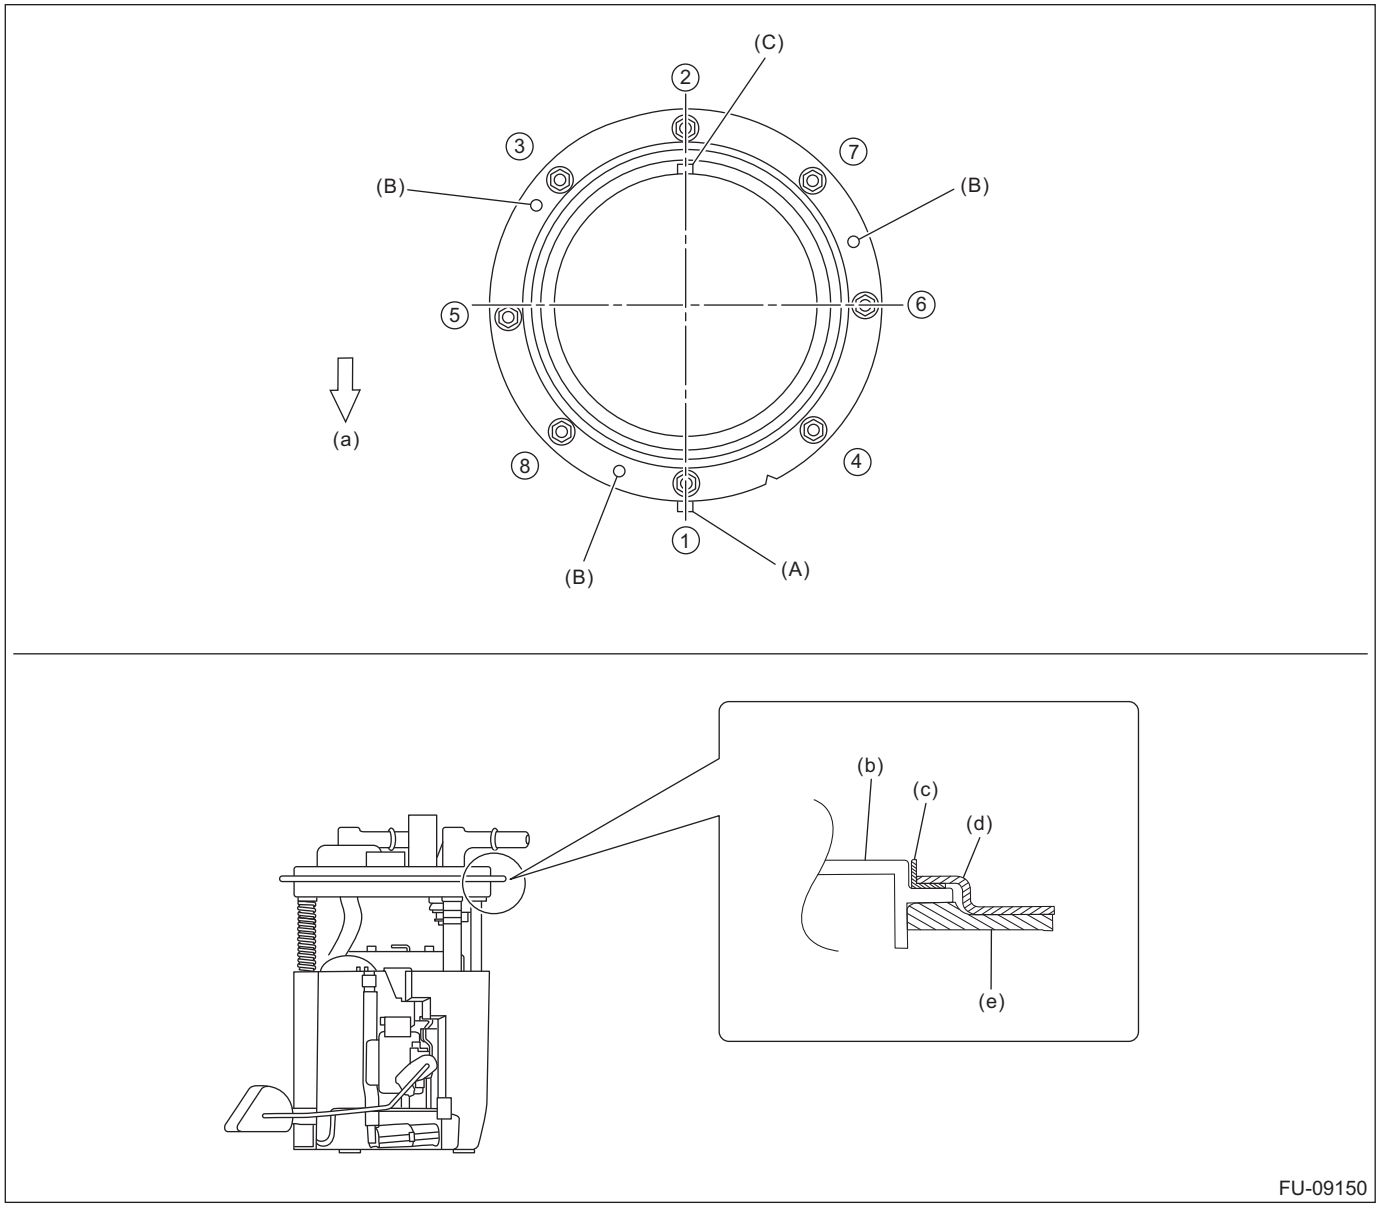
1) Install the fuel pump assembly to the fuel tank.
   (1) Make sure the sealing portion is free from fuel or foreign matter before installation.
   (2) Align the protrusion (A) of the gasket to the position shown in the figure, and install the gasket from the lower side of the fuel pump assembly.

NOTE:
Use a new gasket.

   (3) Align the protrusion (C) of fuel pump upper plate cushion with the protrusion (C) of the fuel pump assembly as shown in the figure, and install the fuel pump upper plate cushion from the upper side of the fuel pump assembly.
   (4) Align the cutout of the fuel pump upper plate with the protrusion (C), and install the fuel pump upper plate from the upper side of the fuel pump assembly so that the protrusions (B) (3 places) of the gasket fit the holes of the fuel pump upper plate.
   (5) Install the fuel pump assembly to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

CAUTION:
Set the arm and float of the fuel level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel level sensor is bent, the fuel gauge may not read correctly.

Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)

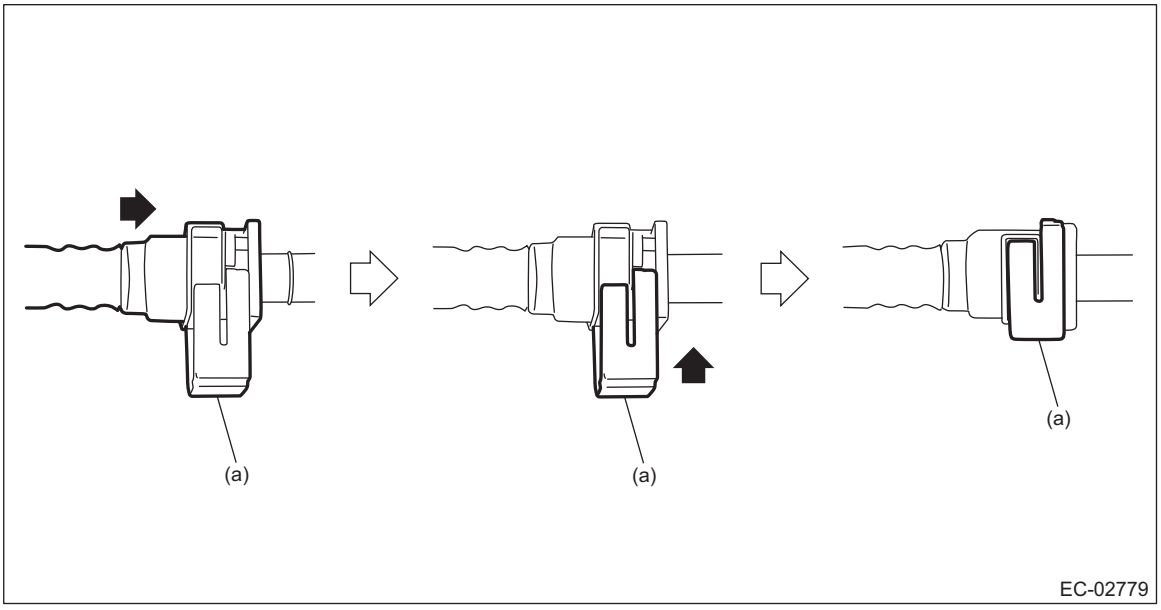


(a) Front side of vehicle
(b) Fuel pump ASSY
(c) Fuel pump upper plate cushion
(d) Fuel pump upper plate
(e) Gasket

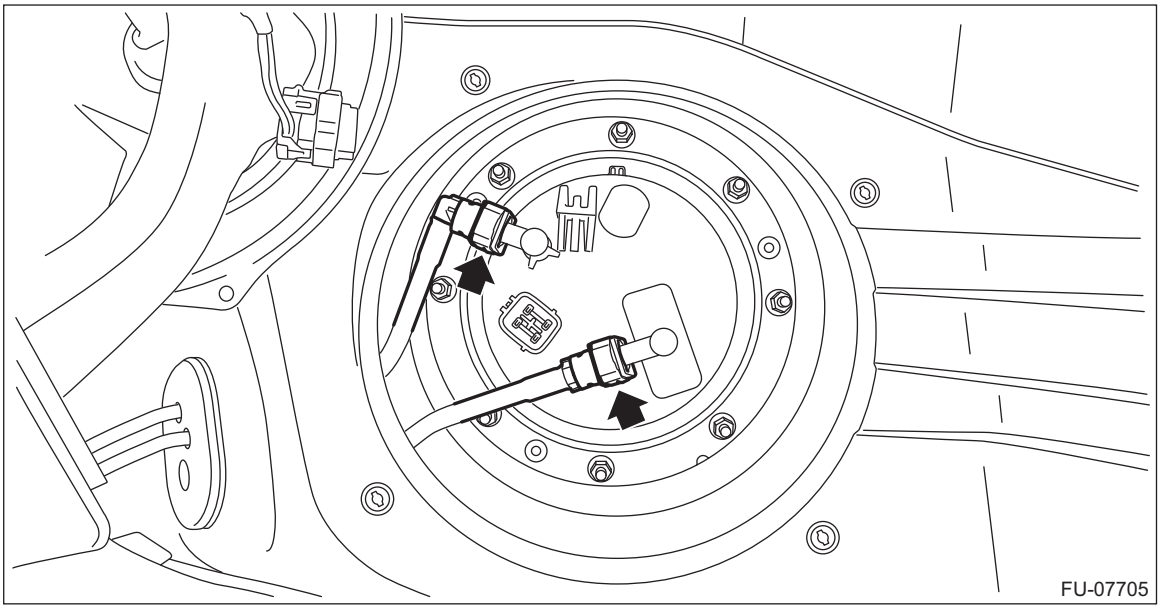
2) Connect the quick connector of the fuel delivery tube and the jet pump tube.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.

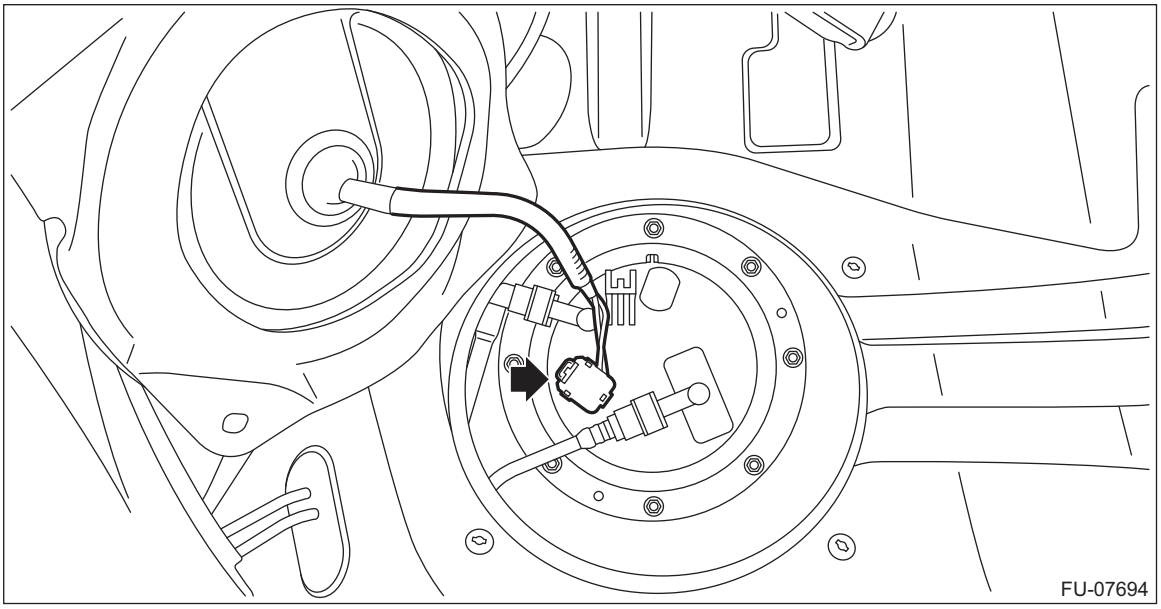


(a) Slider

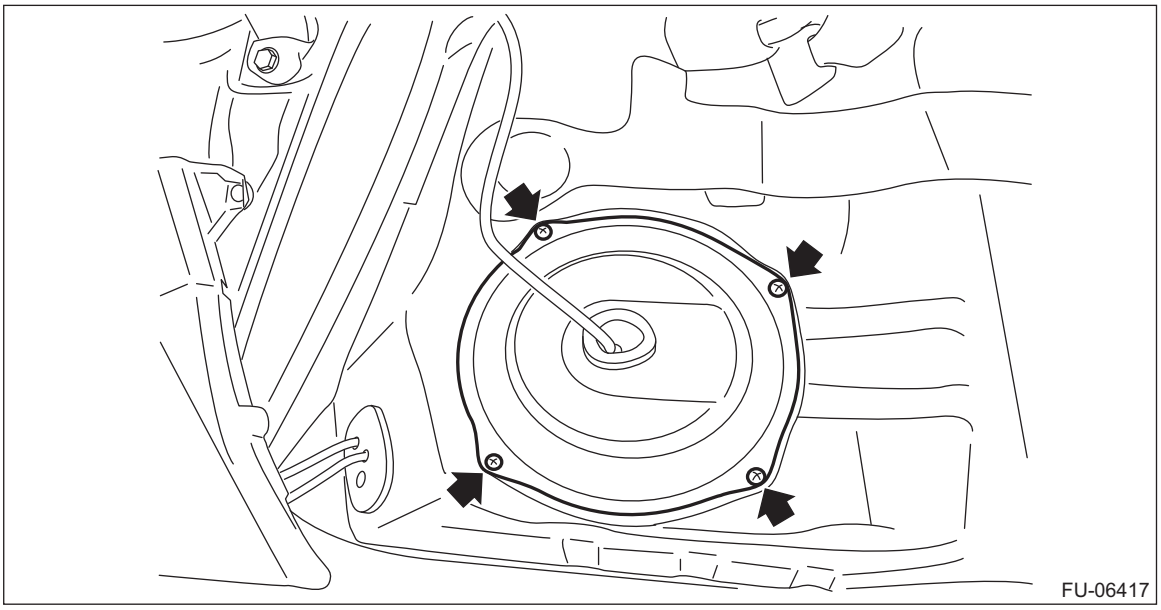


3) Connect the connector to the fuel pump.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel pump and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



4) Install the service hole cover of fuel pump.



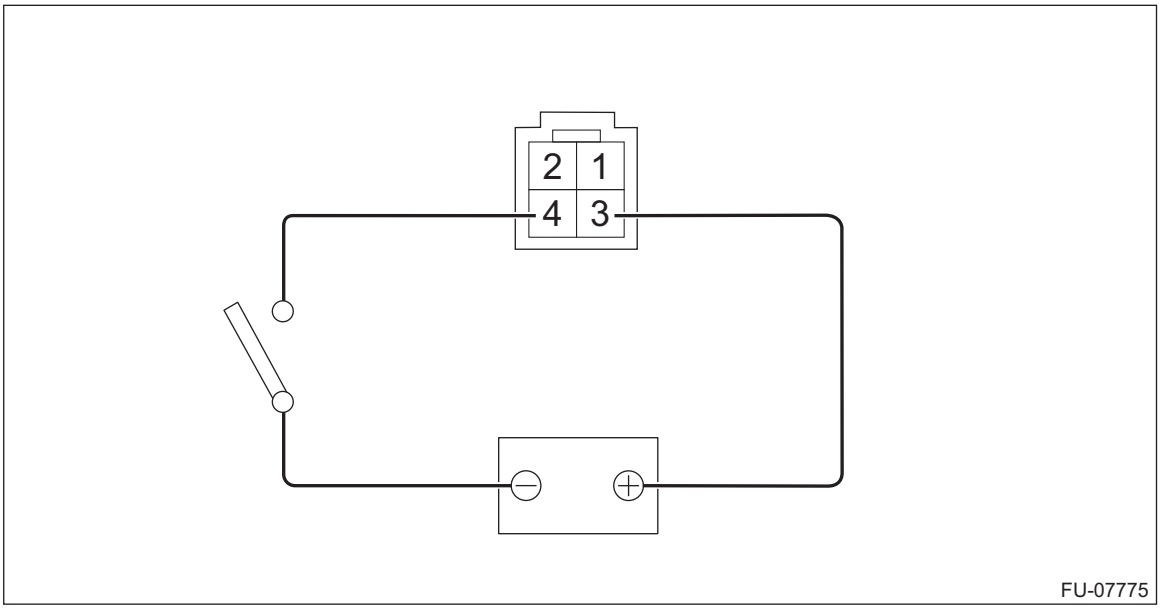
5) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the fuel pump has no deformation, cracks or other damages.
2) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the fuel pump operation.

WARNING:
- **Wipe off fuel completely.**
- **Keep the battery as far apart from fuel pump as possible.**

- **Do not run the fuel pump for a long time under non-load condition.**



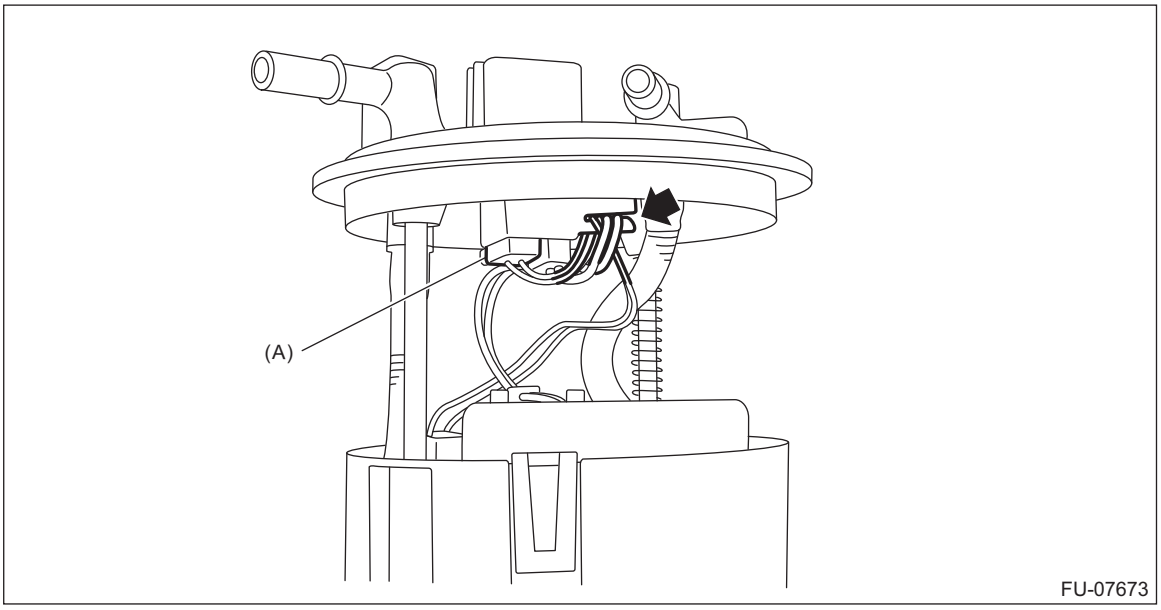
38.Fuel Level Sensor

A: REMOVAL

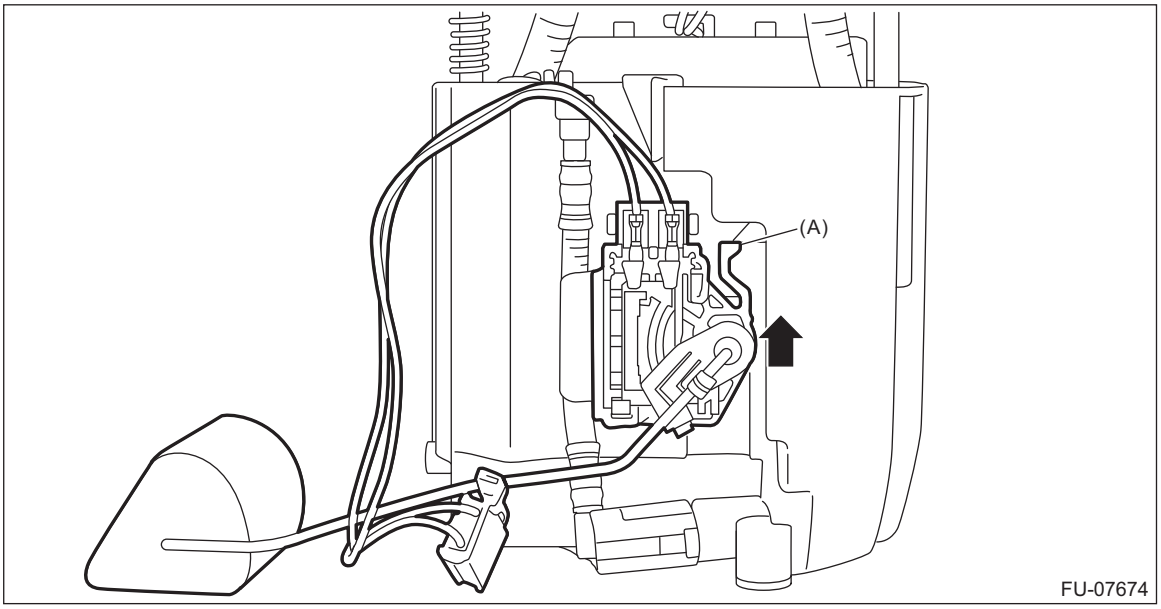
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

NOTE:
The fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(w/o STI)-161, REMOVAL, Fuel Pump.>
2) Disconnect the fuel level sensor connector (A), and pull out the connector cable and fuel level sensor harness from the clip.



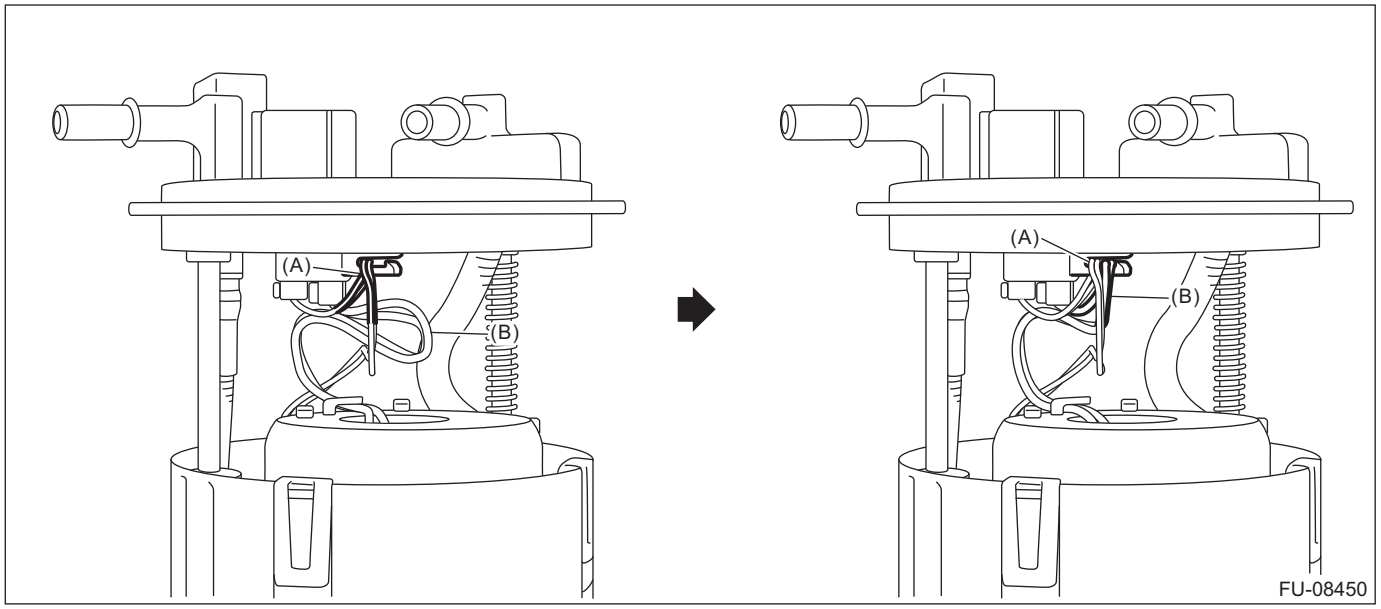
3) While pressing the claw (A) of the fuel level sensor, slide the fuel level sensor in the direction of the arrow, and remove the fuel level sensor.



B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be sure to install the fuel level sensor harness to the clip first, then install the connector cable. Otherwise, malfunction may occur.

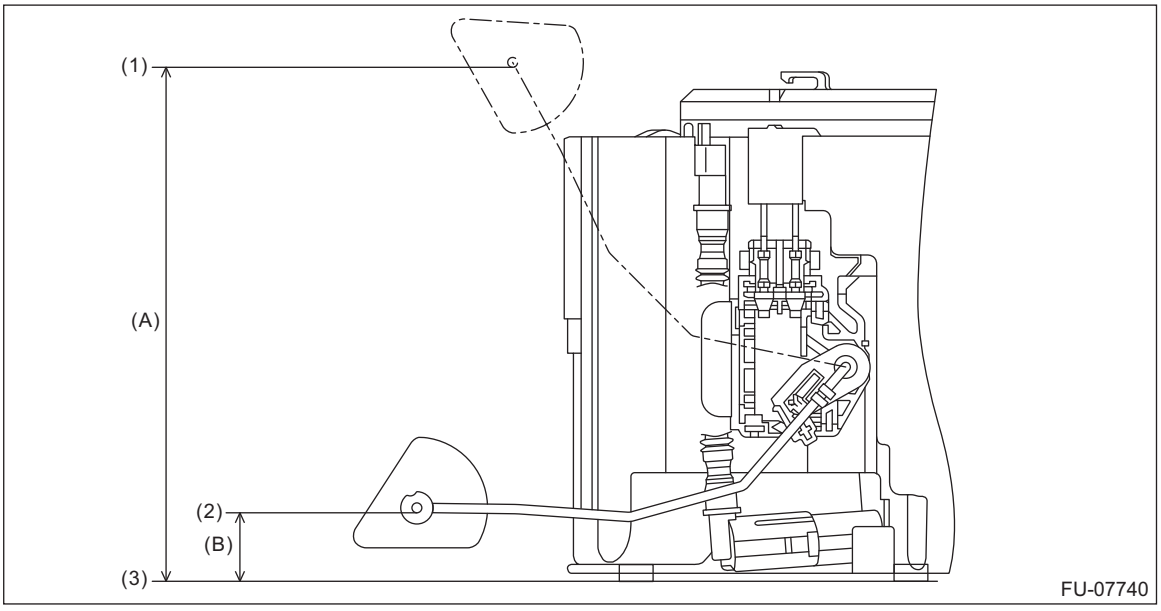


(A) Fuel level sensor harness (B) Connector cable

C: INSPECTION

1) Check that the fuel level sensor has no damage.
2) Measure the fuel level sensor float position.

NOTE:
When inspecting the fuel level sensor, perform the work with the sensor installed to the fuel pump.

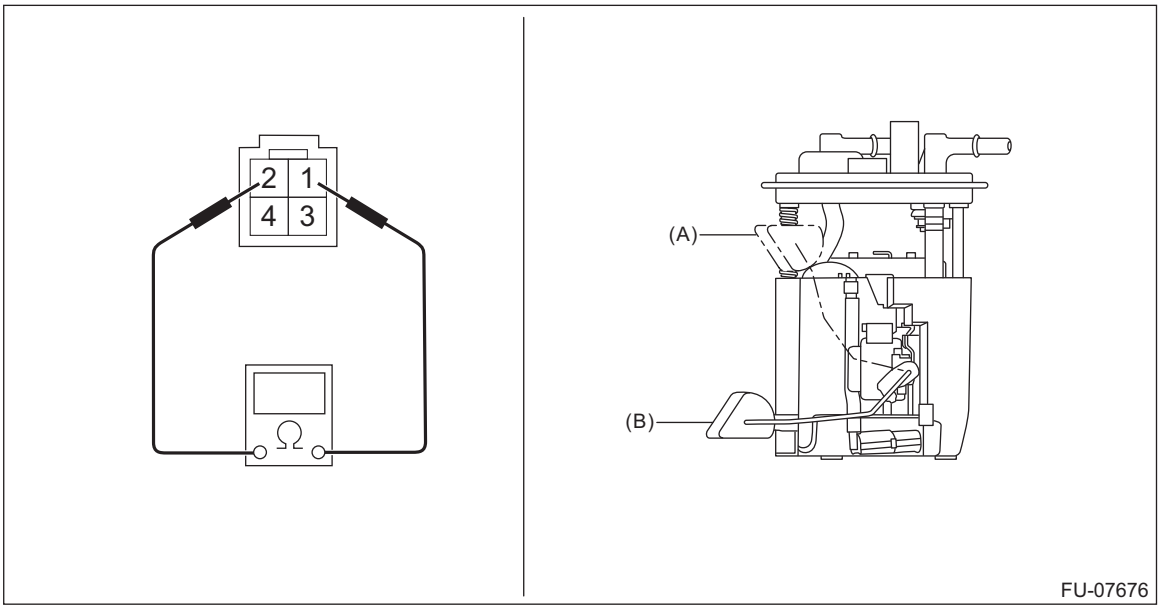


(1) FULL (2) EMPTY (3) Fuel tank seating surface

Float position	Standard
FULL to Fuel tank seating surface (A)	133.0±4 mm (5.236±0.157 in)

Float position	Standard
EMPTY to Fuel tank seating surface (B)	21.6±4 mm (0.850±0.157 in)

3) Check the resistance between fuel level sensor terminals by the connector on top of the fuel pump.



Float position	Terminal No.	Standard
FULL (A)	1 and 2	8.7±1.0 Ω
EMPTY (B)		139.1±2.0 Ω

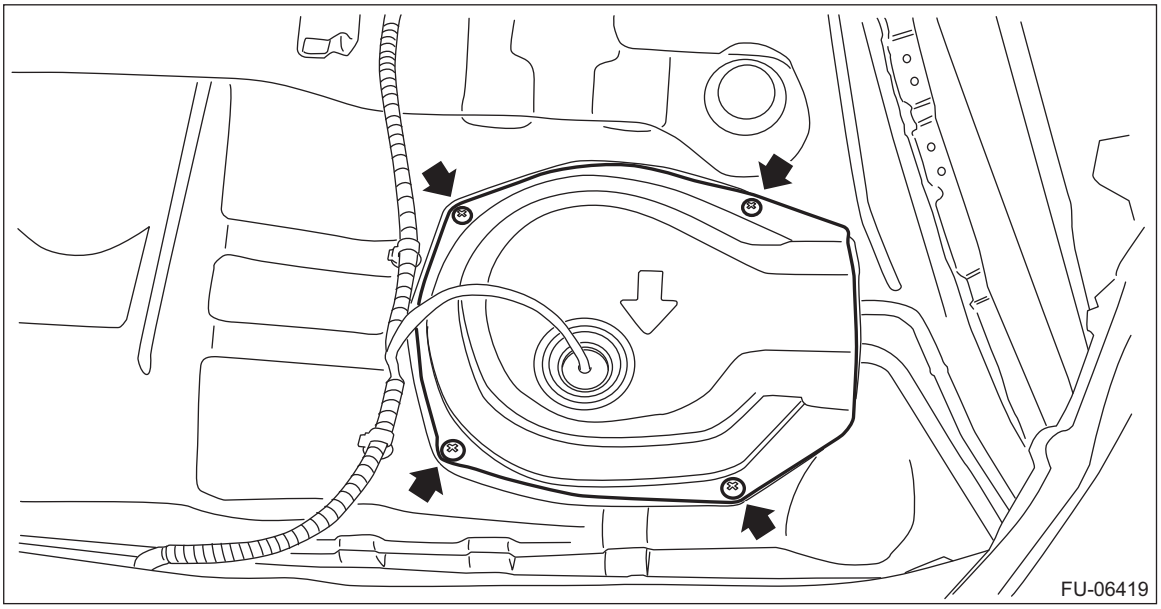
39.Fuel Sub Level Sensor

A: REMOVAL

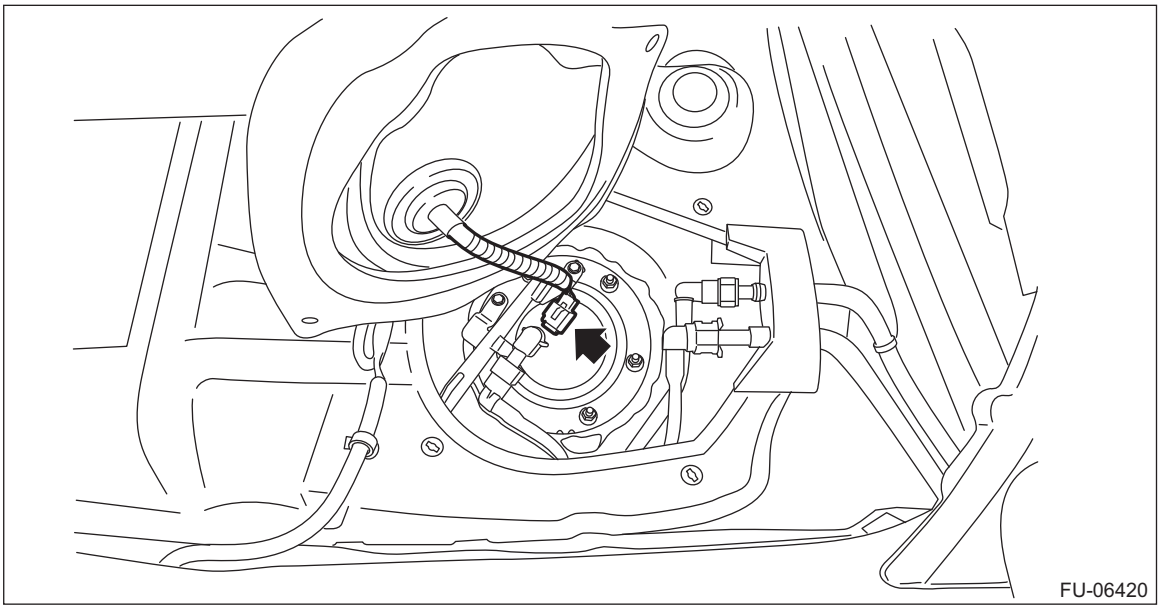
WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**

1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Remove the rear seat cushion. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the service hole cover of fuel sub level sensor.

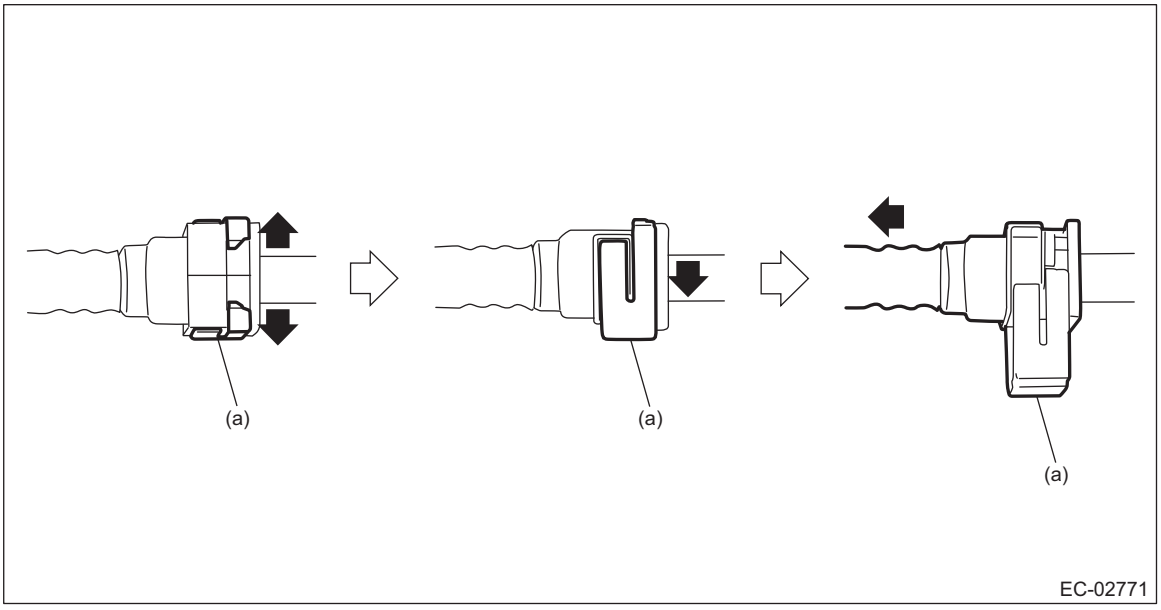


6) Disconnect the connector from the fuel sub level sensor, and move aside the service hole cover.

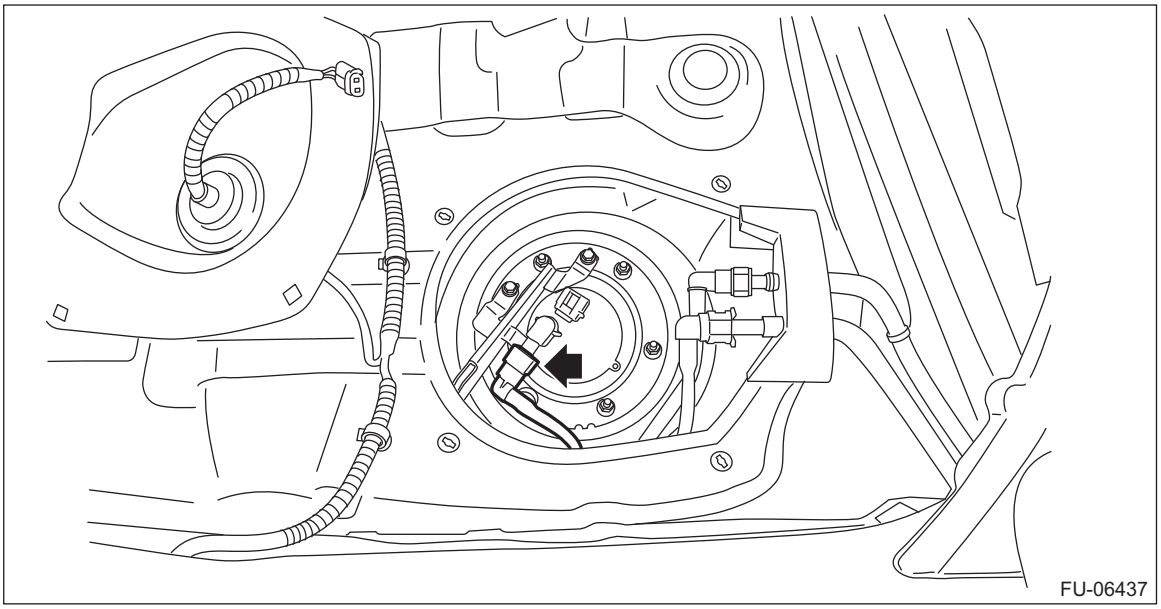


7) Disconnect the quick connector of the jet pump tube.

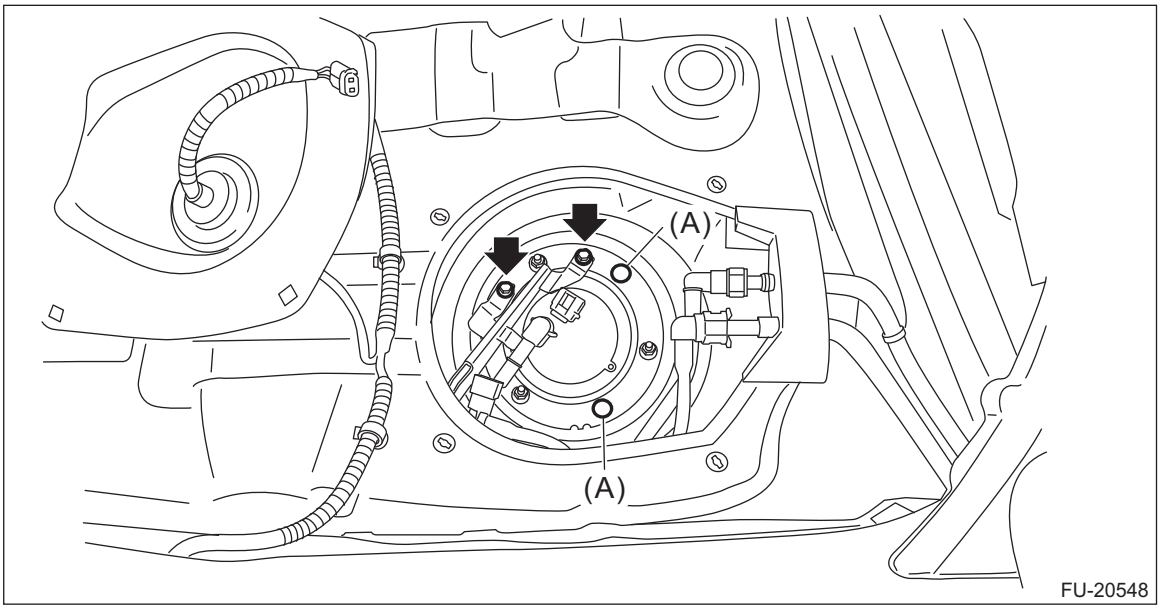
NOTE:
Disconnect the quick connector as shown in the figure.



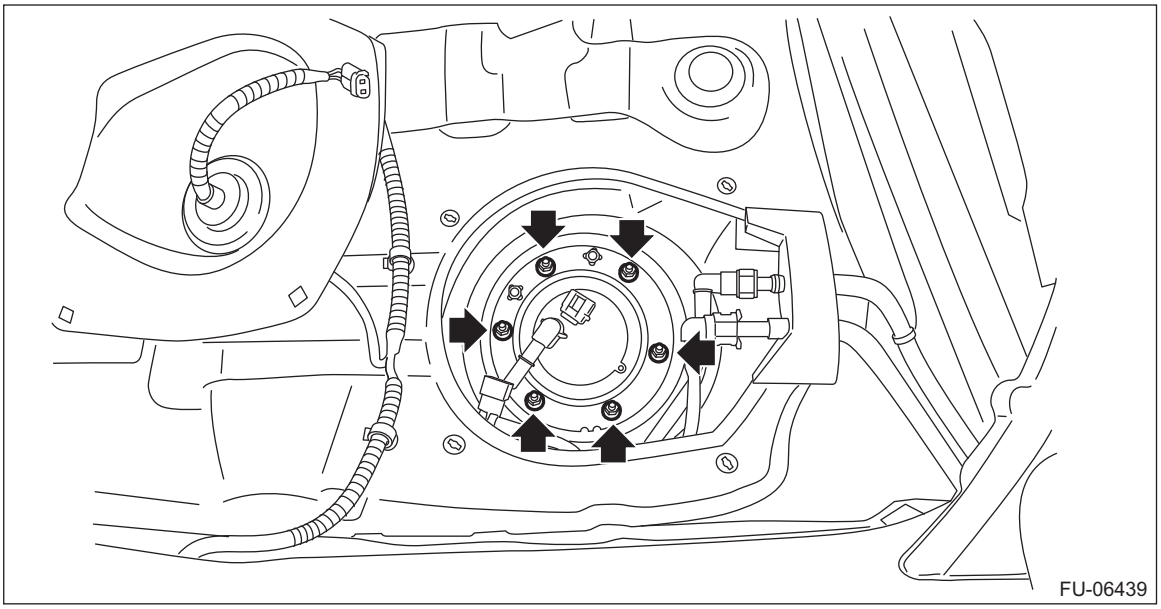
(a) Slider



8) Remove the fuel sub level sensor protector, and remove the rubber cap (A) from nut.



9) Remove the bolts and nuts which hold fuel sub level sensor protector and fuel sub level sensor upper plate to the fuel tank.



10) Remove the fuel sub level sensor from the fuel tank.

CAUTION:
Be careful not to let the arm and float of the fuel sub level sensor contact the fuel tank.

B: INSTALLATION

1) Install the fuel sub level sensor to the fuel tank.
   (1) Make sure the sealing portion is free from fuel or foreign matter before installation.
   (2) Align the cutout (B) as shown in the figure, and install the fuel sub level sensor upper plate cushion to the fuel sub level sensor upper plate.
