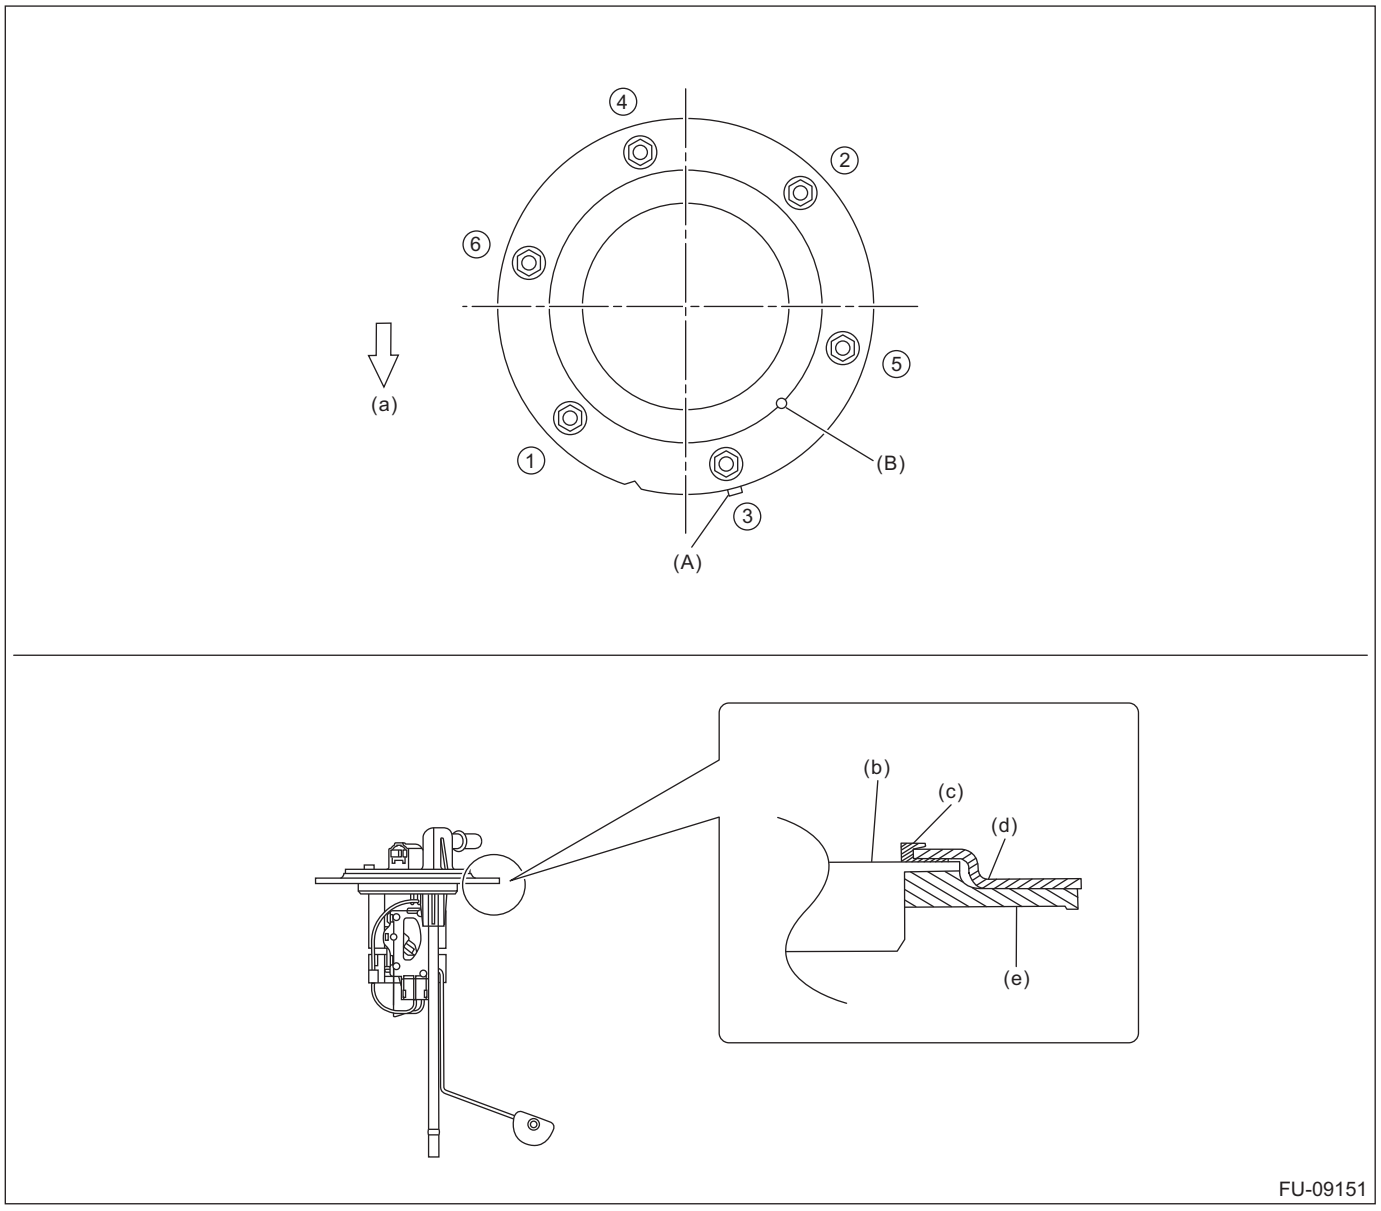
   (3) Align the cutout of the fuel sub level sensor upper plate with the protrusion (B) of the fuel sub level sensor as shown in the figure, and install the fuel sub level sensor upper plate from the upper side of the fuel sub level sensor.
   (4) Install the gasket from the lower side of the fuel sub level sensor so that the protrusion (B) of the fuel sub level sensor and the protrusion (A) of the gasket are positioned as shown in the figure.

NOTE:
Use a new gasket.

(5) Install the fuel sub level sensor to the fuel tank in the direction shown in the figure, and tighten the nuts to the specified torque in the order as shown in the figure.

CAUTION:
Set the arm and float of the fuel sub level sensor while paying attention to prevent them from contacting the fuel tank. If the arm of the fuel sub level sensor is bent, the fuel gauge may not read correctly.

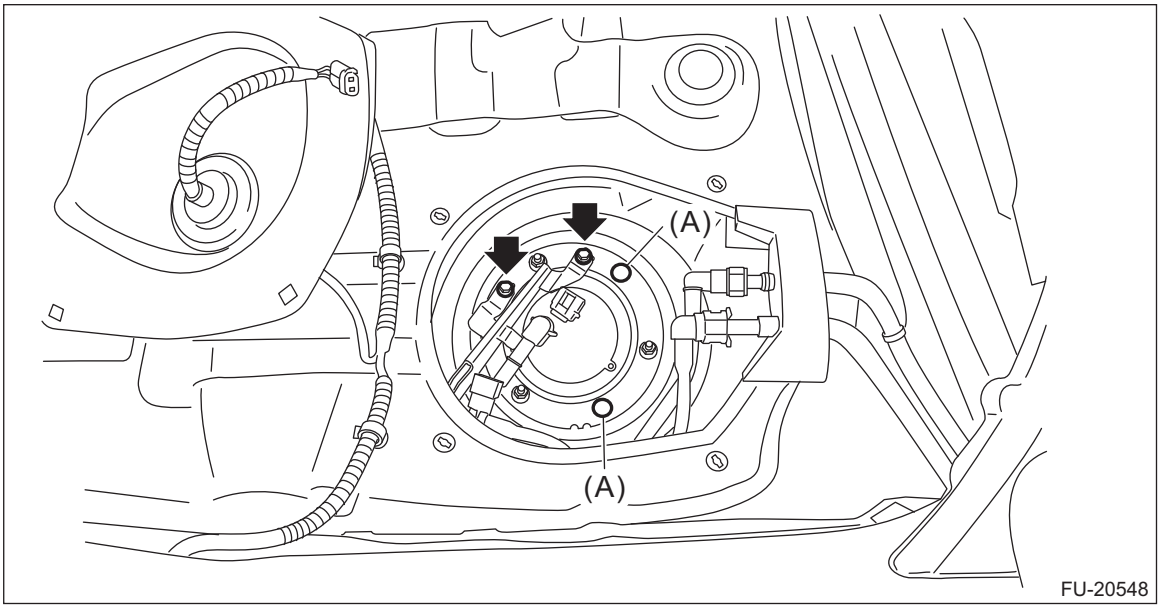
Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)



(a) Front side of vehicle
(b) Fuel sub level sensor
(c) Fuel sub level sensor upper plate cushion
(d) Fuel sub level sensor upper plate
(e) Gasket

2) Install the fuel sub level sensor protector, and install the rubber cap (A).

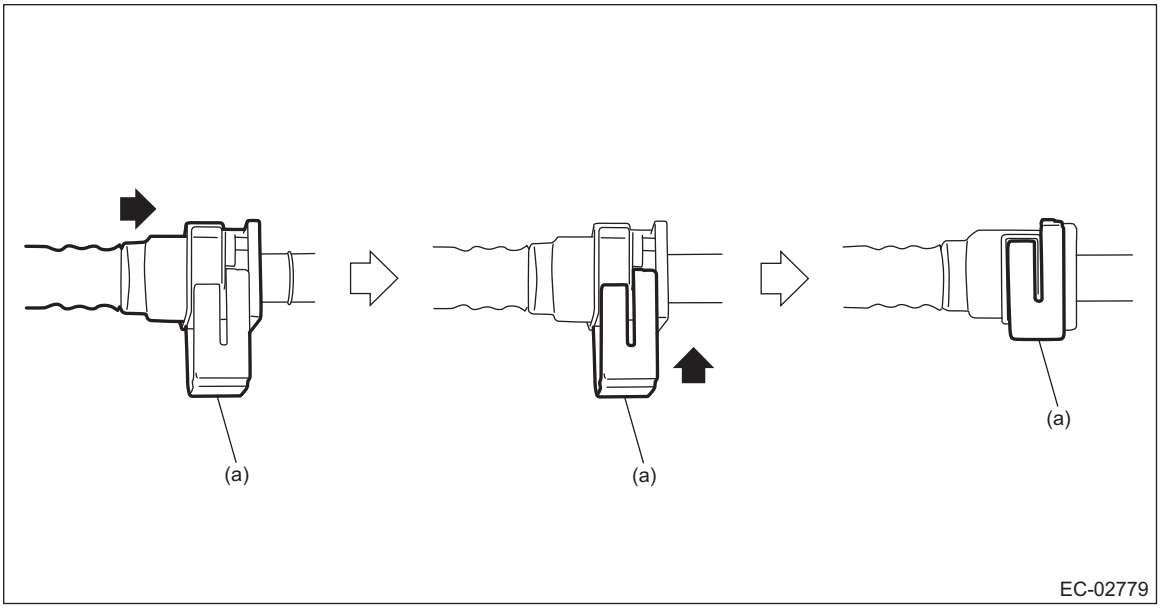
Tightening torque:
4.4 N·m (0.4 kgf-m, 3.2 ft-lb)



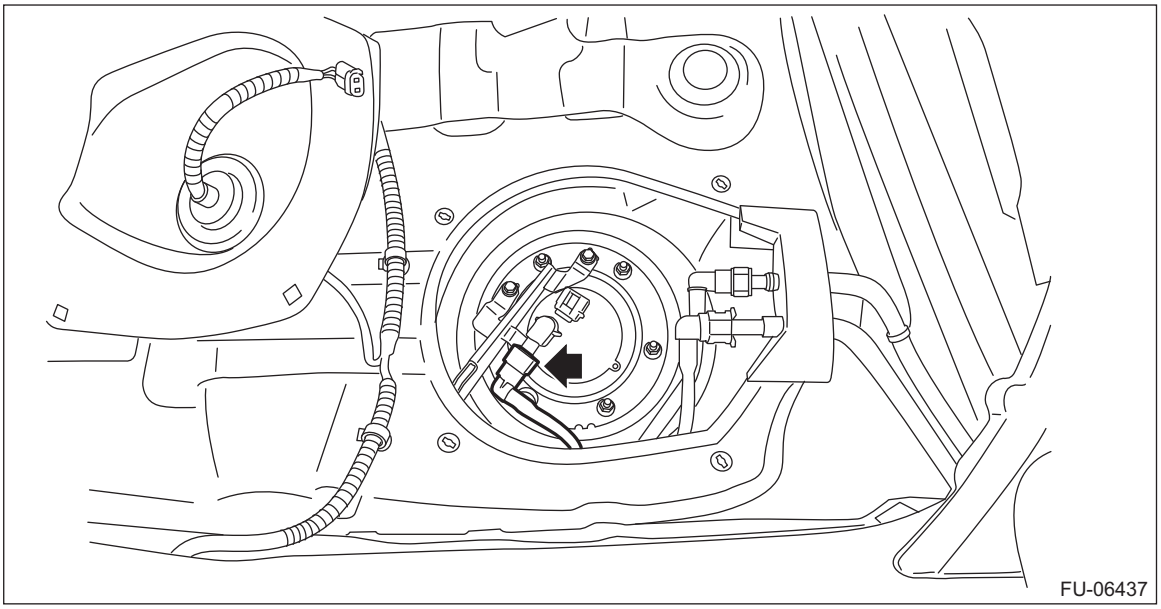
3) Connect the quick connector of the jet pump tube.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.

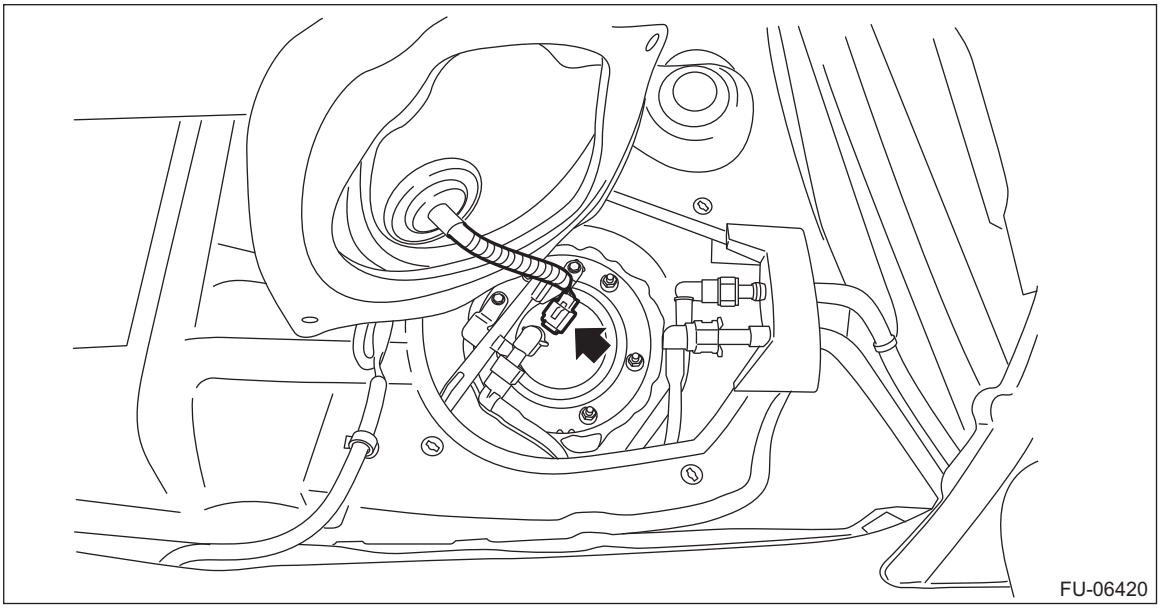


(a) Slider

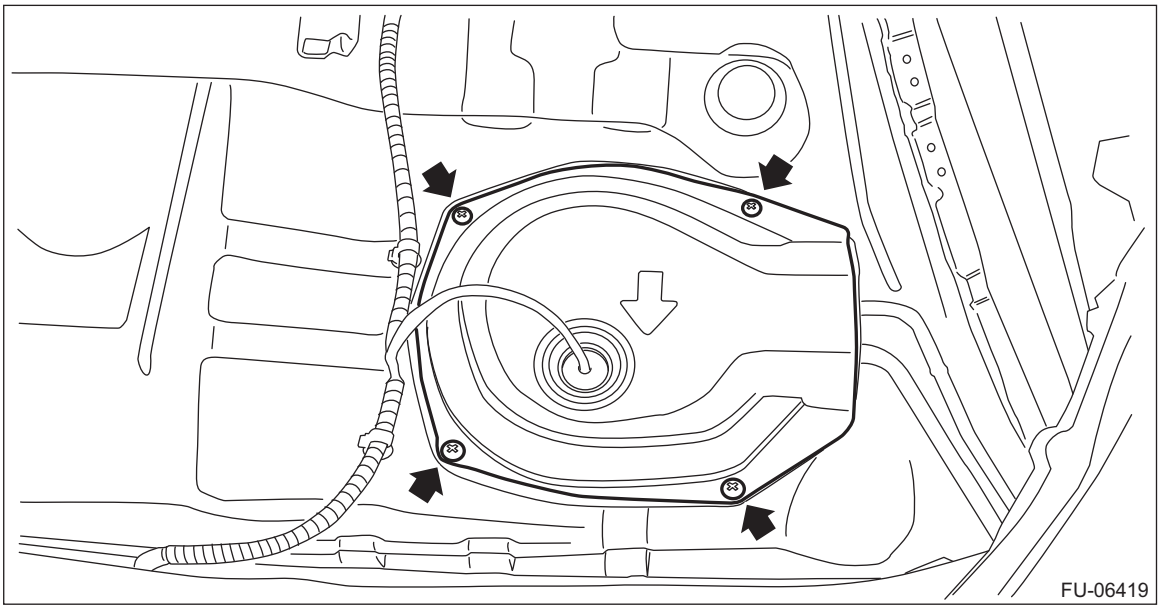


4) Connect the connector to the fuel sub level sensor.

CAUTION:
Before connecting, check that there are no foreign objects, water, etc. in the connectors of the fuel sub level sensor and harness. If any foreign objects and water are found, remove them with air blow and completely dry the connectors to connect.



5) Install the service hole cover of fuel sub level sensor.

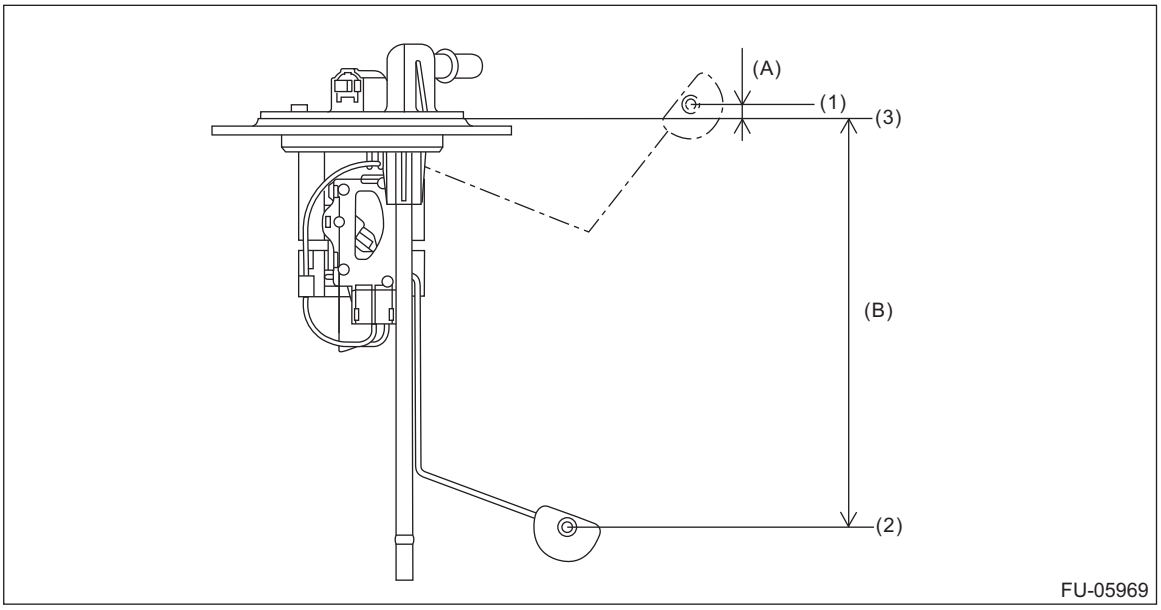


6) Install the rear seat cushion. <Ref. to SE-38, INSTALLATION, Rear Seat.>
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the fuel sub level sensor has no damage.

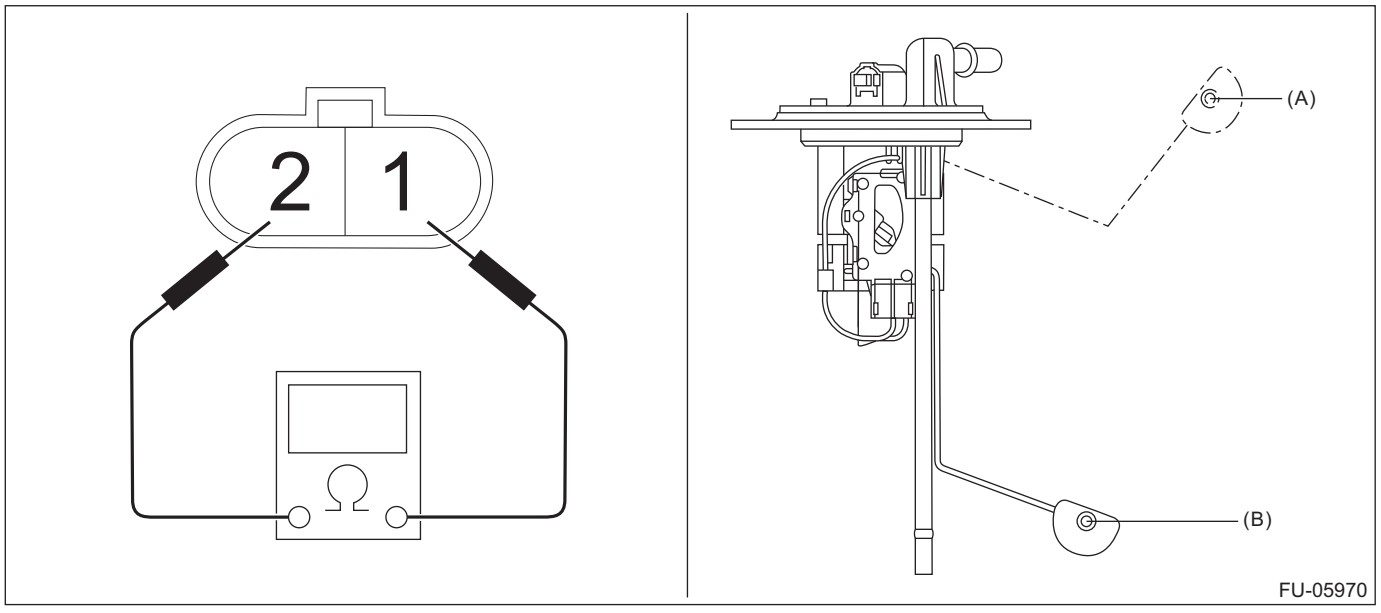
2) Measure the fuel sub level sensor float position.



(1) FULL (2) EMPTY (3) Datum points

Float position	Standard
FULL to Datum point (A)	5.31±3.5 mm (0.209±0.138 in)
EMPTY to Datum point (B)	160.6±3.5 mm (6.32±0.138 in)

3) Measure the resistance between fuel sub level sensor terminals.



Float position	Terminal No.	Standard
FULL (A)	1 and 2	8.7±1.0 Ω
EMPTY (B)		270.9±4.0 Ω

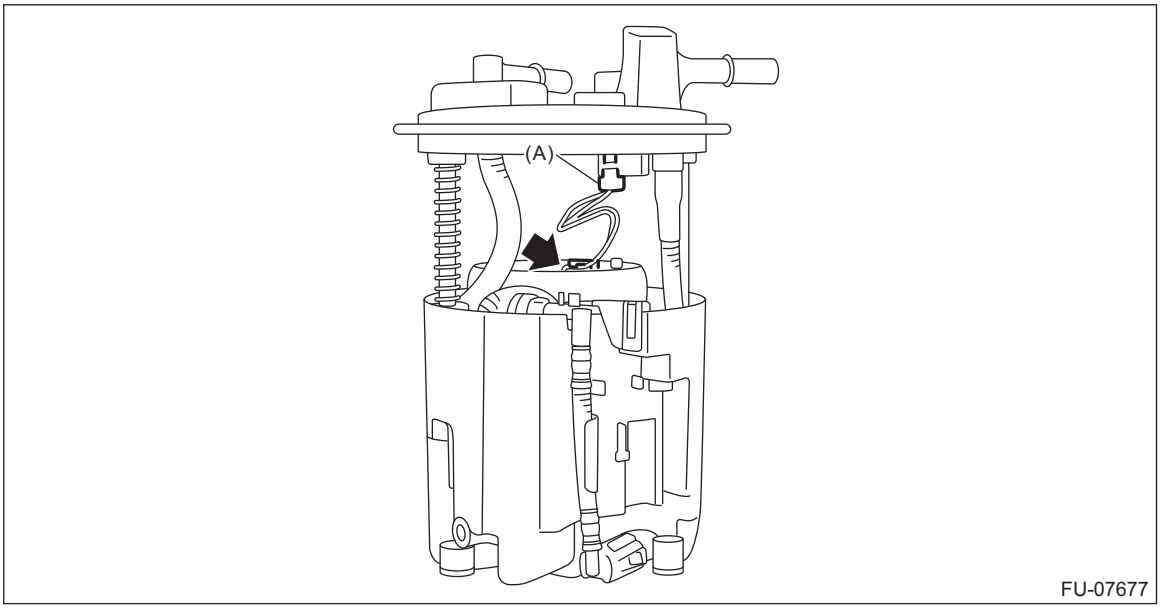
40.Fuel Filter

A: REMOVAL

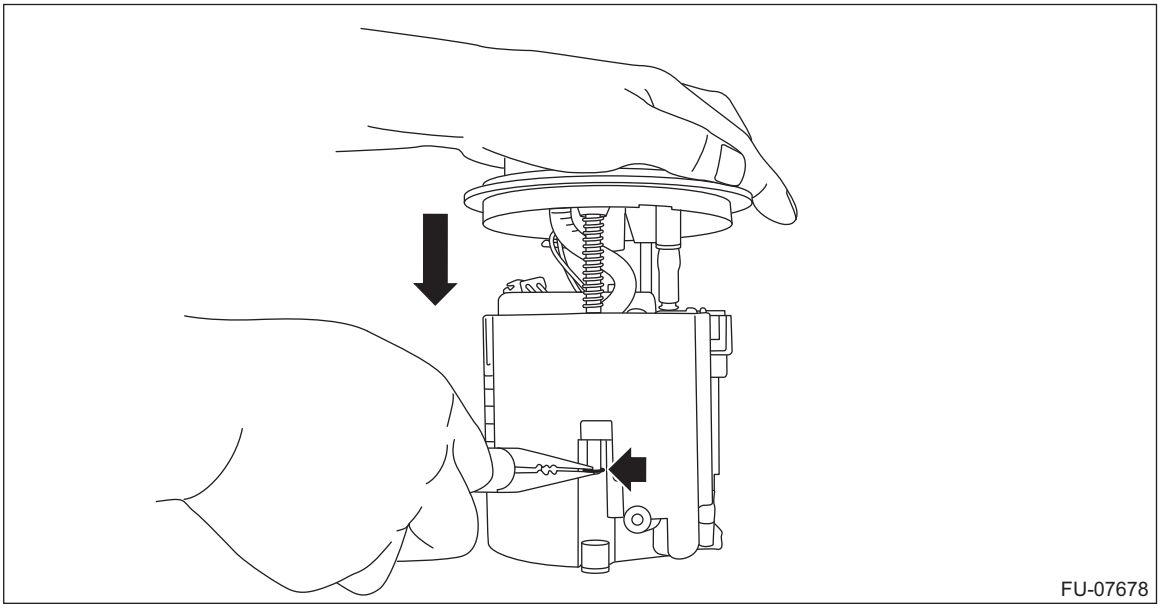
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
- **Be careful not to spill fuel.**
- **If the fuel gauge indicates that two thirds or more of the fuel is remaining, be sure to drain fuel before starting work to avoid the fuel to spill.**
- **Be careful not to drop or apply any impact to the fuel pump during work. This may deteriorate its performance.**

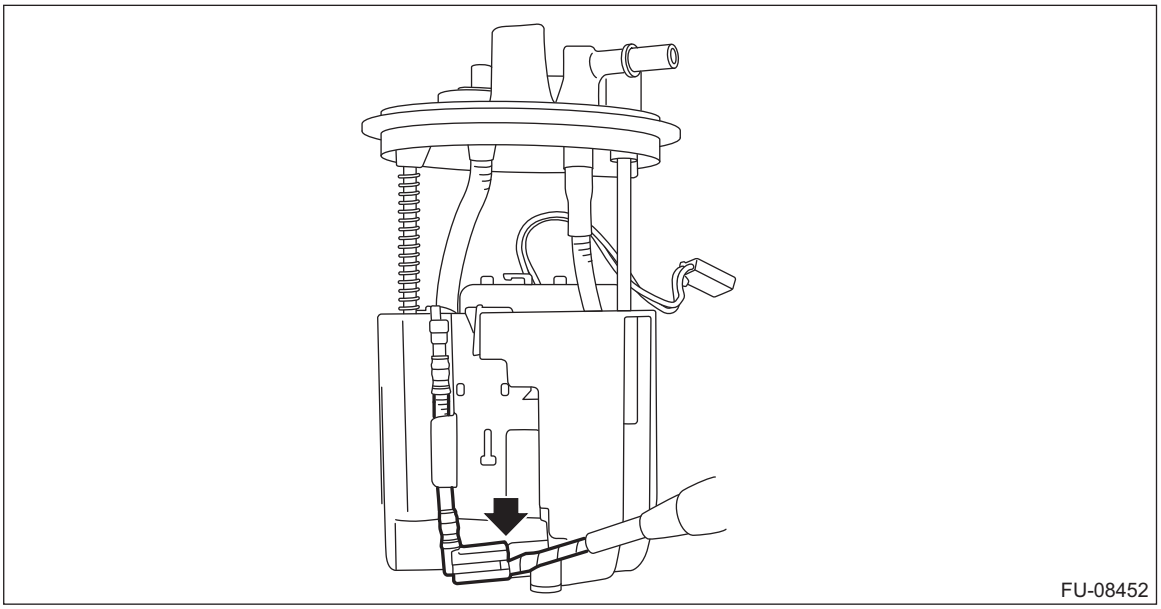
NOTE:
The fuel filter is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(w/o STI)-161, REMOVAL, Fuel Pump.>
2) Remove the fuel level sensor. <Ref. to FU(w/o STI)-169, REMOVAL, Fuel Level Sensor.>
3) Remove the connector cable from the clip, and disconnect the connector (A) of the connector cable.



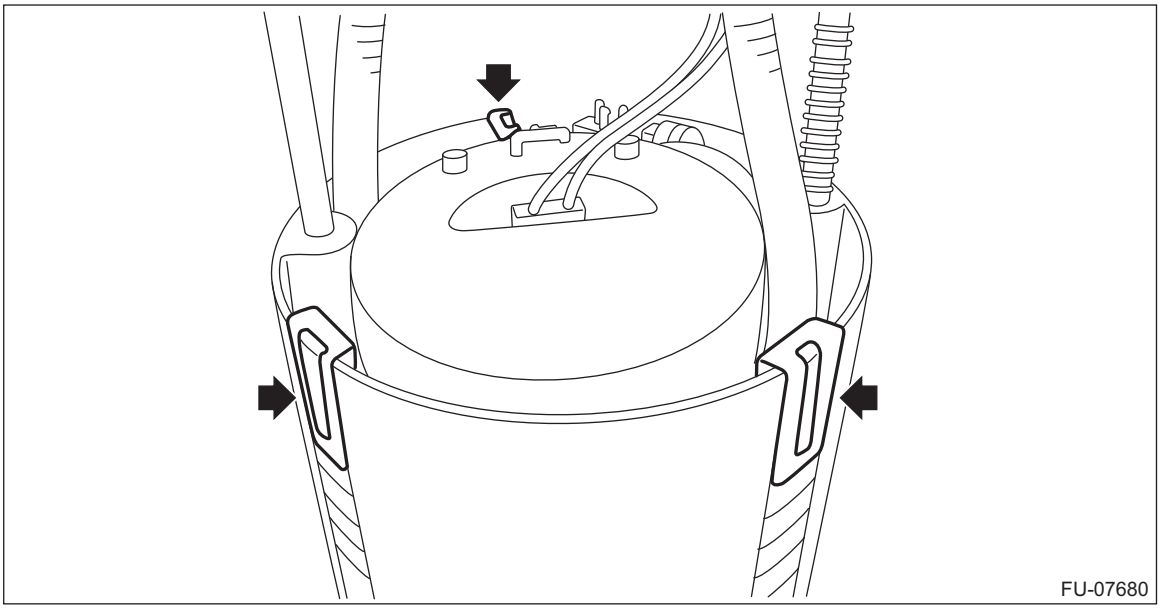
4) Push the fuel filter assembly in the direction of the arrow to compress, and detach the clip.



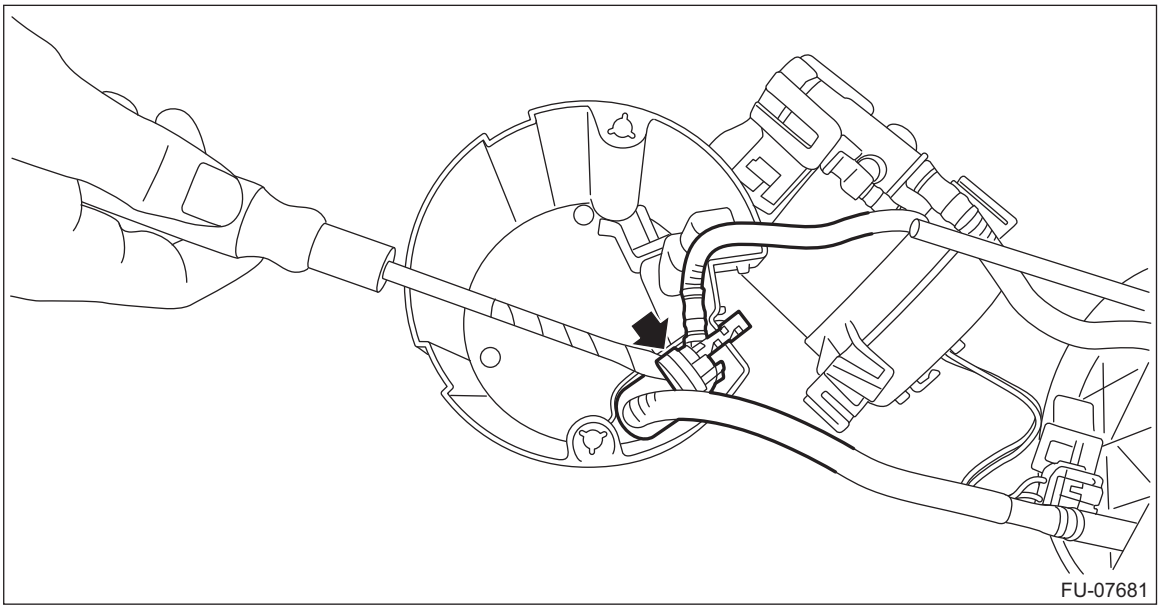
5) Release the claw of the tube assembly using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the tube assembly from the fuel chamber assembly.



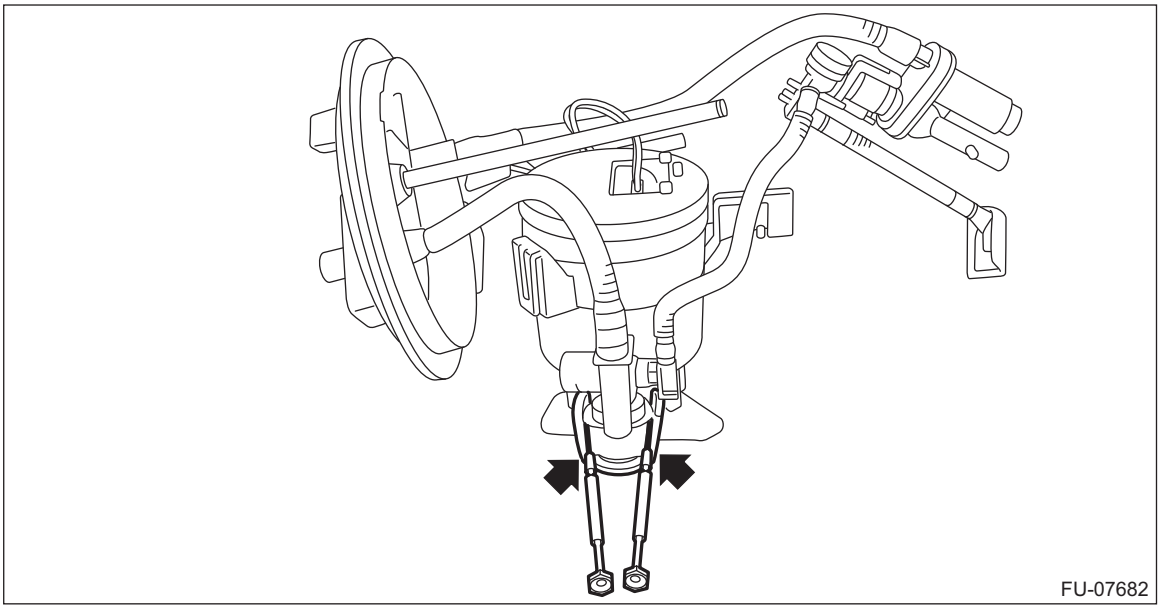
6) Release three claws on the fuel pump holder from the fuel chamber assembly, and raise the fuel filter assembly.



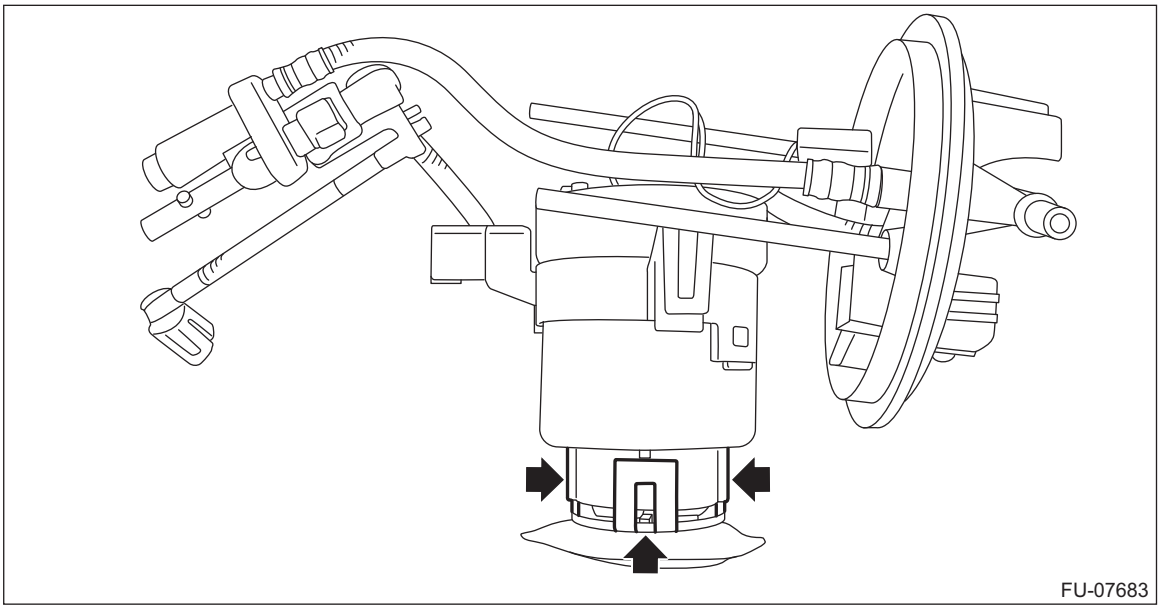
7) Using a flat tip screwdriver or similar tool wrapped with a protection tape, remove the tube assembly from the fuel chamber assembly, and separate the fuel filter assembly and fuel chamber assembly.



8) Using a precision driver or similar tool wrapped with a protection tape, expand the claws on the fuel pump.

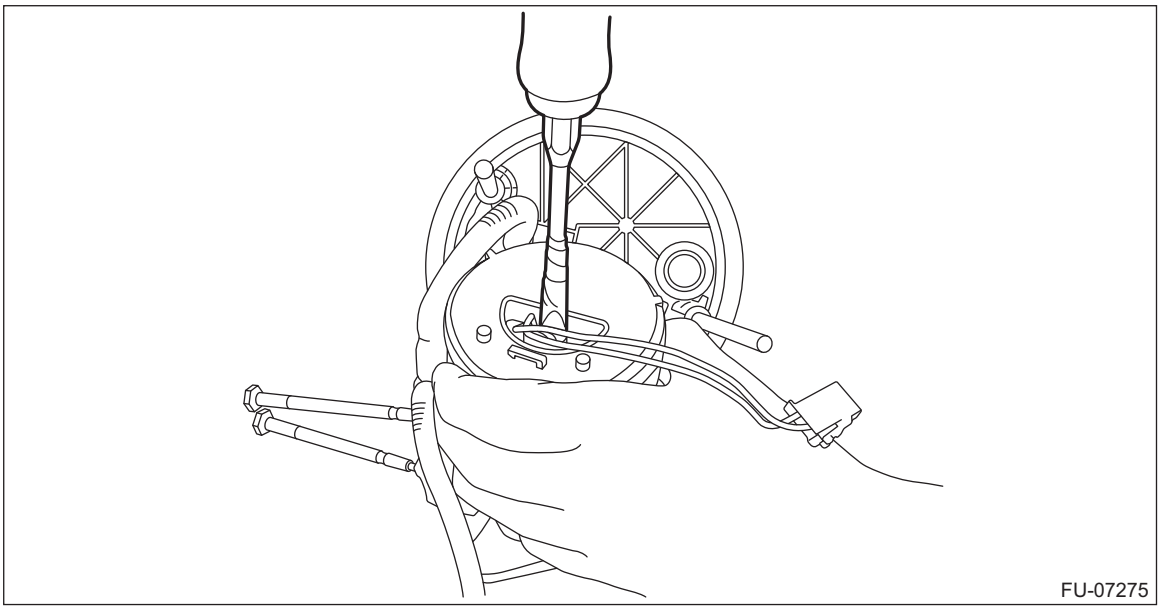


9) Release the claws on the fuel pump.

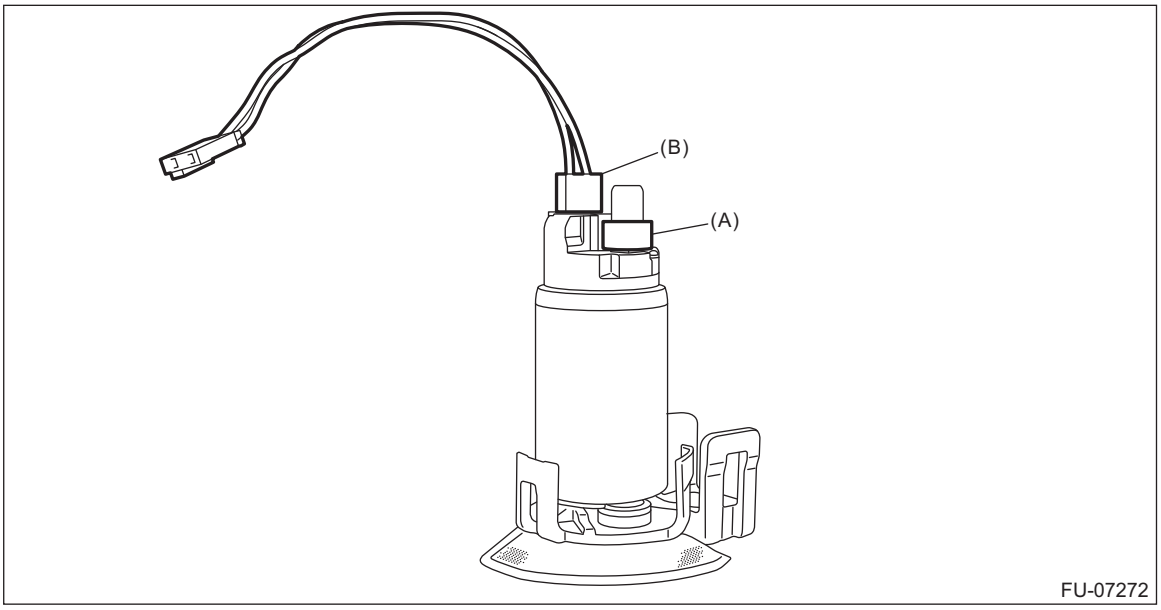


10) Using a flat tip screwdriver or similar tool wrapped with a protection tape, press on the fuel pump and remove the fuel pump together with the fuel pump holder from the fuel filter assembly.

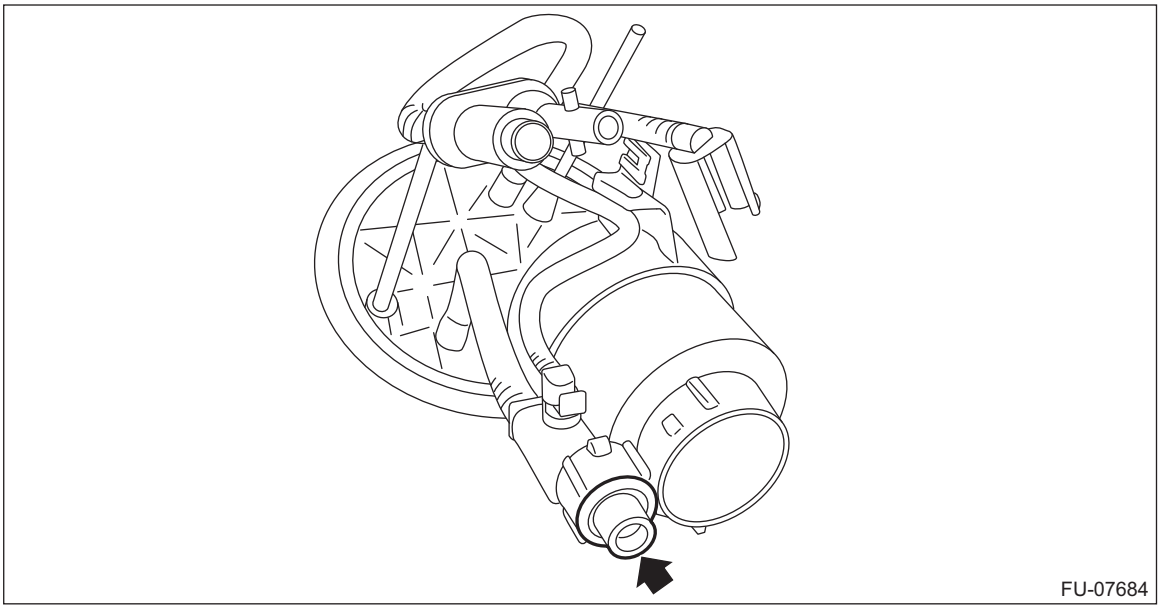
CAUTION:
If O-rings remain on the fuel filter assembly side, carefully remove them with a precision screwdriver or similar tool wrapped with a protection tape.



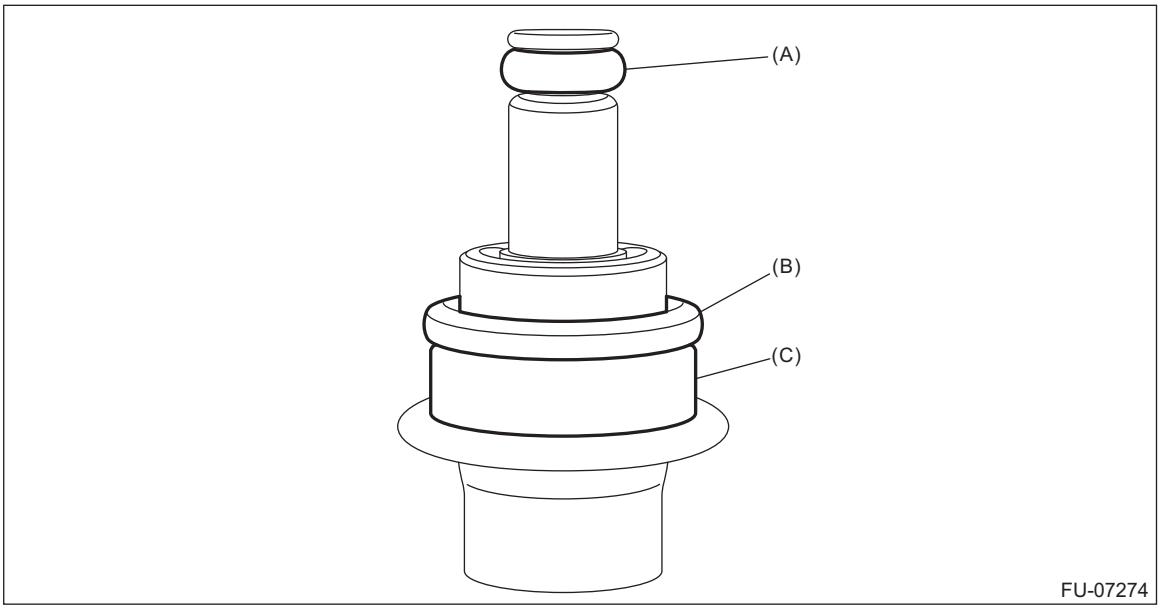
11) Remove the spacer (A) and connector cable (B) from the fuel pump.



12) Remove the pressure regulator from the fuel filter assembly.



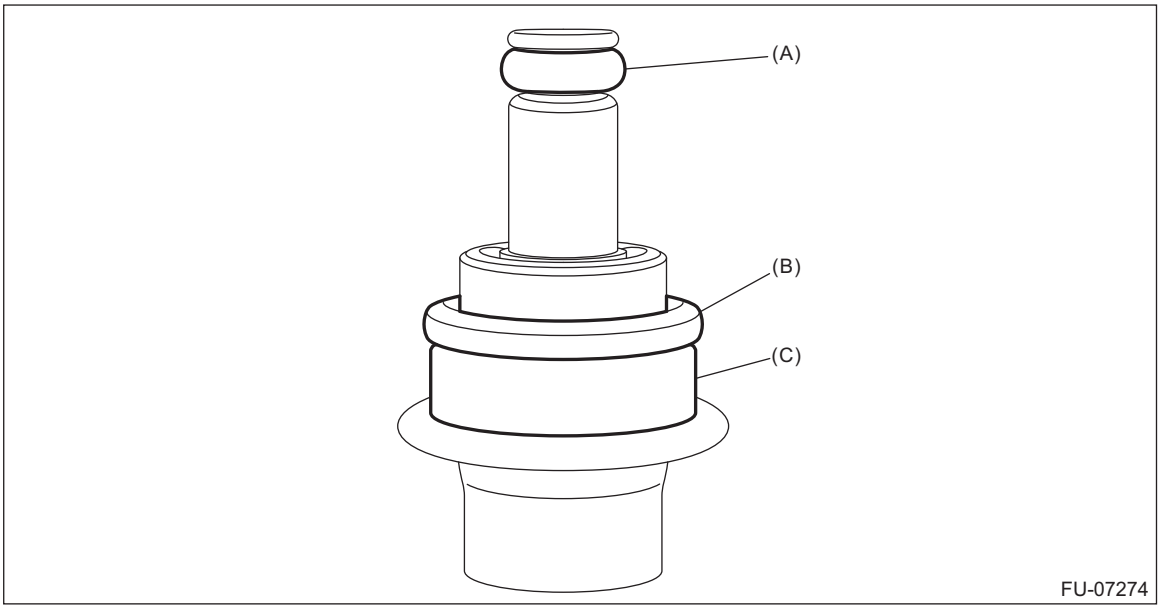
13) Remove O-ring (A), O-ring (B), and backup ring (C) from the pressure regulator.



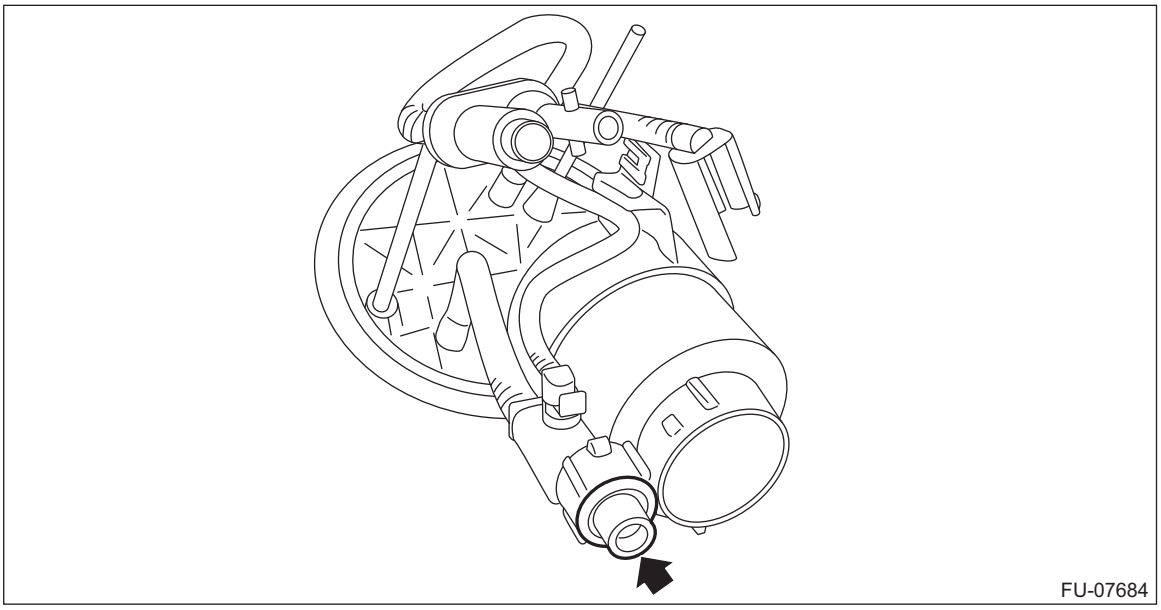
B: INSTALLATION

1) Install O-ring (A), O-ring (B), and backup ring (C) to the pressure regulator.

NOTE:
- Use new O-rings.
- Apply gasoline to the O-ring and backup ring.

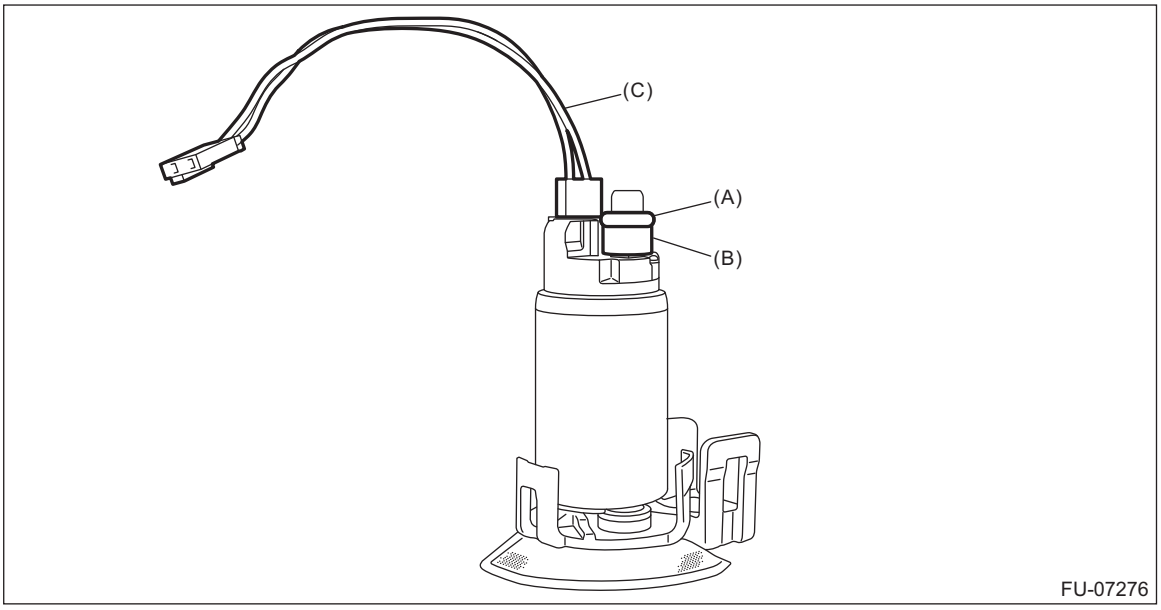


2) Install the pressure regulator to the fuel filter assembly.



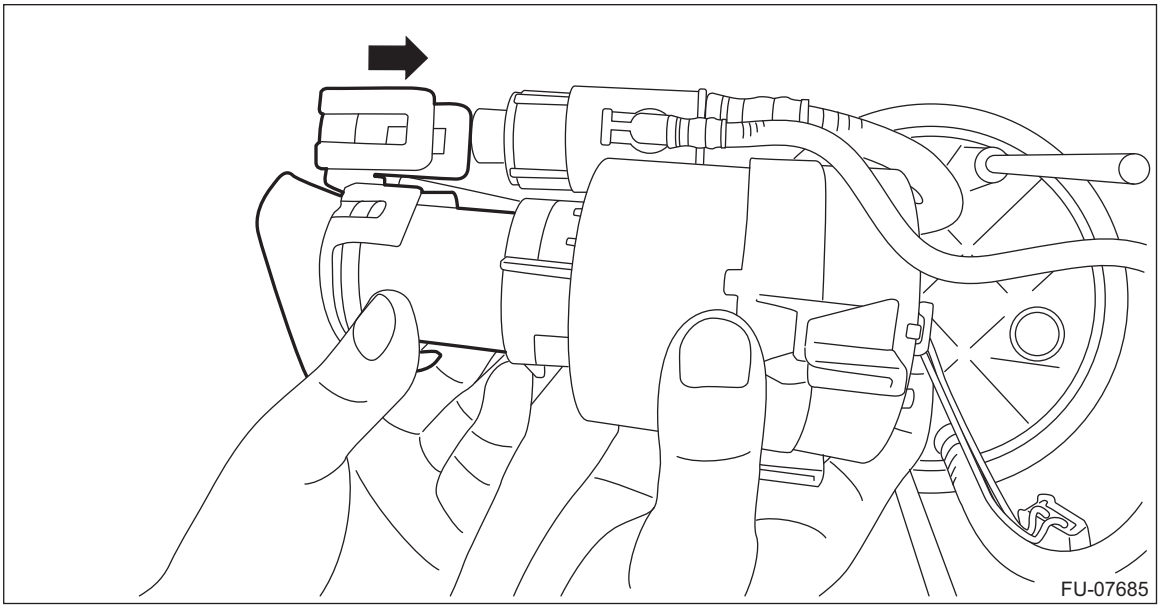
3) Install O-ring (A), spacer (B), and connector cable (C) to the fuel pump.

NOTE:
- Use new O-rings and the connector cable.
- Apply gasoline to the O-rings and the spacer.

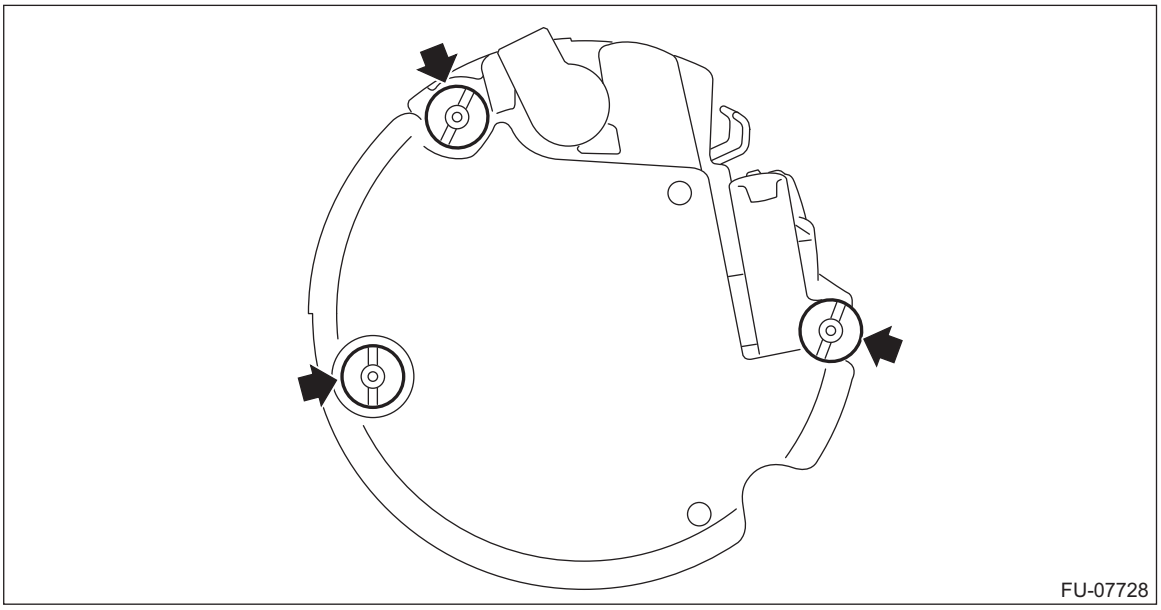


4) Install the fuel pump to the fuel filter assembly.

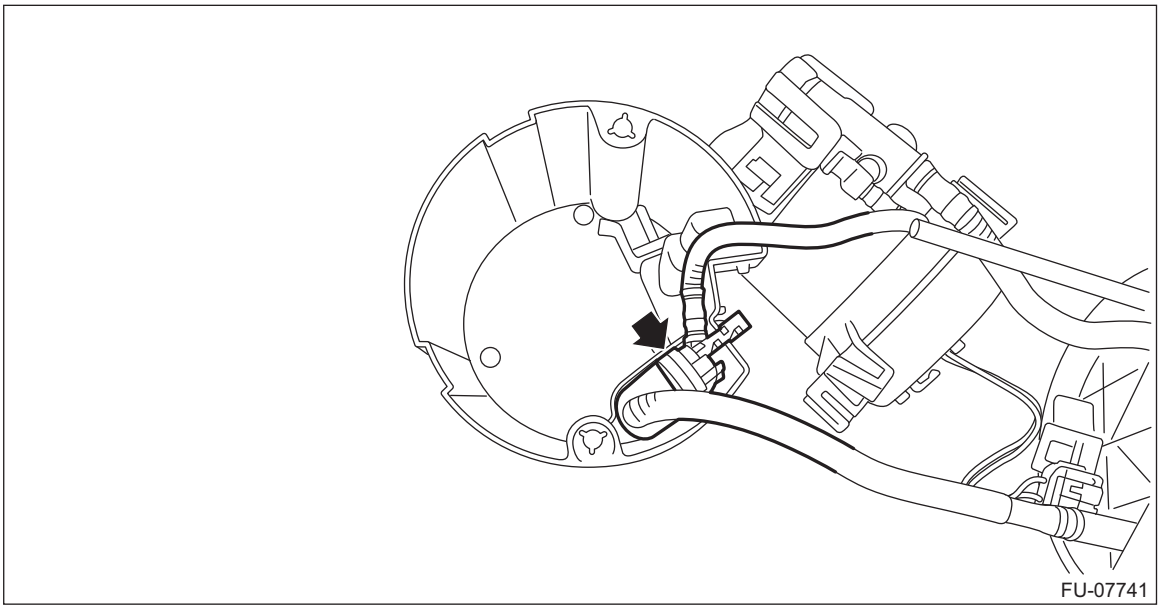
NOTE:
After installation, make sure five claws are correctly engaged in each position.



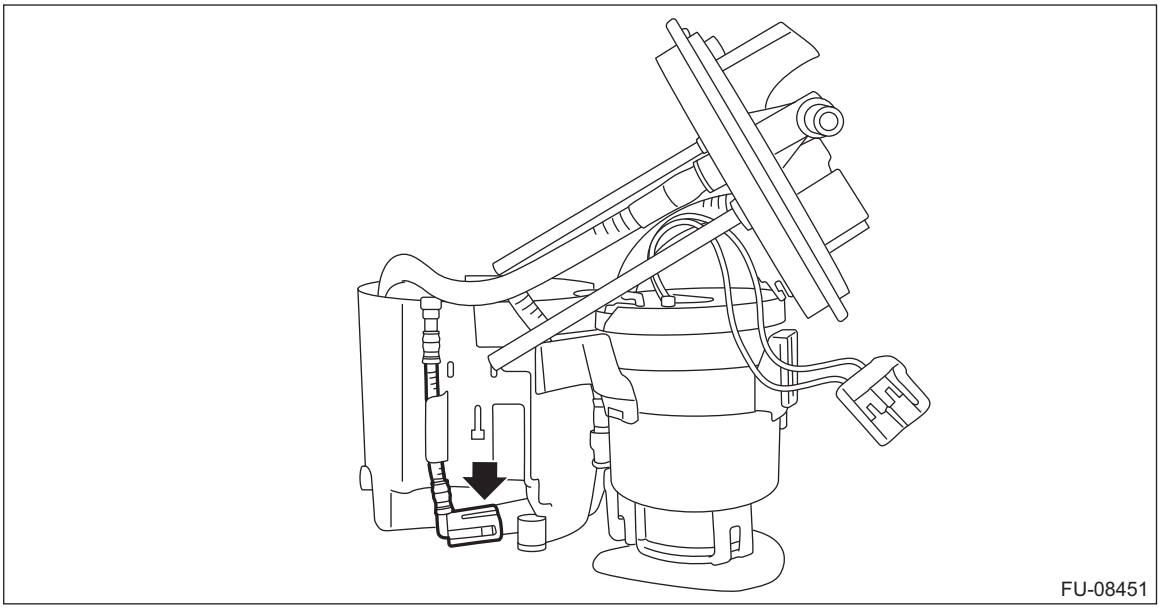
5) Check that the cushions of the fuel chamber assembly for dislocation. If any of them is dislocated, install a new cushion.



6) Slowly press in and install the tube assembly to the fuel chamber assembly until a clicking sound is heard.

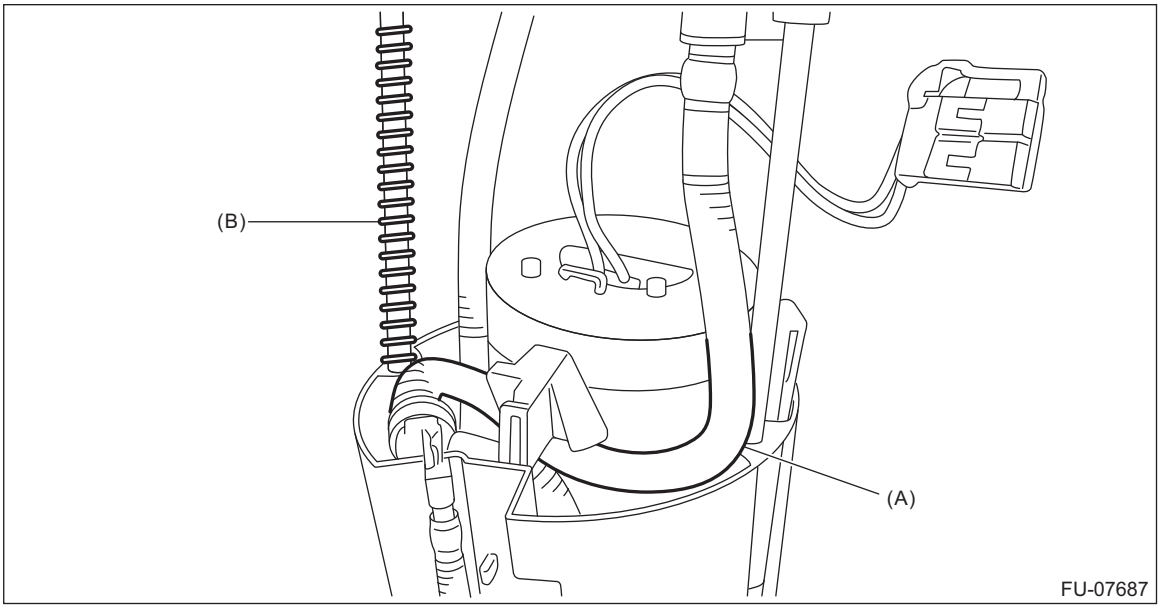


7) Install the tube assembly to the fuel chamber assembly, and connect the tube assembly to the fuel chamber assembly.

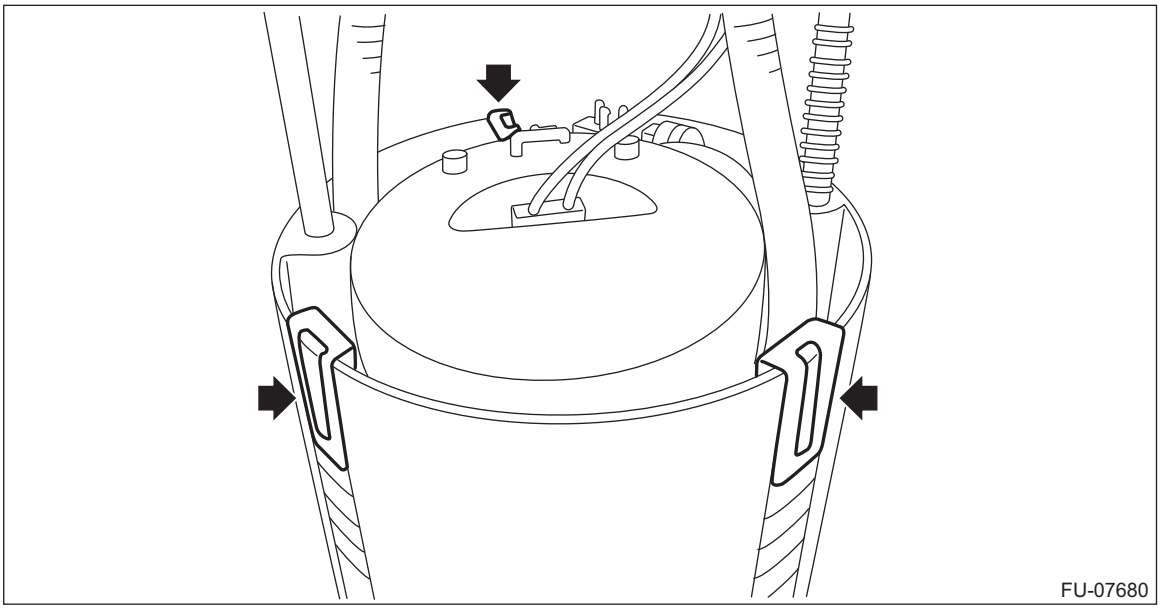


8) Install the fuel filter assembly to the fuel chamber assembly.

NOTE:
- Set the tube (A) and spring (B) for the fuel filter assembly as shown in the figure.

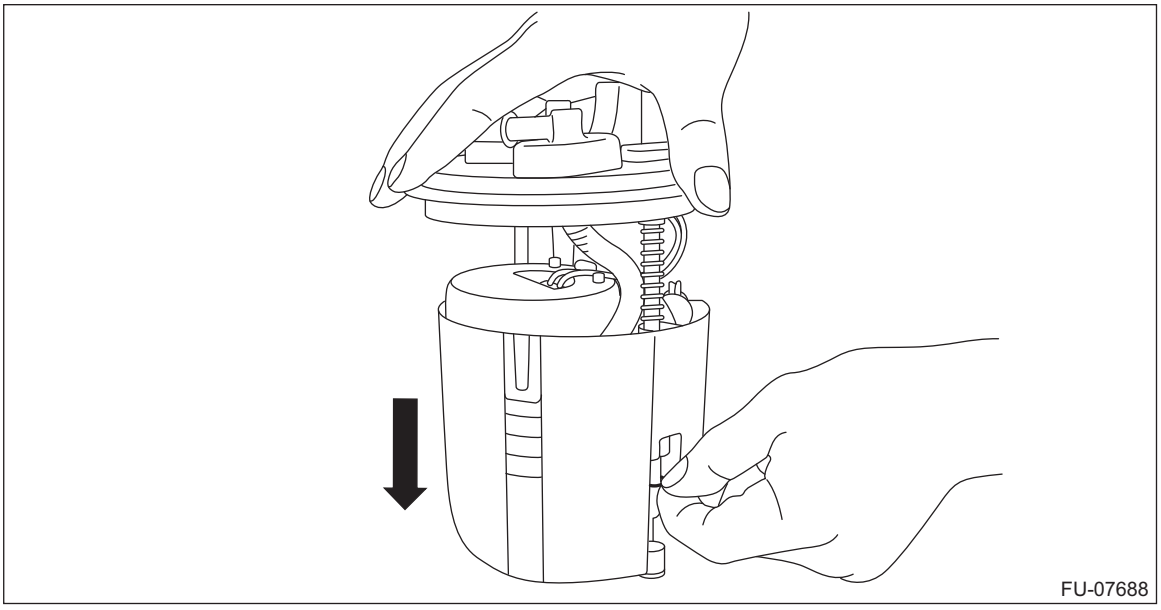


- Check that the claw connecting the fuel camber assembly and the fuel filter assembly is securely fastened.

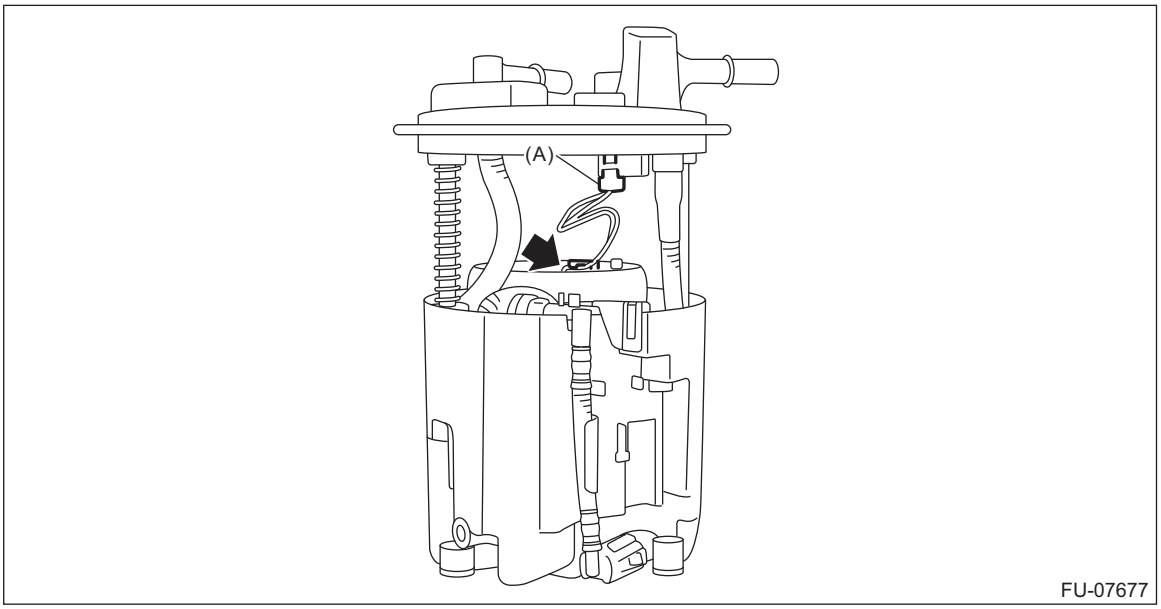


9) Push the fuel filter assembly in the direction of the arrow to compress, and attach the clip.

NOTE:
Use a new clip.



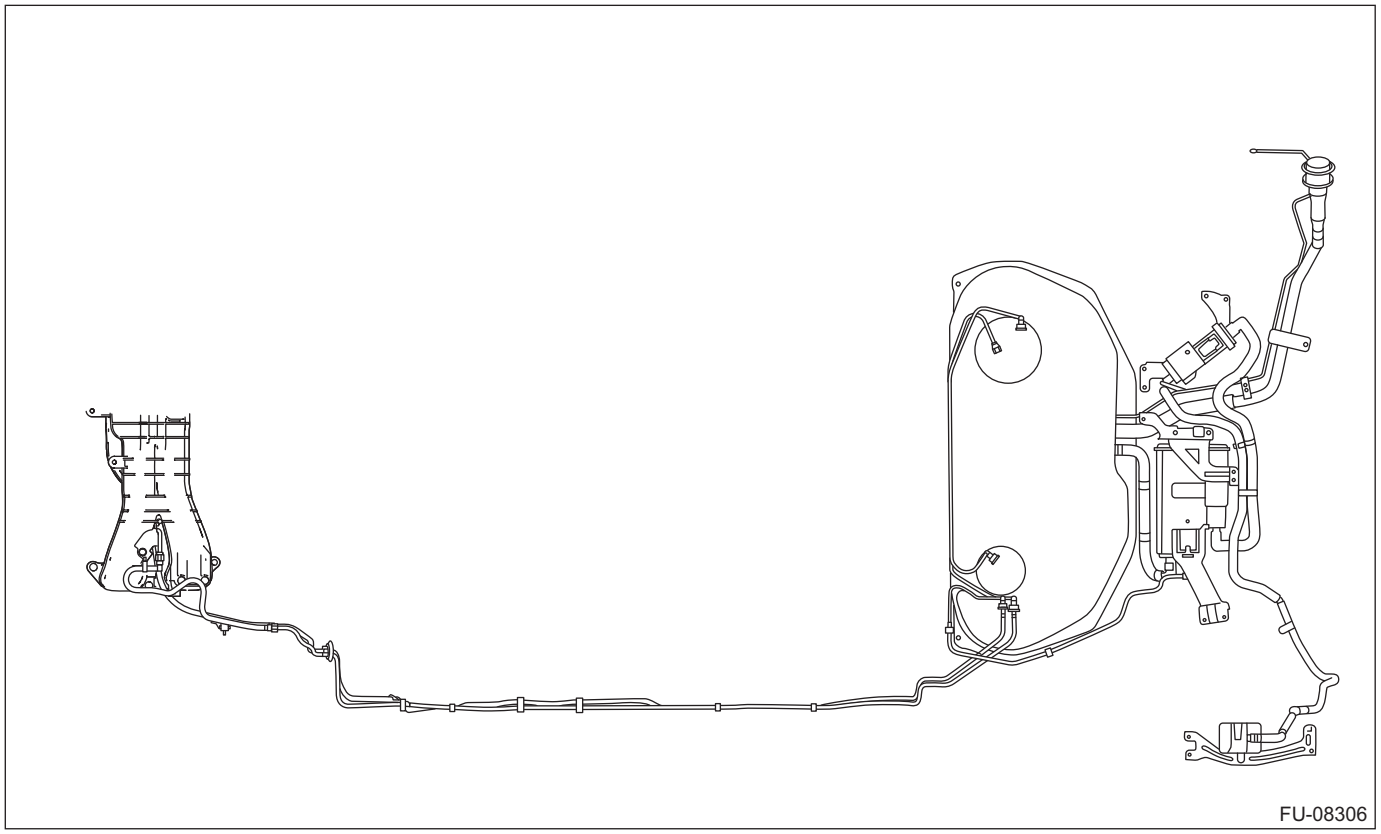
10) Secure the connector cable with the clip, and connect the connector (A) of the connector cable.



11) Install the fuel level sensor. <Ref. to FU(w/o STI)-170, INSTALLATION, Fuel Level Sensor.>
12) Inspect the fuel level sensor. <Ref. to FU(w/o STI)-170, INSPECTION, Fuel Level Sensor.>
13) Install the fuel pump assembly. <Ref. to FU(w/o STI)-164, INSTALLATION, Fuel Pump.>

41.Fuel Delivery and Evaporation Lines

A: REMOVAL



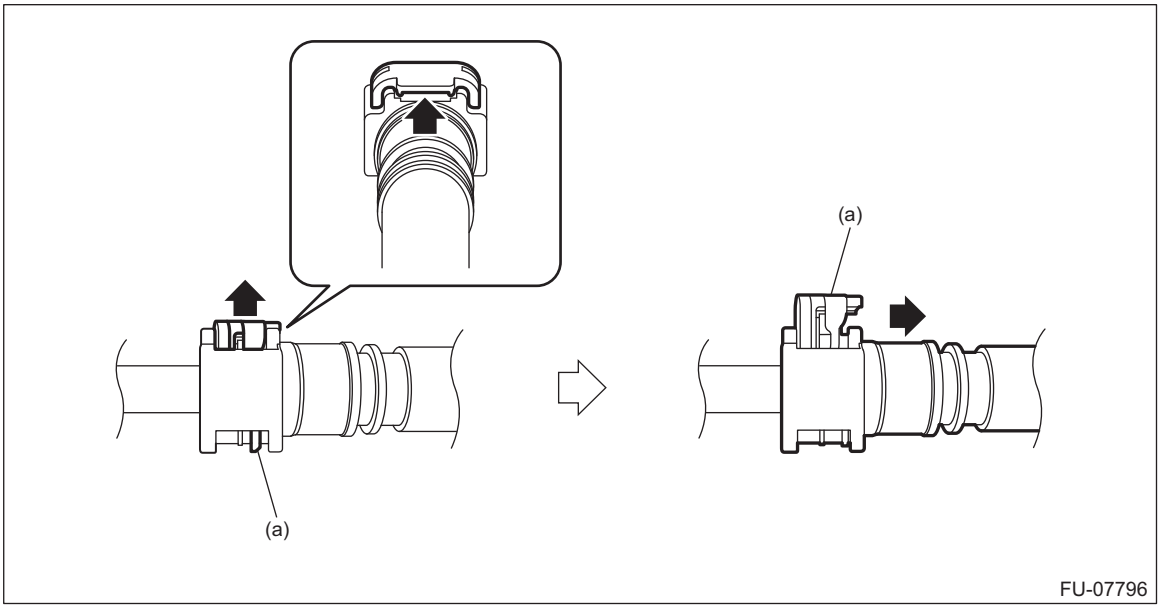
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
Be careful not to spill fuel.
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler lid and remove the fuel filler cap.

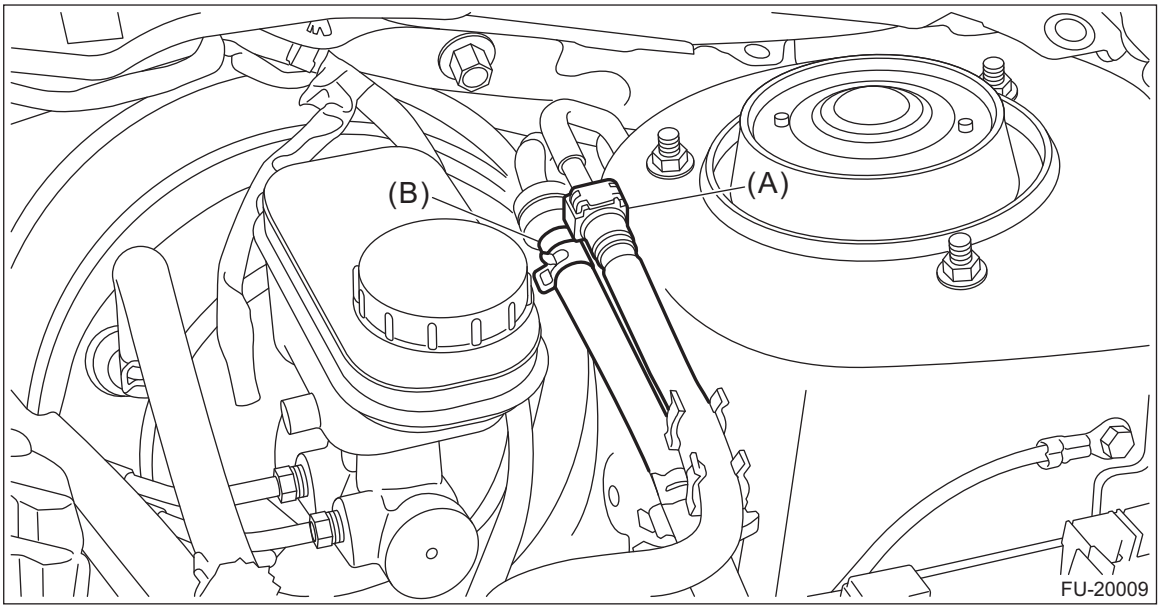
NOTE:
This operation is required to release the inner pressure of the fuel tank.
3) Remove the floor mat. <Ref. to EI-106, REMOVAL, Floor Mat.>
4) In the engine compartment, disconnect the fuel delivery tube (A) and evaporation hose (B).

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

NOTE:
Disconnect the quick connector as shown in the figure.



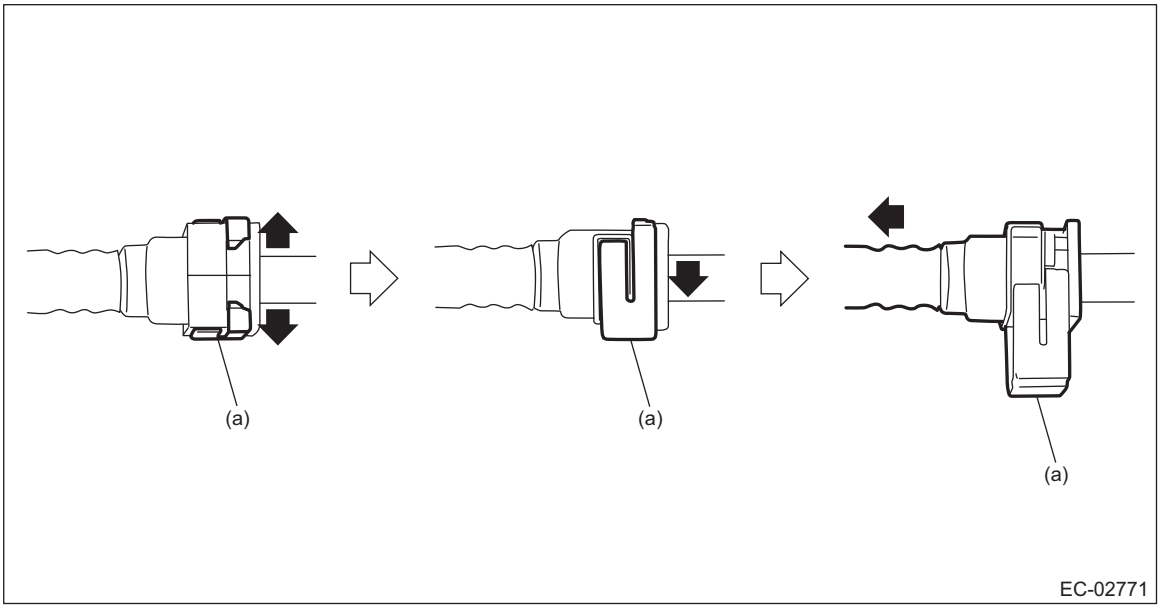
(a) Slider



5) Remove the fuel tank. <Ref. to FU(w/o STI)-145, REMOVAL, Fuel Tank.>
6) Disconnect the quick connector, and remove the fuel delivery tube and jet pump tube from the fuel tank.

CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

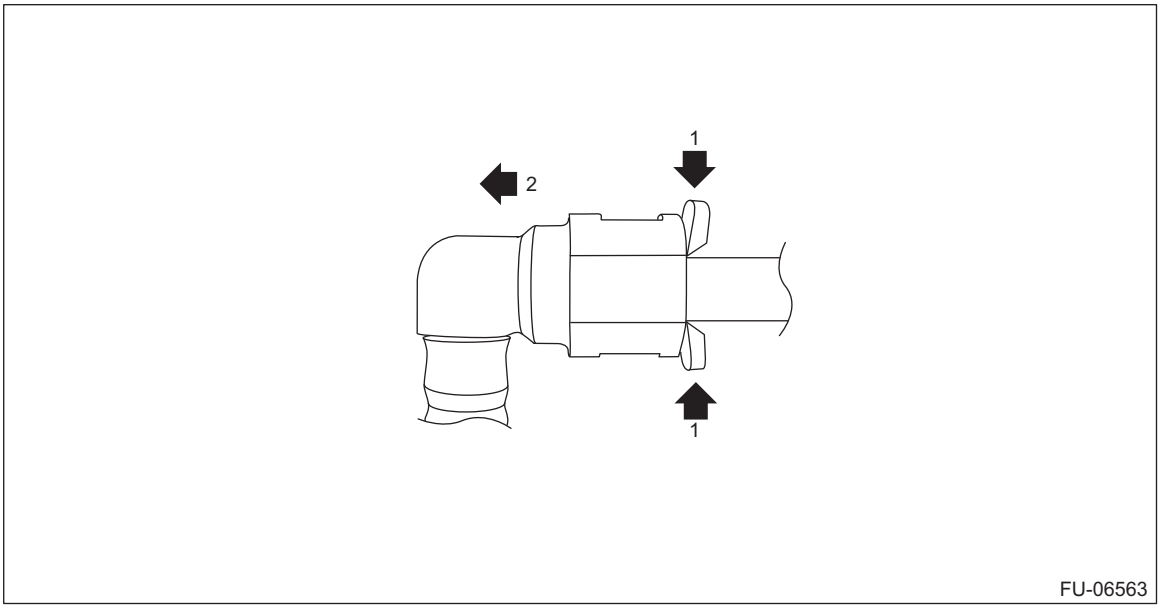
NOTE:
Disconnect the quick connector as shown in the figure.

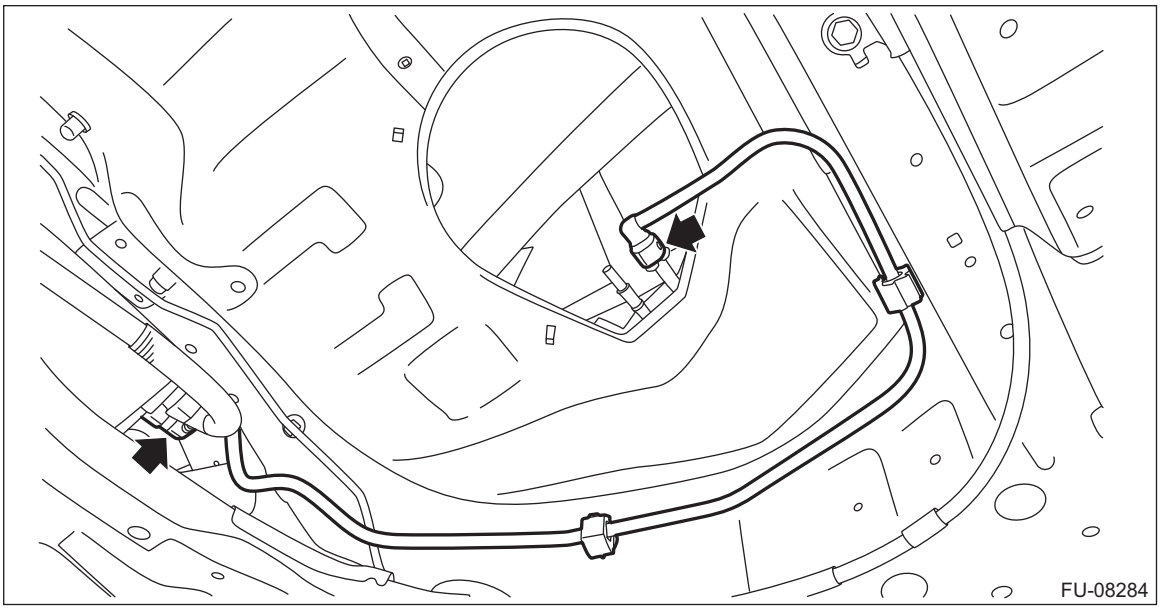


(a) Slider

7) Disconnect the quick connector and remove the purge tube.

NOTE:
Disconnect the quick connector as shown in the figure.





8) Remove the body integrated unit. <Ref. to SL-80, REMOVAL, Body Integrated Unit.>
9) Remove the fuel pipe assembly from vehicle.

B: INSTALLATION

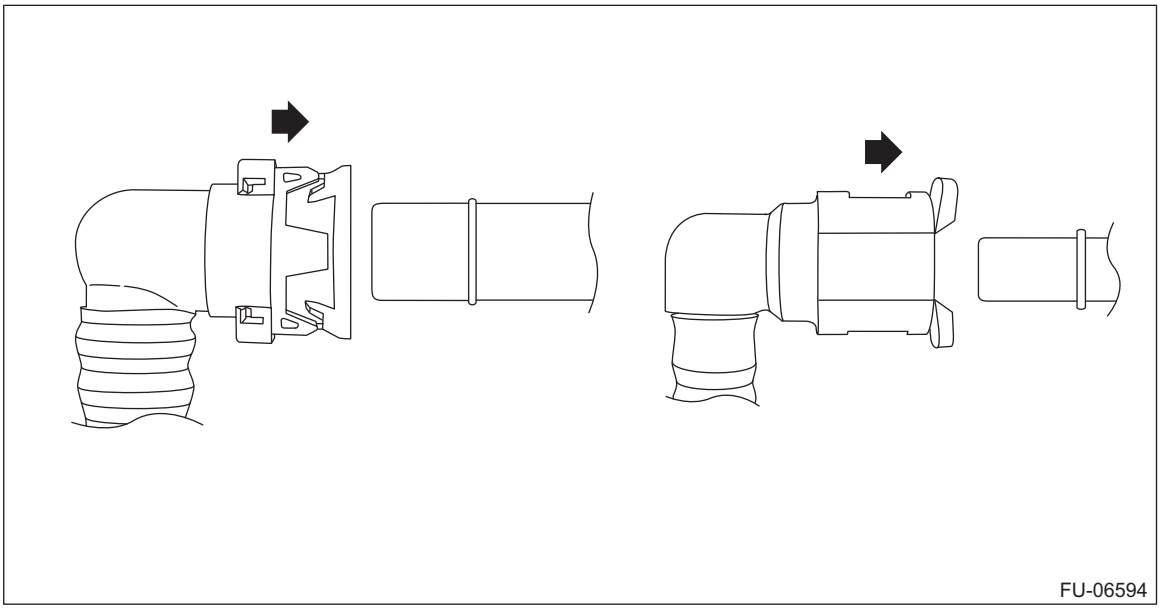
Install in the reverse order of removal while being careful of the following.

1. CONNECTING THE EVAPORATION LINE QUICK CONNECTOR

NOTE:
Connect the quick connector as shown in the figure.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.

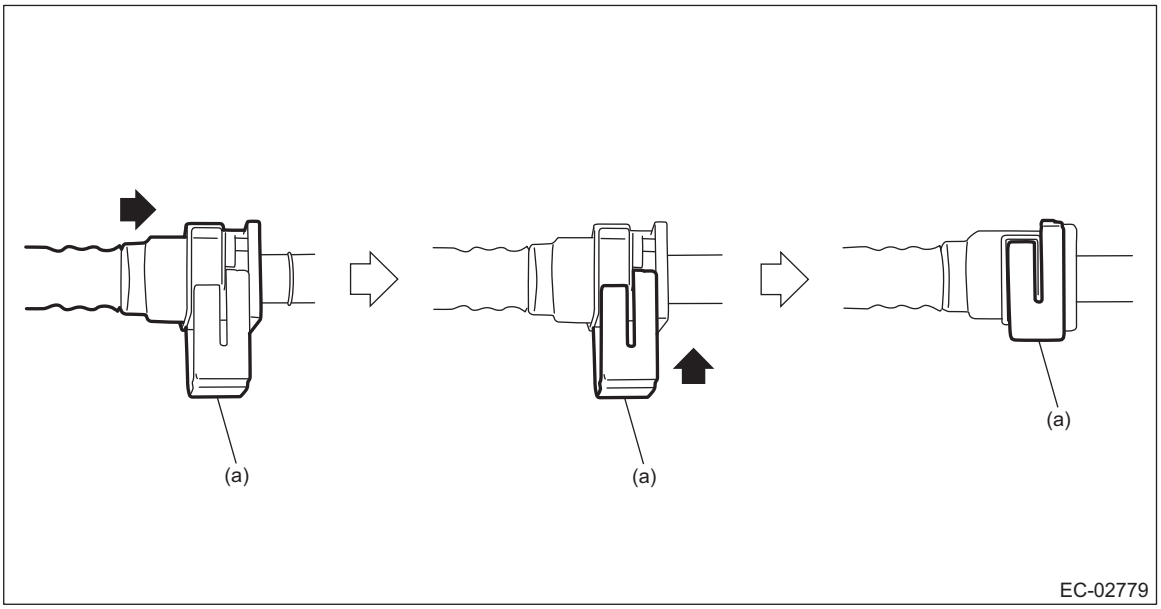
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.



2. CONNECTING THE FUEL LINE QUICK CONNECTOR

Connect the quick connector as shown in the figure.

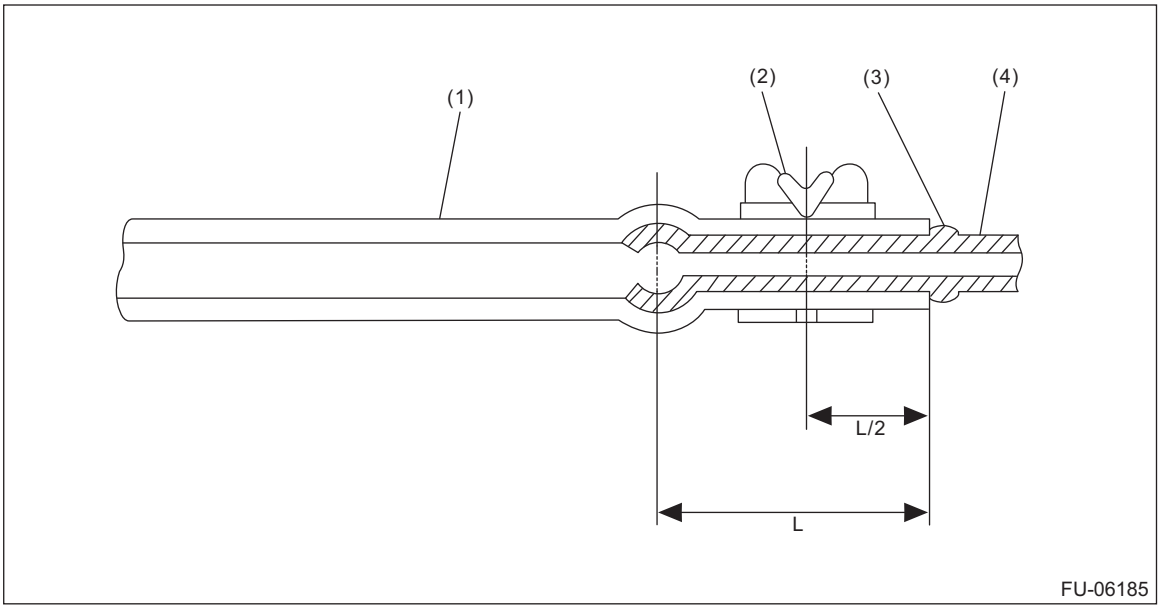
CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.



(a) Slider

3. EVAPORATION HOSE CONNECTION

Connect the evaporation hose by inserting it to the pipe until the hose reaches the spool or bump.



(1) Hose
(2) Clip
(3) Spool or bump
(4) Pipe

C: INSPECTION

1) Check that the fuel pipe has no deformation, cracks or other damages.
2) Check that the hose and tube have no cracks, damage or loose part.

42.Fuel System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Insufficient fuel supply to fuel injector	a. Fuel pump does not operate.	
	❍ Defective terminal contact	Inspect contact, especially ground, and tighten it securely.
	❍ Trouble in electromagnetic or electronic circuit parts	Replace the faulty parts.
	b. Decline of fuel pump function	Replace the fuel pump.
	c. Clogged fuel filter	Replace the fuel filter. Clean or replace the fuel tank if necessary.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
	e. Air is mixed in fuel system.	Check the fuel line connections, correct or replace the defective part.
	f. Damaged diaphragm of pressure regulator	Replace the pressure regulator.
Leakage or blow out of fuel	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Cracked fuel line pipe, hose or tube	Replace the fuel line pipe, hose or tube.
	c. Cracked fuel tank or defective welding part	Replace the fuel tank.
	d. Clogged or bent fuel line pipe, hose or tube	Clean, correct or replace the fuel line pipe, hose or tube.
Gasoline smell inside of compartment	a. Loose connections of fuel line pipe, hose or tube	Check the fuel line connections, correct or replace the defective part.
	b. Defective canister	Replace the canister.
Defective fuel gauge	a. Defective operation of fuel level sensor	Replace the fuel level sensor.
	b. Defective operation of combination meter <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Replace the combination meter.
Noise	a. Large operation noise or vibration of fuel pump	Replace the fuel pump.

NOTE:
• When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent the problem.
• In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop to 0°C (32°F) or less throughout the winter season, use a water removing agent in the fuel system to prevent freezing fuel system and accumulating water.
• When water is accumulated in fuel filter, fill the water removing agent in the fuel tank.
• Before using water removing agent, follow the cautions noted on the bottle.

Tightening torque: N·m (kgf-m, ft-lb)
T: 23 (2.3, 17.0)

B: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Clamp pincer	• Used for installing PCV pipe assembly and PCV hose assembly. • This tool is made by OETIKER. Product No. 14100134

2. Front Catalytic Converter

A: REMOVAL

The front catalytic converter is integrated into the center exhaust pipe (front). Refer to “Center Exhaust Pipe” for removal procedures. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The front catalytic converter is integrated into the center exhaust pipe (front). Refer to “Center Exhaust Pipe” for installation procedures. <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

3. Rear Catalytic Converter

A: REMOVAL

The rear catalytic converter is integrated into the center exhaust pipe (rear). Refer to “Center Exhaust Pipe” for removal procedures. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The rear catalytic converter is integrated into the center exhaust pipe (rear). Refer to “Center Exhaust Pipe” for installation procedures. <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

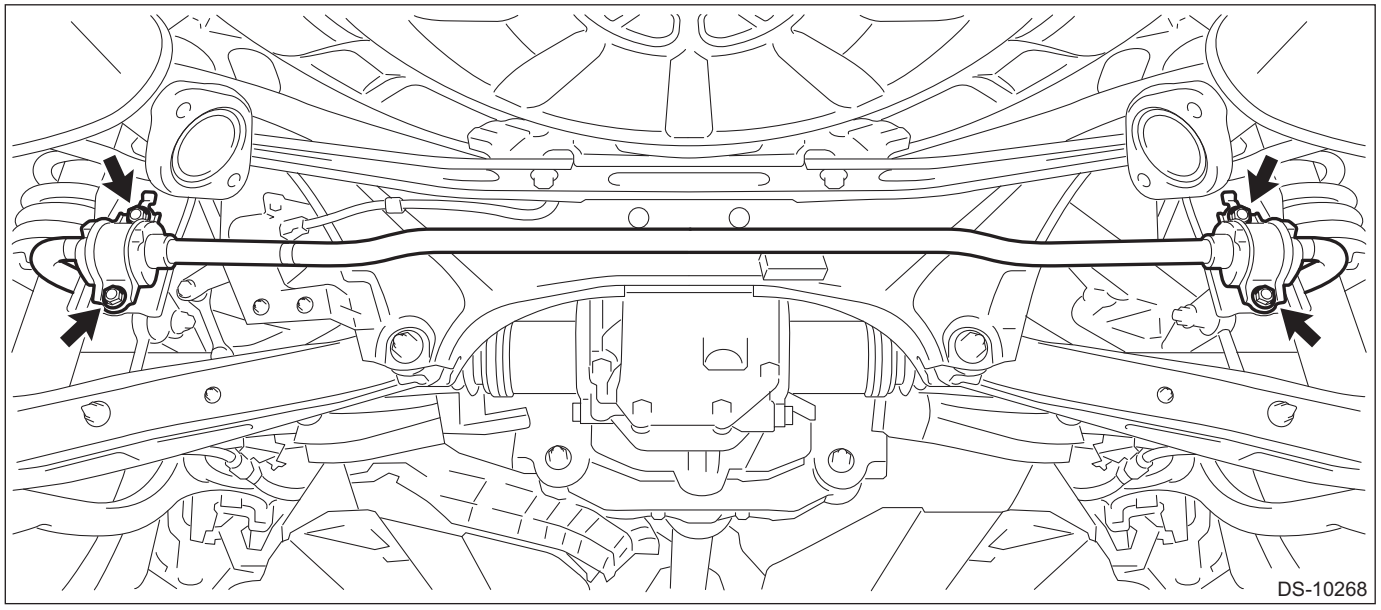
4. Canister

A: REMOVAL

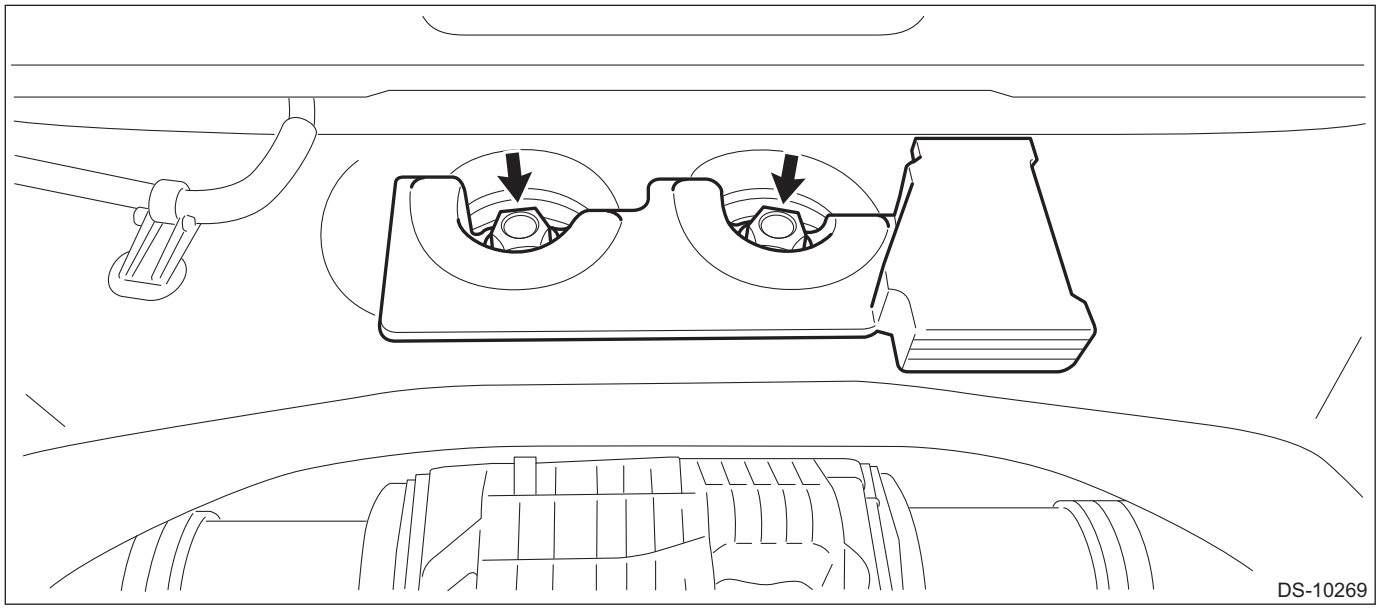
WARNING:
Place “NO OPEN FLAMES” signs near the working area.

CAUTION:
Be careful not to spill fuel.

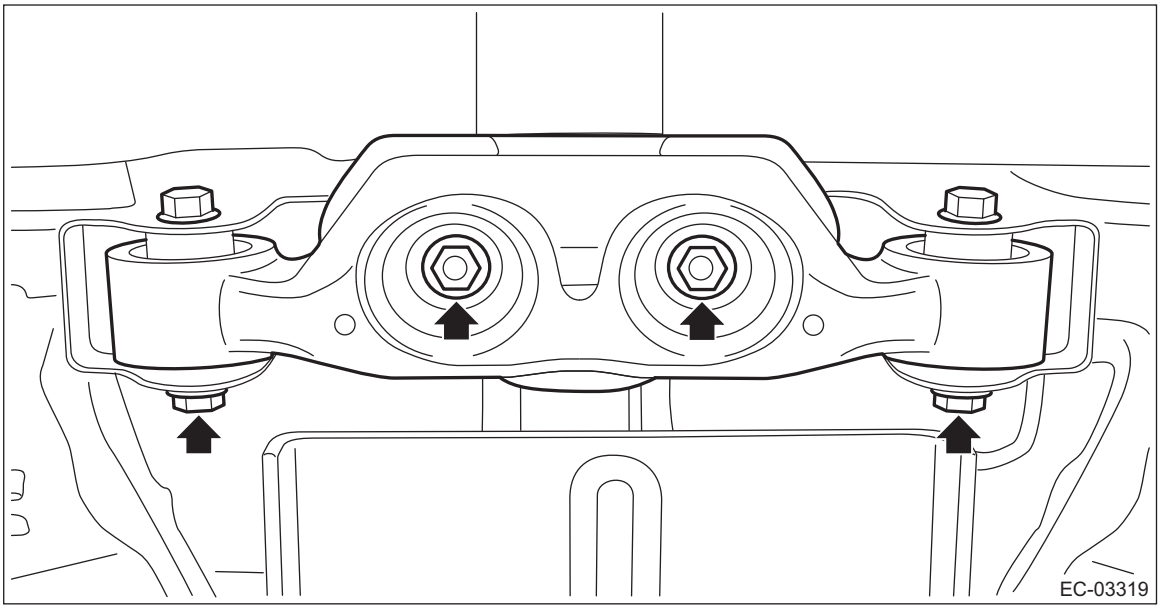
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Lift up the vehicle.
4) Remove the rear exhaust pipe. <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
5) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
6) Support the rear differential with the transmission jack.
7) Remove the bolts, then disconnect the rear stabilizer.



8) Remove the mass damper and the self-locking nuts which hold the rear differential to the rear sub frame assembly.

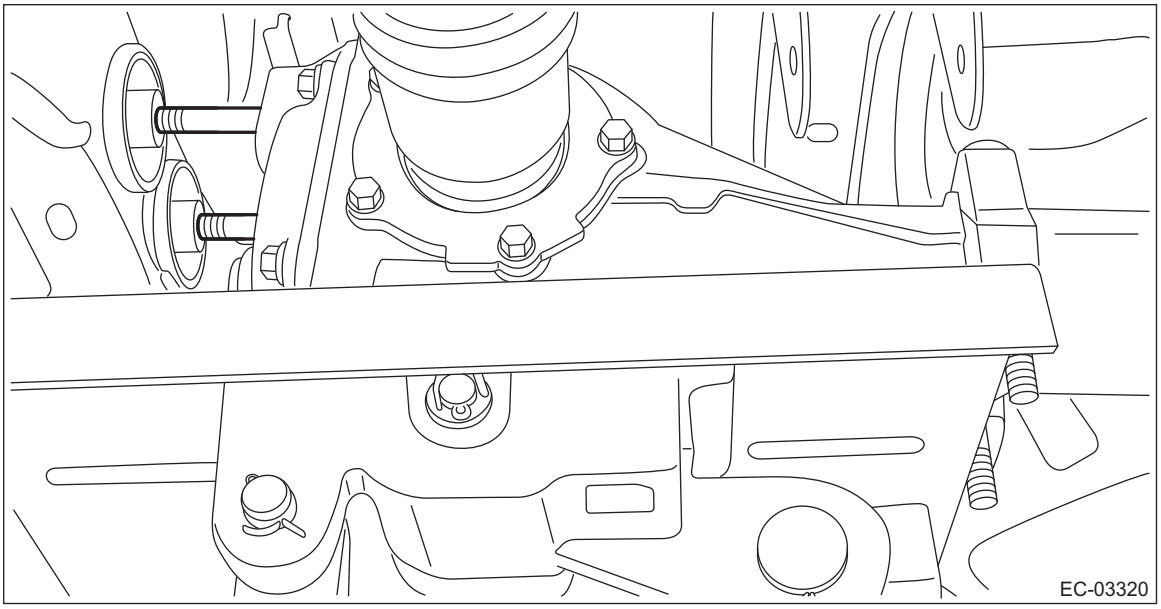


9) Remove the rear differential member from the rear sub frame assembly and the rear differential.

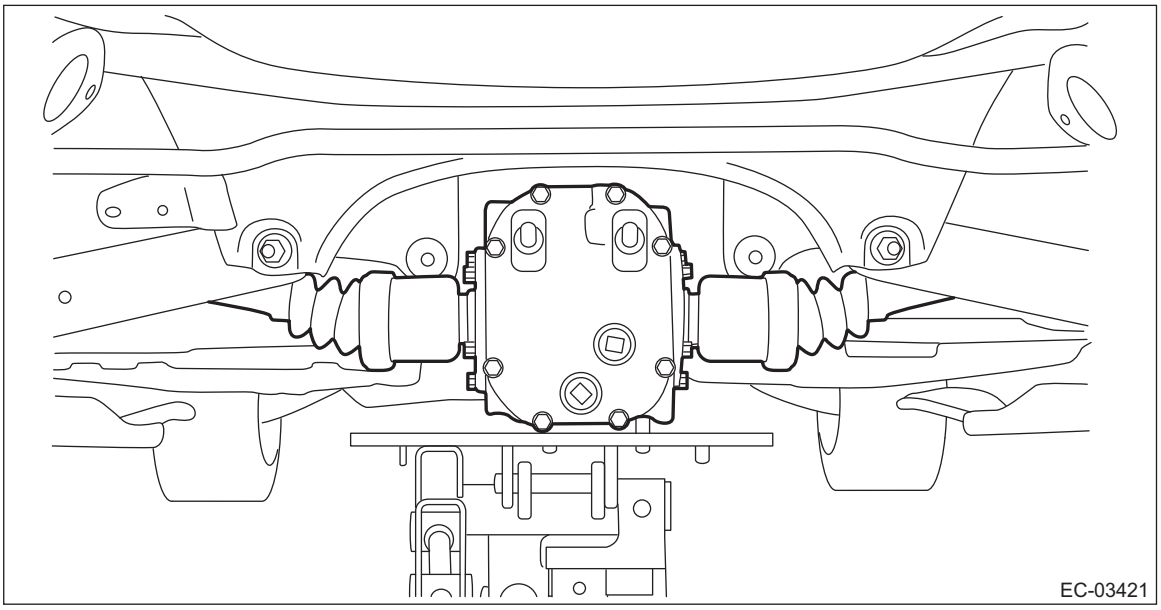


10) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

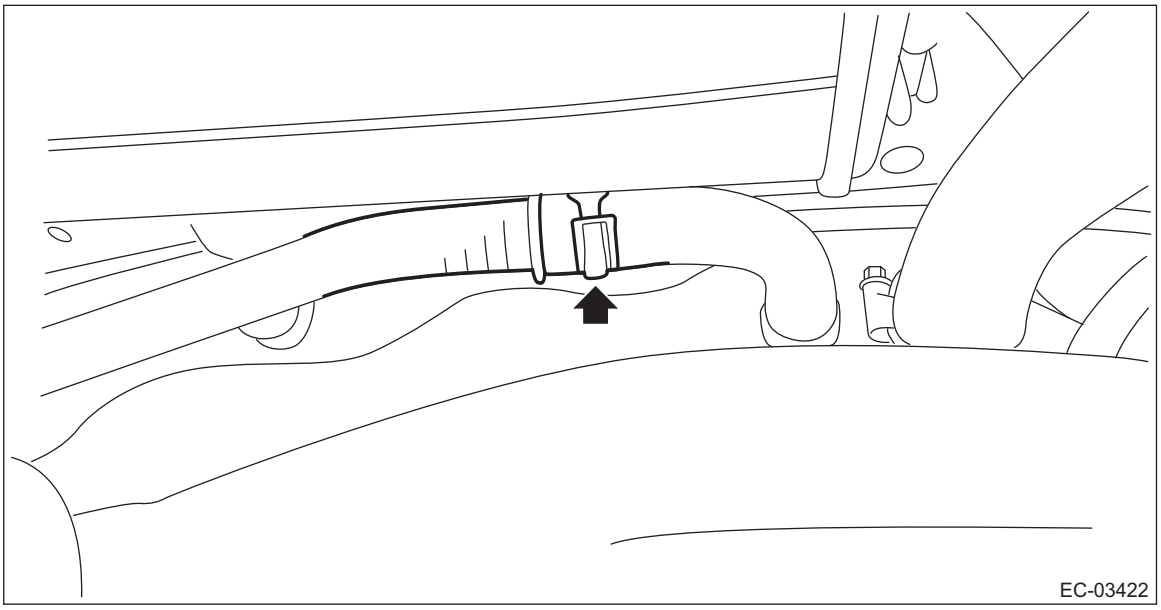
NOTE:
• When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



• Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

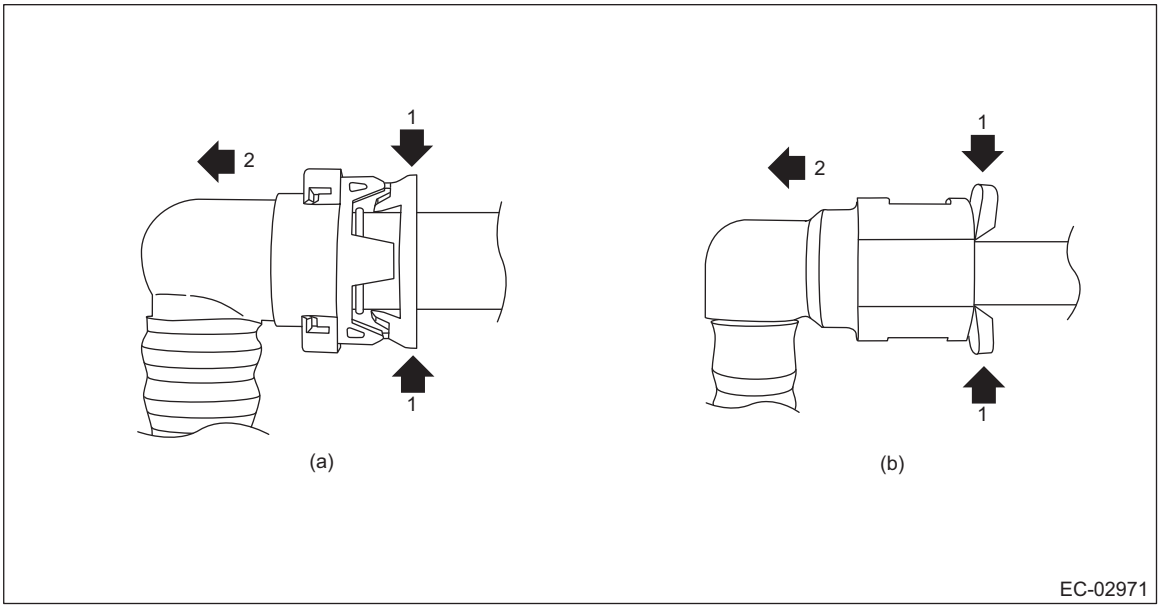


11) Disconnect the vent tube from vent hose.

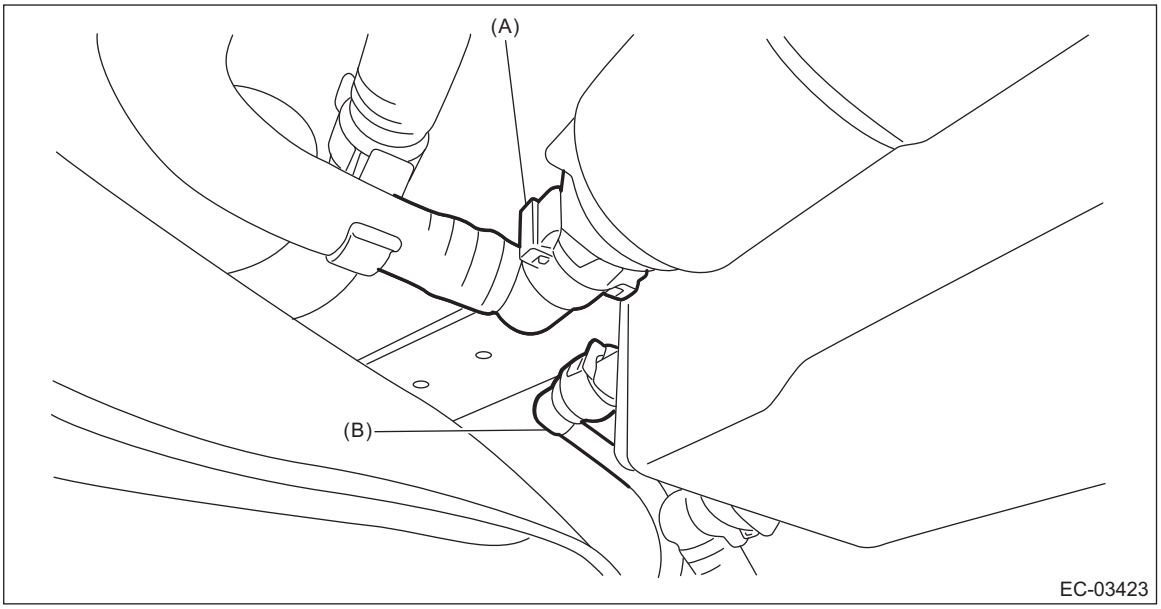


12) Disconnect the drain tube (A) and purge tube (B) from the canister.

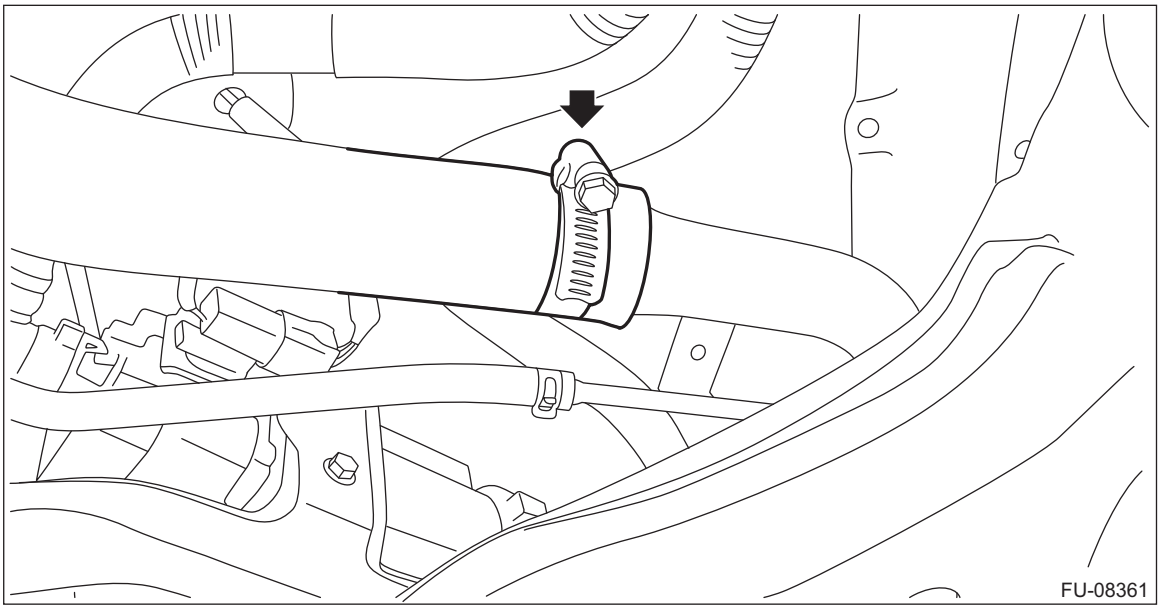
NOTE:
Disconnect the quick connector as shown in the figure.



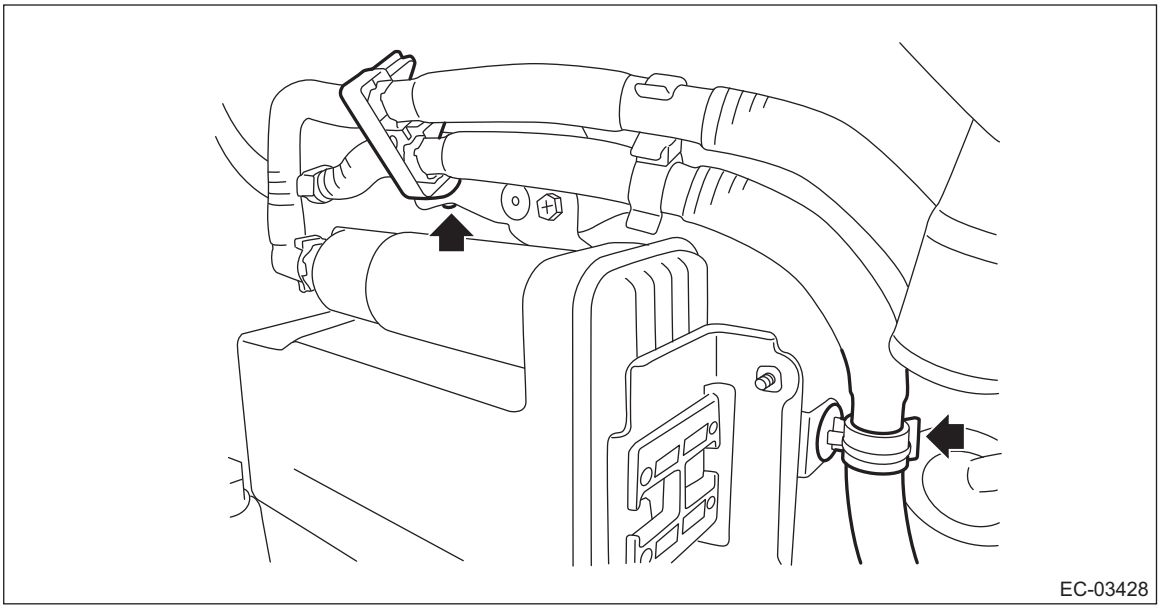
(a) Drain tube (b) Purge tube



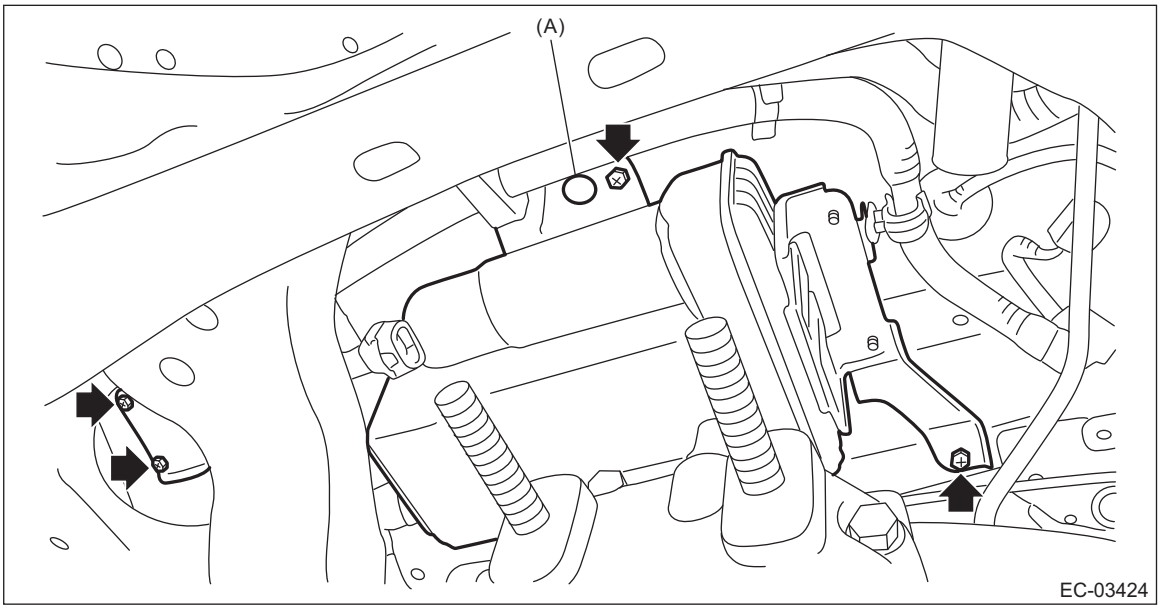
13) Disconnect the fuel filler hose from the fuel filler pipe assembly.



14) Remove the tube clamp from the canister bracket A, and remove the drain tube from the tube clamp.

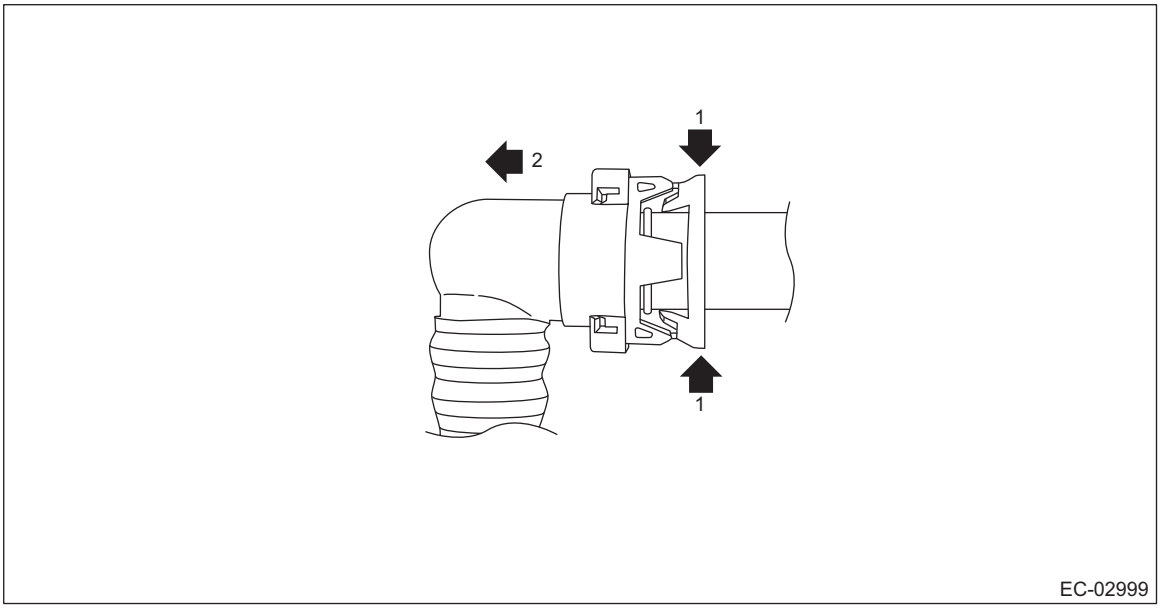


15) Remove the bolts and clip (A) securing the canister to the vehicle, and remove the canister.

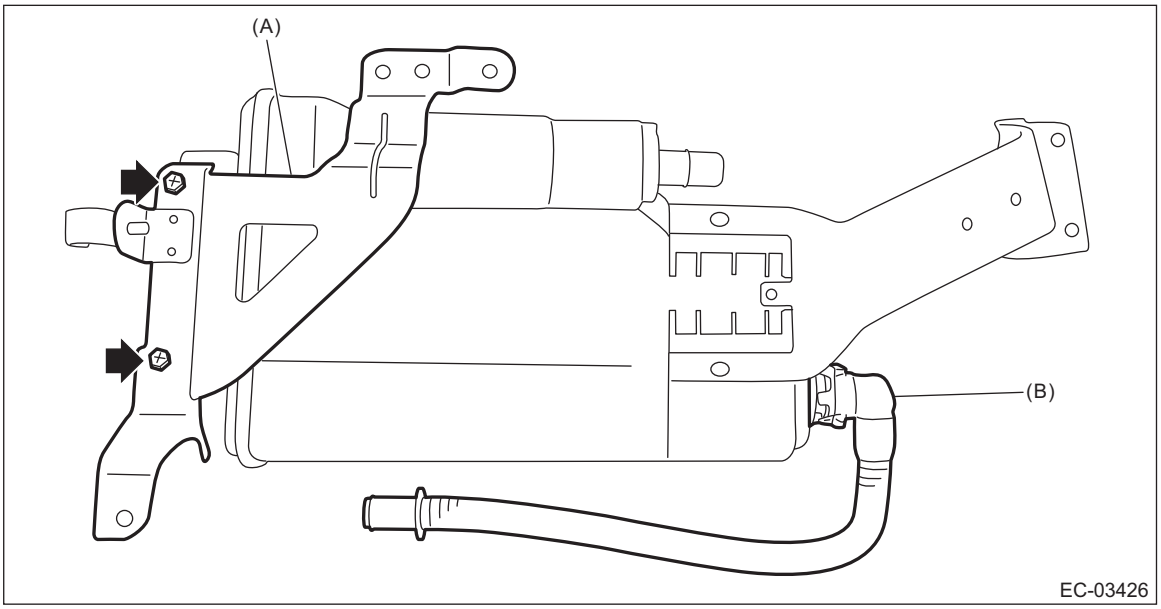


16) Disconnect the vent tube (B) from the canister and remove the canister bracket A (A).

NOTE:
- Disconnect the quick connector as shown in the figure.



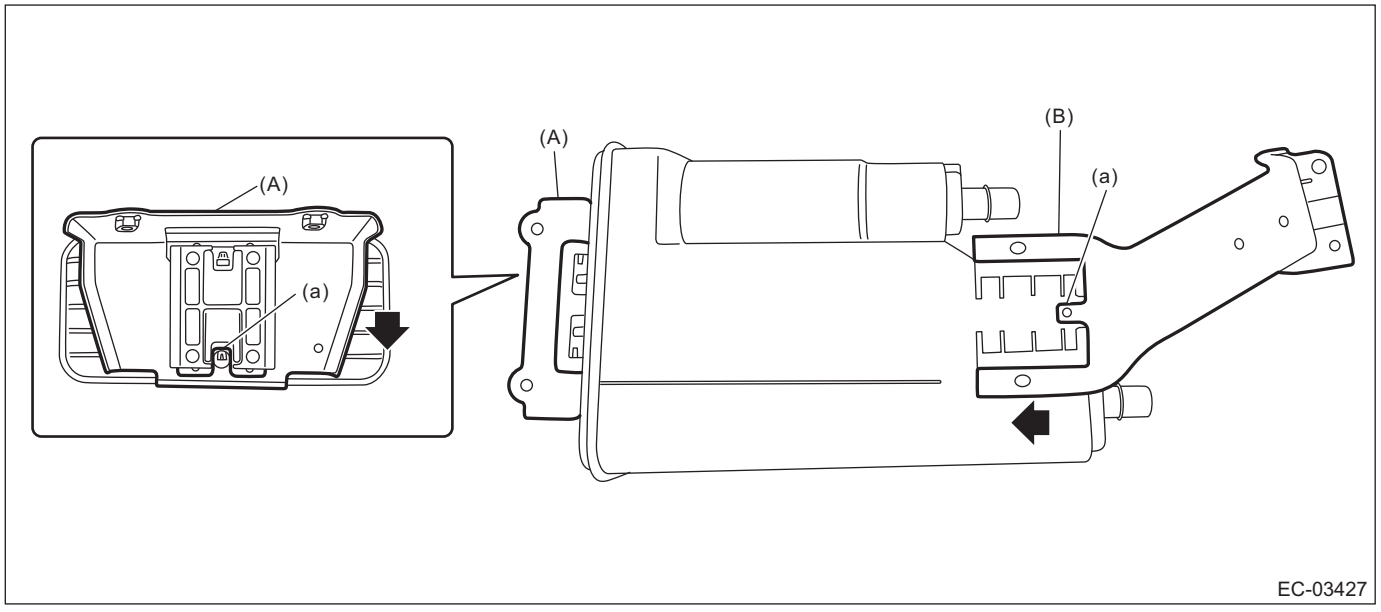
• The canister bracket cannot be separated from the canister. Therefore, be sure to replace both of them with new ones when replacing the canister or canister bracket.



B: INSTALLATION

1) Move it in the direction of the arrow and install the canister bracket B (A) and canister bracket C (B) to the canister.

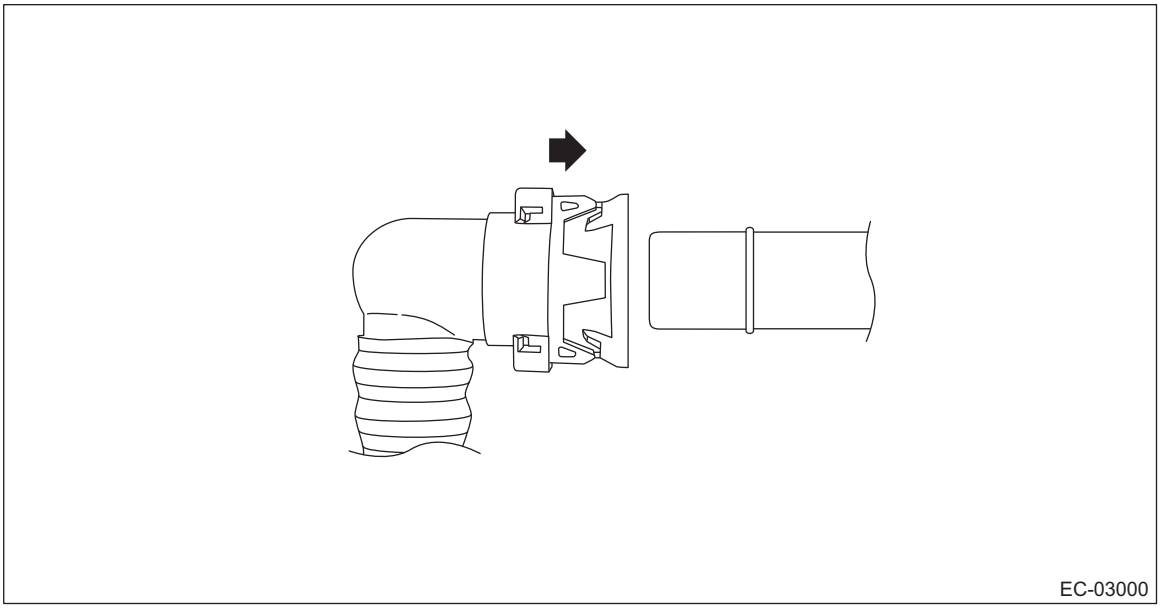
NOTE:
• Use a new canister and a canister bracket.
• Check that the claw (a) is securely tightened.



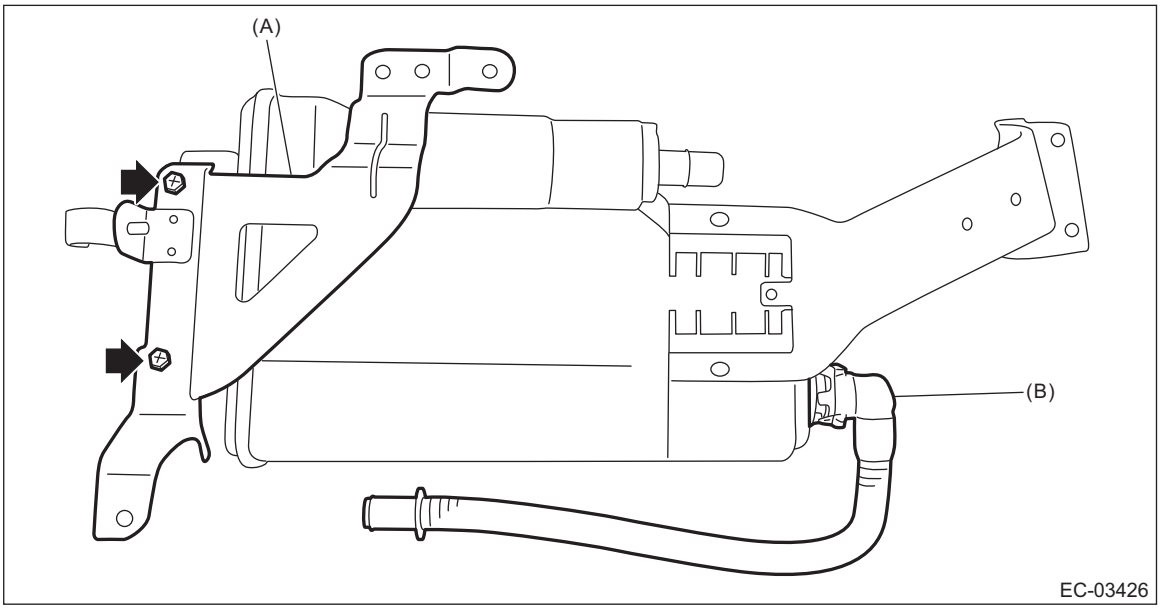
2) Connect the vent tube (B) to the canister and remove the canister bracket A (A).

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Install the quick connector as shown in the figure.

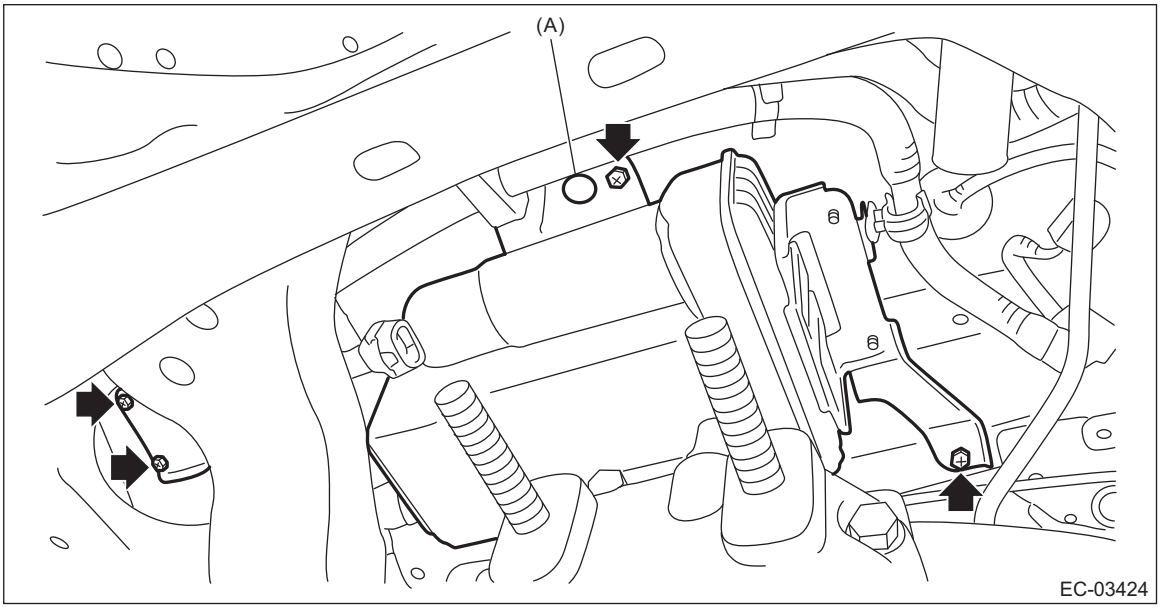


Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



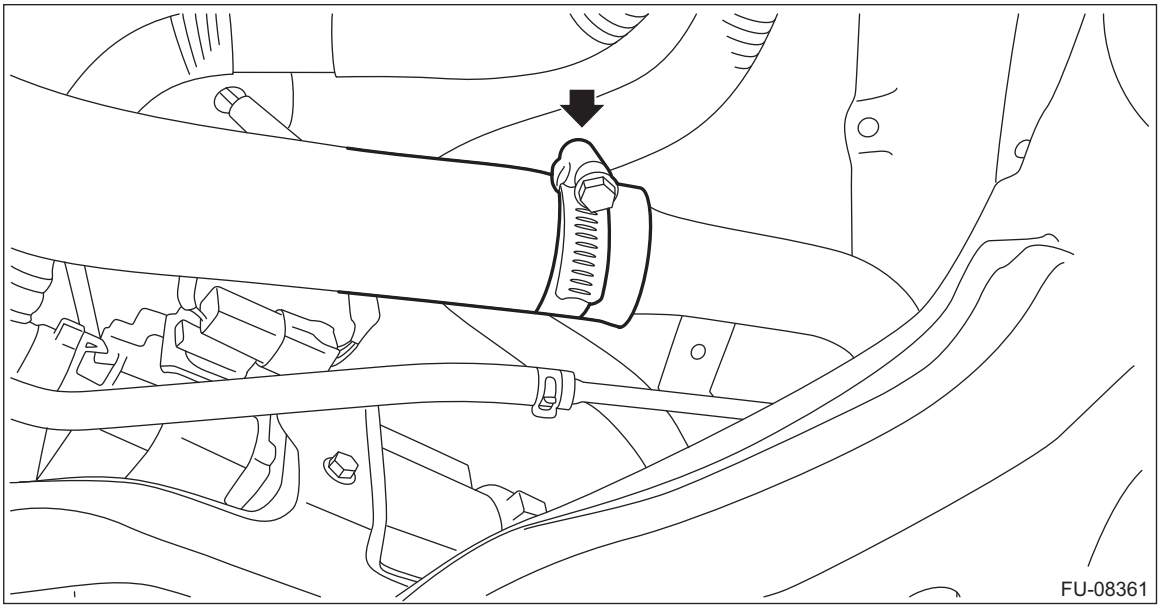
3) Set the canister to the vehicle, and attach the bolts and clip (A) which secure the canister.

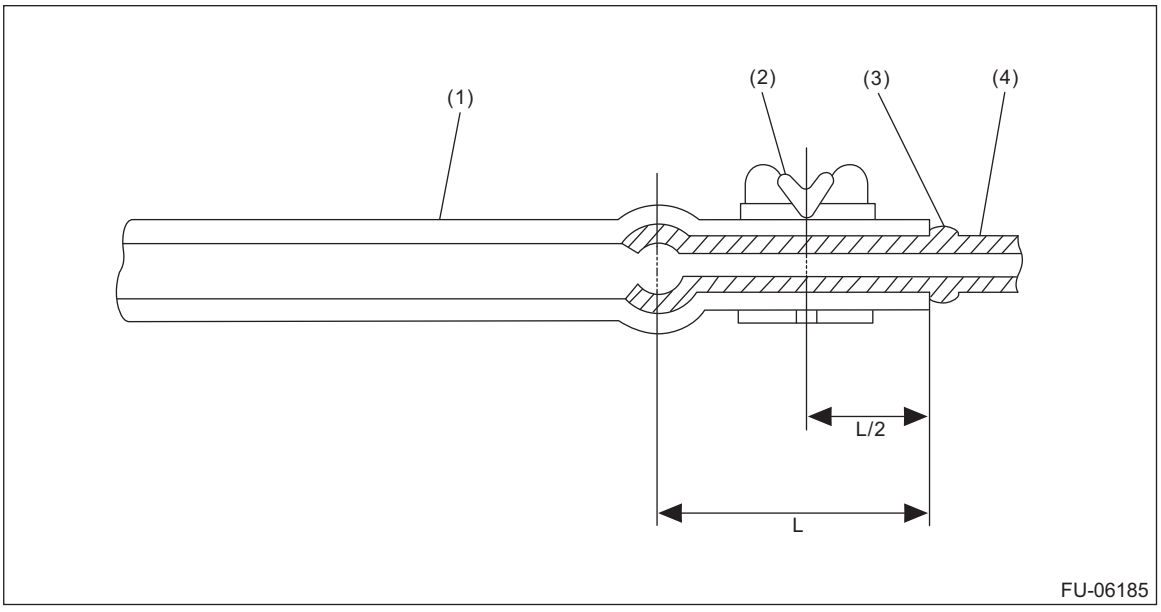
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



4) Correctly insert the fuel filler hose to the spool, and then install the clamp as shown.

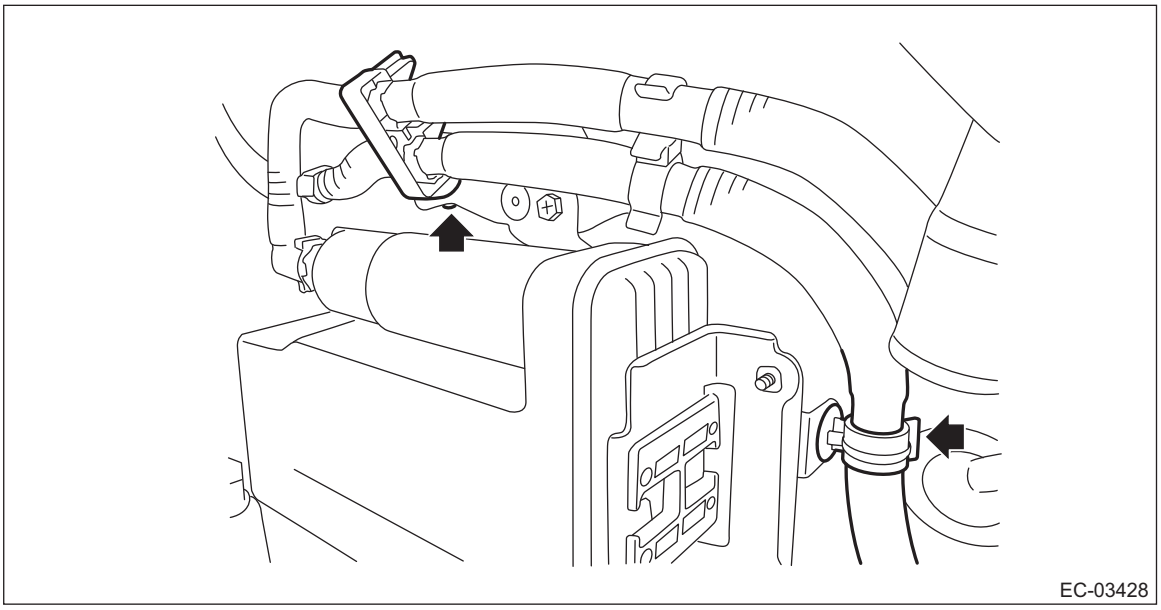
Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)





(1) Hose
(2) Clamp
(3) Spool
(4) Pipe

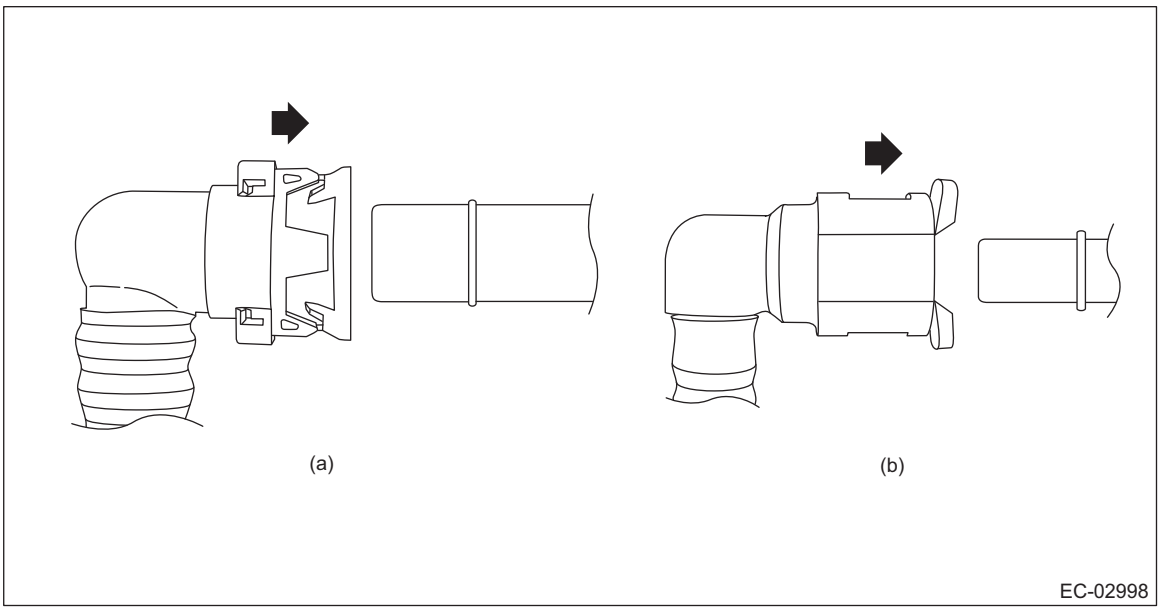
5) Install the tube clamp to the canister bracket A, and install the drain tube to the tube clamp.



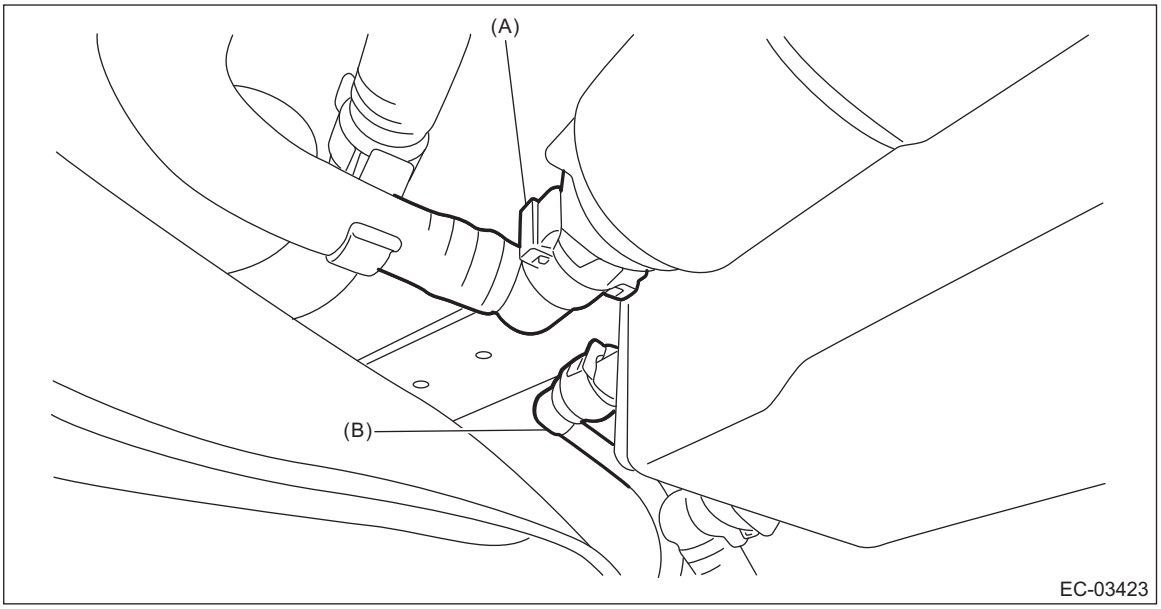
6) Connect the drain tube (A) and purge tube (B) to the canister.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

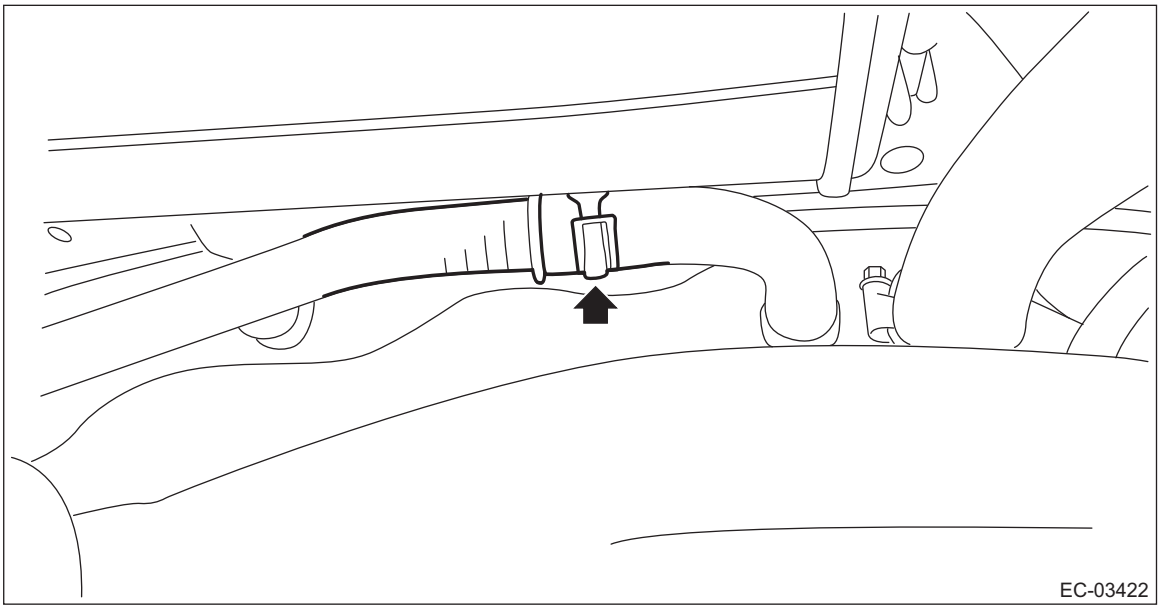
NOTE:
Install the quick connector as shown in the figure.



(a) Drain tube (b) Purge tube

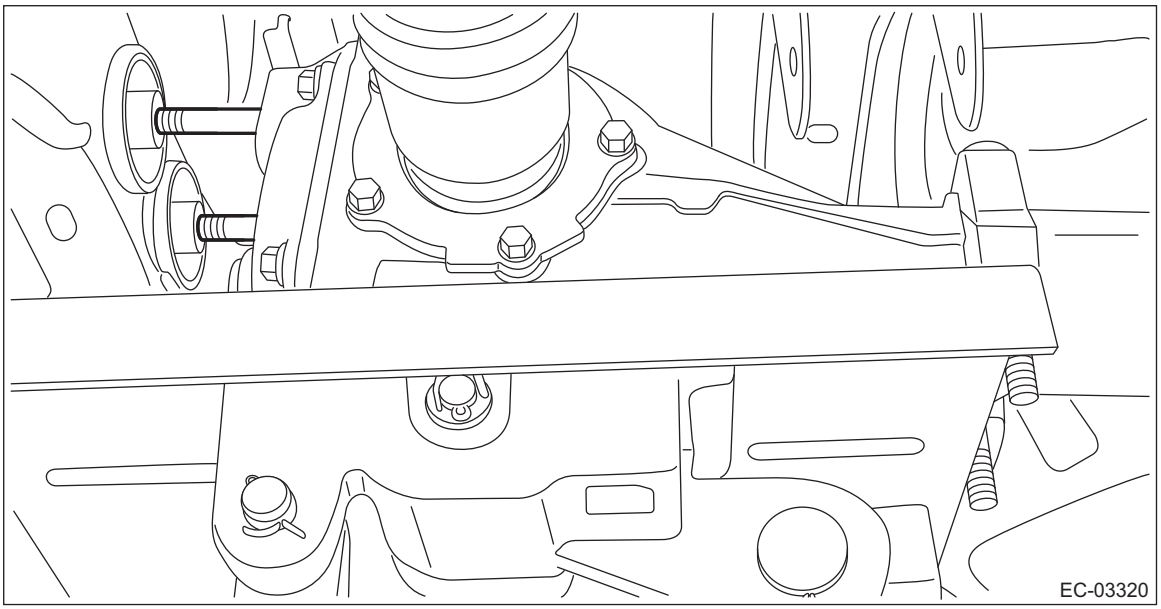


7) Connect the vent tube to the vent hose.



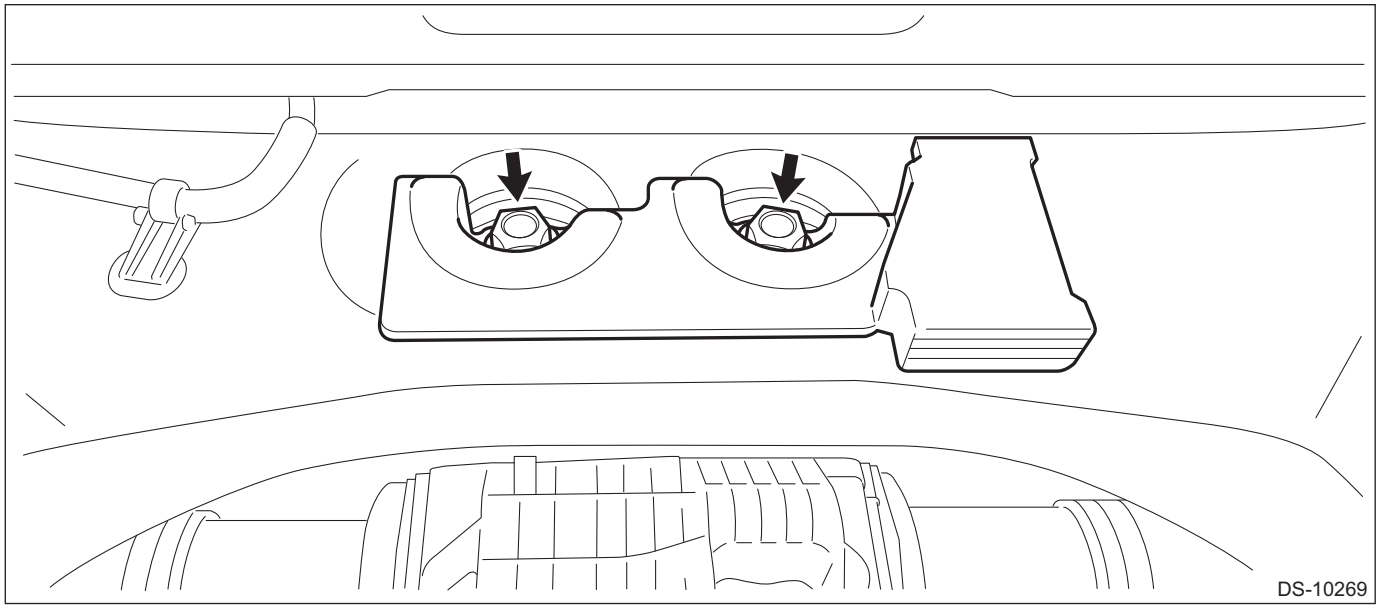
8) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:
When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



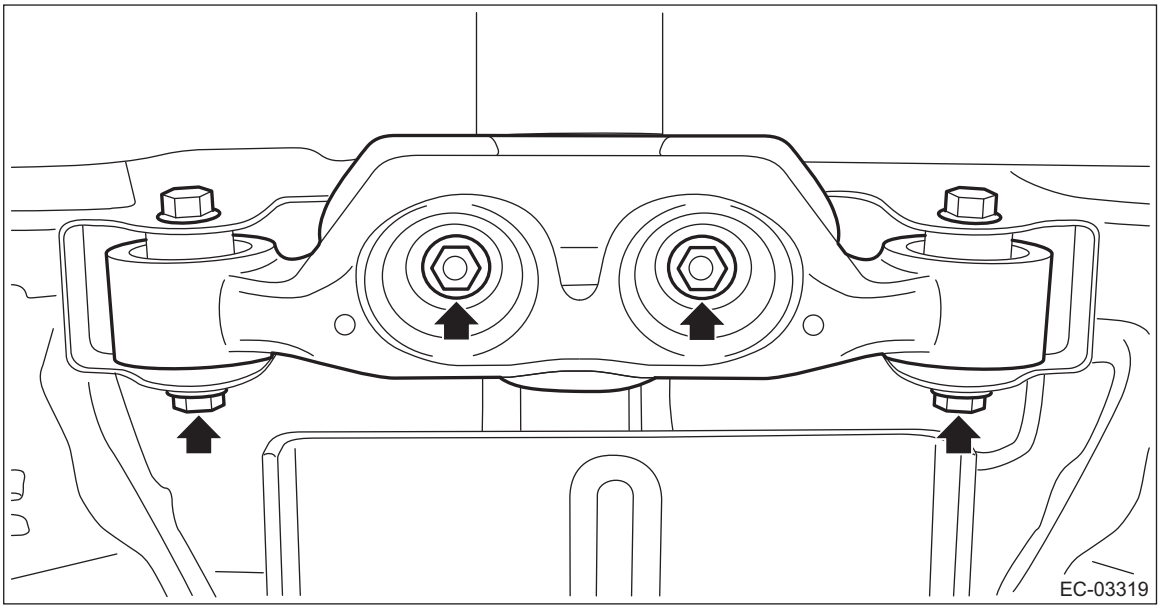
9) Set the mass damper to the rear sub frame assembly, and temporarily tighten the self-locking nuts which hold the rear differential.

NOTE:
Use a new self-locking nut.



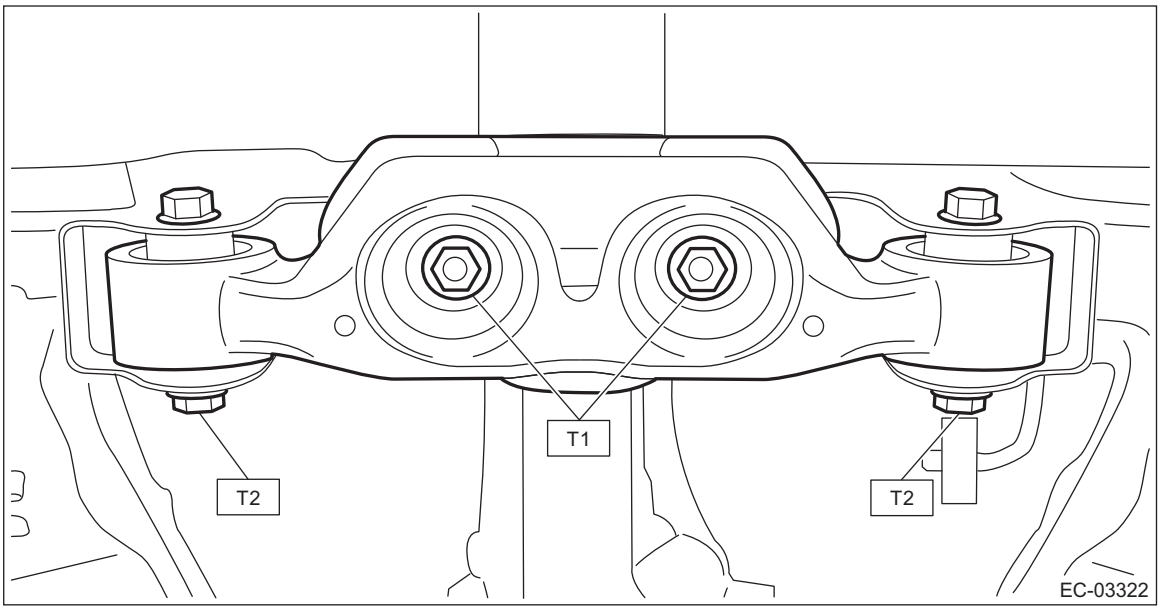
10) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:
Use a new self-locking nut.



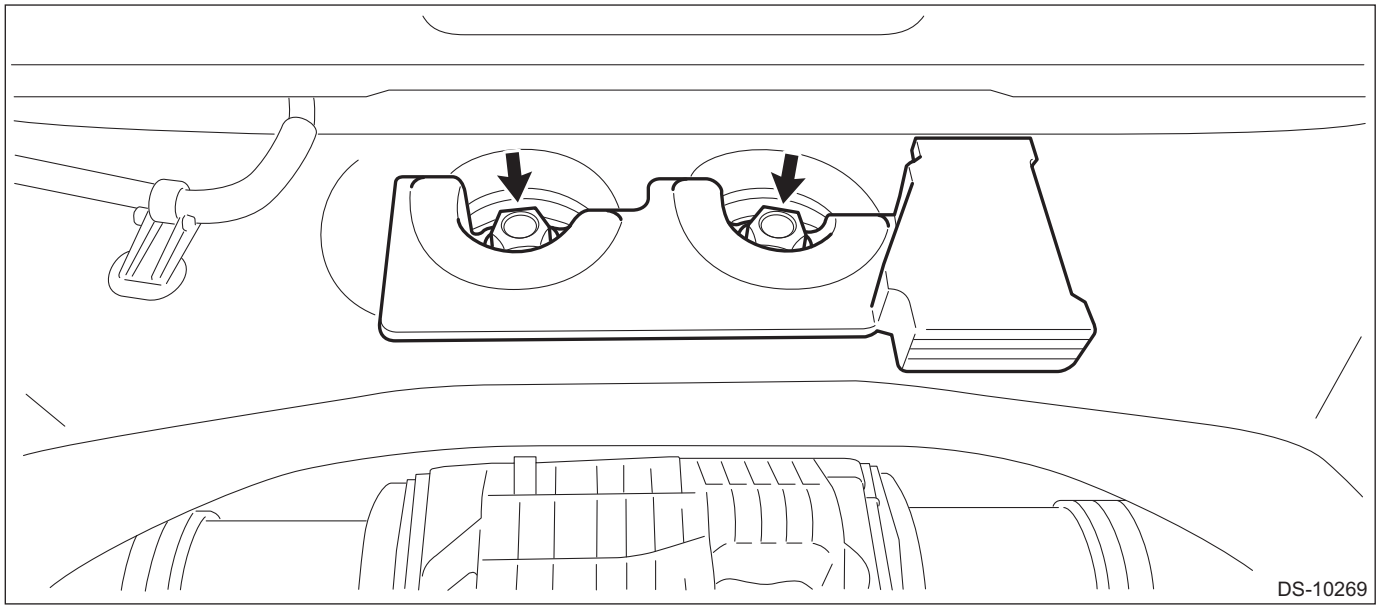
11) Remove the transmission jack from the rear differential.
12) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



13) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

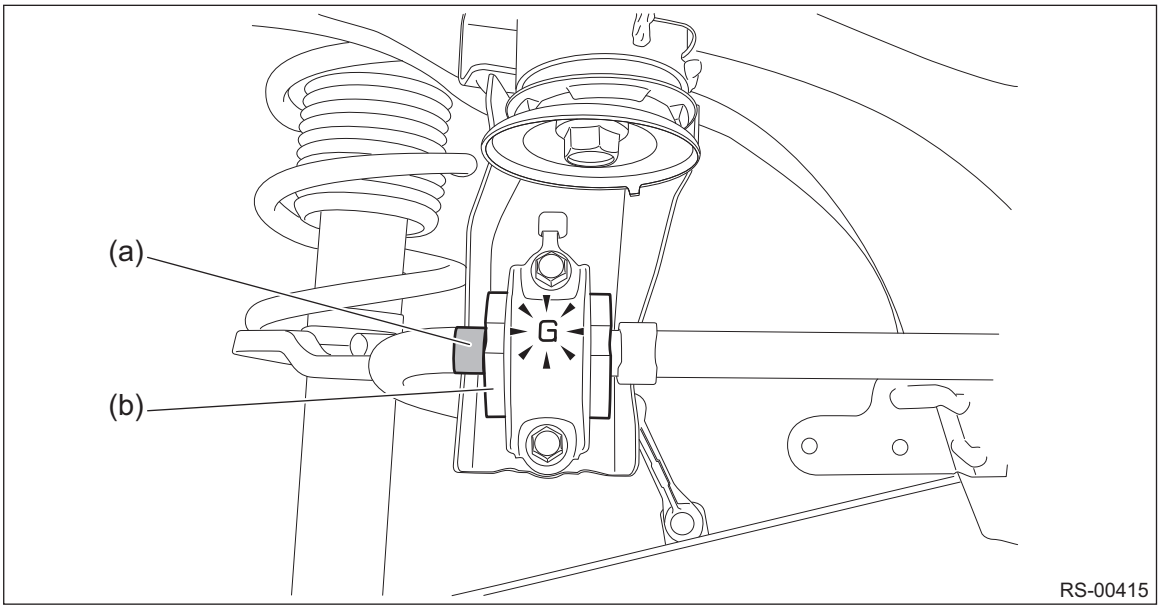
Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)



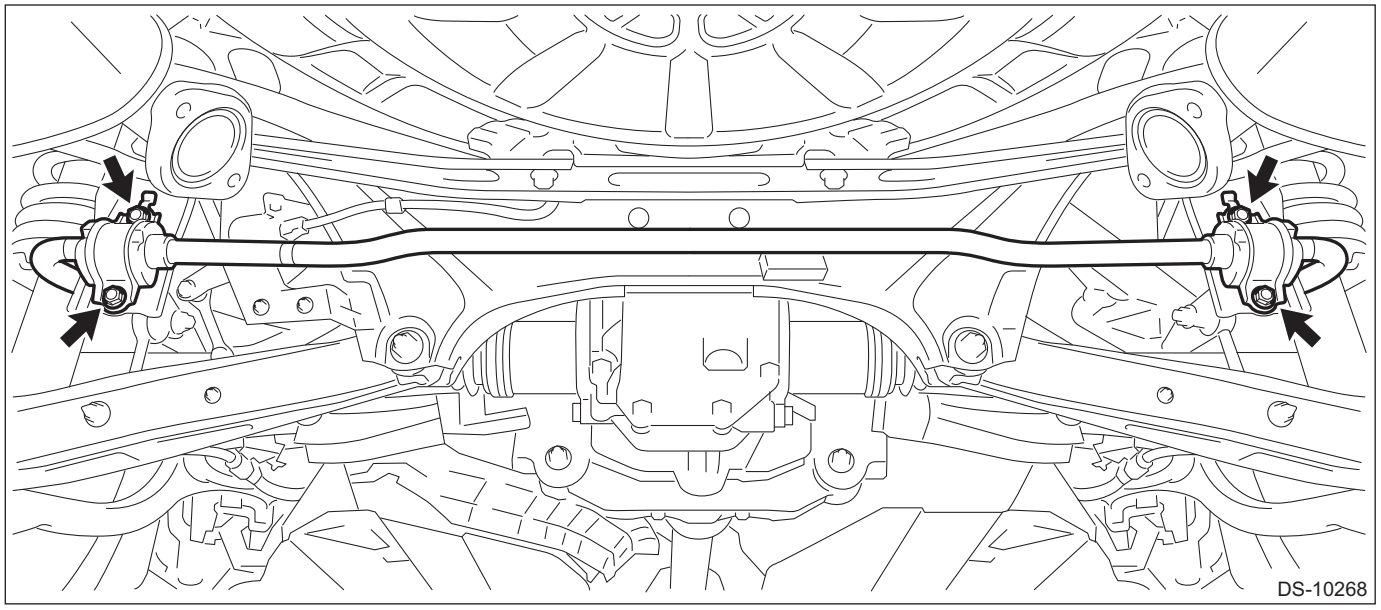
14) Install the rear stabilizer.

CAUTION:
• Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
• Install the clamp - stabilizer bushing with the "G" character facing upward.

- **When installing, align the edge of identification paint (a) to the end face of the bushing (b).**



Tightening torque:
30 N·m (3.1 kgf-m, 22 ft-lb)



15) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
16) Install the rear exhaust pipe. <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
17) Lower the vehicle.

C: INSPECTION

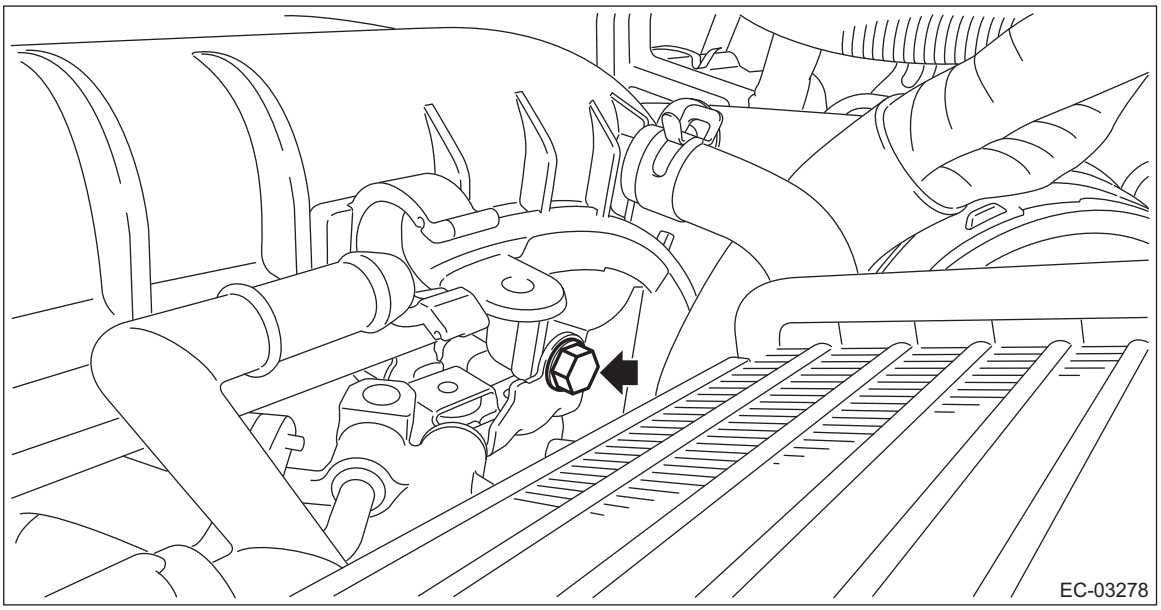
1) Check that the canister has no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

5. Purge Control Solenoid Valve

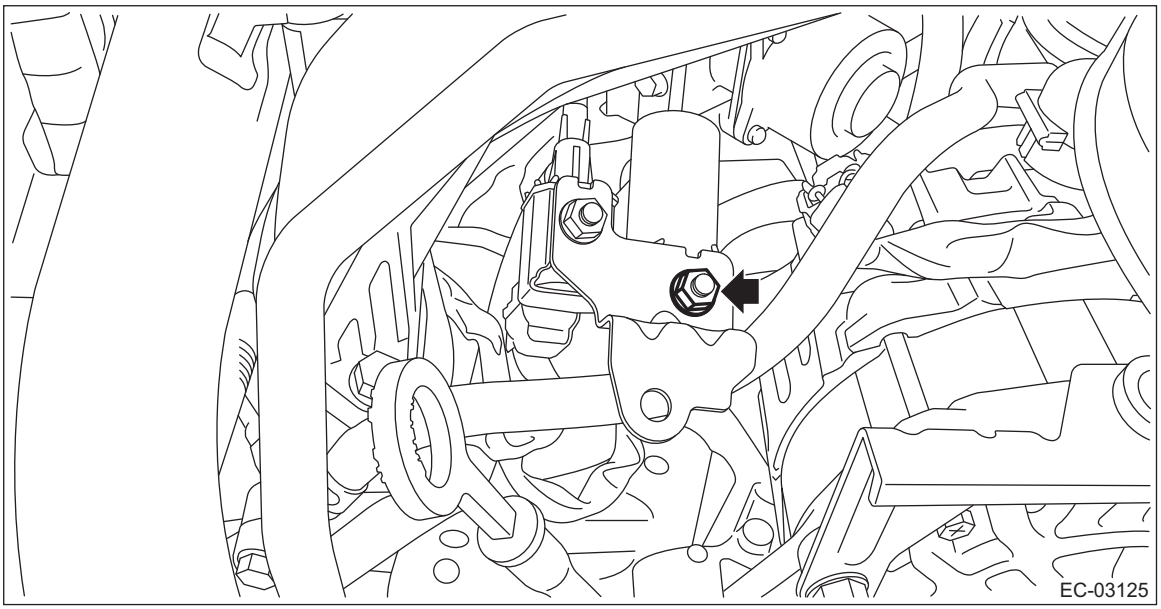
A: REMOVAL

1. PURGE CONTROL SOLENOID VALVE 1

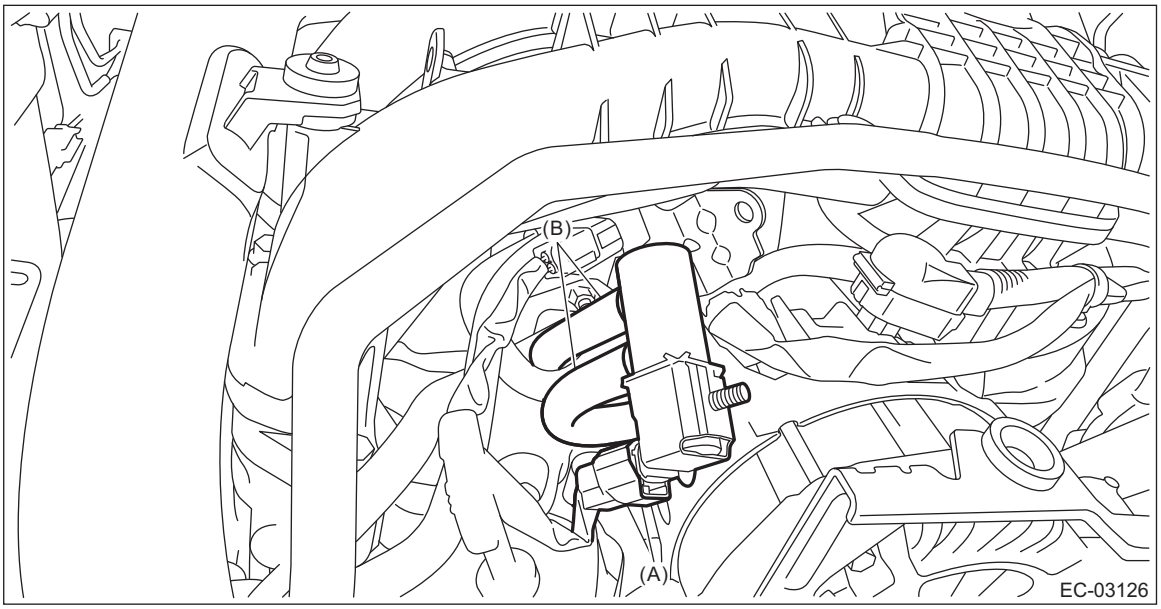
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the brake vacuum pump. <Ref. to BR-121, REMOVAL, Brake Vacuum Pump.>
4) Remove the bolt which secures the solenoid valve bracket from the intake manifold.



5) Remove the nut which secures the purge control solenoid valve 1 to the solenoid valve bracket.

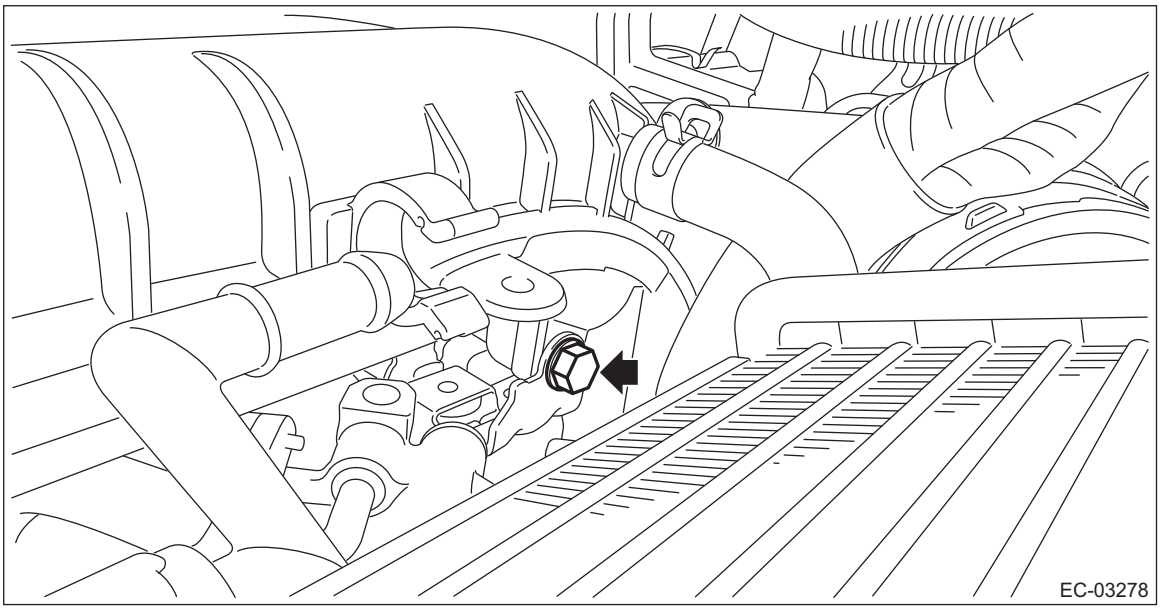


6) Disconnect the connector (A) and vacuum hose (B) from the purge control solenoid valve 1, and remove the purge control solenoid valve 1.

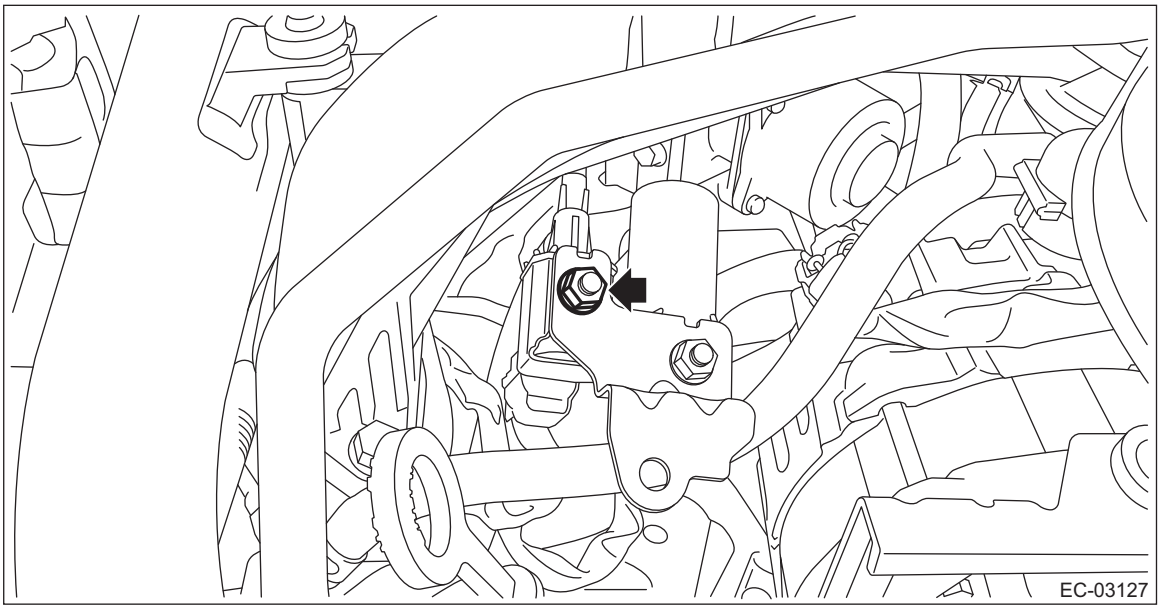


2. PURGE CONTROL SOLENOID VALVE 2

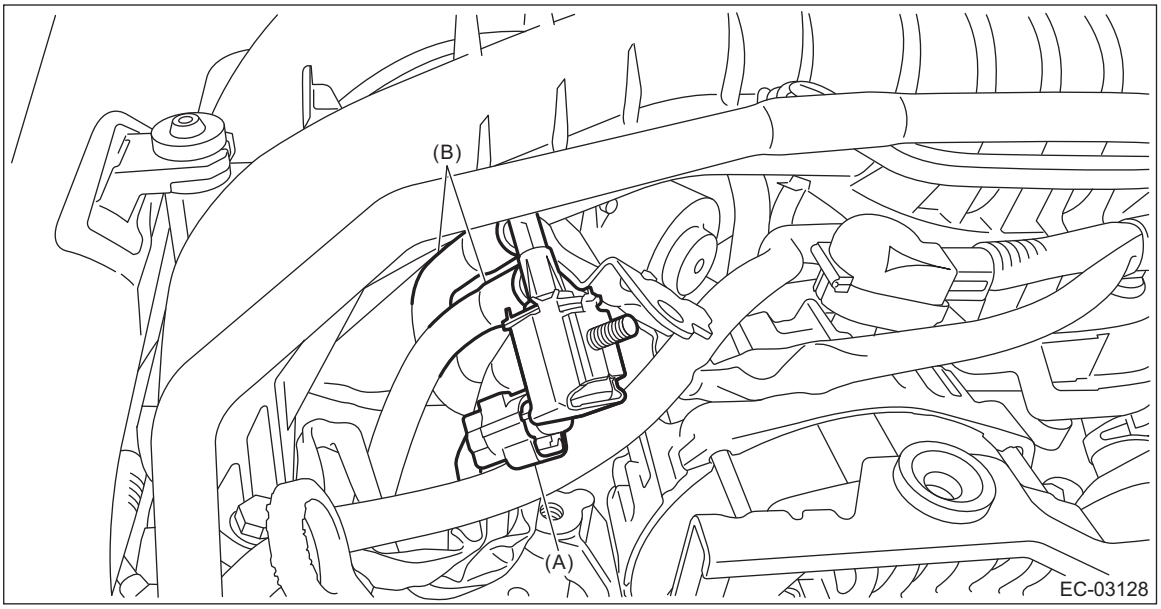
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the brake vacuum pump. <Ref. to BR-121, REMOVAL, Brake Vacuum Pump.>
4) Remove the bolt which secures the solenoid valve bracket from the intake manifold.



5) Remove the nut which secures the purge control solenoid valve 2 to the solenoid valve bracket.



6) Disconnect the connector (A) and vacuum hose (B) from the purge control solenoid valve 2, and remove the purge control solenoid valve 2.

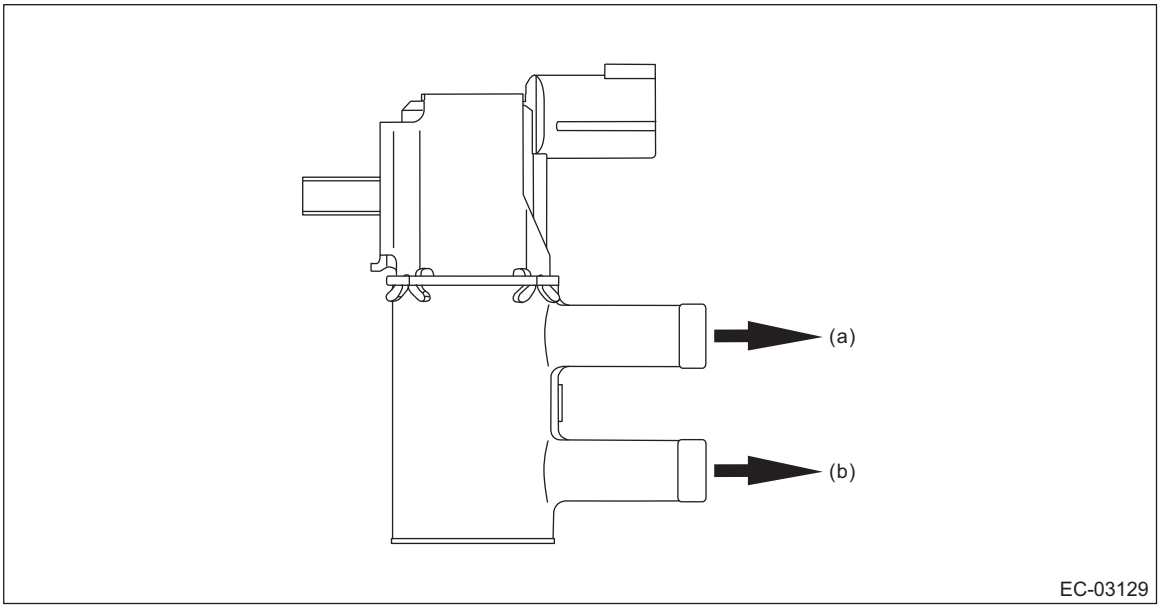


B: INSTALLATION

1. PURGE CONTROL SOLENOID VALVE 1

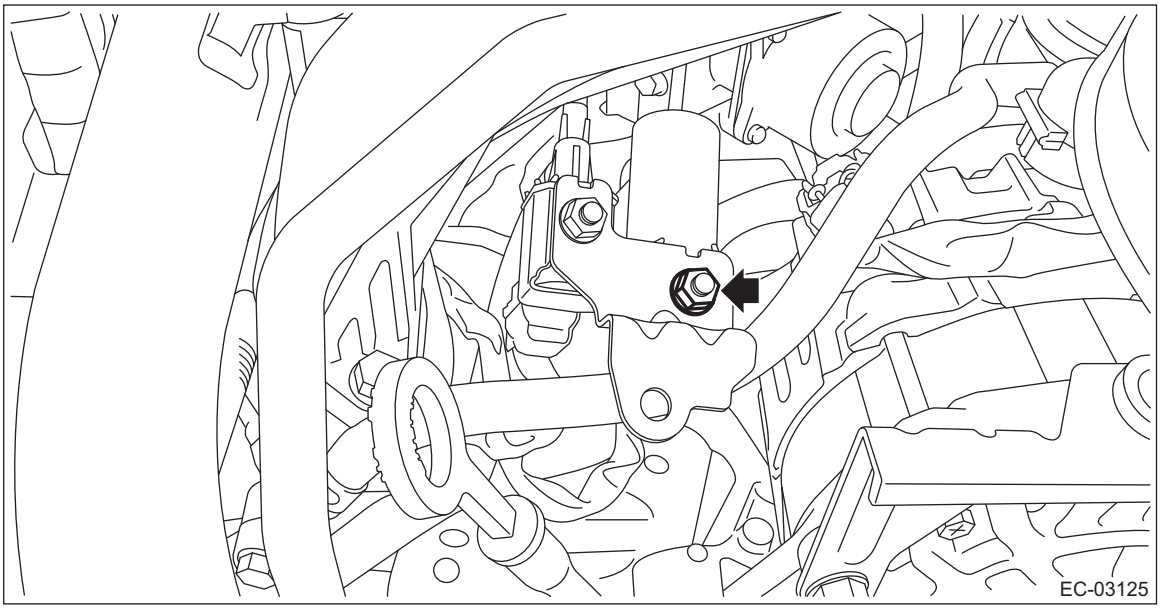
Install in the reverse order of removal.

NOTE:
Connect the vacuum hose as shown in the figure.

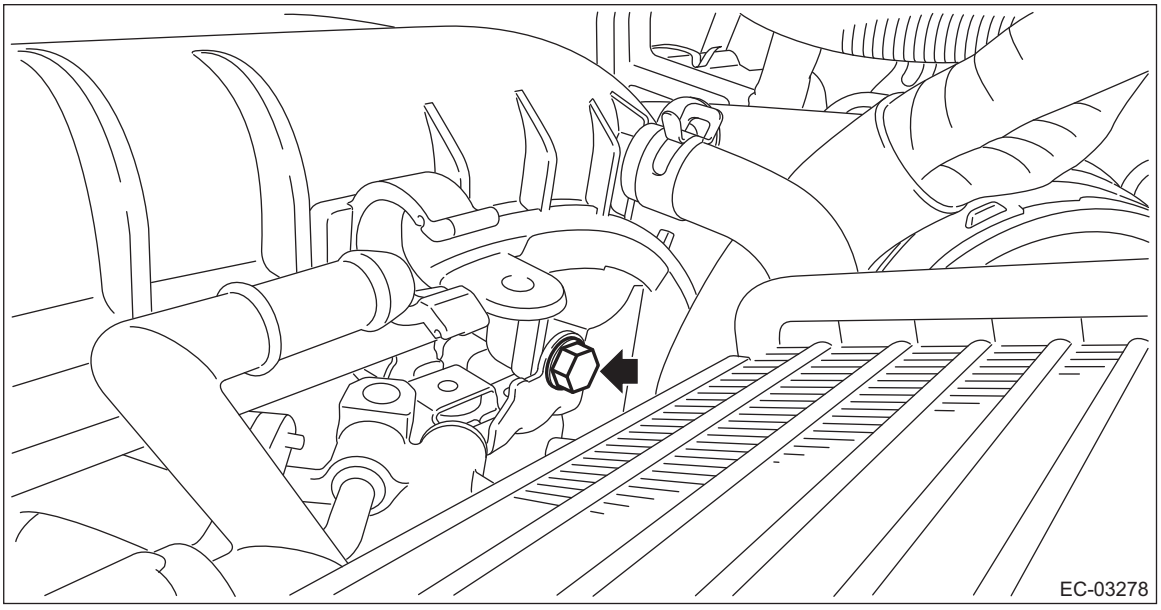


(a) To intake manifold (b) To fuel pipe

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



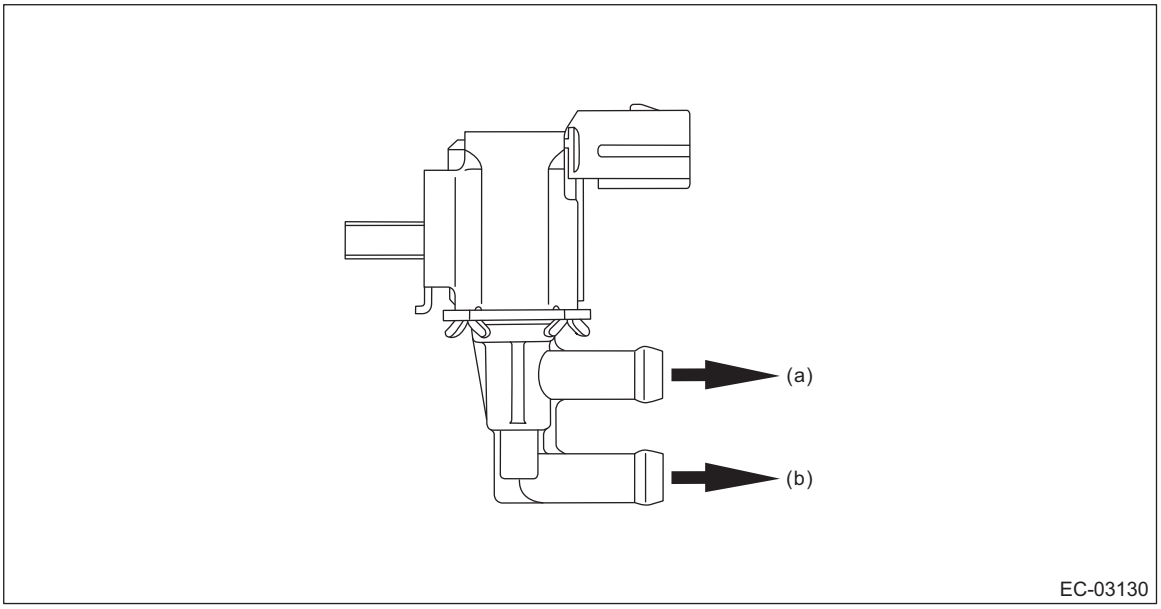
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



2. PURGE CONTROL SOLENOID VALVE 2

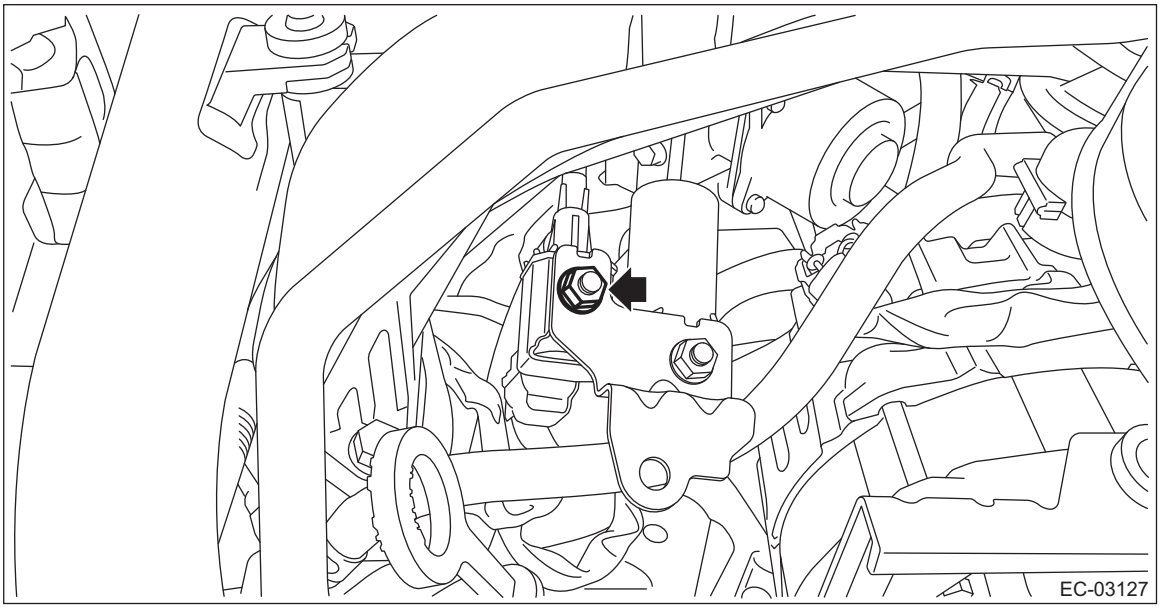
Install in the reverse order of removal.

NOTE:
Connect the vacuum hose as shown in the figure.

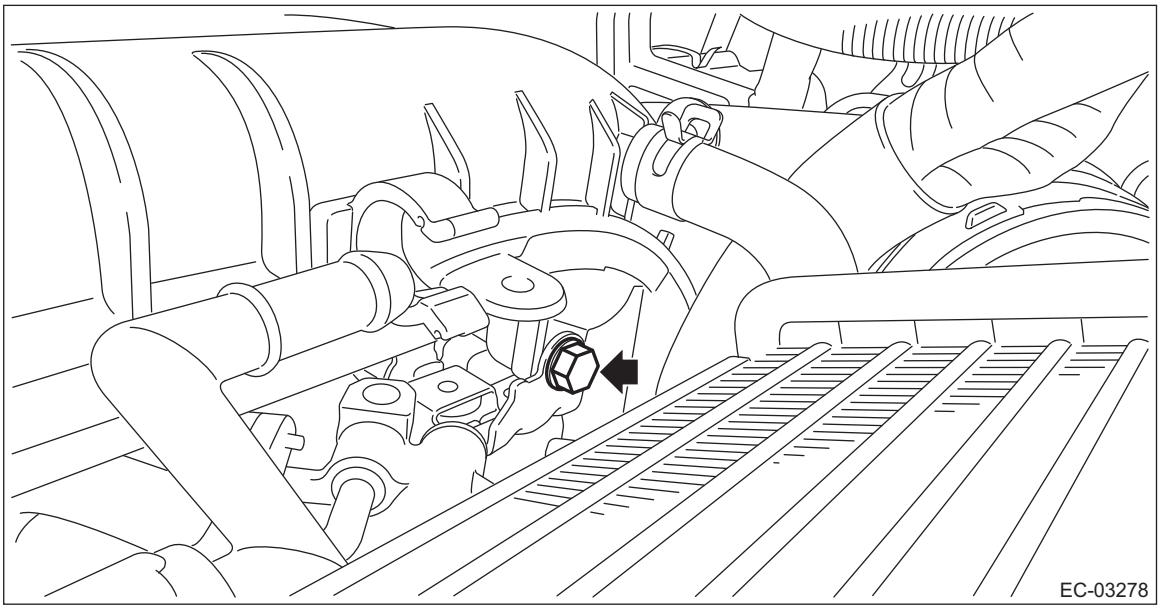


(a) To intake duct
(b) To fuel pipe

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

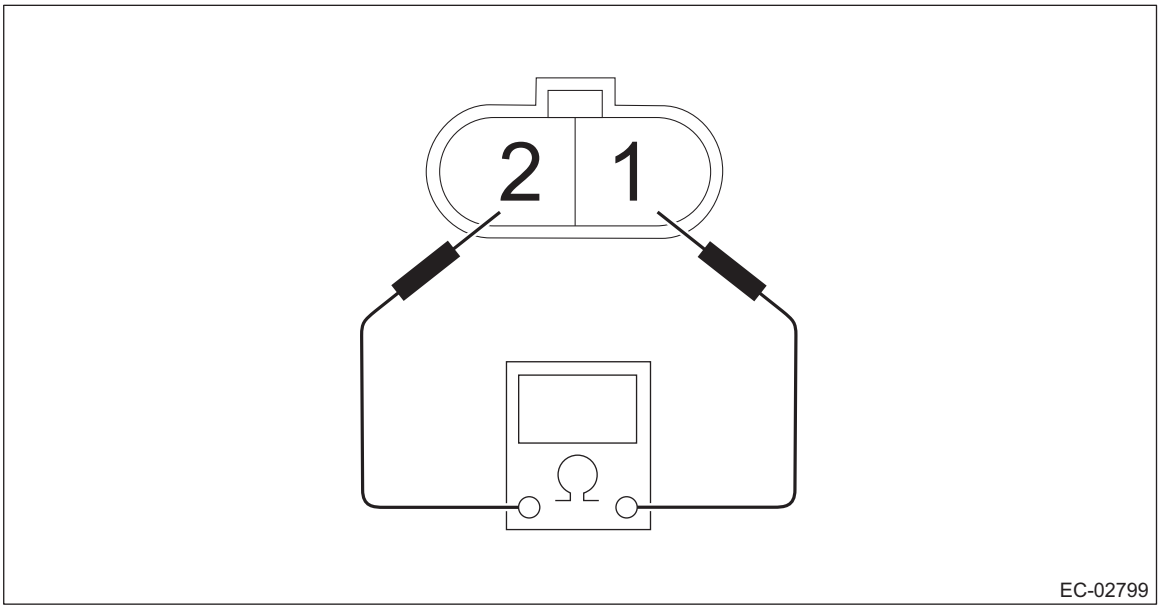


C: INSPECTION

1. PURGE CONTROL SOLENOID VALVE

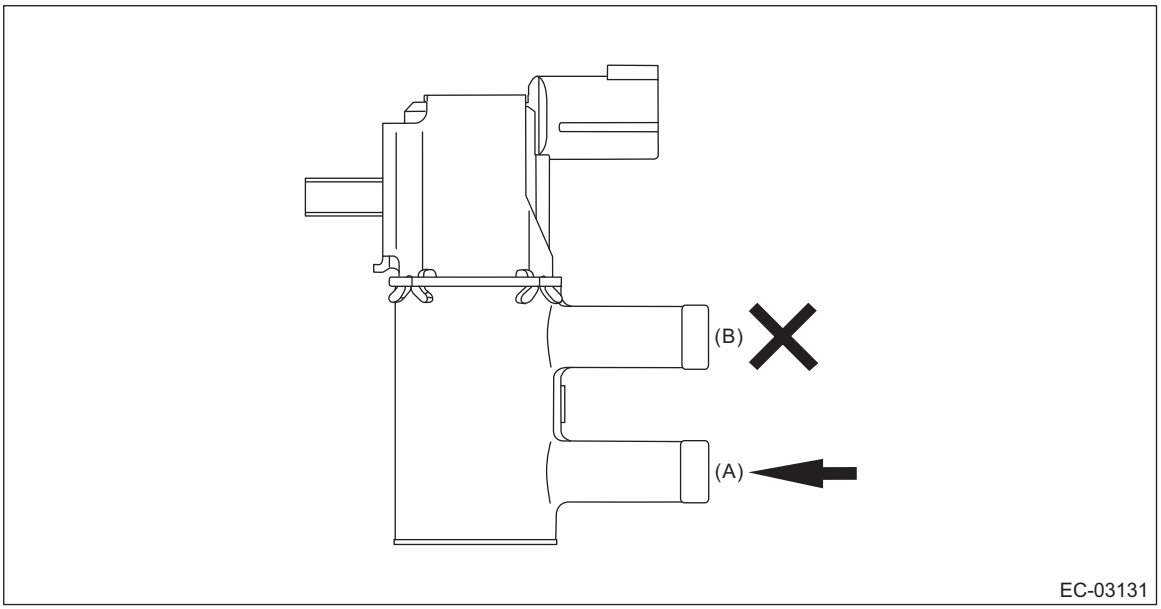
1) Check that the purge control solenoid valve has no deformation, cracks or other damages.

2) Measure the resistance between the purge control solenoid valve terminals.

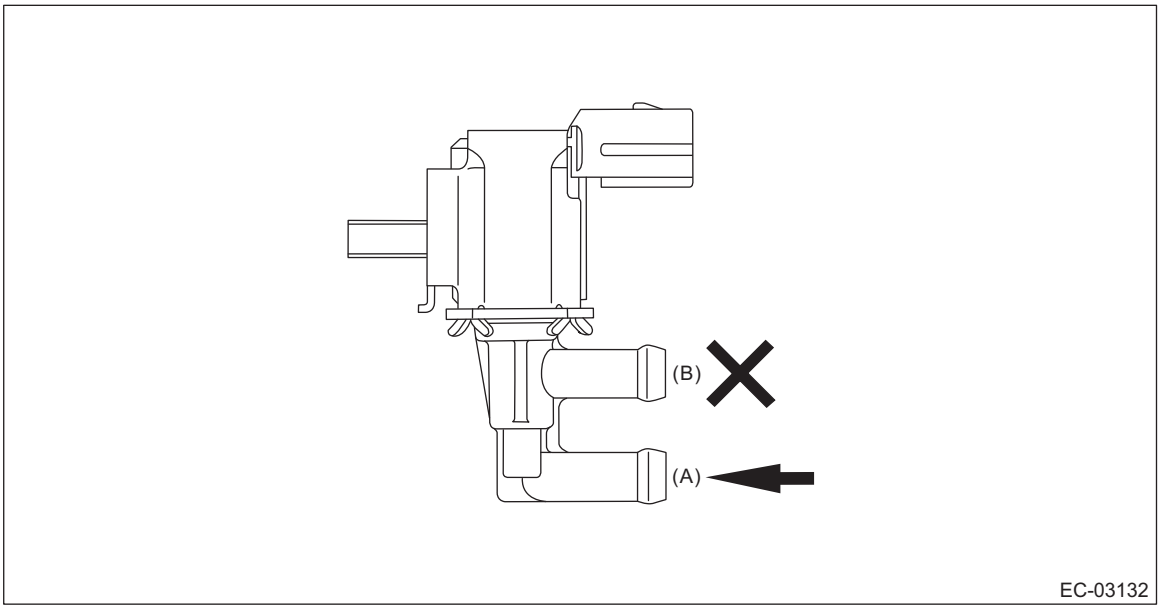


Terminal No.	Standard
1 and 2	24±3 Ω (20°C (68°F))

3) Check that air does not come out from (B) when air is blown into (A).
- Purge control solenoid valve 1

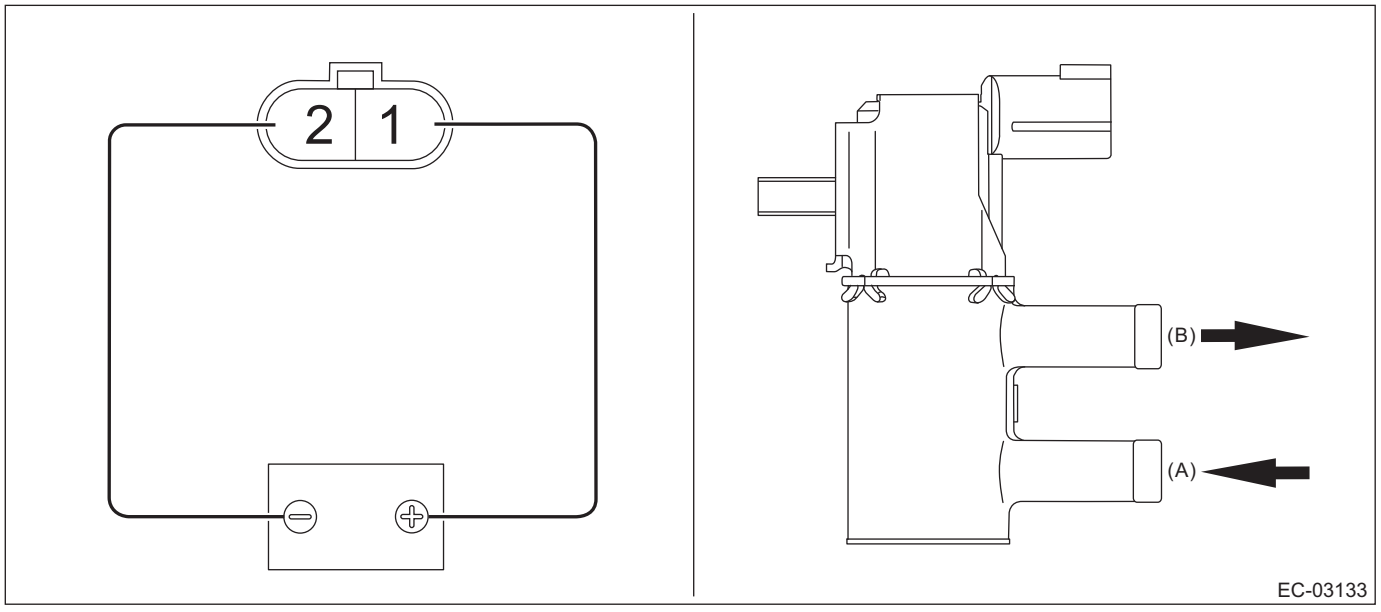


- Purge control solenoid valve 2

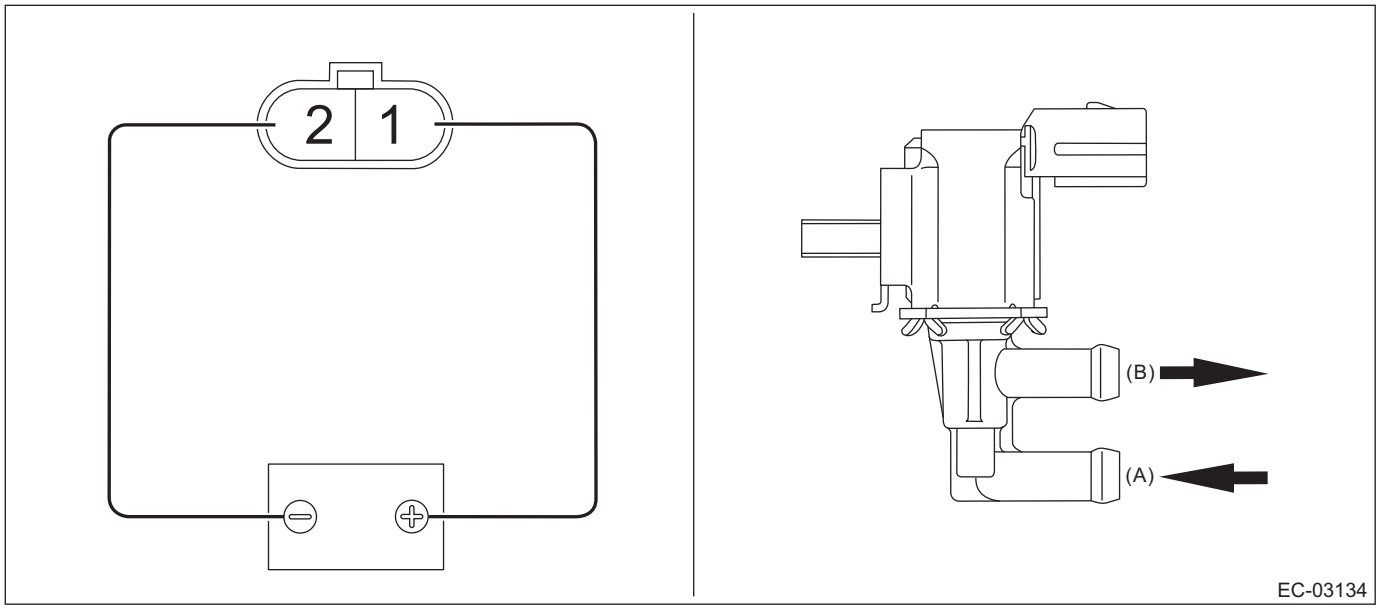


4) Connect the battery positive terminal to the terminal No. 1 and the battery negative terminal to the terminal No. 2. Check that air is discharged from (B), when supplying air to (A).

- Purge control solenoid valve 1



- Purge control solenoid valve 2



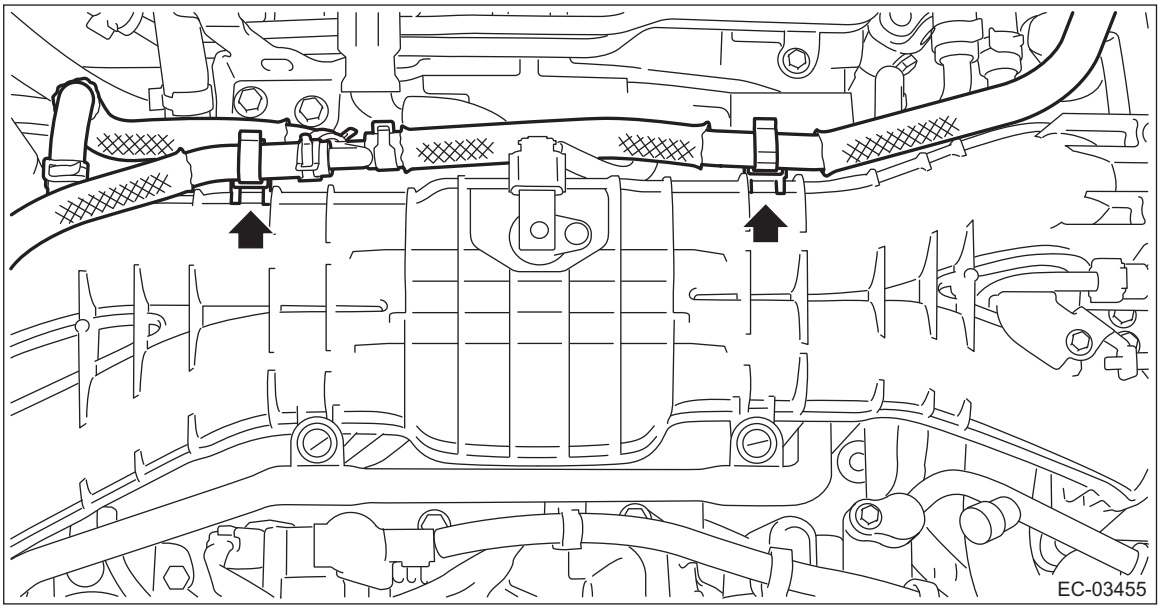
2. OTHER INSPECTIONS

Check the vacuum hose for cracks, damage or looseness.

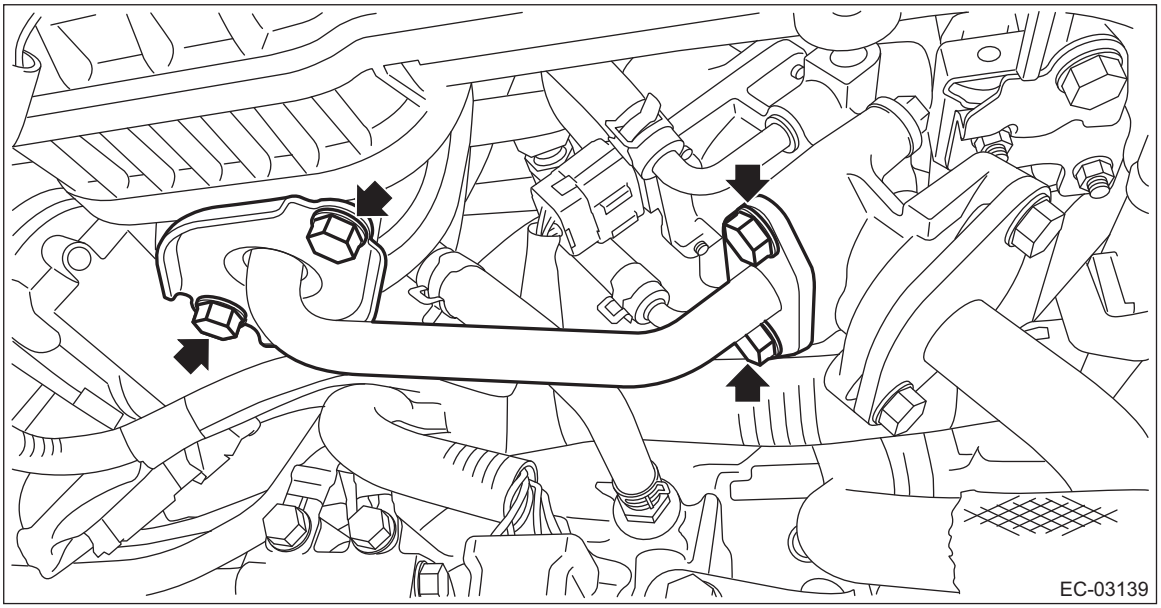
6. EGR Pipe

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the brake booster vacuum hose from the clip, and place the brake booster vacuum hose aside so that it does not interfere with the work.



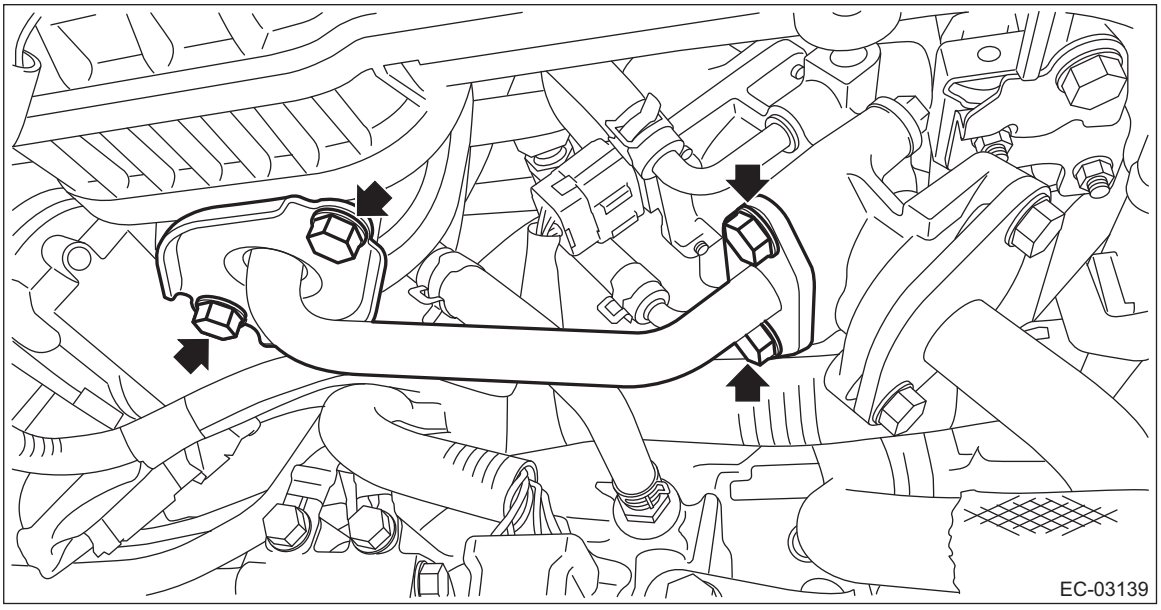
5) Remove the bolts which secure the EGR pipe to the intake manifold and EGR control valve, and remove the EGR pipe.



B: INSTALLATION

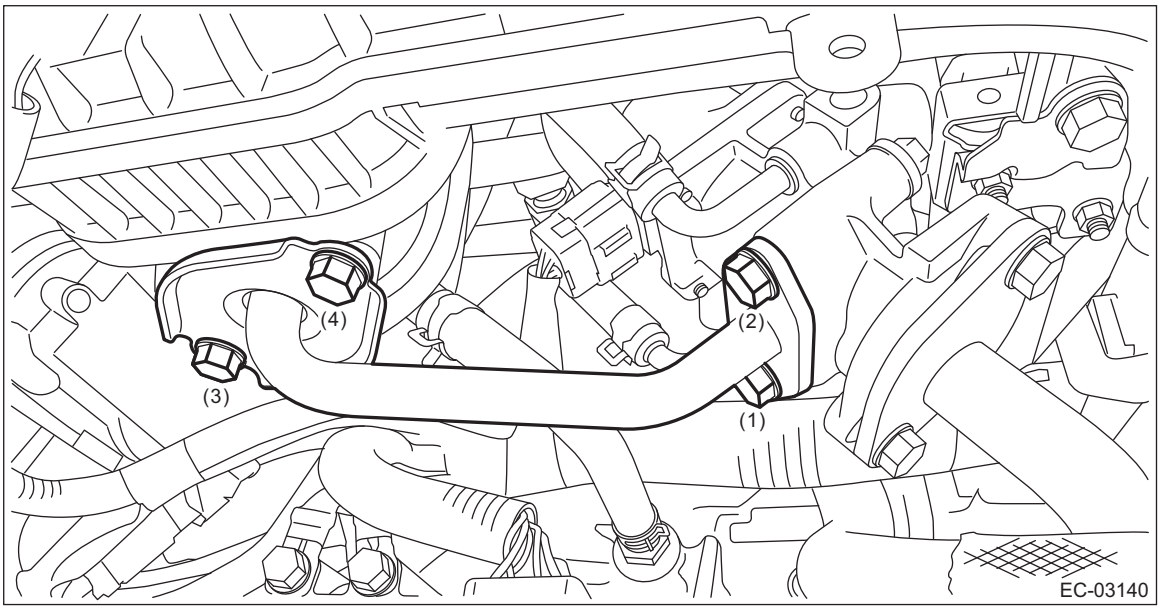
1) Install the EGR pipe to the intake manifold and EGR control valve.
   (1) Set the EGR pipe to the intake manifold and EGR control valve, and temporarily tighten the bolts which secure the EGR pipe to the intake manifold and EGR control valve.

NOTE:
Use new gaskets and O-rings.



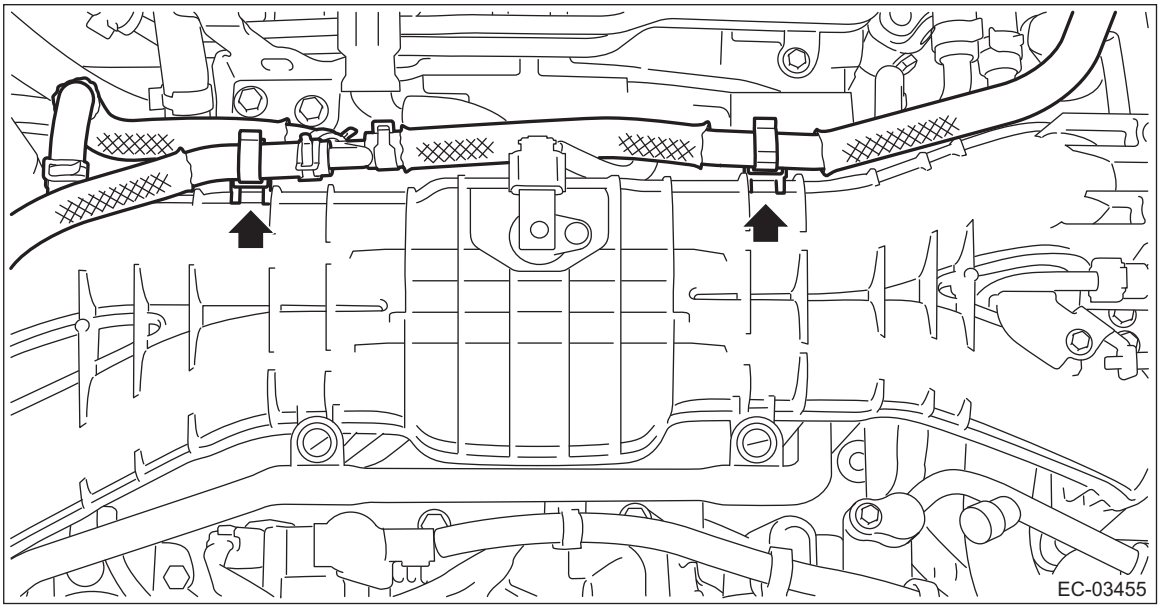
(2) Tighten the bolts which secure the EGR pipe to the intake manifold and EGR control valve in numerical order as shown in the figure.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



2) Install the brake booster vacuum hose to the clip.

NOTE:
If the clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.



3) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

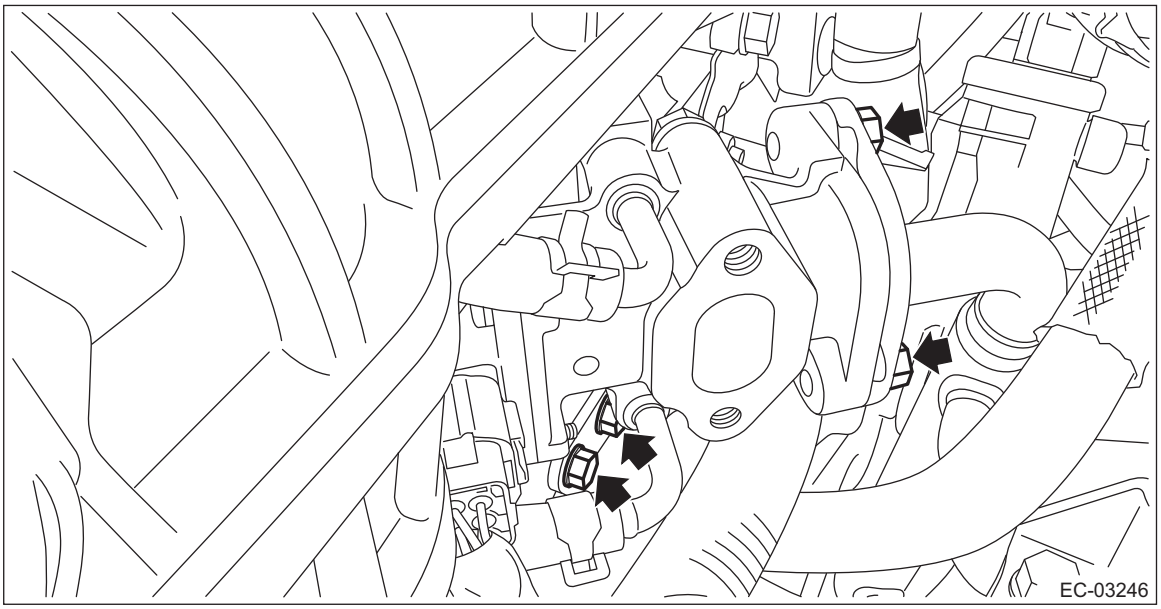
C: INSPECTION

Check that the EGR pipe has no deformation, cracks or other damages.

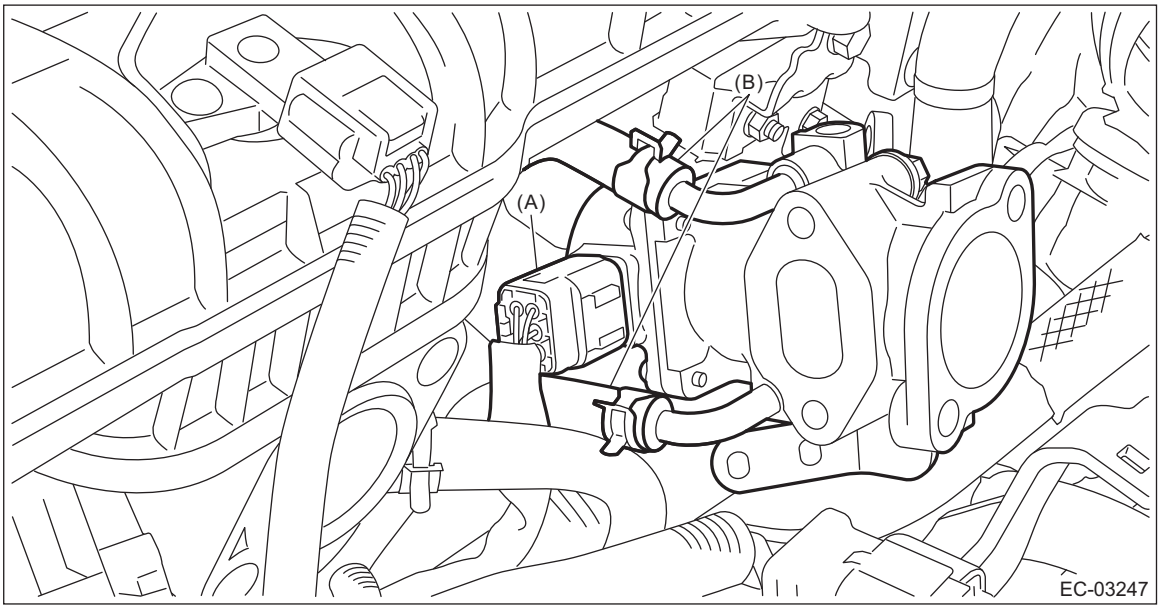
7. EGR Control Valve

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Drain approximately 3.0 L (3.2 US qt, 2.6 Imp qt) of coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
6) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
7) Remove the EGR pipe. <Ref. to EC(w/o STI)-34, REMOVAL, EGR Pipe.>
8) Remove the bolts which secure the EGR cooler to the EGR control valve, and remove the bolts which secure the EGR control valve bracket A to the EGR control valve bracket B.

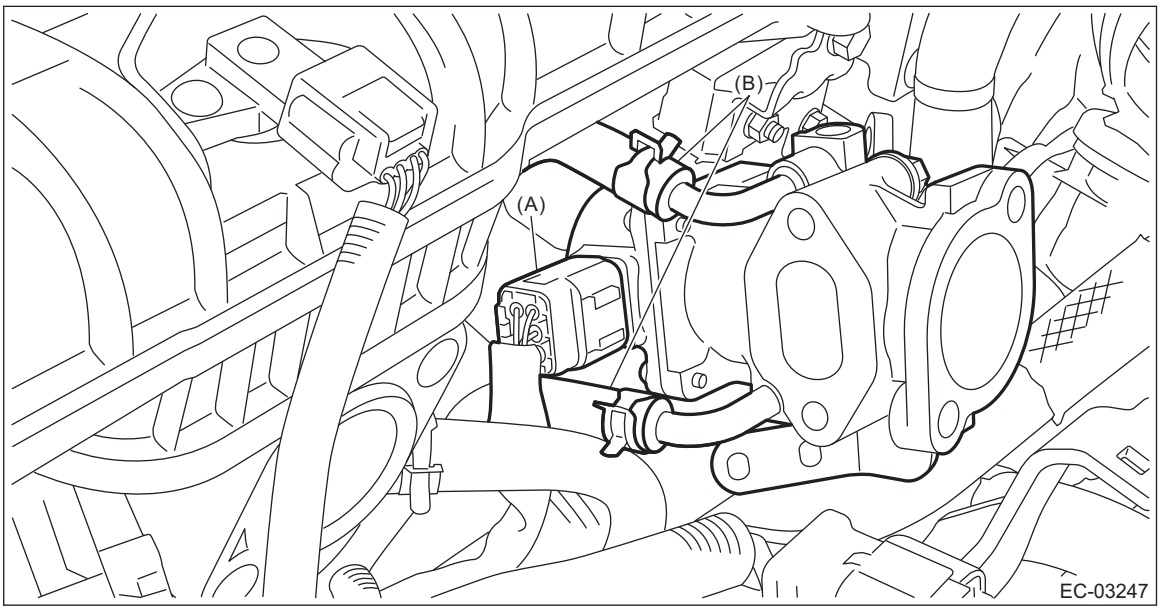


9) Disconnect the connector (A) and preheater hose (B) from EGR control valve, and remove the EGR control valve.



B: INSTALLATION

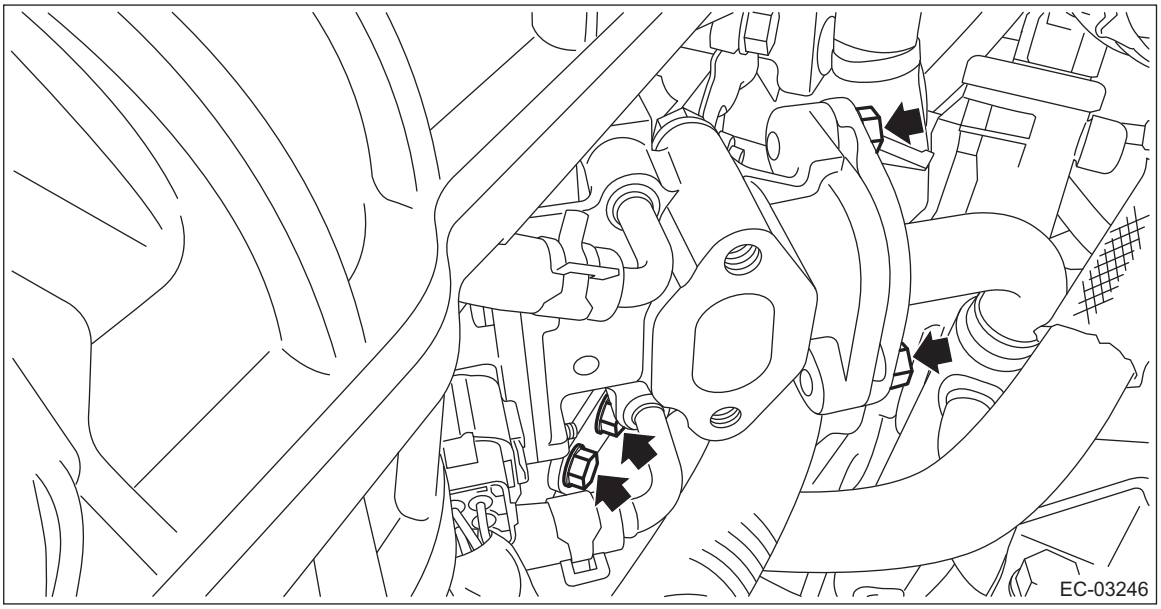
1) Connect the preheater hose (B) and connector (A) to the EGR control valve.



2) Install the EGR control valve and EGR control valve bracket A to the EGR cooler and EGR control valve bracket B.

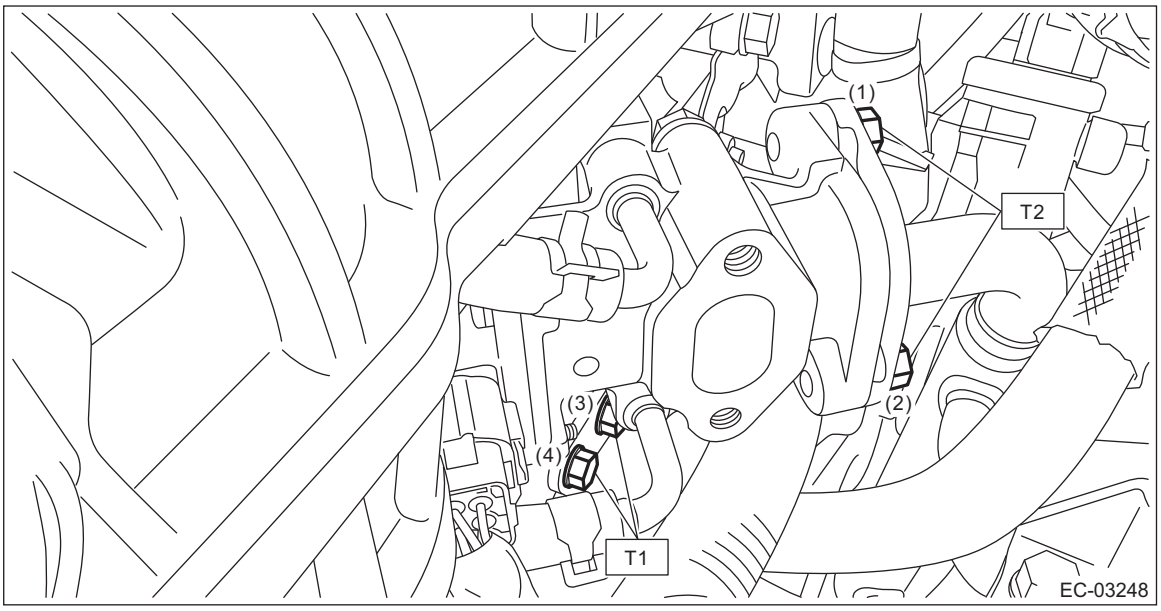
(1) Set the EGR control valve and EGR control valve bracket A to the EGR cooler and EGR control valve bracket B, and temporarily tighten the bolts which secure the EGR control valve and EGR control valve bracket A to the EGR cooler and EGR control valve bracket B.

NOTE:
Use a new gasket.



(2) Tighten the bolts which secure the EGR control valve and EGR control valve bracket A to the EGR cooler and EGR control valve bracket B in numerical order as shown in the figure.

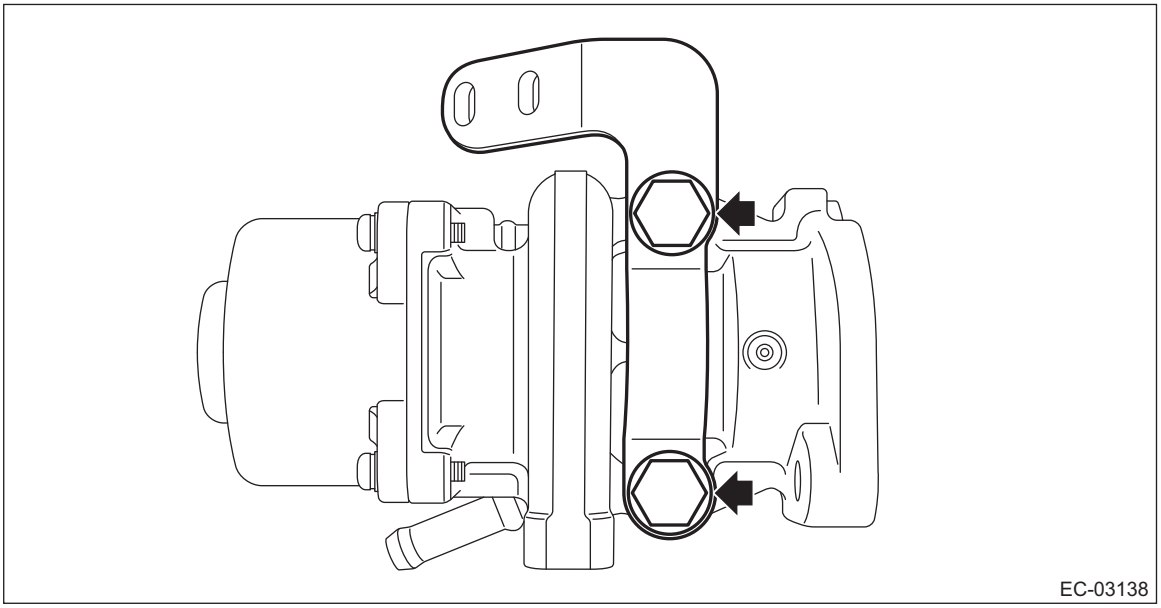
Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)



3) Install the EGR pipe. <Ref. to EC(w/o STI)-34, INSTALLATION, EGR Pipe.>
4) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
5) Lift up the vehicle.
6) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
7) Lower the vehicle.
8) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
10) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

Remove the EGR control valve bracket A from the EGR control valve.



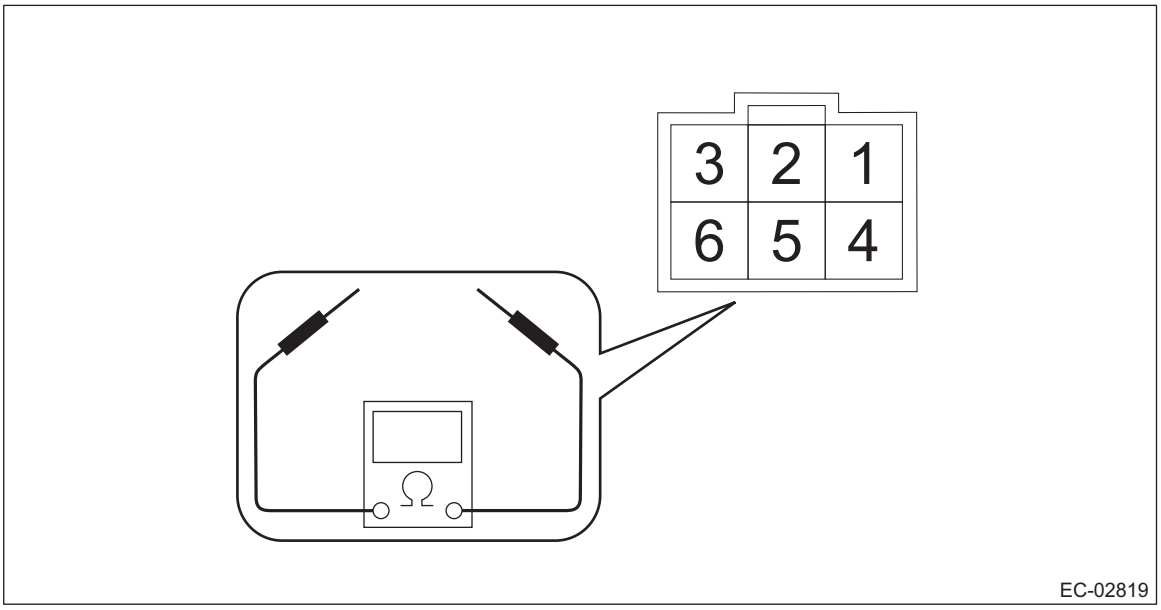
D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

E: INSPECTION

1) Check that the EGR control valve and EGR control valve bracket A have no deformation, cracks or other damages.
2) Measure the resistance between EGR control valve terminals.

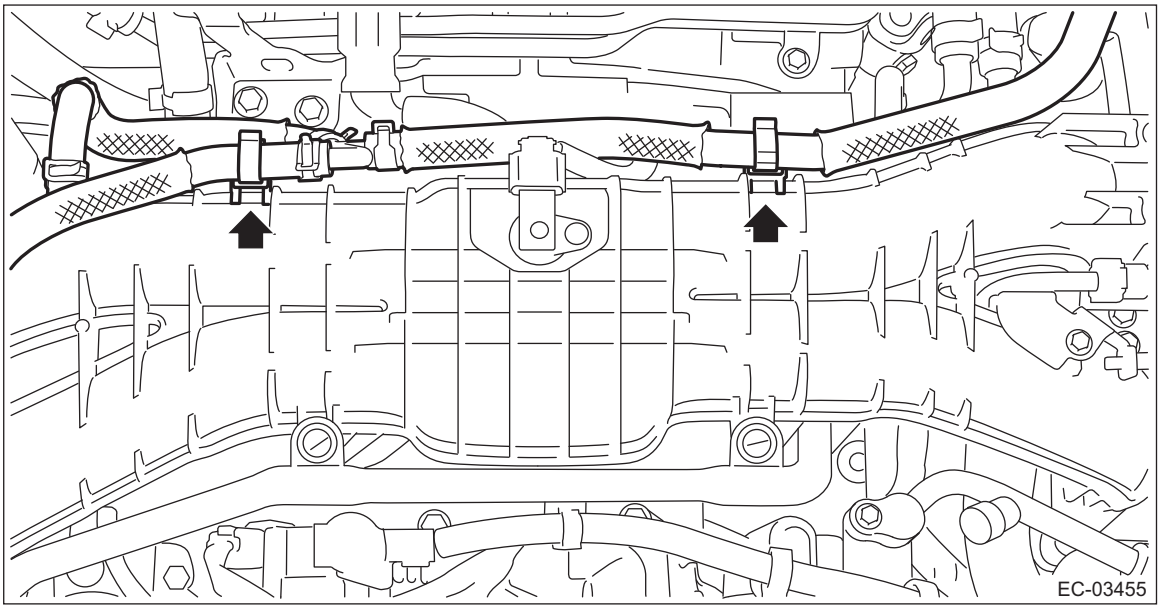


Terminal No.	Standard
2 and 1	15±2 Ω (20°C (68°F))
2 and 3	
5 and 4	
5 and 6	

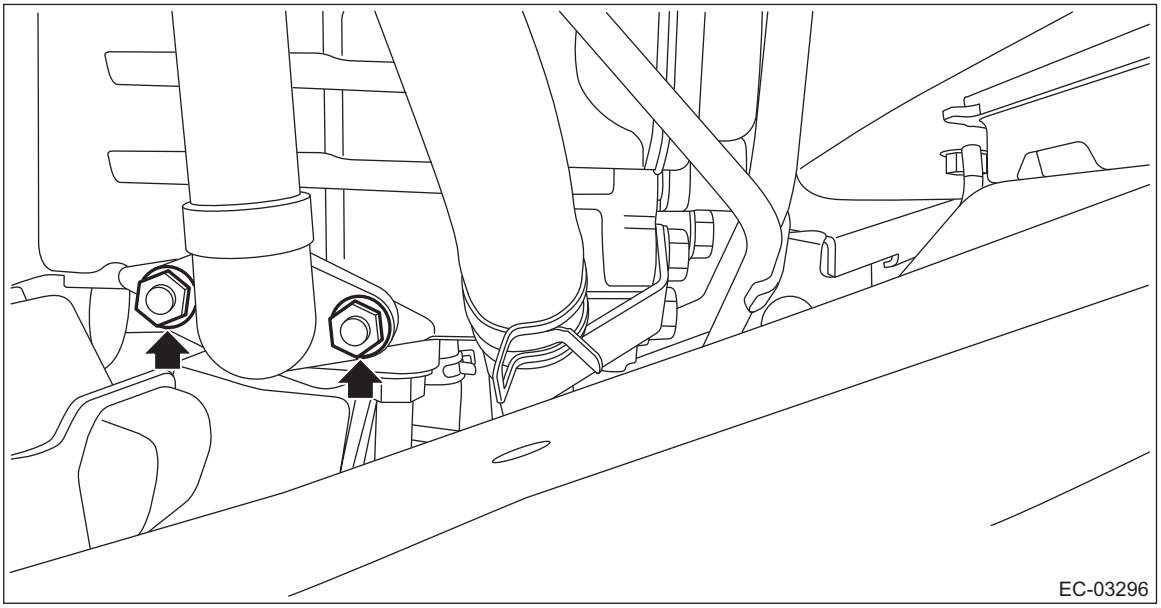
8. EGR Cooler

A: REMOVAL

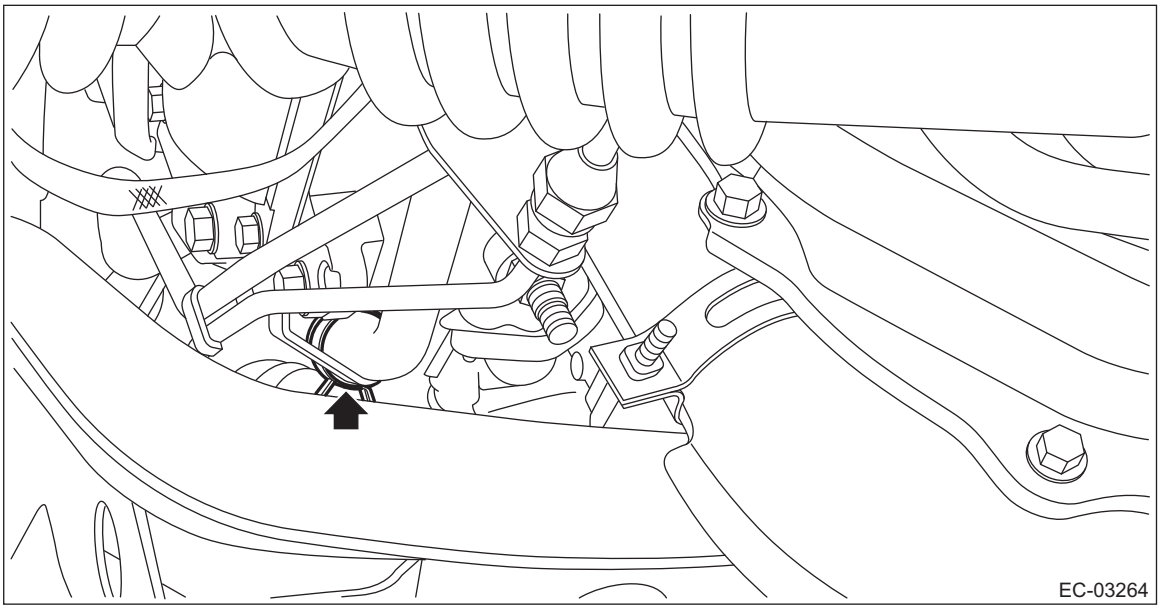
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the brake booster vacuum hose from the clip, and place the brake booster vacuum hose aside so that it does not interfere with the work.



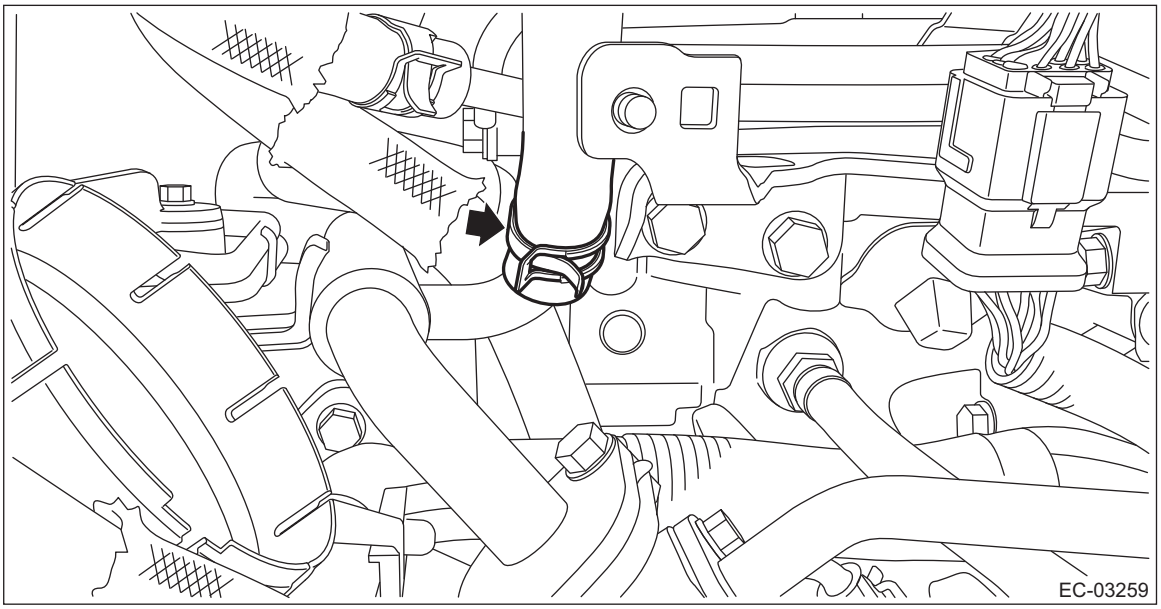
5) Lift up the vehicle.
6) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
7) Remove the nuts which secure the EGR cooler to the cylinder head RH.



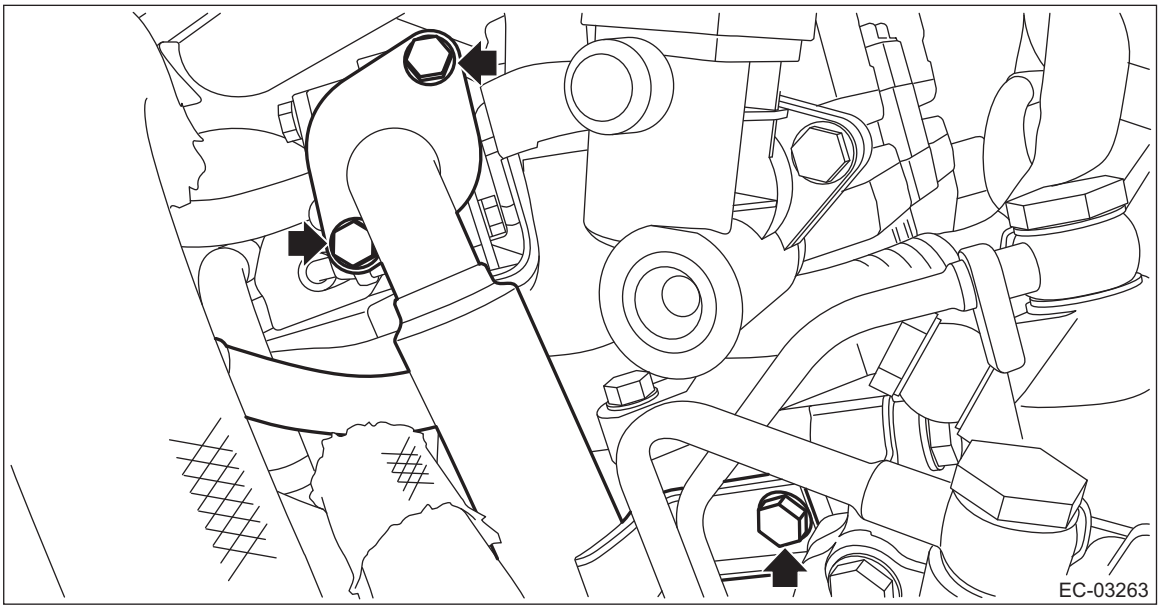
8) Disconnect the water hose A from the water pipe RH.



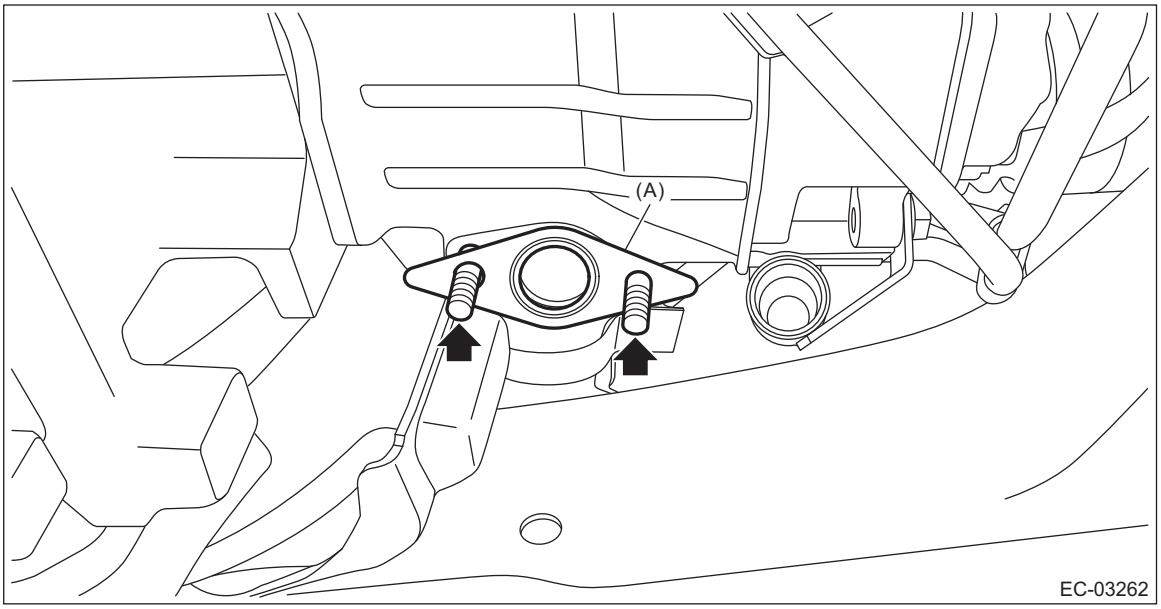
9) Lower the vehicle.
10) Disconnect the engine coolant inlet hose (CVT model) or water hose B (MT model) from the EGR cooler.



11) Remove the bolts which secure the EGR cooler to the EGR control valve and cylinder head RH, and remove the EGR cooler.



12) Remove the gasket (A) from the stud bolt, and remove the stud bolt from the cylinder head RH.

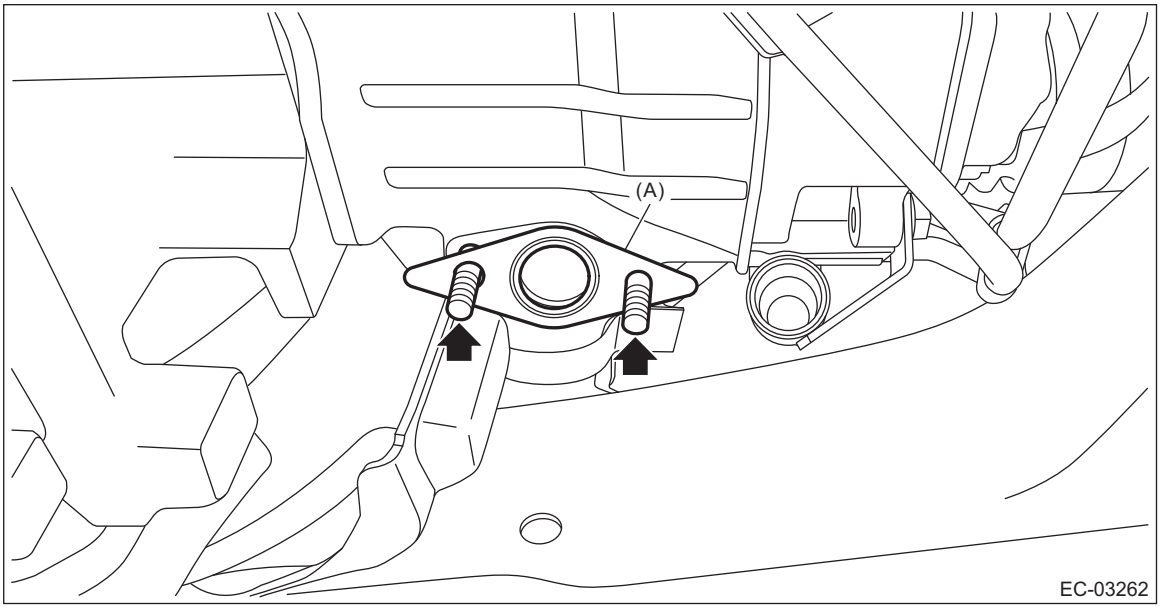


B: INSTALLATION

1) Install the stud bolt to the cylinder head RH, and set the gasket (A) to the stud bolt.

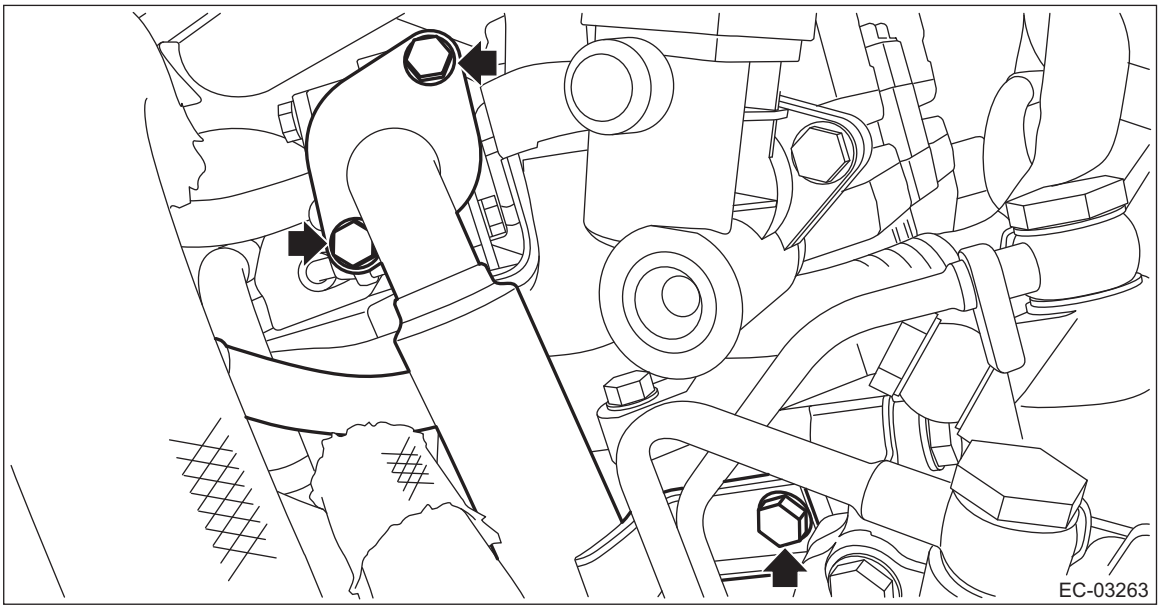
NOTE:
Use a new stud bolt and gasket.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

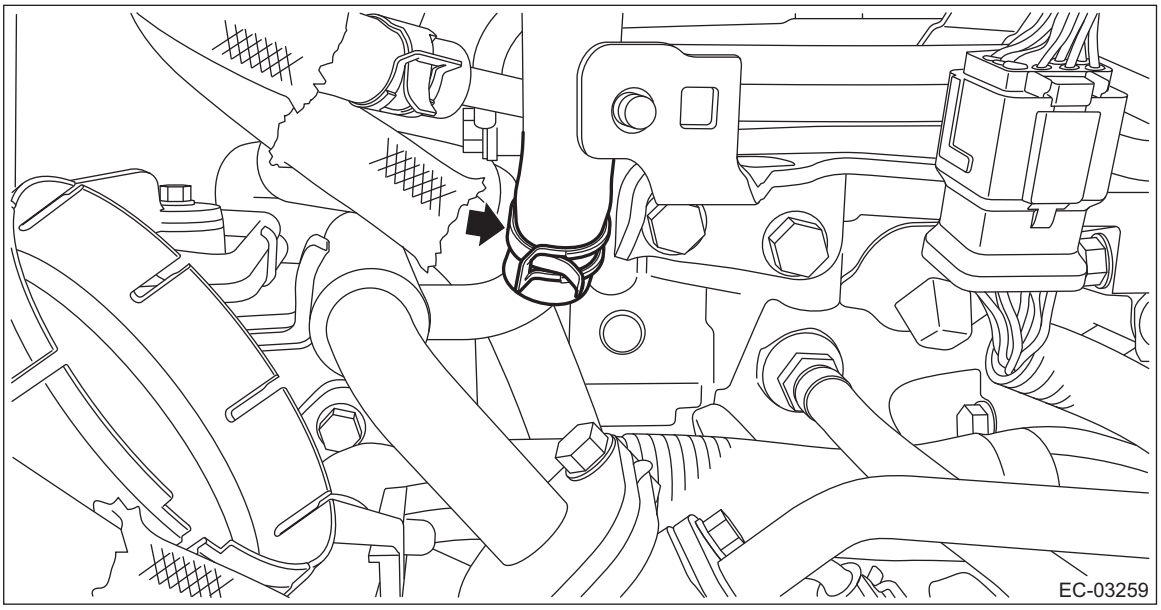


2) Lower the vehicle.
3) Set the EGR cooler to the EGR control valve and cylinder head RH, and temporarily tighten the bolts which secure the EGR cooler to the EGR control valve and cylinder head RH.

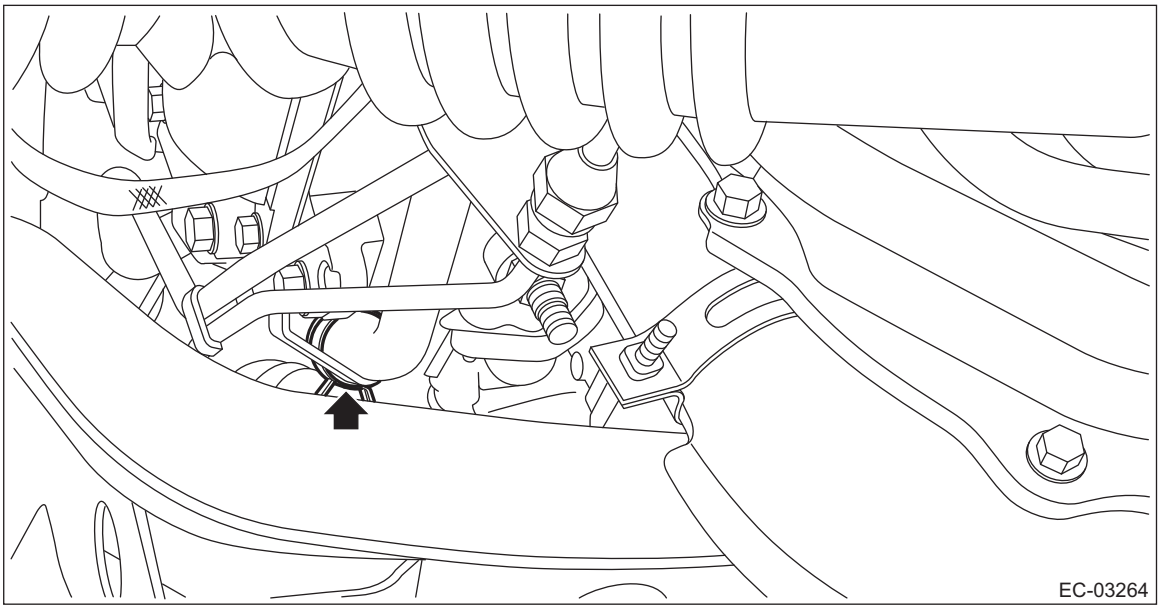
NOTE:
Use a new gasket.



4) Connect the engine coolant inlet hose (CVT model) or water hose B (MT model) to the EGR cooler.

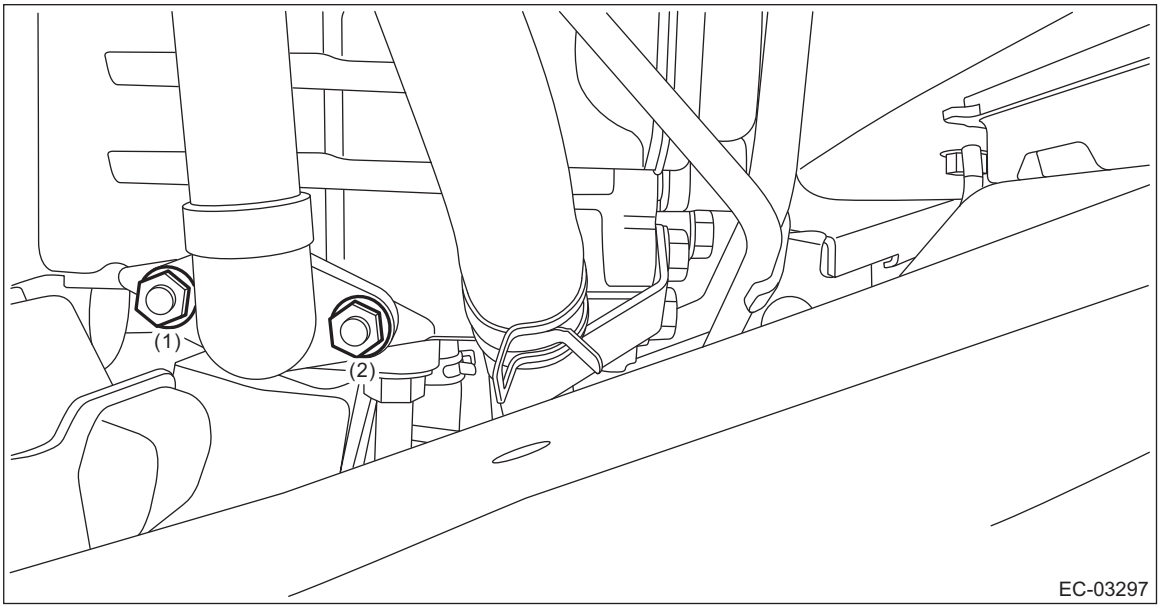


5) Lift up the vehicle.
6) Connect the water hose A to the water pipe RH.



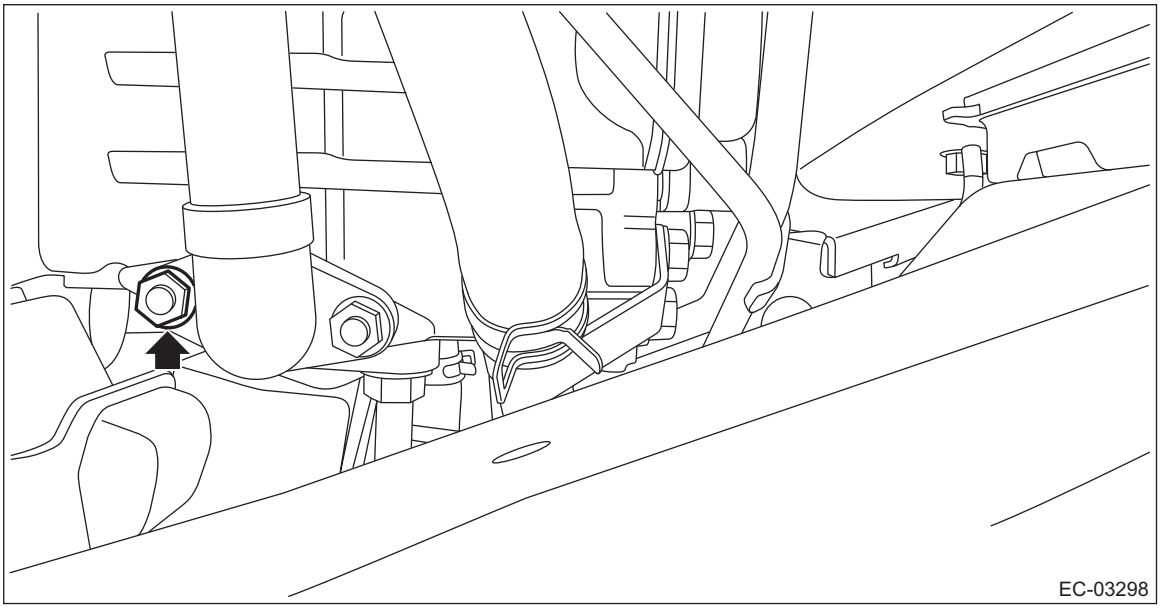
7) Install the EGR cooler to the cylinder head RH.
   (1) Tighten the nuts which secure the EGR cooler to the cylinder head RH in numerical order as shown in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)



(2) Retighten the nut shown in the figure.

Tightening torque:
9 N·m (0.9 kgf-m, 6.6 ft-lb)

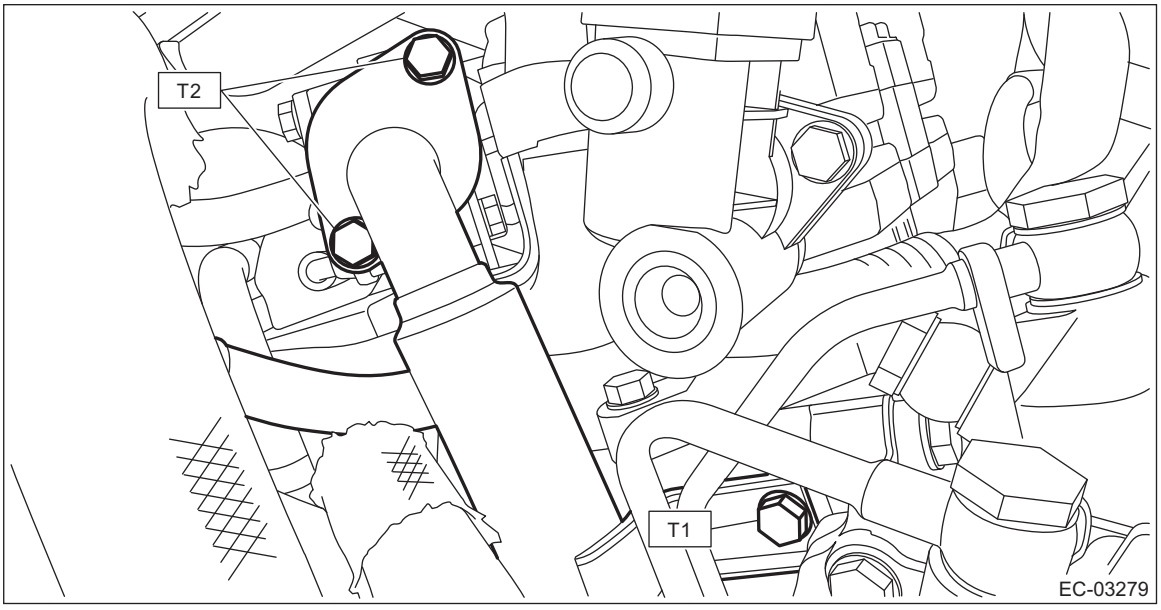


8) Tighten the bolts holding the EGR cooler to the cylinder head RH.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

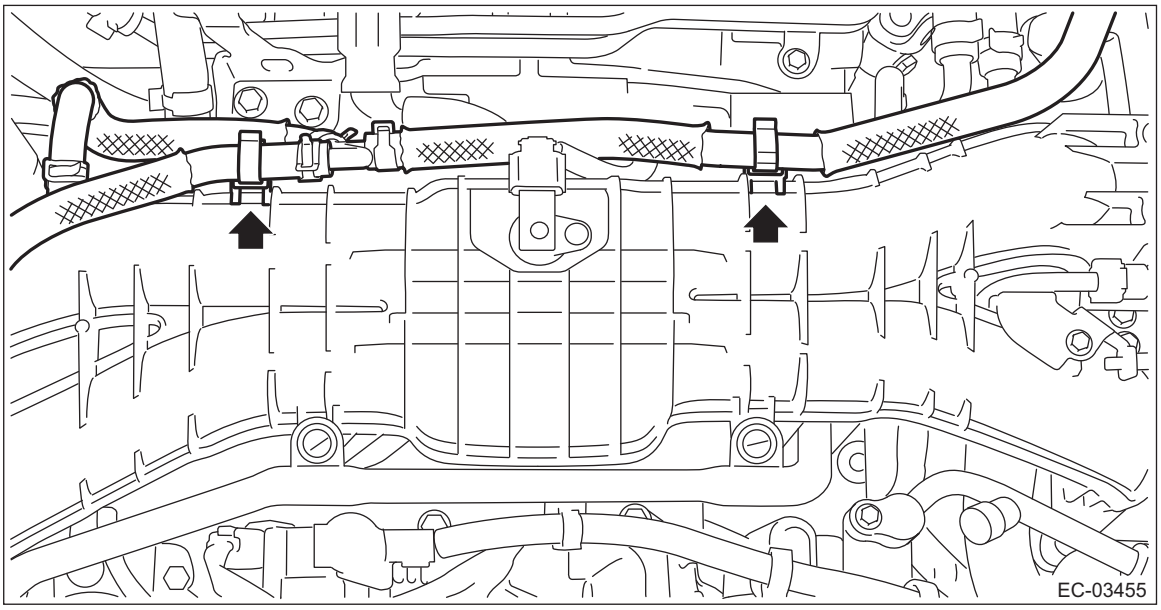
9) Tighten the bolt securing the EGR cooler to the EGR control valve.

Tightening torque:
T2: 19 N·m (1.9 kgf-m, 14.0 ft-lb)



10) Lower the vehicle.
11) Install the brake booster vacuum hose to the clip.

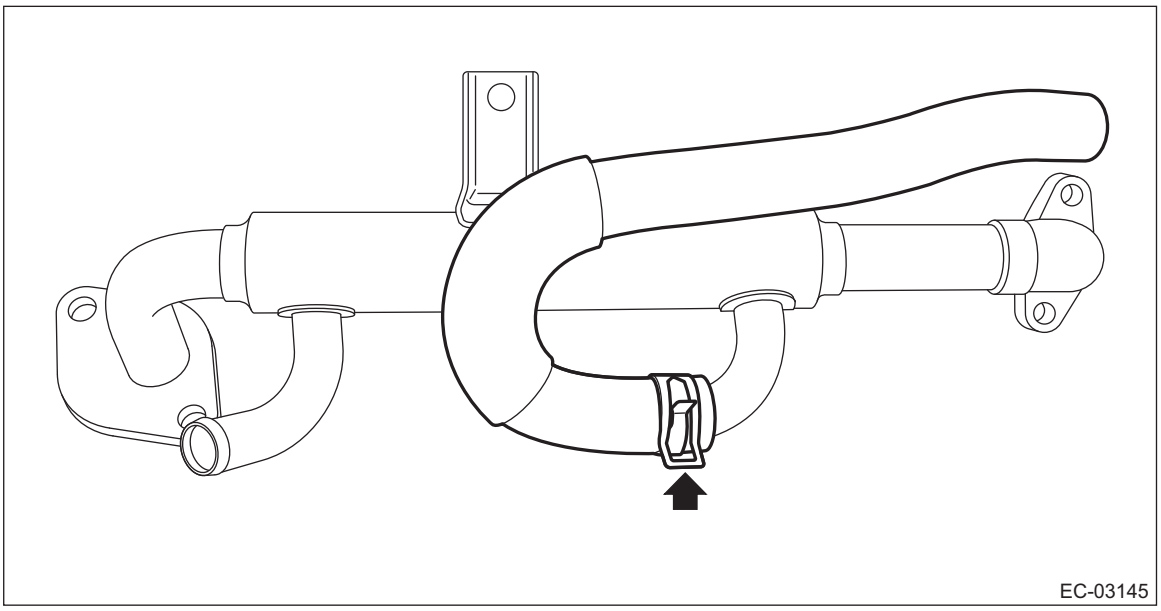
NOTE:
If the clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.



12) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
13) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
14) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
15) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

Remove the water hose A from EGR cooler.



D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

1) Check that the EGR cooler has no deformation, cracks or other damages.
2) Check that the water hose has no cracks, damage or loose part.

9. Fuel Level Sensor

A: REMOVAL

Refer to “Fuel Level Sensor” for removal procedure of the fuel level sensor. <Ref. to FU(w/o STI)-169, REMOVAL, Fuel Level Sensor.>

B: INSTALLATION

Refer to “Fuel Level Sensor” for installation procedure of the fuel level sensor. <Ref. to FU(w/o STI)-170, INSTALLATION, Fuel Level Sensor.>

C: INSPECTION

Refer to “Fuel Level Sensor” for the fuel level sensor inspection procedure. <Ref. to FU(w/o STI)-170, INSPECTION, Fuel Level Sensor.>

10.Fuel Sub Level Sensor

A: REMOVAL

Refer to “Fuel Sub Level Sensor” for removal procedure of the fuel sub level sensor. <Ref. to FU(w/o STI)-172, REMOVAL, Fuel Sub Level Sensor.>

B: INSTALLATION

Refer to “Fuel Sub Level Sensor” for installation procedure of the fuel sub level sensor. <Ref. to FU(w/o STI)-175, INSTALLATION, Fuel Sub Level Sensor.>

C: INSPECTION

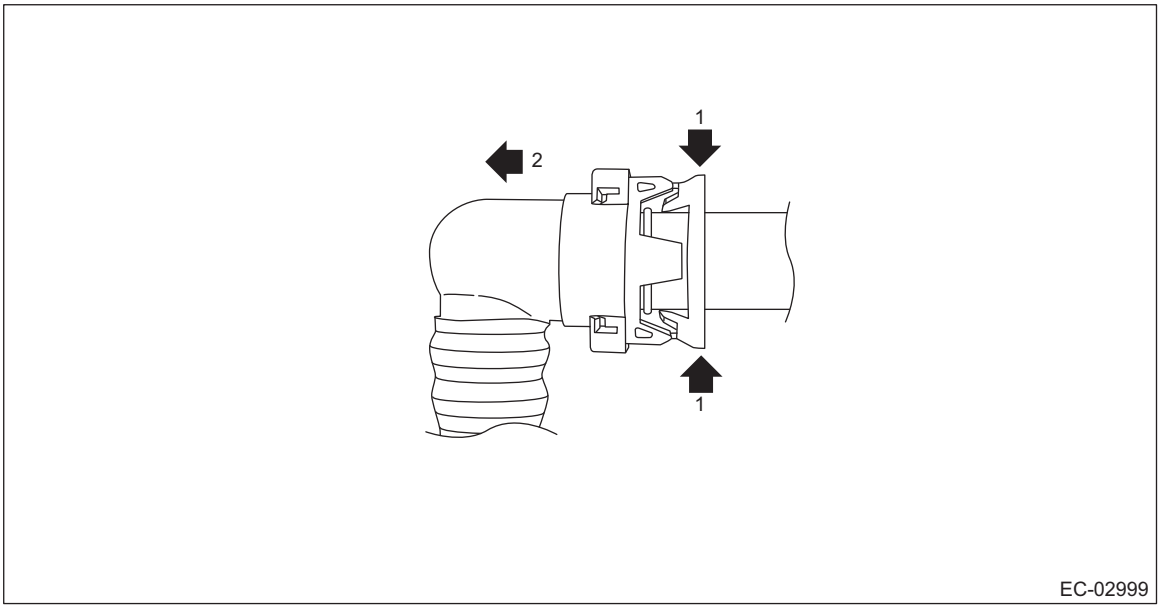
Refer to “Fuel Sub Level Sensor” for the fuel sub level sensor inspection procedure. <Ref. to FU(w/o STI)-179, INSPECTION, Fuel Sub Level Sensor.>

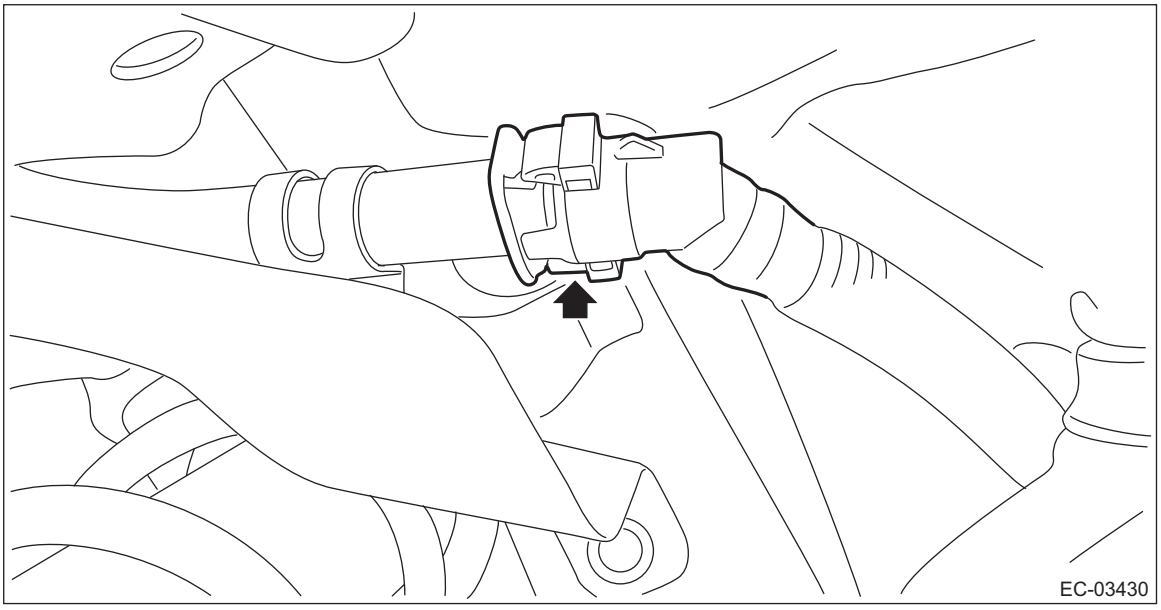
11.Drain Filter

A: REMOVAL

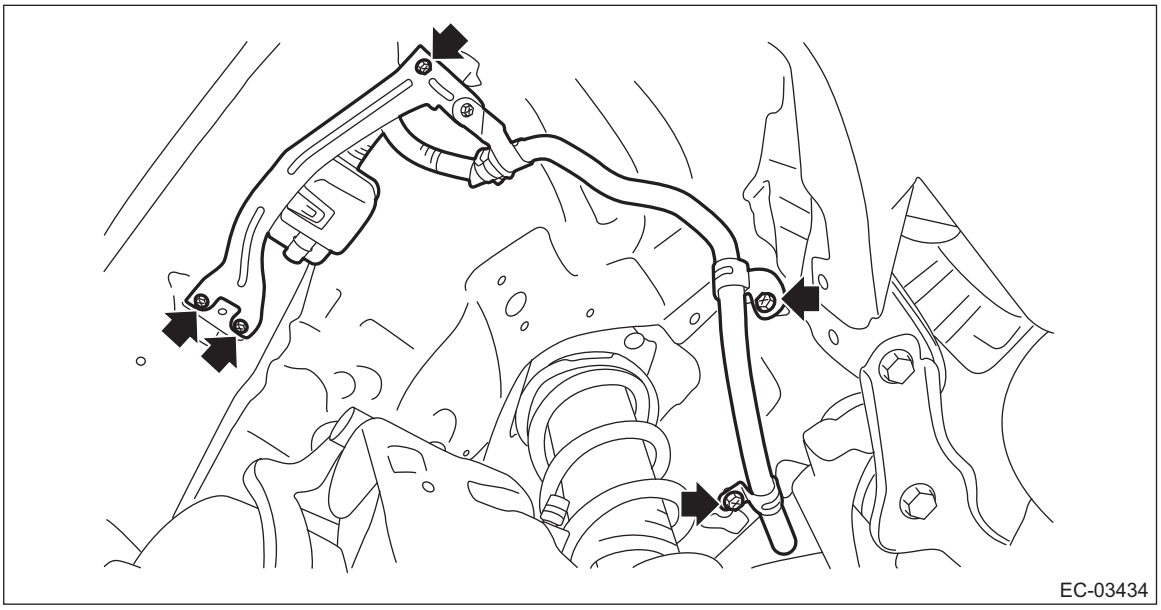
1) Remove the rear wheel LH. <Ref. to WT-5, REMOVAL, Tire and Wheel.>
2) Lift up the vehicle.
3) Remove the rear mud guard LH. <Ref. to EI-24, REMOVAL, Mud Guard.>
4) Disconnect the drain tube from the drain pipe.

NOTE:
Disconnect the quick connector as shown in the figure.



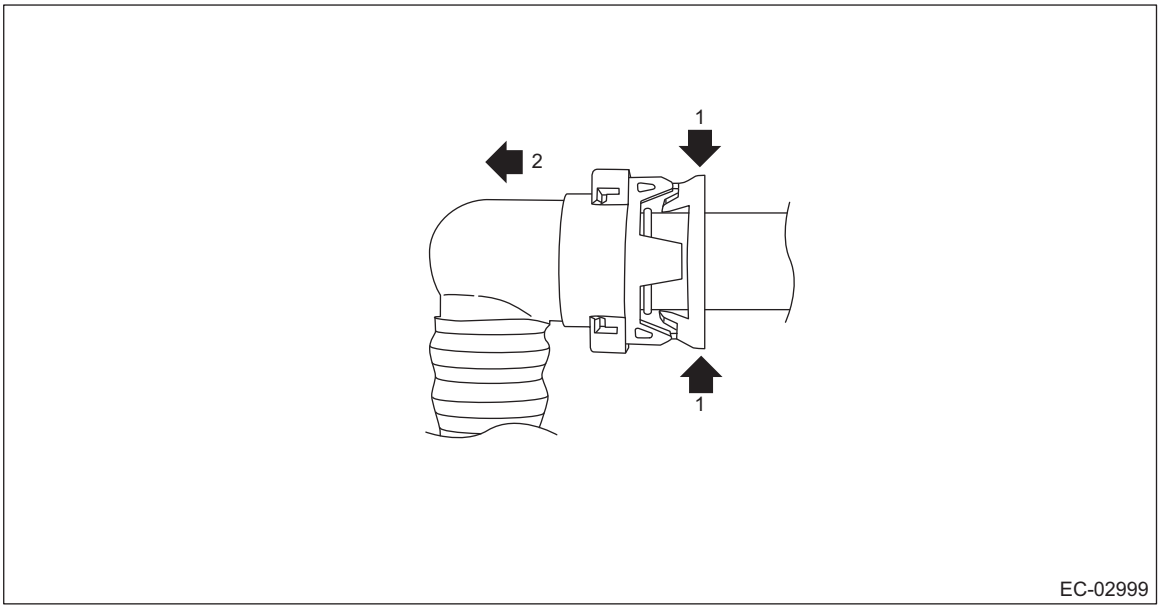


5) Remove the drain bracket and drain pipe from vehicle as a unit.

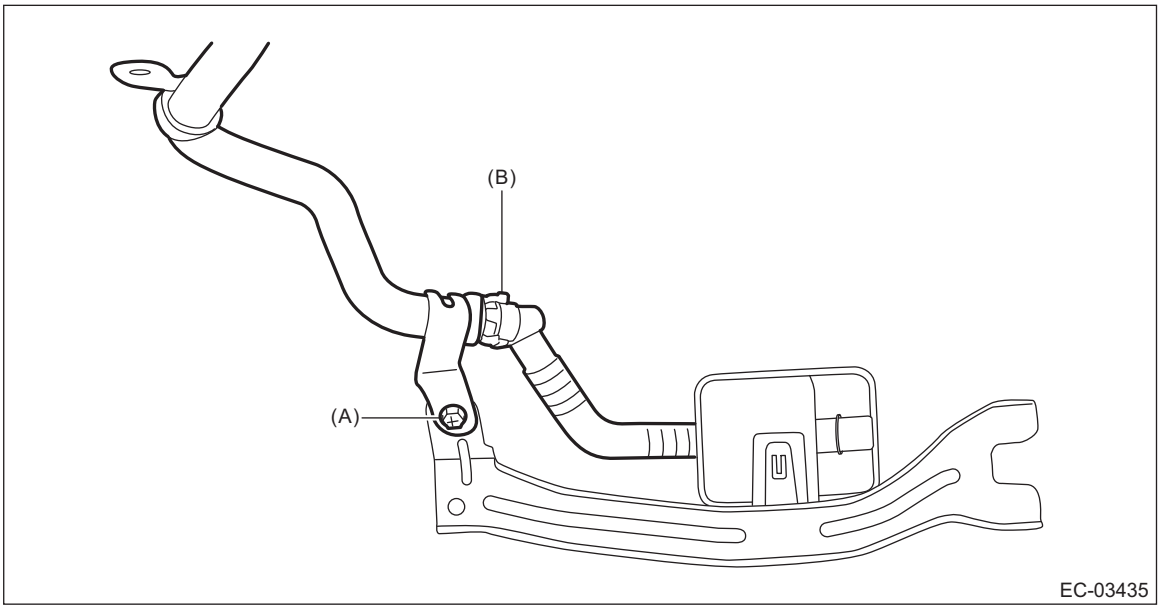


6) Remove the bolt (A) which holds drain pipe from the drain bracket.
7) Disconnect the drain tube (B) from the drain pipe.

NOTE:
- Disconnect the quick connector as shown in the figure.



• The drain filter cannot be separated from the drain bracket. Therefore, be sure to replace both of them with new ones when replacing the drain bracket or drain filter.

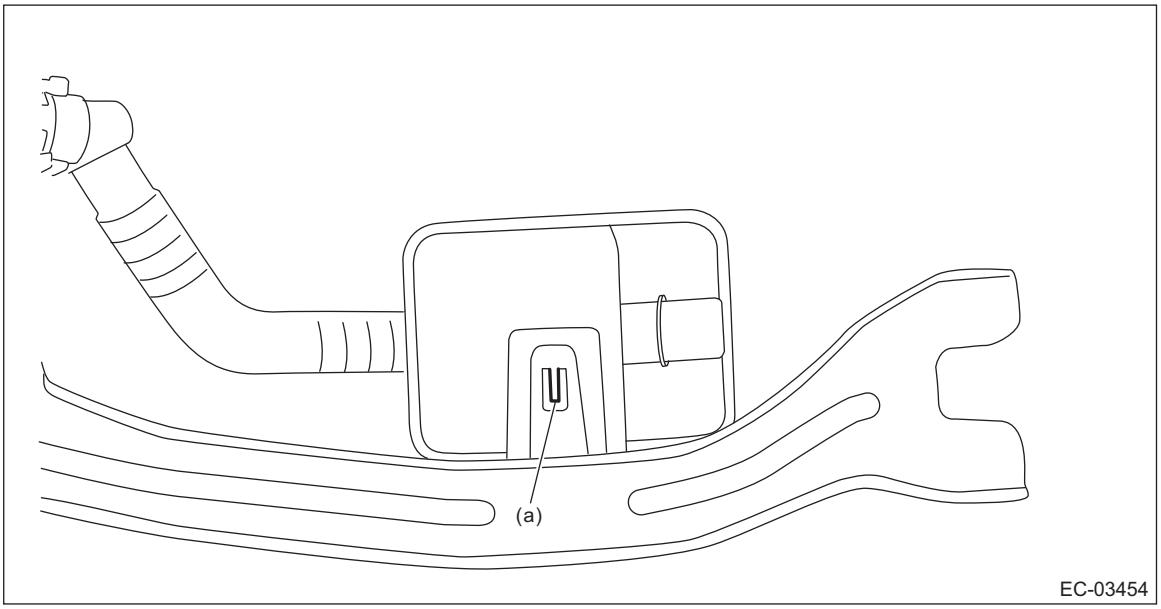


B: INSTALLATION

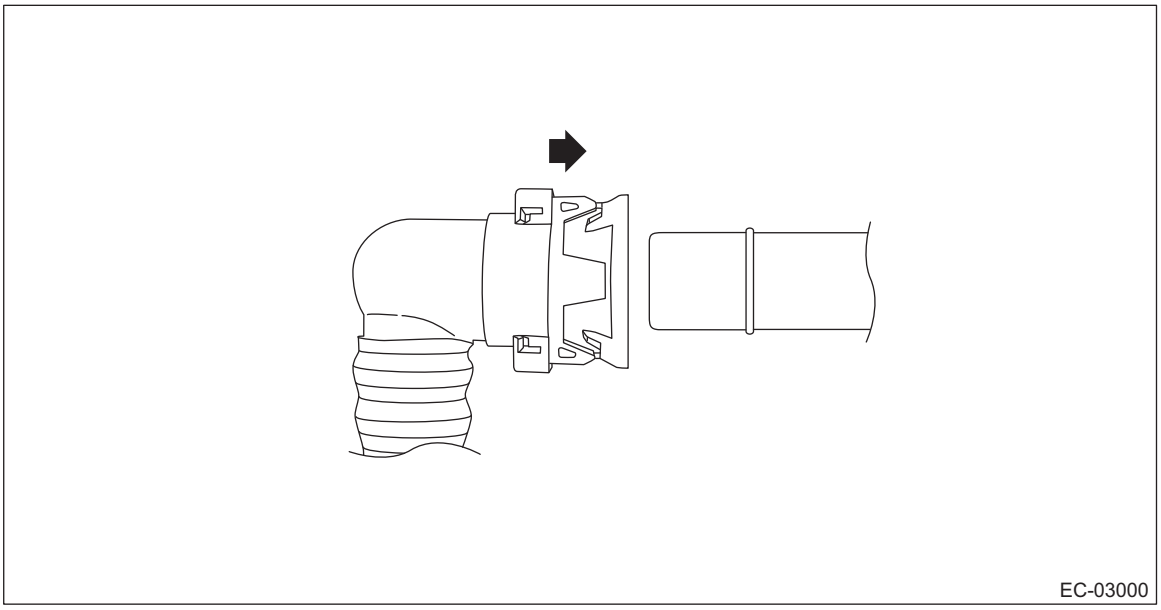
Install in the reverse order of removal.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
• Use a new drain bracket and a drain filter.
• Before installing the drain filter to the drain bracket, check that the claw (a) is securely tightened.



- Install the quick connector as shown in the figure.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: INSPECTION

1) Check that the drain filter has no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

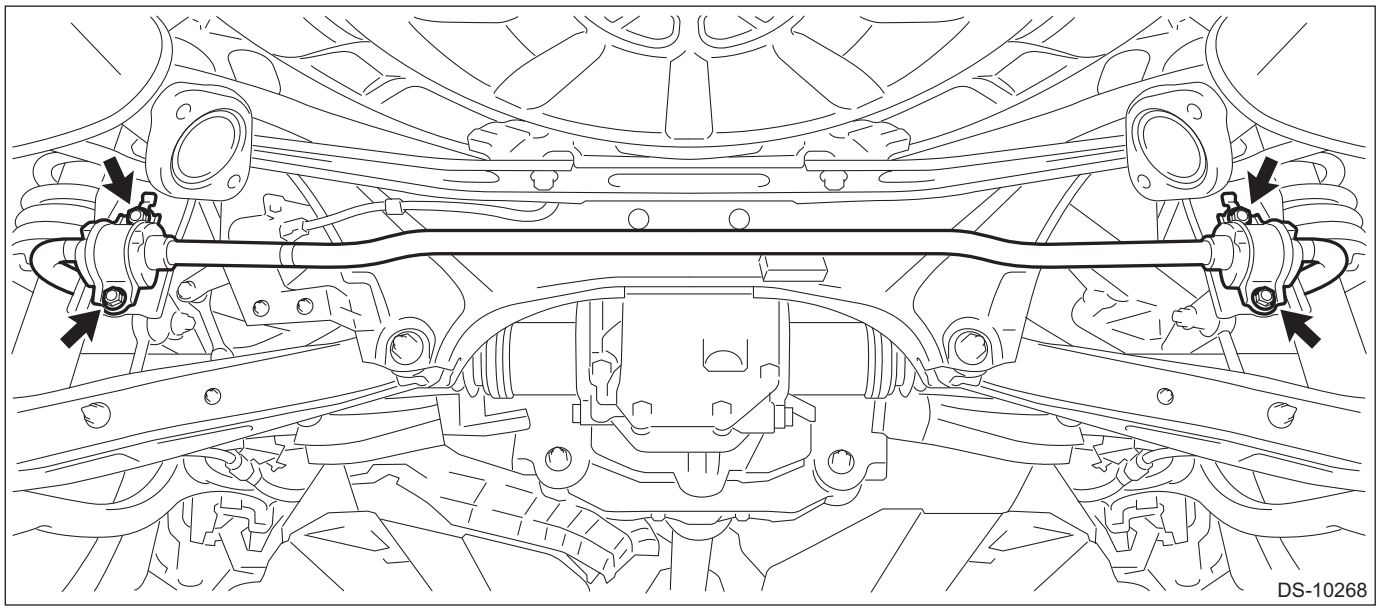
12.Leak Check Valve Assembly

A: REMOVAL

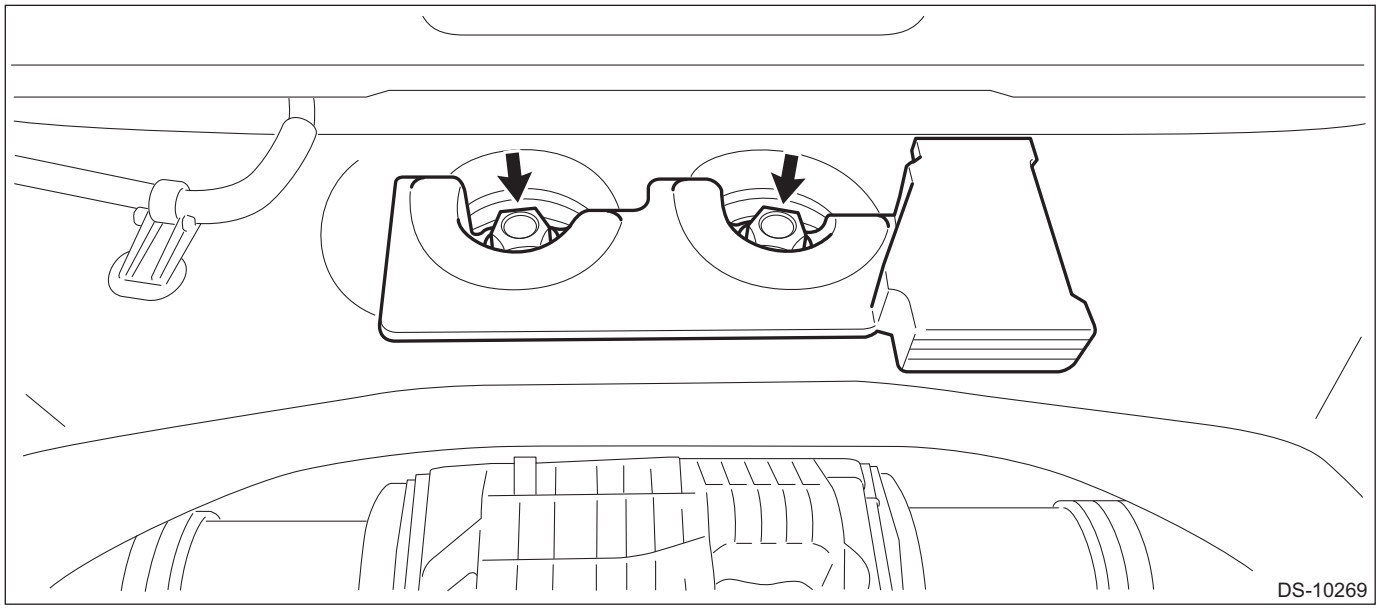
WARNING:
Place "NO OPEN FLAMES" signs near the working area.

CAUTION:
Be careful not to spill fuel.

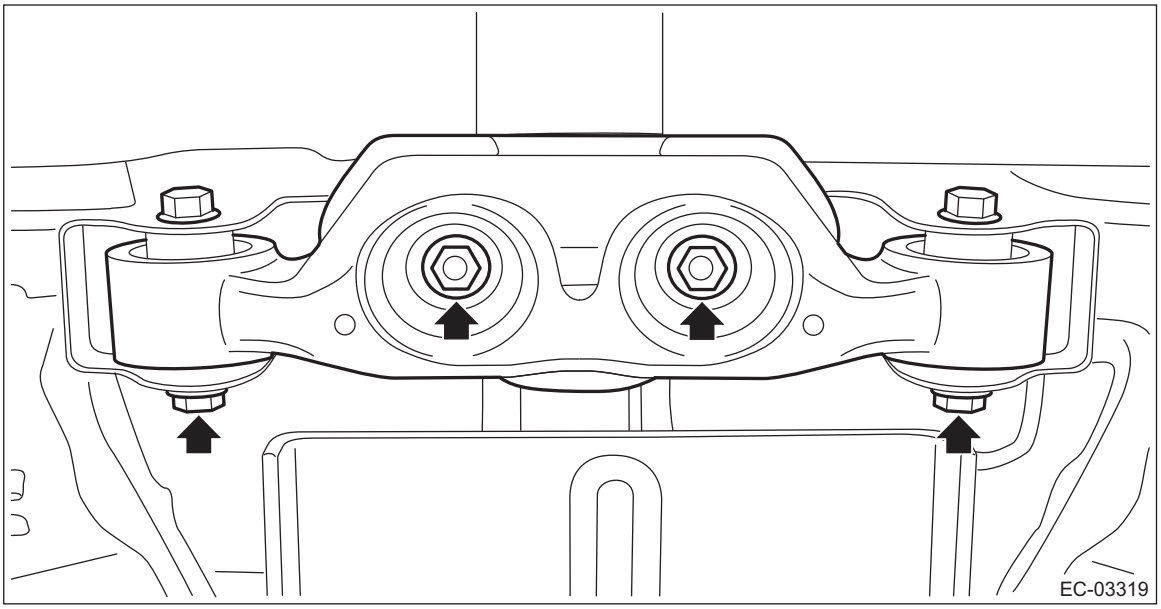
1) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(w/o STI)-139, DRAINING FUEL (WITH SUBARU SELECT MONITOR), PROCEDURE, Fuel.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Lift up the vehicle.
5) Remove the rear exhaust pipe. <Ref. to EX(w/o STI)-48, REMOVAL, Rear Exhaust Pipe.>
6) Remove the propeller shaft. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
7) Support the rear differential with the transmission jack.
8) Remove the bolts, then disconnect the rear stabilizer.



9) Remove the mass damper and the self-locking nuts which hold the rear differential to the rear sub frame assembly.

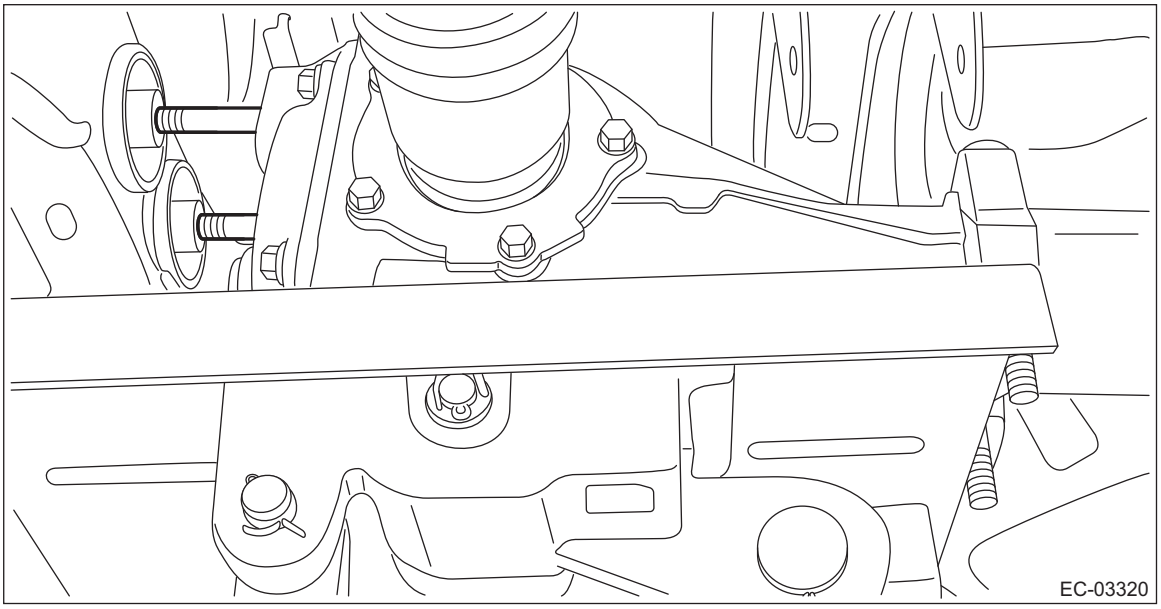


10) Remove the rear differential member from the rear sub frame assembly and the rear differential.

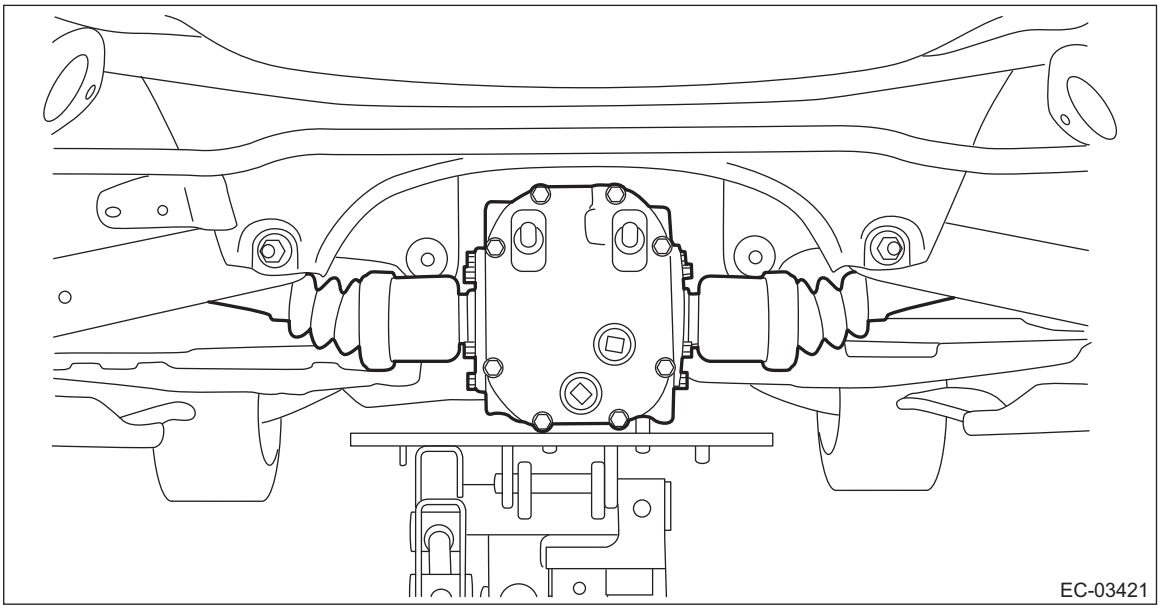


11) Lower the transmission jack gradually until the rear differential is at the position shown in the figure.

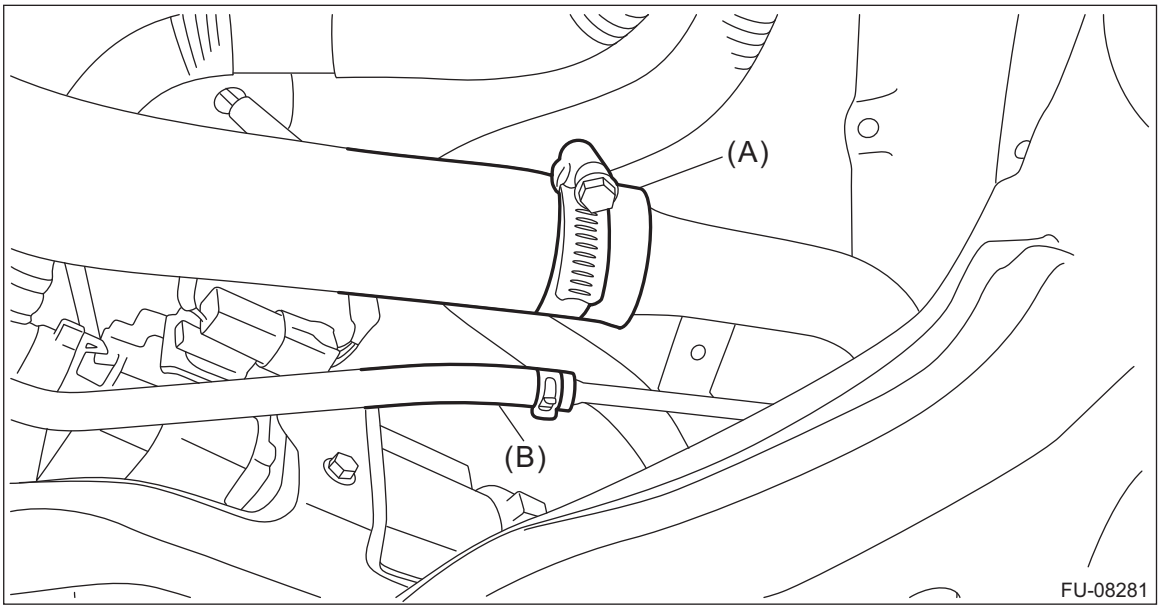
NOTE:
• When pulling out the stud bolt from the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



• Do not lower the rear differential excessively. Doing so may add extra load to the drive shaft or cause the falling-off of the drive shaft.

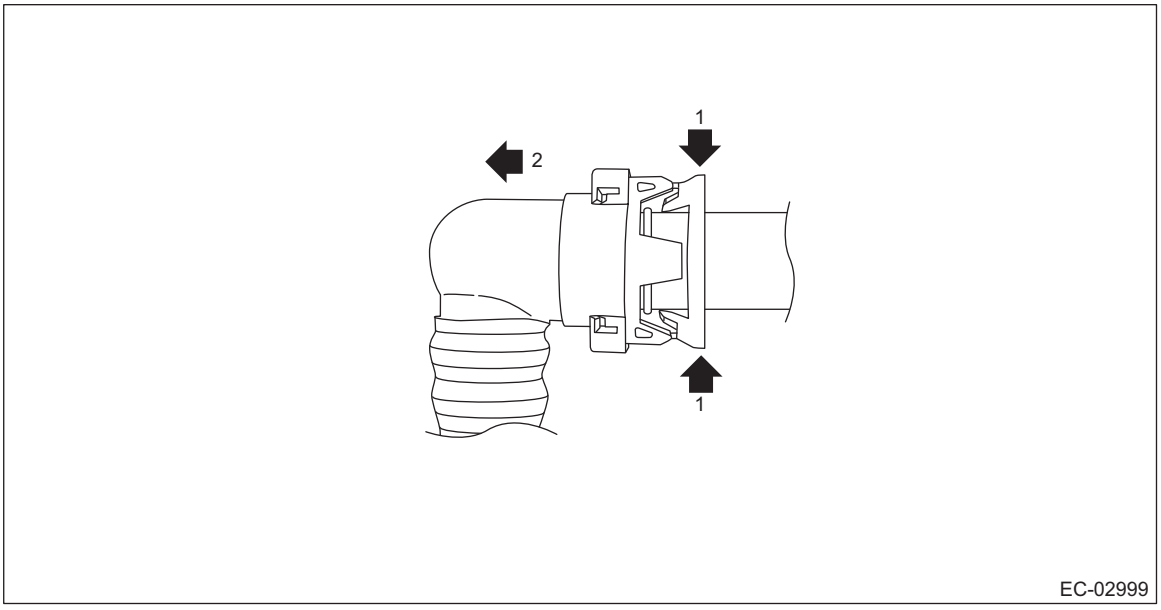


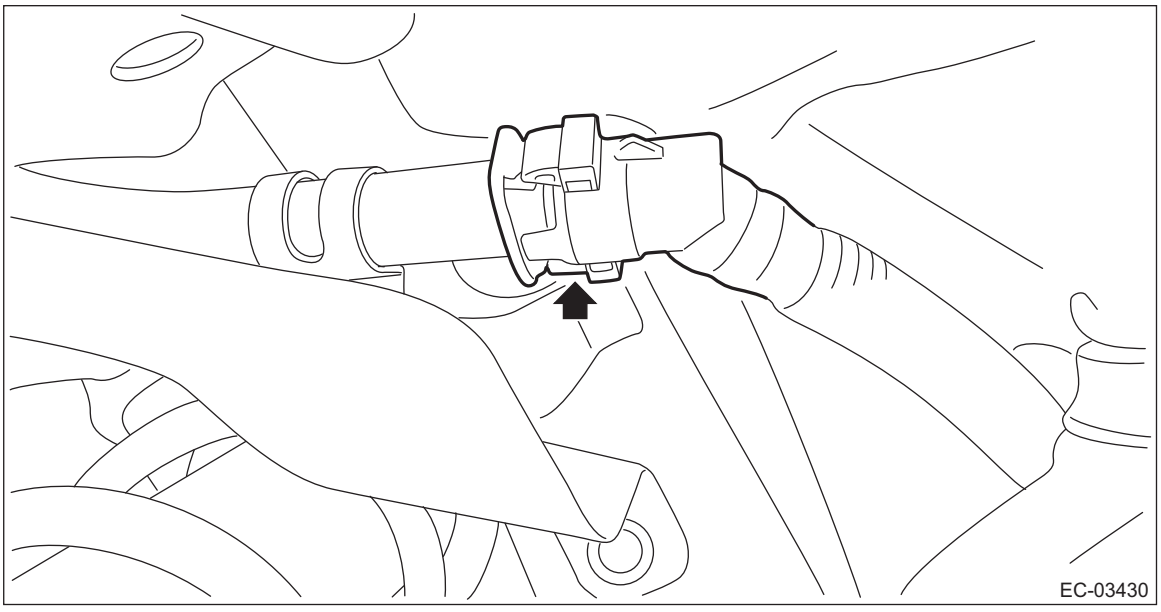
12) Disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe assembly.



13) Disconnect the drain tube from the drain pipe.

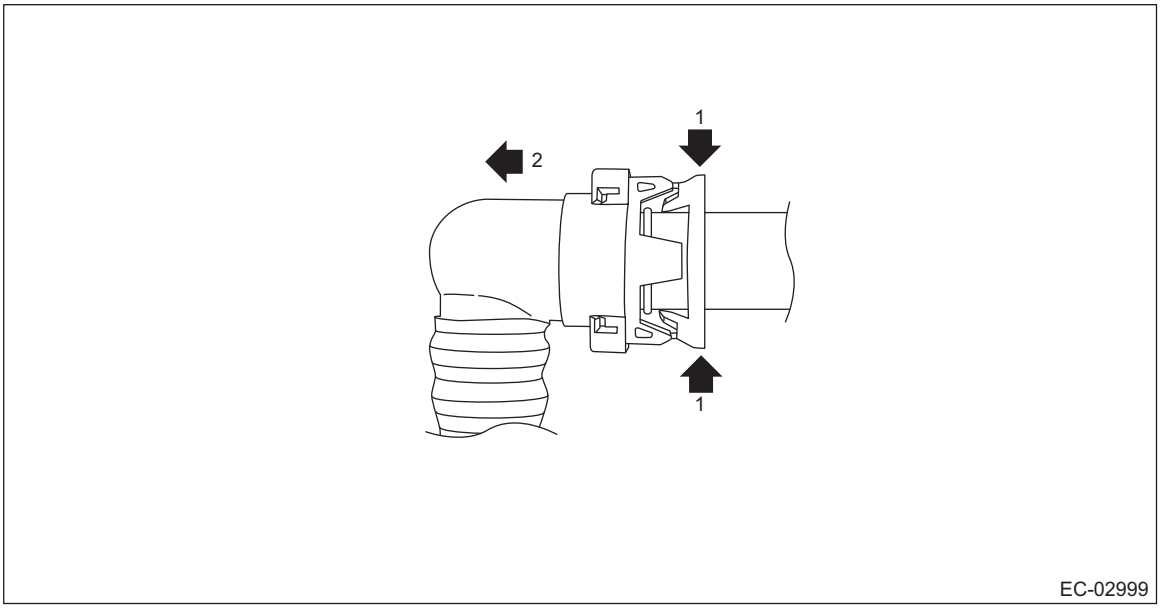
NOTE:
Disconnect the quick connector as shown in the figure.



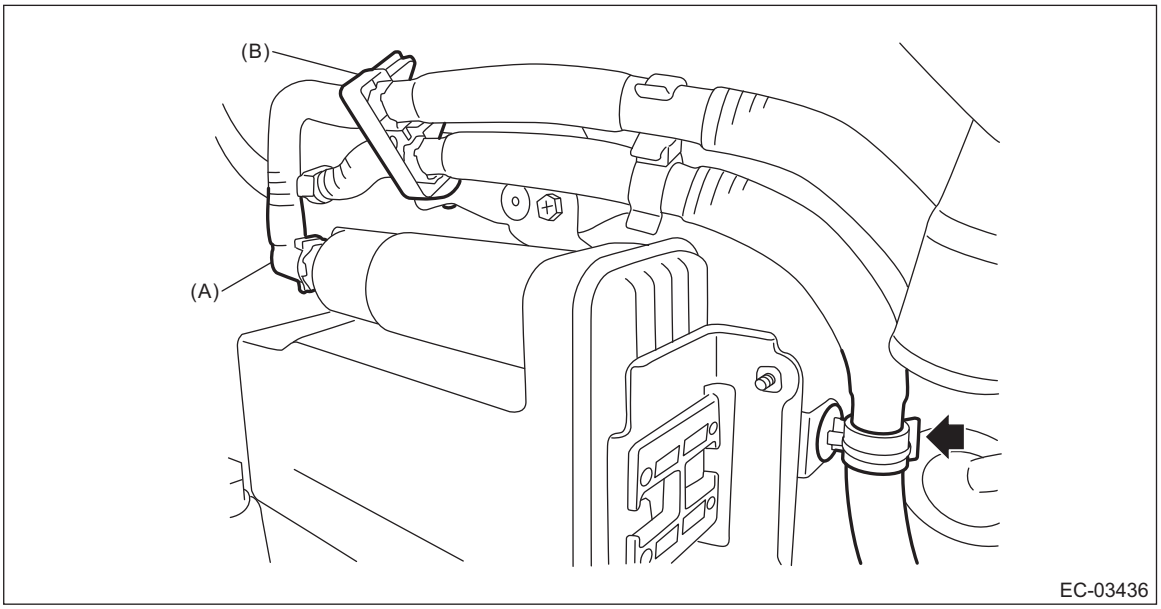


14) Disconnect the drain tube (A) from the canister.

NOTE:
Disconnect the quick connector as shown in the figure.

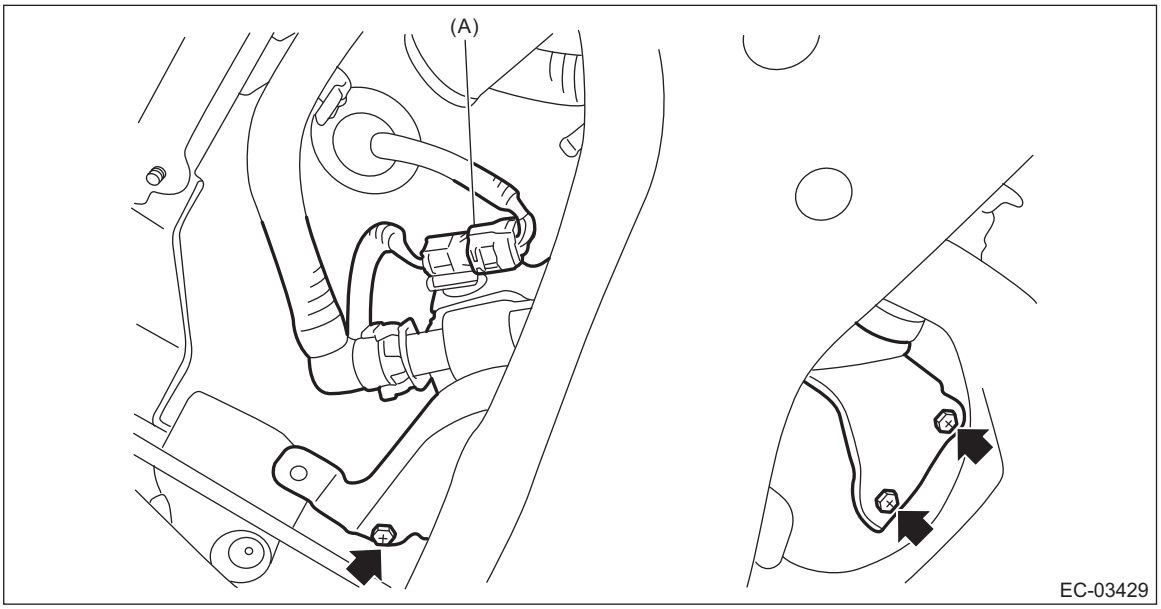


15) Remove the tube clamp (B) from the canister bracket A, and remove the drain tube from the tube clamp.



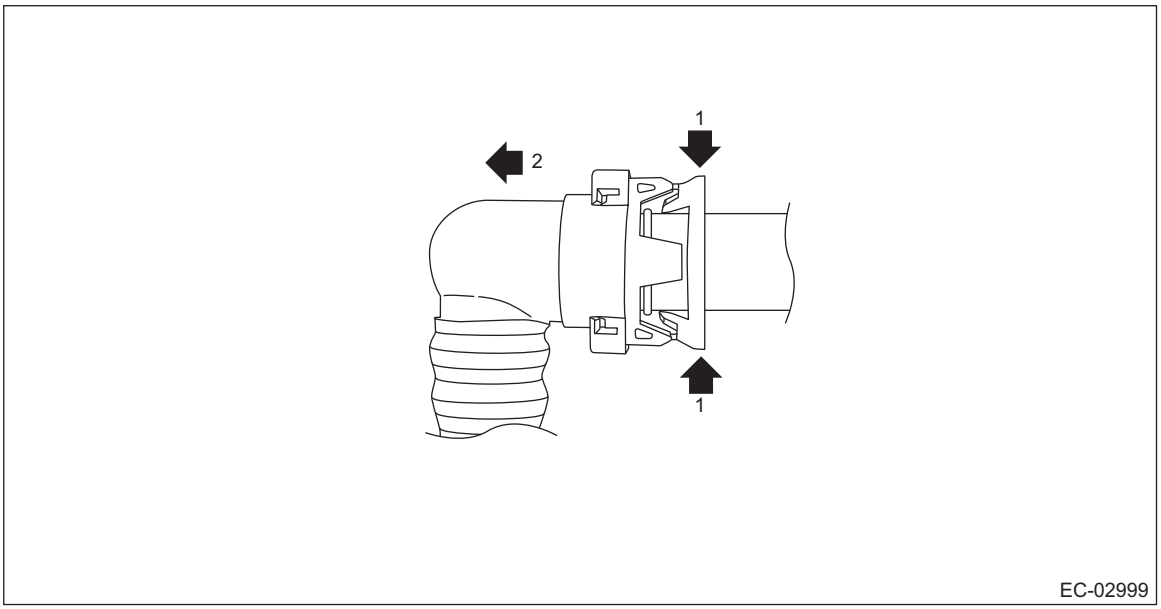
16) Disconnect the connector (A) from the leak check valve assembly.

17) Remove the bolts which hold the leak check valve assembly and remove the leak check valve assembly together with drain tube from vehicle.

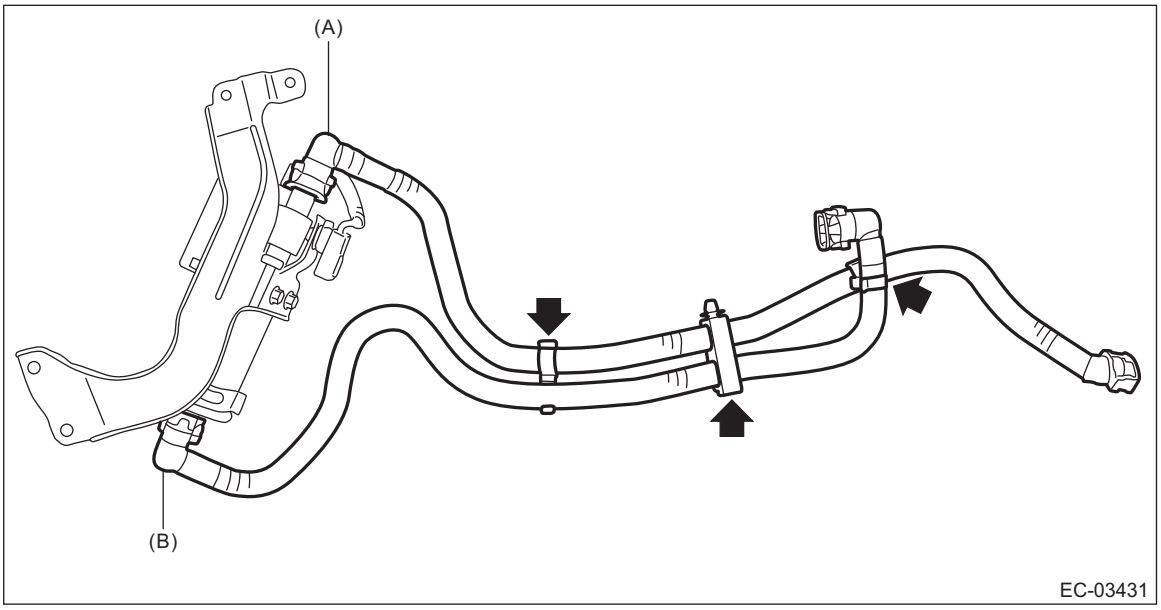


18) Disconnect the drain tube A (A) and drain tube B (B) from the leak check valve assembly.

NOTE:
Disconnect the quick connector as shown in the figure.



19) Remove the tube clamp from the drain tube A (A) and drain tube B (B).

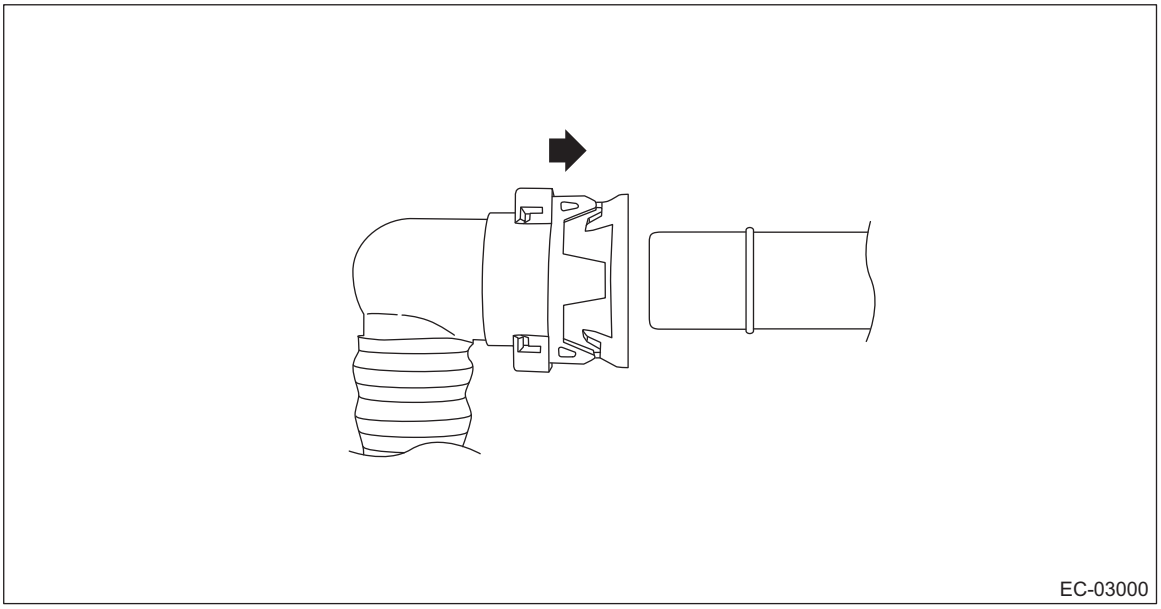


B: INSTALLATION

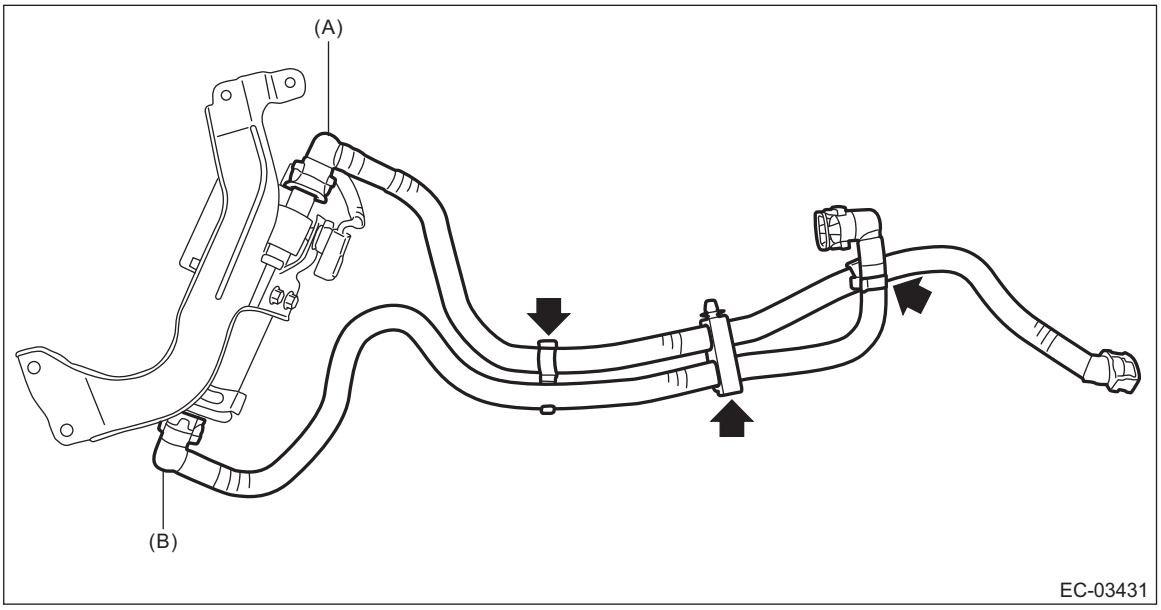
1) Connect the drain tube A (A) and drain tube B (B) to the leak check valve assembly.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.



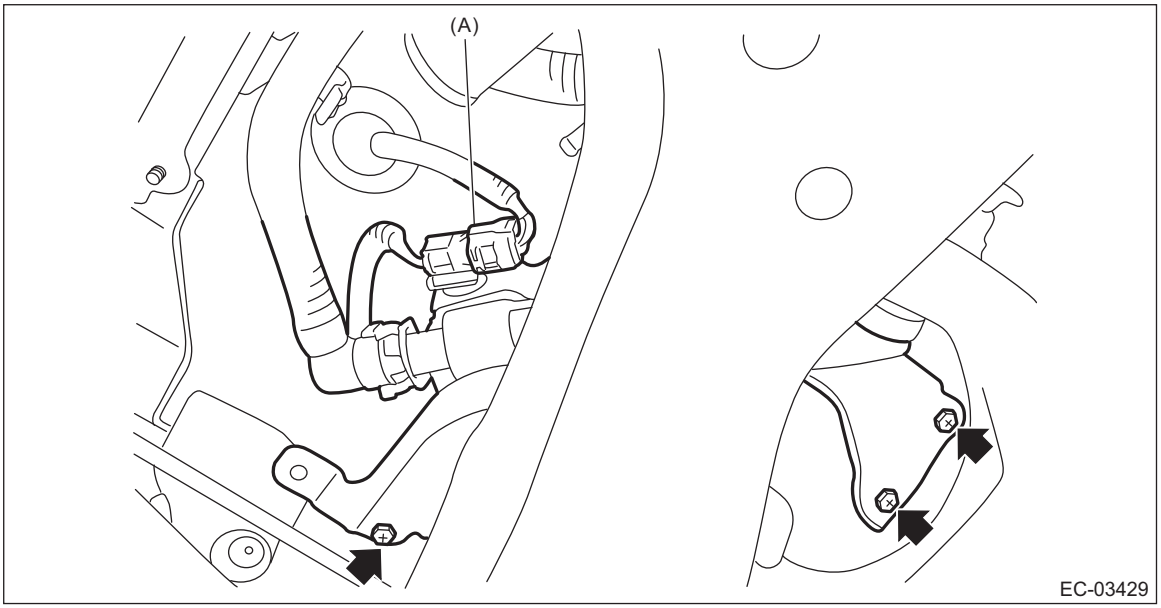
2) Install the tube clamp to the drain tube A (A) and drain tube B (B).



3) Set the leak check valve assembly together with drain tube to the vehicle and install the bolt which holds the leak check valve assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

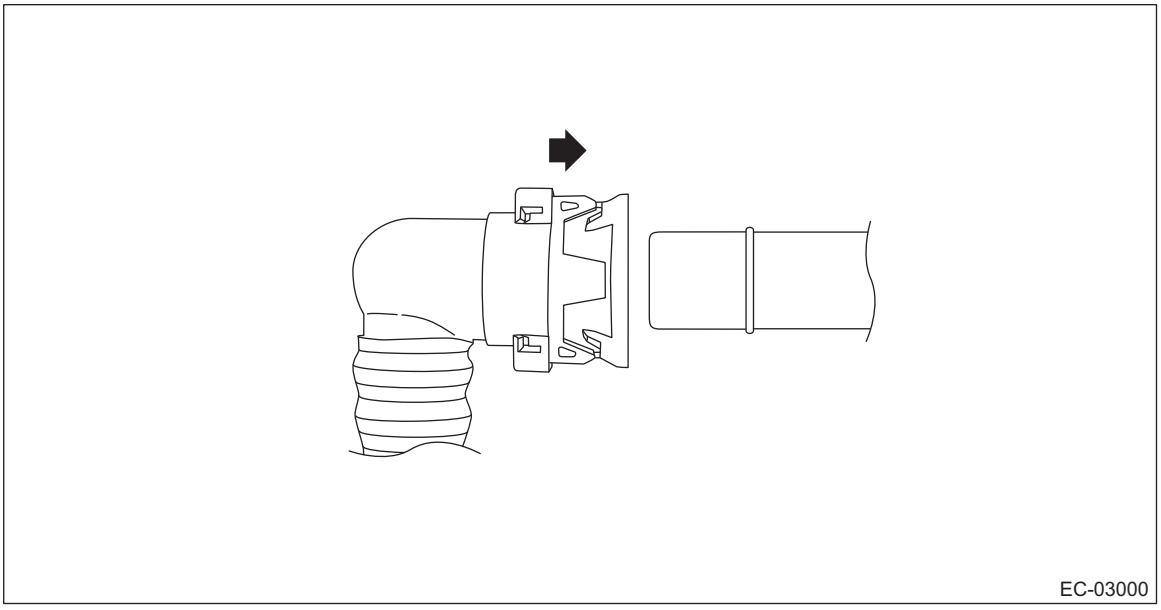
4) Connect the connector (A) to the leak check valve assembly.



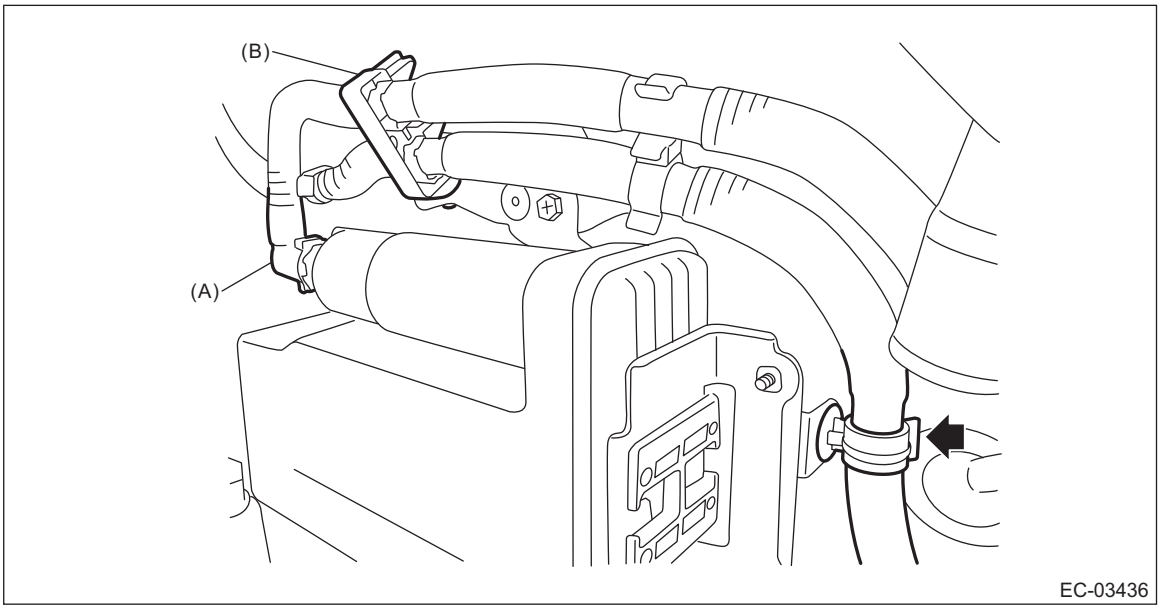
5) Connect the drain tube (A) to the canister.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

NOTE:
Connect the quick connector as shown in the figure.



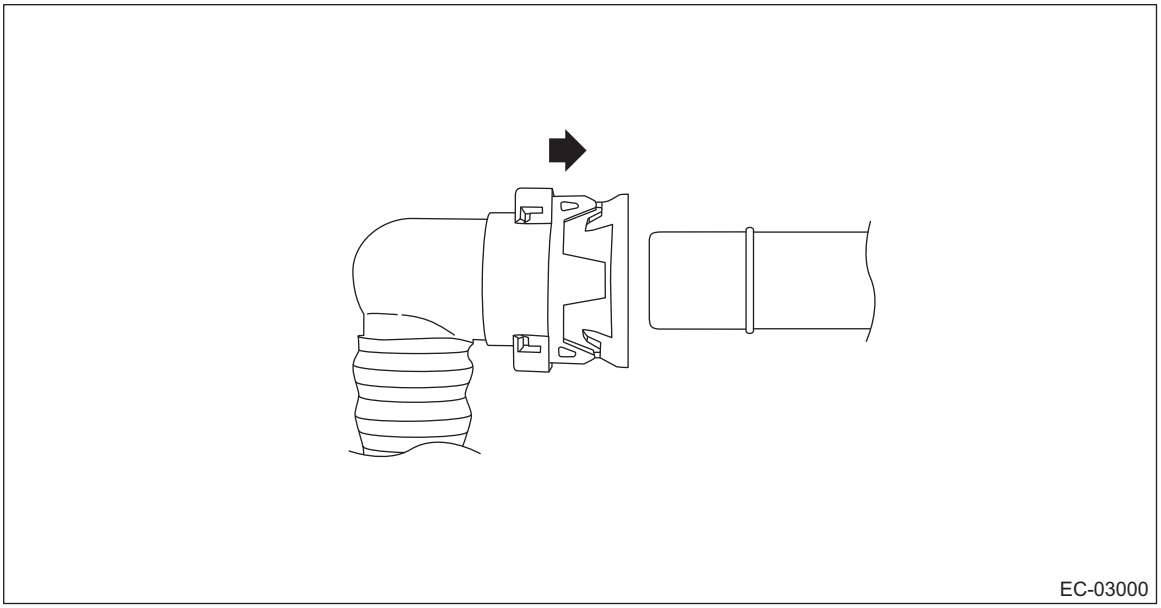
6) Install the tube clamp (B) to the canister bracket A, and install the drain tube to the tube clamp.

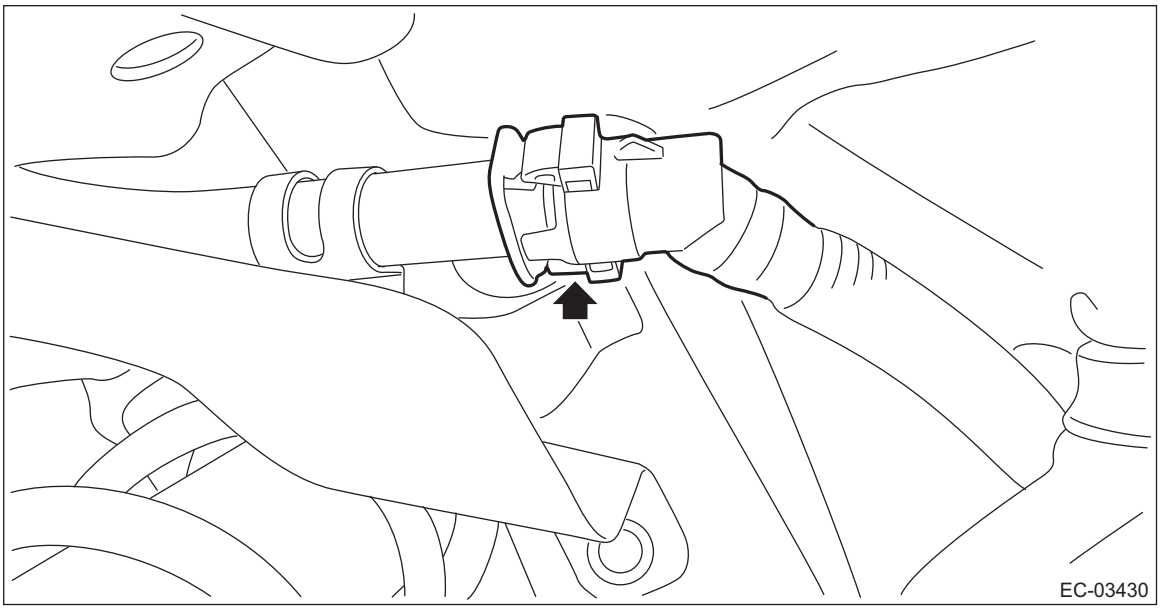


7) Connect the drain tube to the drain pipe.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

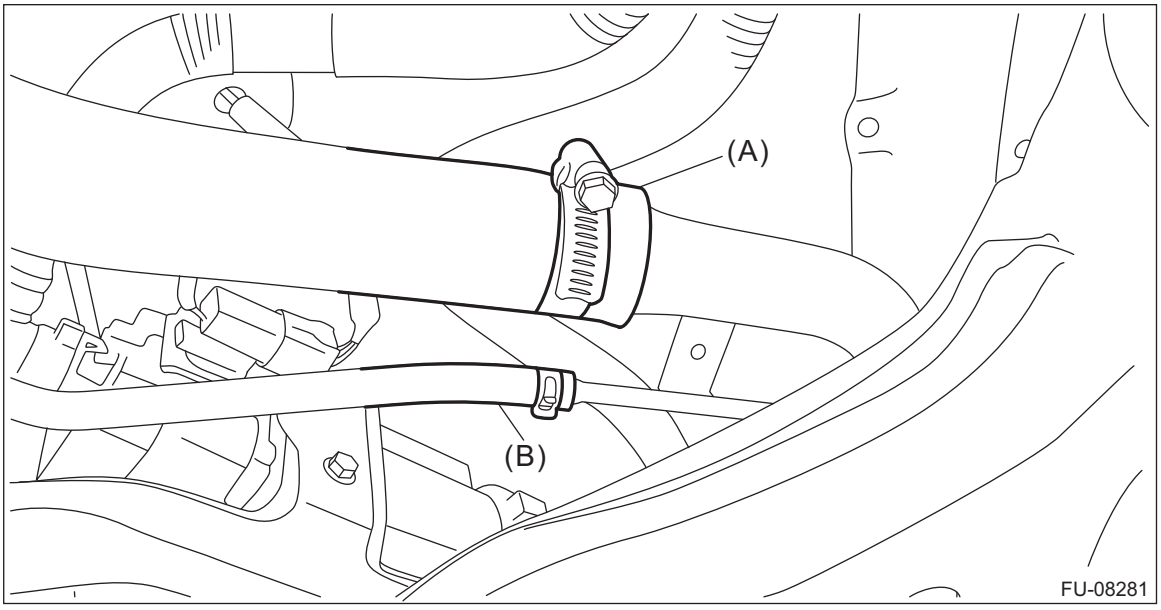
NOTE:
Connect the quick connector as shown in the figure.

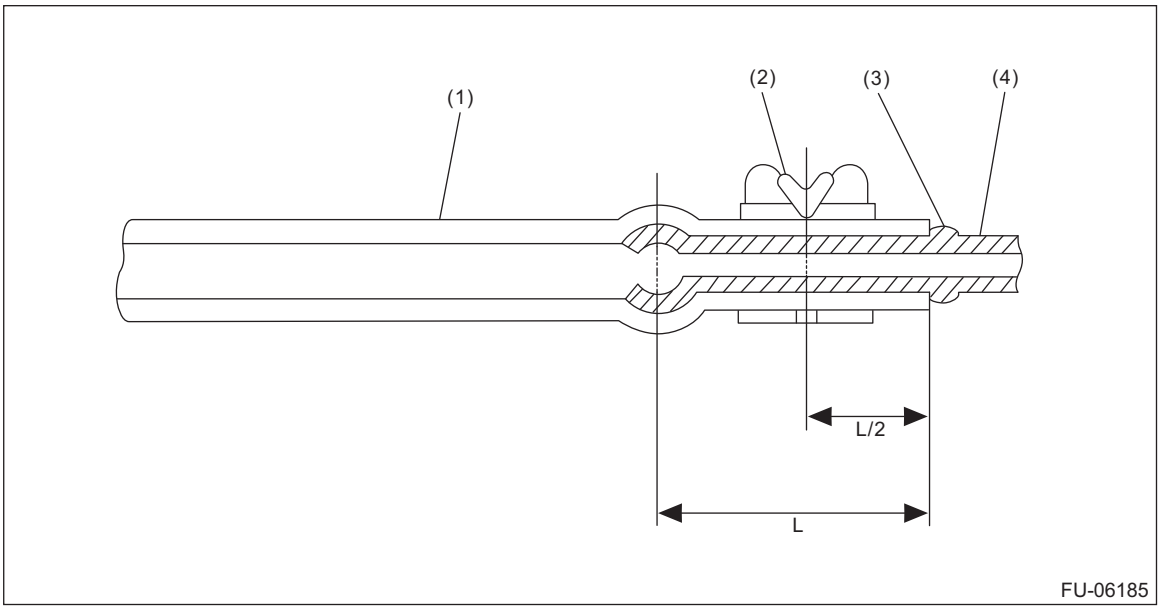




8) Securely insert the fuel filler hose (A) and evaporation hose (B) until the hose end contacts the spool, then attach the clamp and clip as shown in the figure.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

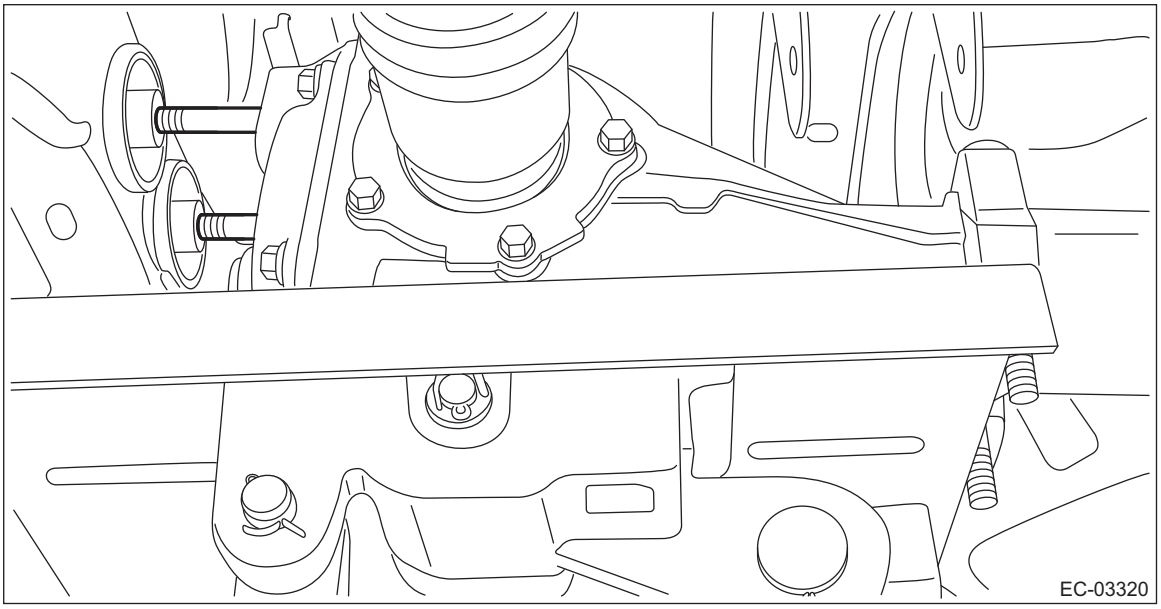




(1) Hose
(2) Clamp and clip
(3) Spool
(4) Pipe

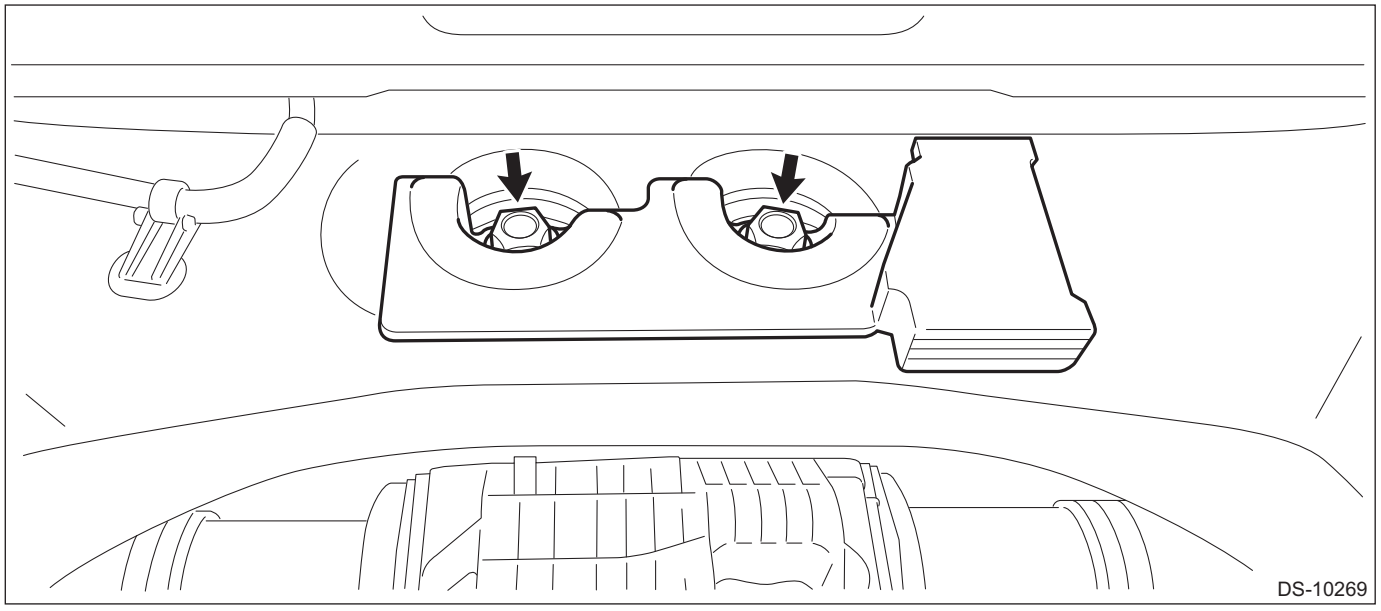
9) Lift up the transmission jack gradually, and set the rear differential to the rear sub frame assembly.

NOTE:
When inserting the stud bolt into the bushing portion of the rear sub frame assembly, adjust the angle and location of transmission jack and jack stand.



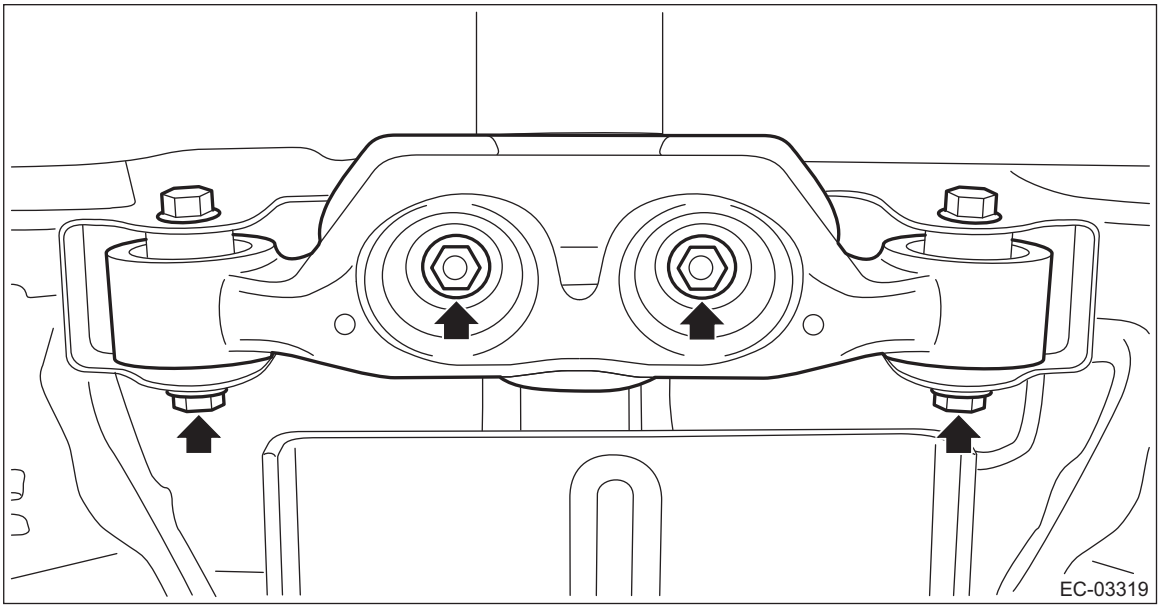
10) Set the mass damper to the rear sub frame assembly, and temporarily tighten the self-locking nuts which hold the rear differential.

NOTE:
Use a new self-locking nut.



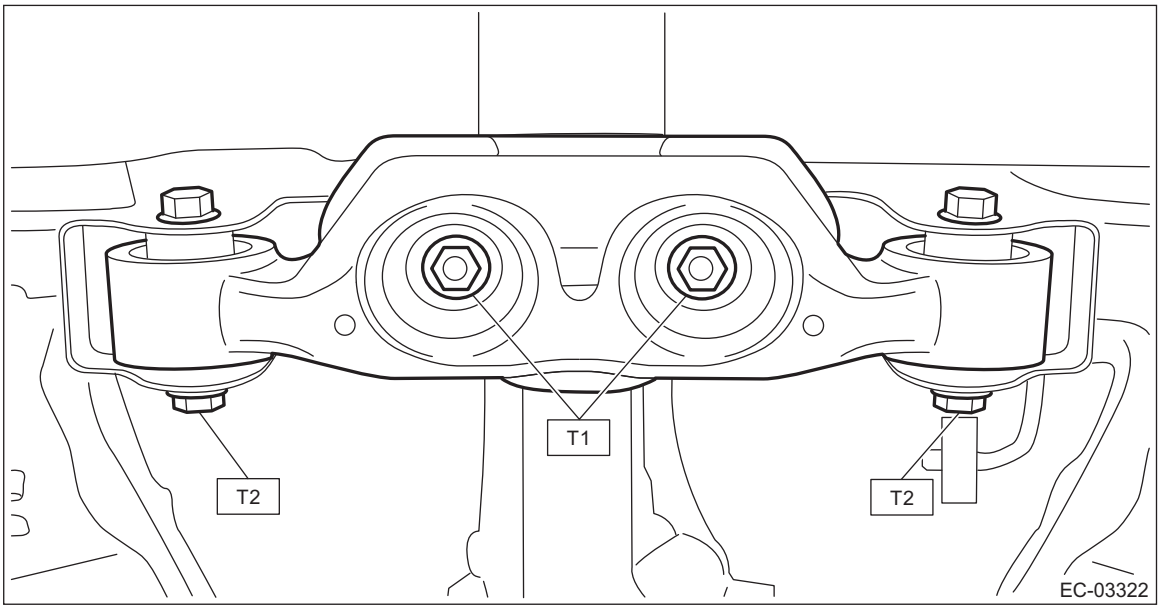
11) Set the rear differential member to the rear sub frame assembly and rear differential, and temporarily tighten the self-lock nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

NOTE:
Use a new self-locking nut.



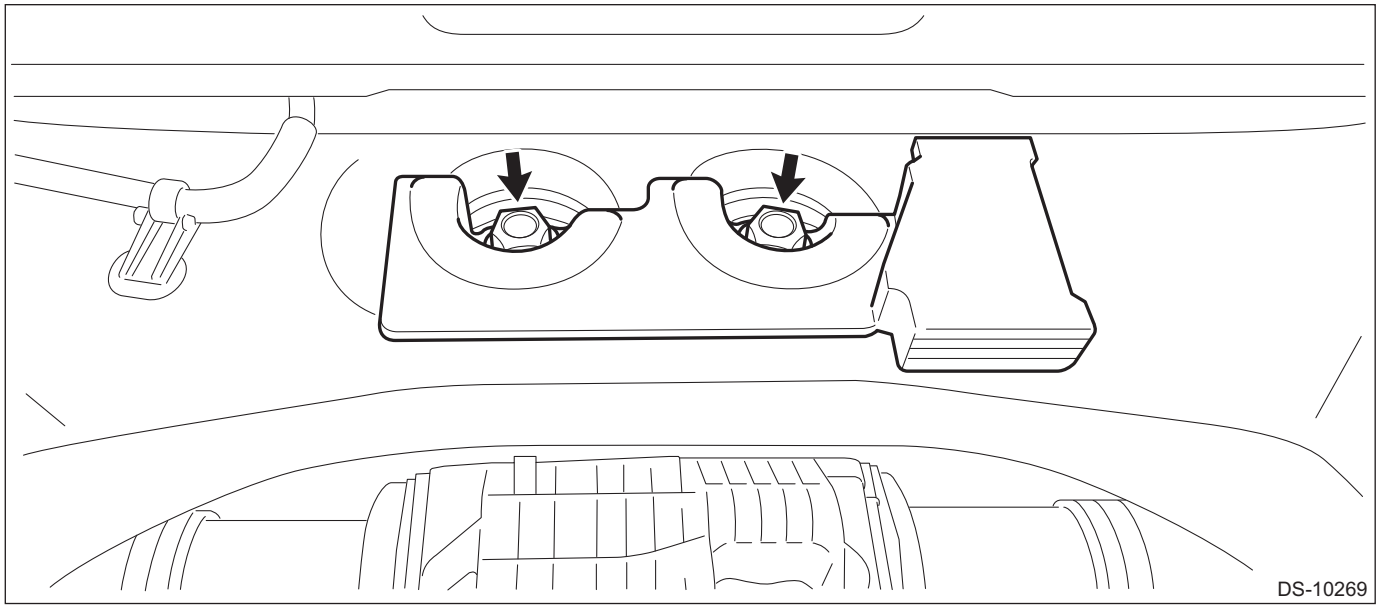
12) Remove the transmission jack from the rear differential.
13) Tighten the self-locking nuts which secure the rear differential member to the rear sub frame assembly and rear differential.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 110 N·m (11.2 kgf-m, 81.1 ft-lb)



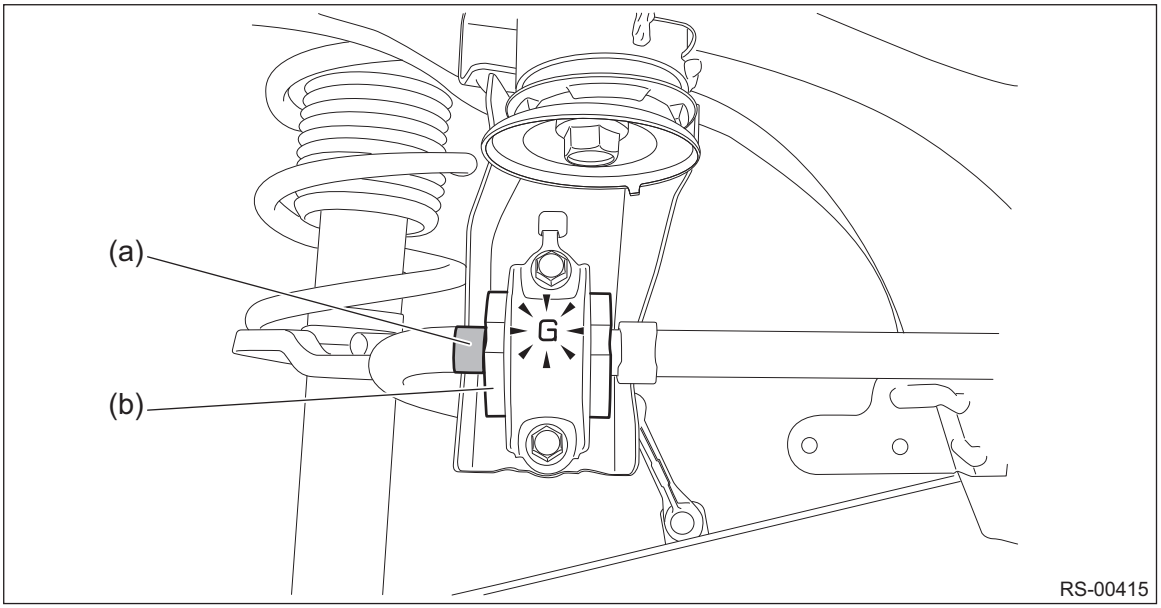
14) Tighten the self-locking nuts which secure the rear differential to the rear sub frame assembly.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

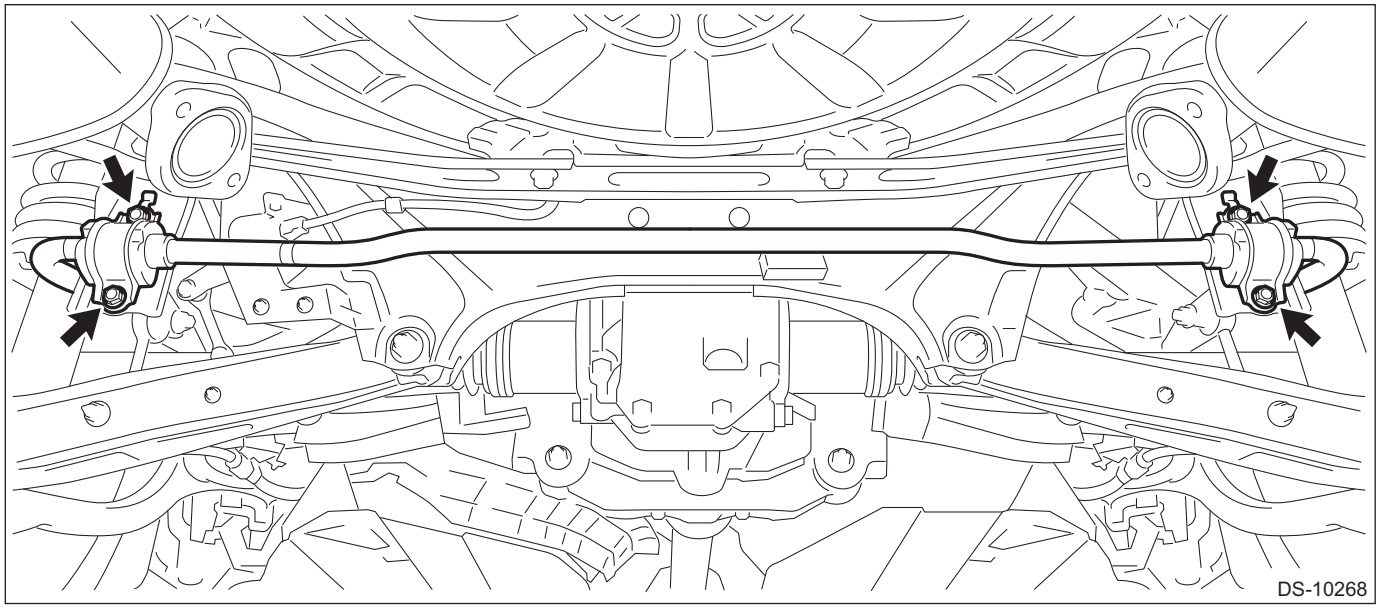


15) Install the rear stabilizer.

CAUTION:
• Always tighten the bushing in the state where the vehicle is at curb weight and the wheels are in full contact with the ground.
• Install the clamp - stabilizer bushing with the "G" character facing upward.
• When installing, align the edge of identification paint (a) to the end face of the bushing (b).



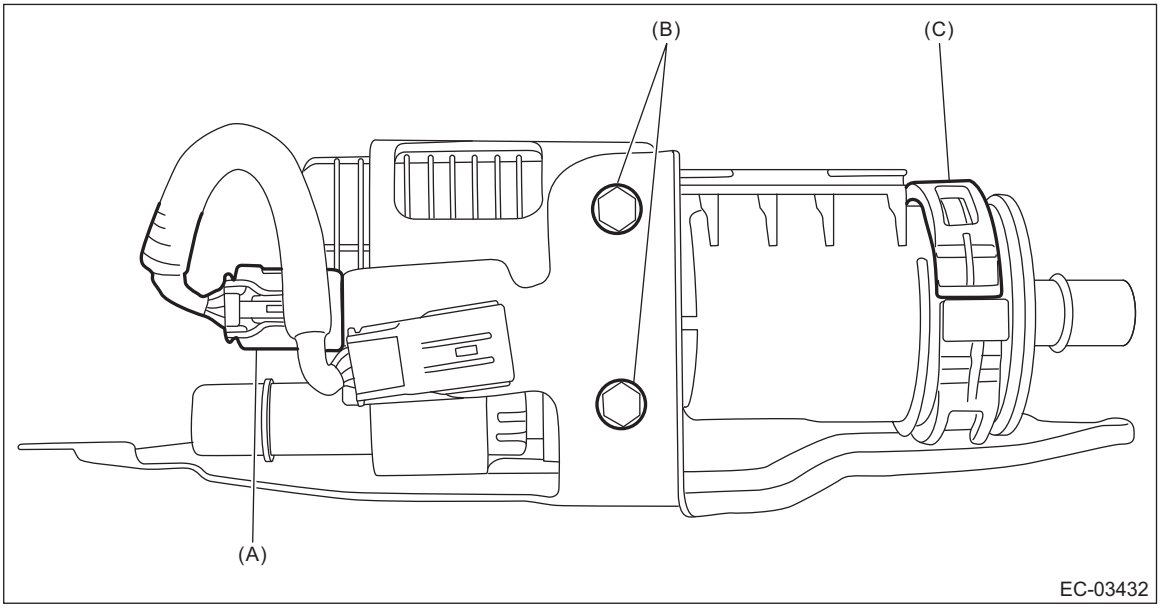
Tightening torque:
30 N·m (3.1 kgf-m, 22 ft-lb)



16) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
17) Install the rear exhaust pipe. <Ref. to EX(w/o STI)-49, INSTALLATION, Rear Exhaust Pipe.>
18) Lower the vehicle.
19) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

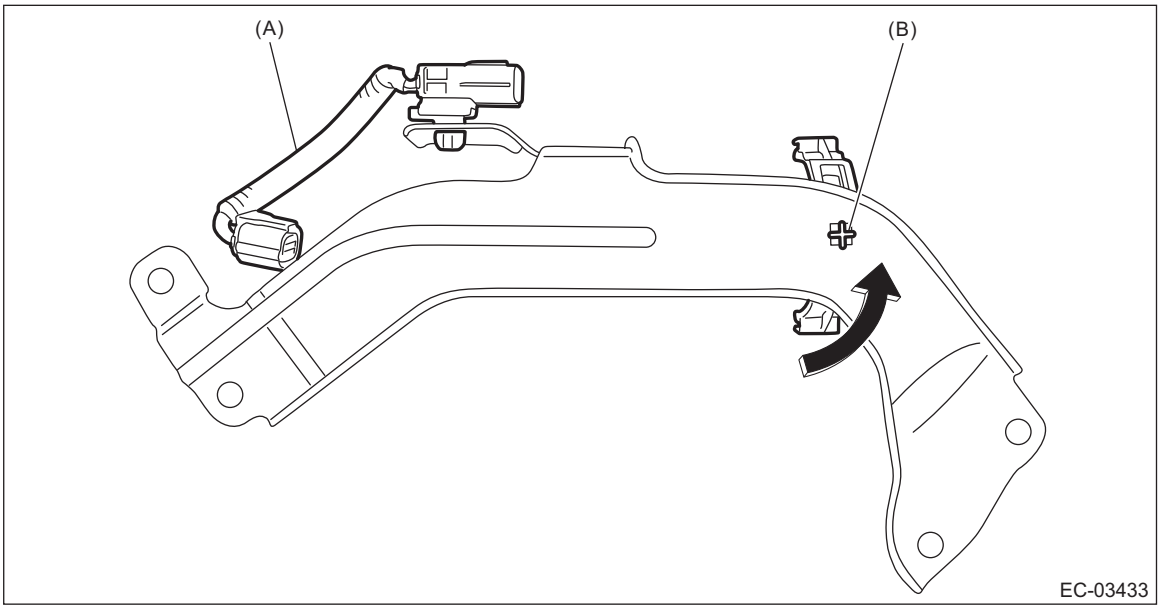
C: DISASSEMBLY

1) Disconnect the connector (A) from the leak check valve assembly.
2) Remove the bolt (B) securing the leak check valve assembly to the leak check valve bracket.
3) Remove the clamp B (C) which secures the leak check valve assembly, and remove the leak check valve assembly.



4) Remove the harness (A) from the leak check valve bracket.

5) Rotate the clamp A (B) in the direction of the arrow and remove it from the leak check valve bracket.



D: ASSEMBLY

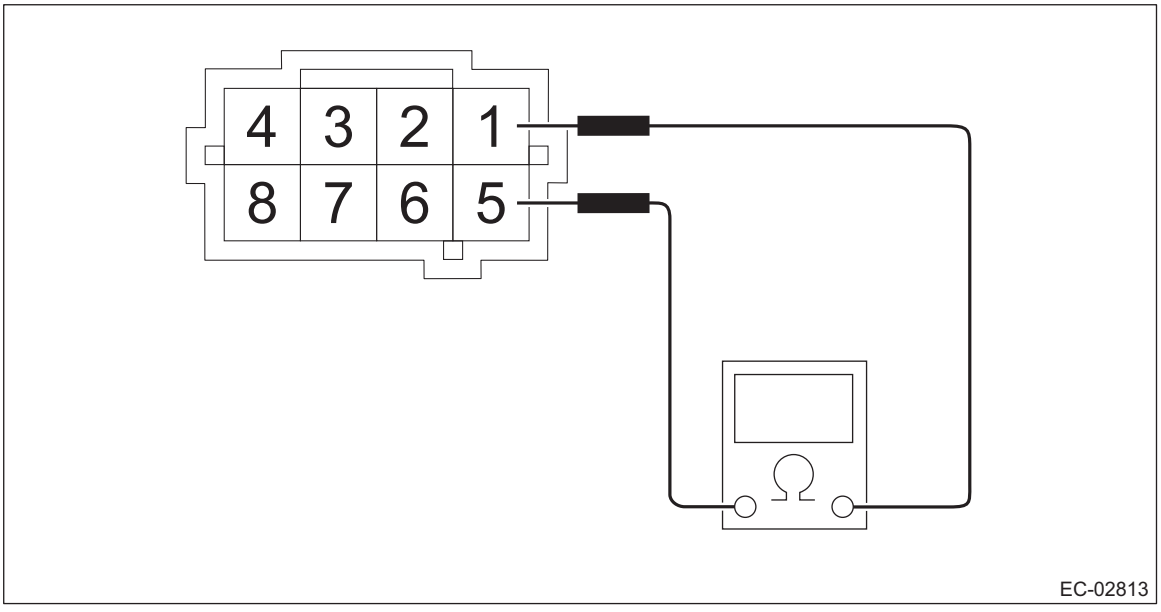
Assemble in the reverse order of disassembly.

Tightening torque:
5.4 N·m (0.6 kgf-m, 4.0 ft-lb)

E: INSPECTION

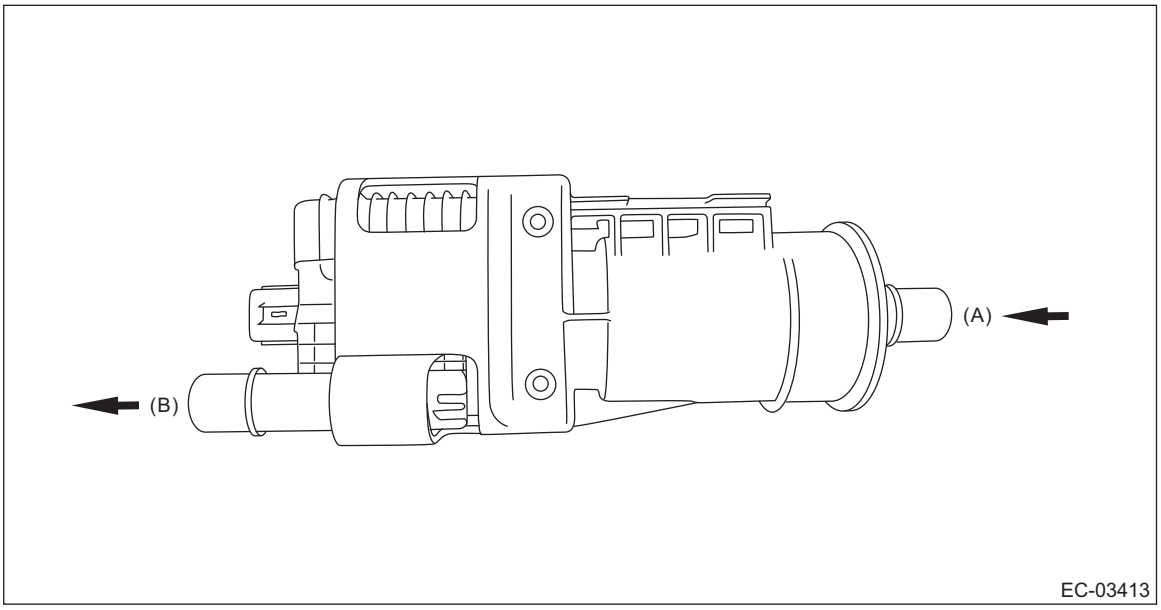
1. CHECK SWITCHING VALVE

1) Check the resistance between switching valve terminals.



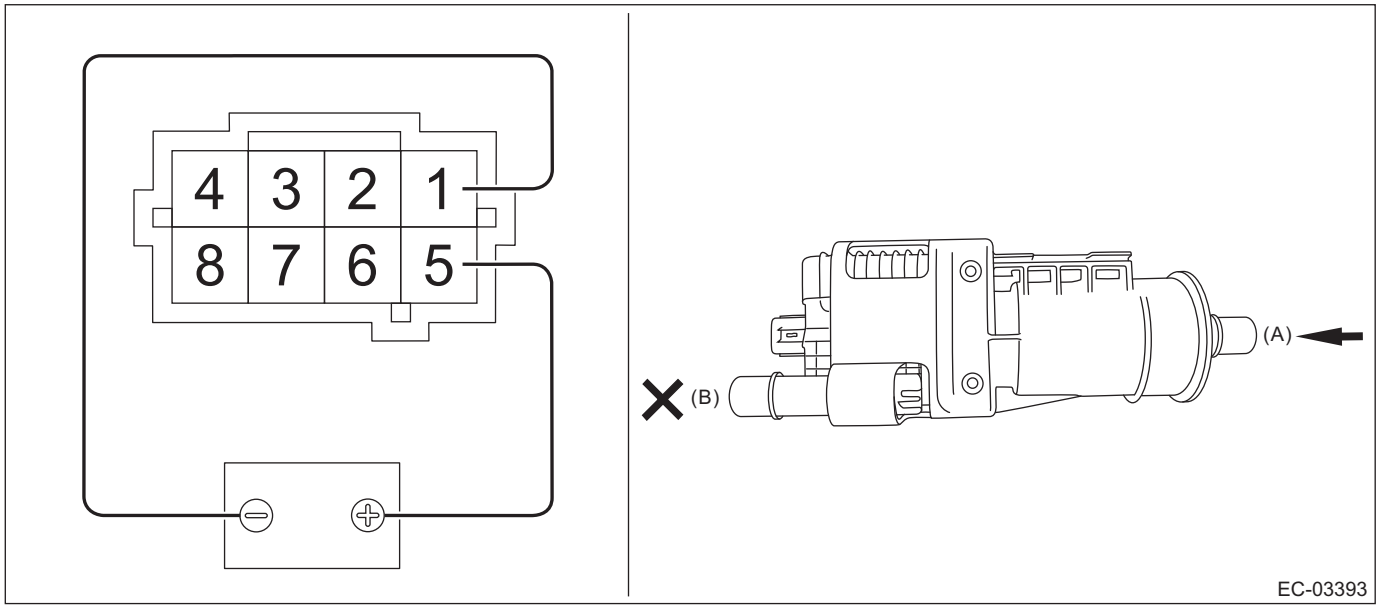
Terminal No.	Standard
1 and 5	27^{+3}_{-2} Ω (when 20°C (68°F))
	31±4 Ω (60°C (140°F))

2) Check that air is discharged from (B) when air is blown into (A).



3) Connect the battery positive terminal to the terminal No. 5 and the battery negative terminal to the terminal No. 1. Check that air does not come out from (B) when air is blown into (A).

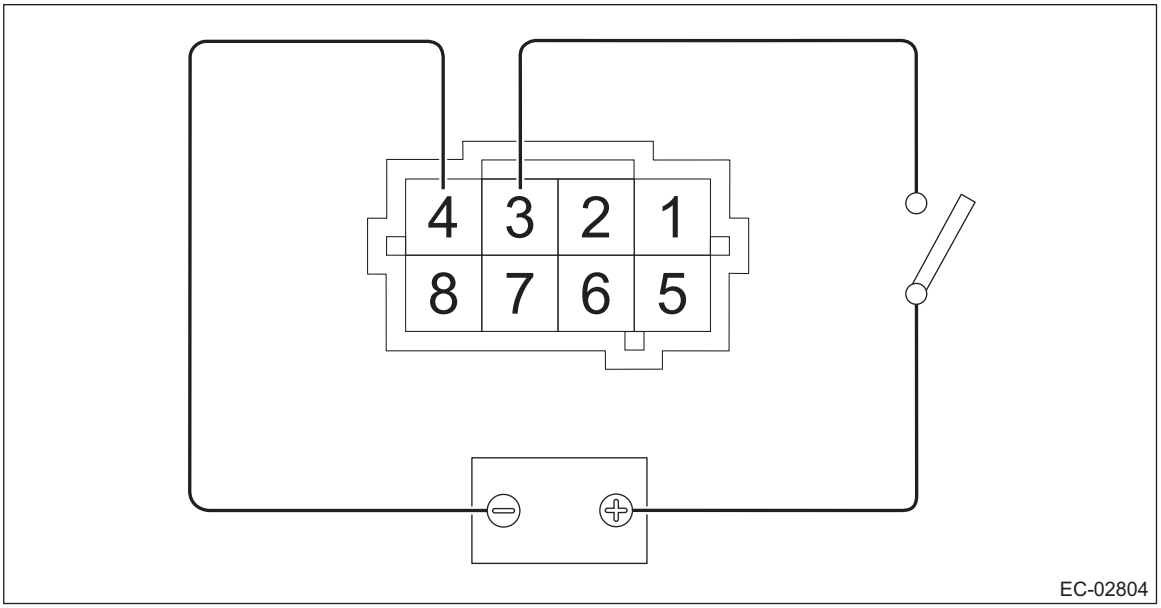
NOTE:
The purpose of this inspection is to check the valve movement, and it would be success if a large change of flow can be checked resulting from valve opening/closing. Therefore, it does not indicate a malfunction if a small amount of flow from (B) is detected when the valve is closed.



2. CHECK VACUUM PUMP

1) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and inspect the vacuum pump operation.

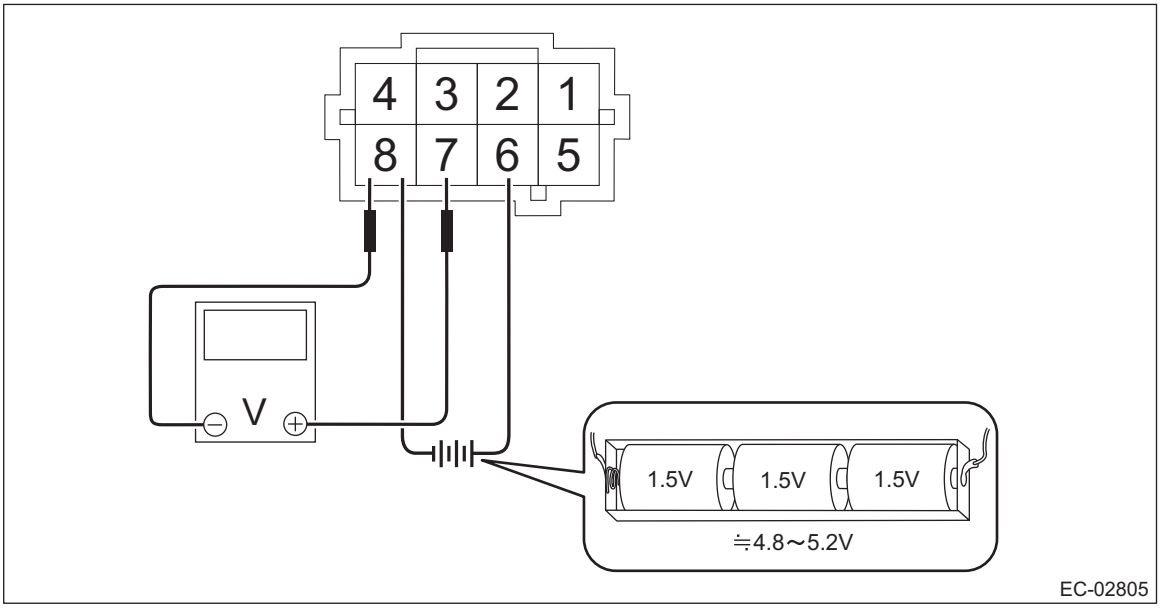
CAUTION:
Do not operate the vacuum pump for 5 minutes or more.



3. CHECK PRESSURE SENSOR

1) Connect dry-cell battery positive terminal to terminal No. 6 and dry-cell battery ground terminal to terminal No. 8, circuit tester positive terminal to terminal No. 7 and the circuit tester ground terminal to terminal No. 8.

NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC constant voltage power source can also be used.

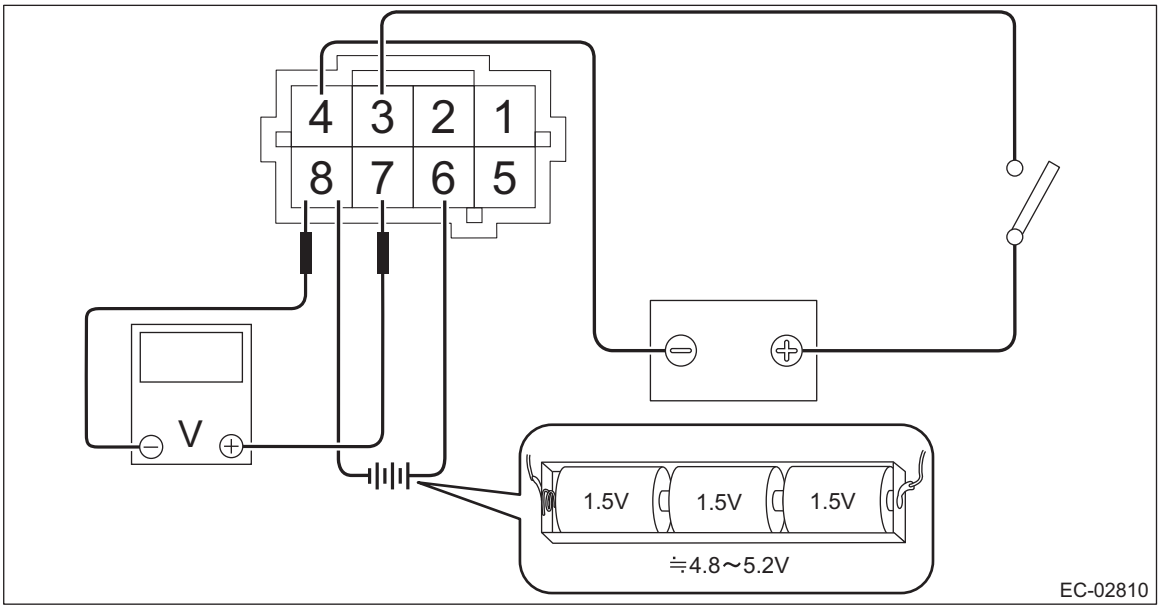


2) Check the voltage at a normal atmospheric pressure.

NOTE:
The atmospheric pressure at higher altitude is lower than normal. Therefore, the voltage is lower than the standard value.

Terminal No.	Standard
7 (+) and 8 (–)	Approx. 3.5 V (when 25°C (77°F))

3) Connect the battery positive terminal to terminal No. 3 and the battery ground terminal to terminal No. 4, and check that there is a voltage drop from the voltage measured in step 2) when the vacuum pump is operated.



4. OTHER INSPECTIONS

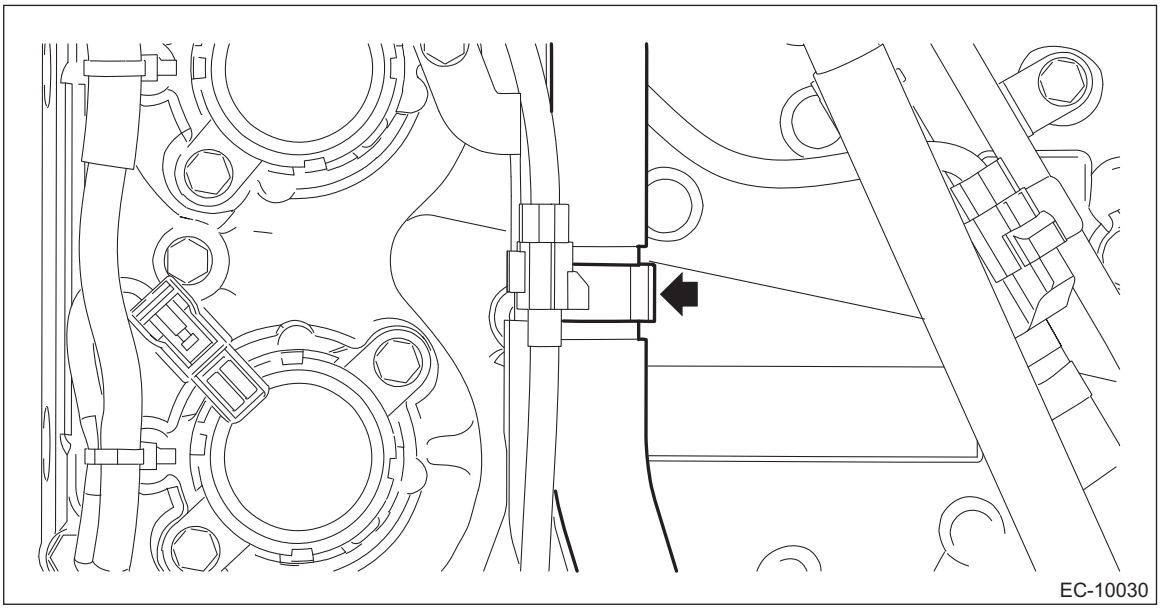
1) Check that the leak check valve assembly and leak check valve bracket have no deformation, cracks or other damages.
2) Check that the tube has no cracks, damage or loose part.

13.PCV Pipe

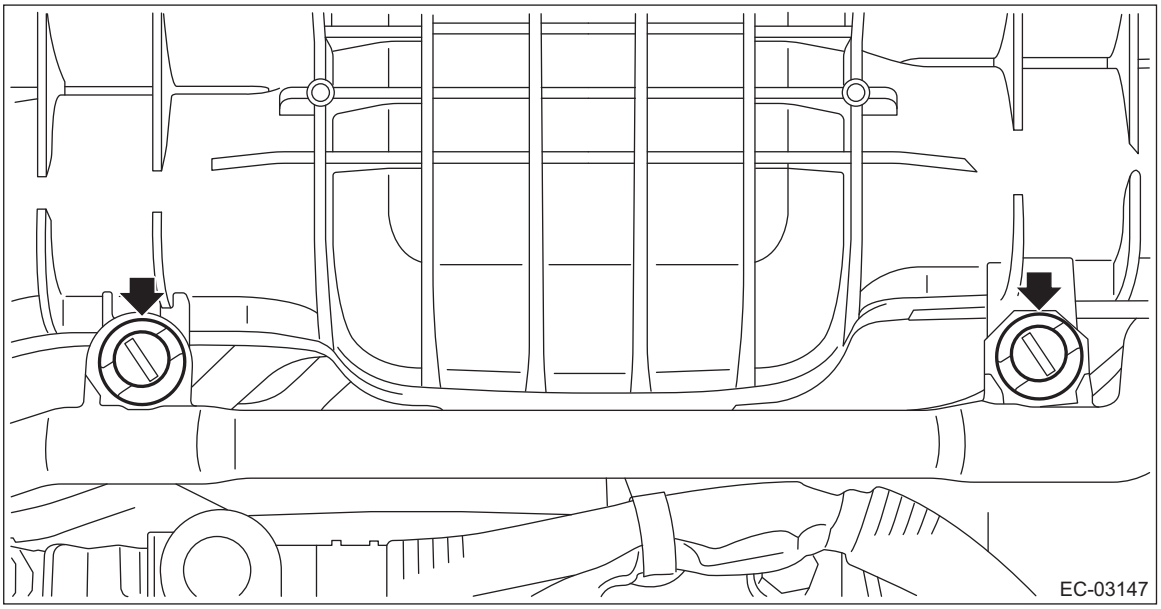
A: REMOVAL

CAUTION:
Do not remove except when the PCV pipe assembly is broken.

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Collect the refrigerant from A/C system. <Ref. to AC-26, Refrigerant Recovery Procedure.>
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Remove the intake duct No. 2. <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
5) Remove the PCV pipe assembly from the clip.

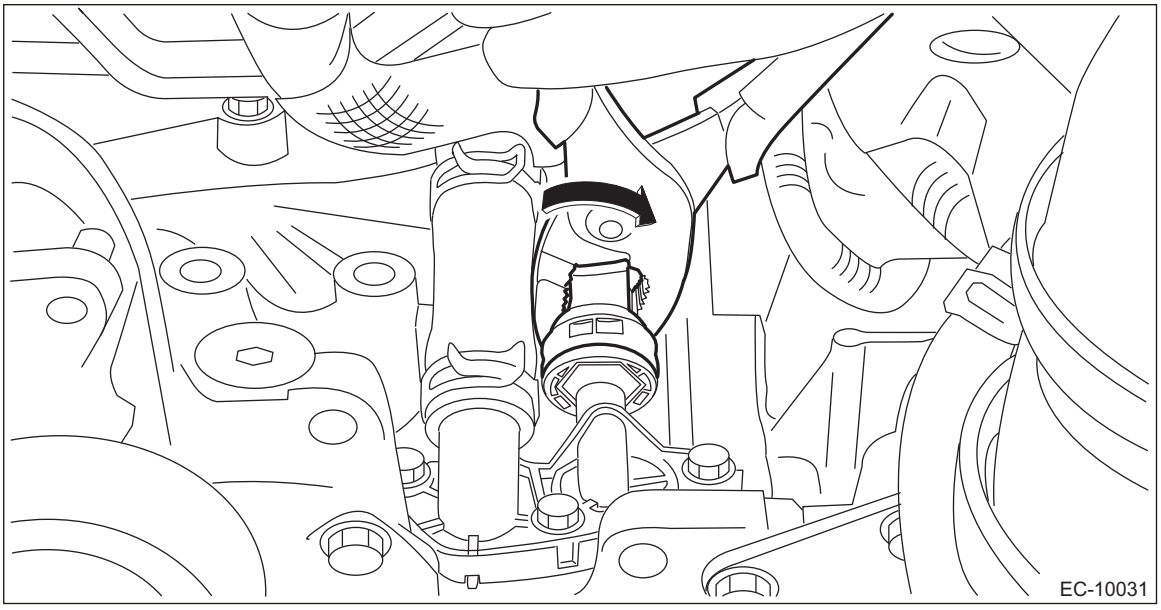


6) Remove the clip securing the PCV pipe assembly to the intake manifold.



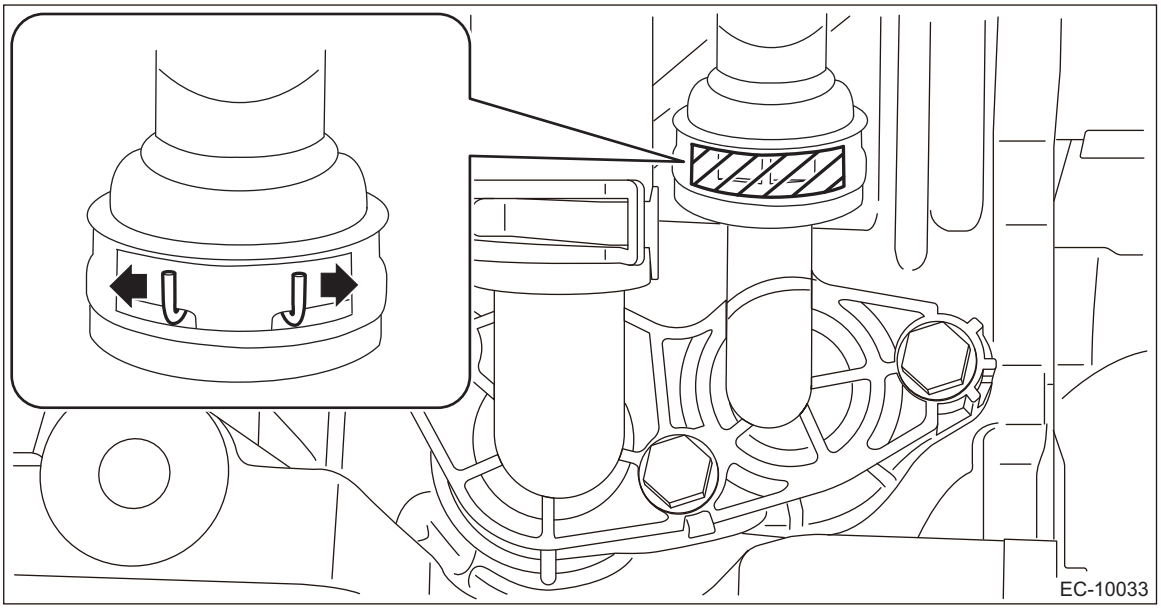
7) Remove the A/C compressor. <Ref. to AC-45, REMOVAL, Compressor.>
8) Remove the PCV pipe assembly from the PCV connector.
   (1) Pinch the quick connector of the PCV pipe assembly using pliers and break the quick connector by twisting to the arrow direction. And then, remove the PCV pipe assembly from the PCV connector.

CAUTION:
Be careful not to damage the PCV connector and preheater hose.



(2) If the PCV pipe assembly cannot be removed after performing the step (1), cut out the shaded area shown in the figure using a pair of nippers and open the spring in the arrow direction to unlock using snap ring pliers. And then, remove the PCV pipe assembly from the PCV connector.

CAUTION:
Be careful not to damage the PCV connector and preheater hose.

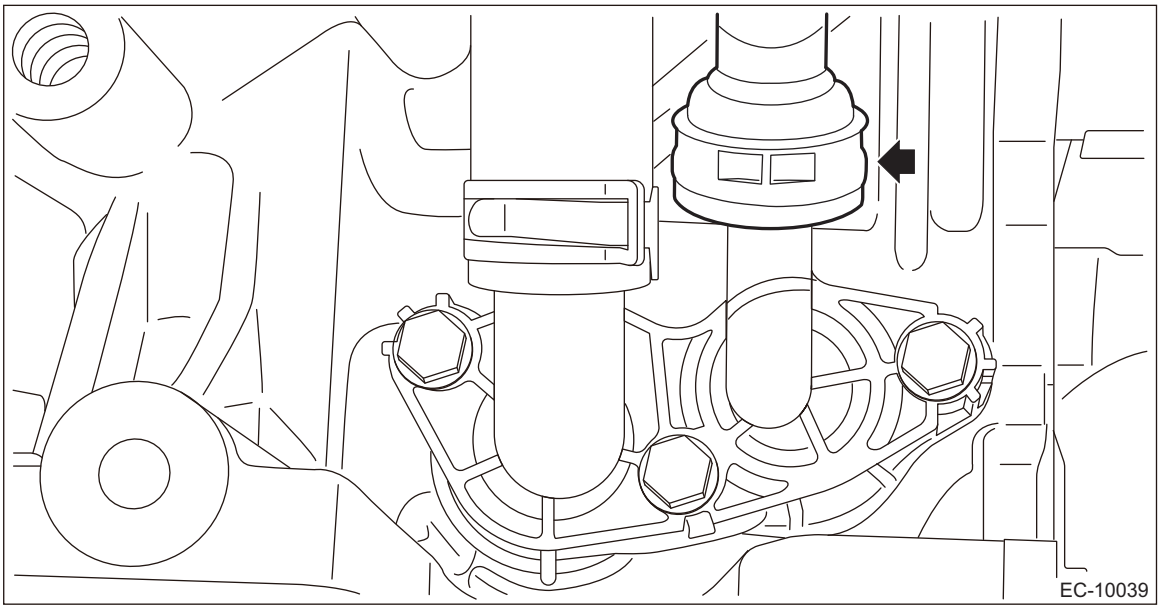


B: INSTALLATION

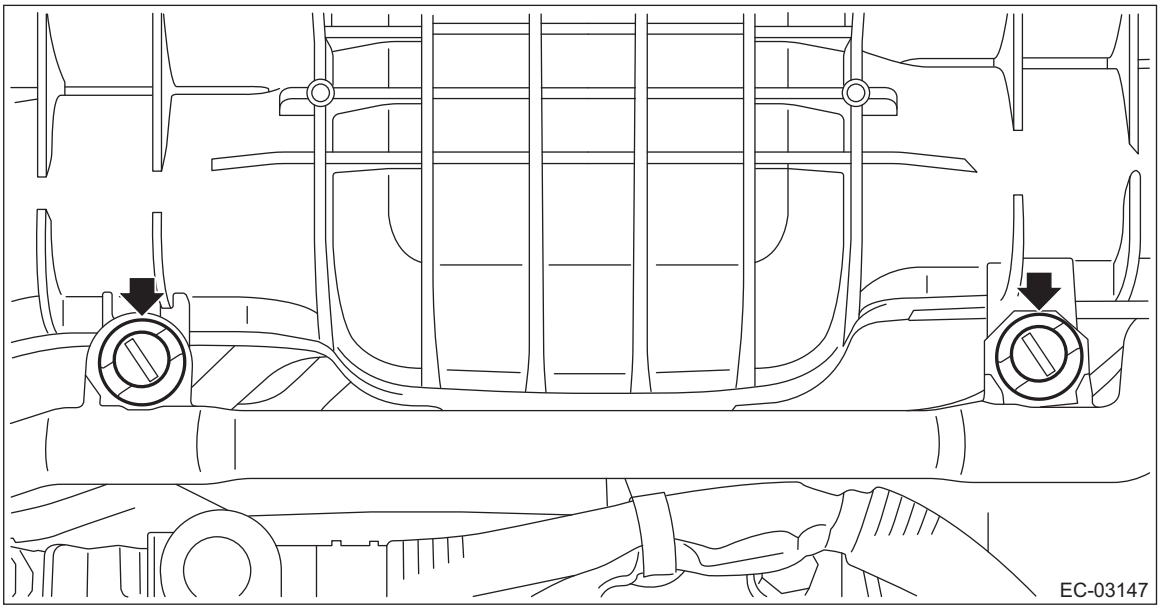
1) Connect the quick connector of the PCV pipe assembly to the PCV connector.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.

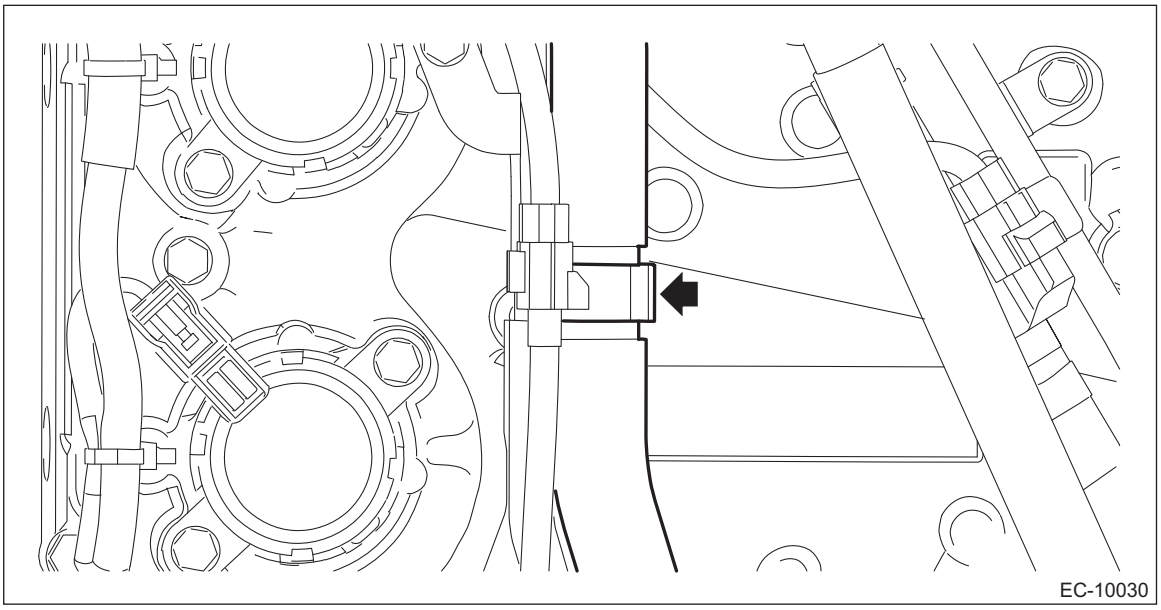
• After connecting the quick connector, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.



2) Install the A/C compressor. <Ref. to AC-48, INSTALLATION, Compressor.>
3) Attach the clips which secure the PCV pipe assembly to the intake manifold.



4) Install the PCV pipe assembly to the clip.

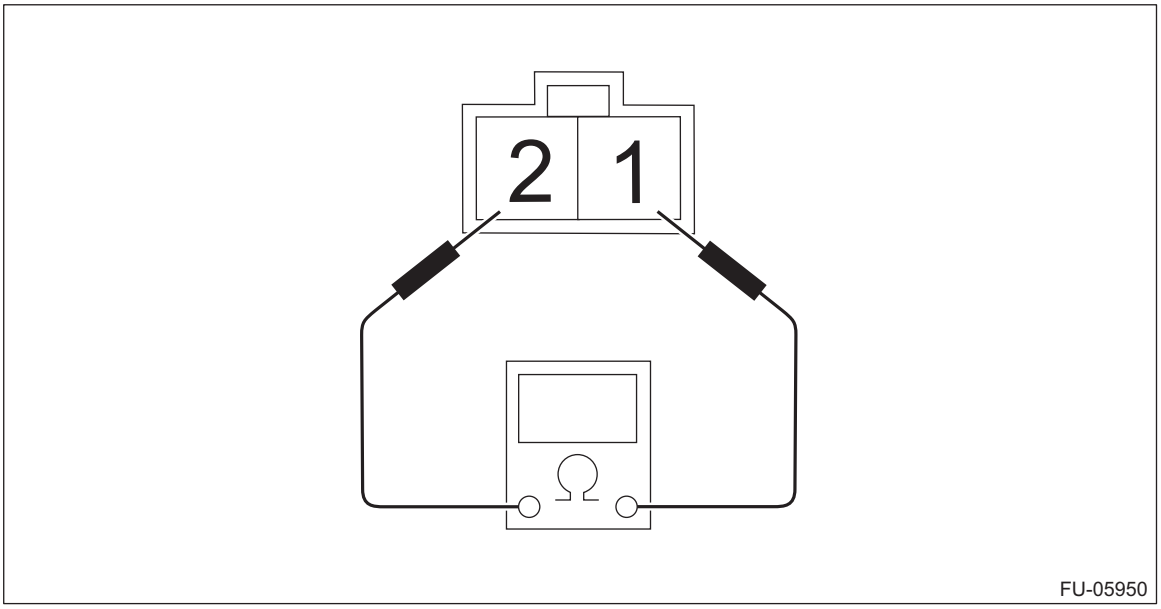


5) Install the intake duct No. 2. <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Charge the A/C system with refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
8) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: INSPECTION

1. BLOW-BY DIAGNOSIS CONNECTOR

1) Check that the blow-by diagnosis connector has no deformation, cracks or other damages.
2) Check the resistance between blow-by diagnosis connector terminals.



Terminal No.	Standard
1 and 2	Less than 1 Ω

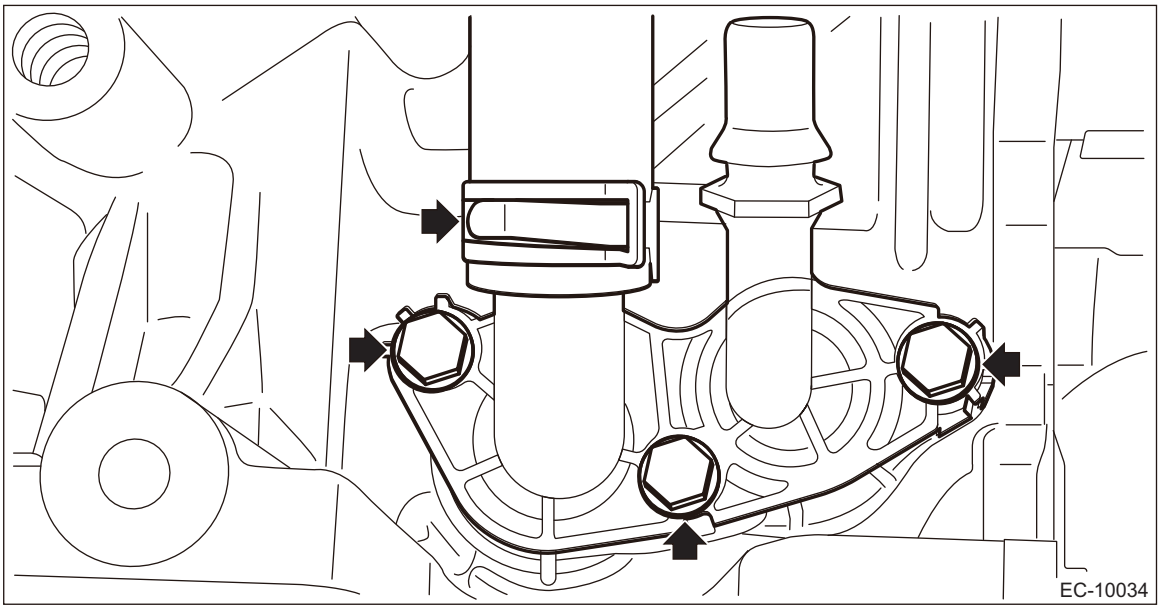
2. OTHER INSPECTIONS

Check that the PCV pipe assembly has no cracks, damage or loose part.

14.PCV Connector

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Remove the PCV pipe assembly. <Ref. to EC(w/o STI)-75, REMOVAL, PCV Pipe.>
5) Disconnect the preheater hose from the PCV connector, and remove the PCV connector from the cylinder block LH.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

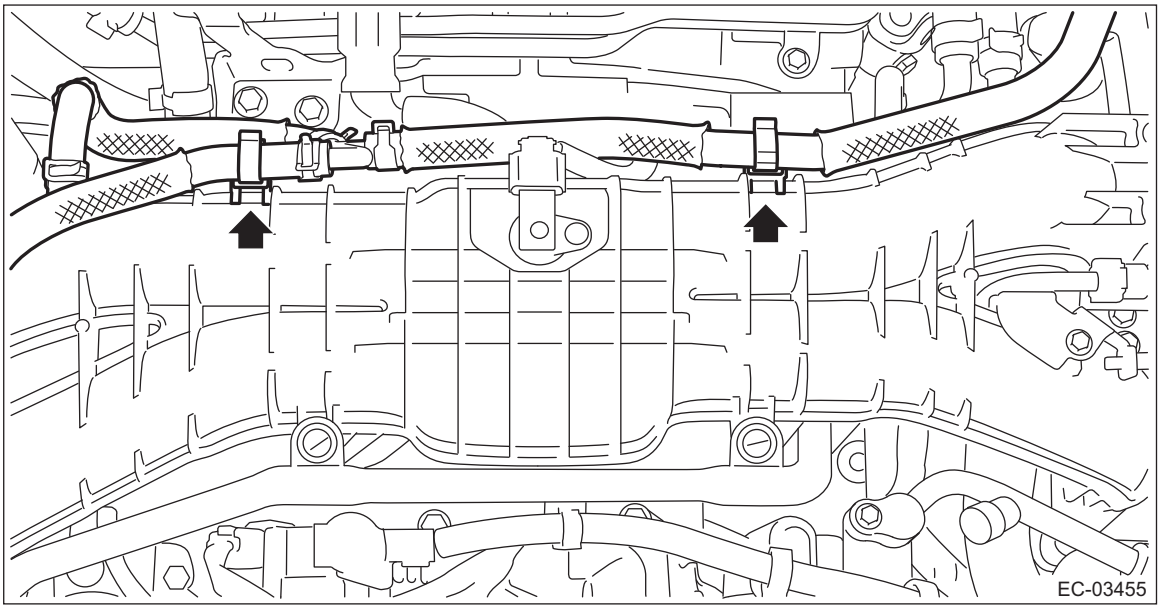
C: INSPECTION

Check that the PCV connector has no deformation, cracks or other damages.

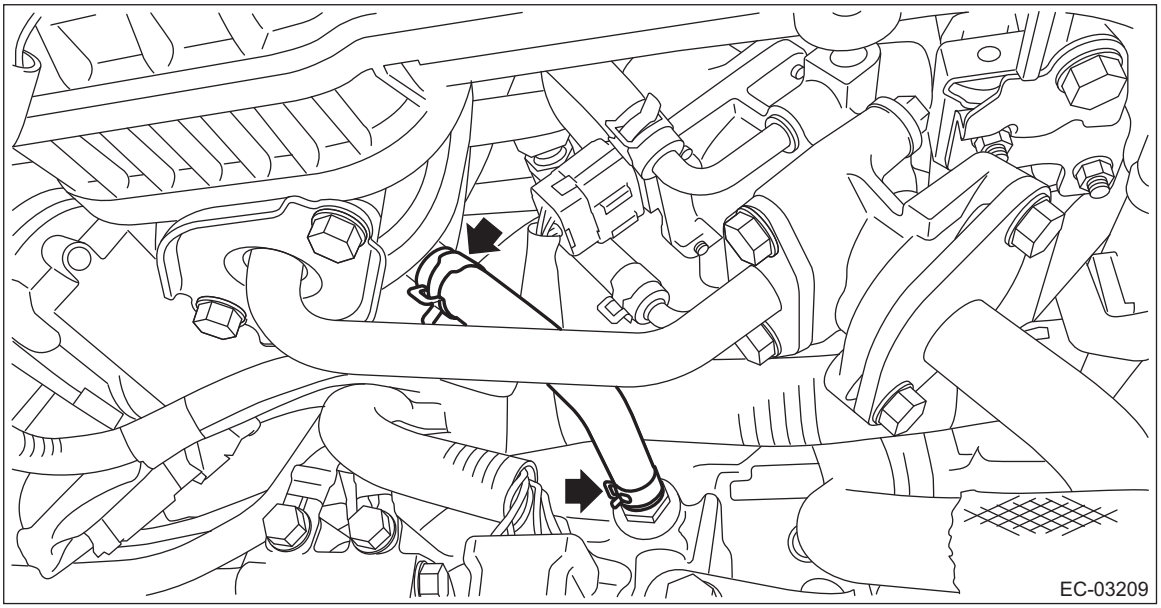
15.PCV Hose

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the brake booster vacuum hose from the clip, and place the brake booster vacuum hose aside so that it does not interfere with the work.



5) Disconnect the PCV hose from the intake manifold, and remove the PCV hose from the PCV valve.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
If the brake booster vacuum hose securing clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.

C: INSPECTION

Check that the PCV hose has no cracks, damage or loose part.

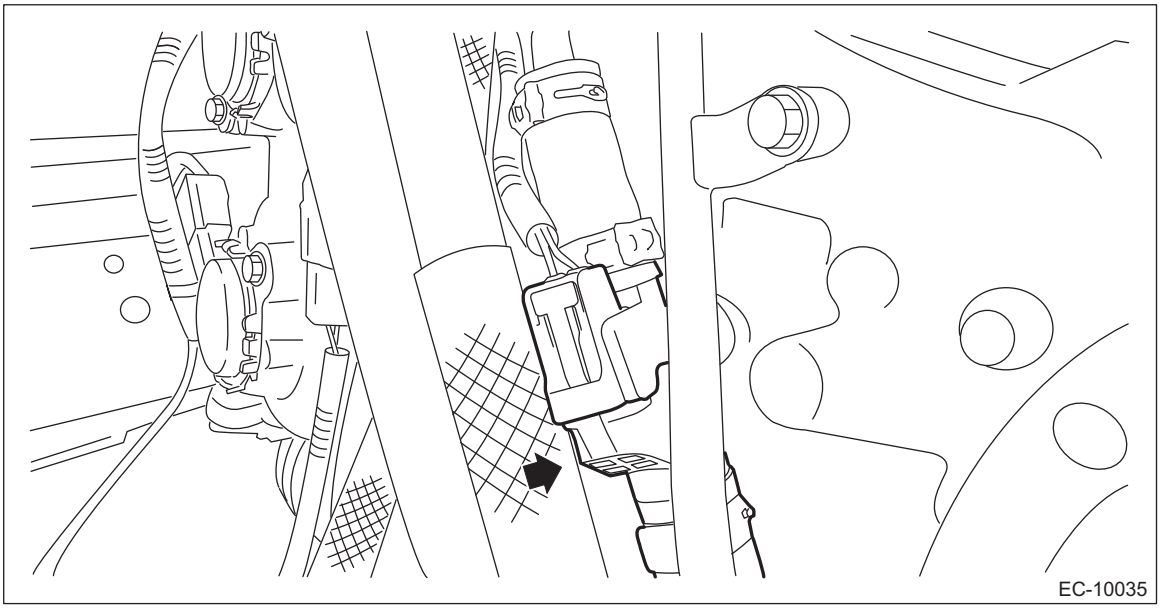
16.PCV Hose Assembly

A: REPLACEMENT

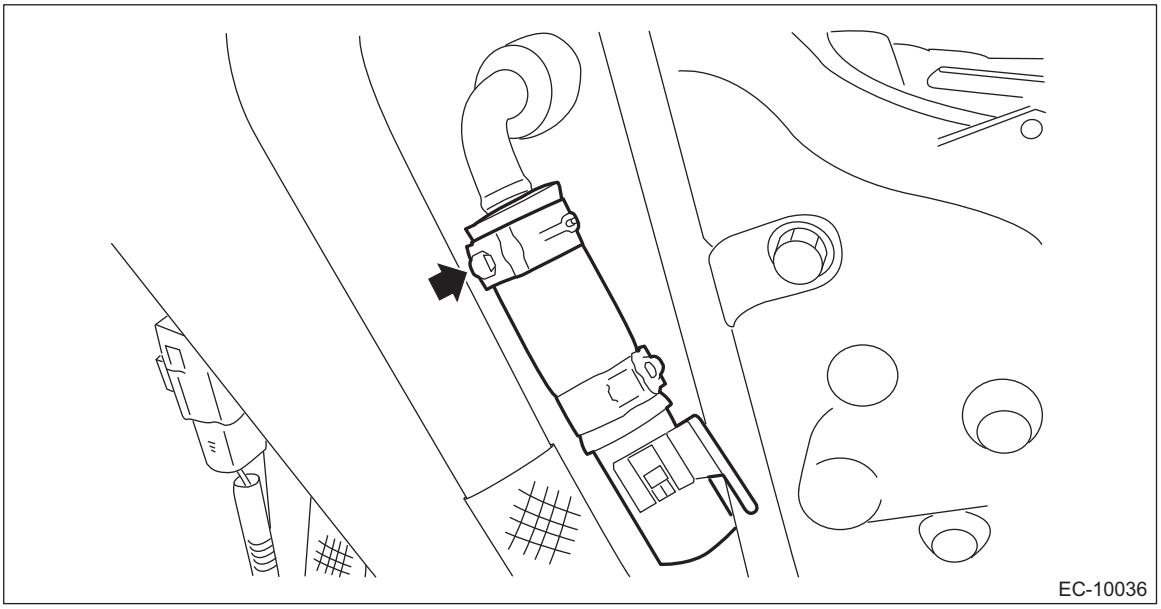
CAUTION:
Do not remove except when the PCV hose assembly is broken.

1. PCV HOSE ASSY NO. 1

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the radiator. <Ref. to CO(w/o STI)-38, REMOVAL, Radiator.>
3) Remove the condenser. <Ref. to AC-50, REMOVAL, Condenser.>
4) Unlock the blow-by diagnosis connector, and disconnect the PCV hose assembly No. 2 from the PCV hose assembly No. 1.

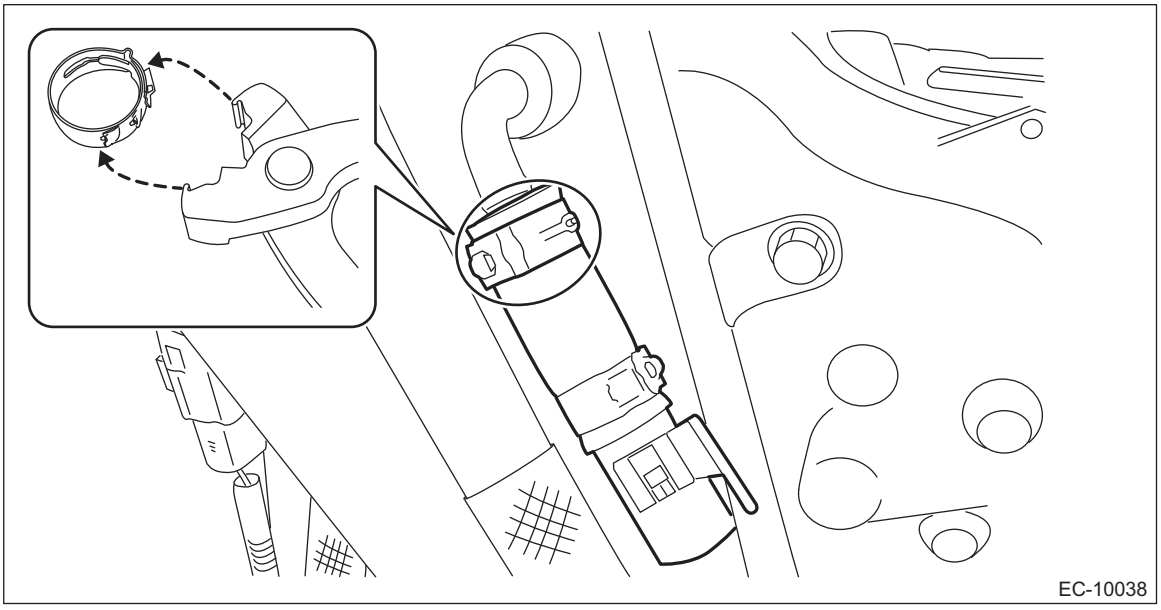


5) Remove the blow-by diagnosis connector harness from the PCV hose assembly No. 1.
6) Break the clamp, and remove the PCV hose assembly No. 1 from the chain cover.



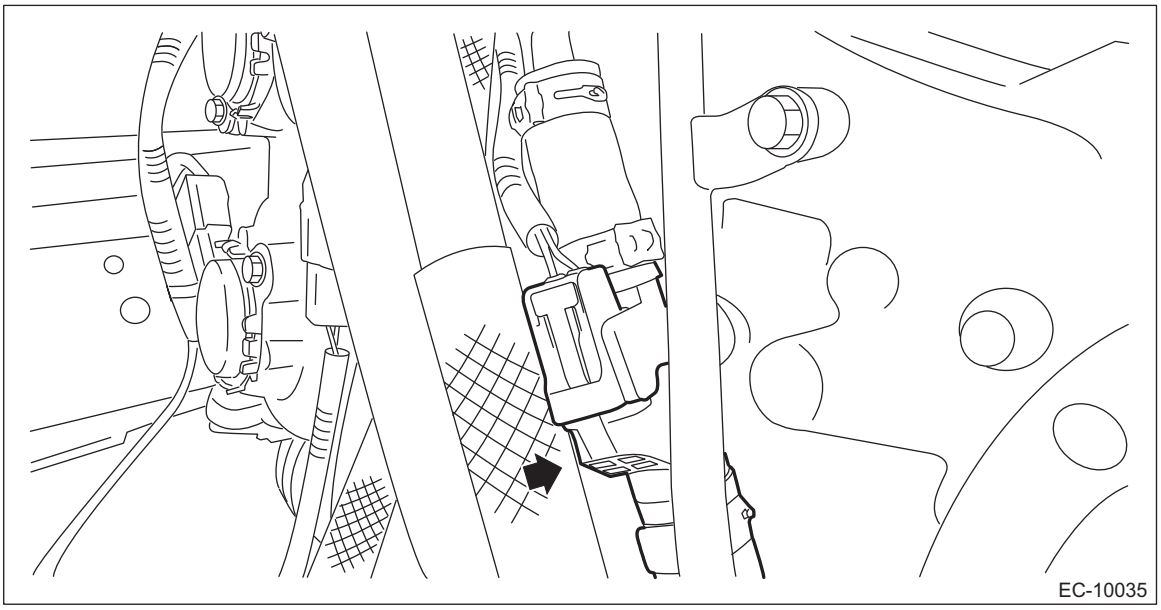
7) Install the PCV hose assembly No. 1 to the chain cover, and install the clamp using the Clamp pincer (14100134).

NOTE:
Use a new clamp.



8) Install the blow-by diagnosis connector harness to the PCV hose assembly No. 1, and connect the PCV hose assembly No. 2 to the PCV hose assembly No. 1.

NOTE:
- There are multiple blow-by diagnosis connectors. Be careful not to connect incorrectly.
- Make sure that the blow-by diagnosis connector is connected securely.

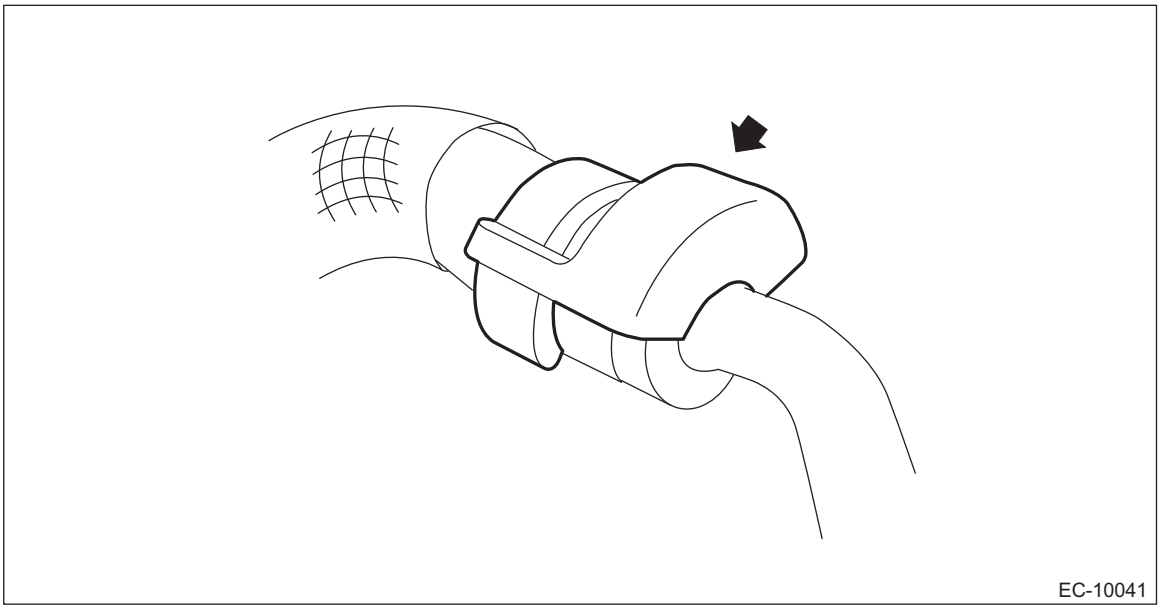


9) Install the condenser. <Ref. to AC-52, INSTALLATION, Condenser.>
10) Install the radiator. <Ref. to CO(w/o STI)-41, INSTALLATION, Radiator.>
11) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
12) Charge the A/C system with refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
13) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

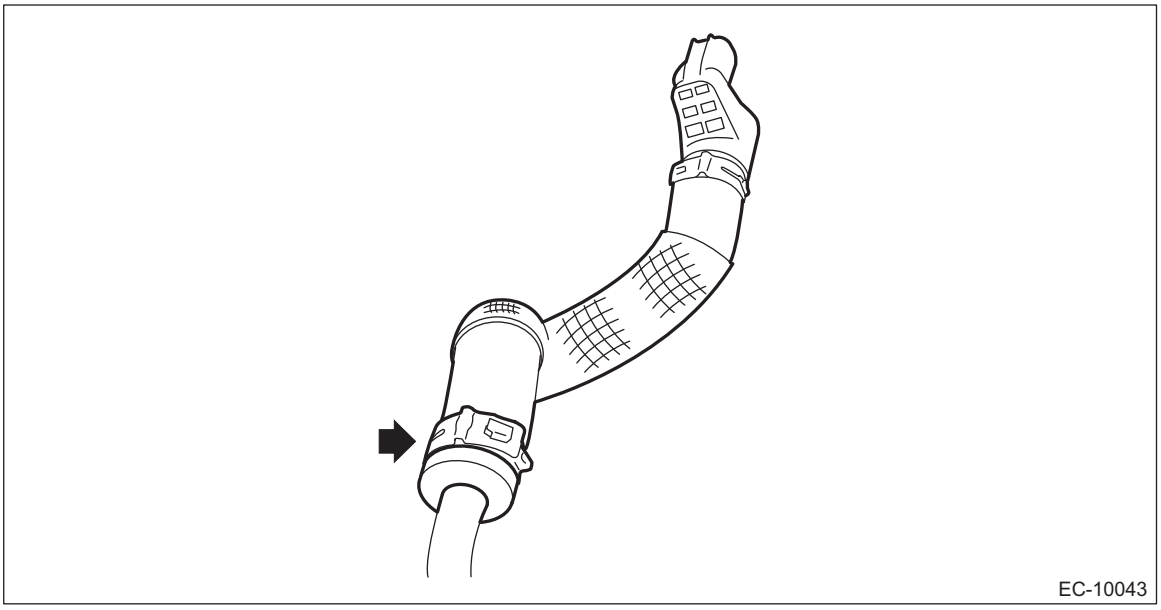
2. PCV HOSE ASSY NO. 2

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the oil catch tank. <Ref. to IN(w/o STI)-65, REMOVAL, Oil Catch Tank.>

3) Remove the clamp cover.

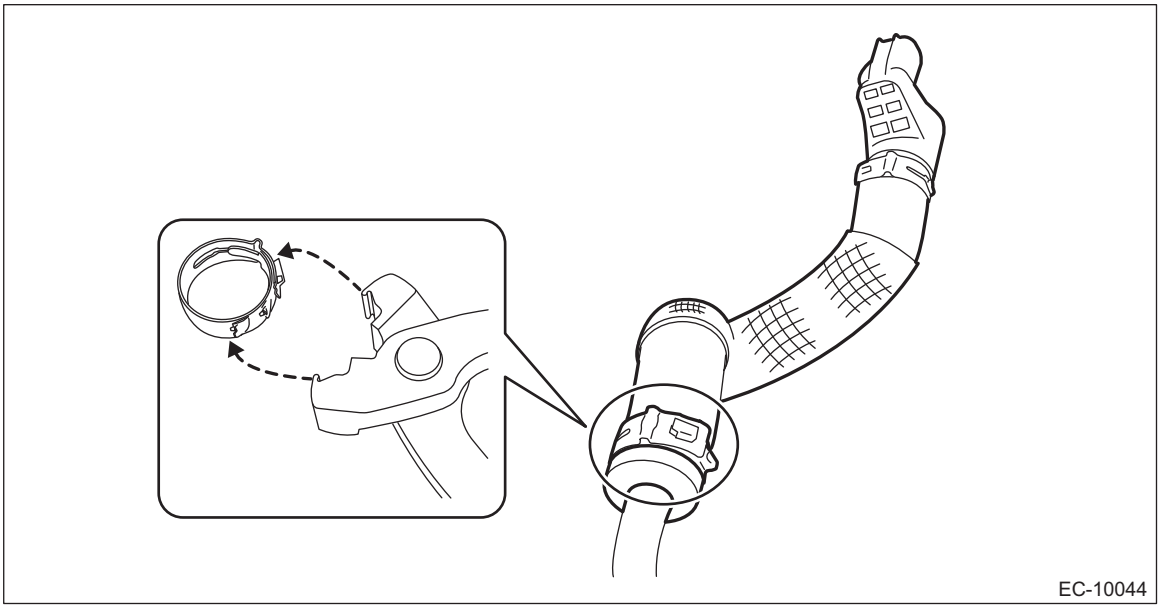


4) Break the clamp, and remove the PCV hose assembly No. 2 from the oil catch tank.



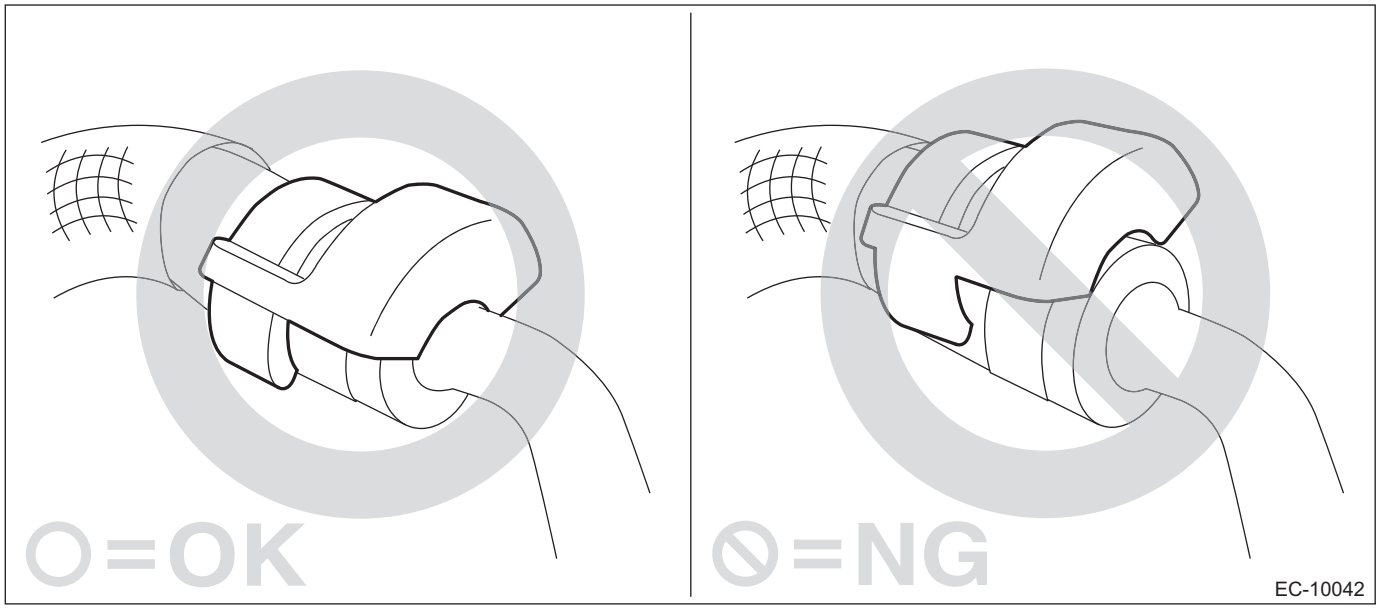
5) Install the PCV hose assembly No. 2 to the oil catch tank, and install the clamp using the Clamp pincer (14100134).

NOTE:
Use a new clamp.



6) Install the clamp cover.

CAUTION:
Be careful not to allow the lower part of the clamp cover to ride over the PCV hose assembly No. 2.



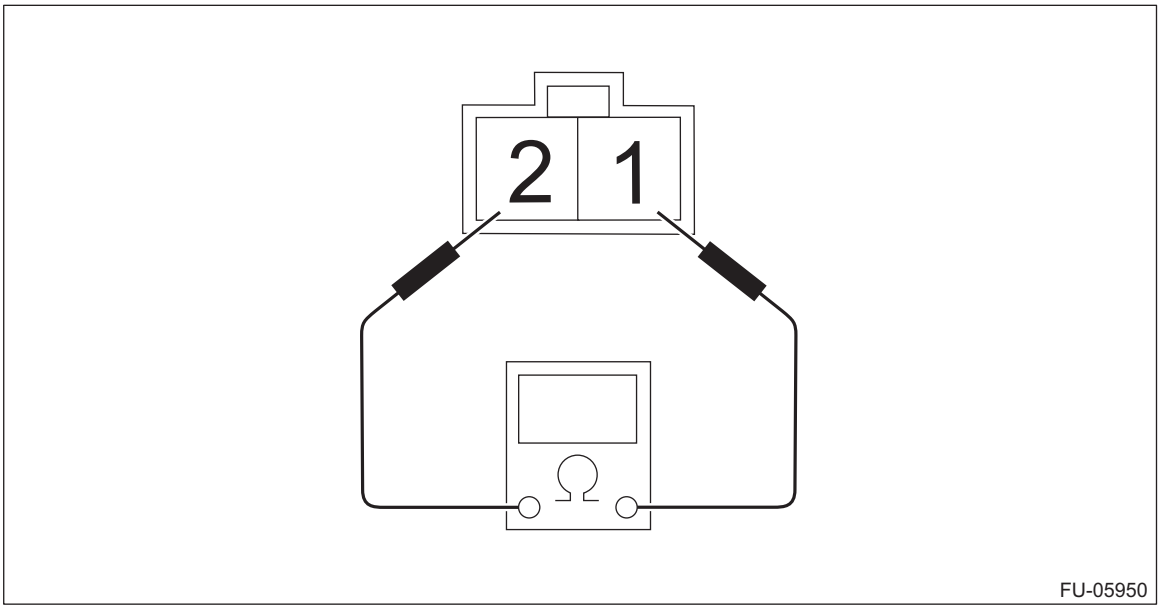
7) Install the oil catch tank. <Ref. to IN(w/o STI)-66, INSTALLATION, Oil Catch Tank.>
8) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

B: INSPECTION

1. BLOW-BY DIAGNOSIS CONNECTOR

1) Check that the blow-by diagnosis connector has no deformation, cracks or other damages.

2) Check the resistance between blow-by diagnosis connector terminals.



Terminal No.	Standard
1 and 2	Less than 1 Ω

2. OTHER INSPECTIONS

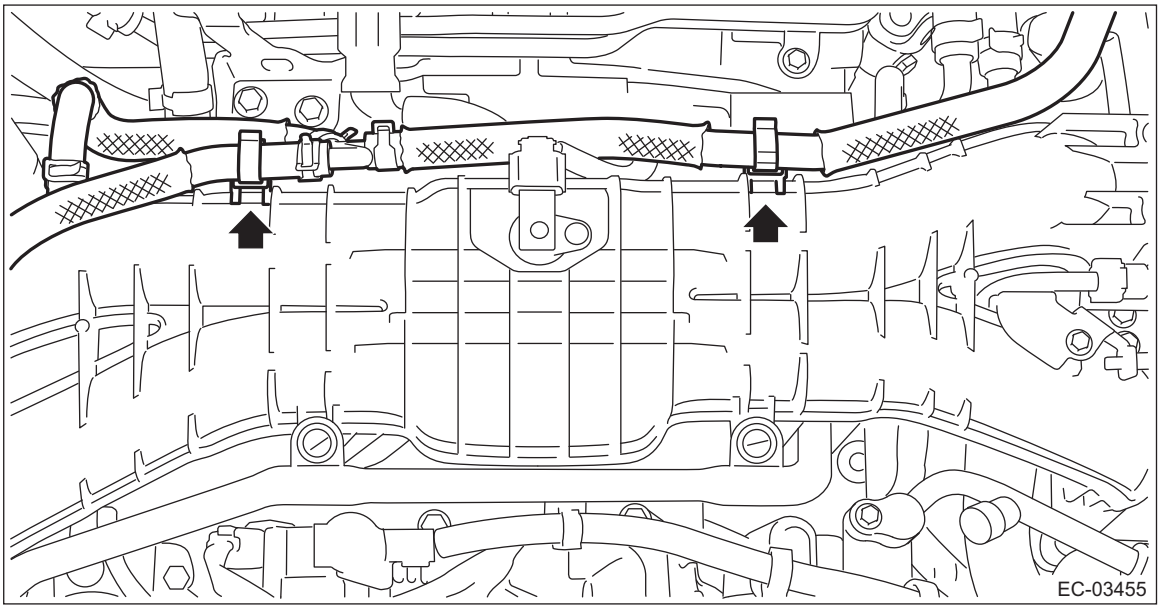
Check the PCV hose assembly for cracks, damage or looseness.

17.PCV Valve

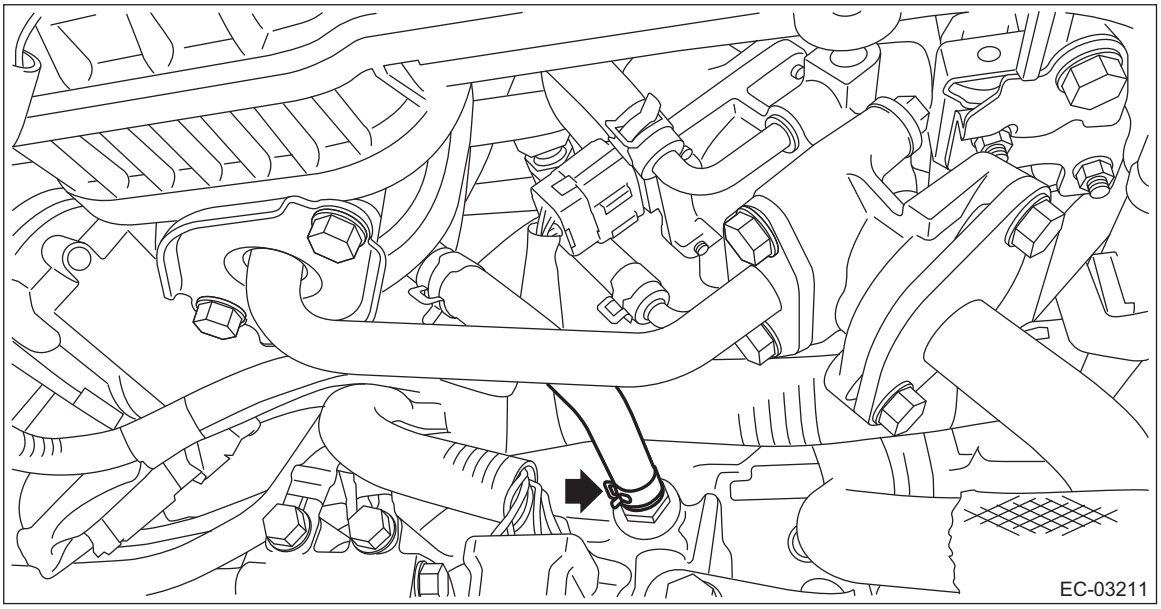
A: REMOVAL

CAUTION:
Do not remove unless the PCV valve is broken.

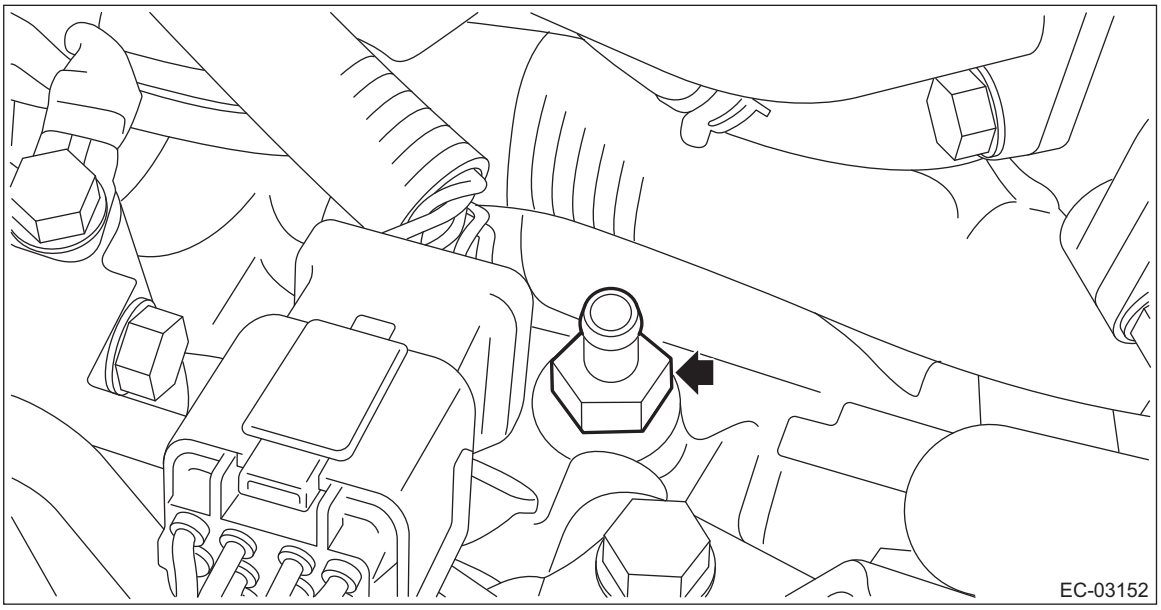
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Remove the brake booster vacuum hose from the clip, and place the brake booster vacuum hose aside so that it does not interfere with the work.



5) Disconnect the PCV hose from the PCV valve.



6) Remove the PCV valve from the cylinder block RH.



B: INSTALLATION

Install in the reverse order of removal.

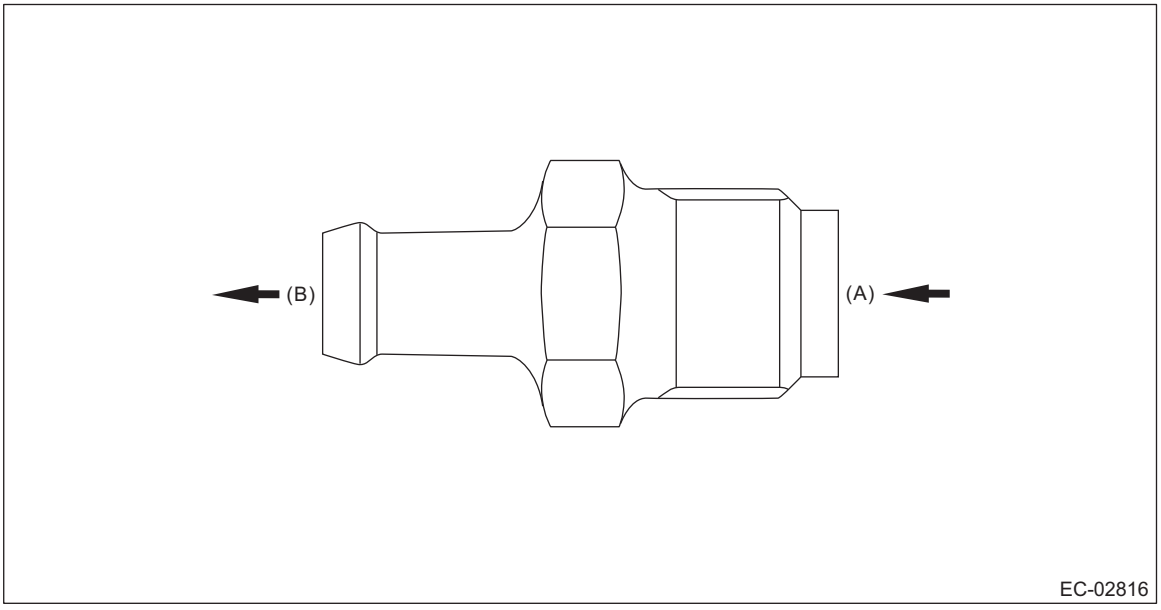
NOTE:
- Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)
- If the brake booster vacuum hose securing clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.

C: INSPECTION

1) Check that the PCV valve has no deformation, cracks or other damages.
2) Check that air is discharged from (B) when air is blown into (A).



3) Check that air does not come out from (B) when air is blown into (A).

B: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.

• Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
• Keep the removed parts in order and protect them from dust and dirt.
• All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
• Bolts, nuts and washers should be replaced with new parts as required.
• Be sure to tighten the fasteners including bolts and nuts to the specified torque.

C: PREPARATION TOOL

1. GENERAL TOOL

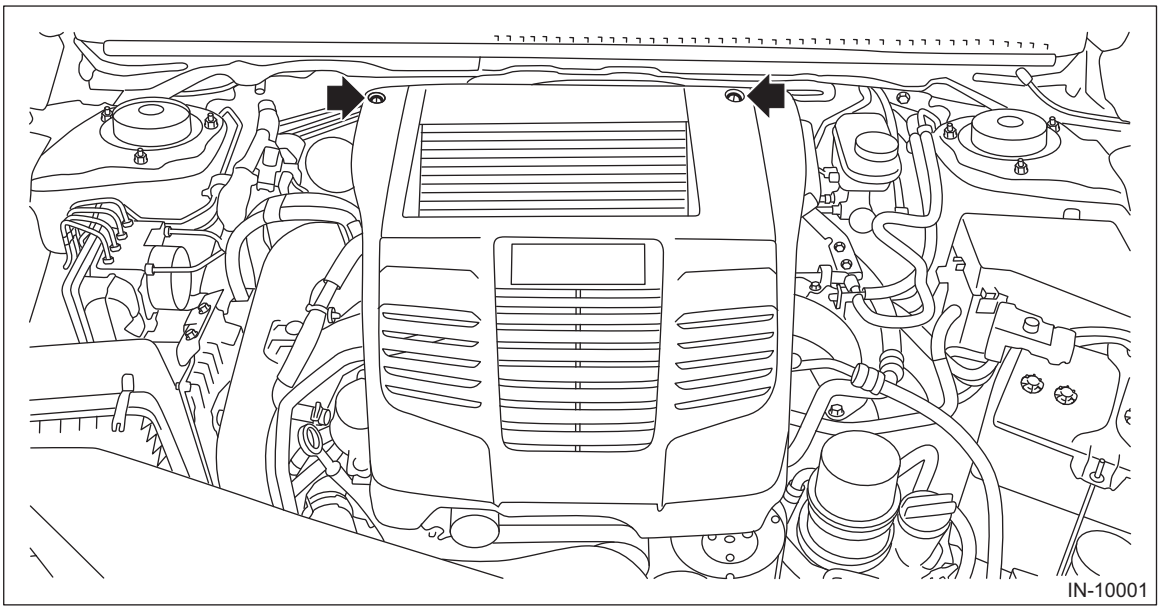
TOOL NAME	REMARKS
TORX® socket E10	Used for disassembling and assembling the turbocharger.
Mighty Vac	Used for checking waste gate actuator and air by-pass valve.
Urethane sheet Width × Height × Thickness Approx. 300 mm × approx. 200 mm × approx. 10 mm (Approx. 11.81 in × approx. 7.87 in × approx. 0.39 in)	Used for removing and installing intercooler. (MT model)

2. Collector Cover

A: REMOVAL

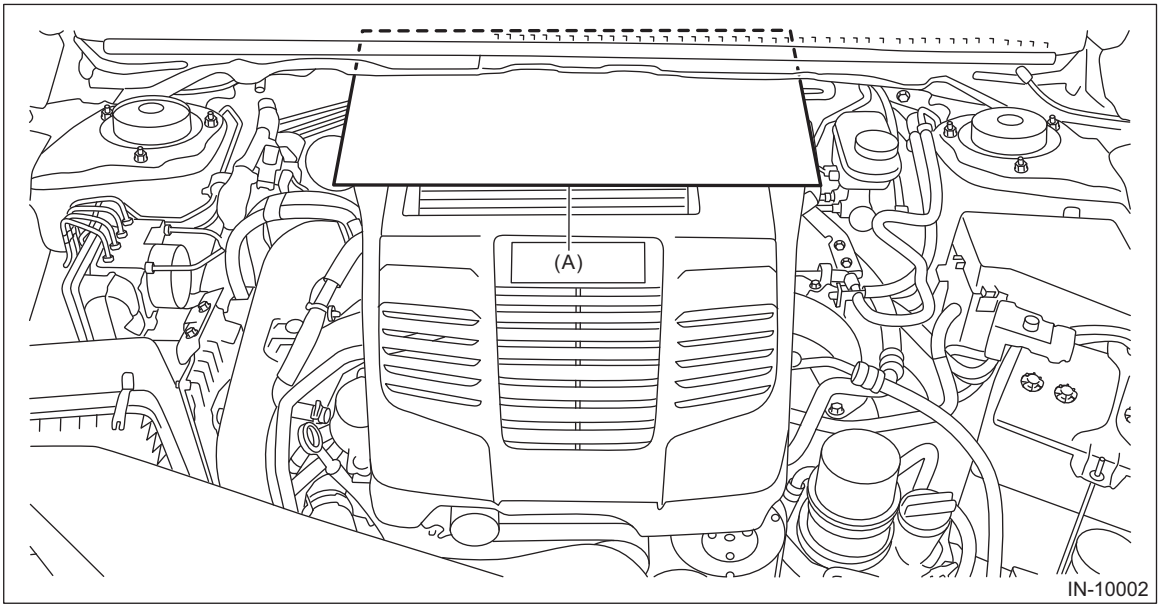
CAUTION:
The operation must be carefully performed; otherwise the collector cover may be damaged.

1) Remove the clip holding the collector cover.



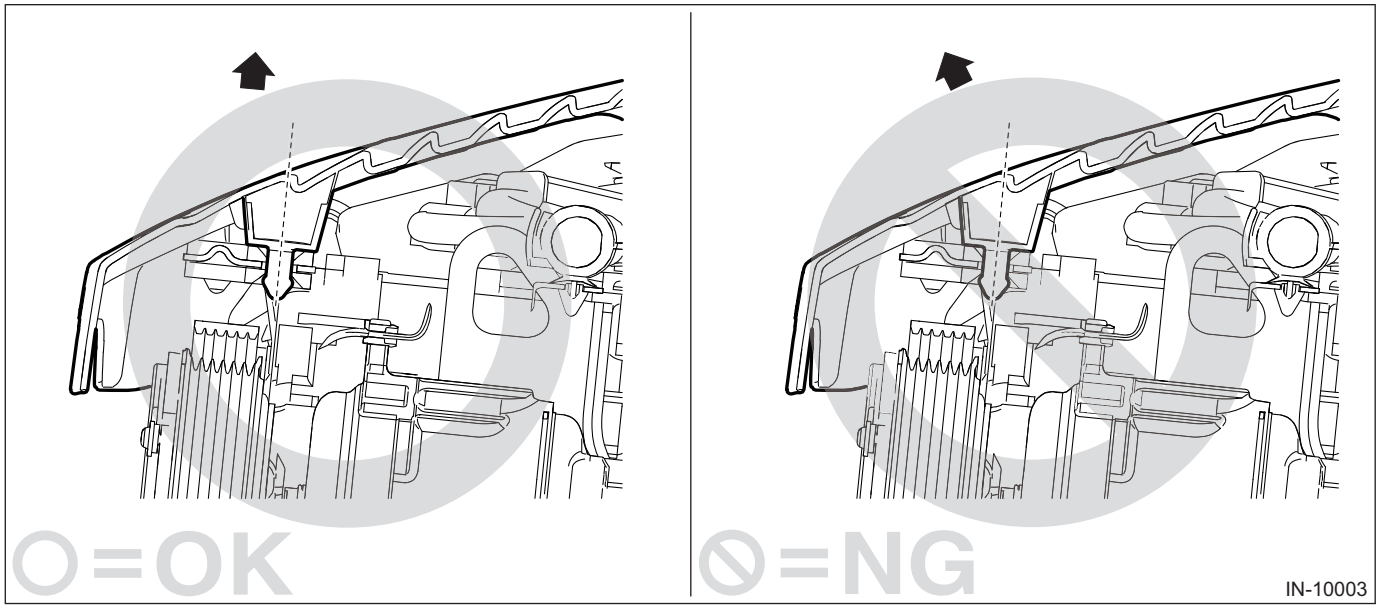
2) Insert a cloth, etc. (A) between the collector cover and bulkhead.

NOTE:
This procedure is required to prevent the collector cover from touching the vehicle during collector cover removal.

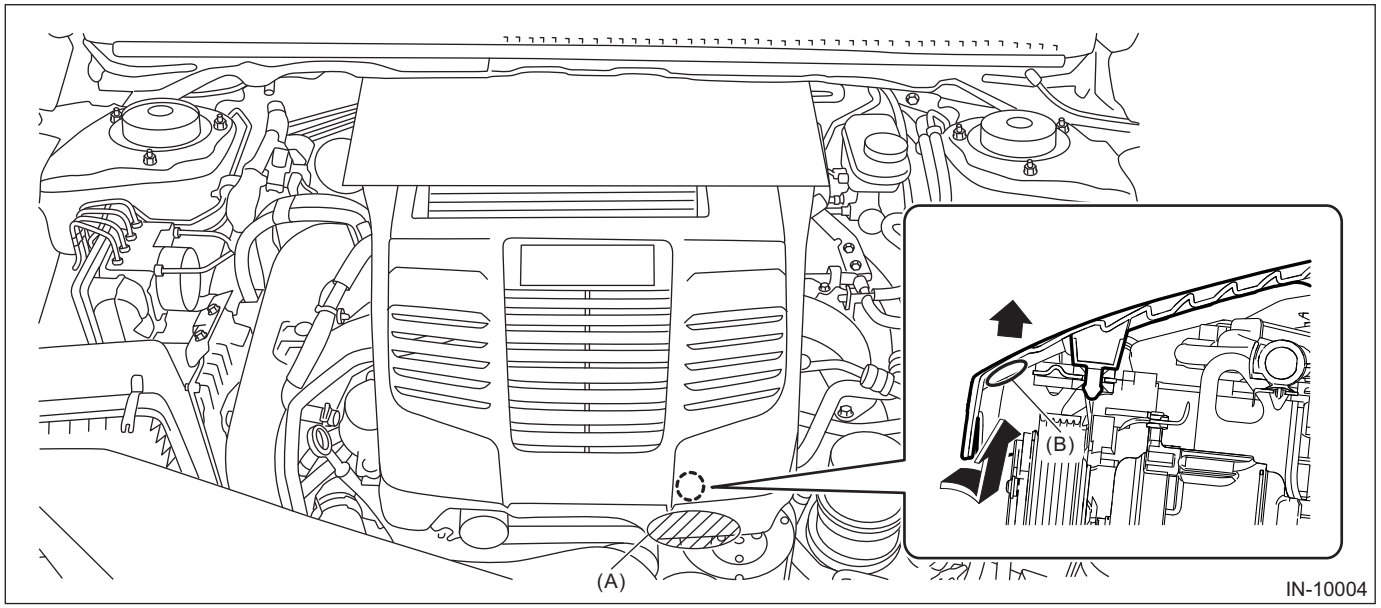


3) Remove the bushing inserted section, and remove the collector cover.
   (1) Hold the shaded section (A) of the collector cover LH side by hand, and lift up the section (B) in the direction of the arrow with fingers to remove the bushing inserted section.

CAUTION:
When removing the collector cover from the collector cover bracket, lift up in parallel to the insertion direction of installation part.

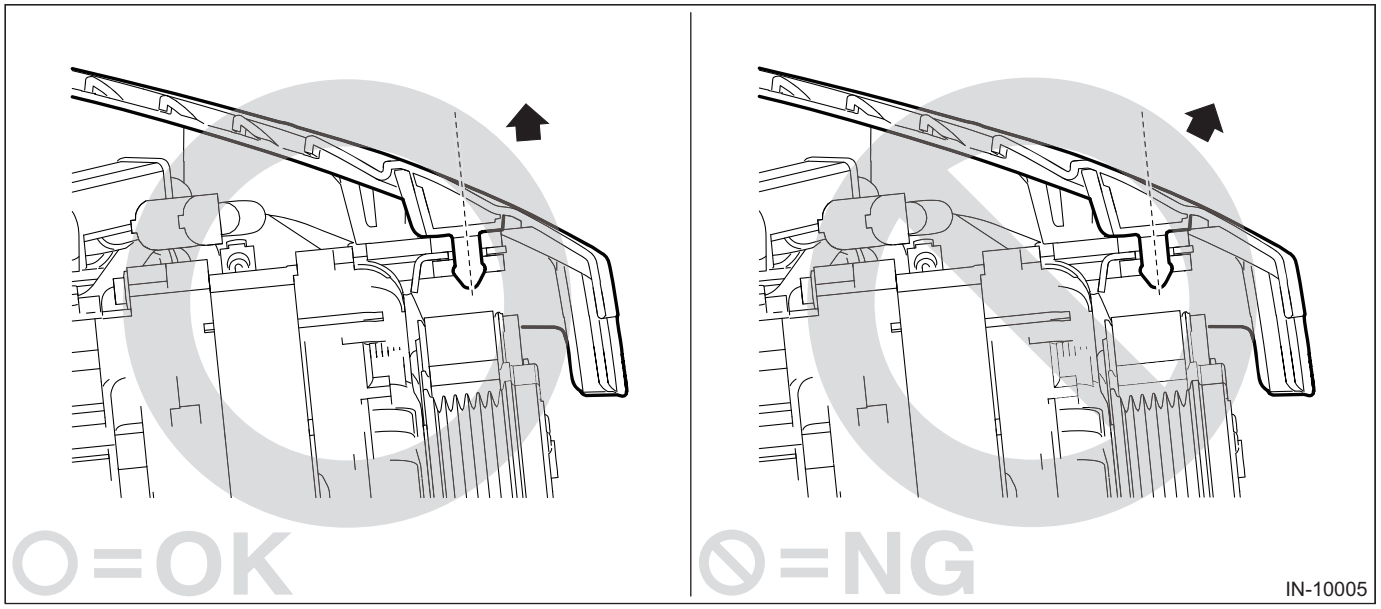


NOTE:
Be careful not to deform the collector cover when holding the shaded section (A) by hand.

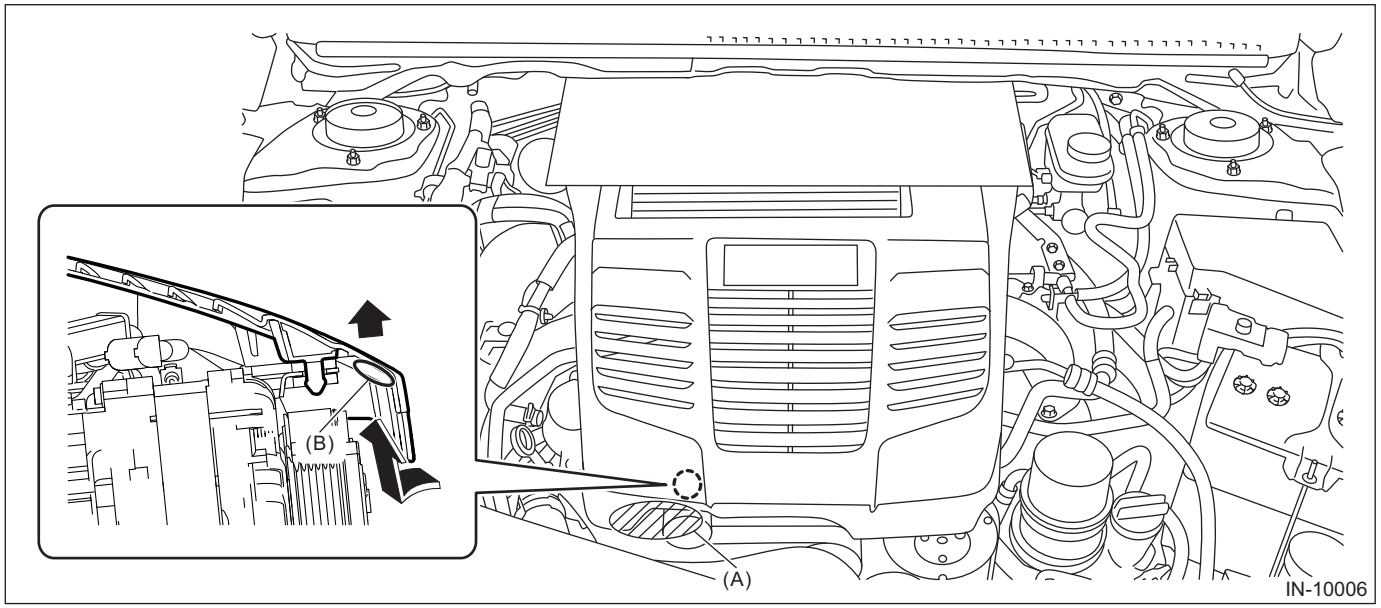


(2) Hold the shaded section (A) of the collector cover RH side by hand, and lift up the section (B) in the direction of the arrow with fingers to remove the bushing inserted section. Then, remove the collector cover.

CAUTION:
When removing the collector cover from the collector cover bracket, lift up in parallel to the insertion direction of installation part.



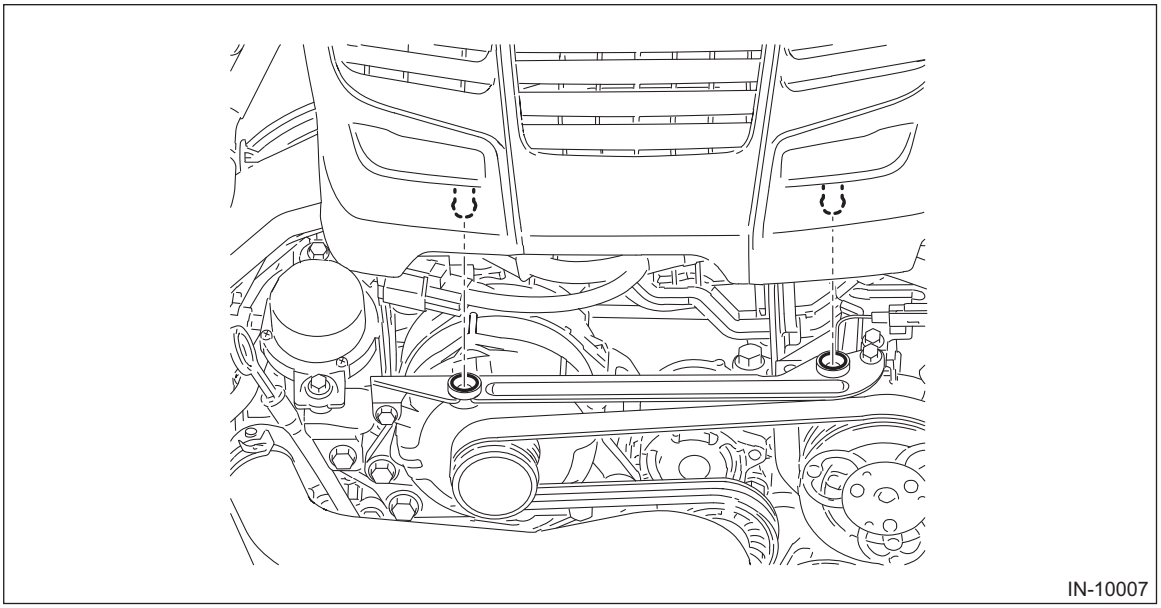
NOTE:
Be careful not to deform the collector cover when holding the shaded section (A) by hand.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Insert the collector cover installation part into the collector cover bracket cushion.



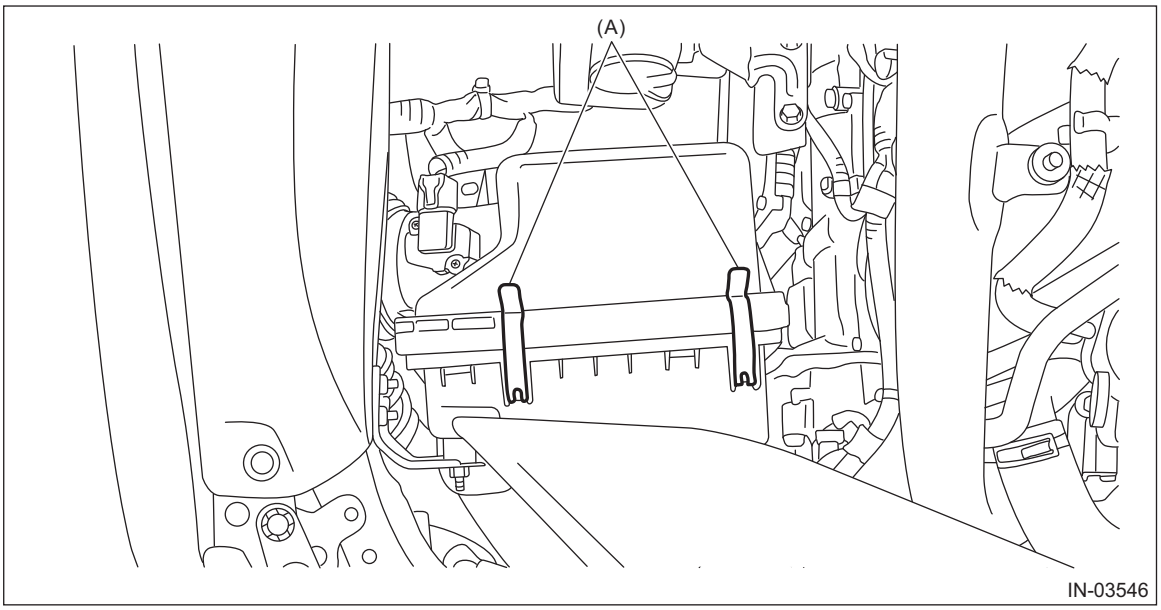
C: INSPECTION

Check that the collector cover does not have deformation, cracks and any other damage.

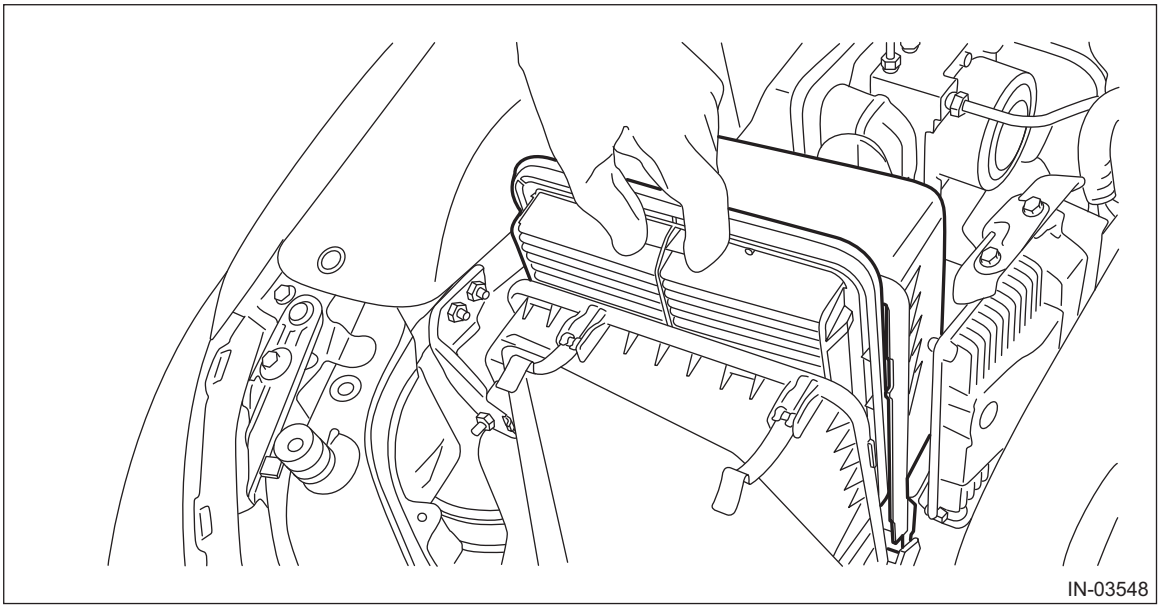
3. Air Cleaner Element

A: REMOVAL

1) Remove the clip (A) from the air cleaner case (rear).



2) Open the air cleaner case (rear) while lifting it up, and remove the protrusion of the air cleaner case (rear) from the hole on the air cleaner case (front) to remove the air cleaner element.



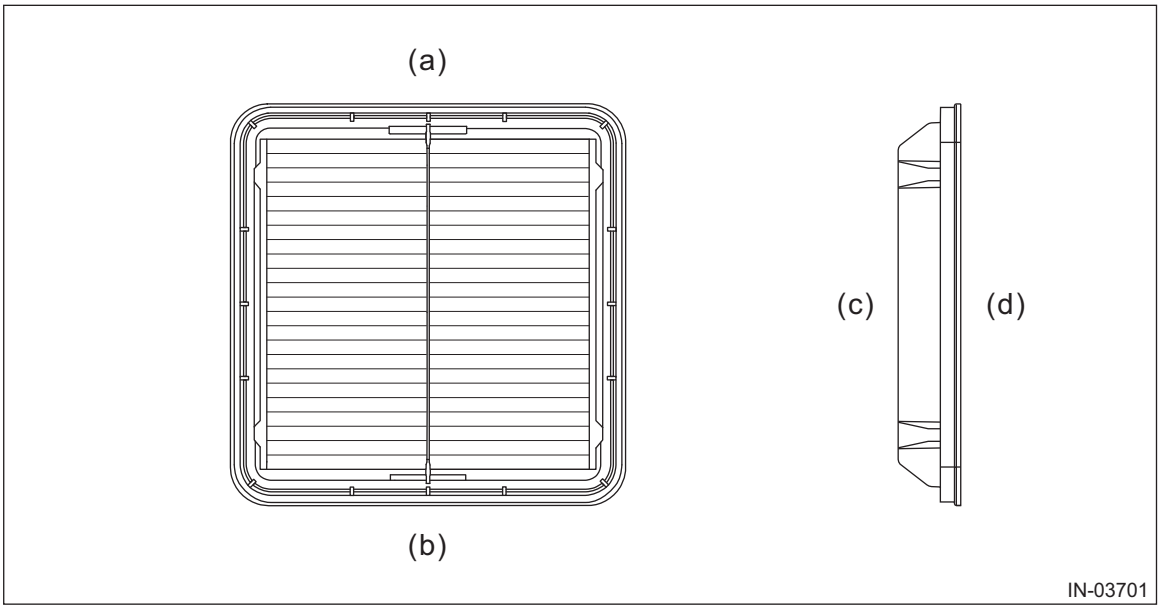
B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be sure to use SUBARU genuine air cleaner element depending on the engine type when replacing the air cleaner elements. Using other air cleaner element may affect the engine performance.

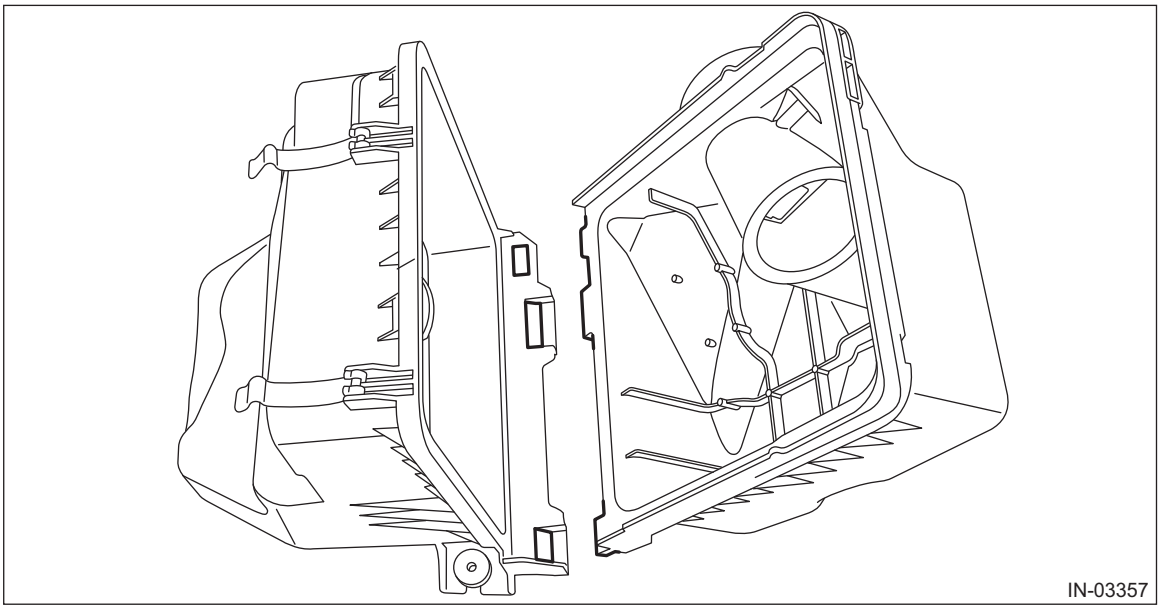
NOTE:
- Check that there is no dirt or dust within the air cleaner case. If any dirt or dust is found, clean it.

- Install the air cleaner element as shown in the figure.



(a) Upside (b) Downside (c) Air cleaner case (front) side
(d) Air cleaner case (rear) side

- When installing the air cleaner case (rear), align the protrusion of the air cleaner case (rear) to the hole on the air cleaner case (front) to install.



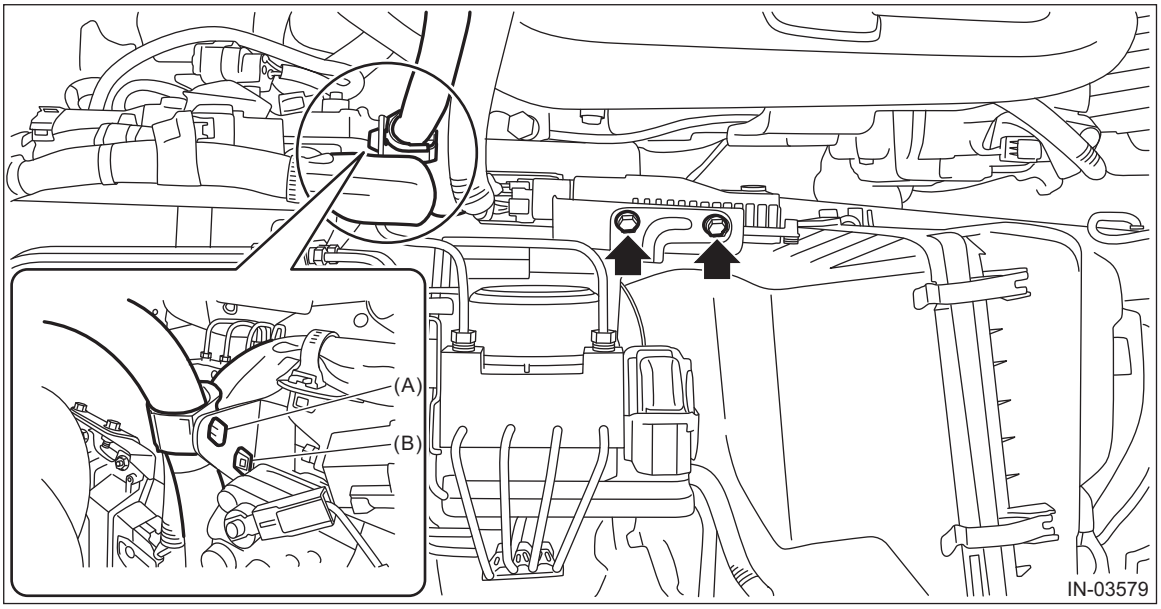
C: INSPECTION

1) Check that the air cleaner element has no deformation, cracks or other damages.
2) Check the air cleaner element for excessive dirt.

4. Air Cleaner Case

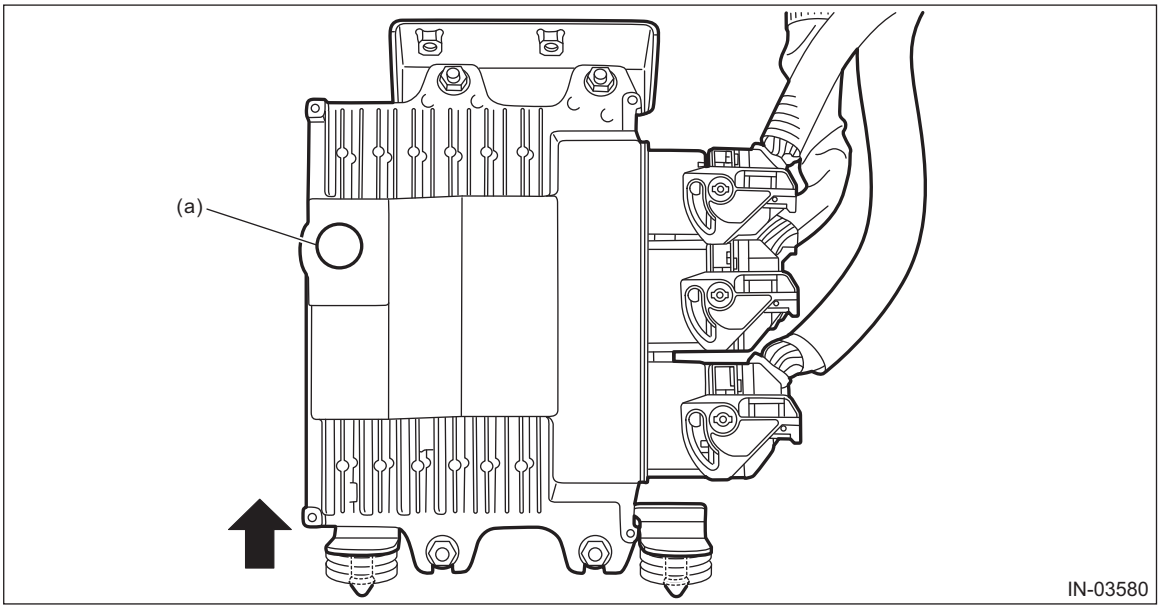
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.

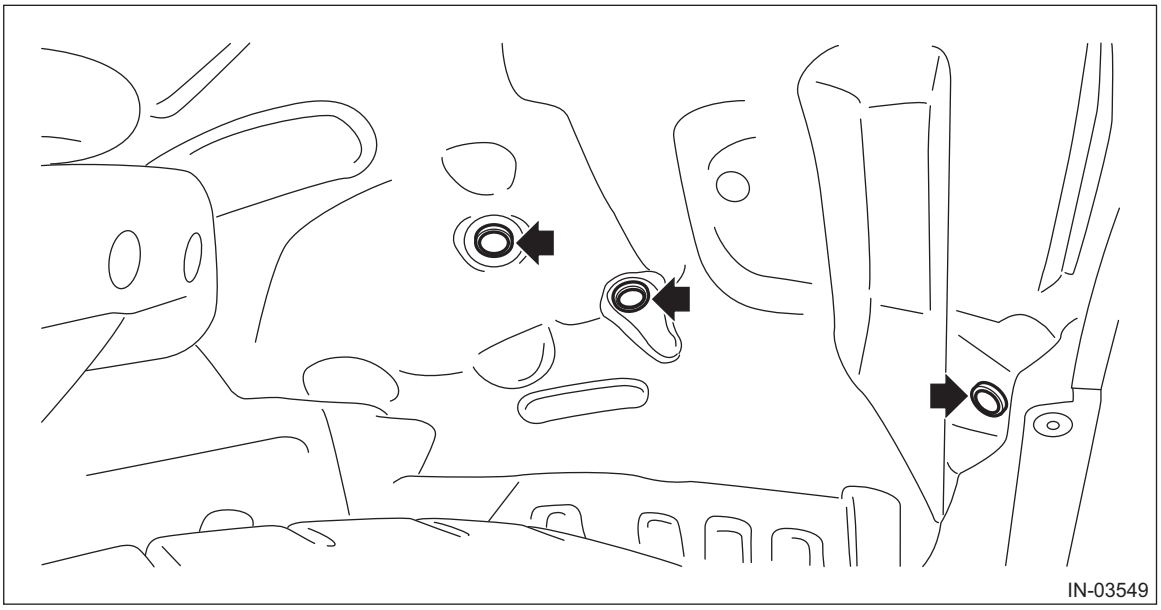


4) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

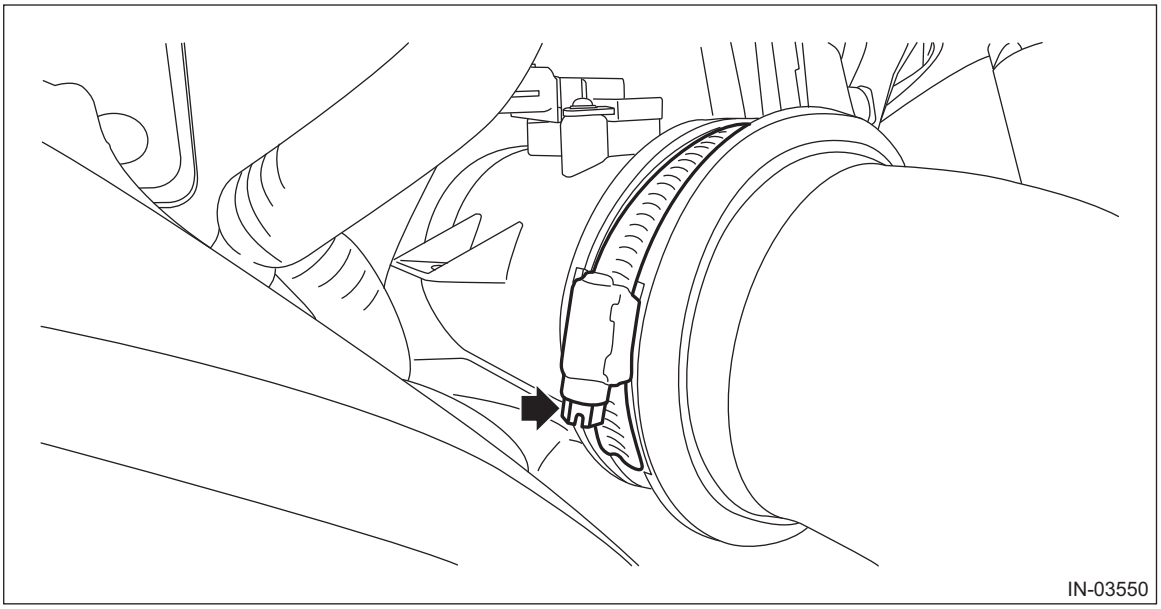
NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.



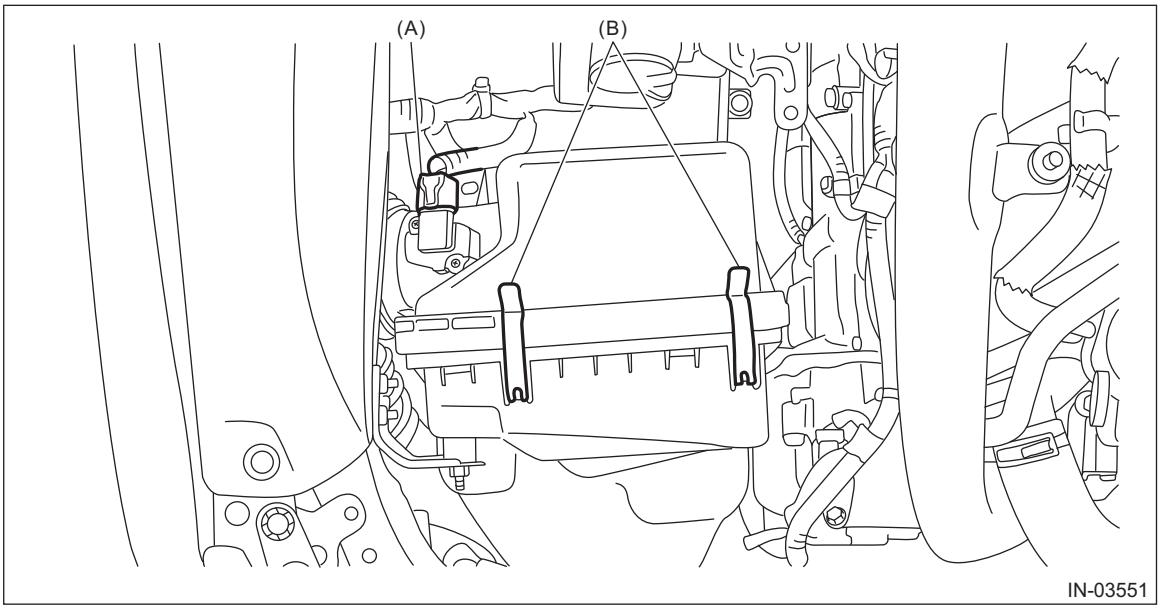
5) Remove the clips (3 places) which secure the front mud guard RH to the vehicle.



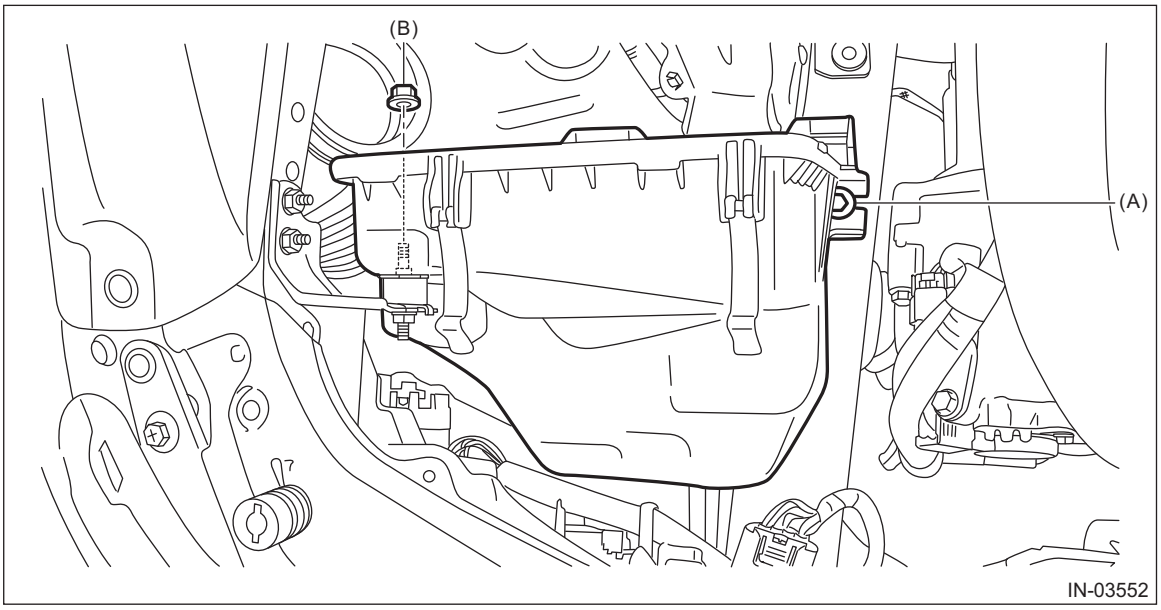
6) Turn over the front mud guard RH, and loosen the clamp which secures the air intake boot to the air cleaner case (rear).



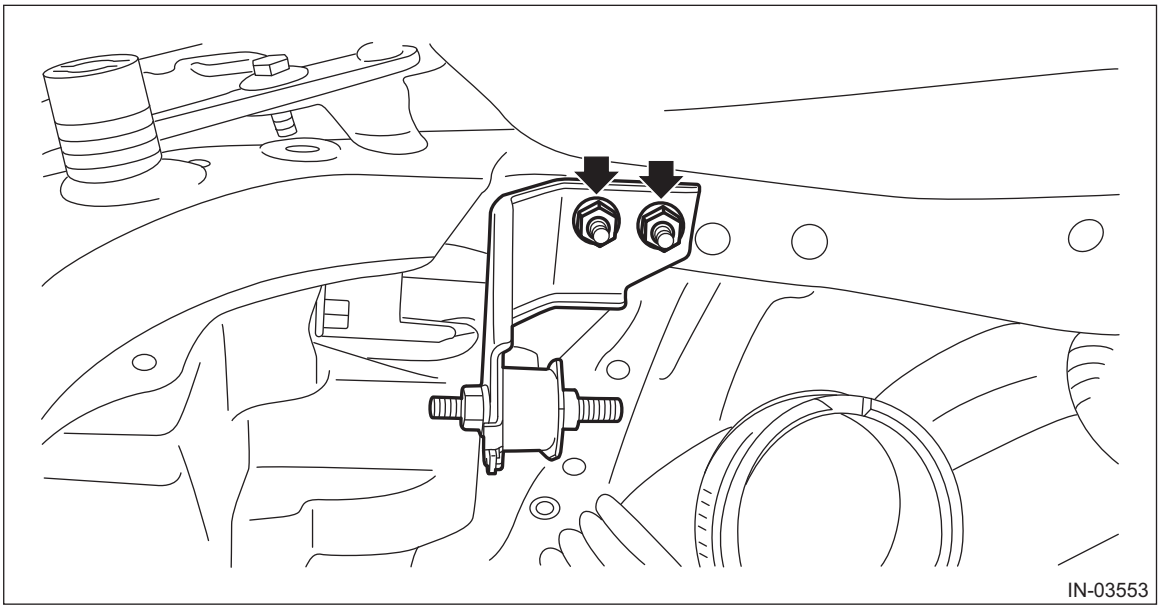
7) Disconnect the connector (A) from the mass air flow and intake air temperature sensor, and remove the clip (B) from the air cleaner case (rear).



8) Remove the air cleaner case (rear) and air cleaner element.
9) Remove the bolt (A) and nut (B), and remove the air cleaner case (front).



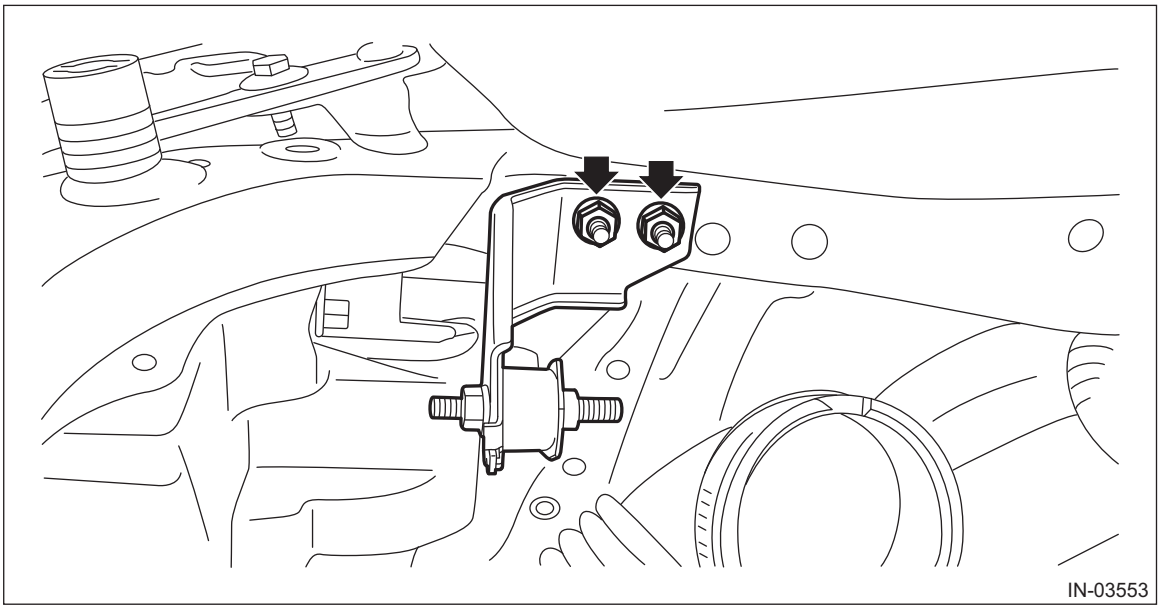
10) Remove the air cleaner case bracket from the vehicle.



B: INSTALLATION

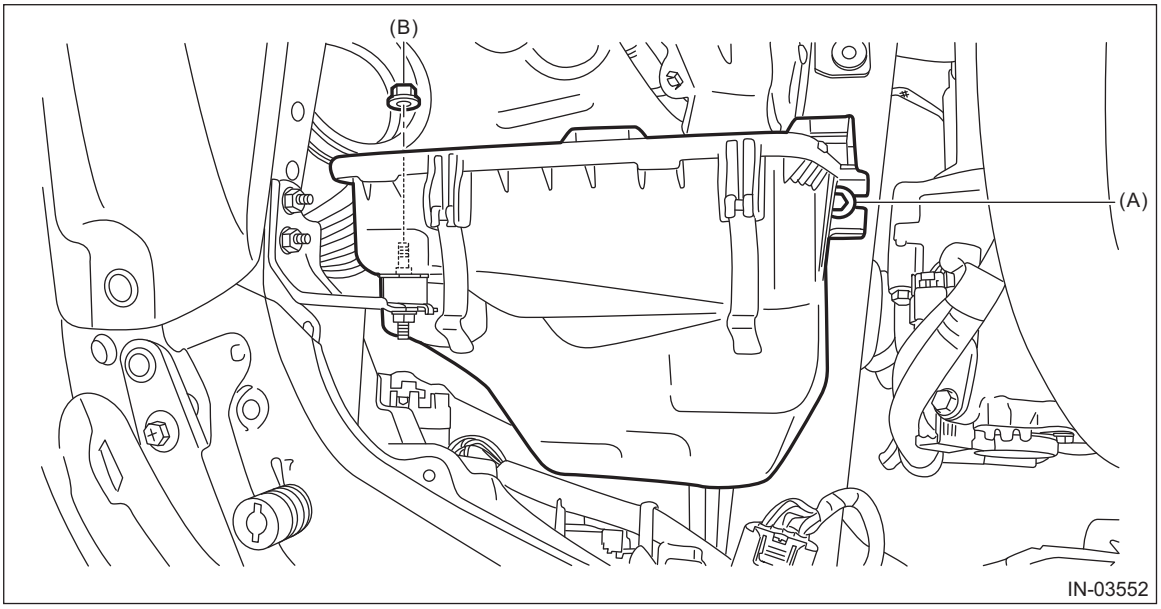
1) Install the air cleaner case bracket to the vehicle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



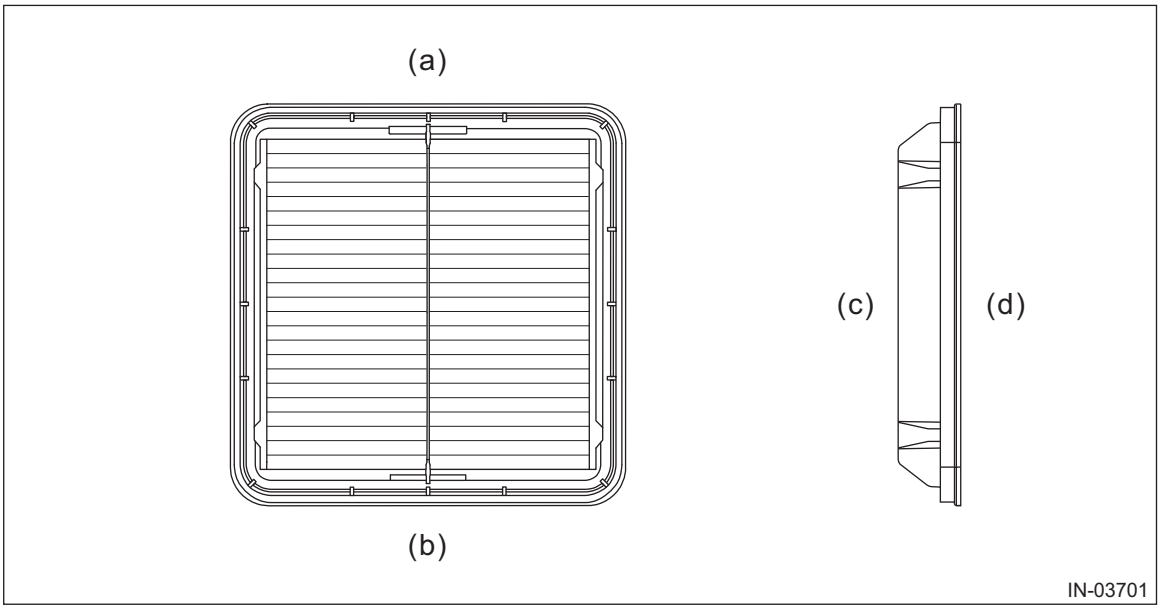
2) Set the air cleaner case (front) and install the bolt (A) and nut (B).

Tightening torque:
Bolt (A)
6 N·m (0.6 kgf-m, 4.4 ft-lb)
Nut (B)
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



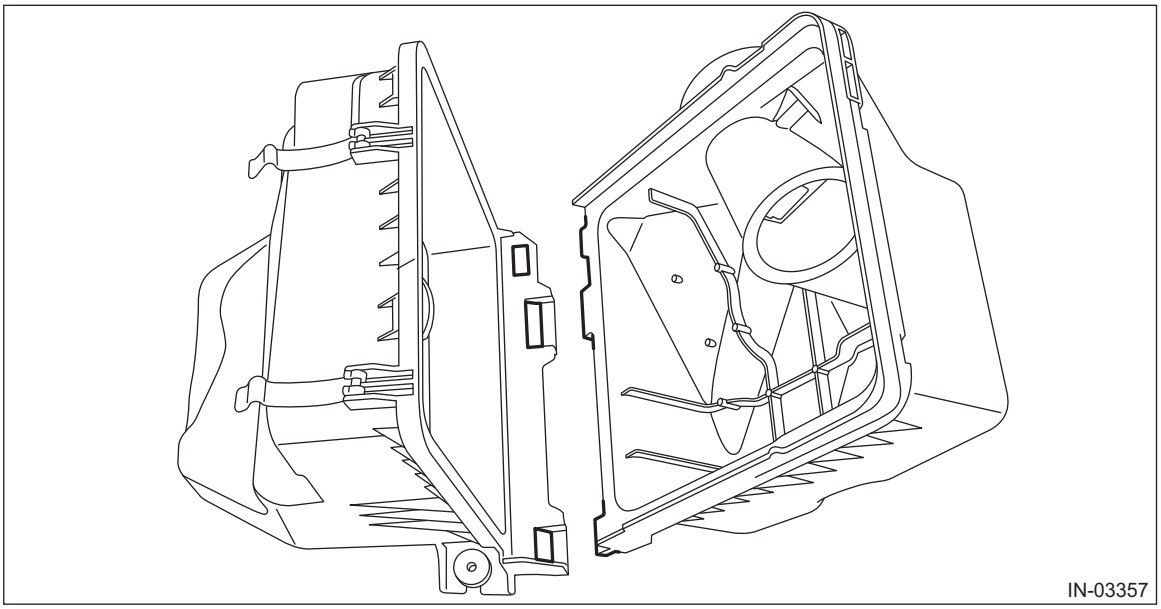
3) Set the air cleaner element to the air cleaner case (front), and install the air cleaner case (rear).

NOTE:
- Check that there is no dirt or dust within the air cleaner case. If any dirt or dust is found, clean it.
- Install the air cleaner element as shown in the figure.

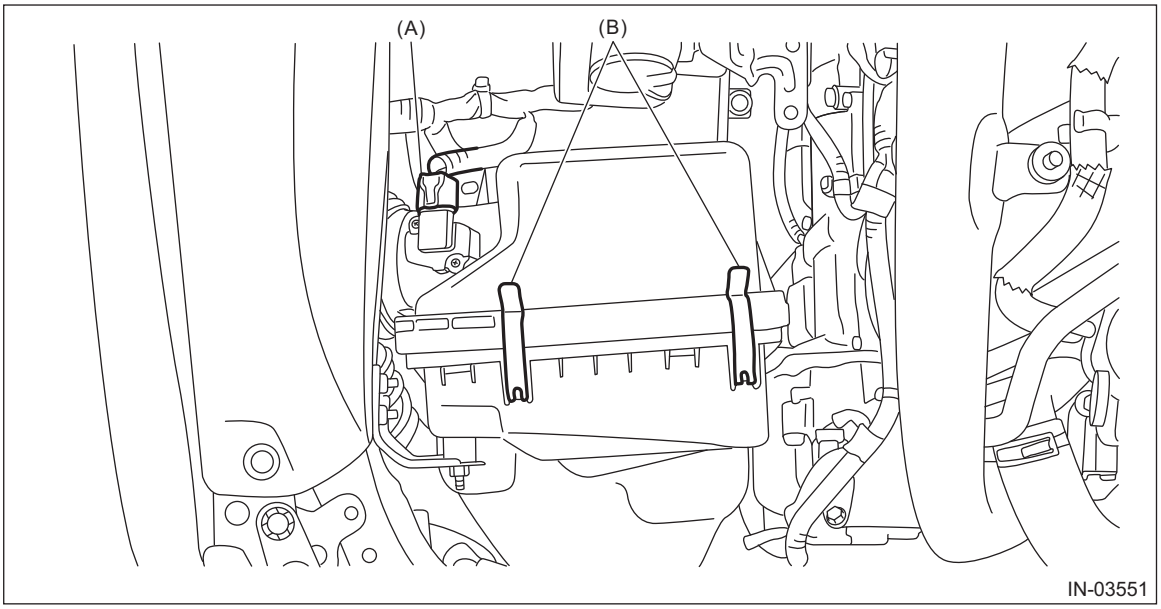


(a) Upside
(b) Downside
(c) Air cleaner case (front) side
(d) Air cleaner case (rear) side

• When installing the air cleaner case (rear), align the protrusion of the air cleaner case (rear) to the hole on the air cleaner case (front) to install.

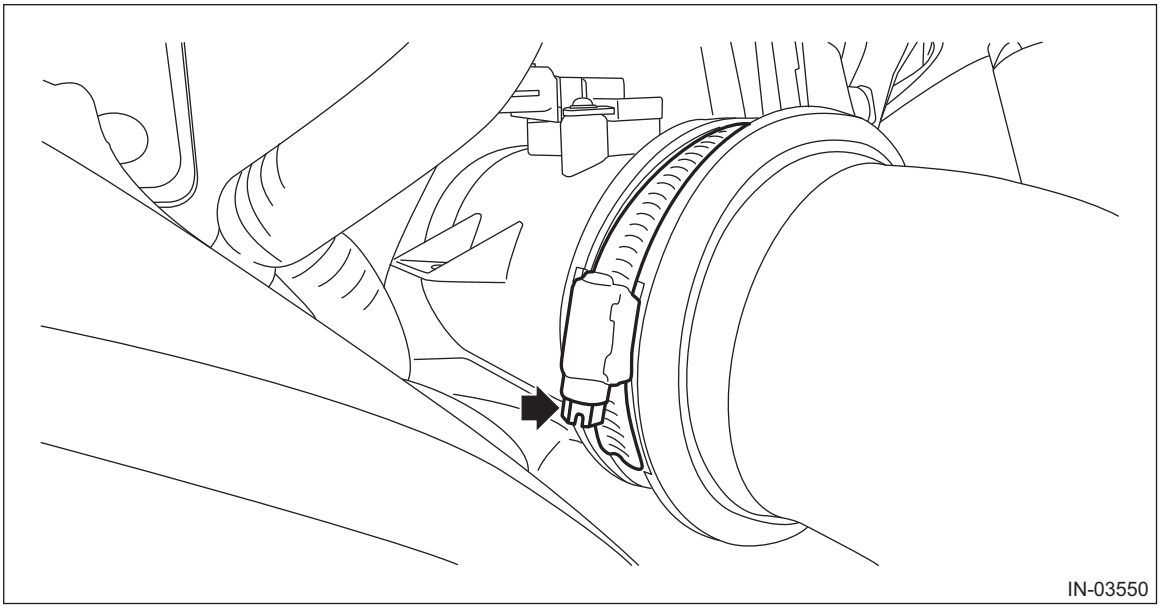


4) Install the clip (B) to the air cleaner case (rear), and connect the connector (A) to the mass air flow and intake air temperature sensor.

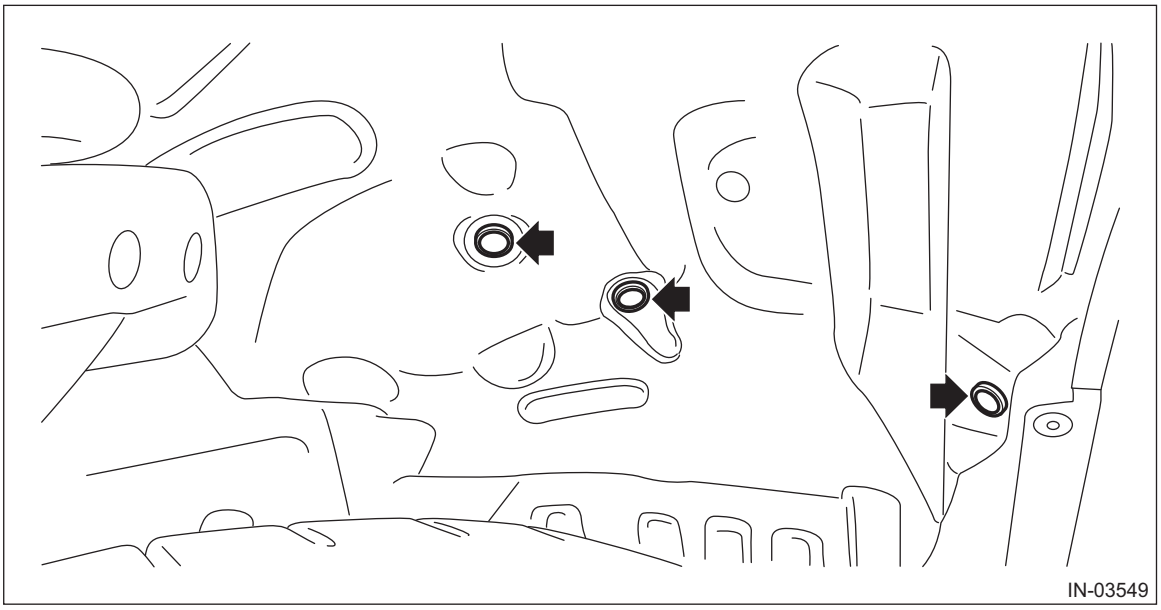


5) Tighten the clamp which secures the air intake boot to the air cleaner case (rear).

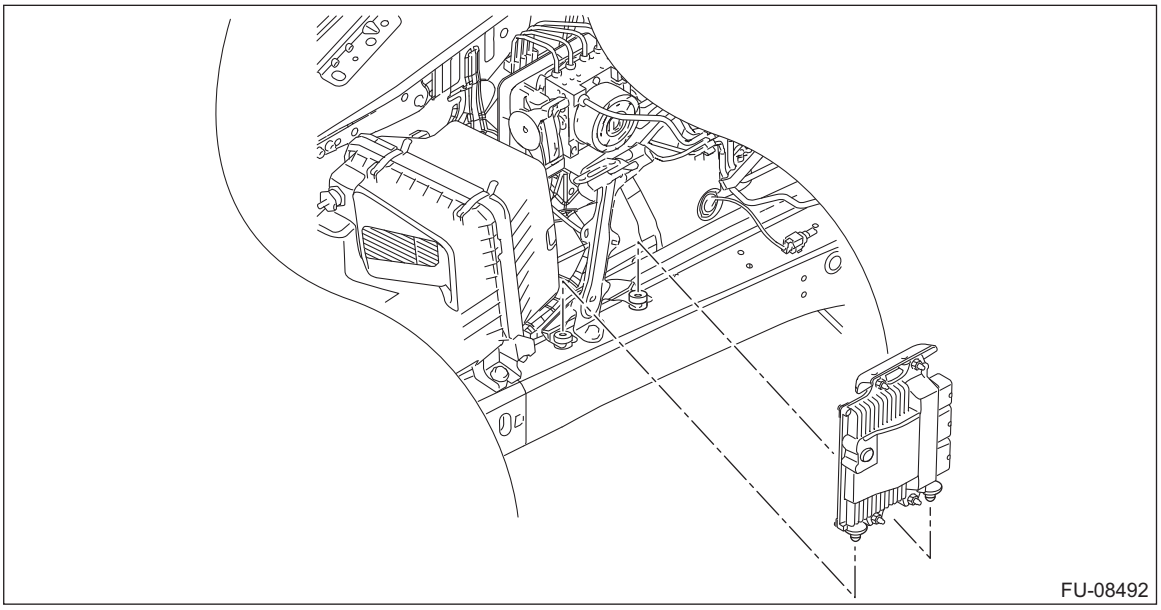
Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)



6) Set the front mud guard RH to the vehicle, and install the clips which secure the front mud guard RH.

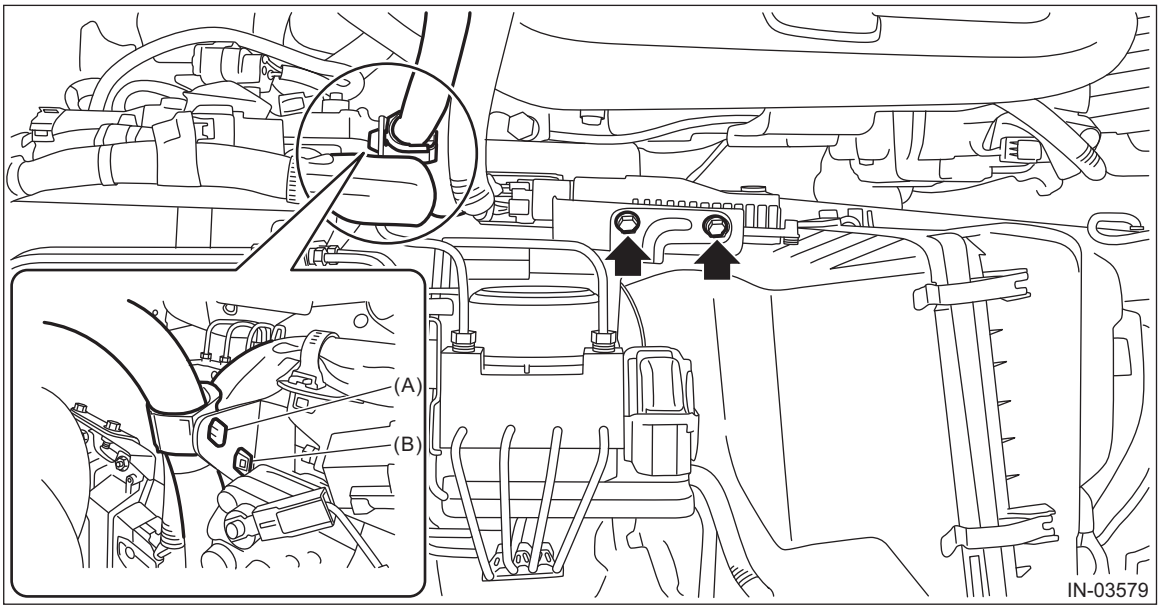


7) Insert the engine control module (ECM) to the bracket.



8) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



9) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
10) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

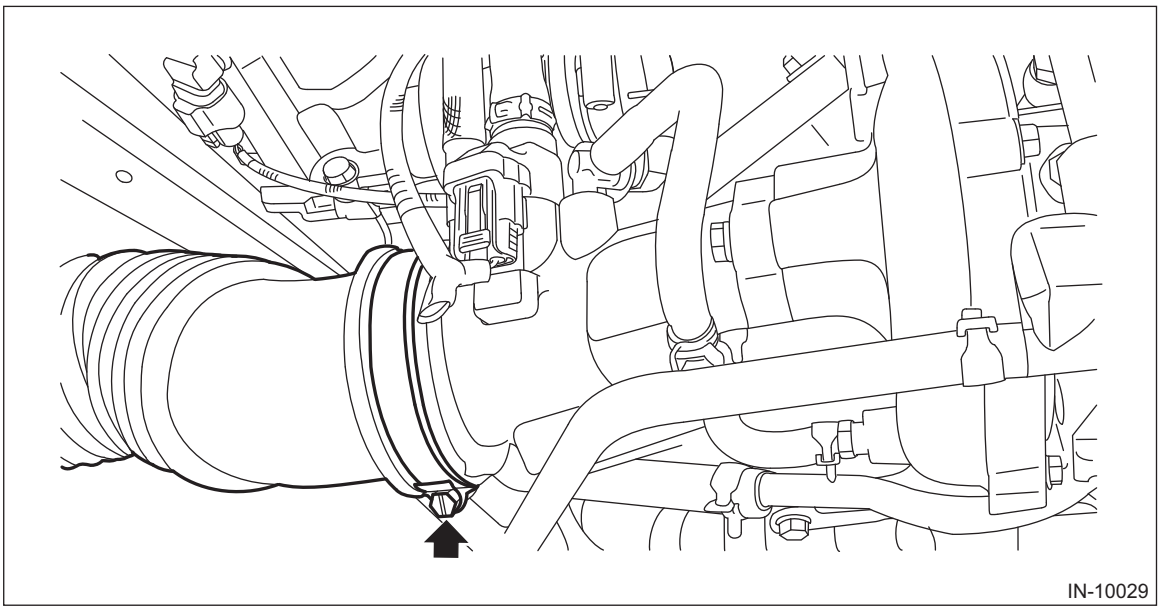
C: INSPECTION

Check that the air cleaner case has no deformation, cracks or other damages.

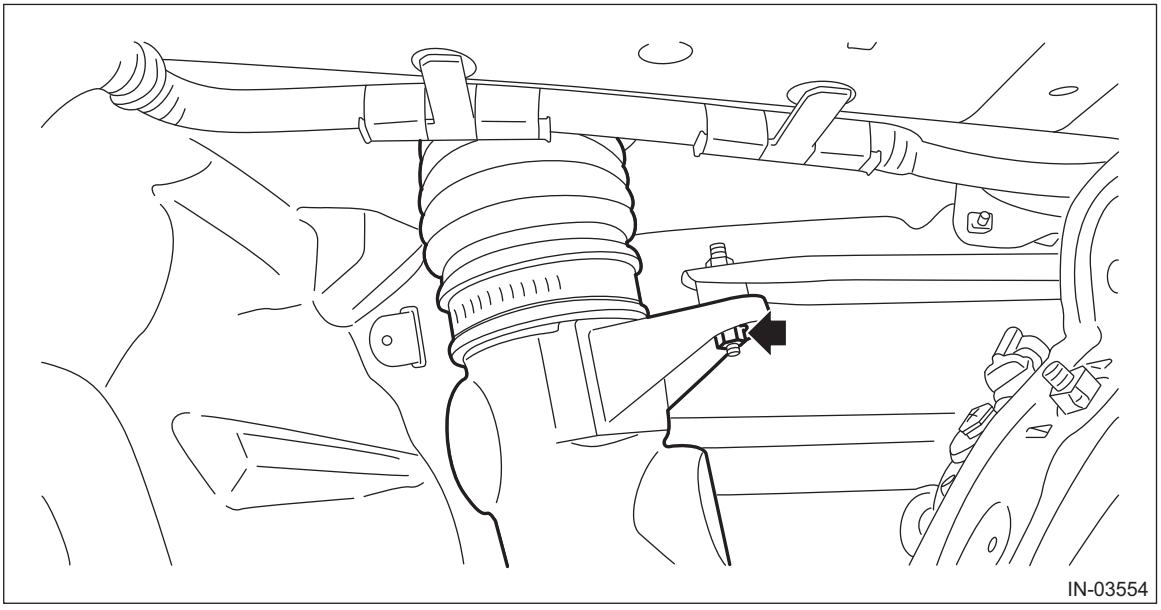
5. Air Intake Boot

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air cleaner case. <Ref. to IN(w/o STI)-13, REMOVAL, Air Cleaner Case.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Remove the air intake boot from the intake duct No. 1.

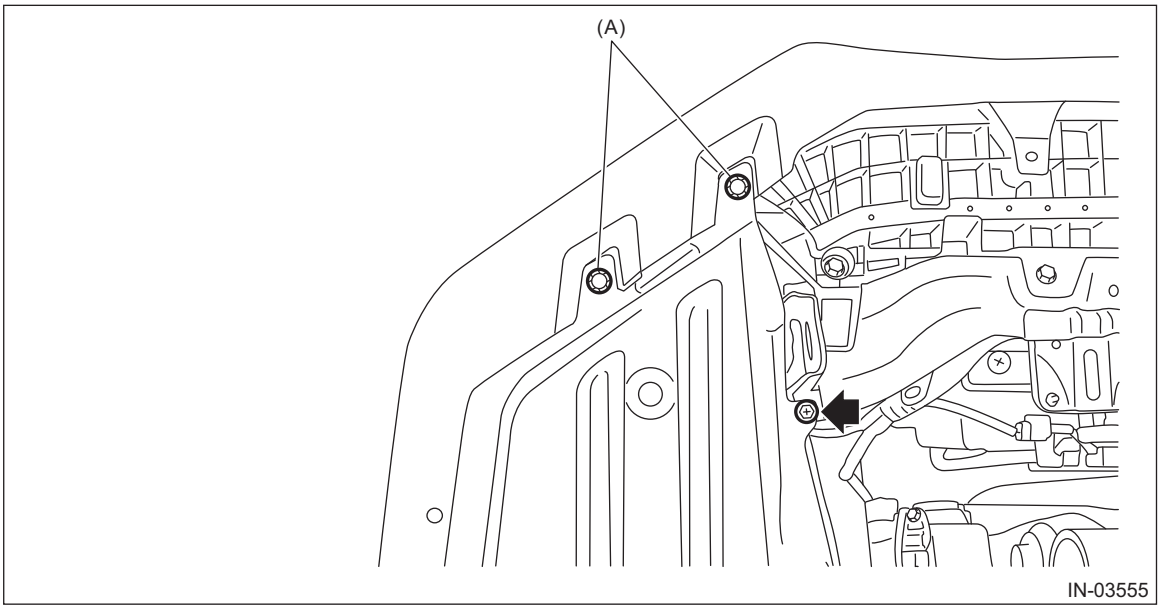


6) Lower the vehicle.
7) Remove the nuts which secure the turbo duct to the vehicle, and remove the air intake boot from the upper side of the vehicle together with the turbo duct.

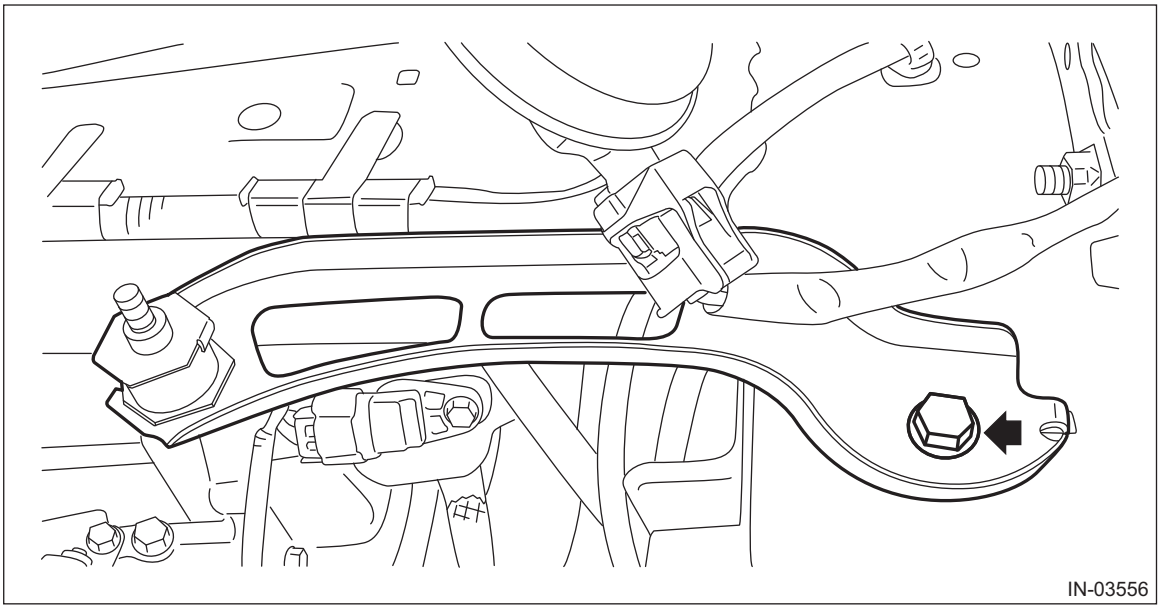


8) Lift up the vehicle.

9) Remove the clips (A) which secure the front mud guard RH to the front bumper, and remove the screw which secures the front mud guard RH to the vehicle.



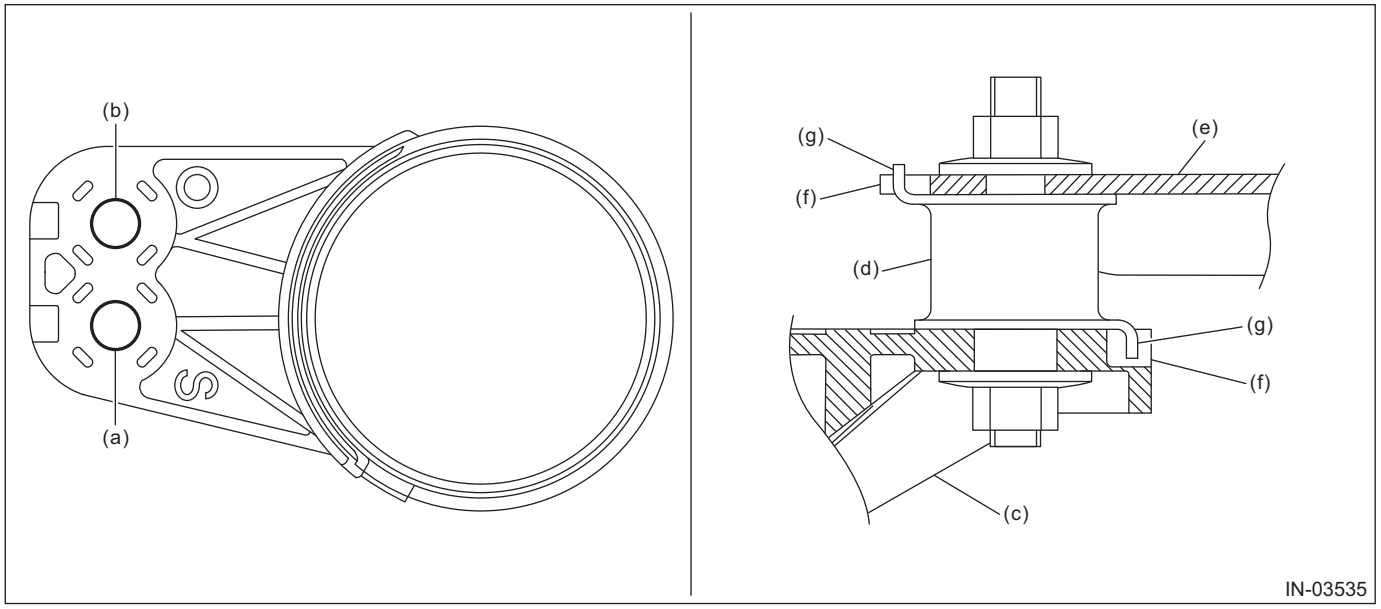
10) Turn over the front mud guard RH and remove the duct bracket from the vehicle.



B: INSTALLATION

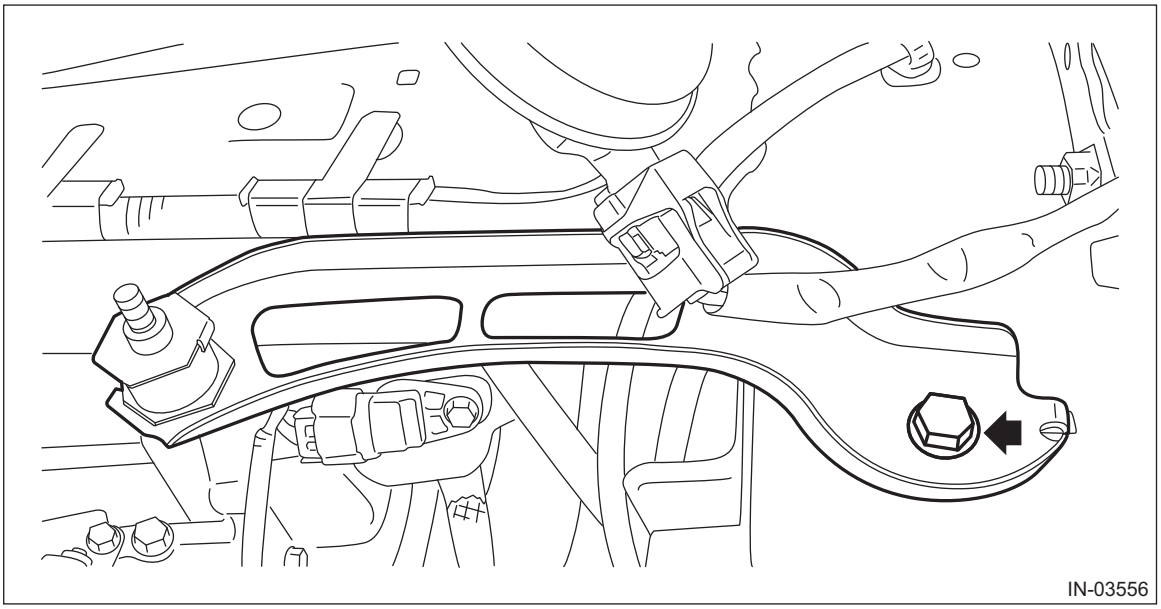
Install in the reverse order of removal.

NOTE:
When installing the air intake boot to the vehicle, pay attention to the mounting hole position, and align the protrusion for stopping rotation of cushion to the cutout portion on the turbo duct.

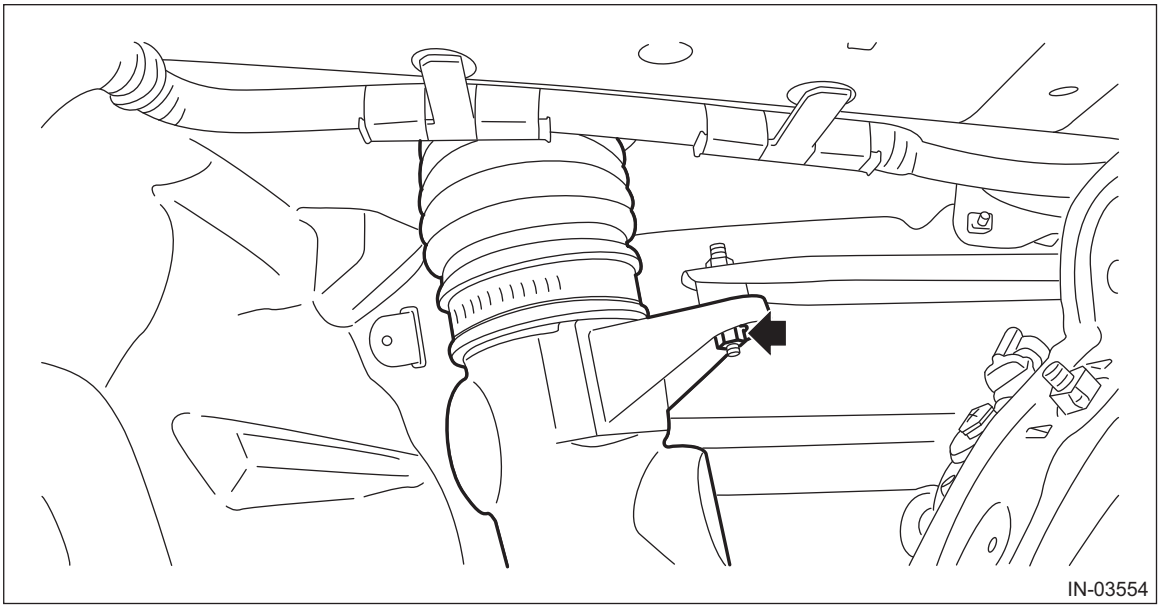


(a) Attachment hole
(b) Not used
(c) Turbo duct
(d) Cushion
(e) Duct bracket
(f) Cutout portion
(g) Protrusion portion

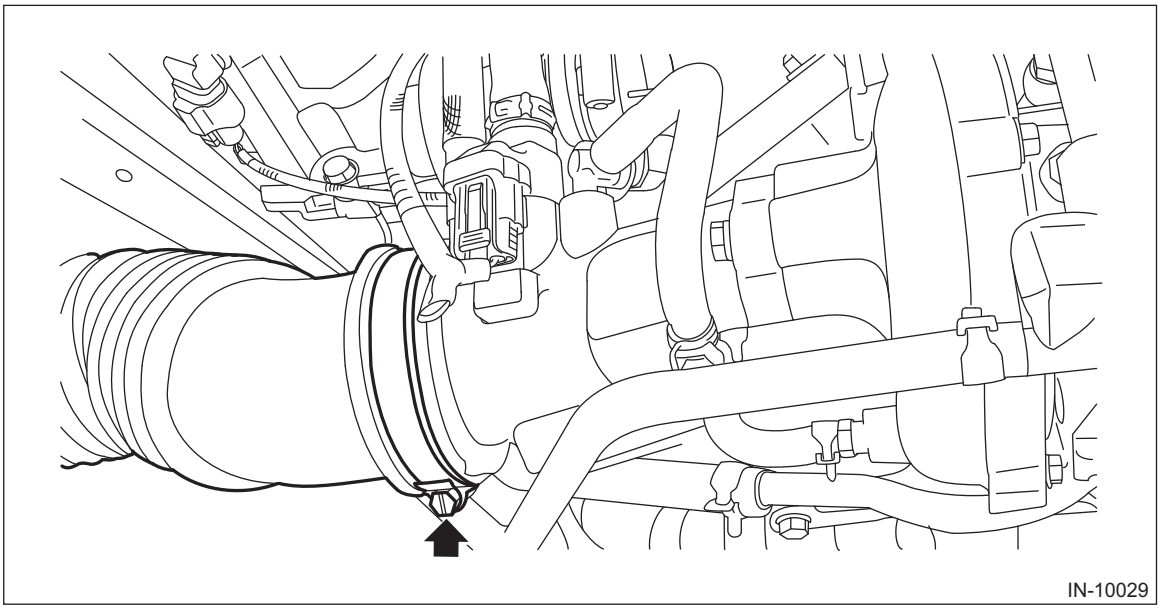
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

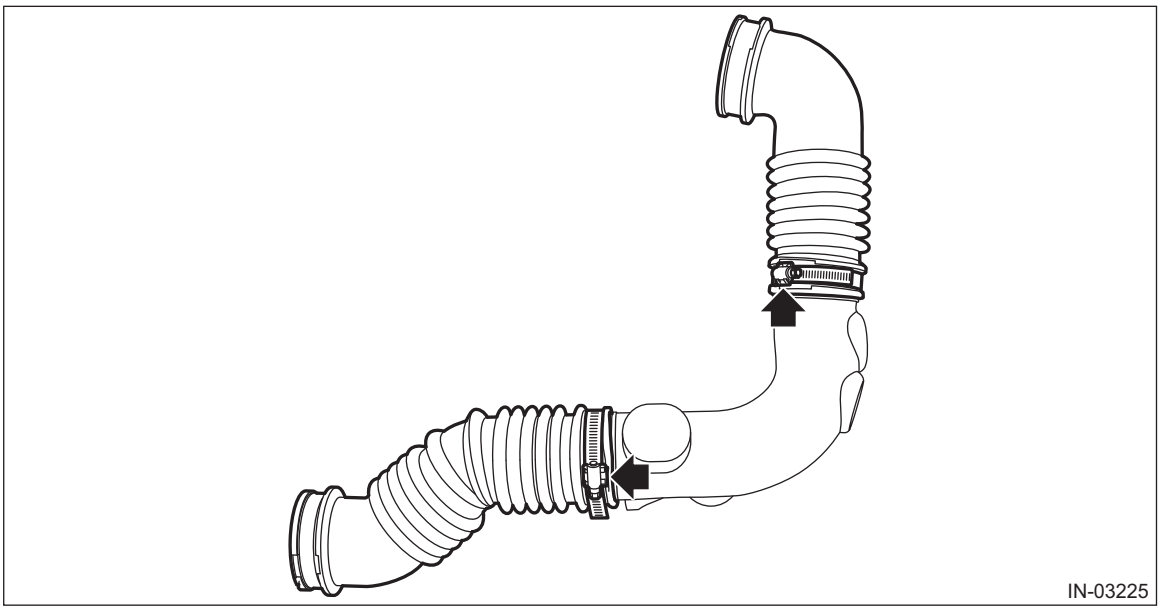


Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)



C: DISASSEMBLY

Remove the air intake boot from the turbo duct.



D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

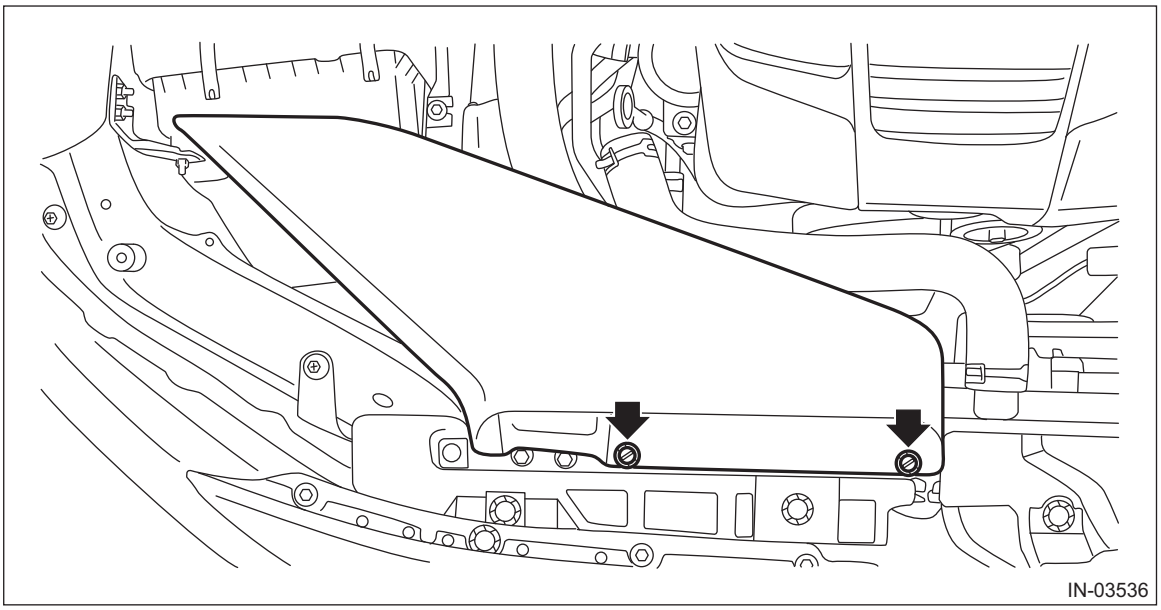
E: INSPECTION

Check that the air intake boot and turbo duct have no cracks, damage or loose part.

6. Air Intake Duct

A: REMOVAL

Remove the clip which secures the air intake duct, and remove the air intake duct.



B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Check that the air intake duct has no deformation, cracks or other damages.
2) Inspect that no foreign objects are mixed in the air intake duct.

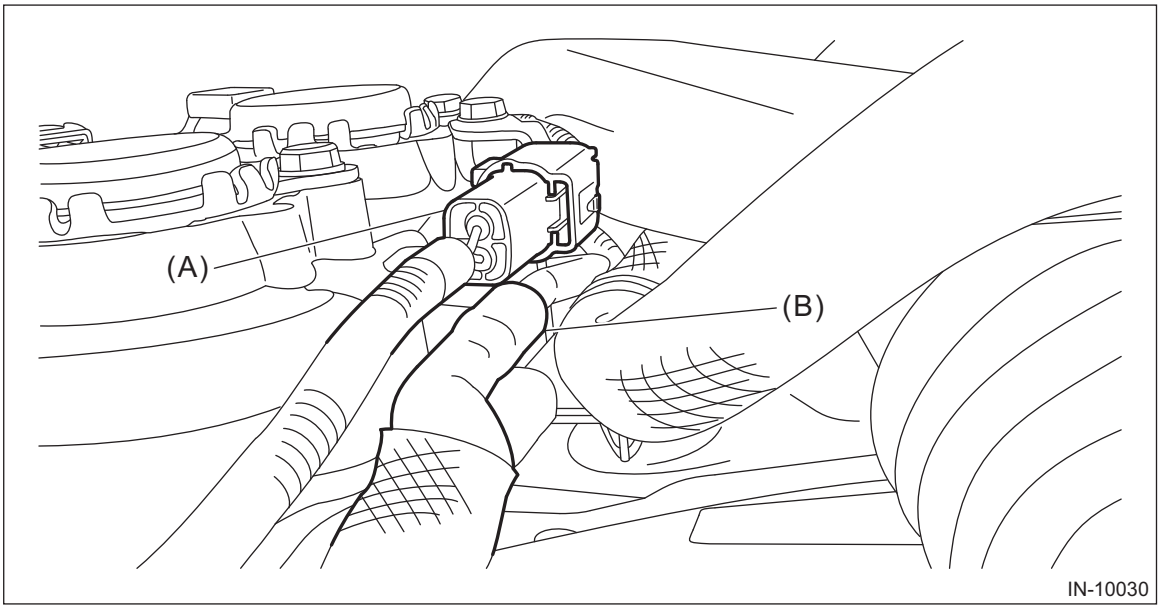
7. Intake Duct

A: REMOVAL

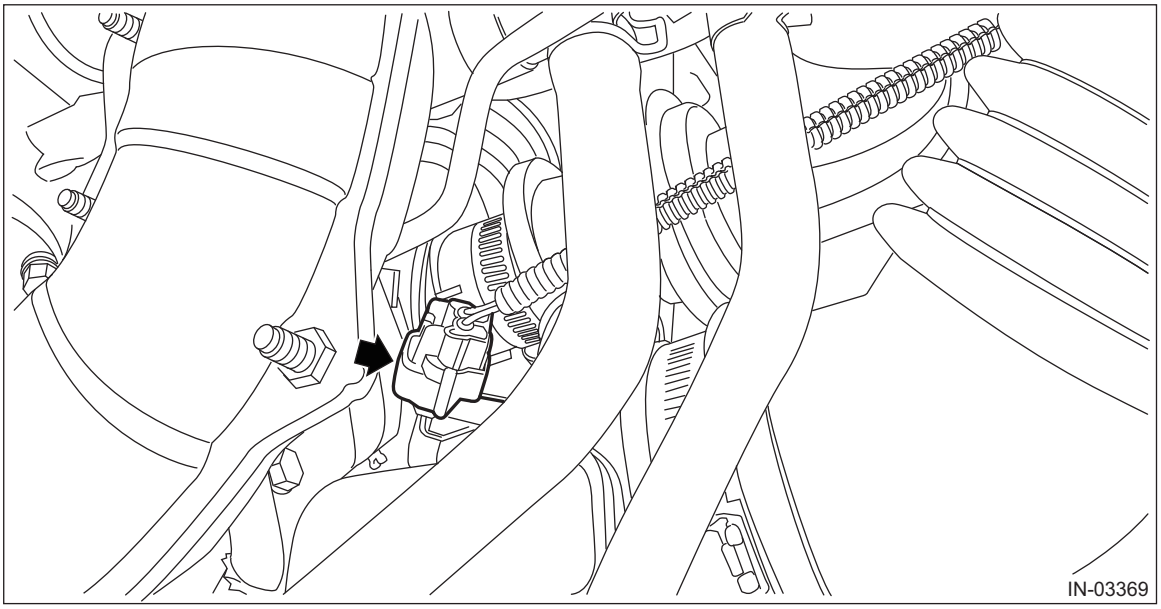
1. INTAKE DUCT NO. 1

• Except for Canada

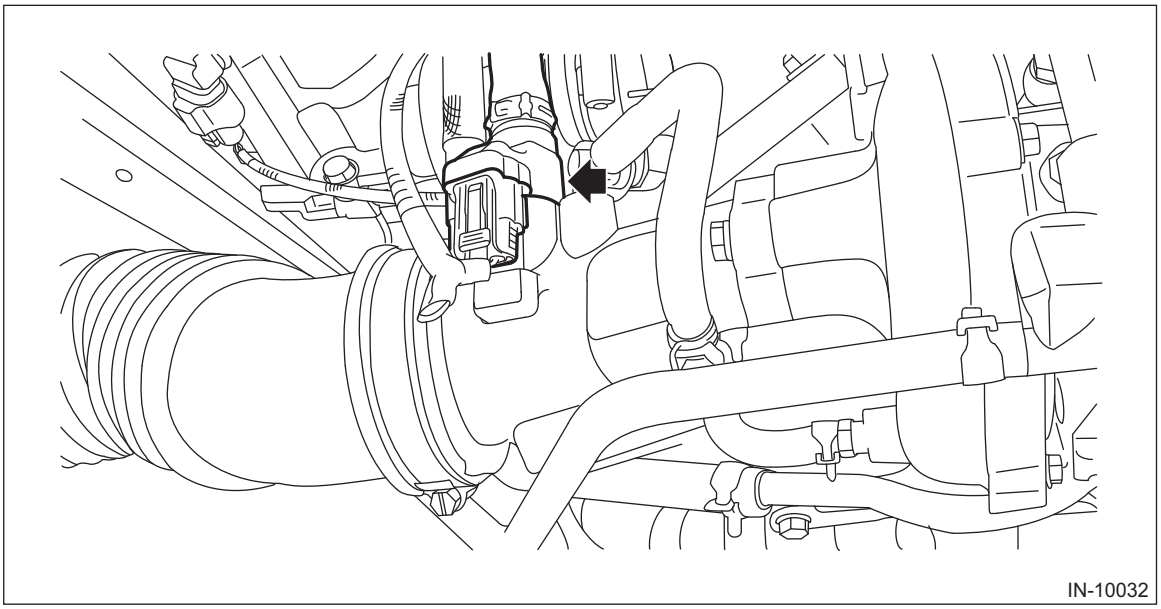
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Disconnect the blow-by diagnosis connector (A) from the engine wiring harness, and disconnect the vacuum hose (B) from the vacuum pipe assembly.



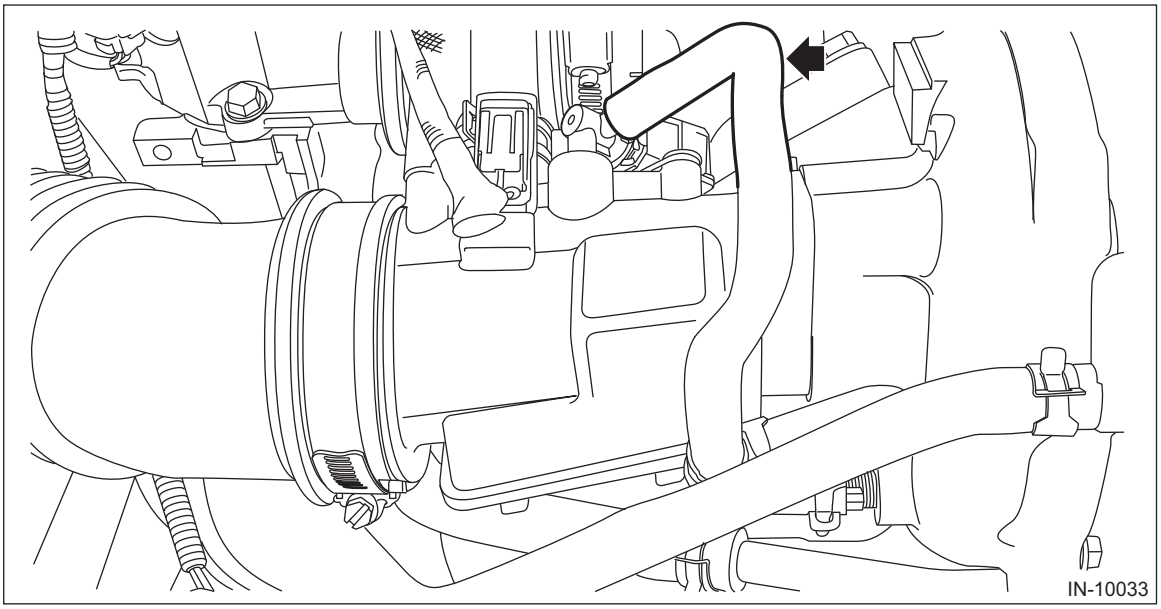
6) Disconnect the connector from the wastegate control solenoid valve.



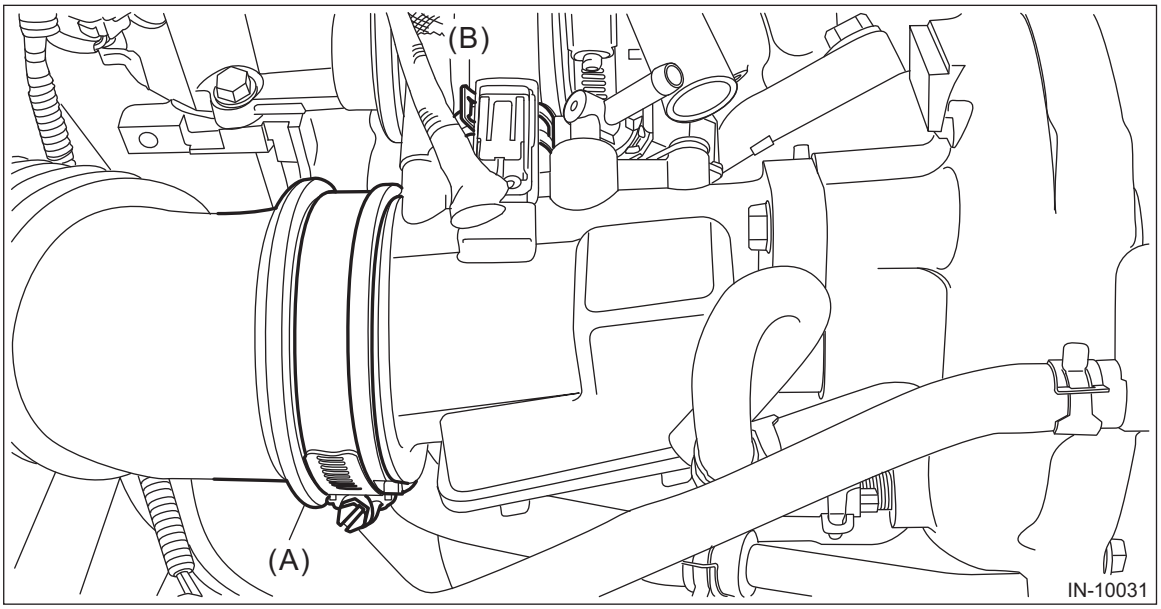
7) Unlock the blow-by diagnosis connector, and disconnect the PCV pipe assembly from the intake duct No. 1.



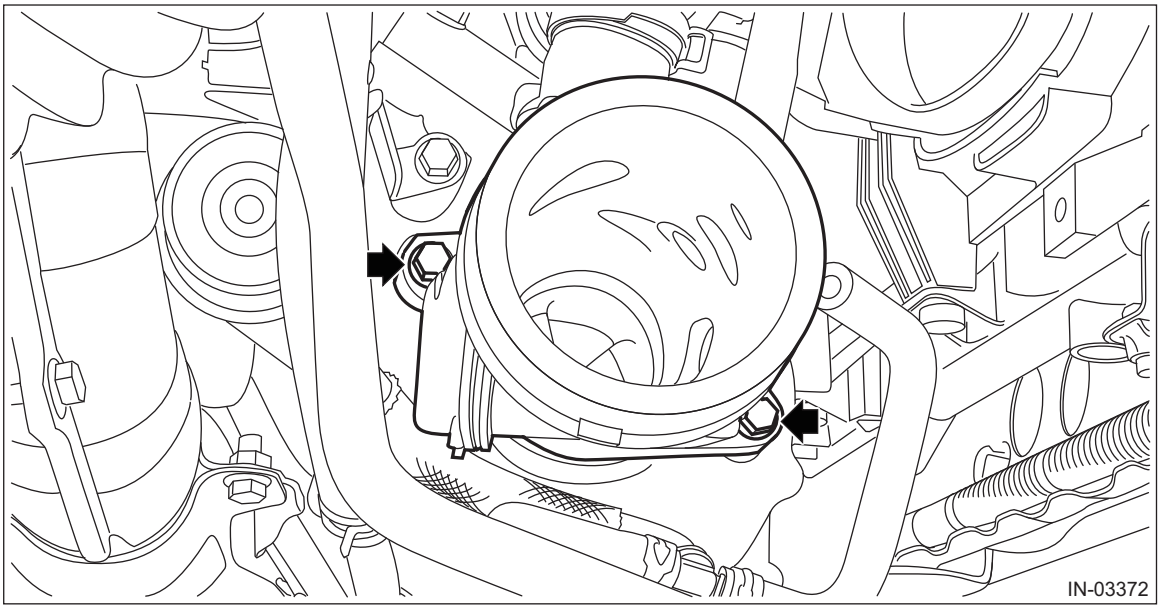
8) Disconnect the vacuum control hose from the wastegate control solenoid valve.



9) Remove the air intake boot (A) from the intake duct No. 1, and disengage the clip (B) which secures the air by-pass valve to the intake duct No. 1.



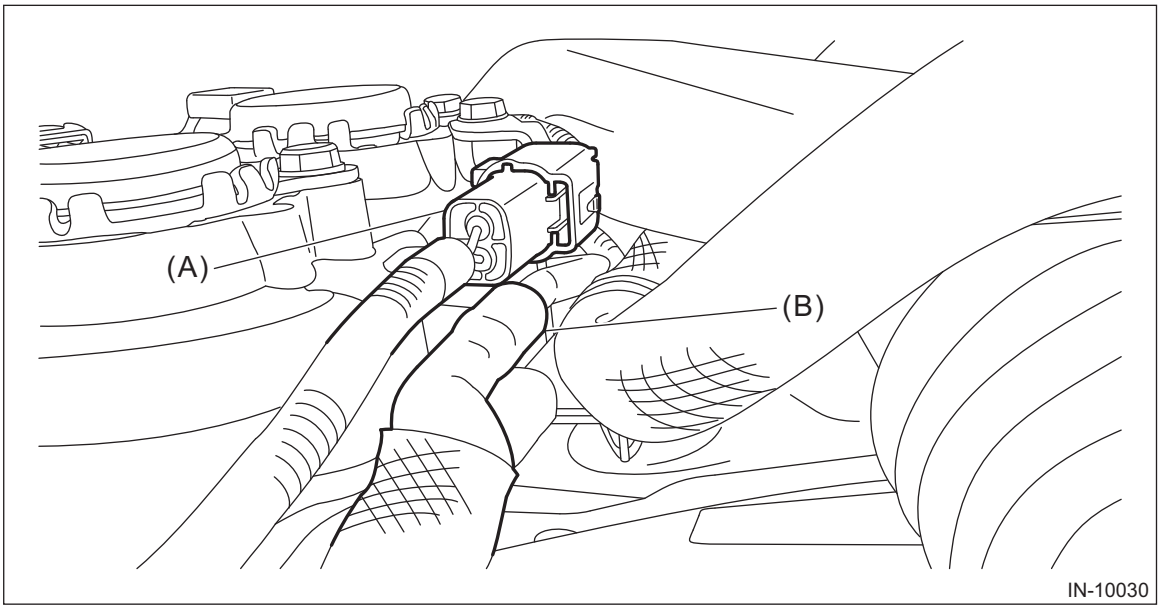
10) Remove the intake duct No. 1 from the turbocharger.



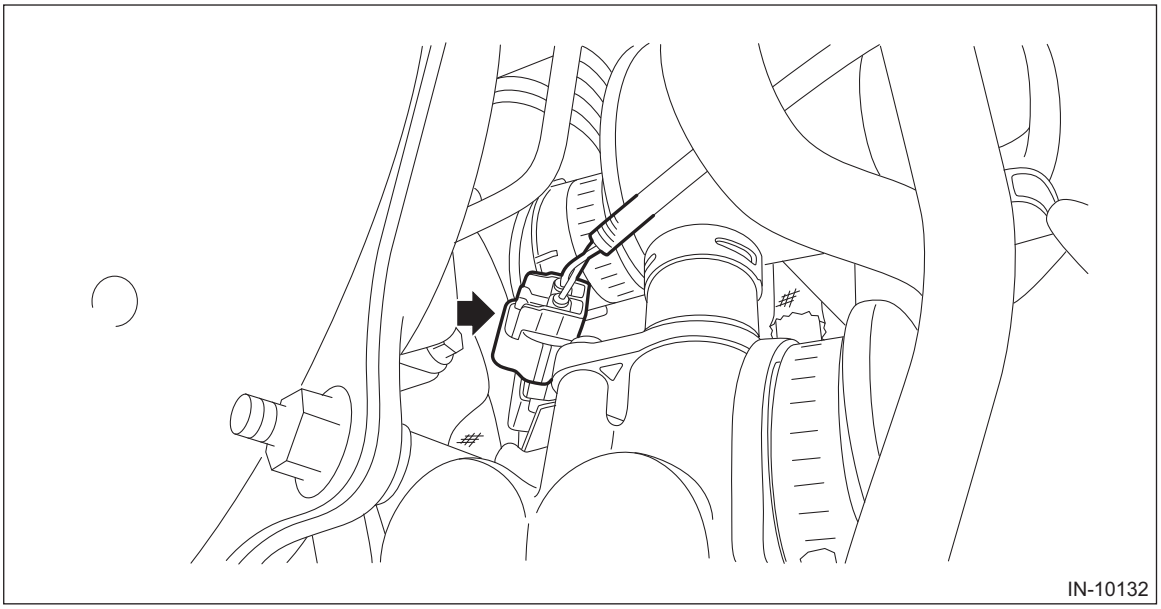
- **For Canada**

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

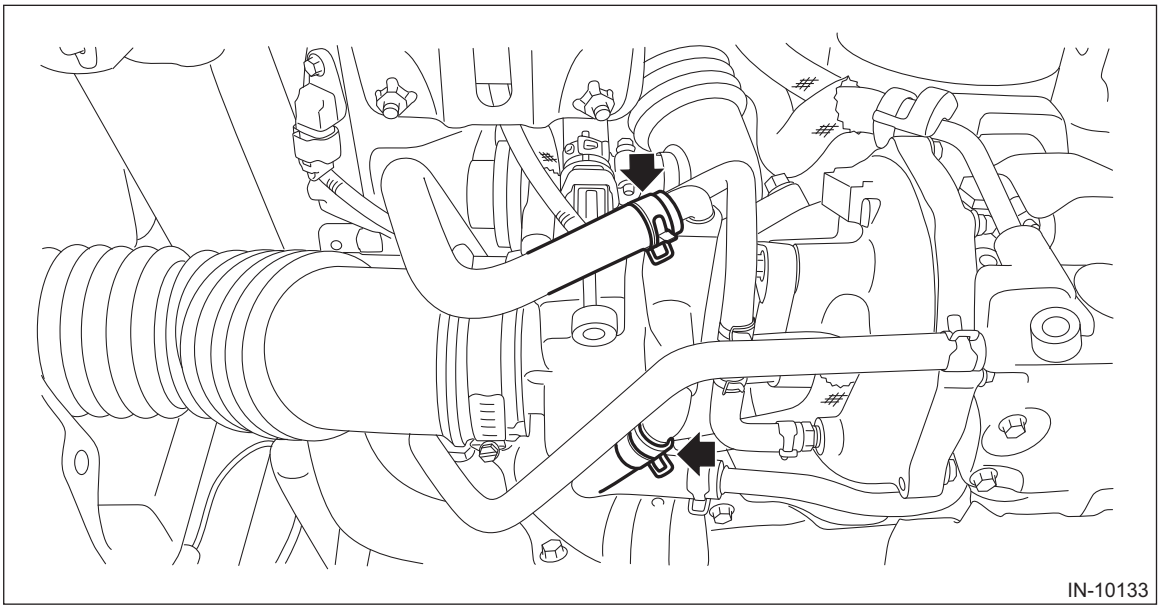
4) Disconnect the blow-by diagnosis connector (A) from the engine wiring harness, and disconnect the vacuum hose (B) from the vacuum pipe assembly.



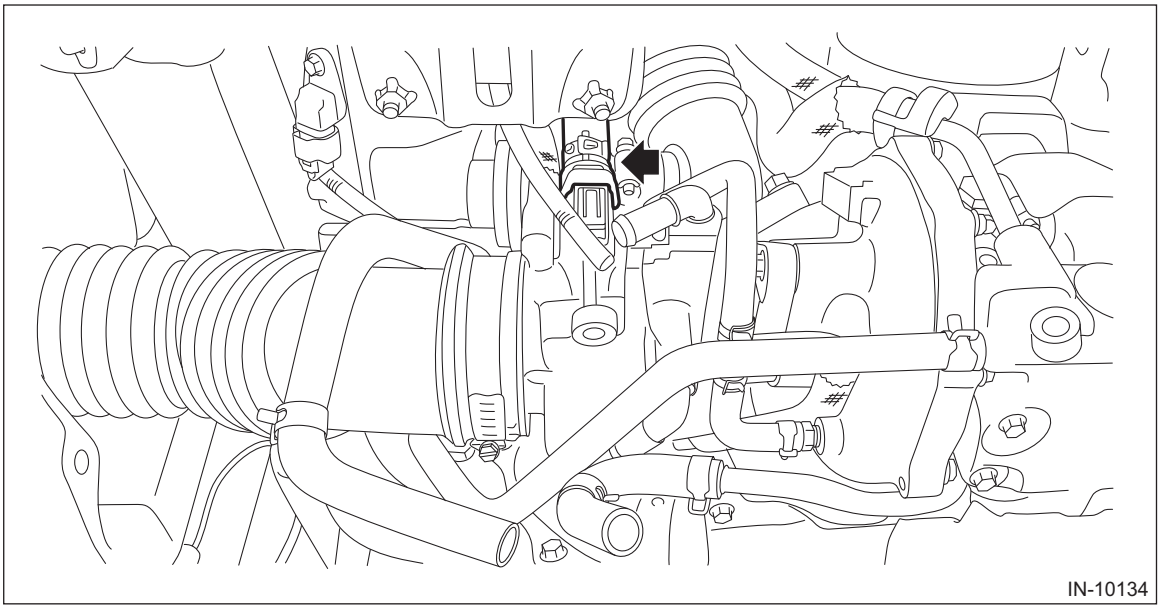
5) Disconnect the connector from the wastegate control solenoid valve.



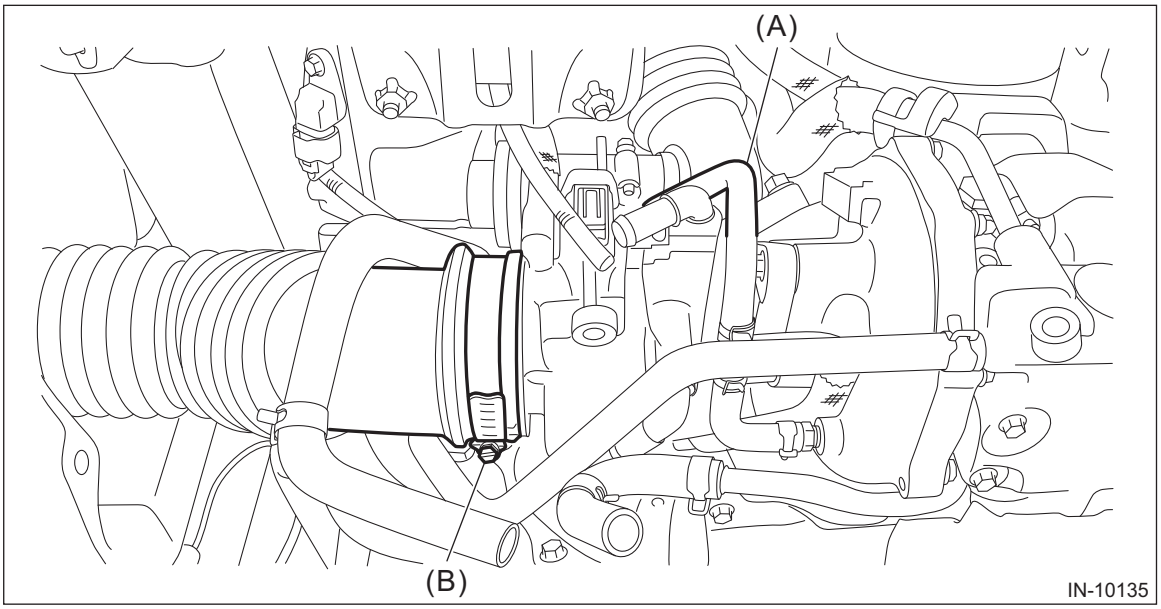
6) Remove the engine coolant hose from the intake duct No. 1.



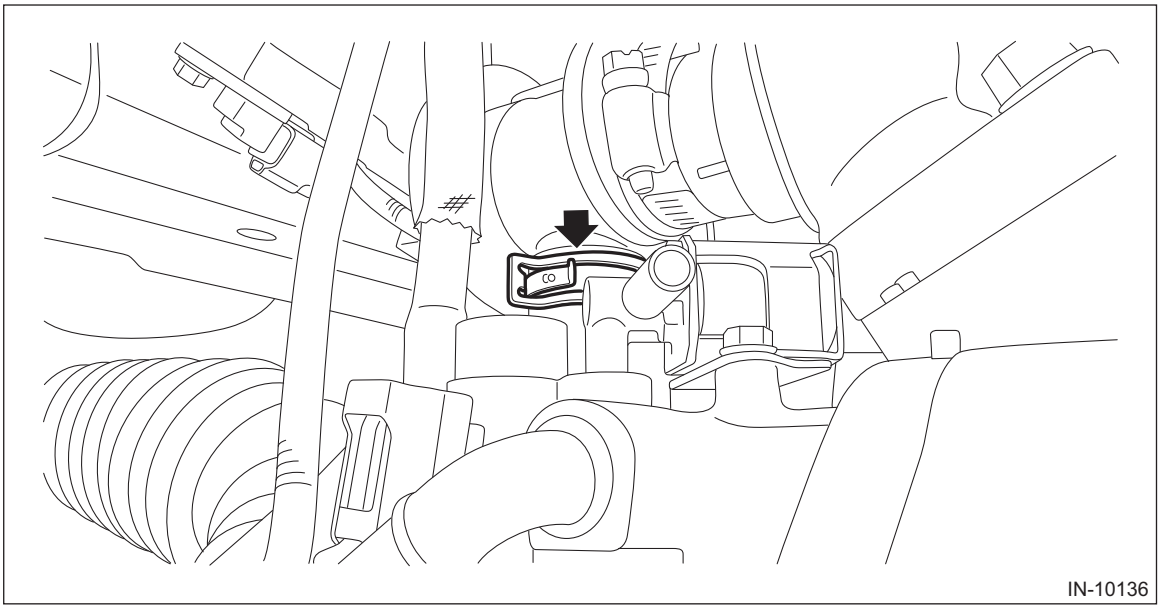
7) Unlock the blow-by diagnosis connector, and disconnect the PCV pipe assembly from the intake duct No. 1.



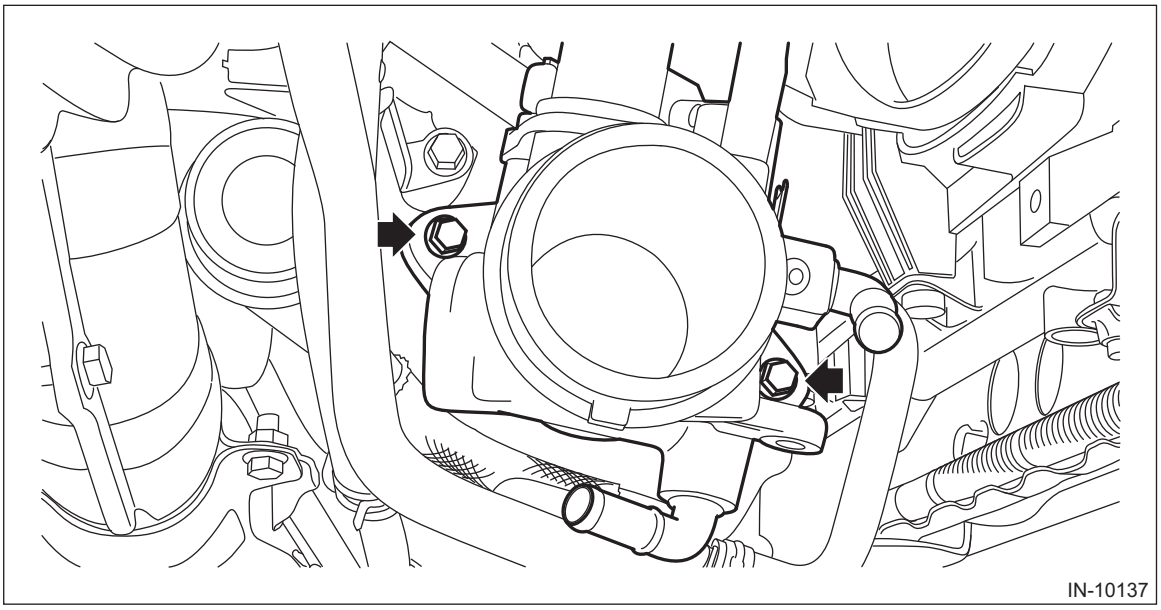
8) Disconnect the vacuum control hose (A) from the wastegate control solenoid valve, and remove the air intake boot (B) from the intake duct No. 1.



9) Disengage the clip which secures the air by-pass valve to the intake duct No. 1.

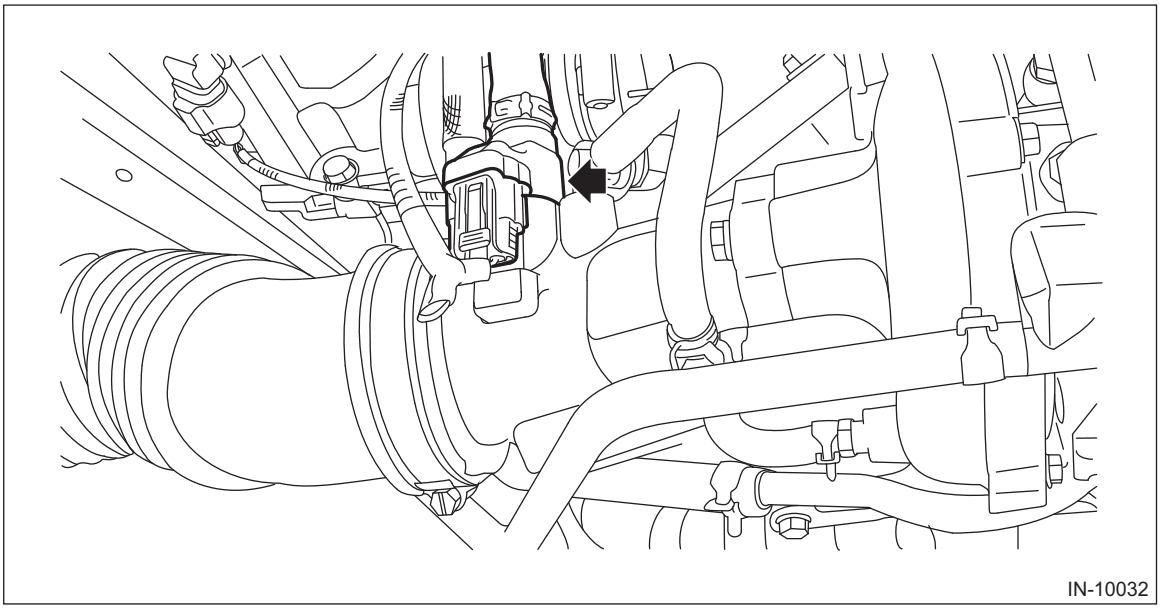


10) Remove the intake duct No. 1 from the turbocharger.

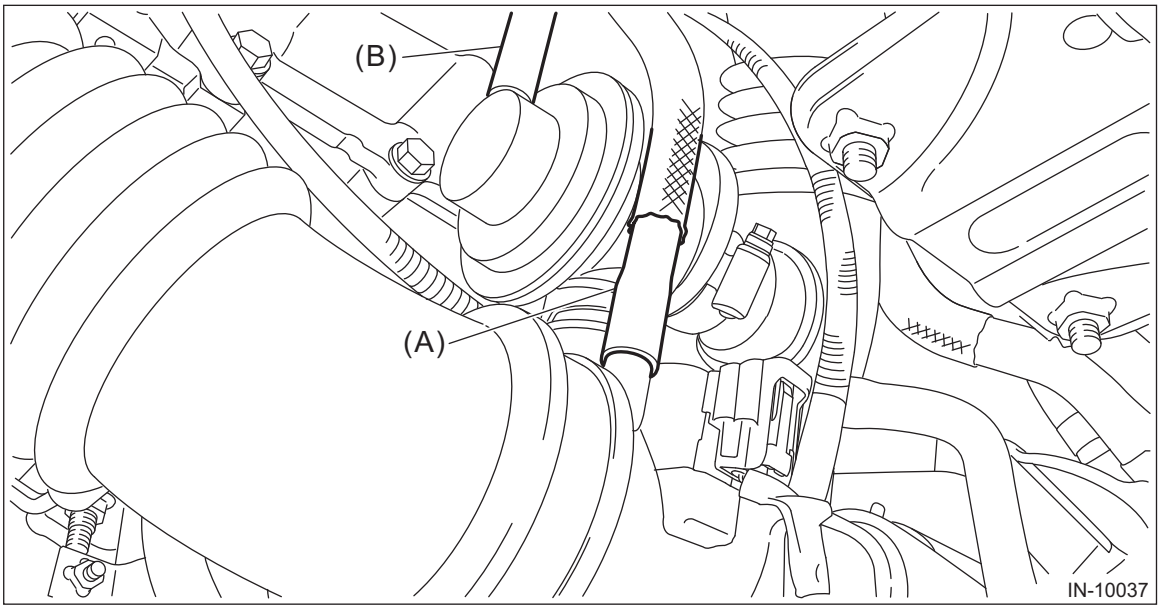


2. INTAKE DUCT NO. 2

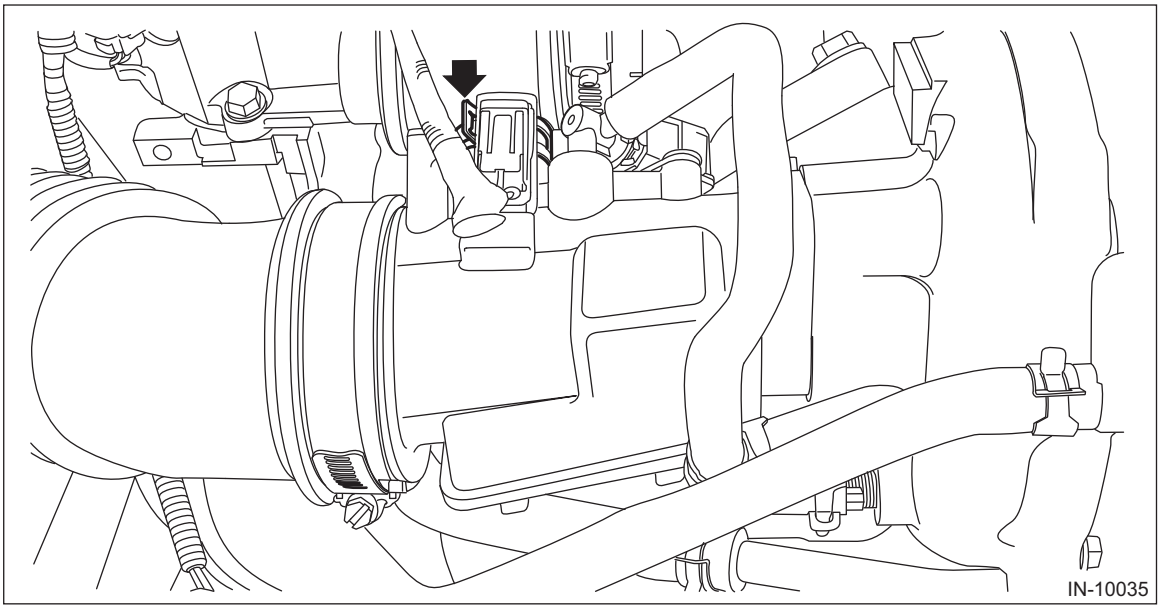
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
4) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
5) Remove the radiator sub fan and fan motor. <Ref. to CO(w/o STI)-50, REMOVAL, Radiator Sub Fan and Fan Motor.>
6) Lift up the vehicle.
7) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
8) Unlock the blow-by diagnosis connector, and disconnect the PCV pipe assembly from the intake duct No. 1.



9) Disconnect the vacuum hose (A) from the intake duct No. 1, and disconnect the vacuum hose (B) from the air by-pass valve.

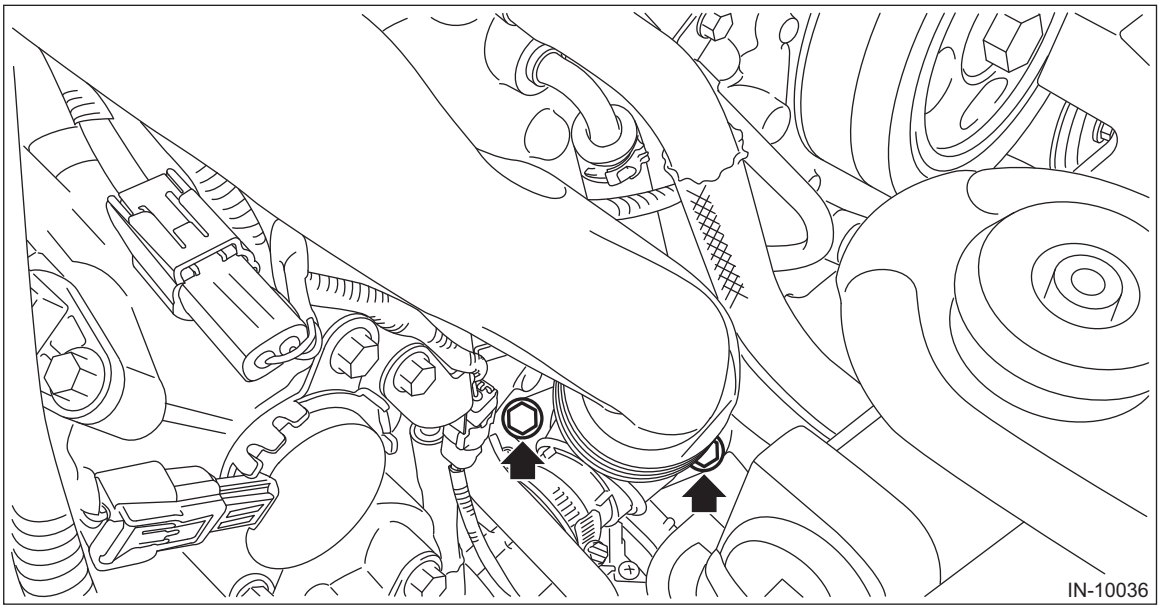


10) Disengage the clip which secures the air by-pass valve to the intake duct No. 1.

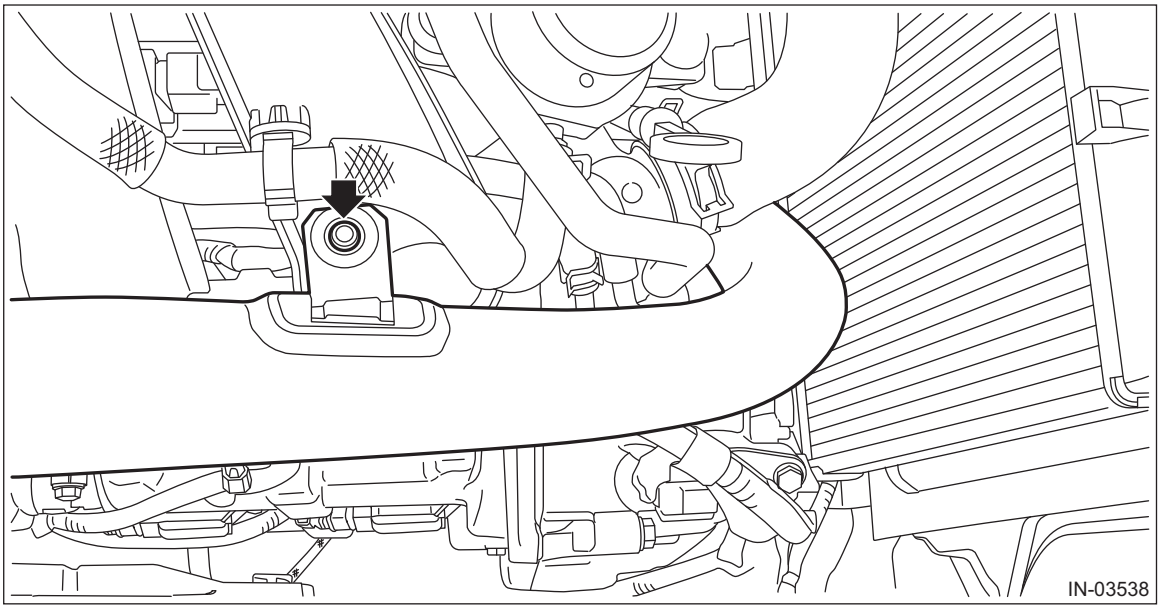


11) Lower the vehicle.

12) Remove the bolts which secure the intake duct No. 2 to the turbocharger.



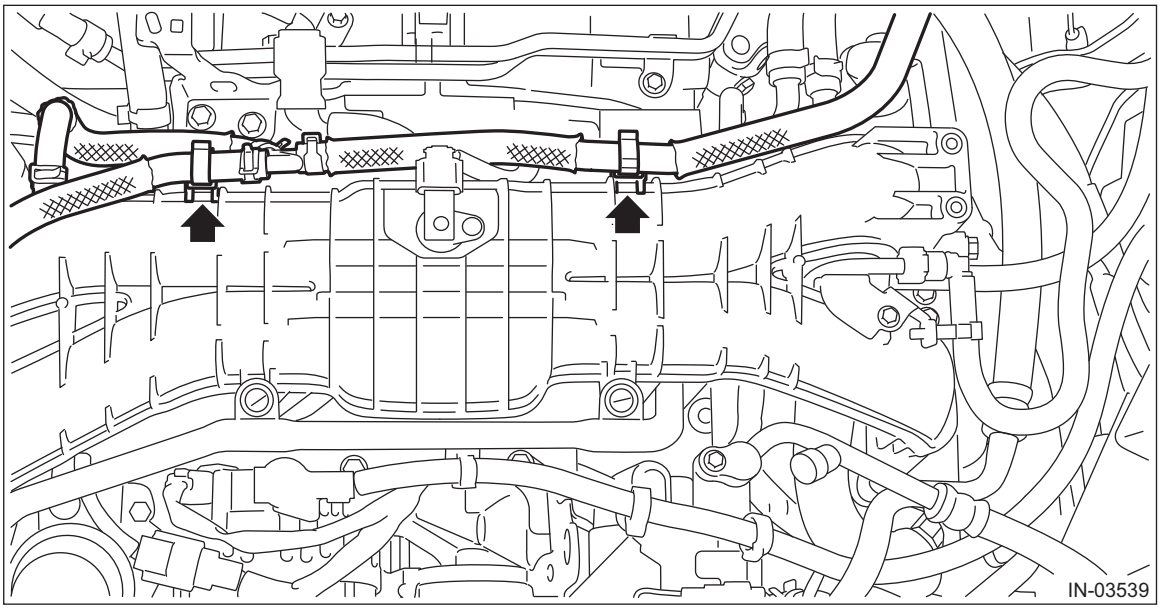
13) Pull out the air by-pass valve from the intake duct No. 1, and remove the intake duct No. 2 from the intake manifold.



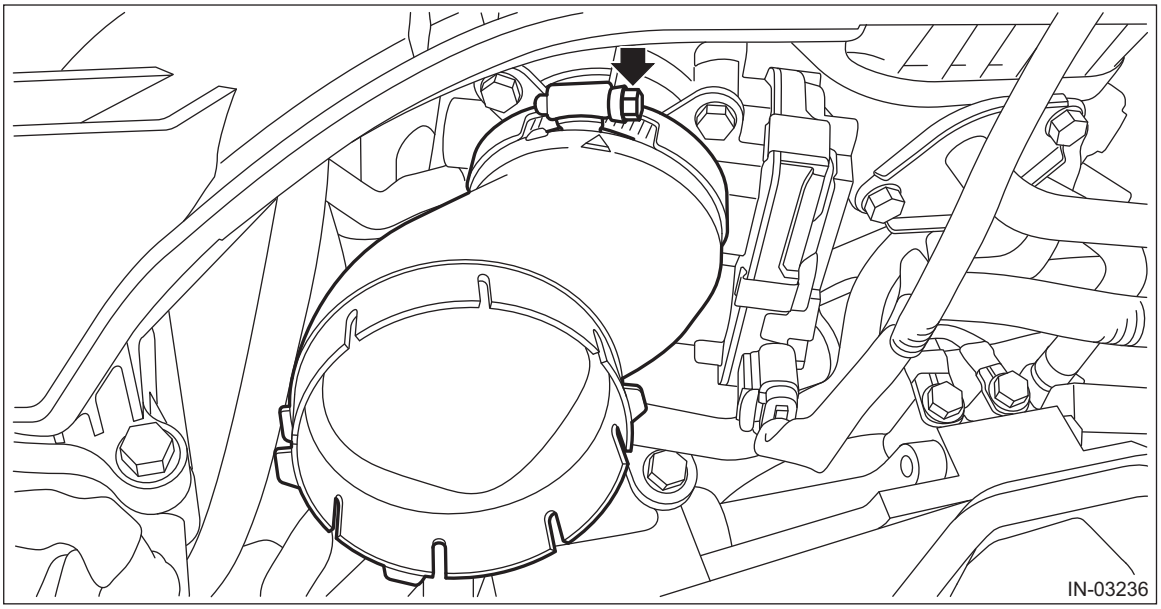
3. INTAKE DUCT NO. 3

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>

3) Remove the brake booster vacuum hose from the clip, and place the brake booster vacuum hose aside so that it does not interfere with the work.



4) Remove the intake duct No. 3 from the throttle body.



B: INSTALLATION

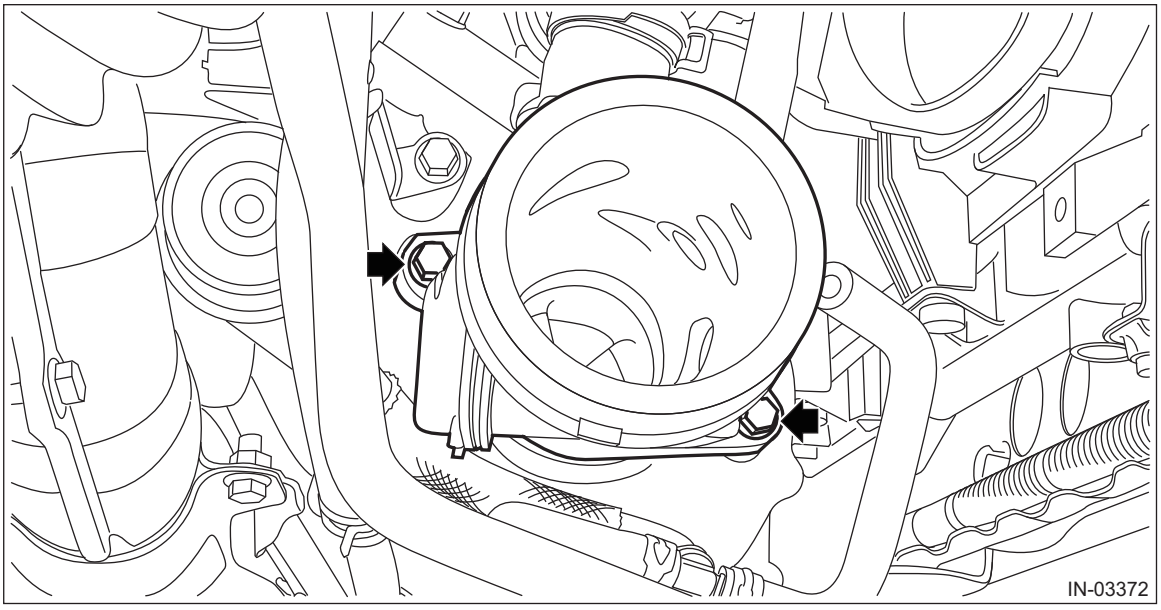
1. INTAKE DUCT NO. 1

• Except for Canada

1) Install the intake duct No. 1 to the turbocharger.

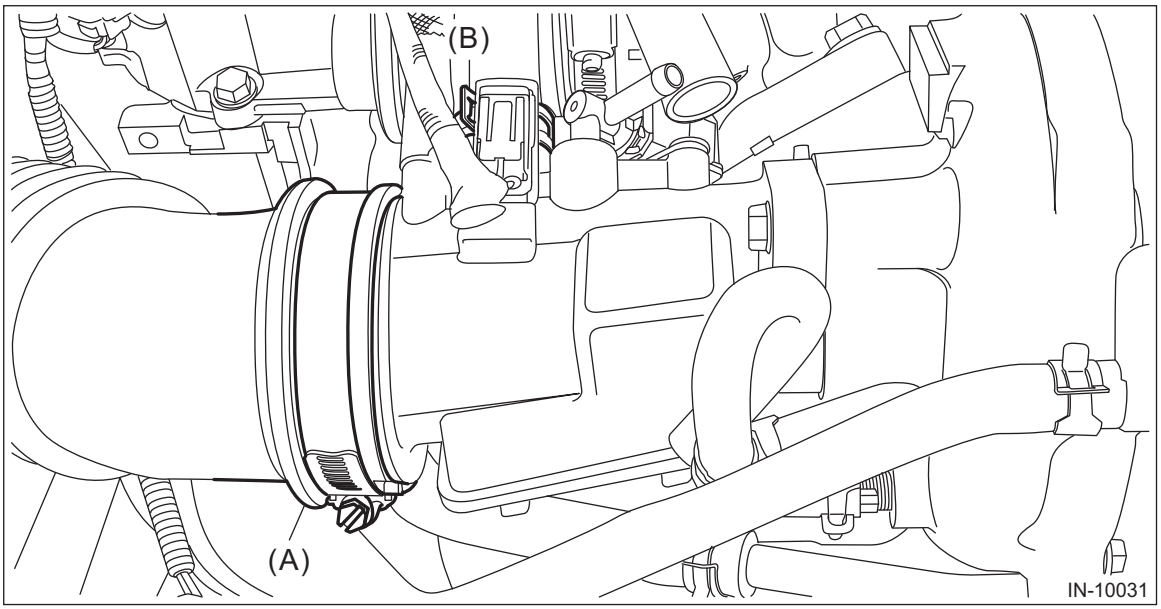
NOTE:
- Use new O-rings.
- Be careful not to pinch the O-ring.
- Check that the air by-pass valve is firmly inserted into the intake duct No. 1.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

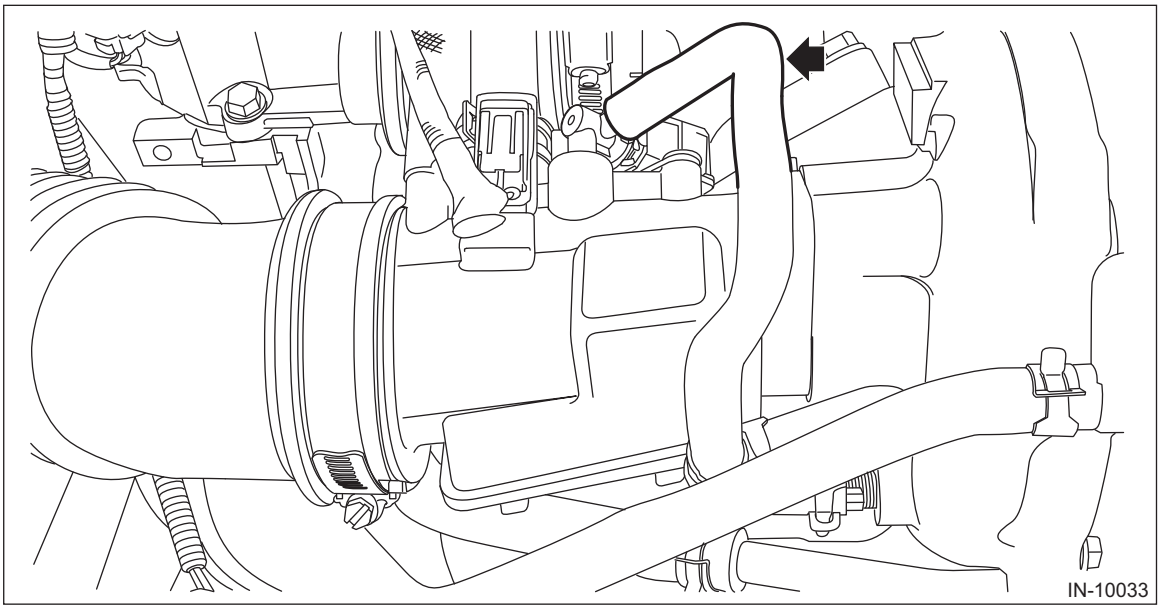


2) Install the air intake boot (A) to the intake duct No. 1, and engage the clip (B) which secures the air by-pass valve to the intake duct No. 1.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

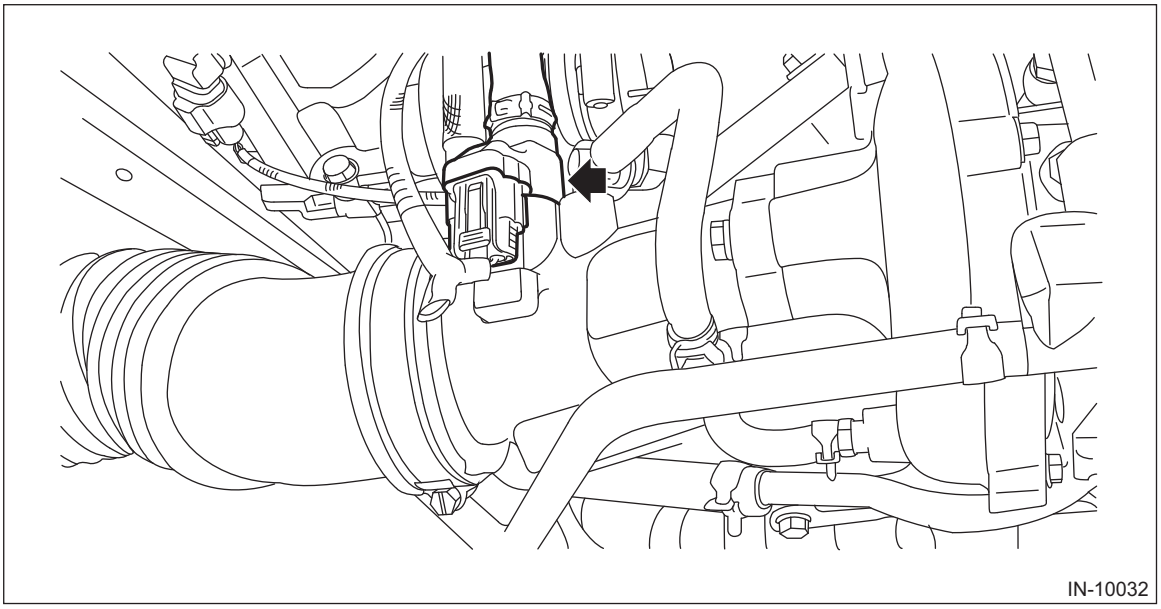


3) Connect the vacuum control hose to the wastegate control solenoid valve.

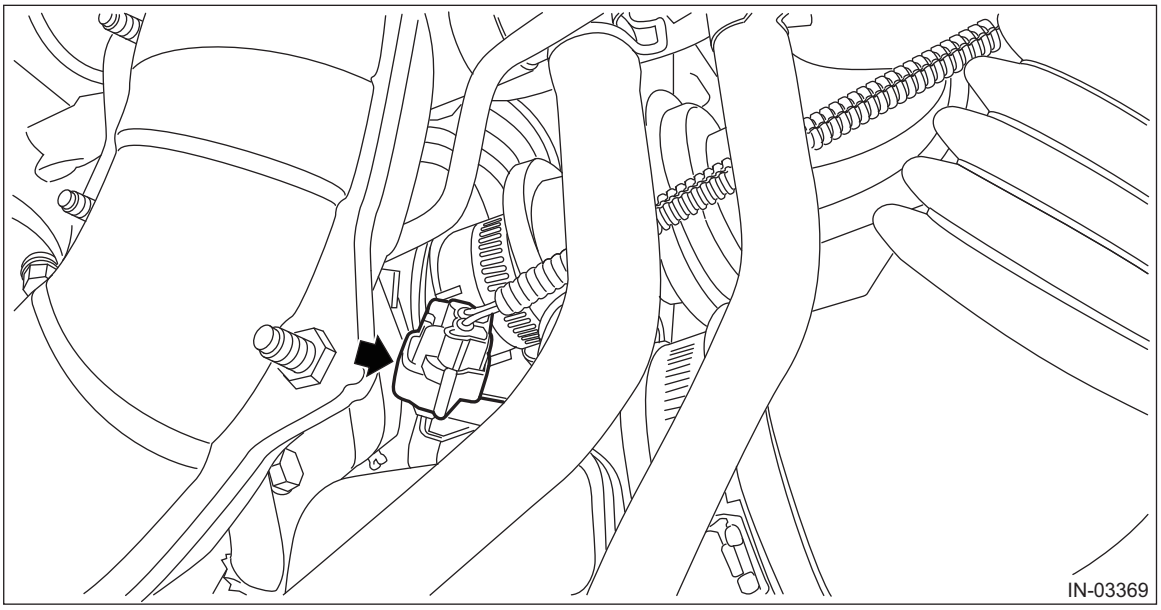


4) Connect the PCV pipe assembly to the intake duct No. 1.

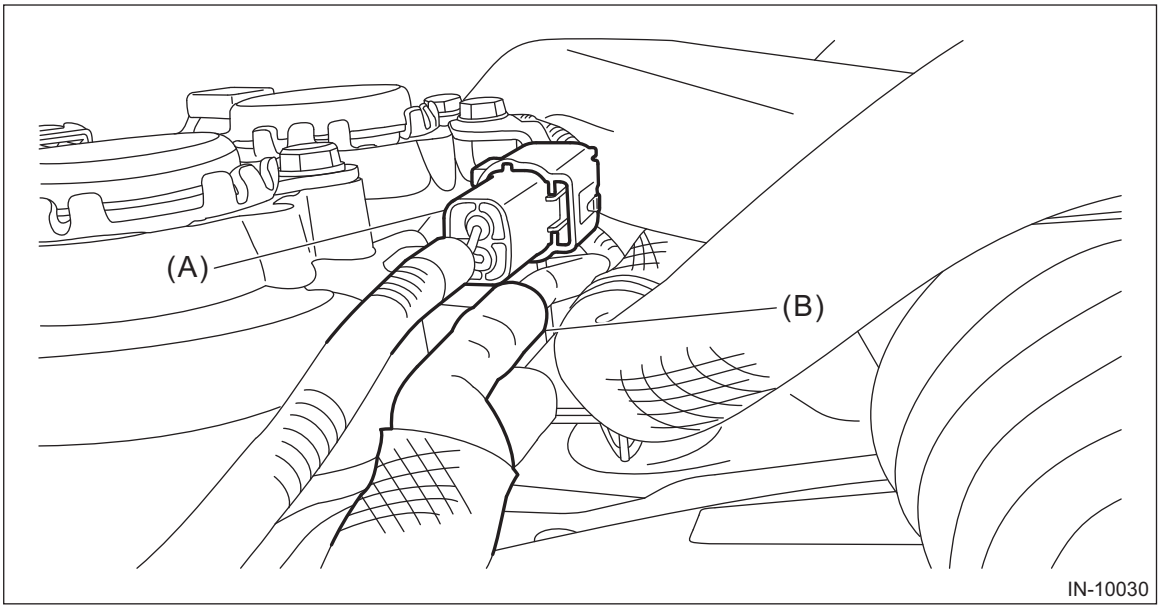
NOTE:
Make sure that the blow-by diagnosis connector is connected securely.



5) Connect the connector to the wastegate control solenoid valve.



6) Connect the blow-by diagnosis connector (A) to the engine wiring harness, and connect the vacuum hose (B) to the vacuum pipe assembly.



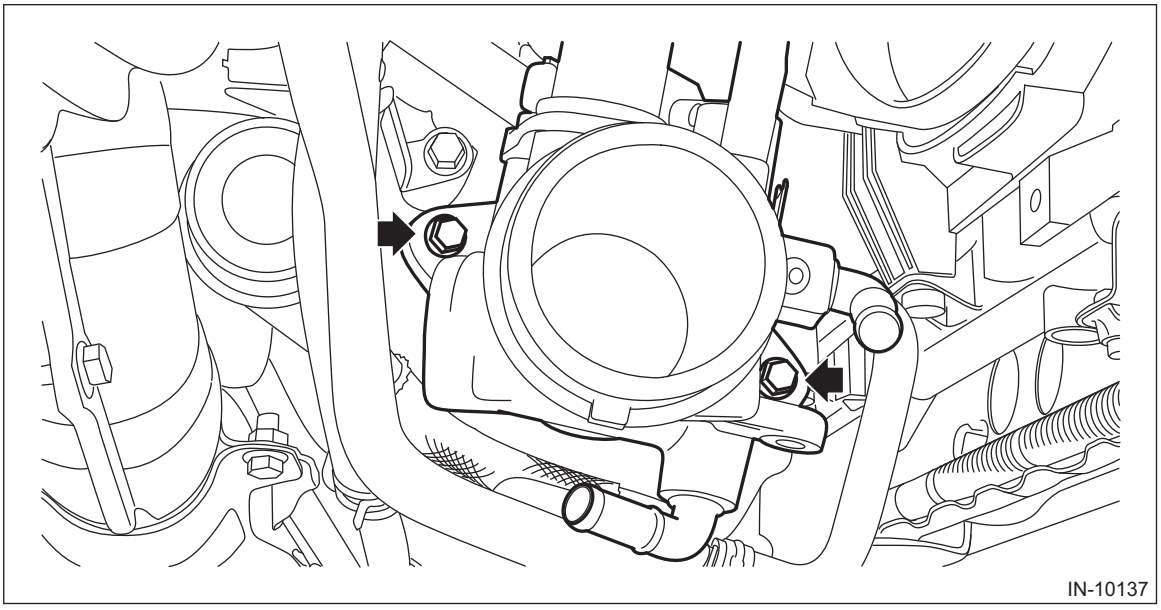
7) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
8) Lower the vehicle.
9) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
10) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

- **For Canada**

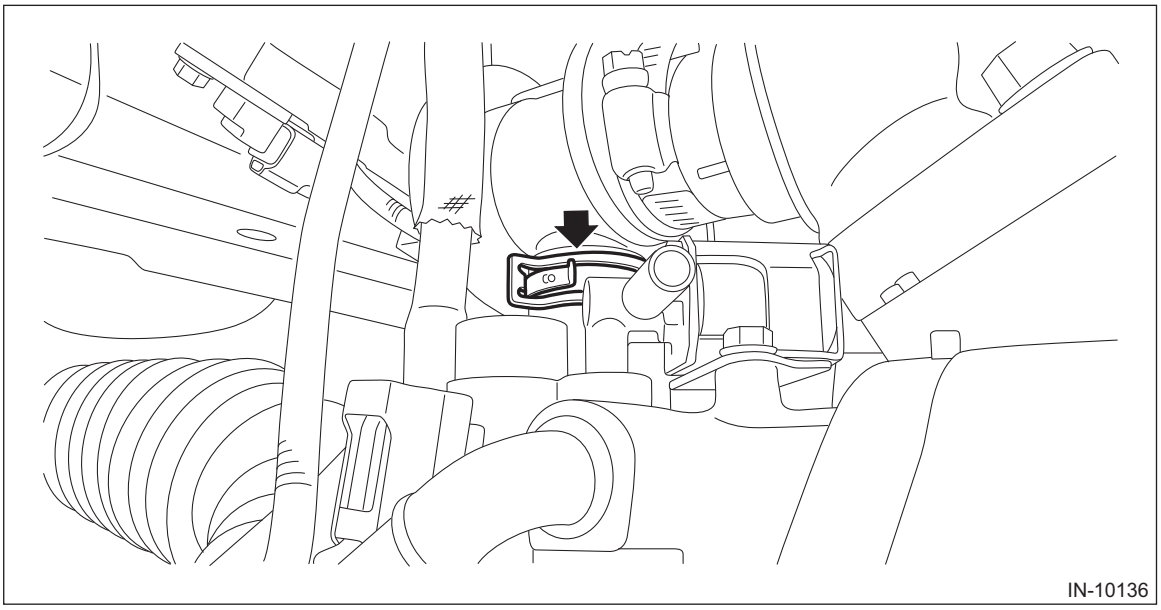
1) Install the intake duct No. 1 to the turbocharger.

NOTE:
- Use new O-rings.
- Be careful not to pinch the O-ring.
- Check that the air by-pass valve is firmly inserted into the intake duct No. 1.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

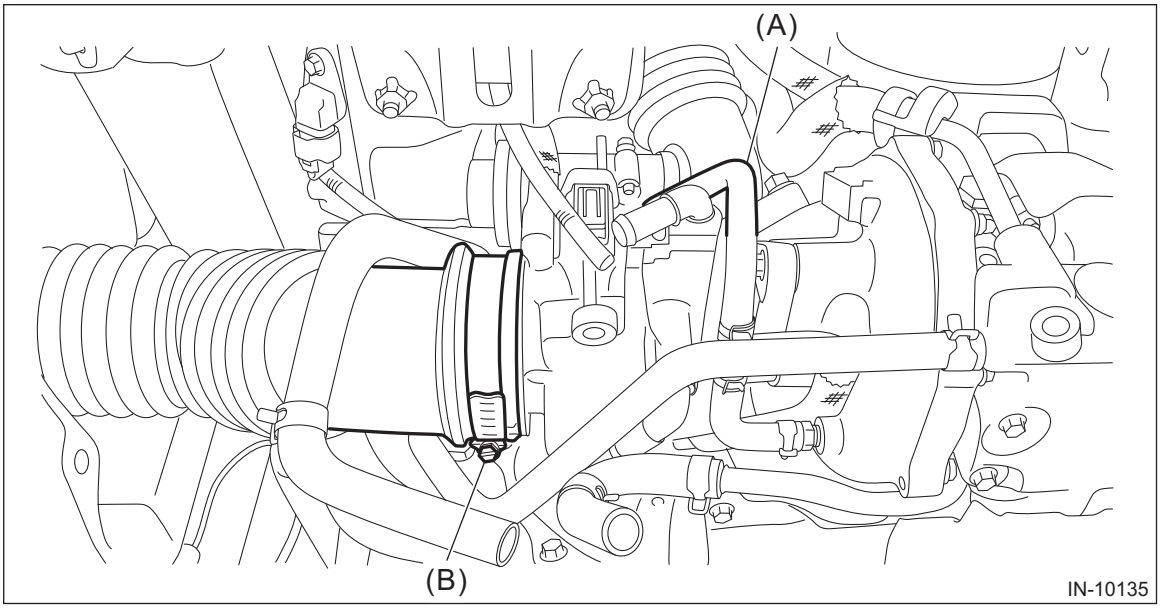


2) Engage the clip which secures the air by-pass valve to the intake duct No. 1.



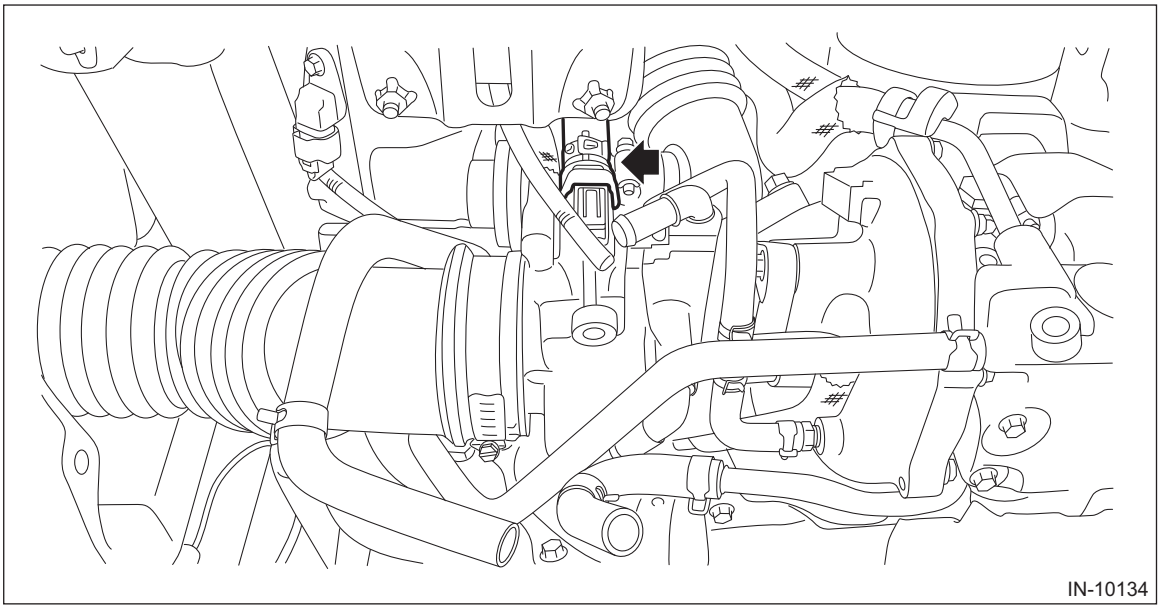
3) Connect the vacuum control hose (A) to the wastegate control solenoid valve, and install the air intake boot (B) to the intake duct No. 1.

Tightening torque:
2.5 N·m (0.3 kgf-m, 1.8 ft-lb)

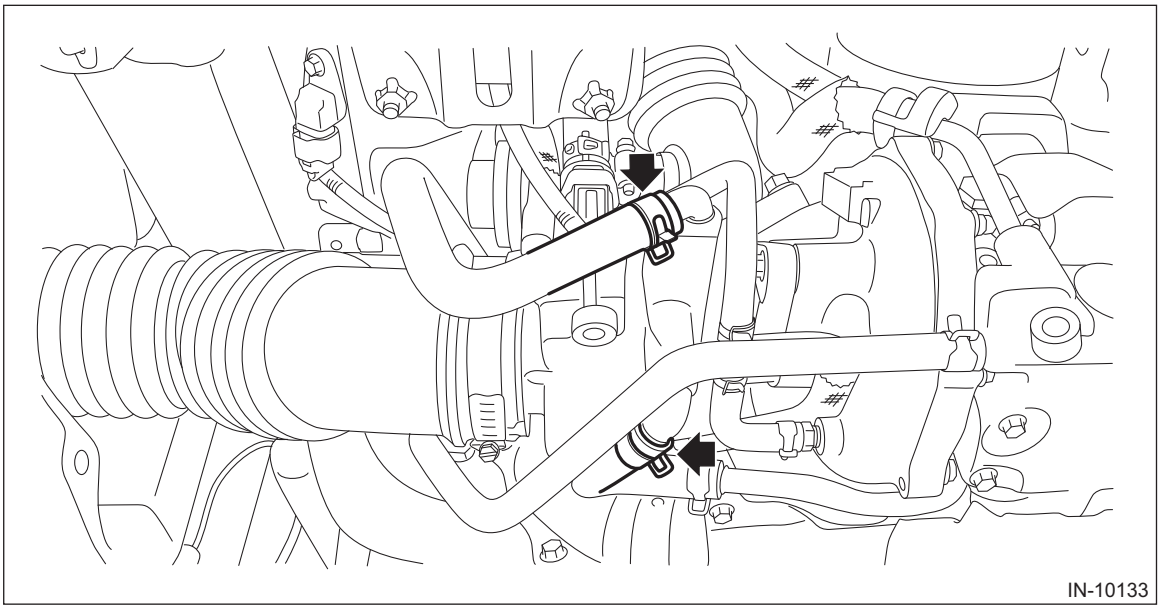


4) Connect the PCV pipe assembly to the intake duct No. 1.

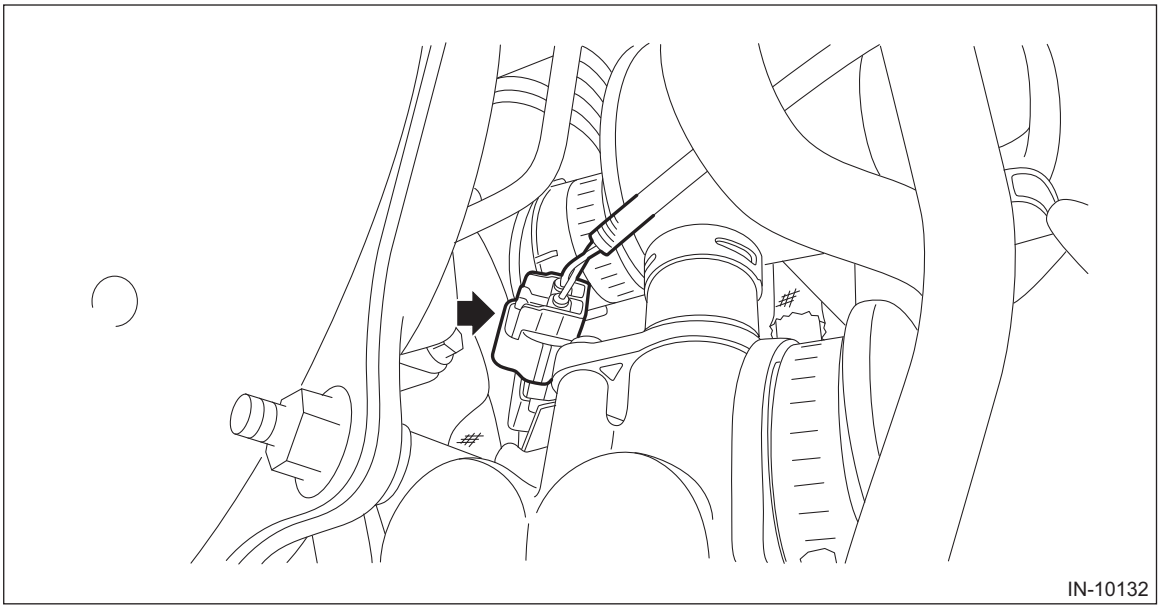
NOTE:
Make sure that the blow-by diagnosis connector is connected securely.



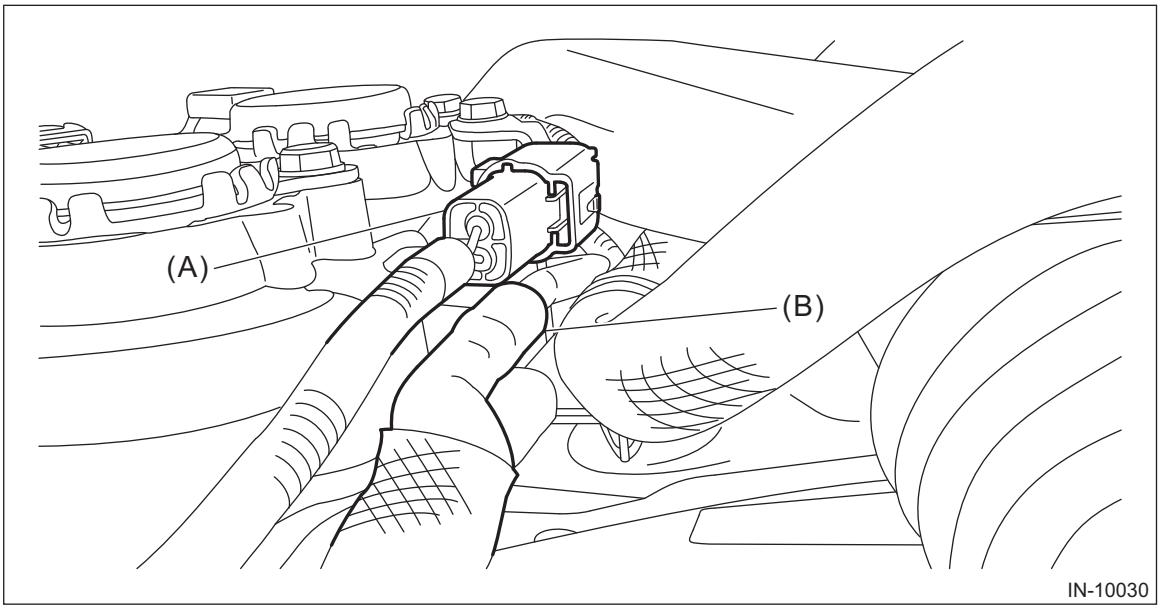
5) Connect the engine coolant hose to the intake duct No. 1.



6) Connect the connector to the wastegate control solenoid valve.



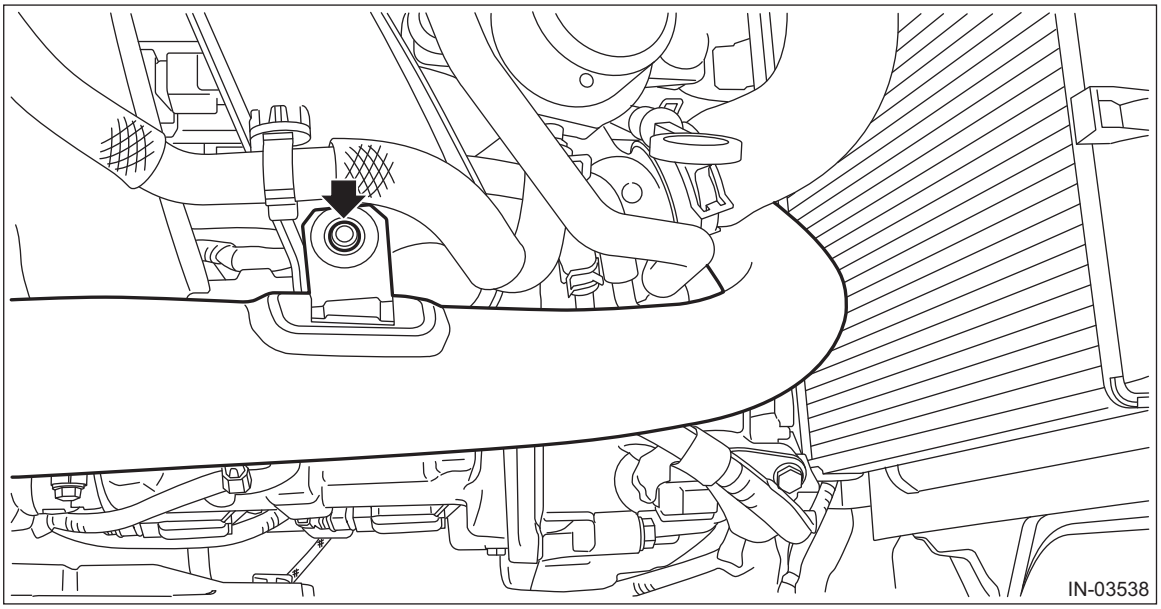
7) Connect the blow-by diagnosis connector (A) to the engine wiring harness, and connect the vacuum hose (B) to the vacuum pipe assembly.



8) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
9) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
10) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
11) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

2. INTAKE DUCT NO. 2

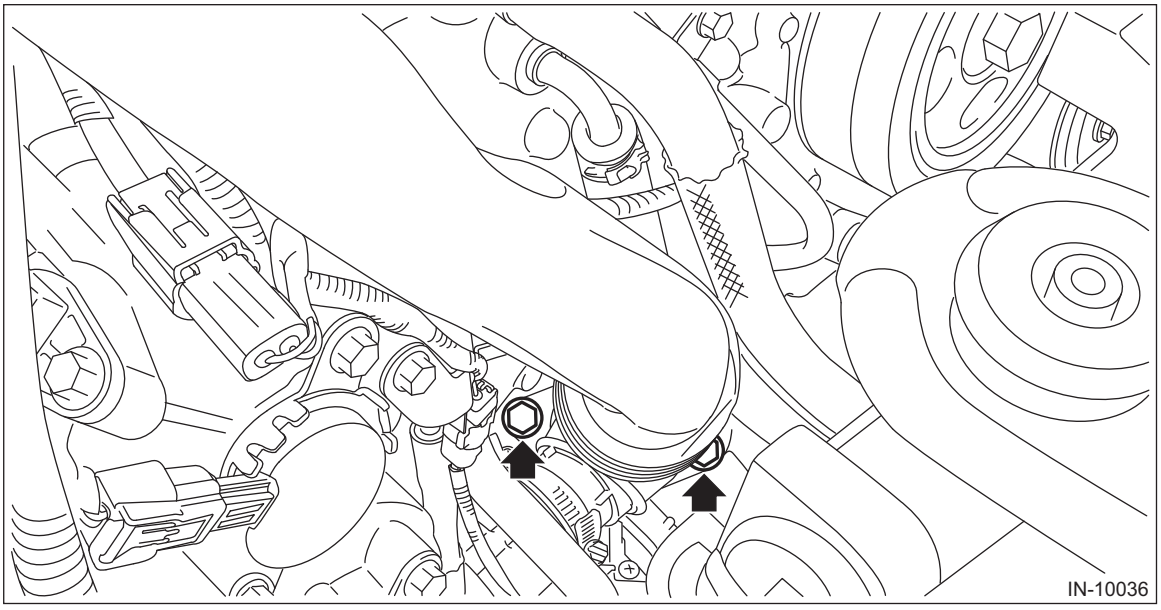
1) Set the air by-pass valve to the intake duct No. 1, and install the intake duct No. 2 to the intake manifold.



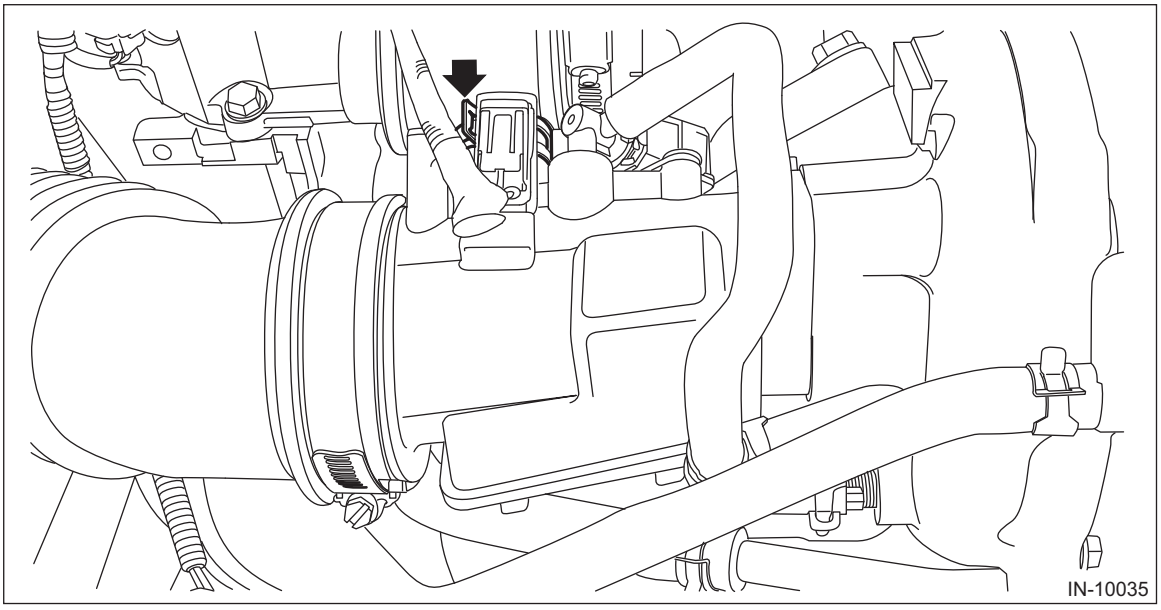
2) Install the bolt which secures the intake duct No. 2 to the turbocharger.

NOTE:
- Use new O-rings.
- Be careful not to pinch the O-ring.
- Check that the air by-pass valve is firmly inserted into the intake duct No. 1.

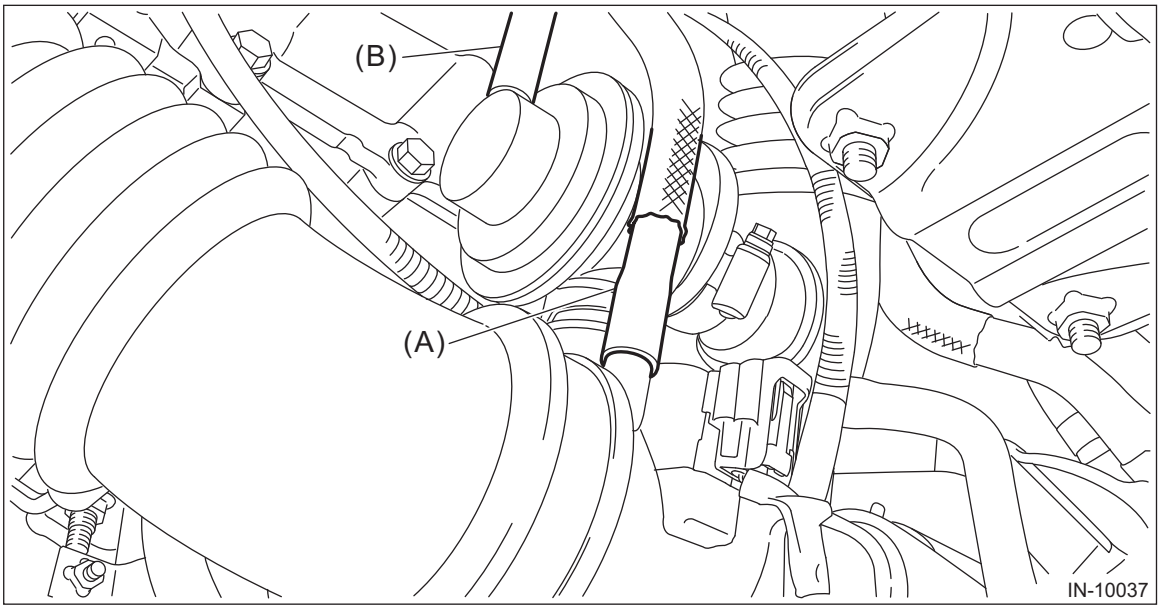
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



3) Lift up the vehicle.
4) Engage the clip which secures the air by-pass valve to the intake duct No. 1.

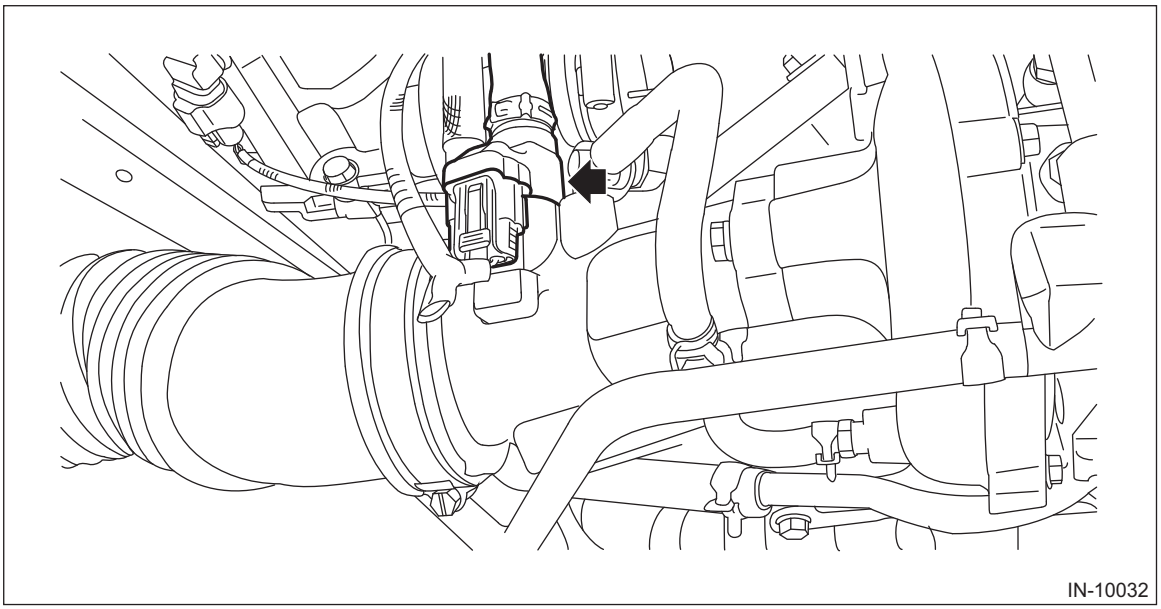


5) Connect the vacuum hose (A) to the intake duct No. 1, and connect the vacuum hose (B) to the air by-pass valve.



6) Connect the PCV pipe assembly to the intake duct No. 1.

NOTE:
Make sure that the blow-by diagnosis connector is connected securely.



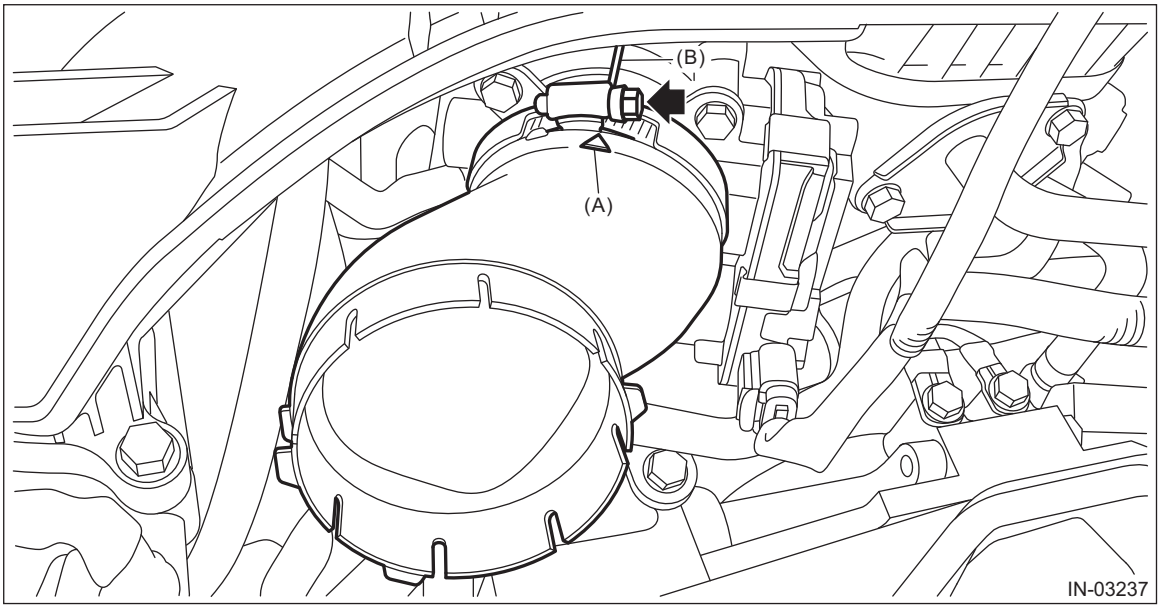
7) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
8) Lower the vehicle.
9) Install the radiator sub fan and fan motor. <Ref. to CO(w/o STI)-50, INSTALLATION, Radiator Sub Fan and Fan Motor.>
10) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
11) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
12) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
13) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

3. INTAKE DUCT NO. 3

1) Align the triangle mark (A) on the intake duct No. 3 to the rib (B) on the throttle body, and install the intake duct No. 3 to the throttle body.

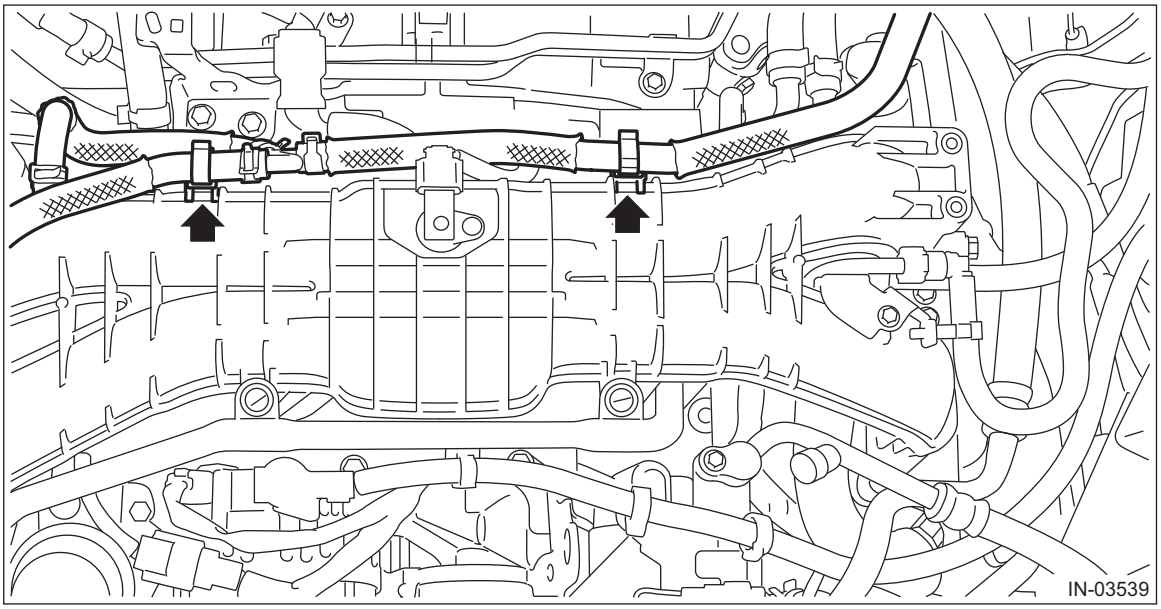
NOTE:
- Use a new insulator.
- Apply a thin coat of SUBARU PS fluid (K0515YA000) or liquid paraffin to the inner periphery of the insulator.
- When inserting the intake duct No. 3 to the throttle body, be careful that the insulator is not turned over.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)



2) Install the brake booster vacuum hose to the clip.

NOTE:
If the clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.



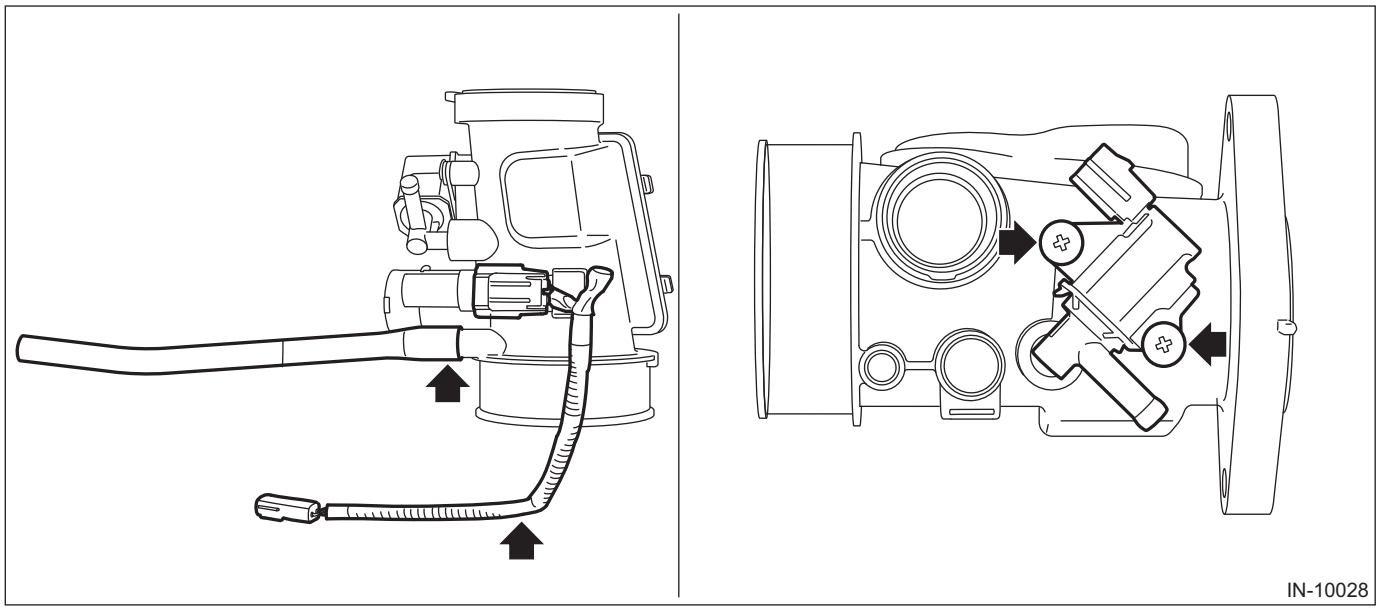
3) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
4) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

1. INTAKE DUCT NO. 1

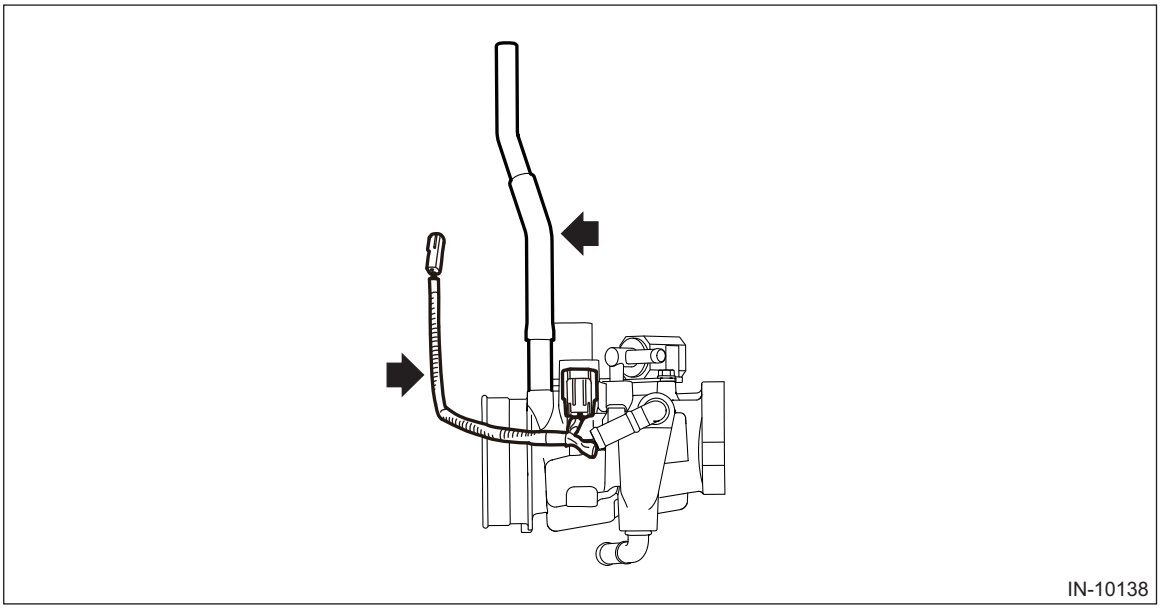
• Except for Canada

Remove the vacuum hose, blow-by diagnosis connector harness and wastegate control solenoid valve from the intake duct No. 1.

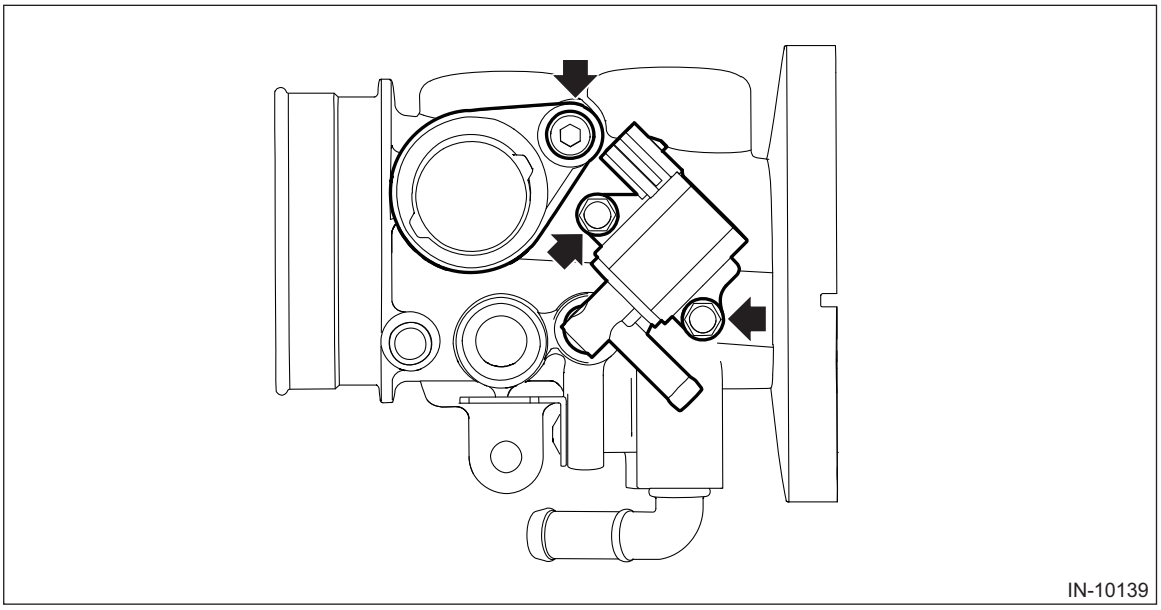


• For Canada

1) Remove the vacuum hose and blow-by diagnosis connector harness from the intake duct No. 1.

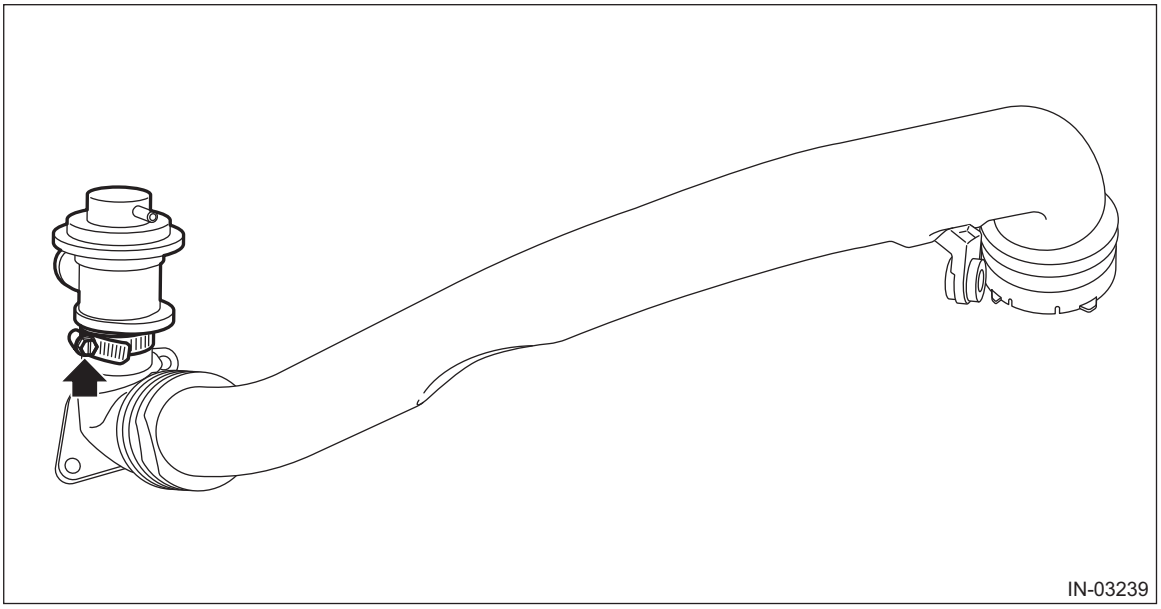


2) Remove the wastegate control solenoid valve and air by-pass pipe from the intake duct No. 1.



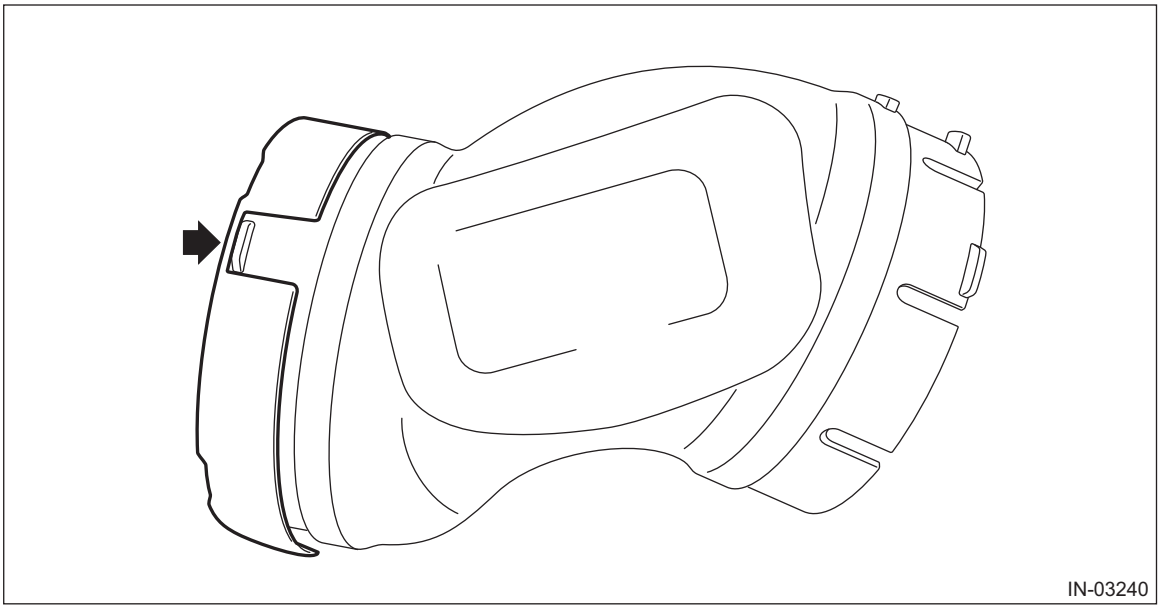
2. INTAKE DUCT NO. 2

Remove the air by-pass valve from the intake duct No. 2.



3. INTAKE DUCT NO. 3

Remove the insulator from the intake duct No. 3.



D: ASSEMBLY

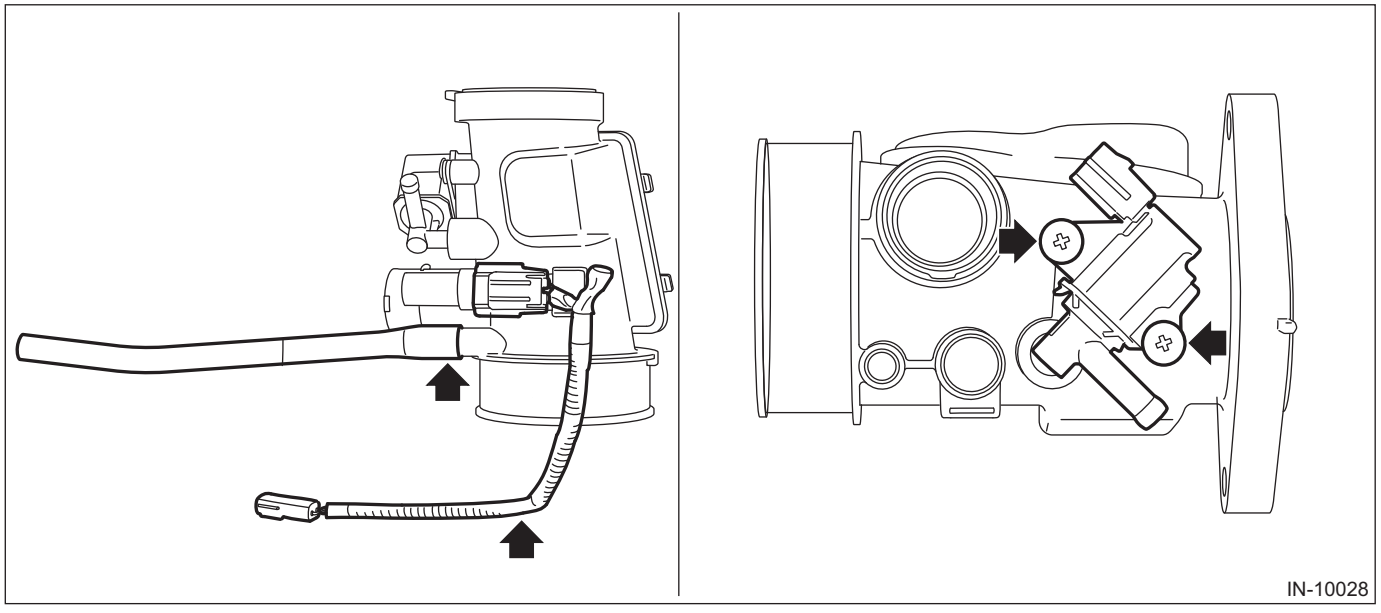
1. INTAKE DUCT NO. 1

- **Except for Canada**

Install the vacuum hose, blow-by diagnosis connector harness and wastegate control solenoid valve to the intake duct No. 1.

NOTE:
- Use new O-rings.
- Check that the wastegate control solenoid valve is securely seated.

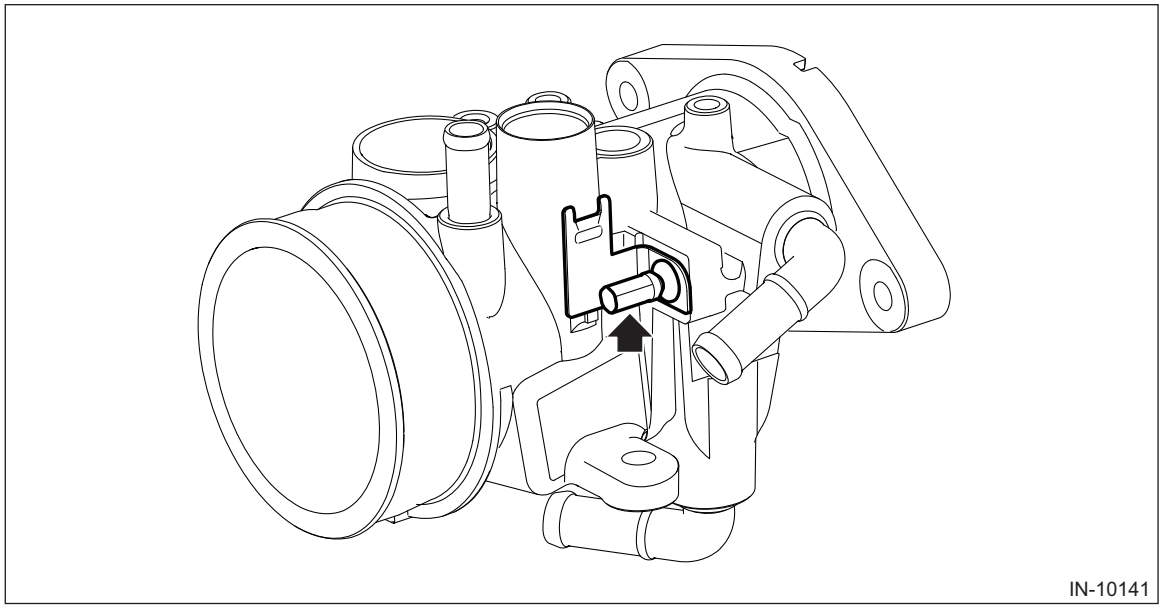
Tightening torque:
2.8 N·m (0.3 kgf-m, 2.1 ft-lb)



- **For Canada**

1) Set the connector bracket, and using new set bolts, tighten the bolt until the bolt head is broken (bolt head wrenched off).

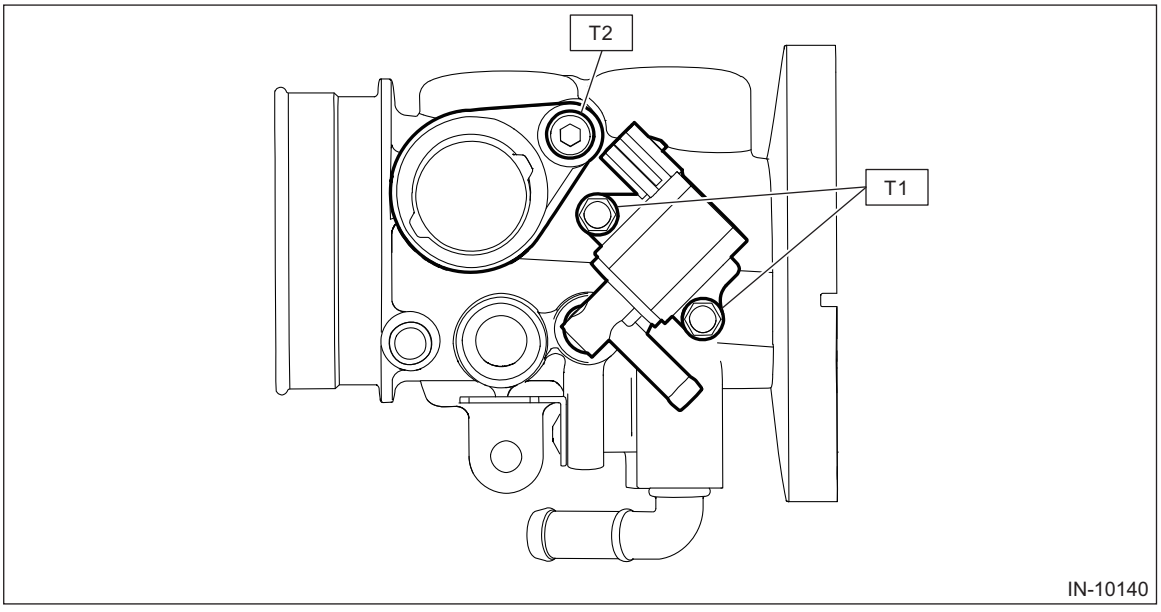
NOTE:
This operation is required only when replacing the intake duct No. 1.



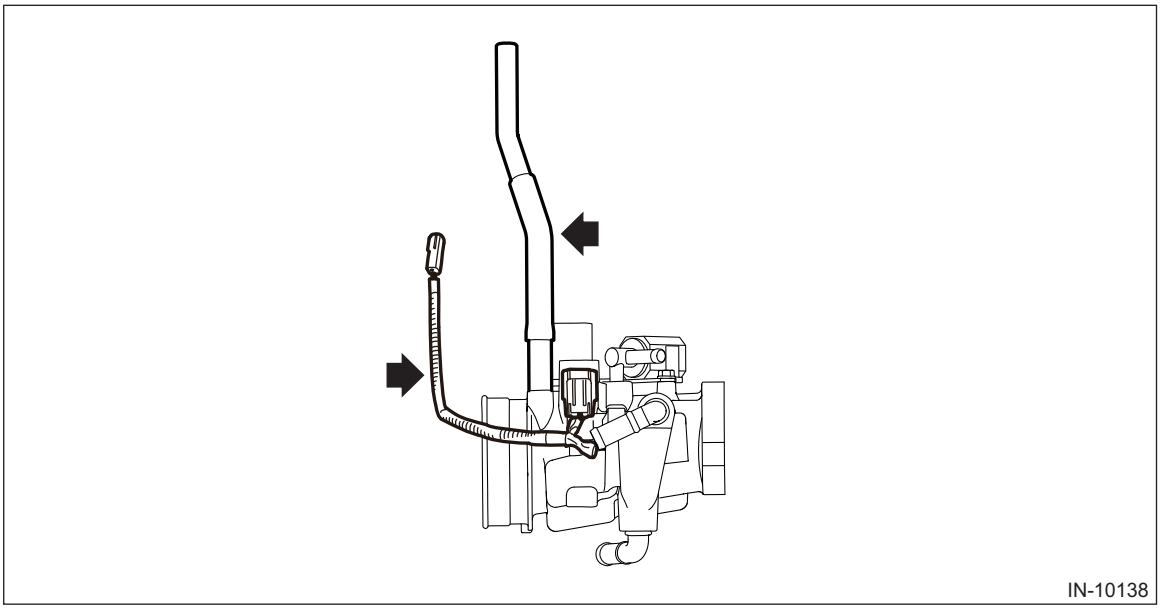
2) Install the wastegate control solenoid valve and air by-pass pipe to the intake duct No. 1.

NOTE:
- Use new O-rings.
- Check that the wastegate control solenoid valve is securely seated.

Tightening torque:
T1: 2.5 N·m (0.3 kgf-m, 1.8 ft-lb)
T2: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



3) Install the vacuum hose and blow-by diagnosis connector harness to the intake duct No. 1.



2. INTAKE DUCT NO. 2

Assemble in the reverse order of disassembly.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)

3. INTAKE DUCT NO. 3

Assemble in the reverse order of disassembly.

NOTE:
Use a new insulator.

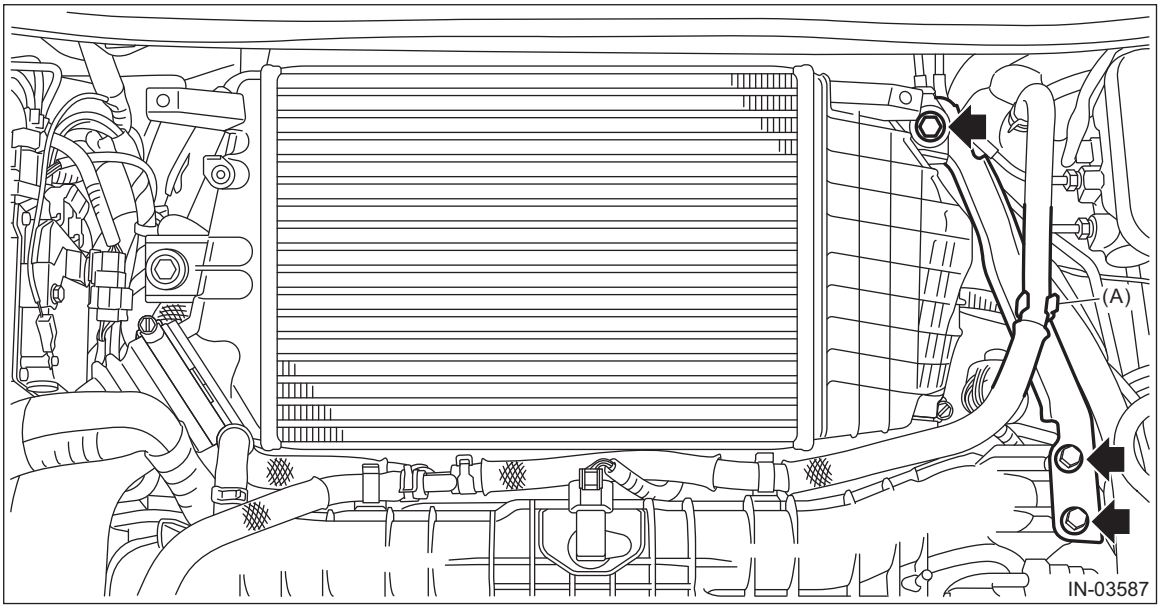
E: INSPECTION

1) Check that the intake duct has no deformation, cracks or other damages.
2) Check the vacuum hose for cracks, damage or looseness.

8. Intercooler

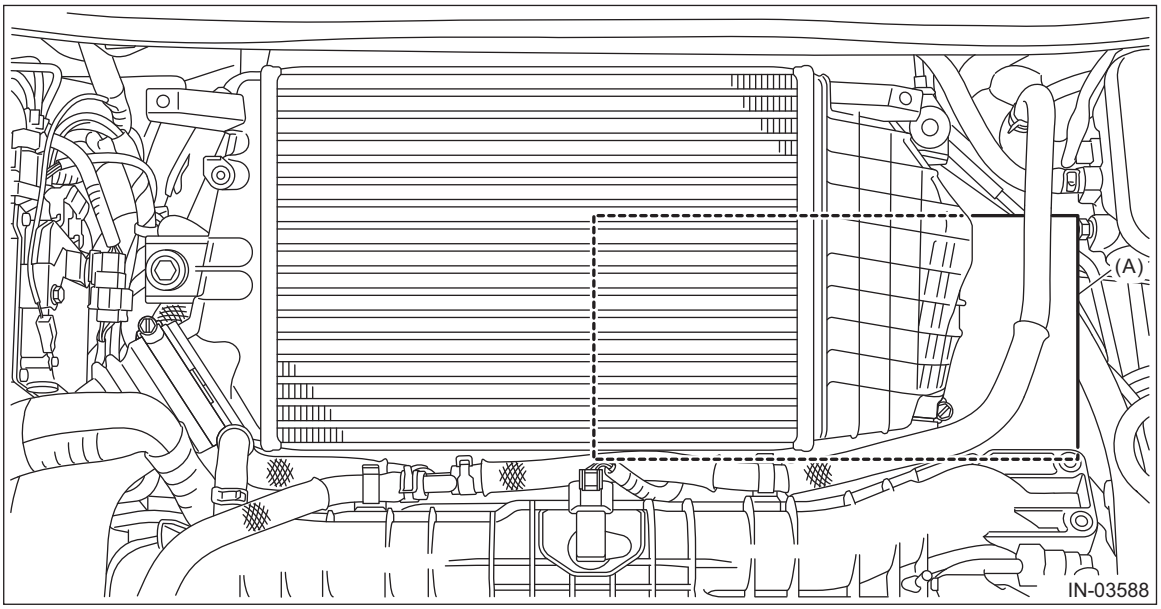
A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Remove the brake booster vacuum hose from the clip (A).
3) Remove the bolts which secure the intercooler stay LH to the intercooler and intake manifold, and remove the intercooler stay LH.



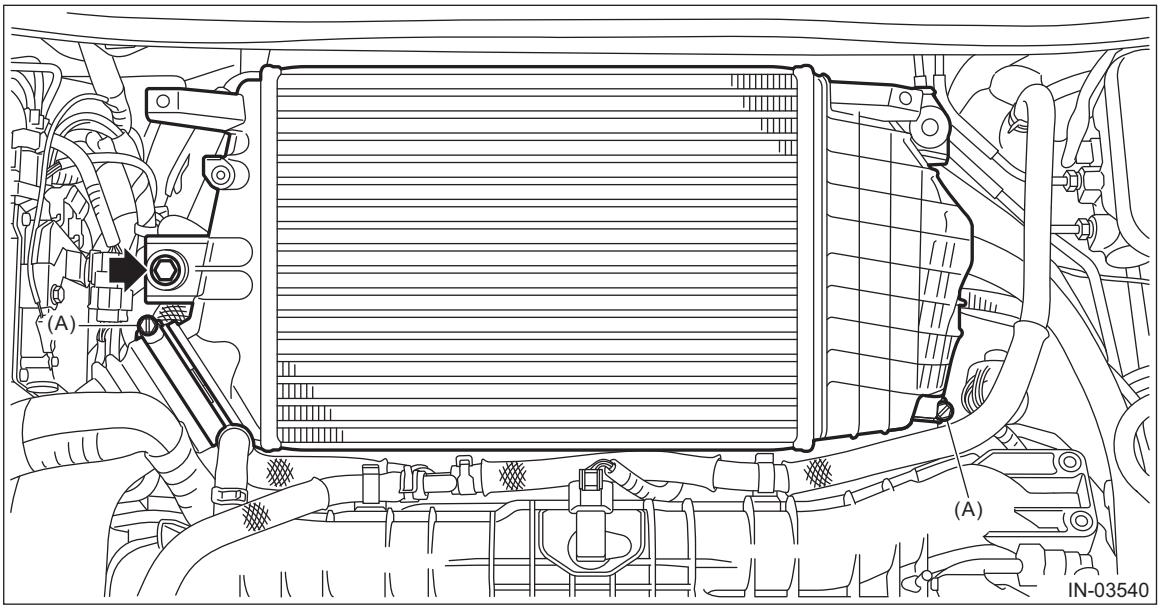
4) Insert the urethane sheet (A) between intercooler and operating cylinder. (MT model)

NOTE:
• This procedure is required to prevent the intercooler from touching the operating cylinder during intercooler removal.
• Use the urethane sheet with the size (width × height × thickness) of approx. 300 mm × approx. 200 mm × approx. 10 mm (approx. 11.81 in × approx. 7.87 in × approx. 0.39 in).

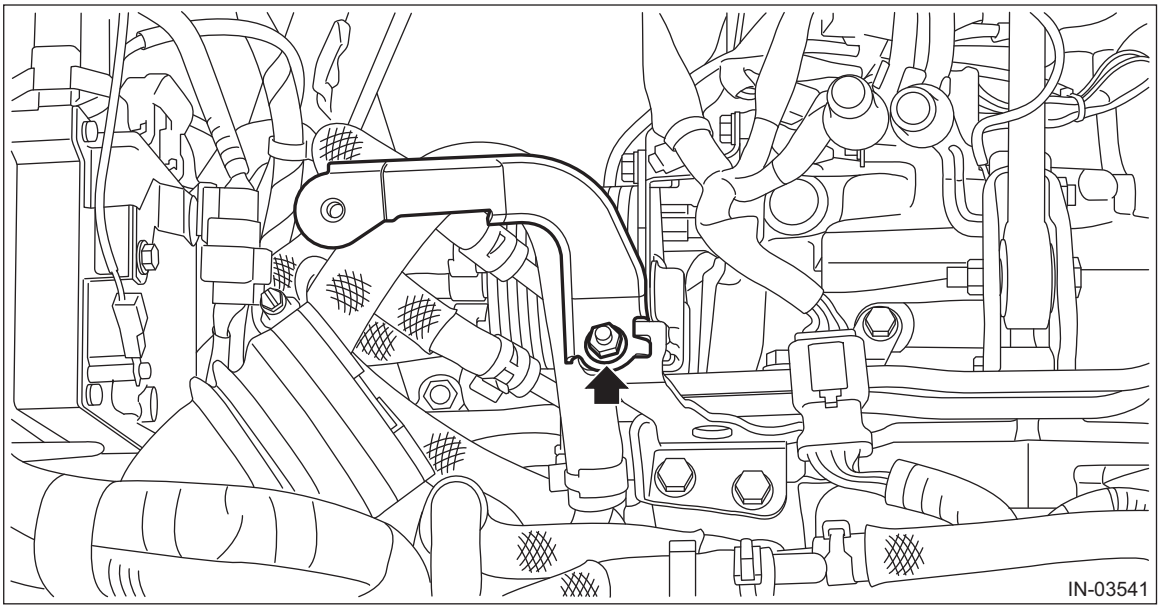


5) Loosen the clamp (A) which holds the intake duct to intercooler.

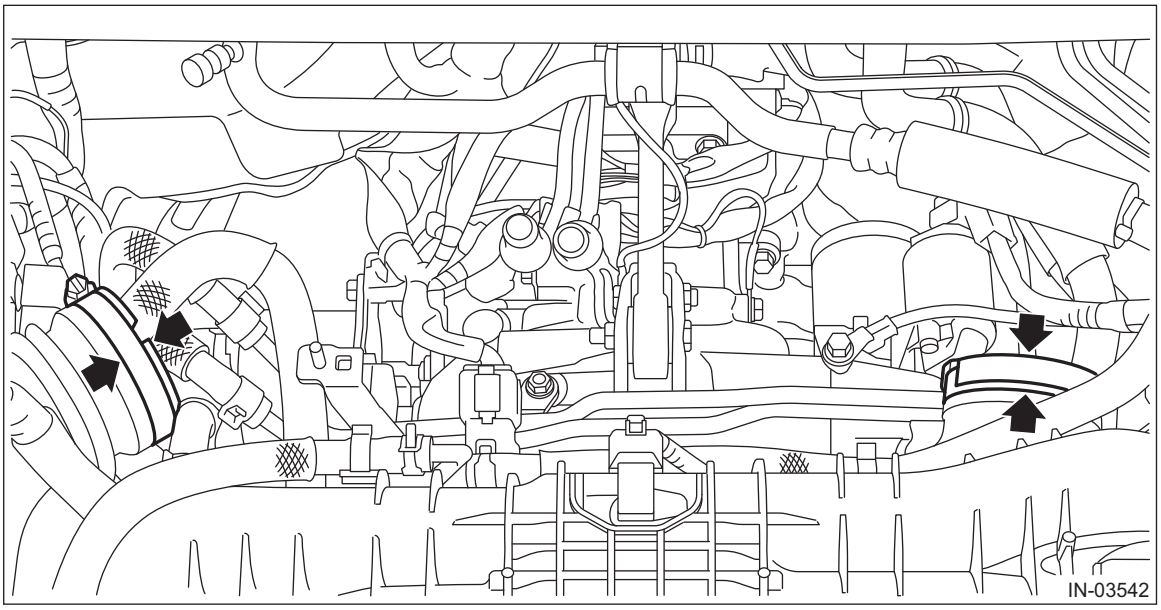
6) Remove the bolts which secure the intercooler to the intercooler stay RH, and remove the intercooler.



7) Remove the intercooler stay RH from the engine hanger stay.



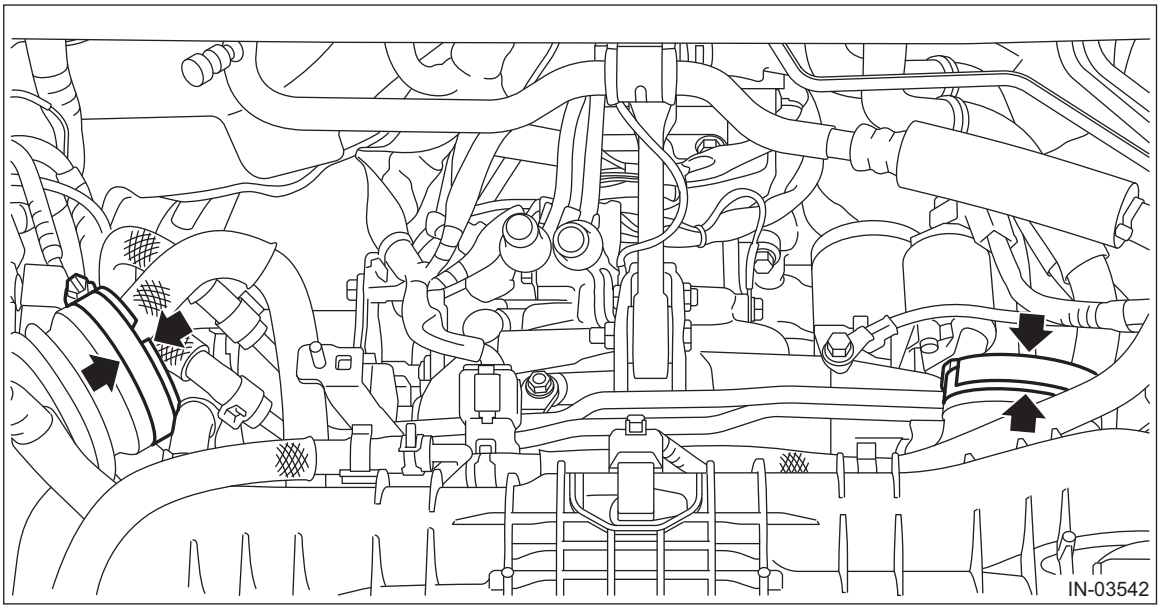
8) Remove the insulator and clamp from intake duct.



B: INSTALLATION

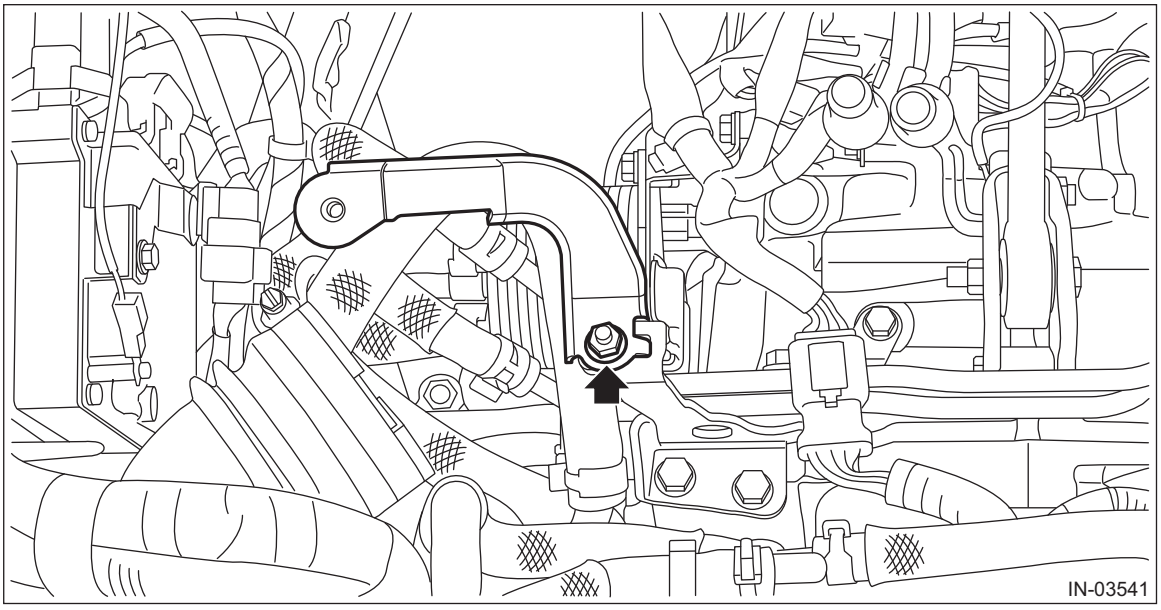
1) Install the insulator and clamp to the intake duct.

NOTE:
- Use a new insulator.
- Apply a thin coat of SUBARU PS fluid (K0515YA000) or liquid paraffin to the inner periphery of the insulator.



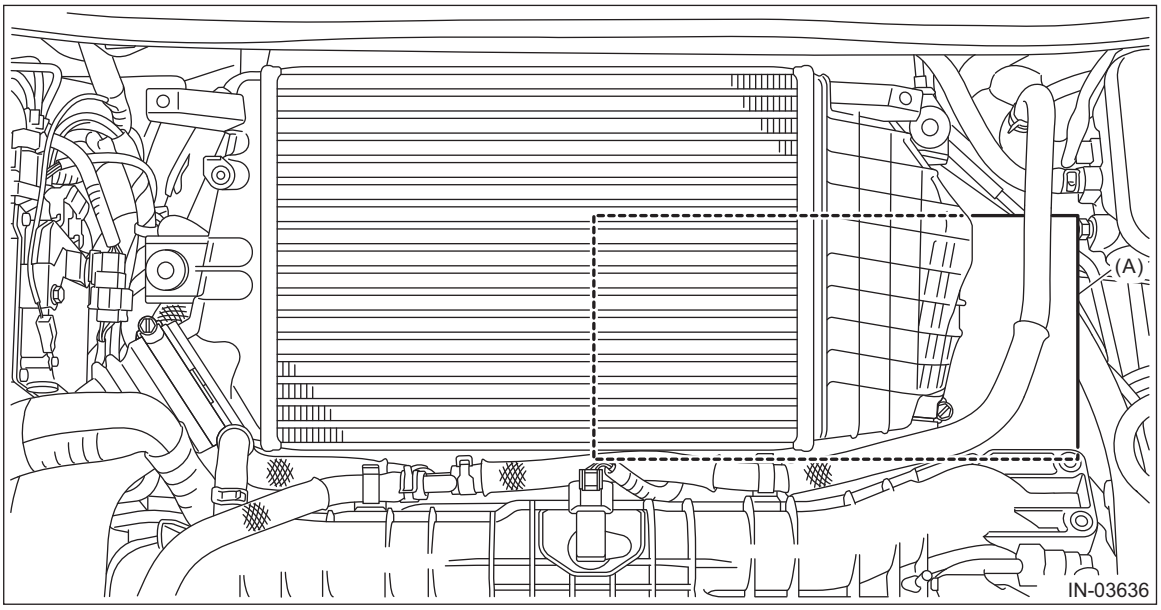
2) Install the intercooler stay RH to the engine hanger stay.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



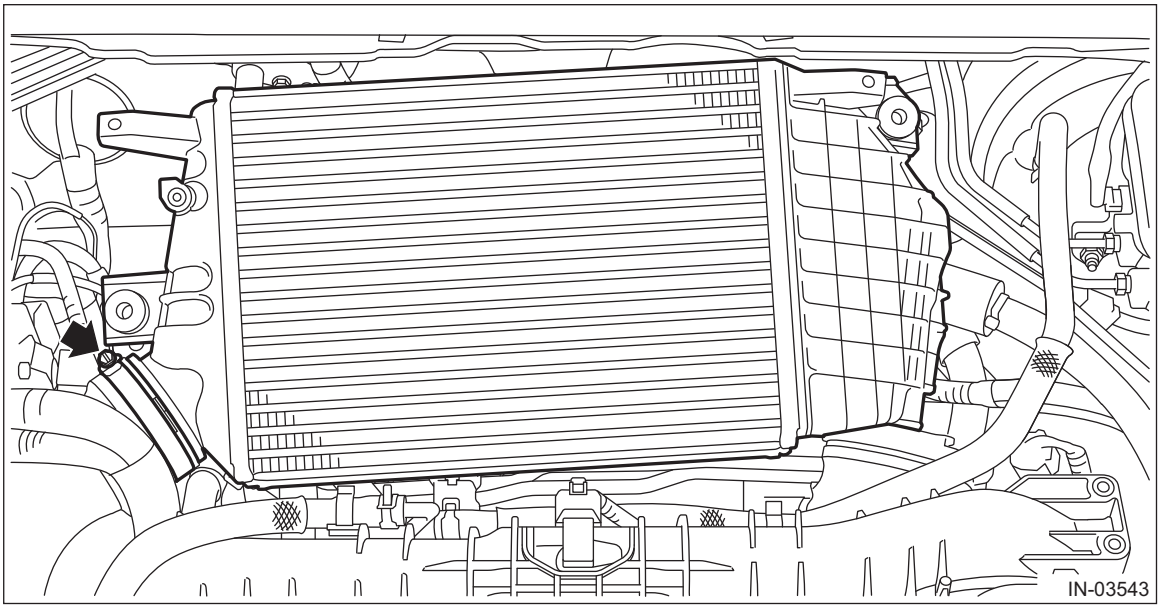
3) Set the urethane sheet (A) so that it covers the operating cylinder. (MT model)

NOTE:
• This procedure is required to prevent the intercooler from touching the operating cylinder during intercooler installation.
• Use the urethane sheet with the size (width × height × thickness) of approx. 300 mm × approx. 200 mm × approx. 10 mm (approx. 11.81 in × approx. 7.87 in × approx. 0.39 in).



4) Insert the intercooler into the intake duct No. 2, and temporarily tighten the clamp which secures the intake duct No. 2 to the intercooler.

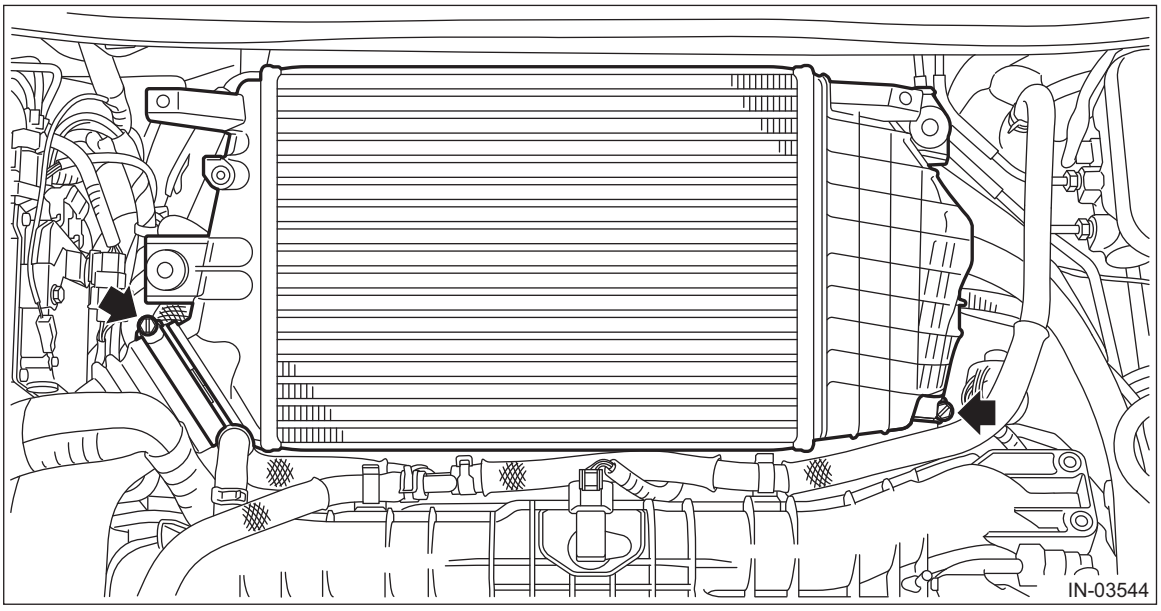
NOTE:
When inserting the intercooler into the intake duct No. 2, be careful that the insulator is not turned over.



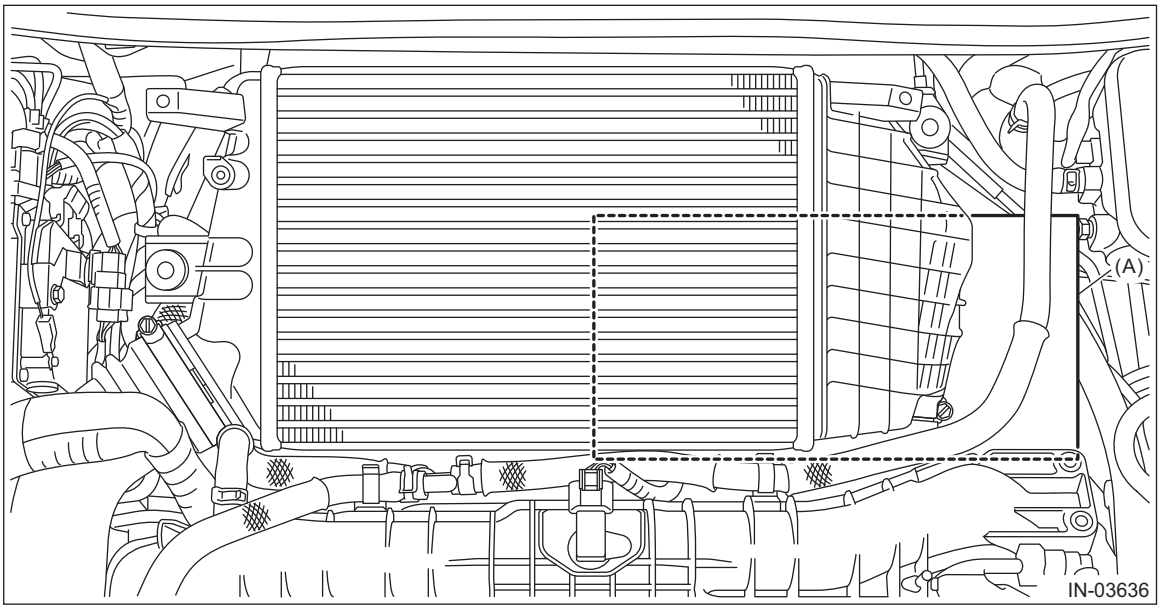
5) Insert the intercooler into the intake duct No. 3, and tighten the clamp which secures the intake duct to the intercooler.

NOTE:
When inserting the intercooler into the intake duct No. 3, be careful that the insulator is not turned over.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)

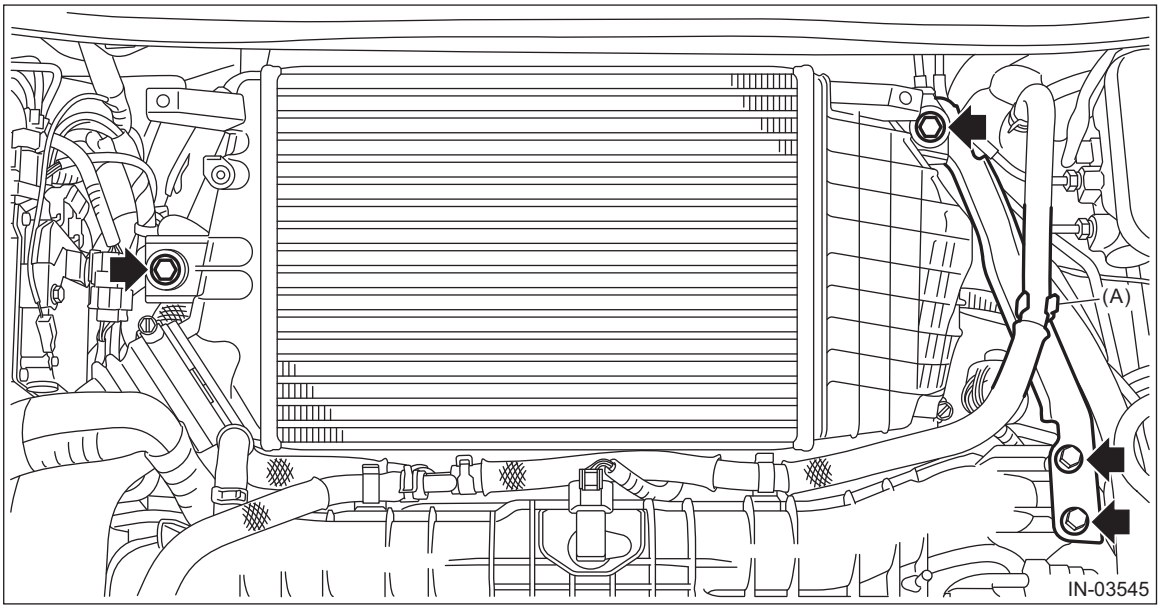


6) Pull out the urethane sheet (A) between intercooler and operating cylinder. (MT model)



7) Set the intercooler stay LH to the intake manifold, and temporarily tighten the bolts which secure intercooler stay LH to the intake manifold.
8) Install the bolt which secures the intercooler to the intercooler stay.
9) Tighten the bolts which secure the intercooler stay LH to the intake manifold, and install the brake booster vacuum hose to the clip (A).

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



10) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: INSPECTION

Check that the intercooler and intercooler stay have no deformation, cracks or other damages.

9. Turbocharger

A: REMOVAL

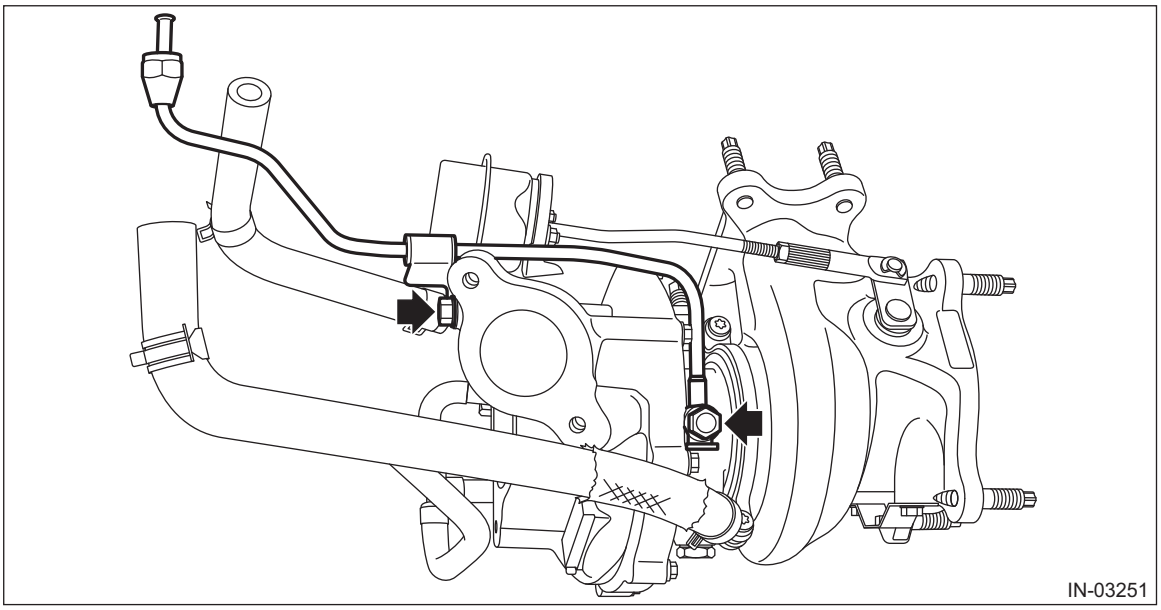
Remove the turbo charger and front exhaust pipe as a unit. Refer to “Front Exhaust Pipe” for the removal procedure. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(w/o STI)-27, DISASSEMBLY, Front Exhaust Pipe.>

B: INSTALLATION

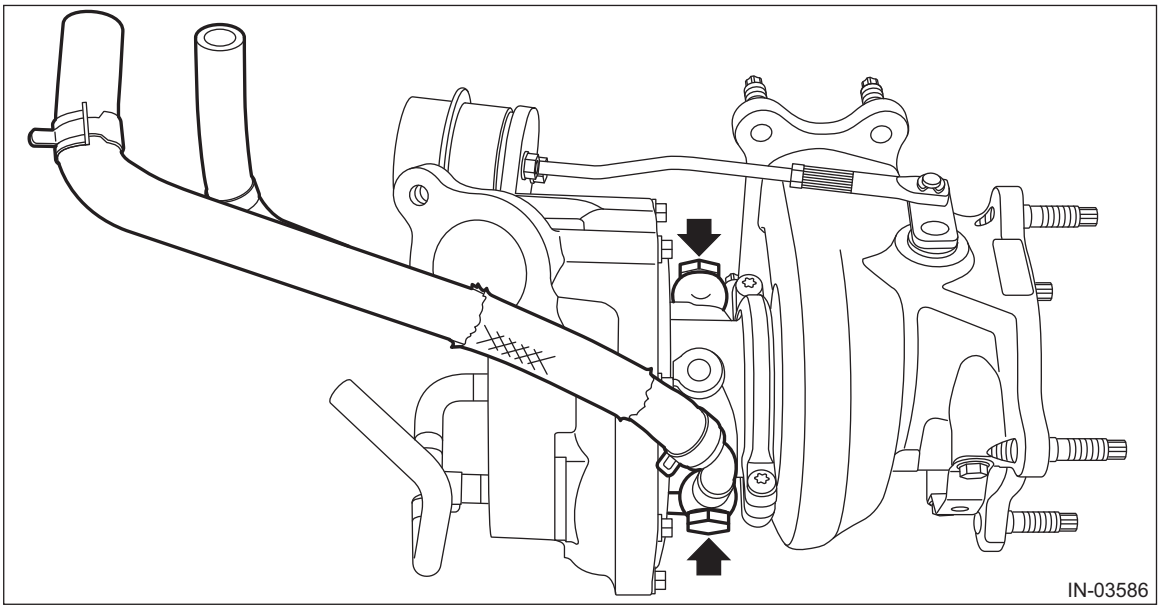
Refer to “Front Exhaust Pipe” for the installation procedure. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(w/o STI)-29, ASSEMBLY, Front Exhaust Pipe.>

C: DISASSEMBLY

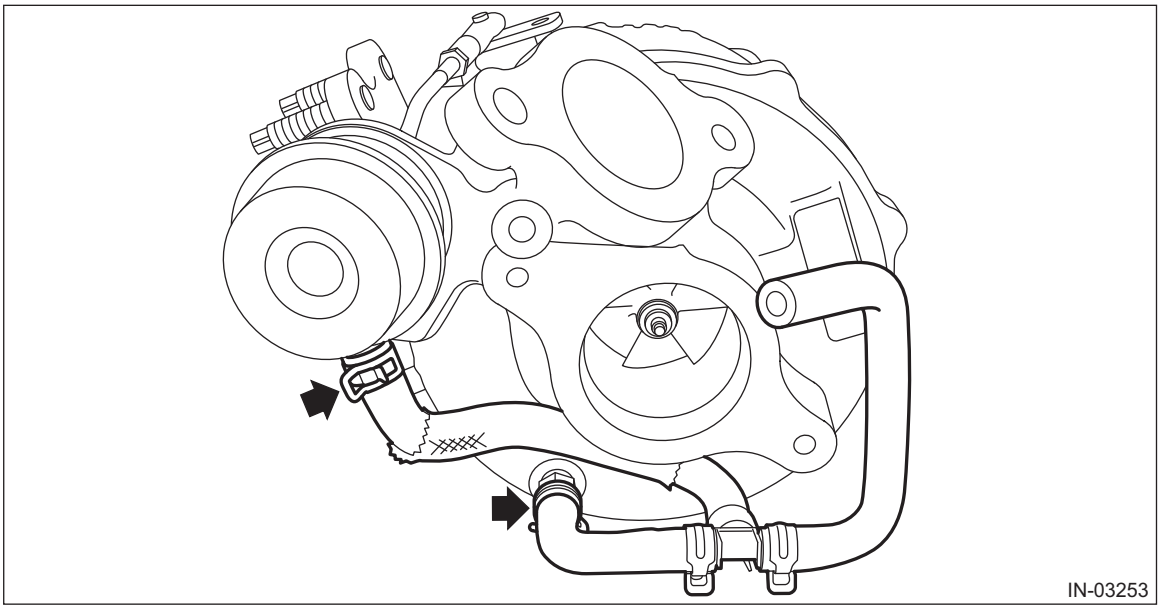
1) Remove the union screw pipe assembly from the turbocharger.



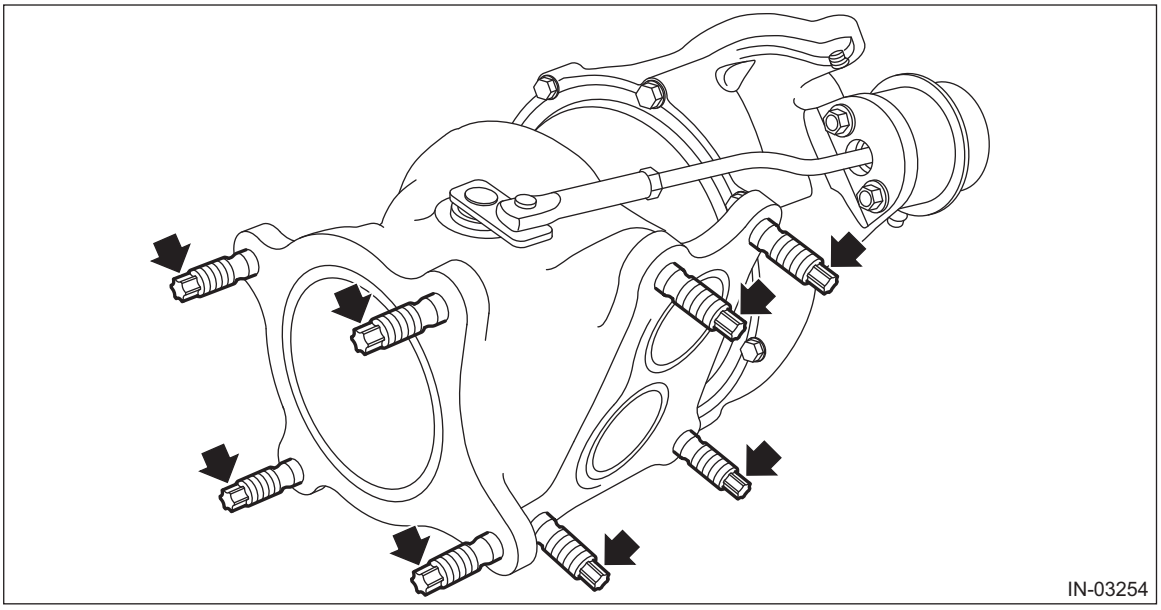
2) Remove the turbocharger pipe from the turbocharger.



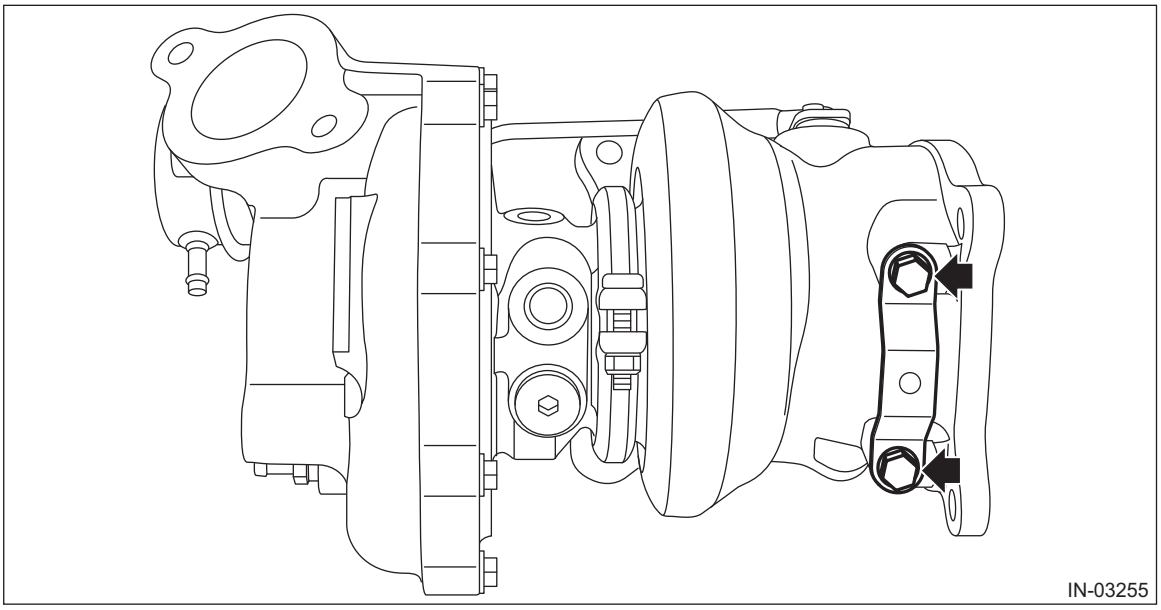
3) Remove the air control hose from the turbocharger.



4) Remove the stud bolt from the turbocharger.



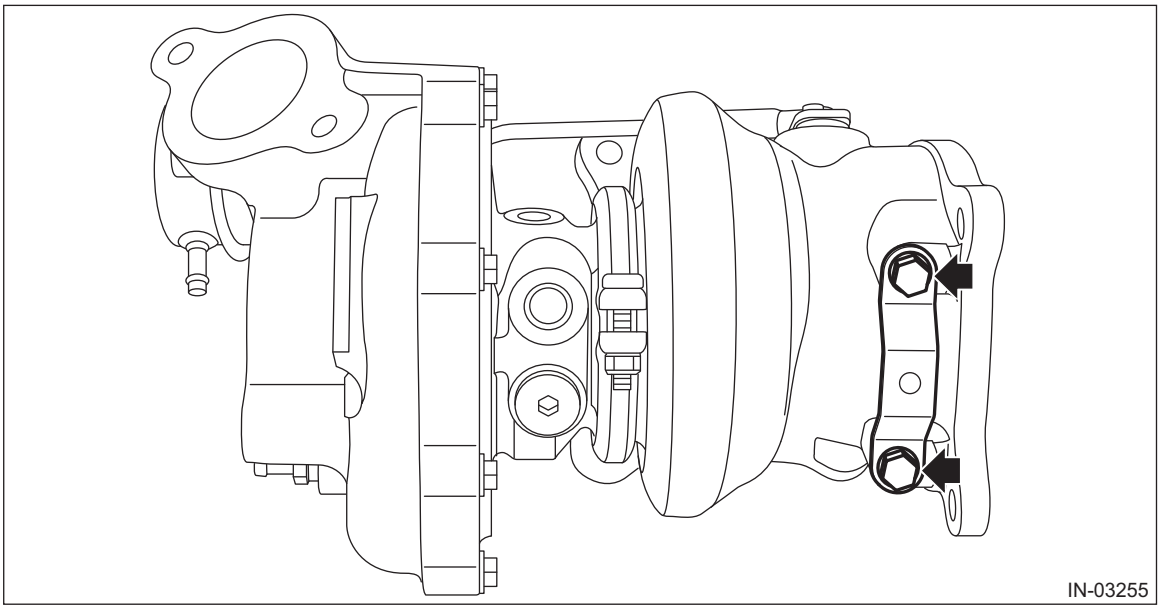
5) Remove the exhaust stay from the turbocharger.



D: ASSEMBLY

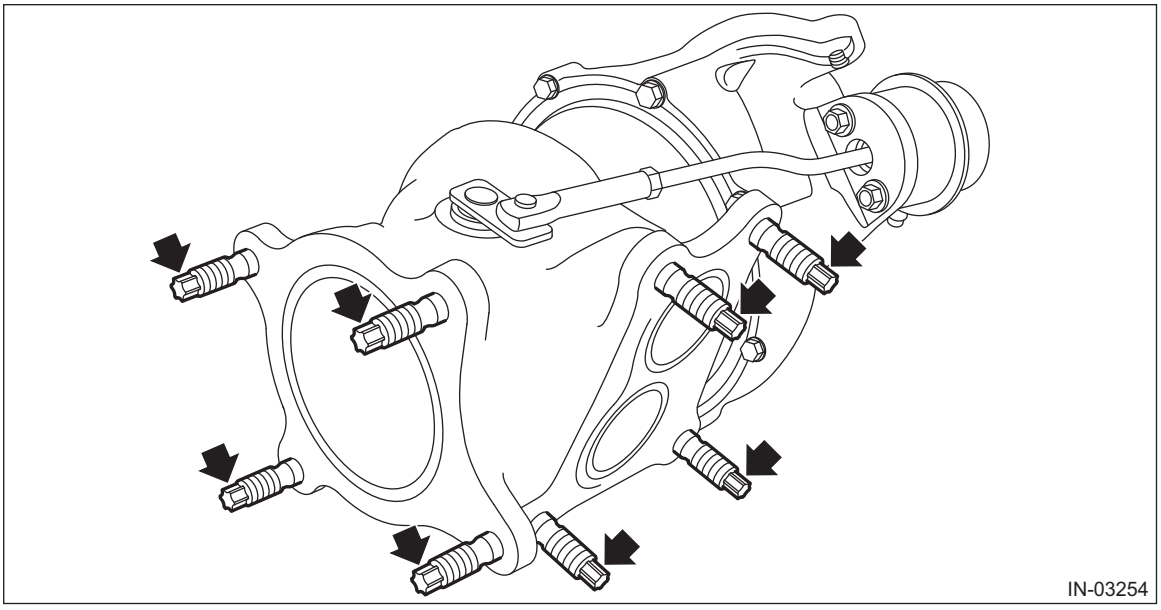
1) Install the exhaust stay to the turbocharger.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

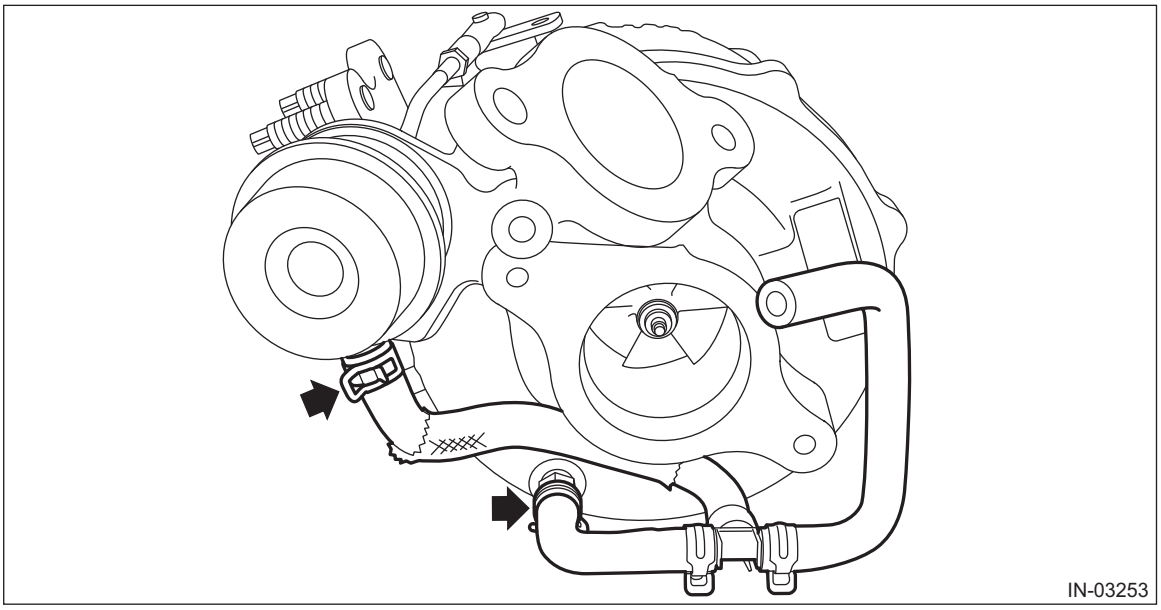


2) Attach the stud bolts to the turbocharger.

Tightening torque:
14.7 N·m (1.5 kgf-m, 10.8 ft-lb)



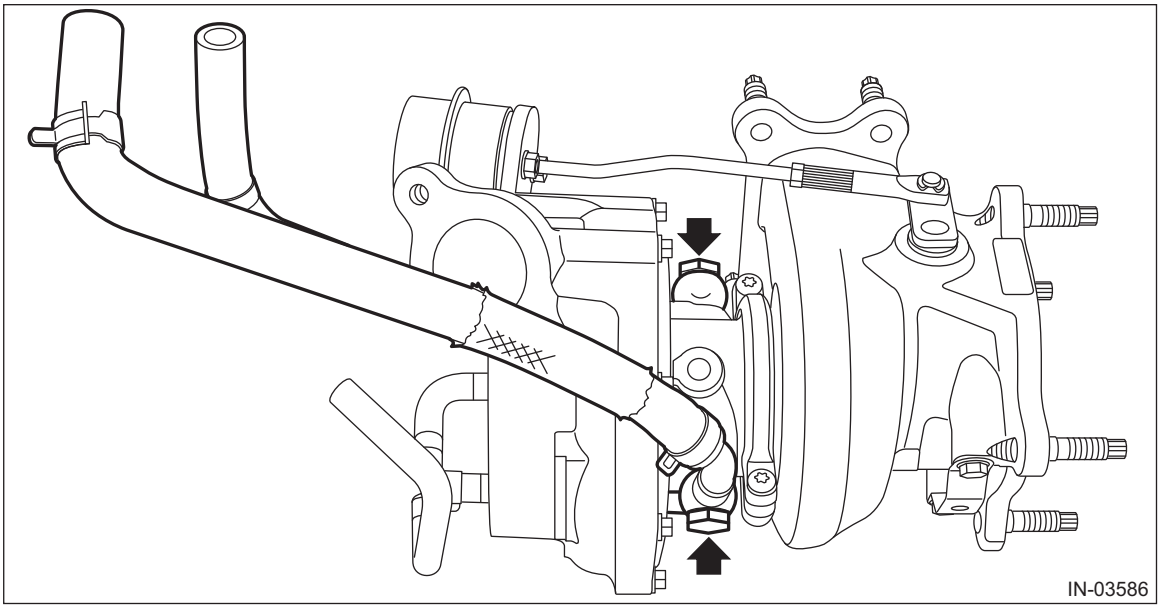
3) Install the air control hose to the turbocharger.



4) Install the turbocharger pipe to the turbocharger.

NOTE:
Use a new gasket.

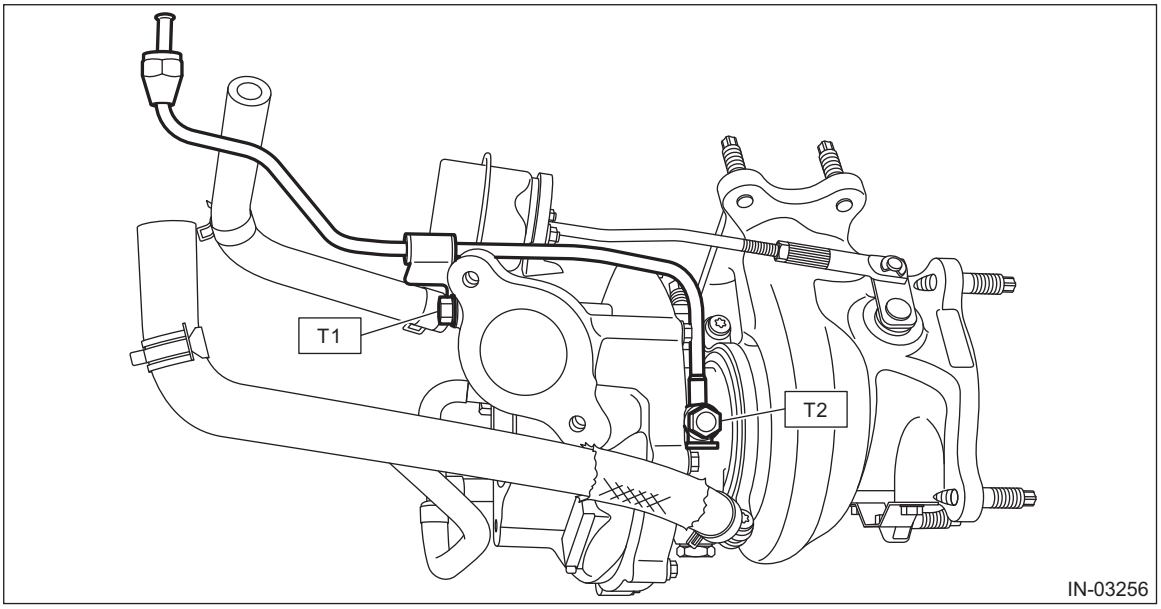
Tightening torque:
31.5 N·m (3.2 kgf-m, 23.2 ft-lb)



5) Install the union screw pipe assembly to the turbocharger.

NOTE:
Use a new gasket.

Tightening torque:
T1: 6.8 N·m (0.7 kgf-m, 5.1 ft-lb)
T2: 16 N·m (1.6 kgf-m, 11.8 ft-lb)

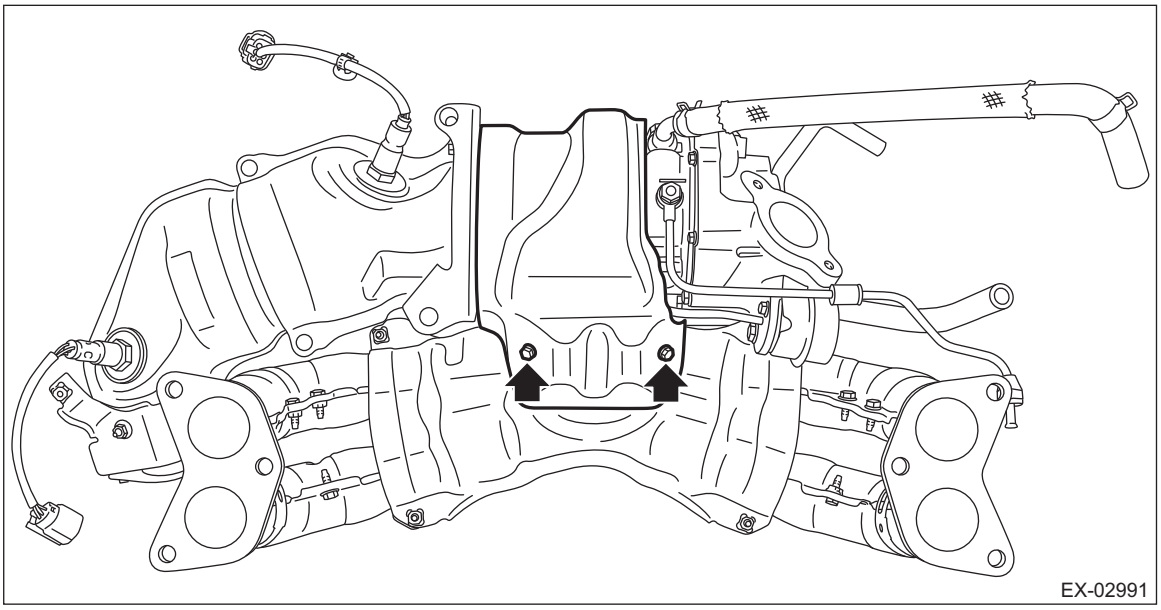


E: INSPECTION

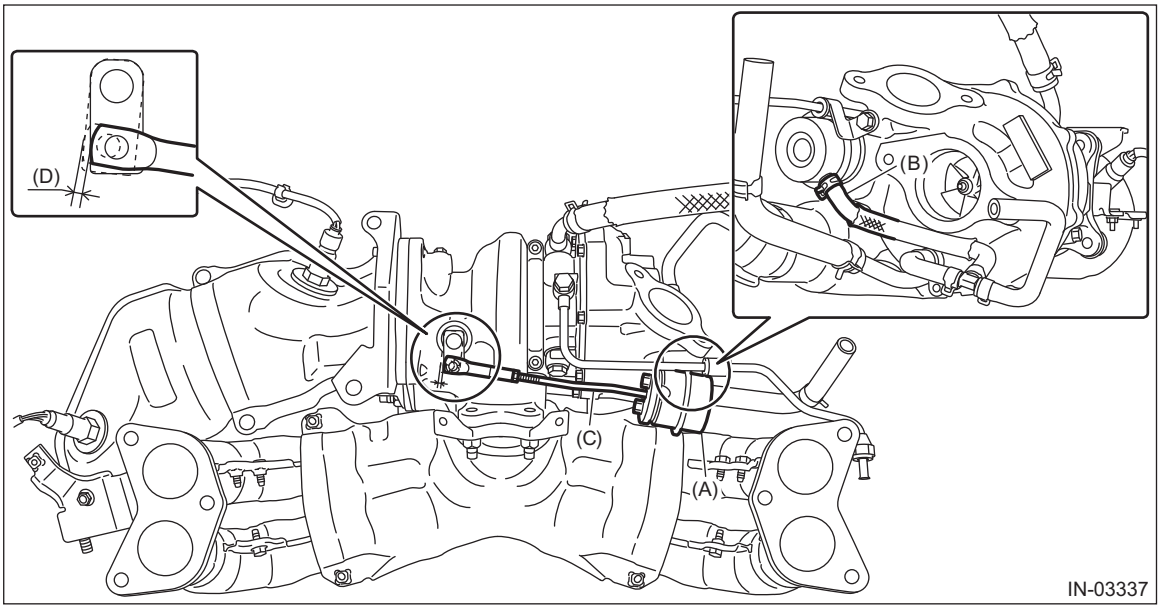
1. WASTE GATE ACTUATOR

1) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>

2) Remove the exhaust cover.



3) Remove the vacuum control hose (B) from the waste gate actuator (A) of the turbocharger, and connect the Mighty Vac to the waste gate actuator (A).



(A) Waste gate actuator
(B) Vacuum control hose
(C) Control rod
(D) Control rod stroke

4) Pressurize slowly with the Mighty Vac, and check the pressure when the control rod stroke (D) becomes 1±0.15 mm (0.0394±0.0059 in). If it is not within the standard, replace the turbocharger assembly.

CAUTION:
Do not pressurize over 112.7 kPa (1.15 kg/cm^2, 16.34 psi) to prevent damaging the waste gate actuator.

Operating pressure (control rod stroke 1±0.15 mm (0.0394±0.0059 in)):
Standard
84.0 — 88.0 kPa (0.86 — 0.90 kg/cm^2, 12.18 — 12.76 psi)

5) After inspection, install the related parts in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

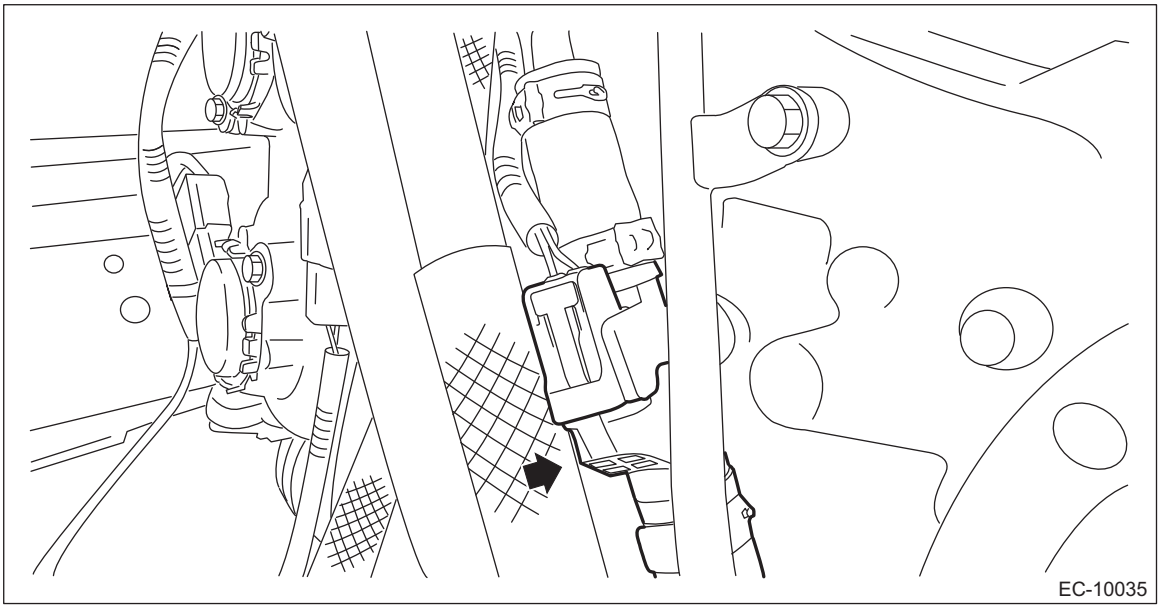
2. OTHER INSPECTIONS

1) Check that the turbocharger and pipe have no deformation, cracks or other damages.
2) Check that the hose has no cracks, damage or loose part.
3) Check that there are no oil leakage or water leakage from the pipe attachment section.

10.Oil Catch Tank

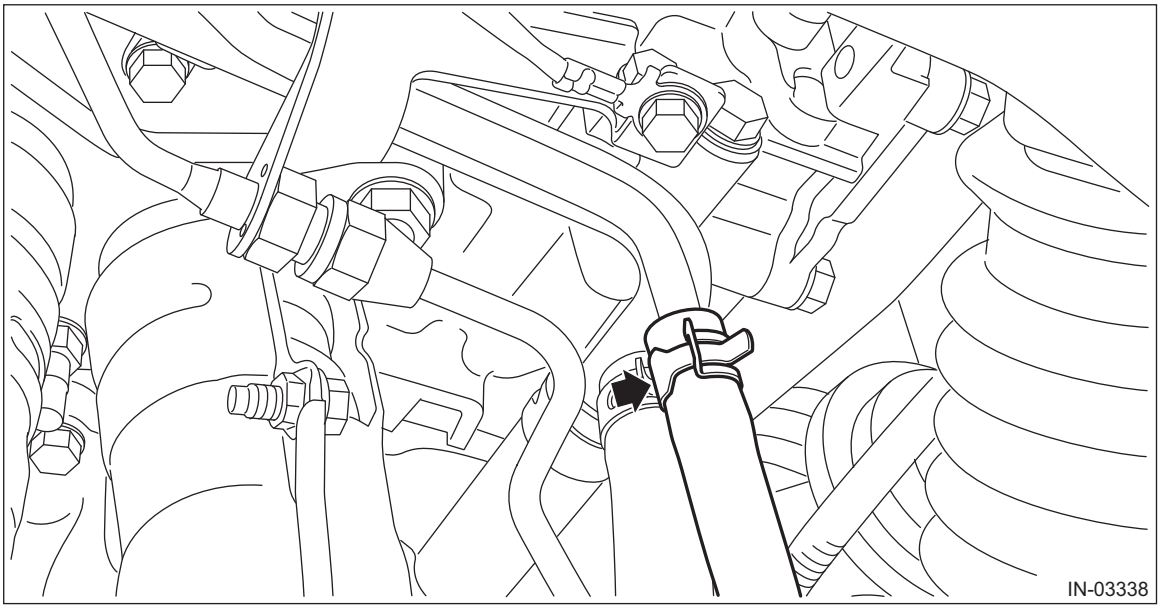
A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Unlock the blow-by diagnosis connector, and disconnect the PCV hose assembly No. 2 from the PCV hose assembly No. 1.

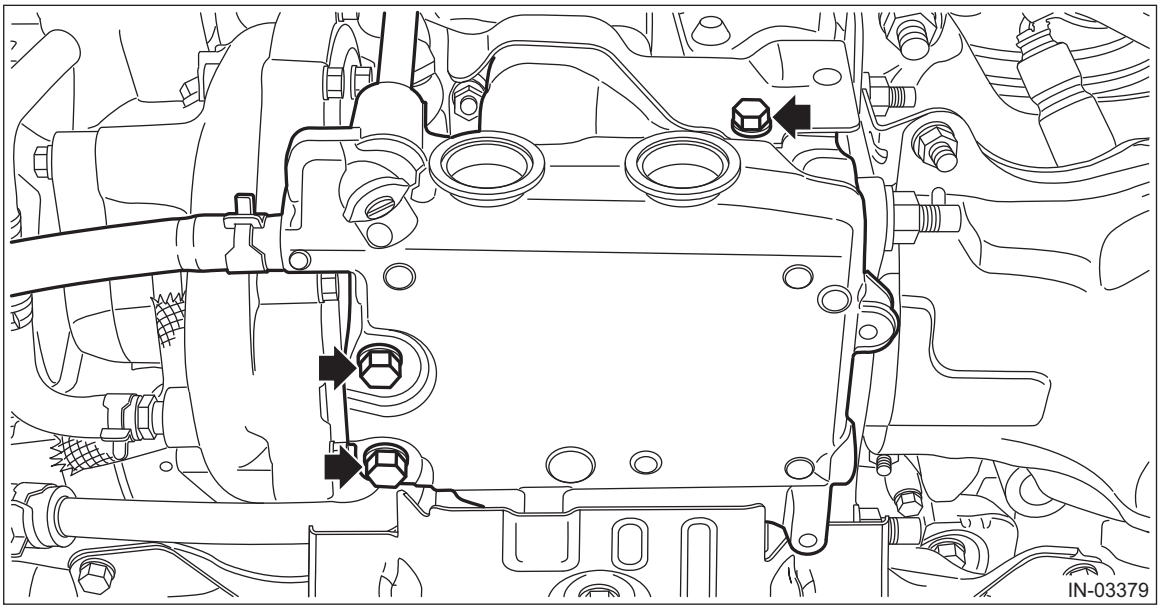


4) Lift up the vehicle.
5) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
6) Disconnect the oil hose from the oil pipe, and drain the engine oil in the oil catch tank.

NOTE:
Prepare the container for draining of engine oil.



7) Remove bolts which secure the oil catch tank to the turbocharger and exhaust stay, and remove the oil catch tank.



8) Remove the oil hose from the oil catch tank.

B: INSTALLATION

1) Install the oil hose to the oil catch tank.

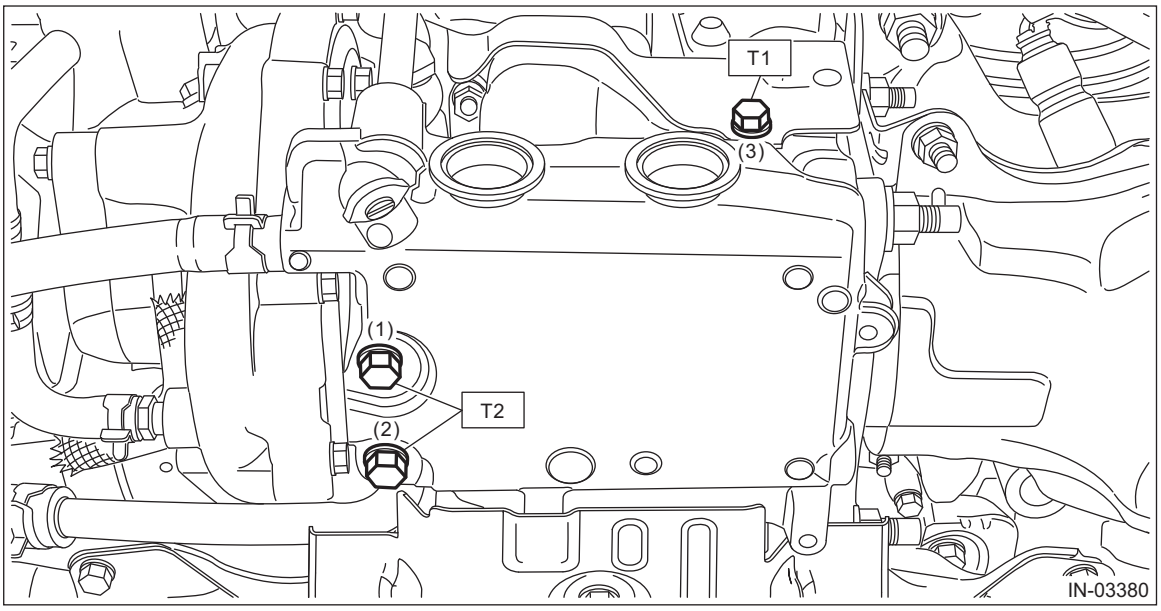
NOTE:
Use a new oil hose.

2) Install the oil catch tank to the turbocharger and exhaust stay.
   (1) Set the oil catch tank to the turbocharger, and temporarily tighten the bolts which secure the oil catch tank to the turbocharger and exhaust stay.

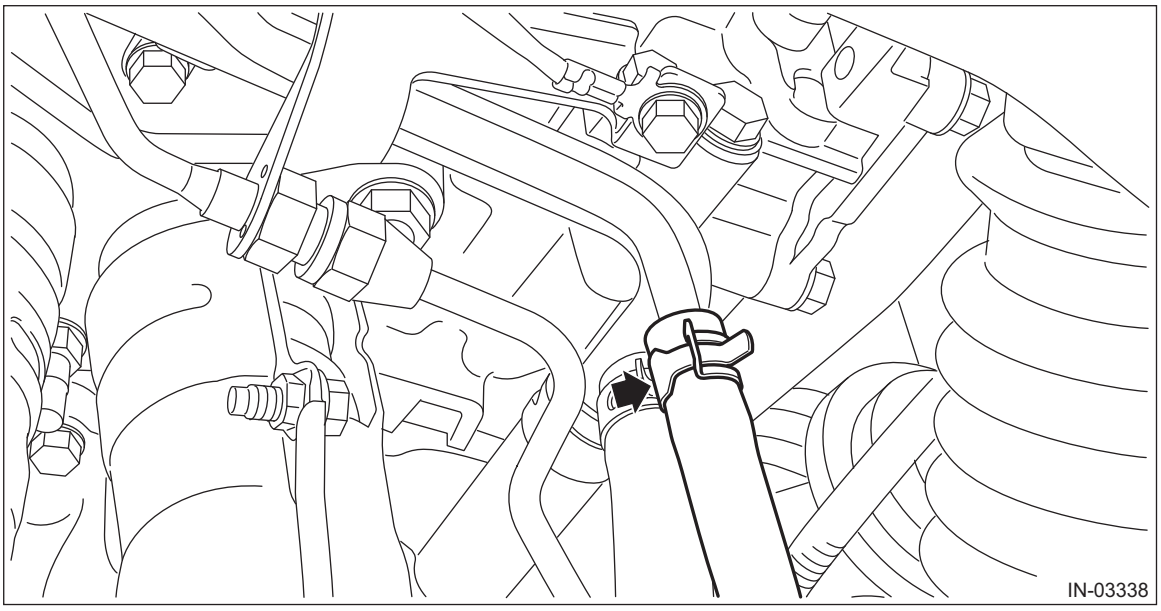
NOTE:
Use a new gasket.

   (2) Tighten the bolts which secure the oil catch tank to the turbocharger and exhaust stay in numerical order as shown in the figure.

Tightening torque:
T1: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
T2: 10.5 N·m (1.1 kgf-m, 7.7 ft-lb)



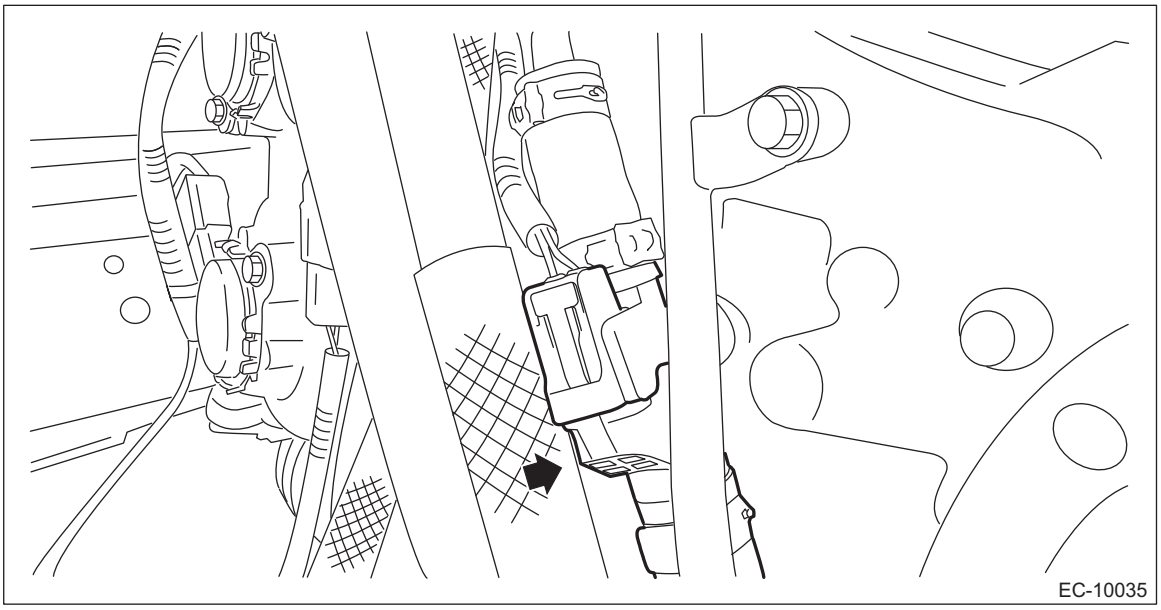
3) Connect the oil hose to the oil pipe.



4) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
5) Lower the vehicle.
6) Connect the PCV hose assembly No. 2 to the PCV hose assembly No. 1.

NOTE:
- There are multiple blow-by diagnosis connectors. Be careful not to connect incorrectly.

- Make sure that the blow-by diagnosis connector is connected securely.



7) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
8) Check the engine oil level and replenish the engine oil if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
9) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

1) Remove the PCV hose assembly No. 2. <Ref. to EC(w/o STI)-82, PCV HOSE ASSY NO. 2, REPLACEMENT, PCV Hose Assembly.>

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)

E: INSPECTION

1) Check that the oil catch tank does not have deformation, cracks or damage.
2) Check that the PCV hose and oil hose have no cracks, damage or loose part.

11.Scavenge Pump

A: REMOVAL

Refer to “Scavenge Pump” for removal procedure of scavenge pump. <Ref. to LU(w/o STI)-40, REMOVAL, Scavenge Pump.>

B: INSTALLATION

Refer to “Scavenge Pump” for installation procedure of scavenge pump. <Ref. to LU(w/o STI)-40, INSTALLATION, Scavenge Pump.>

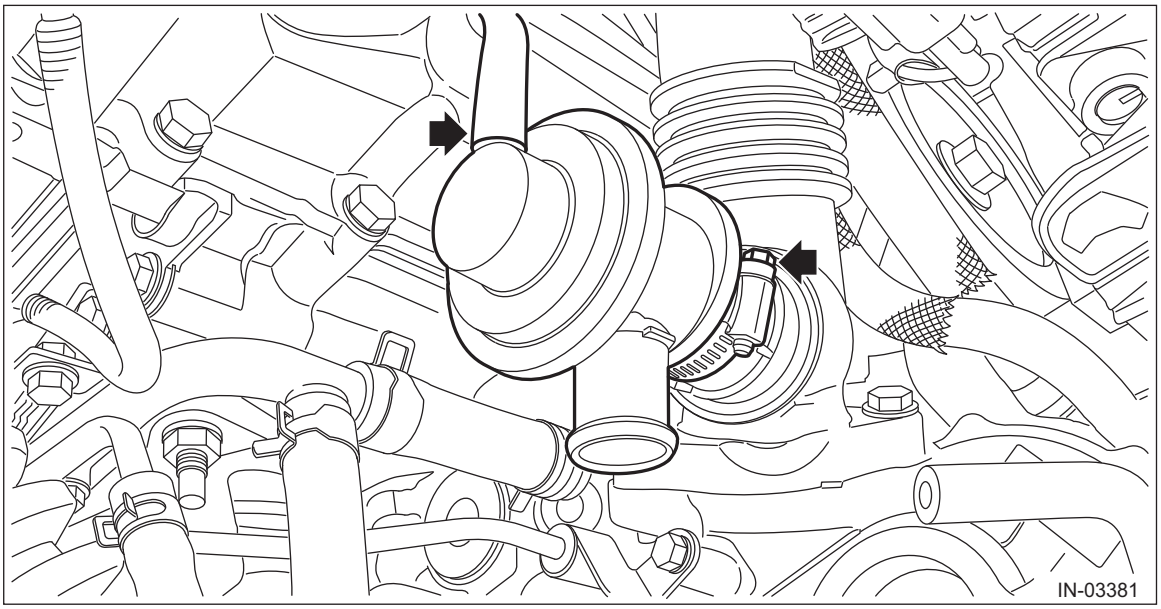
C: INSPECTION

Refer to “Scavenge Pump” for inspection procedure of scavenge pump. <Ref. to LU(w/o STI)-41, INSPECTION, Scavenge Pump.>

12.Air By-pass Valve

A: REMOVAL

1) Remove the intake duct No. 1. <Ref. to IN(w/o STI)-27, INTAKE DUCT NO. 1, REMOVAL, Intake Duct.>
2) Disconnect the vacuum hose from the air by-pass valve, and remove the air by-pass valve from the intake duct No. 2.



B: INSTALLATION

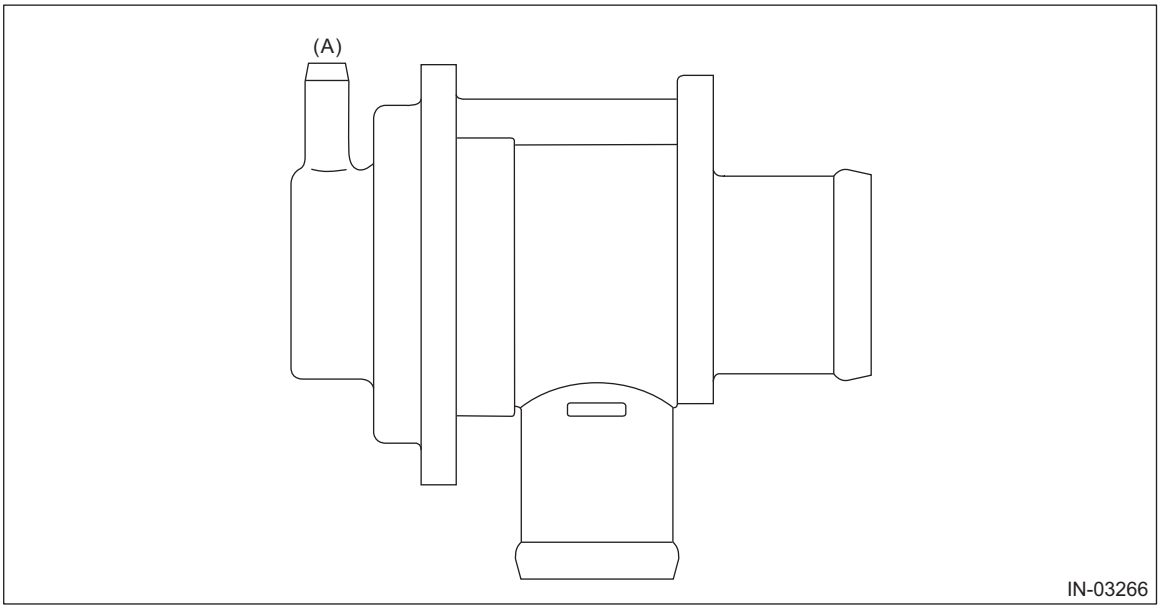
Install in the reverse order of removal.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)

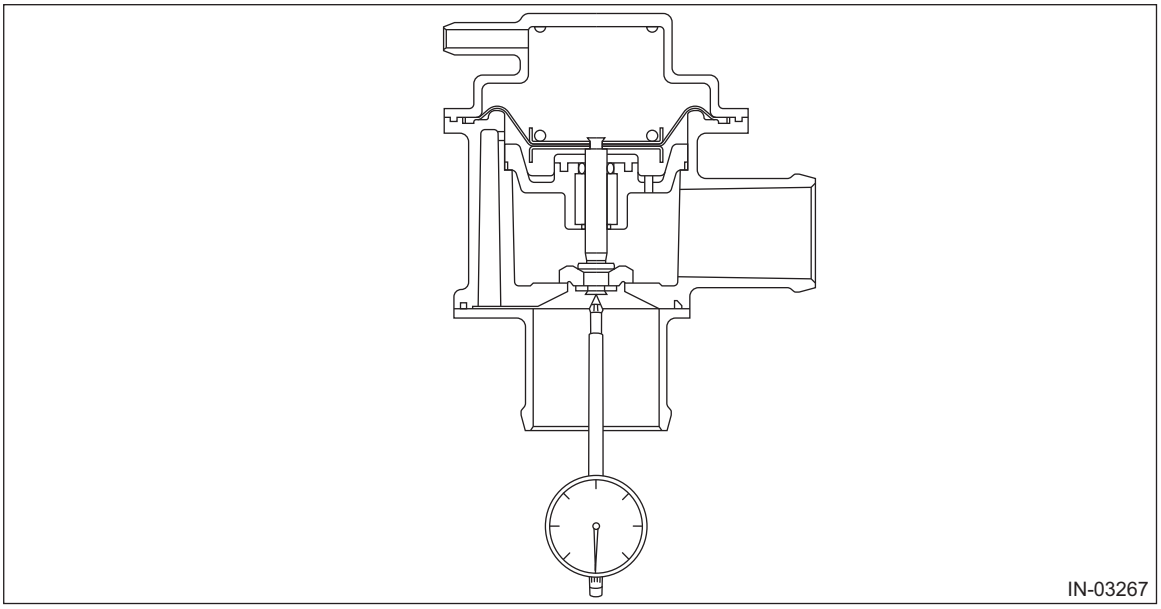
C: INSPECTION

1. AIR BY-PASS VALVE

1) Check that the air by-pass valve has no deformation, cracks or other damages.
2) Connect the Mighty Vac to the nipple (A) of the air by-pass valve.



3) Using the Mighty Vac, generate the vacuum pressure to –93.3 kPa (–0.95 kg/cm^2, –13.5 psi). Check that the Mighty Vac gauge needle indication holds 10 seconds without dropping down to lower than –92.6 kPa (–0.94 kg/cm^2, –13.4 psi).
4) Set a dial gauge to the end of valve rod of the air by-pass valve.



5) Using the Mighty Vac, generate the vacuum pressure, and check the pressure when dial gauge needle (valve stroke) shows 0.5 mm (0.02 in). If it is not within the standard, replace the air by-pass valve.

Opening pressure (valve stroke 0.5 mm (0.02 in)):
Standard
–13.3 — –21.3 kPa (–0.14 — –0.22 kg/cm^2, –1.93 — –3.09 psi)

2. OTHER INSPECTIONS

Check that the vacuum hose and air by-pass pipe have no cracks, damage or loose part.

1. General Description

A: SPECIFICATION

Engine	Model				2.0 L
	Cylinder arrangement				Horizontally opposed, liquid cooled, 4-cylinder, 4-stroke gasoline engine
	Valve system mechanism				Chain driven, double overhead camshaft, 4-valve/cylinder
	Bore × Stroke mm (in)				86.0 × 86.0 (3.39 × 3.39)
	Displacement cm^3 (cu in)				1,998 (122)
	Compression ratio				10.6
	Compression pressure (at 200 — 300 r/min) kPa (kg/cm^2, psi)			Standard	1,350 — 1,750 (14 — 18, 196 — 254)
	Number of piston rings				Compression ring: 2 Oil ring: 1
	Intake valve timing		Open	Max. retard	ATDC 26°
				Min. advance	BTDC 42°
			Close	Max. retard	ABDC 82°
				Min. advance	ABDC 14°
	Exhaust valve timing		Open	Max. retard	BBDC 11°
				Min. advance	BBDC 66°
			Close	Max. retard	ATDC 55°
				Min. advance	ATDC 0°
	Cam clearance mm (in)	Intake		Standard	$0.13^{+0.02}_{-0.03}$ ($0.0051^{+0.0008}_{-0.0012}$)
		Exhaust		Standard	0.22±0.02 (0.0087±0.0008)
	Idle speed (For CVT model, select lever in “P” or “N” range. For MT model, gear shift lever in neutral position.) r/min	No load		Standard	700±100
		A/C ON		Standard	700 — 865±50
	Ignition order				1 → 3 → 2 → 4
	Ignition timing BTDC/{r/min}			Standard	CVT model: 8°±10°/700
					MT model: 6°±10°/700

NOTE:
OS: Oversize US: Undersize

Camshaft	Bending mm (in)			Limit	0.020 (0.0008)
	Cam lobe height mm (in)	Intake	Valve drive section	Standard	40.34 — 40.44 (1.5882 — 1.5921)
			Fuel pump drive section	Standard	41.95 — 42.05 (1.6516 — 1.6555)
		Exhaust		Standard	40.20 — 40.30 (1.5827 — 1.5866)
	Cam base circle diameter mm (in)			Standard	34.0 (1.3386)
	Journal outer diameter mm (in)			Standard	25.946 — 25.963 (1.0215 — 1.0222)
	Thrust clearance mm (in)			Standard	0.068 — 0.116 (0.0027 — 0.0047)
	Oil clearance mm (in)			Standard	0.037 — 0.072 (0.0015 — 0.0028)
Cylinder head	Warpage (mating surface with cylinder block) mm (in)			Limit	0.020 (0.0008)
	Grinding limit mm (in)				To 98.4 (3.8740)
	Height mm (in)			Standard	98.5 (3.8779)
Valve & valve guide	Valve overall length mm (in)			Intake	104.95 (4.1319)
				Exhaust	97.9 (3.8543)
	Valve head edge thickness mm (in)		Intake	Standard	0.8 — 1.2 (0.0315 — 0.0472)
			Exhaust	Standard	1.0 — 1.4 (0.0394 — 0.0551)
	Valve stem outer diameter mm (in)		Intake	Standard	5.455 — 5.470 (0.2148 — 0.2154)
			Exhaust	Standard	5.445 — 5.460 (0.2144 — 0.2150)
	Valve guide inner diameter mm (in)			Standard	5.500 — 5.512 (0.2165 — 0.2170)
	Clearance between valve and valve guide mm (in)		Intake	Standard	0.030 — 0.057 (0.0012 — 0.0022)
			Exhaust	Standard	0.040 — 0.067 (0.0016 — 0.0026)
	Valve guide protrusion amount mm (in)			Standard	11.4 — 11.8 (0.4488 — 0.4646)
Valve & valve shim	Valve stem end outer diameter mm (in)		Intake	Standard	5.455 — 5.470 (0.2148 — 0.2154)
			Exhaust	Standard	5.445 — 5.460 (0.2144 — 0.2150)
	Valve shim inner diameter mm (in)			Standard	5.500 — 5.560 (0.2165 — 0.2189)
	Clearance between valve and valve shim mm (in)		Intake	Standard	0.030 — 0.105 (0.0012 — 0.0041)
			Exhaust	Standard	0.040 — 0.115 (0.0016 — 0.0045)

Valve seat	Seating width between valve and valve seat mm (in)	Intake		Standard	0.8 — 1.6 (0.0315 — 0.0630)
		Exhaust		Standard	1.1 — 1.7 (0.0433 — 0.0669)
	Seating angle between valve and valve seat				45°
	Seating position between valve and valve seat				Valve face center
Valve spring	Free length (reference) mm (in)			Standard	CVT model: 41.68 (1.6409)
					MT model: 41.06 (1.6165)
	Tension/spring height N (kgf, lb)/mm (in)	Set		Standard	182 — 210 (18.56 — 21.41, 40.92 — 47.22)/33.0 (1.2992)
		Lift		Standard	CVT model: 502 — 554 (51.19 — 56.49, 112.87 — 124.56)/22.0 (0.8661)
					MT model: 552 — 610 (56.29 — 62.20, 124.11 — 137.15)/22.0 (0.8661)
	Squareness			Standard	2.5°, 1.8 mm (0.0709 in) or less
Cylinder block & piston	Cylinder block warpage (Mating surface with cylinder head) mm (in)			Limit	0.025 (0.0010)
	Grinding limit of cylinder block mm (in)				To 204.9 (8.0669)
	Height of cylinder block mm (in)			Standard	205.0 (8.0709)
	Inner diameter of cylinder liner mm (in)	Cylinder bore size mark A		Standard	86.005 — 86.015 (3.3860 — 3.3864)
		Cylinder bore size mark B		Standard	85.995 — 86.005 (3.3856 — 3.3860)
	Cylindricality of cylinder liner mm (in)			Limit	0.030 (0.0012)
	Out-of-roundness of cylinder liner mm (in)			Limit	0.030 (0.0012)
	Piston grade point mm (in)				40.0 (1.5748)
	Piston outer diameter mm (in)	Standard Size	Grade A	Standard	85.985 — 85.995 (3.3852 — 3.3856)
			Grade B	Standard	85.975 — 85.985 (3.3848 — 3.3852)
		0.25 (0.0098) OS		Standard	86.225 — 86.245 (3.3947 — 3.3955)
		0.50 (0.0197) OS		Standard	86.475 — 86.495 (3.4045 — 3.4053)
	Clearance between cylinder liner and piston mm (in)			Standard	0.010 — 0.030 (0.0004 — 0.0012)
	Inner diameter of cylinder liner boring limit (diameter) mm (in)				To 86.505 (3.4057)
Piston and piston pin	Degree of fit				Piston pin must be fitted into position with thumb at 20°C (68°F).
	Clearance between piston and piston pin mm (in)			Standard	0.004 — 0.008 (0.0002 — 0.0003)

Piston ring	Closed gap mm (in)	Compression ring	Top ring	Standard	0.20 — 0.25 (0.0079 — 0.0098)
			Second ring	Standard	0.40 — 0.50 (0.0157 — 0.0197)
		Oil ring (Upper rail and lower rail)		Standard	0.10 — 0.35 (0.0039 — 0.0138)
	Clearance between compression ring and piston mm (in)		Top ring	Standard	0.040 — 0.080 (0.0016 — 0.0031)
			Second ring	Standard	0.045 — 0.085 (0.0018 — 0.0033)
Connecting rod and connecting rod bearing	Bend or twist per 100 mm (3.9370 in) in length mm (in)			Limit	0.10 (0.0039)
	Thrust clearance mm (in)			Standard	0.070 — 0.330 (0.0028 — 0.0130)
	Connecting rod bearing thickness (at center) mm (in)		Standard size	Standard	1.492 — 1.508 (0.0587 — 0.0594)
			0.03 (0.0012) US	Standard	1.511 — 1.515 (0.0595 — 0.0596)
			0.05 (0.0020) US	Standard	1.521 — 1.525 (0.0599 — 0.0600)
			0.25 (0.0098) US	Standard	1.621 — 1.625 (0.0638 — 0.0640)
	Oil clearance mm (in)			Standard	0.025 — 0.055 (0.0010 — 0.0022)
Piston pin & connecting rod bushing	Clearance between piston pin and connecting rod bushing mm (in)			Standard	0.004 — 0.026 (0.0002 — 0.0010)

Crankshaft and crankshaft bearing	Bending			mm (in)	Limit	0.035 (0.0014)
	Crankshaft pin	Cylindricality		mm (in)	Limit	0.006 (0.0002)

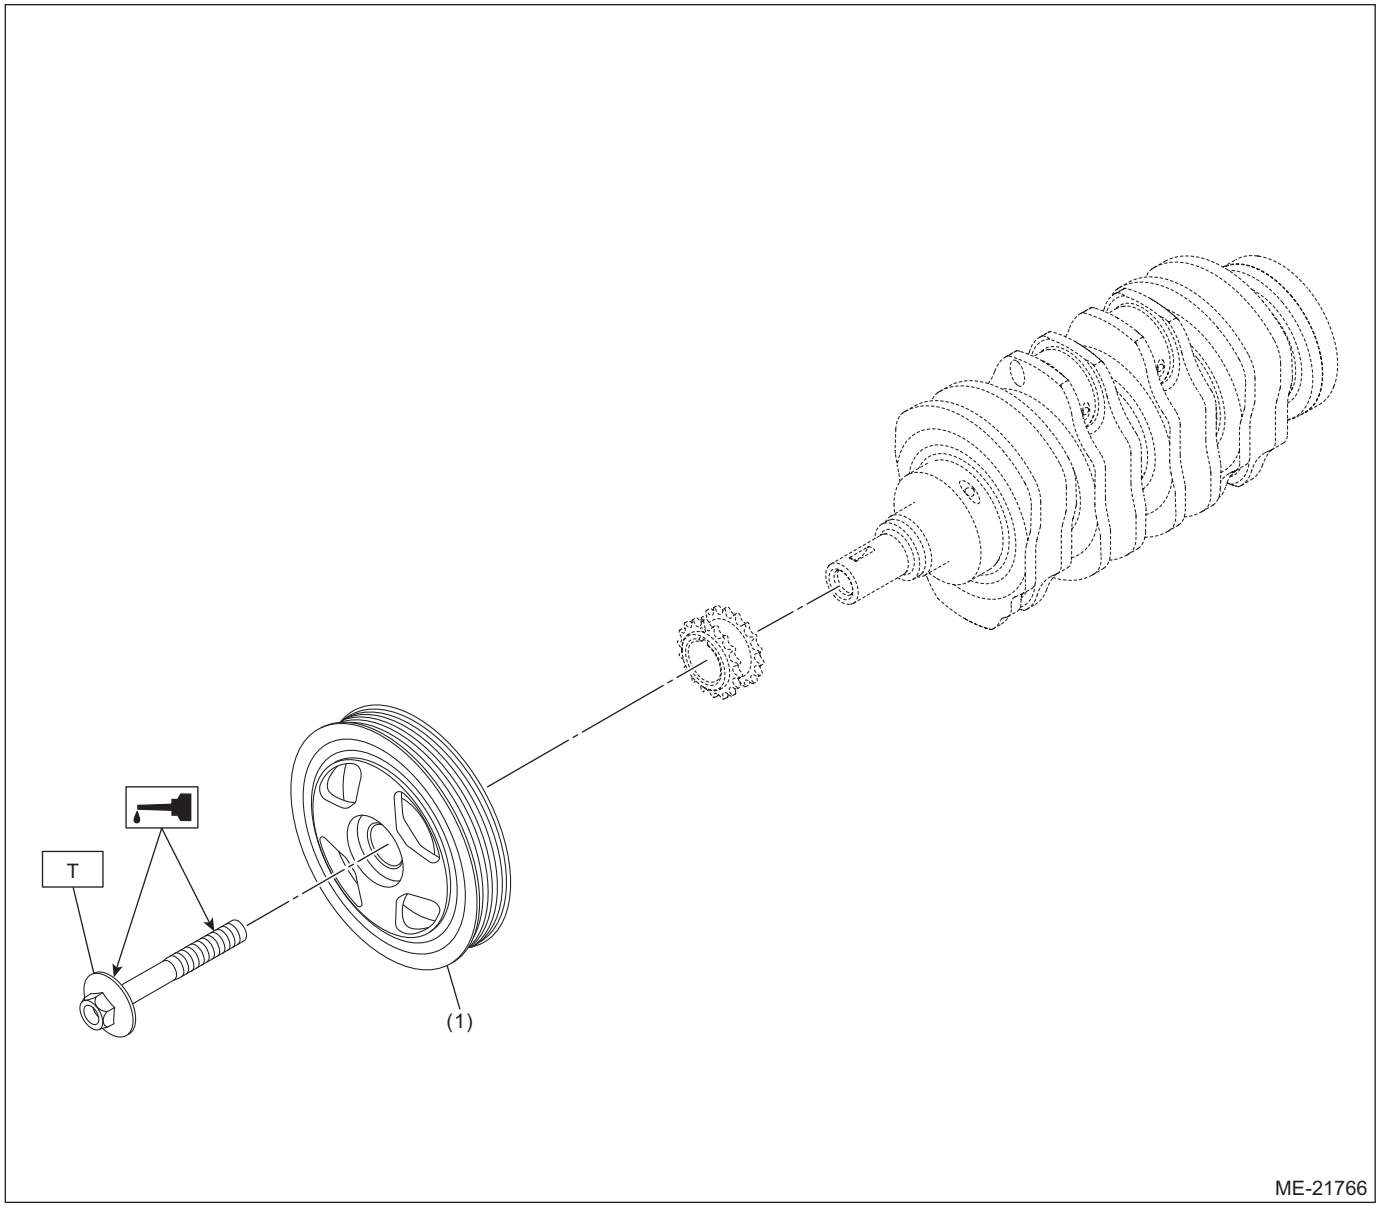
	Thrust clearance			mm (in)	Standard	0.130 — 0.308 (0.0051 — 0.0121)
	Oil clearance			mm (in)	Standard	0.013 — 0.031 (0.0005 — 0.0012)

B: COMPONENT

1. CRANK PULLEY

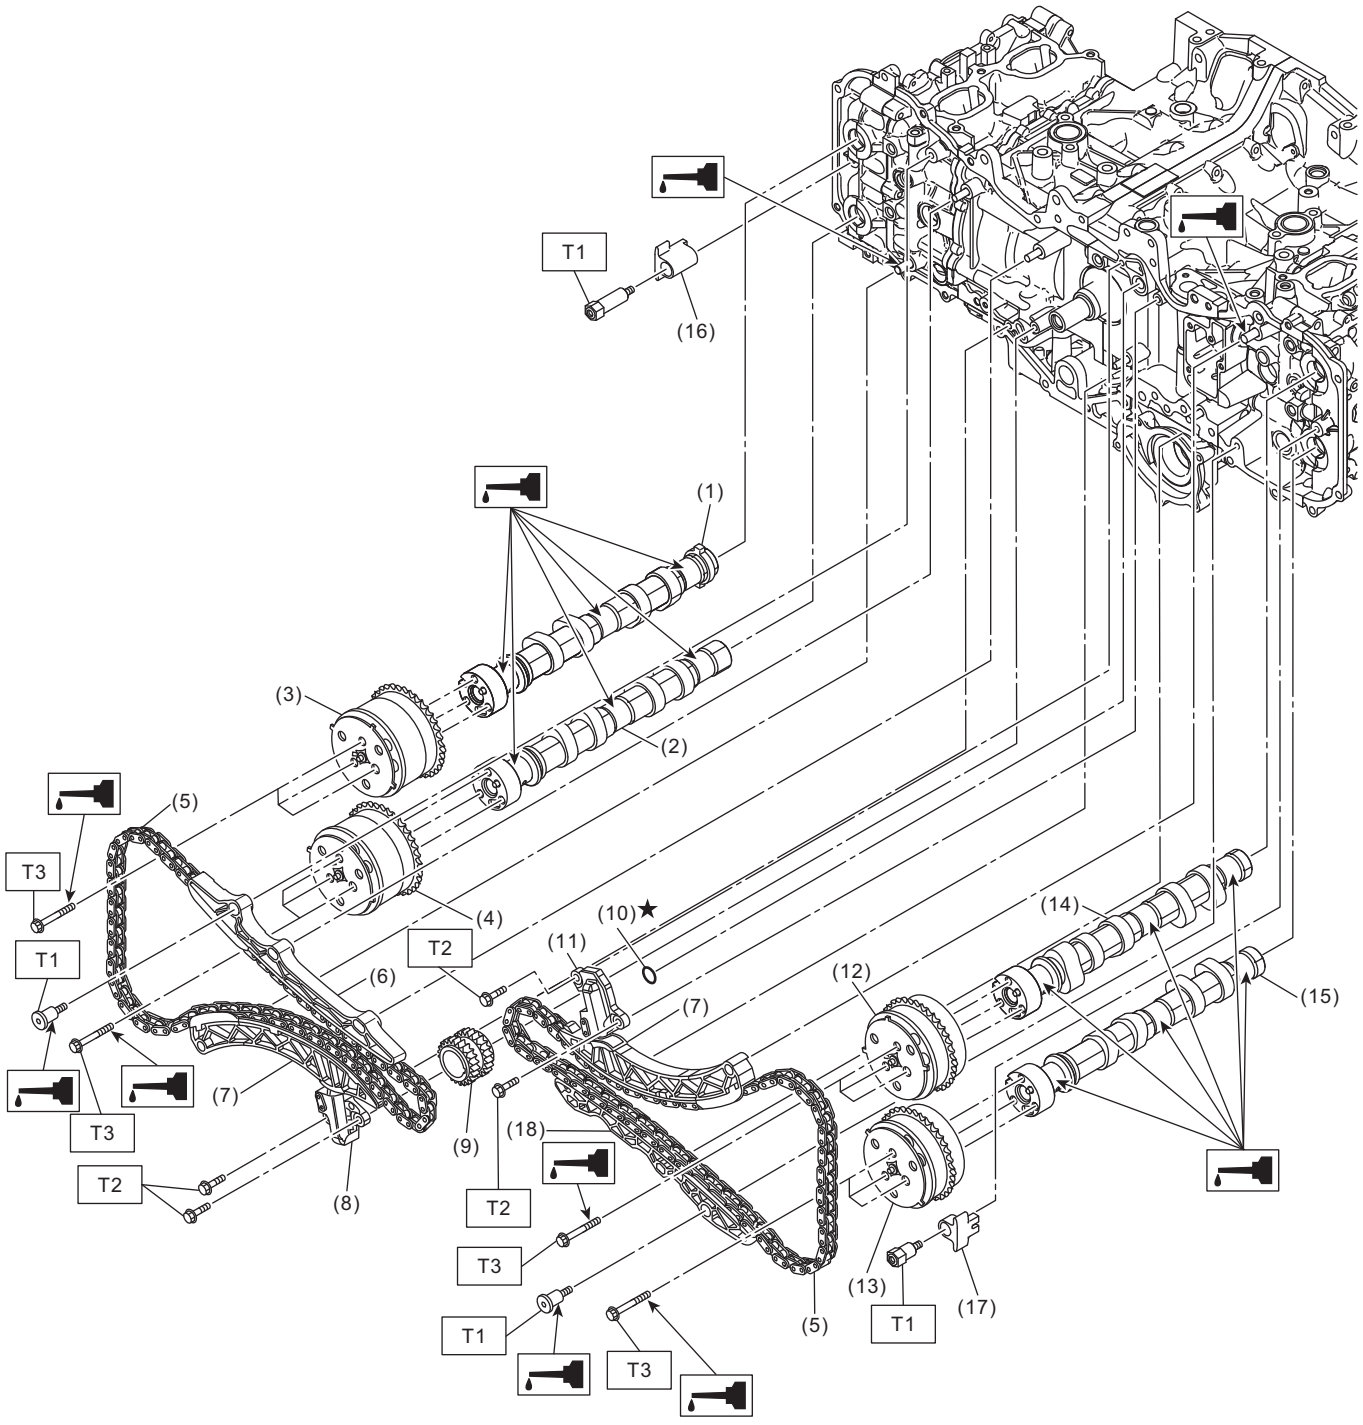


(1) Crank pulley

Tightening torque: N·m (kgf-m, ft-lb)

T: <Ref. to ME(w/o STI)-85, INSTALLATION, Crank Pulley.>

2. TIMING CHAIN & CAMSHAFT

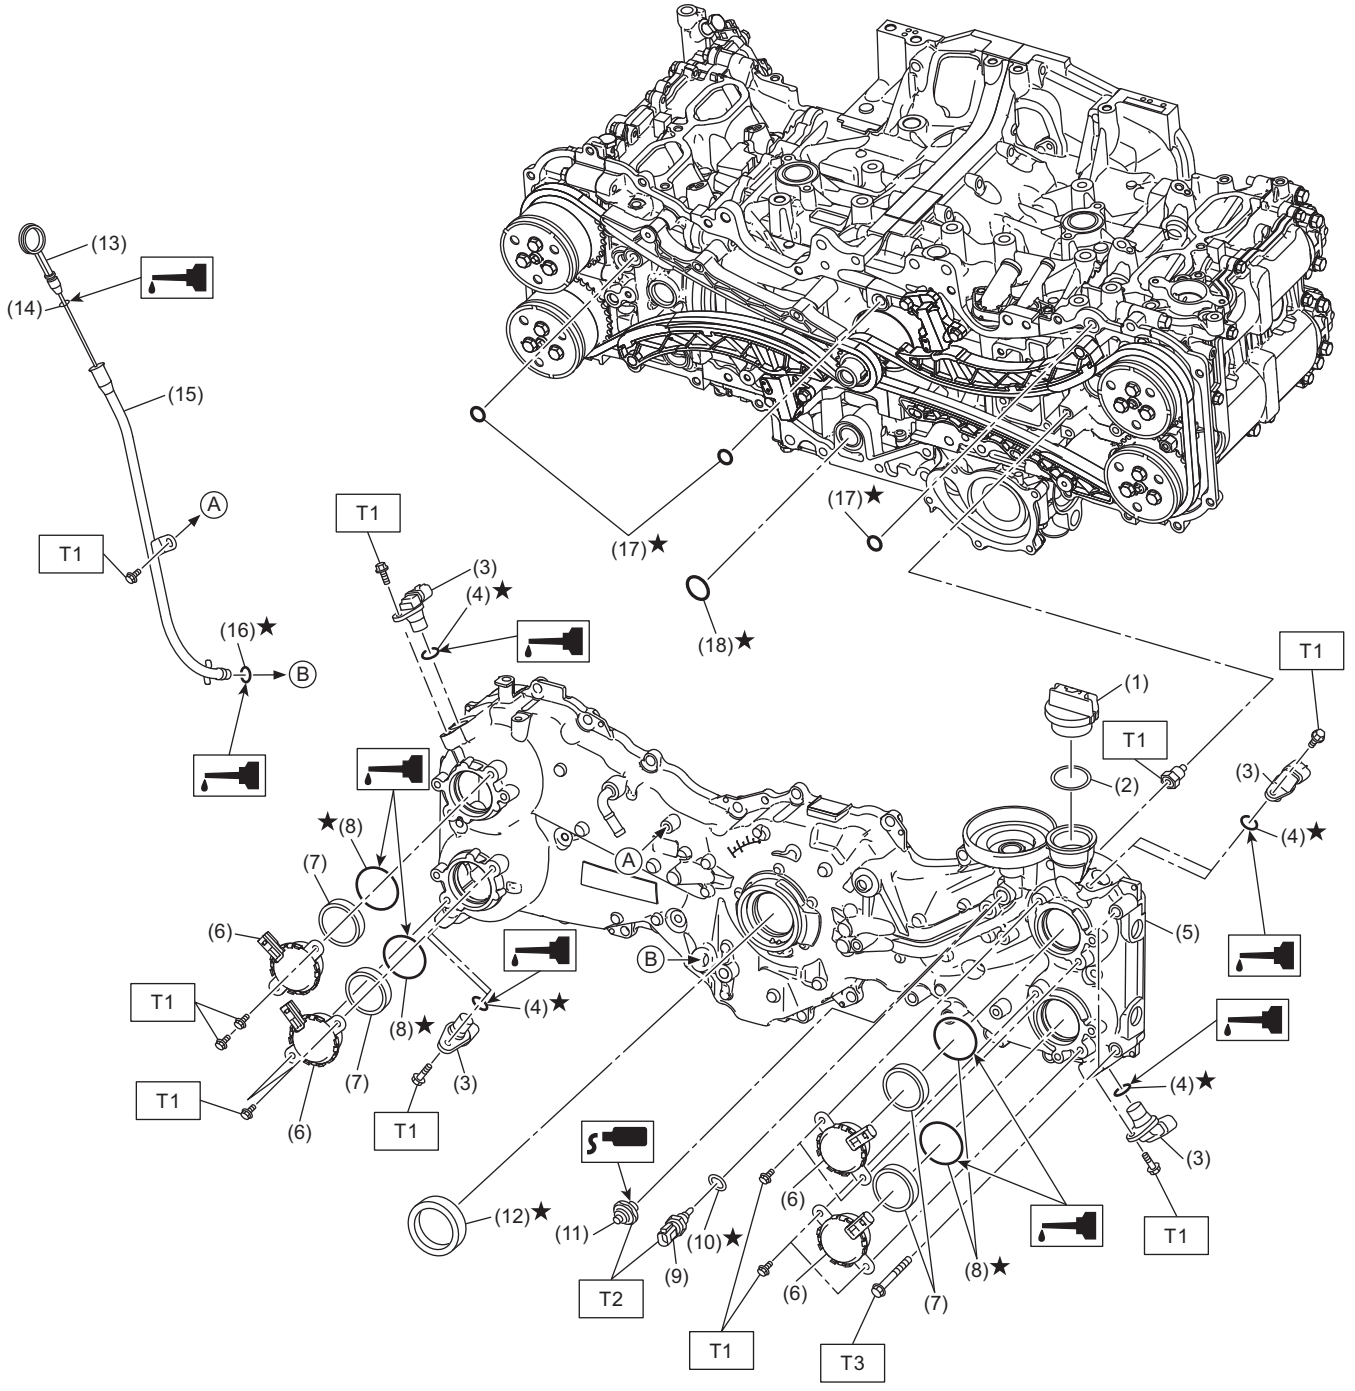


ME-22488

(1) Intake camshaft RH
(2) Exhaust camshaft RH
(3) Intake cam sprocket RH
(4) Exhaust cam sprocket RH
(5) Timing chain
(6) Chain guide A
(7) Chain tension lever
(8) Chain tensioner RH
(9) Crank sprocket
(10) O-ring
(11) Chain tensioner LH
(12) Intake cam sprocket LH
(13) Exhaust cam sprocket LH
(14) Intake camshaft LH
(15) Exhaust camshaft LH
(16) Chain guide B
(17) Chain guide C
(18) Chain guide D

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 8.5 (0.9, 6.3)
T3: 18 (1.8, 13.3)

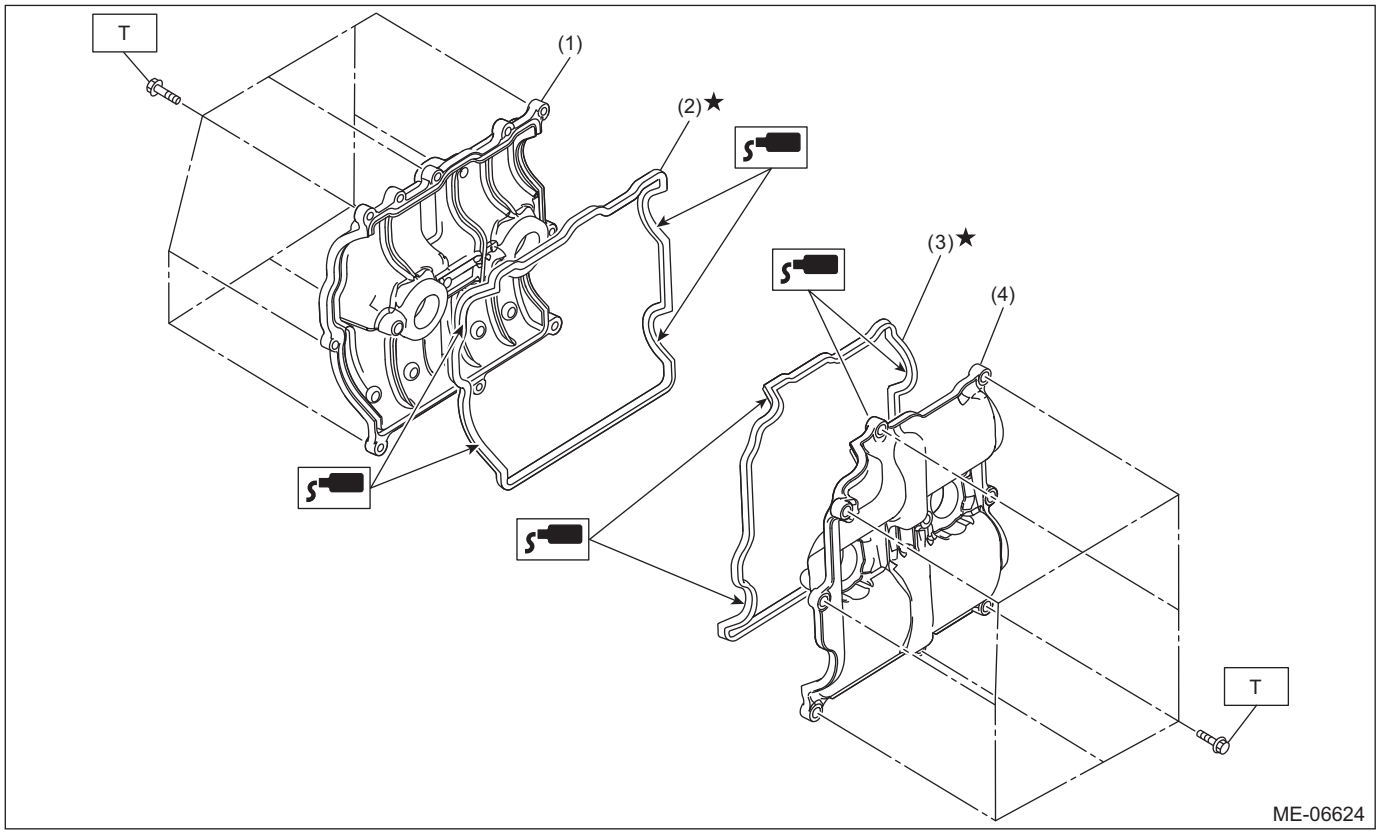
3. CHAIN COVER



(1) Oil filler cap
(2) Gasket
(3) Camshaft position sensor
(4) O-ring
(5) Chain cover
(6) Oil control solenoid
(7) Back-up ring
(8) O-ring
(9) Engine oil temperature sensor
(10) Gasket
(11) Oil pressure switch
(12) Front oil seal
(13) Oil level gauge
(14) O-ring
(15) Oil level gauge guide
(16) O-ring
(17) O-ring
(18) O-ring

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 18 (1.8, 13.3)
T3: <Ref. to ME(w/o STI)-98, INSTALLATION, Chain Cover.>

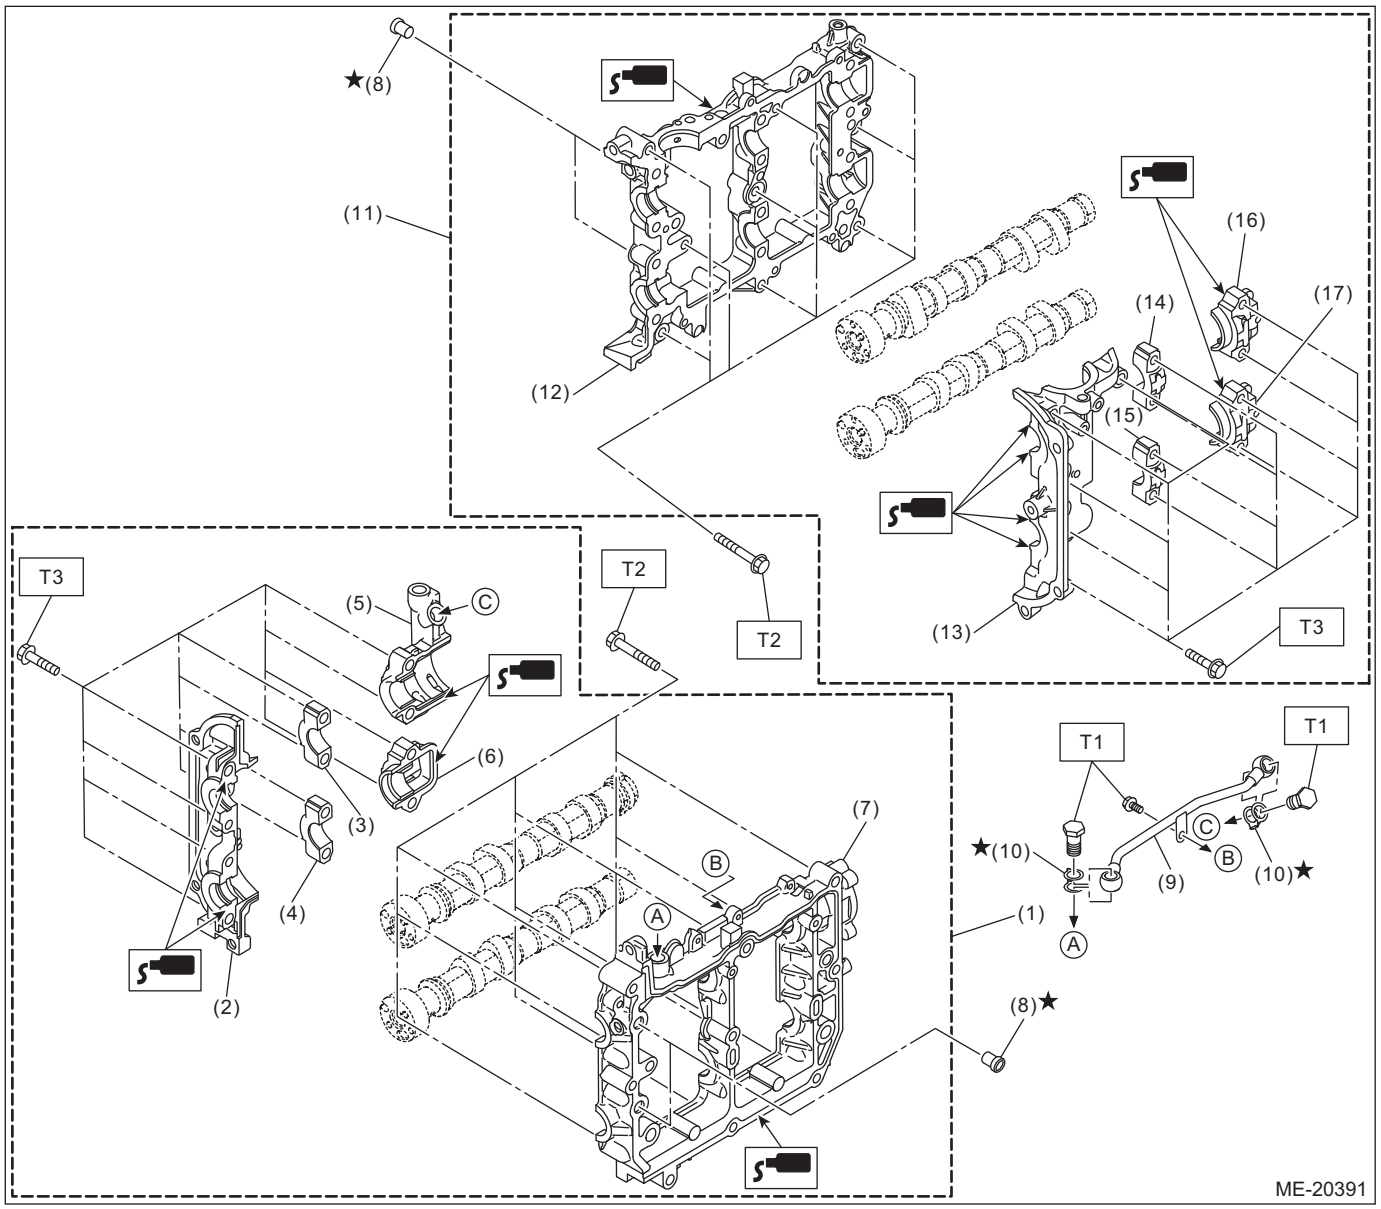
4. ROCKER COVER



(1) Rocker cover RH
(2) Rocker cover gasket RH
(3) Rocker cover gasket LH
(4) Rocker cover LH

Tightening torque: N·m (kgf-m, ft-lb)
T: <Ref. to ME(w/o STI)-152, INSTALLATION, Rocker Cover.>

5. CAM CARRIER



(1) Cam carrier ASSY RH
(2) Front camshaft cap RH
(3) Intake center camshaft cap RH
(4) Exhaust center camshaft cap RH
(5) Intake rear camshaft cap RH
(6) Exhaust rear camshaft cap RH
(7) Cam carrier RH
(8) Filter
(9) Oil pipe
(10) Gasket
(11) Cam carrier ASSY LH
(12) Cam carrier LH
(13) Front camshaft cap LH
(14) Intake center camshaft cap LH
(15) Exhaust center camshaft cap LH
(16) Intake rear camshaft cap LH
(17) Exhaust rear camshaft cap LH

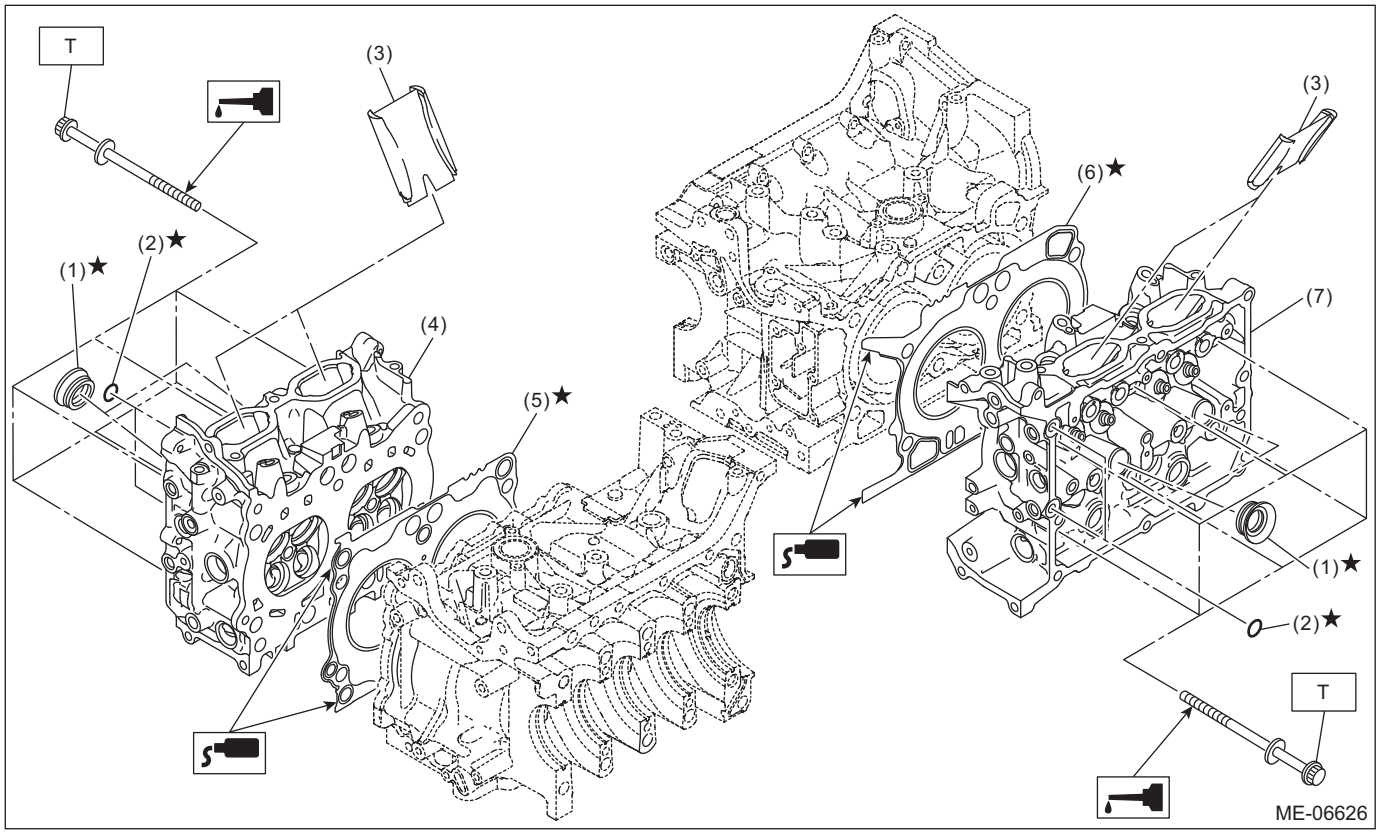
Tightening torque: N·m (kgf-m, ft-lb)

T1: ***<Ref. to ME(w/o STI)-192, CAM CARRIER RH, ASSEMBLY, Cam Carrier.>***

T2: ***<Ref. to ME(w/o STI)-171, INSTALLATION, Cam Carrier.>***

T3: ***<Ref. to ME(w/o STI)-192, ASSEMBLY, Cam Carrier.>***

6. CYLINDER HEAD

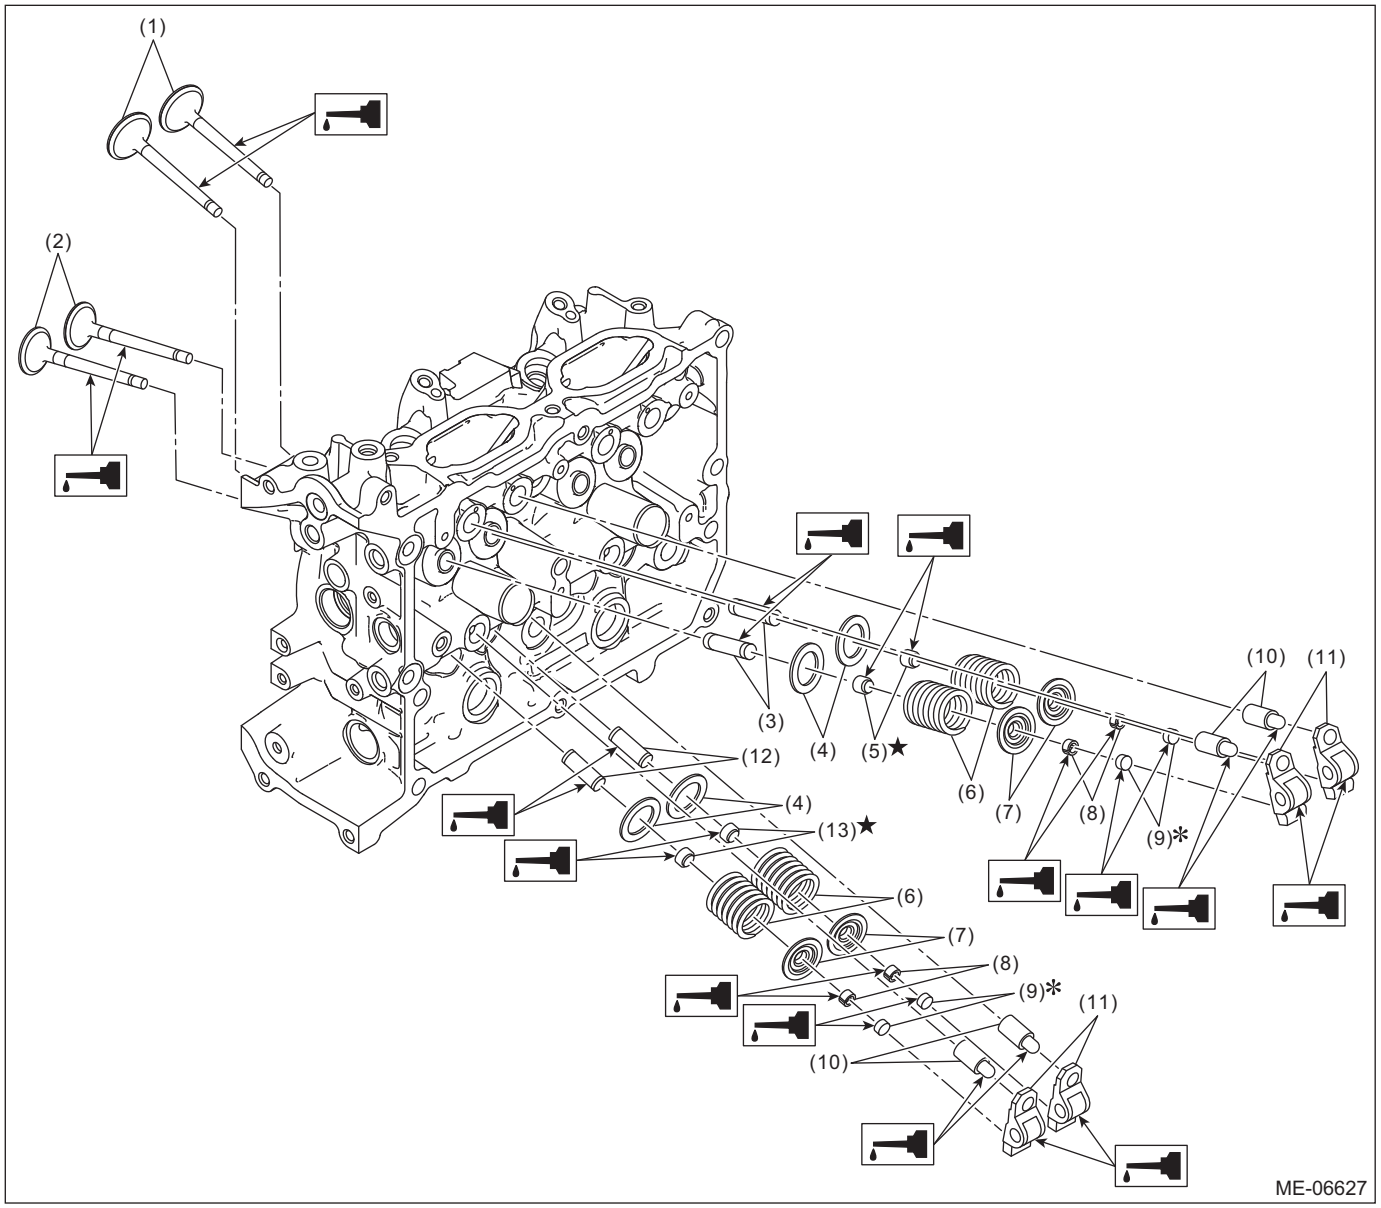


(1) Spark plug pipe gasket
(2) O-ring
(3) Cylinder head plate
(4) Cylinder head RH
(5) Cylinder head gasket RH
(6) Cylinder head gasket LH
(7) Cylinder head LH

Tightening torque: N·m (kgf-m, ft-lb)

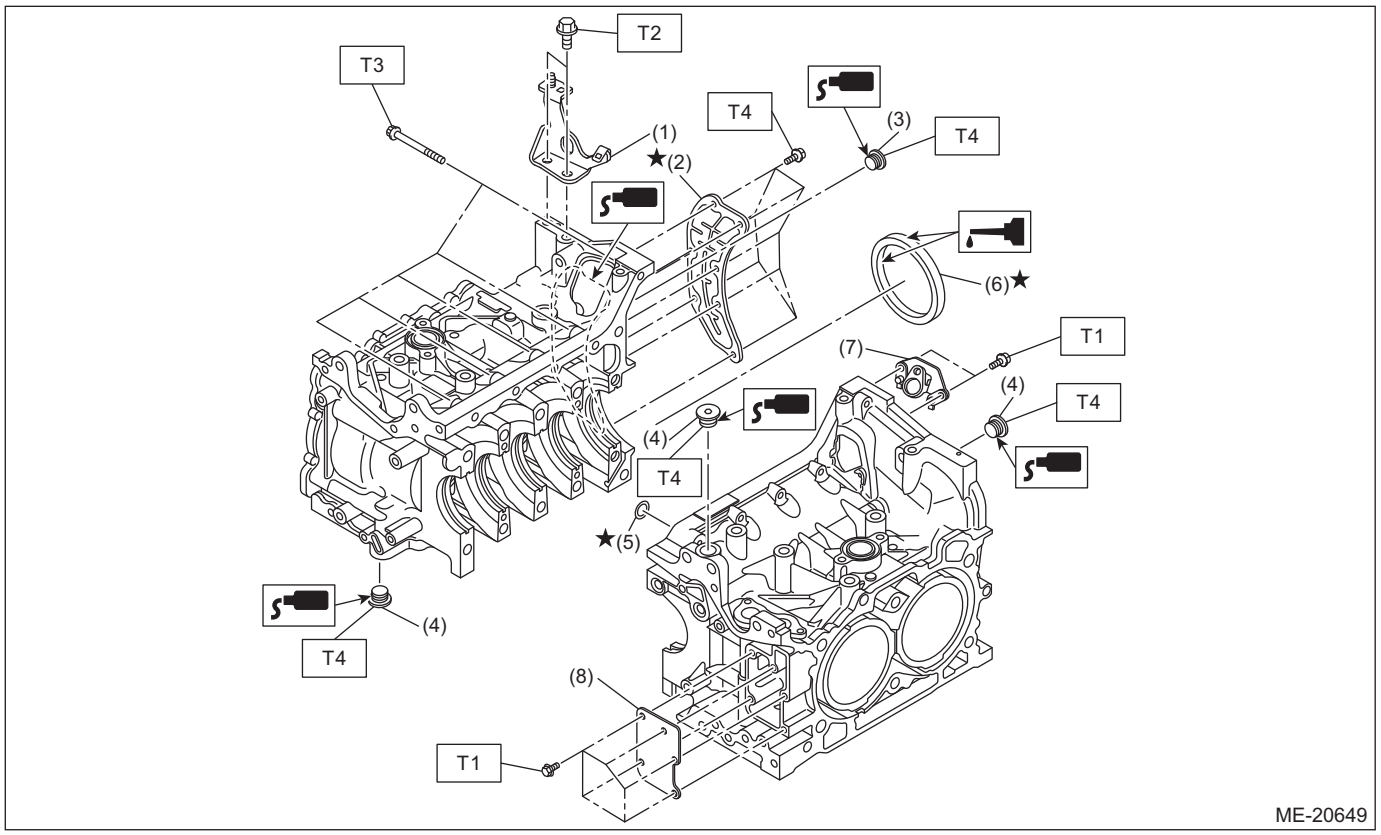
T: <Ref. to ME(w/o STI)-203, INSTALLATION, Cylinder Head.>

7. VALVE ASSY



(1) Exhaust valve
(2) Intake valve
(3) Intake valve guide
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Valve spring retainer
(8) Valve collet
(9) Valve shim
(10) Roller rocker arm pivot
(11) Roller rocker arm
(12) Exhaust valve guide
(13) Exhaust valve oil seal

8. CYLINDER BLOCK 1

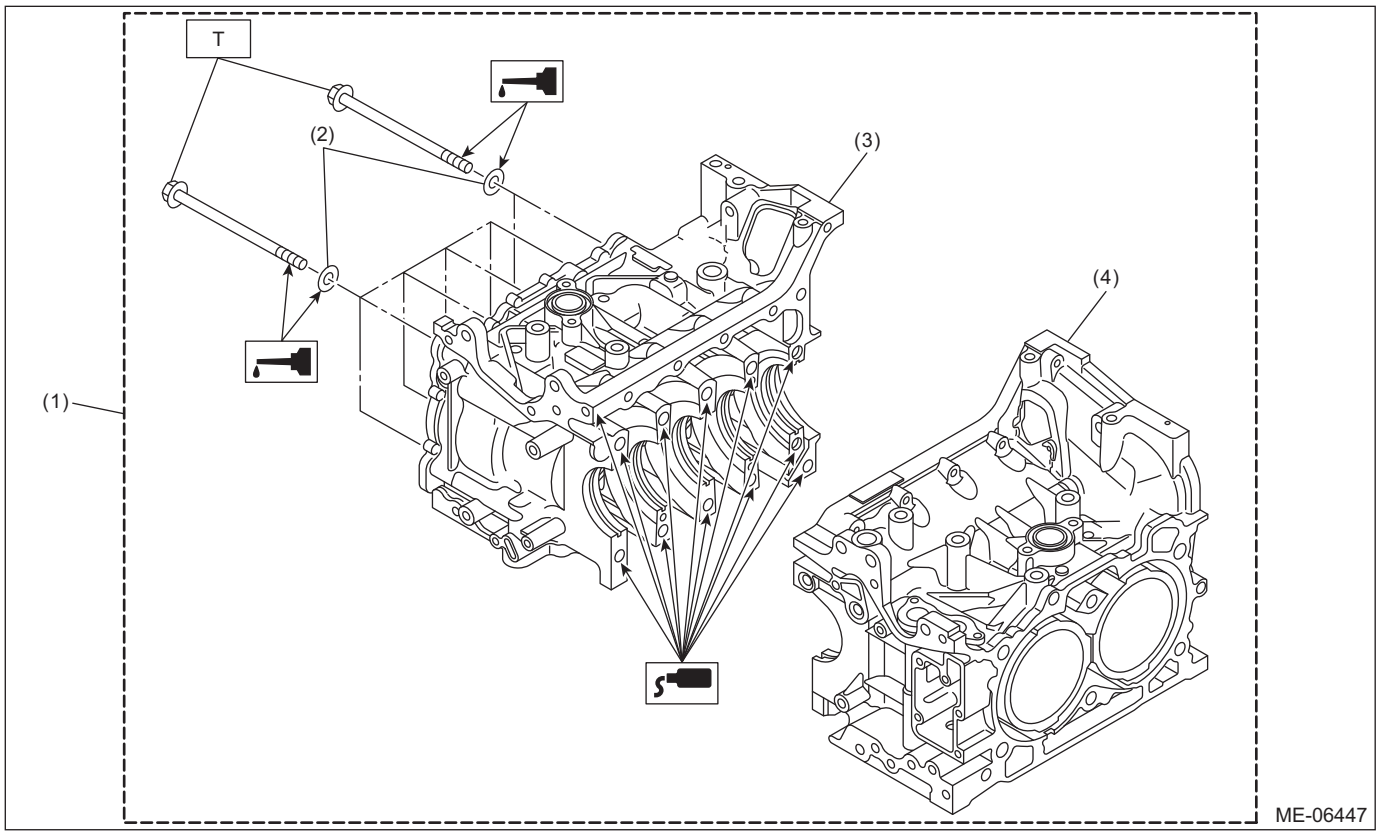


(1) Engine rear hanger
(2) Oil separator cover
(3) Cylinder block plug
(4) Main gallery plug
(5) O-ring
(6) Rear oil seal
(7) Crankshaft position sensor holder
(8) Cylinder block plate

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.7, 4.7)
T2: 21 (2.1, 15.5)
T3: 25 (2.5, 18.4)
T4: <Ref. to ME(w/o STI)-279, CYLINDER BLOCK, ASSEMBLY, Cylinder Block.>

9. CYLINDER BLOCK 2

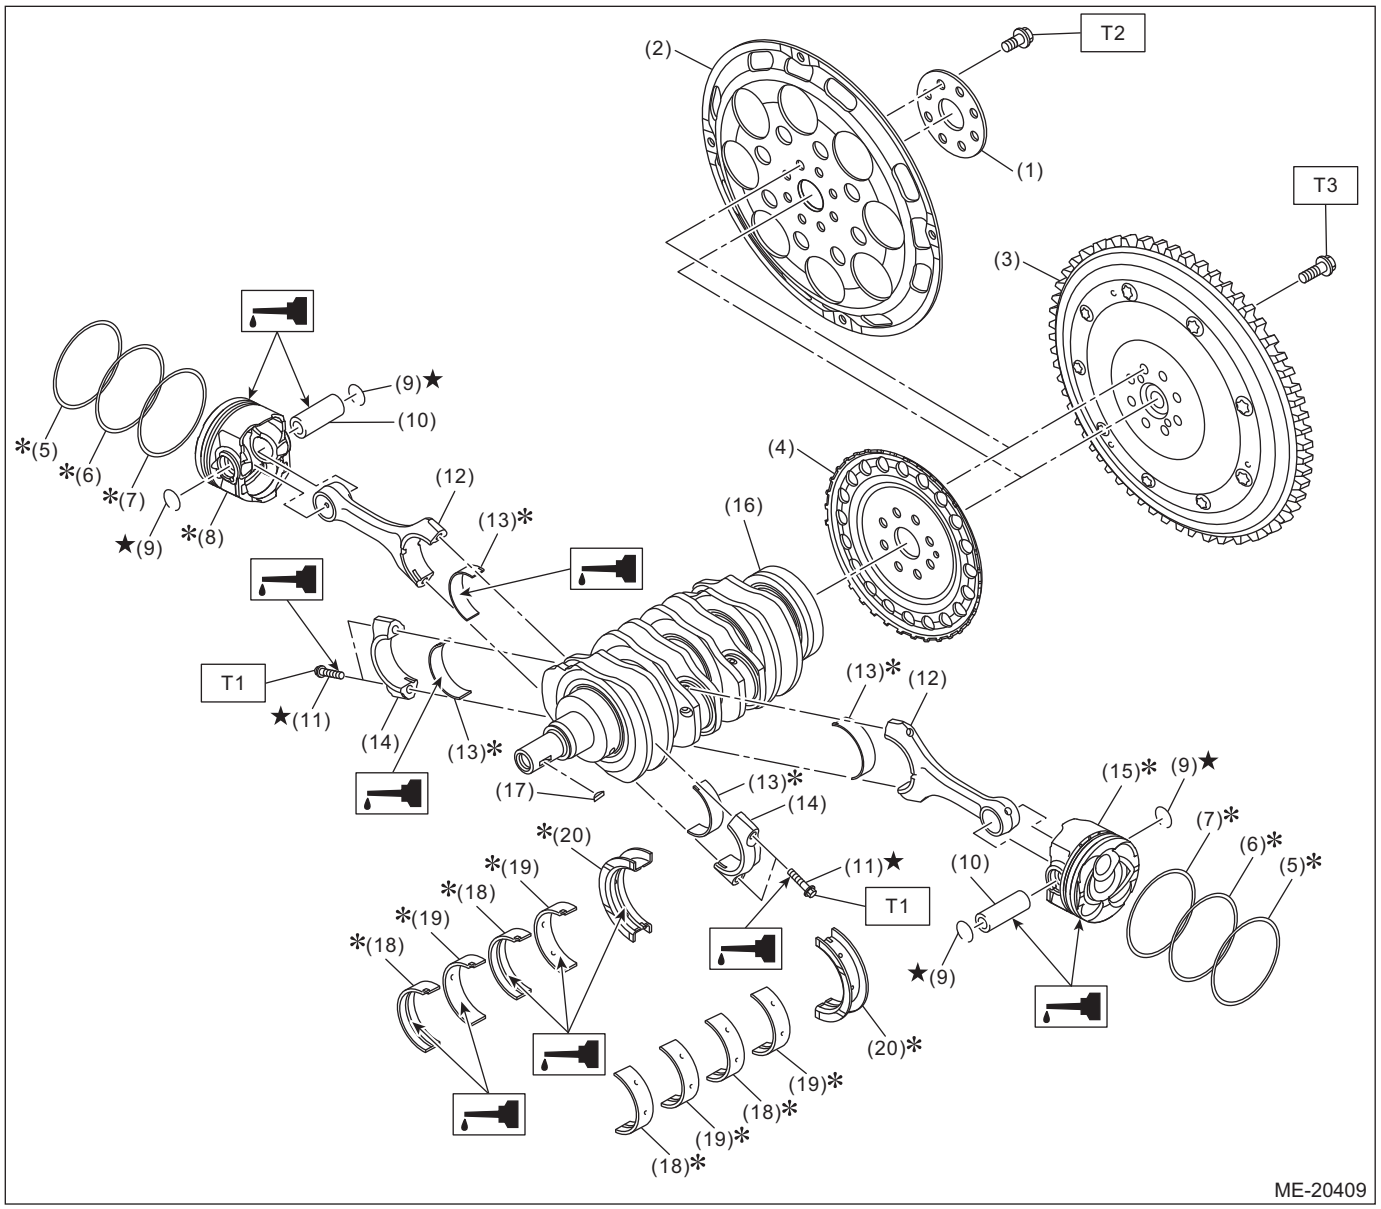


(1) Cylinder block ASSY
(2) Washer
(3) Cylinder block RH
(4) Cylinder block LH

Tightening torque: N·m (kgf-m, ft-lb)

T: <Ref. to ME(w/o STI)-252, INSTALLATION, Cylinder Block.>

10.CRANKSHAFT AND PISTON

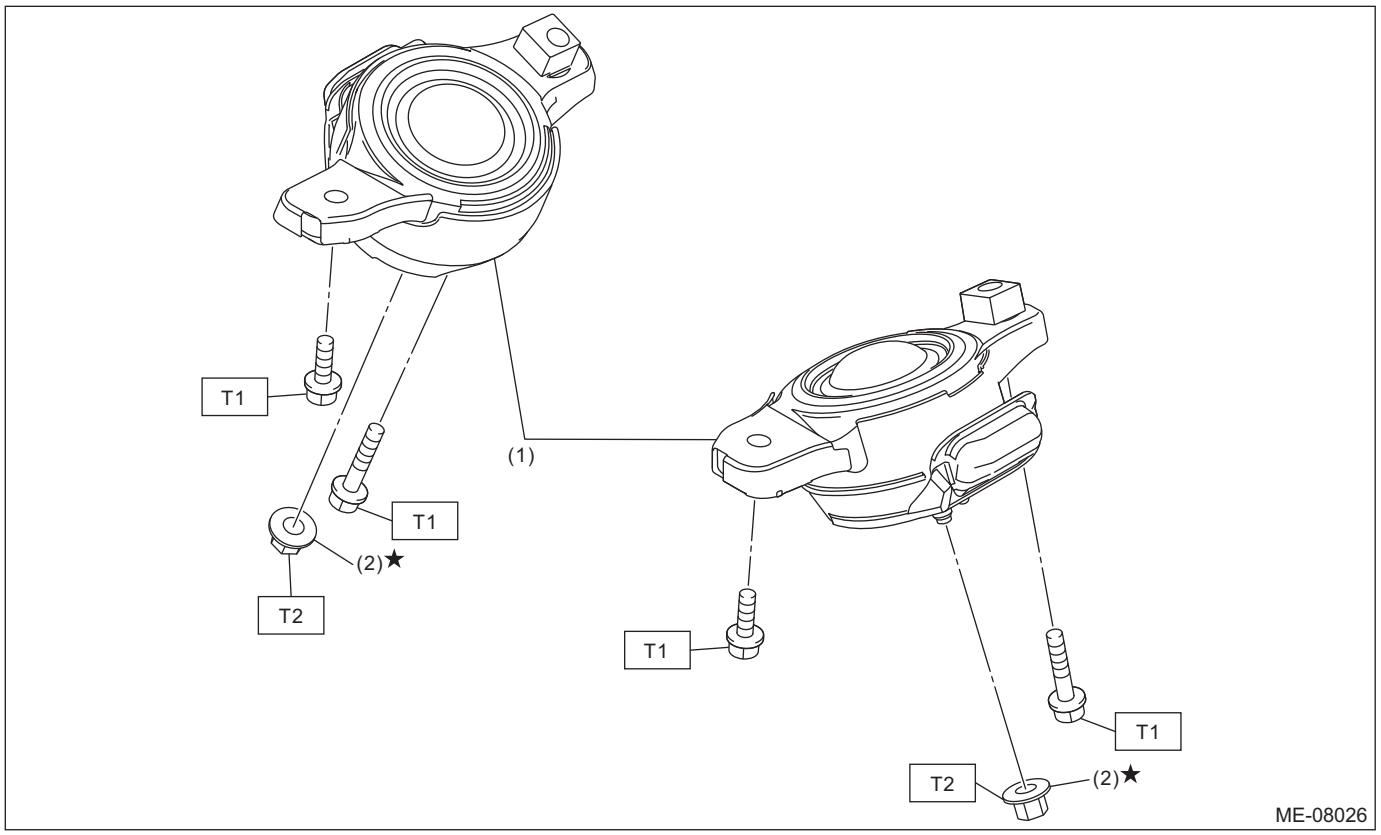


(1) Reinforcement drive plate (CVT model)
(2) Drive plate (CVT model)
(3) Flywheel (MT model)
(4) Crankshaft position sensor plate
(5) Top ring
(6) Second ring
(7) Oil ring
(8) Piston RH
(9) Circlip
(10) Piston pin
(11) Connecting rod cap bolt
(12) Connecting rod
(13) Connecting rod bearing
(14) Connecting rod cap
(15) Piston LH
(16) Crankshaft
(17) Woodruff key
(18) Crankshaft bearing #1, #3
(19) Crankshaft bearing #2, #4
(20) Crankshaft bearing #5

Tightening torque: N·m (kgf-m, ft-lb)

T1: <Ref. to ME(w/o STI)-252, INSTALLATION, Cylinder Block.>
T2: <Ref. to CVT(TR690)-140, INSTALLATION, Drive Plate.>
T3: <Ref. to CL-15, INSTALLATION, Flywheel.>

11.ENGINE MOUNTING



(1) Front cushion rubber (2) Nut

Tightening torque: N·m (kgf-m, ft-lb)
T1: 35 (3.6, 25.8)
T2: 60 (6.1, 44.3)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use. When lifting up the vehicle, make sure to support the vehicle at the jack-up points.
- Be careful not to let any oil or grease contact the clutch disc or flywheel.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil when being assembled.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST0920287002000	0920287002000	REMOVER AND REPLACER	Used for removing and installing valve spring.
 ST-498277200	498277200	STOPPER SET	Used for preventing the torque converter from falling when removing and installing the engine. (CVT model)
 ST-499765700	499765700	VALVE GUIDE REMOVER AND INSTALLER	Used for removing and installing valve guide.
 ST-499765900	499765900	VALVE GUIDE REAMER	Used for reaming valve guides.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18252AA000	18252AA000	CRANKSHAFT SOCKET	Used for rotating crankshaft.
 ST18261AA010	18261AA010	VALVE OIL SEAL GUIDE	Used for press-fitting of intake valve oil seals and exhaust valve oil seals.
 ST18270AA020	18270AA020	SOCKET	Used for removing and installing connecting rod.
 ST18270KA010	18270KA010	SOCKET	Used for installing and removing cam sprocket.
 ST18334AA000	18334AA000	PULLEY WRENCH PIN SET	• Used for removing and installing the crank pulley. • Used together with PULLEY WRENCH (18355AA000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18334AA020	18334AA020	PULLEY WRENCH PIN SET	• Used for rotating the intake cam sprocket LH. • Used for removing and installing cam sprocket. • Used together with PULLEY WRENCH (18355AA000).
 ST18355AA000	18355AA000	PULLEY WRENCH	• Used for removing and installing the crank pulley. • Used for rotating the intake cam sprocket LH. • Used for removing and installing cam sprocket. • Used together with PULLEY WRENCH PIN SET (18334AA000) or PULLEY WRENCH PIN SET (18334AA020).
 ST18471AA000	18471AA000	FUEL PIPE ADAPTER	Used for inspecting the fuel pressure.
 ST18632AA030	18632AA030	STAND ASSY	Used for removing and installing rocker cover LH.
 ST18657AA030	18657AA030	OIL SEAL INSTALLER	• Used for installing the rear oil seal of engine. • Used together with OIL SEAL GUIDE (18671AA020).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18671AA020	18671AA020	OIL SEAL GUIDE	• Used for installing the rear oil seal of engine. • Used together with OIL SEAL INSTALLER (18657AA030).
 ST41099YC001	41099YC001	ST REAR MOUNT	Used for removing and installing engine. (CVT model)
 ST41399FG020	41399FG020	SPECIAL TOOL B	Used for installing the front oil seal of engine.
 ST42075AG690	42075AG690	FUEL HOSE	Used for inspecting the fuel pressure. NOTE: This is the SUBARU genuine part.
 ST42099AE000	42099AE000	QUICK CONNECTOR RELEASE	Used for removing FUEL HOSE (42075AG690). NOTE: FUEL HOSE (42075AG690) is used for checking the fuel pressure.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

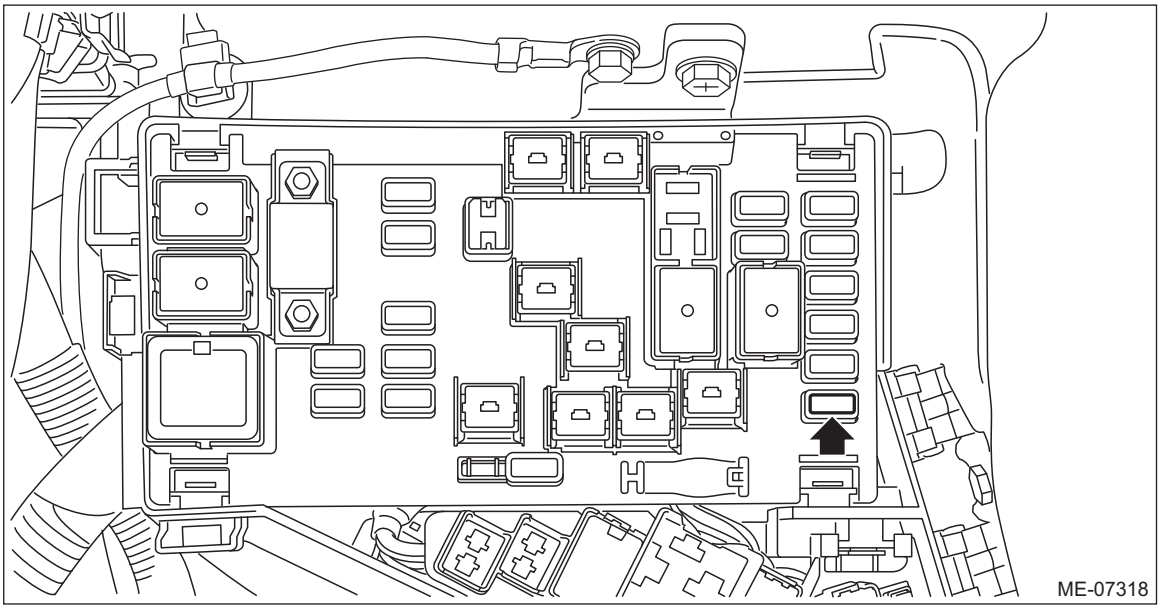
TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.
Vacuum gauge	Used for measuring intake manifold vacuum.
Oil pressure gauge	Used for measuring engine oil pressure.
Fuel pressure gauge	Used for measuring fuel pressure.
Thickness gauge	Used for various inspections.
Engine stand	Used for disassembling and assembling engine.
Angle gauge	Used for angle tightening.
Piston ring compressor	Used for installing the piston into the cylinder block.
DST-i	Used together with Subaru Select Monitor 4.

2. Compression

A: INSPECTION

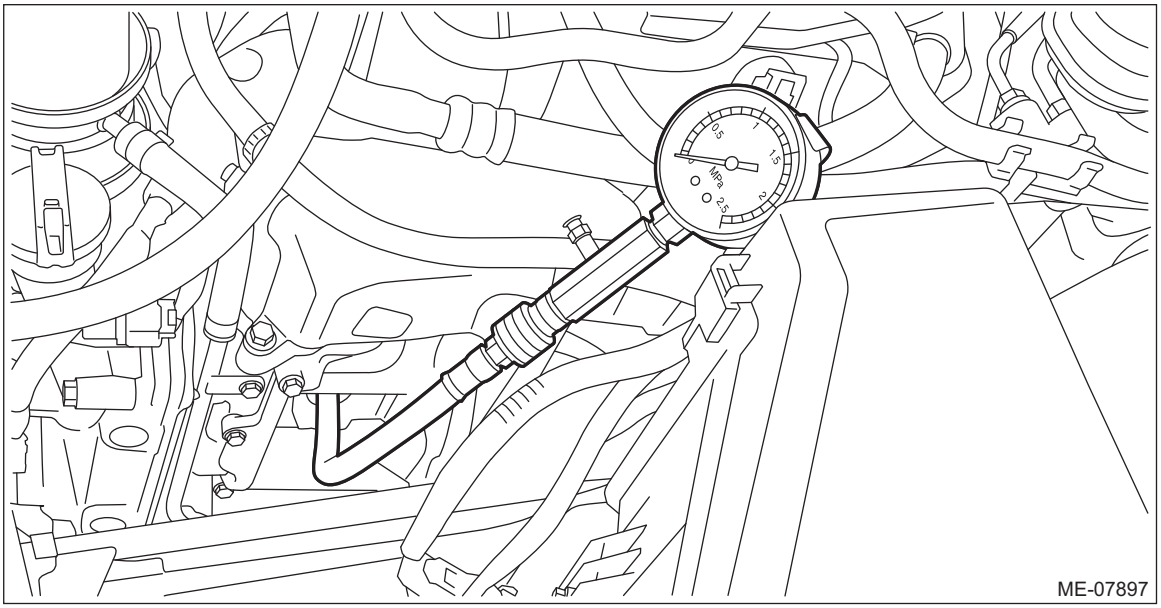
CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

NOTE:
• Before checking the compression pressure, the compression condition of each cylinder can be confirmed as a guide by using the compression measurement mode in Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-97, OPERATION, Active Test.>
• In the compression measurement mode, the compression condition is judged by each cylinder speed. The high speed cylinder has low compression pressure and low speed cylinder has high compression pressure.
1) After warming-up the engine, turn the ignition switch to OFF.
2) Make sure that the battery is fully charged.
3) Check the starter motor for satisfactory performance and operation.
4) Remove the fuse of fuel pump from main fuse box.

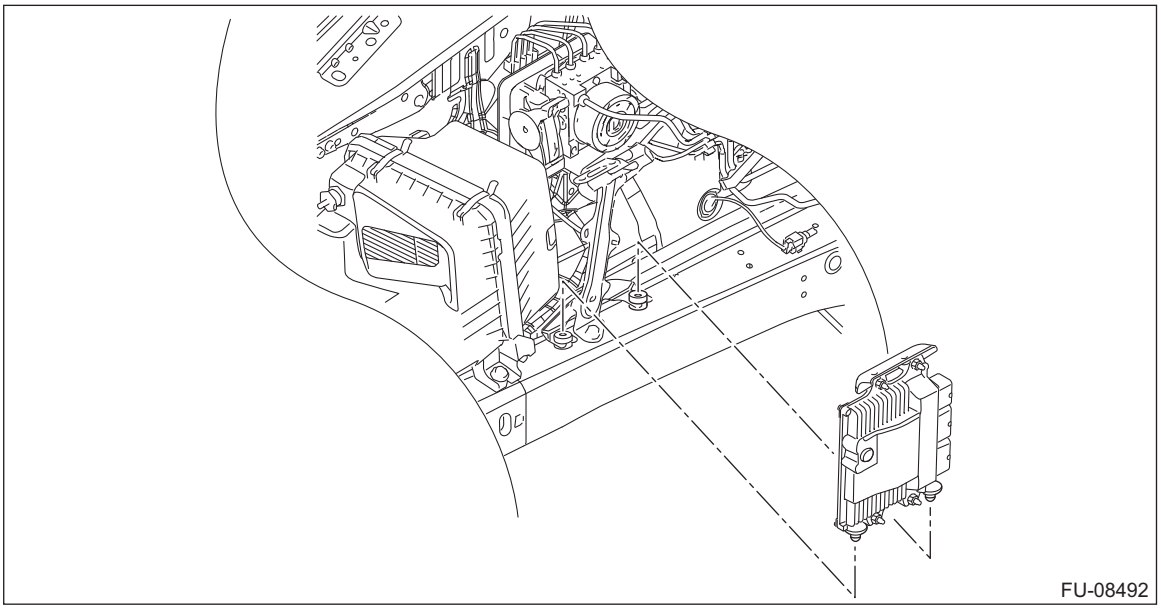


5) Start the engine and run it until it stalls.
6) After the engine stalls, crank it for five more seconds.
7) Turn the ignition switch to OFF.
8) Remove all spark plugs. <Ref. to IG(w/o STI)-4, REMOVAL, Spark Plug.>
9) Install the compression gauge to the spark plug hole.

NOTE:
When using a screw-in type compression gauge, the screw should be less than 25 mm (0.98 in) long.

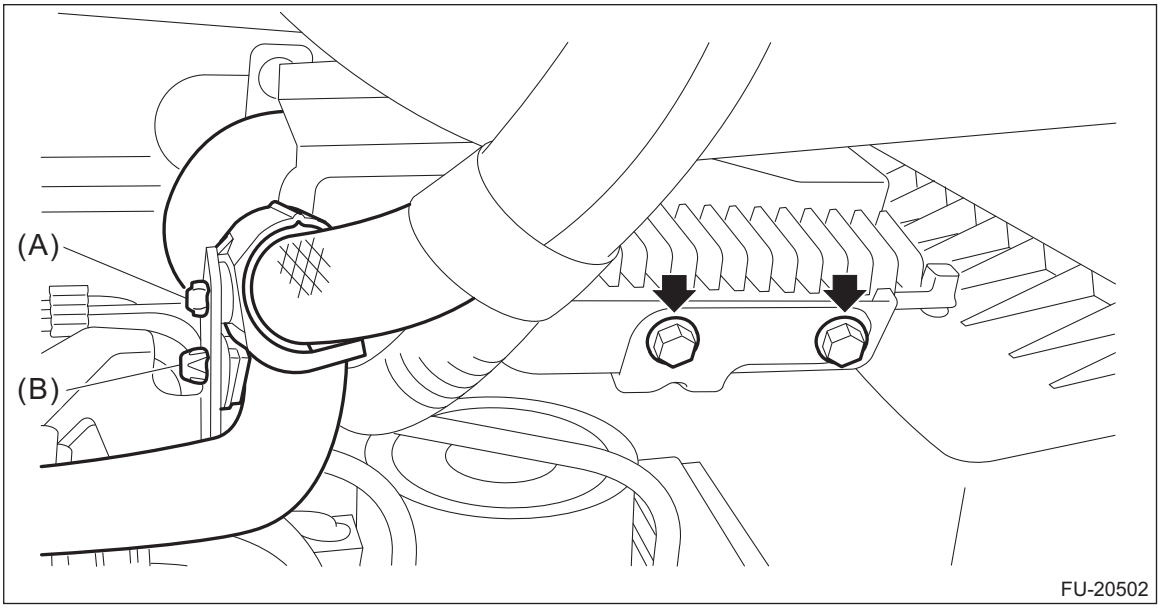


10) Insert the engine control module (ECM) to the bracket.



11) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



12) Install the battery. <Ref. to SC(w/o STI)-50, INSTALLATION, Battery.>
13) Turn the ignition switch to ON.
14) Depress the accelerator pedal to full throttle.
15) Crank the engine by starter motor and read the value when the needle of the compression gauge becomes stable.

NOTE:
- Perform at least two measurements per cylinder, and make sure that the values are correct.
- If the compression pressure is out of standard, check or adjust the pistons, valves and cylinders.

Compression pressure:
At 200 — 300 r/min
Standard
1,350 — 1,750 kPa (14 — 18 kg/cm^2, 196 — 254 psi)
Difference between cylinders
100 kPa (1 kg/cm^2, 14 psi) or less
16) After inspection, install the related parts in the reverse order of removal.

NOTE:
When compression pressure is checked, the malfunction indicator light illuminates and DTC (P0087) may be stored in ECM. When the malfunction indicator light has illuminated, perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>

3. Idle Speed

A: INSPECTION

1) Before checking the idle speed, check the following item:
   (1) Check the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2) Warm up the engine.
3) Read the engine idle speed using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>

NOTE:
- Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted.
- If idle speed is out of standard, refer to the General Diagnosis Table under “Engine Control System”. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>

   (1) Check the idle speed when no-loaded. (Headlight, blower fan, rear defroster, radiator fan, A/C and etc. are OFF)

Idle speed (No load, and for CVT model, select lever in “P” or “N” range, for MT model, gear shift lever in neutral position.):

Standard

700±100 r/min

   (2) Check the idle speed when loaded. (Turn the A/C switch to ON and operate the compressor for at least one minute before measurement.)

Idle speed (A/C on, and for CVT model, select lever in “P” or “N” range, for MT model, gear shift lever in neutral position.):

Standard

700 — 865±50 r/min

4. Ignition Timing

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

1) Before checking the ignition timing, check the following item:
   (1) Check the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Check the malfunction indicator light does not illuminate.
2) Warm up the engine.
3) Read the ignition timing using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>

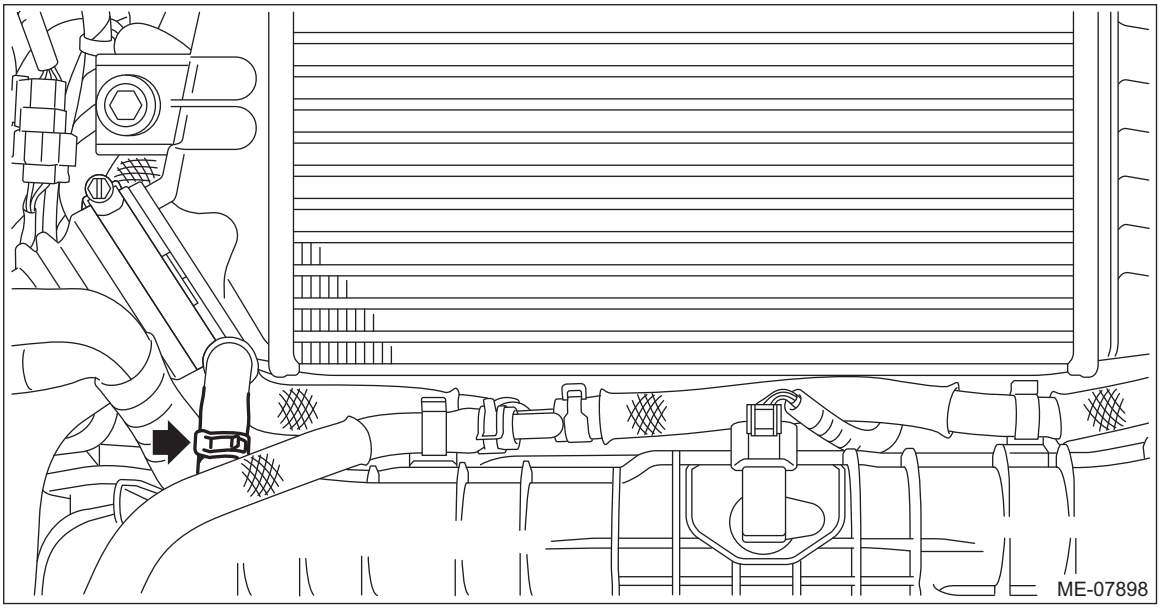
NOTE:
If ignition timing is out of standard, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>

Ignition timing [BTDC/{r/min}]:
CVT model
Standard
8°±10°/700
MT model
Standard
6°±10°/700

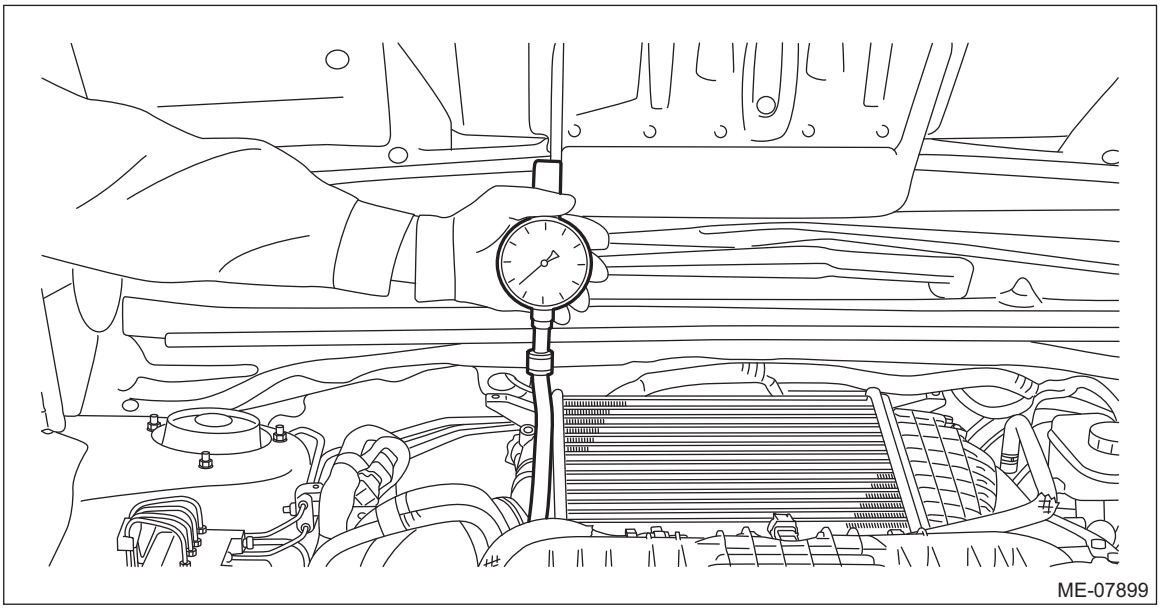
5. Intake Manifold Vacuum

A: INSPECTION

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Warm up the engine.
3) Disconnect the brake booster vacuum hose from the intake manifold.



4) Connect the vacuum gauge to the intake manifold.



5) Keep the engine at idle speed and read the vacuum gauge indication.

NOTE:
Condition of engine inside can be diagnosed by observing the behavior of the vacuum gauge needle as described in table below.

Intake manifold vacuum (at idling, A/C OFF):
Standard
–60.0 kPa (–450 mmHg, –17.72 inHg) or more

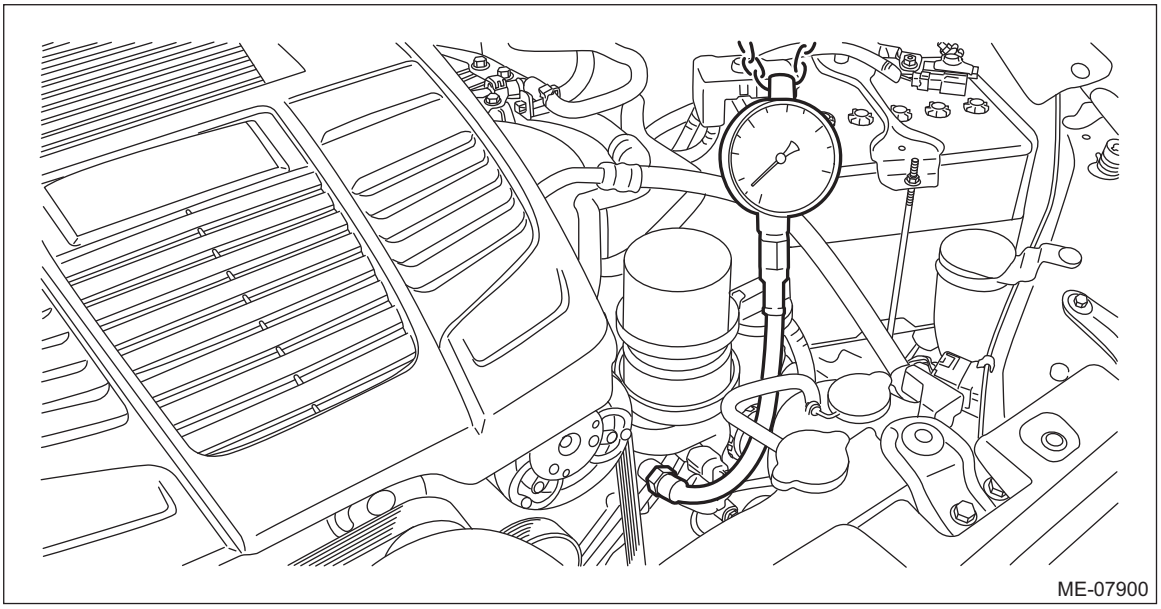
Diagnosis of engine condition by inspection of intake manifold vacuum	
Vacuum gauge needle behavior	Possible engine condition
1. Needle is steady but lower than standard value. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket, disconnection or damage of vacuum hose
2. Needle intermittently drops to position lower than standard value.	Leakage around cylinder
3. Needle drops suddenly and intermittently from standard value.	Sticky valve
4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
5. Needle vibrates above and below standard value in narrow range.	Defective ignition system

6) After inspection, install the related parts in the reverse order of removal.

6. Engine Oil Pressure

A: INSPECTION

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the oil pressure switch. <Ref. to LU(w/o STI)-29, REMOVAL, Oil Pressure Switch.>
3) Install the oil pressure gauge to the chain cover.



4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Start the engine, and check the oil pressure.

NOTE:
- Standard value is based on an engine oil temperature of 80°C (176°F).
- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(w/o STI)-68, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is ON and oil pressure is within standard, check the oil pressure switch. <Ref. to LU(w/o STI)-68, INSPECTION, Engine Lubrication System Trouble in General.>

Engine oil pressure:
At 600 r/min
Standard
50 kPa (0.5 kg/cm^2, 7 psi) or more
At 6,000 r/min
Standard
350 kPa (3.6 kg/cm^2, 51 psi) or more

6) After inspection, install the related parts in the reverse order of removal.

7. Fuel Pressure

A: INSPECTION

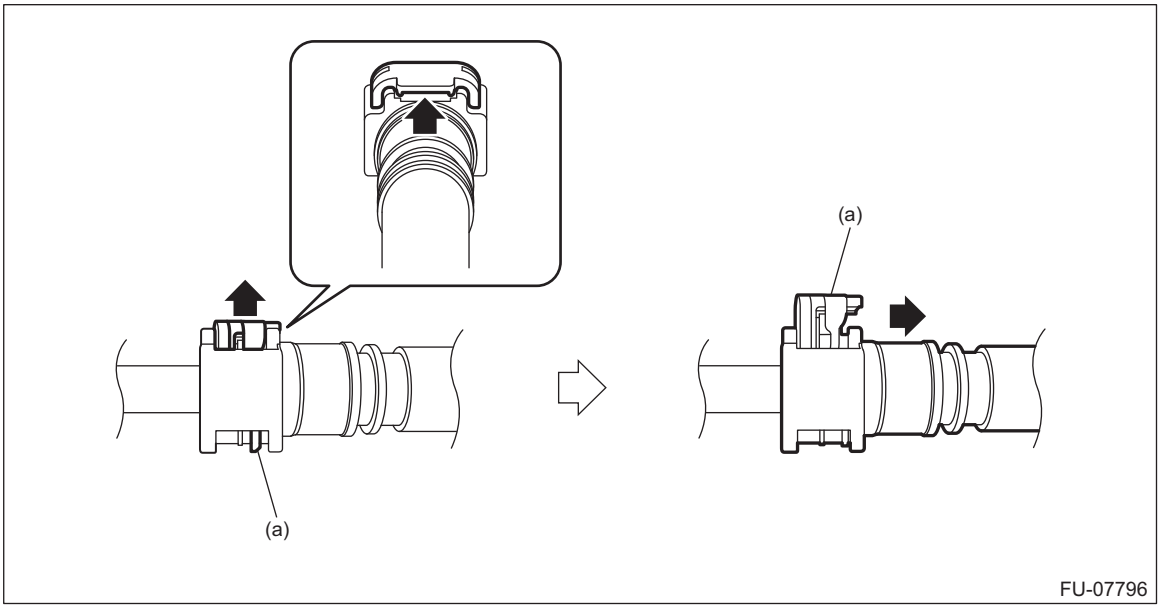
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler lid and remove the fuel filler cap.

NOTE:
This operation is required to release the inner pressure of the fuel tank.
4) Disconnect the fuel delivery tube from the fuel delivery pipe, and connect the fuel pressure gauge.

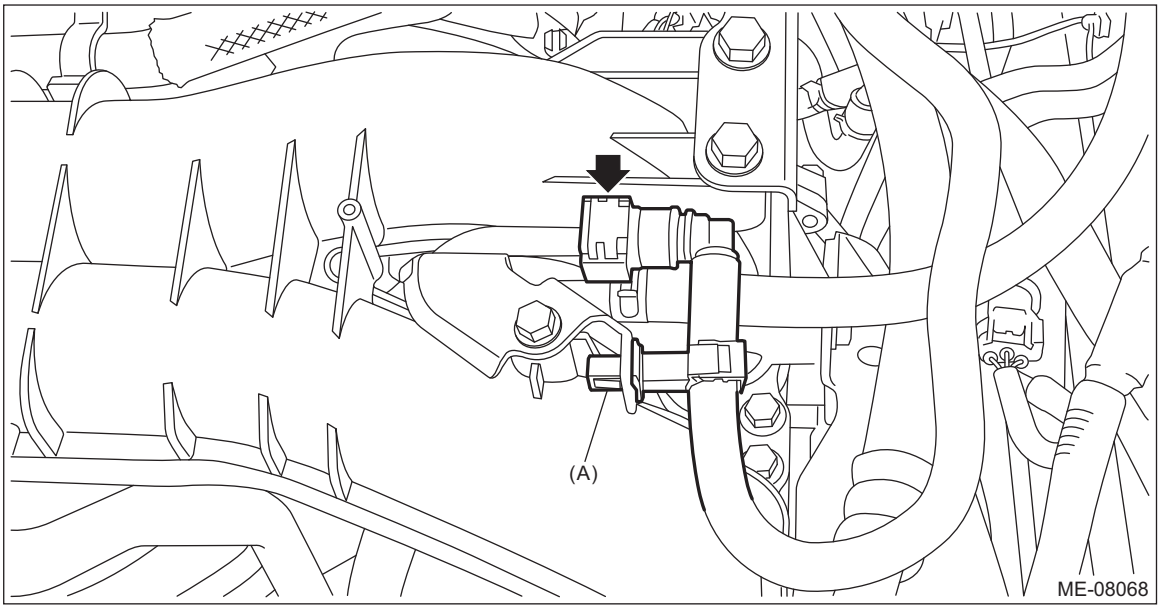
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube to the fuel pipe assembly.

NOTE:
Disconnect the quick connector as shown in the figure.



(a) Slider

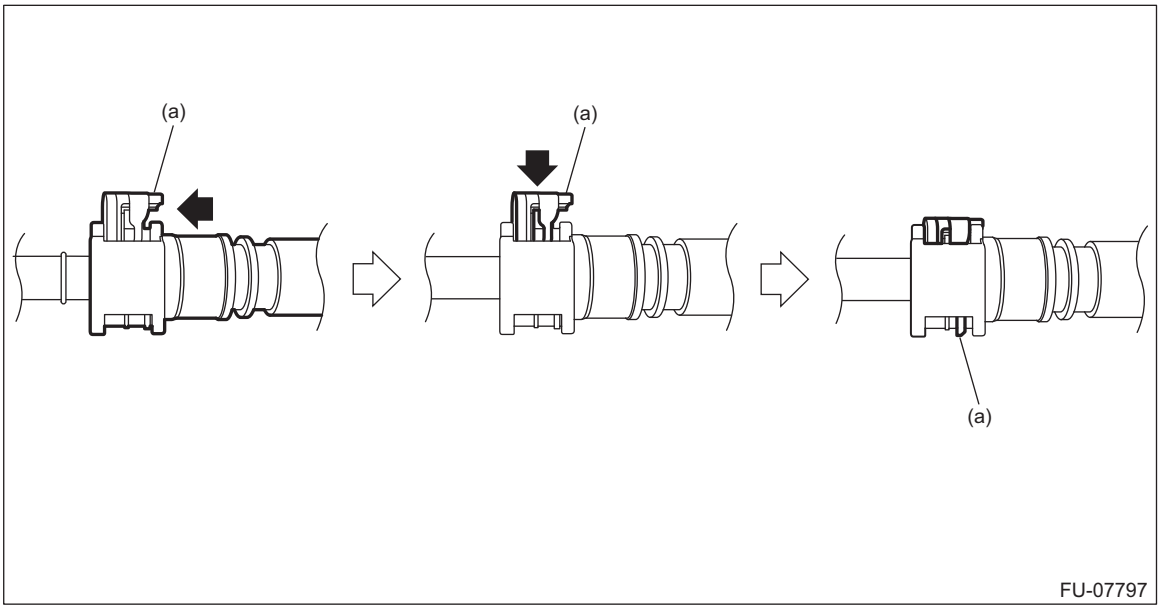


(2) Connect the fuel pressure gauge with ST1 and ST2.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

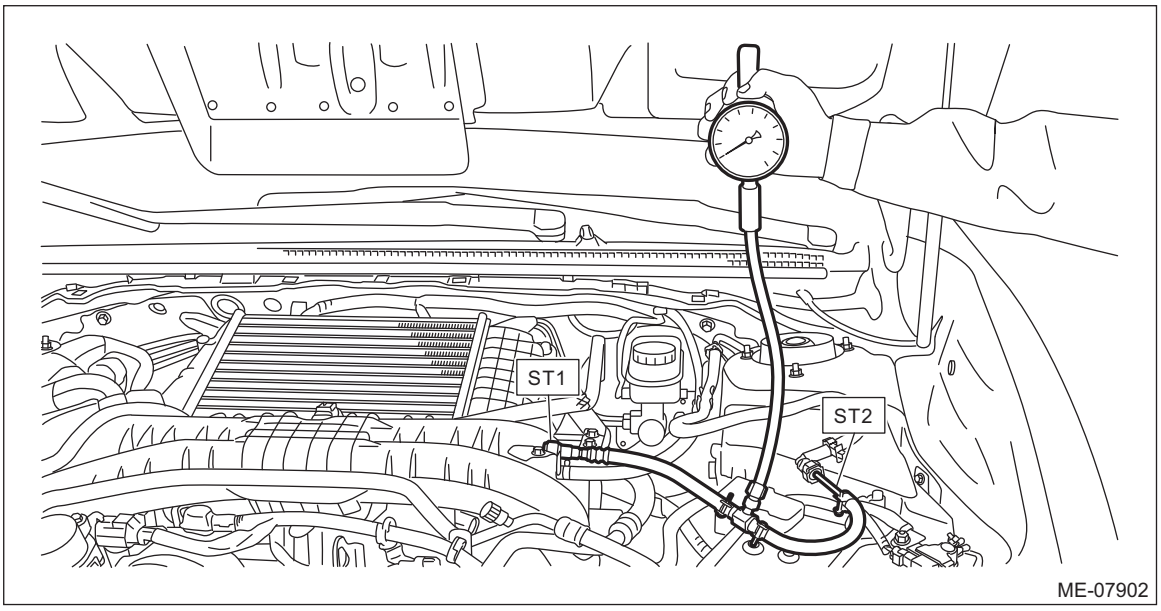
NOTE:
• ST1 is a SUBARU genuine part.

- When connecting the ST2 to the quick connector on the fuel delivery tube, connect as shown in the figure.



(a) Slider

ST1 42075AG690 FUEL HOSE
ST2 18471AA000 FUEL PIPE ADAPTER



5) Start the engine.
6) Check the fuel pressure after warming up the engine.

NOTE:
- The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm^2, 1 to 3 psi) higher than standard values during high-altitude operations.
- Check or replace the fuel pump and fuel delivery line if the fuel pressure is out of the standard.

Fuel pressure:
Standard
340 — 400 kPa (3.5 — 4.1 kg/cm^2, 49 — 58 psi)

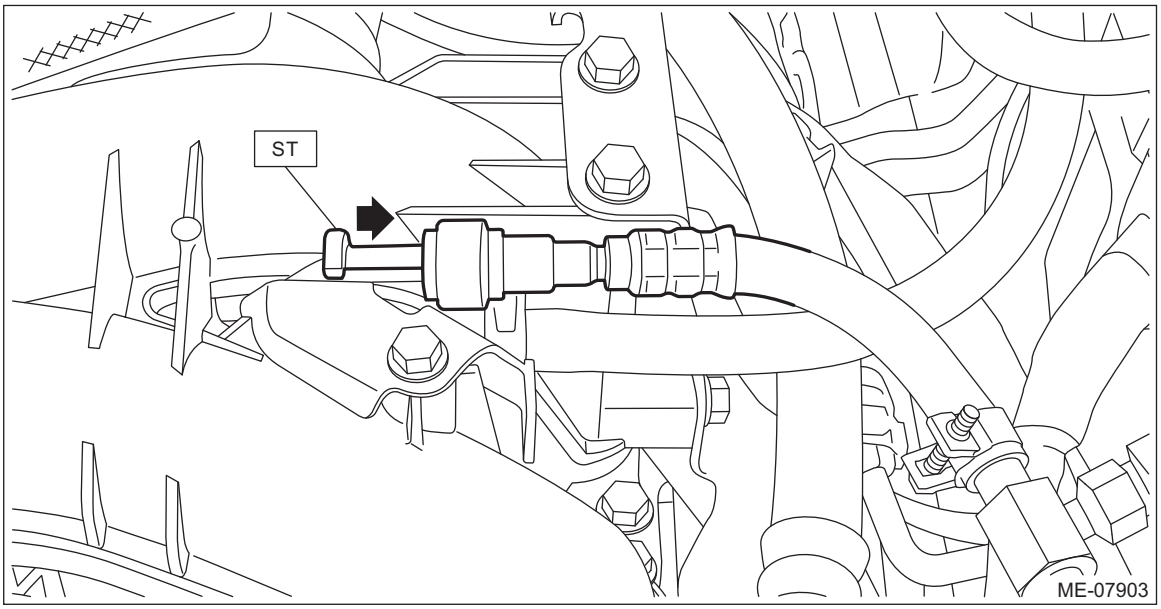
7) After inspection, install the related parts in the reverse order of removal.

CAUTION:
- **Before removing the fuel pressure gauge, release the fuel pressure.**

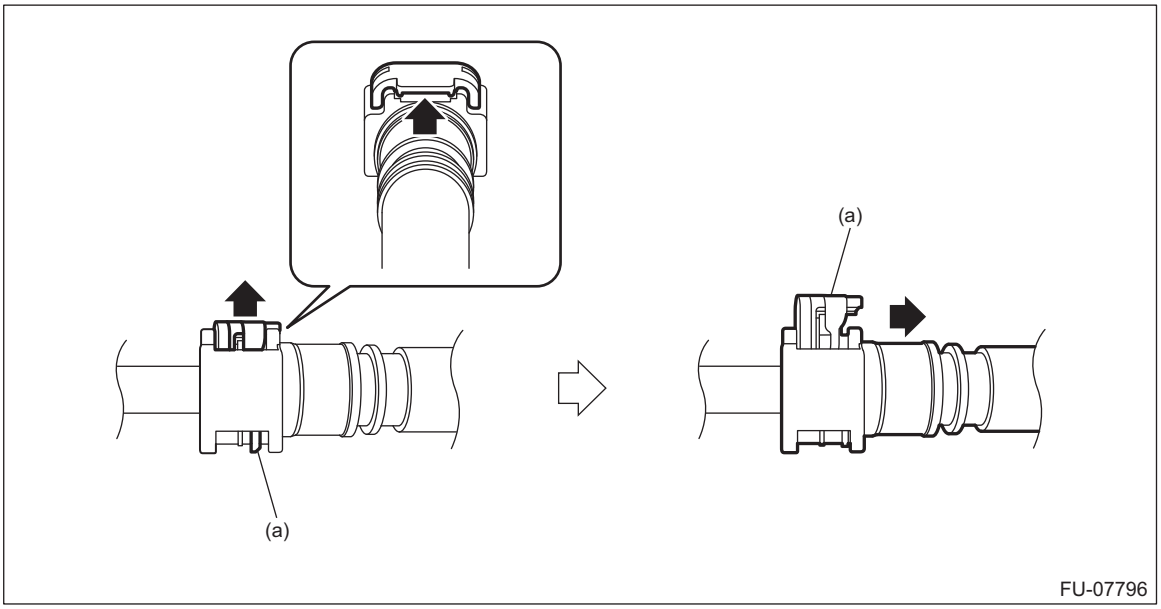
- **Be careful not to spill fuel.**
- **Catch the fuel from hoses and tubes using a container or cloth.**
- **Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.**
- **When connecting the quick connector with slider, make sure to insert it all the way in before locking the slider.**
- **When it is difficult to lock the slider, check that the connector is fully inserted.**
- **After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.**

NOTE:
- When disconnecting the ST1, install the ST2 to the fuel pipe assembly, and press the ST2 in the direction of arrow to disconnect the quick connector on the ST1.

ST1 42075AG690 FUEL HOSE
ST2 42099AE000 QUICK CONNECTOR RELEASE

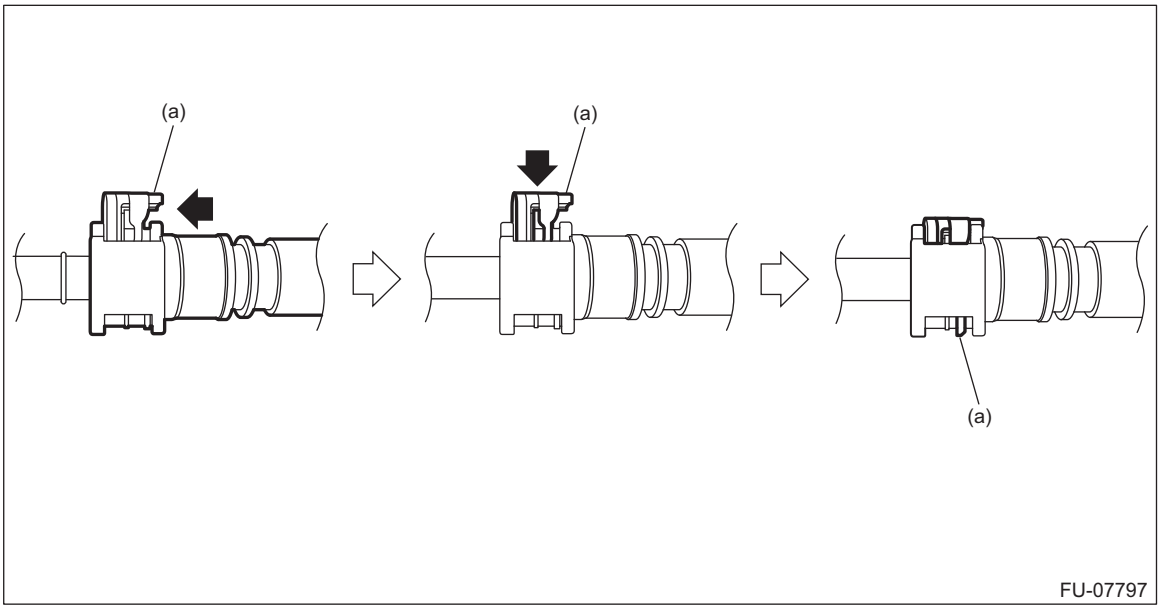


- Disconnect the quick connector on the fuel delivery tube as shown in the figure.



(a) Slider

- Connect the quick connector on the fuel delivery tube as shown in the figure.



(a) Slider

8. Cam Clearance

A: INSPECTION

1. WHEN TIMING CHAIN ASSEMBLY IS NOT REMOVED

CAUTION:
When working on the vehicle, if engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

NOTE:
- Inspection of cam clearance should be performed while engine is cold.
- If the engine is removed from vehicle, performing the steps 1) to 2) is not necessary.

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the V-belts. <Ref. to ME(w/o STI)-77, REMOVAL, V-belt.>
4) When inspecting #1 and #3 cylinders
   (1) Remove the rocker cover RH. <Ref. to ME(w/o STI)-144, ROCKER COVER RH, REMOVAL, Rocker Cover.>

NOTE:
When working on the vehicle, place a suitable container under the vehicle.

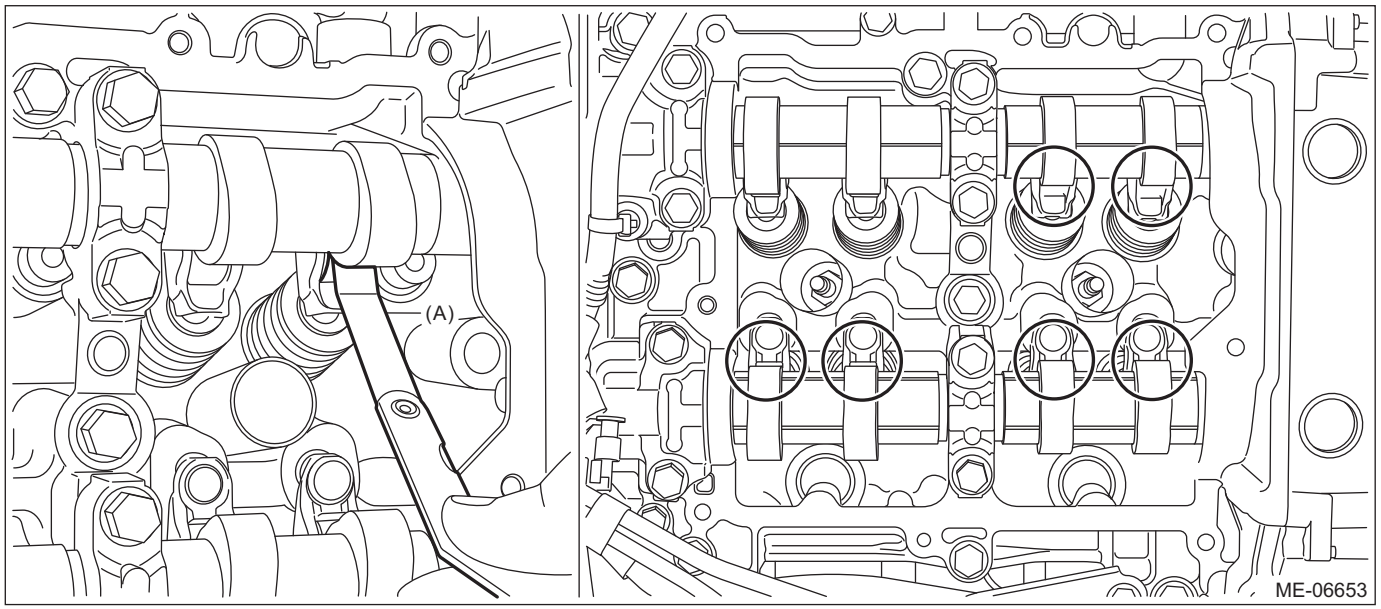
   (2) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

NOTE:
When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #1 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #1 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #1 cylinder piston at TDC of compression stroke.

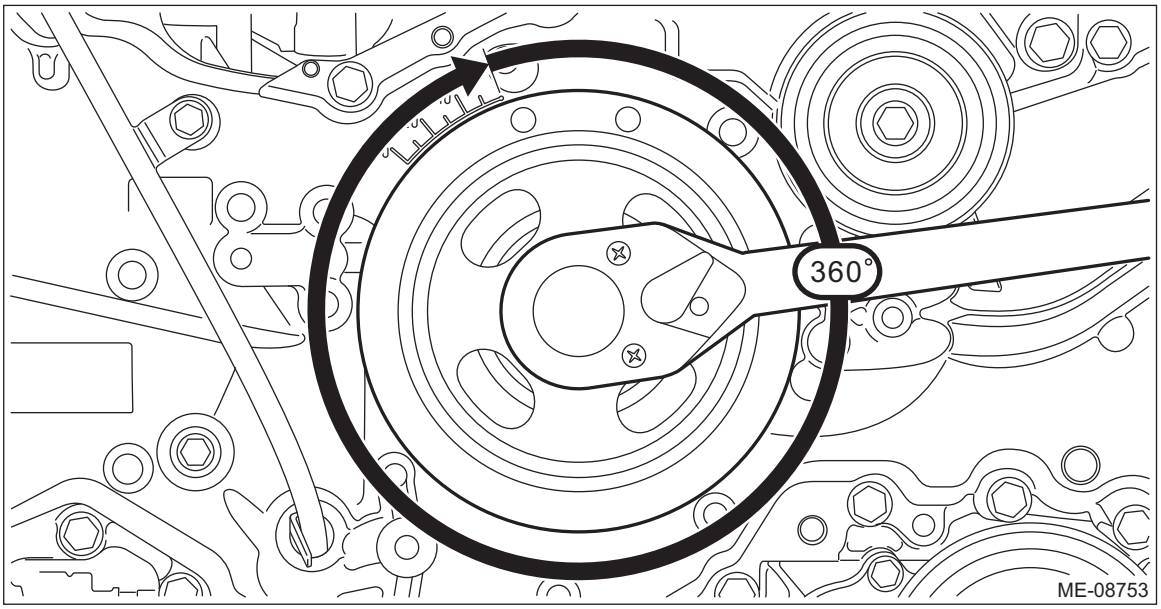
   (3) Check the cam clearance for #1 cylinder intake, #1 cylinder exhaust and #3 cylinder exhaust.

NOTE:
- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)



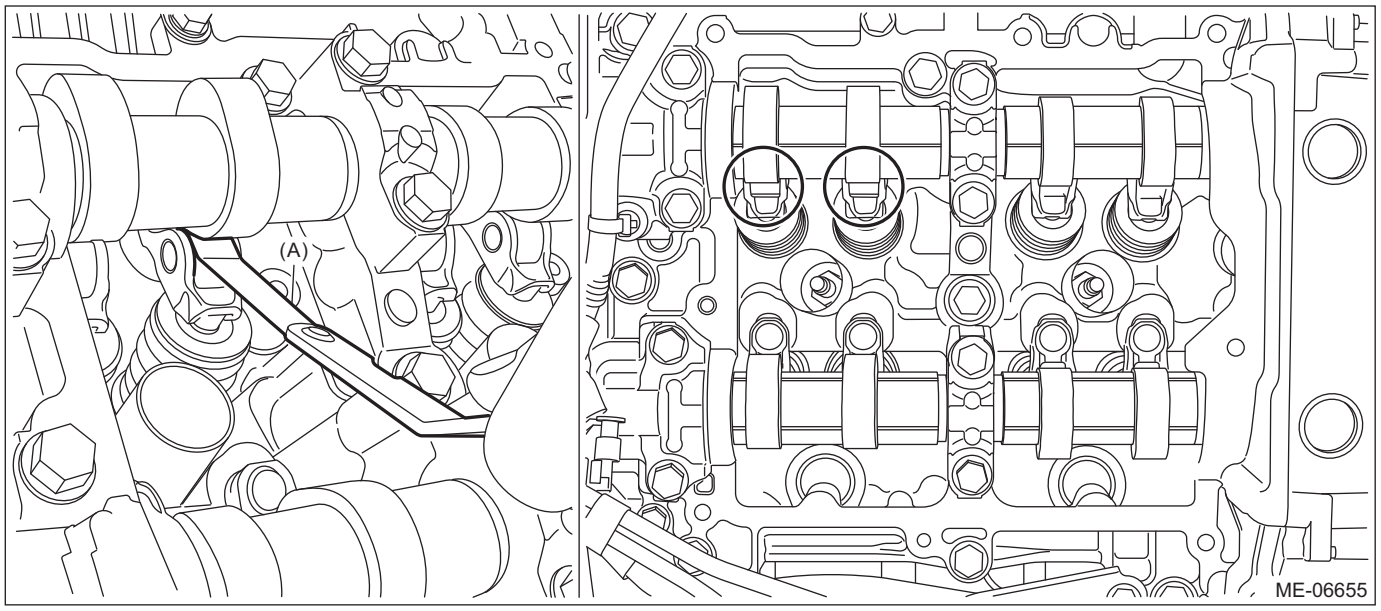
(4) Turn the crank pulley by 360°.



(5) Check the cam clearance of #3 cylinder intake.

NOTE:
• Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
• If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)

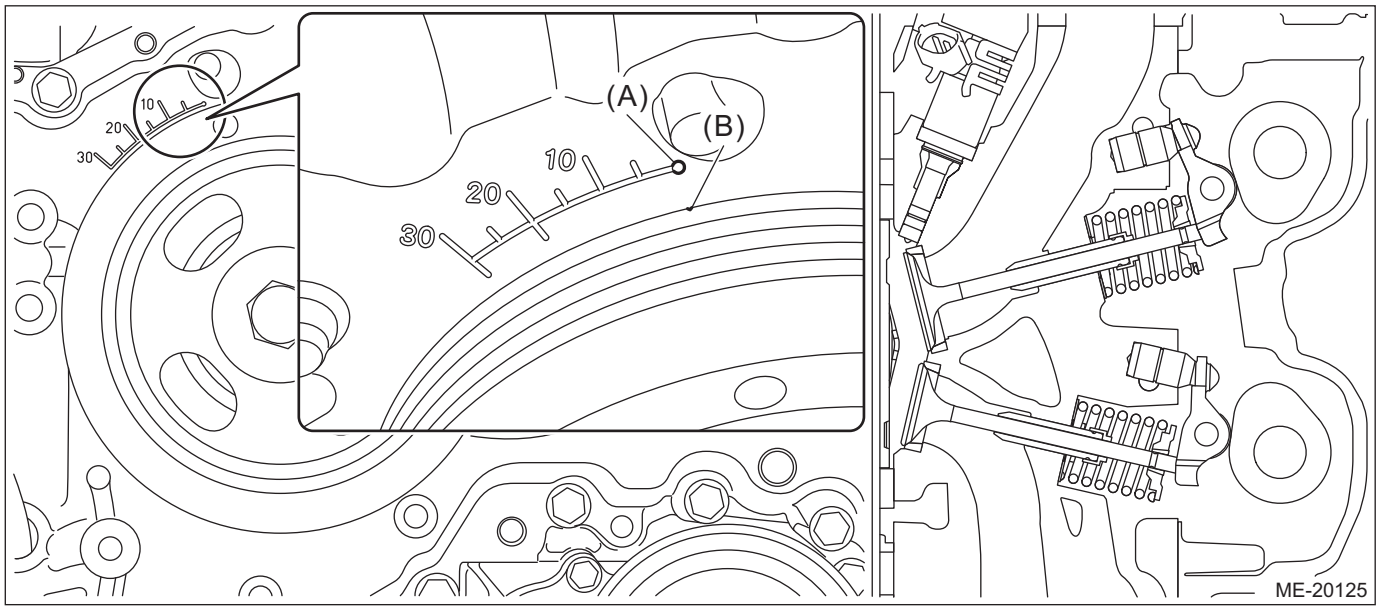


5) When inspecting #2 and #4 cylinders
(1) Remove the rocker cover LH. <Ref. to ME(w/o STI)-145, ROCKER COVER LH, REMOVAL, Rocker Cover.>

NOTE:
When working on the vehicle, place a suitable container under the vehicle.

(2) Set #2 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

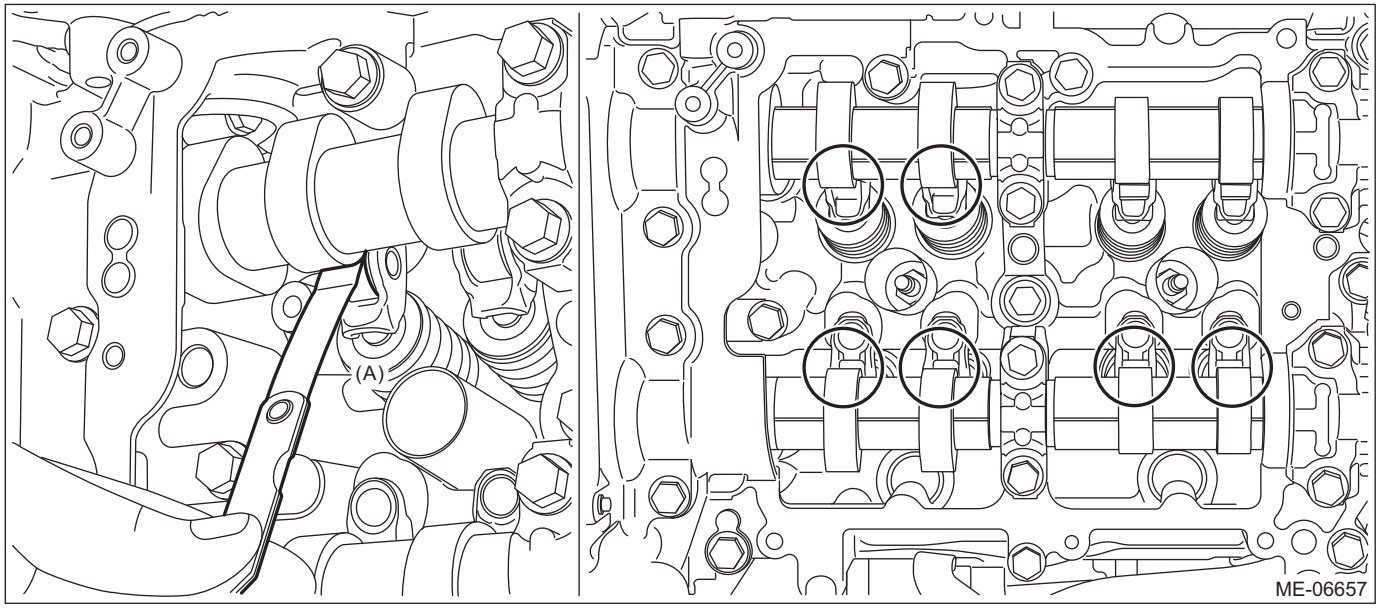
NOTE:
When the timing mark (B) on crank pulley is aligned to the 0° in timing gauge (A) on chain cover as shown in the figure, the #2 cylinder piston is located at TDC of compression stroke if the intake camshaft and exhaust camshaft does not depress the #2 cylinder intake side roller rocker arm (intake valve) and exhaust side roller rocker arm (exhaust valve). If roller rocker arm (valve) is depressed, turn the crank pulley by 360° in order to make #2 cylinder piston at TDC of compression stroke.



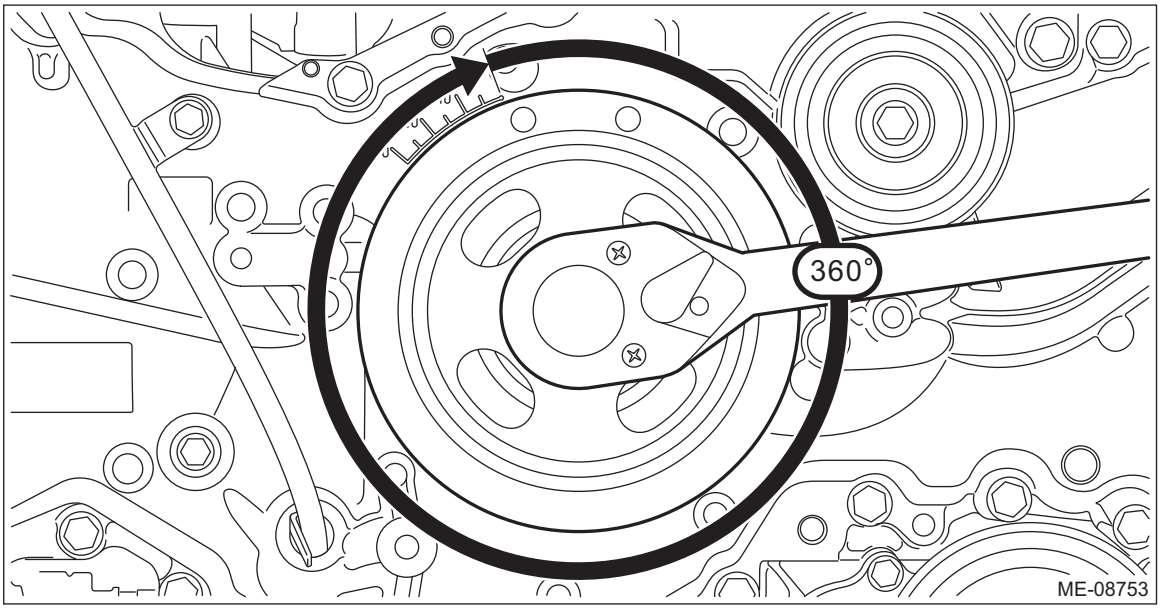
(3) Check the cam clearance for #2 cylinder intake, #2 cylinder exhaust and #4 cylinder exhaust.

NOTE:
- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)



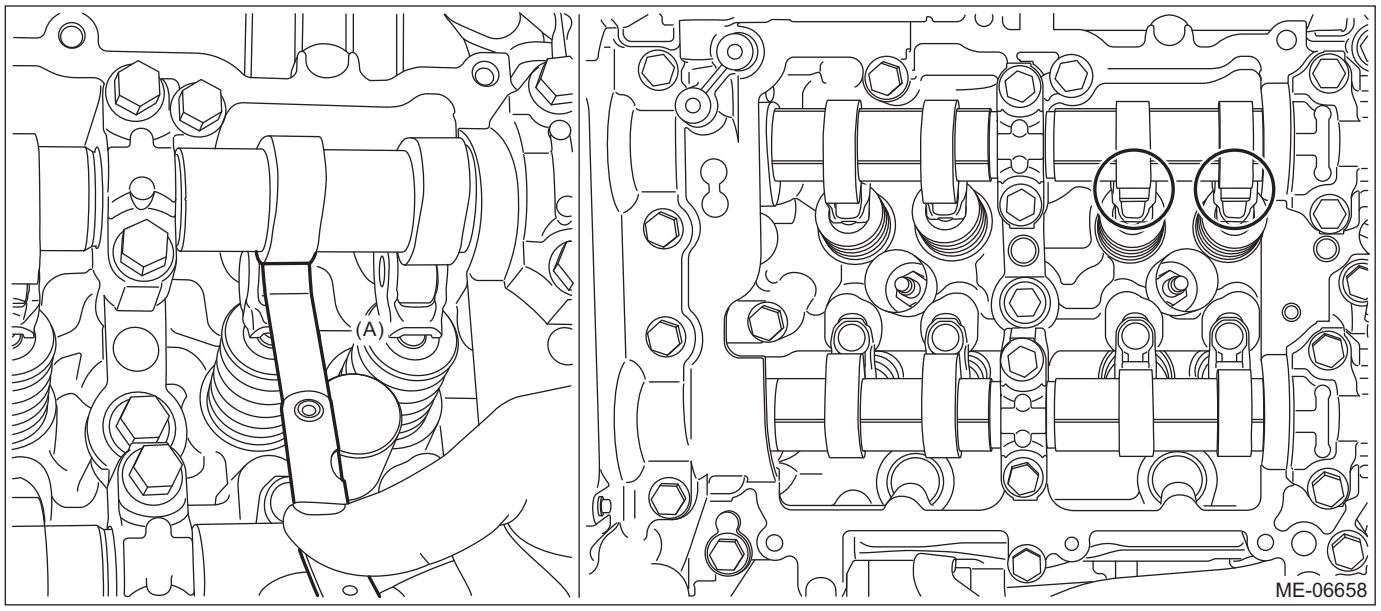
(4) Turn the crank pulley by 360°.



(5) Check the cam clearance of #4 cylinder intake.

NOTE:
- Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
- If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)



6) If necessary, adjust the cam clearance. <Ref. to ME(w/o STI)-43, ADJUSTMENT, Cam Clearance.>
7) After inspection, install the related parts in the reverse order of removal.

2. WHEN TIMING CHAIN ASSEMBLY IS REMOVED

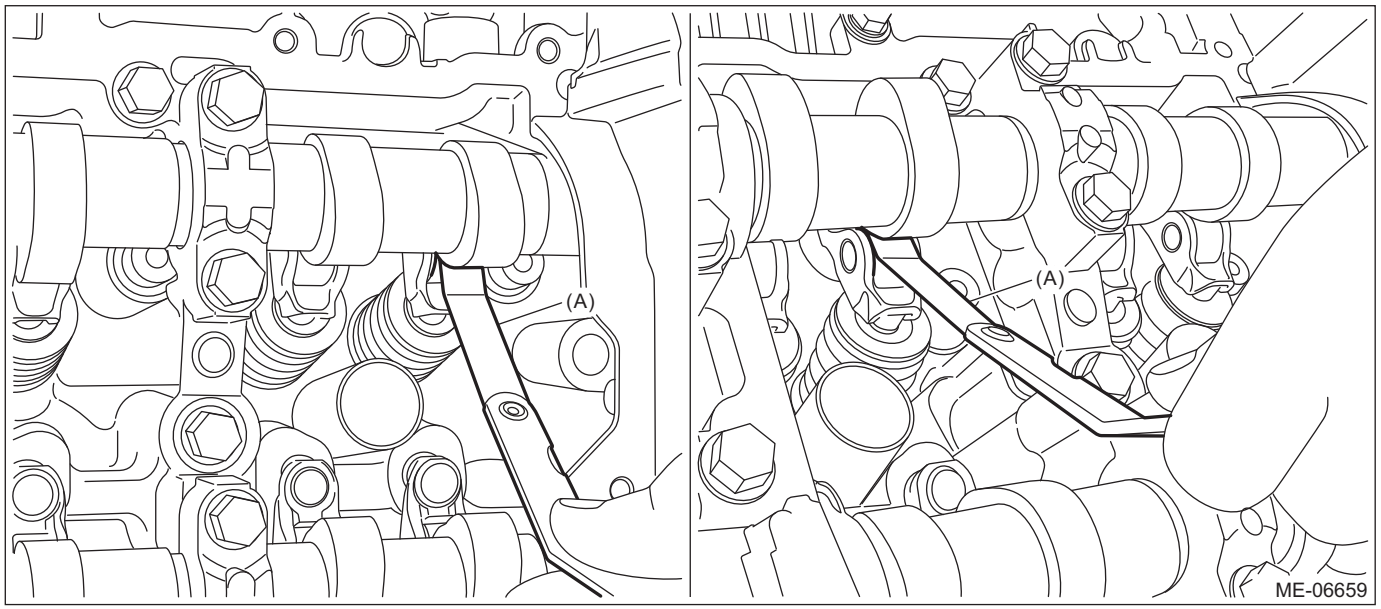
NOTE:
Inspection of cam clearance should be performed while engine is cold.
1) When inspecting #1 and #3 cylinders
(1) Remove the rocker cover RH. <Ref. to ME(w/o STI)-144, ROCKER COVER RH, REMOVAL, Rocker Cover.>

NOTE:
When working on the vehicle, place a suitable container under the vehicle.
(2) Check the #1 and #3 cylinder cam clearance.

CAUTION:
Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

NOTE:
• For cam clearance inspection, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the camshaft (cam sprocket) to be measured.
• Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
• If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)



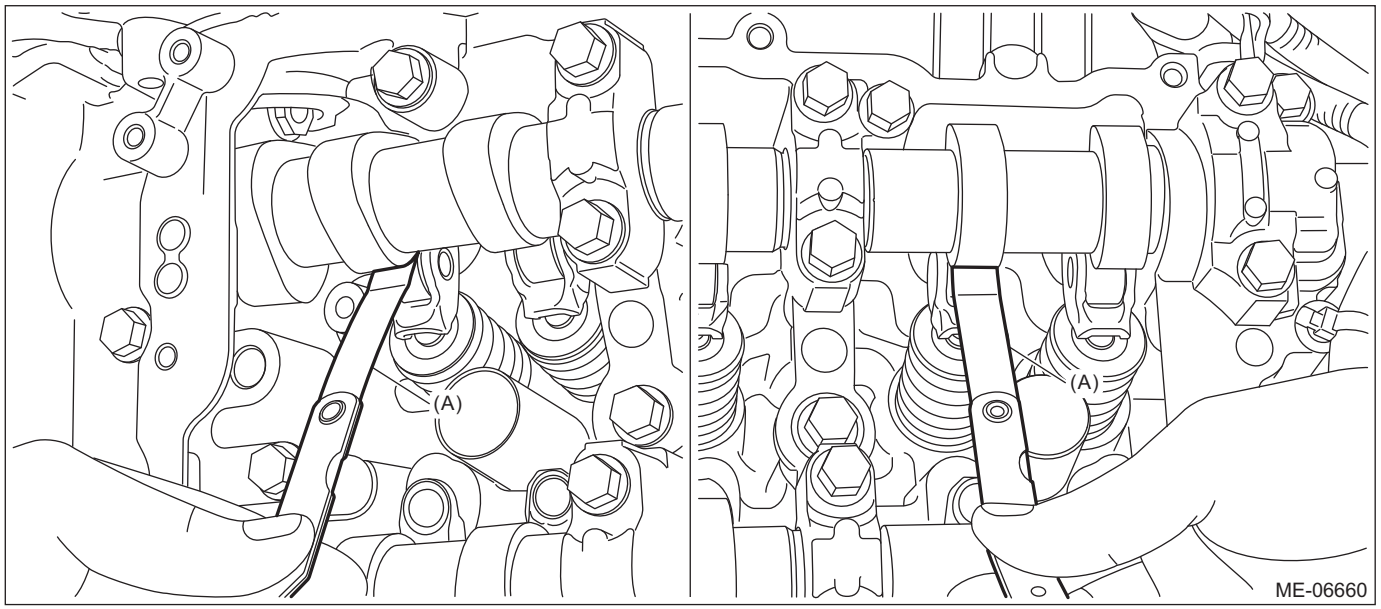
2) When inspecting #2 and #4 cylinders
(1) Remove the rocker cover LH. <Ref. to ME(w/o STI)-145, ROCKER COVER LH, REMOVAL, Rocker Cover.>

NOTE:
When working on the vehicle, place a suitable container under the vehicle.
(2) Check the #2 and #4 cylinder cam clearance.

CAUTION:
Intake and exhaust camshafts can be independently rotated with the timing chain removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero lift (cam base circle position) (in range where it can be turned lightly by hand).

NOTE:
• Because the intake camshaft is pressurized by the high-pressure fuel pump, it is almost impossible to turn the intake camshaft lightly by hand. Since the zero-lift position is adjusted at the removal of the timing chain LH, measure the cam clearance at that position.
• For cam clearance inspection on exhaust side, adjust the cam base circle position so that the thickness gauge (A) can be inserted easily by hand turning the exhaust camshaft (cam sprocket).
• Measure the roller surface of cam base circle and roller rocker arm using thickness gauge (A).
• If the measured value is out of standard, take notes of the value in order to adjust the cam clearance later on.

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)

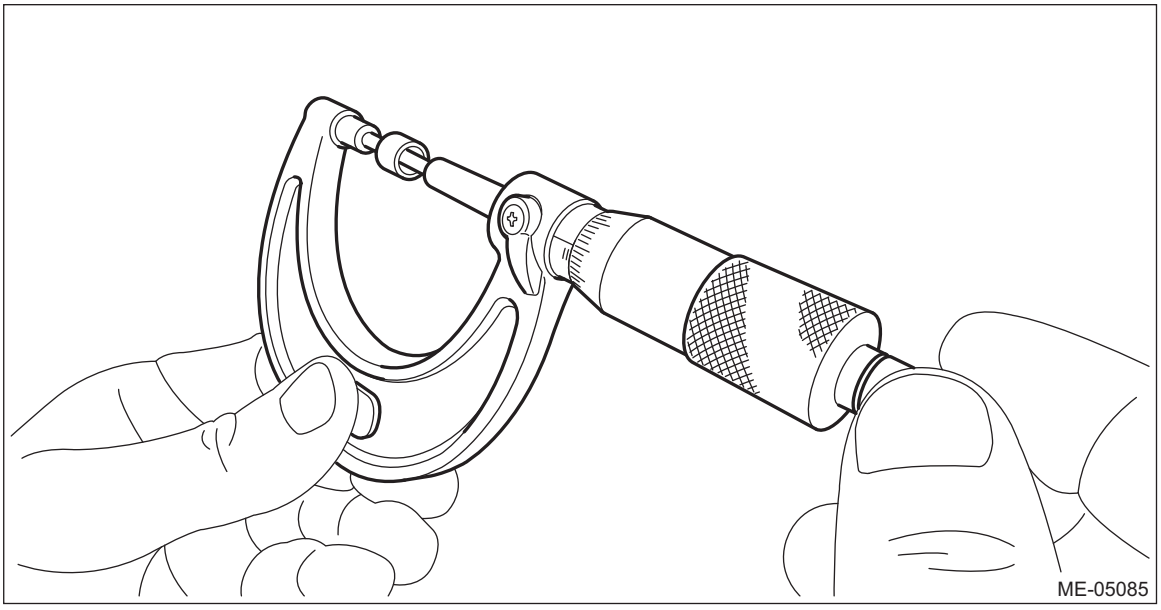


3) If necessary, adjust the cam clearance. <Ref. to ME(w/o STI)-43, ADJUSTMENT, Cam Clearance.>
4) After inspection, install the related parts in the reverse order of removal.

B: ADJUSTMENT

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the chain cover. <Ref. to ME(w/o STI)-91, REMOVAL, Chain Cover.>
3) When adjusting #1 and #3 cylinders
   (1) Remove the timing chain RH. <Ref. to ME(w/o STI)-112, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
   (2) Remove the cam carrier RH. <Ref. to ME(w/o STI)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.>
   (3) Measure the thickness of valve shim using micrometer.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).



(4) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

NOTE:
Use a new valve shim.

Intake side: S = T + 1.69 × (V – 0.13 mm (0.0051 in)) Exhaust side: S = T + 1.87 × (V – 0.22 mm (0.0087 in))
S: Valve shim thickness required V: Measured cam clearance T: Current valve shim thickness

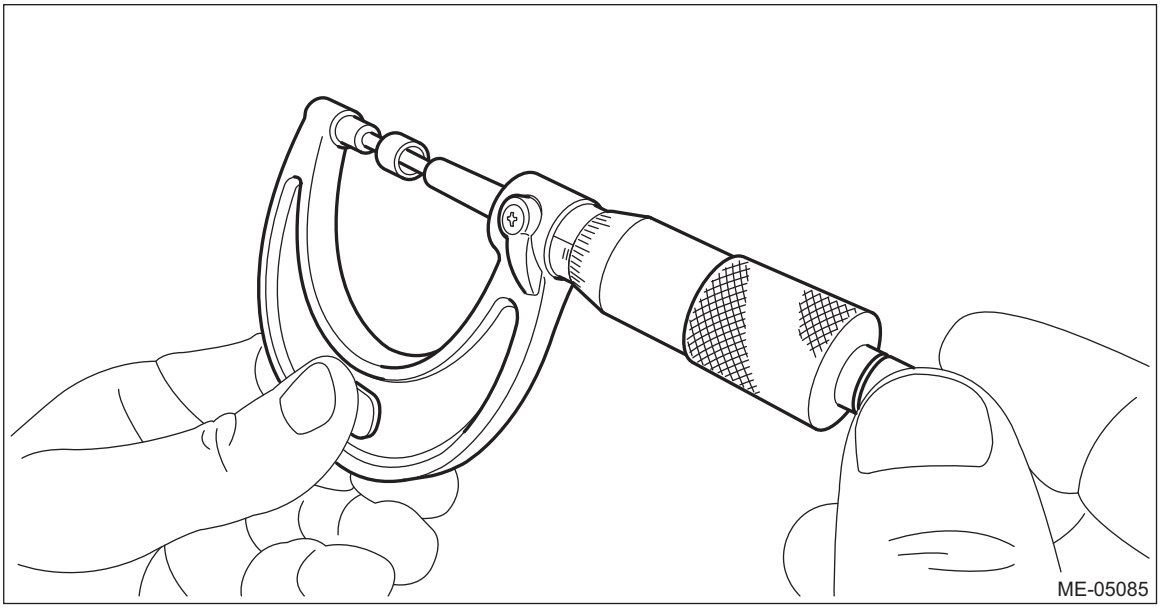
(5) Install the cam carrier RH. <Ref. to ME(w/o STI)-171, CAM CARRIER RH, INSTALLATION, Cam Carrier.>
(6) Check all the cam clearance of RH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step (2).

NOTE:
When the removing/installing of cam carrier RH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of RH side is necessary. Refer to INSPECTION of "Cam Clearance" for the cam clearance inspection. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)

4) When adjusting #2 and #4 cylinders
(1) Remove the timing chain LH. <Ref. to ME(w/o STI)-114, TIMING CHAIN LH, REMOVAL, Timing Chain Assembly.>
(2) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
(3) Remove the cam carrier LH. <Ref. to ME(w/o STI)-165, CAM CARRIER LH, REMOVAL, Cam Carrier.>
(4) Measure the thickness of valve shim using micrometer.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).



(5) Select a valve shim of suitable thickness using the measured cam clearance and valve shim thickness.

NOTE:
Use a new valve shim.

Intake side: S = T + 1.69 × (V – 0.13 mm (0.0051 in)) Exhaust side: S = T + 1.87 × (V – 0.22 mm (0.0087 in))
S: Valve shim thickness required V: Measured cam clearance T: Current valve shim thickness

(6) Install the cam carrier LH. <Ref. to ME(w/o STI)-178, CAM CARRIER LH, INSTALLATION, Cam Carrier.>
(7) Check all the cam clearance of LH side at this time. If the cam clearance is not within the standard value, repeat the procedure over again from step (3).

NOTE:
When the removing/installing of cam carrier LH has been performed, cam clearance may be outside the standard value. Checking of all cam clearance of LH side is necessary. Refer to INSPECTION of “Cam Clearance” for the cam clearance inspection. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Cam clearance:
Intake
Standard
$0.13^{+0.02}_{-0.03}$ mm ($0.0051^{+0.0008}_{-0.0012}$ in)
Exhaust
Standard
0.22±0.02 mm (0.0087±0.0008 in)

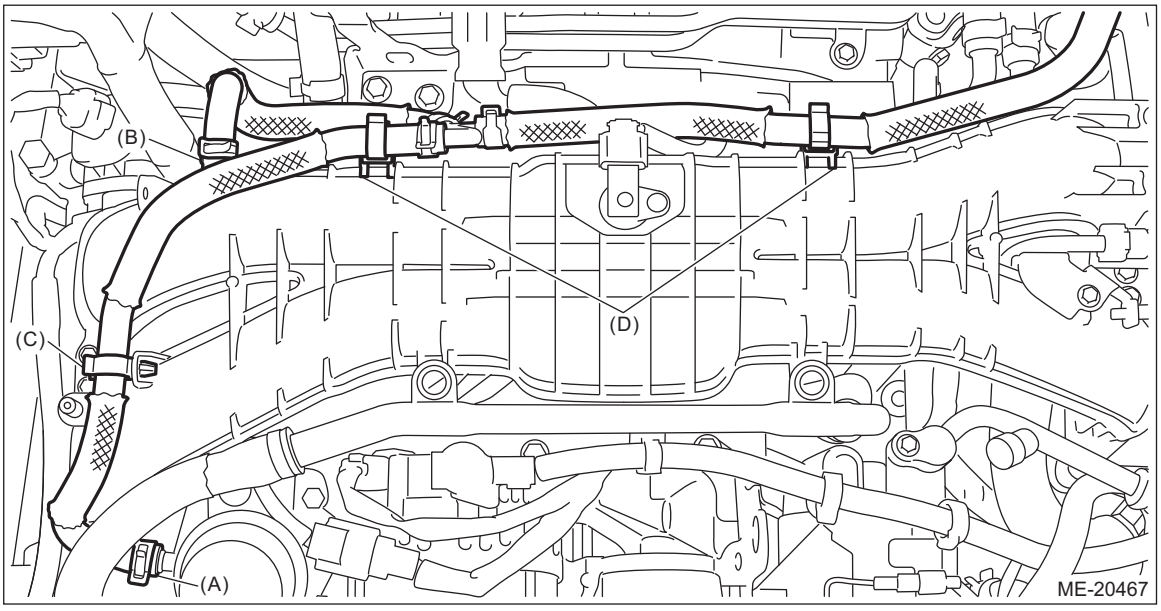
5) After adjustment, install the related parts in the reverse order of removal.

9. Engine Assembly

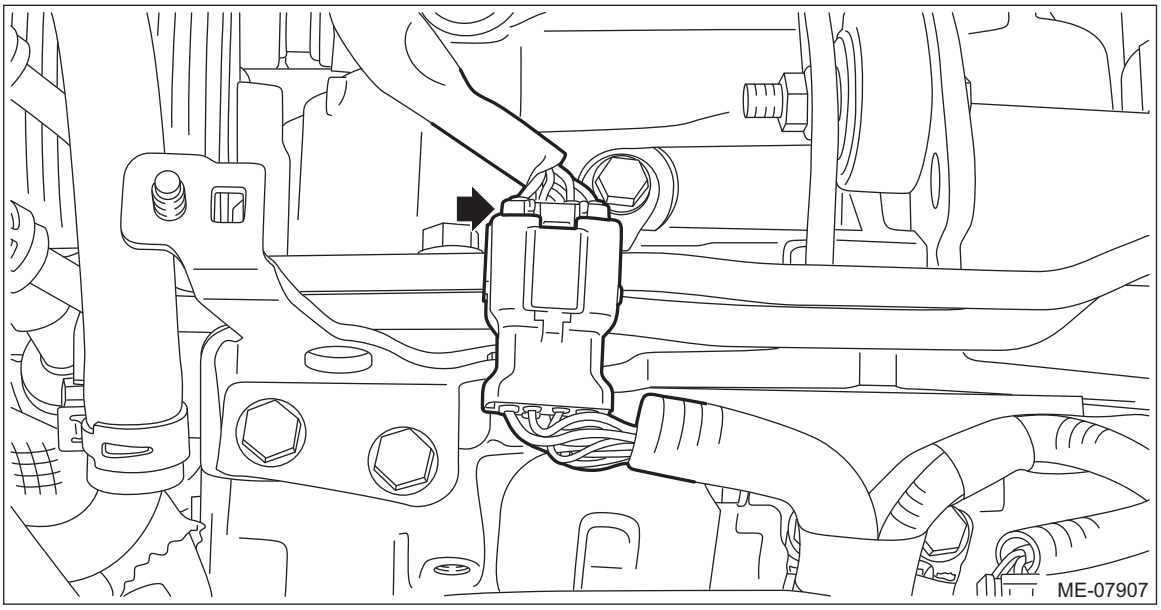
A: REMOVAL

1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Collect the refrigerant from A/C system. <Ref. to AC-26, Refrigerant Recovery Procedure.>
5) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
6) Open the fuel filler lid and remove the fuel filler cap.

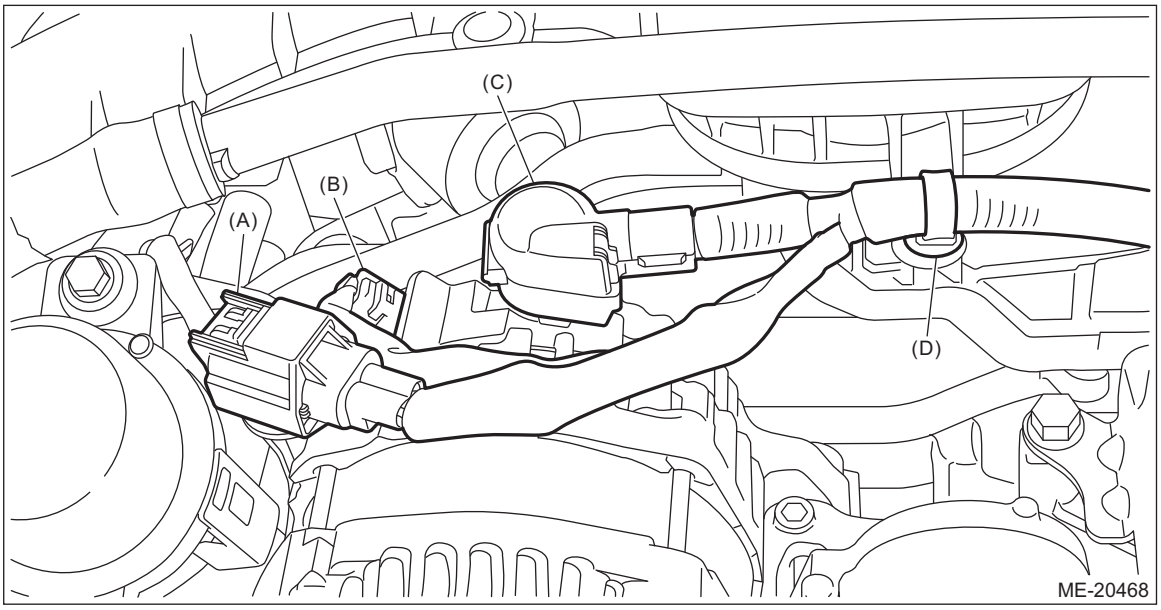
NOTE:
This operation is required to release the inner pressure of the fuel tank.
7) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
9) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
10) Remove the ECM. <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
11) Remove the intake duct No. 1 and intake duct No. 2. <Ref. to IN(w/o STI)-27, INTAKE DUCT NO. 1, REMOVAL, Intake Duct.> <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
12) Remove the radiator. <Ref. to CO(w/o STI)-38, REMOVAL, Radiator.>
13) Disconnect sections (A) and (B) of the brake booster vacuum hose from the brake vacuum pump and intake manifold, and remove the brake booster vacuum hose from the clip (C).
14) Remove the brake booster vacuum hose from the clip (D), and place the brake booster vacuum hose aside so that it does not interfere with the work.



15) Disconnect the bulkhead harness connectors from the engine wiring harness connectors.

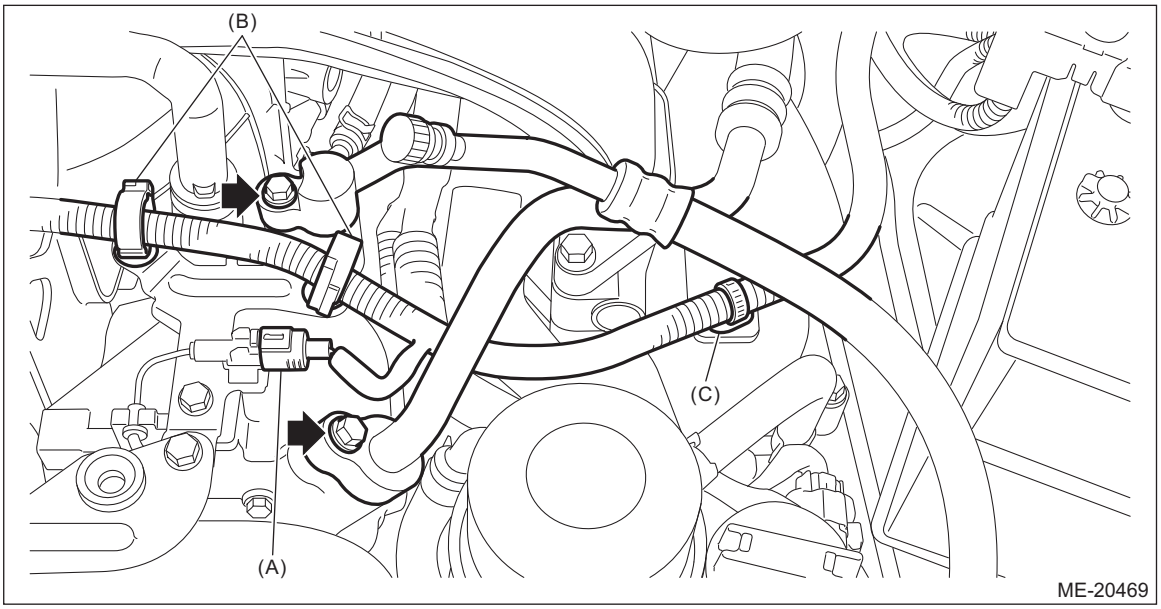


16) Disconnect the connector (A) from the brake vacuum pump.
17) Disconnect connector (B) and terminal (C) from the generator, and remove the clip (D) securing the generator cord to the intake manifold.

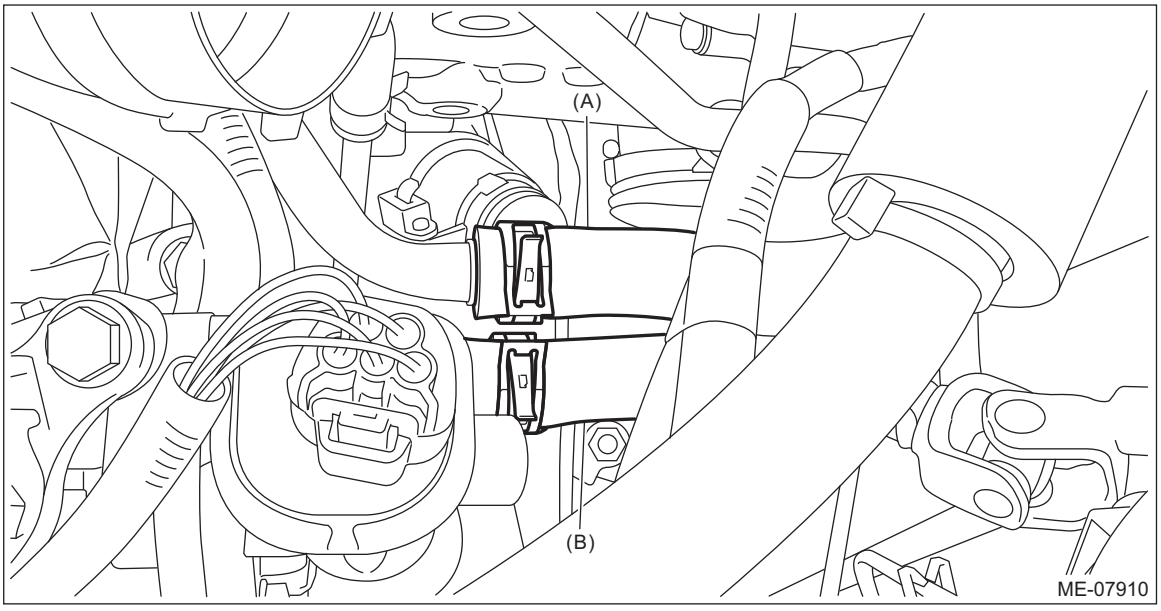


18) Disconnect connector (A) from A/C compressor, and remove the generator cord from clip (B).
19) Remove the clip (C) securing the generator cord to the fuel pipe protector, and move the generator cord aside so that it does not interfere with the work.

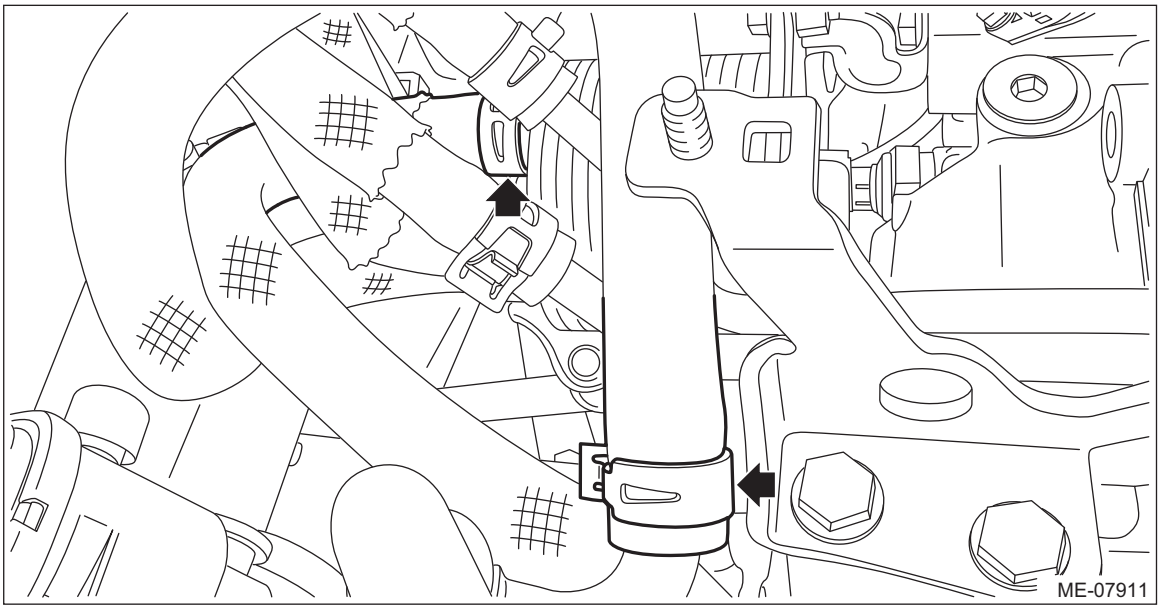
20) Remove the bolts securing the hose - pressure suction and the hose - pressure discharge to the A/C compressor, and disconnect the hose - pressure suction and the hose - pressure discharge from the A/C compressor. <Ref. to AC-63, REMOVAL, Hose and Pipe.>



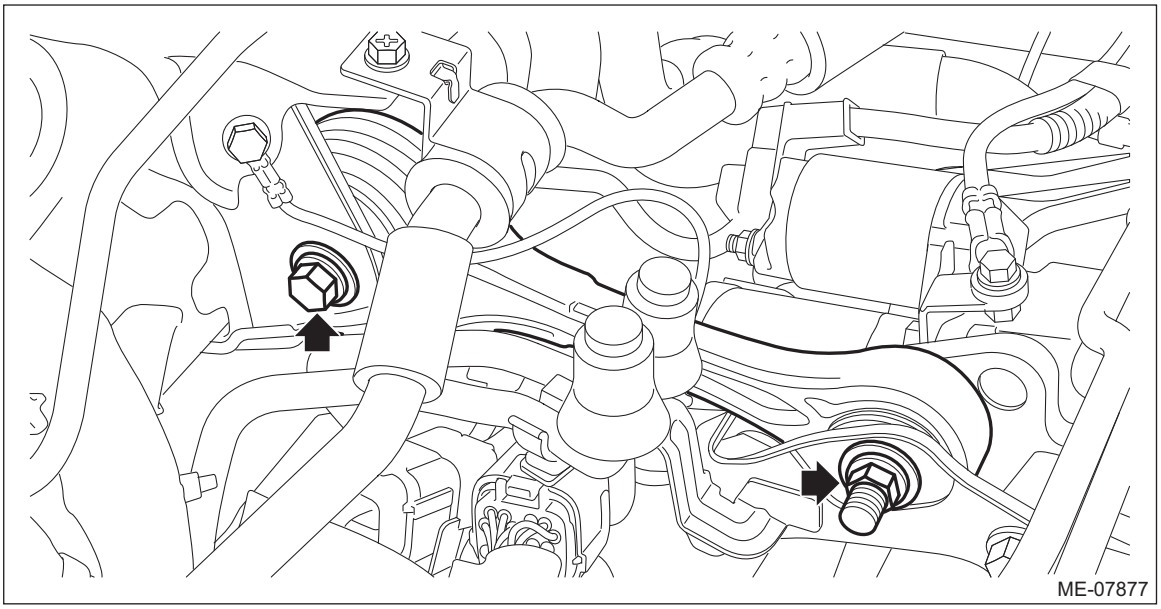
21) Disconnect the heater inlet hose (A) from the water pipe assembly, and disconnect the heater outlet hose (B) from the water pipe LH.



22) Disconnect the engine coolant inlet hose and engine coolant outlet hose from the CVTF cooler (with warmer feature) and EGR cooler. (CVT model)



23) Remove the pitching stopper.

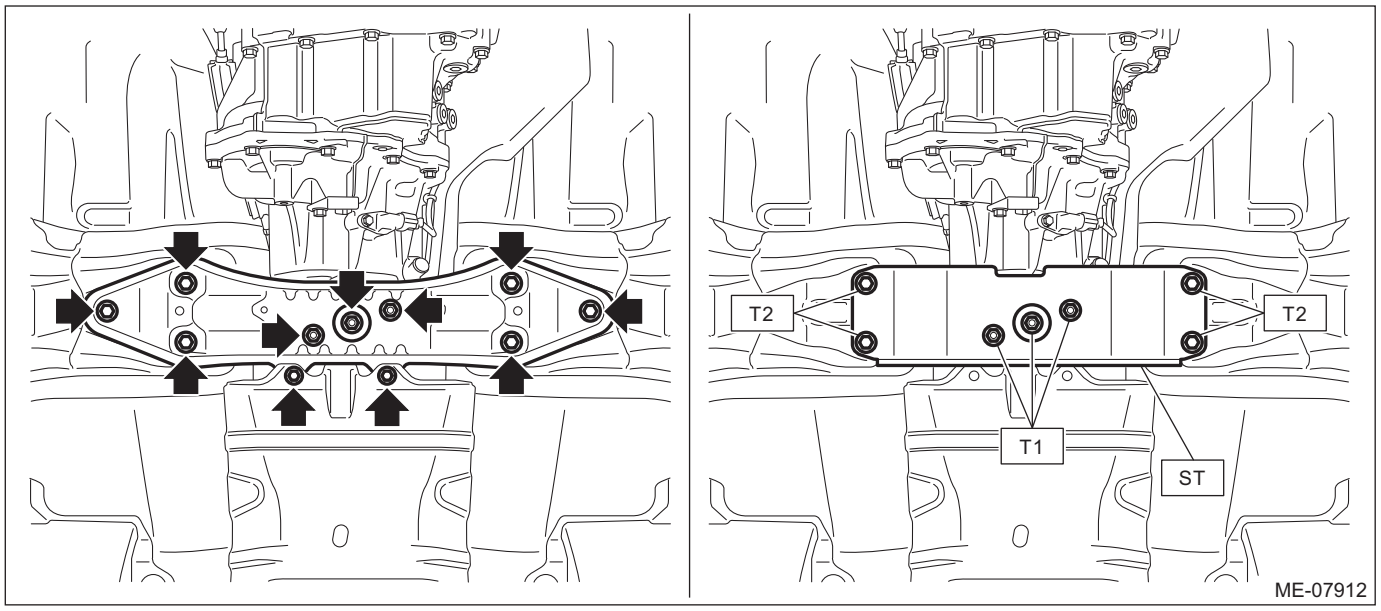


24) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
25) Set the transmission jack to the transmission. (CVT model)

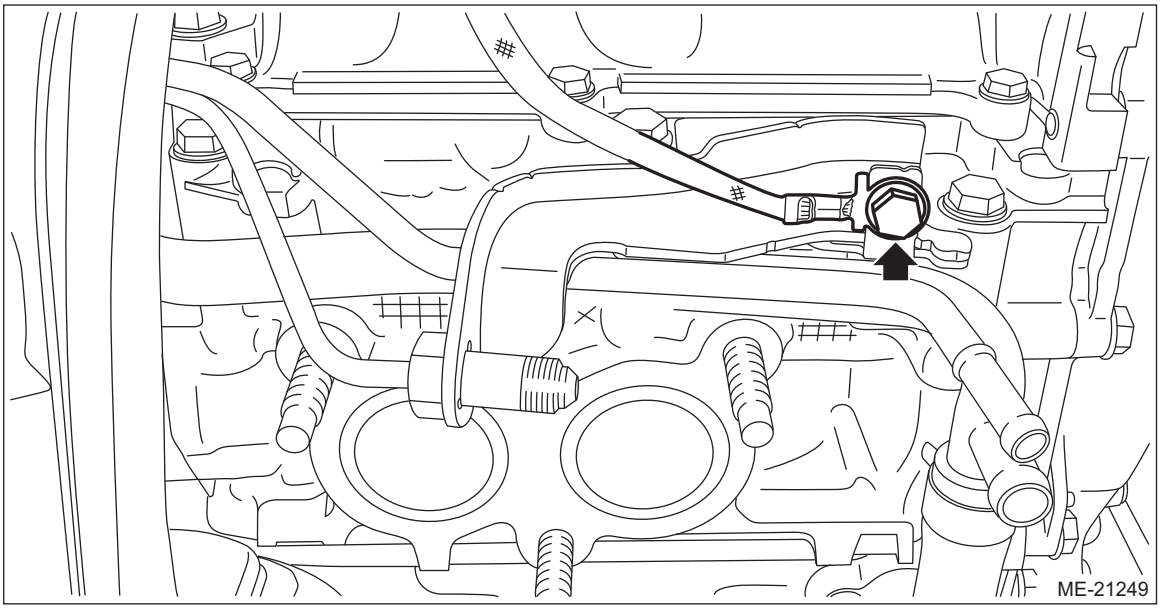
NOTE:
Be careful that the support plate of transmission jack does not touch the transmission oil pan.

26) Remove the rear crossmember and attach the ST. (CVT model)
ST 41099YC001 ST REAR MOUNT

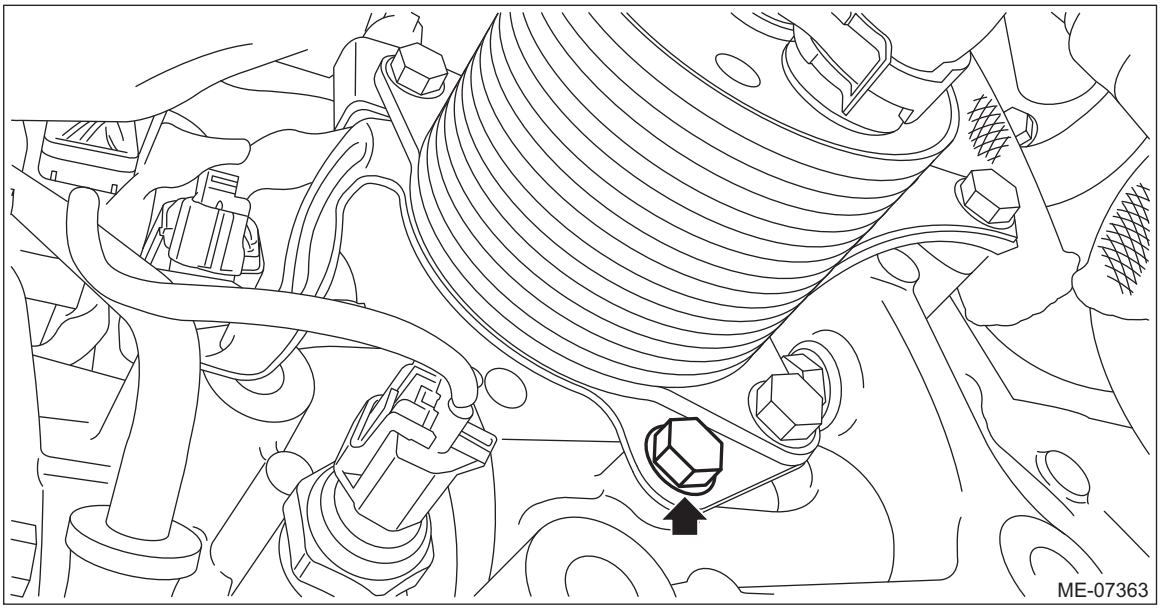
Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



27) Remove the transmission jack. (CVT model)
28) Disconnect the ground cable from the oil pipe assembly.

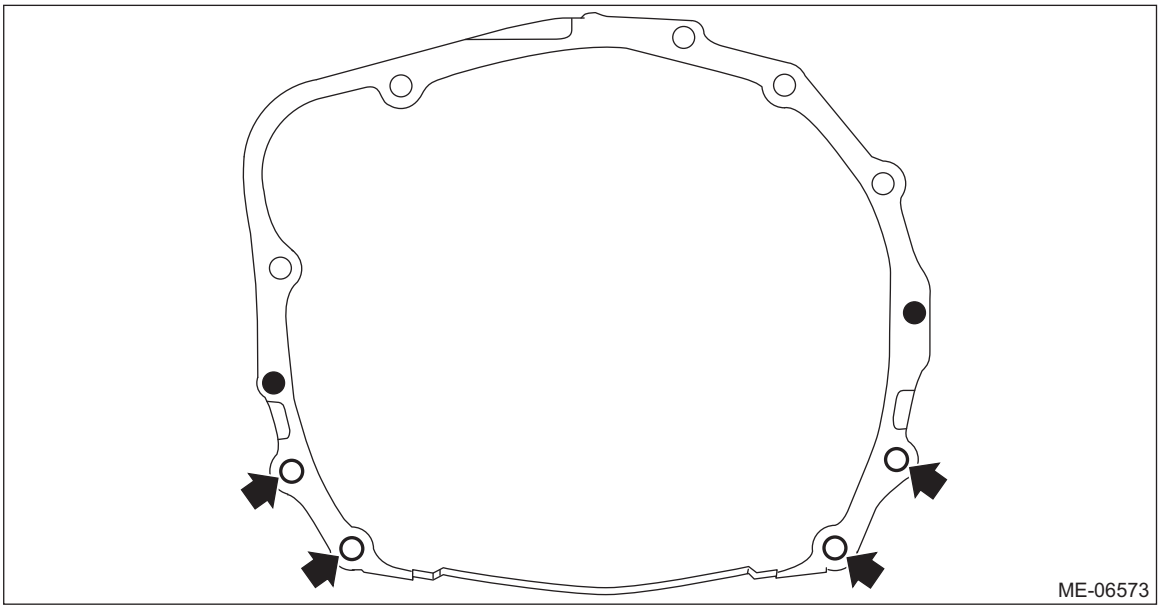


29) Remove the lower bolt securing the CVTF cooler (with warmer feature) to the CVT. (CVT model)

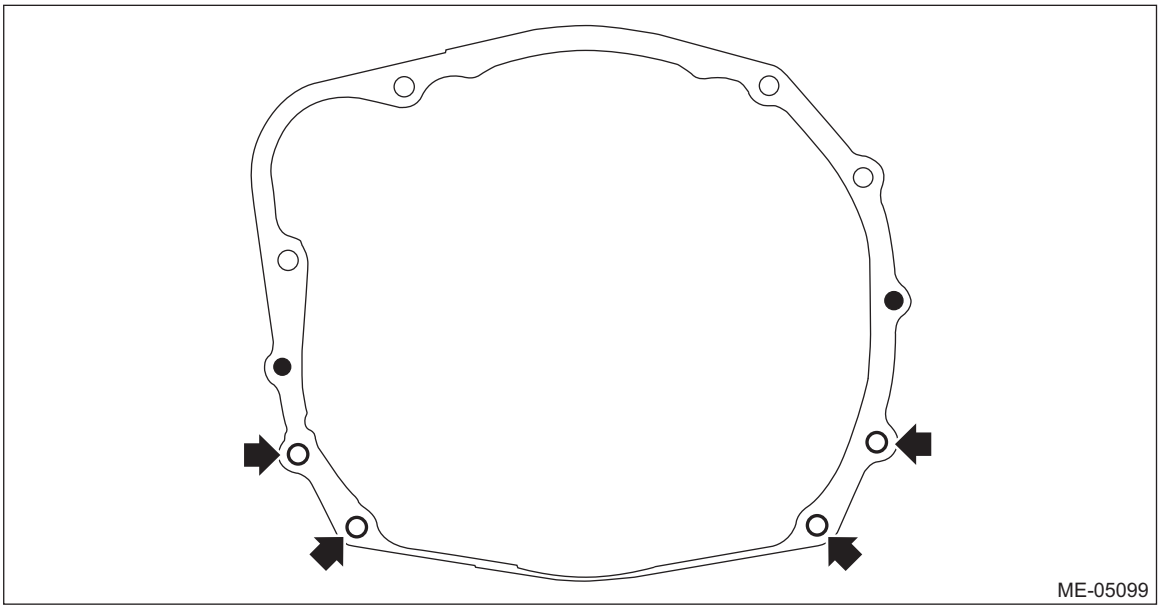


30) Remove the bolts and nuts which hold the lower side of transmission to the engine.

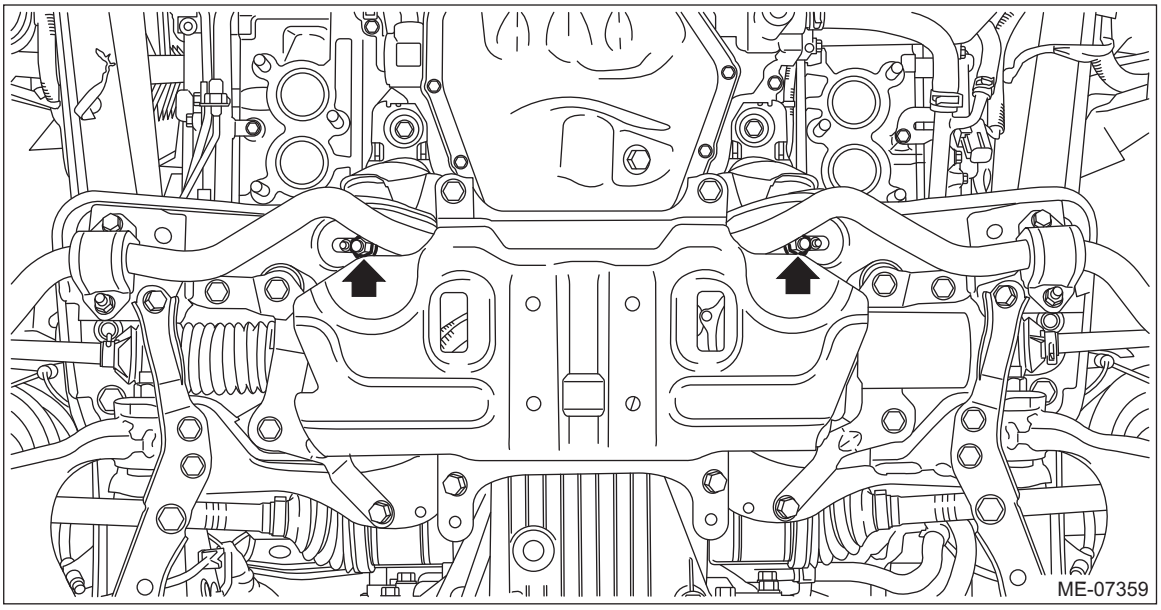
- CVT model



- MT model

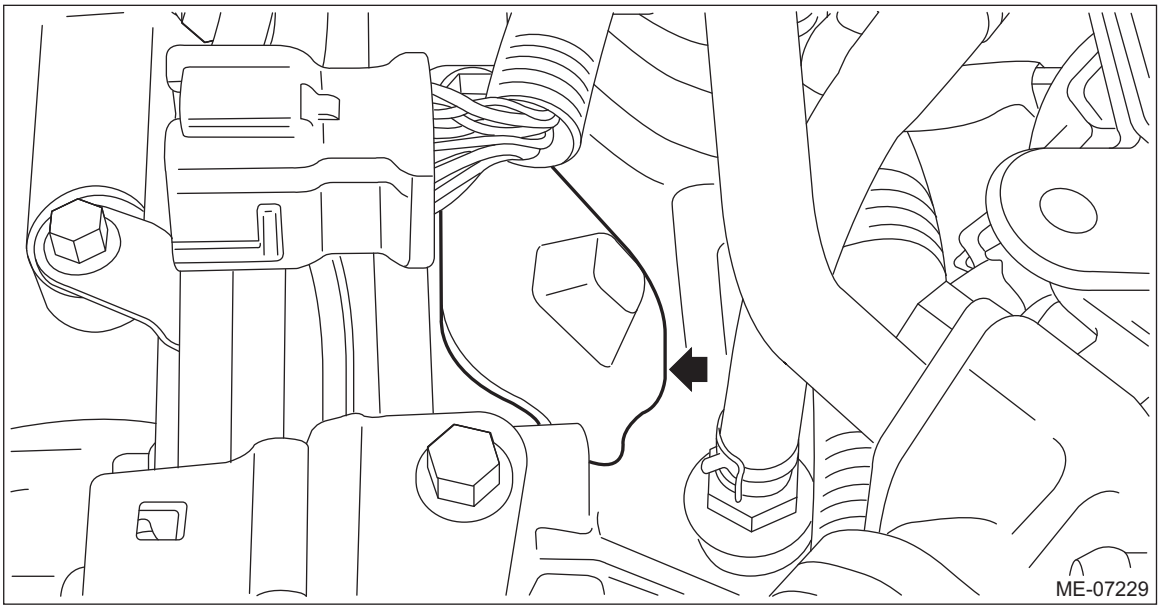


31) Remove the nuts which secure the engine mounting to the front crossmember.

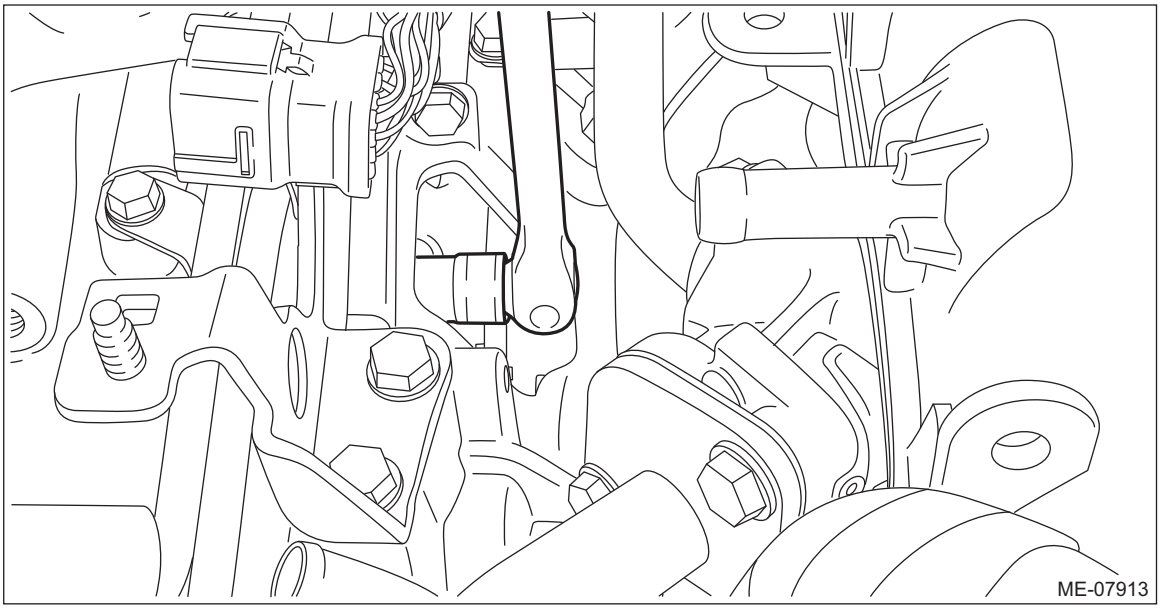


32) Lower the vehicle.
33) Remove the starter. <Ref. to SC(w/o STI)-7, REMOVAL, Starter.>
34) Separate the torque converter assembly from the drive plate. (CVT model)

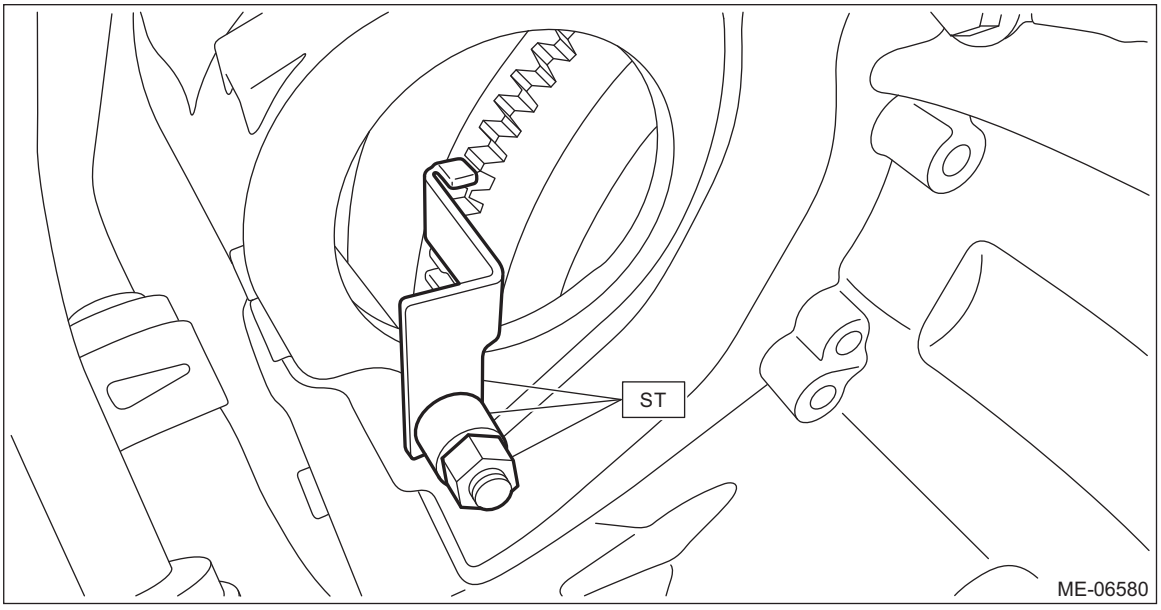
(1) Remove the service hole plug.



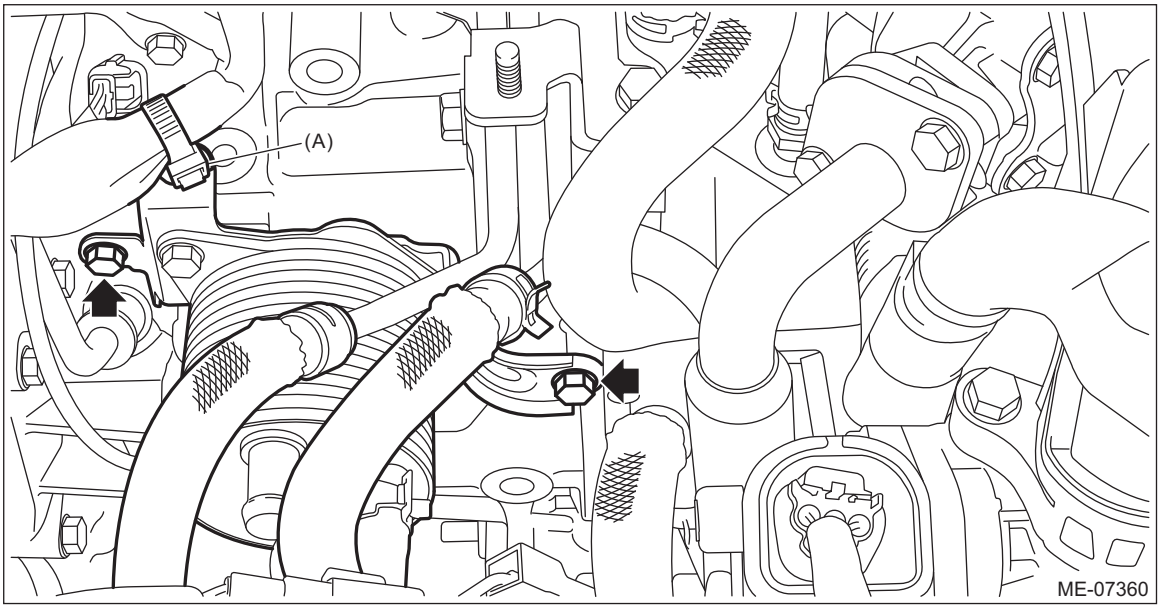
(2) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to remove the four bolts securing the torque converter assembly to the drive plate.



(3) Attach the ST to the converter case.
ST 498277200 STOPPER SET



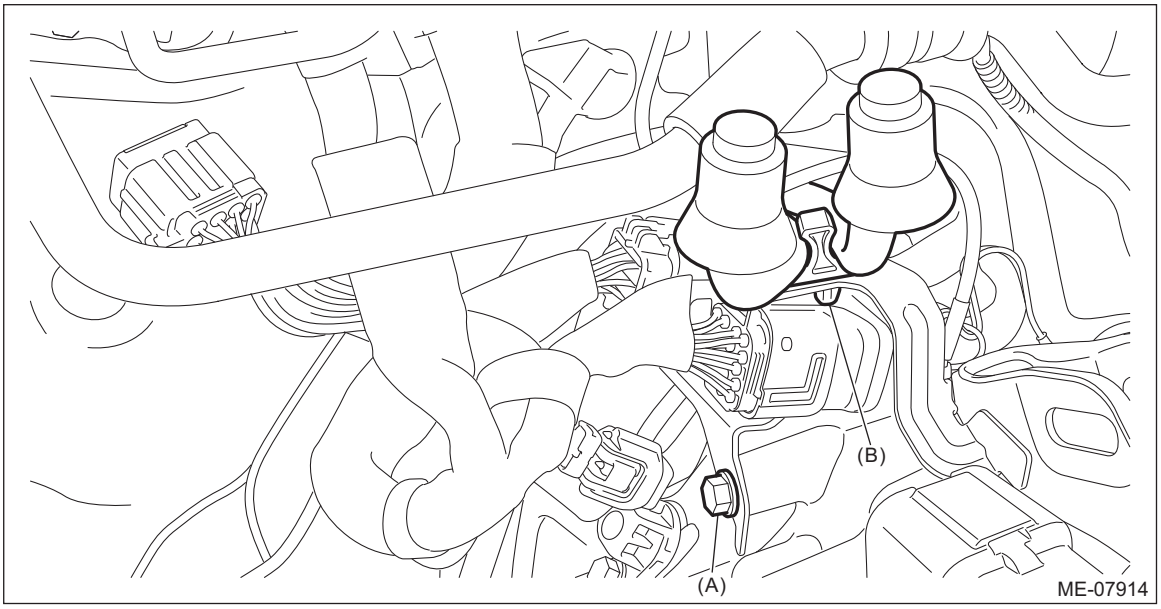
35) Remove the clip (A) securing the bulkhead harness to the CVTF cooler (with warmer feature). (CVT model)
36) Remove the upper bolt securing the CVTF cooler (with warmer feature) to the CVT, and move the CVTF cooler (with warmer feature) at the locations that do not interfere operation. (CVT model)



37) Remove the bolt (A) securing the transmission harness stay to the CVT. (CVT model)

NOTE:
This procedure is required to prevent the transmission connector from touching the A/C pressure hose during engine removal/installation.
38) Remove the air breather hose from the clip (B), and then remove the clip (B) from the pitching stopper bracket. (CVT model)

NOTE:
This procedure is required to prevent the clip from touching the A/C pressure hose during engine removal/ installation.

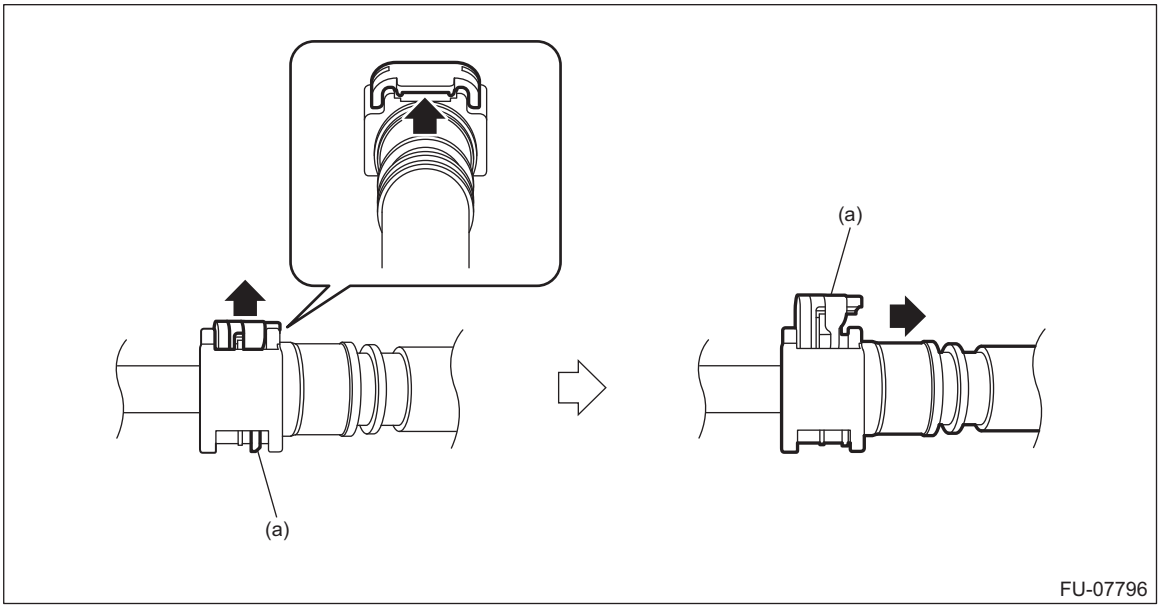


39) Disconnect the fuel delivery tube and evaporation hose.

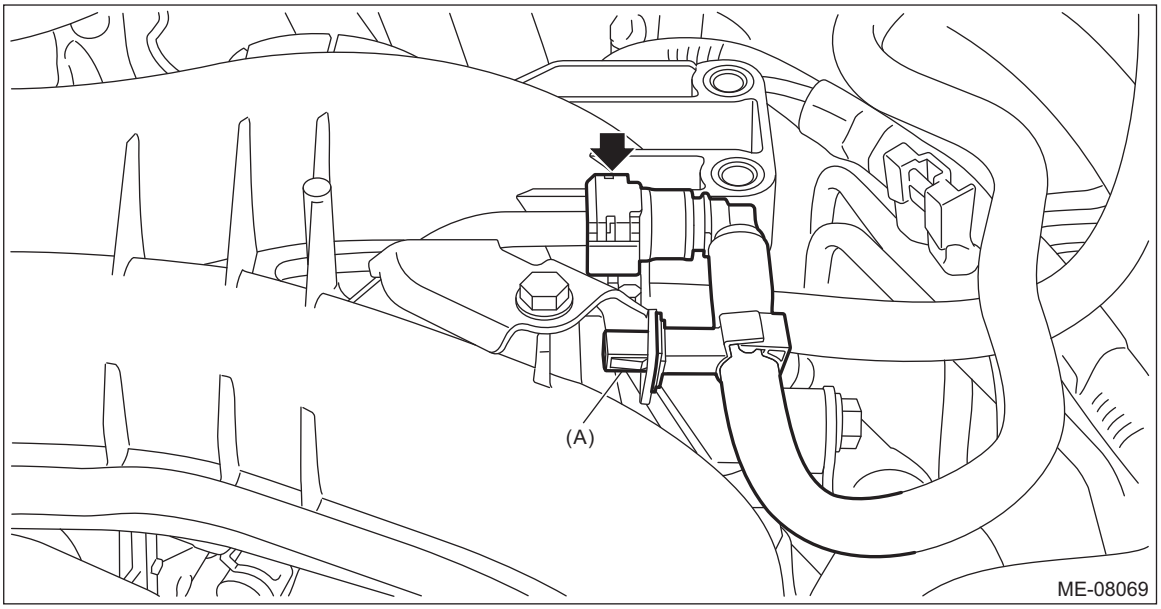
CAUTION:
- **Be careful not to spill fuel.**
- **Catch the fuel from the tubes using a container or cloth.**

(1) Disconnect the quick connector on the fuel delivery tube from the fuel pipe assembly, and remove the clip (A) securing the fuel delivery tube.

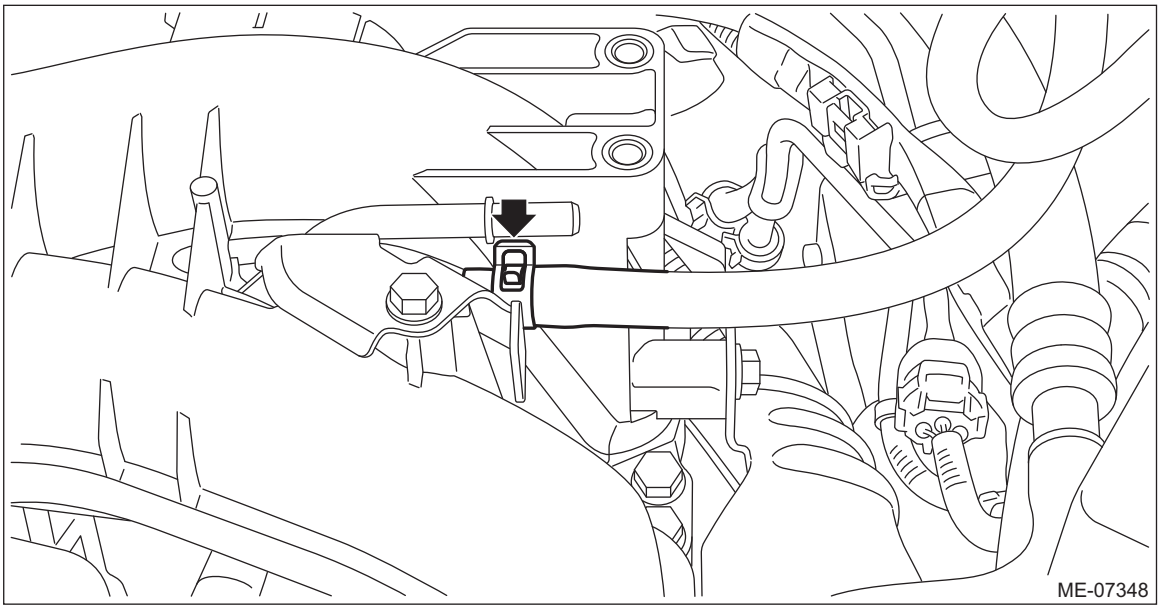
NOTE:
Disconnect the quick connector as shown in the figure.



(a) Slider



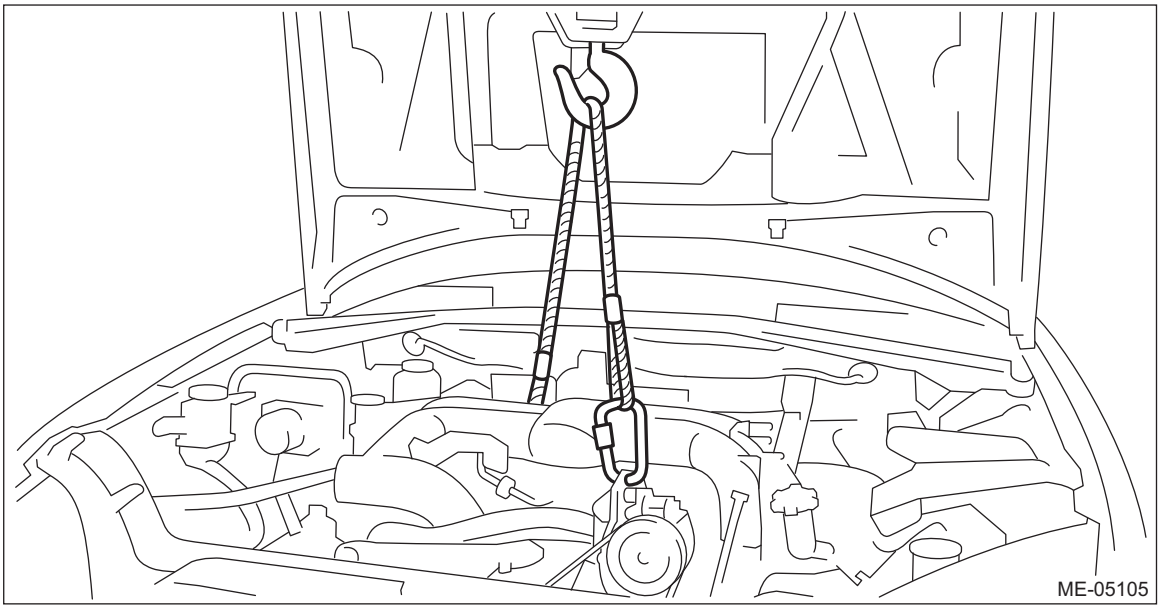
(2) Disconnect the evaporation hose from the fuel pipe assembly.



40) Separate the engine and transmission.

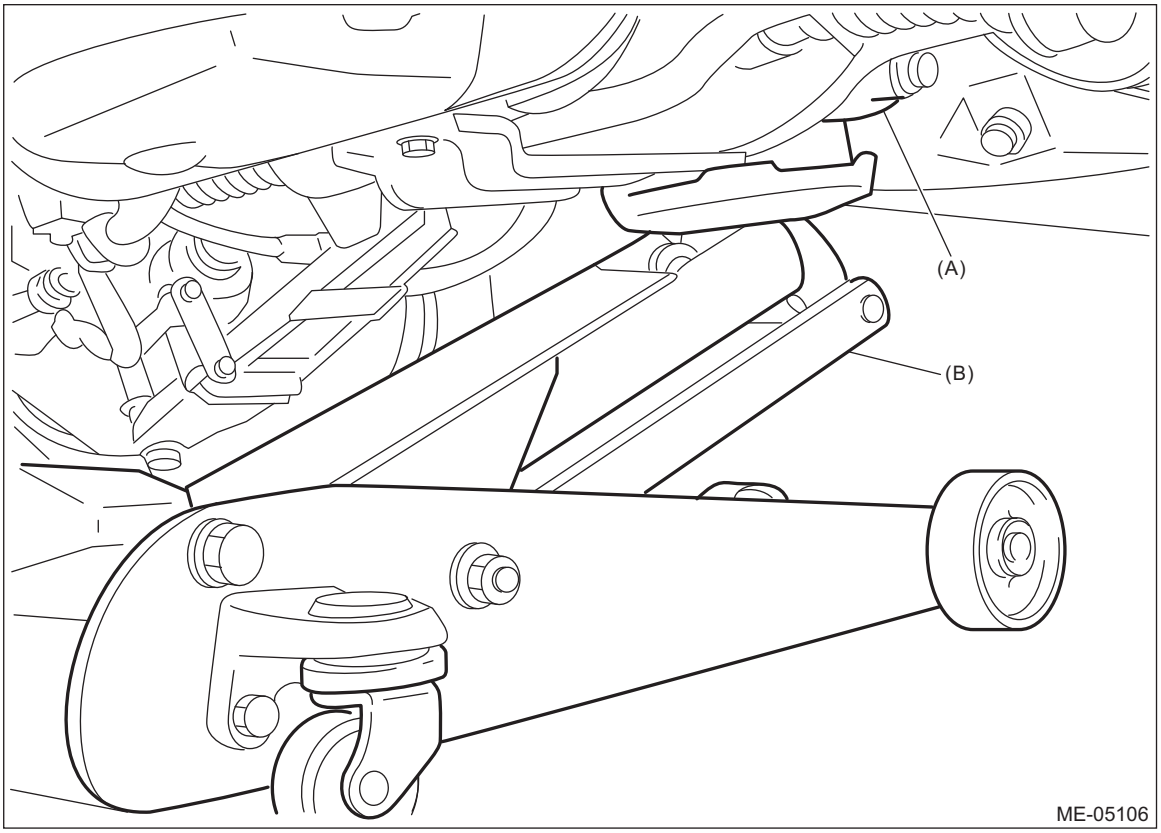
CAUTION:
Before removing the engine away from transmission, check to be sure no work has been overlooked.

(1) Support the engine with a lifting device and wire ropes.



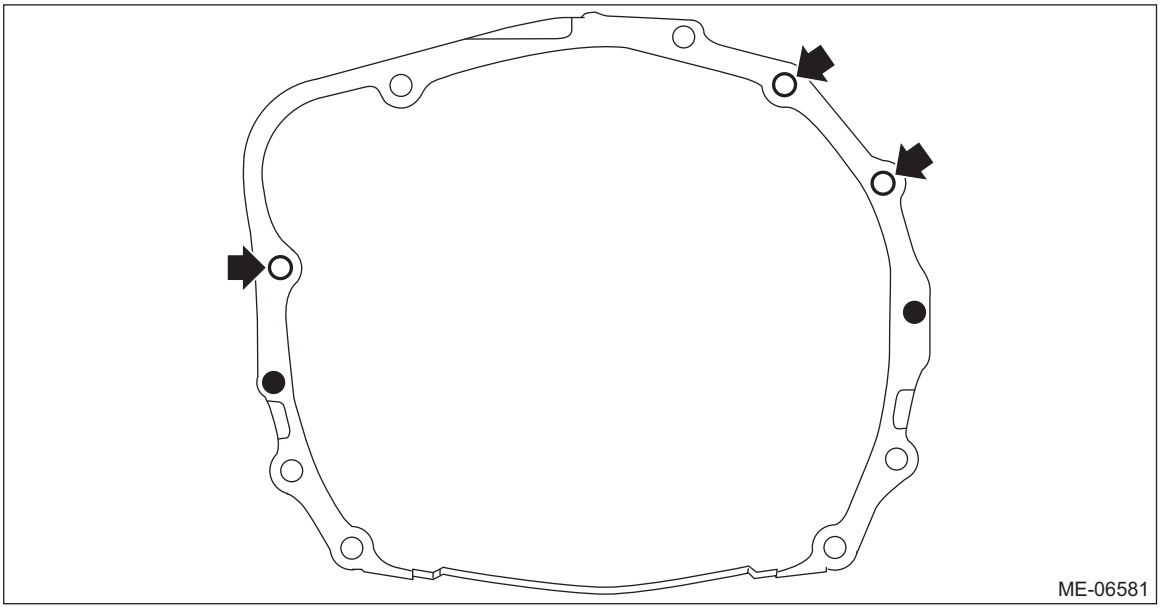
(2) Support the transmission with a garage jack.

CAUTION:
Be sure to perform this procedure to prevent the transmission from lowering by its own weight.

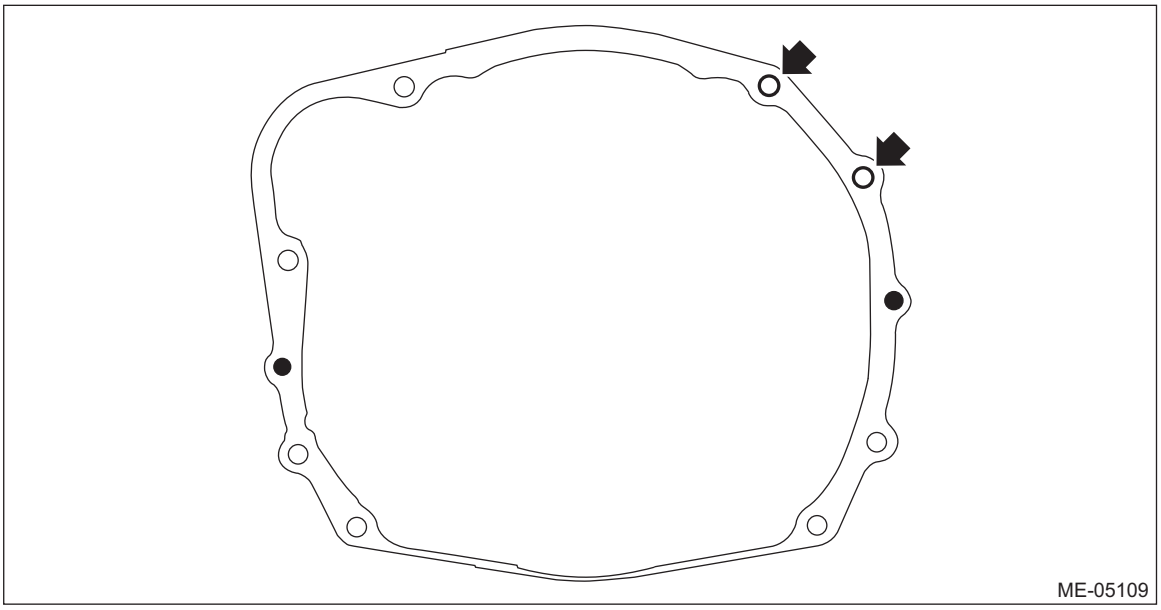


(A) Transmission (B) Garage jack

(3) Remove the bolts which hold the upper side of the transmission to the engine.
- CVT model



- MT model



41) Set the cushioning material such as a waste cloth between pitching stopper bracket and transmission case cover. (CVT model)

NOTE:
- This operation is required to prevent damage to the transmission case cover.
- Make sure that the height of cushioning material does not become 15 — 20 mm (0.6 — 0.8 in) or less when it is crushed.

42) Remove the engine from the vehicle.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

(1) Slightly raise the engine.
(2) Raise the transmission with garage jack.
(3) Move the engine horizontally until engine is withdrawn from transmission. (CVT model)
(4) Move the engine horizontally until main shaft is withdrawn from clutch cover. (MT model)
(5) Slowly move the engine away from engine compartment.

43) Remove the engine mounting from the engine.

B: INSTALLATION

1) Install the engine mounting onto the engine.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

2) Apply a small amount of grease to splines of main shaft. (MT model)

Grease:
NICHIMOLY N-130 or equivalent

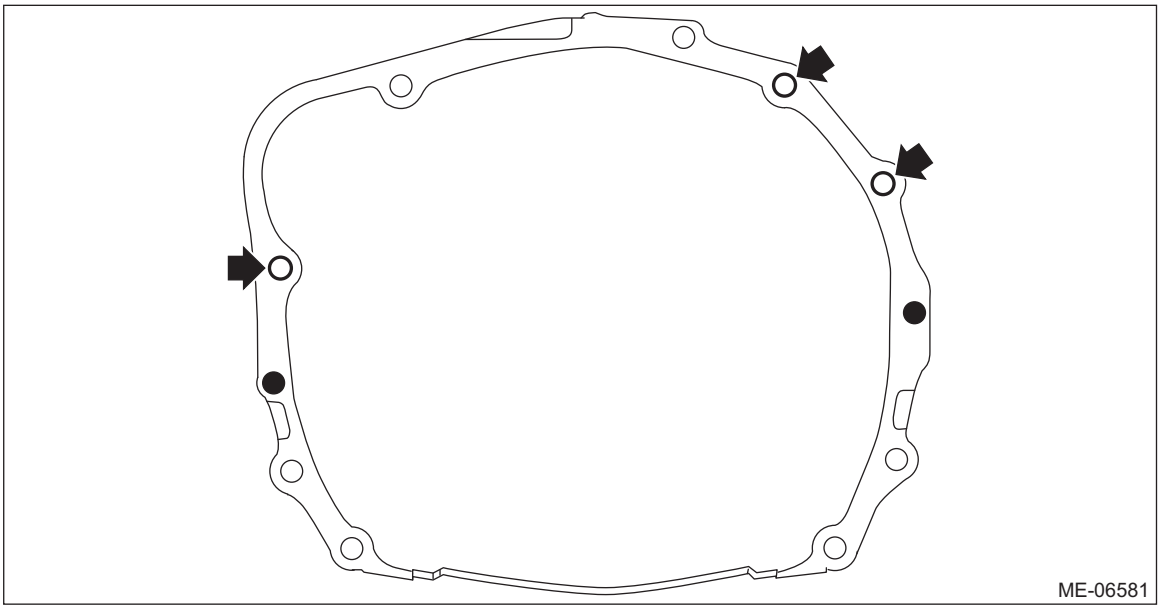
3) Position the engine in engine compartment and align it with transmission.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

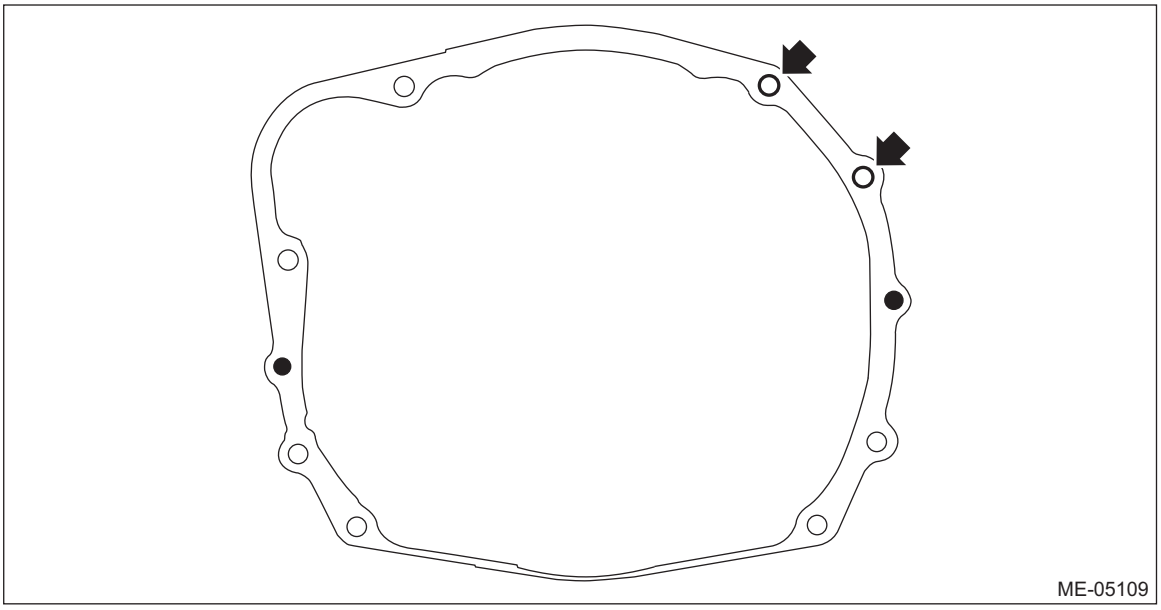
4) Install the bolts which hold upper side of transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

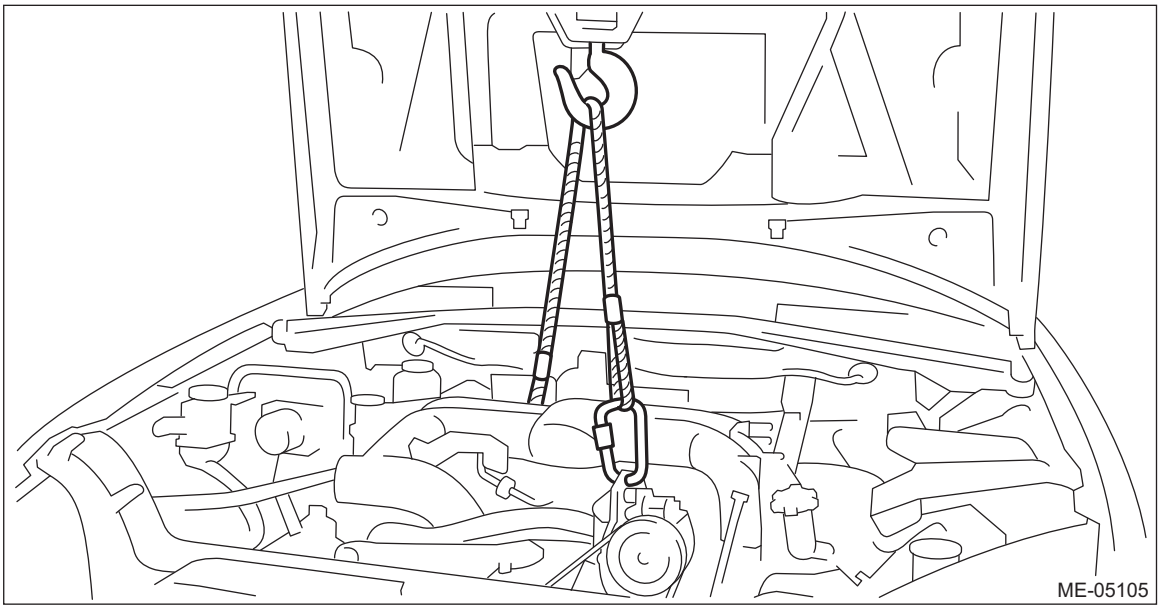
- CVT model



- MT model

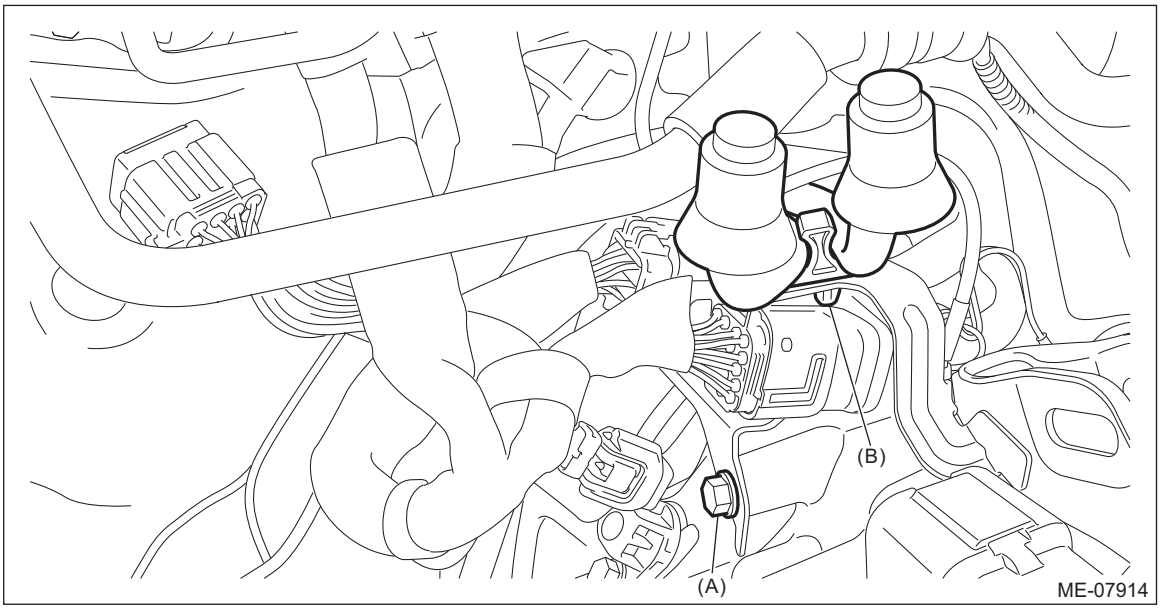


5) Remove the lifting device and wire ropes.



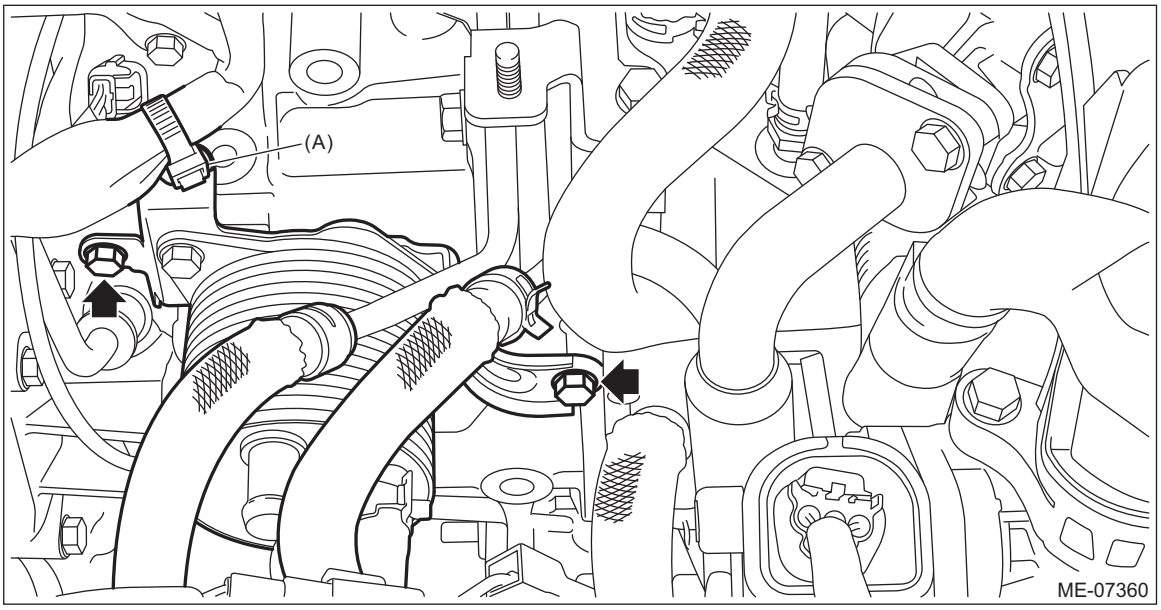
6) Remove the garage jack.
7) Remove the cushioning material between pitching stopper bracket and transmission case cover. (CVT model)
8) Install the clip (B) to the pitching stopper bracket, and then install the air breather hose to the clip (B). (CVT model)
9) Install the bolt (A) which secures the transmission harness stay to the CVT. (CVT model)

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



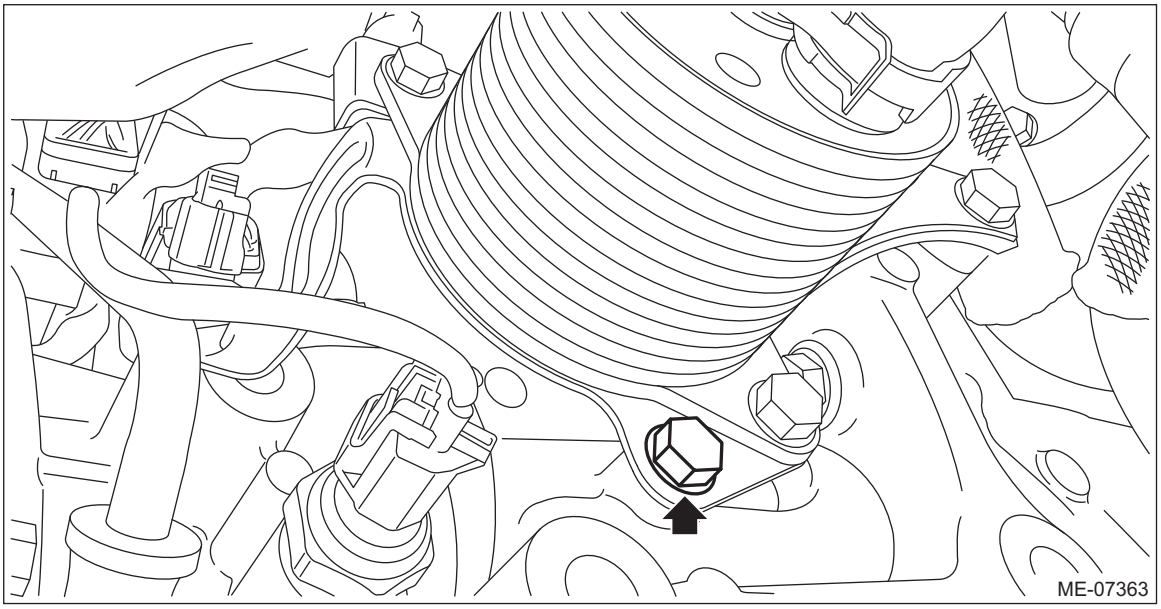
10) Install the CVTF cooler (with warmer feature) to the CVT. (CVT model)
(1) Temporarily tighten the upper bolt which secures the CVTF cooler (with warmer feature) to the CVT.

(2) Using clip (A), fix the bulkhead harness to the CVTF cooler (with warmer feature).



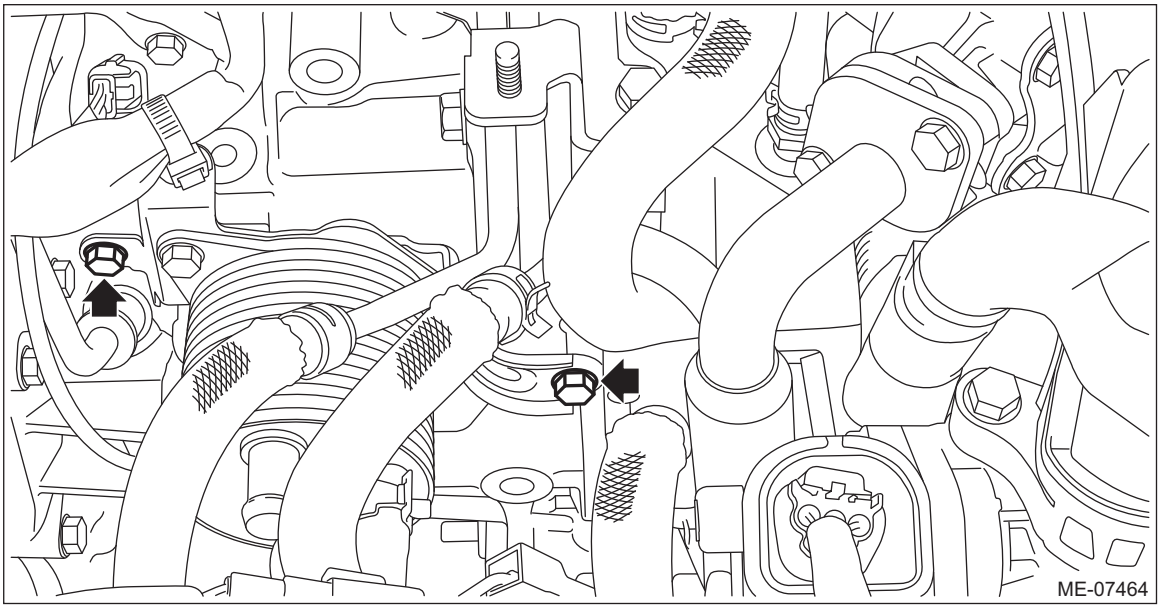
(3) Lift up the vehicle.
(4) Install the lower bolt which secures CVTF cooler (with warmer feature) to the CVT.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



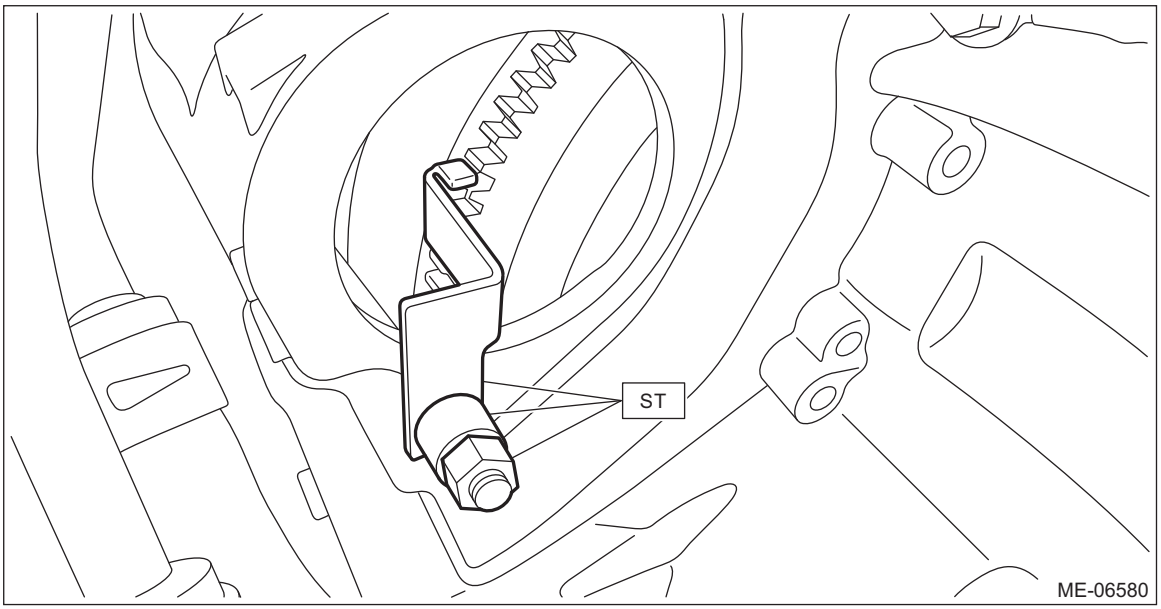
(5) Lower the vehicle.
(6) Tighten the upper bolt which secures the CVTF cooler (with warmer feature) to the CVT.

Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



11) Install the torque converter assembly to the drive plate. (CVT model)
(1) Remove the ST from converter case.

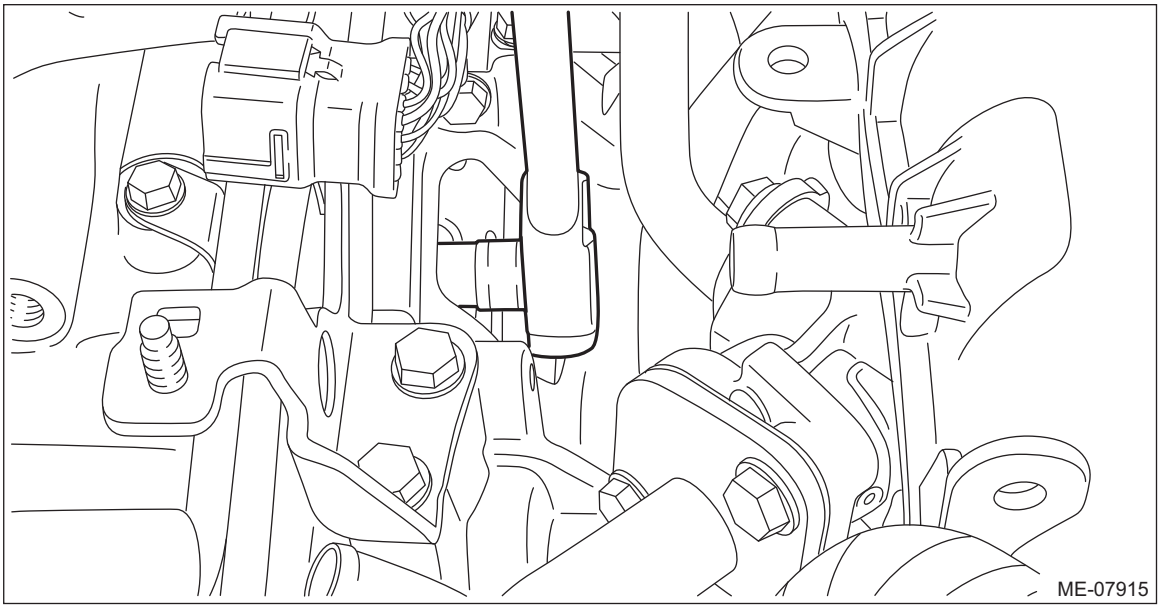
NOTE:
Be careful not to drop the ST into the converter housing when removing the ST.
ST 498277200 STOPPER SET



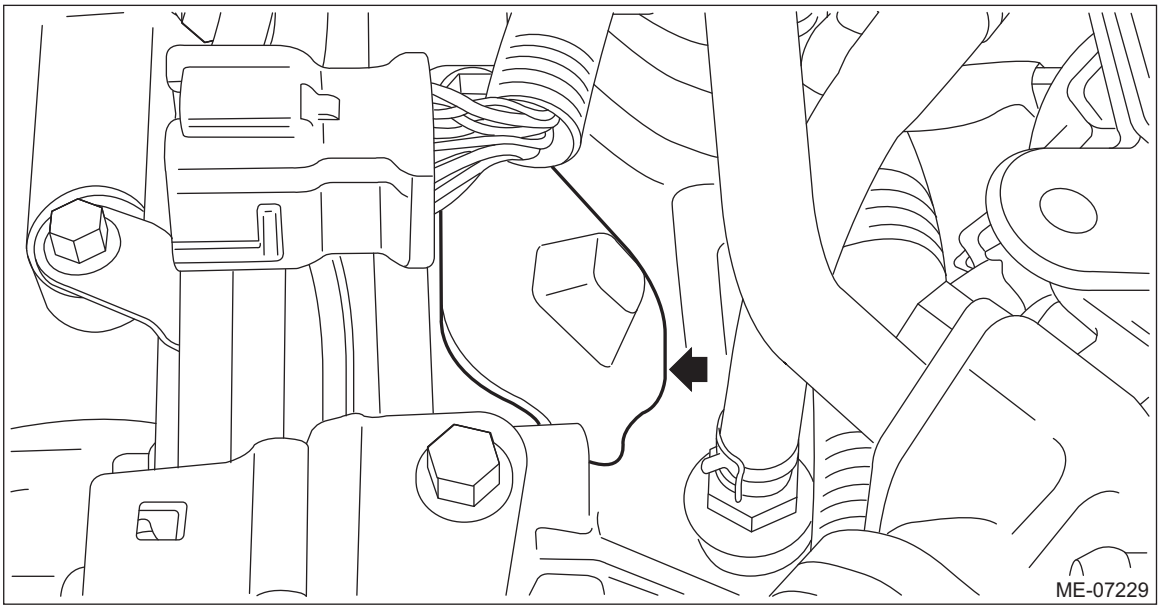
(2) Insert the wrench into the crank pulley bolt, and rotate the crank pulley to attach the four bolts securing the torque converter assembly to the drive plate.

NOTE:
Be careful not to drop bolts into the converter housing.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



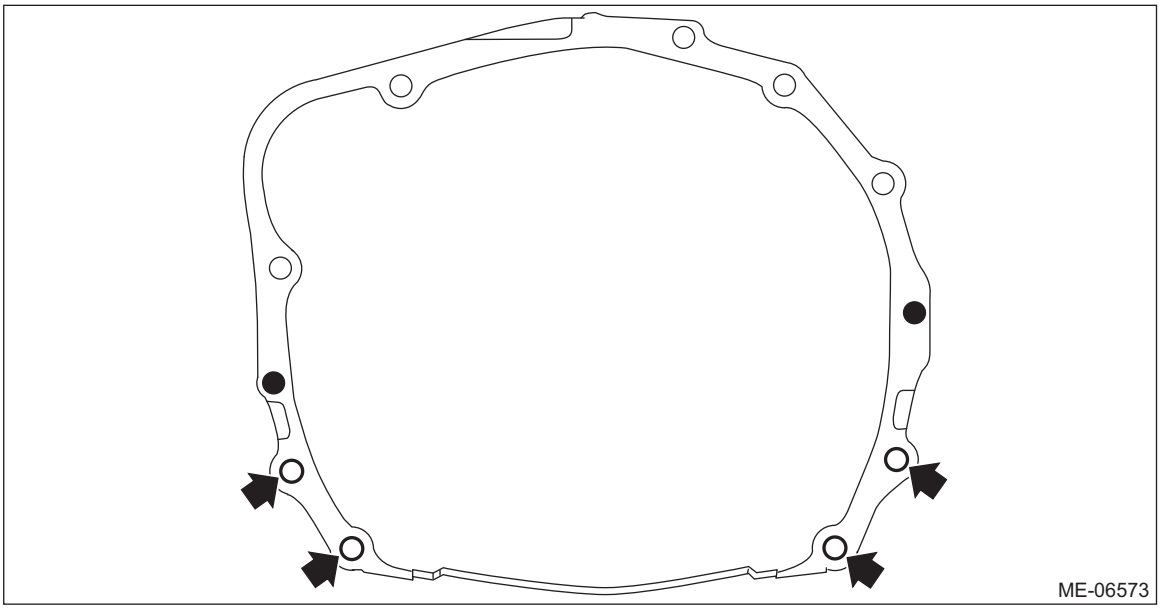
(3) Fit the plug to service hole.



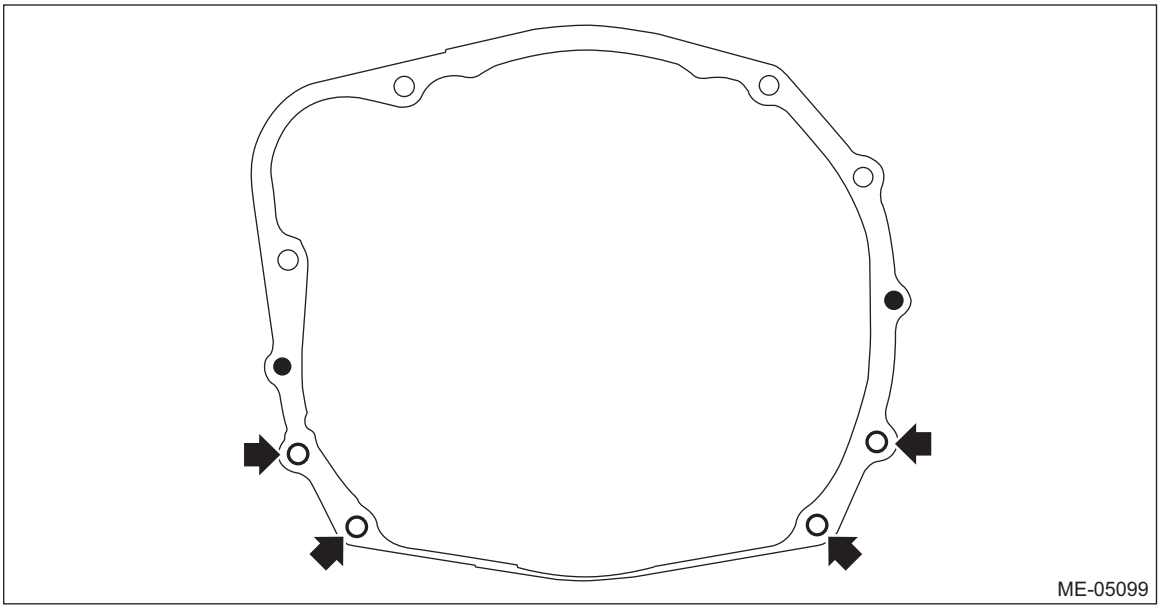
12) Install the starter. <Ref. to SC(w/o STI)-8, INSTALLATION, Starter.>
13) Lift up the vehicle.
14) Install the bolts and nuts which hold lower side of the transmission to engine.

Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

- CVT model



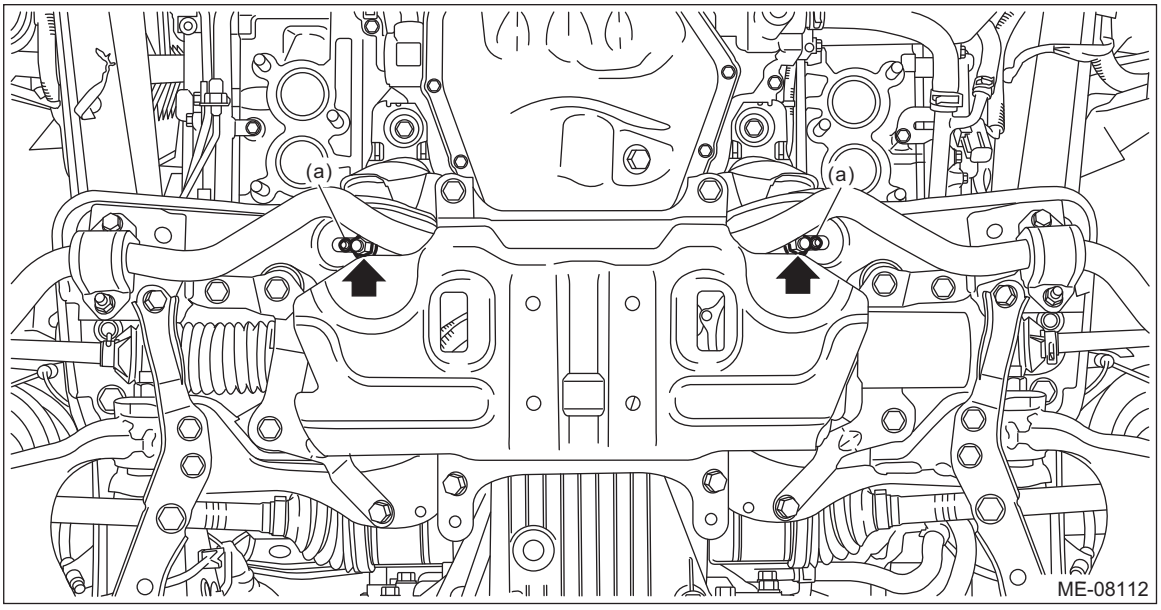
- MT model



15) Install the nuts which hold the engine mounting to the front crossmember.

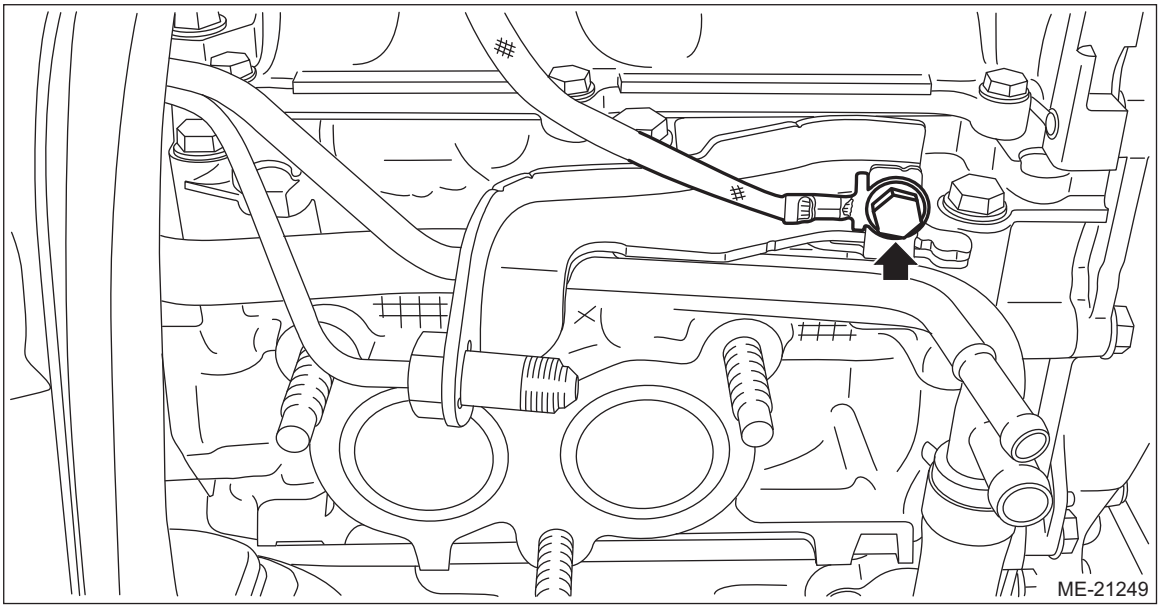
NOTE:
- Make sure that locators (a) of the engine mounting are securely inserted.
- Use a new nut.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



16) Connect the ground cable to the oil pipe assembly.

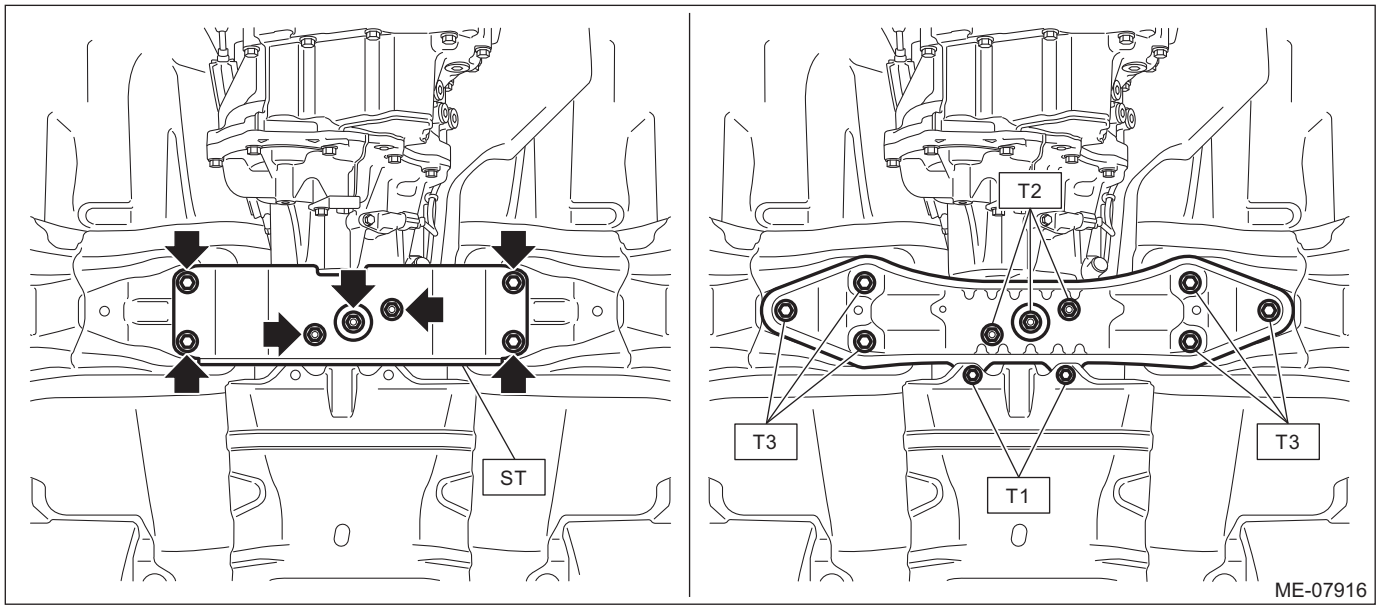
Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)



17) Set the transmission jack to the transmission. (CVT model)

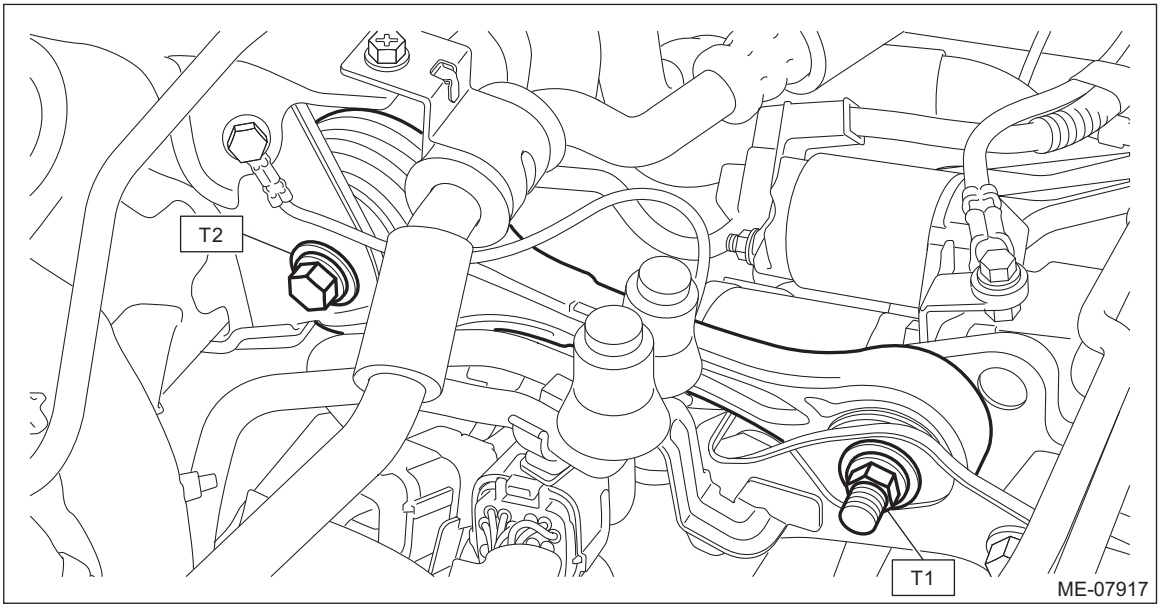
NOTE:
Be careful that the support plate of transmission jack does not touch the transmission oil pan.
18) Remove the ST and install the rear crossmember. (CVT model)
ST 41099YC001 ST REAR MOUNT

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T3: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



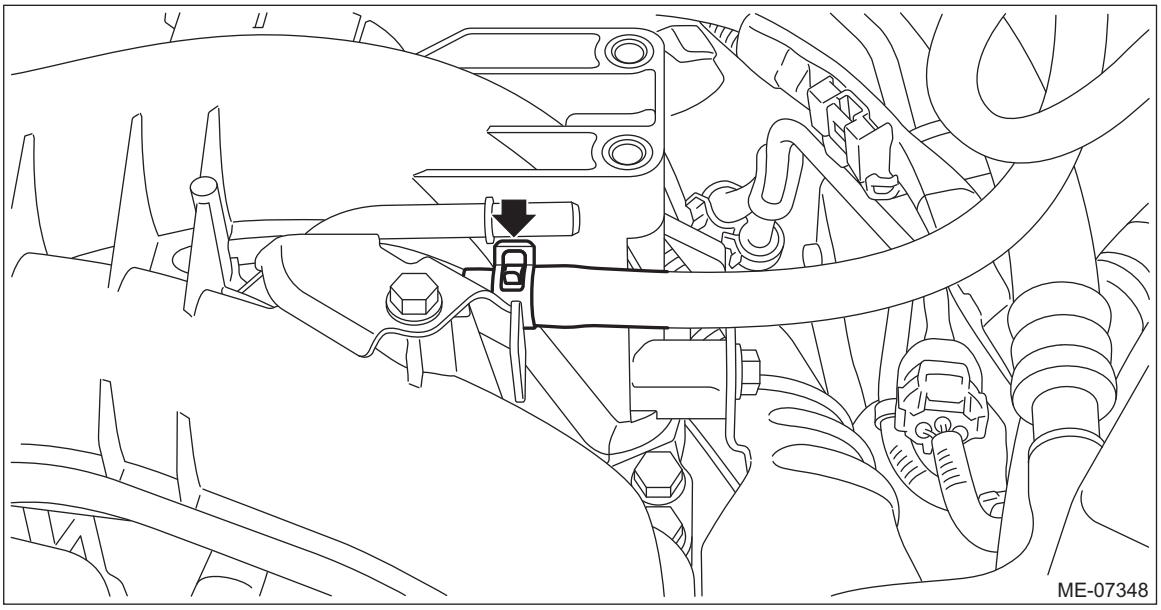
19) Remove the transmission jack. (CVT model)
20) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>
21) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



22) Connect the fuel delivery tube and evaporation hose.

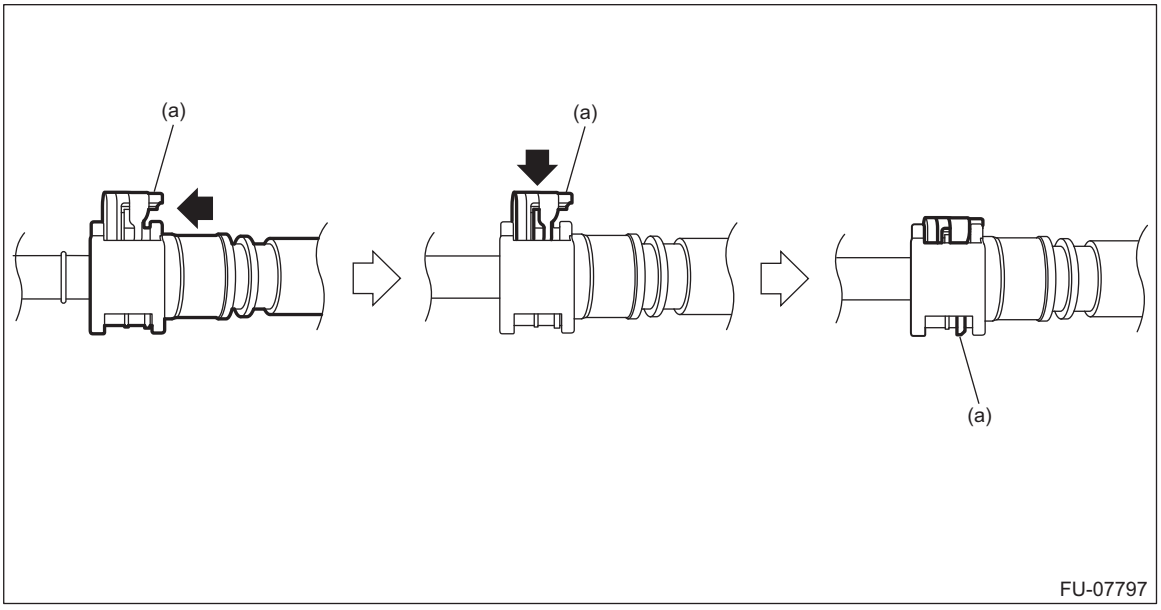
(1) Connect the evaporation hose to fuel pipe assembly.



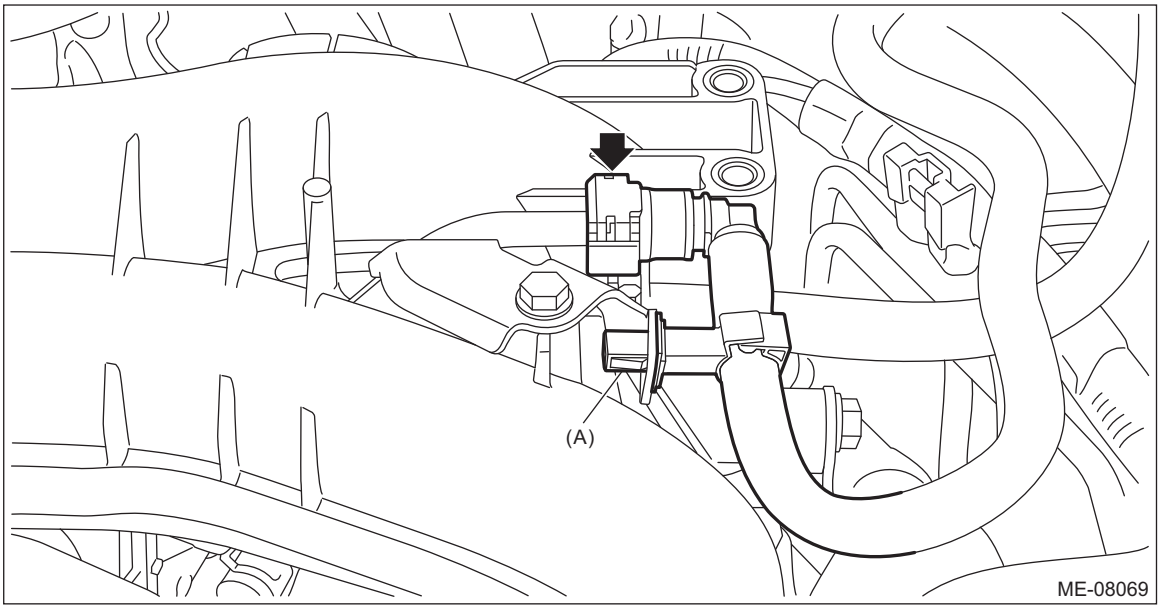
(2) Connect the quick connector on the fuel delivery tube to the fuel pipe assembly, and fix the fuel delivery tube using clip (A).

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

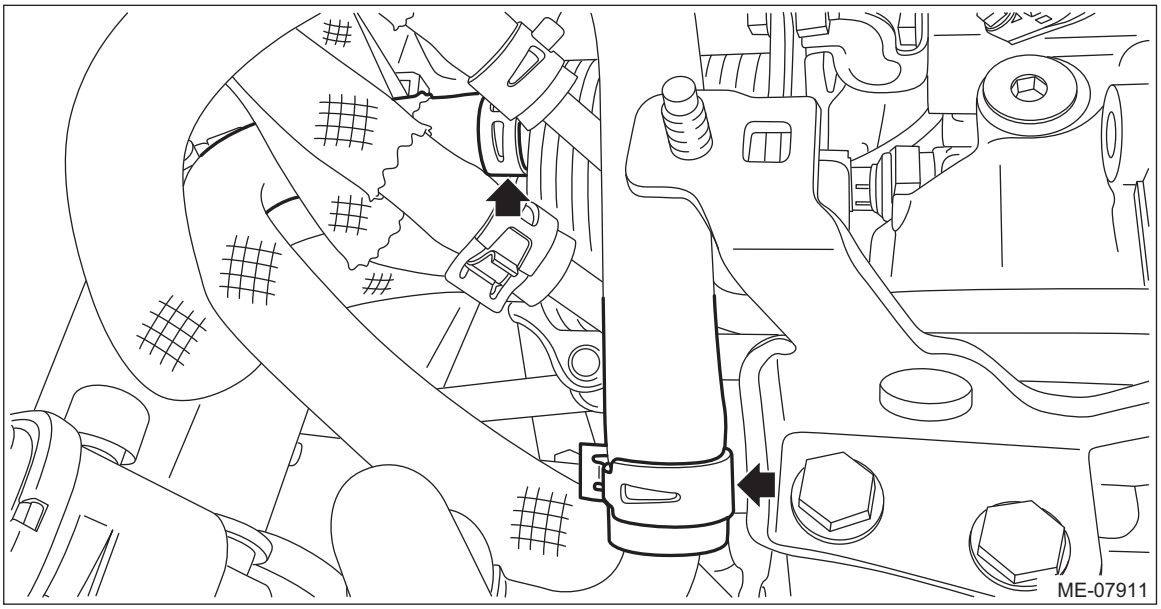
NOTE:
Connect the quick connector as shown in the figure.



(a) Slider

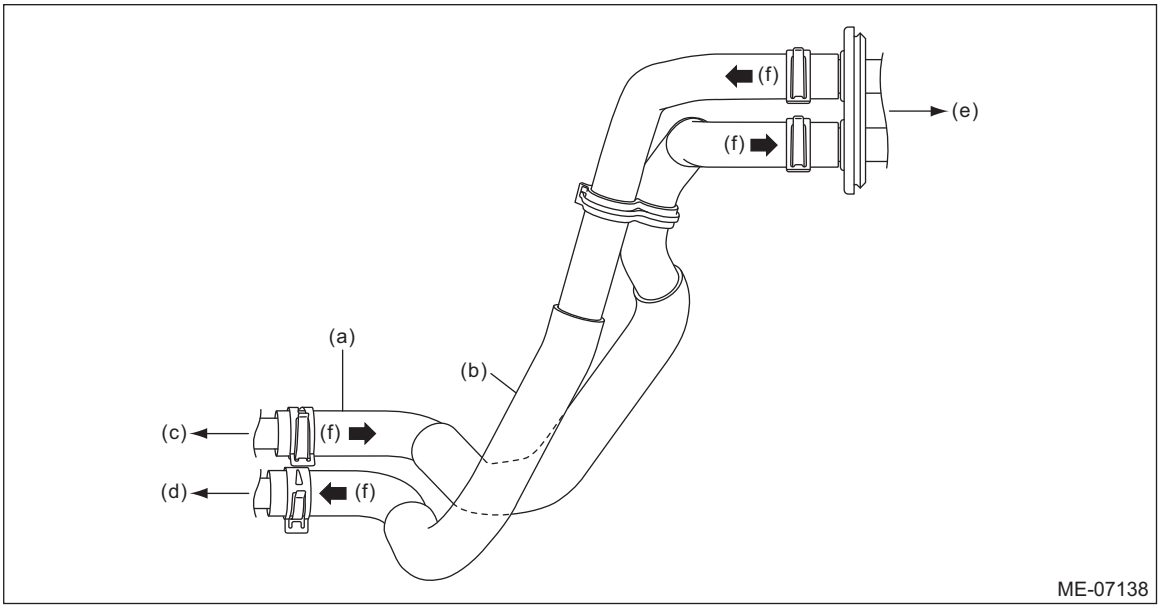


23) Connect the engine coolant inlet hose and engine coolant outlet hose to the CVTF cooler (with warmer feature) and EGR cooler. (CVT model)

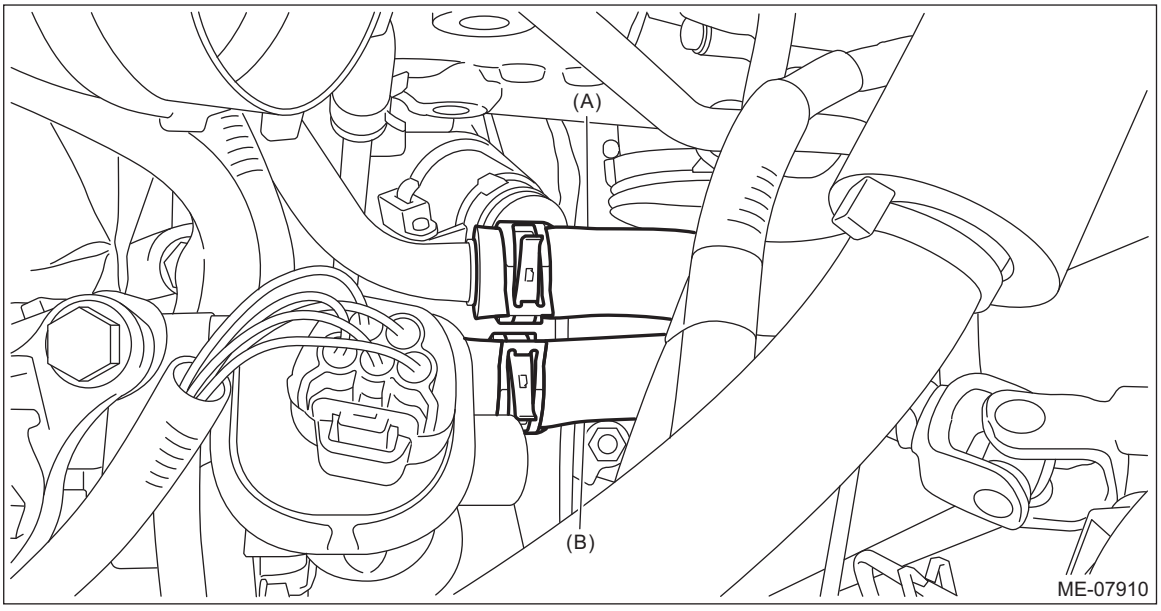


24) Connect the heater inlet hose (A) to the water pipe assembly, and connect the heater outlet hose (B) to the water pipe LH.

NOTE:
Be careful not to mix up the heater inlet hose and the heater outlet hose when connecting them.

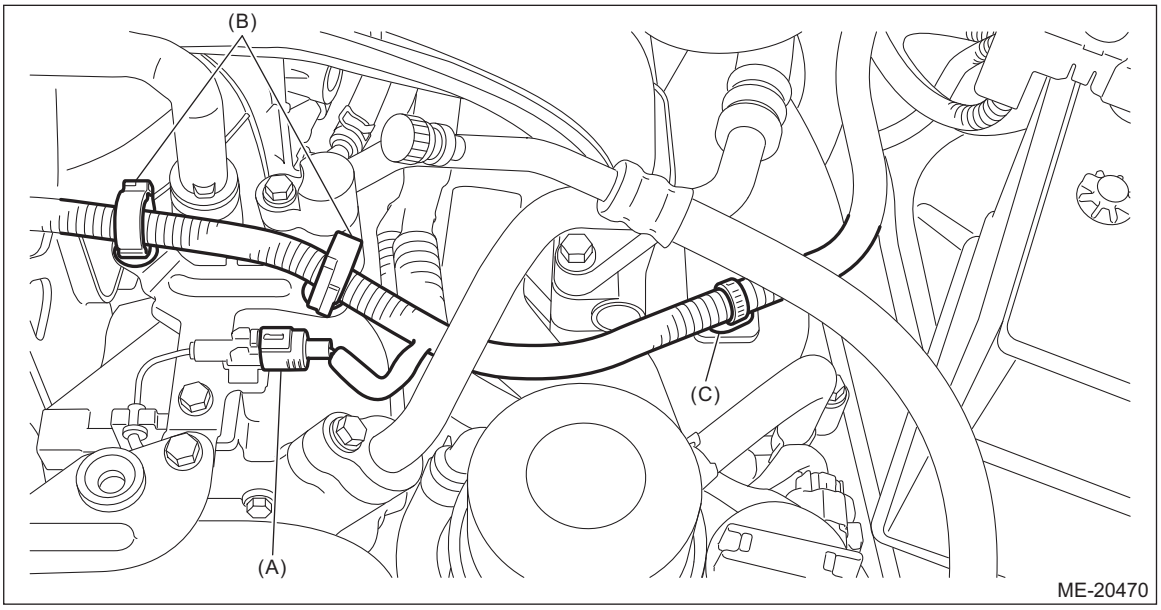


(a)	Heater inlet hose	(c)	To water pipe ASSY	(e)	To heater core ASSY
(b)	Heater outlet hose	(d)	To water pipe LH	(f)	Engine coolant flow



25) Connect the hose - pressure suction and the hose - pressure discharge to the A/C compressor. <Ref. to AC-67, INSTALLATION, Hose and Pipe.>
26) Set the generator cord, and fix the generator cord to the fuel pipe protector using clip (C).

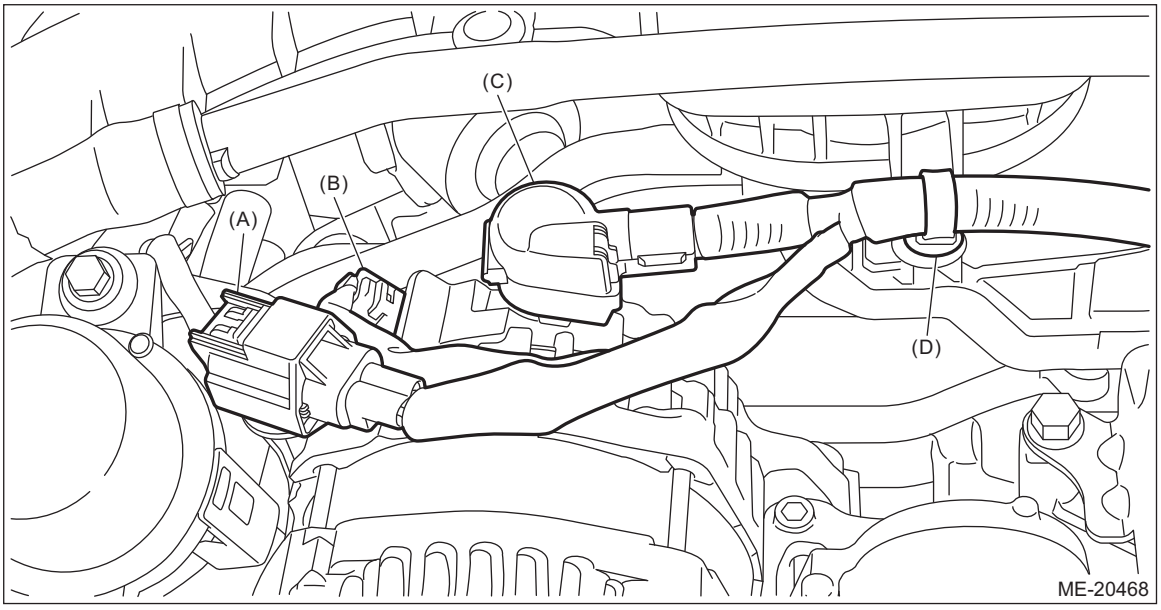
27) Install the generator cord to clip (B), and connect the connector (A) to A/C compressor.



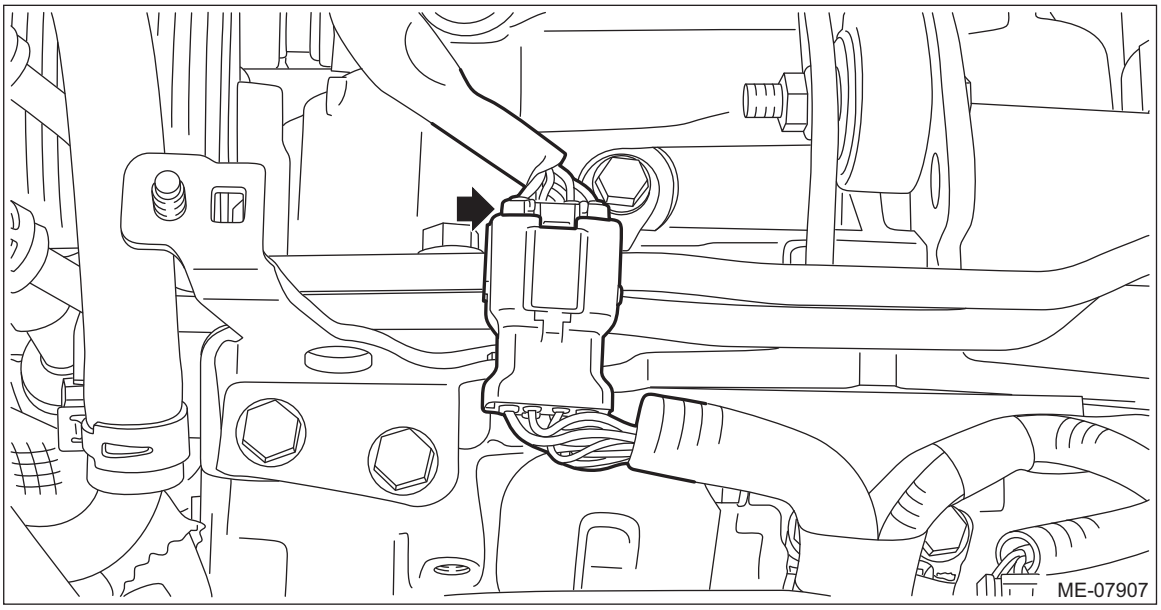
28) Using clip (D), fix the generator cord to the generator cord stay, and connect the connector (B) and the terminal (C) to the generator.

Tightening torque:
15.5 N·m (1.6 kgf-m, 11.4 ft-lb)

29) Connect the connector (A) to the brake vacuum pump.



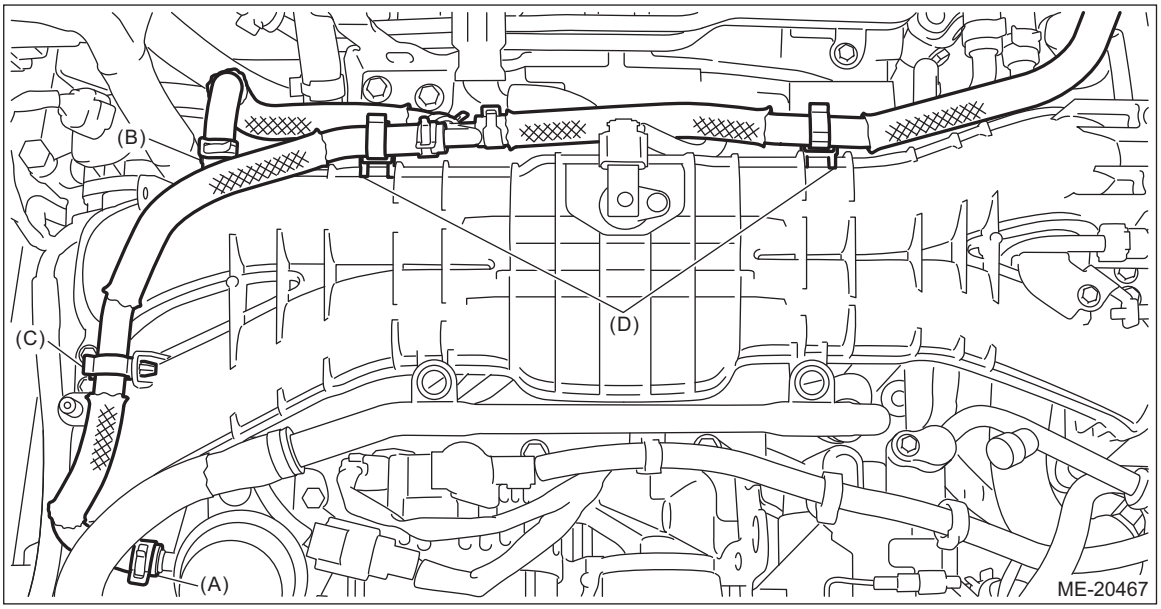
30) Connect the bulkhead harness connector to the engine wiring harness connector.



31) Install the brake booster vacuum hose to the clip (D).

NOTE:
If the clip is removed from the intake manifold, install the clip to the position of alignment mark ▼ of intake manifold.

32) Connect sections (A) and (B) of the brake booster vacuum hose to the brake vacuum pump and intake manifold, and install the brake booster vacuum hose to the clip (C).



33) Install the radiator. <Ref. to CO(w/o STI)-41, INSTALLATION, Radiator.>
34) Install the intake duct No. 1 and intake duct No. 2. <Ref. to IN(w/o STI)-36, INTAKE DUCT NO. 1, INSTALLATION, Intake Duct.> <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
35) Install the ECM. <Ref. to FU(w/o STI)-126, INSTALLATION, Engine Control Module (ECM).>
36) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
37) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
38) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
39) Charge the A/C system with refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
40) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

41) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
42) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
43) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
44) Close the front hood.

C: INSPECTION

1) Check that pipes, hoses, connectors and clamps are installed firmly.
2) Check the engine coolant is at specified level.
3) Start the engine and check for exhaust gas, engine coolant, leaks of fuel, etc. Also check for noise and vibrations.

10.Engine Mounting

A: REMOVAL

1) Remove the front crossmember. <Ref. to FS-20, REMOVAL, Front Crossmember.>
2) Remove the engine mounting from the engine.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: INSPECTION

Make sure that there are no cracks or other damages.

11.Preparation for Overhaul

A: PROCEDURE

1) After engine has been removed from the vehicle, mount the engine to the engine stand while being careful of the following.

(1) When mounting the engine stand, follow the instructions of engine stand used.

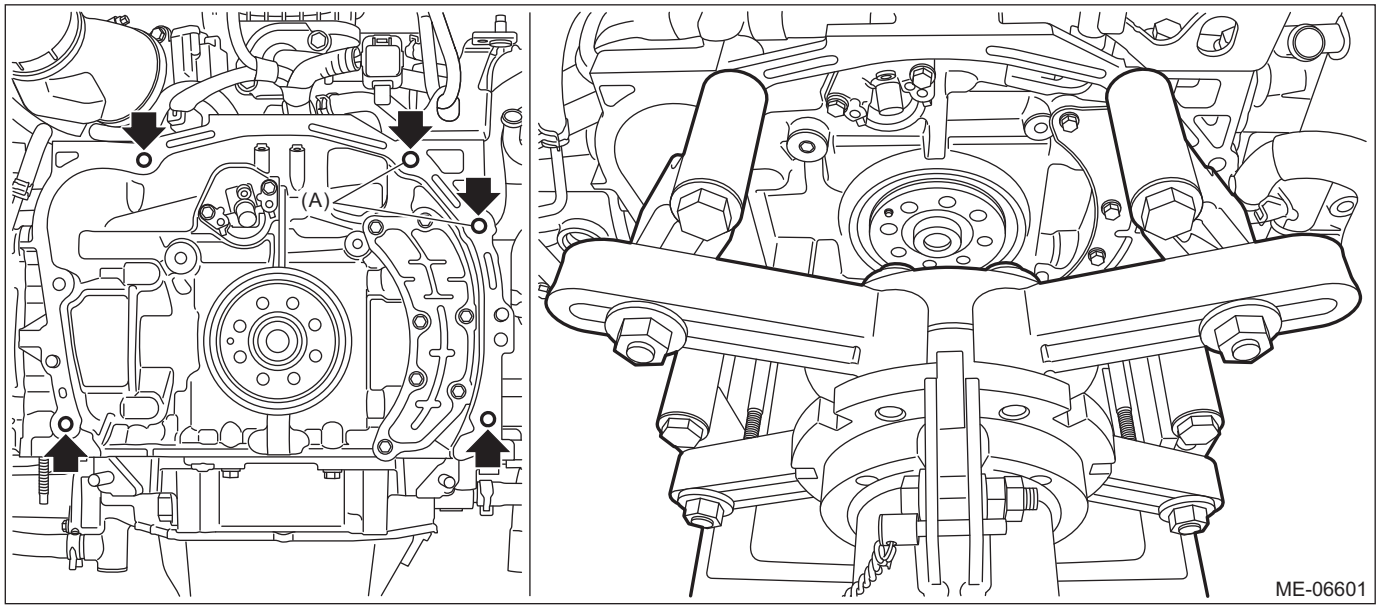
(2) When disassembling the cylinder block, remove the following parts first, and then mount the engine stand.

1. Remove the crankshaft position sensor plate with drive plate. (CVT model) <Ref. to CVT(TR690)-140, REMOVAL, Drive Plate.>
2. Remove the clutch disc and cover. (MT model) <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
3. Remove the crankshaft position sensor plate with flywheel. (MT model) <Ref. to CL-15, REMOVAL, Flywheel.>

(3) Mount the engine stand using the points shown by the arrows in the figure.

CAUTION:
Be sure to mount the engine stand at four points. Otherwise, the engine damage may occur.

NOTE:
- For points (A), either of them can be used for mounting the engine stand.
- The engine stand shown in the figure is just for reference.



2) In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process. Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

12.V-belt

A: REMOVAL

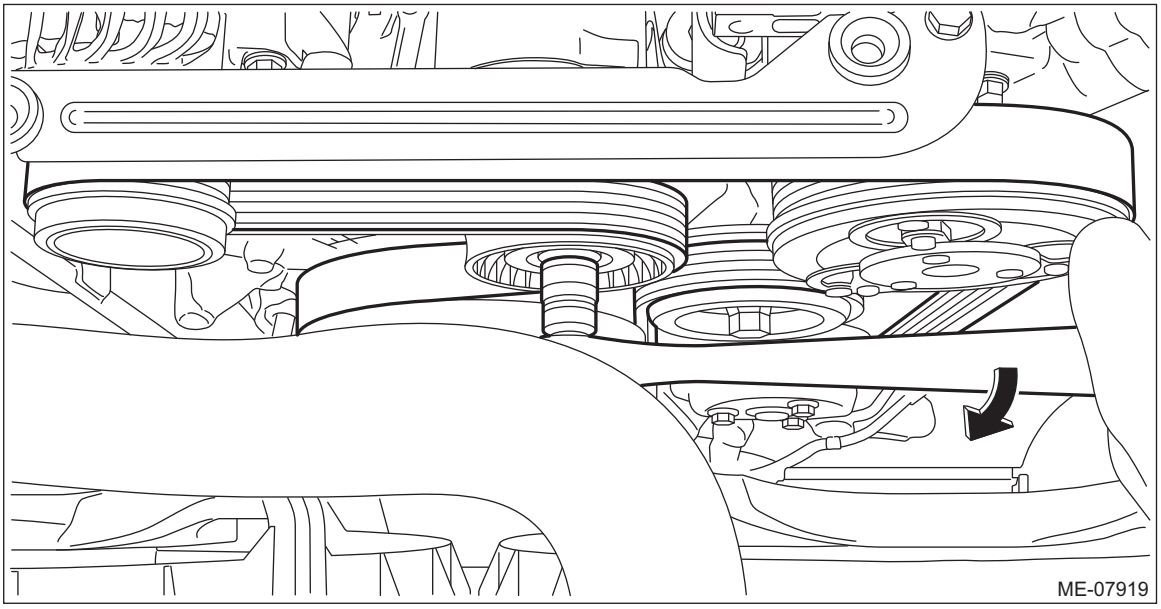
NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.

1. V-BELT

1) When working on the vehicle

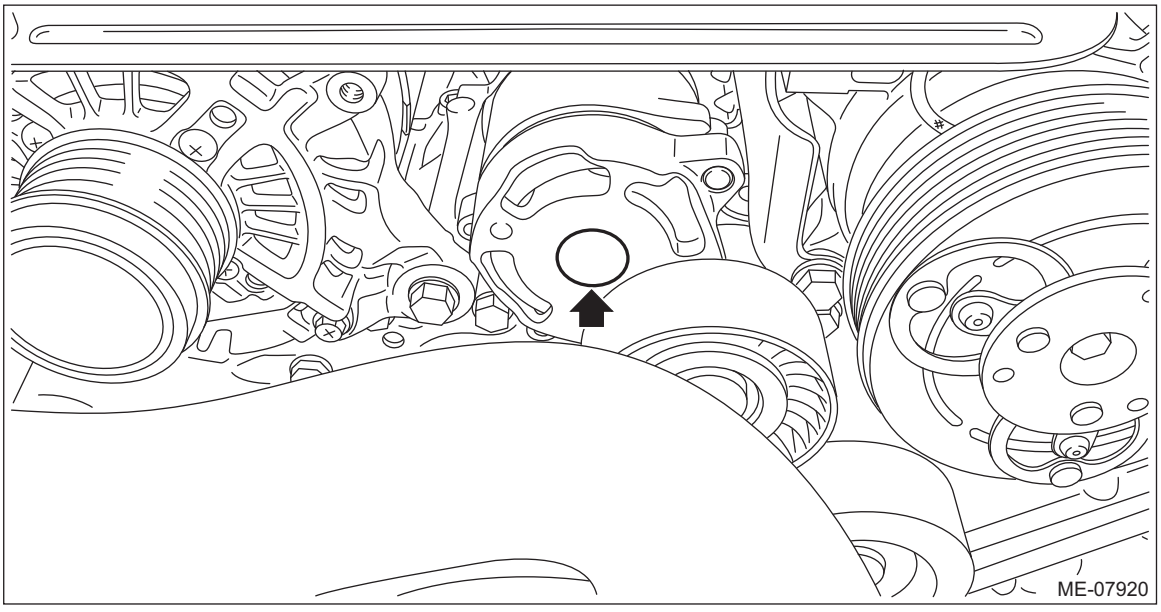
NOTE:
When working on the vehicle, perform the following steps also.
(1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
(2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>

2) Attach the tool to the V-belt tensioner assembly, and rotate the tool clockwise to loosen and remove the V-belt.



2. V-BELT TENSIONER ASSY

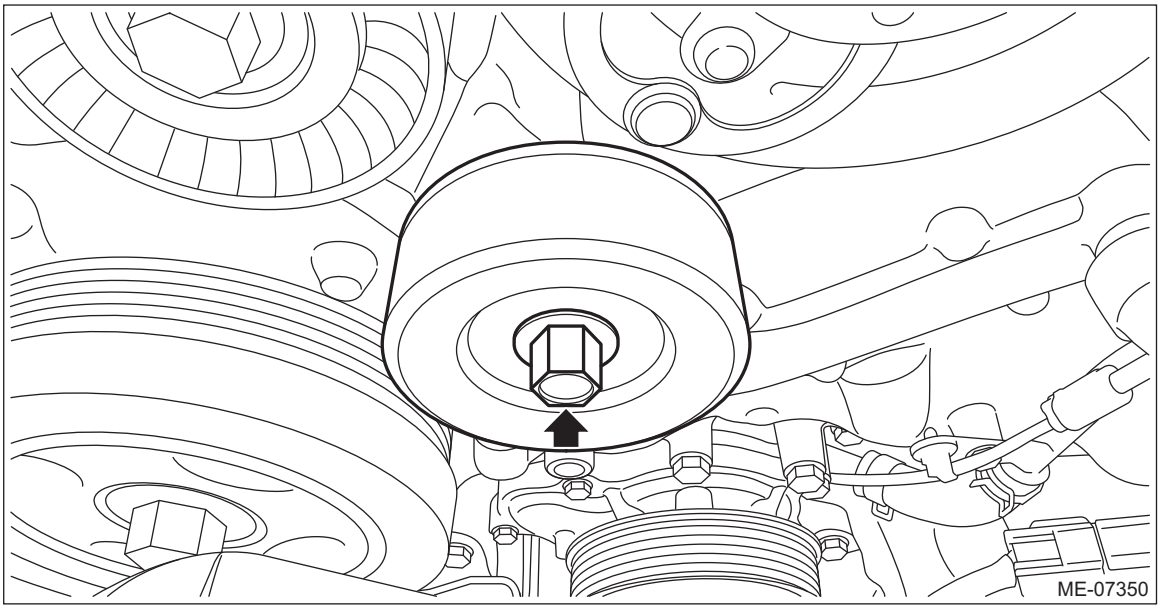
1) Remove the V-belts. <Ref. to ME(w/o STI)-77, V-BELT, REMOVAL, V-belt.>
2) Remove the cap from V-belt tensioner assembly.



3) Remove the bolt securing the V-belt tensioner assembly to the generator bracket, and remove the V-belt tensioner assembly.

3. IDLER PULLEY

1) Remove the V-belts. <Ref. to ME(w/o STI)-77, V-BELT, REMOVAL, V-belt.>
2) Remove the bolts which secure the idler pulley to the chain cover, and remove the idler pulley.



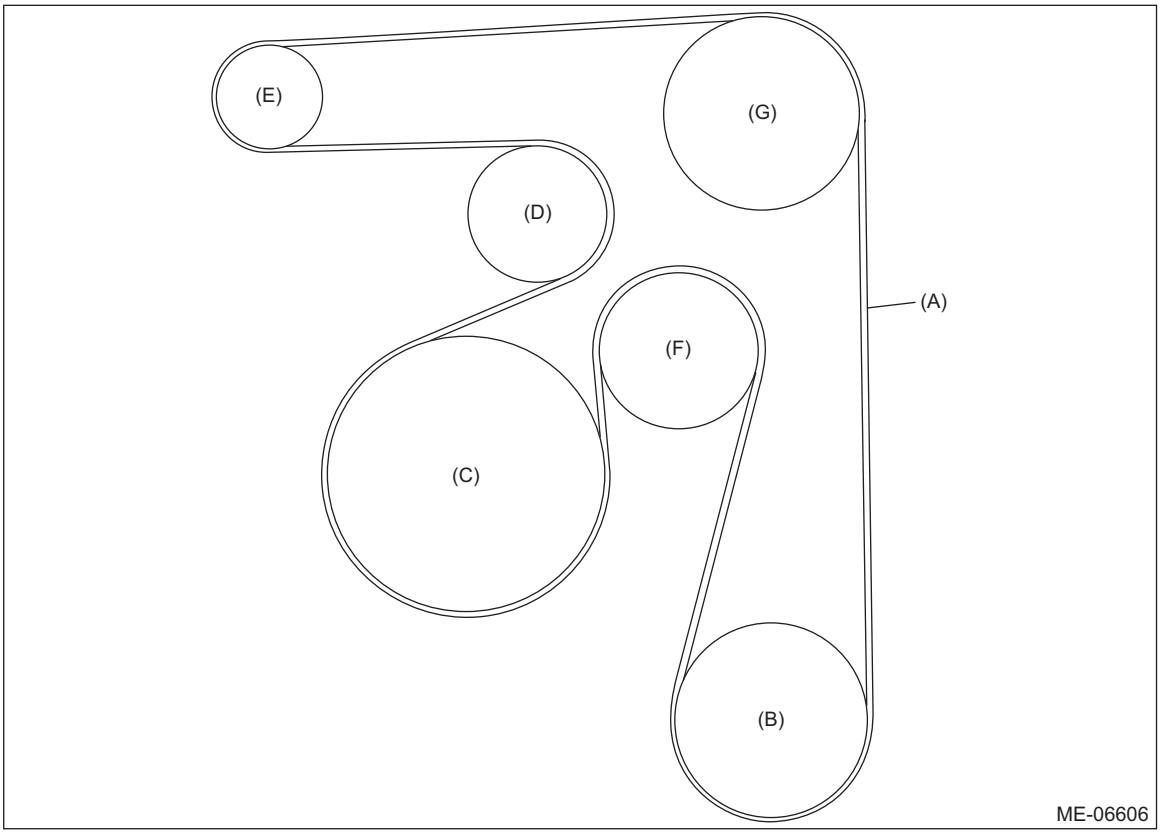
B: INSTALLATION

1. V-BELT

Install in the reverse order of removal.

CAUTION:
- **When reusing the V-belt, wipe off dust and water with cloth.**
- **Do not use the V-belt if there is any oil, grease or coolant on the belt.**
- **Be careful not to rub the V-belt end surface with bare hands; exposed core may cause injury.**

- **Wipe off any dust, oil and water on the groove of each pulley with cloth.**

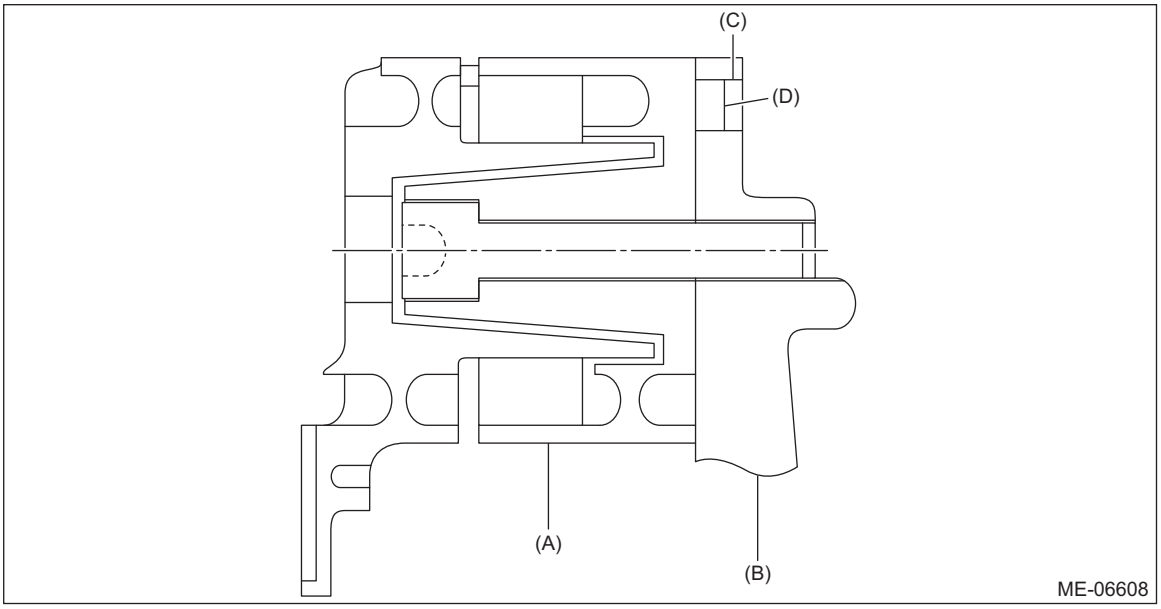


(A) V-belt
(B) Water pump pulley
(C) Crank pulley
(D) V-belt tensioner ASSY
(E) Generator pulley
(F) Idler pulley
(G) A/C compressor pulley

2. V-BELT TENSIONER ASSY

Install in the reverse order of removal.

NOTE:
When installing the V-belt tensioner assembly, insert the protrusion of V-belt tensioner assembly into the hole for preventing rotation at the generator bracket.



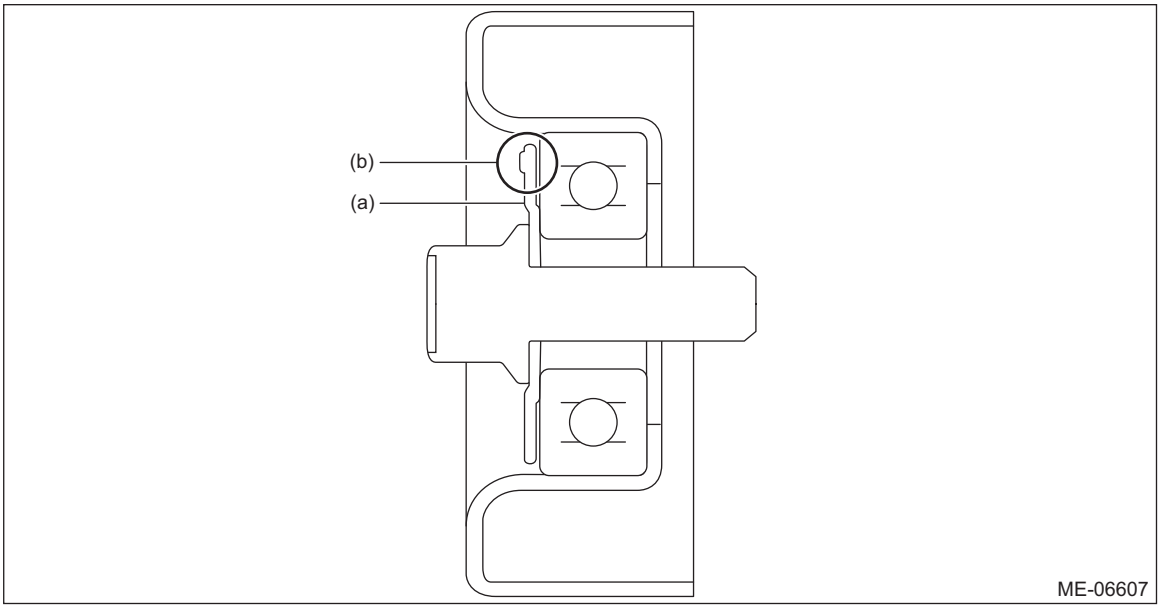
(A) V-belt tensioner ASSY
(B) Generator bracket
(C) Hole to prevent rotation
(D) Protrusion portion

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3. IDLER PULLEY

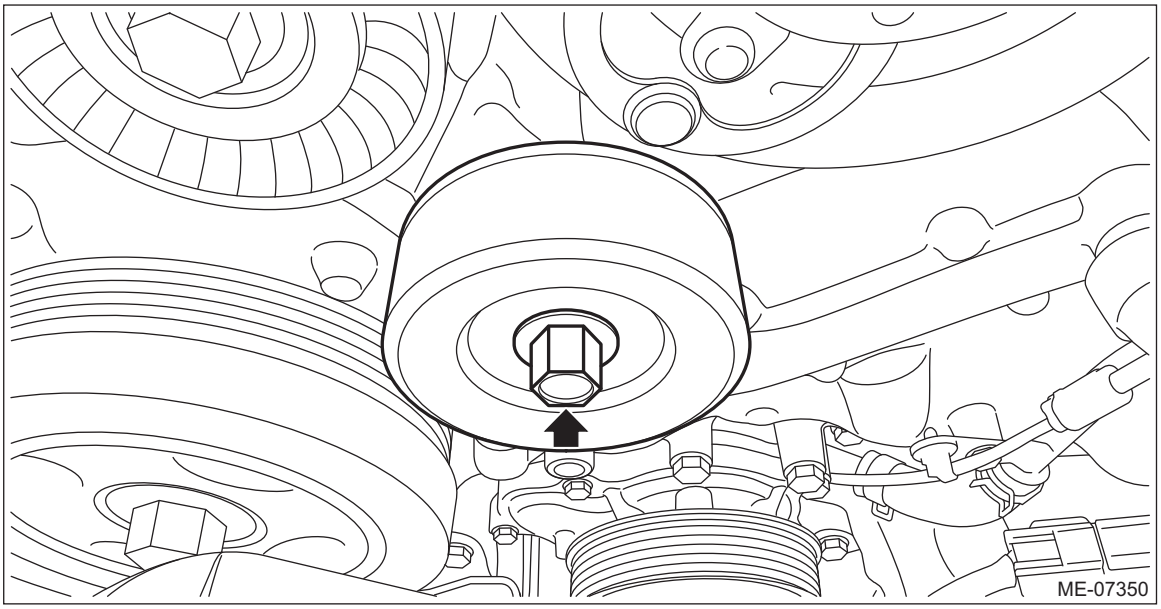
Install in the reverse order of removal.

NOTE:
When installing the idler pulley, be careful of the idler pulley cover direction.



(a) Idler pulley cover (b) Protrusion (3 places)

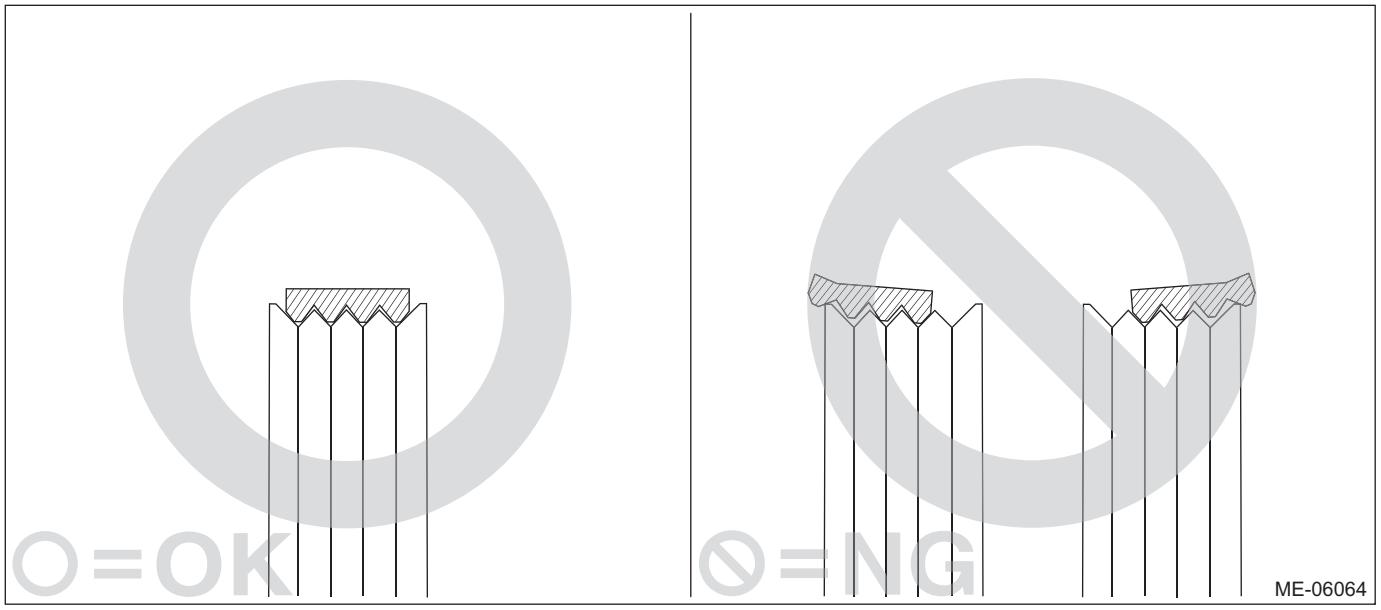
Tightening torque:
36 N·m (3.7 kgf-m, 26.6 ft-lb)



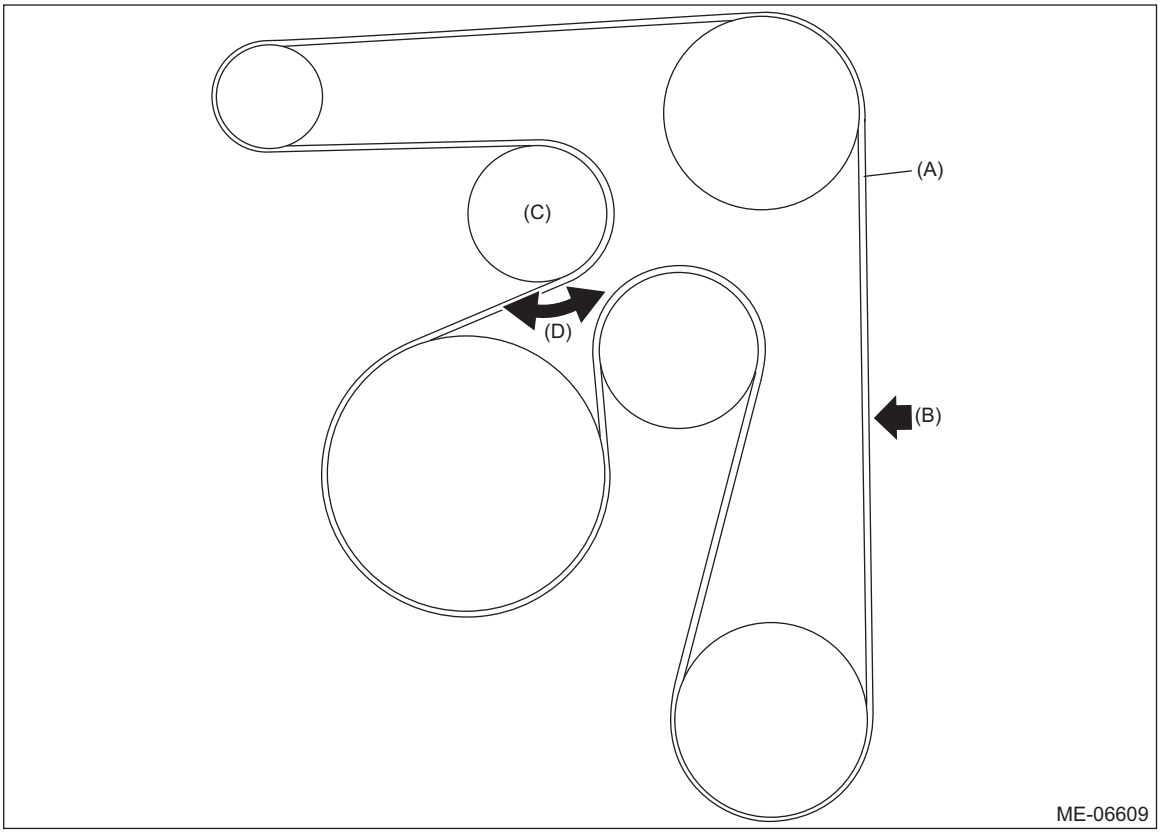
C: INSPECTION

1) Check the V-belt for cracks, tear or wear.
2) Check the V-belt tensioner assembly and idler pulley for deformation, cracks or other damages.

3) Check that the V-belt ribs are securely placed on the rib grooves for each pulley.



4) Check that the V-belt tensioner assembly (C) moves in the direction of arrow (D), when the V-belt (A) is pushed and released by the area indicated by the arrow (B).



5) Start the engine and confirm that the V-belt rotates smoothly and no abnormal noise is emitted.

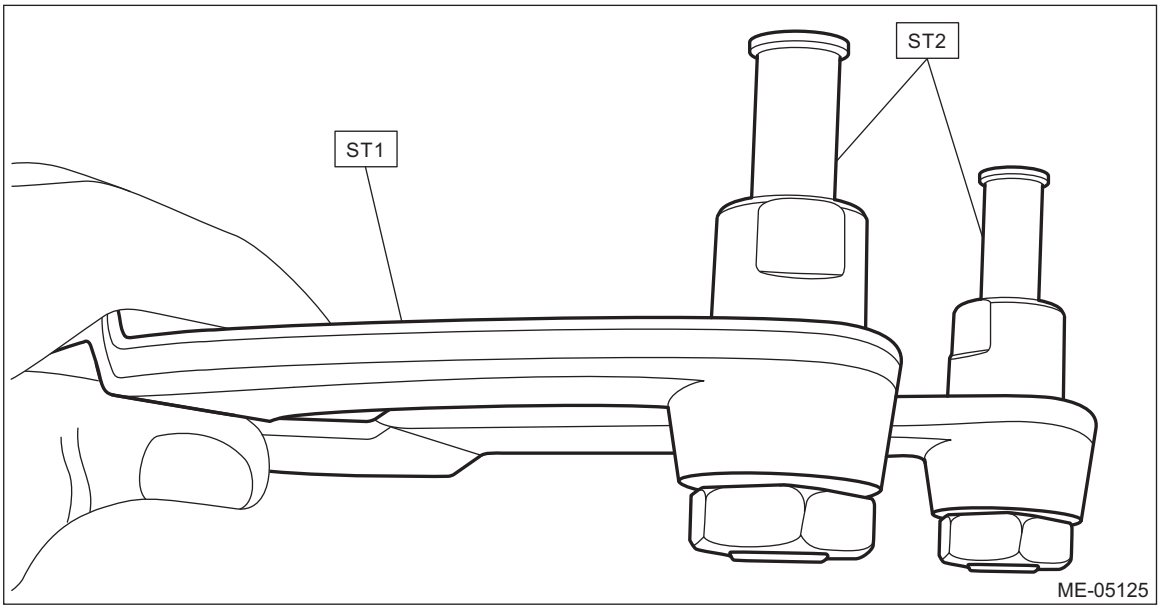
13.Crank Pulley

A: REMOVAL

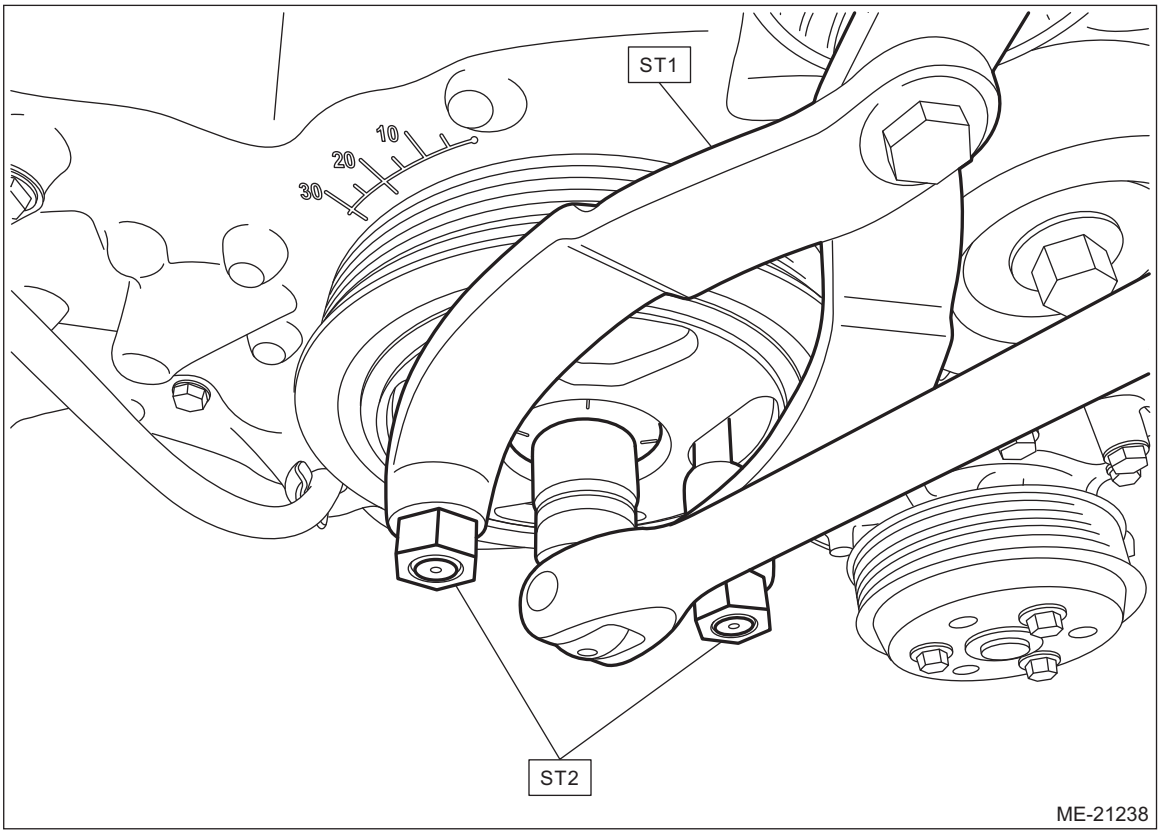
NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Remove the radiator main fan & fan motor assembly and radiator sub fan & fan motor assembly. <Ref. to CO(w/o STI)-47, REMOVAL, Radiator Main Fan and Fan Motor.> <Ref. to CO(w/o STI)-50, REMOVAL, Radiator Sub Fan and Fan Motor.>
2) Remove the V-belts. <Ref. to ME(w/o STI)-77, V-BELT, REMOVAL, V-belt.>
3) Use the ST to lock the crank pulley, and remove the crank pulley bolt.

NOTE:
To prevent damaging ST1, attach the ST2 onto the ST1 as shown.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA000 PULLEY WRENCH PIN SET

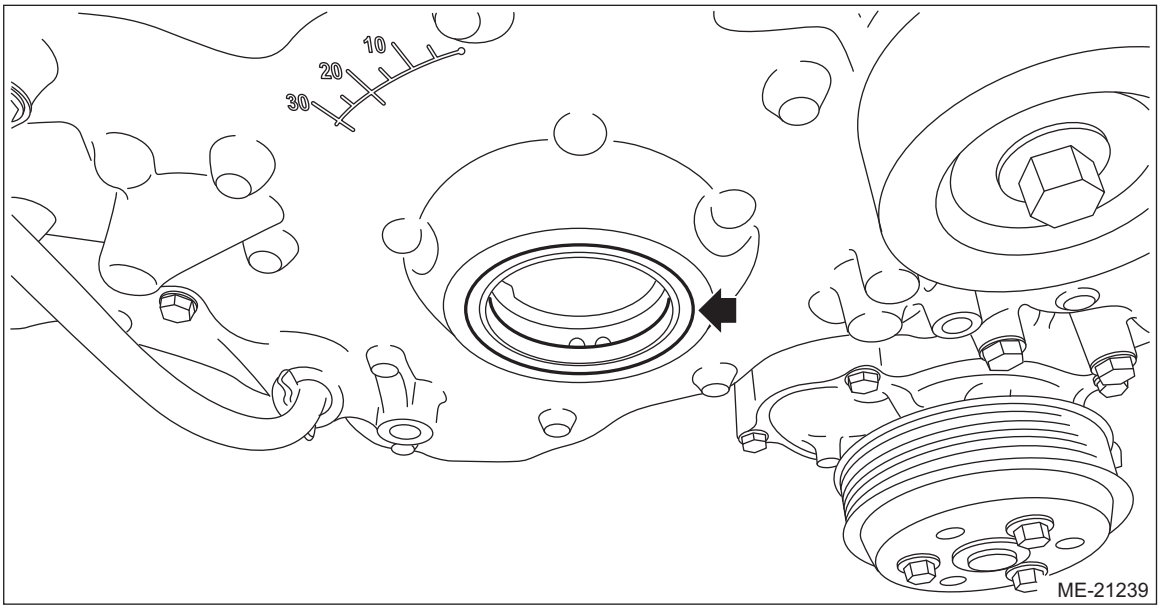


ST1 18355AA000 PULLEY WRENCH
ST2 18334AA000 PULLEY WRENCH PIN SET



4) Remove the crank pulley.

5) Remove the front oil seal from the chain cover.



B: INSTALLATION

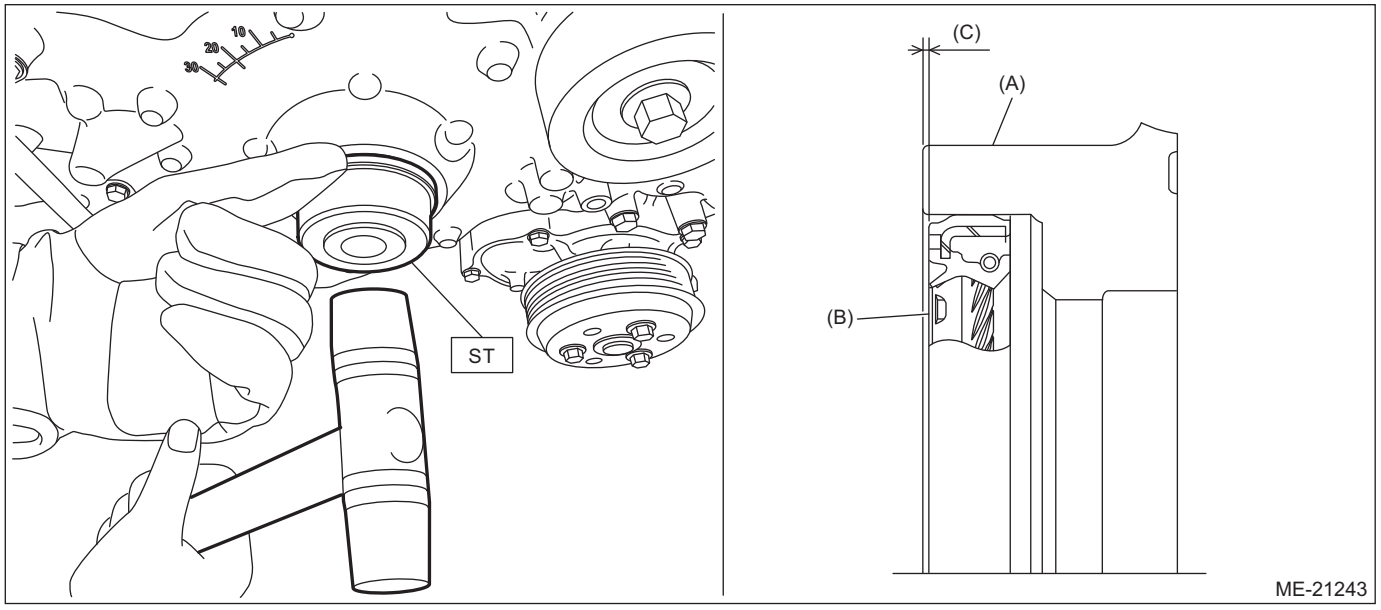
1) Degrease the press-fit section for the chain cover front oil seal, and install the front oil seal to the chain cover using ST.

CAUTION:
Do not apply fluid such as engine oil to the front oil seal and the chain cover; otherwise engine oil leakage may occur.

NOTE:
- Use a new front oil seal.
- When tapping the front oil seal in on the vehicle, protect the radiator fin with cardboards etc. so as not to damage the radiator fin by the plastic hammer.

ST 41399FG020 SPECIAL TOOL B

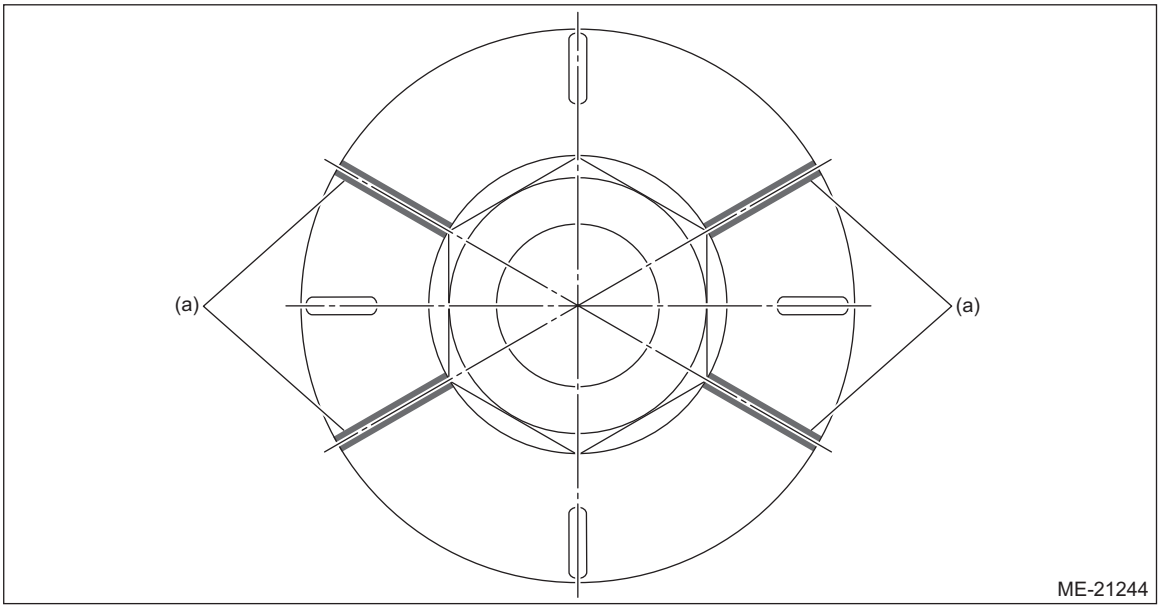
Front oil seal press-fit position:
1^{+0}_{-1} mm ($0.0394^{+0}_{-0.0394}$ in) position from chain cover end face



(A) Chain cover
(B) Oil seal
(C) Front oil seal press-fit position (1^{+0}_{-1} mm ($0.0394^{+0}_{-0.0394}$ in) position from chain cover end face)

2) Clean the crankshaft thread using compressed air.
3) Apply engine oil to the crank pulley bolt seat and thread.
4) Install the crank pulley.
   (1) Use a marker to add lines at the portion of the crank pulley bolt head that has no indented line, as shown in the figure.

NOTE:
- Four lines are indented by 90° on the crank pulley bolt head.
- To minimize an angular error, use a ruler, etc. to draw a straight line.

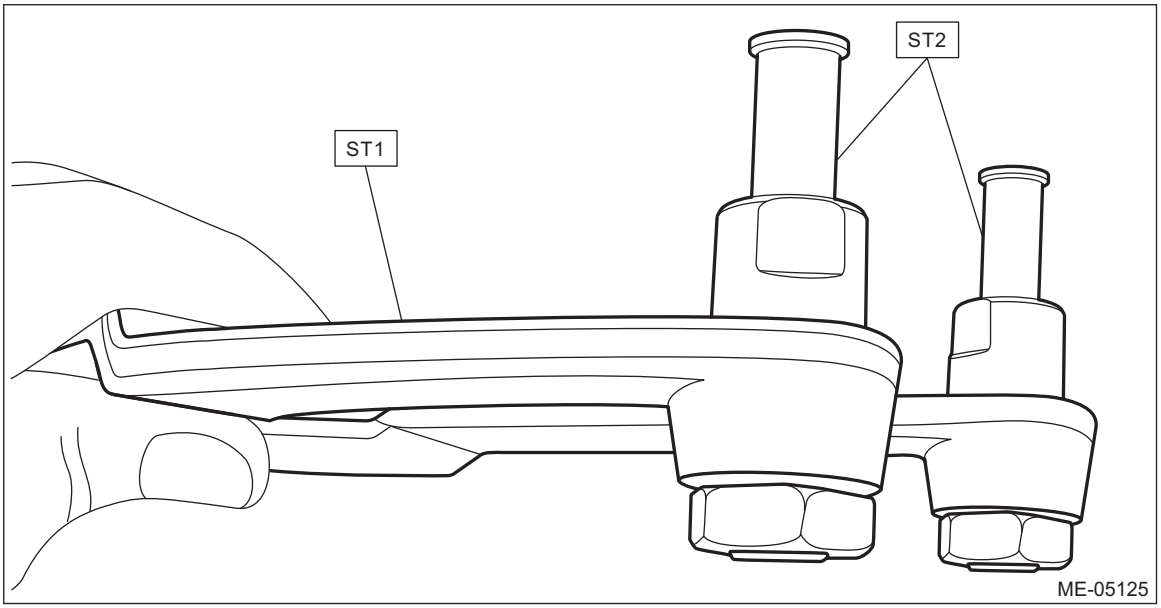


(a) Additional line

   (2) Set the crank pulley to the chain cover.

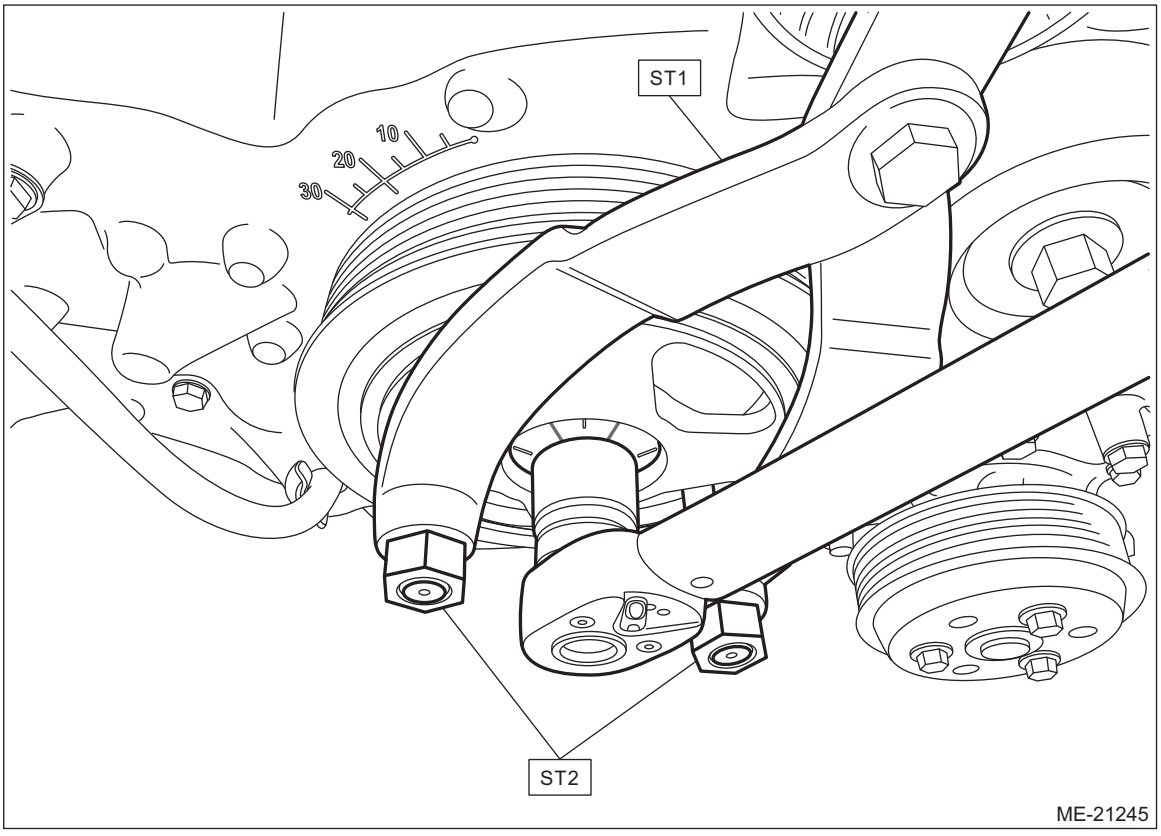
(3) Use the ST to lock the crank pulley, and temporarily tighten the crank pulley bolt.

NOTE:
To prevent damaging ST1, attach the ST2 onto the ST1 as shown.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA000 PULLEY WRENCH PIN SET



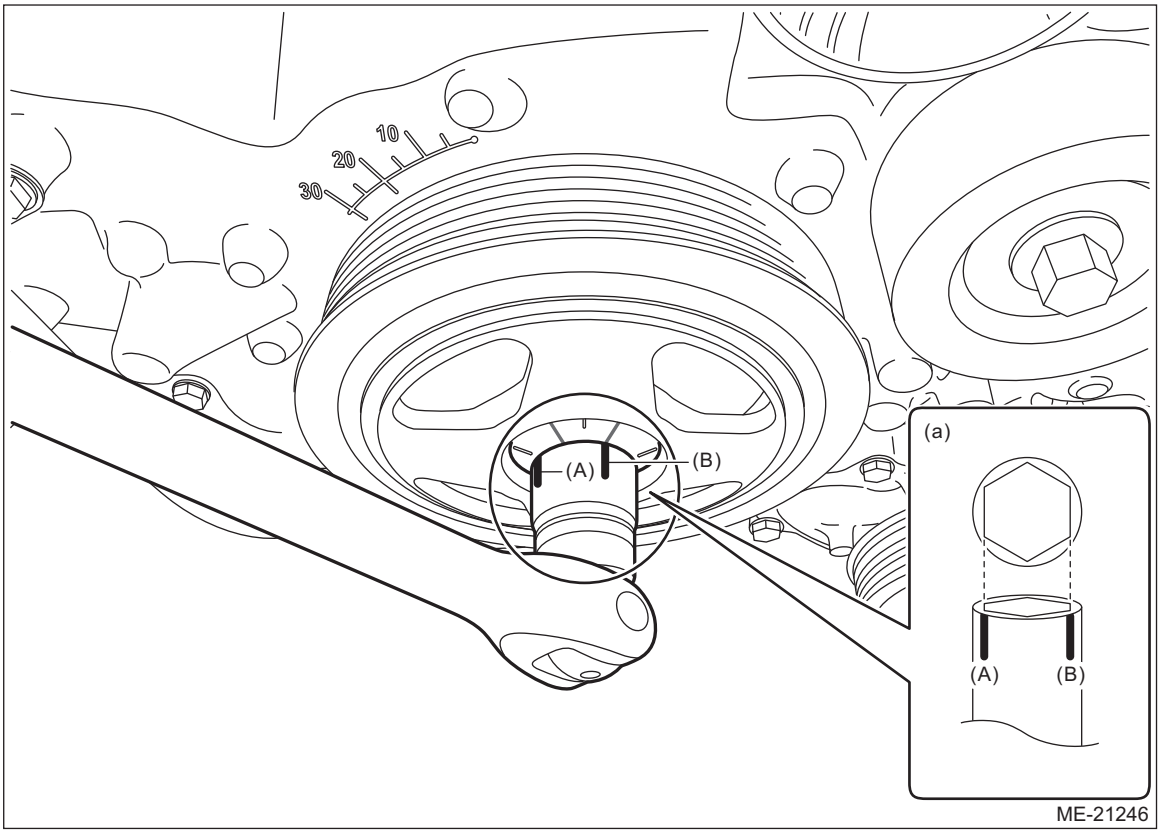
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA000 PULLEY WRENCH PIN SET

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)



(4) Draw reference lines (A) and (B) using a marker to set the socket to the crank pulley bolt as shown in the figure.

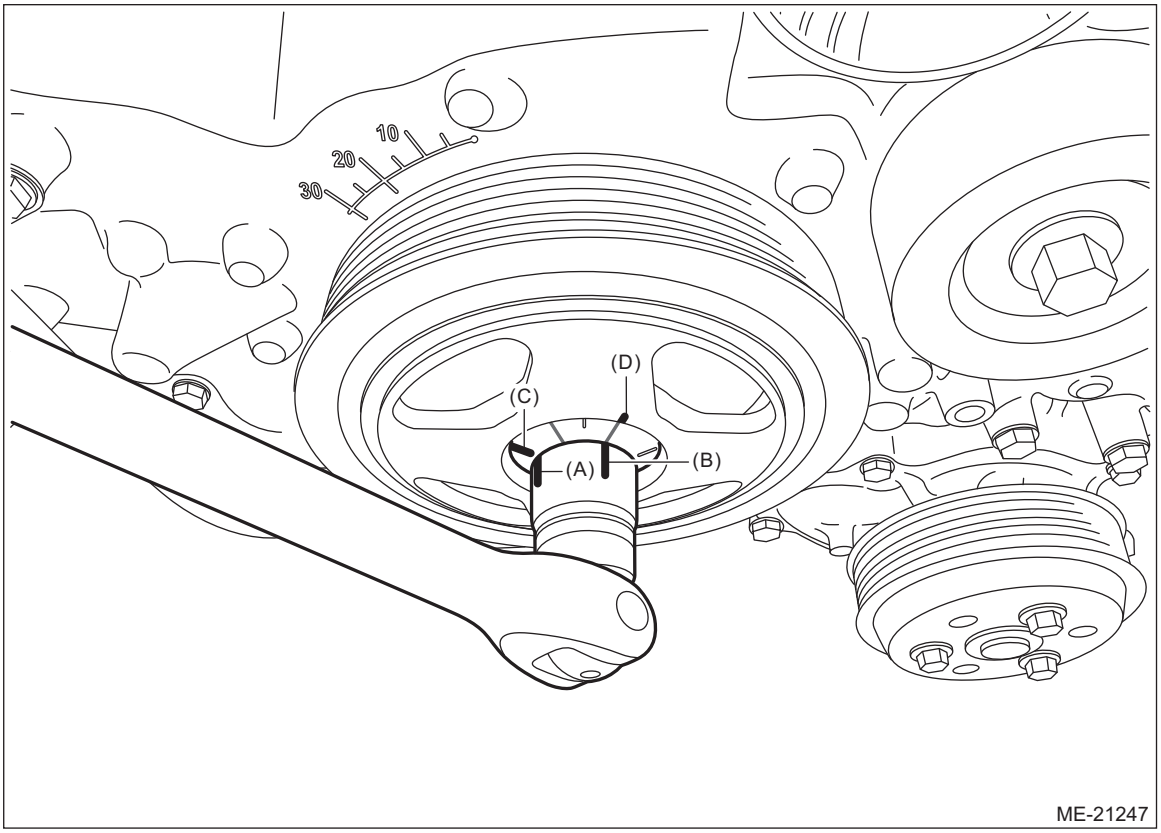
NOTE:
Use a 6-point socket to tighten the crank pulley bolt to avoid the socket being broken.



(a) 6-point socket

(5) As shown in the figure, use a marker with a different color than in step (1) to draw a reference line (C) on the crank pulley bolt, according to the reference line (A) and the indented line or additional line on the crank pulley bolt head. Then draw a end line (D) on the crank pulley, using the reference line (B) and the indented line or additional line on the crank pulley bolt head as a reference.

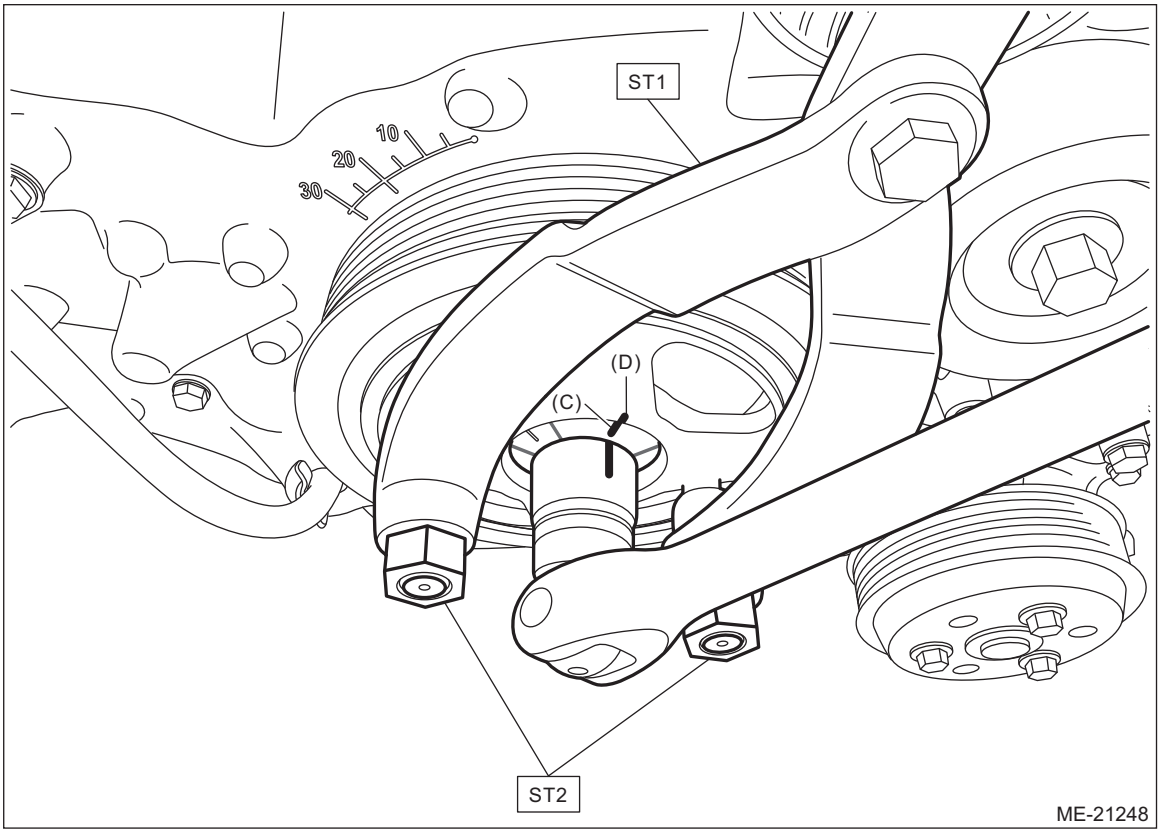
NOTE:
Reference line (C) is drawn for prevention of misidentification and better visibility.



(6) Use the ST to lock the crank pulley, and tighten the crank pulley bolt to the angle where reference line (C) and end line (D) are aligned.

NOTE:
It should be approx. 120° when reference line (C) and end line (D) are aligned.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA000 PULLEY WRENCH PIN SET

Tightening angle:
120°±5°



5) Install the V-belts. <Ref. to ME(w/o STI)-78, V-BELT, INSTALLATION, V-belt.>
6) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Install the radiator main fan & fan motor assembly and radiator sub fan & fan motor assembly. <Ref. to CO(w/o STI)-47, INSTALLATION, Radiator Main Fan and Fan Motor.> <Ref. to CO(w/o STI)-50, INSTALLATION, Radiator Sub Fan and Fan Motor.>

C: INSPECTION

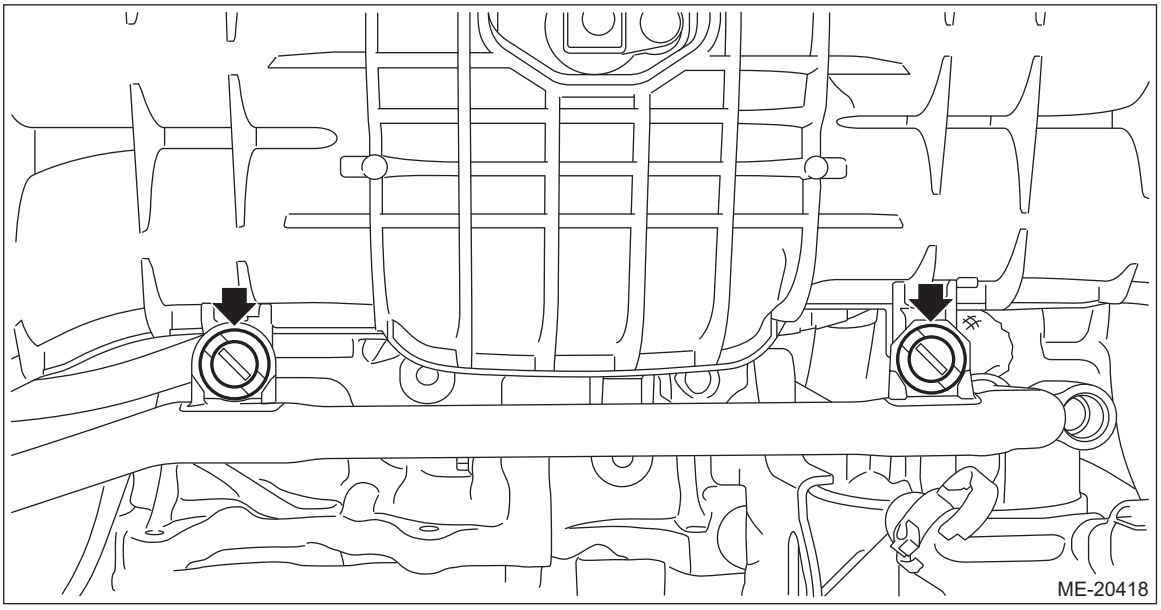
1) Check that the crank pulley has no deformation, cracks or other damages.
2) Inspect for oil leakage from the front oil seal. If there is an oil leak, replace the front oil seal with a new one. <Ref. to ME(w/o STI)-83, REMOVAL, Crank Pulley.> <Ref. to ME(w/o STI)-85, INSTALLATION, Crank Pulley.>

14.Chain Cover

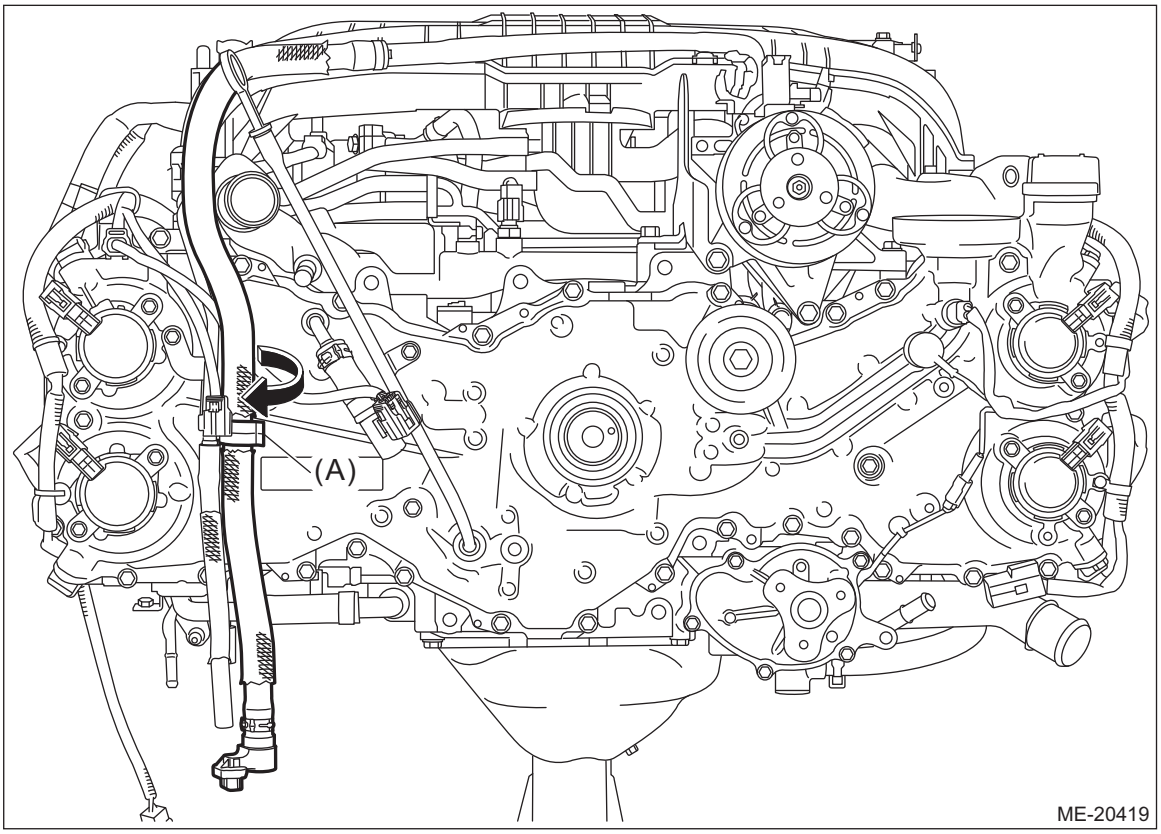
A: REMOVAL

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) When working on the vehicle

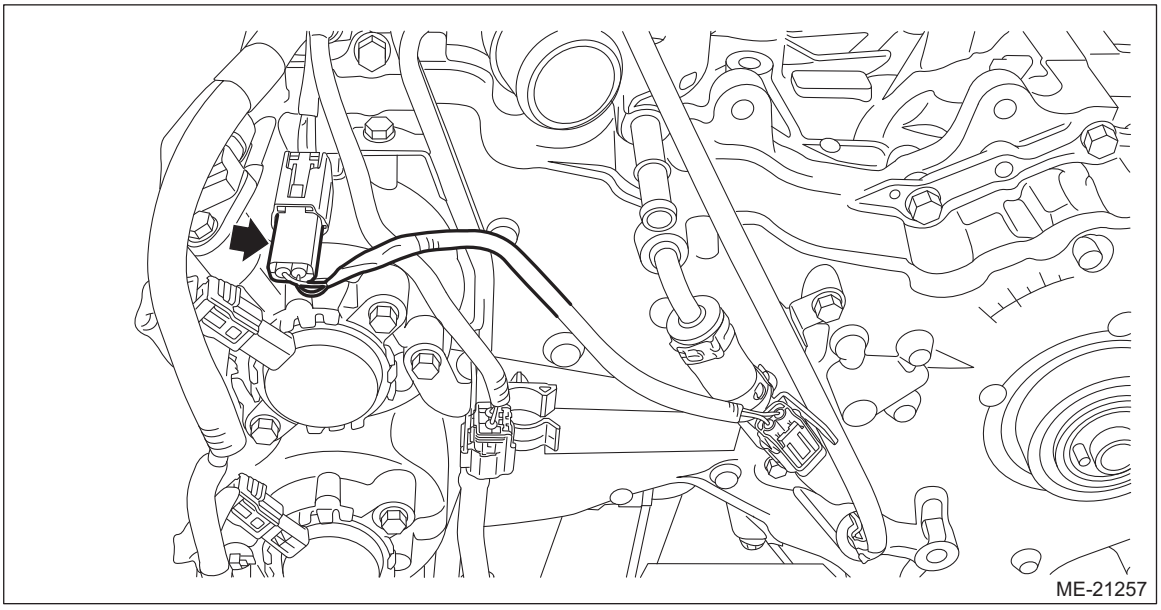
NOTE:
When working on the vehicle, perform the following steps also.
(1) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
(2) Remove the intake duct No. 1 and intake duct No. 2. <Ref. to IN(w/o STI)-27, INTAKE DUCT NO. 1, REMOVAL, Intake Duct.> <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
(3) Remove the radiator. <Ref. to CO(w/o STI)-38, REMOVAL, Radiator.>
(4) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
2) Drain the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
3) Remove the V-belts. <Ref. to ME(w/o STI)-77, V-BELT, REMOVAL, V-belt.>
4) Remove the generator. <Ref. to SC(w/o STI)-31, REMOVAL, Generator.>
5) Remove the water pump pulley. <Ref. to CO(w/o STI)-18, WATER PUMP, REMOVAL, Water Pump.>
6) Remove the crank pulley. <Ref. to ME(w/o STI)-83, REMOVAL, Crank Pulley.>
7) Remove the engine oil cooler. <Ref. to LU(w/o STI)-33, REMOVAL, Engine Oil Cooler.>
8) Remove the front engine oil cooler pipe assembly. <Ref. to LU(w/o STI)-35, FRONT ENGINE OIL COOLER PIPE, REMOVAL, Engine Oil Cooler Pipe.>
9) Remove the clip securing the PCV pipe to the intake manifold.



10) Remove the PCV pipe from the clip (A), and place the PCV pipe aside so that it does not interfere with the work.

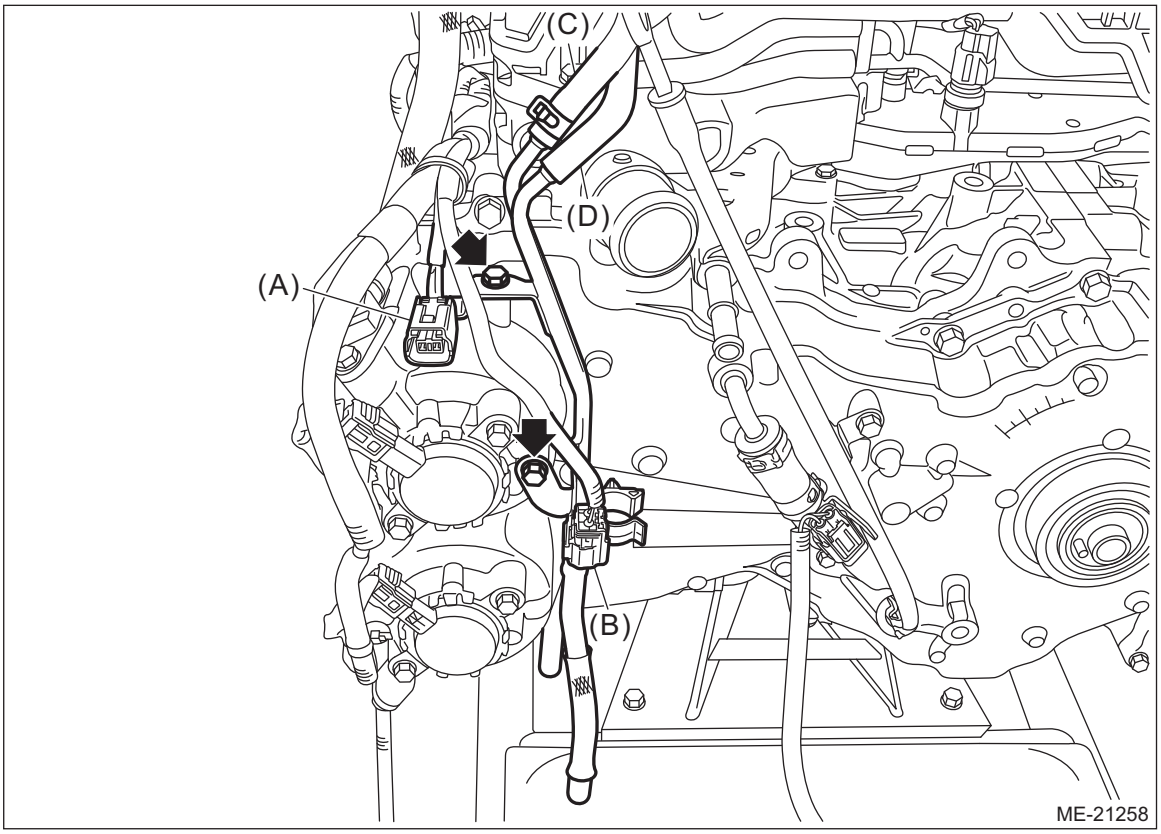


11) Disconnect the connector from the engine wiring harness.

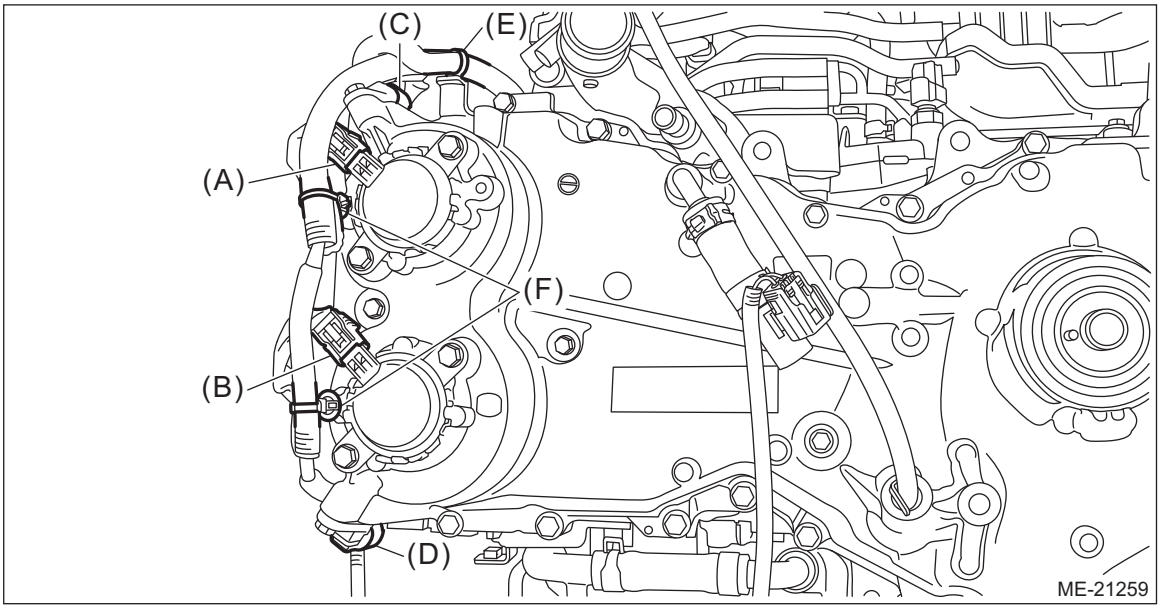


12) Remove the connector (A) and connector (B) from the vacuum pipe assembly.

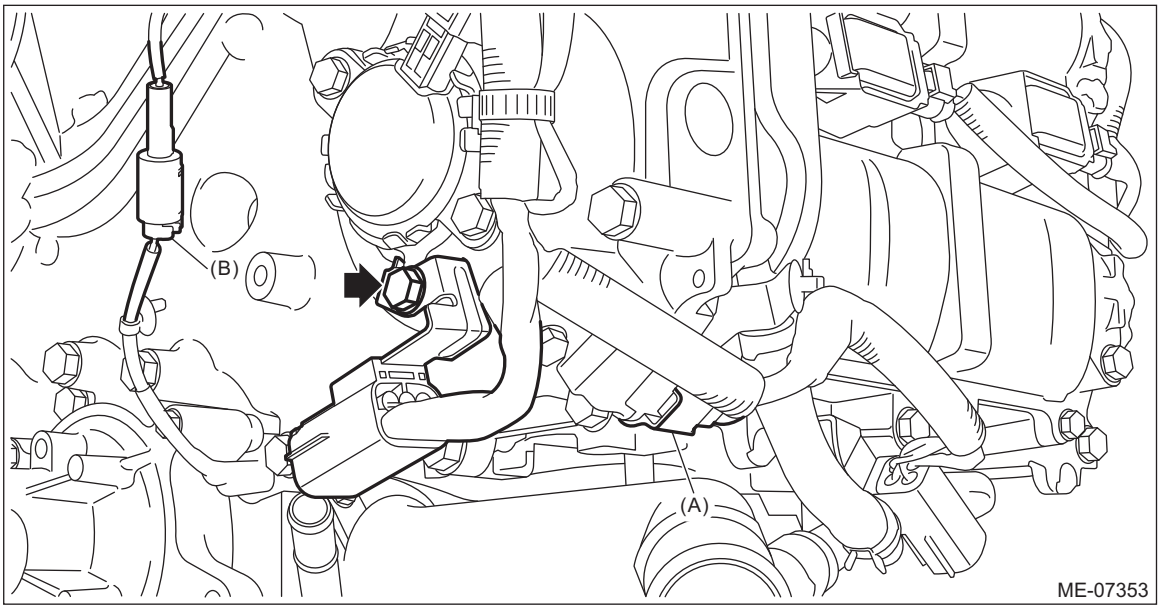
13) Disconnect the vacuum control hose (C) and vacuum hose (D) from the vacuum pipe assembly, and remove the vacuum pipe assembly from the chain cover.



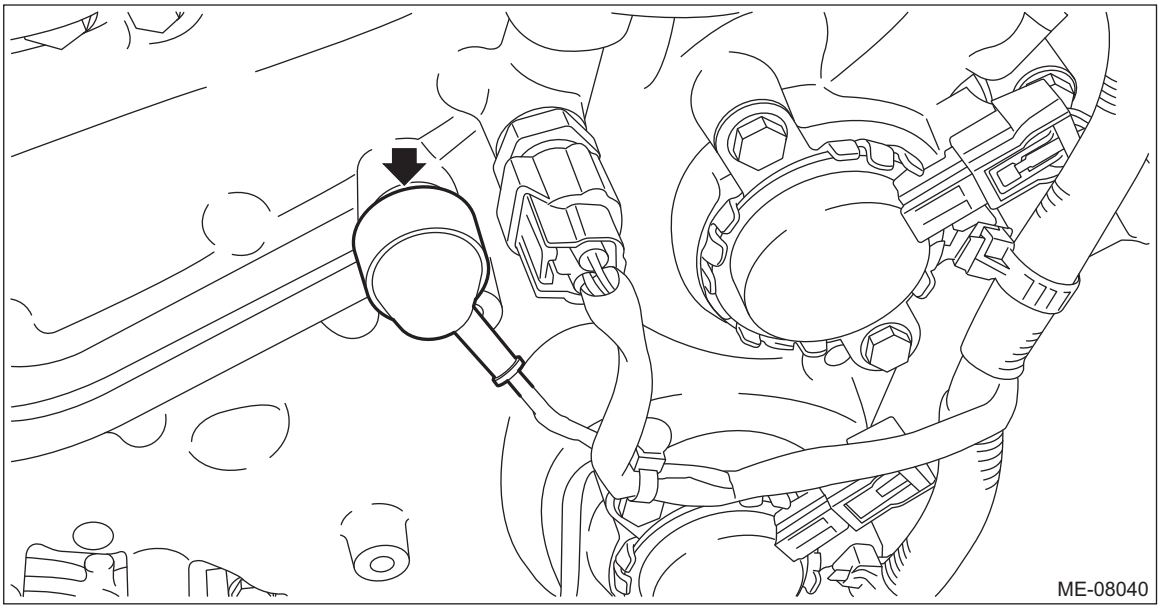
14) Disconnect the connector (A) from the intake oil control solenoid RH, connector (B) from the exhaust oil control solenoid RH, connector (C) from the intake camshaft position sensor RH, and the connector (D) from the exhaust camshaft position sensor RH, and then remove the clips (E) and (F) securing the engine wiring harness.



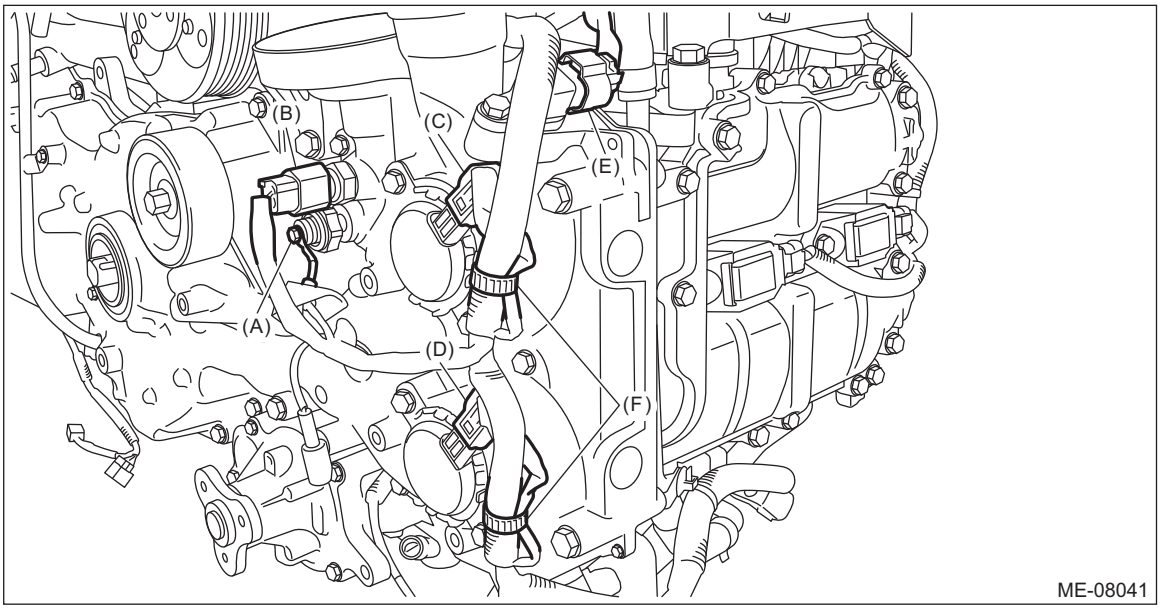
15) Disconnect the connector (A) from the exhaust camshaft position sensor LH and the connector (B) from the oil level switch, and remove the engine wiring harness stay from the chain cover.



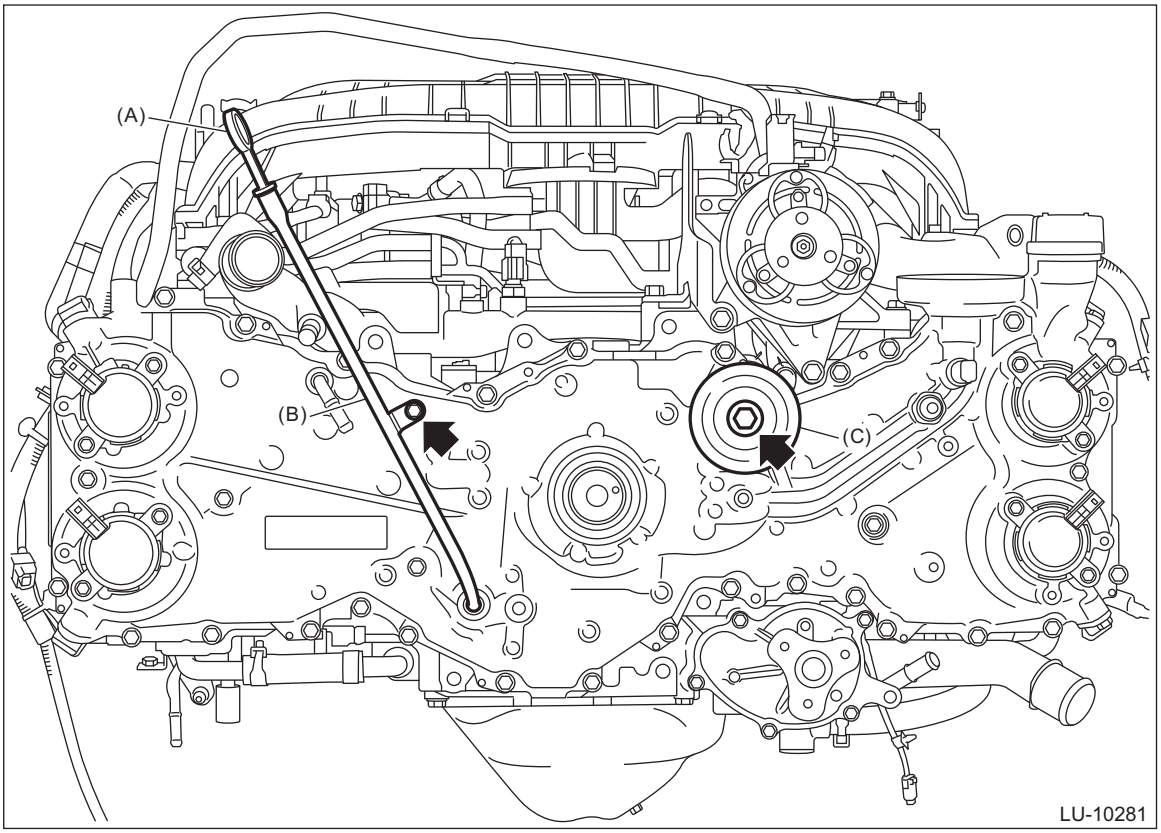
16) Remove the rubber cap from the oil pressure switch.



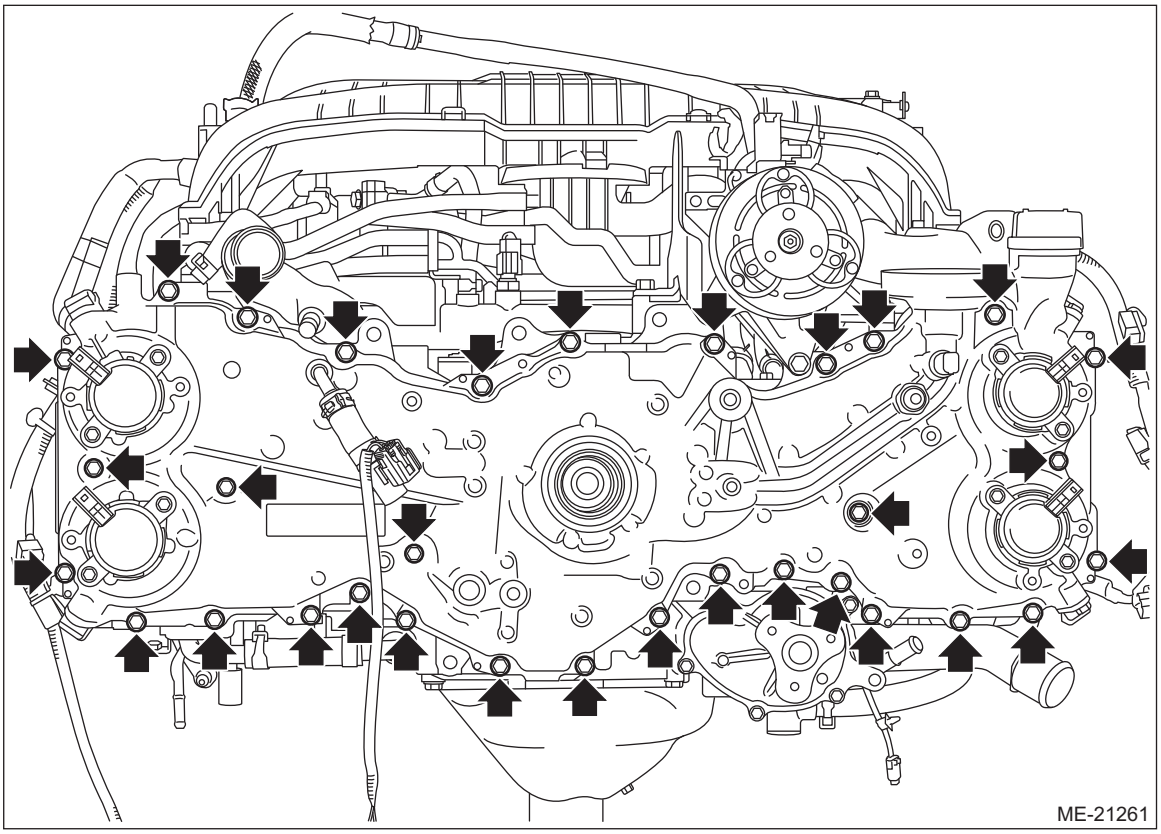
17) Disconnect the terminal (A) from the oil pressure switch, connector (B) from the engine oil temperature sensor, connector (C) from the intake oil control solenoid LH, connector (D) from the exhaust oil control solenoid LH, and the connector (E) from the intake camshaft position sensor LH, and then remove the clip (F) securing the engine wiring harness.



18) Pull out the oil level gauge (A), and remove the oil level gauge guide (B) and idler pulley (C).

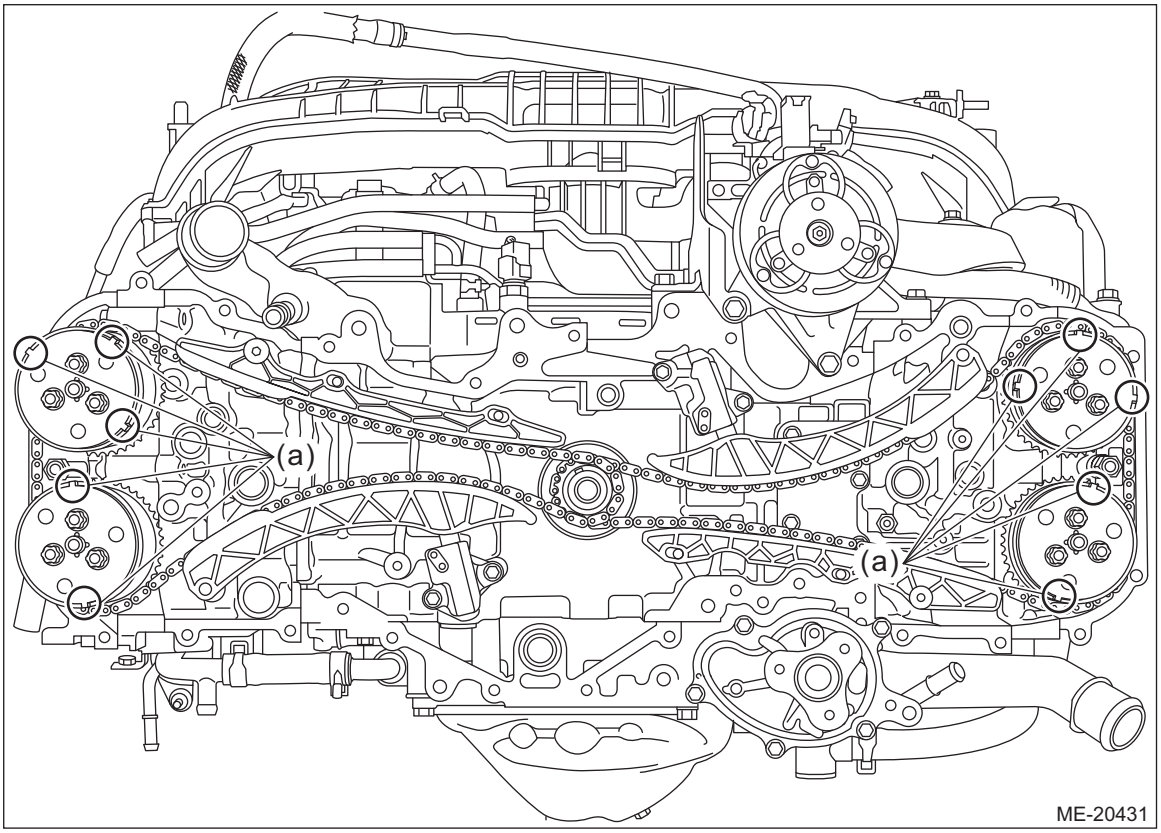


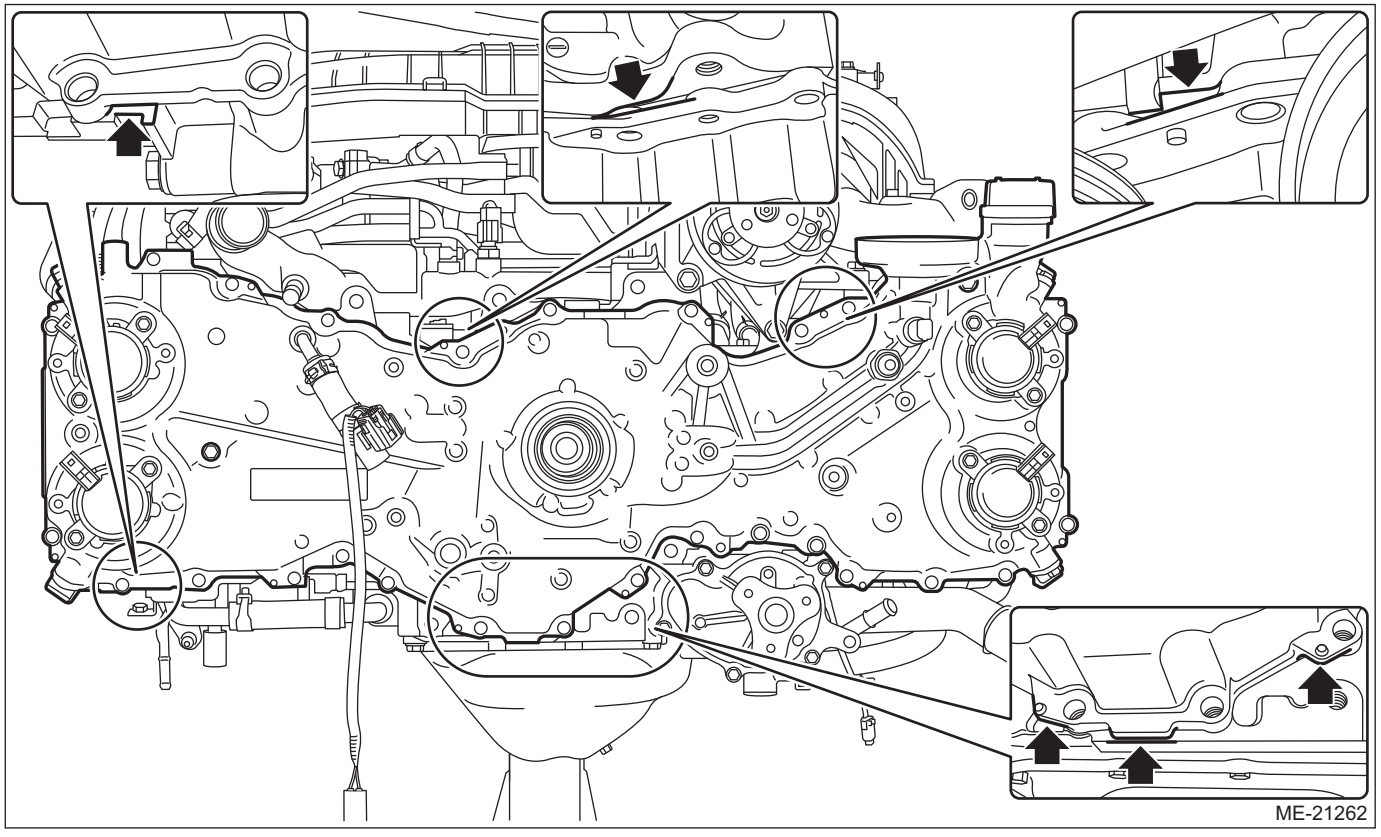
19) Remove the bolts securing the chain cover to engine.



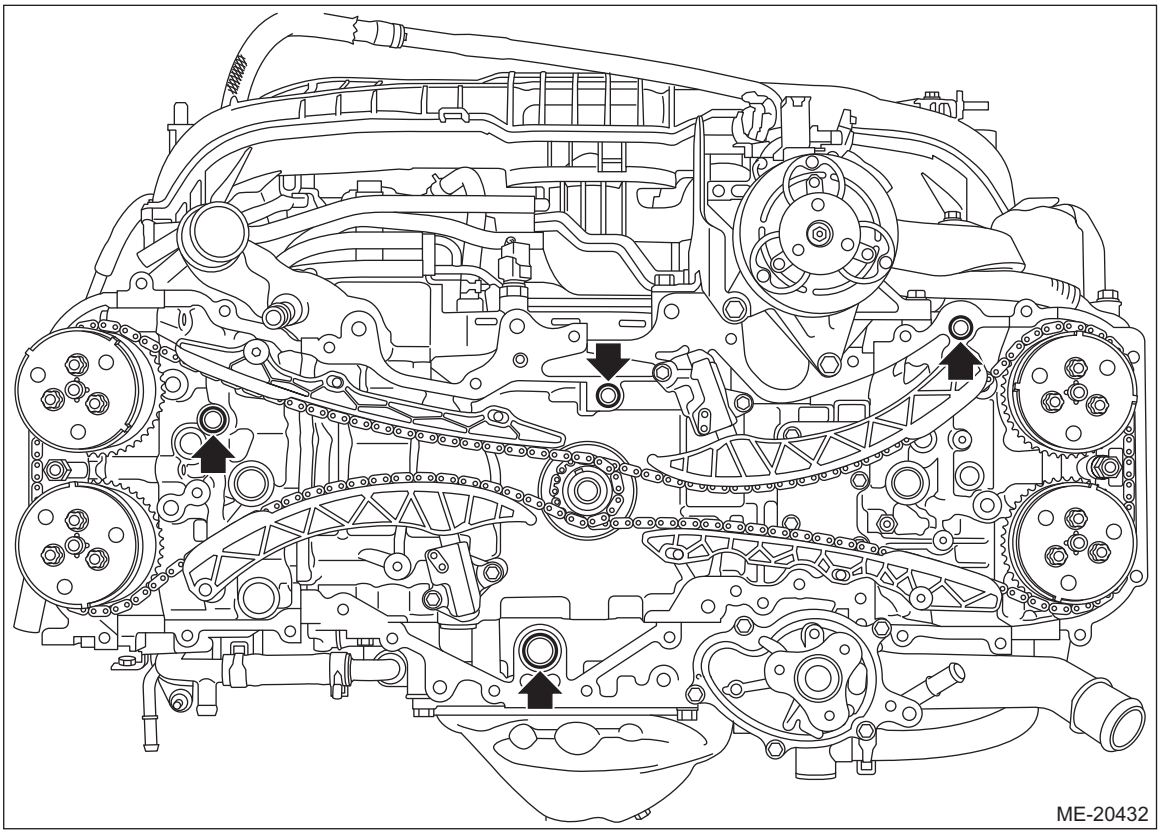
20) Pry the points shown in the figure with a crowbar wrapped by protective tape, and then remove the chain cover from the engine.

CAUTION:
The chain cover may contact the protrusion (a) of cam sprocket sensor plate and cause damage. When removing the chain cover, move the chain cover horizontally until it cannot contact with the cam sprocket, and then remove it carefully.





21) Remove the O-rings from cylinder head RH, cylinder head LH, cylinder block LH and oil pan upper.



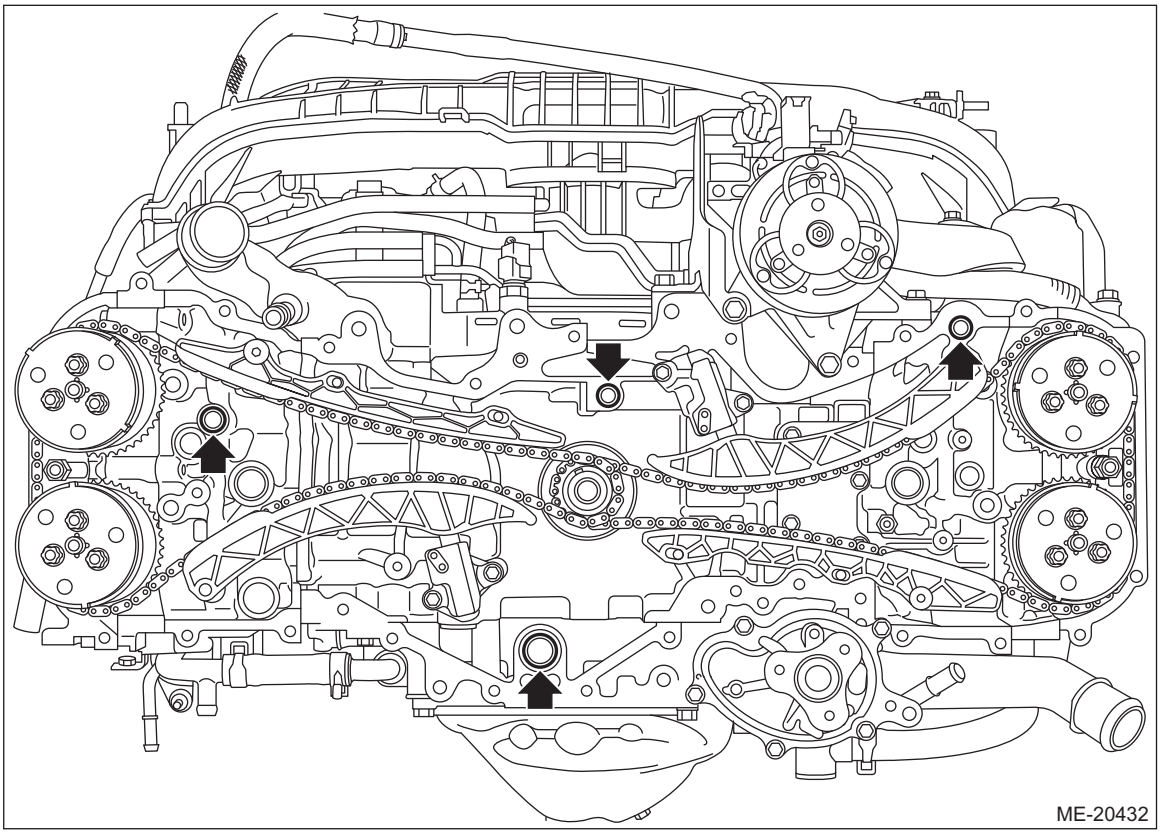
22) Remove the liquid gasket from the chain cover and engine unit.

B: INSTALLATION

1) Install the O-rings to cylinder head RH, cylinder head LH, cylinder block LH and oil pan upper.

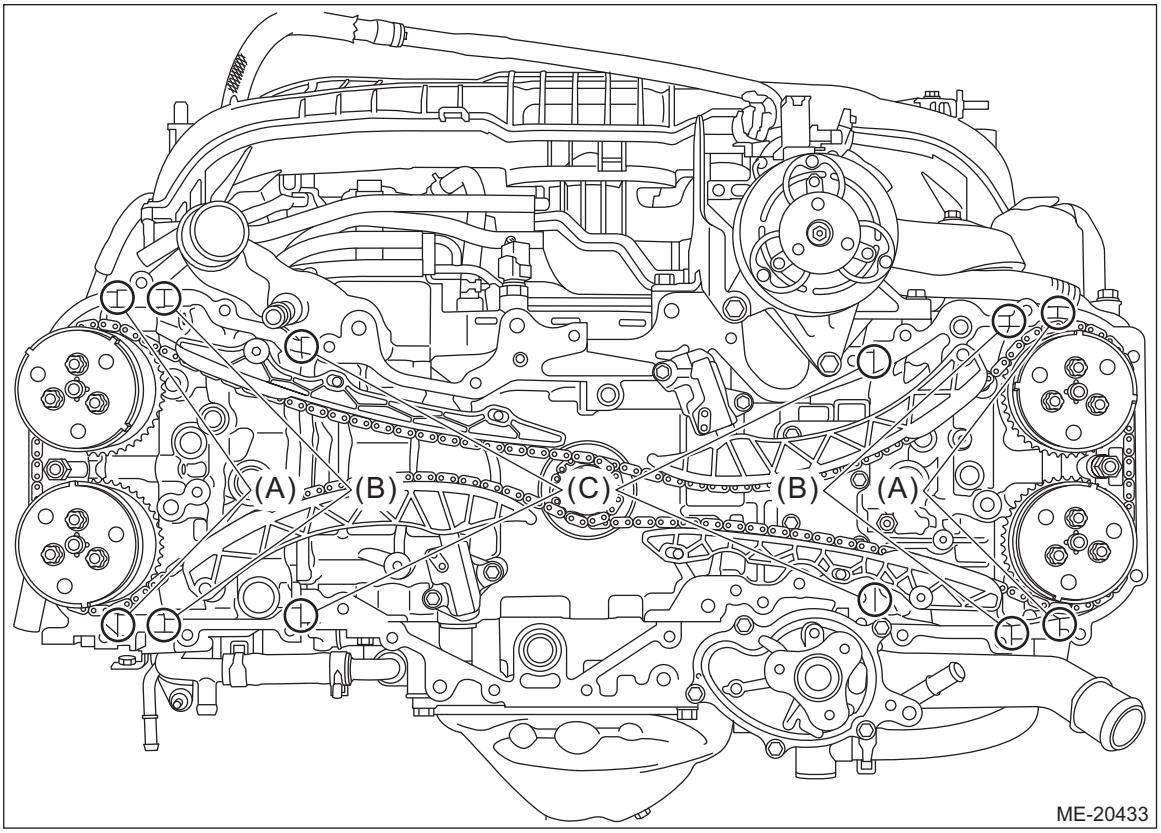
NOTE:
- Use new O-rings.

- Apply a coat of engine oil to the O-rings.



2) Apply liquid gasket if there are gaps between front camshaft cap and cam carrier (A), cam carrier and cylinder head (B), and cylinder head and cylinder block (C) as shown in the figure.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

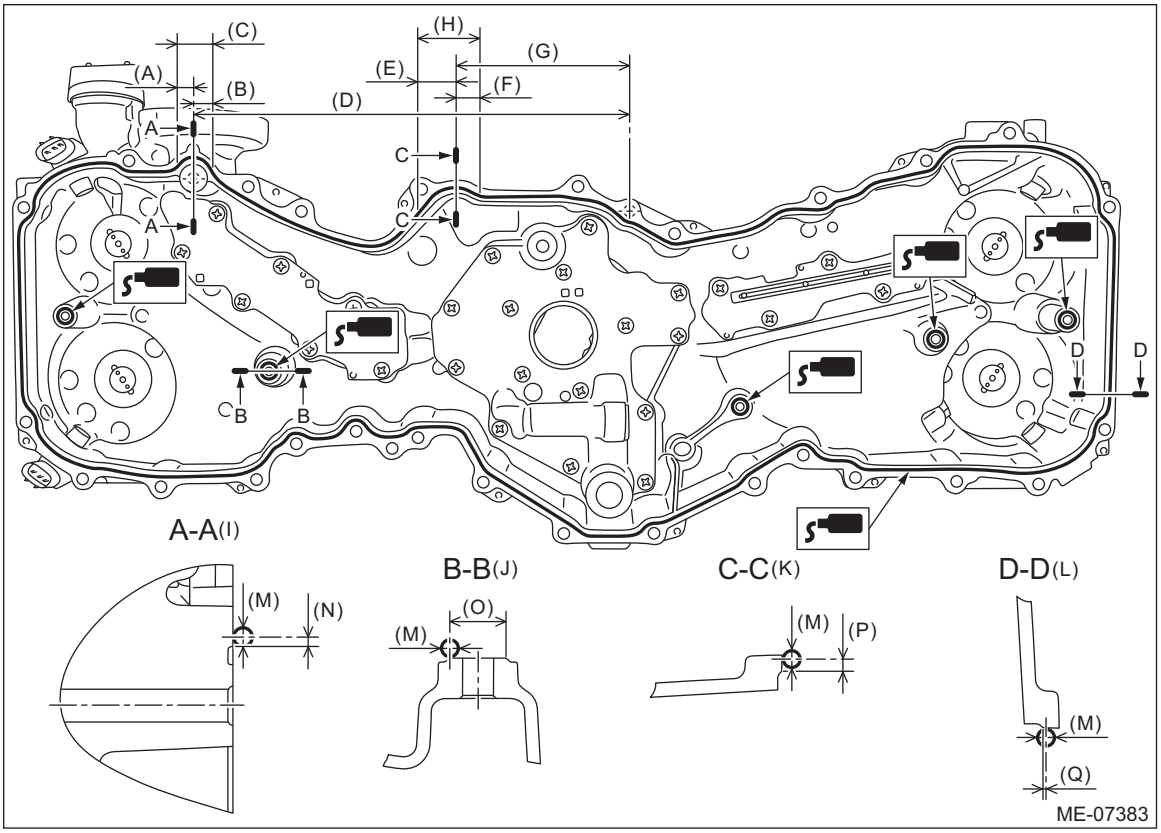


3) Apply liquid gasket to the chain cover mating surface and center boss (5 places) as shown in the figure.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine and chain cover.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

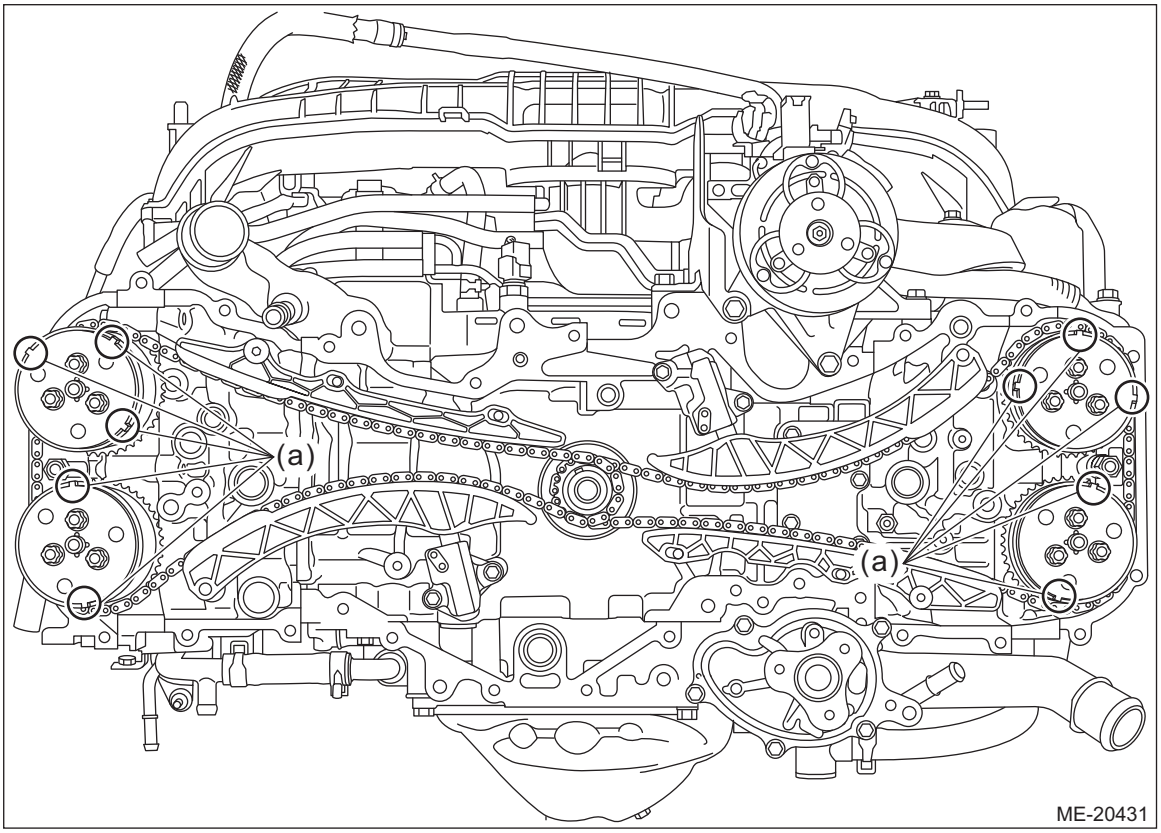
Liquid gasket applying diameter:
4±0.5 mm (0.1575±0.0197 in)



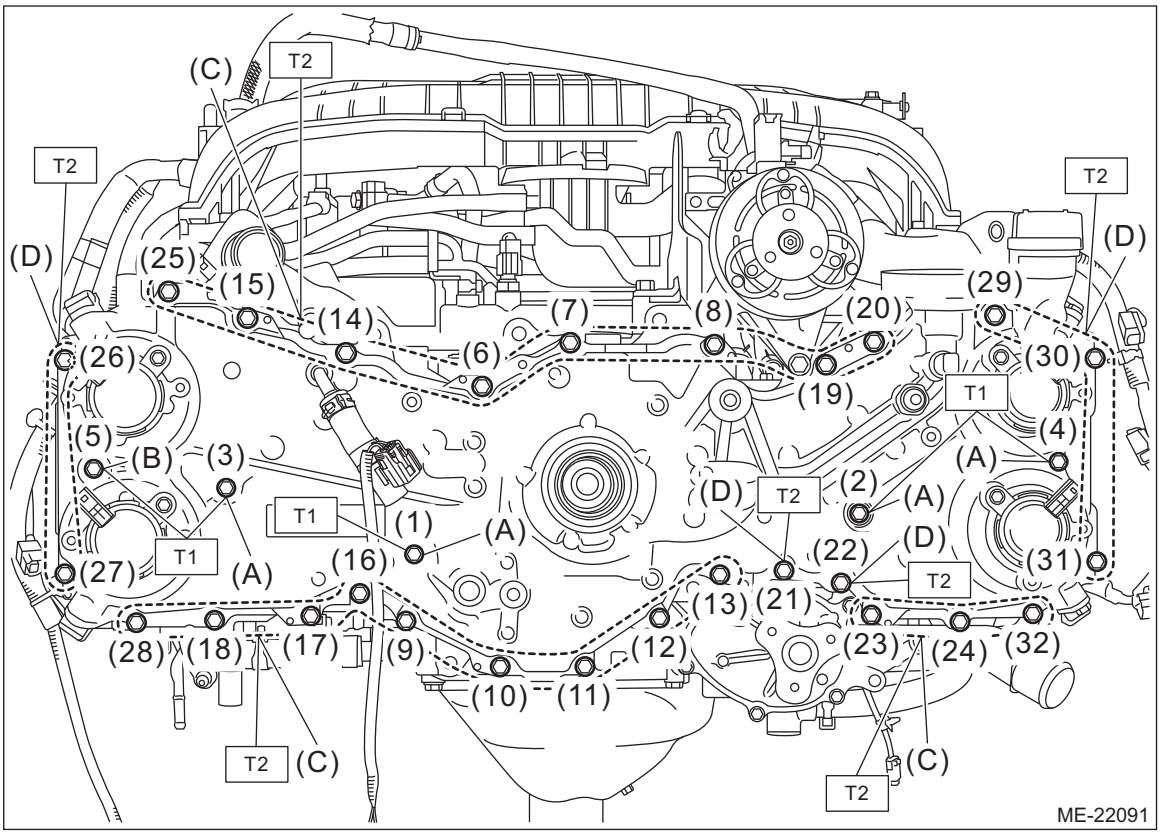
(A)	14.5 mm (0.5709 in)	(G)	127 mm (5.0000 in)	(M)	ϕ4±0.5 mm (0.1575±0.0197 in)
(B)	17.5 mm (0.6890 in)	(H)	Range B	(N)	2 mm (0.0787 in)
(C)	Range A	(I)	Liquid gasket applying position of mating surfaces of range A	(O)	ϕ12 mm (0.4724 in)
(D)	316.2 mm (12.4488 in)	(J)	Liquid gasket applying position of center boss (5 places)	(P)	2.5 mm (0.0984 in)
(E)	24.5 mm (0.9646 in)	(K)	Liquid gasket applying position of mating surfaces of range B	(Q)	0.5 mm (0.0197 in)
(F)	18.5 mm (0.7283 in)	(L)	Liquid gasket applying position of mating surfaces other than range A and range B		

4) Set the chain cover, and tighten the bolts in numerical order as shown in the figure.

CAUTION:
The chain cover may contact the protrusion (a) of cam sprocket sensor plate and cause damage. When setting the chain cover, move the chain cover horizontally and set it while taking care not to contact with the cam sprocket.



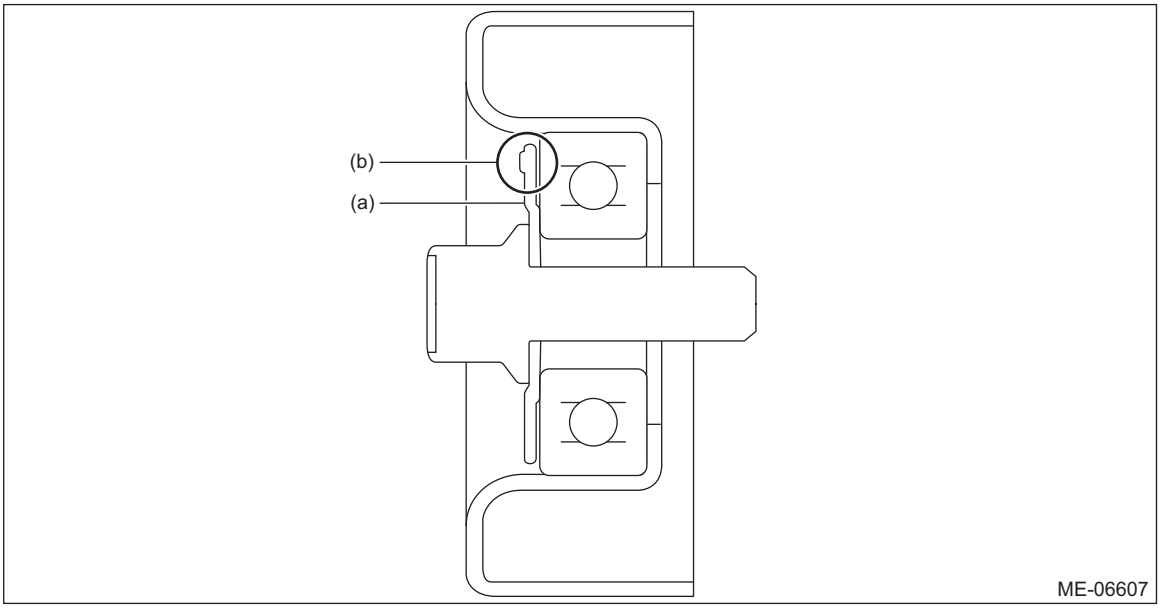
Tightening torque:
T1: 10 N·m (1.0 kgf-m, 7.4 ft-lb)
T2: 25 N·m (2.5 kgf-m, 18.4 ft-lb)



(A) M6 × 20
(B) M6 × 50
(C) M8 × 25
(D) M8 × 60

5) Install the idler pulley (C) and oil level gauge guide (B), and insert the oil level gauge (A).

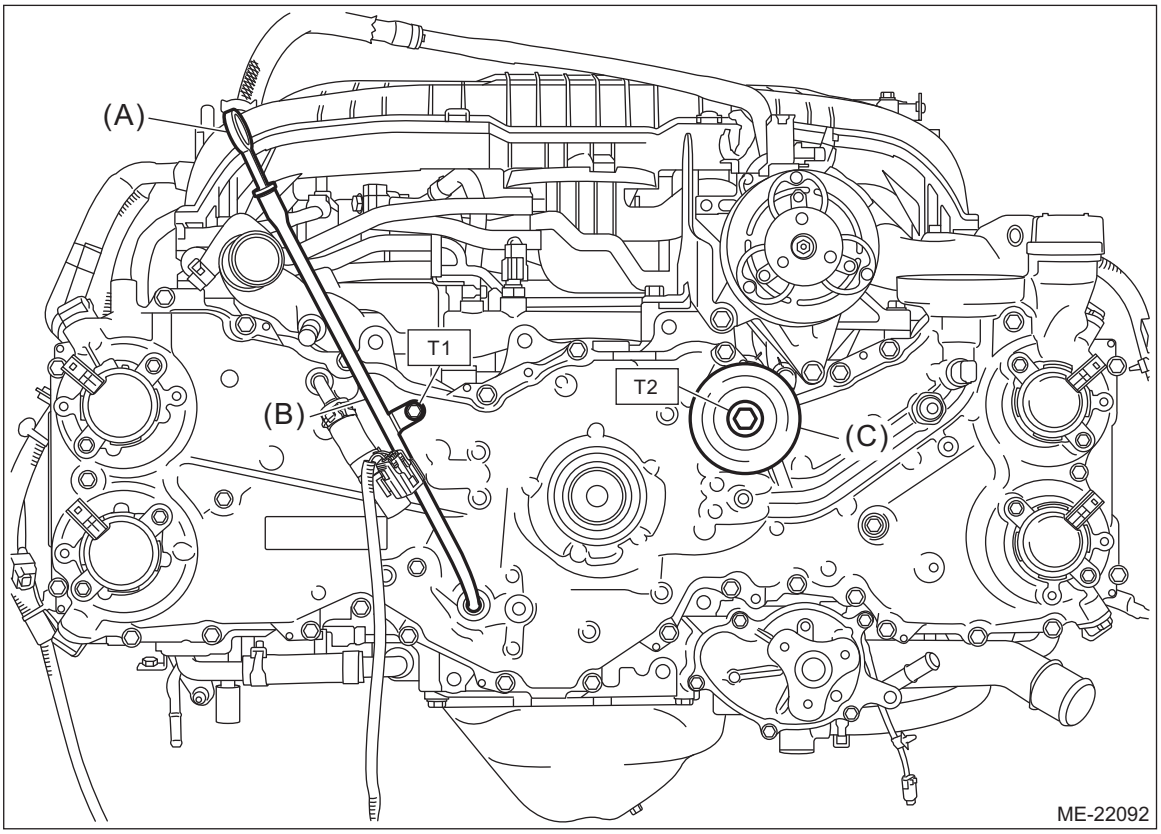
NOTE:
- When installing the idler pulley, be careful of the idler pulley cover direction.



(a) Idler pulley cover
(b) Protrusion (3 places)

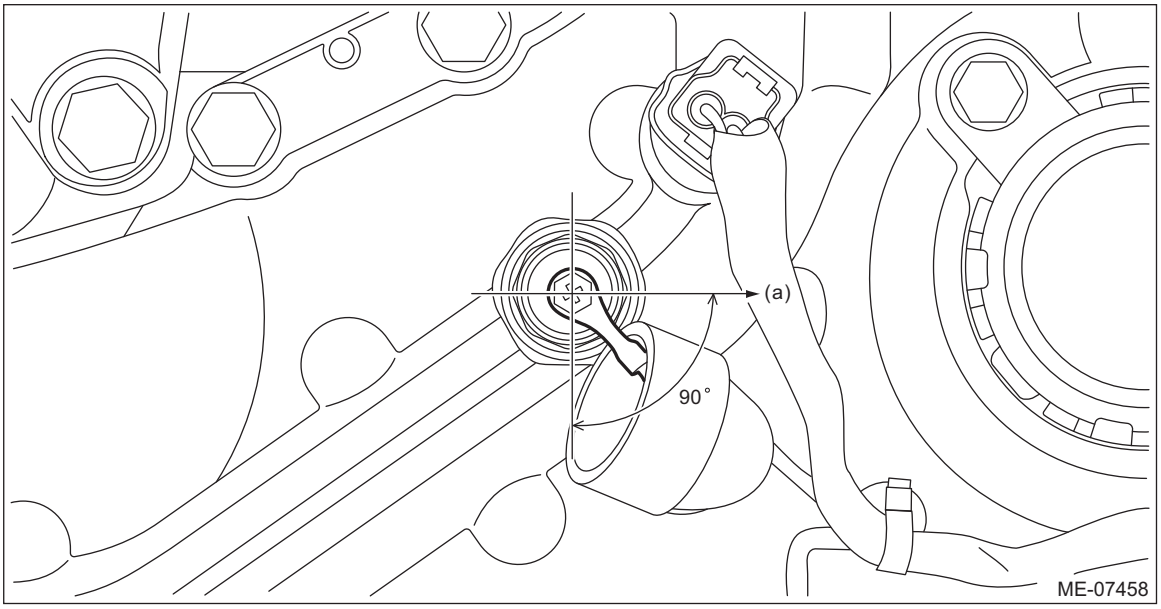
- Use a new O-ring to the oil level gauge guide.
- Apply a light coat of engine oil to the O-rings of the oil level gauge guide and the oil level gauge.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 36 N·m (3.7 kgf-m, 26.6 ft-lb)



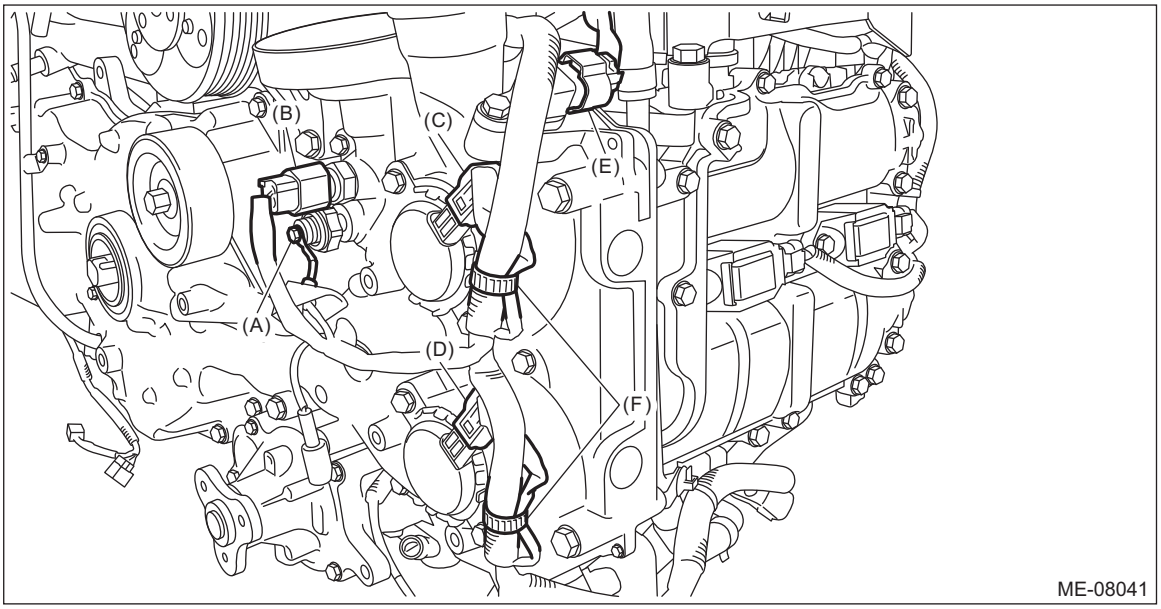
6) Connect the terminal (A) to the oil pressure switch, connector (B) to the engine oil temperature sensor, connector (C) to the intake oil control solenoid LH, connector (D) to the exhaust oil control solenoid LH, and the connector (E) to the intake camshaft position sensor LH, and fix the engine wiring harness using the clip (F).

NOTE:
The oil pressure switch harness must be positioned toward the left lower side of the vehicle within the range of 90°.

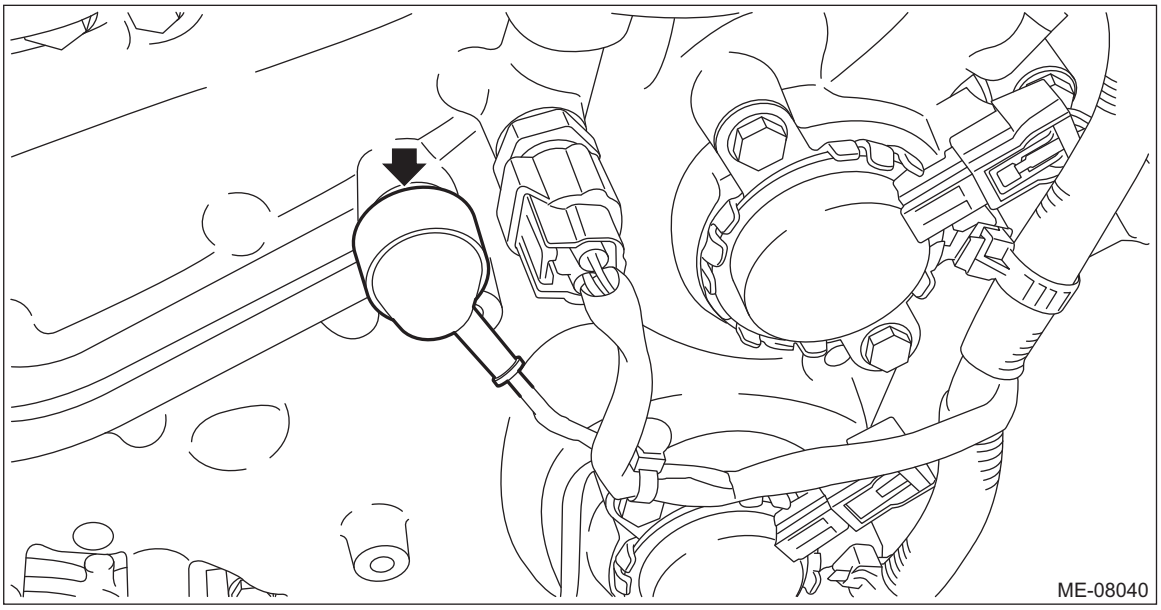


(a) Left side of vehicle

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)

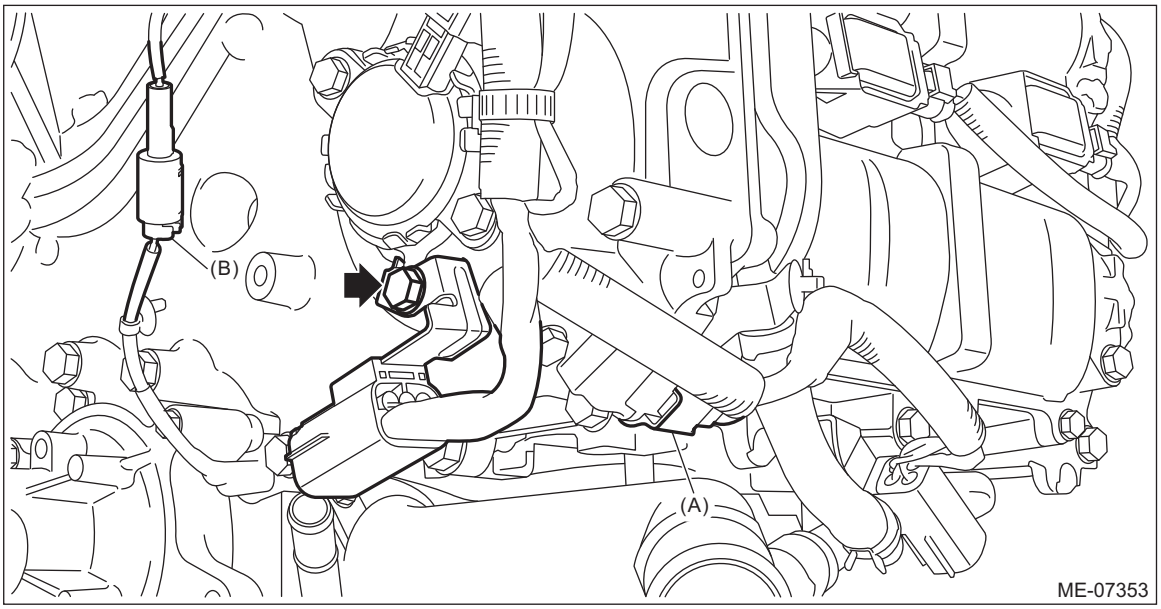


7) Attach the rubber cap to the oil pressure switch.

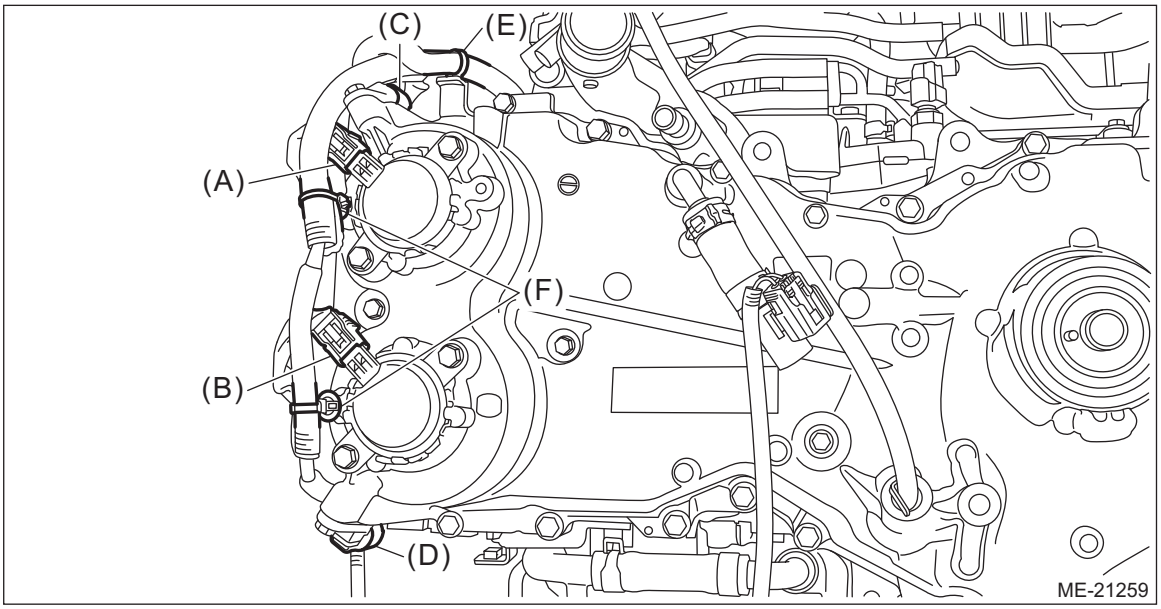


8) Connect the connector (A) to the exhaust camshaft position sensor LH and the connector (B) to the oil level switch, and install the engine wiring harness stay to the chain cover.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



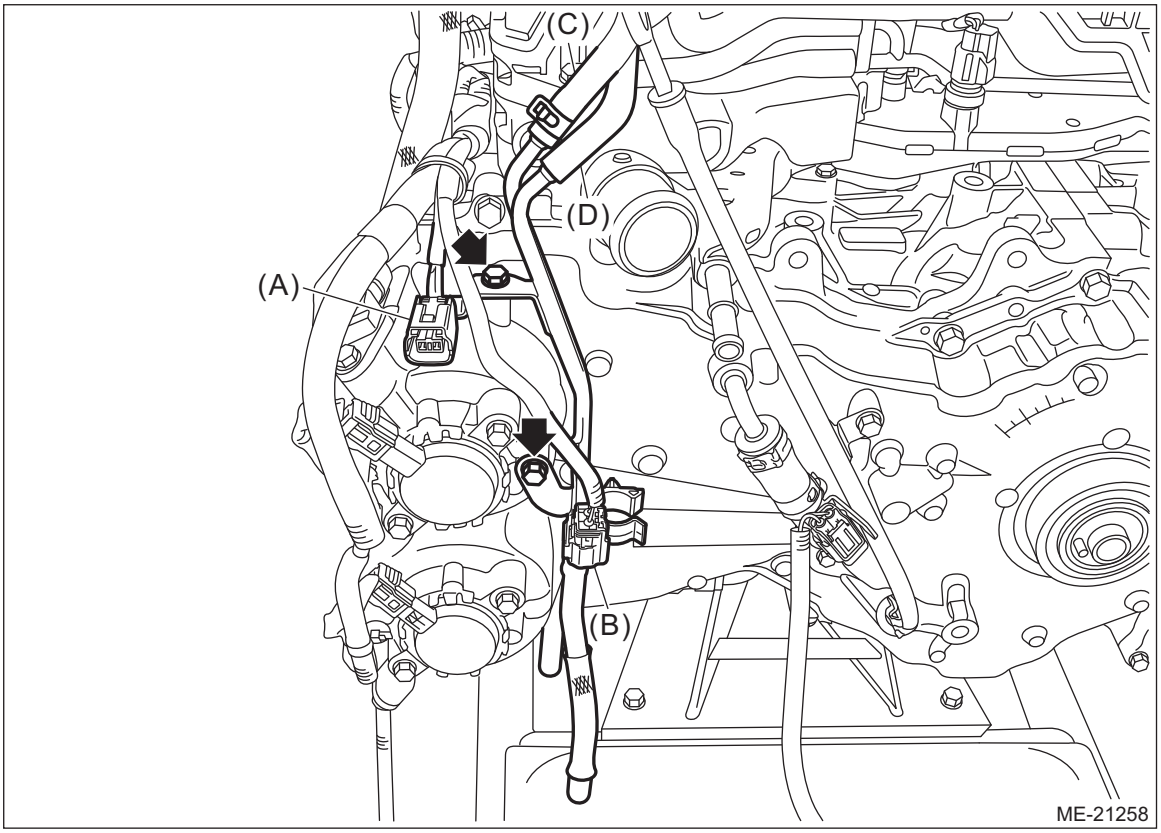
9) Connect the connector (A) to the intake oil control solenoid RH, connector (B) to the exhaust oil control solenoid RH, connector (C) to the intake camshaft position sensor RH, and the connector (D) to the exhaust camshaft position sensor RH, and then fix the engine wiring harness using the clips (E) and (F).



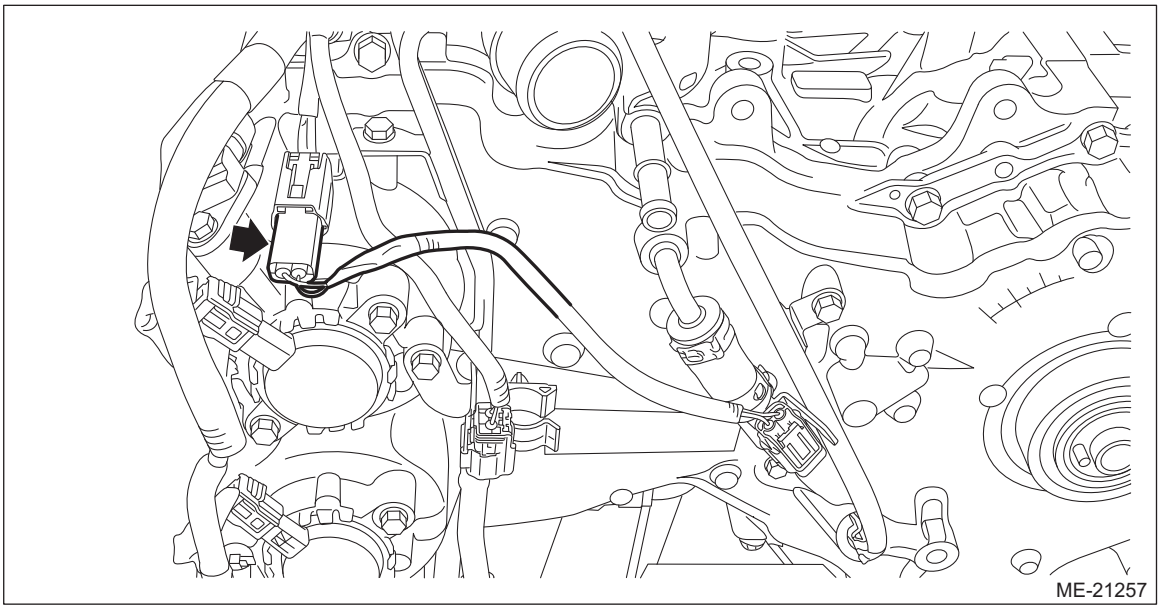
10) Install the vacuum pipe assembly to the chain cover, and connect the vacuum control hose (C) and vacuum hose (D) to the vacuum pipe assembly.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

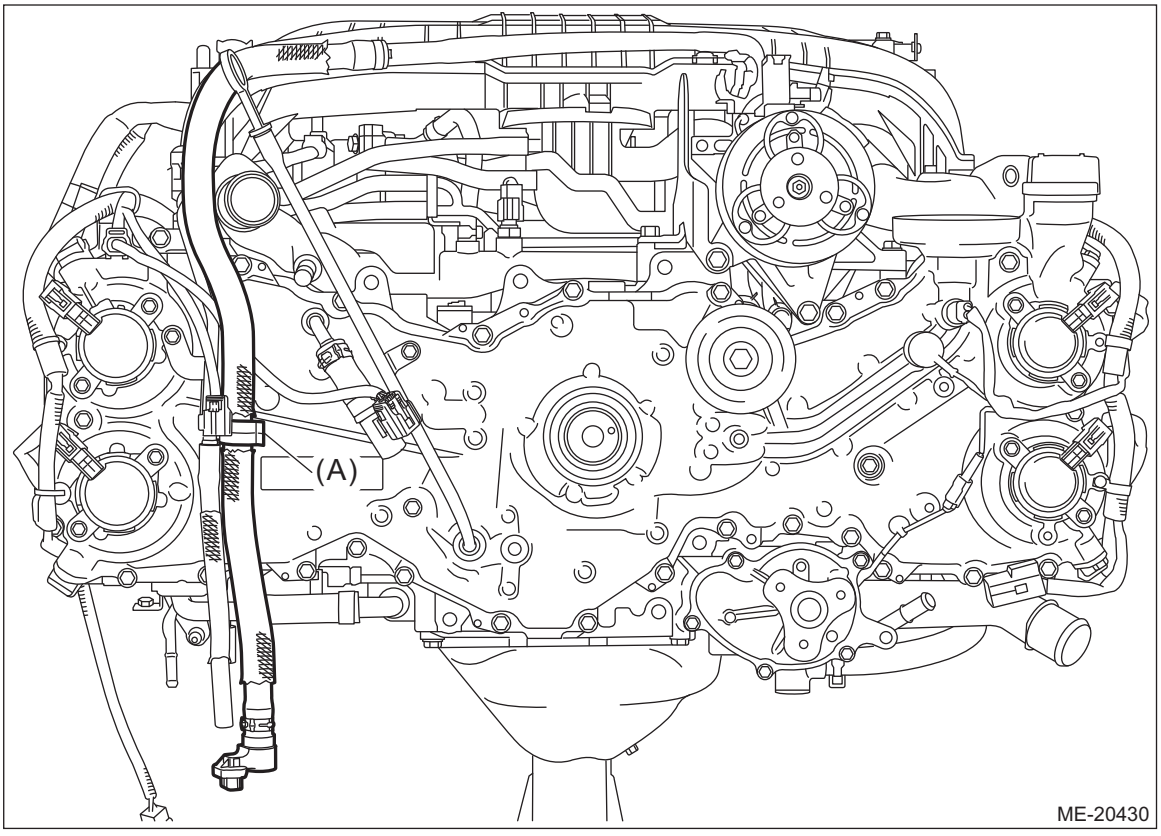
11) Install the connector (A) and connector (B) to the vacuum pipe assembly.



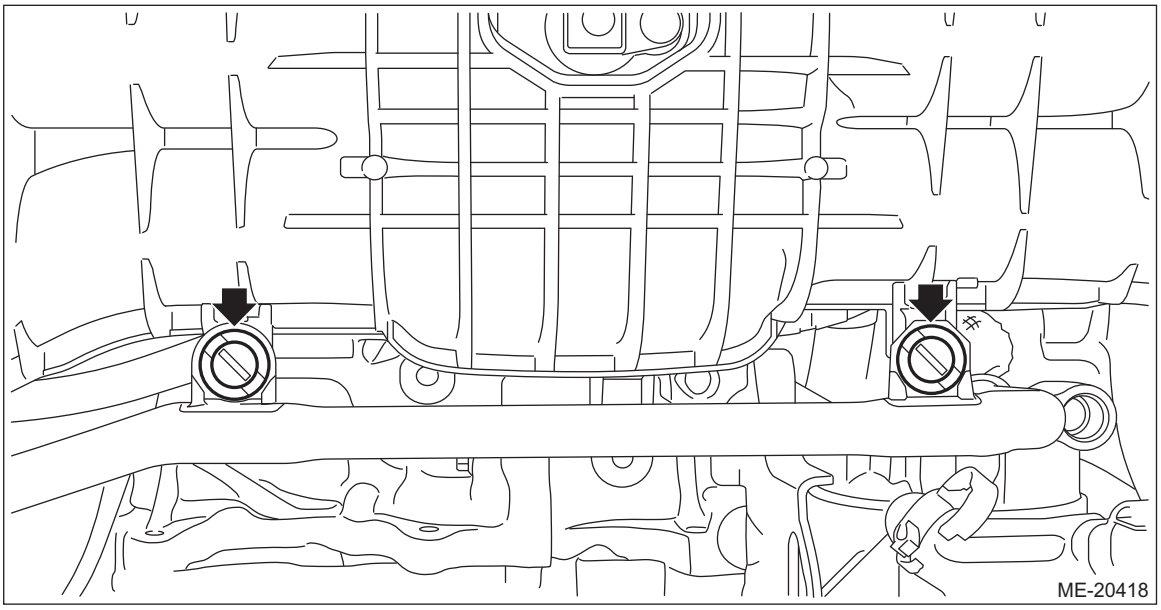
12) Connect the connector to the engine wiring harness.



13) Install the PCV pipe to the clip (A).



14) Fix the PCV pipe to the intake manifold using the clip.

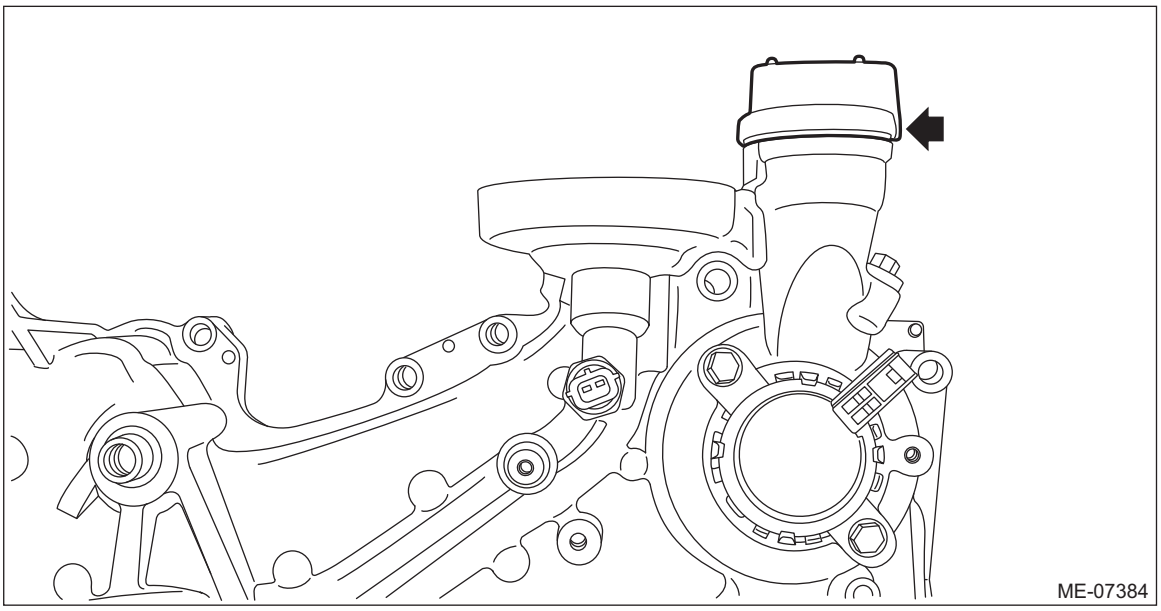


15) Install the front engine oil cooler pipe assembly. <Ref. to LU(w/o STI)-37, FRONT ENGINE OIL COOLER PIPE, INSTALLATION, Engine Oil Cooler Pipe.>
16) Attach the engine oil cooler. <Ref. to LU(w/o STI)-33, INSTALLATION, Engine Oil Cooler.>
17) Install the crank pulley. <Ref. to ME(w/o STI)-85, INSTALLATION, Crank Pulley.>
18) Install the water pump pulley. <Ref. to CO(w/o STI)-19, WATER PUMP, INSTALLATION, Water Pump.>
19) Install the generator. <Ref. to SC(w/o STI)-32, INSTALLATION, Generator.>
20) Install the V-belts. <Ref. to ME(w/o STI)-78, V-BELT, INSTALLATION, V-belt.>
21) Fill engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
22) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>
(2) Install the intake duct No. 1 and intake duct No. 2. <Ref. to IN(w/o STI)-36, INTAKE DUCT NO. 1, INSTALLATION, Intake Duct.> <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
(3) Install the radiator. <Ref. to CO(w/o STI)-41, INSTALLATION, Radiator.>

C: DISASSEMBLY

1) Remove the oil filler cap.

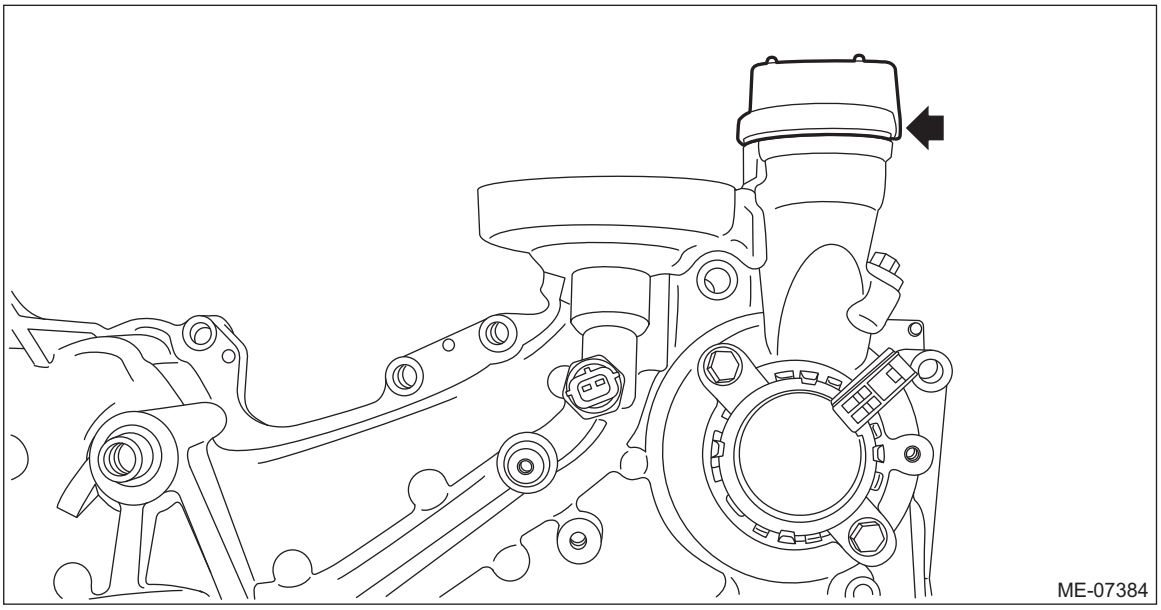


2) Remove the PCV hose assembly No. 1. <Ref. to EC(w/o STI)-81, PCV HOSE ASSY NO. 1, REPLACEMENT, PCV Hose Assembly.>
3) Remove the oil pressure switch. <Ref. to LU(w/o STI)-29, REMOVAL, Oil Pressure Switch.>
4) Remove the engine oil temperature sensor. <Ref. to FU(w/o STI)-94, REMOVAL, Engine Oil Temperature Sensor.>
5) Remove the oil control solenoid. <Ref. to FU(w/o STI)-103, REMOVAL, Oil Control Solenoid.>
6) Remove the camshaft position sensor. <Ref. to FU(w/o STI)-100, REMOVAL, Camshaft Position Sensor.>

D: ASSEMBLY

1) Install the camshaft position sensor. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
2) Install the oil control solenoid. <Ref. to FU(w/o STI)-104, INSTALLATION, Oil Control Solenoid.>
3) Install the engine oil temperature sensor. <Ref. to FU(w/o STI)-94, INSTALLATION, Engine Oil Temperature Sensor.>
4) Install the oil pressure switch. <Ref. to LU(w/o STI)-30, INSTALLATION, Oil Pressure Switch.>
5) Install the PCV hose assembly No. 1. <Ref. to EC(w/o STI)-81, PCV HOSE ASSY NO. 1, REPLACEMENT, PCV Hose Assembly.>

6) Install the oil filler cap.



E: INSPECTION

Check that the chain cover does not have deformation, cracks and any other damage.

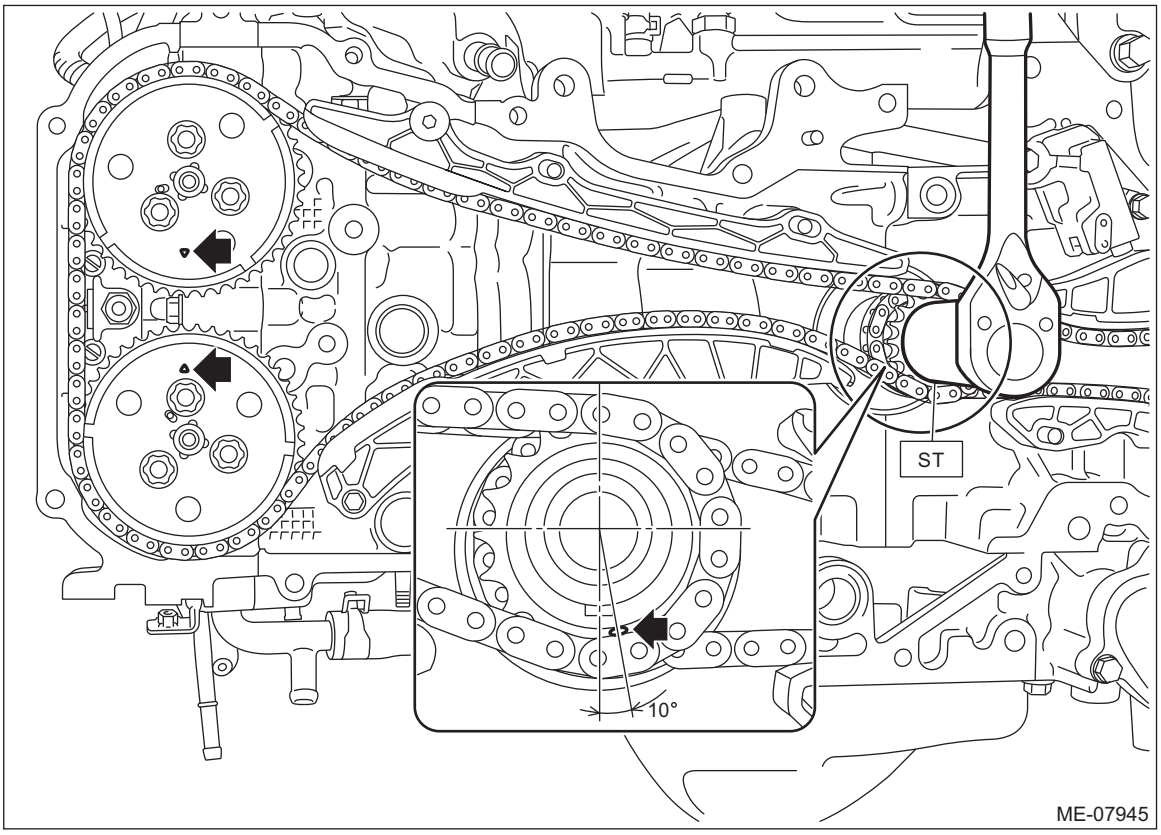
15.Timing Chain Assembly

A: REMOVAL

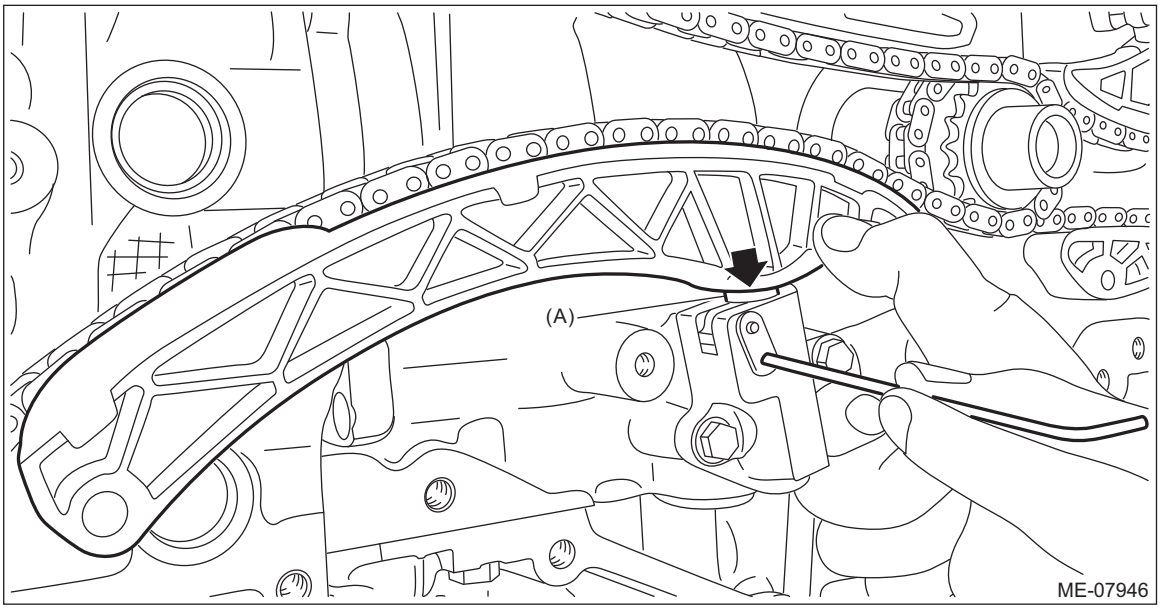
1. TIMING CHAIN RH

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) Remove the chain cover. <Ref. to ME(w/o STI)-91, REMOVAL, Chain Cover.>
2) Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket RH and exhaust cam sprocket RH to the positions as shown in the figure.

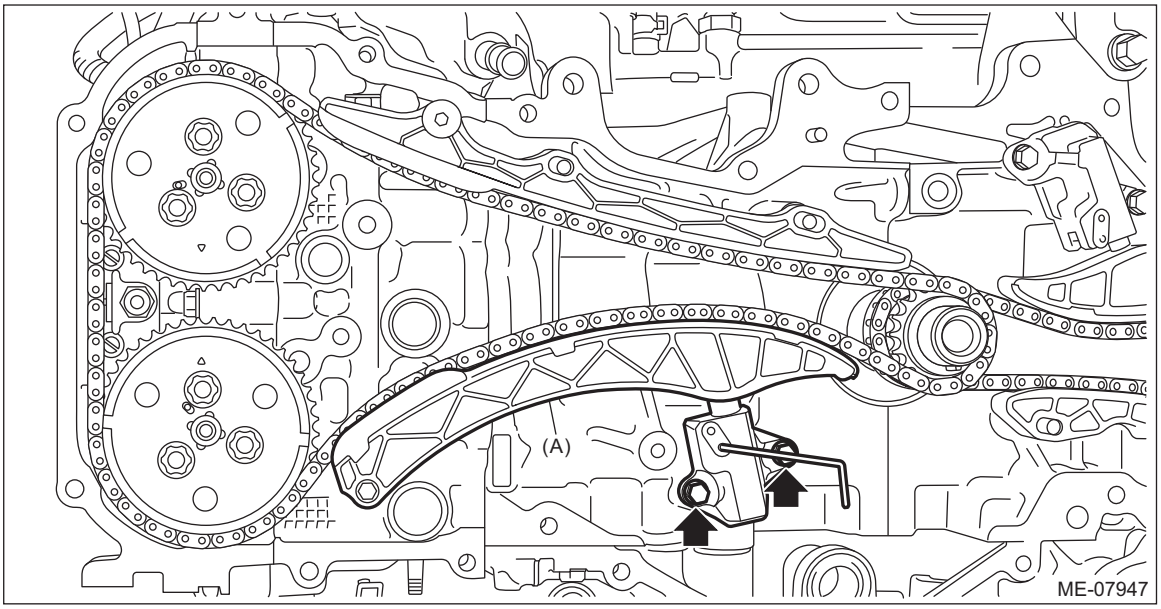
NOTE:
If the alignment marks are aligned to the positions as shown in the figure, the crankshaft key is located at six o'clock position.
ST 18252AA000 CRANKSHAFT SOCKET



3) Push down the chain lever tensioner RH, and with a 2.5 mm (0.0984 in) dia. stopper pin or a 2.5 mm dia. hex wrench inserted into the stopper pin hole in the chain tensioner RH, secure the plunger (A).



4) Remove the chain tensioner RH, and remove the chain tensioner lever RH (A).

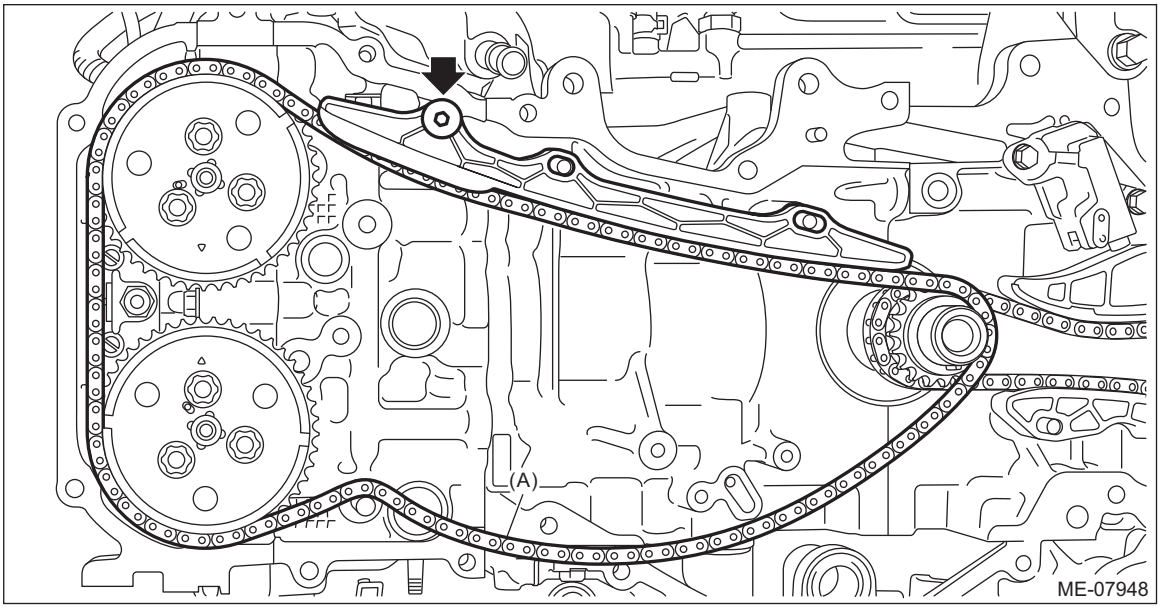


5) Remove the chain guide RH, and remove the timing chain RH (A).

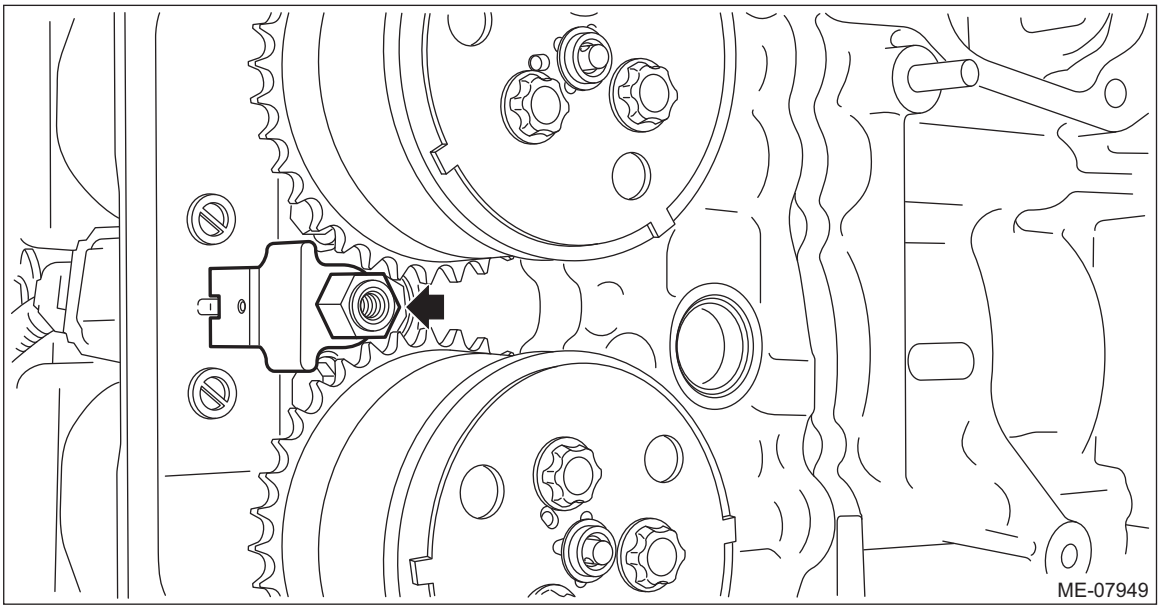
CAUTION:

- **If the timing chain RH is not installed, the intake camshaft RH and exhaust camshaft RH are kept at zero-lift position. All cams on the camshaft are not pressing down the roller rocker arm (intake valve and exhaust valve). (Under this condition, all valves remain unlifted.)**
- **Intake camshaft RH and exhaust camshaft RH can be independently rotated with the timing chain RH removed. When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn it to the outside of range of zero-lift (in range where it can be turned lightly by hand).**

NOTE:
To avoid mixing with LH side, keep the removed part in order.



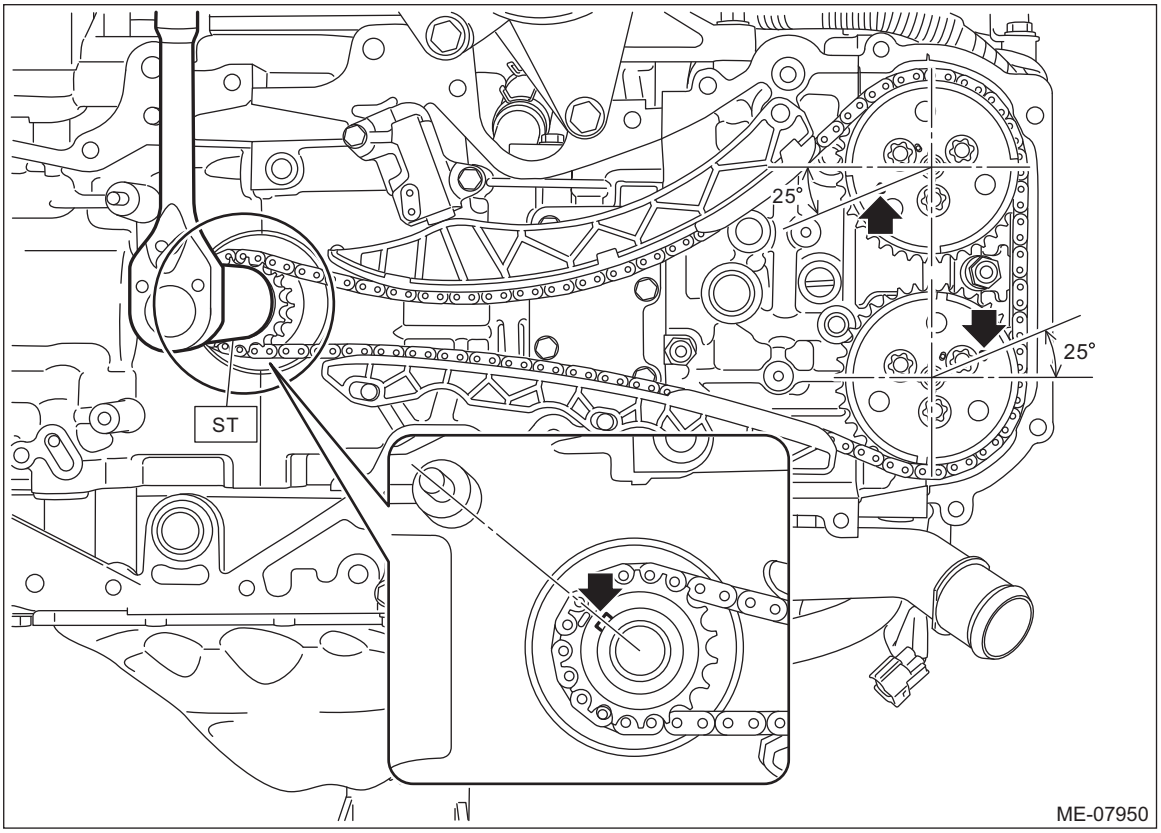
6) Remove the chain guide RH from the front camshaft cap RH.



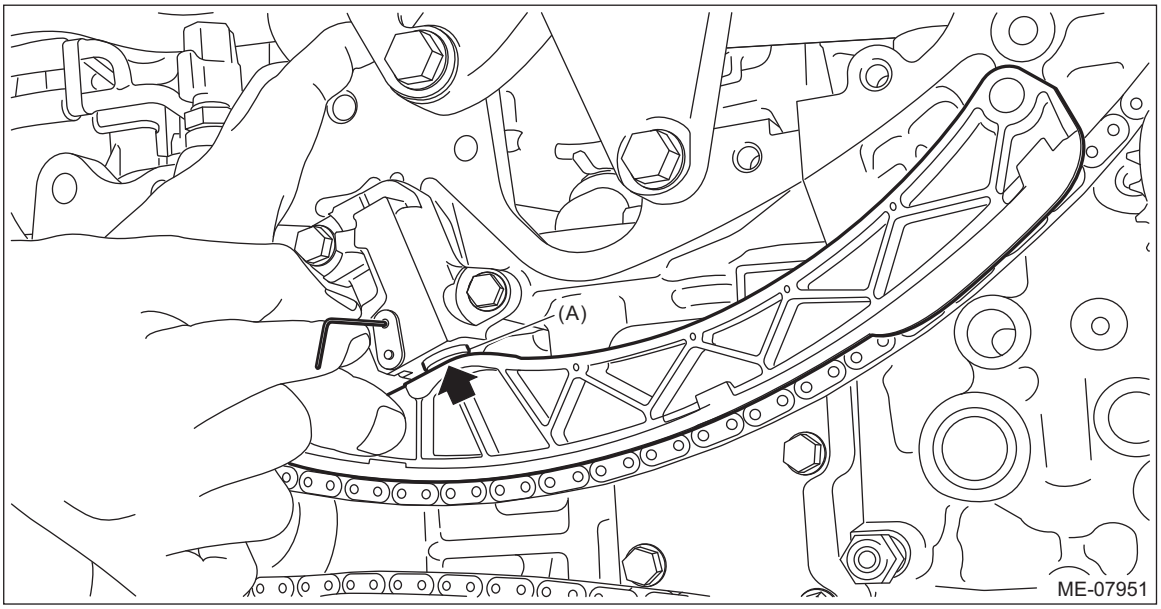
2. TIMING CHAIN LH

1) Remove the timing chain RH. <Ref. to ME(w/o STI)-112, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>

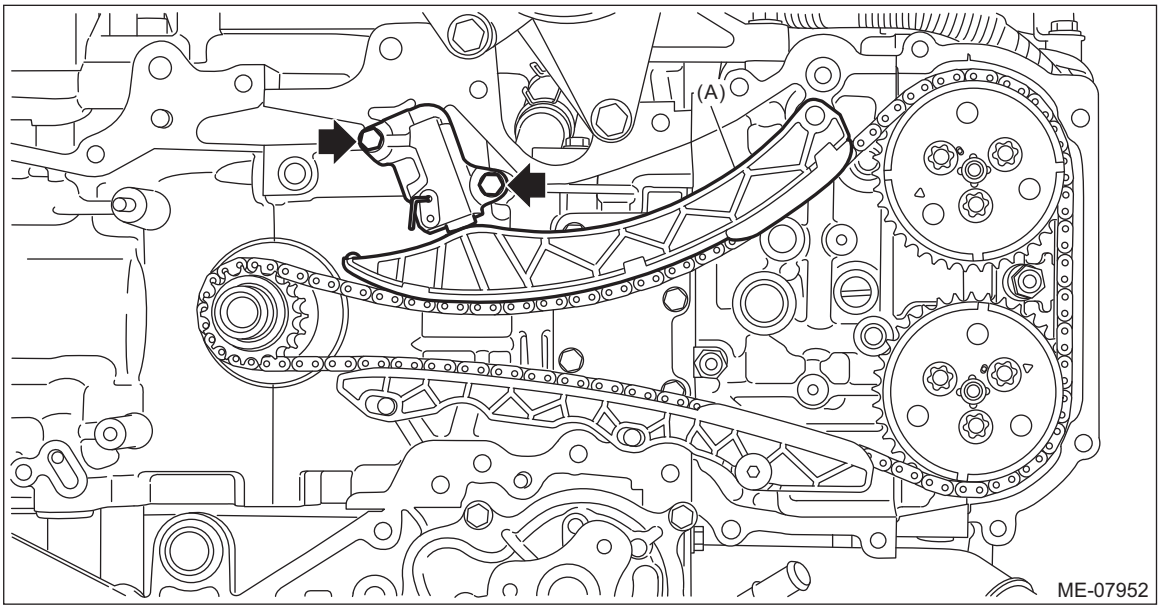
2) Using ST and by turning the crankshaft, align the alignment marks of crankshaft key, intake cam sprocket LH and exhaust cam sprocket LH to the positions as shown in the figure.
ST 18252AA000 CRANKSHAFT SOCKET



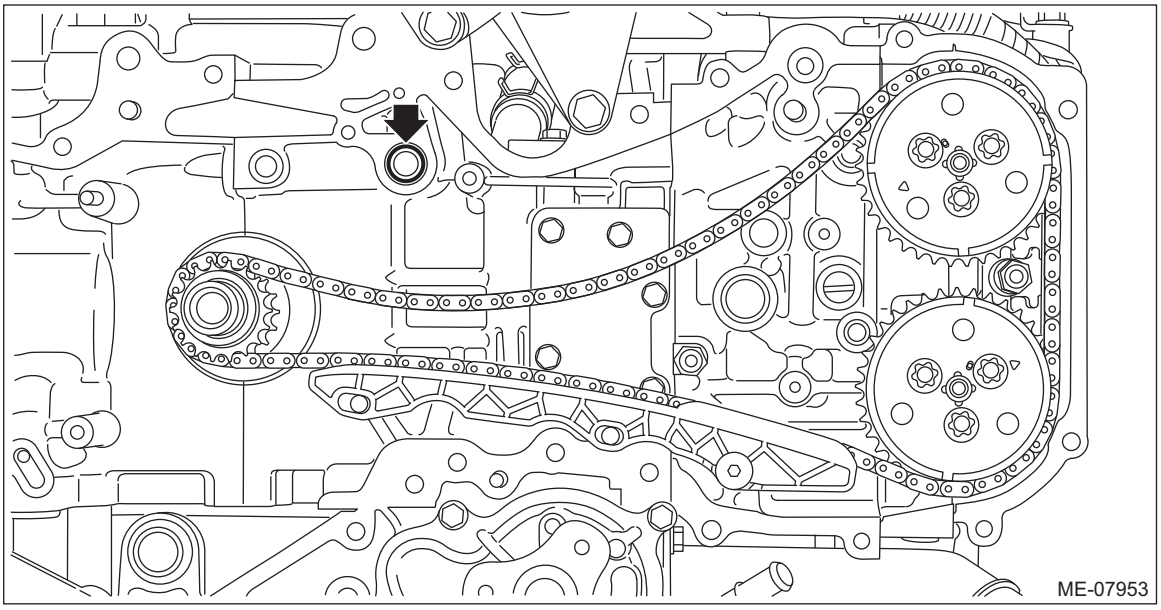
3) Push up the chain tensioner lever LH as shown in the figure, and with a stopper pin measuring 1.2 mm (0.0472 in) dia. or less (clips, etc.), or with a hex wrench measuring 1.2 mm dia. inserted into the stopper pin hole in the chain tensioner LH, secure the plunger (A).



4) Remove the chain tensioner LH, and remove the chain tensioner lever LH (A).



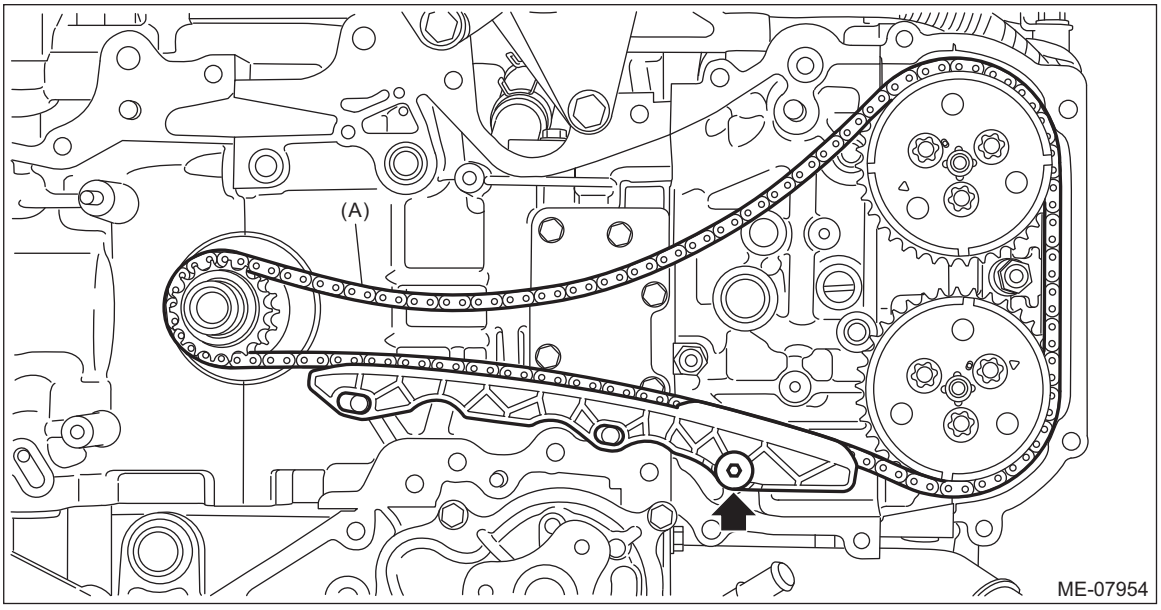
5) Remove the O-ring from the cylinder block LH.



6) Remove the chain guide LH, and remove the timing chain LH (A).

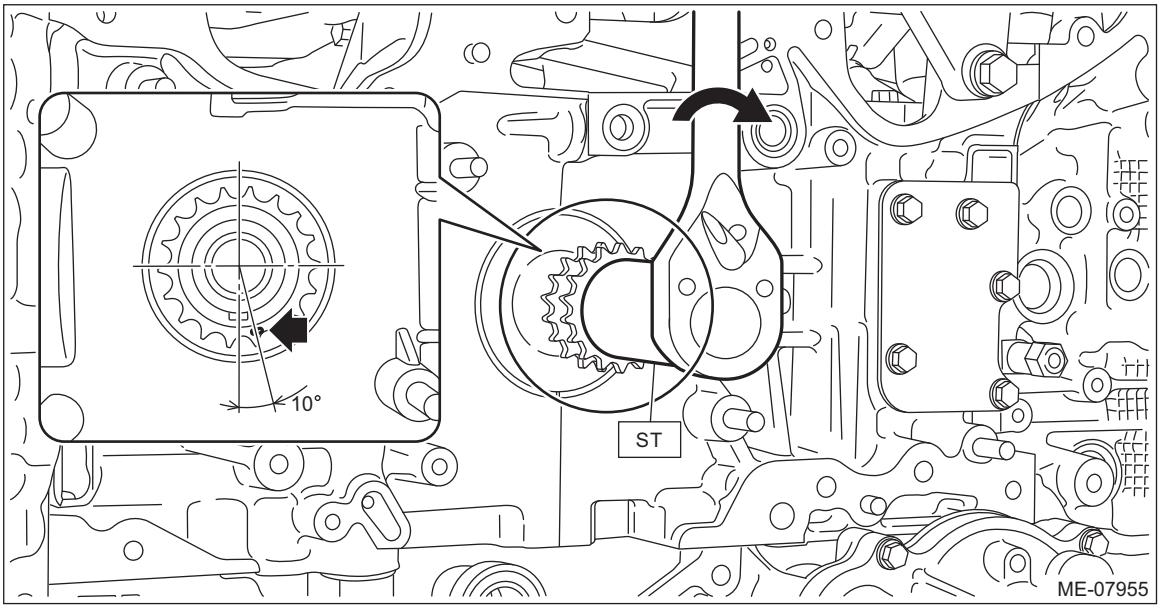
CAUTION:
• If the timing chain LH is not installed, the exhaust camshaft LH is kept at zero-lift position. All cams on the exhaust camshaft LH are not pressing down the roller rocker arm (exhaust valve). (Under this condition, exhaust valves remain unlifted.)
• Intake camshaft LH is kept at lift position. All cams on the intake camshaft LH are pressing down the roller rocker arm (intake valve). (Under this condition, intake valves remain lifted.)
• Intake camshaft LH and exhaust camshaft RH can be independently rotated with the timing chain LH removed. When the exhaust camshaft LH is turned, the valve heads contact each other and valve stem may bend as described in above. Do not turn the exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).
• #4 piston is located near TDC. If the intake camshaft LH is turned, the valve and the piston may contact and valve stem may bend. Do not turn the intake camshaft LH at this time.

NOTE:
To avoid mixing with RH side, keep the removed part in order.



7) Using ST and by turning the crankshaft approximately 200° clockwise, align the alignment marks of crank sprocket to the positions as shown in the figure.

CAUTION:
• This procedure is required to prevent the valve and piston contacting with each other, by moving the all pistons to the middle of the cylinders.
• Never turn counterclockwise because the valve and piston may contact. Counterclockwise turn is allowed only when adjusting precisely the alignment marks, after turning the crank sprocket alignment mark clockwise near the position as shown in the figure.
ST 18252AA000 CRANKSHAFT SOCKET

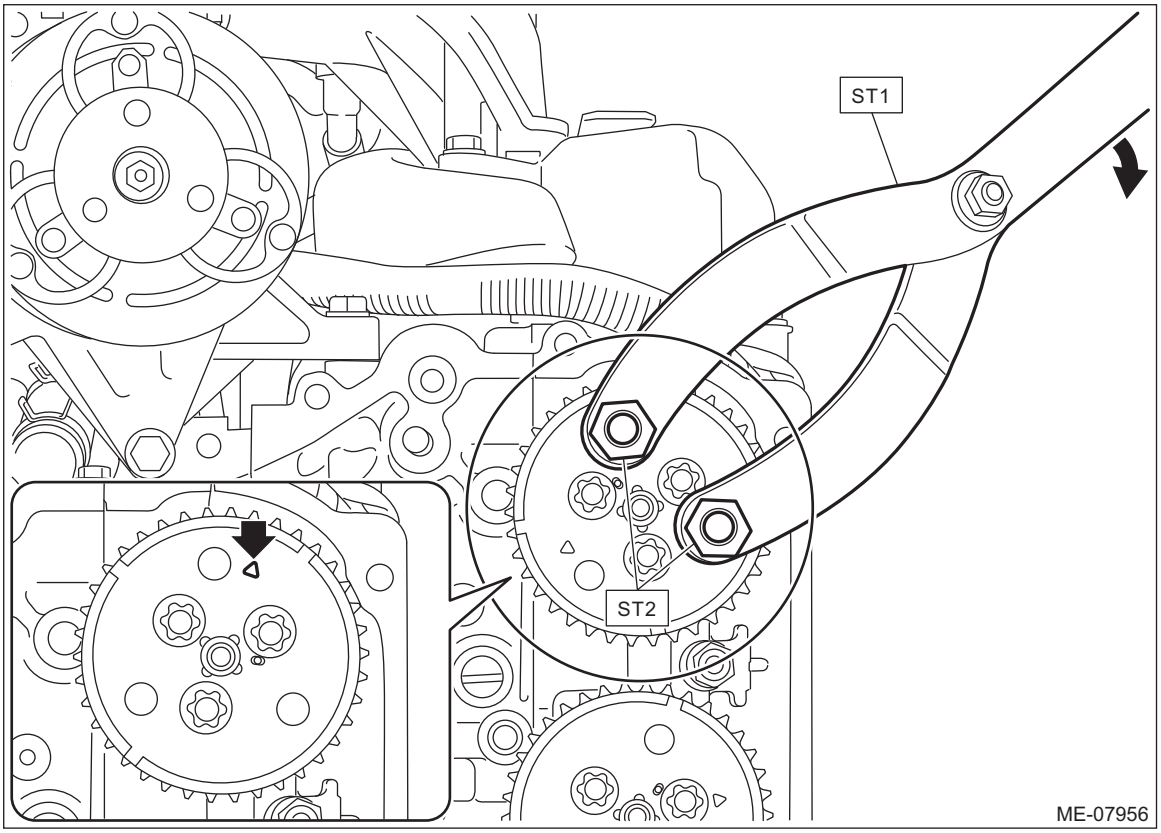


8) Using ST and by turning the intake cam sprocket LH approximately 130° clockwise, align the alignment marks of intake cam sprocket LH to the positions (zero-lift position) as shown in the figure.

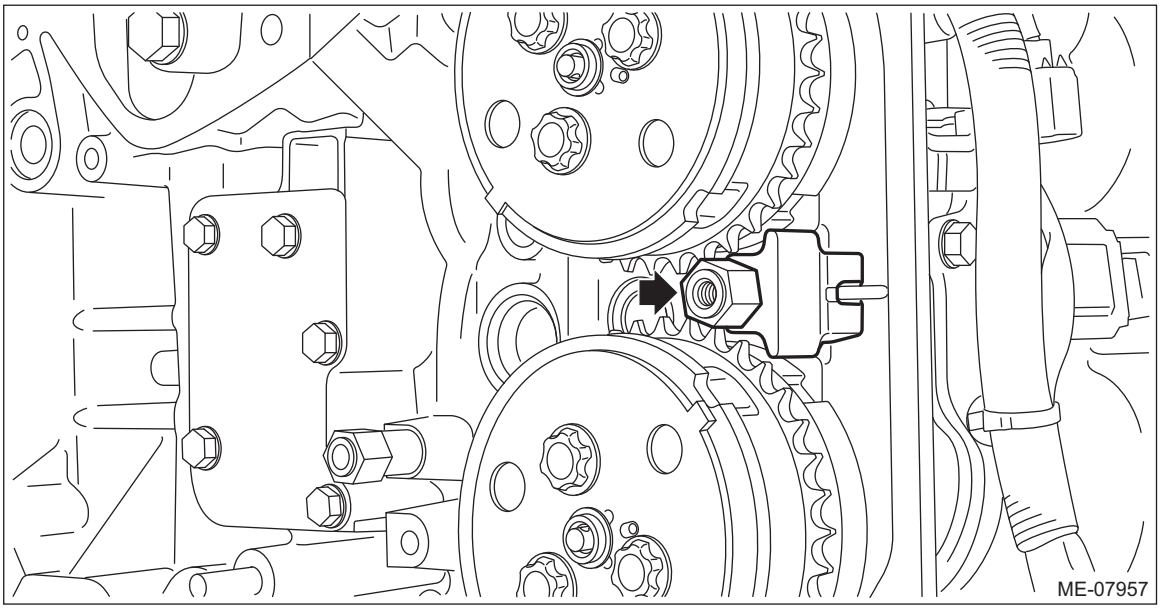
CAUTION:
• After this work, when the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the intake camshaft LH and exhaust camshaft LH to the outside of range of zero-lift (in range where it can be turned lightly by hand).

- **Perform the operation carefully since the ST comes off easily.**

NOTE:
Intake camshaft LH has three peaks of drive sections for the high-pressure fuel pump. Therefore, there is little range where it can be turned lightly by hand in zero-lift position.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET



9) Remove the chain guide LH from the front camshaft cap LH.



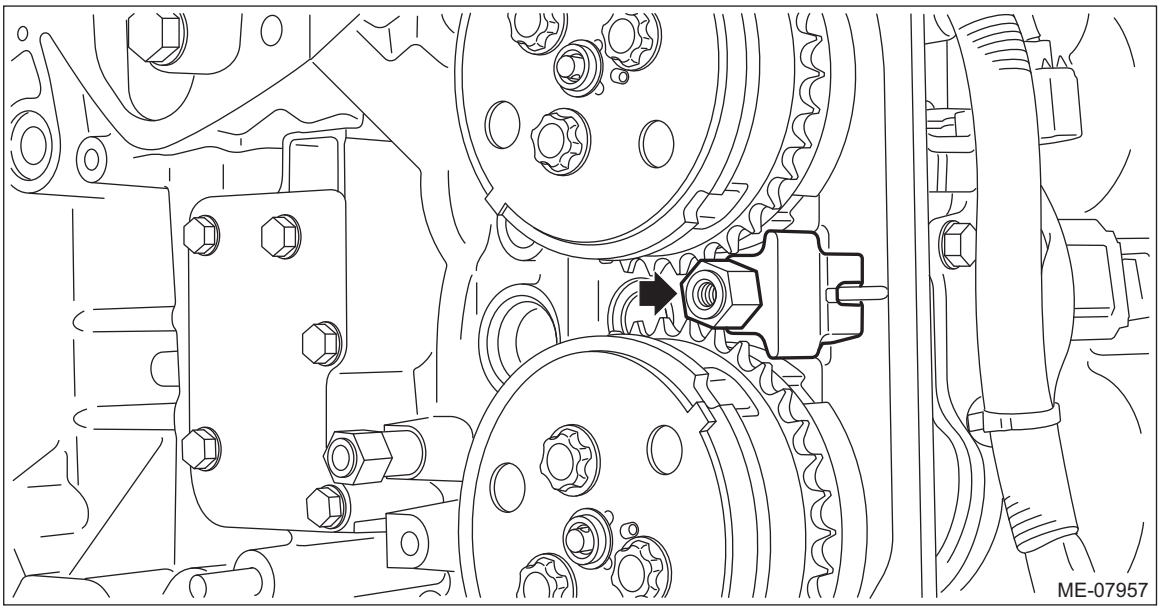
B: INSTALLATION

1. TIMING CHAIN LH

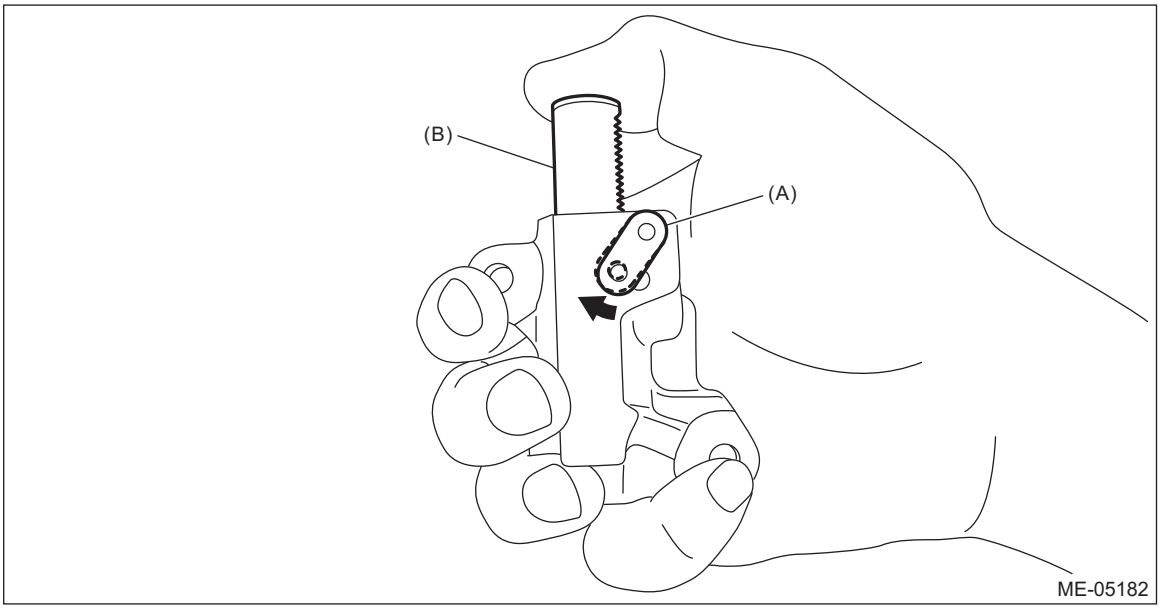
NOTE:
- Be careful that the foreign matter is not into or onto the assembled component during installation.
- Apply engine oil to all component parts of the timing chain.

1) Install the chain guide LH to the front camshaft cap LH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

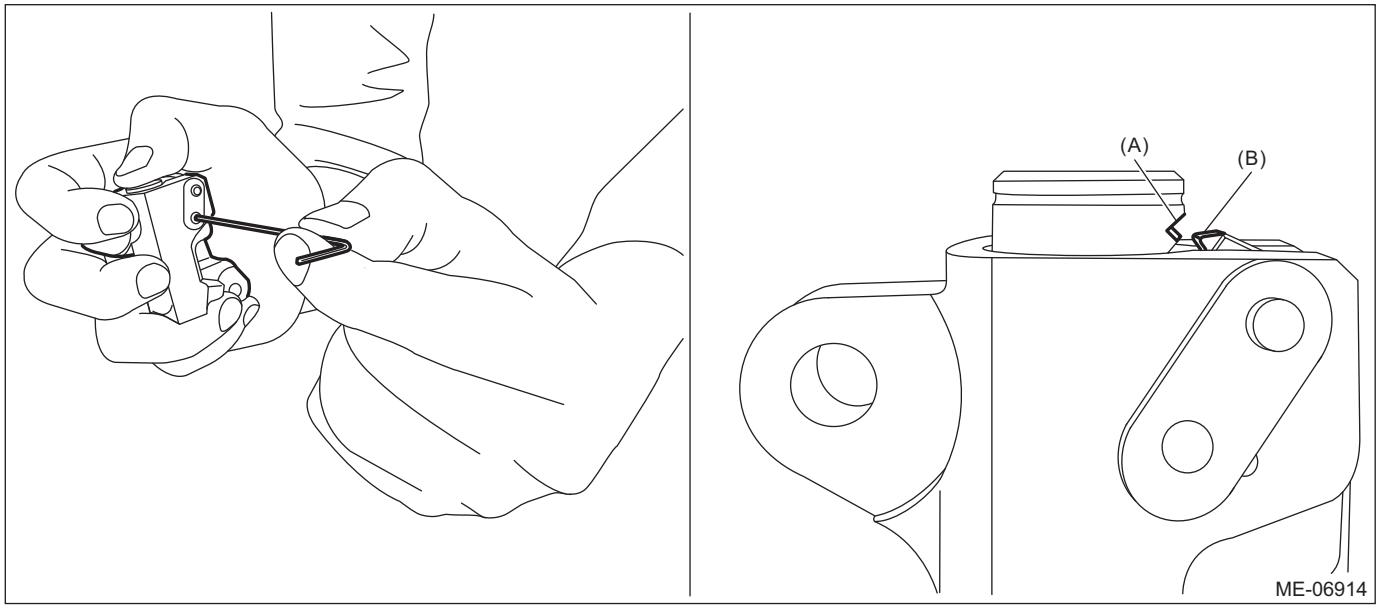


2) Prepare to attach the chain tensioner LH.
(1) Move the link plate (A) in the direction of arrow to press in the plunger (B).



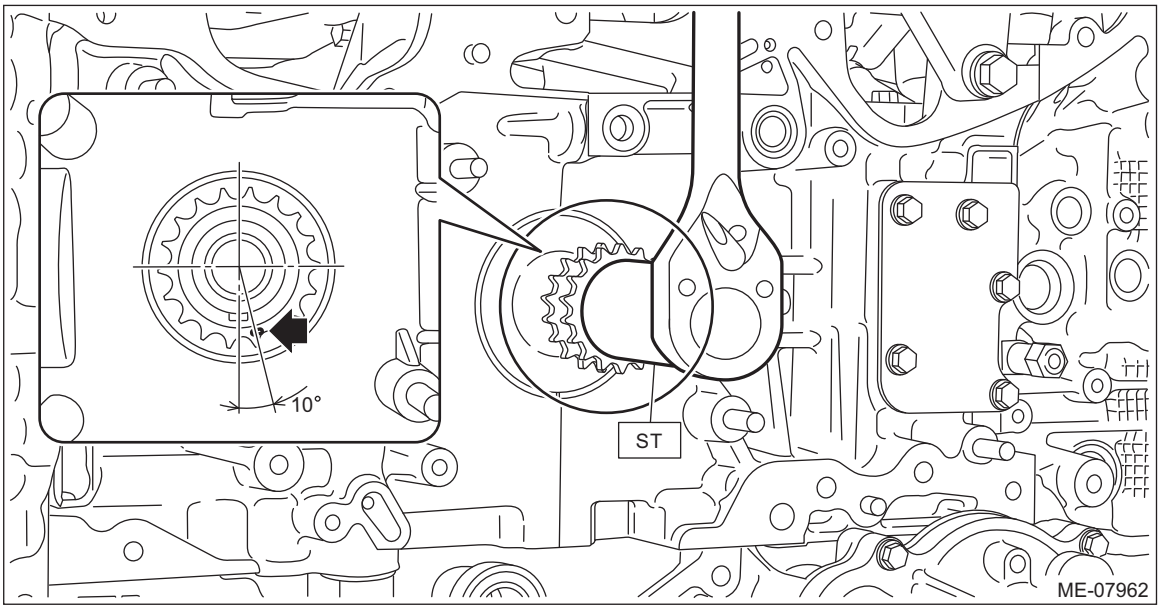
(2) With a stopper pin measuring 1.2 mm (0.0472 in) dia. or less (clips, etc.) or a hex wrench measuring 1.2 mm dia. inserted into the stopper pin hole, secure the plunger.

NOTE:
If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of plunger rack (A) is engaged with the stopper tooth (B). If not engaged, retract the plunger a little so that the first notch of plunger rack (A) is engaged with the stopper tooth (B).



3) Check that the crank sprocket is located at the position shown in the figure. If not aligned, using ST turn the crankshaft to align the crank sprocket alignment mark to the position shown in the figure.

NOTE:
This procedure is required to prevent the valve and piston contacting with each other in the next step.
ST 18252AA000 CRANKSHAFT SOCKET

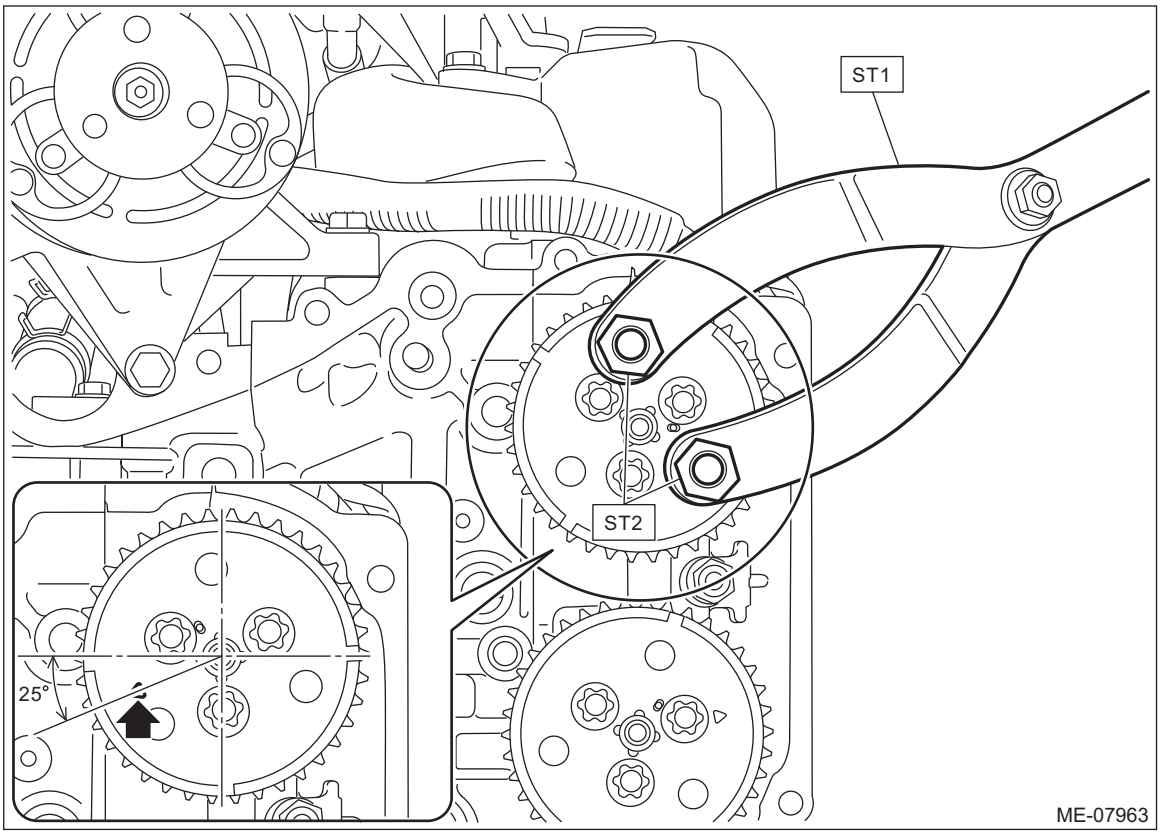


4) Using ST and by turning the intake cam sprocket LH, align the alignment marks to the positions as shown in the figure.

CAUTION:
• When the intake valve and exhaust valve lift at the same time, the valve heads contact each other and valve stem may bend. Do not turn the exhaust camshaft LH.

- **Perform the operation carefully since the ST comes off easily.**

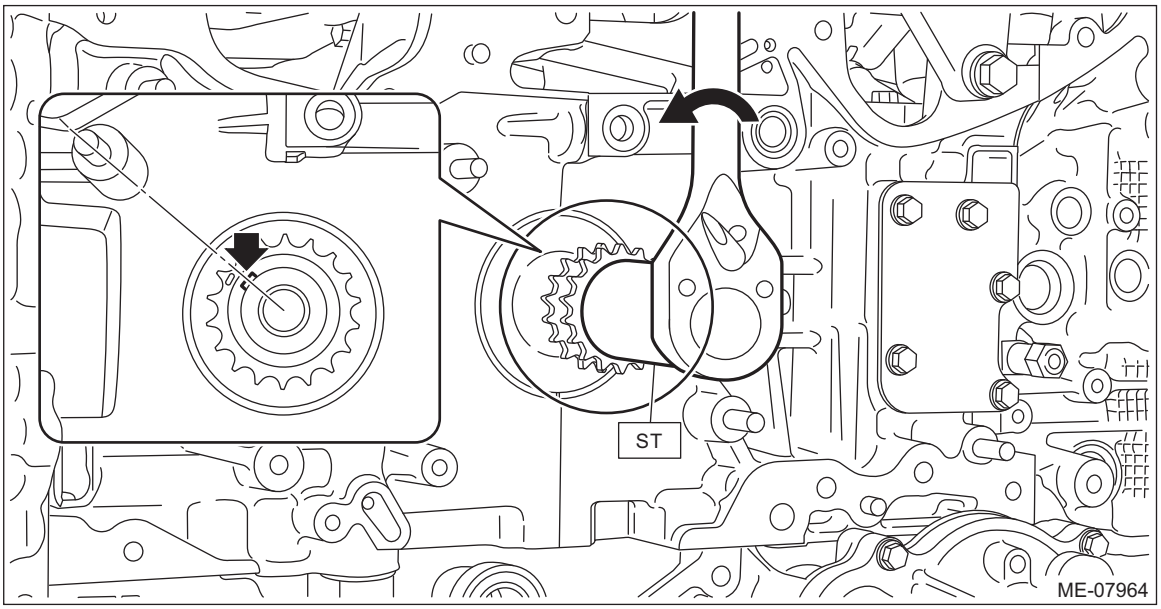
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET



5) Using ST and by turning the crankshaft approximately 130° counterclockwise, align the alignment marks of crankshaft key to the positions as shown in the figure.

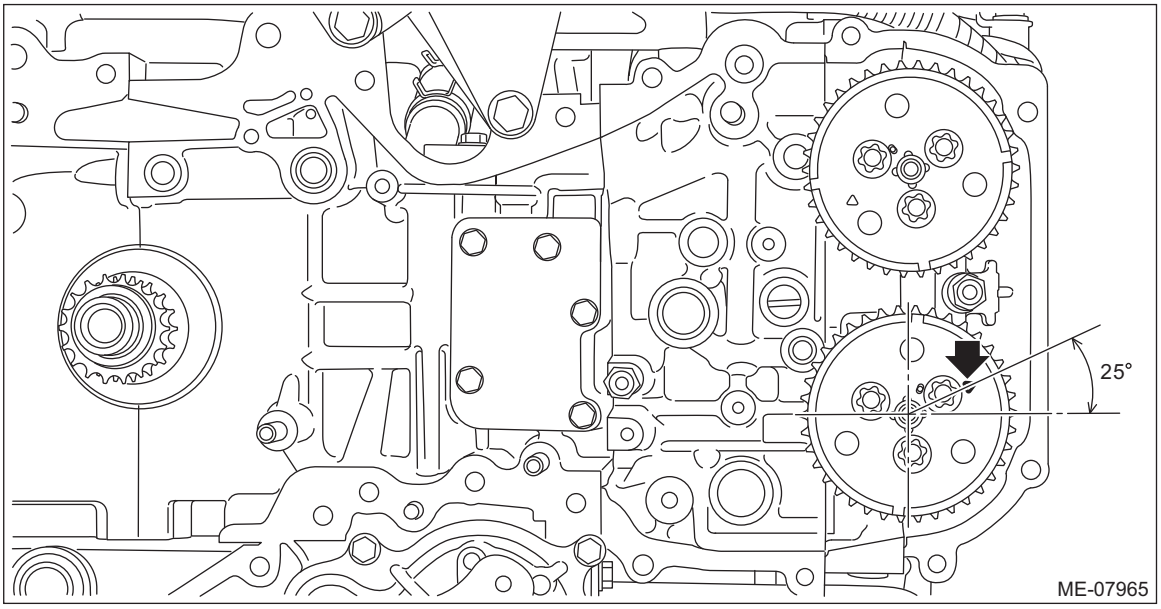
CAUTION:
Never turn clockwise because the valve and piston may contact. Clockwise turn is allowed only when adjusting the key position precisely, after turning the crankshaft counterclockwise to bring the key near the position as shown in the figure.

ST 18252AA000 CRANKSHAFT SOCKET



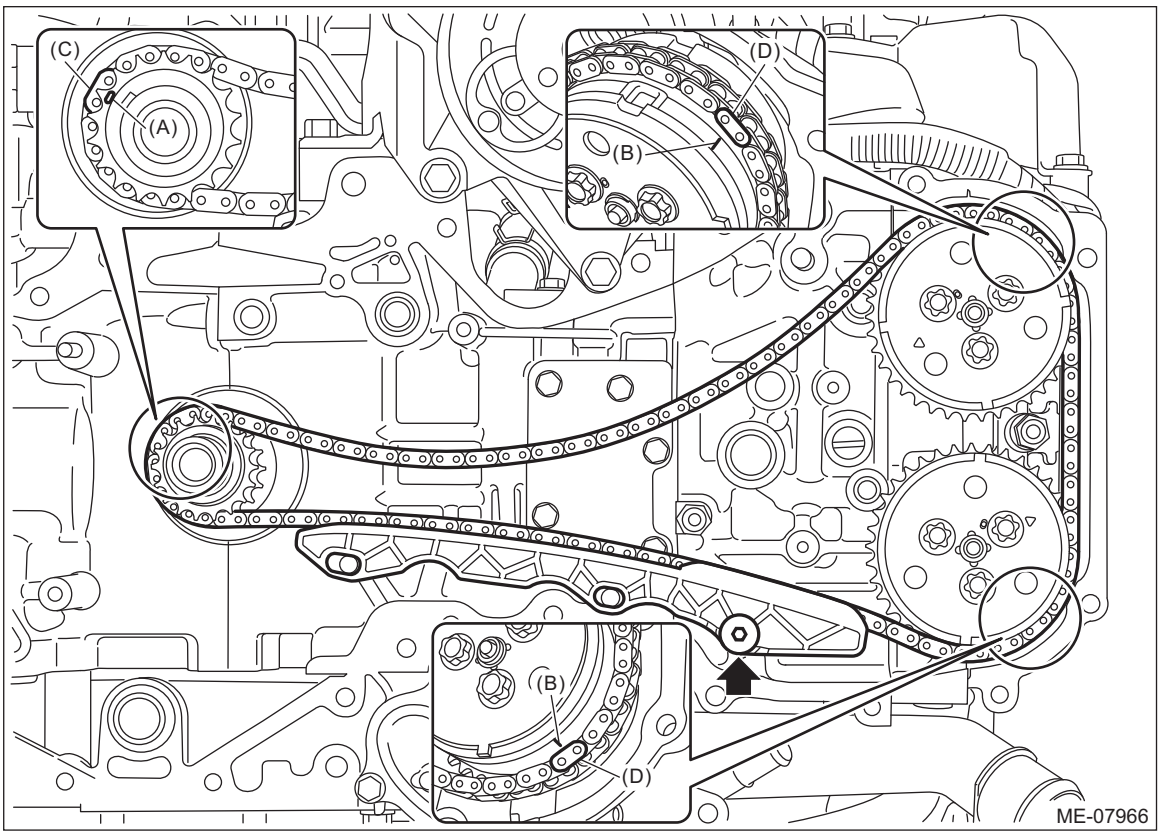
6) Align the alignment mark of exhaust cam sprocket LH to the position shown in the figure.

CAUTION:
To prevent valve damage, turn the exhaust cam sprocket LH only within the range of zero-lift (in range where it can be turned lightly by hand).



7) Install the timing chain LH and the timing chain guide LH.
   (1) Match the timing chain mark (blue) to the alignment mark of the crank sprocket.
   (2) Match the timing chain mark (pink) to the timing mark position of the intake cam sprocket LH.
   (3) Match the timing chain mark (pink) to the timing mark position of the exhaust cam sprocket LH.
   (4) Install timing chain guide LH.

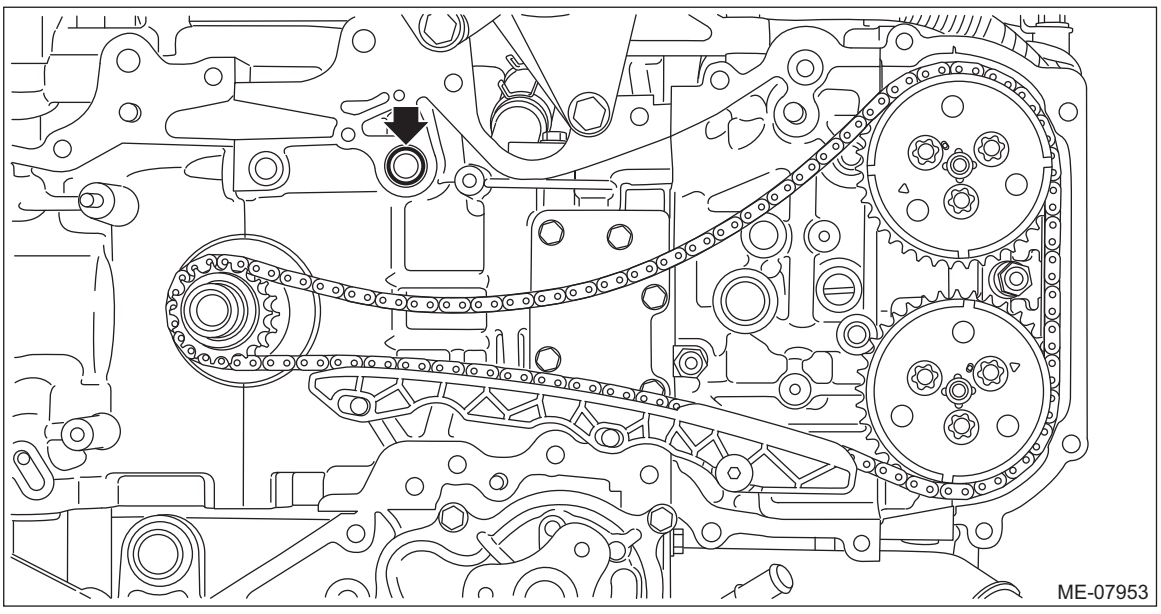
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



(A) Alignment mark
(B) Timing mark
(C) Blue
(D) Pink

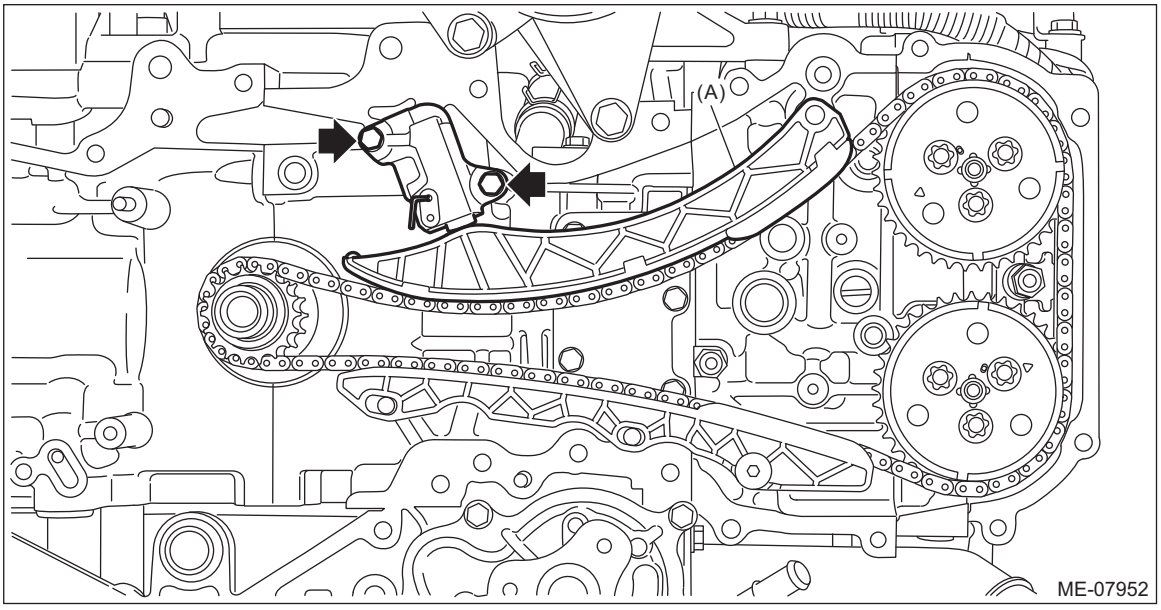
8) Install O-rings to the cylinder block LH.

NOTE:
Use new O-rings.



9) Install the chain tensioner lever LH (A) and chain tensioner LH.

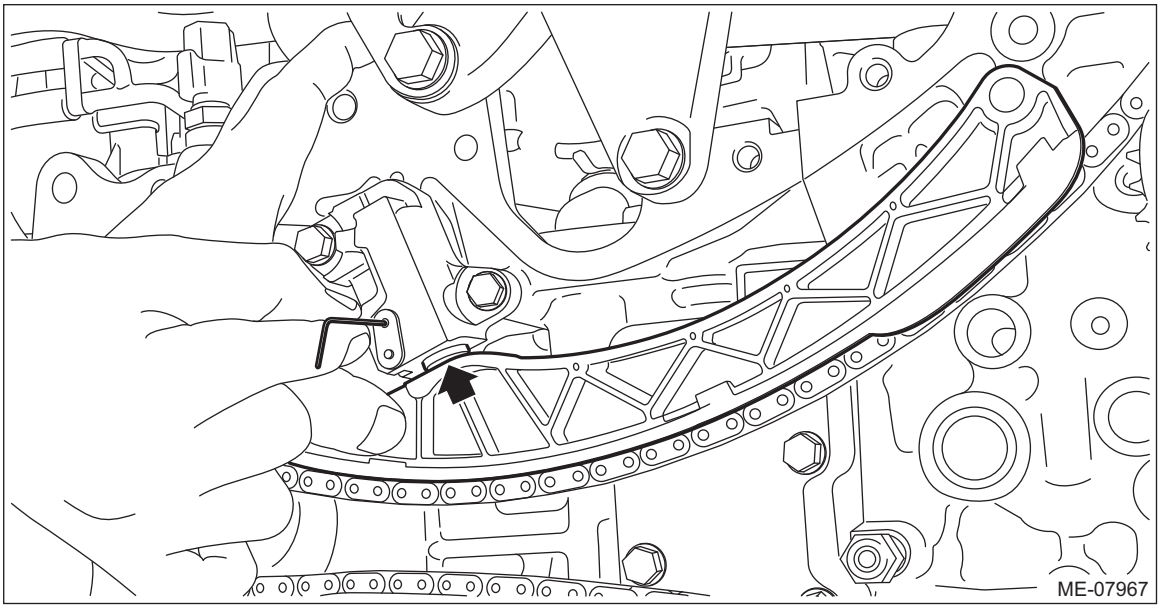
Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

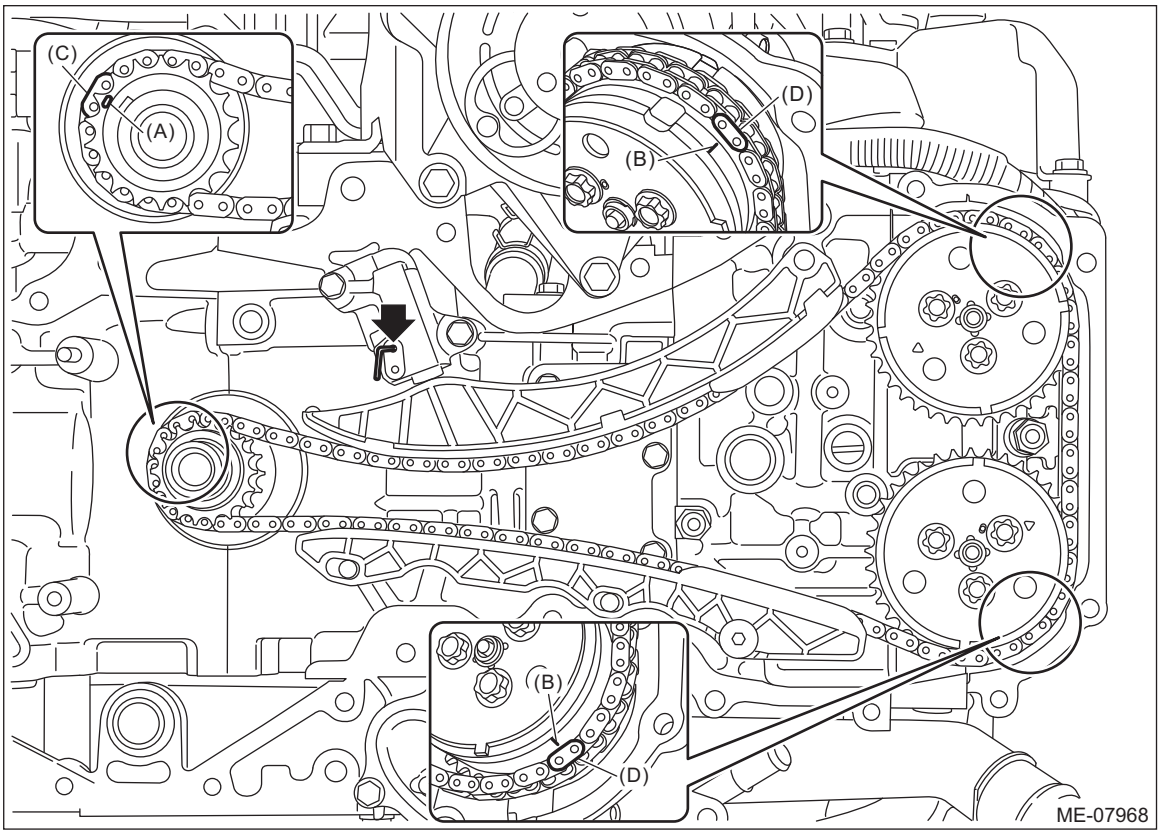


10) Pull out the stopper pin from the chain tensioner LH.

CAUTION:
Confirm the following before pulling out the stopper pin.
- **Matching of the timing chain mark (blue) to the alignment mark of the crank sprocket.**
- **Matching of the timing chain mark (pink) to the timing mark position of the intake cam sprocket LH.**
- **Matching of the timing chain mark (pink) to the timing mark position of the exhaust cam sprocket LH.**

NOTE:
If the stopper pin cannot be removed, lift the chain tension lever LH to remove as shown in the figure.

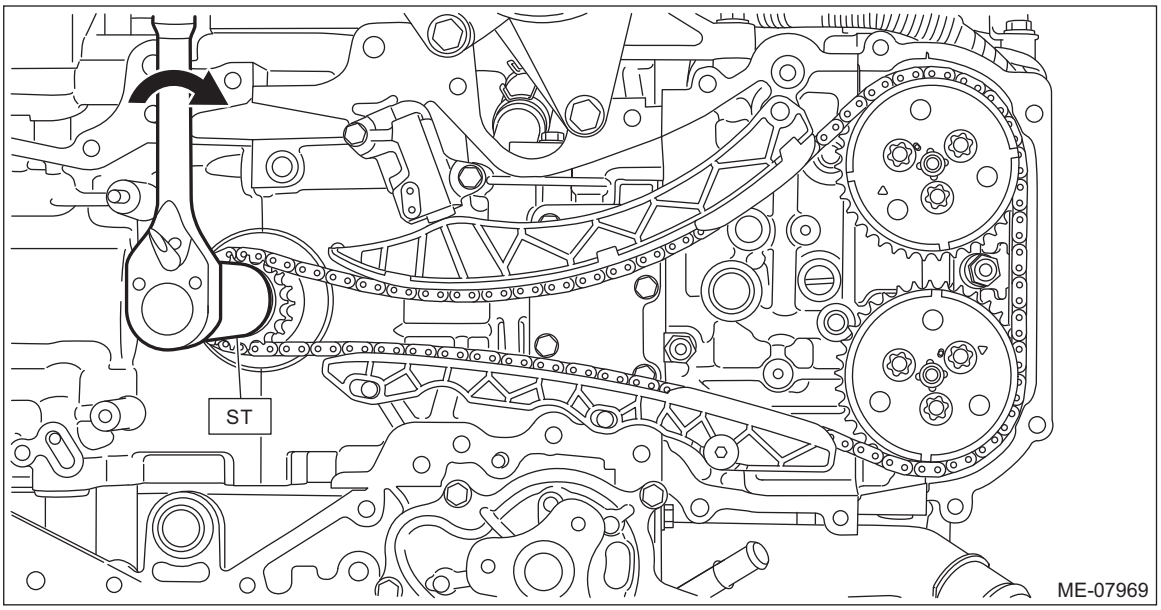




(A) Alignment mark
(B) Timing mark
(C) Blue
(D) Pink

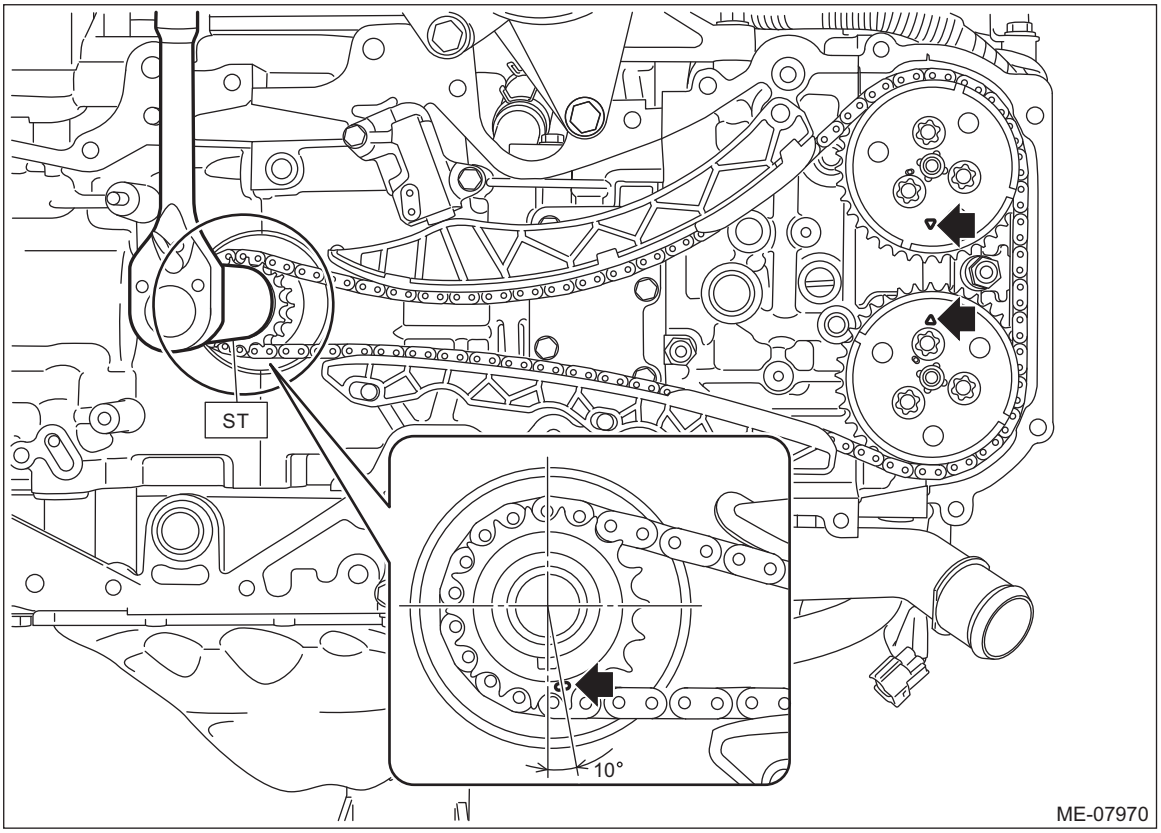
11) Using the ST, turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

CAUTION:
Always make sure to perform this confirmation.
ST 18252AA000 CRANKSHAFT SOCKET



12) Using ST and by turning the crankshaft, align the alignment marks of crank sprocket, intake cam sprocket LH and exhaust cam sprocket LH to the positions as shown in the figure.

NOTE:
If the alignment marks are aligned to the positions as shown in the figure, the crankshaft key is located at six o'clock position.
ST 18252AA000 CRANKSHAFT SOCKET



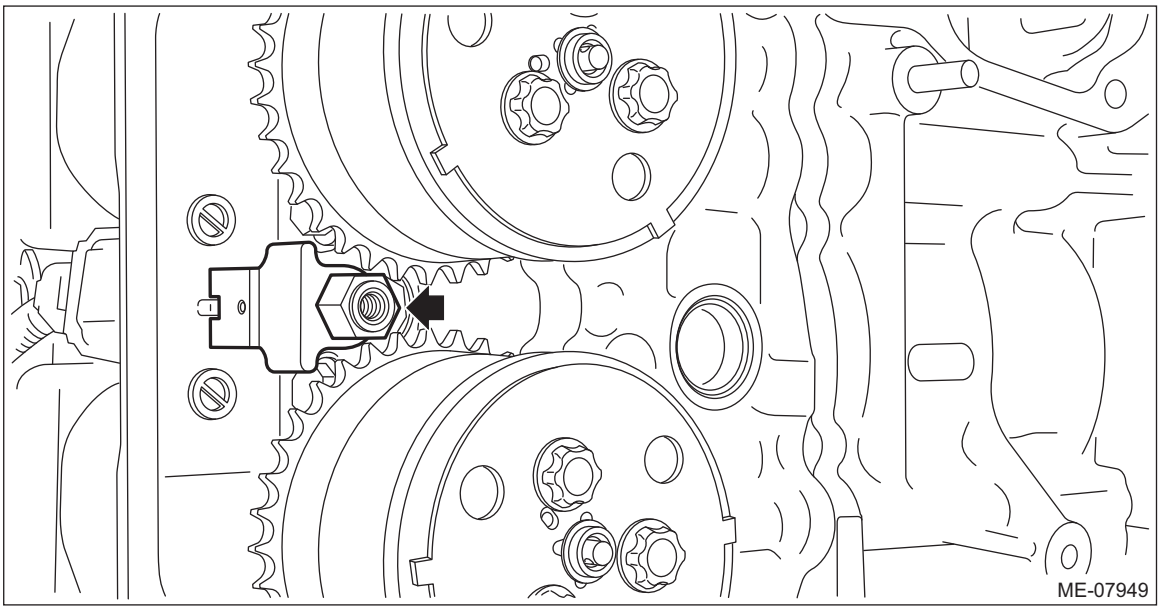
13) Install the timing chain RH. <Ref. to ME(w/o STI)-127, TIMING CHAIN RH, INSTALLATION, Timing Chain Assembly.>

2. TIMING CHAIN RH

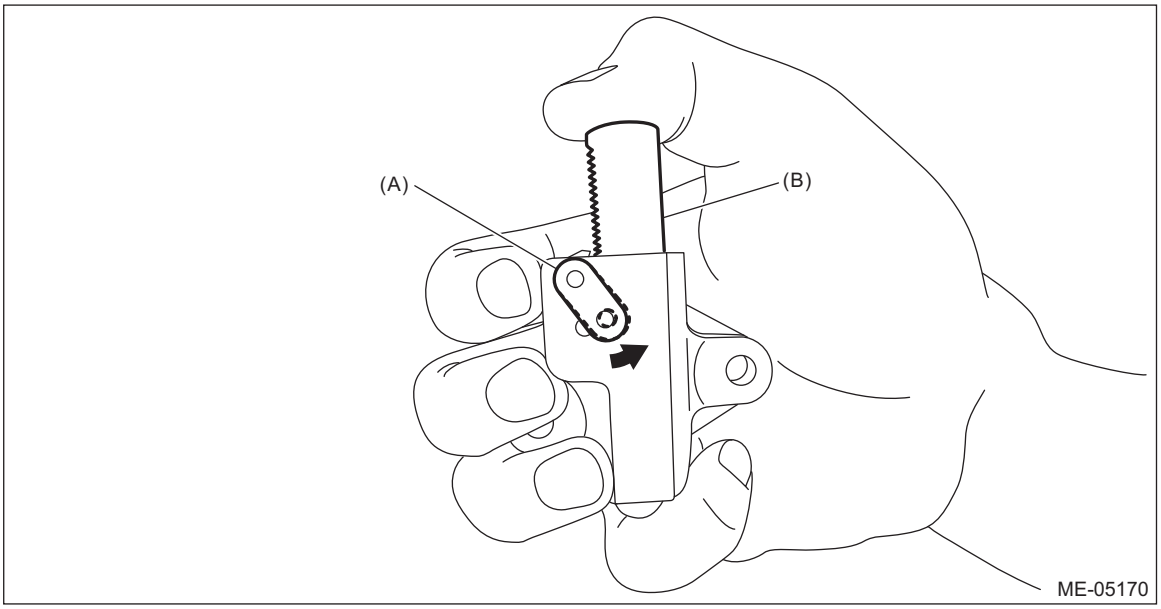
NOTE:
- Be careful that the foreign matter is not into or onto the assembled component during installation.
- Apply engine oil to all component parts of the timing chain.

1) Install timing chain LH. <Ref. to ME(w/o STI)-119, TIMING CHAIN LH, INSTALLATION, Timing Chain Assembly.>
2) Install the chain guide RH to the front camshaft cap RH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

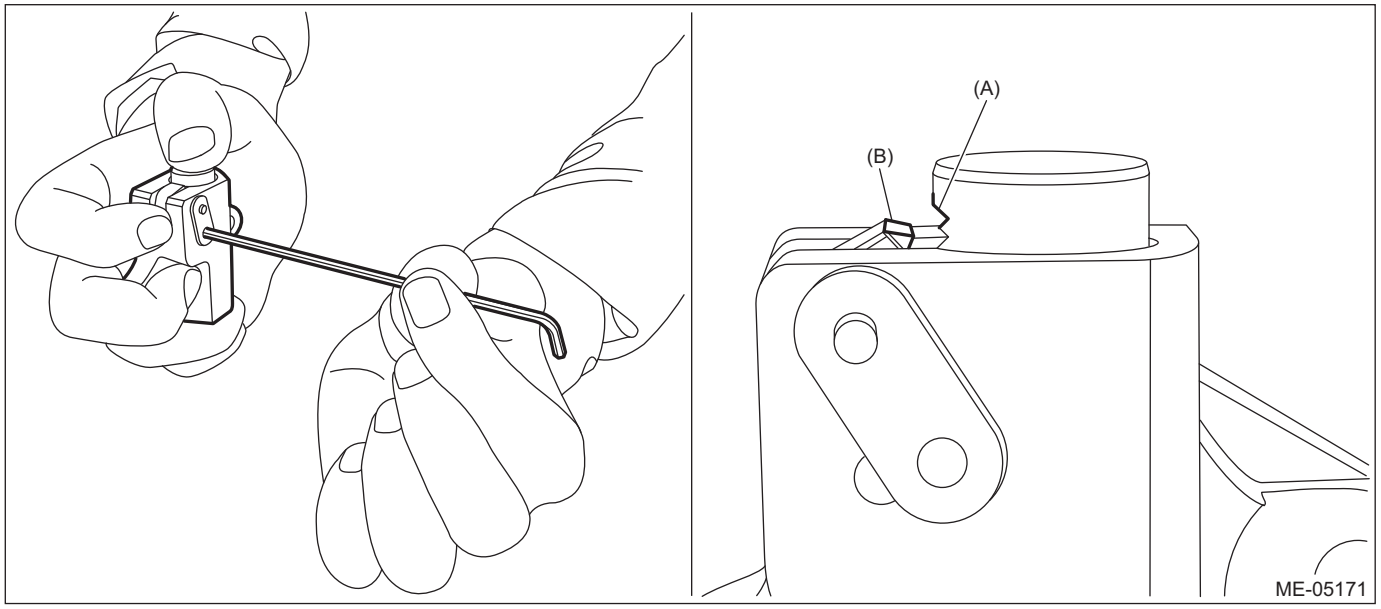


3) Prepare to attach the chain tensioner RH.
(1) Move the link plate (A) in the direction of arrow to press in the plunger (B).

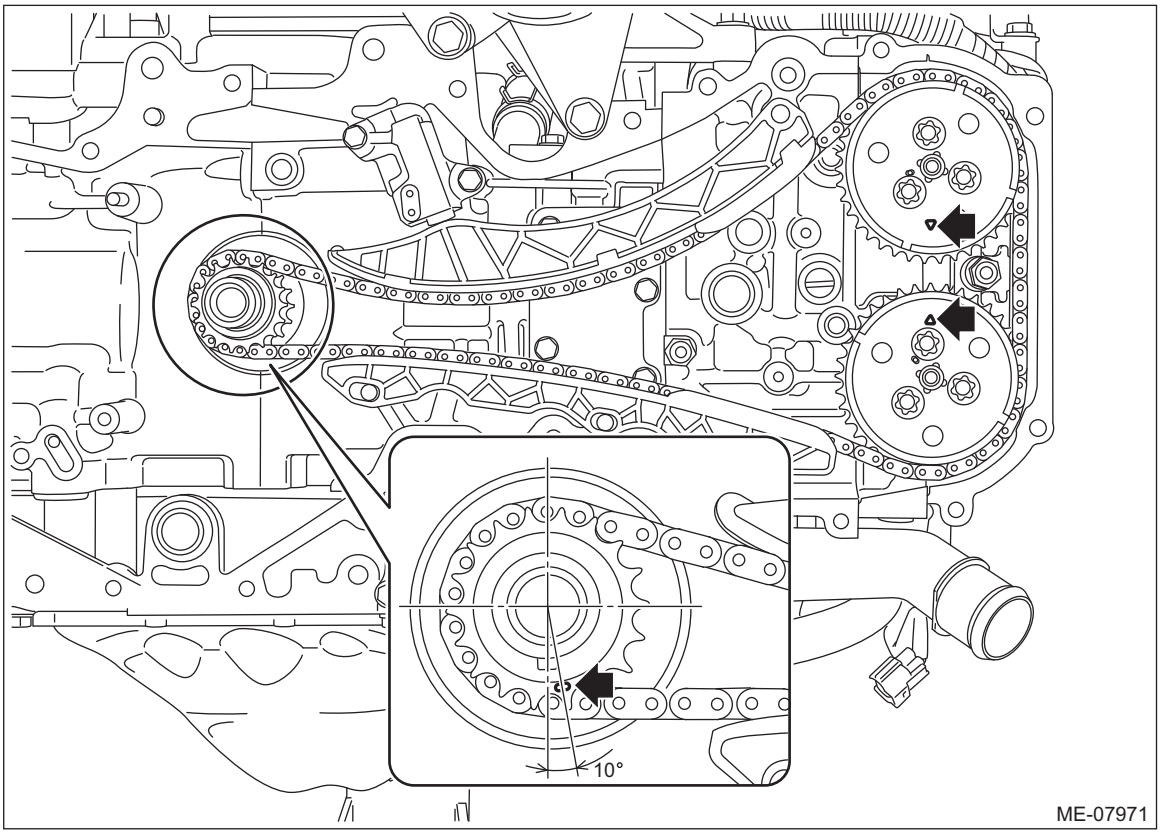


(2) With a 2.5 mm (0.0984 in) dia. stopper pin or a 2.5 mm dia. hex wrench inserted into the stopper pin hole, secure the plunger.

NOTE:
If the stopper pin hole on the link plate and the stopper pin hole on the chain tensioner are not aligned, check that the first notch of plunger rack (A) is engaged with the stopper tooth (B). If not engaged, retract the plunger a little so that the first notch of plunger rack (A) is engaged with the stopper tooth (B).

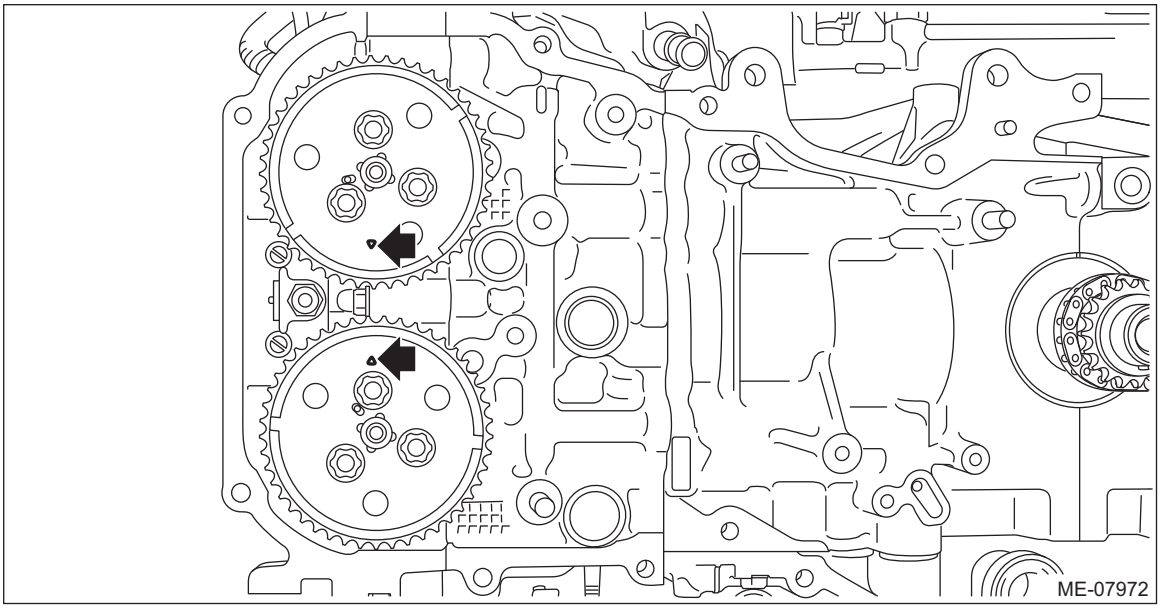


4) Make sure that the alignment marks of the crank sprocket, intake cam sprocket LH and exhaust cam sprocket LH are aligned to the positions as shown in the figure.



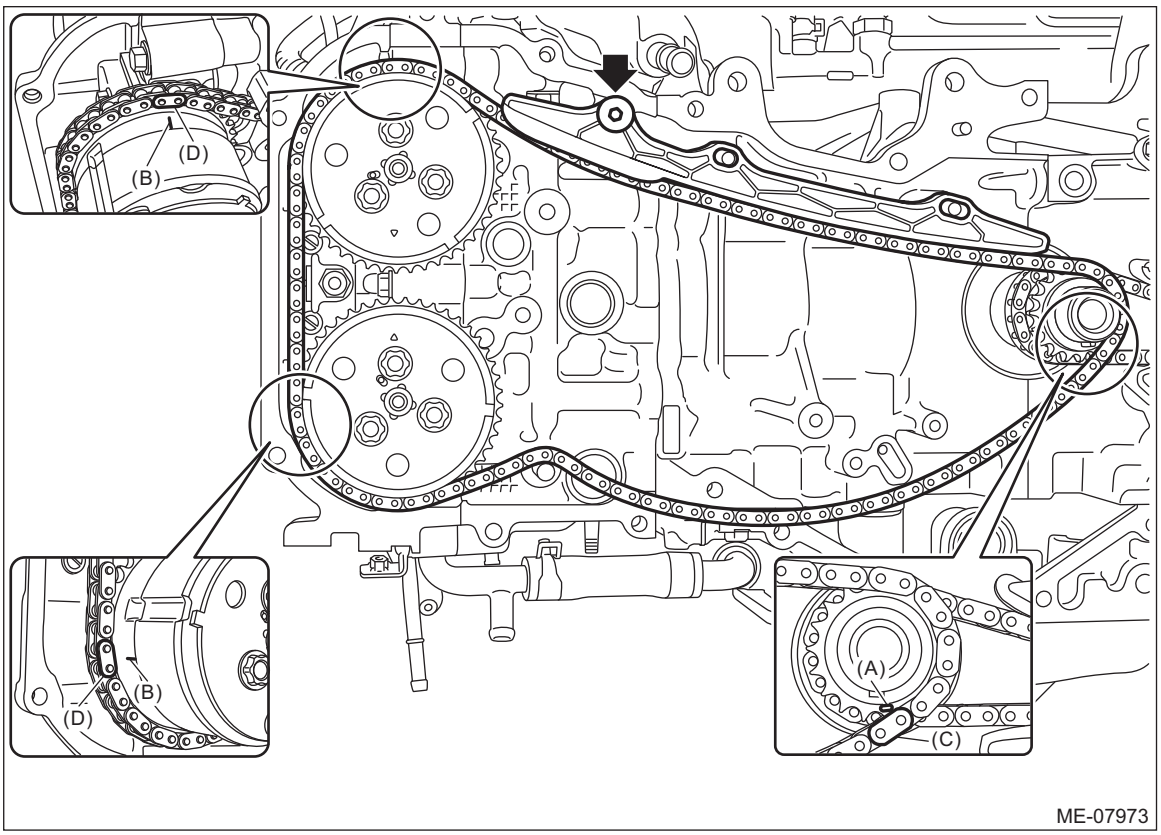
5) Align the alignment marks of intake cam sprocket RH and exhaust cam sprocket RH to the positions as shown in the figure.

CAUTION:
To prevent valve damage, turn the intake cam sprocket RH and exhaust cam sprocket RH only within the range of zero-lift (in range where it can be turned lightly by hand).



6) Install the timing chain RH and the timing chain guide RH.
   (1) Match the timing chain mark (blue) to the alignment mark of the crank sprocket.
   (2) Match the timing chain mark (pink) to the timing mark position of the intake cam sprocket RH.
   (3) Match the timing chain mark (pink) to the timing mark position of the exhaust cam sprocket RH.
   (4) Install the timing chain guide RH.

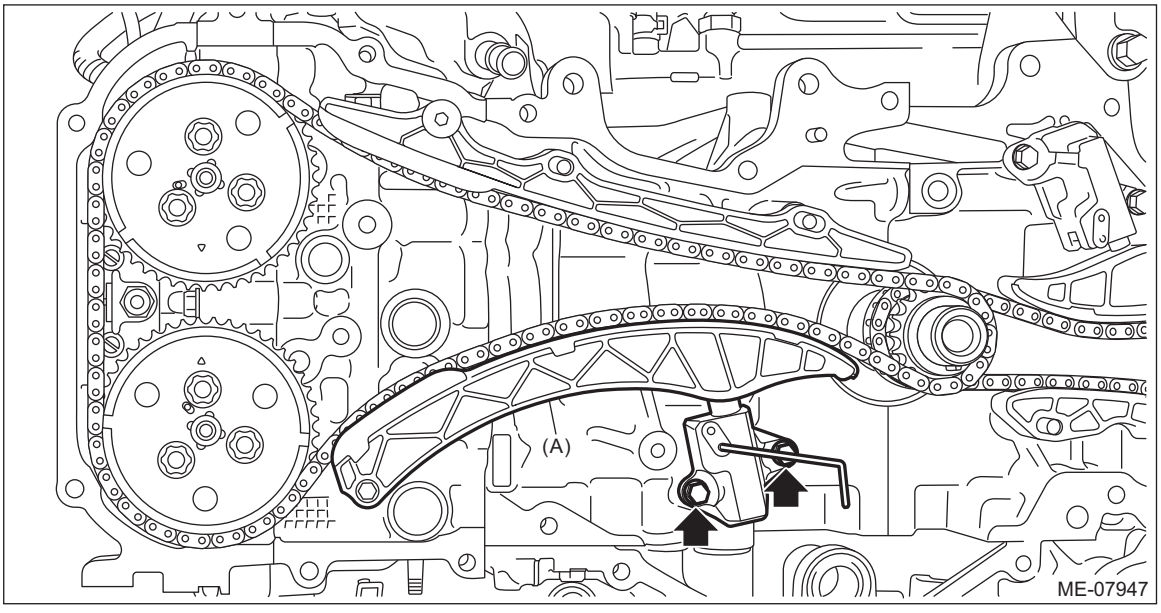
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



(A) Alignment mark
(B) Timing mark
(C) Blue
(D) Pink

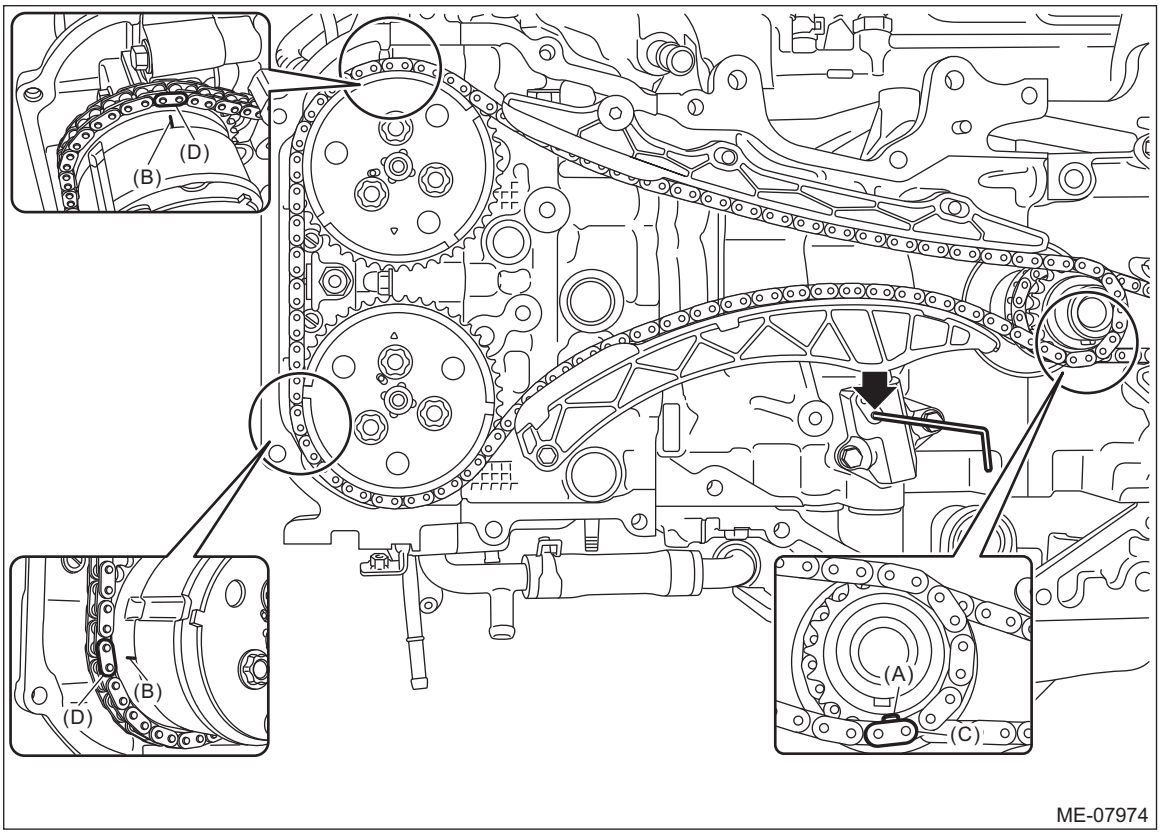
7) Install the chain tensioner lever RH (A) and chain tensioner RH.

Tightening torque:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)



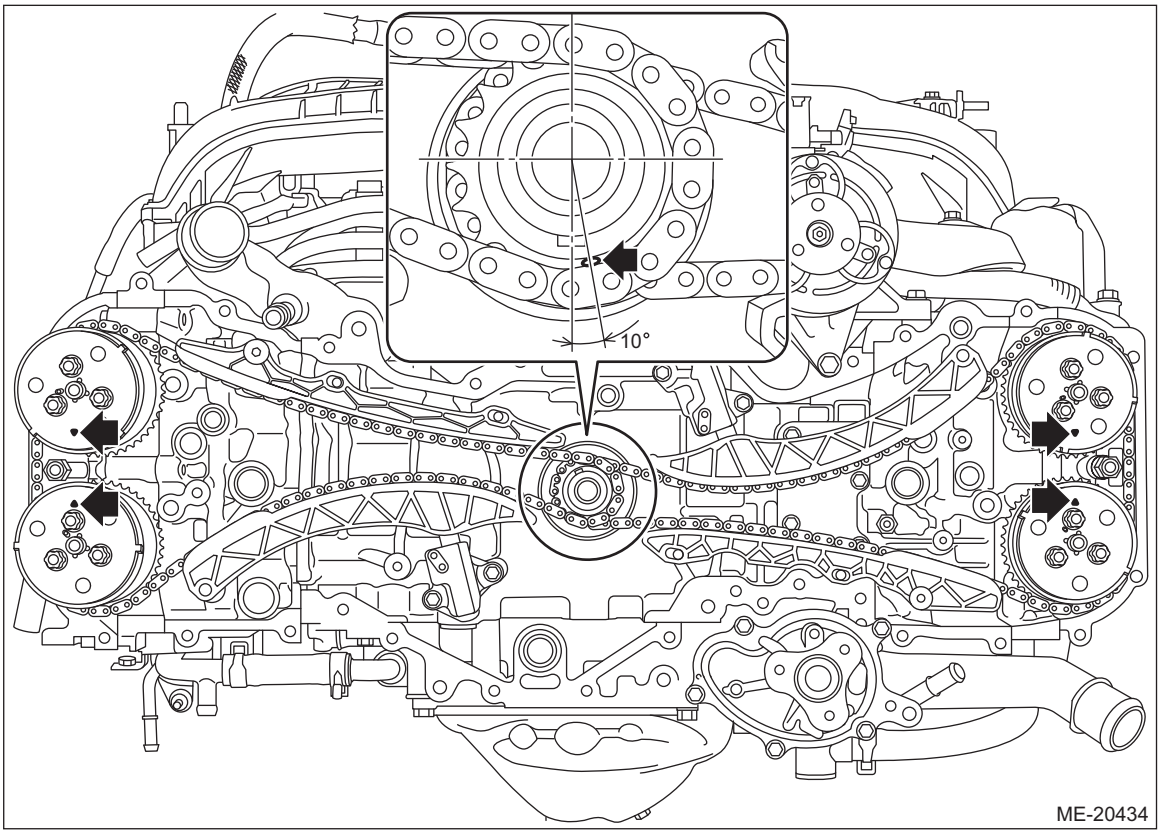
8) Pull out the stopper pin from the chain tensioner RH.

CAUTION:
Confirm the following before pulling out the stopper pin.
- **Matching of the timing chain mark (blue) to the alignment mark of the crank sprocket.**
- **Matching of the timing chain mark (pink) to the timing mark position of the intake cam sprocket RH.**
- **Matching of the timing chain mark (pink) to the timing mark position of the exhaust cam sprocket RH.**



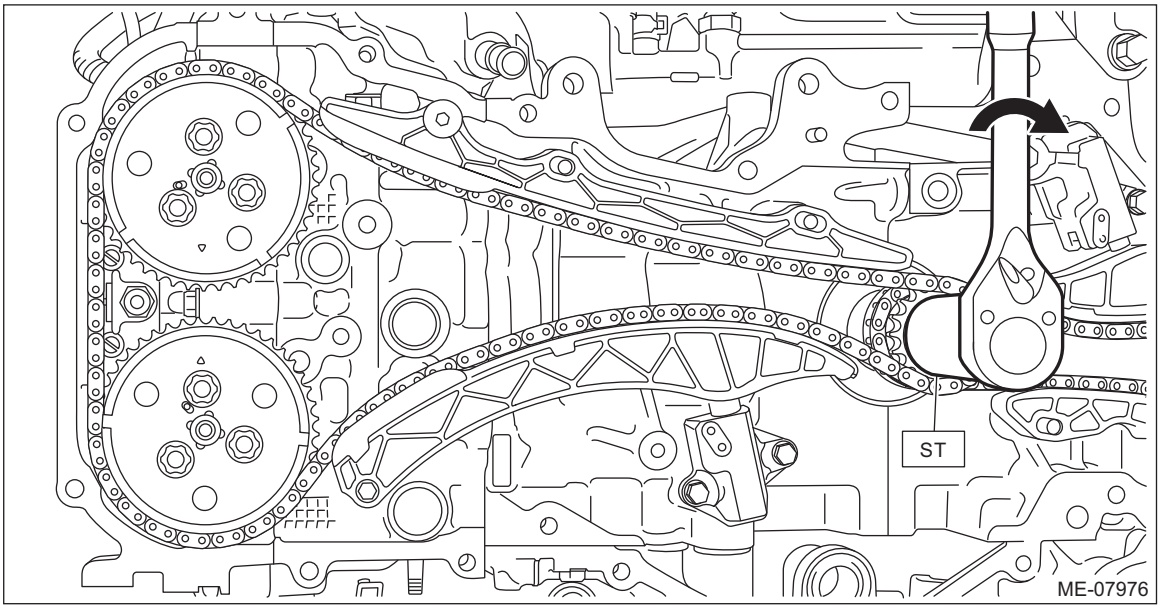
(A) Alignment mark
(B) Timing mark
(C) Blue
(D) Pink

9) Make sure that the alignment marks of the cam sprocket and crank sprocket are aligned to the positions as shown in the figure.



10) Using the ST, turn the crankshaft clockwise, and make sure that there are no abnormal conditions.

CAUTION:
Always make sure to perform this confirmation.
ST 18252AA000 CRANKSHAFT SOCKET



11) Install the chain cover. <Ref. to ME(w/o STI)-98, INSTALLATION, Chain Cover.>

C: INSPECTION

1) Check the timing chain, chain guide, chain tensioner lever and chain tensioner for deformation, cracks or other damages.

2) Check the chain guide and chain tensioner lever for abnormal wear.

16.Cam Sprocket

A: REMOVAL

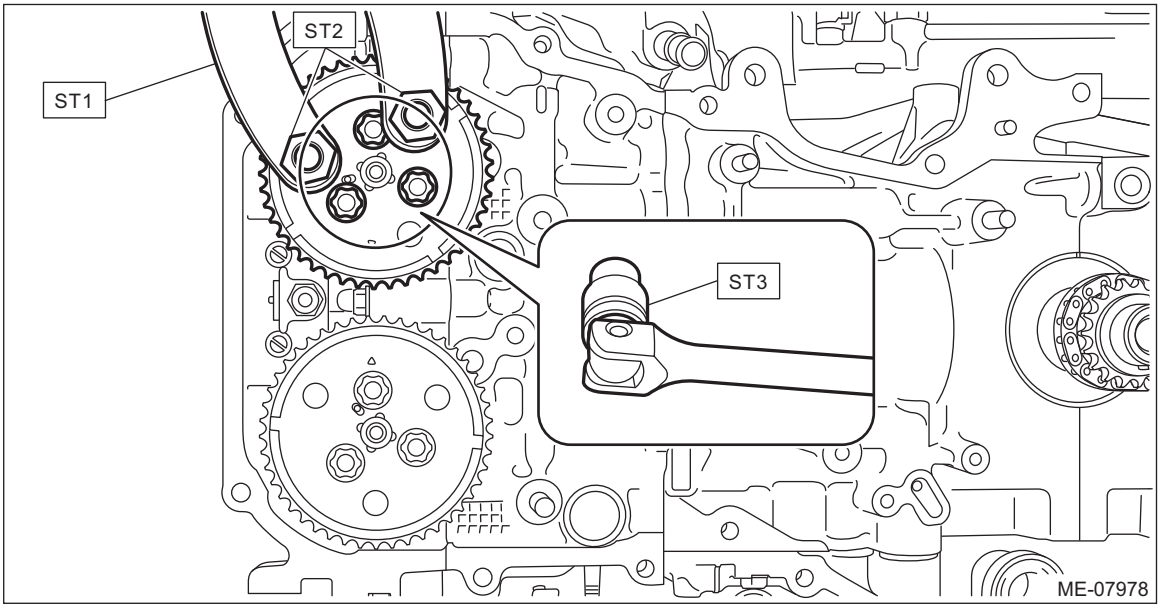
1. CAM SPROCKET RH

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.

• Intake cam sprocket RH

1) Remove the timing chain RH. <Ref. to ME(w/o STI)-112, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
2) Hold the intake cam sprocket RH using the ST1 and ST2, and remove the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

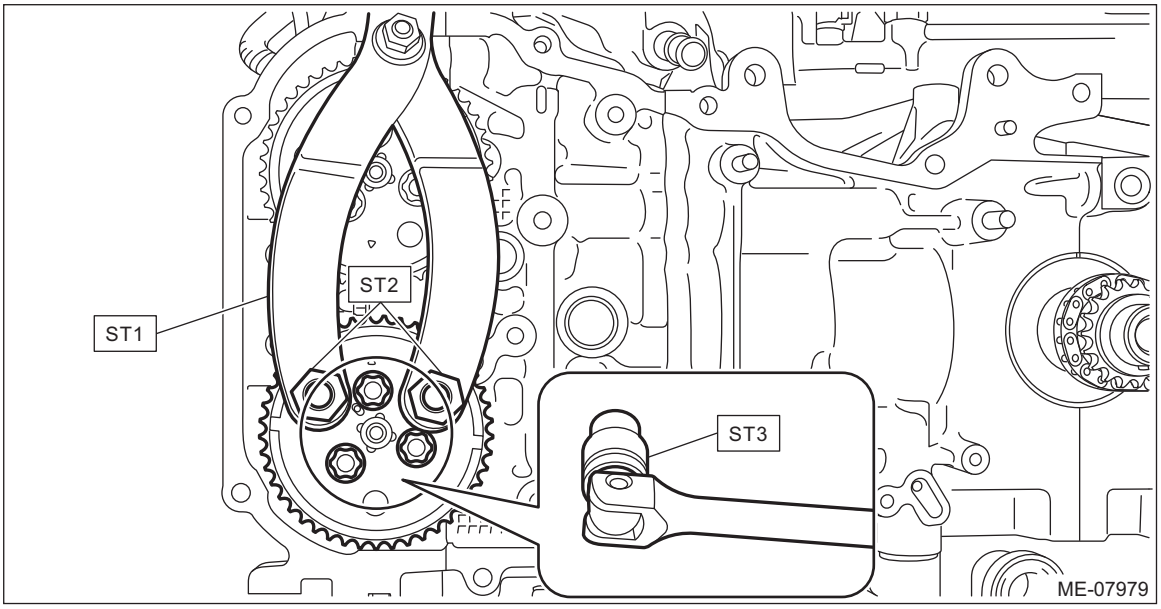


3) Remove the intake cam sprocket RH.

• Exhaust cam sprocket RH

1) Remove the timing chain RH. <Ref. to ME(w/o STI)-112, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
2) Hold the exhaust cam sprocket RH using the ST1 and ST2, and remove the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET



3) Remove the exhaust cam sprocket RH.

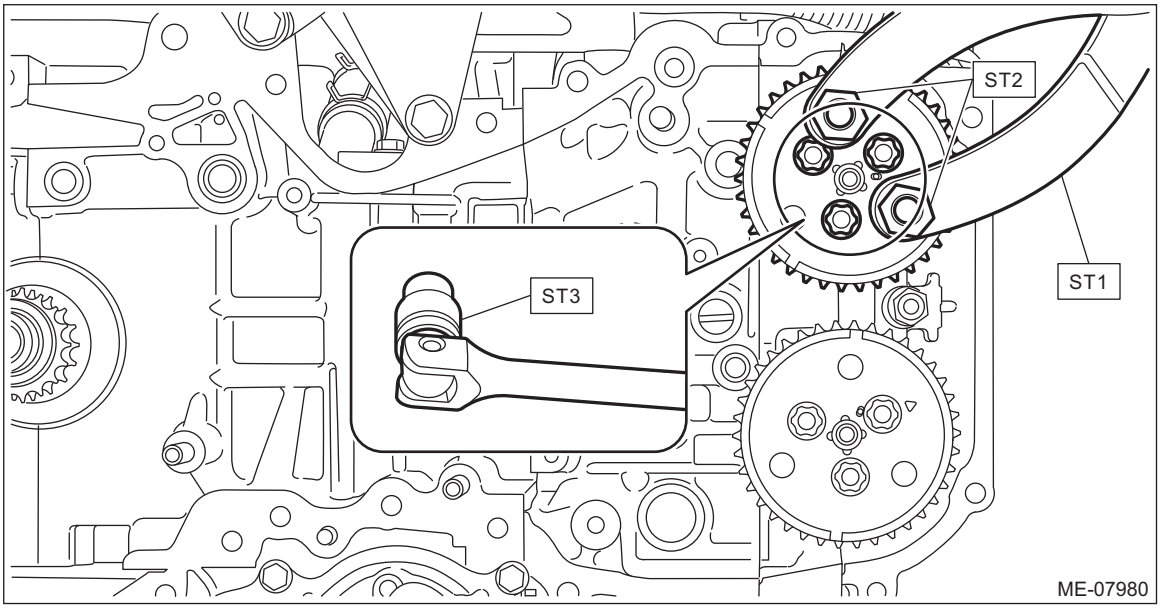
2. CAM SPROCKET LH

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.

- **Intake cam sprocket LH**

1) Remove the timing chain LH. <Ref. to ME(w/o STI)-114, TIMING CHAIN LH, REMOVAL, Timing Chain Assembly.>
2) Hold the intake cam sprocket LH using the ST1 and ST2, and remove the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

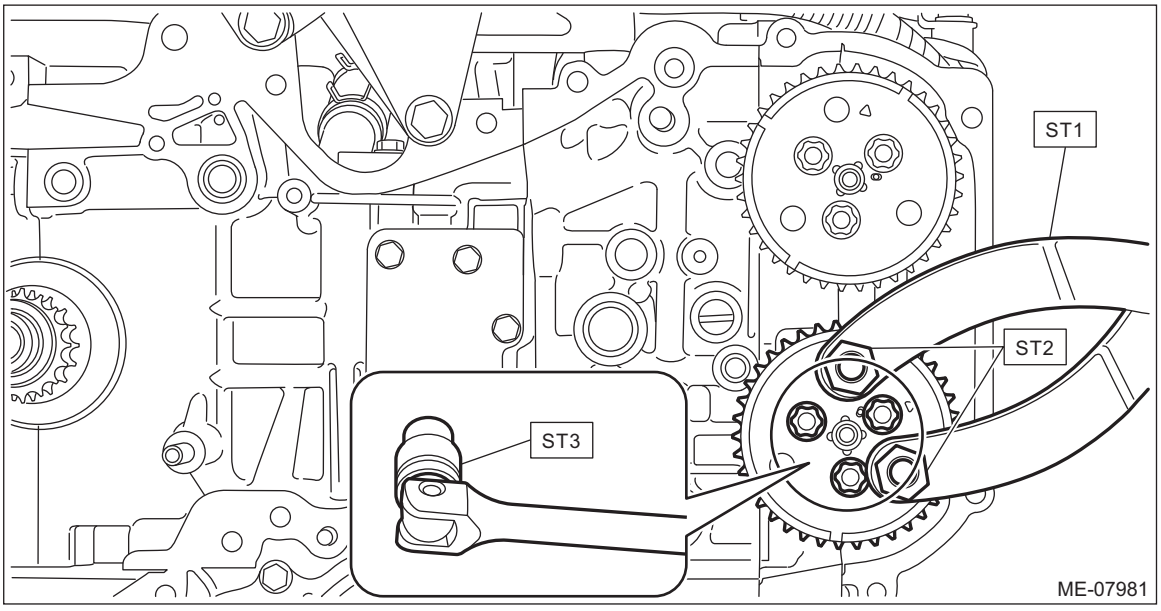


3) Remove the intake cam sprocket LH.

- **Exhaust cam sprocket LH**

1) Remove the timing chain LH. <Ref. to ME(w/o STI)-114, TIMING CHAIN LH, REMOVAL, Timing Chain Assembly.>
2) Hold the exhaust cam sprocket LH using the ST1 and ST2, and remove the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET



3) Remove the exhaust cam sprocket LH.

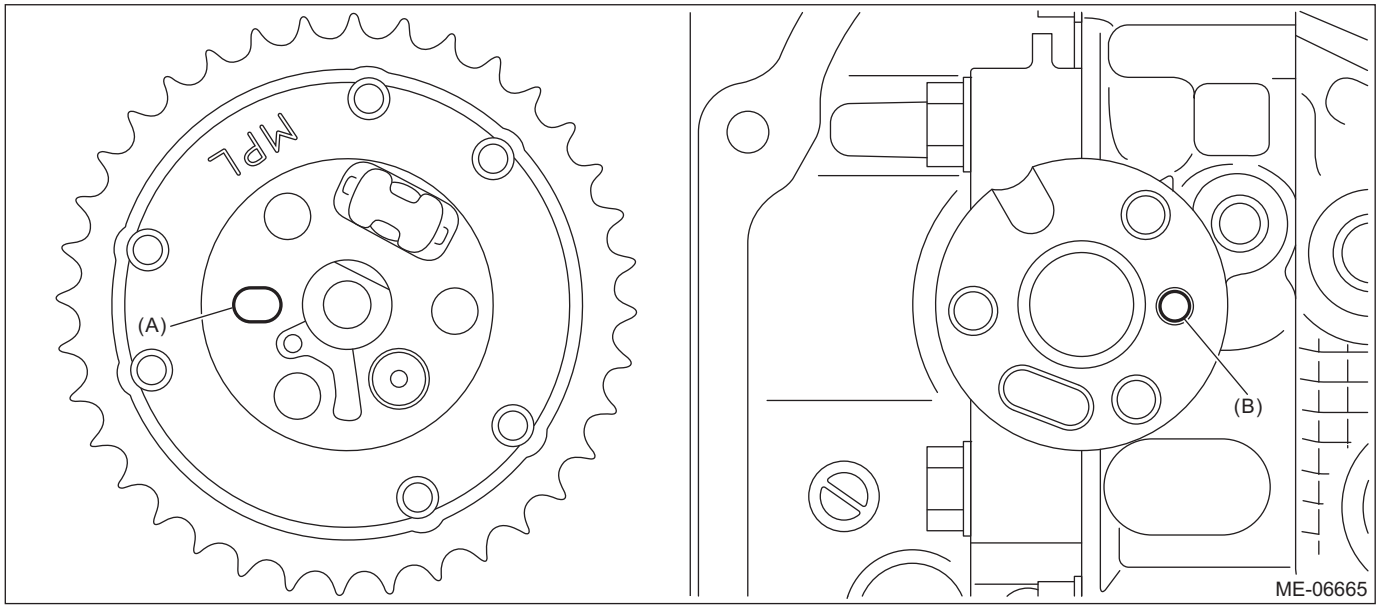
B: INSTALLATION

1. CAM SPROCKET RH

• Intake cam sprocket RH

1) Install the intake cam sprocket RH by aligning the knock hole (A) of intake cam sprocket RH and the knock pin (B) of intake camshaft RH.

NOTE:
Before installation, check that there is no foreign matter on the intake cam sprocket RH and intake camshaft RH.

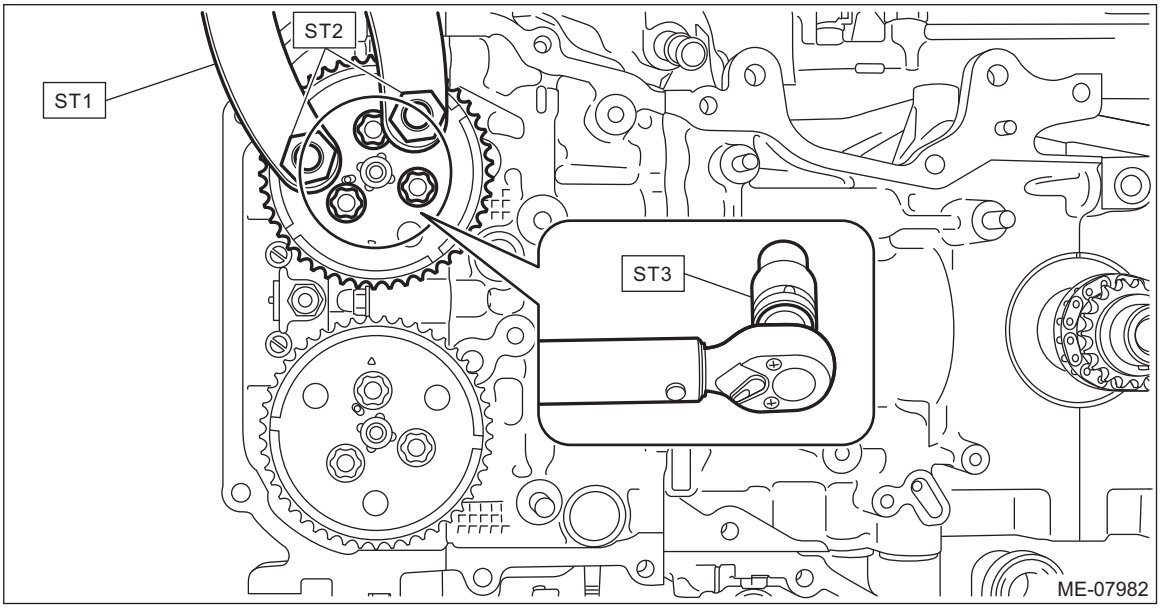


2) Hold the intake cam sprocket RH using the ST1 and ST2, and install the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.

NOTE:
Apply engine oil to the bolt thread.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

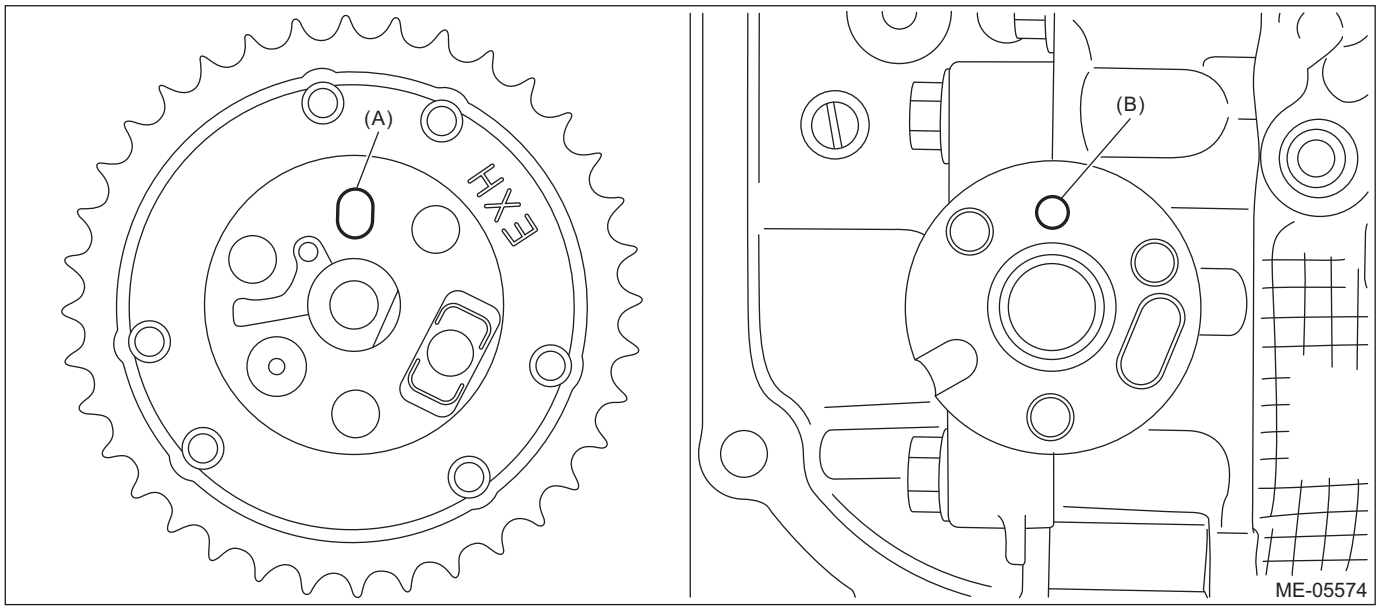


3) Install the timing chain RH. <Ref. to ME(w/o STI)-127, TIMING CHAIN RH, INSTALLATION, Timing Chain Assembly.>

- **Exhaust cam sprocket RH**

1) Install the exhaust cam sprocket RH by aligning the knock hole (A) of exhaust cam sprocket RH and the knock pin (B) of exhaust camshaft RH.

NOTE:
Before installation, check that there is no foreign matter on the exhaust cam sprocket RH and exhaust camshaft RH.

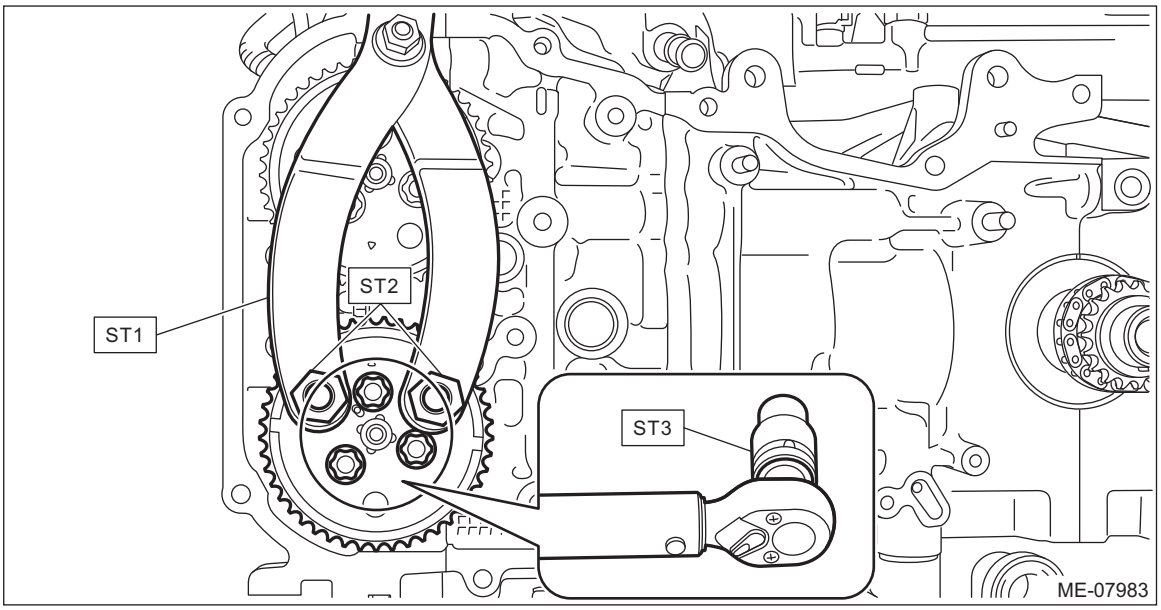


2) Hold the exhaust cam sprocket RH using ST1 and ST2, and install the bolts using ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.

NOTE:
Apply engine oil to the bolt thread.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



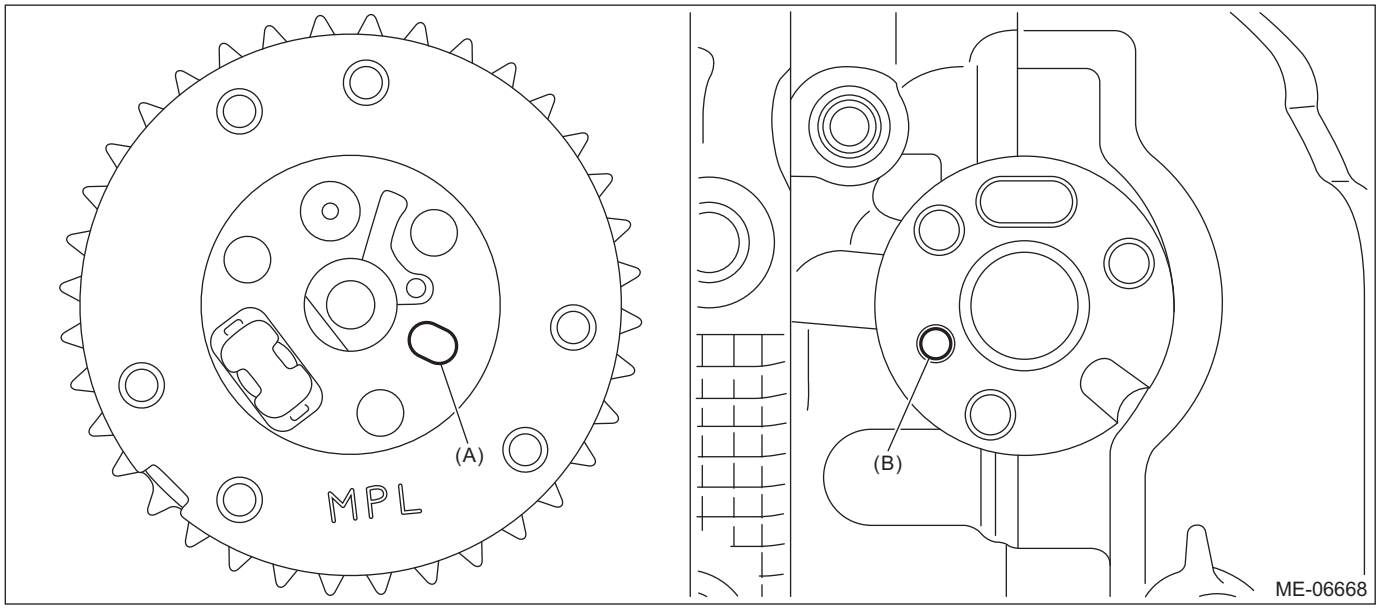
3) Install the timing chain RH. <Ref. to ME(w/o STI)-127, TIMING CHAIN RH, INSTALLATION, Timing Chain Assembly.>

2. CAM SPROCKET LH

• Intake cam sprocket LH

1) Install the intake cam sprocket LH by aligning the knock hole (A) of intake cam sprocket LH and the knock pin (B) of intake camshaft LH.

NOTE:
Before installation, check that there is no foreign matter on the intake cam sprocket LH and intake camshaft LH.

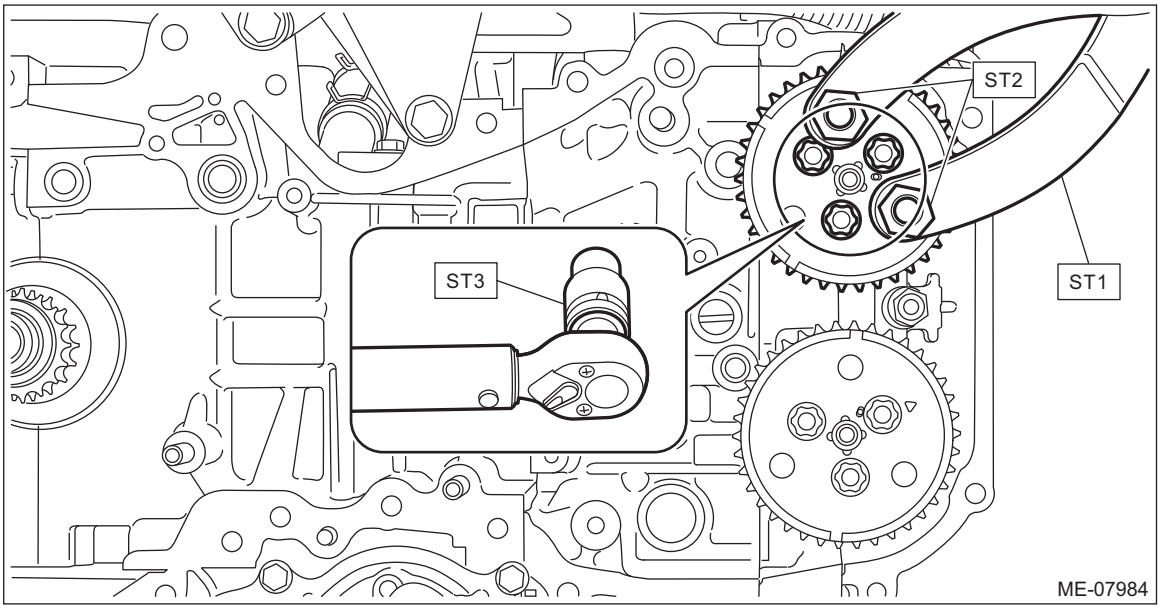


2) Hold the intake cam sprocket LH using the ST1 and ST2, and install the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.

NOTE:
Apply engine oil to the bolt thread.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

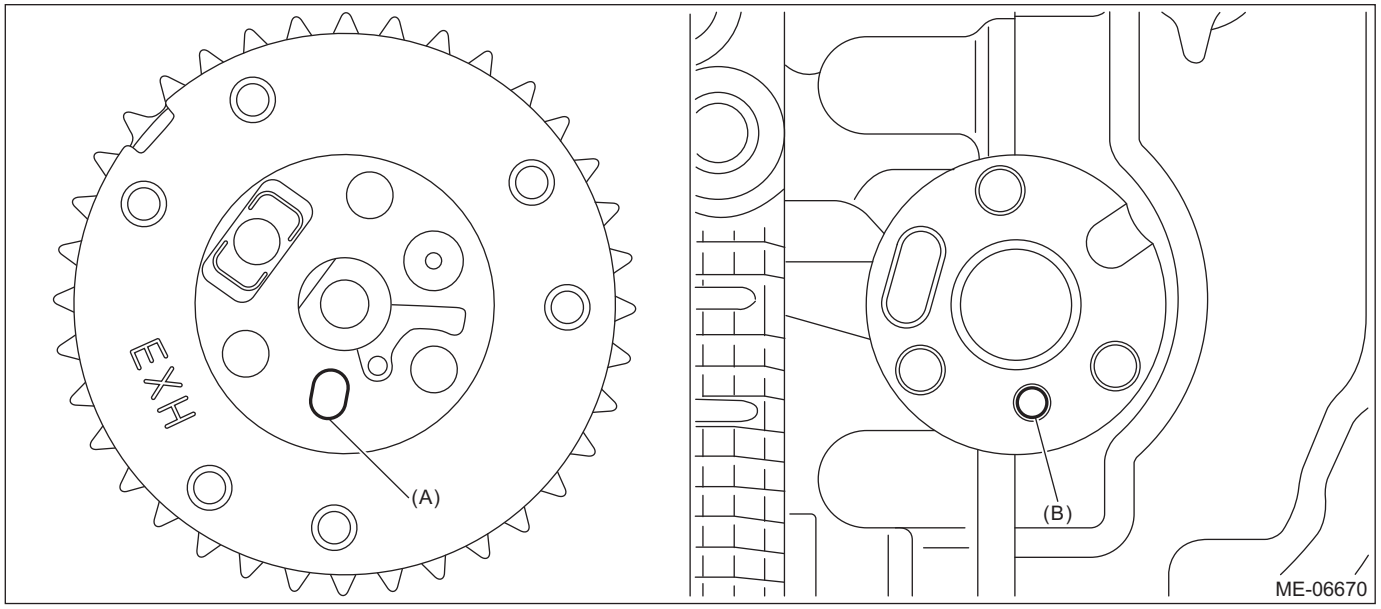


3) Install timing chain LH. <Ref. to ME(w/o STI)-119, TIMING CHAIN LH, INSTALLATION, Timing Chain Assembly.>

- **Exhaust cam sprocket LH**

1) Install the exhaust cam sprocket LH by aligning the knock hole (A) of exhaust cam sprocket LH and the knock pin (B) of exhaust camshaft LH.

NOTE:
Before installation, check that there is no foreign matter on the exhaust cam sprocket LH and exhaust camshaft LH.

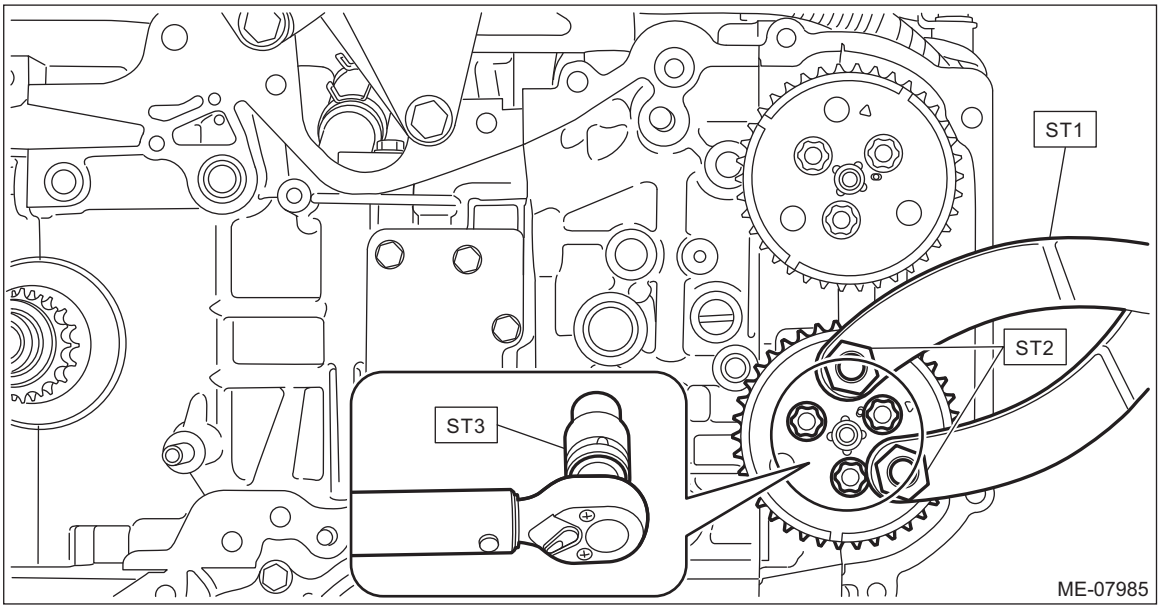


2) Hold the exhaust cam sprocket LH using the ST1 and ST2, and install the bolts using the ST3.

CAUTION:
Perform the operation carefully since the ST comes off easily.

NOTE:
Apply engine oil to the bolt thread.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA020 PULLEY WRENCH PIN SET
ST3 18270KA010 SOCKET

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



3) Install timing chain LH. <Ref. to ME(w/o STI)-119, TIMING CHAIN LH, INSTALLATION, Timing Chain Assembly.>

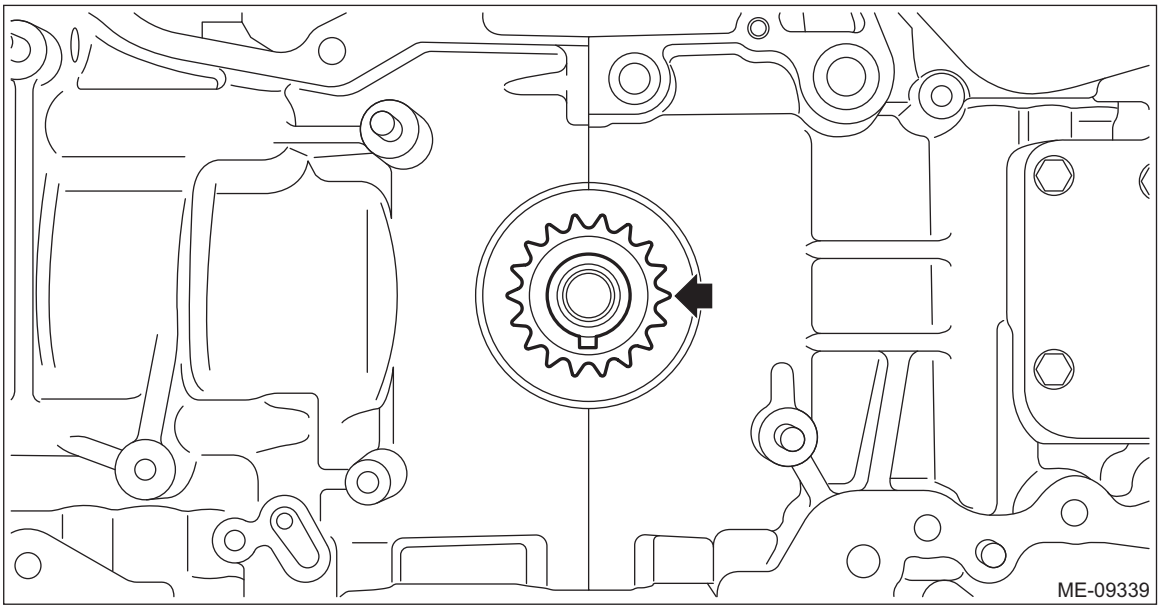
C: INSPECTION

Check the cam sprocket teeth for abnormal wear and scratches.

17.Crank Sprocket

A: REMOVAL

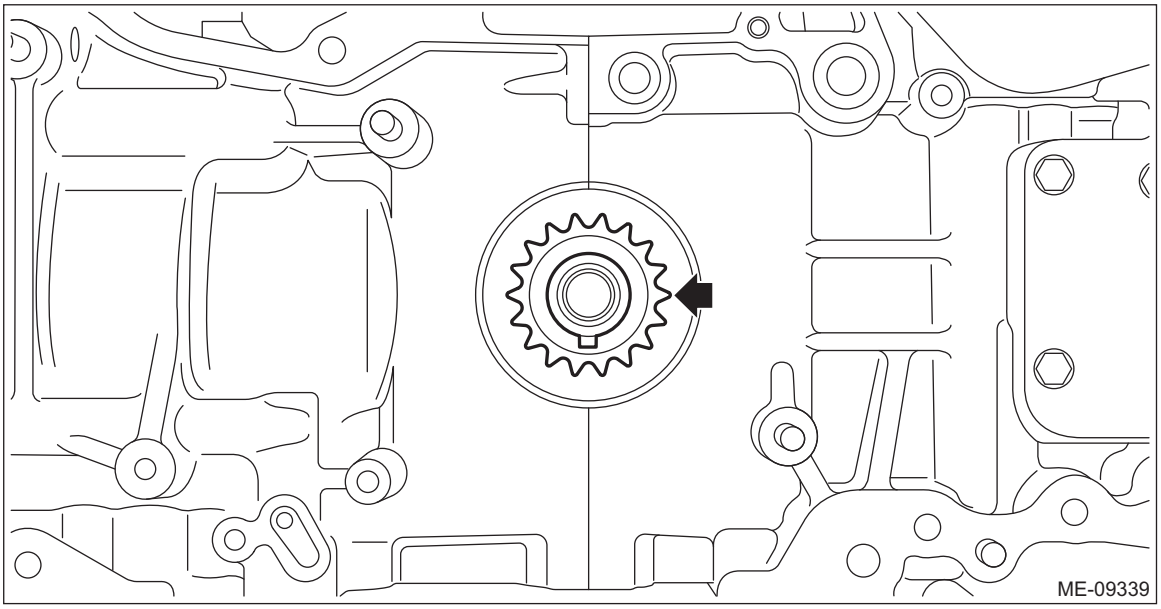
NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) Remove the timing chain. <Ref. to ME(w/o STI)-112, REMOVAL, Timing Chain Assembly.>
2) Remove the crank sprocket.



B: INSTALLATION

1) Install the crank sprocket.

NOTE:
The direction of installation is not specified for the crank sprocket.



2) Install the timing chain. <Ref. to ME(w/o STI)-119, INSTALLATION, Timing Chain Assembly.>

C: INSPECTION

1) Check the crank sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between crank sprocket and key.

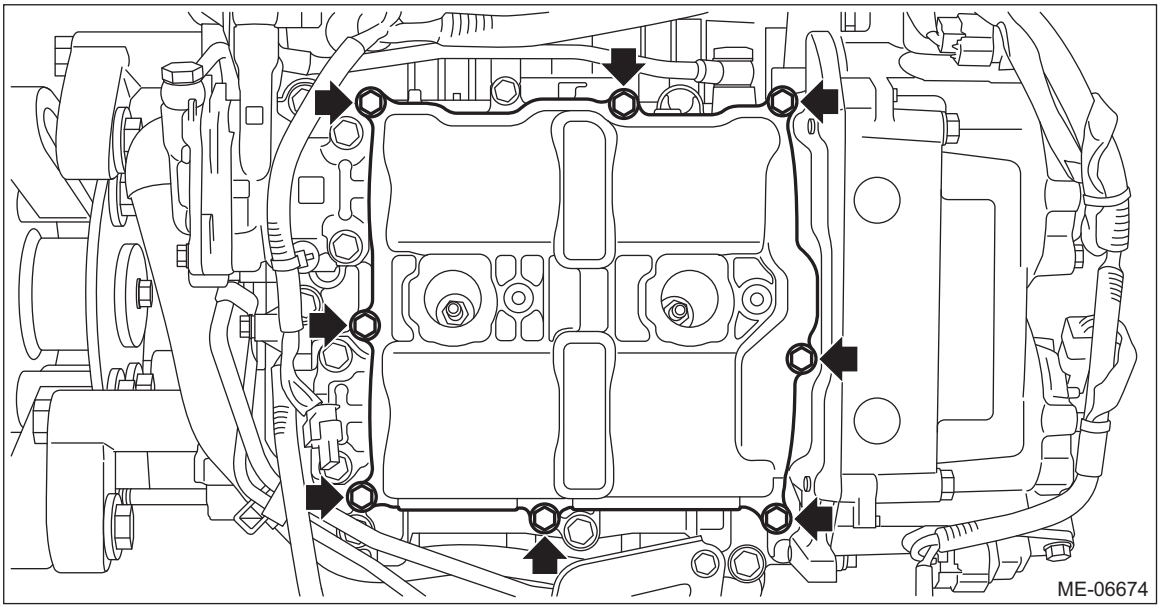
18.Rocker Cover

A: REMOVAL

1. ROCKER COVER RH

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) When working on the vehicle

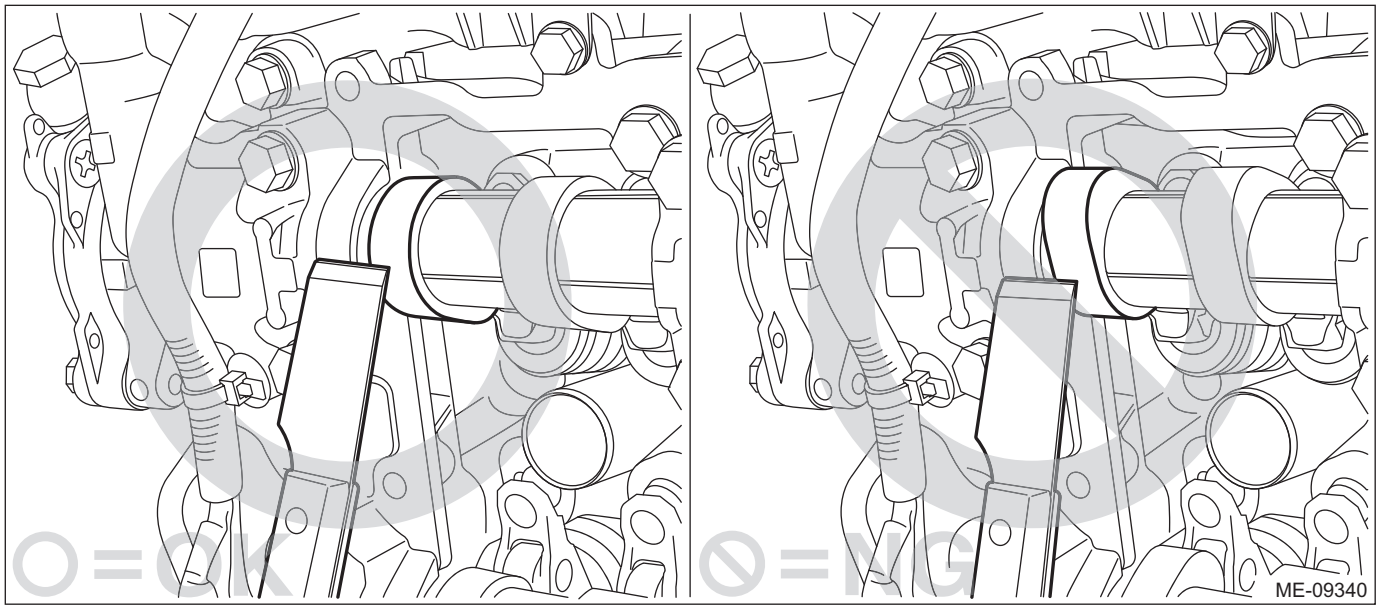
NOTE:
When working on the vehicle, perform the following steps also.
(1) Remove the air cleaner case. <Ref. to IN(w/o STI)-13, REMOVAL, Air Cleaner Case.>
2) Remove the #1 ignition coil and the #3 ignition coil. <Ref. to IG(w/o STI)-11, REMOVAL, Ignition Coil.>
3) Remove the rocker cover RH.

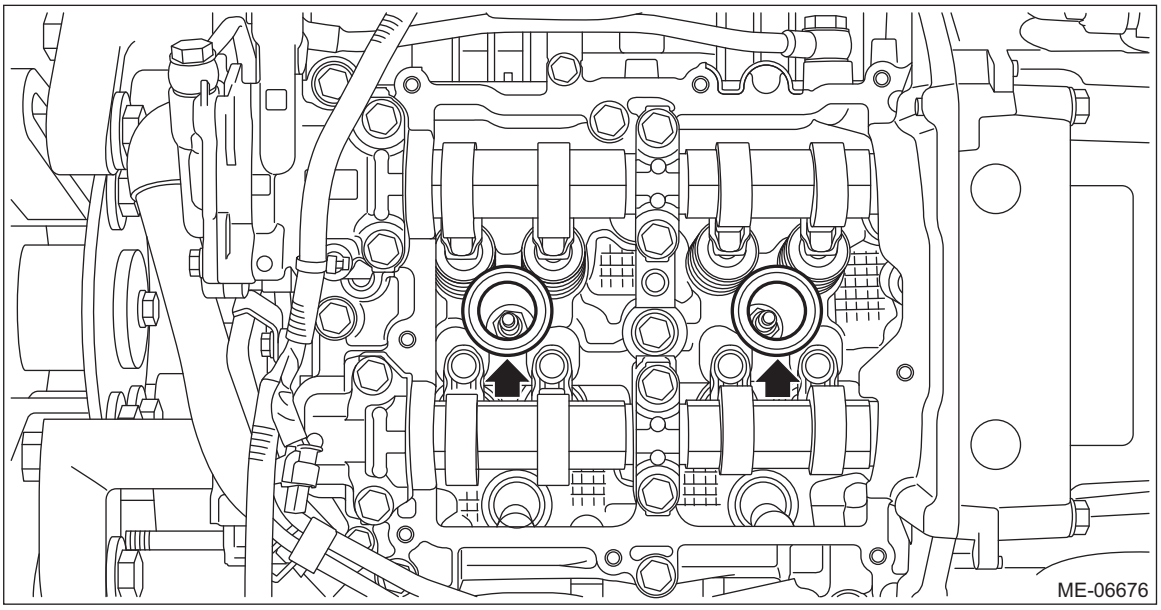


4) Remove the rocker cover gasket RH, #1 spark plug pipe gasket and #3 spark plug pipe gasket, and remove the liquid gasket.

CAUTION:
• When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft RH.

• If the cam lobe of camshaft RH interferes, turn the crankshaft to the position where the scraper does not touch.





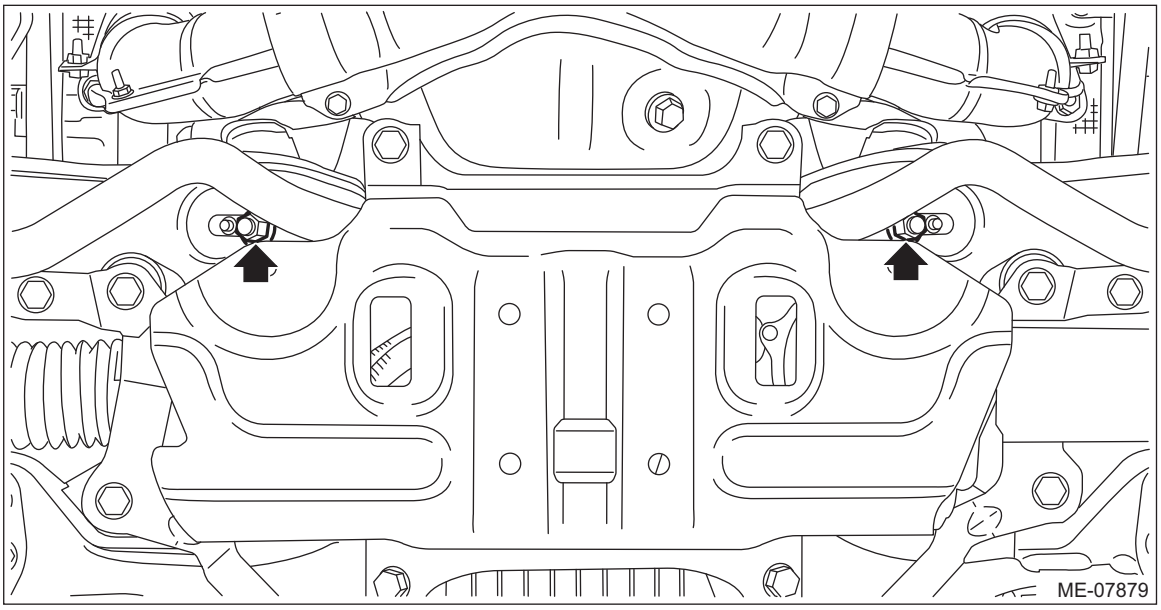
2. ROCKER COVER LH

NOTE:
When replacing a single part, perform the work with the engine assembly installed to body.
1) When working on the vehicle

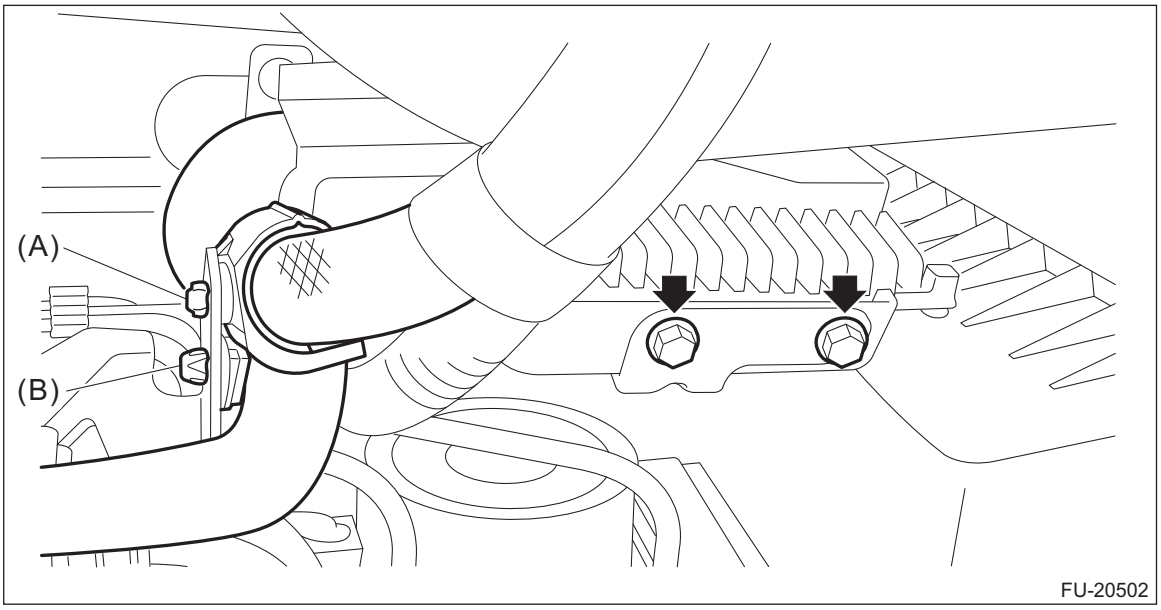
NOTE:
When working on the vehicle, perform the following steps also.

(1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
(2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
(3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
(4) Remove the battery. <Ref. to SC(w/o STI)-50, REMOVAL, Battery.>
(5) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
(6) Remove the center exhaust pipe. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>

(7) Remove the nuts which secure the engine mounting to the front crossmember.

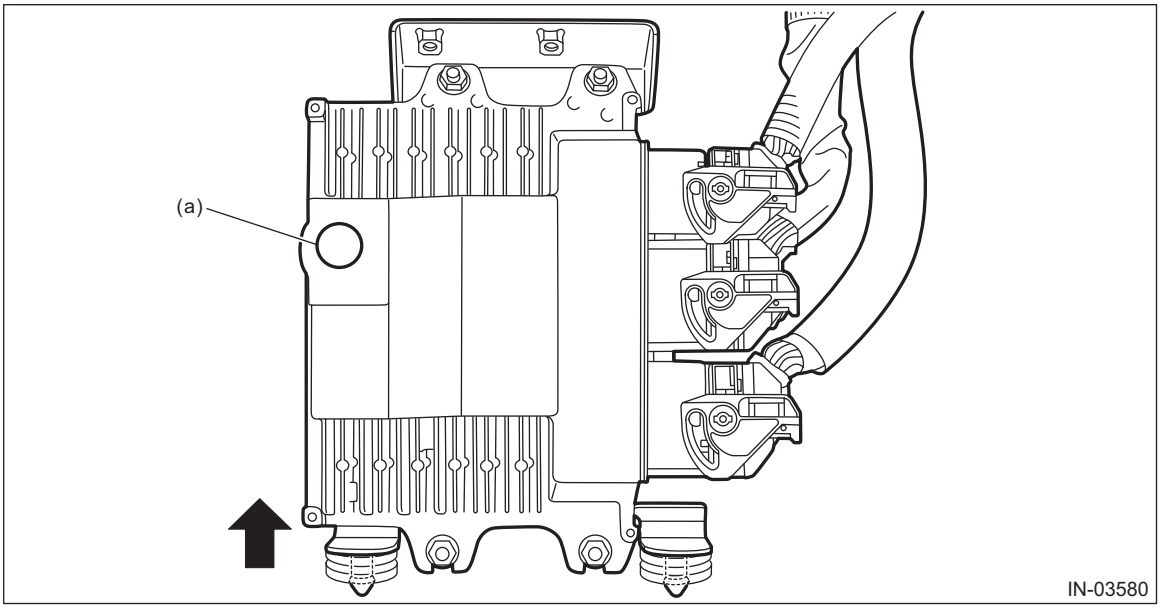


(8) Lower the vehicle.
(9) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.

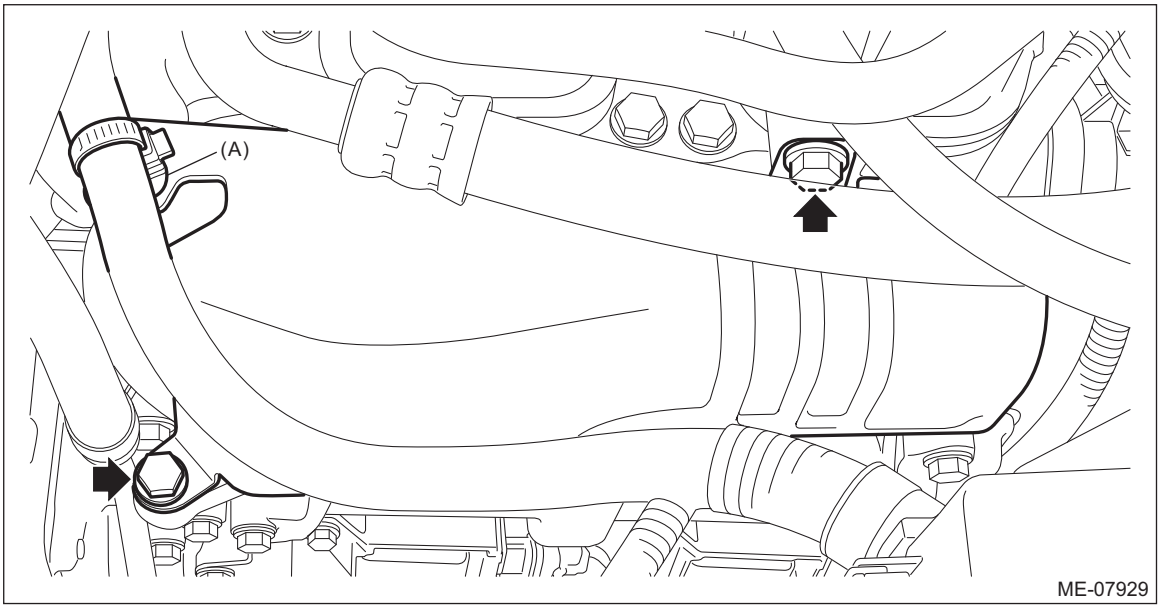


(10) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

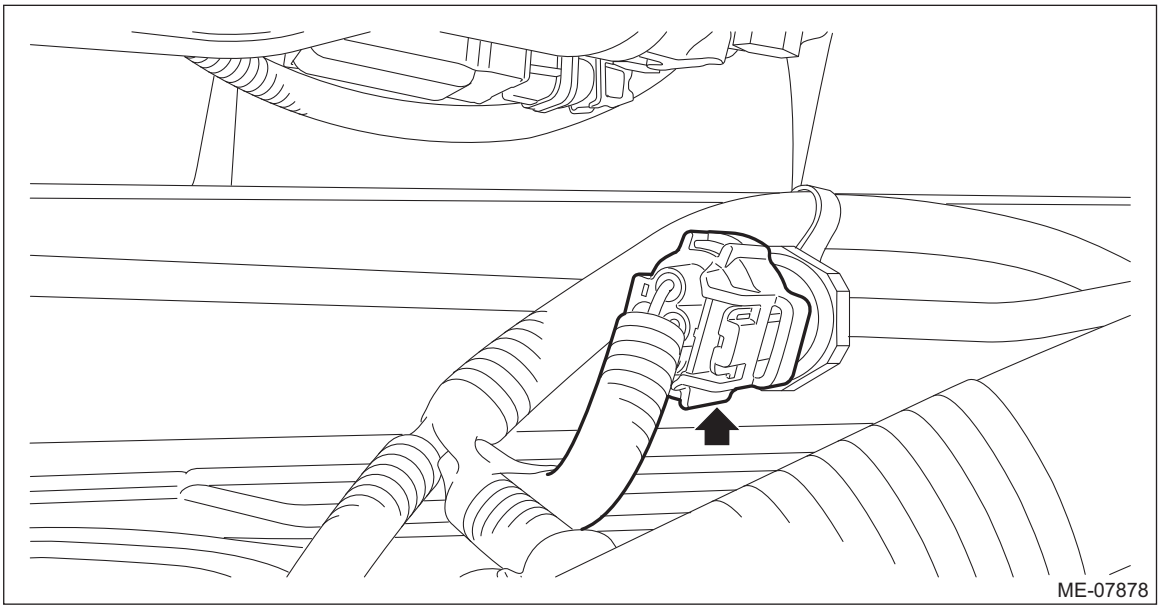
NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.



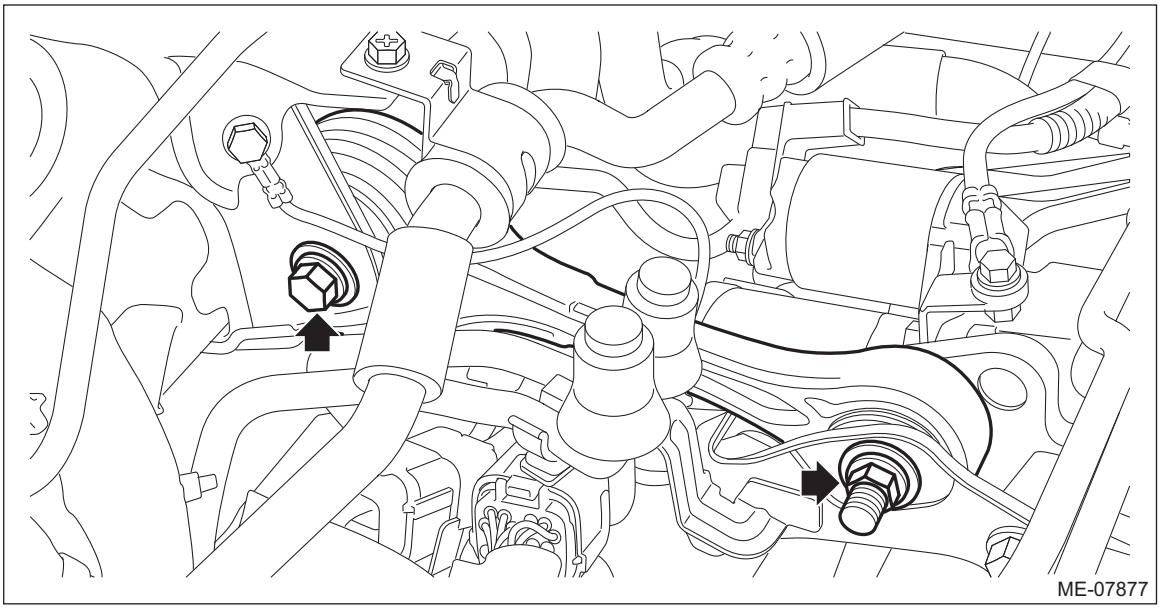
(11) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
(12) Remove the clip (A) securing the generator cord to the fuel pipe protector, and remove the fuel pipe protector from the high-pressure fuel pump case and intake manifold.



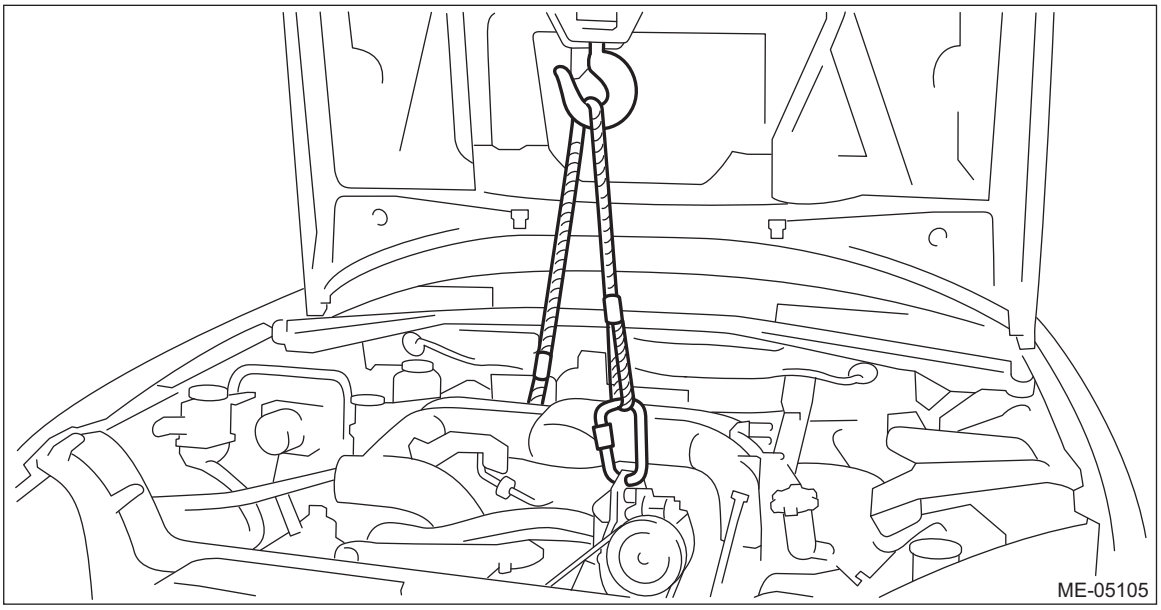
(13) Disconnect the connector from pressure switch (triple pressure switch).



(14) Remove the pitching stopper.



(15) Support the engine with a lifting device and wire ropes.

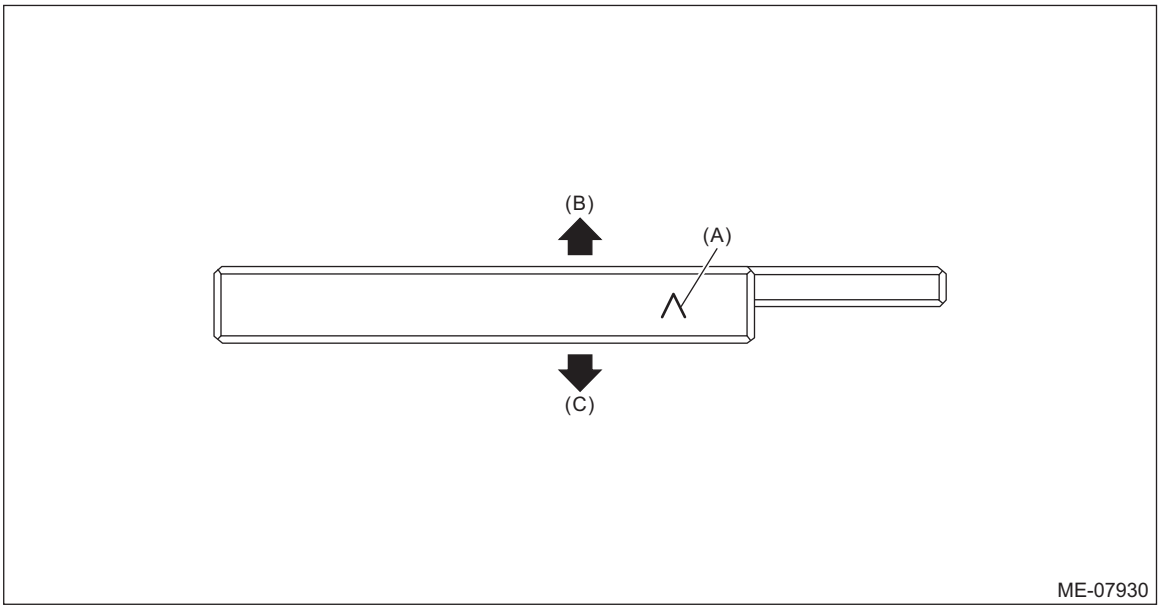


(16) Set the cushioning material such as a waste cloth between pitching stopper bracket and transmission case cover. (CVT model)

NOTE:
- This operation is required to prevent damage to the transmission case cover.
- Make sure that the height of cushioning material does not become 15 — 20 mm (0.6 — 0.8 in) or less when it is crushed.

(17) While gradually lifting up the engine, set the ST between the engine mount LH and front crossmember, and then slowly lower the engine.

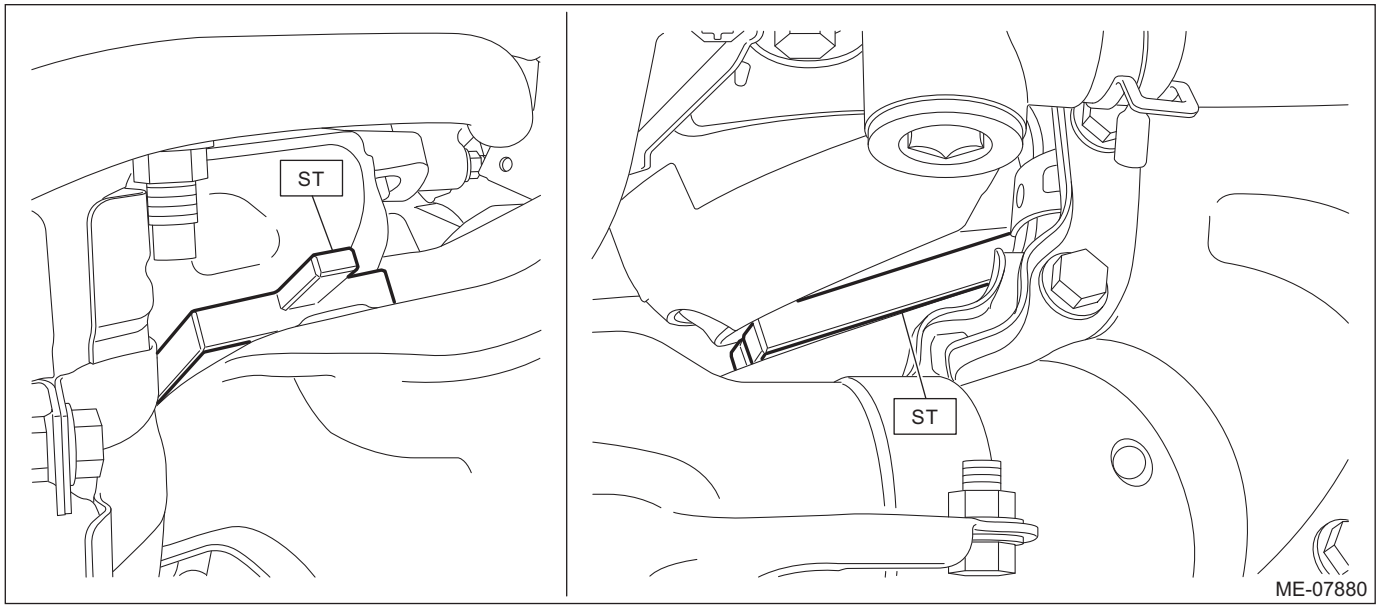
CAUTION:
- **When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.**
- **To avoid the damage, be sure to set the ST as shown in the figure.**



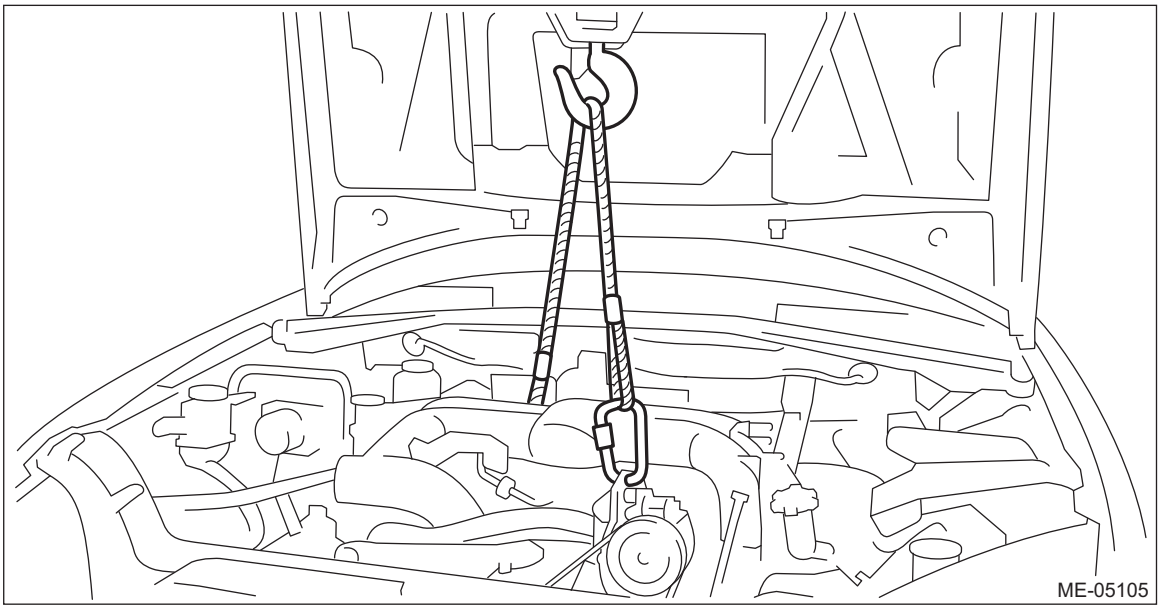
(A) Direction mark (B) Engine mounting side (C) Front crossmember side

- **After lowering the engine, check that the ST does not come off even if the engine is bounced.**

ST 18632AA030 STAND ASSY



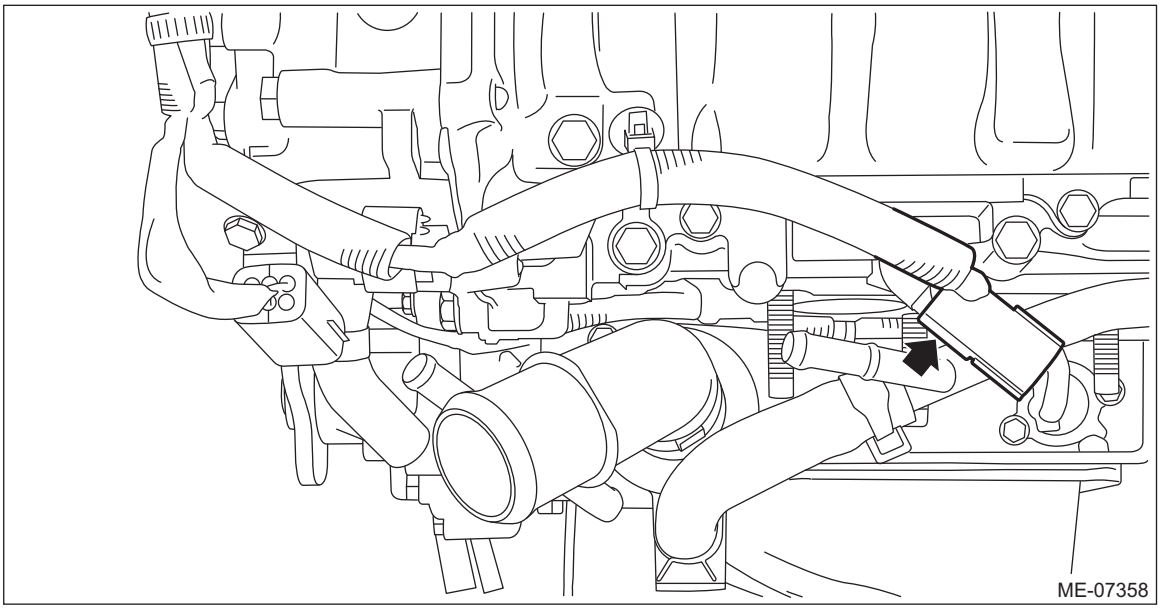
(18) Remove the lifting device and wire ropes.



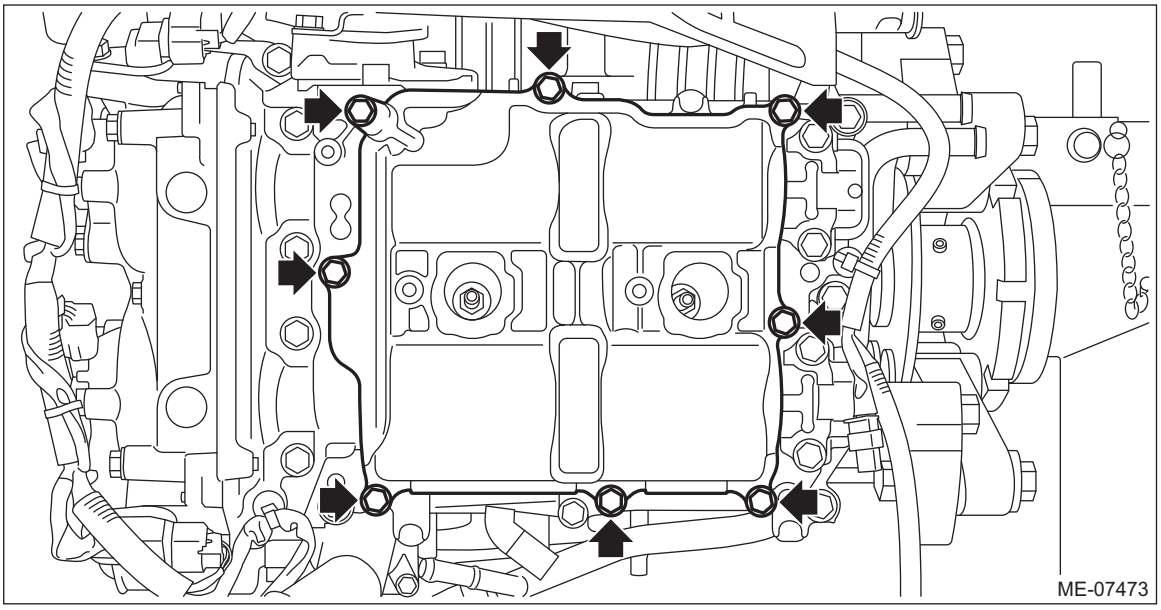
2) Remove the side engine oil cooler pipe assembly. <Ref. to LU(w/o STI)-36, SIDE ENGINE OIL COOLER PIPE, REMOVAL, Engine Oil Cooler Pipe.>

3) Remove the #2 ignition coil and the #4 ignition coil. <Ref. to IG(w/o STI)-11, REMOVAL, Ignition Coil.>

4) Remove the connector from the water pipe LH.



5) Remove the rocker cover LH.

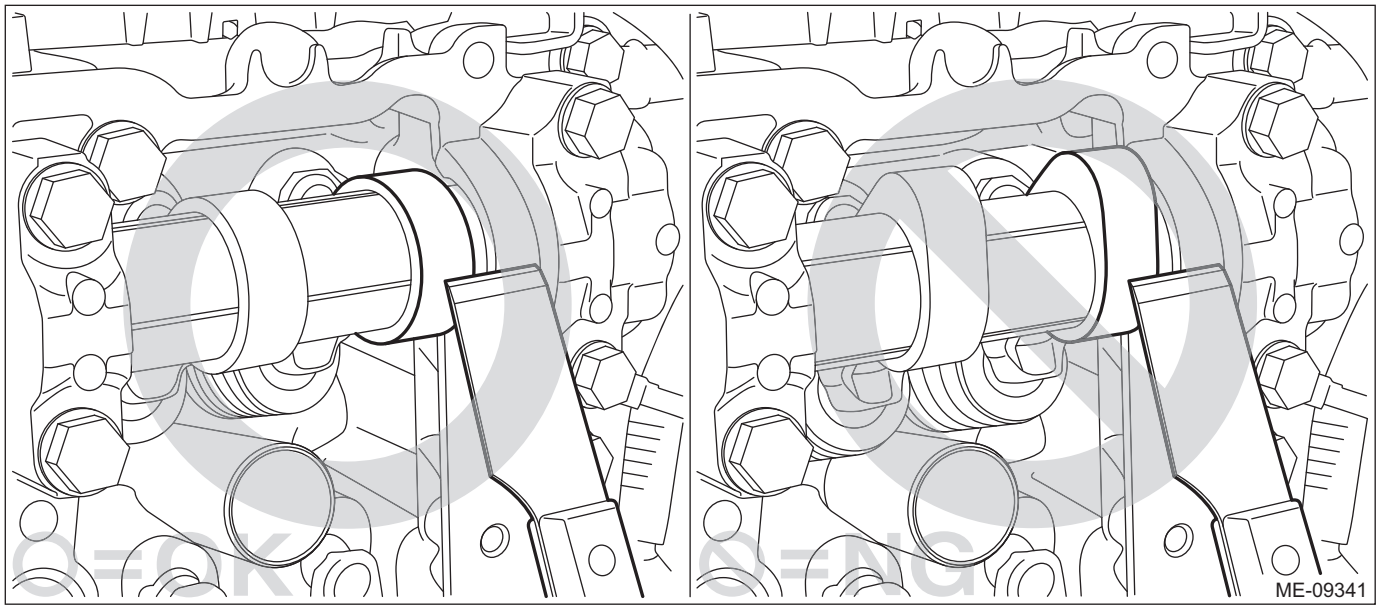


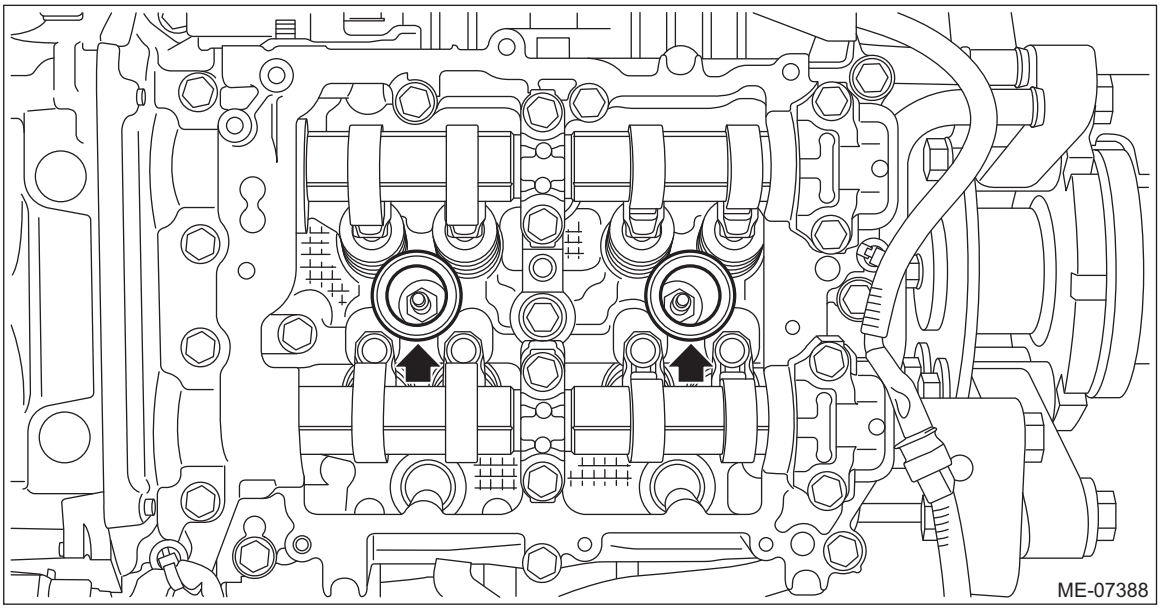
6) Remove the rocker cover gasket LH, #2 spark plug pipe gasket and #4 spark plug pipe gasket, and remove the liquid gasket.

CAUTION:

• When removing the liquid gasket from engine unit using scraper, use special care not to damage the cam lobe of camshaft LH.

• If the cam lobe of camshaft LH interferes, turn the crankshaft to the position where the scraper does not touch.





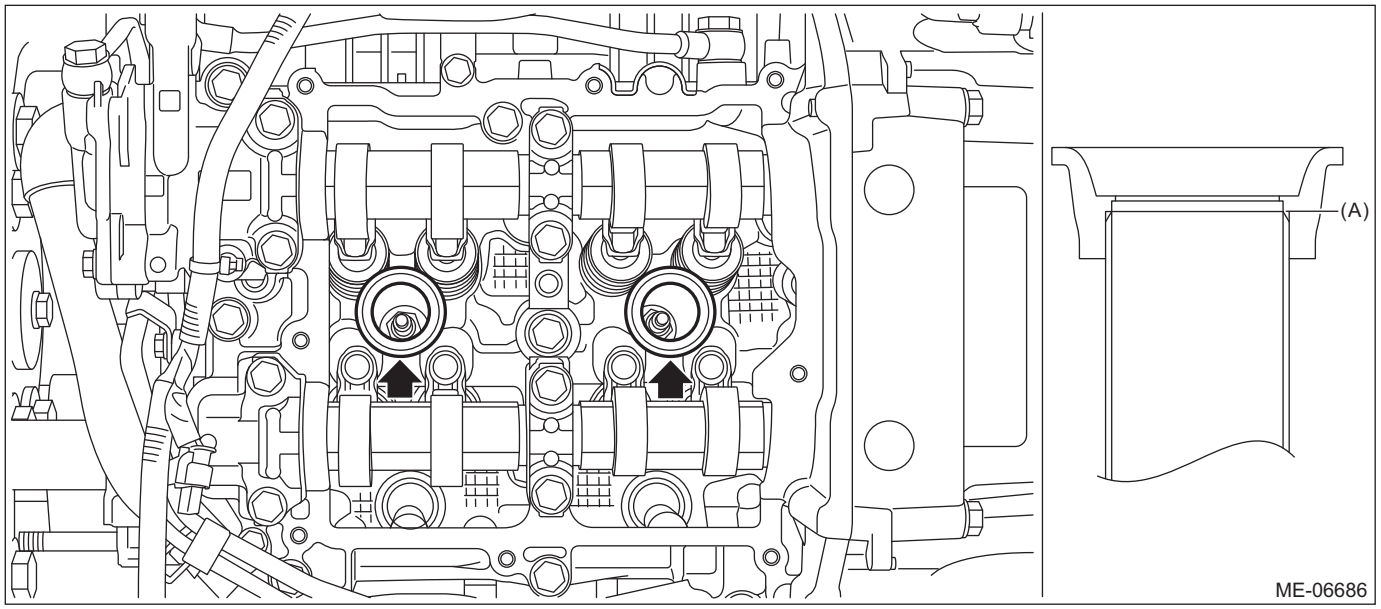
B: INSTALLATION

1. ROCKER COVER RH

1) Install the #1 spark plug pipe gasket and #3 spark plug pipe gasket to the #1 spark plug pipe and #3 spark plug pipe.

NOTE:
• Use a new #1 spark plug pipe gasket and #3 spark plug pipe gasket.

• Apply a light coat of engine oil to the #1 spark plug pipe gasket and #3 spark plug pipe gasket, and insert them onto the spark plug pipe edge (A).



2) Install the rocker cover gasket RH to the rocker cover RH.

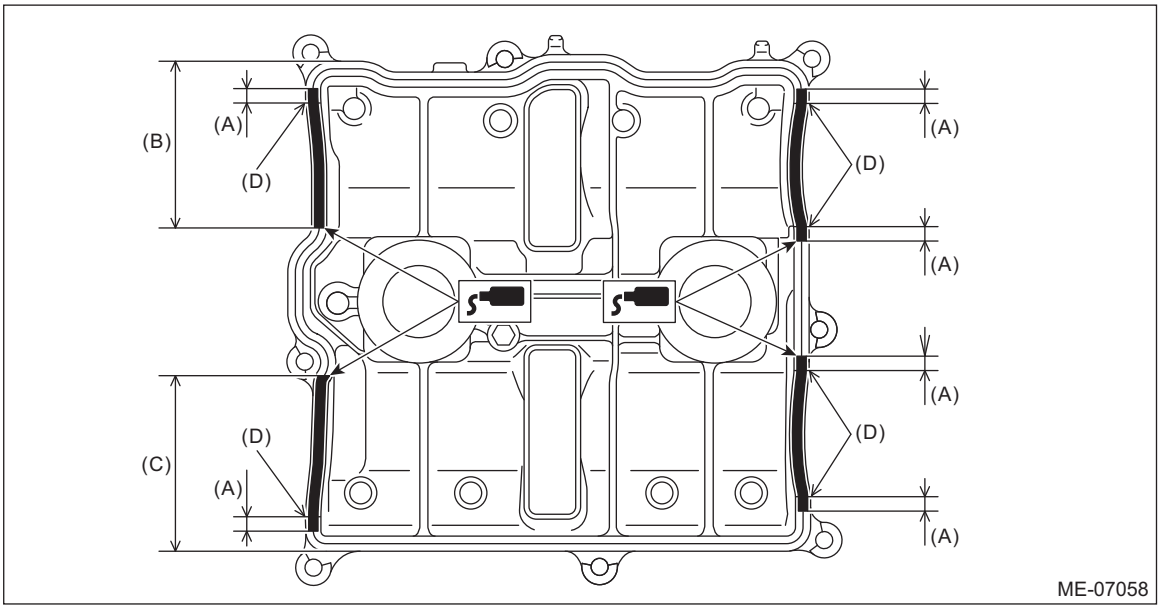
NOTE:
Use a new rocker cover gasket RH.

3) Apply liquid gasket to the mating surface of rocker cover RH as shown in the figure.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.
- Be careful not to allow liquid gasket to be squeezed out from rocker cover RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

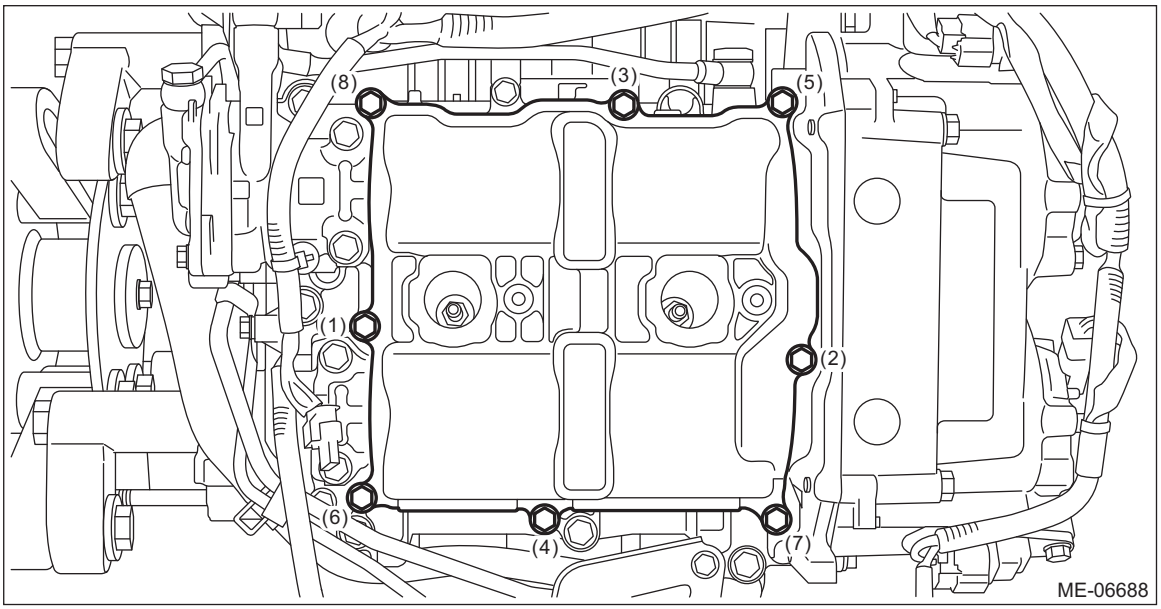
Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



(A) 10 mm (0.3937 in) or more
(B) 68 mm (2.6772 in) or more
(C) 70.7 mm (2.7835 in) or more
(D) Arch starting point

4) Set the rocker cover RH, and tighten the bolts in numerical order as shown in the figure.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



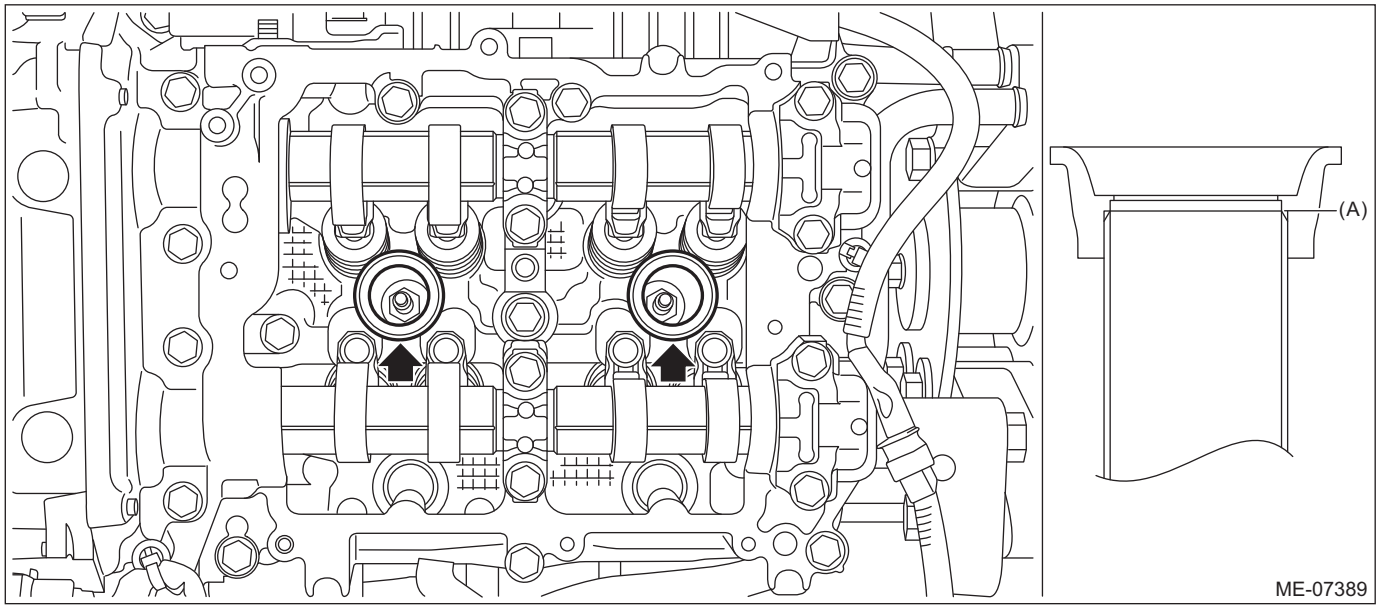
5) Install the #1 ignition coil and the #3 ignition coil. <Ref. to IG(w/o STI)-11, INSTALLATION, Ignition Coil.>
6) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.
(1) Install the air cleaner case. <Ref. to IN(w/o STI)-16, INSTALLATION, Air Cleaner Case.>

2. ROCKER COVER LH

1) Install the #2 spark plug pipe gasket and #4 spark plug pipe gasket to the #2 spark plug pipe and #4 spark plug pipe.

NOTE:
- Use a new #2 spark plug pipe gasket and #4 spark plug pipe gasket.
- Apply a light coat of engine oil to the #2 spark plug pipe gasket and #4 spark plug pipe gasket, and insert them onto the spark plug pipe edge (A).



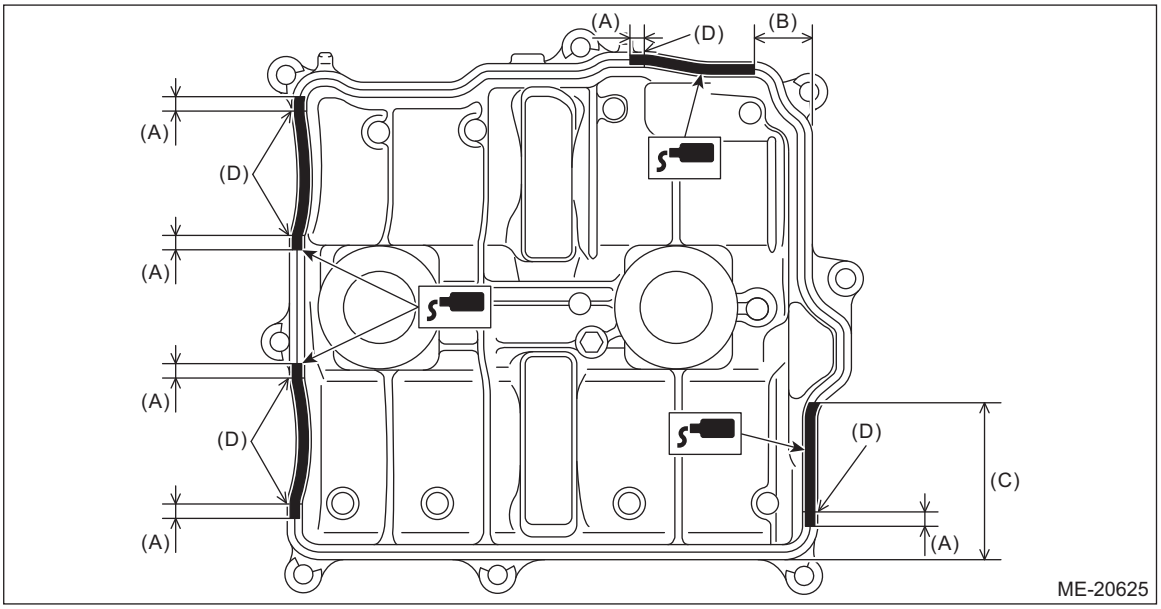
2) Install the rocker cover gasket LH to the rocker cover LH.

NOTE:
Use a new rocker cover gasket LH.
3) Apply liquid gasket to the mating surface of rocker cover LH as shown in the figure.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the engine.
- Be careful not to allow liquid gasket to be squeezed out from rocker cover LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

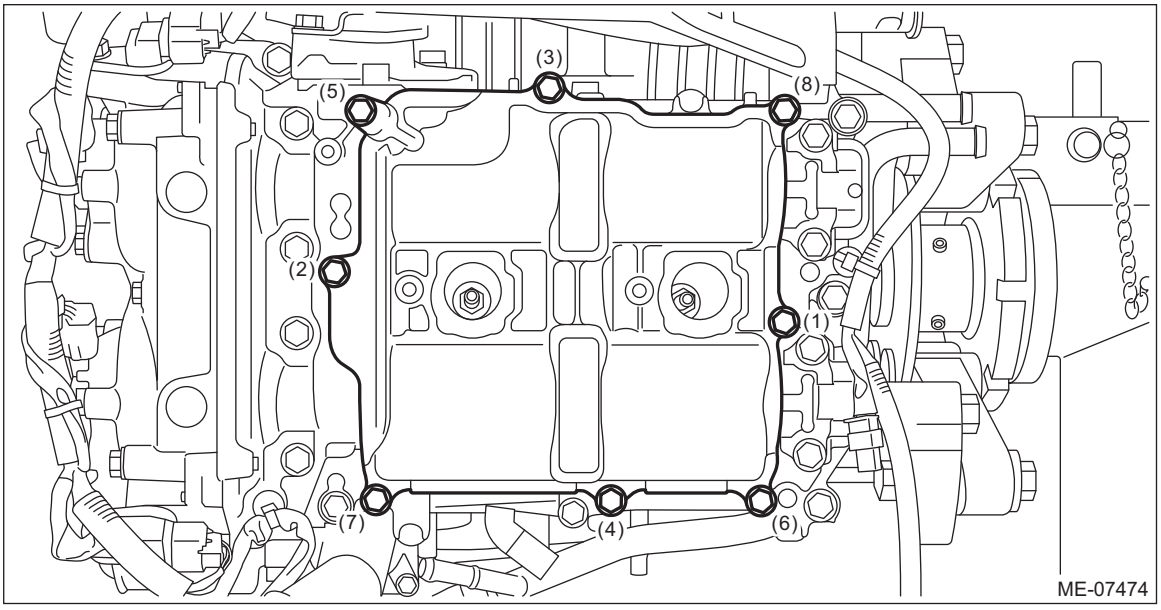
Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



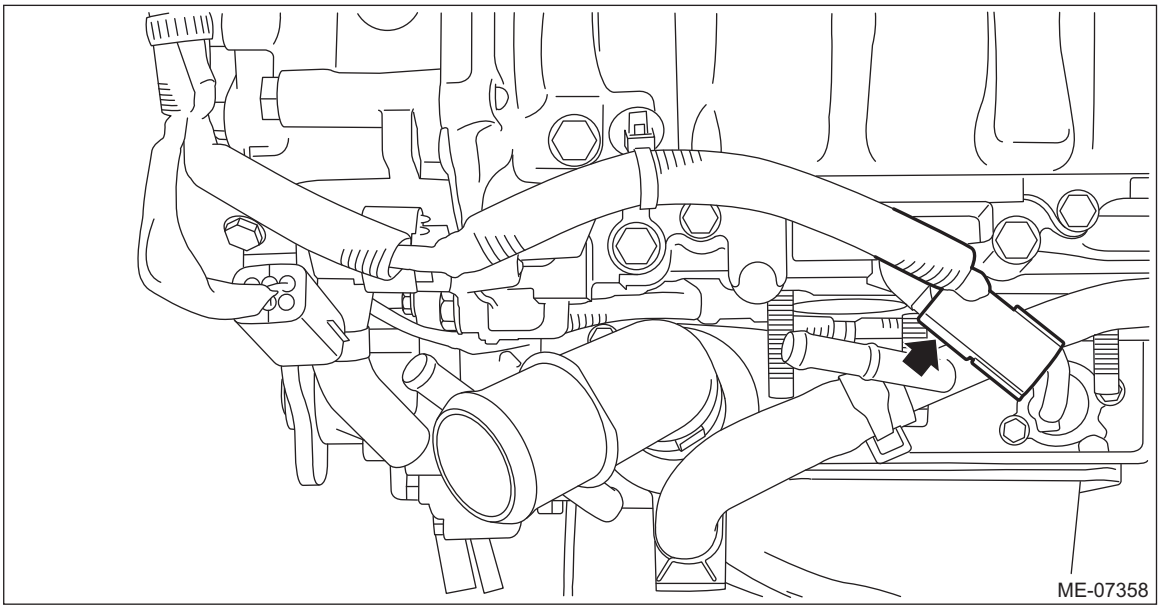
(A) 10 mm (0.3937 in) or more
(B) 18.8 mm (0.7402 in) or less
(C) 63 mm (2.4803 in) or more
(D) Arch starting point

4) Set the rocker cover LH, and tighten the bolts in numerical order as shown in the figure.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



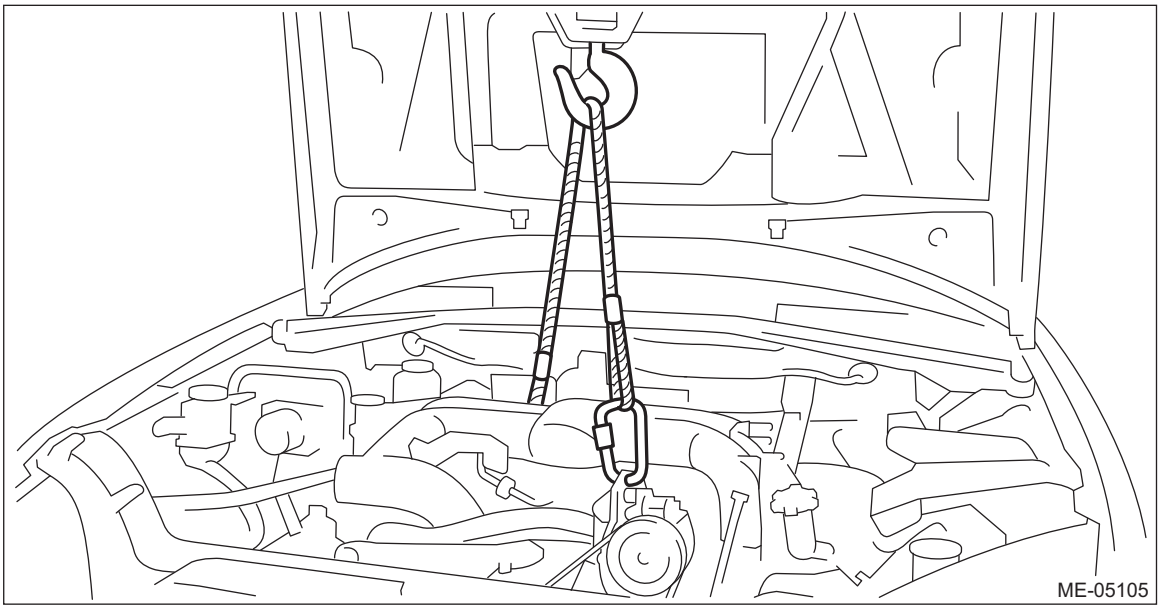
5) Connect the connector to the water pipe LH.



6) Install the #2 ignition coil and the #4 ignition coil. <Ref. to IG(w/o STI)-11, INSTALLATION, Ignition Coil.>
7) Install the side engine oil cooler pipe assembly. <Ref. to LU(w/o STI)-37, SIDE ENGINE OIL COOLER PIPE, INSTALLATION, Engine Oil Cooler Pipe.>
8) When working on the vehicle

NOTE:
When working on the vehicle, perform the following steps also.

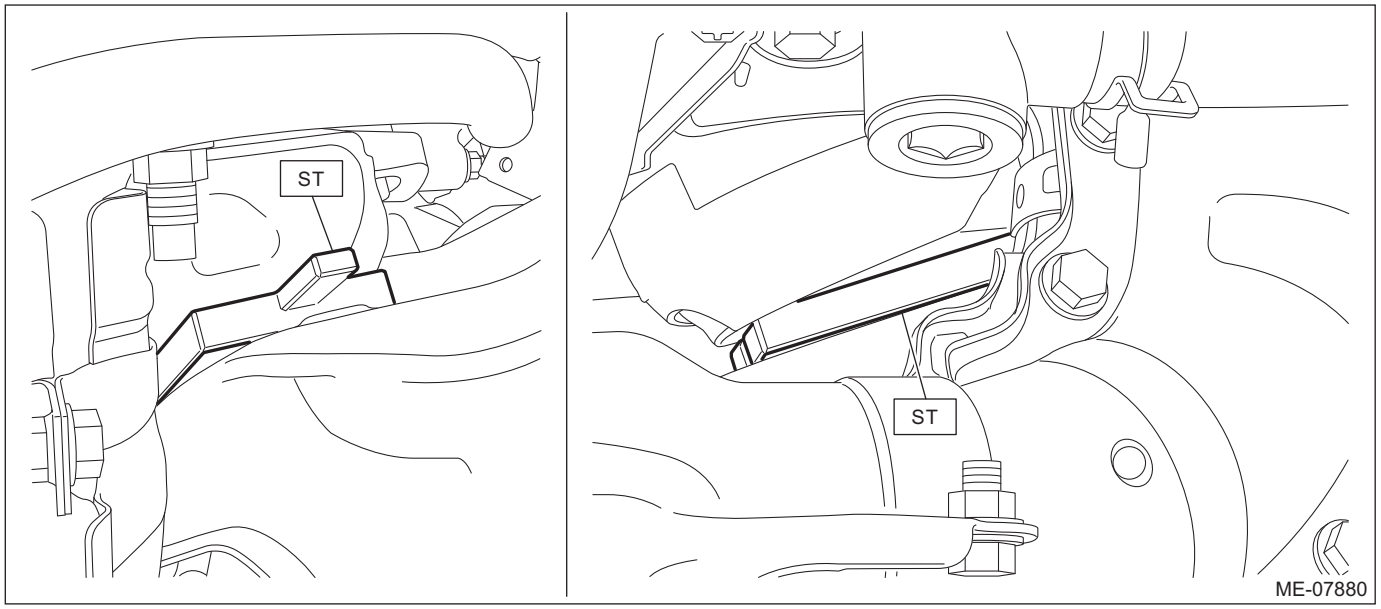
(1) Support the engine with a lifting device and wire ropes.



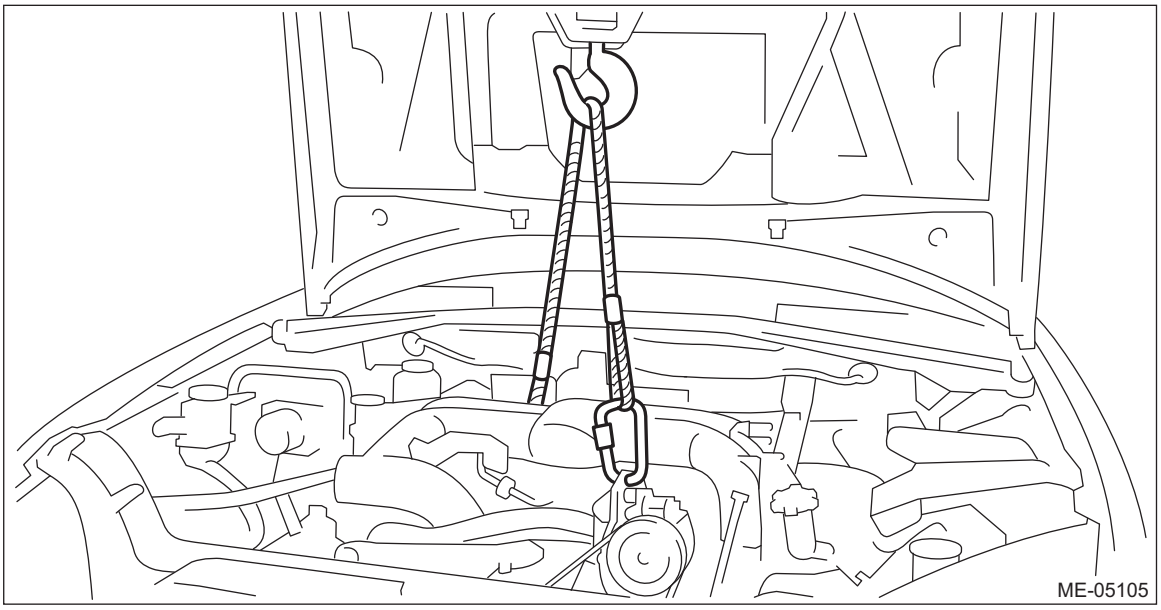
(2) Lift the engine a little, and remove the ST.

CAUTION:
When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

ST 18632AA030 STAND ASSY

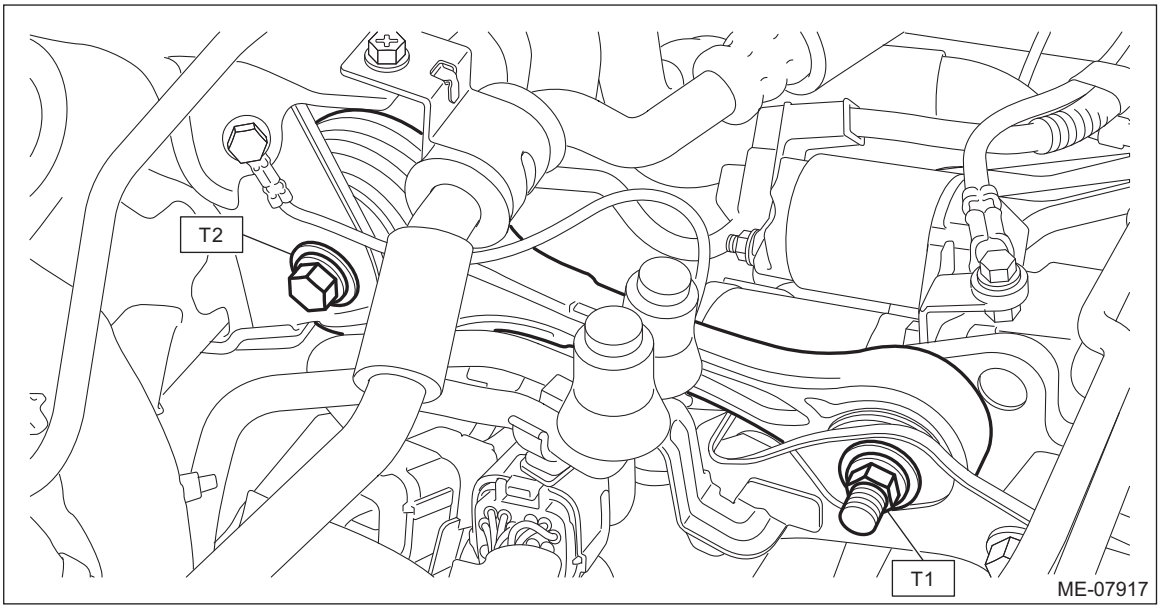


(3) Lower the engine and remove the lifting device and wire ropes.

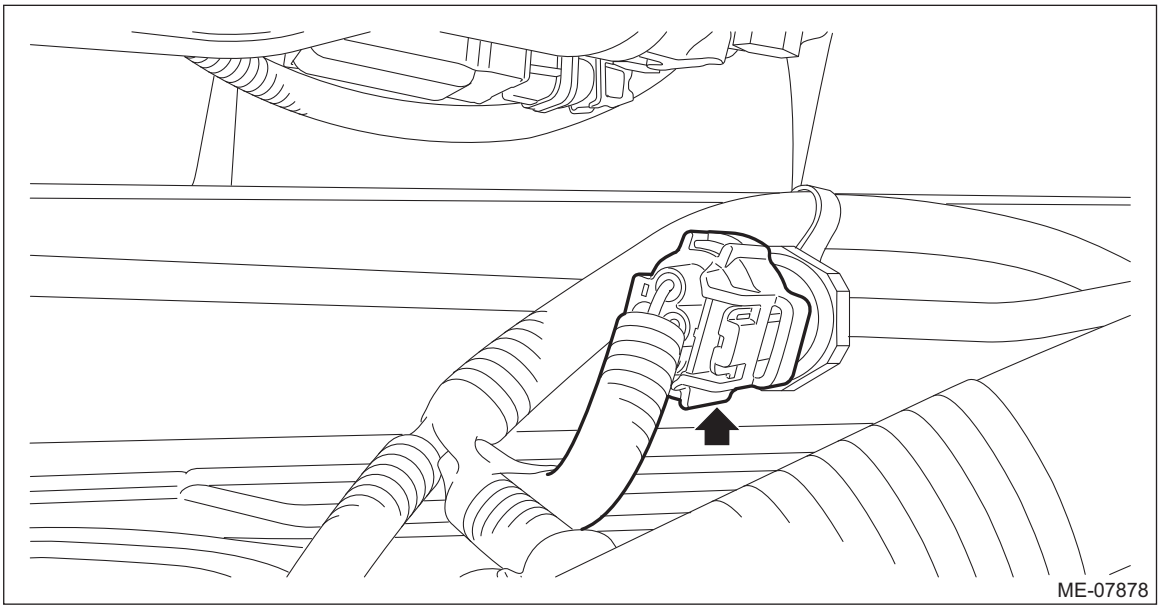


(4) Remove the cushioning material between pitching stopper bracket and transmission case cover. (CVT model)
(5) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

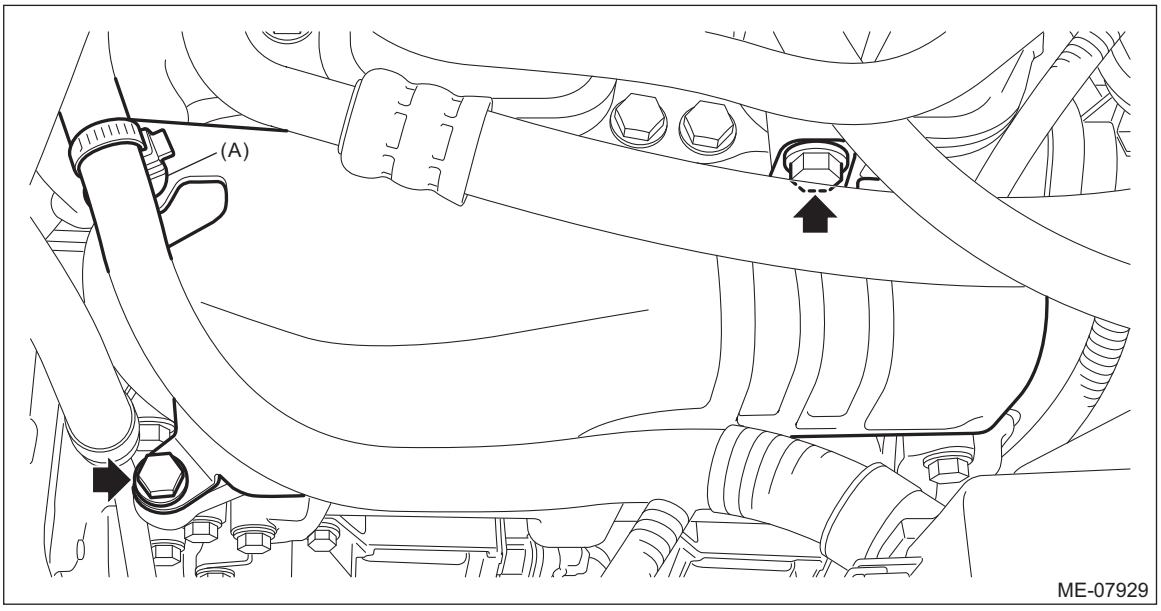


(6) Connect the connector to the pressure switch (triple pressure switch).



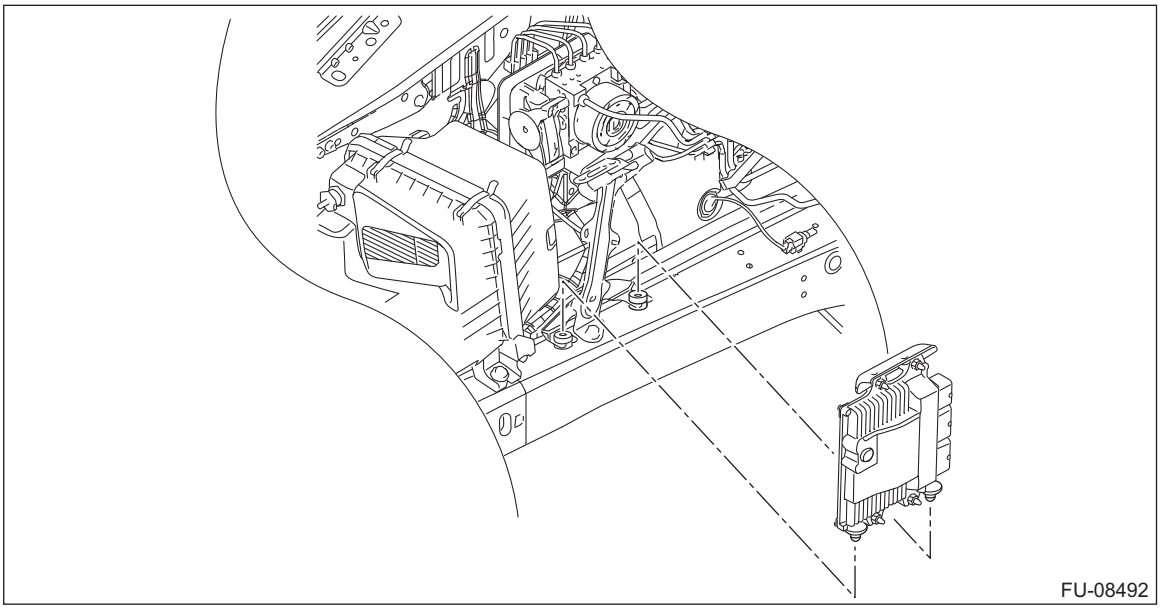
(7) Install the fuel pipe protector to the high-pressure fuel pump case and intake manifold, and secure the generator cord to the fuel pipe protector using the clip (A).

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



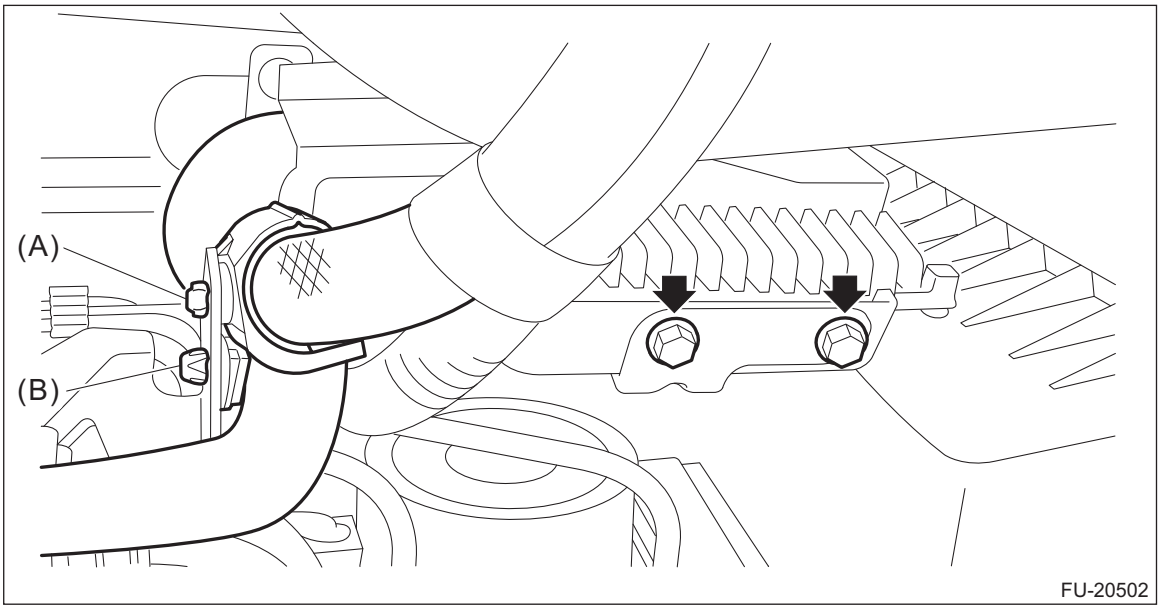
(8) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>

(9) Insert the engine control module (ECM) to the bracket.



(10) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

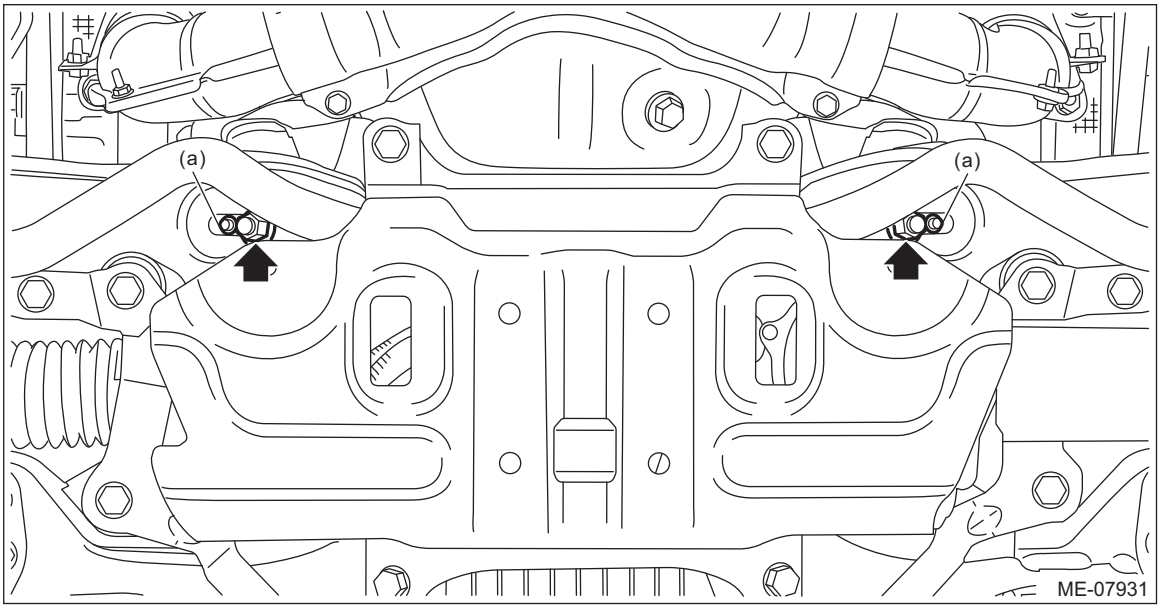
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



(11) Lift up the vehicle.
(12) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
- Make sure that locators (a) of the engine mounting are securely inserted.
- Use a new nut.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



(13) Install the center exhaust pipe. <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
(14) Lower the vehicle.
(15) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
(16) Install the battery. <Ref. to SC(w/o STI)-50, INSTALLATION, Battery.>
(17) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
(18) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
(19) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
(20) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
(21) Close the front hood.

C: INSPECTION

Check that the rocker cover does not have deformation, cracks and any other damage.

19.Camshaft

A: REMOVAL

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft RH. <Ref. to ME(w/o STI)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.> <Ref. to ME(w/o STI)-189, CAM CARRIER RH, DISASSEMBLY, Cam Carrier.>

2. CAMSHAFT LH

The camshaft LH and cam carrier are designed as removing as a unit. Refer to “Cam Carrier” for removal procedures of camshaft LH. <Ref. to ME(w/o STI)-165, CAM CARRIER LH, REMOVAL, Cam Carrier.> <Ref. to ME(w/o STI)-190, CAM CARRIER LH, DISASSEMBLY, Cam Carrier.>

B: INSTALLATION

1. CAMSHAFT RH

The camshaft RH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft RH. <Ref. to ME(w/o STI)-192, CAM CARRIER RH, ASSEMBLY, Cam Carrier.> <Ref. to ME(w/o STI)-171, CAM CARRIER RH, INSTALLATION, Cam Carrier.>

2. CAMSHAFT LH

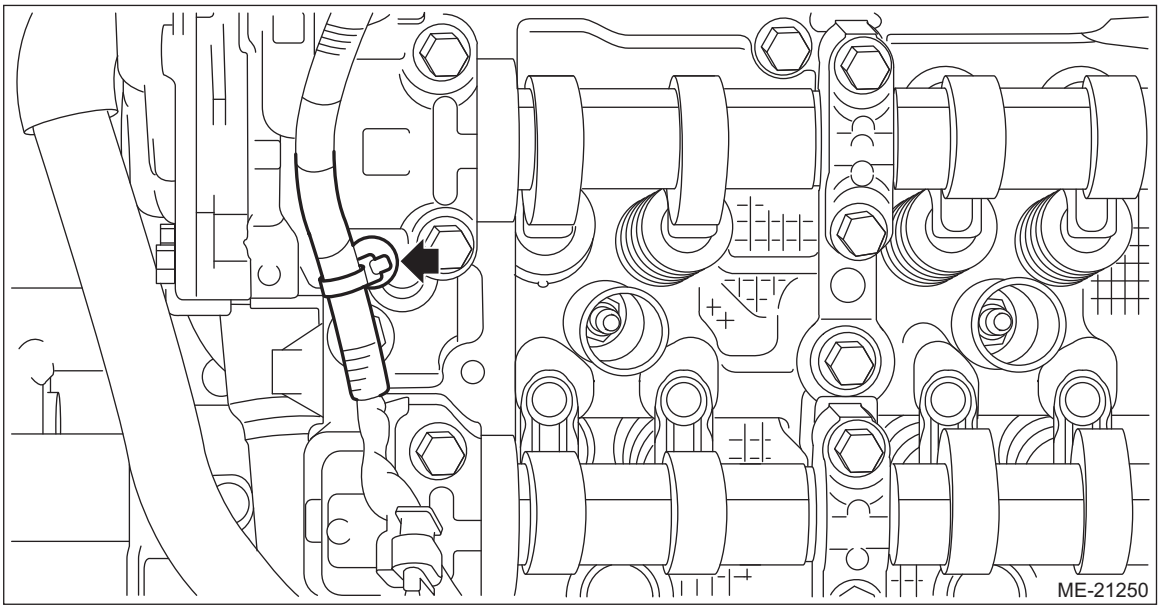
The camshaft LH and cam carrier are designed as installing as a unit. Refer to “Cam Carrier” for installation procedures of camshaft LH. <Ref. to ME(w/o STI)-195, CAM CARRIER LH, ASSEMBLY, Cam Carrier.> <Ref. to ME(w/o STI)-178, CAM CARRIER LH, INSTALLATION, Cam Carrier.>

20.Cam Carrier

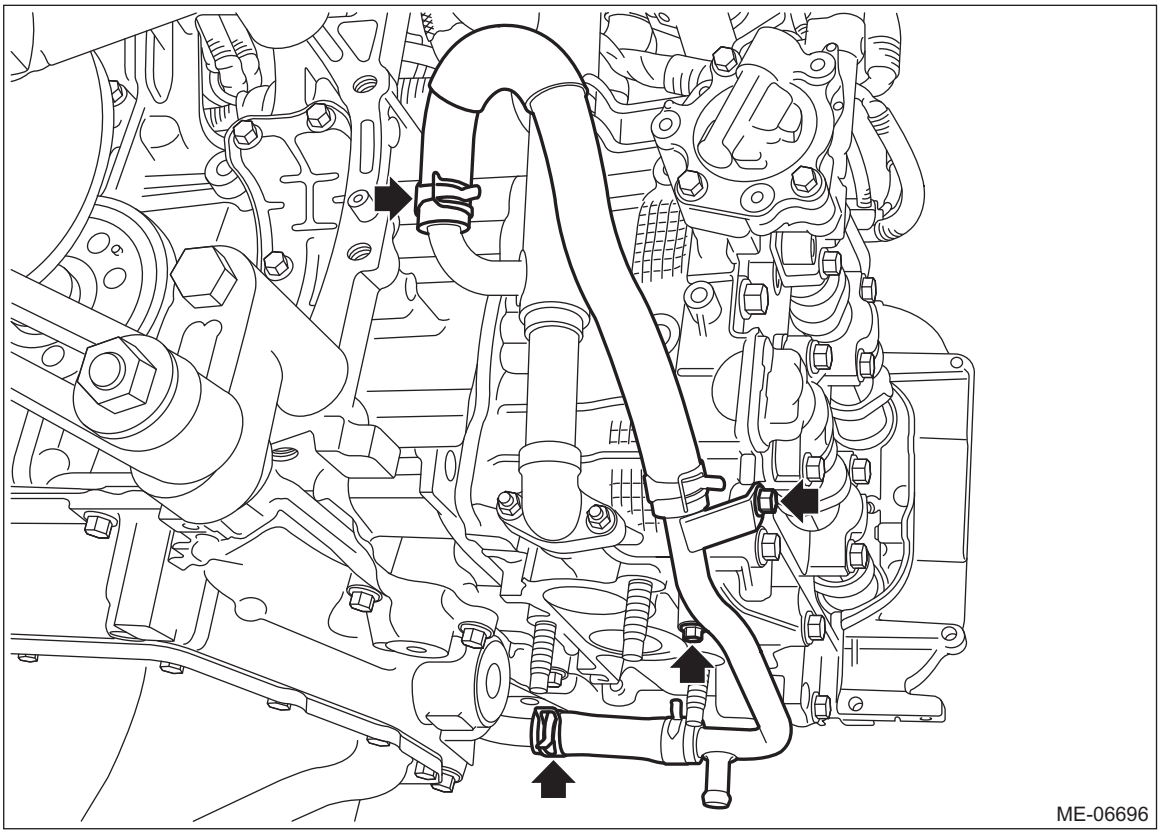
A: REMOVAL

1. CAM CARRIER RH

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the timing chain RH. <Ref. to ME(w/o STI)-112, TIMING CHAIN RH, REMOVAL, Timing Chain Assembly.>
3) Remove the rocker cover RH. <Ref. to ME(w/o STI)-144, ROCKER COVER RH, REMOVAL, Rocker Cover.>
4) Remove the oil pipe assembly. <Ref. to LU(w/o STI)-42, OIL PIPE ASSEMBLY, REMOVAL, Oil Pipe.>
5) Remove the clip holding the engine wiring harness from cam carrier RH.



6) Disconnect the water pipe hose from oil pan upper and EGR cooler, and remove the water pipe assembly.

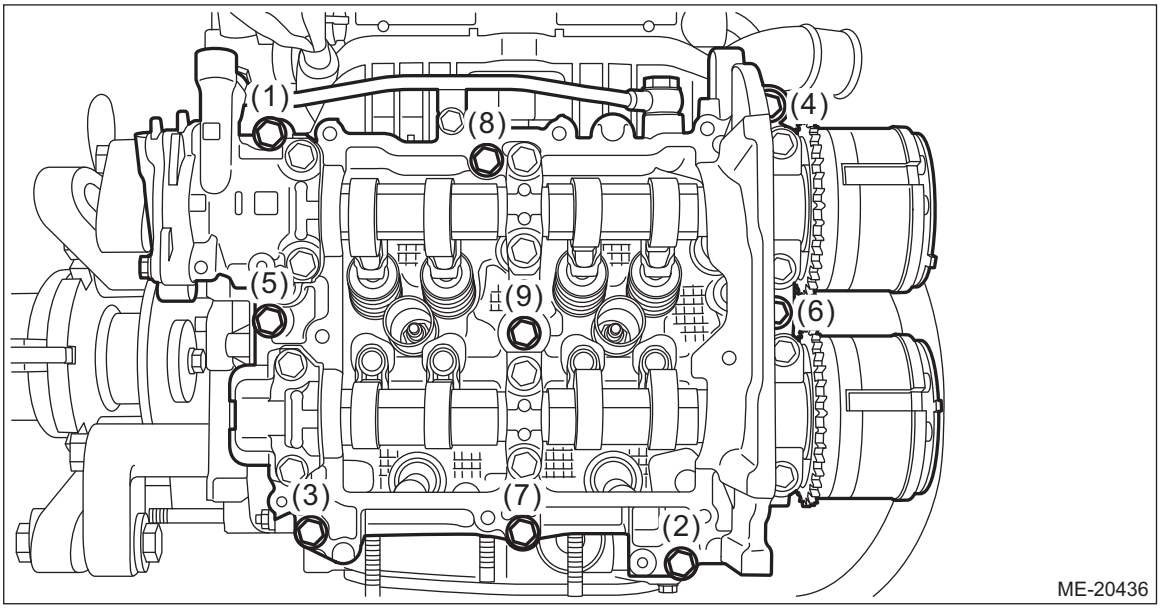


7) When disassembling the cam carrier RH

NOTE:
When disassembling the cam carrier RH, perform the following steps also.
(1) Remove the scavenge pump. <Ref. to LU(w/o STI)-40, REMOVAL, Scavenge Pump.>
(2) Remove the cam sprocket RH. <Ref. to ME(w/o STI)-134, CAM SPROCKET RH, REMOVAL, Cam Sprocket.>

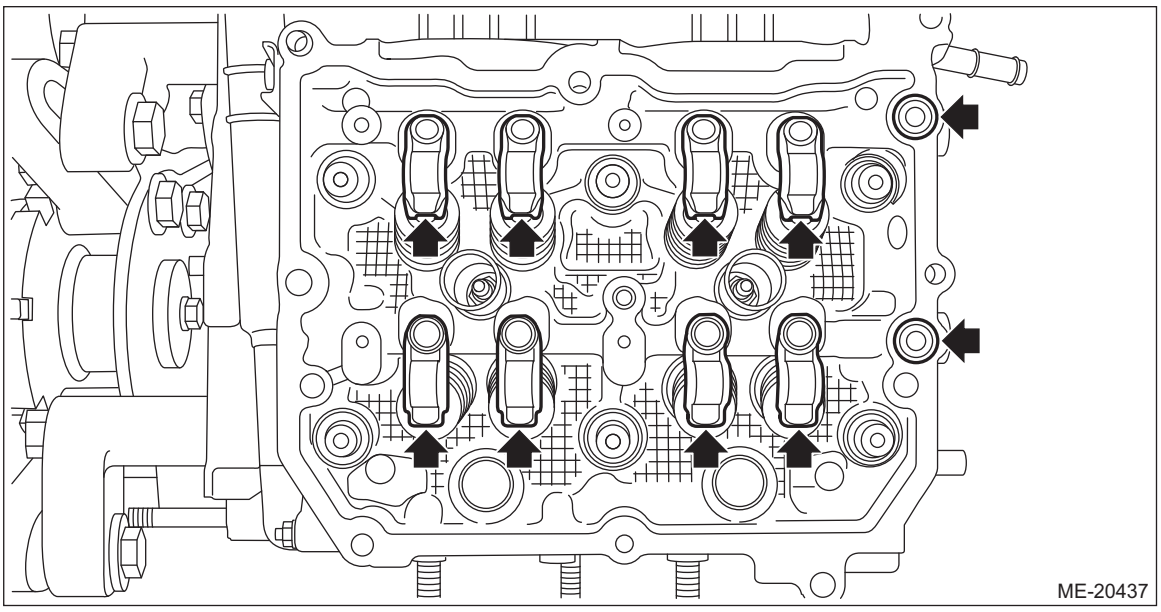
8) Set the part so that the cam carrier RH is on the upper side.

9) Loosen the bolts holding the cam carrier RH equally, a little at a time in numerical sequence as shown in the figure and remove the cam carrier RH.



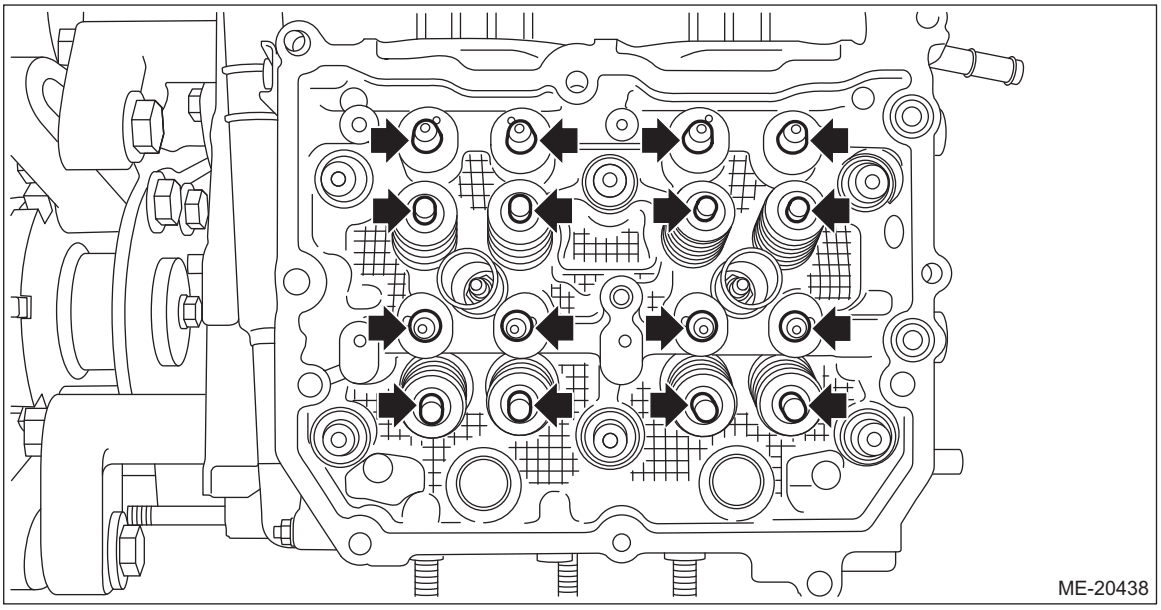
10) Remove the O-ring and the roller rocker arm from cylinder head RH.

NOTE:
Be careful not to confuse the roller rocker arms.



11) Remove the valve shim and the roller rocker arm pivot from cylinder head RH.

NOTE:
Be careful not to confuse the valve shim and the roller rocker arm pivot.

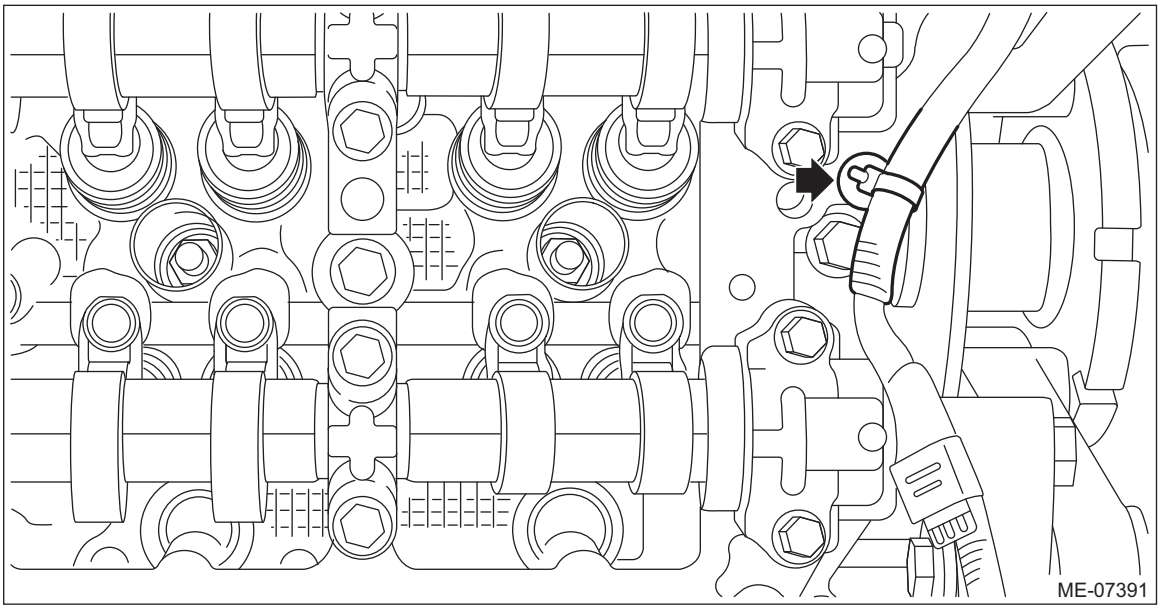


12) Remove the liquid gasket from cam carrier RH and cylinder head RH.

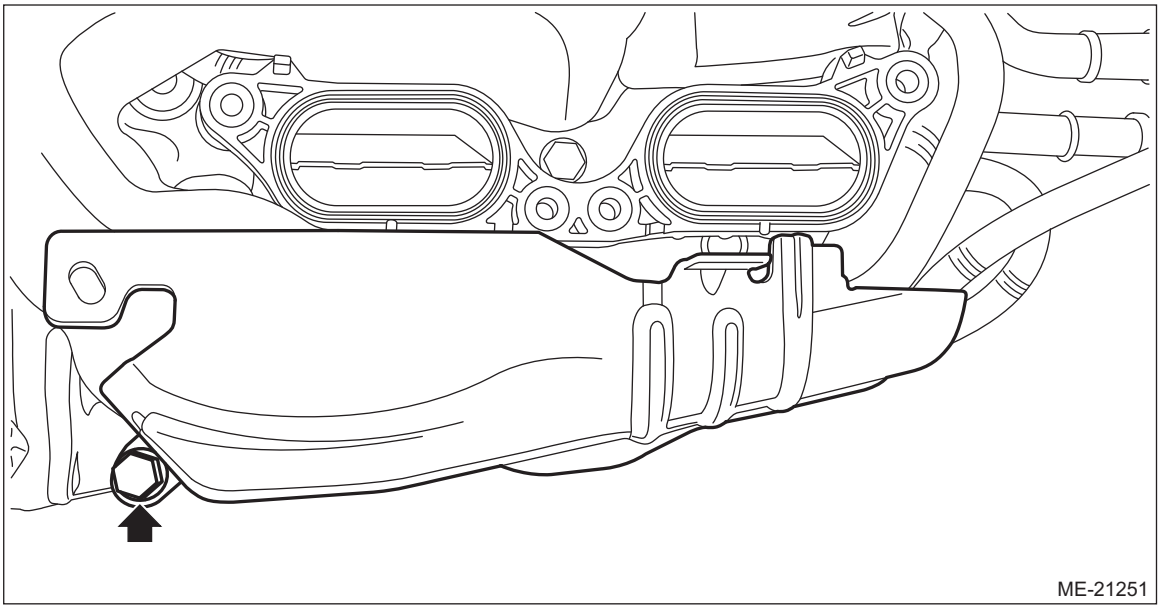
2. CAM CARRIER LH

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the timing chain LH. <Ref. to ME(w/o STI)-114, TIMING CHAIN LH, REMOVAL, Timing Chain Assembly.>
3) Remove the intake manifold. <Ref. to FU(w/o STI)-18, REMOVAL, Intake Manifold.>
4) Remove the rocker cover LH. <Ref. to ME(w/o STI)-145, ROCKER COVER LH, REMOVAL, Rocker Cover.>

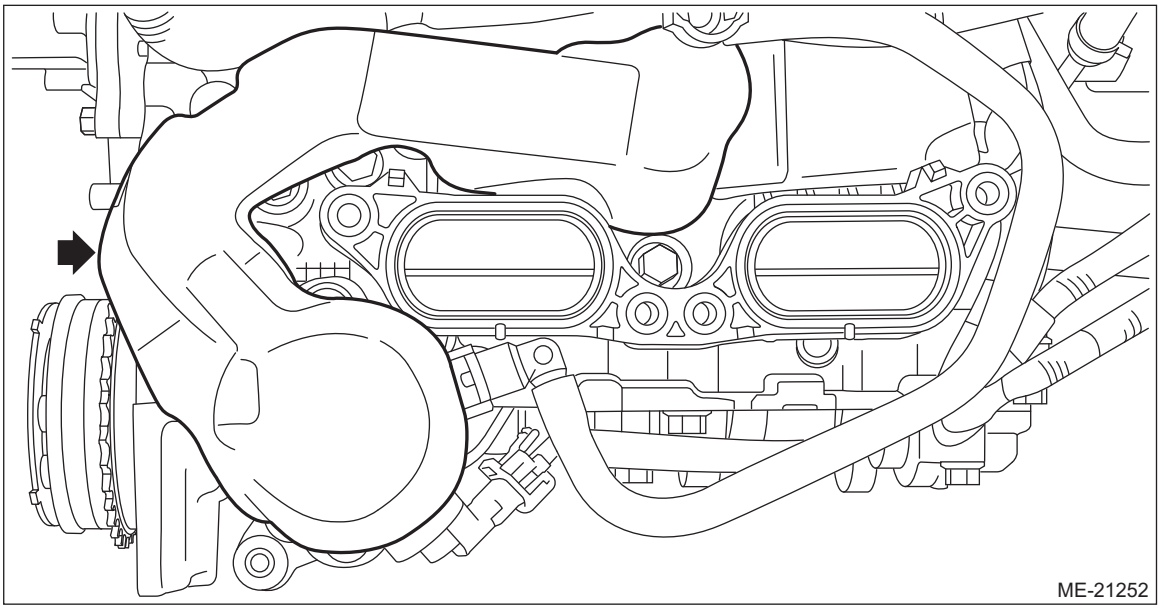
5) Remove the clip holding the engine wiring harness from cam carrier LH.



6) Remove the fuel pipe protector from the high-pressure fuel pump case.

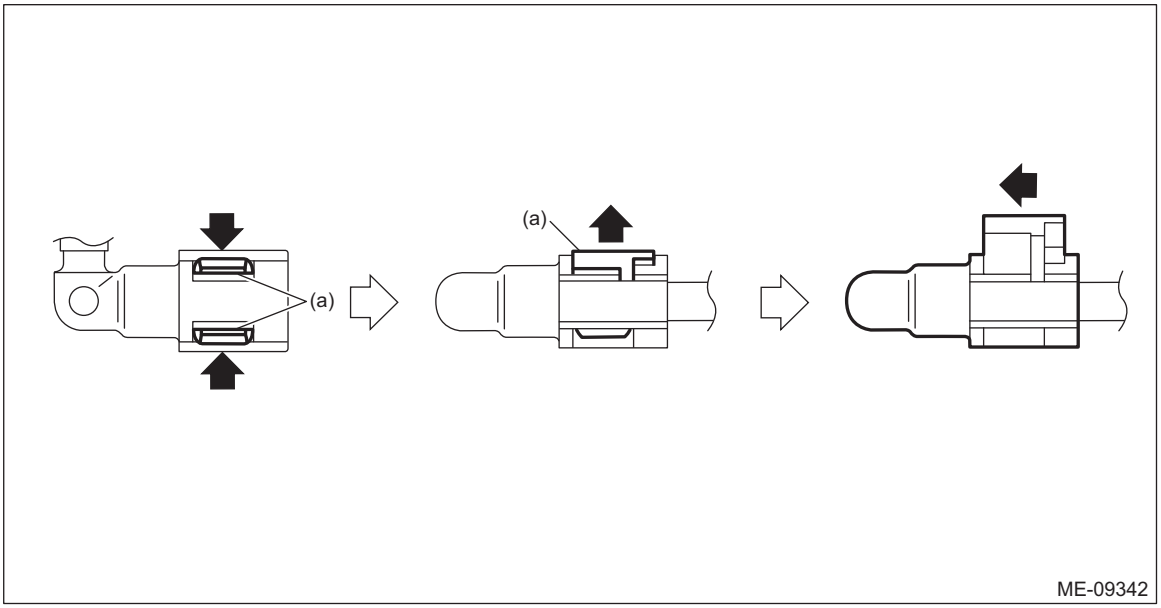


7) Remove the fuel pipe insulator No. 1 from the high pressure fuel pump and high pressure fuel delivery pipe.

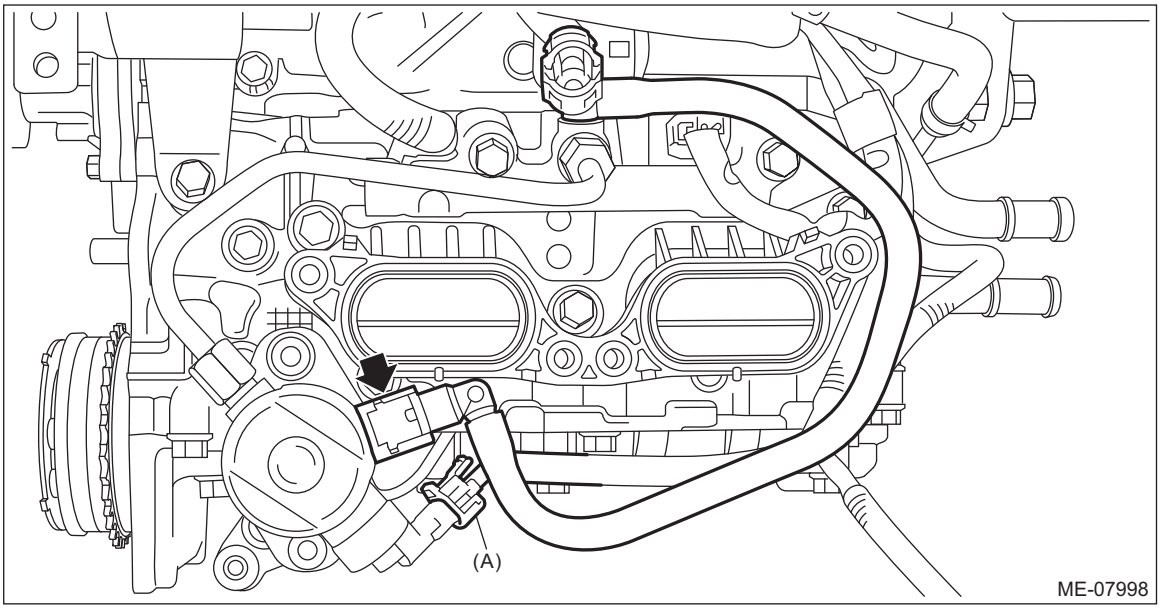


8) Disconnect the connector (A) from the high-pressure fuel pump, and remove the fuel delivery pipe from the high-pressure fuel pump.

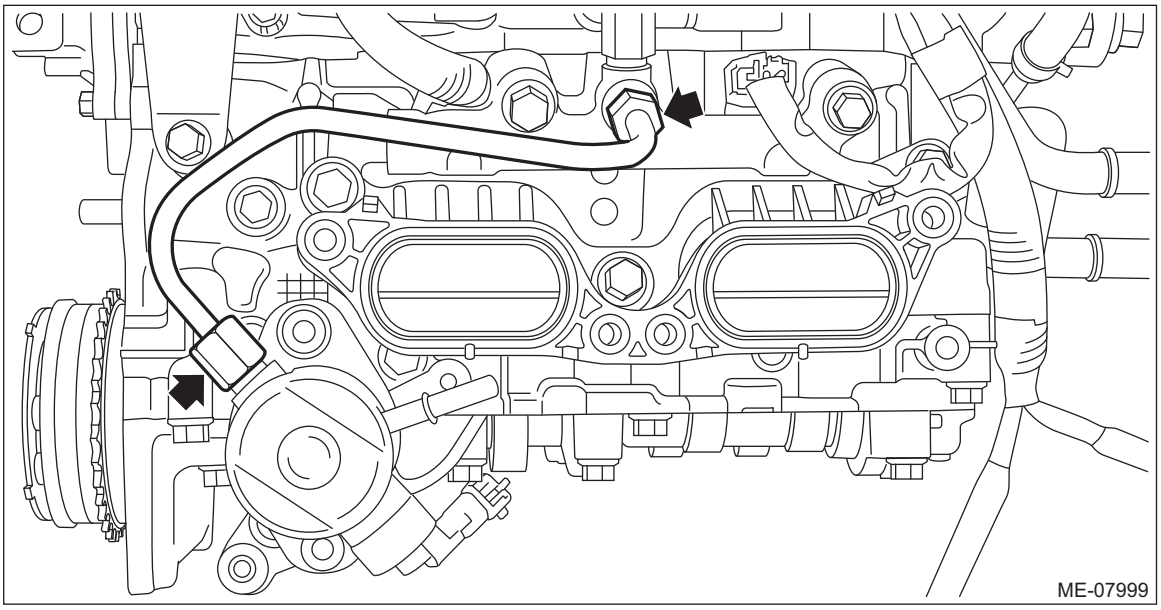
NOTE:
Disconnect the quick connector as shown in the figure.



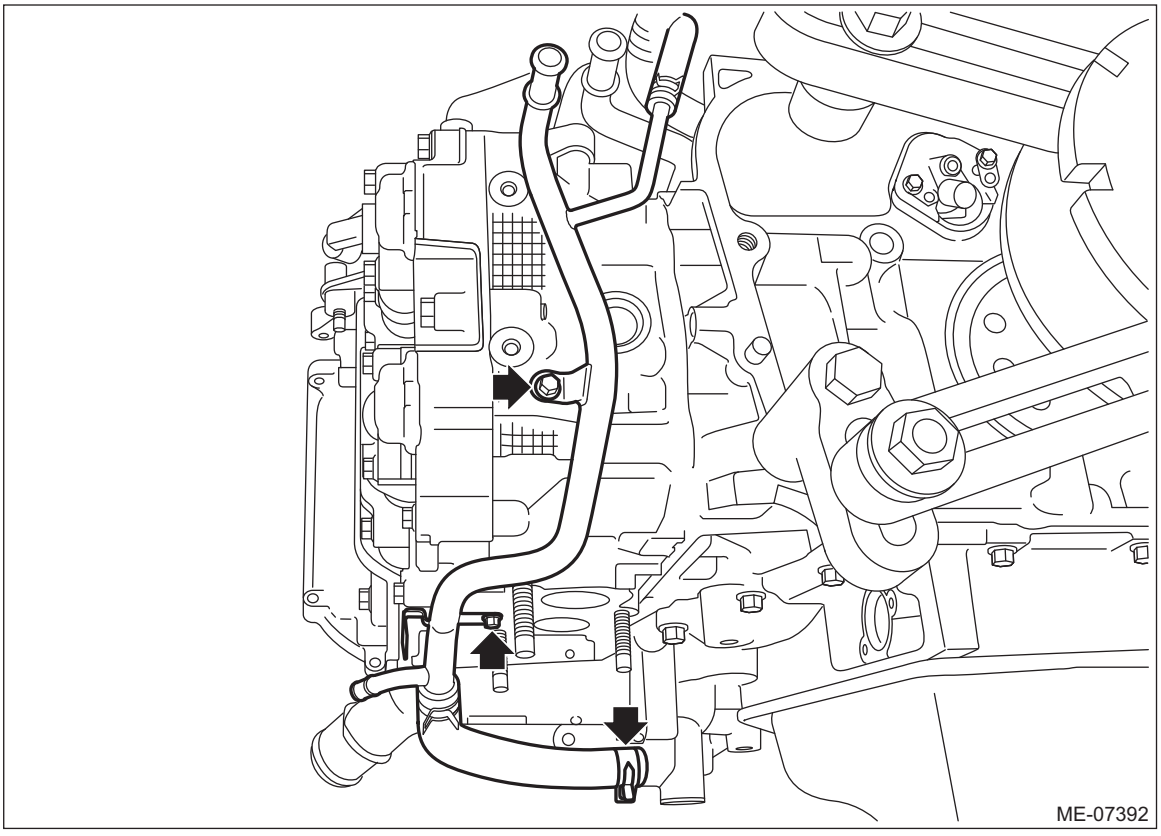
(a) Slider



9) Remove the high-pressure fuel delivery pipe from the high-pressure fuel pump and fuel injector pipe.



10) Disconnect the water pipe hose from oil pan upper, and remove the water pipe assembly.



11) When disassembling the cam carrier LH

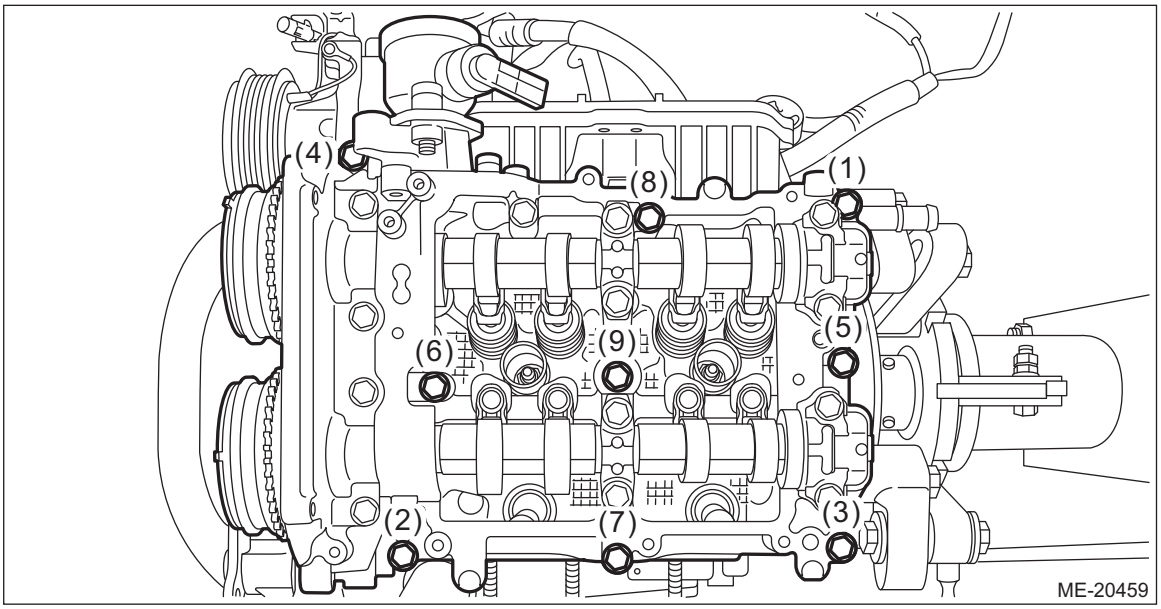
NOTE:
When disassembling the cam carrier LH, perform the following steps also.

(1) Remove the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, REMOVAL, High Pressure Fuel Pump.>

(2) Remove the cam sprocket LH. <Ref. to ME(w/o STI)-135, CAM SPROCKET LH, REMOVAL, Cam Sprocket.>

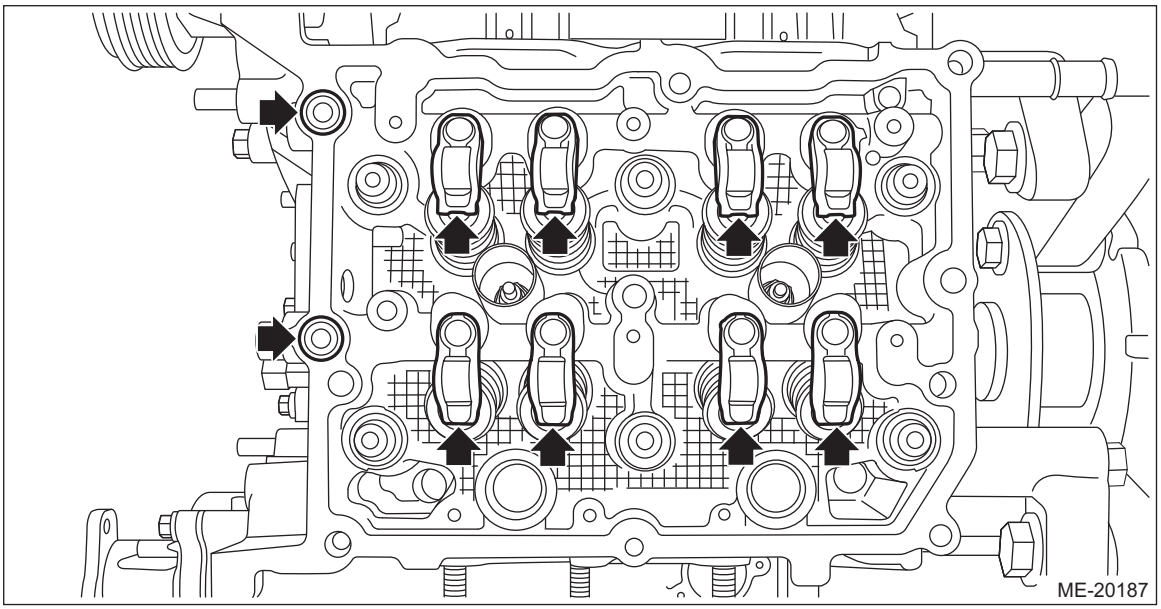
12) Set the part so that the cam carrier LH is on the upper side.

13) Loosen the bolts holding the cam carrier LH equally, a little at a time in numerical sequence as shown in the figure and remove the cam carrier LH.



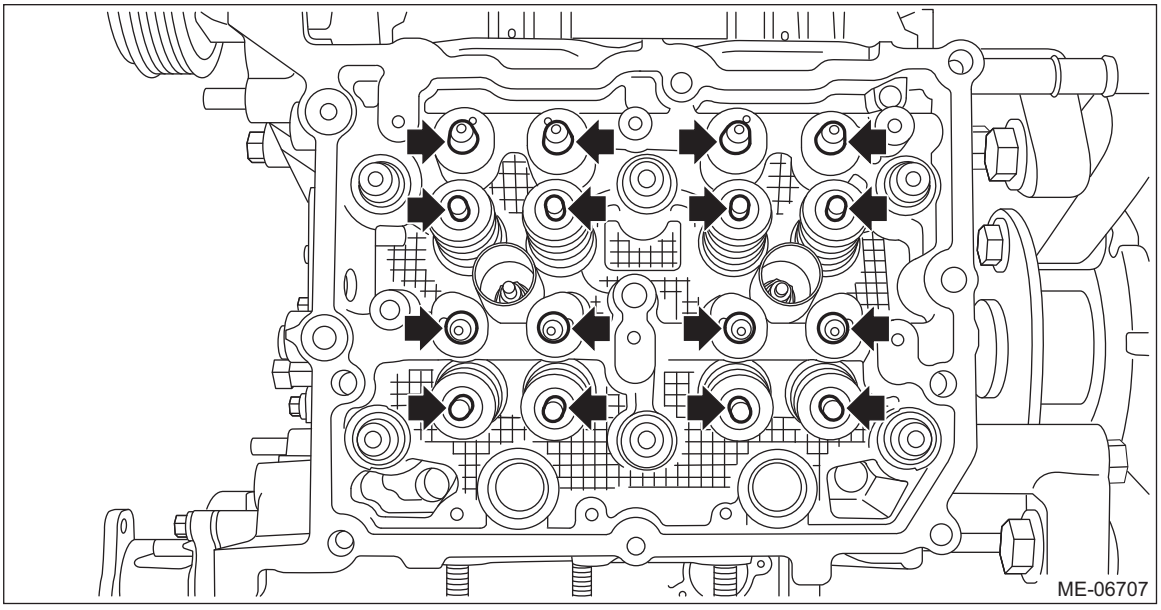
14) Remove the O-ring and the roller rocker arm from cylinder head LH.

NOTE:
Be careful not to confuse the roller rocker arms.



15) Remove the valve shim and the roller rocker arm pivot from cylinder head LH.

NOTE:
Be careful not to confuse the valve shim and the roller rocker arm pivot.

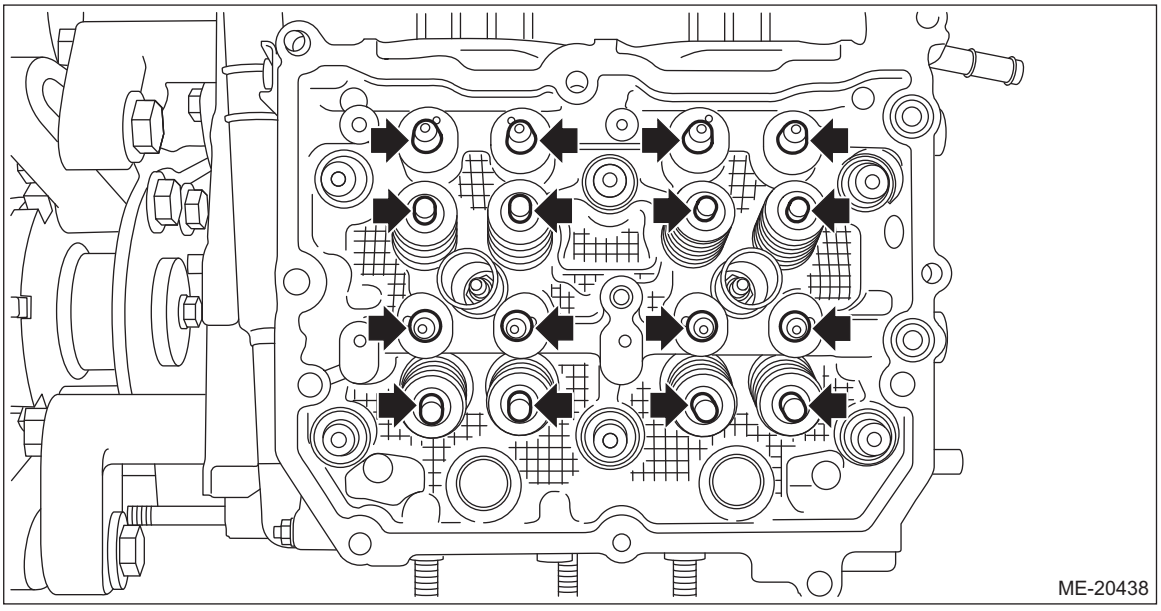


16) Remove the liquid gasket from cam carrier LH and cylinder head LH.

B: INSTALLATION

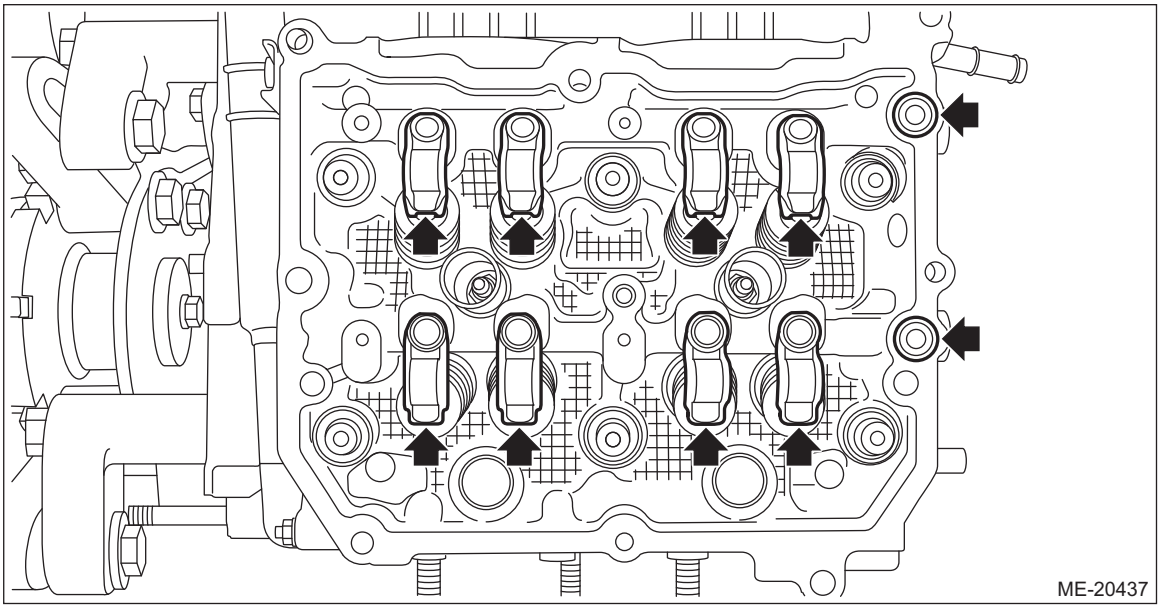
1. CAM CARRIER RH

1) Set the part so that the cylinder head RH is on the upper side.
2) Apply engine oil to the valve shim and the roller rocker arm pivot, and install the valve shim and the roller rocker arm pivot to the cylinder head RH.



3) Apply engine oil to the O-ring and the roller rocker arm, and install the O-ring and the roller rocker arm to the cylinder head RH.

NOTE:
Use new O-rings.

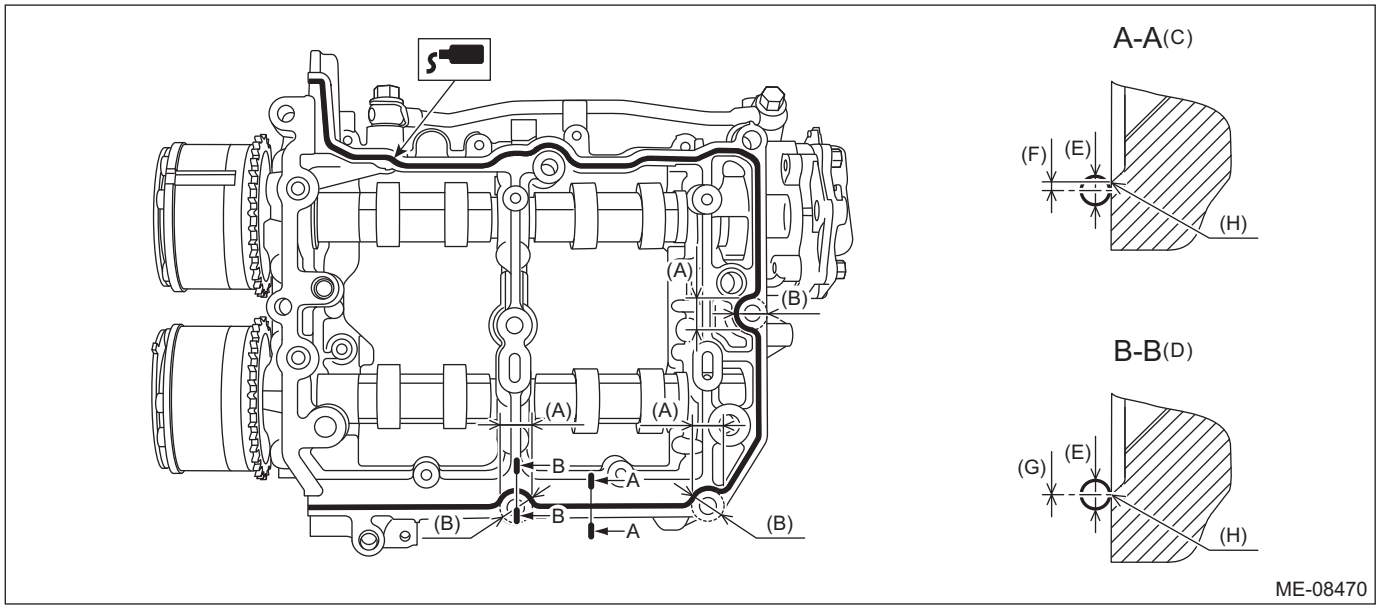


4) Apply liquid gasket to the mating surface of cam carrier RH as shown in the figure.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder head RH and cam carrier RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

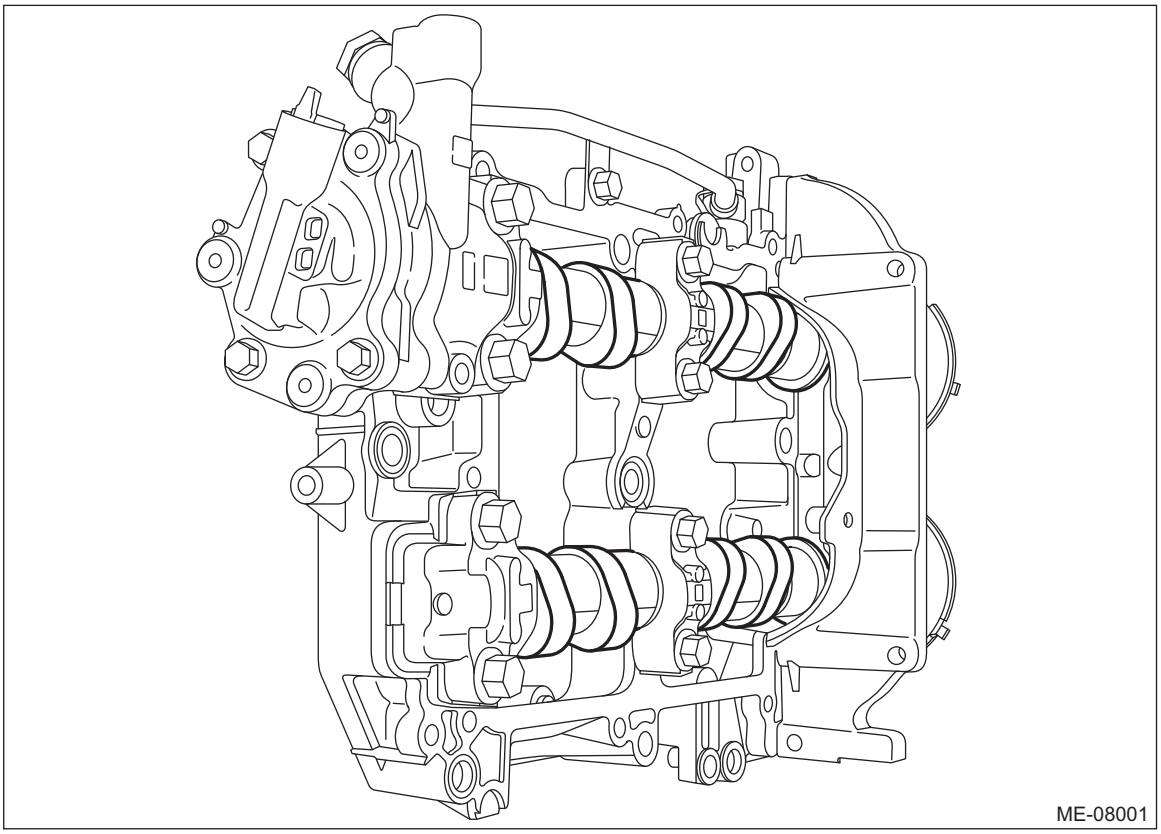
Liquid gasket applying diameter:
3±0.5 mm (0.1181±0.0197 in)



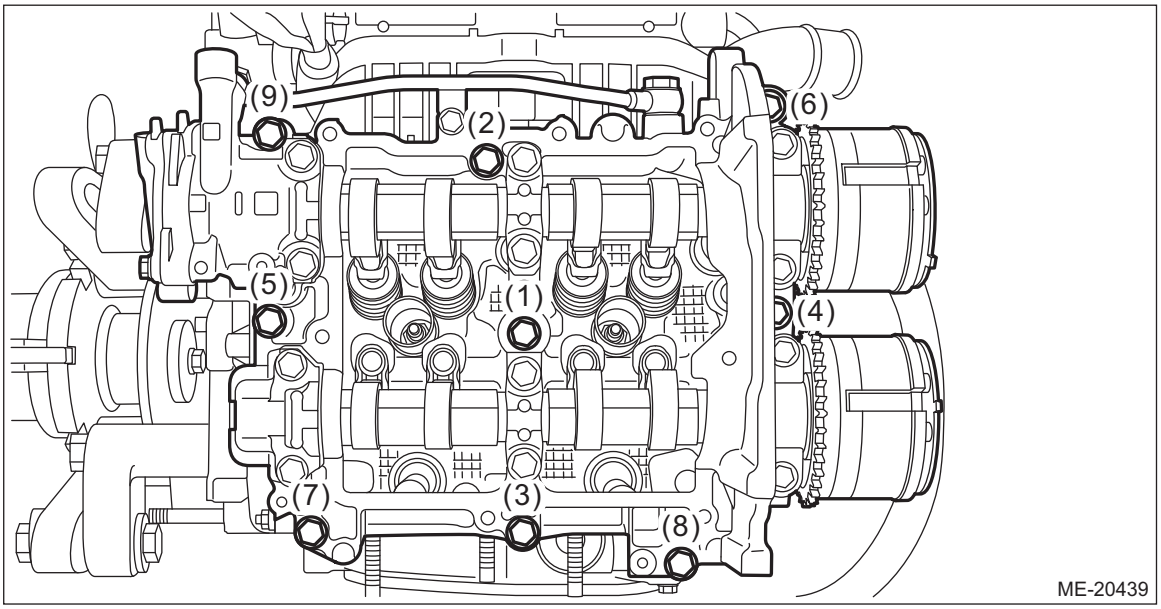
(A)	Range A	(D)	Liquid gasket applying position of mating surfaces of range A	(G)	0±0.5 mm (0±0.0197 in)
(B)	ϕ18 mm (0.7087 in)	(E)	ϕ3±0.5 mm (0.1181±0.0197 in)	(H)	Chamfer edge
(C)	Liquid gasket applying position of mating surfaces other than range A	(F)	1 mm (0.0394 in) or less		

5) Install the cam carrier RH to the cylinder head RH.
   (1) Mount the cam carrier RH, then tighten all bolts with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

NOTE:
Set the intake camshaft RH and the exhaust camshaft RH to the zero-lift position as shown in the figure.

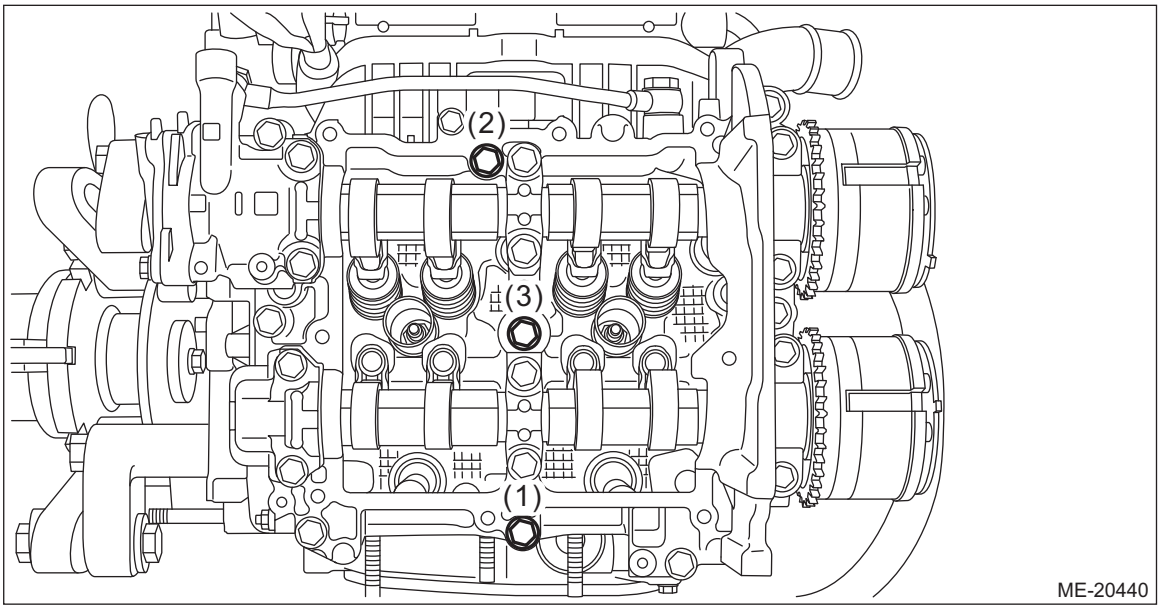


ME-08001

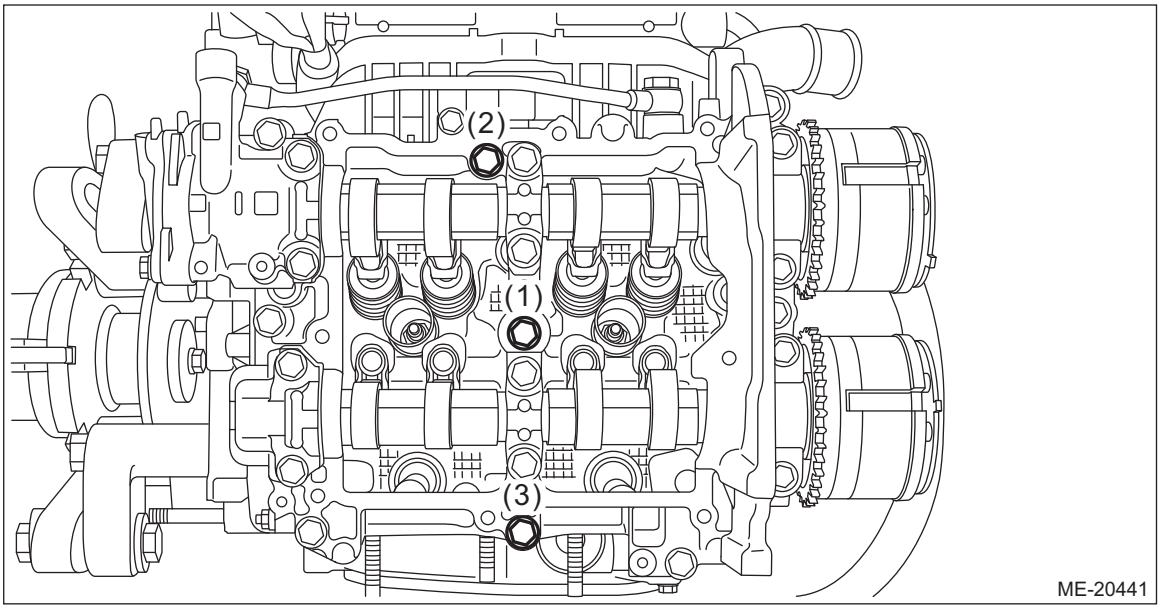


ME-20439

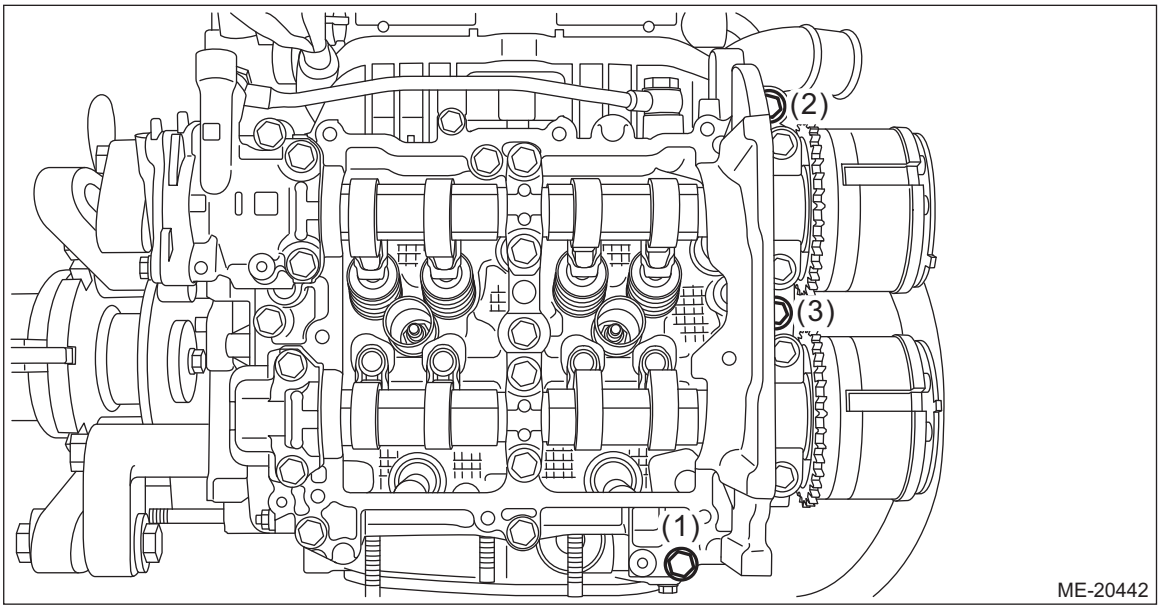
(2) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



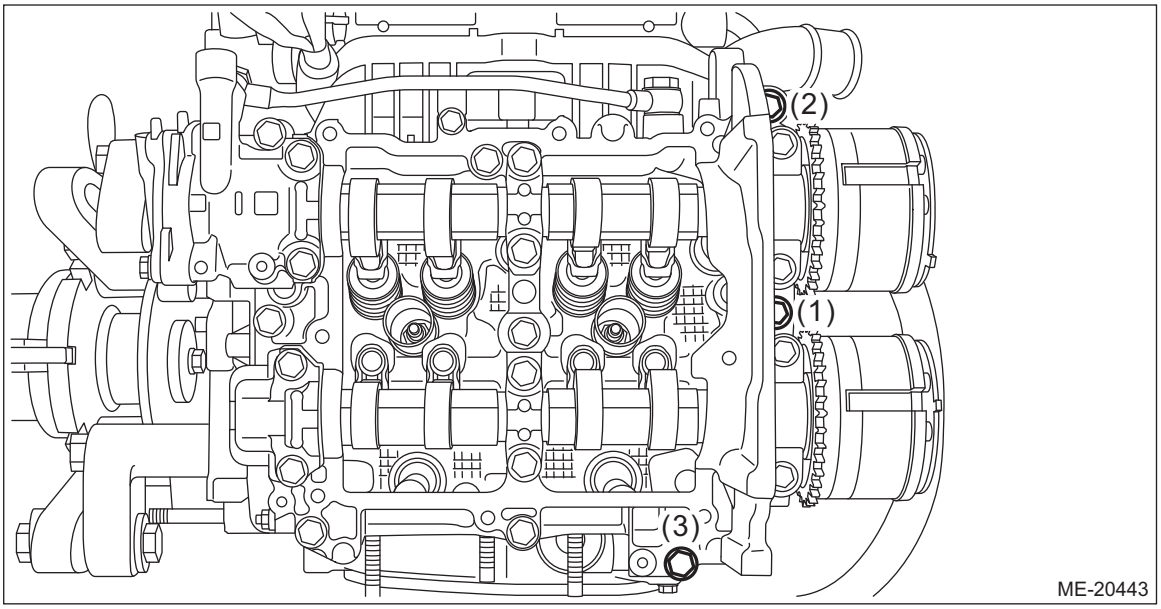
(3) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.



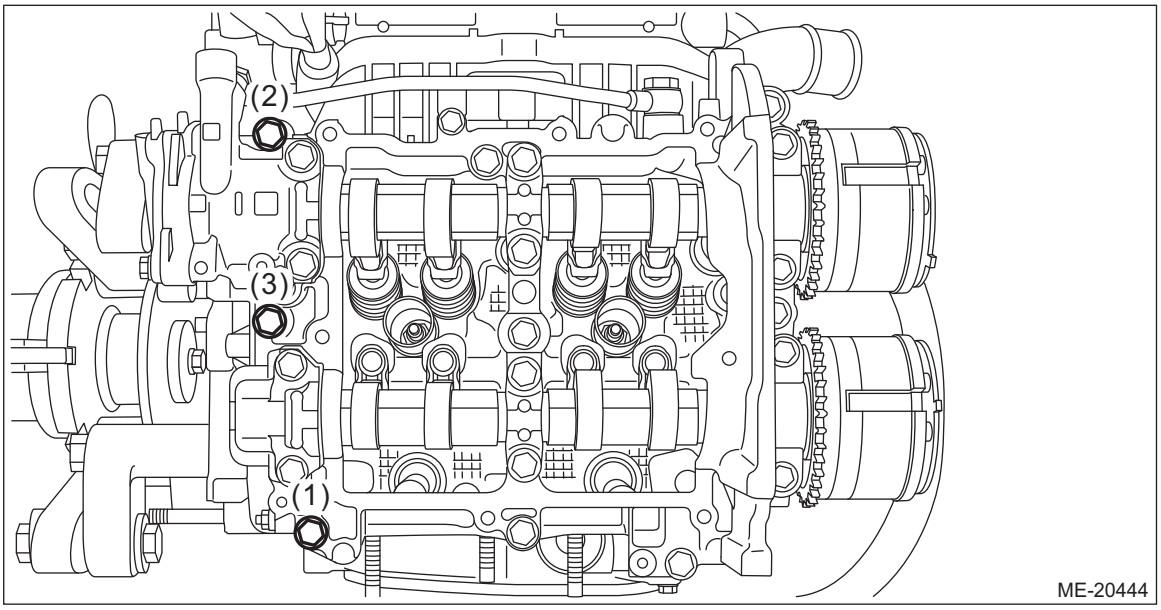
(4) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



(5) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

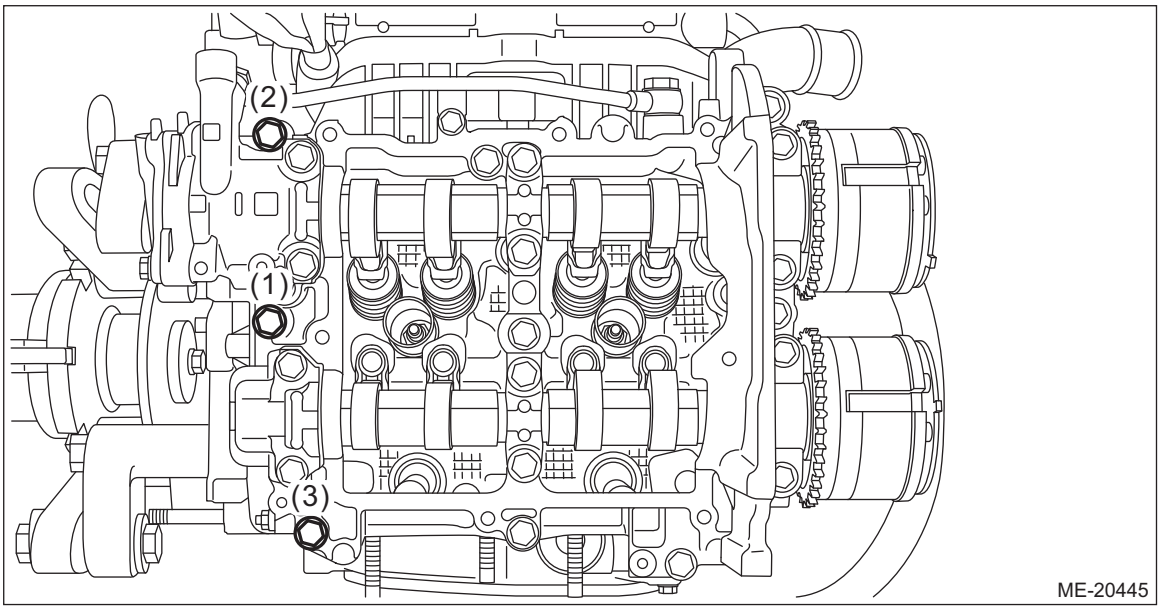


(6) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



(7) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

NOTE:
After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.



6) Set the part so that the intake manifold is on the upper side.
7) When the cam carrier RH has been disassembled

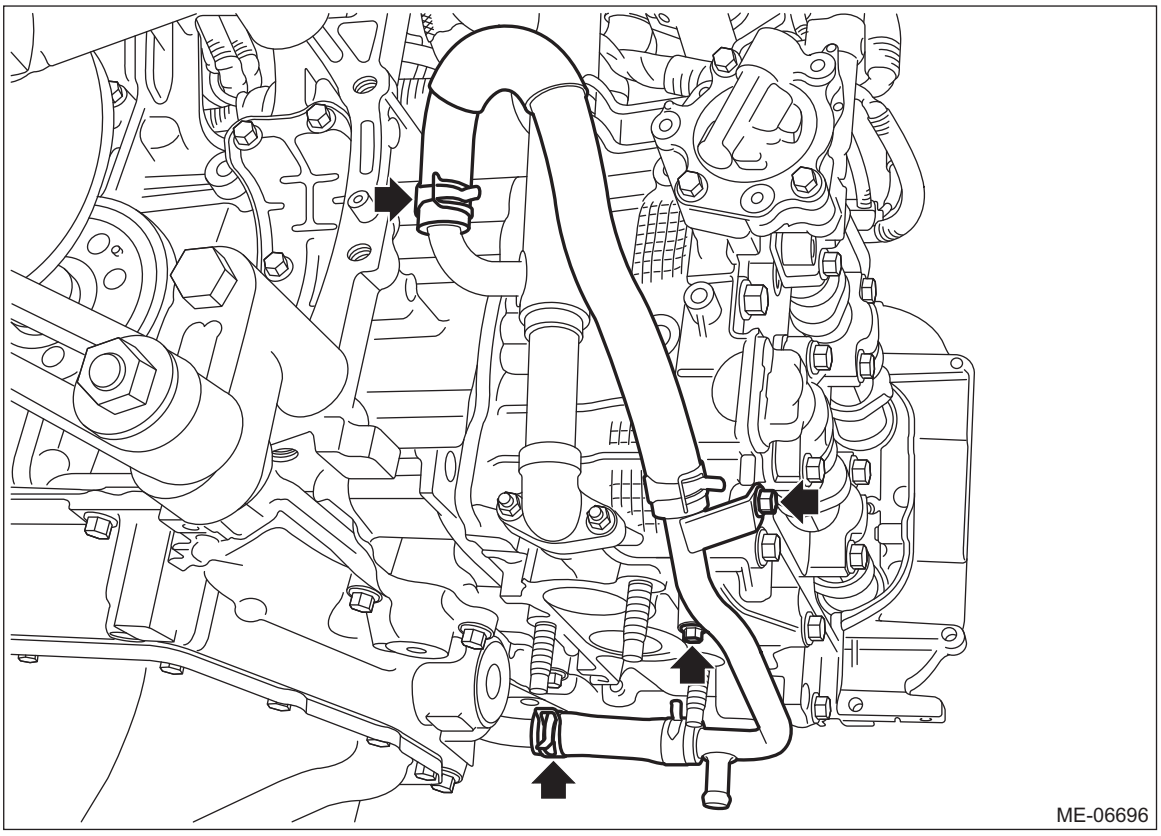
NOTE:
When the cam carrier RH has been disassembled, perform the following steps also.

(1) Install the cam sprocket RH. <Ref. to ME(w/o STI)-137, CAM SPROCKET RH, INSTALLATION, Cam Sprocket.>
(2) Install the scavenge pump. <Ref. to LU(w/o STI)-40, INSTALLATION, Scavenge Pump.>

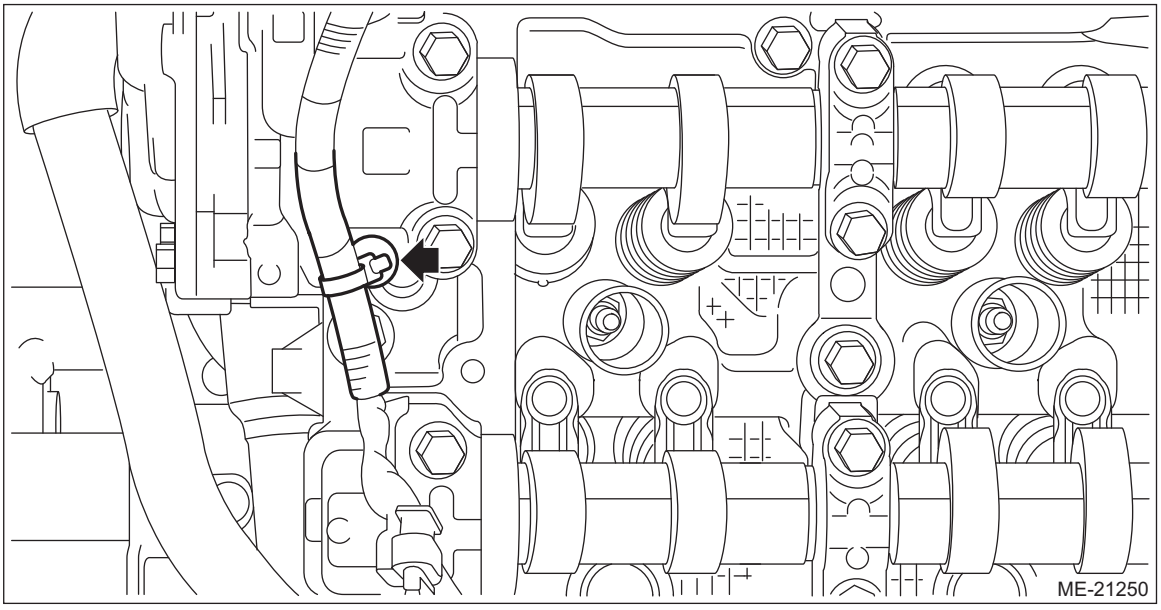
NOTE:
When installing the scavenge pump, do not turn the intake camshaft RH to the outside of range of zero-lift (in range where it can be turned lightly by hand).

8) Check the cam clearance. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>
9) Connect the water pipe hose to oil pan upper and EGR cooler, and install the water pipe assembly.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



10) Secure the engine wiring harness to the cam carrier RH with a clip.

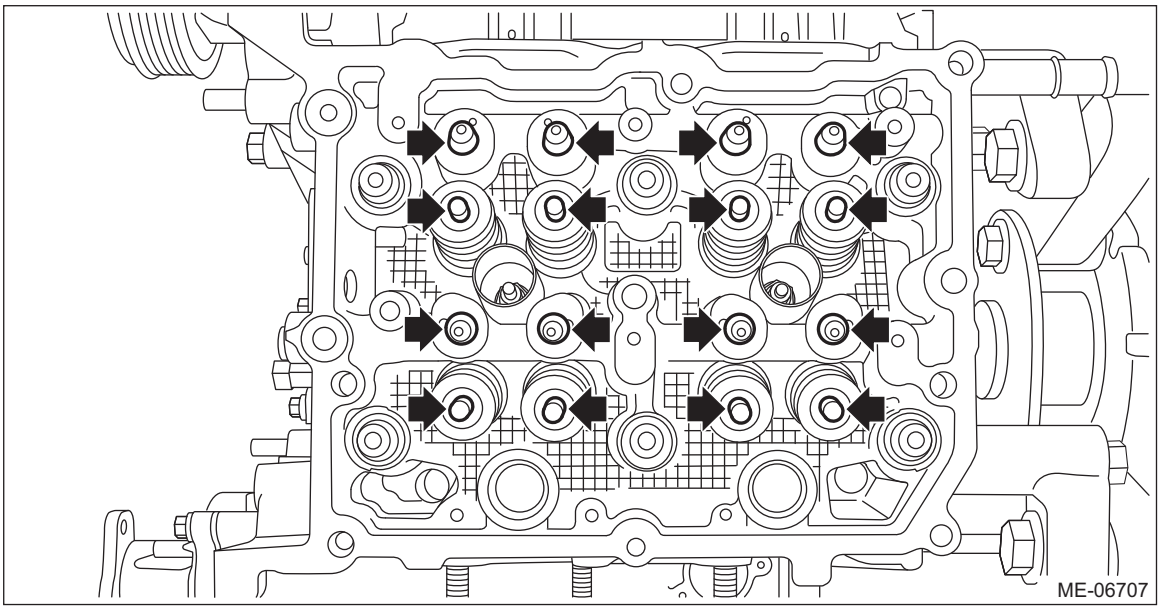


11) Install the oil pipe assembly. <Ref. to LU(w/o STI)-44, OIL PIPE ASSEMBLY, INSTALLATION, Oil Pipe.>
12) Install the rocker cover RH. <Ref. to ME(w/o STI)-152, ROCKER COVER RH, INSTALLATION, Rocker Cover.>
13) Install the timing chain RH. <Ref. to ME(w/o STI)-127, TIMING CHAIN RH, INSTALLATION, Timing Chain Assembly.>

14) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>

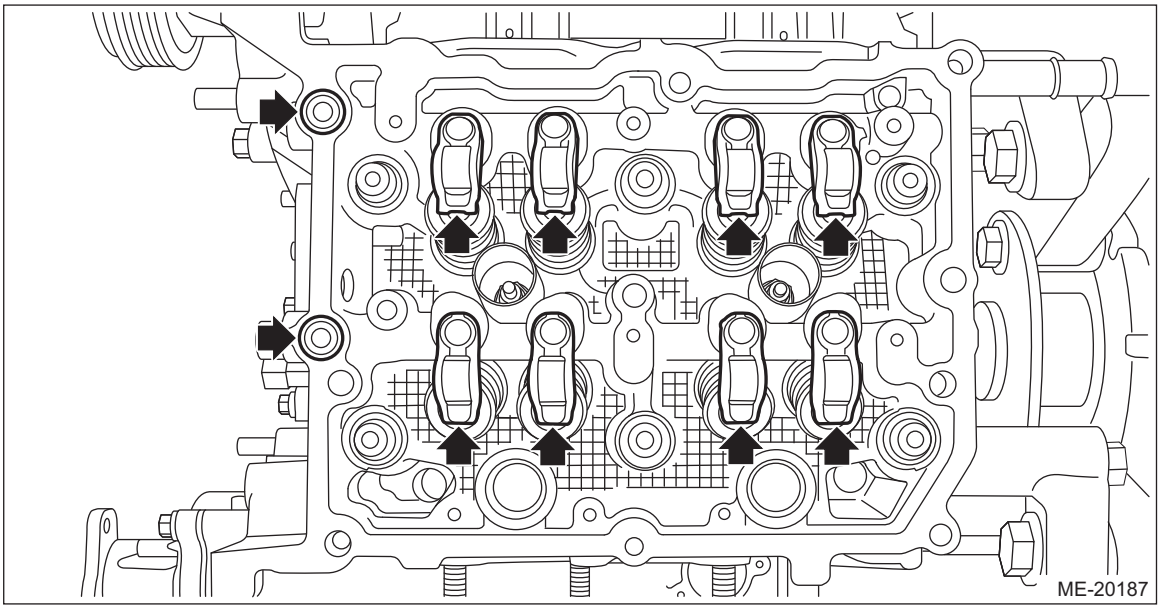
2. CAM CARRIER LH

1) Set the part so that the cylinder head LH is on the upper side.
2) Apply engine oil to the valve shim and the roller rocker arm pivot, and install the valve shim and the roller rocker arm pivot to the cylinder head LH.



3) Apply engine oil to the O-ring and the roller rocker arm, and install the O-ring and the roller rocker arm to the cylinder head LH.

NOTE:
Use new O-rings.

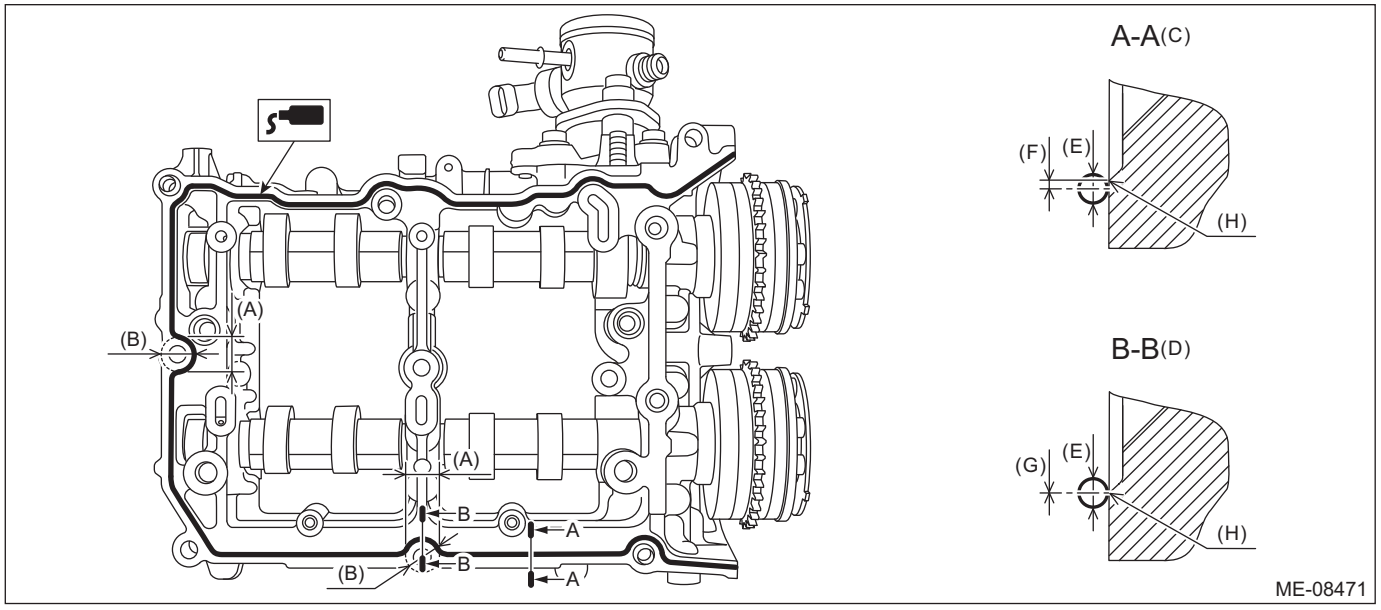


4) Apply liquid gasket to the mating surface of cam carrier LH as shown in the figure.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder head LH and cam carrier LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

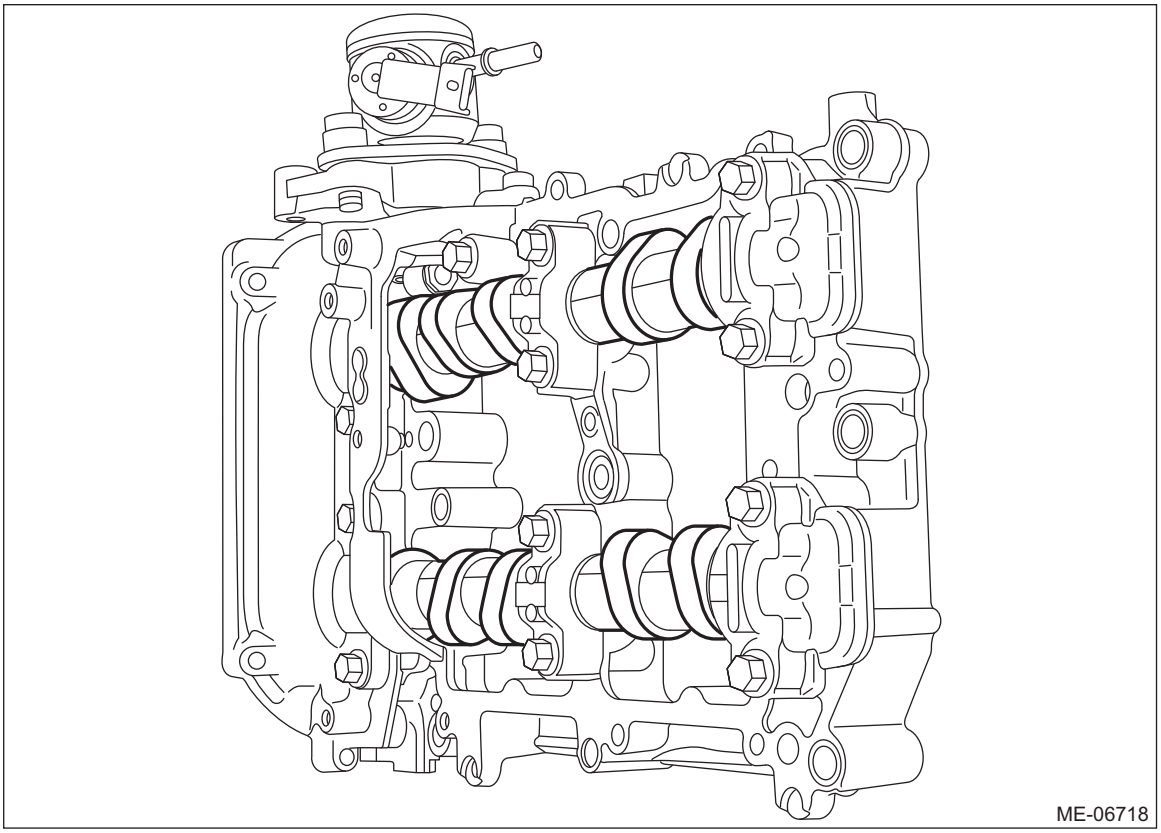
Liquid gasket applying diameter:
3±0.5 mm (0.1181±0.0197 in)

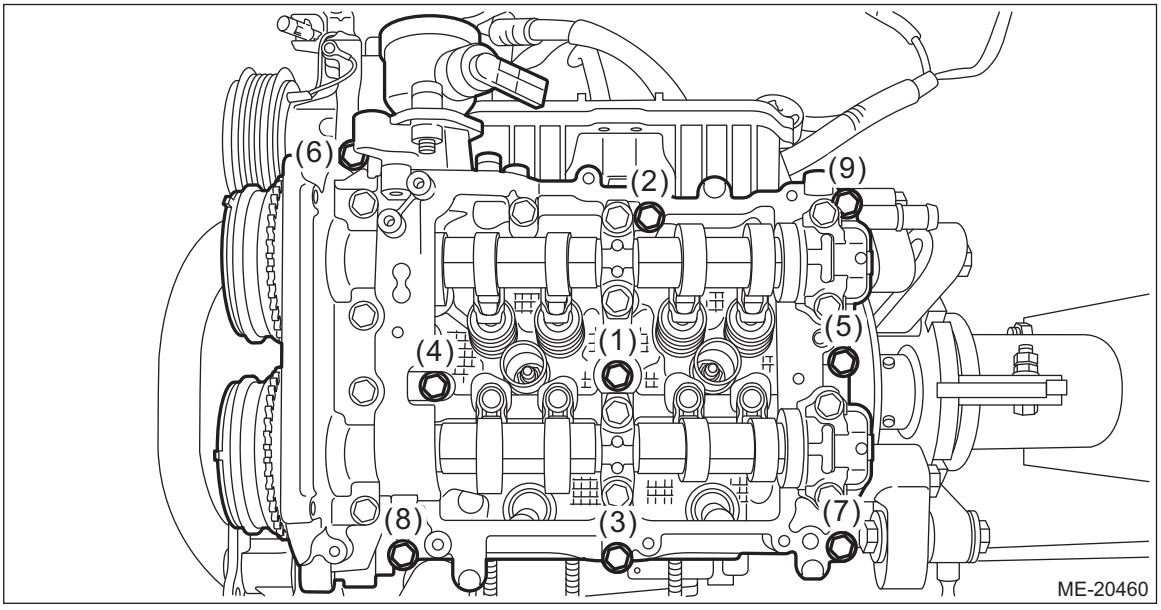


(A)	Range A	(D)	Liquid gasket applying position of mating surfaces of range A	(G)	0±0.5 mm (0±0.0197 in)
(B)	ϕ18 mm (0.7087 in)	(E)	ϕ3±0.5 mm (0.1181±0.0197 in)	(H)	Chamfer edge
(C)	Liquid gasket applying position of mating surfaces other than range A	(F)	1 mm (0.0394 in) or less		

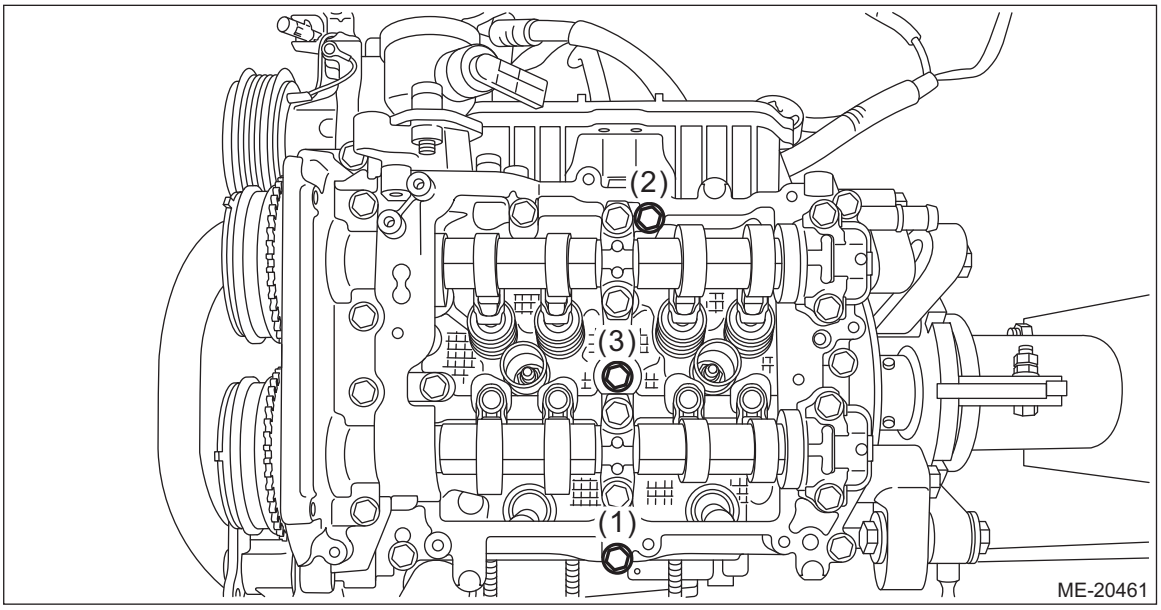
5) Install the cam carrier LH to the cylinder head LH.
(1) Mount the cam carrier LH, then tighten all bolts with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

NOTE:
Set the intake camshaft LH and the exhaust camshaft LH to the zero-lift position as shown in the figure.

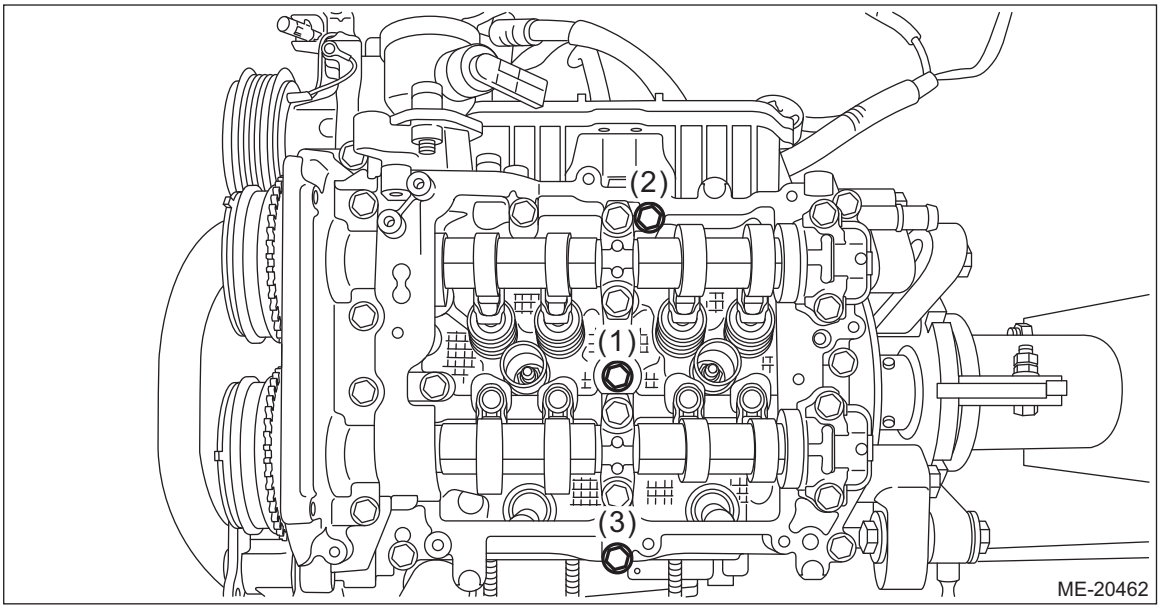




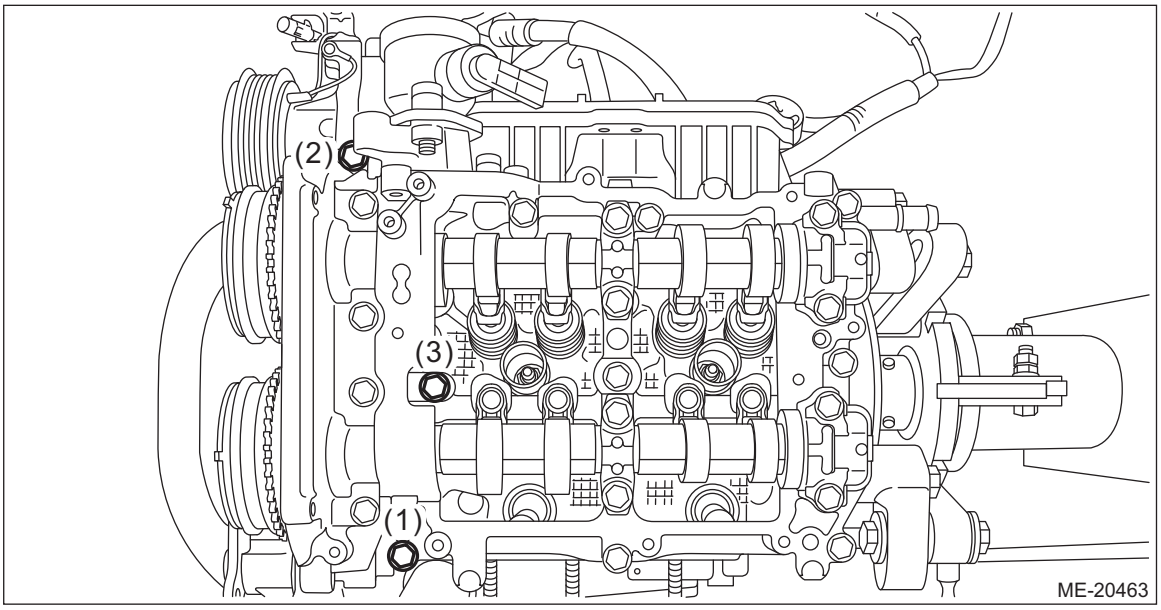
(2) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



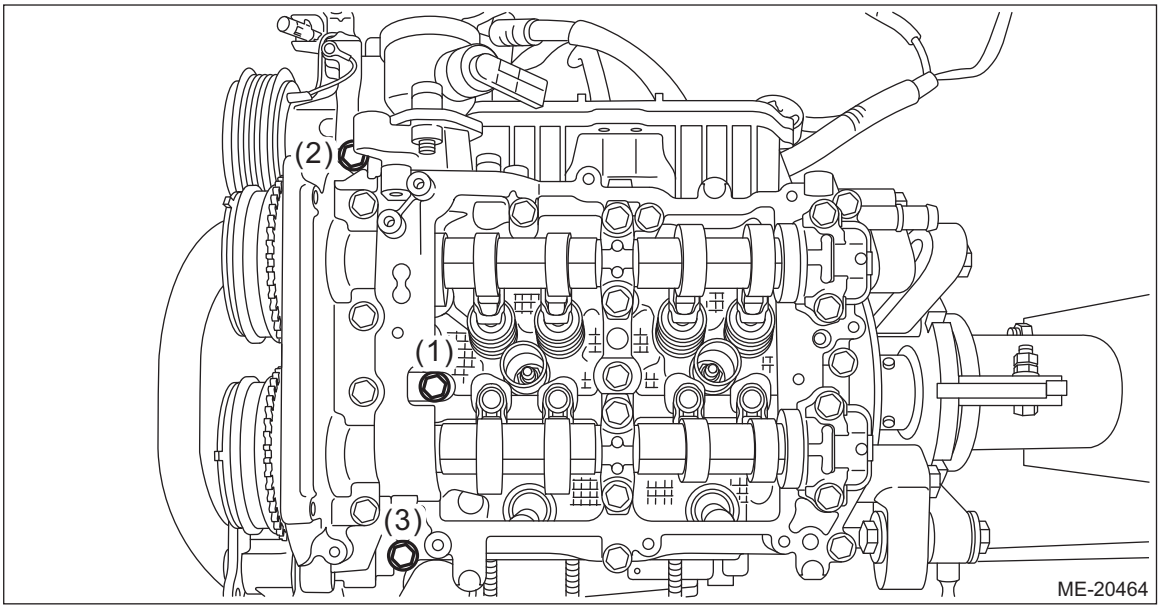
(3) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.



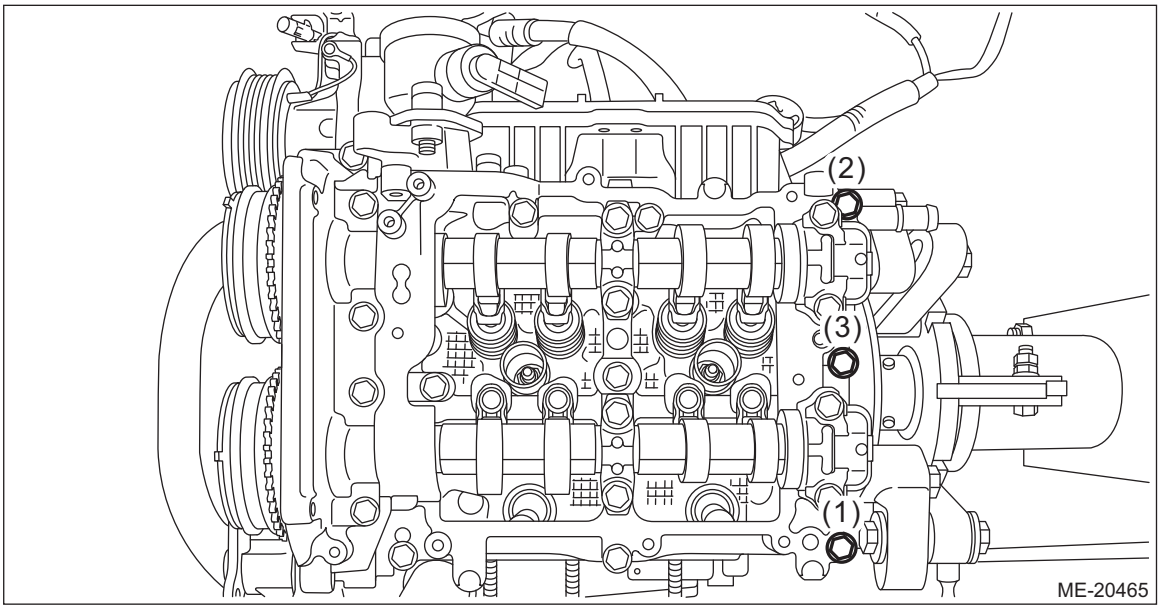
(4) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



(5) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

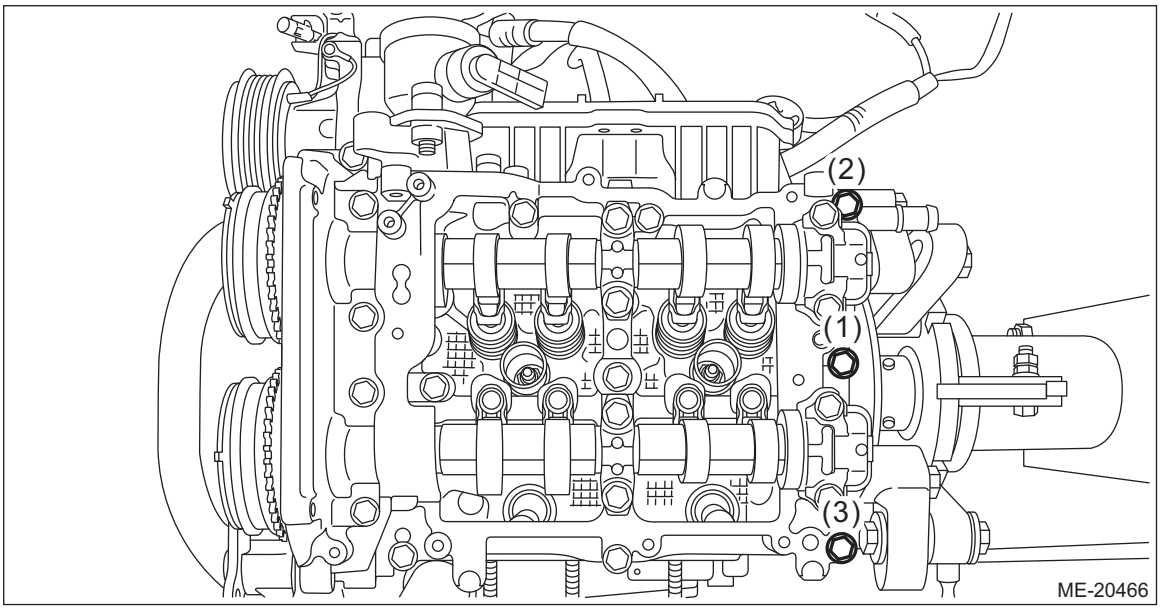


(6) Loosen the bolts (3 places) by 180° in numerical order as shown in the figure.



(7) Tighten the bolts (3 places) with a torque of 18 N·m (1.8 kgf-m, 13.3 ft-lb) in numerical order as shown in the figure.

NOTE:
After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

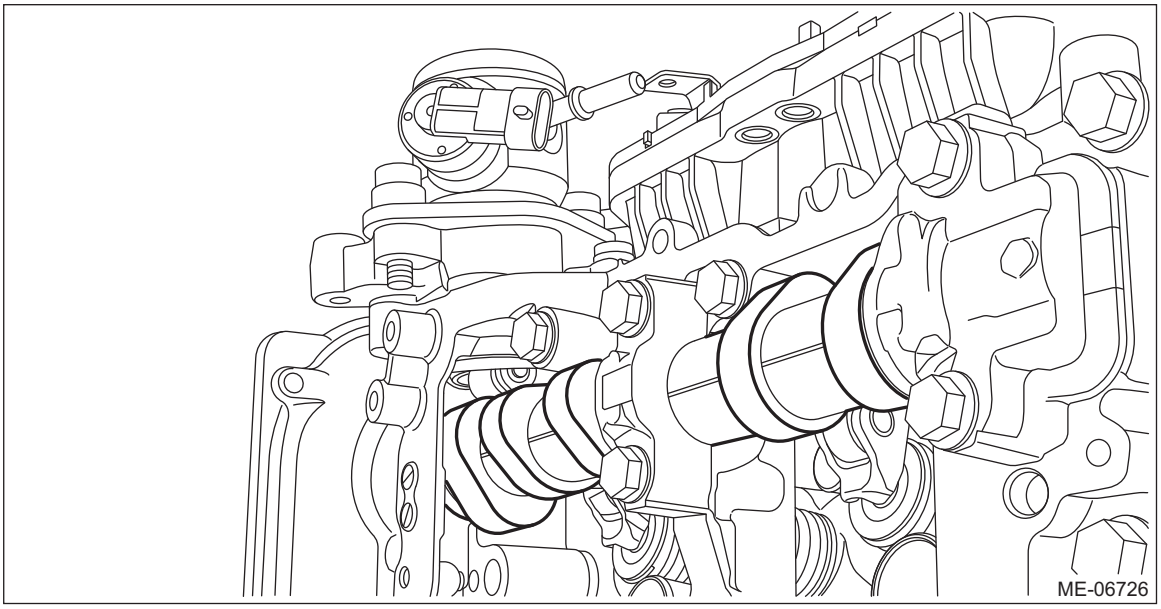


6) Set the part so that the installation surface of the intake manifold is on the upper side.
7) When the cam carrier LH has been disassembled

NOTE:
When the cam carrier LH has been disassembled, perform the following steps also.

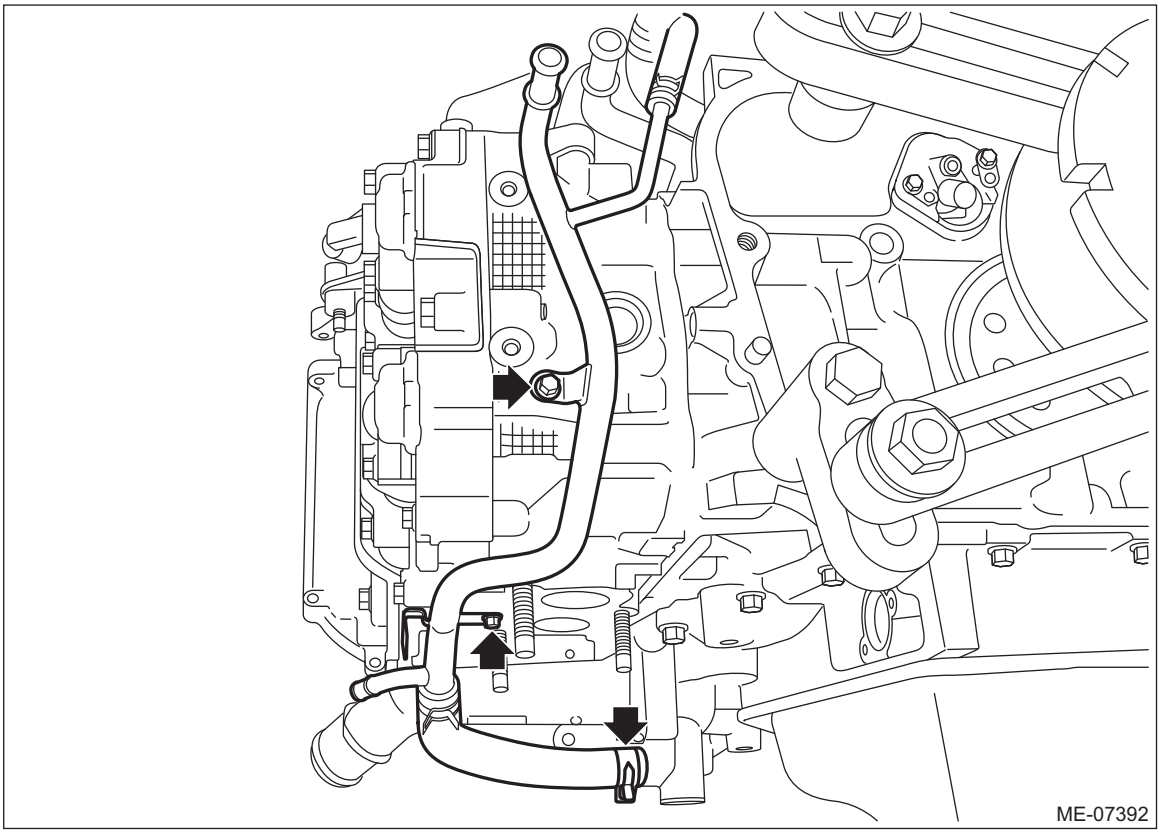
(1) Install the cam sprocket LH. <Ref. to ME(w/o STI)-139, CAM SPROCKET LH, INSTALLATION, Cam Sprocket.>
(2) Install the high-pressure fuel pump. <Ref. to FU(w/o STI)-73, INSTALLATION, High Pressure Fuel Pump.>

NOTE:
Install the high-pressure fuel pump so that the cam lobes on the intake camshaft LH are positioned as shown in the figure. Perform adjustment within the range of zero-lift (in range where it can be turned lightly by hand).



8) Check the cam clearance. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>
9) Connect the water pipe hose to oil pan upper, and install the water pipe assembly.

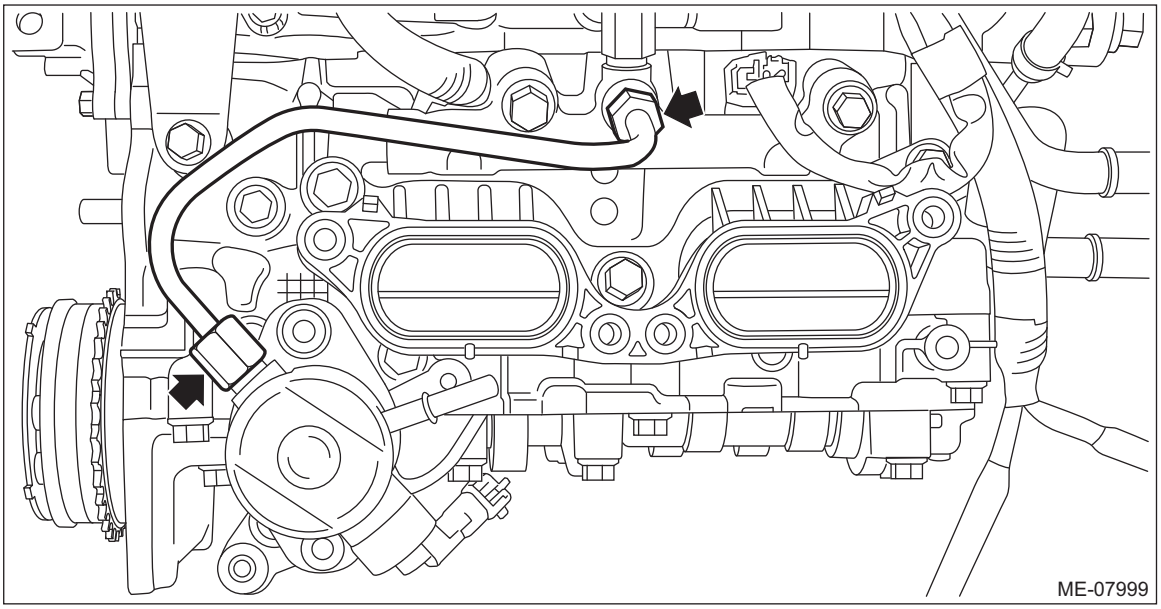
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



10) Temporarily tighten the flare nuts of the high-pressure fuel delivery pipe to the high-pressure fuel pump and fuel injector pipe by hand until they are seated, and then tighten the flare nuts.

CAUTION:
Always use a new high-pressure fuel delivery pipe.

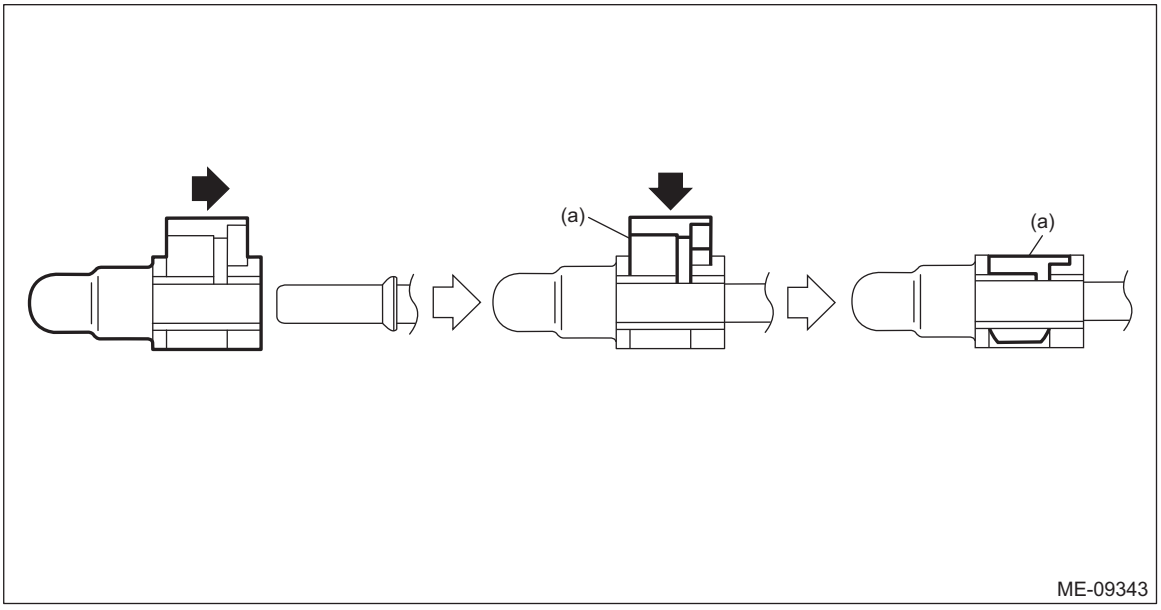
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



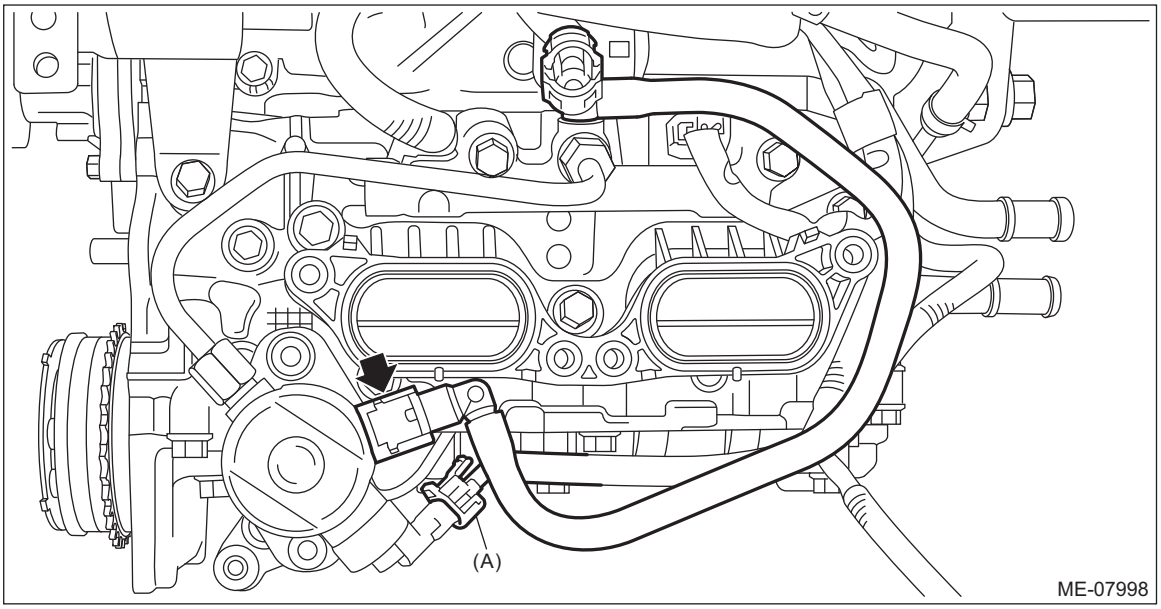
11) Install the fuel delivery pipe to the high-pressure fuel pump, and connect the connector (A) to the high-pressure fuel pump.

CAUTION:
• Check that there is no damage or dust on the quick connector. If necessary, clean the seal surface of the pipe.
• When connecting the quick connector, make sure to insert it all the way in before locking the slider.
• When it is difficult to lock the slider, check that the connector is fully inserted.
• After locking the slider, pull the quick connector itself to the disconnecting direction, and then push to the connecting direction in order to confirm secure connection. Make sure to end this check with a pushing step.

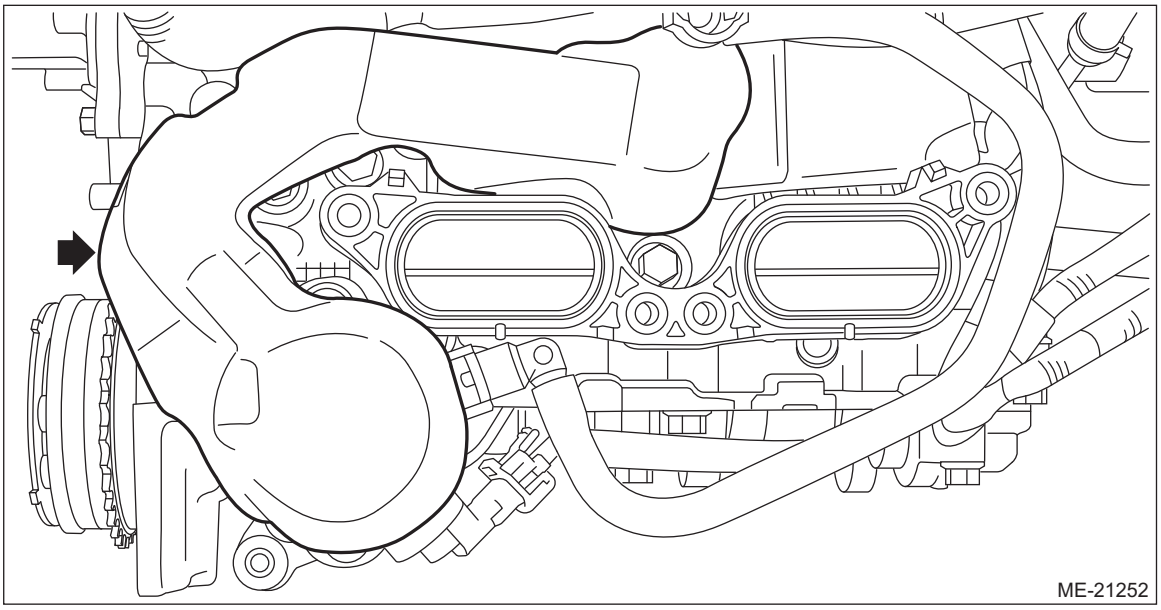
NOTE:
Connect the quick connector as shown in the figure.



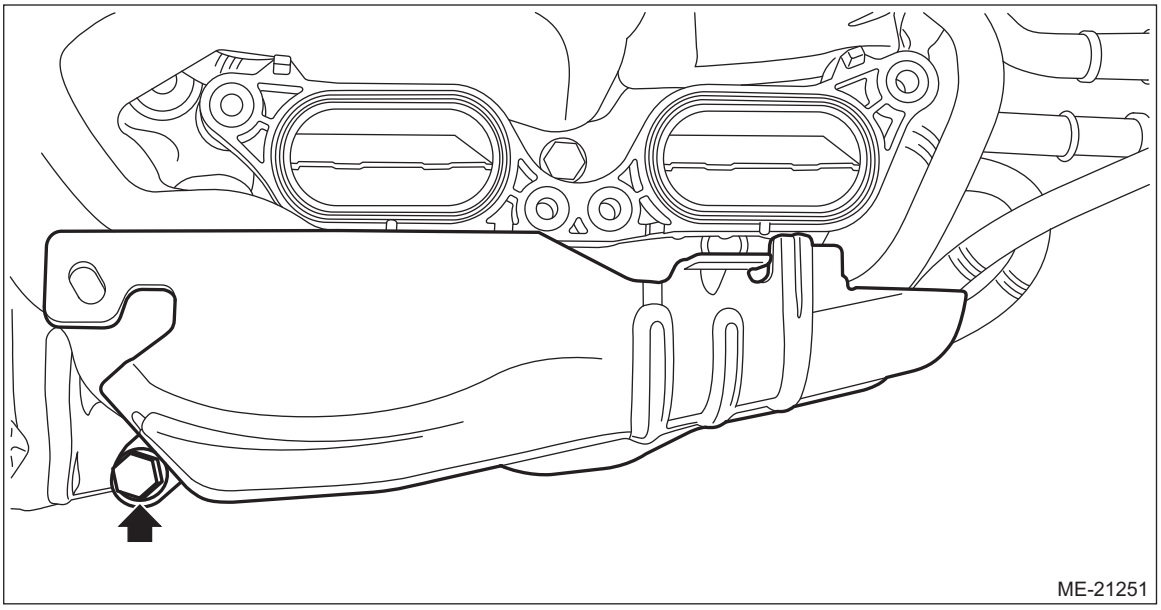
(a) Slider



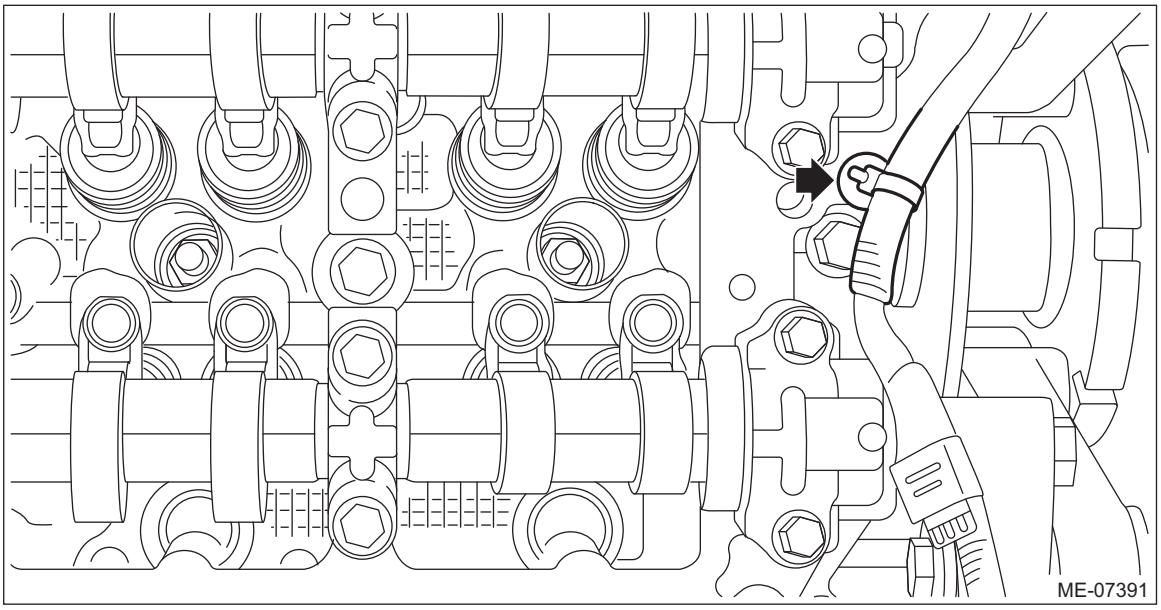
12) Install the fuel pipe insulator No. 1 to the high pressure fuel pump and high pressure fuel delivery pipe.



13) Temporarily tighten the bolts securing the fuel pipe protector to the high-pressure fuel pump case.

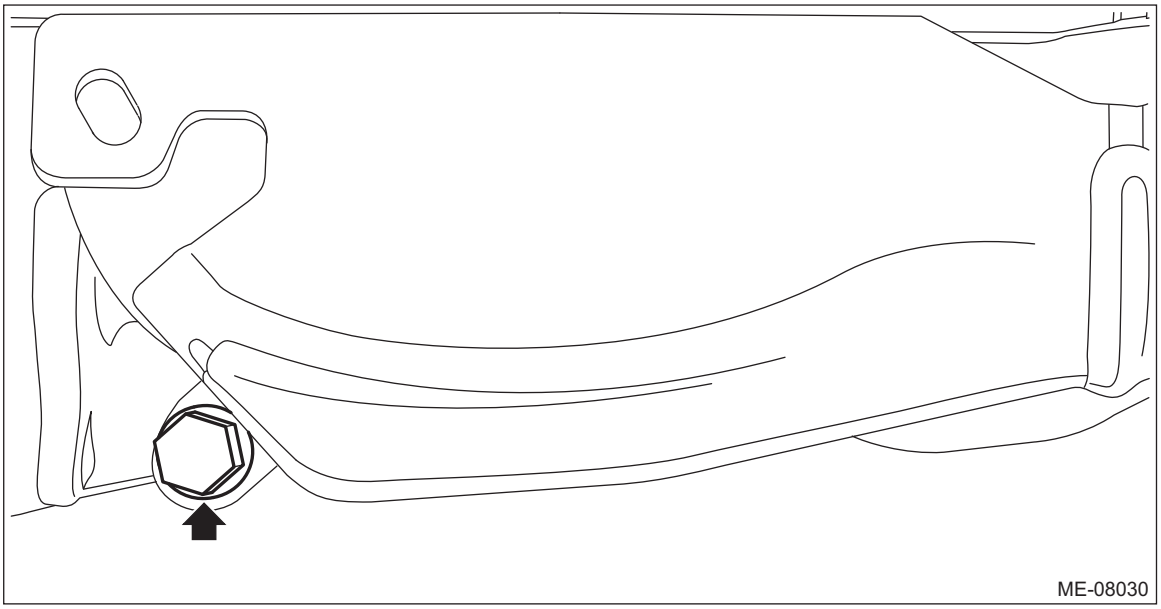


14) Secure the engine wiring harness to the cam carrier LH with a clip.



15) Install the rocker cover LH. <Ref. to ME(w/o STI)-154, ROCKER COVER LH, INSTALLATION, Rocker Cover.>
16) Install the intake manifold. <Ref. to FU(w/o STI)-27, INSTALLATION, Intake Manifold.>
17) Tighten the bolts securing the fuel pipe protector to the high-pressure fuel pump case.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

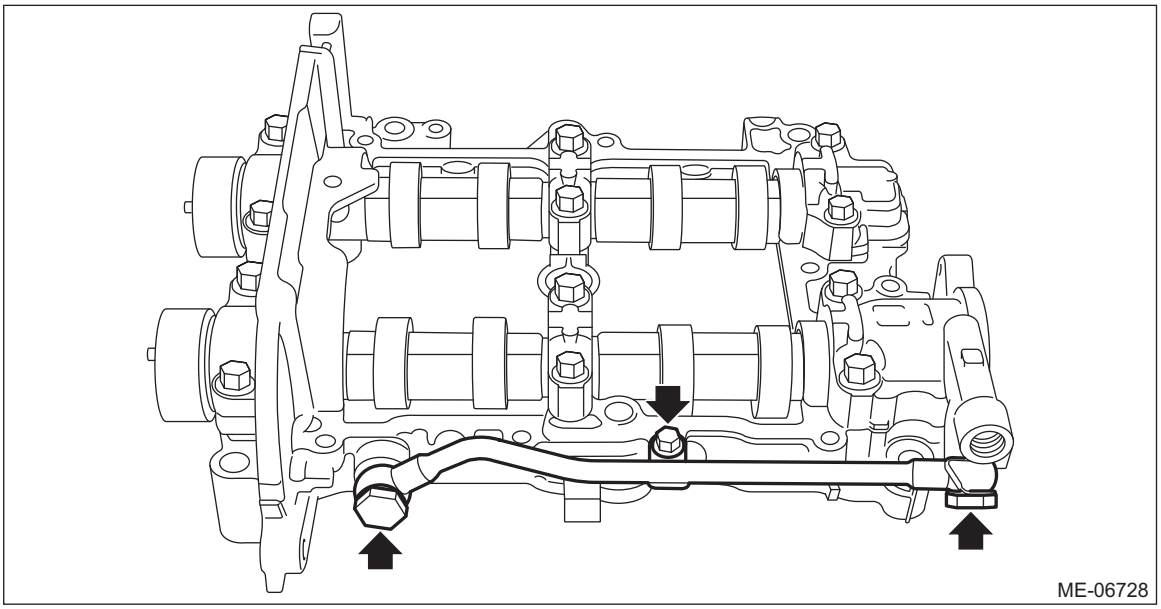


18) Install timing chain LH. <Ref. to ME(w/o STI)-119, TIMING CHAIN LH, INSTALLATION, Timing Chain Assembly.>
19) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>

C: DISASSEMBLY

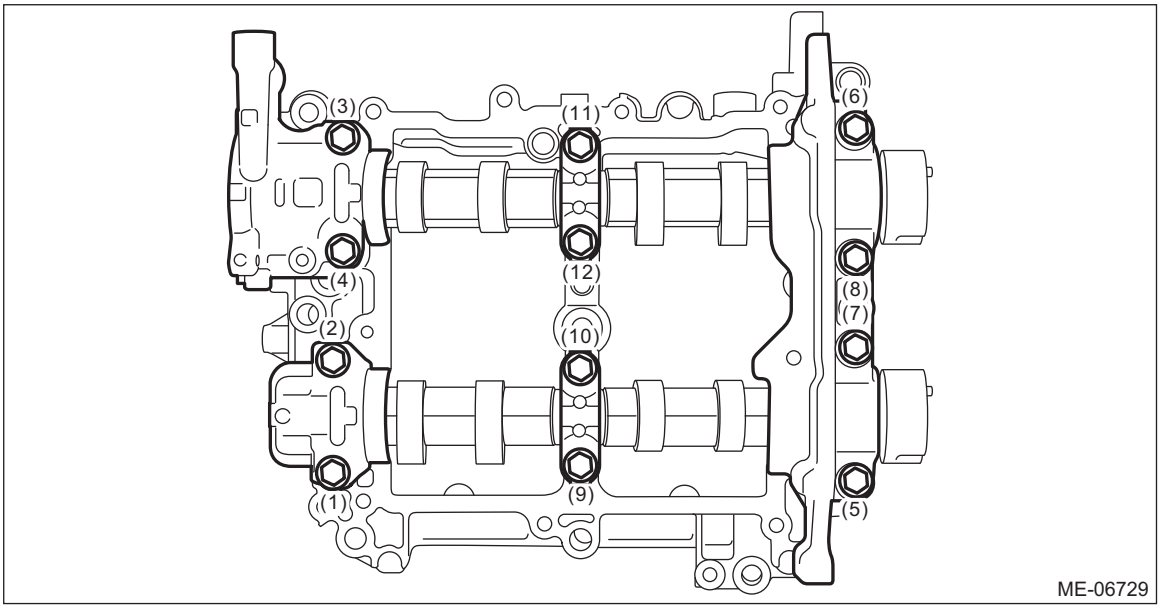
1. CAM CARRIER RH

1) Remove the oil pipe from cam carrier RH.

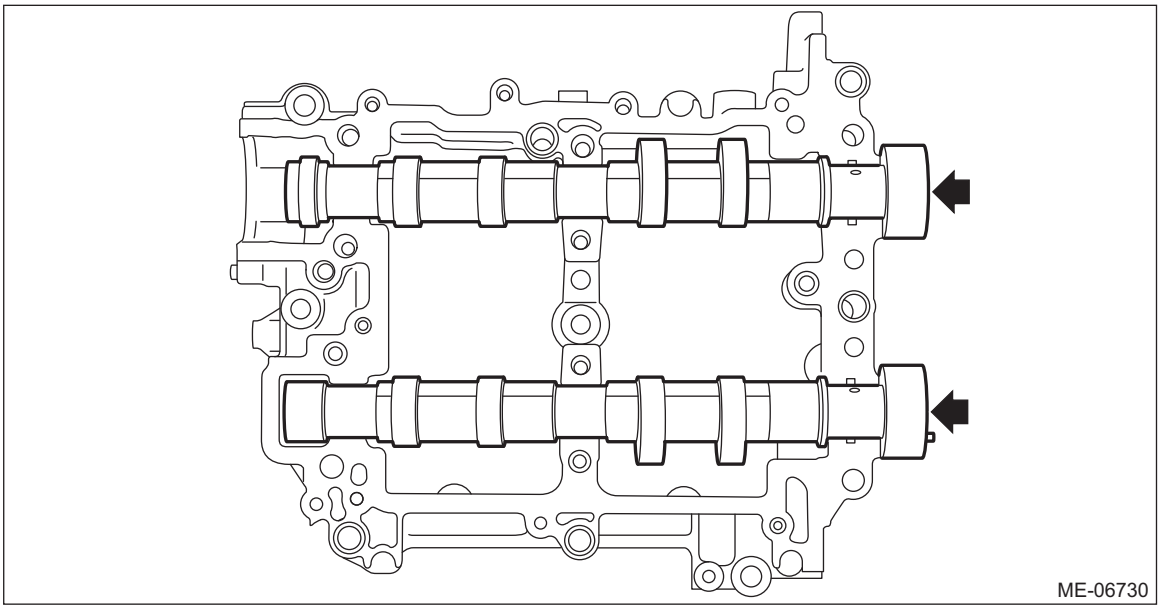


2) Loosen the bolts (front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH, and exhaust rear camshaft cap RH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

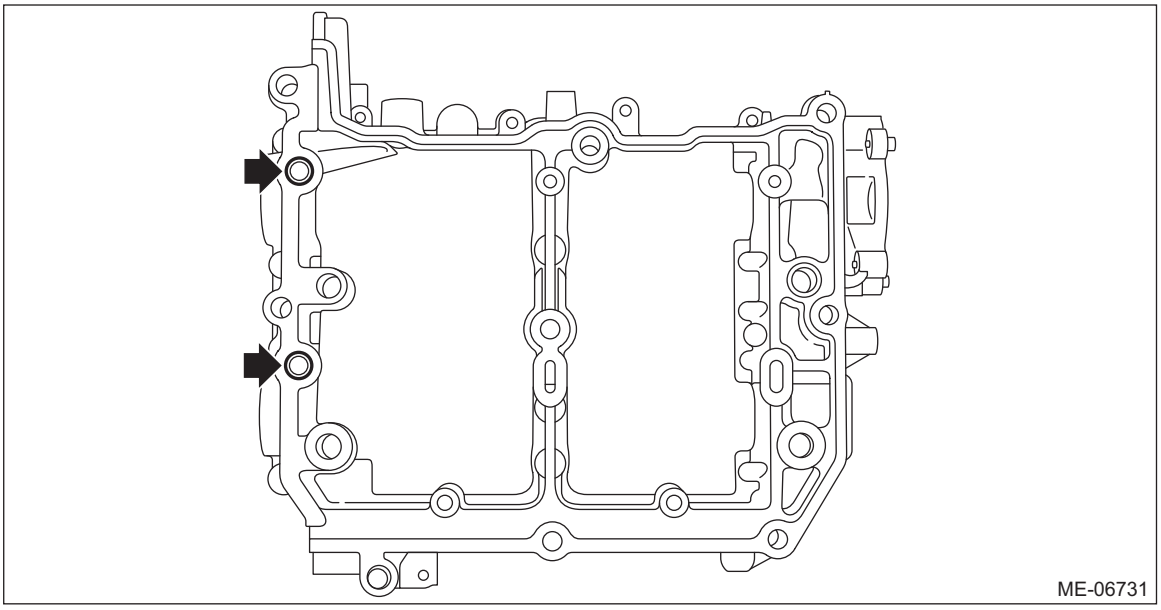
NOTE:
Arrange camshaft caps in order so that they can be installed in their original positions.



3) Remove the intake camshaft RH and the exhaust camshaft RH from cam carrier RH.



4) Remove the filter from cam carrier RH.

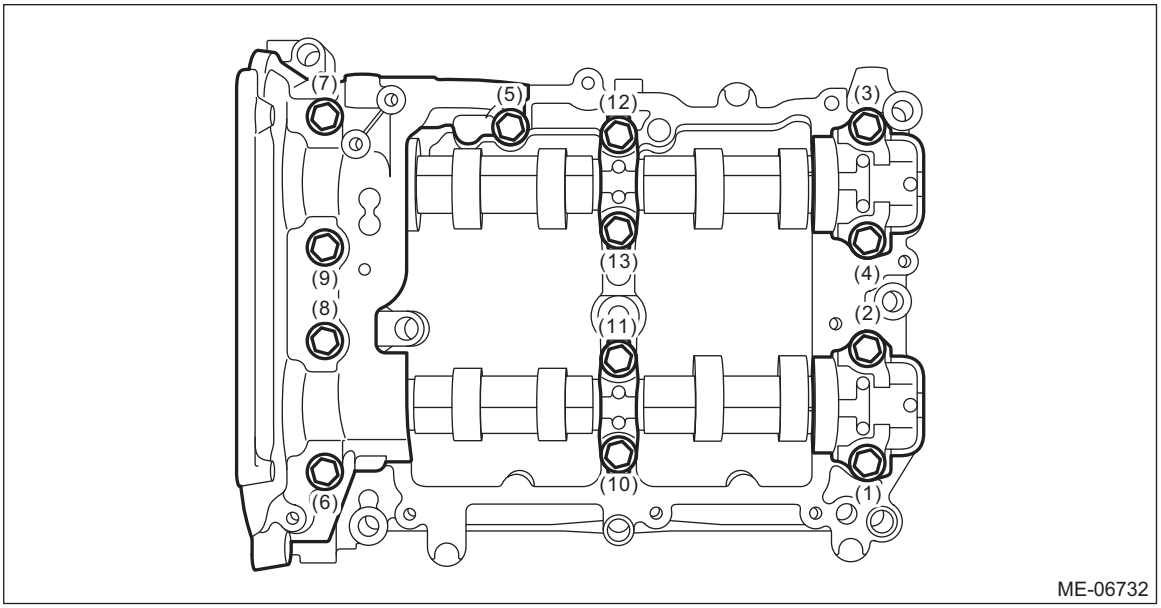


5) Remove the liquid gasket from cam carrier RH, front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH.

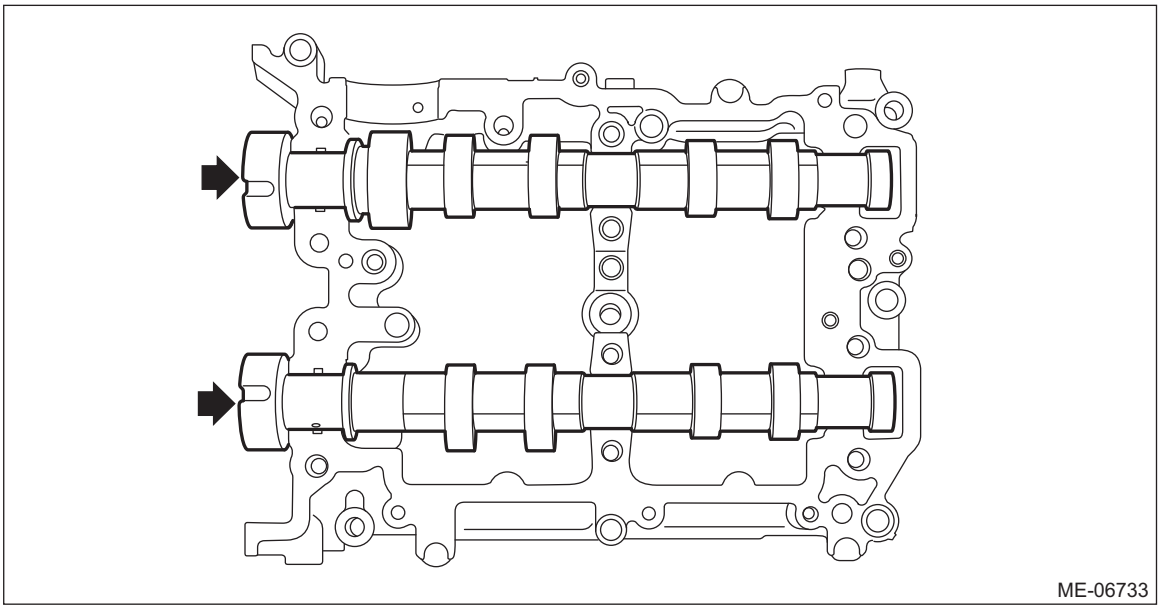
2. CAM CARRIER LH

1) Loosen the bolts (front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

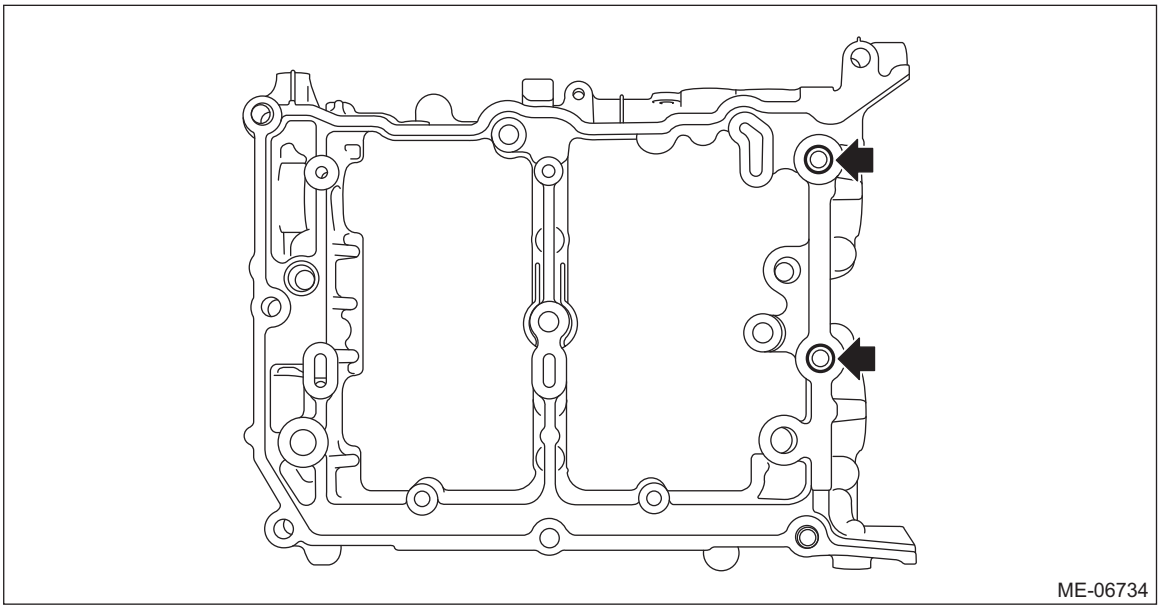
NOTE:
Arrange camshaft caps in order so that they can be installed in their original positions.



2) Remove the intake camshaft LH and the exhaust camshaft LH from cam carrier LH.



3) Remove the filter from cam carrier LH.



4) Remove the liquid gasket from cam carrier LH, front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH.

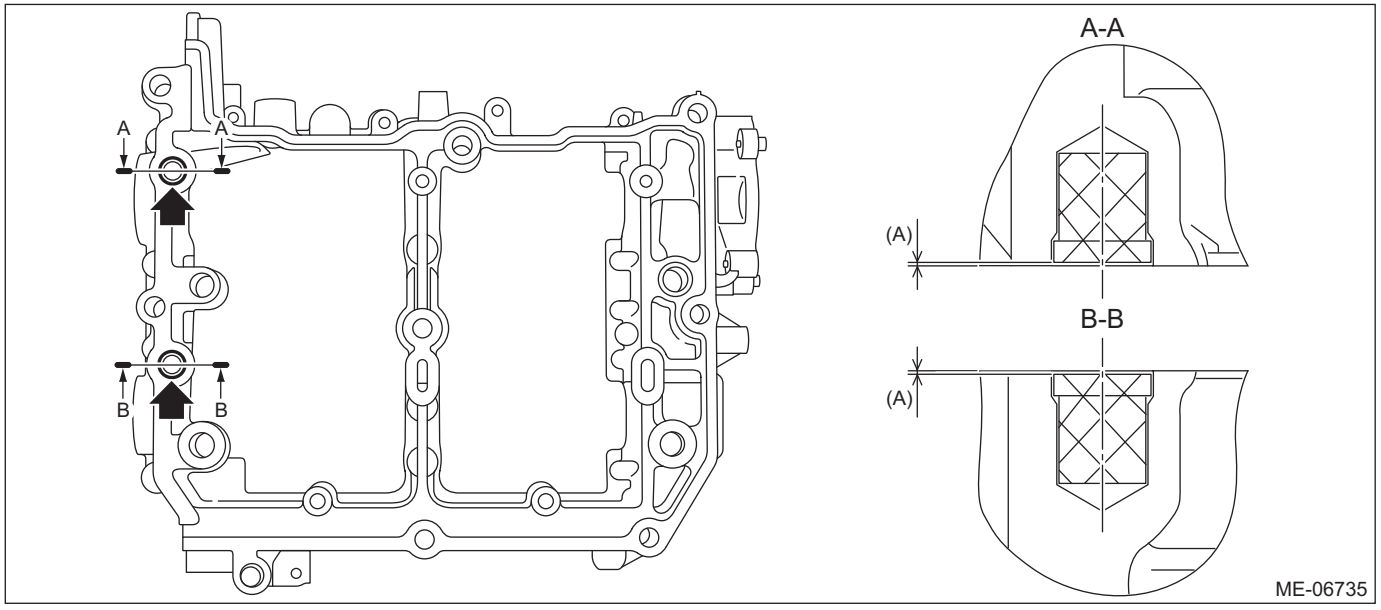
D: ASSEMBLY

1. CAM CARRIER RH

1) Install the filter to the cam carrier RH.

NOTE:
Use a new filter.

Filter insert position:
Cam carrier RH end face $0^{+0}_{-0.5}$ mm ($^{+0}_{-0.0197}$ in) position



(A) 0 — 0.5 mm (0 — 0.0197 in)

2) Set the intake camshaft RH and the exhaust camshaft RH to the cam carrier RH.

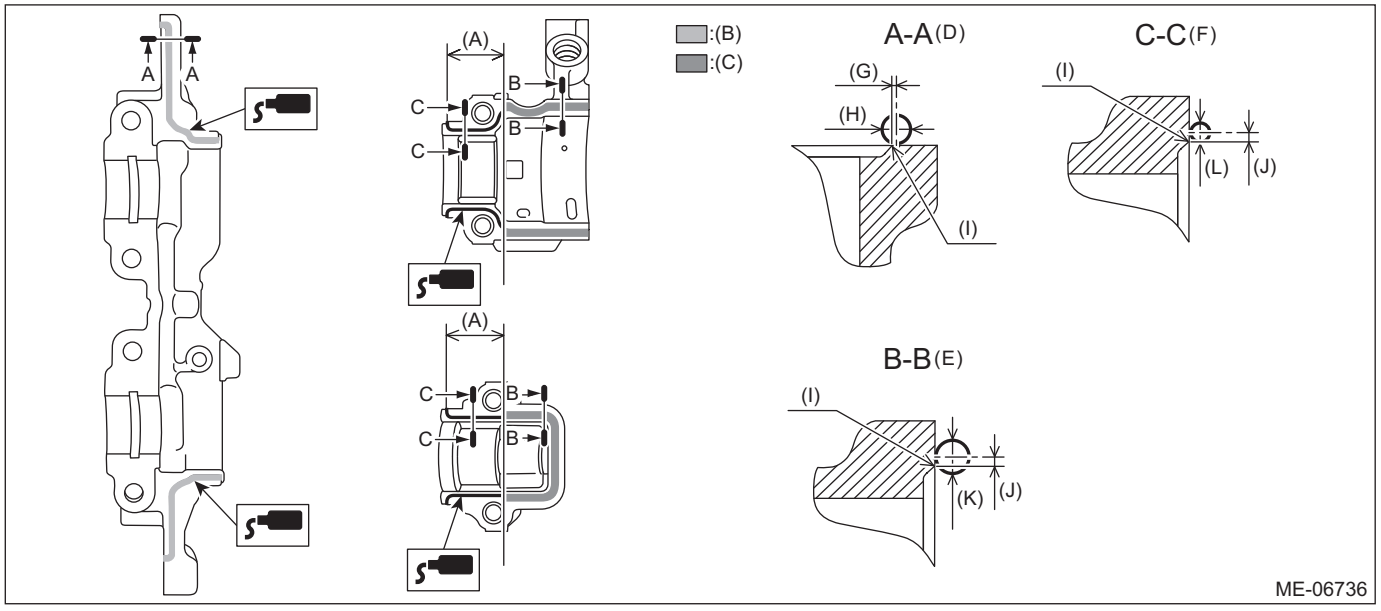
NOTE:
Apply engine oil to the journals of cam carrier RH before setting the intake camshaft RH and exhaust camshaft RH.
3) Install the front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH.
(1) Apply liquid gasket to the mating surface of front camshaft cap RH, intake rear camshaft cap RH and exhaust rear camshaft cap RH as shown in the figure.

CAUTION:
• Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.
• Do not apply liquid gasket excessively to the intake center camshaft cap RH and exhaust center camshaft cap RH.

NOTE:
• Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap RH, intake rear camshaft cap RH, exhaust rear camshaft cap RH, and cam carrier RH.
• Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
Mating surfaces other than ranges A and B
2±0.5 mm (0.0787±0.0197 in)
Mating surfaces of range A
$3^{+1}_{-0.5}$ mm ($0.1181^{+0.0394}_{-0.0197}$ in)
Mating surfaces of range B
3.5±0.5 mm (0.1378±0.0197 in)

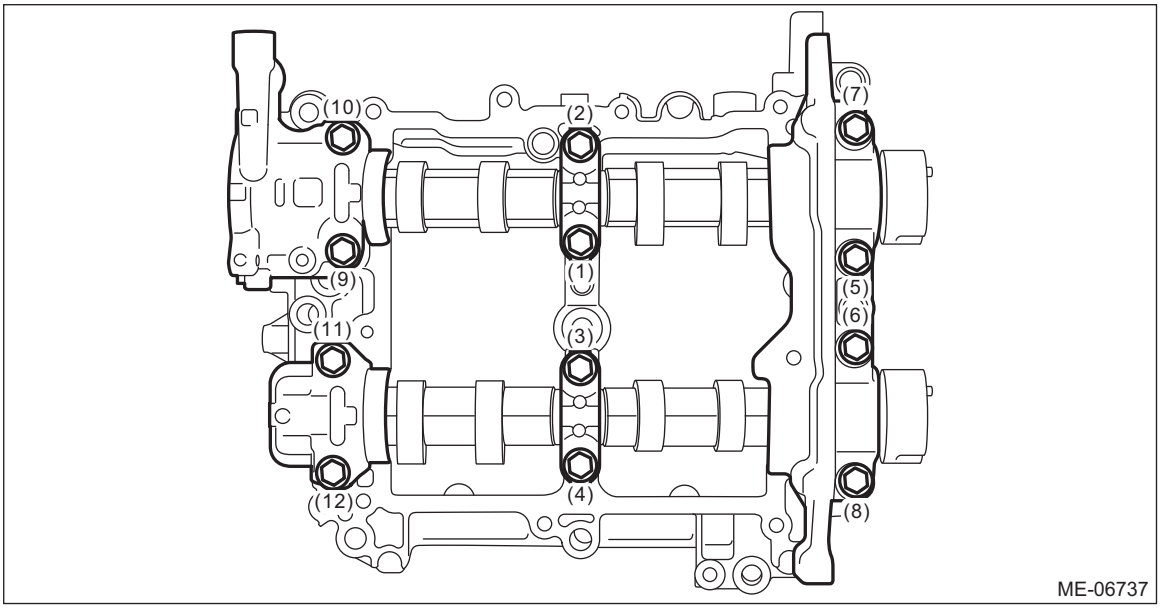


(A)	28.5 mm (1.1220 in)	(E)	Liquid gasket applying position of mating surfaces of range B	(I)	Chamfer edge
(B)	Range A	(F)	Liquid gasket applying position of mating surfaces other than range A and range B	(J)	1 mm (0.0394 in) or less
(C)	Range B	(G)	0.5 mm (0.0197 in)	(K)	ϕ3.5±0.5 mm (0.1378±0.0197 in)
(D)	Liquid gasket applying position of mating surfaces of range A	(H)	$\phi 3^{+1}_{-0.5}$ mm ($0.1181^{+0.0394}_{-0.0197}$ in)	(L)	ϕ2±0.5 mm (0.0787±0.0197 in)

(2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.

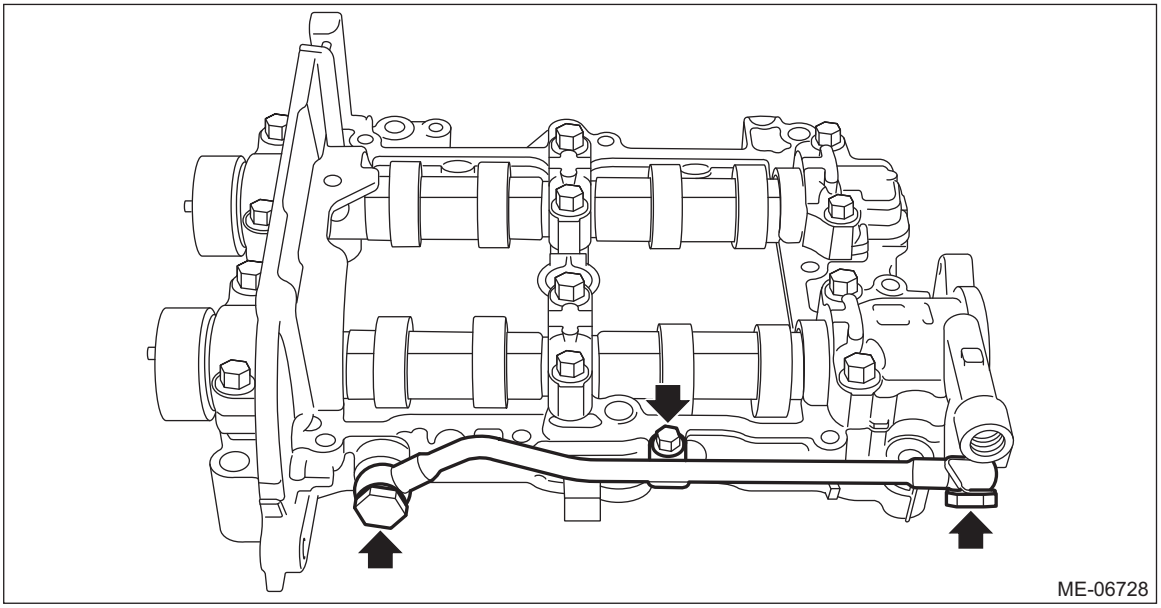
(3) Tighten the bolts which secure front camshaft cap RH, intake center camshaft cap RH, intake rear camshaft cap RH, exhaust center camshaft cap RH and exhaust rear camshaft cap RH in numerical order as shown in the figure.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



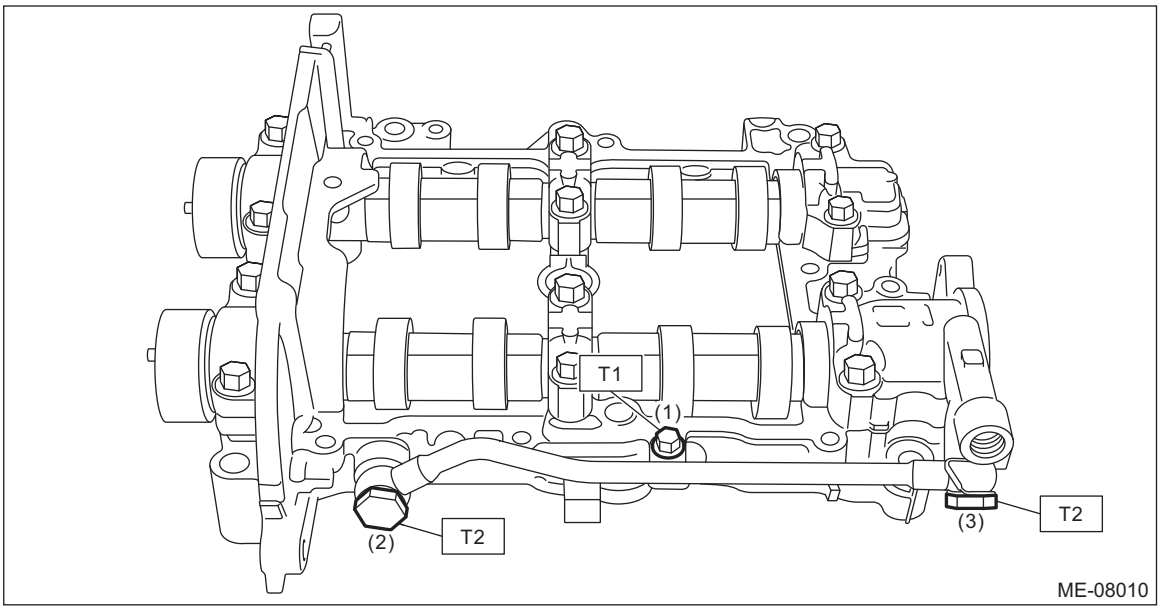
4) Install the oil pipe to the cam carrier RH.
(1) Set the oil pipe to the cam carrier RH, and temporarily tighten the bolts which secure the oil pipe to the cam carrier RH.

NOTE:
Use a new gasket.



(2) Tighten the bolts which secures the oil pipe to the cam carrier RH in numerical order as shown in the figure.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
T2: 31 N·m (3.2 kgf-m, 22.9 ft-lb)

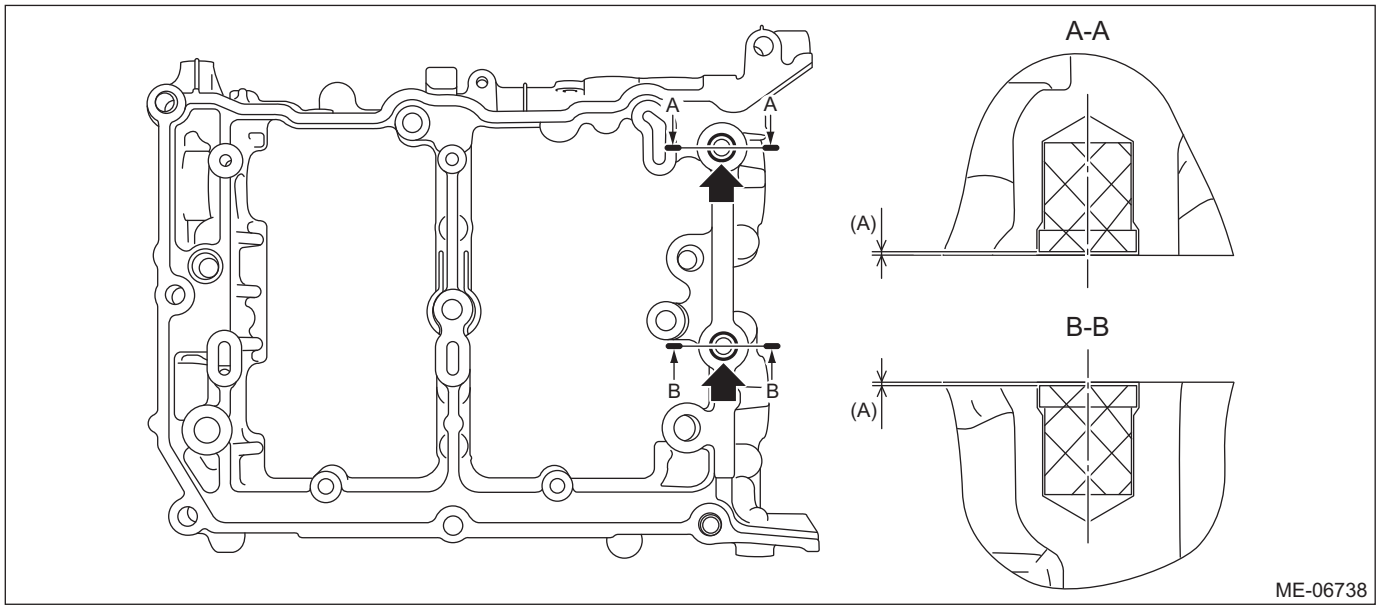


2. CAM CARRIER LH

1) Install the filter to the cam carrier LH.

NOTE:
Use a new filter.

Filter insert position:
Cam carrier LH end face $0^{+0}_{-0.5}$ mm ($^{+0}_{-0.0197}$ in) position



(A) 0 — 0.5 mm (0 — 0.0197 in)

2) Set the intake camshaft LH and the exhaust camshaft LH to the cam carrier LH.

NOTE:
Apply engine oil to the journals of cam carrier LH before setting the intake camshaft LH and exhaust camshaft LH.

3) Install the front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH.

(1) Apply liquid gasket to the mating surface of front camshaft cap LH, intake rear camshaft cap LH and exhaust rear camshaft cap LH as shown in the figure.

CAUTION:

• Do not apply liquid gasket excessively. Applying excessively may cause excess gasket to flow toward camshaft journal, resulting in engine seizure.

• Do not apply liquid gasket excessively to the intake center camshaft cap LH and exhaust center camshaft cap LH.

NOTE:

• Before applying liquid gasket, degrease the old liquid gasket seal surface of the front camshaft cap LH, intake rear camshaft cap LH, exhaust rear camshaft cap LH, and cam carrier LH.

• Install within 5 min. after applying liquid gasket.

Liquid gasket:

THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:

Mating surfaces other than ranges A, B and C

2±0.5 mm (0.0787±0.0197 in)

Mating surfaces of range A

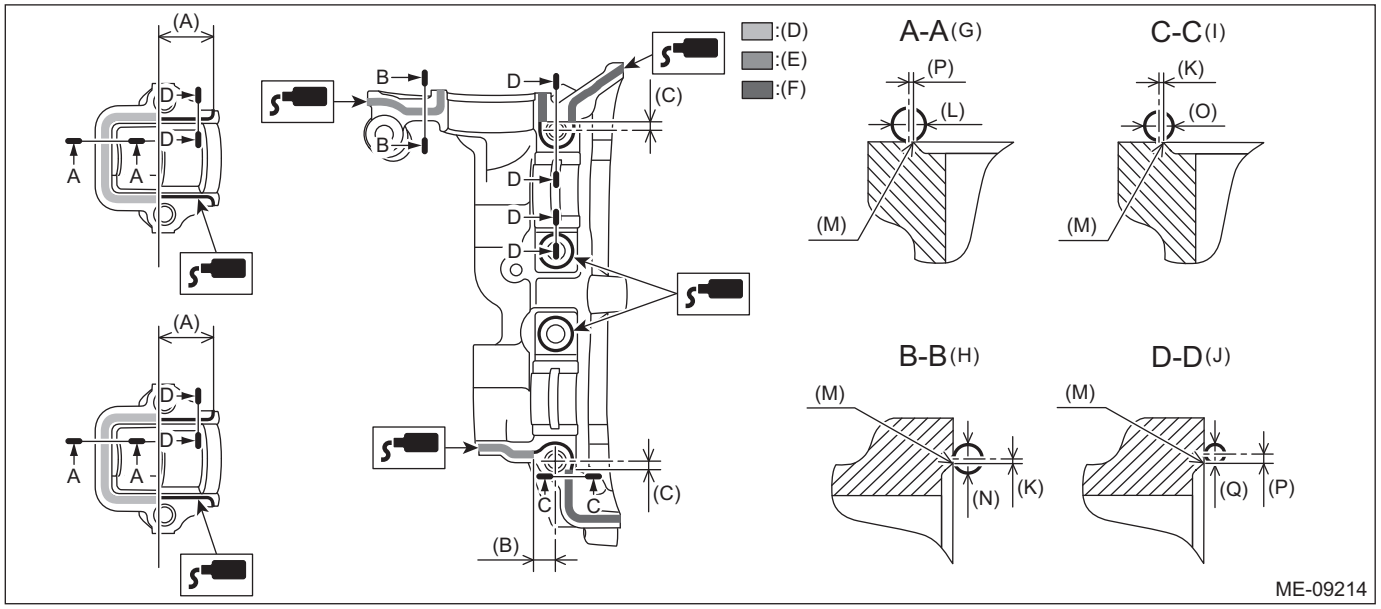
3.5±0.5 mm (0.1378±0.0197 in)

Mating surfaces of range B

3±0.5 mm (0.1181±0.0197 in)

Mating surfaces of range C

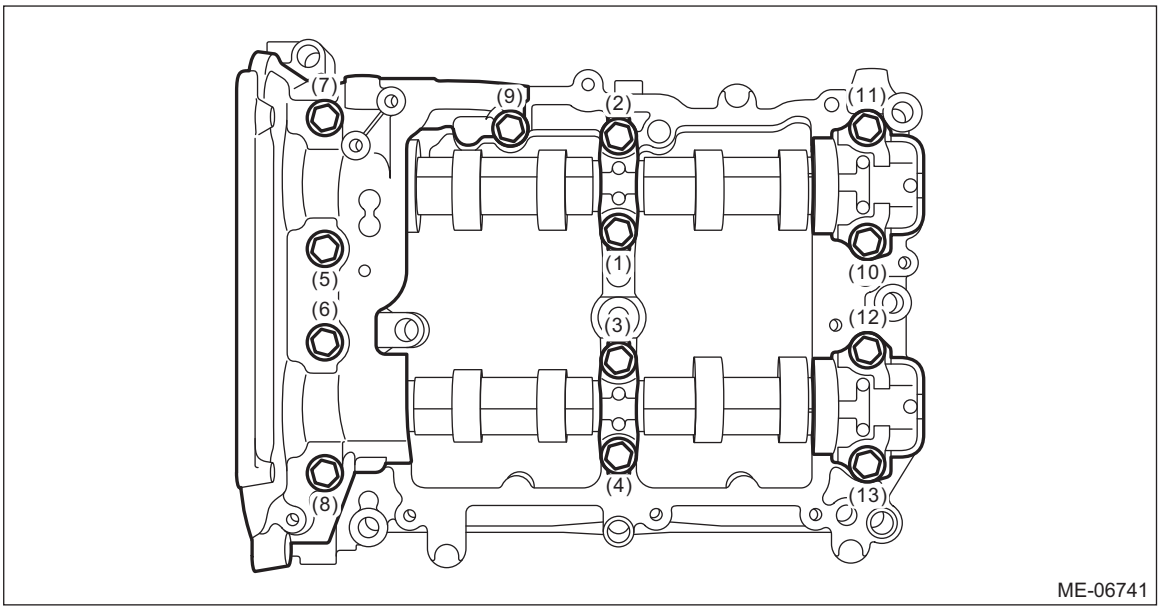
$3^{+1}_{-0.5}$ mm ($0.1181^{+0.0394}_{-0.0197}$ in)



(A)	28.5 mm (1.1220 in)	(G)	Liquid gasket applying position of mating surfaces of range A	(M)	Chamfer edge
(B)	11.6 mm (0.4567 in)	(H)	Liquid gasket applying position of mating surfaces of range B	(N)	ϕ3±0.5 mm (0.1181±0.0197 in)
(C)	5.1 mm (0.2008 in)	(I)	Liquid gasket applying position of mating surfaces of range C	(O)	$\phi 3^{+1}_{-0.5}$ mm ($0.1181\pm^{+0.0394}_{0.0197}$ in)
(D)	Range A	(J)	Liquid gasket applying position of mating surfaces other than range A, range B and range C	(P)	1 mm (0.0394 in) or less
(E)	Range B	(K)	0.5 mm (0.0197 in)	(Q)	ϕ2±0.5 mm (0.0787±0.0197 in)
(F)	Range C	(L)	ϕ3.5±0.5 mm (0.1378±0.0197 in)		

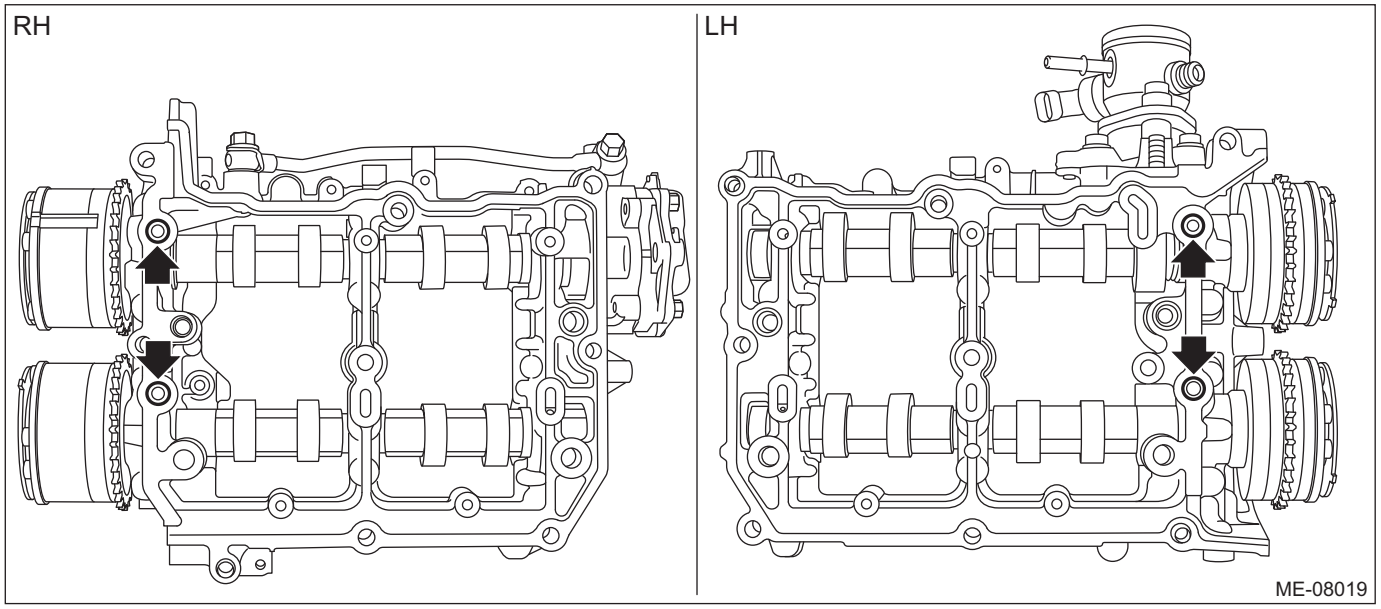
(2) Apply engine oil to the journals of each camshaft cap before setting the camshaft cap.
(3) Tighten the bolts which secure front camshaft cap LH, intake center camshaft cap LH, intake rear camshaft cap LH, exhaust center camshaft cap LH and exhaust rear camshaft cap LH in numerical order as shown in the figure.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



E: INSPECTION

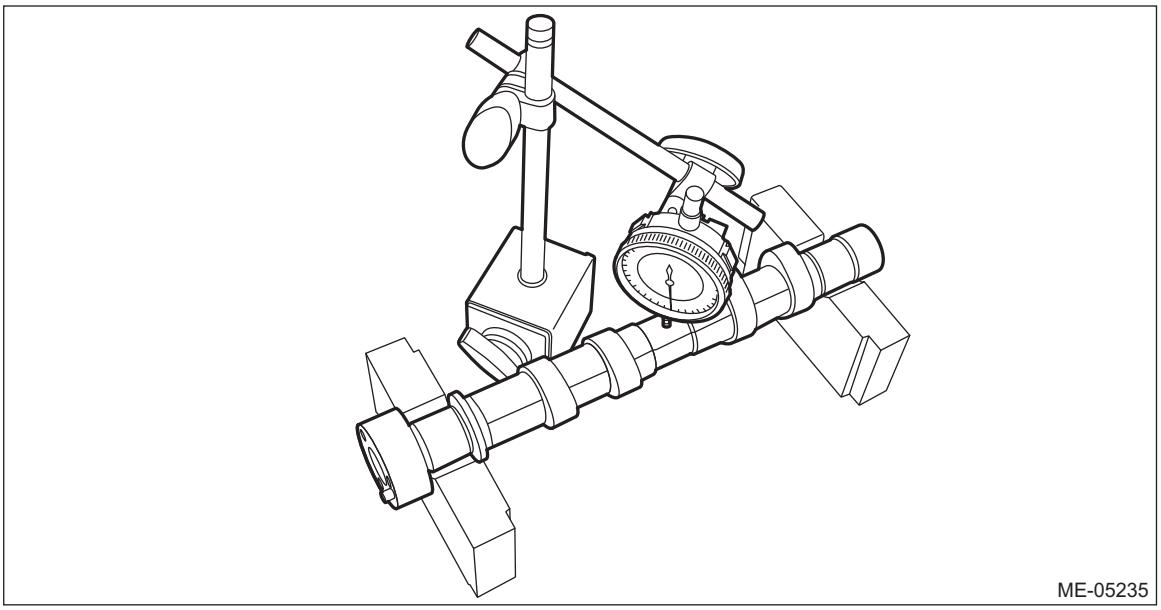
1) Visually check the cam carrier filter, and if clogging is found, replace with a new part.



2) Check the camshaft journals for damage and wear. Replace the camshaft if faulty.
3) Check the cam face condition of camshaft, and remove the minor faults by grinding with oil stone. Replace the camshaft if uneven wear is found.
4) Using a dial gauge, check the camshaft bend. If it exceeds the limit, replace the camshaft.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Camshaft bend:
Limit
0.020 mm (0.0008 in)

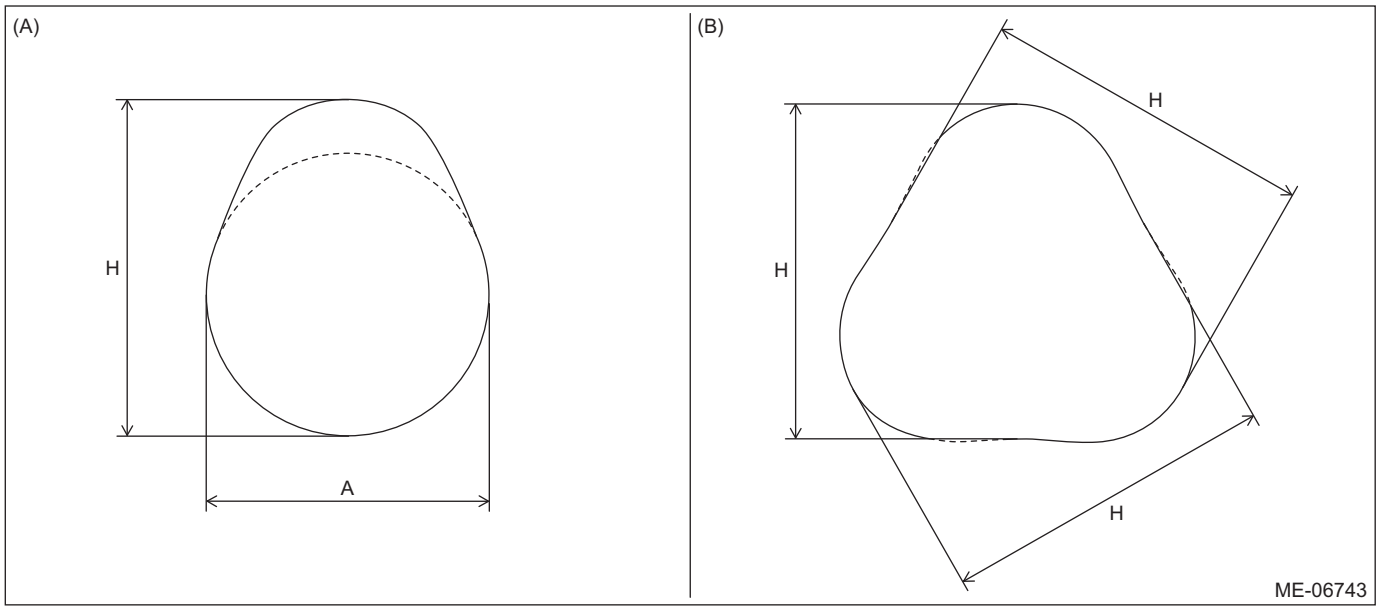


5) Check the cam lobe height “H” and cam base circle diameter “A” of camshaft as shown in the figure, using micrometer. If it is not within the standard, replace the camshaft.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Perform measurement of cam lobe height for fuel pump drive section at three points.

Camshaft cam lobe overall height H:
Intake
Valve drive section
Standard
40.34 — 40.44 mm (1.5882 — 1.5921 in)
Fuel pump drive section
Standard
41.95 — 42.05 mm (1.6516 — 1.6555 in)
Exhaust
Standard
40.20 — 40.30 mm (1.5827 — 1.5866 in)

Camshaft cam base circle diameter A:
Standard
34.0 mm (1.3386 in)

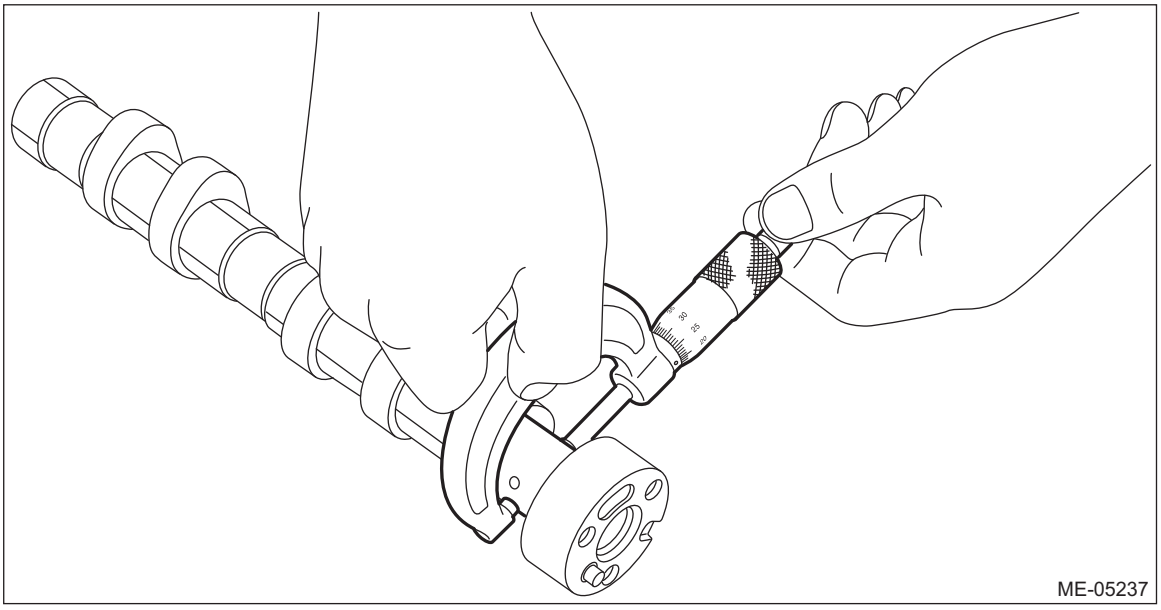


(A) Valve drive section (B) Fuel pump drive section

6) Check the camshaft journal outer diameter using micrometer. If it is not within the standard, replace the camshaft.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Measure outer diameter of each journal at several points, and read the value of most worn location.

Camshaft journal outer diameter:
Standard
25.946 — 25.963 mm (1.0215 — 1.0222 in)

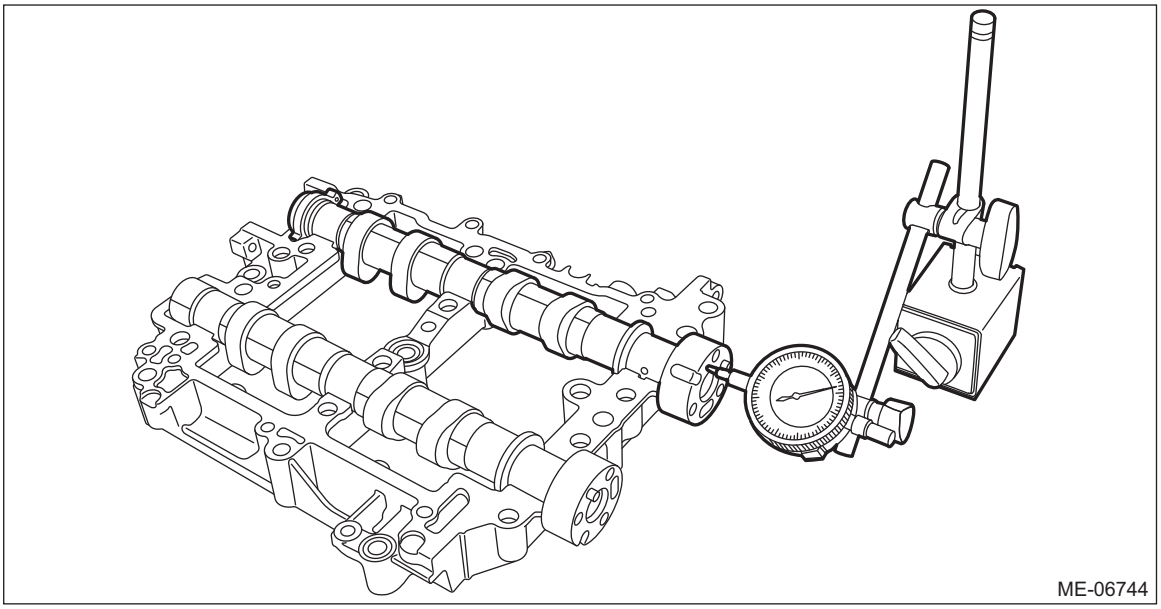


7) Using a dial gauge, check the thrust clearance of the camshaft. If it is not within the standard or if uneven wear is found, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).

- Set the dial gauge at end surface of camshaft.

Camshaft thrust clearance:
Standard
0.068 — 0.116 mm (0.0027 — 0.0047 in)

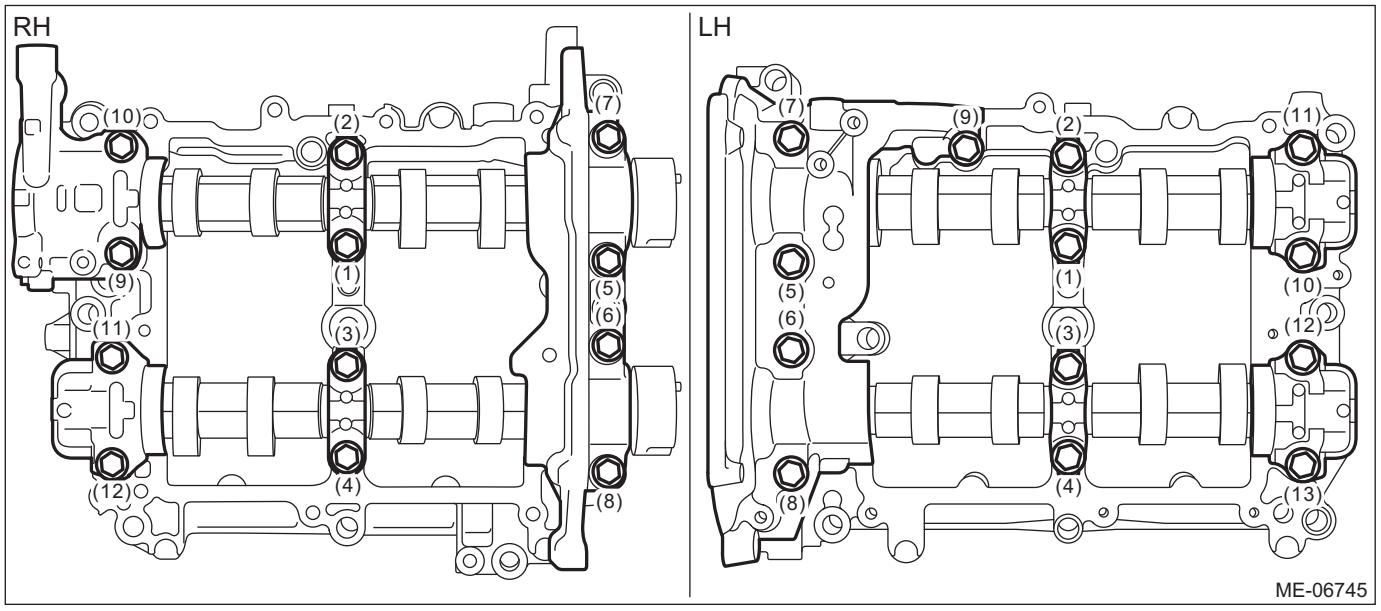


8) Check the oil clearance on the camshaft using a plastigauge.

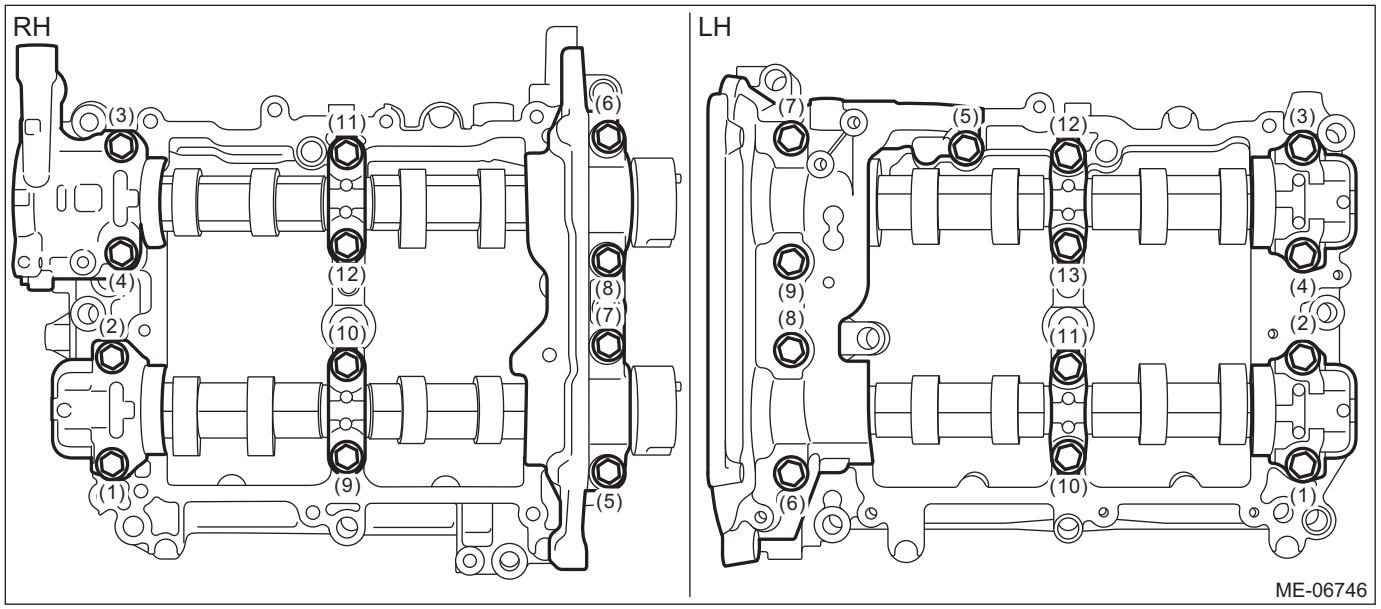
NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

(1) Remove the liquid gasket from cam carrier, front camshaft cap, intake rear camshaft cap and exhaust rear camshaft cap.
(2) Clean each camshaft cap and cam carrier journals.
(3) Set the camshaft to the cam carrier.
(4) Place a plastigauge across the camshaft journals of each camshaft and set the camshaft caps.
(5) Tighten the bolts which secure front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap in numerical order as shown in the figure.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



(6) Loosen the bolts (front camshaft cap, intake center camshaft cap, intake rear camshaft cap, exhaust center camshaft cap and exhaust rear camshaft cap) equally, a little at a time in numerical sequence as shown in the figure, and remove each camshaft cap.

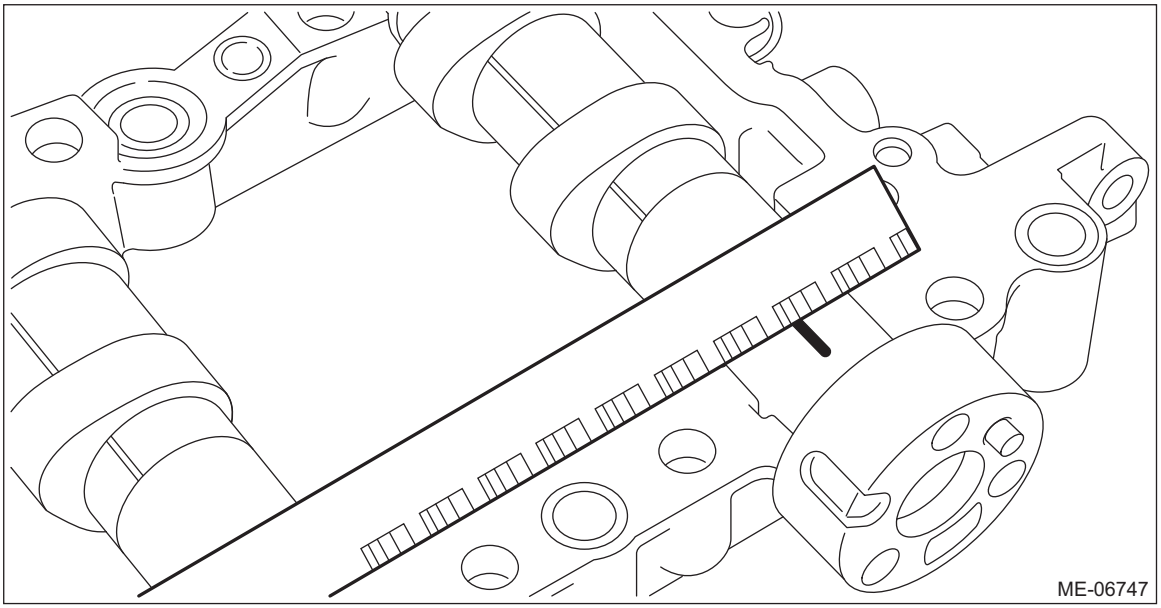


(7) Determine camshaft oil clearance by matching the widest point of plastigauge on each journal against scale printed on a package of plastigauge. If it is not within the standard, replace each camshaft cap and cam carrier as a set. If necessary replace the camshaft.

Camshaft oil clearance:

Standard

0.037 — 0.072 mm (0.0015 — 0.0028 in)



(8) Completely remove the plastigauge.

21.Cylinder Head

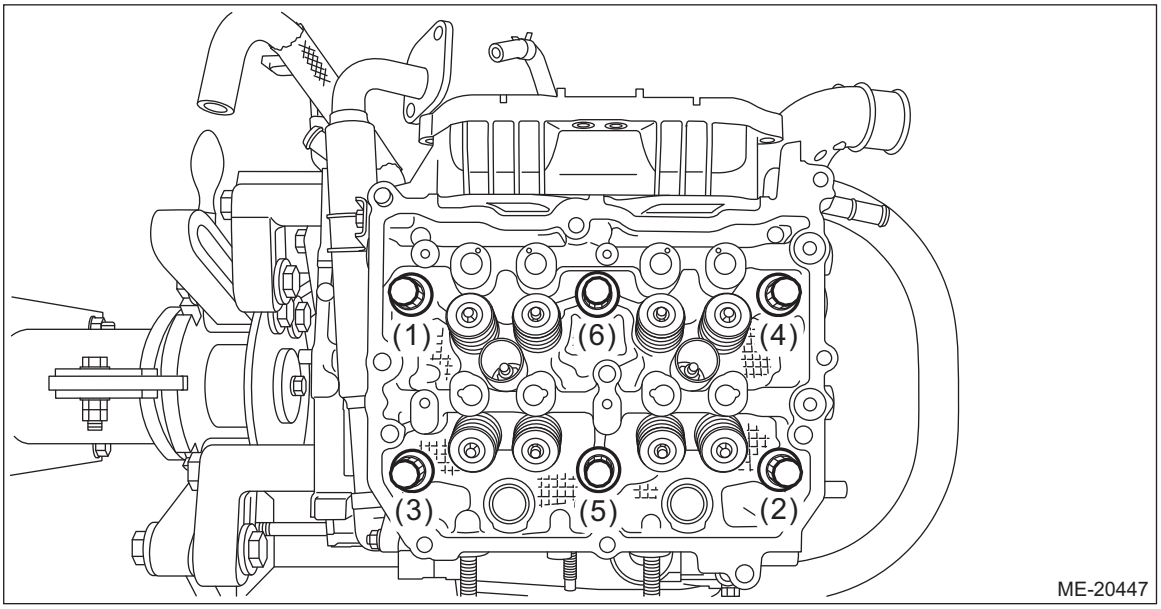
A: REMOVAL

1. CYLINDER HEAD RH

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the engine wiring harness. <Ref. to FU(w/o STI)-82, REMOVAL, Engine Wiring Harness.>
3) Remove the cam carrier RH. <Ref. to ME(w/o STI)-163, CAM CARRIER RH, REMOVAL, Cam Carrier.>
4) Remove the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, REMOVAL, High Pressure Fuel Delivery Pipe.>
5) When disassembling the cylinder head RH

NOTE:
When disassembling the cylinder head RH, perform the following steps also.
(1) Remove the air intake adapter RH. <Ref. to FU(w/o STI)-42, REMOVAL, Tumble Generator Valve Assembly.>
(2) Remove the fuel injector RH. <Ref. to FU(w/o STI)-49, FUEL INJECTOR RH, REMOVAL, Fuel Injector.>
(3) Remove the EGR cooler. <Ref. to EC(w/o STI)-41, REMOVAL, EGR Cooler.>

6) Set the part so that the cylinder head RH is on the upper side.
7) Loosen the bolts securing the cylinder head RH equally, a little at a time in numerical sequence as shown in the figure and remove the cylinder head bolt.



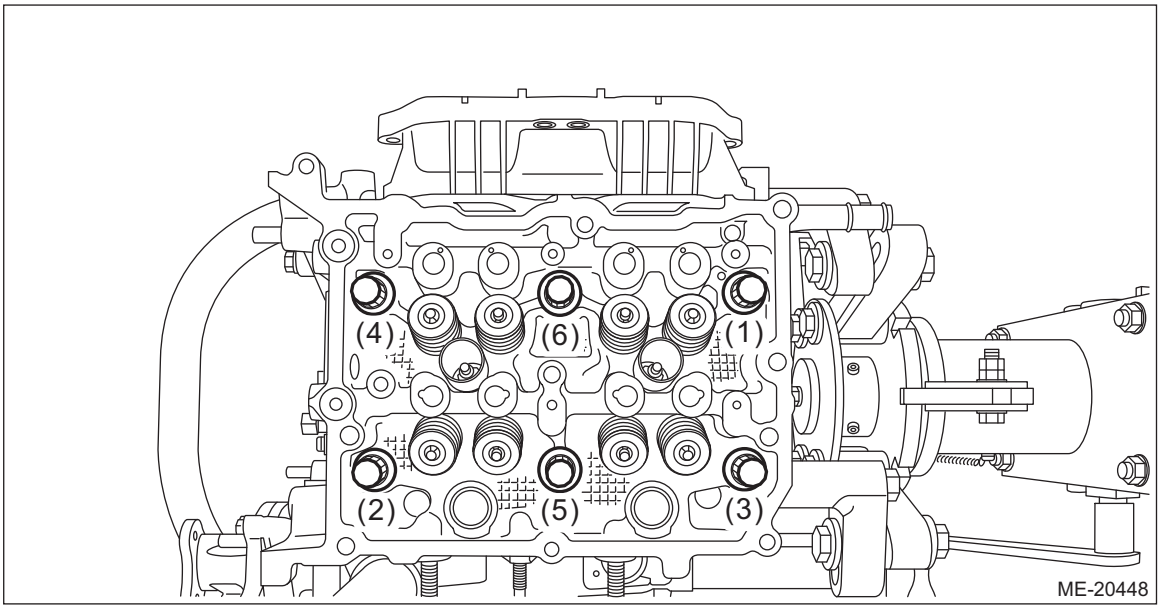
8) While tapping the cylinder head RH with a plastic hammer, separate to remove it from the cylinder block RH.
9) Remove the cylinder head gasket RH.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.
10) Remove the liquid gasket from the cylinder head RH and cylinder block RH.

2. CYLINDER HEAD LH

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the engine wiring harness. <Ref. to FU(w/o STI)-82, REMOVAL, Engine Wiring Harness.>
3) Remove the cam carrier LH. <Ref. to ME(w/o STI)-165, CAM CARRIER LH, REMOVAL, Cam Carrier.>
4) Remove the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-79, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, REMOVAL, High Pressure Fuel Delivery Pipe.>
5) Remove the A/C compressor. <Ref. to AC-45, REMOVAL, Compressor.>
6) When disassembling the cylinder head LH

NOTE:
When disassembling the cylinder head LH, perform the following steps also.
(1) Remove the air intake adapter LH. <Ref. to FU(w/o STI)-42, REMOVAL, Tumble Generator Valve Assembly.>
(2) Remove the fuel injector LH. <Ref. to FU(w/o STI)-52, FUEL INJECTOR LH, REMOVAL, Fuel Injector.>
7) Set the part so that the cylinder head LH is on the upper side.
8) Loosen the bolts securing the cylinder head LH equally, a little at a time in numerical sequence as shown in the figure and remove the cylinder head bolt.



9) While tapping the cylinder head LH with a plastic hammer, separate to remove it from the cylinder block LH.
10) Remove the cylinder head gasket LH.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.
11) Remove the liquid gasket from cylinder head LH and cylinder block LH.

B: INSTALLATION

1. CYLINDER HEAD RH

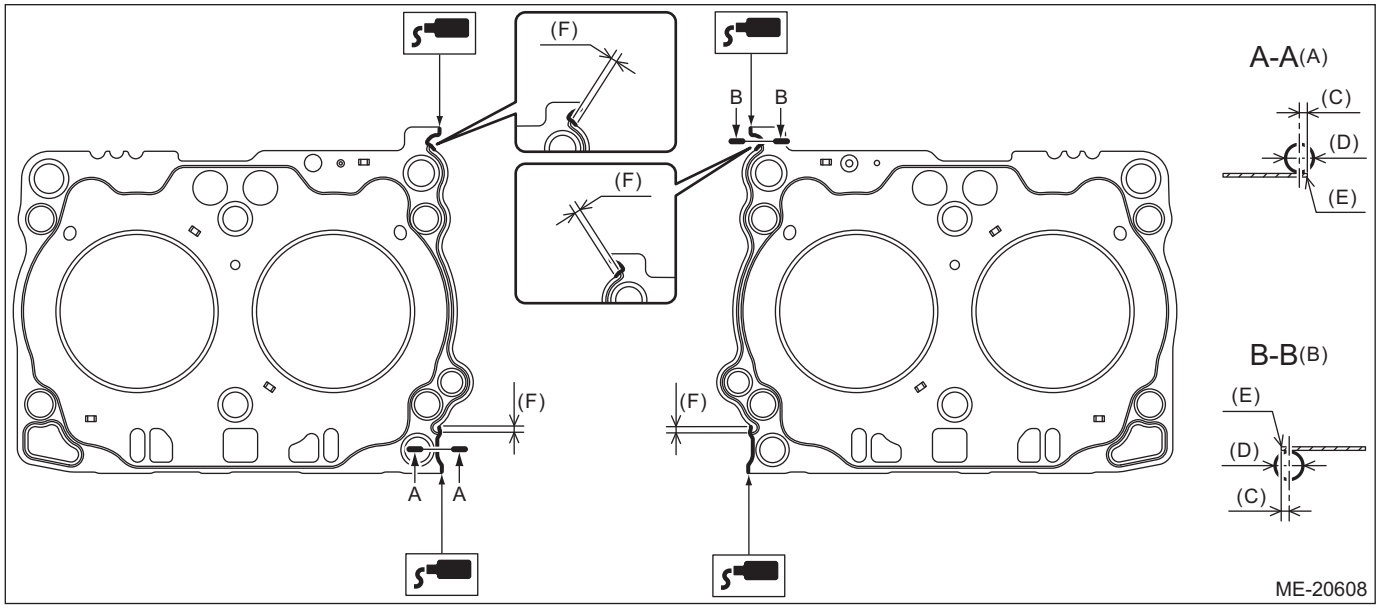
1) Set the part so that the cylinder block RH is on the upper side.
2) Clean the bolt holes in the cylinder block RH.

CAUTION:
To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.
3) Apply liquid gasket to both sides of the cylinder head gasket RH as shown in the figure.

NOTE:
- Use a new cylinder head gasket RH.
- Before applying liquid gasket, degrease the mating surface of cylinder blocks RH and cylinder head RH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



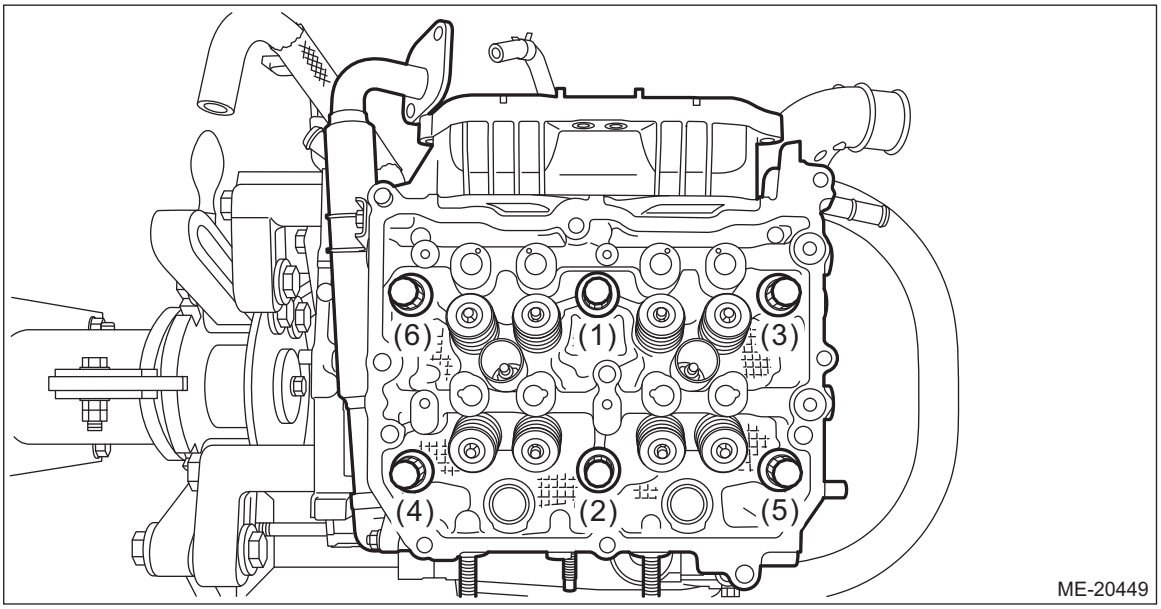
(A)	Liquid gasket applying position to the cylinder head side	(C)	1 mm (0.0394 in) or less	(E)	Cylinder head gasket edge
(B)	Liquid gasket applying position to the cylinder block side	(D)	ϕ3±1 mm (0.1181±0.0394 in)	(F)	Overlap margin of bead end and liquid gasket: 3 — 10 mm (0.1181 — 0.3937 in)

4) Attach the cylinder head gasket RH.

NOTE:
Check that liquid gasket RH is squeezed out from the cylinder head gasket.
5) Install the cylinder head RH to the cylinder block RH.

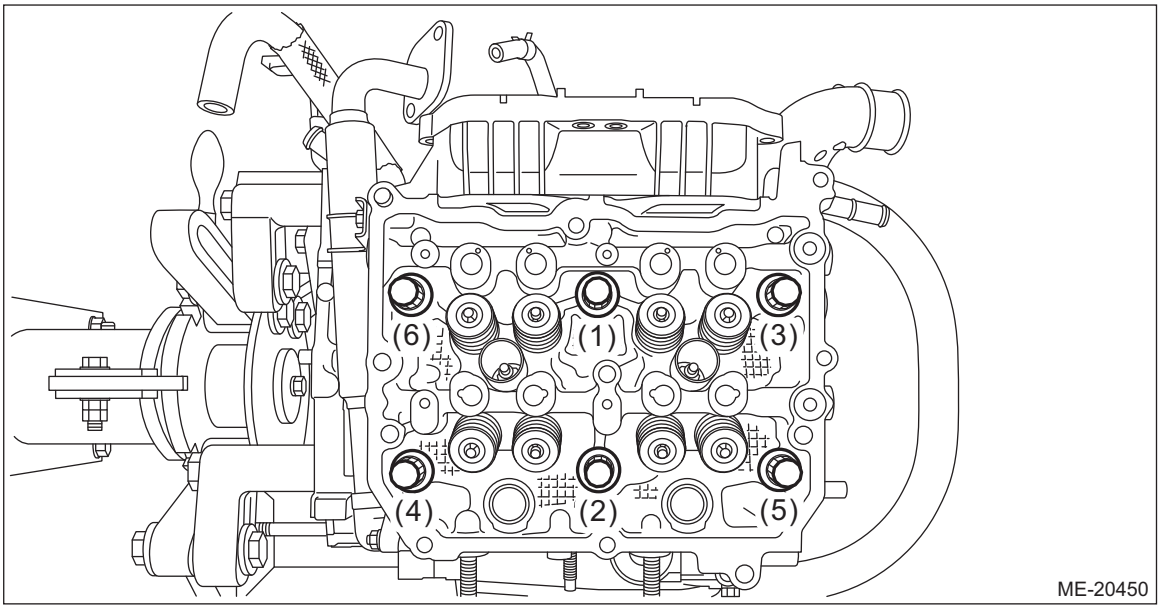
CAUTION:
Be careful not to scratch the mating surface of cylinder head RH and cylinder block RH.

(1) Clean the cylinder head bolt threads and apply sufficient engine oil to the washer and cylinder head bolts threads.
(2) Mount the cylinder head RH onto the cylinder block RH, and tighten all bolts with a torque of 20 N·m (2.0 kgf-m, 14.8 ft-lb) in numerical order as shown in the figure.

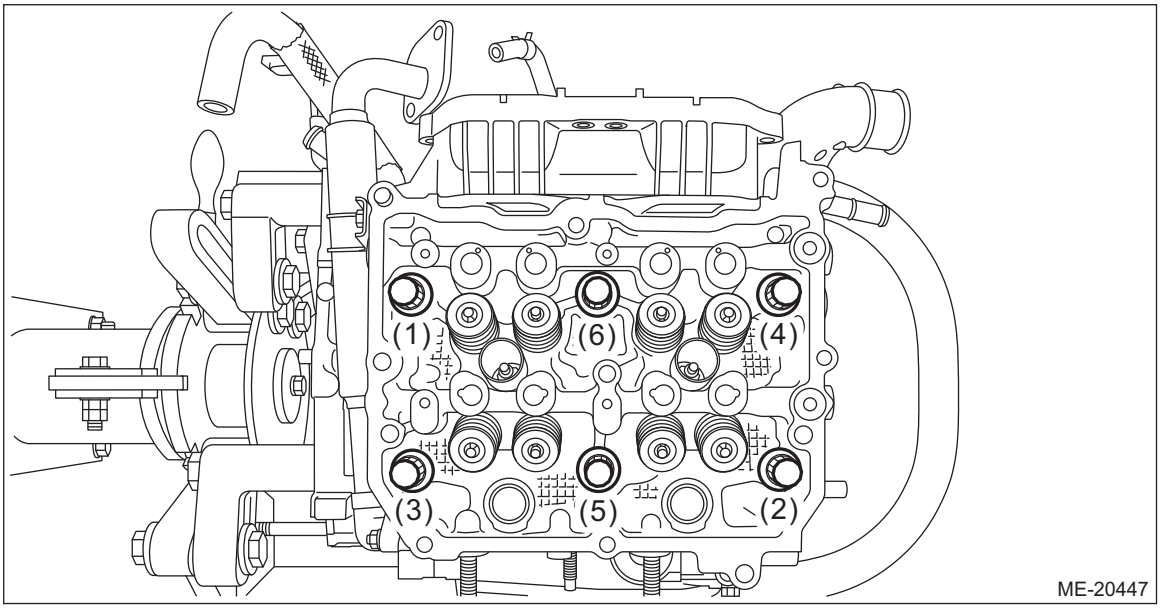


(3) Tighten all cylinder head bolts further with a torque of 100 N·m (10.2 kgf-m, 73.8 ft-lb) in numerical order as shown in the figure.

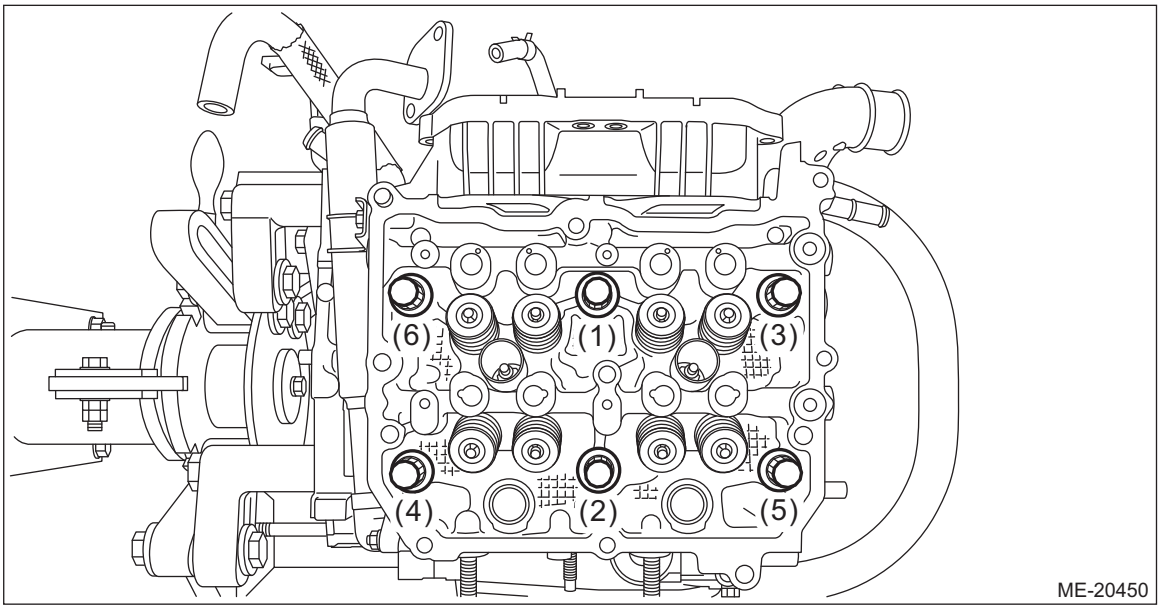
CAUTION:
If the bolt makes stick-slip sound during tightening, repeat the procedure from step 1). In that case, the cylinder head gasket RH can be reused. But it is necessary to remove liquid gasket completely from cylinder block RH, cylinder head RH and cylinder head gasket RH and re-apply to them.



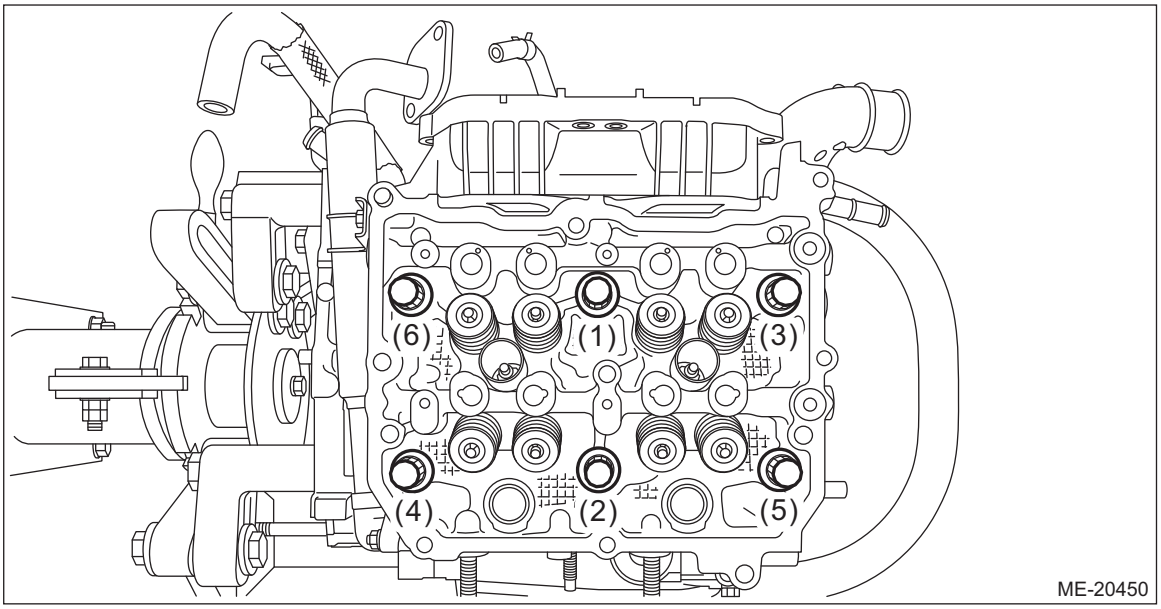
(4) Loosen all cylinder head bolts by 360° in the numerical order as shown in the figure.



(5) Tighten all bolts with torque of 20 N·m (2.0 kgf-m, 14.8 ft-lb) in numerical sequence as shown in the figure.

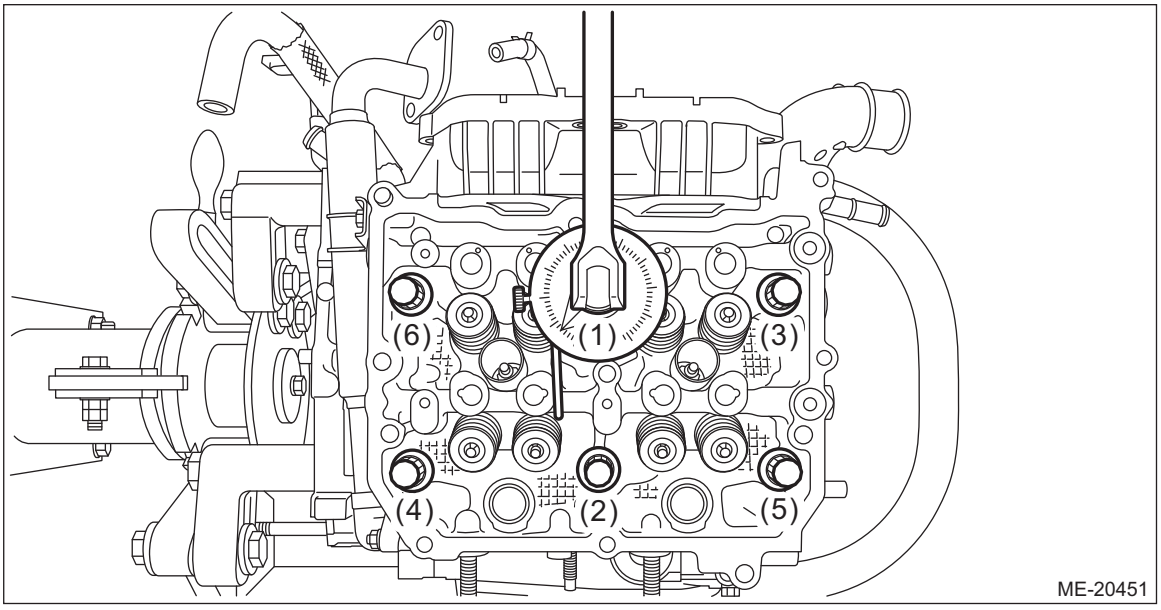


(6) Tighten all cylinder head bolts with a torque of 42 N·m (4.3 kgf-m, 31.0 ft-lb) in numerical order as shown in the figure.



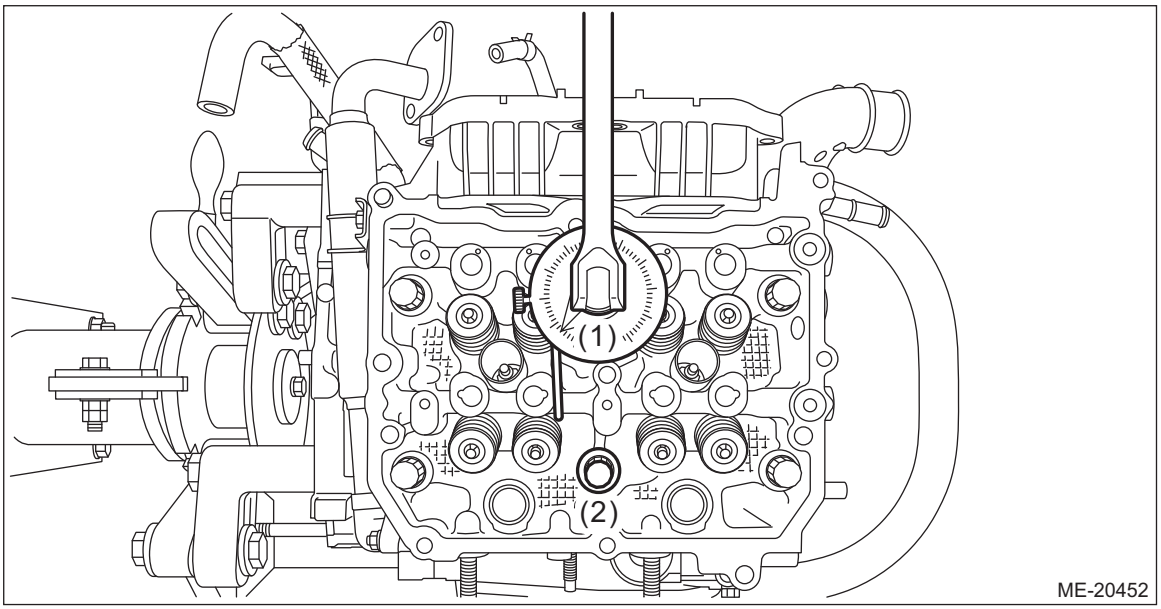
(7) Using angle gauge, tighten all cylinder head bolts with specified angle in numerical order as shown in the figure.

Tightening angle:
100°±2°



(8) Using angle gauge, tighten the cylinder head bolts (2 places) with specified angle in numerical order as shown in the figure.

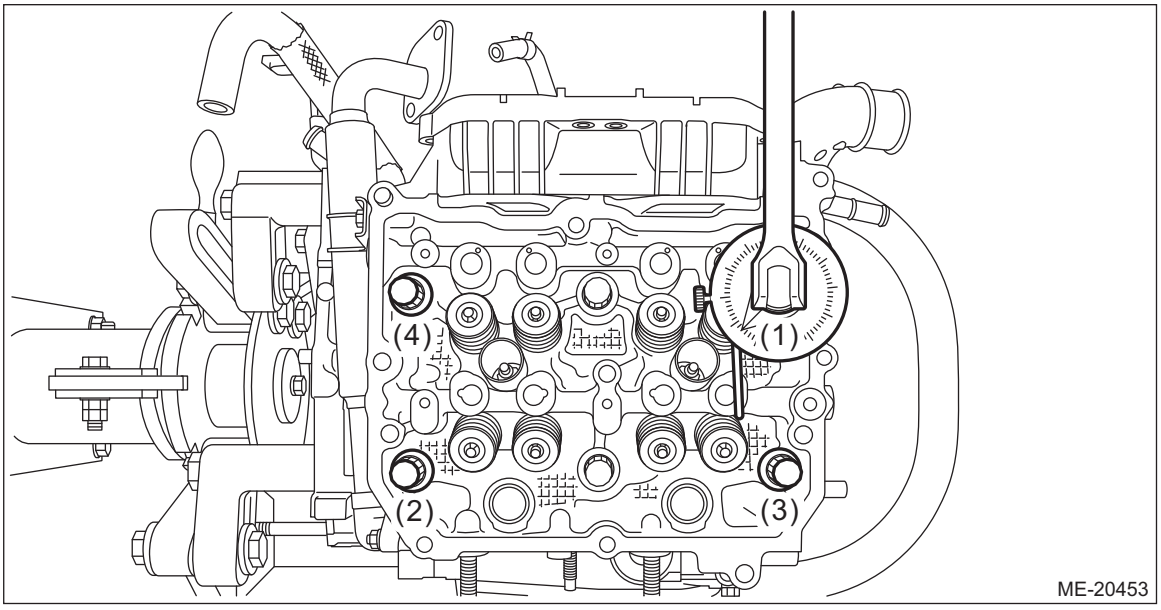
Tightening angle:
100°±2°



(9) Using angle gauge, tighten the cylinder head bolts (4 places) with specified angle in numerical order as shown in the figure.

NOTE:
After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

Tightening angle:
50°±2°



6) Set the part so that the installation surface of the intake manifold is on the upper side.
7) When the cylinder head RH has been disassembled

NOTE:
When the cylinder head RH has been disassembled, perform the following steps also.
(1) Install the EGR cooler. <Ref. to EC(w/o STI)-43, INSTALLATION, EGR Cooler.>
(2) Install the fuel injector RH. <Ref. to FU(w/o STI)-55, FUEL INJECTOR RH, INSTALLATION, Fuel Injector.>
(3) Install the air intake adapter RH. <Ref. to FU(w/o STI)-43, INSTALLATION, Tumble Generator Valve Assembly.>
8) Install the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-81, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, INSTALLATION, High Pressure Fuel Delivery Pipe.>
9) Install the cam carrier RH. <Ref. to ME(w/o STI)-171, CAM CARRIER RH, INSTALLATION, Cam Carrier.>
10) Install the engine wiring harness. <Ref. to FU(w/o STI)-86, INSTALLATION, Engine Wiring Harness.>
11) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>

2. CYLINDER HEAD LH

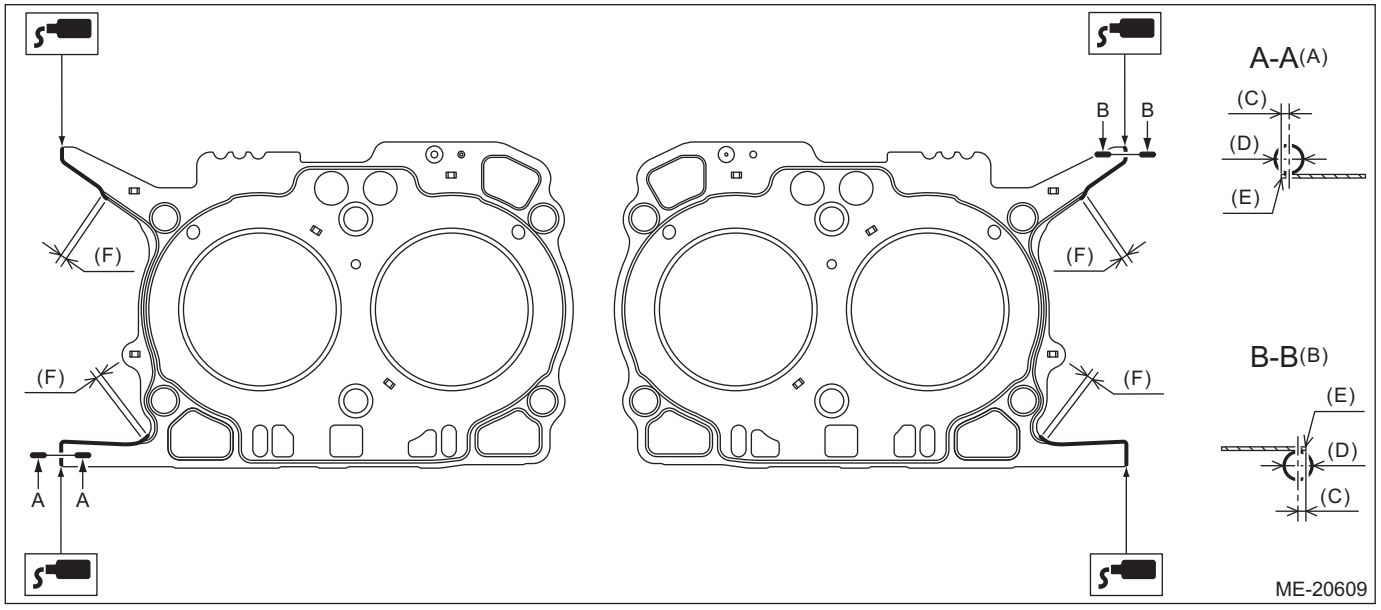
1) Set the part so that the cylinder block LH is on the upper side.
2) Clean the bolt holes in the cylinder block LH.

CAUTION:
To avoid erroneous tightening of the bolts, clean out the bolt holes sufficiently by blowing with compressed air to eliminate engine coolant etc.
3) Apply liquid gasket to both sides of the cylinder head gasket LH as shown in the figure.

NOTE:
- Use a new cylinder head gasket LH.
- Before applying liquid gasket, degrease the mating surface of cylinder blocks LH and cylinder head LH.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



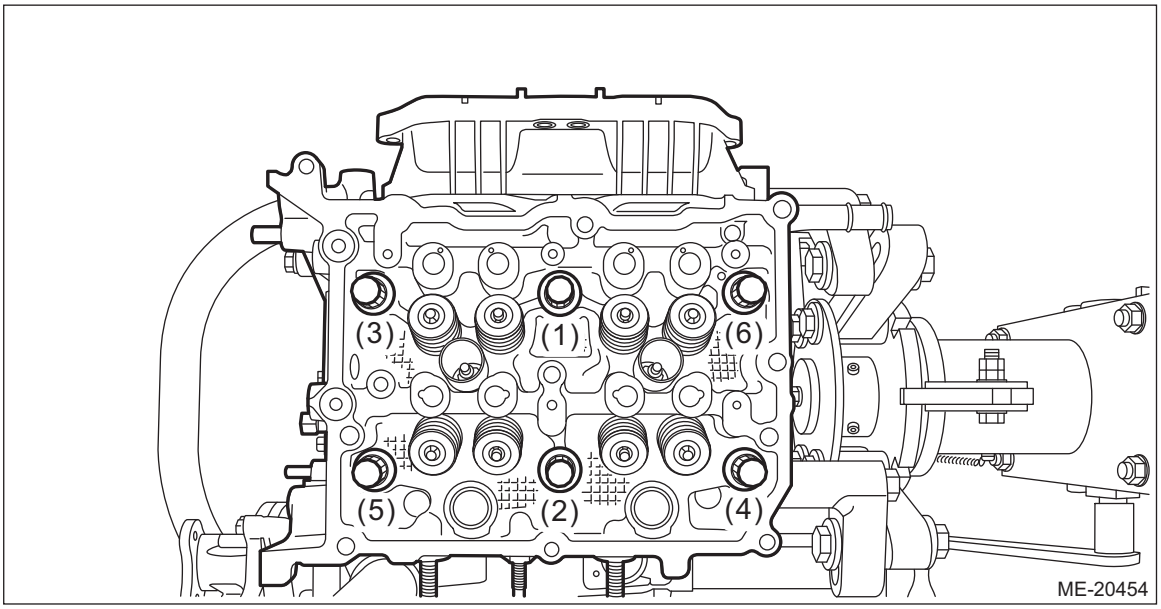
(A)	Liquid gasket applying position to the cylinder head side	(C)	1 mm (0.0394 in) or less	(E)	Cylinder head gasket edge
(B)	Liquid gasket applying position to the cylinder block side	(D)	ϕ3±1 mm (0.1181±0.0394 in)	(F)	Overlap margin of bead end and liquid gasket: 3 — 10 mm (0.1181 — 0.3937 in)

4) Attach the cylinder head gasket LH.

NOTE:
Check that liquid gasket is squeezed out from the cylinder head gasket LH.
5) Install the cylinder head LH to the cylinder block LH.

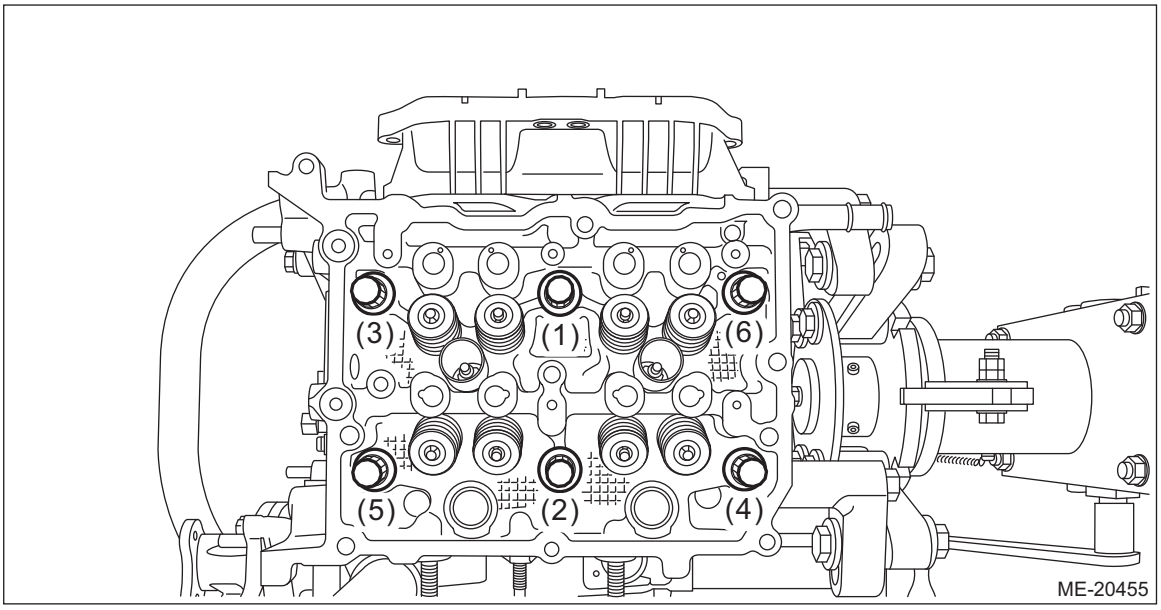
CAUTION:
Be careful not to scratch the mating surface of cylinder head LH and cylinder block LH.

(1) Clean the cylinder head bolt threads and apply sufficient engine oil to the washer and cylinder head bolts threads.
(2) Set the cylinder head LH to the cylinder block LH, then tighten all bolts with a torque of 20 N·m (2.0 kgf-m, 14.8 ft-lb) in numerical order as shown in the figure.

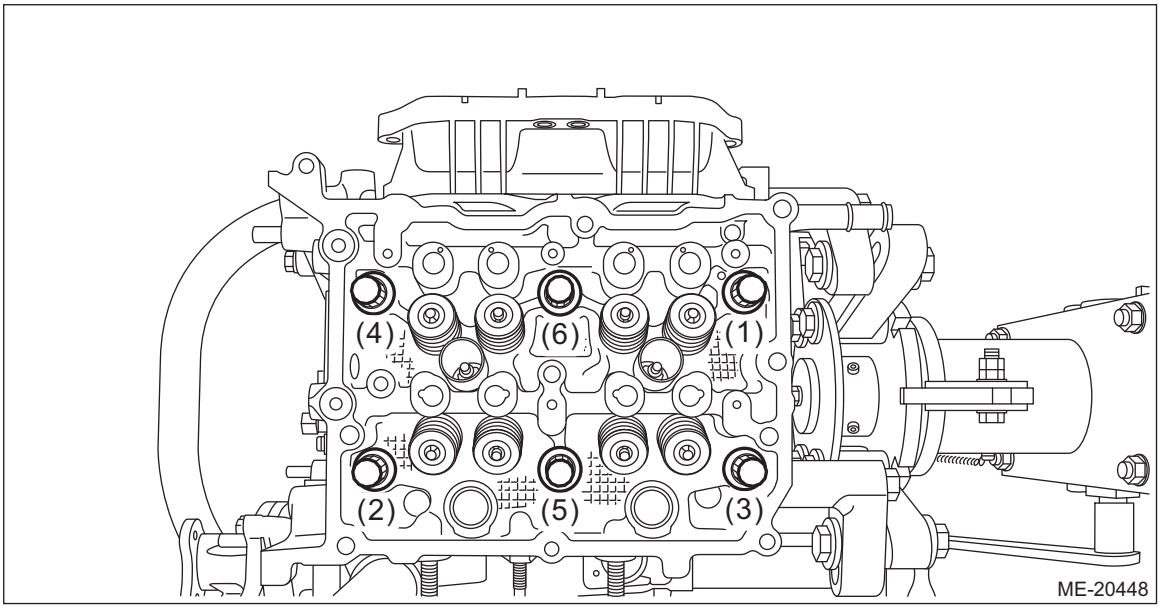


(3) Tighten all cylinder head bolts further with a torque of 100 N·m (10.2 kgf-m, 73.8 ft-lb) in numerical order as shown in the figure.

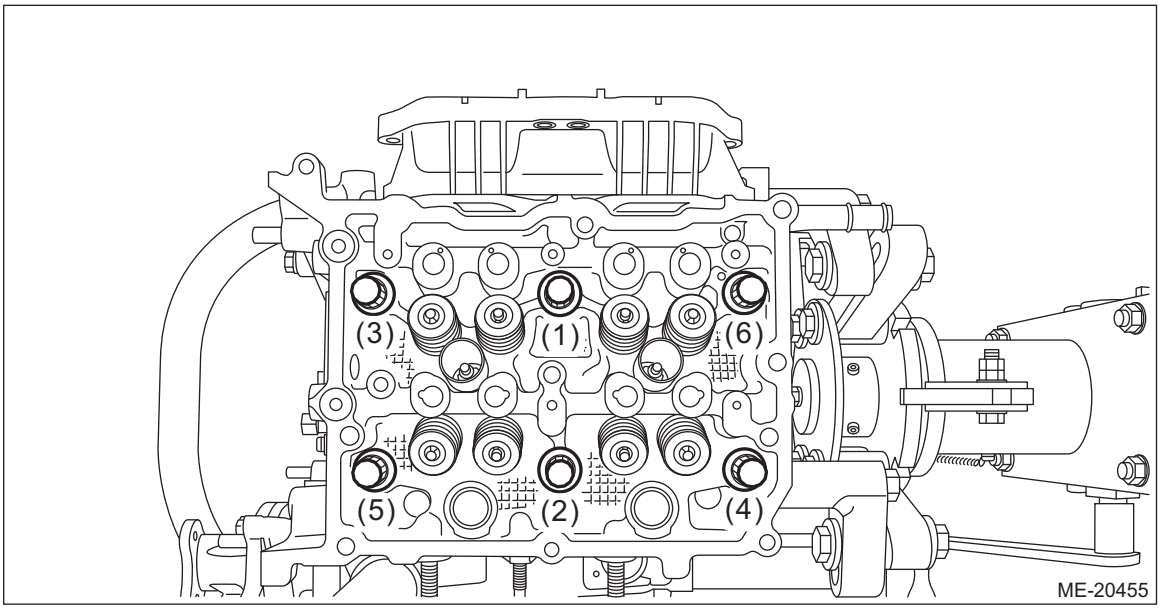
CAUTION:
If the bolt makes stick-slip sound during tightening, repeat the procedure from step 1). In that case, the cylinder head gasket LH can be reused. But it is necessary to remove liquid gasket completely from cylinder block LH, cylinder head LH and cylinder head gasket LH and re-apply to them.



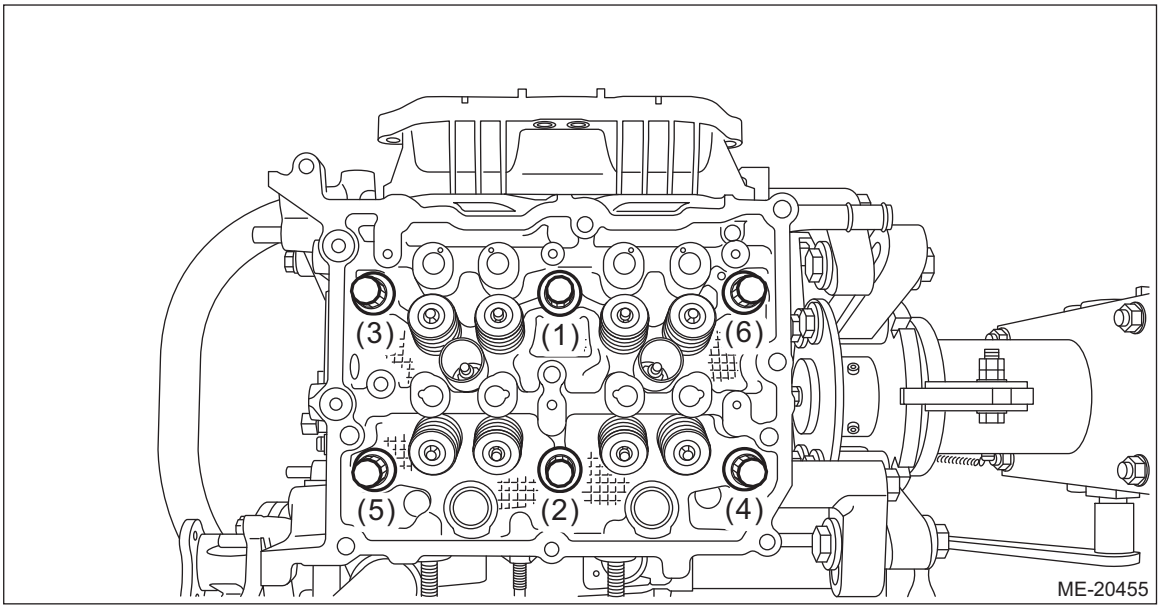
(4) Loosen all cylinder head bolts by 360° in the numerical order as shown in the figure.



(5) Tighten all bolts with torque of 20 N·m (2.0 kgf-m, 14.8 ft-lb) in numerical sequence as shown in the figure.

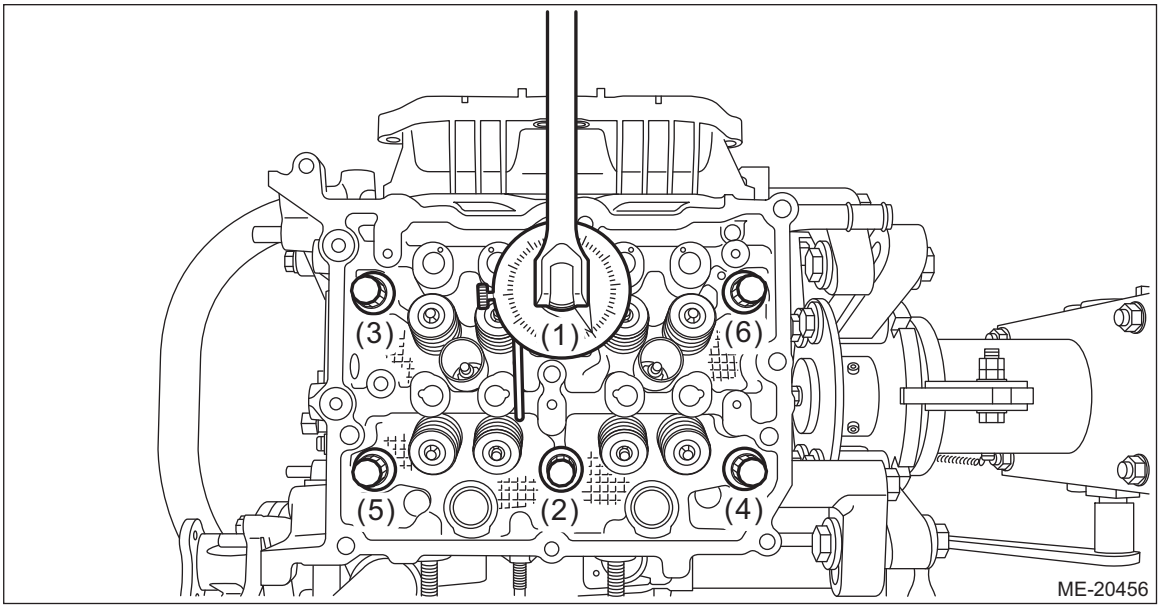


(6) Tighten all cylinder head bolts with a torque of 42 N·m (4.3 kgf-m, 31.0 ft-lb) in numerical order as shown in the figure.



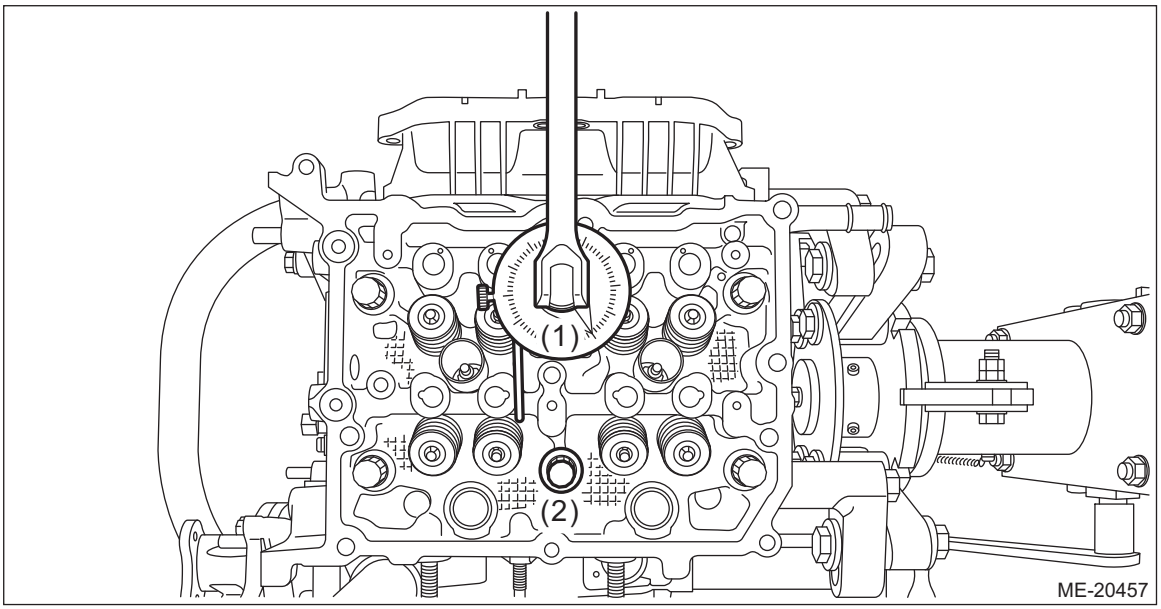
(7) Using angle gauge, tighten all cylinder head bolts with specified angle in numerical order as shown in the figure.

Tightening angle:
100°±2°



(8) Using angle gauge, tighten the cylinder head bolts (2 places) with specified angle in numerical order as shown in the figure.

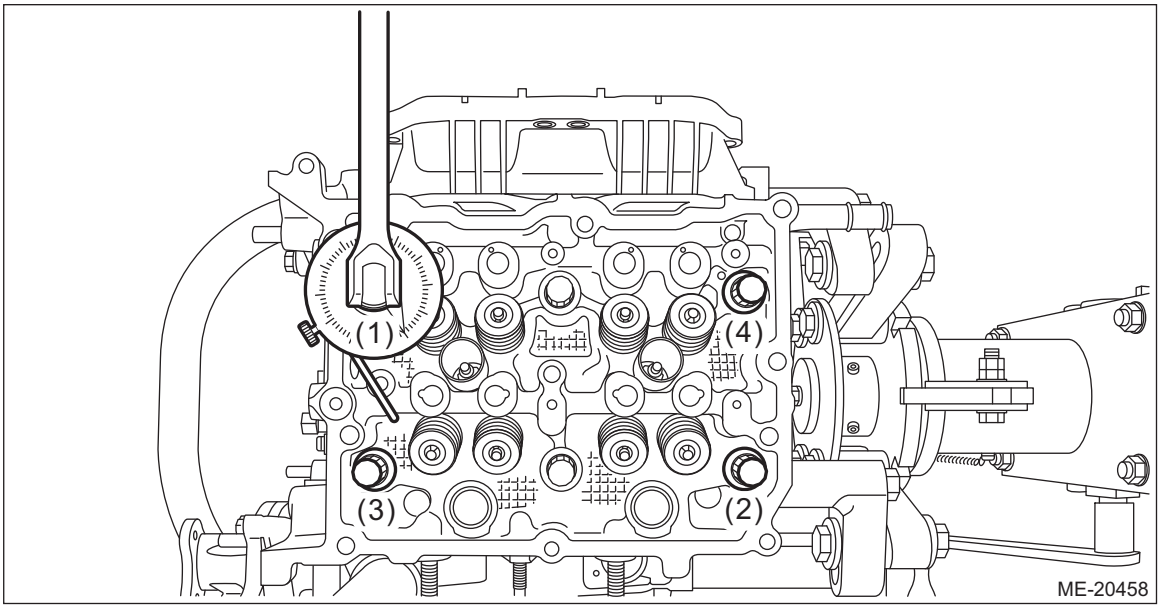
Tightening angle:
100°±2°



(9) Using angle gauge, tighten the cylinder head bolts (4 places) with specified angle in numerical order as shown in the figure.

NOTE:
After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

Tightening angle:
50°±2°

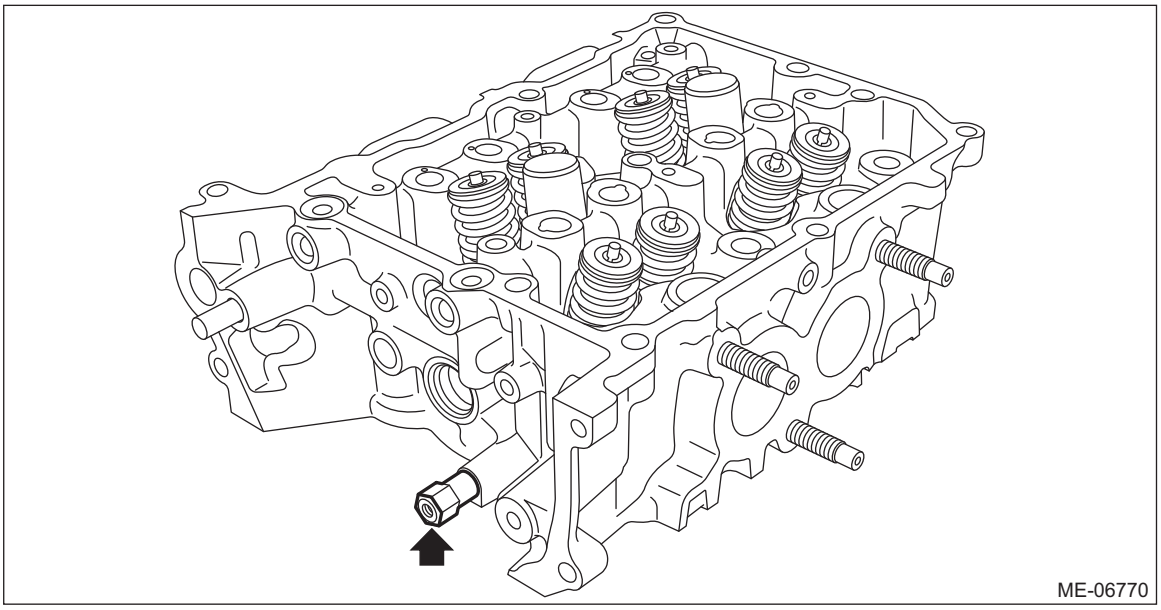


6) Set the part so that the installation surface of the intake manifold is on the upper side.
7) When the cylinder head LH has been disassembled

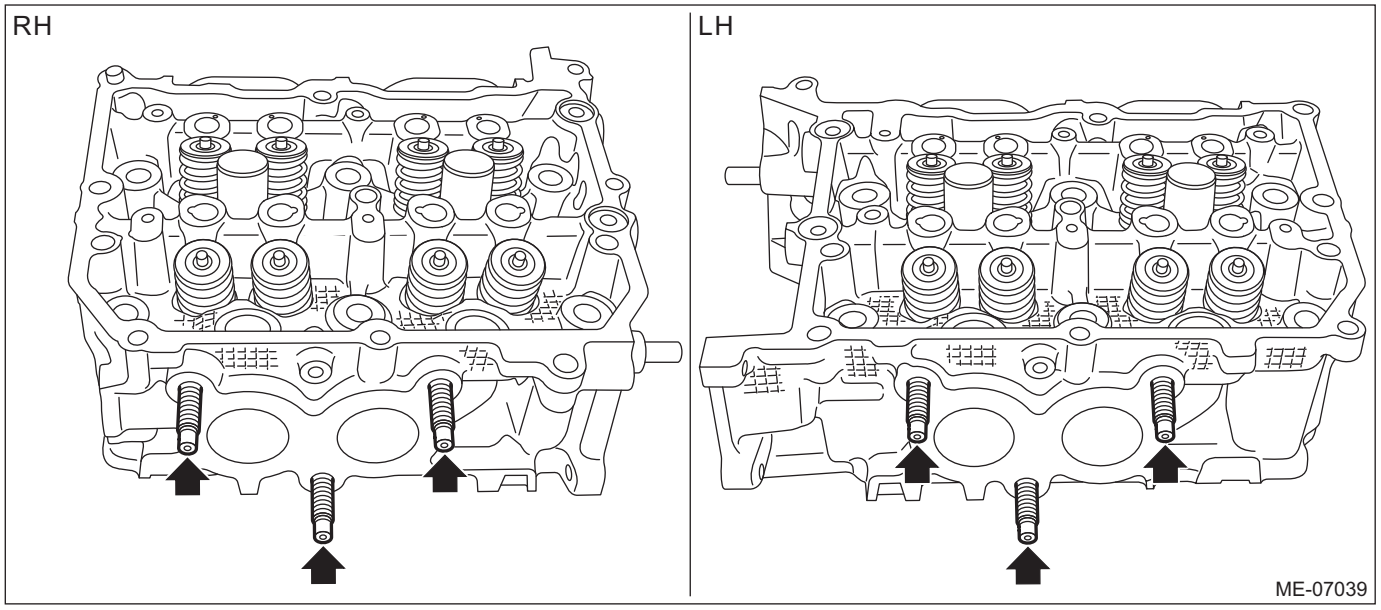
NOTE:
When the cylinder head LH has been disassembled, perform the following steps also.
(1) Install the fuel injector LH. <Ref. to FU(w/o STI)-57, FUEL INJECTOR LH, INSTALLATION, Fuel Injector.>
(2) Install the air intake adapter LH. <Ref. to FU(w/o STI)-43, INSTALLATION, Tumble Generator Valve Assembly.>
8) Install the A/C compressor. <Ref. to ME(w/o STI)-178, CAM CARRIER LH, INSTALLATION, Cam Carrier.>
9) Install the high-pressure fuel delivery pipe assembly. <Ref. to FU(w/o STI)-81, HIGH-PRESSURE FUEL DELIVERY PIPE ASSY, INSTALLATION, High Pressure Fuel Delivery Pipe.>
10) Install the cam carrier LH. <Ref. to ME(w/o STI)-178, CAM CARRIER LH, INSTALLATION, Cam Carrier.>
11) Install the engine wiring harness. <Ref. to FU(w/o STI)-86, INSTALLATION, Engine Wiring Harness.>
12) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>

C: DISASSEMBLY

1) Remove the chain cover securing bolt from the cylinder head LH.



2) Remove the stud bolts from the cylinder head.



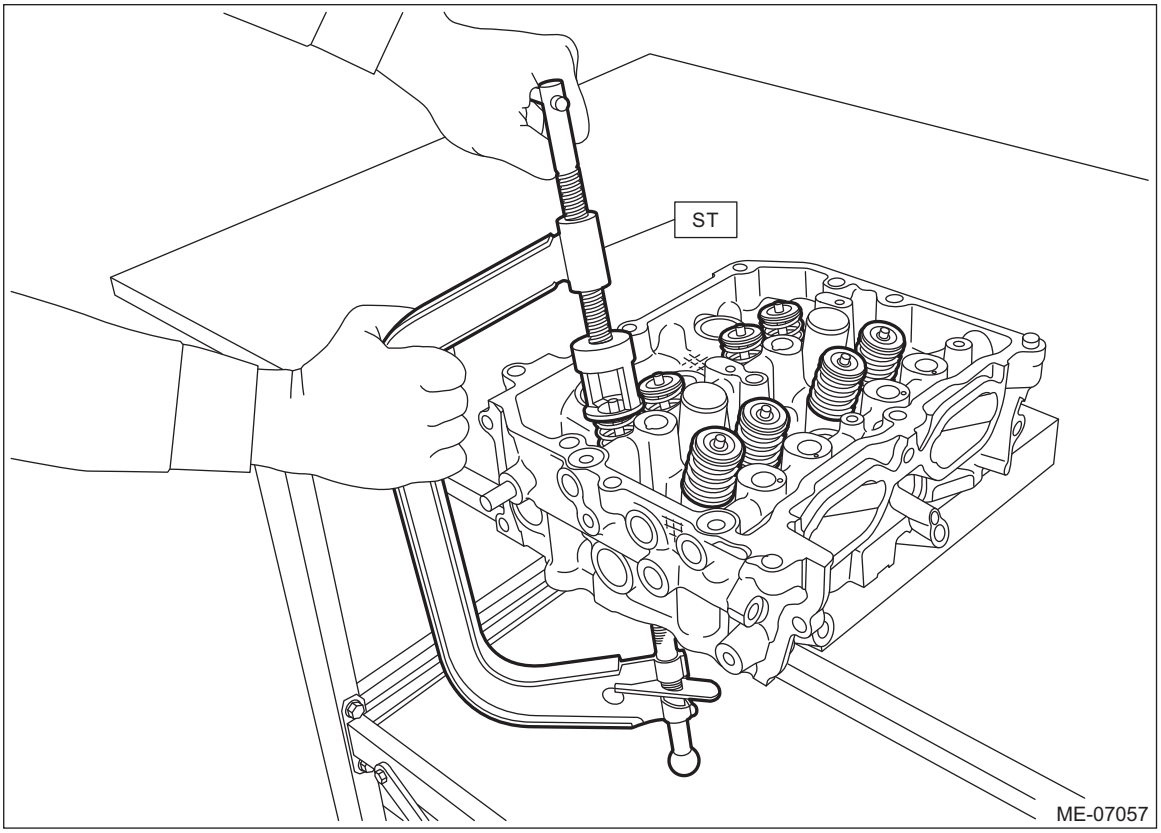
3) Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head RH.

WARNING:
Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". <Ref. to ME(w/o STI)-239, DISPOSAL, Cylinder Head.>

CAUTION:
During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

NOTE:
- Mark each part to prevent confusion.
- Keep all the removed parts in order for re-installing in their original positions.

(1) Compress the valve spring and remove the valve collet using ST.
ST 0920287002000 REMOVER AND REPLACER



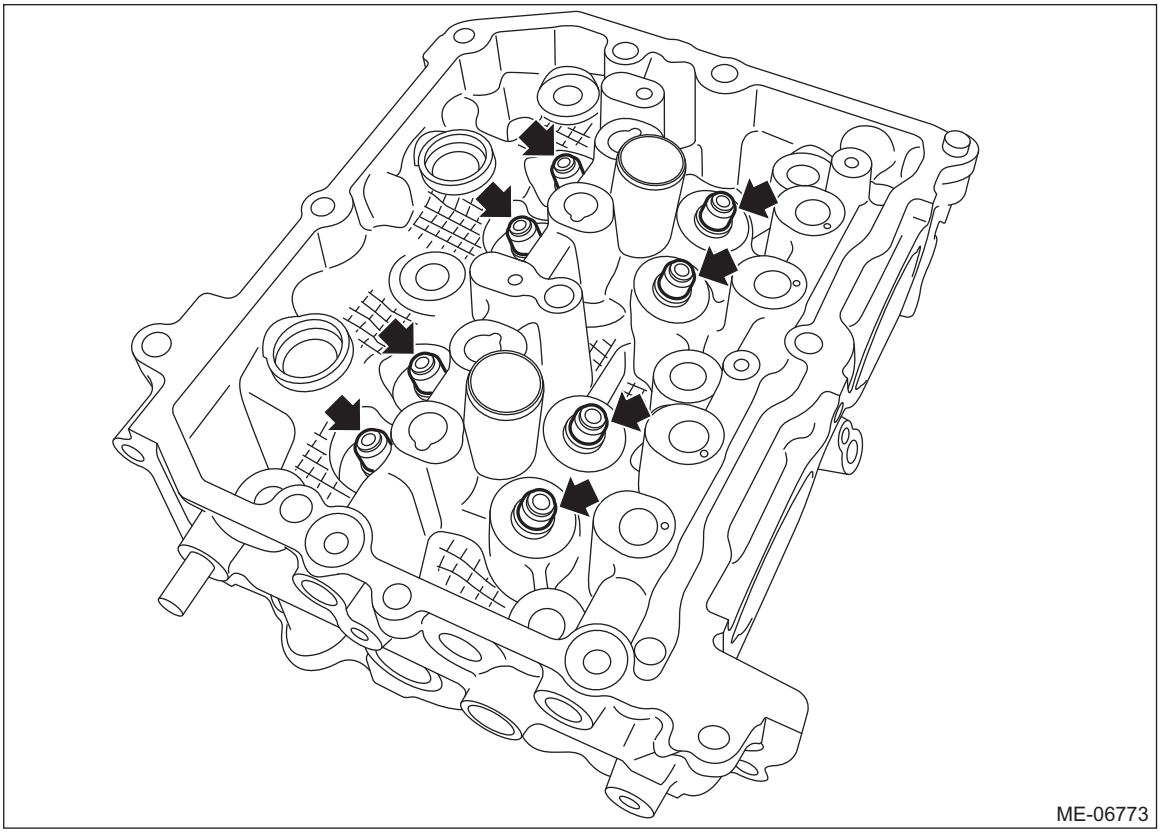
(2) Remove valve, valve spring retainer, valve spring and valve spring seat.

4) Remove the valve collet, valve, valve spring retainer, valve spring and valve spring seat from the cylinder head LH.

5) Remove the valve oil seals from valve guides of cylinder head RH.

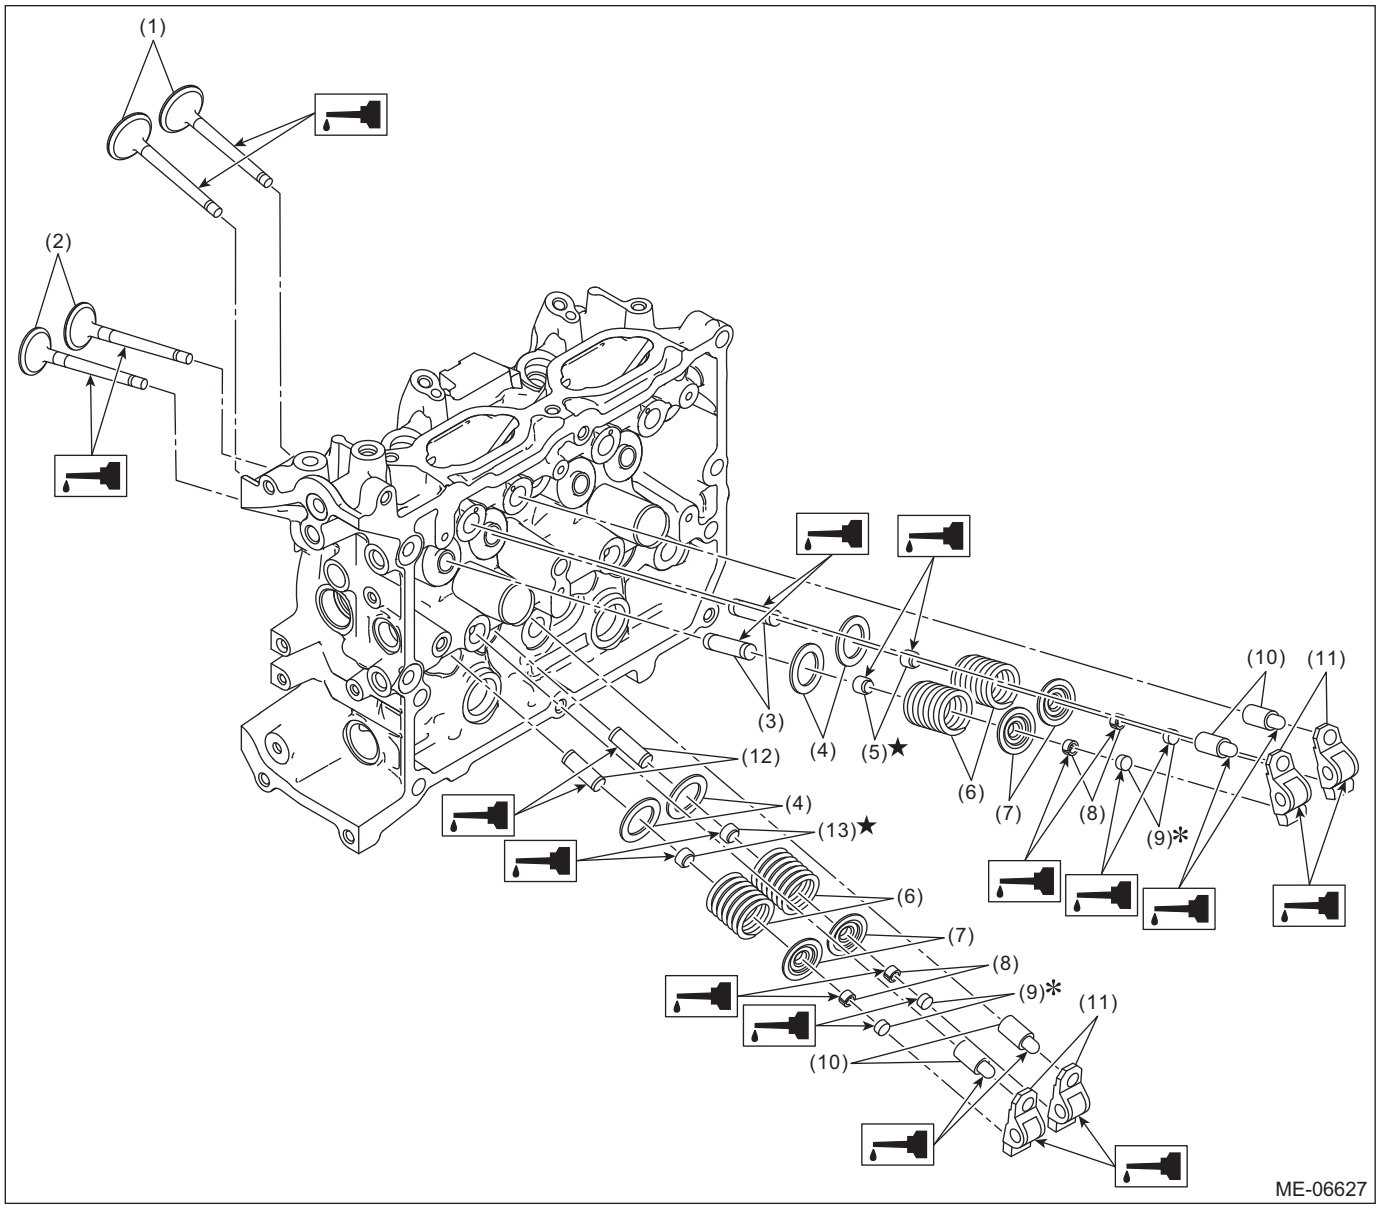
CAUTION:
- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.**
- **Use special care not to damage the cylinder head RH and guide during work.**

NOTE:
For removal of valve guide, refer to INSPECTION. <Ref. to ME(w/o STI)-221, VALVE & VALVE GUIDE, INSPECTION, Cylinder Head.>



6) For cylinder head LH, remove the valve oil seal in the same manner.

D: ASSEMBLY



(1)	Exhaust valve	(6)	Valve spring	(11)	Roller rocker arm
(2)	Intake valve	(7)	Valve spring retainer	(12)	Exhaust valve guide
(3)	Intake valve guide	(8)	Valve collet	(13)	Exhaust valve oil seal
(4)	Valve spring seat	(9)	Valve shim		
(5)	Intake valve oil seal	(10)	Roller rocker arm pivot		

1) Using the ST, install the valve oil seals to valve guides of cylinder head RH.

CAUTION:
• During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.
• Use special care not to damage the cylinder head RH and guide during work.
• When installing the valve oil seal, press the ST with hands to install it and never drive the ST with a plastic hammer, otherwise the valve oil seal can be damaged.

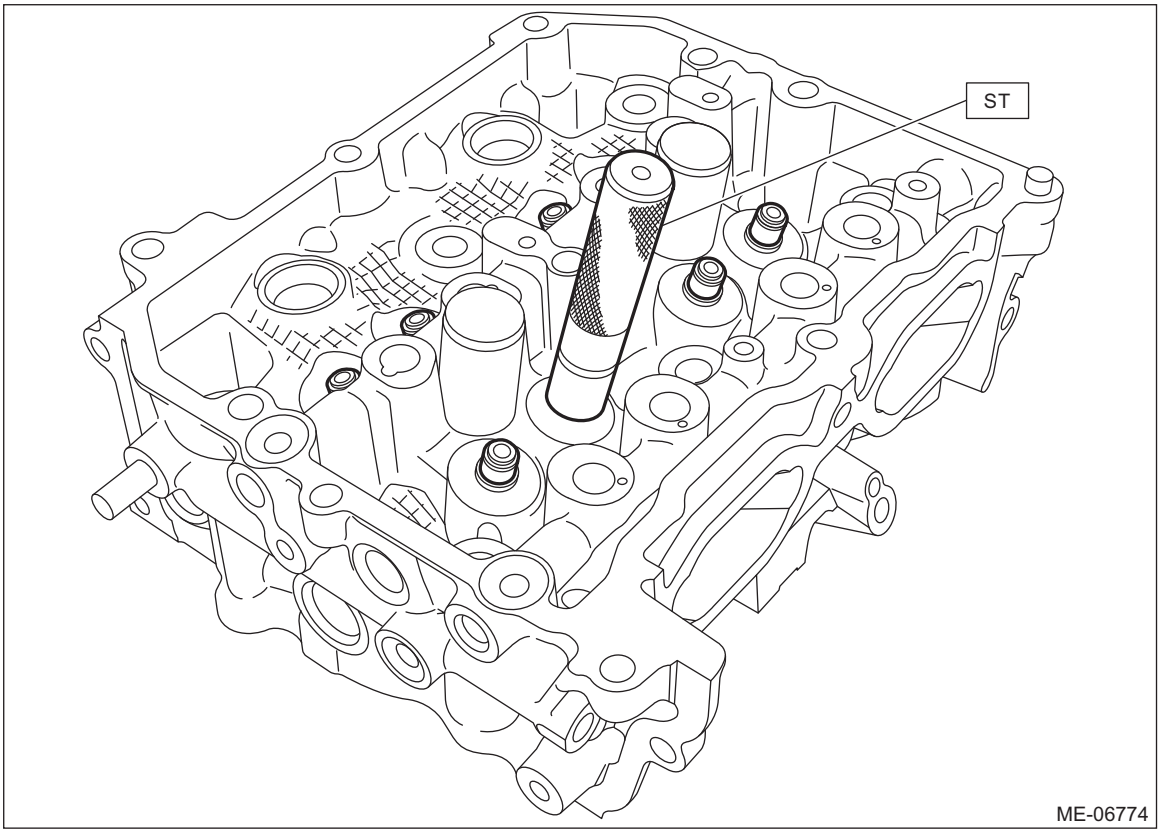
NOTE:
• Use a new valve oil seal.
• Apply engine oil to valve oil seal before installing.

- The intake valve oil seals and exhaust valve oil seals are distinguished by their colors.

Identification colors:
Intake [Gray]
Exhaust [Green]

- For installation of valve guide, refer to INSPECTION. <Ref. to ME(w/o STI)-221, VALVE & VALVE GUIDE, INSPECTION, Cylinder Head.>

ST 18261AA010 VALVE OIL SEAL GUIDE



2) For cylinder head LH, install the valve oil seal in the same manner.
3) Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head RH.

CAUTION:
During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head RH.

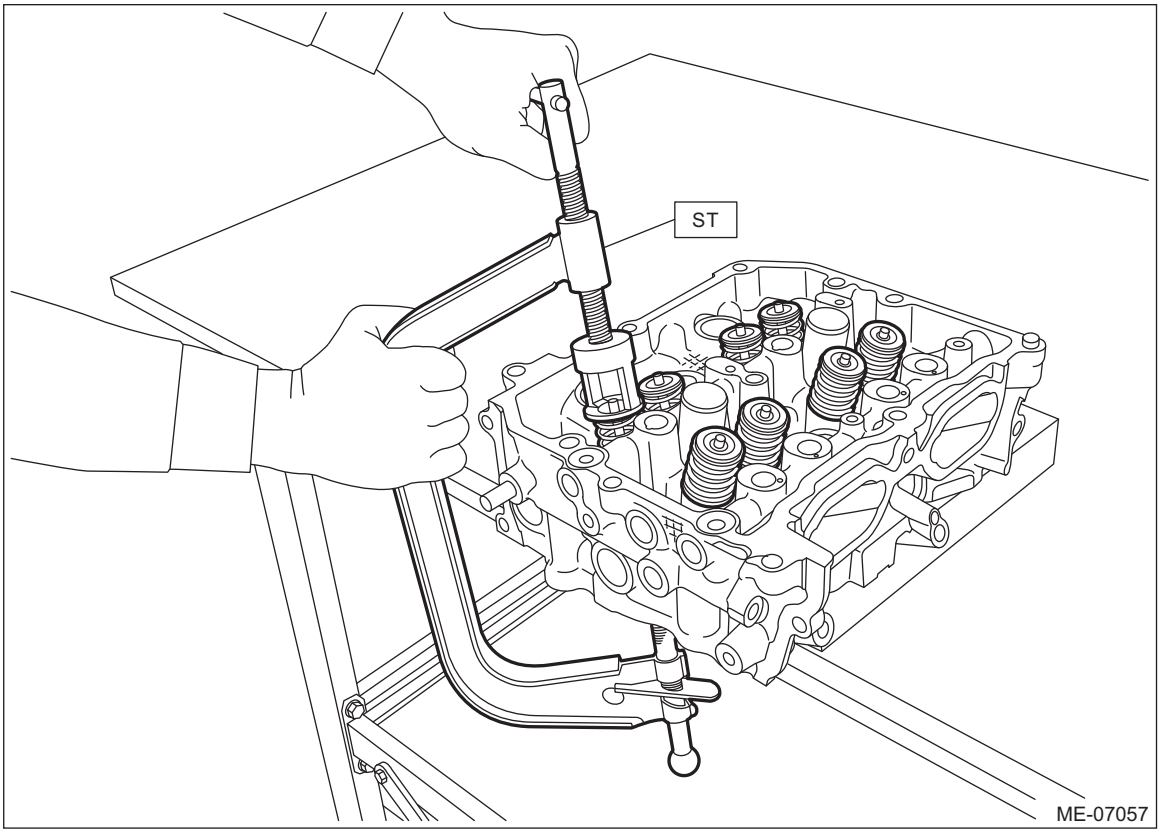
(1) Set the valve spring seat, valve spring and valve spring retainer onto the cylinder head RH.

NOTE:
Be sure to install the valve spring with its close-coiled end facing the cylinder head side.

(2) Coat the valve stem of each valve with engine oil and insert the valve into valve guide.

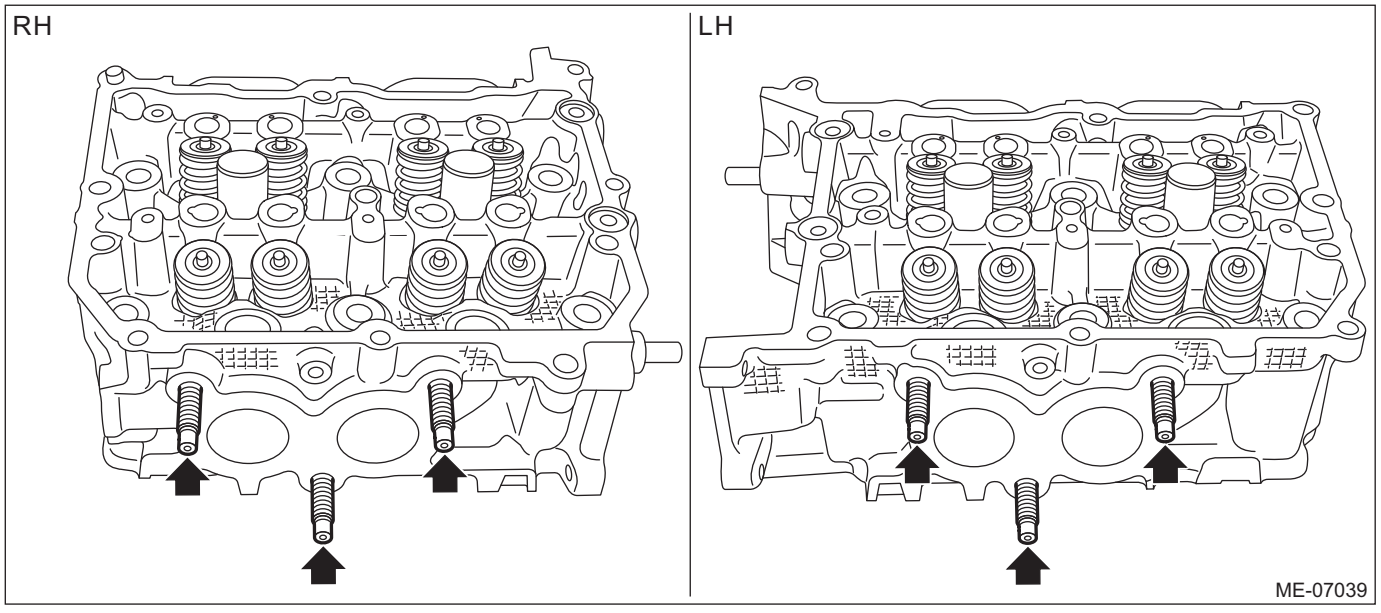
NOTE:
When inserting the valve into valve guide, use special care not to damage the oil seal lip.

(3) Compress the valve spring and install the valve collet using ST.
ST 0920287002000 REMOVER AND REPLACER



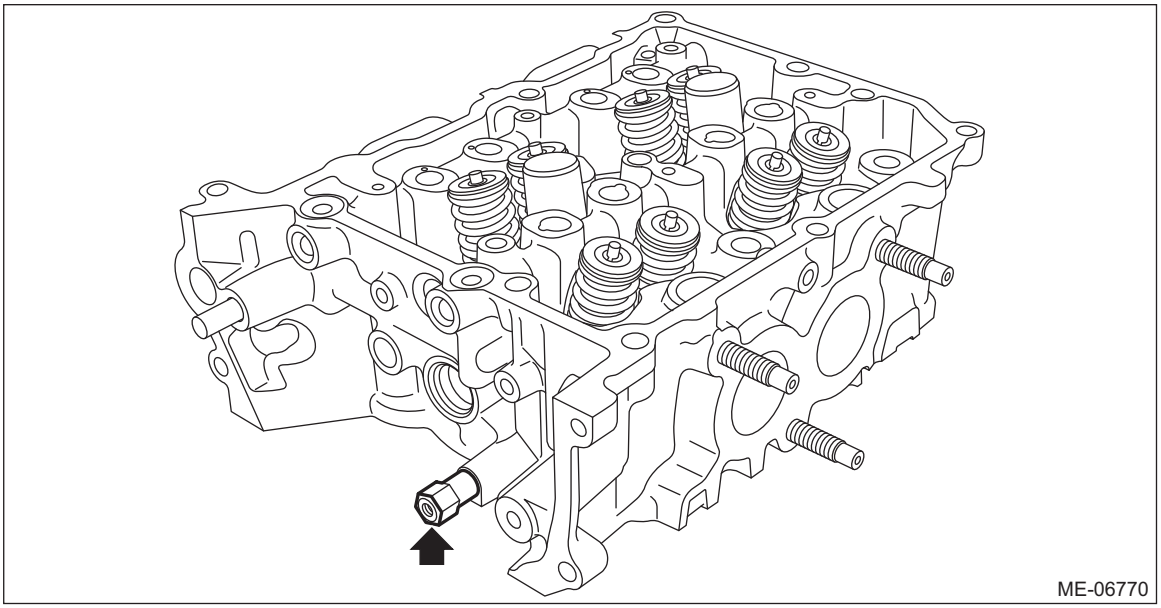
4) Install the valve spring seat, valve spring, valve spring retainer, valve and valve collet to the cylinder head LH.
5) Lightly tap the valve spring retainer with a plastic hammer, and make sure that the valve collet is securely attached.
6) Install the stud bolts onto cylinder heads.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



7) Install the chain cover securing bolt to the cylinder head LH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



E: INSPECTION

1. CYLINDER HEAD

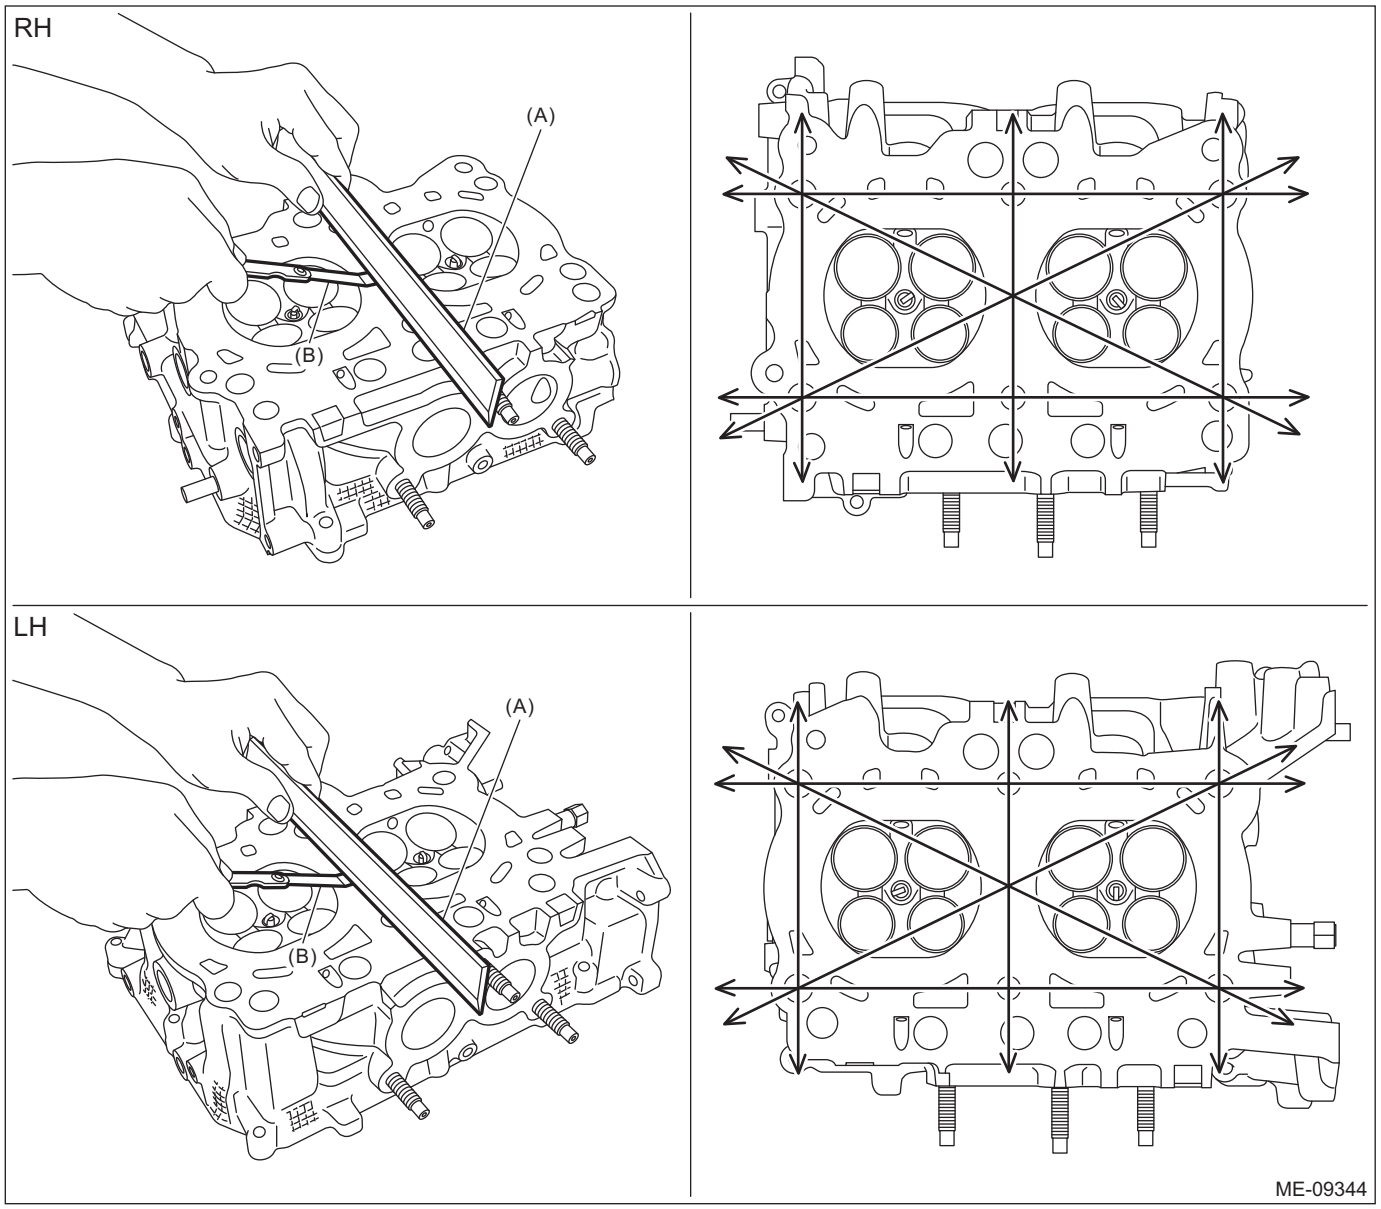
1) Visually inspect to make sure that there are no cracks, scratches or other damage.
2) Use liquid penetrant tester on the important sections to check for fissures.
3) Check that there are no marks of gas leaking or water leaking on gasket attachment surface.
4) Check the warping of the cylinder head mating surface that mates with cylinder block at the locations shown in the figure using a straight edge (A) and thickness gauge (B). If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder head.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- If there is warpage on the cylinder head mating surface, the cylinder head bolt tightening torque and angle tightening may be improper. When installing the cylinder head, make sure that tightening torque and angle tightening work is performed precisely according to the operation procedures.
- When the cylinder head is replaced, lap each valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

Cylinder head warpage:
Limit
0.020 mm (0.0008 in)

Cylinder head grinding limit:
To 98.4 mm (3.8740 in)

Cylinder head height:
Standard
98.5 mm (3.8779 in)



2. VALVE & VALVE GUIDE

WARNING:
Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". <Ref. to ME(w/o STI)-239, DISPOSAL, Cylinder Head.>

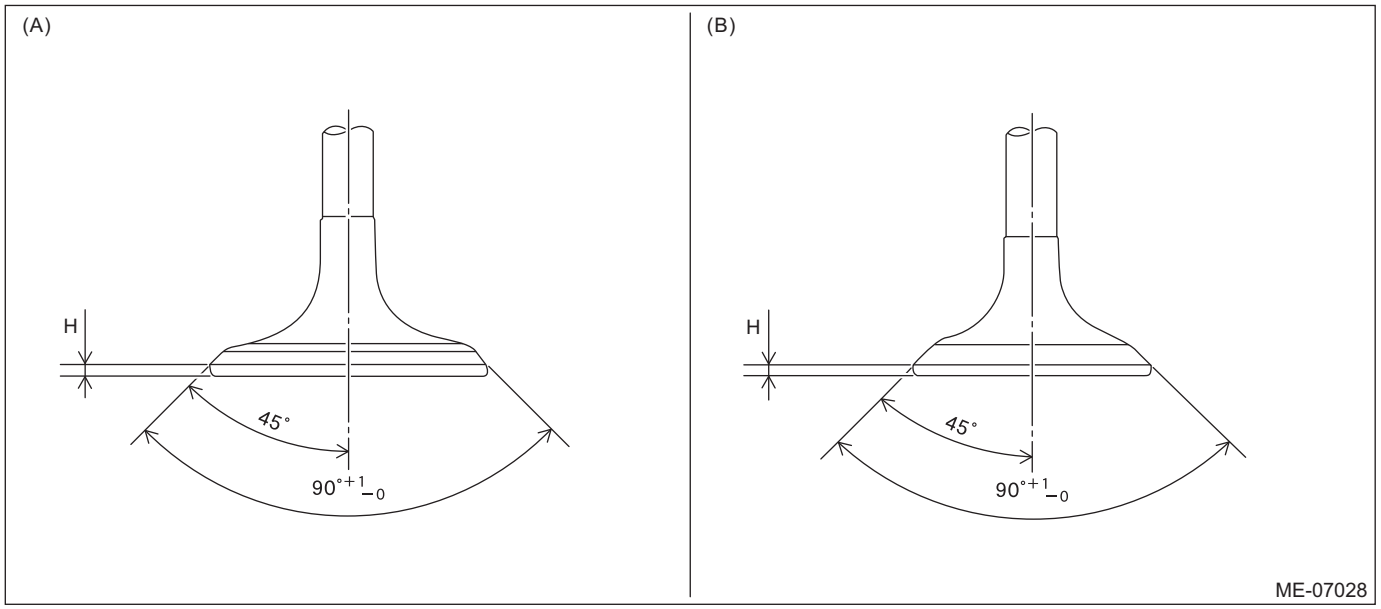
1) Check the valve flange and stem for damage, wear or deformation.
2) Measure the thickness "H" of valve head edge as shown in the figure using a caliper gauge. If it is not within the standard, replace the valve.

NOTE:
- It is possible to differentiate between the intake valve and the exhaust valve by their overall length.

Valve overall length:
Intake
104.95 mm (4.1319 in)
Exhaust
97.9 mm (3.8543 in)

• When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

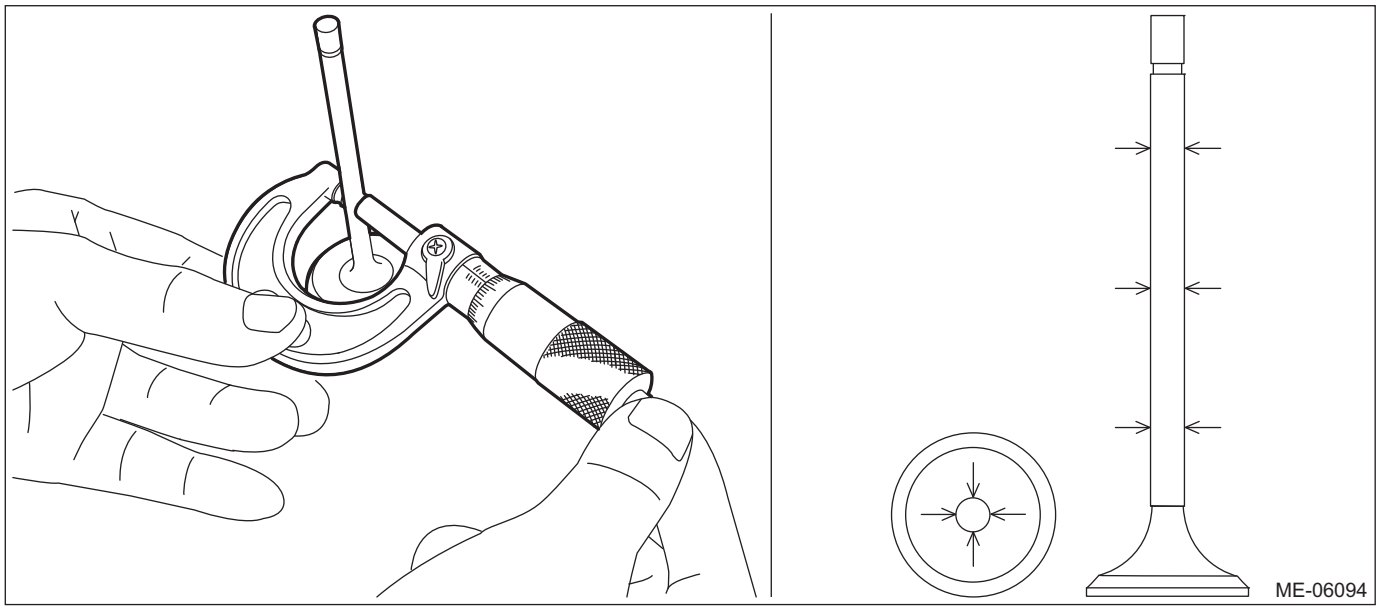
Valve head edge thickness H:
Intake (A)
Standard
0.8 — 1.2 mm (0.0315 — 0.0472 in)
Exhaust (B)
Standard
1.0 — 1.4 mm (0.0394 — 0.0551 in)



3) Check the clearance between valve and valve guide. Check the clearance between valve and valve guide by measuring the outer diameter of valve stem and the inner diameter of valve guide respectively.
(1) Measure the outer diameter of valve stem with a micrometer. If it is not within the standard, replace the valve.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the outer diameter of the valve stem at the six locations as shown in the figure, and read the value of most worn location.
• When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

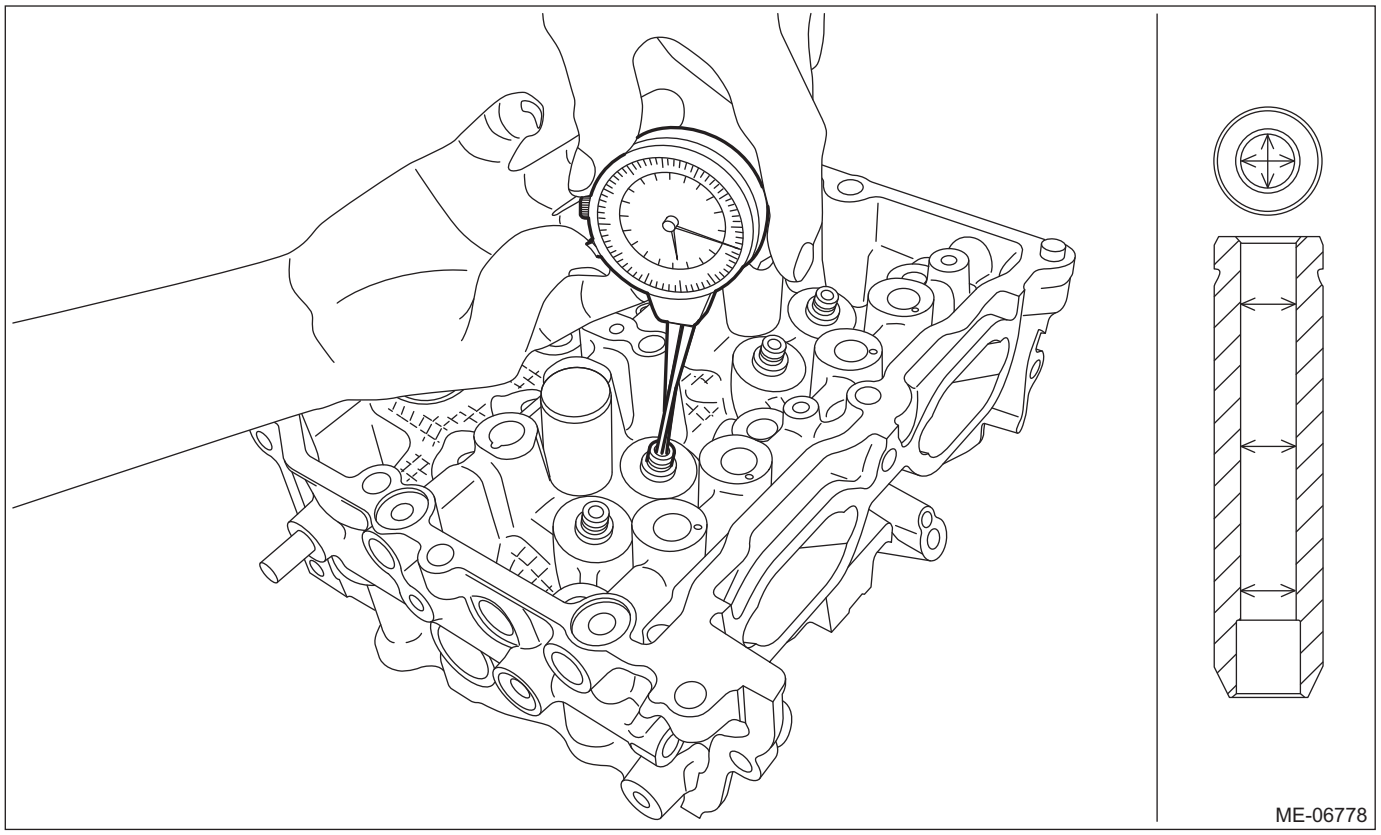
Valve stem outer diameter:
Intake
Standard
5.455 — 5.470 mm (0.2148 — 0.2154 in)
Exhaust
Standard
5.445 — 5.460 mm (0.2144 — 0.2150 in)



(2) Using a caliper gauge, measure the inner diameter of valve guide. If it is not within the standard, replace the valve guide. For replacement procedure, refer to step 4).

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the inner diameter of the valve guide at the six locations as shown in the figure, and read the value of most worn location.

Valve guide inner diameter:
Standard
5.500 — 5.512 mm (0.2165 — 0.2170 in)



(3) Calculate the clearance between valve and valve guide.

Clearance between valve and valve guide:
Intake
Standard
0.030 — 0.057 mm (0.0012 — 0.0022 in)
Exhaust
Standard
0.040 — 0.067 mm (0.0016 — 0.0026 in)

4) If the clearance between valve and valve guide exceeds the standard, replace the valve or valve guide, whichever shows the greater amount of wear or damage. For replacement procedure of valve guide, refer to the following.

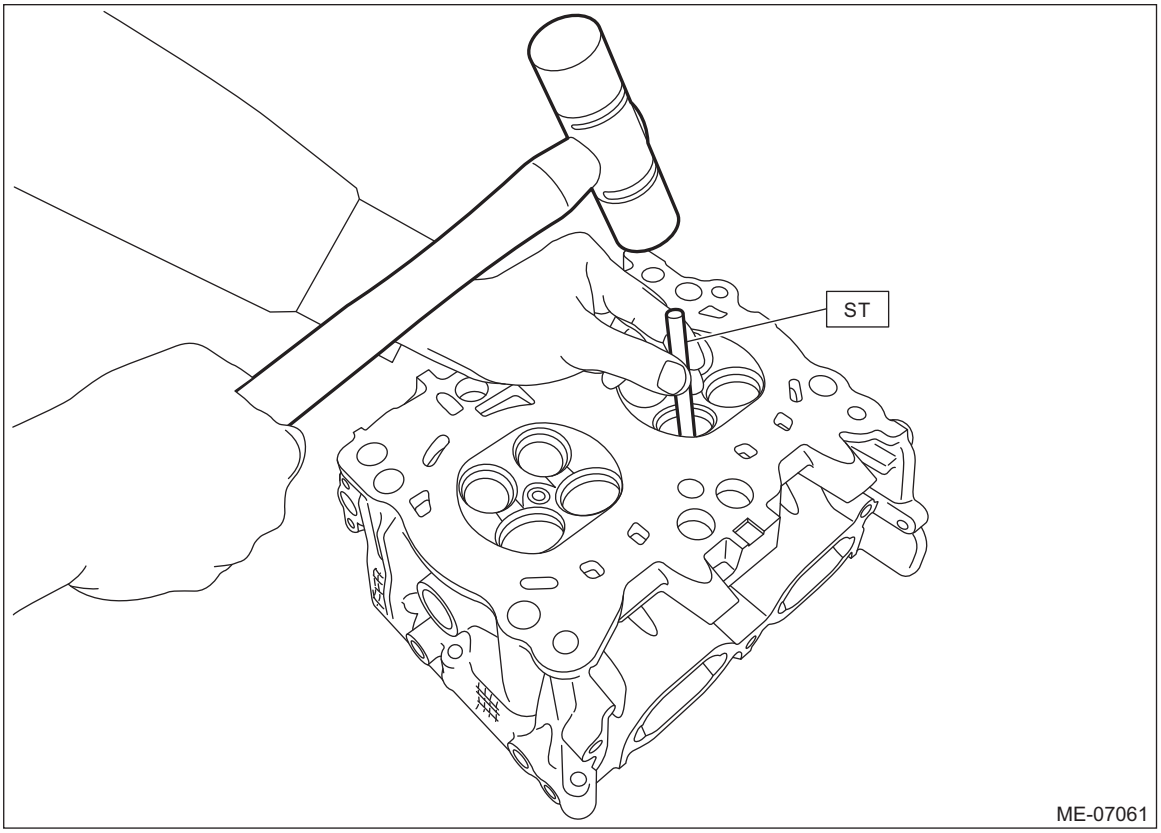
NOTE:
When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

(1) Insert ST into the valve guide with the combustion chamber upward and remove the valve guide using plastic hammer.

CAUTION:
- **Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.**
- **Use special care not to damage the cylinder head during work.**

- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

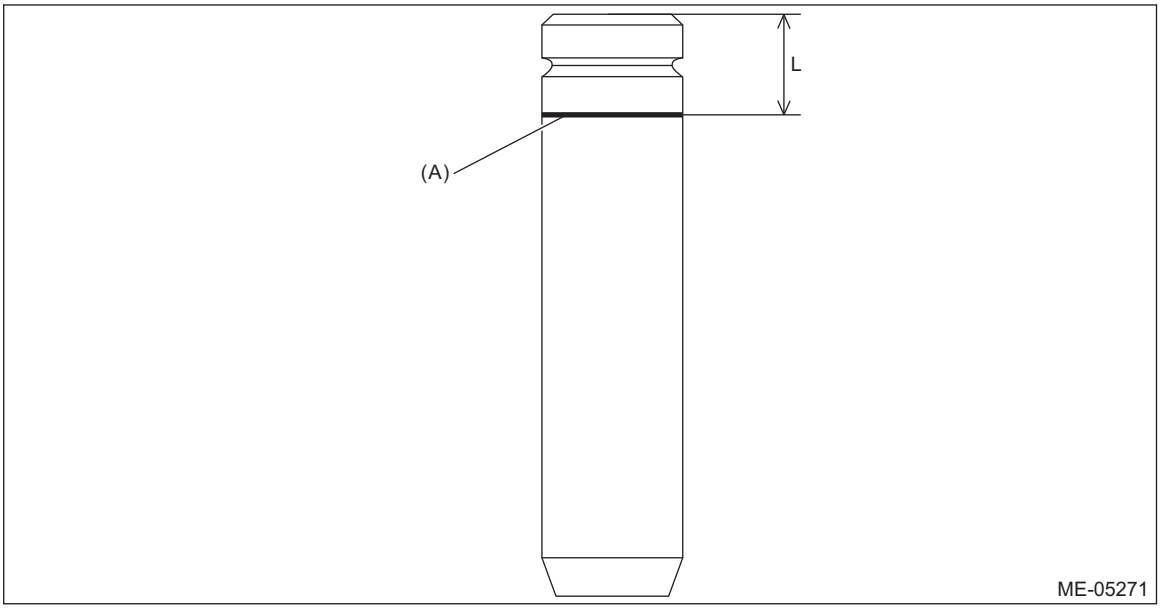


(2) Before installing the valve guide, make sure that neither scratches nor damages exist on the inner surface of valve guide installation holes of cylinder head.

(3) Draw a reference line (A) for insert on the valve guide using a marker as shown in the figure.

NOTE:
- Use a new valve guide.
- A reference line for insert is used as a guide when tapping-in the valve guide.

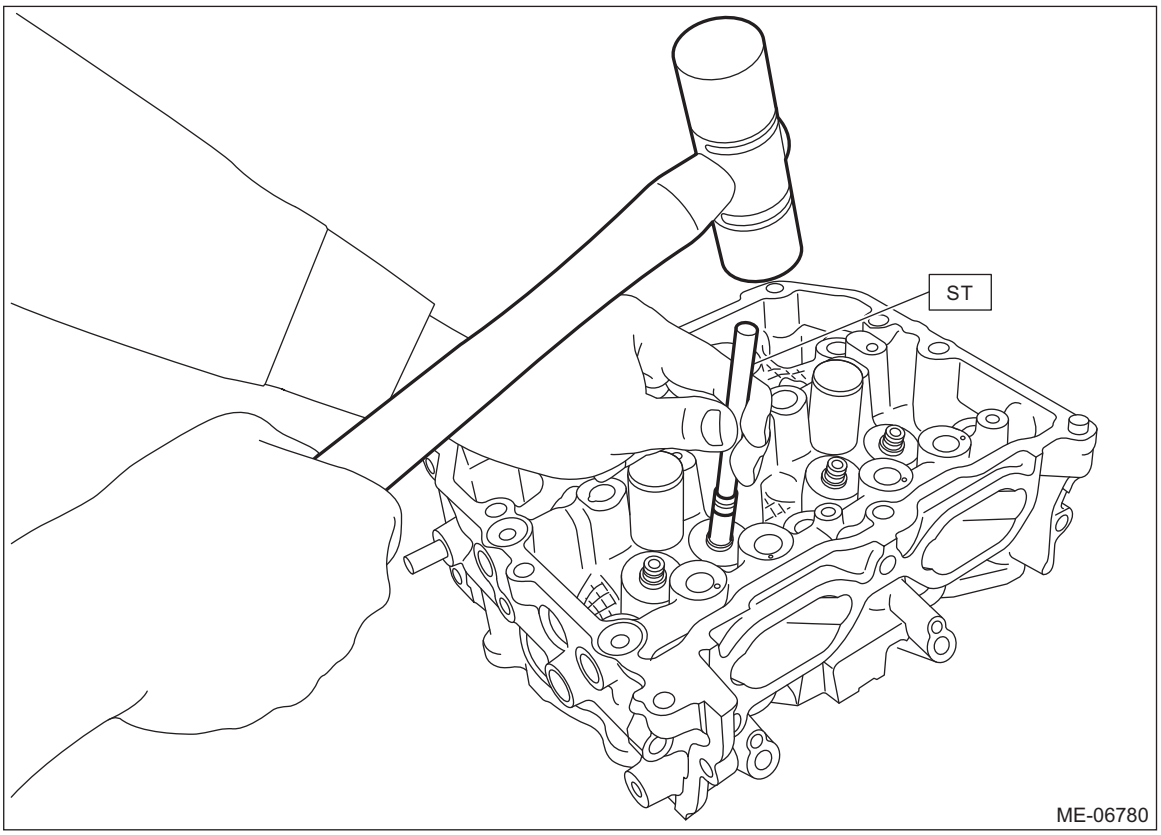
Valve guide inserting reference line position L:
15 mm (0.5906 in)



(4) Apply a enough coat of engine oil to the valve guide, and set the valve guide on the cylinder head with the combustion chamber downward.
(5) Insert the ST into the valve guide, and tap-in the valve guide to the reference line (A) for insert using plastic hammer.

CAUTION:
- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.**
- **Use special care not to damage the cylinder head during work.**
- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

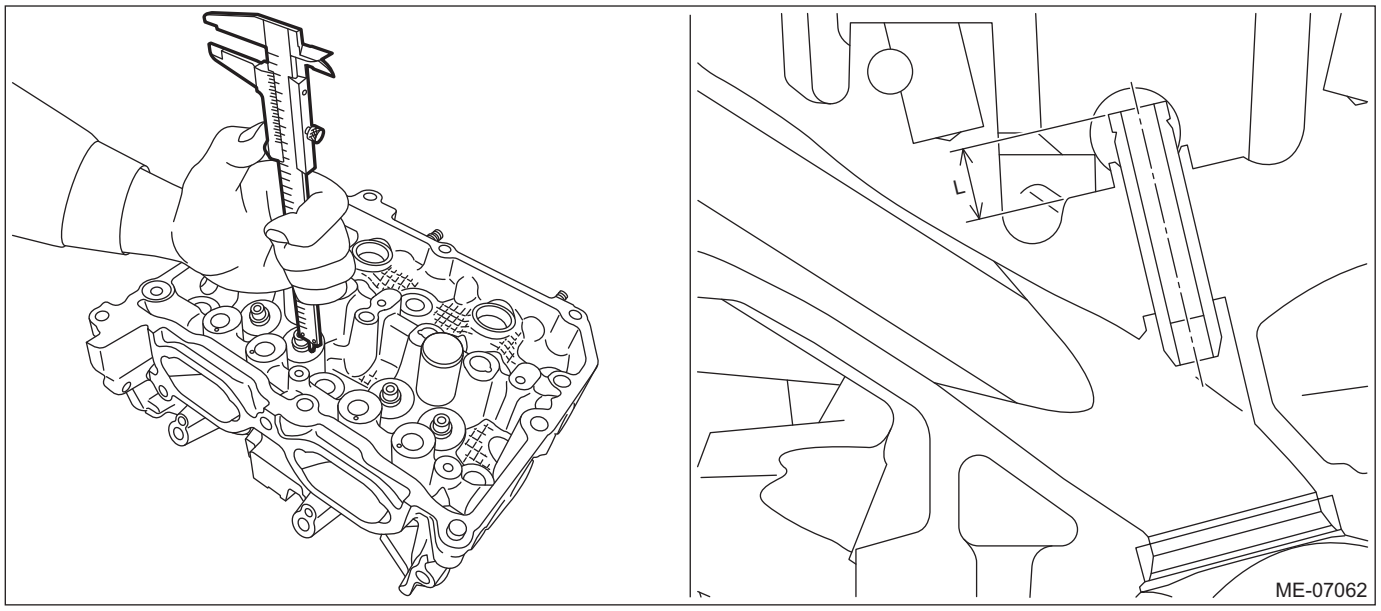


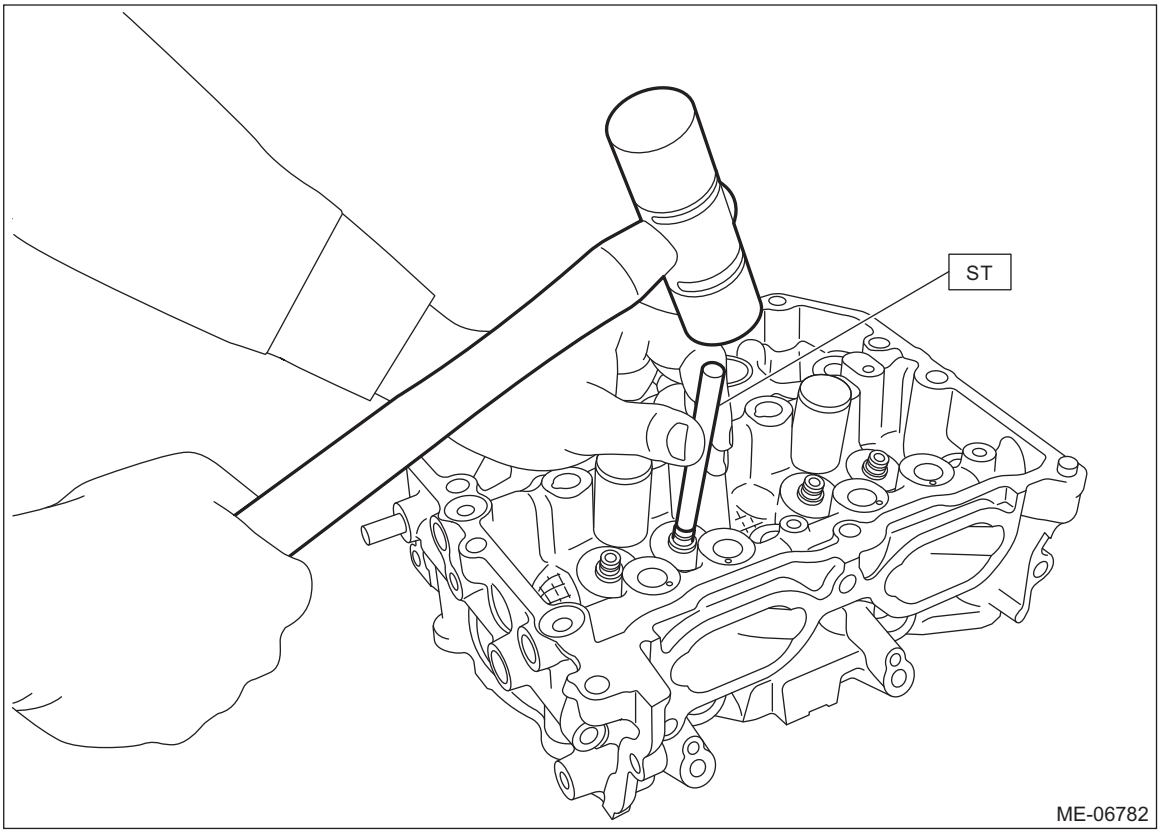
(6) Measure the valve guide protrusion amount “L” as shown in the figure using a caliper gauge. Insert the ST into the valve guide again, and tap-in the valve guide so that it is positioned within standard by referring to the measured value using plastic hammer.

CAUTION:
- **During work, place a waste cloth, etc. to avoid scratching the mating surface of the cylinder head.**
- **Use special care not to damage the cylinder head during work.**
- **Always strike the ST vertically with a plastic hammer. Otherwise, the ST can be damaged.**

NOTE:
Be careful not to tap-in excessively by repeating the steps of Tapping-in → Measurement → Tapping-in → Measurement … when installing the valve guide.
ST 499765700 VALVE GUIDE REMOVER AND INSTALLER

Valve guide protrusion amount L:
Standard
11.4 — 11.8 mm (0.4488 — 0.4646 in)



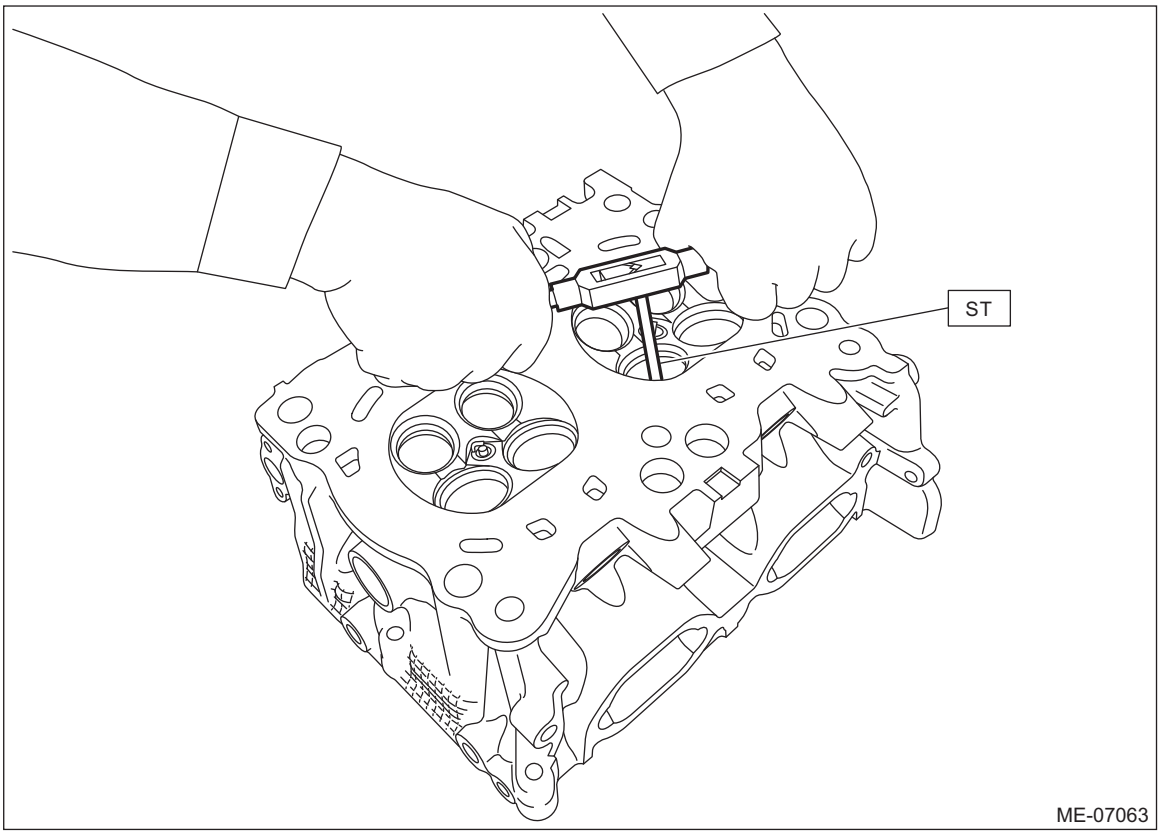


(7) Ream the inside of valve guide with the combustion chamber upward using the ST. Put the ST in valve guide, and rotate the ST slowly clockwise while pushing it lightly. Bring the ST back while rotating it clockwise.

CAUTION:
- **Place a wood board wrapped with a waste cloth to stabilize the cylinder head before work.**
- **Use special care not to damage the cylinder head during work.**

NOTE:
- Apply engine oil to the ST.

• If the inner surface of valve guide is damaged, the edge of ST should be slightly ground with oil stone.
• If the inner surface of valve guide becomes lustrous and the ST does not chip, use a new ST or remedy the ST.
ST 499765900 VALVE GUIDE REAMER



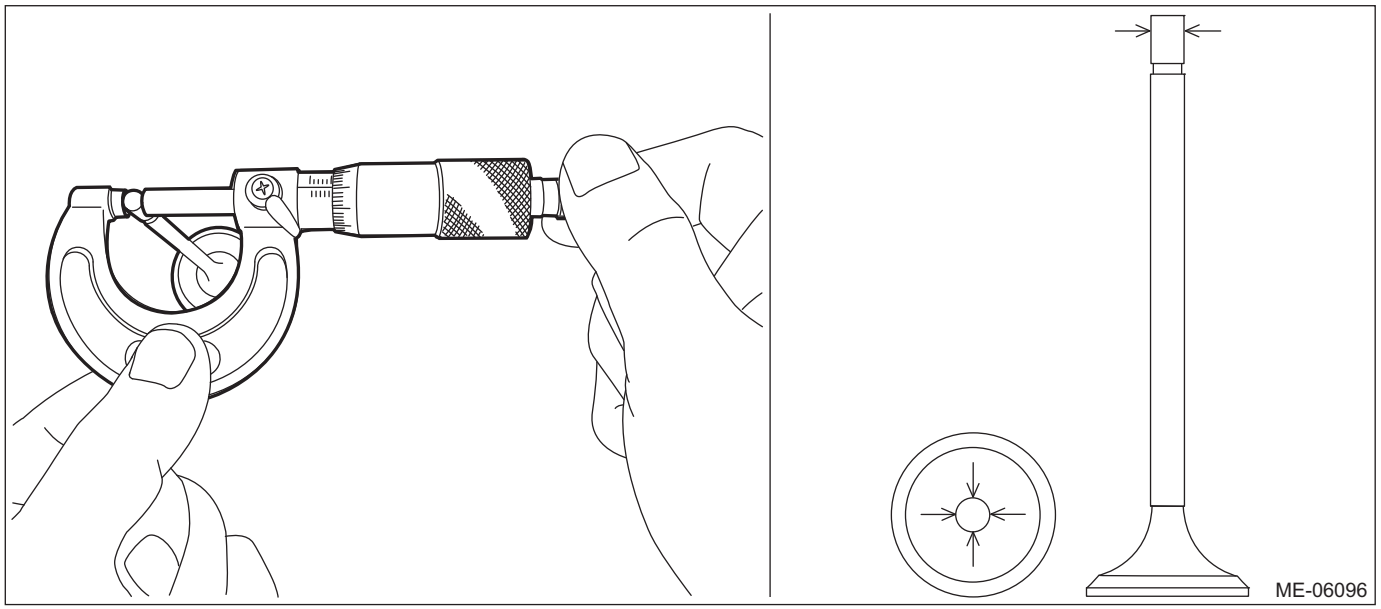
(8) After reaming, clean the valve guide to remove chips.
(9) Check the seating width between valve and valve seat. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

3. VALVE & VALVE SHIM

WARNING:
Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and thus prone to serious chemical reaction. When handling or disposing of the valve, be sure to confirm "DISPOSAL". <Ref. to ME(w/o STI)-239, DISPOSAL, Cylinder Head.>
1) Visually check the valve shim for damage.
2) Check the clearance between valve and valve shim. Check the clearance between valve and valve shim by measuring the outer diameter of valve stem end and the inner diameter of valve shim respectively.
(1) Measure the outer diameter of valve stem end with a micrometer. If it is not within the standard, replace the valve.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the outer diameter of the valve stem end at the two locations as shown in the figure, and read the value of most worn location.
• When the valve is replaced, lap the valve. Refer to "VALVE SEAT" for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>

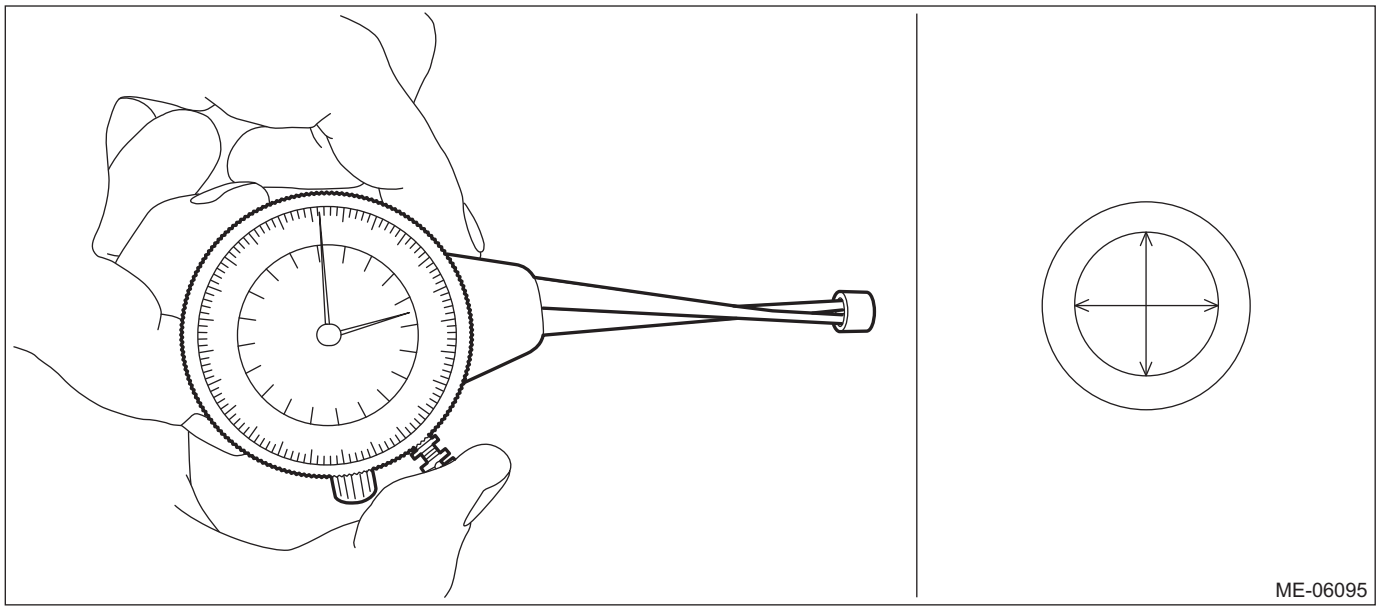
Valve stem end outer diameter:
Intake
Standard
5.455 — 5.470 mm (0.2148 — 0.2154 in)
Exhaust
Standard
5.445 — 5.460 mm (0.2144 — 0.2150 in)



(2) Using a caliper gauge, measure the inner diameter of valve shim. If it is not within the standard, replace the valve shim.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the inner diameter of the valve shim at the two locations as shown in the figure, and read the value of most worn location.
• If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Valve shim inner diameter:
Standard
5.500 — 5.560 mm (0.2165 — 0.2189 in)



(3) Calculate the clearance between valve and valve shim. If the clearance exceeds the standard, replace the valve or valve shim, whichever shows the greater amount of wear or damage.

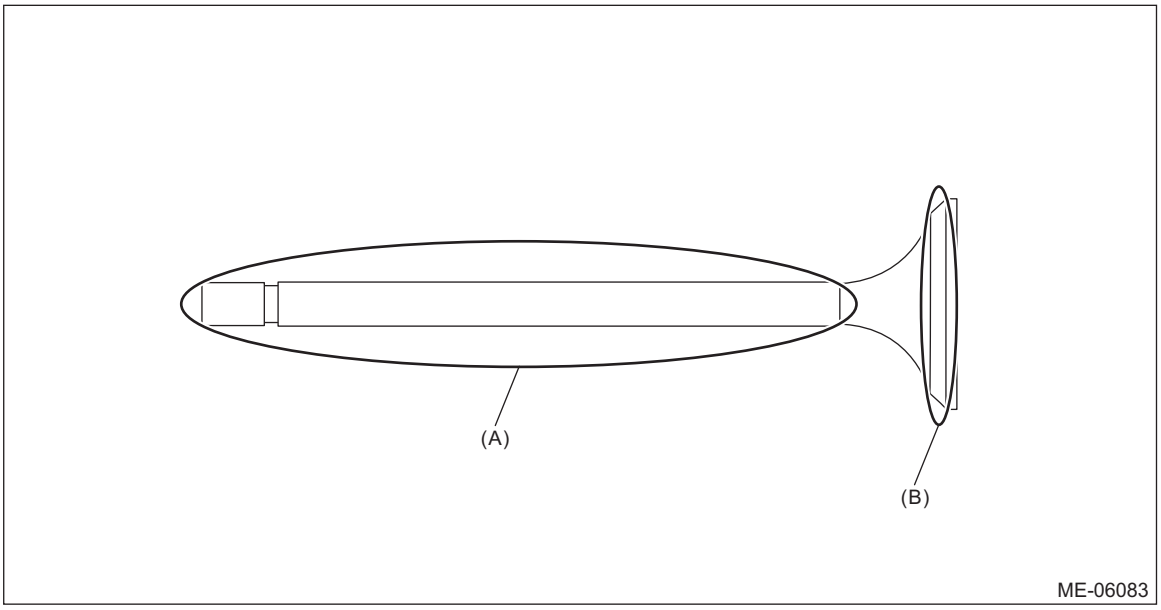
NOTE:
• When the valve is replaced, lap the valve. Refer to “VALVE SEAT” for lapping. <Ref. to ME(w/o STI)-230, VALVE SEAT, INSPECTION, Cylinder Head.>
• If the valve shim has to be replaced, check the cam clearance and replace with the suitable valve shim. <Ref. to ME(w/o STI)-41, WHEN TIMING CHAIN ASSEMBLY IS REMOVED, INSPECTION, Cam Clearance.>

Clearance between valve and valve shim:
Intake
Standard
0.030 — 0.105 mm (0.0012 — 0.0041 in)
Exhaust
Standard
0.040 — 0.115 mm (0.0016 — 0.0045 in)

4. VALVE SEAT

1) Check the valve seat for damage and deformation.
2) Check the seating width and seating position between valve and valve seat for the intake valve seat and exhaust valve seat.
(1) Clean the valve and valve seat.

(2) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the valve face (B).



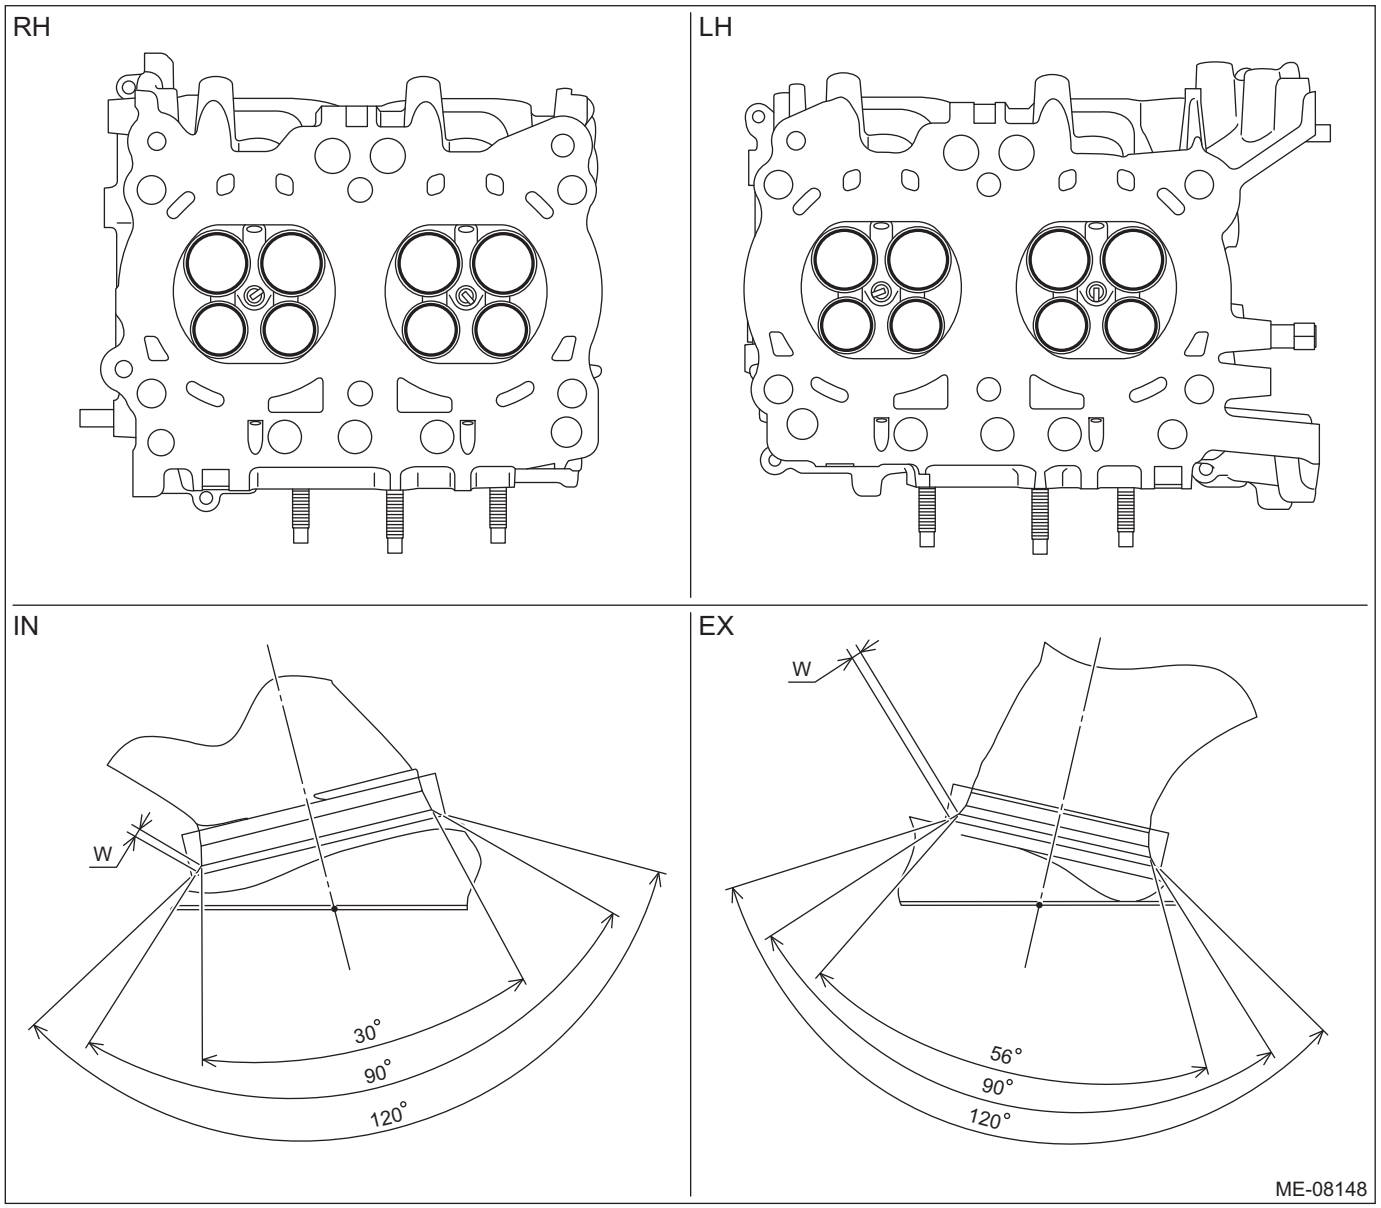
(3) Using the valve lapper, slowly insert the valve with red dye applied into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.

(4) Check the seating width “W” of valve seat as shown in the figure, using a caliper gauge. Check the seating width “W” between valve and valve seat by measuring the width of red dye on the seating surface of valve seat. If the seating width “W” between valve and valve seat is out of the standard, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

NOTE:

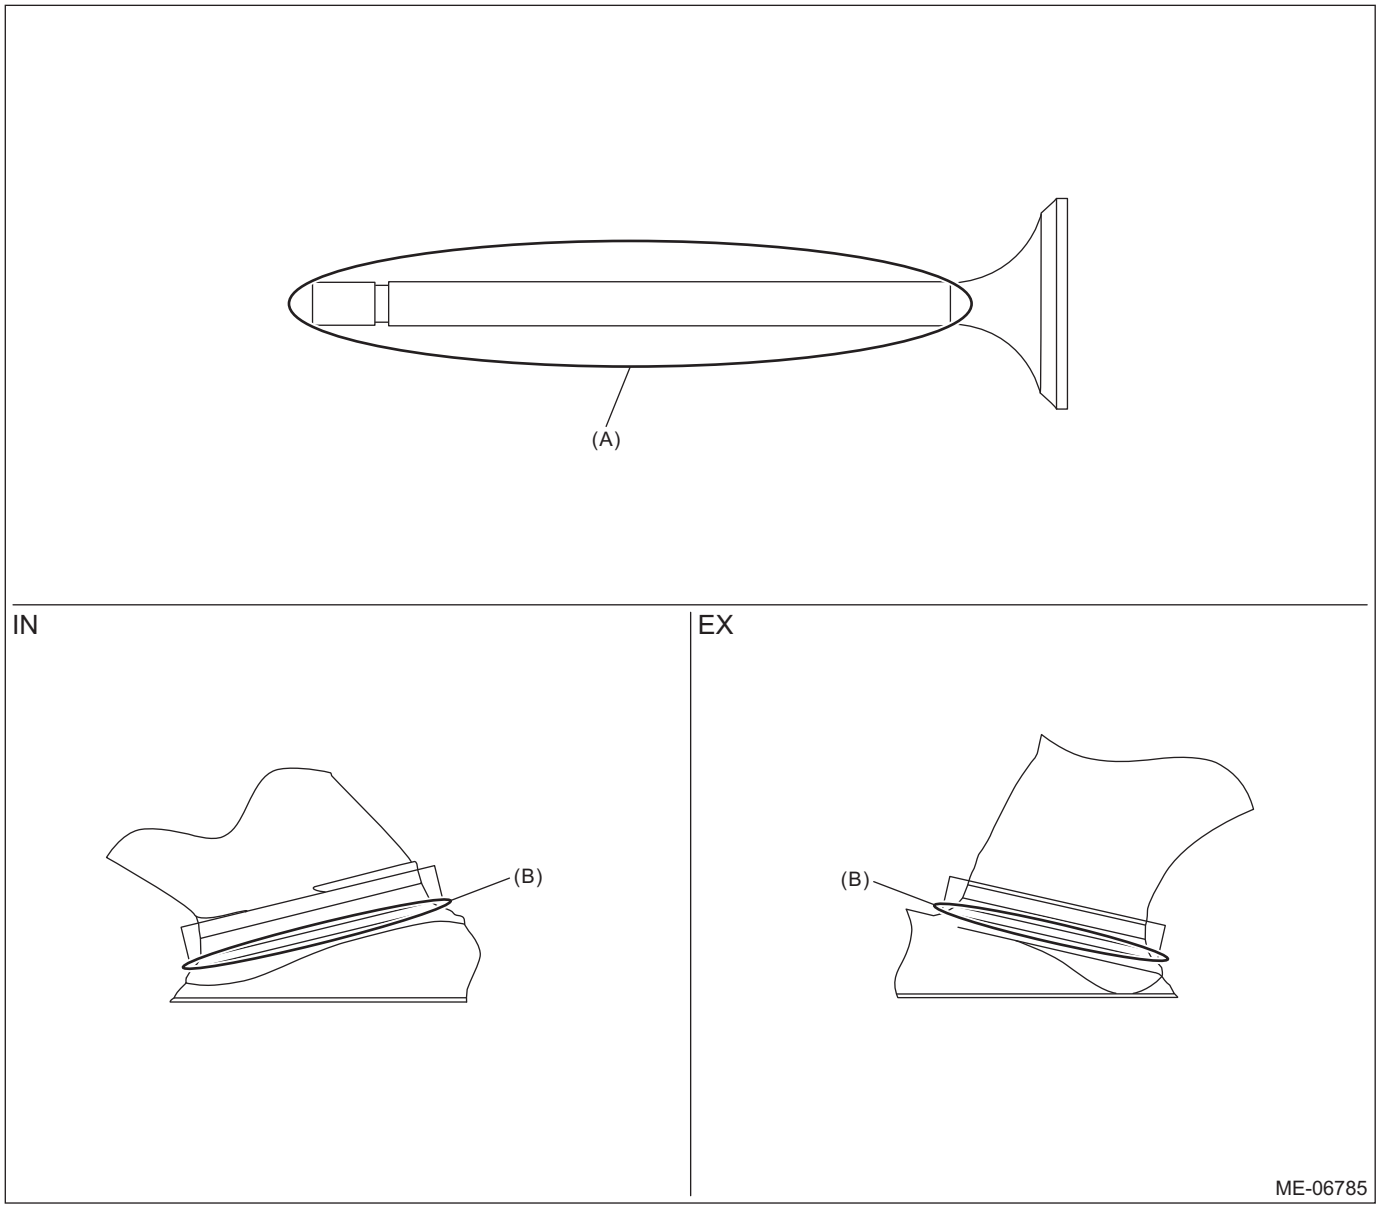
- When the red dye does not appear seamlessly on the valve seat seating surface, lap the valve. For lapping procedure, refer to step 4).
- When the red dye does not appear seamlessly on the valve seat seating surface even after lapping the valve, correct the valve seat seating surface using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Seating width W between valve and valve seat:
Intake
Standard
0.8 — 1.6 mm (0.0315 — 0.0630 in)
Exhaust
Standard
1.1 — 1.7 mm (0.0433 — 0.0669 in)



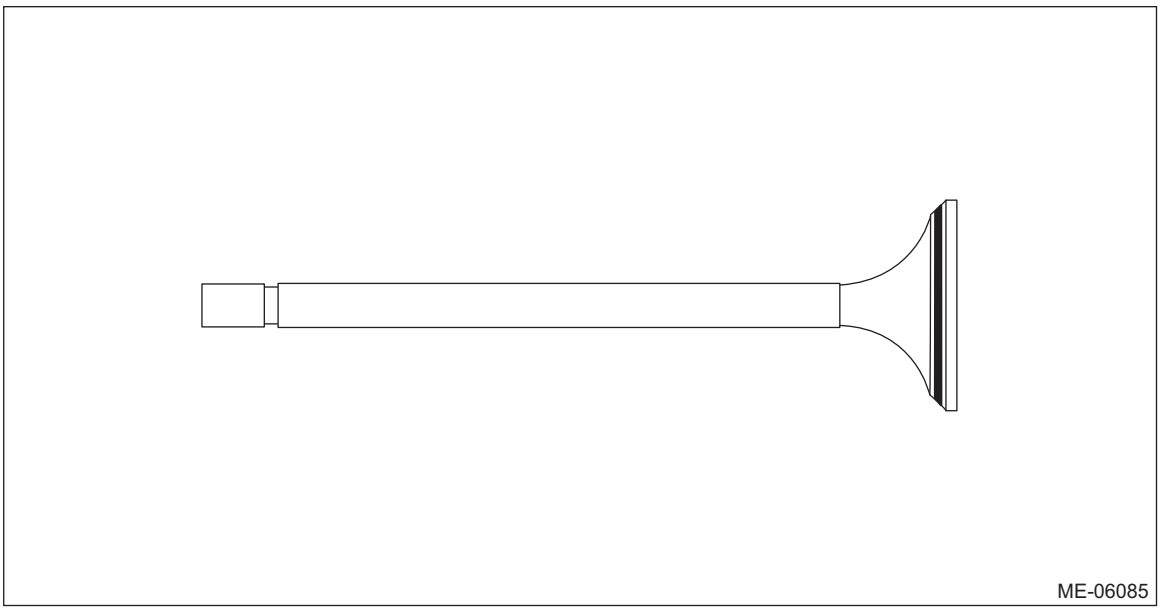
(5) Wipe off the red dye on the valve and valve seat completely.

(6) Coat the stem (A) of the valve lightly with engine oil and apply red dye evenly on the seating surface (B) between valve and valve seat.



(7) Using the valve lapper, slowly insert the valve into the valve guide. Lightly press the valve against the valve seat without turning the valve, and then slowly pull out the valve.
(8) Check the seating position between valve and valve seat. Check the seating position between valve and valve seat by checking the position of red dye on the valve face. If the seating position between valve and valve seat is not at the center of valve face, correct the seating surface of valve seat using the valve seat cutter. For correcting procedures of the valve seat seating surface, refer to step 3).

Seating position between valve and valve seat:
Valve face center



(9) After inspection, wipe off the red dye completely.

3) When correcting the seating surfaces of valve seat

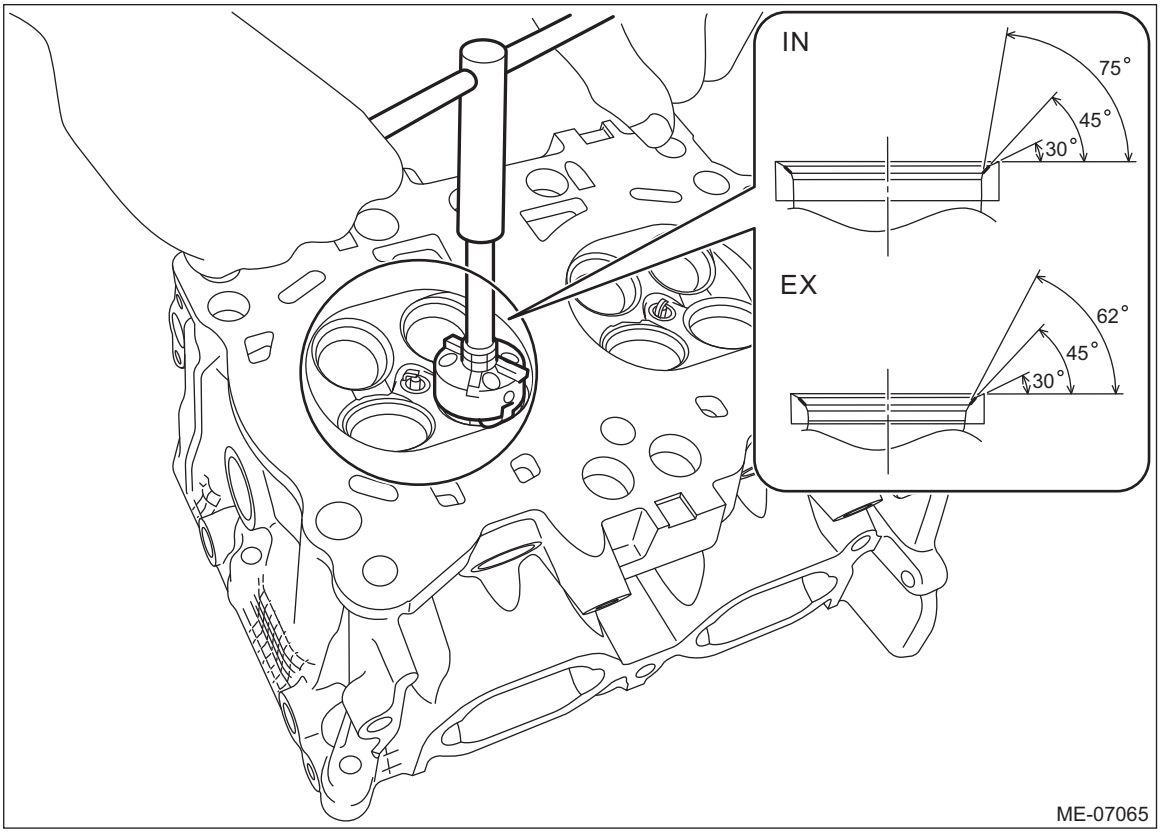
(1) Correct the seating angle between valve and valve seat using the 45° valve seat cutter.

NOTE:
• Select the size of the valve seat cutter by referring to the outer diameters of the intake valve and exhaust valve.

Valve outer diameter:
Intake
Standard
33.9 — 34.1 mm (1.3346 — 1.3425 in)
Exhaust
Standard
28.9 — 29.1 mm (1.1378 — 1.1457 in)

• Grind the seating surface so that the seating width between valve and valve seat becomes slightly larger than the standard value.
• Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.

Seating angle between valve and valve seat:
45°



(2) Lap the valve. For lapping procedure of the valve, refer to step 4).
(3) Check the seating position between valve and valve seat. For inspection of the seating position between valve and valve seat, refer to step 2).

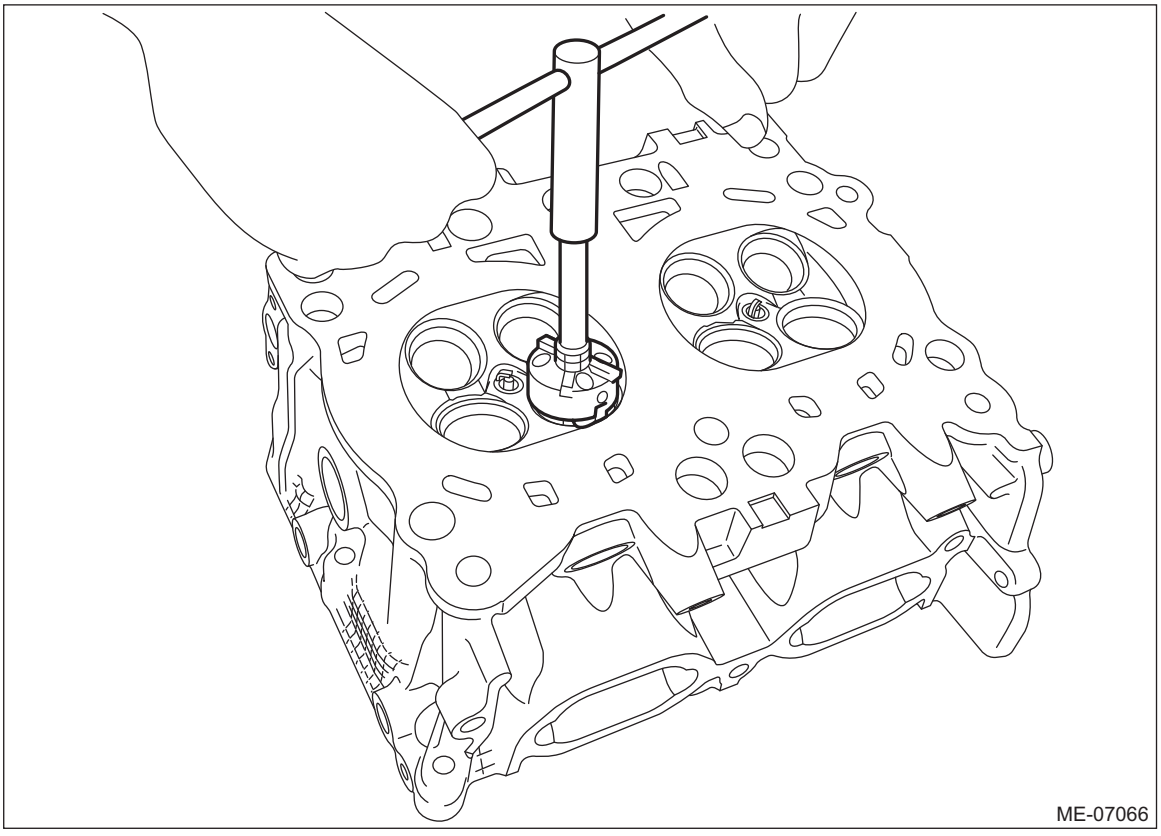
NOTE:
This procedure is necessary to select a seat cutter to be used in step (4).
(4) Using a seat cutter, correct the valve seat so that the seating width between valve and valve seat becomes the standard value.

NOTE:
- Select a proper valve seat cutter according to the following table.

Seating position between valve and valve seat	Seat cutter selection
	When the seating position of valve face is high, grind the surface using the 30° seat cutter until seating width between valve and valve seat becomes the standard value.
	When the seating position of valve face is low, grind the surface using the 75° (IN) or 62° (EX) seat cutter until seating width between valve and valve seat becomes the standard value.

Seating position between valve and valve seat	Seat cutter selection
	When the seating position of valve face is at center, grind the surface evenly using the 30° and 75° (IN) or 62° (EX) seat cutters until seating width between valve and valve seat becomes the standard value.

• Gradually reduce pressure at the end of grinding process in order to avoid creating a gap on the valve seat correcting surface.

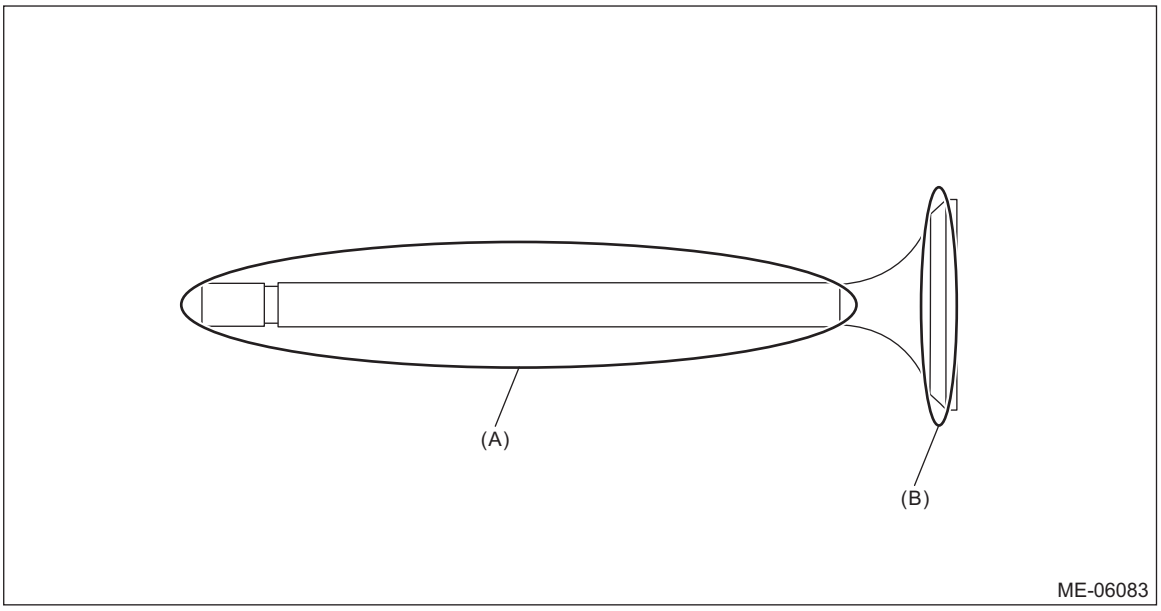


(5) Lap the valve. For lapping procedure of the valve, refer to step 4).

4) When lapping the valve

(1) Coat the stem (A) of the valve lightly with engine oil and put a small amount of valve compound evenly on the valve face (B).

NOTE:
• Be careful not to put the valve compound more than necessary.
• To avoid damaging the valve guide and valve stem, be careful not to let the valve compound contact the valve stem.



(2) Using the valve lapper, slowly insert the valve with the valve compound applied into the valve guide, and lap the seating surface between valve and valve seat. First, lift the valve and strike it against the valve seat twice, and then slightly turn the valve once. Repeat these steps as one set.

NOTE:
• To prevent the seating width between valve and valve seat from exceeding the standard value, be careful not to keep turning the valve while pressing it against the valve seat during lapping.
• Be careful not to lift the valve too far during lapping in order to prevent the valve from coming off the valve guide.

(3) Wipe off the valve compound on the valve and valve seat completely after lapping.

NOTE:
Be careful not to leave any valve compound in order to avoid malfunction.

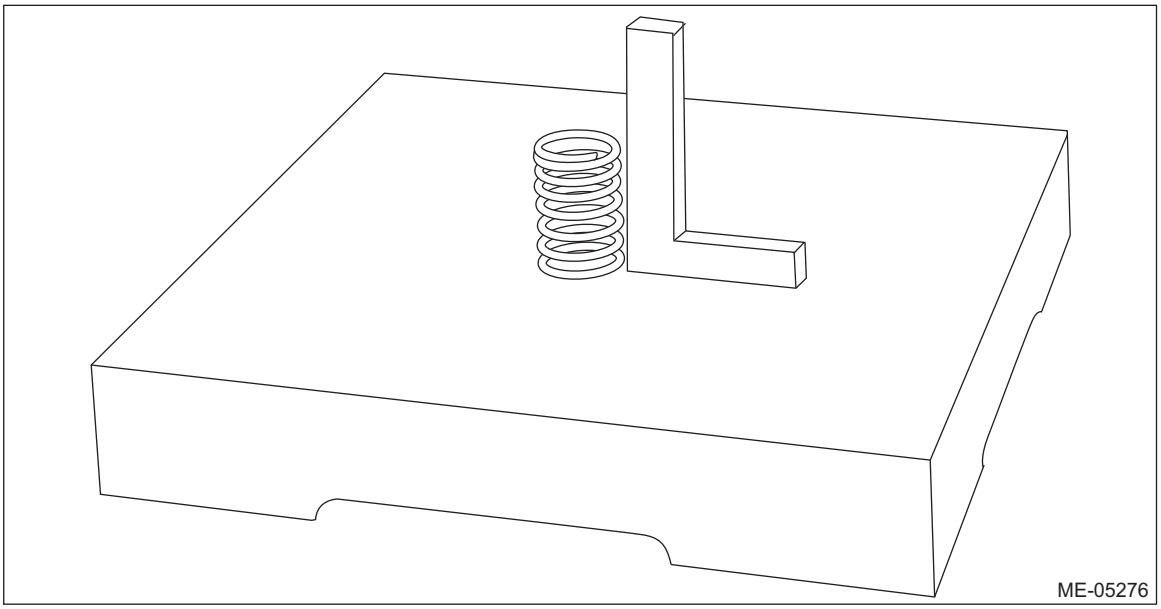
(4) Check the seating width and seating position between valve and valve seat.

5. VALVE SPRING

1) Check the valve spring for damage and deformation.
2) Using a caliper gauge, valve spring tester, surface plate and try square, check the valve spring free length (reference), tension/spring height and squareness. If it is not within the standard, replace the valve spring.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• The free length of the valve spring is described as a reference. There is no need to replace the valve spring if the free length of the valve spring alone is out of standard.

• To check the squareness of the valve spring, stand the valve spring on a surface plate and check its deflection at the top of the valve spring using a try square.



Valve spring free length (reference):
CVT model
Standard
41.68 mm (1.6409 in)
MT model
Standard
41.06 mm (1.6165 in)

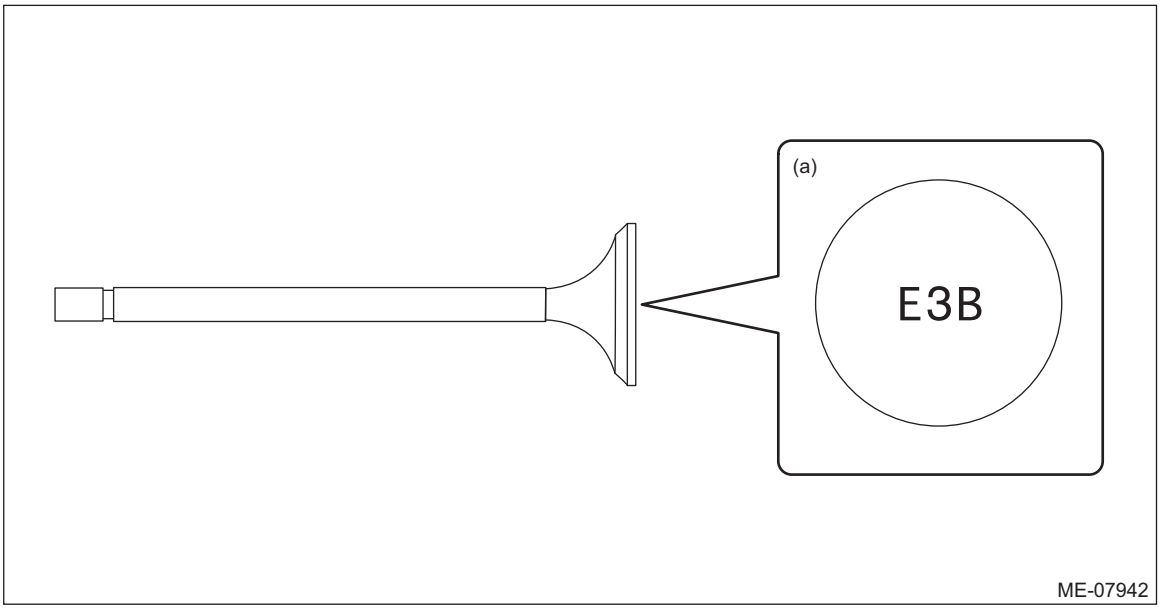
Valve spring tension/spring height:
CVT model
Set
Standard
182 — 210 N (18.56 — 21.41 kgf, 40.92 — 47.22 lbf)/33.0 mm (1.2992 in)
Lift
Standard
502 — 554 N (51.19 — 56.49 kgf, 112.87 — 124.56 lbf)/22.0 mm (0.8661 in)
MT model
Set
Standard
182 — 210 N (18.56 — 21.41 kgf, 40.92 — 47.22 lbf)/33.0 mm (1.2992 in)
Lift
Standard
552 — 610 N (56.29 — 62.20 kgf, 124.11 — 137.15 lbf)/22.0 mm (0.8661 in)

Valve spring squareness:
Standard
2.5°, 1.8 mm (0.0709 in) or less

F: DISPOSAL

WARNING:
• Metallic sodium is encapsulated in the exhaust valve. Metallic sodium is a strong alkaline material and poses a risk of causing a severe chemical reaction. Use great care when handling and disposing it.
• If the metallic sodium gets into your eyes, you may lose your sight. If it touches the skin, you may get burned severely or if it touches flame, fire may be caused by chemical reaction. Therefore, do not disassemble the exhaust valve.

- **It is safe when the metallic sodium encapsulated in the exhaust valve is not exposed to the air.**
- **When the exhaust valve is broken, remove the broken exhaust valve, and dispose of the metallic sodium.**
- **Do not intentionally break the exhaust valve and take out the metallic sodium.**
- **Identify the exhaust valve in which the metallic sodium is encapsulated with the embossed mark.**



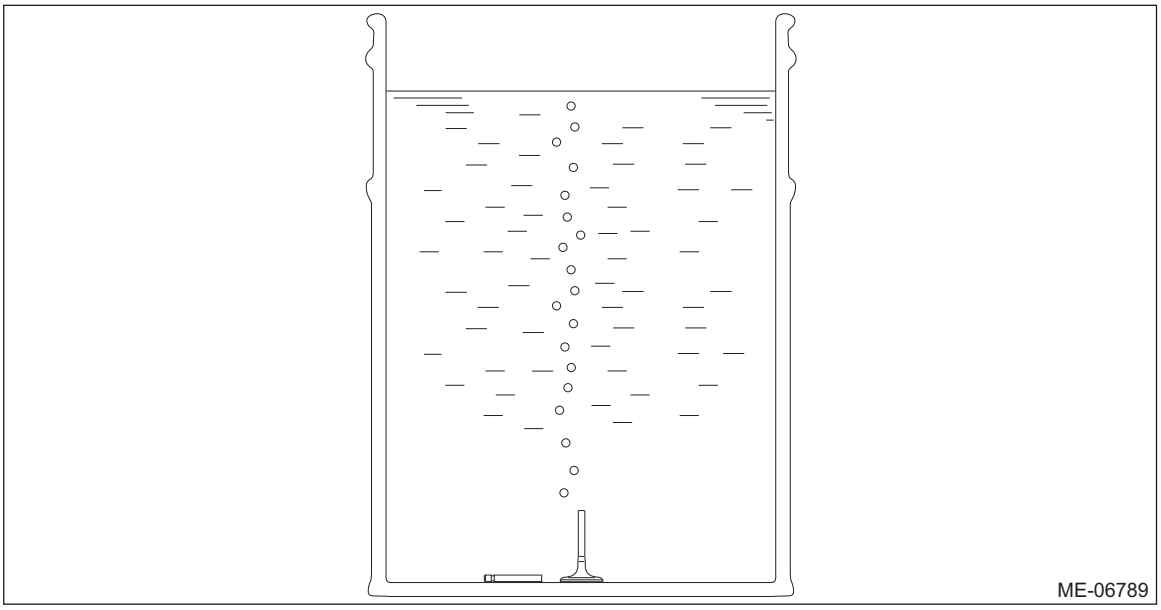
(a) Embossed mark (Identification: E3B)

CAUTION:
- **When disposing of the exhaust valve that is not broken, entrust the disposal processing to the industrial waste disposer in charge of dissolution treatment.**
- **When the exhaust valve is broken, remove it from the cylinder head, perform appropriate processing in the same manner as the general steel material.**
- **When performing processing, be careful of the following.**
  1. **Prepare the fire extinguisher nearby.**
  2. **Wear the protective goggles.**
  3. **Wear rubber gloves.**

1) Wear rubber gloves and remove the broken exhaust valve from the cylinder head.
2) Prepare large container (bucket or oil can) in well-ventilated place, and fill the container with water (10 L or more).
3) Using a pair of large tweezers or pliers, immerse the broken exhaust valve in the water vertically.

CAUTION:
- **Completely immerse the broken exhaust valve in the water.**
- **Hydrogen gas is produced by the chemical reaction. Therefore, always keep the container away from open flames such as sparks.**

- **Because the severe chemical reaction is developed, keep at least 2 to 3 m away from the container.**



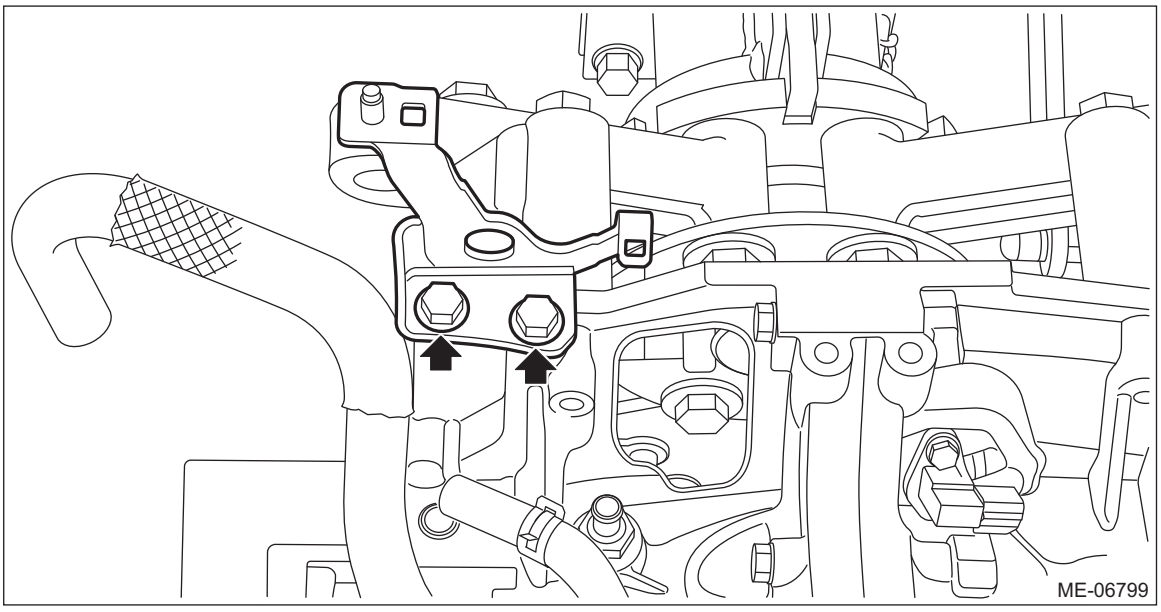
4) After completion of chemical reaction (after the elapse of 4 to 5 hours), carefully take out the exhaust valve using a pair of large tweezers or pliers, and dispose of the exhaust valve according to the same disposal procedure as general steel materials.

CAUTION:
- **Concerning the liquid waste disposal of the liquid (sodium hydrate) produced in a chemical reaction, follow all governmental regulations and local regulations related to the liquid waste disposal.**
- **If the liquid produced in a chemical reaction (sodium hydrate) should touch the skin, immediately wash it away with plenty water.**

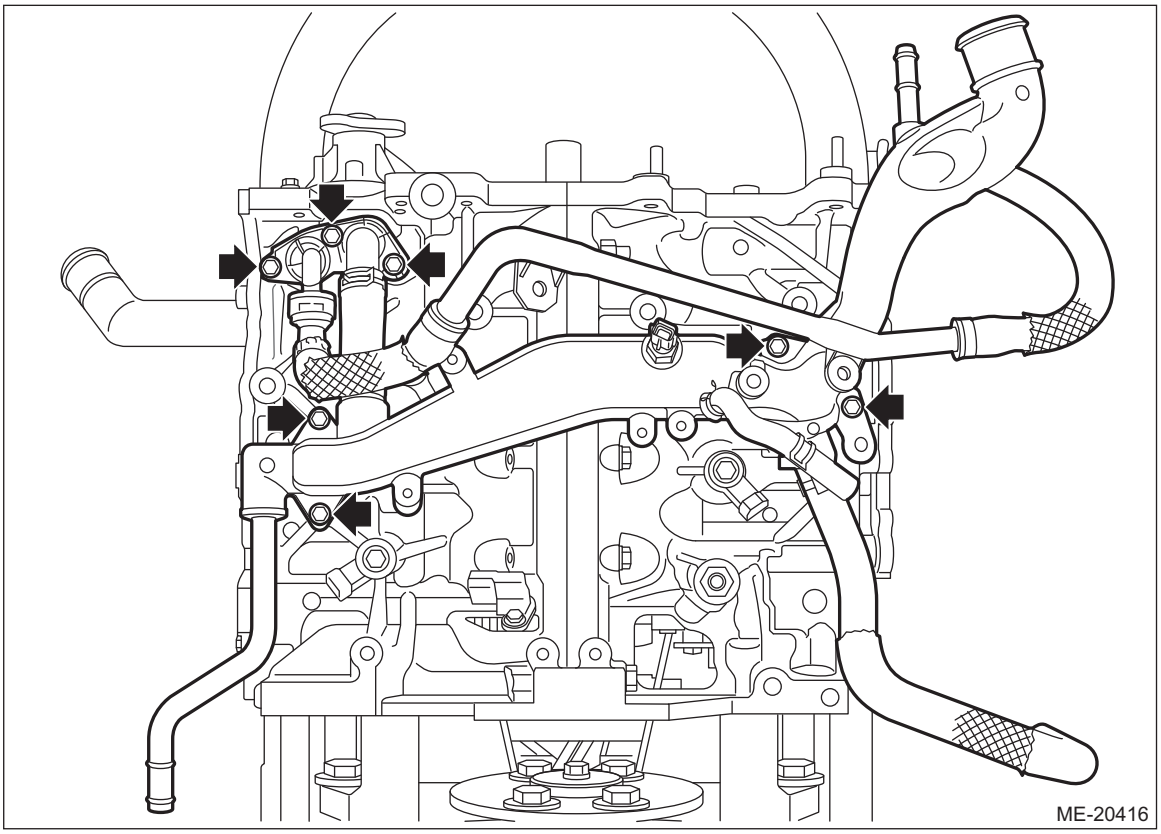
22.Cylinder Block

A: REMOVAL

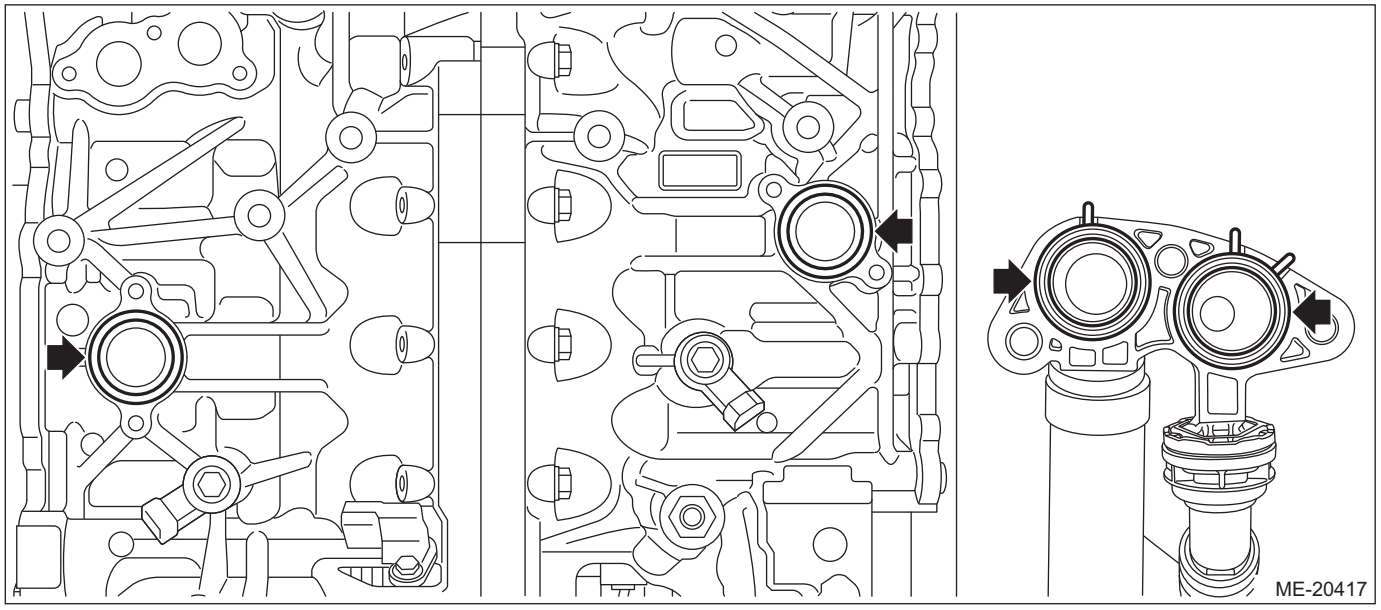
1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the crankshaft position sensor plate with drive plate. (CVT model) <Ref. to CVT(TR690)-140, REMOVAL, Drive Plate.>
3) Remove the clutch disc and cover. (MT model) <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
4) Remove the crankshaft position sensor plate with flywheel. (MT model) <Ref. to CL-15, REMOVAL, Flywheel.>
5) Remove the cylinder head. <Ref. to ME(w/o STI)-202, REMOVAL, Cylinder Head.>
6) Remove the crank sprocket. <Ref. to ME(w/o STI)-143, REMOVAL, Crank Sprocket.>
7) Remove the engine rear hanger from cylinder block RH.



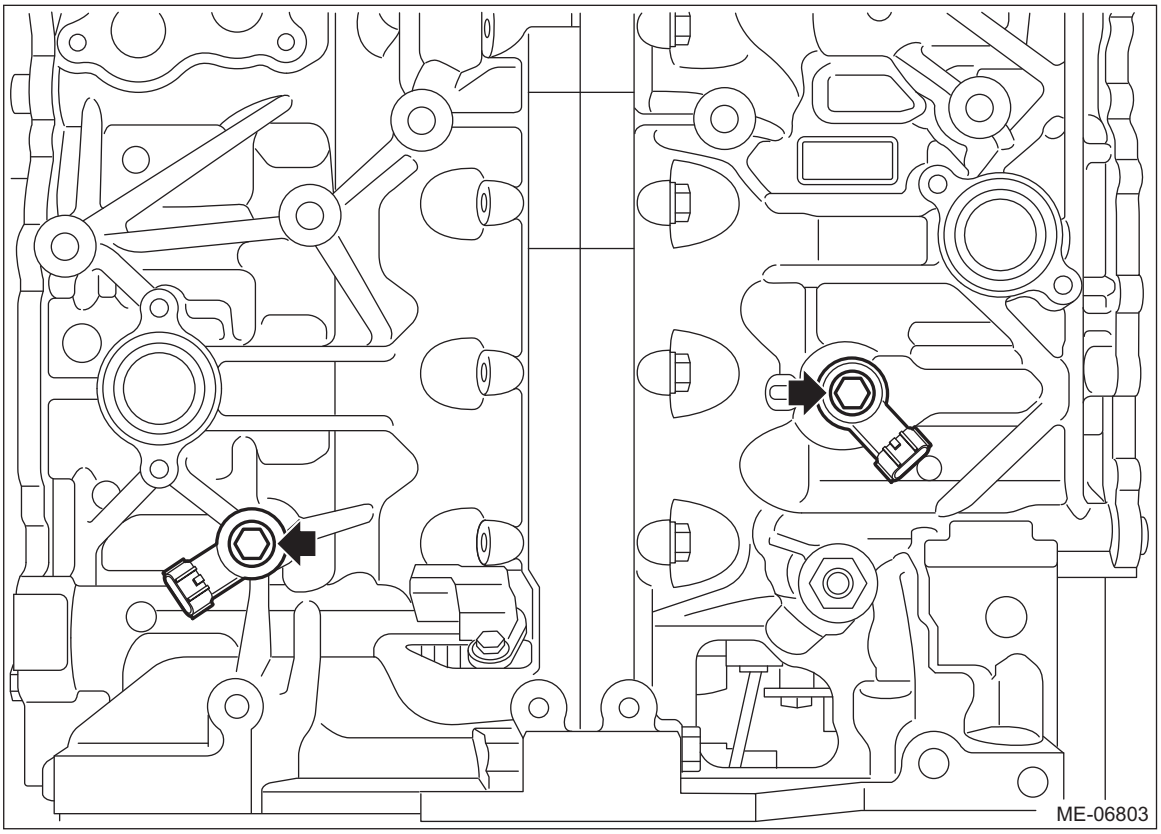
8) Remove the bolts securing the water pipe assembly and PCV connector to the cylinder block, and remove the water pipe assembly and PCV connector as a set from cylinder block.



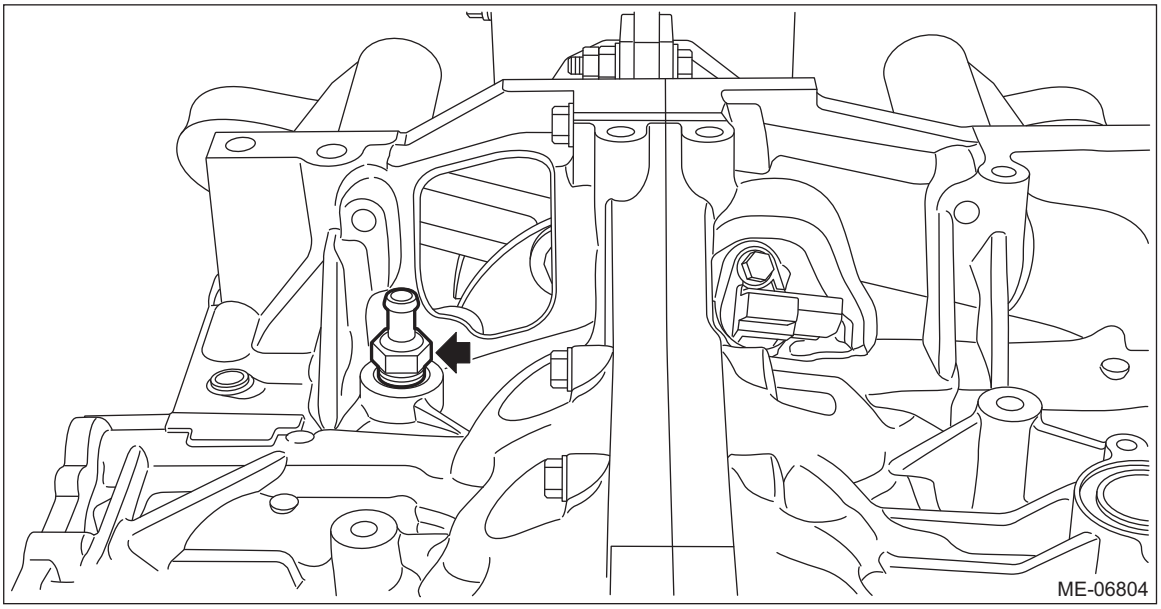
9) Remove the O-ring from the cylinder block and PCV connector.



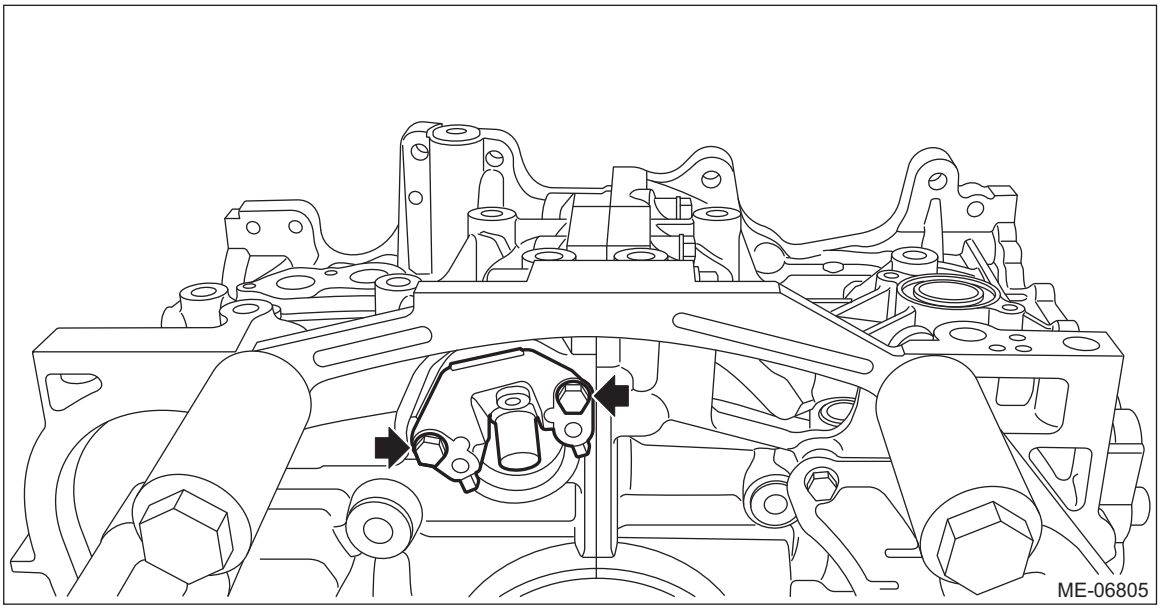
10) Remove the knock sensor from cylinder block LH.



11) Remove the PCV valve from the cylinder block RH.



12) Remove the bolts securing the crankshaft position sensor holder from the cylinder block LH, and remove the crankshaft position sensor with crankshaft position sensor holder.

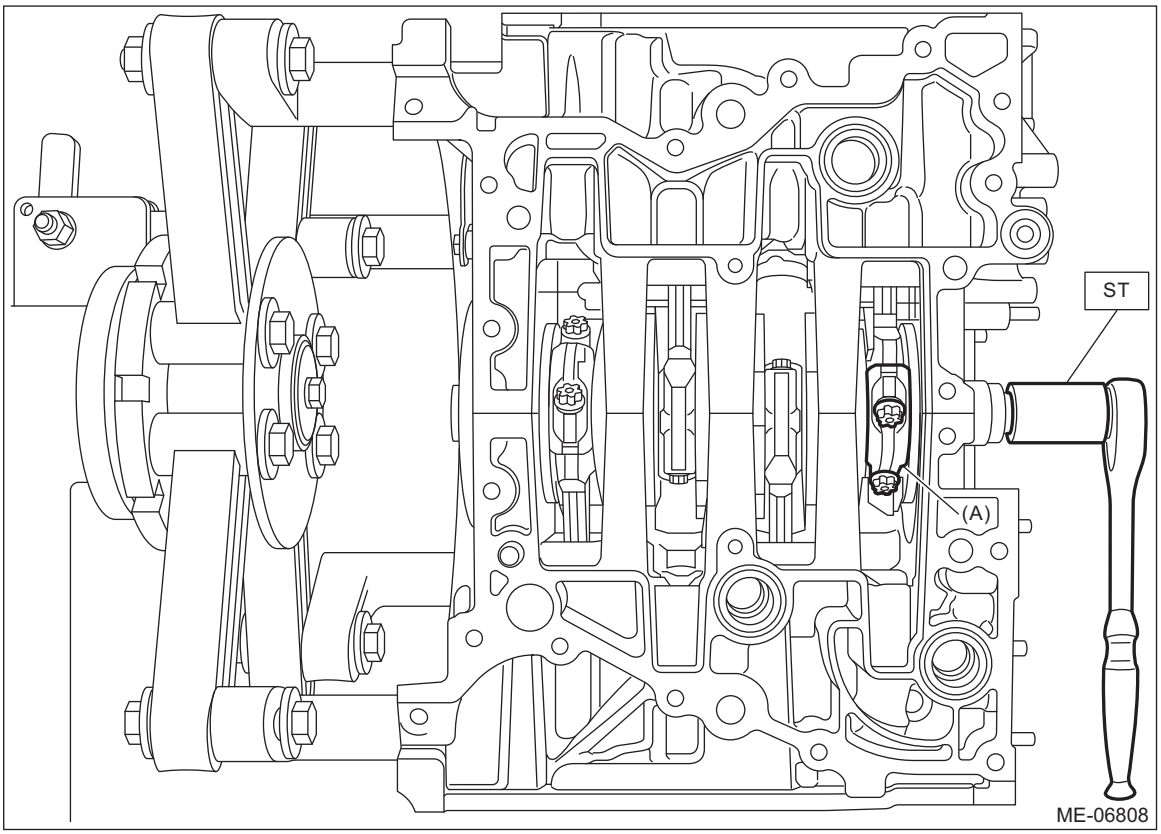


13) Remove the oil pan upper. <Ref. to LU(w/o STI)-19, OIL PAN UPPER, REMOVAL, Oil Pan.>
14) Set the part so that the cylinder block RH is on the upper side.
15) Remove the #1 and #3 connecting rod caps and pistons from the cylinder block.

NOTE:
Mark each connecting rod cap and piston with a cylinder number.

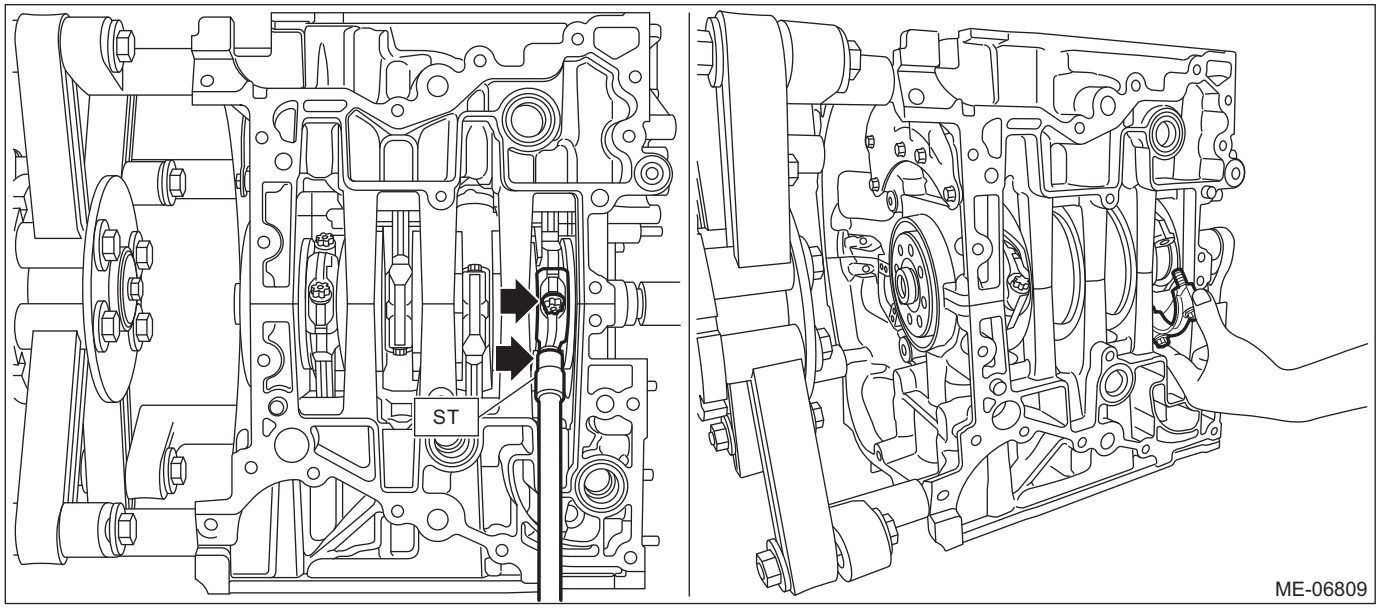
(1) Turn the crankshaft so that the #1 connecting rod cap (A) is located at the position shown in the figure using ST.

ST 18252AA000 CRANKSHAFT SOCKET



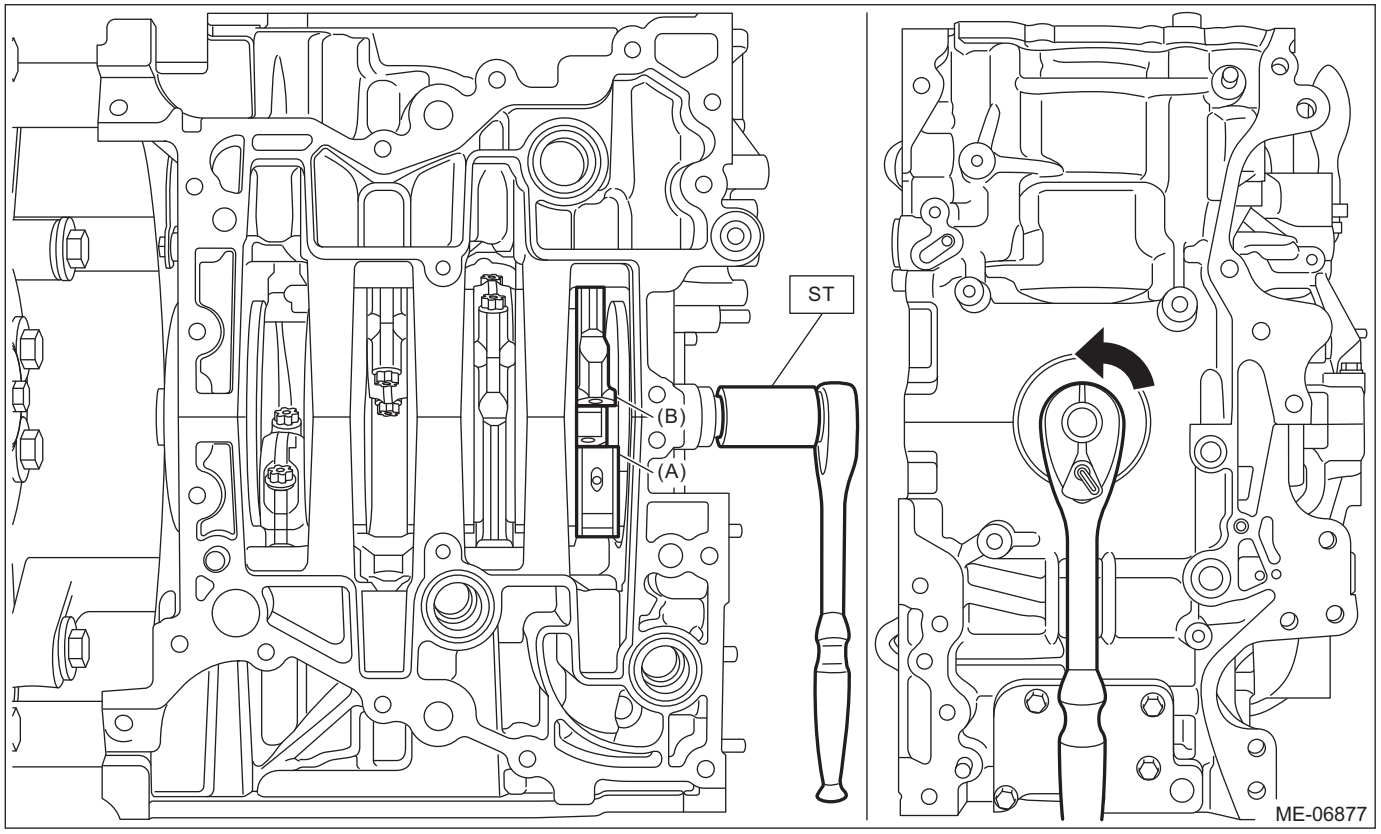
(2) Using ST, loosen the #1 connecting rod cap bolt, and remove the #1 connecting rod cap bolt and #1 connecting rod cap.

ST 18270AA020 SOCKET

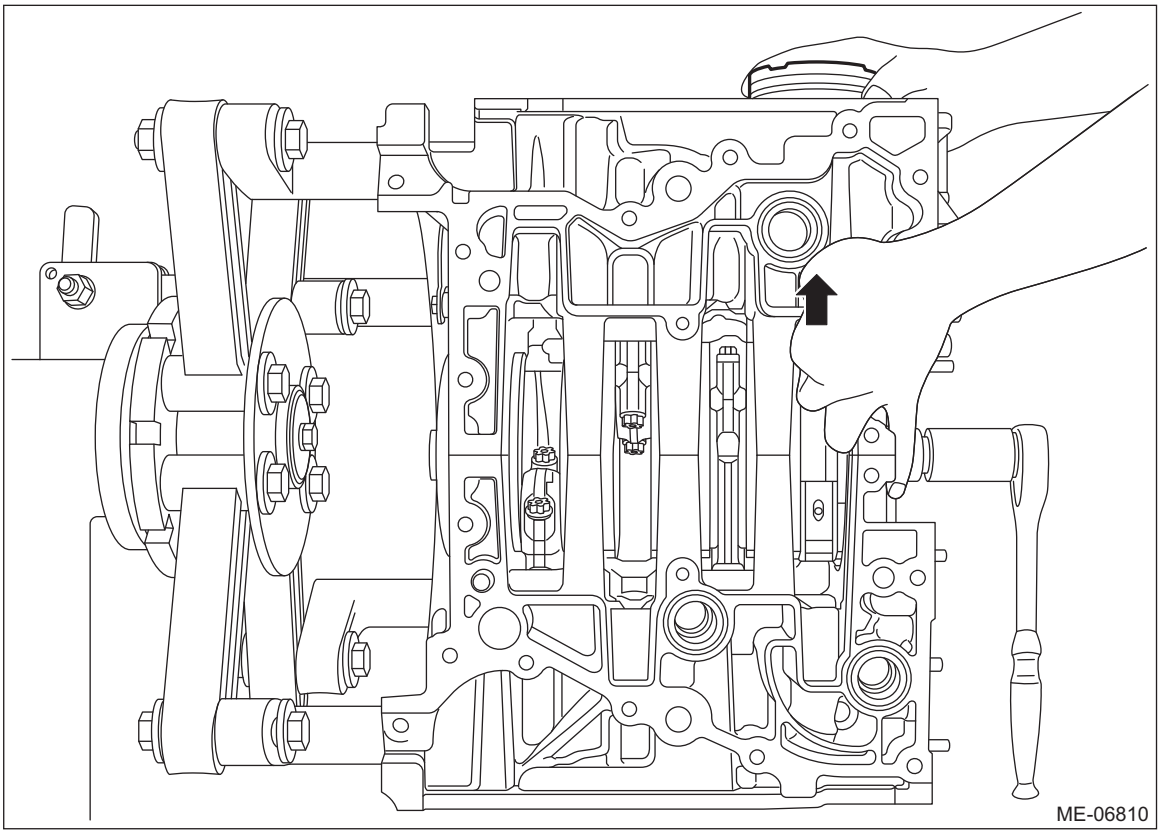


(3) Using the ST, turn the crankshaft counterclockwise and separate the positions of the #1 pin (A) of crankshaft and the large end (B) of #1 connecting rod.

ST 18252AA000 CRANKSHAFT SOCKET

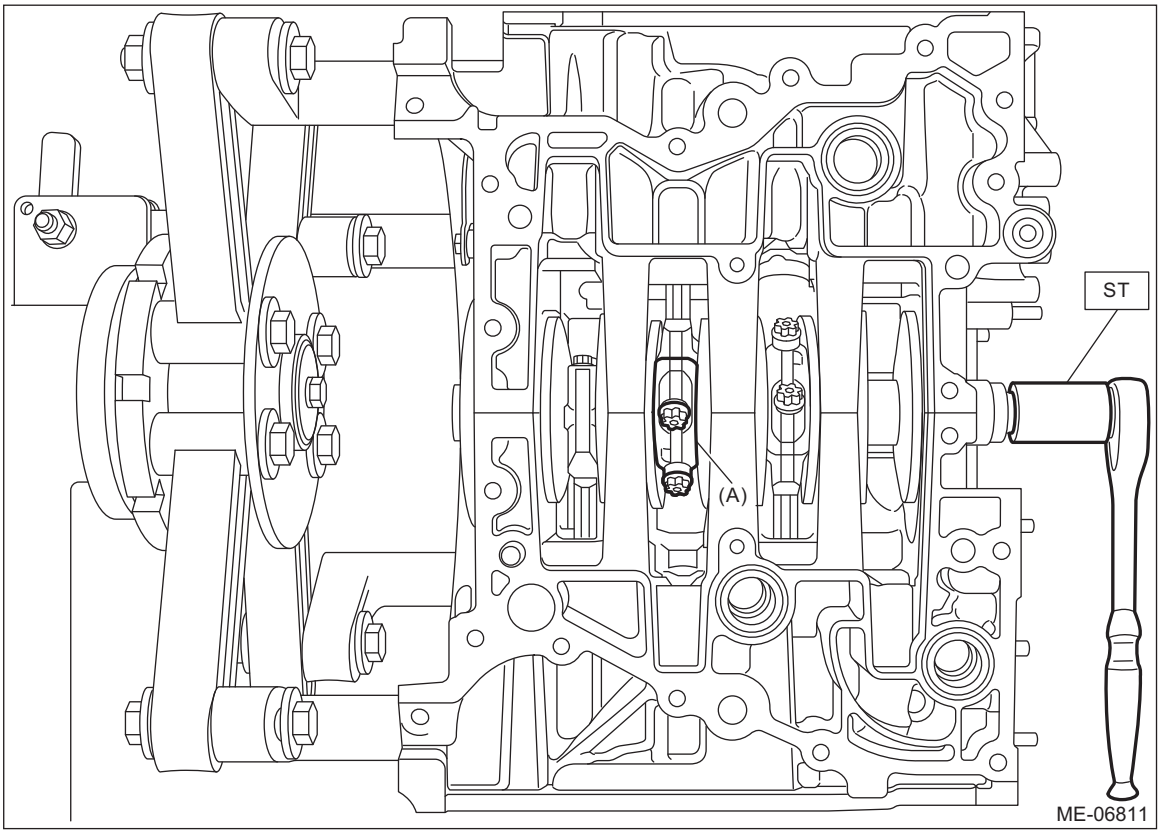


(4) Push the #1 connecting rod in the direction of the arrow, and remove the #1 piston with #1 connecting rod from the cylinder block.



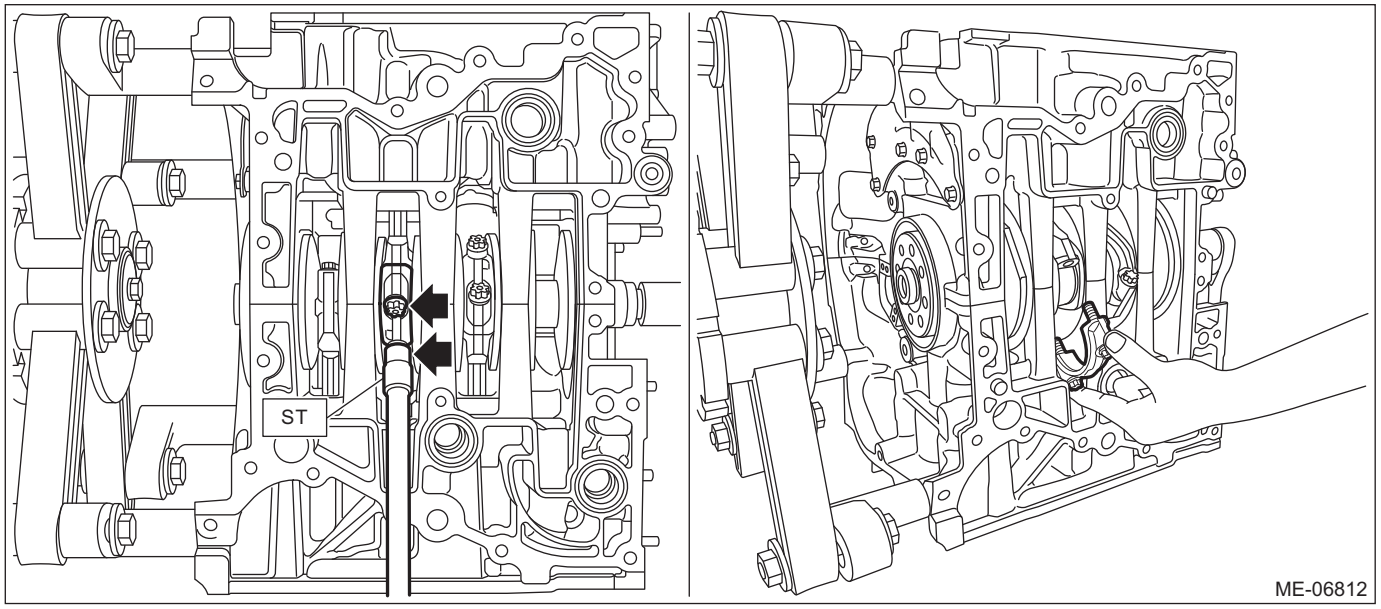
(5) Turn the crankshaft so that the #3 connecting rod cap (A) is located at the position shown in the figure using ST.

ST 18252AA000 CRANKSHAFT SOCKET



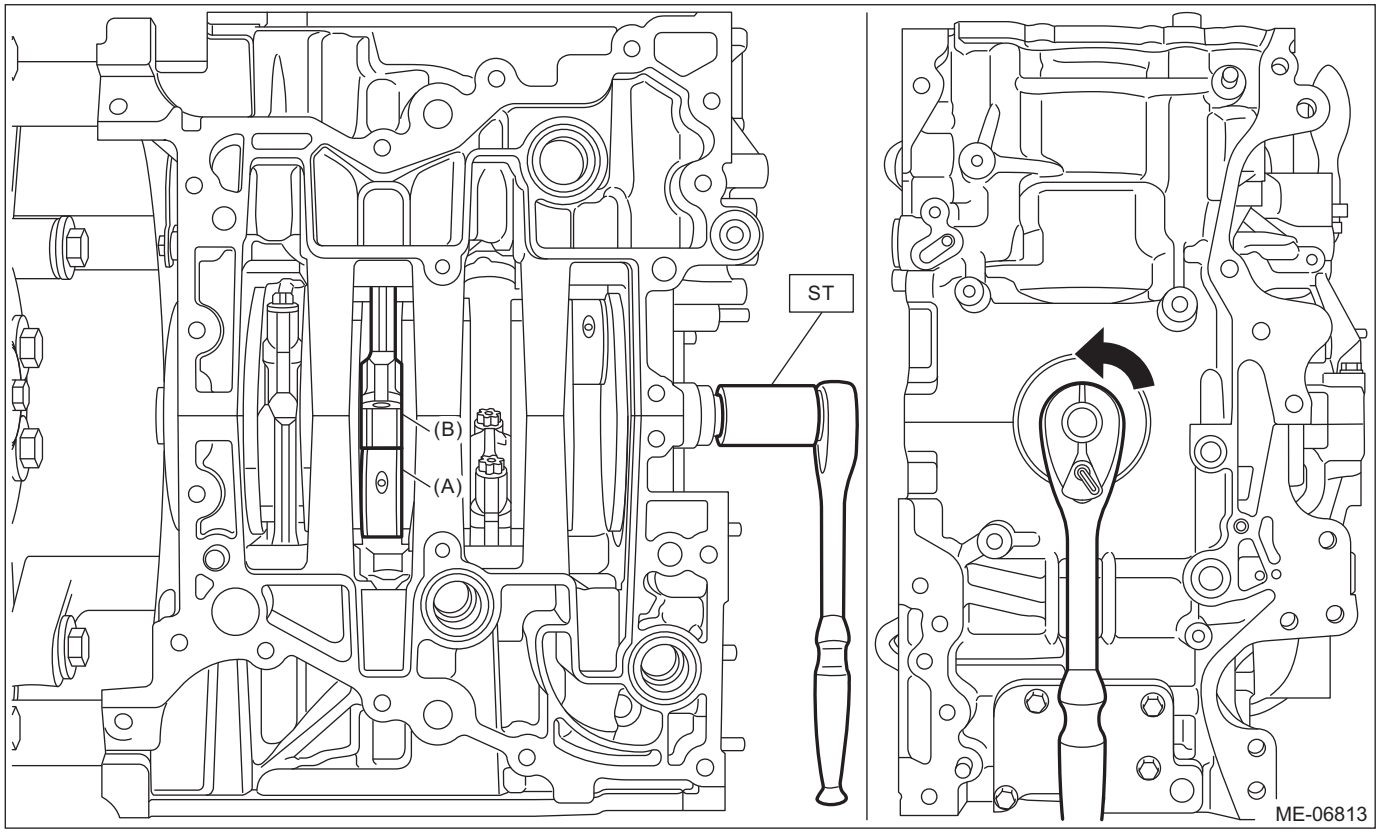
(6) Using ST, loosen the #3 connecting rod cap bolt, and remove the #3 connecting rod cap bolt and #3 connecting rod cap.

ST 18270AA020 SOCKET

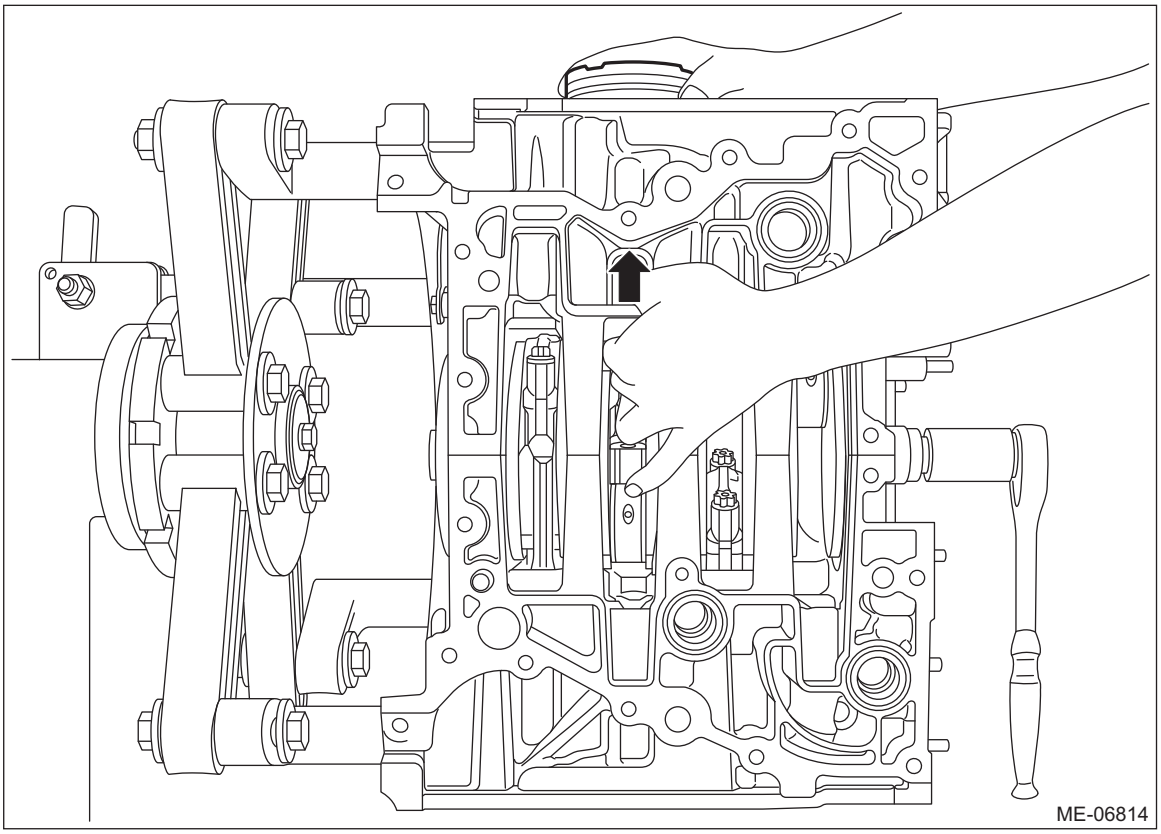


(7) Using the ST, turn the crankshaft counterclockwise and separate the positions of the #3 pin (A) of crankshaft and the large end (B) of #3 connecting rod.

ST 18252AA000 CRANKSHAFT SOCKET

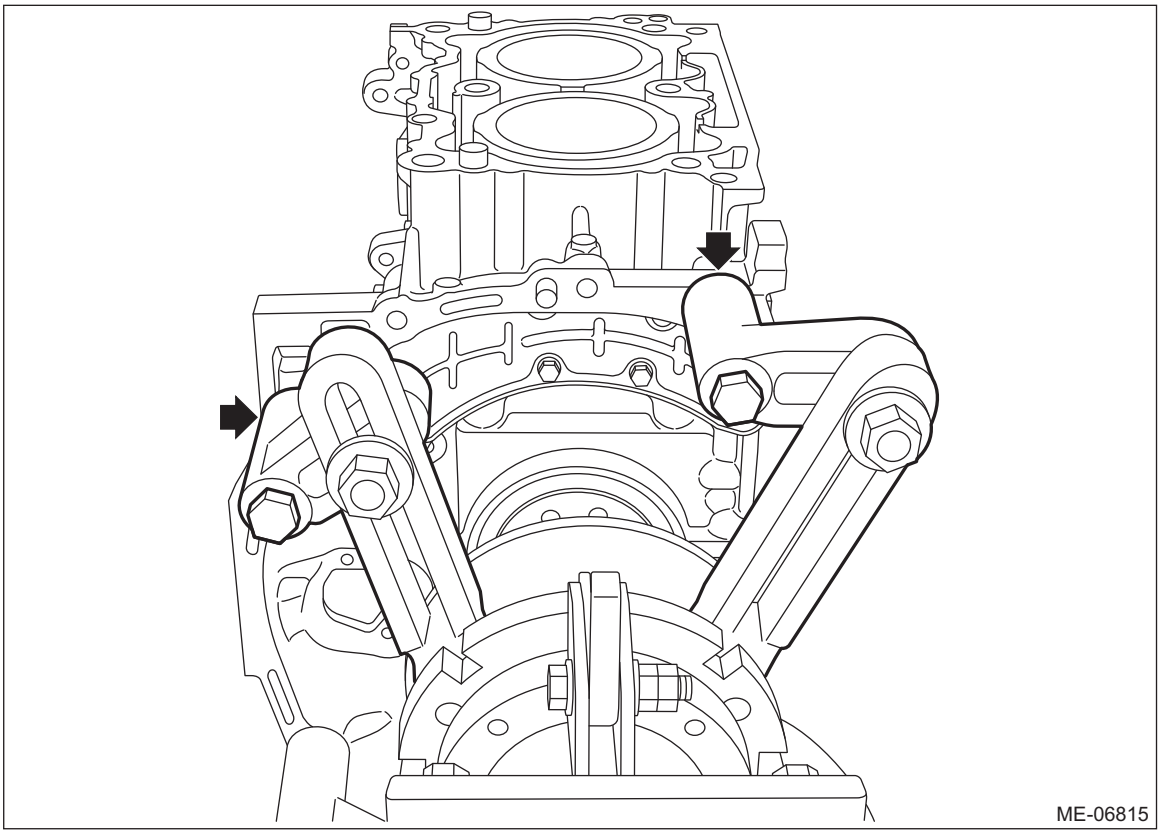


(8) Push the #3 connecting rod in the direction of the arrow, and remove the #3 piston with #3 connecting rod from the cylinder block.

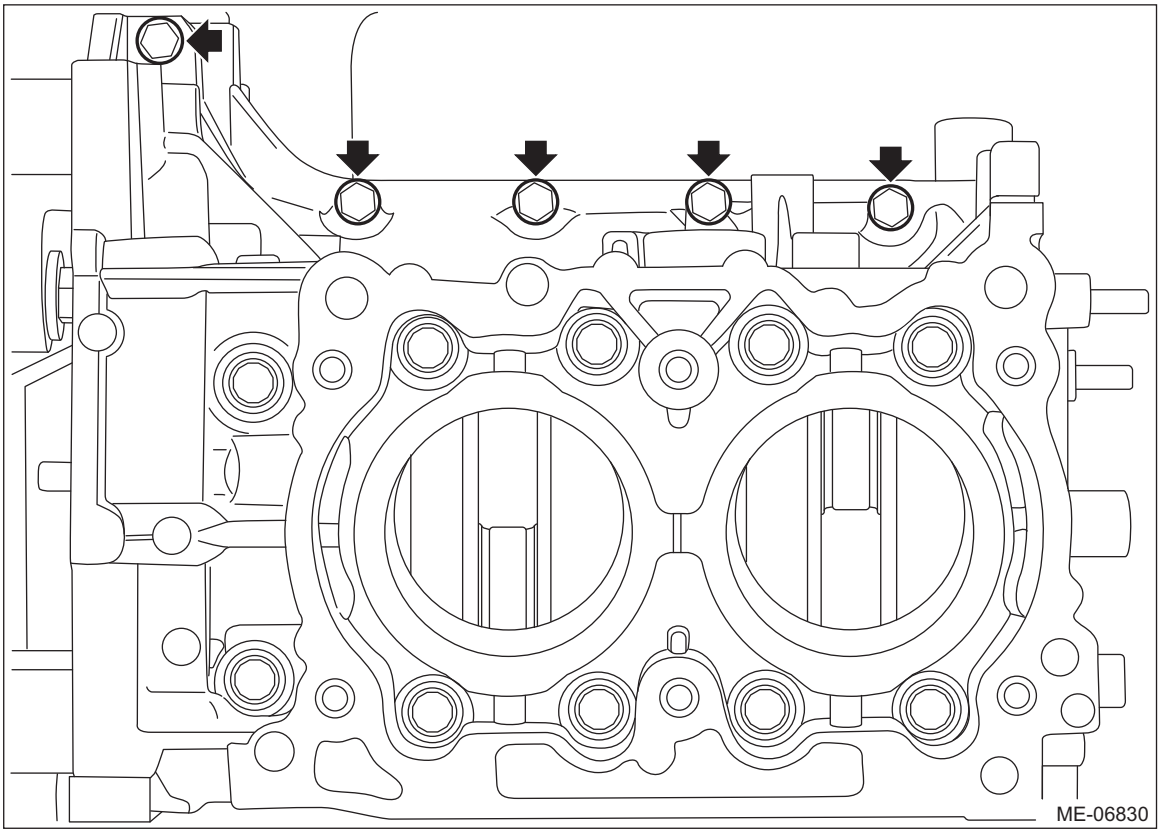


16) Set the part so that the cylinder block LH is on the upper side.
17) Remove #2 and #4 connecting rod caps and pistons in the same removal procedure as #1 and #3 connecting rod caps and pistons.
18) Set the part so that the cylinder block RH is on the upper side, and separate the cylinder block.

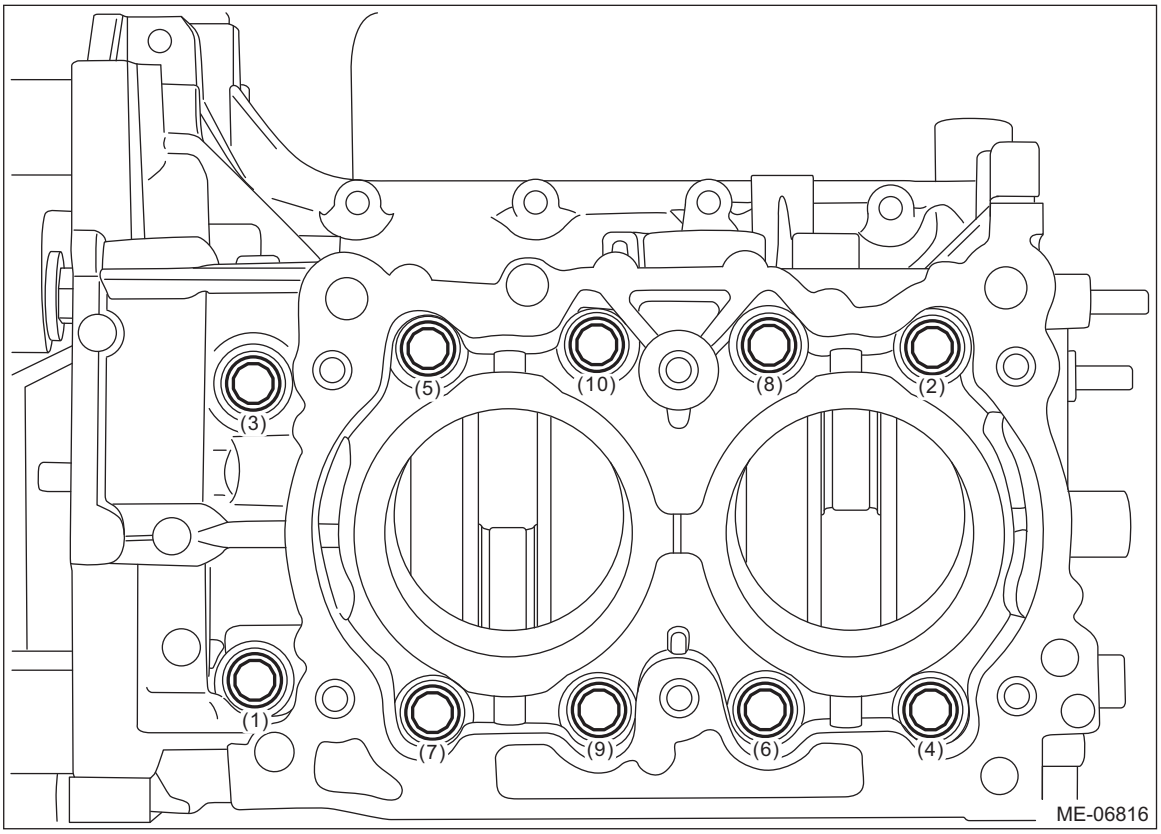
(1) Remove the engine stand from the cylinder block RH.



(2) Remove the bolt shown in the figure.



(3) Loosen the cylinder block mounting bolts in numerical order as shown in the figure.

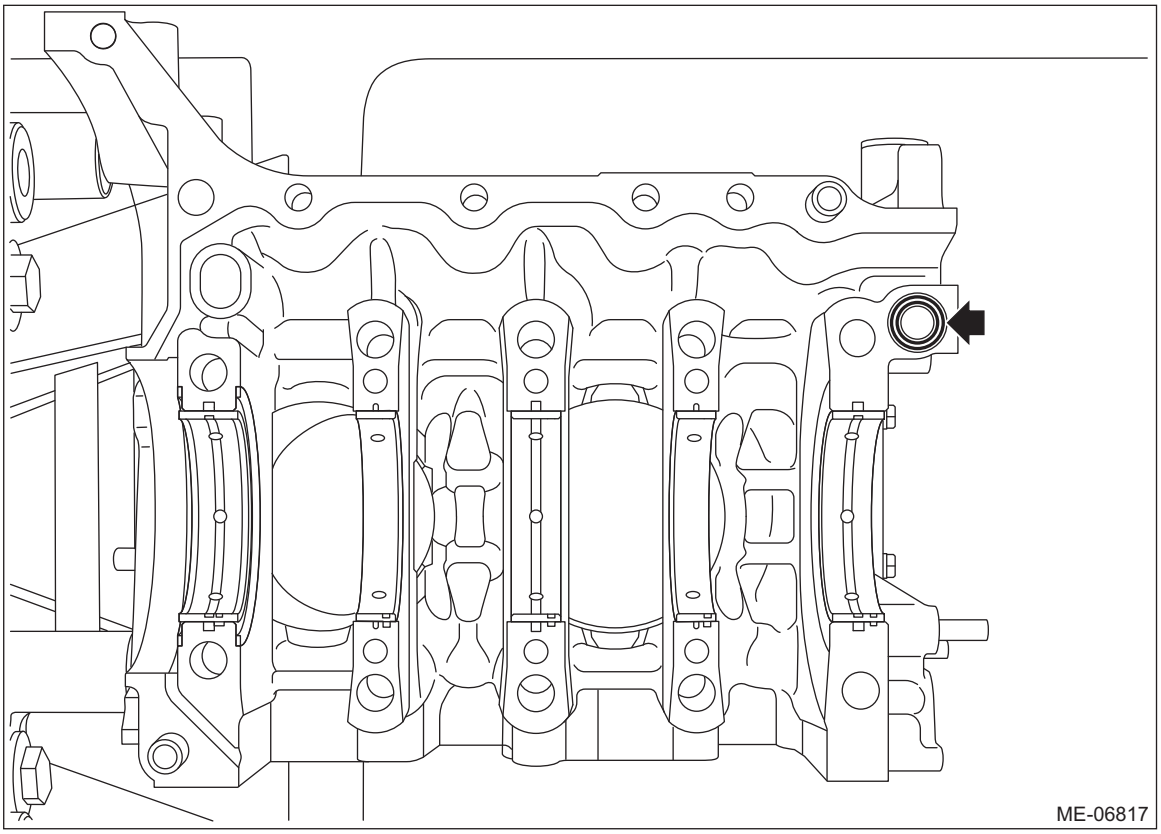


(4) While tapping the cylinder block RH with a plastic hammer, separate the cylinder block RH from the cylinder block LH.

NOTE:
Lift the cylinder block RH gradually, and confirm that the crankshaft is remaining in the cylinder block LH. If the cylinder block RH is lifted carelessly when separating, the crankshaft may stick to cylinder block RH, then fall off.

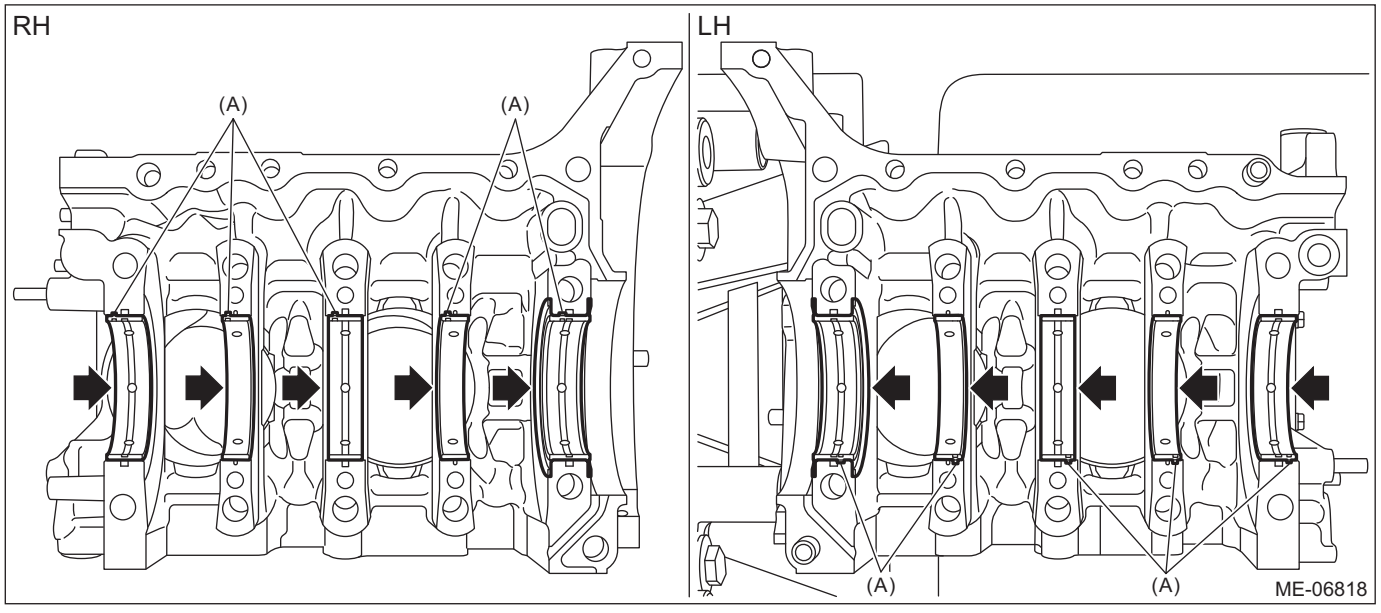
19) Remove the crankshaft from cylinder block LH, and remove the rear oil seal.

20) Remove the O-ring from the cylinder block LH.



21) Remove the crankshaft bearings from the cylinder block.

NOTE:
- Be careful not to confuse the crankshaft bearing combination.
- Press the bearing at the end opposite to locking lip (A).

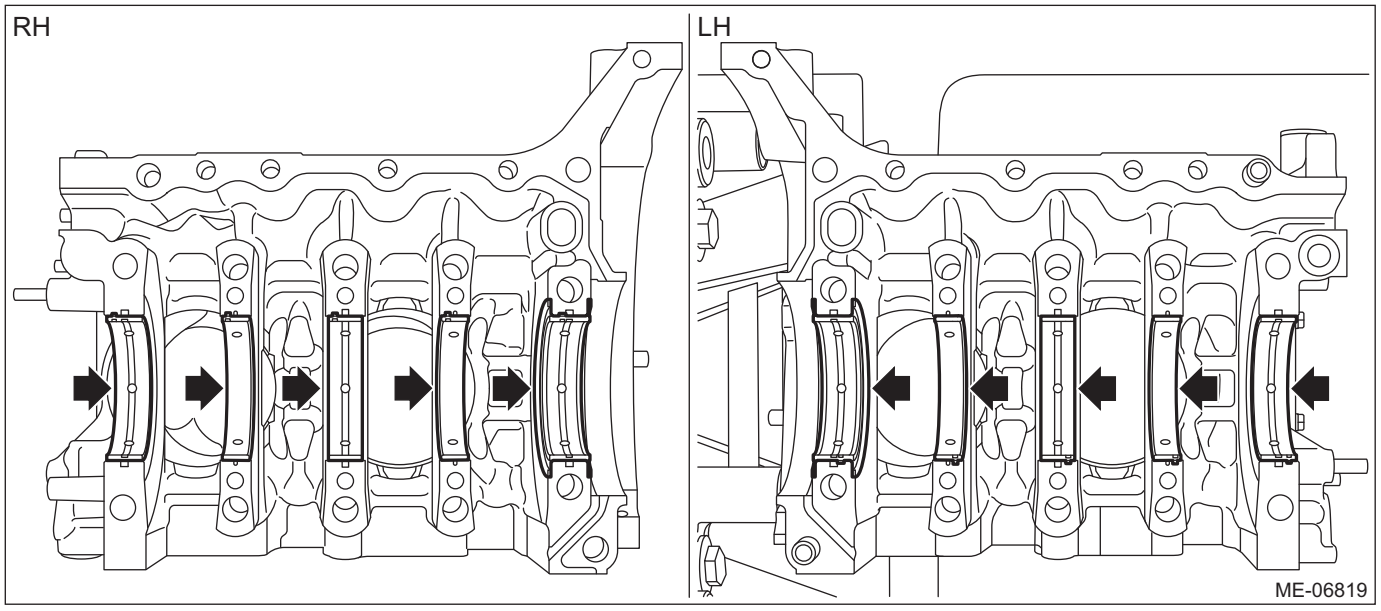


22) Remove the liquid gasket from cylinder block.
23) Remove the cylinder block LH from the engine stand.

B: INSTALLATION

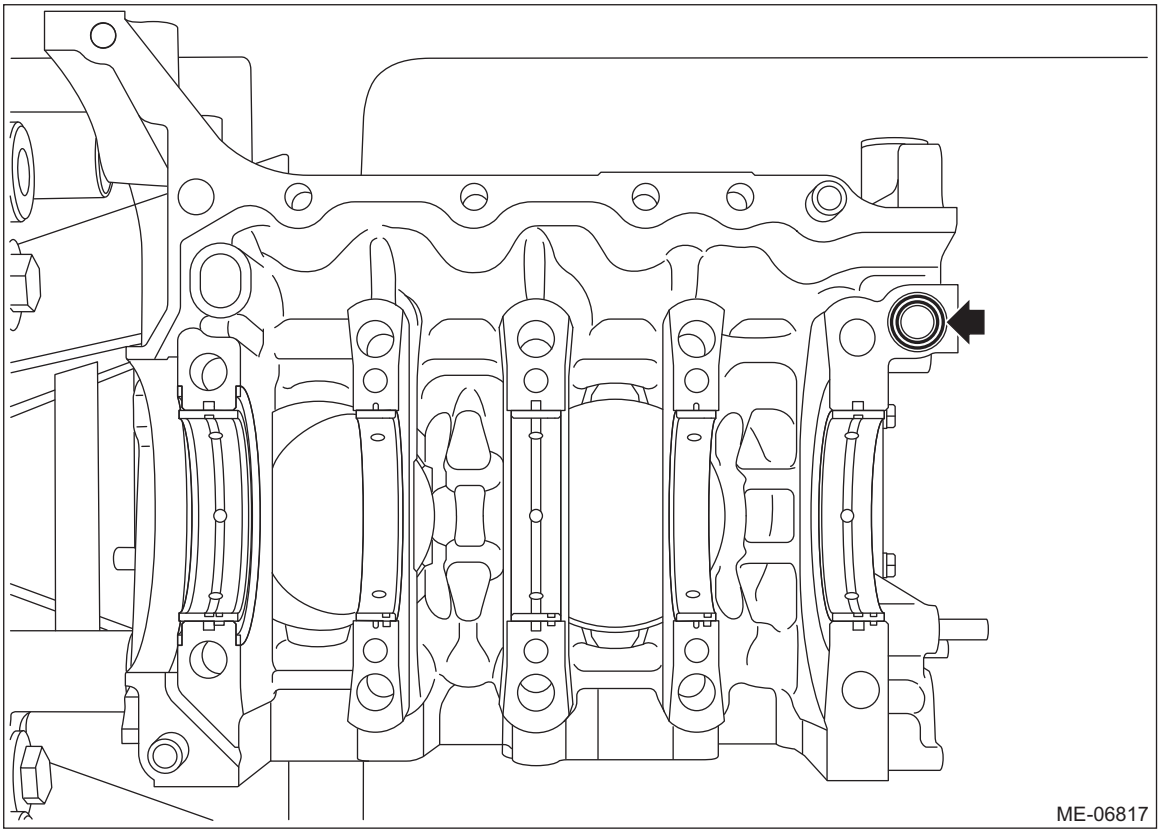
1) Install the cylinder block LH to the engine stand.
2) Apply engine oil to the crankshaft bearing, and install the crankshaft bearing to the cylinder block.

CAUTION:
When performing the operation of the cylinder block RH, be careful of the following.
1. Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
2. Be careful not to scratch the mating surface of cylinder block during work.

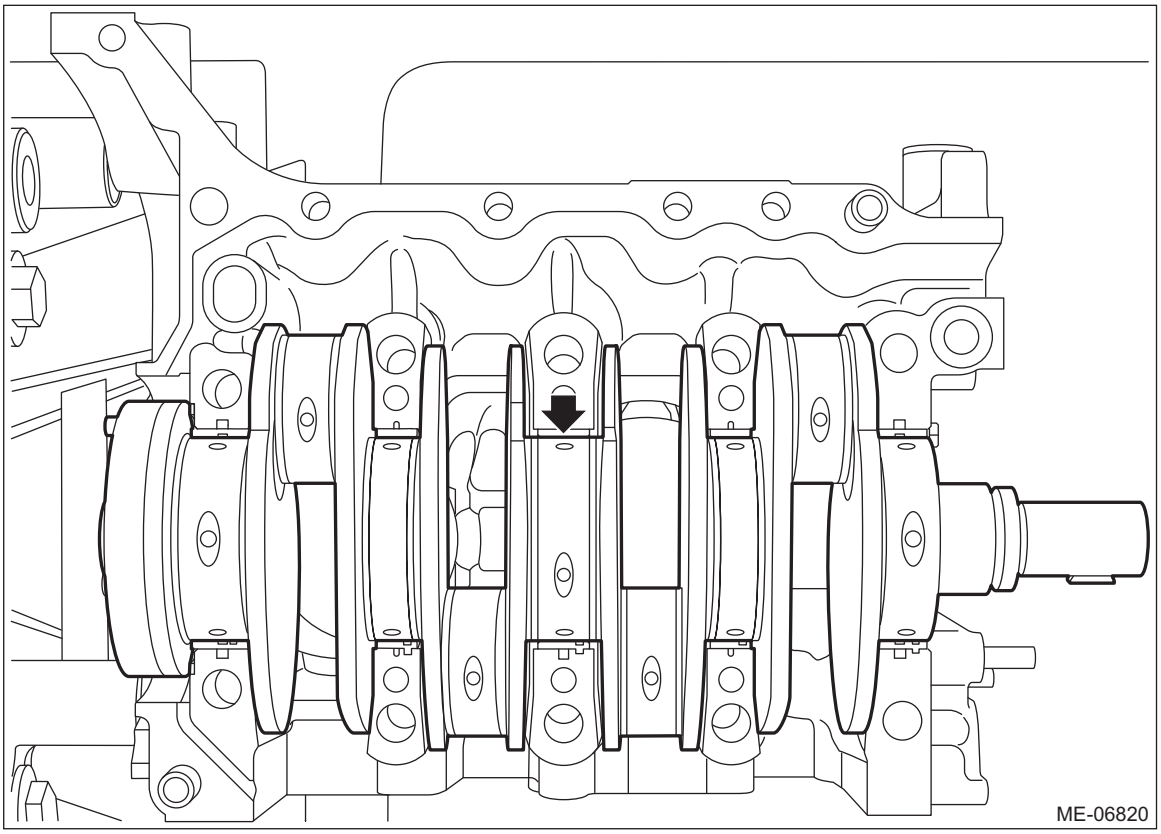


3) Install O-rings to the cylinder block LH.

NOTE:
Use new O-rings.



4) Apply engine oil to the crankshaft journal, and set the crankshaft to cylinder block LH.



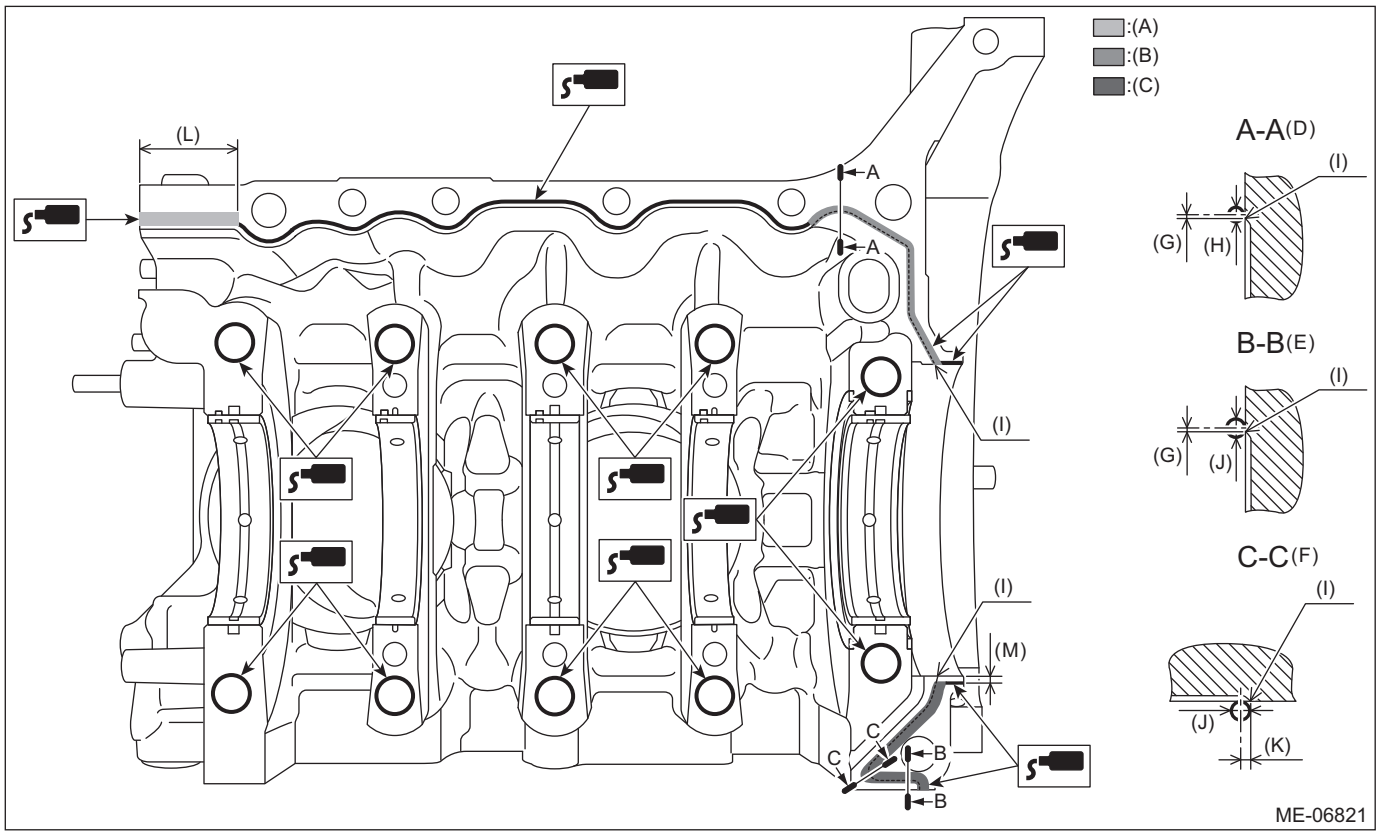
5) Apply liquid gasket to the mating surface of cylinder block RH as shown in the figure.

CAUTION:
• Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
• Be careful not to scratch the mating surface of cylinder block during work.
• Do not let the liquid gasket overflow to the oil passage and crankshaft bearing portions, because the engine seizure may result.

NOTE:
• Before applying liquid gasket, degrease the old liquid gasket seal surface of the cylinder block RH and cylinder block LH.
• Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
Mating surfaces other than ranges A, B and C
1±0.5 mm (0.0394±0.0197 in)
Mating surfaces of ranges A and C
4±0.5 mm (0.1575±0.0197 in)
Mating surfaces of range B
3.2±0.5 mm (0.1260±0.0197 in)

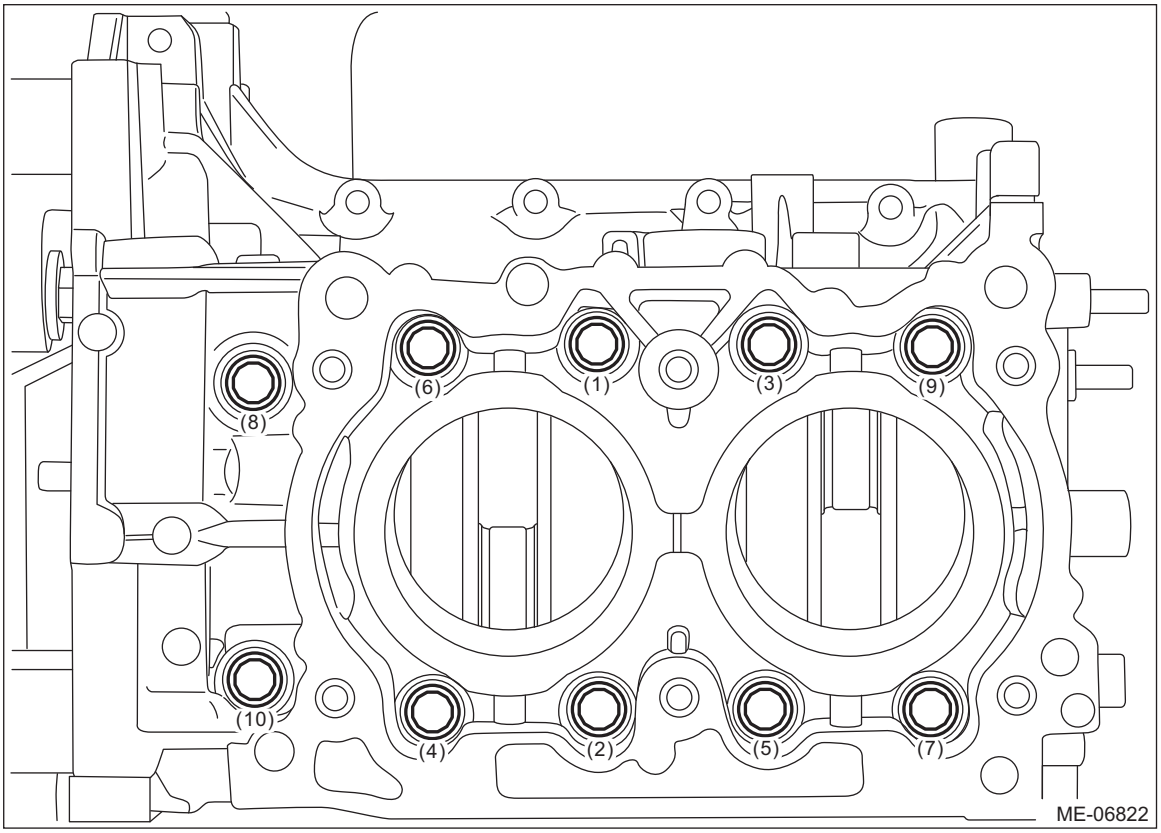


(A)	Range A	(F)	Liquid gasket applying position of mating surfaces (the edge) of range C	(K)	2 mm (0.0787 in)
(B)	Range B	(G)	1 mm (0.0394 in) or less	(L)	36 mm (1.4173 in)
(C)	Range C	(H)	ϕ3.2±0.5 mm (0.1260±0.0197 in)	(M)	2.5 mm (0.0984 in)
(D)	Liquid gasket applying position of mating surfaces of range B	(I)	Chamfer edge		
(E)	Liquid gasket applying position of mating surfaces (other than the edge) of range C	(J)	ϕ4±0.5 mm (0.1575±0.0197 in)		

6) Install the cylinder block RH to the cylinder block LH.
7) Join the cylinder blocks.
(1) Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

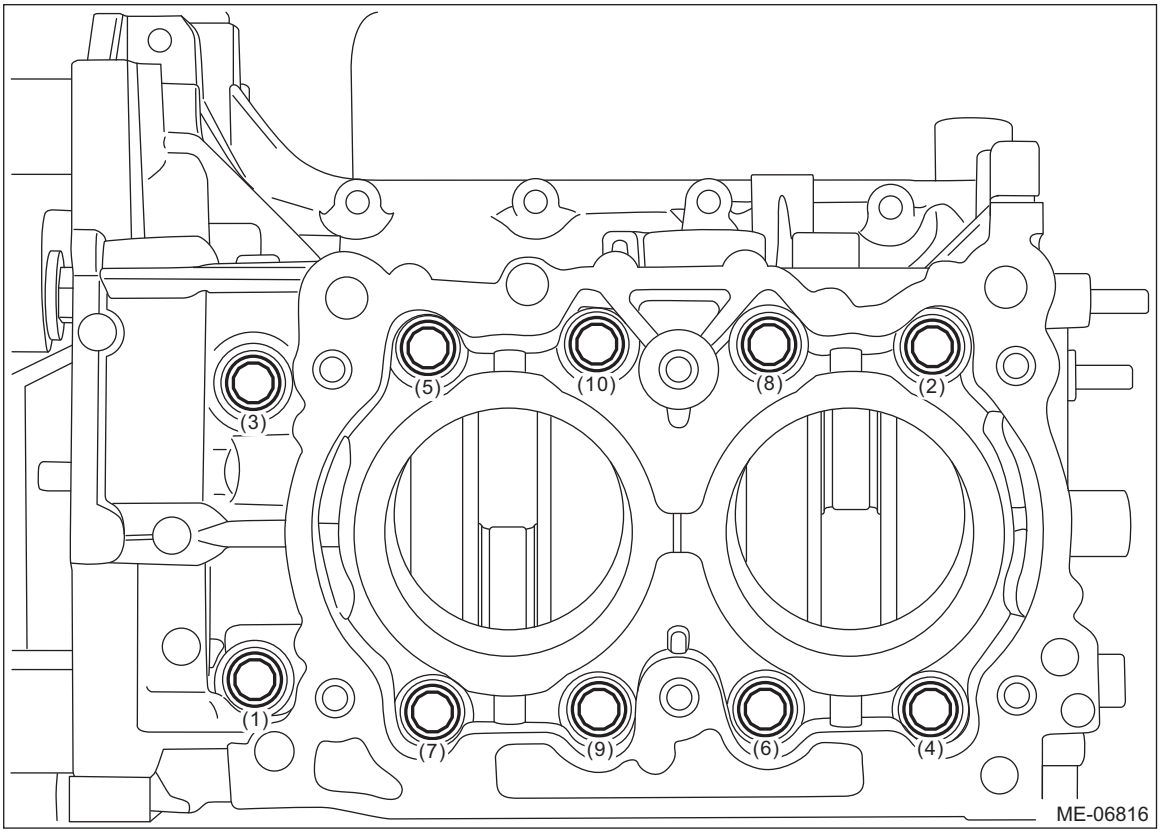
NOTE:
To prevent mixture of engine oil into the water jacket, do not apply a large amount.
(2) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



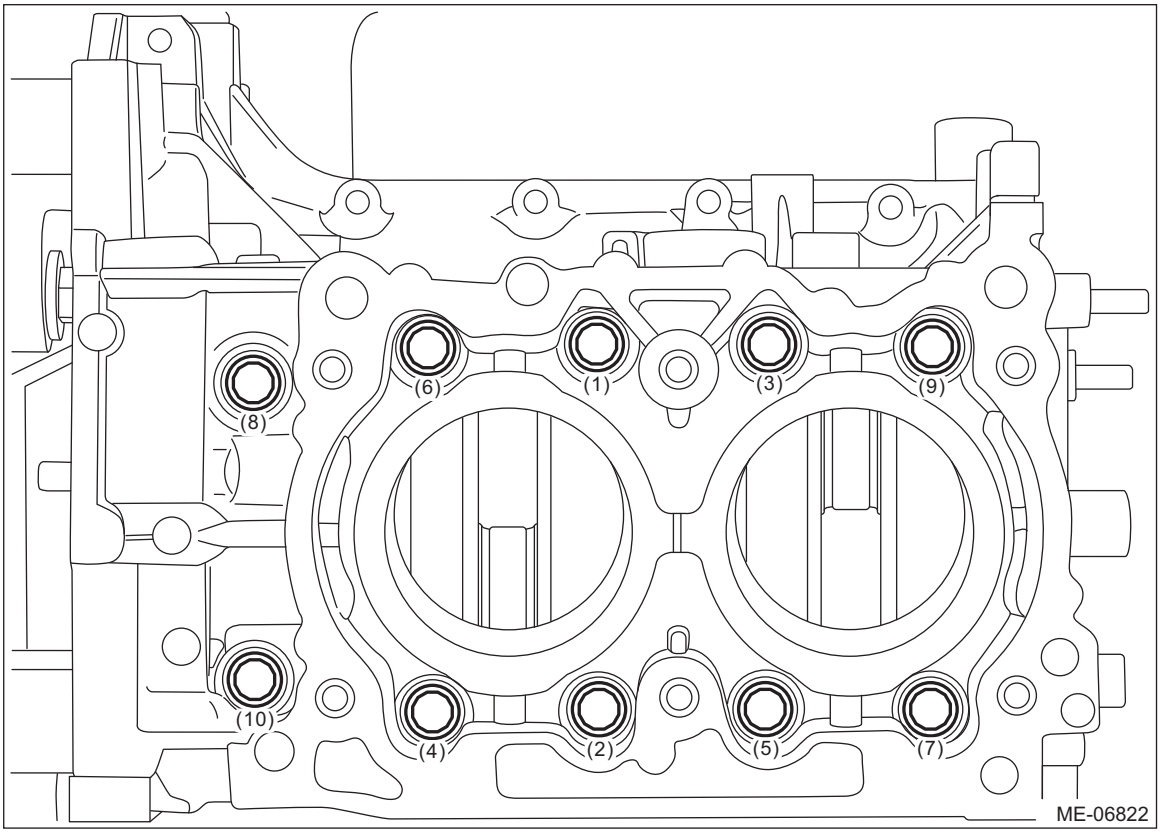
(3) Loosen all mounting bolts by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



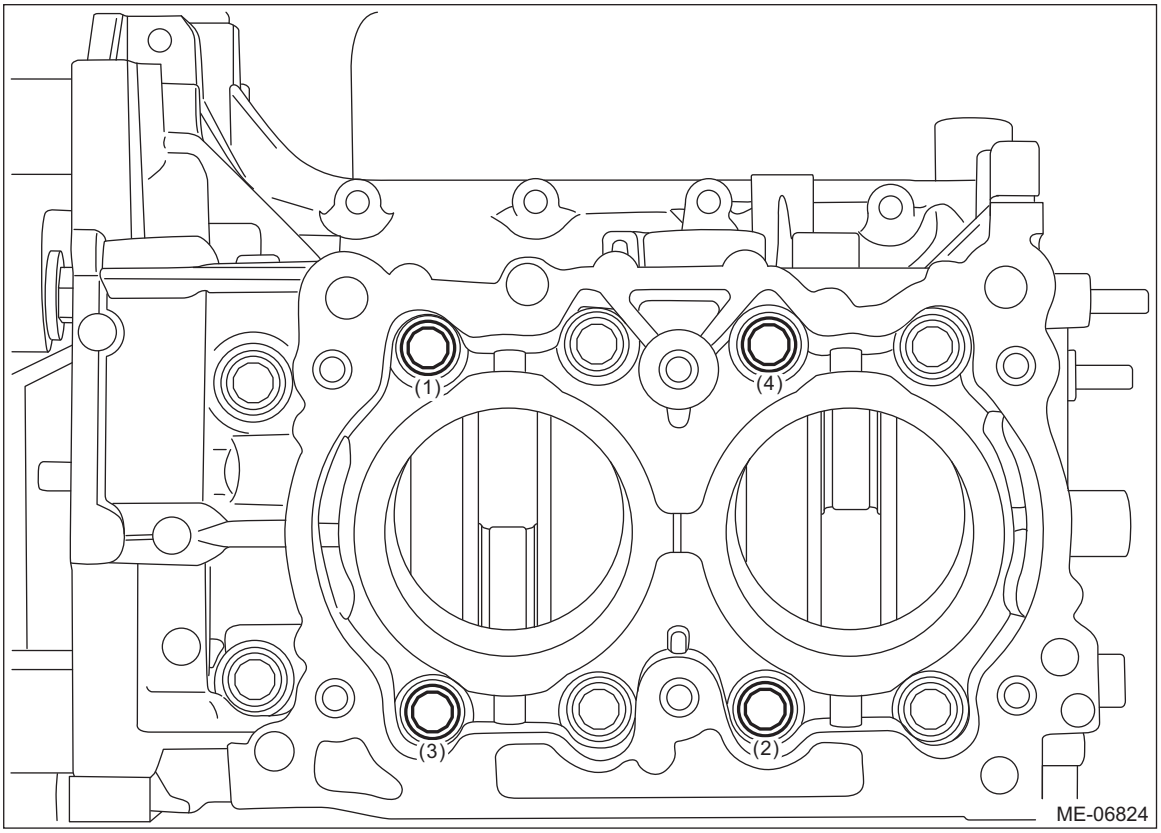
(4) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



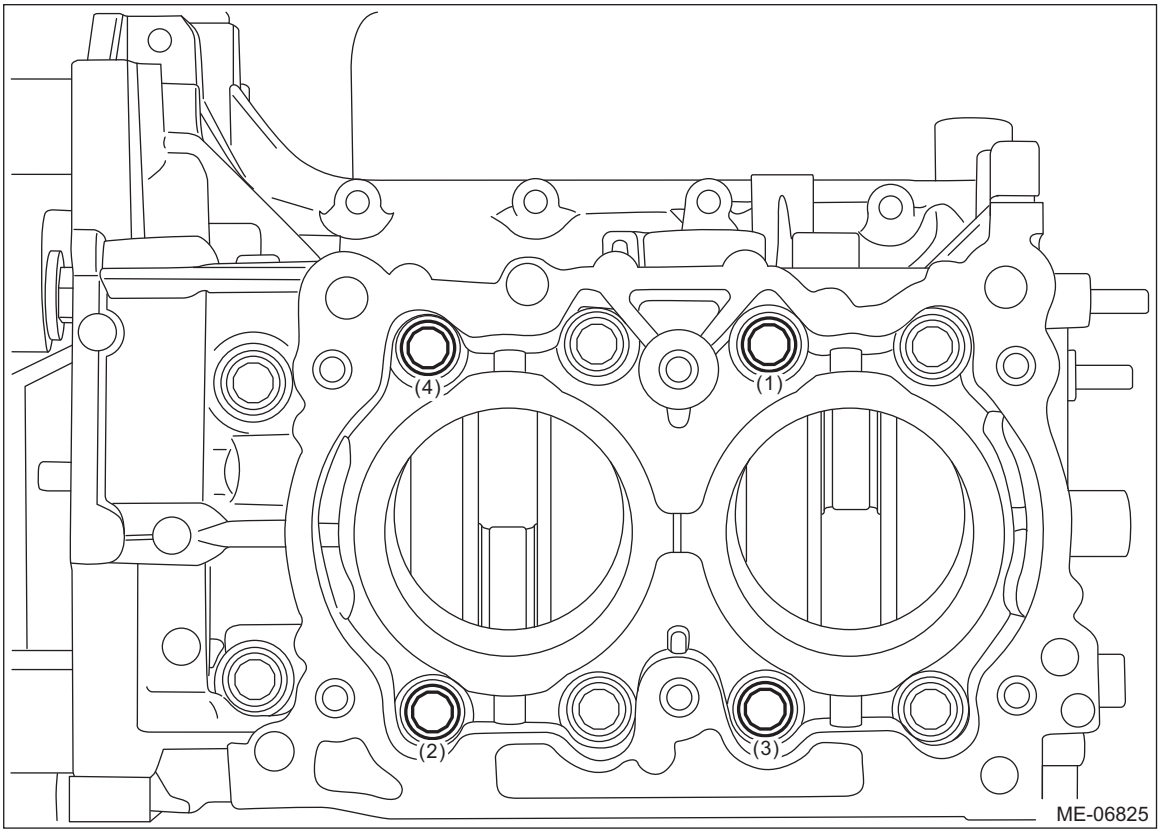
(5) Loosen the mounting bolts (4 places) by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(6) Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7 kgf-m, 12.5 ft-lb) in numerical order as shown in the figure.

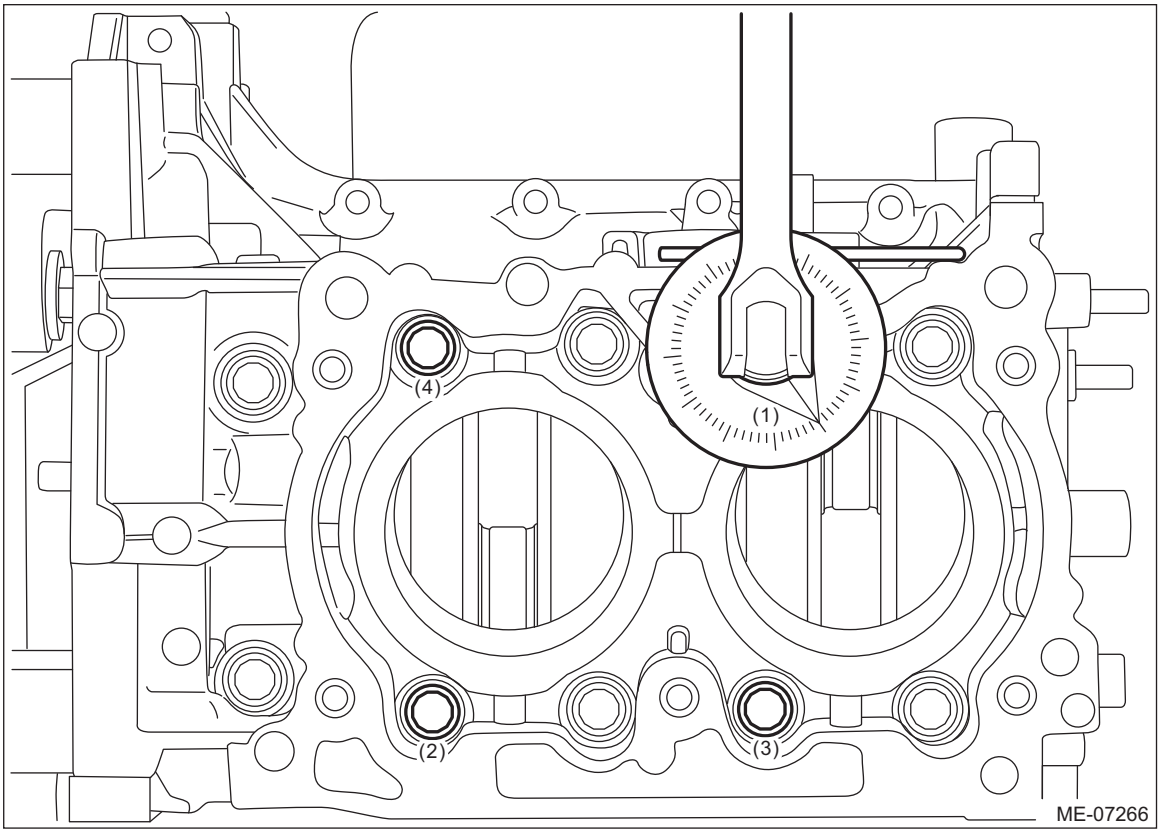
CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(7) Using angle gauge, tighten the mounting bolts (4 places) with specified angle in numerical order as shown in the figure.

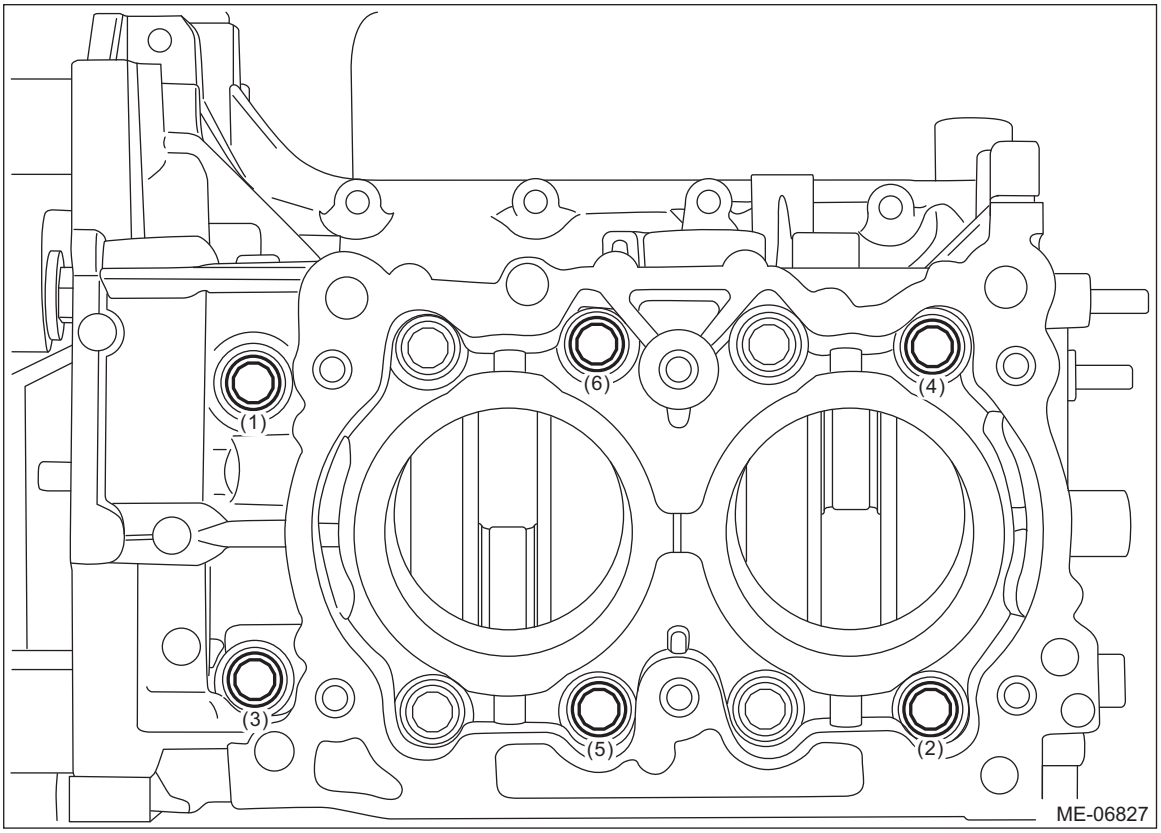
CAUTION:
When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:
60°±2°



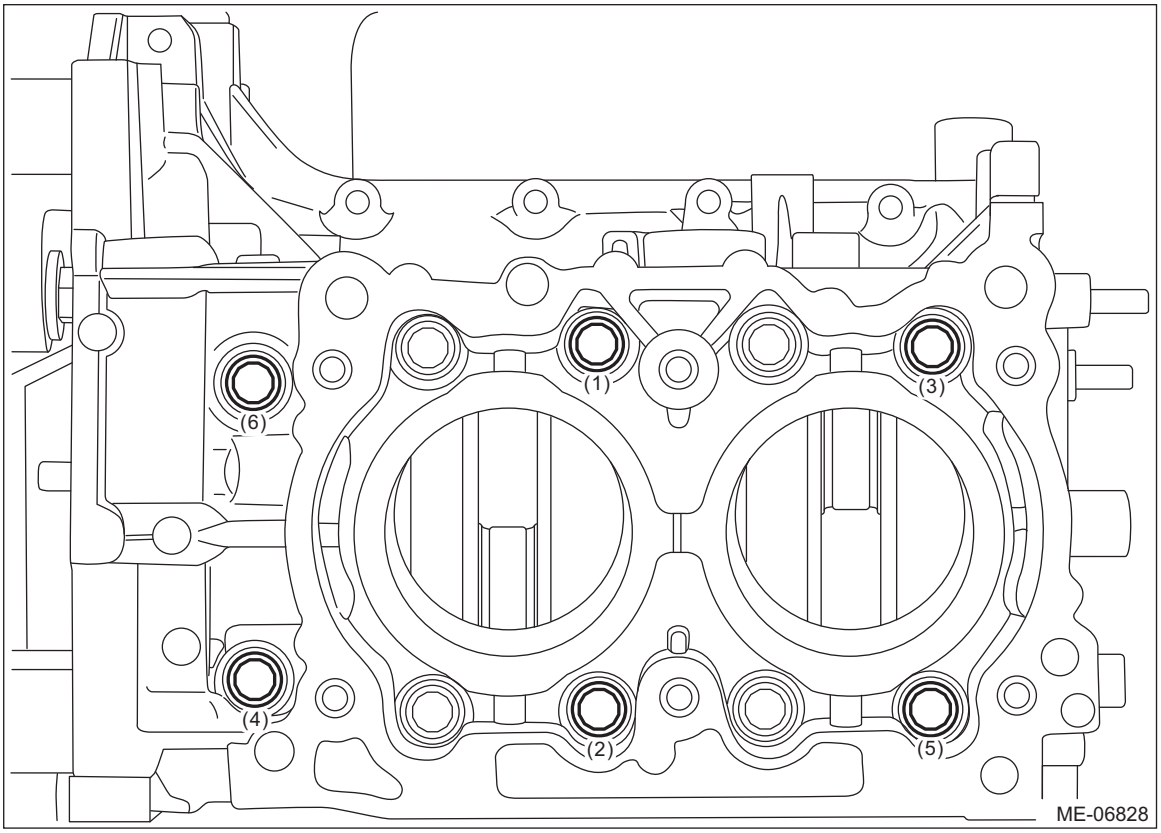
(8) Loosen the mounting bolts (6 places) by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(9) Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7 kgf-m, 12.5 ft-lb) in numerical order as shown in the figure.

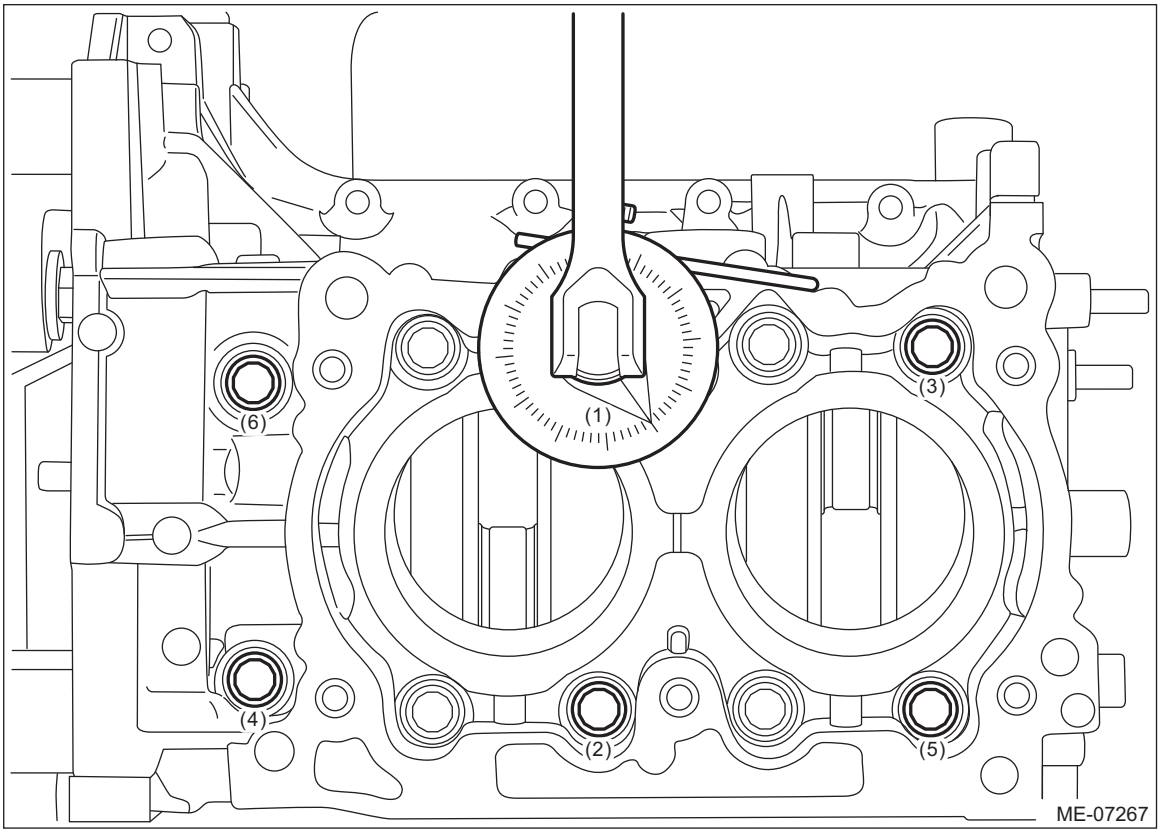
CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(10) Using angle gauge, tighten the mounting bolts (6 places) with specified angle in numerical order as shown in the figure.

CAUTION:
When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

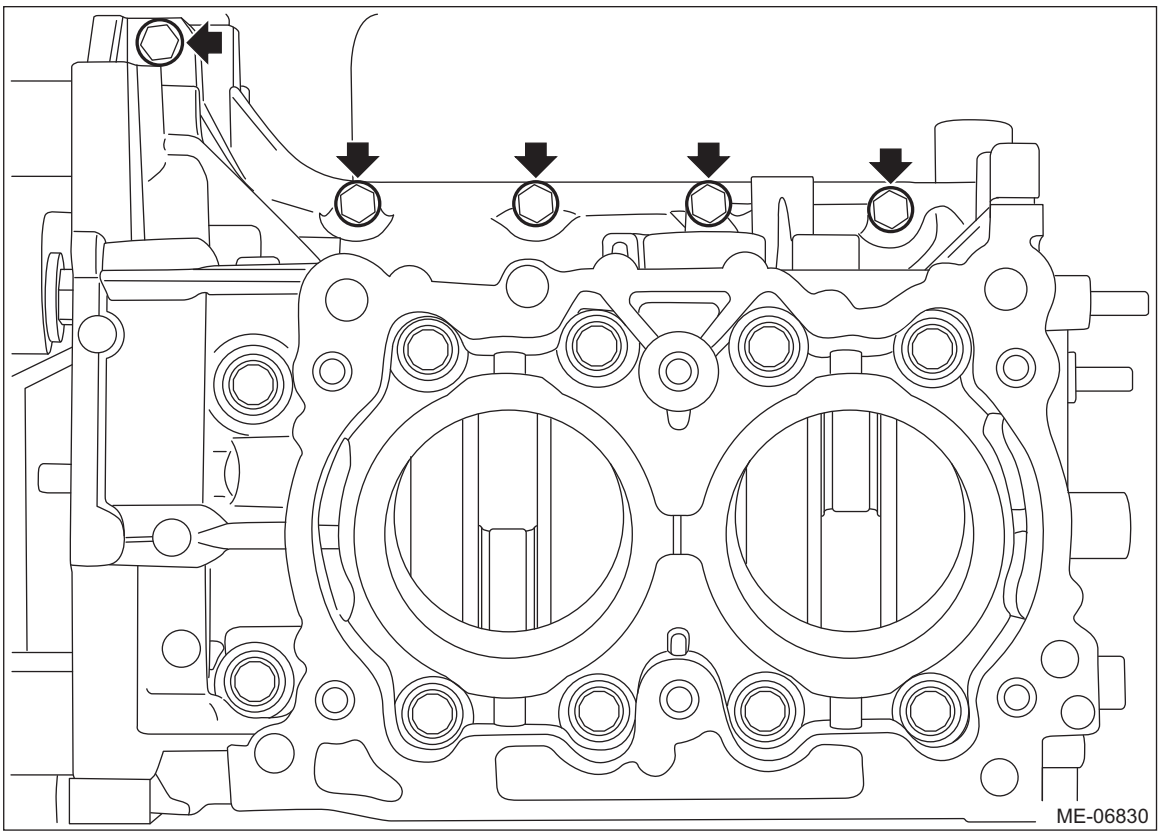
Tightening angle:
60°±2°



(11) Install the bolt shown in the figure.

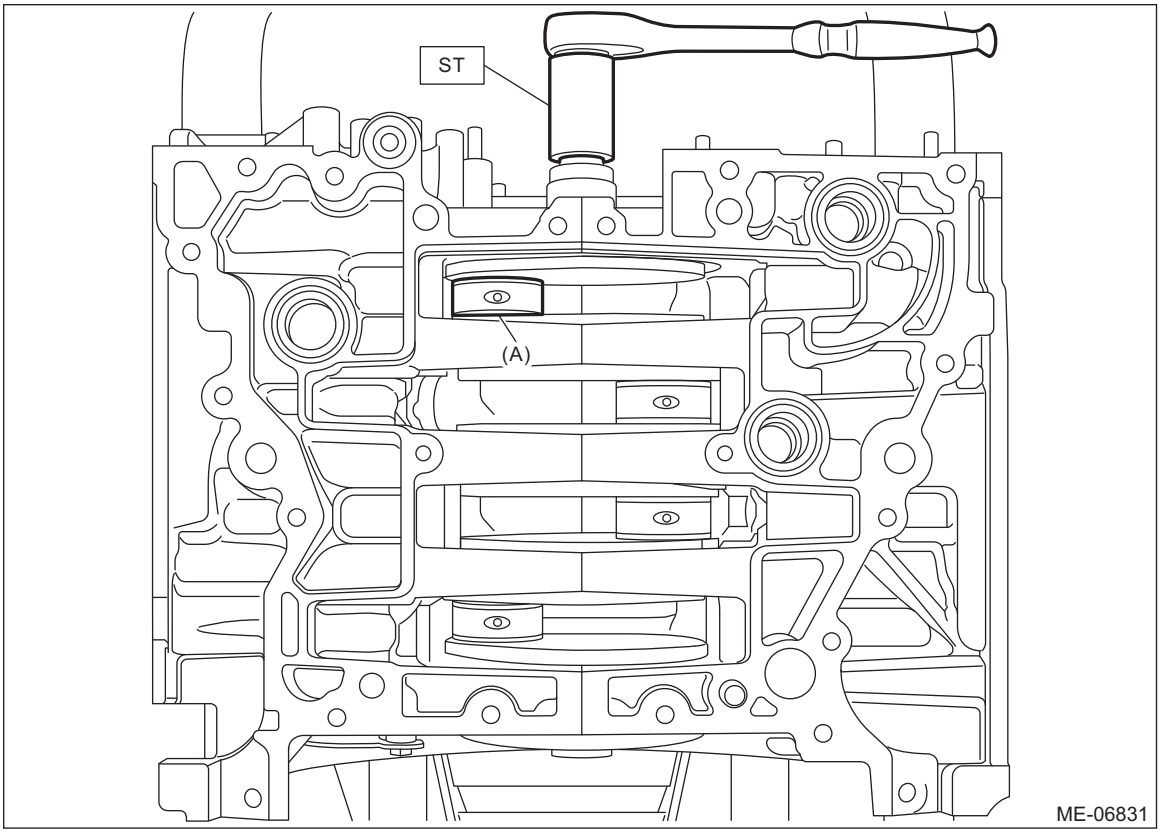
NOTE:
After tightening, if the liquid gasket is squeezed out in the seal surface area of the chain cover and oil pan upper, completely remove any liquid gasket that is squeezed out. Any liquid gasket on the chamfer area, however, should not be removed.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



8) Set the part so that the installation surface of the oil pan upper is on the upper side.
9) Check that the piston ring gap for each piston is positioned correctly. <Ref. to ME(w/o STI)-282, PISTON AND CONNECTING ROD, ASSEMBLY, Cylinder Block.>
10) Install the piston and connecting rod to the cylinder block.
(1) Apply engine oil to the outer circumference of each piston, crankshaft pin, and in the cylinder block.

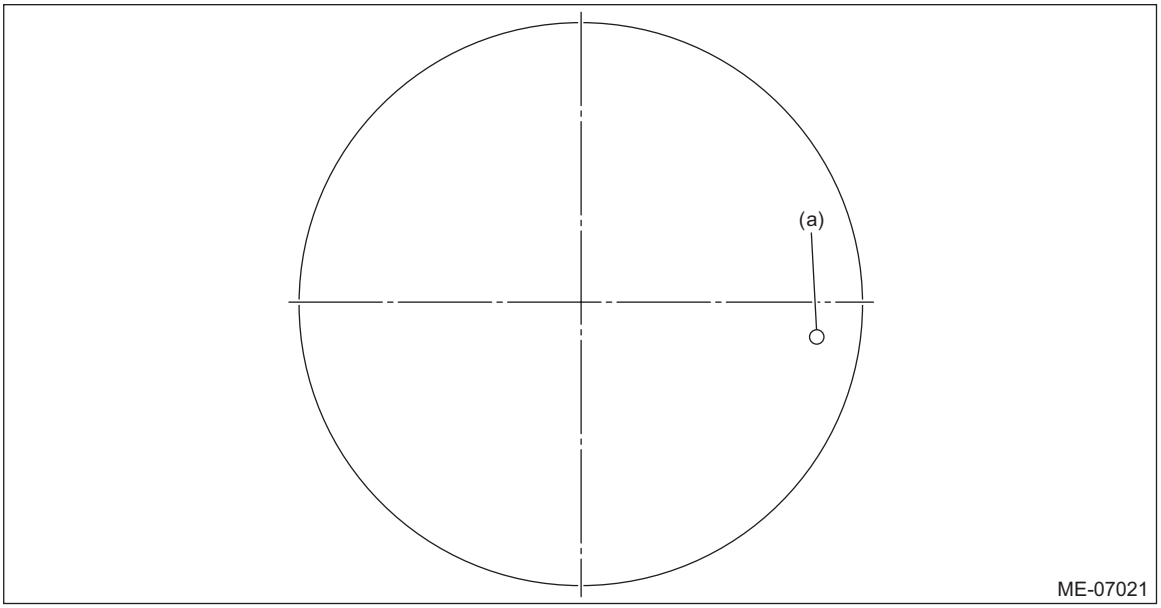
(2) Turn the crankshaft so that the #1 pin (A) of crankshaft is positioned at TDC using ST.
ST 18252AA000 CRANKSHAFT SOCKET



(3) Compress the piston ring using piston ring compressor, and insert the #1 connecting rod with #1 piston into cylinder block.

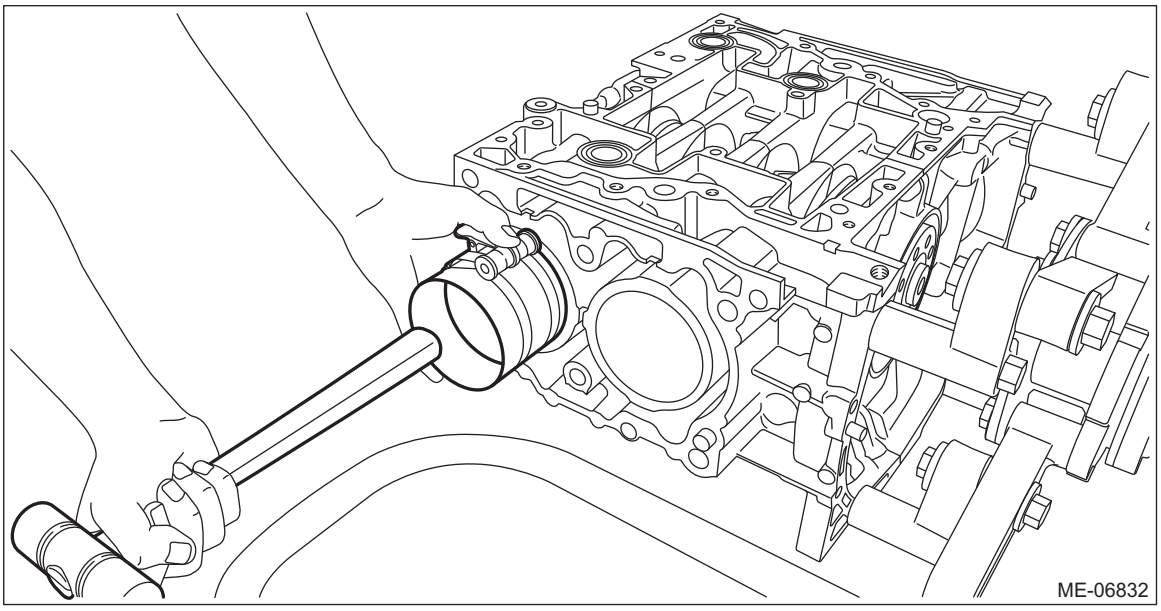
CAUTION:
• Be careful not to damage the cylinder liner and #1 pin of crankshaft by the #1 connecting rod large end.
• Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.

NOTE:
• Face the piston front mark (round mark) towards the front of the engine.



(a) Front mark

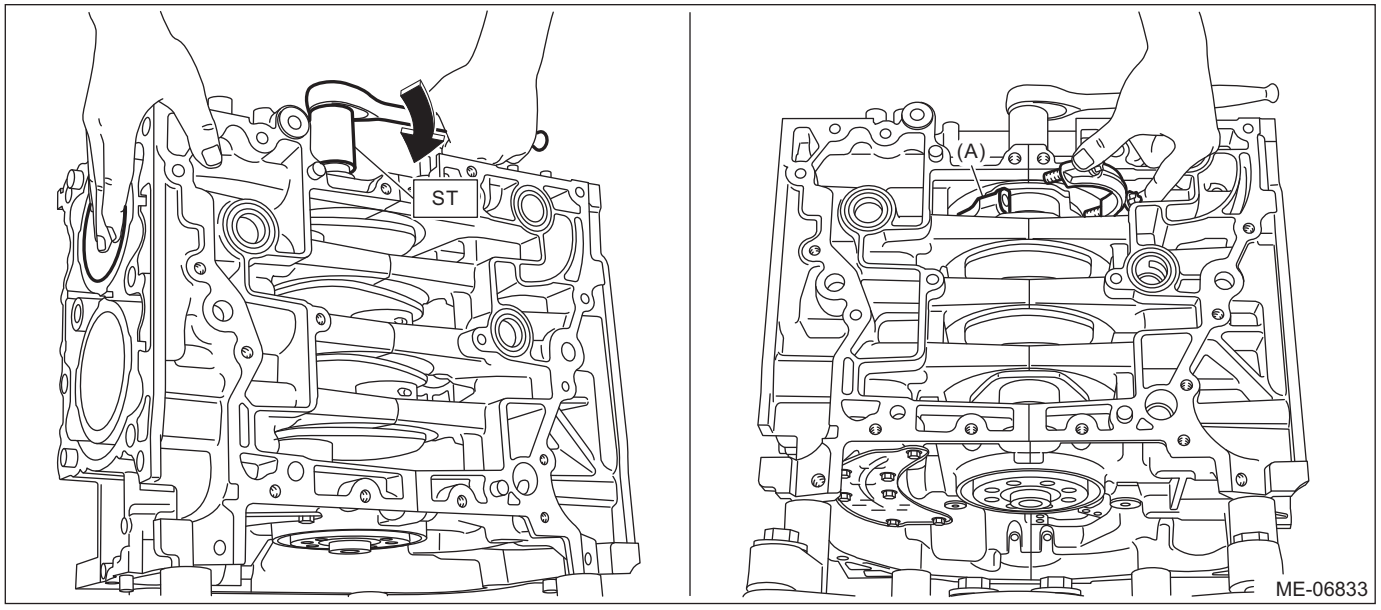
• Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.



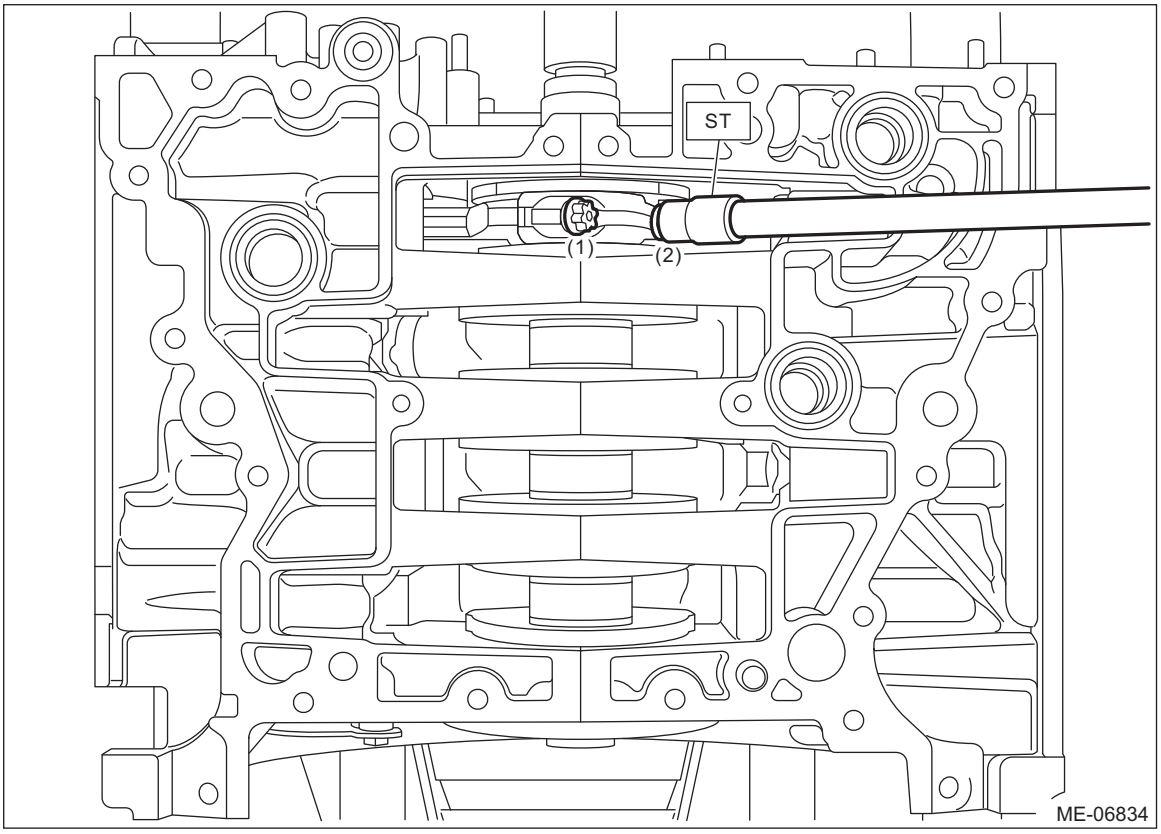
(4) Turn the crankshaft counterclockwise so that the #1 pin of crankshaft and the large end (A) of #1 connecting rod are positioned as shown in the figure using ST, while pressing the #1 piston crown, and then set the #1 connecting rod cap and #1 connecting rod cap bolt.

NOTE:
• Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
• Use a new connecting rod cap bolt.

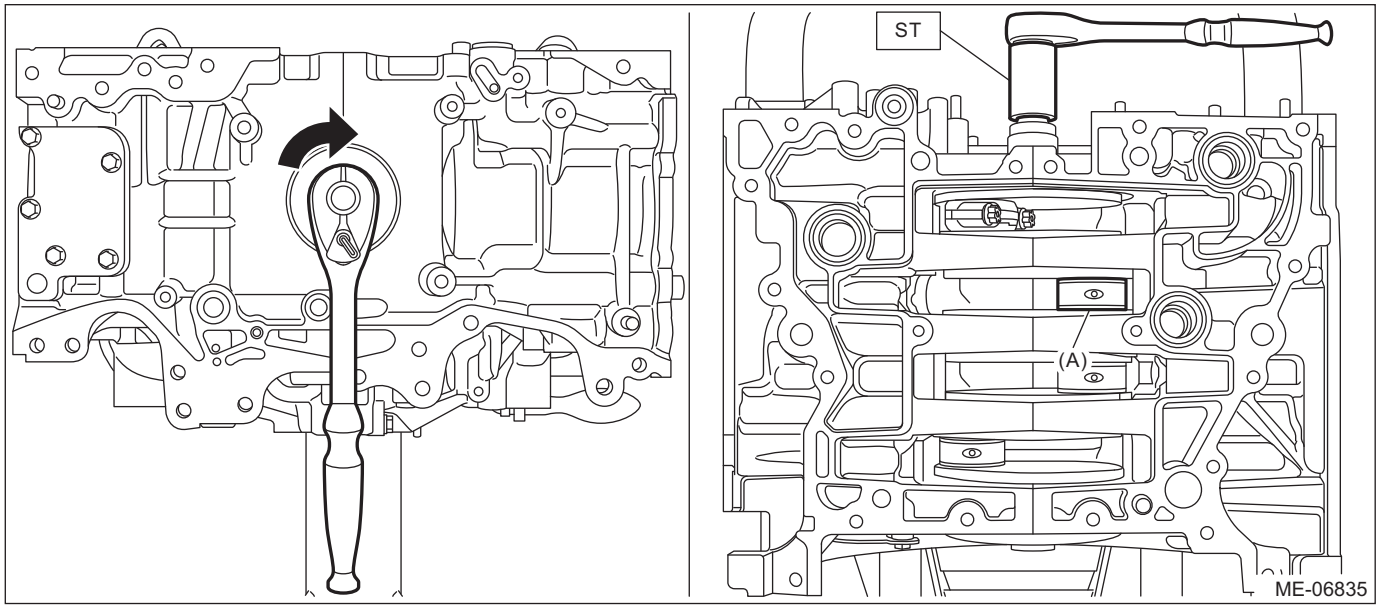
• Apply a coat of engine oil to the #1 connecting rod cap seat and the connecting rod cap bolt threads.
ST 18252AA000 CRANKSHAFT SOCKET



(5) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 25 N·m (2.5 kgf-m, 18.4 ft-lb) in numerical order as shown in the figure.
ST 18270AA020 SOCKET



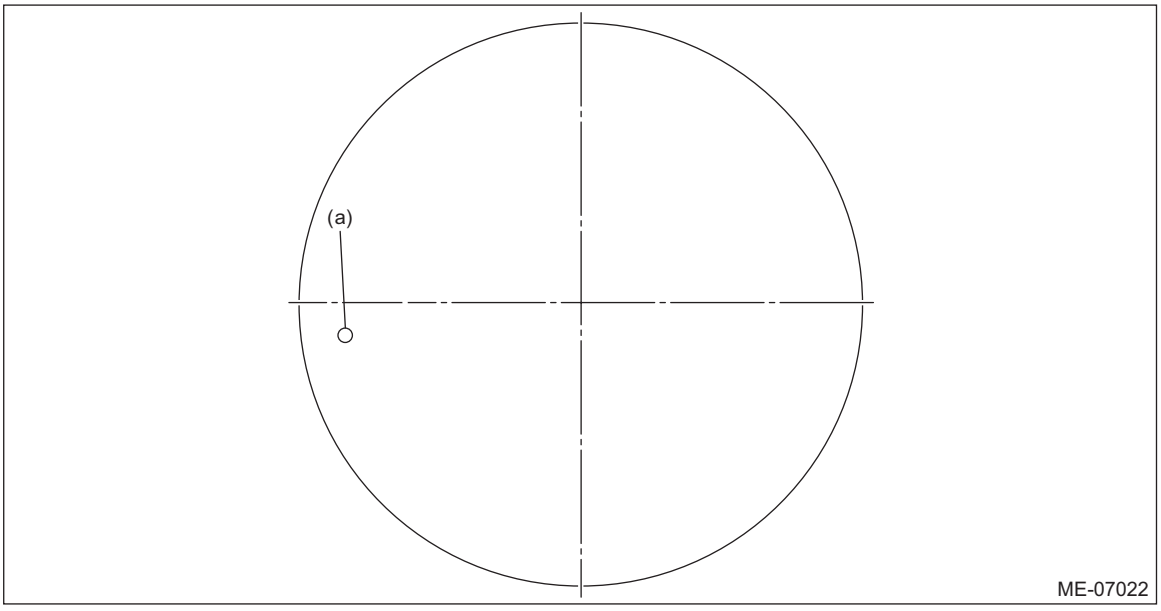
(6) Turn the crankshaft clockwise so that the #2 pin (A) of crankshaft is positioned at TDC using ST.
ST 18252AA000 CRANKSHAFT SOCKET



(7) Compress the piston ring using piston ring compressor, and insert the #2 connecting rod with #2 piston into cylinder block.

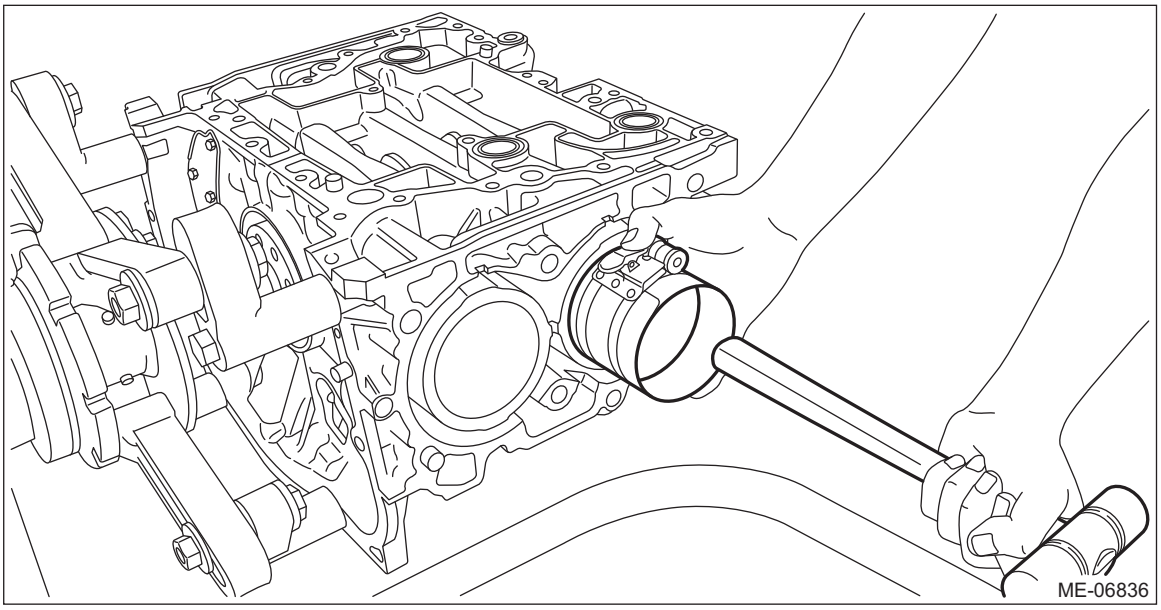
CAUTION:
• Be careful not to damage the cylinder liner and #2 pin of crankshaft by the #2 connecting rod large end.
• Be careful not to apply strong impact when inserting to prevent connecting rod bearing from falling off.

NOTE:
• Face the piston front mark (round mark) towards the front of the engine.



(a) Front mark

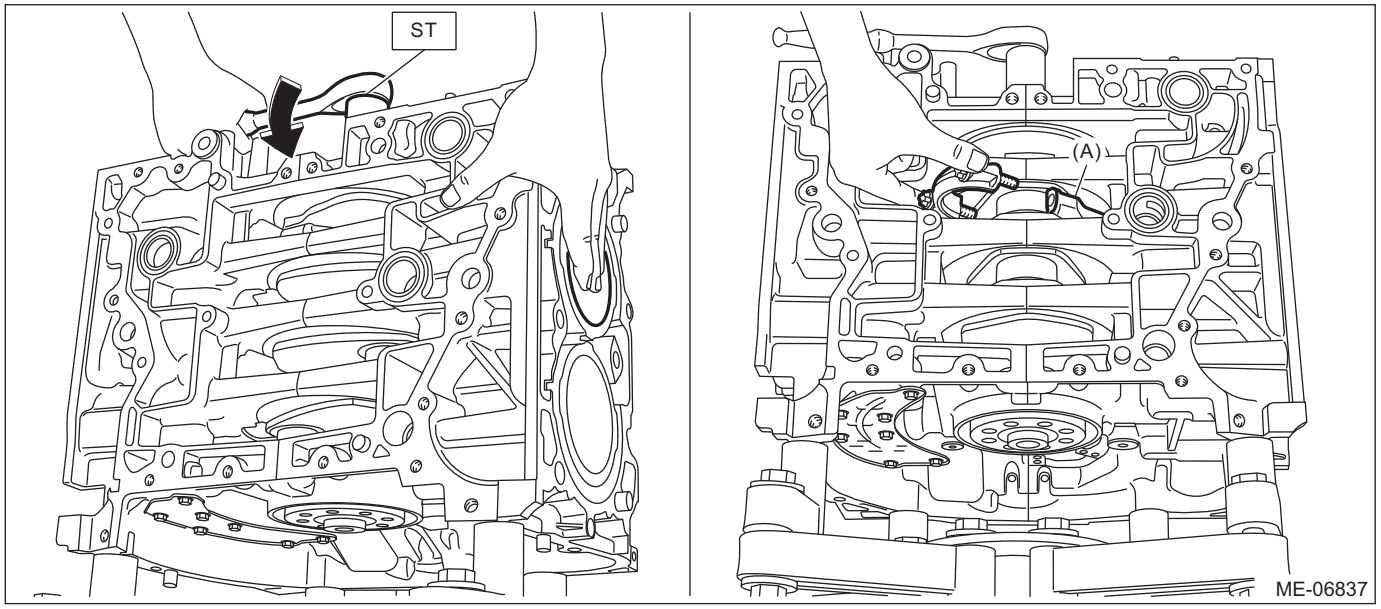
- Insert while lightly tapping the crown of the piston with the handle of a plastic hammer.



(8) Turn the crankshaft clockwise so that the #2 pin of crankshaft and the large end (A) of #2 connecting rod are positioned as shown in the figure using ST, while pressing the #2 piston crown, and then set the #2 connecting rod cap and #2 connecting rod cap bolt.

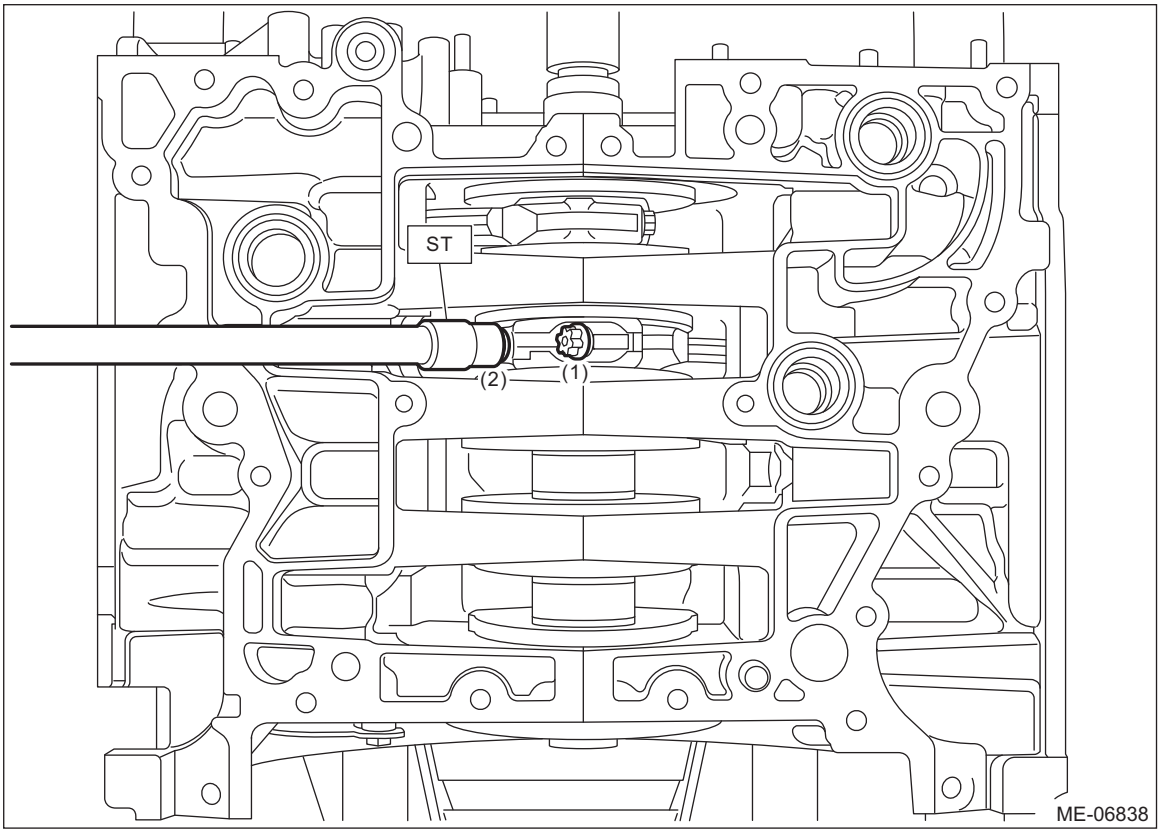
NOTE:
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
- Use a new connecting rod cap bolt.
- Apply a coat of engine oil to the #2 connecting rod cap seat and the connecting rod cap bolt threads.

ST 18252AA000 CRANKSHAFT SOCKET



(9) Using ST, tighten the #2 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 25 N·m (2.5 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure.

ST 18270AA020 SOCKET



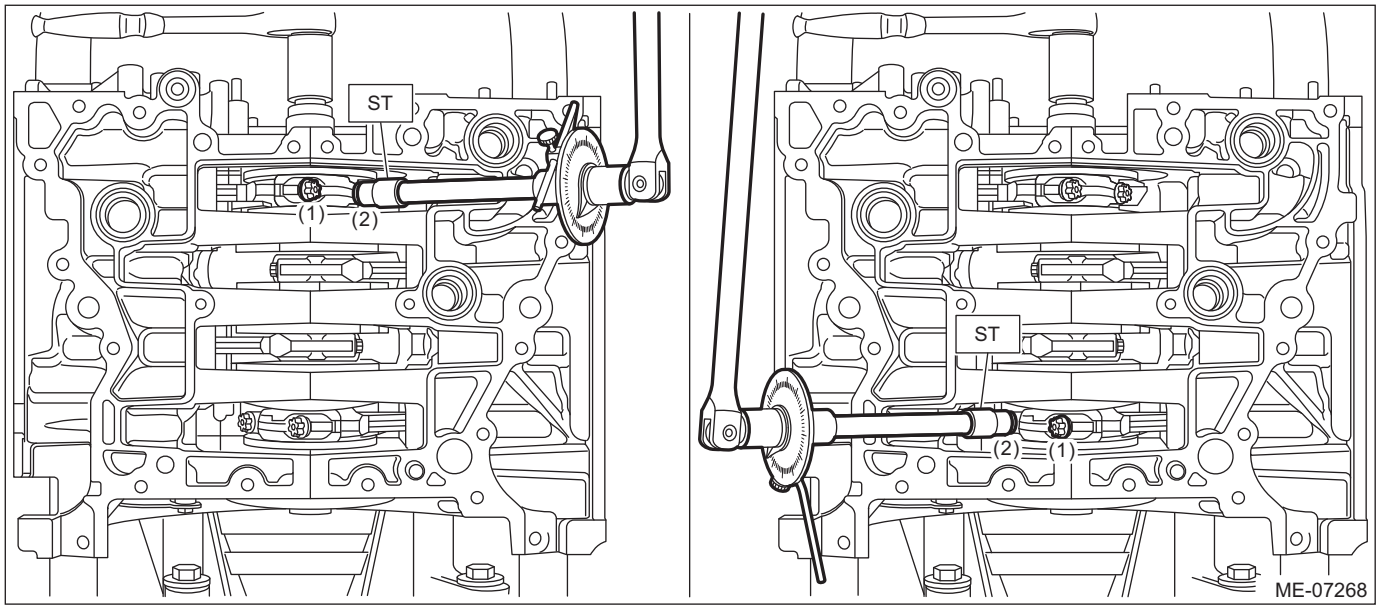
(10) Install #3 and #4 pistons and connecting rod caps in the same installation procedure as #1 and #2 pistons and connecting rod caps.

(11) Using ST and angle gauge, tighten the #1 connecting rod cap bolts and #4 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

ST 18270AA020 SOCKET

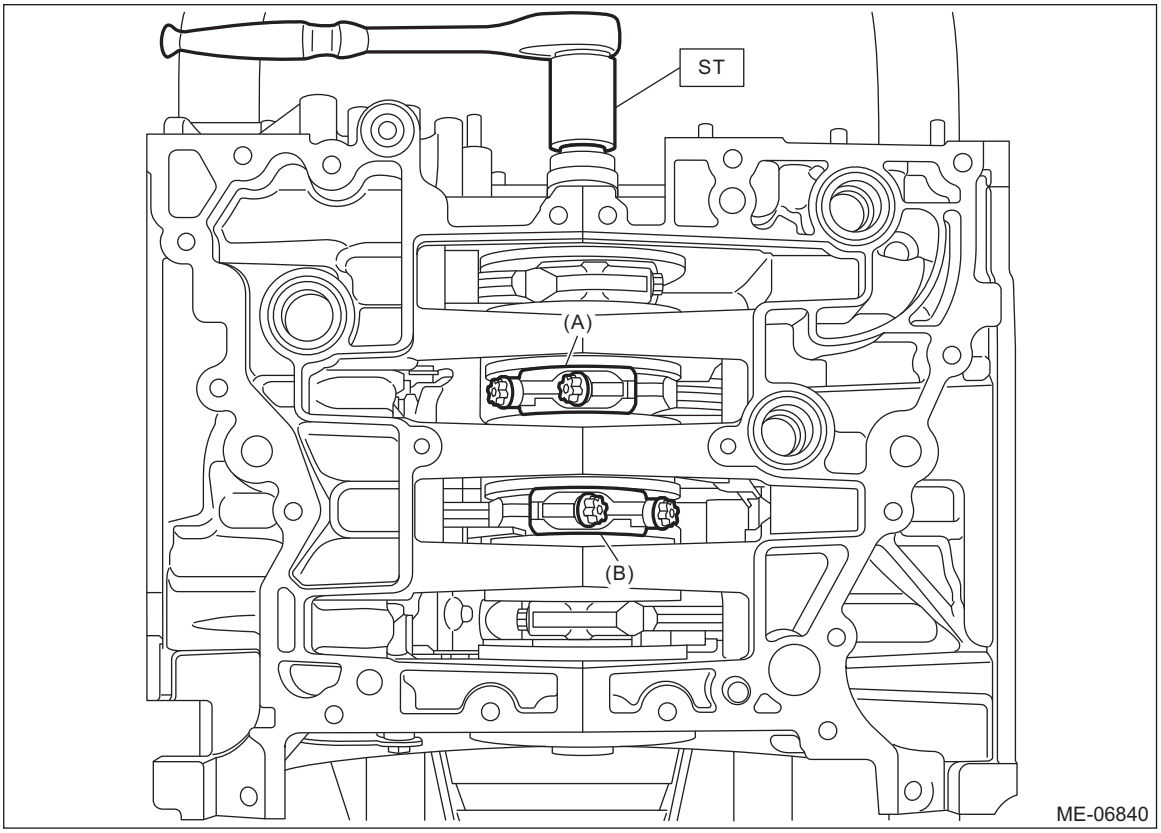
Tightening angle:

$90^{\circ}{}^{+5^{\circ}}_{-0^{\circ}}$



(12) Turn the crankshaft so that the #2 connecting rod cap (A) and #3 connecting rod cap (B) is located at the position shown in the figure using ST.

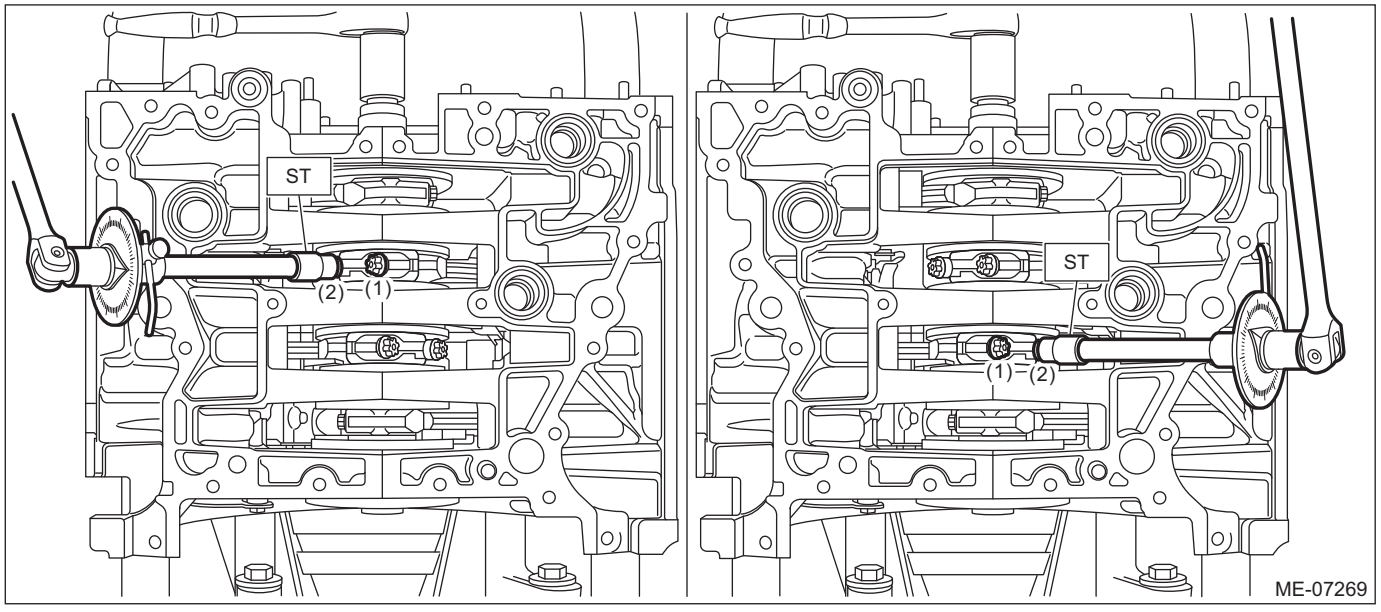
ST 18252AA000 CRANKSHAFT SOCKET



(13) Using ST and angle gauge, tighten the #2 connecting rod cap bolts and #3 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

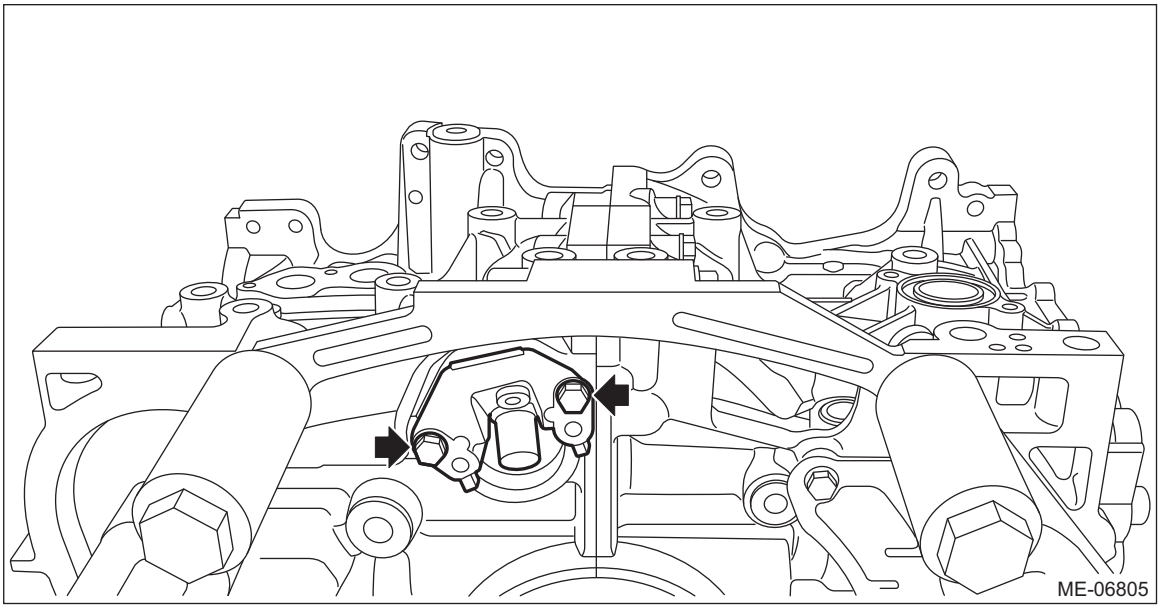
ST 18270AA020 SOCKET

Tightening angle:
$90^{\circ}{}^{+5^{\circ}}_{-0^{\circ}}$



11) Install the oil pan upper. <Ref. to LU(w/o STI)-25, OIL PAN UPPER, INSTALLATION, Oil Pan.>
12) Set the part so that the installation surface of the intake manifold is on the upper side.
13) Install the crankshaft position sensor with crankshaft position sensor holder to the cylinder block LH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

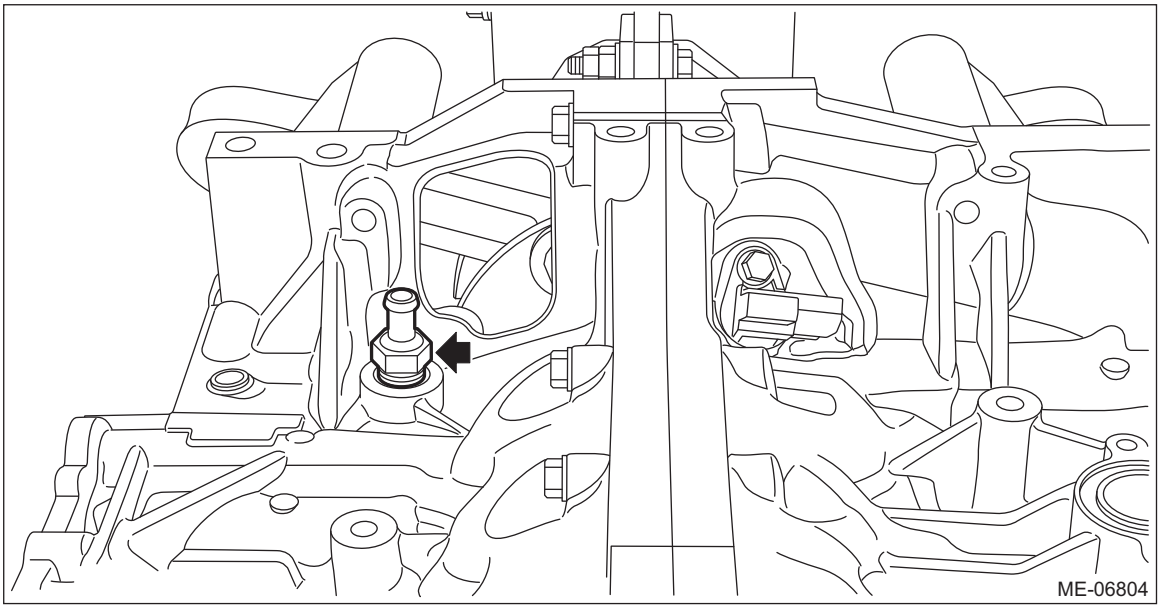


14) Install the PCV valve onto the cylinder block RH.

NOTE:
Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

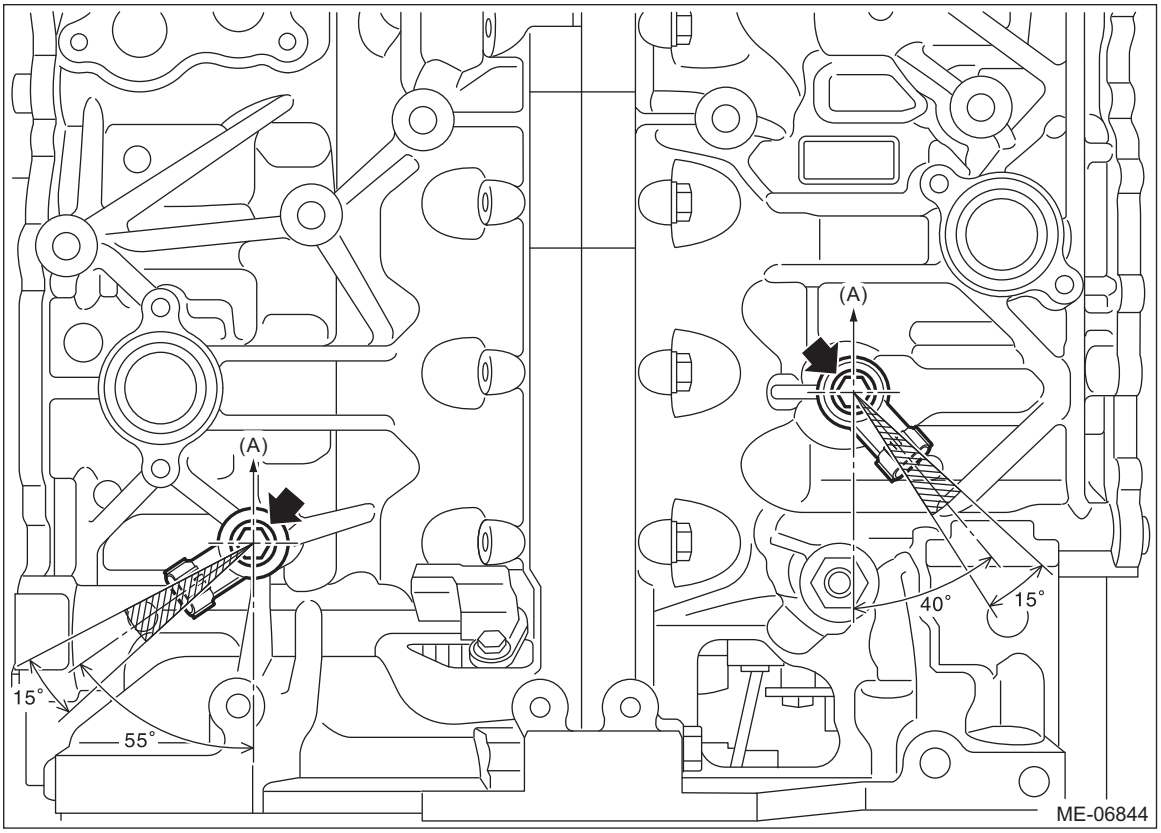
Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)



15) Install the knock sensor to the cylinder block LH.

NOTE:
Knock sensor must be positioned toward engine front so that the connector center position is within the range of shaded area shown in the figure.

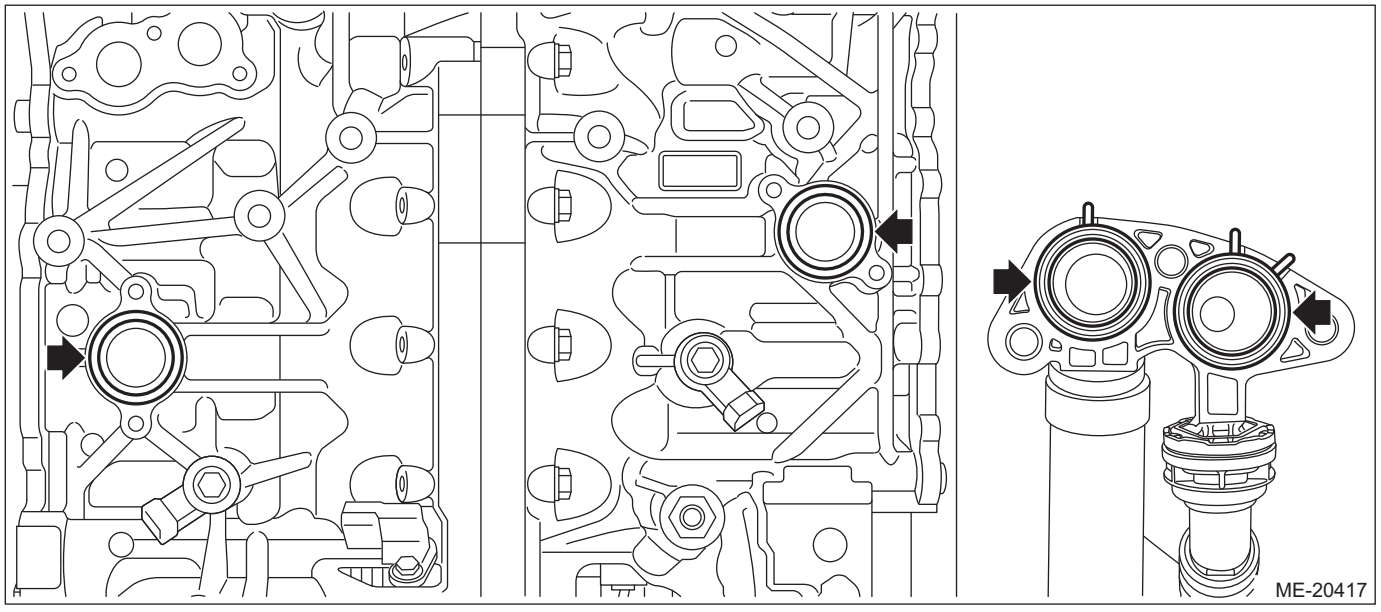
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)



(A) Front of engine

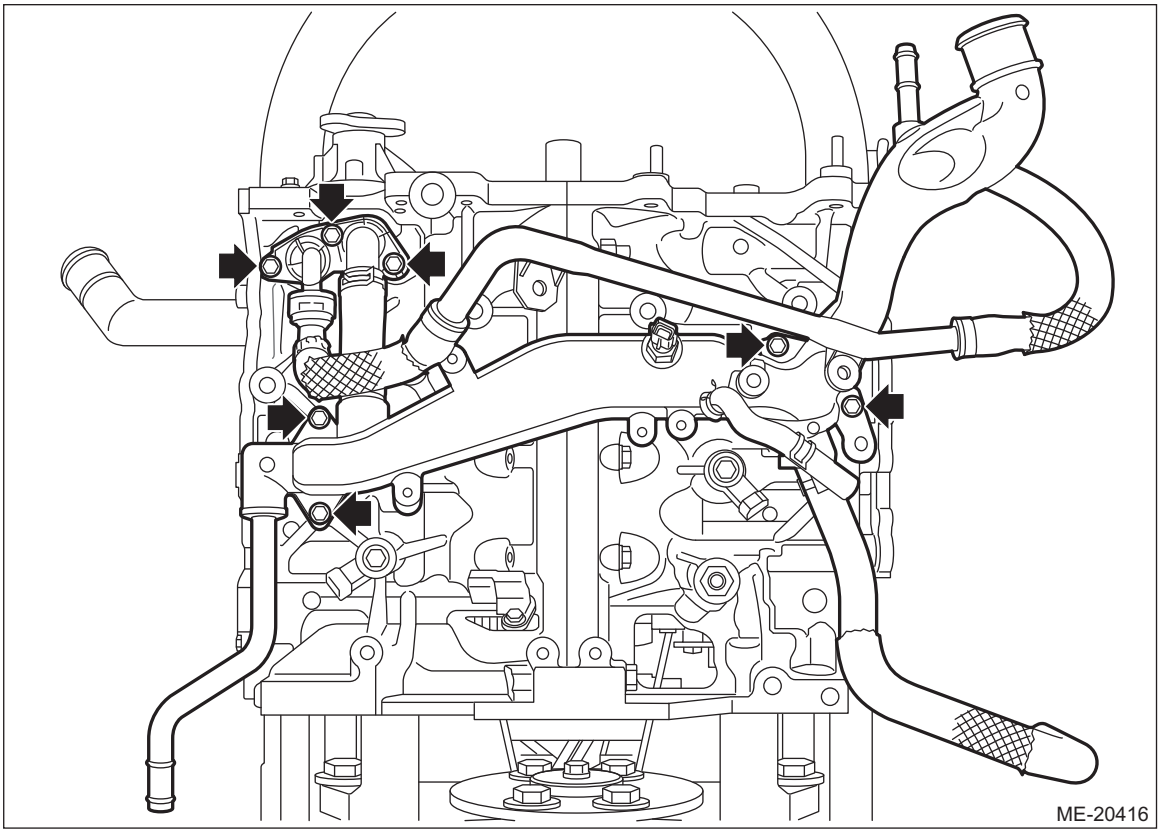
16) Install the O-ring to the cylinder block and PCV connector.

NOTE:
Use new O-rings.



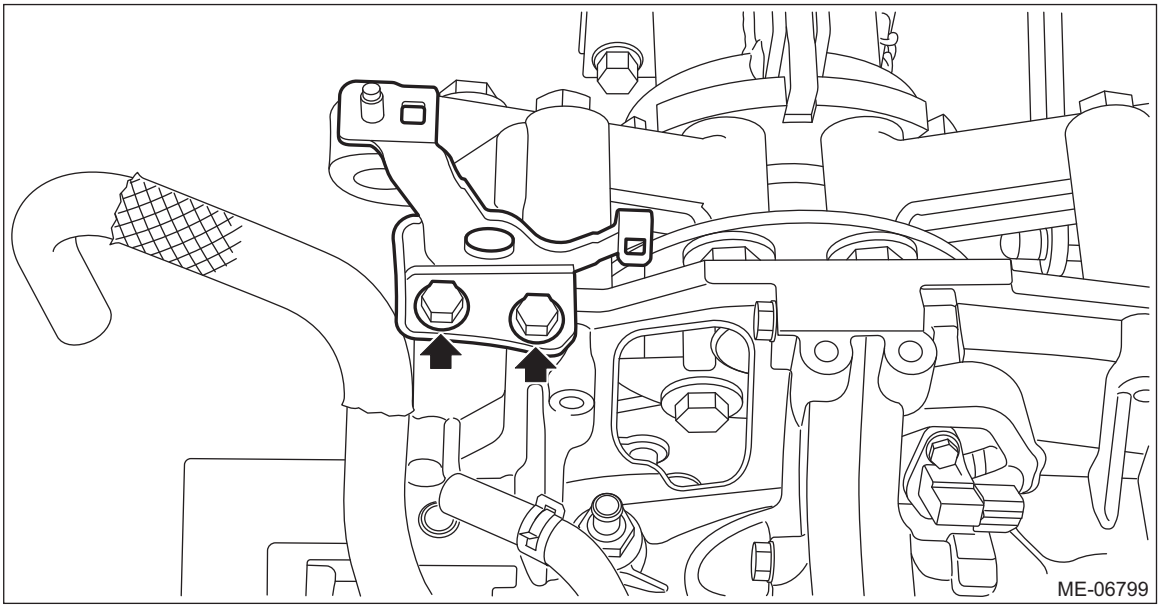
17) Install the water pipe assembly and PCV connector to the cylinder block.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



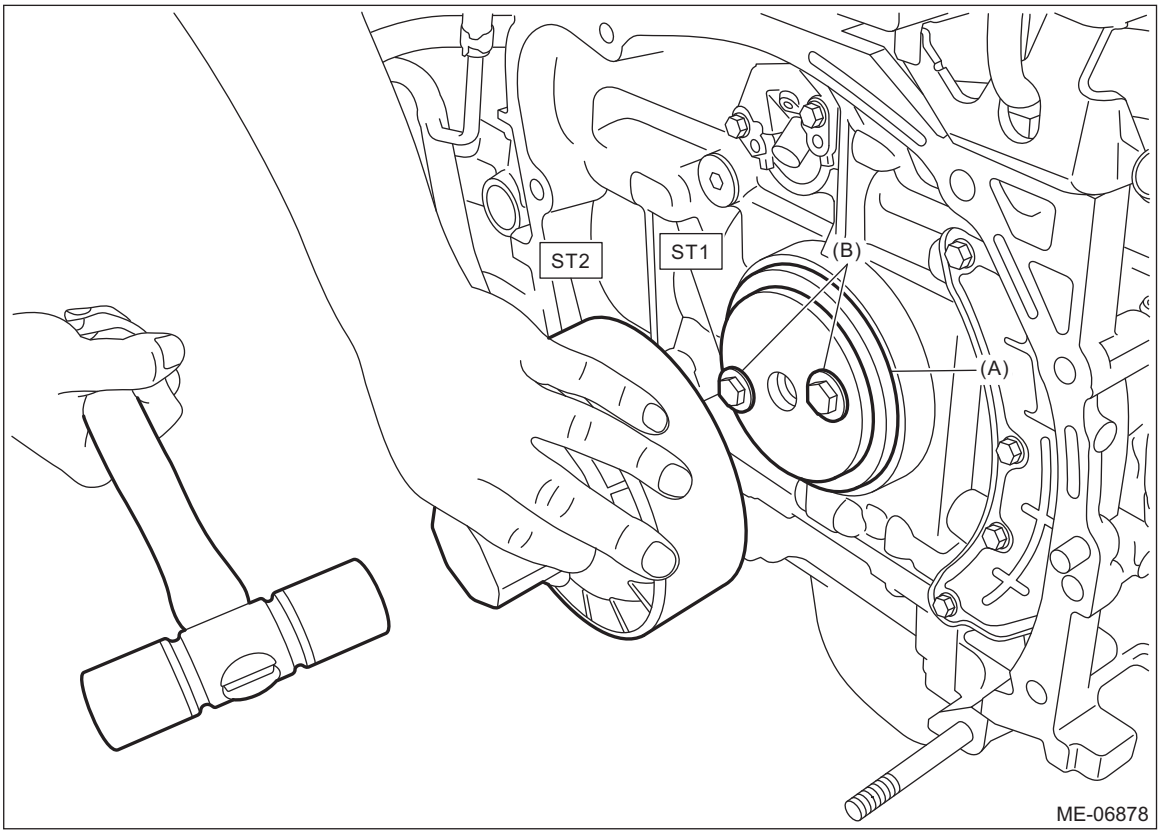
18) Install the engine rear hanger to the cylinder block RH.

Tightening torque:
21 N·m (2.1 kgf-m, 15.5 ft-lb)



19) Install the crank sprocket. <Ref. to ME(w/o STI)-143, INSTALLATION, Crank Sprocket.>
20) Install the cylinder head. <Ref. to ME(w/o STI)-203, INSTALLATION, Cylinder Head.>
21) Apply a coat of engine oil to the oil seal inner periphery and outer periphery, and install the rear oil seal using ST1 and ST2.

NOTE:
Use a new rear oil seal.
ST1 18671AA020 OIL SEAL GUIDE
ST2 18657AA030 OIL SEAL INSTALLER



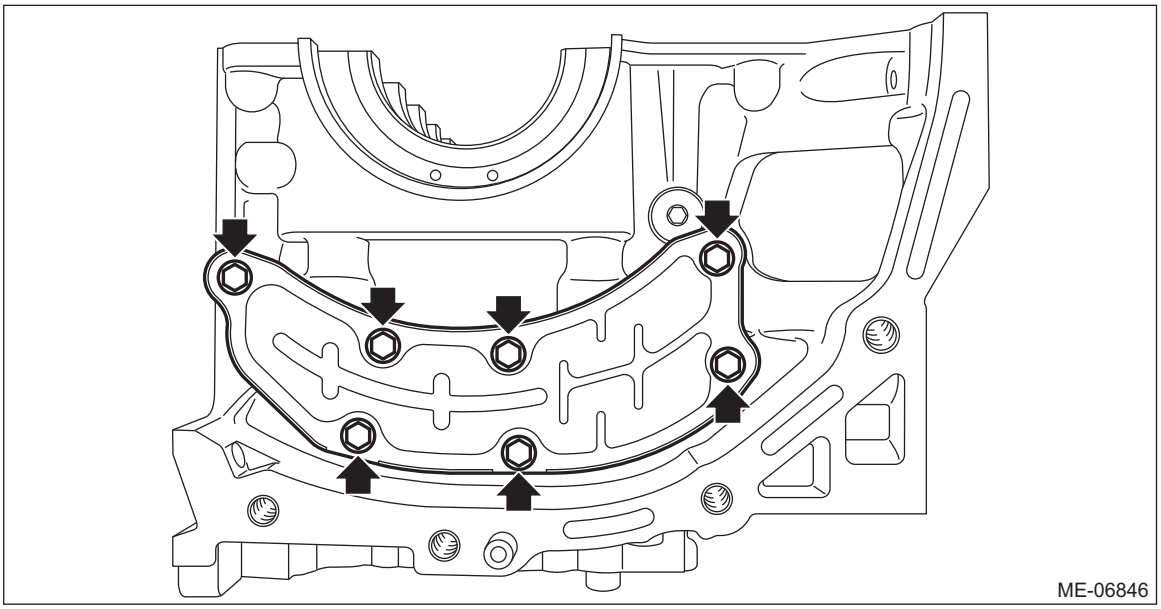
(A) Rear oil seal
(B) Drive plate or flywheel mounting bolt

22) Install the crankshaft position sensor plate with drive plate. (CVT model) <Ref. to CVT(TR690)-140, INSTALLATION, Drive Plate.>
23) Install the crankshaft position sensor plate with flywheel. (MT model) <Ref. to CL-15, INSTALLATION, Flywheel.>
24) Install the clutch disc and cover. (MT model) <Ref. to CL-12, INSTALLATION, Clutch Disc and Cover.>
25) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>

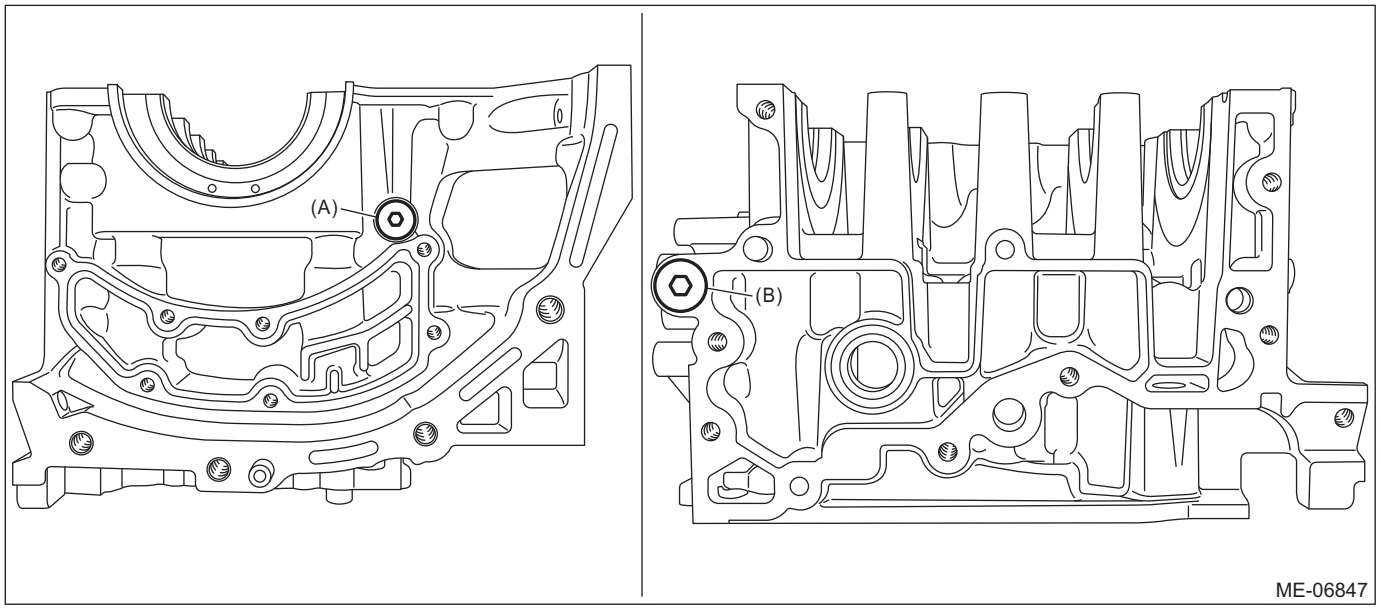
C: DISASSEMBLY

1. CYLINDER BLOCK

1) Remove the oil separator cover from cylinder block RH.

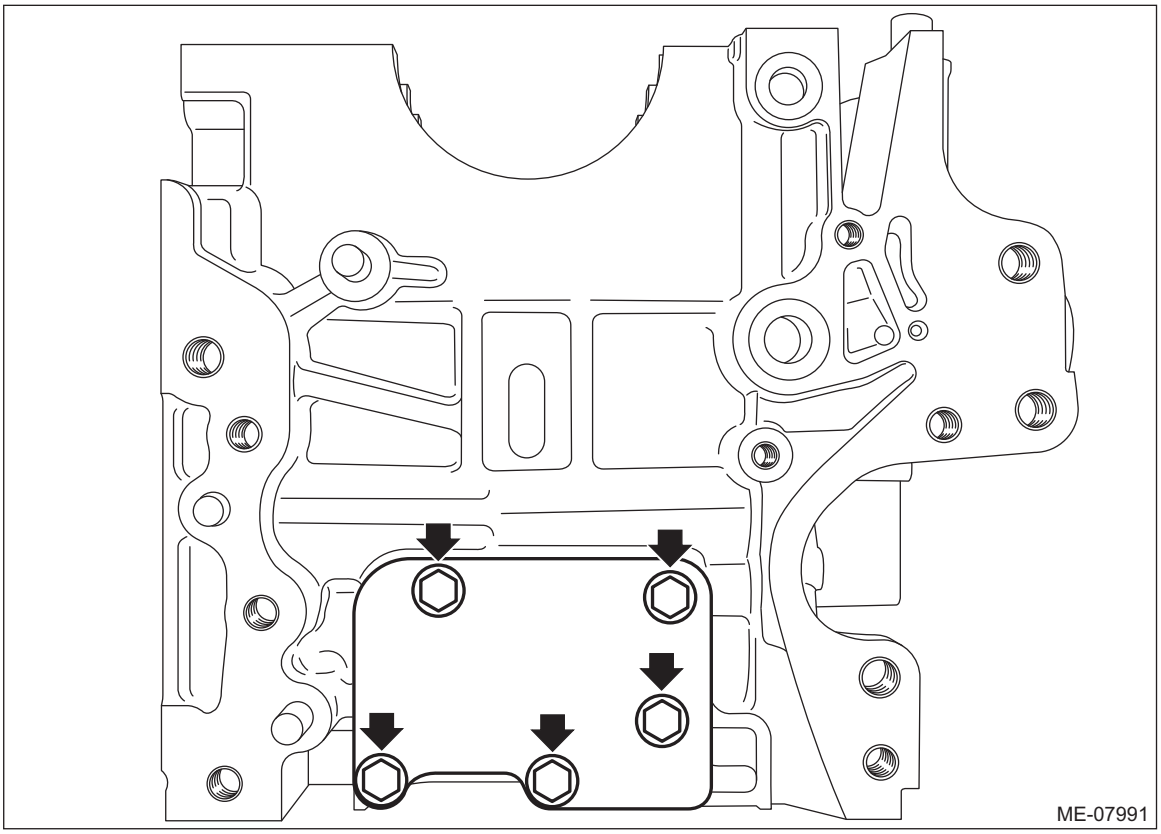


2) Remove the liquid gasket from cylinder block RH.
3) Remove the cylinder block plug (A) and the main gallery plug (B) from cylinder block RH.

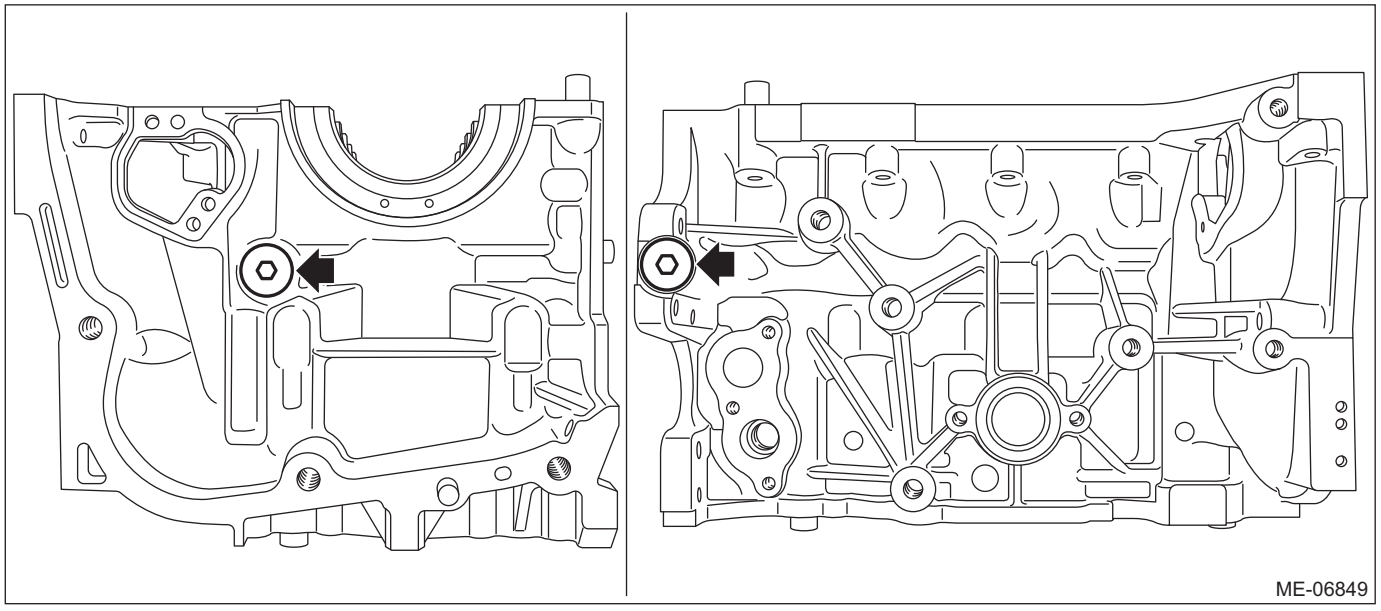


4) Remove the liquid gasket from the thread holes of the cylinder block RH, and from the threaded portions of cylinder block plug and main gallery plug.

5) Remove the cylinder block plate from cylinder block LH.

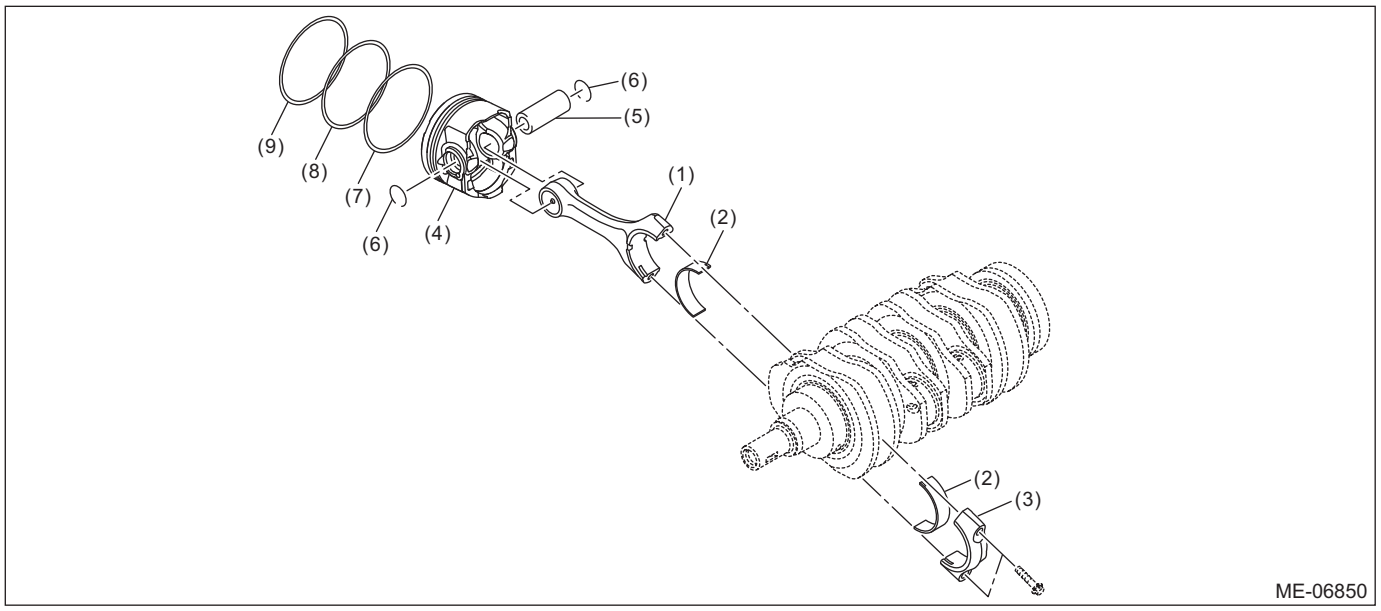


6) Remove the main gallery plug from cylinder block LH.



7) Remove the liquid gasket from the thread holes of the cylinder block LH and main gallery plug.

2. PISTON AND CONNECTING ROD



(1)	Connecting rod	(4)	Piston	(7)	Oil ring
(2)	Connecting rod bearing	(5)	Piston pin	(8)	Second ring
(3)	Connecting rod cap	(6)	Circlip	(9)	Top ring

NOTE:
To prevent confusion of various parts, mark each part.
1) Remove the connecting rod bearing from connecting rod and connecting rod cap.
2) Remove the piston rings from the piston.

NOTE:
Arrange the piston rings in order so that they can be installed in their original positions without confusion.
(1) Remove the compression rings in the order of top ring and second ring, using piston ring expander.
(2) Remove the oil rings in the order of upper rail, lower rail and expander by hand.
3) Remove the circlip on one end from the piston using a flat tip screwdriver.

NOTE:
Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.
4) Remove the piston pin from piston, and remove the connecting rod from piston.
5) Remove the circlip on other end from the piston using a flat tip screwdriver.

NOTE:
Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.

D: ASSEMBLY

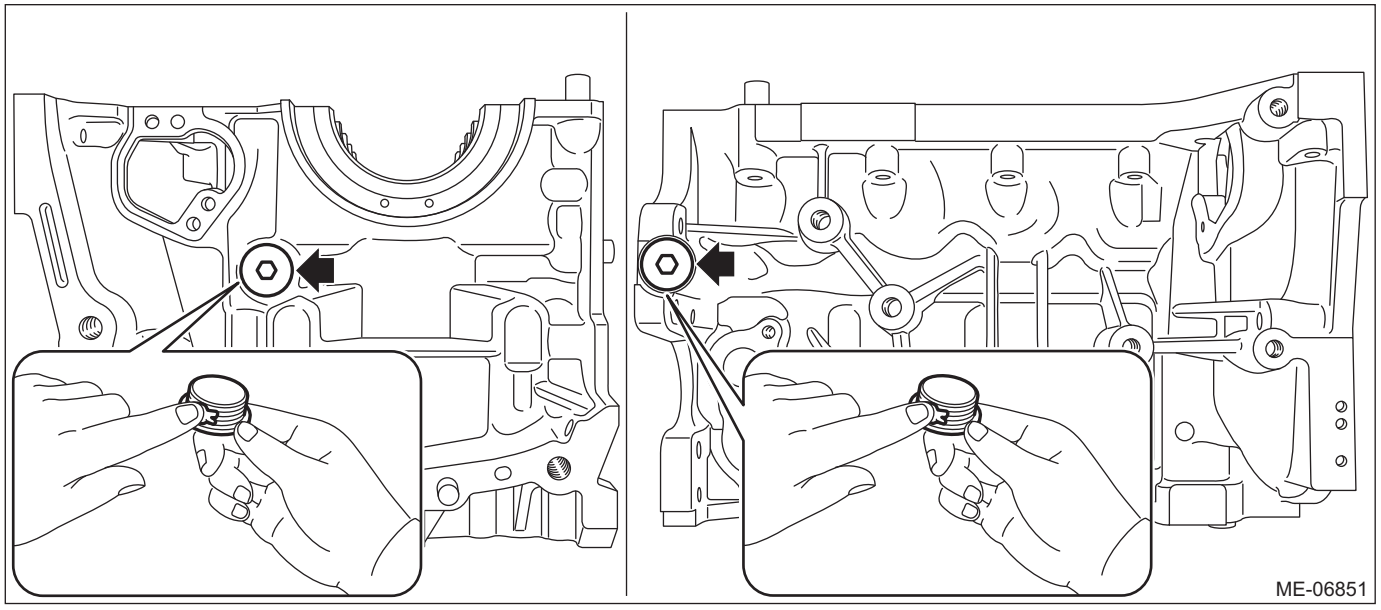
1. CYLINDER BLOCK

1) Apply liquid gasket to the threaded portion of the main gallery plug, and install the main gallery plug to the cylinder block LH.

NOTE:
Before applying liquid gasket, degrease the thread holes of the cylinder block LH and main gallery plug.

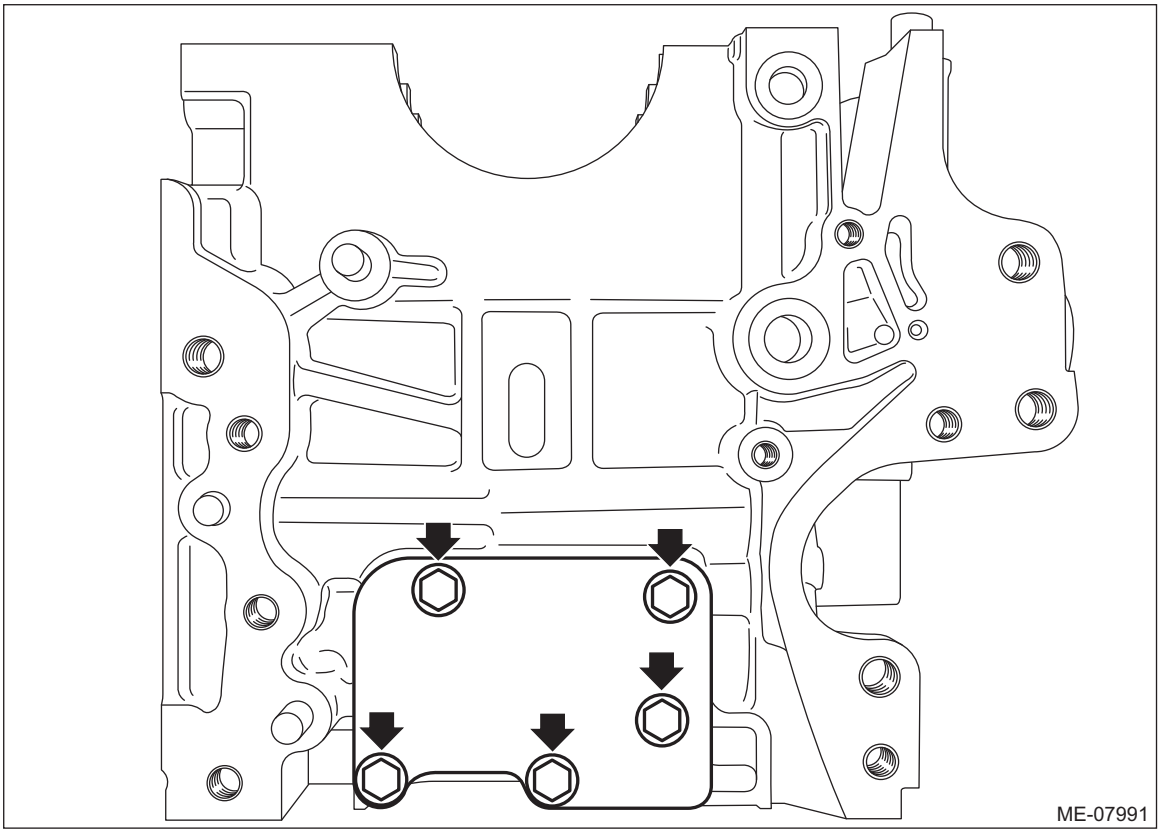
Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
37 N·m (3.8 kgf-m, 27.3 ft-lb)



2) Install the cylinder block plate onto cylinder block LH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

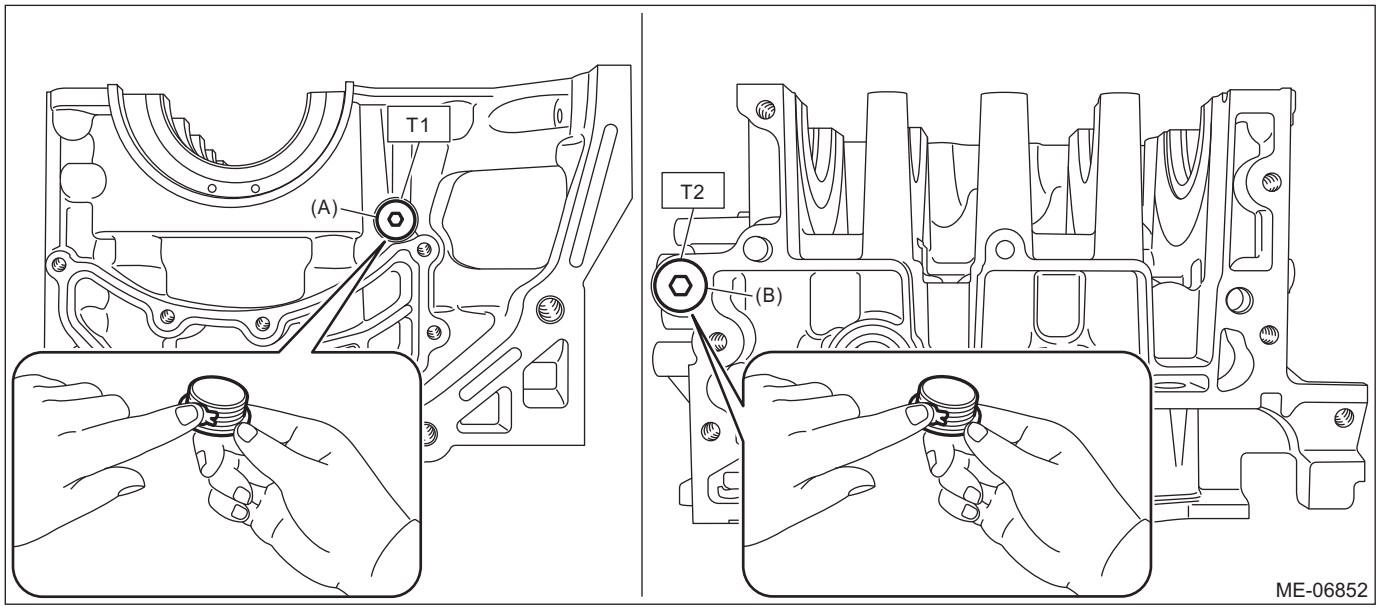


3) Apply liquid gasket to the threaded portions of cylinder block plug and main gallery plug, and install the cylinder block plug (A) and main gallery plug (B) to cylinder block RH.

NOTE:
Before applying liquid gasket, degrease the thread holes of the cylinder block RH, and the threaded portions of cylinder block plug and main gallery plug.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)
T2: 37 N·m (3.8 kgf-m, 27.3 ft-lb)

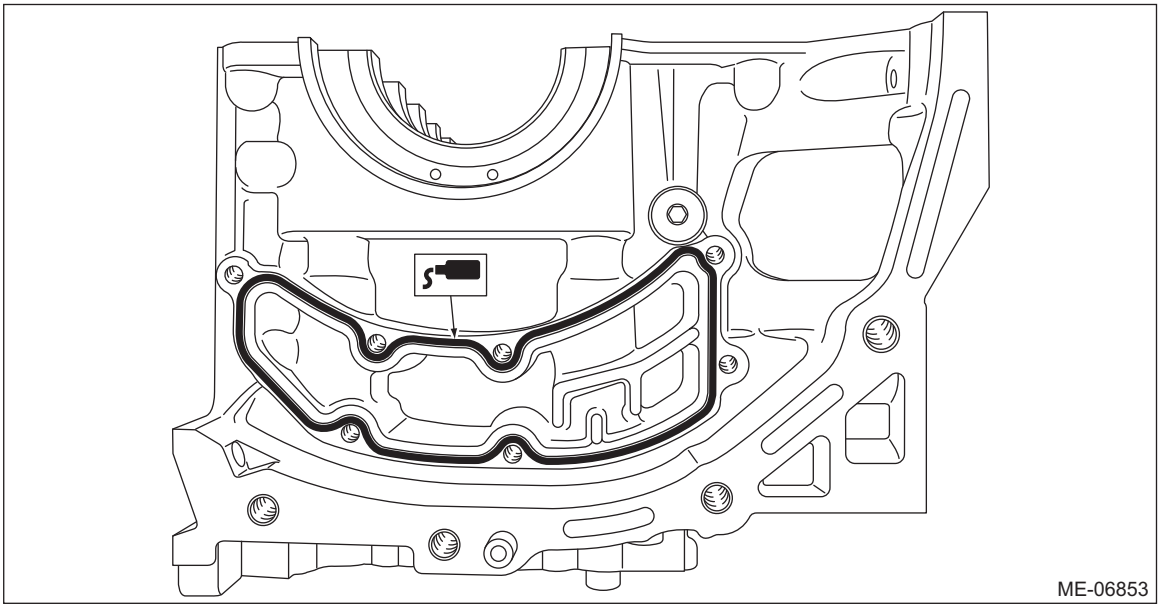


4) Install the oil separator cover to the cylinder block RH.
(1) Apply liquid gasket to the mating surfaces of oil separator cover.

NOTE:
- Use new oil separator cover.
- Before applying liquid gasket, degrease the old liquid gasket seal surface of cylinder block RH.
- Install within 5 min. after applying liquid gasket.

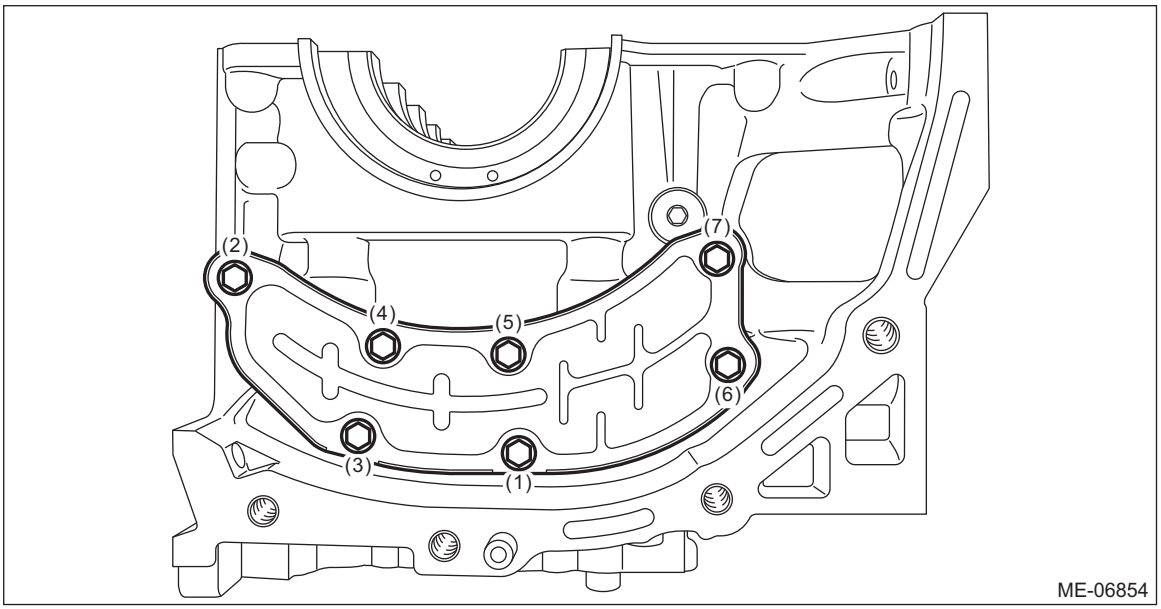
Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
4±1 mm (0.1772±0.0394 in)

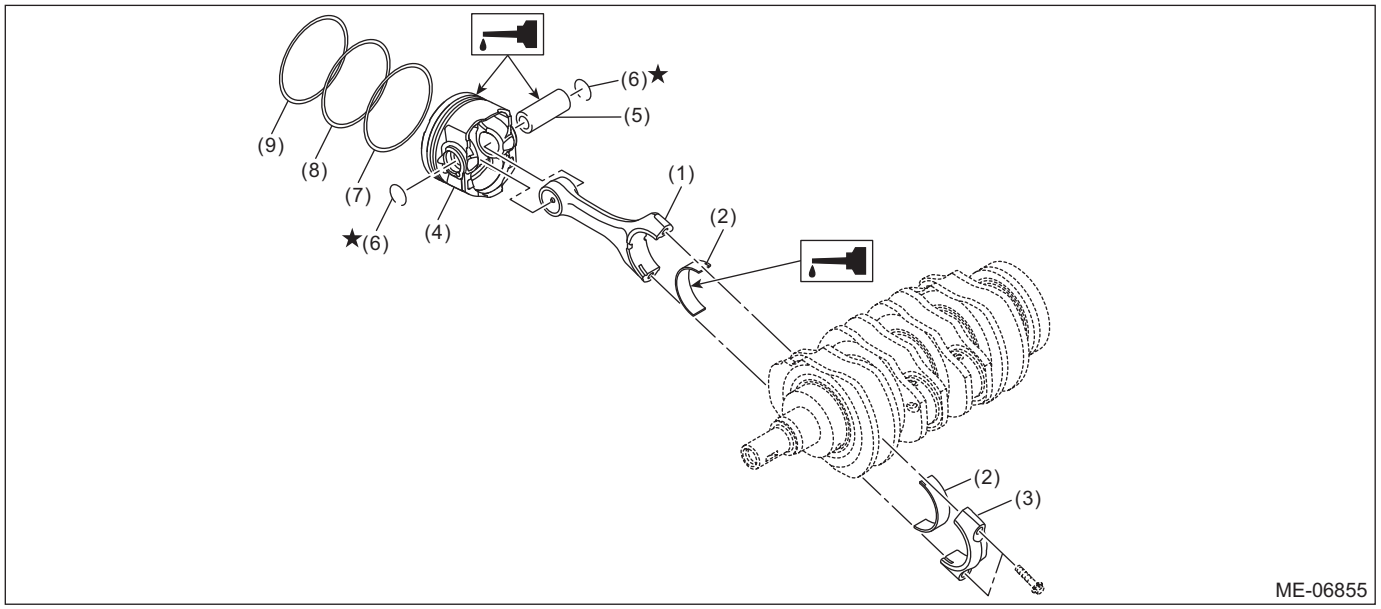


(2) Install the oil separator cover to the cylinder block RH, and tighten the oil separator cover bolts in numerical order as shown in the figure.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



2. PISTON AND CONNECTING ROD

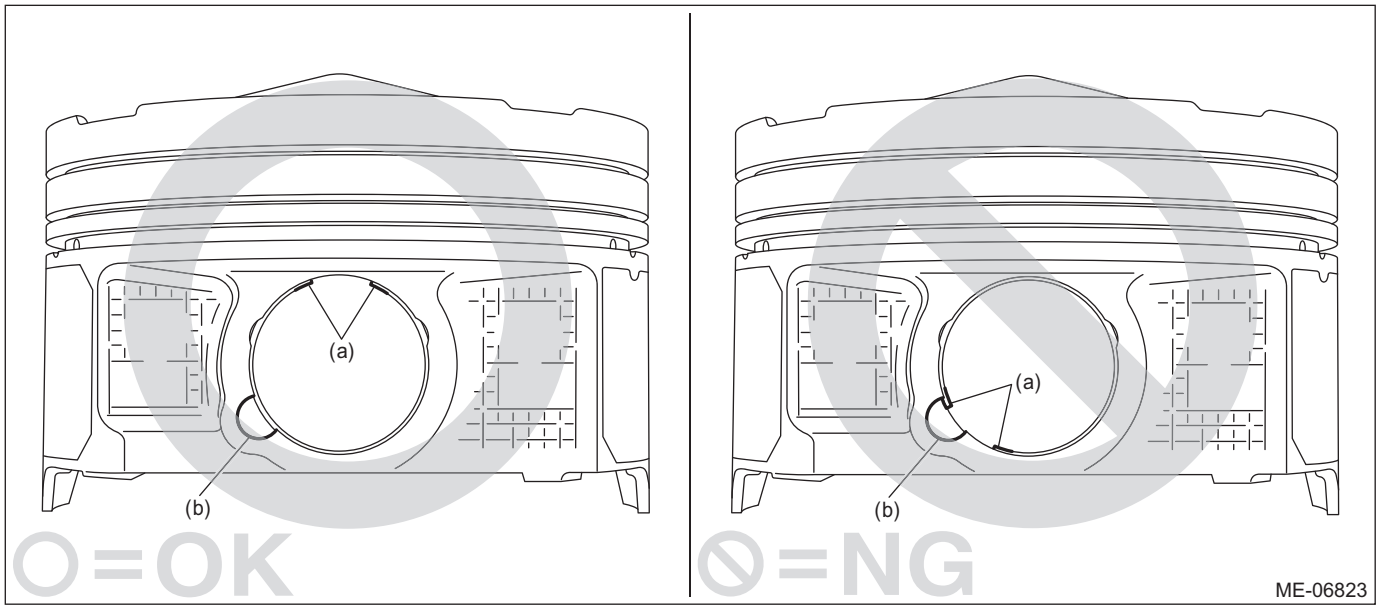


(1)	Connecting rod	(4)	Piston	(7)	Oil ring
(2)	Connecting rod bearing	(5)	Piston pin	(8)	Second ring
(3)	Connecting rod cap	(6)	Circlip	(9)	Top ring

1) Install the connecting rod bearing to the connecting rod and connecting rod cap.
2) Install the circlip on one end of the piston using a flat tip screwdriver.

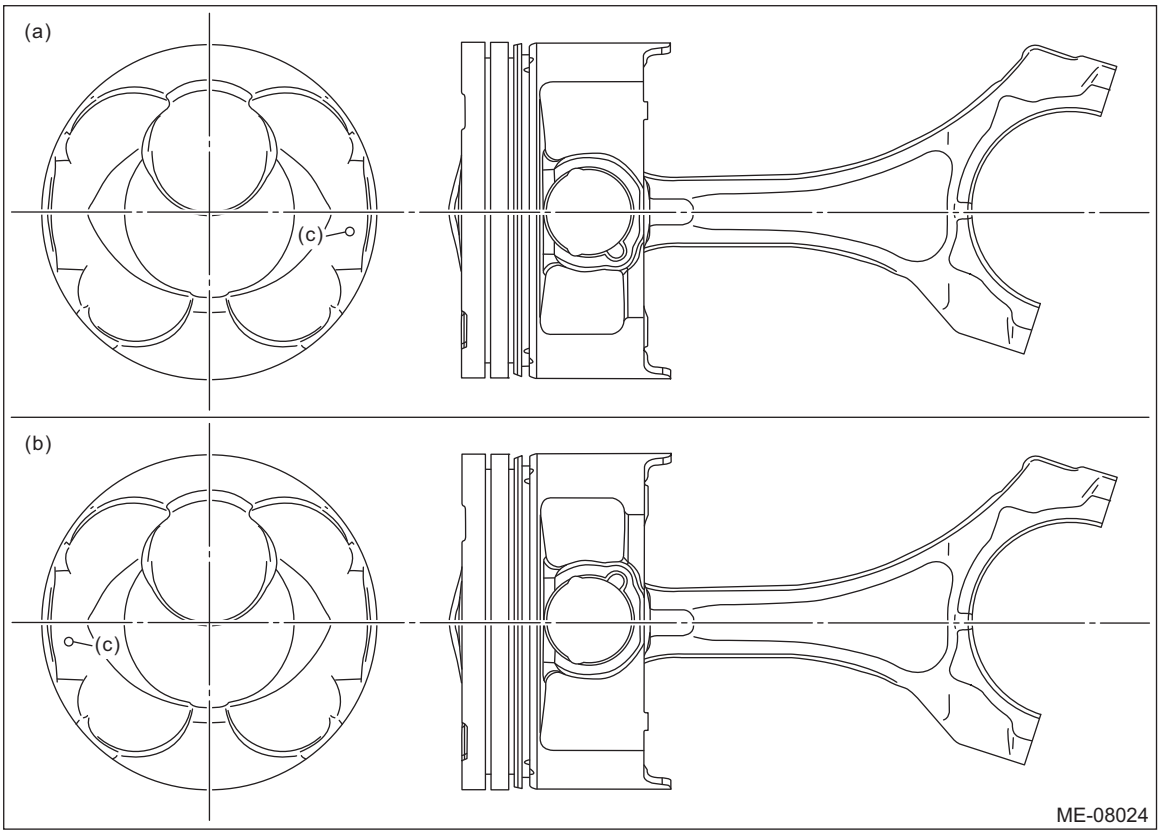
NOTE:
- Be careful not damage the piston, by wrapping the tip of flat tip screwdriver with tape.
- Make sure the circlip is firmly inserted into the circlip groove.

• After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.



3) Set the piston to the connecting rod.

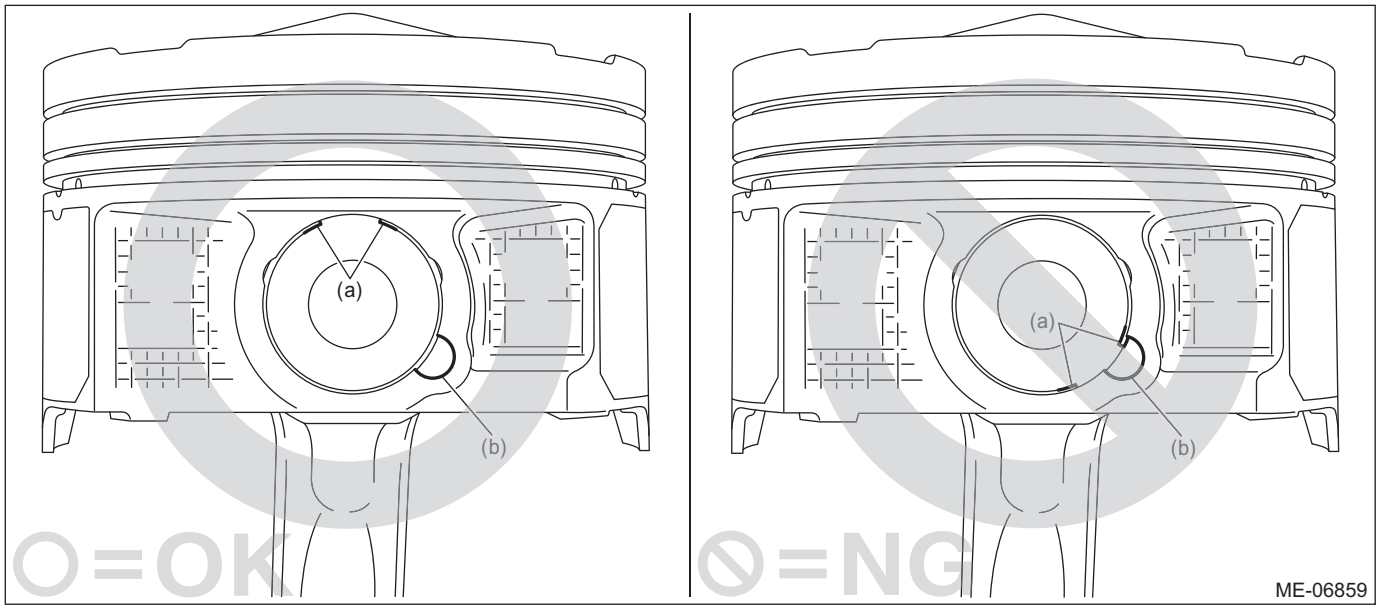
NOTE:
Align the front mark of piston and the connecting rod direction correctly as shown in the figure.



(a) RH side (#1 and #3) (b) LH side (#2 and #4) (c) Front mark

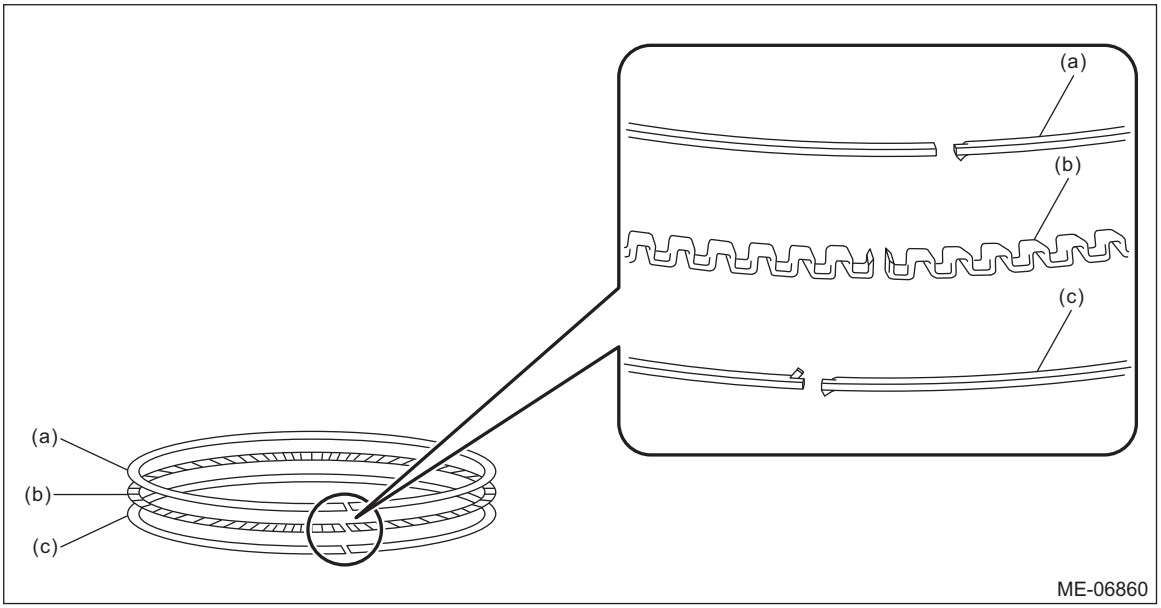
4) Apply engine oil to the piston pin, and attach the piston pin.
5) Install the circlip on the piston using a flat tip screwdriver.

NOTE:
- Be careful not damage the piston and piston pin, by wrapping the tip of flat tip screwdriver with tape.
- Make sure the circlip is firmly inserted into the circlip groove.
- After installing the circlip, rotate the circlip so that its end part (a) and the cutout portion of circlip groove (b) do not match.



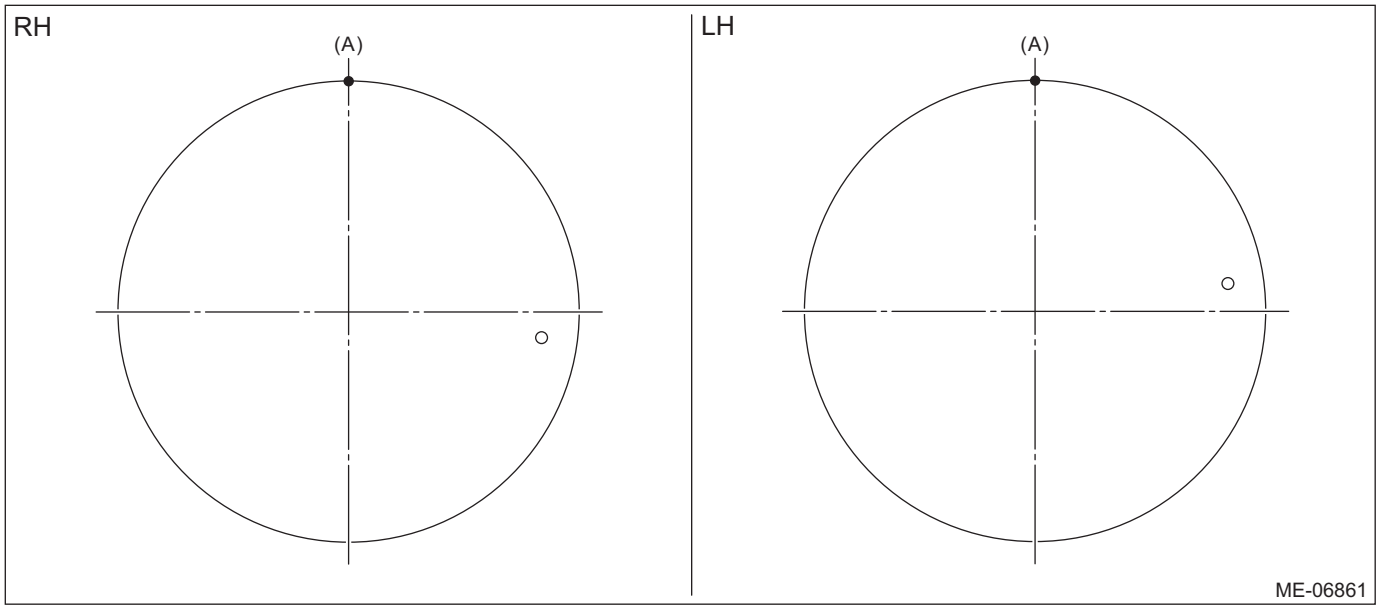
6) Install the oil rings to the piston in the order of expander, lower rail and upper rail by hand.

NOTE:
Oil ring consists of the upper rail, expander and lower rail.

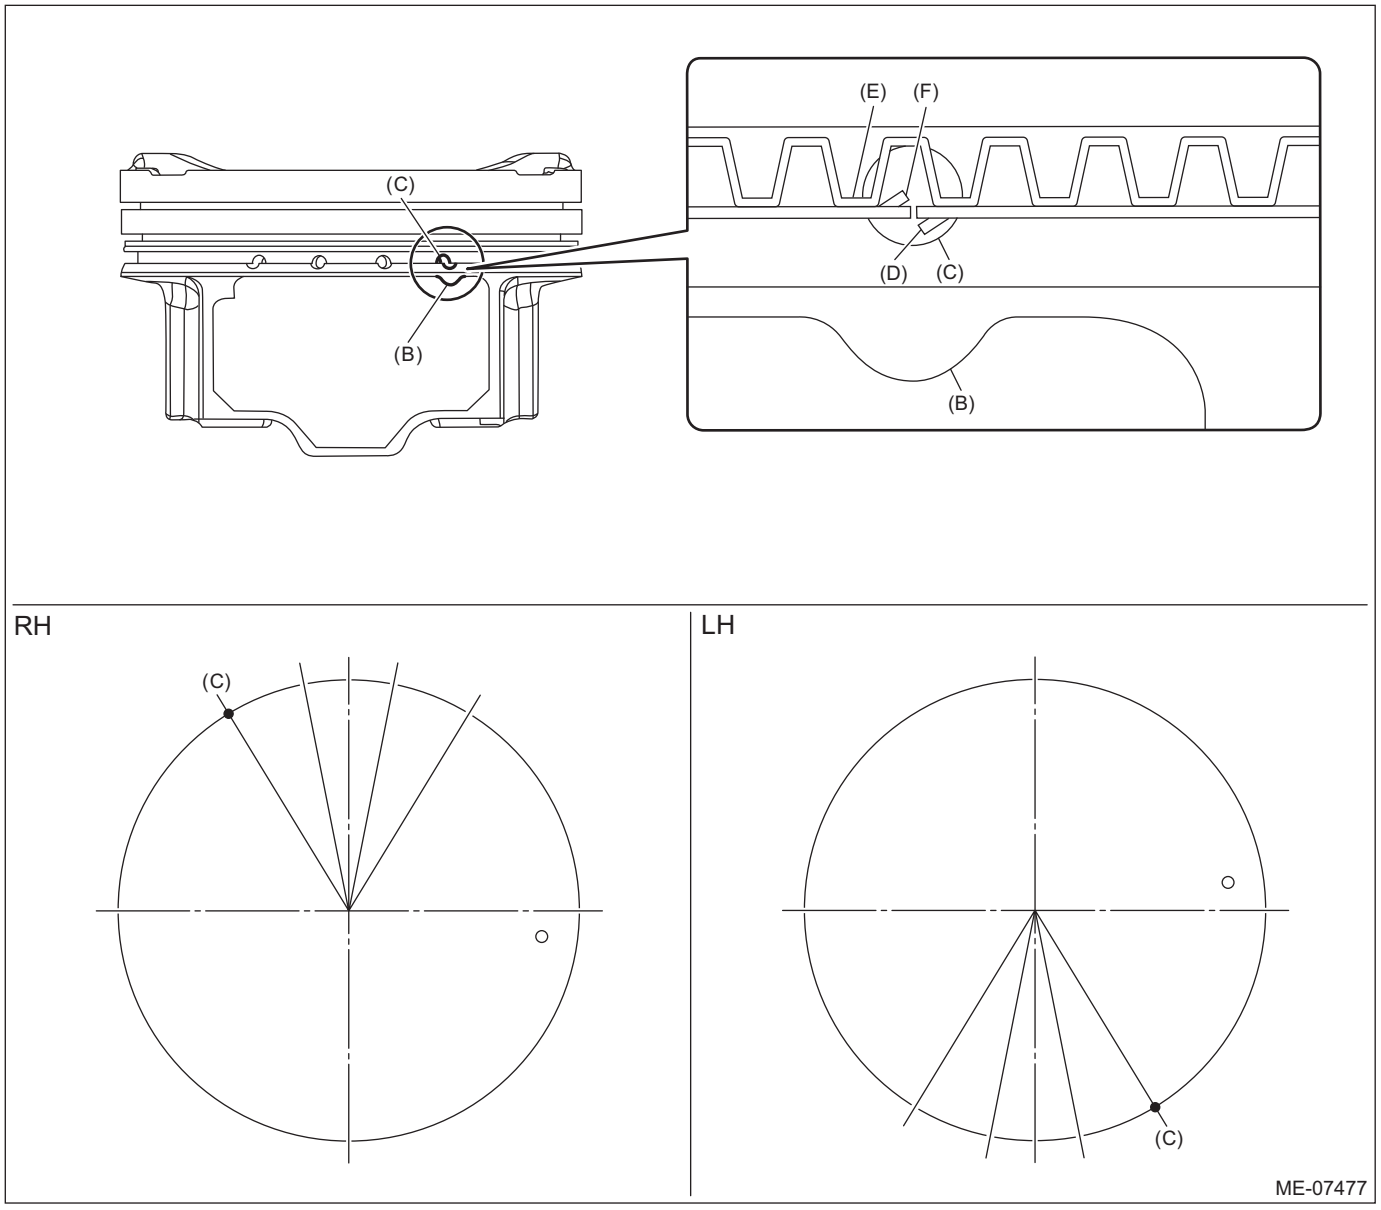


(a) Upper rail (b) Expander (c) Lower rail

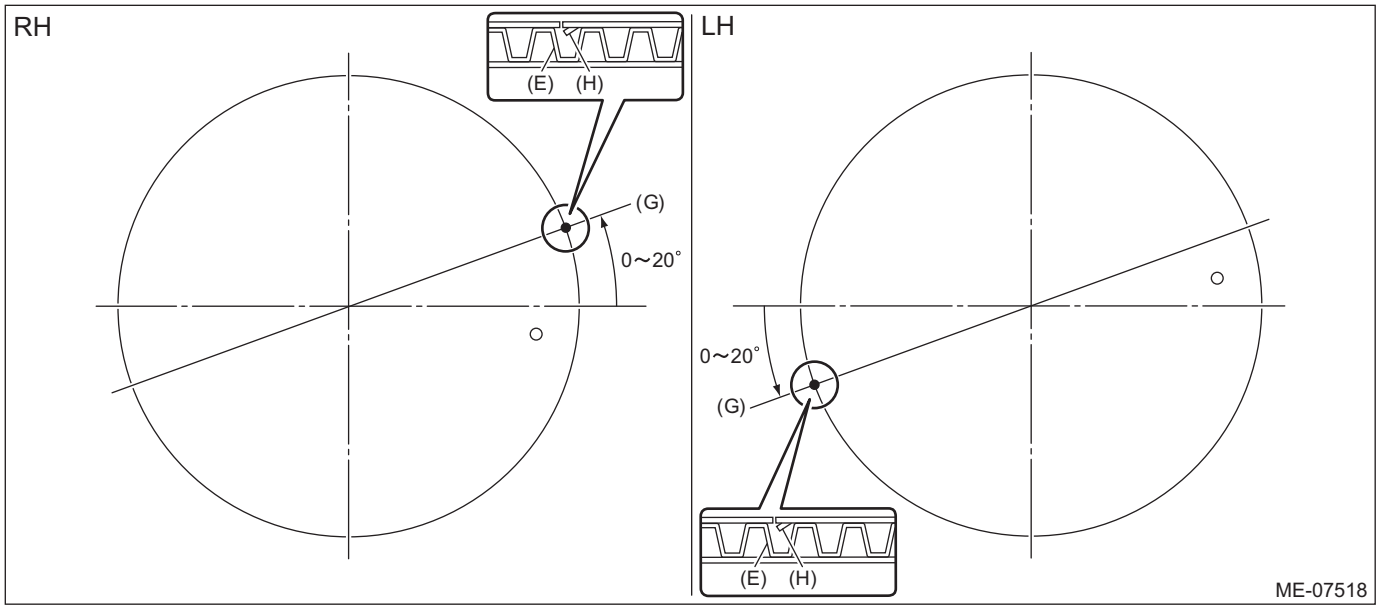
(1) Set the ring gap of the expander to the position (A).



(2) Set the lower rail spin stopper (D) to the oil groove (C) located above the cutout portion (B) of the piston skirt coating, and hook the lower rail spin stopper (F) to the expander (E).



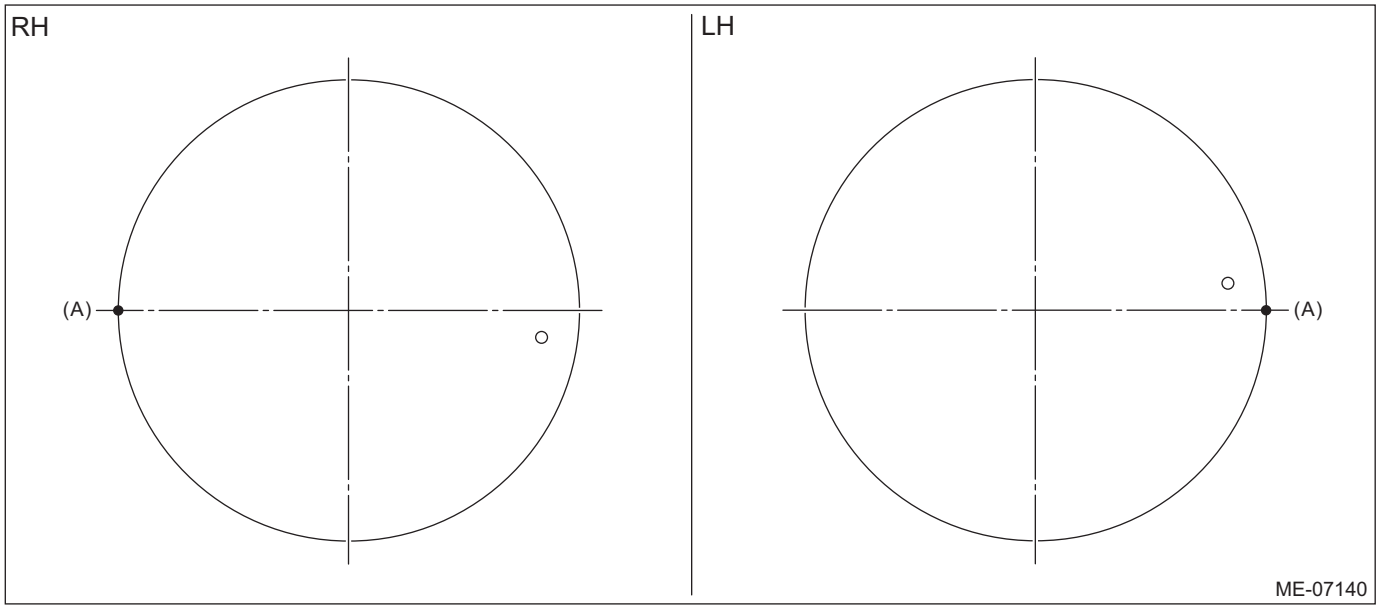
(3) Set the upper rail gap to the position (G), and hook the upper rail spin stopper (H) to the expander (E).



7) Install the compression rings to the piston in the order of second ring and top ring, using piston ring expander.

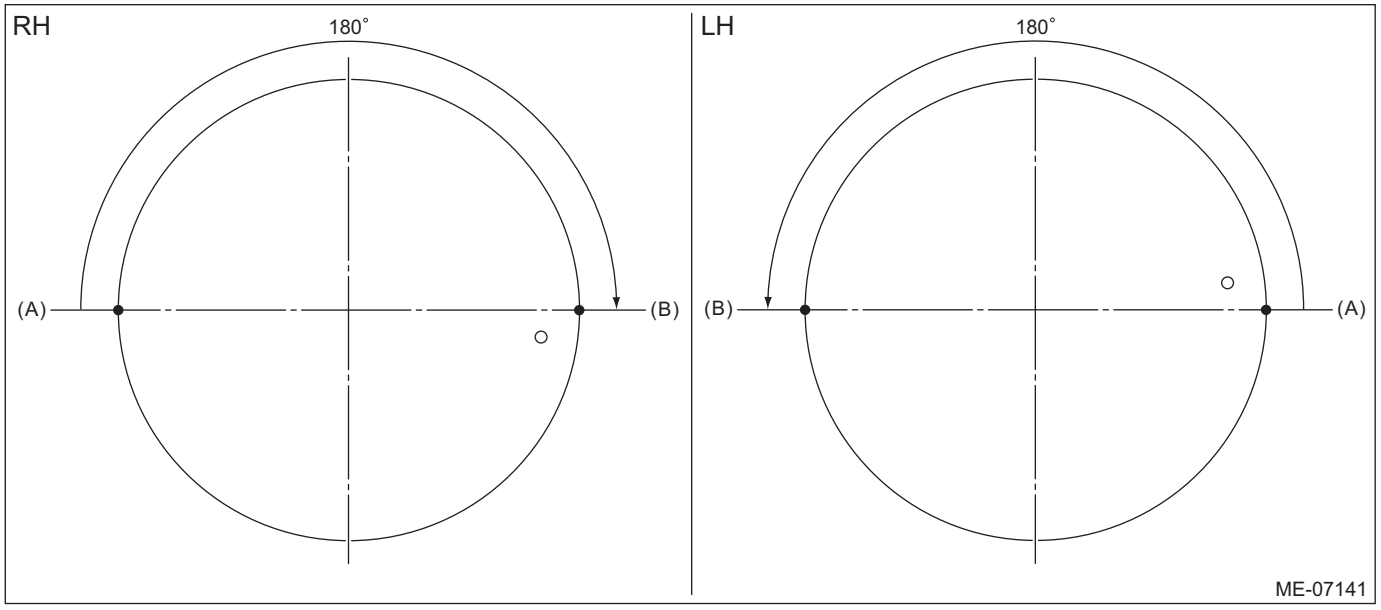
(1) Set the ring gap of the second ring to the position (A) in the figure.

NOTE:
Install the second ring so that the ring mark (2N) faces the piston crown.



(2) Set the ring gap of top ring at (B) in the figure on the 180° opposite direction of (A).

NOTE:
Install the top ring so that the ring mark (TN) faces the piston crown.



8) Check that the piston ring is installed correctly.

E: INSPECTION

1. CYLINDER BLOCK & PISTON

1) Visually inspect to make sure that there are no cracks, scratches or other damage.
2) Use liquid penetrant tester on the important sections to check for fissures.
3) Check that there are no traces of gas leaking or water leaking on the gasket attachment surface.
4) Check the oil passages for clogging.
5) Check for warpage of mating surfaces of the cylinder block that contacts cylinder head using a straight edge and thickness gauge. If it exceeds the limit, correct the surface by grinding it with a surface grinder or replace the cylinder block.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Cylinder block warpage:
Limit
0.025 mm (0.0010 in)

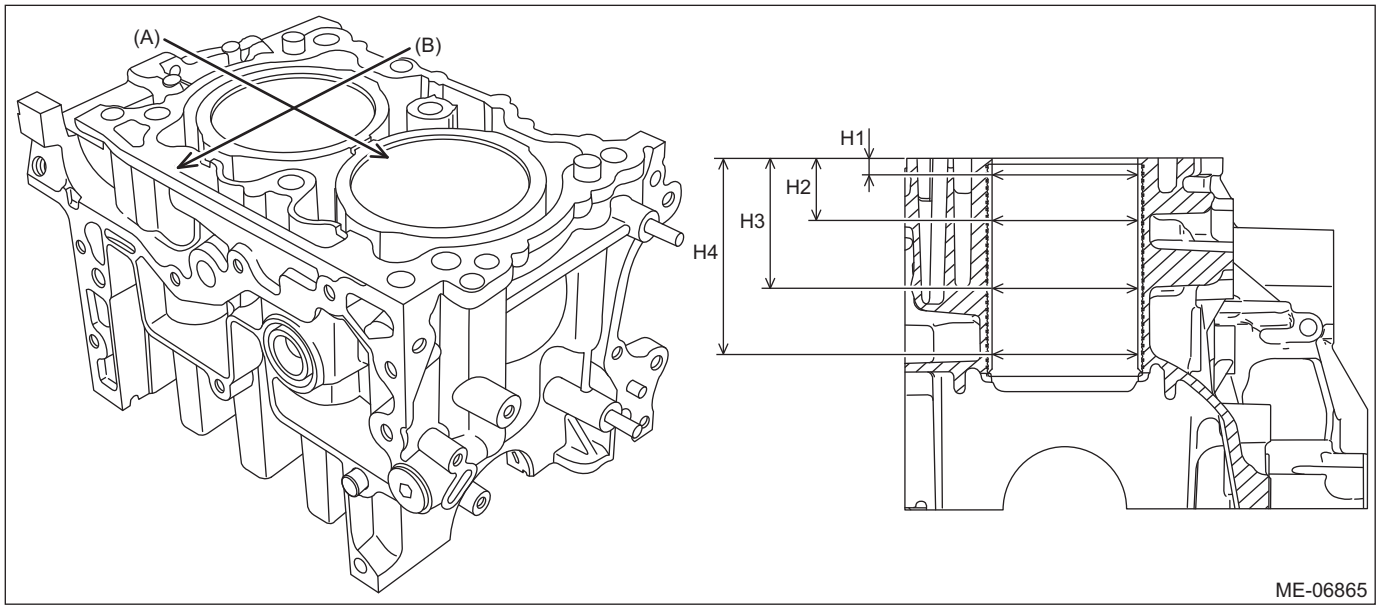
Grinding limit of cylinder block:
To 204.9 mm (8.0669 in)

Height of cylinder block:
Standard
205.0 mm (8.0709 in)

6) Using a cylinder bore gauge, check the cylindricality and out-of-roundness of cylinder liner. If it is not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

NOTE:
- Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).
- Measurement should be performed at a temperature of 20°C (68°F).
- Write down all measurement values as the values are used in the next procedure.

• Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure.



(A) Piston pin direction (B) Thrust direction

H1: 10 mm (0.3937 in) H2: 45 mm (1.7717 in) H3: 80 mm (3.1496 in)
H4: 105 mm (4.1339 in)

• Calculate the cylindricality of cylinder liner by using the following formula.

Calculation formula
C = The larger value between the calculation values C' and C'' C' = (D(a)–D(b))/2 C'' = (D(c)–D(d))/2
C: Cylindricality of cylinder liner D(a): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(b): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the direction of the piston pin D(c): The largest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction D(d): The smallest value of all the values obtained by measuring the cylinder liner inner diameter in the thrust direction

• Calculate the out-of-roundness of cylinder liner at each measurement height by using the following formula.

Calculation formula
R = (D(e)–D(f))/2
R: Out-of-roundness of cylinder liner D(e): The larger value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter D(f): The smaller value between the measurement values in the piston pin direction and in the thrust direction of cylinder liner inner diameter

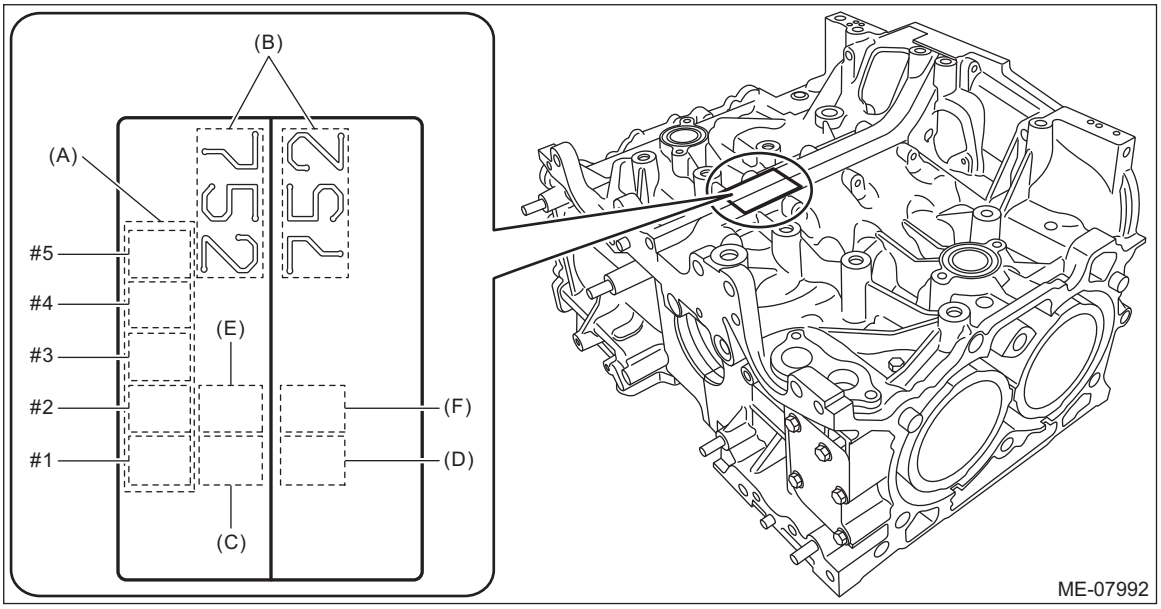
Cylindricality of cylinder liner:
Limit
0.030 mm (0.0012 in)

Out-of-roundness of cylinder liner:
Limit
0.030 mm (0.0012 in)

7) Check the clearance between cylinder liner and piston. Check the clearance between cylinder liner and piston by measuring the inner diameter of cylinder liner and the outer diameter of piston respectively.

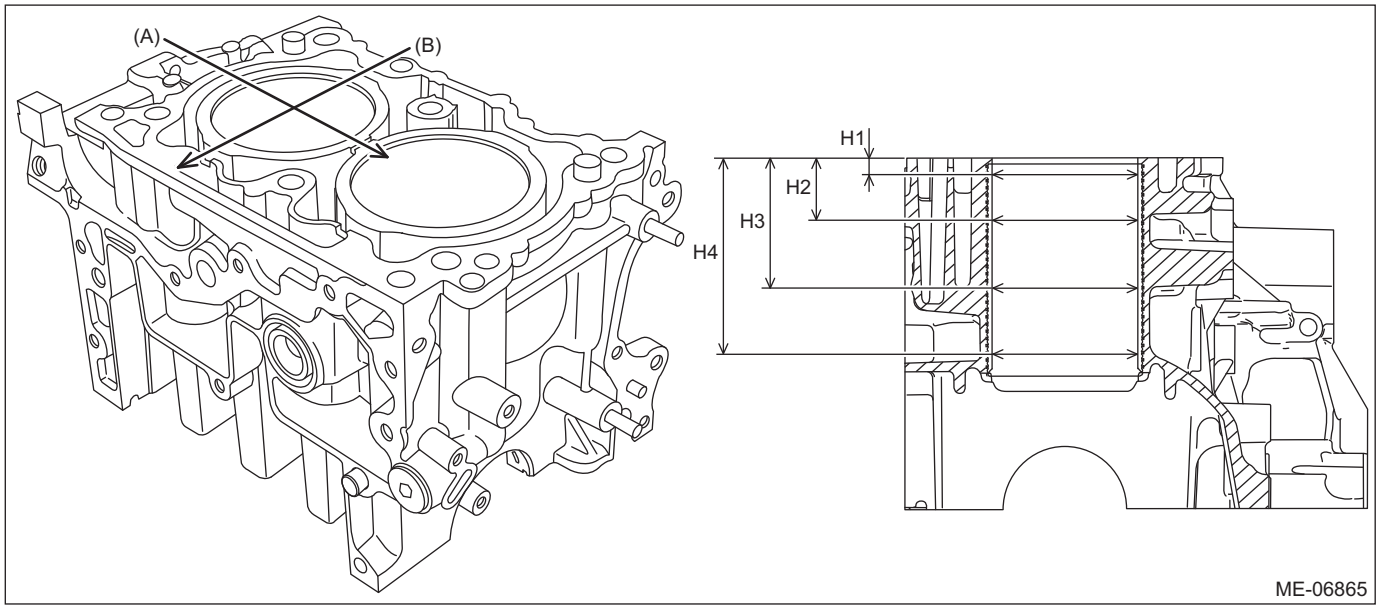
(1) Measure the inner diameter of cylinder liner. If it is not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

NOTE:
- Measure the cylinder liner with cylinder blocks separated (into cylinder block RH and cylinder block LH).
- Measurement should be performed at a temperature of 20°C (68°F).
- The cylinder bore size mark is stamped on the upper face of the cylinder block.



(A) Main journal size mark
(B) Cylinder block (RH) - (LH) combination mark
(C) #1 cylinder bore size mark
(D) #2 cylinder bore size mark
(E) #3 cylinder bore size mark
(F) #4 cylinder bore size mark

- Measure the inner diameter of each cylinder liner in both the thrust and piston pin directions at the heights as shown in the figure and read the value of the most worn location.



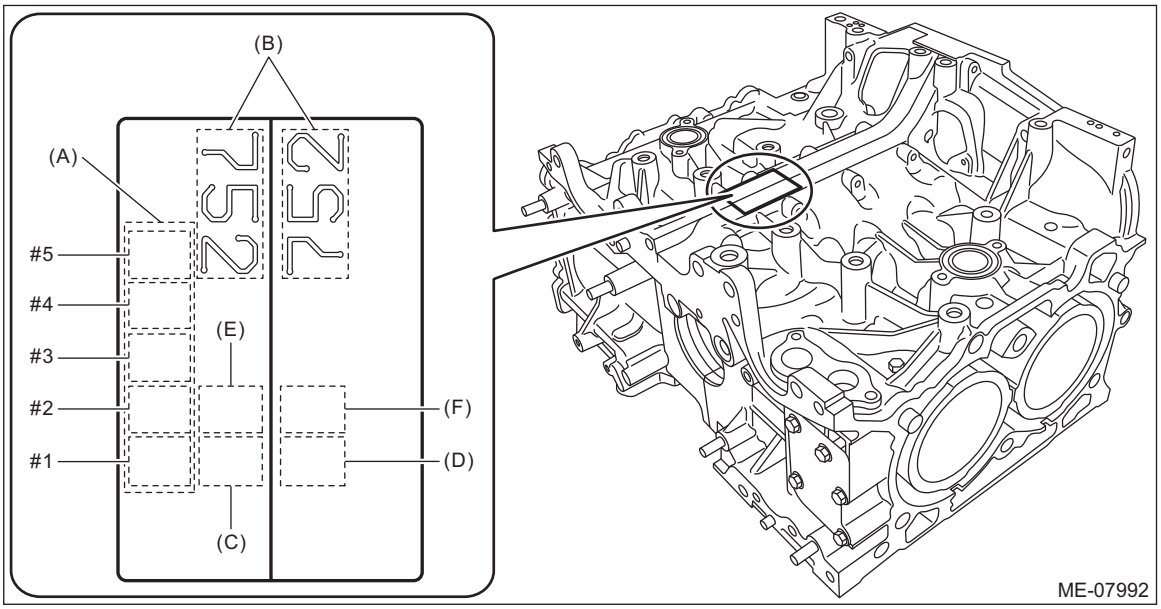
(A) Piston pin direction
(B) Thrust direction

H1: 10 mm (0.3937 in)
H2: 45 mm (1.7717 in)
H3: 80 mm (3.1496 in)
H4: 105 mm (4.1339 in)

Inner diameter of cylinder liner:
Cylinder bore size mark A
Standard
86.005 — 86.015 mm (3.3860 — 3.3864 in)
Cylinder bore size mark B
Standard
85.995 — 86.005 mm (3.3856 — 3.3860 in)

(2) Check the outer diameter of piston with a micrometer. If it is not within the standard, replace the piston.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of each piston in thrust direction at the height as shown in the figure.
- Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.
- The grade can be judged by the stamp of cylinder bore size mark on the upper face of the cylinder block.

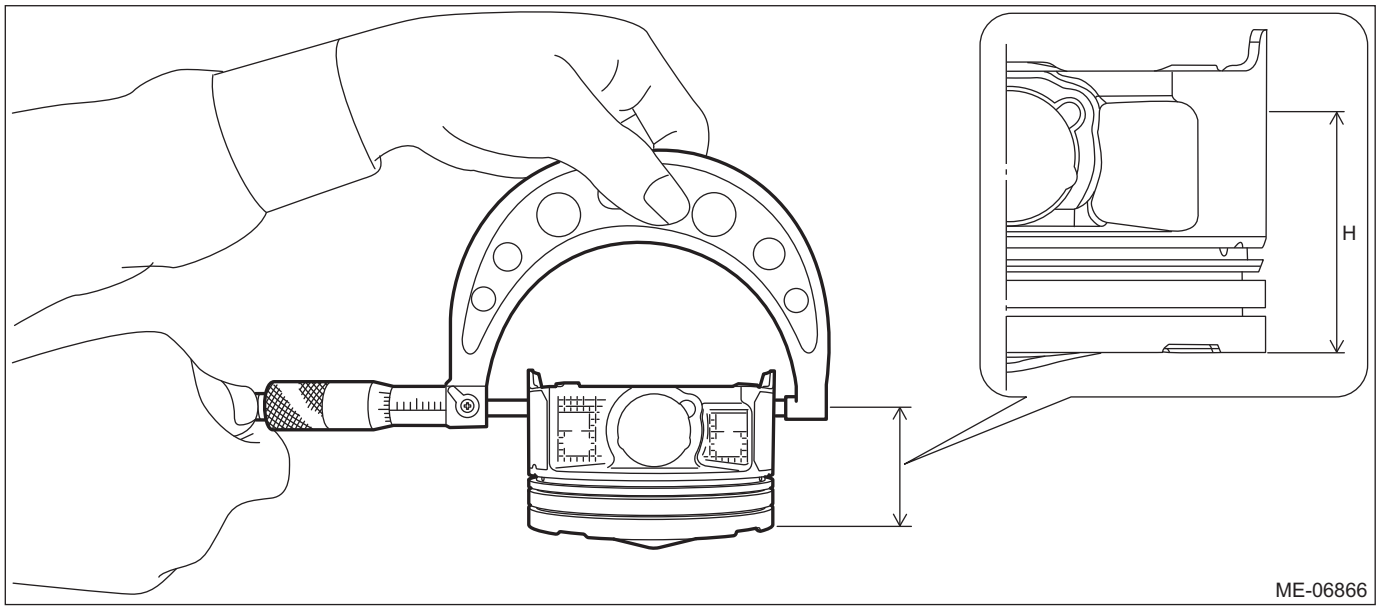


(A)	Main journal size mark	(C)	#1 cylinder bore size mark	(E)	#3 cylinder bore size mark
(B)	Cylinder block (RH) – (LH) combination mark	(D)	#2 cylinder bore size mark	(F)	#4 cylinder bore size mark

- If the piston is replaced, check the clearance between cylinder liner and piston in the step (3), and select a suitable sized piston.

Piston grade point H:
40.0 mm (1.5748 in)

Piston outer diameter:
Standard size (grade A = cylinder bore size mark A)
Standard
85.985 — 85.995 mm (3.3852 — 3.3856 in)
Standard size (grade B = cylinder bore size mark B)
Standard
85.975 — 85.985 mm (3.3848 — 3.3852 in)



(3) Calculate the clearance between cylinder liner and piston. If it is not within the standard, perform reboring (including honing), or replace the cylinder block and piston as a set. For reboring and honing procedure, refer to step 8).

NOTE:
The clearance between cylinder liner and piston is decided by matching the cylinder block bore size mark and the grade of piston outer diameter (grade A or B).

Clearance between cylinder liner and piston:
Standard
0.010 — 0.030 mm (0.0004 — 0.0012 in)

8) Reboring and honing

(1) If any of the cylindricality, out-of-roundness, inner diameter or clearance between cylinder liner and piston is out of standard or if there is any damage on the cylinder liner, perform reboring (including honing).

CAUTION:
When any of the cylinder liner needs reboring, all other cylinder liners must be rebored at the same time, and replaced with proper size pistons.

Oversize piston outer diameter:
0.25 mm (0.0098 in) oversize
Standard
86.225 — 86.245 mm (3.3947 — 3.3955 in)
0.50 mm (0.0197 in) oversize
Standard
86.475 — 86.495 mm (3.4045 — 3.4053 in)

(2) If the inner diameter of cylinder liner exceeds the limit after reboring (including honing), replace the cylinder block and piston as a set.

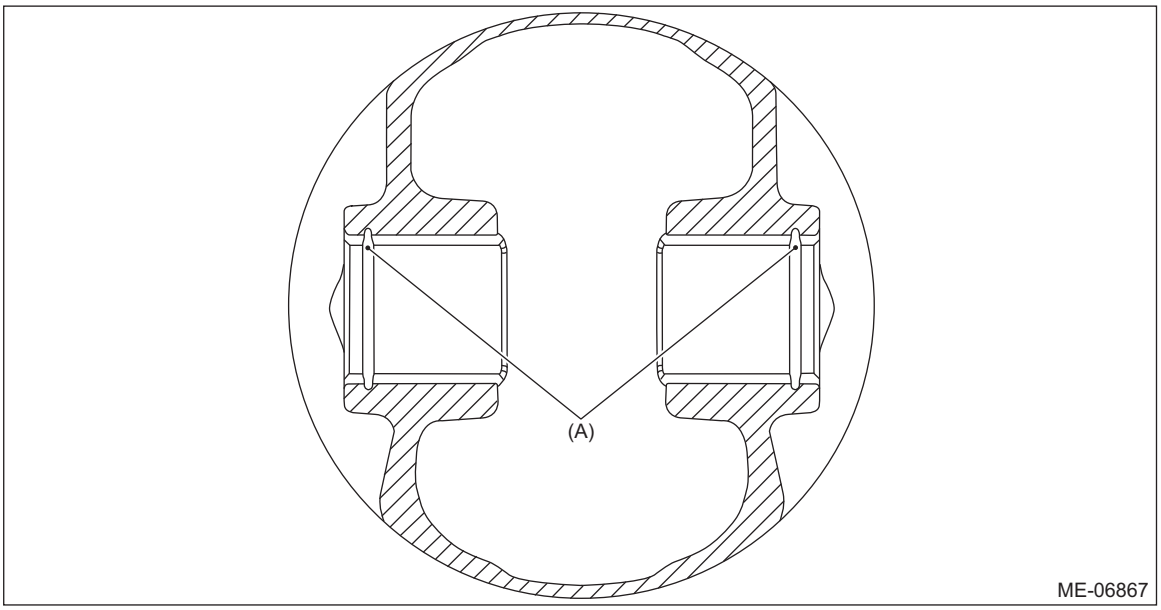
NOTE:
• Immediately after reboring (including honing), the inner diameter of cylinder liner may differ from its real diameter due to temperature rise. Thus, when measuring the inner diameter of cylinder liner, wait until the temperature has cooled to 20°C (68°F).
• For the measurement of the inner diameter of cylinder liner, refer to step 7).

Inner diameter of cylinder liner boring limit (diameter):
To 86.505 mm (3.4057 in)

2. PISTON AND PISTON PIN

1) Check the piston and piston pin for wear or crack.
2) Check the snap ring for distortion or wear.
3) Check the piston ring groove for damage.
4) Check the circlip groove (A) for burr.

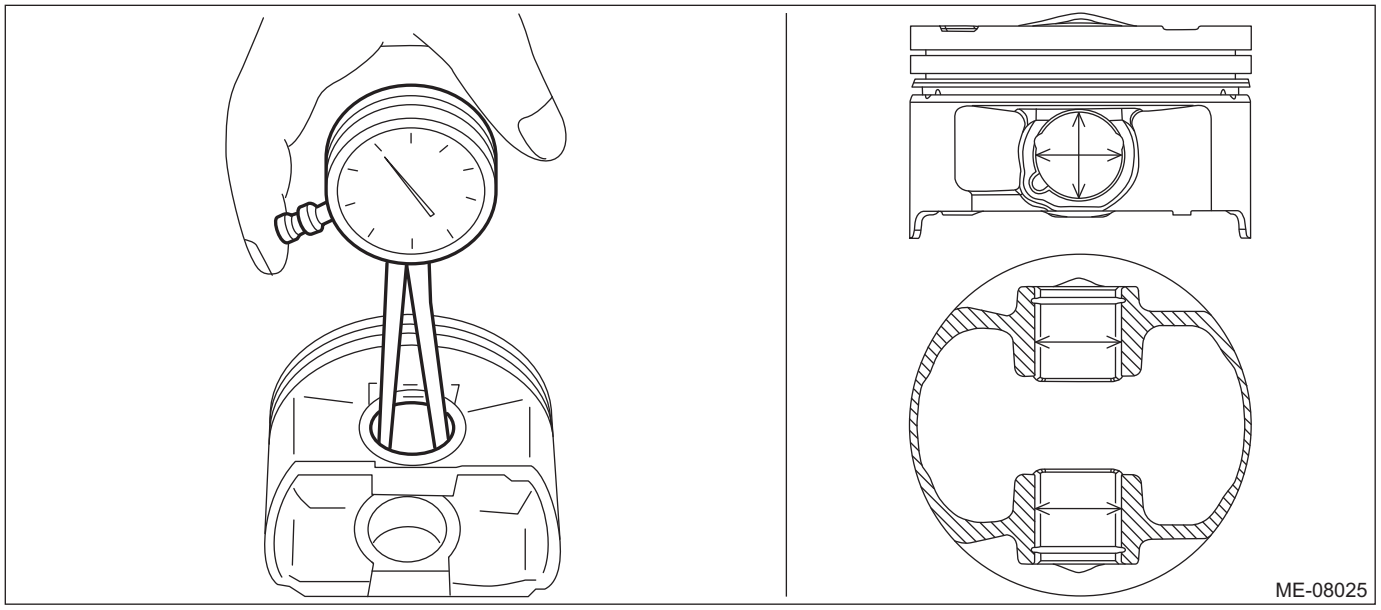
NOTE:
If the burr is found, remove the burr from groove.



5) Check that the piston pin can be inserted into the piston with a thumb at 20°C (68°F).
6) Check the clearance between piston and piston pin. Check the clearance between piston and piston pin by measuring the inner diameter of piston pin hole and the outer diameter of piston pin respectively.
(1) Using a caliper gauge, measure the inner diameter of piston pin hole.

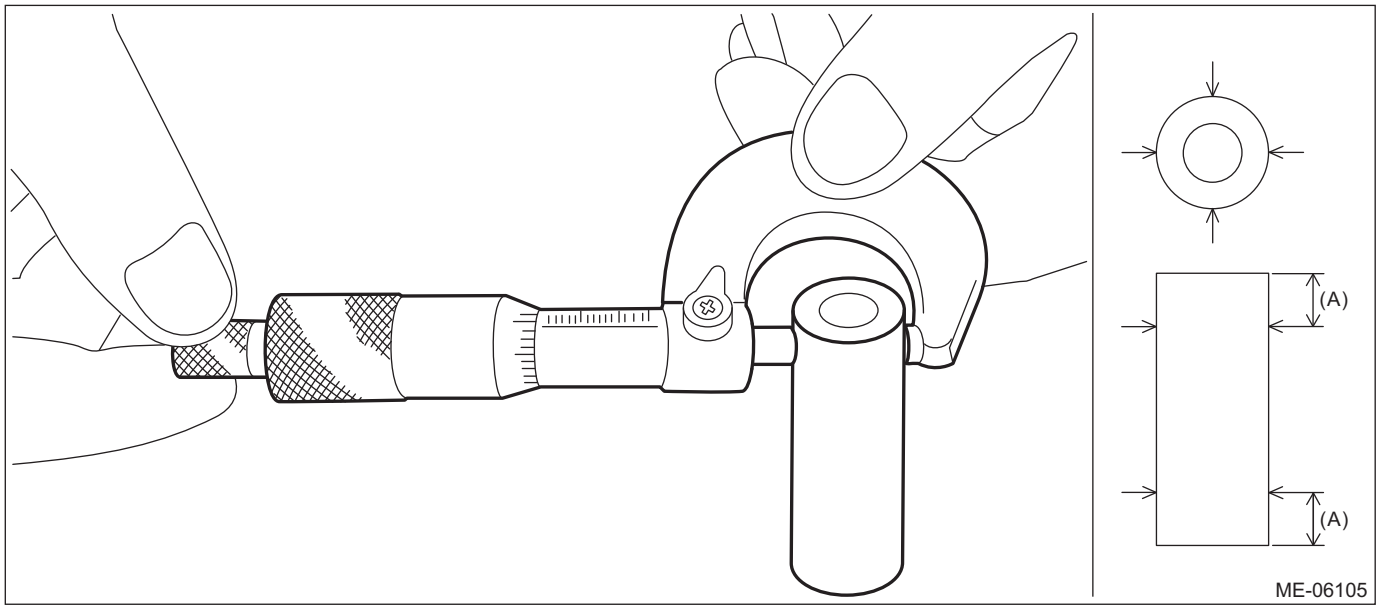
NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the inner diameter of the piston pin hole at the four locations as shown in the figure, and read the value of most worn location.

• Record the measured value.



(2) Measure the outer diameter of piston pin with a micrometer.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the outer diameter of the piston pin at the four locations as shown in the figure, and read the value of most worn location.
• Record the measured value.



(A) 10 mm (0.3937 in)

(3) Calculate the clearance between piston and piston pin. If it is not within the standard, replace the piston and piston pin as a set.

Clearance between piston and piston pin:
Standard
0.004 — 0.008 mm (0.0002 — 0.0003 in)

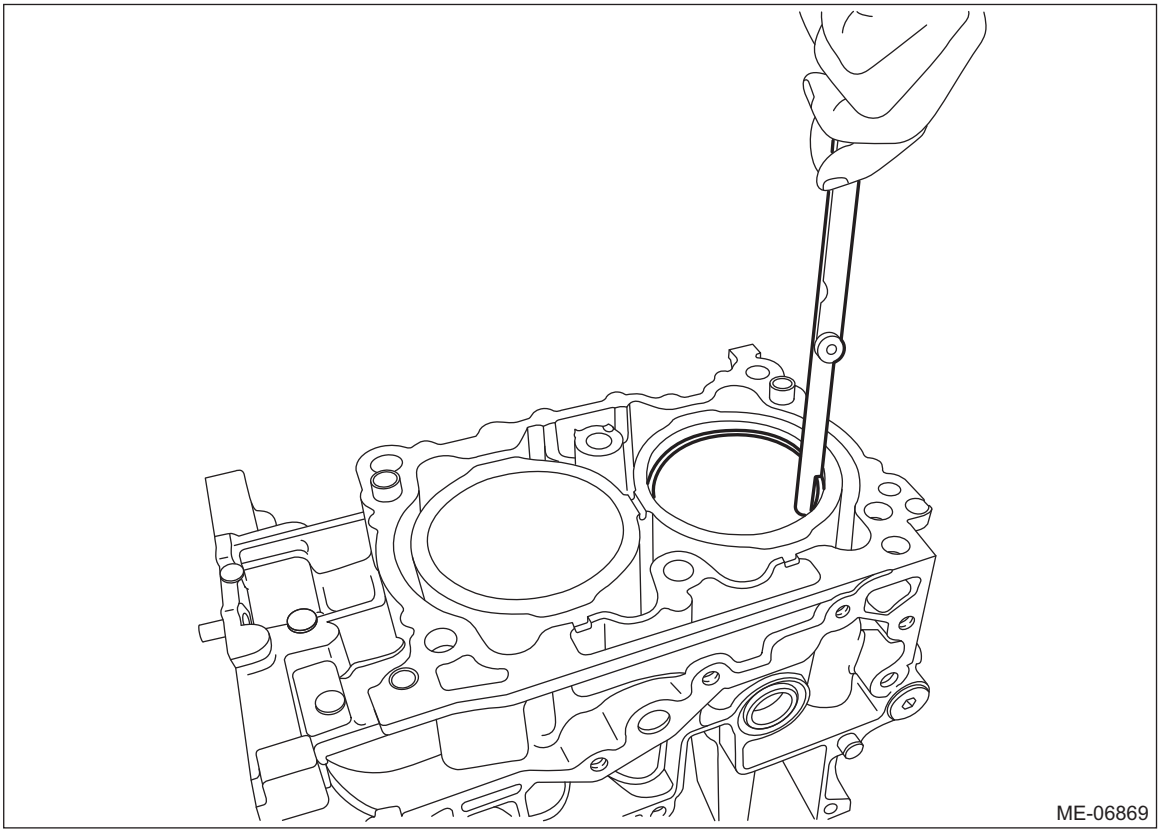
3. PISTON RING

1) Make sure the piston ring is not broken or damaged.

2) Using a cylindrical guide, insert the piston ring into the cylinder liner so that they are perpendicular to the cylinder wall, and check the piston ring gap using a thickness gauge. If it is not within the standard, replace the piston ring.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Use piston ring with same size as piston when replacing piston ring.

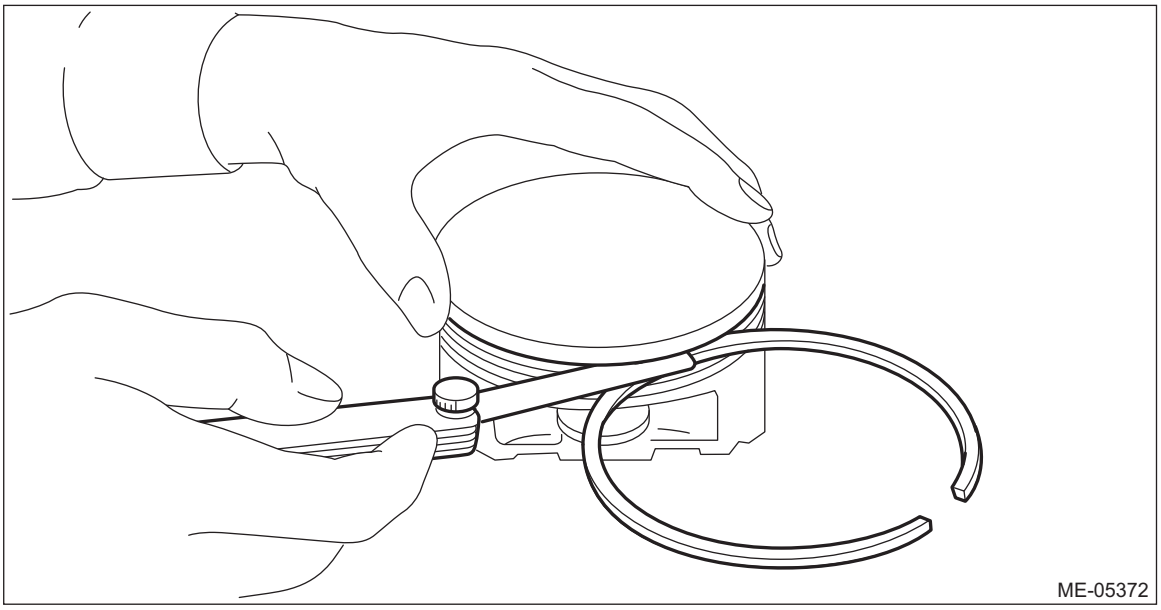
Piston ring gap:
Compression ring (top ring)
Standard
0.20 — 0.25 mm (0.0079 — 0.0098 in)
Compression ring (second ring)
Standard
0.40 — 0.50 mm (0.0157 — 0.0197 in)
Oil ring (upper rail and lower rail)
Standard
0.10 — 0.35 mm (0.0039 — 0.0138 in)



3) Fit the compression ring straight into the piston ring groove, then check the clearance between compression ring and piston with a thickness gauge. If it is not within the standard, replace the compression ring.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Before inspecting the clearance, clean the piston ring groove and compression ring.
- Use compression ring with same size as piston when replacing compression ring.

Clearance between compression ring and piston:
Top ring
Standard
0.040 — 0.080 mm (0.0016 — 0.0031 in)
Second ring
Standard
0.045 — 0.085 mm (0.0018 — 0.0033 in)

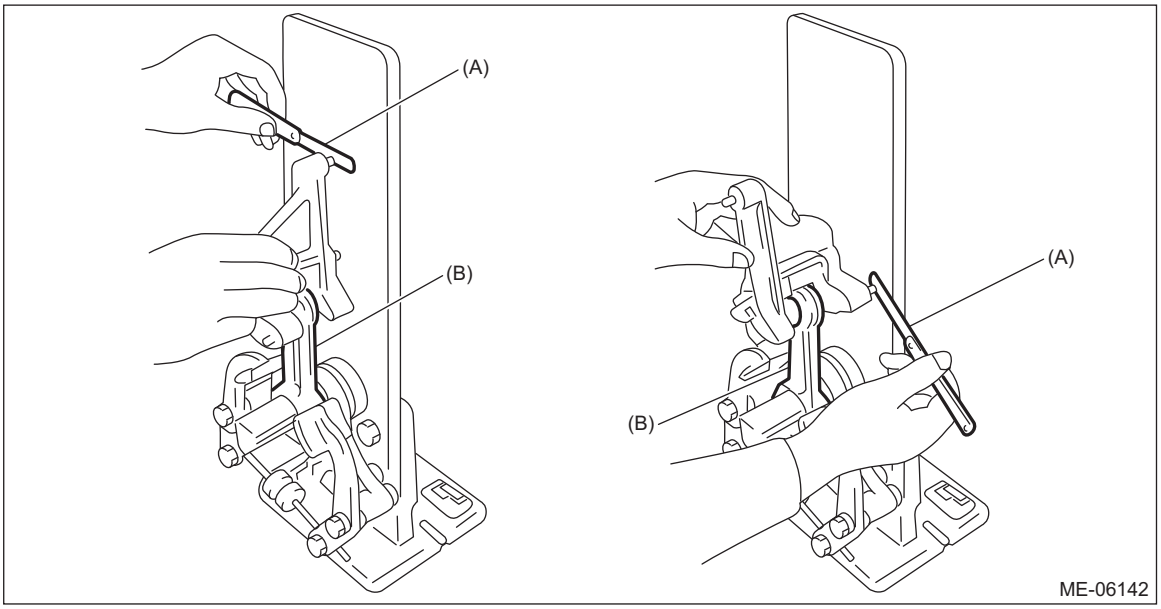


4. CONNECTING ROD AND CONNECTING ROD BEARING

1) Check for bend or twist using a connecting rod aligner. If it exceeds the limit, replace the connecting rod.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Bend or twist per 100 mm (3.9370 in) in length:
Limit
0.10 mm (0.0039 in)



(A) Thickness gauge (B) Connecting rod

2) Check that the large or small end thrust surface of each connecting rod is not damaged.
3) Check each connecting rod bearing for scar, peeling, seizure, melting or wear, etc.
4) Check the thrust clearance of each connecting rod using a thickness gauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

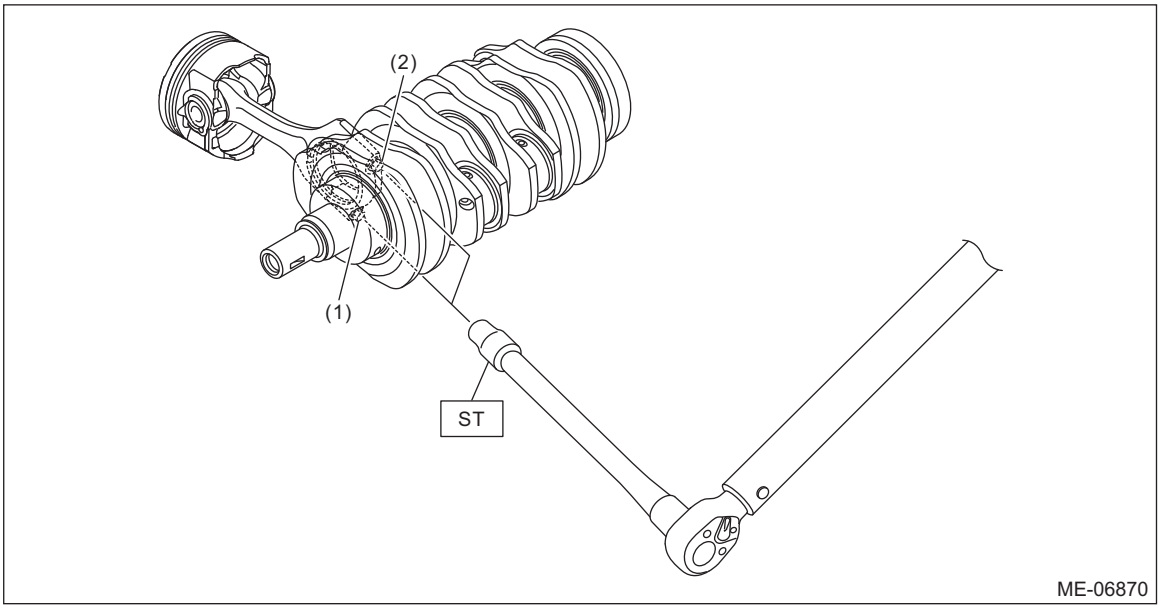
(1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft, and apply engine oil to the #1 pin of crankshaft.
(2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.
(3) Set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

NOTE:
• Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
• Use a new connecting rod cap bolt.
• Apply a coat of engine oil to the #1 connecting rod cap bolt thread.

(4) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 25 N·m (2.5 kgf-m, 18.4 ft-lb) in numerical order as shown in the figure.

CAUTION:
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**

ST 18270AA020 SOCKET

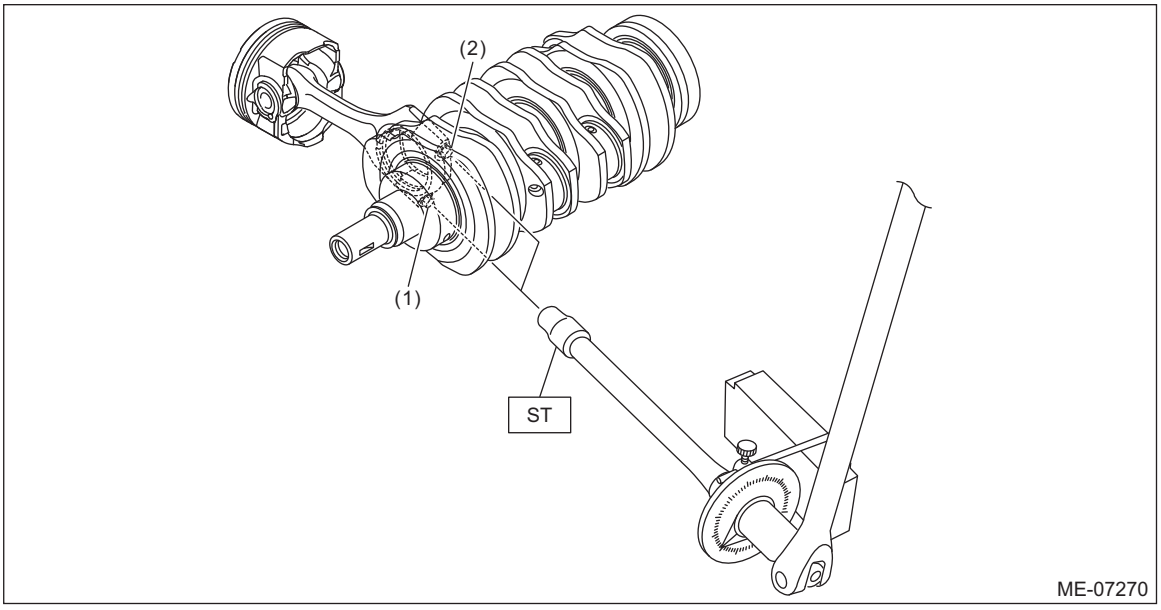


(5) Using ST and angle gauge, tighten the #1 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

CAUTION:
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**

NOTE:
Prevent angle gauge from rotating using a V-block, etc.
ST 18270AA020 SOCKET

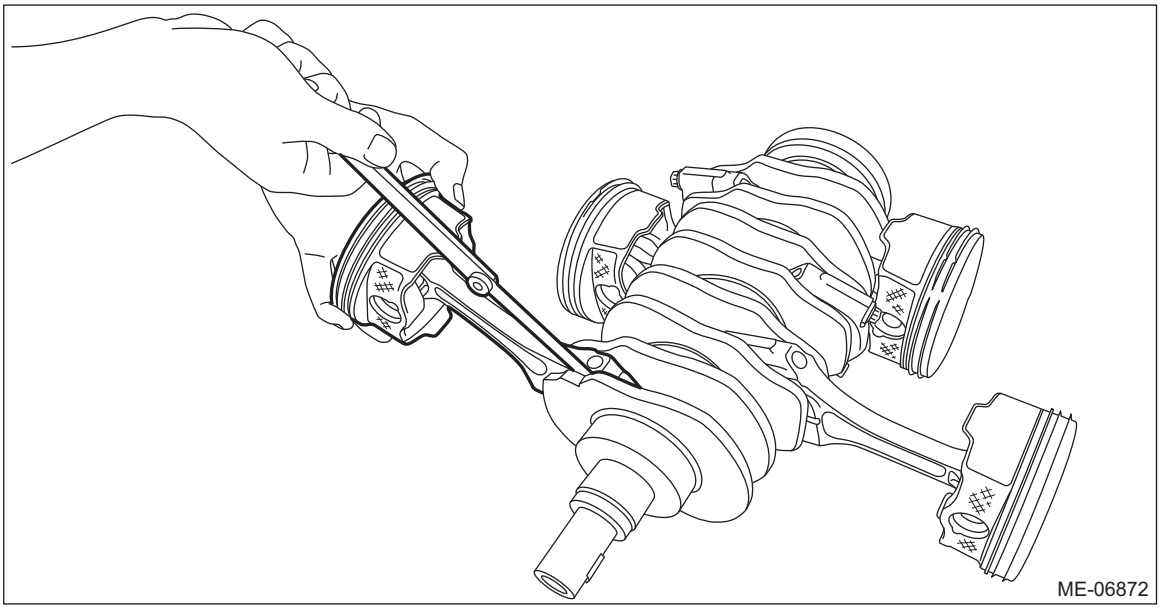
Tightening angle:
90°+5°–0°



(6) In the same manner, install the #2, #3 and #4 connecting rods.
(7) Check the thrust clearance of each connecting rod using a thickness gauge. If it is not within the standard, replace the connecting rod.

NOTE:
Measure the thrust clearance of each connecting rod at several points, and replace the connecting rod if there is uneven wear.

Connecting rod thrust clearance:
Standard
0.070 — 0.330 mm (0.0028 — 0.0130 in)



5) Check the oil clearance on each connecting rod bearing using plastigauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).
(1) Clean the #1 connecting rod bearing and the #1 pin of crankshaft.
(2) Set the #1 connecting rod bearing to the #1 connecting rod and #1 connecting rod cap.

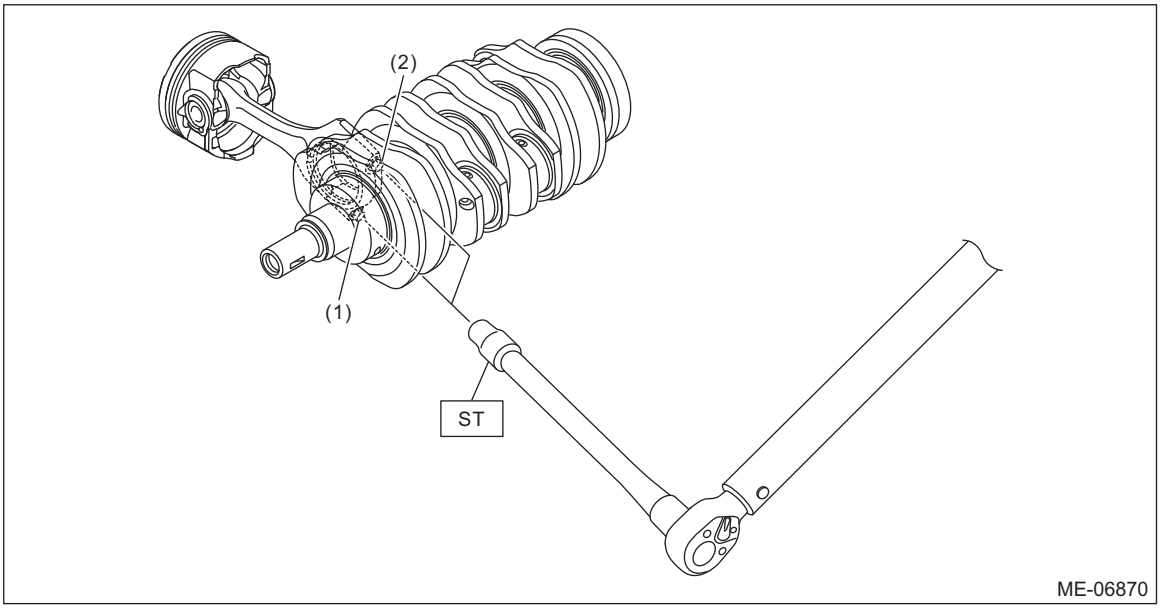
(3) Place a plastigauge across the #1 pin of crankshaft, and set the #1 connecting rod, #1 connecting rod cap and #1 connecting rod cap bolt to the #1 pin of crankshaft.

NOTE:
• Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching symbol.
• Use a new connecting rod cap bolt.
• Apply a coat of engine oil to the #1 connecting rod cap bolt thread.

(4) Using ST, tighten the #1 connecting rod cap bolts to 10 N·m (1.0 kgf-m, 7.4 ft-lb) in numerical order as shown in the figure, then retighten the bolts to 25 N·m (2.5 kgf-m, 18.4 ft-lb) in numerical order as shown in the figure.

CAUTION:
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

ST 18270AA020 SOCKET

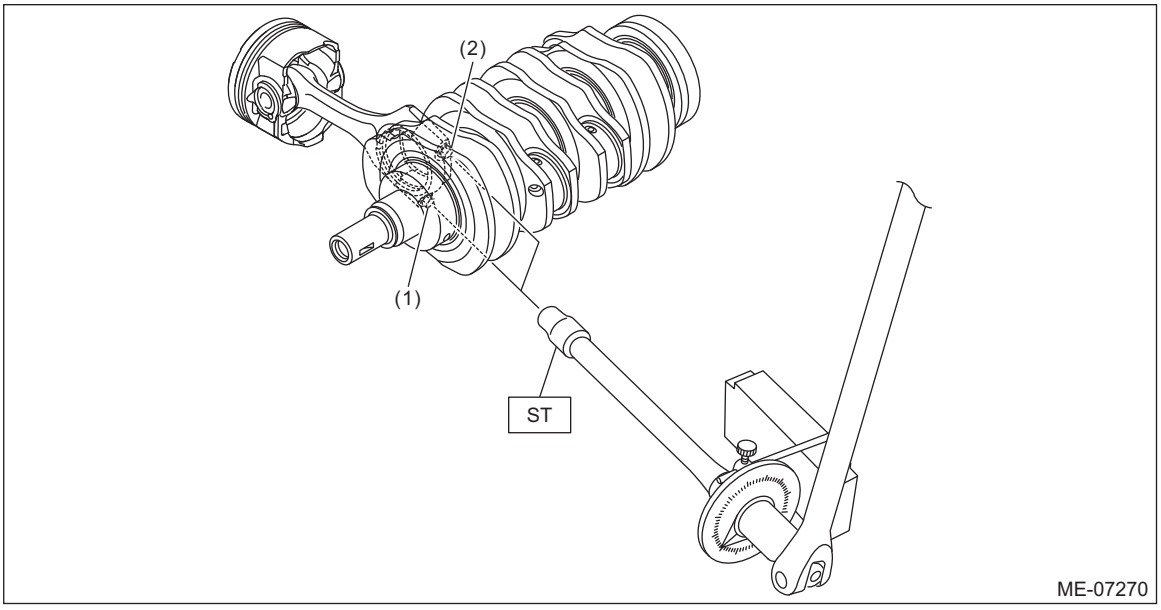


(5) Using ST and angle gauge, tighten the #1 connecting rod cap bolts with specified angle in numerical order as shown in the figure.

CAUTION:
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During tightening, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

NOTE:
Prevent angle gauge from rotating using a V-block, etc.
ST 18270AA020 SOCKET

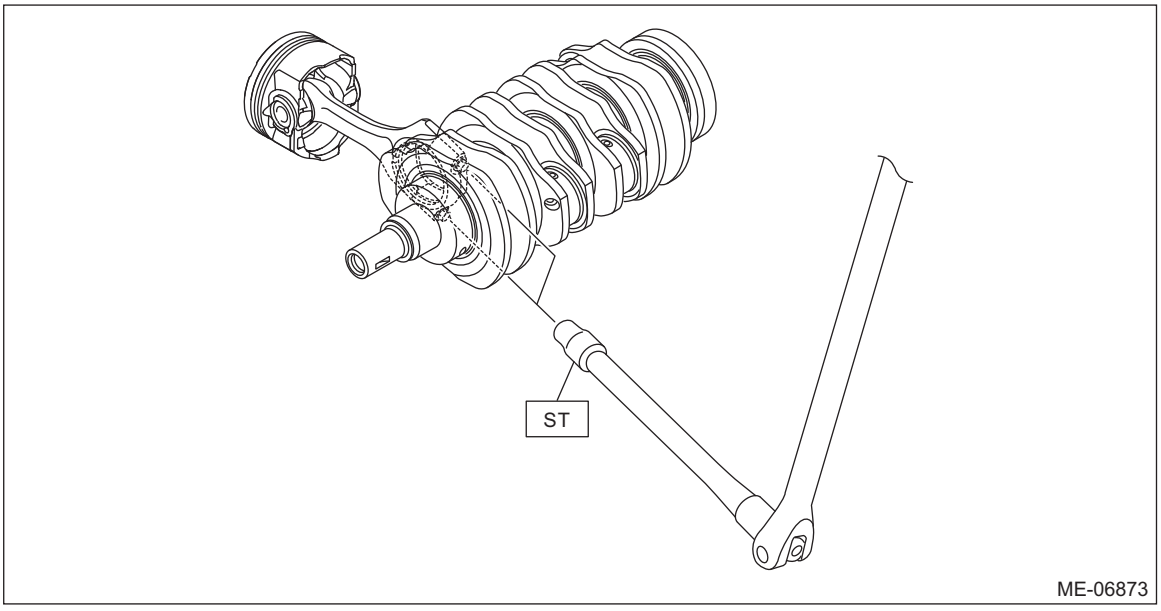
Tightening angle:
90°+5°–0°



(6) Using ST, loosen the #1 connecting rod cap bolt, and remove the #1 connecting rod cap bolt and #1 connecting rod cap.

CAUTION:
- **Make sure to hold the crankshaft securely during work.**
- **When holding the crankshaft, be careful not to damage the crankshaft.**
- **During removal, be careful not to move the #1 connecting rod and the #1 connecting rod cap.**

ST 18270AA020 SOCKET



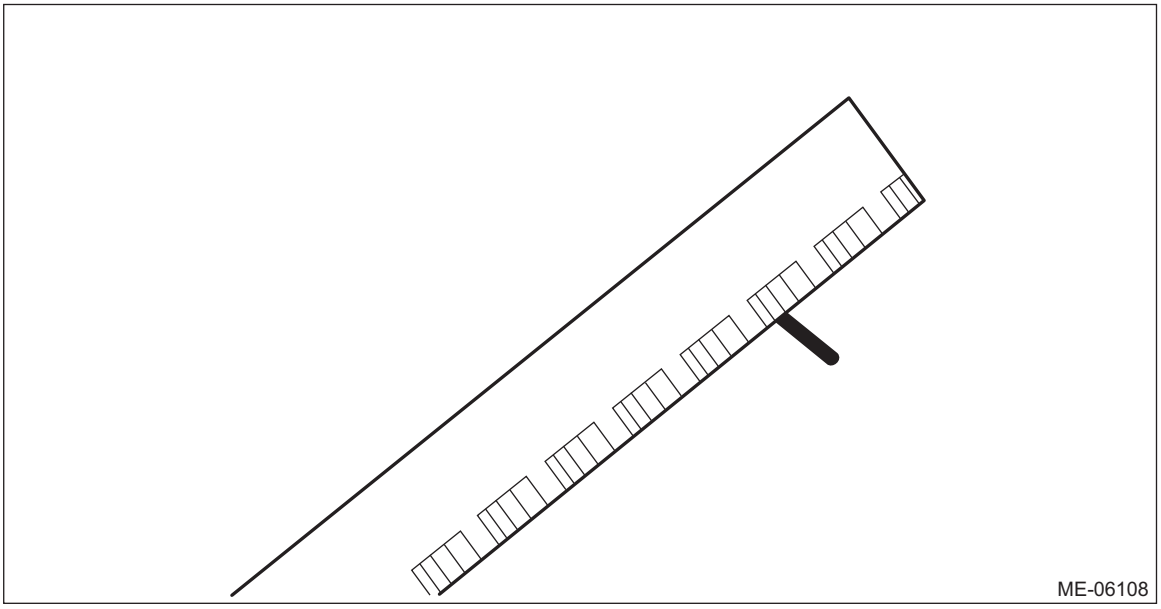
(7) Determine oil clearance of the #1 connecting rod bearing by matching the widest point of the plastigauge on #1 pin of crankshaft against scale printed on a package of the plastigauge. If it is not within the standard, replace the #1 connecting rod bearing.

NOTE:
Measure the outer diameter of crankshaft pin using micrometer, and select the suitable size connecting rod bearing when replacing the connecting rod bearing.

Unit: mm (in)

Bearing	Connecting rod bearing thickness (at center)	Crankshaft pin outer diameter
	Standard	Standard
Standard size	1.492 — 1.508 (0.0587 — 0.0594)	49.976 — 50.000 (1.9676 — 1.9685)
0.03 (0.0012) Undersize	1.511 — 1.515 (0.0595 — 0.0596)	49.946 — 49.970 (1.9664 — 1.9673)
0.05 (0.0020) Undersize	1.521 — 1.525 (0.0599 — 0.0600)	49.926 — 49.950 (1.9656 — 1.9665)
0.25 (0.0098) Undersize	1.621 — 1.625 (0.0638 — 0.0640)	49.726 — 49.750 (1.9577 — 1.9587)

Connecting rod bearing oil clearance:
Standard
0.025 — 0.055 mm (0.0010 — 0.0022 in)



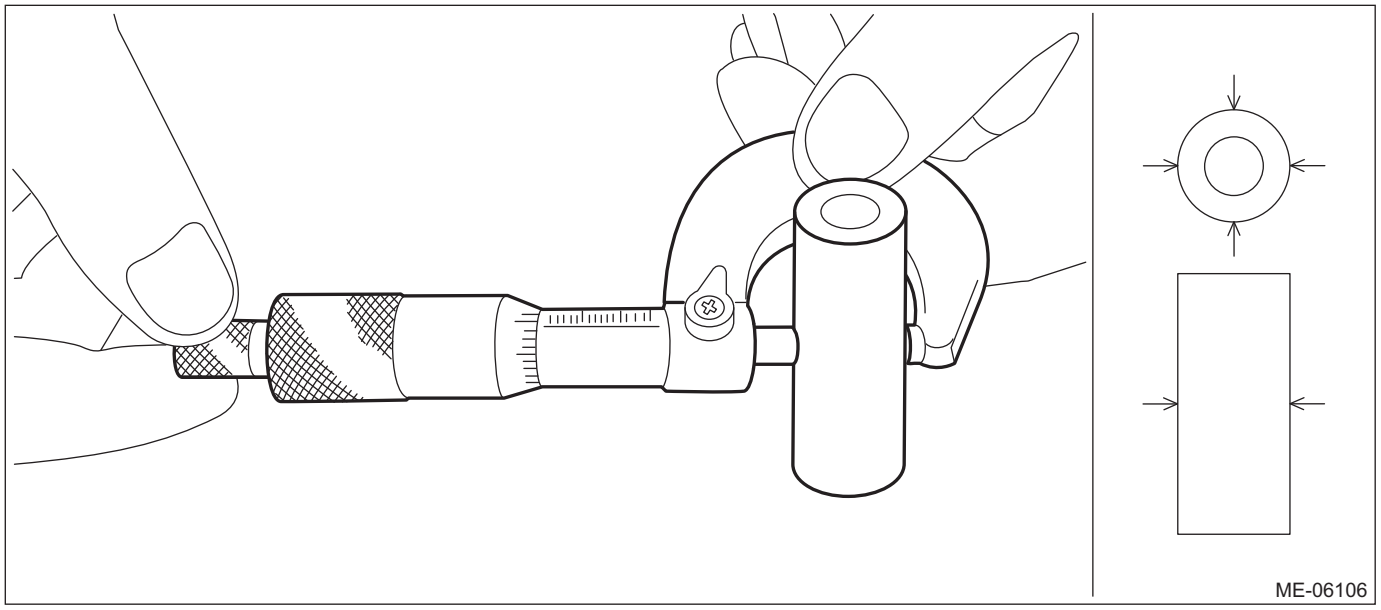
(8) Completely remove the plastigauge.
(9) In the same manner, check oil clearance of the #2, #3 and #4 connecting rod bearings.

5. PISTON PIN & CONNECTING ROD BUSHING

1) Check that the connecting rod bushing is not damaged.
2) Check the clearance between piston pin and connecting rod bushing. Check the clearance between piston pin and connecting rod bushing by measuring the outer diameter of piston pin and the inner diameter of connecting rod bushing respectively.
(1) Measure the outer diameter of piston pin with a micrometer.

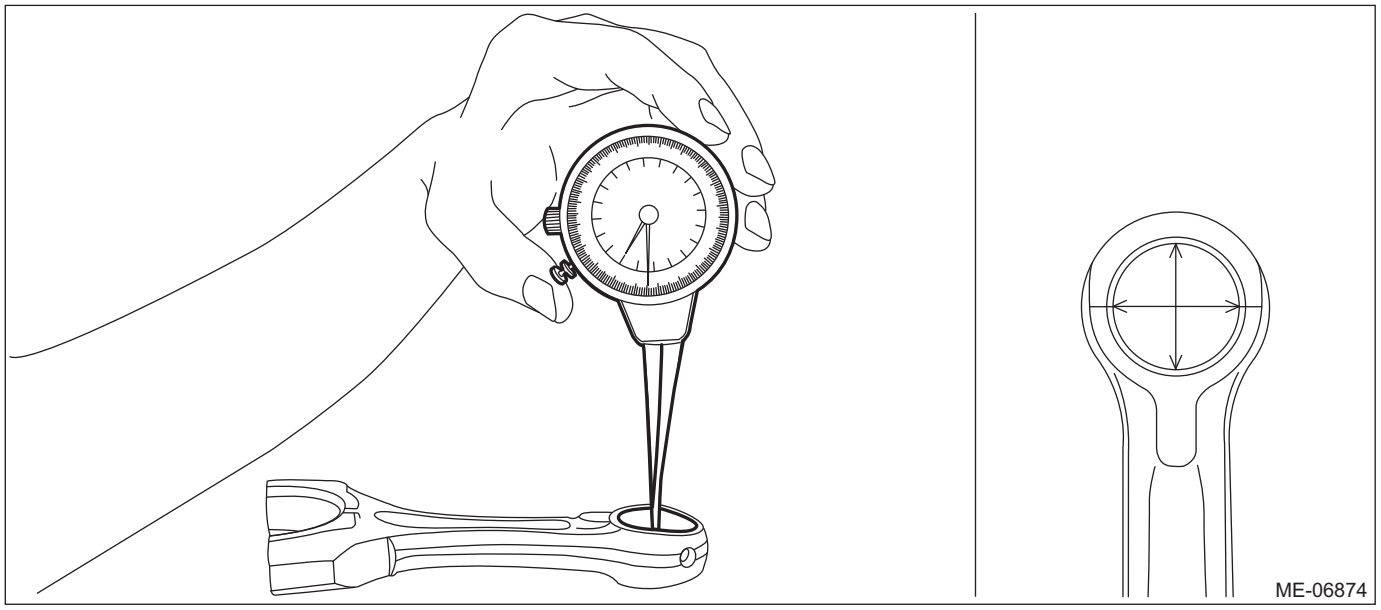
NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Measure the outer diameter of the piston pin at the two locations as shown in the figure, and read the value of most worn location.

• Record the measured value.



(2) Using a caliper gauge, measure the inner diameter of connecting rod bushing.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Measure the inner diameter of the connecting rod bushing at the two locations as shown in the figure, and read the value of most worn location.
• Record the measured value.



(3) Calculate the clearance between piston pin and connecting rod bushing.

Clearance between piston pin and connecting rod bushing:
Standard
0.004 — 0.026 mm (0.0002 — 0.0010 in)

3) If the clearance between piston pin and connecting rod bushing is not within the standard, replace the connecting rod and piston pin as a set.

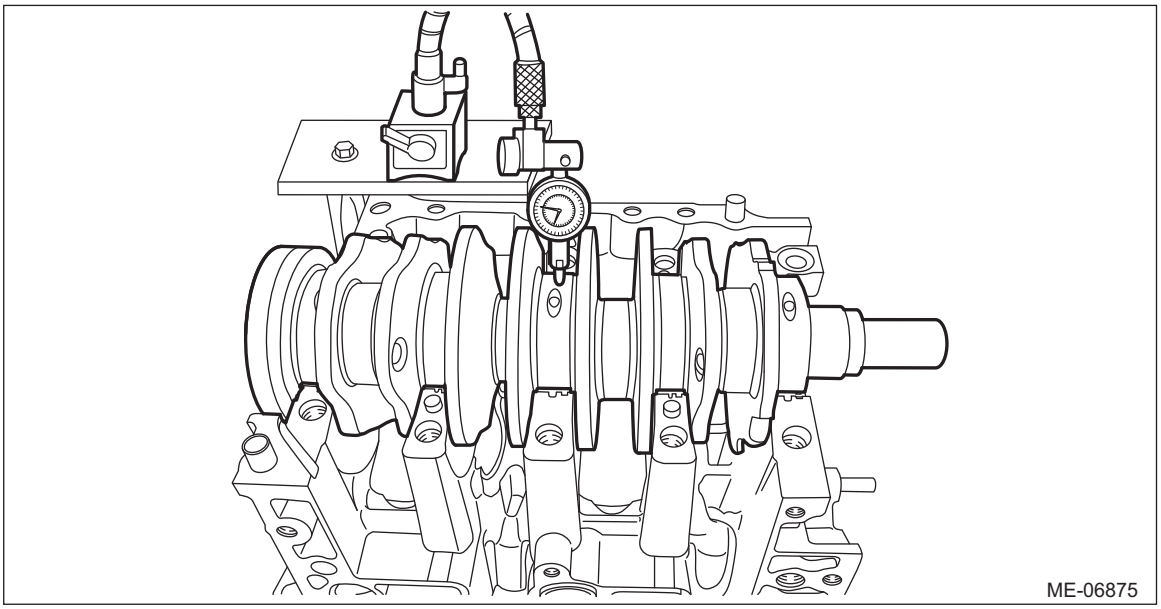
6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using liquid penetrant tester.

2) Using a dial gauge, check the crankshaft bend. If it exceeds the limit, grind to correct the crankshaft journal or replace the crankshaft.

NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- If a suitable V-block is not available, using just the #1 and #5 crankshaft bearings on cylinder block, position the crankshaft on cylinder block. Then, measure the crankshaft bend using a dial gauge.
- When grinding to correct the crankshaft journal, refer to step 3).

Crankshaft bend:
Limit
0.035 mm (0.0014 in)



3) Using a micrometer, check the outer diameter of crankshaft pin, outer diameter of journal, cylindricality, and out-of-roundness. If it is not within the standard, replace the connecting rod bearing or crankshaft bearing, and grind to correct the crankshaft pin or journal or replace the crankshaft as required.

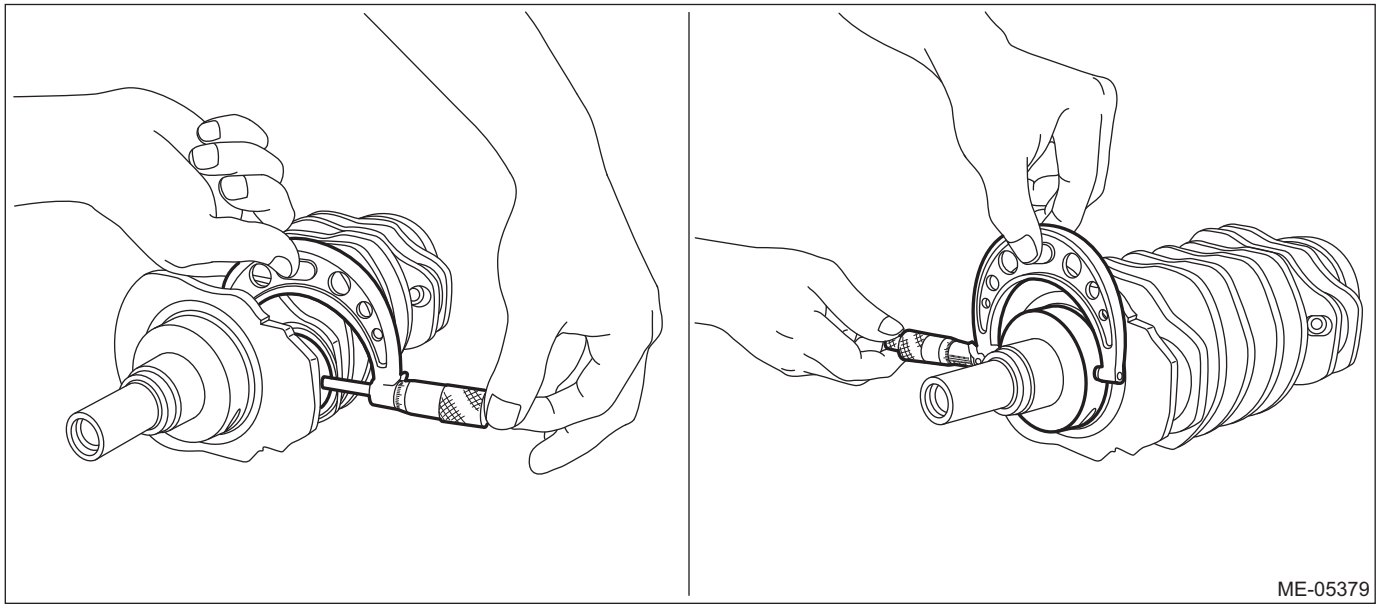
NOTE:
- Measurement should be performed at a temperature of 20°C (68°F).
- Select the suitable size connecting rod bearing or crankshaft bearing when replacing the connecting rod bearing or crankshaft bearing.
- When grinding to correct the crankshaft pin or journal, finish them to the suitable outer diameter as shown in the table below according to the undersize bearing to be used.

Unit: mm (in)

Bearing	Connecting rod bearing thickness (at center)	Crankshaft pin outer diameter	Crankshaft bearing thickness (at center)		Crankshaft journal outer diameter
			#1, #2, #3, #4	#5	
	Standard	Standard	Standard	Standard	Standard
Standard size	1.492 — 1.508 (0.0587 — 0.0594)	49.976 — 50.000 (1.9676 — 1.9685)	2.498 — 2.513 (0.0983 — 0.0989)	2.496 — 2.511 (0.0983 — 0.0989)	67.985 — 68.003 (2.6766 — 2.6773)
0.03 (0.0012) Undersize	1.511 — 1.515 (0.0595 — 0.0596)	49.946 — 49.970 (1.9664 — 1.9673)	2.519 — 2.522 (0.0992 — 0.0993)	2.517 — 2.520 (0.0991 — 0.0992)	67.955 — 67.979 (2.6754 — 2.6763)
0.05 (0.0020) Undersize	1.521 — 1.525 (0.0599 — 0.0600)	49.926 — 49.950 (1.9656 — 1.9665)	2.529 — 2.532 (0.0996 — 0.0997)	2.527 — 2.530 (0.0995 — 0.0996)	67.935 — 67.959 (2.6746 — 2.6755)
0.25 (0.0098) Undersize	1.621 — 1.625 (0.0638 — 0.0640)	49.726 — 49.750 (1.9577 — 1.9587)	2.629 — 2.632 (0.1035 — 0.1036)	2.627 — 2.630 (0.1034 — 0.1035)	67.735 — 67.759 (2.6667 — 2.6677)

Crankshaft pin:
Cylindricality
Limit
0.006 mm (0.0002 in)
Out-of-roundness
Limit
0.005 mm (0.0002 in)
Grinding limit (dia.)
To 49.726 mm (1.9577 in)

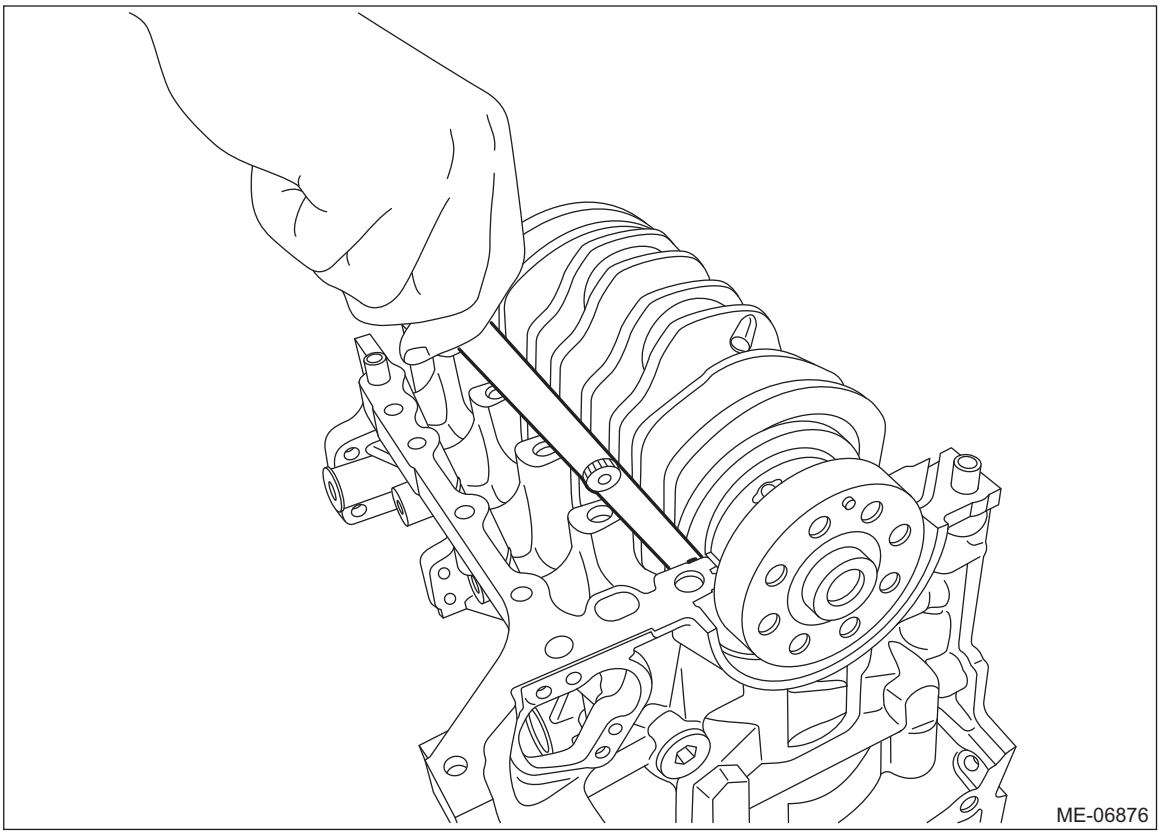
Crankshaft journal:
Cylindricality
Limit
0.006 mm (0.0002 in)
Out-of-roundness
Limit
0.005 mm (0.0002 in)
Grinding limit (dia.)
To 67.735 mm (2.6667 in)



4) Inspect the crankshaft bearing for scar, peeling, seizure, melting or wear, etc.
5) Use a thickness gauge to check the thrust clearance of crankshaft at thrust of #5 crankshaft bearing. If it is not within the standard, replace the #5 crankshaft bearing.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Set all the crankshaft bearings onto the cylinder block, then mount the crankshaft on the cylinder block, and use a thickness gauge to measure the thrust clearance of crankshaft.
• Select the #5 crankshaft bearing of suitable size by referring to step 3) when replacing #5 crankshaft bearing.

Crankshaft thrust clearance:
Standard
0.130 — 0.308 mm (0.0051 — 0.0121 in)



6) Check the oil clearance on each crankshaft bearing using plastigauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

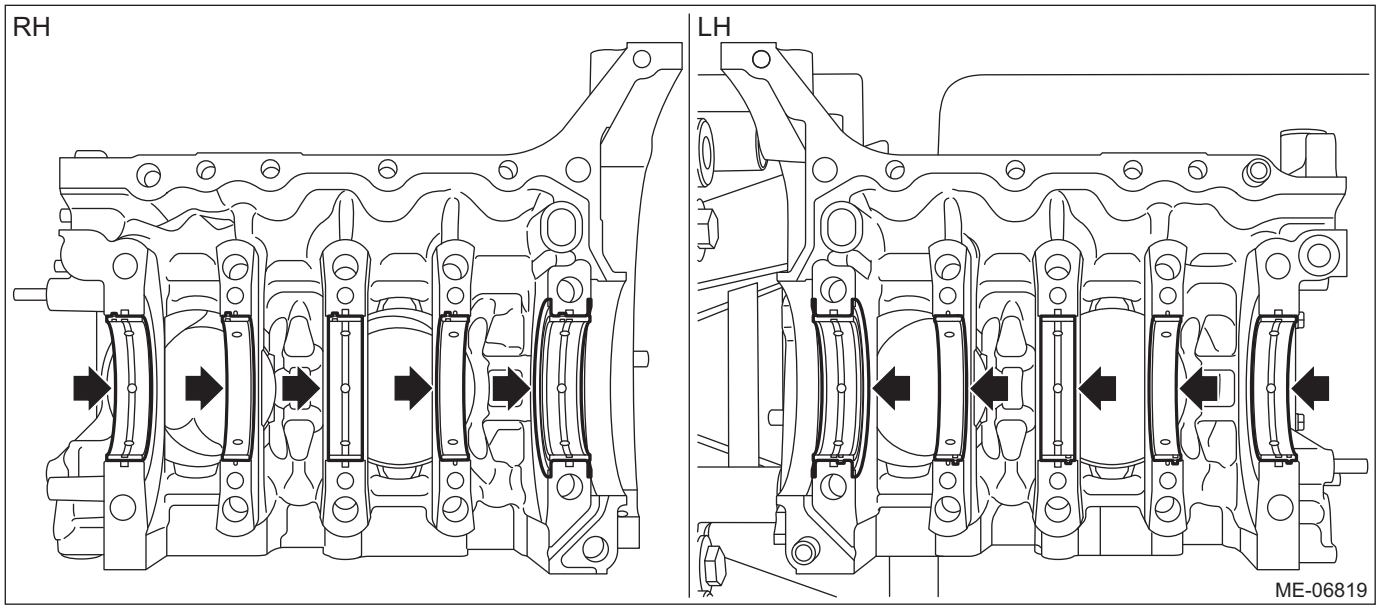
(1) Install the cylinder block LH to the engine stand.

CAUTION:
• When the engine stand is not used, place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.
• Be careful not to scratch the mating surface of cylinder block during work.

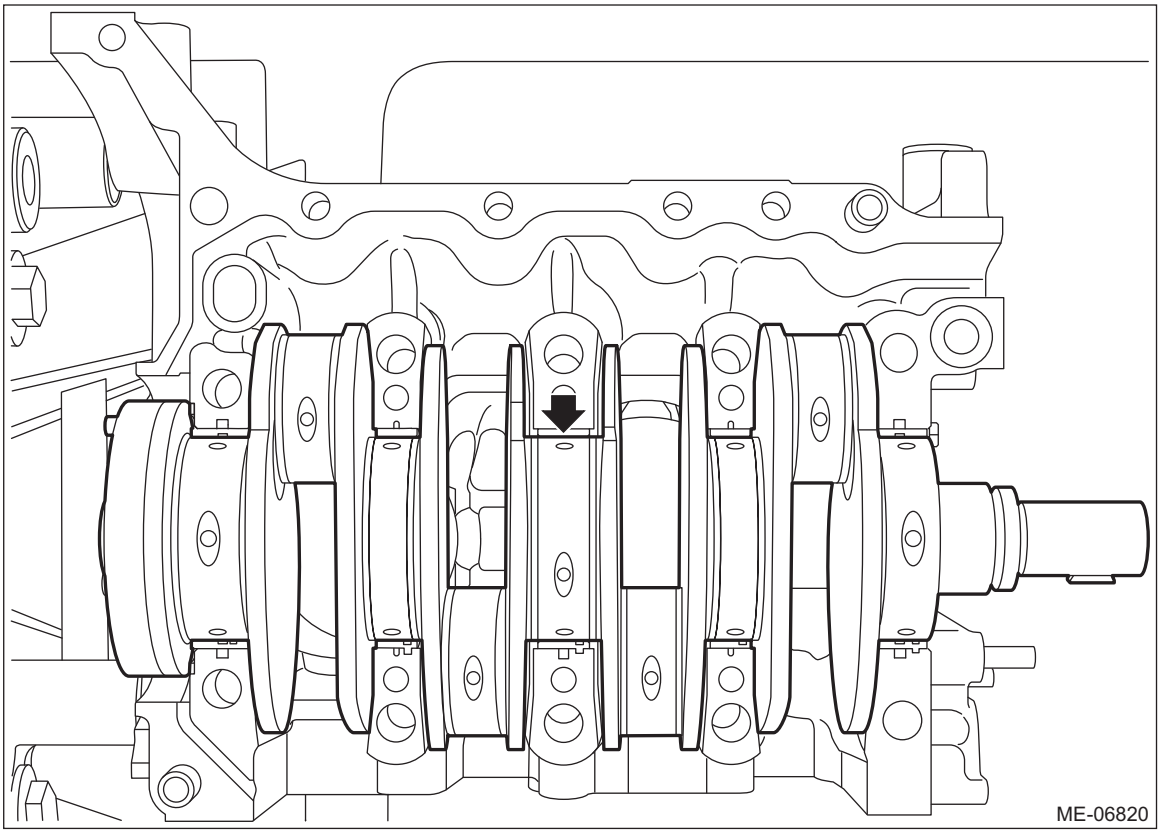
(2) Remove the liquid gasket from cylinder block.
(3) Clean each crankshaft bearing and crankshaft journal.
(4) Set each crankshaft bearing to the cylinder block.

CAUTION:
When performing the operation of the cylinder block RH, be careful of the following.
1. Place a wood board wrapped with a waste cloth to prevent the knock pin damage and to stabilize the cylinder block before work.

2. Be careful not to scratch the mating surface of cylinder block during work.



(5) Set the crankshaft to the cylinder block LH.



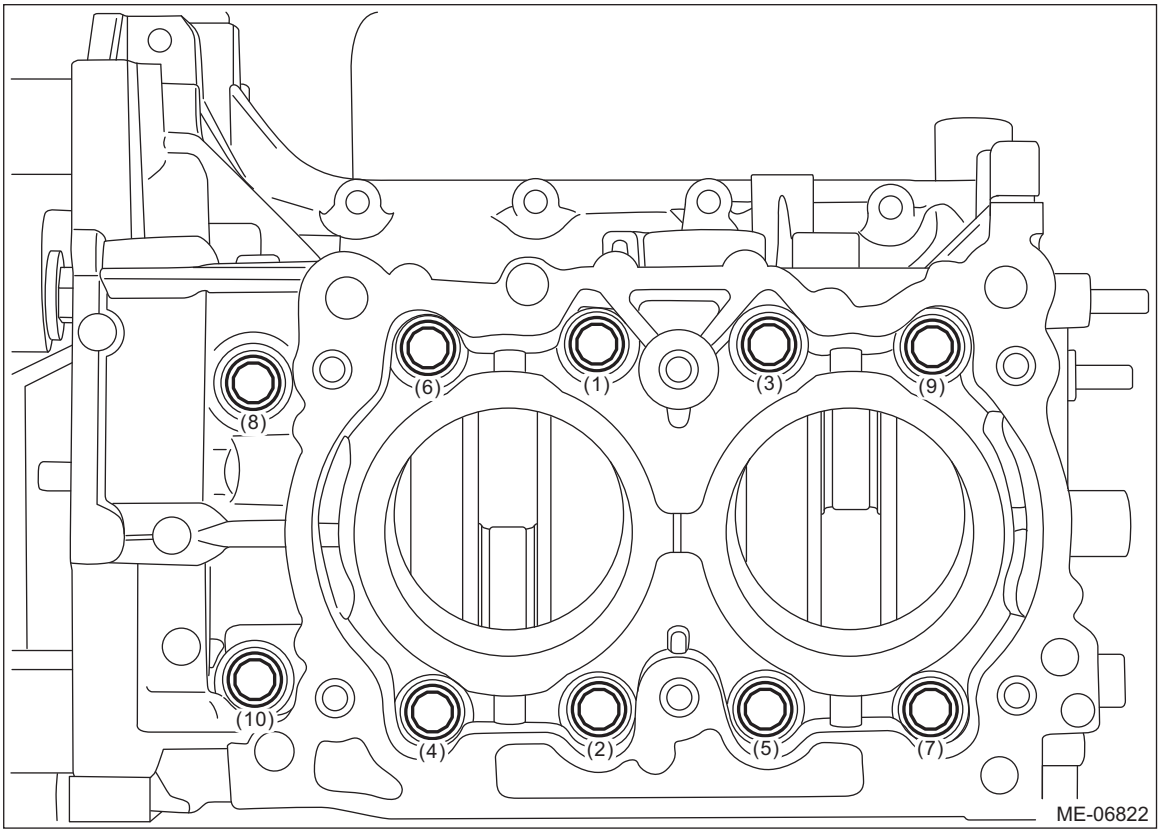
(6) Place a plastigauge across the crankshaft journals and set the cylinder block RH to the cylinder block LH.

(7) Apply a coat of engine oil to the washers and cylinder block mounting bolt threads.

NOTE:
To prevent mixture of engine oil into the water jacket, do not apply a large amount.

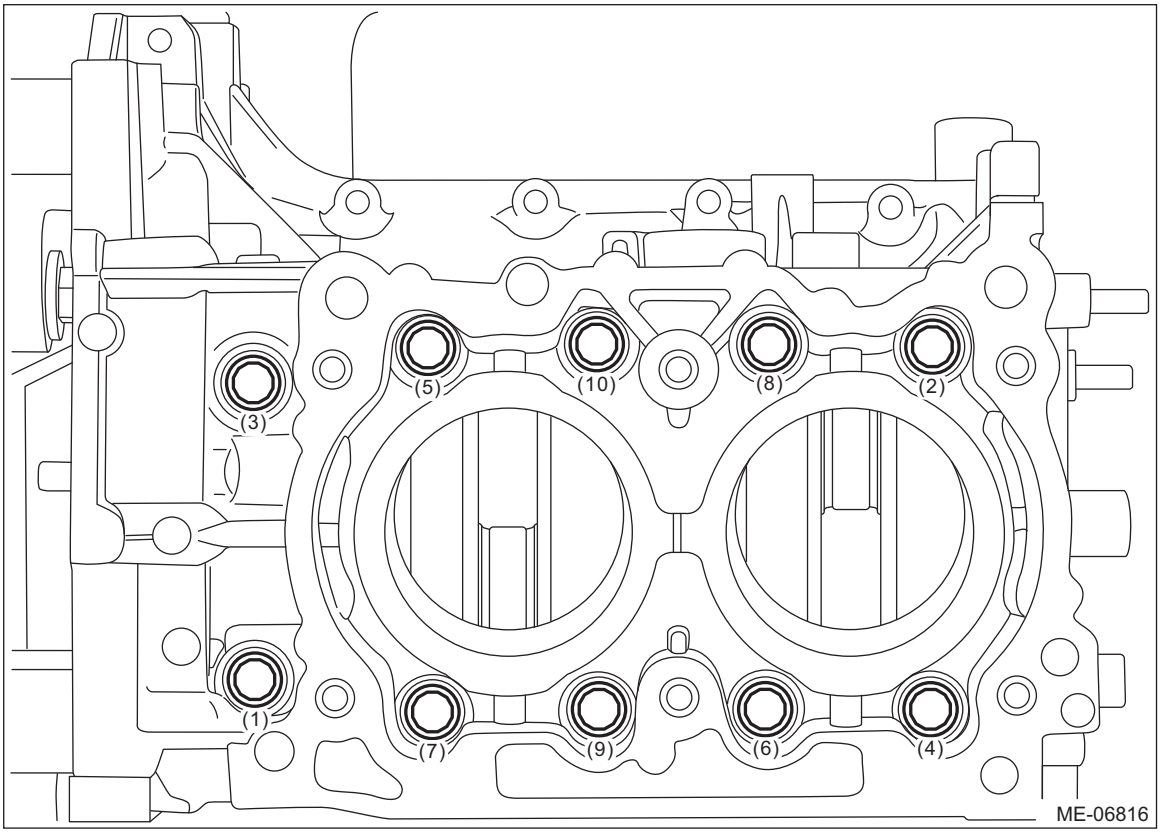
(8) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



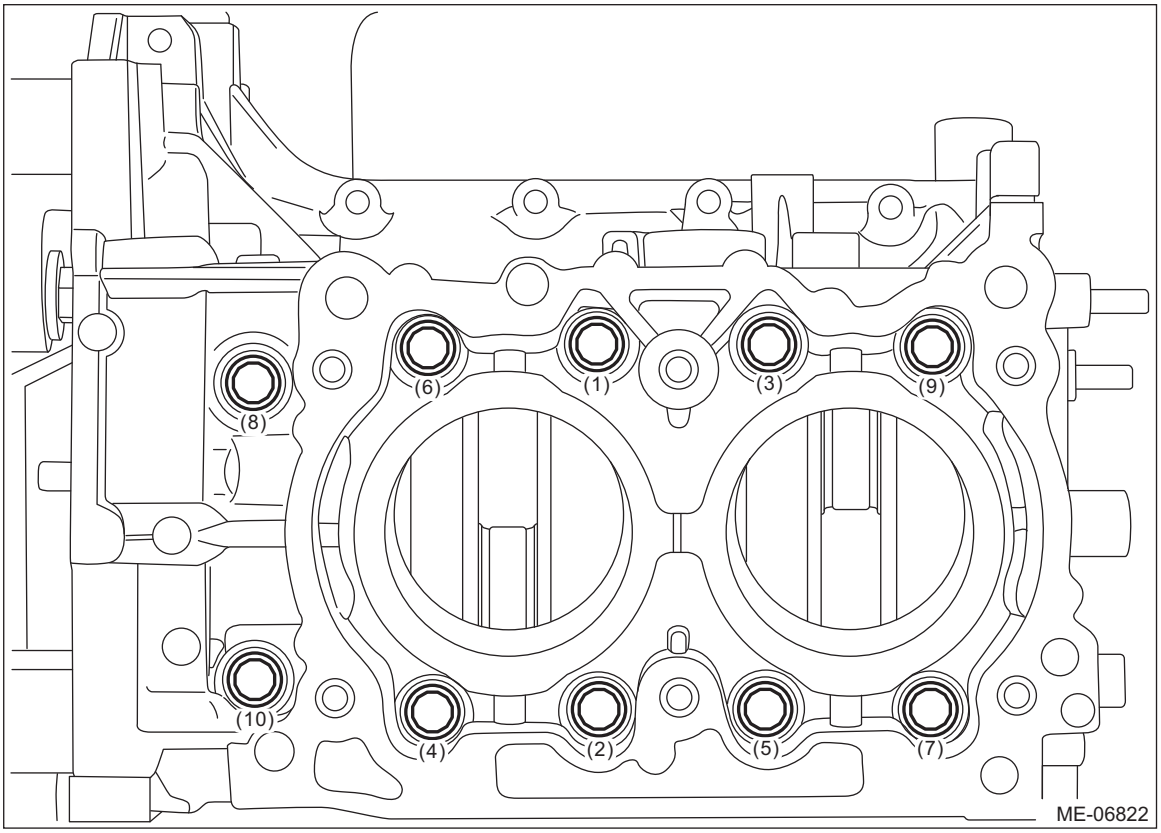
(9) Loosen all mounting bolts by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



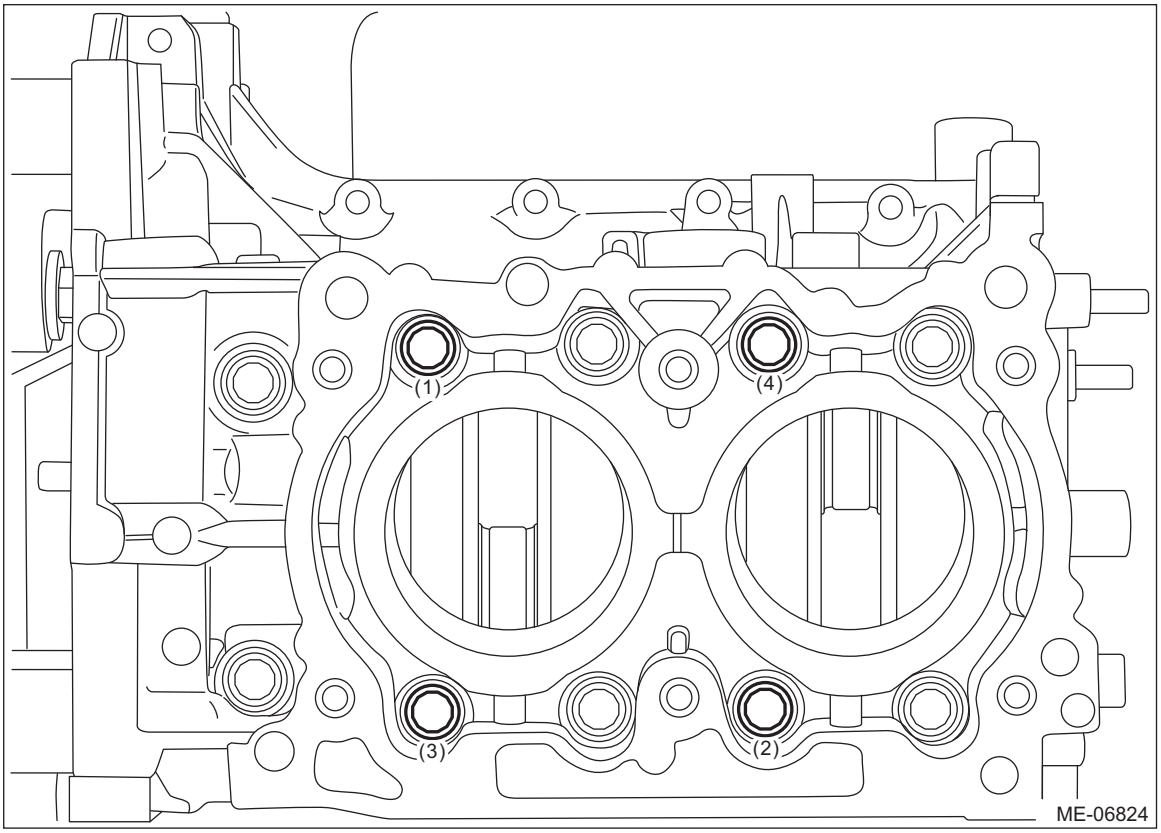
(10) Tighten all mounting bolts with a torque of 35 N·m (3.6 kgf-m, 25.8 ft-lb) in numerical order as shown in the figure.

CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



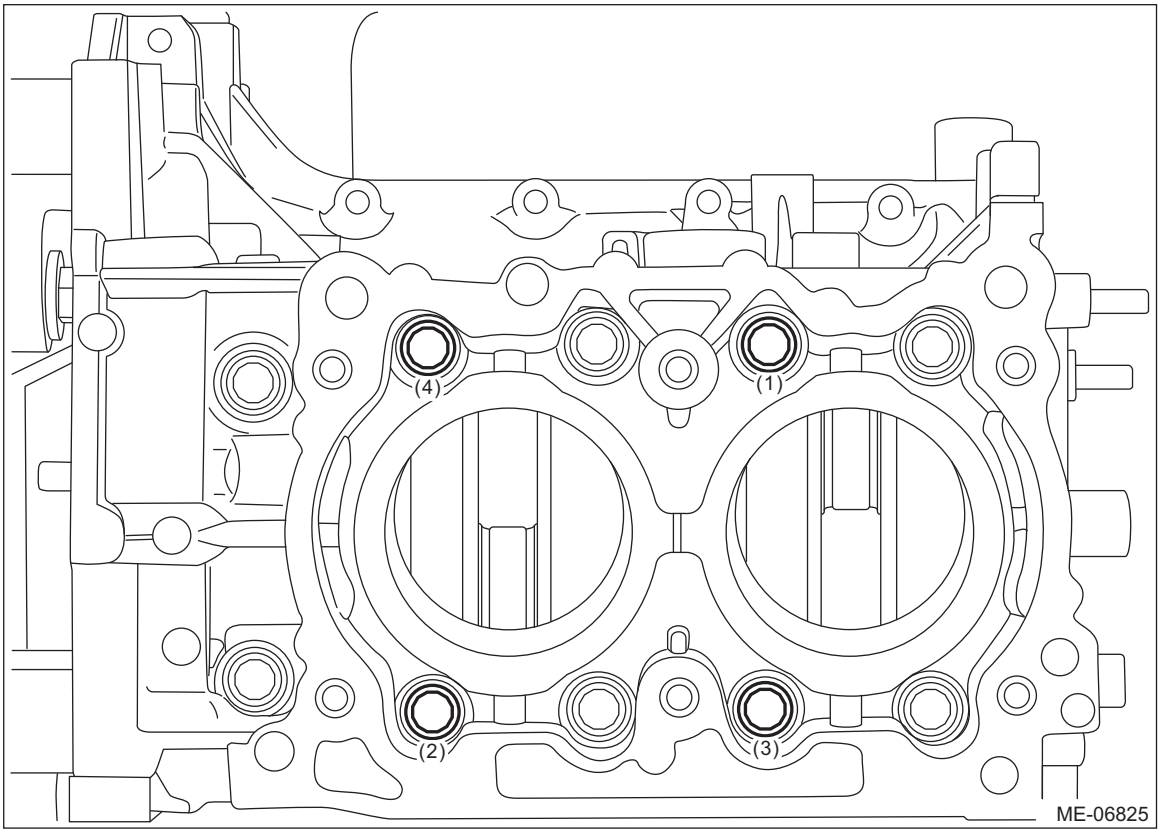
(11) Loosen the mounting bolts (4 places) by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(12) Tighten the mounting bolts (4 places) with a torque of 17 N·m (1.7 kgf-m, 12.5 ft-lb) in numerical order as shown in the figure.

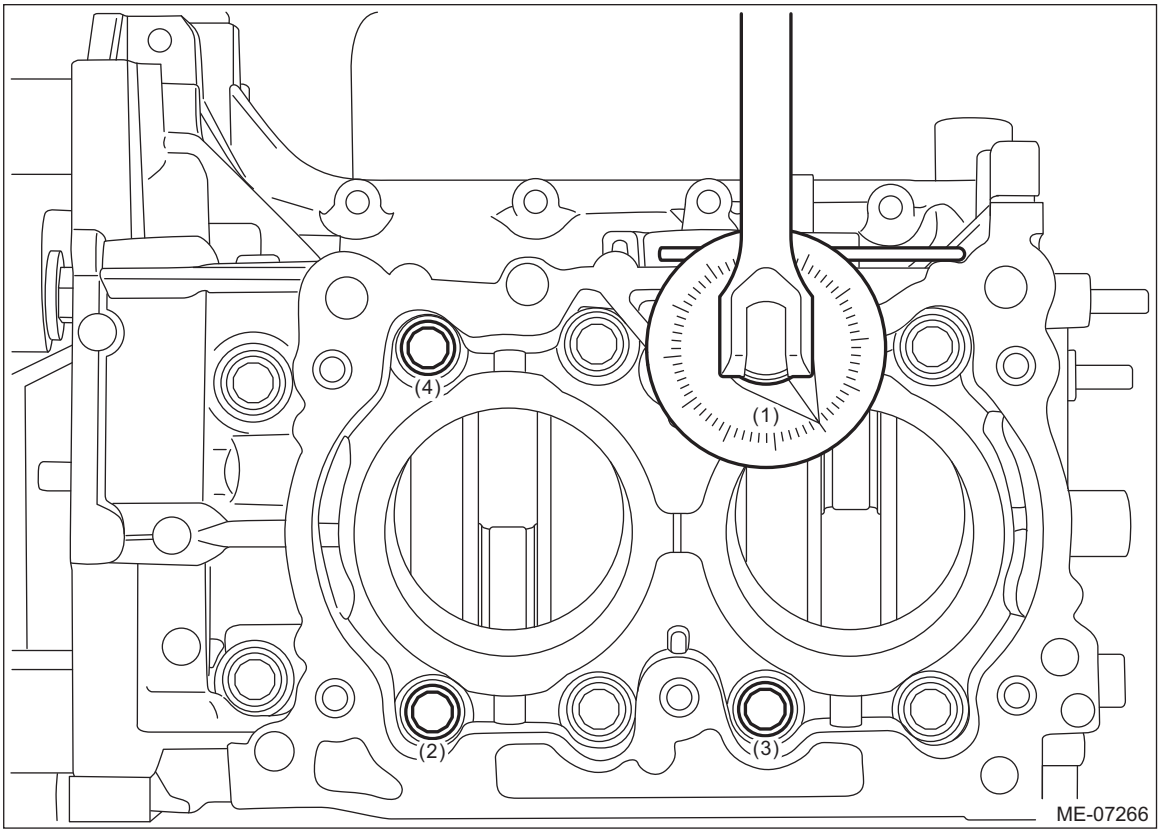
CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(13) Using angle gauge, tighten the mounting bolts (4 places) with specified angle in numerical order as shown in the figure.

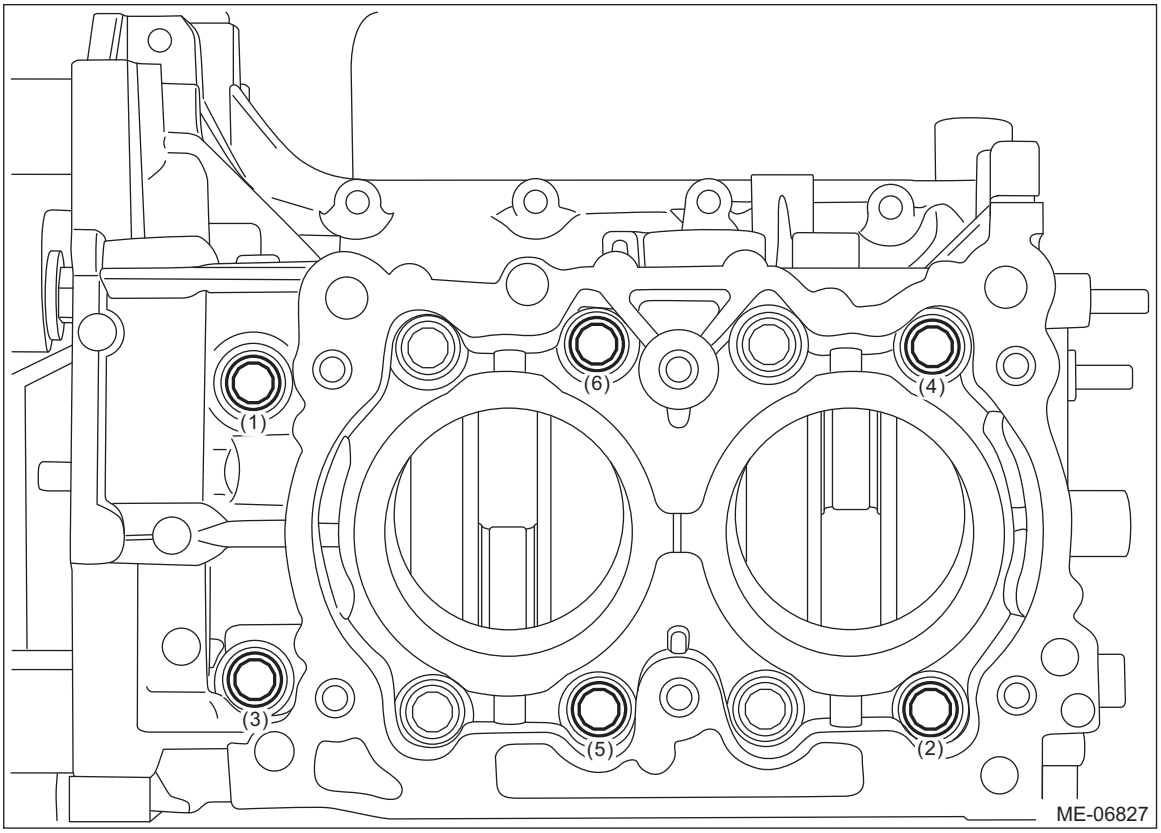
CAUTION:
When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:
60°±2°



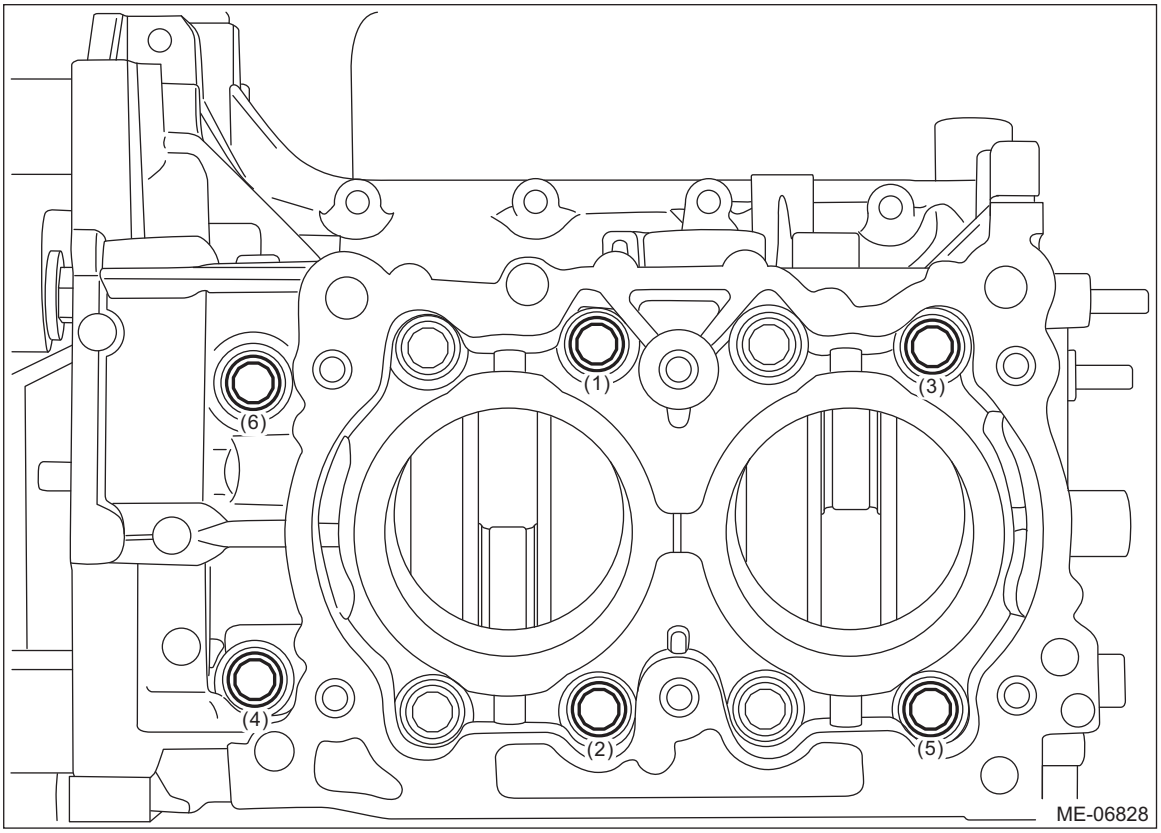
(14) Loosen the mounting bolts (6 places) by 180° in numerical order as shown in the figure.

CAUTION:
When loosening the mounting bolts, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(15) Tighten the mounting bolts (6 places) with a torque of 17 N·m (1.7 kgf-m, 12.5 ft-lb) in numerical order as shown in the figure.

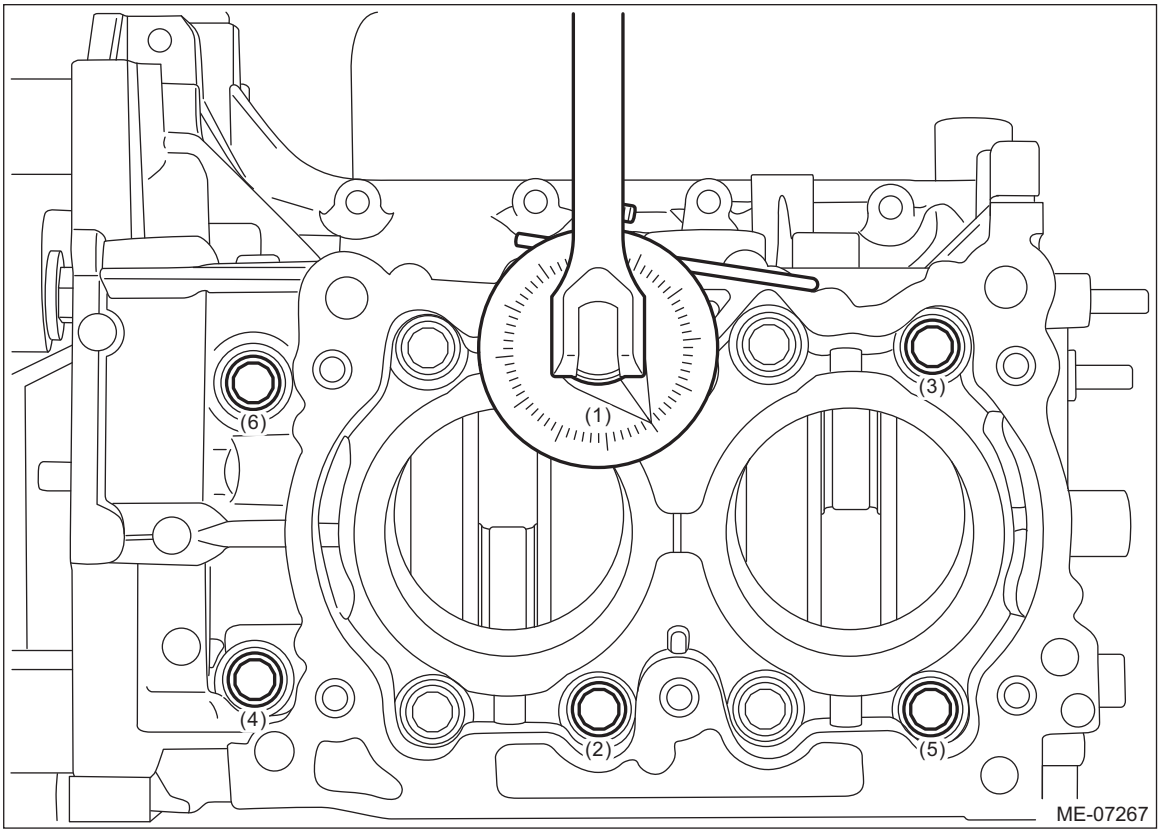
CAUTION:
When tightening the mounting bolts with specified torque, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.



(16) Using angle gauge, tighten the mounting bolts (6 places) with specified angle in numerical order as shown in the figure.

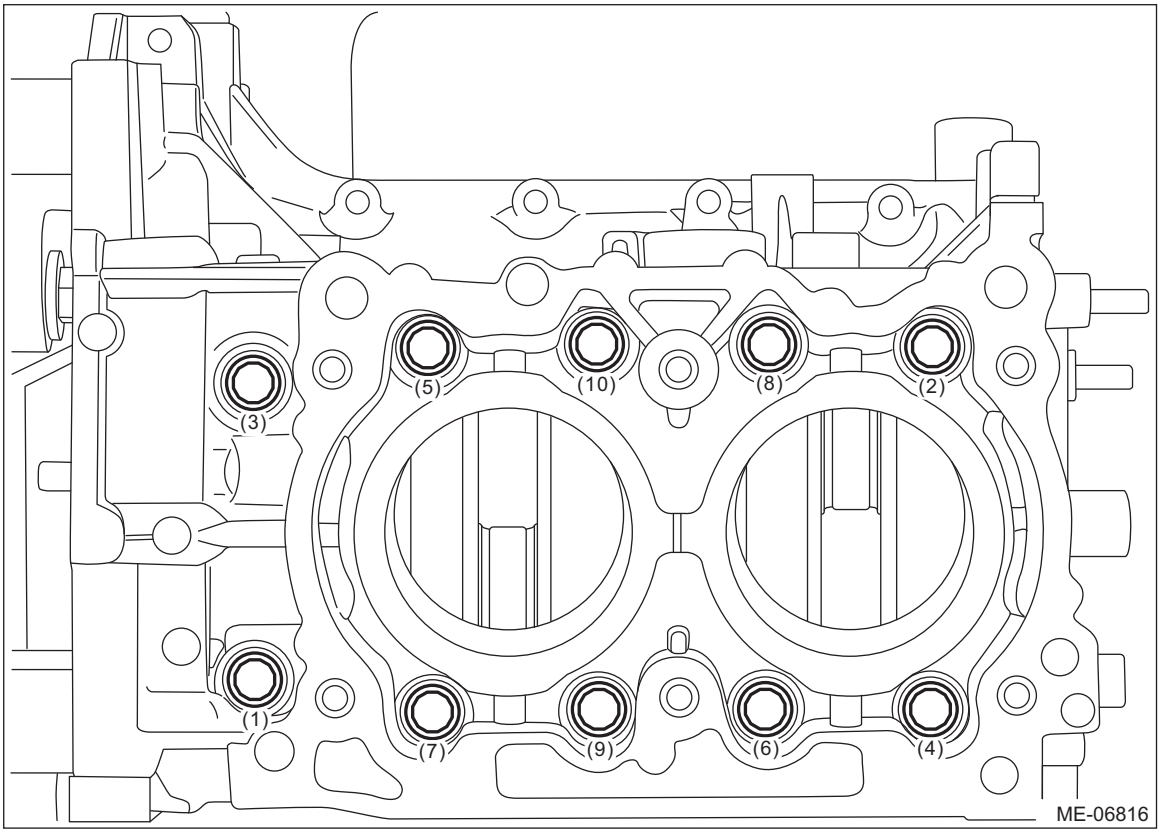
CAUTION:
When tightening the mounting bolts with specified angle, hold the cylinder block LH while not holding the cylinder block RH to ensure the joint accuracy of the cylinder block.

Tightening angle:
60°±2°



(17) Loosen the cylinder block mounting bolts in numerical order as shown in the figure, and separate the cylinder block RH and LH.

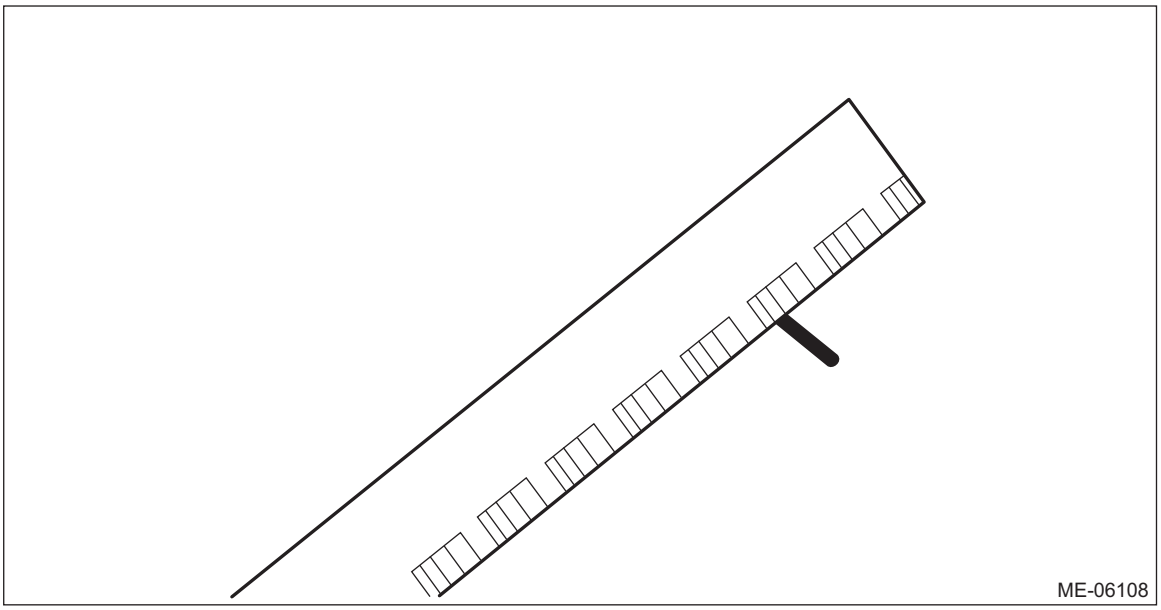
NOTE:
Lift the cylinder block RH slightly, and confirm that the crankshaft is remaining in the cylinder block LH. If the cylinder block RH is lifted carelessly when separating, the crankshaft may stick to cylinder block RH, then fall off.



(18) Determine the crankshaft oil clearance by matching the widest point of the plastigauge on each journal against scale printed on a package of the plastigauge. If it is not within the standard, replace the crankshaft bearing, and grind to correct the crankshaft journal or replace the crankshaft as required.

NOTE:
- Select the crankshaft bearing of suitable size by referring to step 3) when replacing crankshaft bearing.
- When grinding to correct the crankshaft journal, finish it to the suitable outer diameter by referring to step 3) according to the undersize bearing to be used.

Crankshaft oil clearance:
Standard
0.013 — 0.031 mm (0.0005 — 0.0012 in)



(19) Completely remove the plastigauge.

7. REAR OIL SEAL

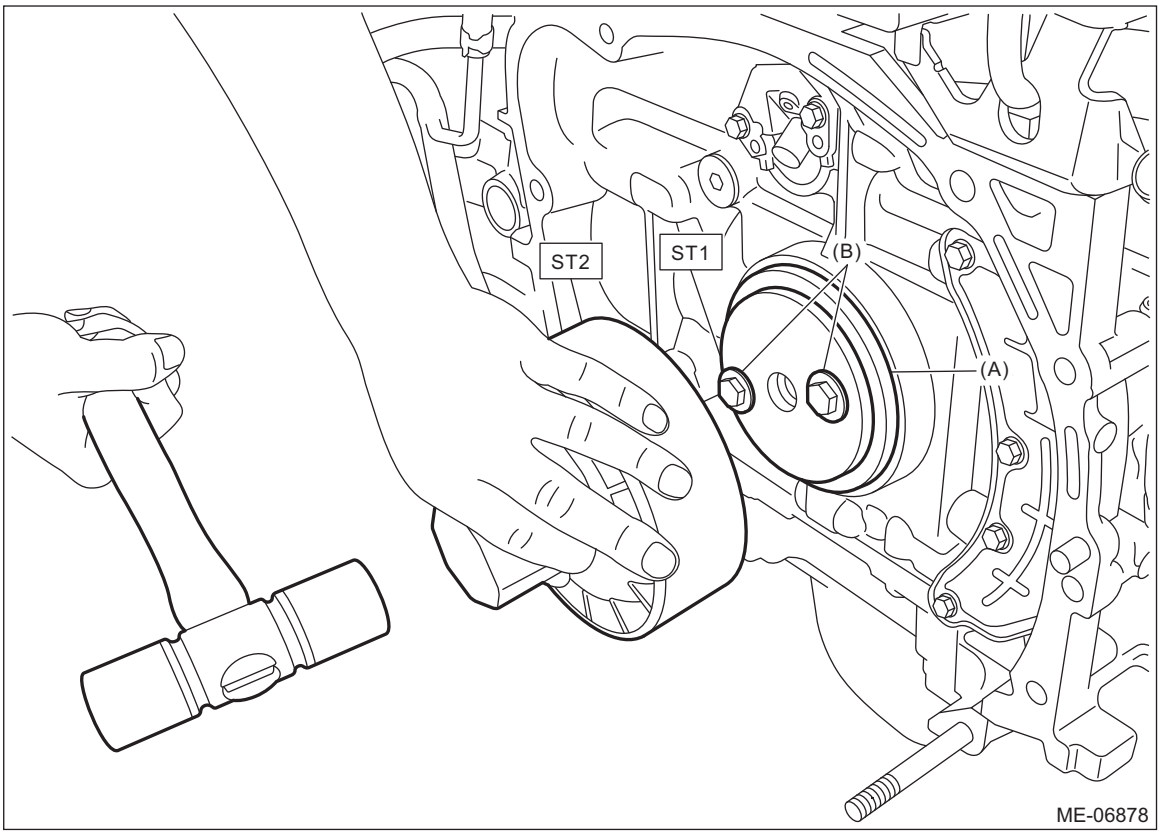
1) Inspect for oil leakage from the rear oil seal. If there is an oil leak, replace the rear oil seal with a new part according to the following procedures.
(1) When working on the vehicle

CAUTION:
When working on the vehicle, perform the following steps also.
1. Remove the transmission body from the vehicle. CVT model <Ref. to CVT(TR690)-56, REMOVAL, Automatic Transmission Assembly.> MT model <Ref. to 6MT(TY85)-32, REMOVAL, Manual Transmission Assembly.>
(2) Remove the crankshaft position sensor plate with drive plate. (CVT model) <Ref. to CVT(TR690)-140, REMOVAL, Drive Plate.>
(3) Remove the clutch disc and cover. (MT model) <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>
(4) Remove the crankshaft position sensor plate with flywheel. (MT model) <Ref. to CL-15, REMOVAL, Flywheel.>
(5) Remove the rear oil seal from the cylinder block using a oil seal puller, etc.

CAUTION:
Be careful not to damage the crankshaft during operation.

(6) Apply a coat of engine oil to the oil seal inner periphery and outer periphery, and install the rear oil seal using ST1 and ST2.

ST1 18671AA020 OIL SEAL GUIDE
ST2 18657AA030 OIL SEAL INSTALLER



(A) Rear oil seal
(B) Drive plate or flywheel mounting bolt

(7) Install in the reverse order of removal after replacement.

23.Intake and Exhaust Valve

A: SPECIFICATION

Refer to “Cylinder Head” for removal and installation procedures of the intake and exhaust valves.
<Ref. to ME(w/o STI)-202, REMOVAL, Cylinder Head.>
<Ref. to ME(w/o STI)-203, INSTALLATION, Cylinder Head.>
<Ref. to ME(w/o STI)-214, DISASSEMBLY, Cylinder Head.>
<Ref. to ME(w/o STI)-217, ASSEMBLY, Cylinder Head.>

24.Piston

A: SPECIFICATION

Refer to “Cylinder Block” for removal and installation procedures of pistons.
<Ref. to ME(w/o STI)-242, REMOVAL, Cylinder Block.>
<Ref. to ME(w/o STI)-252, INSTALLATION, Cylinder Block.>
<Ref. to ME(w/o STI)-279, PISTON AND CONNECTING ROD, DISASSEMBLY, Cylinder Block.>
<Ref. to ME(w/o STI)-282, PISTON AND CONNECTING ROD, ASSEMBLY, Cylinder Block.>

25.Connecting Rod

A: SPECIFICATION

Refer to “Cylinder Block” for removal and installation procedures of connecting rod.
<Ref. to ME(w/o STI)-242, REMOVAL, Cylinder Block.>
<Ref. to ME(w/o STI)-252, INSTALLATION, Cylinder Block.>
<Ref. to ME(w/o STI)-279, PISTON AND CONNECTING ROD, DISASSEMBLY, Cylinder Block.>
<Ref. to ME(w/o STI)-282, PISTON AND CONNECTING ROD, ASSEMBLY, Cylinder Block.>

26.Crankshaft

A: SPECIFICATION

Refer to “Cylinder Block” for removal and installation procedures of the crankshaft.
<Ref. to ME(w/o STI)-242, REMOVAL, Cylinder Block.>
<Ref. to ME(w/o STI)-252, INSTALLATION, Cylinder Block.>

27.Symptoms and causes

A: INSPECTION

NOTE:
The “RANK” shown in the chart shows the possibilities of the cause of trouble in order from “Very often” to “Rarely”.
A — Very often
B — Sometimes
C — Rarely

Symptoms	Problem parts etc.	Possible cause	RANK
1. Engine does not start.			
1) Starter does not turn.	Starter	Defective battery-to-starter harness	B
		Defective starter switch	C
		Defective relay	C
		Defective inhibitor switch	C
		Defective clutch start switch	C
		Defective starter	B
	Battery	Improper connection of terminal	A
		Run-down battery	A
		Defective charging system	B
	Friction	Seizure of crankshaft and connecting rod bearing	C
		Seized camshaft	C
		Seized or stuck piston and cylinder	C
	Immobilizer system <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>		A
2) Initial combustion does not occur.	Starter	Defective starter	C
	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Fuel line	Defective fuel pump and relay	A
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder liner and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
3) Initial combustion occurs.	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Defective intake manifold gasket	B
		Defective throttle body gasket	B
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder liner and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B
4) Engine stalls after initial combustion.	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	B
		Loosened or cracked PCV hose	C
		Loosened or cracked vacuum hose	C
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Dirty air cleaner element	C
		Air by-pass valve malfunction	C
	Fuel line	Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Trouble	B
		Defective timing	B
	Compression	Incorrect cam clearance	C
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	B
		Improper engine oil (low viscosity)	B

Symptoms	Problem parts etc.	Possible cause	RANK
2. Rough idle and engine stall	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	A
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	C
		Loosened oil filler cap	B
		Dirty air cleaner element	C
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	C
		Clogged fuel line	C
		Lack of fuel or insufficient fuel	B
	Timing chain	Defective timing	C
	Compression	Incorrect cam clearance	B
		Loosened spark plug or defective gasket	B
		Loosened cylinder head bolt or defective cylinder head gasket	B
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	B
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Lubrication system	Incorrect oil pressure	B
		Defective rocker cover gasket	C
	Cooling system	Over-heating	C
	Other	Evaporative emission control system malfunction	A
		Stuck or damaged throttle valve	B

Symptoms	Problem parts etc.	Possible cause	RANK
3. Low output, hesitation and poor acceleration	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	B
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	B
		Loosened oil filler cap	B
		Dirty air cleaner element	A
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	B
		Clogged fuel line	B
		Lack of fuel or insufficient fuel	C
	Timing chain	Defective timing	B
	Compression	Incorrect cam clearance	B
		Loosened spark plug or defective gasket	B
		Loosened cylinder head bolt or defective cylinder head gasket	B
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	B
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Lubrication system	Incorrect oil pressure	B
	Cooling system	Over-heating	C
		Over-cooling	C
	Other	Evaporative emission control system malfunction	A

Symptoms	Problem parts etc.	Possible cause	RANK
4. Surging	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	A
		Loosened or cracked PCV hose	A
		Loosened or cracked vacuum hose	A
		Defective intake manifold gasket	B
		Defective throttle body gasket	B
		Defective PCV valve	B
		Loosened oil filler cap	B
		Dirty air cleaner element	B
		Air by-pass valve malfunction	B
	Fuel line	Defective fuel pump and relay	B
		Clogged fuel line	B
		Lack of fuel or insufficient fuel	C
	Timing chain	Defective timing	B
	Compression	Incorrect cam clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	C
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
		Improper engine oil (low viscosity)	B
	Cooling system	Over-heating	B
	Other	Evaporative emission control system malfunction	C
5. Engine does not return to idle.	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked vacuum hose	A
	Other	Stuck or damaged throttle valve	A
6. Dieseling (run-on)	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Cooling system	Over-heating	B
	Other	Evaporative emission control system malfunction	B

Symptoms	Problem parts etc.	Possible cause	RANK
7. After burning in exhaust system	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened or cracked intake duct	C
		Loosened or cracked PCV hose	C
		Loosened or cracked vacuum hose	B
		Defective PCV valve	B
		Loosened oil filler cap	C
		Air by-pass valve malfunction	C
	Timing chain	Defective timing	B
	Compression	Incorrect cam clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder head gasket	C
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	C
		Incorrect valve timing	A
	Lubrication system	Incorrect oil pressure	C
	Cooling system	Over-cooling	C
	Other	Evaporative emission control system malfunction	C
8. Knocking	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Loosened oil filler cap	B
	Timing chain	Defective timing	B
	Compression	Incorrect cam clearance	C
		Incorrect valve timing	B
	Cooling system	Over-heating	A
9. Excessive engine oil consumption	Intake system	Loosened or cracked PCV hose	A
		Defective PCV valve	B
		Loosened oil filler cap	C
	Compression	Defective valve stem	A
		Worn or stuck piston rings, cylinder and piston	A
	Lubrication system	Loosened chain cover attaching bolts and defective gasket	B
		Defective oil filter gasket	B
		Defective crankshaft oil seal	B
		Defective rocker cover gasket	B
		Loosened oil drain plug or defective gasket	B
		Loosened oil pan mounting bolt or defective oil pan	B

Symptoms	Problem parts etc.	Possible cause	RANK
10. Excessive fuel consumption	Engine control system <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>		A
	Intake system	Dirty air cleaner element	A
	Timing chain	Defective timing	B
	Compression	Incorrect cam clearance	B
		Loosened spark plug or defective gasket	C
		Loosened cylinder head bolt or defective cylinder gasket	C
		Improper valve sealing	B
		Defective valve stem	C
		Worn or broken valve spring	C
		Worn or stuck piston rings, cylinder and piston	B
		Incorrect valve timing	B
	Lubrication system	Incorrect oil pressure	C
	Cooling system	Over-cooling	C

28.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	• Valve mechanism is defective • Incorrect cam clearance • Worn camshaft • Broken valve spring • Defective valve shim
Heavy and dull clank	Oil pressure is low.	• Worn crankshaft bearing • Worn connecting rod bearing
	Oil pressure is normal.	• Loosened flywheel mounting bolt • Damaged engine mounting
High-pitched clank	Sound is noticeable when accelerating with an overload condition.	• Ignition timing advanced • Accumulation of carbon inside combustion chamber • Wrong heat range of spark plug • Improper octane value gasoline
Clank noise when engine speed is between 1,000 and 2,000 r/min	Sound is reduced when the fuel injector of the noisy cylinder is stopped.*	• Worn crankshaft bearing • Worn connecting rod bearing
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when the fuel injector of the noisy cylinder is stopped.*	• Worn cylinder liner and piston ring • Broken or stuck piston ring • Worn piston pin and piton pin hole of piston
	Sound is not reduced if each fuel injector is stopped in turn.*	• Unusually worn valve rocker • Unusually worn valve shim • Worn cam sprocket • Worn journal of cam carrier and camshaft cap
Squeaky sound	—	• Insufficient generator lubrication
Rubbing sound	—	• Poor contact of generator brush and rotor
Gear scream when starting engine	—	• Defective ignition starter switch • Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	• Defective V-belt tensioner assembly (loose V-belt) • Defective water pump shaft
Hissing sound	—	• Insufficient compression • Air leakage in air intake system, hose, connection or manifold
Timing chain noise	—	• Loose timing chain • Timing chain contacting with adjacent part
Valve noise	—	• Incorrect cam clearance

*Fuel injector can be stopped using the Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-97, OPERATION, Active Test.>

EXHAUST

EX(w/o STI)

Page

1. General Description 2

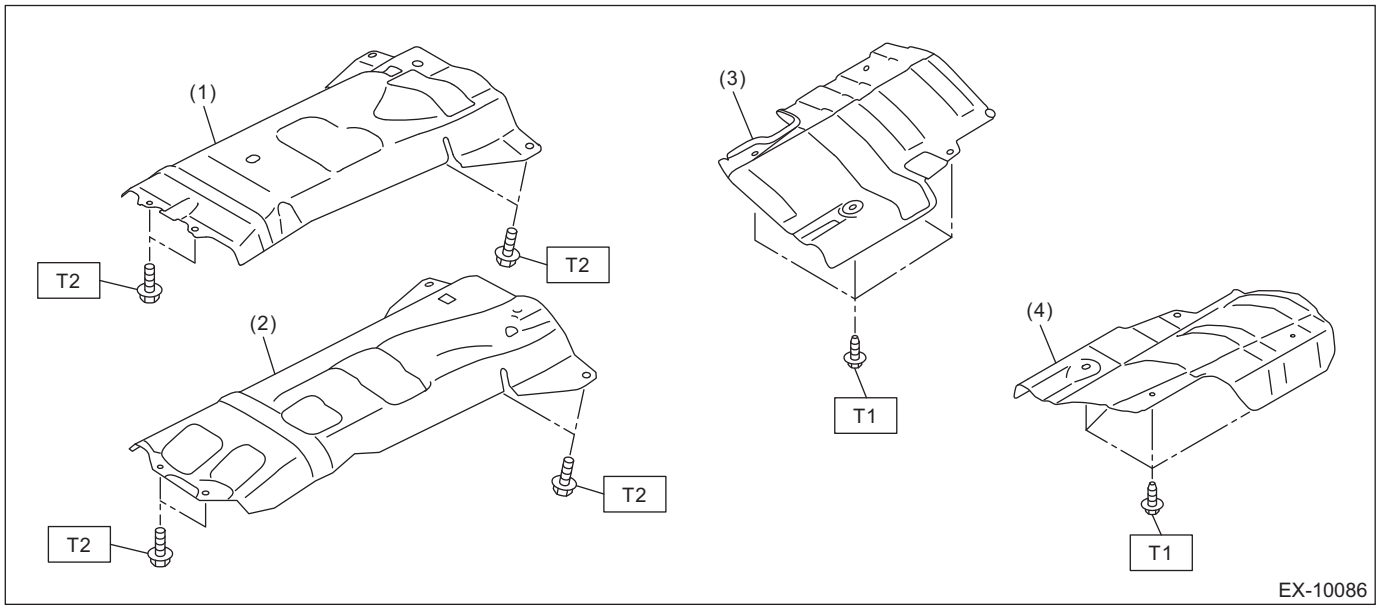
3. HEAT SHIELD COVER



(1) Center exhaust cover (CVT model)
(2) Center exhaust cover (MT model)
(3) Rear exhaust cover RH
(4) Rear exhaust cover LH

Tightening torque: N·m (kgf-m, ft-lb)

T1: 10 (1.0, 7.4)
T2: 18 (1.8, 13.3)

B: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If any grease adheres to the exhaust pipe, wipe it off. Otherwise a fire may happen.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18283AA010	18283AA010	WRENCH ADAPTER	Used for removing and installing center exhaust pipe (front).

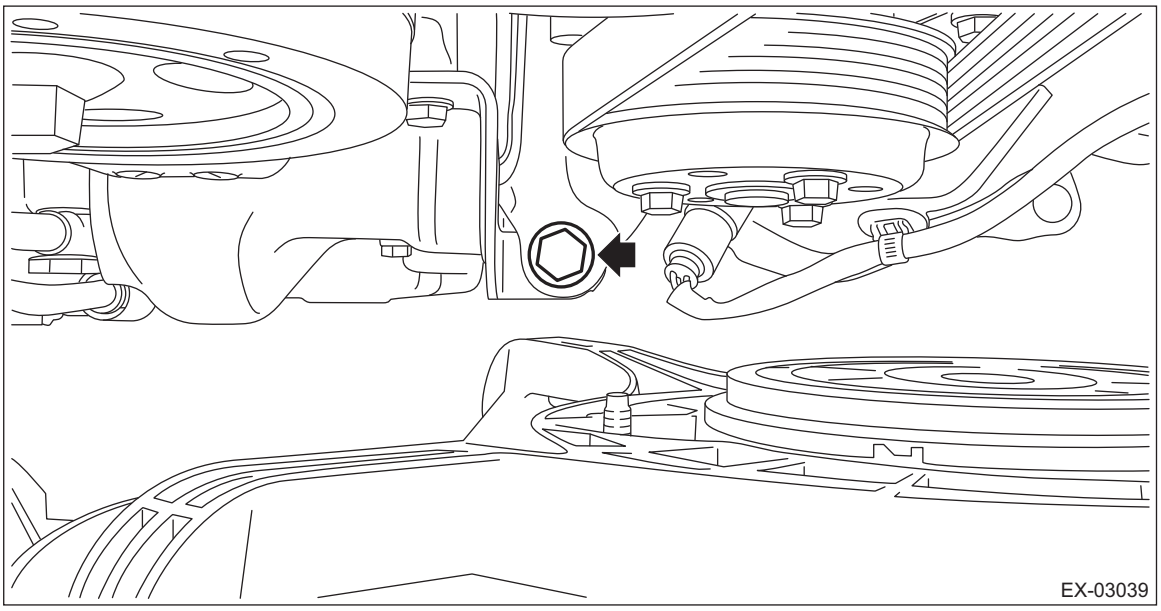
2. GENERAL TOOL

TOOL NAME	REMARKS
TORX® socket E10	Used for removing and installing center exhaust pipe (front).

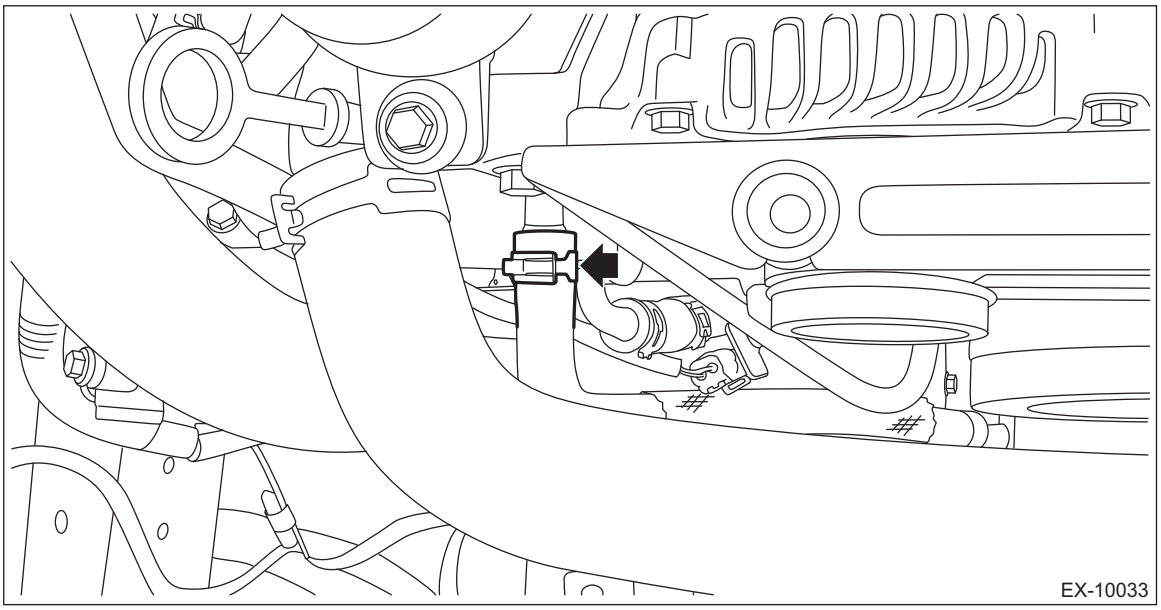
2. Front Exhaust Pipe

A: REMOVAL

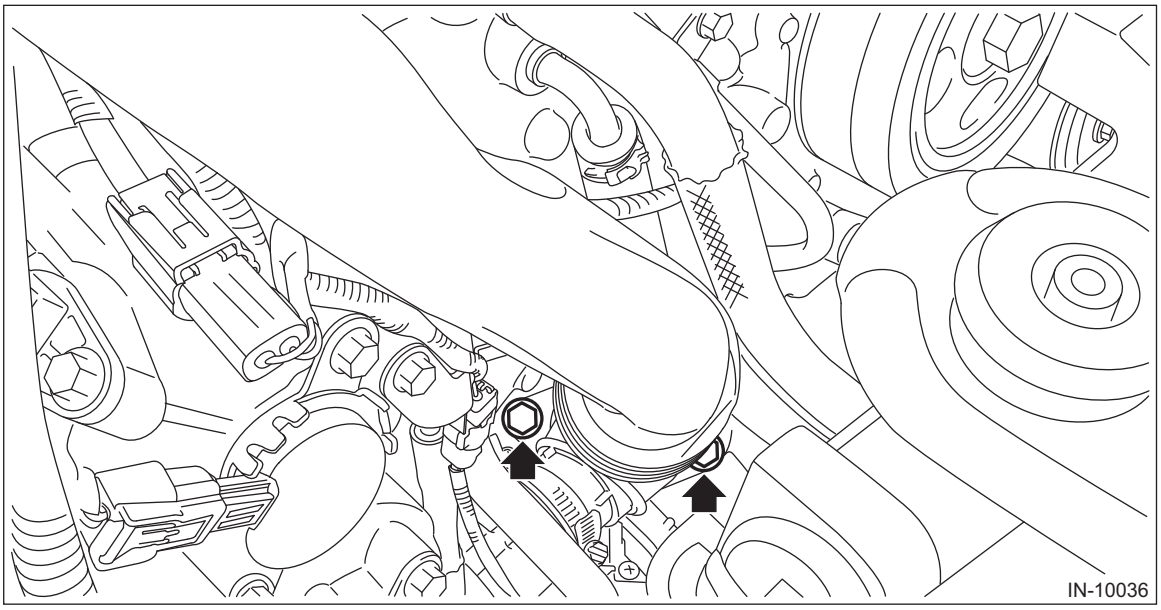
CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
4) Remove the radiator sub fan and fan motor. <Ref. to CO(w/o STI)-50, REMOVAL, Radiator Sub Fan and Fan Motor.>
5) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
6) Lower the vehicle.
7) Remove the bolts which secure the water pump pulley cover to the turbocharger stay.



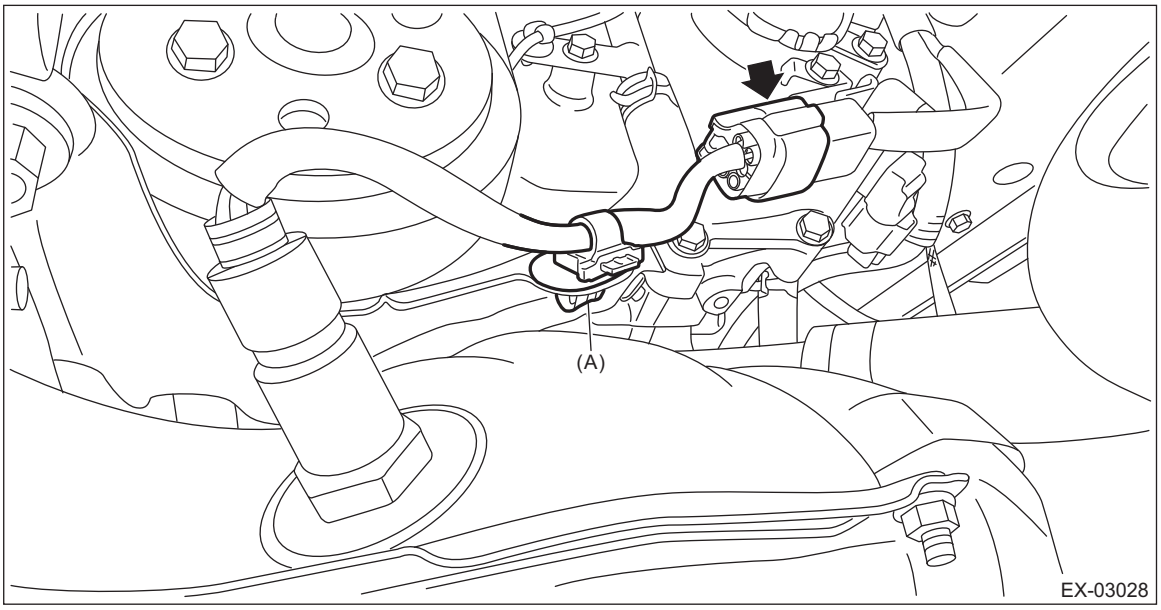
8) Disconnect the engine coolant hose from the water pipe assembly.



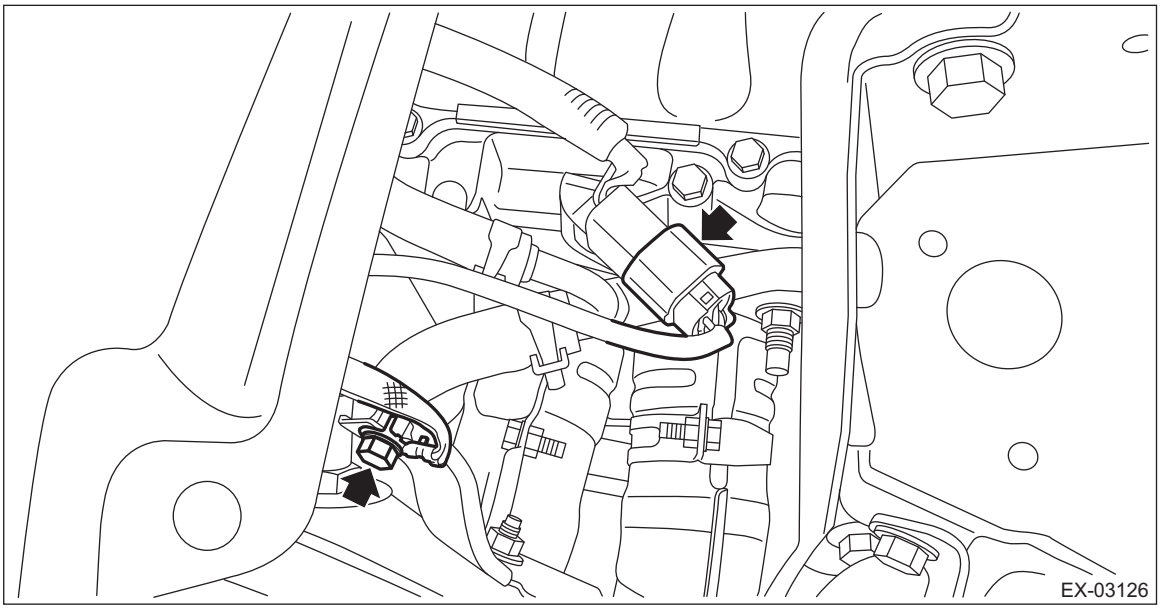
9) Remove the bolts which secure the intake duct No. 2 to the turbocharger.



10) Lift up the vehicle.
11) Disconnect the connector on the front oxygen (A/F) sensor from the engine wiring harness, and remove the clip (A) which secures the front oxygen (A/F) sensor harness to the water pump pulley cover.

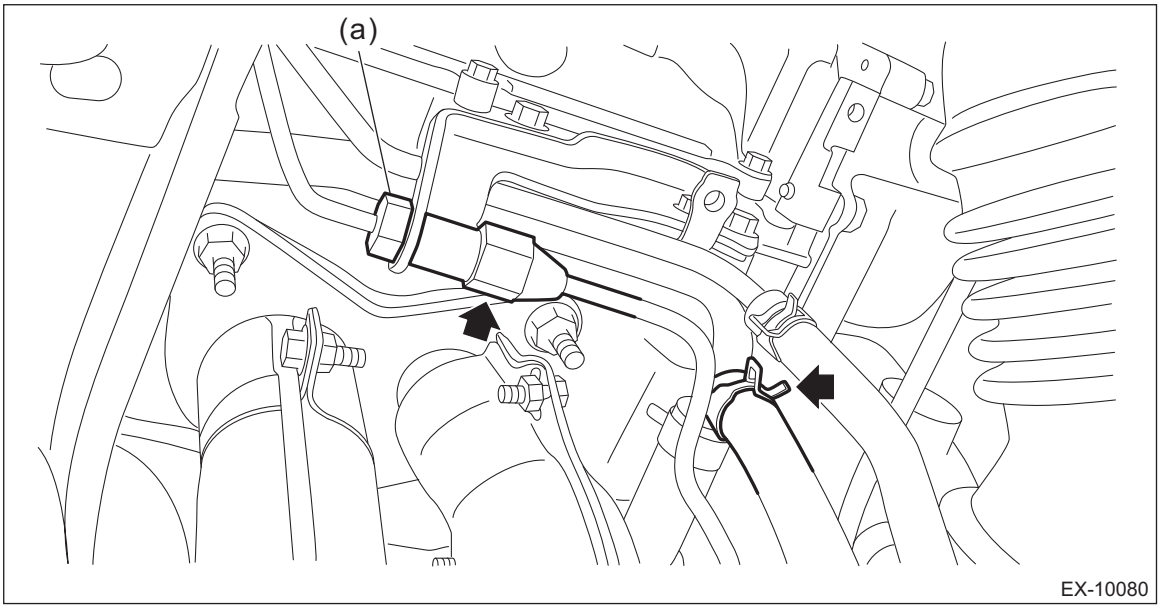


12) Disconnect the connector on the rear oxygen sensor from the engine wiring harness, and disconnect the ground cable from the exhaust pipe cover.

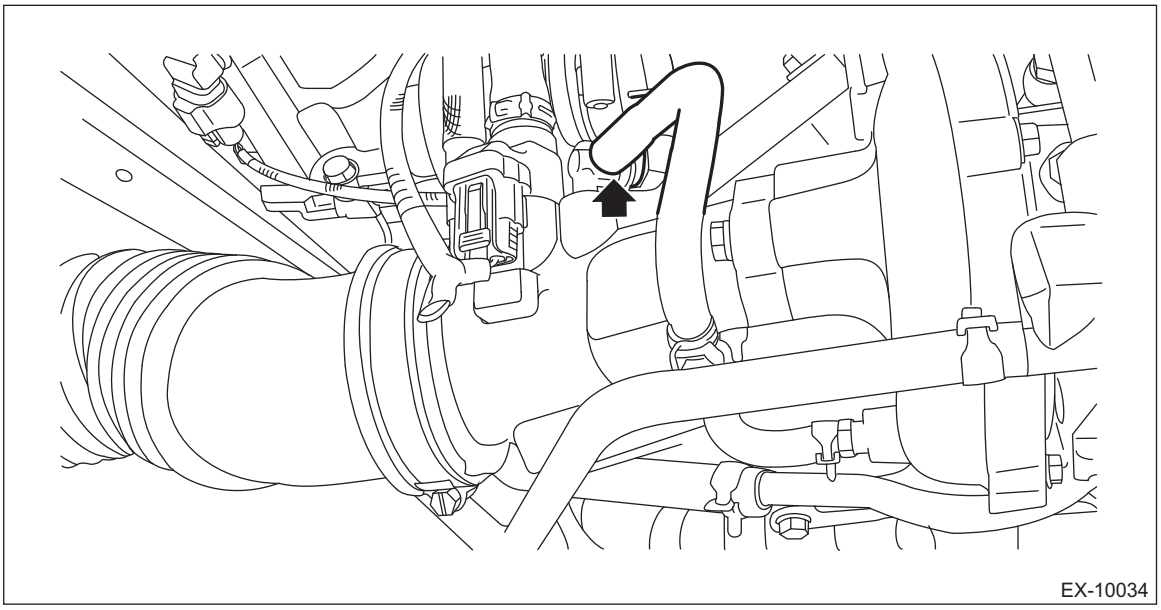


13) Disconnect the union screw pipe assembly from the oil pipe assembly, and disconnect the engine coolant hose from the water pipe RH.

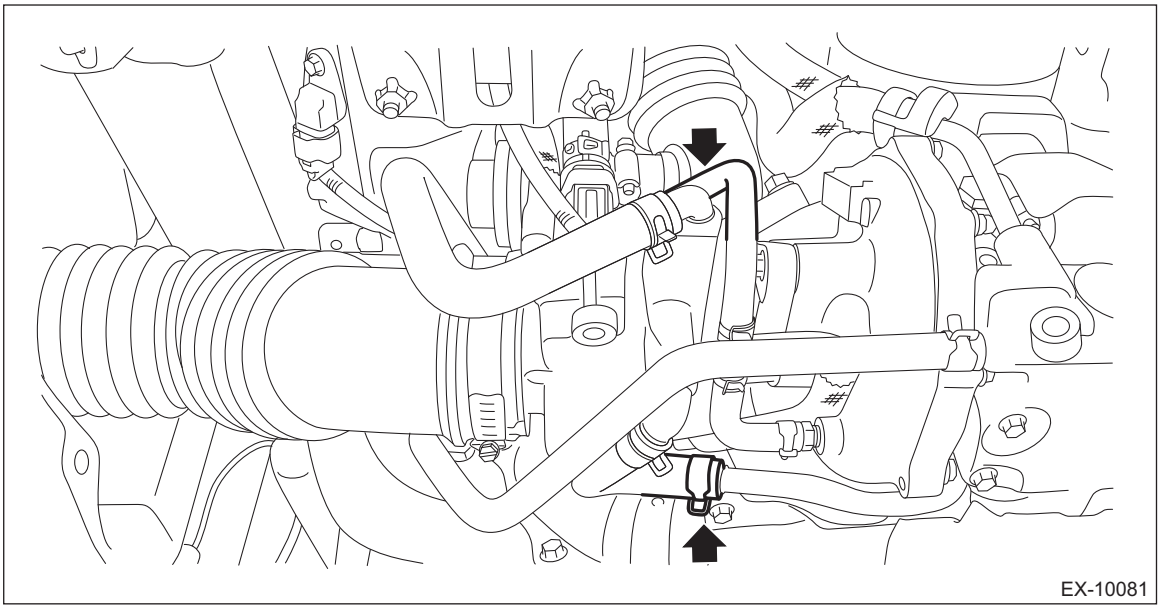
CAUTION:
In order to prevent damaging the oil pipe assembly, fix the section (a) shown in the figure when loosing the flare nut on the union screw pipe assembly, and avoid the part from rotating together while loosening the nut.



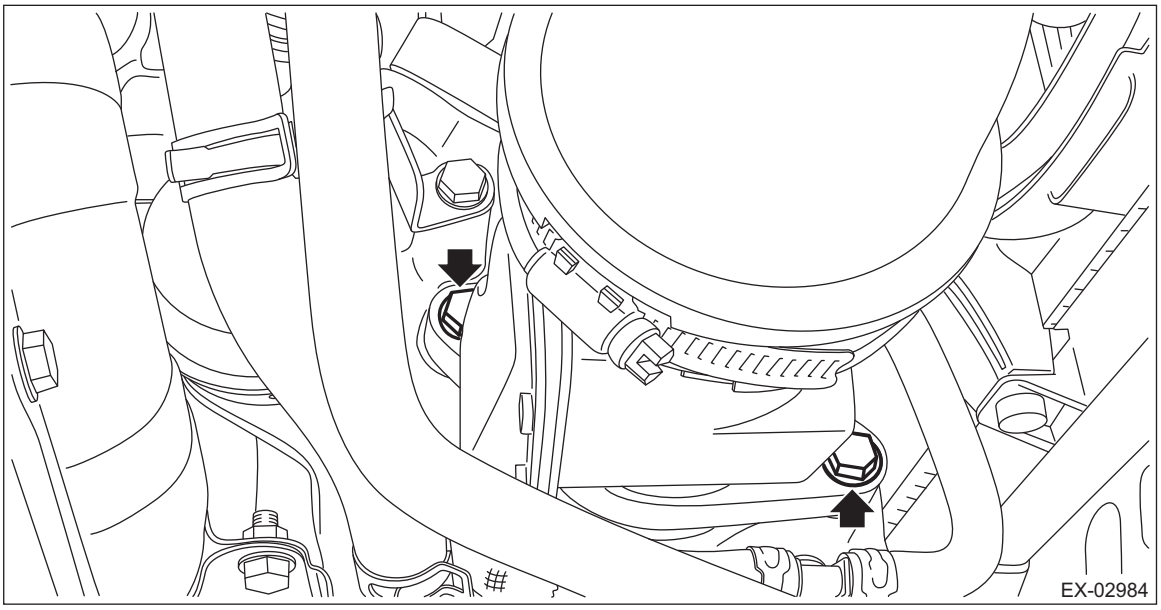
14) Disconnect the vacuum control hose from the wastegate control solenoid valve. (Except for Canada)



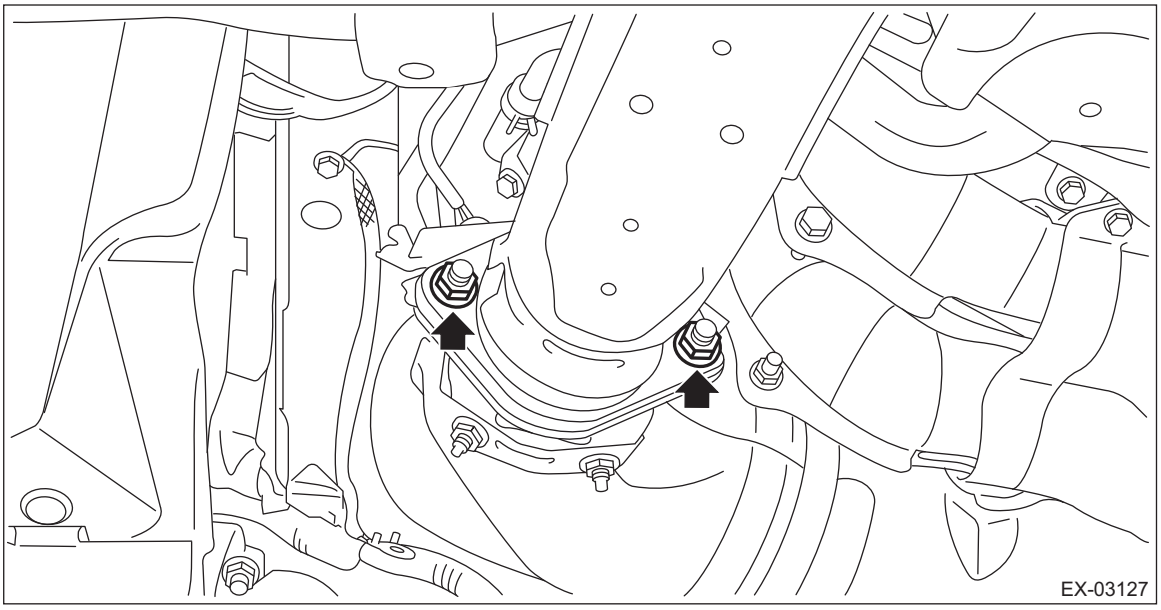
15) Disconnect the vacuum control hose from the wastegate control solenoid valve, and disconnect the engine coolant hose from the intake duct No. 1. (For Canada)



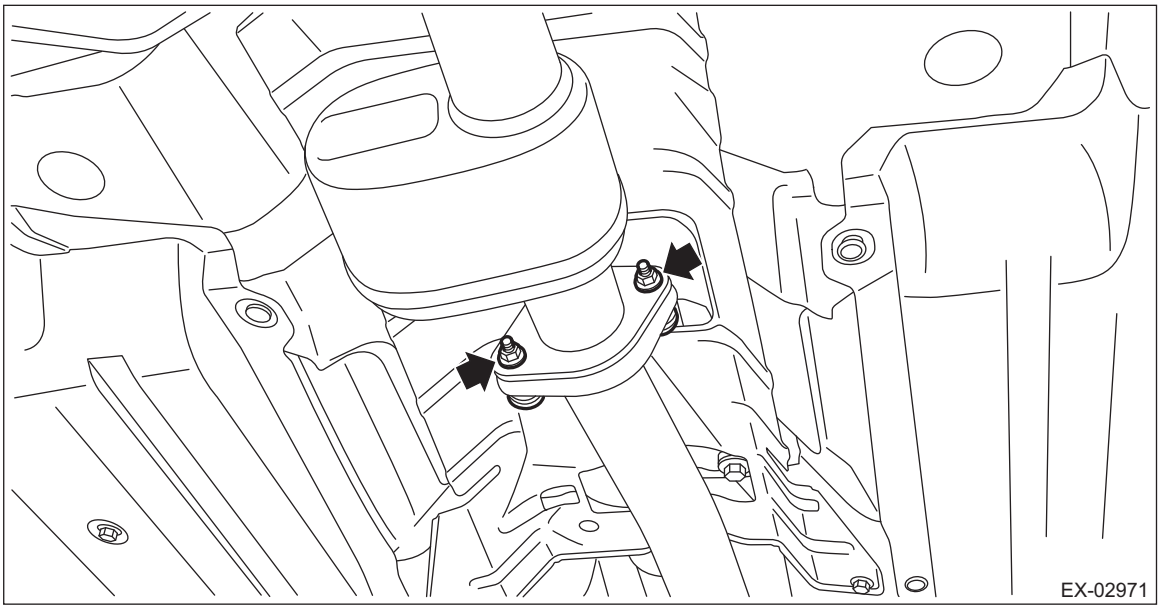
16) Remove the bolts which secure the intake duct No. 1 to the turbocharger.



17) Remove the nuts which secure the center exhaust pipe (rear) to the center exhaust pipe (front).



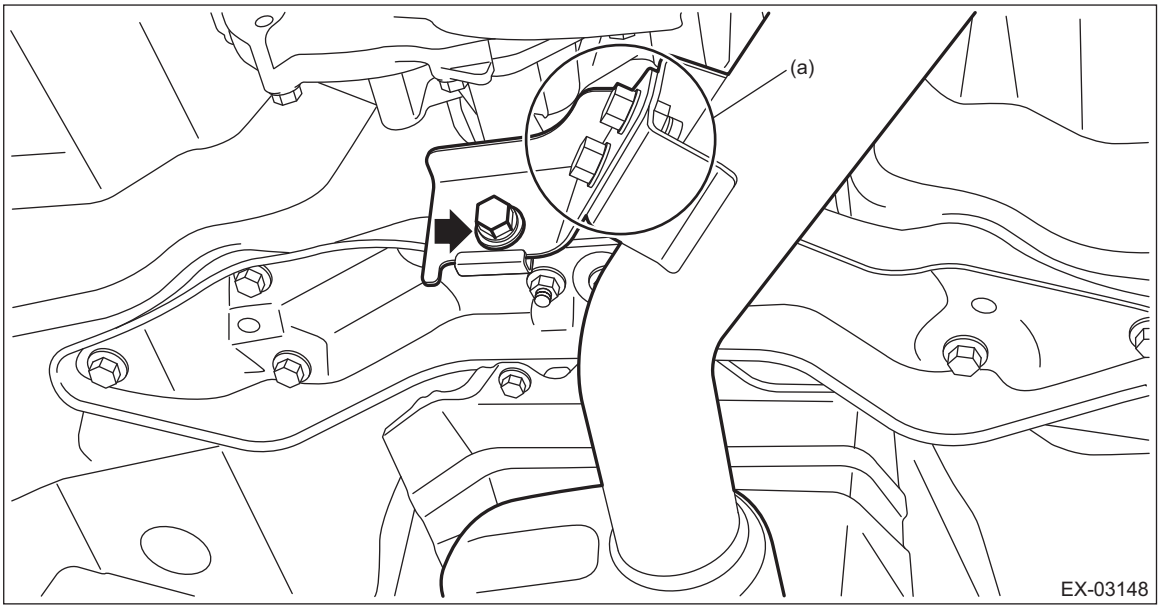
18) Remove the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe (rear).



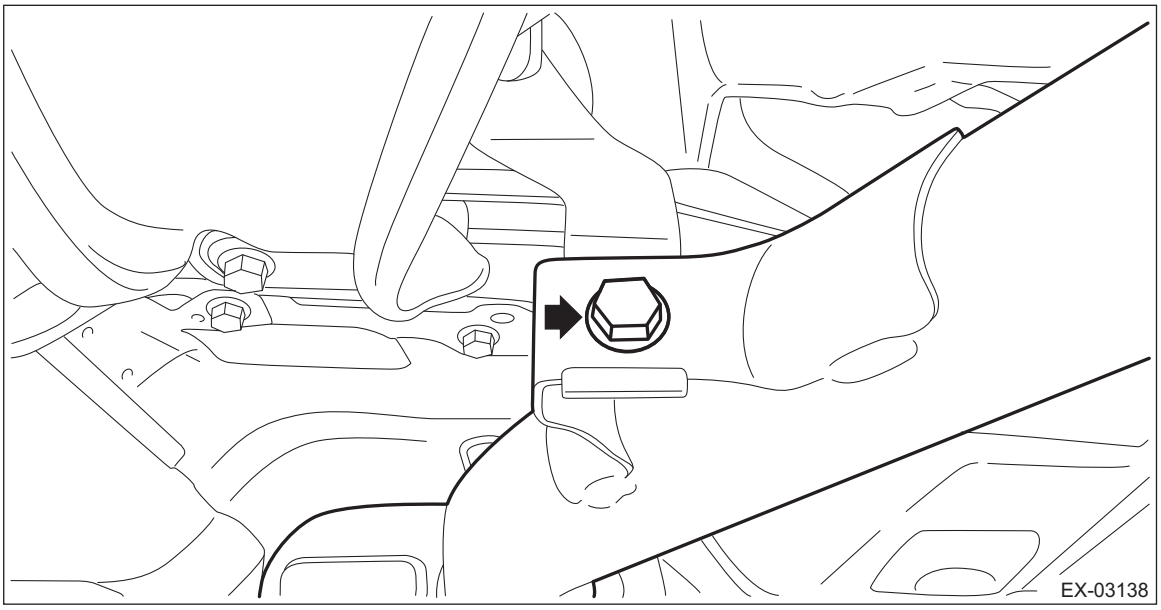
19) Remove the bolt which holds center exhaust pipe (rear) to the hanger bracket, and remove the center exhaust pipe (rear).

NOTE:
For CVT model, removing the exhaust pipe bracket from the center exhaust pipe (rear) will adversely affect the positioning accuracy. Therefore, do not remove the bolts in section (a) shown in the figure.

- CVT model



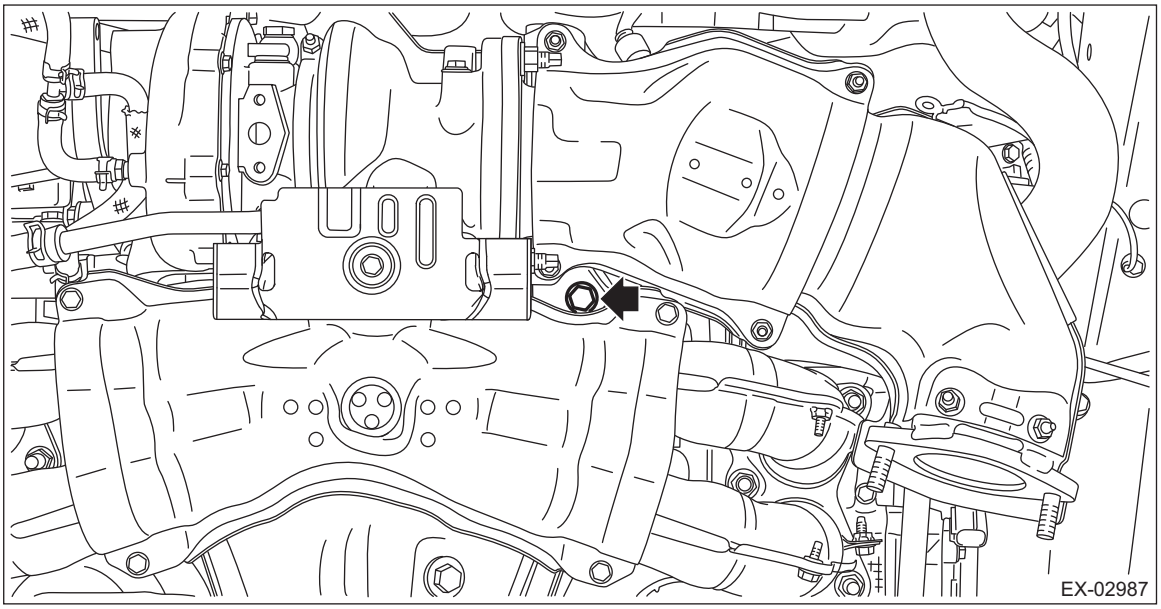
- MT model



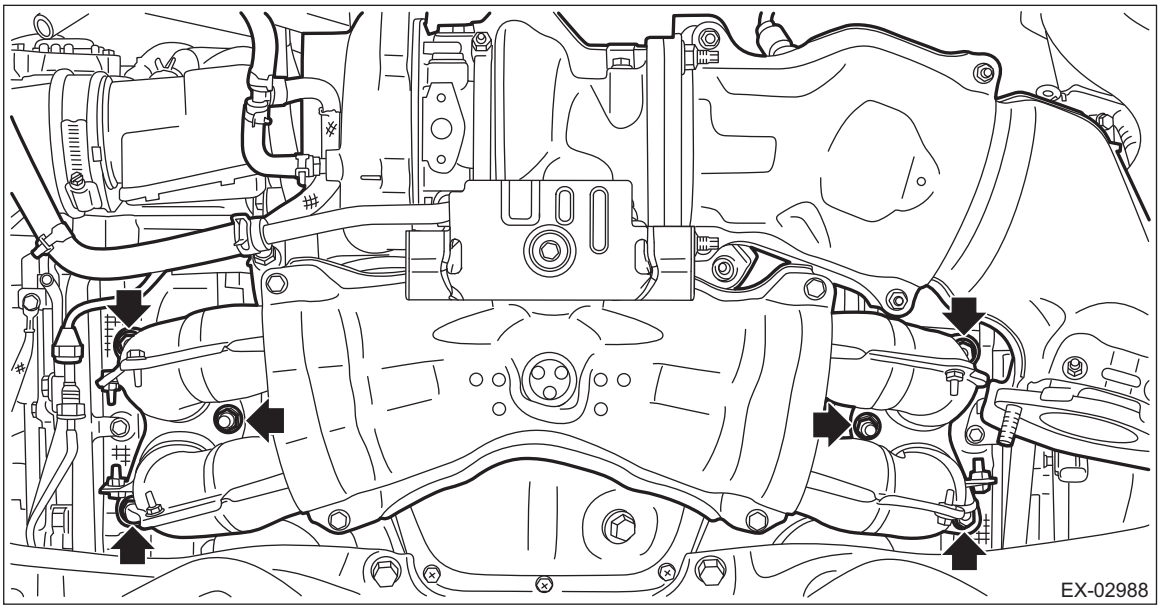
20) Remove the oil catch tank. <Ref. to IN(w/o STI)-65, REMOVAL, Oil Catch Tank.>

CAUTION:
This procedure is required to prevent oil from remaining in the compressor and turbine areas if the residual oil inside the oil catch tank back flows.

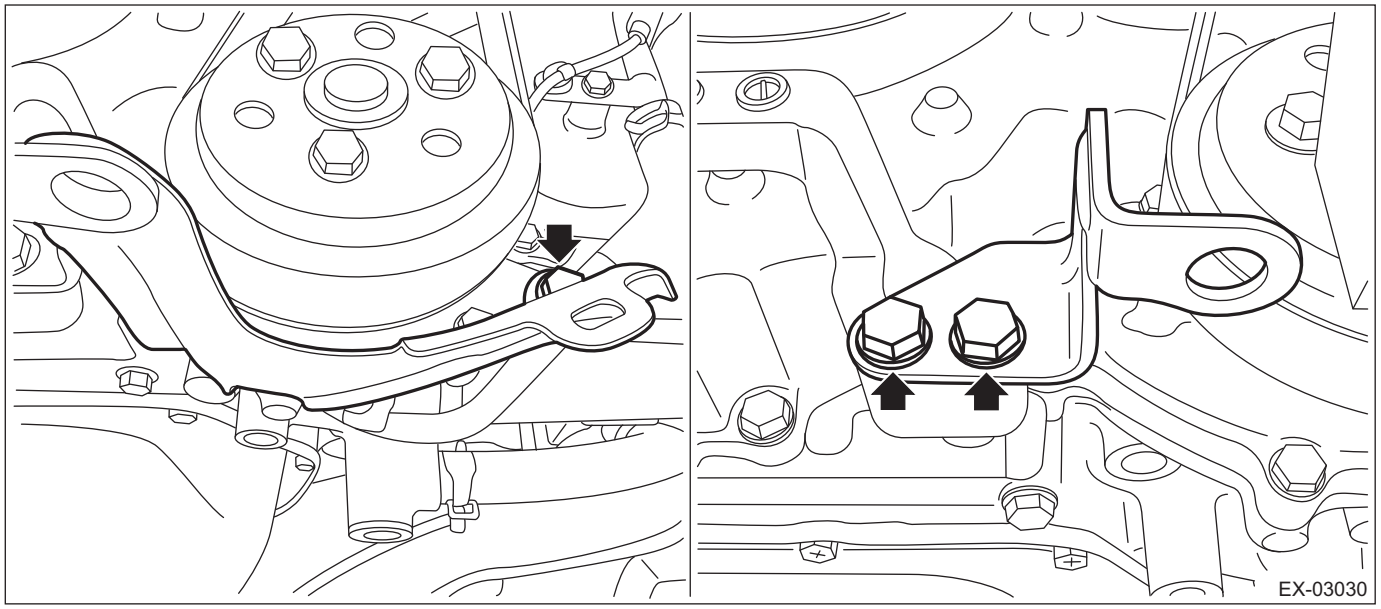
21) Remove the bolts which secure the turbocharger stay.



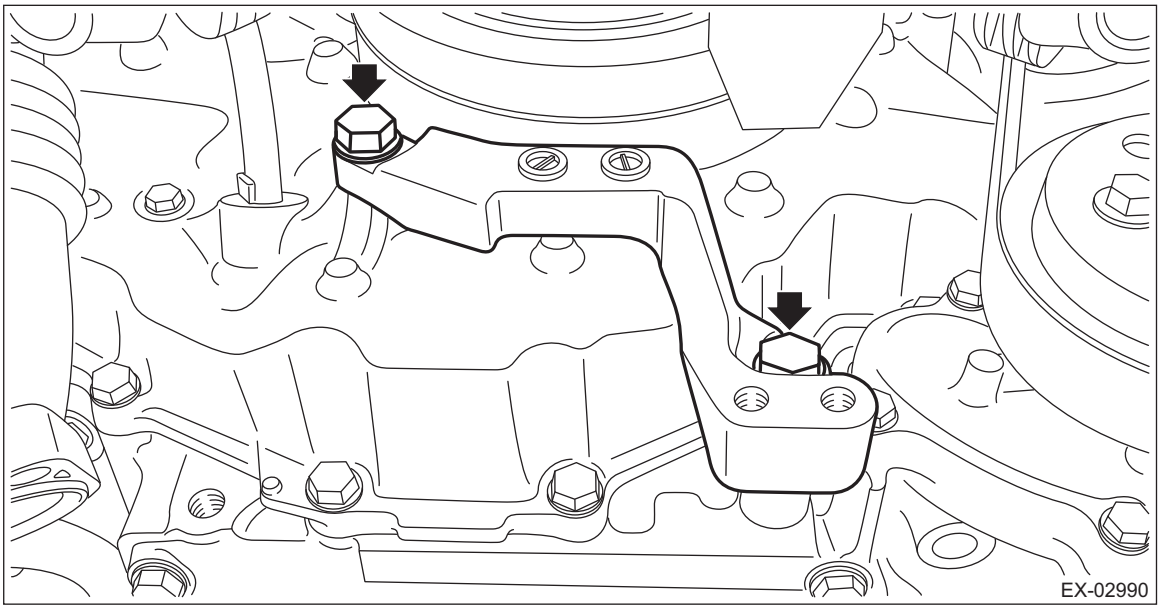
22) While holding the front exhaust pipe with transmission jack, remove the nuts which hold the front exhaust pipe to the cylinder head exhaust port, and remove the front exhaust pipe.



23) Remove the water pump pulley cover and exhaust pipe stay from the engine and turbocharger stay.



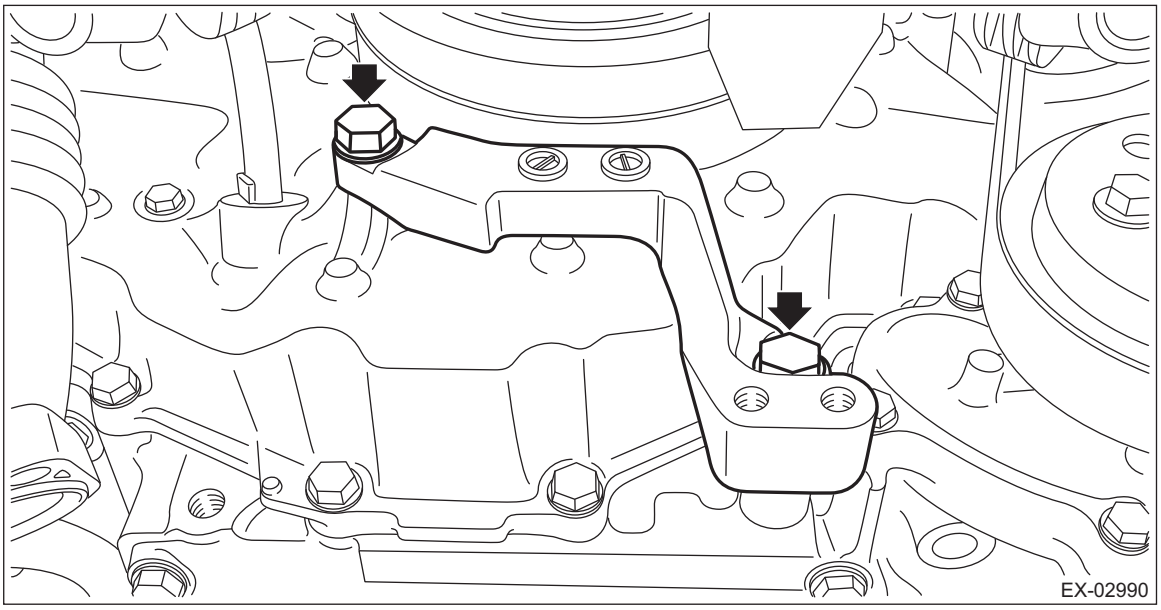
24) Remove the turbocharger stay from the engine.



B: INSTALLATION

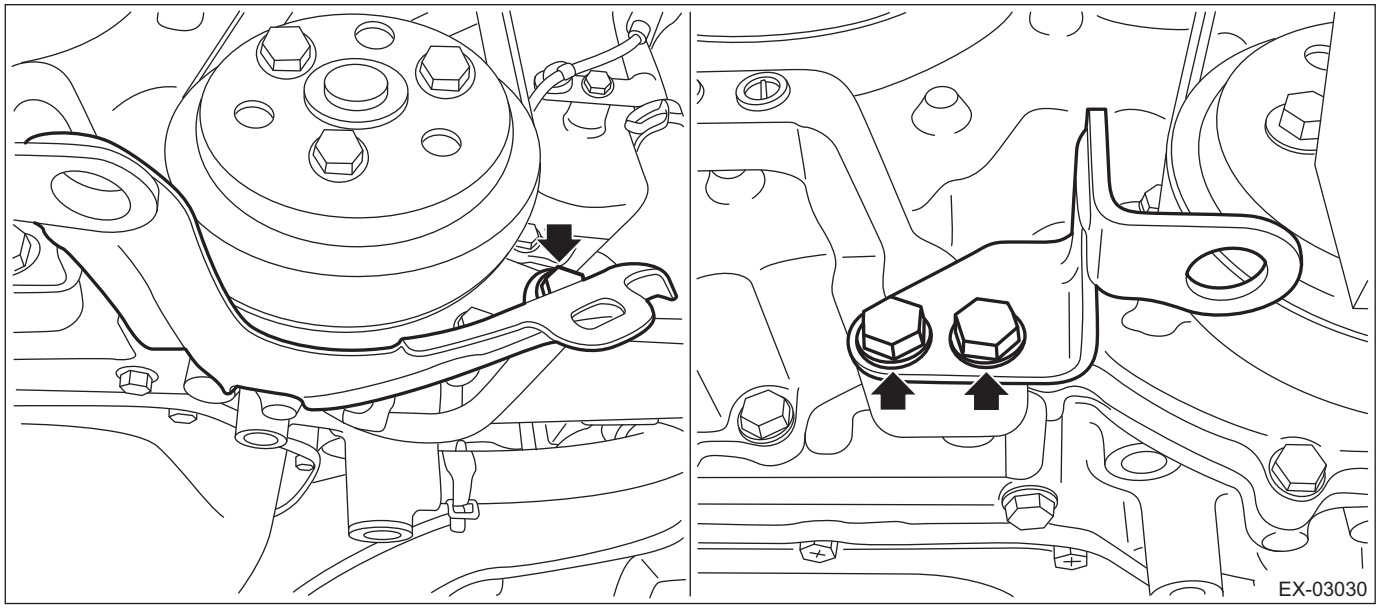
1) Install the turbocharger stay to the engine.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)



2) Install the water pump pulley cover and exhaust pipe stay to the engine and turbocharger stay.

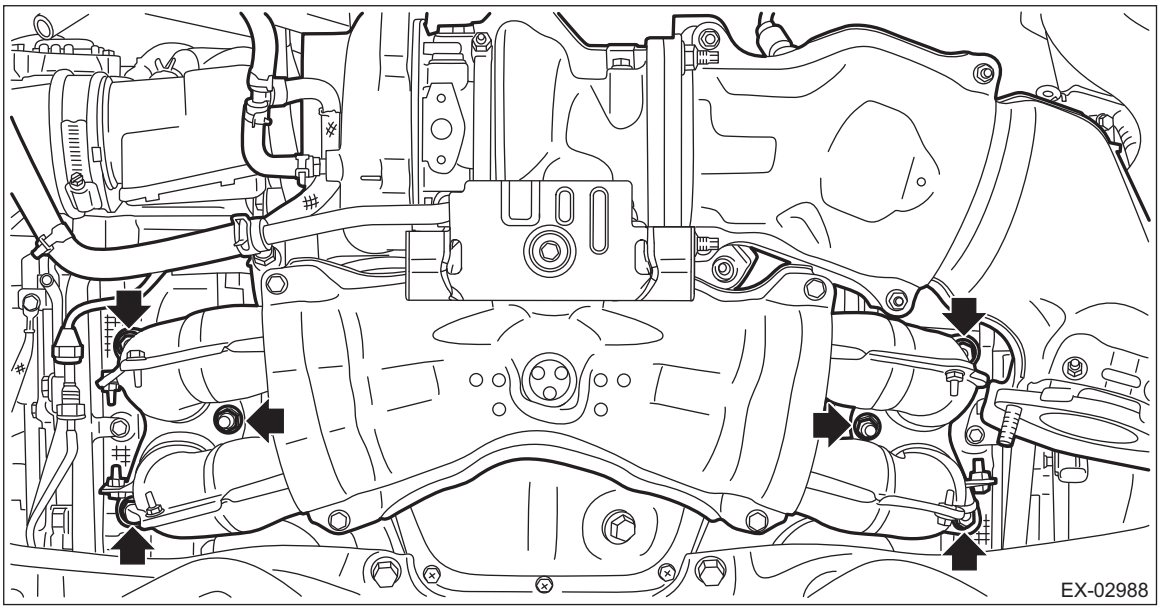
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)



3) While holding the front exhaust pipe with transmission jack, set the front exhaust pipe, and temporarily install the front exhaust pipe to the cylinder head exhaust port.

CAUTION:
Be sure to install the front exhaust pipe to the cylinder head.

NOTE:
Use a new gasket.



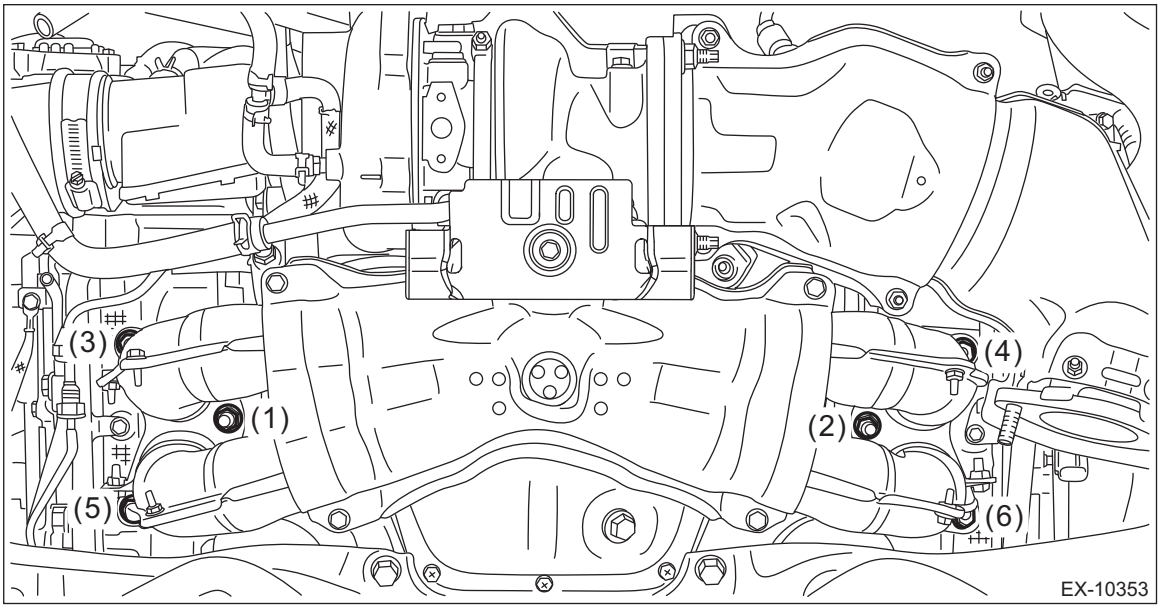
4) Tighten the nuts in the numerical order as shown in the figure.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)

5) Tighten the nuts again in the numerical order as shown in the figure.

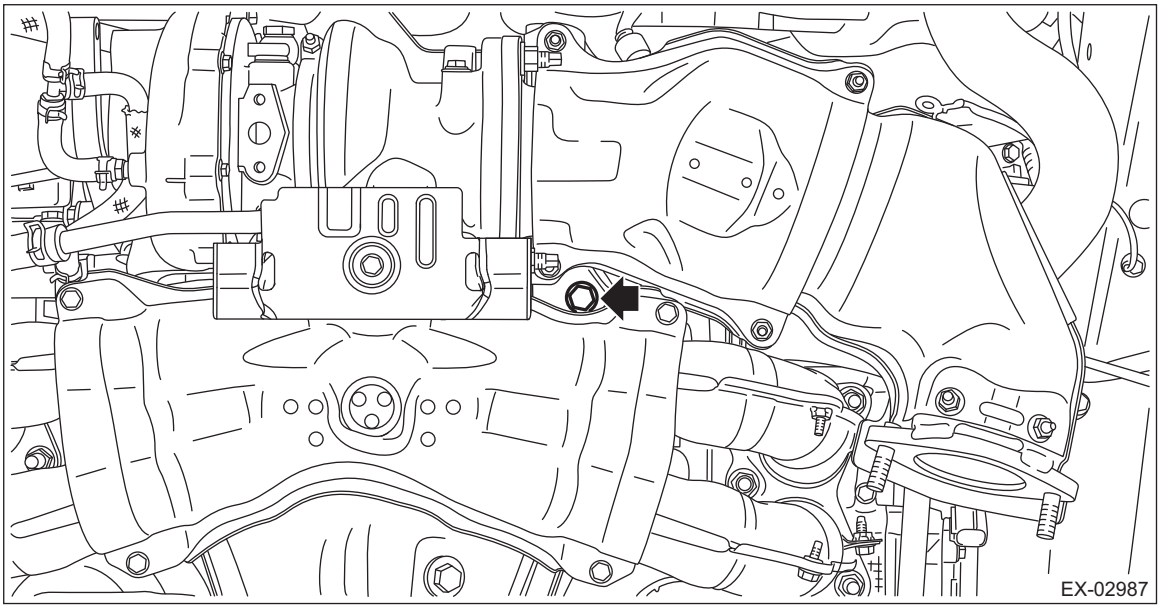
NOTE:
This operation is required to completely install the front exhaust pipe to the cylinder head.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



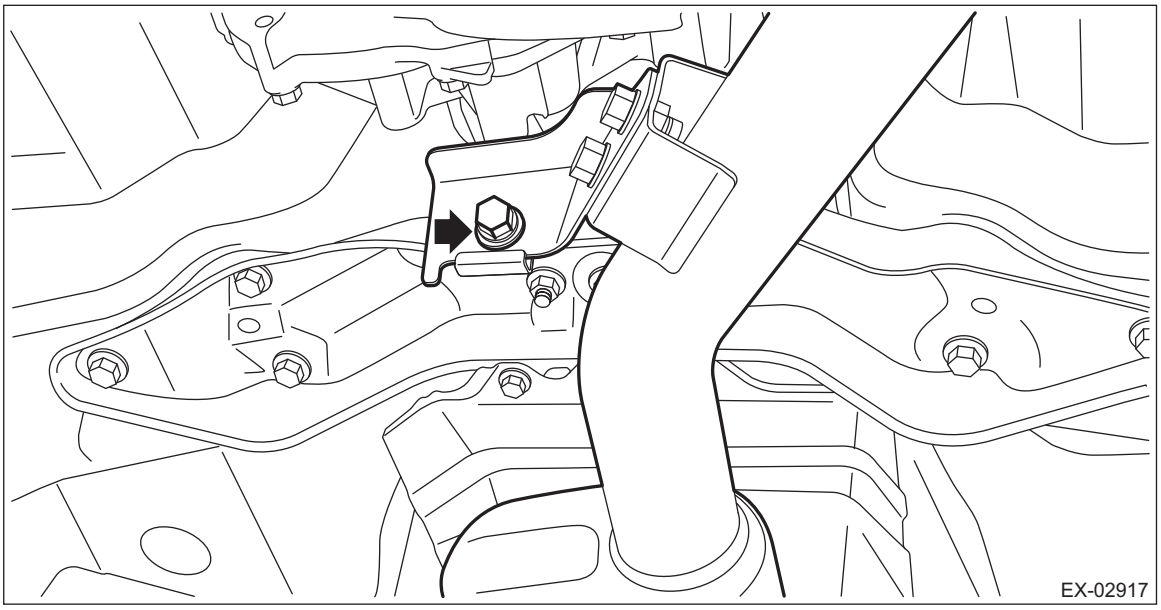
6) Attach the bolt which holds the turbocharger stay.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

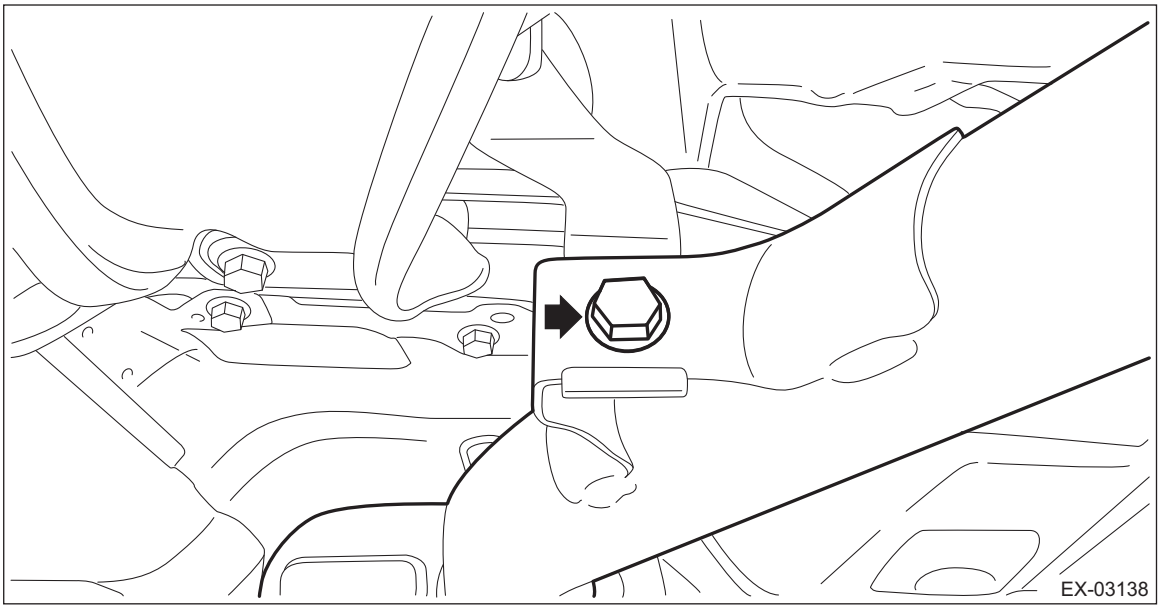


7) Install the oil catch tank. <Ref. to IN(w/o STI)-66, INSTALLATION, Oil Catch Tank.>
8) Set the center exhaust pipe (rear), and temporarily tighten the bolt which holds the center exhaust pipe (rear) to the hanger bracket.

- CVT model



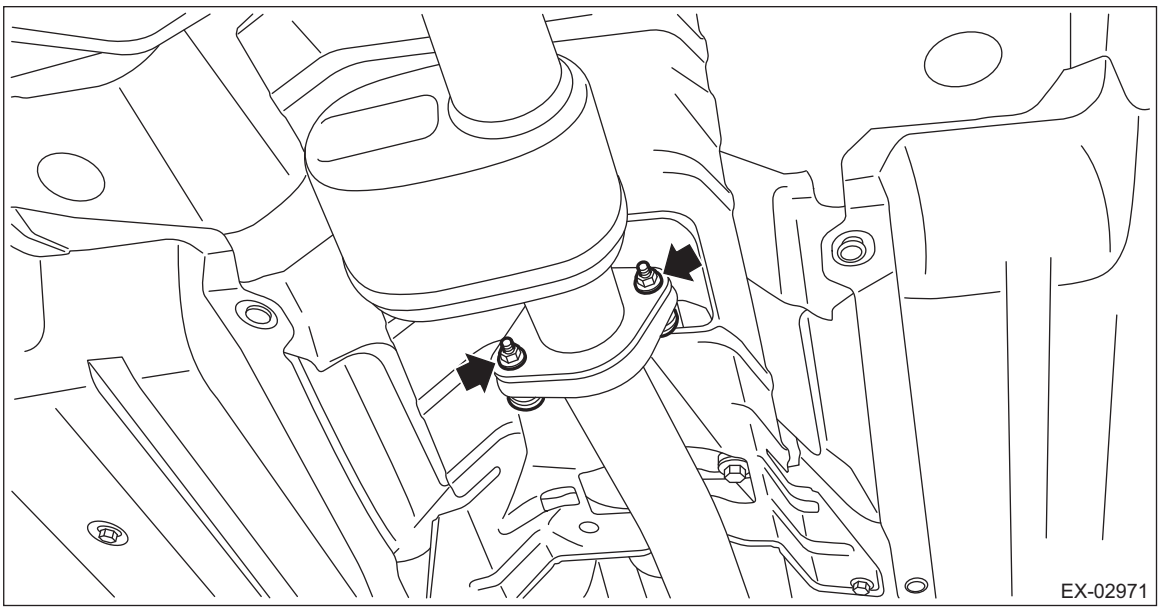
- MT model



9) Install the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe (rear).

NOTE:
Use a new gasket.

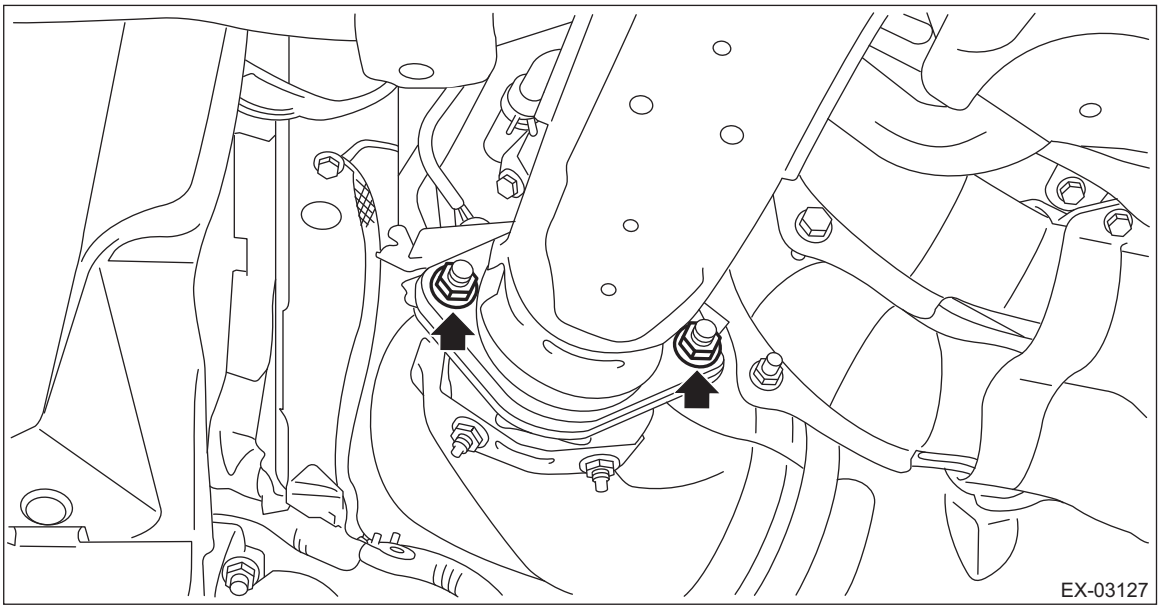
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



10) Install the nuts which secure the center exhaust pipe (rear) to the center exhaust pipe (front).

NOTE:
Use a new gasket.

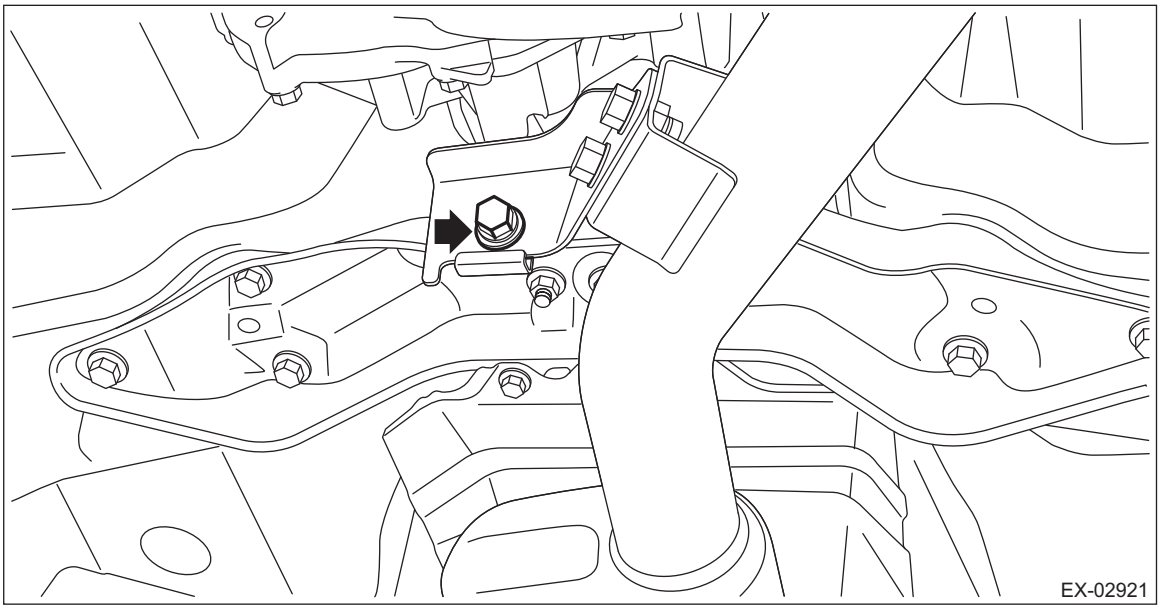
Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



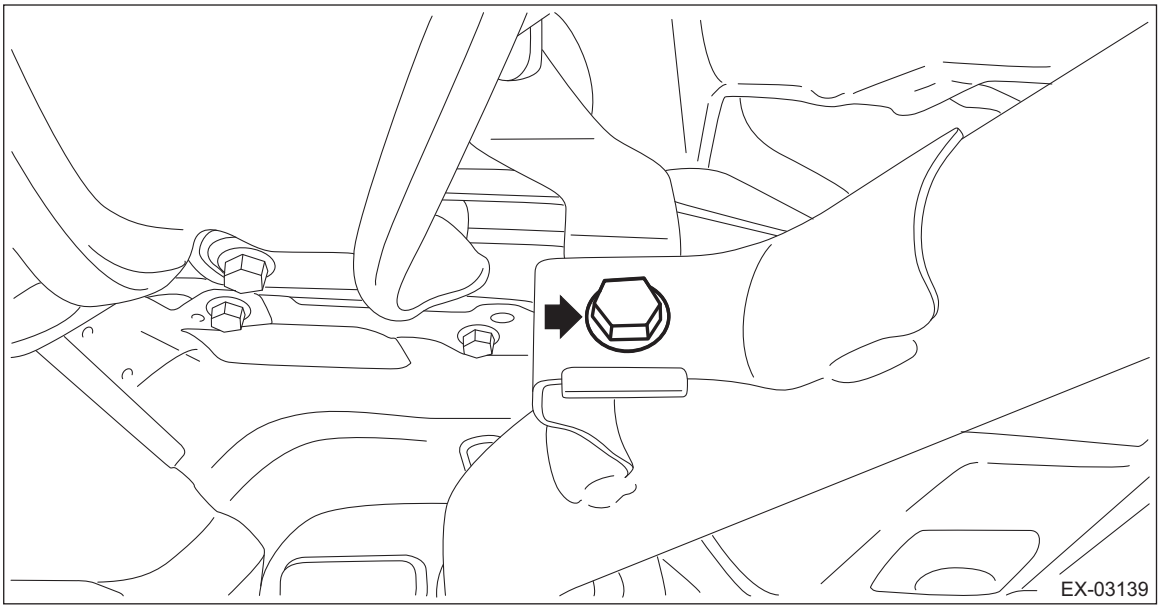
11) Tighten the bolts which hold center exhaust pipe (rear) to the hanger bracket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

- CVT model



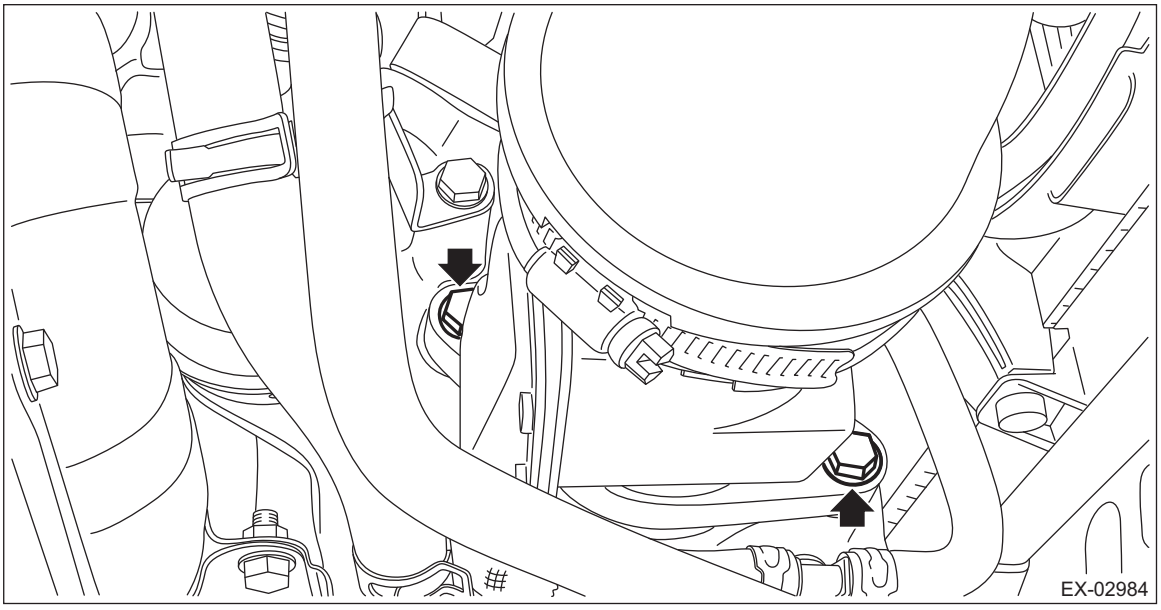
- MT model



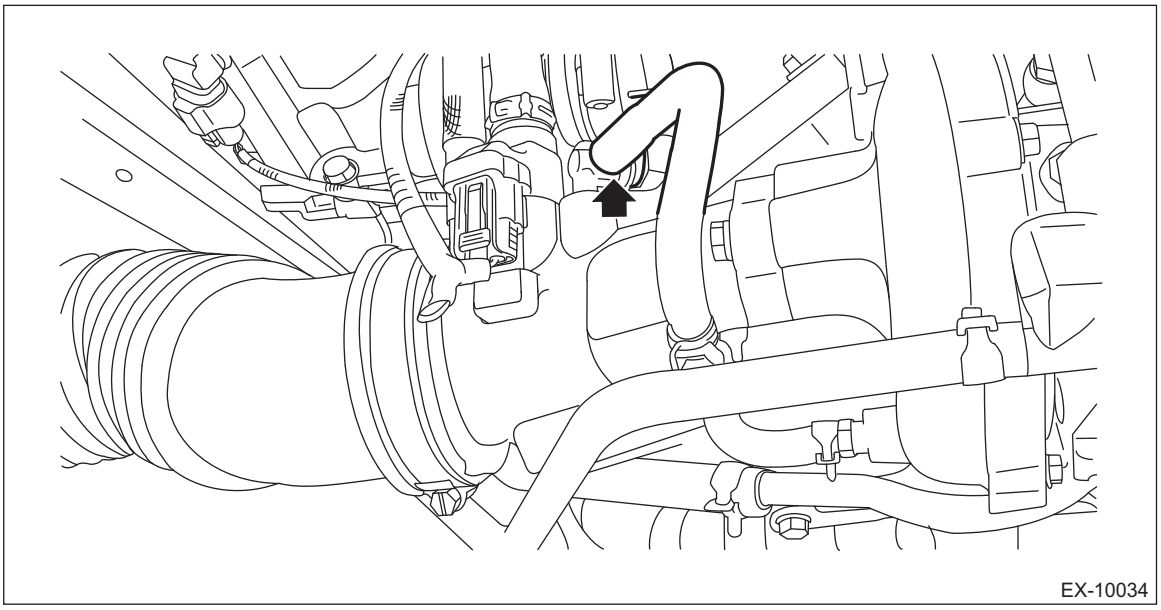
12) Install the bolt which secures the intake duct No. 1 to the turbocharger.

NOTE:
- Use new O-rings.
- Be careful not to pinch the O-ring.

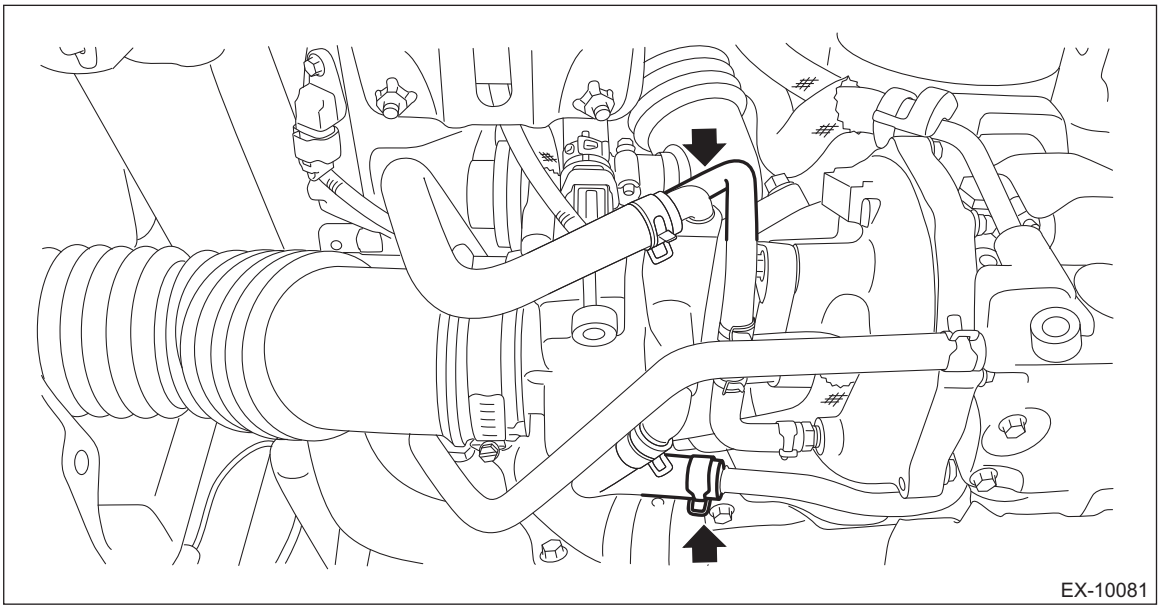
Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)



13) Connect the vacuum control hose to the wastegate control solenoid valve. (Except for Canada)



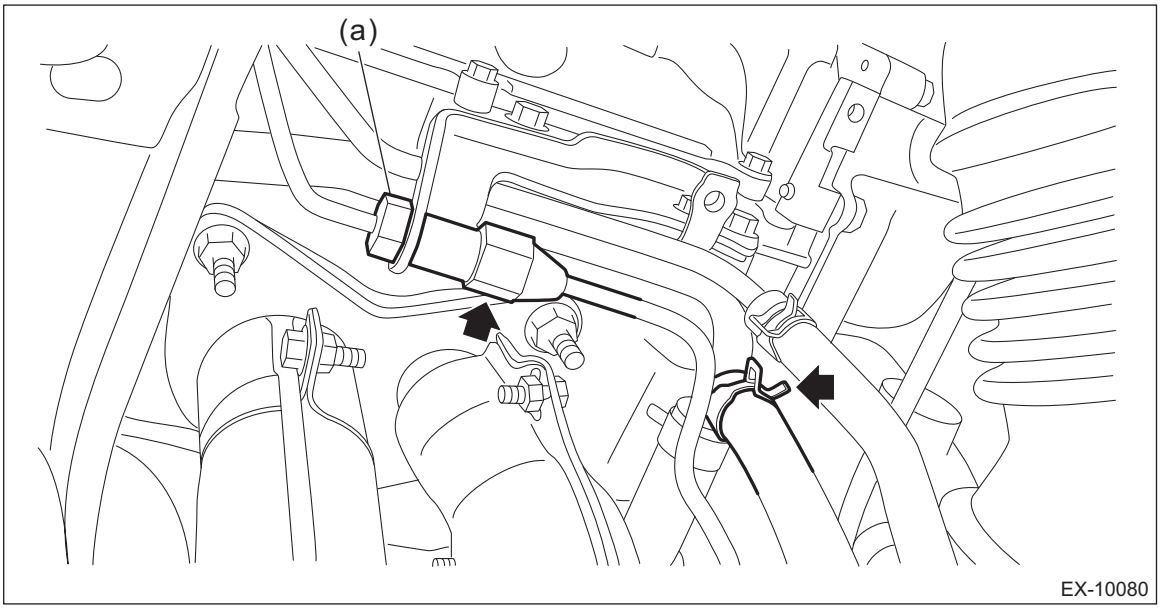
14) Connect the vacuum control hose to the wastegate control solenoid valve, and connect the engine coolant hose to the intake duct No. 1. (For Canada)



15) Connect the union screw pipe assembly to the oil pipe assembly, and connect the engine coolant hose to the water pipe RH.

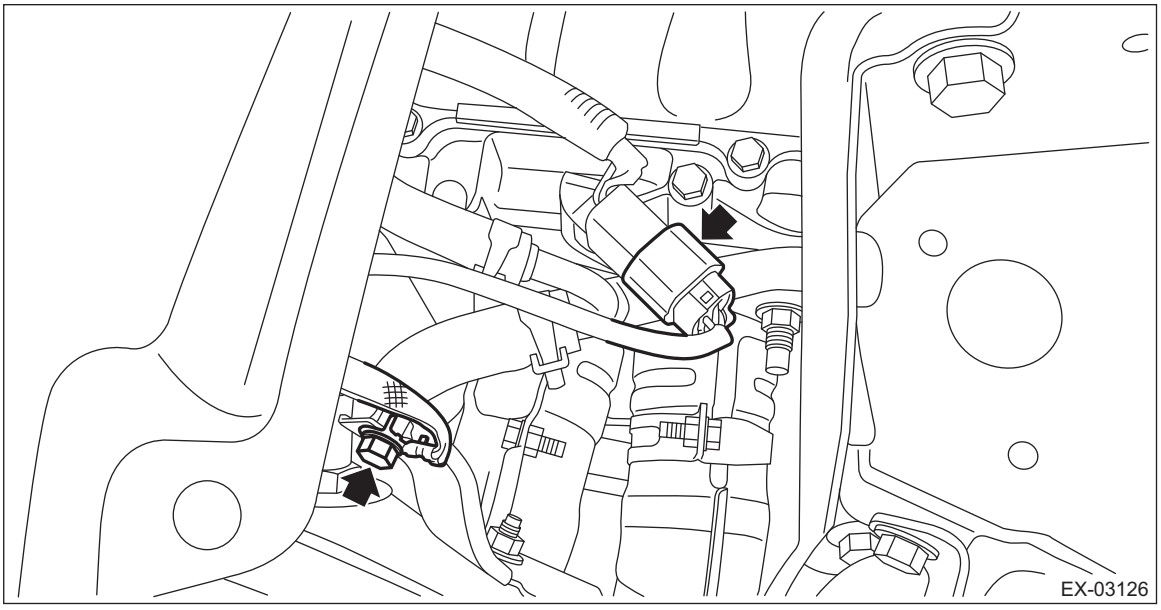
CAUTION:
In order to prevent damaging the oil pipe assembly, fix the section (a) shown in the figure when tightening the flare nut on the union screw pipe assembly, and avoid the part from rotating together while tightening the nut.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

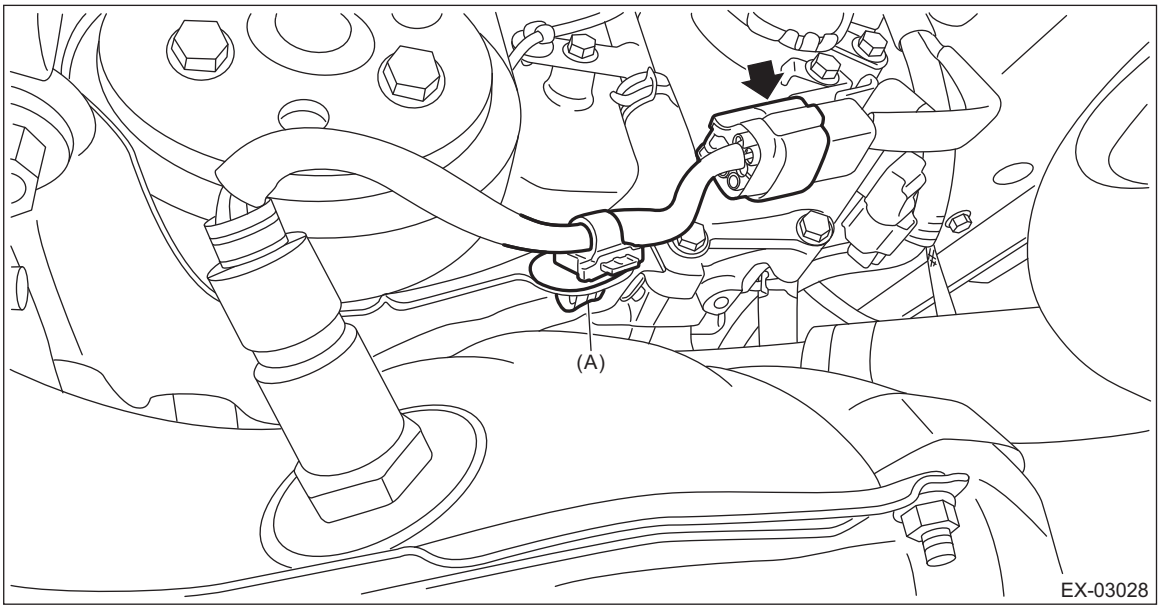


16) Connect the connector on the rear oxygen sensor to the engine wiring harness, and connect the ground cable to the exhaust pipe cover.

Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)

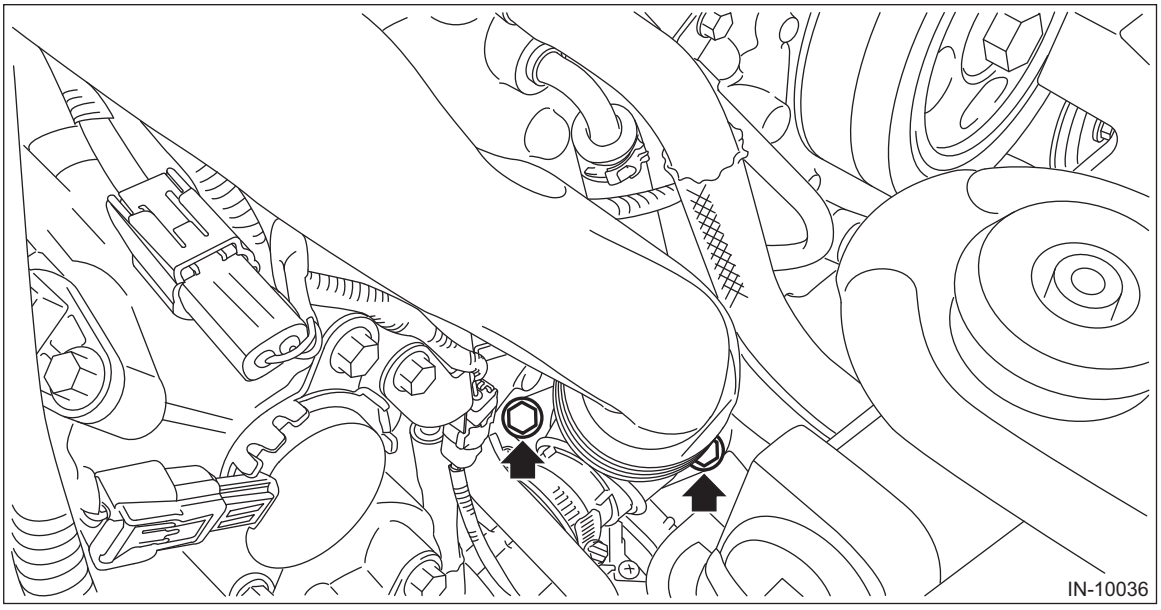


17) Secure the front oxygen (A/F) sensor harness to the water pump pulley cover with the clip (A), and connect the front oxygen (A/F) sensor connector to the engine wiring harness.

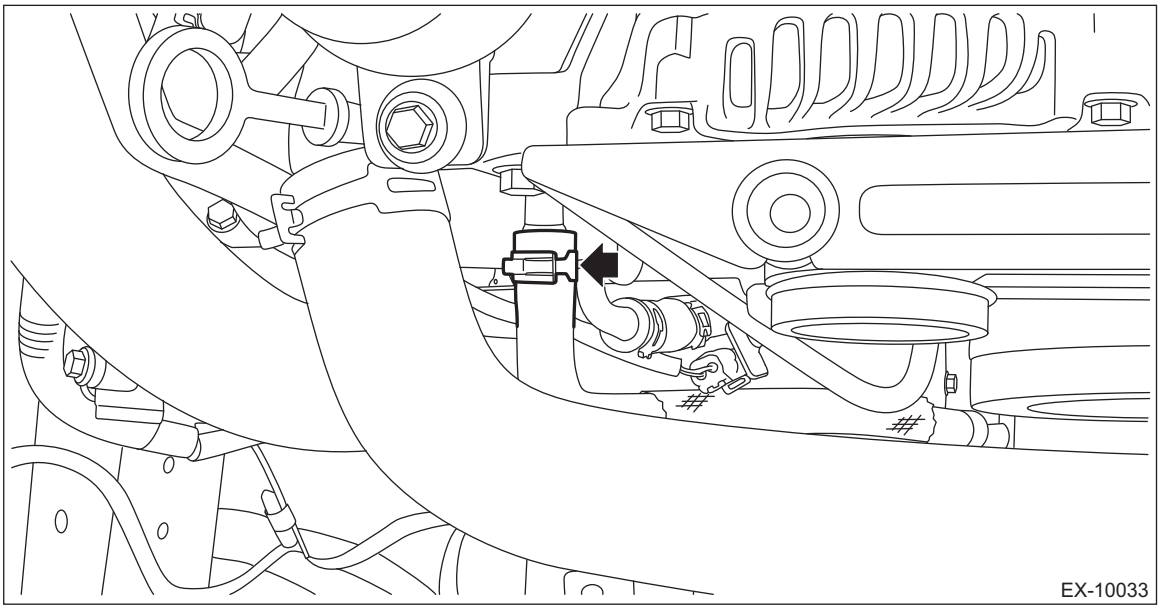


18) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
19) Lower the vehicle.
20) Install the bolt which secures the intake duct No. 2 to the turbocharger.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

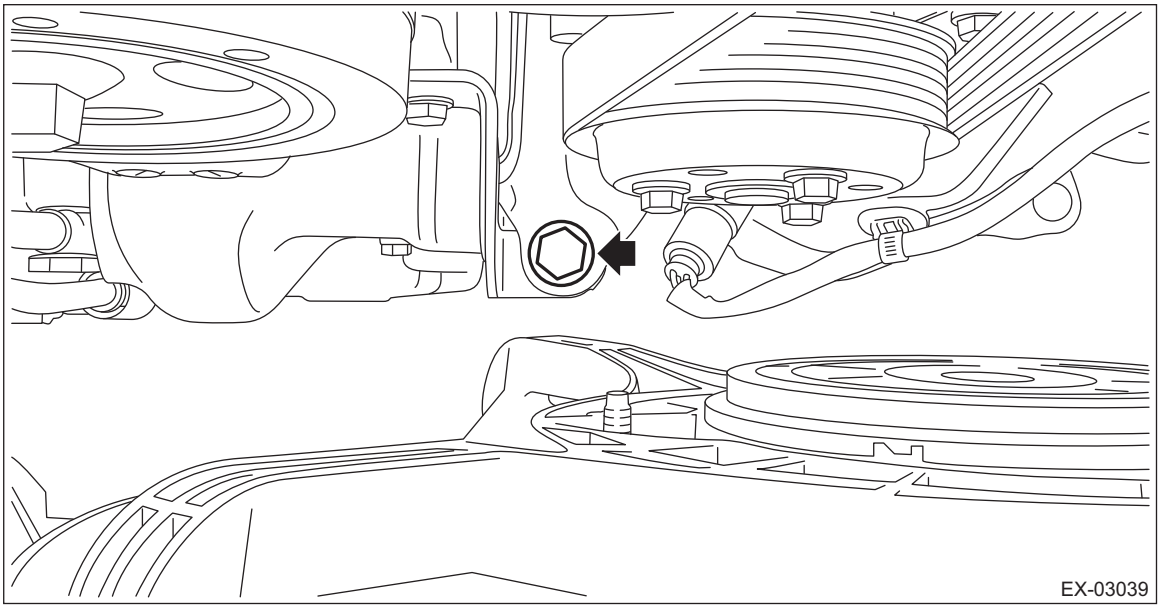


21) Connect the engine coolant hoses to the water pipe assembly.



22) Attach the bolt which secures the water pump pulley cover to the turbocharger stay.

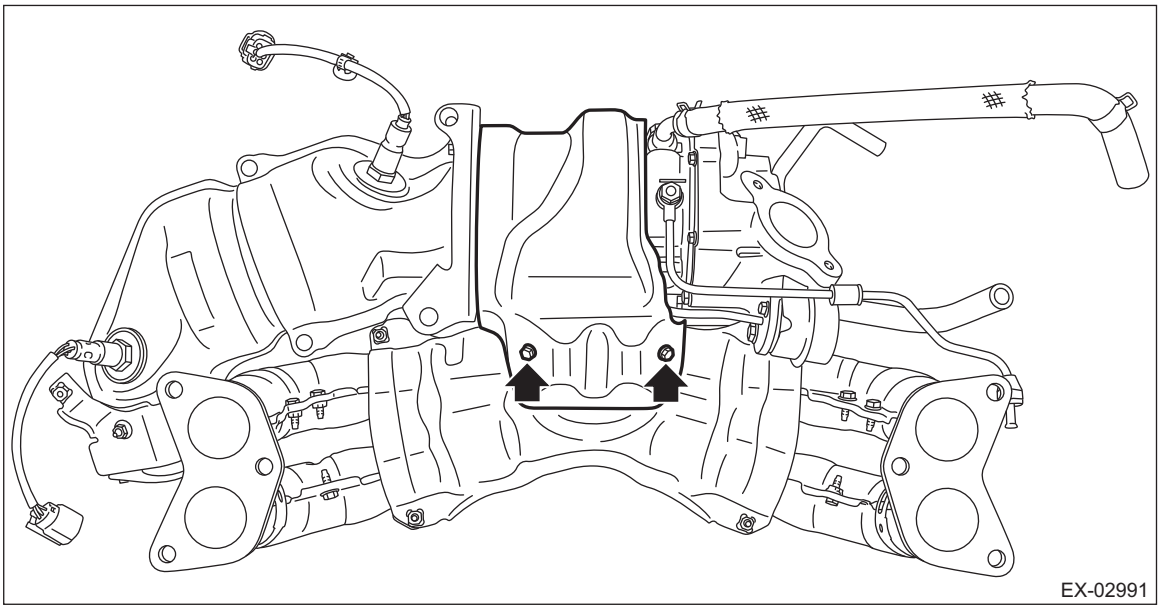
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



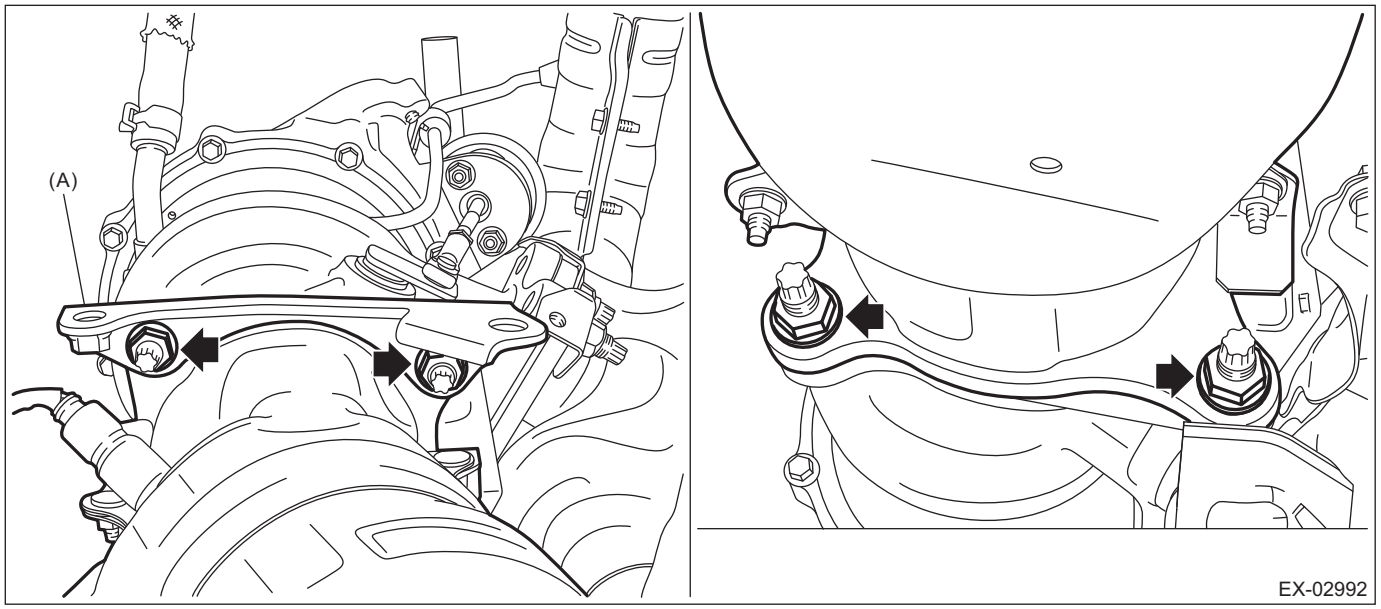
23) Install the radiator sub fan and fan motor. <Ref. to CO(w/o STI)-50, INSTALLATION, Radiator Sub Fan and Fan Motor.>
24) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
25) Check the engine oil level and replenish the engine oil if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
26) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
27) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
28) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

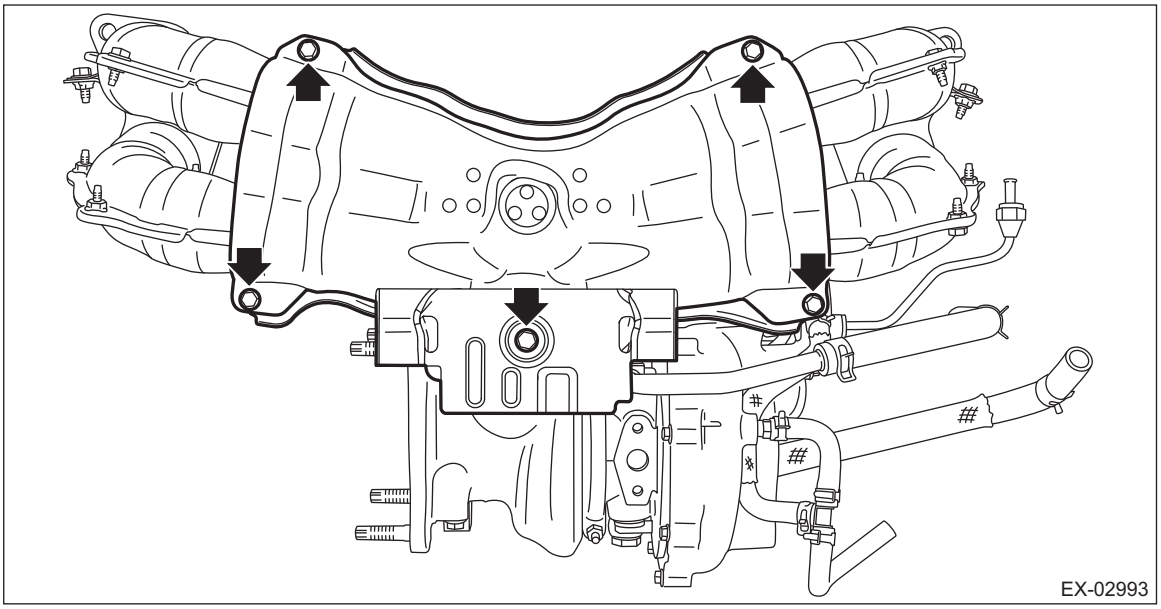
1) Remove the exhaust pipe cover from the turbocharger stay.



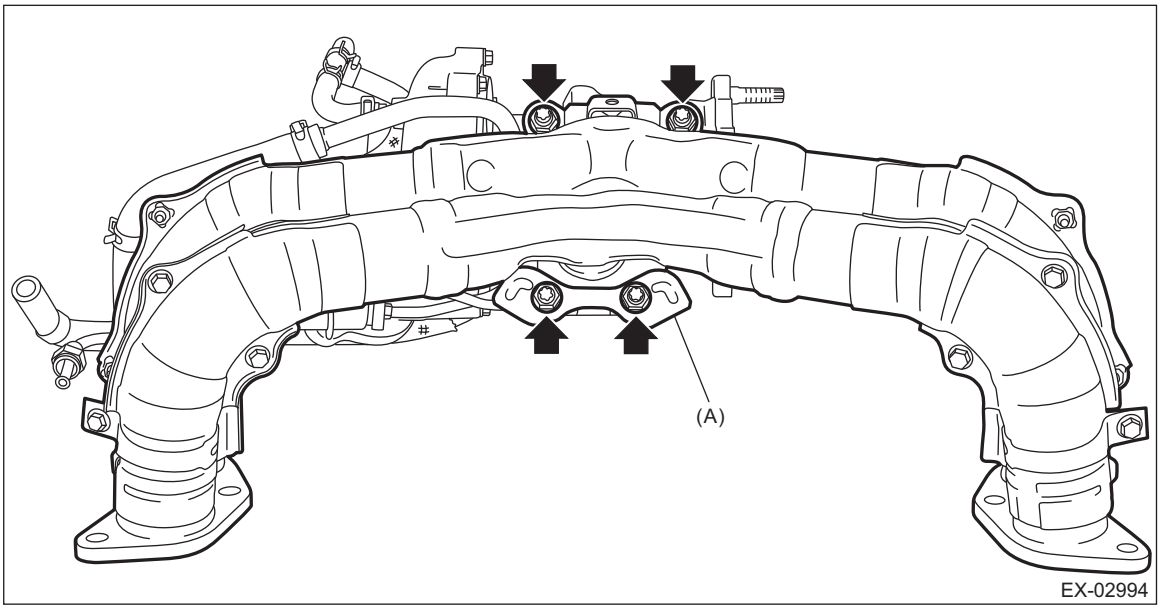
2) Remove nuts which hold the center exhaust pipe (front) to the turbocharger, and remove the center exhaust pipe (front) together with the turbocharger stay (A).



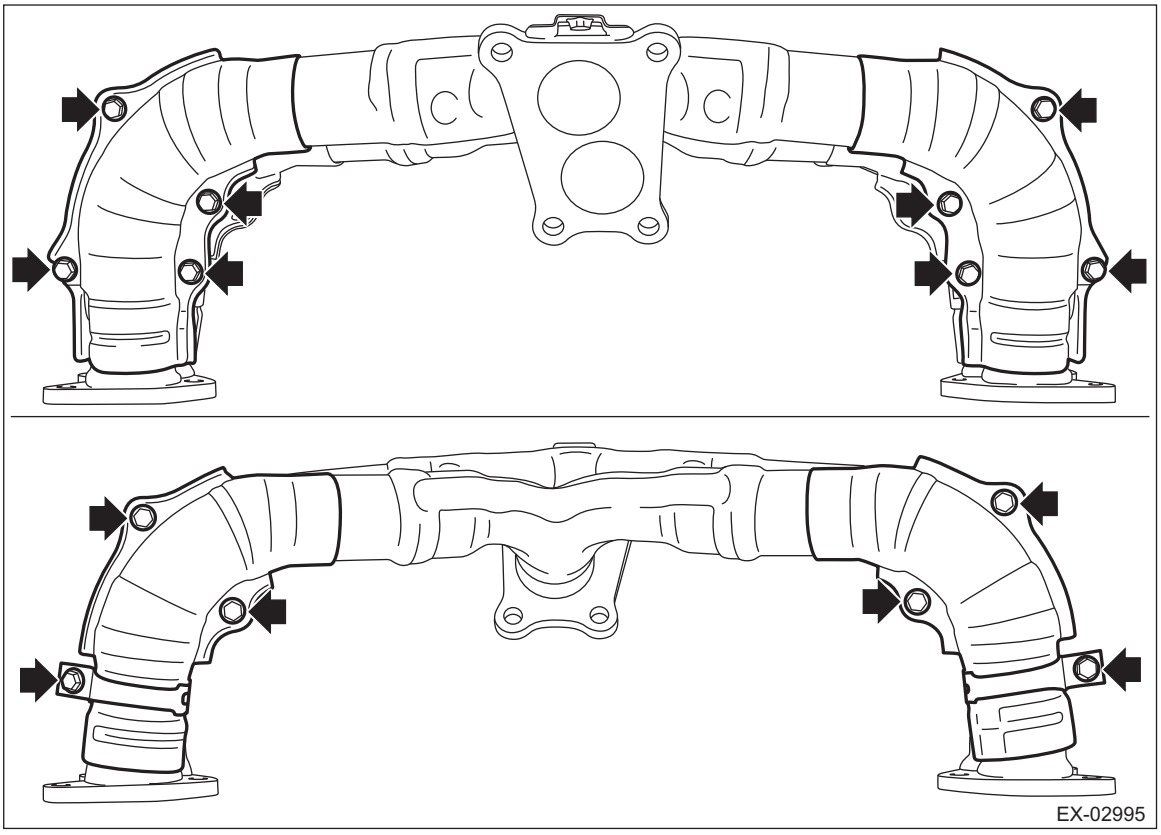
3) Remove the exhaust pipe cover from the front exhaust pipe.



4) Remove nuts which secure the front exhaust pipe to the turbocharger, and remove the front exhaust pipe together with the turbocharger stay (A).



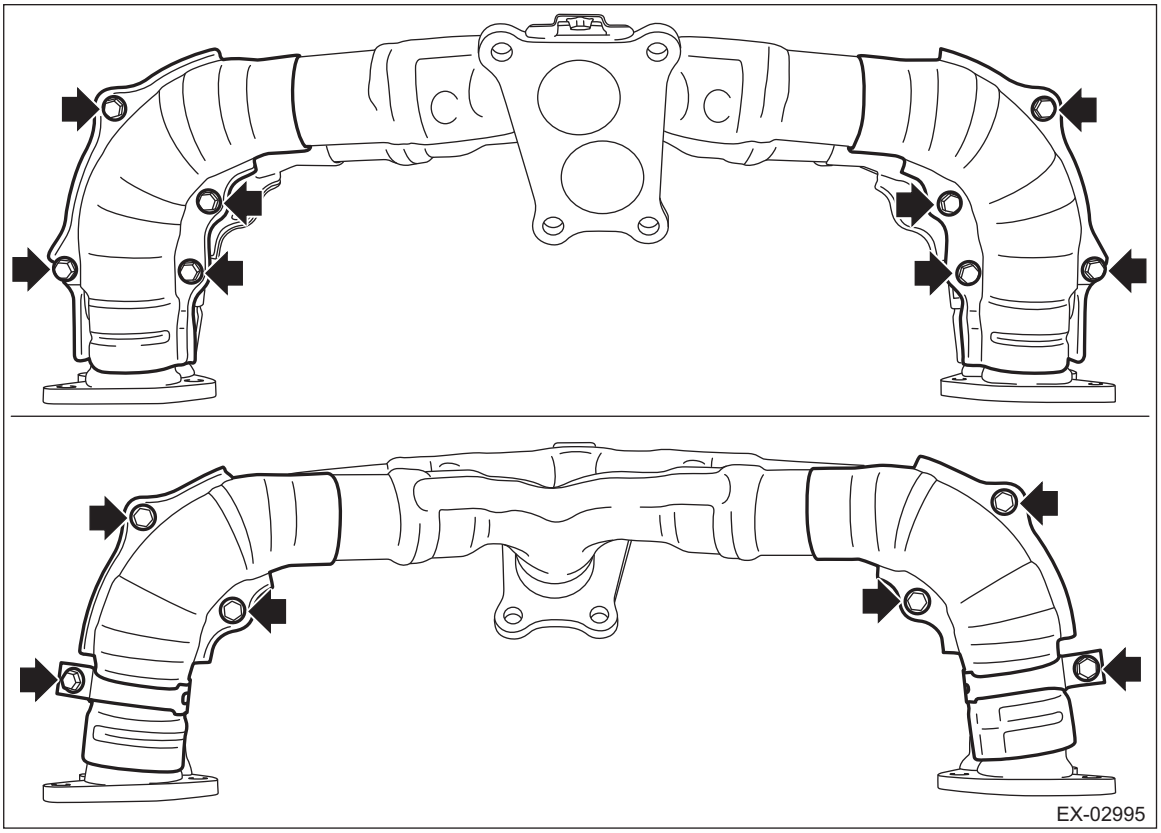
5) Remove the exhaust pipe cover from the front exhaust pipe.



D: ASSEMBLY

1) Install the exhaust pipe cover to the front exhaust pipe.

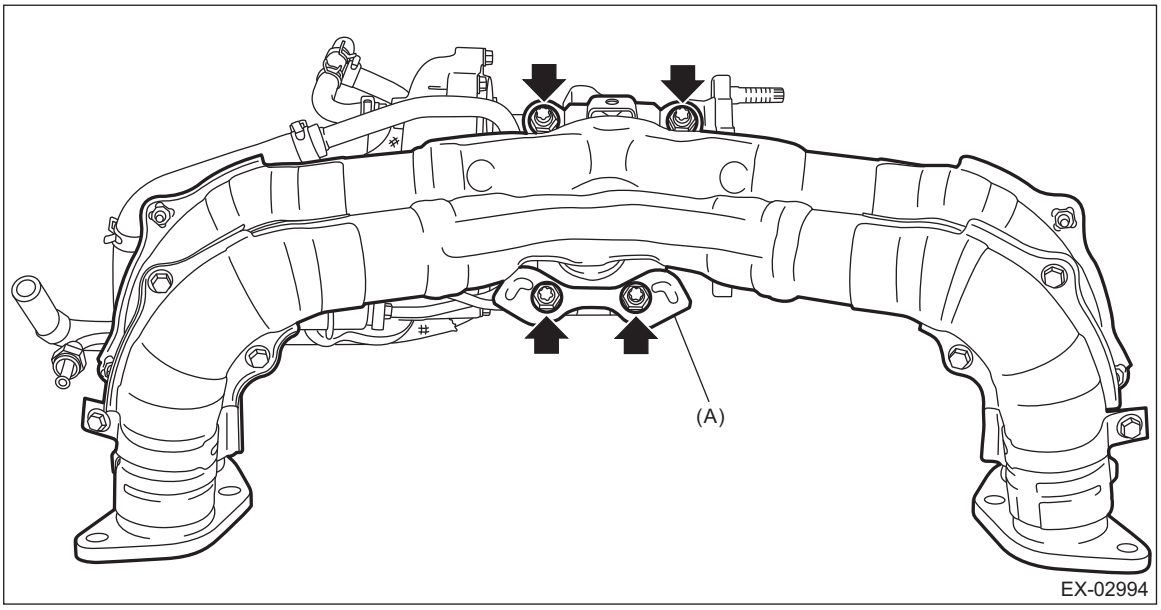
Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)



2) Install the front exhaust pipe together with the turbocharger stay (A) to the turbocharger.

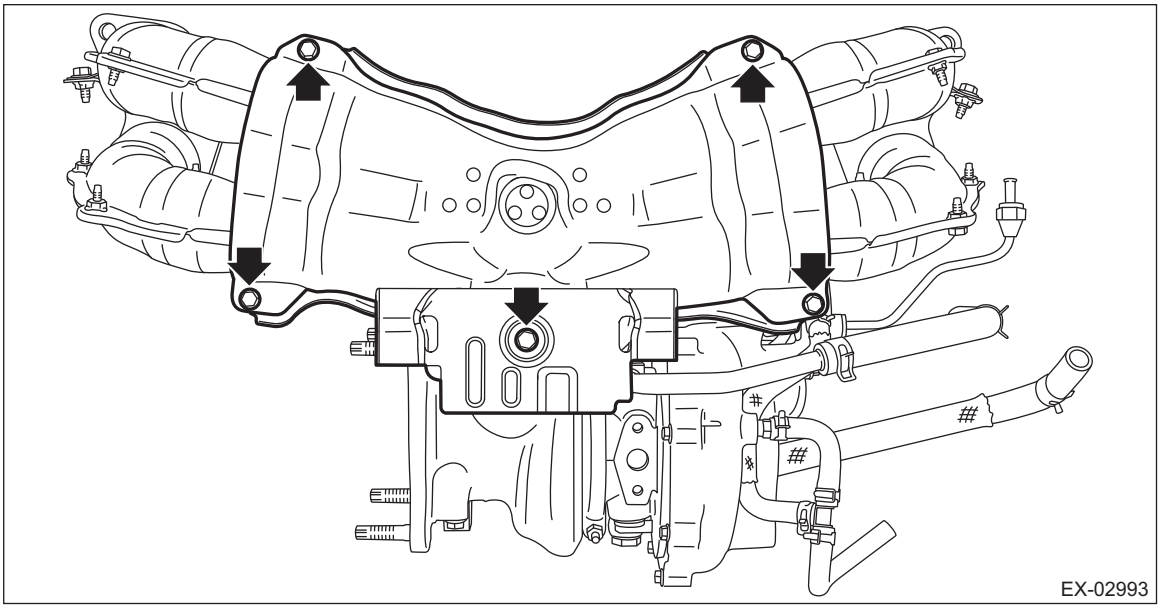
NOTE:
Use a new gasket and self-locking nut.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



3) Install the exhaust pipe cover to the front exhaust pipe.

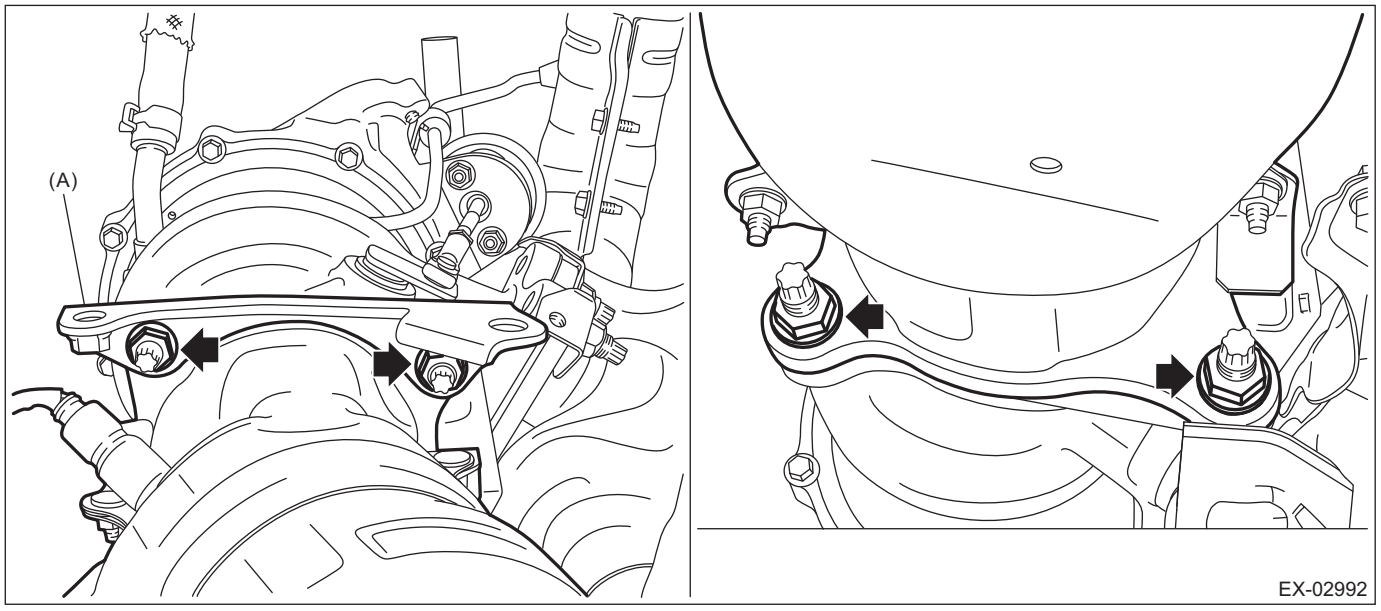
Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)



4) Install the center exhaust pipe (front) together with the turbocharger stay (A) to the turbocharger.

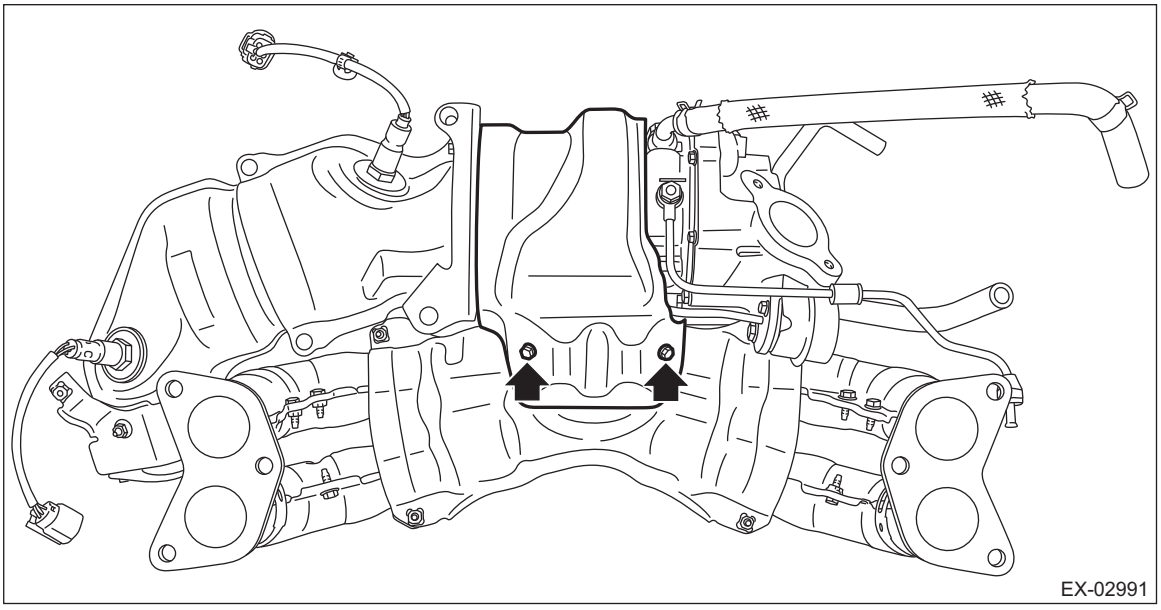
NOTE:
Use a new gasket and self-locking nut.

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



5) Install the exhaust pipe cover to the turbocharger stay.

Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)



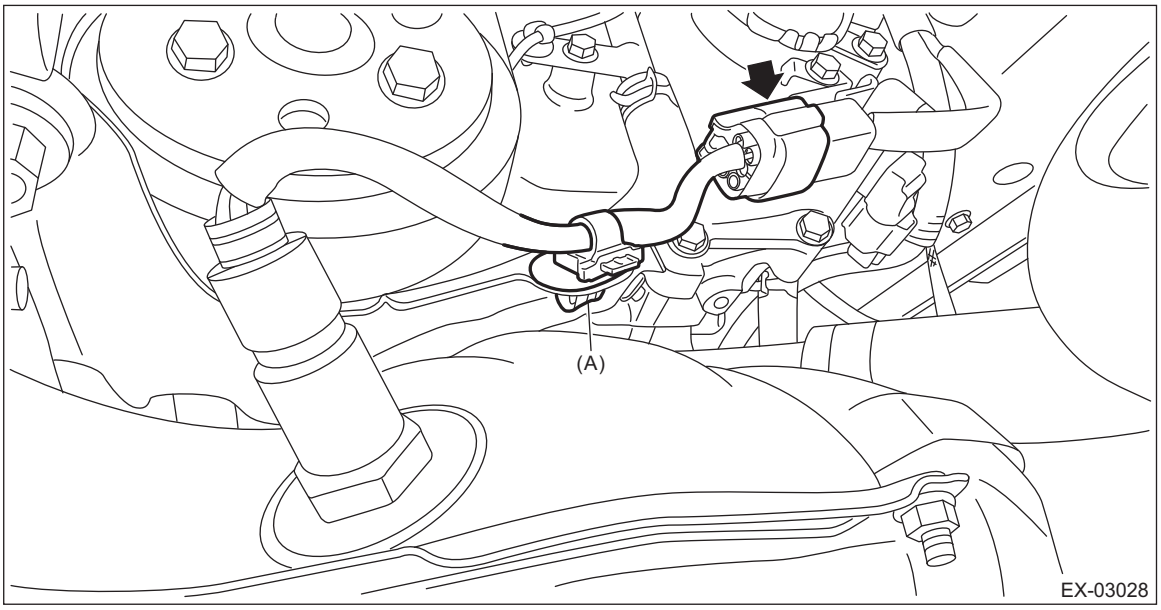
E: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

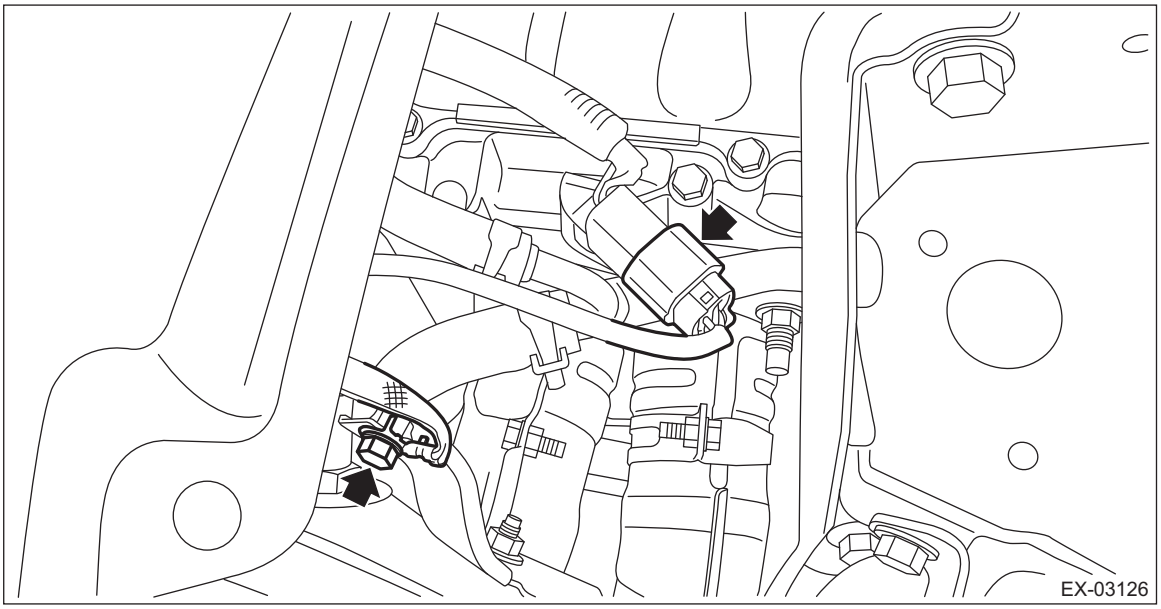
3. Center Exhaust Pipe

A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Lift up the vehicle.
4) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Disconnect the connector on the front oxygen (A/F) sensor from the engine wiring harness, and remove the clip (A) which secures the front oxygen (A/F) sensor harness to the water pump pulley cover.

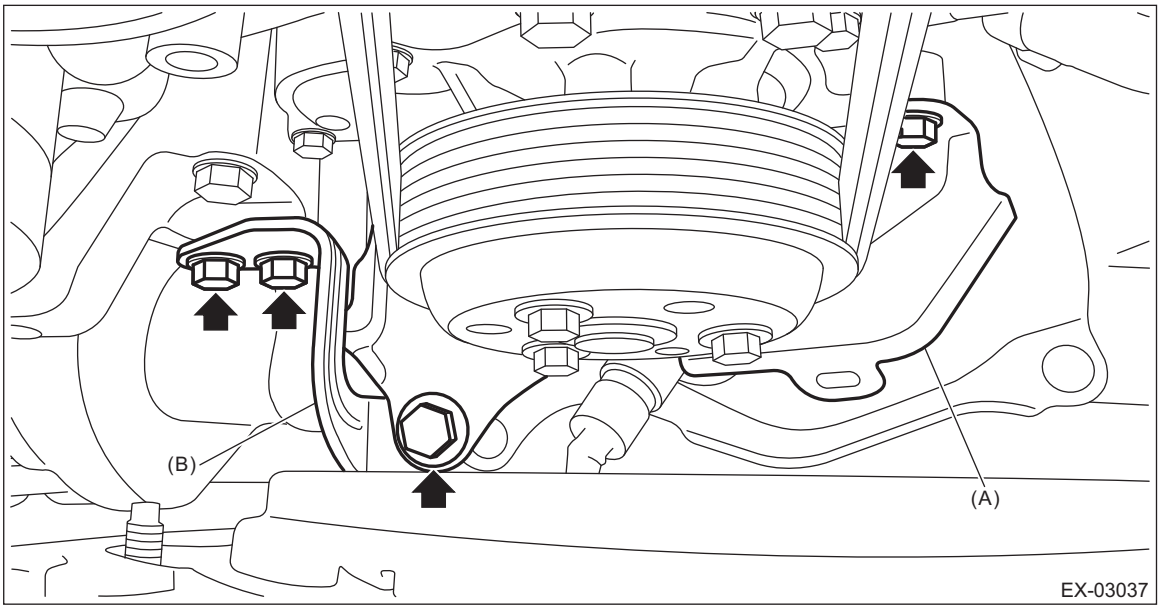


6) Disconnect the connector on the rear oxygen sensor from the engine wiring harness, and disconnect the ground cable from the exhaust pipe cover.

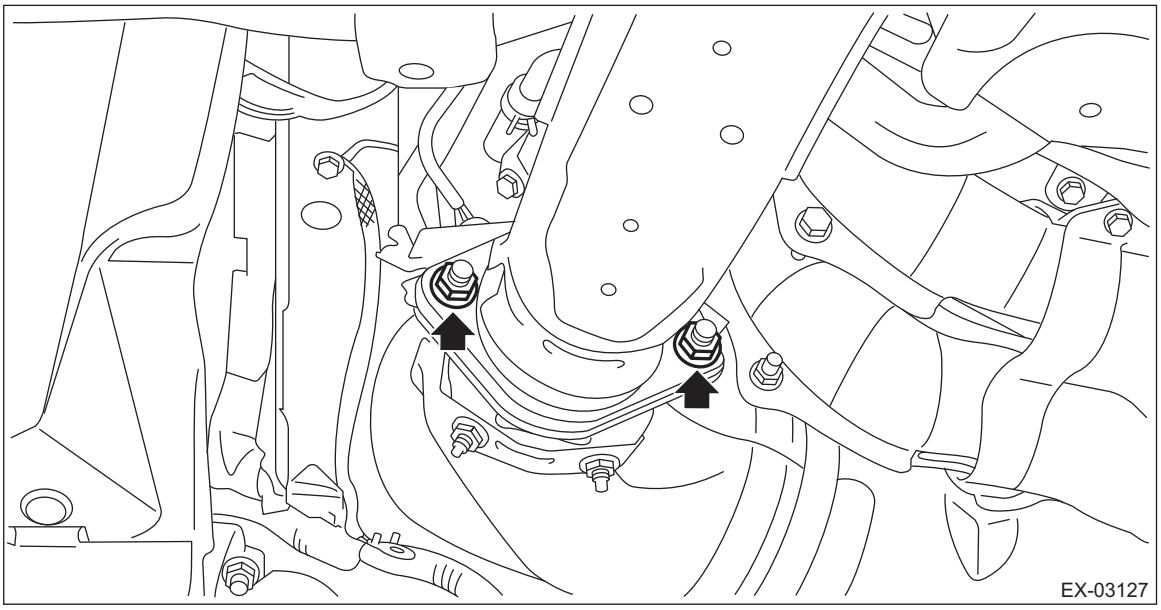


7) Lower the vehicle.

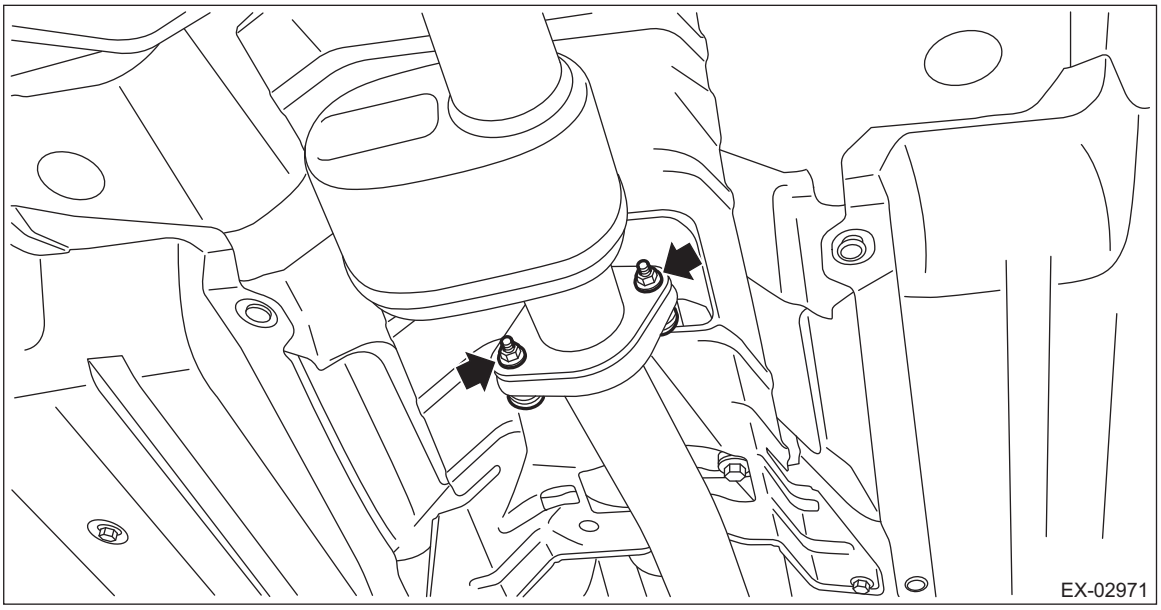
8) Remove the bolts which secure the water pump pulley cover (A) and exhaust pipe stay (B) to the turbocharger stay, and remove the water pump pulley cover (A) and exhaust pipe stay (B) from the water pump and turbocharger stay.



9) Lift up the vehicle.
10) Remove the nuts which secure the center exhaust pipe (rear) to the center exhaust pipe (front).



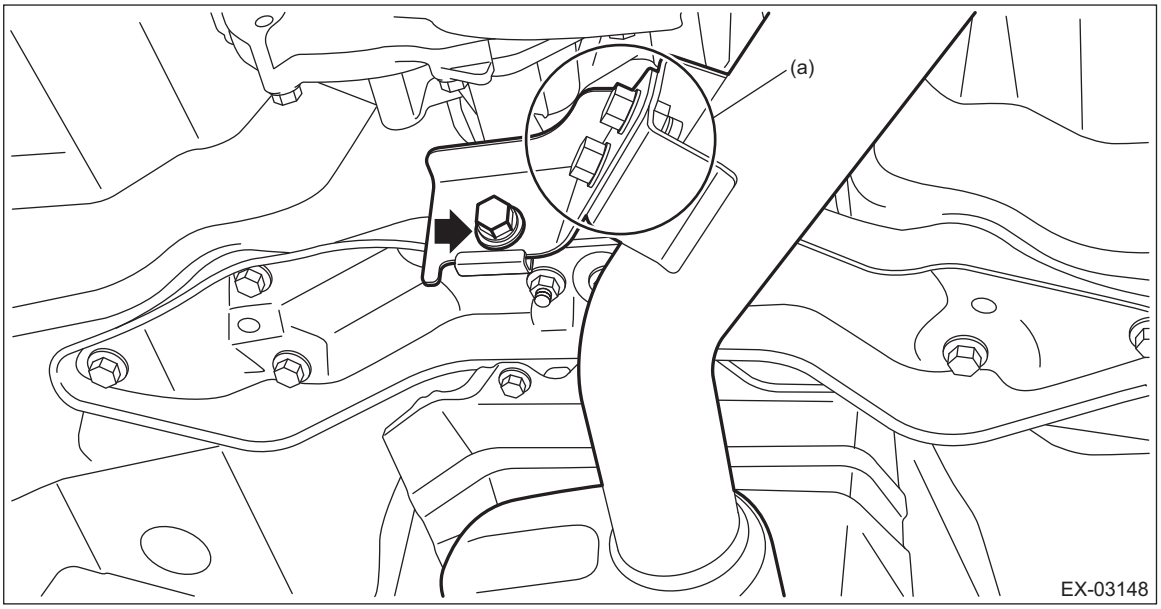
11) Remove the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe (rear).



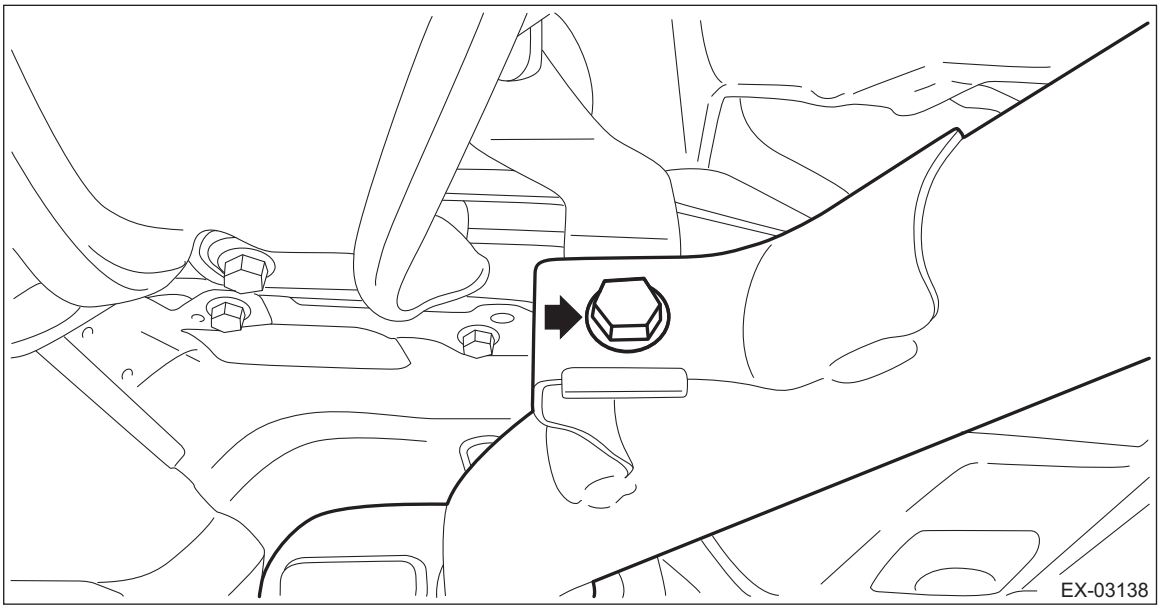
12) Remove the bolt which holds center exhaust pipe (rear) to the hanger bracket, and remove the center exhaust pipe (rear).

NOTE:
For CVT model, removing the exhaust pipe bracket from the center exhaust pipe (rear) will adversely affect the positioning accuracy. Therefore, do not remove the bolts in section (a) shown in the figure.

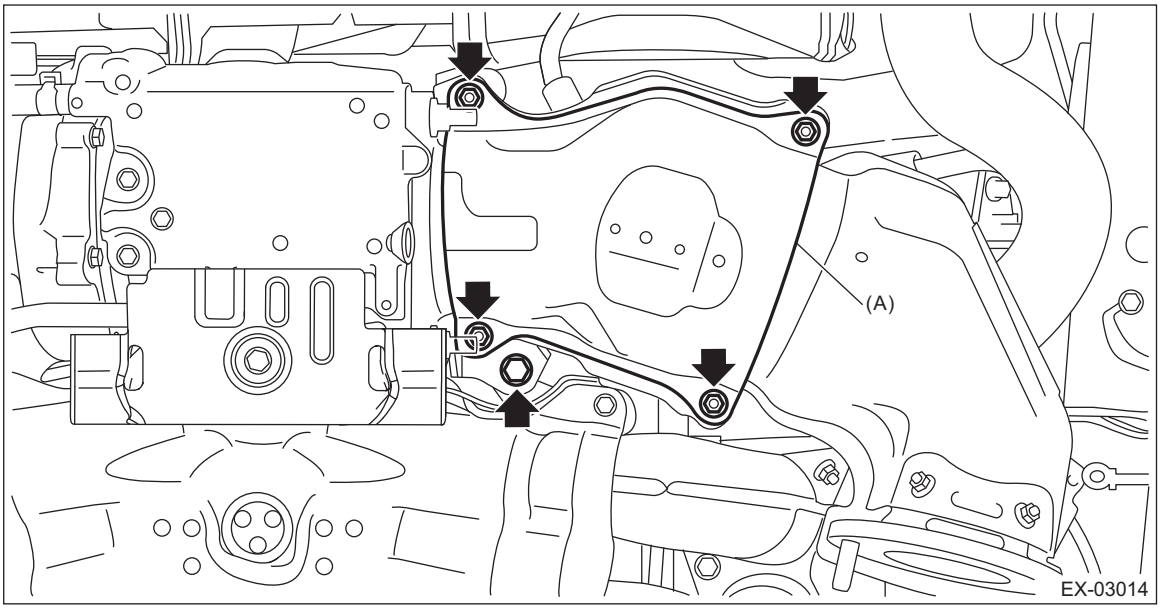
- CVT model



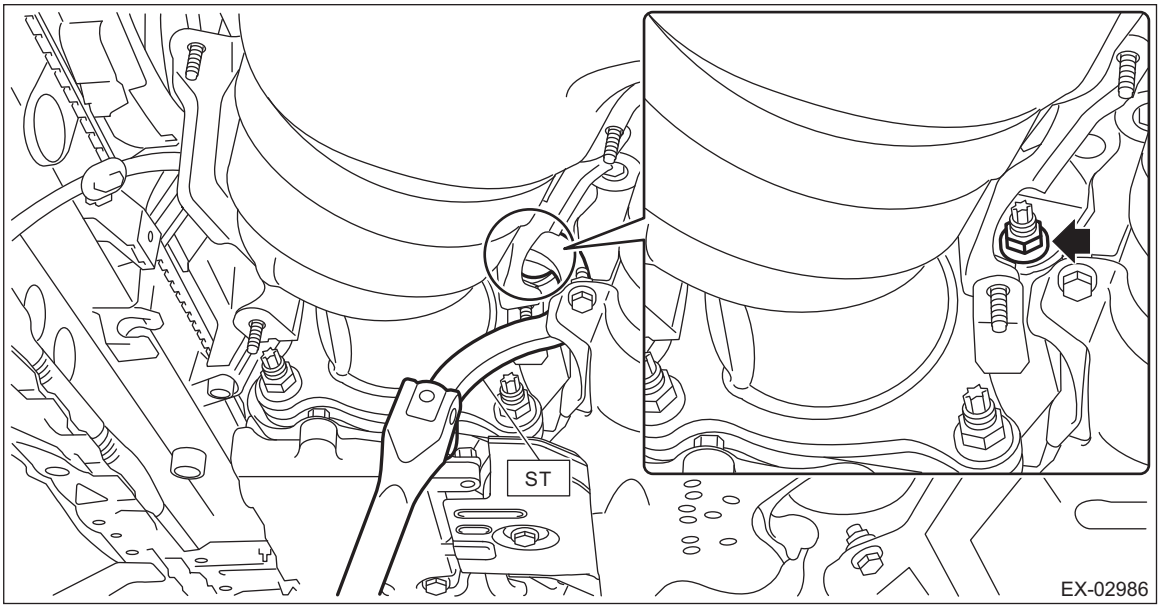
- MT model



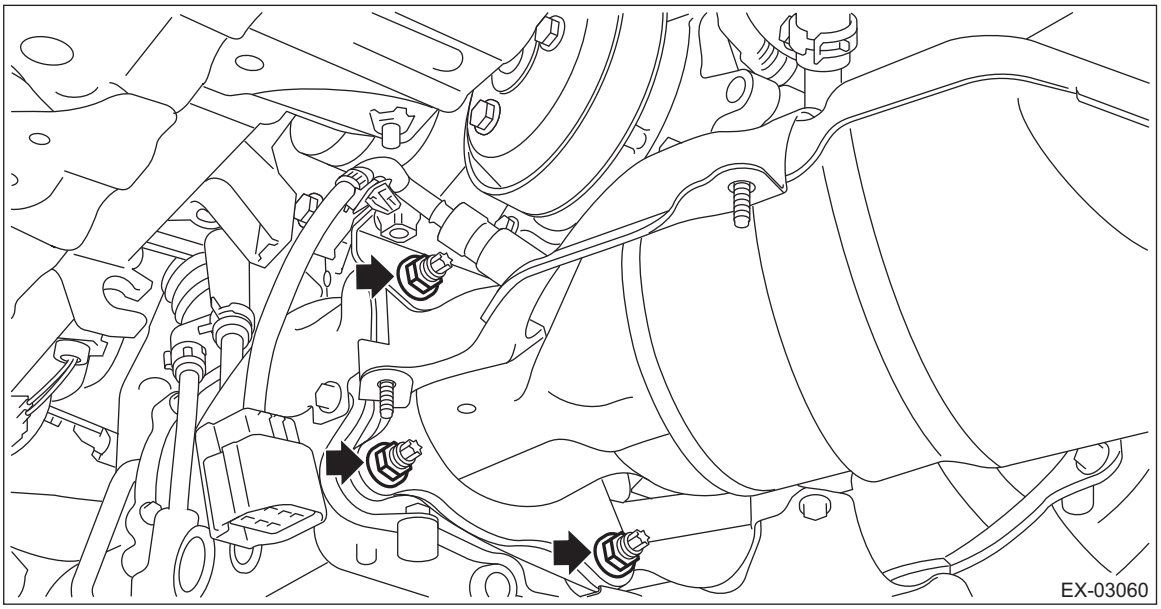
13) Remove the exhaust pipe cover (A) from the center exhaust pipe (front), and remove the bolts which secure the turbocharger stay.



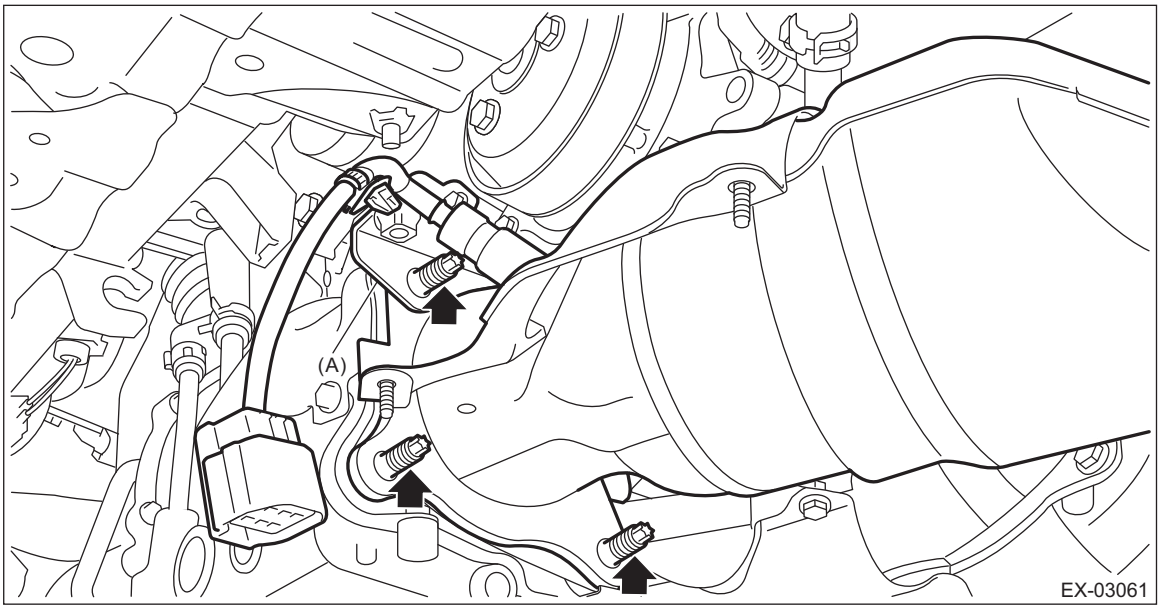
14) Using ST, remove the nut (1 place) which secures the center exhaust pipe (front) to the turbocharger.
ST 18283AA010 WRENCH ADAPTER



15) Remove the nuts (3 places) which secure the center exhaust pipe (front) to the turbocharger.



16) Using the TORX® socket E10, remove stud bolts (3 places) from the turbocharger, and remove the center exhaust pipe (front) together with turbocharger stay (A).

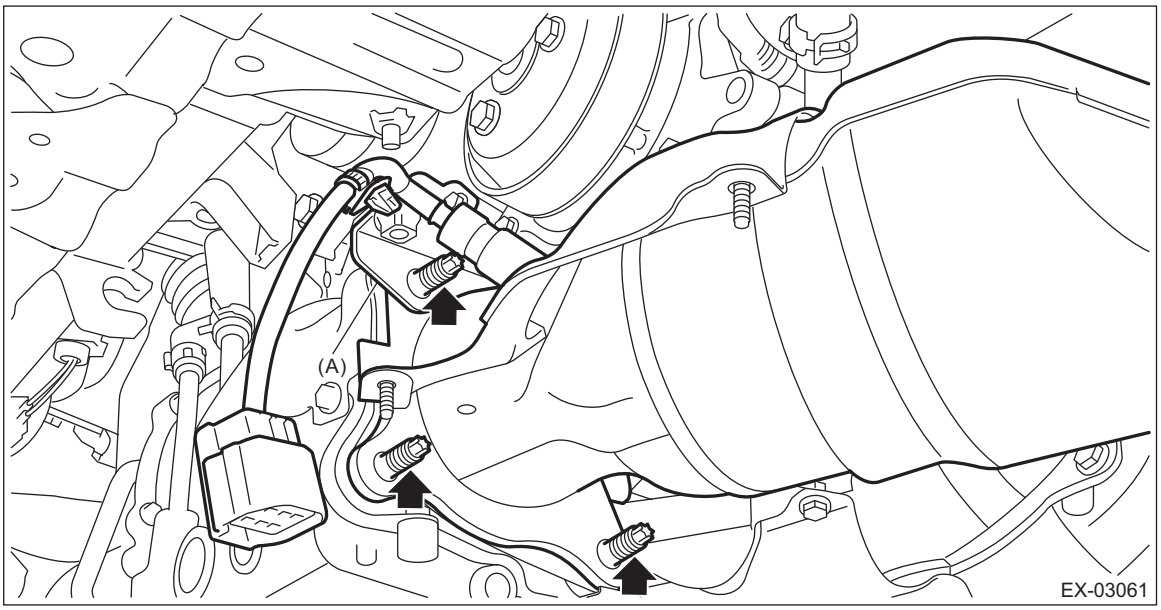


B: INSTALLATION

1) Set the center exhaust pipe (front) together with turbocharger upper stay (A), and install stud bolts (3 places) to the turbocharger by using the TORX® socket E10.

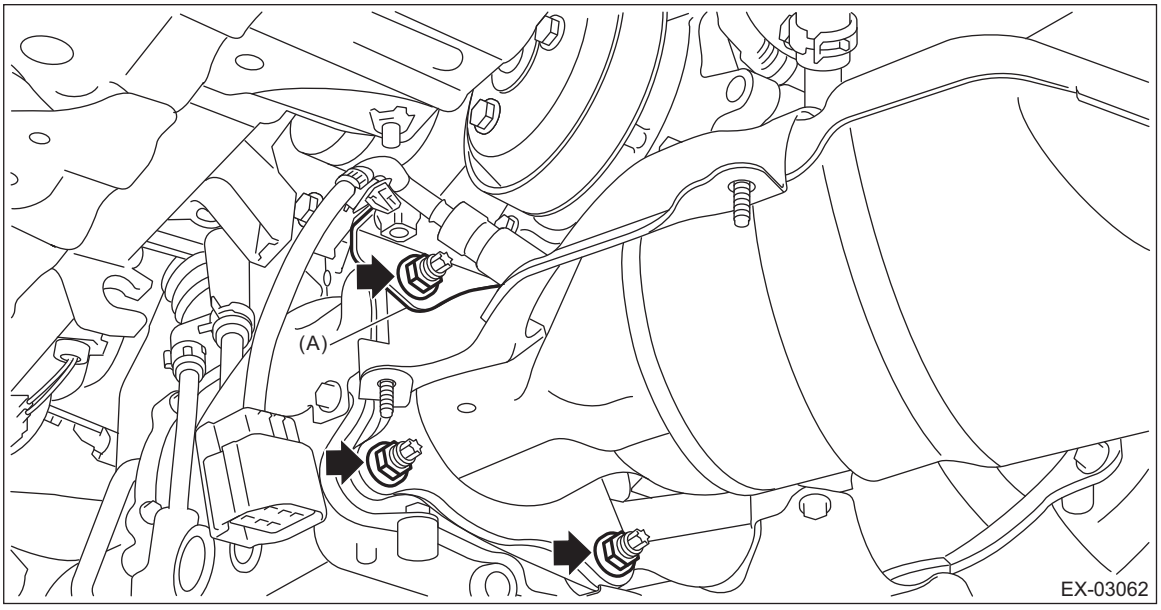
NOTE:
Use a new gasket.

Tightening torque:
14.7 N·m (1.5 kgf-m, 10.8 ft-lb)



2) Temporarily tighten the nuts (3 places) which secure the center exhaust pipe (front) to the turbocharger together with the turbocharger upper stay (A).

NOTE:
Use a new self-locking nut.



3) Using ST, install the nut (1 place) which secures the center exhaust pipe (front) to the turbocharger.

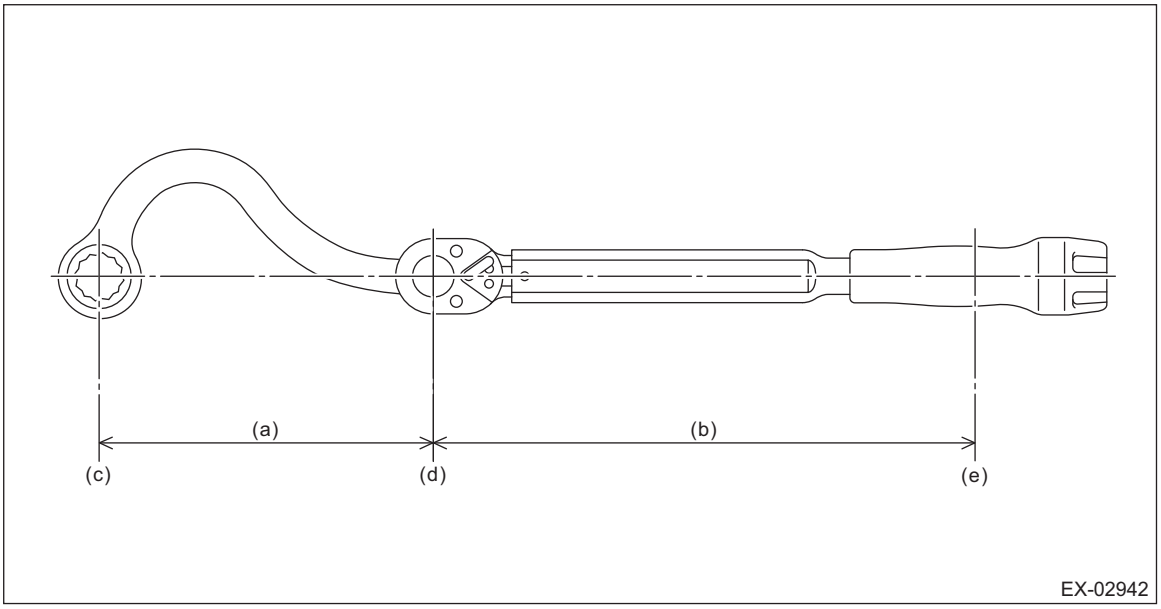
NOTE:
Use a new self-locking nut.
ST 18283AA010 WRENCH ADAPTER

Tightening torque:

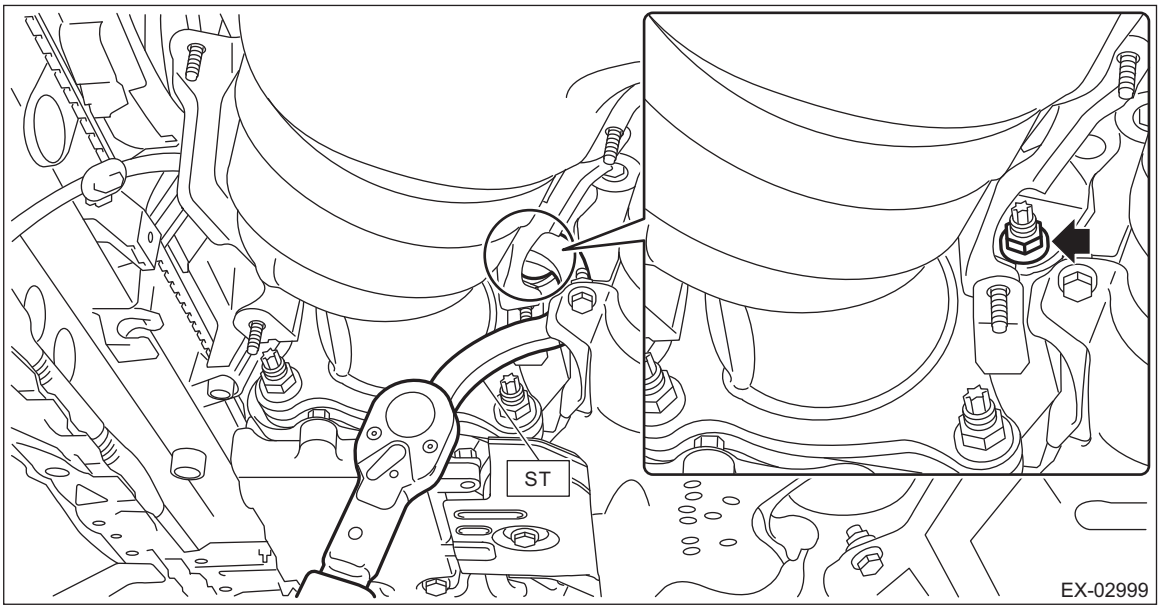
Calculation formula
T = L/(120 mm (4.72 in) + L) × 42.5 N·m (4.3 kgf-m, 31.3 ft-lb)

T: Tightening torque
L: Effective length of torque wrench

NOTE:
If the effective length of the torque wrench used is unknown, consult the manufacturer of the torque wrench.

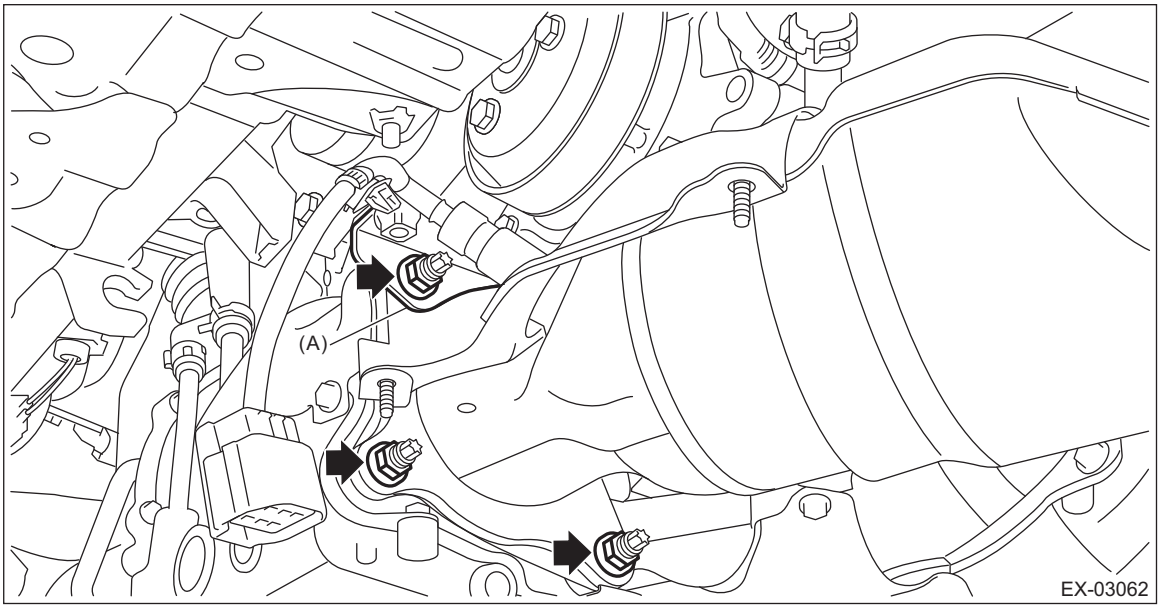


(a) Effective length of the ST
(b) Effective length of the torque wrench
(c) Center of drive angle of the ST
(d) Center of drive angle of the torque wrench
(e) Center of the position where a force is applied by hand



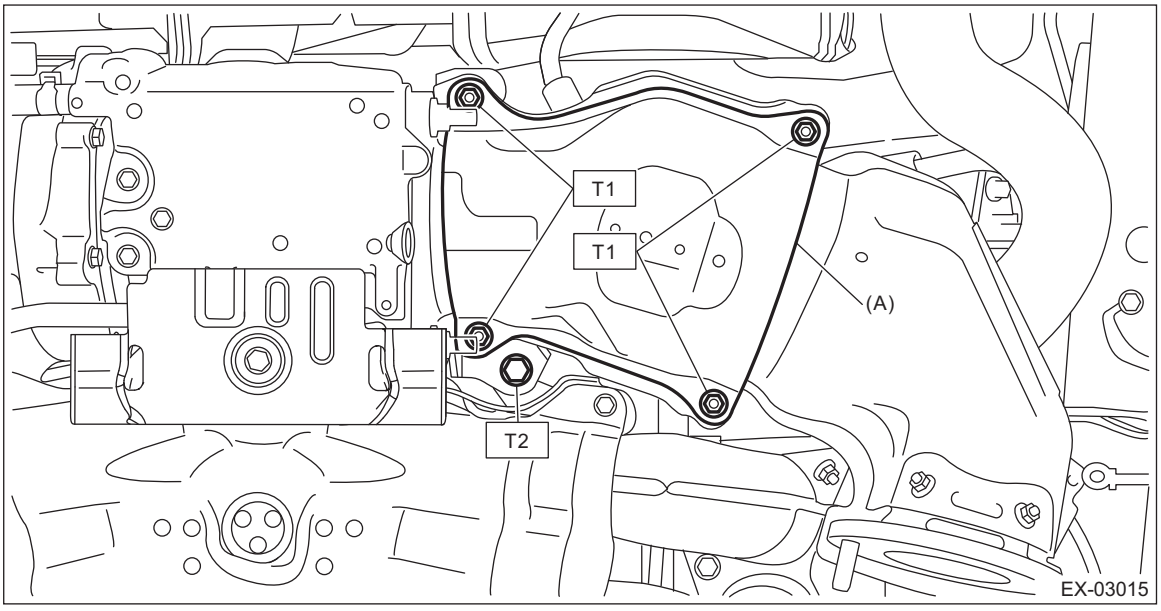
4) Temporarily tighten the nuts (3 places) which secure the center exhaust pipe (front) to the turbocharger together with the turbocharger stay (A).

Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



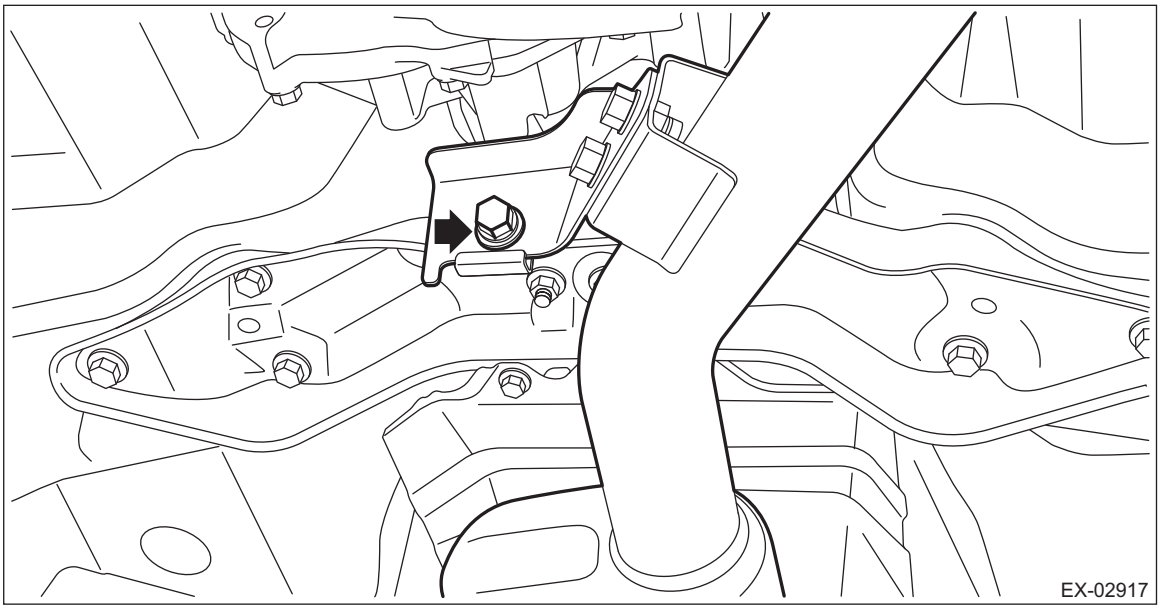
5) Install the bolt which secures the turbocharger stay, and install the exhaust pipe cover (A) to the center exhaust pipe (front).

Tightening torque:
T1: 7.4 N·m (0.8 kgf-m, 5.4 ft-lb)
T2: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

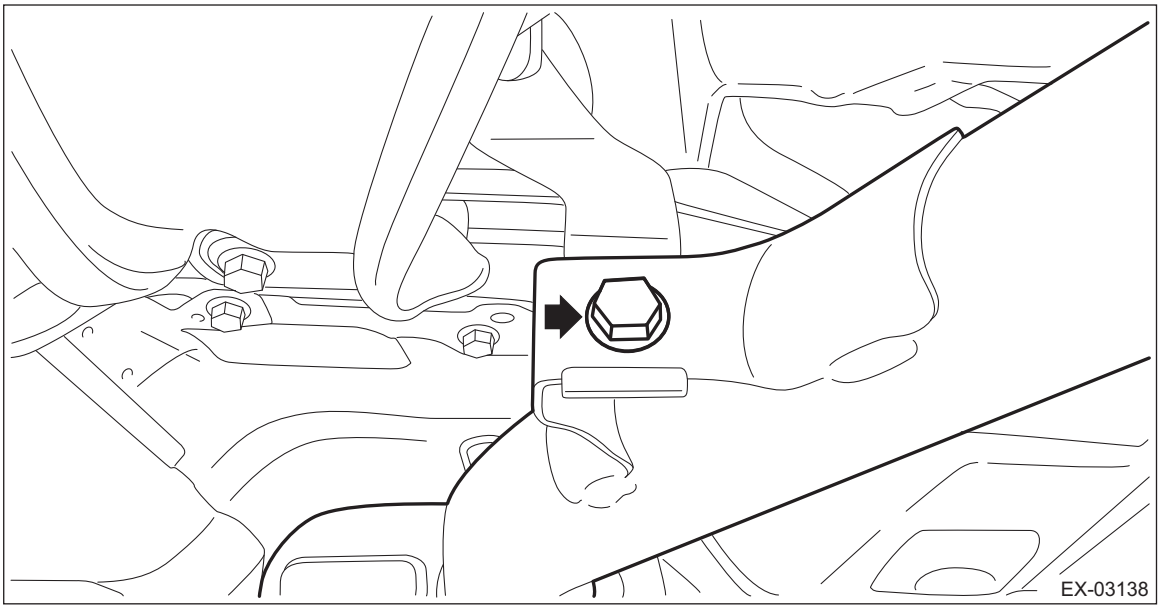


6) Install the center exhaust pipe (rear) and temporarily tighten the bolt which holds center exhaust pipe (rear) to the hanger bracket.

- CVT model



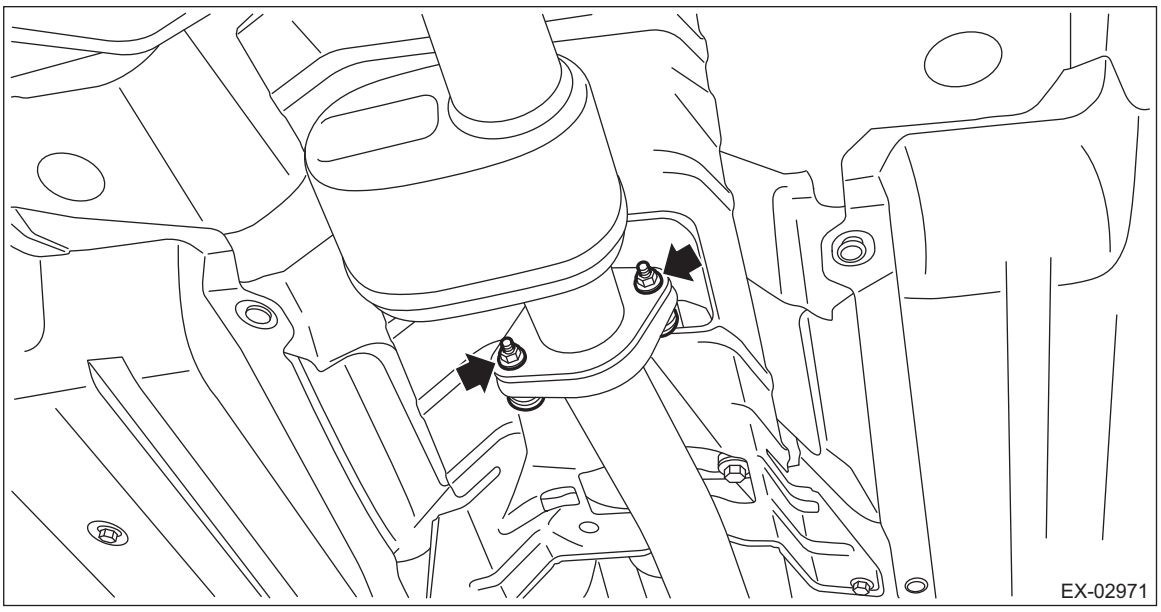
- MT model



7) Install the bolts, springs, and nuts which secure the rear exhaust pipe to the center exhaust pipe (rear).

NOTE:
Use a new gasket.

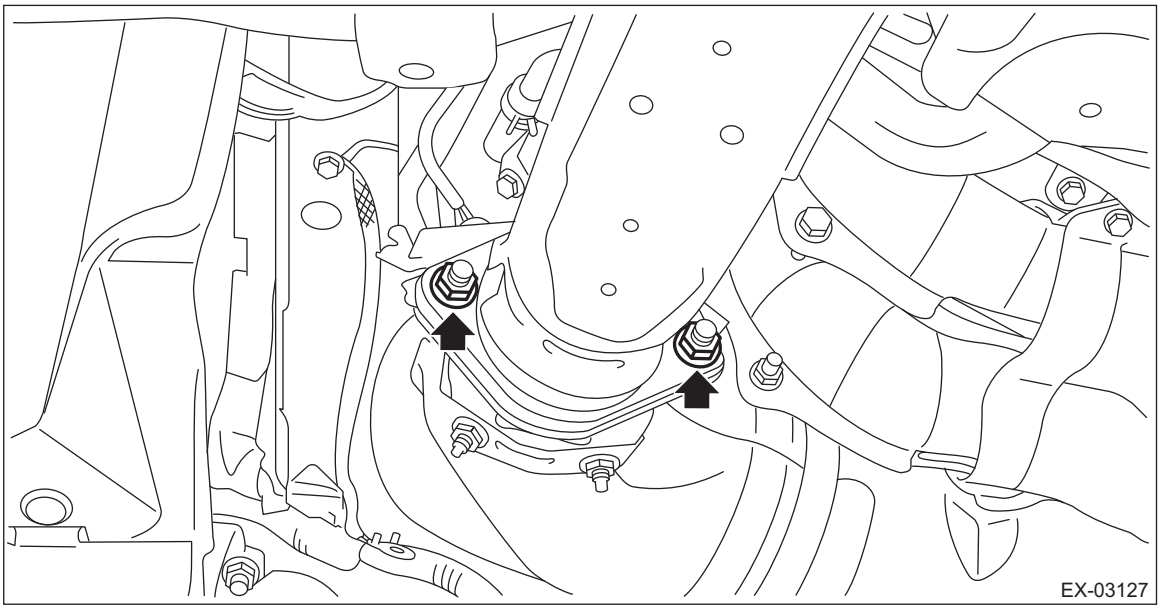
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



8) Install the nuts which secure the center exhaust pipe (front) to the center exhaust pipe (rear).

NOTE:
Use a new gasket.

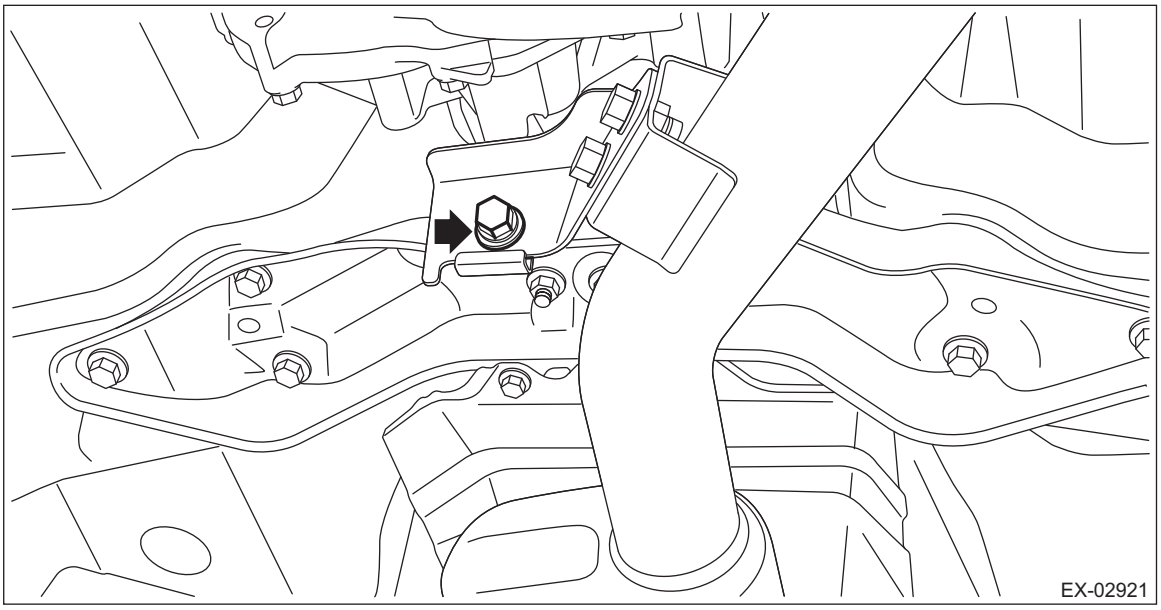
Tightening torque:
42.5 N·m (4.3 kgf-m, 31.3 ft-lb)



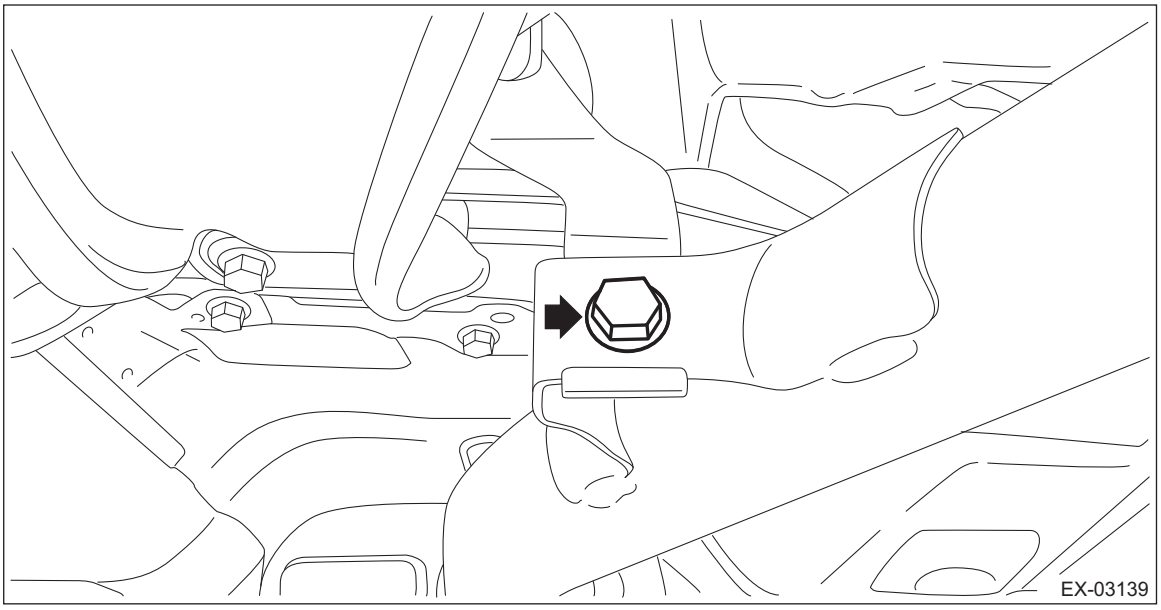
9) Tighten the bolts which hold center exhaust pipe (rear) to the hanger bracket.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)

- CVT model

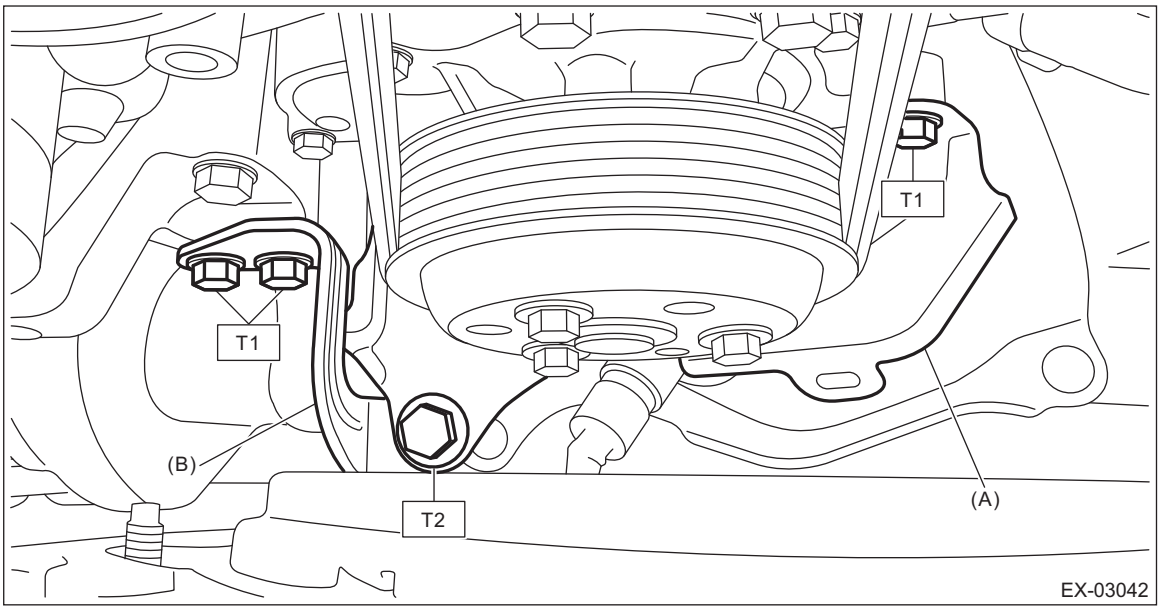


- MT model



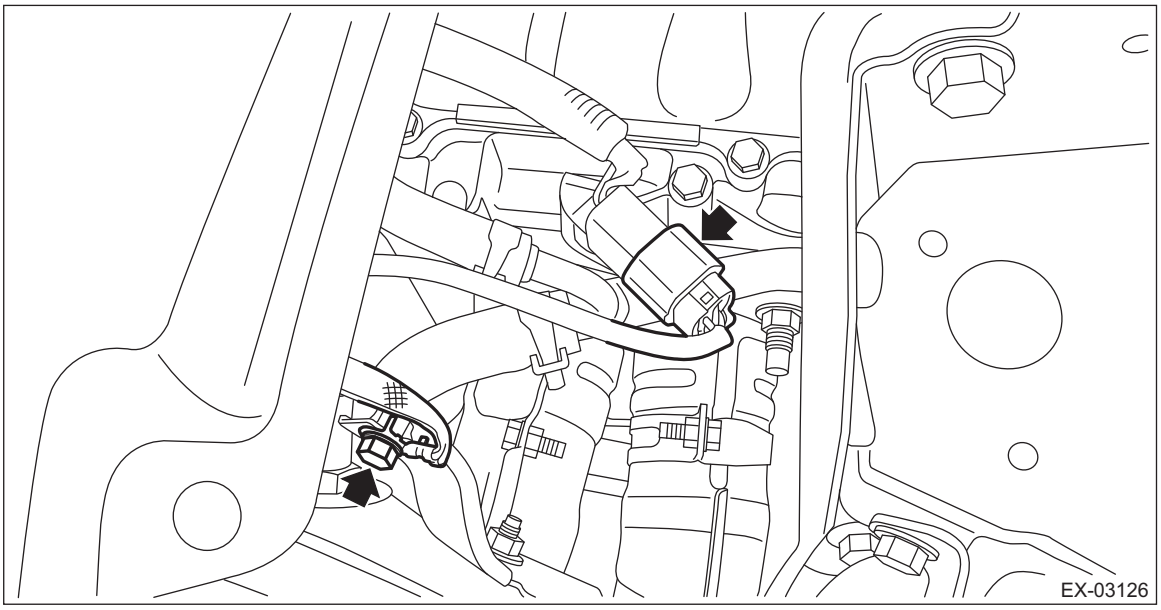
10) Lower the vehicle.
11) Install the exhaust pipe stay (B) and water pump pulley cover (A) to the turbocharger stay and water pump, and install the bolts which secure the water pump pulley cover (A) and exhaust pipe stay (B) to the turbocharger stay.

Tightening torque:
T1: 19 N·m (1.9 kgf-m, 14.0 ft-lb)
T2: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

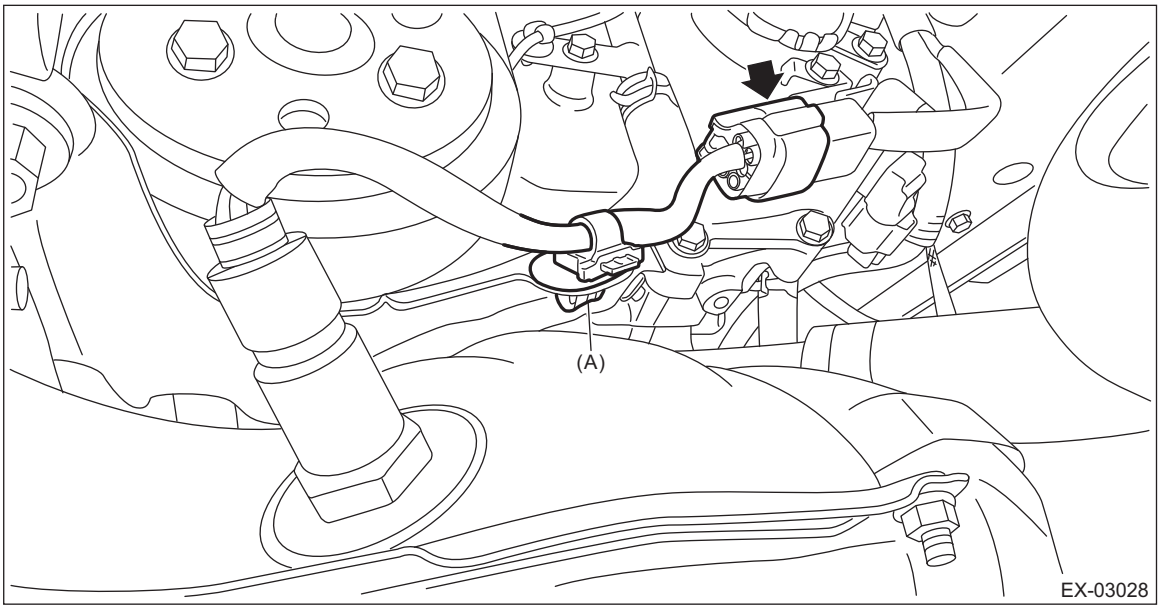


12) Lift up the vehicle.
13) Connect the connector on the rear oxygen sensor to the engine wiring harness, and connect the ground cable to the exhaust pipe cover.

Tightening torque:
7.4 N·m (0.8 kgf-m, 5.4 ft-lb)



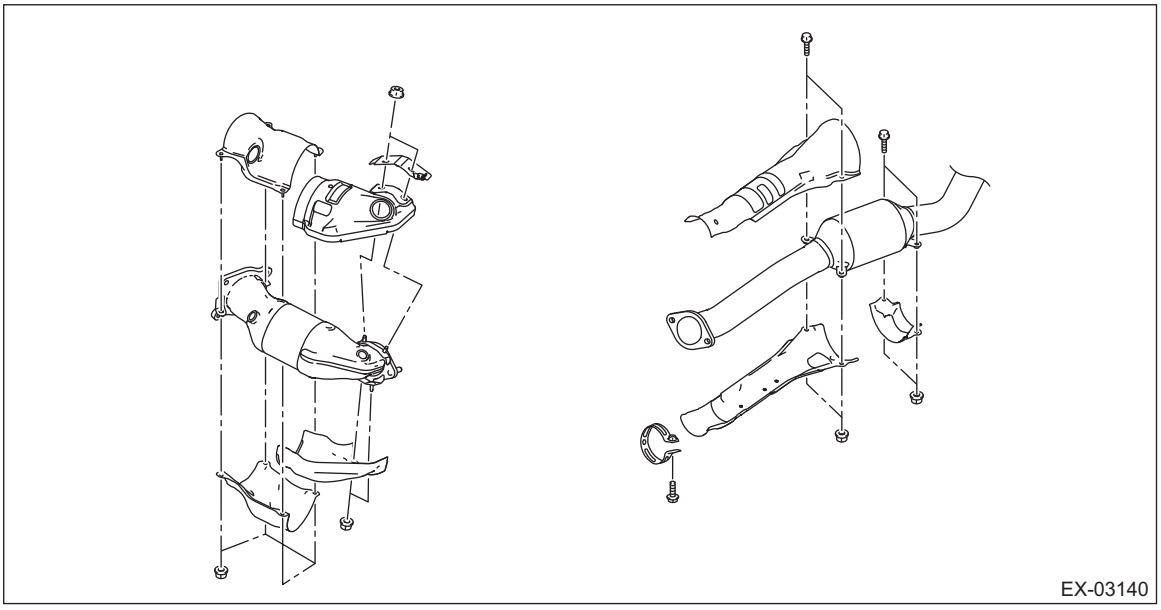
14) Secure the front oxygen (A/F) sensor harness to the water pump pulley cover with the clip (A), and connect the front oxygen (A/F) sensor connector to the engine wiring harness.



15) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
16) Lower the vehicle.
17) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
18) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: DISASSEMBLY

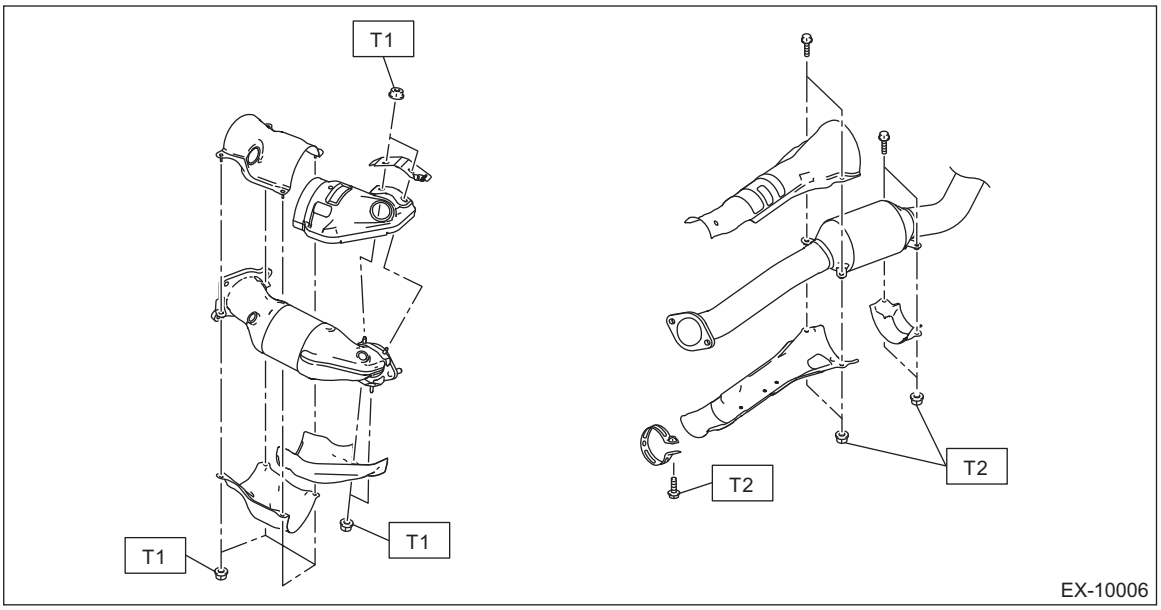
1) Remove the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(w/o STI)-119, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(w/o STI)-121, REMOVAL, Rear Oxygen Sensor.>
2) Remove the exhaust pipe cover from the center exhaust pipe (front) and center exhaust pipe (rear).



D: ASSEMBLY

1) Install the exhaust pipe cover to the center exhaust pipe (front) and center exhaust pipe (rear).

Tightening torque:
T1: 7.4 N·m (0.8 kgf-m, 5.4 ft-lb)
T2: 13 N·m (1.3 kgf-m, 9.6 ft-lb)



2) Install the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(w/o STI)-119, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(w/o STI)-121, INSTALLATION, Rear Oxygen Sensor.>

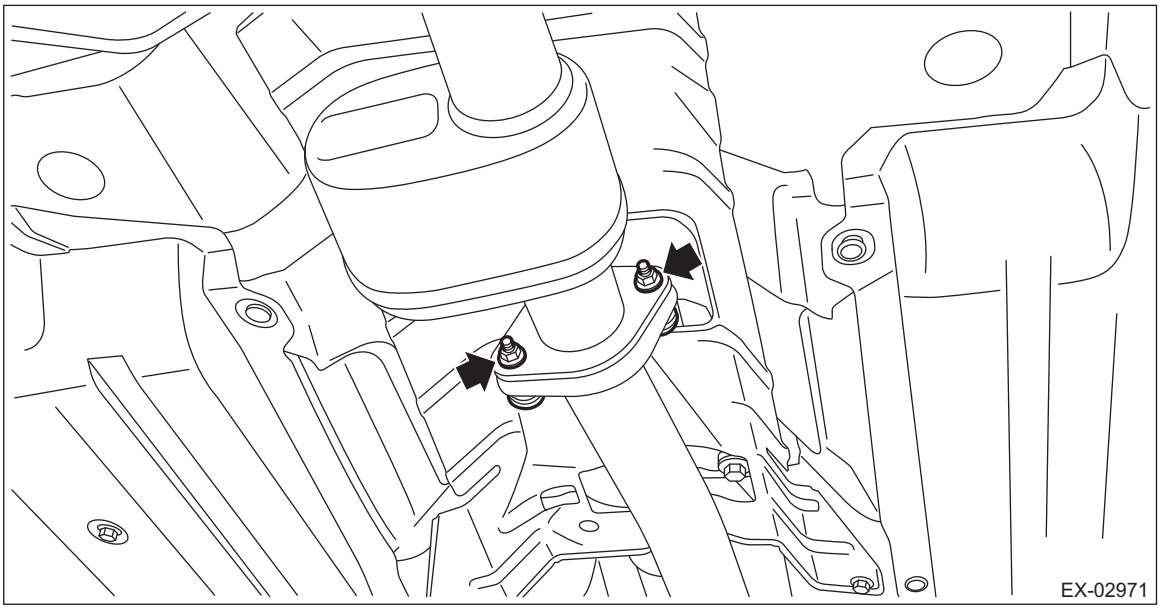
E: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.

4. Rear Exhaust Pipe

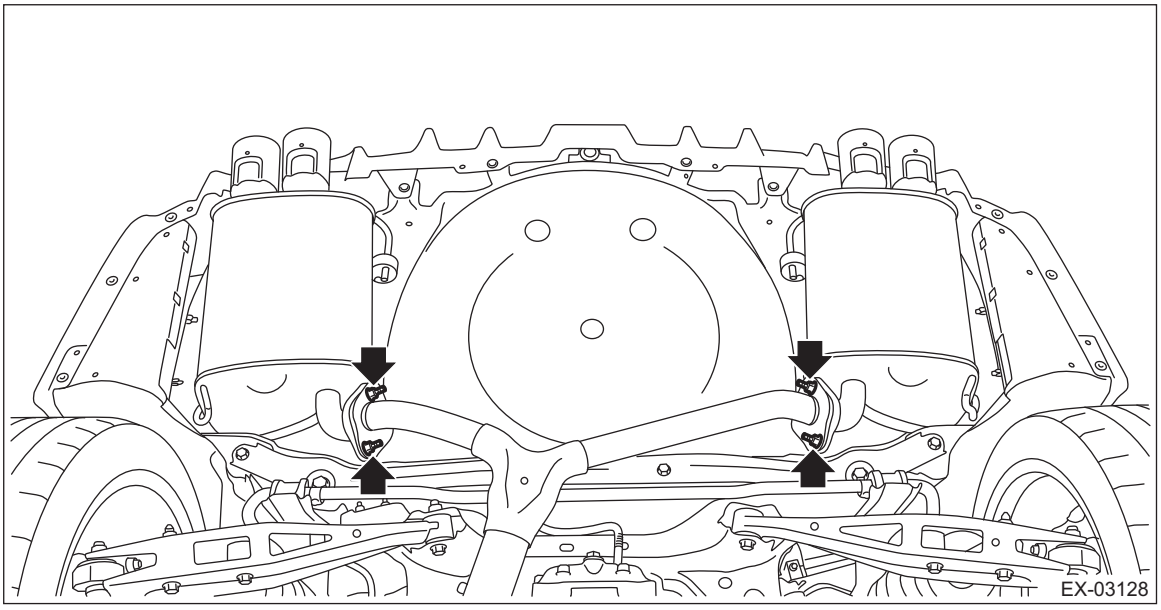
A: REMOVAL

CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
1) Lift up the vehicle.
2) Remove the bolts, springs, and nuts which secure the center exhaust pipe (rear) to the rear exhaust pipe.



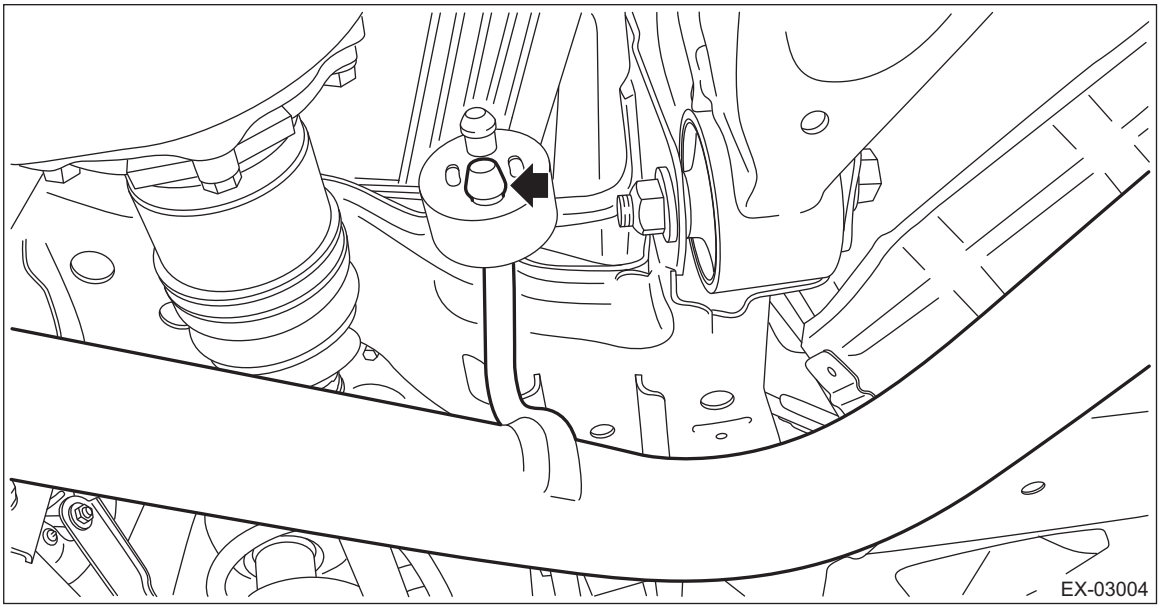
3) Remove the bolts and self-locking nuts securing the mufflers to the rear exhaust pipes.

CAUTION:
Be careful not to drop the rear exhaust pipe.



4) Apply a coat of spray type lubricant to the mating area of cushion rubber.
5) Remove the rear exhaust pipe from the cushion rubber.

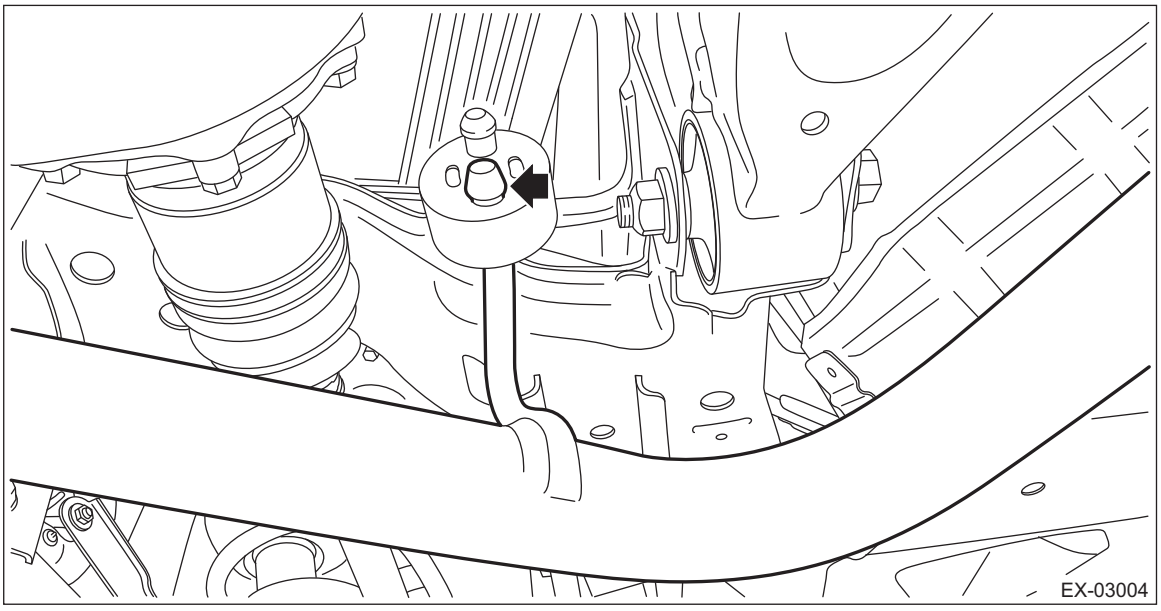
CAUTION:
Be careful not to let the muffler contact the rear bumper.



B: INSTALLATION

1) Apply a coat of spray type lubricant to the mating area of cushion rubber.
2) Install the rear exhaust pipe to cushion rubber.

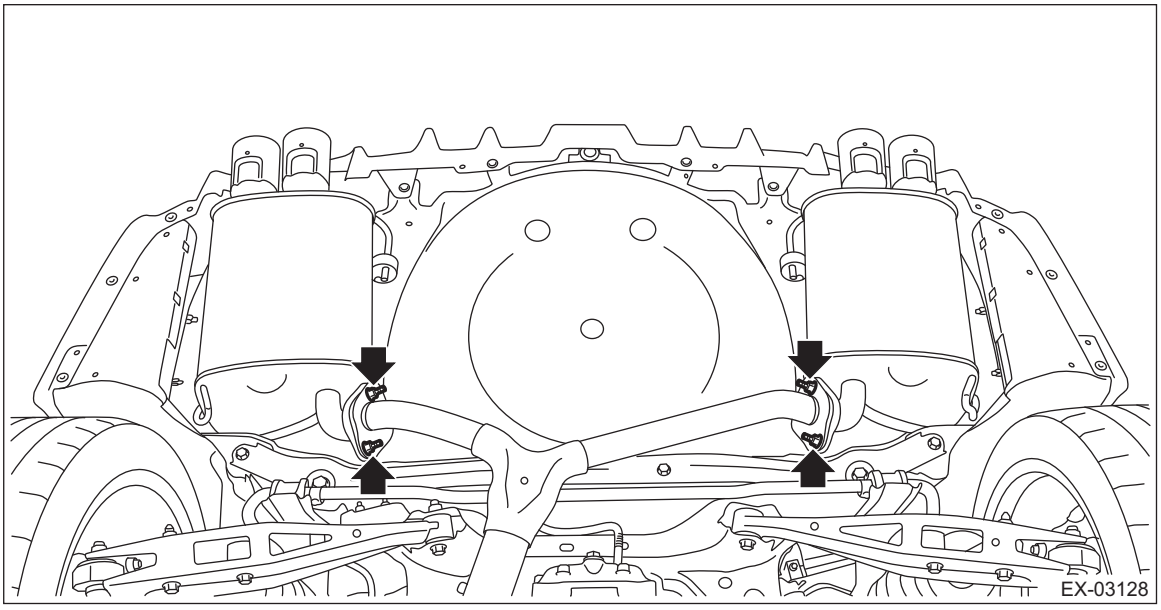
NOTE:
After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.



3) Install the bolts and self-locking nuts which secure the muffler to the rear exhaust pipe.

NOTE:
Use a new gasket and self-locking nut.

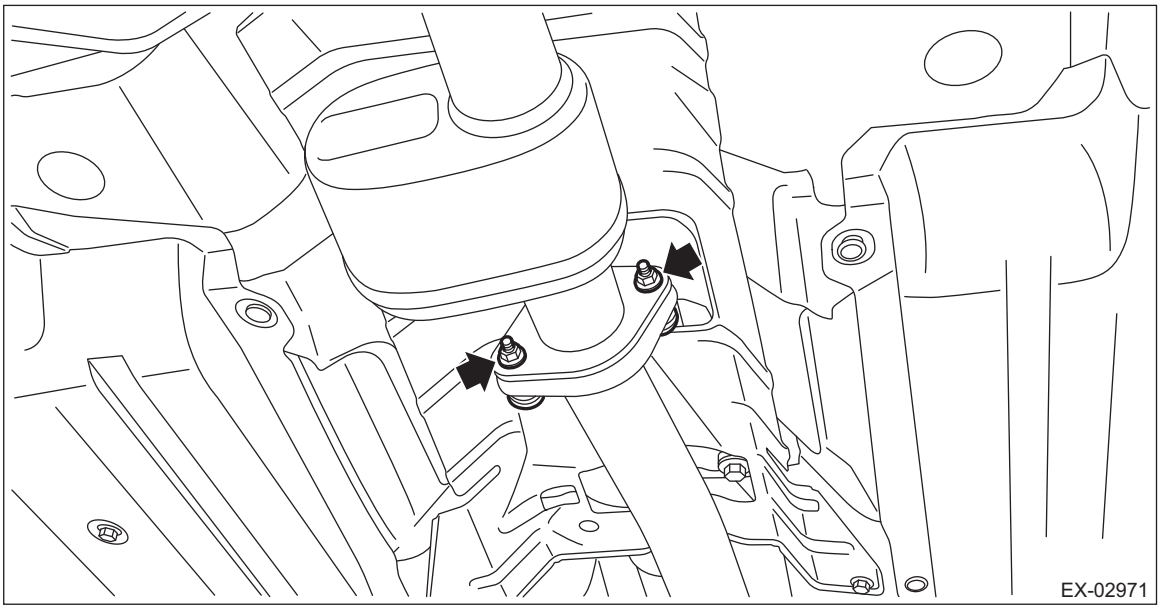
Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



4) Install the bolts, springs, and nuts which secure the center exhaust pipe (rear) to the rear exhaust pipe.

NOTE:
Use a new gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



5) Lower the vehicle.

C: INSPECTION

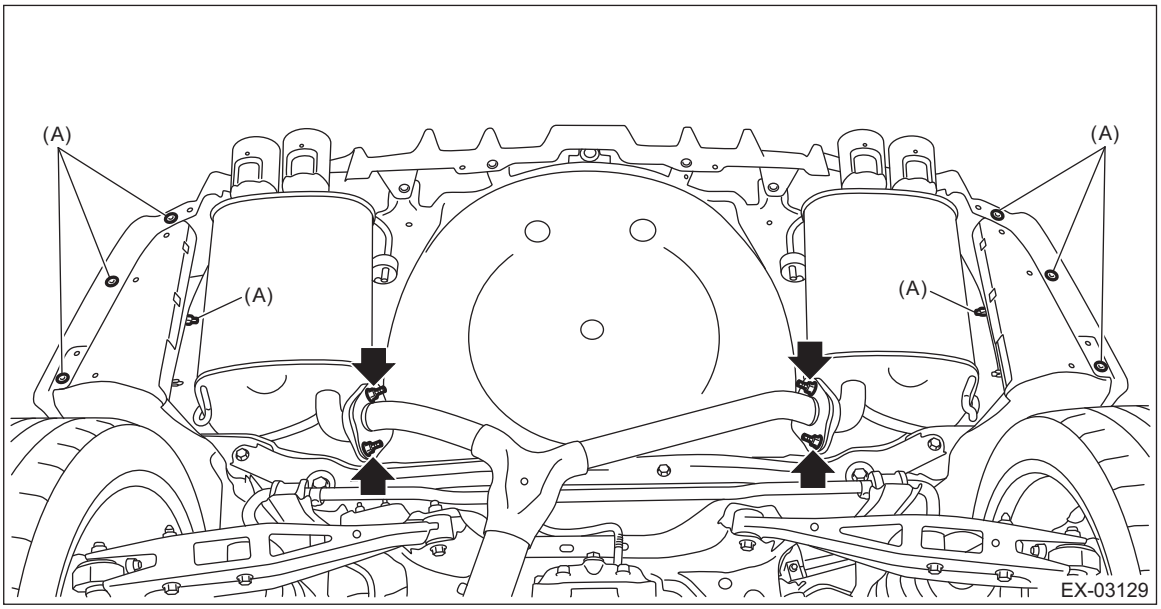
1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.
3) Check the cushion rubber for wear or crack.

5. Muffler

A: REMOVAL

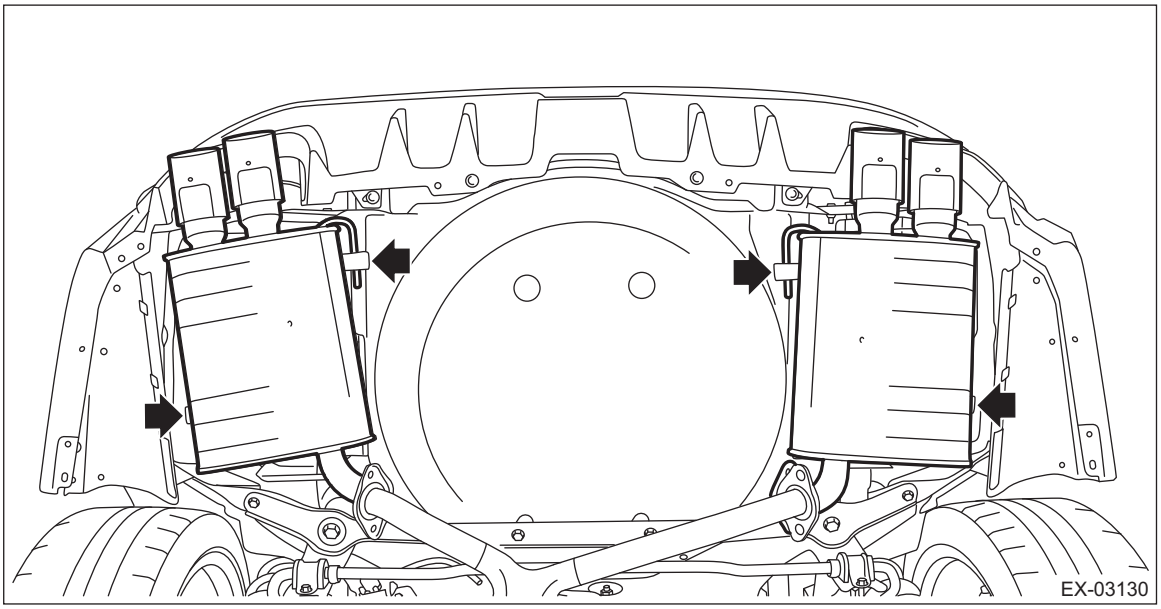
CAUTION:
Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
1) Lift up the vehicle.
2) Remove the clip (A) which holds the cover - rear bumper side to the vehicle and rear bumper.

NOTE:
This procedure is required to facilitate the removal/installation of the muffler.
3) Remove the bolts and self-locking nuts which secure the rear exhaust pipe to the muffler.

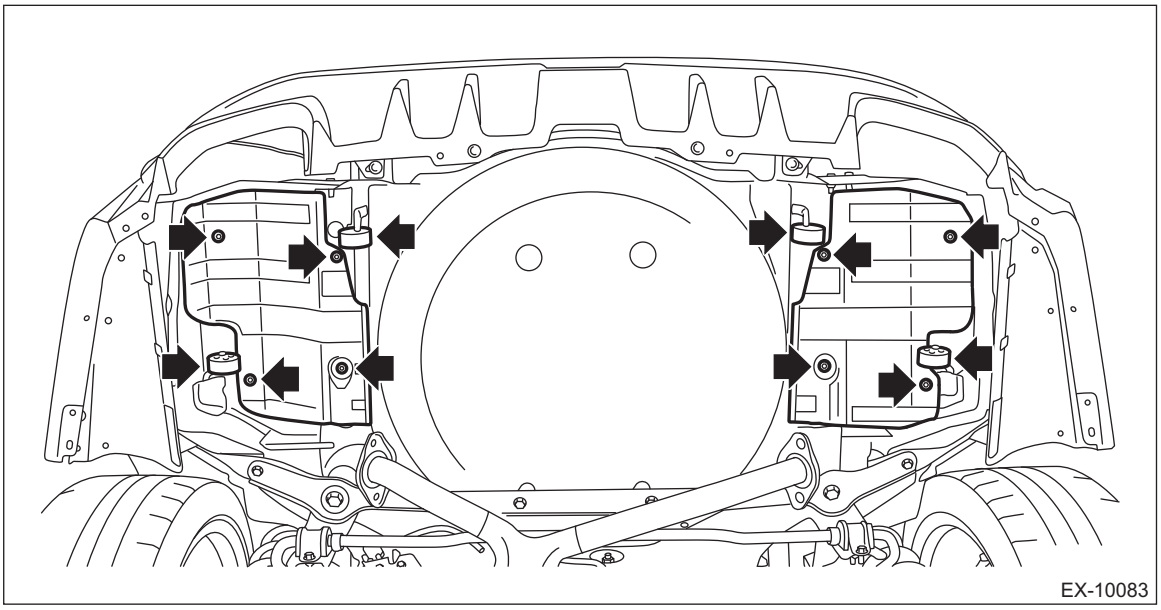


4) Apply a coat of spray type lubricant to the mating area of cushion rubber.
5) Remove the muffler from the cushion rubber.

CAUTION:
Be careful not to drop the muffler during removal.



6) Remove the cushion rubber and rear exhaust cover from the vehicle.

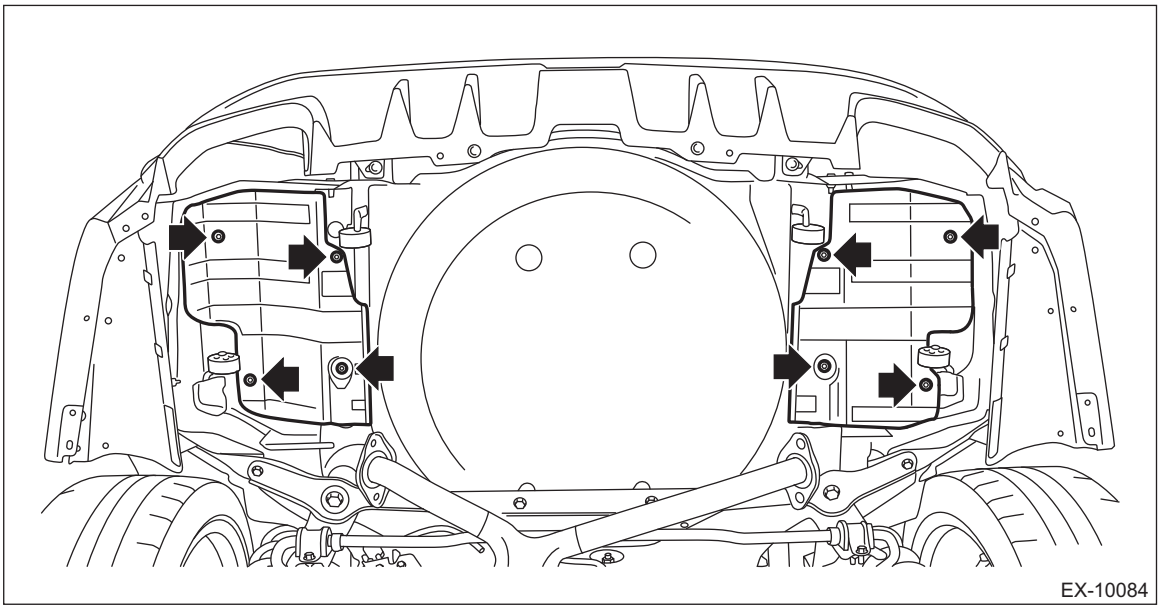


B: INSTALLATION

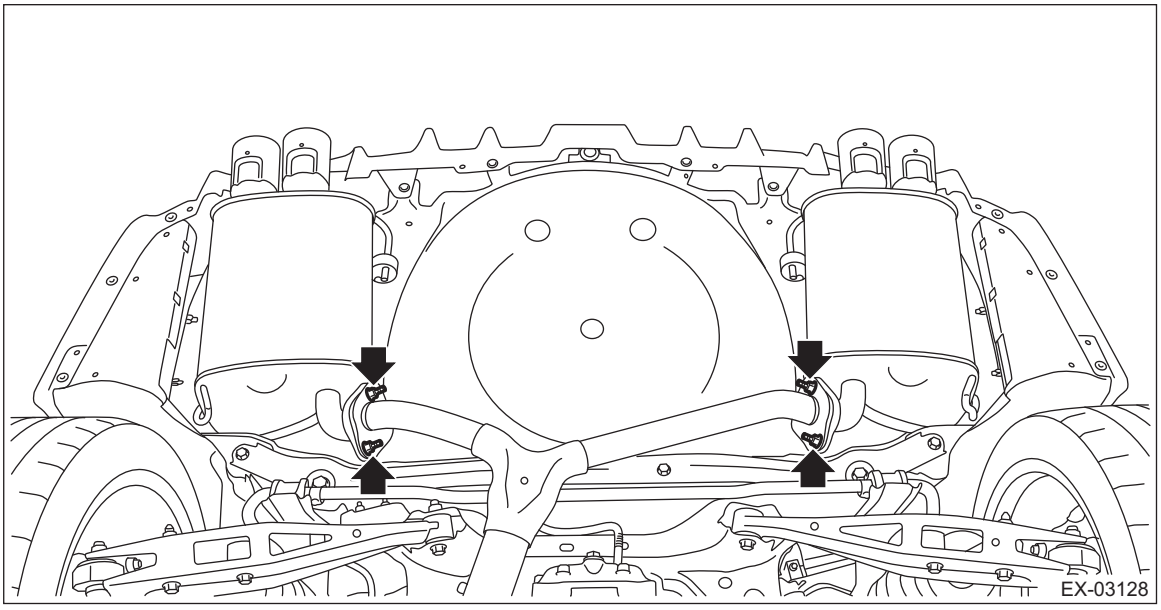
Install in the reverse order of removal.

NOTE:
- Use a new gasket and self-locking nut.
- After assembling, degrease the lubricant which was applied to the cushion rubber while removing/installing.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



C: INSPECTION

1) Check the connections and welded parts for exhaust leaks.
2) Make sure there are no holes or rusting.
3) Check the cushion rubber for wear or crack.

COOLING

1. General Description

A: SPECIFICATION

Cooling system					Electric fan + Forced engine coolant circulation system
Total engine coolant capacity L (US qt, Imp qt)					CVT model: Approx. 8.3 (8.8, 7.3) MT model: Approx. 8.1 (8.6, 7.2)
Water pump	Type				Centrifugal impeller type
	Discharge performance	Discharge rate L (US gal, Imp gal)/min			248 (65.5, 54.6)
		Pump speed — Discharge pressure			8,580 r/min — 88 kPa (8.9 mAq)
		Engine coolant temperature			80°C (176°F)
	Impeller diameter mm (in)				56 (2.2)
	Number of impeller vanes				7
	Pump pulley diameter mm (in)				100 (3.9)
Thermostat	Type				Wax pellet type
	Starting temperature to open				86 — 90°C (187 — 194°F)
	Fully opens				95°C (203°F)
	Valve lift mm (in)				8.0 (0.315) or more
	Valve opening size mm (in)				32 (1.26)
Radiator fan	Motor input	Main fan W			120
		Sub fan W			120
	Fan diameter / Blade	Main fan			320 mm (12.6 in)/9
		Sub fan			320 mm (12.6 in)/11
Radiator	Type				Down flow, pressure type
	Core dimensions	Width × Height × Thickness mm (in)			687.4 × 340 × 16 (27.06 × 13.39 × 0.63)
	Pressure range in which cap valve is open kPa (kg/cm^2, psi)		Positive pressure side	Standard	93 — 123 (0.95 — 1.25, 14 — 18)
				Limit	83 (0.85, 12)
			Negative pressure side	Standard	–1.0 to –4.9 or less (–0.01 — –0.05, –0.1 — –0.7)
	Fins				Corrugated fin type
Reservoir tank	Capacity L (US qt, Imp qt)				0.45 (0.48, 0.40)

	Recommended materials	Item number	Alternative
Engine coolant	SUBARU SUPER COOLANT (concentrated type)	—	—
	SUBARU SUPER COOLANT (diluted type)	K0670Y0001	
Water for dilution	Distilled water	—	Soft water or tap water
Cooling system protective agent	Cooling system conditioner	SOA345001	—

(23) Radiator lower gasket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 3.43 (0.35, 2.53)
T2: 4.41 (0.45, 3.25)
T3: 7.5 (0.8, 5.5)
T4: 12 (1.2, 8.9)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth to prevent scattering of engine coolant when performing work where engine coolant can be spilled. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- Follow all government and local regulations concerning disposal of refuse when disposing engine coolant.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18355AA000	18355AA000	PULLEY WRENCH	• Used for removing and installing water pump pulley. • Used with PULLEY WRENCH PIN SET (18334AA030).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18334AA030	18334AA030	PULLEY WRENCH PIN SET	• Used for removing and installing water pump pulley. • Used together with PULLEY WRENCH (18355AA000).
 ST18632AA030	18632AA030	STAND ASSY	Used for removing and installing the water pipe assembly LH.
 ST45099SJ000	45099SJ000	ST COOLANT CHARGER	Used for filling radiator with engine coolant.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

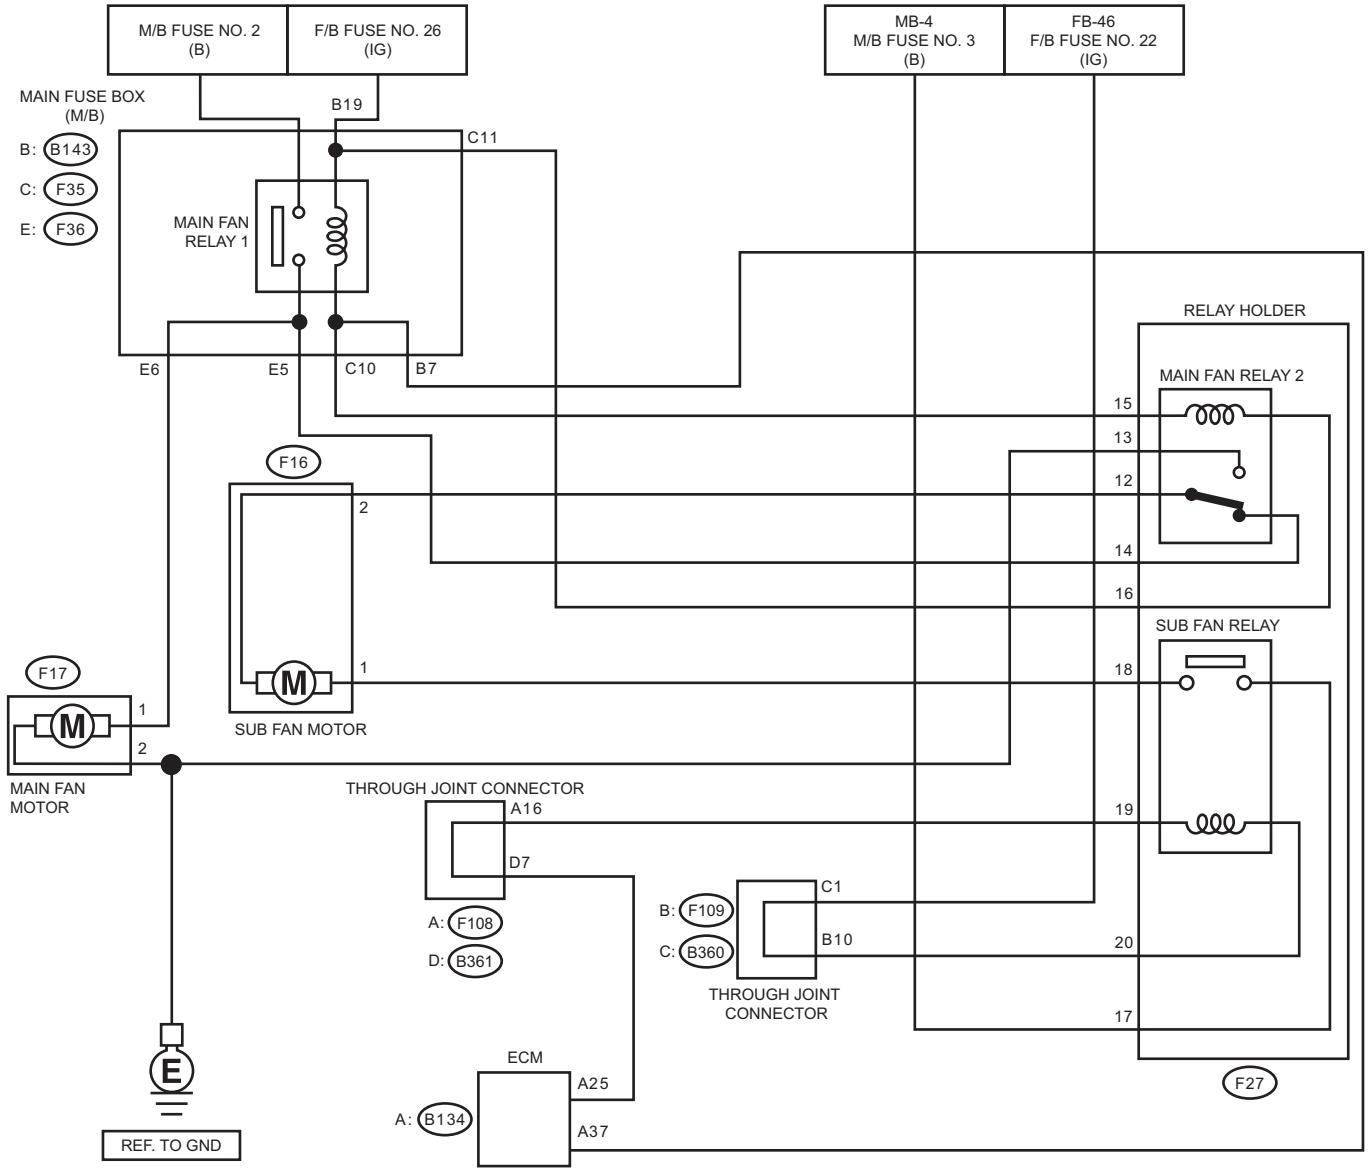
2. GENERAL TOOL

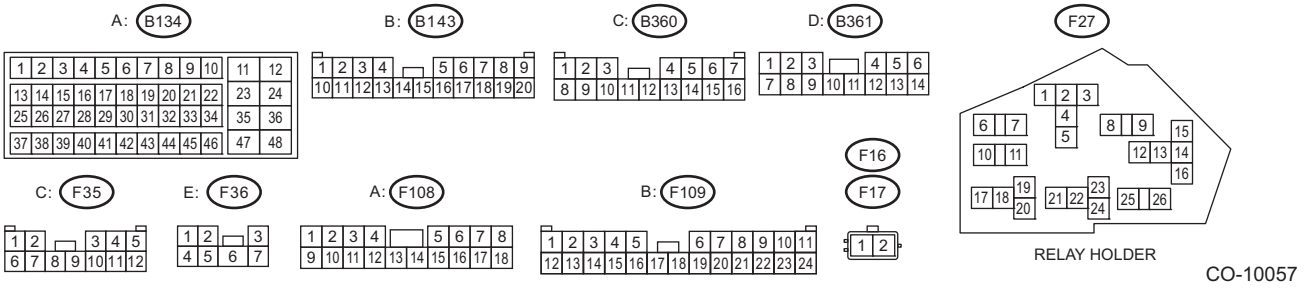
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Radiator cap tester	Used for checking radiator and radiator cap.
DST-i	Used together with Subaru Select Monitor 4.

2. Radiator Fan System

A: WIRING DIAGRAM

Radiator fan system <Ref. to WI-310, WIRING DIAGRAM, Radiator Fan System.>





CO-10057

B: INSPECTION

Operating condition:

Vehicle speed	A/C compressor load	Engine coolant temperature		
		Increase: 94°C (201°F) or less Decrease: 92°C (198°F) or less	Increase: 95 — 99°C (203 — 210°F) Decrease: 93 — 94°C (199 — 201°F)	Increase: 100°C (212°F) or more Decrease: 95°C (203°F) or more
		Radiator fan operation	Radiator fan operation	Radiator fan operation
During acceleration: 19 km/h (12 MPH) or less[*1] During deceleration: 10 km/h (6 MPH) or less[*1]	OFF	OFF	Low-Speed	High-Speed
	Low	Low-Speed	Low-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 20 — 69 km/h (12 — 43 MPH) During deceleration: 11 — 64 km/h (7 — 40 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	High-Speed	High-Speed	High-Speed
	High	High-Speed	High-Speed	High-Speed
During acceleration: 70 — 134 km/h (43 — 83 MPH) During deceleration: 65 — 129 km/h (40 — 80 MPH)	OFF	OFF	Low-Speed	High-Speed
	Low	OFF[*2]	Low-Speed[*2]	High-Speed
	High	Low-Speed[*2]	High-Speed	High-Speed
During acceleration: 135 km/h (84 MPH) or more During deceleration: 130 km/h (81 MPH) or more	OFF	OFF	OFF	High-Speed
	Low	OFF	Low-Speed	High-Speed
	High	OFF	Low-Speed	High-Speed

[*1]: Including the condition under which vehicle is stopped (0 km/h (0 MPH)).
[*2]: The fan may run at High-Speed when ambient temperature is high.

Diagnosis:

Radiator main fan and radiator sub fan do not rotate under the above operating conditions.

	Step	Check	Yes	No
1	**CHECK OPERATION OF RADIATOR FAN.** 1) Install the delivery mode fuse. 2) Turn the ignition switch to ON. 3) Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at low speed?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK OPERATION OF RADIATOR FAN.** Using the Subaru Select Monitor, perform the active test for the radiator fan relay. NOTE: • When performing the active test for the radiator fan relay using the Subaru Select Monitor, the radiator main fan and radiator sub fan will repeat low speed revolution → high speed revolution → OFF in this order. • For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.	Do the radiator main fans and radiator sub fans rotate at high speed?	Radiator main fan system is normal.	Go to step **27**.
3	**CHECK POWER SUPPLY TO SUB FAN RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the sub fan relay. 3) Measure the voltage between the sub fan relay terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK POWER SUPPLY TO SUB FAN RELAY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the sub fan relay terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 20 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Go to step **6**.
5	**CHECK FUSE.** 1) Remove the fuse No. 3. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
6	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Repair the power supply line.
7	**CHECK SUB FAN RELAY.** Measure the resistance between sub fan relay switch terminals.	Is the resistance 1 MΩ or more?	Go to step **8**.	Replace the sub fan relay. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
8	**CHECK SUB FAN RELAY.** 1) Connect the battery to the terminal on the sub fan relay coil side. 2) Measure the resistance between sub fan relay switch terminals.	Is the resistance less than 1 Ω?	Go to step **9**.	Replace the sub fan relay. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN SUB FAN RELAY TERMINAL AND SUB FAN MOTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the sub fan motor. 3) Measure the resistance of harness between the sub fan relay terminal and sub fan motor connector. ***Connector & terminal*** ***(F16) No. 1 — (F27) No. 18:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair the open circuit of harness between sub fan relay terminal and sub fan motor connector.
10	**CHECK HARNESS BETWEEN SUB FAN MOTOR CONNECTOR AND MAIN FAN RELAY 2 CONNECTOR.** 1) Remove the main fan relay 2. 2) Measure the resistance of harness between sub fan motor connector and main fan relay 2 connector. ***Connector & terminal*** ***(F16) No. 2 — (F27) No. 12:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of the harness between sub fan motor connector and main fan relay 2 connector.
11	**CHECK FOR POOR CONTACT.** Check poor contact of sub fan motor connector.	Is there poor contact of the sub fan motor connector?	Repair the poor contact of sub fan motor connector.	Go to step **12**.
12	**CHECK SUB FAN MOTOR.** Connect the battery positive (+) terminal to terminal No. 1 of the sub fan motor, and the ground (–) terminal to terminal No. 2.	Does the radiator sub fan rotate?	Go to step **13**.	Replace the sub fan motor. <Ref. to CO(w/o STI)-50, Radiator Sub Fan and Fan Motor.>
13	**CHECK MAIN FAN RELAY 2.** Measure the resistance between terminals of main fan relay 2 switch (always ON side).	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the main fan relay 2. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
14	**CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND MAIN FAN MOTOR CONNECTOR.** 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 2 terminal and main fan motor connector. ***Connector & terminal*** ***(F17) No. 1 — (F27) No. 14:***	Is the resistance less than 1 Ω?	Go to step **15**.	Repair the open circuit of the harness between main fan relay 2 terminal and main fan motor connector.
15	**CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.** Measure the resistance between main fan motor connector and chassis ground. ***Connector & terminal*** ***(F17) No. 2 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **16**.	Repair the open circuit of the harness between main fan motor connector and chassis ground.
16	**CHECK FOR POOR CONTACT.** Check poor contact of main fan motor connector.	Is there poor contact of the main fan motor connector?	Repair the poor contact of main fan motor connector.	Go to step **17**.

	Step	Check	Yes	No
17	**CHECK MAIN FAN MOTOR.** Connect the battery positive (+) terminal to terminal No. 1 of the main fan motor, and the ground (–) terminal to terminal No. 2.	Does the radiator main fan rotate?	Go to step **18**.	Replace the main fan motor. <Ref. to CO(w/o STI)-47, Radiator Main Fan and Fan Motor.>
18	**CHECK HARNESS BETWEEN SUB FAN RELAY AND ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the sub fan relay terminal and ECM connector. ***Connector & terminal*** ***(B134) No. 25 — (F27) No. 19:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the open circuit of harness between sub fan relay terminal and ECM.
19	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Check the DTC. Repair the trouble cause. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>
20	**CHECK MAIN FAN RELAY 1.** 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 1. 3) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance 1 MΩ or more?	Go to step **21**.	Replace the main fan relay 1. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
21	**CHECK MAIN FAN RELAY 1.** 1) Connect the main fan relay 1 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 1 switch.	Is the resistance less than 1 Ω?	Go to step **22**.	Replace the main fan relay 1. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>
22	**CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND MAIN FAN MOTOR CONNECTOR.** 1) Disconnect the connector from the main fan motor. 2) Measure the resistance of the harness between main fan relay 1 terminal and main fan motor connector. ***Connector & terminal*** ***(F17) No. 1 — (F36) No. 6:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair the open circuit of the harness between main fan relay 1 terminal and main fan motor connector.

	Step	Check	Yes	No
23	**CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between main fan relay 1 terminal and ECM connector. ***Connector & terminal*** ***(B134) No. 37 — (B143) No. 7:***	Is the resistance less than 1 Ω?	Go to step **24**.	Repair the open circuit of the harness between main fan relay 1 terminal and ECM.
24	**CHECK HARNESS BETWEEN MAIN FAN RELAY 2 AND ECM.** Measure the resistance between main fan relay 2 terminal and ECM connector. ***Connector & terminal*** ***(B134) No. 37 — (F27) No. 15:***	Is the resistance less than 1 Ω?	Go to step **25**.	Repair the open circuit of the harness between main fan relay 2 terminal and ECM.
25	**CHECK FUSE.** 1) Remove the fuse No. 2 and No. 26. 2) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **26**.
26	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Repair the power supply circuit to the main fuse box.
27	**CHECK OPERATION OF RADIATOR FAN.** If the both fans do not rotate at high speed in the condition of step 2, check whether the radiator sub fan is rotating.	Does the radiator sub fan rotate?	Go to step **20**.	Go to step **28**.
28	**CHECK GROUND CIRCUIT OF MAIN FAN RELAY 2.** 1) Turn the ignition switch to OFF. 2) Remove the main fan relay 2. 3) Measure the resistance between main fan relay 2 terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 13 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **29**.	Repair the open circuit of harness between main fan relay 2 and chassis ground.
29	**CHECK POWER SUPPLY TO MAIN FAN RELAY 2.** 1) Turn the ignition switch to ON. 2) Measure the voltage between main fan relay 2 terminal and chassis ground. ***Connector & terminal*** ***(F27) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **30**.	Repair the power supply line.
30	**CHECK MAIN FAN RELAY 2.** Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance 1 MΩ or more?	Go to step **31**.	Replace the main fan relay 2. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

Step		Check	Yes	No
31	**CHECK MAIN FAN RELAY 2.** 1) Connect the main fan relay 2 coil side terminal to the battery. 2) Measure the resistance between terminals of main fan relay 2 switch (always OFF side).	Is the resistance less than 1 Ω?	Go to step **23**.	Replace the main fan relay 2. <Ref. to EN(w/o STI)(diag)-17, SOLENOID VALVE, ACTUATOR, EMISSION CONTROL SYSTEM PARTS AND IGNITION SYSTEM PARTS, LOCATION, Electrical Component Location.>

3. Engine Coolant

A: INSPECTION

NOTE:
When adding the engine coolant, always use SUBARU Super Coolant.
1) Park the vehicle on a level surface.
2) Check the engine coolant amount, and if the coolant level is low, check for the coolant leakage, and then add the engine coolant.
(1) Make sure the engine coolant level in the reservoir tank is between “FULL” and “LOW” with the engine in a cold condition.
(2) Open the radiator cap and make sure that the radiator is filled with the engine coolant up to its filler neck position.

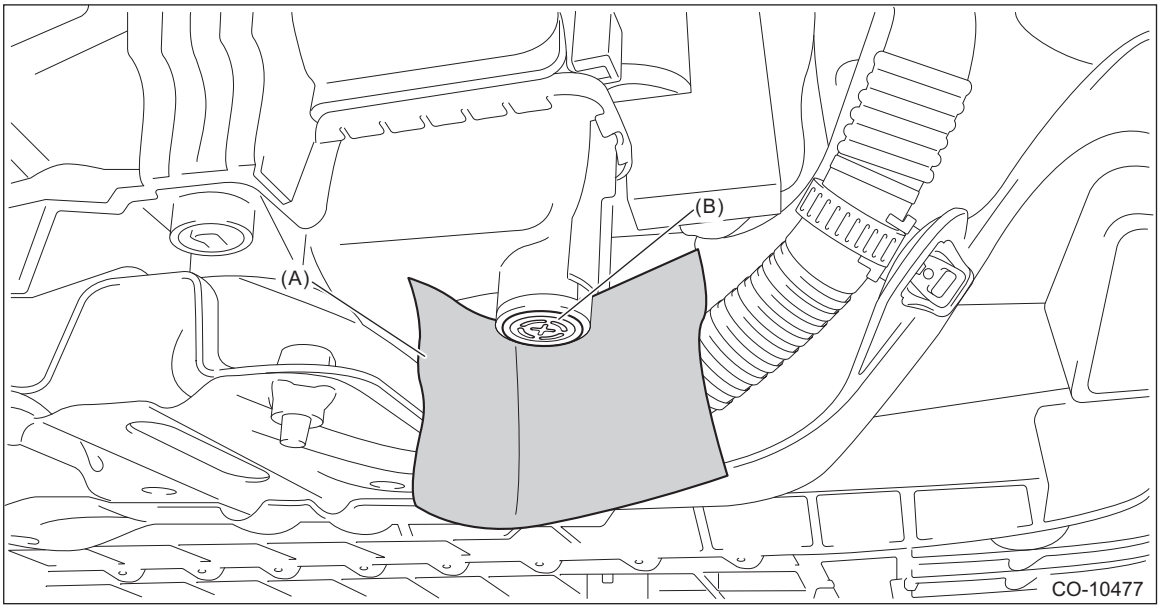
B: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

1) Lift up the vehicle.
2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Set a vinyl sheet (A), etc. at the base of drain plug.

CAUTION:
This operation is required to prevent engine coolant from scattering around.
4) Remove the drain plug (B) to drain engine coolant into container.

NOTE:
Remove the radiator cap so that engine coolant will drain faster.



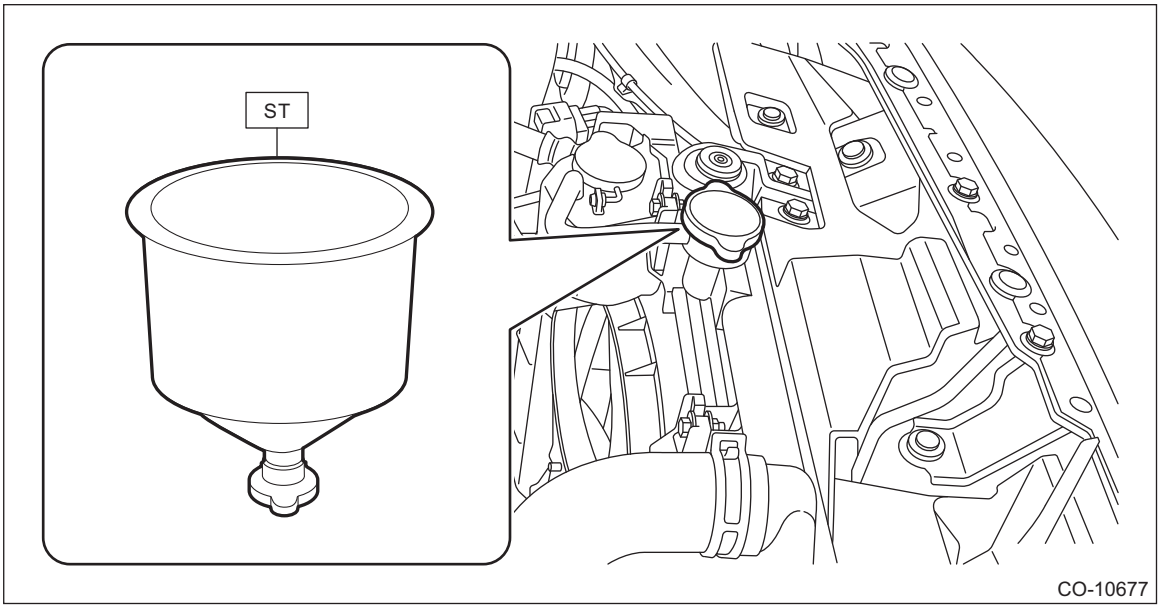
5) Install the drain plug.

NOTE:
Use new O-rings.
6) Remove the vinyl sheet, etc.
7) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>

2. FILLING OF ENGINE COOLANT

CAUTION:
For CVT models, set the select lever to “P” or “N” range (for MT models, the shift lever in neutral) during work, and do not shift the lever.

1) Set the ST to the radiator filler neck.
ST 45099SJ000 ST COOLANT CHARGER



2) Fill the ST with cooling system conditioner.

Cooling system protective agent:
Refer to "SPECIFICATION" for cooling system protective agent. <Ref. to CO(w/o STI)-2, SPECIFICATION, General Description.>

3) Fill the ST with engine coolant.

Recommended engine coolant:
Refer to "SPECIFICATION" for recommended engine coolant. <Ref. to CO(w/o STI)-2, SPECIFICATION, General Description.>

Engine coolant level:
Refer to "SPECIFICATION" for engine coolant level. <Ref. to CO(w/o STI)-2, SPECIFICATION, General Description.>

Engine coolant concentration:
Refer to "ADJUSTMENT" for the recommended engine coolant concentration. <Ref. to CO(w/o STI)-17, ADJUSTMENT, Engine Coolant.>

NOTE:
The SUBARU Super Coolant contains anti-freeze and anti-rust agents, and is especially made for Subaru engines with an aluminum cylinder block. Be sure to use SUBARU Super Coolant, since other coolant may cause corrosion.

4) Start the engine, and race 5 to 6 times at 3,000 r/min or less, then stop the engine. (Complete this operation within 40 seconds.)
5) Wait for one minute after the engine stops. If the engine coolant level drops, fill the ST with engine coolant.
6) Perform the procedures 4) and 5) again.
7) Start the engine and operate the heater at maximum hot position and the blower speed setting to "LO". (A/C OFF)
8) Run the engine at 3,000 r/min or less until radiator fan starts and stops.

NOTE:
Be careful with the engine coolant temperature to prevent overheating.

9) Stop the engine and wait until the engine coolant temperature lowers to 30°C (86°F) or less.
10) If the engine coolant level drops, fill the ST with engine coolant.
11) Set the heater setting to maximum hot position and the blower speed setting to "LO" and start the engine. Perform racing at 3,000 r/min or less. If the flowing sound is heard from the heater core, repeat the procedures from step 8).

12) Stop the engine and remove the ST, and then install the radiator cap.

CAUTION:
Prepare a container and cloth when performing the work in order to prevent scattering of engine coolant. If the oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
13) Make sure the engine coolant level in the reservoir tank is between “FULL” and “LOW”, and adjust if necessary.

C: ADJUSTMENT

1. PROCEDURE TO ADJUST THE SUBARU SUPER COOLANT CONCENTRATION

CAUTION:
Use the SUBARU Super Coolant with a 50 — 60% concentration in order to obtain maximum anti-freeze and anti-rust performance.
To adjust the concentration of SUBARU Super Coolant according to temperature, find the proper SUBARU Super Coolant concentration in the table, and add dilution water to the SUBARU Super Coolant (concentrated type) until it reaches the proper dilution.

Relationship of SUBARU Super Coolant concentration and freezing temperature			
SUBARU Super Coolant concentration	50%	55%	60%
Freezing temperature	–36°C (–33°F)	–41°C (–42°F)	–50°C (–58°F)

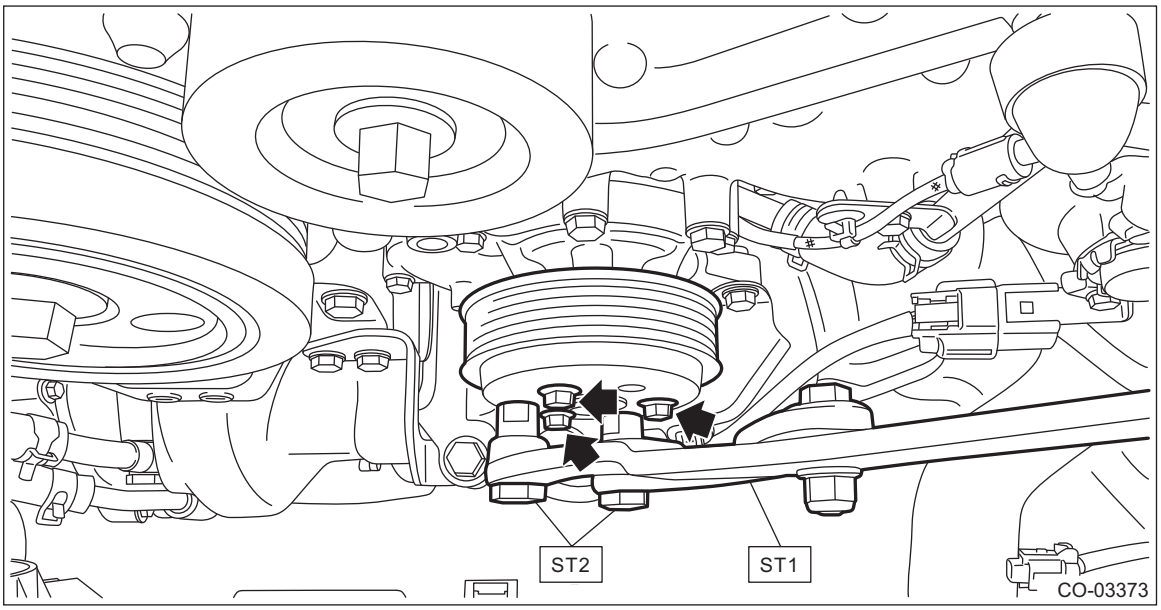
Engine coolant and diluting water:
Refer to “SPECIFICATION” for recommended engine coolant and diluting water. <Ref. to CO(w/o STI)-2, SPECIFICATION, General Description.>

4. Water Pump

A: REMOVAL

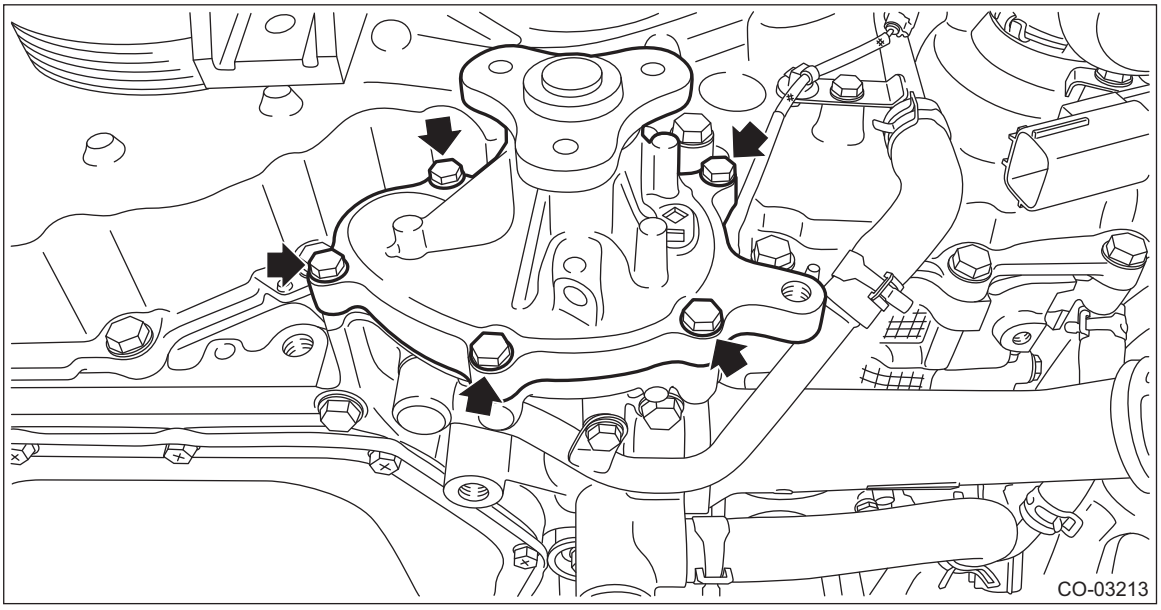
1. WATER PUMP PULLEY

1) Remove the V-belts. <Ref. to ME(w/o STI)-77, REMOVAL, V-belt.>
2) Remove the water pump pulley using the ST.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA030 PULLEY WRENCH PIN SET



2. WATER PUMP

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the water pump pulley. <Ref. to CO(w/o STI)-18, WATER PUMP PULLEY, REMOVAL, Water Pump.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
5) Remove the water pump from the oil pan upper.

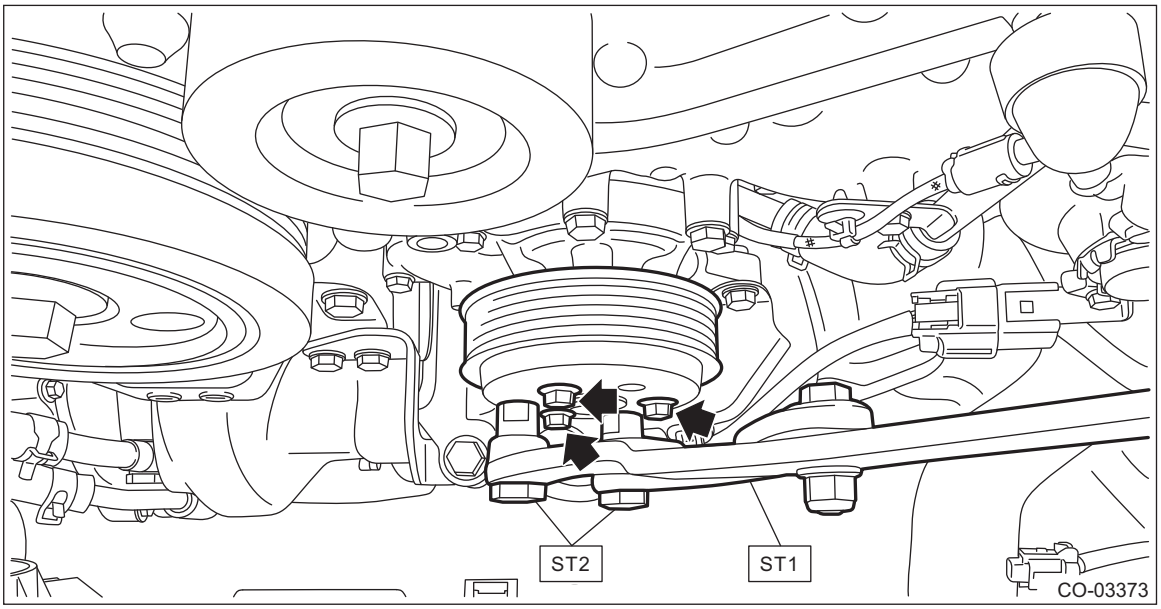


B: INSTALLATION

1. WATER PUMP PULLEY

1) Using the ST, install the water pump pulley.
ST1 18355AA000 PULLEY WRENCH
ST2 18334AA030 PULLEY WRENCH PIN SET

Tightening torque:
14 N·m (1.4 kgf-m, 10.3 ft-lb)



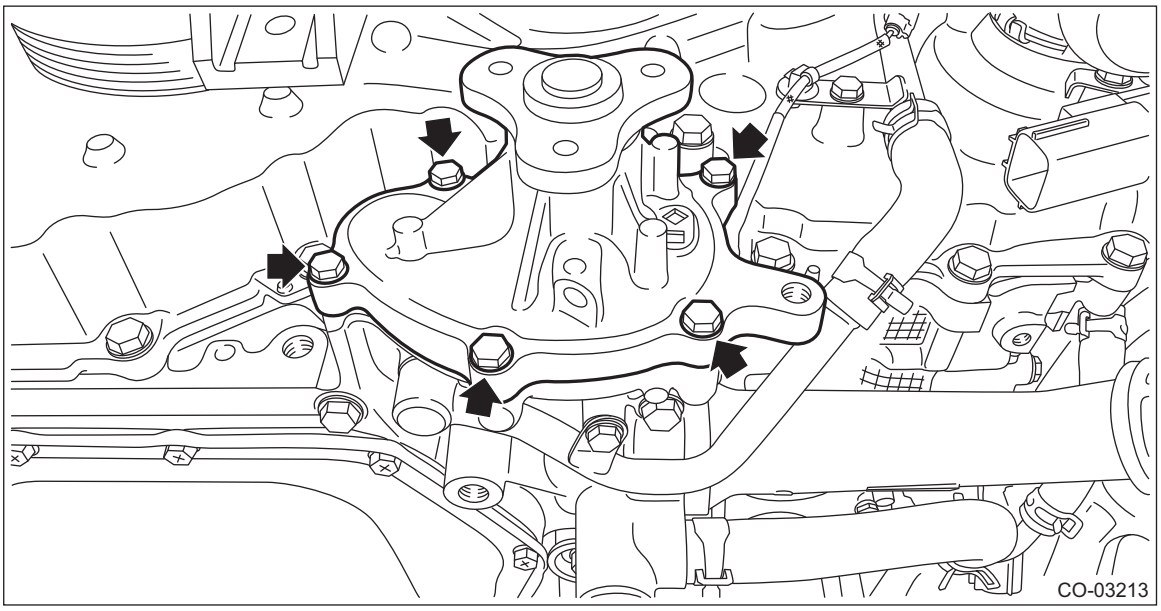
2) Install the V-belts. <Ref. to ME(w/o STI)-78, INSTALLATION, V-belt.>

2. WATER PUMP

1) Install the water pump to oil pan upper.

NOTE:
Use a new gasket.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



2) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>

3) Install the water pump pulley. <Ref. to CO(w/o STI)-19, WATER PUMP PULLEY, INSTALLATION, Water Pump.>
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

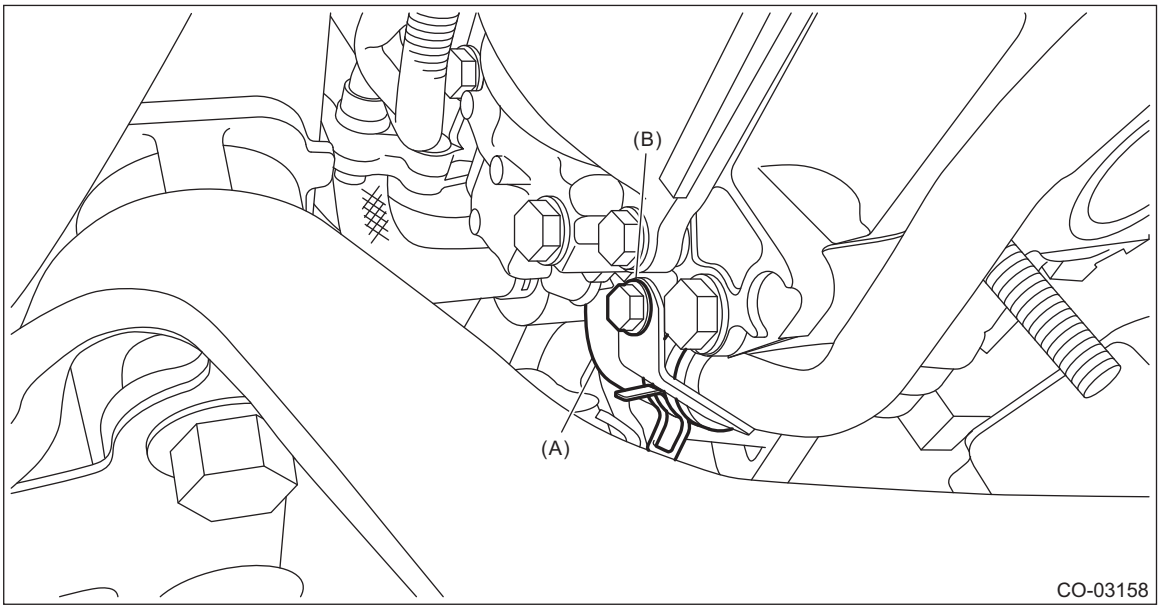
1) Check that the water pump pulley does not have deformation, cracks and any other damage.
2) Check the water pump bearing for smooth rotation.
3) Make sure the impeller is not abnormally deformed or damaged.

5. Water Pipe Assembly

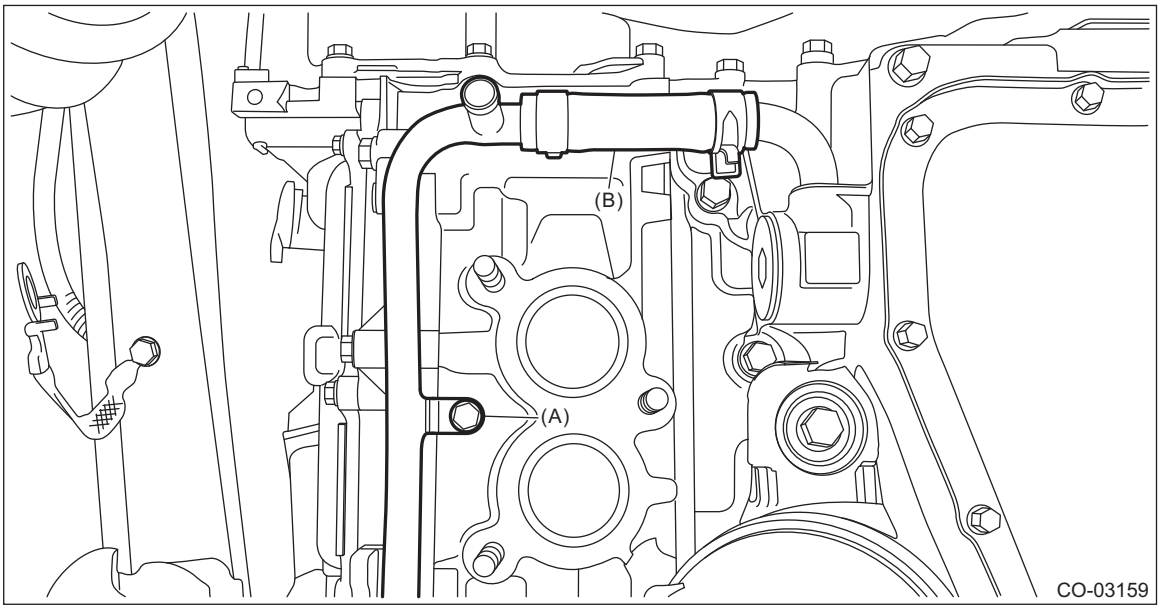
A: REMOVAL

1. WATER PIPE ASSEMBLY RH

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
3) Remove the oil pipe assembly. <Ref. to LU(w/o STI)-42, OIL PIPE ASSEMBLY, REMOVAL, Oil Pipe.>
4) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
5) Disconnect the water hose (A) from the water pipe assembly RH, and remove the bolt (B) securing the water pipe assembly RH to the cam carrier RH.



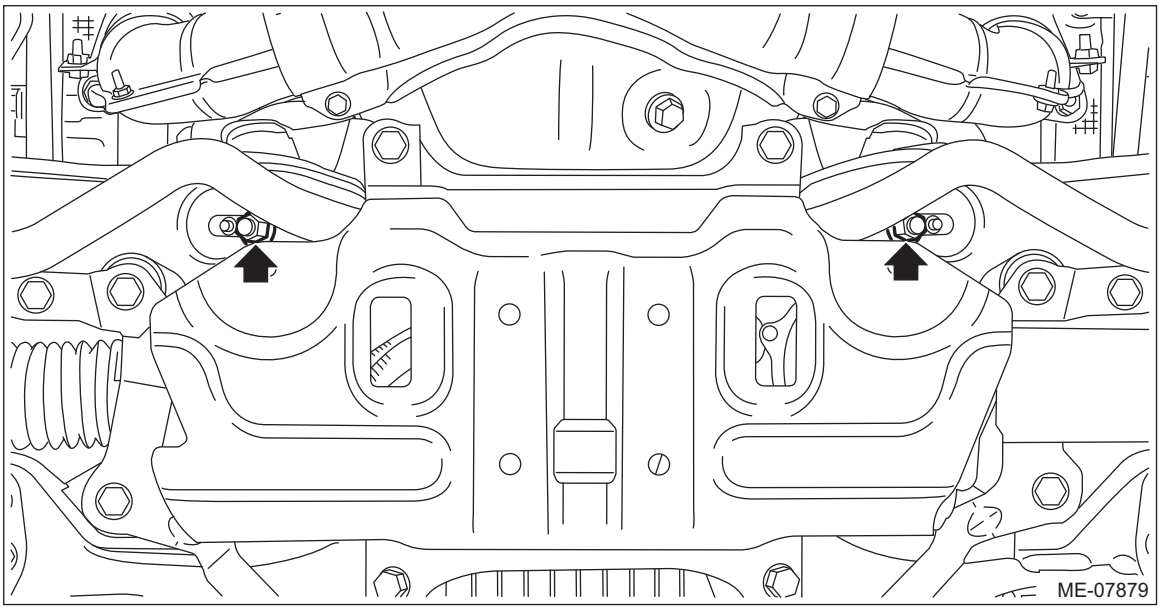
6) Remove the bolt (A) which secures the water pipe assembly RH to the cylinder head RH.
7) Disconnect the water pipe hose RH (B) from oil pan upper, and remove the water pipe assembly RH.



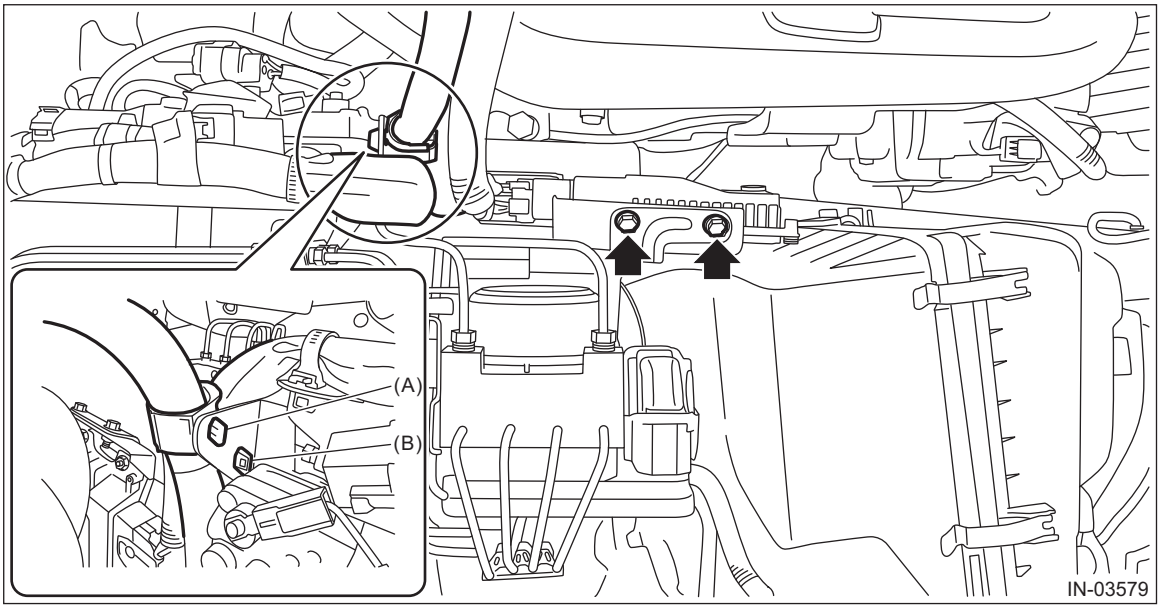
2. WATER PIPE ASSEMBLY LH

1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>

4) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
6) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
7) Remove the center exhaust pipe. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
8) Remove the nuts which secure the engine mounting to the front crossmember.

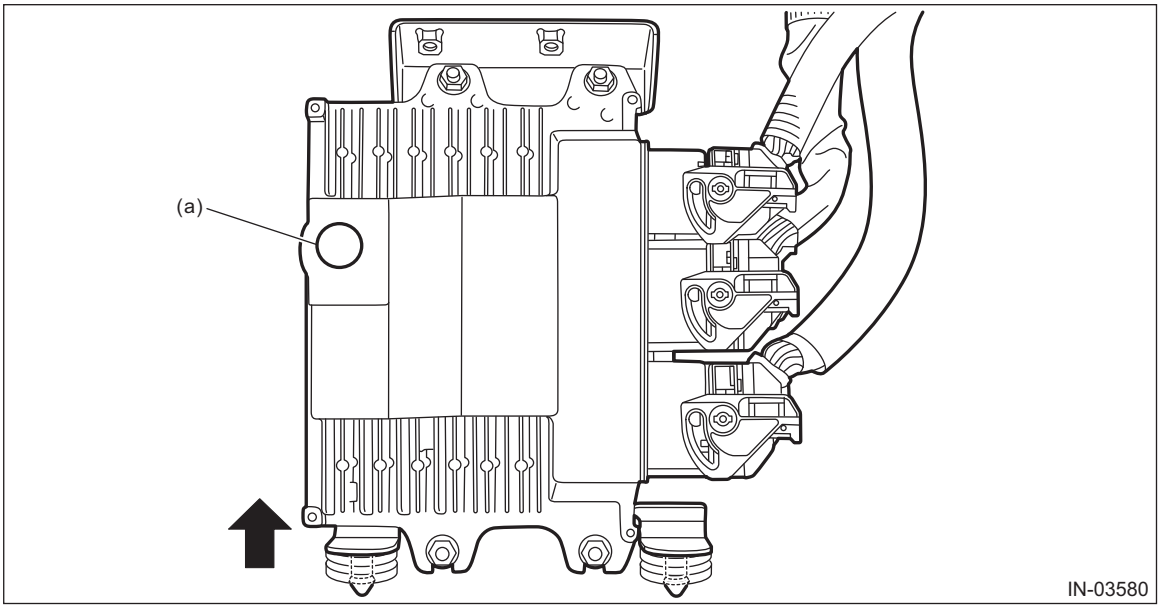


9) Lower the vehicle.
10) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.

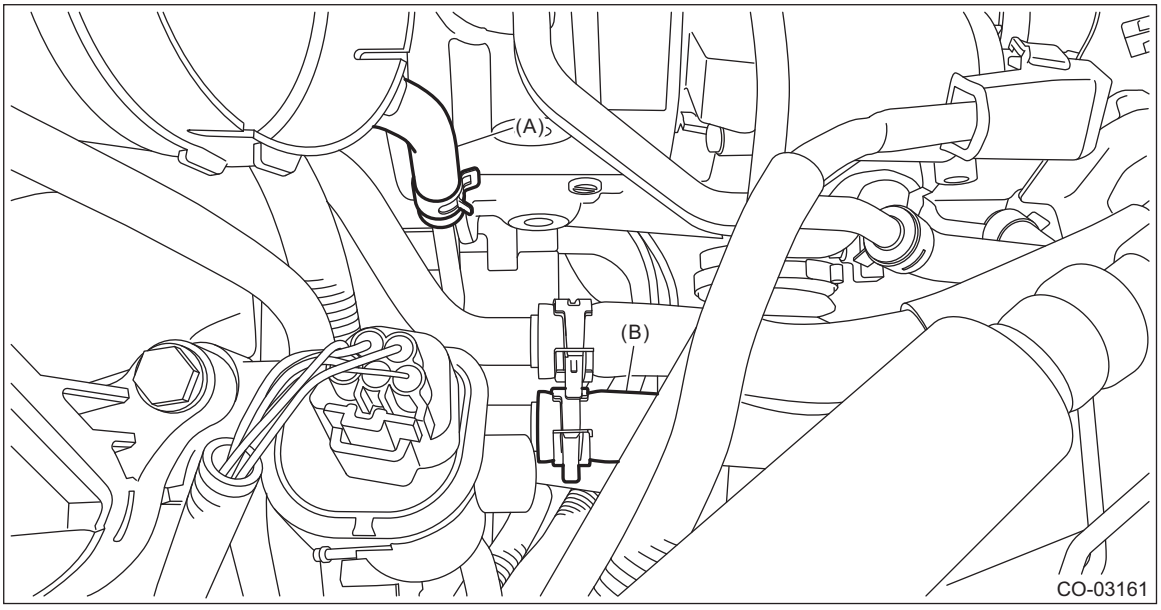


11) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

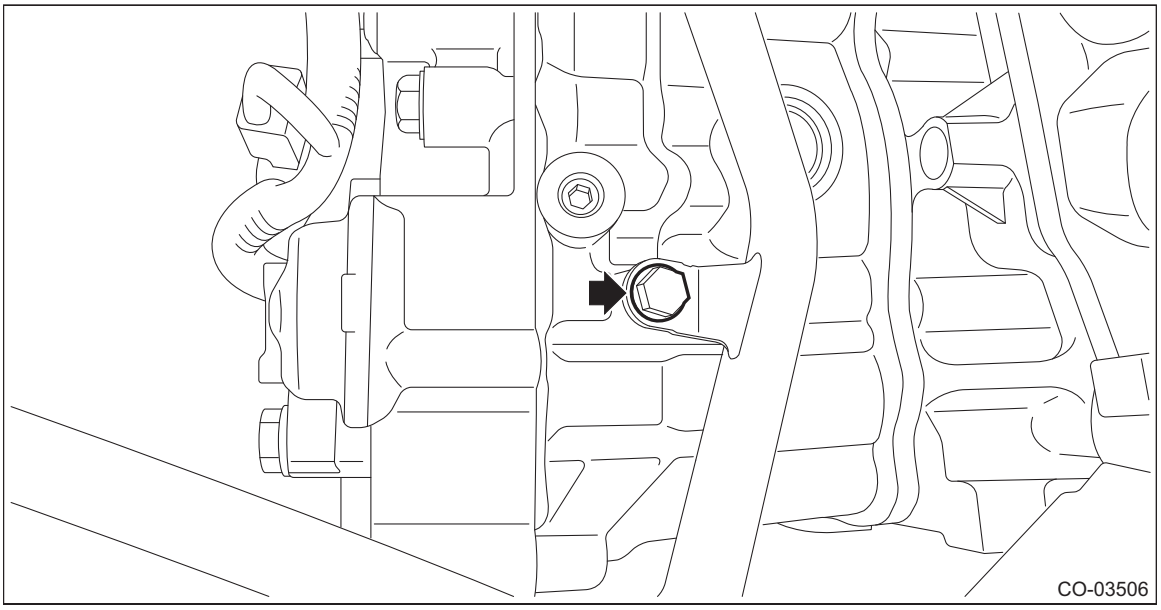
NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.



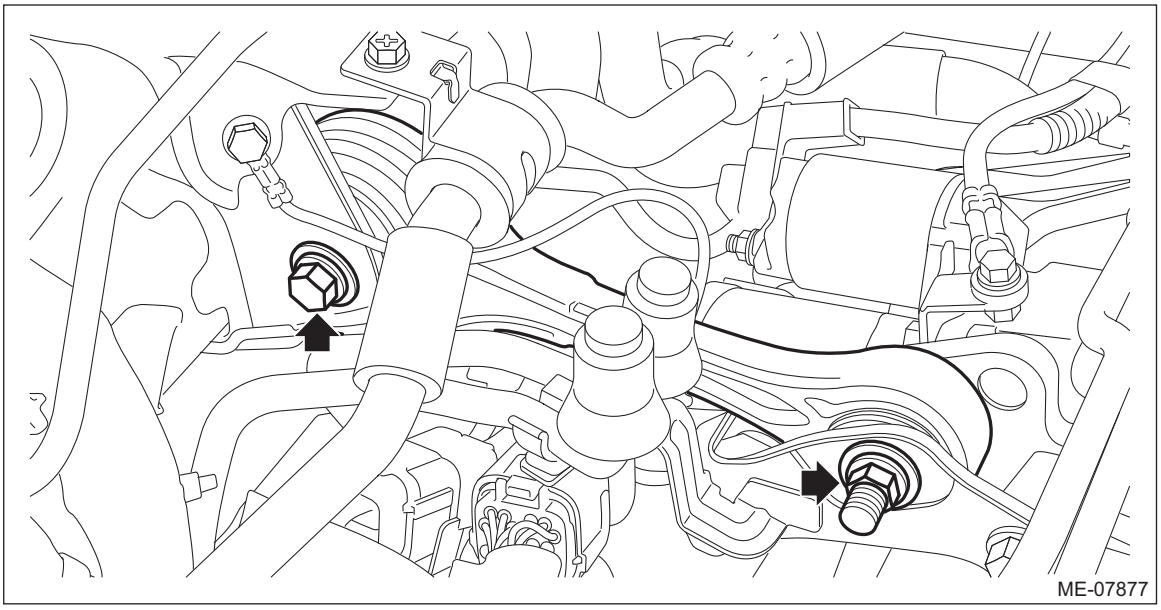
12) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
13) Disconnect the preheater hose (A) and the heater outlet hose (B) from the water pipe assembly LH.



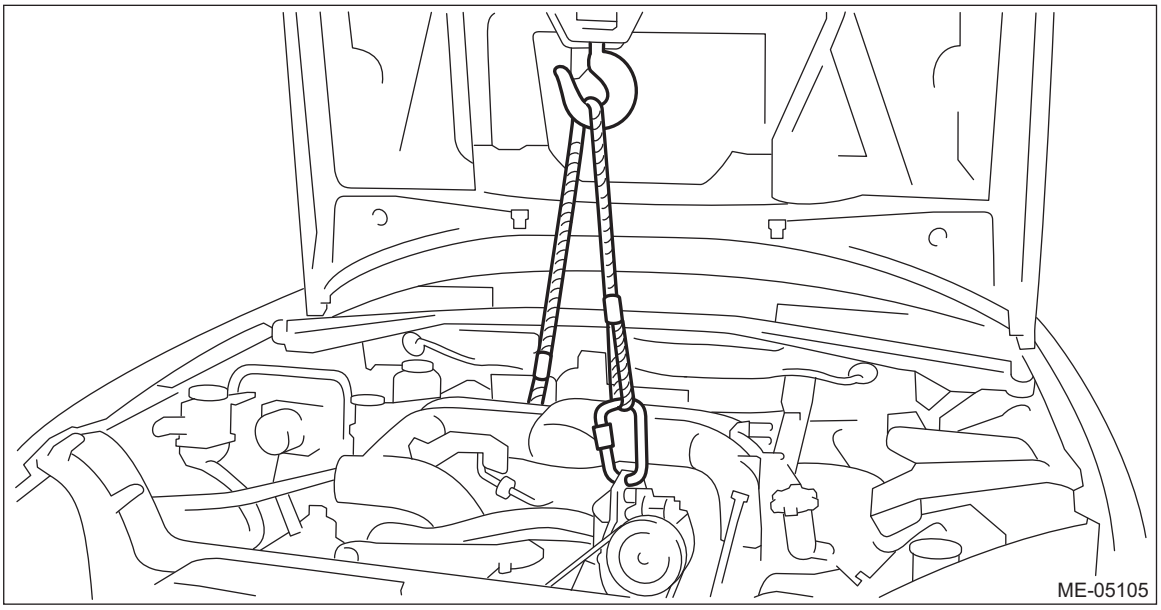
14) Remove the bolt which holds the water pipe assembly LH from the cylinder head LH.



15) Remove the pitching stopper.



16) Support the engine with a lifting device and wire ropes.

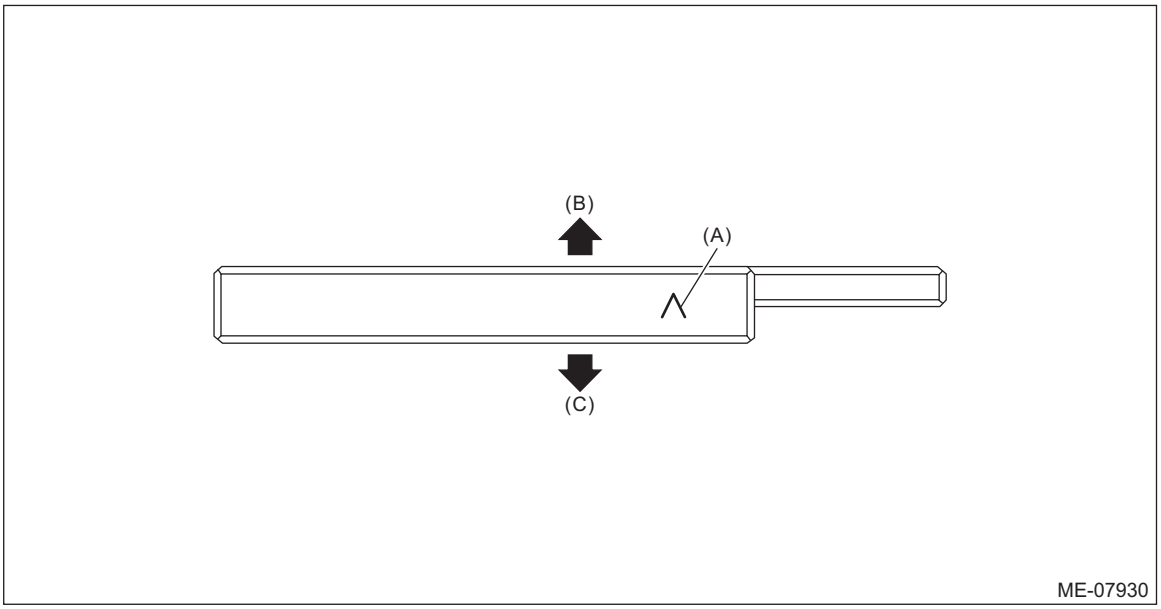


17) Set the cushioning material such as a waste cloth between pitching stopper bracket and transmission case cover. (CVT model)

NOTE:
- This operation is required to prevent damage to the transmission case cover.
- Make sure that the height of cushioning material does not become 15 — 20 mm (0.6 — 0.8 in) or less when it is crushed.

18) While gradually lifting up the engine, set the ST between the engine mount LH and front crossmember, and then slowly lower the engine.

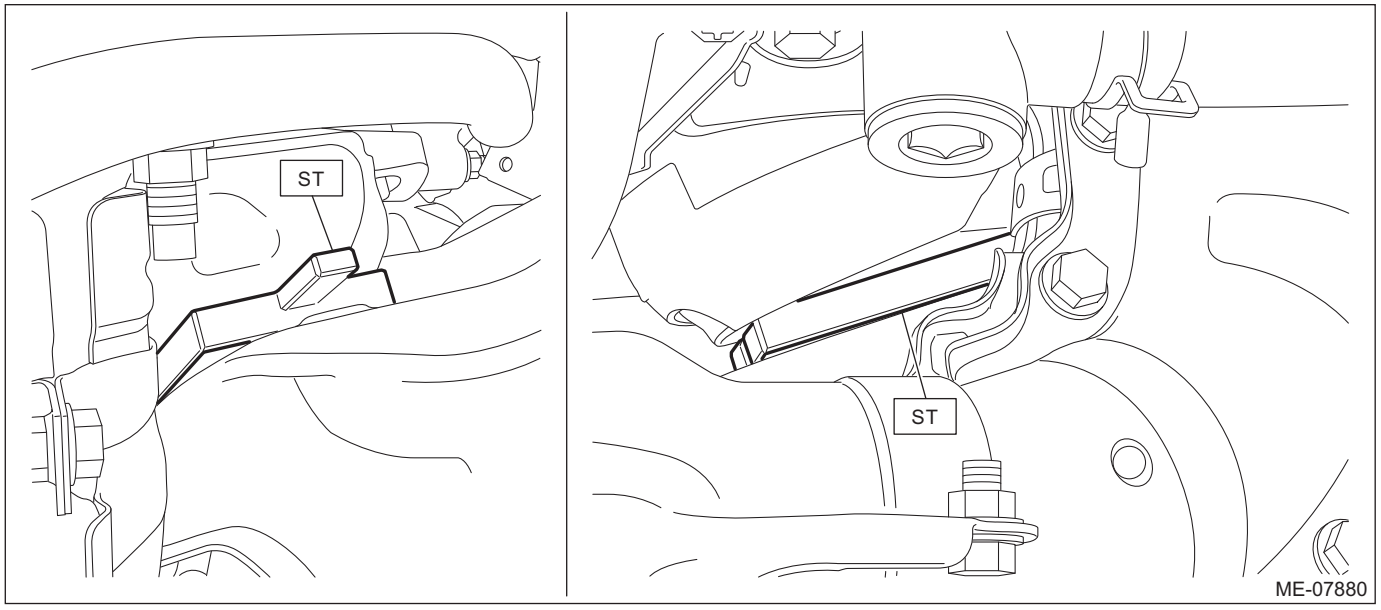
CAUTION:
- **When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.**
- **To avoid the damage, be sure to set the ST as shown in the figure.**



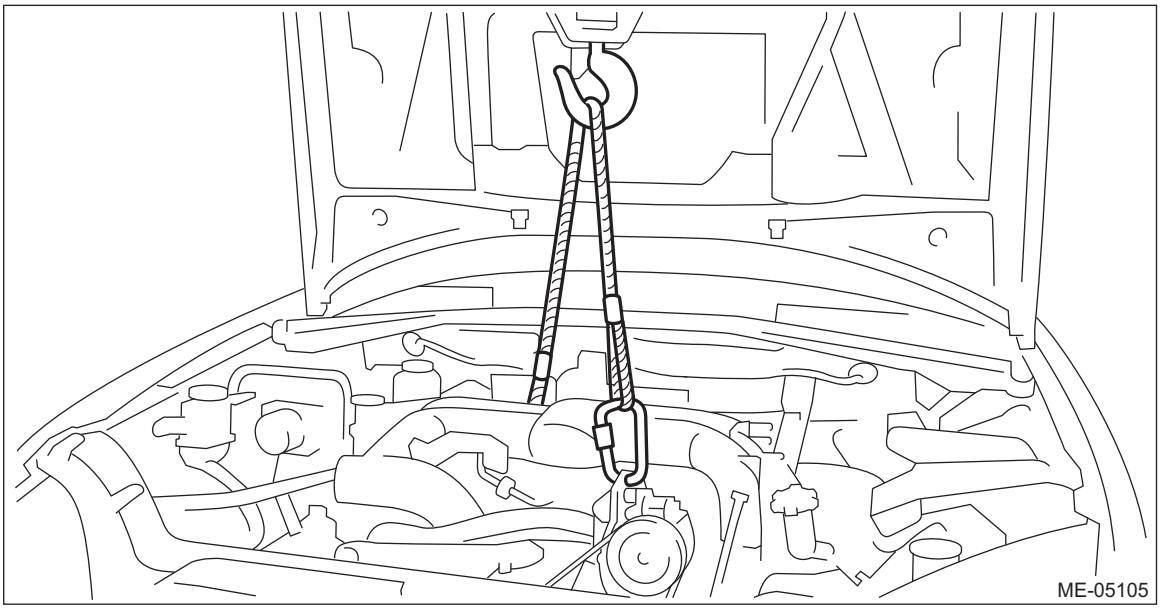
(A) Direction mark (B) Engine mounting side (C) Front crossmember side

- **After lowering the engine, check that the ST does not come off even if the engine is bounced.**

ST 18632AA030 STAND ASSY

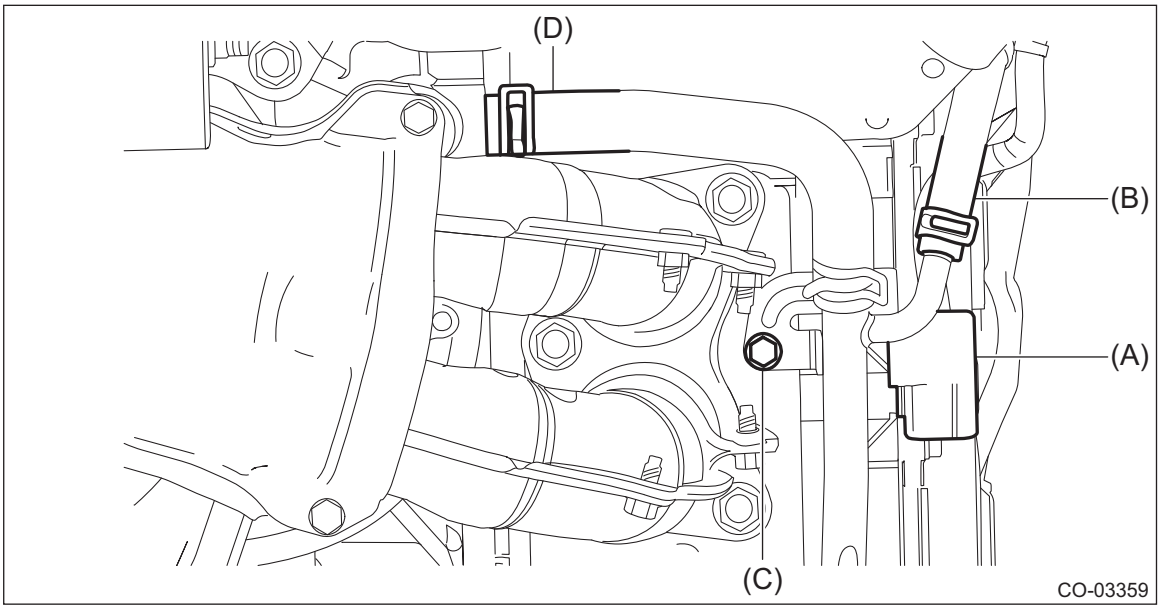


19) Remove the lifting device and wire ropes.



20) Lift up the vehicle.
21) Remove the rear oxygen sensor connector (A) from the water pipe assembly LH.
22) Disconnect the side engine oil cooler hose B (B) from the water pipe assembly LH.
23) Remove the bolt (C) which secures the water pipe assembly LH to the cylinder head LH.

24) Disconnect the water pipe hose LH (D) from oil pan upper, and remove the water pipe assembly LH.

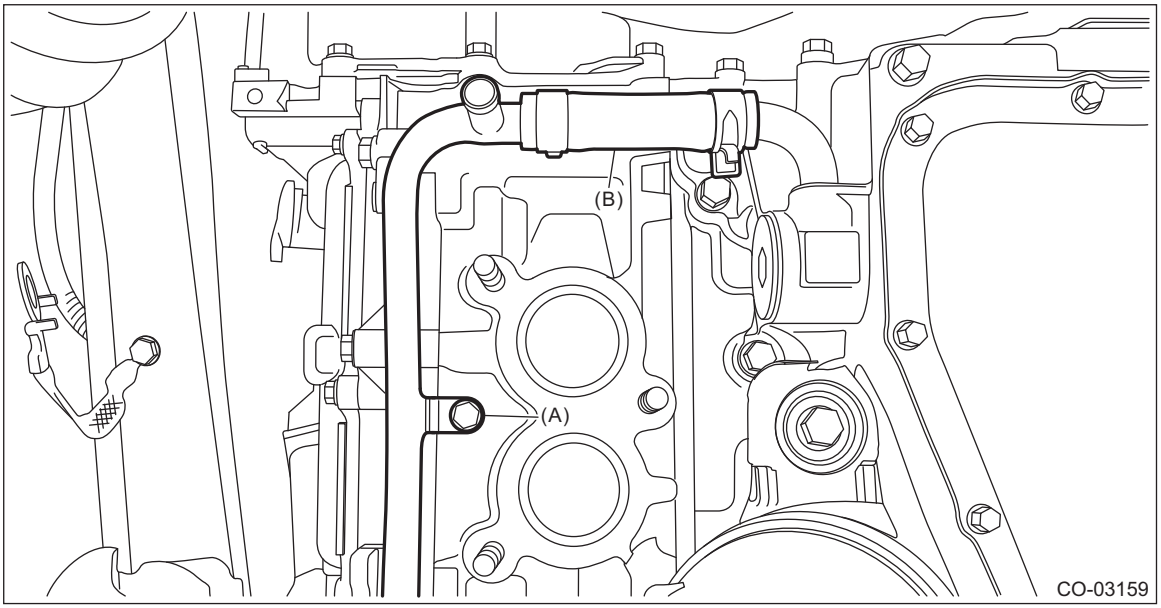


B: INSTALLATION

1. WATER PIPE ASSEMBLY RH

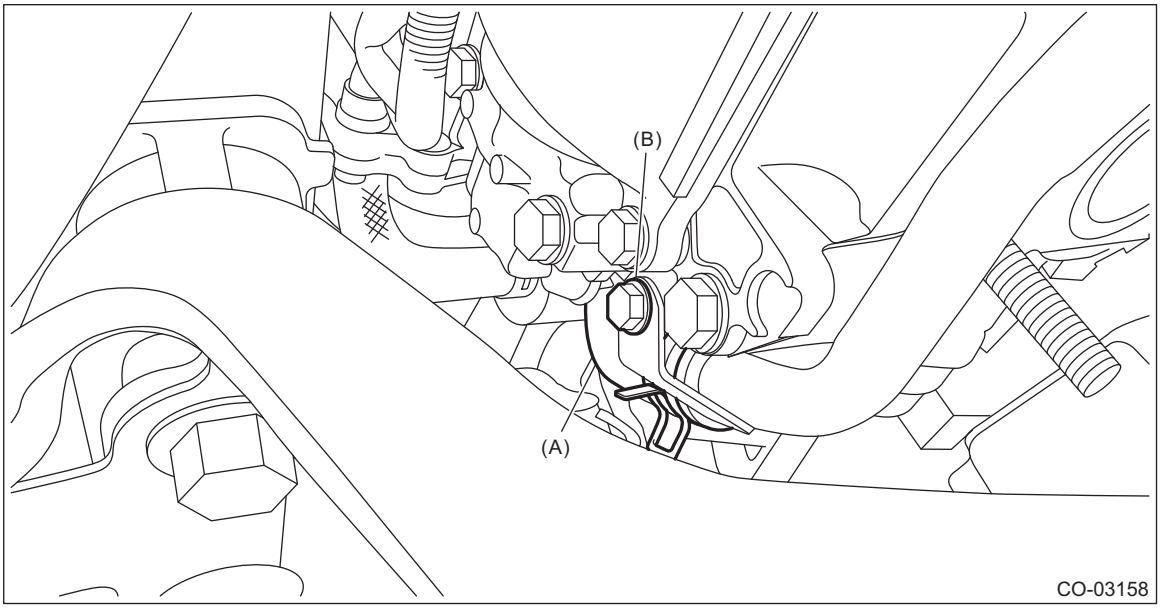
1) Set the water pipe assembly RH on the engine, and connect the water pipe hose RH (B) to the oil pan upper.
2) Install the bolt (A) which secures the water pipe assembly RH to the cylinder head RH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



3) Connect the water hose (A) to the water pipe assembly RH, and install the bolt (B) which secures the water pipe assembly RH to the cam carrier RH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



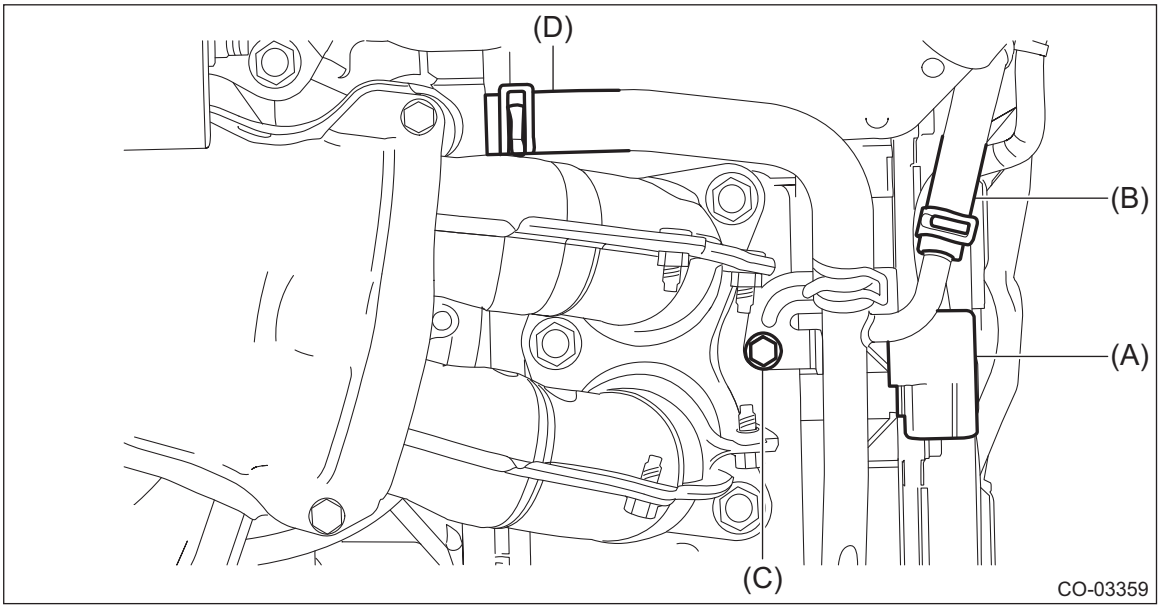
4) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>
5) Install the oil pipe assembly. <Ref. to LU(w/o STI)-44, OIL PIPE ASSEMBLY, INSTALLATION, Oil Pipe.>
6) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

2. WATER PIPE ASSEMBLY LH

1) Set the water pipe assembly LH on the engine, and connect the water pipe hose LH (D) to the oil pan upper.
2) Install the bolt (C) which secures the water pipe assembly LH to the cylinder head LH.

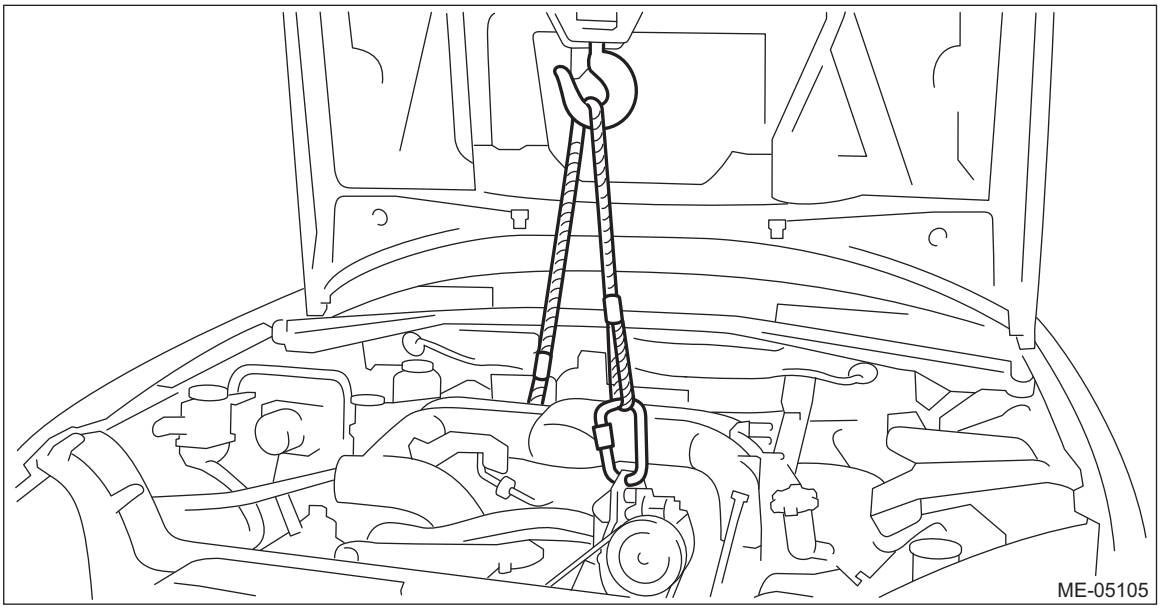
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3) Connect the side engine oil cooler hose B (B) to the water pipe assembly LH.
4) Install the rear oxygen sensor connector (A) to the water pipe assembly LH.



5) Lower the vehicle.

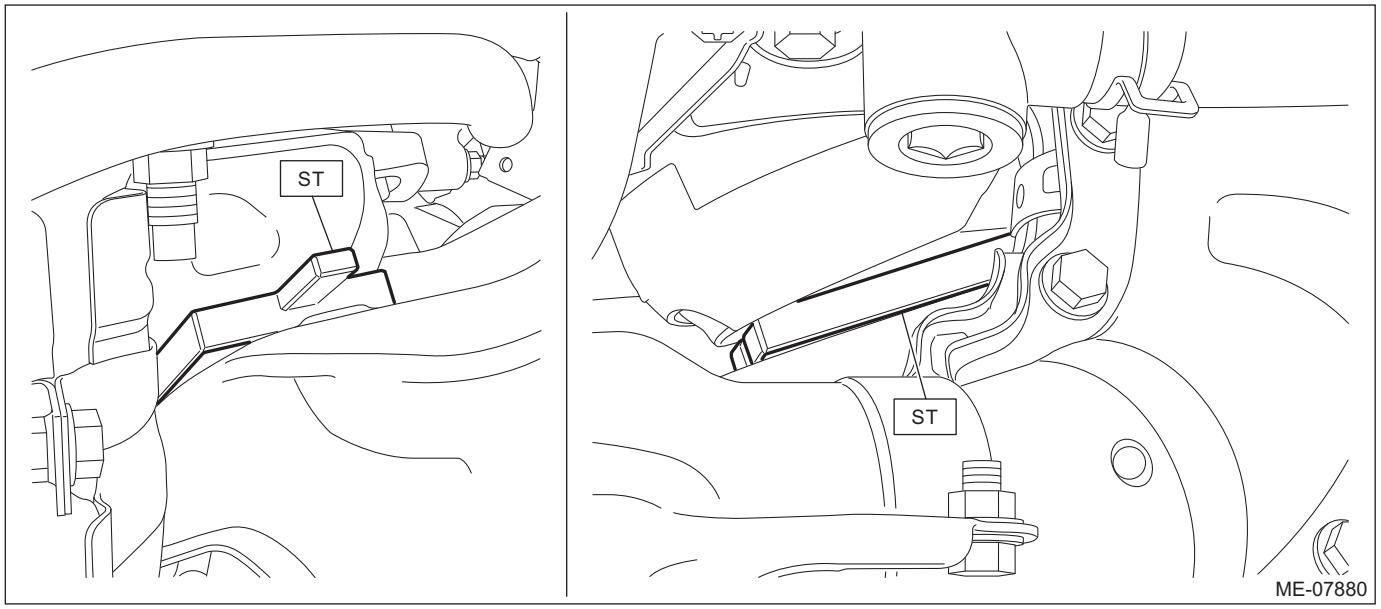
6) Support the engine with a lifting device and wire ropes.



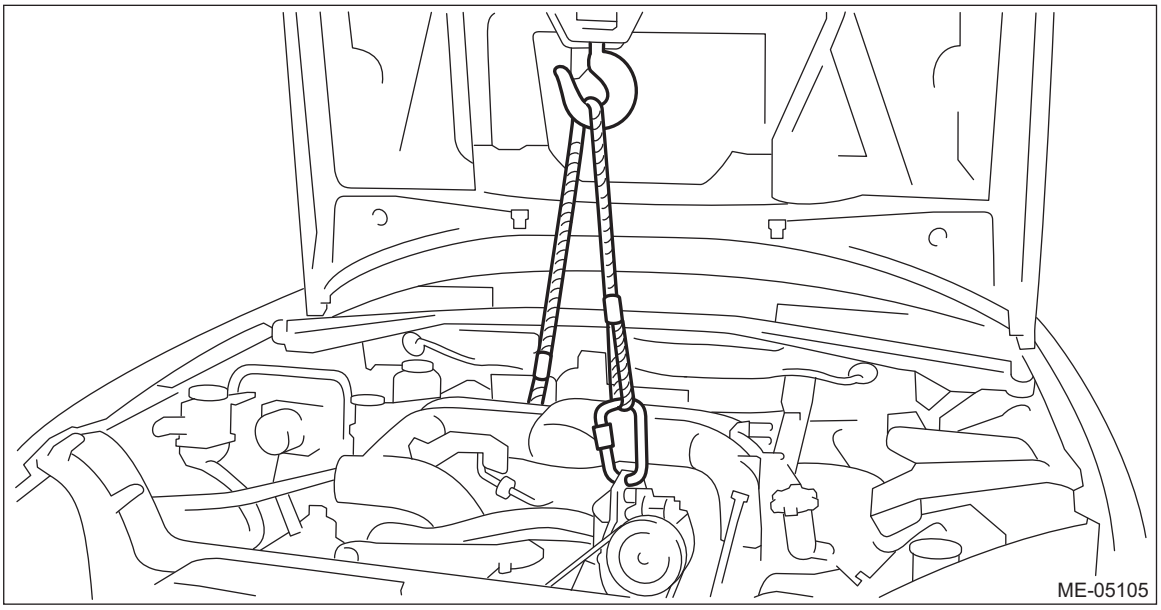
7) Lift the engine a little, and remove the ST.

CAUTION:
When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

ST 18632AA030 STAND ASSY

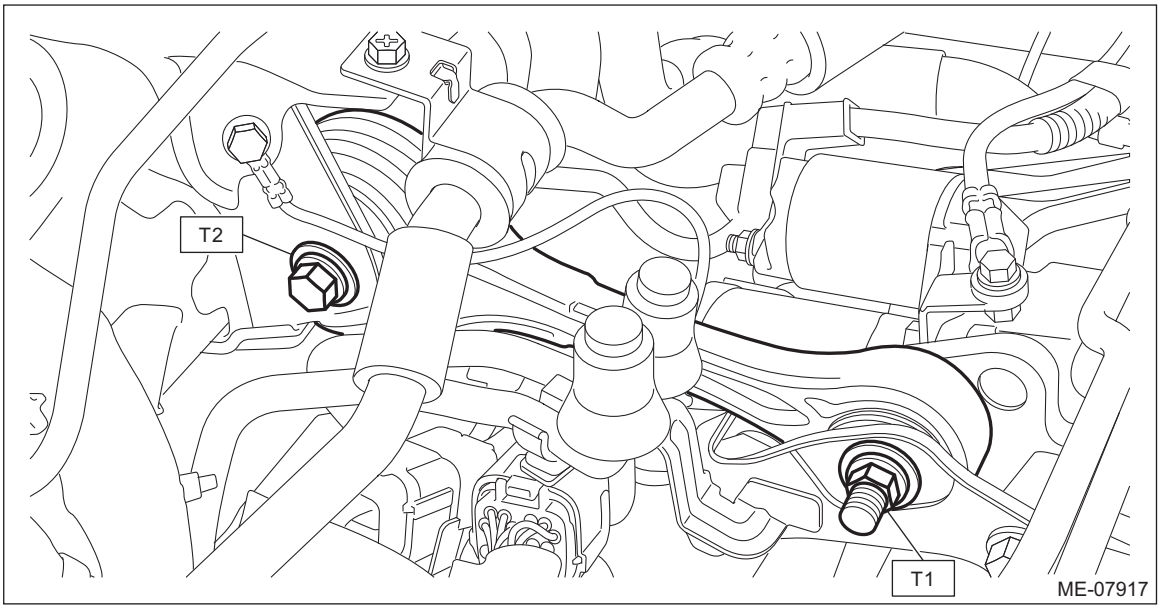


8) Lower the engine and remove the lifting device and wire ropes.

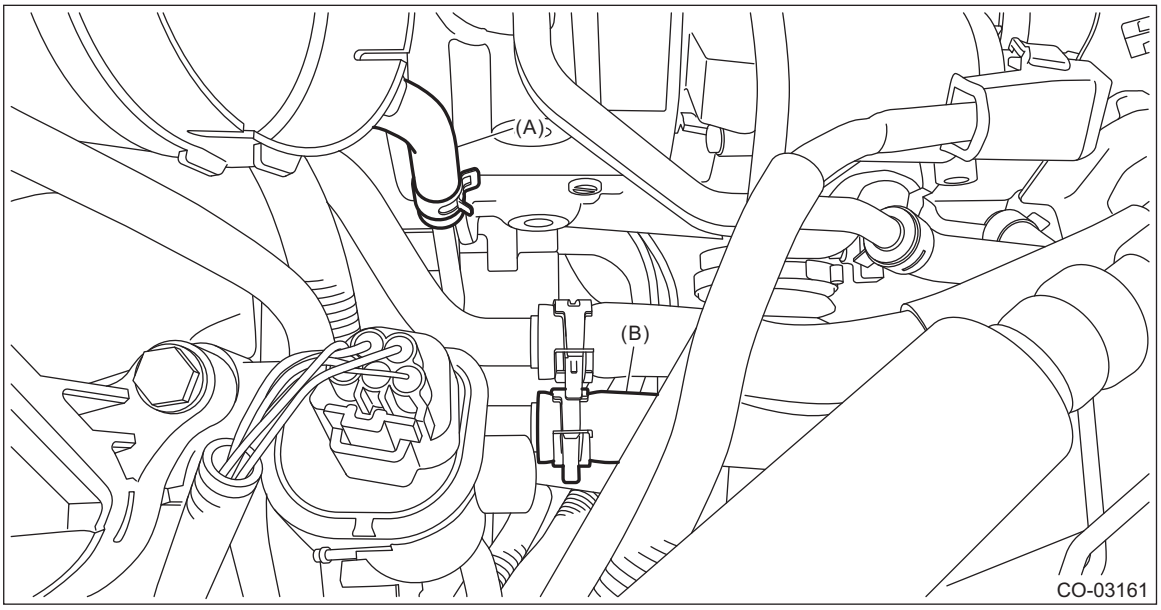


9) Remove the cushioning material between pitching stopper bracket and transmission case cover. (CVT model)
10) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

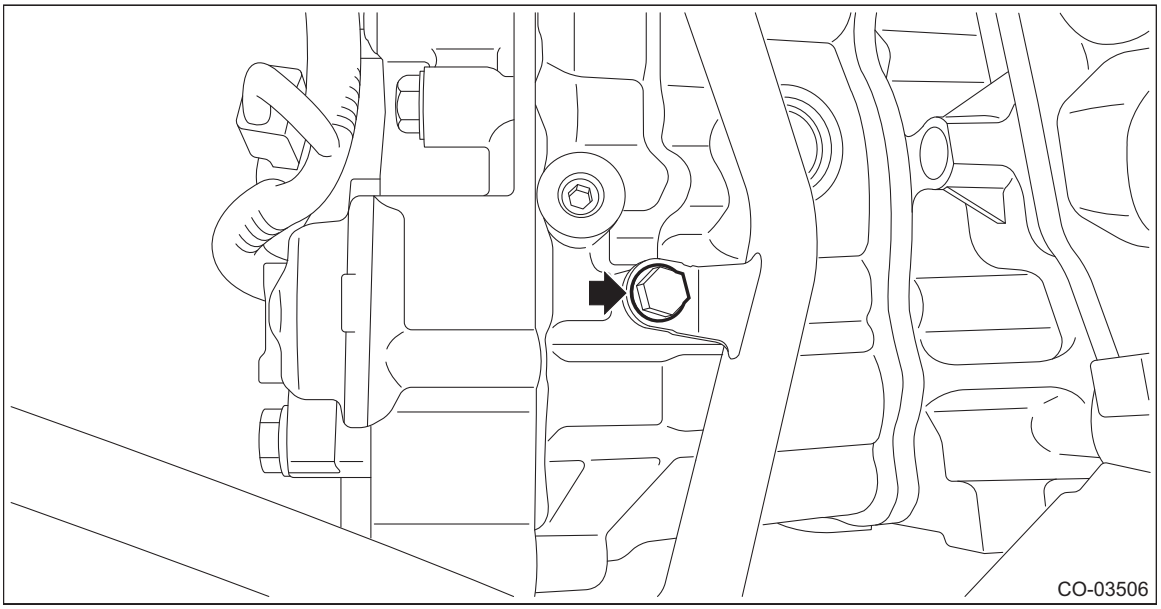


11) Connect the preheater hose (A) and the heater outlet hose (B) to the water pipe assembly LH.



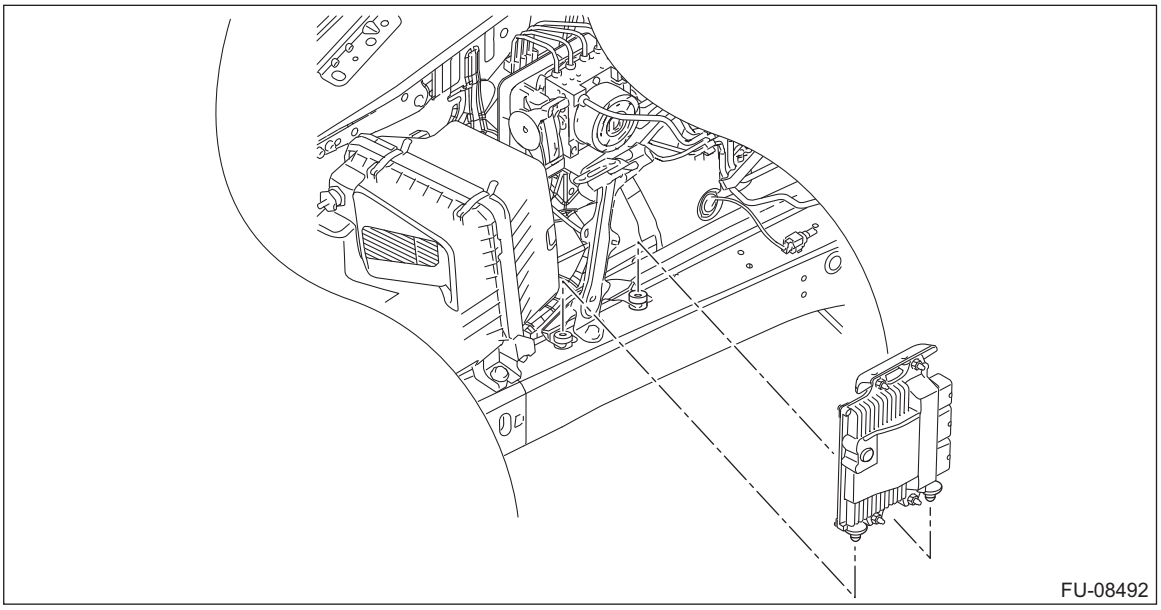
12) Install the bolt which secures the water pipe assembly LH to the cylinder head LH.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



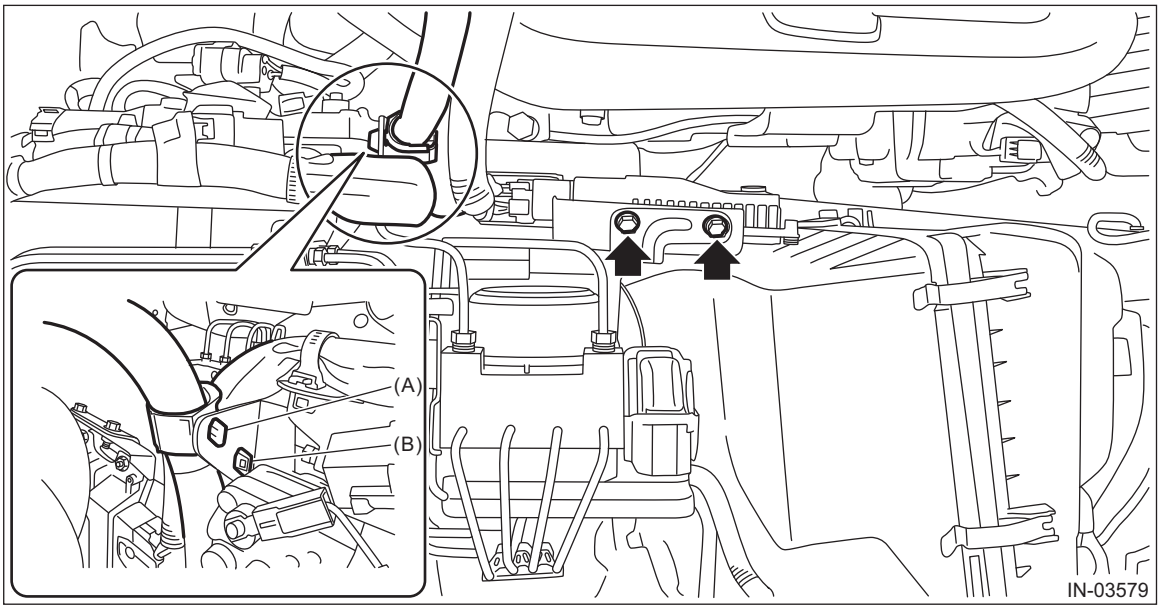
13) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>

14) Insert the engine control module (ECM) to the bracket.



15) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

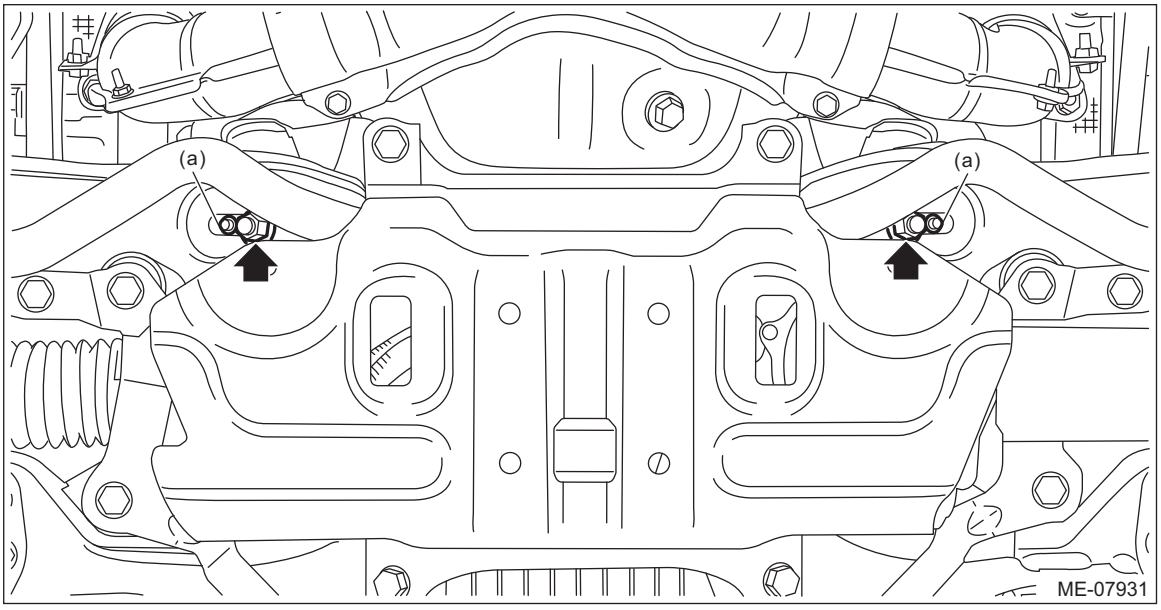
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



16) Lift up the vehicle.
17) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
- Use a new nut.
- Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



18) Install the center exhaust pipe. <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
19) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
20) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
21) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
22) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
23) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
24) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
25) Close the front hood.

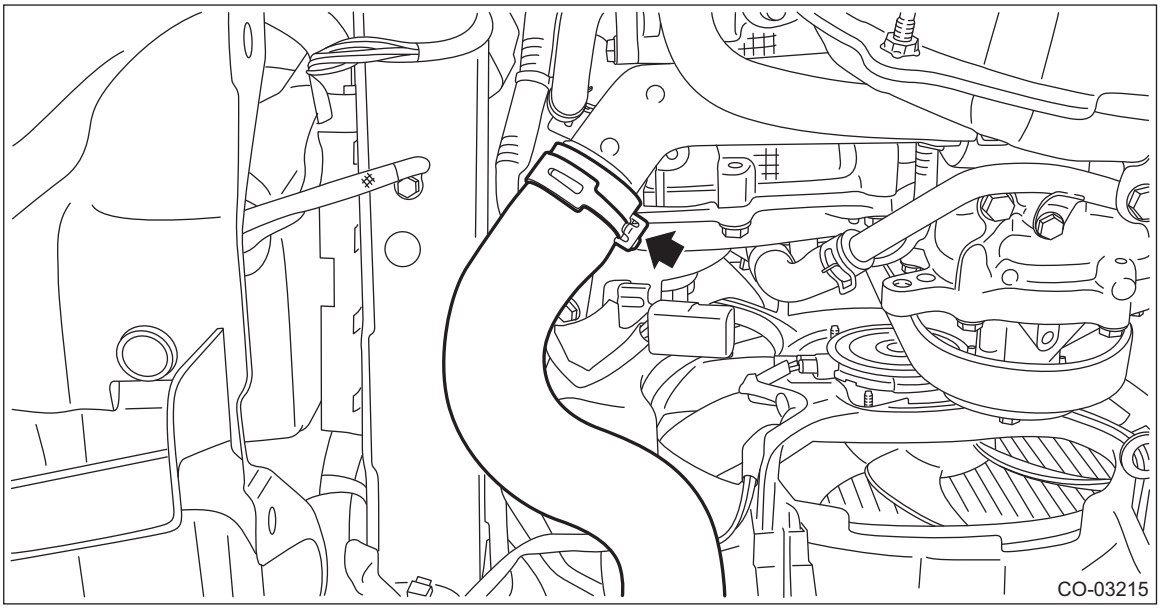
C: INSPECTION

1) Check that the water pipe assembly has no deformation, cracks or other damages.
2) Check that the hose has no cracks, damage or loose part.

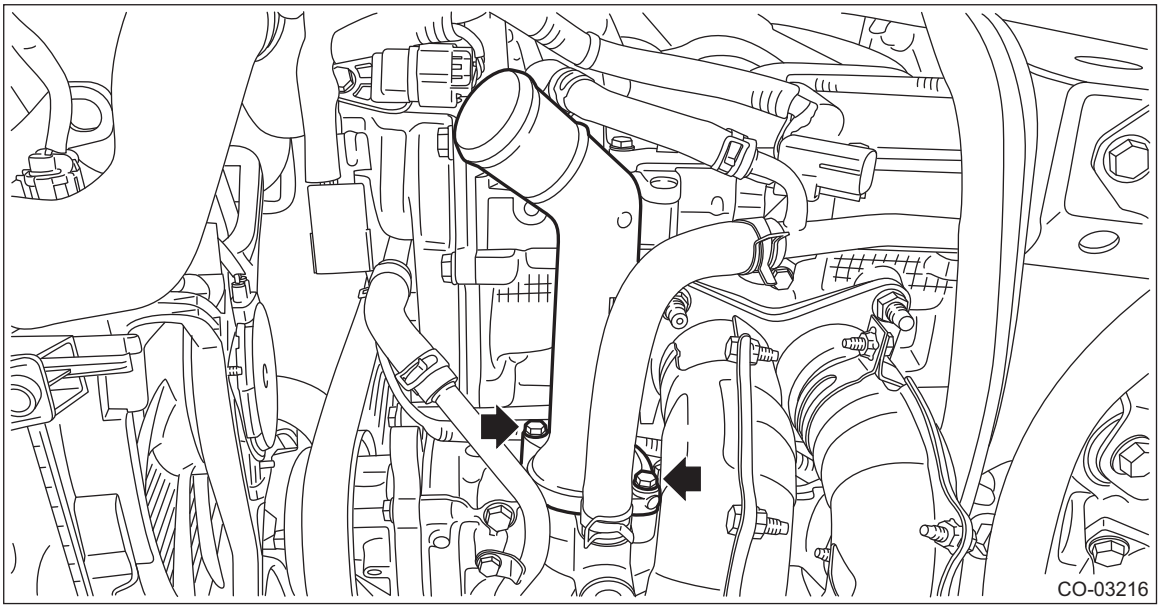
6. Thermostat

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
3) Remove the center exhaust pipe. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
4) Disconnect the radiator outlet hose from thermostat cover.



5) Remove the thermostat cover, and then remove the thermostat.



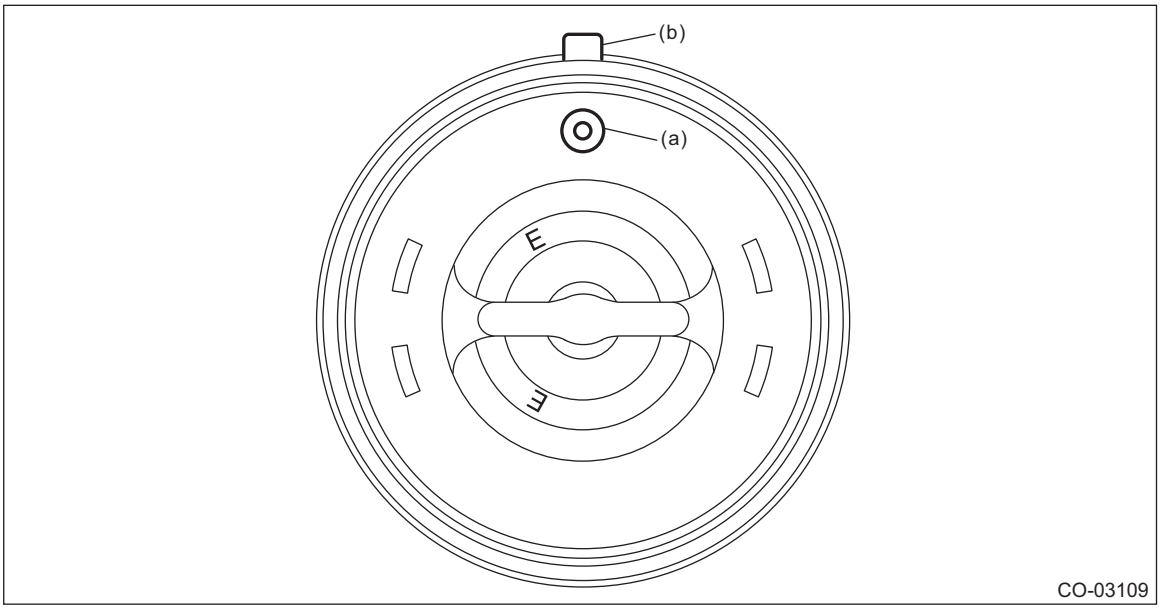
6) Remove the gasket from thermostat.

B: INSTALLATION

1) Install a gasket to thermostat.

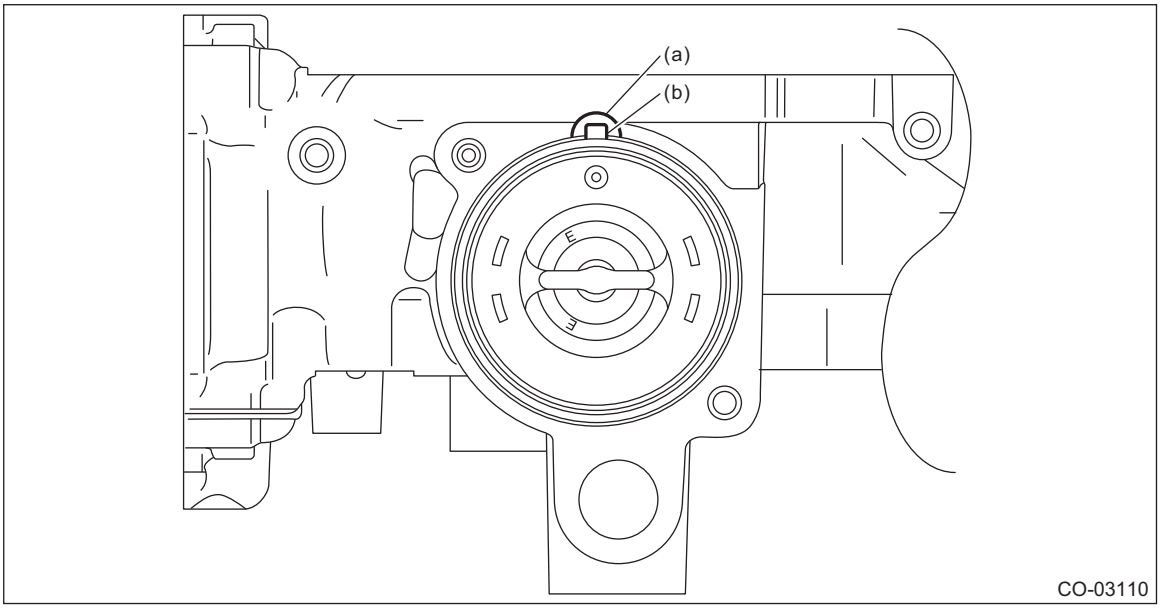
NOTE:
- Use a new gasket.

- Align the positions of the jig pin (a) and gasket ribs (b).

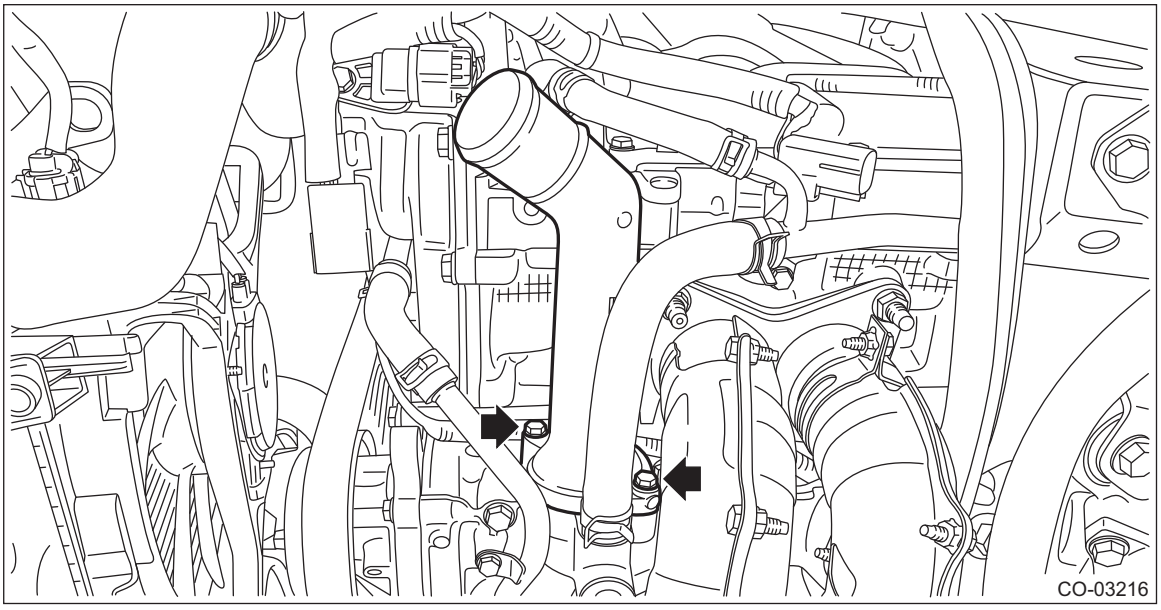


2) Install the thermostat and thermostat cover.

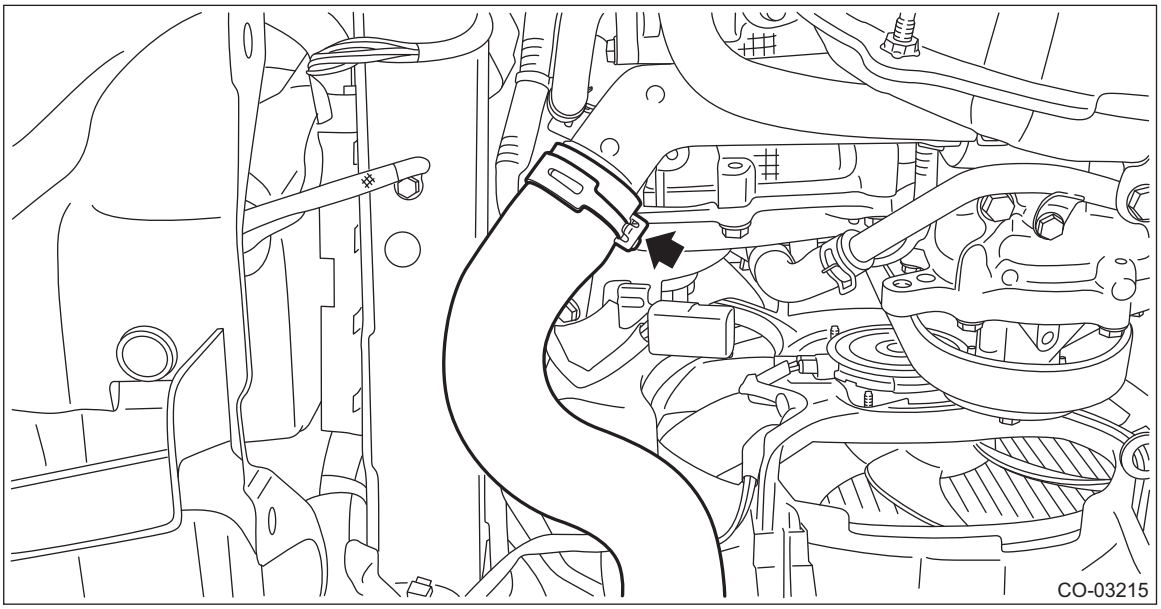
NOTE:
Align the oil pan upper cutout (a) with the position of the thermostat rib (b).



Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



3) Connect the radiator outlet hose to thermostat cover.



4) Install the center exhaust pipe. <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
5) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
6) Lower the vehicle.
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

1) Check that the thermostat does not have deformation, cracks or damage.
2) Check that the thermostat valve closes completely at an ambient temperature.
3) Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and check the temperature and valve lift when the valve begins to open and when the valve is fully opened. Replace the thermostat if faulty.

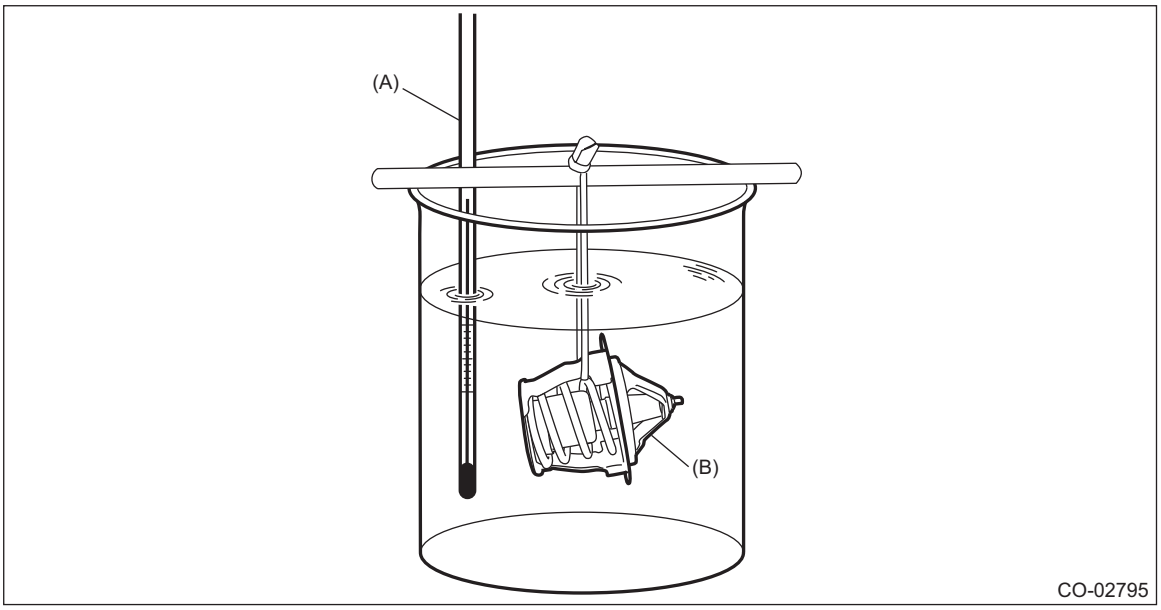
NOTE:
- During the test, agitate the water for even temperature distribution.

- Leave the thermostat in the boiling water for five minutes or more before measuring the valve lift.
- Hold the thermostat with a wire or the like to avoid contacting with container bottom.

Starting temperature to open:
86 — 90°C (187 — 194°F)

Full open temperature:
95°C (203°F)

Total valve lift:
8.0 mm (0.315 in) or more



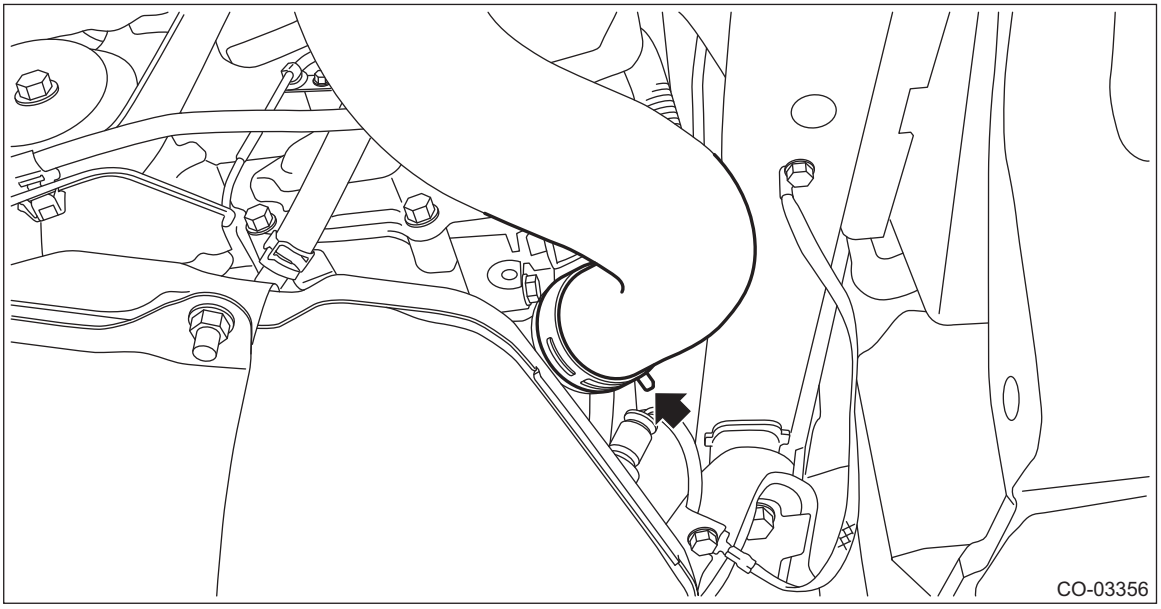
(A) Thermometer (B) Thermostat

7. Radiator

A: REMOVAL

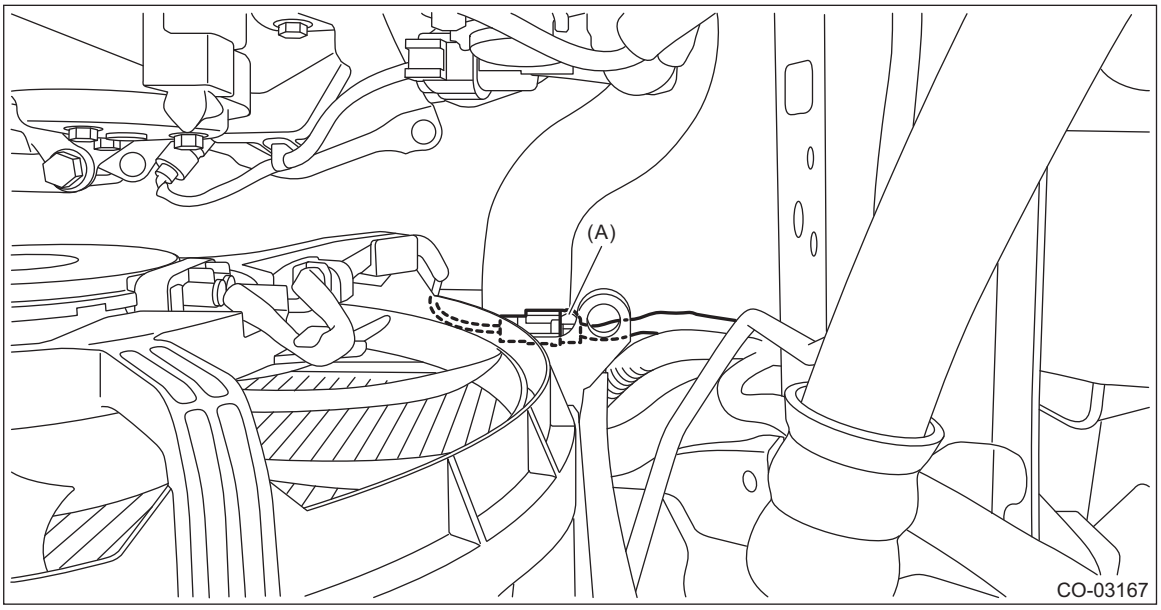
CAUTION:
The radiator is pressurized when the engine and radiator are hot. Wait until engine and radiator cool down before working on the radiator.

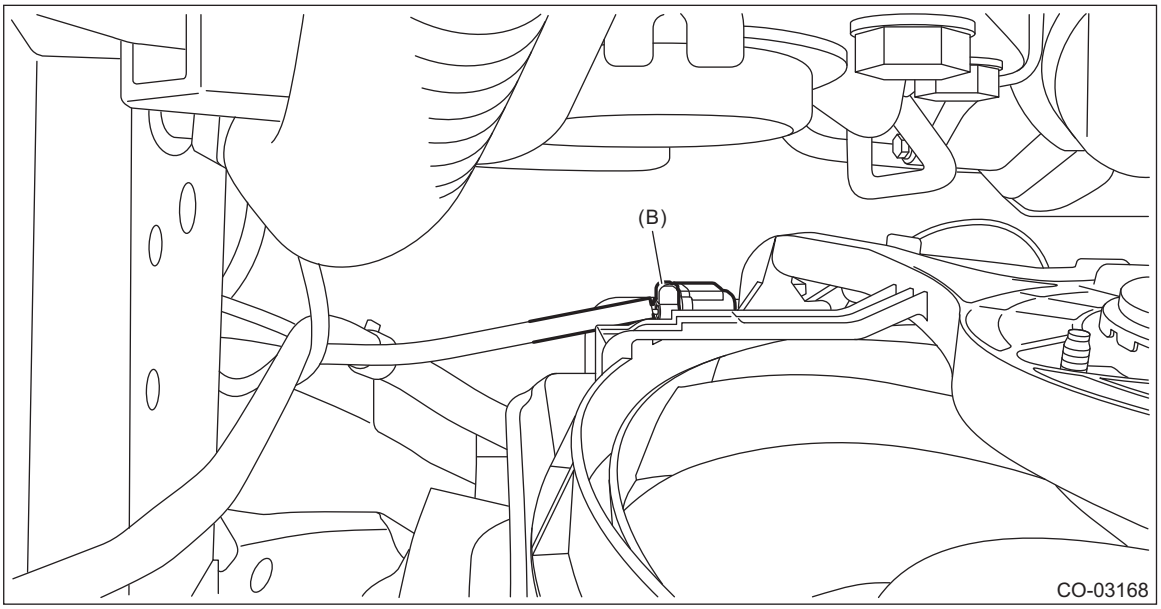
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Remove the reservoir tank. <Ref. to CO(w/o STI)-53, REMOVAL, Reservoir Tank.>
4) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Disconnect the radiator outlet hose from thermostat cover.



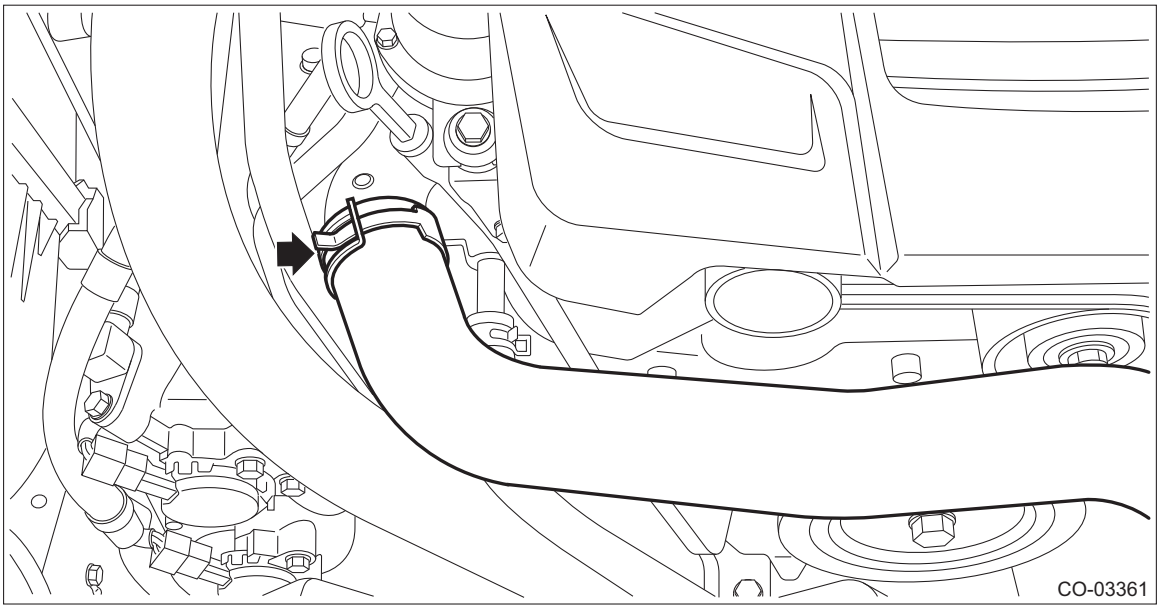
6) Lower the vehicle.

7) Disconnect the connector (A) from the main fan motor and the connector (B) from the sub fan motor.

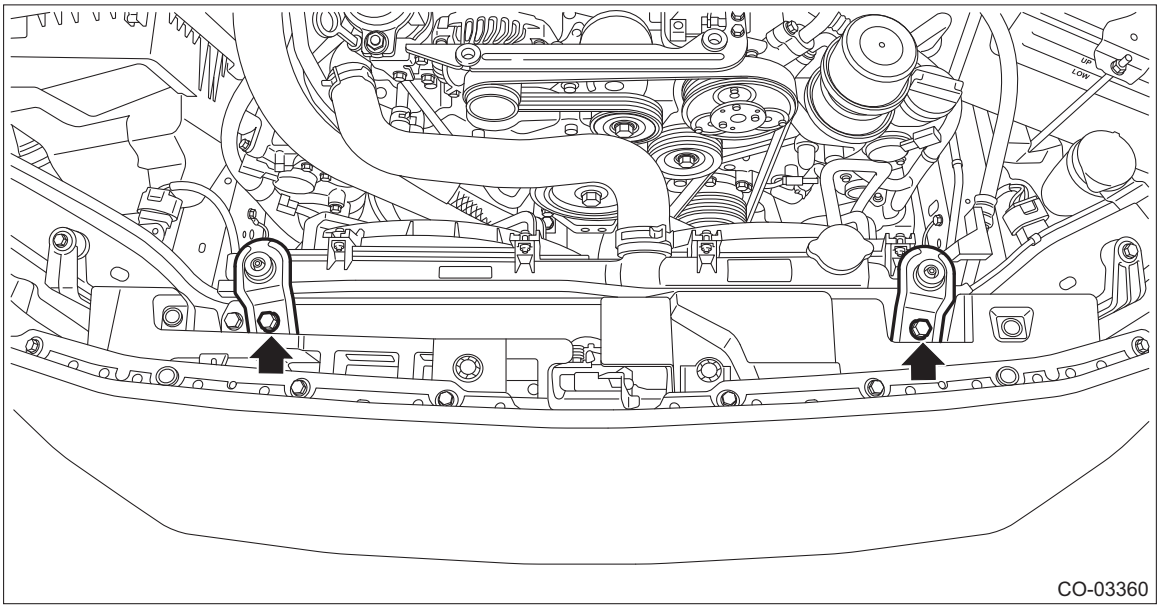




8) Disconnect the radiator inlet hose from the water tank pipe assembly.

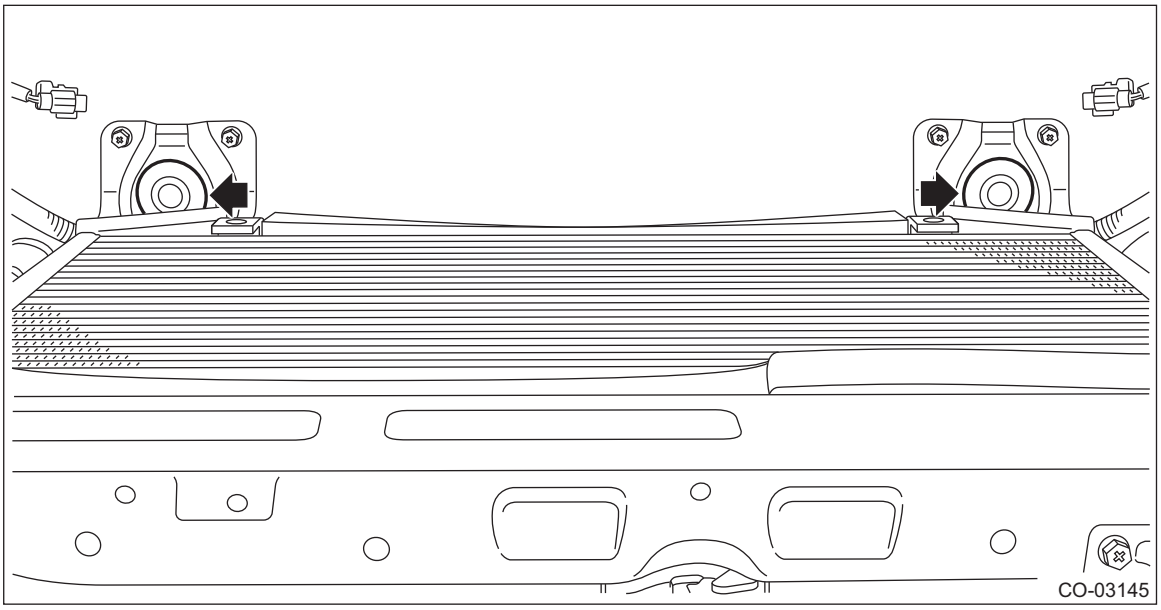


9) Remove the radiator upper brackets.



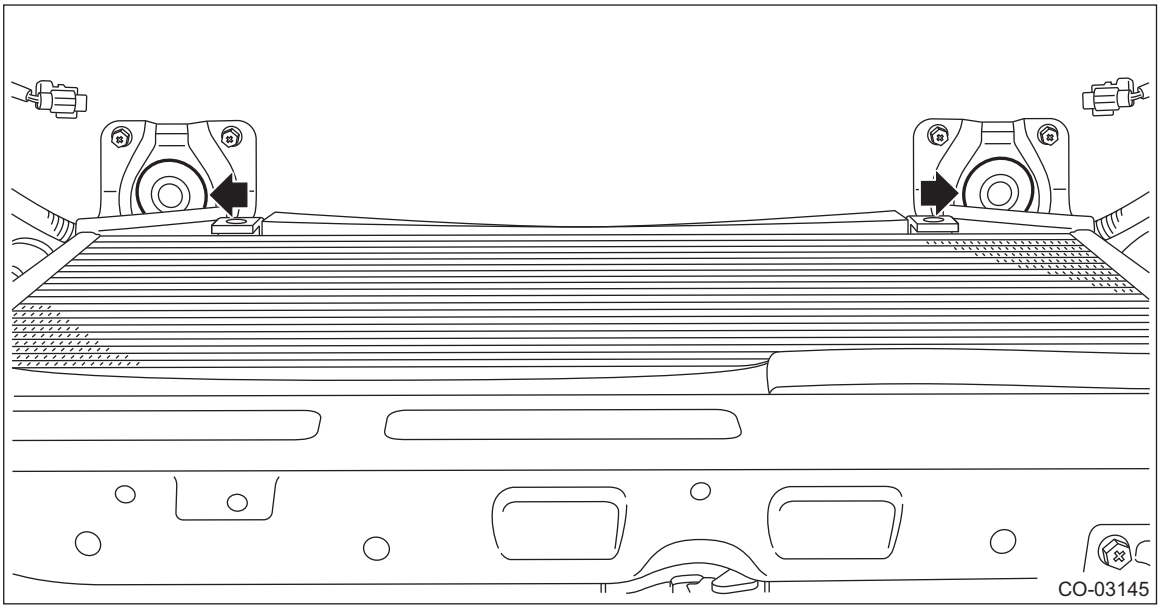
10) Remove the radiator from vehicle.

11) Remove the radiator lower cushion from the radiator lower bracket.



B: INSTALLATION

1) Attach the radiator lower cushion to the radiator lower bracket.

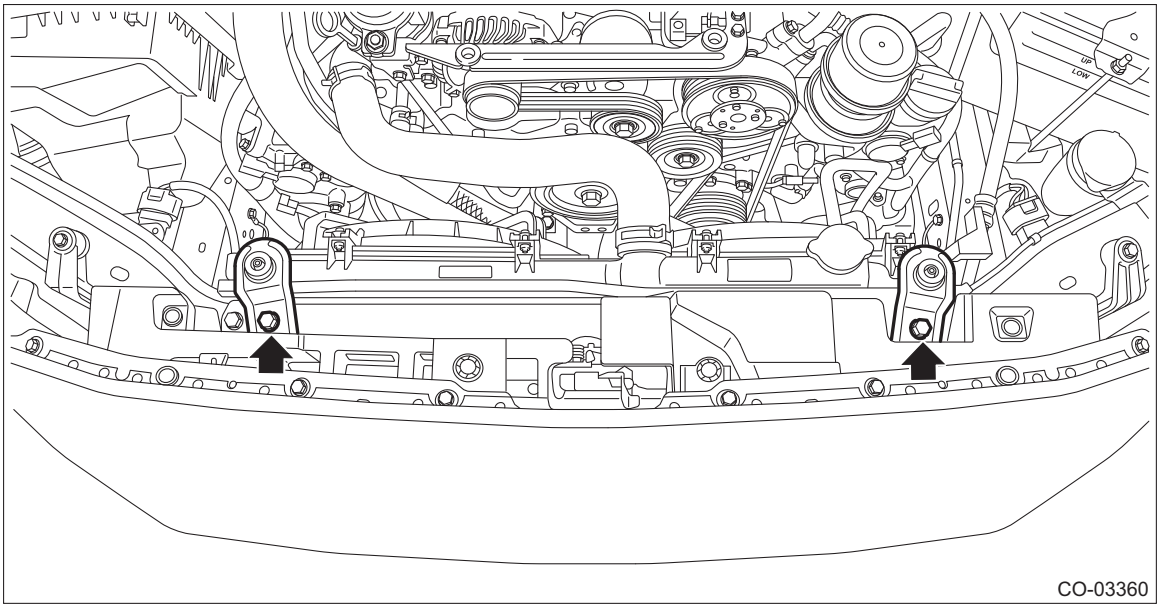


2) Install the radiator to vehicle.

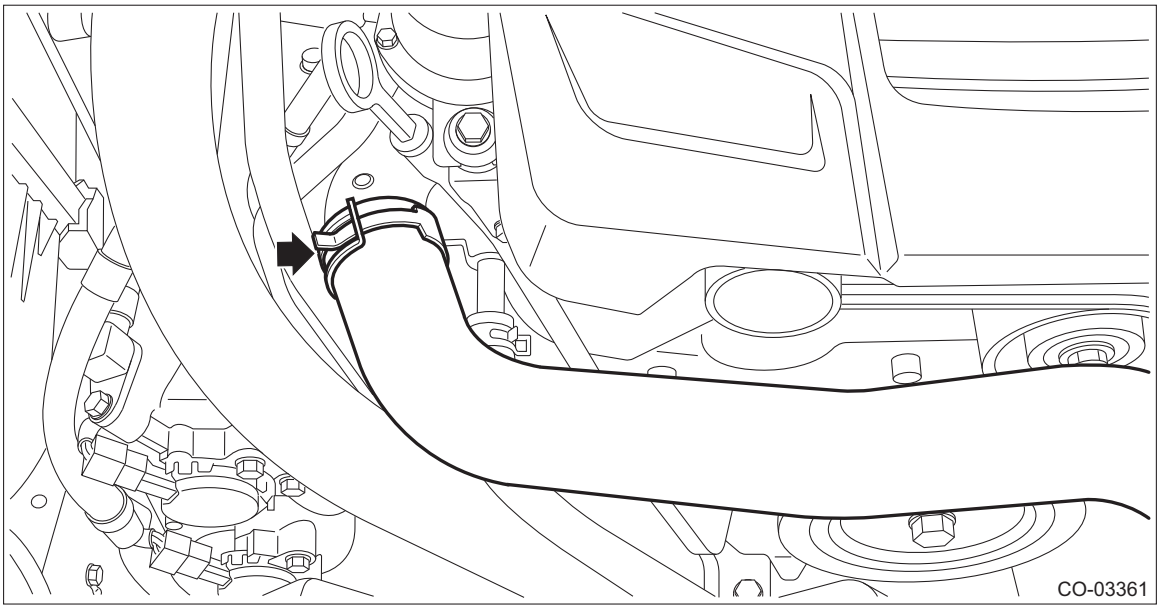
NOTE:
Make pins on the lower side of radiator be fitted into the radiator lower cushions.

3) Install the radiator upper brackets.

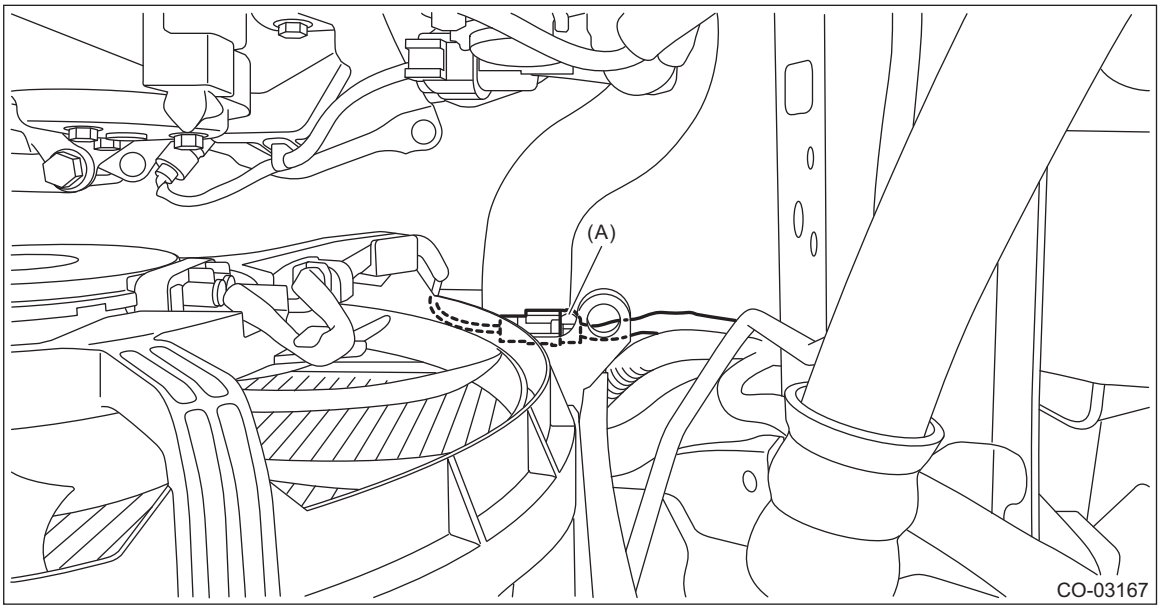
Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)

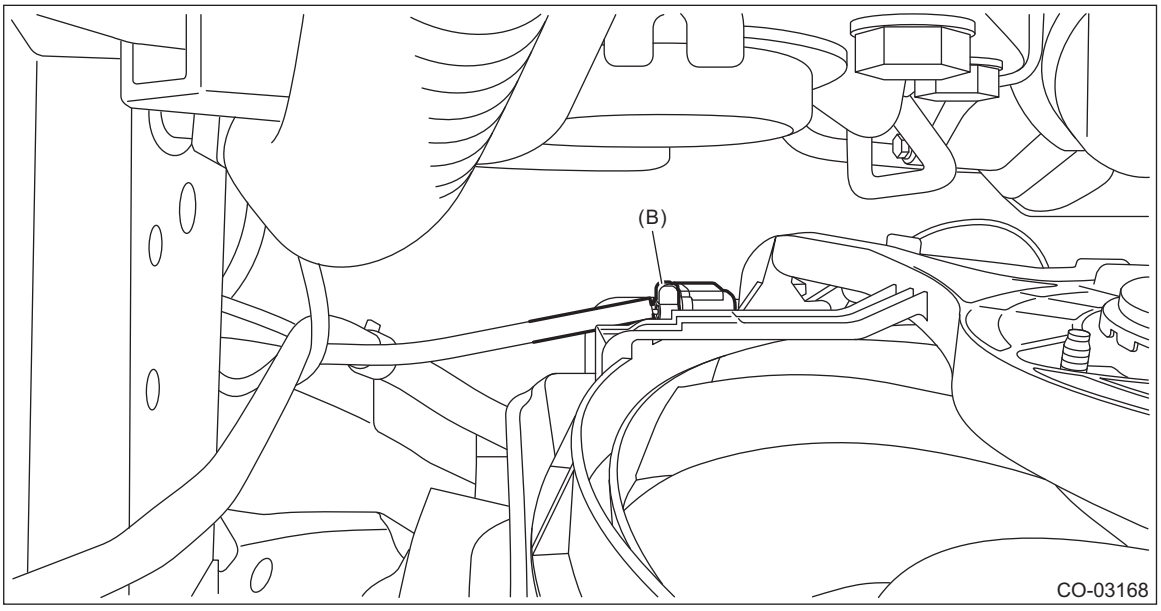


4) Connect the radiator inlet hose to the water tank pipe assembly.



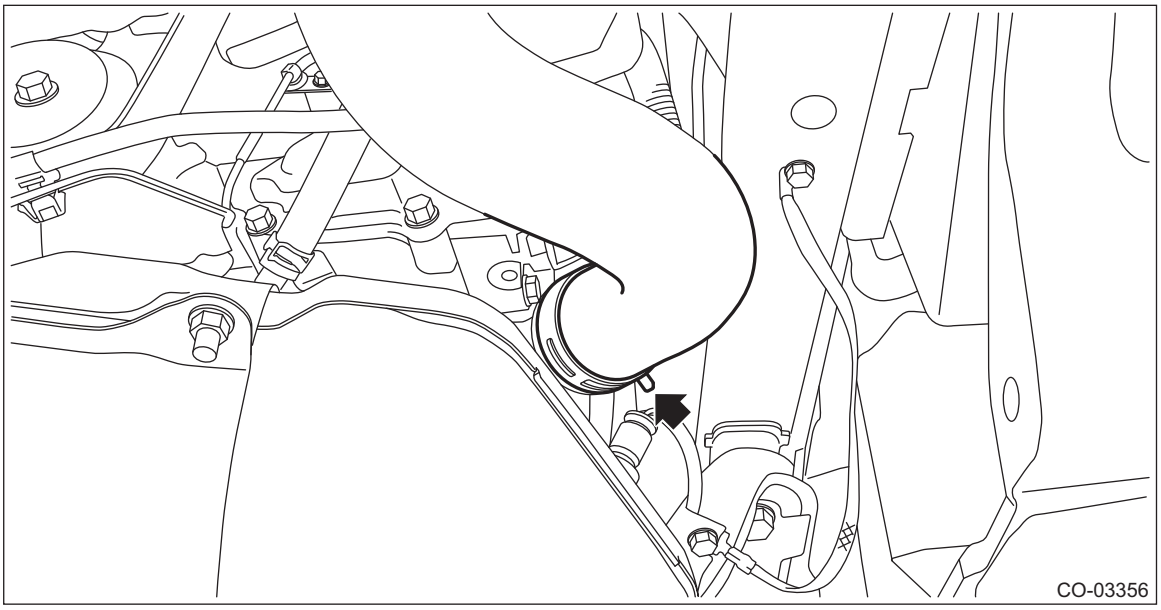
5) Connect the connector (A) to the main fan motor and the connector (B) to the sub fan motor.





6) Lift up the vehicle.

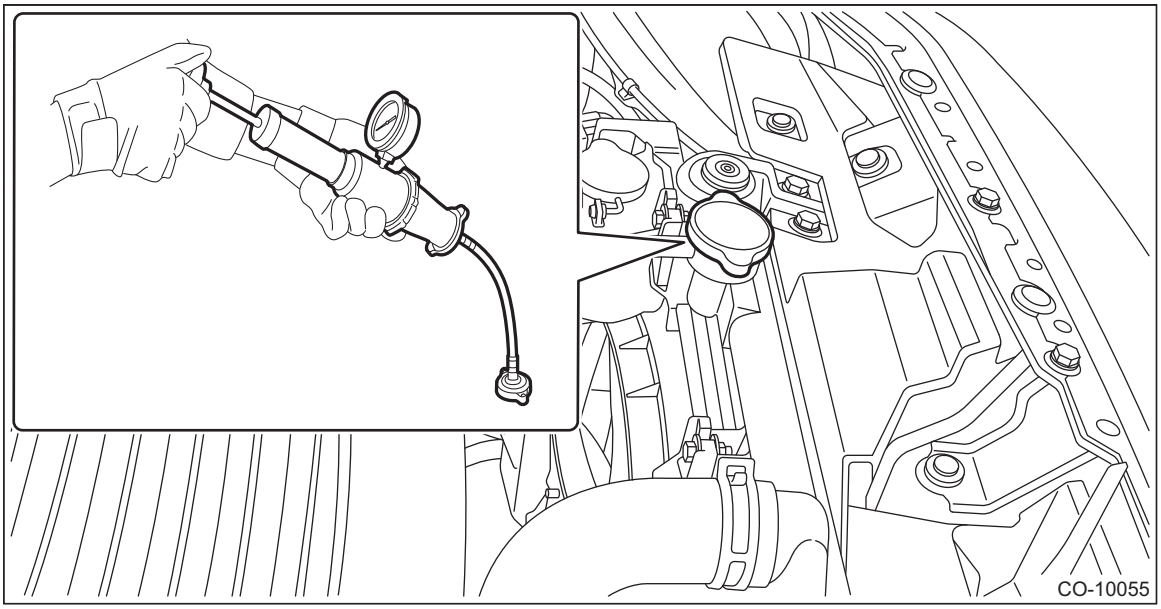
7) Connect the radiator outlet hose to thermostat cover.



8) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
9) Lower the vehicle.
10) Install the reservoir tank. <Ref. to CO(w/o STI)-53, INSTALLATION, Reservoir Tank.>
11) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
12) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
13) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

1) Check that the radiator does not have deformation, cracks or damage.
2) Check that the hose has no cracks, damage or loose part.
3) Remove the radiator cap, fill the radiator with engine coolant, and then install the radiator cap tester to the filler neck of radiator.



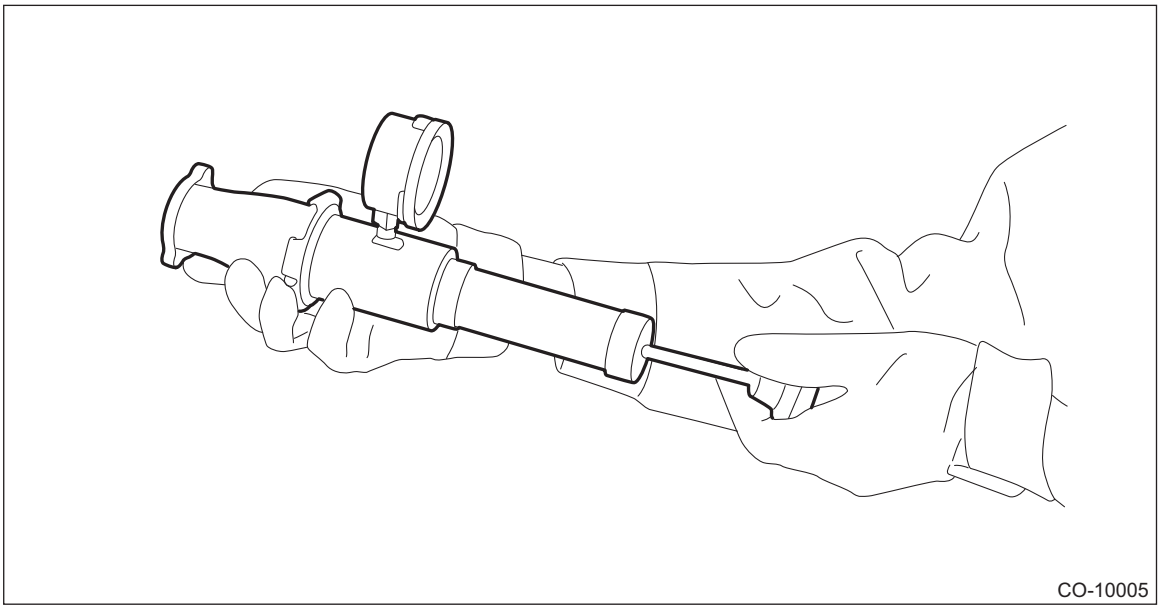
4) Apply a pressure of 157 kPa (1.6 kg/cm^2, 23 psi) to the radiator and check the following points:
- Leakage from the radiator or its vicinity
- Leakage from the hose or its connections

CAUTION:
- **Engine should be turned off.**
- **Clean the check points.**
- **Be careful not to deform the filler neck of radiator when installing and removing the radiator cap tester.**
- **Be careful of engine coolant from spurting out when removing the radiator cap tester.**

8. Radiator Cap

A: INSPECTION

1) Check that the radiator cap does not have deformation, cracks or damage.
2) Attach the radiator cap tester to radiator cap.



3) Increase pressure until the radiator cap tester gauge needle stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 — 6 seconds. Replace the radiator cap if its valve opens at less than the service limit.

CAUTION:
Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.

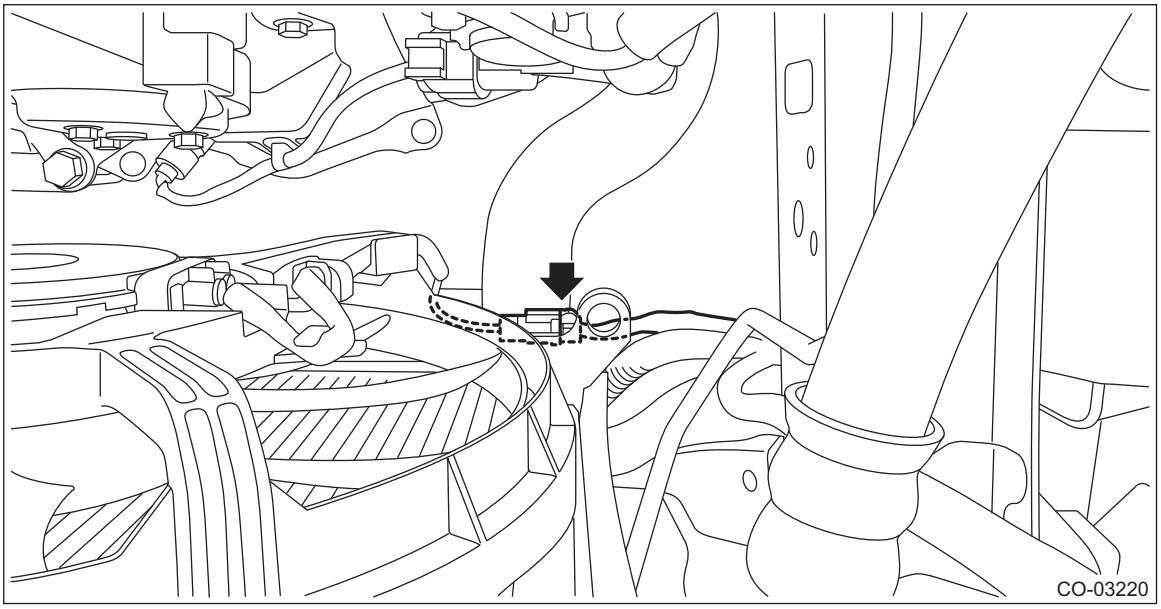
Standard:
93 — 123 kPa (0.95 — 1.25 kg/cm^2, 14 — 18 psi)

Service limit:
83 kPa (0.85 kg/cm^2, 12 psi)

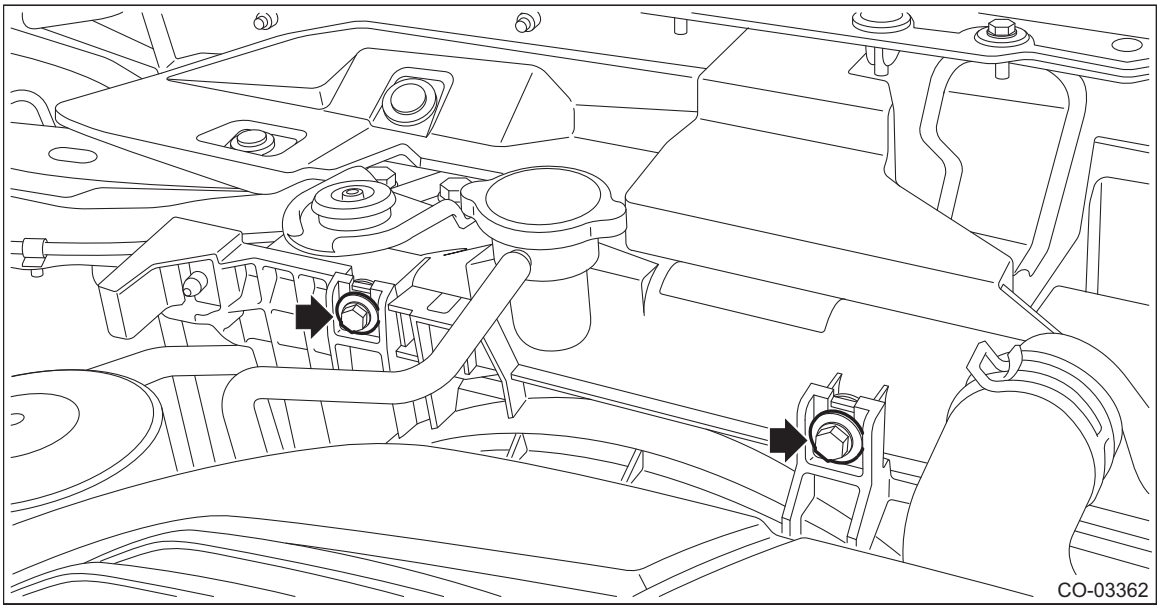
9. Radiator Main Fan and Fan Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the reservoir tank. <Ref. to CO(w/o STI)-53, REMOVAL, Reservoir Tank.>
3) Disconnect the connector from the main fan motor.



4) Remove the bolts which secure the radiator main fan motor assembly onto the radiator.



5) Remove the radiator main fan motor assembly from the vehicle.

B: INSTALLATION

Install in the reverse order of removal.

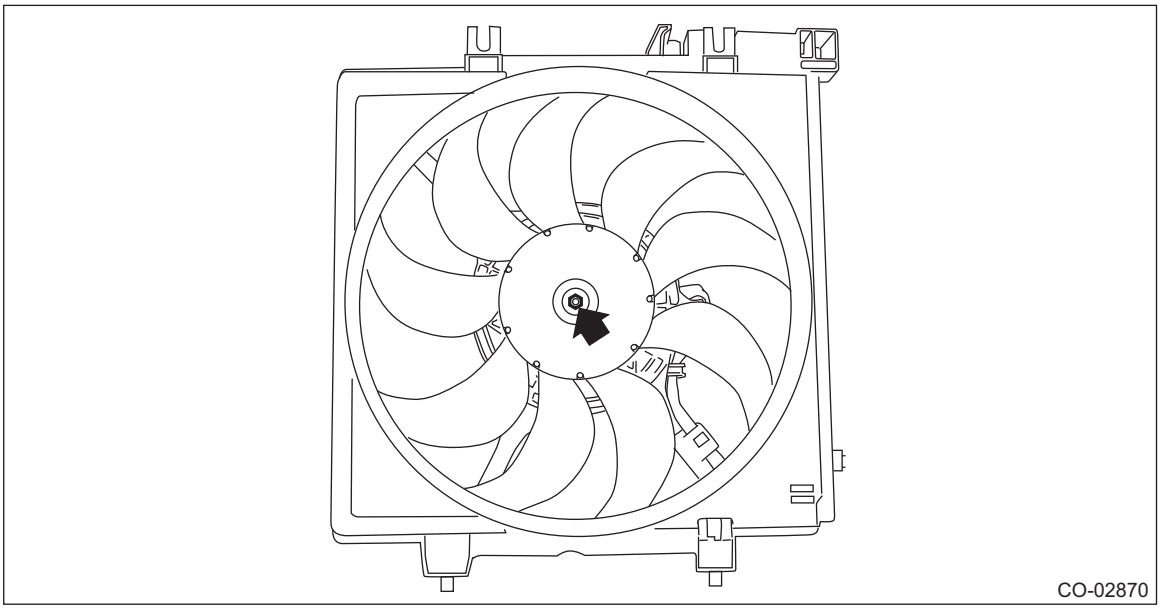
CAUTION:
Confirm that the radiator hose is securely connected.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

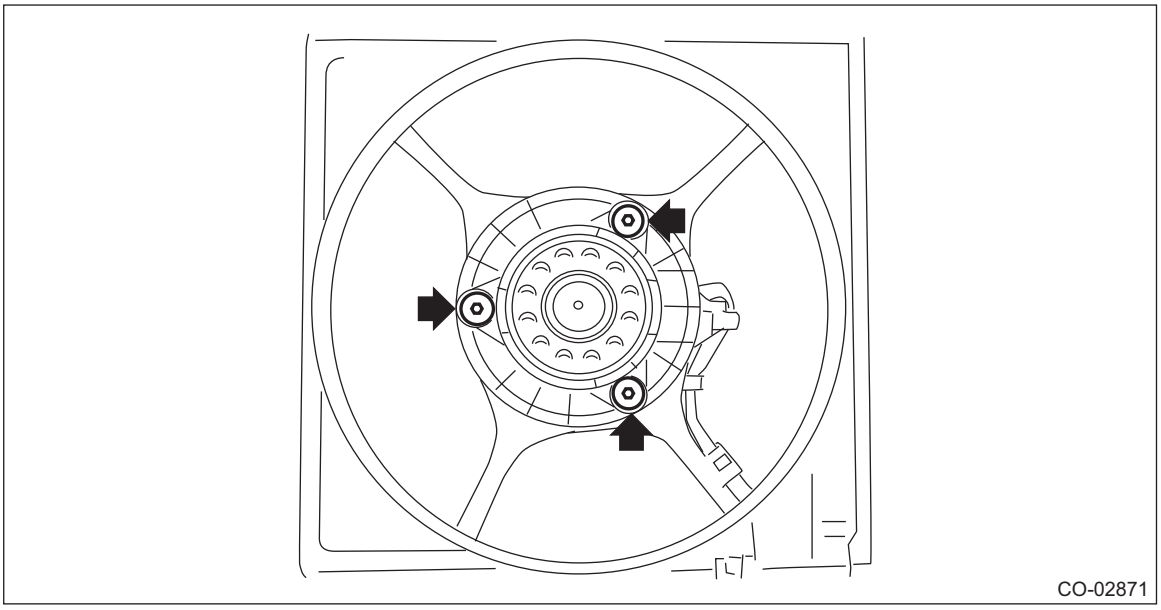
C: DISASSEMBLY

1) Remove the clip which holds the main fan motor connector onto the radiator main fan shroud.
2) Disconnect the radiator main fan from the main fan motor.

NOTE:
Remove the lock agent from the threaded portion of the main fan motor.



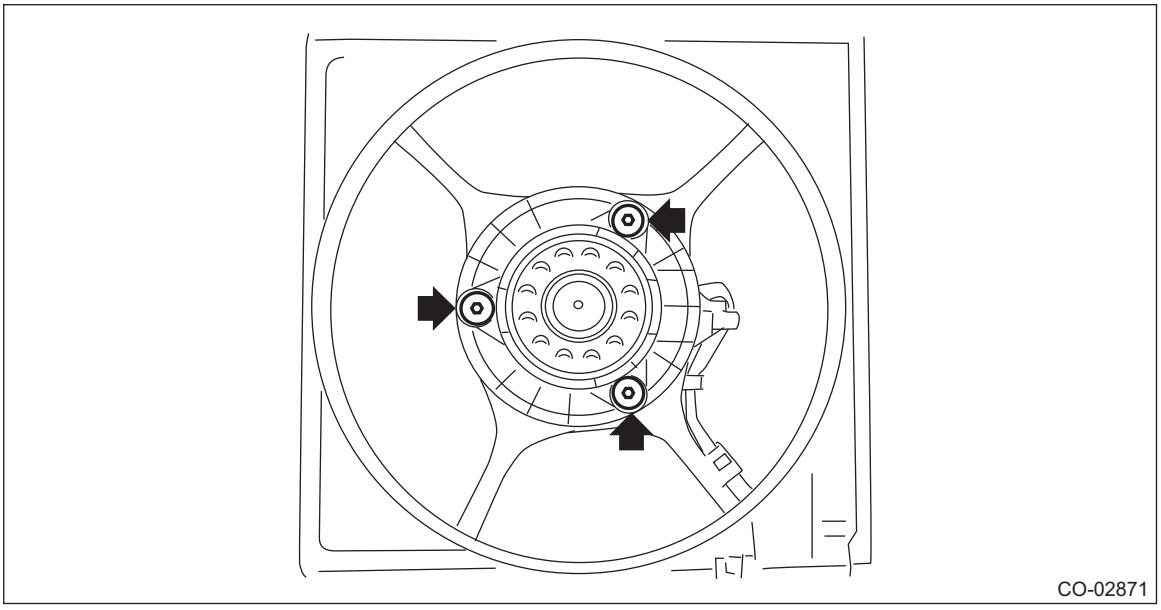
3) Disconnect the main fan motor from the radiator main fan shroud.



D: ASSEMBLY

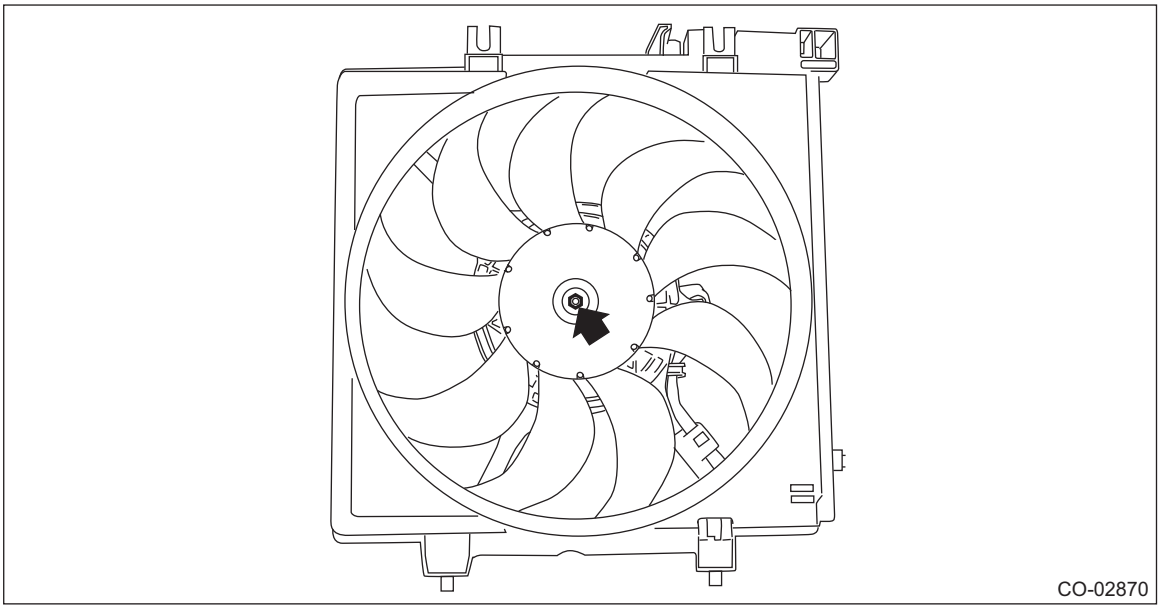
Assemble in the reverse order of disassembly.

Tightening torque:
4.41 N·m (0.45 kgf-m, 3.25 ft-lb)



CAUTION:
Be sure to use a new nut (with lock agent).

Tightening torque:
3.43 N·m (0.35 kgf-m, 2.53 ft-lb)



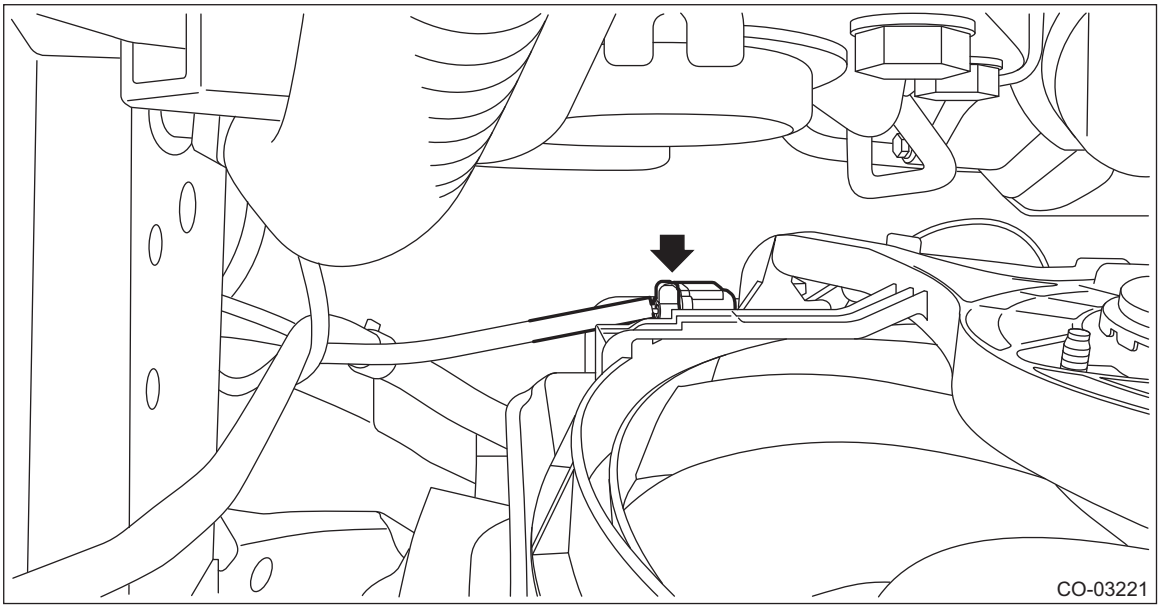
E: INSPECTION

Check that the radiator main fan, radiator main fan shroud and main fan motor do not have deformation, cracks or damage.

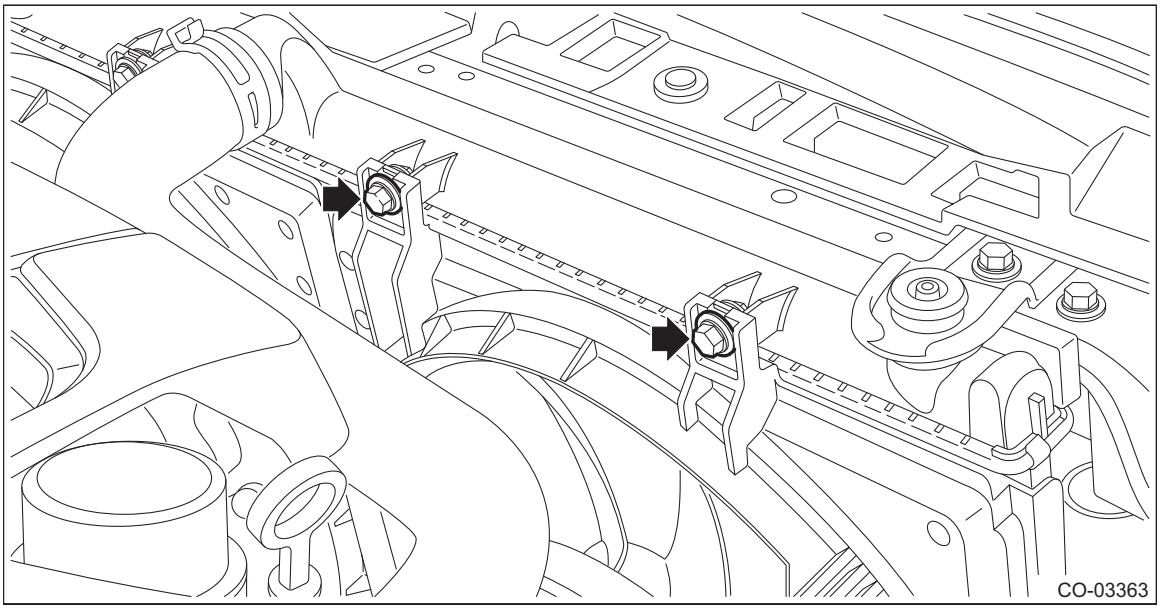
10.Radiator Sub Fan and Fan Motor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
3) Disconnect the connector from the sub fan motor.



4) Remove the bolts which secure the radiator sub fan motor assembly onto the radiator.



5) Remove the radiator sub fan motor assembly from the vehicle.

B: INSTALLATION

Install in the reverse order of removal.

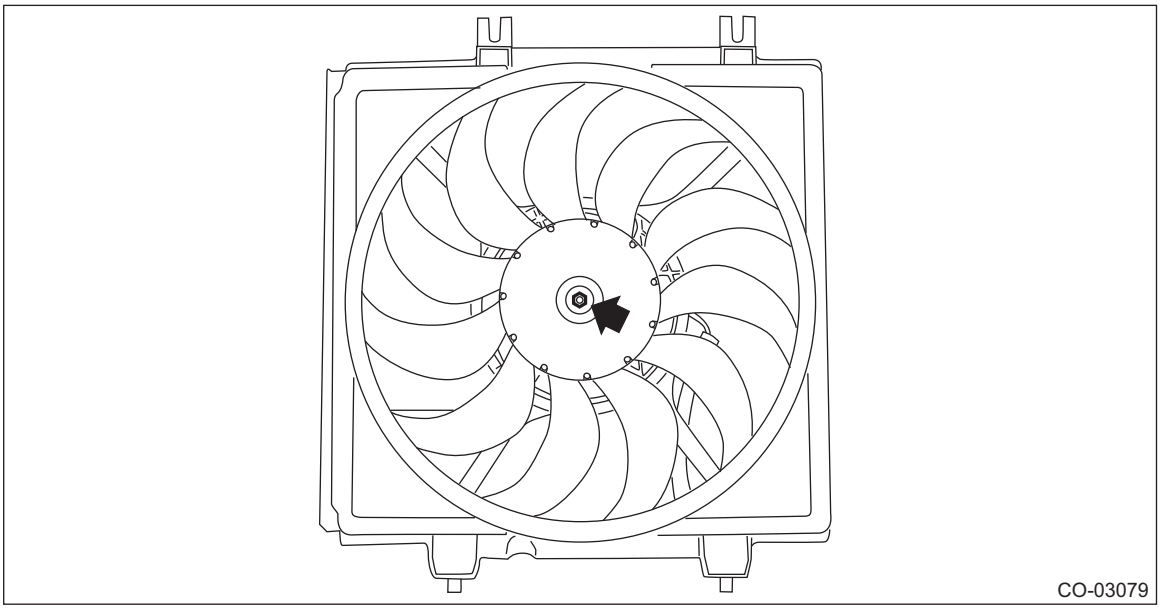
CAUTION:
Confirm that the radiator hose is securely connected.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

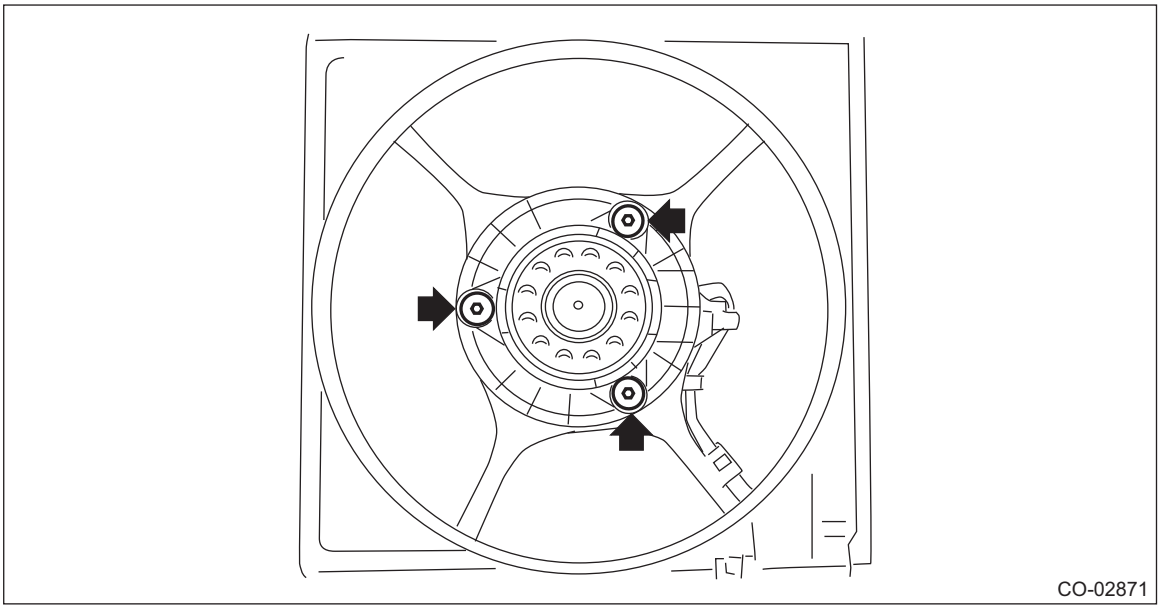
C: DISASSEMBLY

1) Remove the clip which holds the sub fan motor connector onto the radiator sub fan shroud.
2) Disconnect the radiator sub fan from the sub fan motor.

NOTE:
Remove the lock agent from the threaded portion of the sub fan motor.



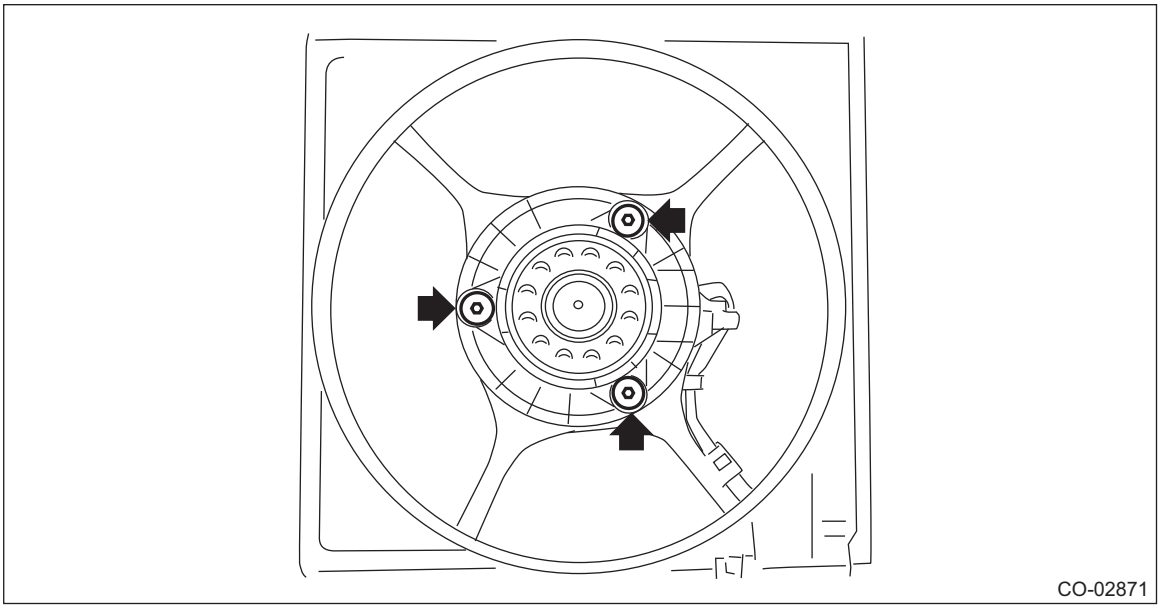
3) Disconnect the sub fan motor from the radiator sub fan shroud.



D: ASSEMBLY

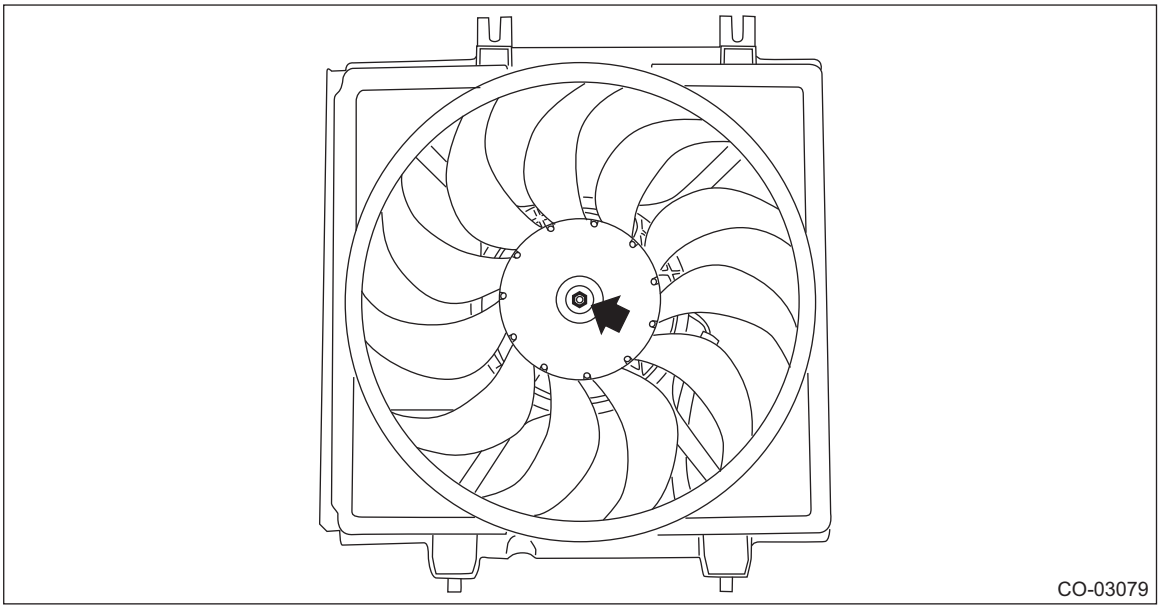
Assemble in the reverse order of disassembly.

Tightening torque:
4.41 N·m (0.45 kgf-m, 3.25 ft-lb)



CAUTION:
Be sure to use a new nut (with lock agent).

Tightening torque:
3.43 N·m (0.35 kgf-m, 2.53 ft-lb)



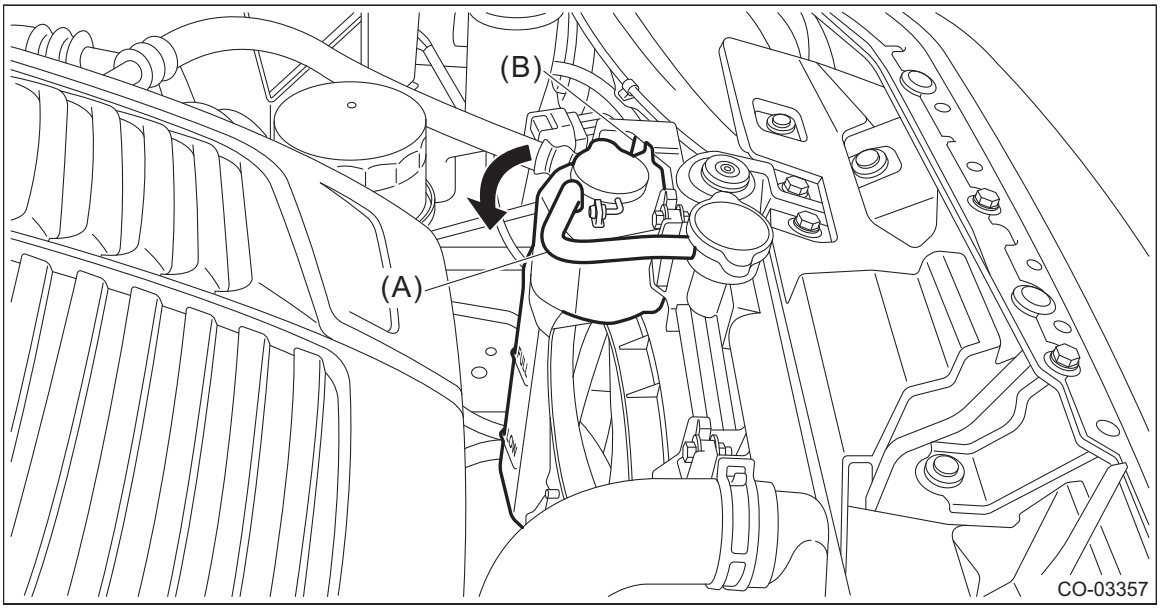
E: INSPECTION

Check that the radiator sub fan, radiator sub fan shroud and sub fan motor do not have deformation, cracks or damage.

11.Reservoir Tank

A: REMOVAL

1) Disconnect the over flow hose (A) connected to the radiator filler neck from the reservoir tank.
2) Pull out the reservoir tank in the direction of the arrow while pushing the claw (B).

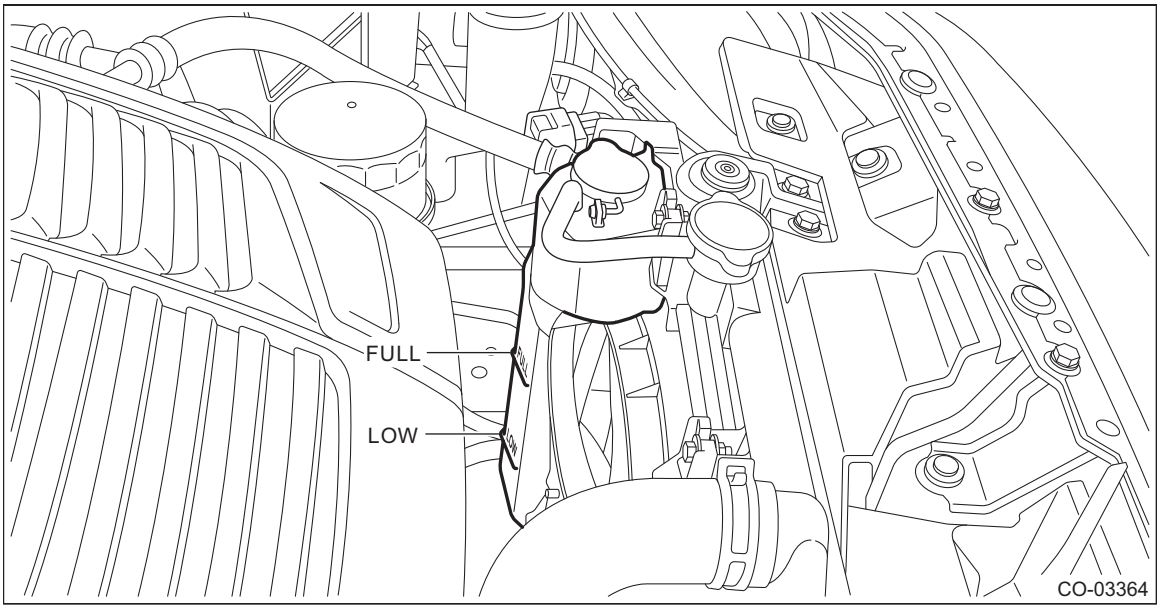


B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Check that the reservoir tank does not have deformation, cracks or damage.
2) Make sure the over flow hoses are not cracked, damaged or loose.
3) Make sure the engine coolant level is between “FULL” and “LOW”.



12.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Possible cause	Corrective action
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair it if necessary.
	b. Defective thermostat	Replace.
	c. Malfunction of water pump	Replace.
	d. Clogged engine coolant passage	Clean.
	e. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>
	f. Clogged or leaking radiator	Clean, repair or replace.
	g. Defective radiator cap	Replace.
	h. Improper engine oil in engine coolant	Replace the engine coolant. If ineffective, check, repair or replace engine components.
	i. Air/fuel mixture ratio too lean	Inspect and repair the fuel injection system. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>
	j. Excessive back pressure in exhaust system	Clean or replace.
	k. Insufficient clearance between piston and cylinder	Adjust or replace.
	l. Dragging brake	Adjust.
	m. Slipping clutch	Repair or replace.
	n. Malfunction of radiator fan	Inspect the radiator fan relay, engine coolant temperature sensor or fan motor and replace them.
Over-cooling	a. Ambient temperature extremely low	Partly cover radiator front area.
	b. Defective thermostat	Replace.
Engine coolant leaks	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace cylinder head gasket.
	e. Damaged or cracked cylinder head and cylinder block	Repair or replace.
	f. Damaged or cracked thermostat cover	Repair or replace.
	g. Leakage from radiator	Repair or replace.
Noise	a. Defective radiator fan	Replace.
	b. Defective water pump bearing	Replace water pump.
	c. Defective water pump mechanical seal	Replace water pump.

LUBRICATION

LU(w/o STI)

12.	Engine Oil Filter	49
13.	Oil Level Switch	50
14.	Engine Lubrication System Trouble in General	68

1. General Description

A: SPECIFICATION

Lubrication method					Forced lubrication
Oil pump	Pump type				Trochoid type
	Number of teeth	Inner rotor			11
		Outer rotor			12
	Outer rotor diameter × Thickness			mm (in)	77 × 14 (3.03 × 0.55)
	Performance (Oil temperature 120°C (248°F))	600 r/min	Discharge pressure	kPa (kg/cm^2, psi)	35 (0.4, 5.1)
			Discharge rate	L (US qt, Imp qt)/min	7.4 (7.8, 6.5) or more
		6,700 r/min	Discharge pressure	kPa (kg/cm^2, psi)	321 (3.3, 46.6)
			Discharge rate	L (US qt, Imp qt)/min	60.2 (63.6, 53.0) or more
	Relief valve working pressure			kPa (kg/cm^2, psi)	700 (7.1, 102)
Oil filter*	Filter type				Full-flow filter type
	Filtration area			cm^2 (sq in)	900 (139.5)
	By-pass valve opening pressure			kPa (kg/cm^2, psi)	160 (1.6, 23.2)
	Outer diameter × Width			mm (in)	80 × 65 (3.15 × 2.55)
	Installation screw specifications				M 20 × 1.5
Oil pressure switch	Type				Immersed contact point type
	Operating voltage				12 V
	Warning light operating pressure			kPa (kg/cm^2, psi)	14.7 (0.1, 2.1)
	Proof pressure			kPa (kg/cm^2, psi)	981 (10, 142.2)
Engine oil	Total capacity (at overhaul)			L (US qt, Imp qt)	6.0 (6.3, 5.3)
	When replacing engine oil and oil filter			L (US qt, Imp qt)	5.1 (5.4, 4.5)
	When replacing engine oil only			L (US qt, Imp qt)	4.9 (5.2, 4.3)

*: Do not use any oil filters other than that of 80 mm (3.15 in) dia. × 65 mm (2.55 in) height.

Specified oil:

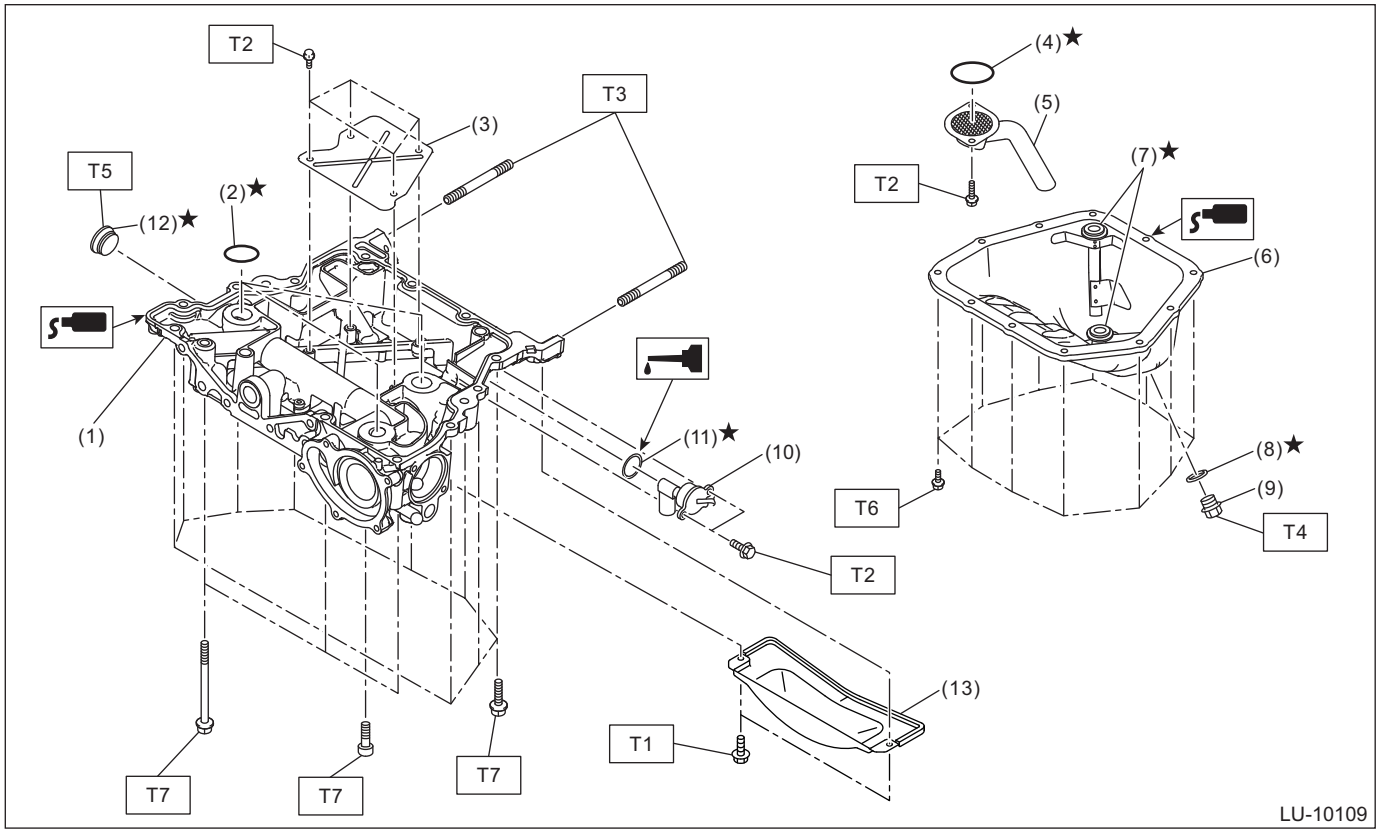
CAUTION:
- **Use 5W-30 (synthetic oil).**
- **It is acceptable to fill an engine with oil of another brand when replacing the oil, but make sure to use the following engine oil specified by Subaru.**

NOTE:
The proper viscosity oil helps the engine maintain its ideal temperature, and cranking speed increased by reducing viscosity friction in hot condition.

Engine oil standard		SAE viscosity No.
 RM-00081 Those with SN or SN PLUS "Resource Conserving" logo in case of API standard.	or RM-00002 Those with GF-5 "starburst mark" displayed on top of the container in case of ILSAC standard.	5W-30 (synthetic oil)

B: COMPONENT

1. OIL PAN

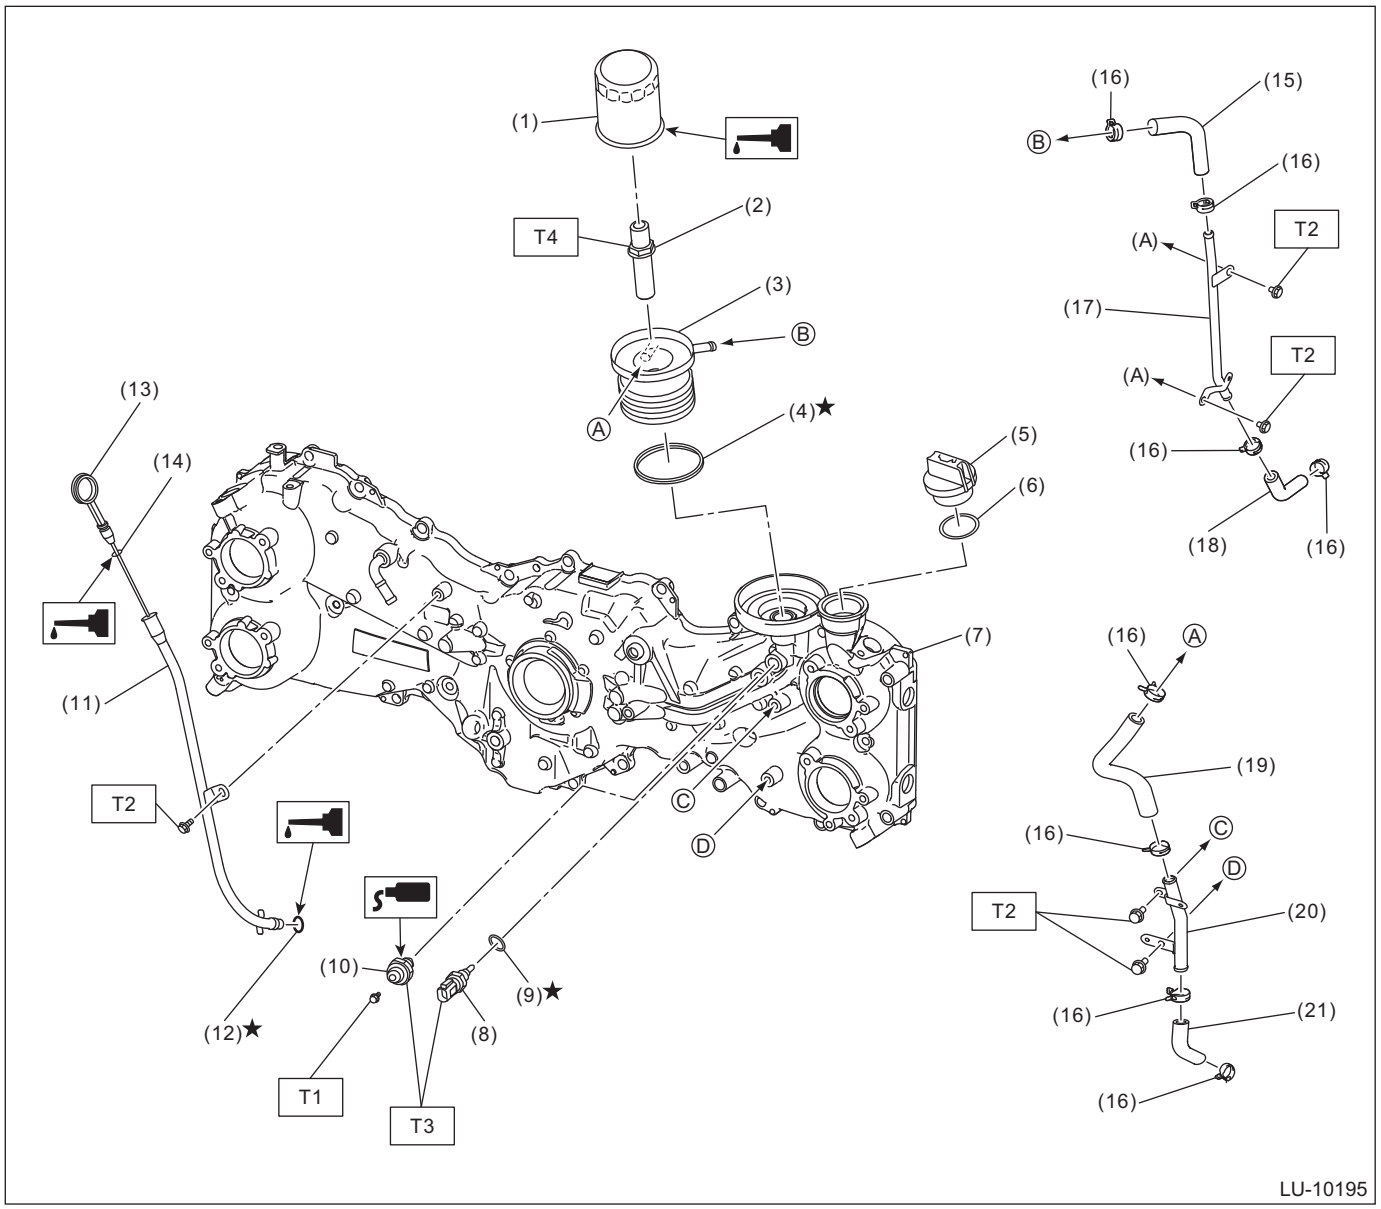


(1) Oil pan upper
(2) O-ring
(3) Baffle plate
(4) O-ring
(5) Oil strainer
(6) Oil pan
(7) Oil pan seal ring
(8) Drain plug gasket
(9) Drain plug
(10) Oil level switch
(11) O-ring
(12) Plug
(13) Clutch housing cover (MT model)

Tightening torque: N·m (kgf-m, ft-lb)

T1: 5 (0.5, 3.7)
T2: 6.4 (0.7, 4.7)
T3: 10 (1.0, 7.4)
T4: 41.7 (4.3, 30.8)
T5: 90 (9.2, 66.4)
T6: <Ref. to LU(w/o STI)-20, OIL PAN, INSTALLATION, Oil Pan.>
T7: <Ref. to LU(w/o STI)-25, OIL PAN UPPER, INSTALLATION, Oil Pan.>

2. OIL FILTER AND OIL LEVEL GAUGE

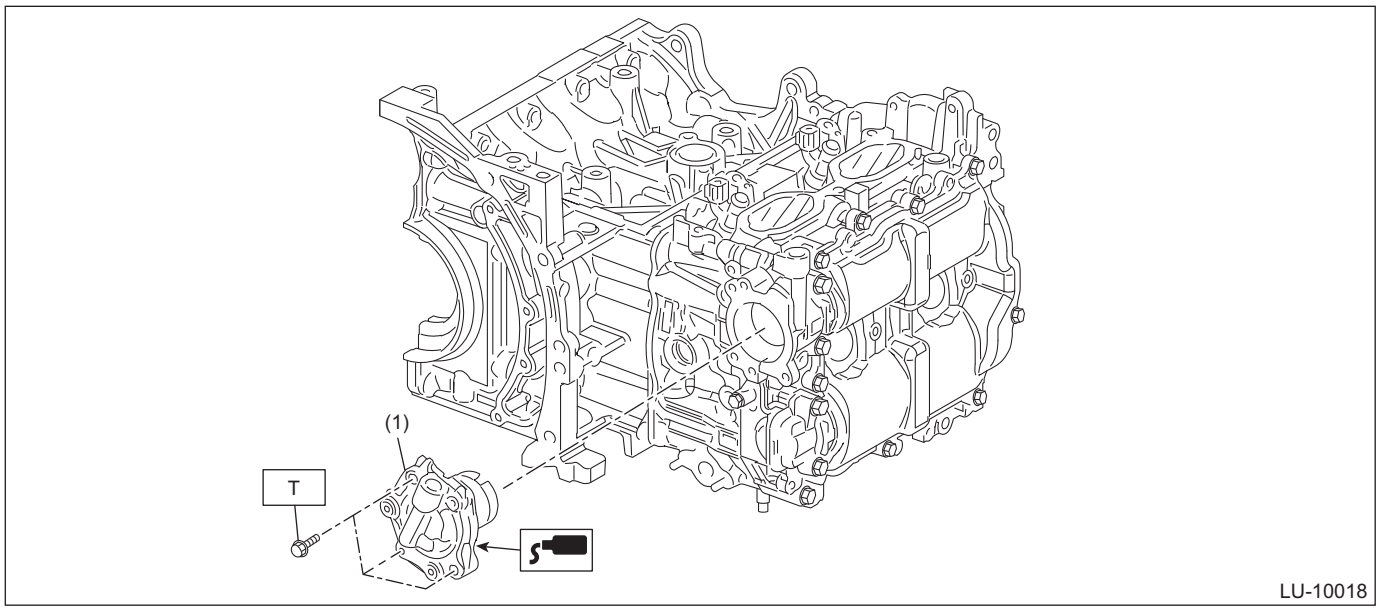


(A) To front camshaft cap LH

(1) Engine oil filter
(2) Oil cooler connector
(3) Engine oil cooler
(4) Gasket
(5) Oil filler cap
(6) Gasket
(7) Chain cover
(8) Engine oil temperature sensor
(9) Gasket
(10) Oil pressure switch
(11) Oil level gauge guide
(12) O-ring
(13) Oil level gauge
(14) O-ring
(15) Side engine oil cooler hose A
(16) Clip
(17) Side engine oil cooler pipe
(18) Side engine oil cooler hose B
(19) Front engine oil cooler hose A
(20) Front engine oil cooler pipe
(21) Front engine oil cooler hose B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 1.5 (0.2, 1.1)
T2: 6.4 (0.7, 4.7)
T3: 18 (1.8, 13.3)
T4: 45 (4.6, 33.2)

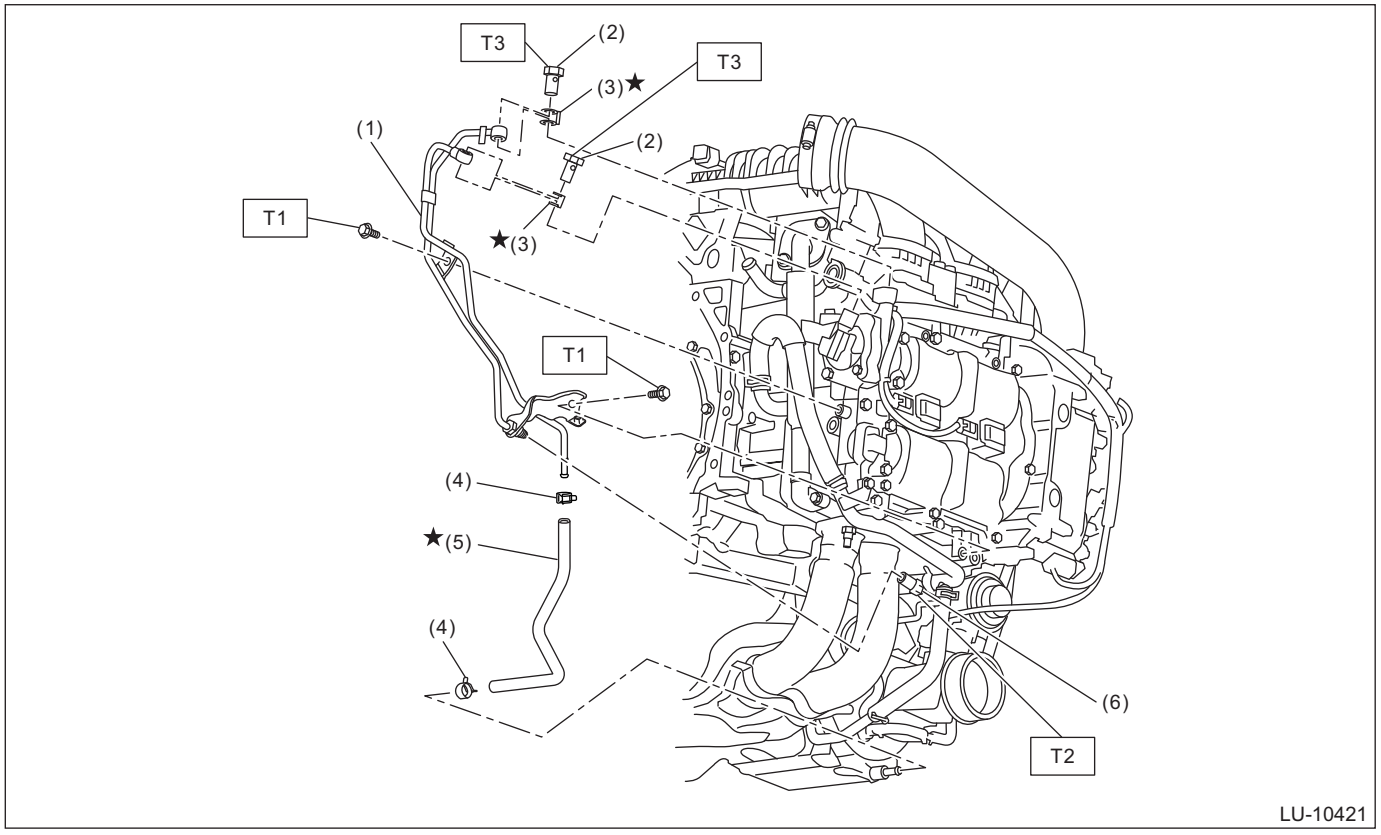
3. SCAVENGE PUMP



(1) Scavenge pump

Tightening torque: N·m (kgf-m, ft-lb)
T: 6.4 (0.7, 4.7)

4. OIL PIPE ASSEMBLY



(1) Oil pipe
(2) Union bolt
(3) Gasket
(4) Clip
(5) Engine oil hose
(6) Union screw pipe ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.8 (0.7, 5.0)
T2: 20 (2.0, 14.8)
T3: 31.5 (3.2, 23.2)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Prepare a container and cloth when performing work which oil possibly spills. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.
- If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.
- Follow all government and local regulations concerning disposal of refuse when disposing of oil.
- Always use new application oil during work.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST41099YC001	41099YC001	ST REAR MOUNT	Used for removing and installing oil level switch. (CVT model)
 ST-498547000	498547000	OIL FILTER WRENCH	Used for removing and installing oil filter.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST18632AA030	18632AA030	STAND ASSY	Used for removing and installing oil pan.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

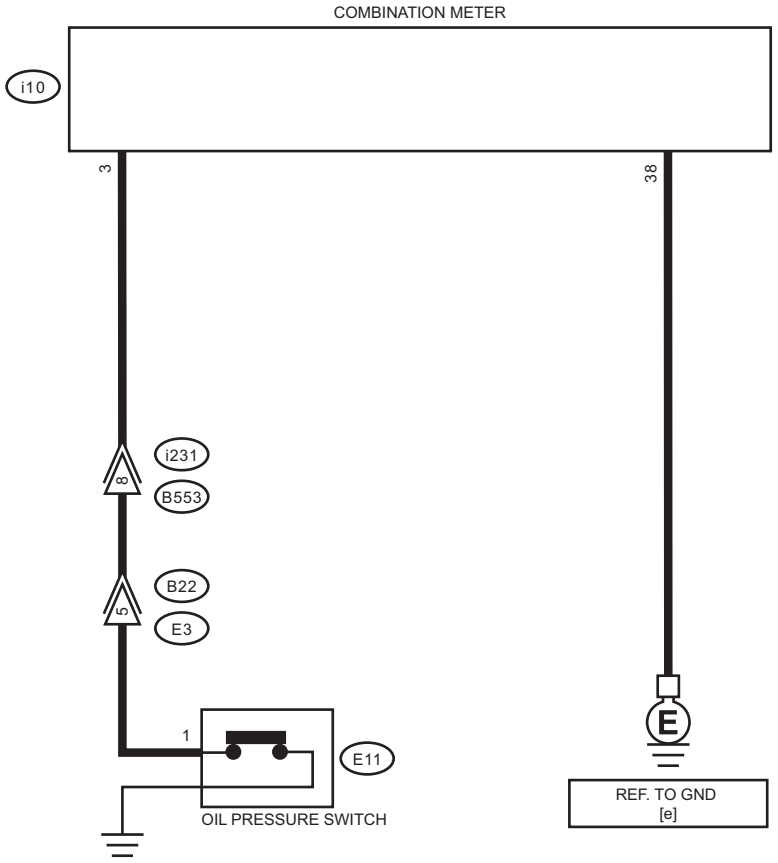
2. GENERAL TOOL

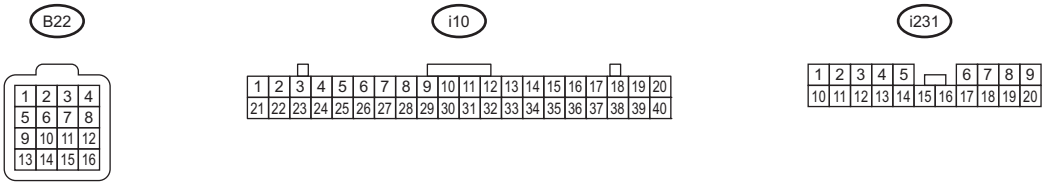
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
TORX® bit T45	Used for removing and installing oil pan upper.

2. Oil Pressure System

A: WIRING DIAGRAM

Oil pressure warning system <Ref. to WI-292, WIRING DIAGRAM, Oil Pressure Warning Light System.>





LU-10065

B: INSPECTION

Step		Check	Yes	No
1	**CHECK ENGINE OIL AMOUNT.**	Is the engine oil amount normal? <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>	Go to step **2**.	Adjust the engine oil amount. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.> After the operation is complete, go to the next step. Go to step **2**.
2	**CHECK DTC.**	Is DTC for engine displayed? <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY TO OIL PRESSURE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the terminal from oil pressure switch. 3) Turn the ignition switch to ON (engine OFF). 4) Measure the voltage of harness between oil pressure switch harness terminal and chassis ground. ***Terminals*** ***(E11) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the oil pressure switch. <Ref. to LU(w/o STI)-29, Oil Pressure Switch.>	Go to step **4**.
4	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter to check if there are any faults in the combination meter. <Ref. to IDI-6, OPERATION, Combination Meter System.>	Is combination meter OK?	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit of harness between combination meter and oil pressure switch • Poor contact of combination meter connector • Poor contact of oil pressure switch terminal • Poor contact of coupling connector	Repair or replace the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>

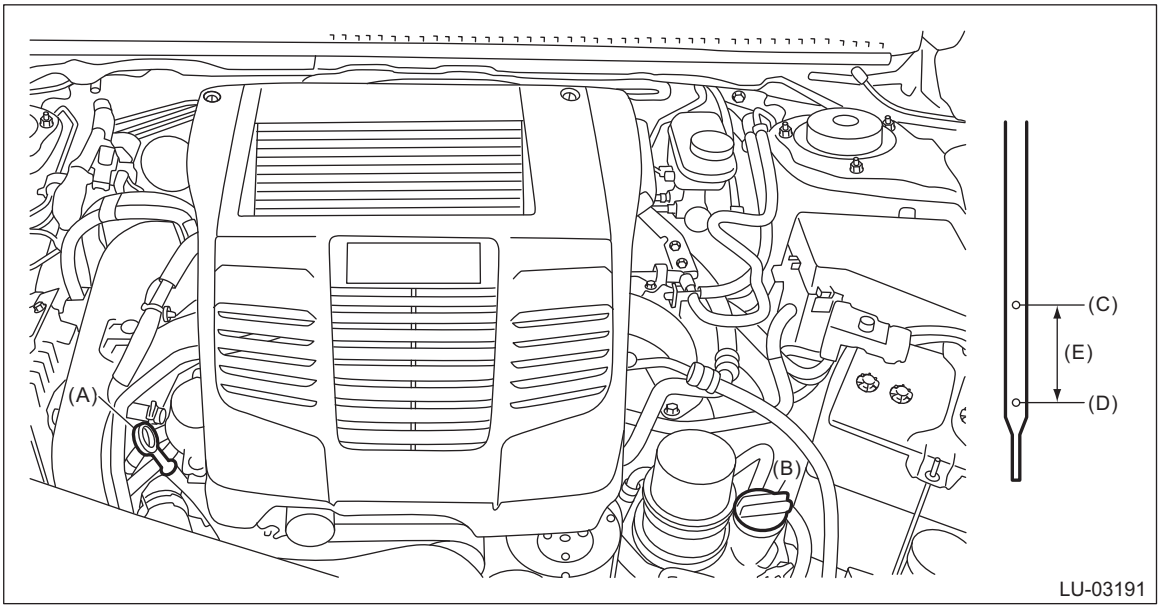
3. Engine Oil

A: INSPECTION

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe away the oil.
3) Reinsert the oil level gauge all the way. Be sure that the oil level gauge is correctly inserted and properly orientated.
4) Pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to determine the engine oil level. If the engine oil level is below “L” line, check for oil leakage from engine and add oil to bring the level up to “F” line.
5) Start the engine to circulate the oil in engine.
6) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the level.

NOTE:
- To prevent overfilling of engine oil, do not add oil above “F” line when the engine is cold.
- As the oil level gauge is used for daily maintenance, “F” line and “L” line is set assuming that the engine is cold.



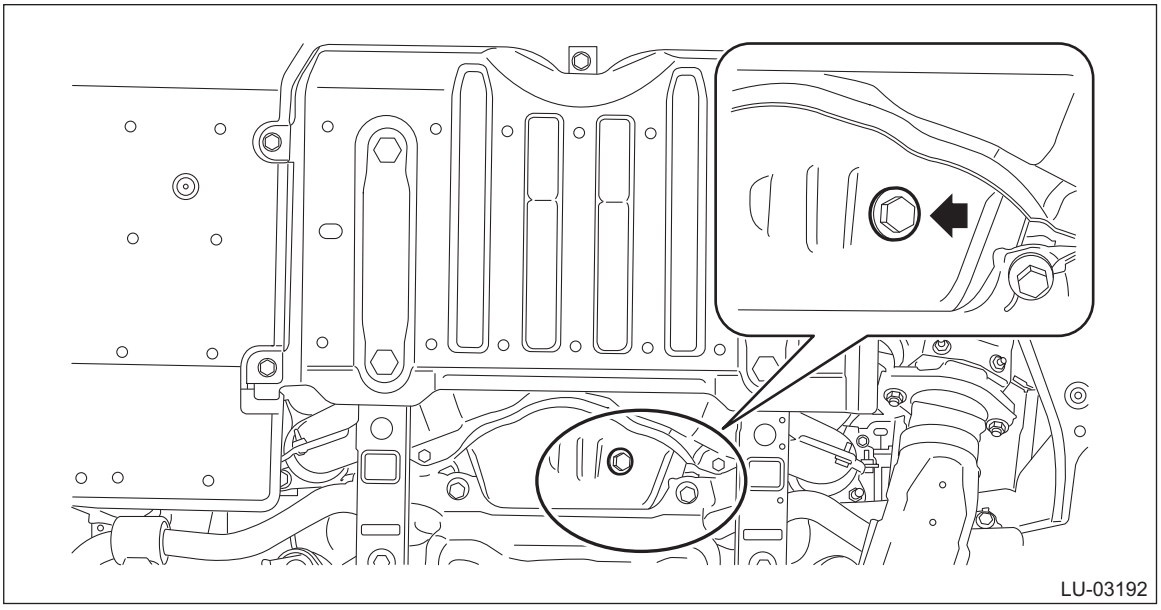
(A) Oil level gauge
(B) Oil filler cap
(C) “F” line
(D) “L” line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

B: REPLACEMENT

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Open the oil filler cap for quick draining of engine oil.
2) Lift up the vehicle.
3) Drain engine oil by loosening the drain plug.

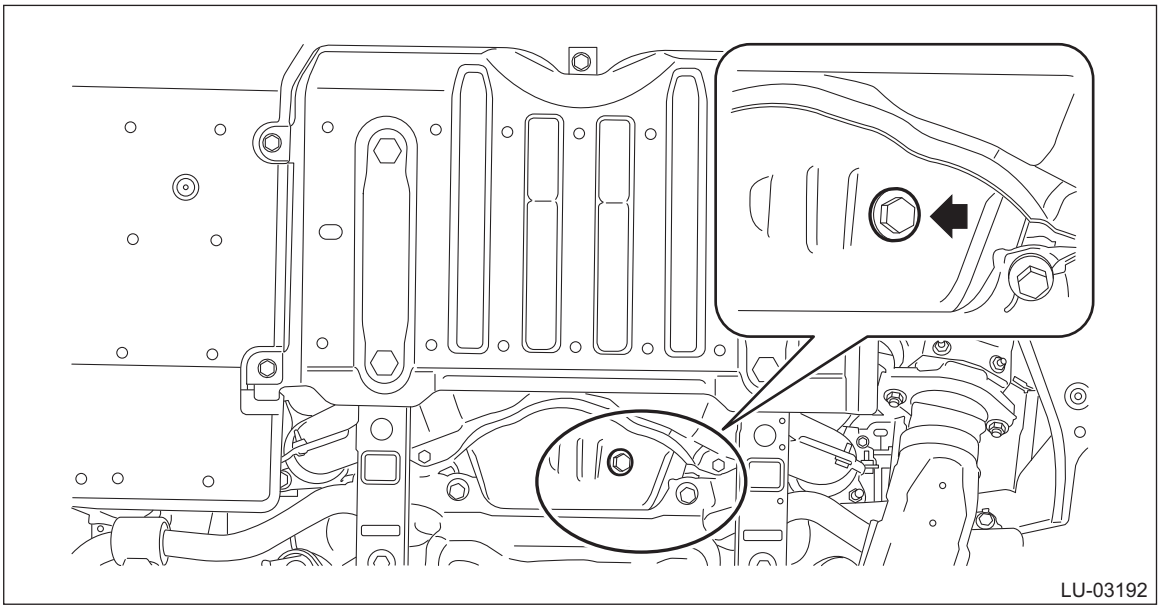
NOTE:
Prepare the container for draining of engine oil.



4) After draining the engine oil, tighten the engine oil drain plug.

NOTE:
Use a new drain plug gasket.

Tightening torque:
41.7 N·m (4.3 kgf-m, 30.8 ft-lb)

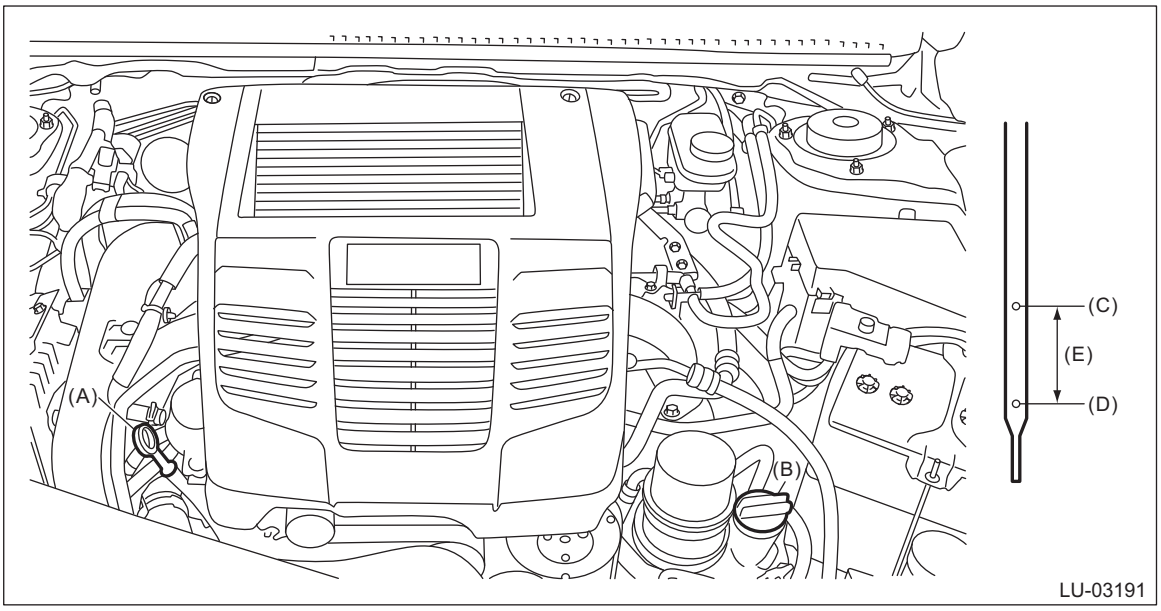


5) Lower the vehicle.
6) Select engine oil of adequate quality and viscosity and fill it through the chain cover to the “F” line on the oil level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:
Refer to “SPECIFICATION” for recommended oil. <Ref. to LU(w/o STI)-2, SPECIFICATION, General Description.>

Engine oil capacity:
Refer to “SPECIFICATION” for engine oil capacity. <Ref. to LU(w/o STI)-2, SPECIFICATION, General Description.>

7) Close the oil filler cap.
8) Start the engine to circulate the oil in engine.
9) Stop the engine and pull out the oil level gauge again, and check both sides of the oil level gauge. Use a lower side to check the engine oil level. If necessary, add engine oil up to the “F” line on oil level gauge.



(A) Oil level gauge
(B) Oil filler cap
(C) “F” line
(D) “L” line
(E) Approx. 1.0 L (1.1 US qt, 0.9 Imp qt)

4. Oil Pump

A: SPECIFICATION

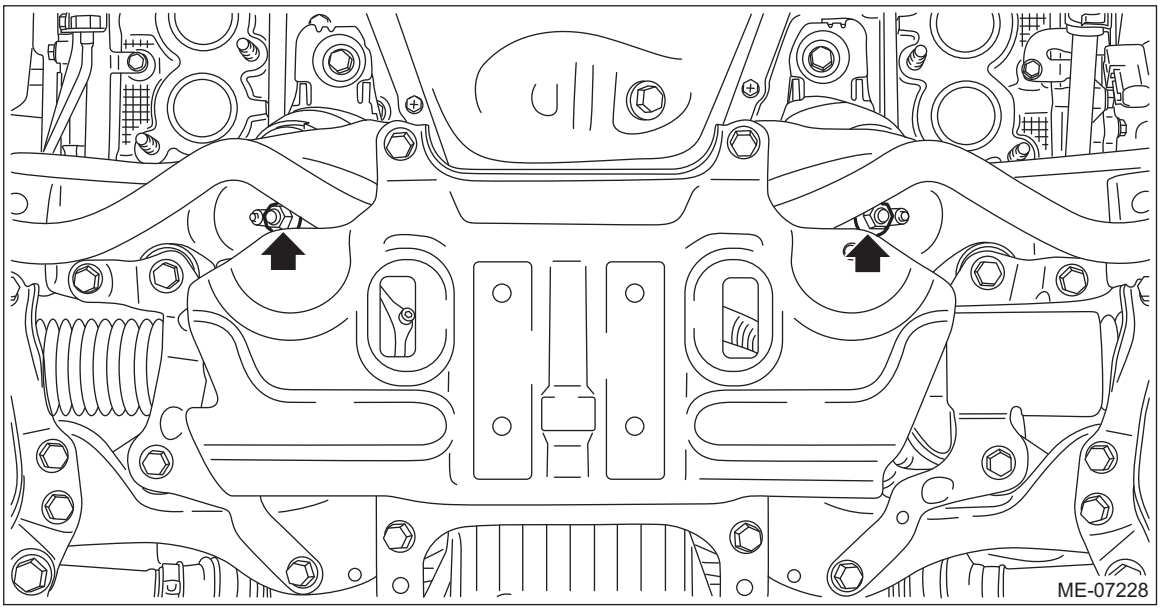
The oil pump cannot be disassembled.
Refer to “Chain Cover” for removal and installation procedures. <Ref. to ME(w/o STI)-91, REMOVAL, Chain Cover.> <Ref. to ME(w/o STI)-98, INSTALLATION, Chain Cover.>

5. Oil Pan

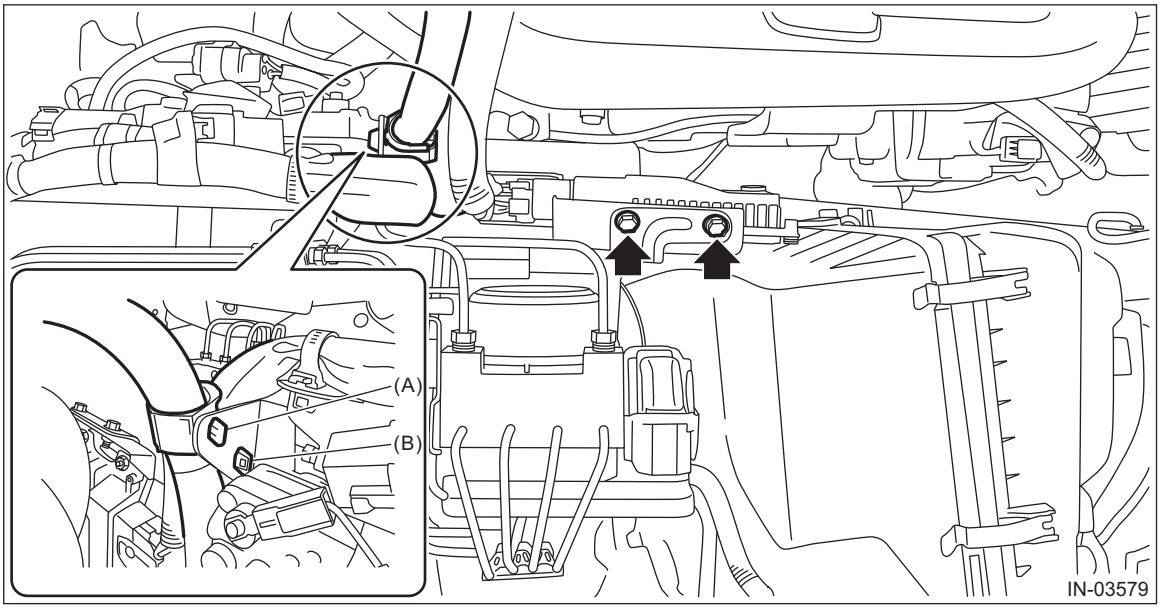
A: REMOVAL

1. OIL PAN

1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
6) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
7) Drain the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
8) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>
9) Remove the nuts which secure the engine mounting to the front crossmember.

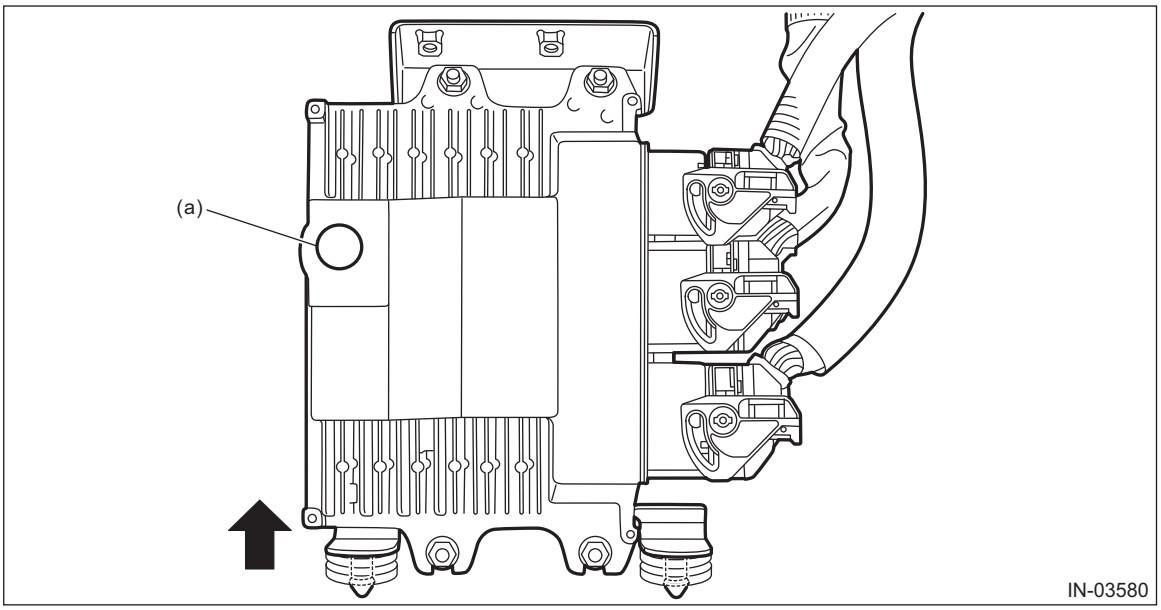


10) Lower the vehicle.
11) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.

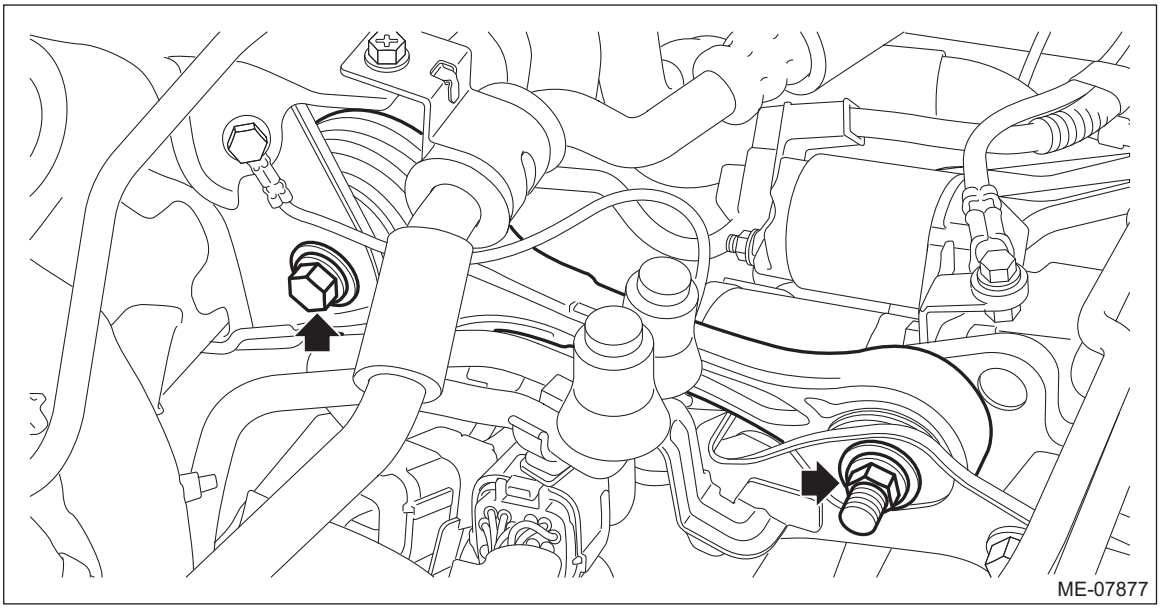


12) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

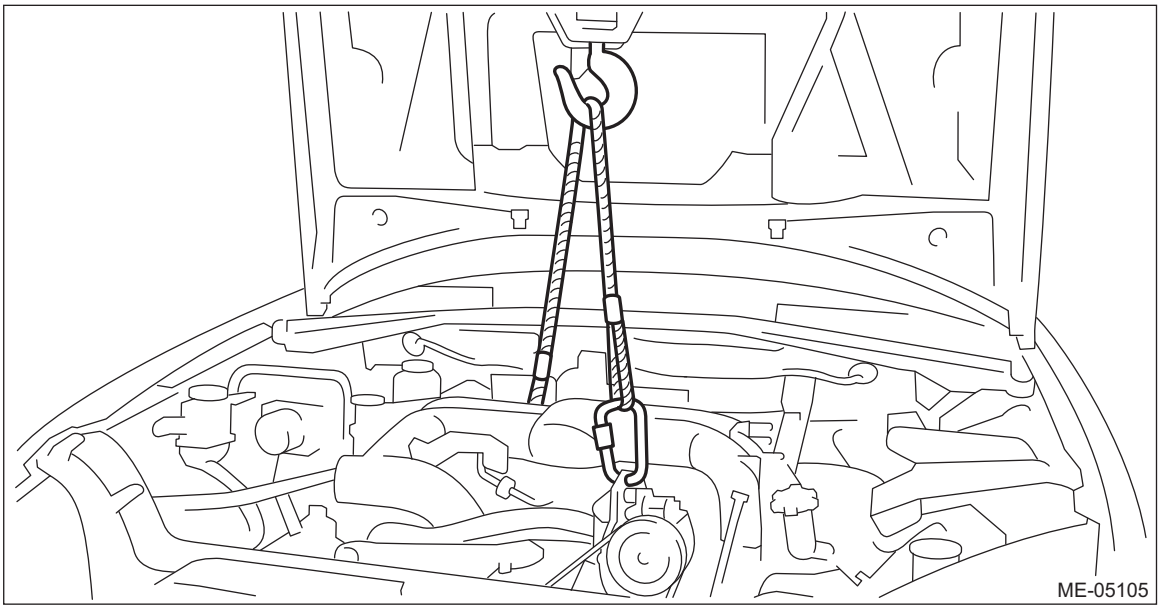
NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.



13) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
14) Remove the pitching stopper.



15) Support the engine with a lifting device and wire ropes.

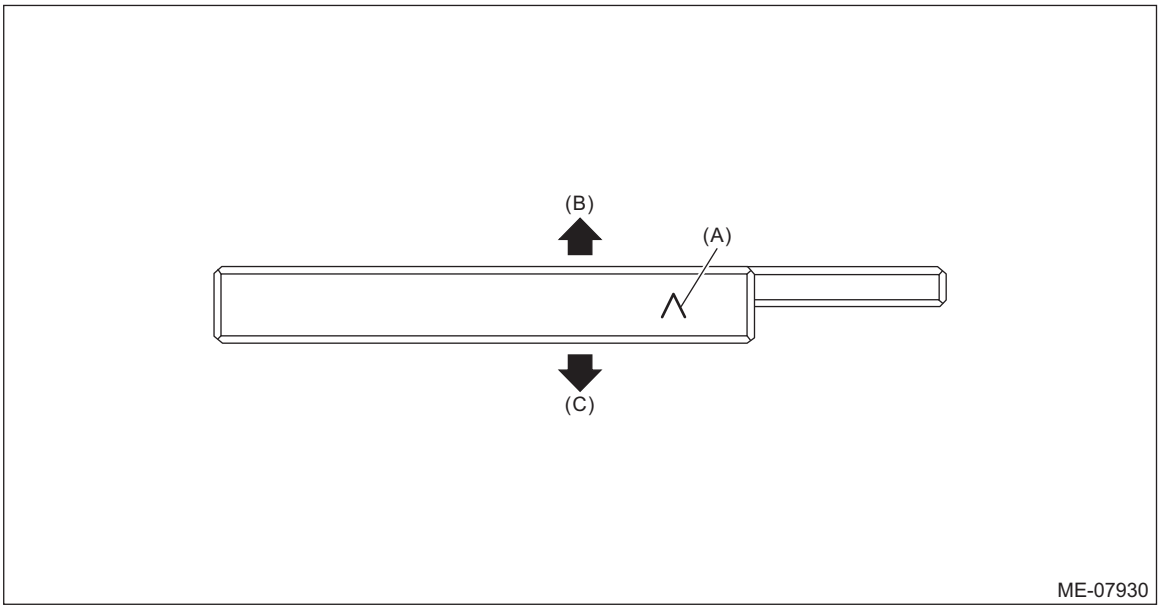


16) Set the cushioning material such as a waste cloth between pitching stopper bracket and transmission case cover. (CVT model)

NOTE:
- This operation is required to prevent damage to the transmission case cover.
- Make sure that the height of cushioning material does not become 15 — 20 mm (0.6 — 0.8 in) or less when it is crushed.

17) While gradually lifting up the engine, set the ST between the engine mount LH and front crossmember, and then slowly lower the engine.

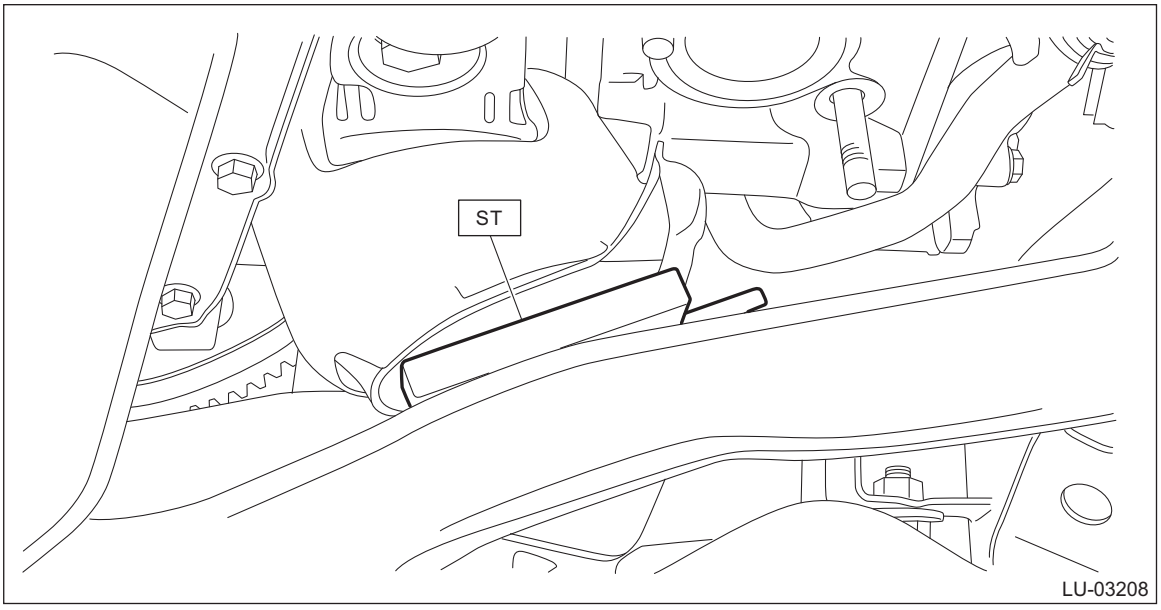
CAUTION:
- **When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.**
- **To avoid the damage, be sure to set the ST as shown in the figure.**



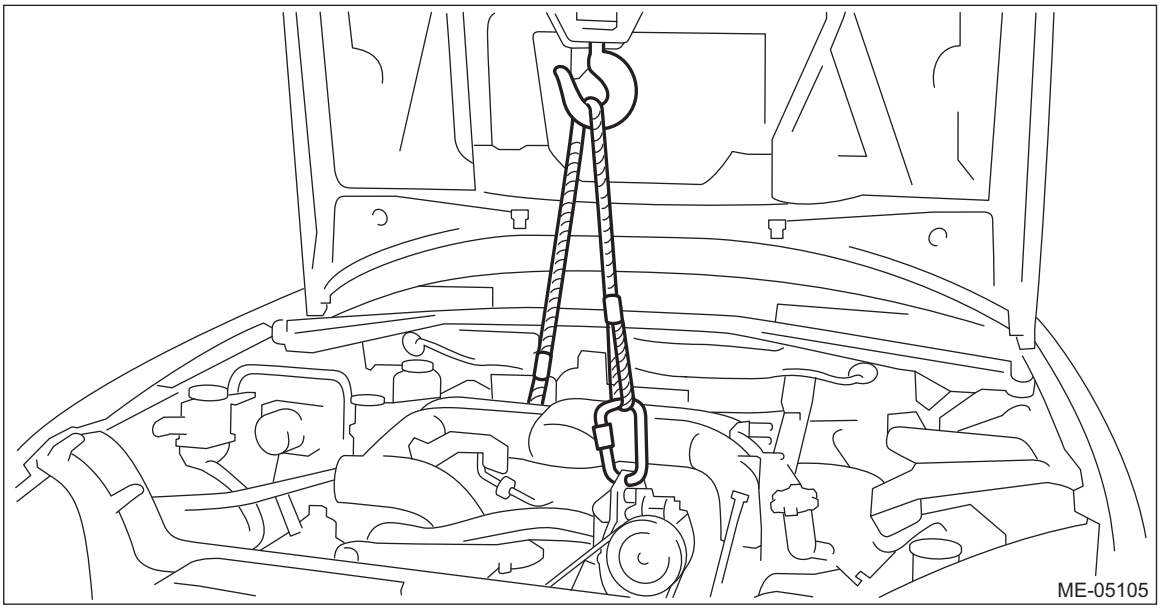
(A) Direction mark (B) Engine mounting side (C) Front crossmember side

- **After lowering the engine, check that the ST does not come off even if the engine is bounced.**

ST 18632AA030 STAND ASSY

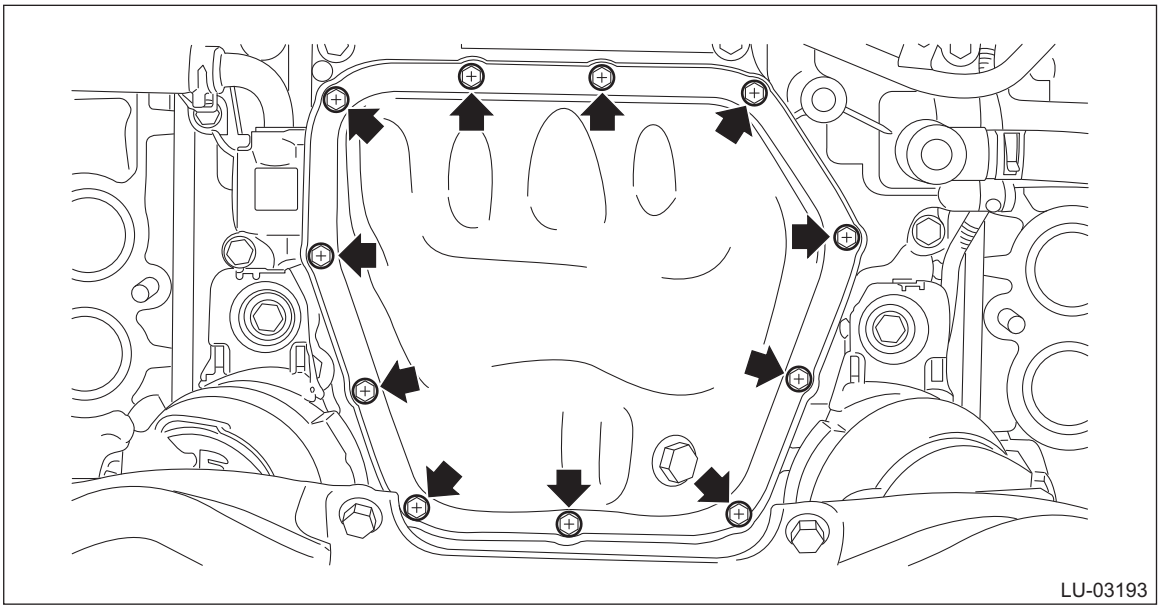


18) Remove the lifting device and wire ropes.



19) Lift up the vehicle.

20) Remove the bolts which secure oil pan to oil pan upper.



21) Insert an oil pan cutter blade into the gap between oil pan upper and oil pan, and remove the oil pan.

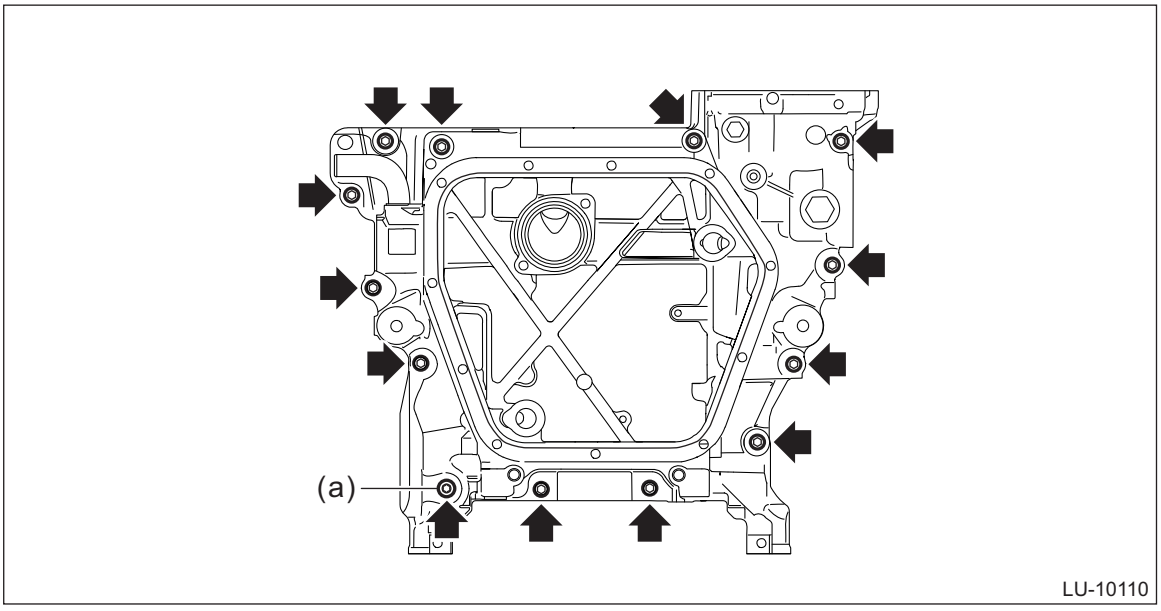
CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.

22) Remove the liquid gasket from the oil pan and the oil pan upper.

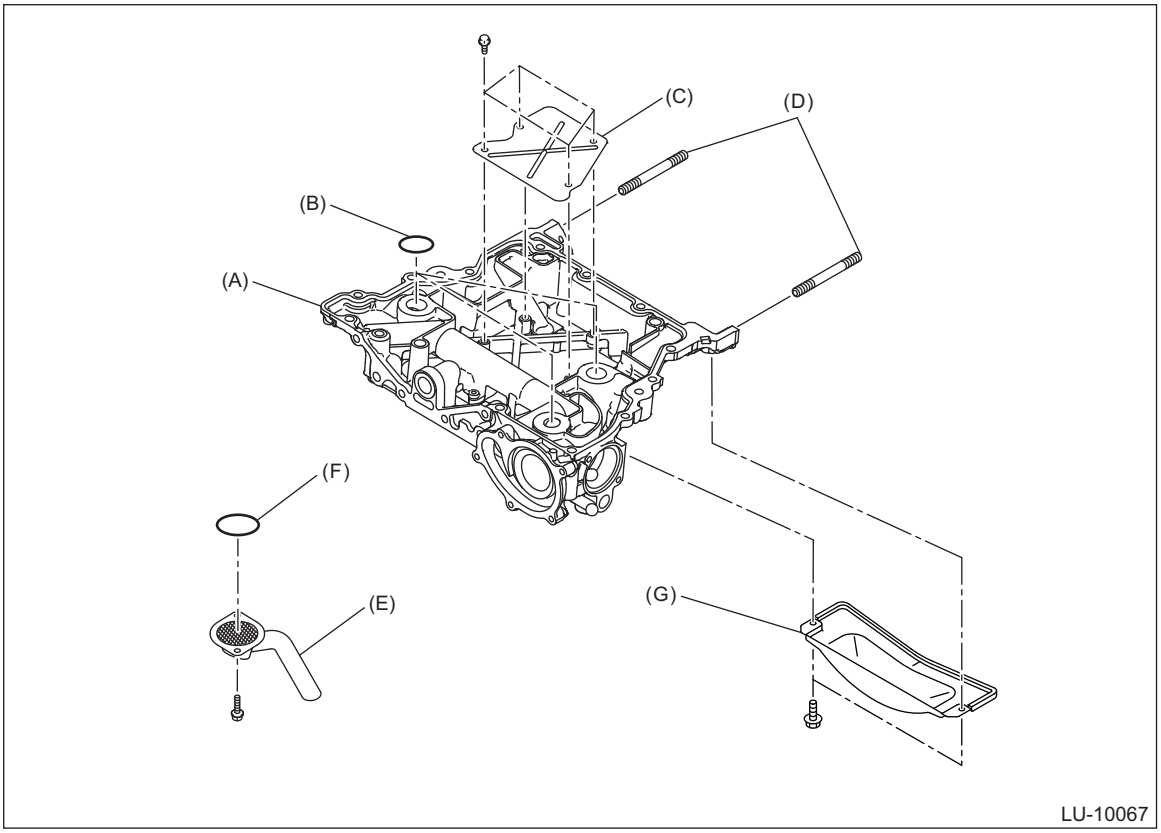
2. OIL PAN UPPER

1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, REMOVAL, Engine Assembly.>
2) Remove the water pump. <Ref. to CO(w/o STI)-18, REMOVAL, Water Pump.>
3) Remove the thermostat cover. <Ref. to CO(w/o STI)-34, REMOVAL, Thermostat.>
4) Remove the water pipe assembly. <Ref. to CO(w/o STI)-21, REMOVAL, Water Pipe Assembly.>
5) Remove the chain cover. <Ref. to ME(w/o STI)-91, REMOVAL, Chain Cover.>
6) Remove the oil pan. <Ref. to LU(w/o STI)-15, OIL PAN, REMOVAL, Oil Pan.>
7) Remove the oil level switch. <Ref. to LU(w/o STI)-50, REMOVAL, Oil Level Switch.>
8) Remove the bolts which secure oil pan upper to cylinder block, and remove the oil pan upper.

NOTE:
Remove the bolt (a) shown in the figure using TORX® bit T45.



9) Remove the baffle plate from the oil pan upper.
10) Remove the oil strainer from the oil pan upper.
11) Remove stud bolts from the oil pan upper.
12) Remove the clutch housing cover from the oil pan upper. (MT model)
13) Remove the O-ring from the cylinder block.



(A) Oil pan upper
(B) O-ring
(C) Baffle plate
(D) Stud bolt
(E) Oil strainer
(F) O-ring
(G) Clutch housing cover (MT model)

14) Remove the liquid gasket from oil pan upper and cylinder block.

B: INSTALLATION

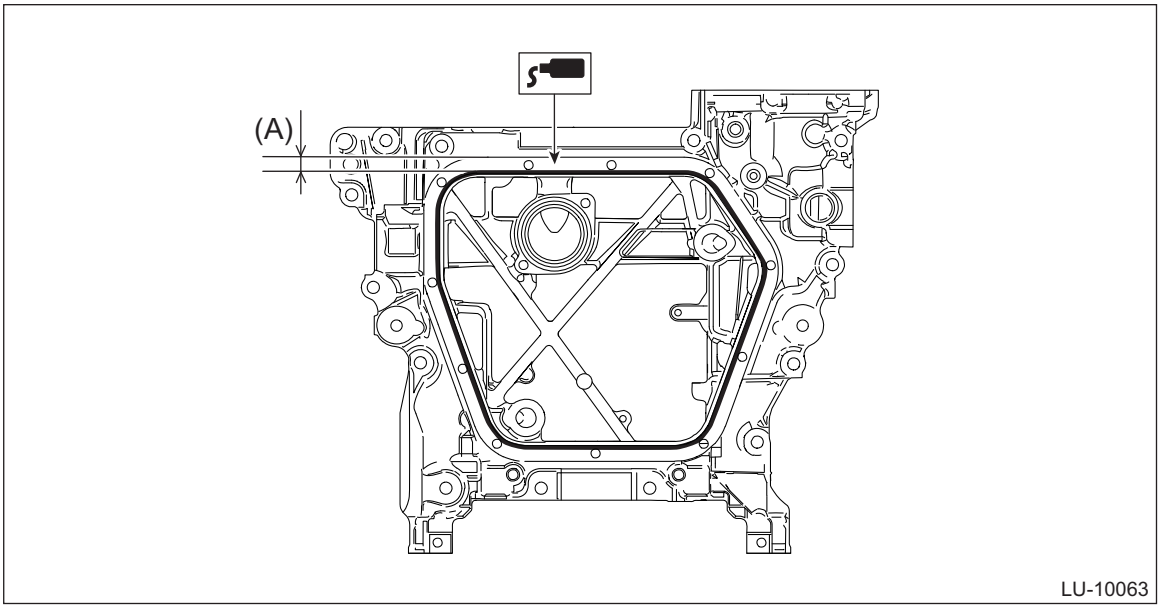
1. OIL PAN

1) Apply liquid gasket to the mating surface of the oil pan upper as shown in the figure, and install the oil pan.

NOTE:
- Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan and the oil pan upper.
- Use a new oil pan seal ring.
- Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

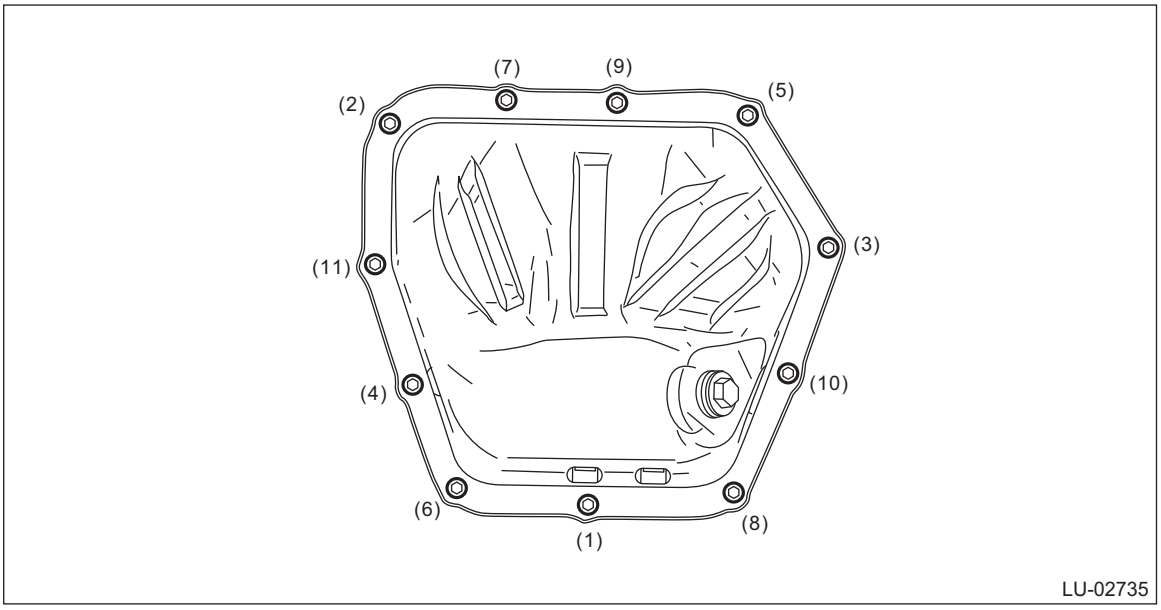
Liquid gasket applying diameter:
5±1 mm (0.1969±0.0394 in)



(A) 9.5 mm (0.374 in)

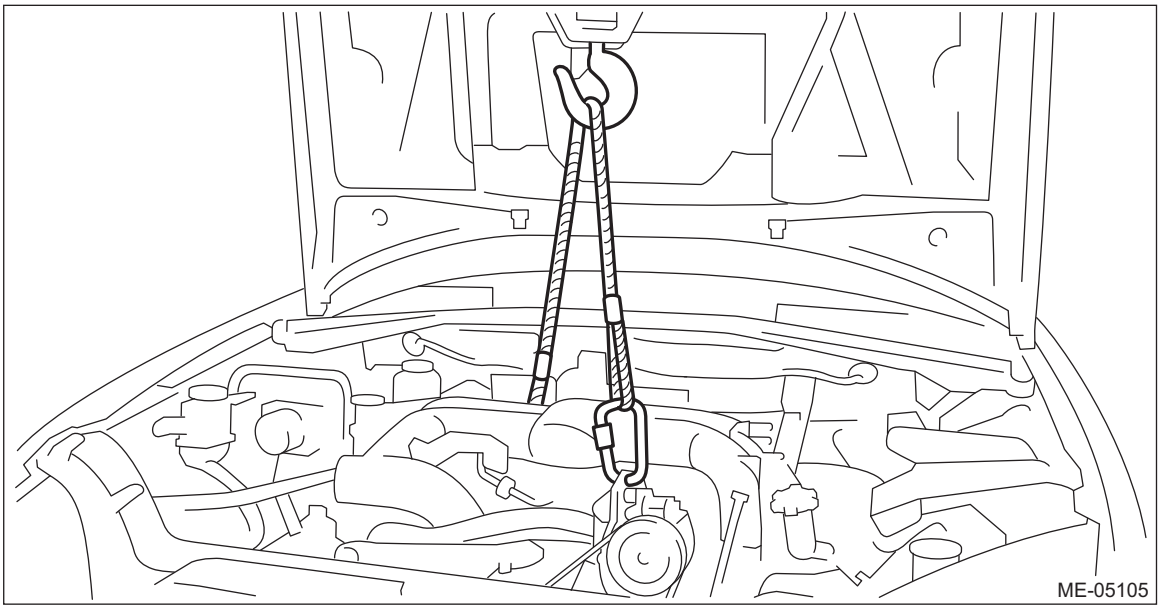
2) Tighten the bolts to secure the oil pan to the oil pan upper in the numerical order shown in the figure.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



3) Lower the vehicle.

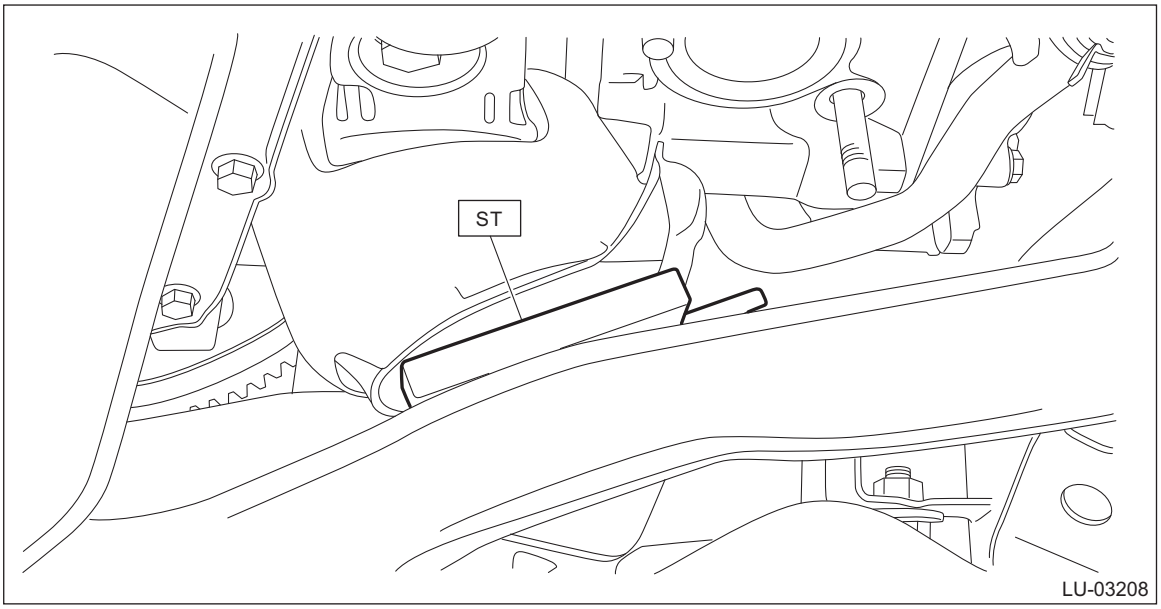
4) Support the engine with a lifting device and wire ropes.



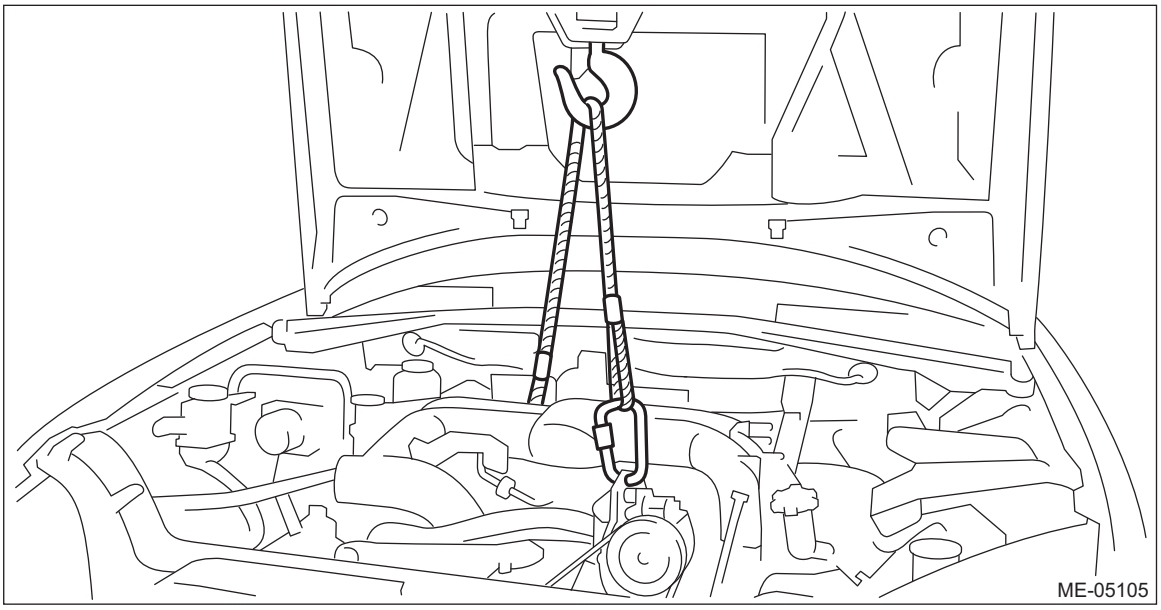
5) Lift the engine a little, and remove the ST.

CAUTION:
When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

ST 18632AA030 STAND ASSY

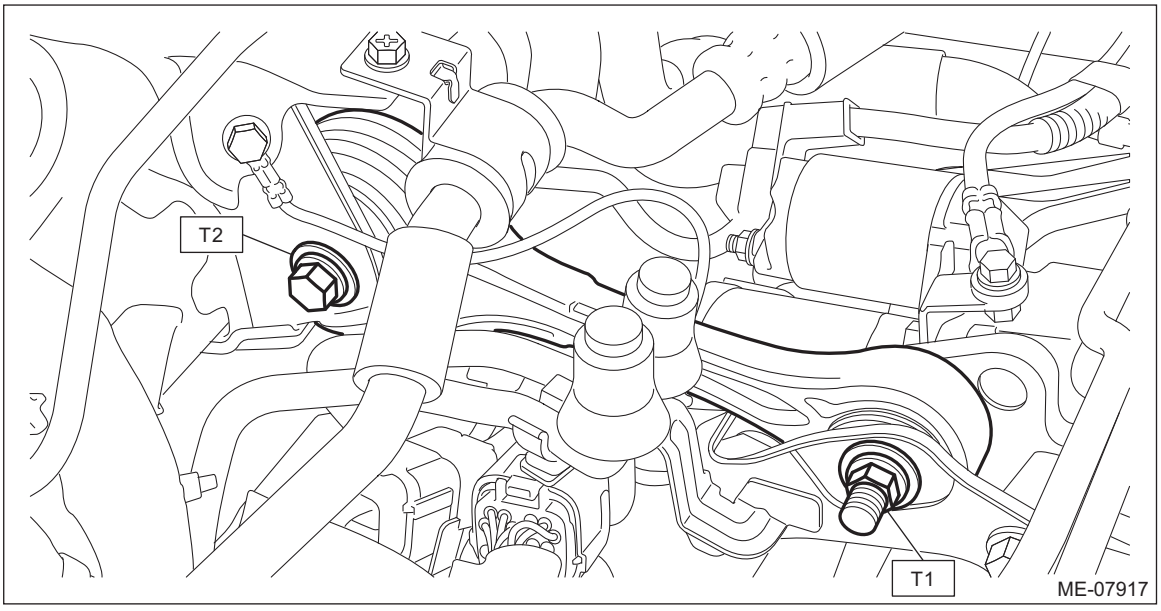


6) Lower the engine and remove the lifting device and wire ropes.



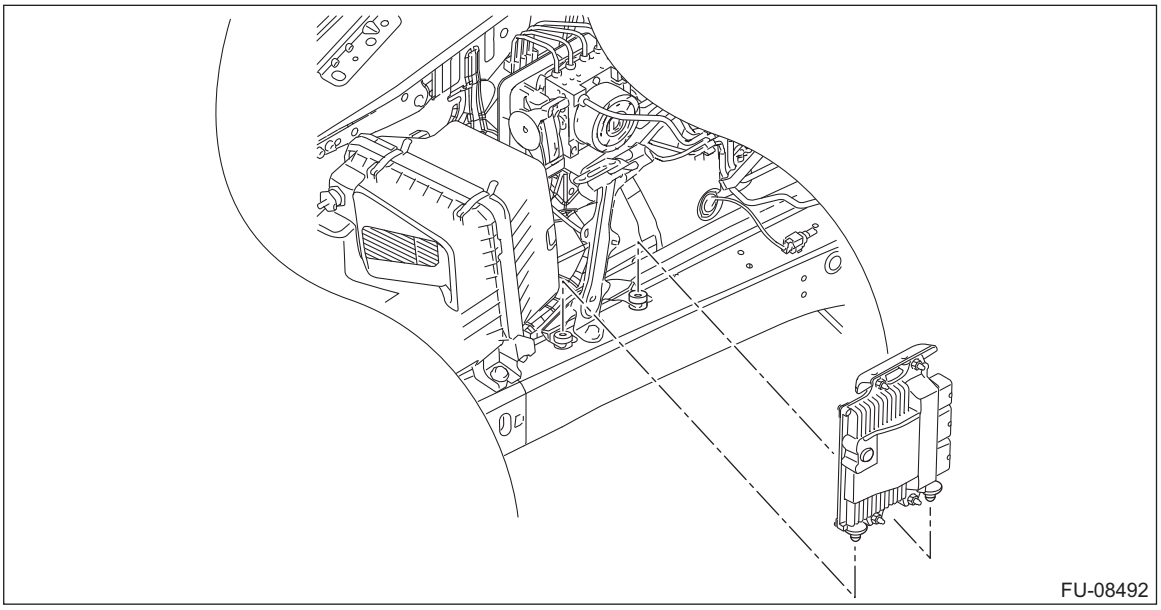
7) Remove the cushioning material between pitching stopper bracket and transmission case cover. (CVT model)
8) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



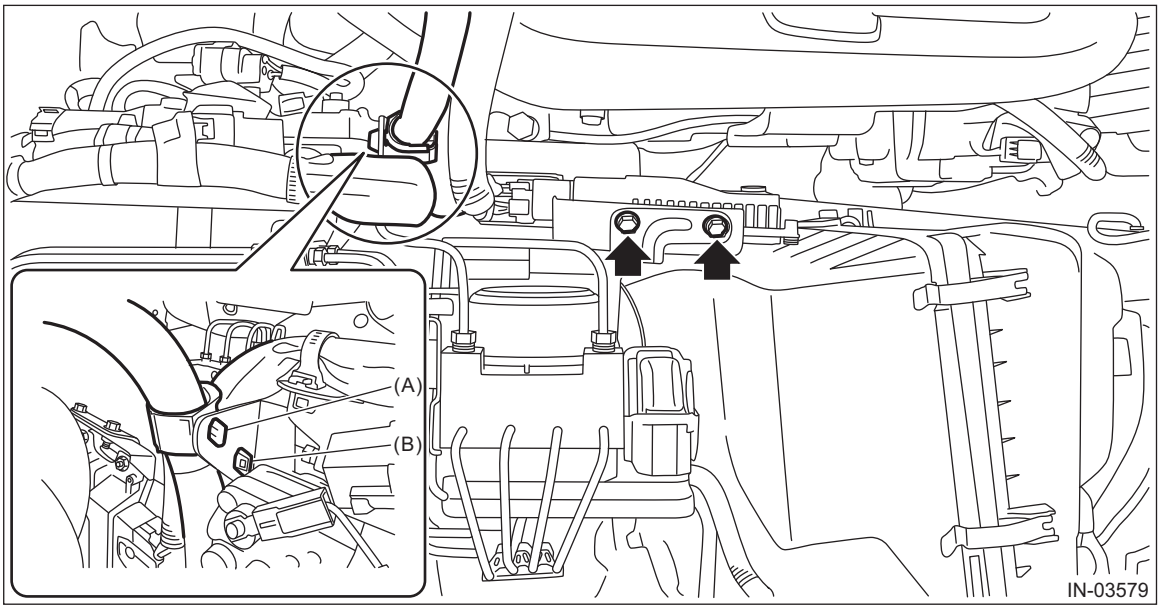
9) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>

10) Insert the engine control module (ECM) to the bracket.



11) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

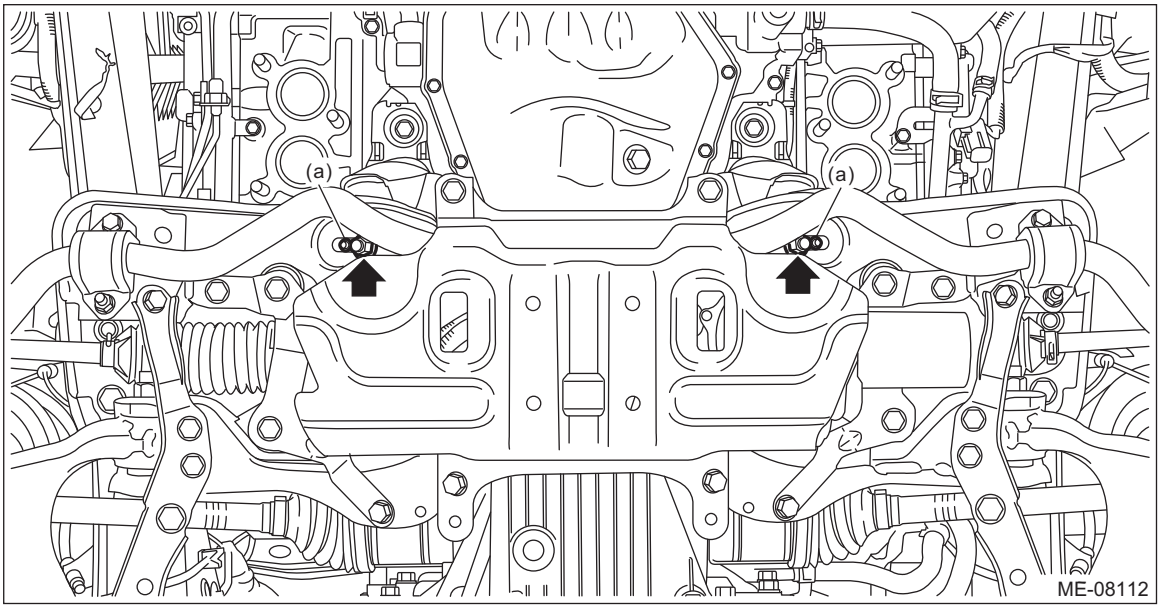
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



12) Lift up the vehicle.
13) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
- Use a new nut.
- Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)



14) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>
15) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
16) Lower the vehicle.
17) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
18) Refill the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
19) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
20) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
21) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
22) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
23) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
24) Close the front hood.

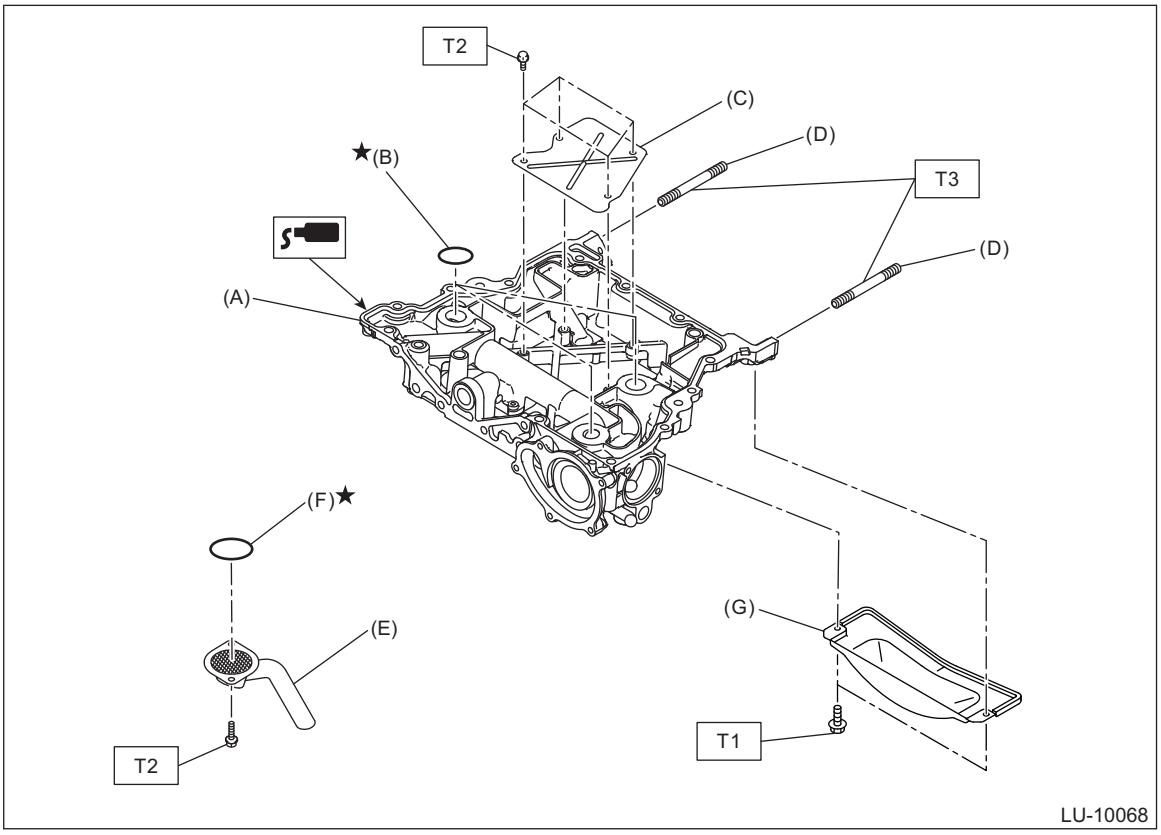
2. OIL PAN UPPER

1) Install the O-ring to the cylinder block.

NOTE:
Use new O-rings.
2) Attach the clutch housing cover to the oil pan upper. (MT model)
3) Attach the stud bolts to the oil pan upper.
4) Attach the oil strainer to the oil pan upper.

NOTE:
Use new O-rings.
5) Attach the baffle plate to the oil pan upper.

Tightening torque:
T1: 5 N·m (0.5 kgf-m, 3.7 ft-lb)
T2: 6.4 N·m (0.7 kgf-m, 3.7 ft-lb)
T3: 10 N·m (1.0 kgf-m, 7.4 ft-lb)



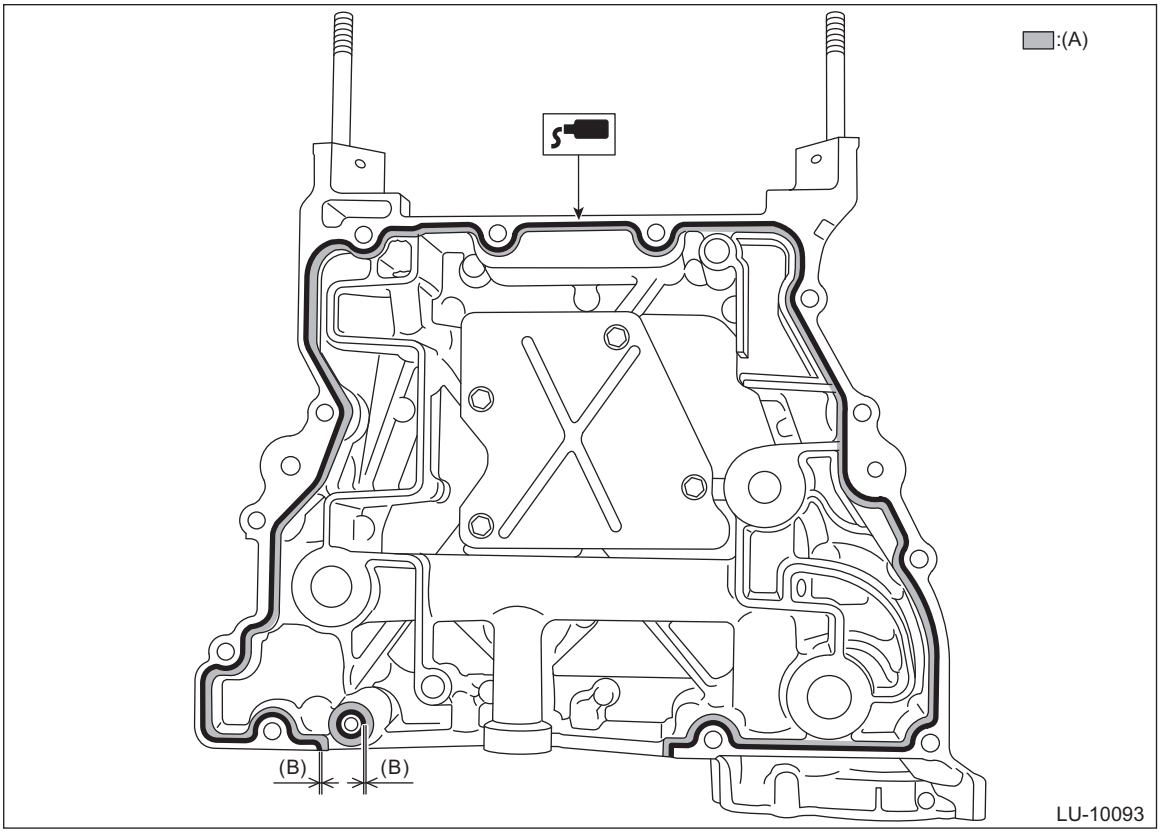
(A) Oil pan upper
(B) O-ring
(C) Baffle plate
(D) Stud bolt
(E) Oil strainer
(F) O-ring
(G) Clutch housing cover (MT model)

6) Apply liquid gasket to the mating surface of the oil pan upper as shown in the figure, and install the oil pan upper to the cylinder block.

NOTE:
• Before applying liquid gasket, degrease the old liquid gasket seal surface of the oil pan upper and the cylinder block.
• Install within 5 min. after applying liquid gasket.
• Apply liquid gasket 1.5 mm (0.0591 in) outside from the chamfer surface. However, application of liquid gasket on the chamfer surface around the bolt hole is allowed.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
5±1 mm (0.1969±0.0394 in)

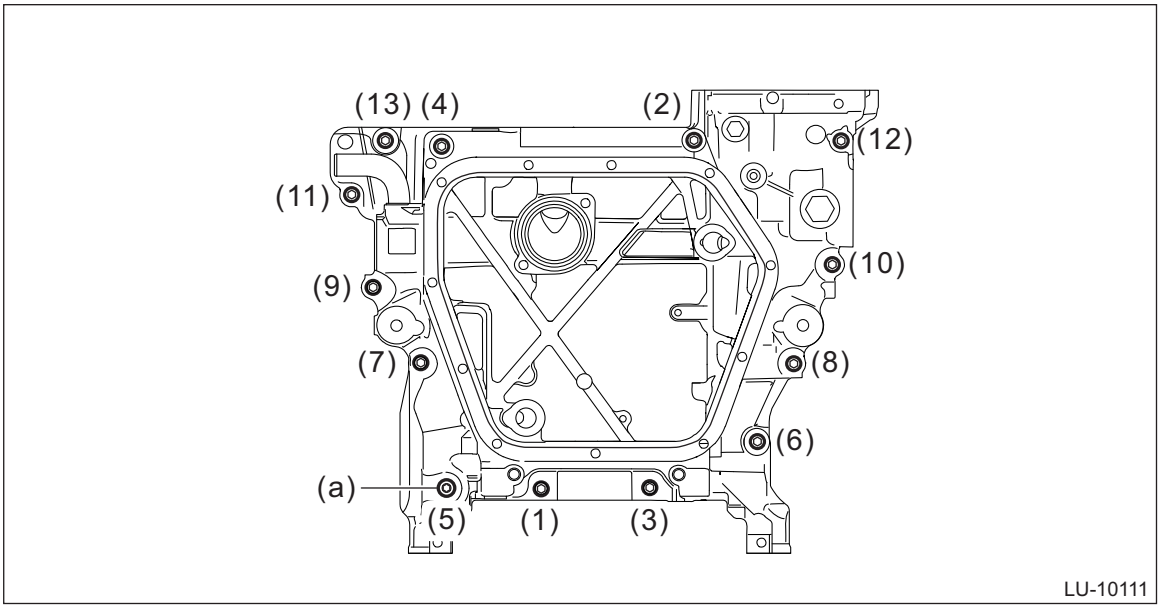


(A) Chamfer surface (B) 1.5 mm (0.0591 in)

7) Tighten the bolts to secure the oil pan upper to the cylinder block in the numerical order shown in the figure.

NOTE:
- Install the bolt (a) shown in the figure using TORX® bit T45.
- After tightening, if the liquid gasket is squeezed out onto the seal surface of the chain cover, completely remove any squeezed-out liquid gasket.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



8) Install the oil level switch. <Ref. to LU(w/o STI)-56, INSTALLATION, Oil Level Switch.>
9) Install the oil pan. <Ref. to LU(w/o STI)-20, OIL PAN, INSTALLATION, Oil Pan.>
10) Install the chain cover. <Ref. to ME(w/o STI)-98, INSTALLATION, Chain Cover.>
11) Install the water pipe assembly. <Ref. to CO(w/o STI)-27, INSTALLATION, Water Pipe Assembly.>
12) Install the thermostat cover. <Ref. to CO(w/o STI)-34, INSTALLATION, Thermostat.>
13) Install the water pump. <Ref. to CO(w/o STI)-19, INSTALLATION, Water Pump.>
14) Install the engine to the vehicle. <Ref. to ME(w/o STI)-59, INSTALLATION, Engine Assembly.>
15) Refill the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
16) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

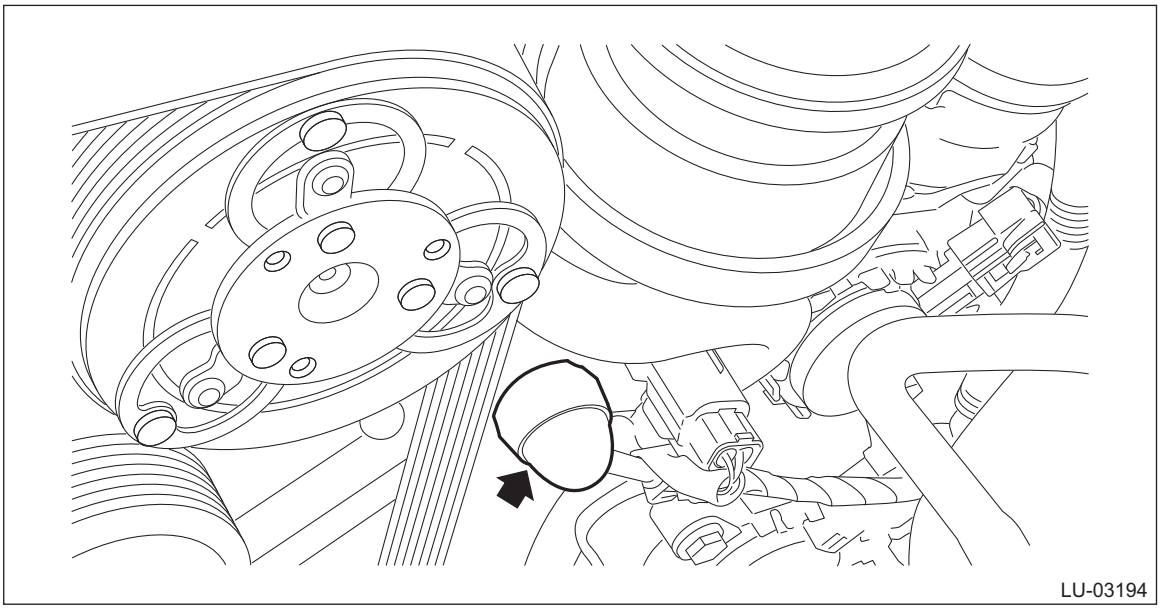
Check that the oil pan, oil pan upper, oil strainer and baffle plate do not have deformation, cracks or damage.

6. Oil Pressure Switch

A: REMOVAL

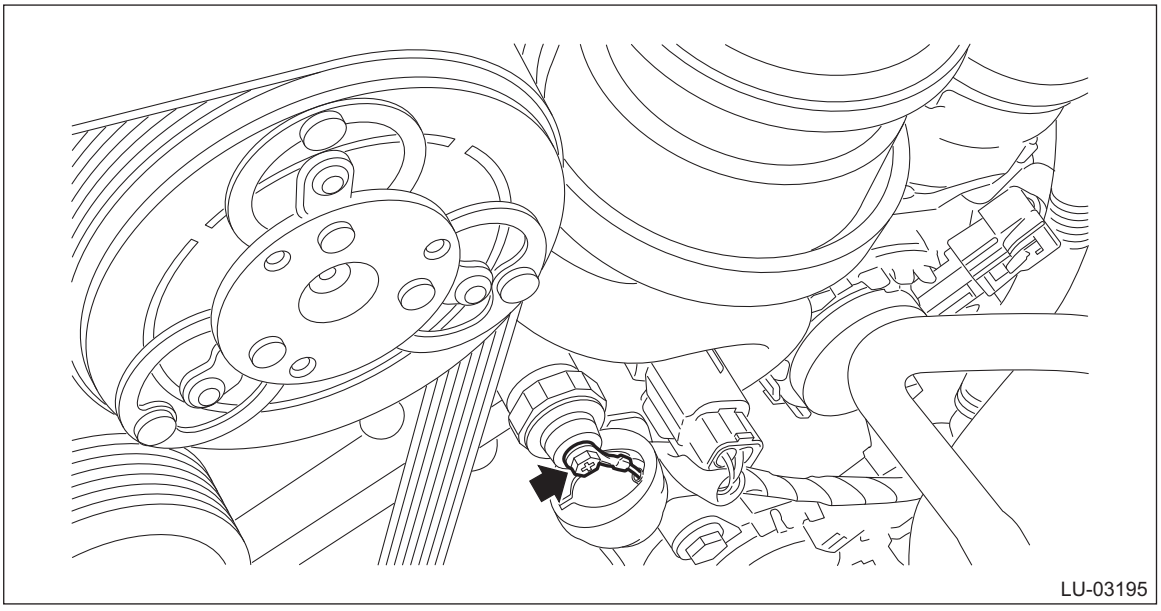
CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emitting smoke or causing a fire.

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the rubber cap.



LU-03194

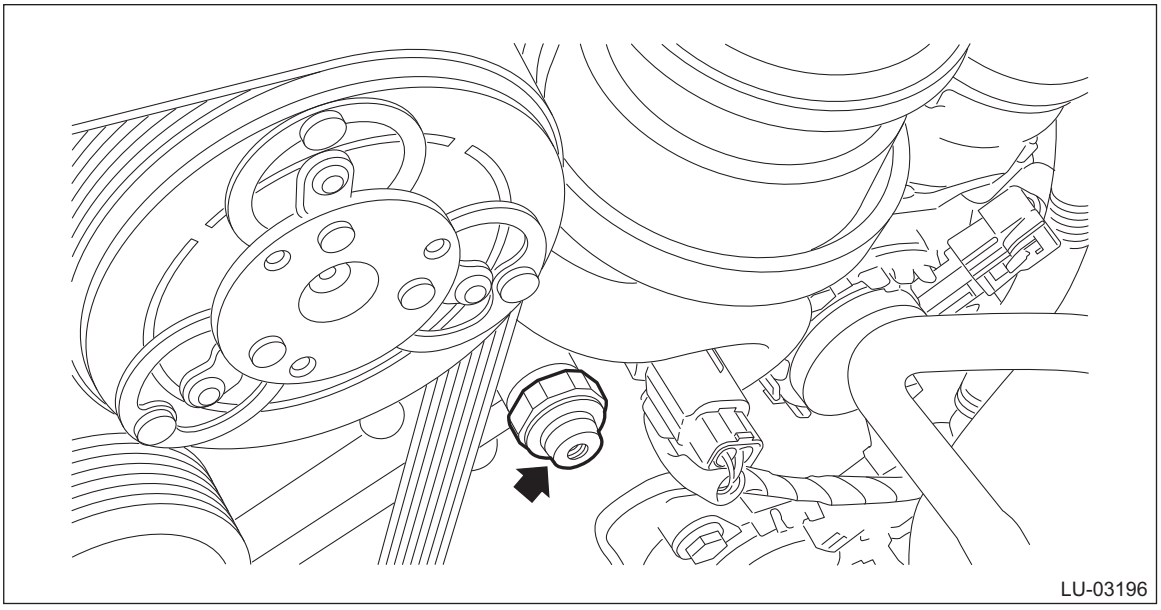
3) Disconnect the terminal from oil pressure switch.



LU-03195

4) Remove the oil pressure switch.

CAUTION:
Catch the engine oil using cloth to prevent it from splashing.

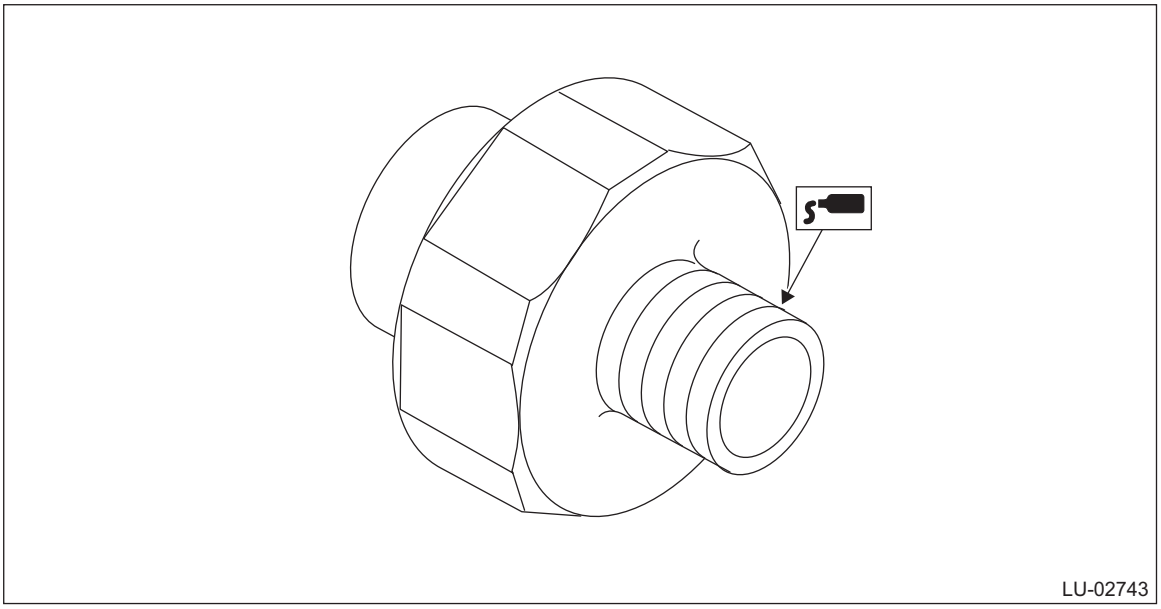


LU-03196

B: INSTALLATION

1) Apply liquid gasket to the oil pressure switch threads.

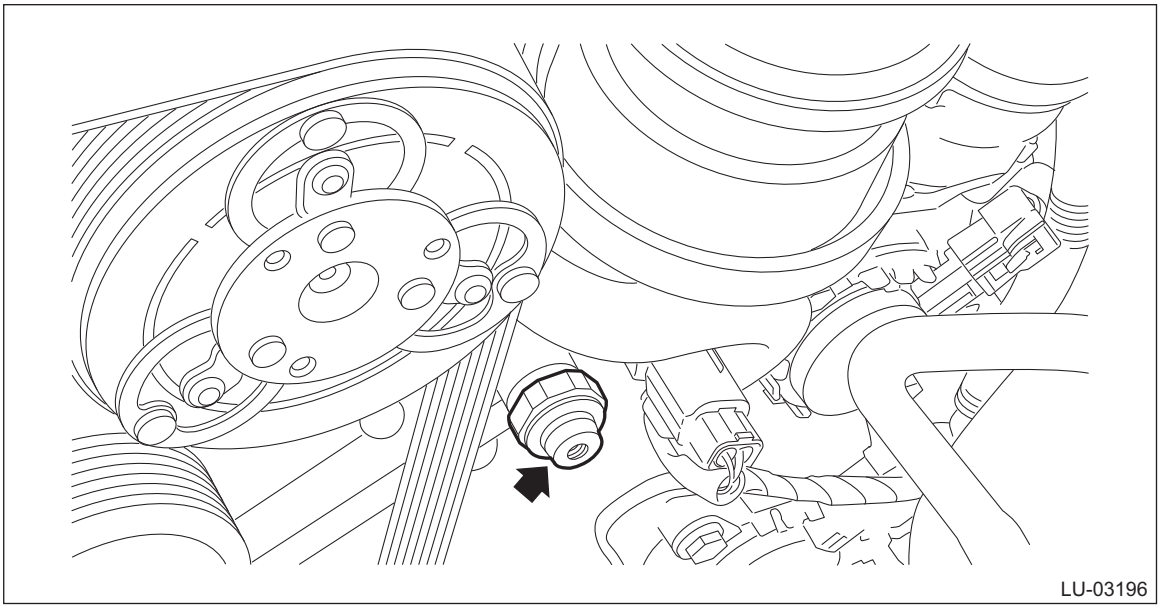
Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent



LU-02743

2) Install the oil pressure switch to the chain cover.

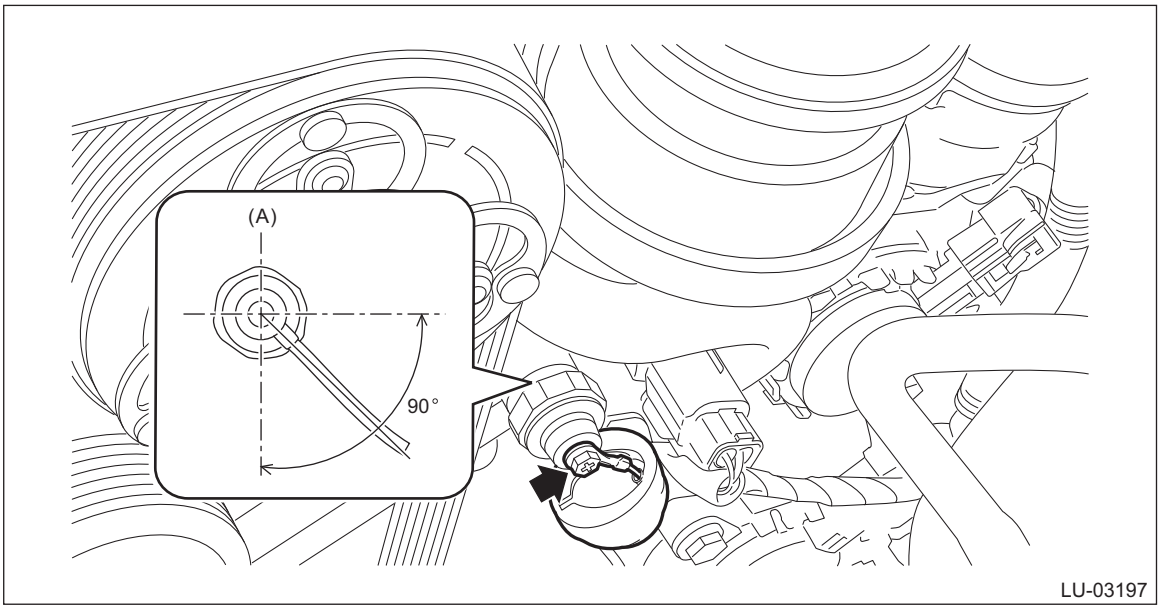
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)



3) Connect the terminal to the oil pressure switch.

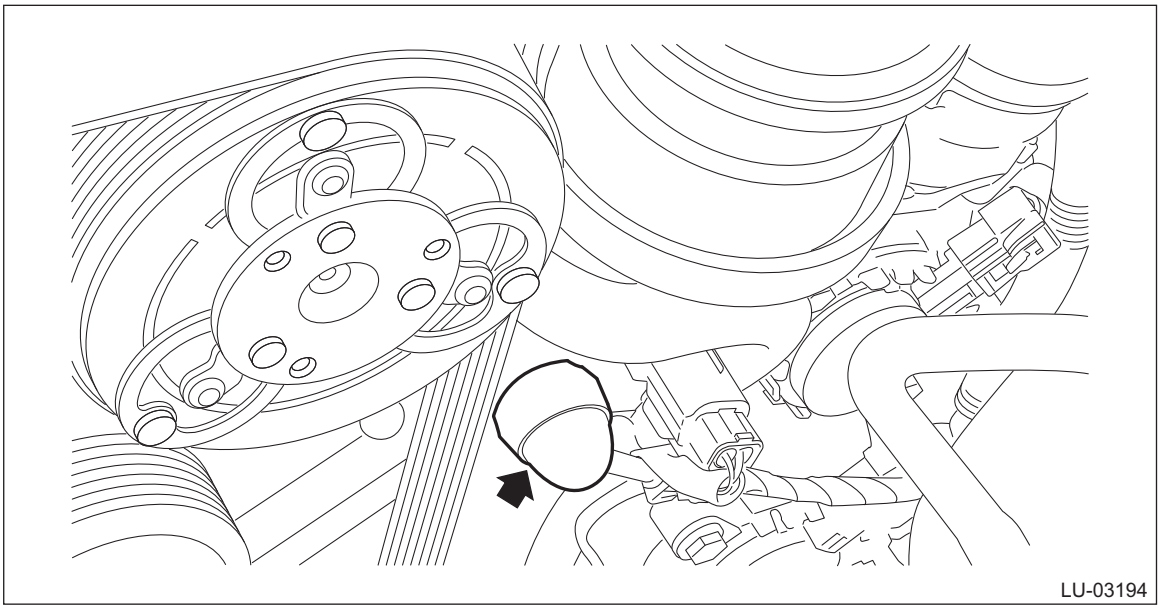
NOTE:
The oil pressure switch harness must be tightened within the range of a 90° angle as shown below.

Tightening torque:
1.5 N·m (0.2 kgf-m, 1.1 ft-lb)



(A) Upper side of the engine

4) Attach the rubber cap.



5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

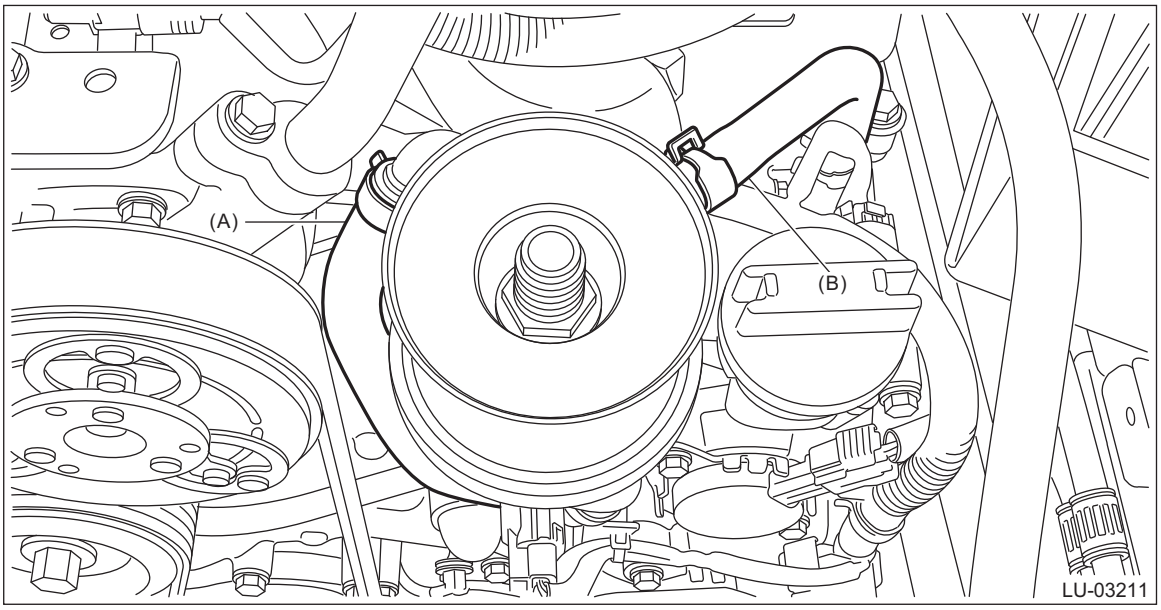
1) Check that the oil pressure switch does not have deformation, cracks or damage.
2) Check the oil pressure switch installation portion for oil leakage and oil seepage.

7. Engine Oil Cooler

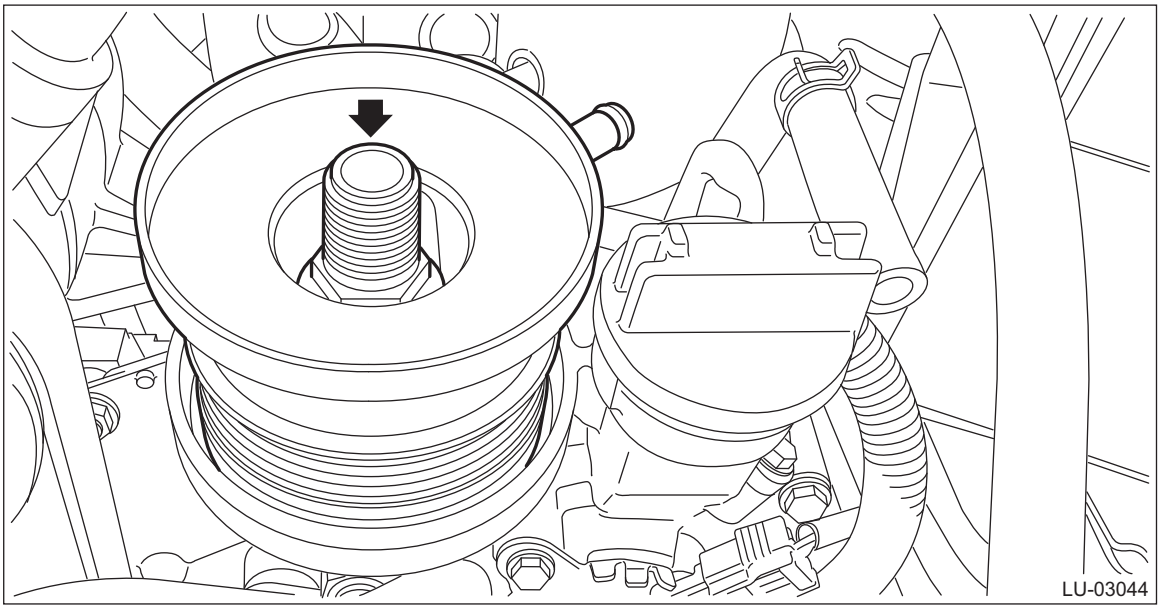
A: REMOVAL

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
3) Lower the vehicle.
4) Remove the engine oil filter. <Ref. to LU(w/o STI)-49, REMOVAL, Engine Oil Filter.>
5) Disconnect the front engine oil cooler hose A (A) and the side engine oil cooler hose A (B) from the engine oil cooler.



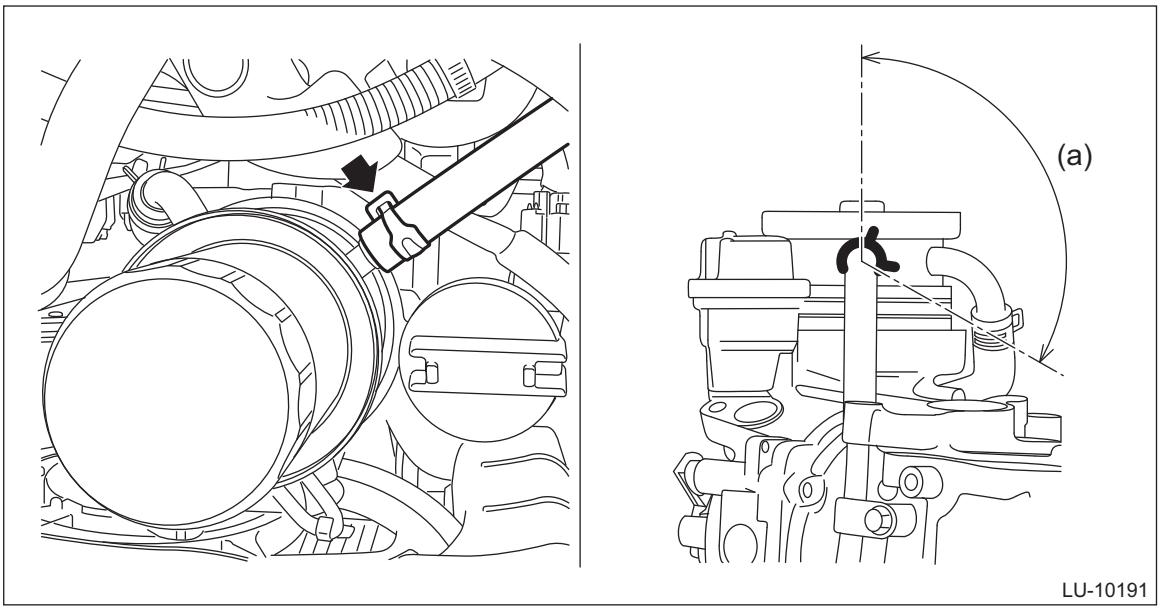
6) Remove the oil cooler connector and remove the engine oil cooler.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• Use a new gasket.
• When connecting the side engine oil cooler hose A to the engine oil cooler, the direction of the clip claw should be matched within the position (a) shown in the figure.



• After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

C: INSPECTION

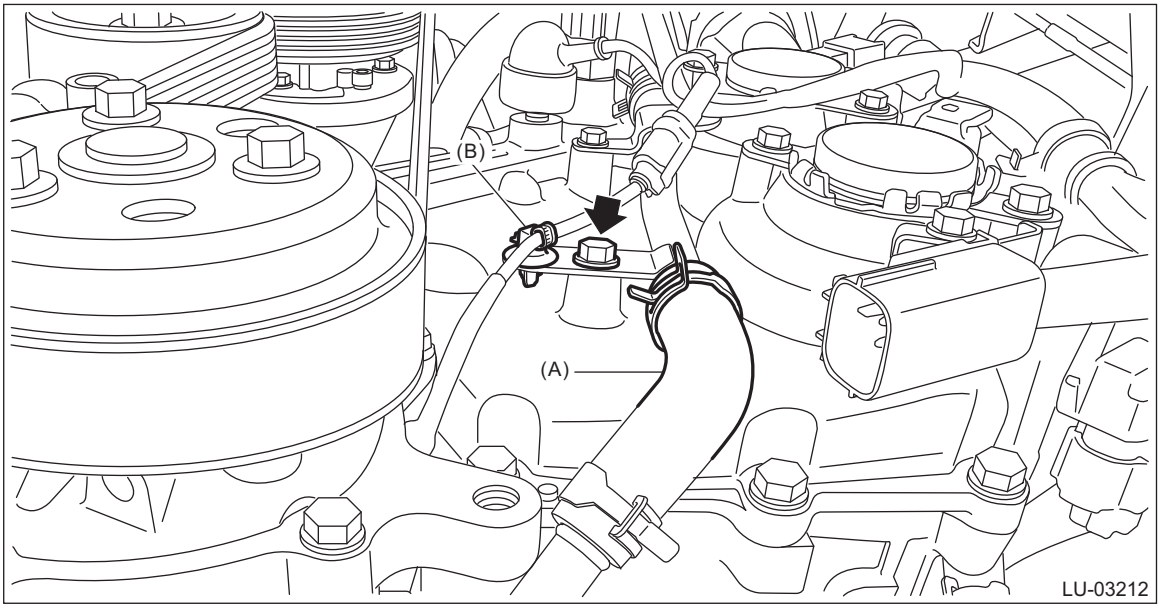
1) Check that the engine oil cooler, engine oil cooler pipe, and oil cooler connector do not have deformation, cracks or damage.
2) Make sure the engine oil cooler hoses are not cracked, damaged or loose.
3) Blow with compressed air to make sure the coolant passages are not clogged.
4) Make sure the mating surfaces of the chain cover do not have damage.

8. Engine Oil Cooler Pipe

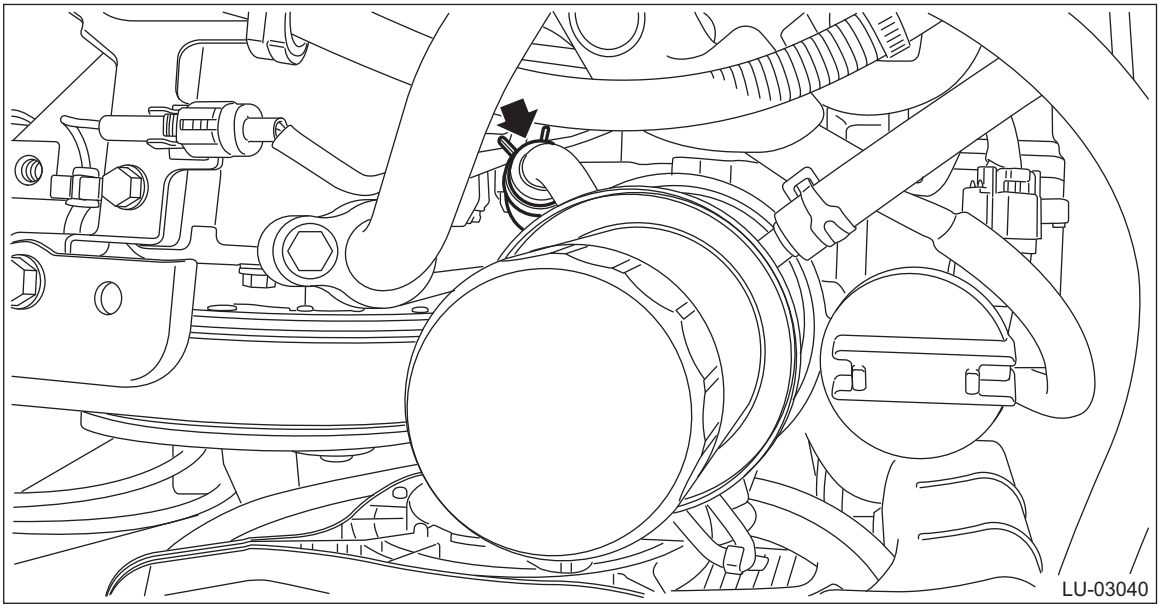
A: REMOVAL

1. FRONT ENGINE OIL COOLER PIPE

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Remove the center exhaust pipe. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
5) Remove the clip (B) which holds the front engine oil cooler hose B (A) and the oil level switch harness from the front engine oil cooler pipe. Remove the bolt which secures the front engine oil cooler pipe to the chain cover.

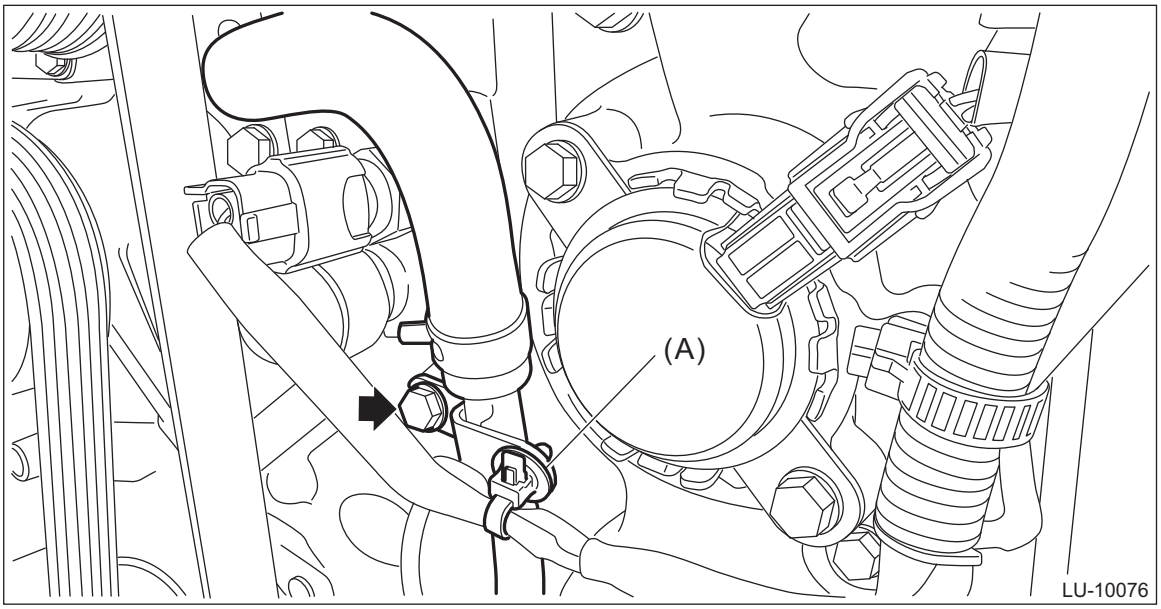


6) Lower the vehicle.
7) Disconnect the front engine oil cooler hose A from the engine oil cooler.



8) Remove the clip (A) holding the engine oil temperature sensor harness from the front engine oil cooler pipe.

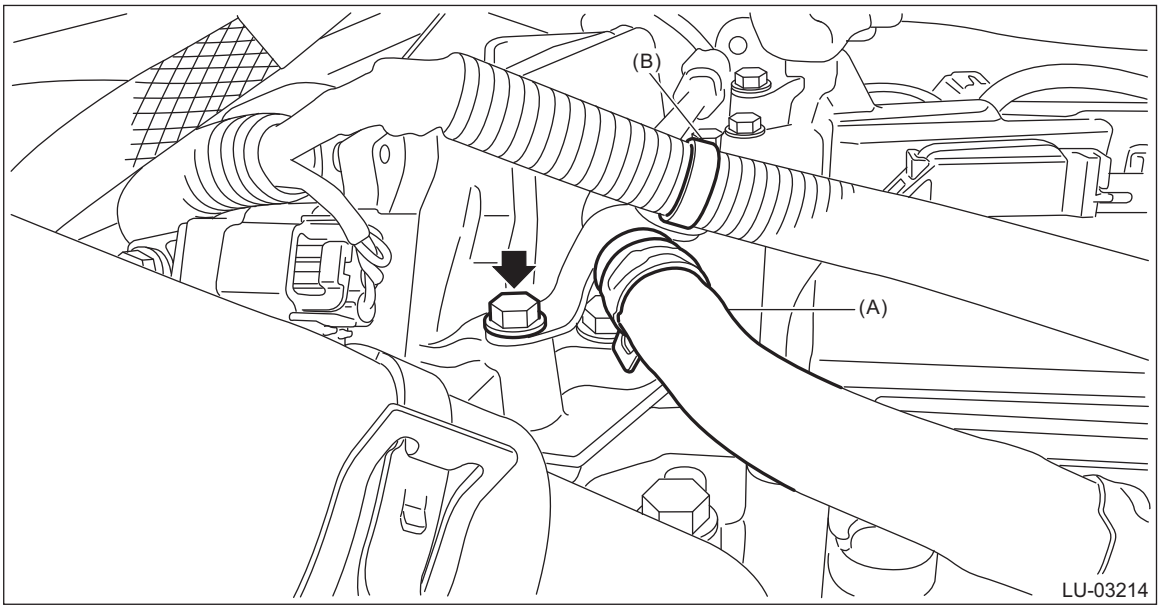
9) Remove the bolt which secures the front engine oil cooler pipe to the chain cover. Remove the front engine oil cooler pipe together with the front engine oil cooler hose A.



10) Remove the front engine oil cooler hose A from the front engine oil cooler pipe.

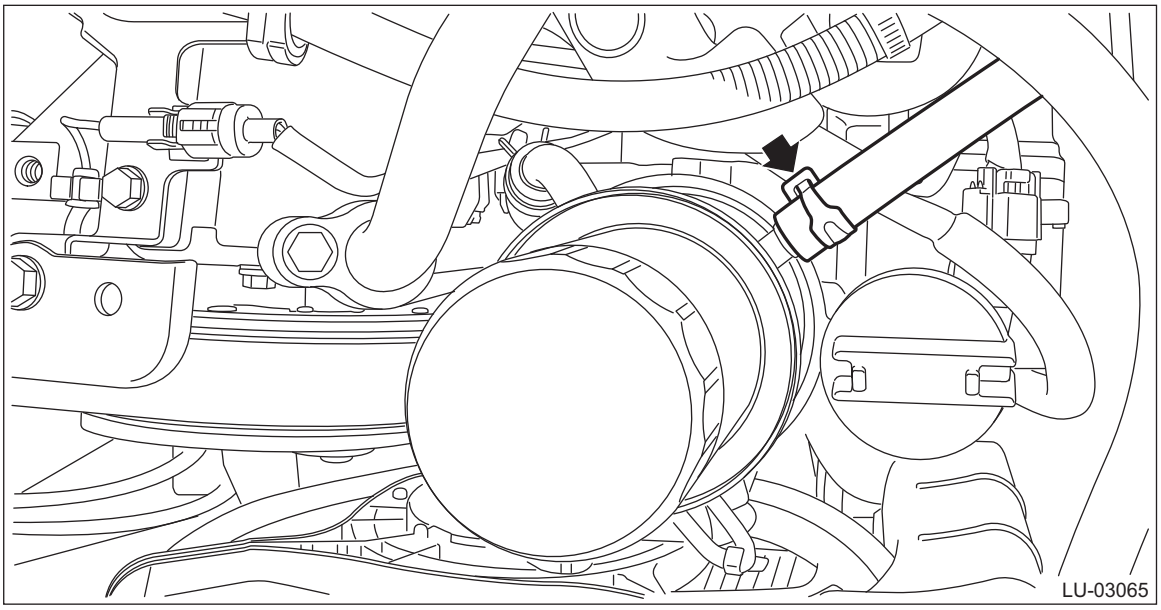
2. SIDE ENGINE OIL COOLER PIPE

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Remove the center exhaust pipe. <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
5) Remove the clip (B) which holds the side engine oil cooler hose B (A) and the rear oxygen sensor harness from the side engine oil cooler pipe. Remove the bolt which secures the side engine oil cooler pipe to the cam carrier RH.

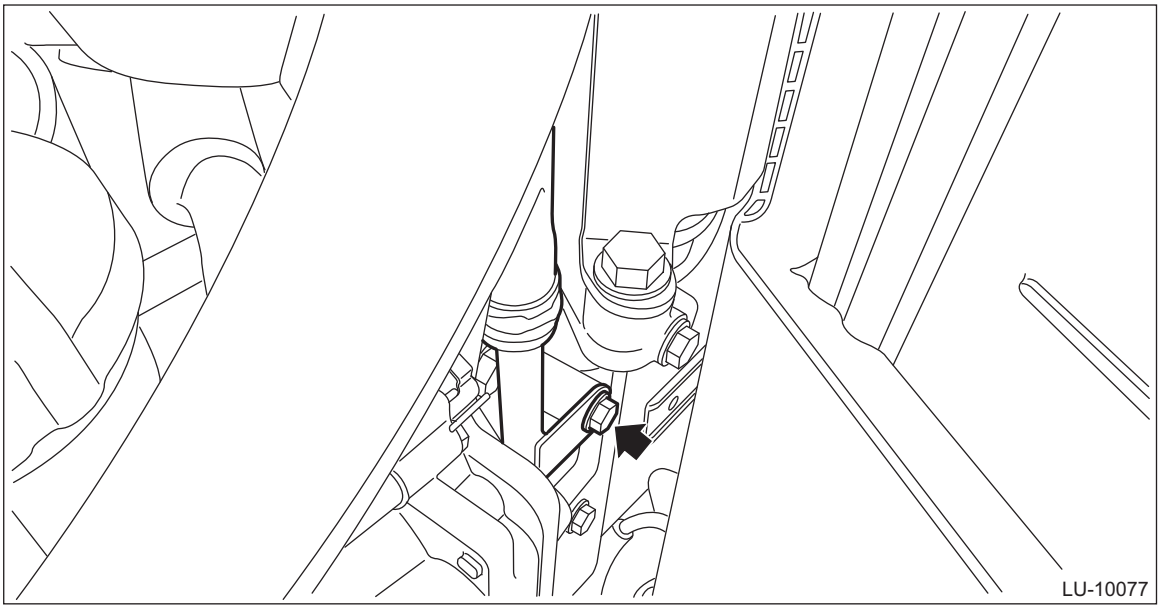


6) Lower the vehicle.

7) Disconnect the side engine oil cooler hose A from the engine oil cooler.



8) Remove the bolt which secures the side engine oil cooler pipe to the cam carrier RH. Remove the side engine oil cooler pipe together with the side engine oil cooler hose A.



9) Remove the side engine oil cooler hose A from the side engine oil cooler pipe.

B: INSTALLATION

1. FRONT ENGINE OIL COOLER PIPE

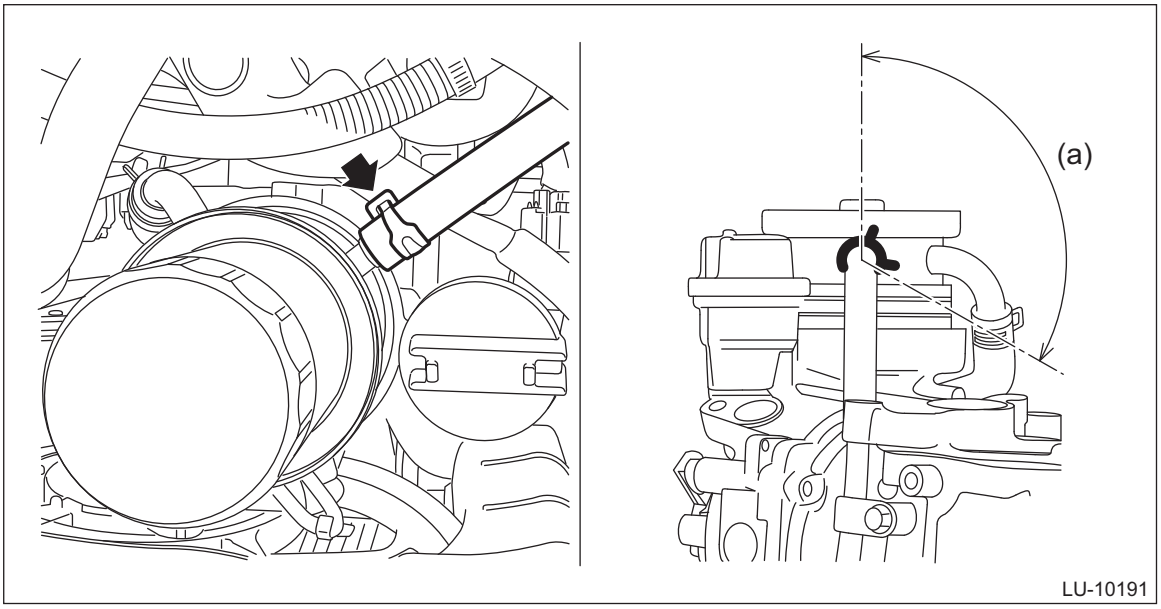
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

2. SIDE ENGINE OIL COOLER PIPE

Install in the reverse order of removal.

NOTE:
When connecting the side engine oil cooler hose A to the engine oil cooler, the direction of the clip claw should be matched within the position (a) shown in the figure.



Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1) Check that the engine oil cooler pipes have no deformation, cracks or other damages.
2) Make sure the engine oil cooler hoses are not cracked, damaged or loose.

9. Oil Catch Tank

A: REMOVAL

Refer to “Oil Catch Tank” for removal procedure of the oil catch tank. <Ref. to IN(w/o STI)-65, REMOVAL, Oil Catch Tank.>

B: INSTALLATION

Refer to “Oil Catch Tank” for installation procedure of the oil catch tank. <Ref. to IN(w/o STI)-66, INSTALLATION, Oil Catch Tank.>

C: INSPECTION

Refer to “Oil Catch Tank” for inspection procedure of the oil catch tank. <Ref. to IN(w/o STI)-68, INSPECTION, Oil Catch Tank.>

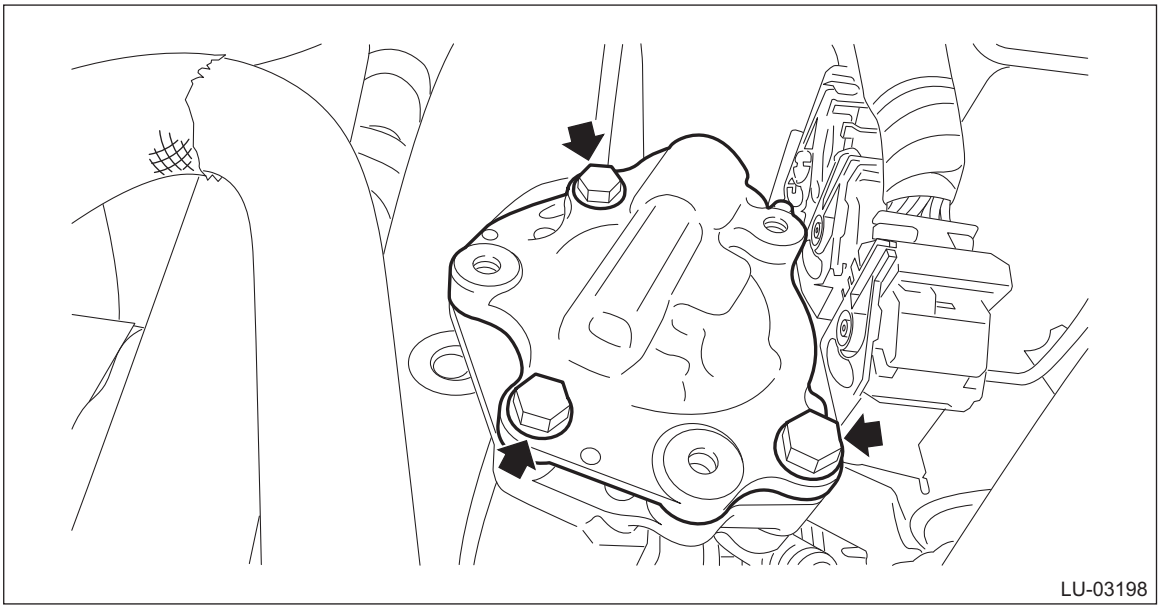
10.Scavenge Pump

A: REMOVAL

CAUTION:
If engine oil is spilt onto the exhaust pipe, wipe it off with cloth to avoid emission of smoke or causing a fire.

1) Remove the oil pipe assembly. <Ref. to LU(w/o STI)-42, OIL PIPE ASSEMBLY, REMOVAL, Oil Pipe.>
2) Remove the bolts which secure the scavenge pump to the intake rear camshaft cap RH and the cam carrier RH. Using a crowbar, remove the scavenge pump.

CAUTION:
Be careful not to damage the mating surfaces of the cylinder head and scavenge pump.



3) Remove the liquid gasket from the scavenge pump, intake rear camshaft cap RH, and cam carrier RH.

B: INSTALLATION

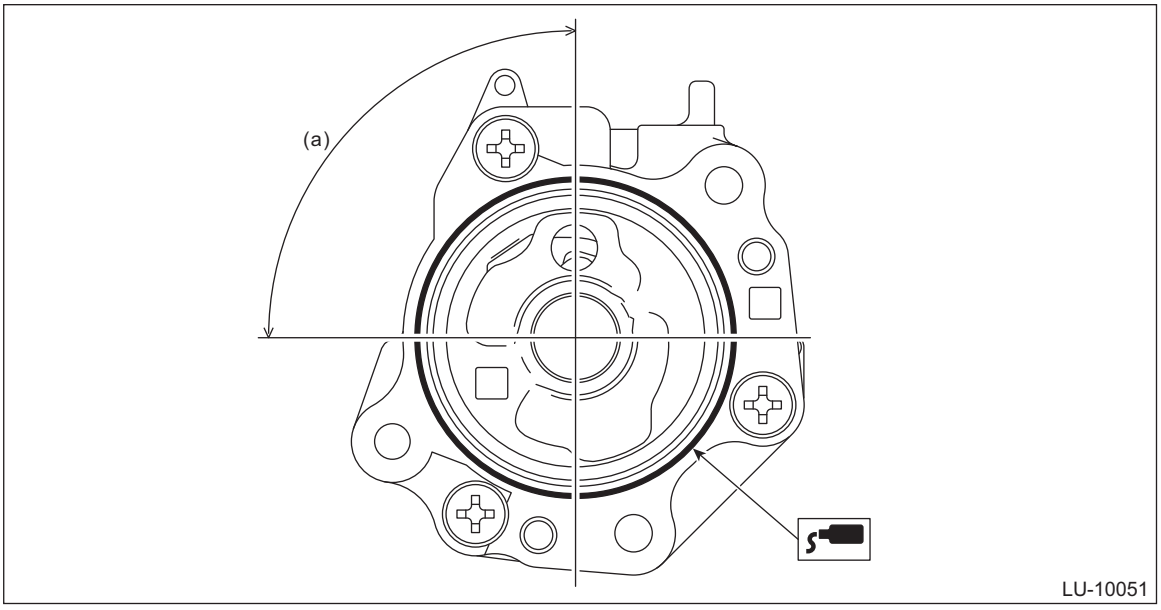
Install in the reverse order of removal.

CAUTION:
Do not start applying the gasket in the (a) range shown in the figure.

NOTE:
• Before applying liquid gasket, degrease the liquid gasket seal surface of the scavenge pump, intake rear camshaft cap RH, and cam carrier RH.
• Install within 5 min. after applying liquid gasket.

Liquid gasket:
THREE BOND 1217G (Part No. K0877Y0100), THREE BOND 1217H or equivalent

Liquid gasket applying diameter:
3±1 mm (0.1181±0.0394 in)



Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

C: INSPECTION

1) Check that the scavenge hose has no deformation, cracks or other damages.
2) Check that the scavenge pump has no crack, damage, or looseness.

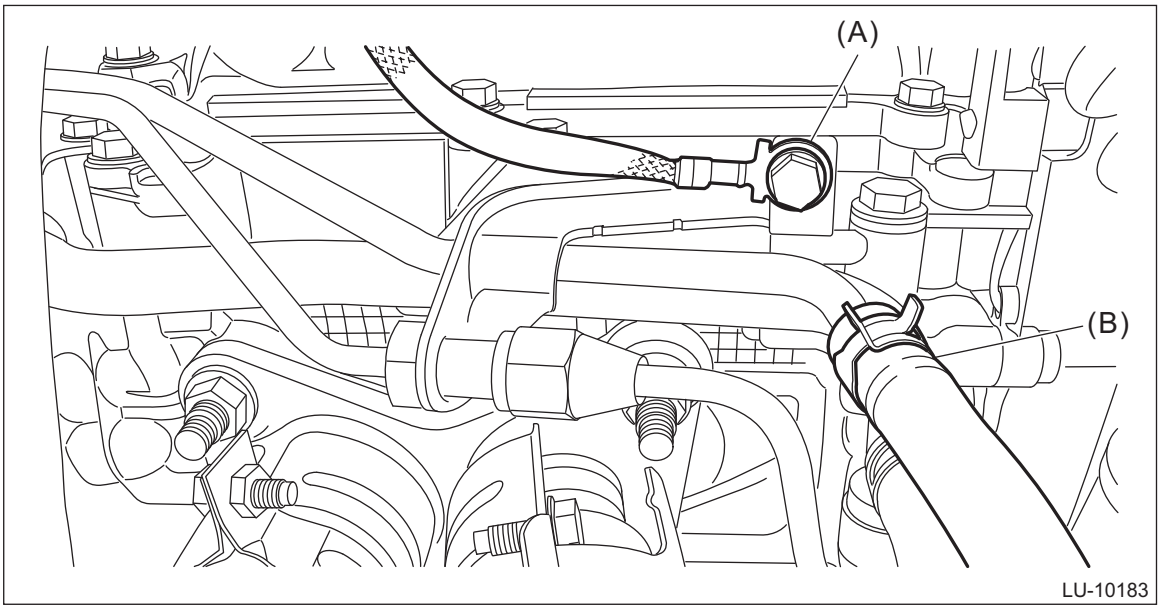
11.Oil Pipe

A: REMOVAL

1. OIL PIPE ASSEMBLY

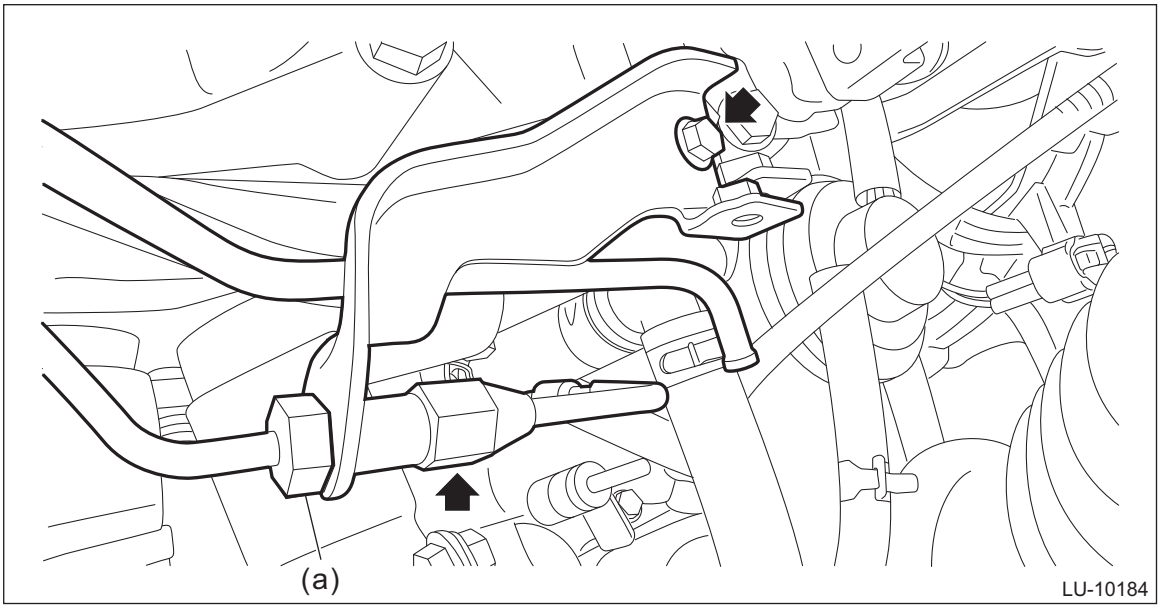
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intake duct No. 2. <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
4) Lift up the vehicle.
5) Disconnect the ground cable (A) from the oil pipe assembly.
6) Disconnect the engine oil hose (B) from the oil pipe assembly, and drain the engine oil in the oil catch tank.

NOTE:
Prepare the container for draining of engine oil.

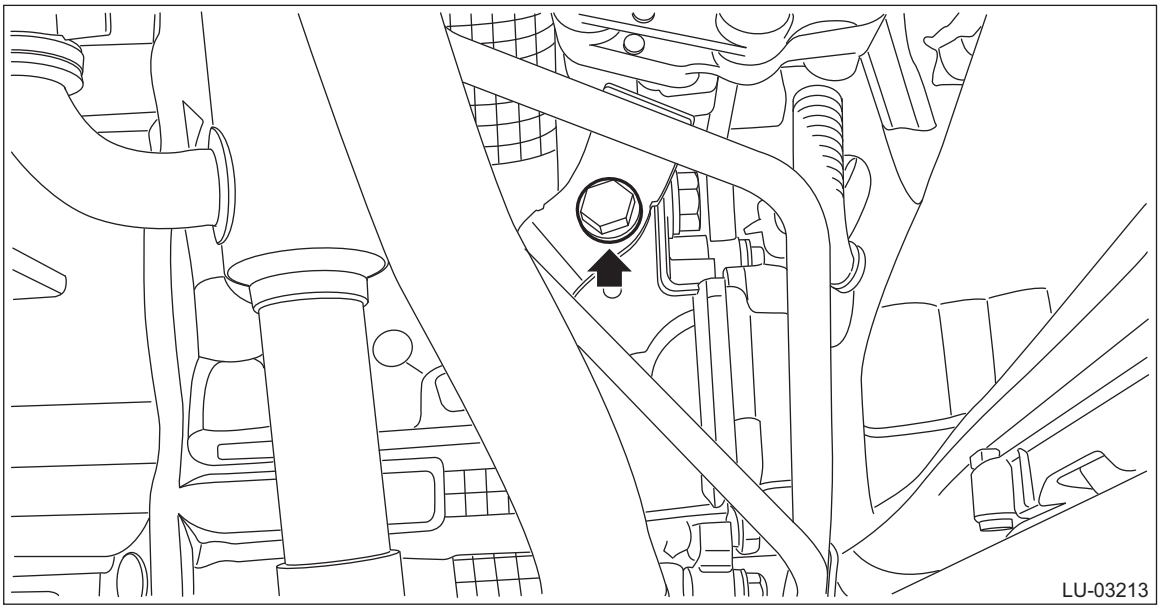


7) Remove the engine oil hose from the oil catch tank.
8) Disconnect the union screw pipe assembly from the oil pipe assembly, and remove the bolt which holds the oil pipe assembly.

CAUTION:
In order to prevent damaging the oil pipe assembly, fix the section (a) shown in the figure when loosing the flare nut on the union screw pipe assembly, and avoid the part from rotating together while loosening the nut.

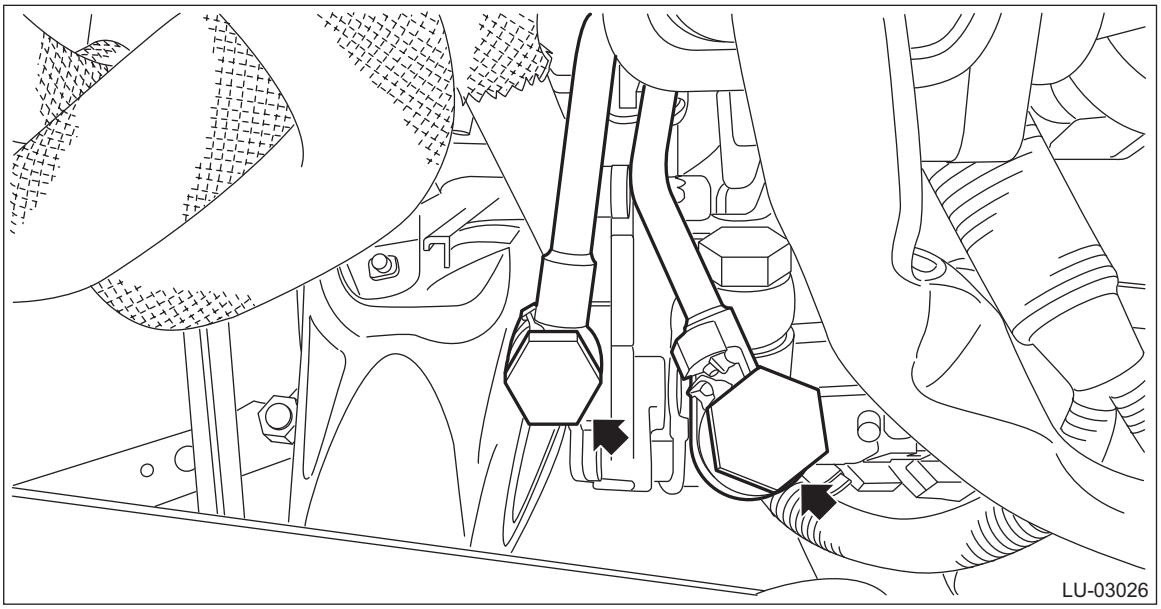


9) Remove the bolt which secures the oil pipe assembly to the cam carrier RH.



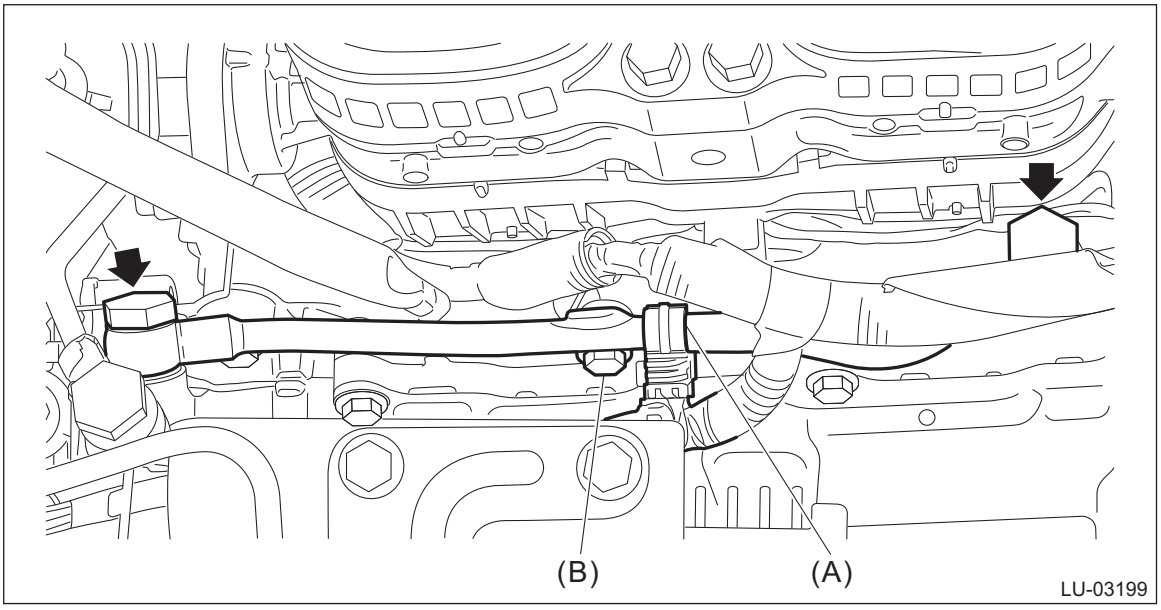
10) Lower the vehicle.

11) Remove the union bolts which secure the oil pipe assembly from the scavenge pump and the intake rear camshaft cap RH, and remove the oil pipe assembly.



2. OIL PIPE

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Remove the intake duct No. 2. <Ref. to IN(w/o STI)-33, INTAKE DUCT NO. 2, REMOVAL, Intake Duct.>
3) Remove the clip (A) which secures the engine wiring harness to the oil pipe, and remove the bolt (B) which secures the oil pipe to the cam carrier RH.
4) Remove the union bolts which secure the oil pipes from the intake rear camshaft cap RH and the cam carrier RH.



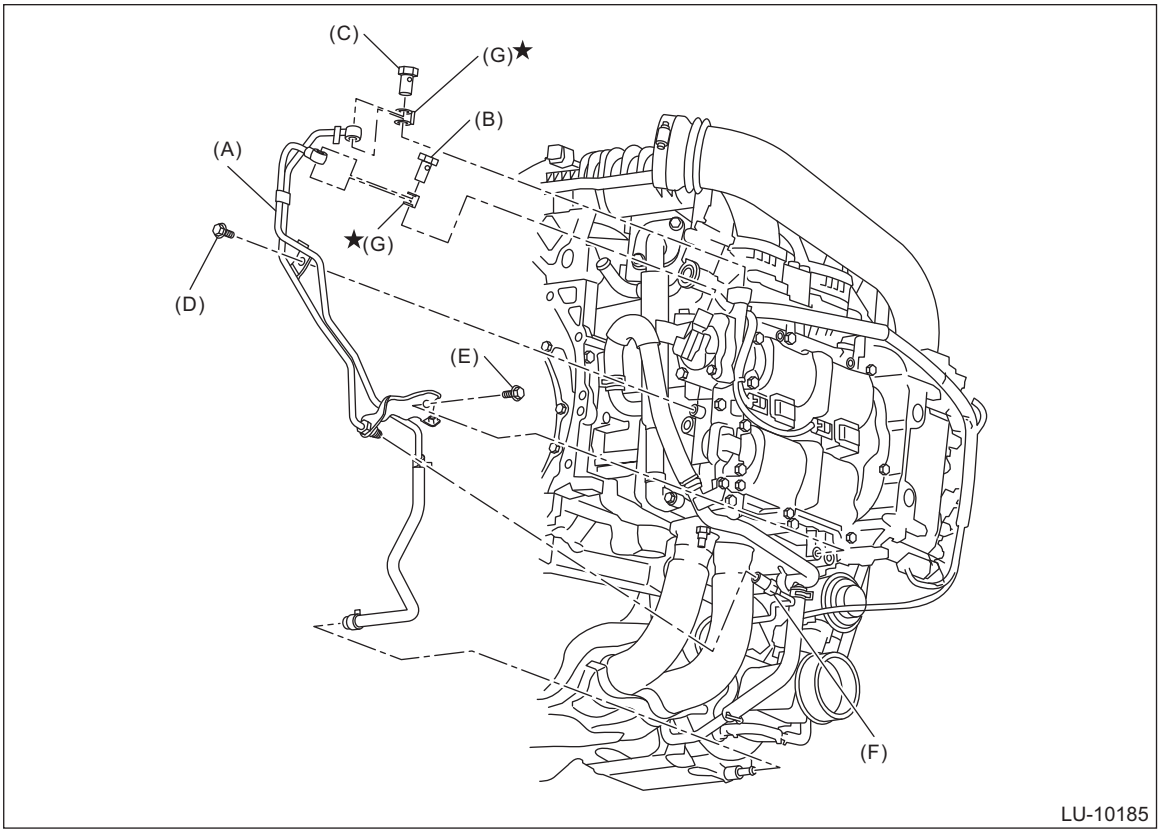
B: INSTALLATION

1. OIL PIPE ASSEMBLY

1) Temporarily install the oil pipe assembly.
   (1) Temporarily tighten the union bolts (B) and (C) which secure the oil pipe assembly (A) to the scavenge pump and the intake rear camshaft cap RH.

NOTE:
Use a new gasket.

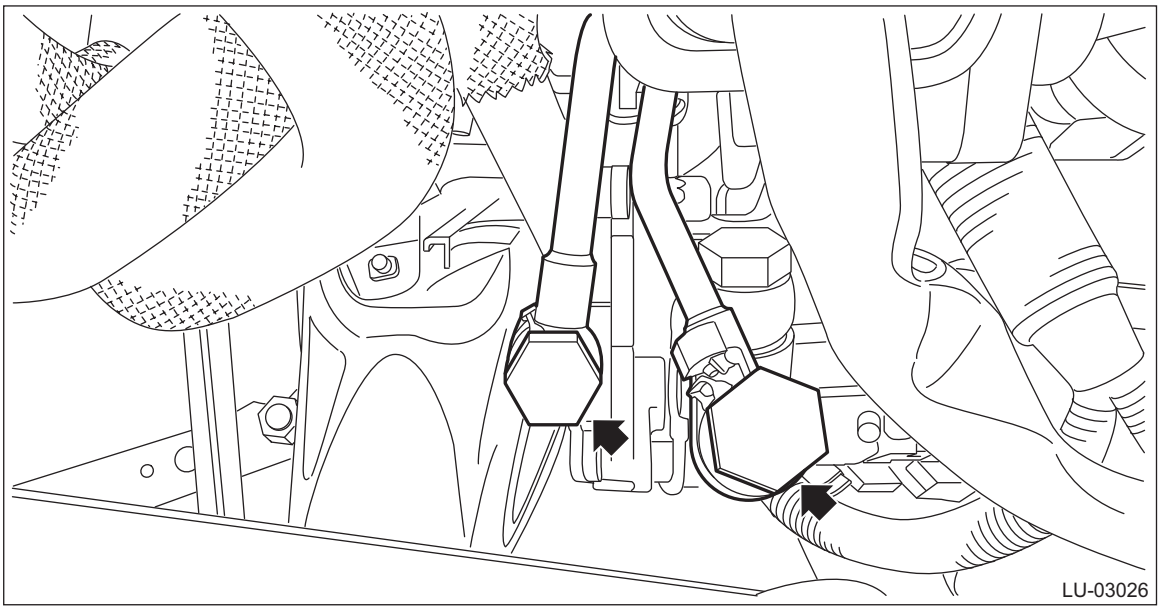
(2) Temporarily tighten the bolts (D) and (E) which secure the oil pipe assembly (A) to the cam carrier RH.
(3) Temporarily tighten the union screw pipe assembly (F) to the oil pipe assembly (A).



(A)	Oil pipe ASSY	(B)	Union bolt	(C)	Union bolt
(D)	Bolt	(E)	Bolt	(F)	Union screw pipe ASSY
(G)	Gasket				

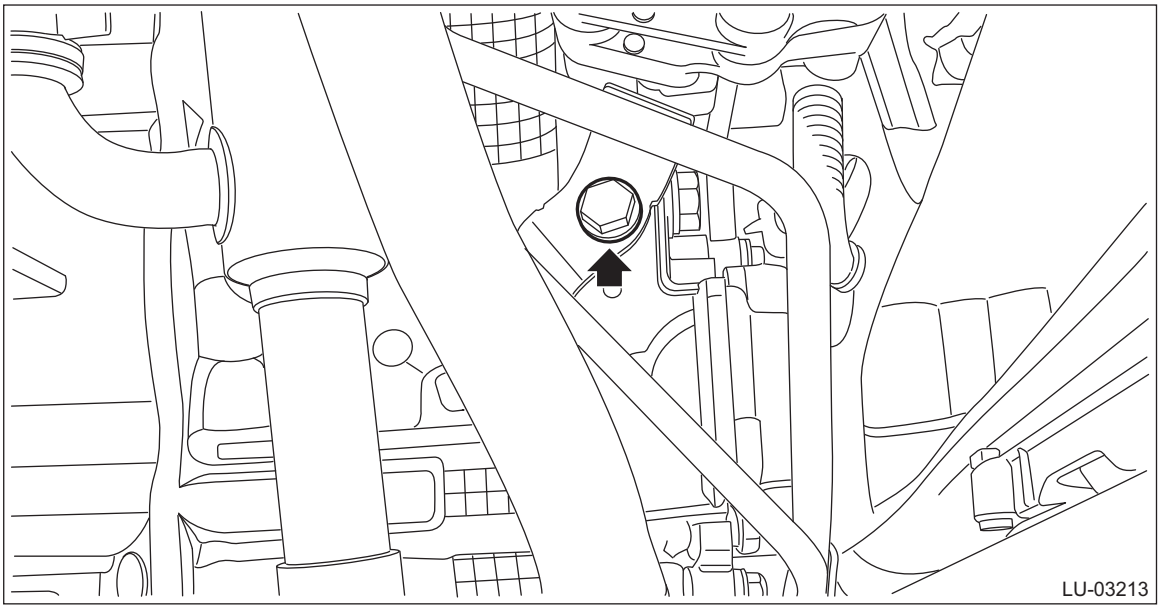
2) Tighten the union bolts which secure the oil pipe assembly to the scavenge pump and the intake rear camshaft cap RH.

Tightening torque:
31.5 N·m (3.2 kgf-m, 23.2 ft-lb)



3) Lift up the vehicle.
4) Tighten the bolt which secures the oil pipe assembly to the cam carrier RH.

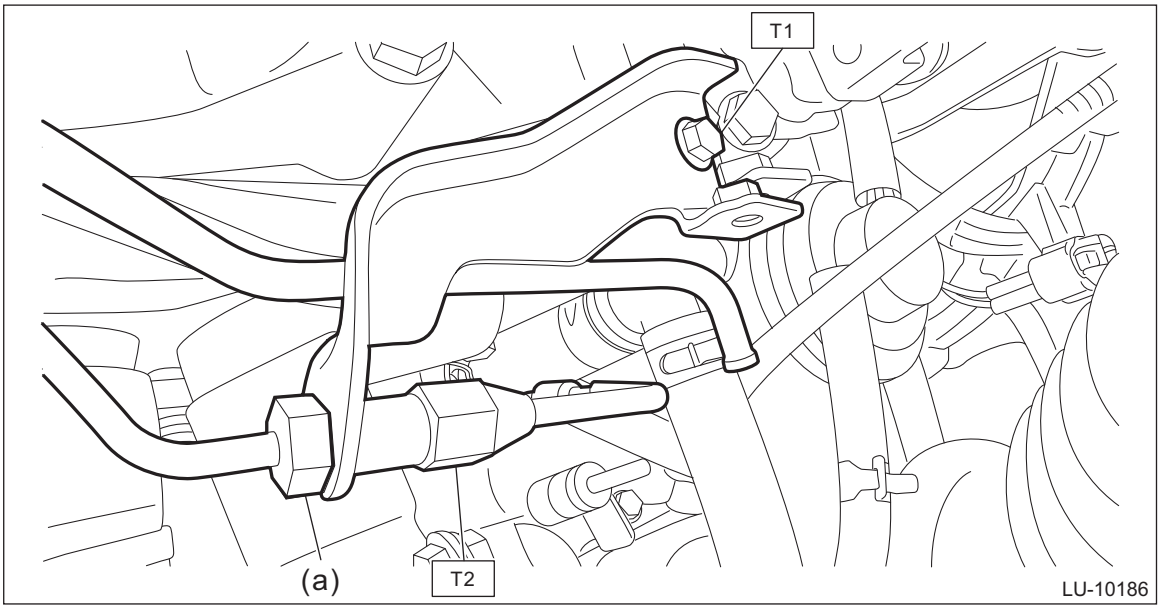
Tightening torque:
6.8 N·m (0.7 kgf-m, 5.0 ft-lb)



5) Tighten the union screw pipe assembly to the oil pipe assembly, and tighten the oil pipe assembly mounting bolts.

CAUTION:
In order to prevent damaging the oil pipe assembly, fix the section (a) shown in the figure when tightening the flare nut on the union screw pipe assembly, and avoid the part from rotating together while tightening the nut.

Tightening torque:
T1: 6.8 N·m (0.7 kgf-m, 5.0 ft-lb)
T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)

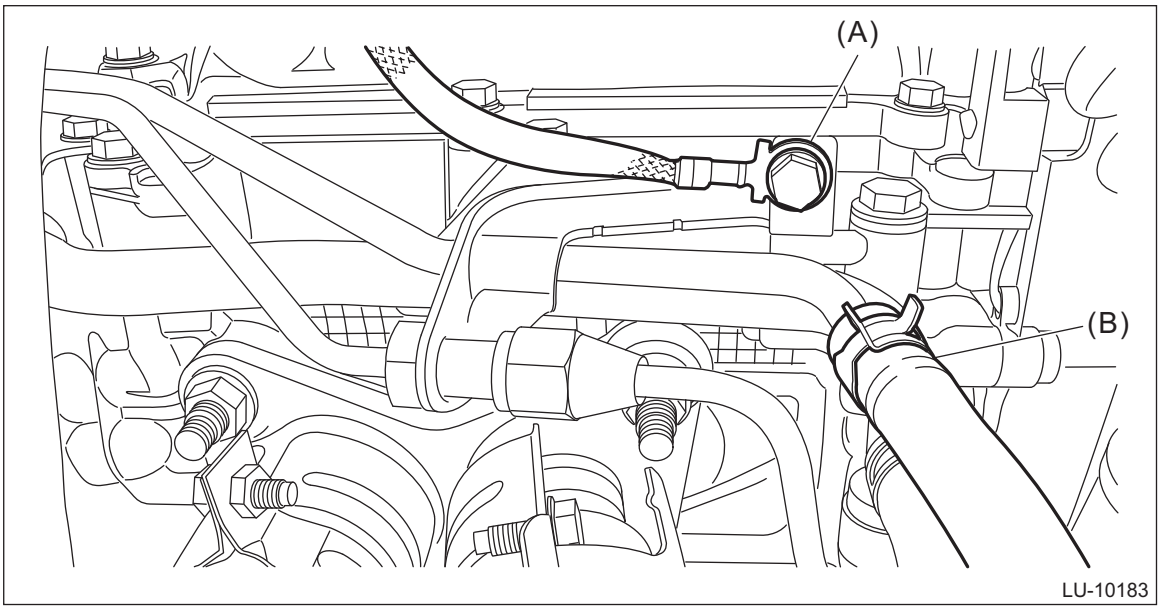


6) Install the engine oil hose to the oil catch tank.

NOTE:
Use a new engine oil hose.

7) Connect the ground cable (A) and the oil outlet hose (B) to the oil pipe assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

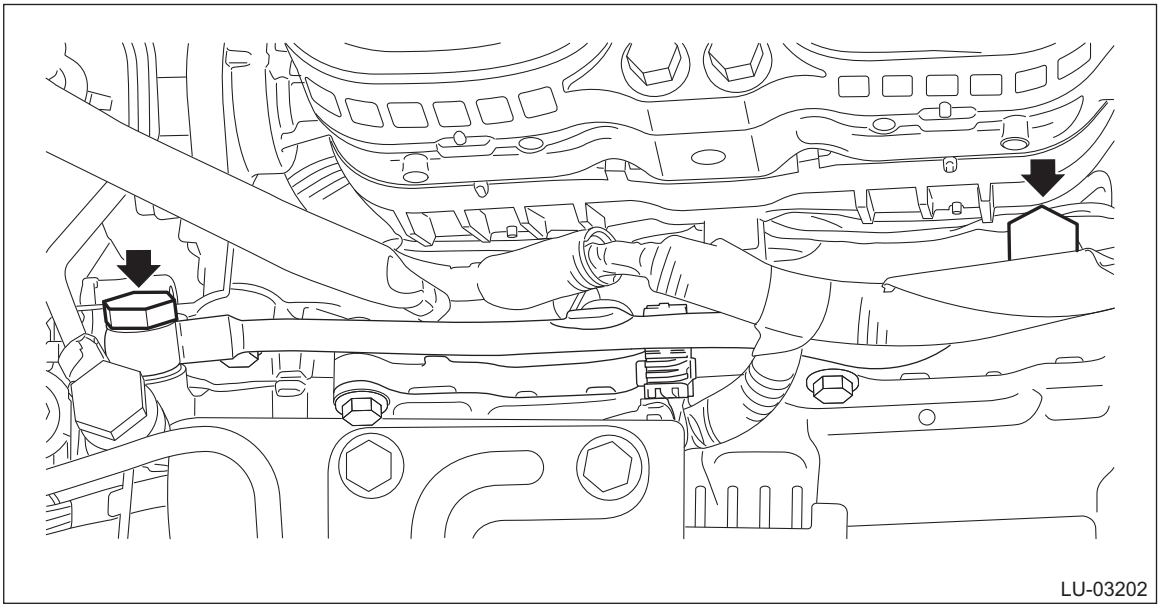


8) Lower the vehicle.
9) Install the intake duct No. 2. <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
10) After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
11) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
12) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

2. OIL PIPE

1) Temporarily tighten the union bolts which secure the oil pipes to the intake rear camshaft cap RH and the cam carrier RH.

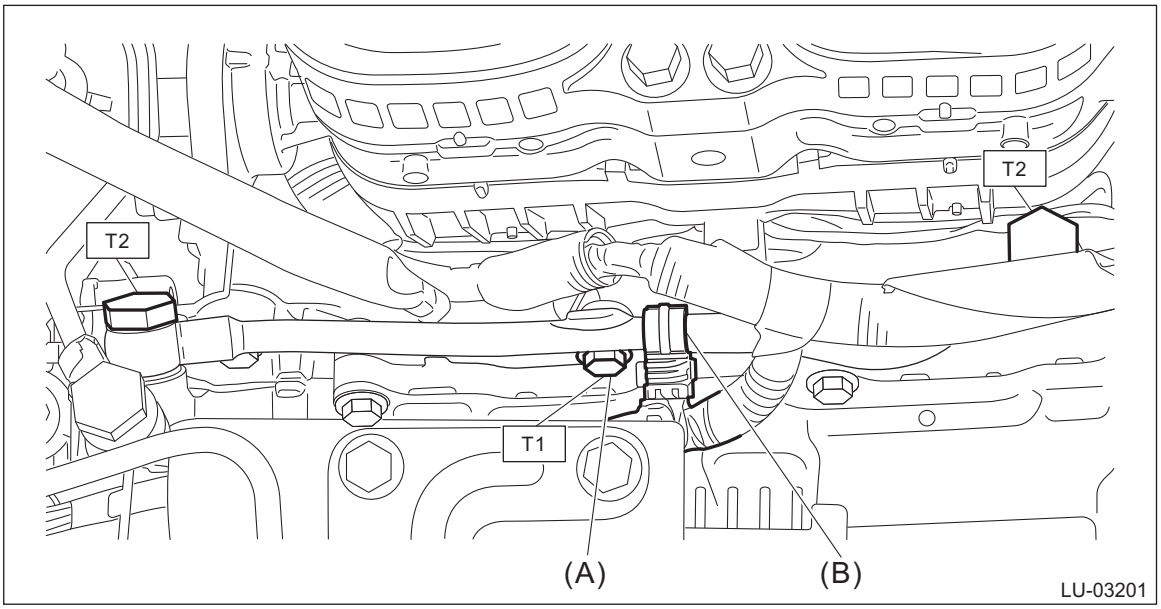
NOTE:
Use a new gasket.



2) Install the bolt (A) which secures the oil pipe to the cam carrier RH, and install the clip (B) which secures the engine wiring harness to the oil pipe.

Tightening torque:
T1: 6.4 N·m (0.7 kgf-m, 4.7 ft-lb)
3) Tighten the union bolts which secure the oil pipes to the intake rear camshaft cap RH and the cam carrier RH.

Tightening torque:
T2: 31 N·m (3.2 kgf-m, 22.9 ft-lb)



4) Install the intake duct No. 2. <Ref. to IN(w/o STI)-43, INTAKE DUCT NO. 2, INSTALLATION, Intake Duct.>
5) After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>
6) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

C: INSPECTION

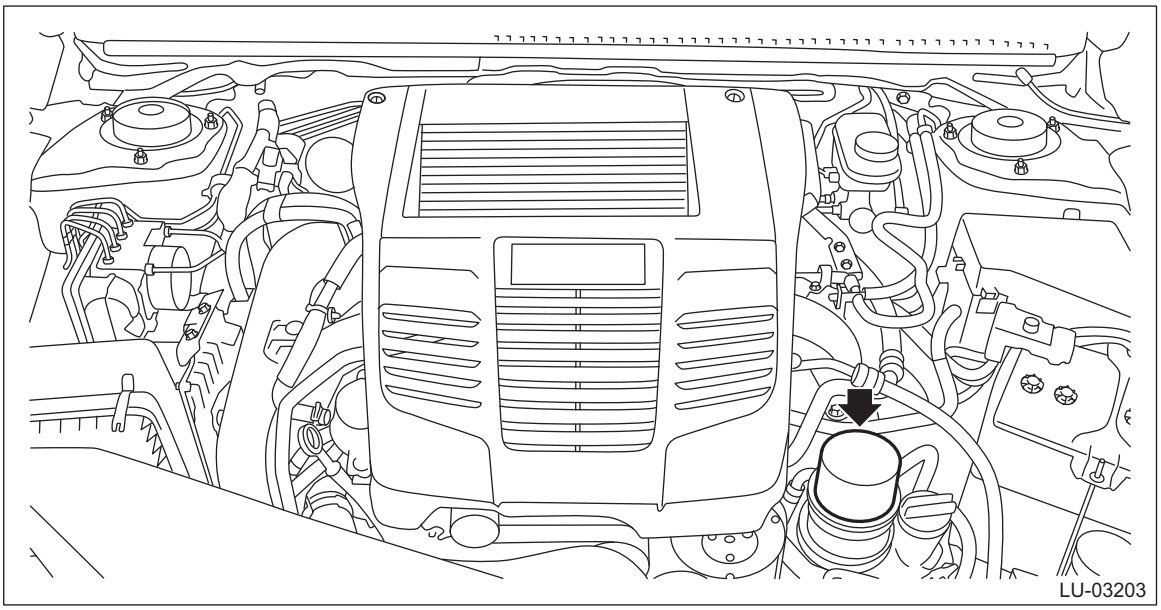
1) Check that the oil pipe assembly, oil pipes, and the union bolts have no deformation, cracks and other damages.
2) Check that there are no oil leaks or oil oozing from the areas where the oil pipe assembly and oil pipes are installed.

12.Engine Oil Filter

A: REMOVAL

CAUTION:
If the engine oil is spilt over exhaust pipe or the under cover, wipe it off with cloth to avoid emission of smoke or causing a fire.
Remove the oil filter using ST.

NOTE:
Clean off water or dust from the oil filter mating surface using air.
ST 498547000 OIL FILTER WRENCH



B: INSTALLATION

CAUTION:
- **Do not use any oil filters other than that of 80 mm (3.15 in) dia. × 65 mm (2.55 in) height.**
- **Do not tighten excessively, or oil may leak.**

1) Clean the oil filter installation surface.
2) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
3) Install the oil filter by turning it by hand, being careful not to damage the seal rubber of the oil filter.
4) Further tighten the oil filter (approx. 3/4 rotation) after the seal rubber of the oil filter comes in contact with the oil cooler. When using a torque wrench, tighten it to 14 N·m (1.4 kgf-m, 10.3 ft-lb).
5) After installing, check the engine oil level and replenish it if necessary. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>

C: INSPECTION

1) After installing the oil filter, run the engine and check for oil leakage.

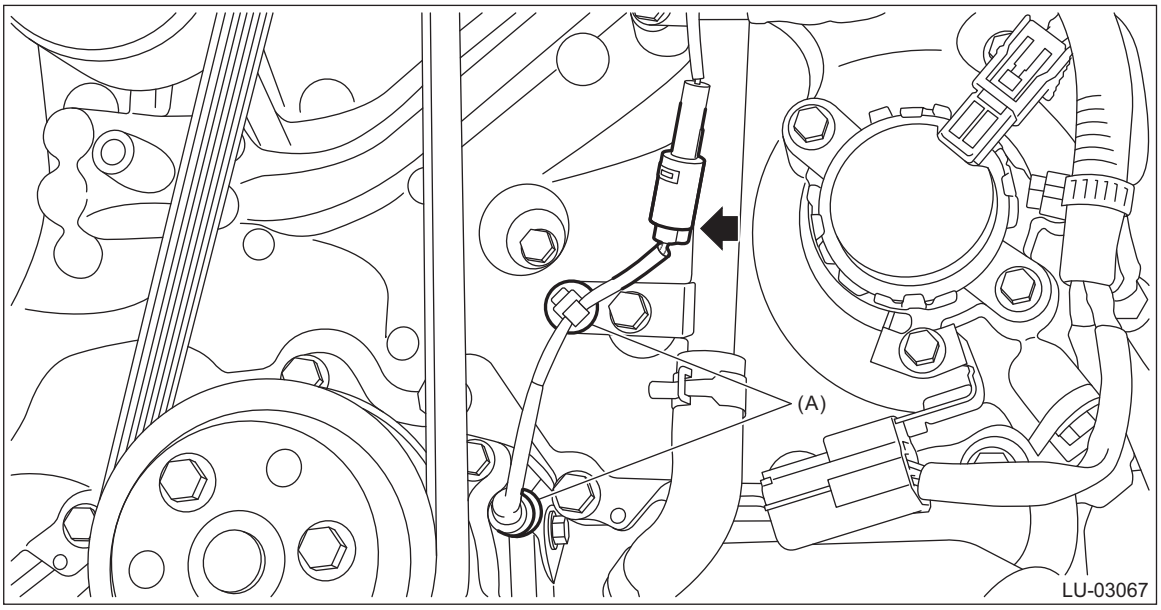
NOTE:
The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.
2) Check the engine oil level. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.>

13.Oil Level Switch

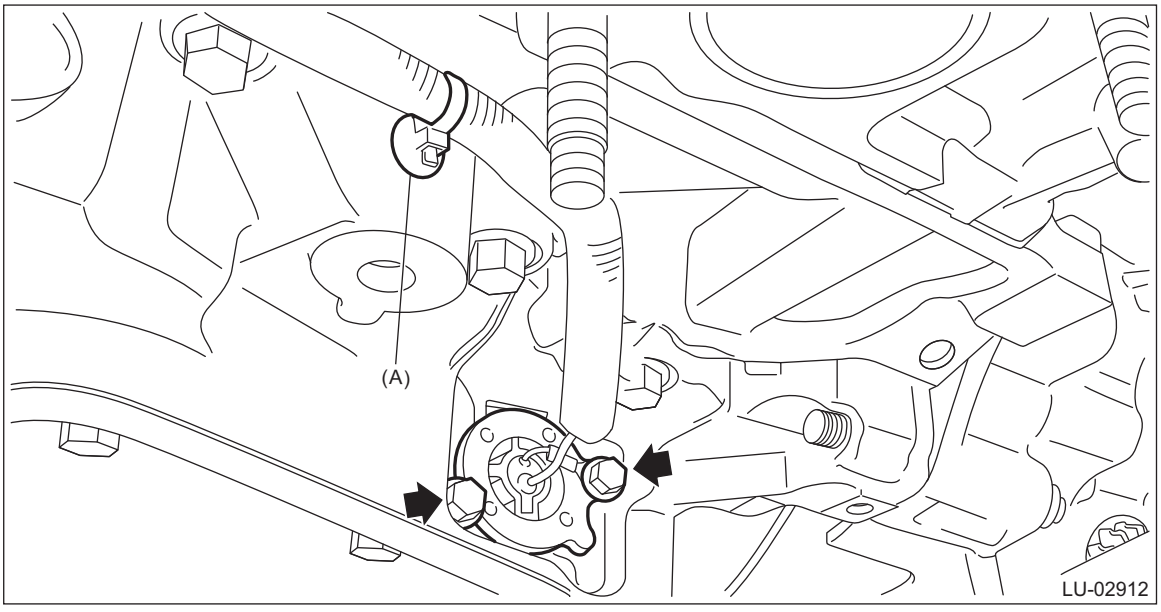
A: REMOVAL

1. WHEN REMOVING FRONT CROSSMEMBER

1) Remove the front crossmember. <Ref. to FS-20, REMOVAL, Front Crossmember.>
2) Disconnect the oil level switch connector from the engine wiring harness, and remove the clip (A) securing the harness.



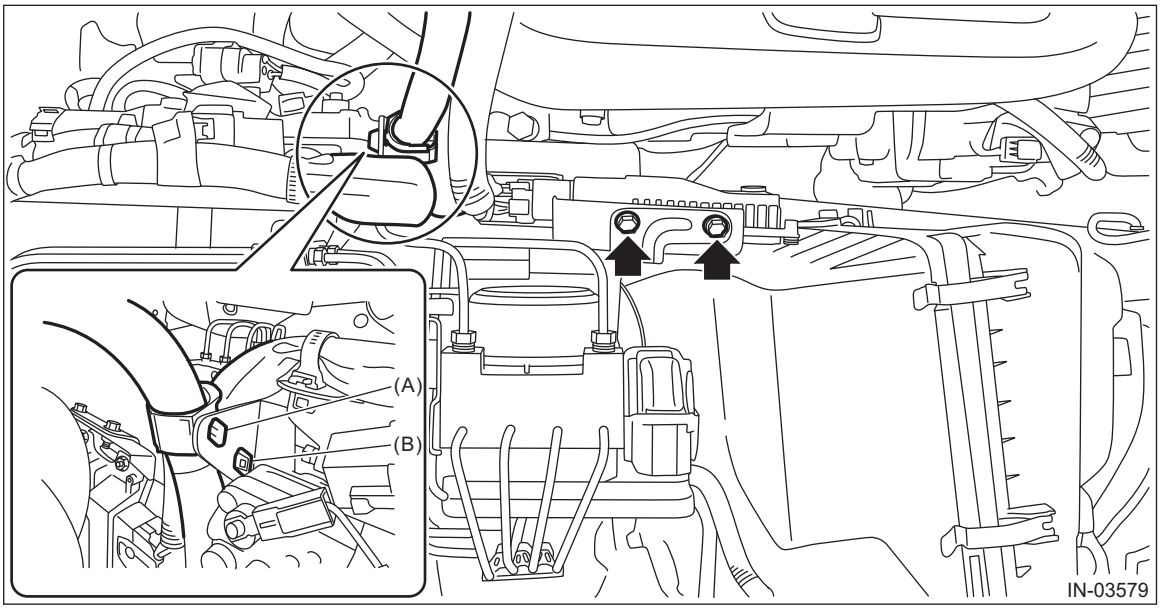
3) Remove clip (A) from the oil pan upper, and remove the oil level switch.



2. WHEN NOT REMOVING FRONT CROSSMEMBER

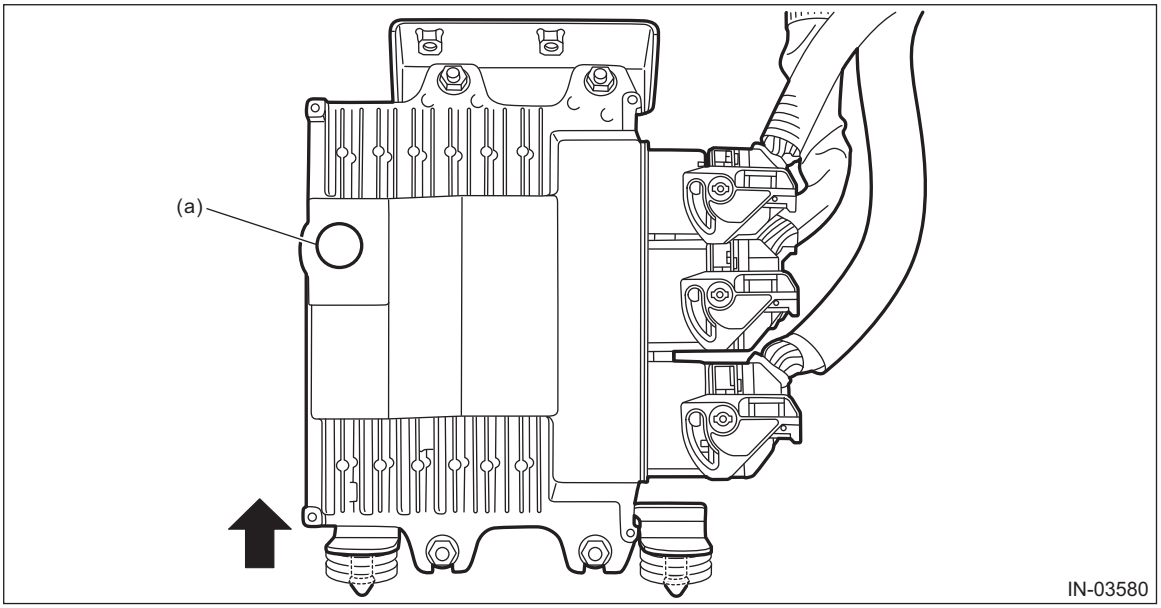
1) Remove the striker - front hood. <Ref. to EB-10, DISASSEMBLY, Front Hood.>
2) Fully open the front hood. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
3) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the air intake duct. <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>

6) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.



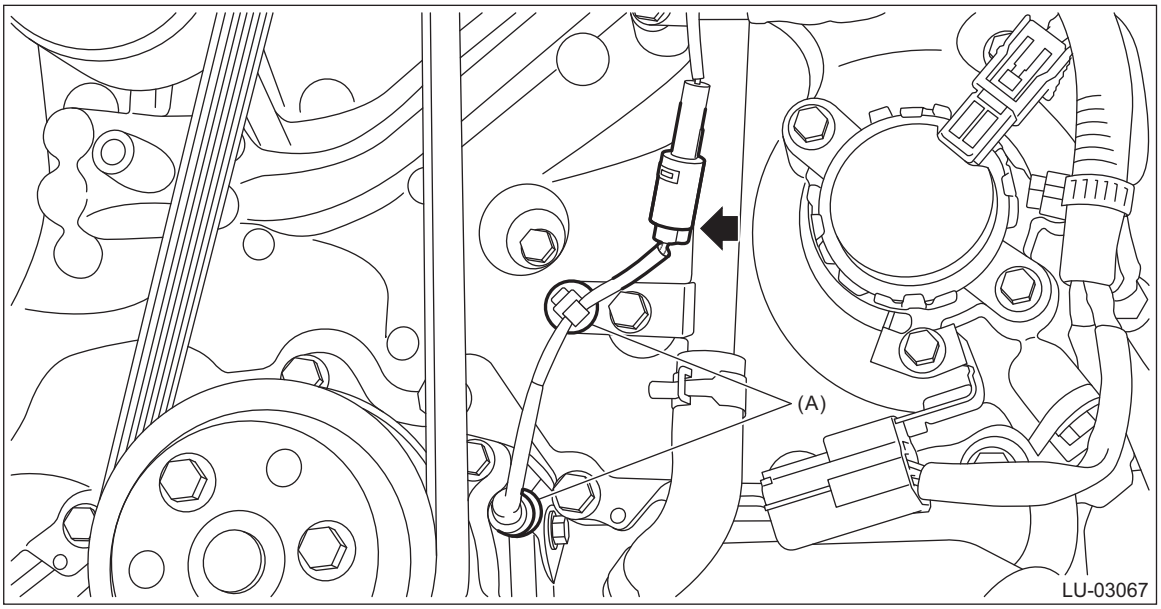
7) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.

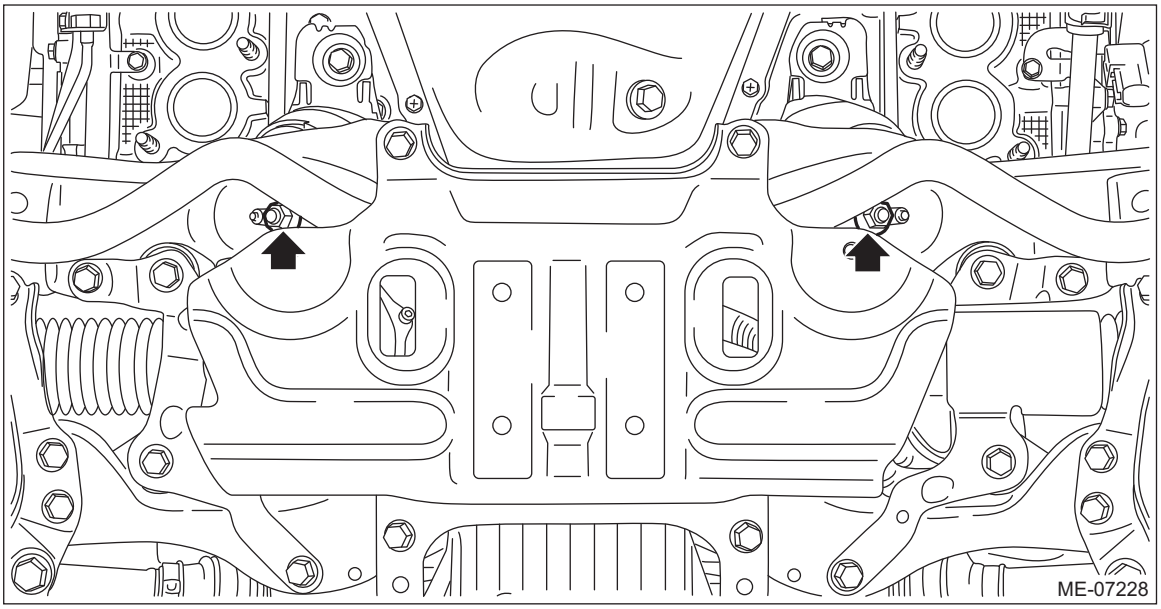


8) Drain engine coolant. <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
9) Drain the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
10) Remove the front exhaust pipe. <Ref. to EX(w/o STI)-9, REMOVAL, Front Exhaust Pipe.>

11) Disconnect the oil level switch connector from the engine wiring harness, and remove the clip (A) securing the harness.

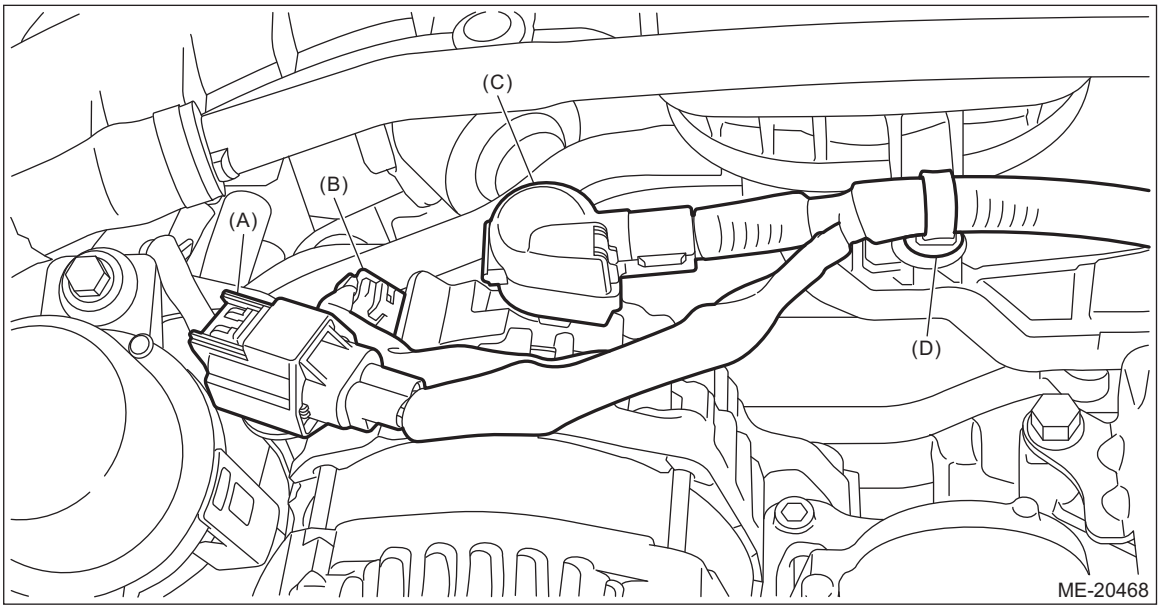


12) Remove the nuts which secure the engine mounting to the front crossmember.

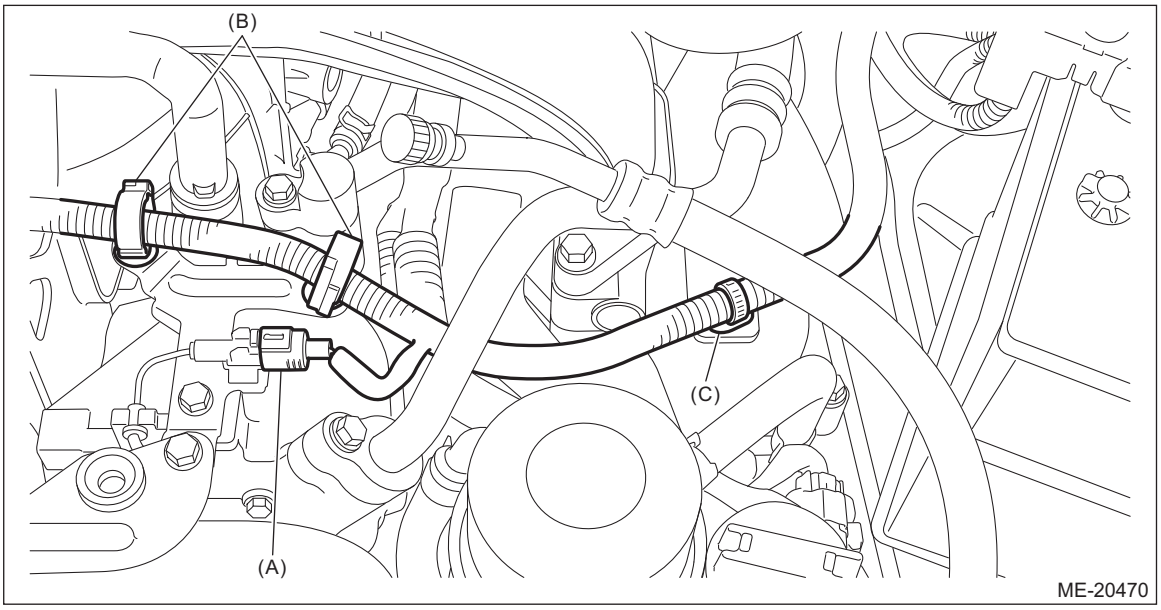


13) Remove the electric power steering gearbox. <Ref. to PS-64, REMOVAL, Electric Power Steering Gearbox.>
14) Remove the front drive shaft LH. <Ref. to DS-43, REMOVAL, Front Drive Shaft.>
15) Lower the vehicle.
16) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
17) Disconnect the connector (A) from the brake vacuum pump.

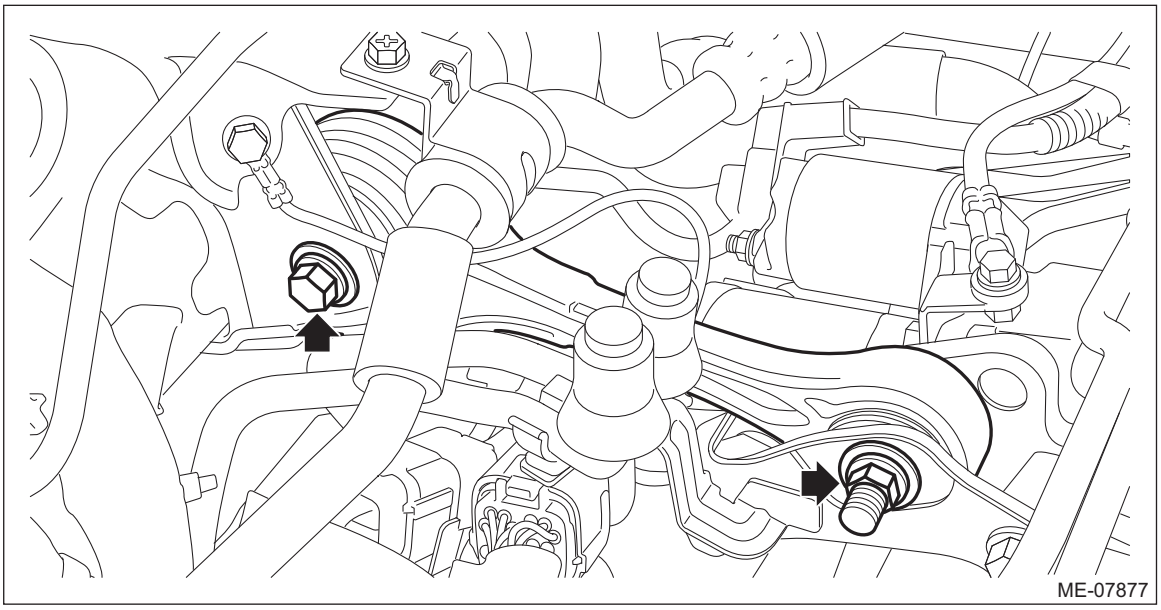
18) Disconnect connector (B) and terminal (C) from the generator, and remove the clip (D) securing the generator cord to the intake manifold.



19) Disconnect connector (A) from A/C compressor, and remove the generator cord from clip (B).
20) Remove the clip (C) securing the generator cord to the fuel pipe protector, and move the generator cord aside so that it does not interfere with the work.



21) Remove the pitching stopper.

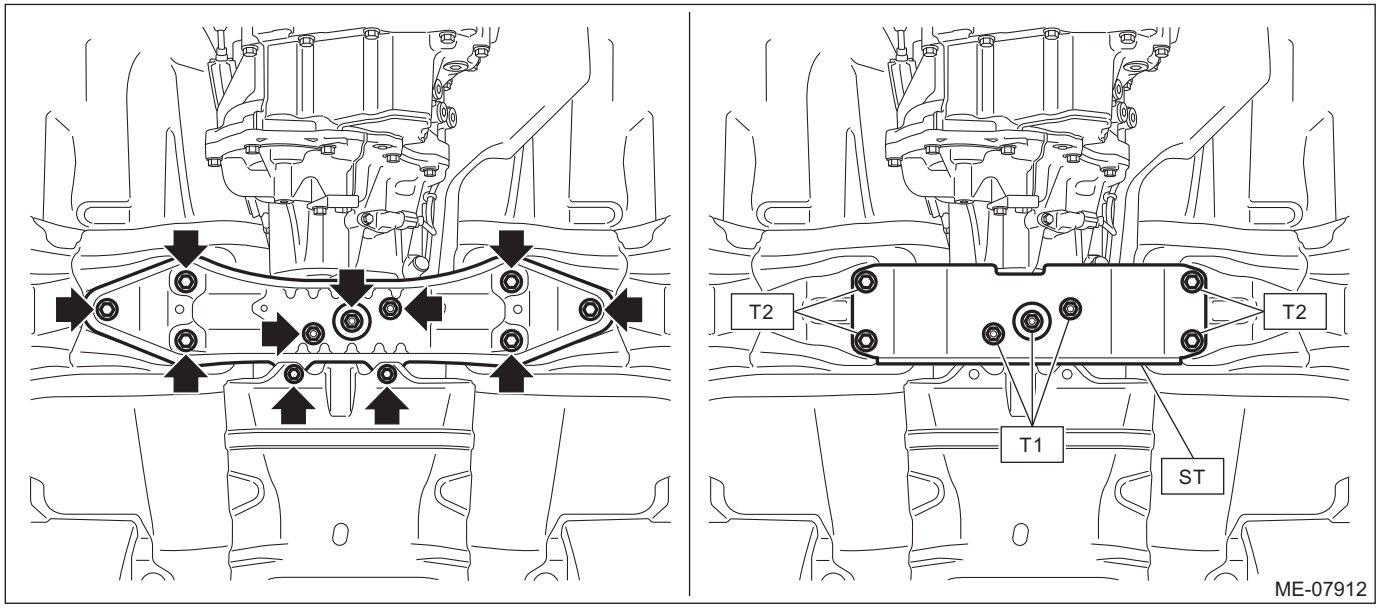


22) Lift up the vehicle. (CVT model)
23) Set the transmission jack to the transmission. (CVT model)

NOTE:
Be careful that the support plate of transmission jack does not touch the transmission oil pan.

24) Remove the rear crossmember and attach the ST. (CVT model)
ST 41099YC001 ST REAR MOUNT

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)

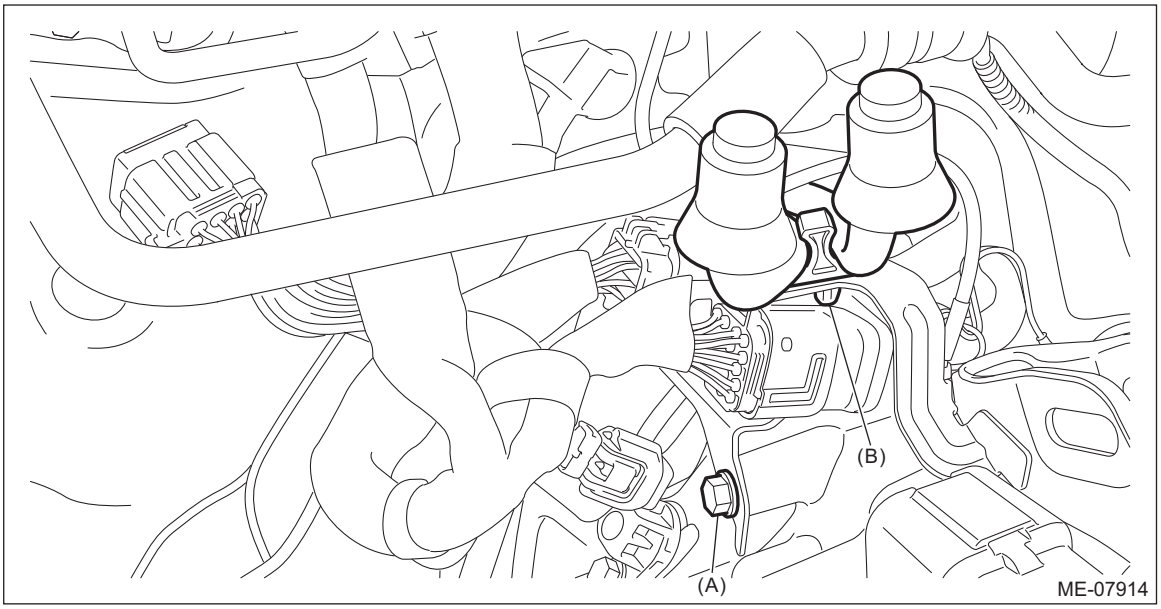


25) Remove the transmission jack. (CVT model)
26) Lower the vehicle. (CVT model)
27) Remove the bolt (A) securing the transmission harness stay to the CVT. (CVT model)

NOTE:
This procedure is required to prevent the transmission connector from touching the A/C pressure hose during engine lift-up.

28) Remove the air breather hose from the clip (B), and then remove the clip (B) from the pitching stopper bracket. (CVT model)

NOTE:
This procedure is required to prevent the clip from touching the A/C pressure hose during engine lift-up.

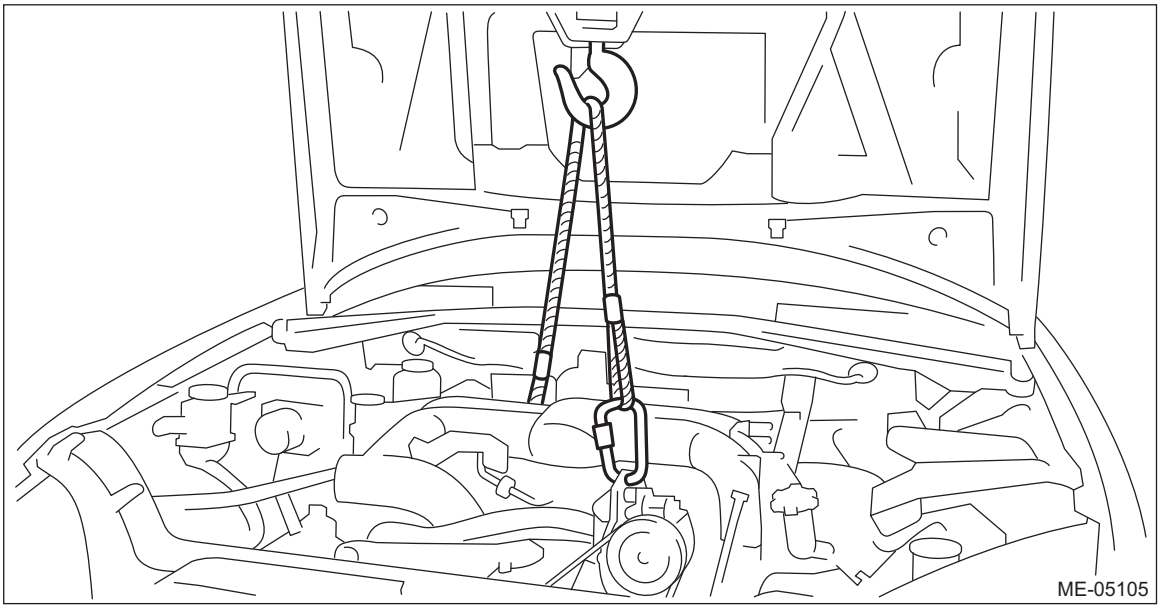


29) Set the cushioning material such as a waste cloth between pitching stopper bracket and transmission case cover. (CVT model)

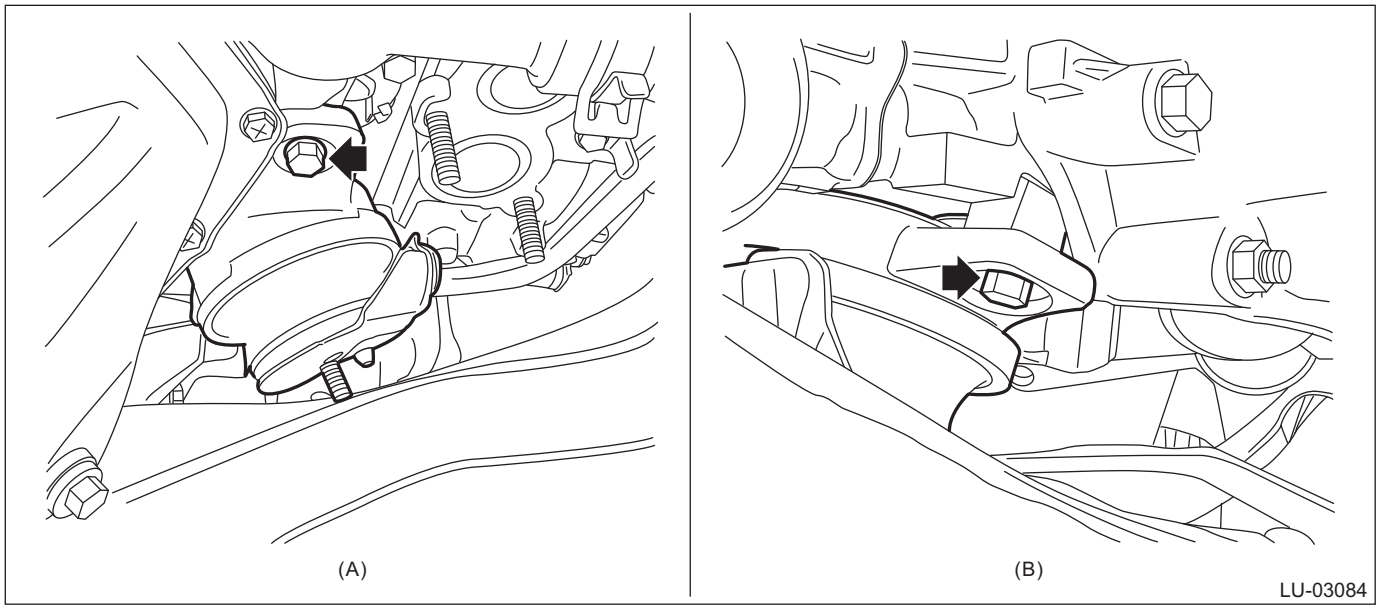
NOTE:
- This operation is required to prevent damage to the transmission case cover.
- Make sure that the height of cushioning material does not become 15 — 20 mm (0.6 — 0.8 in) or less when it is crushed.

30) Lift up the engine with a lifting device and wire ropes.

CAUTION:
When lifting up the engine, pay attention to the clearance of each part and be careful not to lift the engine too much, in order to prevent damaging the vehicle.

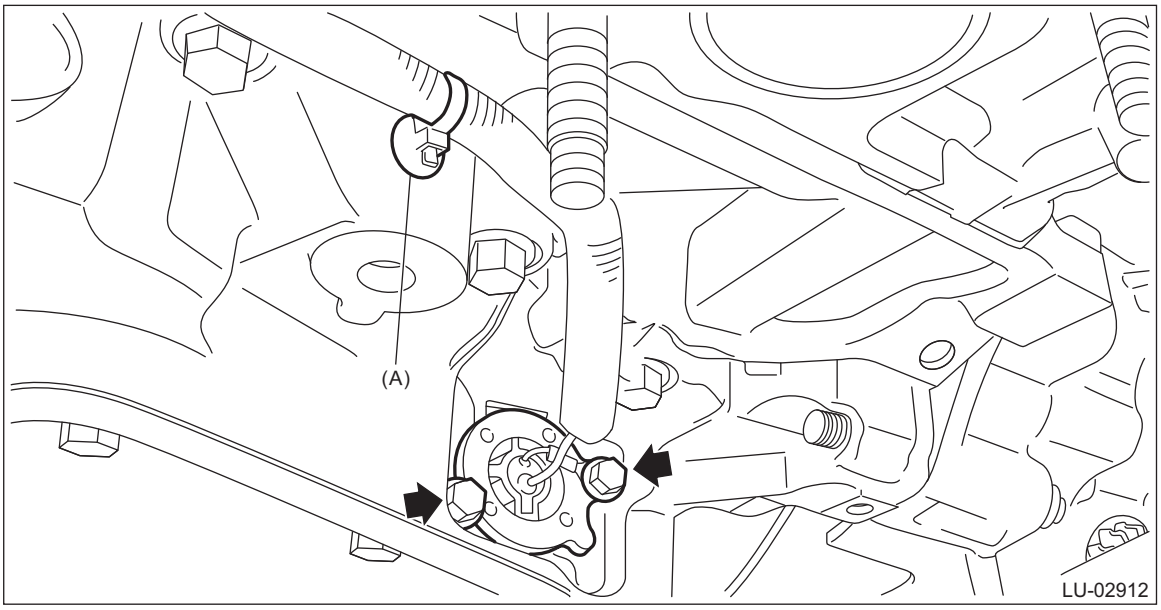


31) Remove the engine mounting LH from the engine.



(A) Front side (B) Rear side

32) Remove clip (A) from the oil pan upper, and remove the oil level switch.



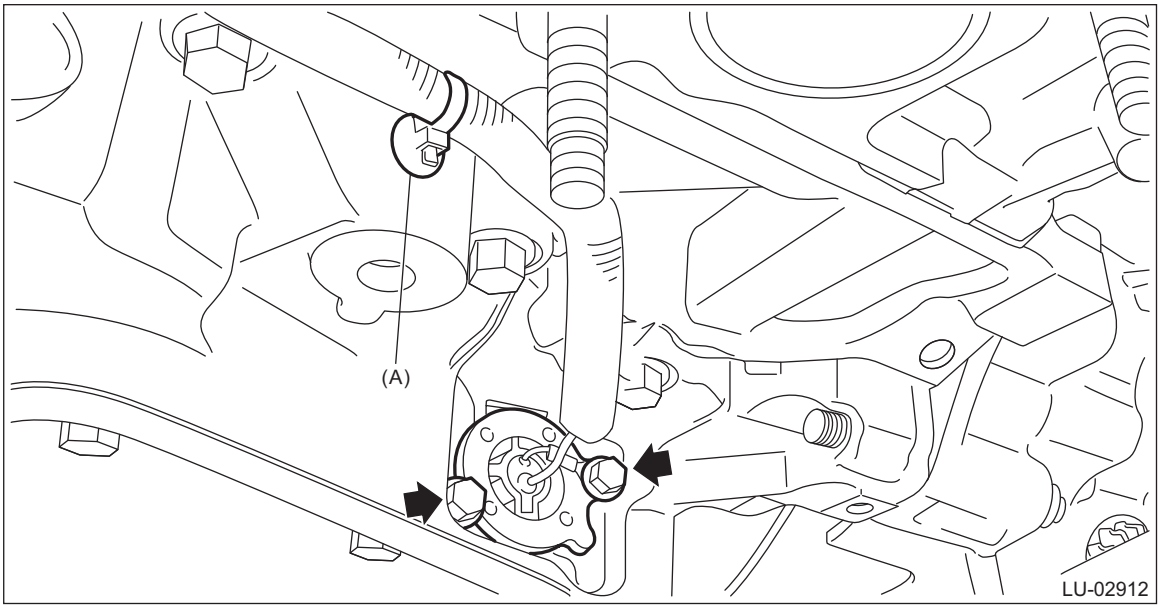
B: INSTALLATION

1. WHEN FRONT CROSSMEMBER HAS BEEN REMOVED

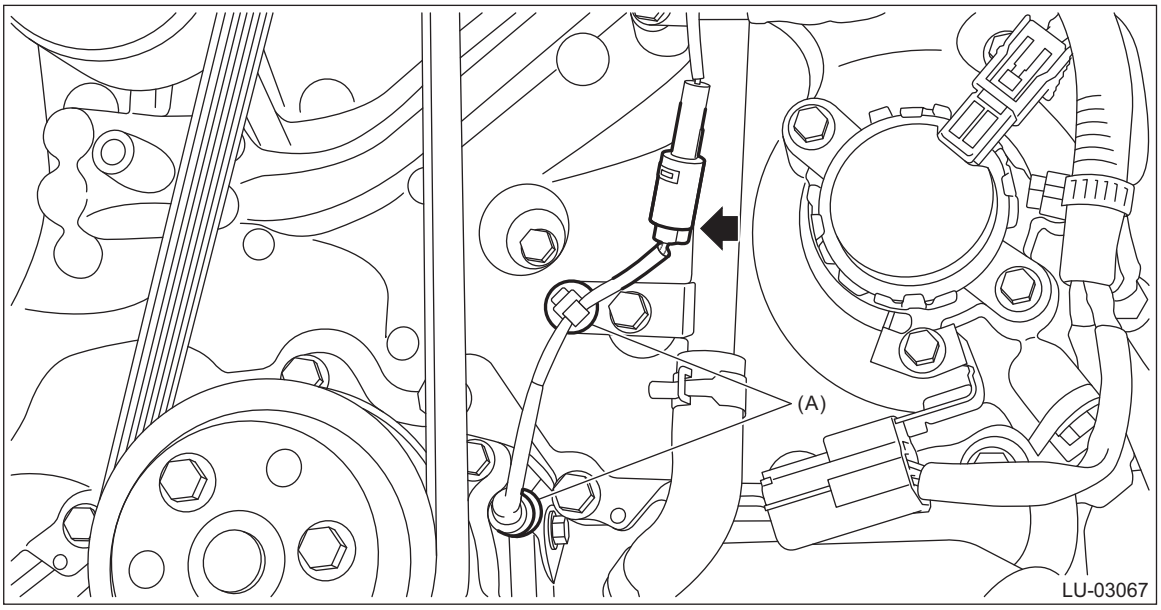
1) Install the oil level switch and the clip (A) to the oil pan upper.

NOTE:
- Use new O-rings.
- Apply a coat of engine oil to the O-rings.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



2) Connect the connector of oil level switch to the engine wiring harness, and install the clip (A) securing the harness.



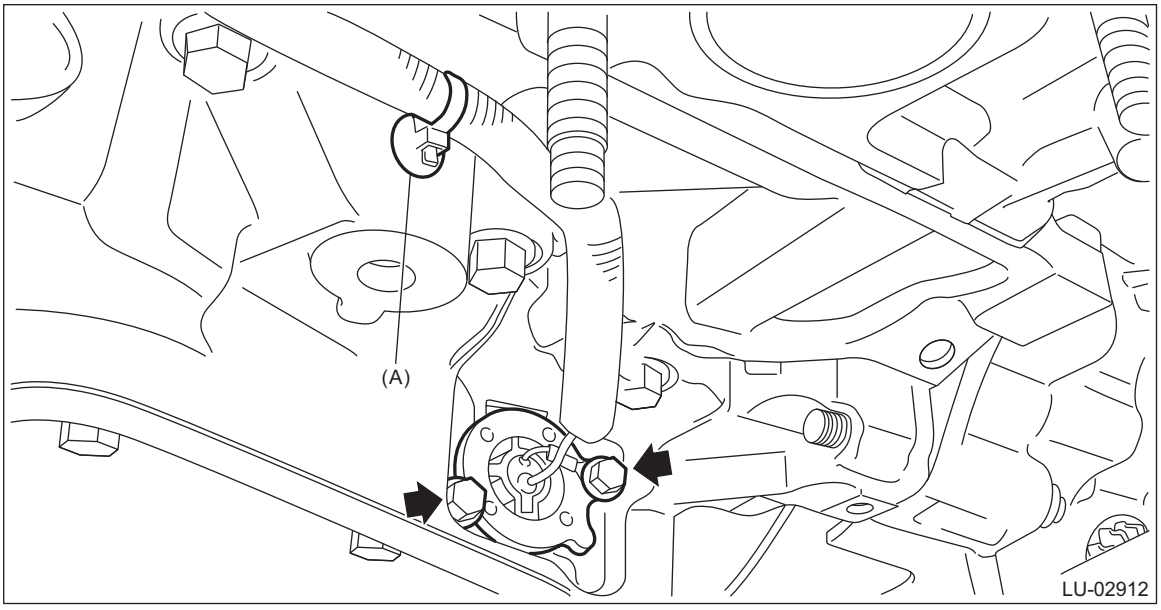
3) Install the front crossmember. <Ref. to FS-23, INSTALLATION, Front Crossmember.>

2. WHEN FRONT CROSSMEMBER HAS NOT BEEN REMOVED

1) Install the oil level switch and the clip (A) to the oil pan upper.

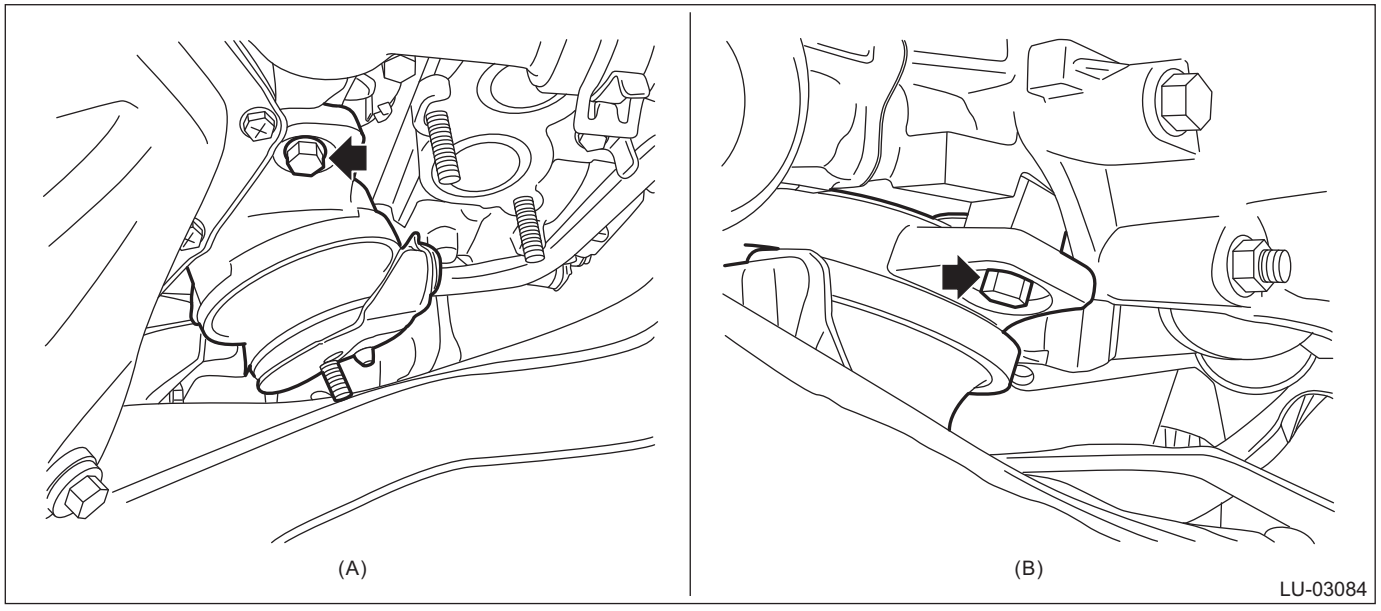
NOTE:
- Use new O-rings.
- Apply a coat of engine oil to the O-rings.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



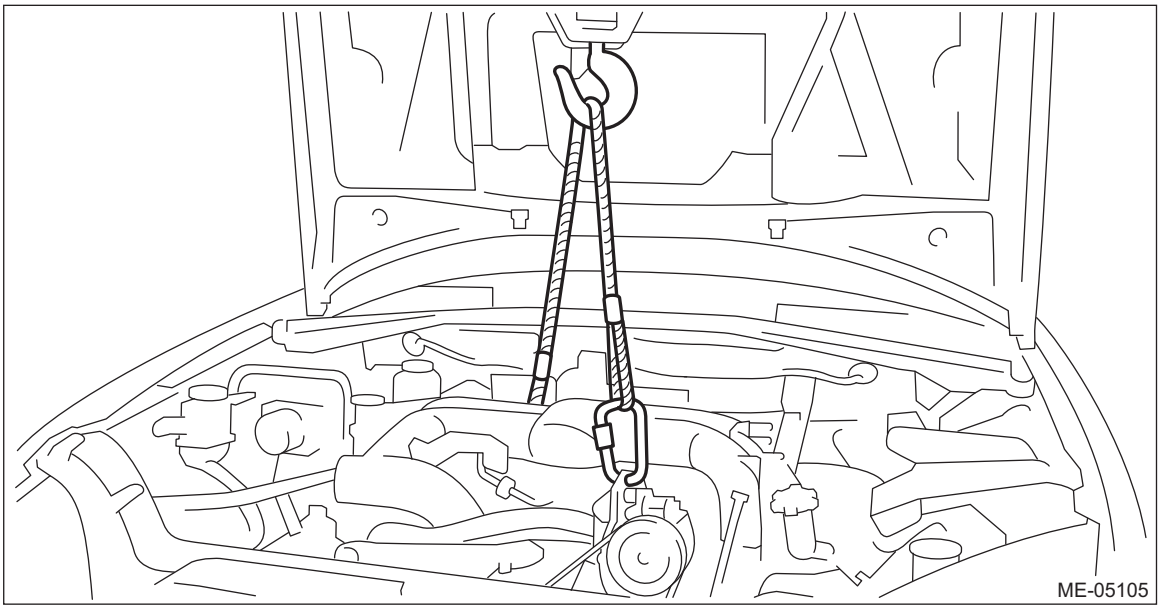
2) Install the engine mounting LH onto the engine.

Tightening torque:
35 N·m (3.6 kgf-m, 25.8 ft-lb)



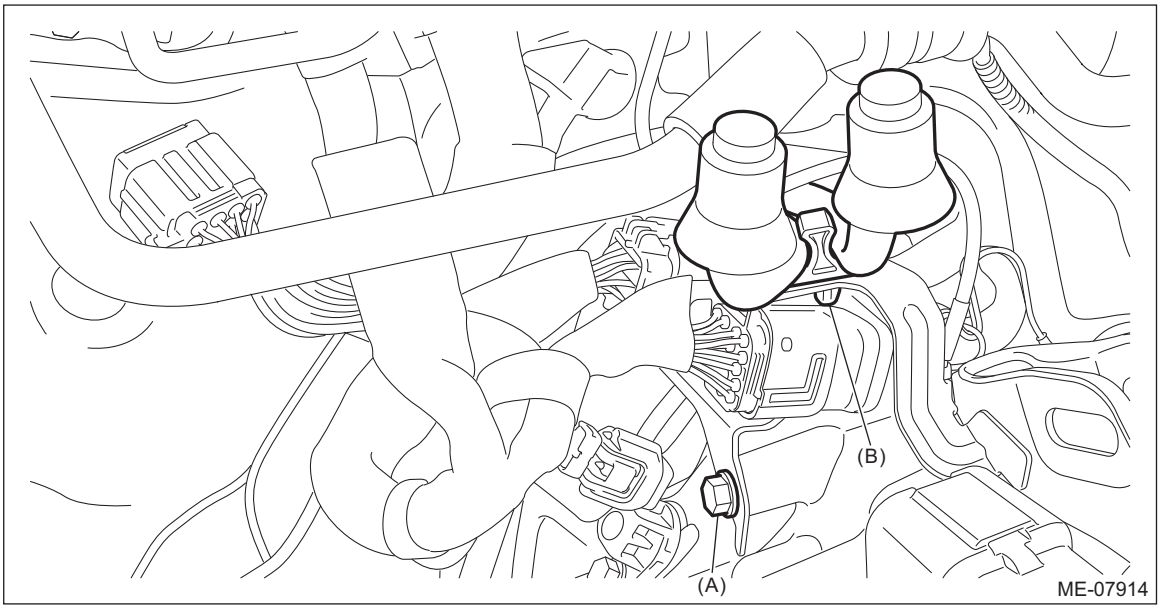
(A) Front side (B) Rear side

3) Lower the engine and remove the lifting device and wire ropes.



4) Remove the cushioning material between pitching stopper bracket and transmission case cover. (CVT model)
5) Install the clip (B) to the pitching stopper bracket, and then install the air breather hose to the clip (B). (CVT model)
6) Install the bolt (A) which secures the transmission harness stay to the CVT. (CVT model)

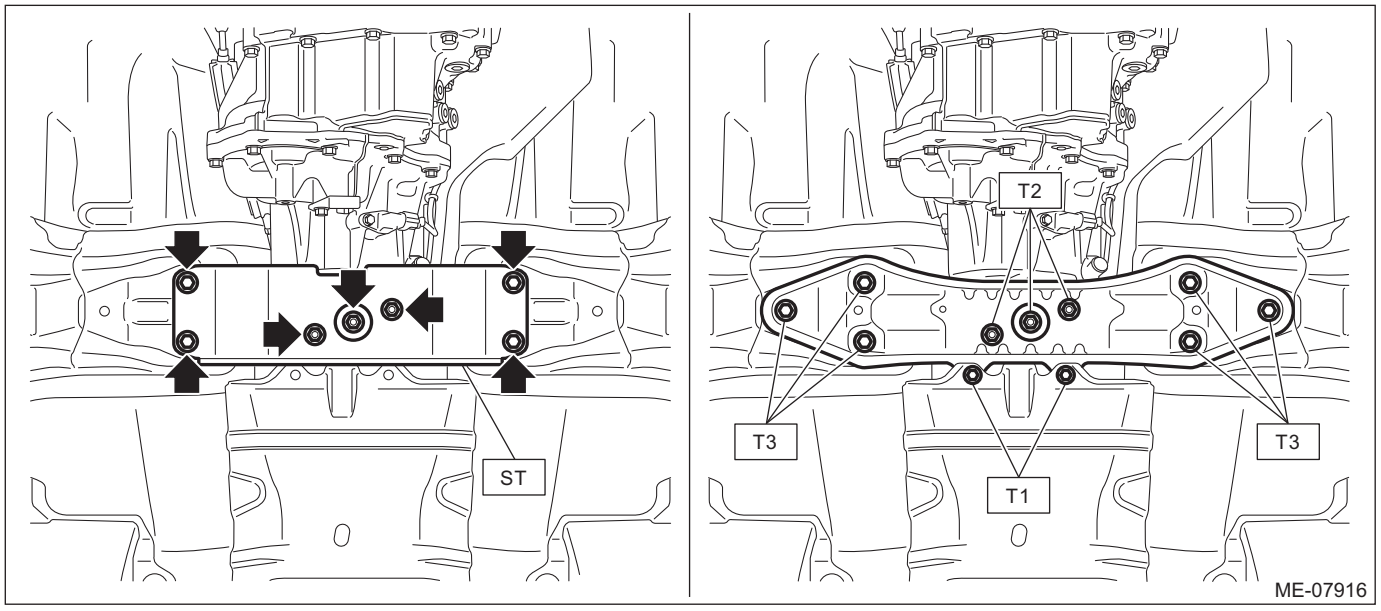
Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)



7) Lift up the vehicle. (CVT model)
8) Set the transmission jack to the transmission. (CVT model)

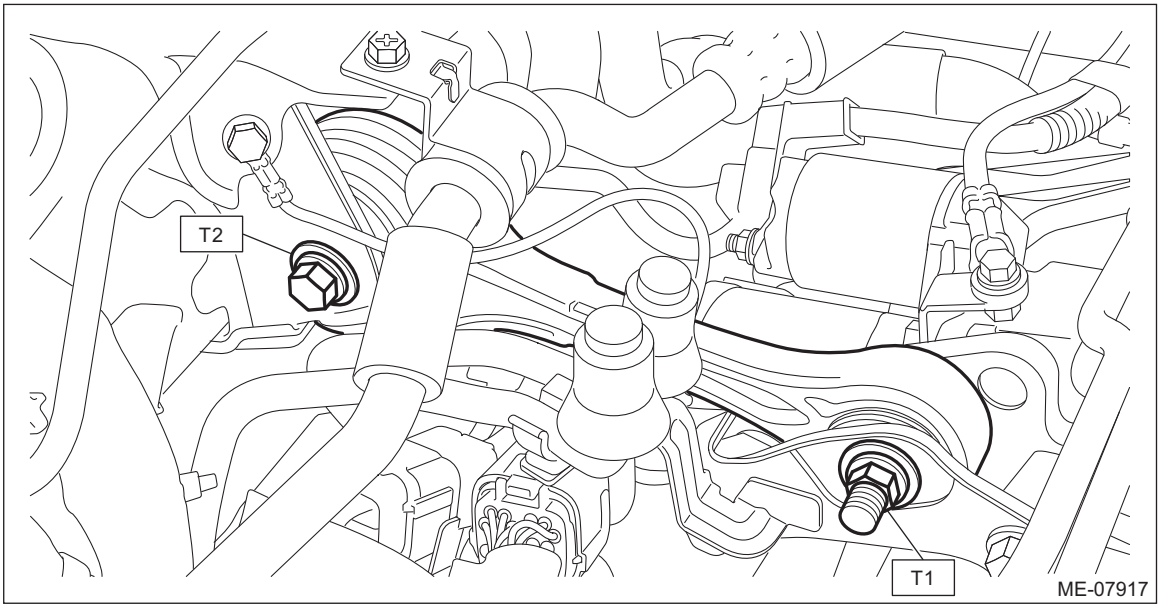
NOTE:
Be careful that the support plate of transmission jack does not touch the transmission oil pan.
9) Remove the ST and install the rear crossmember. (CVT model)
ST 41099YC001 ST REAR MOUNT

Tightening torque:
T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
T2: 35 N·m (3.6 kgf-m, 25.8 ft-lb)
T3: 70 N·m (7.1 kgf-m, 51.6 ft-lb)



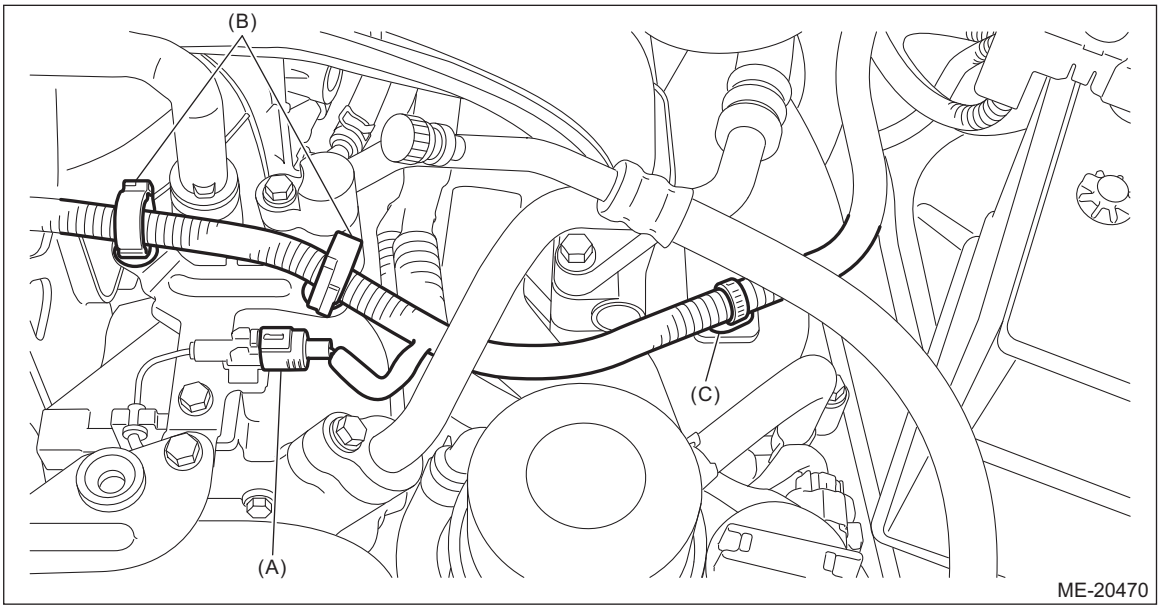
10) Remove the transmission jack. (CVT model)
11) Lower the vehicle. (CVT model)
12) Install the pitching stopper.

Tightening torque:
T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)



13) Set the generator cord, and fix the generator cord to the fuel pipe protector using clip (C).

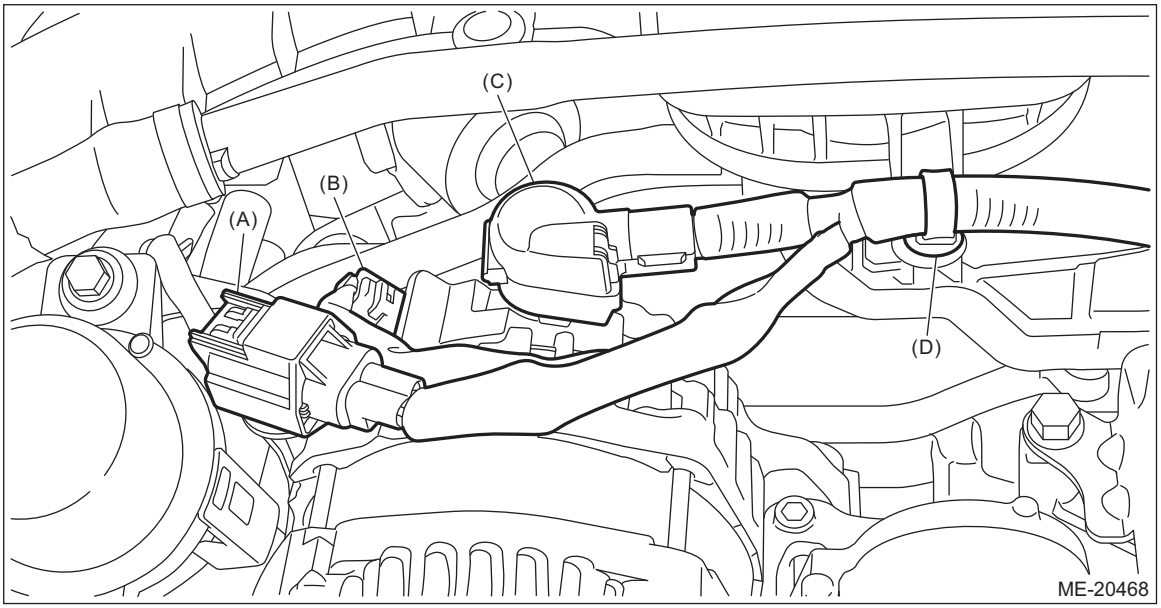
14) Install the generator cord to clip (B), and connect the connector (A) to A/C compressor.



15) Using clip (D), fix the generator cord to the generator cord stay, and connect the connector (B) and the terminal (C) to the generator.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

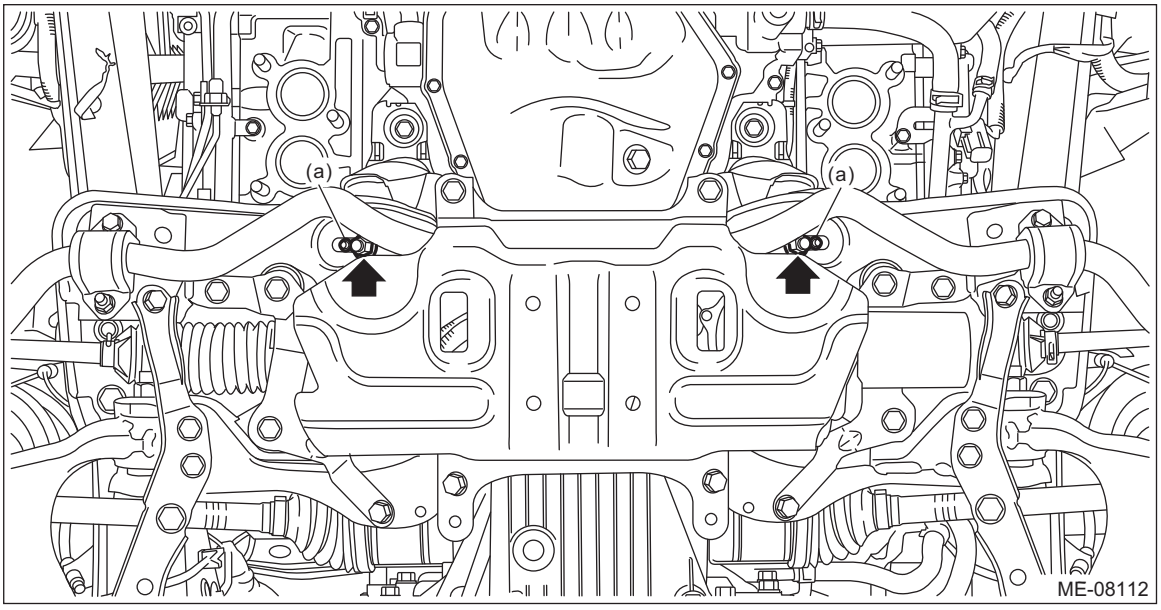
16) Connect the connector (A) to the brake vacuum pump.



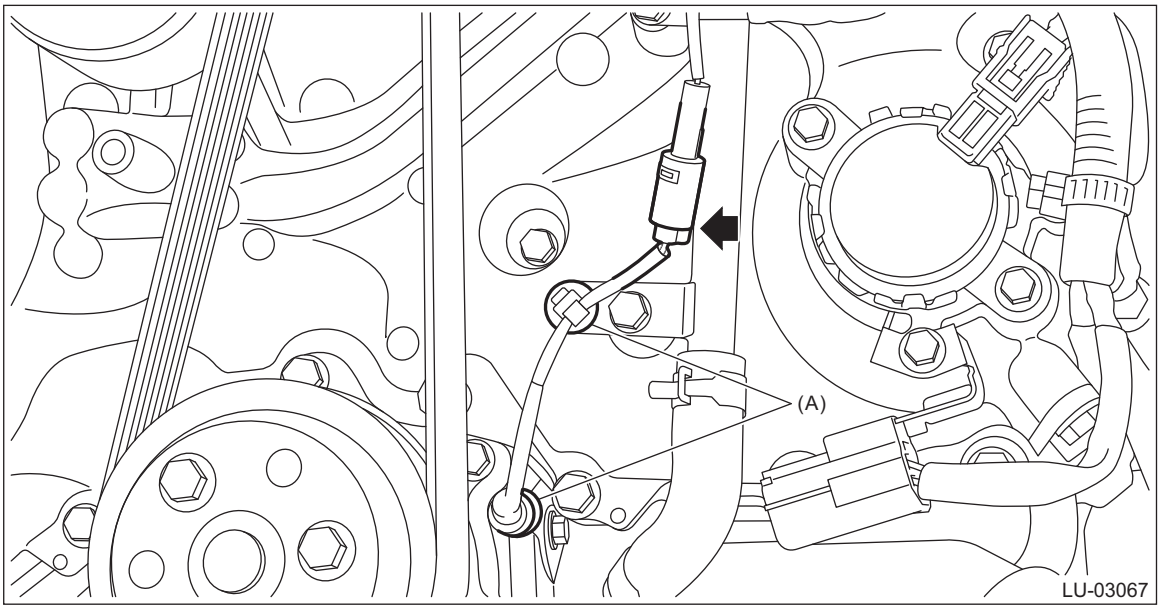
17) Install the intercooler. <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
18) Lift up the vehicle.
19) Install the electric power steering gearbox. <Ref. to PS-67, INSTALLATION, Electric Power Steering Gearbox.>
20) Install the front drive shaft LH. <Ref. to DS-44, INSTALLATION, Front Drive Shaft.>
21) Install the nuts which hold the engine mounting to the front crossmember.

NOTE:
- Use a new nut.
- Make sure that locators (a) of the engine mounting are securely inserted.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

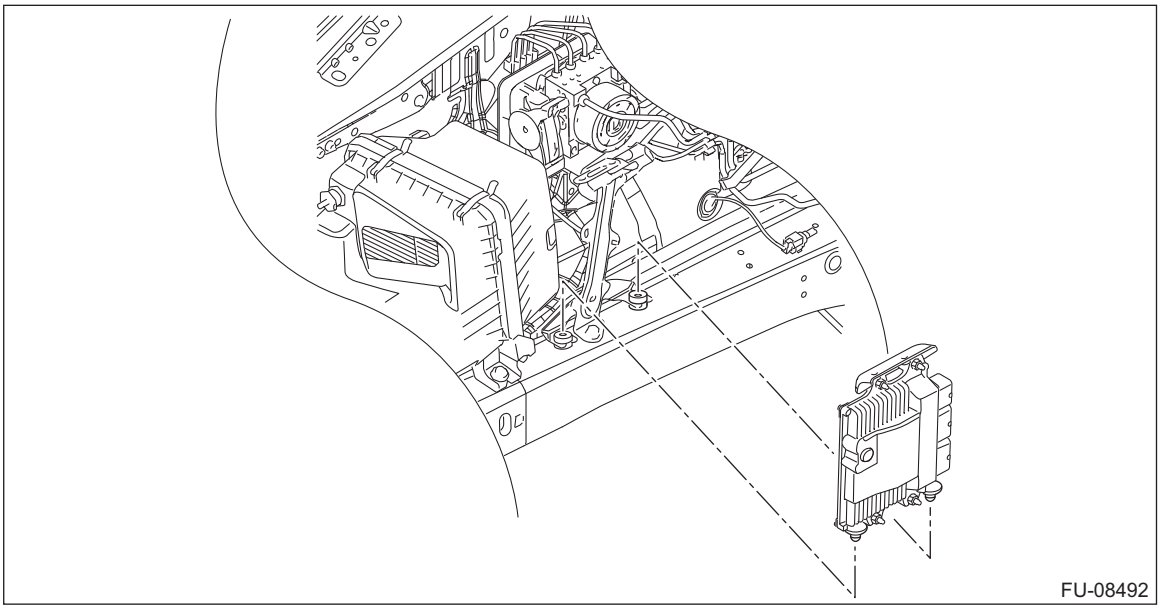


22) Connect the connector of oil level switch to the engine wiring harness, and install the clip (A) securing the harness.



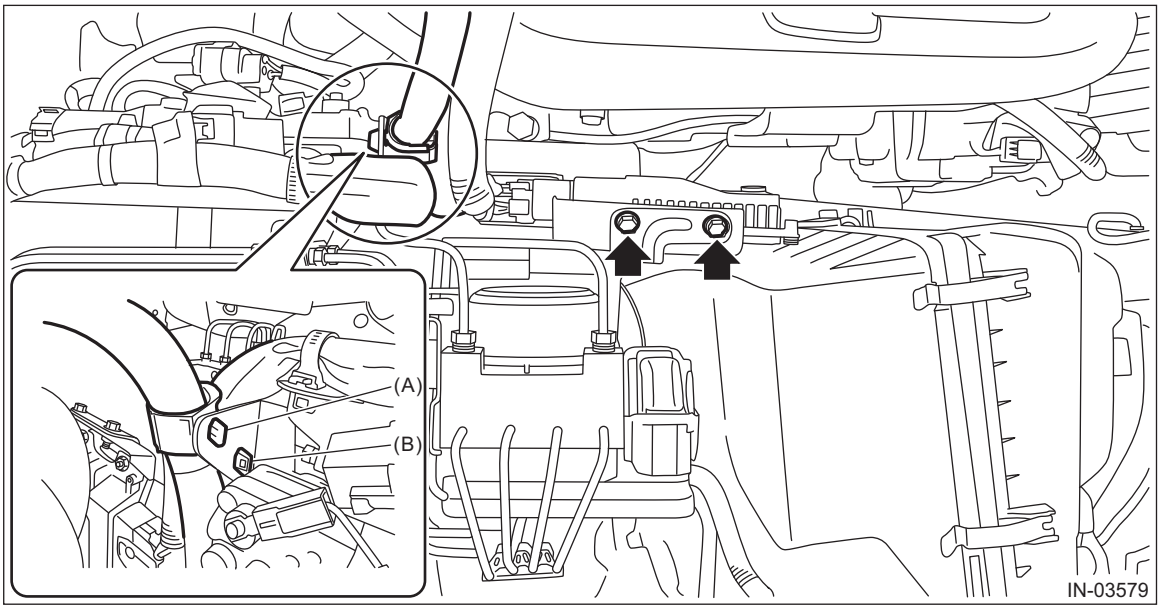
23) Install the front exhaust pipe. <Ref. to EX(w/o STI)-17, INSTALLATION, Front Exhaust Pipe.>

24) Insert the engine control module (ECM) to the bracket.



25) Install the bolt which secures the engine control module (ECM) to the bracket, and then secure the engine wiring harness and bulkhead harness to the bracket with clip (A) and clip (B).

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

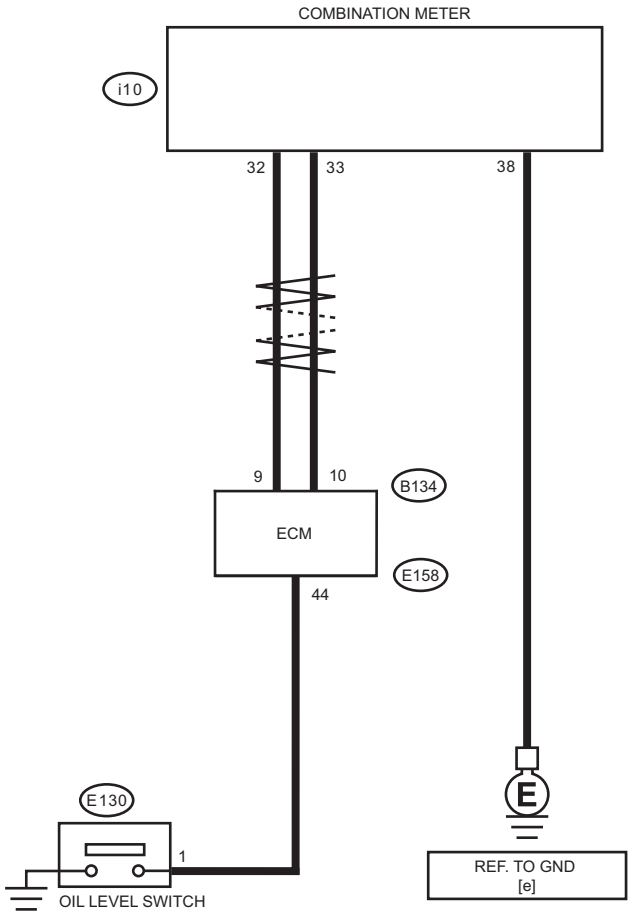


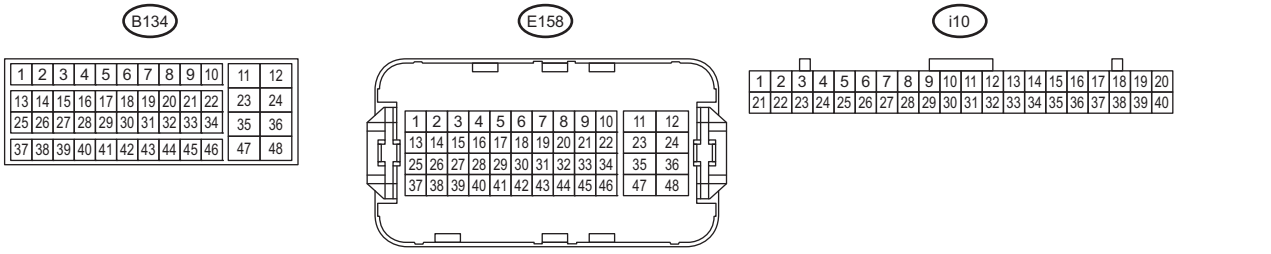
26) Install the air intake duct. <Ref. to IN(w/o STI)-26, INSTALLATION, Air Intake Duct.>
27) Refill the engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
28) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
29) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
30) Fill engine coolant. <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
31) Set the front hood to the normal position. <Ref. to NT-22, FRONT HOOD GAS STAY, NOTE, Note.>
32) Install the striker - front hood. <Ref. to EB-13, ASSEMBLY, Front Hood.>
33) Close the front hood.

C: WIRING DIAGRAM

- Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

- CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>





LU-10070

D: INSPECTION

1. INSPECTION WHEN LOW ENGINE OIL WARNING LIGHT ILLUMINATES ON LCD

Step		Check	Yes	No
1	**CHECK ENGINE OIL LEVEL.**	Is engine oil level normal?	Go to step **2**.	Replace engine oil or refill, and check again while the oil level is normal condition. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.> To disable the low engine oil warning, install the spare fuse at the delivery mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning is not displayed. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil level warning is not displayed with the delivery mode fuse inserted.
2	**CHECK LAN SYSTEM.**	Has a DTC of the LAN system been input?	Perform the diagnosis according to DTC.	Go to step **3**.
3	**CHECK OIL LEVEL SWITCH CIRCUIT.** 1) Turn the ignition switch to ON (engine OFF). 2) Read the current data for engine in the Subaru Select Monitor to confirm the item for “Oil level switch”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Is the “Oil level switch” signal displayed in Subaru Select Monitor HIGH?	To disable the low engine oil warning, install the spare fuse at the delivery mode fuse in the main fuse box. Then turn the ignition switch to ON (engine off) again, to confirm the low engine oil warning is not displayed. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil level warning is not displayed with the delivery mode fuse inserted.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter to check if there are any faults in the combination meter. <Ref. to IDI-6, OPERATION, Combination Meter System.>	Is combination meter OK?	Go to step **5**.	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>
5	**CHECK SECURE CONNECTION OF CONNECTOR BETWEEN ENGINE WIRING HARNESS AND OIL LEVEL SWITCH.**	Is there any insecure connection?	Repair the connection condition. Then, to disable the low engine oil warning display, install the spare fuse at the delivery mode fuse in the main fuse box. Then turn the ignition switch to ON (engine OFF) again to confirm the low engine oil warning is not displayed. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil level warning is not displayed with the delivery mode fuse inserted.	Go to step **6**.
6	**CHECK OIL LEVEL SWITCH.** 1) Deliberately short circuits by connecting the engine wiring harness connector terminal and chassis ground. 2) Turn the ignition switch to ON (engine OFF). 3) Read the current data for engine in the Subaru Select Monitor to confirm the item for “Oil level switch”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> ***Connector & terminal*** ***(E130) No. 1 — Chassis ground:***	Is the “Oil level switch” signal displayed in Subaru Select Monitor HIGH?	Replace the oil level switch. <Ref. to LU(w/o STI)-50, REMOVAL, Oil Level Switch.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK SECURE CONNECTION OF CONNECTOR BETWEEN ENGINE CONTROL MODULE (ECM) AND ENGINE WIRING HARNESS.**	Is there any insecure connection?	Repair the connection condition. Then, to disable the low engine oil warning display, install the spare fuse at the delivery mode fuse in the main fuse box. Then turn the ignition switch to ON (engine OFF) again to confirm the low engine oil warning is not displayed. Remove the spare fuse installed to finish. NOTE: The engine oil level switch is normal if the low engine oil level warning is not displayed with the delivery mode fuse inserted.	Go to step **8**.
8	**CHECK ENGINE WRING HARNESS.** 1) Disconnect the engine control module (ECM) side connector. 2) Disconnect the connector between the engine wiring harness and the oil level switch. 3) Measure the resistance between connector terminals. ***Connector & terminal*** ***(E158) No. 44 — (E130) No. 1:***	Is the resistance less than 1 Ω?	Replace the engine control module (ECM). <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>	Repair or replace the open circuit of the engine wiring harness.

2. OTHER INSPECTIONS

1) Check that the oil level switch does not have deformation, cracks, or damage.
2) Check the oil level switch installation part for oil leakage and oil seepage.

14.Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause	Corrective action
Warning light remains ON.	a. Oil pressure switch failure	
	❍ Cracked diaphragm or oil leakage within switch	Replace.
	❍ Broken spring or seized contacts	Replace.
	b. Low oil pressure	
	❍ Clogging of oil filter	Replace.
	❍ Malfunction of oil by-pass valve in oil filter	Replace.
	❍ Clogged oil passage	Clean.
	❍ Excessive tip clearance and side clearance of oil pump rotor	Replace.
	❍ Clogged oil strainer or broken pipe	Clean or replace.
	c. No oil pressure	
	❍ Insufficient engine oil (degradation, etc.)	Replace.
	❍ Broken pipe of oil strainer	Replace.
	❍ Stuck oil pump rotor	Replace.
Warning light does not illuminate.	a. Malfunction of combination meter	Replace.
	b. Poor contact of switch contact points	Replace.
	c. Disconnection of wiring	Repair.
Warning light flickers momentarily.	a. Defective terminal contact	Repair.
	b. Defective wiring harness	Repair.
	c. Oil pressure switch failure	
	❍ Cracked diaphragm or oil leakage within switch	Replace.
	❍ Broken spring or seized contacts	Replace.
	d. Low oil pressure	
	❍ Clogging of oil filter	Replace.
	❍ Malfunction of oil by-pass valve in oil filter	Replace.
	❍ Clogged oil passage	Clean.
	❍ Excessive tip clearance and side clearance of oil pump rotor	Replace.
	❍ Clogged oil strainer or broken pipe	Clean or replace.

SPEED CONTROL SYSTEMS

SP(w/o STI)

Page

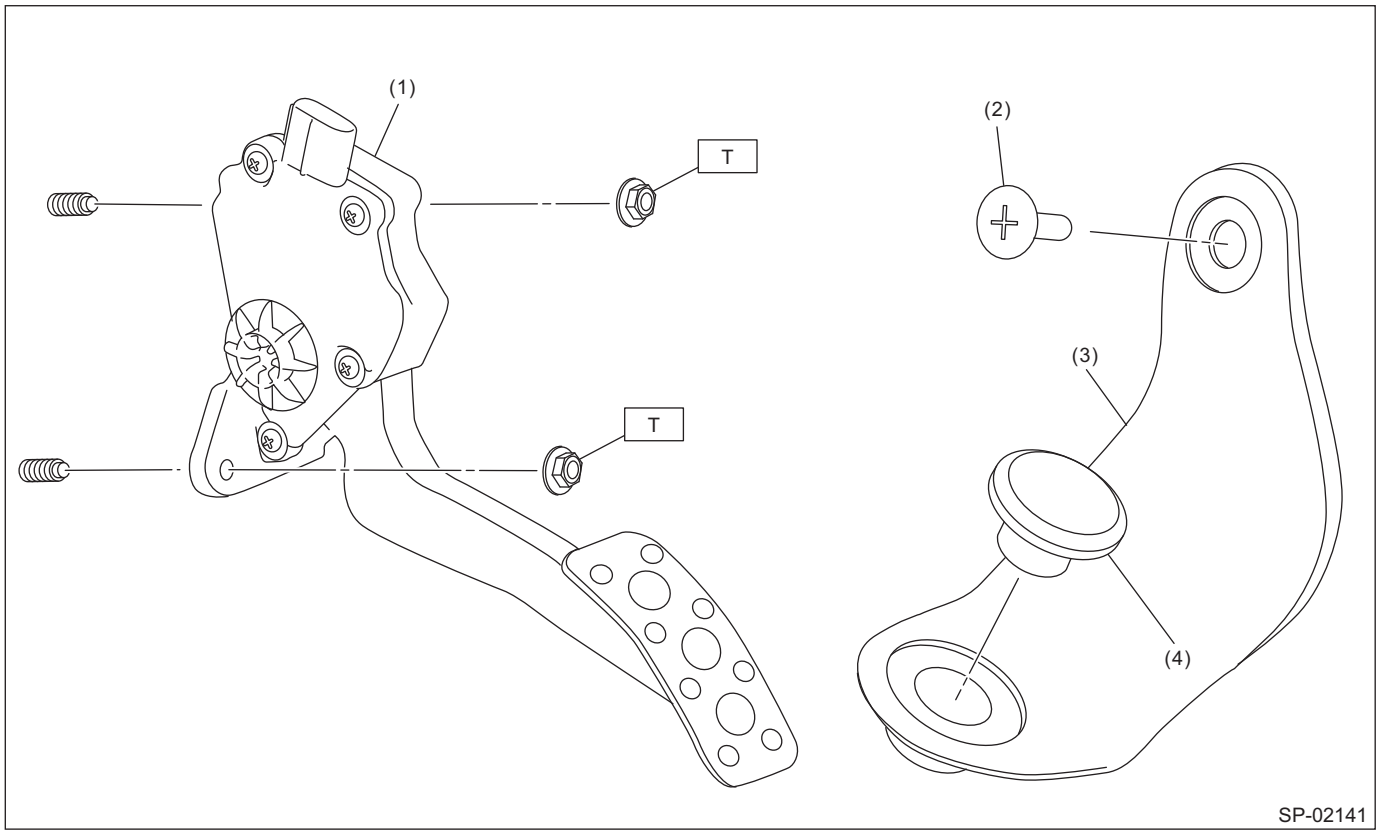
1. General Description 2
2. Accelerator Pedal 4

1. General Description

A: SPECIFICATION

Accelerator pedal	Stroke	At pedal pad	50 — 59 mm (1.97 — 2.32 in)

B: COMPONENT



(1) Accelerator pedal ASSY
(2) Clip
(3) Accelerator plate
(4) Accelerator stopper

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18460AA030	18460AA030	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.

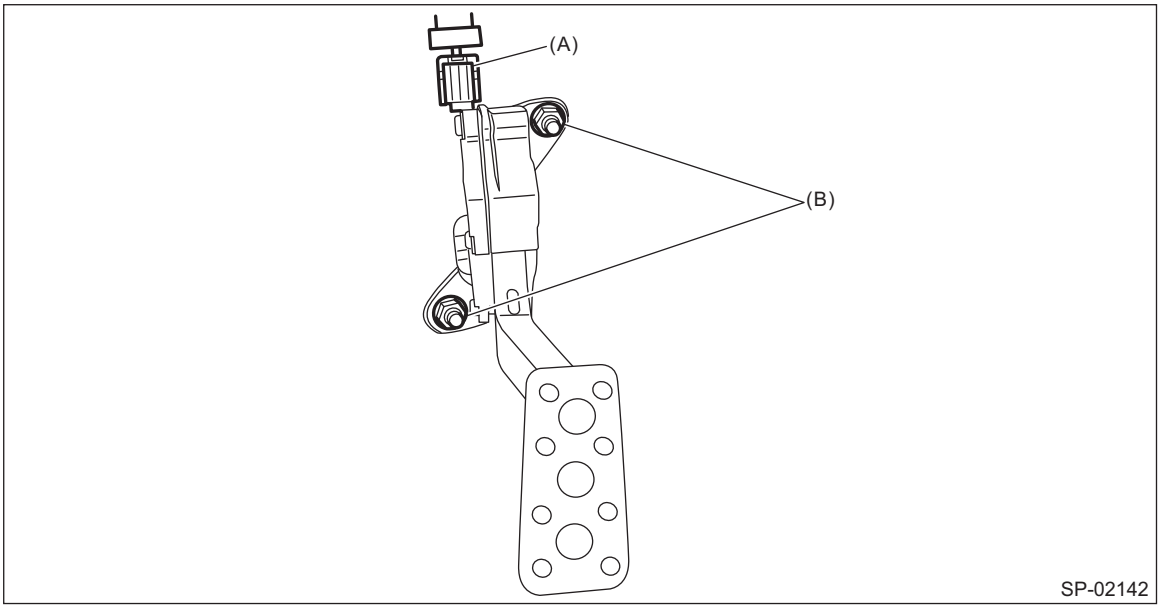
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Accelerator Pedal

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Disconnect the connector (A).
3) Remove the nut (B) securing accelerator pedal assembly, and remove the accelerator pedal assembly.



B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY

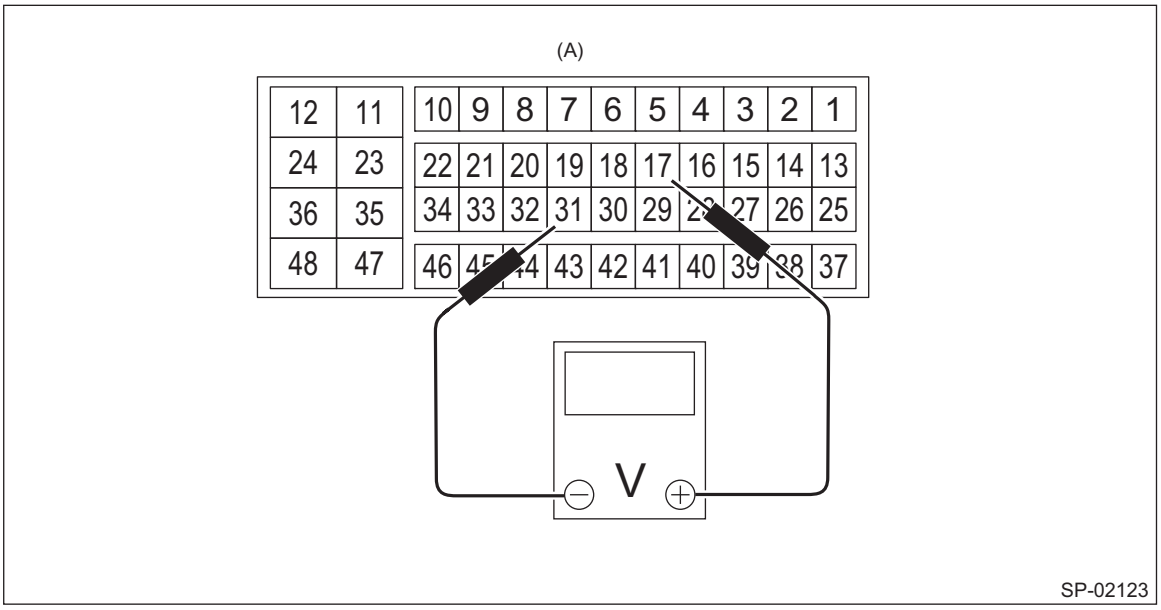
NOTE:
The accelerator pedal cannot be disassembled.

D: INSPECTION

1. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH CIRCUIT TESTER)

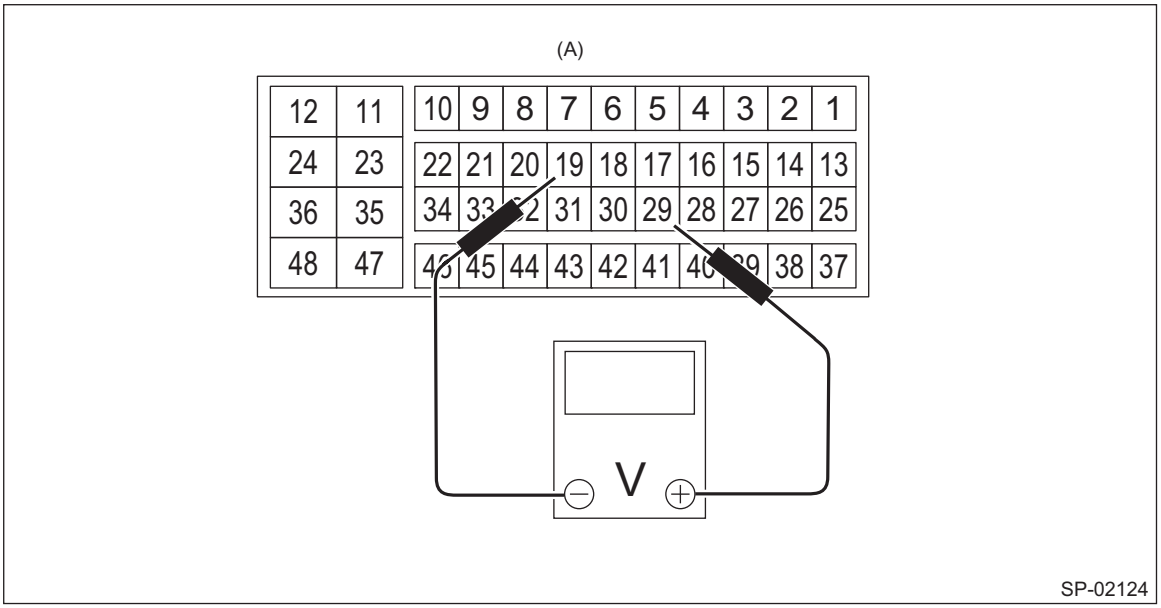
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the ECM. <Ref. to FU(w/o STI)-125, REMOVAL, Engine Control Module (ECM).>
3) Install the ST between the ECM and bulkhead harness and the engine wiring harness. <Ref. to EN(w/o STI)(diag)-7, CAUTION, General Description.>
ST 18460AA030 CHECK BOARD
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Turn the ignition switch to ON. (Engine OFF)
6) Measure the voltage between ECM connector terminals using ST.

- Main sensor side



(A) To the check board connector (ECM connector)

- Sub sensor side



(A) To the check board connector (ECM connector)

Accelerator pedal sensor	Accelerator pedal	Terminal No.	Standard
Main	Not depressed (full closed)	17 (+) and 31 (–)	0.4 — 1.0 V
	Depressed (full opened)		2.4 — 3.7 V
Sub	Not depressed (full closed)	29 (+) and 19 (–)	0.4 — 1.0 V
	Depressed (full opened)		2.4 — 3.7 V

7) After inspection, install the related parts in the reverse order of removal.

2. CHECK ACCELERATOR PEDAL SENSOR AREA (METHOD WITH SUBARU SELECT MONITOR)

1) Turn the ignition switch to ON. (Engine OFF)
2) Read the accelerator pedal opening angle signal and voltage of accelerator pedal sensor using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>

Accelerator pedal sensor	Accelerator pedal opening angle signal	Standard
Main	0.0%	0.4 — 1.0 V
	100.0%	2.4 — 3.7 V
Sub	0.0%	0.4 — 1.0 V
	100.0%	2.4 — 3.7 V

3. OTHER INSPECTIONS

1) Check that the accelerator pedal does not have deformation, cracks or damage.
2) Check for smooth operation when the accelerator pedal is depressed.
3) Check if the accelerator pedal returns to its original position smoothly when the pedal is released.

IGNITION

IG(w/o STI)

Page

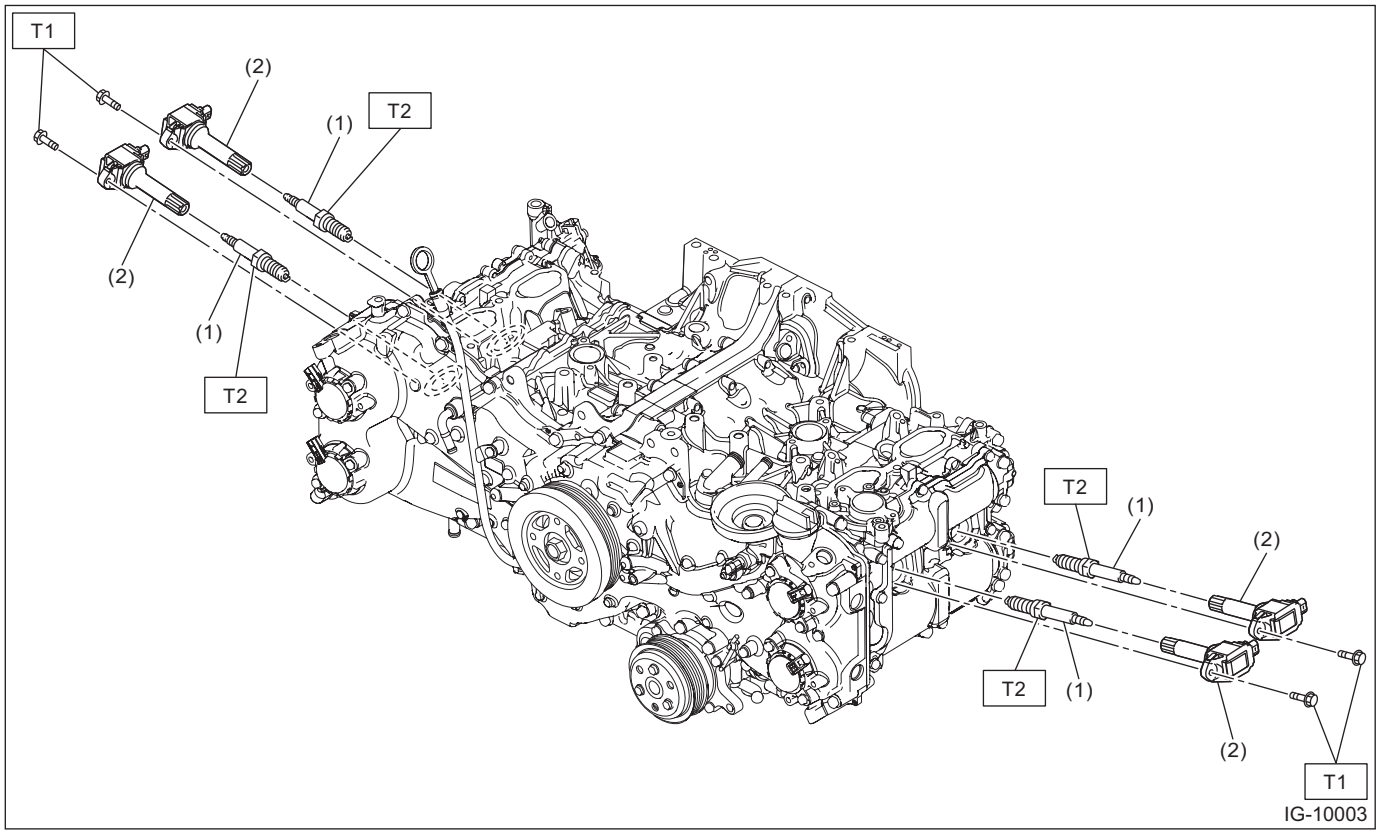
1. General Description 2
2. Spark Plug 4
3. Ignition Coil 11

1. General Description

A: SPECIFICATION

Item			Specifications
Ignition coil	Type		FK0463
	Ignition system		Independent ignition coil
	Manufacturer		Diamond Electric
Spark plug	Manufacturer and type		NGK: ILKAR8H6
	Thread size (diameter, pitch, length) mm		12, 1.25, 26.5
	Spark plug gap mm (in)	Standard	0.50 — 0.55 (0.020 — 0.022)
	Electrode		Center electrode: Iridium Ground electrode: Platinum

B: COMPONENT



(1) Spark plug
(2) Ignition coil

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8.5 (0.9, 6.3)
T2: 17.5 (1.8, 12.9)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.

- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

2. Spark Plug

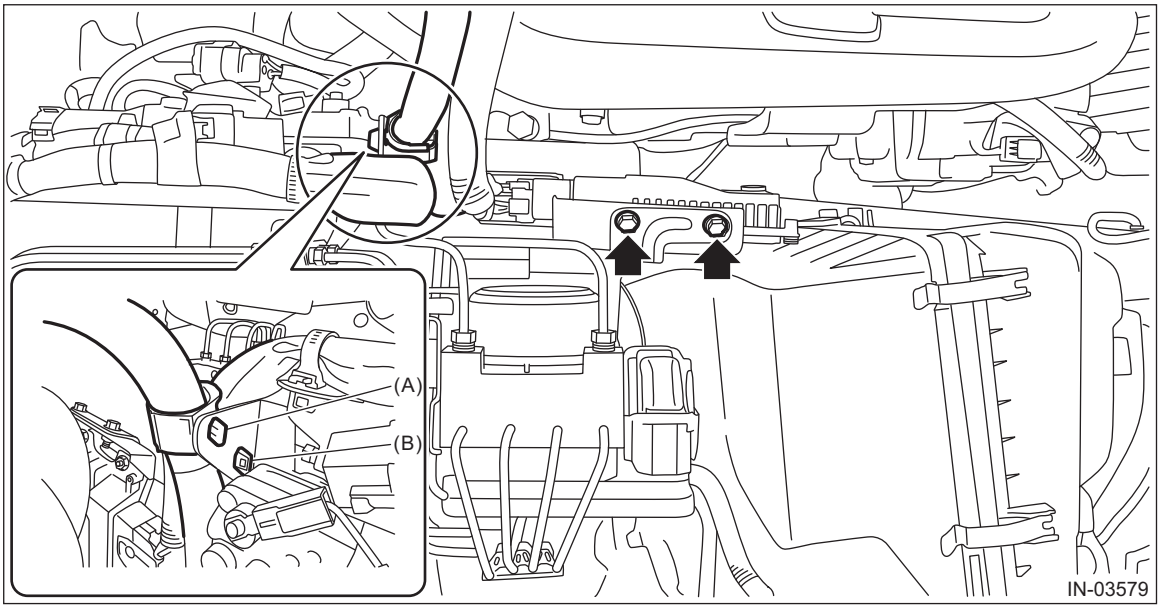
A: REMOVAL

Spark plug:

Refer to "SPECIFICATION" for spark plug. <Ref. to IG(w/o STI)-2, SPECIFICATION, General Description.>

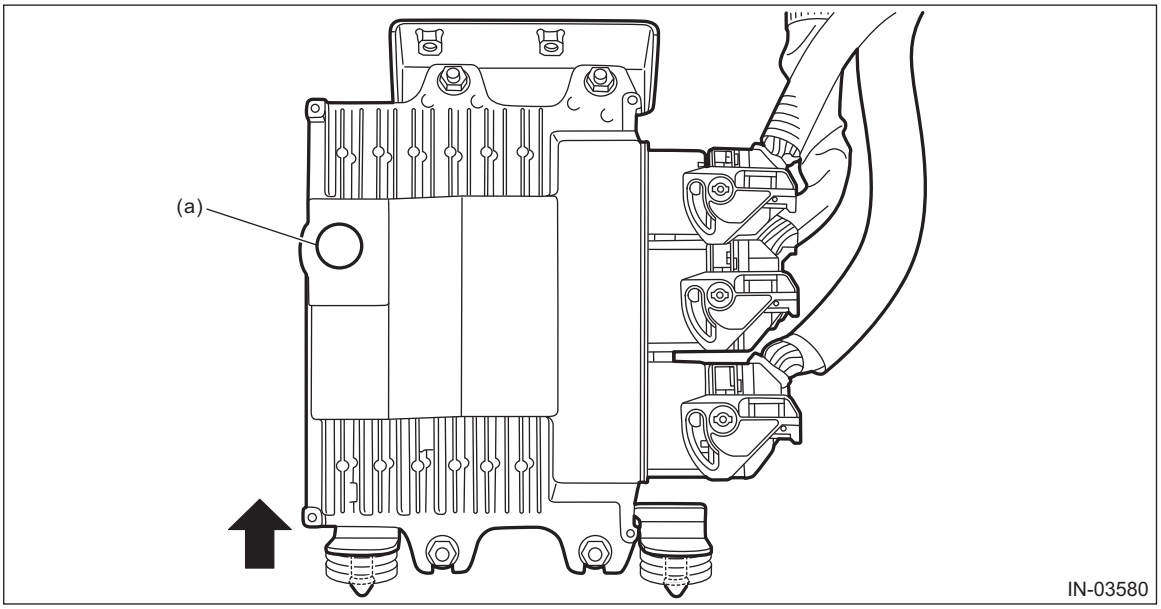
1. RH SIDE

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the clip (A) and clip (B) which secure the engine wiring harness and bulkhead harness to the bracket, and remove the bolt which secures the engine control module (ECM) to the bracket.



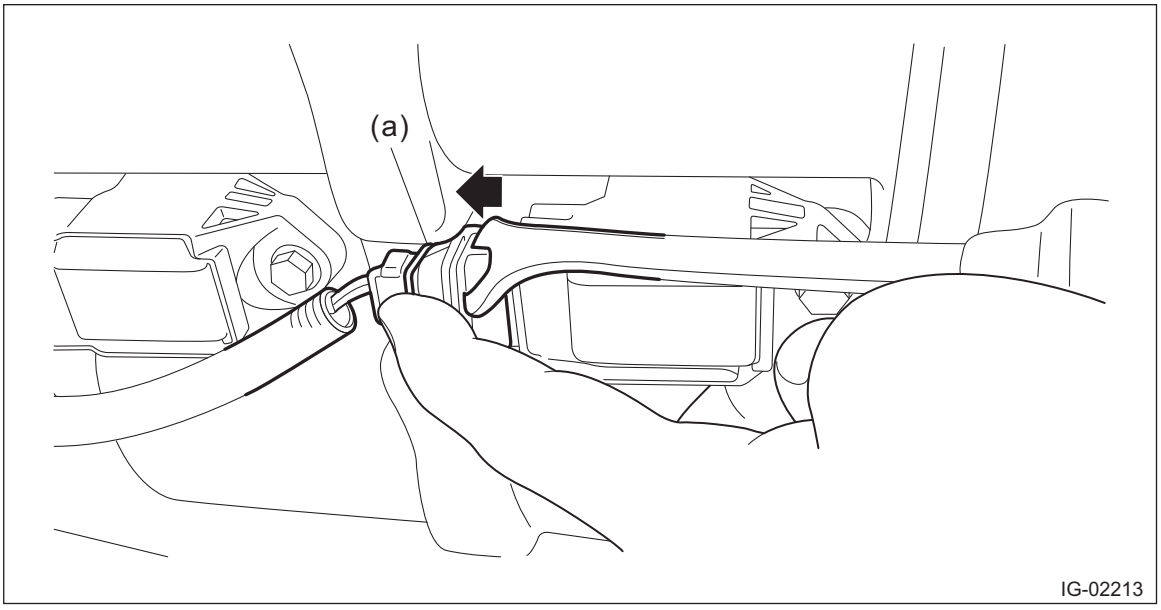
3) Pull out the engine control module (ECM) from the bracket, and move it to a location that does not interfere operation.

NOTE:
When performing the pulling out operation, pay attention not to apply excessive load to the breather filter portion (a) in order to avoid the damage.

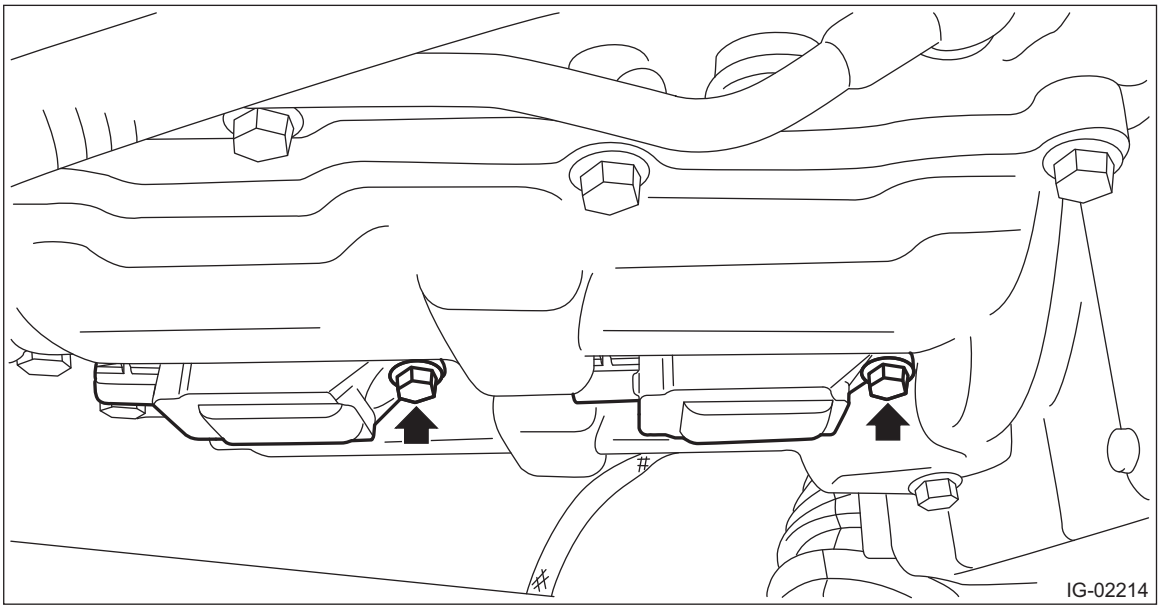


4) Disconnect the connector from ignition coil.

NOTE:
While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.



5) Remove the ignition coil.

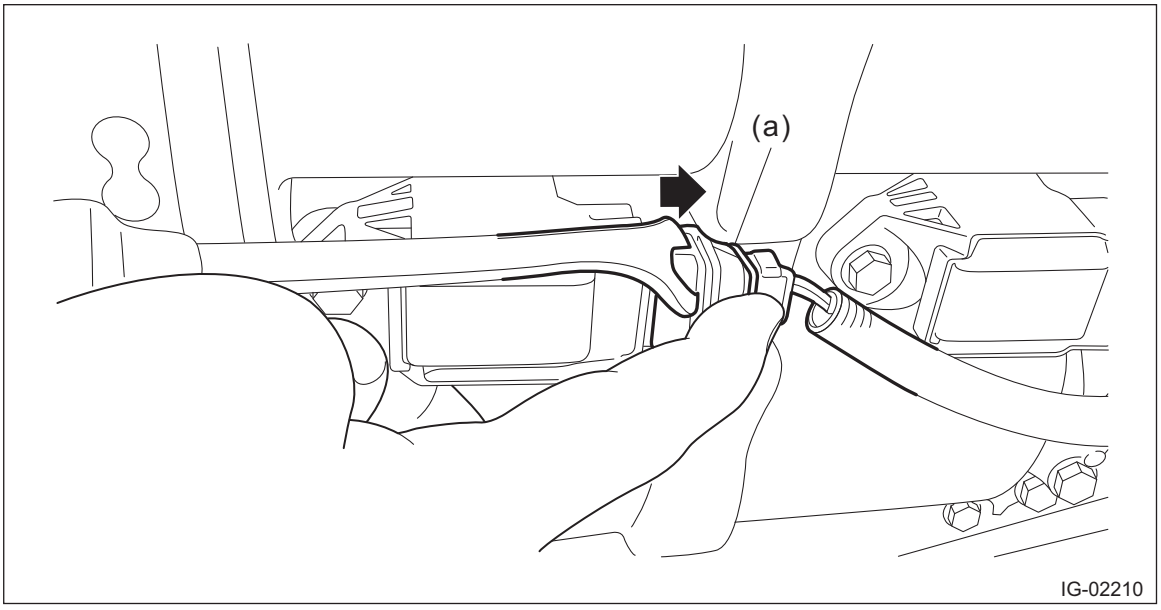


6) Remove the spark plug with a spark plug socket.

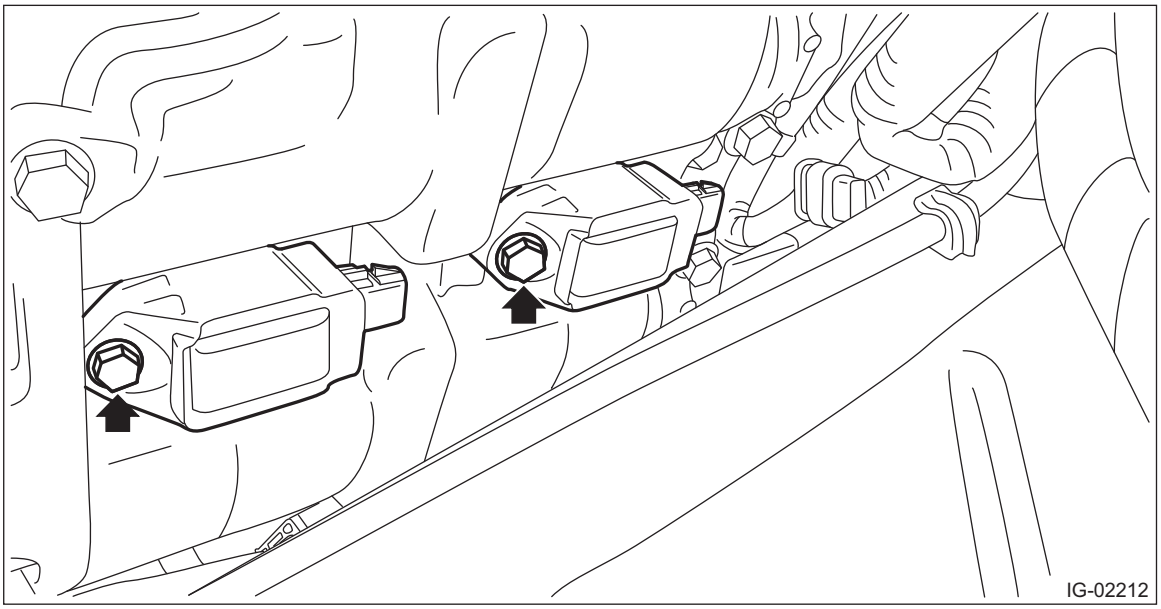
2. LH SIDE

1) Remove the battery. <Ref. to SC(w/o STI)-50, REMOVAL, Battery.>
2) Disconnect the connector from ignition coil.

NOTE:
While pressing the spring (a) shown in the figure, slide it in the direction of the arrow with a clip remover.



3) Remove the ignition coil.



4) Remove the spark plug with a spark plug socket.

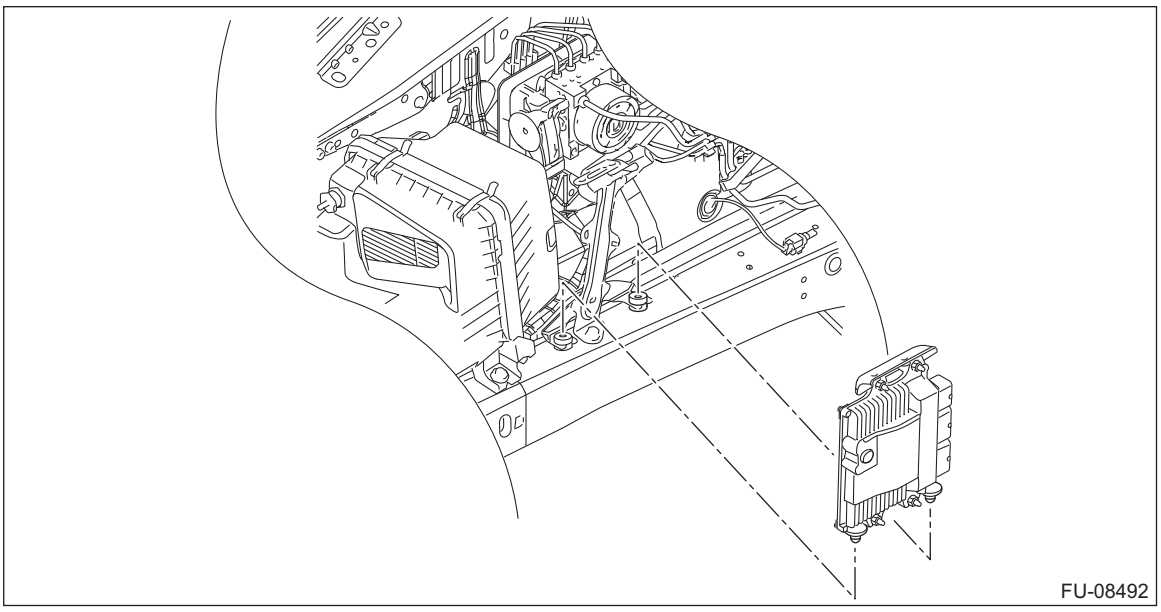
B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

CAUTION:
Degrease the ignition coil fixing portion and the ignition coil mounting bolt.

NOTE:
Insert the engine control module (ECM) to the bracket cushion.



Tightening torque:
Spark plug:
17.5 N·m (1.8 kgf-m, 12.9 ft-lb)
Ignition coil:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)
Engine control module (ECM):
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2. LH SIDE

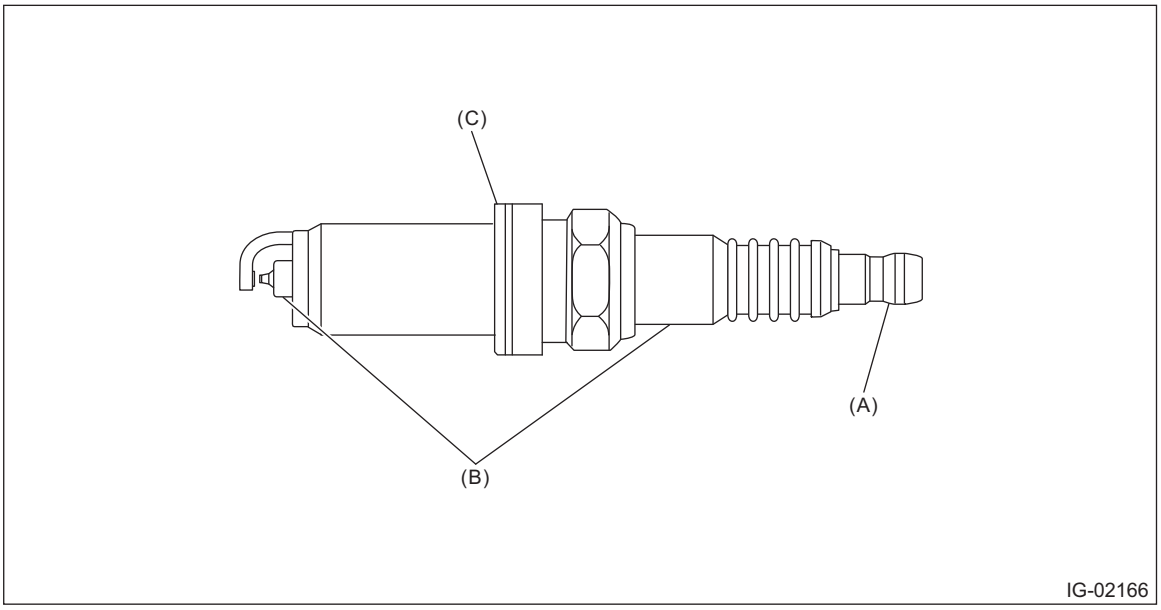
Install in the reverse order of removal.

CAUTION:
Degrease the ignition coil fixing portion and the ignition coil mounting bolt.

Tightening torque:
Spark plug:
17.5 N·m (1.8 kgf-m, 12.9 ft-lb)
Ignition coil:
8.5 N·m (0.9 kgf-m, 6.3 ft-lb)

C: INSPECTION

1) Check the spark plug for abnormalities. If defective, replace the spark plug.

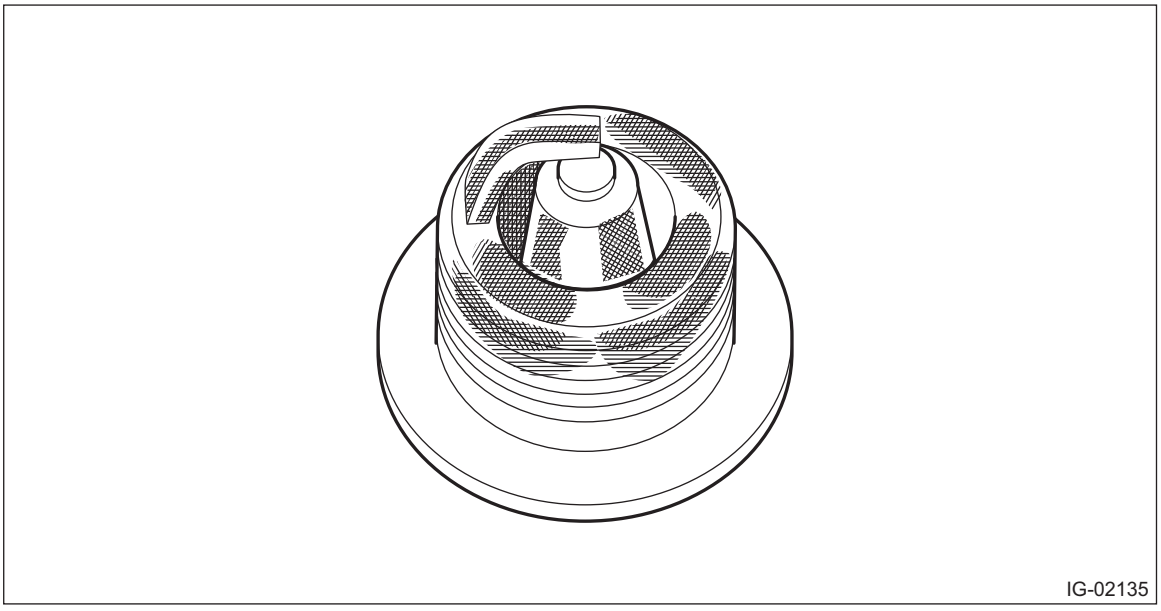


(A) Terminal damage (B) Crack or damage in insulator (C) Damaged gasket

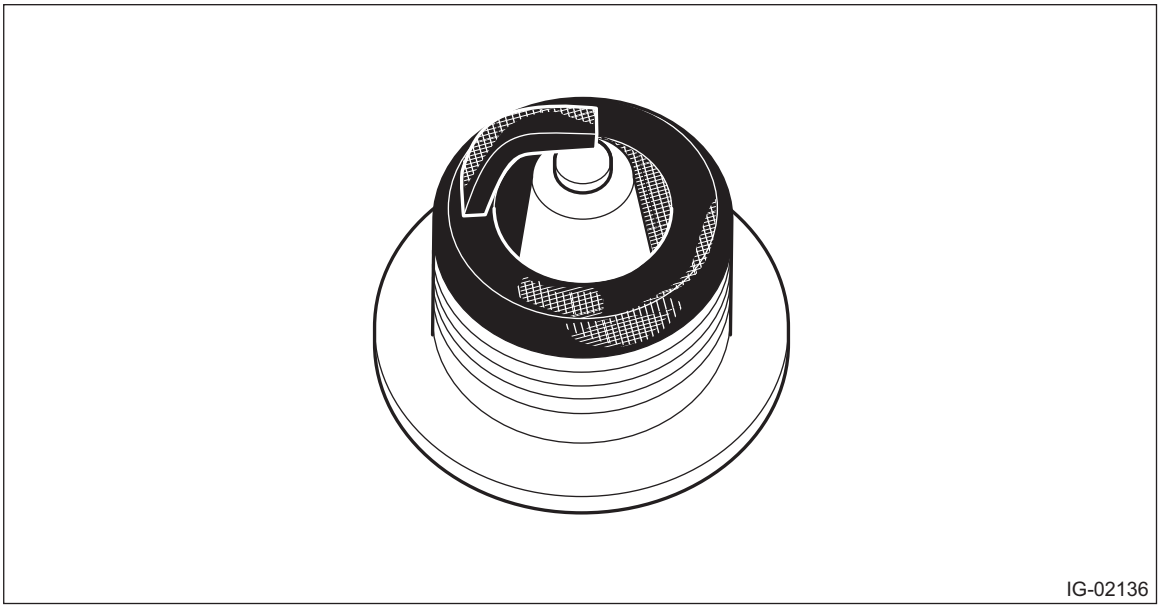
2) Check the spark plug electrode and condition of the insulator. If abnormal, check and repair the cause and replace the spark plug.

(1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

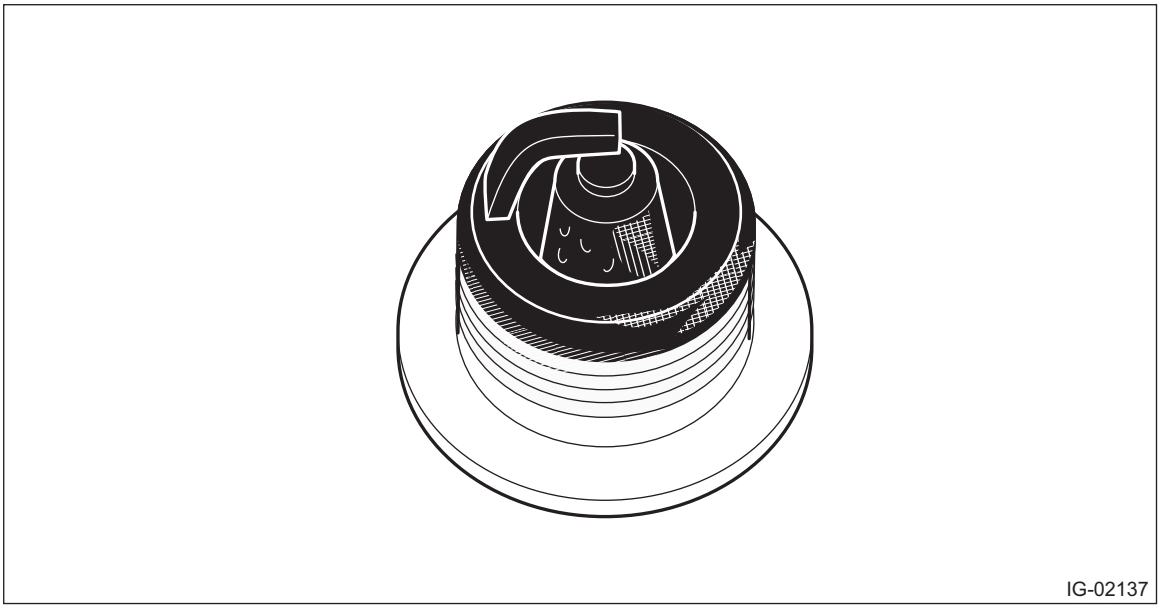


(2) Carbon fouled:
Dry fluffy carbon deposits on the insulator and electrode are mostly caused by slow-speed driving in town, weak ignition, too rich fuel mixture, etc.



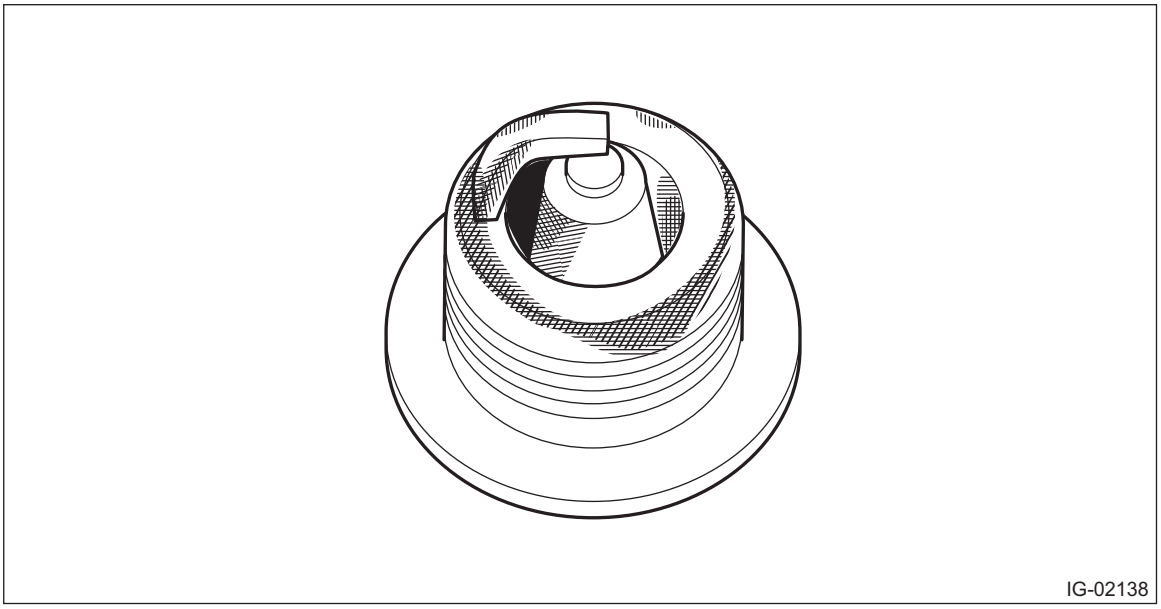
IG-02136

(3) Oil fouled:
Wet black deposits show oil entrance into combustion chamber through worn piston rings or increased clearance between valve guides and valve stems.



IG-02137

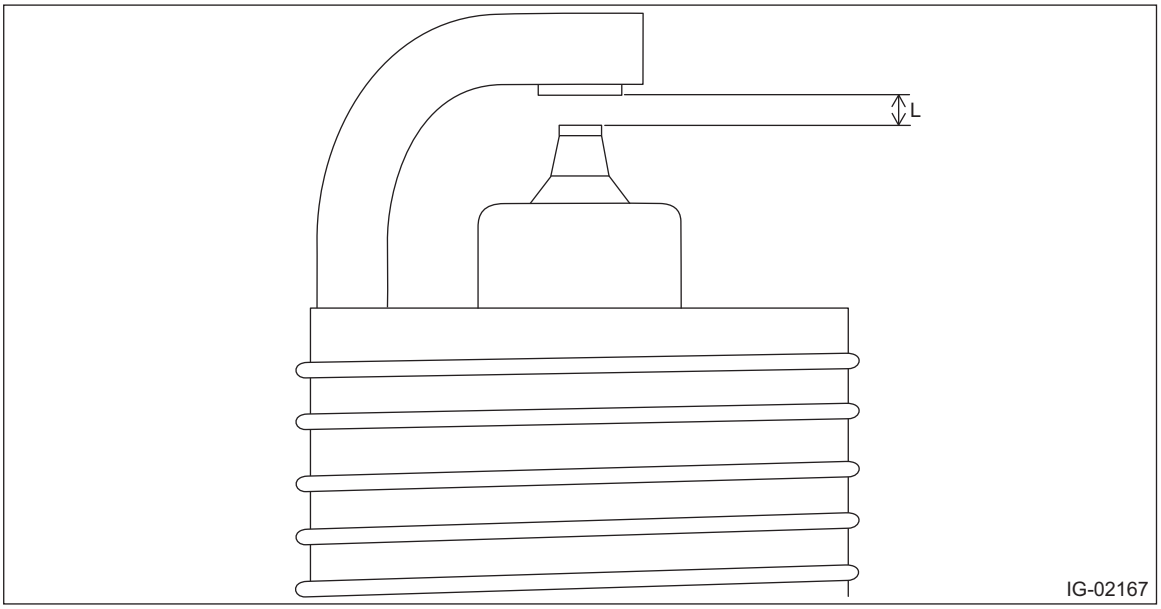
(4) Overheating:
A white or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating, wrong selection of fuel, or loose spark plugs.



3) Using a nylon brush, etc., clean and remove the carbon or oxide deposits from the spark plug. If deposits are too stubborn, replace the spark plugs. After cleaning the spark plugs, check the spark plug gap “L” using a gap gauge. If it is not within the standard, replace the spark plug.

NOTE:
- Never use a plug cleaner.
- Do not use a metal brush as it may damage the electrode area.

Spark plug gap L:
Standard
0.50 — 0.55 mm (0.020 — 0.022 in)



3. Ignition Coil

A: REMOVAL

Direct ignition type is adopted. Refer to “Spark Plug” for removal procedure. <Ref. to IG(w/o STI)-4, REMOVAL, Spark Plug.>

B: INSTALLATION

Direct ignition type is adopted. Refer to “Spark Plug” for the installation procedure. <Ref. to IG(w/o STI)-6, INSTALLATION, Spark Plug.>

C: INSPECTION

For inspection procedure, refer to “Diagnostics for Engine Starting Failure”. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

STARTING/CHARGING SYSTEMS

1. General Description 2
2. Starter 7
3. Generator 31
4. Battery 50
5. Battery Sensor 57

1. General Description

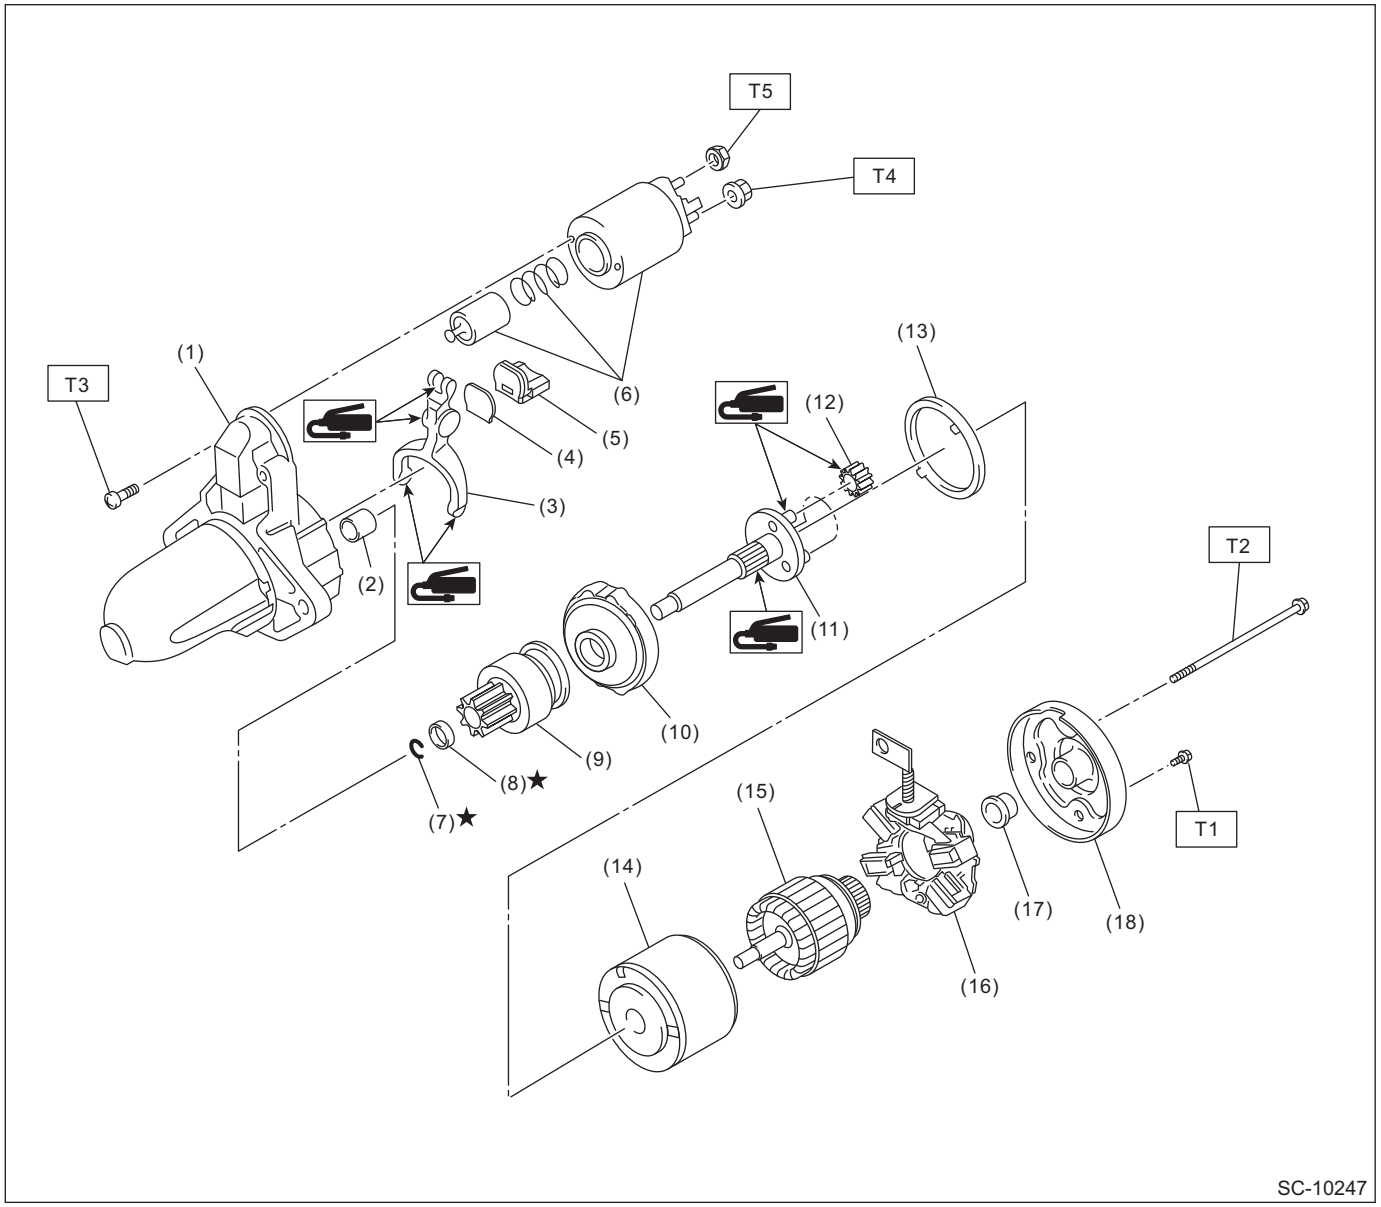
A: SPECIFICATION

Item			Specifications	
Vehicle model			CVT	MT
Starter	Type		Reduction type	
	Model		M000T38571	M000T33176
	Manufacturer		Mitsubishi Electric	
	Voltage and output		12 V — 1.2 kW	12 V — 1.0 kW
	Direction of rotation		Counterclockwise (when observed from pinion)	
	Number of pinion teeth		9	8
	No-load characteristics	Voltage	11 V	
		Current	90 A or less	95 A or less
Generator	Type		Rotating-field three-phase type, voltage regulator built-in type, each with load response control system	
	Model		A2TX5081	
	Manufacturer		Mitsubishi Electric	
	Voltage and output		12 V — 130 A	
	Polarity on ground side		Negative	
	Direction of rotation		Clockwise (when observed from pulley side)	
	Stator connection		3-phase △ type	
	Output current		1,500 r/min — 50 A or more 2,500 r/min — 111 A or more 5,000 r/min — 133 A or more	
	Regulated voltage		14.1 — 14.8 V [20°C (68°F)]	
	Rotor slip ring outer diameter	Standard	22.7 mm (0.894 in)	
		Limit	22.1 mm (0.870 in)	
	Brush length	Standard	22.5 mm (0.886 in)	
		Limit	5.0 mm (0.197 in)	
Battery	Type		75D23L	
	Nominal capacity		5 HR: 53 Ah [25°C (77°F)]	
	Nominal voltage		12 V	
	CCA		470 A	
	BCI group number*		35	

*: This is a reference information for battery size, and is not guaranteed by SUBARU CORPORATION.

B: COMPONENT

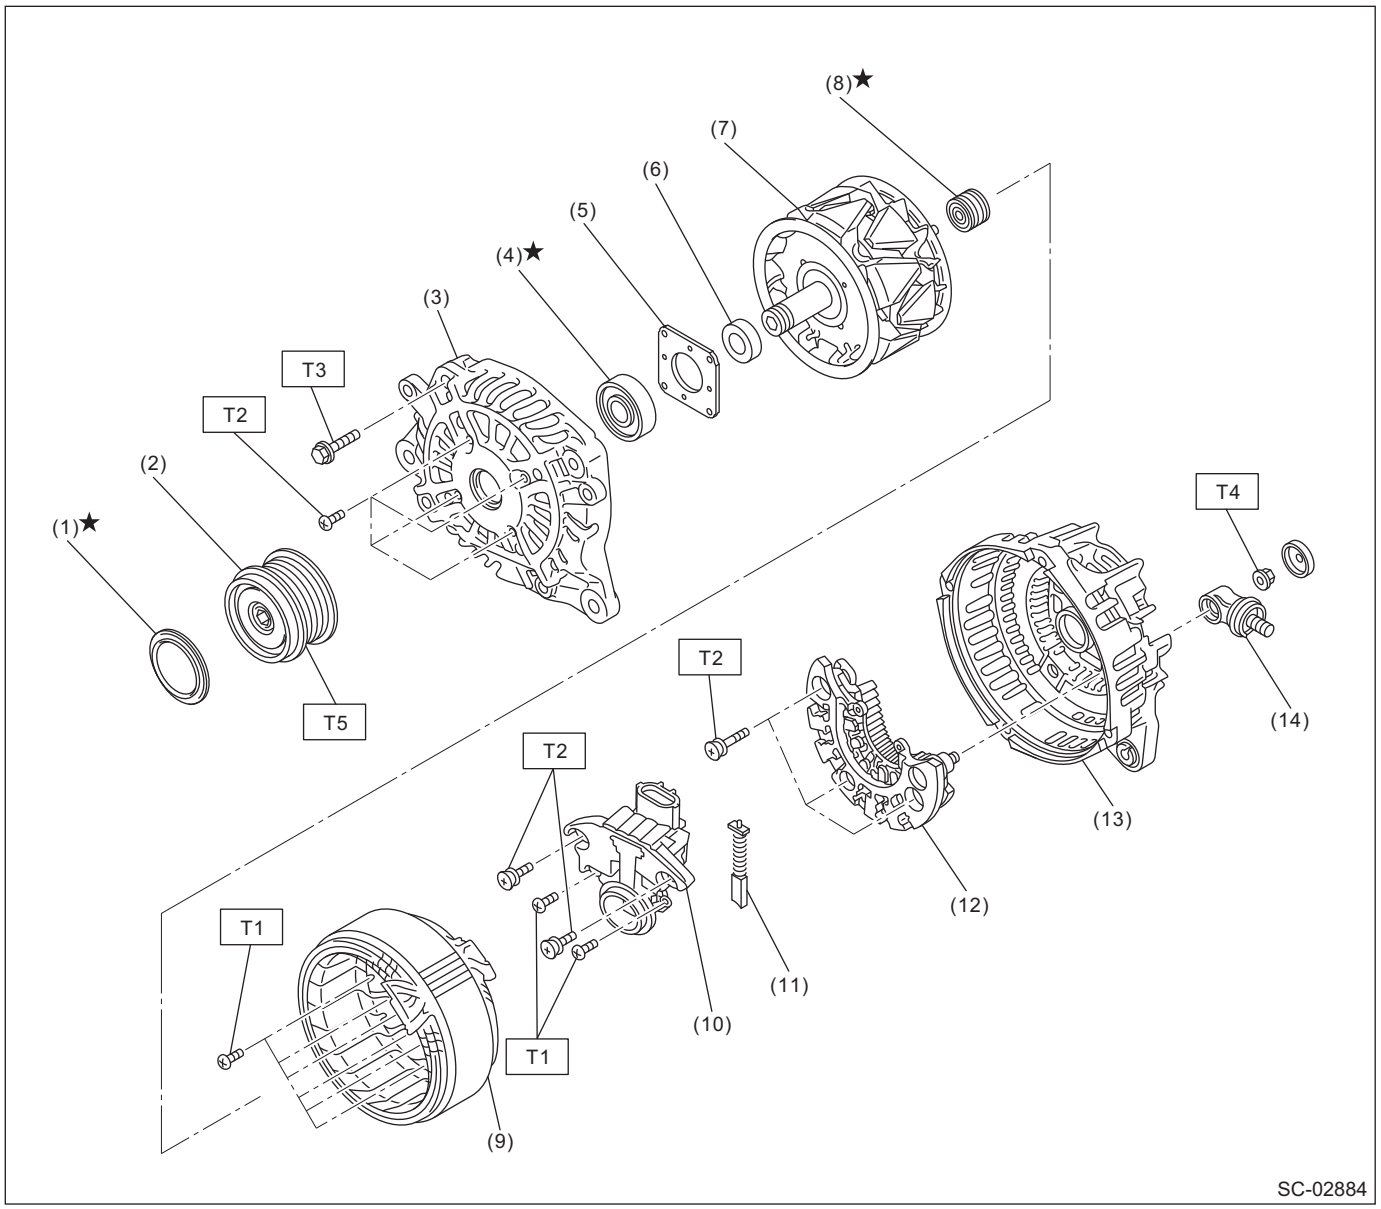
1. STARTER



(1)	Starter housing ASSY	(10)	Internal gear ASSY
(2)	Sleeve bearing	(11)	Shaft
(3)	Shift lever	(12)	Pinion gear
(4)	Plate	(13)	Seal rubber
(5)	Seal rubber	(14)	Yoke ASSY
(6)	Magnet switch ASSY	(15)	Armature ASSY
(7)	Snap ring	(16)	Brush holder ASSY
(8)	Stopper	(17)	Sleeve bearing
(9)	Overrunning clutch	(18)	Starter cover ASSY

Tightening torque: N·m (kgf-m, ft-lb)
T1: 1.4 (0.1, 1.0)
T2: 6 (0.6, 4.4)
T3: 7.5 (0.8, 5.5)
T4: 10 (1.0, 7.4)
T5: 11 (1.1, 8.1)

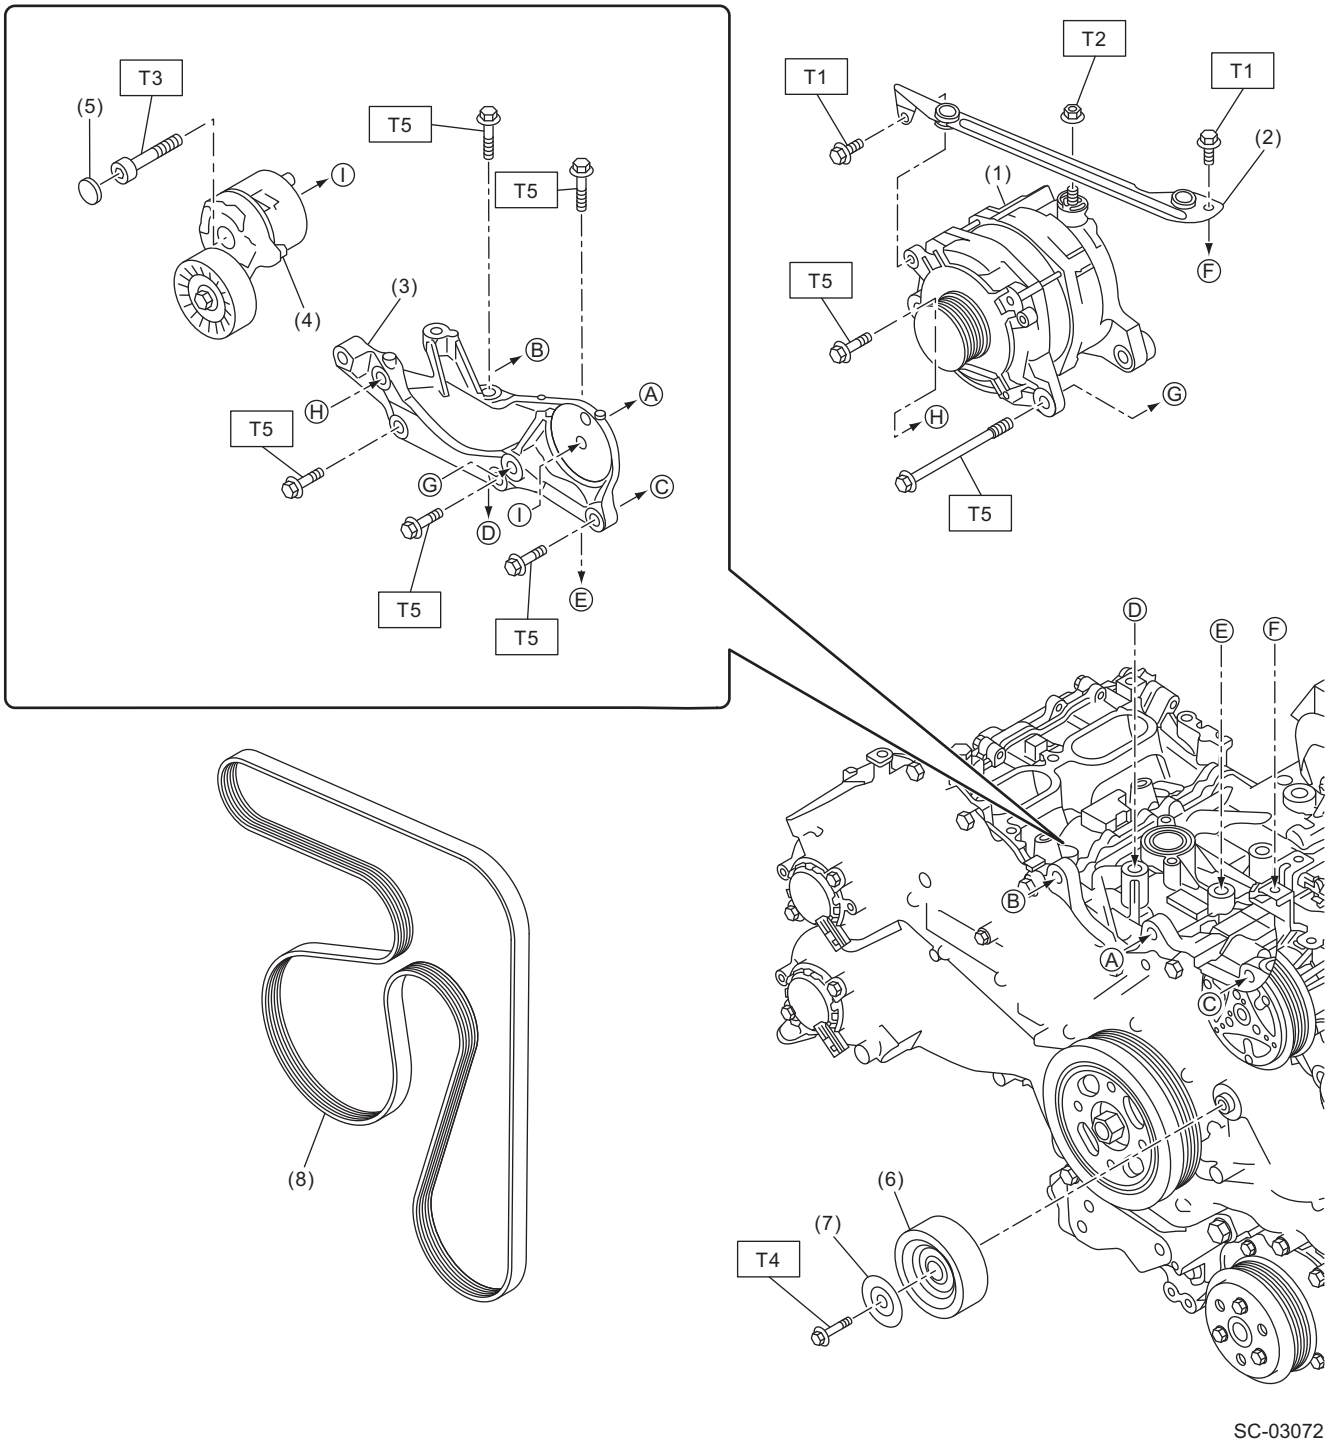
2. GENERATOR



(1) Cap
(2) Pulley
(3) Front cover
(4) Ball bearing
(5) Bearing retainer
(6) Spacer
(7) Rotor
(8) Bearing
(9) Stator coil
(10) IC regulator
(11) Brush
(12) Rectifier
(13) Rear cover
(14) Terminal B

Tightening torque: N·m (kgf-m, ft-lb)
T1: 2 (0.2, 1.5)
T2: 3.9 (0.4, 2.9)
T3: 4.4 (0.4, 3.2)
T4: 8.9 (0.9, 6.6)
T5: 108 (11.0, 79.8)

3. GENERATOR BRACKET

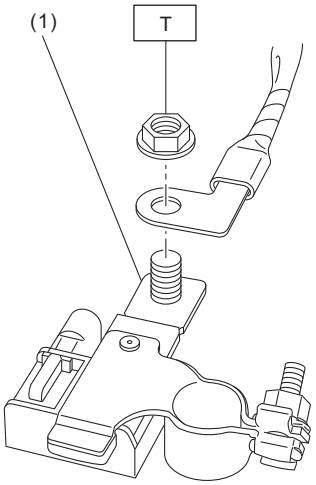


SC-03072

(1) Generator
(2) Collector cover bracket
(3) Generator bracket
(4) V-belt tensioner ASSY
(5) Cap
(6) Idler pulley
(7) Idler pulley cover
(8) V-belt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.4 (0.7, 4.7)
T2: 15.5 (1.6, 11.4)
T3: 25 (2.5, 18.4)
T4: 36 (3.7, 26.6)
T5: <Ref. to SC(w/o STI)-32, INSTALLATION, Generator.>

4. BATTERY SENSOR



SC-03067

(1) Battery sensor

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

- Prior to starting work, pay special attention to the following:
  1. Always wear work clothes, a work cap, and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
  2. Protect the vehicle using a seat cover, fender cover, etc.
  3. Prepare the service tools, clean cloth, containers to catch grease and oil, etc.
- Vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
- When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
- Remove contamination including dirt and corrosion before removal, installation, disassembly or assembly.
- Keep the removed parts in order and protect them from dust and dirt.
- All removed parts, if to be reused, should be reinstalled in the original positions with attention to the correct directions, etc.
- Bolts, nuts and washers should be replaced with new parts as required.
- Be sure to tighten the fasteners including bolts and nuts to the specified torque.

D: PREPARATION TOOL

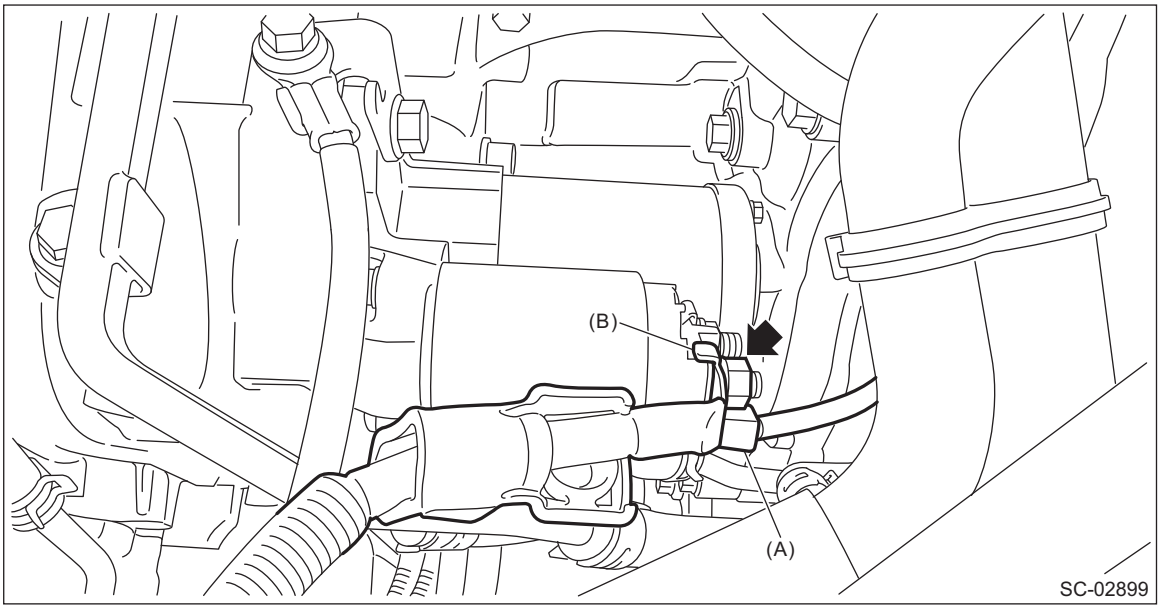
1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current. NOTE: • When measuring the standby current, prepare a circuit tester which can measure down to 1 mA. • When measuring the standby current for models with keyless access function, prepare an analog type.

2. Starter

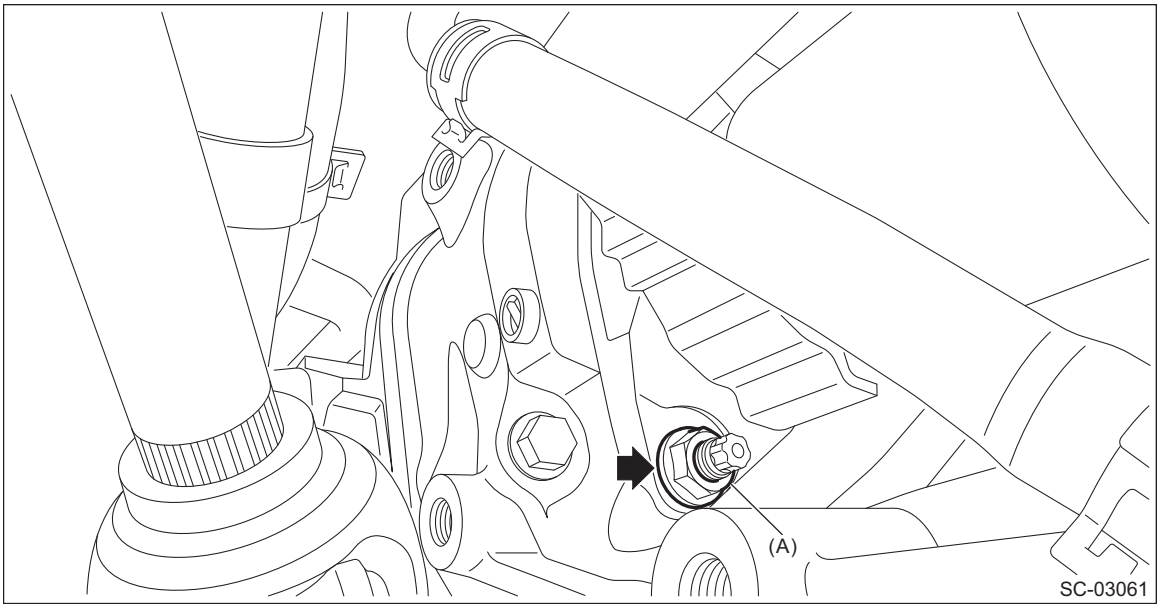
A: REMOVAL

1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the intercooler. <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
4) Disconnect the connector (A) and terminal (B) from starter.



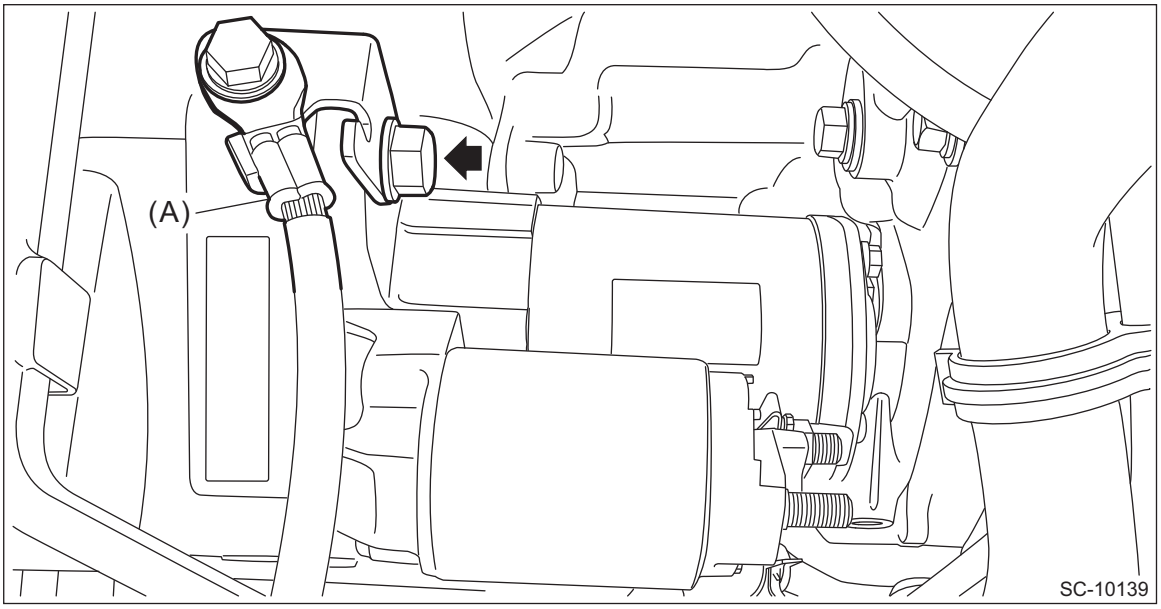
5) Lift up the vehicle.
6) Remove the nut or bolt at the bottom of the starter.

NOTE:
For the MT model, a bolt is used to the location (A).



7) Lower the vehicle.
8) Disconnect the terminal (A) from the cable stay and remove the cable stay and starter from the transmission.

CAUTION:
In order to prevent damaging the terminal (A), fix the terminal (A) when loosing the bolt, and avoid the part from rotating together while loosening the bolt.

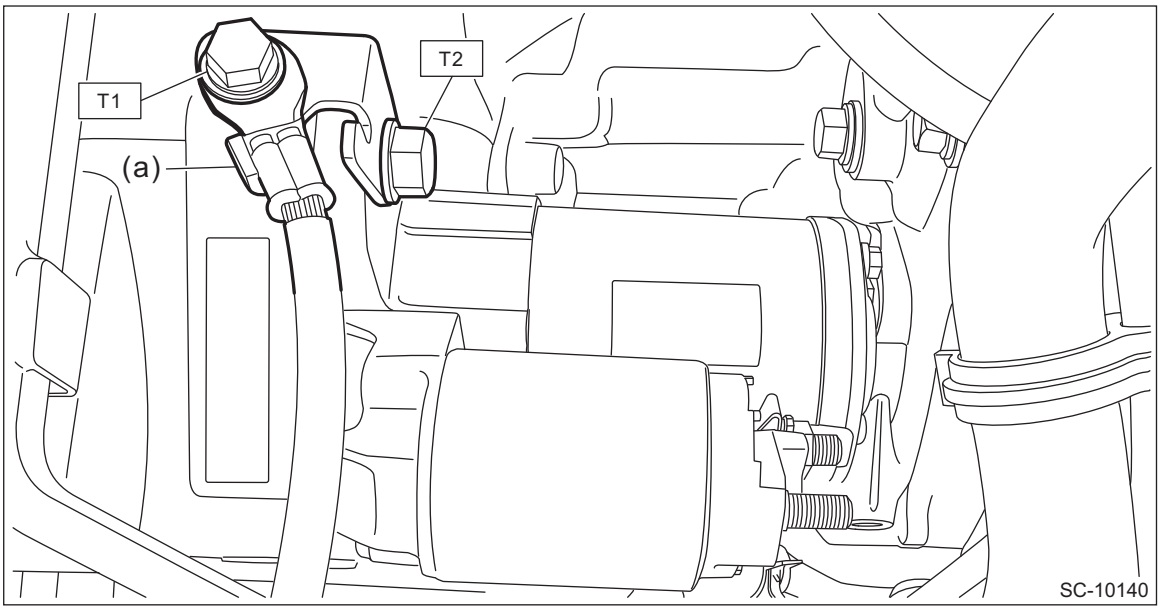


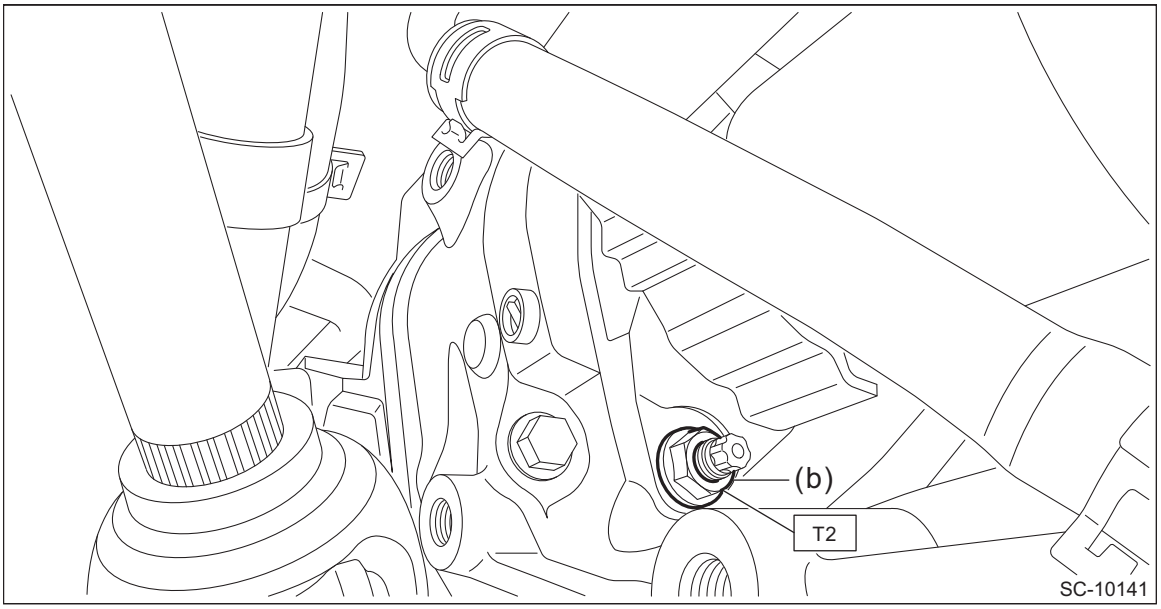
B: INSTALLATION

Install in the reverse order of removal.

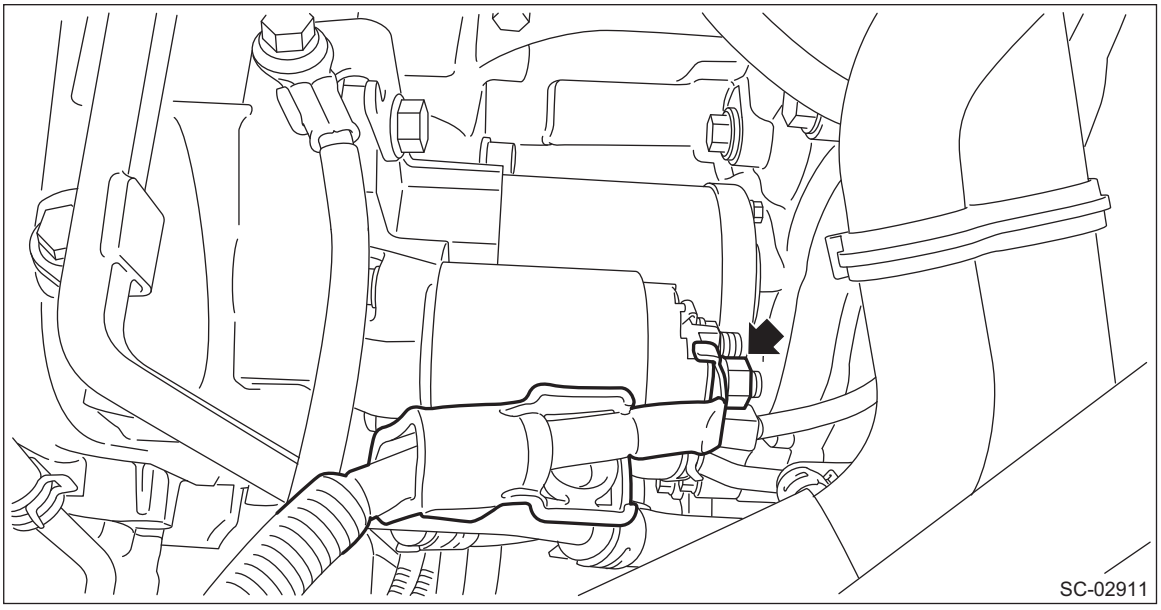
NOTE:
- Tighten the starter and cable stay (a) together using the upper bolt securing the starter.
- For the MT model, a bolt is used to the location (b).

Tightening torque:
T1: 14 N·m (1.4 kgf-m, 10.3 ft-lb)
T2: 50 N·m (5.1 kgf-m, 36.9 ft-lb)



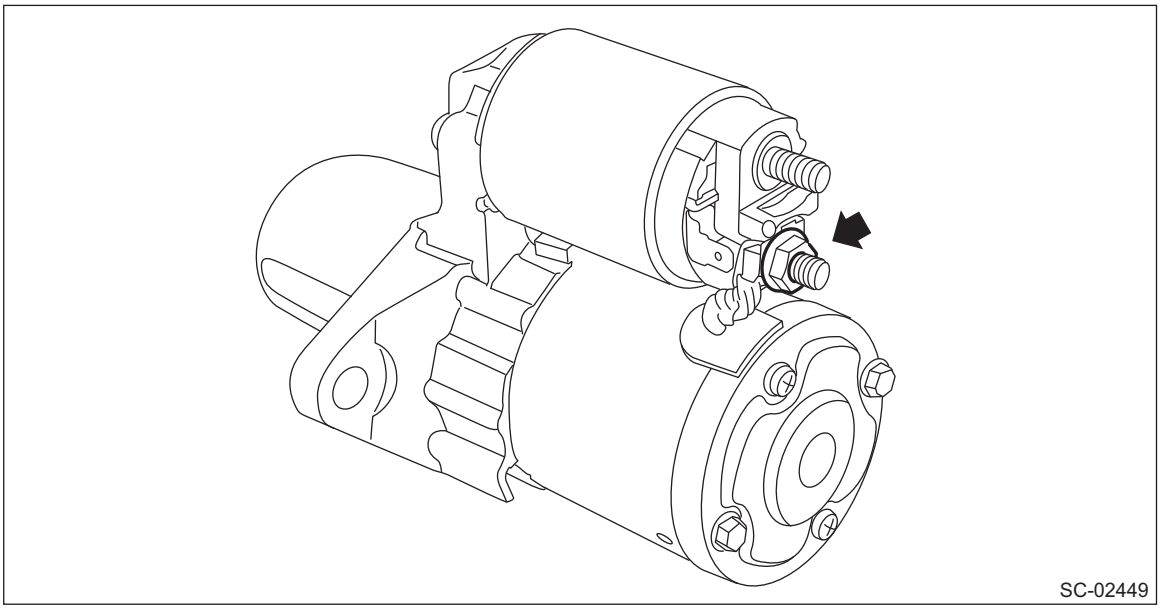


Tightening torque:
11 N·m (1.1 kgf-m, 8.1 ft-lb)

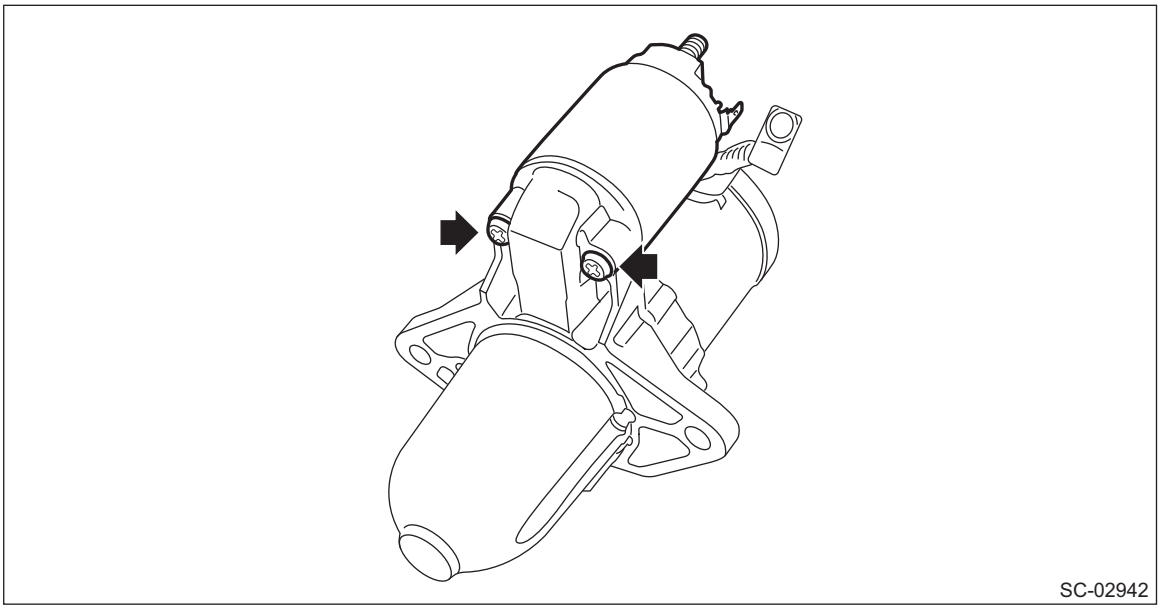


C: DISASSEMBLY

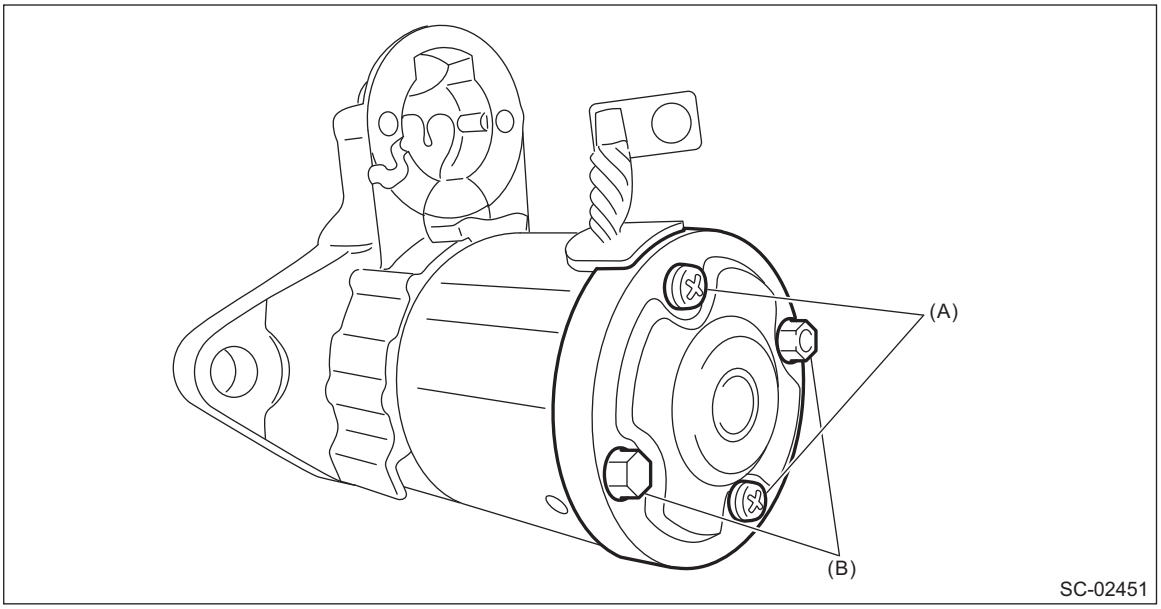
CAUTION:
The starter should be placed through a no-load test whenever it has been overhauled.
1) Disconnect the cable from the terminal M of the magnet switch assembly.



2) Remove the magnet switch assembly from the starter housing assembly.

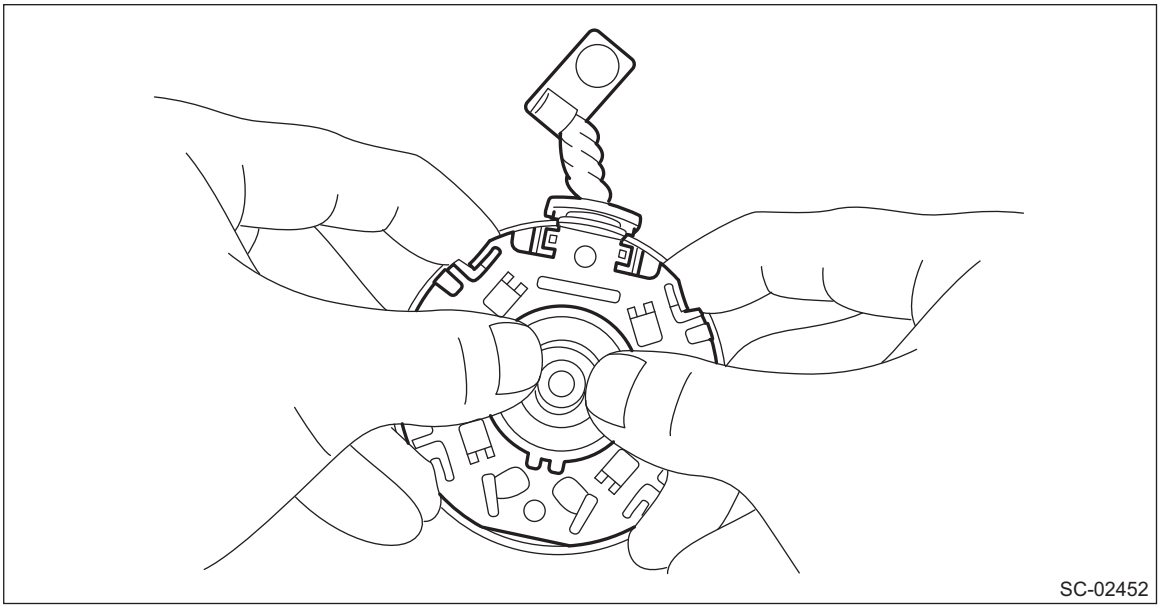


3) Remove screws (A) of the brush holder assembly, and through bolts (B) on both sides, and remove the starter cover assembly.



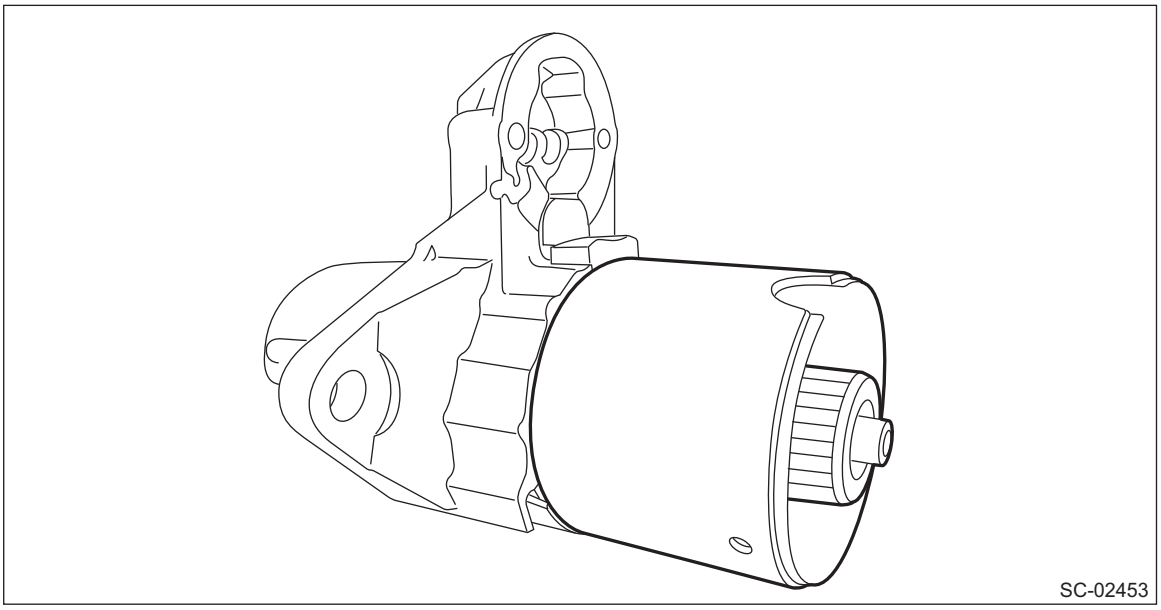
4) Remove the brush holder assembly from the armature assembly.

NOTE:
Hold the brush with your fingers so that the brush spring does not come flying out.



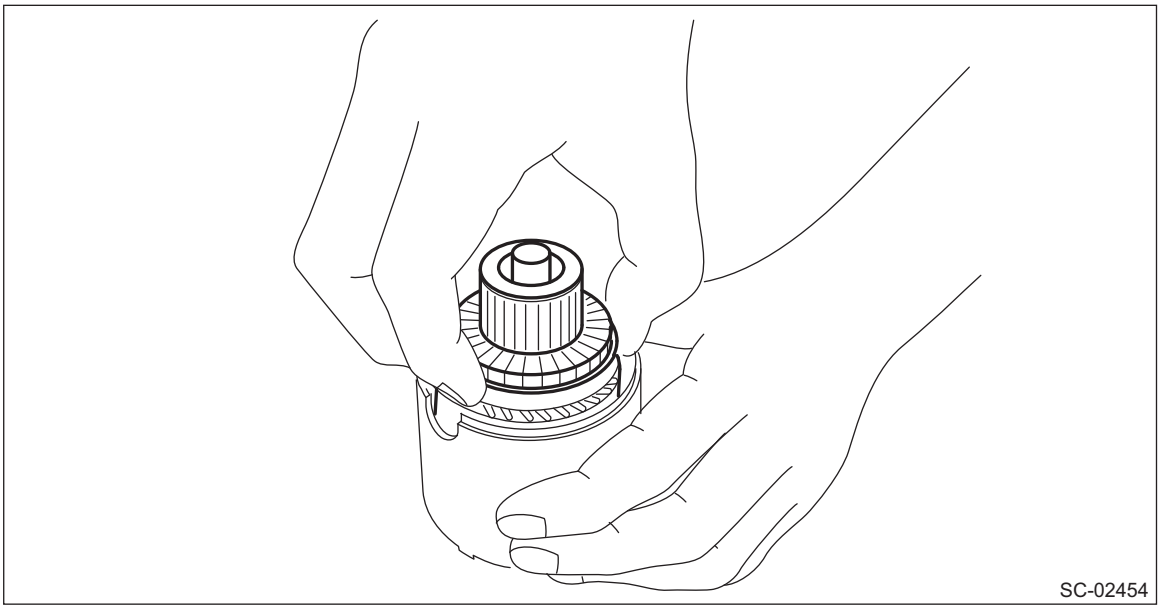
SC-02452

5) Remove the armature assembly and yoke assembly from the starter housing assembly together as a single unit.



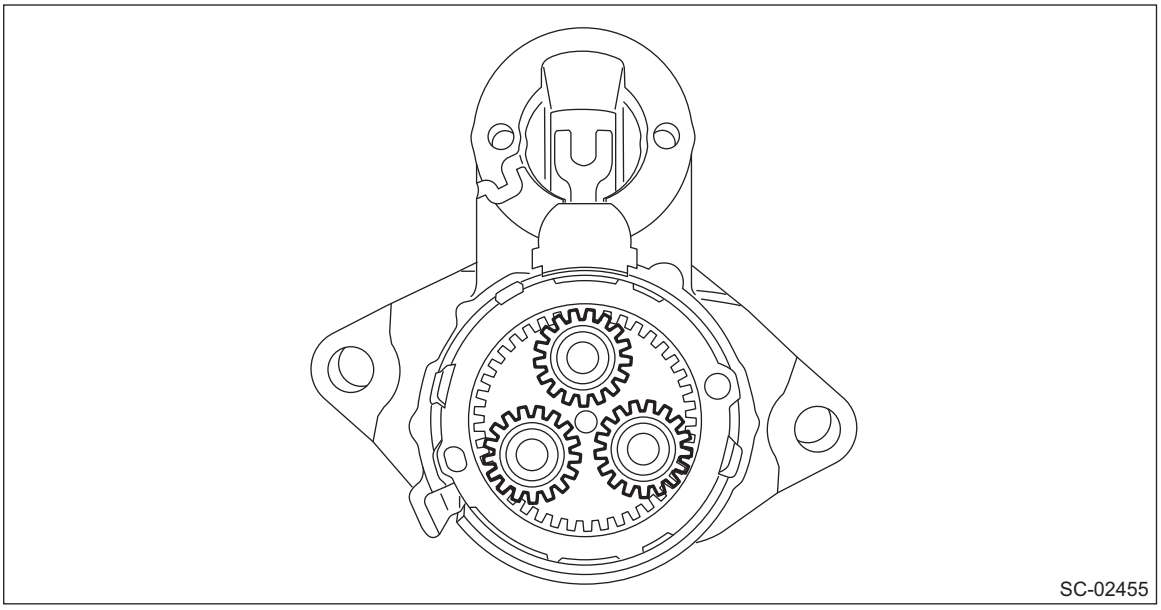
SC-02453

6) Separate the armature assembly and yoke assembly.



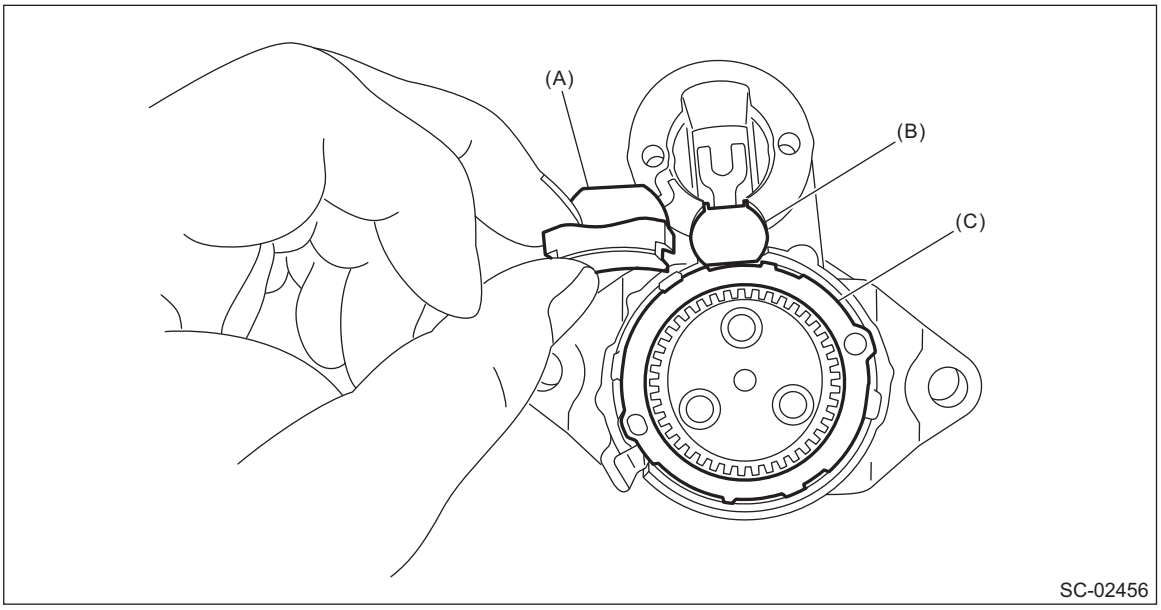
SC-02454

7) Remove the pinion gear from the internal gear assembly.

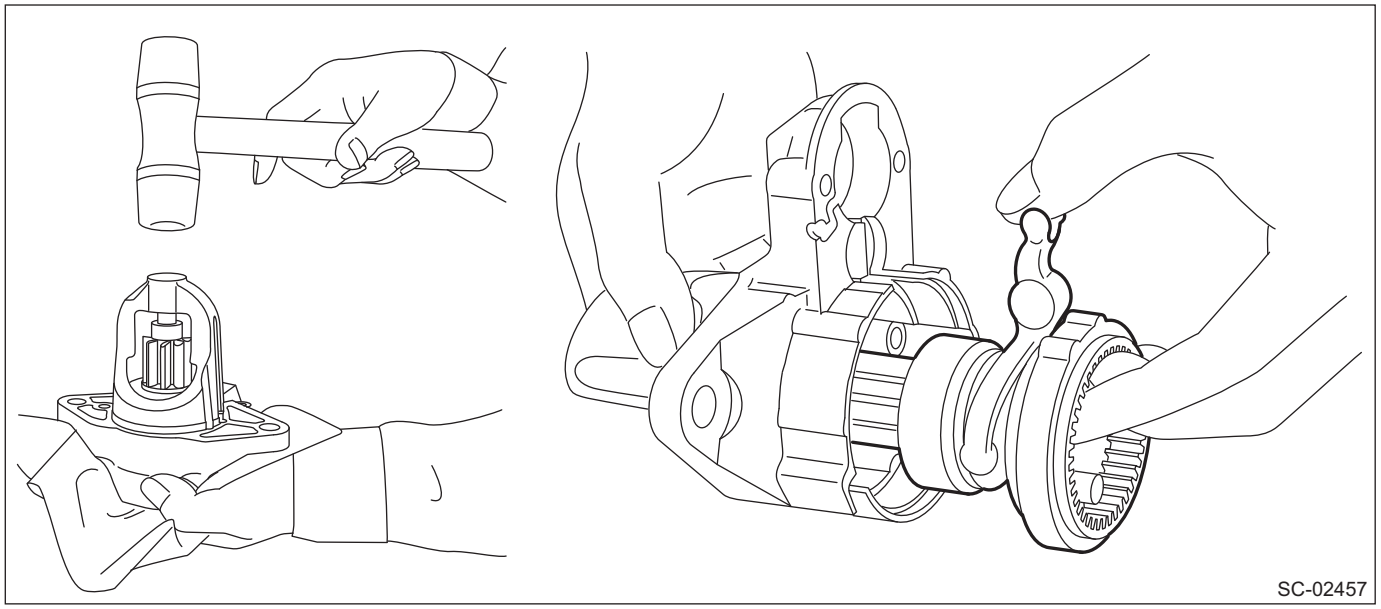


SC-02455

8) Remove seal rubber (A), plate (B), and seal rubber (C).

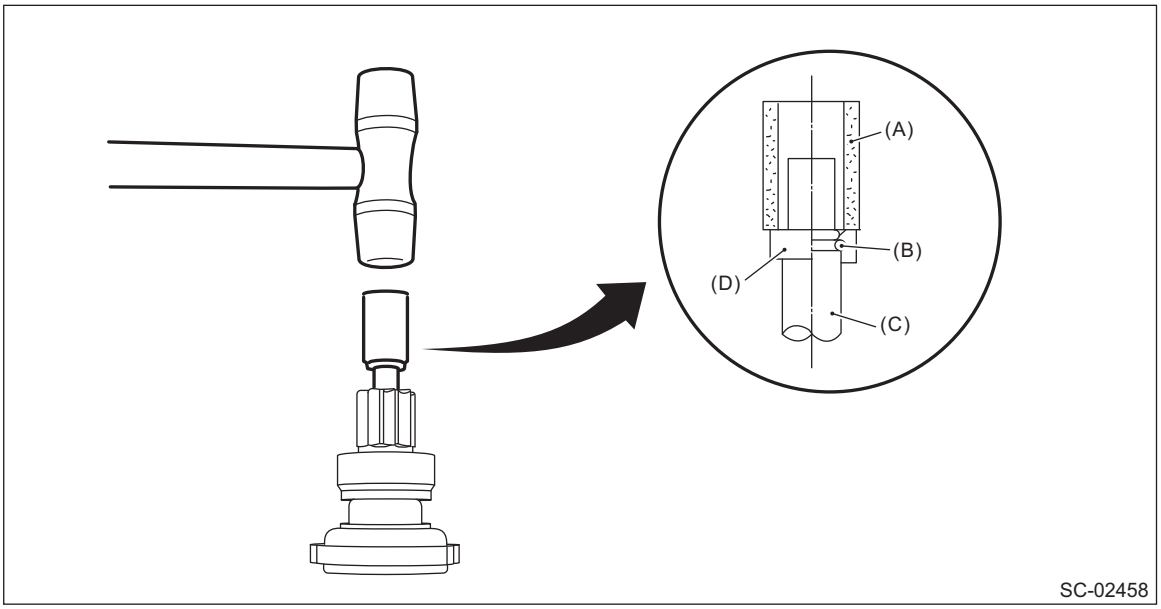


9) Lightly tap the starter housing assembly with a plastic hammer as shown in the figure, and remove the overrunning clutch, internal gear assembly, shaft and shift lever together as one unit.



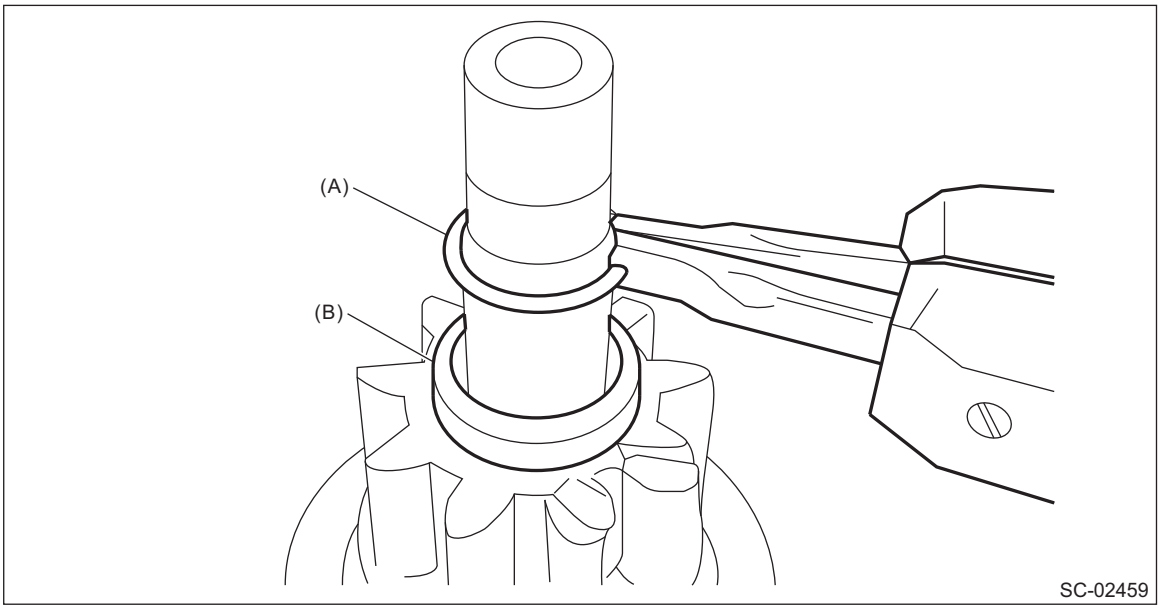
10) Use the following procedures to remove the overrunning clutch from the shaft.

(1) Use an appropriate tool (such as a fit socket wrench), and remove the stopper from snap ring by lightly tapping the stopper with a plastic hammer.

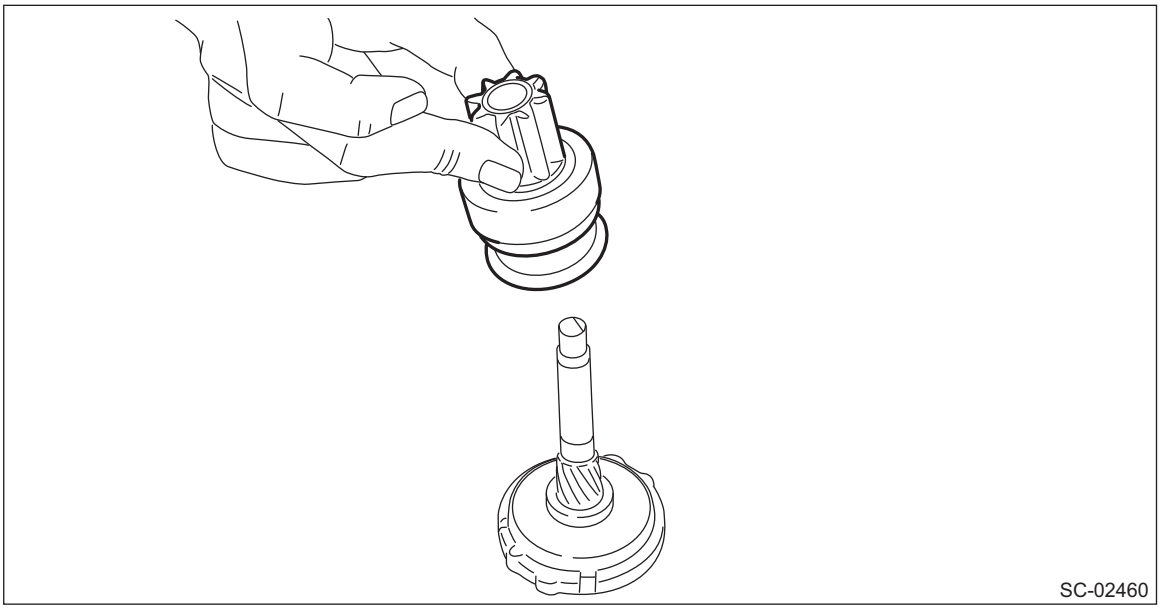


(A) Appropriate tool (B) Snap ring (C) Shaft
(D) Stopper

(2) Remove snap ring (A) from the shaft, and remove stopper (B).

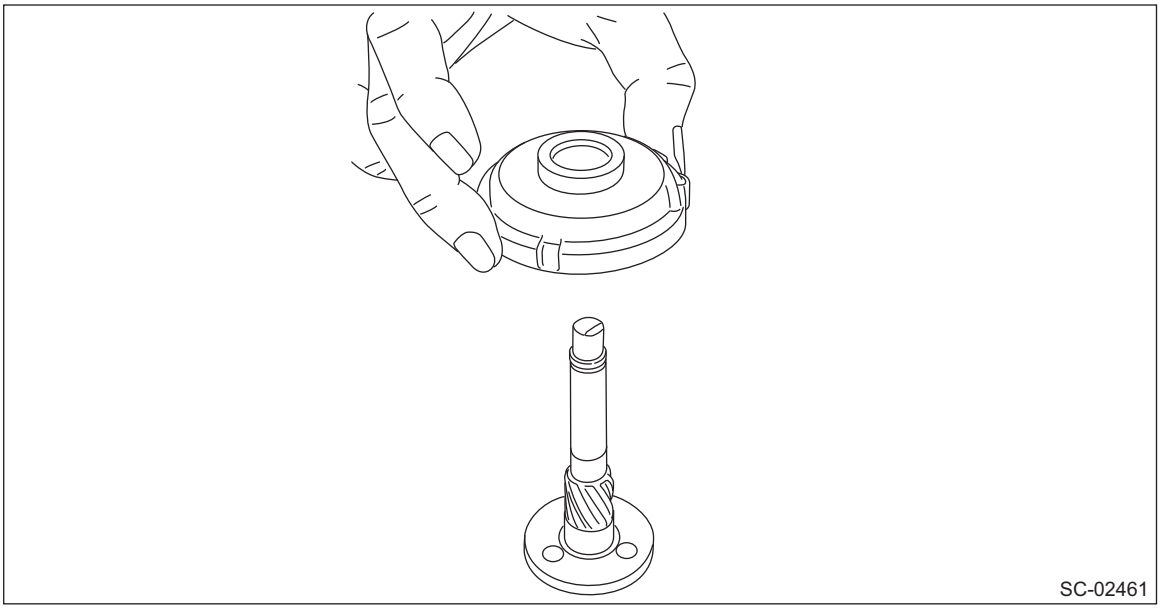


(3) Remove the overrunning clutch from the shaft.



SC-02460

11) Separate the internal gear assembly and shaft.



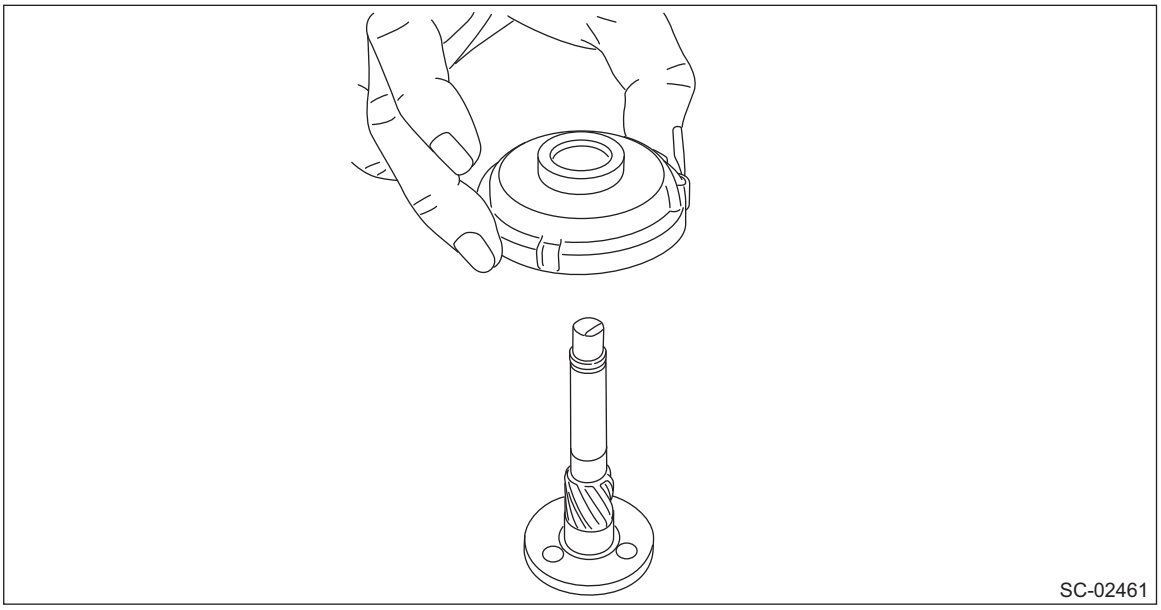
SC-02461

D: ASSEMBLY

1) Apply grease to the shaft sliding surfaces of the internal gear assembly.

Grease:
Multemp #6129 or equivalent

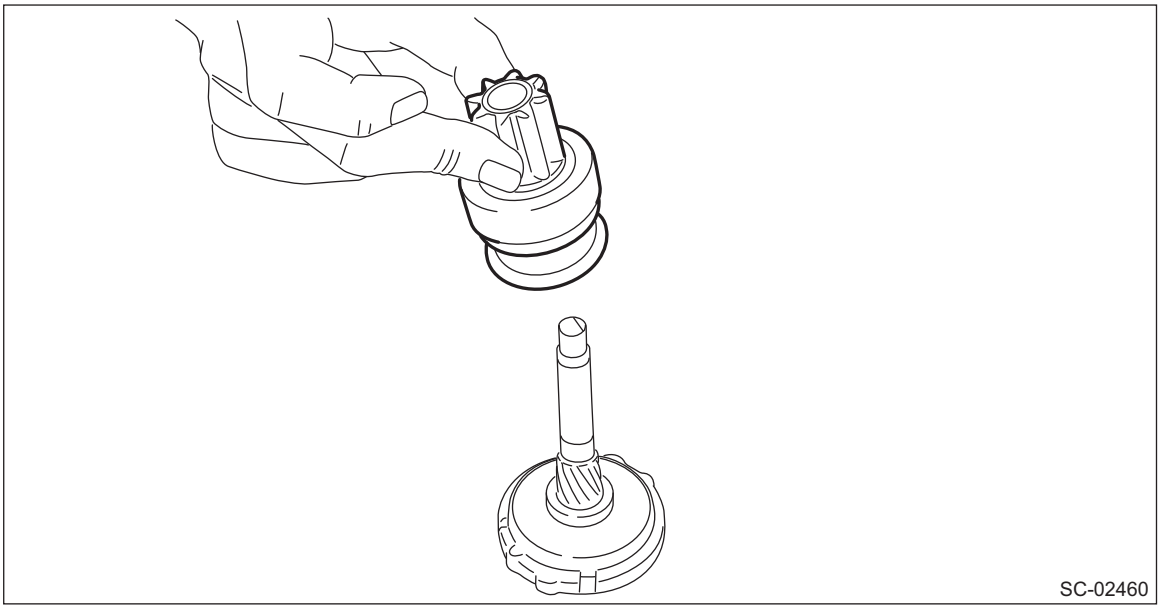
2) Assemble the shaft to the internal gear assembly.



3) Assemble the overrunning clutch as follows:
(1) Apply grease to the spline portion of the shaft.

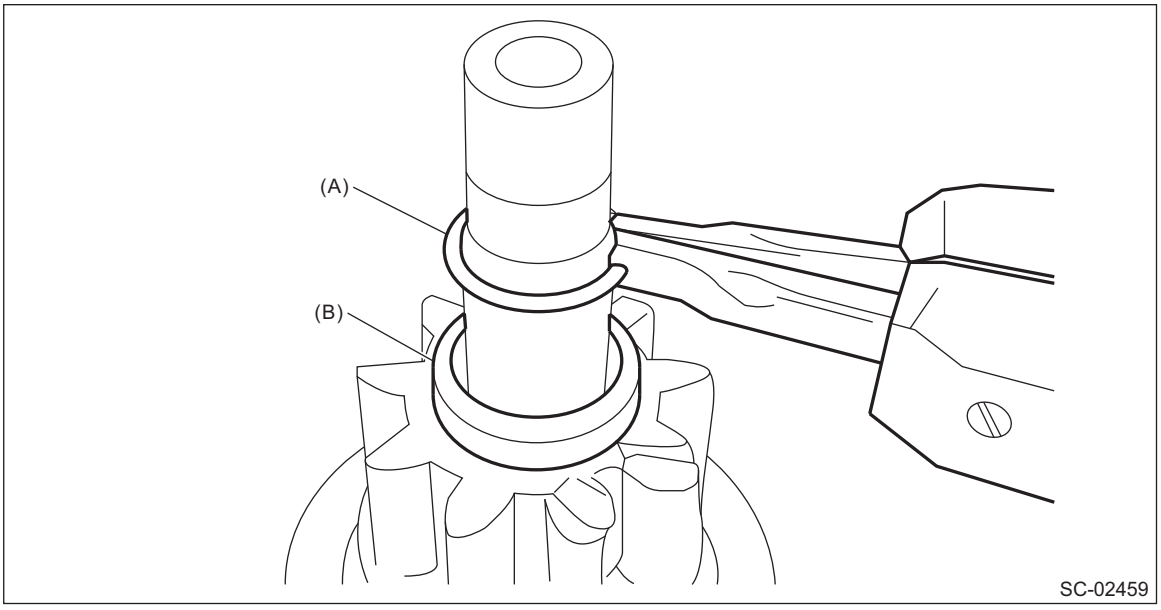
Grease:
Multemp #6129 or equivalent

(2) Install the overrunning clutch to shaft.

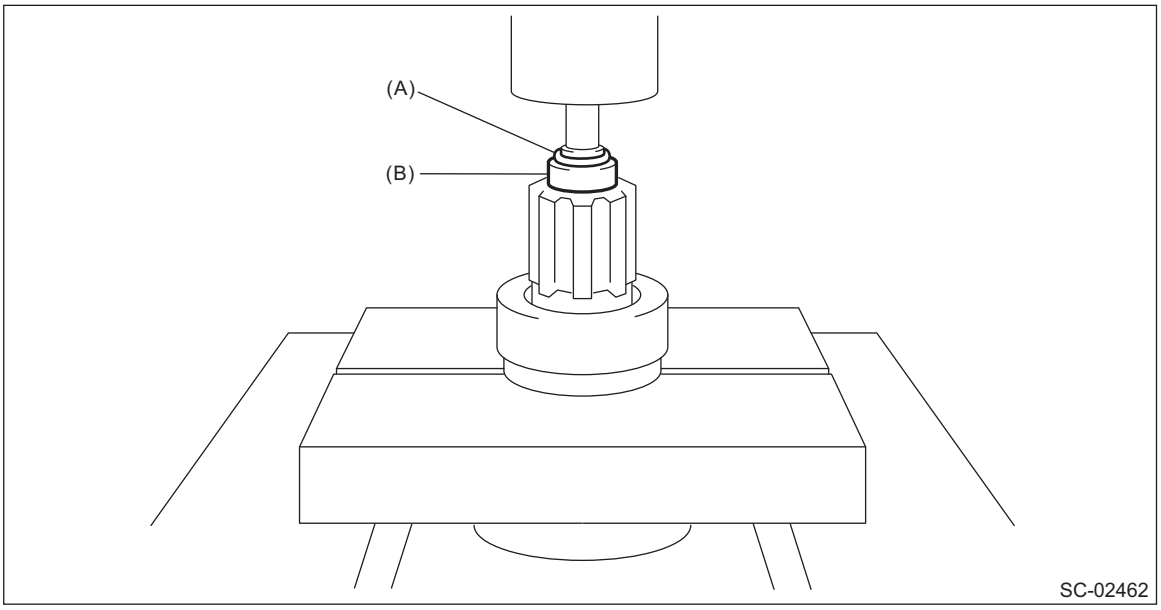


(3) Pass stopper (B) through the shaft assembly, and attach snap ring (A).

NOTE:
Use new stoppers and snap rings.



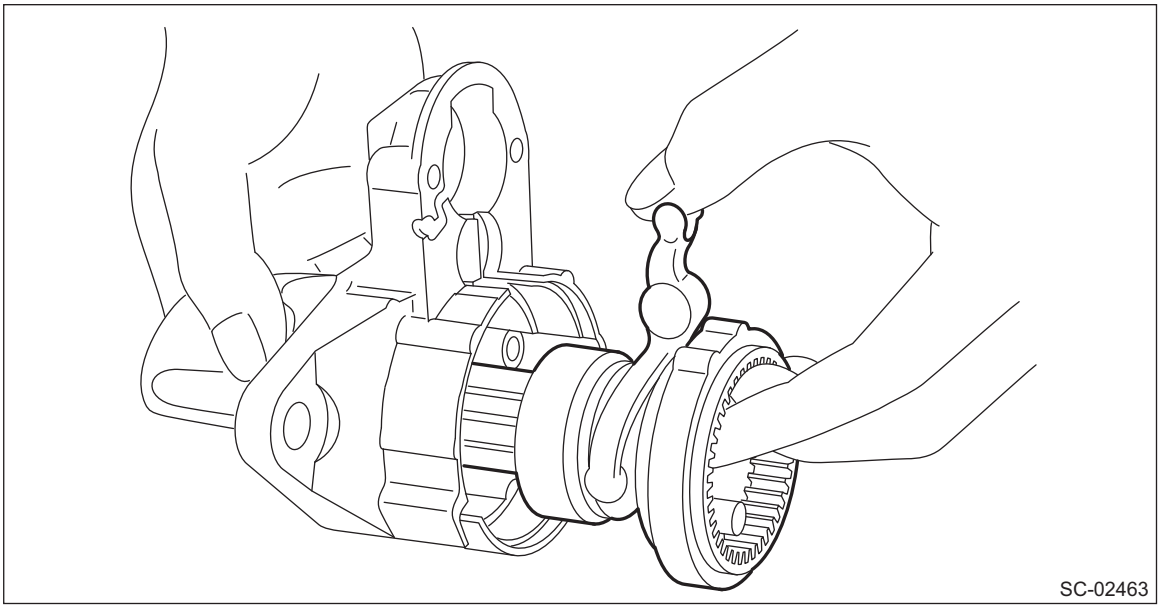
(4) Using a press, pressure fit stopper (B) into snap ring (A).



4) Assemble the overrunning clutch, internal gear assembly, shaft and shift lever as a single unit into the starter housing assembly.

NOTE:
Apply grease to the moving parts of the shift lever.

Grease:
Multemp #6129 or equivalent

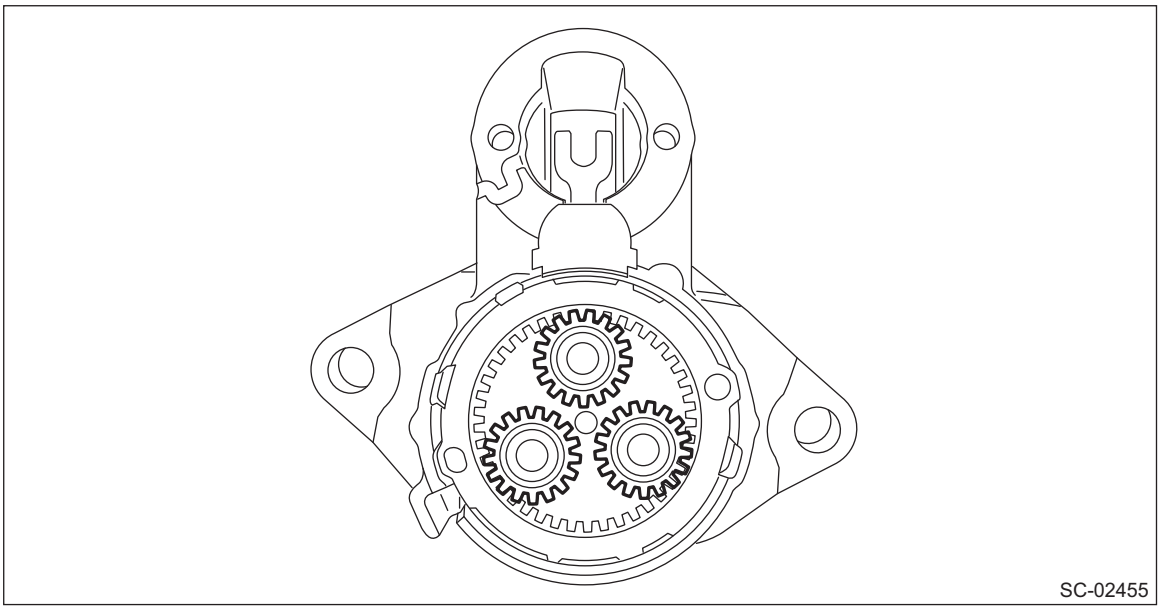


SC-02463

5) Apply grease to the inside of the internal gear assembly and pinion gear, and attach the pinion gear to the internal gear assembly.

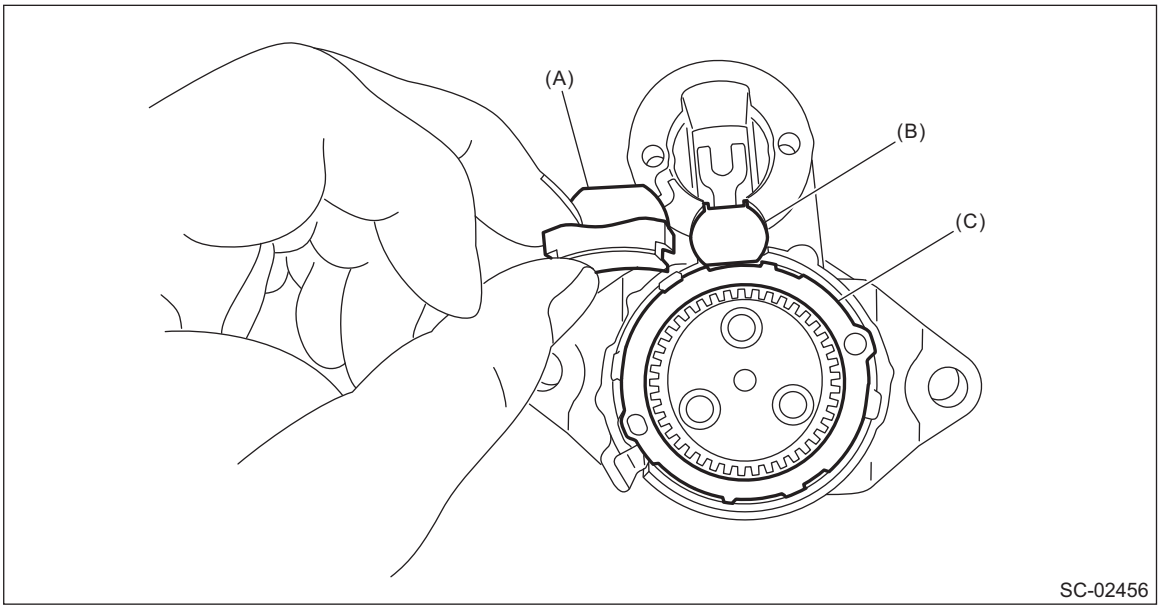
NOTE:
- Apply grease evenly to the contact surfaces of each gear.
- Be careful that no debris becomes attached.

Grease:
Molykote® AG650 or equivalent

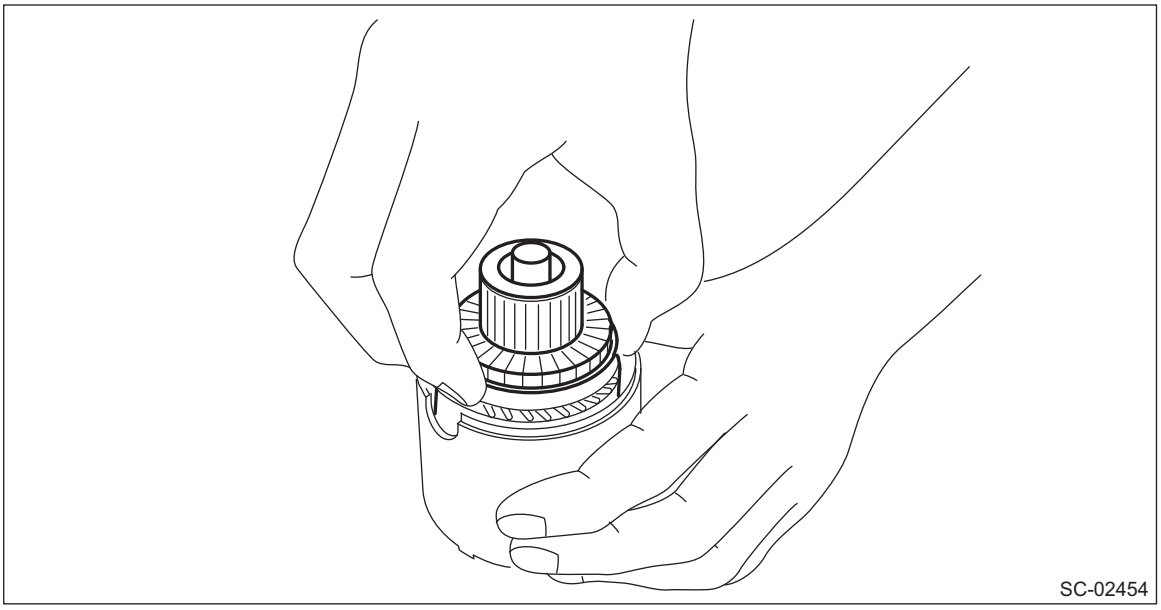


SC-02455

6) Install seal rubber (A), plate (B), and seal rubber (C).

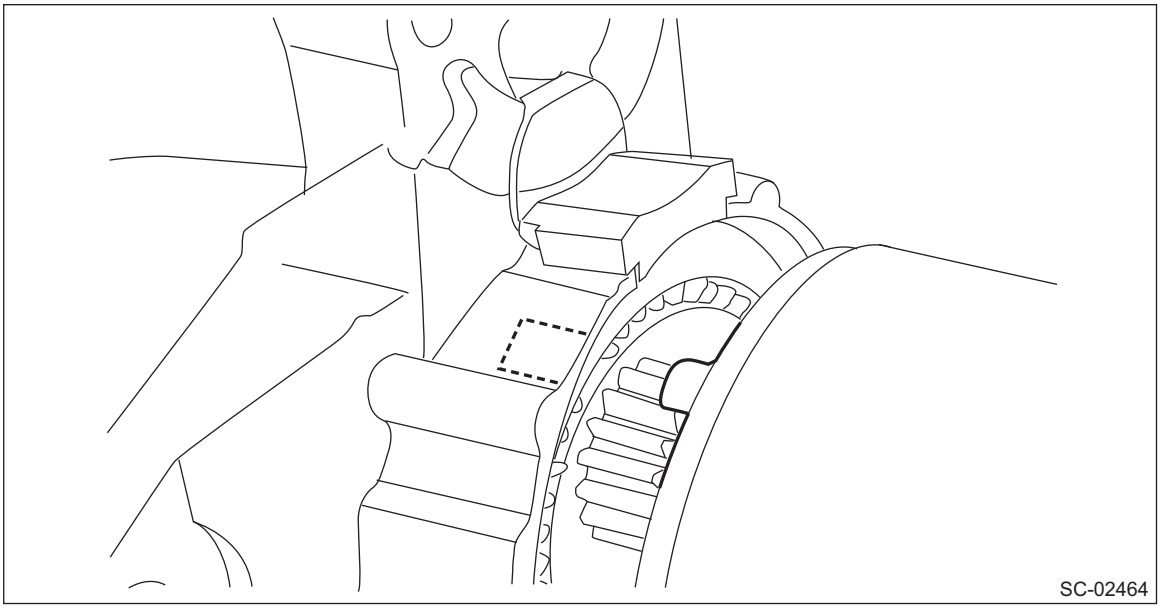


7) Assemble the armature assembly to the yoke assembly.

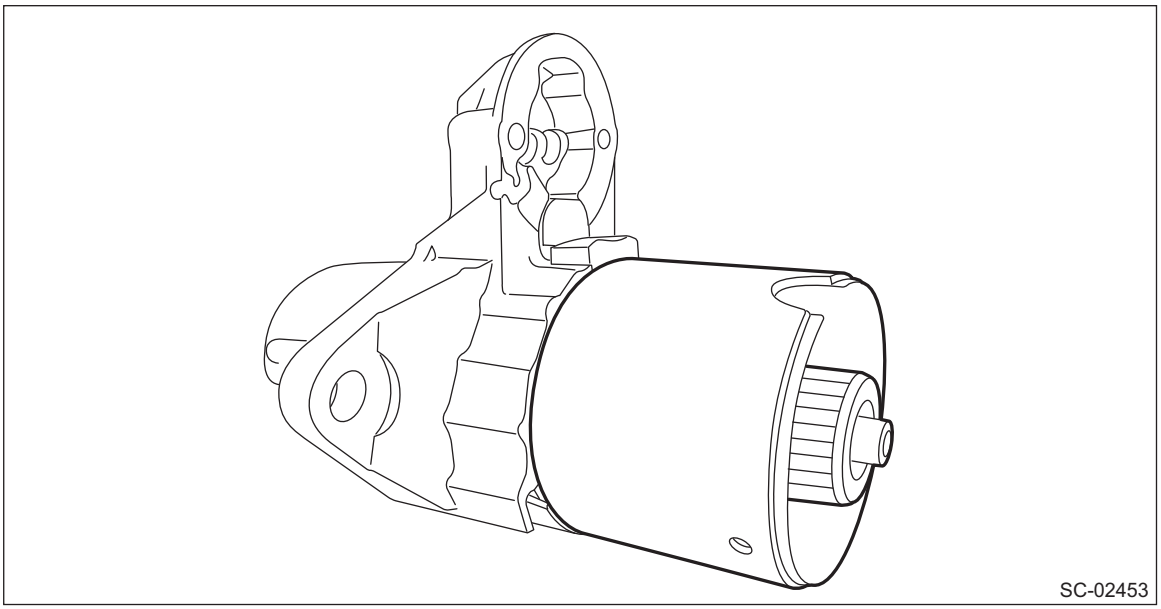


8) Attach the armature assembly and yoke assembly to the starter housing assembly together as a single unit.

NOTE:
As shown in the figure, match the protrusion of the yoke assembly to the cut out of the starter housing assembly.



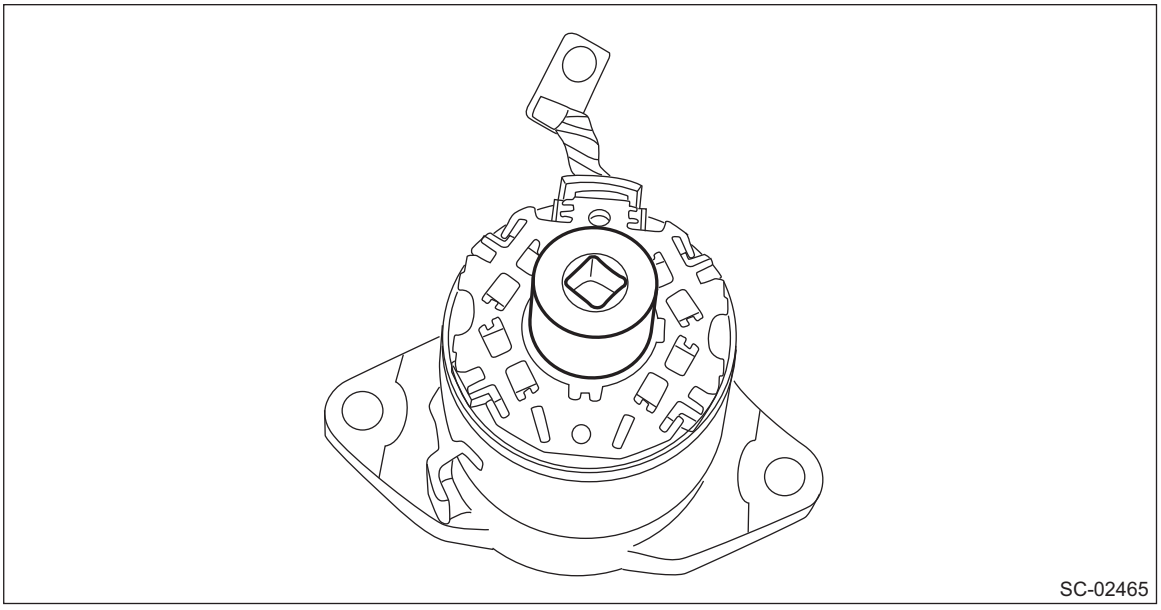
SC-02464



SC-02453

9) Use an appropriate tool (such as correctly sized socket wrenches) and attach the brush holder assembly to the armature assembly.

NOTE:
Be careful not to damage the brushes.

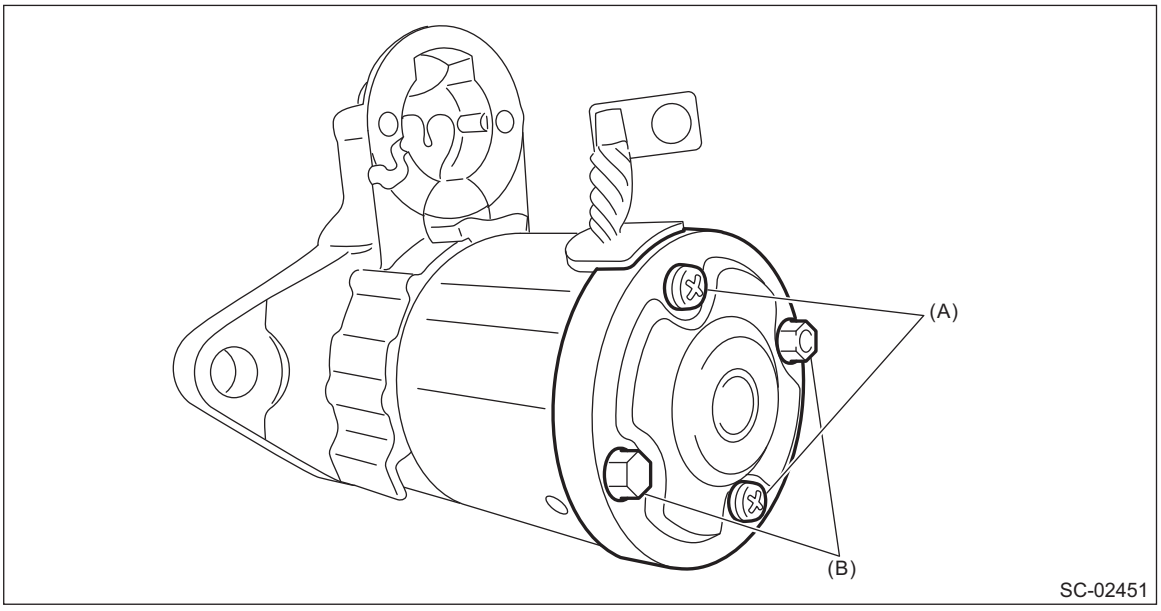


10) Secure starter cover assembly to the brush holder assembly with screws (A).

Tightening torque:
1.4 N·m (0.1 kgf-m, 1.0 ft-lb)

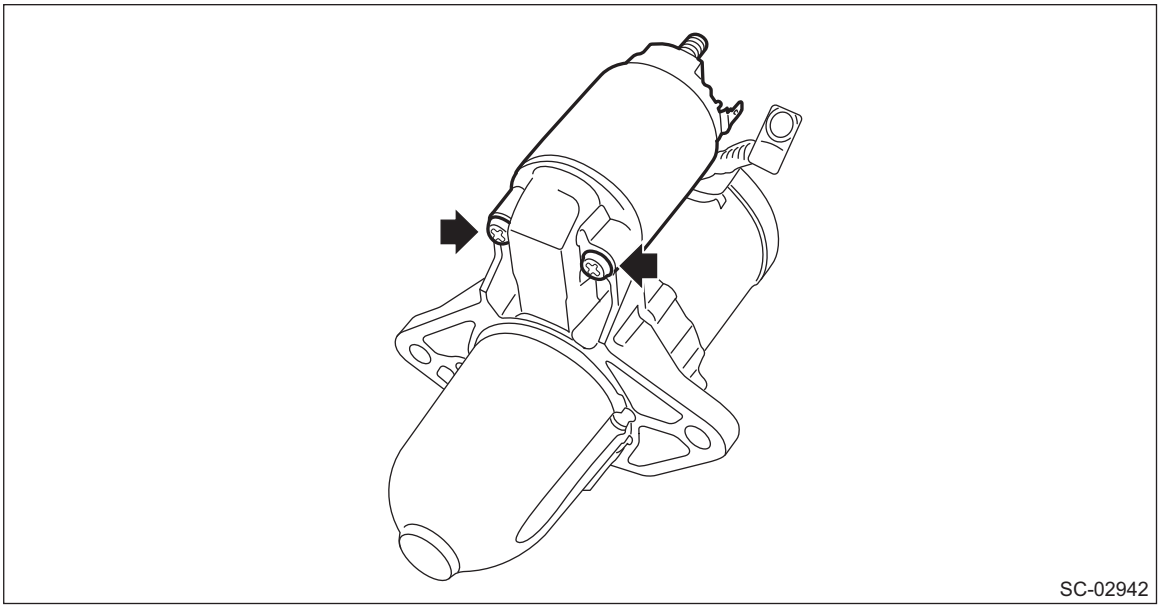
11) Tighten through bolts (B) on both sides.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)



12) Attach the magnet switch assembly to the starter housing assembly.

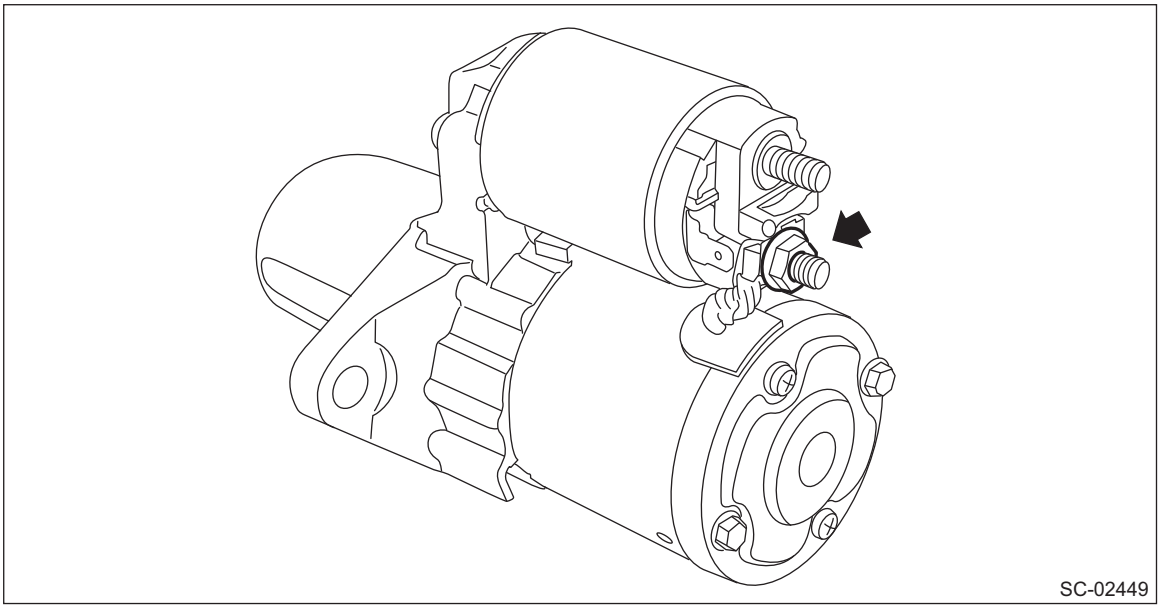
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)



SC-02942

13) Connect the cable to the terminal M of the magnet switch assembly.

Tightening torque:
10 N·m (1.0 kgf-m, 7.4 ft-lb)



SC-02449

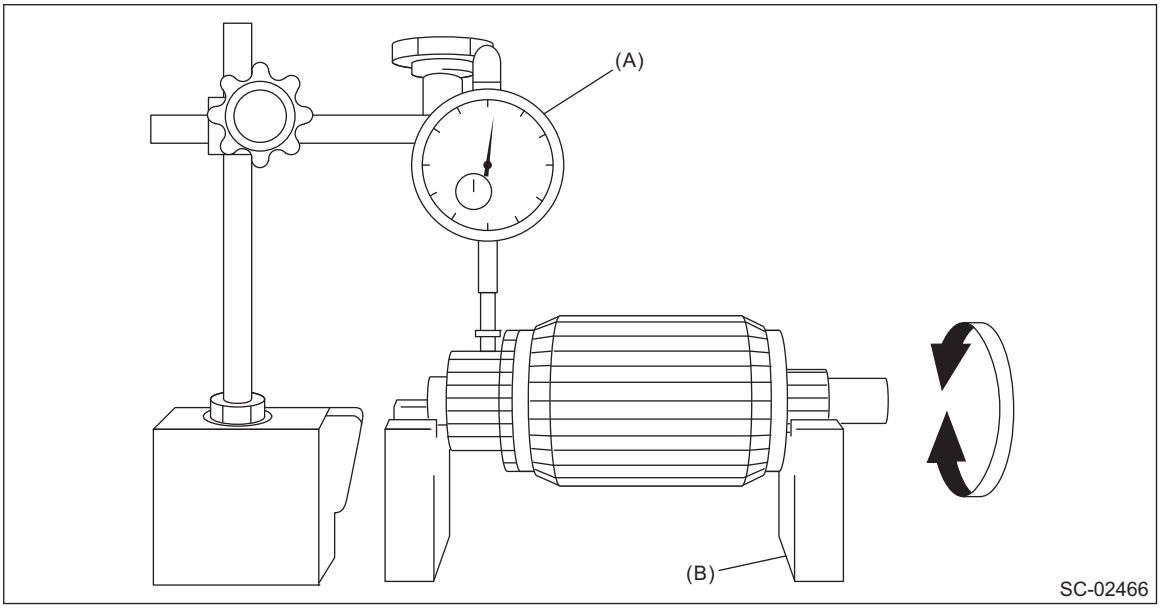
E: INSPECTION

NOTE:
• After the inspection, reinstall the disassembled or removed parts during the inspection in the reverse order of disassembly/removal procedure.
• Refer to component for tightening torque of each part. <Ref. to SC(w/o STI)-3, STARTER, COMPONENT, General Description.>

1. ARMATURE

1) Check the commutator for signs of seizure or stepped wear caused by roughness of the surface. If there is light wear, use sandpaper to repair.
2) Check for runout on the commutator. If excessive, replace the armature.

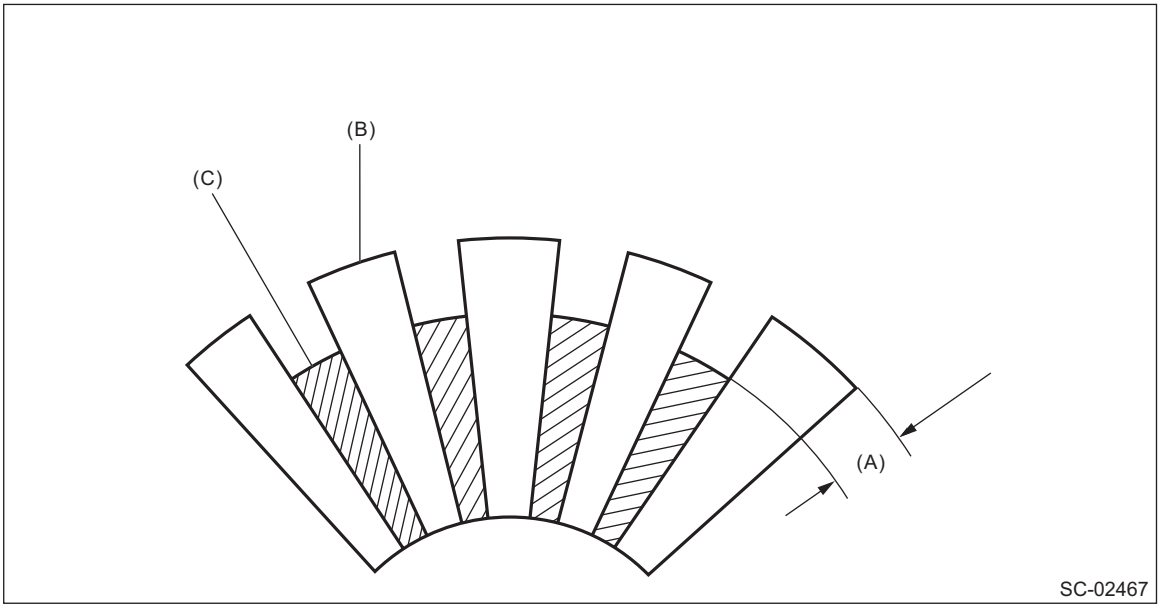
Commutator runout:
Standard
0.05 mm (0.0020 in)
Limit
0.10 mm (0.0039 in)



(A) Dial gauge (B) V-block

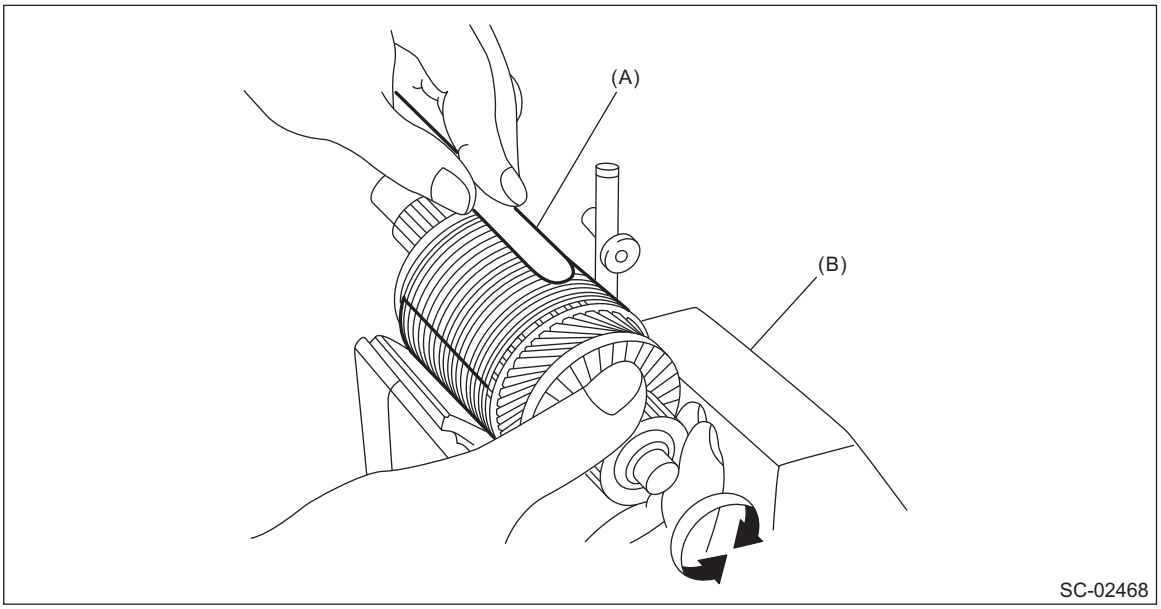
3) Check the depth of the segment mold. If it is not within the standard, replace the armature.

Depth of segment mold:
Standard
0.50 mm (0.020 in)



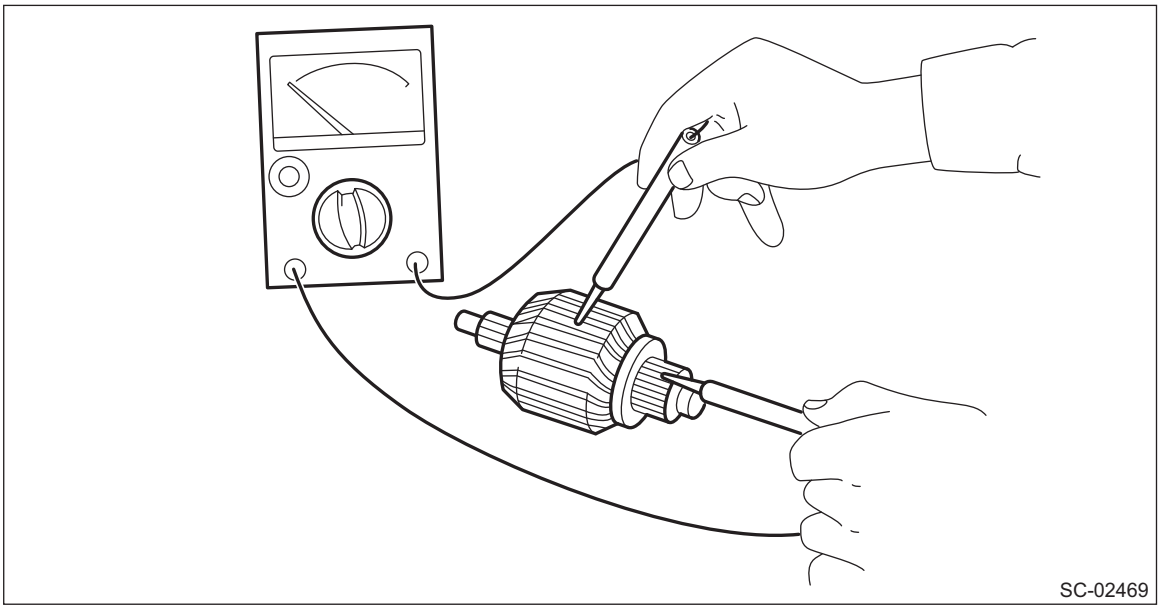
(A) Depth of mold (B) Segment (C) Mold

4) Place the armature on the growler tester to check for short circuits. While slowly turning the armature, support the steel sheet for the armature core. If the circuit of the armature is shorted, the steel sheet will vibrate, causing it to move towards the core. When the steel sheet has moved or vibrated, replace the armature.



(A) Steel sheet (B) Growler tester

5) Use a circuit tester to touch the probe of one side to the commutator segment, and the other probe to the shaft. If there is continuity, replace the armature.



2. YOKE

Make sure that the pole is set at the predetermined position.

3. OVERRUNNING CLUTCH

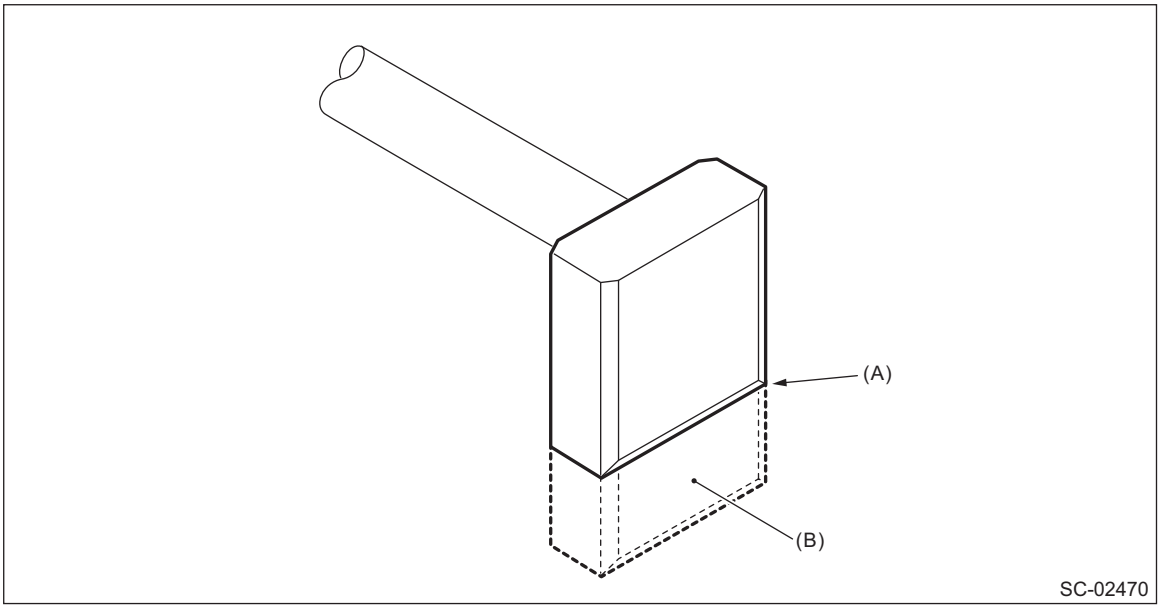
Inspect the pinion, and if there is any wear or damage, replace the overrunning clutch. Also, check that the pinion rotates counterclockwise smoothly and does not rotate clockwise. If there is any fault, replace the overrunning clutch.

CAUTION:
To prevent spilling of grease, do not clean the overrunning clutch with oil.

4. BRUSH AND BRUSH HOLDER

1) Visually check the brush. If there is any abnormal wear or cracks, replace the brush.
2) Measure the length of the brush. If it exceeds service limits, replace the brush.

Brush length:
Standard
12.3 mm (0.484 in)
Limit
7.0 mm (0.276 in)



(A) Service limit line (B) Brush

3) Check that the brush moves smoothly in the brush holder.
4) Measure the brush spring force with a spring scale. Replace the brush holder if below the service limit.

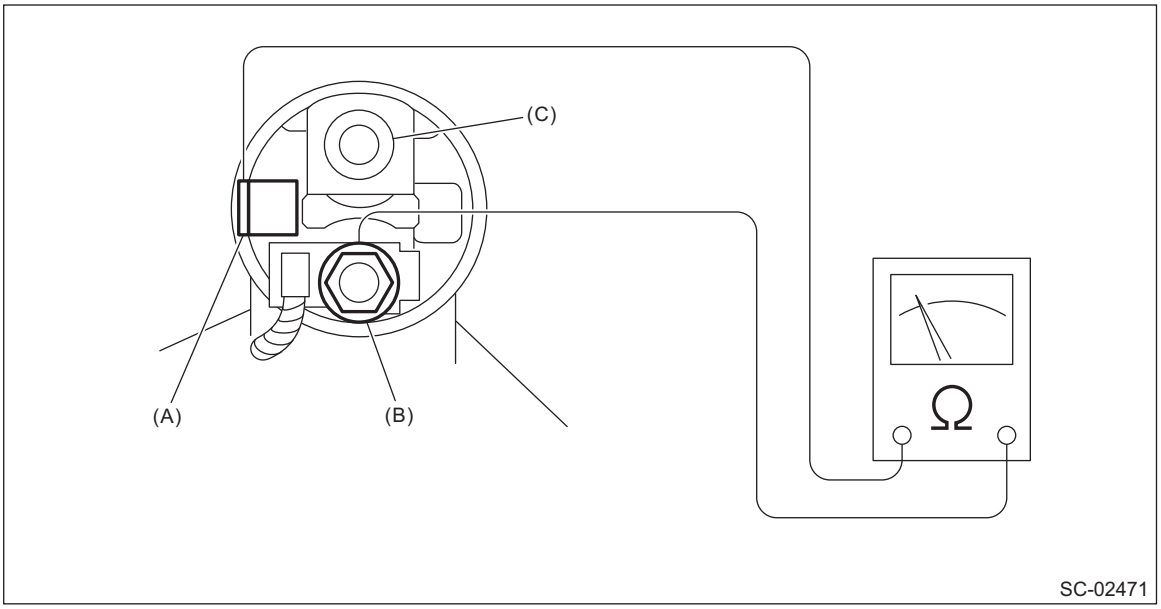
Brush spring force:

Standard
15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf) (when new)

Limit
2.5 N (0.25 kgf, 0.56 lbf)

5. SWITCH ASSEMBLY

Using a circuit tester, check there is continuity between S terminal and M terminal, and between S terminal and ground. Also, check that there is no continuity between M terminal and B terminal.



(A) Terminal S (B) Terminal M (C) Terminal B

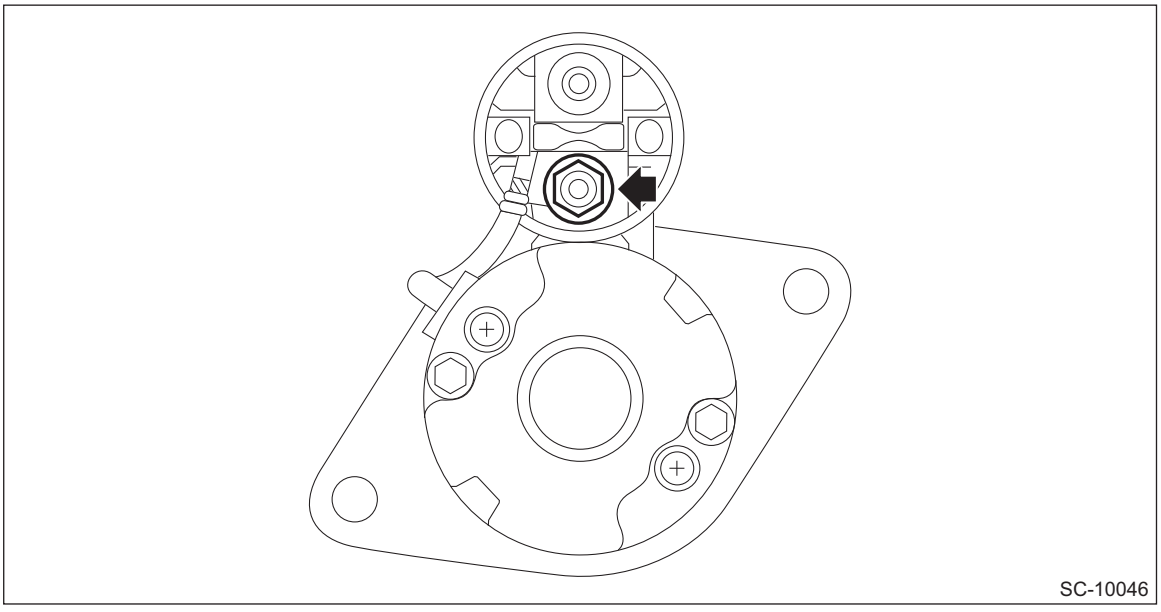
Terminals	Standard
Terminal S — terminal M	1 Ω or less
Terminal S — Ground	1 Ω or less
Terminal M — terminal B	1 MΩ or more

6. SWITCH ASSEMBLY OPERATION

CAUTION:
Perform the inspection in a short period of time. (Within 3 to 5 seconds)

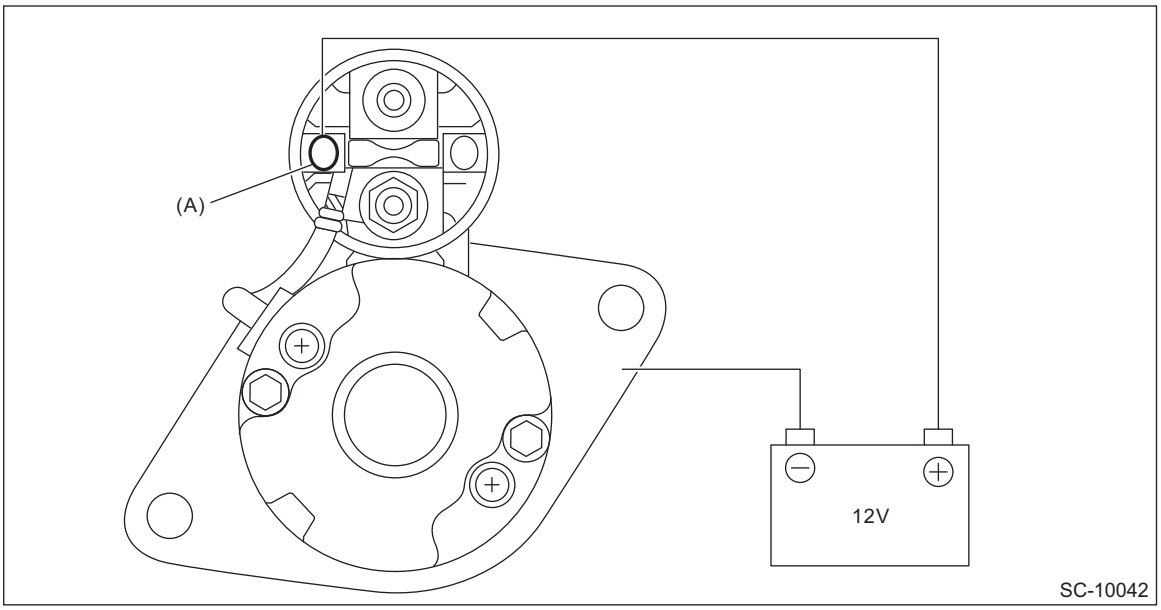
1) Loosen the nut which holds the cable to the M terminal.

NOTE:
This procedure is required to facilitate the cable removal from the M terminal.



2) Connect the battery positive terminal to the switch assembly S terminal, and connect the battery negative terminal to the starter body. Then, if the pinion protrudes, it is normal.

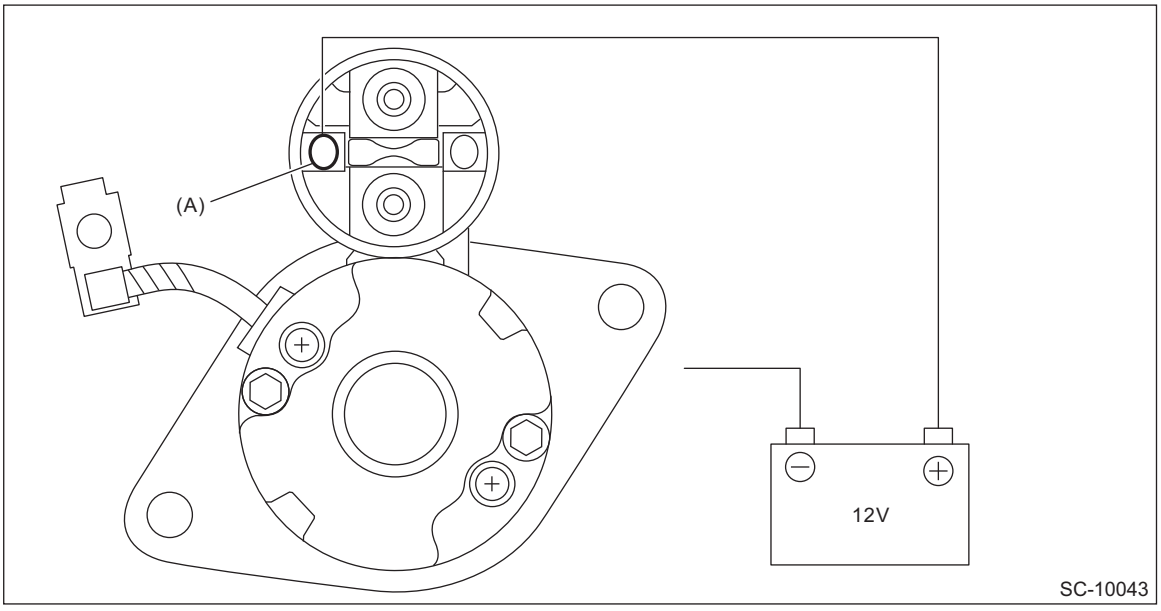
NOTE:
The starter motor may rotate while the pinion protrudes. This occurs due to current that flows to the motor via pull-in coil. This is not a problem.



(A) Terminal S

3) Disconnect the cable from the M terminal. Check that the pinion is being protruded at this time.

CAUTION:
Hold the disconnected cable so that it does not contact the terminal or wiring.
4) Disconnect the battery negative terminal from the starter body. Then, if the pinion returns to its original position, it is normal.

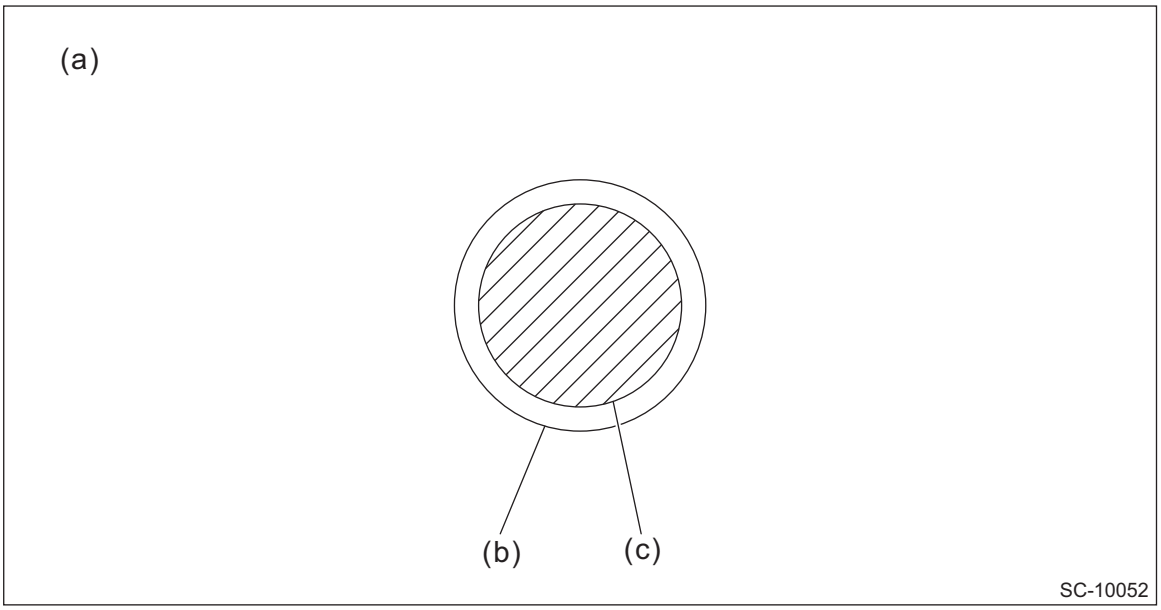


(A) Terminal S

7. NO-LOAD TEST

CAUTION:

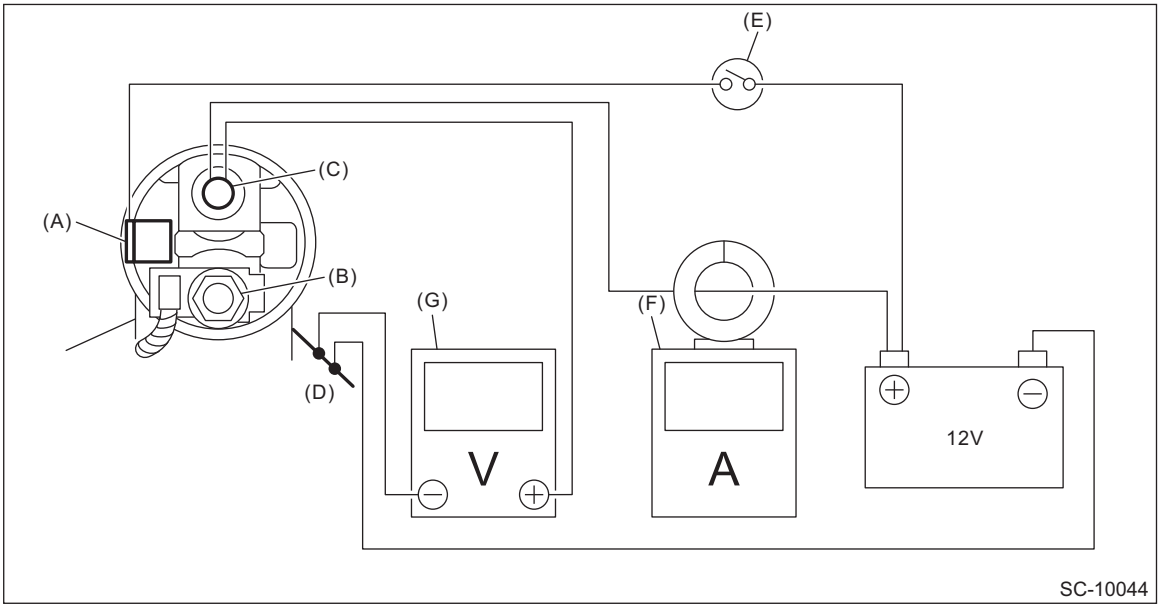
- **Use a thick cable due to large current flowing through the cable.**
  - **It is recommended that the cross-section area of continuity part (shaded part) should be 20 mm^2 (0.00310 sq in) or more for terminal B and ground, and 1.25 mm^2 (0.00194 sq in) or more for terminal S.**



(a) Cable cross-section (b) Cable shield part (c) Cable continuity part

  - **It is possible to use a booster cable instead of wiring.**
- **Be careful not to burn yourself and cause a fire due to heat.**
- **Perform the no-load test in a short period of time. (Within 3 to 5 seconds)**

NOTE:
For no-load test, use the circuit shown in figure.



(A) Terminal S (B) Terminal M (C) Terminal B
(D) Magnet switch (E) Switch (F) Circuit tester with clamp-type ammeter
(G) Circuit tester

1) Using a vise, secure the starter.

CAUTION:
Be careful not to deform or damage the starter.
2) Turn the switch ON, and check that the pinion protrudes rapidly into the specified position and rotates powerfully without noise.
3) Check the current and voltage after its rotation speed stabilizes.

Current/Voltage
CVT model
90 A or less (approx. 11 V)
MT model
95 A or less (approx. 11 V)

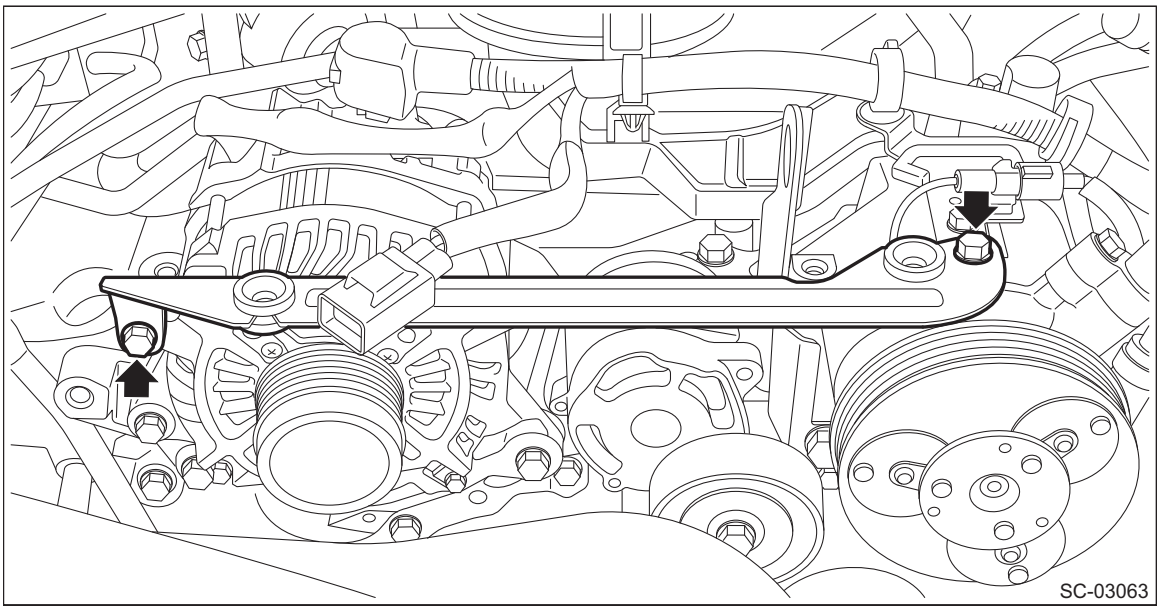
8. OTHER INSPECTIONS

Check that the starter does not have deformation, cracks and any other damage.

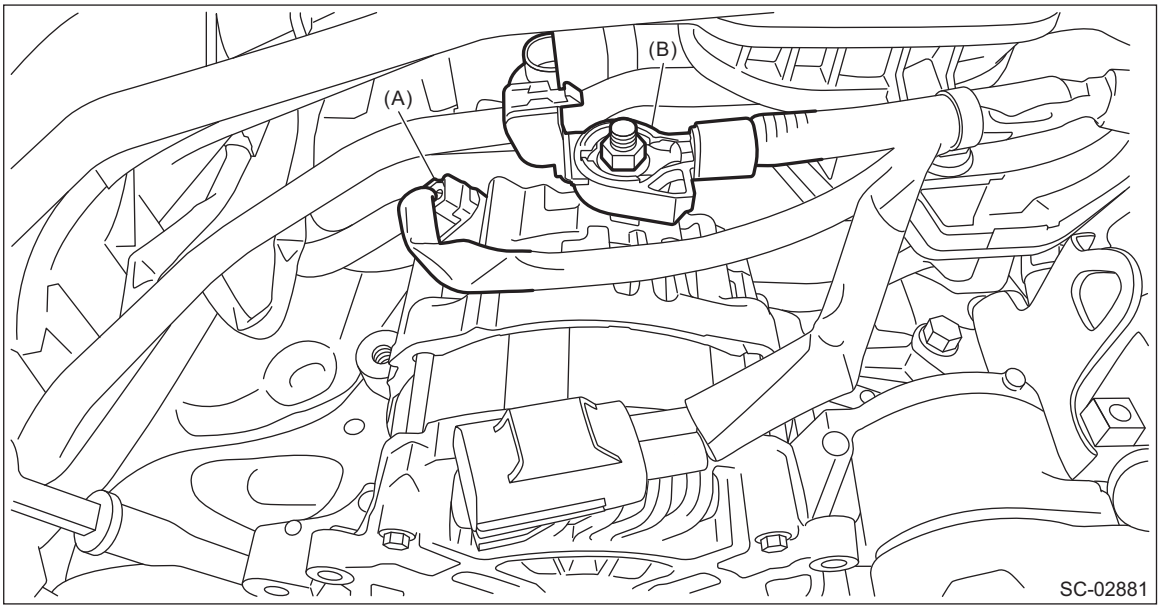
3. Generator

A: REMOVAL

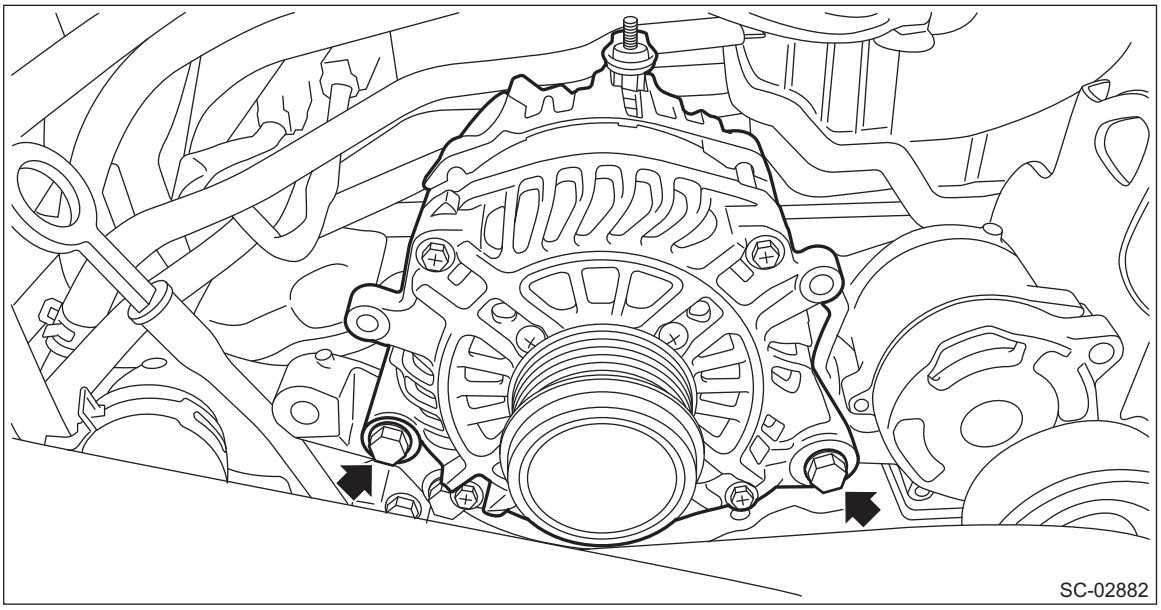
1) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Remove the brake vacuum pump. <Ref. to BR-121, REMOVAL, Brake Vacuum Pump.>
4) Remove the V-belts. <Ref. to ME(w/o STI)-77, V-BELT, REMOVAL, V-belt.>
5) Remove the collector cover bracket.



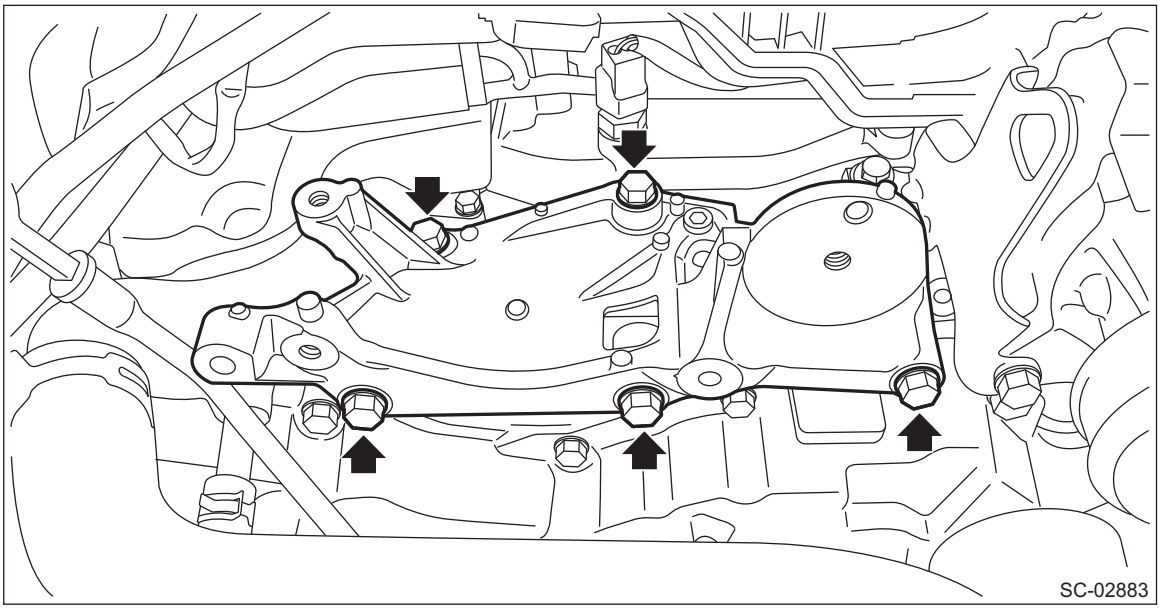
6) Disconnect the connector (A) and terminal (B) from the generator.



7) Remove the generator from the generator bracket.



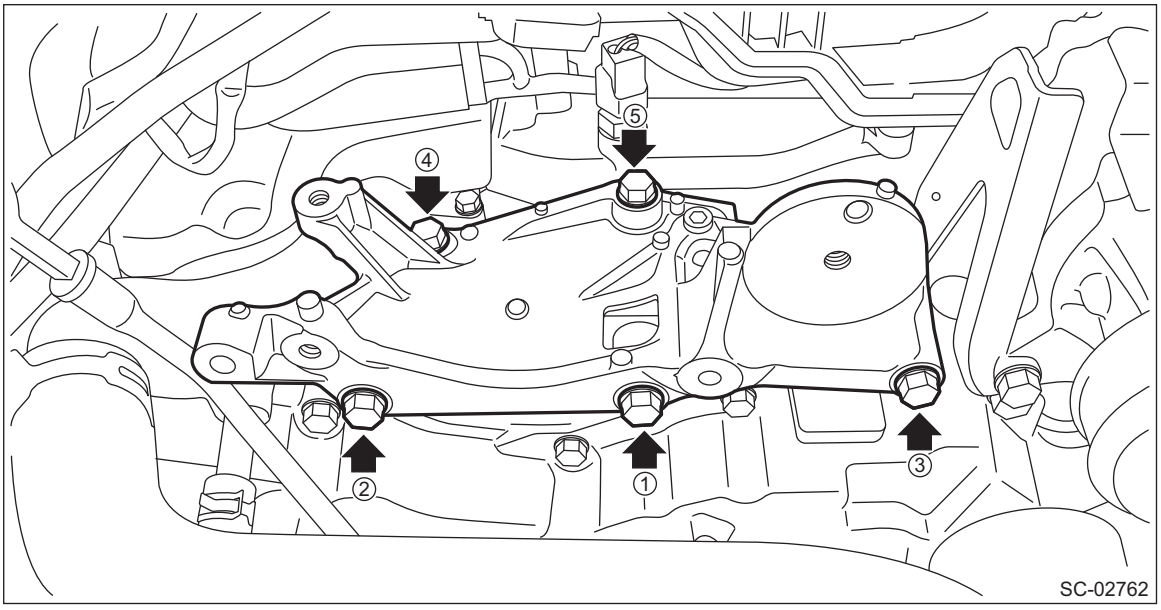
8) Remove the V-belt tensioner assembly. <Ref. to ME(w/o STI)-77, V-BELT TENSIONER ASSY, REMOVAL, V-belt.>
9) Remove the generator bracket from the engine.



B: INSTALLATION

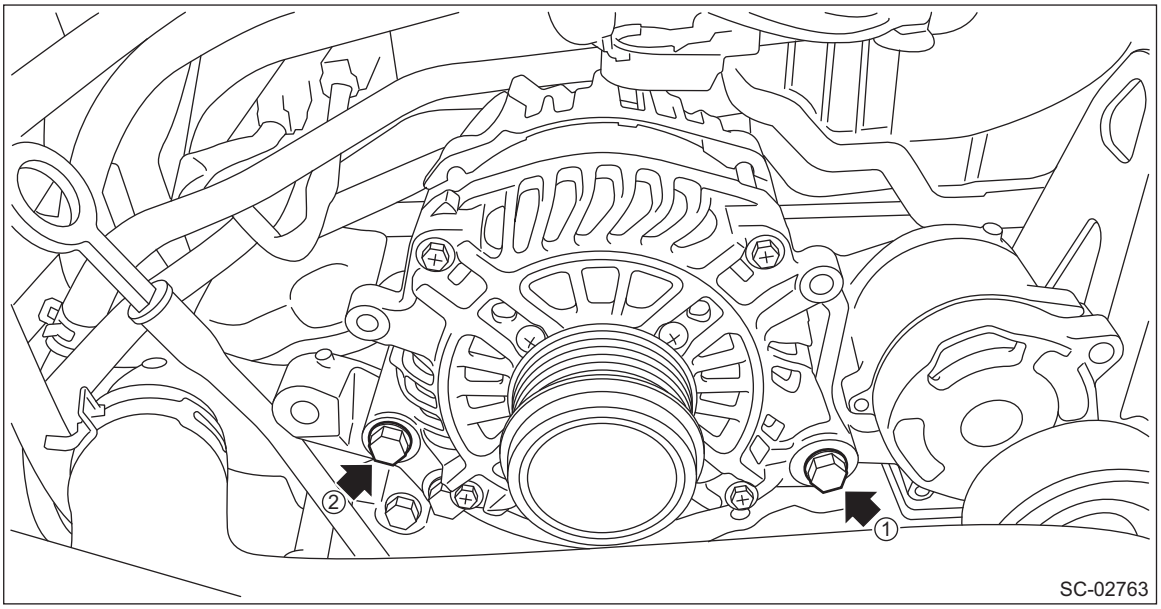
1) Temporarily install the generator bracket to the engine and tighten the bolts in the numerical order.

Tightening torque:
36 N·m (3.7 kgf-m, 26.6 ft-lb)



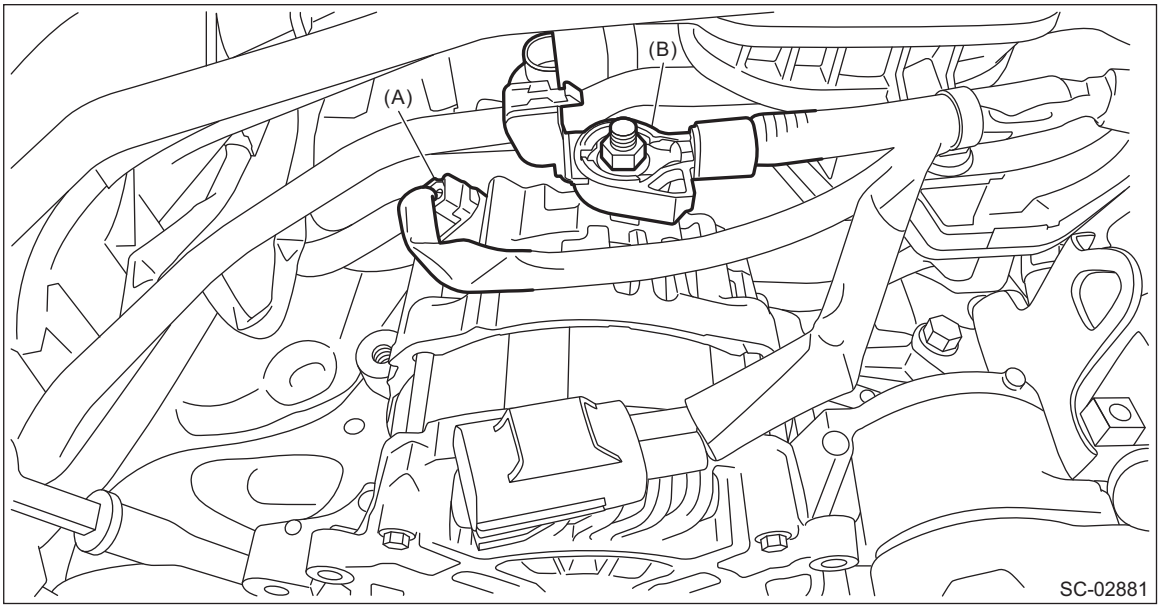
2) Install the V-belt tensioner assembly. <Ref. to ME(w/o STI)-79, V-BELT TENSIONER ASSY, INSTALLATION, V-belt.>
3) Temporarily install the generator bracket to the generator and tighten the bolts in the numerical order.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)



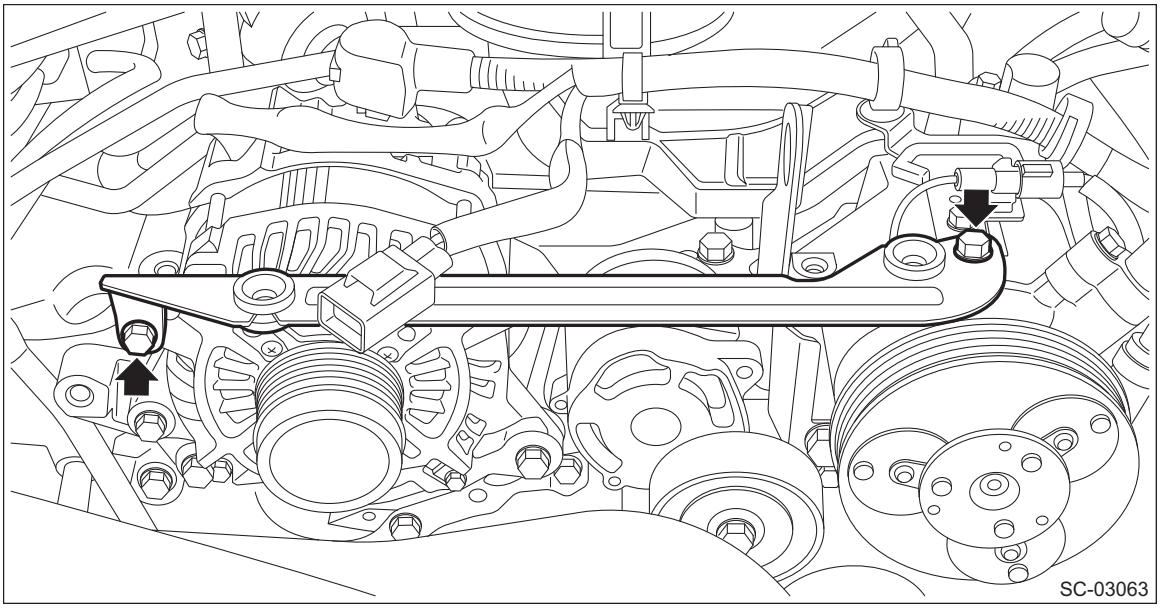
4) Connect the connector (A) and terminal (B) to the generator.

Tightening torque:
15.5 N·m (1.6 kgf-m, 11.4 ft-lb)



5) Install the collector cover bracket.

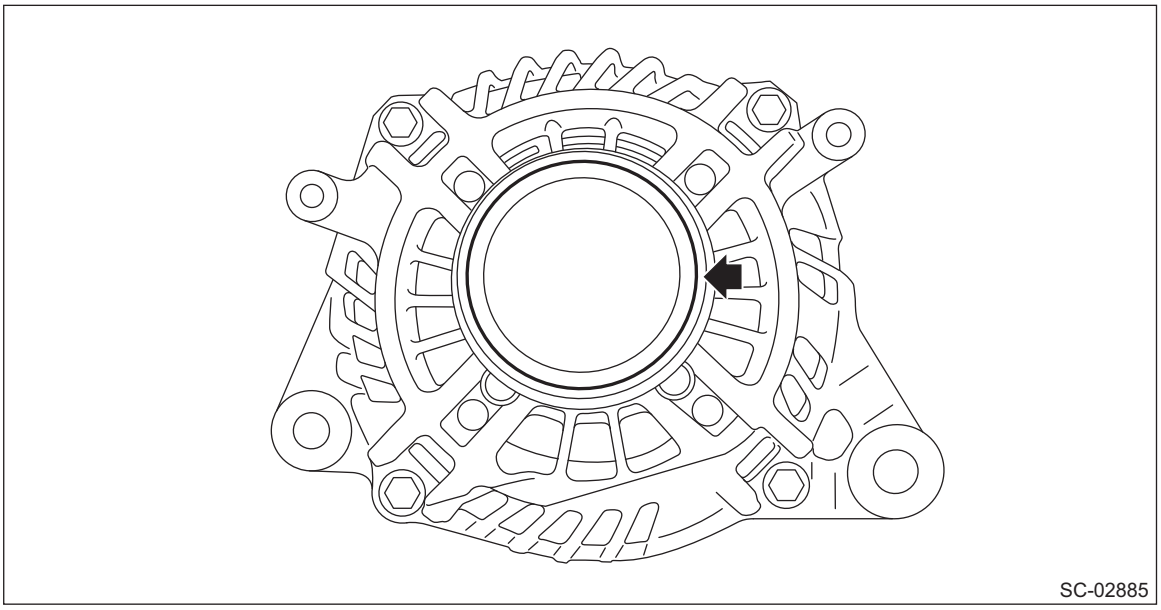
Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)



6) Install the V-belts. <Ref. to ME(w/o STI)-78, V-BELT, INSTALLATION, V-belt.>
7) Install the brake vacuum pump. <Ref. to BR-122, INSTALLATION, Brake Vacuum Pump.>
8) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

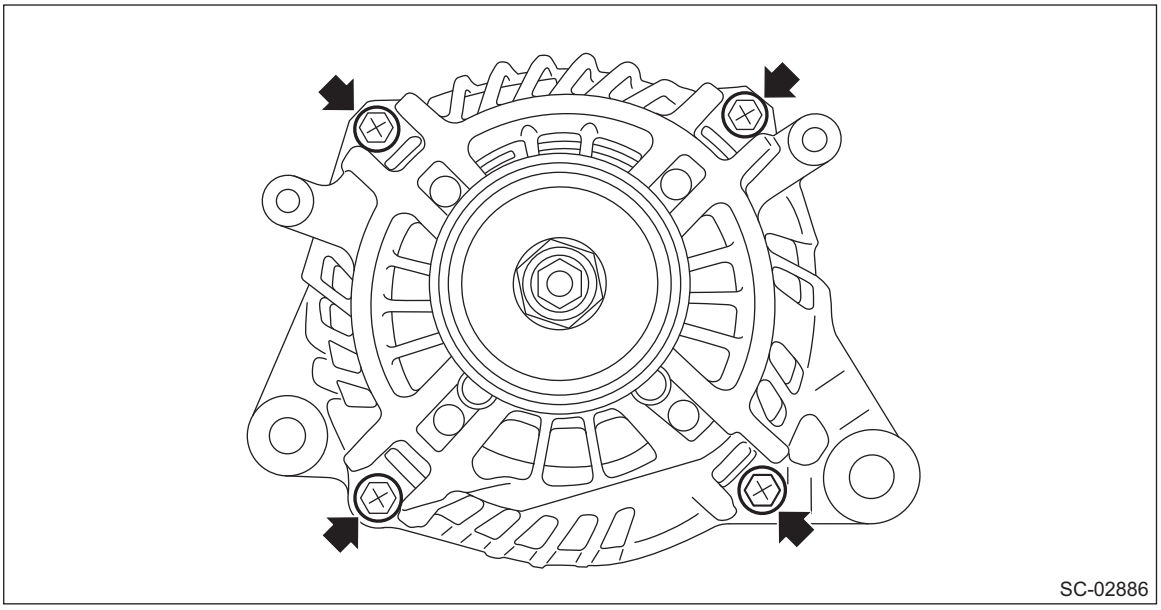
C: DISASSEMBLY

1) Remove the cap from the generator.



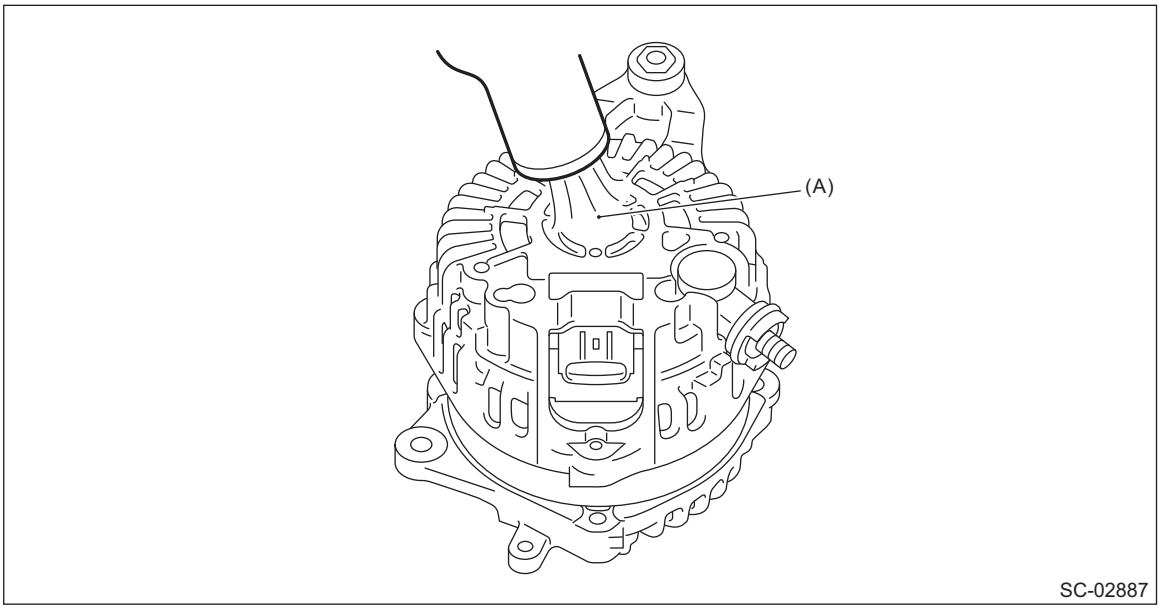
SC-02885

2) Remove the four through bolts.

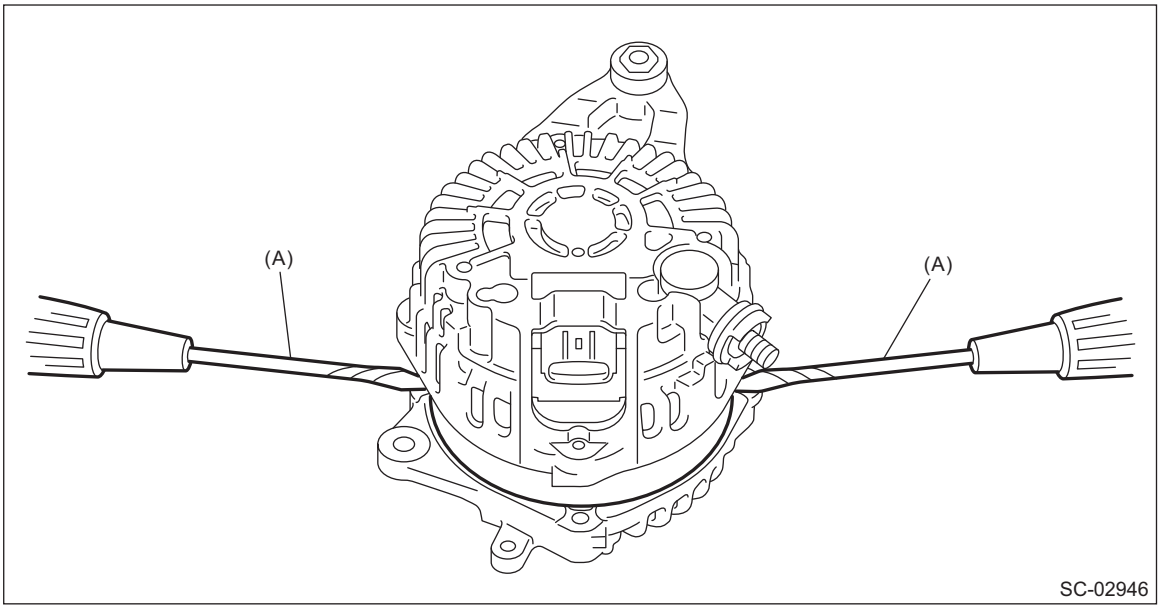


SC-02886

3) Use a drier to heat the rear cover (A) portion to 50 — 60°C (122 — 140°F).



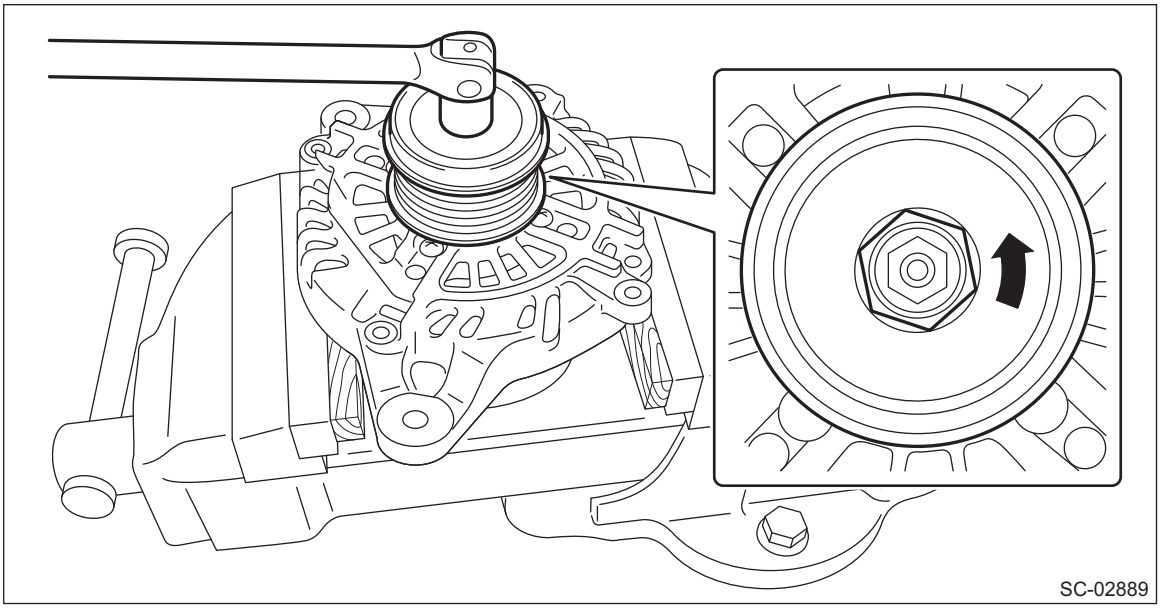
4) Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap between stator core and the front cover to disassemble.



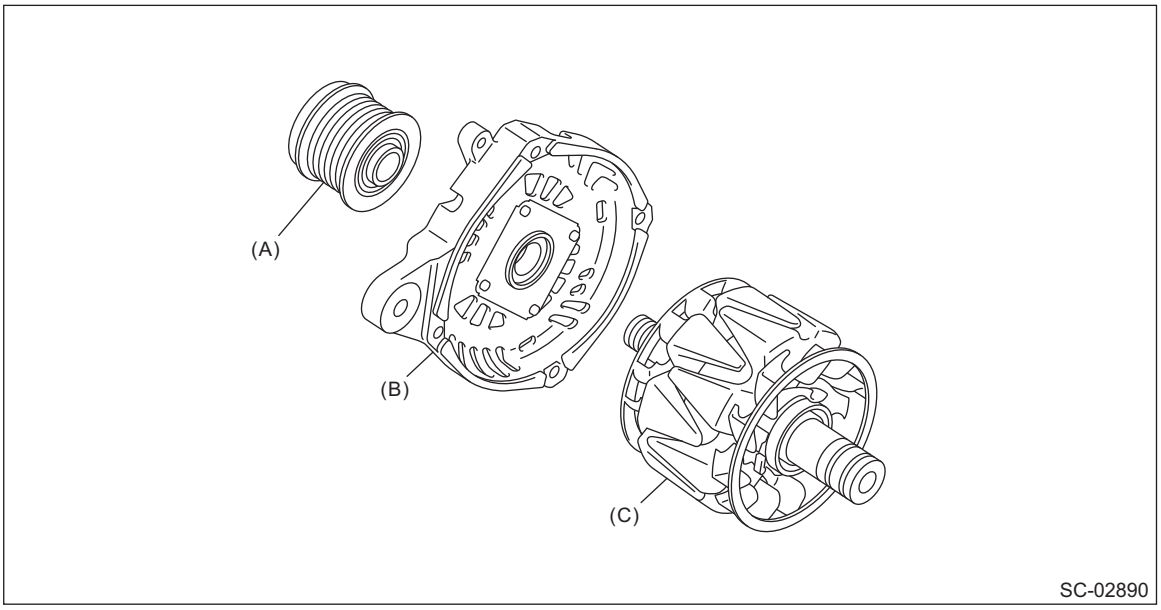
(A) Flat tip screwdriver

5) Hold the rotor on a vise and remove the pulley.

CAUTION:
When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.



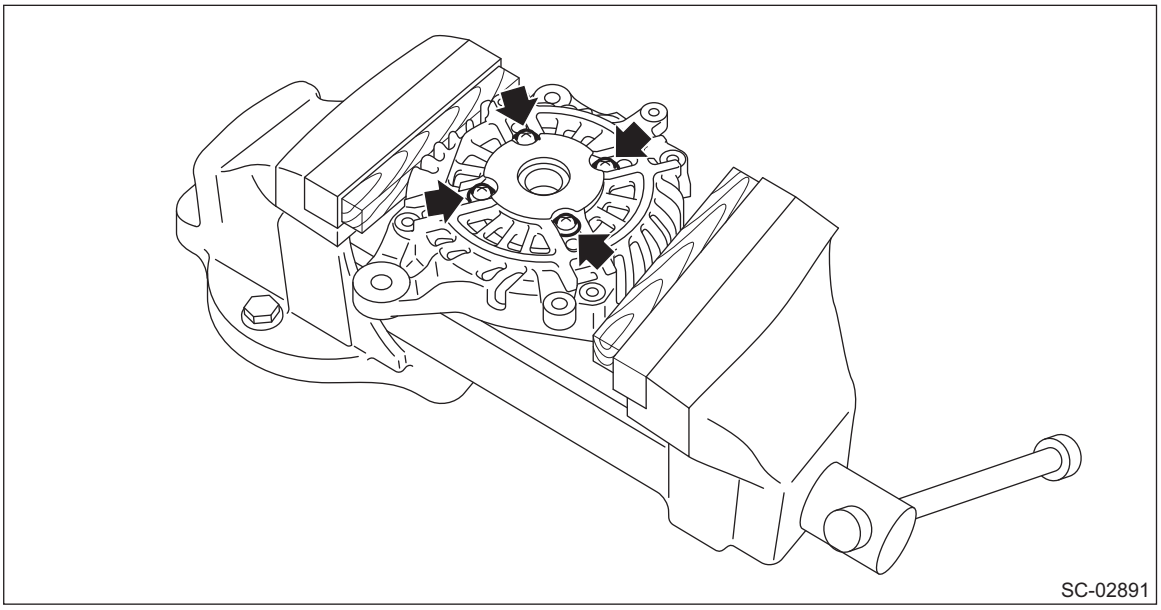
6) Remove the rotor from the front cover.



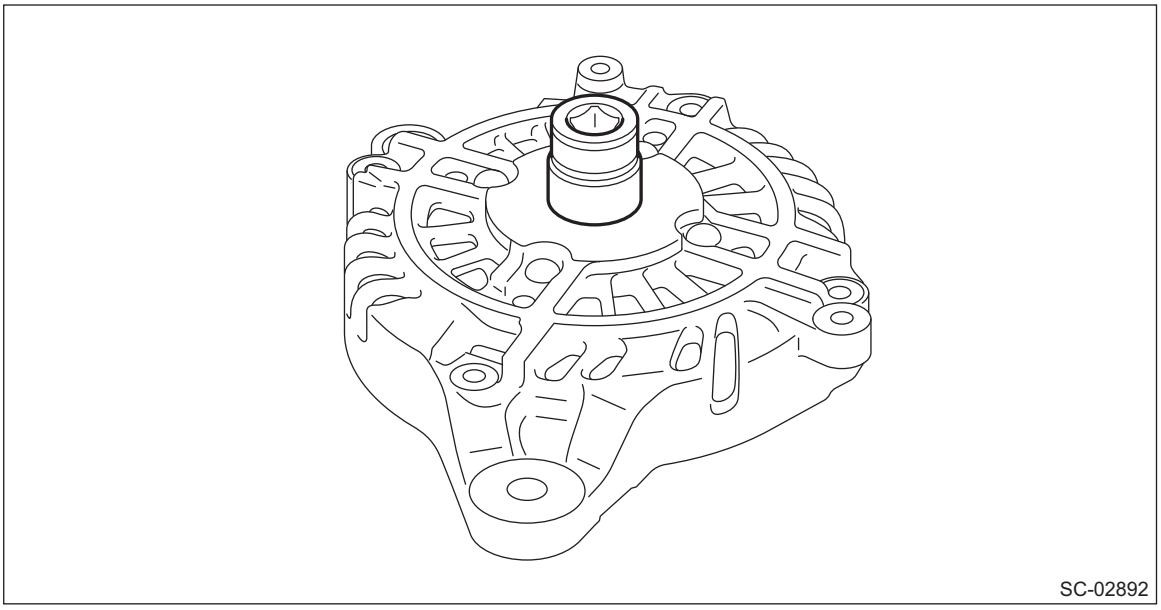
(A) Pulley (B) Front cover (C) Rotor

7) Use the following procedures to remove the ball bearings.

(1) Remove the bolt, and then detach the bearing retainer.

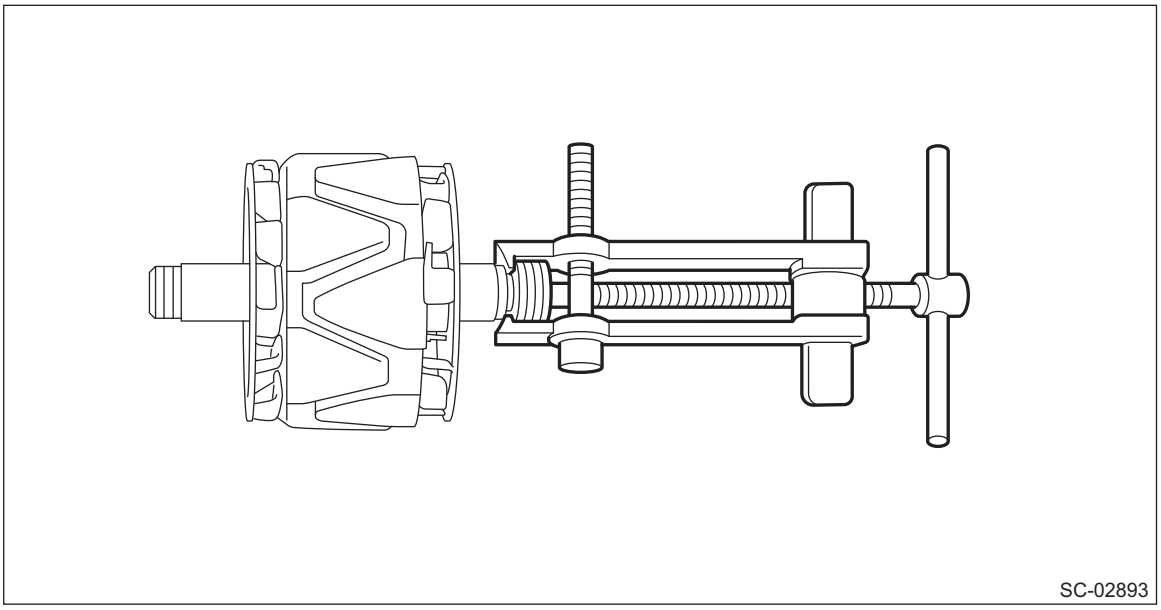


(2) Firmly attach an appropriate tool (such as a correct size socket wrench) to the bearing inner race.



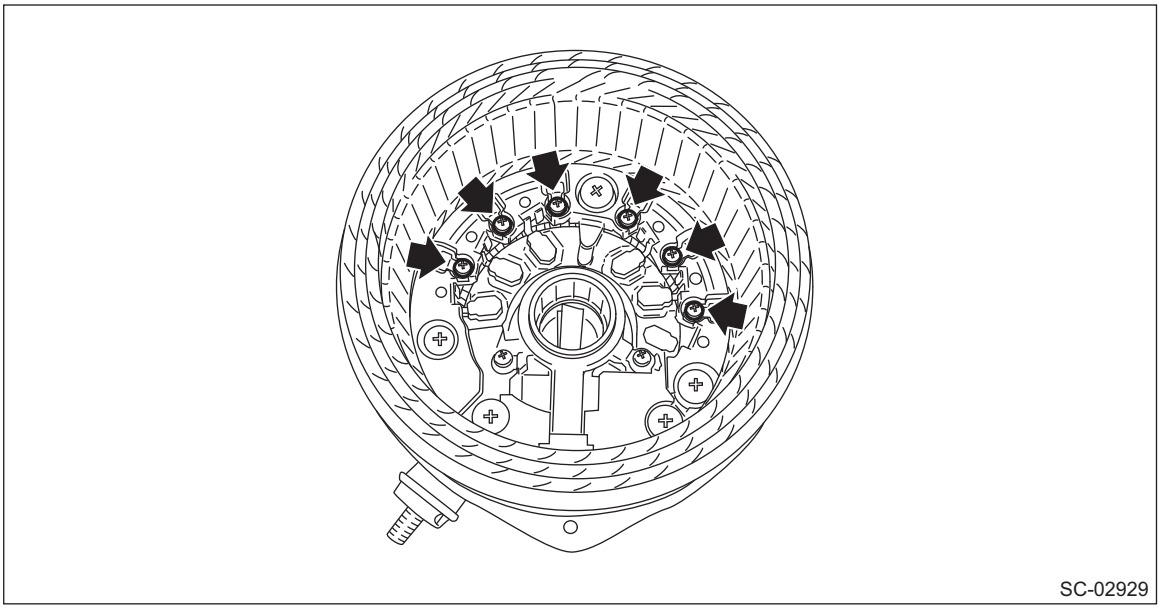
(3) Use the press to push the ball bearings out from the front cover.

8) Using the bearing puller, remove the bearings from the rotor.



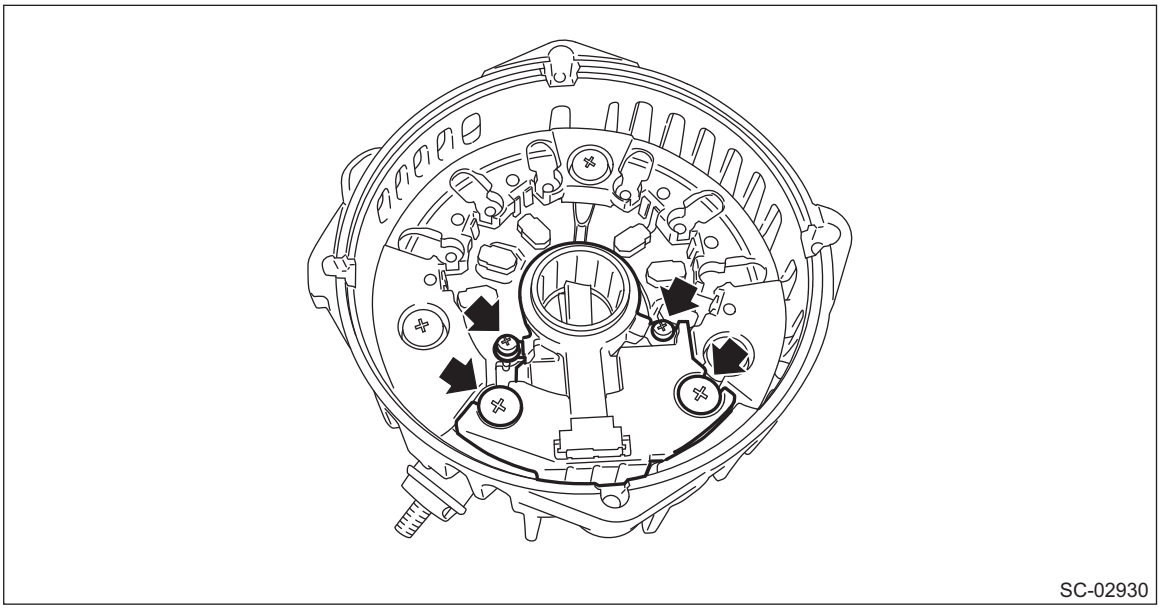
SC-02893

9) Remove six bolts which connect the rectifier and stator coil, then remove the stator coil.



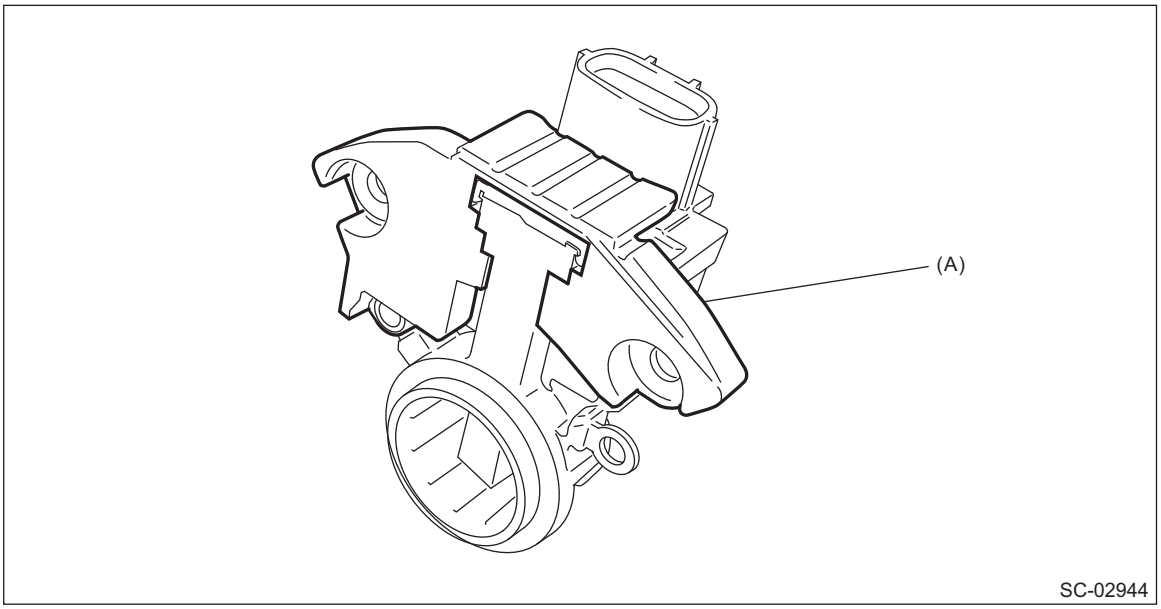
SC-02929

10) Remove four screws which secure the IC regulator to the rear cover, then remove the IC regulator.



SC-02930

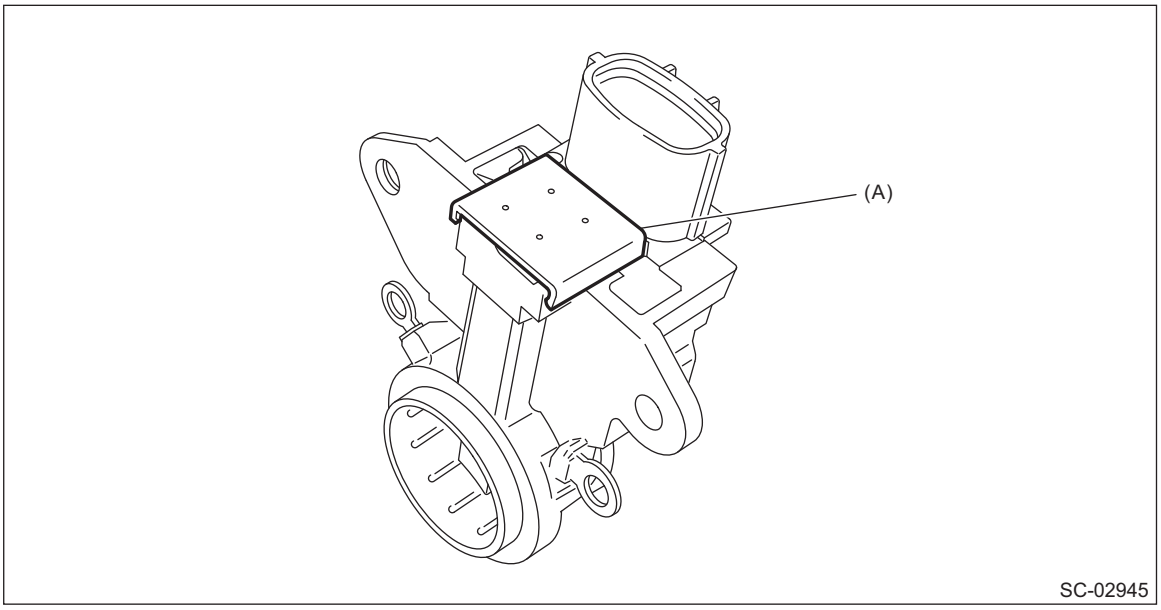
11) Use the following procedures to remove the brush.
(1) Remove the cover A.



SC-02944

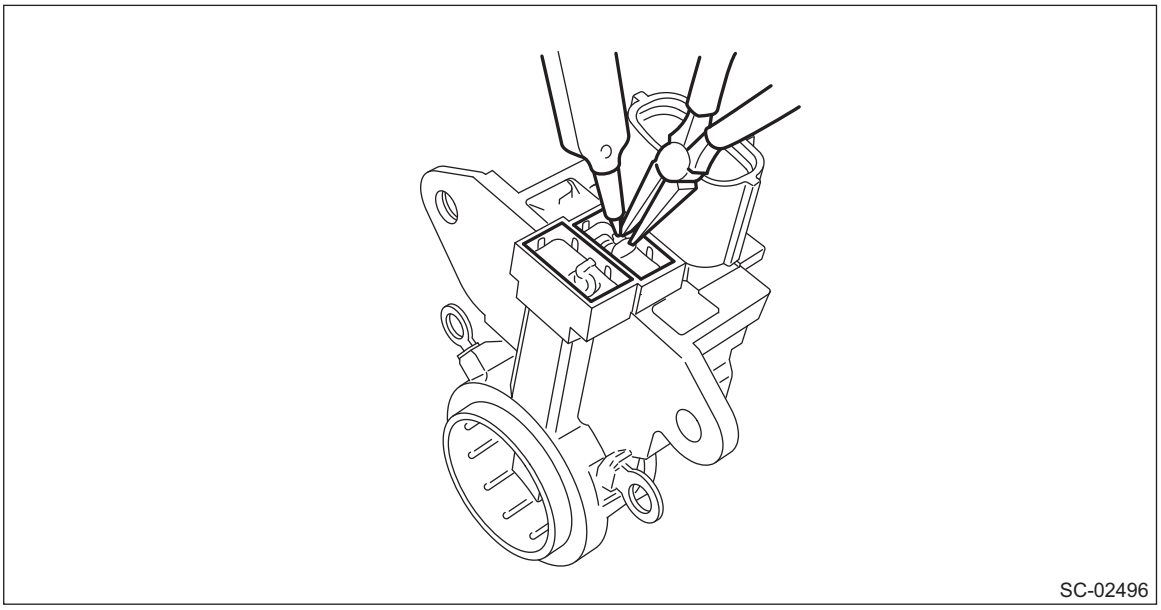
(A) Cover A

(2) Remove the cover B.



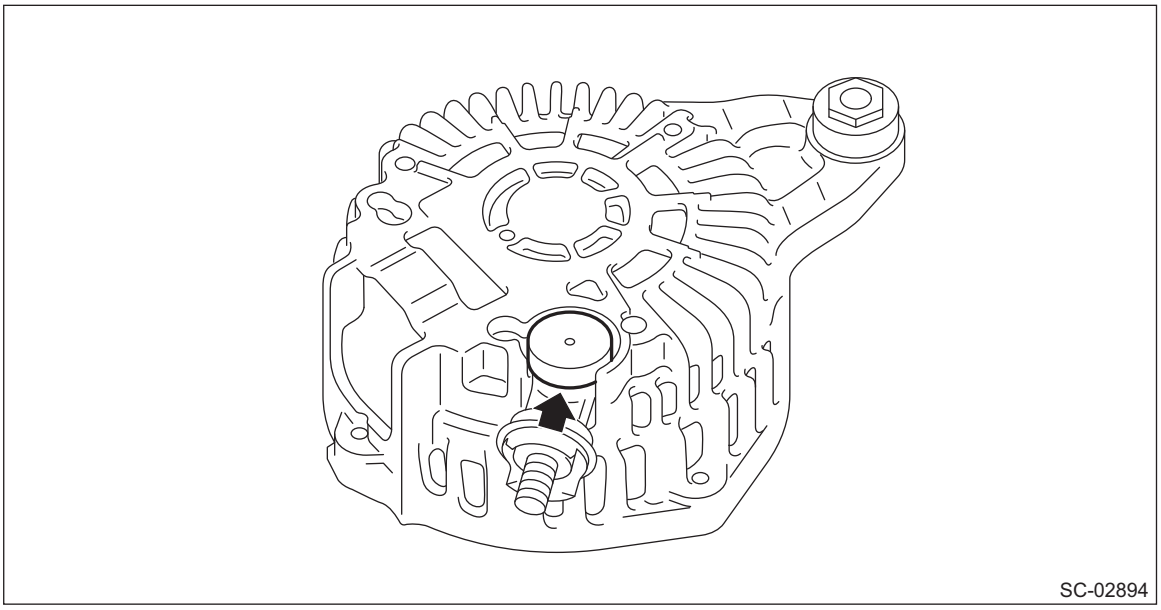
(A) Cover B

(3) Disconnect the connection and remove the brush.

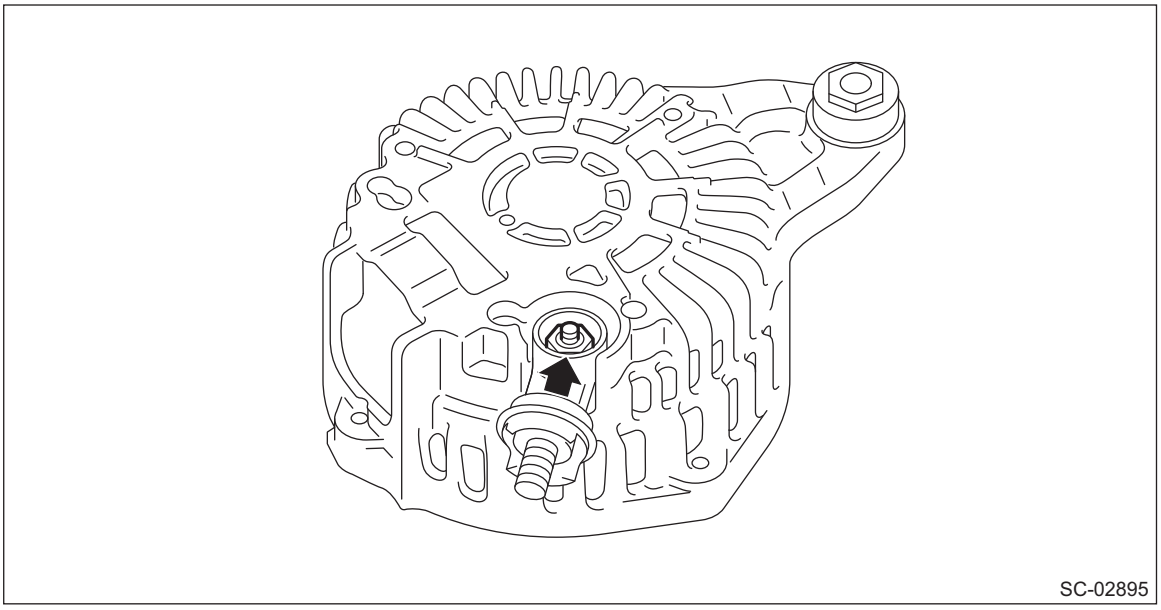


12) Remove the rectifier as follows.

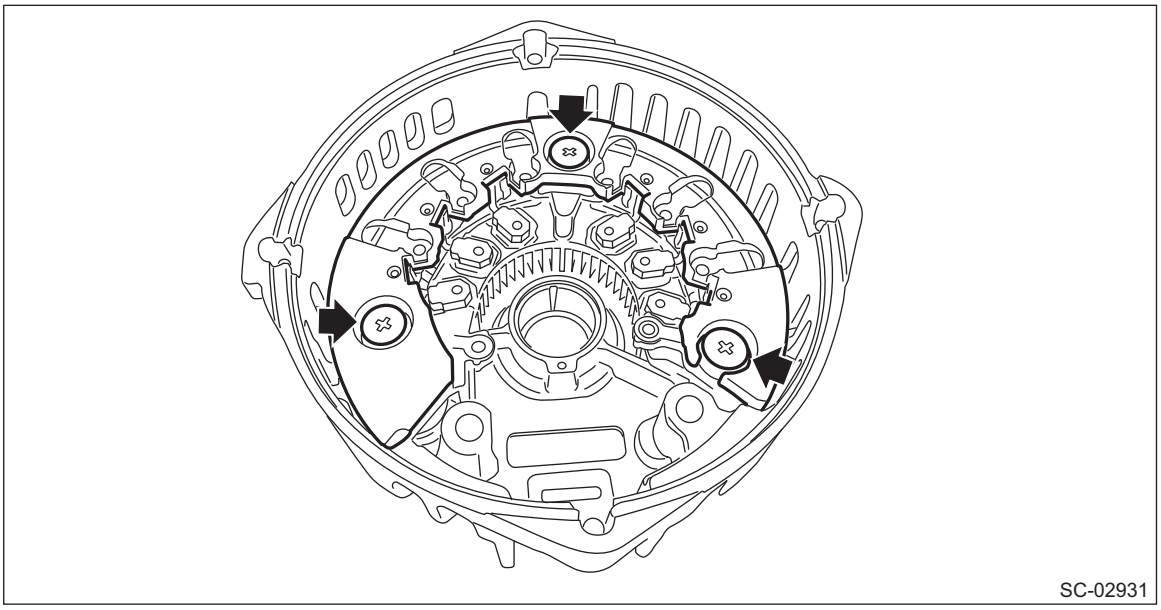
(1) Remove the cover on terminal B.



(2) Remove the nut on terminal B.



(3) Remove the bolts which secure the rectifier, and remove the rectifier.



D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

- Refer to component for tightening torque of each part. <Ref. to SC(w/o STI)-4, GENERATOR, COMPONENT, General Description.>
- After assembling, manually turn the pulley to check that the rotor rotates smoothly.

1) Assembling the rear cover and rectifier

Remove old silicone grease on the mating surface of rear cover and rectifier and apply new silicone grease.

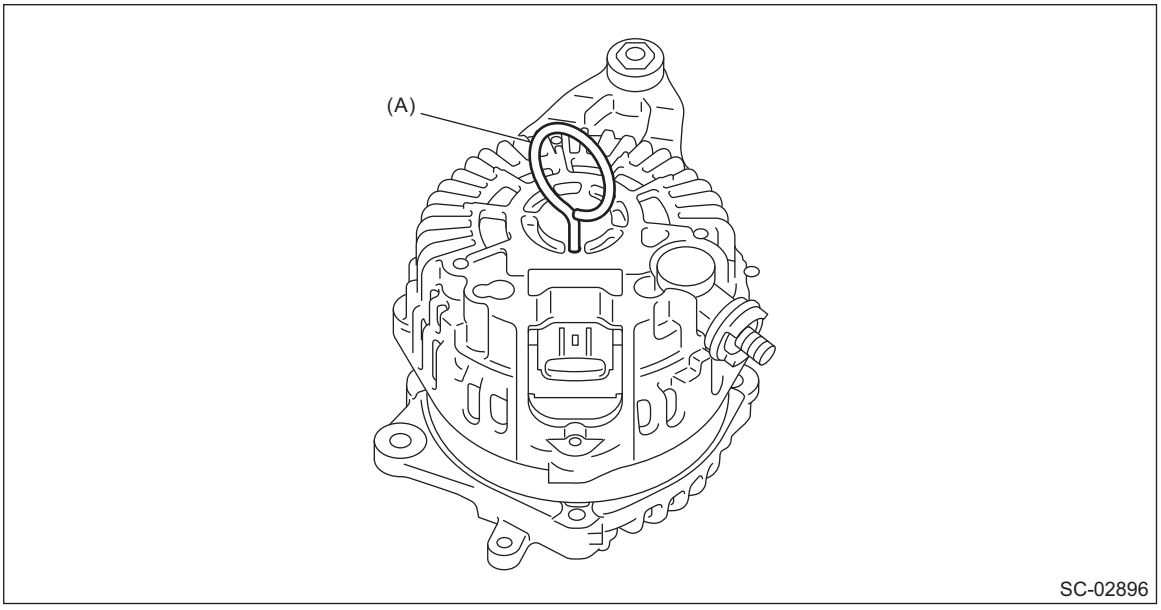
CAUTION:

Do not apply silicone grease to the attachment threads of rectifier.

2) Push of the brush

Before assembling the front and rear parts, press the brush down into the brush holder, then fix the brush in that position by inserting a [1 mm (0.0394 in) dia., 40 — 50 mm (1.5748 — 1.9685 in) long] wire through the hole as shown in the figure.

CAUTION:
After assembling, remove the wire.



(A) Wire

3) Install the ball bearings.
   (1) Set the ball bearings in the front cover, then securely install an appropriate tool (such as a socket wrench of proper size) to the bearing outer race.
   (2) Using a press to press the ball bearings into the specified location.
   (3) Install the bearing retainer.
4) Install the bearings.

CAUTION:
Do not apply grease to the bearings. If there is any oil on the bearing box, remove it completely.
   (1) Use a press to install the bearings to the rotor shaft.
   (2) Heat the bearing box in rear cover at 50 to 60°C (122 to 140°F), and then press the bearing into rear cover.

E: INSPECTION

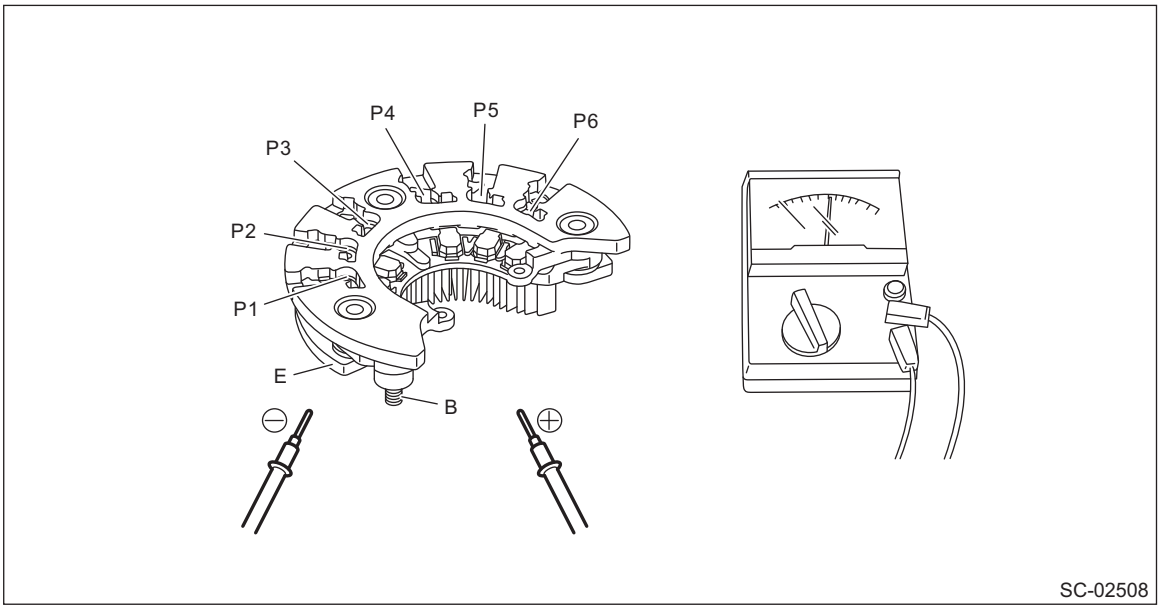
1. DIODE

CAUTION:
There is the possibility of damaging the diodes if a mega-tester (used to measure high voltages) or a similar measuring instrument is used. Never use a mega tester or equivalent for this test.
1) Check for continuity between the diode lead and terminal E or B. If continuity is not as shown in the table, replace the rectifier.
- At analog type tester

Tester lead		Continuity
–lead	+lead	
E	P1, P2, P3, P4, P5, P6	Yes
B		None
P1, P2, P3, P4, P5, P6	E	None
	B	Yes

- At digital type tester

Tester lead		Continuity
–lead	+lead	
E	P1, P2, P3, P4, P5, P6	None
B		Yes
P1, P2, P3, P4, P5, P6	E	Yes
	B	None

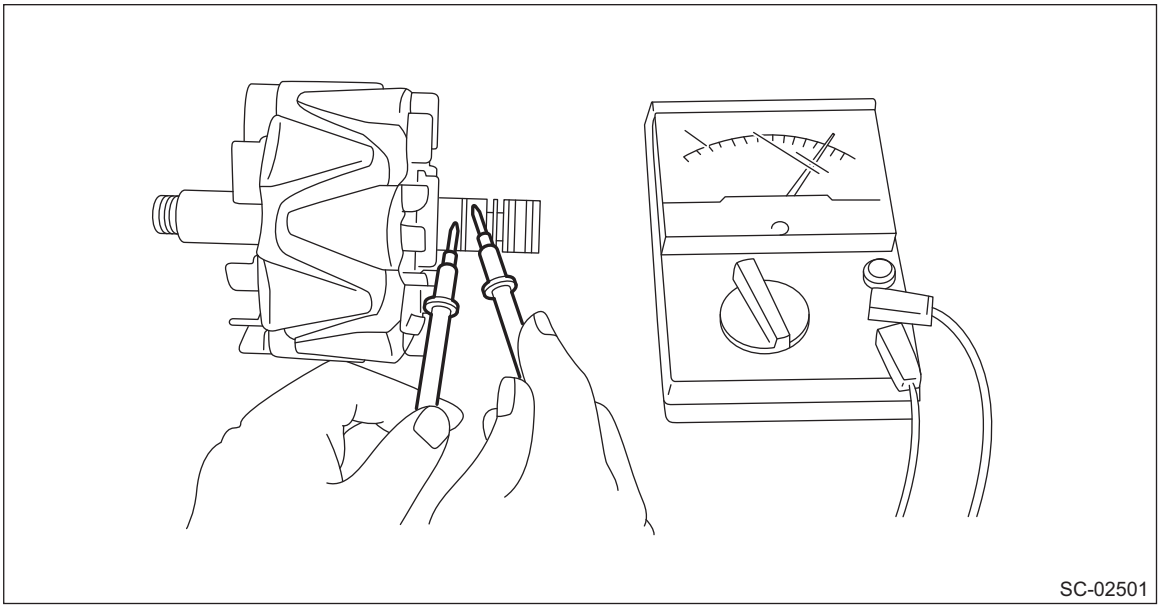


2. ROTOR

1) Slip ring surface
Inspect the slip rings for contamination or any roughness on the sliding surface. Repair the slip ring surface using a lathe or sand paper.
2) Slip ring outer diameter
Measure the slip ring outer diameter. Replace the rotor if the slip ring is worn.

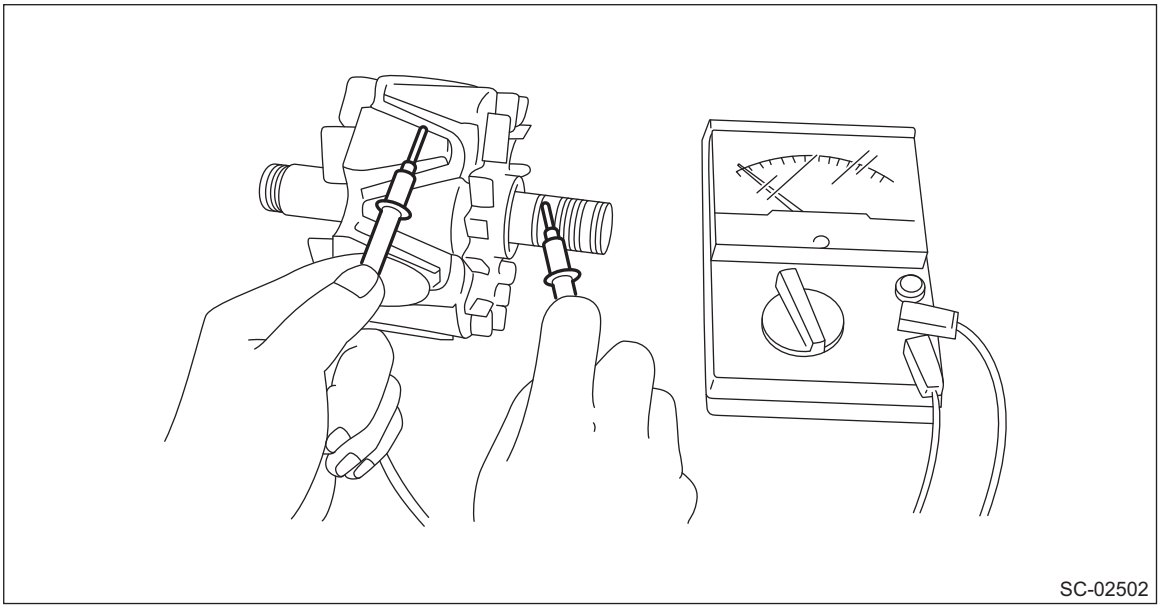
Slip ring outer diameter:
Standard
22.7 mm (0.894 in)
Limit
22.1 mm (0.870 in)
3) Continuity test
Using a circuit tester, check the resistance between slip rings. If the resistance is not within the standard, replace the rotor.

Standard:
Approx. 2.0 — 2.4 Ω



SC-02501

4) Insulation test
Check the continuity between slip ring and rotor core or shaft. If there is continuity, replace the rotor because the rotor coil is grounded.



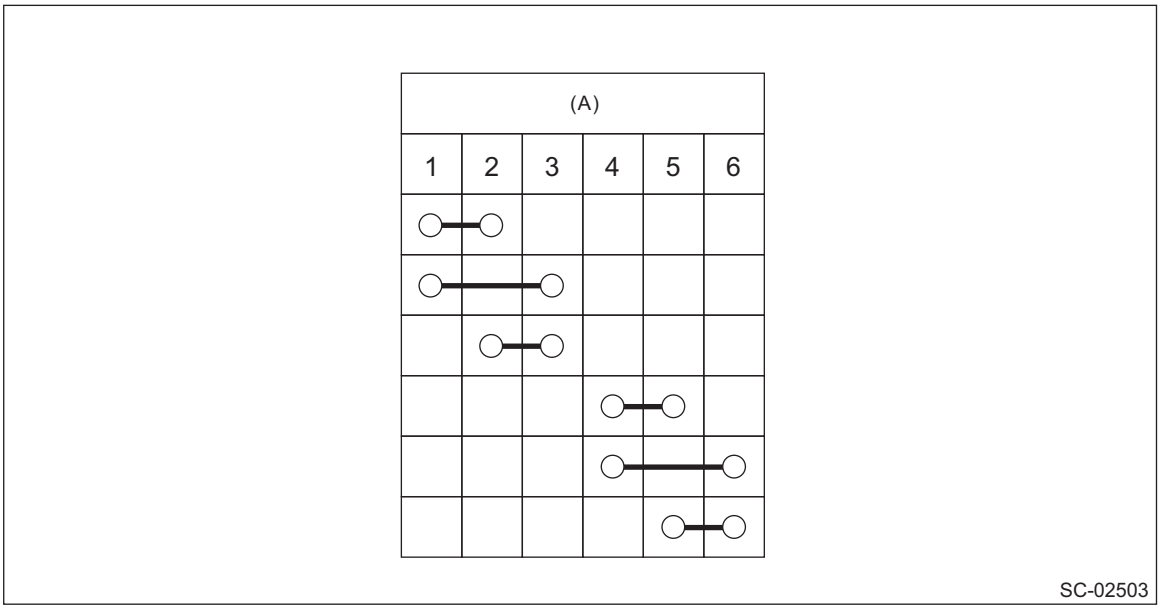
SC-02502

5) Bearing
Check the bearings. If there is any noise, or the rotor does not rotate smoothly, replace the bearings.

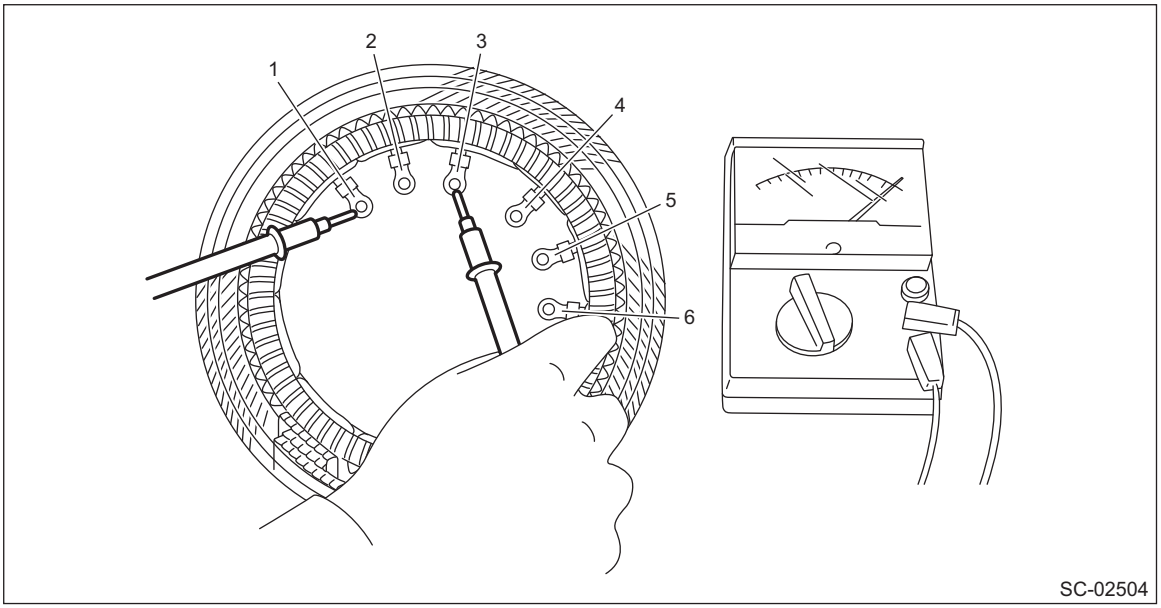
3. STATOR COIL

1) Continuity test

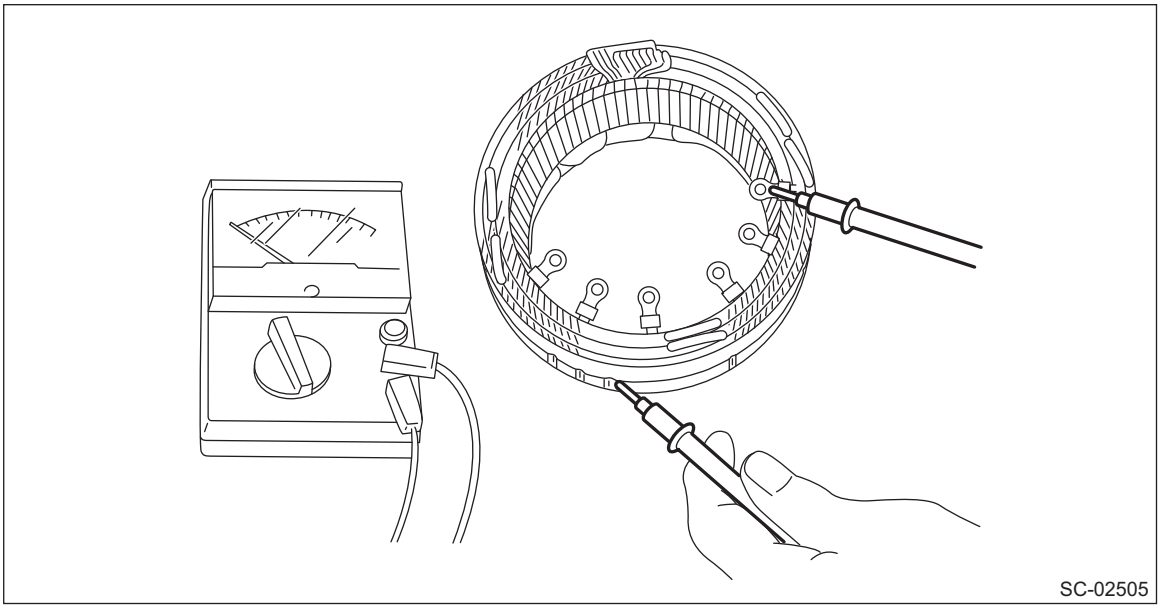
Inspect the continuity between the stator coil terminals. If continuity is not as shown in the table, replace the stator coil.



(A) Terminals



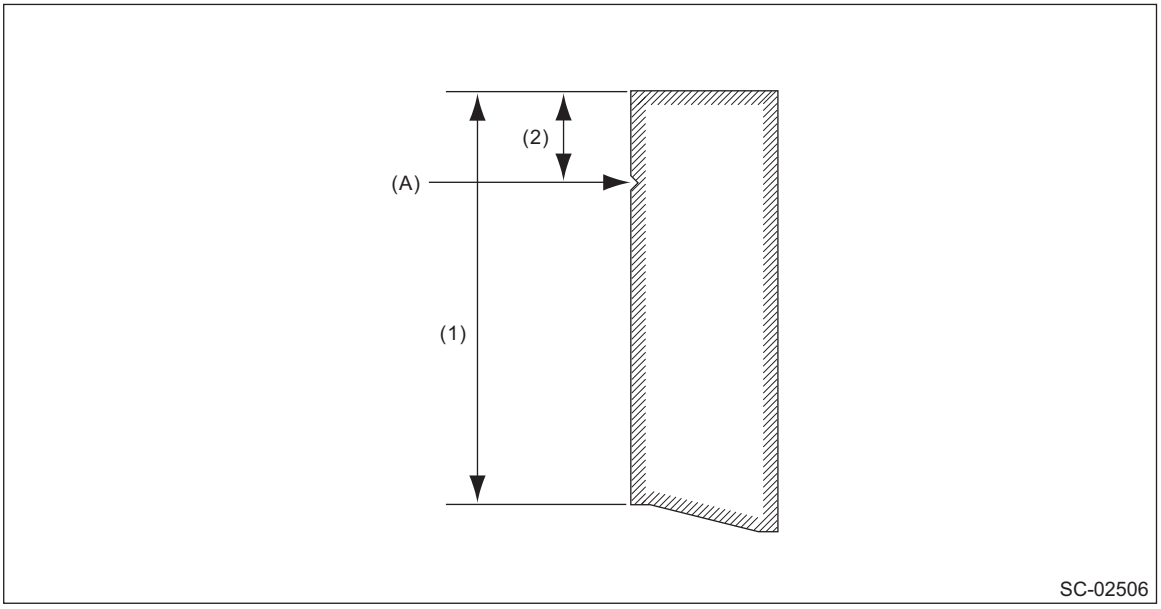
2) Insulation test
Inspect the continuity between the stator coil stator core and lead wire terminals. If there is continuity, replace the stator coil because the stator coil is grounded.



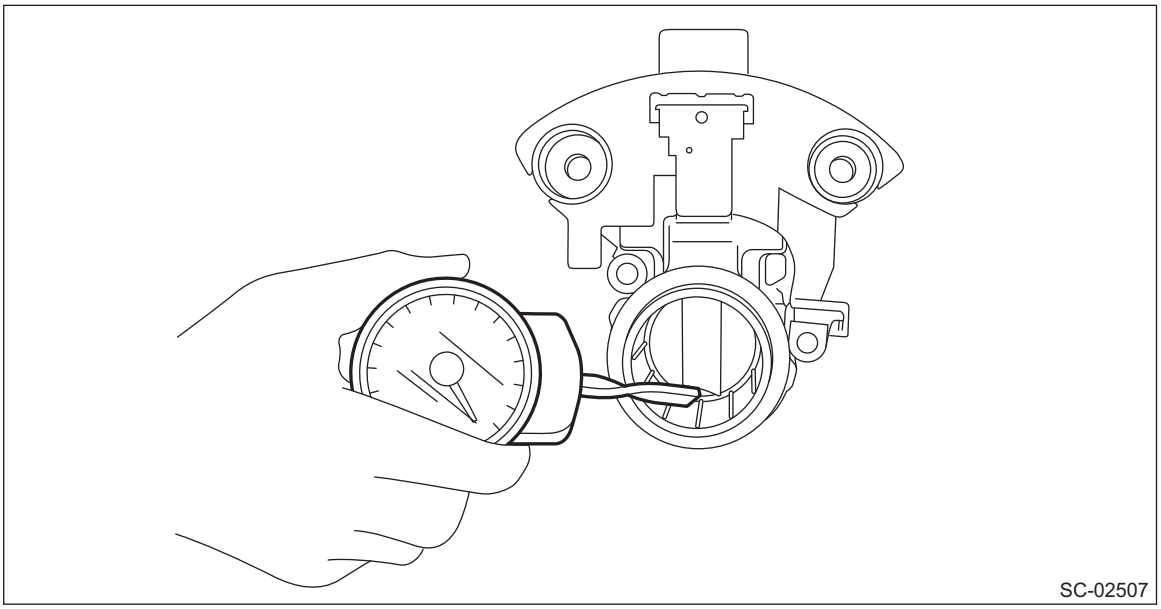
4. BRUSH

1) Measure the length of each brush. Replace the brush if wear exceeds service limits. There is a service limit mark (A) on each brush.

Brush length:
Standard (1)
22.5 mm (0.886 in)
Limit (2)
5.0 mm (0.197 in)



2) Check that there is appropriate pressure on the brush spring. Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.0787 in). Then measure the pressure of brush spring. If the pressure is 1.7 N (173 gf, 6.11 ozf) or less, replace the brush spring. 4.1 — 5.3 N (418 — 540 gf, 14.75 — 19.06 ozf) pressure is required on the new spring.



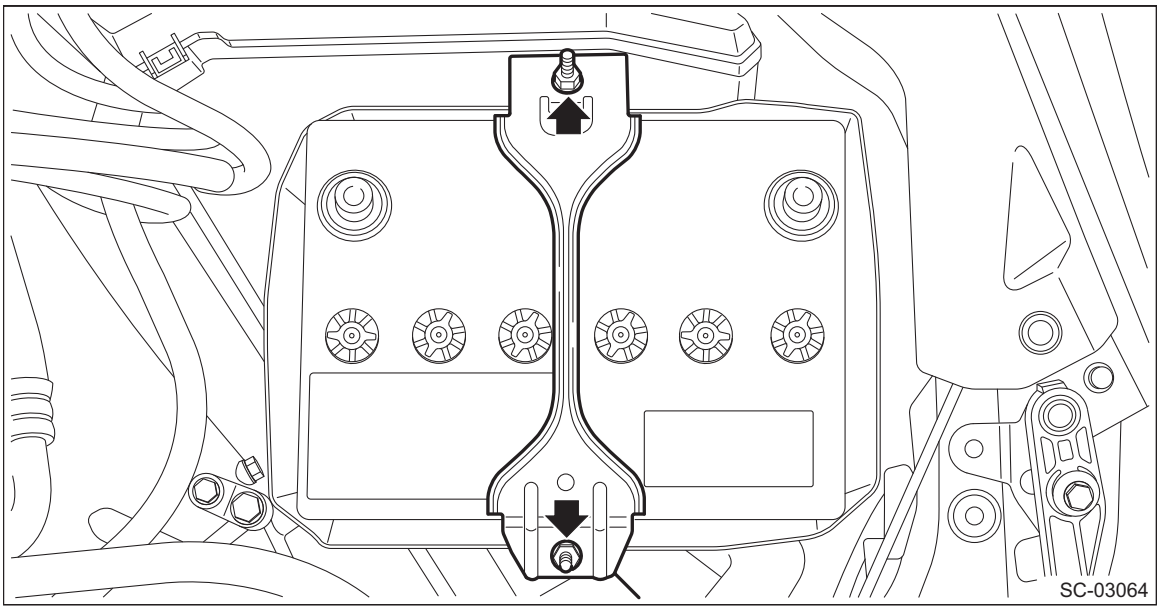
5. BALL BEARING

Check the ball bearings. Replace the ball bearings if there is resistance in the rotation, or if there is any abnormal noise.

4. Battery

A: REMOVAL

1) Remove the battery sensor. <Ref. to SC(w/o STI)-57, REMOVAL, Battery Sensor.>
2) Disconnect the positive terminal of battery.
3) Remove the battery cable holder from the battery rod.
4) Remove the flange nut from battery rod and remove battery holder.



5) Remove the battery.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
Battery holder
3.5 N·m (0.4 kgf-m, 2.6 ft-lb)
Positive terminal
6 N·m (0.6 kgf-m, 4.4 ft-lb)
Battery sensor
6 N·m (0.6 kgf-m, 4.4 ft-lb)

NOTE:
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the battery sensor.
- After the battery is installed, initial diagnosis of the electronic throttle control is performed. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

C: INSPECTION

WARNING:
- **As batteries produce flammable gases, be careful not to bring an open flame close to the batteries.**
- **Ventilate sufficiently when using or charging battery in enclosed space.**
- **Electrolyte is corrosive acid, and has toxicity; be careful of handling the fluid.**
- **For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. In addition, never lean over the battery.**
- **Be careful that the electrode does not come into contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.**
- **Be careful not to let the electrode contact with the coated parts.**
- **Before starting work, remove rings, metal watch-bands, and other metal jewelry.**

• Be careful not to let the metal tools contact the positive battery terminal and anything connected to it. When the operation using a metal tool to the positive terminal or anything connected to it is required, disconnect the battery ground terminal before starting the operation.

1. APPEARANCE

Check the battery case, top cover and terminal posts for dirt or cracks, and perform the following work as necessary.
- Clean the battery with water and wipe with a dry cloth.
- Apply a thin coat of grease on the terminal posts to prevent corrosion.

Check

- ***Normal → Go to the check item 2.***
- ***Abnormal → Replace the battery.***

2. ELECTROLYTE LEVEL

Check the electrolyte level in each cell.

CAUTION:
Do not fill beyond MAX level.

NOTE:
If the level is below the middle point between MIN level and MAX level, pour distilled water into the battery cell to bring the level to MAX.

Check

- ***MAX level → Go to the check item 3.***
- ***Below the middle point between MIN level and MAX level → Fill → Go to the check item 3.***

3. SPECIFIC GRAVITY OF ELECTROLYTE

Check the specific gravity of the electrolyte using a hydrometer and a thermometer.

NOTE:
• Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following calculation:

$$S_{20} = St + 0.0007 \times (t - 20)$$

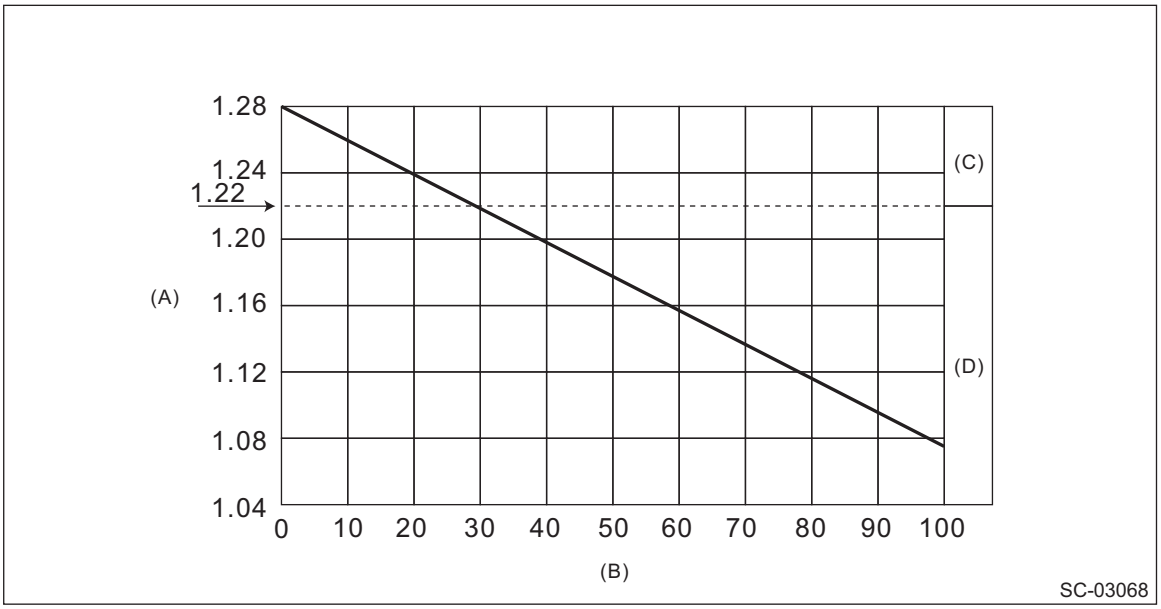
S_{20}: Specific gravity corrected at electrolyte temperature of 20°C
St: Measured specific gravity
t: Measured temperature (°C)

• When measuring in a simplified manner using the battery terminal voltage, calculate the specific gravity by the following formula.

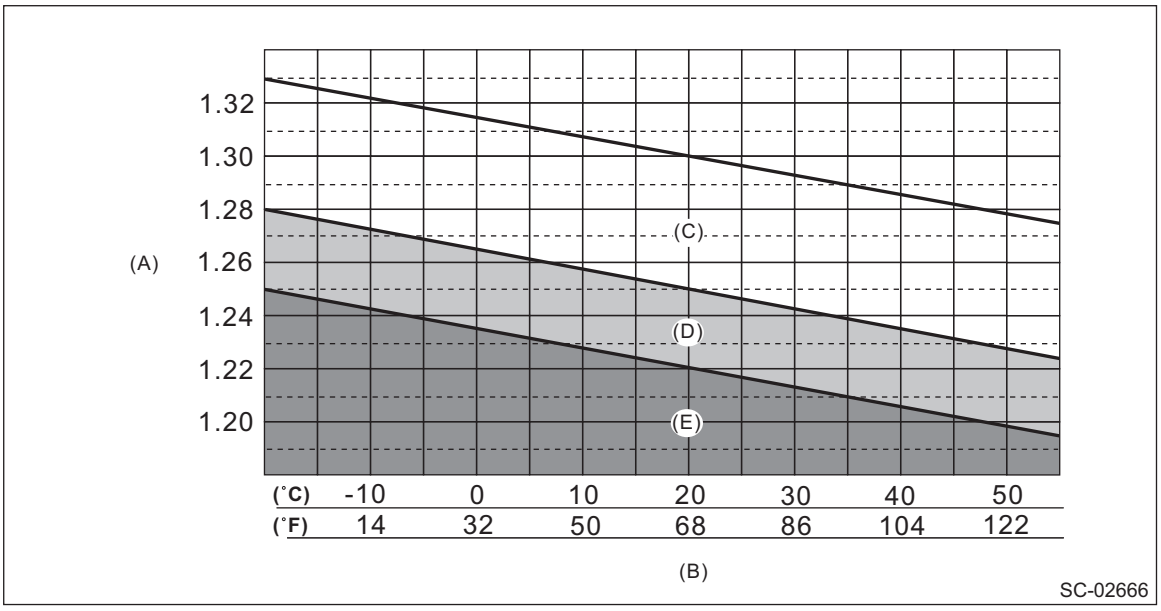
Specific gravity = [0.187 × battery terminal voltage (V)] – 1.1

Perform the steps 1) and 2) before measuring the voltage in order to stabilize the voltage.
1) Turn the ignition switch to OFF and illuminate the headlight for 30 seconds.
2) After turning off the headlight, leave the vehicle for one minute.

• Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.



(A) Specific gravity [20°C (68°F)] (B) Amount of discharge (%) (C) Good
(D) Need to charge or replace



(A) Specific gravity [20°C (68°F)] (B) Electrolyte temperature (C) Good
(D) Caution (E) Need charging

Check

- ***Specific gravity: 1.250 — 1.290, and difference between cells is 0.04 or less → Battery is normal***
- ***Specific gravity: Less than 1.250, or difference between cells is 0.04 or more → Battery needs to be charged or replaced***

4. STANDBY CURRENT

1) Prepare the circuit tester which can measure down to 1 mA.

NOTE:
For model with keyless access function, the standby current changes regularly. Therefore, prepare the analog type circuit tester.
2) Using the circuit tester, check the standby current.

NOTE:
The standby current may be displayed lower than the actual value if the battery is weak, so be sure to check the battery. Charge or replace if necessary.

(1) Check the battery. <Ref. to SC(w/o STI)-51, APPEARANCE, INSPECTION, Battery.> <Ref. to SC(w/o STI)-51, ELECTROLYTE LEVEL, INSPECTION, Battery.> <Ref. to SC(w/o STI)-51, SPECIFIC GRAVITY OF ELECTROLYTE, INSPECTION, Battery.>
(2) Check that the fuse is not blown out and is properly inserted.
(3) When non-genuine electrical parts (including parts sold in authorized workshops) are installed, remove all parts except for genuine electrical parts.
(4) Check that back-up fuse is inserted. <Ref. to PI-5, FUSE, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
(5) Start the engine, and set the switch positions for each system as shown in the following table.

NOTE:
Some of the listed systems are not equipped depending on the vehicle. Set only the systems equipped on the vehicle to the positions as shown.

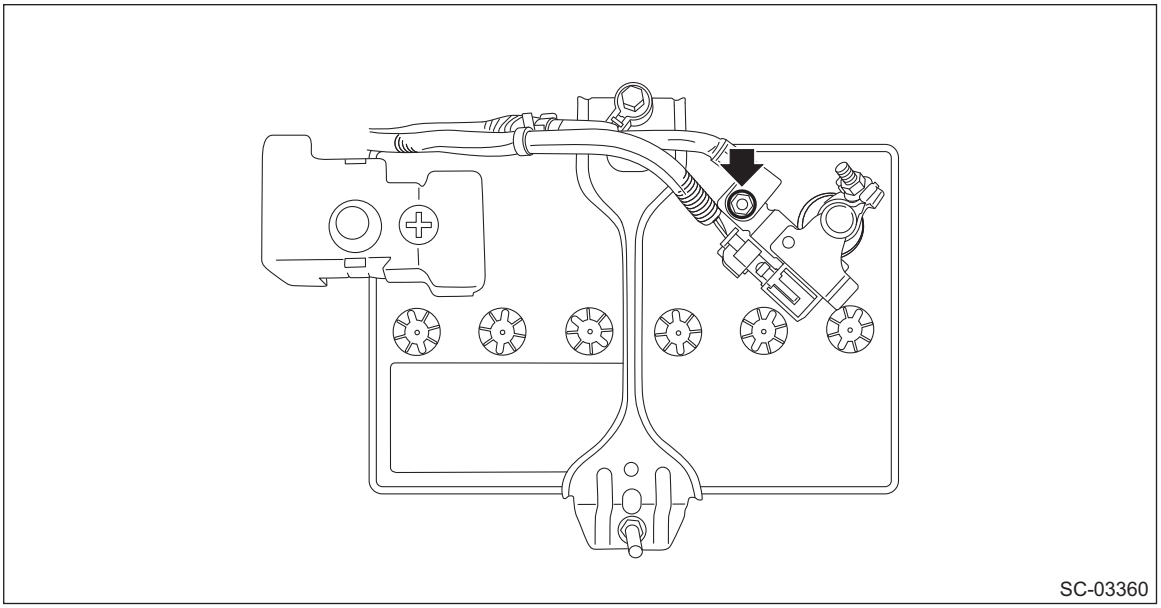
System	Position
Headlight	ON or Auto
Fog light	ON
Wiper (front and rear)	ON or Low speed
Audio and navigation system	ON
Rear defogger	ON
Room light	DOOR
Luggage light	DOOR
Map light	OFF
Auto A/C	ON (AUTO)
Manual A/C	ON (Speed 1)
Electronic parking brake	ON
Electrical parts other than listed above (electrical parts that users can confirm the operation with the key removed)	OFF

(6) Turn the ignition switch to OFF.
(7) Operate the front hood lock release lever to unlock the front hood.
(8) Close all the doors (including rear gate and trunk lid) and then lock the doors. (Security alarm is in set condition)

NOTE:
For model with keyless access function, take the access key 1.5 m or more away from the vehicle after the door lock. And do not put the access key close to the vehicle while measuring the standby current.

(9) Wait for 5 minutes after door lock until the standby current stabilizes.
(10) Loosen the nut which holds the ground terminal to the battery sensor.

NOTE:
Do not remove the ground terminal.

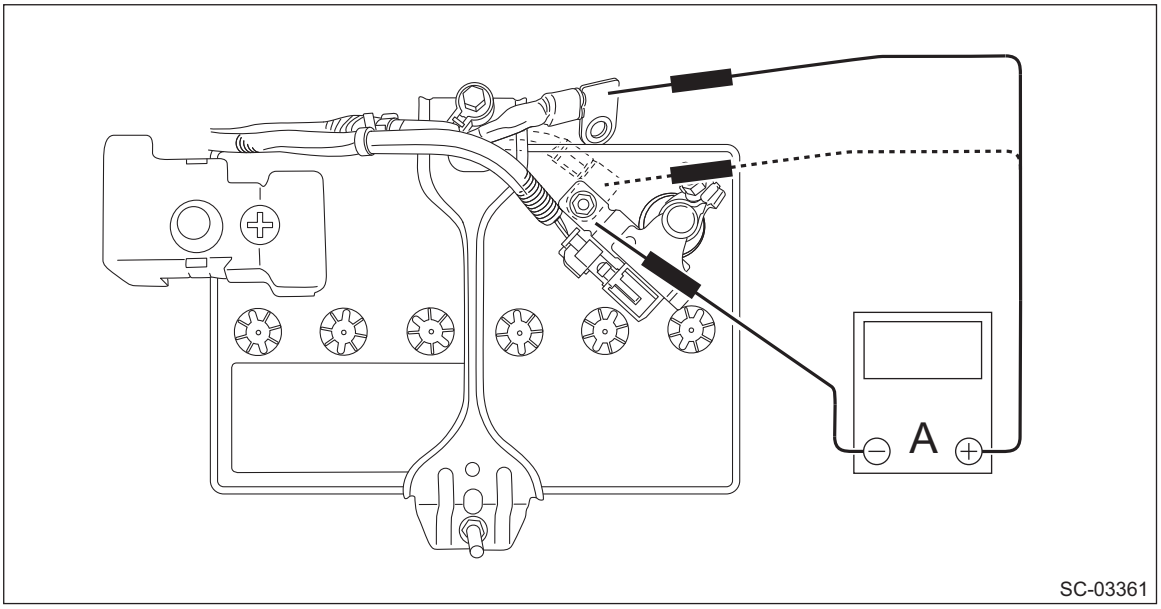


(11) Connect the circuit tester positive terminal to the ground terminal.

NOTE:
To prevent the damage to the circuit tester, set the circuit tester range to a large value first, then gradually change it to smaller values.

(12) Connect the circuit tester negative terminal to the ground terminal installation part of the battery sensor.

(13) While connecting the circuit tester positive terminal with the ground terminal as shown in the figure below, remove the ground terminal from the battery sensor.

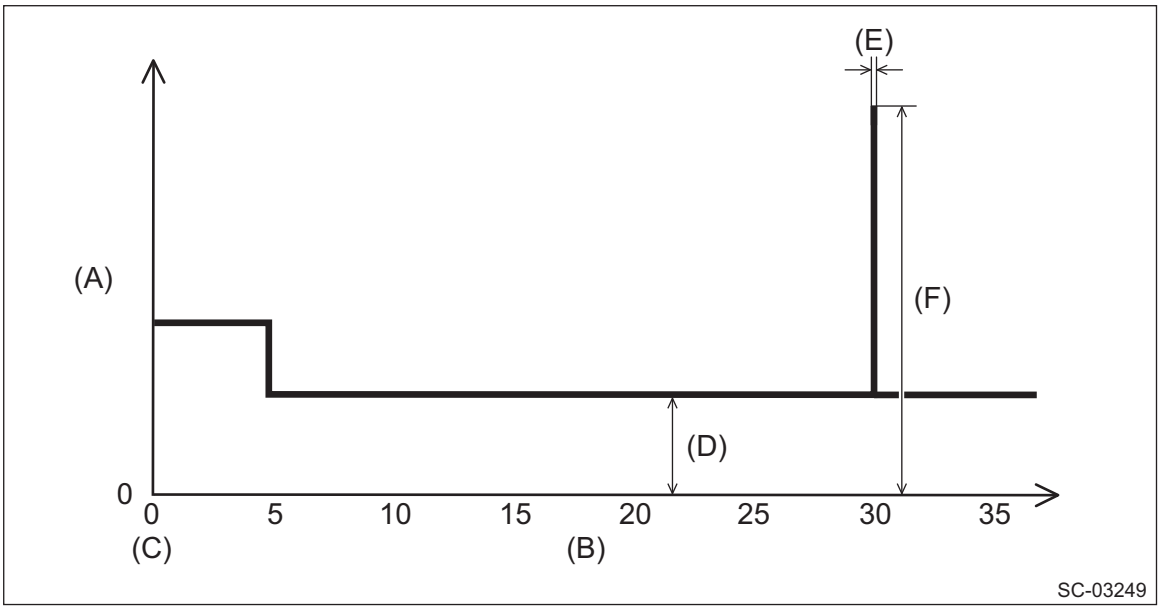


(14) Check the standby current.

CAUTION:
If the circuit tester is disconnected from any terminal during standby current check, reconnect the ground terminal to the battery sensor and restart the procedure back in the step (9).

NOTE:
• For model with keyless access function, the standby current changes periodically because the keyless access system continuously searches the access key (polling).

• When measuring the standby current, the reading of the circuit tester oscillates. Therefore, read the average value (median value).
• The standby current may become large when the vehicle system is activated 5 times at 30-minute intervals or 5 hours after turning the ignition switch to OFF. Therefore, the measurement should be completed in 20 minutes with the ignition switch OFF. If it takes more than 20 minutes, start the engine and turn the ignition switch to OFF again before performing the inspection.



(A) Current/mA
(B) Time/min
(C) Ignition OFF
(D) Less than 70 mA
(E) 5 seconds (system operation)
(F) 300 mA or more

Check

- ***When the maximum measurement value is less than 70 mA → Standby current is normal.***
- ***When the maximum measurement value is 70 mA or more → Go to step (15).***
  (15) Remove all fuses one by one to identify which system changes the standby current value significantly. <Ref. to WI-20, Fuse And Relay.>
  (16) Check the harness and connector of the system whose standby current has changed significantly.

D: CHARGE

WARNING:
• Do not bring an open flame close to the battery when working.

CAUTION:
• Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.
• Be careful while charging the battery because it produces flammable gasses.
• Observe instructions when handling the battery charger.
• Before charging the battery on the vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical units.

1. NORMAL CHARGE (CONSTANT CURRENT CHARGE)

Charge the battery with the current value specified by manufacturer or with approximately 1/10 of battery's rating capacity. (See the table below.)

Type	Charging current (A)	CCA (A)
75D23L	5.0 — 6.0	470

CAUTION:
• The charge control feature and specifications for judgment of charge completion depend on the device. Follow the instruction manual of the charger used.
• Keep the electrolyte temperature at 45°C (113°F) or less while charging. Stop charging when the temperature exceeds this value.

NOTE:
The characteristics of typical charging methods are as follows.
• Constant current charging
This method makes it easy to charge to 100%, since the electrolyte is agitated by the gassing occurred at the end of charging. However, the time for charging is comparatively long because the current value is kept constant.
• Constant voltage charging
This method completes charging in a short period of time due to the large current. However, it is difficult to charge to 100% because no gassing occurred at the end of charging and the electrolyte is not agitated. Therefore, the combined use with the constant current charging is preferable.
• Quasi-constant voltage charging
This method is widely used for commercially available chargers.
Compared to the constant voltage charging whose charging current at the beginning of charging becomes large, it reduces the charging current by lowering the voltage at the initial stage, resulting in battery load reduction. The time for charging is comparatively long. However, this type of chargers can be manufactured comparatively inexpensive due to the simple control circuit (or manual settings). After the initial stage of charging is completed, it gradually raises the charging voltage so that the charging current is within the specification, until the battery is fully charged.
• Constant voltage/current charging
In addition to the constant voltage charging, this method controls the upper limit of the current.
The constant current charging is applied at the beginning of charging, and the constant voltage charging is applied at the end. This makes battery charge comparatively efficient in a short period of time. Charging by generators is similar to this method.
Judgment of charge completion
1) Specific gravity of electrolyte should be held within the specific range of 1.250 — 1.290 for one hour or more.
2) Voltage while charging should be held within the specified range of 15.0 — 16.8 V for one hour or more.
3) Gas is actively generated in all cells.
4) The amount of charge reaches 1.2 — 1.5 times of the amount of discharge.

NOTE:
The amount of discharge/charge can be calculated by the following formula.
Amount of discharge (Ah) = Remaining capacity (%) calculated by specific gravity × 5 hour rate capacity (Ah)
Amount of charge (Ah) = Charging current value (A) × Time for charging

2. QUICK CHARGING

Charge the battery in a short period of time with a relatively large current by using a quick charger.
Charge the battery with the current value at approximately 1/2 of battery's rating capacity. (See the table below.)

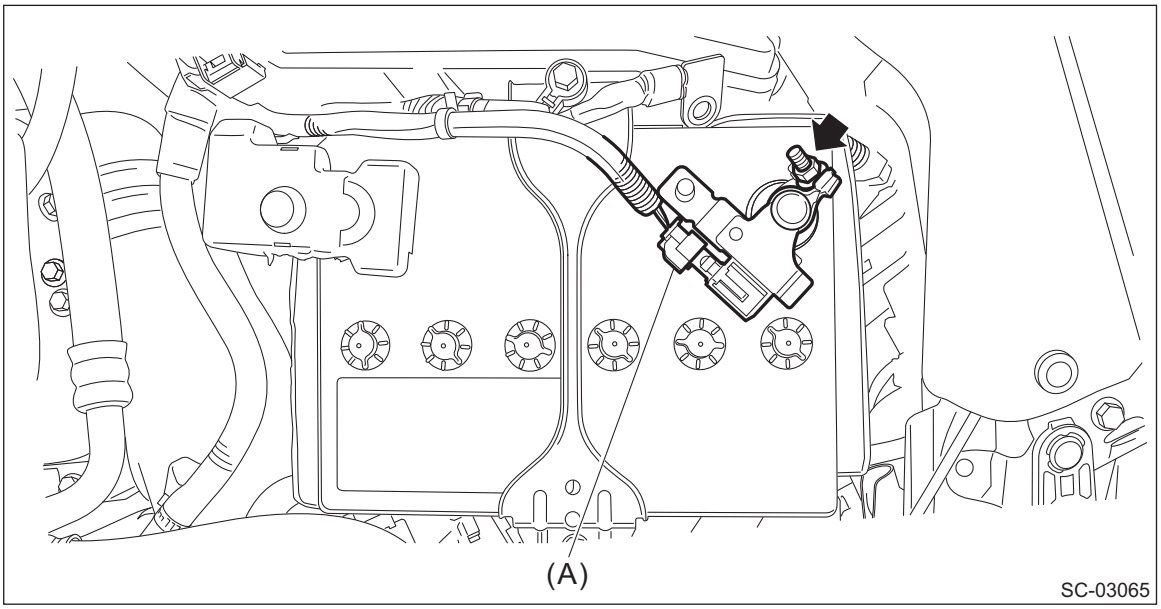
CAUTION:
• Quick charging is accompanied by a large amount of heat generation. Charging should be completed in up to 30 minutes regardless of battery size.
• Quick charging is used to recover the battery until it can start the vehicle. For full charging, use the normal charging method.
• Keep the electrolyte temperature at 55°C (131°F) or less while quick charging. Stop charging when the temperature exceeds this value.

Type	Charging current (A)	CCA (A)
75D23L	24.0 — 29.0	470

5. Battery Sensor

A: REMOVAL

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Disconnect the connector (A) from the battery sensor, and remove the battery sensor.



B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Install the battery sensor to the position where removal/installation of the vent plug is not interfered.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

C: INSPECTION

Check the battery sensor for deformation, cracks and any other damage.

ENGINE (DIAGNOSTICS)

EN(w/o STI)(diag)

17.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	131
18.	General Diagnostic Table	804

1. Basic Diagnostic Procedure

A: PROCEDURE

1. ENGINE

	Step	Check	Yes	No
1	**CHECK ENGINE START FAILURE.** 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(w/o STI)(diag)-4, CHECK, Check List for Interview.> 2) Start the engine.	Does the engine start?	Go to step **2**.	Inspection using "Diagnostics for Engine Starting Failure". <Ref. to EN(w/o STI)(diag)-100, Diagnostics for Engine Starting Failure.>
2	**CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT.** Check the lighting condition of the malfunction indicator light.	Does the malfunction indicator light illuminate?	Go to step **3**.	Inspection using "General Diagnostic Table". <Ref. to EN(w/o STI)(diag)-804, General Diagnostic Table.>
3	**CHECK COMMUNICATION STATUS.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor or general scan tool to the data link connector. 3) Turn the ignition switch to ON, and run the Subaru Select Monitor or general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to the "Subaru Select Monitor". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Does Subaru Select Monitor communicate with vehicle normally?	Go to step **4**.	Inspection using "Basic Diagnostic Procedure" of LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK DTC.** Read DTC using Subaru Select Monitor or general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is DTC displayed on Subaru Select Monitor or general scan tool? (Current malfunction)	Record DTC, time stamp, and freeze frame data, then repair the trouble cause. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> After repair, go to the next step. Go to step **5**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Repair the related parts. NOTE: If DTC is not shown on display although the malfunction indicator light illuminates, perform the diagnosis of malfunction indicator light circuit or combination meter. <Ref. to EN(w/o STI)(diag)-98, Malfunction Indicator Light.>

	Step	Check	Yes	No
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform the Inspection Mode or Drive Cycle. <Ref. to EN(w/o STI)(diag)-71, Inspection Mode.> <Ref. to EN(w/o STI)(diag)-75, Drive Cycle.>	Is DTC displayed on Subaru Select Monitor or general scan tool?	Inspect using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-131, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. CHECK LIST NO. 1

Check the following item when problem has occurred.

NOTE:
Use copies of this page for interviewing customers.

Customer's name		Engine No.	
Date of purchase		Fuel type	
Date of repair		Odometer reading	km
V.I.N.			miles
Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Various/Others:		
Ambient air temperature	°C (°F)		
	❑ Hot ❑ Warm ❑ Cool ❑ Cold		
Place	❑ Highway ❑ Suburbs ❑ Inner city ❑ Uphill ❑ Downhill ❑ Rough road ❑ Others:		
Engine temperature	❑ Cold ❑ Warming-up ❑ After warming-up ❑ Any temperature ❑ Others:		
Engine speed	rpm		
Vehicle speed	km/h (MPH)		
Driving conditions	❑ Not affected ❑ At starting ❑ While idling ❑ At racing ❑ While accelerating ❑ While cruising ❑ While decelerating ❑ While turning (RH/LH)		
Headlight	❑ ON/❑ OFF	Rear defogger	❑ ON/❑ OFF
Blower	❑ ON/❑ OFF	Audio	❑ ON/❑ OFF
A/C compressor	❑ ON/❑ OFF	Rear entertainment system	❑ ON/❑ OFF
Radiator fan	❑ ON/❑ OFF	Car phone	❑ ON/❑ OFF
Front wiper	❑ ON/❑ OFF	Wireless device	❑ ON/❑ OFF
Rear wiper	❑ ON/❑ OFF		
Type of engine oil			
• Grade • Viscosity Use of additives (engine oil): ❑ Yes / ❑ No			
• Parts			
Refueling of wrong fuel: ❑ Yes / ❑ No			

• Date of refueling • Type of fuel
Refueling at a gas station that is not usually used: ❑ Yes / ❑ No
• Date of refueling • Type of fuel
Use of additives (fuel): ❑ Yes / ❑ No
• Parts

2. CHECK LIST NO. 2

Check the following items about the vehicle's state when the malfunction indicator light turns on and DTC is recorded.

NOTE:
Use copies of this page for interviewing customers.

a) Other warning lights or indicators illuminate ❑ Yes/❑ No
❑ Fuel level warning light ❑ Charge warning light ❑ Engine coolant temperature warning light ❑ Oil pressure warning light ❑ ATF temperature warning light or Sport indicator light ❑ Driver's control center differential indicator light ❑ ABS warning light ❑ VDC warning light ❑ Cruise indicator light ❑ SI-CRUISE warning light ❑ Immobilizer indicator light ❑ STEERING warning light ❑ Electronic parking brake warning light ❑ Glow indicator ❑ Sedimenter warning light ❑ Others:
b) Fuel level
• Lack of fuel: ❑ Yes / ❑ No • Indicator position of fuel gauge: • Experienced running out of fuel: ❑ Yes / ❑ No
c) Intentional connecting or disconnecting of harness connectors or spark plug cords: ❑ Yes / ❑ No
• What:
d) Intentional connecting or disconnecting of hoses: ❑ Yes / ❑ No
• What:
e) Installing of other parts except genuine parts: ❑ Yes / ❑ No
• What: • Where:
f) Occurrence of noise: ❑ Yes / ❑ No
• From where: • What kind:
g) Occurrence of smell: ❑ Yes / ❑ No
• From where: • What kind:
h) Intrusion of water into engine compartment or passenger compartment: ❑ Yes / ❑ No
i) Troubles occurred

Check List for Interview

- ❑ Engine does not start.
- ❑ Engine stalls during idling.
- ❑ Engine stalls while driving.
- ❑ Engine speed decreases.
- ❑ Engine speed does not decrease.
- ❑ Rough idling
- ❑ Poor acceleration
- ❑ Back fire
- ❑ After fire
- ❑ Does not shift.
- ❑ Excessive shift shock

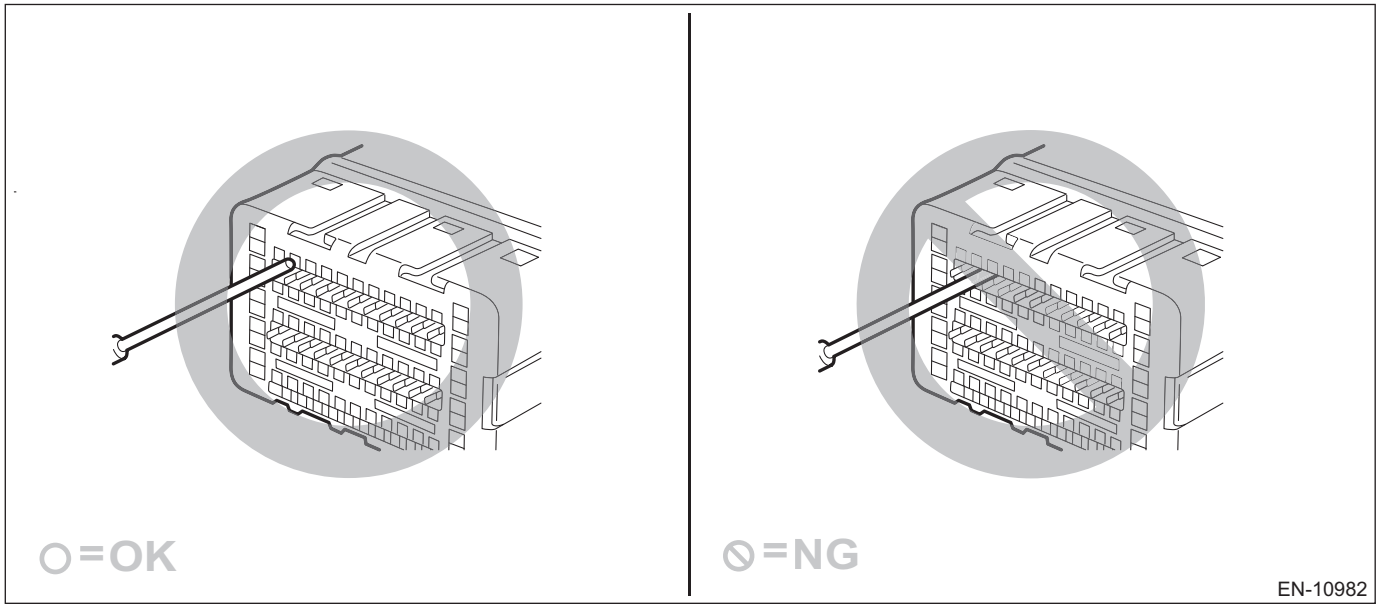
3. General Description

A: CAUTION

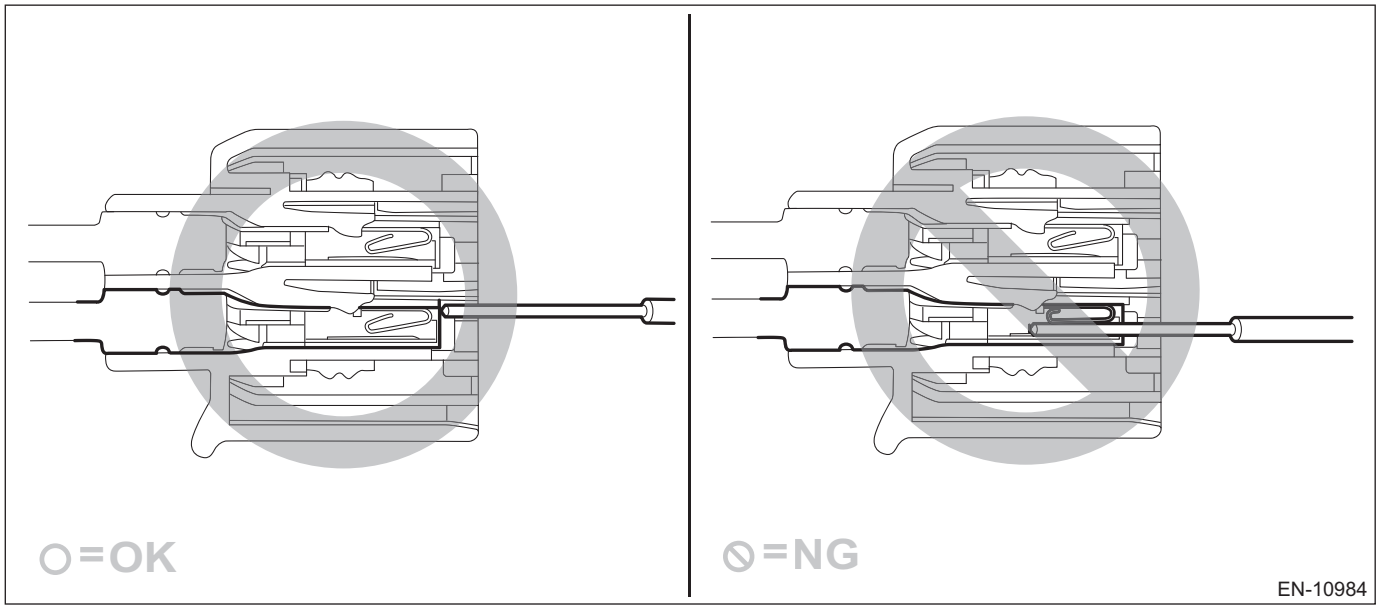
1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:
- **Do not use electrical test equipment on the airbag system circuits.**
- **Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.**

2) Never connect the battery in reverse polarity. Doing so will damage the ECM instantly, and other parts will also be damaged.
3) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM etc.
4) When disconnecting the connectors of the electrical components, always be sure to turn the ignition switch to OFF. Perform the Clear Memory Mode after connecting the connectors. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
5) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal.

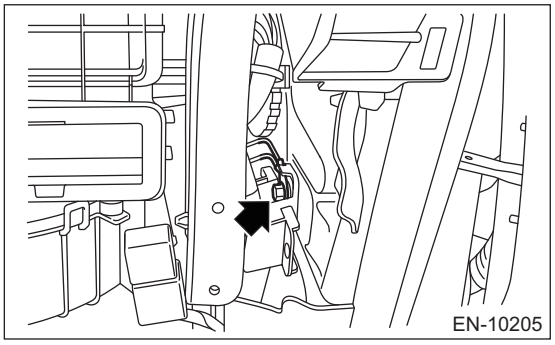


Never insert the tapered pin into the terminal because it deforms inside which may lead to a malfunction.

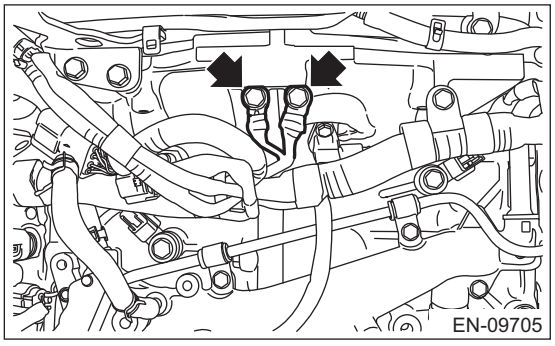


CAUTION:
When replacing the ECM, be careful not to use the ECM of wrong specification to avoid any damage on the fuel injection system.

NOTE:
When replacing the ECM of the models with immobilizer, immobilizer system must be registered. For detailed operation procedure, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
6) The ECM connector is waterproof. When measuring the ECM connector terminal voltages, or the resistance between the ECM connector terminals, use the ST.
ST 18460AA030 CHECK BOARD
7) Take care not to allow water to get into the connectors when servicing or washing the vehicle in rainy weather. Avoid exposure to water even if the connectors are waterproof.
8) Use the ground terminal of the bulkhead harness for the grounding point when measuring voltage and resistance inside the passenger compartment.



9) Use the engine ground terminal or engine assembly for the grounding point when measuring the voltage and resistance in engine compartment.



10) All parts related to the engine control system are precision parts. Do not drop or otherwise apply impact. Do not reuse the parts that are dropped accidentally.
11) Do not connect the wiring of electrical parts directly to the battery terminals. It may cause erroneous operation of the charge control, leading to early deterioration of the battery or discharged battery.
12) Observe the following cautions when installing a radio in vehicle.

CAUTION:
• The antenna must be kept as far apart as possible from the ECM. <Ref. to EN(w/o STI)(diag)-11, CONTROL MODULE, LOCATION, Electrical Component Location.>
• The antenna feeder must be placed as far apart as possible from the ECM and engine control system harness.
• Carefully adjust the antenna for correct matching.
• When mounting a large power type radio, pay special attention to the three items mentioned above.
• Incorrect installation of the radio may affect the operation of ECM.
13) When disconnecting the fuel hose, be sure to release the fuel pressure beforehand. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
14) Warning lights may illuminate when performing driving test with jacked-up or lifted-up condition, but this is not a system malfunction. The reason for this is the rotating speed difference between the front and rear wheels. When engine control system diagnosis is finished, perform the VDC memory clearance procedure of self-diagnosis function. <Ref. to VDC(diag)-30, Clear Memory Mode.>

B: INSPECTION

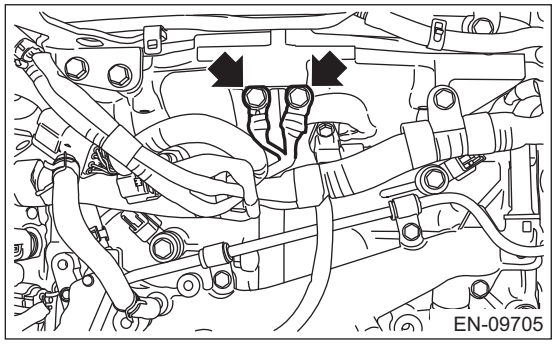
Before performing diagnostics, check the following item which might affect engine problems.

1. BATTERY

1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>
2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND

Make sure that the engine ground terminal has no contamination, corrosion or looseness and is properly connected to the engine.



C: NOTE

• The on-board diagnostic (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
• Further, against any failure of sensors that would cause the vehicle to stop running, the fail-safe function is provided to ensure the minimal drivability.
• The OBD system incorporated with the vehicles within this type of engine complies with OBD-II regulations. The OBD system monitors the components and the system malfunction listed in “Engine Section” which affects on emissions.
• When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
• The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction.
• Freeze frame engine condition data are stored until the DTCs are cleared. However when such malfunctions as fuel trim fault and misfire are detected with the freeze frame engine condition data stored, they are rewritten into those related to the fuel trim fault and misfire.
• When the malfunction does not occur again for three consecutive driving cycles*, malfunction indicator light is turned off, but DTC remains at on-board computer.
*: One driving cycle means the period between the ignition switch ON and the ignition switch OFF after driving.
• When performing diagnosis, connect the Subaru Select Monitor or general scan tool to the vehicle.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18252AA000	18252AA000	CRANKSHAFT SOCKET	Used for rotating crankshaft.
 ST18460AA030	18460AA030	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

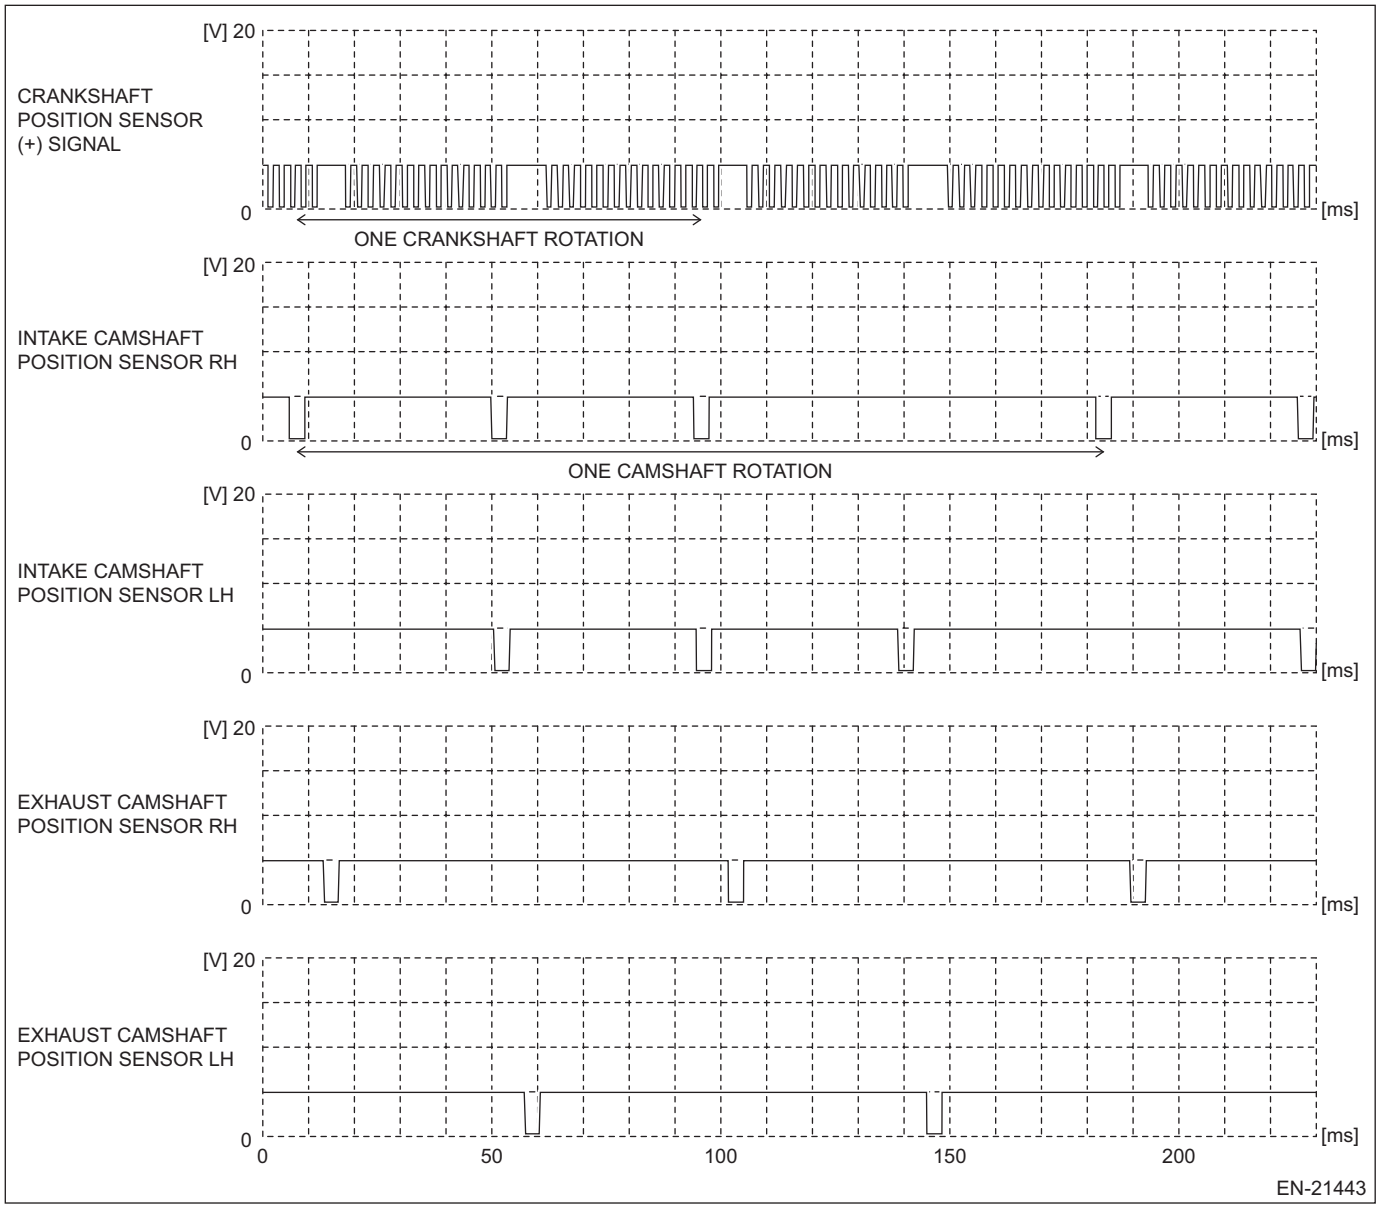
Measuring condition:

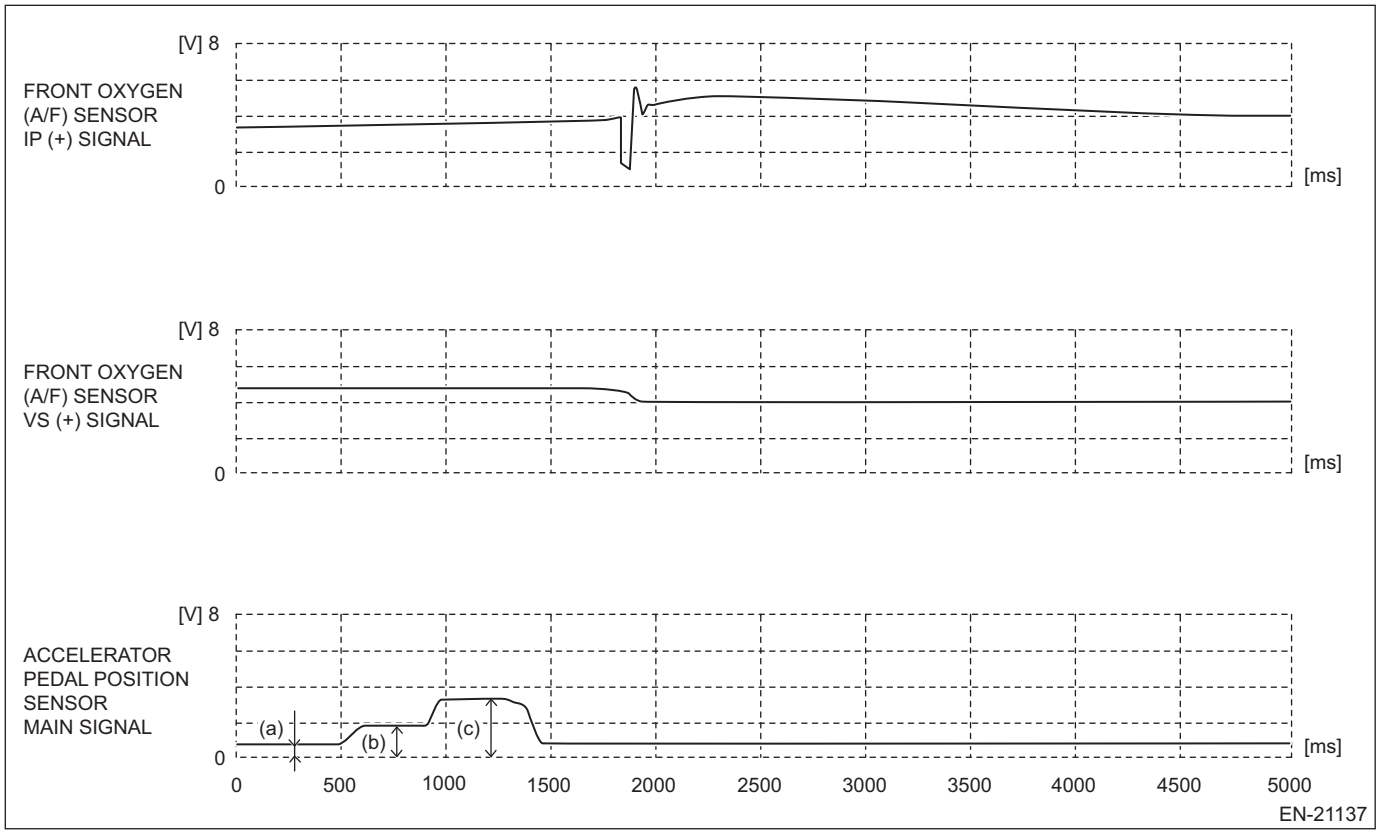
NOTE:
- Perform measurement after warming up the engine.
- For measurement of the waveform of the crankshaft position sensor, we recommend using the DST-i oscilloscope function or a general oscilloscope.
- For CVT models, set the select lever to “P” range or “N” range position, and for MT models, place the gear shift lever in the neutral position.
- Turn the A/C to OFF.
- Turn all the accessory switches to OFF.
- Waveforms vary depending on a measurement environment and vehicle condition.

1. Waveform 1



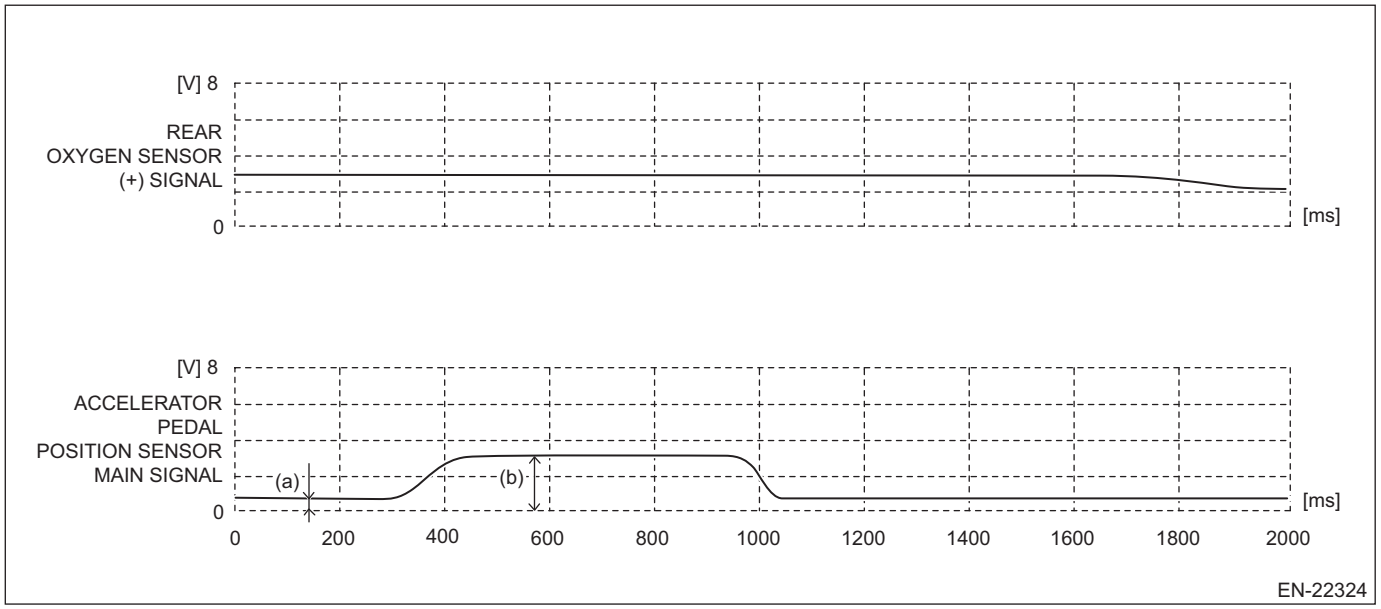
Measured terminal	Crankshaft position sensor (+) signal (E158) No. 19 (+) — Engine ground 3 (E159) No. 10 (–):
	Intake camshaft position sensor RH (E158) No. 20 (+) — Engine ground 3 (E159) No. 10 (–):
	Intake camshaft position sensor LH (E158) No. 21 (+) — Engine ground 3 (E159) No. 10 (–):
	Exhaust camshaft position sensor RH (E158) No. 32 (+) — Engine ground 3 (E159) No. 10 (–):
	Exhaust camshaft position sensor LH (E158) No. 33 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	While engine idling

2. Waveform 2



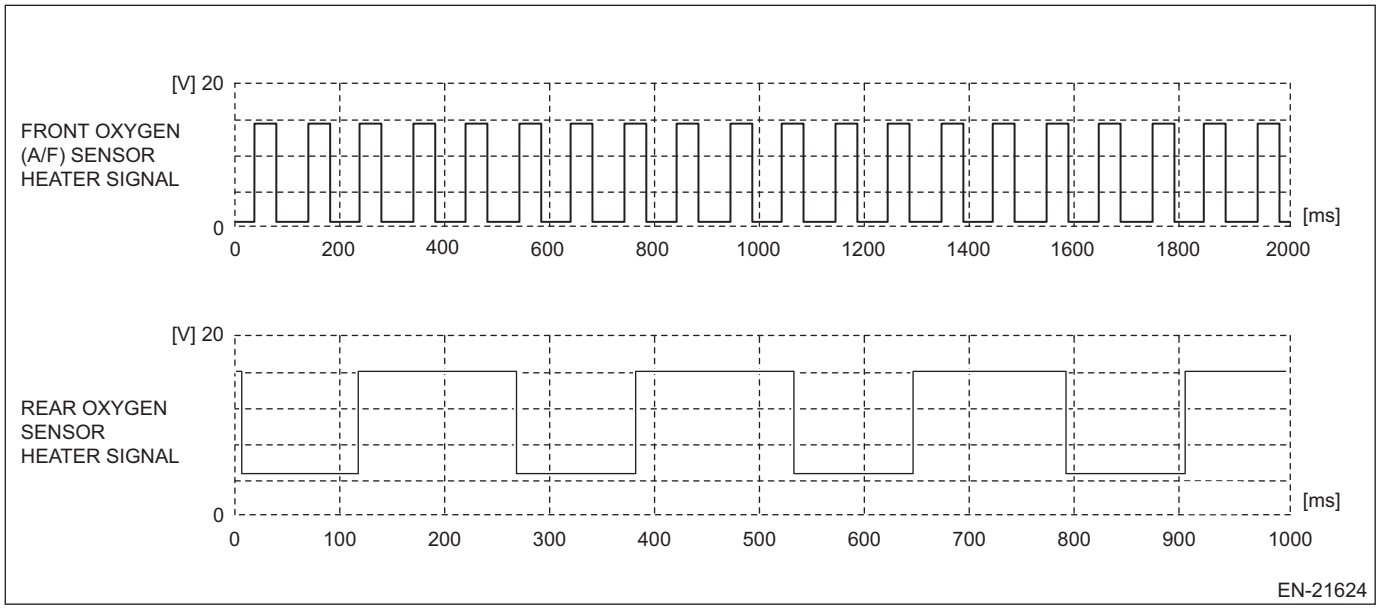
Measured terminal	Front oxygen (A/F) sensor IP (+) signal (E158) No. 15 (+) — Engine ground 3 (E159) No. 10 (–):
	Front oxygen (A/F) sensor VS (+) signal (E158) No. 27 (+) — Engine ground 3 (E159) No. 10 (–):
	Accelerator pedal position sensor main signal (B134) No. 17 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	(a) Accelerator pedal fully closed (b) Accelerator pedal half open (c) Accelerator pedal fully opened

3. Waveform 3



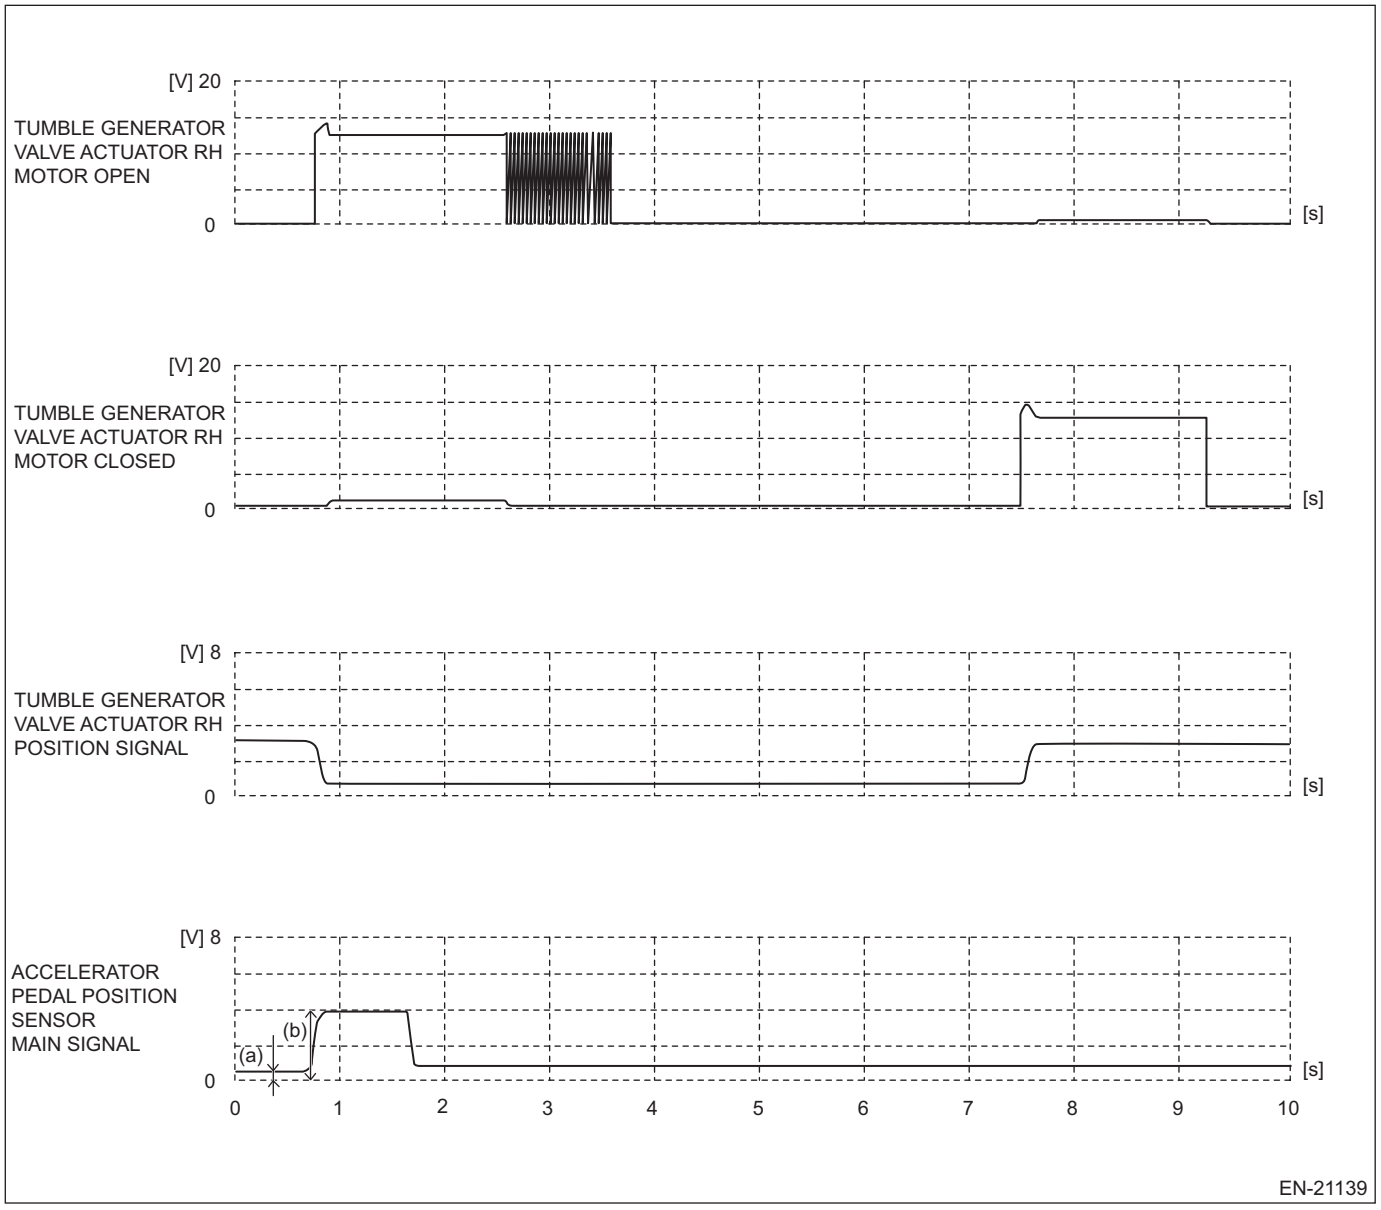
Measured terminal	Rear oxygen sensor (+) signal (E158) No. 16 (+) — (E158) No. 42 (–):
	Accelerator pedal position sensor main signal (B134) No. 17 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	(a) Accelerator pedal fully closed (b) Accelerator pedal fully opened

4. Waveform 4



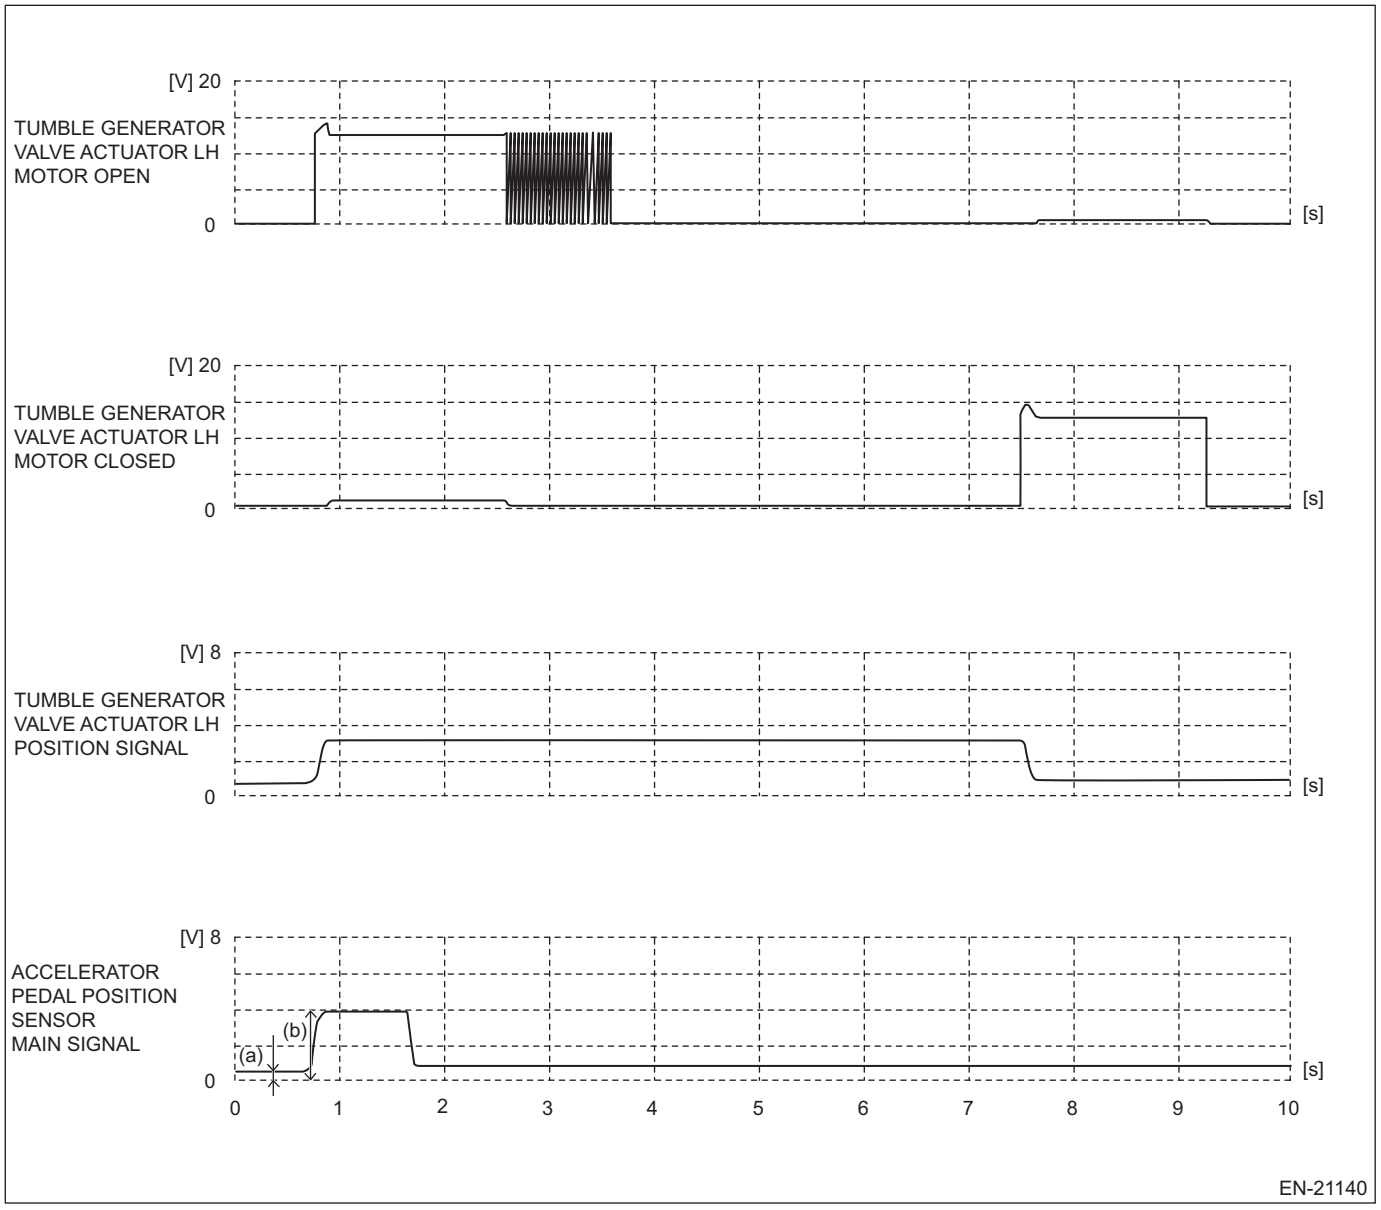
Measured terminal	Front oxygen (A/F) sensor heater signal (E159) No. 9 (+) — Engine ground 3 (E159) No. 10 (–):
	Rear oxygen sensor heater signal (E159) No. 3 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	While engine idling (with the heater on)

5. Waveform 5



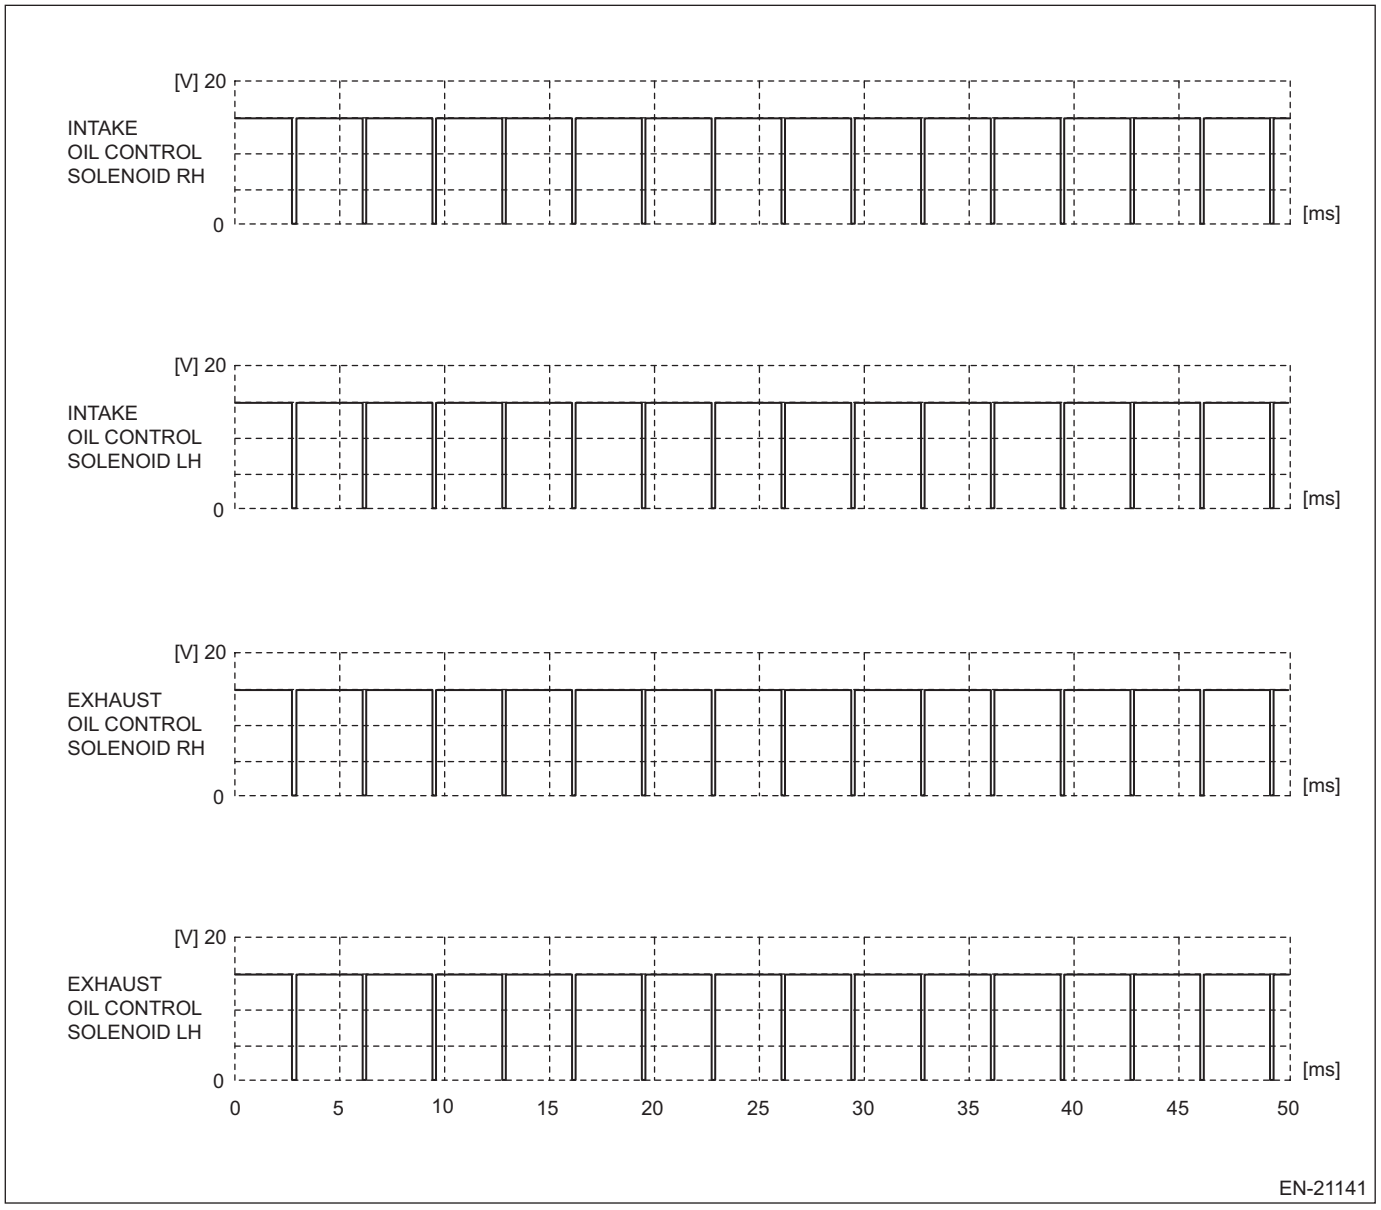
Measured terminal	Tumble generator valve actuator RH motor open (E159) No. 14 (+) — Engine ground 3 (E159) No. 10 (–):
	Tumble generator valve actuator RH motor closed (E159) No. 30 (+) — Engine ground 3 (E159) No. 10 (–):
	Tumble generator valve actuator RH position signal (E158) No. 40 (+) — Engine ground 3 (E159) No. 10 (–):
	Accelerator pedal position sensor main signal (B134) No. 17 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	(a) Accelerator pedal fully closed (b) Accelerator pedal fully opened

6. Waveform 6



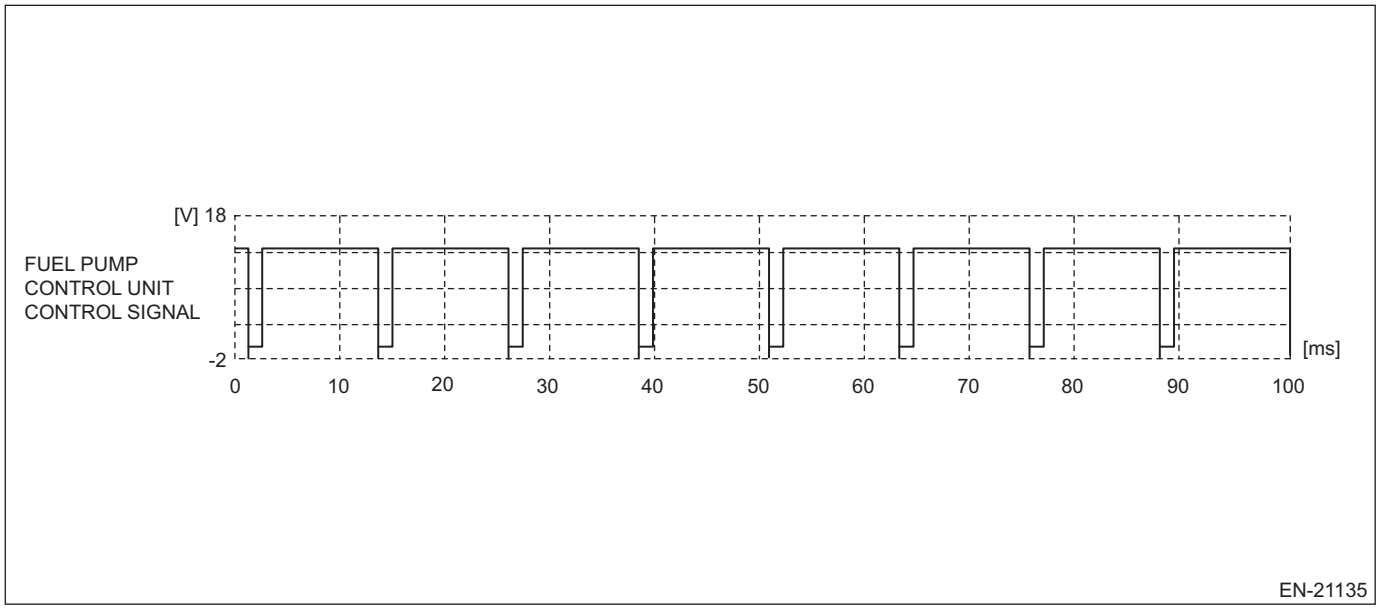
Measured terminal	Tumble generator valve actuator LH motor open (E159) No. 6 (+) — Engine ground 3 (E159) No. 10 (–):
	Tumble generator valve actuator LH motor closed (E159) No. 22 (+) — Engine ground 3 (E159) No. 10 (–):
	Tumble generator valve actuator LH position signal (E158) No. 41 (+) — Engine ground 3 (E159) No. 10 (–):
	Accelerator pedal position sensor main signal (B134) No. 17 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	(a) Accelerator pedal fully closed (b) Accelerator pedal fully opened

7. Waveform 7



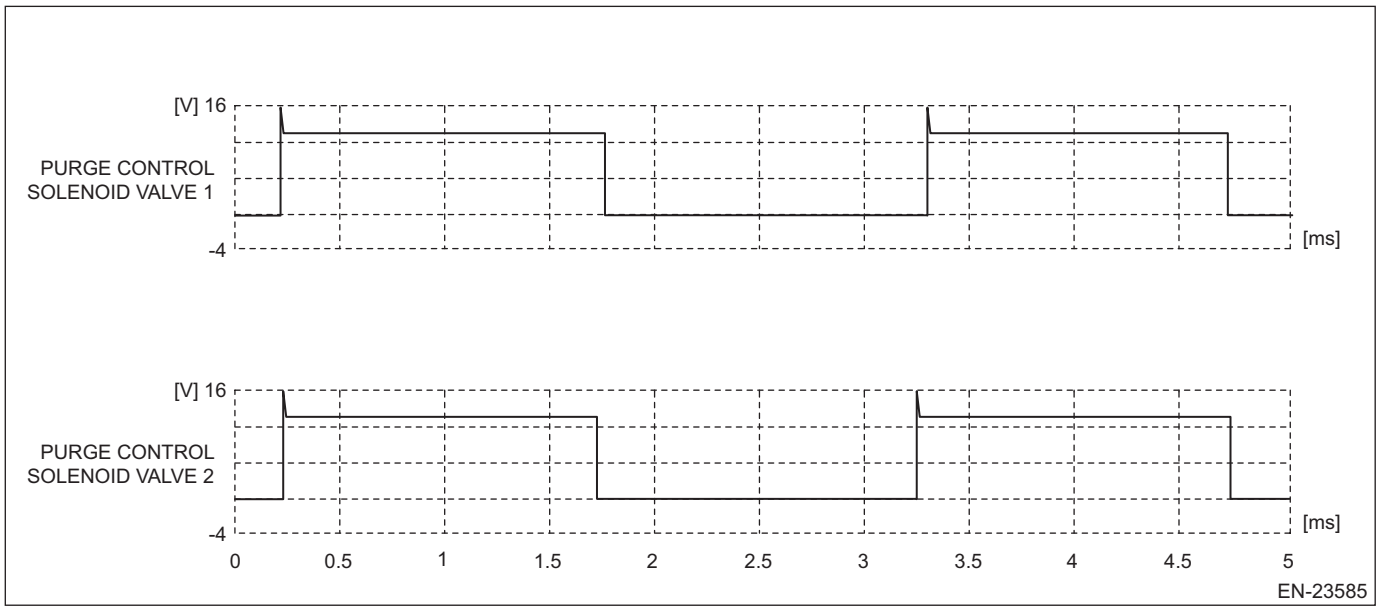
Measured terminal	Intake oil control solenoid RH (E159) No. 7 (+) — Engine ground 3 (E159) No. 10 (–):
	Intake oil control solenoid LH (E159) No. 15 (+) — Engine ground 3 (E159) No. 10 (–):
	Exhaust oil control solenoid RH (E159) No. 23 (+) — Engine ground 3 (E159) No. 10 (–):
	Exhaust oil control solenoid LH (E159) No. 31 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	While engine idling

8. Waveform 8



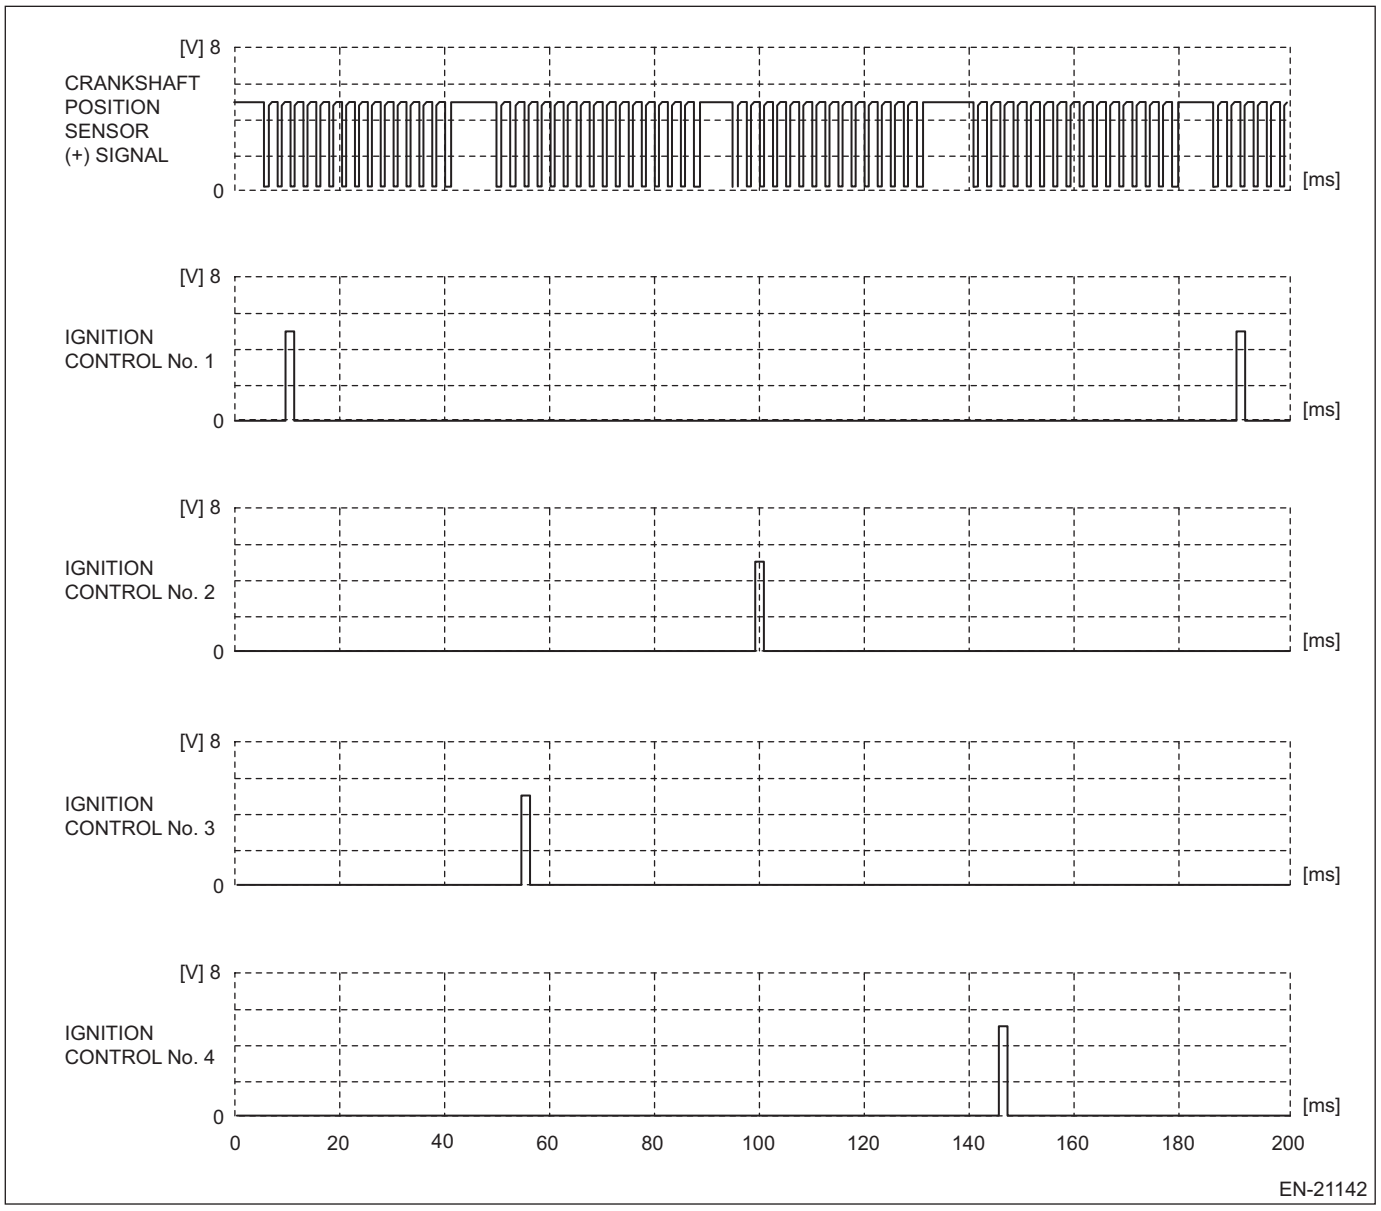
Measured terminal	Fuel pump control unit control signal (B134) No. 40 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	While engine idling

9. Waveform 9



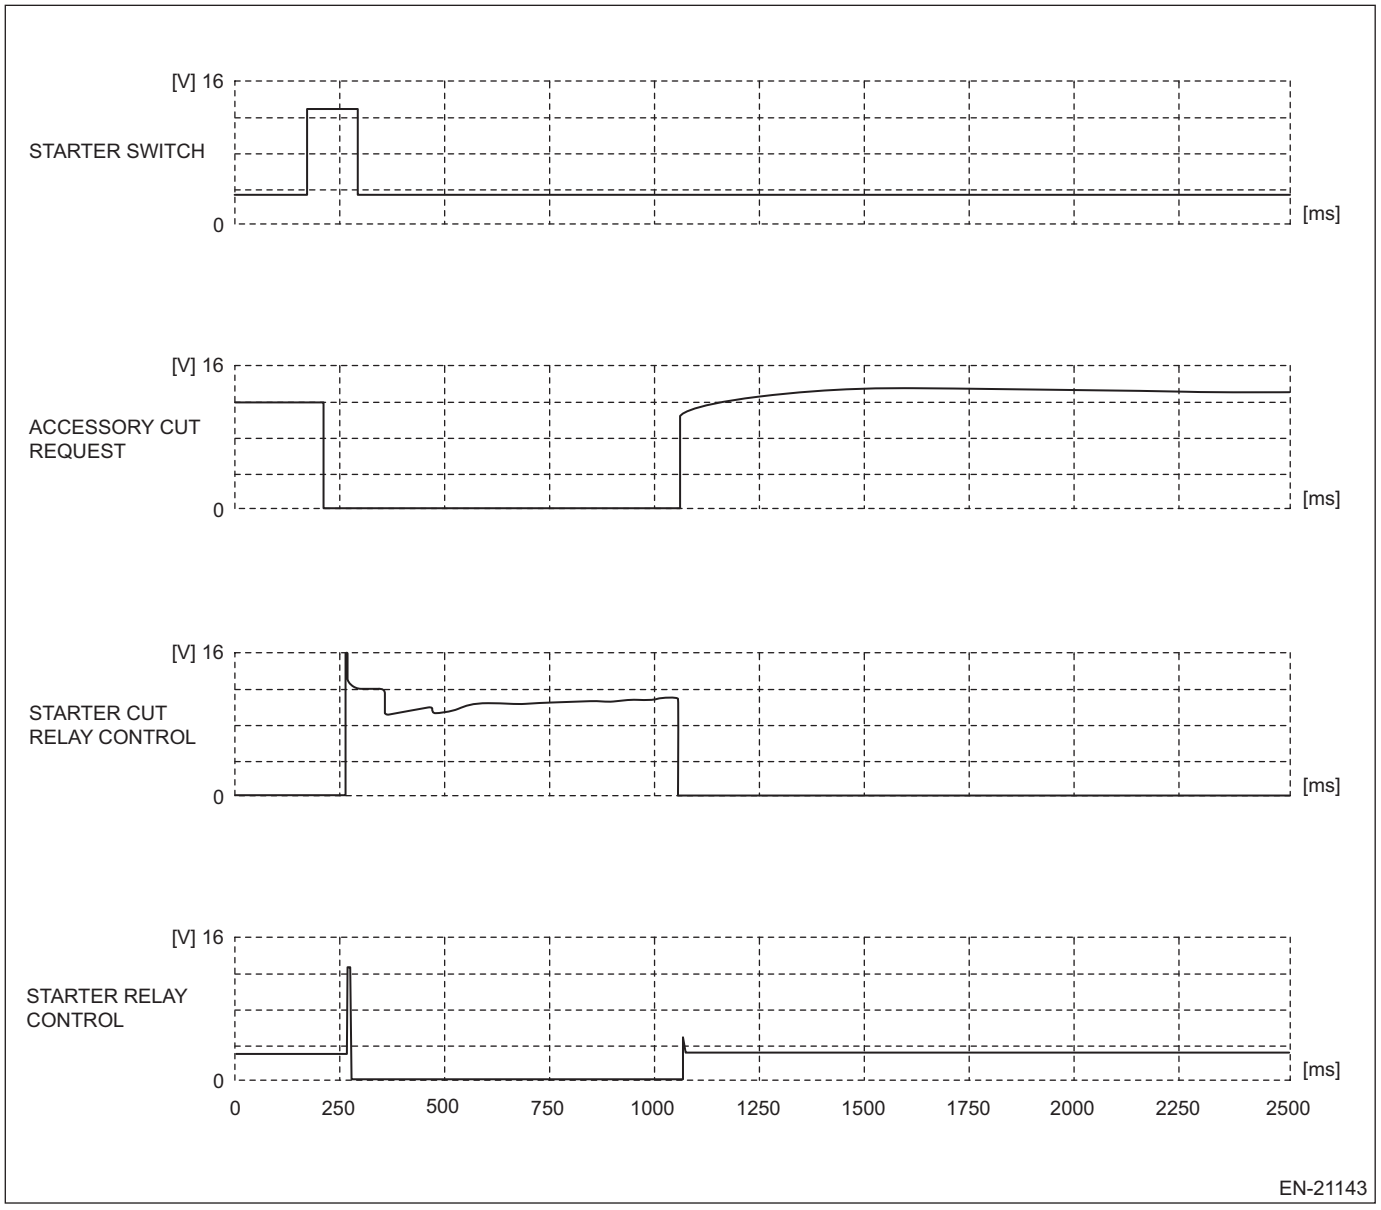
Measured terminal	Purge control solenoid valve 1 (E159) No. 4 (+) — Engine ground 3 (E159) No. 10 (–):
	Purge control solenoid valve 2 (E159) No. 12 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	During execution of active test using Subaru Select Monitor

10.Waveform 10



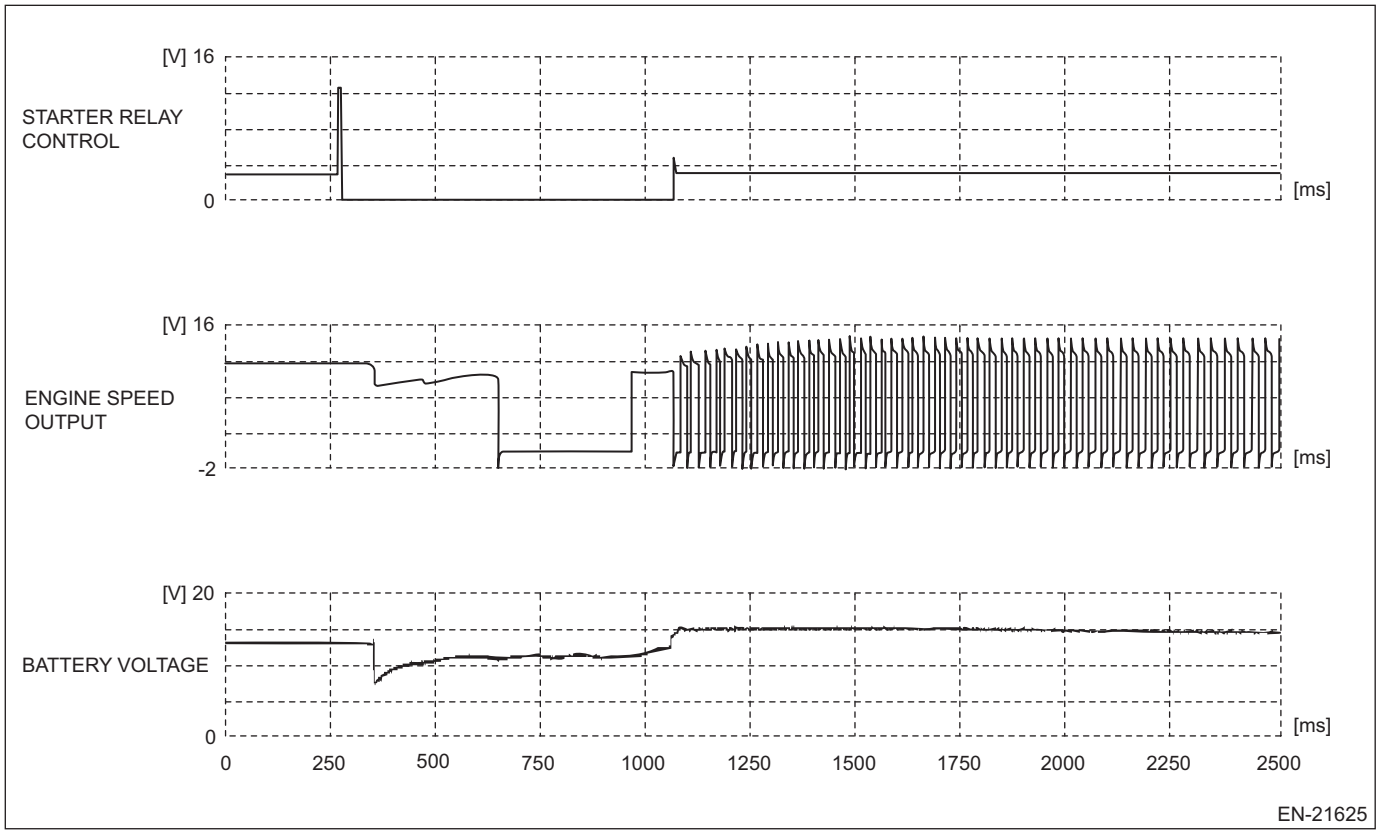
Measured terminal	Crankshaft position sensor (+) signal (E158) No. 19 (+) — Engine ground 3 (E159) No. 10 (–):
	Ignition control #1 (E159) No. 8 (+) — Engine ground 3 (E159) No. 10 (–):
	Ignition control #2 (E159) No. 16 (+) — Engine ground 3 (E159) No. 10 (–):
	Ignition control #3 (E159) No. 24 (+) — Engine ground 3 (E159) No. 10 (–):
	Ignition control #4 (E159) No. 32 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	While engine idling

11.Waveform 11



Measured terminal	Starter switch (B134) No. 45 (+) — Engine ground 3 (E159) No. 10 (–):
	Accessory cut request (B134) No. 2 (+) — Engine ground 3 (E159) No. 10 (–):
	Starter cut relay control (B134) No. 13 (+) — Engine ground 3 (E159) No. 10 (–):
	Starter relay control (B134) No. 14 (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	When engine is started

12.Waveform 12



Measured terminal	Starter relay control (B134) No. 14 (+) — Engine ground 3 (E159) No. 10 (–):
	Engine speed output (B134) No. 4 (+) — Engine ground 3 (E159) No. 10 (–):
	Battery voltage (battery terminal) (+) — Engine ground 3 (E159) No. 10 (–):
Measuring condition	When engine is started

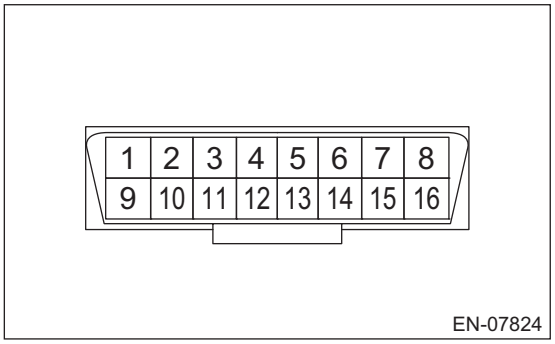
6. Data Link Connector

A: NOTE

This connector is used for Subaru Select Monitor.

CAUTION:
Do not connect any scan tools other than Subaru Select Monitor or general scan tool because the circuit for Subaru Select Monitor may be damaged.



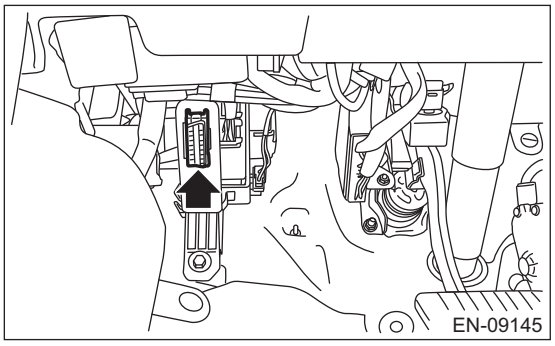
Terminal No.	Contents	Terminal No.	Contents
1	Blank	9	Blank
2	Blank	10	Blank
3	Blank	11	Blank
4	Ground	12	Blank
5	Ground	13	Blank
6	CAN communication (Hi)	14	CAN communication (Lo)
7	Blank	15	A/B batch operation
8	IG	16	Power supply

7. General Scan Tool

A: OPERATION

1. HOW TO USE GENERAL SCAN TOOL

1) Prepare a scan tool (general scan tool) required by SAE J1978.
2) Connect the general scan tool to data link connector located in the lower portion of the instrument panel (on the driver's side).



3) Using the general scan tool, call up each data. General scan tool functions consist of:
   (1) MODE $01: Current powertrain diagnostic data
   (2) MODE $02: Powertrain freeze frame data
   (3) MODE $03: Emission-related powertrain DTC
   (4) MODE $04: Clear/Reset emission-related diagnostic information
   (5) MODE $06: Request on-board monitoring test results for continuously monitored systems
   (6) MODE $07: Initial emission-related powertrain DTC
   (7) MODE $08: Request control for on-board system, test, and component
   (8) MODE $09: Request vehicle information
   (9) MODE $0A: Emission-related DTC (with Permanent Status)
4) Read out the data according to repair procedures. (For detailed operation procedures, refer to the general scan tool operation manual.)

NOTE:
For details concerning DTC, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit
$01	Number of emission-related powertrain DTC, and malfunction indicator light status and diagnosis support information	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	°C
$06	Short term fuel trim	%
$07	Long term fuel trim	%
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH
$0E	Ignition timing advance	°
$10	Intake air amount	g/s
$11	Throttle valve absolute opening angle	%
$13	Check whether oxygen sensor is installed.	—

PID	Data	Unit
$15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor	V and %
$1C	Supporting OBD system	—
$1F	Elapsed time after starting the engine	sec
$21	Running distance after MIL turns on	miles
$24	A/F value and A/F sensor output voltage	– and V
$2C	Target EGR	%
$2D	EGR error	%
$2E	Evaporative purge	%
$2F	Fuel level	%
$30	Number of warm ups after DTC clear	—
$31	Travel distance after DTC clear	miles
$33	Barometric pressure	kPa
$34	A/F value and A/F sensor output current	– and mA
$3C	Catalyst temperature	°C
$41	Diagnostic monitor of each drive cycle	—
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%
$46	Ambient temperature	°C
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$4D	Engine operating time while MIL lit	min
$4E	Elapsed time after DTC clear	min
$51	Fuel used	—
$53	ELCM pressure	kPa
$5A	Relative accelerator opening angle	%
$5C	Engine oil temperature	°C
$65	Neutral status	—
$68	Intake air temperature	°C
$6D	Fuel pressure and target fuel pressure	kPa

NOTE:
Refer to general scan tool manufacturer's operation manual to access current powertrain diagnostic data (MODE $01).

3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)

Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system.
A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit
$02	DTC that caused freeze frame data to be stored	—
$03	Fuel system control status	—
$04	Calculated engine load value	%
$05	Engine coolant temperature	°C
$06	Short term fuel trim	%
$07	Long term fuel trim	%
$0B	Intake manifold absolute pressure	kPa
$0C	Engine speed	rpm
$0D	Vehicle speed	MPH

PID	Data	Unit
$0E	Ignition timing advance	°
$10	Intake air amount	g/s
$11	Throttle valve absolute opening angle	%
$13	Air fuel ratio sensor	—
$15	Rear oxygen sensor voltage, compensation value	V and %
$1C	Supporting OBD system	–
$1F	Elapsed time after starting the engine	sec
$24	A/F value and A/F sensor output voltage	– and V
$2C	Target EGR	%
$2D	EGR error	%
$2E	Evaporative purge	%
$2F	Fuel level	%
$33	Barometric pressure	kPa
$42	ECM power voltage	V
$43	Absolute load	%
$44	A/F target lambda	—
$45	Relative throttle opening angle	%
$46	Ambient temperature	°C
$47	Absolute throttle opening angle 2	%
$49	Absolute accelerator opening angle 1	%
$4A	Absolute accelerator opening angle 2	%
$4C	Target throttle opening angle	%
$65	Neutral status	—
$68	Intake air temperature	°C
$6D	Fuel pressure and target fuel pressure	kPa

NOTE:
Refer to general scan tool manufacturer's operation manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to "List of Diagnostic Trouble Code (DTC)" for information about data denoting emission-related powertrain DTC. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refer to the mode used to clear or reset emission-related diagnostic information.

NOTE:
- Refer to the manufacturer's operation manual for the general scan tool to clear the emission-related diagnostic information (MODE $04).
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

6. MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS)

Refer to diagnostic value of troubleshooting and data of test limit indicated on the support data bit sequence table. A list of the support data is shown in List 1.

NOTE:
- Subaru Select Monitor

For detailed operation procedures, refer to "Application help".
- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.
- Some items are not displayed according to the specifications.

- Measurement items for each DTC of “VVT Monitor Bank 1” and “VVT Monitor Bank 2”

A list of the measurement items is shown in List 2. (Used to check on-board monitor test results of DTC P000A, P000B, P000C, P000D, P0011, P0014, P0016, P0017, P0018, P0019, P0021 and P0024.)
List 1

OBDMID	TID	SID	Diagnostic item
$01	$84	$1E	A/F sensor range failure (Bank 1 Sensor 1)
	$85	$1E	
	$91	$20	A/F sensor response failure (Bank 1 Sensor 1)
	$92	$10

	$8C	$9D	
	$8D	$9D	
	$8E	$9D	

7. MODE $07 (INITIAL EMISSION-RELATED POWERTRAIN DTC)

Refer to the data of DTC (temporary code) for troubleshooting result about emission in the first time.

8. MODE $08 (REQUEST CONTROL FOR ON-BOARD SYSTEM, TEST, AND COMPONENT)

Perform “Active Test” of the on-board system.

9. MODE $09 (REQUEST VEHICLE INFORMATION)

Refer to the data of the vehicle specification.

10.MODE $0A (EMISSION-RELATED DTC (WITH PERMANENT STATUS))

Refer to “List of Diagnostic Trouble Code (DTC)” for information about data denoting emission-related DTC.
<Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>

8. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

NOTE:
For detailed operation procedures, refer to “Application help”.

2. DISPLAY CURRENT ENGINE DATA

NOTE:
- For detailed operation procedures, refer to “Application help”.
- A list of the support data is shown in the following table.
- *: For models without cruise control, the brake switch signal does not change.

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

Display	Contents	Note (at idling)	Unit
Engine RPM	Value calculated from crankshaft position sensor output value.	729	rpm
Mass Air Flow	Value calculated from air flow sensor output value.	2.4 or 0.3	g/s or lb/min
Vehicle Speed	Value calculated from vehicle speed sensor output value.	0	km/h or MPH
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	12	%
Accelerator Opening Angle	Accelerator pedal opening angle (in percentage) calculated from accelerator pedal position sensor output value.	0	%
A/F Sensor #1	Actual lambda value calculated from front oxygen (A/F) sensor output value.	1.01	—
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	6	°
Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	92 or 198	°C or °F
Fuel Injection #1 Pulse	Control value of fuel injection time for the RH bank by ECM.	0.51	ms
Short Term Fuel Trim-Bank1	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	0.8	%
Long Term Fuel Trim-Bank1	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	3.1	%
Learned Ignition Timing	Ignition timing learning value. Advance angle amount or retard angle amount when knocking occurs.	0	deg
Intake Manifold Absolute Pressure	Value calculated from the manifold pressure sensor.	26, 195, 7.7, 3.8 or 104.4	kPa, mmHg, inHg, psi or inH2O
Oxygen sensor #12	Rear oxygen sensor output voltage value.	0.895	V
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	0	deg
VVT Advance Target Angle Amount R	AVCS target advance angle amount for the RH bank on the intake side. This value is compared with the AVCS advance angle amount R to judge if the intake AVCS is operating properly. Response delays during the transition time.	0	deg

Display	Contents	Note (at idling)	Unit
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	0	deg
VVT Advance Target Angle Amount L	AVCS target advance angle amount for the LH bank on the intake side. This value is compared with the AVCS advance angle amount L to judge if the intake AVCS is operating properly. Response delays during the transition time.	0	deg
Exh. VVT Retard Ang. R	AVCS actual retard angle amount for the RH bank on the exhaust side.	0	deg
Ex VVT Retard Target Angle R	AVCS target retard angle amount for the RH bank on the exhaust side. This value is compared with the exhaust AVCS retard angle amount R to judge if the AVCS is operating properly. Response delays during the transition time.	0	deg
Exh. VVT Retard Ang. L	AVCS actual retard angle amount for the LH bank on the exhaust side.	0	deg
Ex VVT Retard Target Angle L	AVCS target retard angle amount for the LH bank on the exhaust side. This value is compared with the exhaust AVCS retard angle amount L to judge if the AVCS is operating properly. Response delays during the transition time.	0	deg
VVT Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	78.9	° CA
VVT Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the intake side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	82.4	° CA
VVT Ex Initial Position Learning Value #1	AVCS initial position learning value for the RH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	110.3	° CA
VVT Ex Initial Position Learning Value #2	AVCS initial position learning value for the LH bank on the exhaust side. Controls the angle against a standard angle. Deviation learning is performed based on this standard value.	108.9	° CA
Number of Cleaning Executions for VVT Self-recovery	Number of times that the intake AVCS oil control valve cleaning is performed.	—	times
Number of Cleaning Executions for Ex VVT Self-recovery	Number of times that the exhaust AVCS oil control valve cleaning is performed.	—	times
ECU ACC	ECM input power supply voltage.	13.924	V
Target engine speed	ECM target engine speed.	700	rpm
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1 aiming at a theoretical air fuel ratio.	0.999	—
Engine Oil Temperature	Value calculated from the engine oil temperature sensor output value.	96 or 205	°C or °F
IAT Sensor #11	Value calculated from the intake air temperature sensor output value of the air flow sensor.	50 or 120	°C or °F
IAT Sensor #12	Value calculated from the intake air temperature sensor output value of the manifold pressure sensor.	70 or 170	°C or °F

Display	Contents	Note (at idling)	Unit
Ambient temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	—	°C or °F
Calculated LOAD Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	21.2	%
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	17.3	%
Atmospheric Pressure	Value calculated from atmospheric pressure sensor output value.	99, 742.7, 29.2, 14.4 or 397.4	kPa, mmHg, inHg, psi or inH2O
Mani. Relative Pressure	Value calculated from manifold pressure sensor output value. (Absolute value) (Air intake absolute pressure – Atmospheric pressure)	(Intake Manifold Absolute Pressure – Atmospheric Pressure)	kPa, mmHg, inHg, psi or inH2O
Primary Control	Boost pressure control value. Control duty ratio of the boost pressure control solenoid valve. ECM output value.	0	%
Target Throttle Opening Angle	Target throttle opening angle calculated by ECM.	2	deg
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	2	deg
Target Throttle Opening Angle	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	3.1	%
Relative Throttle Pos.	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	2	%
Throttle Motor Voltage	Power supply voltage of the throttle motor. Input value to ECM.	13.8	V
Main-Throttle Sensor	Voltage value of the main throttle position sensor. Input value to ECM.	0.62	V
Sub-Throttle Sensor	Voltage value of the sub throttle position sensor. Input value to ECM.	0.6	V
Throttle Motor Duty	Throttle motor control duty ratio. ECM output value.	–33	%
Main-Accelerator Sensor	Voltage value of the main accelerator pedal position sensor. Input value to ECM.	0.68	V
Sub-Accelerator Sensor	Voltage value of the sub accelerator pedal position sensor. Input value to ECM.	0.68	V
Idle Mass Air Flow	Air volume correction value to maintain the target rotation speed in each water temperature. Corrects air volume when the water temperature changes. It includes values of the feedback correction amount and the learning value.	3 or 0.4	g/s or lb/min
Idle Mass Air Flow Feedback correct	Air volume compensation value of ISC as a feedback correction to stabilize the idling speed.	0	g/s or lb/min

Display	Contents	Note (at idling)	Unit
ISC Learning Value	Learning control value of ISC. After warming up, learning control is executed to reduce the ISC feedback correction to zero, in order to stabilize the engine speed.	0.55 or 0.07	g/s or lb/min
Idle A/C load correct	Air volume correction value when the air conditioner is turned on. ECM corrects the air volume against the target rotation speed when the air conditioner is turned ON.	0.86 or 0.11	g/s or lb/min
Electric Load Feedback Val	Air volume correction value when an electric load is turned on. ECM corrects the air volume against the set target rotation speed when the electric load is turned ON.	0.1 or 0.01	g/s or lb/min
Idle dirty throttle correct	Calculates the ISC learning values on a long-term basis, and judges as an ISC dirty throttle correction when the learning value increases gradually. When carbon or other dirt accumulates on the ISC throttle and make the throttle dirty, air volume decreases when the throttle is fully closed. The ECM increases the amount of compensation air to keep the rotation speed.	0	g/s or lb/min
Air Flow Sensor Voltage	Air flow sensor output value. Input value to ECM.	0.8	V
Fuel Rail Pressure A	Fuel pressure sensor output value set to the high pressure fuel line. Input value to ECM.	3,000, 22505.6, 886, 435 or 12043.4	kPa, mmHg, inHg, psi or inH2O
Commanded Fuel Rail Pressure A	Target fuel pressure for high pressure fuel line calculated by ECM.	3,000, 22505.6, 886, 435 or 12043.4	kPa, mmHg, inHg, psi or inH2O
Fuel Level	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	—	%
Fuel level resistance	Fuel level sensor resistance value. Input value to ECM.	—	Ω
Fuel Pump Duty	Fuel pump duty ratio. Supply voltage to the fuel pump is under a duty control by the ECM. This value shows the duty ratio. While the amount of fuel supply is small, such as during idling, the duty value is lowered to decrease the supply voltage.	65	%
Commanded Evap Purge	Evaporative purge rate displayed by the OBD.	0	%
CPC Valve Duty Ratio	Control duty ratio of the purge control solenoid valve. ECM output value.	0	%
Purge Density Learn Value	Leaning value of the evaporation gas density purged from the canister. ECM displays the estimated leaning value.	0	%
Evap Purge Flow	Purge ratio when the evaporation gas is purged from the canister. ECM performs a duty drive to the purge solenoid valve. The amount of gas actually purged will vary depending on the vacuum pressure difference before/after the solenoid valve. Purge ratio displayed here shows current purge amount in percentage against the maximum purge amount when the maximum vacuum pressure is applied.	0	%

Display	Contents	Note (at idling)	Unit
ALT Duty	Value calculated by the ECM as an electric power generation voltage. Indicator voltage value from ECM to alternator is under a duty control.	69	%
Alternator control mode	Control mode of the electric power generation voltage by the alternator. Low: Mode that controls the battery charge Mid: Mode where the battery is not charged and discharged High: Mode that fixes the voltage when the battery is charged or when an electric load is turned on ExHigh: Mode where the battery is charged during deceleration Smart: Mode that maintains target SOC and restrains unnecessary charging	High, Mid or Smart	—
Battery Terminal Voltage	Voltage value between battery terminals input from the battery sensor.	14	V
Battery Charge/Discharge Current	Battery charge/discharge current value input from the battery sensor. When the value is positive: The current flows to a direction that the battery is charged. When the value is negative: The current flows to a direction that the battery is discharged.	3.6	A
Estimated Battery Temperature	Battery temperature input from the battery sensor.	45 or 113	°C or °F
Remaining Battery Capacity	Remaining amount of battery estimated by ECM.	89	%
Knocking Correction	Retard angle amount when knocking occurs. Partially learning value of ignition timing learning value.	0	deg
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	Cl_normal	—
A/F Sensor #1 Current	Front oxygen (A/F) sensor output current value. Input value to ECM.	0	mA
A/F Sensor #1 Resistance	Value calculated from the front oxygen (A/F) sensor output value.	79	Ω
A/F Correction #3	Sub correction value of A/F feedback control.	–1.41	%
Front O2 Heater #1	Current value controlling the front oxygen (A/F) sensor heater. ECM output value.	0	A
Rear O2 Heater Current	Current value controlling the rear oxygen sensor heater. ECM output value.	0	A
No. of EGR steps	Number of EGR valve steps. Number of stepping motor steps. ECM output value.	0	STEP
Commanded EGR	Target value as EGR setting value calculated by ECM.	0	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive: It opens more than the target value. When the value is negative: It opens smaller than the target value.	0	%
TGV Position Sensor R	Tumble generator valve position sensor RH output value. Input value to ECM.	Close: 2.38 — 3.78 Open: 0.43 — 1.19	V

Display	Contents	Note (at idling)	Unit
TGV Position Sensor L	Tumble generator valve position sensor LH output value. Input value to ECM.	Close: 0.43 — 1.19 Open: 2.38 — 3.78	V
TGV Output	Drive signal to tumble generator valve motor. Set to “ON” when the tumble generator valve is activated (when the duty output is other than 0%). ECM output value.	OFF	—
TGV Drive	Tumble generator valve drive status. Set to “Open” when the tumble generator valve is open. ECM control status.	Close	—
OCV Duty R	Control duty ratio of the intake side oil control solenoid on the RH bank. ECM output value.	58.8	%
OCV Duty L	Control duty ratio of the intake side oil control solenoid on the LH bank. ECM output value.	58.4	%
OCV Current R	Actual current value of the intake side oil control solenoid on the RH bank. Input value to ECM.	704	mA
OCV Current L	Actual current value of the intake side oil control solenoid on the LH bank. Input value to ECM.	736	mA
Exh. OCV Duty R	Control duty ratio of the exhaust side oil control solenoid on the RH bank. ECM output value.	45.9	%
Exh. OCV Duty L	Control duty ratio of the exhaust side oil control solenoid on the LH bank. ECM output value.	45.9	%
Exh. OCV Current R	Actual current value of the exhaust side oil control solenoid on the RH bank. Input value to ECM.	544	mA
Exh. OCV Current L	Actual current value of the exhaust side oil control solenoid on the LH bank. Input value to ECM.	544	mA
Roughness Monitor #1	#1 cylinder roughness monitor count value.	0	—
Roughness Monitor #2	#2 cylinder roughness monitor count value.	0	—
Roughness Monitor #3	#3 cylinder roughness monitor count value.	0	—
Roughness Monitor #4	#4 cylinder roughness monitor count value.	0	—
Cylinder Monitor #1	Calculates the rotation speed between certain angles on the #1 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #2	Calculates the rotation speed between certain angles on the #2 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #3	Calculates the rotation speed between certain angles on the #3 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm
Cylinder Monitor #4	Calculates the rotation speed between certain angles on the #4 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	—	rpm

Display	Contents	Note (at idling)	Unit
Ignition SW ON Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	—	times
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned ON. Master integrated unit and ECM synchronize with the master time. When synchronized: “Common” When not synchronized: “Originally”	Common	—
Time Count	Time stamp information. Elapsed time after ignition ON. When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	—	ms
Time Since Engine Start	Elapsed time after starting the engine.	—	sec
Elapsed Time After Engine Run	Elapsed time after starting the engine. This value is used for control.	—	sec
Accumulation Time After Engine Run	Cumulative time after starting the engine. For models with Auto Start Stop, cumulative time after the first engine start. Time is not accumulated while the engine stops due to the Auto Start Stop system.	—	sec
Initial Engine Oil Temp.	Oil temperature when starting the engine, which is input to ECM from the oil temperature sensor.	—	°C or °F
Initial Engine Coolant Temp.	Water temperature when starting the engine, which is input to ECM from the water temperature sensor.	—	°C or °F
Initial Intake Air Temp.	Intake air temperature when starting the engine, which is input to ECM from the intake air temperature sensor.	—	°C or °F
Engine Starting Time	Time needed since the cranking started till the judgment of engine start is complete.	0	ms
Soak Time	The time the vehicle has been left since the engine stopped. This value can be used to check how long the vehicle has been left with the ignition switch ON after the engine stopped.	—	sec
Distance traveled since DTC(s) cleared	Travel distance after DTC clear.	—	km or mile
Engine run time while MIL is illuminated	Engine operating time from when the malfunction indicator light illuminated till when it went off.	—	min
Time since DTC(s) cleared	Elapsed time after DTC clear.	—	min
Number of Warm-ups since DTC(s) cleared	Number of warm ups after DTC clear. 1 cycle is the time from the cold start till warmed up and stop. (Engine start after a warm-up is not counted.)	—	times
Lighted MI lamp history	Travel distance after the warning light illuminated.	—	km or mile
Odometer	Value of the total cumulative travel distance that ECM calculates from the vehicle speed separately from the odometer in the combination meter. Small difference from the odometer will be possible, but if there is a big difference, ECM or the combination meter may need to be replaced.	—	km or mile

Display	Contents	Note (at idling)	Unit
Maximum Engine Speed at the time of Misfire detection caused by out of Fuel	Maximum engine speed during fuel cut by a fuel run-out judgment.	0	rpm
Maximum Intake Air Amount at the time of Misfire detection caused by out of Fuel	Maximum air amount during fuel cut by a fuel run-out judgment.	0	g/s or lb/min
Number of Misfire detection caused by out of Fuel	Number of the occurrences of fuel run-out judgment.	0	times
Estimated Total Mileage at the time of first Misfire detection caused by out of Fuel	Estimated cumulative travel distance during fuel cut by a fuel run-out judgment.	0	km or mile
Engine Speed at the time of Detection to avoid Preignition caused by out of Fuel	Engine speed at the time of pre-ignition avoidance judgment when the fuel runs out.	0	rpm
Intake Air Mass at the time of Detection to avoid Preignition caused by out of Fuel	Amount of air at the time of pre-ignition avoidance judgment when the fuel runs out.	0	g/s or lb/min
Number of Preignition Detection caused by out of Fuel	Number of the occurrences of pre-ignition avoidance judgment when the fuel runs out.	0	times
Estimated Total Mileage at the time of first Detection to avoid Preignition caused by out of Fuel	Estimated cumulative travel distance at the time of the first pre-ignition avoidance judgment when the fuel runs out.	0	km or mile
Status of Control to avoid Pre-Ignition caused by High Intake Air Temperature	Operation judgment of pre-ignition countermeasure control due to high intake air temperature.	OFF	—
Status of Control to avoid Pre-Ignition caused by Continuous Knocking	Operation judgment of pre-ignition countermeasure control due to continuous knocking occurrence.	OFF	—
Pre-Ignition Control (Detection) Operating Status	Operation judgment of countermeasure control at pre-ignition detection.	OFF	—
Estimated Total Mileage of Detection to avoid Pre-Ignition caused by High Intake Air Temperature	Travel distance during a pre-ignition countermeasure control operation due to high intake air temperature.	0	km or mile
Estimated Total Mileage of Detection to avoid Pre-Ignition caused by Continuous Knocking	Travel distance during a pre-ignition countermeasure control operation due to continuous knocking occurrence.	0	km or mile
Estimated Total Mileage Since Pre-Ignition Control (Detection) Operating	Estimated cumulative travel distance at pre-ignition detection.	0	km or mile
Number of Pre-Ignition Control (Prediction) Operating	Number of operations for pre-ignition predictive control.	0	times

Display	Contents	Note (at idling)	Unit
Number of Pre-Ignition Control (Detection) Operating	Number of operations for pre-ignition detection control.	0	times
Number of Pre-Ignition Control (Continuous Knock) Operation	Number of operations for pre-ignition countermeasure control due to continuous knocking occurrence.	0	times
Number of Pre-Ignition Control (LSPI) Operation	Number of torque guard operations at low speed pre-ignition detection.	0	times
Cruise control set status	Cruise control set status.	OFF	—
Cruise Control System Request Torque	Torque request by cruise control.	0	Nm
Driver's request torque	Torque request by accelerator pedal operation.	15.775	Nm
Fuel Cut Elps Time	Elapsed time after experienced high rotation speed.	0	sec
Memorized Cruise Speed	Cruise control system target vehicle speed. (Set speed)	0	km/h or MPH
Catalyst Temperature #11	Estimated temperature of the front catalytic converter.	259.5 or 499.1	°C or °F
Type of fuel	Fuel information recorded in the ECM. (It's not the fuel information currently used.)	GAS	—
AT drive status	Neutral condition. Information input from the inhibitor switch. (CVT model)	NEUT	—
MT gear status	Neutral condition. Information input from the neutral switch. (MT model)	NEUT	—
Evap System Vapor Pressure	Evaporative emission control system pressure value. Pressure sensor output value.	99, 742.7, 29.2, 14.4 or 397.4	kPa, mmHg, inHg, psi or inH2O
SI Drive mode(Display)	SI-DRIVE mode status. ECM output value. Displayed only on models with SI-DRIVE.	I, S or S#	—
Neutral switch	Neutral switch signal. Signal when in neutral (MT) or in P or N range (AT). Input value to ECM.	Neutral	—
ETC Motor Relay	Drive signal to the electronic throttle motor relay. Set to "ON" when the drive signal is output. ECM output value.	ON	—
Clutch switch	Clutch switch signal. Set to "ON" when the clutch switch is ON. (MT model)	OFF	—
Stop Light Switch	Stop light switch signal. Set to "ON" when the stop light illuminates. Input value to ECM.	OFF (when OFF)	—
Brake Switch	Brake switch signal. Set to "ON" when the brake pedal is depressed. Input value to ECM.	OFF (when OFF)	—
Idle Switch Signal	Idle signal. Set to "Idle" while idling.	Idle	—
Ignition SW	Ignition switch signal. Set to "ON" when the ignition switch is ON.	ON	—
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to "ON" when the switch is ON. Input value to ECM.	OFF (when OFF)	—
A/C Compressor Signal	A/C compressor drive signal. Set to "ON" when the drive signal is output. ECM output value.	OFF (when OFF)	—
Radiator Fan Relay #1	Radiator fan relay drive signal. Set to "ON" when the drive signal is output. ECM output value.	OFF (when OFF)	—

Display	Contents	Note (at idling)	Unit
Radiator Fan Relay #2	Radiator fan relay drive signal. Set to “ON” when the drive signal is output. ECM output value.	OFF (when OFF)	—
A/C Switch	Air conditioner switch signal. Set to “ON” when the air conditioner switch of the heater control is ON. Input value to ECM.	OFF (when OFF)	—
Starter Switch	Starter switch signal. Set to “ON” when the starter is ON. Input value to ECM.	OFF	—
Rear Defogger SW	Rear defogger switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Blower Fan SW	Blower fan switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Light Switch	Light switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Wiper Switch	Wiper switch input signal. Set to “ON” when the switch is ON. Input value to ECM.	OFF (when OFF)	—
Delivery Mode Connector	Delivery mode terminal fuse installation status. Shows the status of delivery mode.	OFF	—
Rear O2 Rich Signal	Rear oxygen sensor output value. Displays “Rich” when the air fuel ratio of rear oxygen sensor is rich. Displays “Lean” when the air fuel ratio of rear oxygen sensor is lean.	Rich	—
Knocking Signal	Knock sensor output signal. Judges if a knocking occurs or not. Input value to ECM.	OFF	—
Crankshaft Position Sig.	Crankshaft position sensor output signal. Set to “ON” when the engine is running. Input value to ECM.	ON	—
Camshaft Position Sig.	Camshaft position sensor output signal. Set to “ON” when the engine is running. ECM input value.	ON	—
CPC Solenoid 2	Drive status of the evaporative purge solenoid located upstream of the throttle, equipped with turbo models. ECM output value.	OFF	—
Ban of Torque Down VDC	Torque down prohibition notification signal to the vehicle dynamics control (VDC) module. Set to “OFF” when the prohibition signal is output. ECM output value.	ON	—
Request Torque Down VDC	Torque down request signal transmitted from the vehicle dynamics control (VDC) module. Set to “ON” when the request signal is sent. Vehicle dynamics control (VDC) module input value.	OFF	—
Torque Permission Signal	Torque down permission notification signal to the transmission control module. Set to “ON” when the permission signal is output. ECM output value. (CVT model)	OFF	—
SET/COAST Switch	Cruise control system SET/COAST SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—

Display	Contents	Note (at idling)	Unit
RESUME/ACCEL Switch	Cruise control system RESUME/ACCEL SW signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
Main switch	Cruise control system main switch signal. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
distance change SW	Distance change switch signal. Displayed only on models with EyeSight.	OFF (when OFF)	—
CC Cancel SW	Cruise control cancel switch signal of the cruise control system. Set to “ON” when the switch is operated. Input value to ECM.	OFF (when OFF)	—
All Cylinders Fuel cut	Status under the fuel injection amount control where the fuel injection is cut off in all cylinders.	OFF	—
Immobilizer Fuel Cut Status	Status where the fuel injection is cut off by the command from immobilizer.	OFF	—
Shift Pattern Demand for Low Water Temperature	Shift pattern request sent from ECM to the transmission CM. When the water temperature is low, shift pattern change to the low speed side is requested to raise the catalyst temperature faster. (CVT model)	OFF	—
Oil level switch	Oil level switch signal. Set to “LOW level” when the amount of engine oil decreases. Input value to ECM.	HIGH level	—
ELCM switching valve	Leak check valve assembly switching valve drive signal. Set to “Close” when closing the switching valve. ECM output value.	Open	—
ELCM pump	Leak check valve assembly pump drive signal. Set to “ON” when the leak check valve assembly decompression pump is activated. ECM output value.	OFF	—
AT turbine speed	Turbine rotation speed of the transmission. Turbine rotation speed is input from the transmission CM via CAN. (CVT model)	900	rpm
Lock Up Status	Lock-up status of the transmission. Lock up status is input from the transmission CM via CAN. (CVT model)	OPEN	—
P/N Signal	P/N status of the transmission. P/N range status is input from the transmission CM via CAN. (CVT model)	—	—
Blow-by leak Connector	PCV hose assembly diagnosis signal.	Connection	—
Ignition Control Check 1	Detailed status of the engine ignition control information.	90	—
Ignition Control Check 2	Detailed status of the engine ignition control information.	75	—
Alternator control check 1	Detailed status of charge control.	91	—
Alternator control check 2	Detailed status of charge control.	90.1	—
Alternator control check 3	Detailed status of charge control.	10.350	—
Alternator control check 4	Detailed status of charge control.	8.970	—
Alternator control check 5	Detailed status of charge control.	100	—
Alternator control check 6	Detailed status of charge control.	0	—

Display	Contents	Note (at idling)	Unit
Alternator control check 7	Detailed status of charge control.	14.2	—
Alternator control check 8	Detailed status of charge control.	64	—
Alternator control check 9	Detailed status of charge control.	0	—
Alternator control check 10	Detailed status of charge control.	2	—
MIL Status	Malfunction indicator light illumination status. When judged as abnormal, an illumination command signal is sent from ECM to the combination meter.	OFF	—
Number of Diagnostic Code(s):	The number of trouble codes recorded in the ECM.	0	—
O2 Sensor #11	Installation status of the front oxygen sensor.	Support	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	Support	—
Short term fuel trim #12	Air fuel ratio correction control value for the rear.	0	%
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	1.007	—
A/F Sensor #11	Front oxygen (A/F) sensor current value.	0	mA
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	1.007	—
A/F Sensor #11	Front oxygen (A/F) sensor output voltage.	2.329	V
Absolute Throttle Pos.#2	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	12.2	%
Accelerator Pedal Pos.#1	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	14.1	%
Accelerator Pedal Pos.#2	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	13.7	%
Relative Accelerator Pos.	Accelerator opening angle with a full close point learning value taken into consideration.	0	%
Misfire monitoring(Supp)	Support status of the misfire diagnosis.	YES	—
Misfire monitoring(Rdy)	Status of the misfire diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Fuel system monitoring(Supp)	Support status of the fuel system diagnosis.	YES	—
Fuel system monitoring(Rdy)	Status of the fuel system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Component monitoring(Supp)	Support status of the component diagnosis.	YES	—
Component monitoring(Rdy)	Status of the component diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Catalyst Diagnosis(Supp)	Support status of the catalyst diagnosis.	YES	—
Catalyst Diagnosis(Rdy)	Status of the catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Heated catalyst(Supp)	Support status of the heated catalyst diagnosis.	NO	—
Heated catalyst(Rdy)	Status of the heated catalyst diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Supp)	Support status of the evaporative purge system diagnosis.	NO	—

Display	Contents	Note (at idling)	Unit
Evaporative purge system(Rdy)	Status of the evaporative purge system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Secondary air system(Supp)	Support status of the secondary air system diagnosis.	NO	—
Secondary air system(Rdy)	Status of the secondary air system diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
A/C system refrigerant(Supp)	Support status of the A/C system refrigerant diagnosis.	NO	—
A/C system refrigerant(Rdy)	Status of the A/C system refrigerant diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor(Supp)	Support status of the oxygen sensor diagnosis.	YES	—
Oxygen sensor(Rdy)	Status of the oxygen sensor diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
O2 Heater Diagnosis(Supp)	Support status of the oxygen sensor heater diagnosis.	YES	—
O2 Heater Diagnosis(Rdy)	Status of the oxygen sensor heater diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
EGR system(Supp)	Support status of the EGR diagnosis.	YES	—
EGR system(Rdy)	Status of the EGR diagnosis. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Misfire monitoring(Enable)	Shows whether or not the execution condition of misfire diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Misfire monitoring(Comp)	Shows whether or not the continuous misfire diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Fuel system monitoring(Enable)	Shows whether or not the execution condition of fuel system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Fuel system monitoring(Comp)	Shows whether or not the fuel system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	YES	—
Component monitoring(Enable)	Shows whether or not the execution condition of component diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Comprehensive component monitoring completed	Shows whether or not the component diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—

Display	Contents	Note (at idling)	Unit
Catalyst monitoring	Shows whether or not the execution condition of catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Catalyst Diagnosis(Comp)	Shows whether or not the catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
Heated catalyst(Enable)	Shows whether or not the execution condition of heated catalyst diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Heated catalyst(Comp)	Shows whether or not the heated catalyst diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Evaporative purge system(Enable)	Shows whether or not the execution condition of evaporative purge system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Evaporative purge system(Comp)	Shows whether or not the evaporative purge system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Secondary air system(Enable)	Shows whether or not the execution condition of the secondary air system diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
Secondary air system(Comp)	Shows whether or not the secondary air system diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
A/C system refrigerant(Enable)	Shows whether or not the execution condition of A/C system refrigerant diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	N/A	—
A/C system refrigerant(Comp)	Shows whether or not the A/C system refrigerant diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	N/A	—
Oxygen sensor(Enable)	Shows whether or not the execution condition of oxygen sensor diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
Oxygen sensor(Comp)	Shows whether or not the oxygen sensor diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
O2 Heater Diagnosis(Enable)	Shows whether or not the execution condition of oxygen heater diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—

Display	Contents	Note (at idling)	Unit
O2 Heater Diagnosis(Comp)	Shows whether or not the oxygen heater diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
EGR system(Enable)	Shows whether or not the execution condition of EGR diagnosis is met. YES: Diagnosis can be executed. NO or N/A: Diagnosis cannot be executed or is not supported.	YES	—
EGR system(Comp)	Shows whether or not the EGR diagnosis is completed. YES or N/A: Diagnosis is completed or not supported. NO: Diagnosis is not completed.	NO	—
OBD System	Shows the OBD regulation to be followed. This is the information recorded in the ECM, and it does not mean that the unit automatically judges the compliance to the OBD regulations.	OBD/OBD2	—

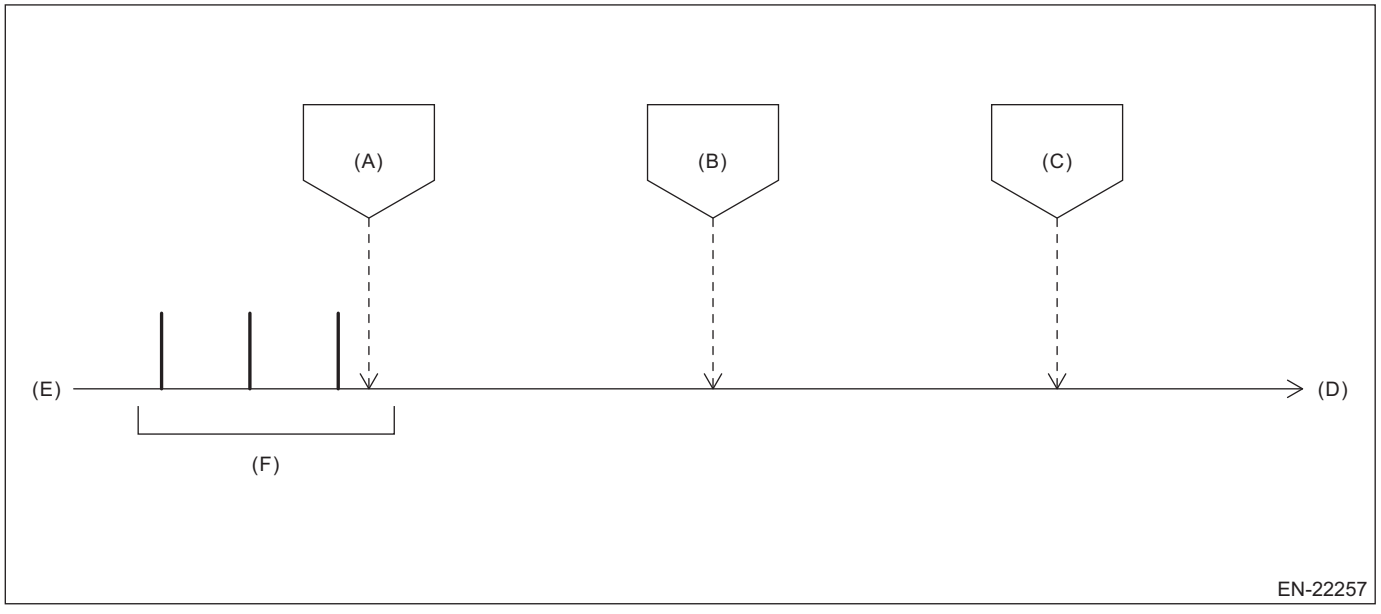
3. DISPLAY OF ENGINE FREEZE FRAME DATA

1. Freeze frame data

ECM records engine condition at the time when DTC is detected. (Freeze frame data)
The freeze frame data is recorded for up to the second detected DTC, but not for the third detected DTC and later.

NOTE:

- The freeze frame data is recorded at the same time when DTC is detected, and therefore cannot be always monitored.
- Time-series freeze frame data is recorded for the first detected DTC.
- When performing diagnosis, you can utilize the freeze frame data to guess the vehicle status when the DTC was detected.
- For detailed operation procedures, refer to “Application help”.

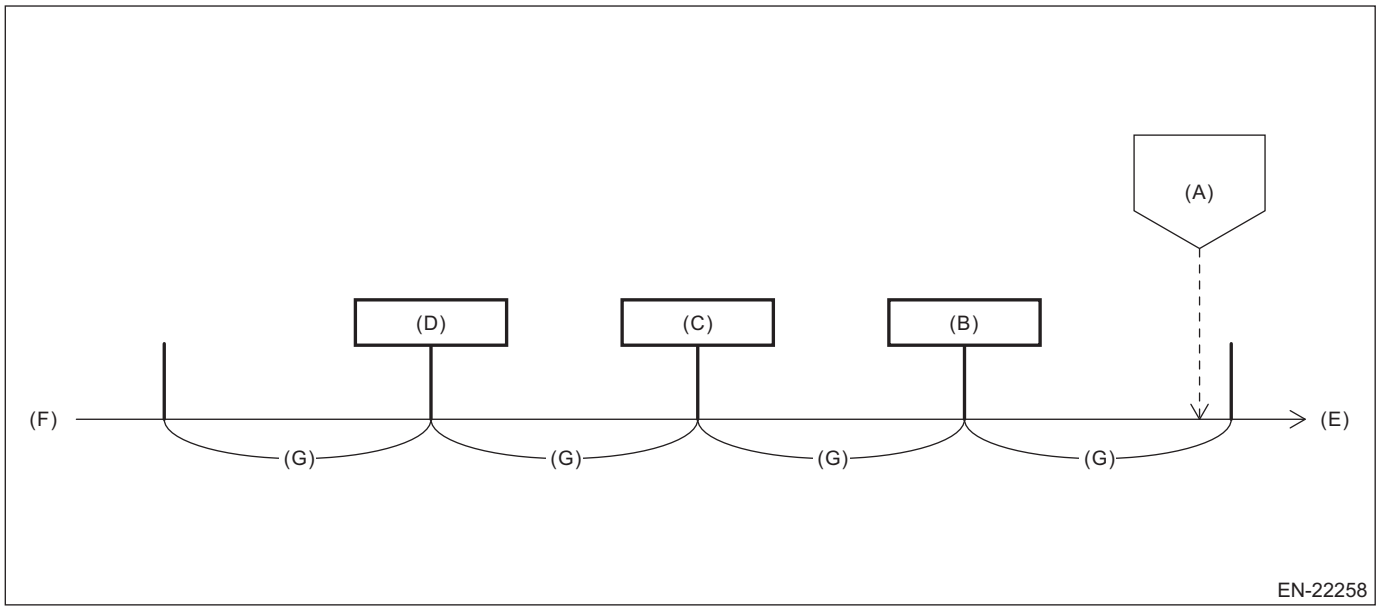


(A) First detected DTC
(B) Second detected DTC
(C) Third detected DTC or later
(D) Current
(E) Past
(F) Time-series freeze frame data

2. Time-series freeze frame data

ECM obtains the freeze frame data every 0.5 seconds, and when DTC is detected, the following freeze frame data are stored: «Detect», «1 block before», «2 blocks before», and «3 blocks before». (Time-series freeze frame data)

NOTE:
- When performing diagnosis, you can utilize the time-series freeze frame data to check data change status from DTC detection to three times before when the DTC was detected.
- For detailed operation procedures, refer to “Application help”.



(A) «When detected»
(B) «Previous time»
(C) «Two times before»
(D) «Three times before»
(E) Current
(F) Past
(G) 0.5 seconds

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Select «FFD» of the DTC displayed in «DTC».

Display	Contents	Unit
Engine RPM	Value calculated from crankshaft position sensor output value.	rpm
Mass Air Flow	Value calculated from air flow sensor output value.	g/s or lb/min
Vehicle Speed	Value calculated from vehicle speed sensor output value.	km/h or MPH
Throttle Opening Angle	Throttle valve opening angle (in percentage) calculated from throttle position sensor output value.	%
Ignition Timing Advance for #1 Cylinder	Ignition timing control value for No. 1 cylinder. Calculated from rotation speed, manifold pressure, intake air temperature, water temperature, and data from knock sensor etc.	°
Coolant Temperature	Value calculated from engine coolant temperature sensor output value.	°C or °F
Short Term Fuel Trim-Bank1	Air fuel ratio correction control value for the front oxygen (A/F) sensor.	%
Long Term Fuel Trim-Bank1	Air fuel ratio learning control value for the front oxygen (A/F) sensor.	%
Intake Manifold Absolute Pressure	Value calculated from the manifold pressure sensor.	kPa, mmHg, inHg, psi or inH2O
Oxygen sensor #12	Rear oxygen sensor output voltage value.	V
VVT Adv. Ang. Amount R	AVCS advance angle amount for the RH bank on the intake side.	deg

Display	Contents	Unit
VVT Advance Target Angle Amount R	AVCS target advance angle amount for the RH bank on the intake side. This value is compared with the AVCS advance angle amount R to judge if the intake AVCS is operating properly. Response delays during the transition time.	deg
VVT Adv. Ang. Amount L	AVCS advance angle amount for the LH bank on the intake side.	deg
VVT Advance Target Angle Amount L	AVCS target advance angle amount for the LH bank on the intake side. This value is compared with the AVCS advance angle amount L to judge if the intake AVCS is operating properly. Response delays during the transition time.	deg
Exh. VVT Retard Ang. R	AVCS actual retard angle amount for the RH bank on the exhaust side.	deg
Ex VVT Retard Target Angle R	AVCS target retard angle amount for the RH bank on the exhaust side. This value is compared with the exhaust AVCS retard angle amount R to judge if the AVCS is operating properly. Response delays during the transition time.	deg
Exh. VVT Retard Ang. L	AVCS actual retard angle amount for the LH bank on the exhaust side.	deg
Ex VVT Retard Target Angle L	AVCS target retard angle amount for the LH bank on the exhaust side. This value is compared with the exhaust AVCS retard angle amount L to judge if the AVCS is operating properly. Response delays during the transition time.	deg
Number of Cleaning Executions for VVT Self-recovery	Number of times that the intake AVCS oil control valve cleaning is performed.	times
Number of Cleaning Executions for Ex VVT Self-recovery	Number of times that the exhaust AVCS oil control valve cleaning is performed.	times
ECU ACC	ECM input power supply voltage.	V
Target Equivalence Ratio	Target air fuel ratio. (Lambda) It usually becomes 1 aiming at a theoretical air fuel ratio.	—
Engine Oil Temperature	Value calculated from the engine oil temperature sensor output value.	°C or °F
IAT Sensor #11	Value calculated from the intake air temperature sensor output value of the air flow sensor.	°C or °F
IAT Sensor #12	Value calculated from the intake air temperature sensor output value of the manifold pressure sensor.	°C or °F
Ambient temperature	Value that ECM estimates by using input values from the engine coolant temperature sensor or the intake air temperature sensor etc.	°C or °F
Calculated LOAD Value	Current rate of air amount. Value assuming that the air amount at the current engine speed with the throttle fully open is 100%.	%
Absolute Load Value	Percentage of current intake air amount against the maximum air intake amount of the engine. For non-turbo engine, the value can be close to 95%, but will never be 100%. For turbo engine, this value may exceed 100% due to a boost pressure.	%
Atmospheric Pressure	Value calculated from atmospheric pressure sensor output value.	kPa, mmHg, inHg, psi or inH2O
Actual Throttle Opening Angle	Actual throttle opening angle. Calculated by ECM based on the throttle sensor input value.	deg

Display	Contents	Unit
Target Throttle Act. Cont.	Control value of the target throttle opening angle calculated by ECM. Target value of opening angle in percentage when 0% means fully closed and 100% means fully open.	%
Relative Throttle Pos.	Current throttle opening angle in percentage against the throttle voltage (full range) that has reflected the full close point learning value. The value will be approx. 70% at full open.	%
Idle Mass Air Flow	Air volume correction value to maintain the target rotation speed in each water temperature. Corrects air volume when the water temperature changes. It includes values of the feedback correction amount and the learning value.	g/s or lb/min
Idle Mass Air Flow Feedback correct	Air volume compensation value of ISC as a feedback correction to stabilize the idling speed.	g/s or lb/min
ISC Learning Value	Learning control value of ISC. After warming up, learning control is executed to reduce the ISC feedback correction to zero, in order to stabilize the engine speed.	g/s or lb/min
Idle A/C load correct	Air volume correction value when the air conditioner is turned on. ECM corrects the air volume against the target rotation speed when the air conditioner is turned ON.	g/s or lb/min
Electric Load Feedback Val	Air volume correction value when an electric load is turned on. ECM corrects the air volume against the set target rotation speed when the electric load is turned ON.	g/s or lb/min
Idle dirty throttle correct	Calculates the ISC learning values on a long-term basis, and judges as an ISC dirty throttle correction when the learning value increases gradually. When carbon or other dirt accumulates on the ISC throttle and make the throttle dirty, air volume decreases when the throttle is fully closed. The ECM increases the amount of compensation air to keep the rotation speed.	g/s or lb/min
Fuel Rail Pressure A	Fuel pressure sensor output value set to the high pressure fuel line. Input value to ECM.	kPa, mmHg, inHg, psi or inH2O
Commanded Fuel Rail Pressure A	Target fuel pressure for high pressure fuel line calculated by ECM.	kPa, mmHg, inHg, psi or inH2O
Fuel Level	Fuel level sensor output value. Input value to ECM. Total value of main and sub.	%
Fuel level resistance	Fuel level sensor resistance value. Input value to ECM.	Ω
Fuel Pump Duty	Fuel pump duty ratio. Supply voltage to the fuel pump is under a duty control by the ECM. This value shows the duty ratio. While the amount of fuel supply is small, such as during idling, the duty value is lowered to decrease the supply voltage.	%
Commanded Evap Purge	Evaporative purge rate displayed by the OBD.	%
Purge Density Learn Value	Leaning value of the evaporation gas density purged from the canister. ECM displays the estimated leaning value.	%
Evap Purge Flow	Purge ratio when the evaporation gas is purged from the canister. ECM performs a duty drive to the purge solenoid valve. The amount of gas actually purged will vary depending on the vacuum pressure difference before/after the solenoid valve. Purge ratio displayed here shows current purge amount in percentage against the maximum purge amount when the maximum vacuum pressure is applied.	%

Display	Contents	Unit
Alternator control mode	Control mode of the electric power generation voltage by the alternator. Low: Mode that controls the battery charge Mid: Mode where the battery is not charged and discharged High: Mode that fixes the voltage when the battery is charged or when an electric load is turned on ExHigh: Mode where the battery is charged during deceleration Smart: Mode that maintains target SOC and restrains unnecessary charging	—
Battery Terminal Voltage	Voltage value between battery terminals input from the battery sensor.	V
Battery Charge/Discharge Current	Battery charge/discharge current value input from the battery sensor. When the value is positive: The current flows to a direction that the battery is charged. When the value is negative: The current flows to a direction that the battery is discharged.	A
Estimated Battery Temperature	Battery temperature input from the battery sensor.	°C or °F
Remaining Battery Capacity	Remaining amount of battery estimated by ECM.	%
Fuel system for Bank 1	Feedback status of air fuel ratio. Open: Feedback is stopped Closed: Feedback control is being performed	—
A/F Sensor #1 Resistance	Value calculated from the front oxygen (A/F) sensor output value.	Ω
Commanded EGR	Target value as EGR setting value calculated by ECM.	%
EGR Error	Percentage of the difference in actual EGR steps as compared to the target EGR steps. Both a positive value and a negative value mean that it doesn't fulfill the target. When the value is positive: It opens more than the target value. When the value is negative: It opens smaller than the target value.	%
Cylinder Monitor #1	Calculates the rotation speed between certain angles on the #1 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm
Cylinder Monitor #2	Calculates the rotation speed between certain angles on the #2 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm
Cylinder Monitor #3	Calculates the rotation speed between certain angles on the #3 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm
Cylinder Monitor #4	Calculates the rotation speed between certain angles on the #4 cylinder. If the rotation speed is low compared to monitor values of other cylinders, it means that the combustion is not ideal in that cylinder.	rpm
Ignition SW ON Count	Time stamp information. Number of times the ignition is ON since the vehicle was manufactured. The number of ignition ON is also recorded when a trouble code is recorded, so the comparison with that number will show you how many times the ignition has turned on since the diagnostic code was recorded.	times

Display	Contents	Unit
Count	Time stamp information. Each unit individually counts the elapsed time since the ignition is turned ON. Master integrated unit and ECM synchronize with the master time. When synchronized: “Common” When not synchronized: “Originally”	—
Time Count	Time stamp information. Elapsed time after ignition ON. When a trouble code is recorded, the elapsed time after ignition ON is also recorded.	ms
Time Since Engine Start	Elapsed time after starting the engine.	sec
Initial Engine Oil Temp.	Oil temperature when starting the engine, which is input to ECM from the oil temperature sensor.	°C or °F
Initial Engine Coolant Temp.	Water temperature when starting the engine, which is input to ECM from the water temperature sensor.	°C or °F
Initial Intake Air Temp.	Intake air temperature when starting the engine, which is input to ECM from the intake air temperature sensor.	°C or °F
Engine Starting Time	Time needed since the cranking started till the judgment of engine start is complete.	ms
Soak Time	The time the vehicle has been left since the engine stopped. This value can be used to check how long the vehicle has been left with the ignition switch ON after the engine stopped.	sec
Maximum Engine Speed at the time of Misfire detection caused by out of Fuel	Maximum engine speed during fuel cut by a fuel run-out judgment.	rpm
Maximum Intake Air Amount at the time of Misfire detection caused by out of Fuel	Maximum air amount during fuel cut by a fuel run-out judgment.	g/s or lb/min
Number of Misfire detection caused by out of Fuel	Number of the occurrences of fuel run-out judgment.	times
Estimated Total Mileage at the time of first Misfire detection caused by out of Fuel	Estimated cumulative travel distance during fuel cut by a fuel run-out judgment.	km or mile
Engine Speed at the time of Detection to avoid Preignition caused by out of Fuel	Engine speed at the time of pre-ignition avoidance judgment when the fuel runs out.	rpm
Intake Air Mass at the time of Detection to avoid Preignition caused by out of Fuel	Amount of air at the time of pre-ignition avoidance judgment when the fuel runs out.	g/s or lb/min
Number of Preignition Detection caused by out of Fuel	Number of the occurrences of pre-ignition avoidance judgment when the fuel runs out.	times
Estimated Total Mileage at the time of first Detection to avoid Preignition caused by out of Fuel	Estimated cumulative travel distance at the time of the first pre-ignition avoidance judgment when the fuel runs out.	km or mile
Status of Control to avoid Pre-Ignition caused by High Intake Air Temperature	Operation judgment of pre-ignition countermeasure control due to high intake air temperature.	—
Status of Control to avoid Pre-Ignition caused by Continuous Knocking	Operation judgment of pre-ignition countermeasure control due to continuous knocking occurrence.	—
Pre-Ignition Control (Detection) Operating Status	Operation judgment of countermeasure control at pre-ignition detection.	—
Estimated Total Mileage of Detection to avoid Pre-Ignition caused by High Intake Air Temperature	Travel distance during a pre-ignition countermeasure control operation due to high intake air temperature.	km or mile

Display	Contents	Unit
Estimated Total Mileage of Detection to avoid Pre-Ignition caused by Continuous Knocking	Travel distance during a pre-ignition countermeasure control operation due to continuous knocking occurrence.	km or mile
Estimated Total Mileage Since Pre-Ignition Control (Detection) Operating	Estimated cumulative travel distance at pre-ignition detection.	km or mile
Number of Pre-Ignition Control (Prediction) Operating	Number of operations for pre-ignition predictive control.	times
Number of Pre-Ignition Control (Detection) Operating	Number of operations for pre-ignition detection control.	times
Number of Pre-Ignition Control (Continuous Knock) Operation	Number of operations for pre-ignition countermeasure control due to continuous knocking occurrence.	times
Number of Pre-Ignition Control (LSPI) Operation	Number of torque guard operations at low speed pre-ignition detection.	times
Cruise control set status	Cruise control set status.	—
Cruise Control System Request Torque	Torque request by cruise control.	Nm
Driver's request torque	Torque request by accelerator pedal operation.	Nm
Fuel Cut Elps Time	Elapsed time after experienced high rotation speed.	sec
Catalyst Temperature #11	Estimated temperature of the front catalytic converter.	°C or °F
AT drive status	Neutral condition. Information input from the inhibitor switch. (CVT model)	—
MT gear status	Neutral condition. Information input from the neutral switch. (MT model)	—
SI Drive mode(Display)	SI-DRIVE mode status. ECM output value. Displayed only on models with SI-DRIVE.	—
Clutch switch	Clutch switch signal. Set to "ON" when the clutch switch is ON. (MT model)	—
Stop Light Switch	Stop light switch signal. Set to "ON" when the stop light illuminates. Input value to ECM.	—
Ignition SW	Ignition switch signal. Set to "ON" when the ignition switch is ON.	—
A/C Mid Pressure Switch	Air conditioner middle pressure switch signal. Set to "ON" when the switch is ON. Input value to ECM.	—
A/C Compressor Signal	A/C compressor drive signal. Set to "ON" when the drive signal is output. ECM output value.	—
Starter Switch	Starter switch signal. Set to "ON" when the starter is ON. Input value to ECM.	—
AT turbine speed	Turbine rotation speed of the transmission. Turbine rotation speed is input from the transmission CM via CAN. (CVT model)	rpm
Lock Up Status	Lock-up status of the transmission. Lock up status is input from the transmission CM via CAN. (CVT model)	—
P/N Signal	P/N status of the transmission. P/N range status is input from the transmission CM via CAN. (CVT model)	—
O2 Sensor #11	Installation status of the front oxygen (A/F) sensor.	—
O2 Sensor #12	Installation status of the rear oxygen sensor.	—

Display	Contents	Unit
Short term fuel trim #12	Air fuel ratio correction control value for the rear.	%
A/F Sensor #11	Air fuel ratio calculated from the front oxygen (A/F) sensor output value. (Lambda)	—
A/F Sensor #11	Front oxygen (A/F) sensor output voltage.	V
Absolute Throttle Pos.#2	Shows the sub throttle sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Pos.#1	Shows the main accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%
Accelerator Pedal Pos.#2	Shows the sub accelerator sensor voltage value in % against the full-range 5 V throttle sensor output voltage.	%

4. V.I.N REGISTRATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Entry VIN».
7) Perform the procedures shown on the display screen.

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>

2. GENERAL SCAN TOOL

NOTE:
- Refer to general scan tool manufacturer’s instruction manual to access powertrain DTC (MODE $03).
- Refer to data denoting emission-related powertrain DTC.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>

10.Inspection Mode

A: PROCEDURE

Perform the diagnosis shown in the following DTC table.
When performing the diagnosis not listed in “List of Diagnostic Trouble Code (DTC)”, refer to the item on the drive cycle. <Ref. to EN(w/o STI)(diag)-75, Drive Cycle.>

DTC	Item	Condition	Number of driving cycles on the detecting condition
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	—	—
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	—	—

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
3) Read the diagnostic trouble code (DTC) and check that no DTC is displayed. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-131, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> After solving the DTC, repeat from step 2).
4) Start the engine, and run the engine at idle for 10 seconds or more.
5) Read the readiness code using Subaru Select Monitor and check that the concerned DTC is not displayed. For detailed operation procedures, refer to “Application help”.

NOTE:
• The readiness code shows self-diagnosis status of each DTC. If any DTC is displayed when you select the readiness code, the self-diagnosis of the DTC is not executed or completed. After the self-diagnosis is complete, DTC will no longer be displayed regardless of the diagnostic result.
• Self-diagnosis is executed every time when the ignition switch is turned to ON. Therefore, even after the self-diagnosis is complete and nothing is displayed on the readiness code display, if you turn the ignition switch to ON again after turning it OFF, some DTCs may be displayed on the readiness code display.
• After you repair a DTC and perform the Inspection Mode or the drive cycle, use the readiness code to check if the self-diagnosis of the DTC is completed. If the concerned DTC is displayed, the self-diagnosis of the DTC is not complete. Repeat from step 4).
6) Read the diagnostic trouble code (DTC) and check the DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-131, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> After solving the DTC, repeat from step 2).

11.Drive Cycle

A: PROCEDURE

It is necessary to perform the drive cycle listed below if DTC is not found in the Inspection Mode. It is possible to complete diagnosis of the DTC by performing the indicated drive cycle. After the repair for the DTC, perform a necessary drive cycle and make sure the function recovers and the DTC is recorded.

1. PREPARATION FOR DRIVE CYCLE

1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and Clear Memory Mode, check that no DTC remains. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>

NOTE:
Perform the drive cycle after warming up the engine except when the engine coolant temperature at engine start is specified.

2. DRIVE CYCLE A

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0030	A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1	—	2
P0087	FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1	Complete diagnosis with drive cycle B as well.	1
P0088	FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1	Complete diagnosis with drive cycle B as well.	1
P0128	COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)	—	2
P013A	O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	—	2
P013B	O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	—	2
P0141	O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2	—	2
P014C	A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	—	2
P014D	A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	—	2
P015A	A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	—	2
P015B	A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	—	2
P0171	SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle B as well.	2
P0172	SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle B as well.	2
P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED	Complete diagnosis with drive cycle B as well.	2
P0301	CYLINDER 1 MISFIRE DETECTED	Complete diagnosis with drive cycle B as well.	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0302	CYLINDER 2 MISFIRE DETECTED	Complete diagnosis with drive cycle B as well.	2
P0303	CYLINDER 3 MISFIRE DETECTED	Complete diagnosis with drive cycle B as well.	2
P0304	CYLINDER 4 MISFIRE DETECTED	Complete diagnosis with drive cycle B as well.	2
P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1	—	2
P0459	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH	—	2
P1191	FUEL RAIL PRESSURE SENSOR "A" CIRCUIT NO ACTIVITY DETECTED	Complete diagnosis with drive cycle B as well.	2
P2096	POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle B as well.	2
P2097	POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle B as well.	2
P2195	A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 1	—	2
P2196	A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 1	—	2
P226B	TURBOCHARGER/SUPERCHARGER BOOST PRESSURE TOO HIGH - MECHANICAL	—	1
P2270	O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 2	—	2
P2271	O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2	—	2

1) Drive for 20 minutes or more at a constant speed of 80 km/h (50 MPH) or more.
2) Stop the vehicle and idle for one minute.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

3. DRIVE CYCLE B

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0087	FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1	Complete diagnosis with drive cycle A as well.	1
P0088	FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1	Complete diagnosis with drive cycle A as well.	1
P0125	INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL	«Coolant Temp.» at engine start: Less than –15°C (5°F)	2
P0130	A/F / O2 SENSOR CIRCUIT BANK 1 SENSOR 1	—	1
P0137	O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2	—	2
P0138	O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2	—	2

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0140	O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 2	—	2
P0171	SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle A as well.	2
P0172	SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle A as well.	2
P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0301	CYLINDER 1 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0302	CYLINDER 2 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0303	CYLINDER 3 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0304	CYLINDER 4 MISFIRE DETECTED	Complete diagnosis with drive cycle A as well.	2
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	—	1
P0506	IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	—	2
P0507	IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	—	2
P062D	FUEL INJECTOR DRIVER CIRCUIT PERFORMANCE BANK 1	—	1
P0700	TRANSMISSION CONTROL SYSTEM (MIL REQUEST)	—	1
P0851	PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW	CVT model	2
P0852	PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH	CVT model	2
P1191	FUEL RAIL PRESSURE SENSOR "A" CIRCUIT NO ACTIVITY DETECTED	Complete diagnosis with drive cycle A as well.	2
P1261	CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN	—	1
P1262	CYLINDER 2 DIRECT FUEL INJECTOR CIRCUIT/OPEN	—	1
P1263	CYLINDER 3 DIRECT FUEL INJECTOR CIRCUIT/OPEN	—	1
P1264	CYLINDER 4 DIRECT FUEL INJECTOR CIRCUIT/OPEN	—	1
P2096	POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1	Complete diagnosis with drive cycle A as well.	2
P2097	POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1	Complete diagnosis with drive cycle A as well.	2

1) Drive at 10 km/h (6 MPH) or more.
2) Stop the vehicle and idle for ten minutes.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

4. DRIVE CYCLE E

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0461	FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—	2

1) Make sure that the battery voltage is 10.9 V or more.
2) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
3) Drive for approximately 30 L (7.9 US gal, 6.6 Imp gal) of fuel.

NOTE:
• It is acceptable to drive the vehicle intermittently.
• Do not disconnect the battery terminals while diagnosing. (Data will be cleared by disconnecting the battery terminals.)
4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

5. DRIVE CYCLE F

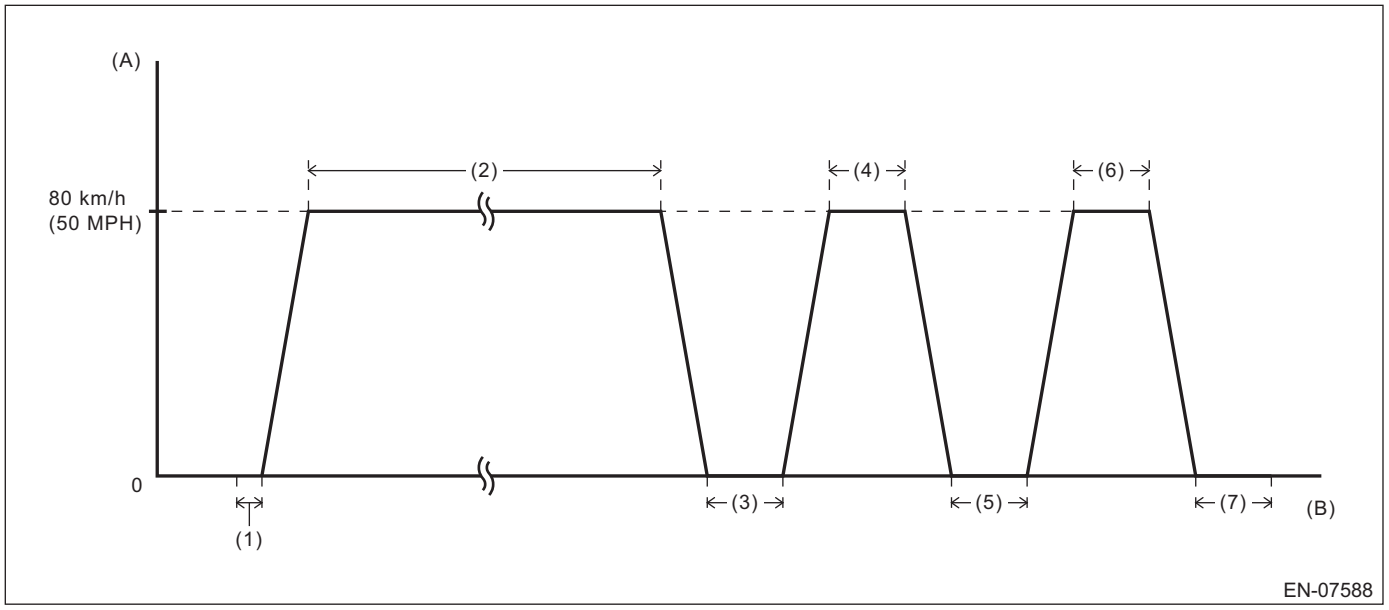
DTC	Item	Condition	Number of driving cycles on the detecting condition
P0096	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT RANGE/ PERFORMANCE BANK 1	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/ PERFORMANCE BANK 1	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

1) With the ignition switch ON (engine stopped), read the value in «Coolant Temp.» and «IAT Sensor #11». <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
2) If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.

Condition:
|Engine coolant temperature — Intake air temperature| ≤ 5°C (9°F)

NOTE:
• If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.
• For CVT models, hold the select lever to “P” range or “N” range at idling, and for MT models, the gear shift lever in the neutral position at idling.

3) Drive according to the drive pattern described below.



(A) Vehicle speed

(B) Elapsed time

(1) Idle the engine for 2 minutes or more.

(2) Drive for a total period of 15 minutes or more at a speed of 80 km/h (50 MPH) or more.

(3) Stop the vehicle and idle for 30 seconds or more.

(4) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.

(5) Stop the vehicle and idle for 30 seconds or more.

(6) Drive for 30 seconds or more at a constant speed of 80 km/h (50 MPH) or more.

(7) Stop the vehicle and idle for 30 seconds.

NOTE:
• In pattern (2), it is acceptable to decelerate to less than 80 km/h (50 MPH) or to stop the vehicle depending on the traffic conditions. Drive the vehicle at 80 km/h (50 MPH) or more until the total driving time reaches or exceeds 15 minutes.
• There is no given transition time between idling and cruising.
• Driving at constant speed only on a downhill causes smaller engine load and may result in failure to obtain a right diagnostic result.
• When the engine stops while performing drive cycle F, perform it again from the state of procedure 1).

4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

6. DRIVE CYCLE H

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P0196	ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE	• 6 hours have elapsed since ignition switch is OFF under a completely warmed up condition. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2
P050A	COLD START IDLE CONTROL SYSTEM PERFORMANCE	—	2
P050B	COLD START IGNITION TIMING PERFORMANCE	—	2
P24B9	EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE	60 seconds have elapsed since ignition switch is OFF.	2

1) With the ignition switch ON (engine stopped), read the values in «Coolant Temp.» and «Intake Air Temp.». <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
2) If the values from step 1) satisfy the following conditions, idle the engine for two minutes or more.

Condition:
|Engine coolant temperature — Intake air temperature| ≤ 5°C (9°F)

NOTE:
• If the conditions are not satisfied, turn the ignition switch to OFF and wait until the parameters are satisfied.
• For CVT models, hold the select lever to “P” range or “N” range at idling, and for MT models, the gear shift lever in the neutral position at idling.
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

7. DRIVE CYCLE I

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0455	EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)	«Coolant Temp.»: 5 — 45°C (41 — 113°F) «IAT Sensor #11»: 5 — 50°C (41 — 122°F)	2
P0456	EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)		2
P04AF	EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED		2
P1451	EVAP SYSTEM CLOG DETECTED (PIPE)		2
P2402	EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH		1
P2404	EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE		2
P2420	EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT HIGH		1

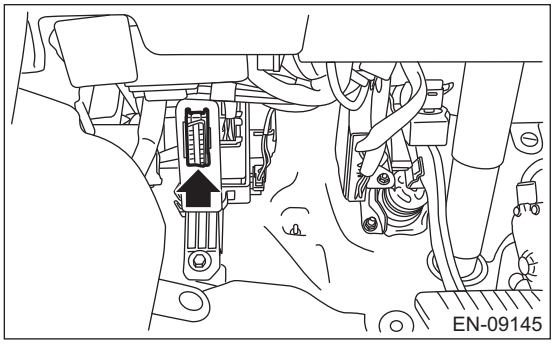
CAUTION:
Be careful of the state of the battery when performing the drive cycle I consecutively. Performing the drive cycle I consecutively without the engine running may cause a low battery voltage and battery discharge.

NOTE:
- If it is necessary to perform drive cycle I consecutively, drive the vehicle under the following conditions to release accumulated evaporating gas. Performing the drive cycle I consecutively without starting the engine causes a large amount of evaporating gas to accumulate in the canister, which hinders an accurate diagnosis.
  - After engine is warmed up
  - Drive for 10 minutes or more at a speed of 48 km/h (30 MPH) or more (duration of drive can be an accumulation)
- To obtain an accurate diagnostic result, perform the procedures according to the following points.
  - Do not refuel gas immediately before performing drive cycle I. There will be a large amount of evaporating gas immediately after refuel, which may cause a less accurate diagnostic performance.
  - Do not shake the vehicle while performing drive cycle I. Shaking the vehicle causes evaporating gas to increase inside the fuel tank, which may cause a less accurate diagnostic performance.
  - Do not perform any service operation including installation or removal of parts or connectors while performing drive cycle I. Performing service operation could affect on the functions of related parts, which may cause a less accurate diagnostic performance.
- Perform MODE $08 when using a general scan tool.

1) Prepare the Subaru Select Monitor 4. <Ref. to EN(w/o STI)(diag)-10, PREPARATION TOOL, General Description.>
2) Prepare PC with Subaru Select Monitor installed.
3) Connect the USB cable to the DST-i and the USB port on the personal computer (dedicated port for the Subaru Select Monitor).

NOTE:
The dedicated port for the Subaru Select Monitor means the USB port which was used to install the Subaru Select Monitor.
4) Connect the diagnosis cable to DST-i.
5) Connect the DST-i to the data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor and general scan tool.



6) Start the PC.
7) Turn the ignition switch to ON (engine OFF) and run the “PC application for Subaru Select Monitor”.
8) On «Start» display, select «OBD System».
9) On «Select System» display, select «Evaporative System Leak Test».
10) On «Evaporative System Leak Test» display, select «Evaporative System Leak Test».
11) On «Evaporative System Leak Test is running. Press Cancel to exit this function.» display, click the «OK» button to perform evaporative system leak test.
12) When «Conditions have been enabled to control this function. Turn the ignition switch off to terminate the test.» display appears, wait for 30 minutes without clicking the «OK» button.

CAUTION:
Do not leave the vehicle for an extended period of time after the test is complete. This may cause early deterioration of the battery or discharged battery.

NOTE:
• Clicking the «OK» button bring the «Evaporative System Leak Test» display back, although the test is continuing.
• The Subaru Select Monitor screen does not change after the evaporative system leak test is complete or when the test is aborted by turning off the ignition switch.
• If «Test conditions are not correct» display appears, use Subaru Select Monitor to check that the values in «Coolant Temp.» and «IAT Sensor #11» are within the specified range. If the conditions are satisfied, make the necessary preparation for the drive cycle again. <Ref. to EN(w/o STI)(diag)-75, PREPARATION FOR DRIVE CYCLE, PROCEDURE, Drive Cycle.>
13) After 30 minutes passed from the start of step 14), click the «OK» button to return to the «Evaporative System Leak Test» display.
14) Return to the «OBD System» display, then select «On-board monitor test result».
15) In the «On-board monitor test result», check TID $C1 — $CA of MID $3C.

NOTE:
Perform MODE $06 and check when using a general scan tool.

Result of on-board monitor test

Display	Details	Remarks
$0000 is stored in all Val.	During the evaporative system leak test, the test conditions were not met and the test was canceled.	Once the test conditions are met, perform the test again.
All Val. are stored with values and OK is set to all the results.	Evaporative system leak test is completed correctly.	While the ignition switch is ON, read the pending code using the Subaru Select Monitor.
Some results were no good.	The evaporative system leak test completed successfully but the results were faulty.	While the ignition switch is ON, read the pending code using the Subaru Select Monitor.

16) When the evaporative system leak test is completed correctly, read the pending code with the ignition switch turned to ON position. If the DTC is recorded, check the appropriate DTC. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

NOTE:
- Perform MODE $07 when using a general scan tool.
- The pending code will be cleared by turning ignition switch to OFF.

8. DRIVE CYCLE J

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2610	ECM/PCM ENGINE OFF TIMER PERFORMANCE	—	2

1) Idle the engine for 15 minutes or more.
2) Turn the ignition switch to OFF.
3) After at least 10 hours passed from the start of step 2), read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

9. DRIVE CYCLE N

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0016	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A	«Coolant Temp.»: 80°C (176°F) or more	2
P0017	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B		2
P0018	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A		2
P0019	CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B		2

WARNING:
When performing drive cycle N on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.
1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:
- Subaru Select Monitor

For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
- General scan tool

For detailed operation procedures, refer to the general scan tool operation manual.
2) While the conditions in the list are satisfied, race the engine at the speed of approx. 2,500 rpm for 40 seconds or more.
3) Start the vehicle, then accelerate the vehicle to 50 km/h (31.1 MPH) or more.
4) When the speed reaches 50 km/h (31.1 MPH) or more, release the accelerator pedal, the brake pedal and the clutch pedal (MT model) to decelerate the vehicle without shifting the gear. At this time, select an appropriate gear beforehand so that the engine speed can decrease from 2,500 rpm to 1,900 rpm for 5 seconds or more.

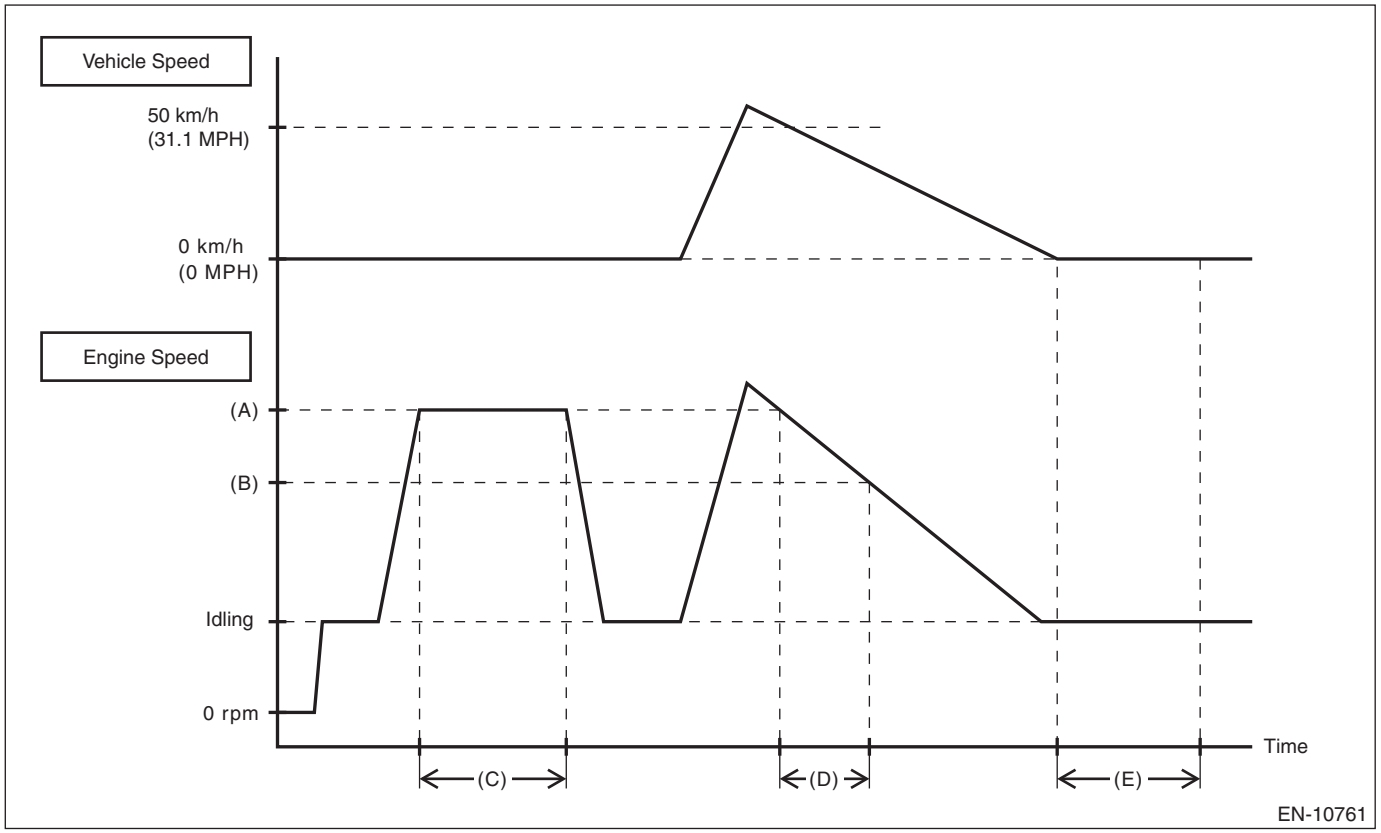
NOTE:
- The vehicle speed does not matter so long as the engine speed can maintain from 2,500 rpm to 1,900 rpm for 5 seconds or more.

Example: On a downhill grade, it can be performed with a low speed gear and at a low vehicle speed.
- When it is performed with the electrical load such as the air conditioner, etc. turned OFF or the vehicle driven on a downhill grade, the engine speed decreases slowly. Therefore, the continuous time can be maintained easily.

5) Bring the vehicle to a stop in a safe place, and idle it for 5 minutes or more.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.
6) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>
• In the step 6), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.



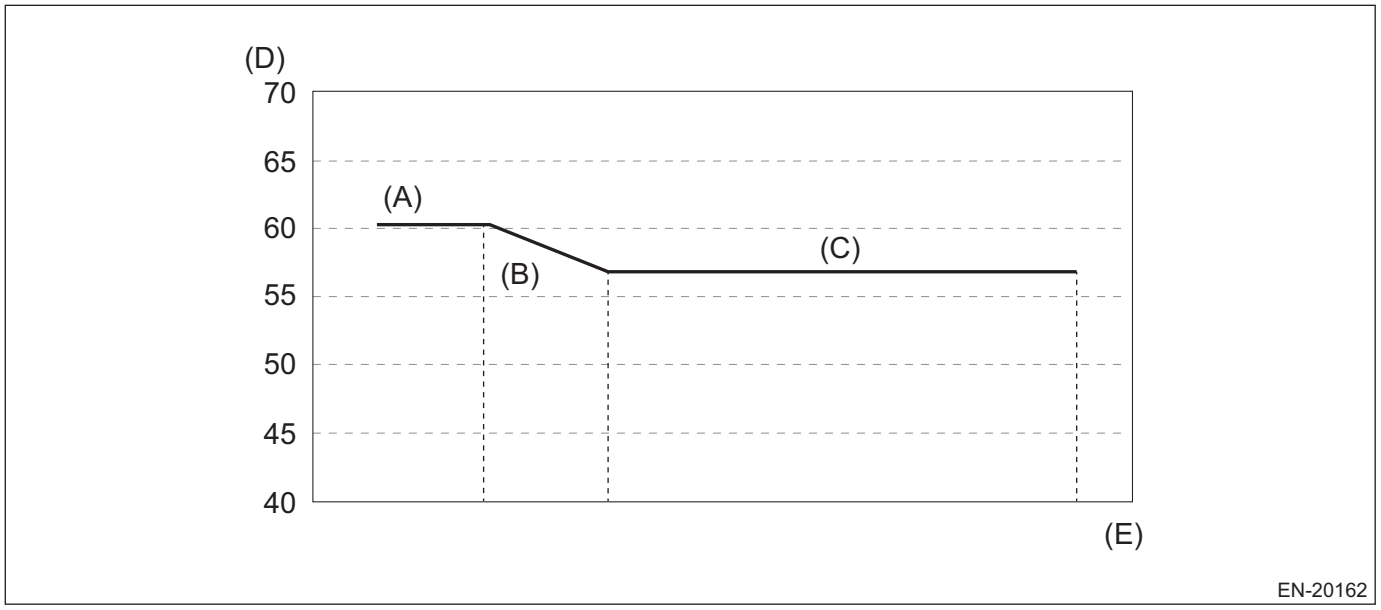
(A) 2500 rpm
(B) 1900 rpm
(C) 40 seconds or more
(D) 5 seconds or more
(E) 5 minutes or more

10.DRIVE CYCLE O

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0441	EVAP SYSTEM (CPC) INCORRECT PURGE FLOW	—	2

WARNING:
When performing drive cycle O on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Drive according to the drive pattern described below.



(A) Drive the vehicle at 60 km/h (37 MPH) or faster for at least 5 minutes in fully warm-up condition.
(B) Decelerate with the throttle fully closed for at least 3 seconds.
(C) Drive the vehicle at a constant vehicle speed by depressing the accelerator pedal for at least 30 seconds.
(D) Vehicle speed km/h (MPH)
(E) Sec.

2) Park the vehicle on a safe place.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.
3) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

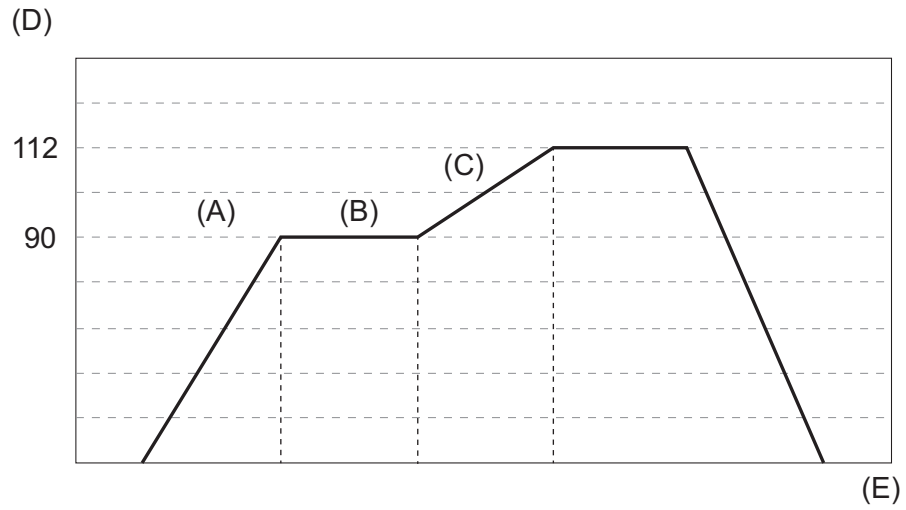
NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>
• In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

11.DRIVE CYCLE P

DTC	Item	Condition	Number of driving cycles on the detecting condition
P04F0	EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE	Remaining fuel level 20 L or more	2

WARNING:
When performing drive cycle P on a public road, pay sufficient attention to the traffic condition and give the highest priority to safe driving.

1) Drive according to the drive pattern described below.



(A) Accelerate the vehicle to 80 km/h (50 MPH) or more in a fully warm-up condition.
(B) Keep a constant vehicle speed of 50 km/h (31.1 MPH) or more for at least five minutes.
(C) While depressing the accelerator pedal without gear shifting, take at least 10 seconds to accelerate to 112 km/h (70 MPH) or more.
(D) Vehicle speed km/h (MPH)
(E) Sec.

2) Park the vehicle on a safe place.

NOTE:
Driving method while vehicle is driven to a stop at safe place is not restricted.
3) With the vehicle idling, read the temporary diagnostic code of DTC using Subaru Select Monitor or general scan tool.

NOTE:
• For detailed operation procedures, refer to “Read Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>
• In the step 3), if the DTC is not displayed on the Subaru Select Monitor or general scan tool display screen, the trouble is resolved.

12.DRIVE CYCLE Q

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0191	FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1	• With the ignition switch ON (engine stopped), read the value in «Coolant Temp.». • If the engine coolant temperature meets the condition of ≥ 30°C, idle the engine for 30 minutes or more. • If the engine coolant temperature does not meet the condition of ≥ 30°C, start the engine, wait until the engine coolant temperature meets the condition of ≥ 30°C, turn OFF the ignition switch once, then idle the engine for 30 minutes or more. • At least 6 hours must have elapsed since ignition switch was OFF. • For models with block heater, at least 6 hours must have elapsed without operating the block heater.	2

1) Idle the engine for at least one minute.

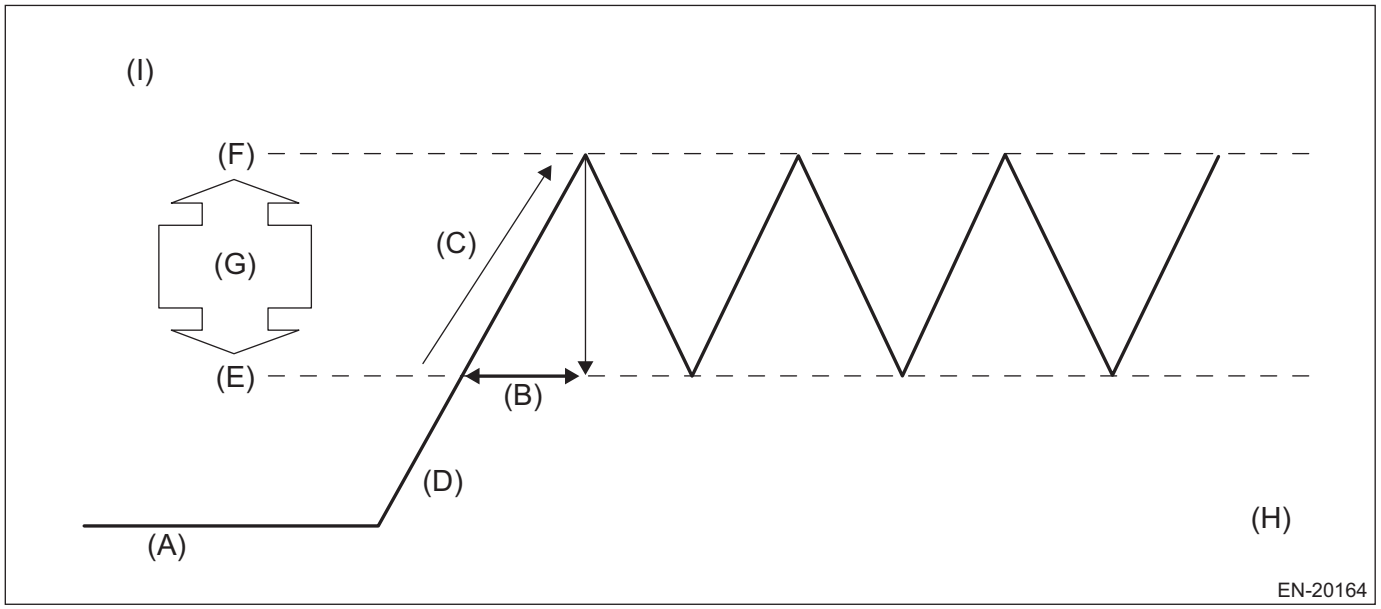
NOTE:
For CVT models, hold the select lever to “P” range or “N” range at idling, and for MT models, the gear shift lever in the neutral position at idling.
2) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

13.DRIVE CYCLE R

DTC	Item	Condition	Number of driving cycles on the detecting condition
P219A	BANK 1 AIR-FUEL RATIO IMBALANCE	—	2

WARNING:
When performing the drive cycle R on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Check the data in condition column of table by using the Subaru Select Monitor or general scan tool.

NOTE:
• Subaru Select Monitor
For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>
• General scan tool
For detailed operation procedures, refer to the general scan tool operation manual.
2) Keep the engine at idle for at least 30 seconds in a fully warm-up condition.
3) Start the driving.
4) With the gear position in the 4th, take 10 seconds to accelerate from 1500 rpm to 4000 rpm.
5) Decelerate to 1500 rpm in the 4th gear position. (There is no restrictions to the deceleration duration and how to use the brake.)
6) Repeat 4) and 5) 10 times (end when the temporary code is acquired).



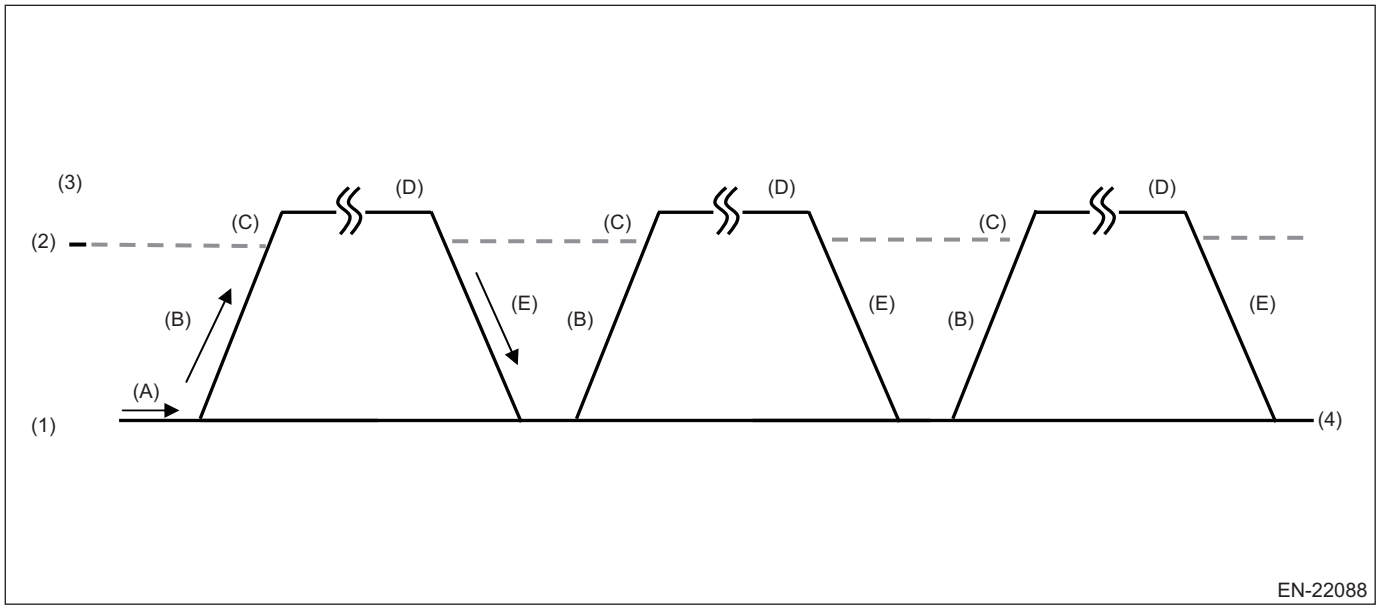
(A)	Idle the engine for at least 30 seconds in a fully warm-up condition.	(D)	Engine speed	(G)	Accelerate and decelerate in the 4th gear position.
(B)	10 seconds	(E)	1500 rpm	(H)	Time
(C)	Accelerating	(F)	4000 rpm	(I)	Accelerating and decelerating

14.DRIVE CYCLE S

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0246	TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH	—	1
P04AD	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH	—	2
P0851	PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW	MT model	2
P0852	PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH	MT model	2

WARNING:
When performing the drive cycle S on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>

2) Drive three times according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(3)	Vehicle speed	(4)	Time
(2)	65 km/h (40 MPH)				
(A)	Idle the engine for five seconds or more.	(C)	Vehicle speed exceeds 65 km/h (40 MPH). (CVT model) Vehicle speed exceeds 65 km/h (40 MPH) with 4th gear. (MT model)	(E)	Deceleration (no restriction for deceleration method)
(B)	Accelerating	(D)	Driving duration (no restriction for driving duration)		

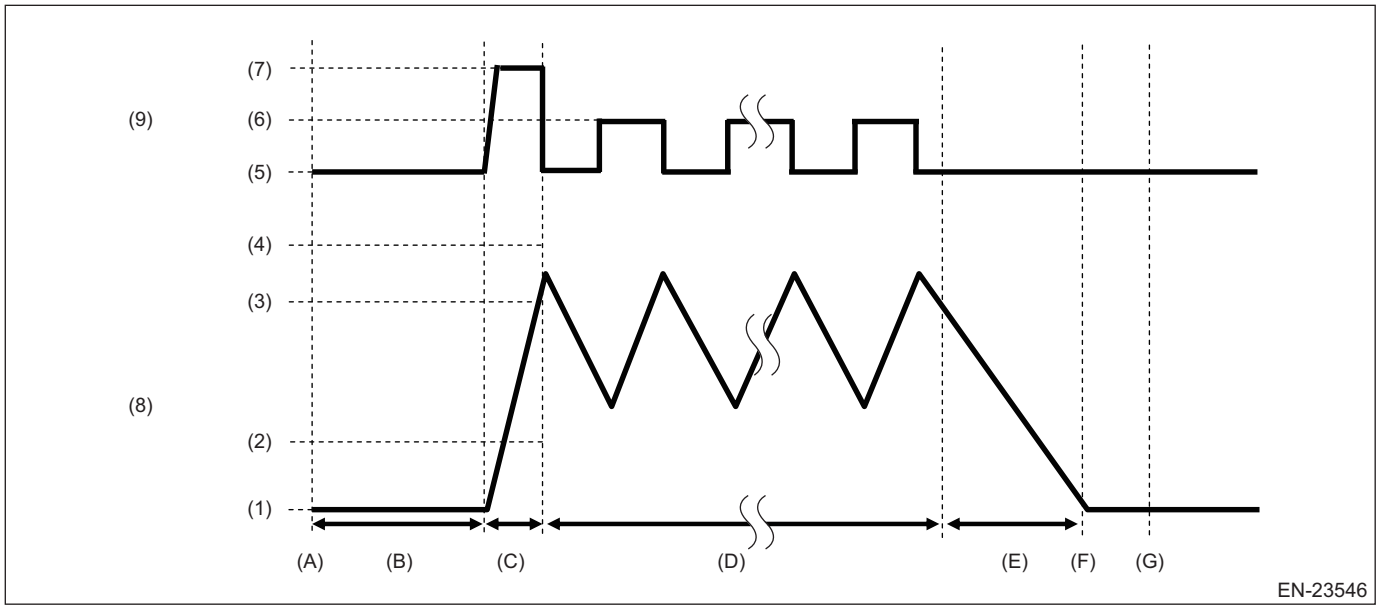
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

15.DRIVE CYCLE T

DTC	Item	Condition	Number of driving cycles on the detecting condition
P000A	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 1	«Coolant Temp.»: 70°C (158°F) or more	2
P000B	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 1		2
P000C	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 2		2
P000D	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 2		2
P0011	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1		2
P0014	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1		2
P0021	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2		2
P0024	"B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2		2

WARNING:
When performing the drive cycle T on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>

2) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(4)	80 km/h (49.7 MPH)	(7)	30 — 60%
(2)	20 km/h (12.4 MPH)	(5)	0%	(8)	Vehicle speed
(3)	60 km/h (37.3 MPH)	(6)	20%	(9)	Accelerator pedal opening angle

(A)	Start the engine.	(D)	With the vehicle speed of 60 km/h (37.3 MPH) as a reference, repeat accelerator pedal opening angle 0% (five seconds) ←→ 20% (five seconds) for 20 minutes or more.	(G)	Stop the engine.
(B)	Idle the engine at least three minutes.	(E)	Decelerate with the accelerator pedal fully closed for at least five seconds.		
(C)	Accelerate the vehicle to 60 km/h (37.3 MPH).	(F)	Park the vehicle. (Driving method while vehicle is driven to a stop at safe place is not restricted)		

NOTE:
In pattern (D), it is acceptable to stop the vehicle according to the traffic condition. Drive the vehicle until the total time of accelerator opening angle 0% (five seconds) ←→ 20% (five seconds) becomes 20 minutes or more.

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

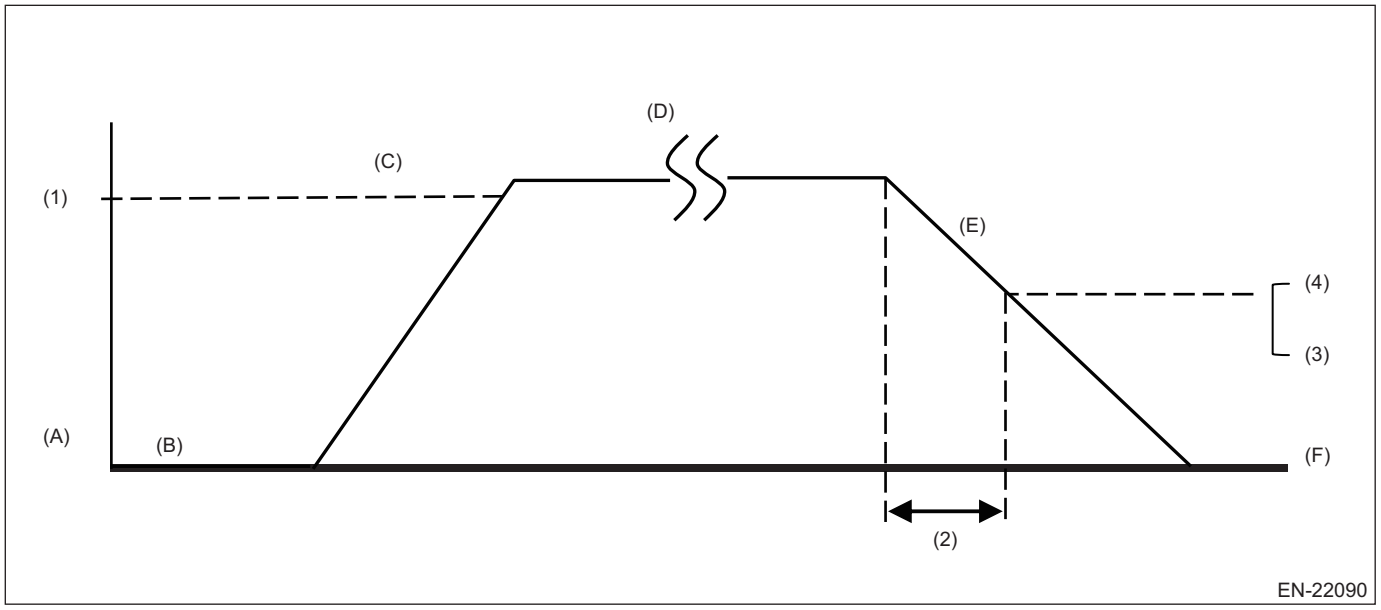
16.DRIVE CYCLE U

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0401	EGR ABNORMAL (EGR AMOUNT TOO SMALL)	—	2
P0402	EGR "A" FLOW EXCESSIVE DETECTED	—	2

WARNING:
When performing the drive cycle U on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>

2) Drive according to the drive pattern described below.



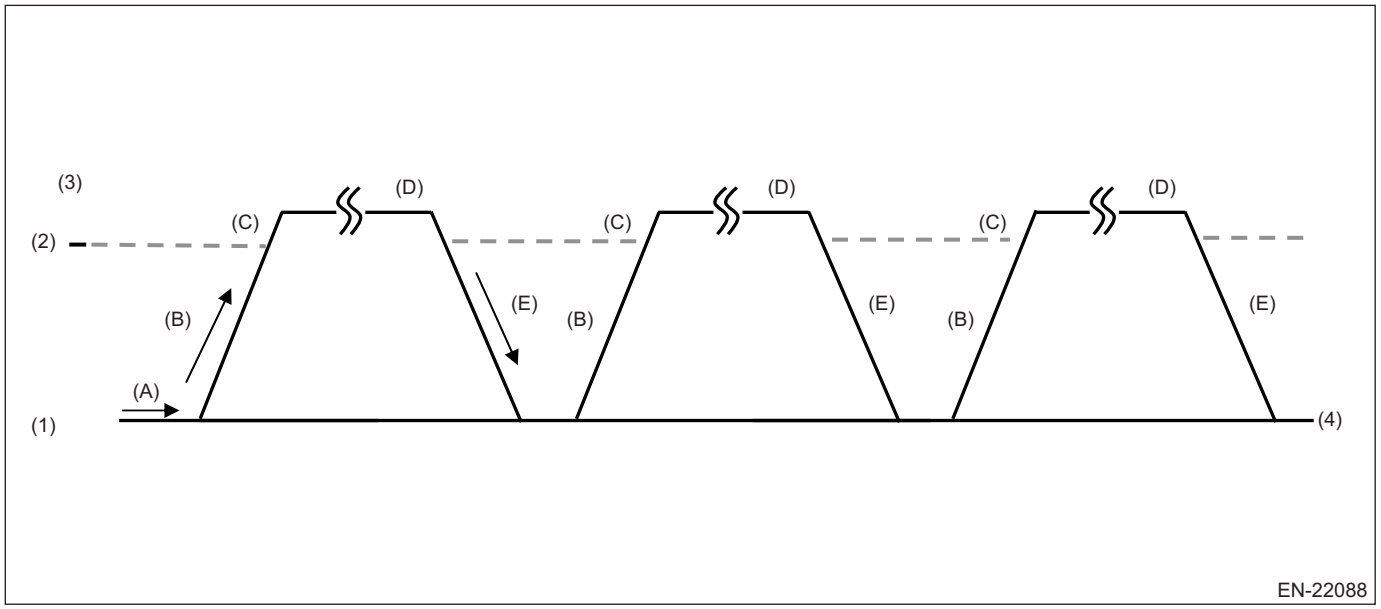
(1)	Vehicle speed 60 km/h (37.3 MPH)	(3)	Vehicle speed 40 km/h (24.9 MPH)	(4)	Engine speed 1300 rpm or more
(2)	Deceleration for ten seconds or more (no restriction for driving operation)				
(A)	Start the engine.	(C)	Accelerate the vehicle to 60 km/h (37.3 MPH). (There is no restriction for driving operation.)	(E)	With the accelerator pedal fully closed, decelerate over 10 seconds or more, while maintaining vehicle speed at 40 km/h (24.9 MPH) or more and engine speed at 1300 rpm or more.
(B)	Idle the engine for 20 seconds or more.	(D)	Perform a constant driving. (Step (D) may be omitted depending on road conditions.)	(F)	Park the vehicle and stop the engine. (Driving method while vehicle is driven to a stop at safe place is not restricted.)

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

17.DRIVE CYCLE W

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0134	A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1	—	1
P1492	COIL 1 EGR "A" CONTROL CIRCUIT LOW	—	1
P1493	COIL 1 EGR "A" CONTROL CIRCUIT HIGH	—	1
P1494	COIL 2 EGR "A" CONTROL CIRCUIT LOW	—	1
P1495	COIL 2 EGR "A" CONTROL CIRCUIT HIGH	—	1
P1496	COIL 3 EGR "A" CONTROL CIRCUIT LOW	—	1
P1497	COIL 3 EGR "A" CONTROL CIRCUIT HIGH	—	1
P1498	COIL 4 EGR "A" CONTROL CIRCUIT LOW	—	1
P1499	COIL 4 EGR "A" CONTROL CIRCUIT HIGH	—	1

WARNING:
When performing the drive cycle W on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>
2) Drive according to the drive pattern described below.



(1) 0 km/h (0 MPH)
(2) 65 km/h (40 MPH)
(3) Vehicle speed
(4) Time

(A) Idle the engine for five seconds or more.
(B) Accelerating
(C) Vehicle speed exceeds 45 km/h (27 MPH).
(D) Driving duration (no restriction for duration)
(E) Deceleration (no restriction for deceleration method)

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

18.DRIVE CYCLE X

DTC	Item	Condition	Number of driving cycles on the detecting condition
P2004	TGV CONTROL STUCK OPEN BANK 1	—	1
P2005	TGV CONTROL STUCK OPEN BANK 2	—	1
P2006	TGV CONTROL STUCK CLOSED BANK 1	—	1
P2007	TGV CONTROL STUCK CLOSED BANK 2	—	1

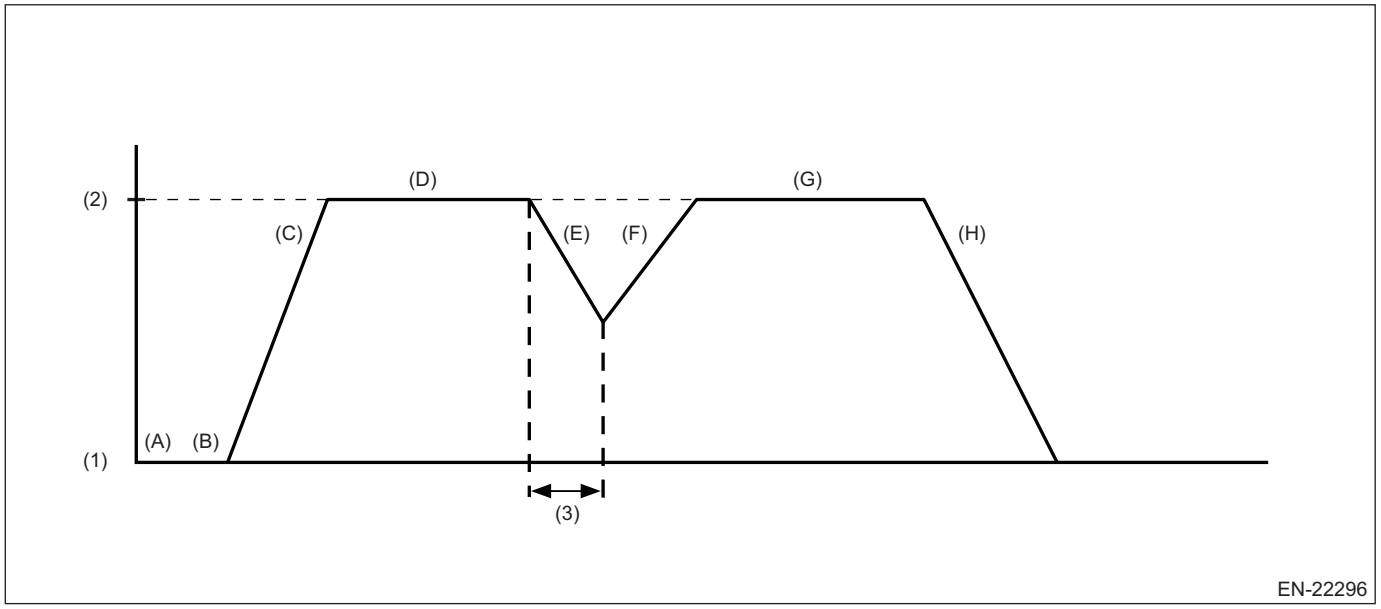
1) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>
2) Start the engine.
3) For CVT models, set the select lever to “P” range, and for MT models, move the gear shift lever into neutral position, and then race the engine for 10 seconds or more.

NOTE:
Keep the engine speed at 3500 rpm or more.
4) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

19.DRIVE CYCLE Y

DTC	Item	Condition	Number of driving cycles on the detecting condition
P013E	O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	—	2
P013F	O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	—	2

WARNING:
When performing the drive cycle Y on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
2) Drive according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(2)	60 km/h (37 MPH)	(3)	10 seconds
(A)	Start the engine.	(D)	Maintain the vehicle at 60 km/h (37 MPH) and drive at the constant speed.	(G)	Maintain the vehicle at 60 km/h (37 MPH) and drive at the constant speed.
(B)	Idle the engine at least five minutes.	(E)	With the vehicle speed of 60 km/h (37 MPH) maintained, set accelerator pedal opening angle to 0% and perform fuel cut for 10 seconds.	(H)	Decelerate and park the vehicle.
(C)	Accelerate the vehicle to 60 km/h (37 MPH).	(F)	Accelerate the vehicle to 60 km/h (37 MPH).		

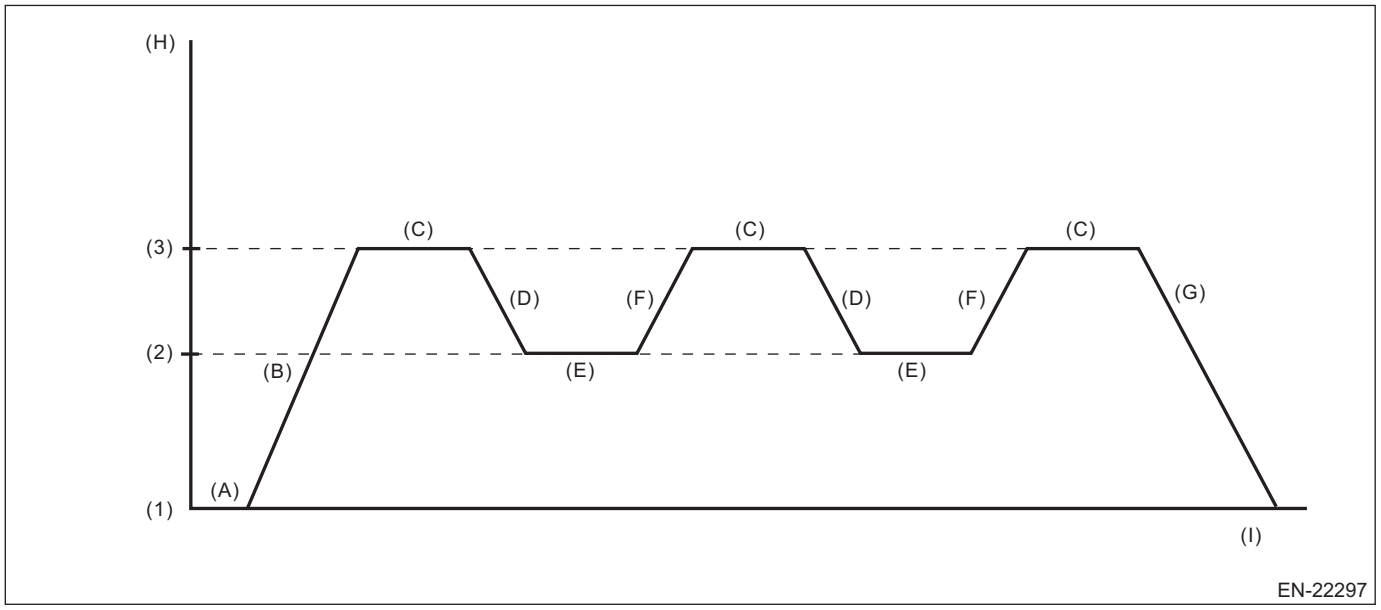
3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

NOTE:
- Acceleration and constant speed conditions may be adjusted depending on road conditions.
- If a diagnostic value is not input after driving, do not stop the engine and repeat the procedure from (Y) again.
- Do not use the cruise control.

20.DRIVE CYCLE Z

DTC	Item	Condition	Number of driving cycles on the detecting condition
P0068	MAP/MAF - THROTTLE POSITION CORRELATION	—	2
P0101	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE	—	2

WARNING:
When performing the drive cycle Z on the public road, be very careful of the traffic condition and the safe driving must be the high priority.
1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
2) Drive according to the drive pattern described below.



(1)	0 (km/h (MPH) or second)	(2)	60 km/h (37 MPH)	(3)	88 km/h (55 MPH)
(A)	Shift the select lever to “P” range or the gear shift lever to the neutral position, and let the engine idle for 10 seconds or more.	(D)	Decelerate with fully closed throttle to 60 km/h (37 MPH).	(G)	Stop vehicle with the throttle fully closed.
(B)	Open the throttle half way, then accelerate the vehicle to 88 km/h (55 MPH) or more.	(E)	Drive for 20 seconds or more at 60 km/h (37 MPH) or less.	(H)	Vehicle speed km/h (MPH)
(C)	Drive for 20 seconds or more at 88 km/h (55 MPH) or more.	(F)	Open the throttle half way, then accelerate the vehicle to 88 km/h (55 MPH) or more.	(I)	Sec.

3) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

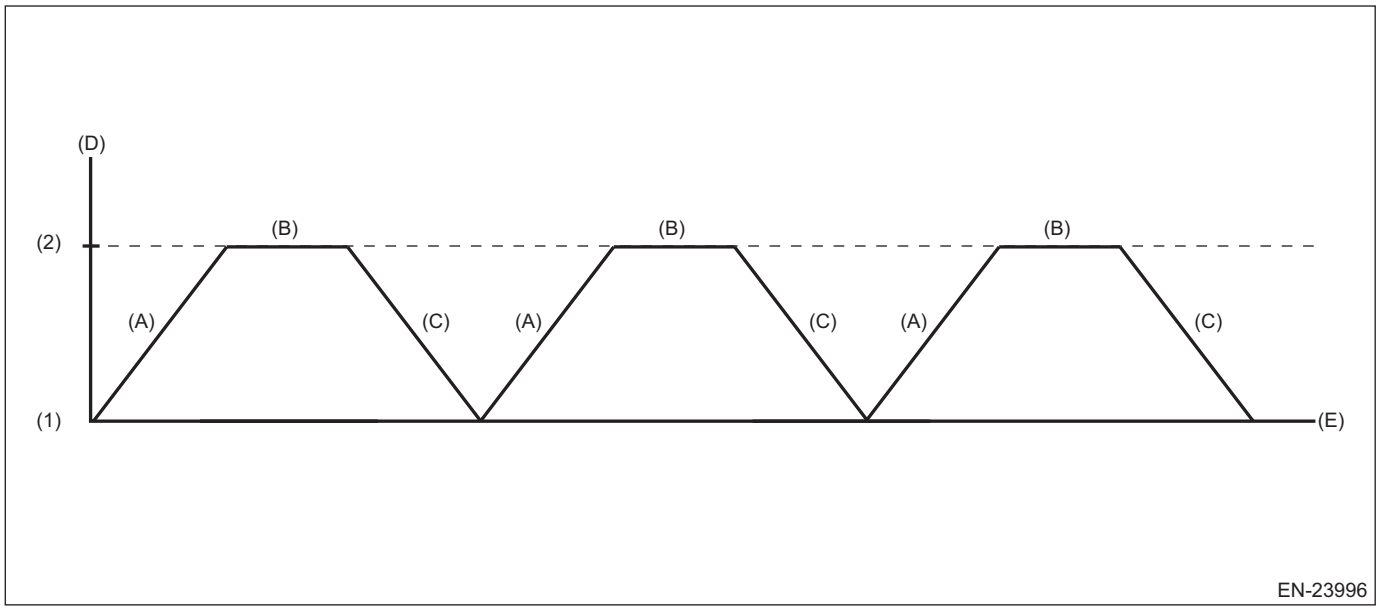
21.DRIVE CYCLE AA

DTC	Item	Condition	Number of driving cycles on the detecting condition
P1449	EVAP SYSTEM CLOG DETECTED (AIR FILTER)	—	2

Drive Cycle

WARNING:
When performing the drive cycle AA on the public road, be very careful of the traffic condition and the safe driving must be the high priority.

1) Drive three times according to the drive pattern described below.



(1)	0 km/h (0 MPH)	(2)	60 km/h (37 MPH)		
(A)	Accelerating to 60 km/h (37 MPH) (rapid acceleration not permitted)	(C)	Deceleration	(E)	Driving duration
(B)	Three minute constant driving	(D)	Vehicle speed		

2) Read the temporary code using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

12.Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.
- For detailed operation procedures, refer to “Application help”.

2. GENERAL SCAN TOOL

For procedures clearing memory using the general scan tool, refer to the general scan tool operation manual.

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

13.Active Test

A: OPERATION

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>

NOTE:
For operation procedures, refer to the “Help for Subaru Select Monitor”.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Select Function» display, select «Active Test».

Active test items	Contents	Execution condition
Fuel Pump Relay	ON/OFF of the fuel pump can be set.	Ignition switch is ON (engine OFF)
CPC Solenoid Valve	ON/OFF of the purge control solenoid valve can be set.	
Radiator Fan Relay	ON/OFF of the radiator fan relay can be set.	
A/C Compressor Relay	ON/OFF of the A/C relay can be set.	
Turbocharger Wastegate Solenoid	ON/OFF of the wastegate control solenoid valve can be set.	
CPC Solenoid 2	ON/OFF of the purge control solenoid valve 2 can be set.	
ELCM switching valve	ON/OFF of the leak check valve assembly switching valve can be set.	
ELCM pump	ON/OFF of the leak check valve assembly vacuum pump can be set.	
Fuel Pump Control (OFF Drive)	Fuel pump can be set to OFF.	At idling
Fixed Idle Ignition Timing	Idle ignition timing can be set.	
Idle Speed Control	Idle speed can be set.	
Injection Stop Mode (Injector 1) Injection Stop Mode (Injector 2) Injection Stop Mode (Injector 3) Injection Stop Mode (Injector 4)	Injector of each cylinder can be set to stop the fuel injection.	
Injection Quantity Control	The amount of fuel injection can be set.	
EGR Valve Control (Step)	Number of EGR control valve STEP can be set.	
High Pressure Fuel Inspection	High pressure fuel pipe inspection can be executed.	
Alternator control	Alternator control mode can be set to one of the followings: Low mode Middle mode High mode ExHigh mode *	
Compression monitor	Compression can be measured.	• Ignition switch is ON (engine OFF) • Accelerator pedal is fully depressed

*: Indicator voltage is the same as in High mode.

14.Malfunction Indicator Light

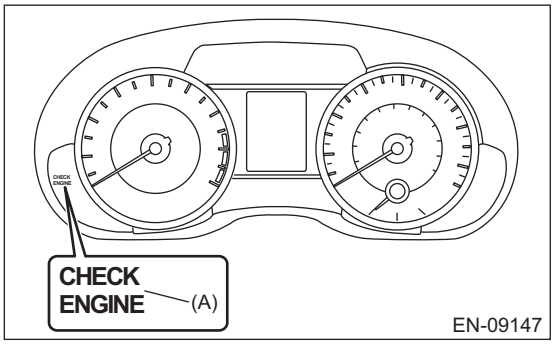
A: PROCEDURE

1. Activation of malfunction indicator light <Ref. to EN(w/o STI)(diag)-98, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>
↓
2. Malfunction indicator light does not come on <Ref. to EN(w/o STI)(diag)-99, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>
↓
3. Malfunction indicator light does not go off <Ref. to EN(w/o STI)(diag)-99, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF, Malfunction Indicator Light.>

B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

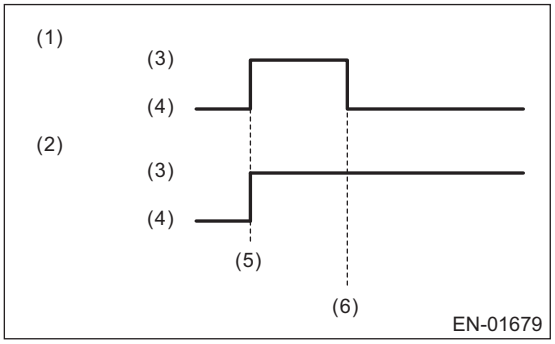
1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light in the combination meter illuminates.

NOTE:
If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(w/o STI)(diag)-99, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>



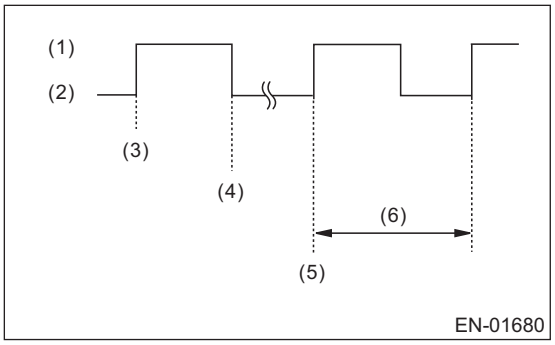
(A) Malfunction indicator light

2) After starting the engine, the malfunction indicator light goes out. If it does not go off, any of the engine and emission control system has malfunction.



(1) No DTC
(2) Trouble occurs
(3) ON
(4) OFF
(5) Ignition switch ON
(6) Engine start

3) If the diagnostic system detects a misfire which could damage the catalyst, the malfunction indicator light will blink at a cycle of 1 Hz.



(1) ON
(2) OFF
(3) Ignition switch ON
(4) Engine start
(5) Misfire start
(6) 1 second

C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

Trouble symptom:
When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not illuminate.

NOTE:
For the diagnostic procedure, refer to the combination meter section. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF

Trouble symptom:
Although malfunction indicator light comes on when the engine runs, DTC is not shown on the Subaru Select Monitor or general scan tool display.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTCs for the engine and the LAN system using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC of engine or LAN system displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Check the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

15.Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Check of the fuel amount
↓
2. CHECK IMMOBILIZER. • Model without push button start <Ref. to IM(diag)-2, Basic Diagnostic Procedure.> • Model with push button start <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
↓
3. Inspection of starter motor circuit <Ref. to EN(w/o STI)(diag)-101, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
4. Inspection of ECM power supply and ground line <Ref. to EN(w/o STI)(diag)-112, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>
↓
5. Inspection of ignition control system <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
6. Inspection of fuel pump circuit <Ref. to EN(w/o STI)(diag)-116, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
7. Inspection of fuel injector circuit <Ref. to EN(w/o STI)(diag)-117, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

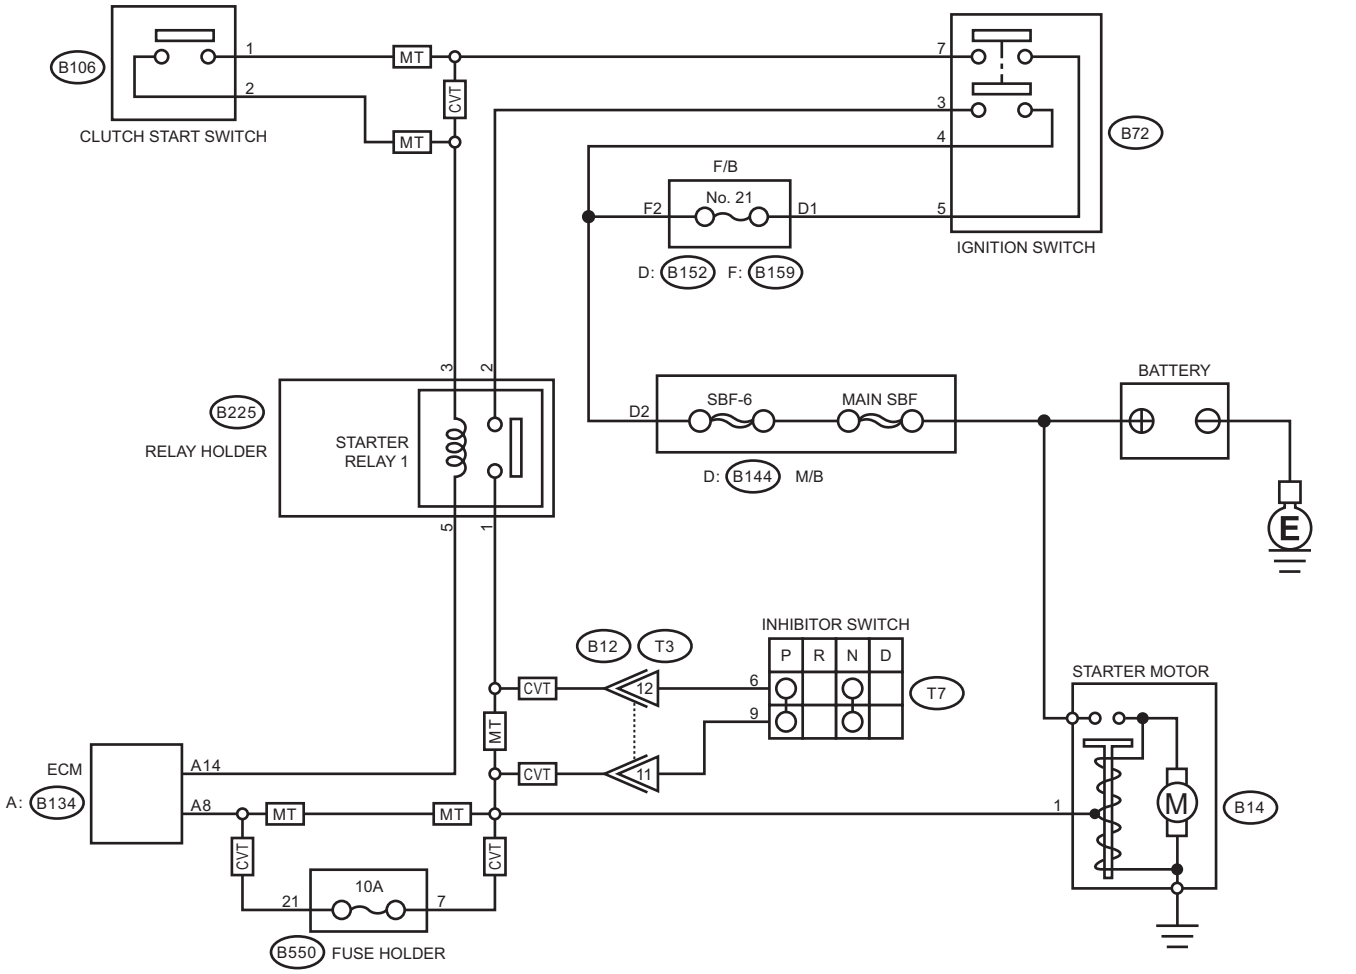
B: STARTER MOTOR CIRCUIT

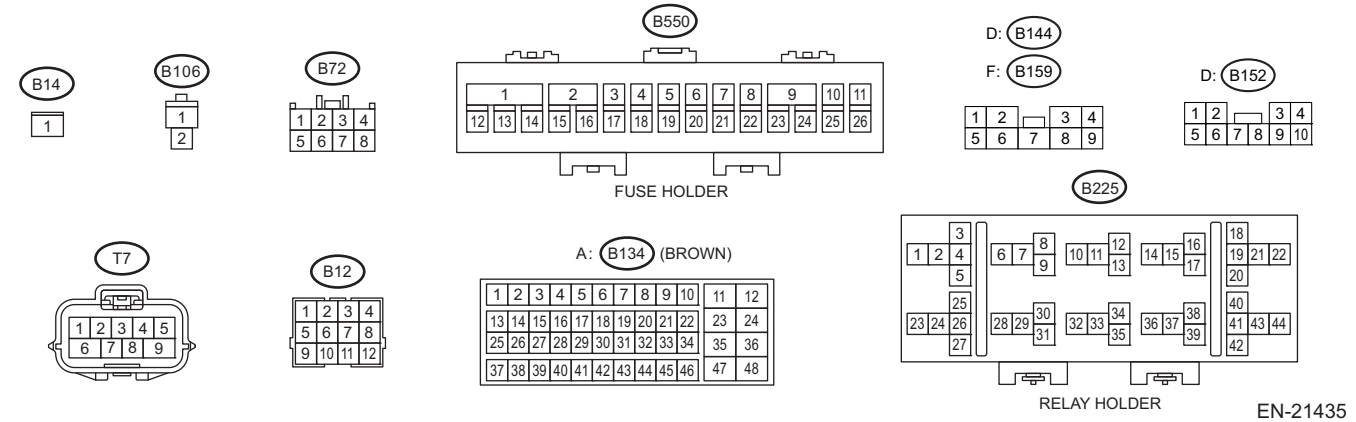
1. MODEL WITHOUT PUSH BUTTON START

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery. <Ref. to SC(w/o STI)-50, Battery.>
2	**CHECK OPERATION OF STARTER MOTOR.** Check the starter motor operation.	Does the starter motor operate?	Go to step **3**.	Go to step **4**.

	Step	Check	Yes	No
3	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Check ignition control system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
4	**CHECK INPUT SIGNAL FOR STARTER MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from starter motor. 3) Turn the ignition switch to START. 4) Measure the voltage between the starter motor connector and the engine ground. ***Connector & terminal*** ***(B14) No. 1 (+) — Engine ground (–):*** NOTE: • For CVT model, place the select lever in "P" range or "N" range. • For MT model, depress the clutch pedal.	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(w/o STI)-7, Starter.>	Go to step **5**.
5	**CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition switch. 3) Measure the power supply voltage between ignition switch connector and chassis ground. ***Connector & terminal*** ***(B72) No. 4 (+) — Chassis ground (–):*** ***(B72) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the power supply circuit.
6	**CHECK IGNITION SWITCH.** Measure the resistance between ignition switch terminals after turning the ignition switch to START position. ***Terminals*** ***No. 3 — No. 4:*** ***No. 5 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the ignition switch. <Ref. to SL-63, REPLACEMENT, Ignition Key Lock.>
7	**CHECK INPUT VOLTAGE OF STARTER RELAY 1.** 1) Turn the ignition switch to OFF. 2) Remove the starter relay 1. 3) Connect the connector to ignition switch. 4) Measure the voltage between starter relay 1 connector and chassis ground after turning the ignition switch to START position. ***Connector & terminal*** ***(B225) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the open circuit of harness between starter relay 1 and ignition switch connector.
8	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and starter relay 1 connector. ***Connector & terminal*** ***(B134) No. 14 — (B225) No. 5:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness between ECM connector and starter relay 1 connector.

	Step	Check	Yes	No
9	**CHECK STARTER RELAY 1.** 1) Connect the battery to starter relay 1 terminals No. 3 and No. 5. 2) Measure the resistance between starter relay 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **10**.	Replace the starter relay 1. <Ref. to EN(w/o STI)(diag)-11, Electrical Component Location.>
10	**CHECK TRANSMISSION TYPE.** Check the transmission type.	Is the transmission type CVT?	Go to step **11**.	Go to step **15**.
11	**CHECK INPUT VOLTAGE OF STARTER RELAY 1.** Measure the voltage between starter relay 1 connector and chassis ground after turning the ignition switch to START position. ***Connector & terminal*** ***(B225) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	Check the following item and repair if necessary. • Blown out of fuse • Open or short circuit to ground in harness between starter relay 1 and ignition switch connector
12	**CHECK HARNESS BETWEEN STARTER RELAY 1 AND INHIBITOR SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from inhibitor switch. 3) Measure the resistance of harness between starter relay 1 connector and inhibitor switch connector. ***Connector & terminal*** ***(B225) No. 1 — (T7) No. 6:***	Is the resistance less than 1 Ω?	Go to step **13**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between starter relay 1 connector and inhibitor switch connector • Poor contact of coupling connector
13	**CHECK HARNESS BETWEEN INHIBITOR SWITCH AND STARTER MOTOR.** Measure the resistance of harness between the inhibitor switch connector and starter motor. ***Connector & terminal*** ***(T7) No. 9 — (B14) No. 1:***	Is the resistance less than 1 Ω?	Go to step **14**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between inhibitor switch connector and starter motor • Poor contact of coupling connector
14	**CHECK INHIBITOR SWITCH.** 1) Place the select lever in “P” range and “N” range. 2) Measure the resistance between inhibitor switch terminals. ***Terminals*** ***No. 6 — No. 9:***	Is the resistance less than 1 Ω?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(w/o STI)(diag)-112, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>

	Step	Check	Yes	No
15	**CHECK INPUT VOLTAGE OF CLUTCH START SWITCH.** 1) Disconnect the connector from clutch start switch. 2) Turn the ignition switch to START. 3) Measure the voltage between the clutch start switch connector and chassis ground. ***Connector & terminal*** ***(B106) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **16**.	Check the following item and repair if necessary. • Blown out of fuse • Open or short circuit to ground in harness between ignition switch connector and clutch start switch connector
16	**CHECK CLUTCH START SWITCH.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between clutch start switch terminals while keeping the clutch pedal depressed. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **17**.	Replace the clutch start switch. <Ref. to CL-36, Clutch Switch.>
17	**CHECK HARNESS BETWEEN STARTER RELAY 1 AND CLUTCH START SWITCH.** Measure the resistance of harness between starter relay 1 and clutch start switch connector. ***Connector & terminal*** ***(B225) No. 3 — (B106) No. 2:***	Is the resistance less than 1 Ω?	Go to step **18**.	Repair the open circuit in harness between starter relay 1 and clutch start switch connector.
18	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND STARTER MOTOR CONNECTOR.** Measure the resistance of harness between starter relay 1 connector and starter motor connector. ***Connector & terminal*** ***(B225) No. 1 — (B14) No. 1:***	Is the resistance less than 1 Ω?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(w/o STI)(diag)-112, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Repair the open circuit of the harness between starter relay 1 connector and starter motor connector.

2. MODEL WITH PUSH BUTTON START

CAUTION:

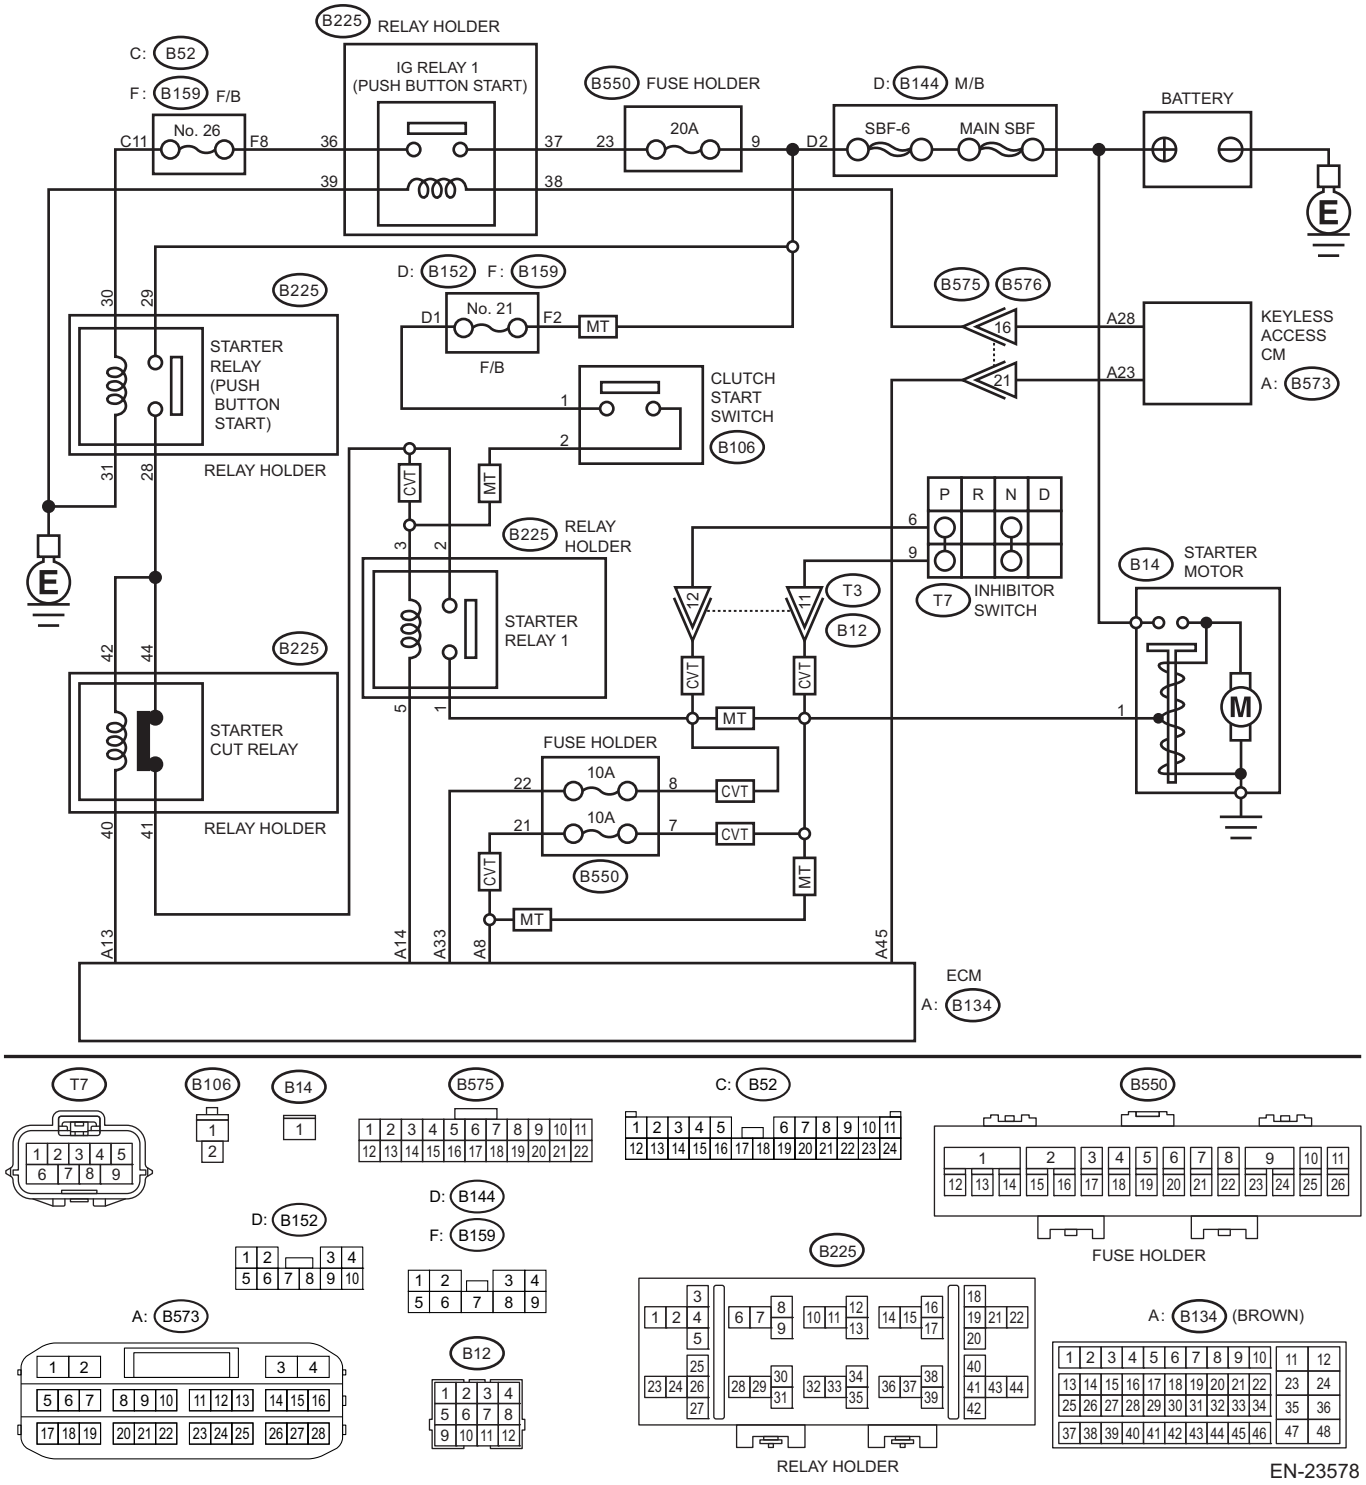
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:

Diagnostics for Engine Starting Failure

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery. <Ref. to SC(w/o STI)-50, Battery.>
2	**CHECK OPERATION OF STARTER MOTOR.** Check the starter motor operation.	Does the starter motor operate?	Go to step **3**.	Go to step **4**.

	Step	Check	Yes	No
3	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Check ignition control system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
4	**CHECK PUSH BUTTON IGNITION SWITCH.** Press the push button ignition switch twice with the ignition OFF (ACC OFF). NOTE: • Release the brake pedal. (CVT model) • Release the clutch pedal. (MT model)	Does the ignition turn to ON?	Go to step **5**.	Check the push button start system. <Ref. to KPS(diag)-127, POWER SUPPLY SWITCHING SYSTEM, LIST, Diagnostics with Phenomenon.> D
5	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Depress the brake pedal (CVT model) or clutch pedal (MT model). NOTE: For CVT model, position the select lever in "P" range. 2) Check the push button ignition switch indicator.	Does the indicator turn to green?	Go to step **6**.	Check the push button start system. <Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
6	**CHECK START SWITCH SIGNAL.** 1) Read the waveform of «Starter Switch» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> 2) Press the push button ignition switch once with the brake pedal (CVT model) or clutch pedal (MT model) depressed.	Does waveform of the «Starter Switch» occur?	Go to step **10**.	Go to step **7**.
7	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the keyless access CM. 4) Measure the resistance of harness between ECM connector and keyless access CM. ***Connector & terminal*** ***(B134) No. 45 — (B573) No. 23:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and keyless access CM connector • Poor contact of coupling connector
8	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 45 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Repair the short circuit to ground in harness between ECM connector and keyless access CM connector.

	Step	Check	Yes	No
9	**CHECK START SWITCH SIGNAL.** 1) Connect the connector to ECM. 2) Connect the connector to the keyless access CM. 3) Read the waveform of start switch signal using an oscilloscope. 4) Press the push button ignition switch once with the brake pedal (CVT model) or clutch pedal (MT model) depressed. ***Connector & terminal*** ***(B134) No. 45 (+) — Chassis ground (–):***	Does waveform of the start switch signal occur?	Repair the poor contact of ECM connector.	Repair the poor contact of keyless access CM connector.
10	**CHECK INPUT SIGNAL FOR STARTER MOTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from starter motor. 3) Set the select lever in "P" range or "N" range (CVT model), or the gear shift lever in neutral. (MT model) 4) Press the push button ignition switch once with the brake pedal (CVT model) or clutch pedal (MT model) depressed. 5) Measure the voltage between the starter motor connector and the engine ground. ***Connector & terminal*** ***(B14) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Check the starter motor. <Ref. to SC(w/o STI)-7, Starter.>	Go to step **11**.
11	**CHECK IG RELAY 1 (PUSH BUTTON START) POWER SUPPLY.** 1) Remove the IG relay 1 (push button start). 2) Turn the ignition to ON. 3) Measure the voltage between the IG relay 1 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 37 (+) — Chassis ground (–):*** ***(B225) No. 38 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	Check the following item and repair or replace if necessary. • Blown out of fuse • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and keyless access CM connector • Open circuit or short circuit to ground in harness between IG relay 1 (push button start) connector and battery • Poor contact of coupling connector
12	**CHECK HARNESS BETWEEN IG RELAY 1 (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition to OFF. 2) Measure the resistance of harness between the IG relay 1 (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 39 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **13**.	Repair the open circuit in harness between the IG relay 1 (push button start) connector and chassis ground.

	Step	Check	Yes	No
13	**CHECK IG RELAY 1 (PUSH BUTTON START).** 1) Connect the battery to IG relay 1 (push button start) terminals No. 38 and No. 39. 2) Measure the resistance between IG relay 1 (push button start) terminals. ***Terminals*** ***No. 36 — No. 37:***	Is the resistance less than 1 Ω?	Go to step **14**.	Replace the IG relay 1 (push button start). <Ref. to SL-107, IG Relay1 (Push Button Start).>
14	**CHECK STARTER RELAY (PUSH BUTTON START) POWER SUPPLY.** 1) Install the IG relay 1 (push button start). 2) Remove the starter relay (push button start). 3) Turn the ignition to ON. 4) Measure the voltage between starter relay (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 29 (+) — Chassis ground (–):*** ***(B225) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **15**.	Check the following item and repair or replace if necessary. • Blown out of fuse (F/B No. 26) • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and IG relay 1 (push button start) connector • Open circuit or short circuit to ground in harness between starter relay (push button start) connector and battery
15	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND CHASSIS GROUND.** 1) Turn the ignition to OFF. 2) Measure the resistance of harness between starter relay (push button start) connector and chassis ground. ***Connector & terminal*** ***(B225) No. 31 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **16**.	Repair the open circuit in harness between starter relay (push button start) connector and chassis ground.
16	**CHECK STARTER RELAY (PUSH BUTTON START).** 1) Connect the battery to starter relay (push button start) terminals No. 30 and No. 31. 2) Measure the resistance between starter relay (push button start) terminals. ***Terminals*** ***No. 28 — No. 29:***	Is the resistance less than 1 Ω?	Go to step **17**.	Replace the starter relay (push button start). <Ref. to SL-105, Starter Relay (Push Button Start).>
17	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR.** 1) Remove the starter cut relay. 2) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector. ***Connector & terminal*** ***(B225) No. 28 — (B225) No. 42:*** ***(B225) No. 28 — (B225) No. 44:***	Is the resistance less than 1 Ω?	Go to step **18**.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.

	Step	Check	Yes	No
18	**CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between starter cut relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 40 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **19**.	Repair the short circuit to ground in harness between ECM connector and starter cut relay connector.
19	**CHECK STARTER CUT RELAY.** Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance less than 1 Ω?	Go to step **20**.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.>
20	**CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR.** 1) Remove the starter relay 1. 2) Measure the resistance of harness between starter cut relay connector and starter relay 1 connector. ***Connector & terminal*** ***(B225) No. 41 — (B225) No. 2:***	Is the resistance less than 1 Ω?	Go to step **21**.	Repair the open circuit of harness between starter cut relay connector and starter relay 1 connector.
21	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** Measure the resistance of harness between ECM connector and starter relay 1 connector. ***Connector & terminal*** ***(B134) No. 14 — (B225) No. 5:***	Is the resistance less than 1 Ω?	Go to step **22**.	Repair the open circuit of harness between ECM connector and starter relay 1 connector.
22	**CHECK STARTER RELAY 1.** 1) Connect the battery to starter relay 1 terminals No. 3 and No. 5. 2) Measure the resistance between starter relay 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **23**.	Replace the starter relay 1. <Ref. to EN(w/o STI)(diag)-11, LOCATION, Electrical Component Location.>
23	**CHECK TRANSMISSION TYPE.**	Is the transmission type CVT?	Go to step **26**.	Go to step **24**.
24	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND CLUTCH START SWITCH CONNECTOR.** Measure the resistance of harness between starter relay 1 connector and clutch start switch connector. ***Connector & terminal*** ***(B225) No. 3 — (B106) No. 2:***	Is the resistance less than 1 Ω?	Go to step **25**.	Repair the open circuit in harness between starter relay 1 connector and clutch start switch connector.
25	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND STARTER MOTOR CONNECTOR.** Measure the resistance of harness between starter relay 1 connector and starter motor connector. ***Connector & terminal*** ***(B225) No. 1 — (B14) No. 1:***	Is the resistance less than 1 Ω?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(w/o STI)(diag)-112, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Repair the open circuit of the harness between starter relay 1 connector and starter motor connector.

	Step	Check	Yes	No
26	**CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR.** Measure the resistance of harness between starter cut relay connector and starter relay 1 connector. ***Connector & terminal*** ***(B225) No. 41 — (B225) No. 3:***	Is the resistance less than 1 Ω?	Go to step **27**.	Repair the open circuit of harness between starter cut relay connector and starter relay 1 connector.
27	**CHECK HARNESS BETWEEN STARTER RELAY 1 CONNECTOR AND INHIBITOR SWITCH CONNECTOR.** 1) Disconnect the connector from inhibitor switch. 2) Measure the resistance of harness between starter relay 1 connector and inhibitor switch connector. ***Connector & terminal*** ***(B225) No. 1 — (T7) No. 6:***	Is the resistance less than 1 Ω?	Go to step **28**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between starter relay 1 connector and inhibitor switch connector • Poor contact of coupling connector
28	**CHECK INHIBITOR SWITCH.** 1) Place the select lever in “P” range or “N” range. 2) Measure the resistance between inhibitor switch terminals. ***Terminals*** ***No. 6 — No. 9:***	Is the resistance less than 1 Ω?	Go to step **29**.	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>
29	**CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and inhibitor switch connector. ***Connector & terminal*** ***(B134) No. 33 — (T7) No. 6:*** ***(B134) No. 8 — (T7) No. 9:***	Is the resistance less than 1 Ω?	Go to step **30**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Blown out of fuse • Open circuit in harness between ECM connector and inhibitor switch connector • Poor contact of coupling connector
30	**CHECK NEUTRAL POSITION SWITCH SIGNAL.** 1) Connect all relays to their proper positions. 2) Connect all connectors to their proper positions. 3) Read the value of «Neutral Position Switch» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “READ CURRENT DATA FOR ENGINE”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> 4) Turn the ignition to ON. 5) Place the select lever in “P” range or “N” range.	Is «Neutral» displayed?	Check the engine control module (ECM) power supply and ground line. <Ref. to EN(w/o STI)(diag)-112, CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM), Diagnostics for Engine Starting Failure.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between inhibitor switch connector and starter motor connector • Poor contact of coupling connector

C: CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM)

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

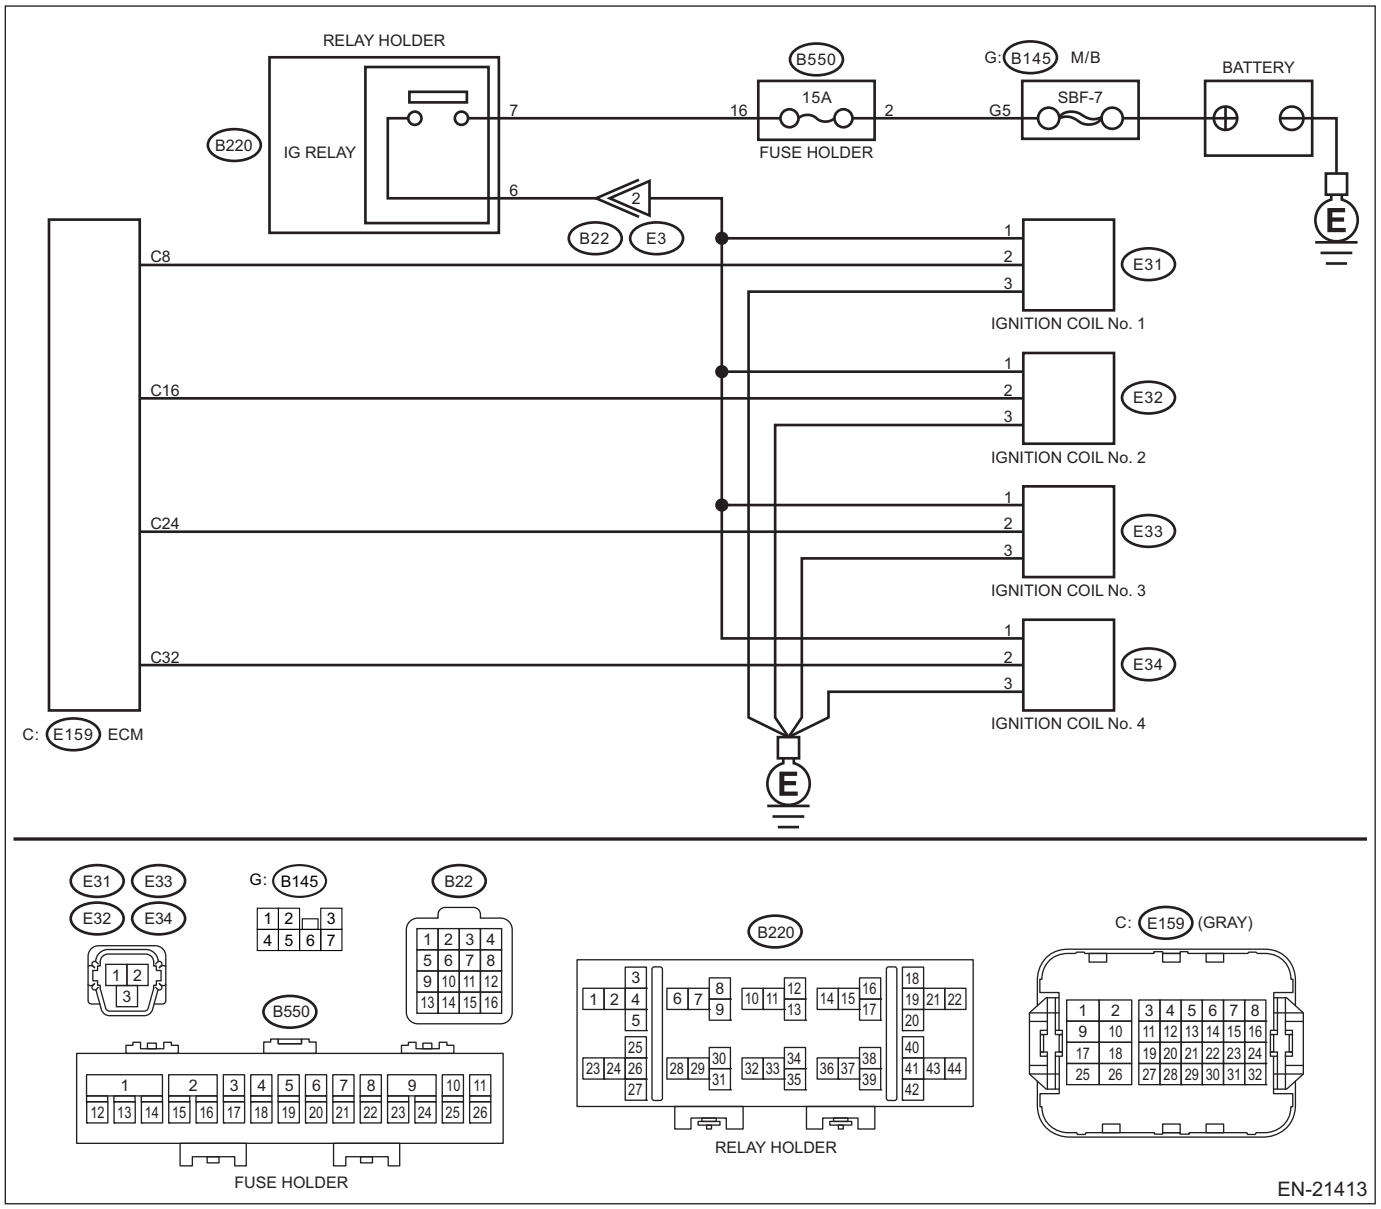
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK MAIN RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Connect the battery to main relay terminals No. 12 and No. 13. 4) Measure the resistance between main relay terminals. ***Terminals*** ***No. 10 — No. 11:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the main relay. <Ref. to FU(w/o STI)-128, Main Relay.>
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 35 — Chassis ground:*** ***(B134) No. 47 — Chassis ground:*** ***(E159) No. 10 — Chassis ground:*** ***(E159) No. 17 — Chassis ground:*** ***(E159) No. 18 — Chassis ground:*** ***(E159) No. 25 — Chassis ground:*** ***(E159) No. 26 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground terminal • Poor contact of coupling connector
3	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 23 (+) — Chassis ground (–):*** ***(B134) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the open or ground short in the harness of power supply circuit.
4	**CHECK INPUT VOLTAGE OF MAIN RELAY.** Measure the voltage between main relay connector and chassis ground. ***Connector & terminal*** ***(B220) No. 11 (+) — Chassis ground (–):*** ***(B220) No. 12 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or ground short in the harness of power supply circuit.
5	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to OFF. 2) Install the main relay. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 38 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Repair the open circuit of harness between ECM connector and main relay connector.
6	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to OFF. 2) Connect the connector to ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 12 (+) — Chassis ground (–):*** ***(B134) No. 24 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check ignition control system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and main relay connector • Poor contact of main relay connector • Poor contact of ECM connector

D: IGNITION CONTROL SYSTEM

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK SPARK PLUG CONDITION.** 1) Remove the spark plug. <Ref. to IG(w/o STI)-4, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(w/o STI)-8, INSPECTION, Spark Plug.>	Is the check result OK?	Go to step **2**.	Replace the spark plug. <Ref. to IG(w/o STI)-4, Spark Plug.>

	Step	Check	Yes	No
2	**CHECK IGNITION SYSTEM FOR SPARKS.** 1) Connect the spark plug to ignition coil. 2) Release the fuel pressure. <Ref. to FU(w/o STI)-139, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.> 3) Contact the spark plug thread portion to engine. 4) While opening the throttle valve fully, crank the engine to check that spark occurs at each cylinder.	Does spark occur at each cylinder?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-116, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step **3**.
3	**CHECK IGNITION COIL POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the voltage between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 1 (+) — Engine ground (–):*** ***(E32) No. 1 (+) — Engine ground (–):*** ***(E33) No. 1 (+) — Engine ground (–):*** ***(E34) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open or short to ground in power supply circuit • Poor contact of coupling connector • Blown out of fuse
4	**CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 3 — Engine ground:*** ***(E32) No. 3 — Engine ground:*** ***(E33) No. 3 — Engine ground:*** ***(E34) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **5**.	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.
5	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and ignition coil connector. ***Connector & terminal*** ***(E159) No. 8 — (E31) No. 2:*** ***(E159) No. 16 — (E32) No. 2:*** ***(E159) No. 24 — (E33) No. 2:*** ***(E159) No. 32 — (E34) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit in harness between ECM connector and ignition coil connector.
6	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 8 — Engine ground:*** ***(E159) No. 16 — Engine ground:*** ***(E159) No. 24 — Engine ground:*** ***(E159) No. 32 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.
7	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ignition coil. <Ref. to IG(w/o STI)-11, Ignition Coil.>

E: FUEL PUMP CIRCUIT

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

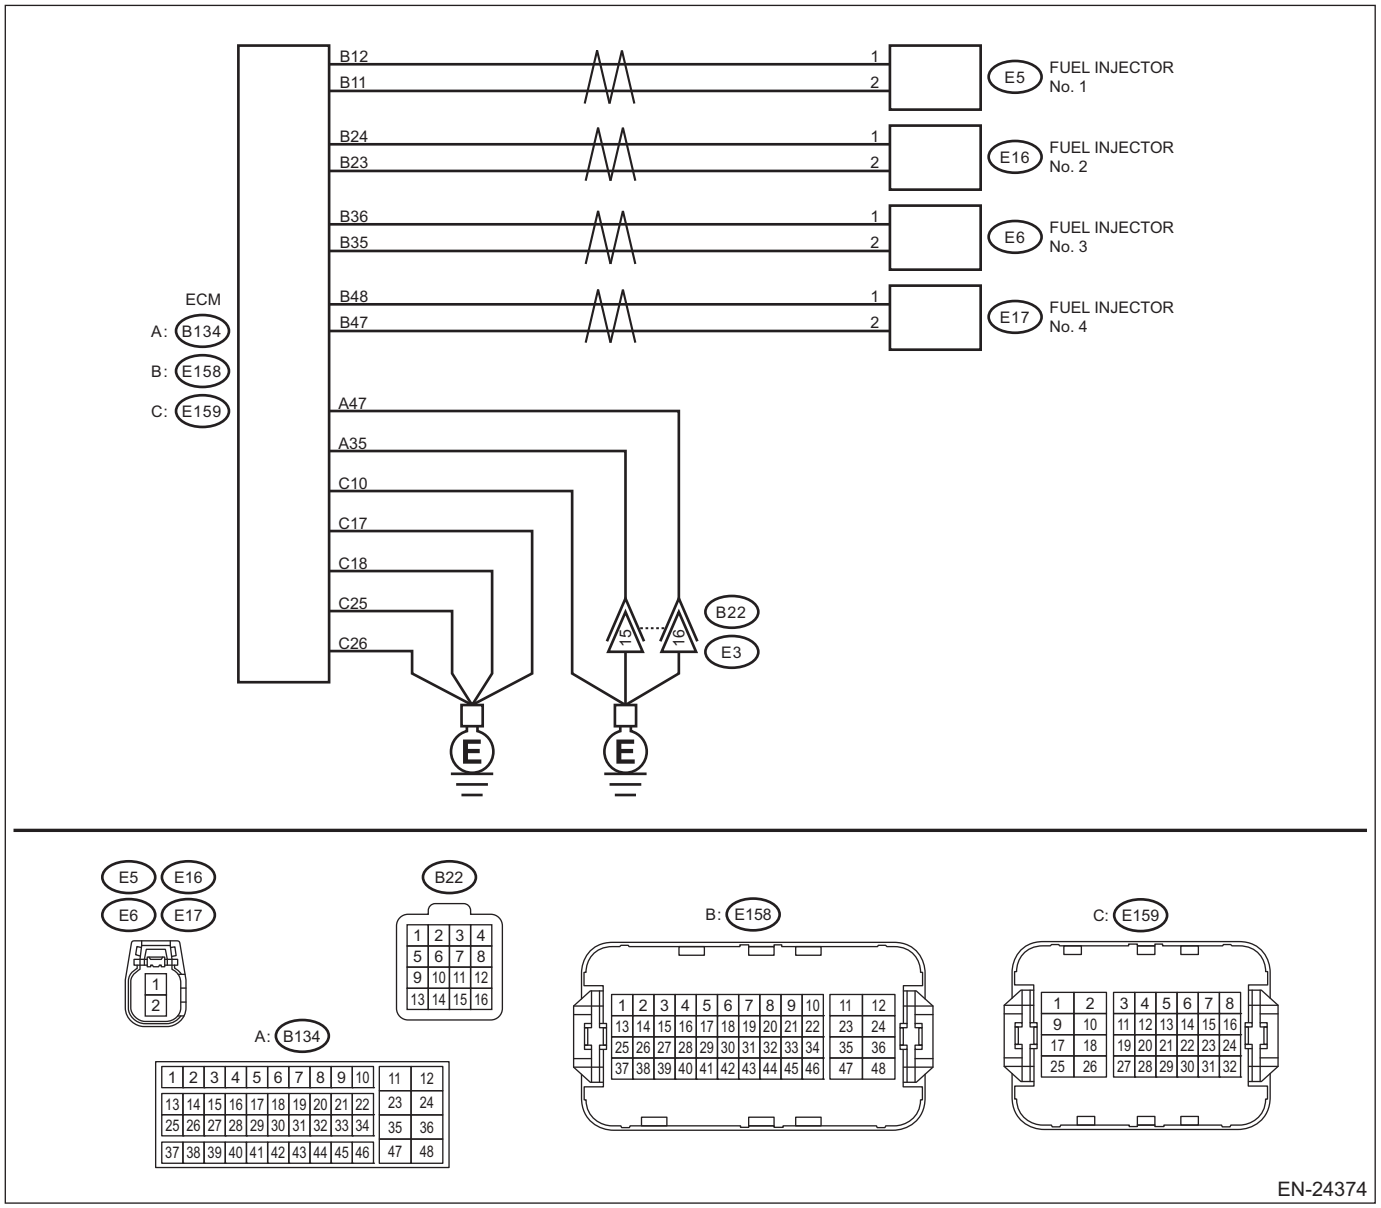
	Step	Check	Yes	No
1	**CHECK OPERATING SOUND OF FUEL PUMP.** Make sure that the fuel pump operates for two seconds when turning the ignition switch to ON. NOTE: Fuel pump operation can be executed using Subaru Select Monitor. For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the fuel pump emit operating sound?	Check the fuel injector circuit. <Ref. to EN(w/o STI)(diag)-117, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>	Display the DTC. <Ref. to EN(w/o STI)(diag)-70, OPERATION, Read Diagnostic Trouble Code (DTC).>

F: FUEL INJECTOR CIRCUIT

CAUTION:
- **Check or repair only faulty parts.**
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK OPERATION OF EACH FUEL INJECTOR.** While cranking the engine, check each fuel injector emits operating sound. Use a sound scope or listen by attaching a screwdriver to the injector for this check.	Does the fuel injector emit operating sound?	Check the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Chassis ground:*** ***#1 (E158) No. 11 — Chassis ground:*** ***#2 (E158) No. 24 — Chassis ground:*** ***#2 (E158) No. 23 — Chassis ground:*** ***#3 (E158) No. 36 — Chassis ground:*** ***#3 (E158) No. 35 — Chassis ground:*** ***#4 (E158) No. 48 — Chassis ground:*** ***#4 (E158) No. 47 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
4	**CHECK EACH FUEL INJECTOR.** Check each fuel injector. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **5**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Inspection using “General Diagnostic Table”. <Ref. to EN(w/o STI)(diag)-804, INSPECTION, General Diagnostic Table.>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
B1571	REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)	<Ref. to IM(diag)-16, DTC B1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-48, DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	<Ref. to IM(diag)-17, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-49, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	<Ref. to IM(diag)-21, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-54, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	<Ref. to IM(diag)-21, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to KPS(diag)-55, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000A	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 1	<Ref. to EN(w/o STI)(diag)-131, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000B	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 1	<Ref. to EN(w/o STI)(diag)-131, DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000C	"A" CAMSHAFT POSITION SLOW RESPONSE BANK 2	<Ref. to EN(w/o STI)(diag)-132, DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P000D	"B" CAMSHAFT POSITION SLOW RESPONSE BANK 2	<Ref. to EN(w/o STI)(diag)-132, DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0010	"A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1	<Ref. to EN(w/o STI)(diag)-133, DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0011	"A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-135, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P0030	A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-216, DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0031	A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-220, DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0032	A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-224, DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0037	A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-227, DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0038	A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-231, DTC P0038 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0068	MAP/MAF - THROTTLE POSITION CORRELATION	<Ref. to EN(w/o STI)(diag)-234, DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0071	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-237, DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0072	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW	<Ref. to EN(w/o STI)(diag)-239, DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0073	AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH	<Ref. to EN(w/o STI)(diag)-240, DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0087	FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1	<Ref. to EN(w/o STI)(diag)-242, DTC P0087 FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0088	FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1	<Ref. to EN(w/o STI)(diag)-245, DTC P0088 FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0096	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT RANGE/PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-247, DTC P0096 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0097	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT LOW BANK 1	<Ref. to EN(w/o STI)(diag)-250, DTC P0097 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT LOW BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0098	INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT HIGH BANK 1	<Ref. to EN(w/o STI)(diag)-253, DTC P0098 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0101	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-256, DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0102	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-258, DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0103	MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-261, DTC P0103 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0107	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-264, DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0108	MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-267, DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0111	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-270, DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0112	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1	<Ref. to EN(w/o STI)(diag)-273, DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0113	INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1	<Ref. to EN(w/o STI)(diag)-276, DTC P0113 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0116	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-279, DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0117	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-282, DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0118	ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-285, DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0122	THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-288, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0123	THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-292, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0125	INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL	<Ref. to EN(w/o STI)(diag)-296, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0128	COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)	<Ref. to EN(w/o STI)(diag)-298, DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0130	A/F / O2 SENSOR CIRCUIT BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-302, DTC P0130 A/F / O2 SENSOR CIRCUIT BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0131	A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-307, DTC P0131 A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0132	A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-311, DTC P0132 A/F / O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0134	A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-315, DTC P0134 A/F / O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

List of Diagnostic Trouble Code (DTC)

DTC	Item	Note
P0137	O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-319, DTC P0137 O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0138	O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-324, DTC P0138 O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013A	O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-328, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013B	O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-332, DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013E	O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-334, DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P013F	O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-336, DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0140	O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-339, DTC P0140 O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0141	O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2	<Ref. to EN(w/o STI)(diag)-342, DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P014C	A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-346, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P014D	A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-348, DTC P014D A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P015A	A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-348, DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P015B	A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1	<Ref. to EN(w/o STI)(diag)-353, DTC P015B A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0171	SYSTEM TOO LEAN BANK 1	<Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0172	SYSTEM TOO RICH BANK 1	<Ref. to EN(w/o STI)(diag)-355, DTC P0172 SYSTEM TOO RICH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0191	FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-360, DTC P0191 FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0192	FUEL RAIL PRESSURE SENSOR CIRCUIT LOW BANK 1	<Ref. to EN(w/o STI)(diag)-363, DTC P0192 FUEL RAIL PRESSURE SENSOR CIRCUIT LOW BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0193	FUEL RAIL PRESSURE SENSOR CIRCUIT HIGH BANK 1	<Ref. to EN(w/o STI)(diag)-365, DTC P0193 FUEL RAIL PRESSURE SENSOR CIRCUIT HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0196	ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-367, DTC P0196 ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0197	ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-371, DTC P0197 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0198	ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-374, DTC P0198 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0222	THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-377, DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0223	THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-381, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0230	FUEL PUMP PRIMARY CIRCUIT	<Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P023F	FUEL PUMP SECONDARY CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-388, DTC P023F FUEL PUMP SECONDARY CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0245	TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" LOW	<Ref. to EN(w/o STI)(diag)-391, DTC P0245 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0246	TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH	<Ref. to EN(w/o STI)(diag)-394, DTC P0246 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0300	RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED	<Ref. to EN(w/o STI)(diag)-397, DTC P0300 RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0301	CYLINDER 1 MISFIRE DETECTED	<Ref. to EN(w/o STI)(diag)-401, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0302	CYLINDER 2 MISFIRE DETECTED	<Ref. to EN(w/o STI)(diag)-406, DTC P0302 CYLINDER 2 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0303	CYLINDER 3 MISFIRE DETECTED	<Ref. to EN(w/o STI)(diag)-406, DTC P0303 CYLINDER 3 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0304	CYLINDER 4 MISFIRE DETECTED	<Ref. to EN(w/o STI)(diag)-407, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0327	KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR	<Ref. to EN(w/o STI)(diag)-411, DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0328	KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR	<Ref. to EN(w/o STI)(diag)-414, DTC P0328 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0332	KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT LOW BANK 2	<Ref. to EN(w/o STI)(diag)-416, DTC P0332 KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT LOW BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0333	KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT HIGH BANK 2	<Ref. to EN(w/o STI)(diag)-419, DTC P0333 KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT HIGH BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0335	CRANKSHAFT POSITION SENSOR "A" CIRCUIT	<Ref. to EN(w/o STI)(diag)-421, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0336	CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-425, DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0340	CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR	<Ref. to EN(w/o STI)(diag)-428, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0341	CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR	<Ref. to EN(w/o STI)(diag)-432, DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0345	CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2	<Ref. to EN(w/o STI)(diag)-433, DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0346	CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 2	<Ref. to EN(w/o STI)(diag)-436, DTC P0346 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0351	IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-437, DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0352	IGNITION COIL "B" PRIMARY CONTROL CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-439, DTC P0352 IGNITION COIL "B" PRIMARY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0353	IGNITION COIL "C" PRIMARY CONTROL CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-439, DTC P0353 IGNITION COIL "C" PRIMARY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0354	IGNITION COIL "D" PRIMARY CONTROL CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-439, DTC P0354 IGNITION COIL "D" PRIMARY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0365	CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1	<Ref. to EN(w/o STI)(diag)-440, DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0366	CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-443, DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0390	CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2	<Ref. to EN(w/o STI)(diag)-444, DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0391	CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 2	<Ref. to EN(w/o STI)(diag)-447, DTC P0391 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0401	EGR ABNORMAL (EGR AMOUNT TOO SMALL)	<Ref. to EN(w/o STI)(diag)-448, DTC P0401 EGR ABNORMAL (EGR AMOUNT TOO SMALL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0402	EGR "A" FLOW EXCESSIVE DETECTED	<Ref. to EN(w/o STI)(diag)-452, DTC P0402 EGR "A" FLOW EXCESSIVE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0420	CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1	<Ref. to EN(w/o STI)(diag)-453, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0441	EVAP SYSTEM (CPC) INCORRECT PURGE FLOW	<Ref. to EN(w/o STI)(diag)-462, DTC P0441 EVAP SYSTEM (CPC) INCORRECT PURGE FLOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0455	EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)	<Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0456	EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)	<Ref. to EN(w/o STI)(diag)-473, DTC P0456 EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0458	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-474, DTC P0458 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0459	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-477, DTC P0459 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0461	FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE	<Ref. to EN(w/o STI)(diag)-480, DTC P0461 FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0462	FUEL LEVEL SENSOR "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-481, DTC P0462 FUEL LEVEL SENSOR "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0463	FUEL LEVEL SENSOR "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-483, DTC P0463 FUEL LEVEL SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P04AC	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-485, DTC P04AC EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P04AD	EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-488, DTC P04AD EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P04AF	EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED	<Ref. to EN(w/o STI)(diag)-491, DTC P04AF EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P04DB	CRANKCASE VENTILATION SYSTEM (PCV) DISCONNECTED	<Ref. to EN(w/o STI)(diag)-492, DTC P04DB CRANKCASE VENTILATION SYSTEM (PCV) DISCONNECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P04F0	EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE	<Ref. to EN(w/o STI)(diag)-495, DTC P04F0 EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0500	VEHICLE SPEED SENSOR "A" CIRCUIT	<Ref. to EN(w/o STI)(diag)-498, DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0506	IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED	<Ref. to EN(w/o STI)(diag)-500, DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0507	IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED	<Ref. to EN(w/o STI)(diag)-502, DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P050A	COLD START IDLE CONTROL SYSTEM PERFORMANCE	<Ref. to EN(w/o STI)(diag)-504, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P050B	COLD START IGNITION TIMING PERFORMANCE	<Ref. to EN(w/o STI)(diag)-515, DTC P050B COLD START IGNITION TIMING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0512	STARTER (SWITCH) REQUEST CIRCUIT	<Ref. to EN(w/o STI)(diag)-516, DTC P0512 STARTER (SWITCH) REQUEST CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0560	SYSTEM VOLTAGE	<Ref. to EN(w/o STI)(diag)-519, DTC P0560 SYSTEM VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR	<Ref. to EN(w/o STI)(diag)-522, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0605	INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR	<Ref. to EN(w/o STI)(diag)-523, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0606	CONTROL MODULE PROCESSOR	<Ref. to EN(w/o STI)(diag)-524, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P060A	INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE	<Ref. to EN(w/o STI)(diag)-528, DTC P060A INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P060B	INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE	<Ref. to EN(w/o STI)(diag)-528, DTC P060B INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0616	STARTER RELAY "A" CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-530, DTC P0616 STARTER RELAY "A" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P0617	STARTER RELAY "A" CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-535, DTC P0617 STARTER RELAY "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062D	FUEL INJECTOR DRIVER CIRCUIT PERFORMANCE BANK 1	<Ref. to EN(w/o STI)(diag)-541, DTC P062D FUEL INJECTOR DRIVER CIRCUIT PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P062F	INTERNAL CONTROL MODULE EEPROM ERROR	<Ref. to EN(w/o STI)(diag)-543, DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0685	ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-545, DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0700	TRANSMISSION CONTROL SYSTEM (MIL REQUEST)	<Ref. to EN(w/o STI)(diag)-547, DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P081A	STARTER DISABLE CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-549, DTC P081A STARTER DISABLE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0851	PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-552, DTC P0851 PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0852	PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-556, DTC P0852 PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1134	A/F / O2 SENSOR BANK1 SENSOR1 SERIAL PERIPHERAL INTERFACE (SPI) COMMUNICATION	<Ref. to EN(w/o STI)(diag)-560, DTC P1134 A/F / O2 SENSOR BANK1 SENSOR1 SERIAL PERIPHERAL INTERFACE (SPI) COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1160	THROTTLE RETURN SPRING	<Ref. to EN(w/o STI)(diag)-561, DTC P1160 THROTTLE RETURN SPRING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1191	FUEL RAIL PRESSURE SENSOR "A" CIRCUIT NO ACTIVITY DETECTED	<Ref. to EN(w/o STI)(diag)-561, DTC P1191 FUEL RAIL PRESSURE SENSOR "A" CIRCUIT NO ACTIVITY DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1261	CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1262	CYLINDER 2 DIRECT FUEL INJECTOR CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-567, DTC P1262 CYLINDER 2 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1263	CYLINDER 3 DIRECT FUEL INJECTOR CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-567, DTC P1263 CYLINDER 3 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1264	CYLINDER 4 DIRECT FUEL INJECTOR CIRCUIT/OPEN	<Ref. to EN(w/o STI)(diag)-567, DTC P1264 CYLINDER 4 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1449	EVAP SYSTEM CLOG DETECTED (AIR FILTER)	<Ref. to EN(w/o STI)(diag)-569, DTC P1449 EVAP SYSTEM CLOG DETECTED (AIR FILTER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1451	EVAP SYSTEM CLOG DETECTED (PIPE)	<Ref. to EN(w/o STI)(diag)-572, DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1492	COIL 1 EGR "A" CONTROL CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-572, DTC P1492 COIL 1 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1493	COIL 1 EGR "A" CONTROL CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-572, DTC P1493 COIL 1 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1494	COIL 2 EGR "A" CONTROL CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-573, DTC P1494 COIL 2 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
P1495	COIL 2 EGR "A" CONTROL CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-573, DTC P1495 COIL 2 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1496	COIL 3 EGR "A" CONTROL CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-573, DTC P1496 COIL 3 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1497	COIL 3 EGR "A" CONTROL CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-573, DTC P1497 COIL 3 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1498	COIL 4 EGR "A" CONTROL CIRCUIT LOW	<Ref. to EN(w/o STI)(diag)-574, DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1499	COIL 4 EGR "A" CONTROL CIRCUIT HIGH	<Ref. to EN(w/o STI)(diag)-577, DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1603	ENGINE STALL HISTORY	<Ref. to EN(w/o STI)(diag)-580, DTC P1603 ENGINE STALL HISTORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1604	STARTABILITY MALFUNCTION	<Ref. to EN(w/o STI)(diag)-609, DTC P1604 STARTABILITY MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1C00	BATTERY MONITOR MODULE "A" PERFORMANCE	<Ref. to EN(w/o STI)(diag)-647, DTC P1C00 BATTERY MONITOR MODULE "A" PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2004	TGV CONTROL STUCK OPEN BANK 1	<Ref. to EN(w/o STI)(diag)-648, DTC P2004 TGV CONTROL STUCK OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P2005	TGV CONTROL STUCK OPEN BANK 2	<Ref. to EN(w/o STI)(diag)-649, DTC P2005 TGV CONTROL STUCK OPEN BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

17.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0011. <Ref. to EN(w/o STI)(diag)-135, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS control	In operation
Target timing advance change amount (per 80 ms)	< 4°CA
VVT target angle	> 12.5°CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while AVCS is operating.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during AVCS control, and the difference per predetermined time is the specified value or larger.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Σ(Target position – Actual position)	> 4000°CA or < –4000°CA

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

B: DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0014. <Ref. to EN(w/o STI)(diag)-147, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge NG when the amount of exhaust AVCS actual timing advance does not approach the amount of exhaust AVCS target timing advance.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS control	In operation
Target timing advance change amount (per 80 ms)	< 4°CA

Secondary parameters	Execution condition
VVT target angle	> 14°CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while exhaust AVCS is operating.

4. DIAGNOSTIC METHOD

When the differences of target timing advance amount and actual timing advance amount is calculated during exhaust AVCS control, and the difference per predetermined time is the specified value or larger.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Σ(Target position – Actual position)	> 4500°CA or < –4500°CA

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

C: DTC P000C "A" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0021. <Ref. to EN(w/o STI)(diag)-197, DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P000A. <Ref. to EN(w/o STI)(diag)-131, DTC P000A "A" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

D: DTC P000D "B" CAMSHAFT POSITION SLOW RESPONSE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0024. <Ref. to EN(w/o STI)(diag)-208, DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P000B. <Ref. to EN(w/o STI)(diag)-131, DTC P000B "B" CAMSHAFT POSITION SLOW RESPONSE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

E: DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 7 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.** Measure the voltage between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid RH. 4) Measure the resistance between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.
5	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance of harness between ECM connector and intake oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 7 — (E38) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and intake oil control solenoid RH connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK INTAKE OIL CONTROL SOLENOID RH.** Measure the resistance between intake oil control solenoid RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 6 — 12 Ω?	Repair the poor contact of intake oil control solenoid RH connector.	Replace the intake oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of oil control solenoid valve.
Judge as NG when the current is small even though the duty signal is large, or when the current is large even though the duty signal is small.

2. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	≥ 99.6%

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	< 8%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.
Diagnosis 1
Judgment value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	< 0.306 A

Diagnosis 2
Judgment value

Malfunction Criteria	Threshold Value
Present current of the oil control solenoid	≥ 0.306 A

Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

F: DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

- **Use the check board when measuring the ECM terminal voltage and resistance.**

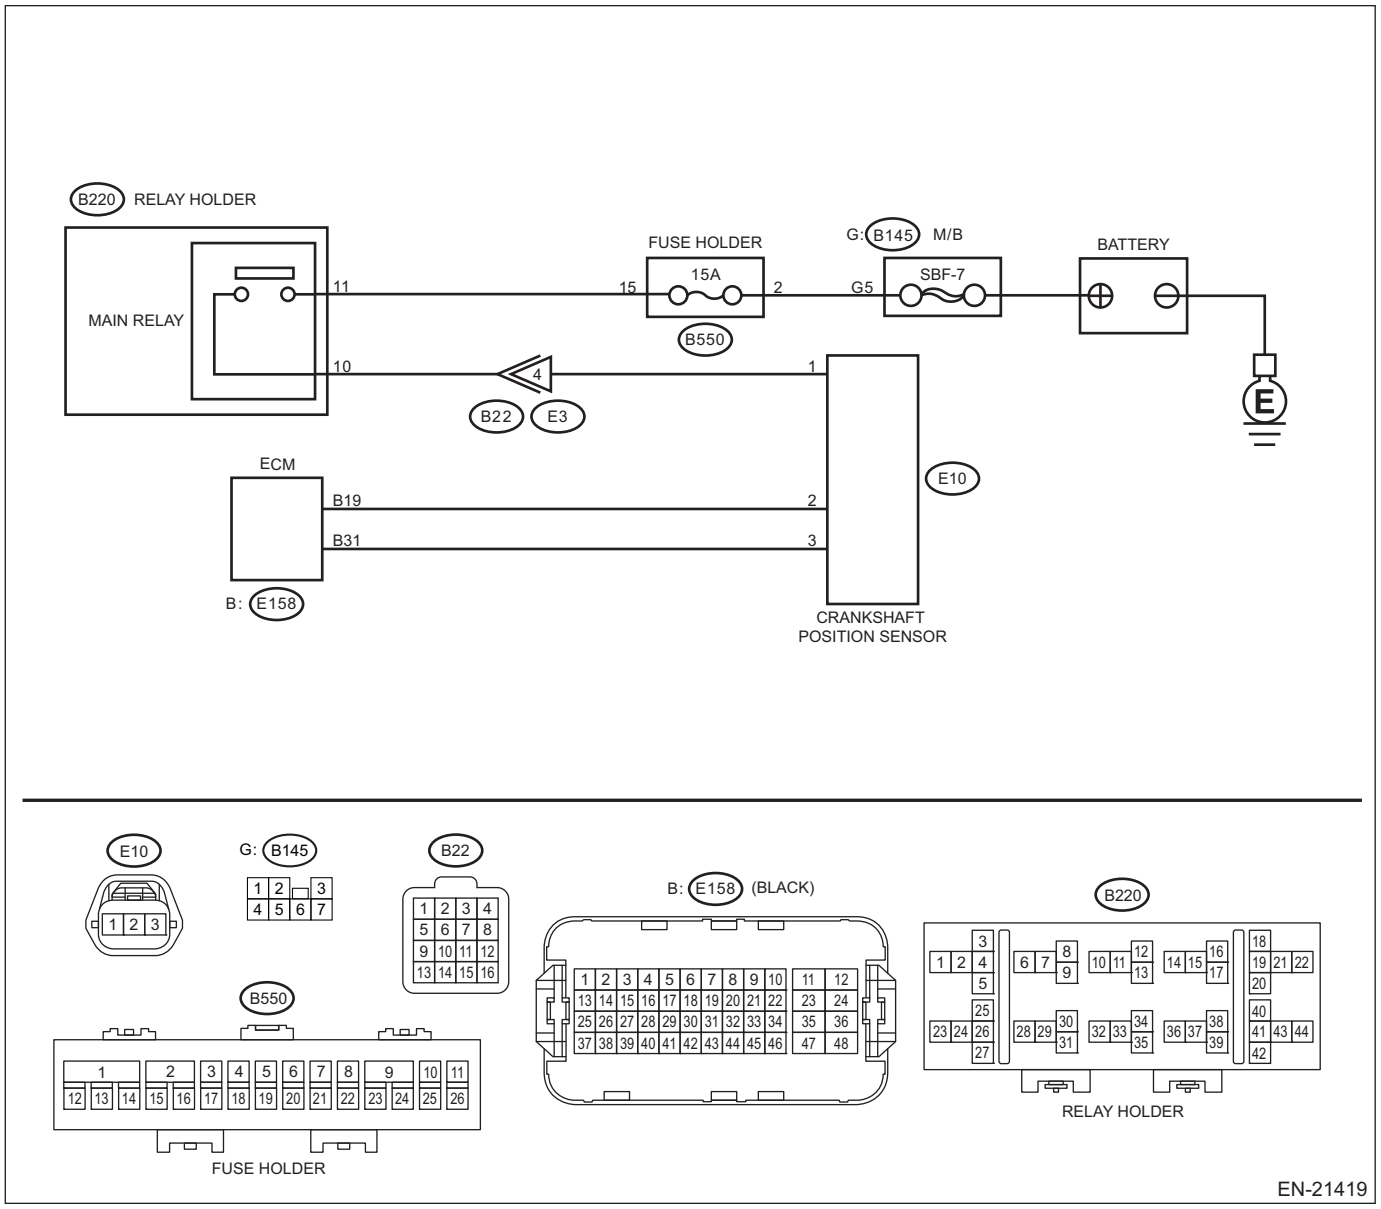
EN-21414



Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000A and P0011 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» of the replaced oil control solenoid 1000 or more?	Go to step **5**.	Go to step **4**.
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 3.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Go to step **5**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>

	Step	Check	Yes	No
5	**CHECK HARNESS AND CONNECTOR.** NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Intake oil control solenoid RH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Intake camshaft position sensor RH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid RH. 4) Measure the resistance of harness between ECM connector and intake oil control solenoid RH connector. ***Connector & terminal*** ***(E159) No. 7 — (E38) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **14**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake camshaft position sensor RH. 4) Measure the resistance between intake camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 20 — (E36) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the engine oil pressure at the specification or less?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **11**.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK OIL PASSAGES OF CHAIN COVER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Oil control solenoid • Entry of foreign matter	Is the check result OK?	Go to step **12**.	Replace the defective parts. Go to step **12**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. 2) Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to intake camshaft RH • Damage to intake camshaft RH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing RH not rotating properly • Check of cam carrier RH filter	Is the check result OK?	Go to step **13**.	Replace the cam carrier RH and camshaft RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to oil control solenoid to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier RH • Oil passage of the cylinder head RH side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **14**.	Remove foreign matter, and replace the cam carrier oil filter and the exhaust cam sprocket RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **14**.

	Step	Check	Yes	No
14	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 3) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» 1000 or more?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Go to step **15**.
15	**CHECK CURRENT DATA.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 14.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Replace the ECM, and finish the procedure. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge as NG when the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

- Normal

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS control	In operation
VVT target angle	> 10°CA

• Intermediate lock under normal condition

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 500 rpm
Elapsed time after starting the engine	> 500 ms and ≤ Value from Map

Map

Engine coolant temperature (°C (°F))	–40 (–40)	–30 (–22)	–20 (–4)	–10 (14)	0 (32)	10 (50)	20 (68)	30 (86)
Elapsed time after starting the engine (s)	10	10	10	8	5	3.5	2.8	2.8

Engine coolant temperature (°C (°F))	40 (104)	50 (122)	60 (140)	70 (158)	80 (176)	90 (194)	100 (212)	110 (230)
Elapsed time after starting the engine (s)	2.8	2.8	2.8	3.7	3.7	3.7	3.7	3.7

3. GENERAL DRIVING CYCLE

• Normal

Perform the diagnosis continuously while AVCS is operating.

• Intermediate lock

Perform the diagnosis when the AVCS is carrying out the intermediate lock control at the engine start.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of AVCS target timing advance amount and AVCS actual timing advance amount is large continues for certain amount of time.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
• Normal |(Target position – Actual position)|	> 10°CA
• Intermediate lock |(Target position – Actual position)|	> 10°CA

Time needed for diagnosis:

• Normal: 10 seconds

• Intermediate lock: 2 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

G: DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 23 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.** Measure the voltage between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid RH. 4) Measure the resistance between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.
5	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 23 — (E63) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and exhaust oil control solenoid RH connector • Poor contact of coupling connector

Step		Check	Yes	No
6	**CHECK EXHAUST OIL CONTROL SOLENOID RH.** Measure the resistance between exhaust oil control solenoid RH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 6 — 12 Ω?	Repair the poor contact of exhaust oil control solenoid RH connector.	Replace the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of oil control solenoid valve.
Judge as NG when the current is small even though the duty signal is large, or when the current is large even though the duty signal is small.

2. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	≥ 99.6%

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Oil control solenoid control duty	< 8%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.
Diagnosis 1
Judgment value

Malfunction Criteria	Threshold Value
Oil control solenoid control present current	< 0.306 A

Diagnosis 2
Judgment value

Malfunction Criteria	Threshold Value
Present current of the oil control solenoid	≥ 0.306 A

Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

H: DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000B and P0014 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» of the replaced oil control solenoid 1000 or more?	Go to step **5**.	Go to step **4**.
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 3.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Go to step **5**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>

Step		Check	Yes	No
5	**CHECK HARNESS AND CONNECTOR.** NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Exhaust oil control solenoid RH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Exhaust camshaft position sensor RH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid RH. 4) Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH connector. ***Connector & terminal*** ***(E159) No. 23 — (E63) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **14**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust camshaft position sensor RH. 4) Measure the resistance between exhaust camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 32 — (E62) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the engine oil pressure at the specification or less?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **11**.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK OIL PASSAGES OF CHAIN COVER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Exhaust oil control solenoid RH • Entry of foreign matter	Is the check result OK?	Go to step **12**.	Replace the defective parts. Go to step **12**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. 2) Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to exhaust camshaft RH • Damage to exhaust camshaft RH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing RH not rotating properly • Check of cam carrier RH filter	Is the check result OK?	Go to step **14**.	Replace the cam carrier RH and camshaft RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **14**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to exhaust oil control solenoid RH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier RH • Oil passage of the cylinder head RH side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **14**.	Remove the foreign matter. Replace the cam carrier oil filter. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **14**.

	Step	Check	Yes	No
14	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 3) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» 1000 or more?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Go to step **15**.
15	**CHECK CURRENT DATA.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 14.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Replace the ECM, and finish the procedure. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS control	In operation
VVT target angle	> 10°CA

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while exhaust AVCS is operating.

4. DIAGNOSTIC METHOD

When the conditions during which the differences of exhaust AVCS target timing advance amount and exhaust AVCS actual timing advance amount is large continues for certain amount of time.
Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
|(Target position – Actual position)|	> 10°CA

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

I: DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0016 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

Step		Check	Yes	No
3	**CHECK THE CHAIN TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the intake oil control solenoid RH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «VVT Adv. Ang. Amount R» of the current data display. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «VVT Adv. Ang. Amount R» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «VVT Adv. Ang. Amount R». 9) Stop the engine.	Is «VVT Adv. Ang. Amount R» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the chain timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> Go to step **15**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle N. <Ref. to EN(w/o STI)(diag)-83, DRIVE CYCLE N, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» of the replaced oil control solenoid 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 4.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Go to step **6**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **15**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Inspect the poor contact of harness and connector. NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Intake oil control solenoid RH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Intake camshaft position sensor RH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid RH. 4) Measure the resistance of harness between ECM connector and intake oil control solenoid RH connector. ***Connector & terminal*** ***(E159) No. 7 — (E38) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **15**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake camshaft position sensor RH. 4) Measure the resistance between intake camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 20 — (E36) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **15**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **15**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the check result OK?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **12**.	Go to step **12**.

	Step	Check	Yes	No
12	**CHECK OIL PASSAGES OF CHAIN COVER.** 1) Remove the chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> 2) Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Oil control solenoid • Entry of foreign matter	Is the check result OK?	Go to step **13**.	Replace the defective parts. Go to step **13**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
13	**CHECK THE CONDITION OF CAMSHAFT.** Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to intake camshaft RH • Damage to intake camshaft RH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing RH not rotating properly • Check of cam carrier RH filter	Is the check result OK?	Go to step **14**.	Replace the cam carrier RH and camshaft RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **14**.
14	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to intake oil control solenoid RH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier RH • Oil passage of the cylinder head RH side • Oil passage from cam sprocket RH to camshaft RH connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **15**.	Remove foreign matter, and replace the cam carrier oil filter and the intake cam sprocket RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **15**.

Step		Check	Yes	No
15	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the learning value of «VVT Initial Position Learning Value #1» using the Subaru Select Monitor. 4) Calculate sum of the read value and the value in «VVT Adv. Ang. Amount R» recorded in step 3. Standard: 68.5 — 88.5	Is the summed value within the specified range?	End.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting engine and while AVCS is not operating.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Crankshaft position when camshaft position sensor signal is input – Learning value|	> 10°CA

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Camshaft position sensor signal input position (RH bank)	< 48.2°CA or > 112.1°CA
Camshaft position sensor signal input position (LH bank)	< 49.9°CA or > 112.1°CA

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

NOTE:
Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

J: DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0017 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

Step		Check	Yes	No
3	**CHECK THE CHAIN TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the exhaust oil control solenoid RH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «Exh. VVT Retard Ang. R» of the current data display. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «Exh. VVT Retard Ang. R» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «Exh. VVT Retard Ang. R». 9) Stop the engine.	Is «Exh. VVT Retard Ang. R» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the chain timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> Go to step **15**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle N. <Ref. to EN(w/o STI)(diag)-83, DRIVE CYCLE N, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 1» of the replaced oil control solenoid 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 4.	Is the value in «VVT Monitor Bank 1» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 2» × 1.5 + 100) compared to the value in «VVT Monitor Bank 2»?	Go to step **6**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **15**.

Step		Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Inspect the poor contact of harness and connector. NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Exhaust oil control solenoid RH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Exhaust camshaft position sensor RH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid RH. 4) Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH connector. ***Connector & terminal*** ***(E159) No. 23 — (E63) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **15**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust camshaft position sensor RH. 4) Measure the resistance between exhaust camshaft position sensor RH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 32 — (E62) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **15**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **15**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the check result OK?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **12**.	Go to step **12**.

	Step	Check	Yes	No
12	**CHECK OIL PASSAGES OF CHAIN COVER.** Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Exhaust oil control solenoid RH • Entry of foreign matter	Is the check result OK?	Go to step **13**.	Replace the defective parts. Go to step **13**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
13	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. 2) Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 2 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 1 and rotational resistance. • Foreign matter adhered to exhaust camshaft RH • Damage to exhaust camshaft RH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing RH not rotating properly • Check of cam carrier RH filter	Is the check result OK?	Go to step **14**.	Replace the cam carrier RH and camshaft RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **14**.
14	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to exhaust oil control solenoid RH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier RH • Oil passage of the cylinder head RH side • Oil passage from cam sprocket RH to camshaft RH connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **15**.	Remove foreign matter, and replace the cam carrier oil filter and the exhaust cam sprocket RH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **15**.

Step		Check	Yes	No
15	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the learning value of «VVT Ex Initial Position Learning Value #1» using the Subaru Select Monitor. 4) Calculate sum of the read value and the value in «Exh. VVT Retard Ang. R» recorded in step 3. Standard: 98.5 — 118.5	Is the summed value within the specified range?	End.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the exhaust AVCS system malfunction.
Judge as NG when standard timing advance amount is far from learning angle.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Exhaust AVCS position learning	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously while the exhaust AVCS is not operating after warming up.

4. DIAGNOSTIC METHOD

Judge as NG when the absolute value of the difference between cam signal input position and learning value is out of specification.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Crankshaft position when camshaft position sensor signal is input – Learning value|	> 10°CA

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Camshaft position sensor signal input position (RH bank)	< 79.9°CA or > 142.1°CA
Camshaft position sensor signal input position (LH bank)	< 78.2°CA or > 142.1°CA

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

NOTE:
Initial standard learning value is the value of crank angle initially input at the production plant. And then it will be updated every time normal judgment has been completed. Learning value will not be updated if NG judgment occurs because timing belt or chain derails suddenly in process or because wrong assembly occurs during servicing.

K: DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR A

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0018 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

Step		Check	Yes	No
3	**CHECK THE CHAIN TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the intake oil control solenoid LH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «VVT Adv. Ang. Amount L» of the current data display. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «VVT Adv. Ang. Amount L» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «VVT Adv. Ang. Amount L». 9) Stop the engine.	Is «VVT Adv. Ang. Amount L» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the chain timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> Go to step **15**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle N. <Ref. to EN(w/o STI)(diag)-83, DRIVE CYCLE N, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» of the replaced oil control solenoid 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 4.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Go to step **6**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **15**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Inspect the poor contact of harness and connector. NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Intake oil control solenoid LH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Intake camshaft position sensor LH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid LH. 4) Measure the resistance of harness between ECM connector and intake oil control solenoid LH connector. ***Connector & terminal*** ***(E159) No. 15 — (E37) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **15**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from intake camshaft position sensor LH. 4) Measure the resistance between intake camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 21 — (E35) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **15**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **10**.	Repair or replace faulty parts. Go to step **15**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the check result OK?	Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **15**.	Go to step **15**.

	Step	Check	Yes	No
12	**CHECK OIL PASSAGES OF CHAIN COVER.** Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Oil control solenoid LH • Entry of foreign matter	Is the check result OK?	Go to step **13**.	Replace the defective parts. Go to step **13**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
13	**CHECK THE CONDITION OF CAMSHAFT.** Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to intake camshaft LH • Damage to intake camshaft LH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing LH not rotating properly • Check of cam carrier LH filter	Is the check result OK?	Go to step **14**.	Replace the cam carrier LH and camshaft LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **14**.
14	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to intake oil control solenoid LH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier LH • Oil passage of the cylinder head LH side • Oil passage from cam sprocket LH to camshaft LH connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **15**.	Remove foreign matter, and replace the cam carrier oil filter and the intake cam sprocket LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **15**.

	Step	Check	Yes	No
15	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the learning value of «VVT Initial Position Learning Value #2» using the Subaru Select Monitor. 4) Calculate sum of the read value and the value in «VVT Adv. Ang. Amount L» recorded in step 3. Standard: 68.5 — 88.5	Is the summed value within the specified range?	End.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0016. <Ref. to EN(w/o STI)(diag)-156, DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR A, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC P0019 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 2 SENSOR B

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0019 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **2**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

Step		Check	Yes	No
3	**CHECK THE CHAIN TIMING.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to OFF. 3) Disconnect the connector of the exhaust oil control solenoid LH. (DTC is included, but it does not affect the inspection.) 4) Start monitoring «Exh. VVT Retard Ang. L» of the current data display. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 5) Turn the ignition switch to ON. 6) Start the engine. 7) Read «Exh. VVT Retard Ang. L» within 10 seconds after starting the engine. NOTE: If 10 seconds or more elapses after the engine is started, the position after the elapse is judged as the reference and [0] will be displayed. 8) Record the read value in «Exh. VVT Retard Ang. L». 9) Stop the engine.	Is «Exh. VVT Retard Ang. L» within 10 seconds after starting the engine ±10 deg. or more apart from the reference value (0 deg)?	Repair the chain timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> Go to step **15**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle N. <Ref. to EN(w/o STI)(diag)-83, DRIVE CYCLE N, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» of the replaced oil control solenoid 1000 or more?	Go to step **6**.	Go to step **5**.
5	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 4.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Go to step **6**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **15**.

	Step	Check	Yes	No
6	**CHECK HARNESS AND CONNECTOR.** Inspect the poor contact of harness and connector. NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Exhaust oil control solenoid LH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Exhaust camshaft position sensor LH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **7**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **7**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid LH. 4) Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH connector. ***Connector & terminal*** ***(E159) No. 31 — (E66) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **15**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from exhaust camshaft position sensor LH. 4) Measure the resistance between exhaust camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 33 — (E65) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **15**.
9	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 MΩ or less?	Go to step **12**.	Repair or replace faulty parts. Go to step **10**.
10	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the engine oil pressure at the specification or less?	Replace the chain cover after inspection. <Ref. to ME(w/o STI)-91, Chain Cover.> Go to step **12**.	Go to step **11**.
11	**CHECK OIL STRAINER.** 1) Remove the engine from the vehicle. 2) Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **12**.	Go to step **12**.

	Step	Check	Yes	No
12	**CHECK OIL PASSAGES OF CHAIN COVER.** Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Exhaust oil control solenoid LH • Entry of foreign matter	Is the check result OK?	Go to step **13**.	Replace the defective parts. Go to step **13**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
13	**CHECK THE CONDITION OF CAMSHAFT.** Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to exhaust camshaft LH • Damage to exhaust camshaft LH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing LH not rotating properly • Check of cam carrier LH filter	Is the check result OK?	Go to step **14**.	Replace the cam carrier LH and camshaft LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **14**.
14	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to exhaust oil control solenoid LH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier LH • Oil passage of the cylinder head LH side • Oil passage from cam sprocket LH to camshaft LH connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **15**.	Remove foreign matter, and replace the cam carrier oil filter and the exhaust cam sprocket LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **15**.

	Step	Check	Yes	No
15	**CHECK CURRENT DATA.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Turn the ignition switch to ON. 3) Read the learning value of «VVT Ex Initial Position Learning Value #2» using the Subaru Select Monitor. 4) Calculate sum of the read value and the value in «Exh. VVT Retard Ang. L» recorded in step 3. Standard: 98.5 — 118.5	Is the summed value within the specified range?	End.	Replace the ECM and perform drive cycle N. If the DTC is not displayed, finish the diagnosis. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0017. <Ref. to EN(w/o STI)(diag)-166, DTC P0017 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION BANK 1 SENSOR B, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC P0020 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 15 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.** Measure the voltage between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid LH. 4) Measure the resistance between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.
5	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance of harness between ECM connector and intake oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 15 — (E37) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and intake oil control solenoid LH connector • Poor contact of coupling connector

	Step	Check	Yes	No
6	**CHECK INTAKE OIL CONTROL SOLENOID LH.** Measure the resistance between intake oil control solenoid LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 6 — 12 Ω?	Repair the poor contact of intake oil control solenoid LH connector.	Replace the intake oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0010. <Ref. to EN(w/o STI)(diag)-133, DTC P0010 "A" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC P0021 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000C and P0021 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the intake oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» of the replaced oil control solenoid 1000 or more?	Go to step **5**.	Go to step **4**.
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 3.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Go to step **5**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>

	Step	Check	Yes	No
5	**CHECK HARNESS AND CONNECTOR.** NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Intake oil control solenoid LH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Intake camshaft position sensor LH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the intake oil control solenoid LH. 4) Measure the resistance of harness between ECM connector and intake oil control solenoid LH connector. ***Connector & terminal*** ***(E159) No. 15 — (E37) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **14**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from intake camshaft position sensor LH. 4) Measure the resistance between intake camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 21 — (E35) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the engine oil pressure at the specification or less?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **11**.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK OIL PASSAGES OF CHAIN COVER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Intake oil control solenoid LH • Entry of foreign matter	Is the check result OK?	Go to step **12**.	Replace the defective parts. Go to step **12**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. 2) Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to intake camshaft LH • Damage to intake camshaft LH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing LH not rotating properly • Check of cam carrier LH filter	Is the check result OK?	Go to step **13**.	Replace the cam carrier LH and camshaft LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to intake oil control solenoid LH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier LH • Oil passage of the cylinder head LH side • Oil passage from cam sprocket LH to camshaft connecting section • Oil passage of the sprocket back side with the sprocket removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **14**.	Remove the foreign matter. Replace the cam carrier oil filter. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **14**.

	Step	Check	Yes	No
14	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 3) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» 1000 or more?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Go to step **15**.
15	**CHECK CURRENT DATA.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 16.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Replace the ECM, and finish the procedure. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0011. <Ref. to EN(w/o STI)(diag)-135, DTC P0011 "A" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC P0023 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/ OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 31 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.** Measure the voltage between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid LH. 4) Measure the resistance between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.
5	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 31 — (E66) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and exhaust oil control solenoid LH connector • Poor contact of coupling connector

	Step	Check	Yes	No
6	**CHECK EXHAUST OIL CONTROL SOLENOID LH.** Measure the resistance between exhaust oil control solenoid LH terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 6 — 12 Ω?	Repair the poor contact of exhaust oil control solenoid LH connector.	Replace the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0013. <Ref. to EN(w/o STI)(diag)-144, DTC P0013 "B" CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT/OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC P0024 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

RELAY HOLDER
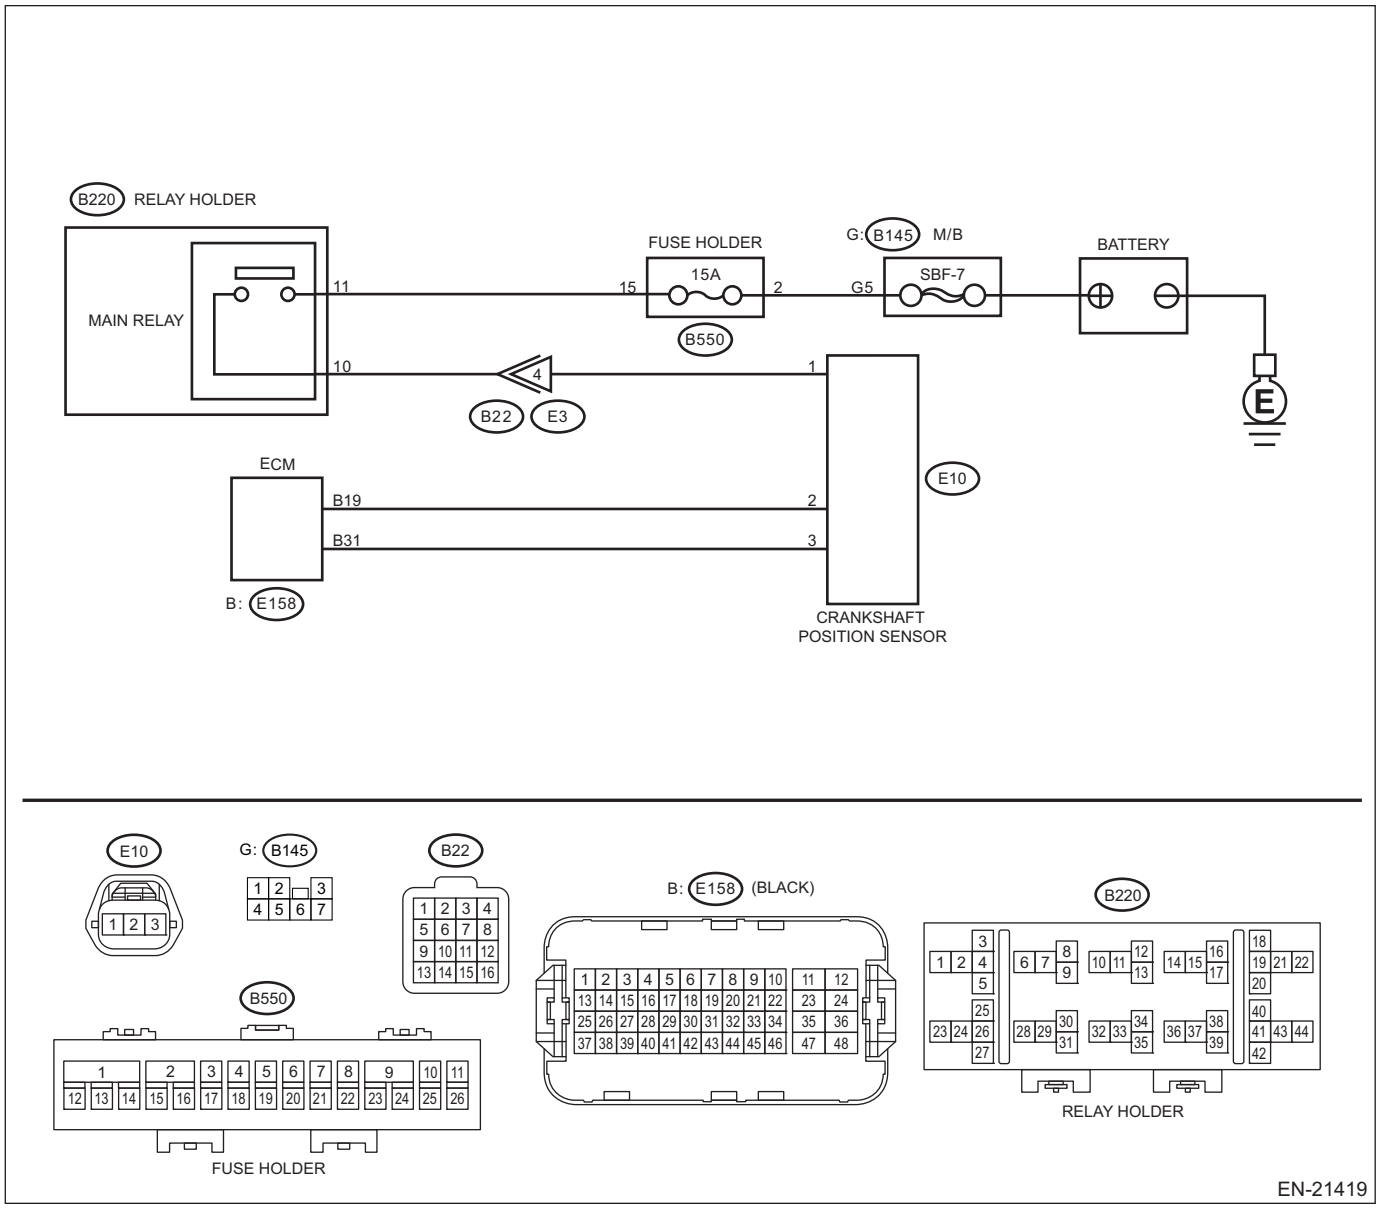
EN-21415



Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than P000D and P0024 displayed? (Current malfunction)	Check the appropriate DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Save the freeze frame data. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> Go to step **2**.
2	**CHECK ENGINE OIL CONDITION.** Check the engine oil condition. NOTE: Check the following items. • Oil amount is within the specified range • Occurrence of abnormal dirt • Coagulation due to additives • Use of oil with specified viscosity	Is the check result OK?	Go to step **3**.	Adjust oil amount or replace the engine oil and oil filter. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.> Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Replace the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> 2) Perform the Clear Memory Mode for the engine using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 3) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 4) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 5) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» of the replaced oil control solenoid 1000 or more?	Go to step **5**.	Go to step **4**.
4	**CHECK ON-BOARD MONITOR TEST RESULTS.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 3.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Go to step **5**.	Idle the engine for five minutes. Replace (flush) the oil filter and engine oil, and finish the procedure. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>

	Step	Check	Yes	No
5	**CHECK HARNESS AND CONNECTOR.** NOTE: Check the following items. • ECM <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> • Exhaust oil control solenoid LH <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> • Exhaust camshaft position sensor LH <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> • Crankshaft position sensor <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **6**.	Repair or replace faulty parts. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-103, Oil Control Solenoid.> <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> Go to step **6**.
6	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the exhaust oil control solenoid LH. 4) Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH connector. ***Connector & terminal*** ***(E159) No. 31 — (E66) No. 2:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace faulty parts. Go to step **14**.
7	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from exhaust camshaft position sensor LH. 4) Measure the resistance between exhaust camshaft position sensor LH connector and ECM connector. ***Connector & terminal*** ***(E158) No. 33 — (E65) No. 2:***	Is the resistance 1 Ω or less?	Go to step **8**.	Repair or replace faulty parts. Go to step **14**.
8	**CHECK HARNESS AND CONNECTOR (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the crankshaft position sensor. 4) Measure the resistance between crankshaft position sensor connector and ECM connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:***	Is the resistance 1 Ω or less?	Go to step **9**.	Repair or replace faulty parts. Go to step **14**.
9	**CHECK ENGINE OIL PRESSURE.** Check the engine oil pressure. <Ref. to ME(w/o STI)-31, Engine Oil Pressure.>	Is the engine oil pressure at the specification or less?	Go to step **11**.	Go to step **10**.
10	**CHECK OIL STRAINER.** Check the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.>	Are there any foreign matter mixed in oil strainer in the oil pan?	Check and clean inside the oil strainer. <Ref. to LU(w/o STI)-15, Oil Pan.> Go to step **11**.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK OIL PASSAGES OF CHAIN COVER.** 1) Remove the engine from the vehicle. <Ref. to ME(w/o STI)-46, Engine Assembly.> 2) Check oil passages of chain cover. <Ref. to ME(w/o STI)-91, Chain Cover.> NOTE: Check the following item and repair or replace if necessary. • Inlet port of oil pump • Discharge port of oil pump • Each O ring at passages to left and right cylinder heads • Exhaust oil control solenoid LH • Entry of foreign matter	Is the check result OK?	Go to step **12**.	Replace the defective parts. Go to step **12**. Replace the chain cover in the case of foreign matter entry. <Ref. to ME(w/o STI)-91, Chain Cover.>
12	**CHECK THE CONDITION OF CAMSHAFT.** 1) Remove the engine from the vehicle. 2) Remove the timing chain. NOTE: Compare rotational resistance with the camshaft in bank 1 and check the following items to see if there is any obvious fault such as unsmoothness of the camshaft in bank 2 and rotational resistance. • Foreign matter adhered to exhaust camshaft LH • Damage to exhaust camshaft LH (scratch, scuffed, wear, etc.) • Check of influence of cam journal bearing LH not rotating properly • Check of cam carrier LH filter	Is the check result OK?	Go to step **13**.	Replace the cam carrier LH and camshaft LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-162, Camshaft.> Go to step **13**.
13	**CHECK OIL PASSAGES BETWEEN OIL PUMP AND OIL CONTROL SOLENOID.** Visually check the following portions of oil passages connecting oil pump to exhaust oil control solenoid LH to see if there is any obvious fault such as adherence of foreign matter and clogging. • Oil passage of the cam carrier LH • Oil passage of the cylinder head LH side • Oil passage from cam sprocket to camshaft connecting section • Oil passage of the sprocket back side with the exhaust cam sprocket LH removed, and the camshaft end **CAUTION:** **• Excessive application of liquid gasket may cause fault. Use the type specified in the service manual and apply appropriate amount (wire diameter).** **• Do not reuse oil filter of cam carrier.** **• Push the oil filter until it becomes flush with the cam carrier surface. (Do not push excessively.)** NOTE: After the procedure is finished, idle the engine for five minutes, and then replace (flush) the oil filter and engine oil. <Ref. to LU(w/o STI)-11, Engine Oil.> <Ref. to LU(w/o STI)-49, Engine Oil Filter.>	Is the check result OK?	Go to step **14**.	Remove foreign matter, and replace the cam carrier oil filter and the exhaust cam sprocket LH. <Ref. to ME(w/o STI)-163, Cam Carrier.> <Ref. to ME(w/o STI)-134, Cam Sprocket.> Go to step **14**.

	Step	Check	Yes	No
14	**CHECK ON-BOARD MONITOR TEST RESULTS.** 1) Perform the clear memory for the engine using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform drive cycle T. <Ref. to EN(w/o STI)(diag)-89, DRIVE CYCLE T, PROCEDURE, Drive Cycle.> 3) Read values of «VVT Monitor Bank 1» and «VVT Monitor Bank 2» according to MODE$06 reading procedures using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-45, MODE $06 (REQUEST ON-BOARD MONITORING TEST RESULTS FOR CONTINUOUSLY MONITORED SYSTEMS), OPERATION, General Scan Tool.> **CAUTION:** **• When performing driving cycle, there should be 2 persons (driver and checker) and the checker should perform the data check.** **• When performing the drive cycle on the public road, be very careful of the traffic condition and the safe driving must be the high priority.** NOTE: • When the diagnostic value is 0, the diagnosis is incomplete. Therefore, do not stop the engine and perform the drive cycle again. • Diagnostic values are updated repeatedly, and therefore, always check the data while diagnostic values are being read. 4) Record the read values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2».	Is the value in «VVT Monitor Bank 2» 1000 or more?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Go to step **15**.
15	**CHECK CURRENT DATA.** Compare the values in «VVT Monitor Bank 1» and «VVT Monitor Bank 2» recorded in step 14.	Is the value in «VVT Monitor Bank 2» 1000 or less, and also larger than the value (value in «VVT Monitor Bank 1» × 1.5 + 100) compared to the value in «VVT Monitor Bank 1»?	Replace the ECM, and finish the procedure. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	End.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0014. <Ref. to EN(w/o STI)(diag)-147, DTC P0014 "B" CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC P0030 A/F / O2 HEATER CONTROL CIRCUIT BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

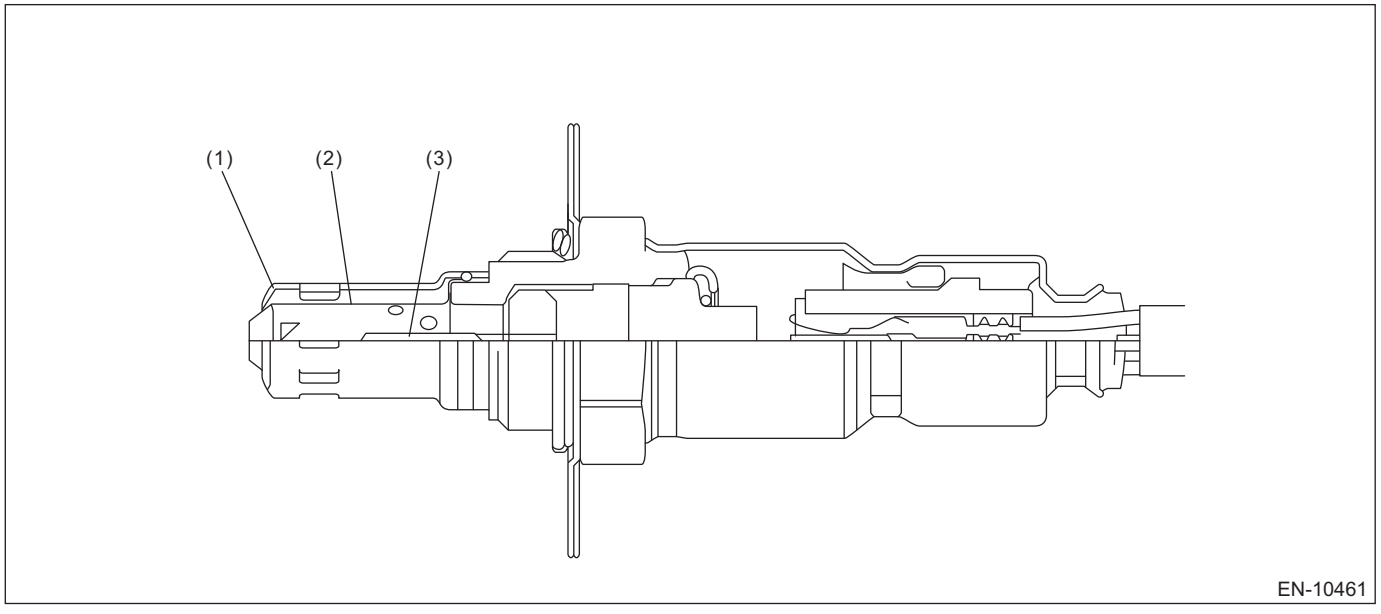
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Start and warm up the engine. 2) Turn the ignition switch to OFF. 3) Disconnect the connector from ECM. 4) Disconnect the connectors from front oxygen (A/F) sensor. 5) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E159) No. 9 — (E24) No. 2:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
2	**CHECK FRONT OXYGEN (A/F) SENSOR.** Measure the resistance between front oxygen (A/F) sensor terminals. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance 2 — 3 Ω?	Go to step **3**.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>
3	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and front oxygen (A/F) sensor connector.	Is there poor contact of ECM or front oxygen (A/F) sensor connector?	Repair the poor contact of ECM or front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect functional errors of the front oxygen (A/F) sensor heater.
Judge as NG when it is determined that the front oxygen (A/F) sensor impedance is large when looking at engine status such as deceleration fuel cut.

2. COMPONENT DESCRIPTION



(1) Element cover (outer) (2) Element cover (inner) (3) Sensor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after A/F sensor heater control began	> 21%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Front oxygen (A/F) sensor impedance	> 100 Ω

Time needed for diagnosis: 25 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

R: DTC P0031 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between front oxygen (A/F) sensor connector and engine ground. ***Connector & terminal*** ***(E24) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E24) No. 2 — (E159) No. 9:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK GROUND CIRCUIT FOR ECM.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
4	**CHECK FRONT OXYGEN (A/F) SENSOR.** Measure the resistance between front oxygen (A/F) sensor terminals. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance 2 — 3 Ω?	Repair the poor contact of ECM connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Front oxygen (A/F) sensor heater control duty	≤ 80%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

S: DTC P0032 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 9 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Go to step **2**.
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of ECM connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect front oxygen (A/F) sensor heater open or short circuit.
The front oxygen (A/F) sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when overcurrent is detected.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Front oxygen (A/F) sensor heater control duty	≥ 20%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 17 A

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

T: DTC P0037 A/F / O2 HEATER CONTROL CIRCUIT LOW BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from rear oxygen sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and rear oxygen sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E25) No. 2 — (E159) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
3	**CHECK GROUND CIRCUIT FOR ECM.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
4	**CHECK REAR OXYGEN SENSOR.** Measure the resistance between rear oxygen sensor connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 5 — 7 Ω?	Repair the poor contact of ECM connector.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when the terminal voltage remains Low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor heater control duty	≤ 96%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

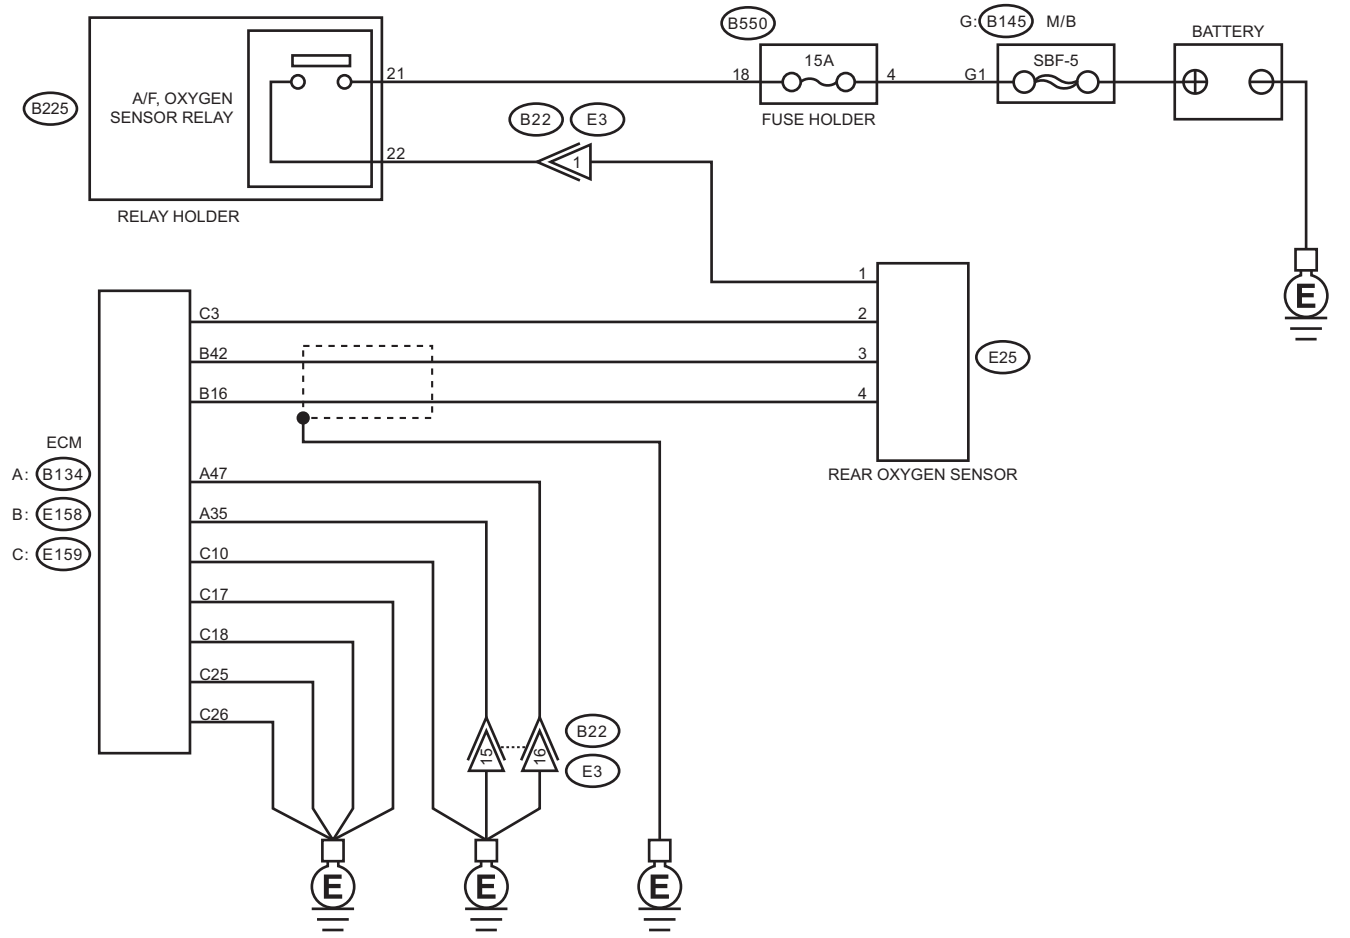
U: DTC P0038 A/F / O2 HEATER CONTROL CIRCUIT HIGH BANK 1 SENSOR 2

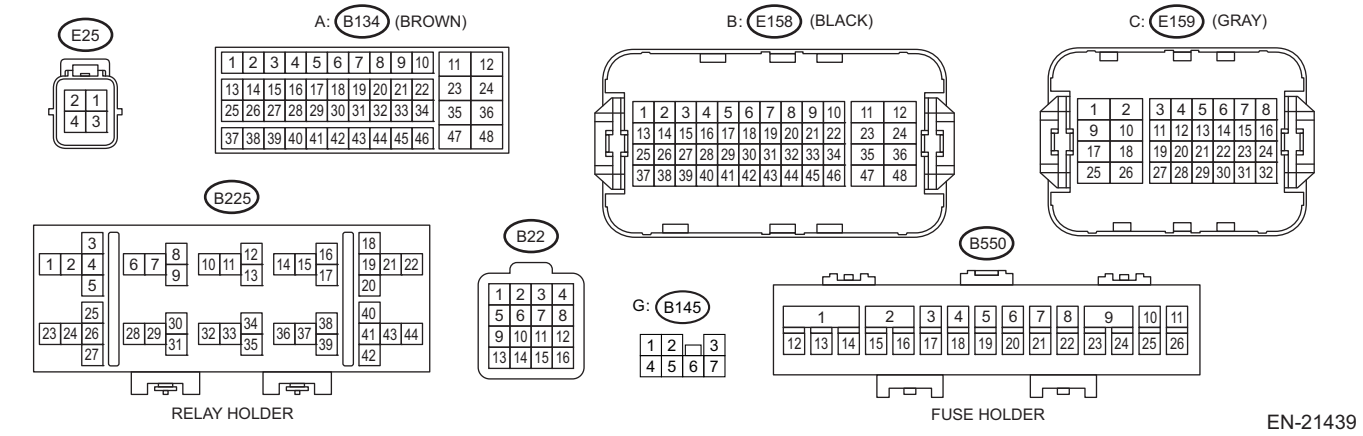
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and rear oxygen sensor connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT FOR ECM.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Repair the poor contact of ECM connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the rear oxygen sensor heater open or short circuit.
The rear oxygen sensor heater performs duty control, and the output terminal voltage at ON is 0 V, and the output terminal voltage at OFF is the battery voltage.
Judge as NG when overcurrent is detected.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor heater control duty	≥ 4%

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 17 A

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

V: DTC P0068 MAP/MAF - THROTTLE POSITION CORRELATION

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

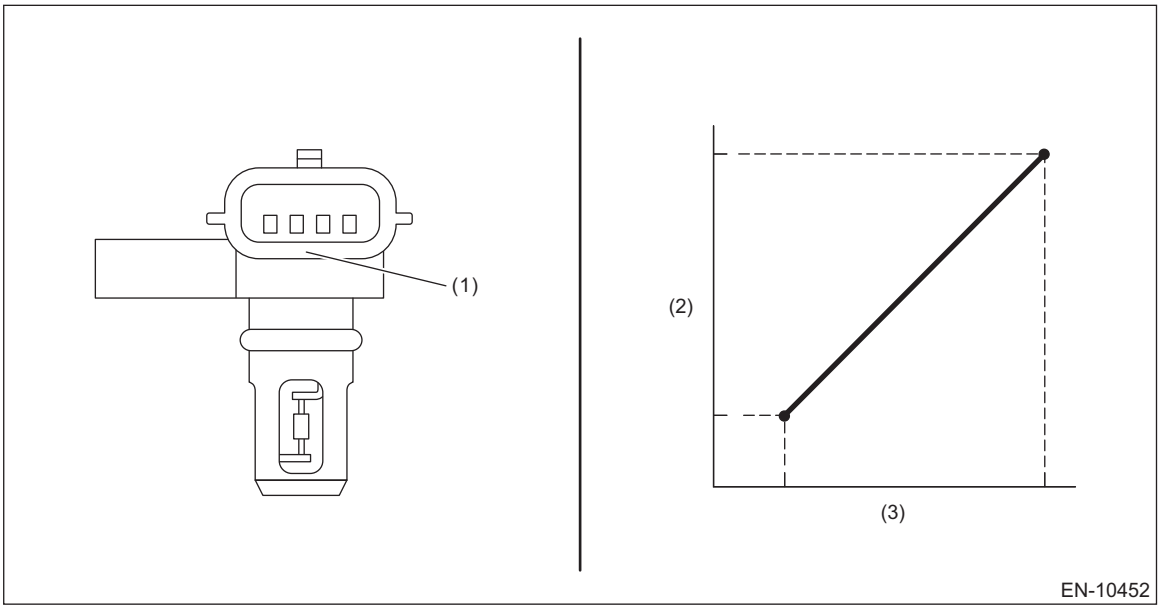
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **2**.
2	**CHECK MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to “P” range or “N” range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Using the Subaru Select Monitor or a general scan tool, read the value in «Mani. Absolute Pressure». NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Read Current Data For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mani. Absolute Pressure» 73.3 — 106.6 kPa (550 — 800 mmHg, 21.65 — 31.50 inHg) when the ignition is turned ON, and 20 — 46.7 kPa (150 — 350 mmHg, 5.91 — 13.78 inHg) during idling?	Repair the poor contact of ECM connector.	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect problems in the manifold absolute pressure sensor output properties.
Judge as NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

2. COMPONENT DESCRIPTION



(1) Manifold absolute pressure sensor (2) Voltage (V) (3) Absolute pressure (kPa)

3. EXECUTION CONDITION

Low

Secondary parameters	Execution condition
Engine speed	< 3600 rpm
Charging efficiency (with atmospheric pressure compensation)	≥ 95 air mass %
Throttle position	≥ 67.4%

High

Secondary parameters	Execution condition
Engine speed	475 — 900 rpm
Charging efficiency (with atmospheric pressure compensation)	≤ 32 air mass %
Throttle position	< 5.9%

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Intake manifold pressure (absolute pressure)	< 75 kPa (562.6 mmHg, 22.2 inHg)
High	
Intake manifold pressure (absolute pressure)	≥ 75 kPa (562.6 mmHg, 22.2 inHg)

Time needed for diagnosis:
Low side: 5000 ms

High side: 5000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

W: DTC P0071 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" RANGE/ PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

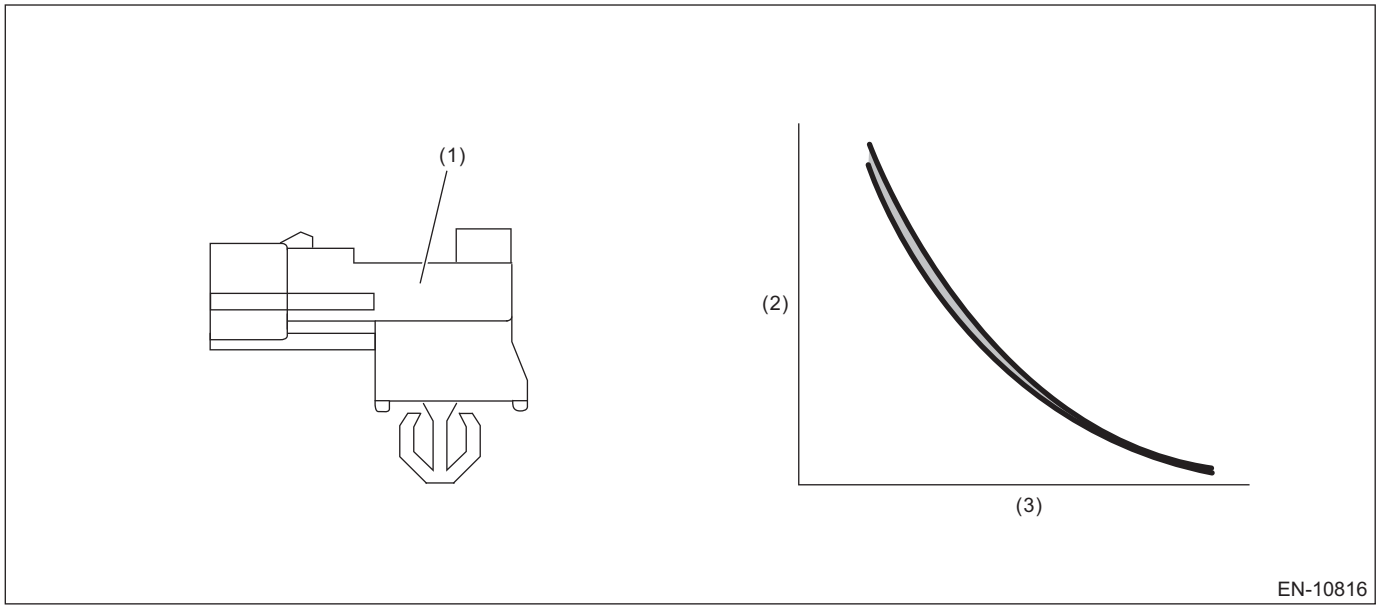
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0071 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Ambient Air Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For HVAC System”. <Ref. to AC(diag)-45, Read Current Data.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 3) Read the change of the value in «Ambient Air Temperature» while heating and cooling the ambient sensor using a hair dryer. **CAUTION:** **Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.**	Does the value of «Ambient Air Temperature» change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the ambient sensor. <Ref. to AC-71, Ambient Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of ambient temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, judge by correlation between ambient temperature sensor value, intake air temperature sensor value and engine coolant temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between ambient air temperature and intake air temperature, ambient air temperature and engine coolant temperature.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
|Ambient air temperature 21 sec. after engine start – Intake air temperature 21 sec. after engine start|	> Value from Map
|Ambient air temperature at engine start – Engine coolant temperature at engine start|	> 25°C (45°F)

Map

Intake air temperature (°C (°F))	–30 (–22)	45 (113)	60 (140)	80 (176)
|Ambient air temperature 21 sec. after engine start – Intake air temperature 21 sec. after engine start| (°C (°F))	20 (36)	20 (36)	32 (57.6)	32 (57.6)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

X: DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

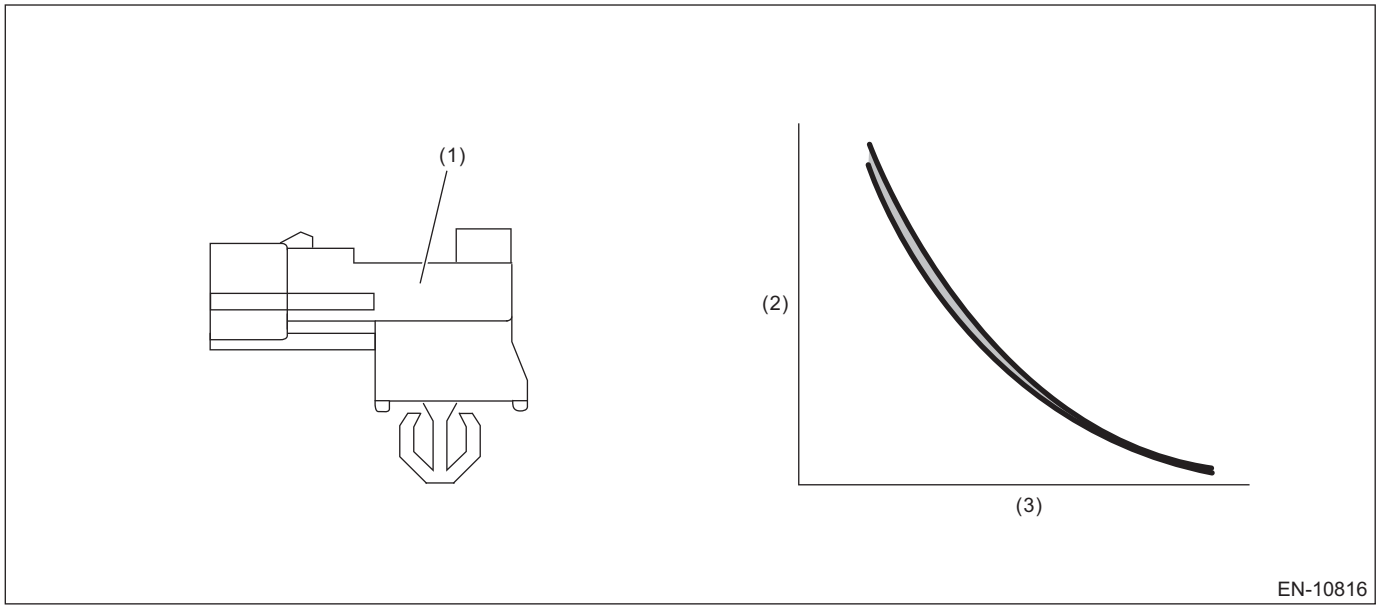
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC P0072 or P0073 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK COMBINATION METER.** Check the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Repair the poor contact of ECM connector.	Repair the combination meter system. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.42 V

Time needed for diagnosis: 2.56 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Y: DTC P0073 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" HIGH

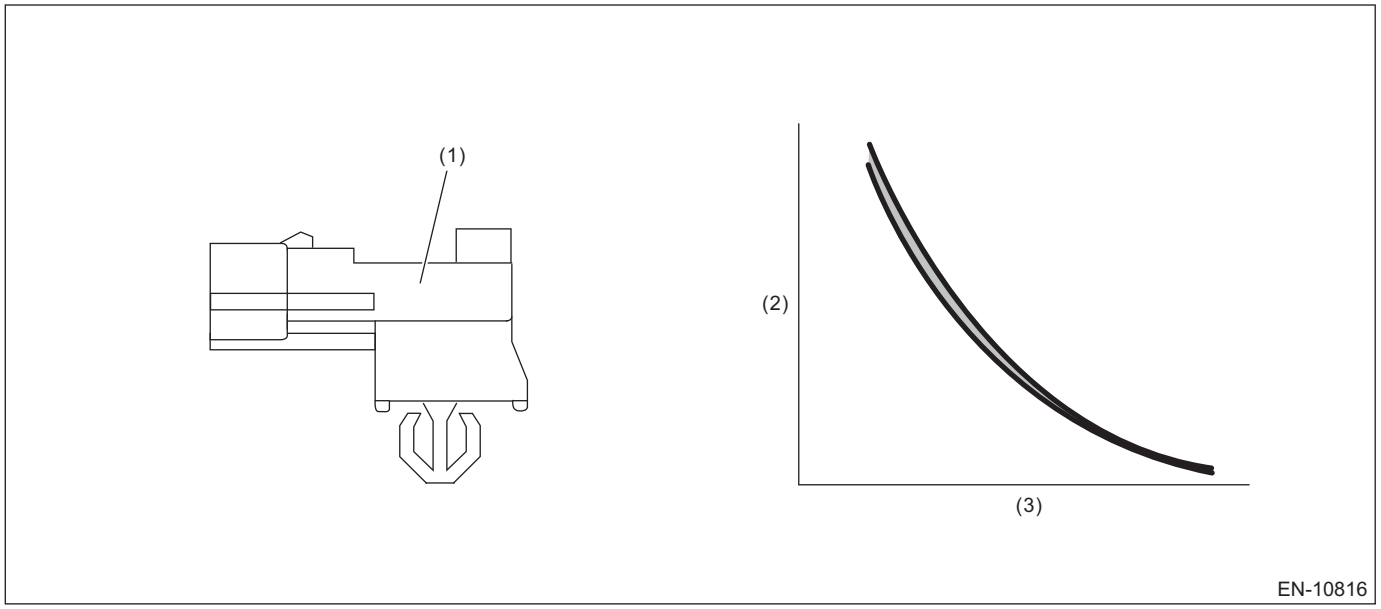
NOTE:
For the diagnostic procedure, refer to DTC P0072. <Ref. to EN(w/o STI)(diag)-239, DTC P0072 AMBIENT AIR TEMPERATURE SENSOR CIRCUIT "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of ambient temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

Ambient temperature sensor is connected to combination meter. ECM receives the data of ambient temperature sensor via CAN communication with combination meter.



(1) Ambient sensor (2) Resistance value (kΩ) (3) Ambient air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.88 V

Time needed for diagnosis: 2.56 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

Z: DTC P0087 FUEL RAIL/SYSTEM PRESSURE - TOO LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Poor acceleration

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK FOR FUEL DELIVERY LINE LEAKAGE.** Visually check the fuel delivery line for leakage. **WARNING:** **• When checking fuel delivery line during engine operation, be very careful so that one's hair, body and clothes do not touch the rotating part in the engine compartment.** **• If there is fuel leakage, the fuel can be combusted spontaneously by the engine heat, resulting in serious accident. Therefore, take extra care of possible fuel leakage.** **• Prepare the necessary fire-extinguishing appliance for immediate fire fighting in case of fire.** NOTE: Concerning the section where visible inspection is difficult, the fuel odor provides a good indication of determining the fuel leakage.	Are there leaks from the fuel delivery line?	Replace the faulty fuel delivery line. <Ref. to FU(w/o STI)-192, Fuel Delivery and Evaporation Lines.> <Ref. to FU(w/o STI)-49, Fuel Injector.>	Go to step **2**.
2	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0087 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK EXPERIENCE OF RUNNING OUT OF FUEL.** Check if there was an experience of running out of fuel using "Check List for Interview". <Ref. to EN(w/o STI)(diag)-5, CHECK LIST NO. 2, CHECK, Check List for Interview.>	Has the vehicle experienced running out of fuel?	Finish the diagnosis. NOTE: DTC may be stored by running out of fuel.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK FUEL PRESSURE.** 1) Start the engine. 2) Using the Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A» when racing the engine. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A»?	Go to step **5**.	• The value in «Fuel Rail Pressure A» does not increase: Go to step **7**. • The value in «Fuel Rail Pressure A» does not change: Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>
5	**CHECK OF FUEL PUMP.** 1) Turn the ignition switch to ON. (Engine OFF) 2) On the «Active Test» item, select «Fuel Pump Relay», and perform ON/OFF drive operation. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.> 3) Check for operating sound in the fuel pump according to ON/OFF switching operation.	Does the fuel pump emit operating sound?	Go to step **6**.	Check fuel pump circuit. <Ref. to EN(w/o STI)(diag)-116, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
6	**CHECK FUEL PRESSURE (LOW PRESSURE SIDE).** Check the fuel pressure on low-pressure side. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the check result OK?	Go to step **7**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
7	**CHECK FOR FUEL DELIVERY LINE LEAKAGE (HIGH PRESSURE SIDE).** 1) Start the engine. 2) Using the Subaru Select Monitor, read the change in value of «Fuel Rail Pressure A» when stopping the engine. NOTE: • In order to maintain the communication with Subaru Select Monitor, turn the ignition switch to OFF, and immediately turn it to ON. • For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Does the value of «Fuel Rail Pressure A» decrease rapidly?	Go to step **8**.	Go to step **9**.
8	**CHECK HIGH-PRESSURE FUEL PUMP.** Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>	Is the check result OK?	Go to step **9**.	Replace the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, High Pressure Fuel Pump.>

	Step	Check	Yes	No
9	**CHECK FOR REPRODUCTION OF FAILURE.** 1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform appropriate drive cycle test. <Ref. to EN(w/o STI)(diag)-75, Drive Cycle.> 3) Read the DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC P0087 displayed?	Replace the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, High Pressure Fuel Pump.> After replacement, go to the next step. Go to step **10**. NOTE: When the high-pressure fuel pump has been replaced in step 8, go to the next step without replacing the high-pressure fuel pump. Go to step **11**.	End.
10	**CHECK FOR REPRODUCTION OF FAILURE.** 1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform appropriate drive cycle test. <Ref. to EN(w/o STI)(diag)-75, Drive Cycle.> 3) Read the DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC P0087 displayed?	Go to step **11**.	End.
11	**CHECK FOR FUEL DELIVERY LINE LEAKAGE (HIGH PRESSURE SIDE).** 1) Start the engine. 2) Using the Subaru Select Monitor, read the change in value of «Fuel Rail Pressure A» when stopping the engine. NOTE: • In order to maintain the communication with Subaru Select Monitor, turn the ignition switch to OFF, and immediately turn it to ON. • For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Does the value of «Fuel Rail Pressure A» decrease rapidly?	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0088. <Ref. to EN(w/o STI)(diag)-245, DTC P0088 FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AA:DTC P0088 FUEL RAIL/SYSTEM PRESSURE - TOO HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Poor driving performance
- Poor acceleration

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0088 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FUEL PRESSURE.** 1) Start the engine. 2) Using Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A» until the vehicle is accelerated to 60 km/h (37.3 MPH) from the parked state and stops again. **CAUTION:** **• Follow traffic rules and give the highest priority to safe driving.** **• During driving, do not operate or gaze at the Subaru Select Monitor.** **• Always check the measurement value after bringing the vehicle to a stop in a safe place.** NOTE: • In order to apply the running load to the vehicle, actually drive the vehicle, and read the measurement value. • For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A»?	Replace the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, High Pressure Fuel Pump.> After replacement, go to the next step. Go to step **3**.	Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>
3	**CHECK FOR REPRODUCTION OF FAILURE.** 1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Perform appropriate drive cycle test. <Ref. to EN(w/o STI)(diag)-75, Drive Cycle.> 3) Read the DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC P0088 displayed?	Repair the poor contact of ECM connector.	End.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high pressure fuel system function.
Judge as NG when actual pressure is not close to target pressure.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 10 s
Fuel cut non-operation time	≥ 3 s
(Target pressure change in every 10 ms	≤ 500 kPa (3750.3 mmHg, 147.7 inHg)
Time described above)	≥ 1.5 s

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Actual fuel pressure – Target fuel pressure	< –3300 kPa (24752.1 mmHg, 974.5 inHg)	P0087
Actual fuel pressure – Target fuel pressure	> 6000 kPa (45003.8 mmHg, 1771.8 inHg)	P0088

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AB:DTC P0096 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

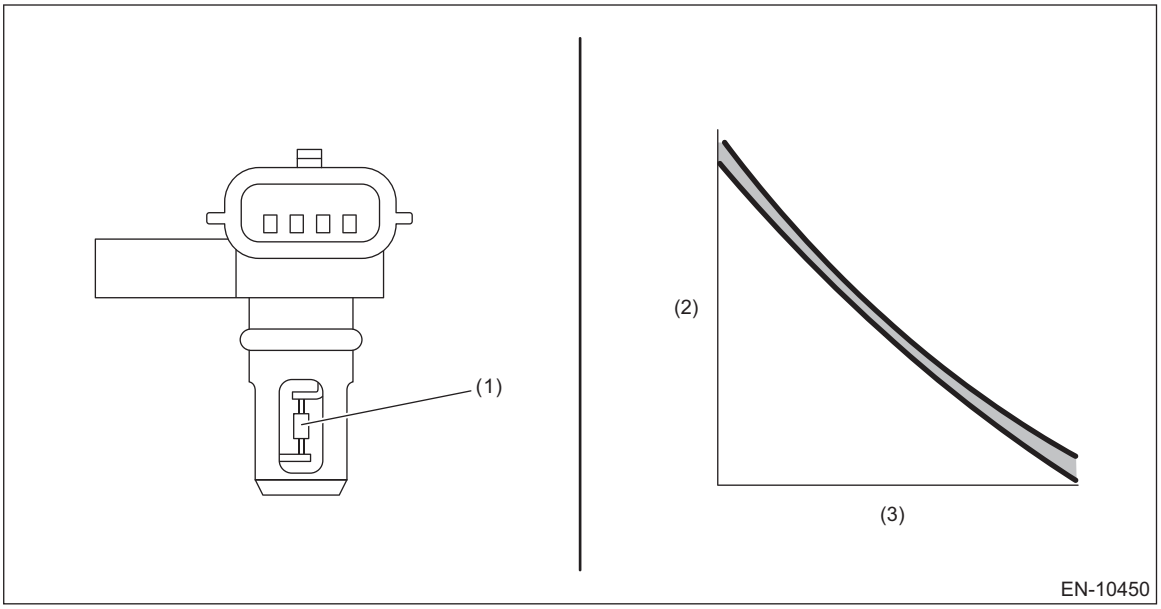
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0096 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «IAT Sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 3) Read the change of the value in «IAT Sensor #12» while heating and cooling the manifold absolute pressure and intake air temperature sensor using a hair dryer. **CAUTION:** **Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.**	Does the value of «IAT Sensor #12» change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor (integrated with manifold absolute pressure sensor) output properties. Using the following two diagnoses, judge as NG when either is NG.
• **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between intake air temperature sensor value, engine coolant temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between intake air temperature and engine coolant temperature, intake air temperature and ambient air temperature.
• **Diagnosis 2 (stuck diagnosis):** Judge as NG when intake air temperature does not change under the driving condition where it should change, considering engine condition.

2. COMPONENT DESCRIPTION

Intake air temperature sensor (integrated with manifold absolute pressure sensor)



(1) Intake air temperature sensor (2) Resistance value (Ω) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine coolant temperature	≥ 60°C (140°F)
Integrated value of intake air amount	≥ 5500 g (194 oz)
Number of experiences under following driving conditions	≥ 3 times
• Duration of driving condition 1	≥ 10 s
Vehicle speed	≥ 40 km/h (24.9 MPH)
and	
Amount of intake air	≥ 15 g/s (0.5 oz/s)
• Duration of driving condition 2	≥ 15 s
Vehicle speed	< 4 km/h (2.5 MPH)

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis when the vehicle speed condition is met after warming up from a cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.

Diagnosis 1
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Intake air temperature (manifold pressure sensor) 21 sec. after engine start – Engine coolant temperature at engine start|	> Value of Map 1
|Intake air temperature (manifold absolute pressure sensor) 21 sec. after engine start – Ambient air temperature 21 sec. after engine start|	> Value of Map 2

Map 1

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Intake air temperature (manifold pressure sensor) 21 sec. after engine start – Engine coolant temperature at engine start| (°C (°F))	11 (19.8)	11 (19.8)	11 (19.8)	11 (19.8)

Map 2

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Intake air temperature (manifold absolute pressure sensor) 21 sec. after engine start – Ambient air temperature 21 sec. after engine start| (°C (°F))	20 (36)	20 (36)	32 (57.6)	32 (57.6)

Time needed for diagnosis: Less than 1 second
Diagnosis 2
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage difference between Max. and Min.	< 0.02 V (Equivalent to approximately 0.5°C (0.9°F) near 25°C (77°F)) (Equivalent to approximately 0.9°C (1.6°F) near –7°C (19.4°F))

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AC:DTC P0097 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

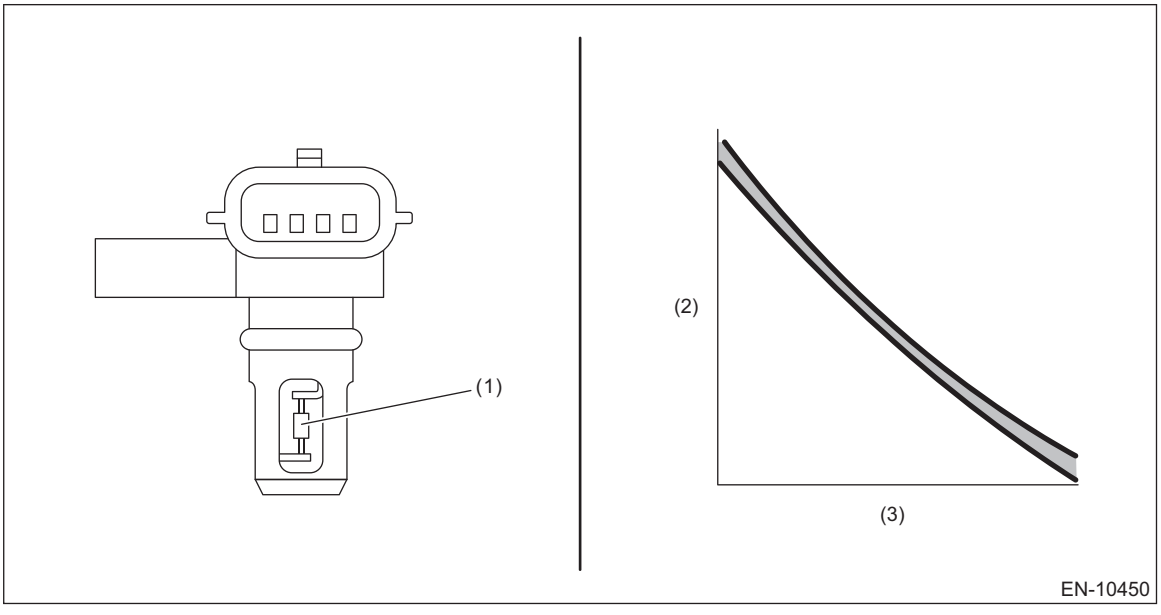
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «IAT Sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «IAT Sensor #12» 120°C (248°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the manifold absolute pressure and intake air temperature sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 25 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>	Repair the ground short circuit of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor (integrated with manifold absolute pressure sensor).
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Intake air temperature sensor (2) Resistance value (kΩ) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.22 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AD:DTC P0098 INTAKE AIR TEMPERATURE SENSOR 2 CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

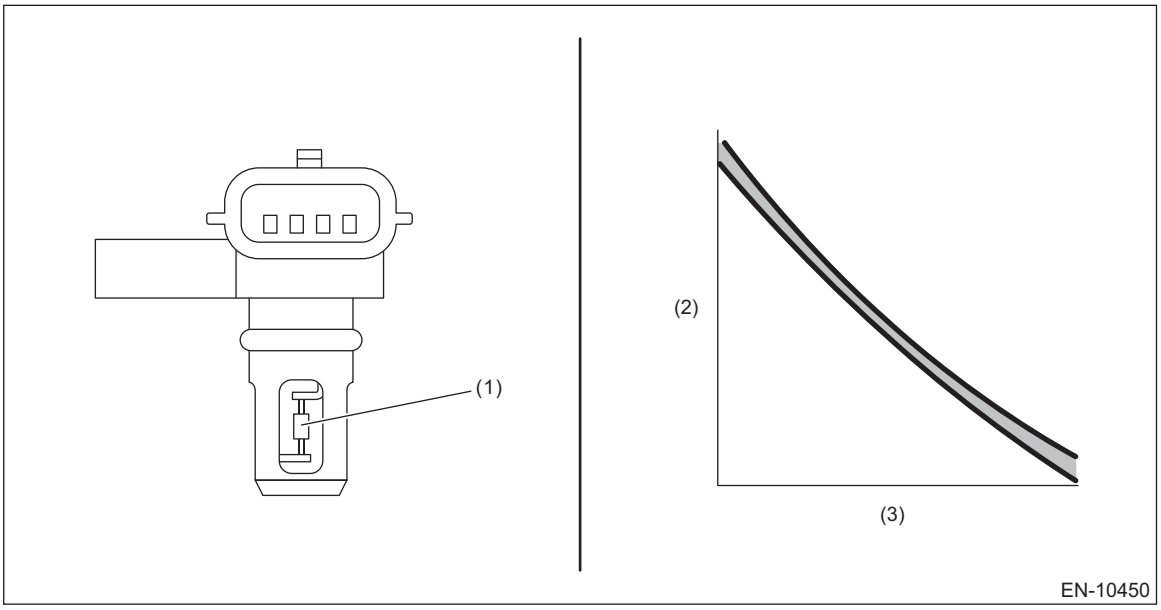
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «IAT Sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «IAT Sensor #12» less than –40°C (–40°F)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and manifold absolute pressure and intake air temperature sensor connector.	Is there poor contact of ECM or manifold absolute pressure and intake air temperature sensor connector?	Repair the poor contact of ECM or manifold absolute pressure and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the manifold absolute pressure and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector. ***Connector & terminal*** ***(E158) No. 25 — (E124) No. 1:*** ***(E159) No. 27 — (E124) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the ECM connector and the manifold absolute pressure & intake air temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 25 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector.	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor (integrated with manifold absolute pressure sensor).
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Intake air temperature sensor (2) Resistance value (kΩ) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.72 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AE:DTC P0101 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT RANGE/ PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

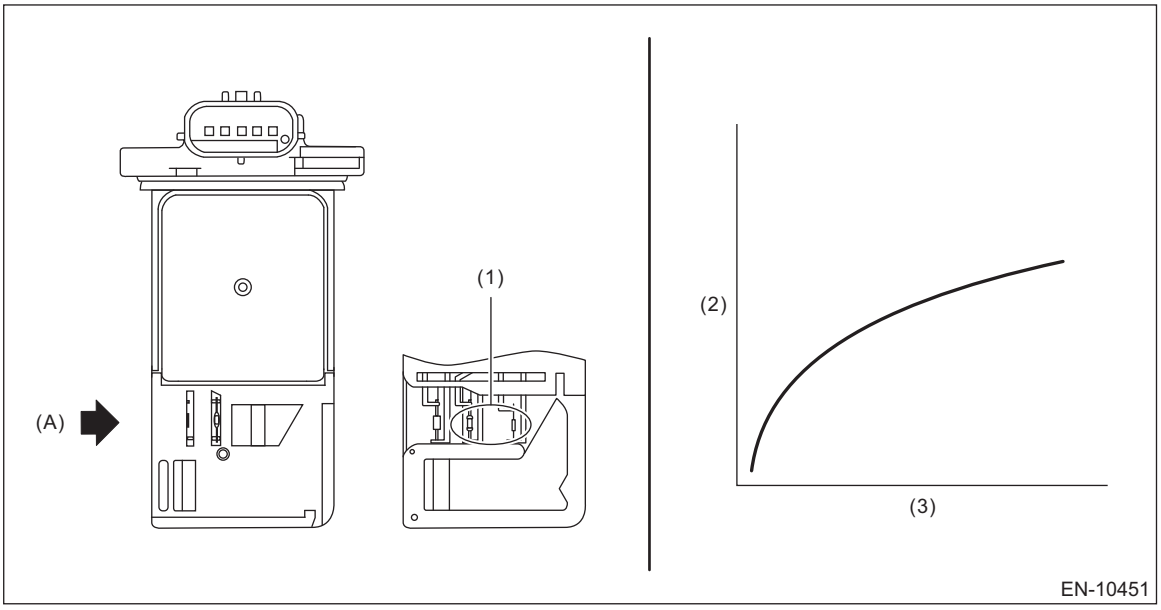
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0101 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output properties.
Judge as NG on the Low side when the displayed value of air flow voltage is small even in a driving condition where it should be large. Judge as NG on the High side when the displayed value of air flow voltage is large even in a driving condition where it should be small. Judge as NG in the air flow sensor property when either the Low side or High side becomes NG.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor (2) Voltage (V) (3) Intake air amount (g (oz)/s)

3. EXECUTION CONDITION

Low

Secondary parameters	Execution condition
Engine speed	≥ 1500 rpm
Throttle position	≥ 12.6%
Intake manifold pressure (with atmospheric pressure compensation)	≥ 100 kPa (750.2 mmHg, 29.5 inHg)

High

Secondary parameters	Execution condition
Engine speed	475 — 900 rpm
Throttle position	< 5.1%
Intake manifold pressure (with atmospheric pressure compensation)	< 64 kPa (480 mmHg, 18.9 inHg)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

5. DIAGNOSTIC METHOD

Judge as NG when Low side or High side becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Low	
Output voltage	< 1.48 V
High	
Output voltage	≥ 1.48 V

Time Needed for Diagnosis:
Low: 5 s
High: 5 s
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AF:DTC P0102 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

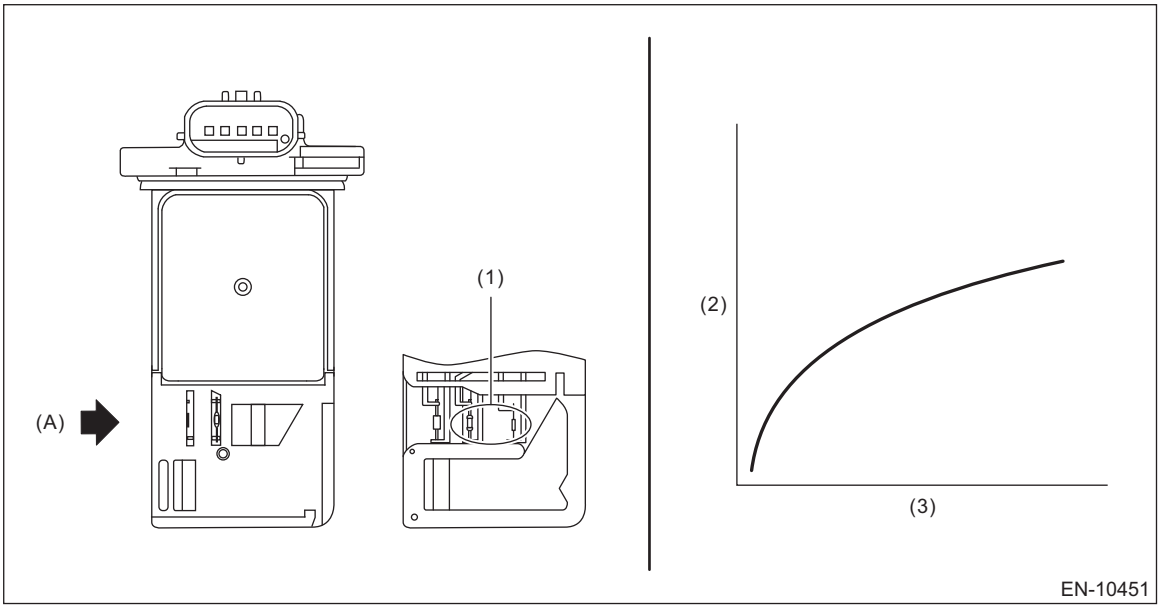
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» less than 0.2 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the mass air flow and intake air temperature sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between mass air flow and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(B3) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay and mass air flow and intake air temperature sensor connector • Poor contact of main relay connector
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B134) No. 16 — (B3) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 16 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.	Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor (2) Voltage (V) (3) Intake air amount (g (oz)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch is turned to ON	≥ 1040 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.12 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AG:DTC P0103 MASS OR VOLUME AIR FLOW SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

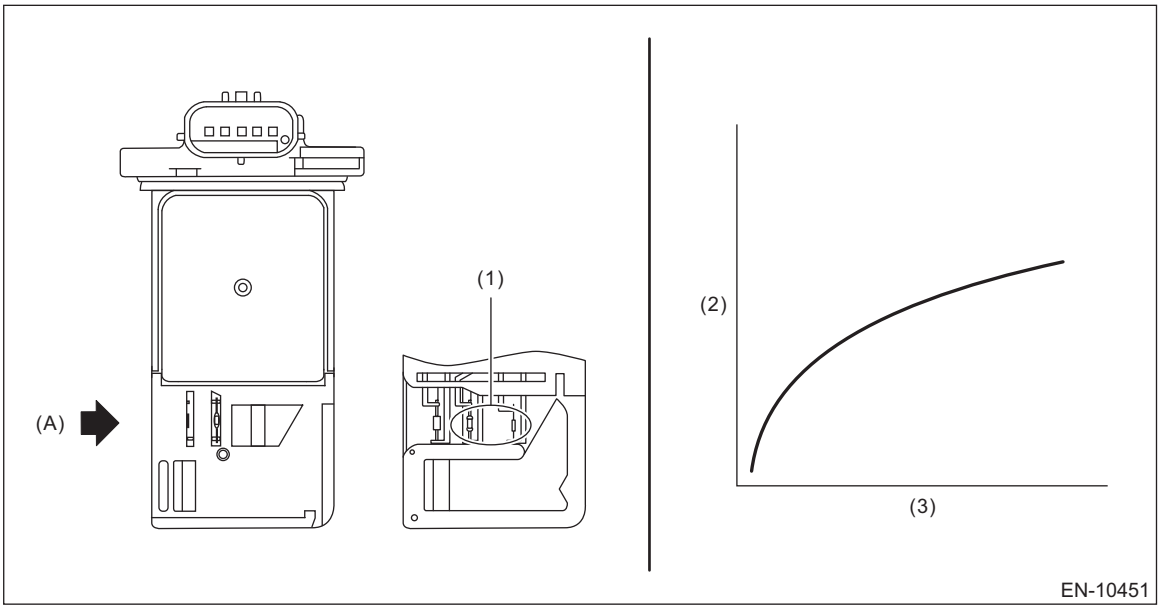
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» 5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from the mass air flow and intake air temperature sensor. 3) Start the engine. 4) Read the value of «Air Flow Sensor Voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Air Flow Sensor Voltage» 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between mass air flow and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(B3) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector • Poor contact of ECM connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of mass air flow and intake air temperature sensor connector.	Is there poor contact of mass air flow and intake air temperature sensor connector?	Repair the poor contact of mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuits of the air flow sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Air flow sensor (2) Voltage (V) (3) Intake air amount (g (oz)/s)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch is turned to ON	≥ 1040 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.79 V

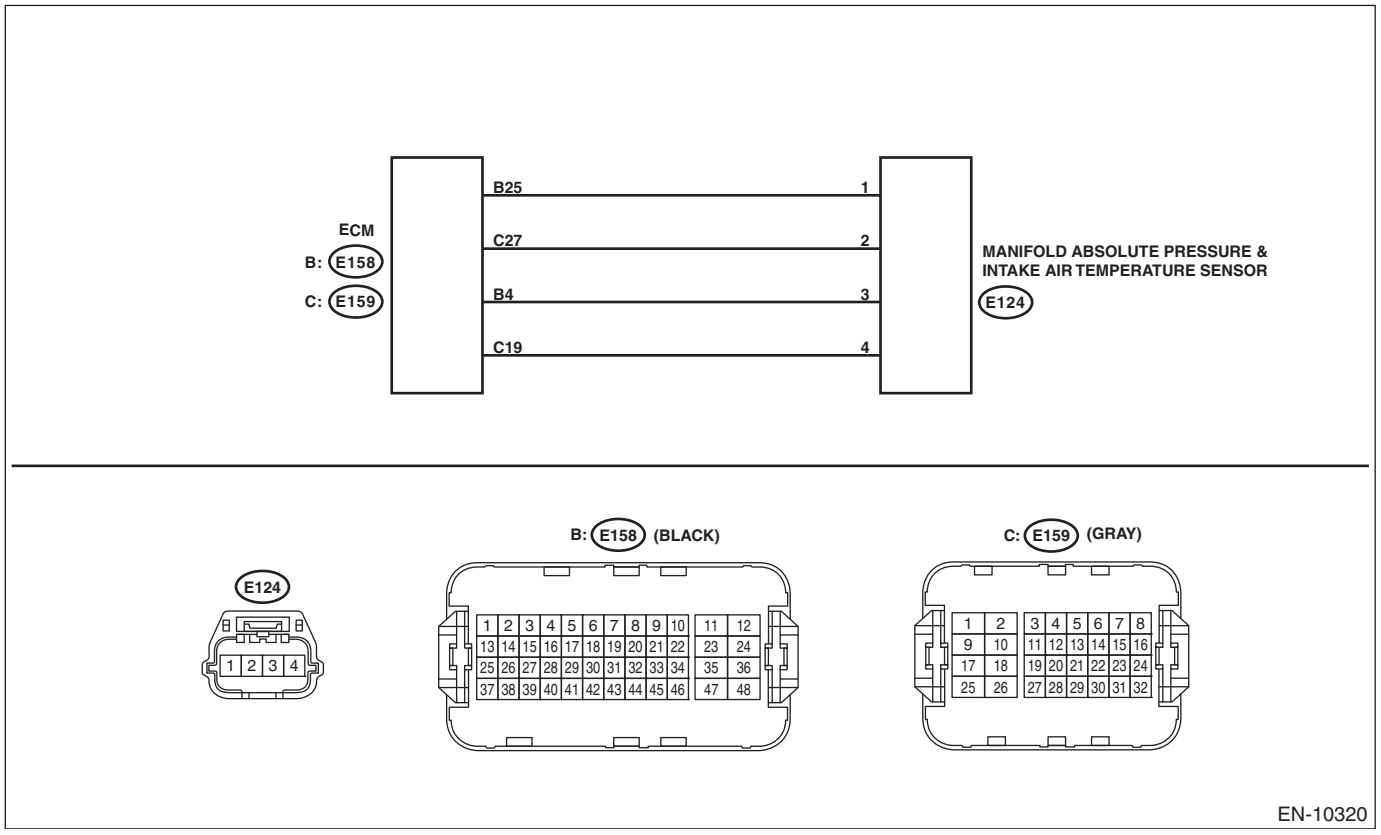
Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AH:DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



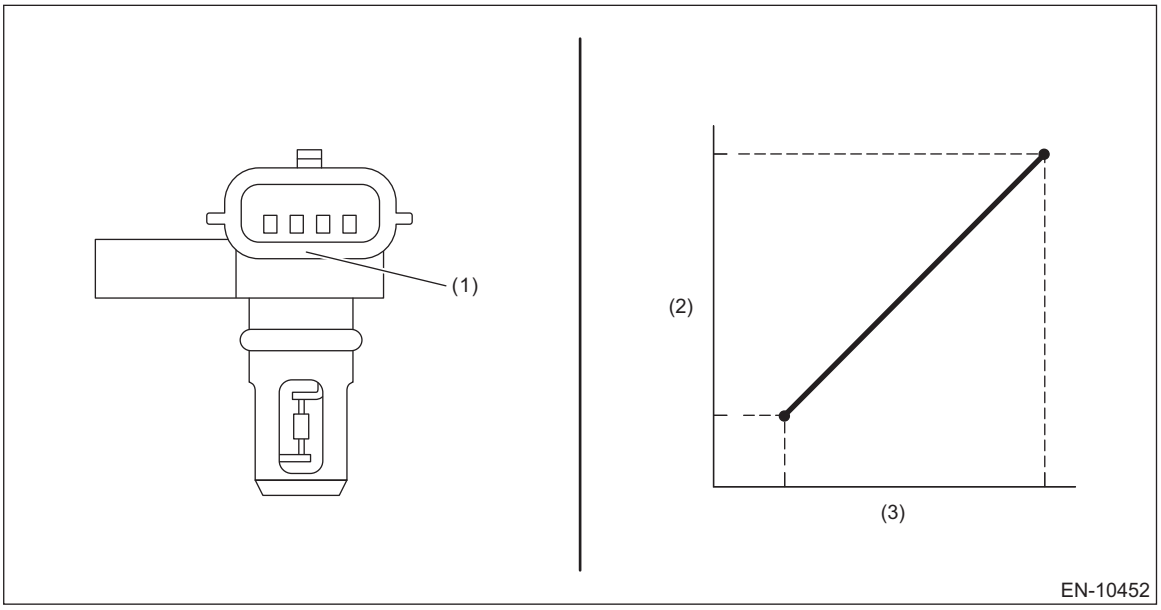
Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» less than 13.3 kPa (100 mmHg, 3.94 inHg)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY OF MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the manifold absolute pressure and intake air temperature sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between the manifold absolute pressure and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(E124) No. 4 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector • Poor contact of ECM connector
3	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector. ***Connector & terminal*** ***(E158) No. 4 — (E124) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between the manifold absolute pressure and intake air temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and manifold absolute pressure and intake air temperature sensor connector.	Is there poor contact of ECM or manifold absolute pressure and intake air temperature sensor connector?	Repair the poor contact of ECM or manifold absolute pressure and intake air temperature sensor connector.	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of manifold absolute pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Manifold absolute pressure sensor (2) Voltage (V) (3) Absolute pressure (kPa)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.33 V

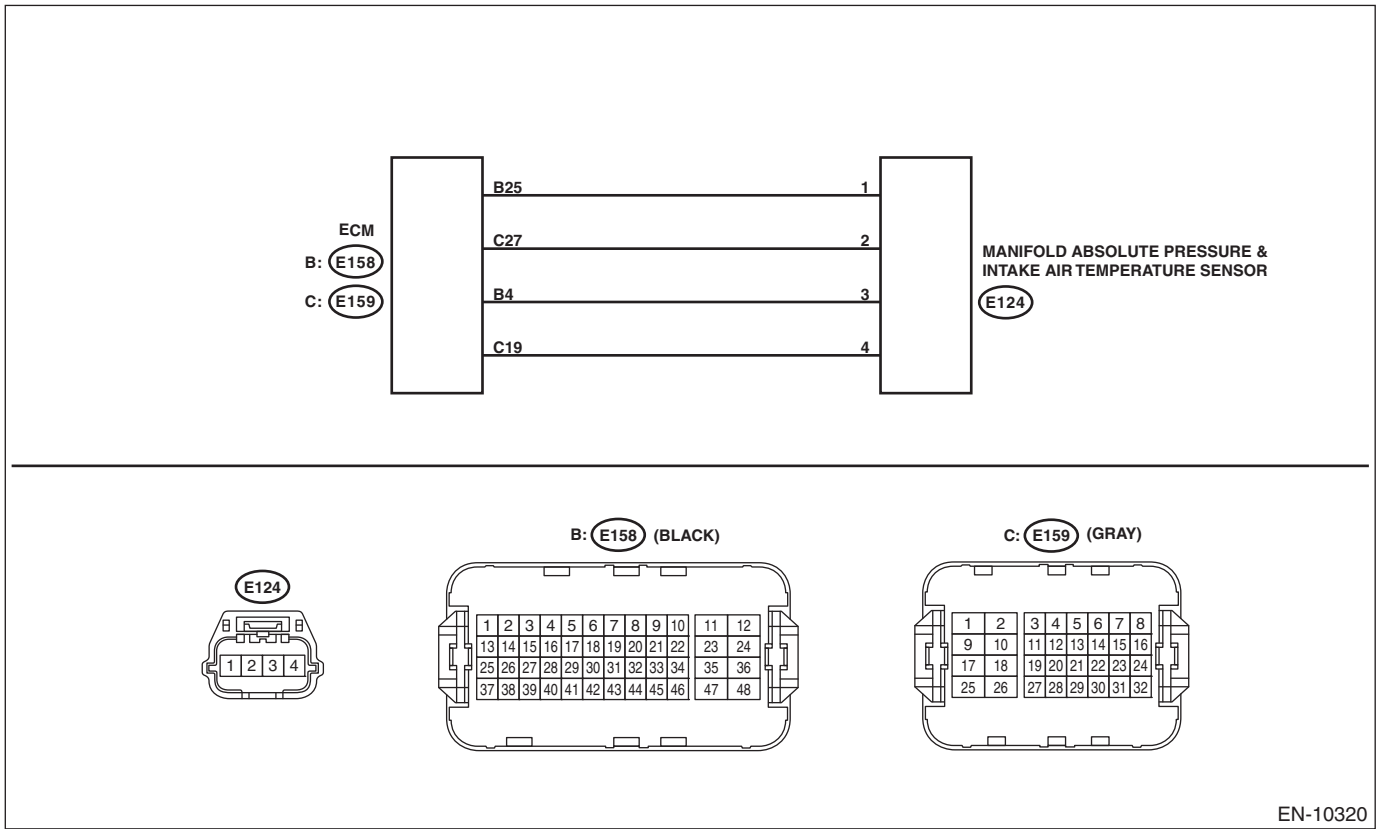
Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AI: DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE SENSOR CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



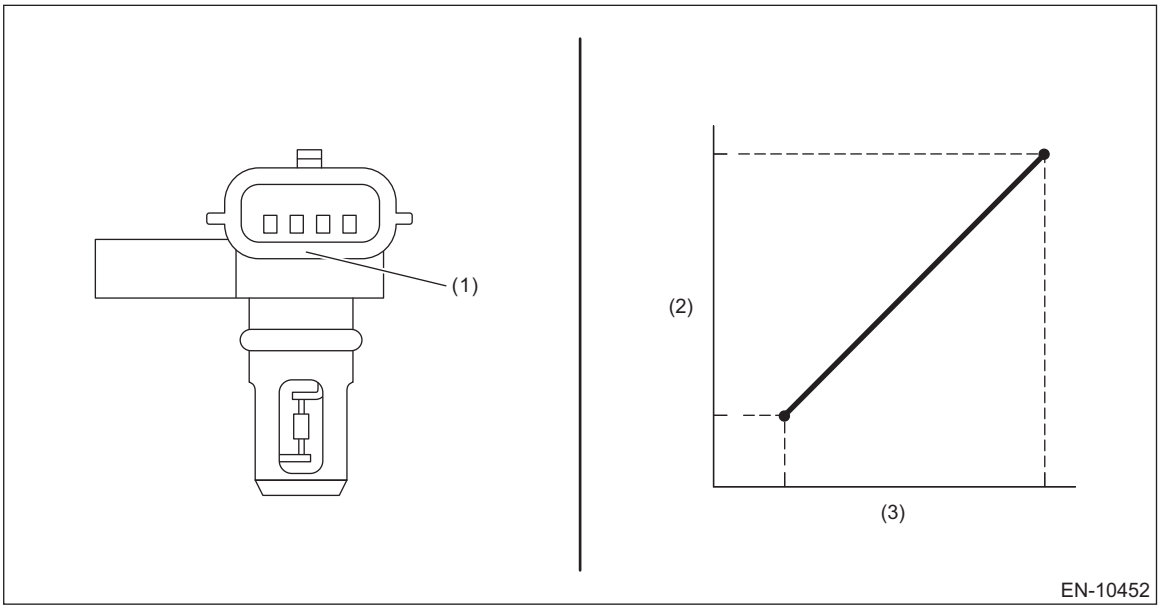
Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» 256 kPa (1920.2 mmHg, 75.6 inHg) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the manifold absolute pressure and intake air temperature sensor. 3) Start the engine. 4) Read the value of «Mani. Absolute Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Mani. Absolute Pressure» 256 kPa (1920.2 mmHg, 75.6 inHg) or more?	Repair the short circuit to power in harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between manifold absolute pressure and intake air temperature sensor connector and engine ground. ***Connector & terminal*** ***(E124) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and the manifold absolute pressure and intake air temperature sensor connector • Poor contact of ECM connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of the manifold absolute pressure and intake air temperature sensor connector.	Is there poor contact of the manifold absolute pressure and intake air temperature sensor connector?	Repair the poor contact of the manifold absolute pressure and intake air temperature sensor connector.	Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of manifold absolute pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Manifold absolute pressure sensor (2) Voltage (V) (3) Absolute pressure (kPa)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.85 V

Time needed for diagnosis: 2000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AJ:DTC P0111 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

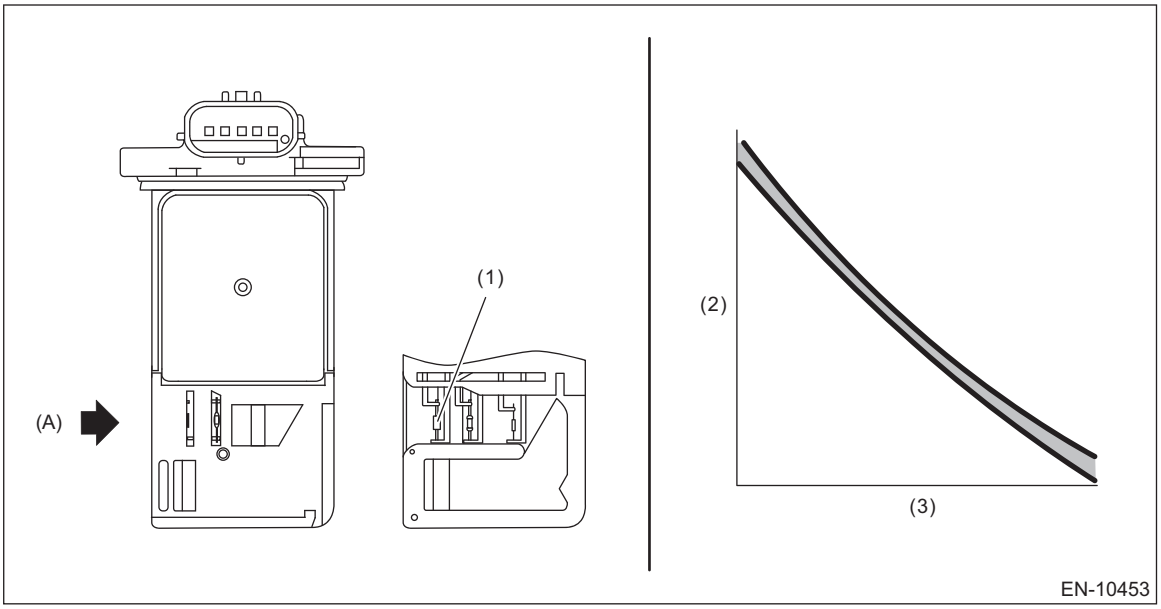
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0111 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 3) Read the change of the value in «IAT Sensor #11» while heating and cooling the mass air flow and intake air temperature sensor using a hair dryer. **CAUTION:** **Do not heat the part to the temperature where you cannot touch it with your bare hand in order to prevent burning yourself and protect the part.**	Does the value of «IAT Sensor #11» change between heating and cooling?	Repair the poor contact of ECM connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the intake air temperature sensor (integrated with air flow sensor) output properties. Using the following two diagnoses, judge as NG when either is NG.
• **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between intake air temperature sensor value, engine coolant temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between intake air temperature and engine coolant temperature, intake air temperature and ambient air temperature.
• **Diagnosis 2 (stuck diagnosis):** Judge as NG when intake air temperature does not change under the driving condition where it should change, considering engine condition.

2. COMPONENT DESCRIPTION

Intake air temperature sensor (integrated with air flow sensor)



(A) Air

(1) Intake air temperature sensor (2) Resistance value (Ω) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine coolant temperature	≥ 60°C (140°F)
Integrated value of intake air amount	≥ 5500 g (194 oz)
Number of experiences under following driving conditions	≥ 3 times
• Duration of driving condition 1	≥ 10 s
Vehicle speed	≥ 40 km/h (24.9 MPH)
and	
Amount of intake air	≥ 10 g/s (0.4 oz/s)
• Duration of driving condition 2	≥ 15 s
Vehicle speed	< 4 km/h (2.5 MPH)

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis when the vehicle speed condition is met after warming up from a cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Intake air temperature (air flow sensor) 21 sec. after engine start – Engine coolant temperature at engine start|	> Value of Map 1
|Intake air temperature (air flow sensor) 21 sec. after engine start – Ambient air temperature 21 sec. after engine start|	> Value of Map 2

Map 1

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Intake air temperature (air flow sensor) 21 sec. after engine start – Engine coolant temperature at engine start| (°C (°F))	12 (21.6)	12 (21.6)	22 (39.6)	22 (39.6)

Map 2

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Intake air temperature (air flow sensor) 21 sec. after engine start – Ambient air temperature 21 sec. after engine start| (°C (°F))	20 (36)	20 (36)	32 (57.6)	32 (57.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage difference between Max. and Min.	< 0.02 V (Equivalent to approximately 0.5°C (0.9°F) near 25°C (77°F)) (Equivalent to approximately 0.9°C (1.6°F) near –7°C (19.4°F))

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AK:DTC P0112 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

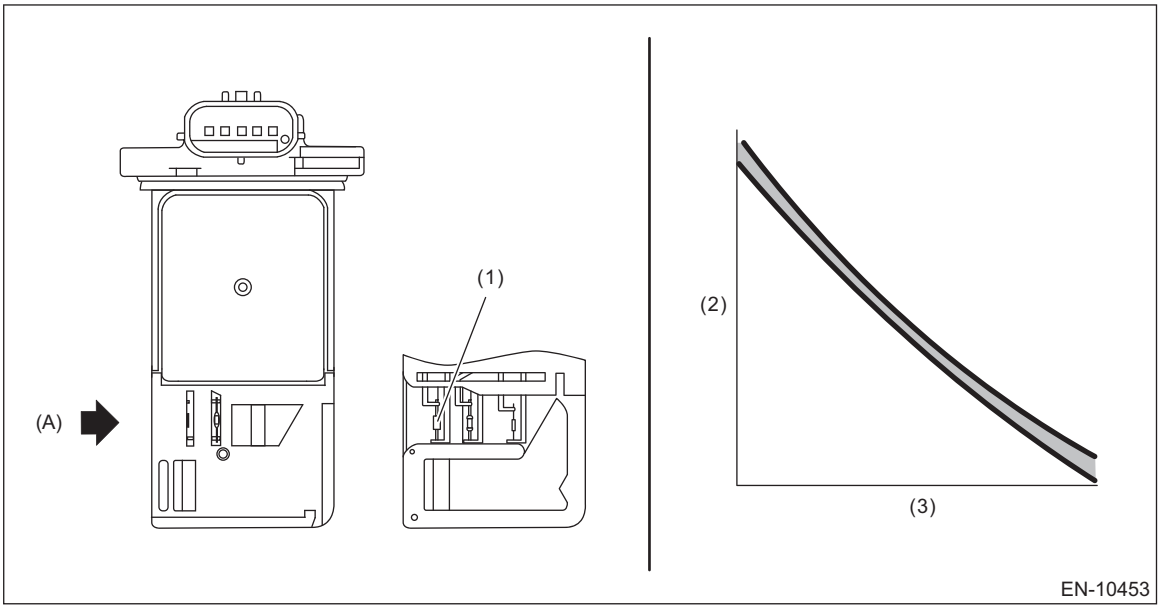
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «IAT Sensor #11» 120°C (248°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 5 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor (integrated with air flow sensor).
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Intake air temperature sensor (2) Resistance value (Ω) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.22 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AL:DTC P0113 INTAKE AIR TEMPERATURE SENSOR 1 CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

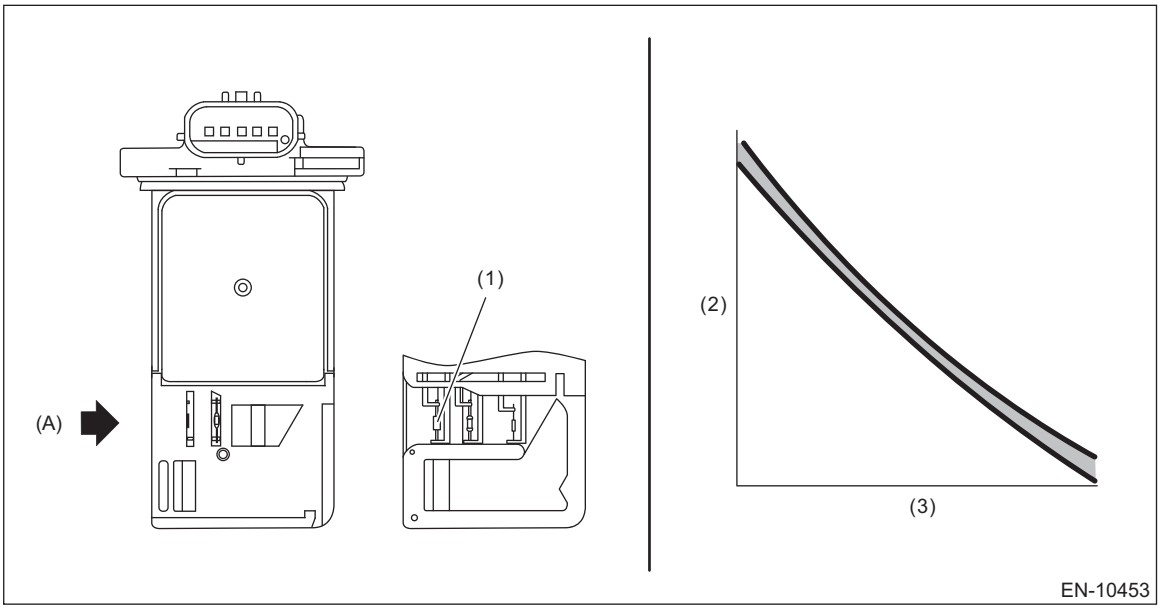
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «IAT Sensor #11» less than –40°C (–40°F)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and mass air flow and intake air temperature sensor connector.	Is there poor contact of ECM or mass air flow and intake air temperature sensor connector?	Repair the poor contact of ECM or mass air flow and intake air temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(E158) No. 5 — (B3) No. 4:*** ***(B134) No. 19 — (B3) No. 5:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the mass air flow and intake air temperature sensor connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 5 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and the mass air flow and intake air temperature sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the intake air temperature sensor (integrated with air flow sensor).
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Air

(1) Intake air temperature sensor (2) Resistance value (Ω) (3) Intake air temperature (°C (°F))

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.72 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AM:DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

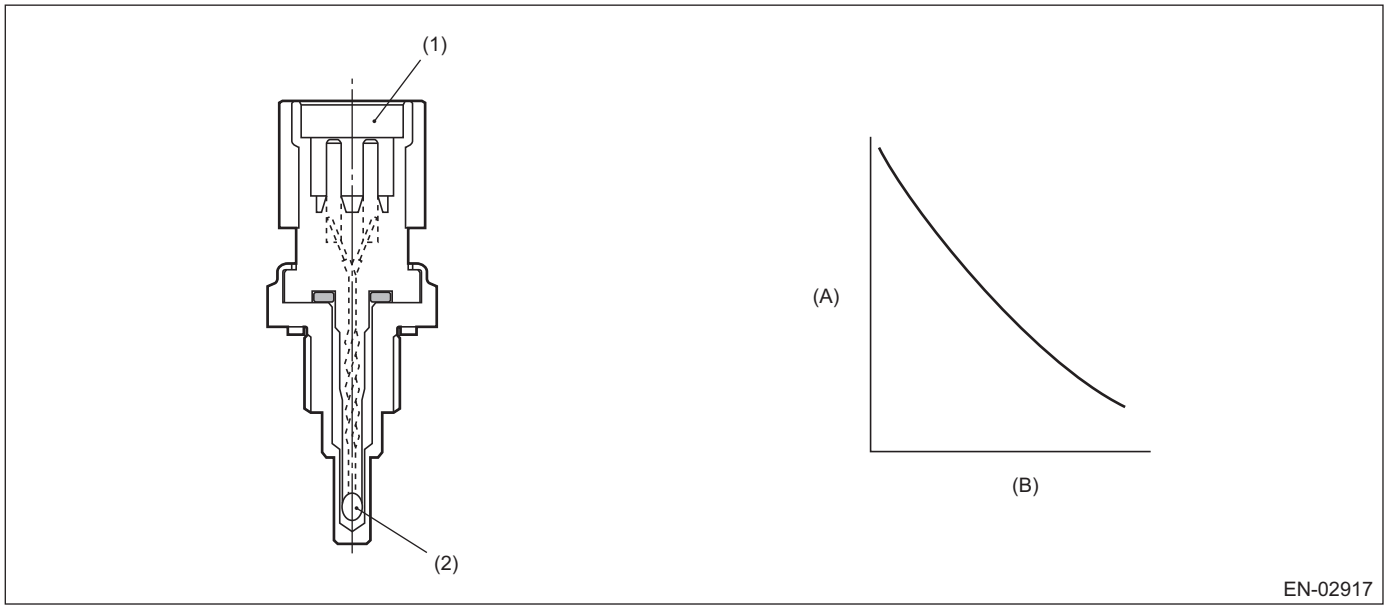
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0116 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Disconnect the connectors from the engine coolant temperature sensor. 2) Measure the resistance between engine coolant temperature sensor terminals when the engine coolant is cold and after warmed up. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance of engine coolant temperature sensor different between when engine coolant is cold and after warmed up?	Repair the poor contact of ECM connector.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine coolant temperature sensor characteristics.
After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine coolant temperature sensor value, intake air temperature sensor value and ambient temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine coolant temperature and ambient air temperature, engine coolant temperature and intake air temperature.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the engine starts after a certain period of soaking time.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
|Engine coolant temperature at engine start – Intake air temperature 21 sec. after engine start|	> Value from Map
|Engine coolant temperature at engine start – Ambient air temperature at engine start|	> 25°C (45°F)

Map

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Engine coolant temperature at engine start – Intake air temperature 21 sec. after engine start| (°C (°F))	12 (21.6)	12 (21.6)	22 (39.6)	22 (39.6)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AN:DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

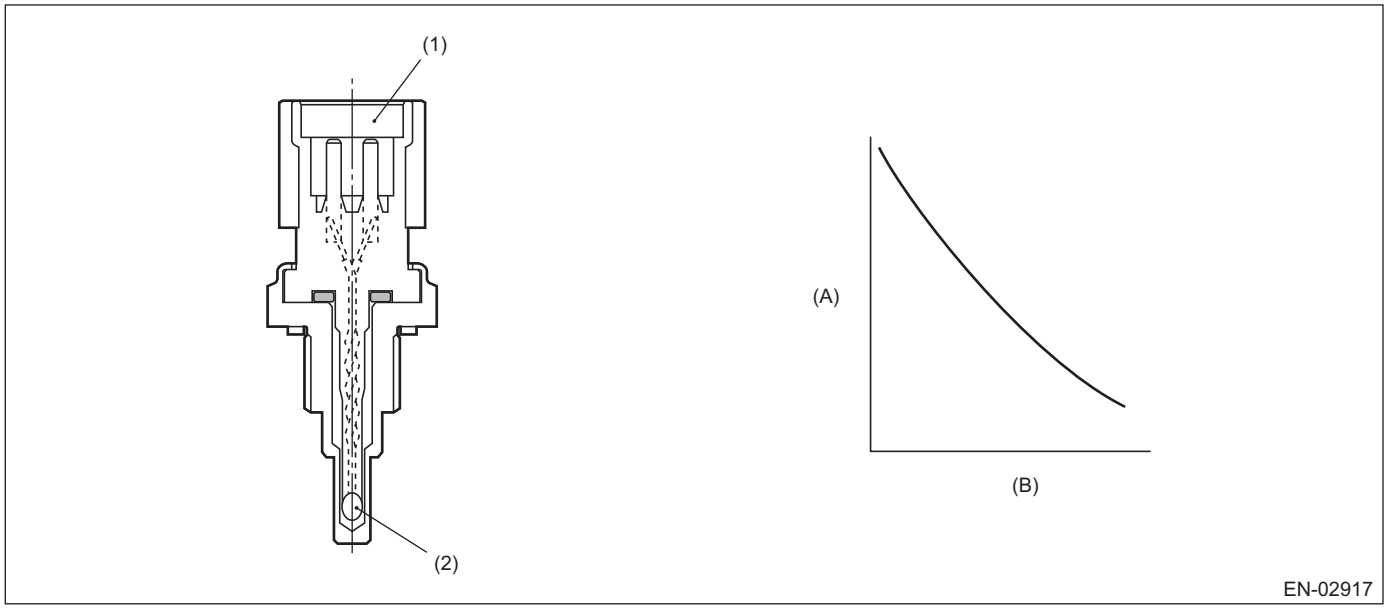
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 150°C (302°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.33 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AO:DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

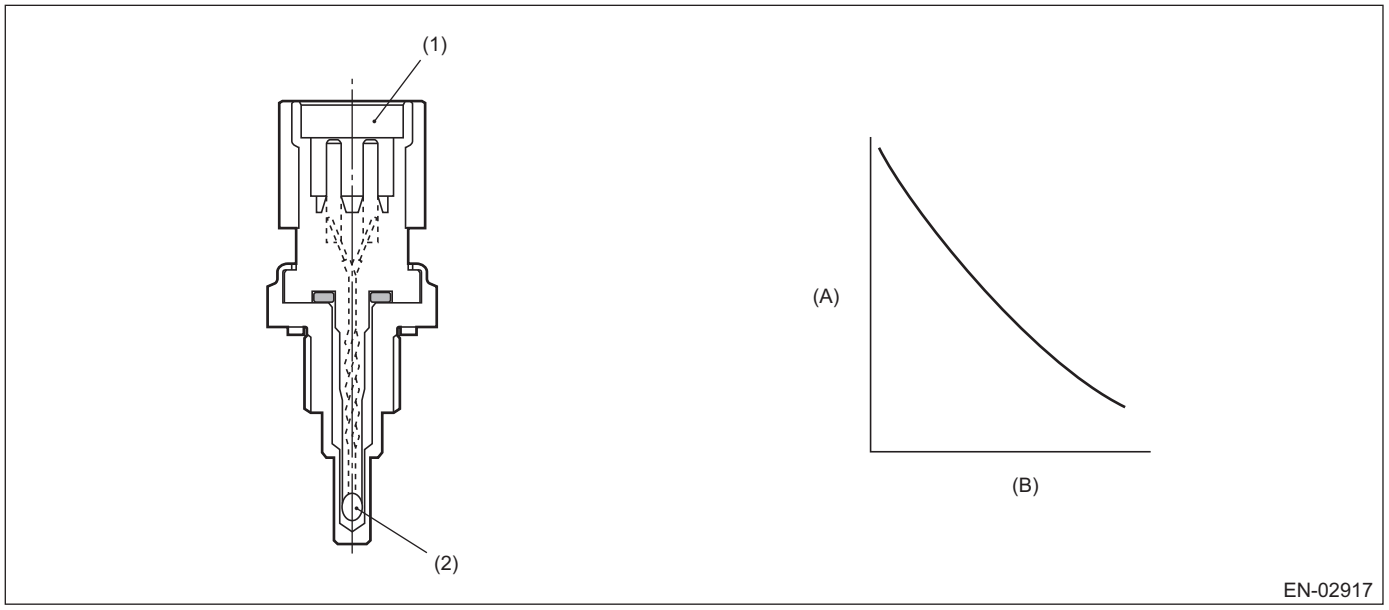
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» less than –40°C (–40°F)?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and engine coolant temperature sensor connector.	Is there poor contact of ECM or engine coolant temperature sensor connector?	Repair the poor contact of ECM or engine coolant temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E8) No. 1:*** ***(E158) No. 38 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit of harness to power supply between ECM connector and engine coolant temperature sensor connector.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the engine coolant temperature sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.71 V

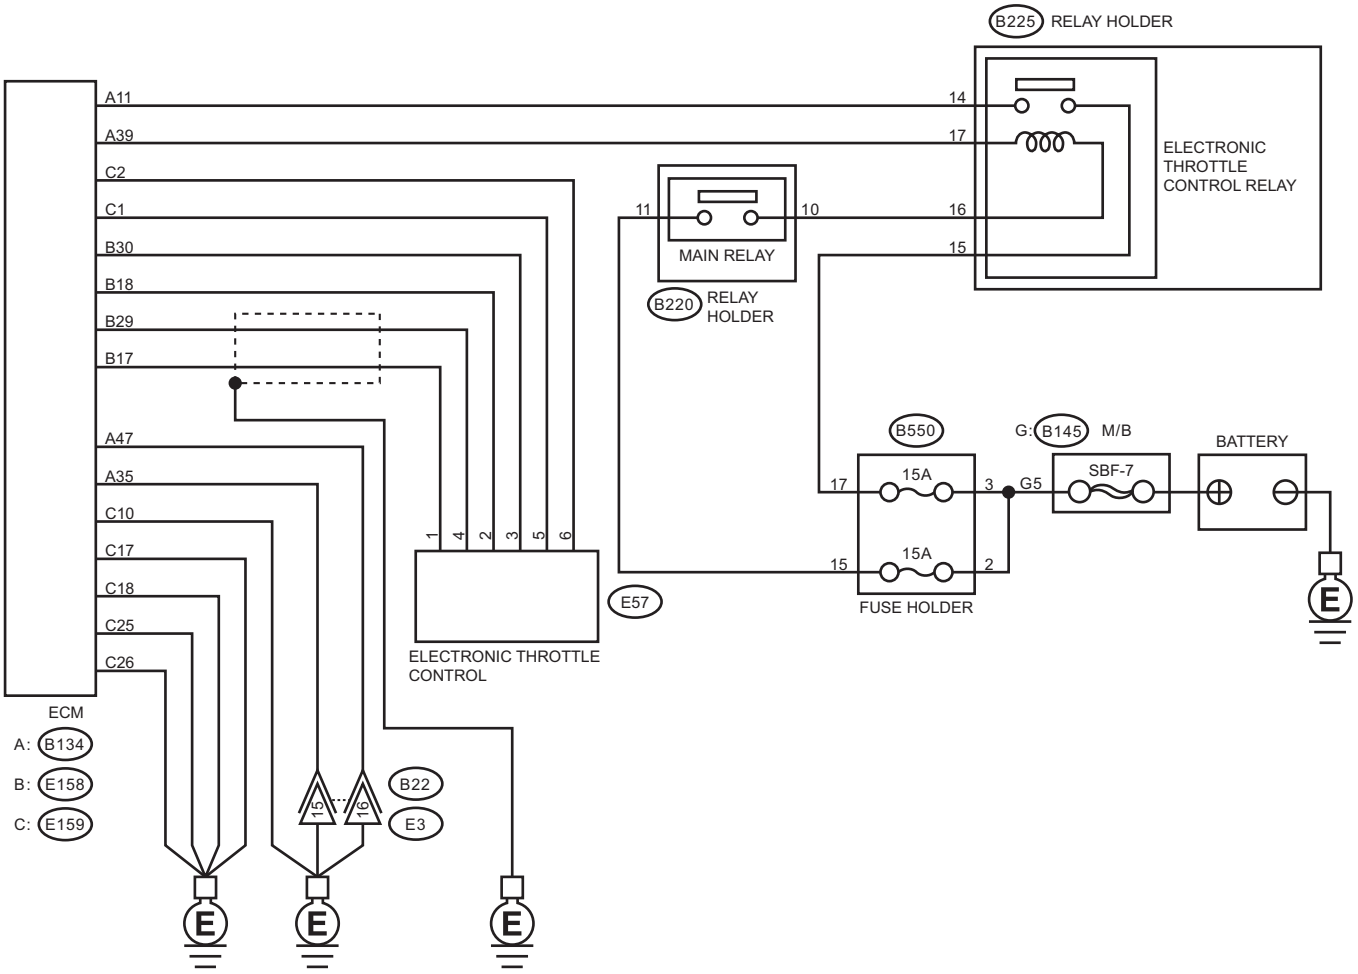
Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

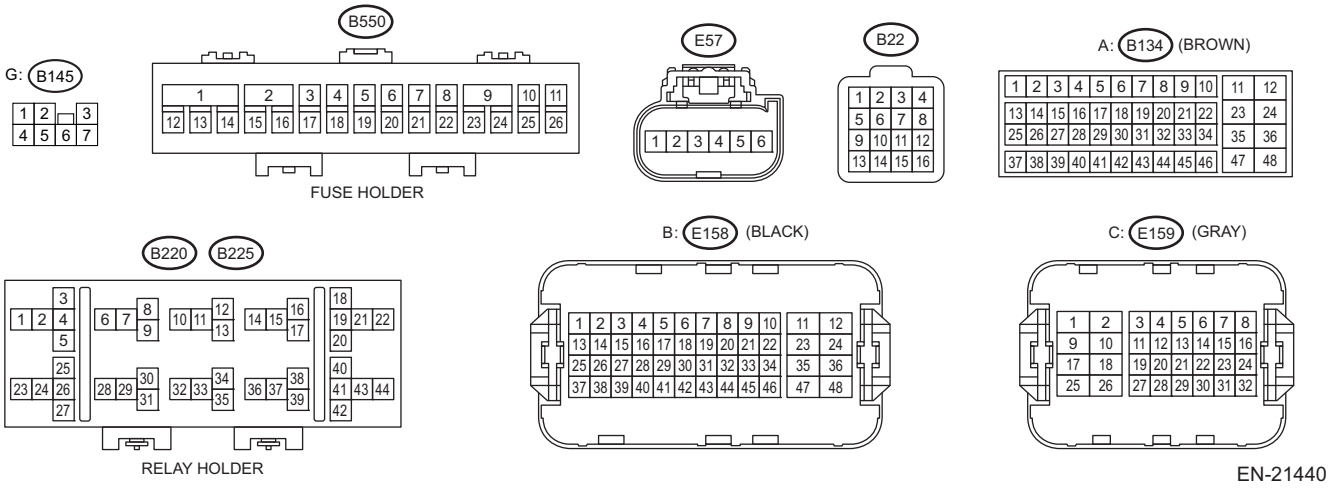
AP:DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





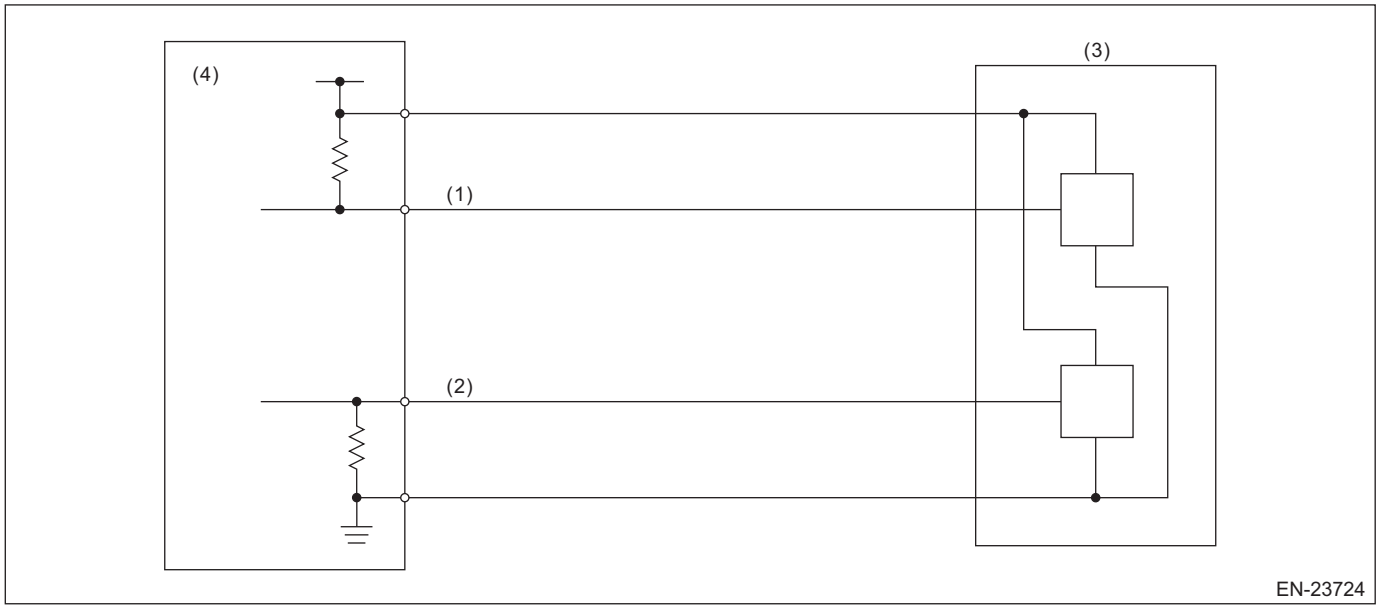
EN-21440

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 18 — Engine ground:*** ***(E158) No. 17 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	< 0.29 V

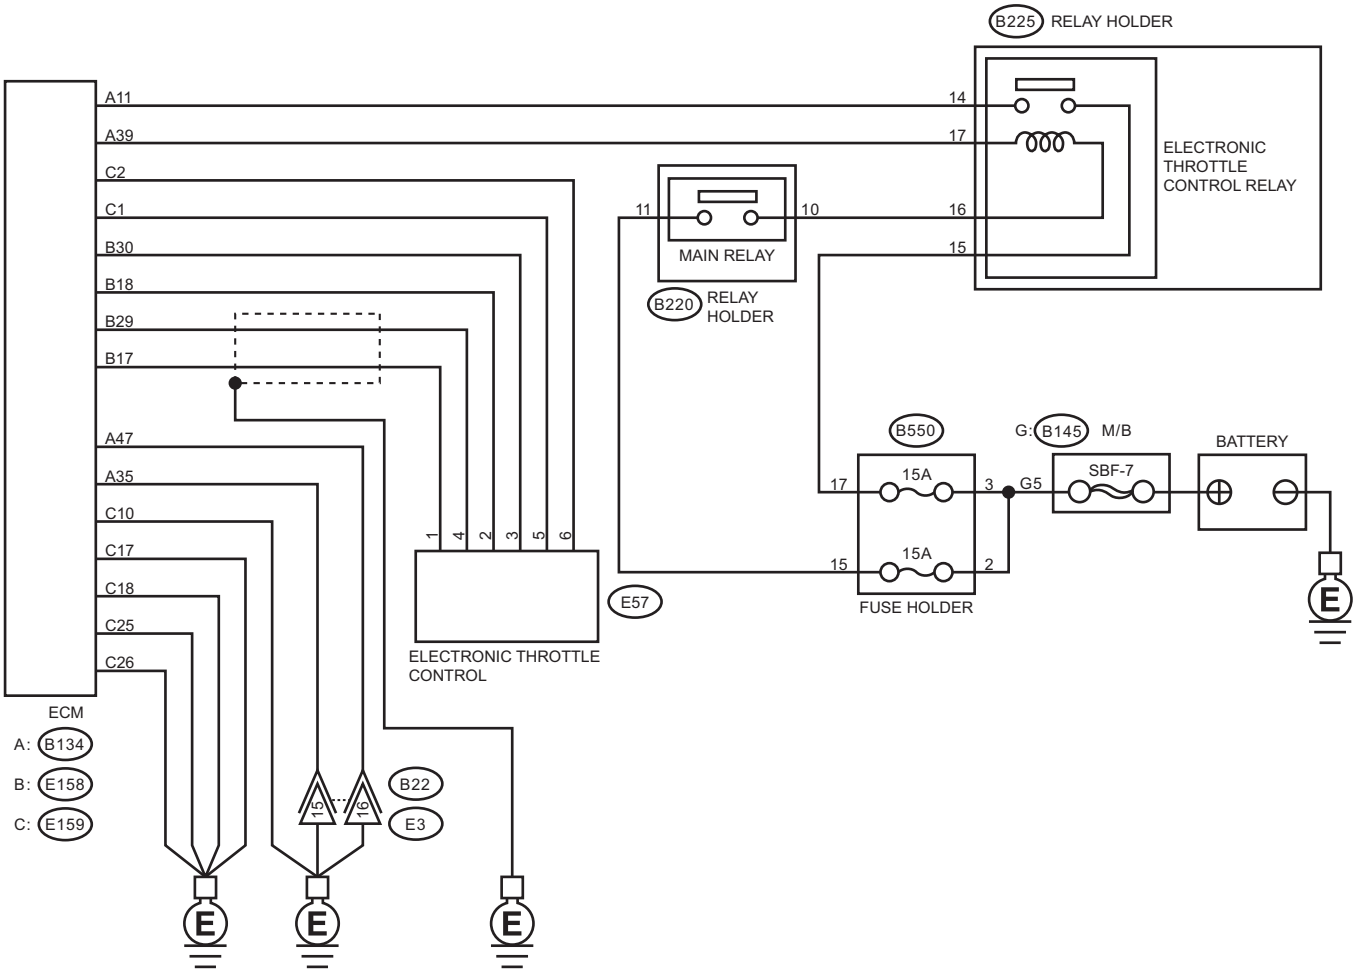
Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

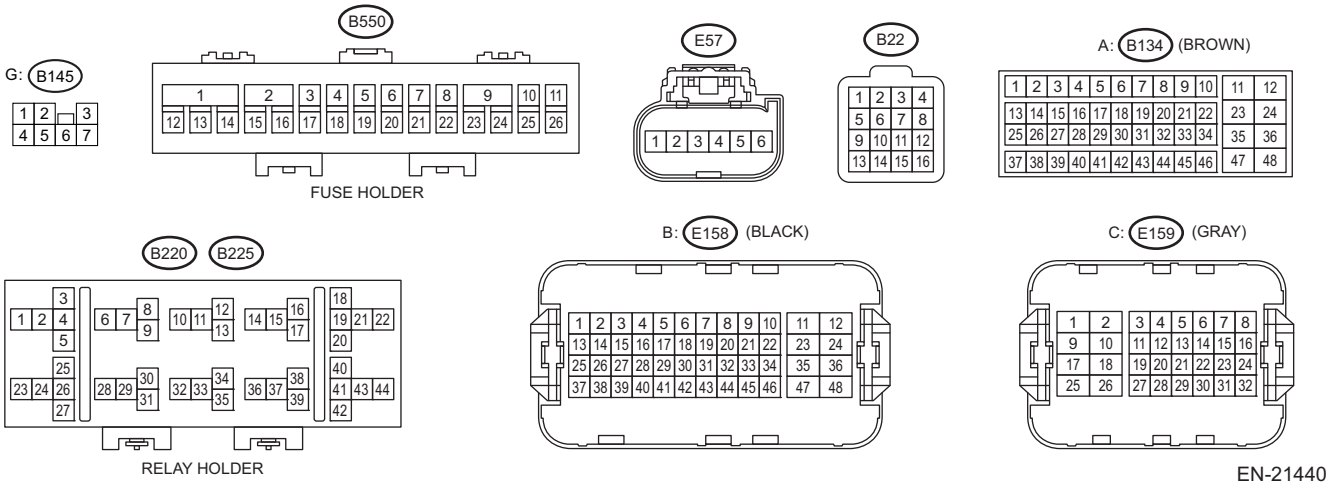
AQ:DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





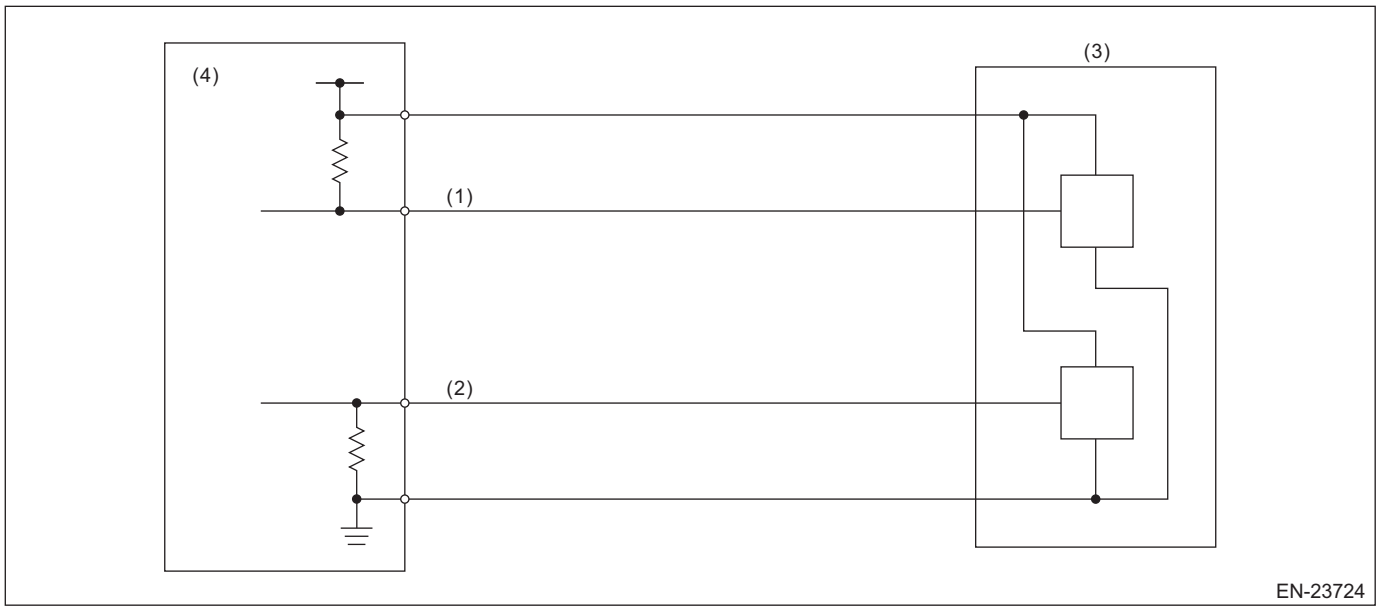
EN-21440

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 17 — (E57) No. 1:*** ***(E158) No. 30 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 17 — (E158) No. 18:***	Is the resistance 1 MΩ or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 input voltage	> 4.69 V

Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

AR:DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine does not return to idle.

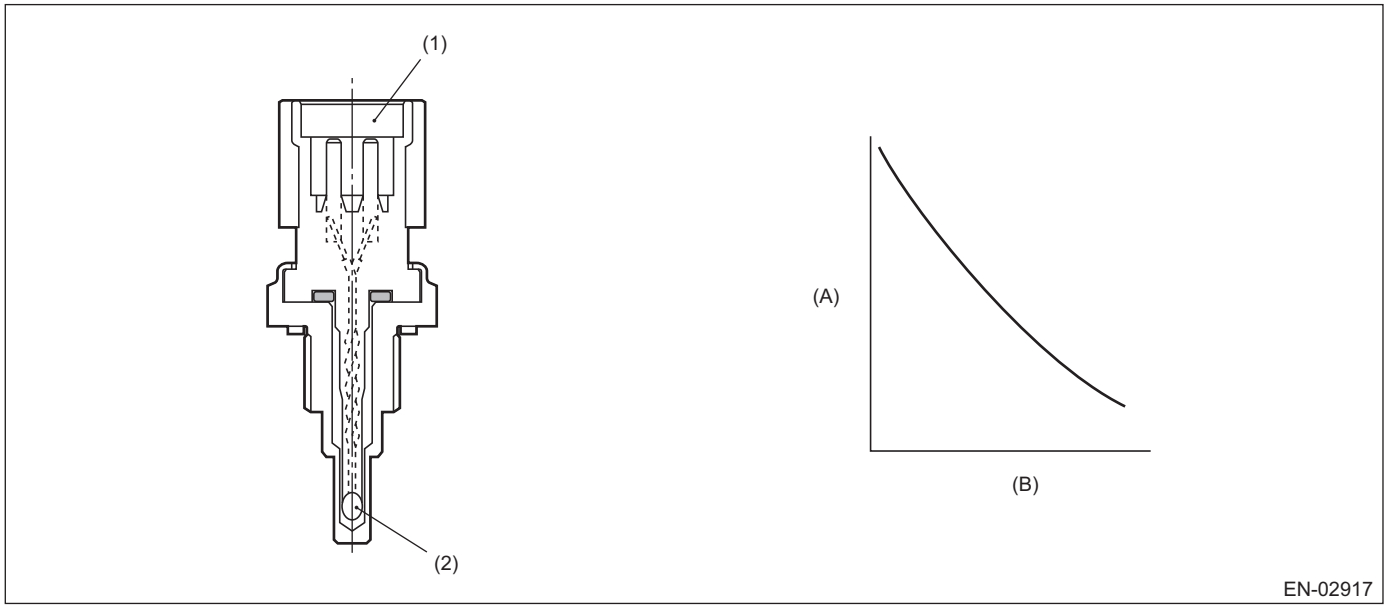
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK ENGINE COOLANT.** Check the following items: • Amount of engine coolant • Engine coolant freeze • Contamination of engine coolant	Is the check result OK?	Go to step **2**.	Fill or replace the engine coolant. <Ref. to CO(w/o STI)-15, REPLACEMENT, Engine Coolant.>
2	**CHECK THERMOSTAT.** Check the thermostat. <Ref. to CO(w/o STI)-36, INSPECTION, Thermostat.>	Does the thermostat remain opened?	Replace the thermostat. <Ref. to CO(w/o STI)-34, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property.
Judge as NG when engine coolant temperature does not rise to the specified value after predetermined time has elapsed since engine start.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine coolant temperature at engine start	< –15°C (5°F)
Engine speed	≥ 475 rpm

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine coolant temperature	< –15°C (5°F)
Elapsed time after starting the engine ((Smaller value either one of engine coolant temperature and intake air temperature at engine start) ≥ –23.3°C (–9.9°F))	≥ 120 s
or	
Elapsed time after starting the engine ((Smaller value either one of engine coolant temperature and intake air temperature at engine start) < –23.3°C (–9.9°F))	≥ 300 s

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AS:DTC P0128 COOLANT THERMOSTAT (ENGINE COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Thermostat remains open.
- Coolant temperature rises slowly.

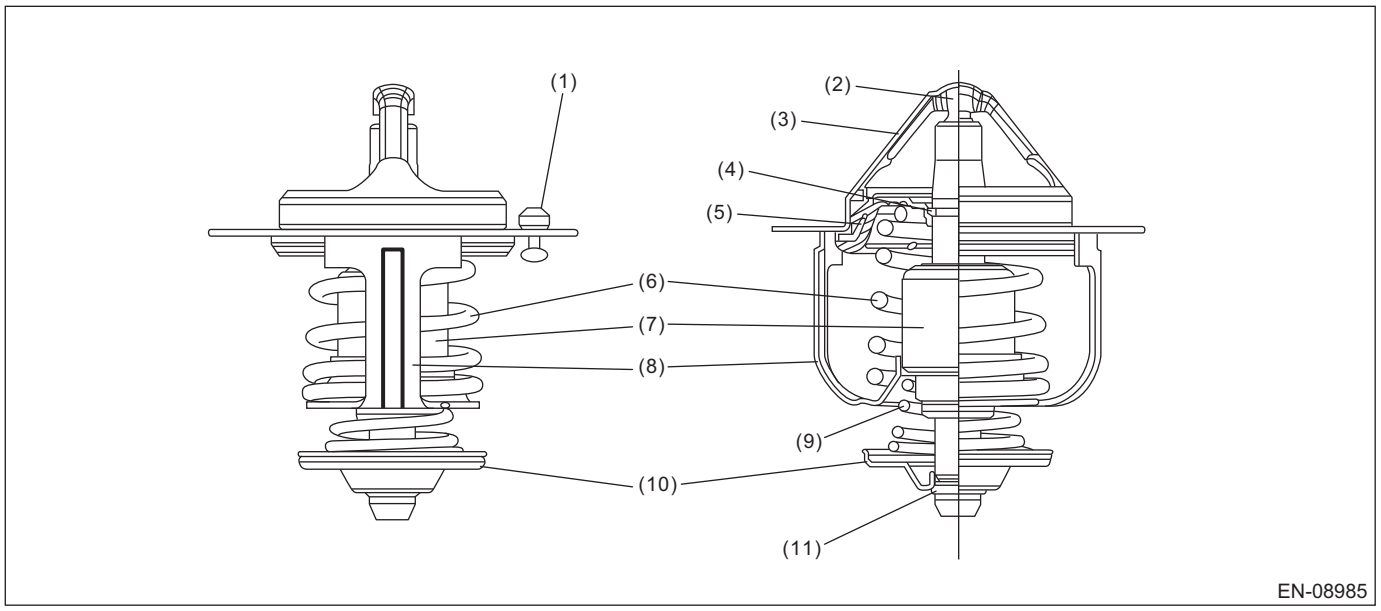
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0128 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE COOLANT.** Check the engine coolant.	Is the check result OK?	Go to step **3**.	Refill the engine coolant. <Ref. to CO(w/o STI)-15, Engine Coolant.>
3	**CHECK RADIATOR FAN.** 1) Start the engine. 2) While keeping idling for approx. 3 minutes (with accelerator OFF), check the operation of the radiator fan.	Does the radiator fan continuously rotate for 3 minutes or more during idling?	Repair radiator fan circuit. <Ref. to CO(w/o STI)-47, Radiator Main Fan and Fan Motor.> <Ref. to CO(w/o STI)-50, Radiator Sub Fan and Fan Motor.>	Go to step **4**.
4	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Replace the thermostat. <Ref. to CO(w/o STI)-34, Thermostat.>	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the thermostat function.
Judge as NG when any one of the following conditions is established.
- When the actual engine coolant temperature does not reach the maximum temperature necessary to perform other OBDII diagnosis and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 1)
- When the actual engine coolant temperature does not reach the range within –11°C (–19.8°F) from the regulated temperature and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 2)
- When the difference between the estimated coolant temperature and the actual engine coolant temperature exceeds the predetermined value, and Σ (Estimated engine coolant temperature – actual engine coolant temperature) exceeded the predetermined value. (Judgment 3)

2. COMPONENT DESCRIPTION



(1) Jiggle valve
(2) Piston
(3) Flange
(4) Stop ring
(5) Dust seal
(6) Main spring
(7) Wax element
(8) Frame
(9) Bypass spring
(10) Bypass valve
(11) Stop ring

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Ambient air temperature	≥ –7°C (19.4°F)
Vehicle speed	≥ 30 km/h (18.6 MPH)
Engine coolant temperature at engine start	< 60°C (140°F)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
When any one of the followings is established:	
<Judgment 1>	
Actual engine coolant temperature	< 60°C (140°F)
Estimated coolant temperature	> 60°C (140°F)
Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 1
<Judgment 2>	
Actual engine coolant temperature	< Regulated temperature * – Value of Map 2
Estimated coolant temperature	> Value of Map 3
Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 4
<Judgment 3>	

Judgment value

Malfunction Criteria	Threshold Value
Actual engine coolant temperature	> 11.1°C (20°F)
Estimated coolant temperature	≥ Value of Map 5
Σ (Estimated engine coolant temperature – actual engine coolant temperature)	> Value of Map 6

* Regulated temperature = 89.2°C (192.6°F)

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AT:DTC P0130 A/F / O2 SENSOR CIRCUIT BANK 1 SENSOR 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

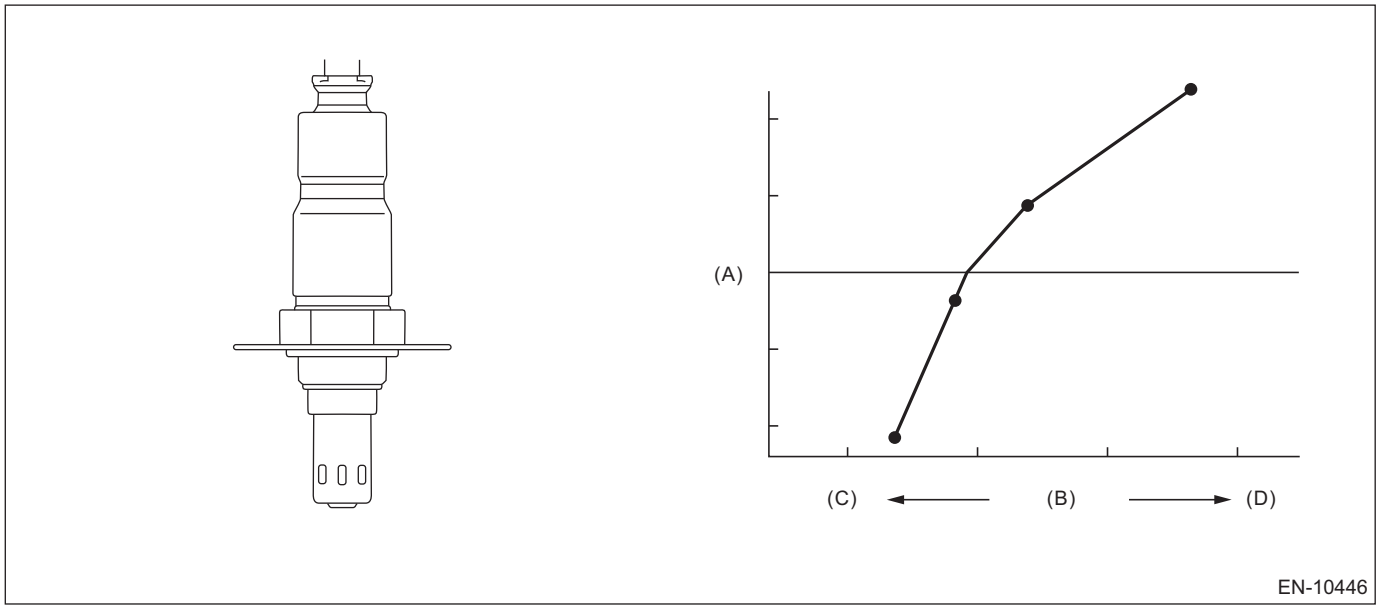
	Step	Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR DATA.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) Idle the engine for one minute or more. 3) Read the value of «A/F Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «A/F Sensor #11» 1.2 — 3 V?	Go to step **2**.	Go to step **3**.
2	**CHECK FRONT OXYGEN (A/F) SENSOR DATA.** 1) Race the engine so that the engine speed reaches 3,000 rpm. (Five times in total) 2) Read the value of «A/F Sensor #11» at racing using the Subaru Select Monitor or a general scan tool. NOTE: • To increase engine speed to 3,000 rpm, slowly depress accelerator pedal for approximately 5 seconds, and quickly release accelerator pedal to decrease engine speed. • Normally, the air fuel ratio is rich during racing.	Is the value of «A/F Sensor #11» 2.5 V or more?	Go to step **5**.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 15 — Engine ground:*** ***(E158) No. 27 — Engine ground:*** ***(E158) No. 39 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.

Step		Check	Yes	No
5	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Looseness of front oxygen (A/F) sensor • Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Judge as NG, while the element impedance is low with the element current out of the range.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Front oxygen (A/F) sensor impedance	≤ 403 Ω

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Input current	< –45 μA or > 45 μA

Time needed for diagnosis: 3040 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

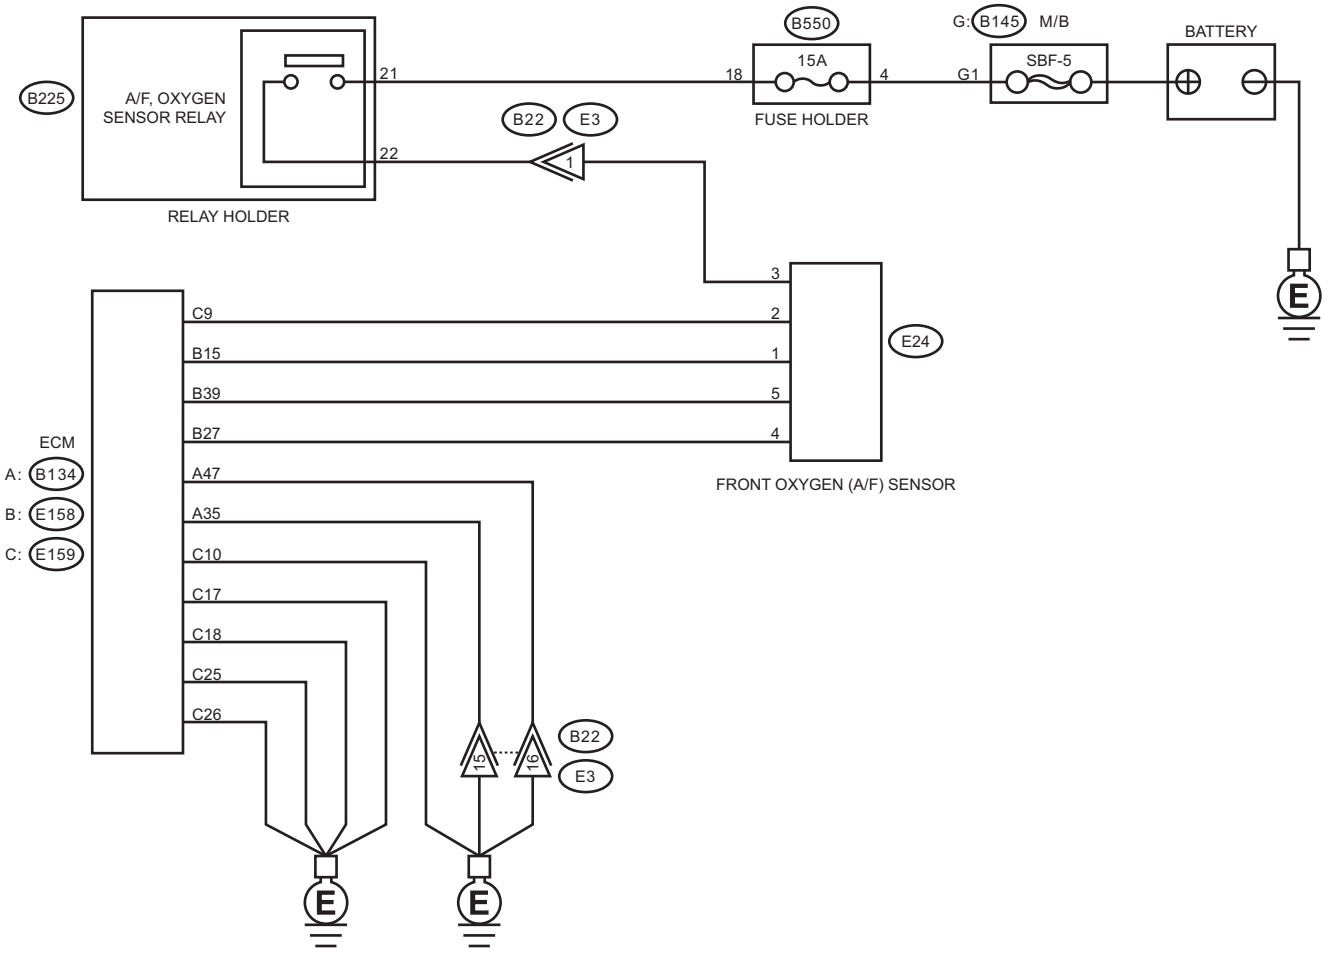
AU:DTC P0131 A/F / O2 SENSOR CIRCUIT LOW VOLTAGE BANK 1 SENSOR 1

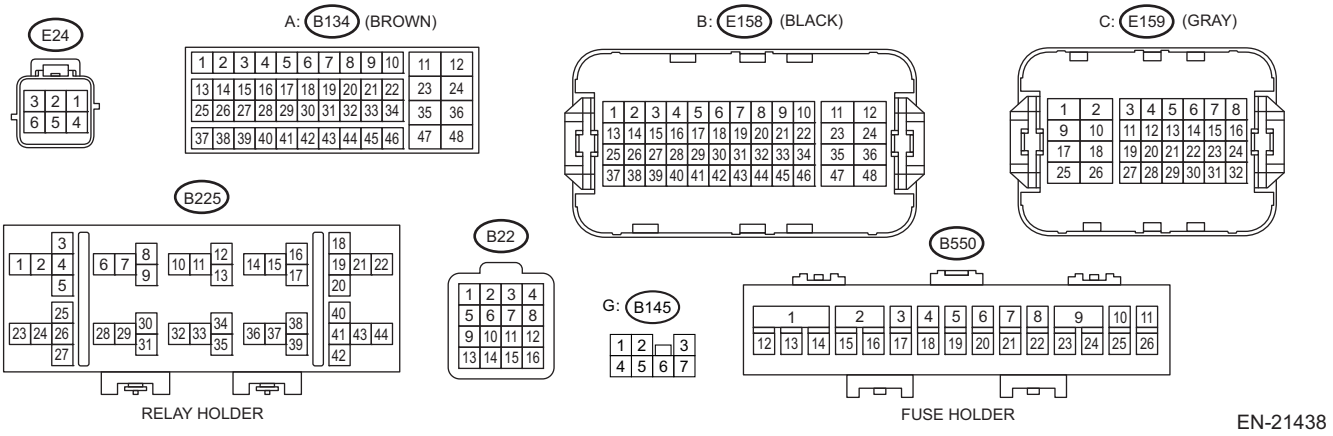
DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





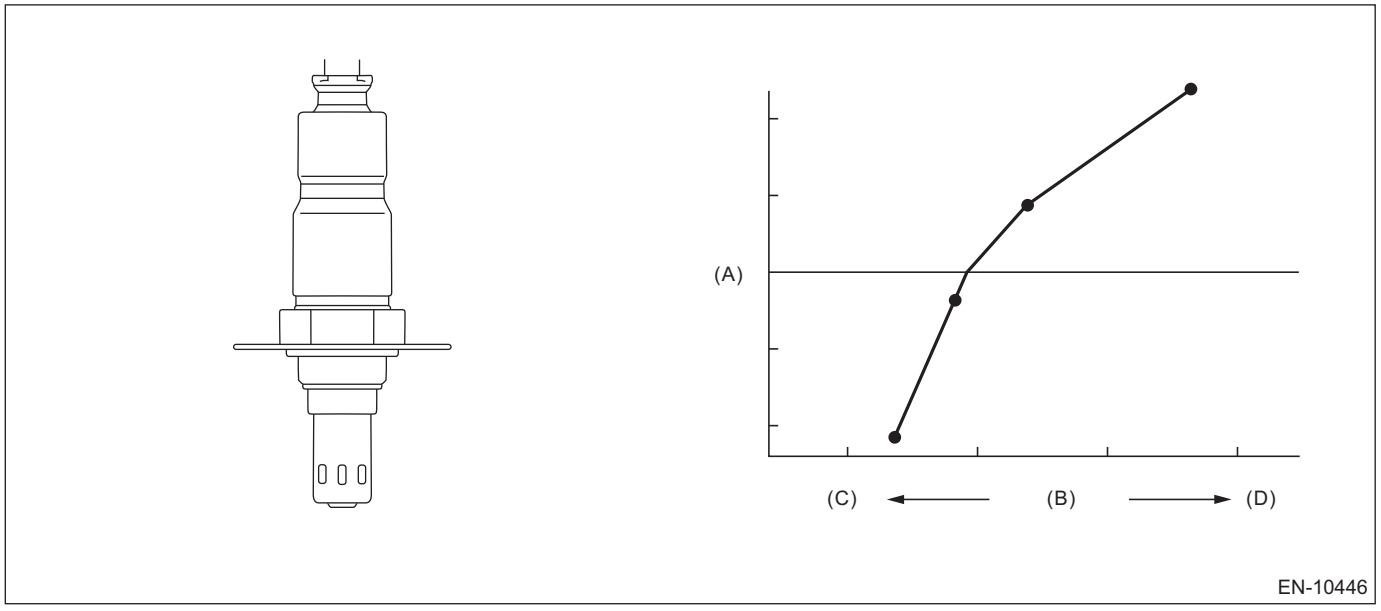
Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 15 — Engine ground:*** ***(E158) No. 27 — Engine ground:*** ***(E158) No. 39 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK FOR POOR CONTACT.** Check for poor contact of the front oxygen (A/F) sensor connector.	Is there poor contact of front oxygen (A/F) sensor connector?	Repair the poor contact of front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.
Judge as NG, when the element voltage is out of the specified range.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Input voltage (+)	≤ 1 V
or	
Input voltage (–)	≤ 1 V
or	
Sensor reference voltage	≤ 1 V

Time needed for diagnosis: 560 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

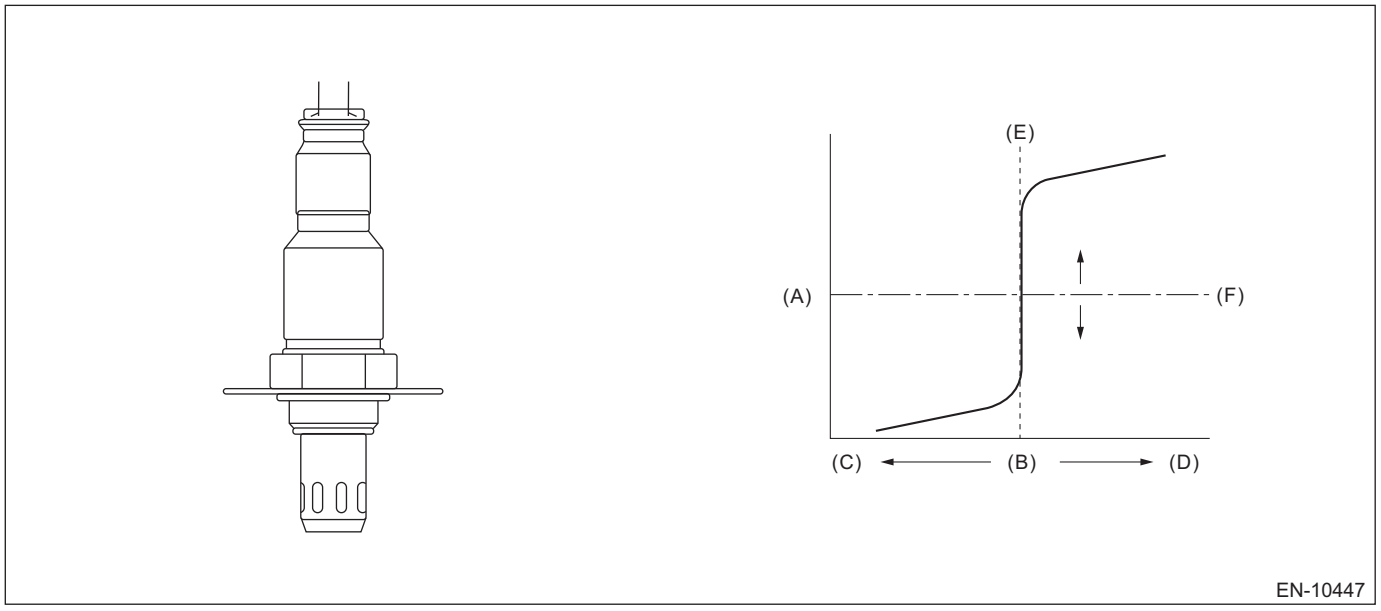
4	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 16 — Engine ground*** ***(E158) No. 42 — Engine ground***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 3 (+) — Engine ground (–):***	Is the voltage 1.8 V or more?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
6	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect continuity NG of the oxygen sensor. Judge as NG when the oxygen sensor voltage reading is not within the probable range.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Diagnosis 2

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Estimated secondary oxygen sensor element temperature	≥ 450°C (842°F)
Integrated duty ratio of the secondary oxygen sensor heater operation from engine start	≥ 54400%
Secondary oxygen sensor offset signal	≥ 1.8 V and ≤ 2.2 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value 1

Malfunction Criteria	Threshold Value
Secondary oxygen sensor offset signal (A)	< 1.8 V

Judgment value 2

Malfunction Criteria	Threshold Value
Secondary oxygen sensor output voltage {(B) - (A)}	< –0.22 V
Secondary oxygen sensor signal (B)	≥ 0.375 V
or	
Secondary oxygen sensor signal (B)	< 1.7 V
Secondary oxygen sensor signal (B)	≥ 0.375 V

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AY:DTC P0138 O2 SENSOR CIRCUIT HIGH VOLTAGE BANK 1 SENSOR 2

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value 1

Judgment value

Malfunction Criteria	Threshold Value
Oxygen sensor offset voltage	> 2.2 V

Judgment value 2

Malfunction Criteria	Threshold Value
Oxygen sensor voltage	> 3.25 V

Judgment value 3

Malfunction Criteria	Threshold Value
Secondary oxygen sensor output voltage {(B) - (A)}	> 1.2 V

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

AZ:DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

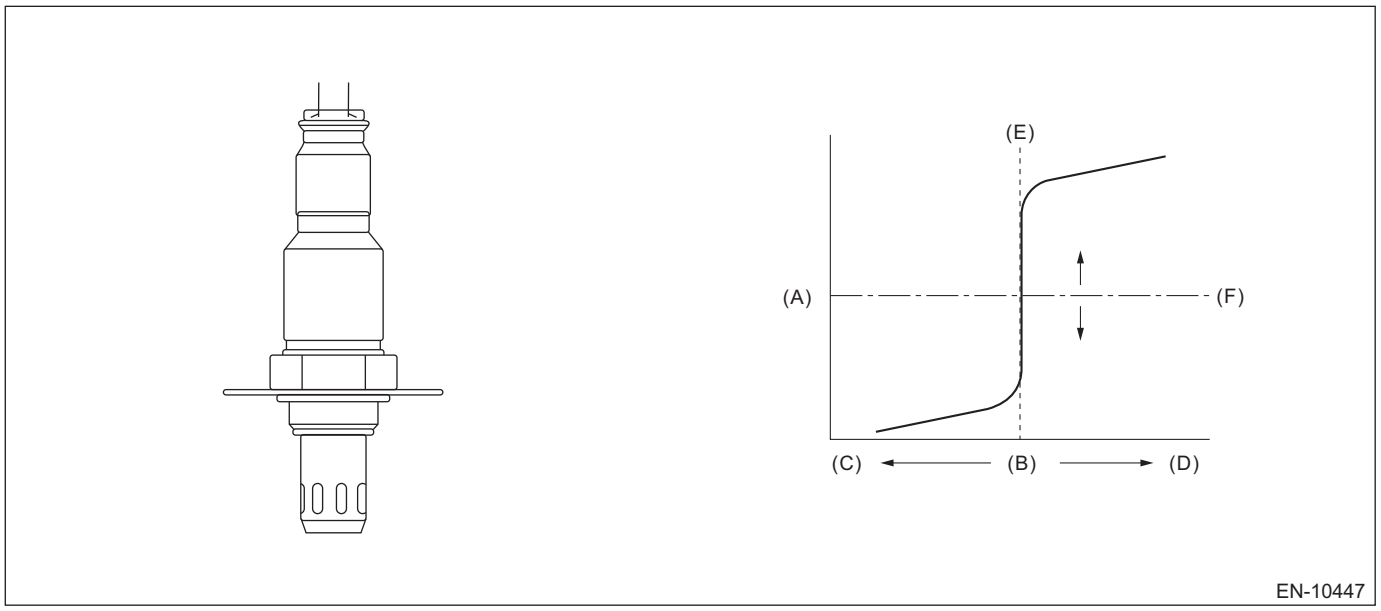
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
3	**CHECK REAR OXYGEN SENSOR.** Measure the resistance between rear oxygen sensor terminals. ***Terminals*** ***No. 3 — No. 4***	Is the resistance less than 1 Ω?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the slow response of rich → lean for rear oxygen sensor output.
When the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

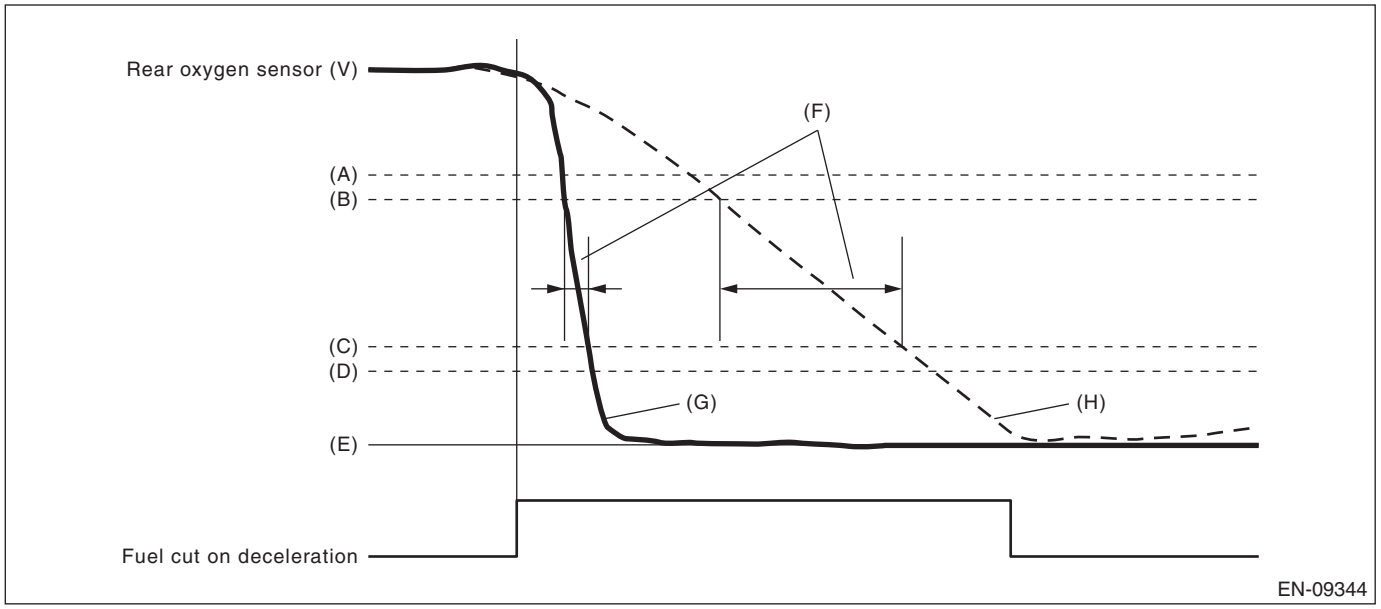
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Current calculation time of the rear oxygen sensor heater after starting	≥ 180000 ms
Rear oxygen sensor voltage when fuel cut starts	≥ 0.55 V
Time of fuel shut-off operation	≥ 5 s
Estimated temperature of rear oxygen sensor element when fuel cut starts	≥ 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor during fuel cut.



(A) 0.55 V
(B) 0.50 V
(C) 0.20 V
(D) 0.15 V
(E) 0 V
(F) Diagnostic parameter
(G) Normal
(H) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time needed for rear oxygen sensor voltage to change from 0.5 V to 0.2 V	> 2000 ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

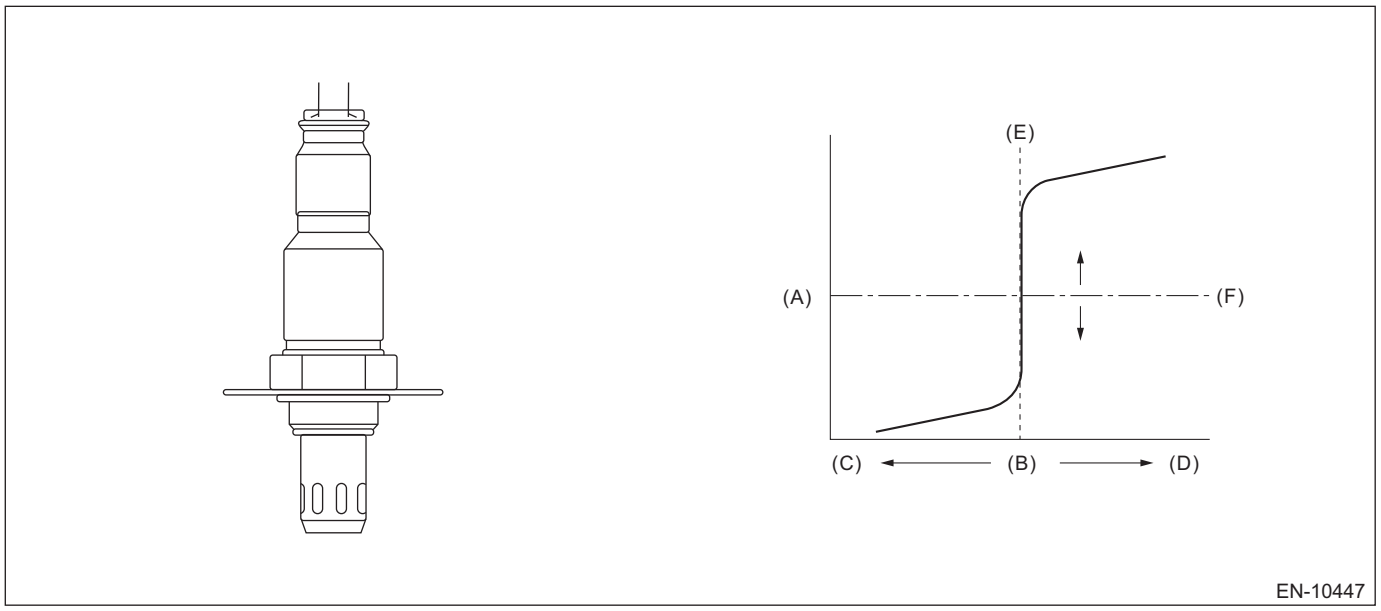
BA:DTC P013B O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(w/o STI)(diag)-328, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of lean → rich for rear oxygen sensor output.
After the deceleration fuel cut has occurred, detect the trouble by calculating the time when the rear oxygen sensor output passes through the predetermined range of voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

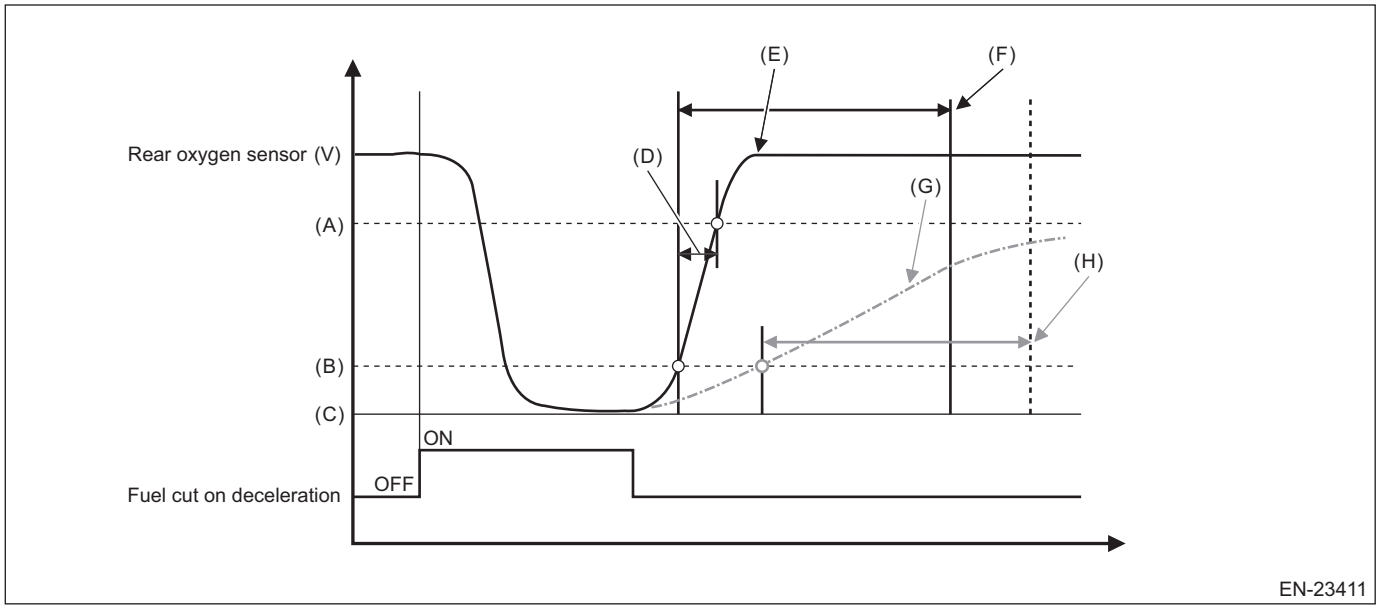
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
(Duration of fuel cut	≥ 3 s
Fuel shut-off function from above)	Not in operation
Output voltage value of rear oxygen sensor	≥ 0.2 V
Compensation to rich	Rich
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once after recovering from a deceleration fuel cut continued for more than predetermined time.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the response time of the rear oxygen sensor after fuel cut.



(A)	0.5 V	(B)	0.2 V	(C)	0 V
(D)	Diagnostic parameter	(E)	Voltage in normal condition	(F)	Response time in normal condition
(G)	Voltage in abnormal condition	(H)	Response time in abnormal condition		

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage value of rear oxygen sensor	< 0.5 V
Elapsed time	> 3 s

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

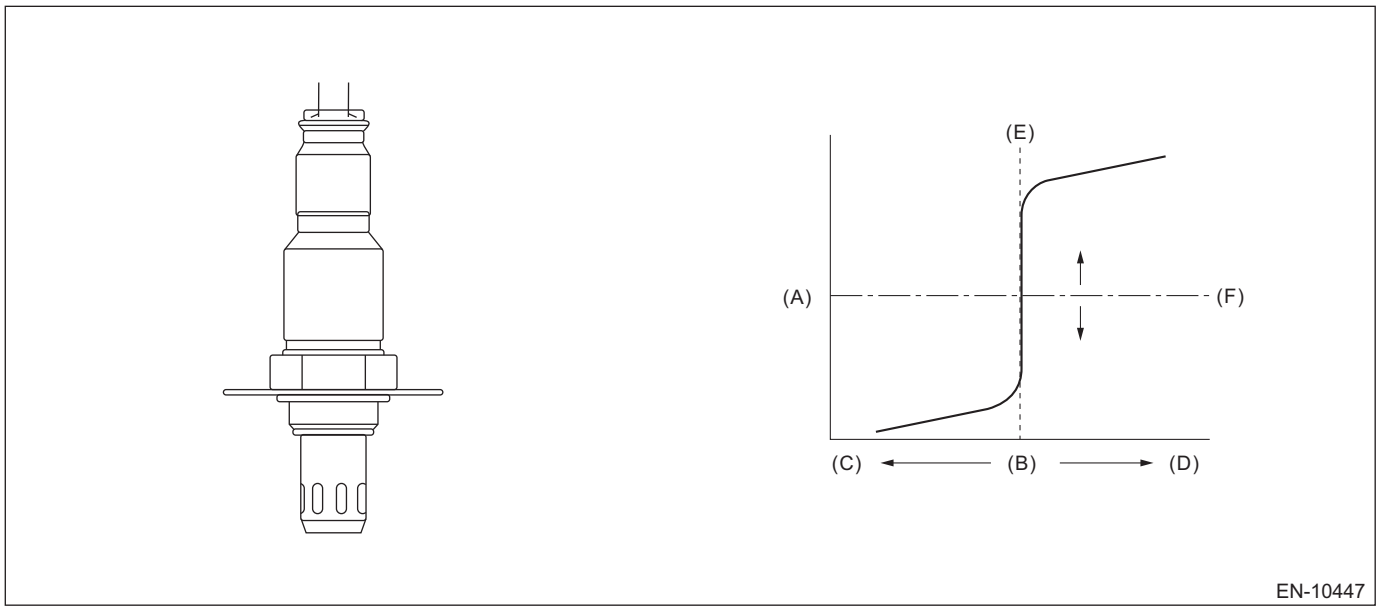
BB:DTC P013E O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(w/o STI)(diag)-328, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for rich → lean.
After the deceleration fuel cut has started, detect the trouble by calculating the time when the rear oxygen sensor output decreases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

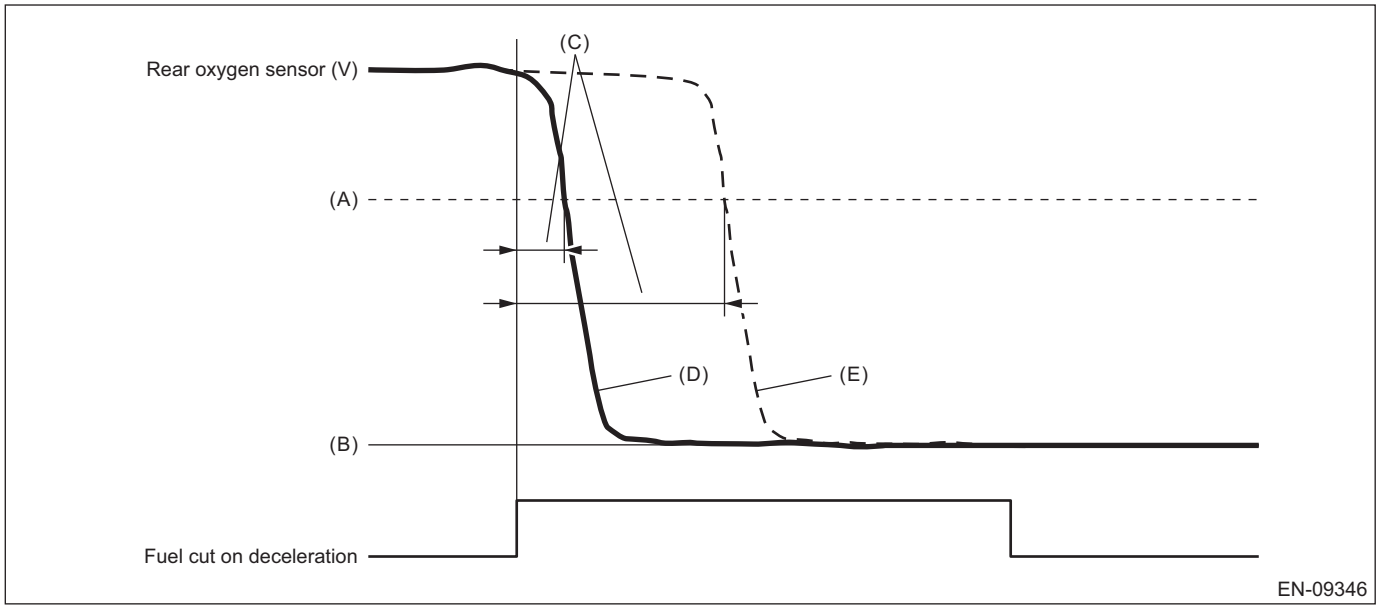
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor voltage when fuel cut starts	> 0.55 V
(Time of fuel shut-off operation Fuel shut-off function after the experience above)	> 5 s Not in operation
Estimated temperature of the rear oxygen sensor element	> 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform diagnosis once during deceleration fuel cut from a constant and high speed driving, when rear oxygen sensor is warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the beginning of the fuel cut to the beginning of the rear oxygen sensor voltage starting to drop.



(A) 0.5 V
(B) 0 V
(C) Diagnostic parameter
(D) Normal
(E) Malfunction

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Time when rear oxygen sensor voltage changed to 0.5 V after the fuel cut started	> 4000 ms

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

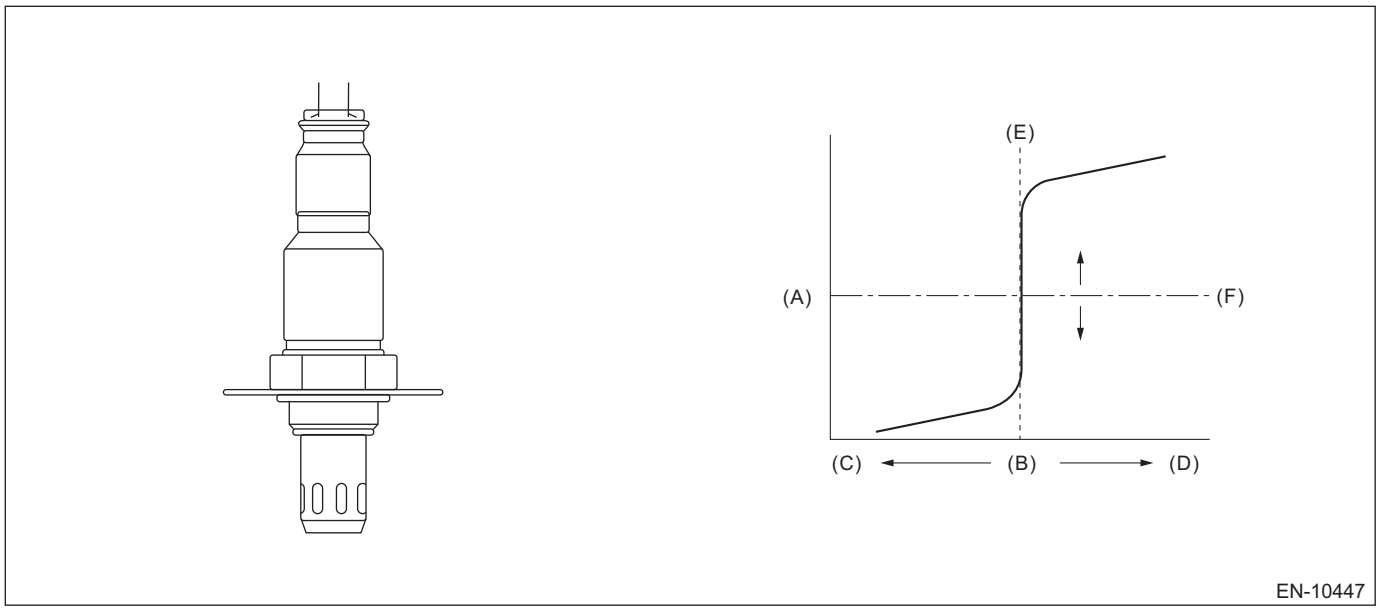
BC:DTC P013F O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 2

NOTE:
For the diagnostic procedure, refer to DTC P013A. <Ref. to EN(w/o STI)(diag)-328, DTC P013A O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the delayed response of rear oxygen sensor output for lean → rich.
After the deceleration fuel cut has completed, detect the trouble by calculating the time when the rear oxygen sensor output increases to the predetermined voltages.
Judge as NG when the response time is larger than the threshold value.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

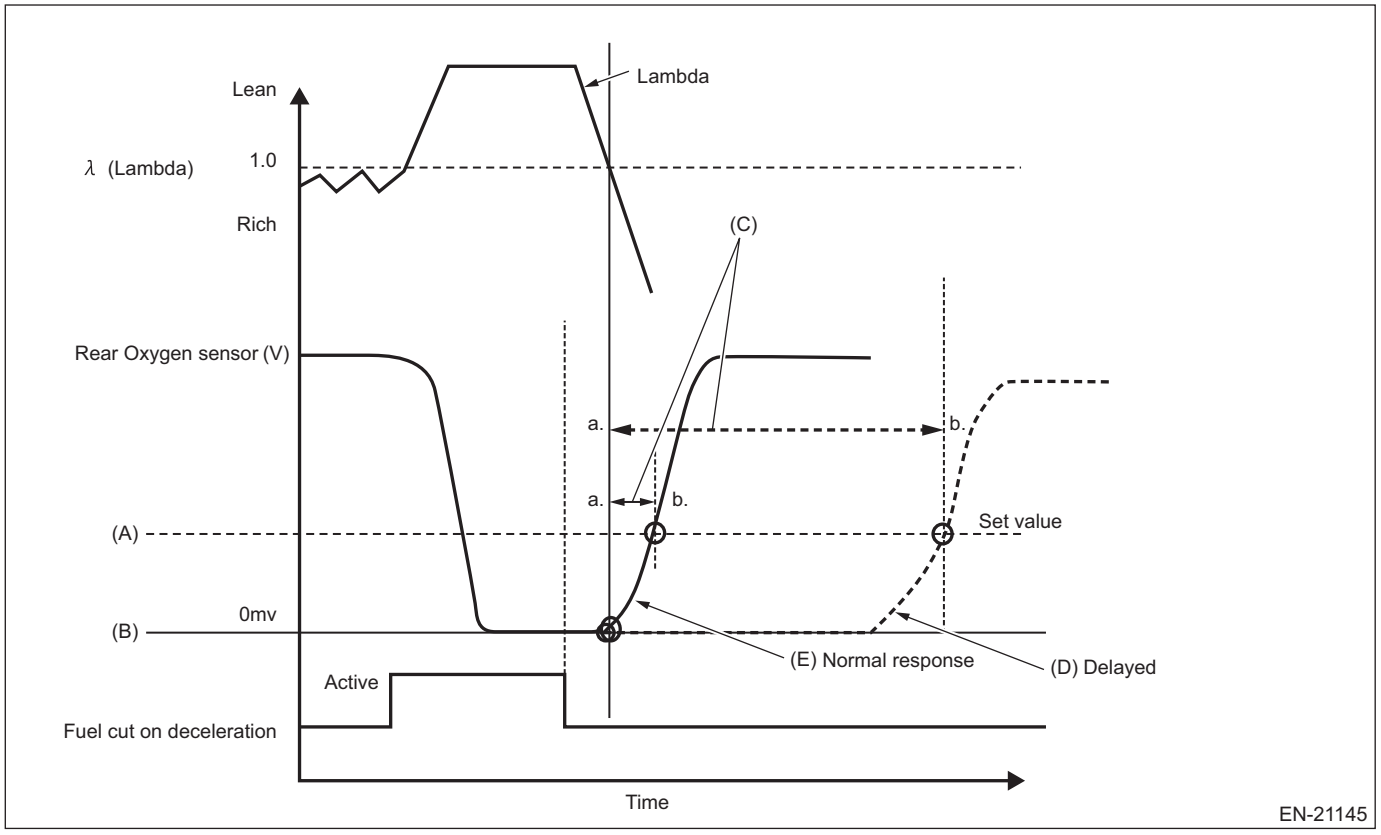
Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Rear oxygen sensor voltage when fuel cut has completed	< 0.15 V
(Time of fuel shut-off operation	> 3 s
Fuel shut-off function after the experience above)	Not in operation
Estimated temperature of the rear oxygen sensor element	> 450°C (842°F)
Compensation to rich	Rich
Amount of intake air	≥ 18 g/s (0.63 oz/s)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once when recovering from the deceleration fuel cut continued for more than predetermined time with the rear oxygen sensor warmed up sufficiently.

5. DIAGNOSTIC METHOD

Detect the trouble by calculating the time from the completion of the fuel cut to the beginning of the rear oxygen sensor voltage starting to rise.



(A) 0.3 V
(B) 0 V
(C) Diagnostic parameter
(D) Malfunction
(E) Normal

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage value of rear oxygen sensor	< 0.2 V
Elapsed time*	> Map

*Elapsed time: The time since the λ became less than 1 after the end of fuel cut

Map (CVT model)

Amount of intake air (g/s (oz/s))	18 (0.63)	20 (0.71)	40 (1.41)
Elapsed time (s)	4.1	4.1	4.1

Map (MT model)

Amount of intake air (g/s (oz/s))	15 (0.53)	18 (0.63)	20 (0.71)	30 (1.06)
Elapsed time (s)	5	4	4	4

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BD:DTC P0140 O2 SENSOR CIRCUIT NO ACTIVITY DETECTED BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

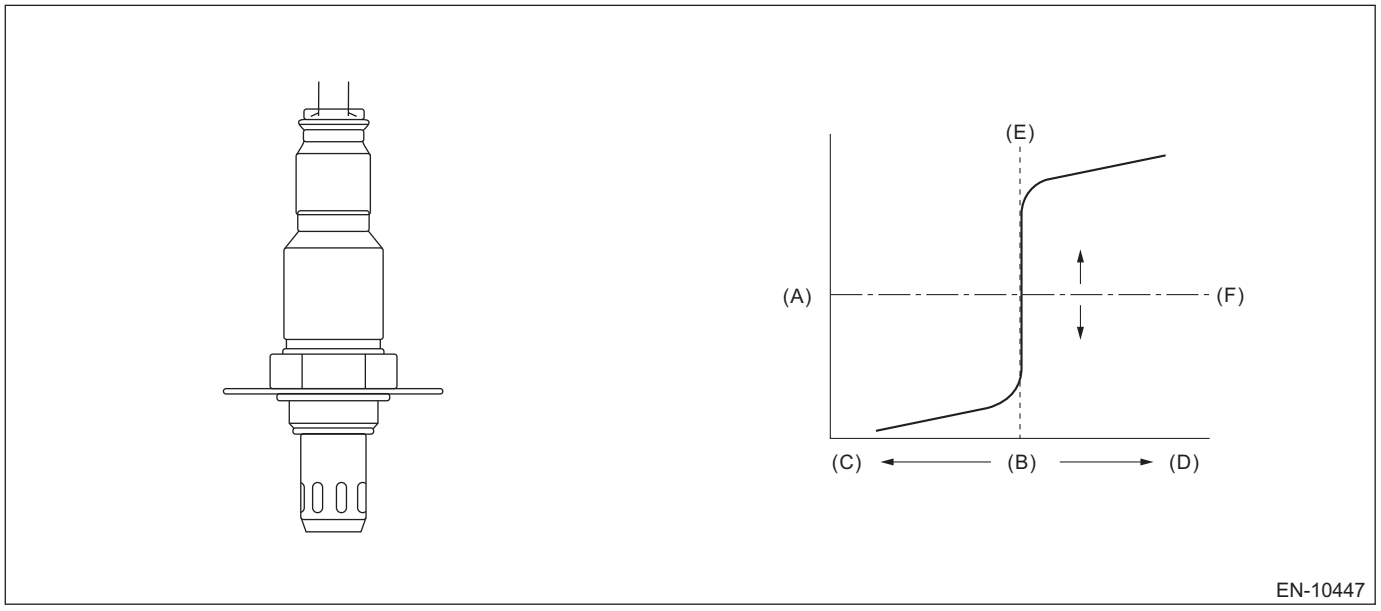
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» 0.490 V or more?	Go to step **6**.	Go to step **2**.
2	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 16 — Engine ground*** ***(E158) No. 42 — Engine ground***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 3 (+) — Engine ground (–):***	Is the voltage 1.8 V or more?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
6	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Loose part and improper installation between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect open circuit of the oxygen sensor.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
12 V battery system voltage	≥ 10.9 V
Estimated secondary oxygen sensor element temperature	≥ 450°C (842°F)
Integrated duty ratio of the secondary oxygen sensor heater operation from engine start	≥ 54400%
Secondary oxygen sensor offset signal	≥ 1.8 V and ≤ 2.2 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Malfunction Criteria	Threshold Value
Secondary oxygen sensor signal (B)	< 0.375 V

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BE:DTC P0141 O2 SENSOR HEATER CIRCUIT BANK 1 SENSOR 2

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

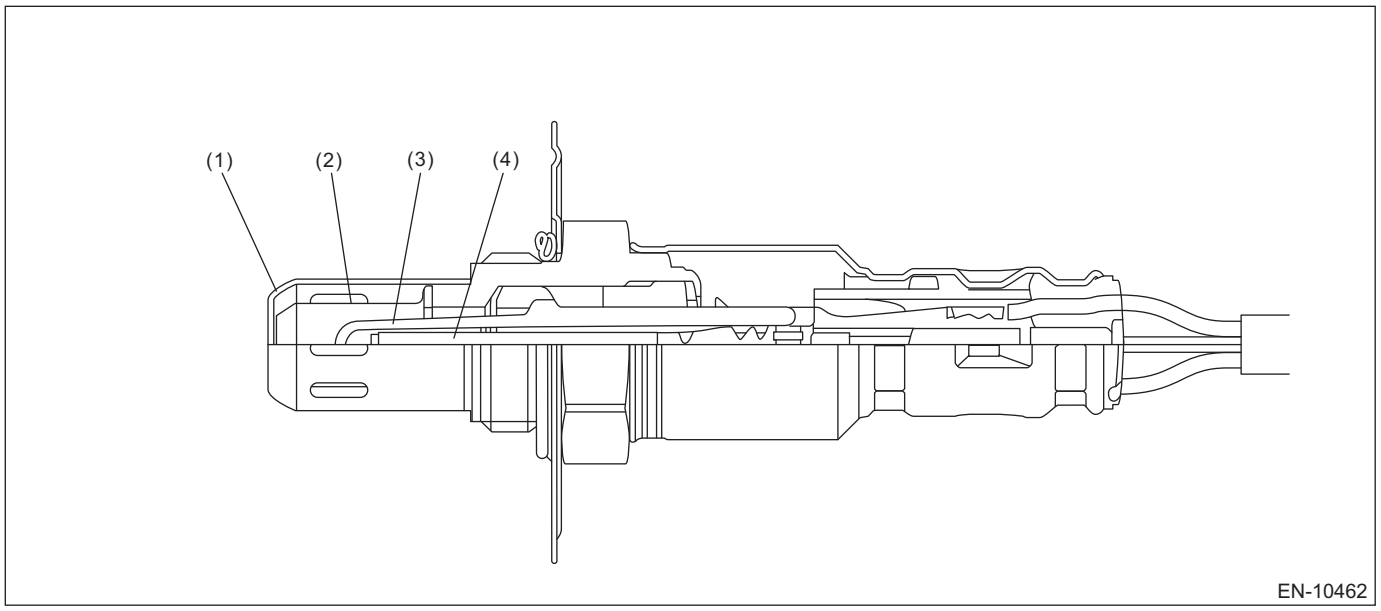
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from rear oxygen sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and rear oxygen sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E25) No. 2 — (E159) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
3	**CHECK GROUND CIRCUIT FOR ECM.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
4	**CHECK REAR OXYGEN SENSOR.** Measure the resistance between rear oxygen sensor connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 5.4 — 7.3 Ω?	Repair the poor contact of ECM connector.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of the rear oxygen sensor heater.
Judge as NG if it is determined that the rear oxygen sensor impedance is large by observing the engine conditions.

2. COMPONENT DESCRIPTION



(1) Element cover (outer)
(2) Element cover (inner)
(3) Sensor element
(4) Ceramic heater

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Rear oxygen sensor heater control duty	≥ 4%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Rear oxygen sensor heater current	< Value from Map

Map

Battery voltage (V)	10.9	12	13	14	15	16
Threshold Value (mA)	330	357.5	385	412.5	440	467.5

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BF:DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

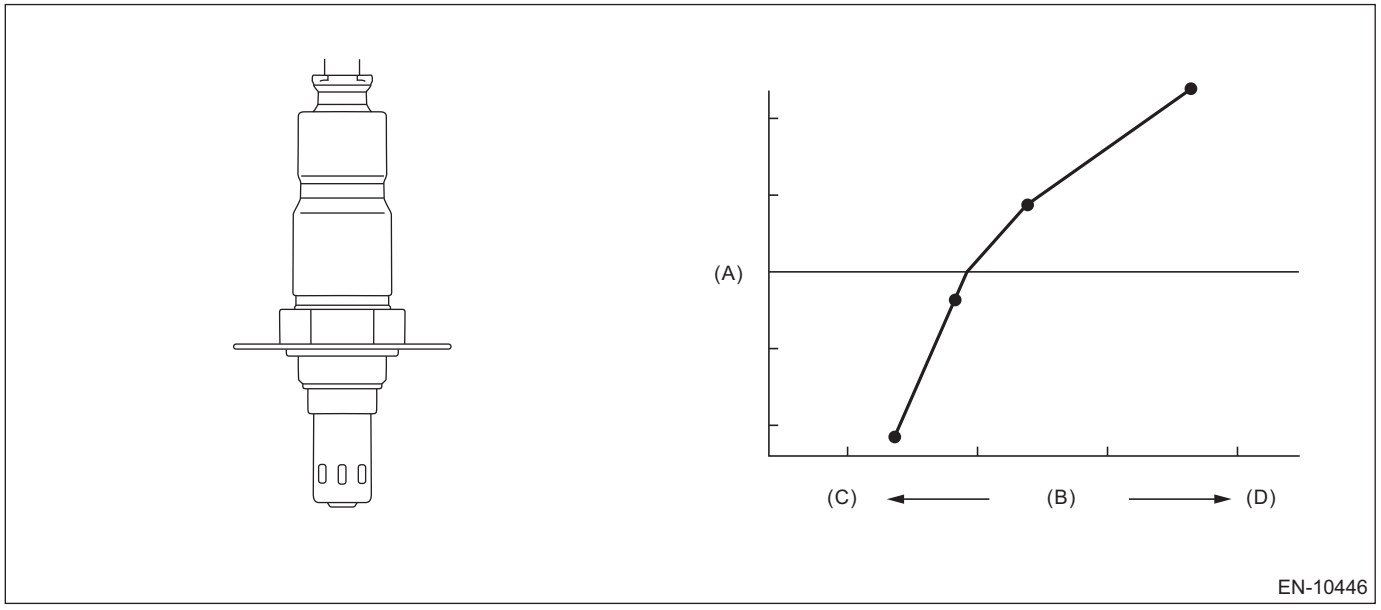
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK EXHAUST SYSTEM.** NOTE: Check the following items. • Loose installation of front portion of exhaust pipe onto cylinder heads • Loose connection between front exhaust pipe and front catalytic converter • Damage of exhaust pipe resulting in a hole	Is there any fault in exhaust system?	Repair the exhaust system.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.
For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Operation time of main feedback	≥ 5 s
Engine speed	≥ 1000 rpm

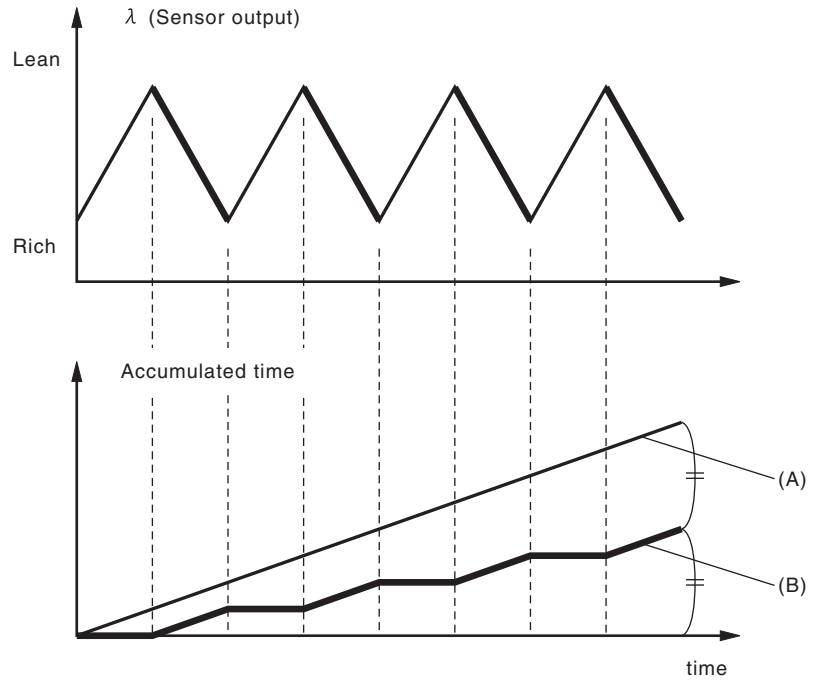
Secondary parameters	Execution condition
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Change amount of intake air	≥ 0.5 g/s (0.07 oz/s)

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction by checking “Cumulative value of time when λ changes from lean → rich” in comparison to “Time during which diagnosis is in progress”.



EN-09340

(A) Time during which diagnosis is in progress

(B) Cumulative value of time when λ changes from lean → rich

Judge as NG when the following conditions are established.

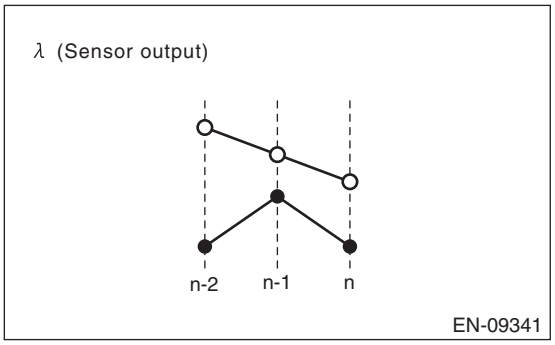
Judgment value

Malfunction Criteria	Threshold Value	DTC
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean	< 0.35 > 0.01 s	P014C
(Cumulative value of time when λ changes from lean → rich) / (Time during which diagnosis is in progress) and Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich	> 0.61 > 0.01 s	P014D

Time needed for diagnosis:
120 s (CVT model)
90 s (MT model)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. DIAGNOSTIC METHOD 2

Detect the malfunction by the cumulative value obtained from the amount of variation in λ change.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Cumulative value obtained from the amount of variation in λ change	< Value from Map	P014C and P014D

Map

Cumulative value obtained from the amount of variation in λ	0	3
Cumulative value obtained from the amount of variation in λ change	0	2.5

Time needed for diagnosis:
120 s (CVT model)
90 s (MT model)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BG:DTC P014D A/F / O2 SENSOR SLOW RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(w/o STI)(diag)-346, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P014C. <Ref. to EN(w/o STI)(diag)-346, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

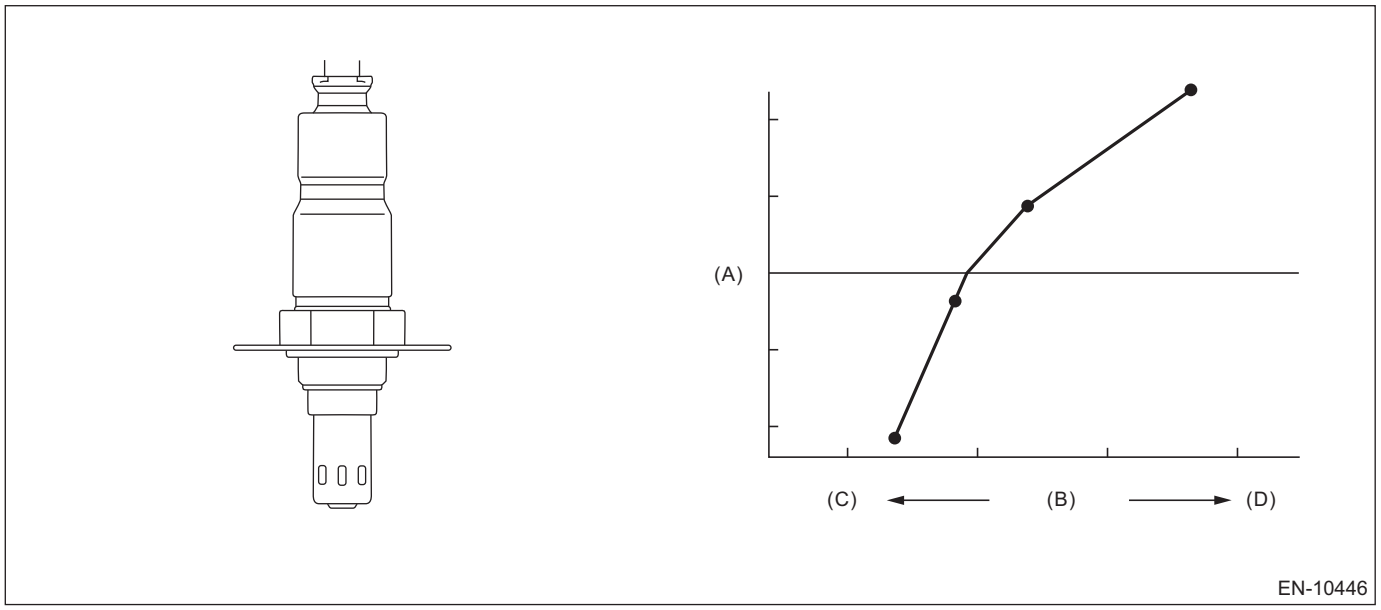
BH:DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(w/o STI)(diag)-346, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the slow response of front oxygen (A/F) sensor.
For diagnosis, detect the trouble by processing the λ waveform in normal driving without forcibly changing the target air fuel ratio.

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Diagnostic method 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Operation time of main feedback	≥ 5 s
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s)
Change amount of intake air	≥ 0.5 g/s (0.07 oz/s)

Diagnostic method 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Engine speed	≥ 1000 rpm
Amount of intake air	≥ 20 g/s (0.71 oz/s) and < 100 g/s (3.5 oz/s)
Change amount of intake air	≥ 0.5 g/s (0.02 oz/s)

Diagnosis method 3 (MT model)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Diagnosis method 3 (MT model)

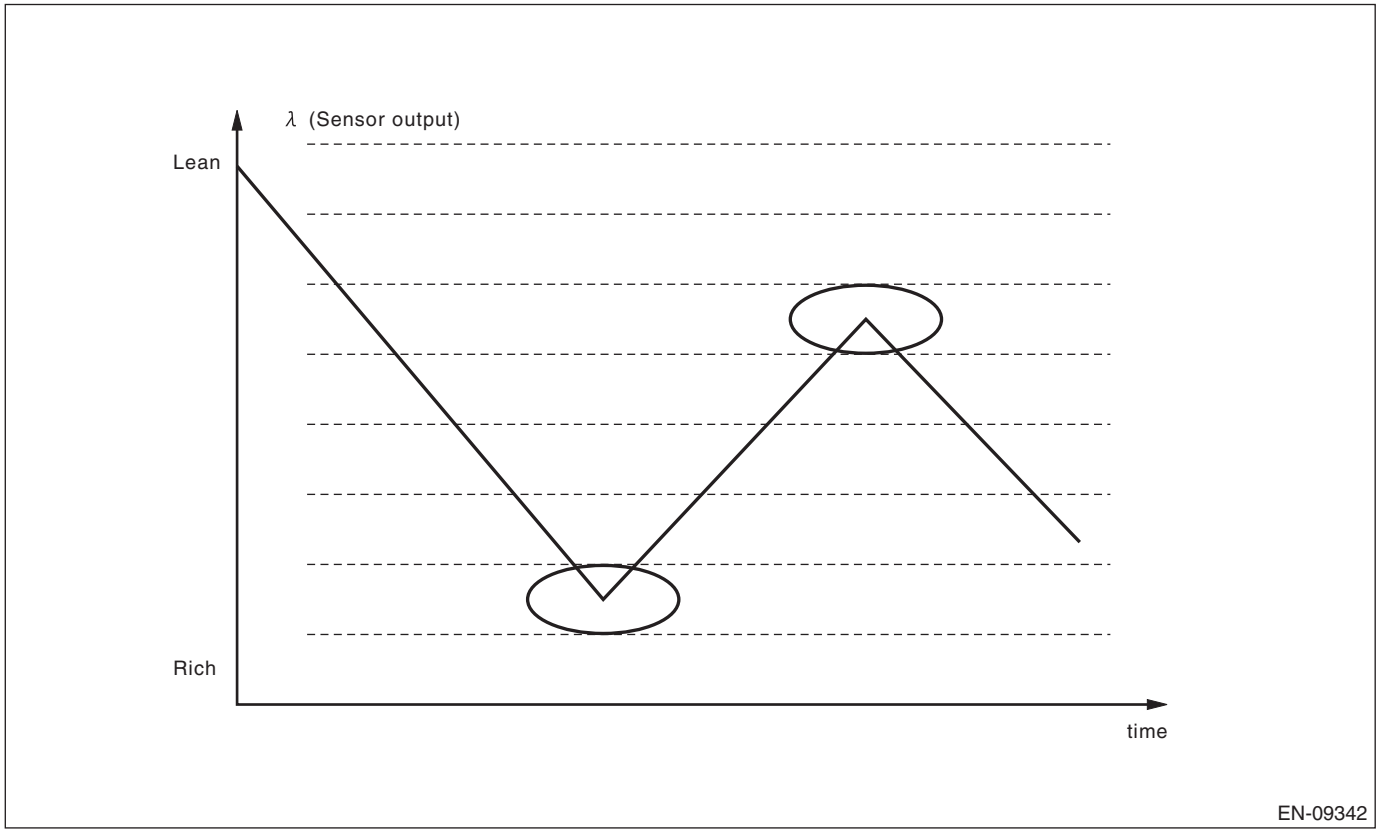
Secondary parameters	Execution condition
Barometric pressure	> 75 kPa (562.6 mmHg, 22.2 inHg)
Main feedback	In operation
Vehicle speed	> 40 km/h (24.9 MPH)
Engine speed	≥ 1000 rpm and < 4000 rpm
Amount of intake air	≥ 10 g/s (0.35 oz/s) and < 40 g/s (1.4 oz/s)
Status of catalytic converter monitor	Not under diagnosis

4. GENERAL DRIVING CYCLE

Perform diagnosis only once in a city driving including normal acceleration and deceleration.

5. DIAGNOSTIC METHOD 1

Detect the malfunction depending on the average value of time necessary for λ to inverse the air fuel ratio from “Lean → Rich → Lean” to “Rich → Lean → Rich”.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Lean → Rich → Lean and Average value when λ is lean	> 500 ms > 600 ms	P015A

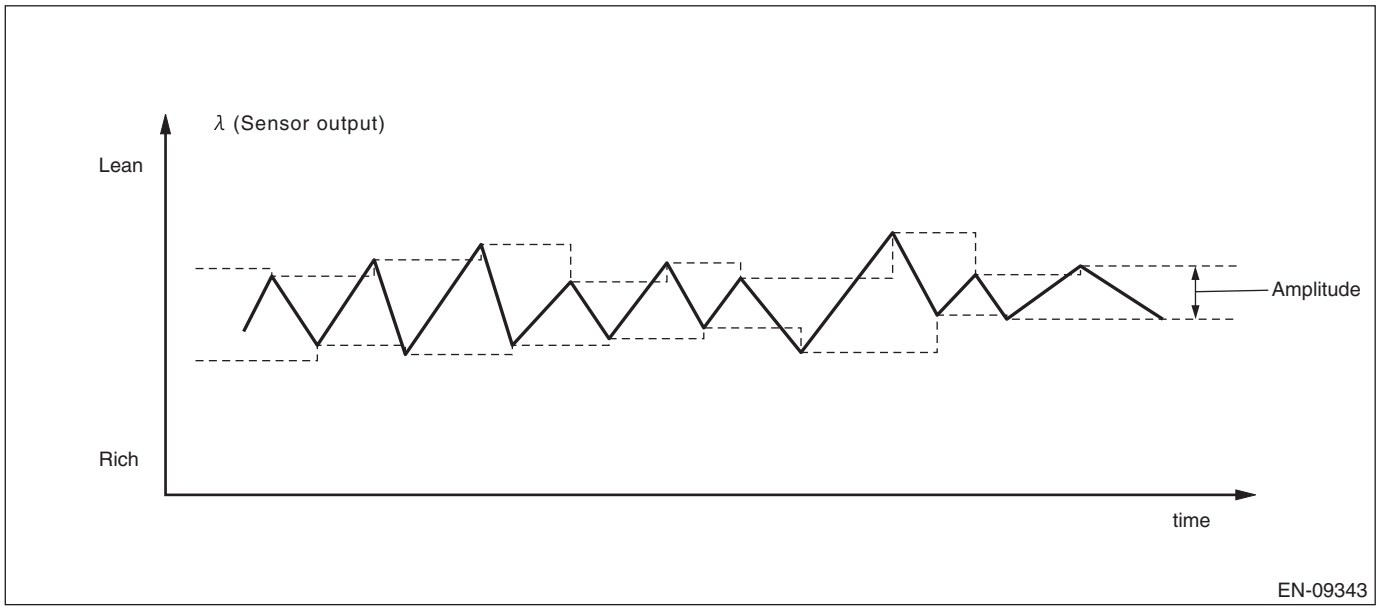
Judgment value

Malfunction Criteria	Threshold Value	DTC
Average value of time necessary for λ to inverse the air fuel ratio to Rich → Lean → Rich and Average value when λ is rich	> 500 ms > 600 ms (CVT model) > 140 ms (MT model)	P015B

Time needed for diagnosis:
120 s (CVT model)
90 s (MT model)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. DIAGNOSTIC METHOD 2

Detect the malfunction by calculating the average amplitude of λ.



Judge as NG when the following conditions are established.

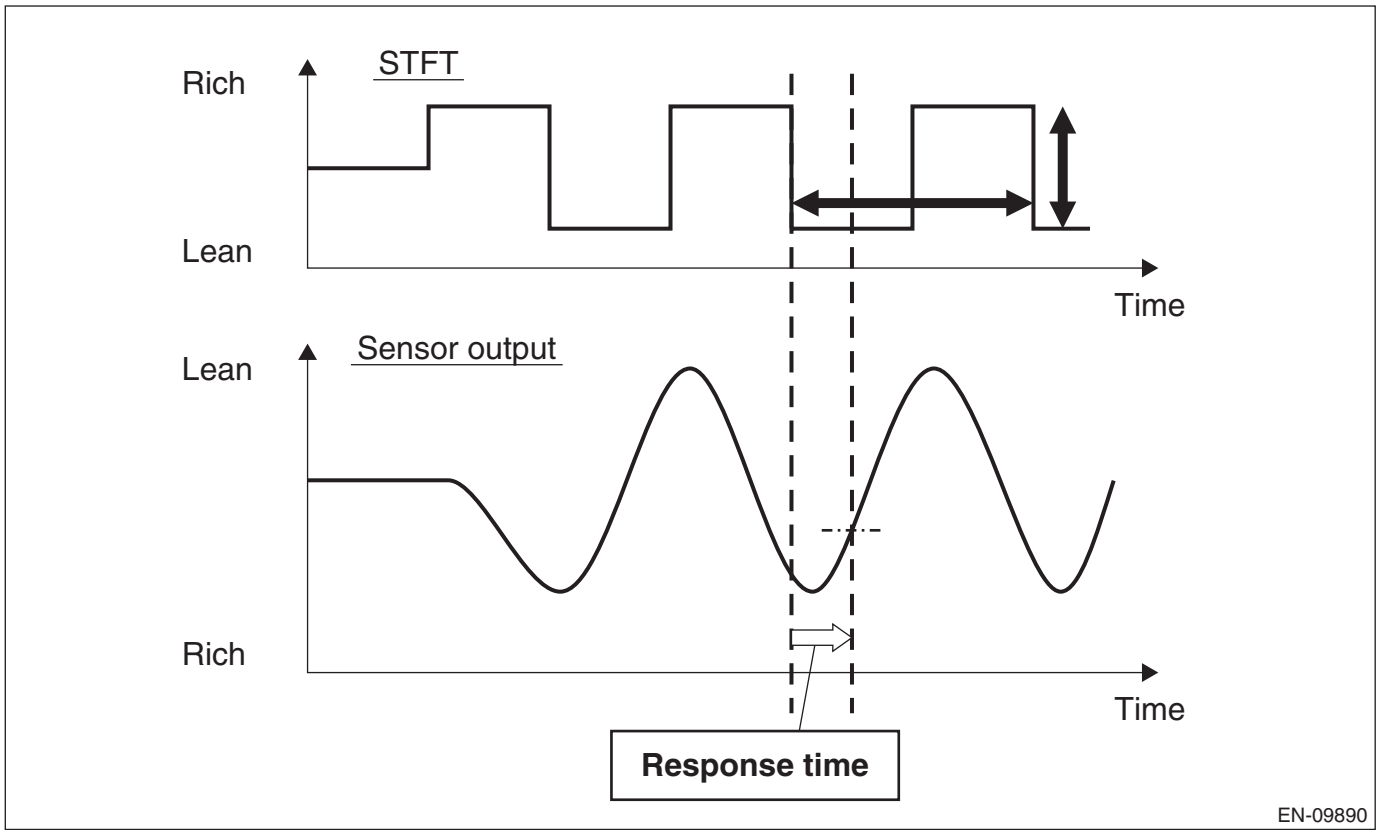
Judgment value

Malfunction Criteria	Threshold Value	DTC
Average value for λ amplitude	> 0.06 (CVT model) > 0.1 (MT model)	P015A and P015B

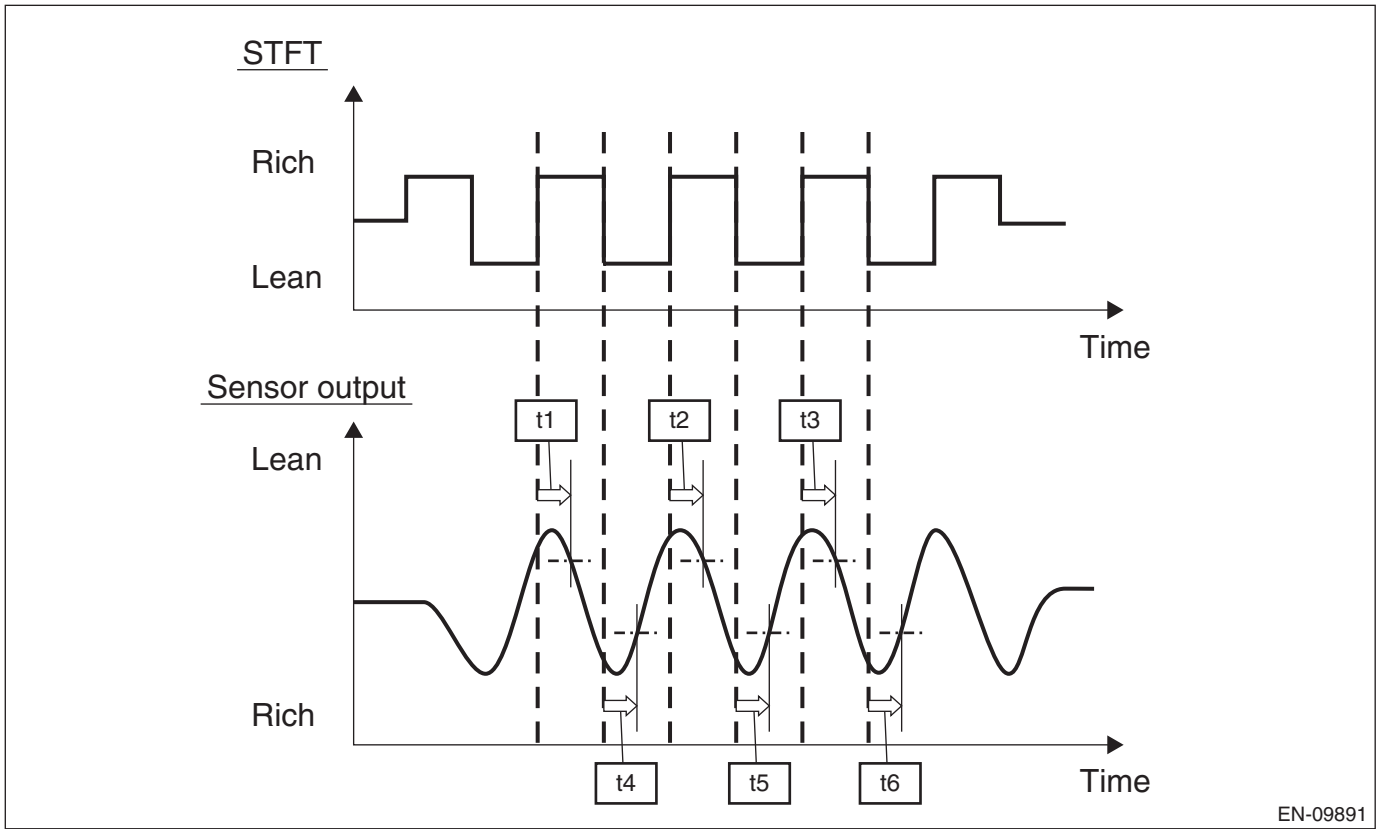
Time needed for diagnosis:
120 s (CVT model)
90 s (MT model)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

7. DIAGNOSIS METHOD 3 (MT MODEL ONLY)

Change STFT (A/F compensation value) by interruption, and measure the reaction time of λ value. When A/F sensor malfunctions, the reaction time takes longer than at normal condition. In this case, judge as abnormal.



Measure reaction time (t1, t2, t3) and reaction time (t4, t5, t6). Use the average value of the reaction time to obtain the diagnostic value.



Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
(t1 + t2 + t3)/3 and (t4 + t5 + t6)/3	> 0.99 s > 0.99 s	P015A and P015B

Time needed for diagnosis: 4.5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BI: DTC P015B A/F / O2 SENSOR DELAYED RESPONSE - LEAN TO RICH BANK 1 SENSOR 1

NOTE:
For the diagnostic procedure, refer to DTC P014C. <Ref. to EN(w/o STI)(diag)-346, DTC P014C A/F / O2 SENSOR SLOW RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P015A. <Ref. to EN(w/o STI)(diag)-348, DTC P015A A/F / O2 SENSOR DELAYED RESPONSE - RICH TO LEAN BANK 1 SENSOR 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BJ:DTC P0171 SYSTEM TOO LEAN BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0172. <Ref. to EN(w/o STI)(diag)-355, DTC P0172 SYSTEM TOO RICH BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.
Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during main feedback.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the criteria continues for 10 s × 3 times or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	> 1.35

Time needed for diagnosis: 10 s × 3 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BK:DTC P0172 SYSTEM TOO RICH BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***#1 (E158) No. 11 — (E158) No. 12:*** ***#2 (E158) No. 23 — (E158) No. 24:*** ***#3 (E158) No. 35 — (E158) No. 36:*** ***#4 (E158) No. 47 — (E158) No. 48:***	Is resistance 1.89 — 2.31 Ω at 20°C (68°F)?	Go to step **3**.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Disconnect the connector from fuel injector. 2) Measure the resistance of harness between ECM connector and defective fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Repair or replace the following items. • Poor contact of fuel injector connector • Defective fuel injector <Ref. to FU(w/o STI)-49, Fuel Injector.>	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Disconnect the connector from fuel injector. 2) Measure the resistance between ECM connector and engine ground on defective fuel injectors. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
5	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **6**.
6	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **8**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
8	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **9**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>
9	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/min)?	Go to step **10**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

	Step	Check	Yes	No
10	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature value from the value of «IAT Sensor #11». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **11**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
11	**CHECK FUEL INJECTOR.** Check fuel injector. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **12**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
12	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(w/o STI)-87, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(w/o STI)-86, PCV Valve.>	Go to step **13**.
13	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Go to step **14**.
14	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect fuel system malfunction by the amount of main feedback control.
Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Main feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

4. DIAGNOSTIC METHOD

Compare the diagnostic value with the threshold value, and if a condition meeting the criteria continues for 10 s × 3 times or more, judge that there is a fault in the fuel system.

Judgment value

Malfunction Criteria	Threshold Value
Offset amount of main feedback compensation	< Value from Map

Map

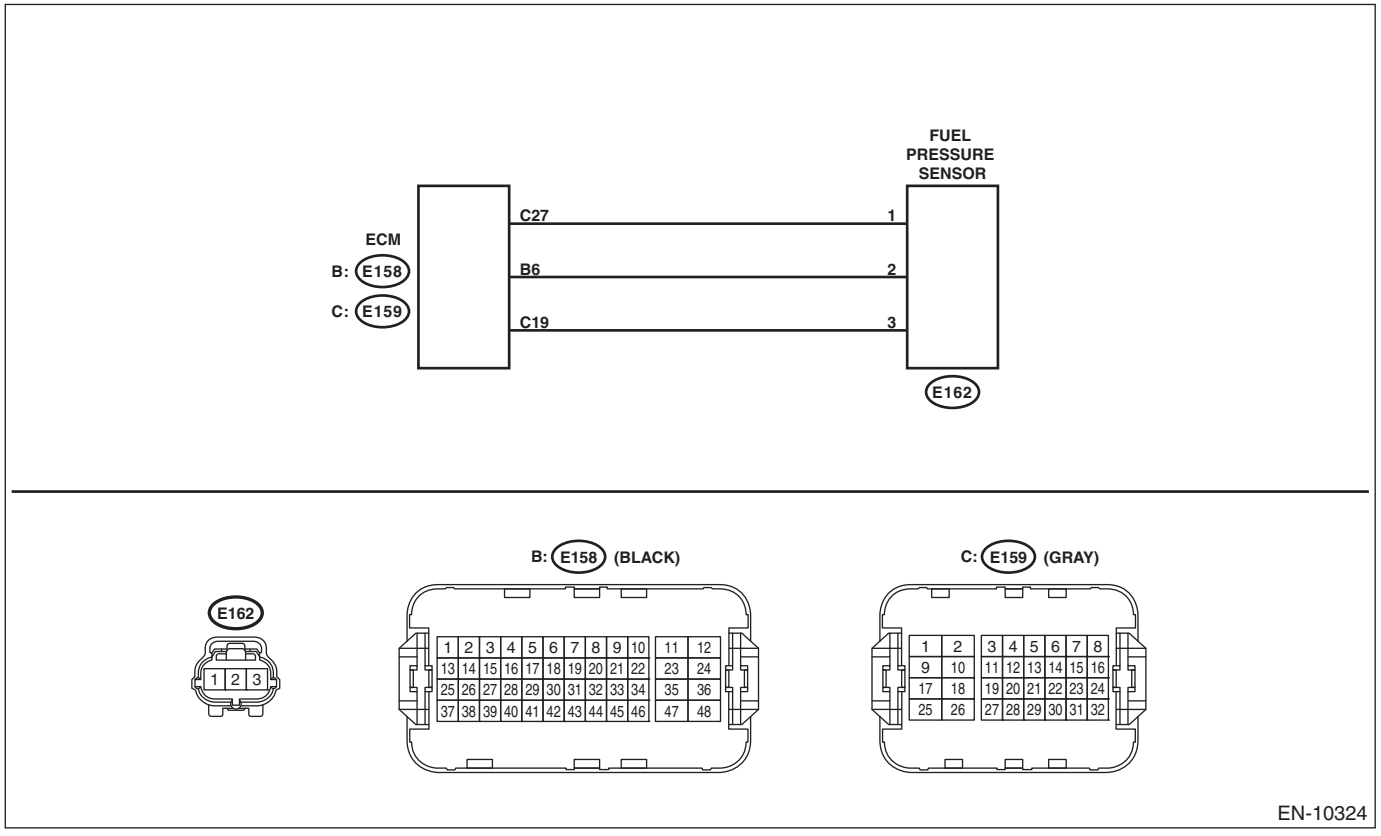
Warm-up increase compensation coefficient	0.00	0.10	0.20	0.30	0.39	0.50	0.60
Threshold Value	0.650	0.539	0.452	0.383	0.307	0.254	0.211

Time needed for diagnosis: 10 s × 3 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BL:DTC P0191 FUEL RAIL PRESSURE SENSOR CIRCUIT RANGE/PERFORMANCE BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK FUEL PRESSURE SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the fuel pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel pressure sensor and engine ground. ***Connector & terminal*** ***(E162) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **2**.	Go to step **4**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the fuel pressure sensor. 4) Measure the resistance of harness between ECM connector and fuel pressure sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E162) No. 1:*** ***(E158) No. 6 — (E162) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.
3	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 6 (+) — Engine ground:*** ***(E159) No. 27 (+) — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>	Repair the ground short circuit of harness between ECM connector and fuel pressure sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and fuel pressure sensor connector. ***Connector & terminal*** ***(E159) No. 19 — (E162) No. 3:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 19 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the ground short circuit of harness between ECM connector and fuel pressure sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the offset malfunction of the fuel pressure sensor.
Judge as NG when the difference of the relative pressure between the fuel pressure and the barometric pressure is equal to or more than the judgment value when the predetermined conditions are met.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Integrated intake air mass during previous driving cycle	> 10000 g
Soak time	> 21600 s
Block heater detection	Complete
Block heater use (Refer to Definition List #4)	Not detected
Engine Coolant Temperature (ECT) continues dropping at each wake up *As defined by ECT at this wake up < ECT at last wake up	True*

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the engine starts after a certain period of soaking time.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

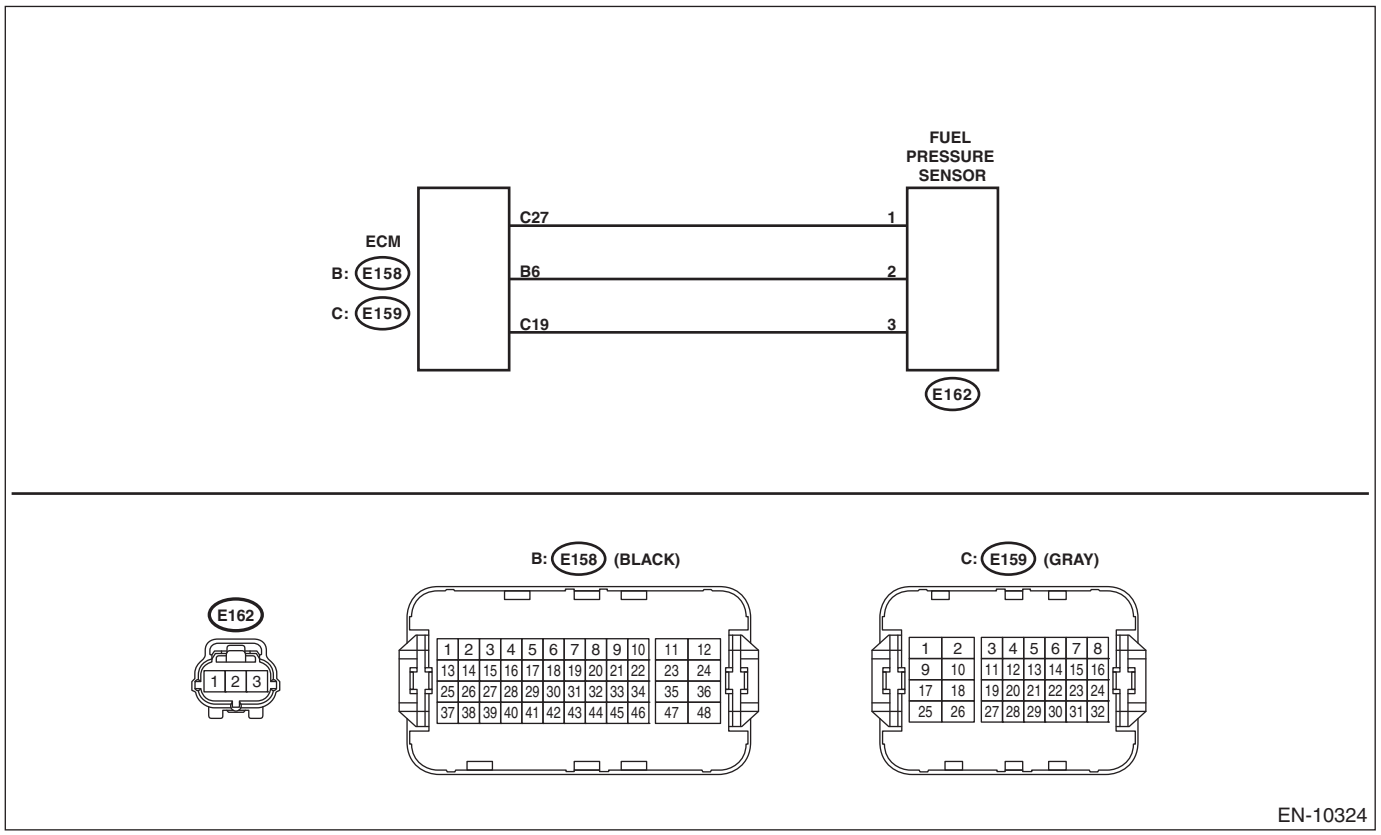
Malfunction Criteria	Threshold Value
Minimum HPFR pressure sensor output voltage (Fuel pressure)< 3.863 MPa	> 1.015 V
Minimum HPFR pressure sensor output voltage (Fuel pressure)< –2.011 MPa	> 0.232 V

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BM:DTC P0192 FUEL RAIL PRESSURE SENSOR CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

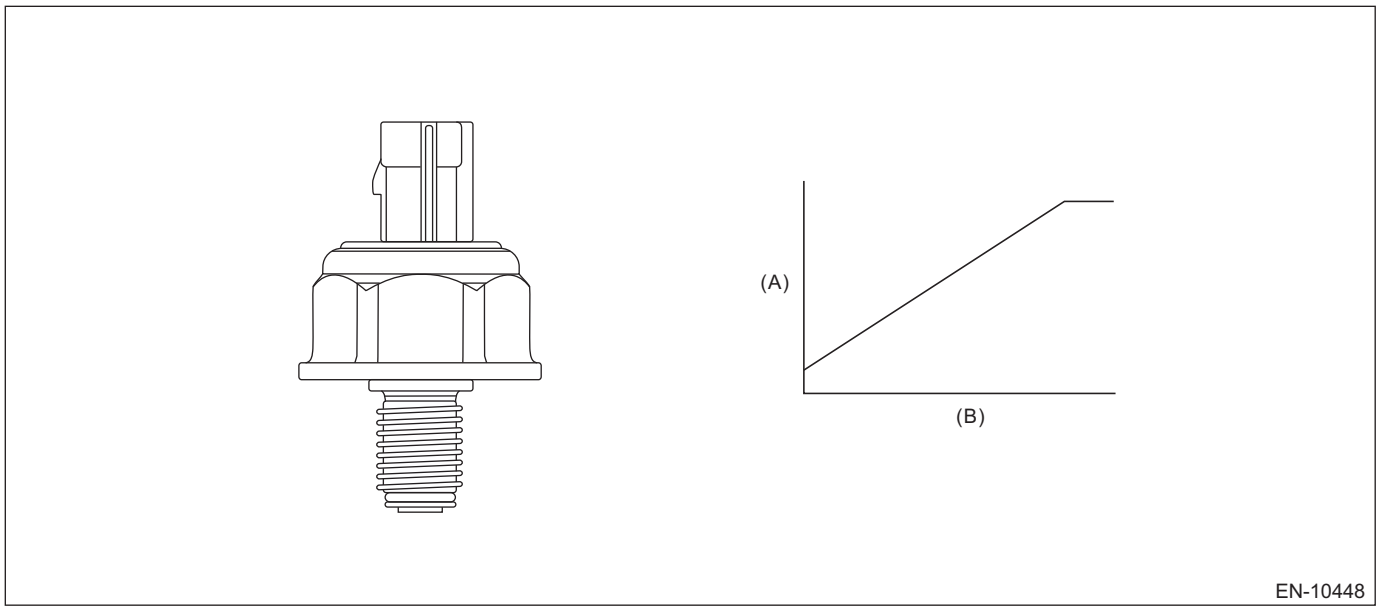


Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the fuel pressure sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 6 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>	Repair the ground short circuit of harness between ECM connector and fuel pressure sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Output voltage (B) Absolute pressure

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.23 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BN:DTC P0193 FUEL RAIL PRESSURE SENSOR CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

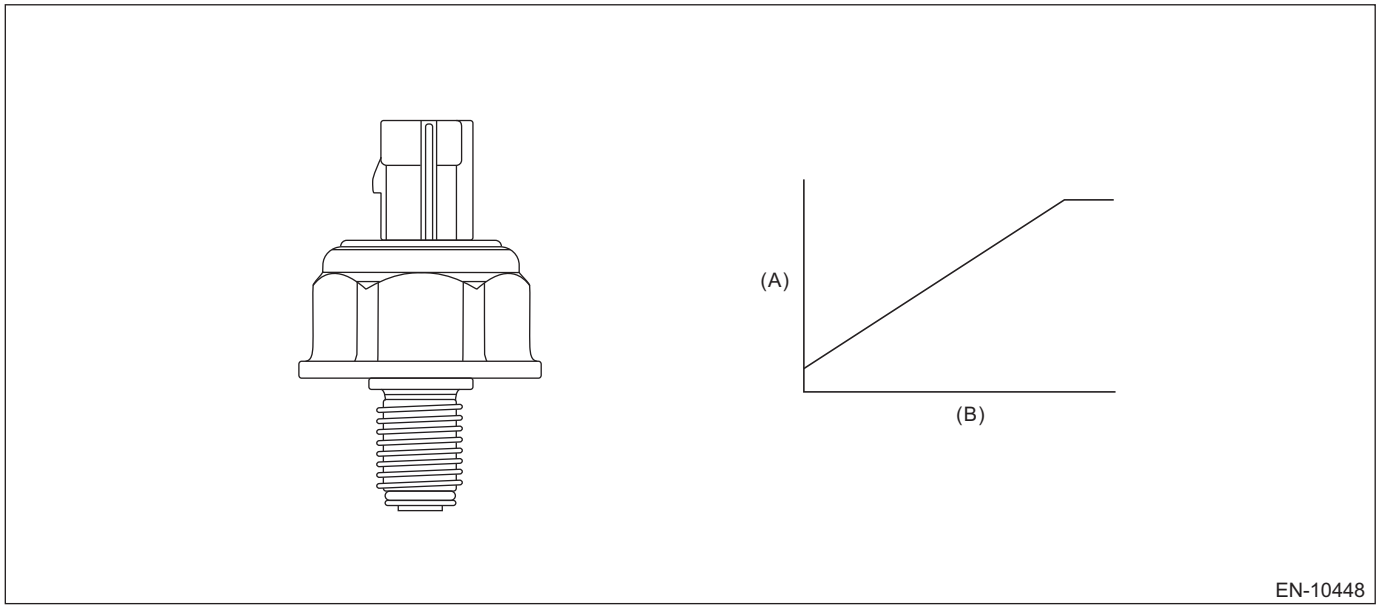
	Step	Check	Yes	No
1	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and fuel pressure sensor connector.	Is there poor contact of the ECM or fuel pressure sensor connector?	Repair the poor contact of the ECM or fuel pressure sensor connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the fuel pressure sensor. 4) Measure the resistance of harness between ECM connector and fuel pressure sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E162) No. 1:*** ***(E158) No. 6 — (E162) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.

Step		Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 6 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and fuel pressure sensor connector.	Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) Output voltage (B) Absolute pressure

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 3.25 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BO:DTC P0196 ENGINE OIL TEMPERATURE SENSOR "A" RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0196 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

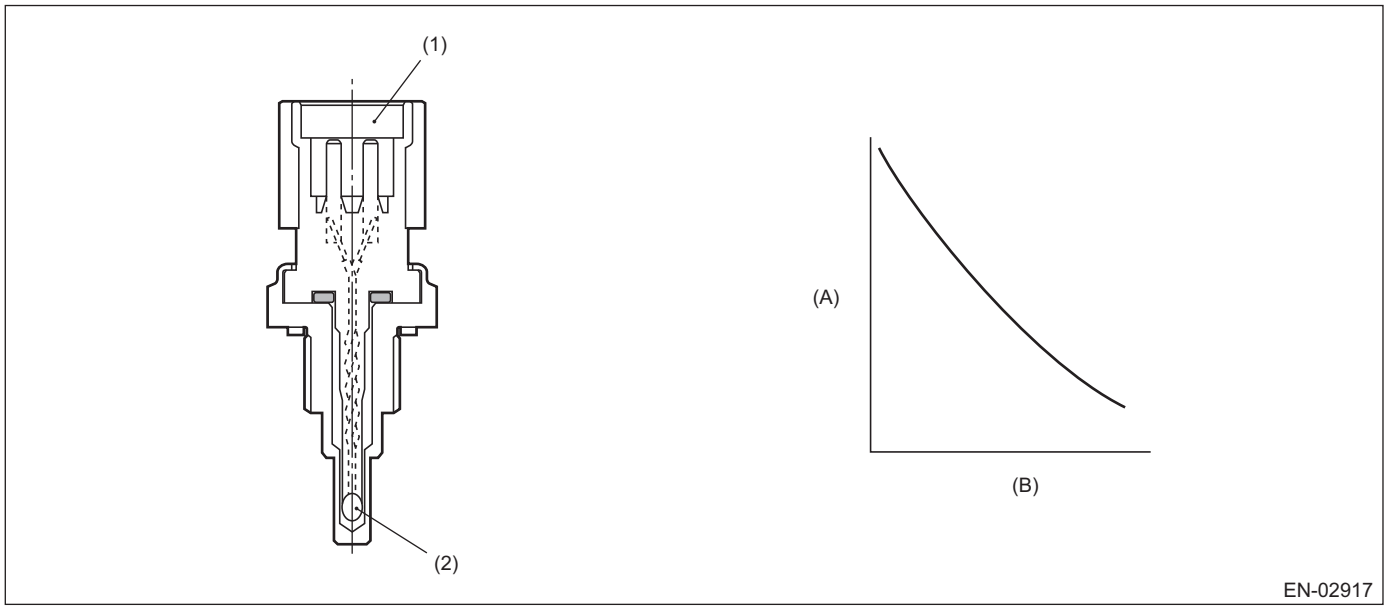
	Step	Check	Yes	No
2	**CHECK ENGINE OIL TEMPERATURE SENSOR.** 1) Disconnect the connectors from the engine oil temperature sensor. 2) Measure the resistance between engine oil temperature sensor terminals when the engine is cold and after warmed up. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance of engine oil temperature sensor different between when engine is cold and after warmed up?	Repair the poor contact of ECM connector.	Replace the engine oil temperature sensor. <Ref. to FU(w/o STI)-94, Engine Oil Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of the engine oil temperature sensor output properties. Using the following two diagnoses, judge as NG when either is NG.

- **Diagnosis 1 (correlation diagnosis):** After the engine starts after the specified period of soaking time has elapsed, diagnose by correlation between engine oil temperature sensor value, engine coolant temperature sensor value and intake air temperature sensor value. Judge as NG when the differences are both above the specified value by comparing between engine oil temperature and engine coolant temperature, engine oil temperature and intake air temperature.
- **Diagnosis 2 (function diagnosis):** Judge as NG when engine oil temperature does not rise to the specified value regardless of an engine running condition that clears certain conditions.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Soaking time	≥ 21600 s
Block heater judgment	Completed
Block heater operation	Not in operation

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 475 rpm
Engine oil temperature at engine starting	< 50°C (122°F)
Idling ratio	≤ 50%

4. GENERAL DRIVING CYCLE

- **Diagnosis 1:** Perform the diagnosis only once after the engine starts after a certain period of soaking time.
- **Diagnosis 2:** Perform the diagnosis only once after starting the engine from cold condition.

5. DIAGNOSTIC METHOD

Judge as NG when Diagnosis 1 or Diagnosis 2 becomes NG.
If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
|Oil temperature 21 sec. after engine start – Engine coolant temperature at engine start|	> 10°C (18°F)
|Oil temperature 21 sec. after engine start – Intake air temperature 21 sec. after engine start|	> Value of Map 1

Map 1

Ambient temperature (°C (°F))	–30 (–22)	30 (86)	45 (113)	60 (140)
|Engine oil temperature at engine start – Intake air temperature 21 sec. after engine start| (°C (°F))	10 (18)	10 (18)	22 (39.6)	22 (39.6)

Time needed for diagnosis: Less than 1 second

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Engine oil temperature	< 50°C (122°F)
Elapsed time after starting the engine	≥ Value of Map 2

Map 2

Intake air temperature at engine start (°C (°F))	–30 (–22)	–20 (–4)	–10 (14)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)
Elapsed time after starting the engine (s)	3,000	2,100	1,400	900	700	500	400	370

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BP:DTC P0197 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

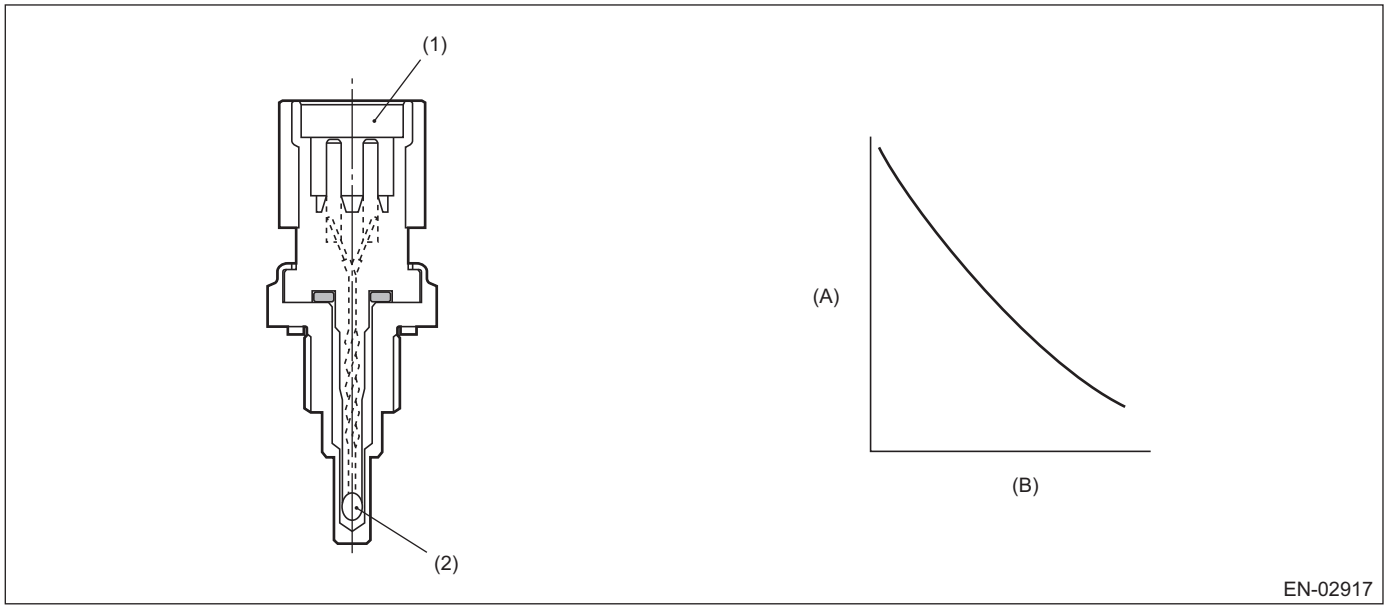
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Oil Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oil Temperature» 150°C (302°F) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine oil temperature sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the engine oil temperature sensor. <Ref. to FU(w/o STI)-94, Engine Oil Temperature Sensor.>	Repair the short circuit to ground in the harness between the ECM connector and engine oil temperature sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the oil temperature sensor.
Judge as NG when outside of the judgment value.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.18 V

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BQ:DTC P0198 ENGINE OIL TEMPERATURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Hard to start
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

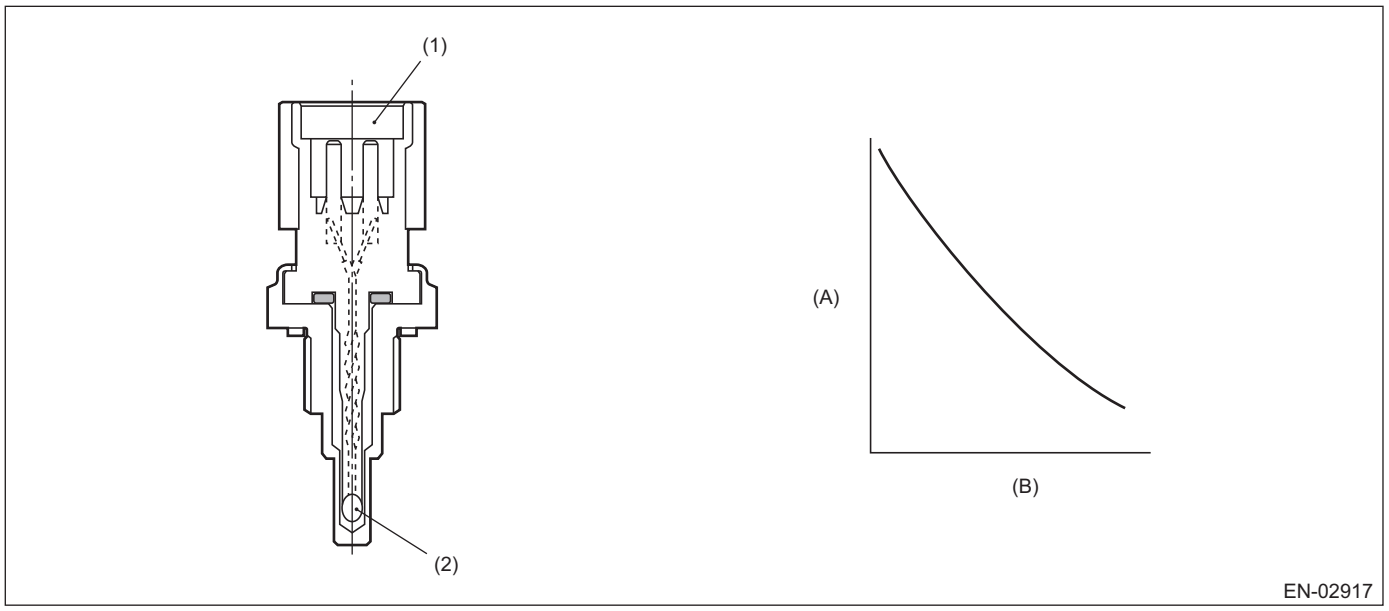
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Oil Temperature» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oil Temperature» –40°C (–40°F) or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FOR POOR CONTACT.** Check for poor contact between the ECM and engine oil temperature sensor connectors.	Is there poor contact of the ECM or engine oil temperature sensor connectors?	Repair the poor contact of ECM or engine oil temperature sensor connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine oil temperature sensor. 4) Measure the resistance of the harness between the ECM connector and engine oil temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E75) No. 1:*** ***(E158) No. 2 — (E75) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in the harness between ECM connector and engine oil temperature sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND ENGINE OIL TEMPERATURE SENSOR CONNECTOR.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and engine oil temperature sensor connector.	Replace the engine oil temperature sensor. <Ref. to FU(w/o STI)-94, Engine Oil Temperature Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the oil temperature sensor.
Judge as NG when outside of the judgment value.

2. COMPONENT DESCRIPTION



(A) Resistance value (kΩ)
(B) Temperature (°C (°F))
(1) Connector
(2) Thermistor element

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.71 V

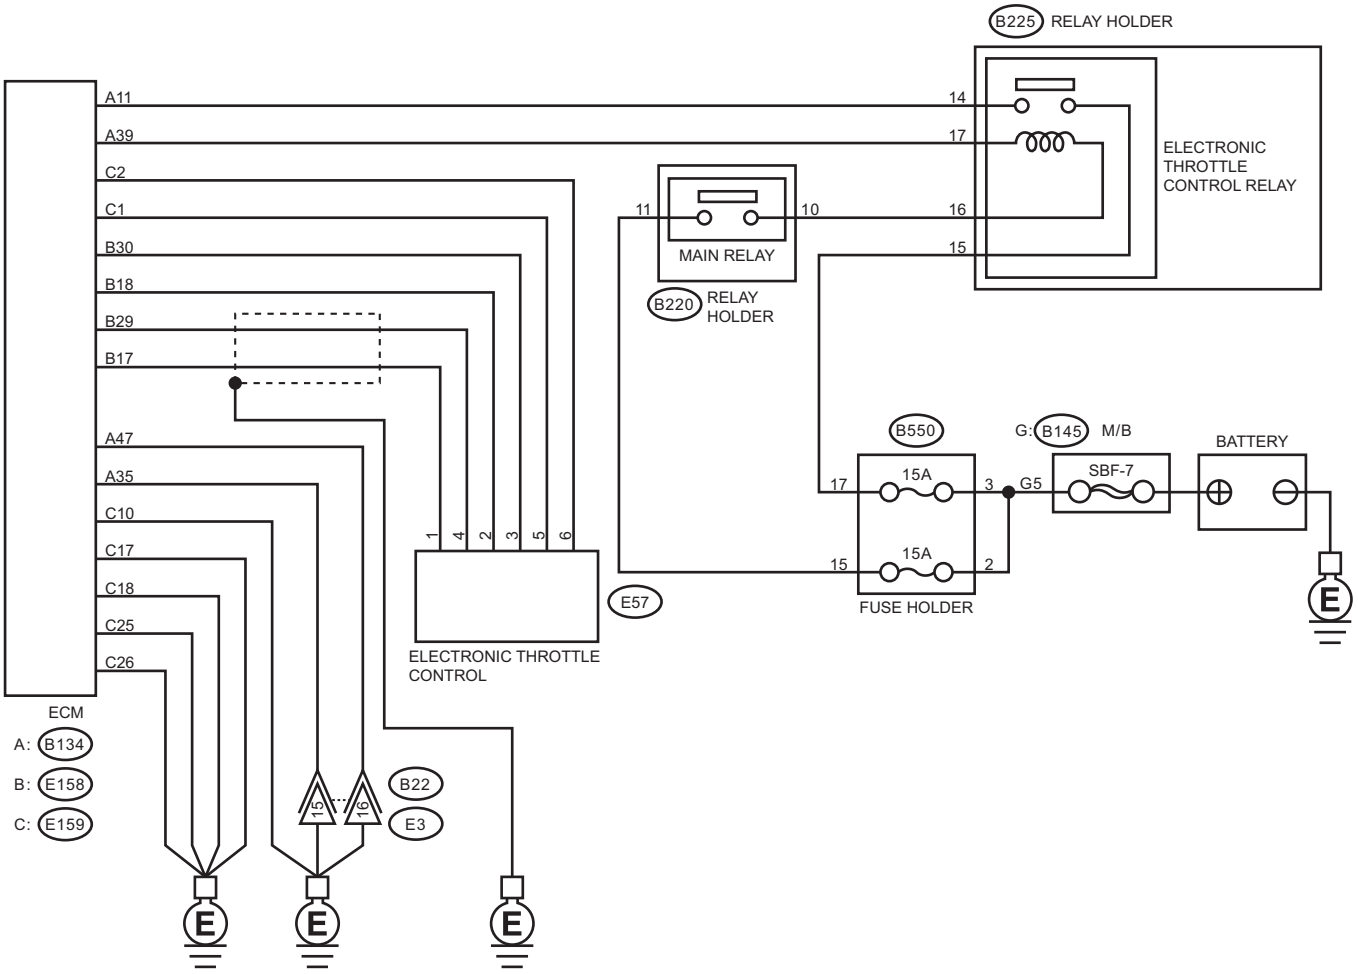
Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

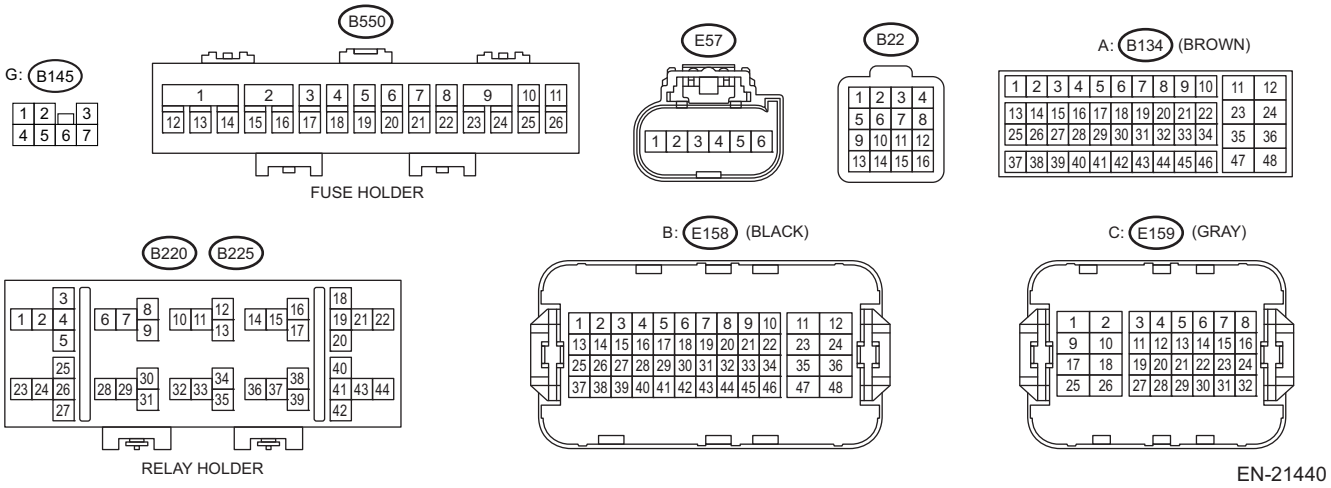
BR:DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





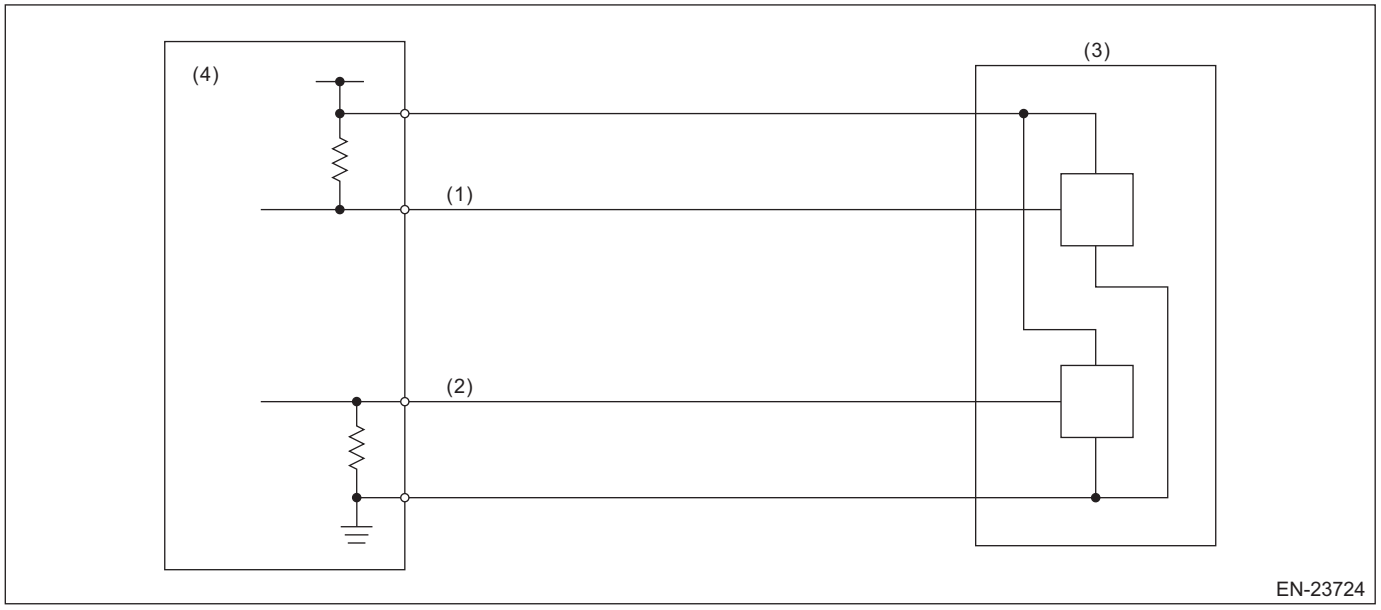
EN-21440

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 18 — Engine ground:*** ***(E158) No. 29 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 input voltage	< 0.37 V

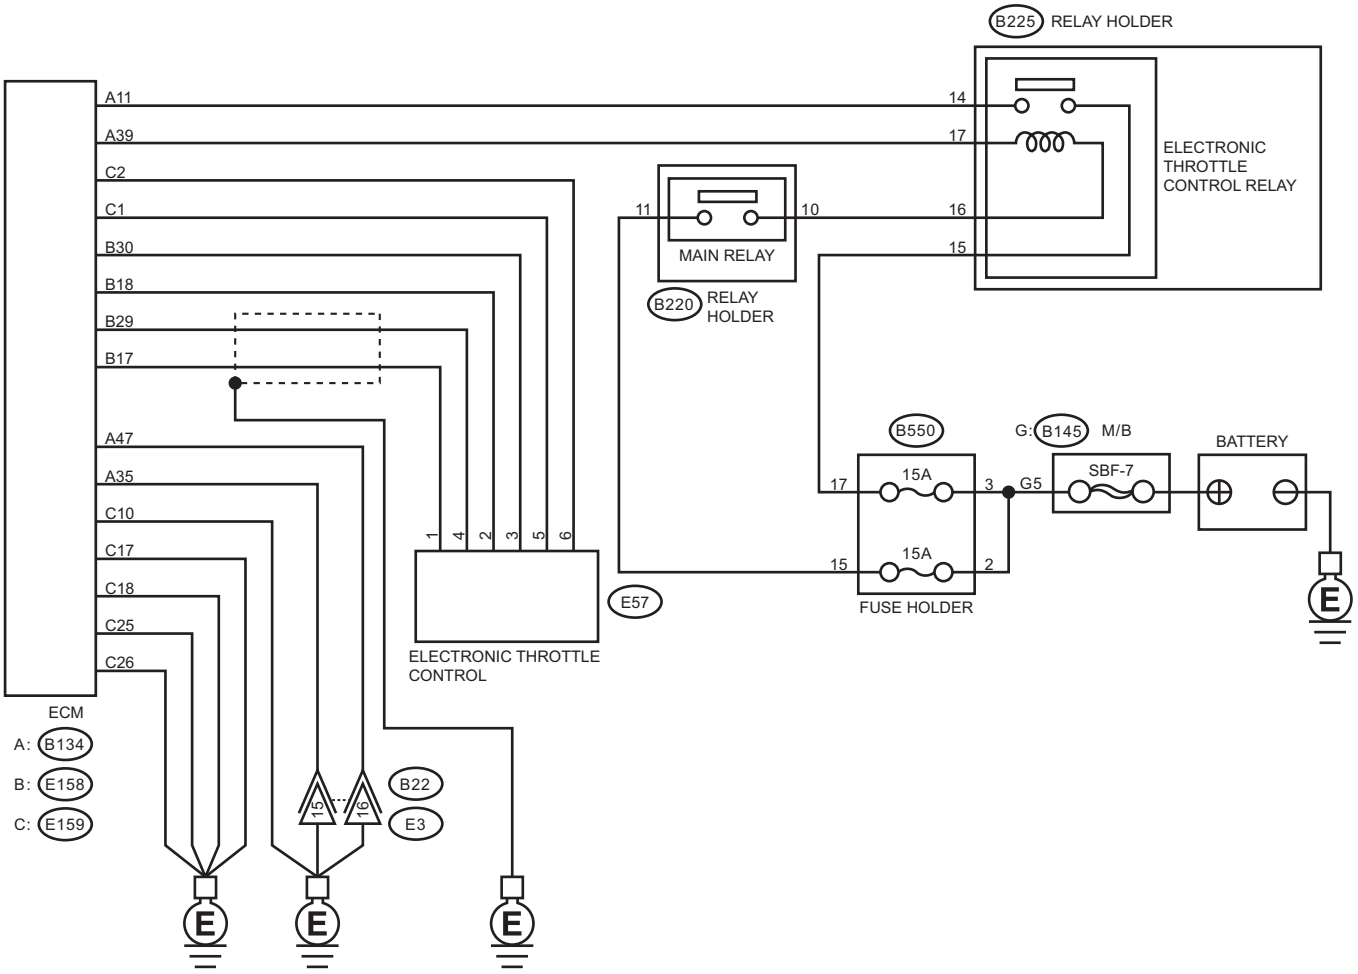
Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

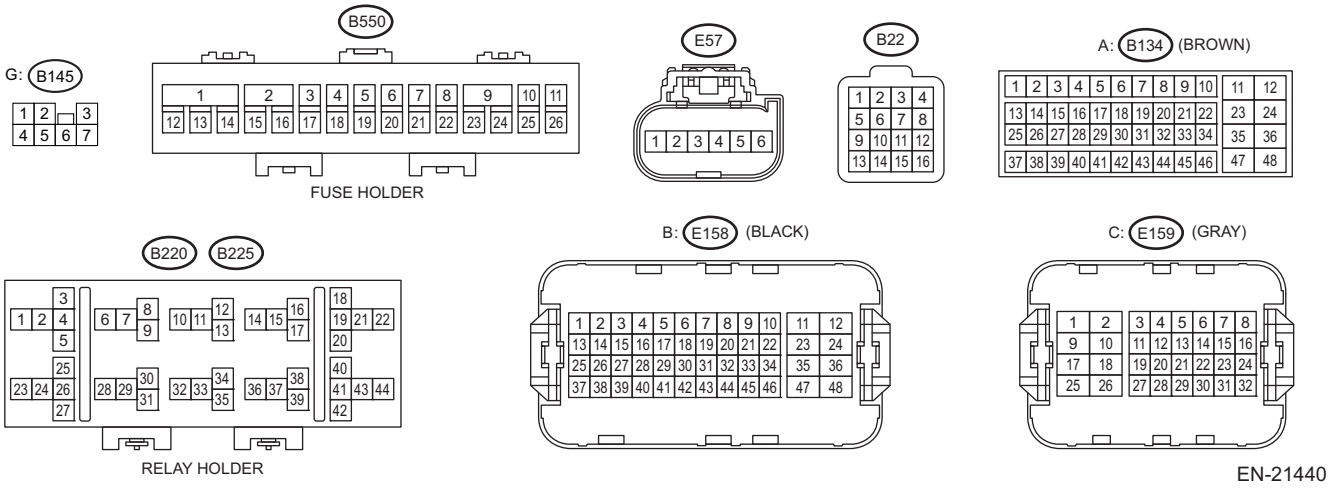
BS:DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





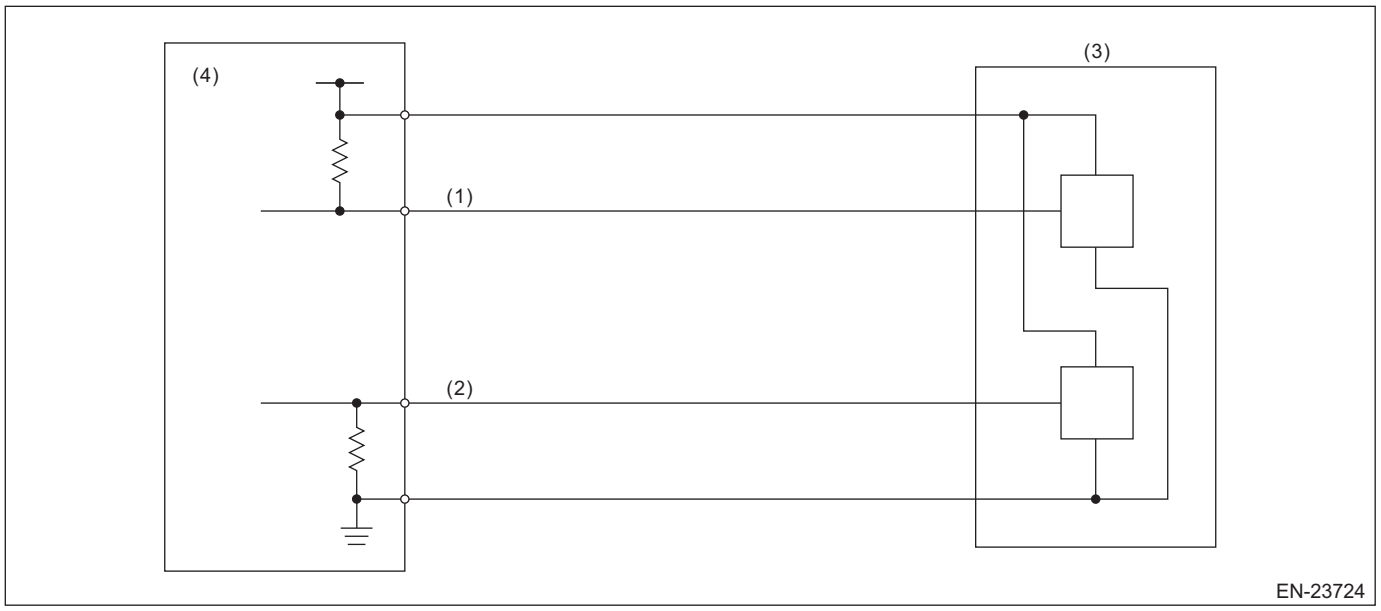
EN-21440

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 29 — (E57) No. 4:*** ***(E158) No. 30 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 18 — (E158) No. 29:***	Is the resistance 1 MΩ or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

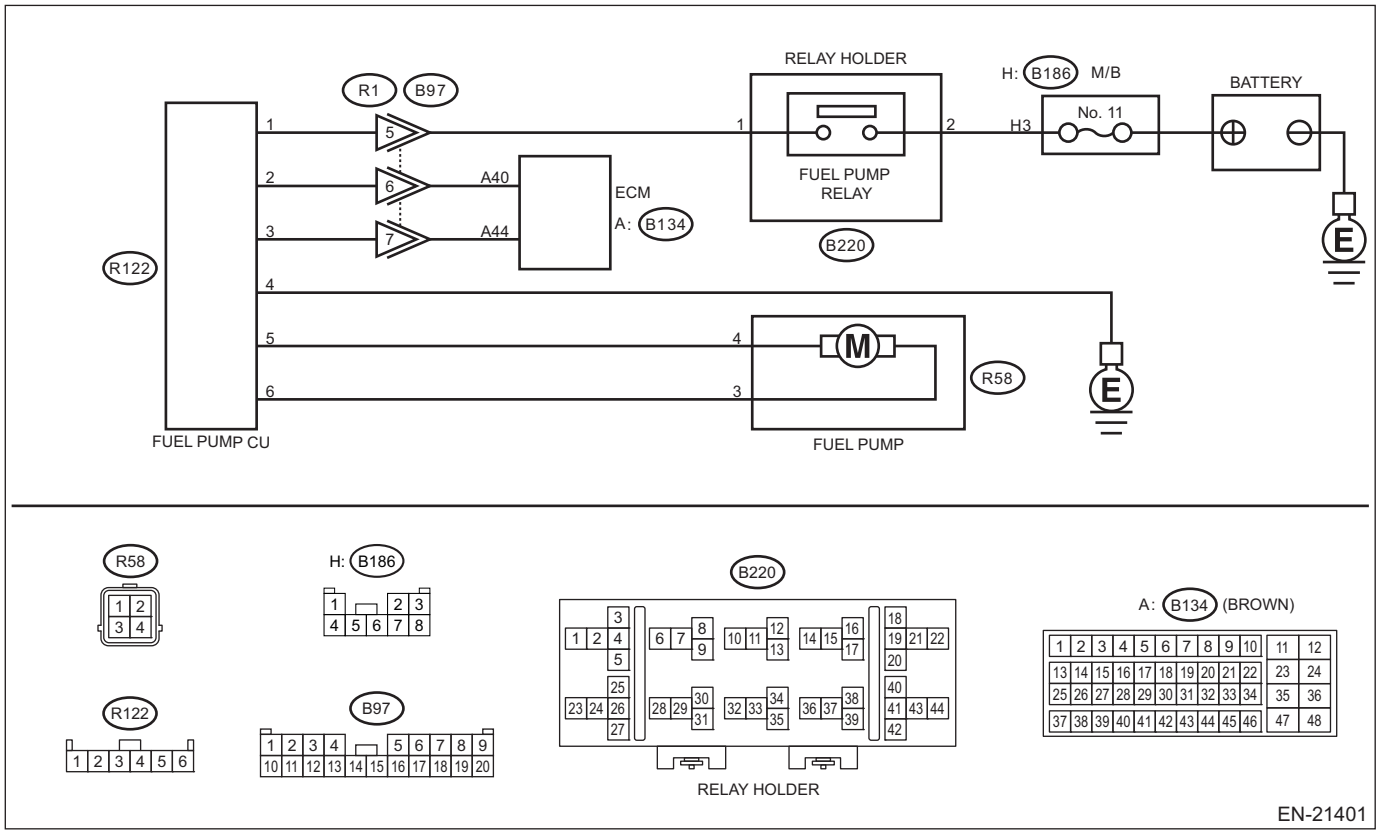
Malfunction Criteria	Threshold Value
Sensor 2 input voltage	> 4.82 V

Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BT:DTC P0230 FUEL PUMP PRIMARY CIRCUIT

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT TO FUEL PUMP CONTROL UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel pump control unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel pump control unit connector and engine ground. ***Connector & terminal*** ***(R122) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between fuel pump relay connector and fuel pump control unit connector • Poor contact of fuel pump control unit connector • Poor contact of fuel pump relay connector • Poor contact of coupling connector

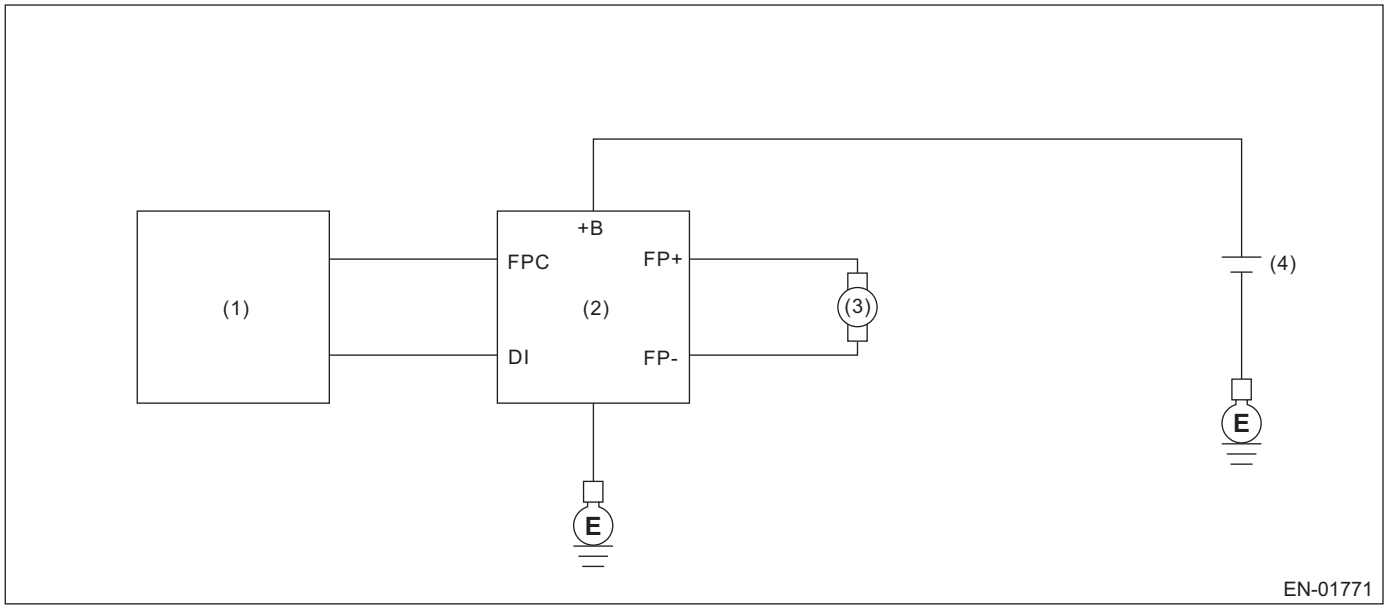
	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT OF FUEL PUMP CONTROL UNIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between fuel pump control unit connector and engine ground. ***Connector & terminal*** ***(R122) No. 4 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the open circuit between fuel pump control unit connector and engine ground.
3	**CHECK HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND FUEL PUMP CONNECTOR.** 1) Disconnect the connector from fuel pump. 2) Measure the resistance of harness between fuel pump control unit and fuel pump connector. ***Connector & terminal*** ***(R122) No. 5 — (R58) No. 4:*** ***(R122) No. 6 — (R58) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between fuel pump control unit connector and fuel pump connector.
4	**CHECK HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND FUEL PUMP CONNECTOR.** Measure the resistance between fuel pump control unit connector and engine ground. ***Connector & terminal*** ***(R122) No. 5 — Engine ground:*** ***(R122) No. 6 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between fuel pump control unit connector and fuel pump connector.
5	**CHECK HARNESS BETWEEN ECM AND FUEL PUMP CONTROL UNIT CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and fuel pump control unit connector. ***Connector & terminal*** ***(B134) No. 40 — (R122) No. 2:*** ***(B134) No. 44 — (R122) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and fuel pump control unit connector • Poor contact of coupling connector
6	**CHECK HARNESS BETWEEN ECM AND FUEL PUMP CONTROL UNIT CONNECTOR.** Measure the resistance between fuel pump control unit connector and engine ground. ***Connector & terminal*** ***(R122) No. 2 — Engine ground:*** ***(R122) No. 3 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit to ground in harness between ECM connector and fuel pump control unit connector.
7	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and fuel pump control unit connector.	Is there poor contact of ECM or fuel pump control unit connector?	Repair the poor contact of ECM or fuel pump control unit connector.	Go to step **8**.
8	**CHECK EXPERIENCE OF RUNNING OUT OF FUEL.** Check “Check List for Interview”.	Has the vehicle experienced running out of fuel?	Finish the diagnosis. NOTE: DTC may be recorded as a result of fuel pump idling while running out of fuel.	Replace the fuel pump control unit. <Ref. to FU(w/o STI)-138, Fuel Pump Control Unit.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel pump control unit.

Judge as NG when the NG signal is sent through a diagnostic line coming from the fuel pump control unit. Fuel pump control unit detects the open or short circuit malfunction for each line, and then sends NG signals if one of them is found NG.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel pump control unit
(3) Fuel pump
(4) Battery

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Fuel level	≥ 15%
Fuel pump controller control mode	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Fuel pump control unit output diagnosis signal	< 1.5 V

Time needed for diagnosis: 2520 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

BU:DTC P023F FUEL PUMP SECONDARY CIRCUIT/OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HIGH-PRESSURE FUEL PUMP.** Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>	Is the check result OK?	Go to step **2**.	Replace the high-pressure fuel pump. <Ref. to FU(w/o STI)-71, High Pressure Fuel Pump.>
2	**CHECK HARNESS BETWEEN ECM AND HIGH-PRESSURE FUEL PUMP CONNECTOR.** 1) Disconnect the connector from ECM. 2) Disconnect the connector from high-pressure fuel pump. 3) Measure the resistance of harness between ECM connector and high-pressure fuel pump connector. ***Connector & terminal*** ***(E158) No. 10 — (E160) No. 1:*** ***(E158) No. 22 — (E160) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in harness between ECM connector and high-pressure fuel pump connector.

Step		Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND HIGH-PRESSURE FUEL PUMP CONNECTOR.** Measure the resistance between high-pressure fuel pump connector and engine ground. ***Connector & terminal*** ***(E160) No. 1 — Engine ground:*** ***(E160) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and high-pressure fuel pump connector.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of high pressure fuel pump circuit function.
Judge as NG when ECM detects any malfunction in the diagnostic items listed below.

Diagnostic item	Malfunction Criteria
Power supply short	ECM low side terminal voltage of the high pressure fuel pump circuit is high.
Ground short	ECM low side terminal voltage of the high pressure fuel pump circuit is low.
Open circuit	High pressure fuel pump current is low.
Overcurrent	High pressure fuel pump current is high.
Short circuit	The time when the high pressure fuel pump current reaches the target current is short.

2. EXECUTION CONDITION

Diagnosis 1, 2

Secondary parameters	Execution condition
Battery voltage	≥ 9.4 V
Engine speed	> 0 rpm
Elapsed time after fuel pump current shutdown (Only power supply short diagnosis and ground short diagnosis)	≥ 3.15 ms

Diagnosis 3, 4, 5

Secondary parameters	Execution condition
Battery voltage	≥ 9.4 V
Engine speed	> 0 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1: Power supply short

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	≥ 4.1 V

Diagnosis 2: Ground short

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	≤ 0.8 V

Diagnosis 3: Open circuit

Judgment value

Malfunction Criteria	Threshold Value
Fuel pump current	≤ 0.5 A

Diagnosis 4: Short circuit

Judgment value

Malfunction Criteria	Threshold Value
Time for reaching target current	≤ 0.075 ms

Diagnosis 5: Diagnosis for overcurrent

Judgment value

Malfunction Criteria	Threshold Value
Fuel pump current	≥ 22 A

Time needed for diagnosis: TDC × 75 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BV:DTC P0245 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Poor driving performance

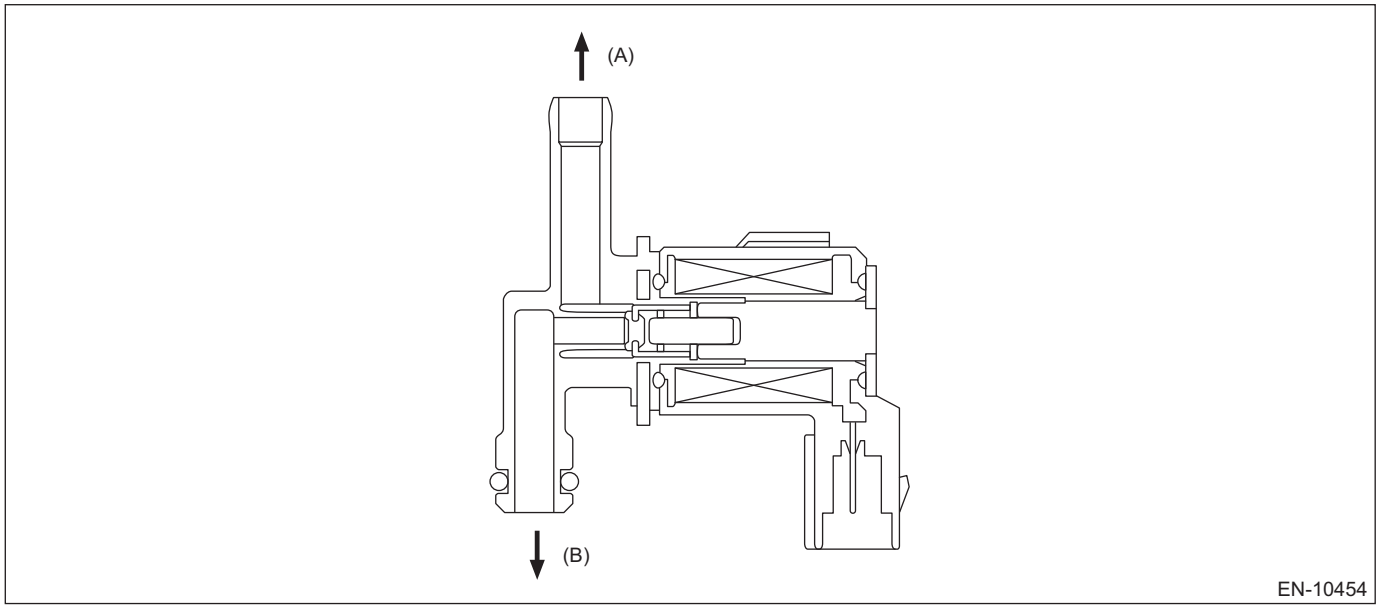
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 11 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO WASTEGATE CONTROL SOLENOID VALVE.** Measure the voltage between wastegate control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E64) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the wastegate control solenoid valve. 4) Measure the resistance between wastegate control solenoid valve connector and engine ground. ***Connector & terminal*** ***(E64) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair ground short circuit of harness between ECM connector and wastegate control solenoid valve connector.
5	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** Measure the resistance of harness between ECM connector and wastegate control solenoid valve connector. ***Connector & terminal*** ***(E159) No. 11 — (E64) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair open circuit in harness between ECM connector and wastegate control solenoid valve connector.
6	**CHECK WASTEGATE CONTROL SOLENOID VALVE.** 1) Remove the wastegate control solenoid valve. 2) Measure the resistance between wastegate control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair poor contact of wastegate control solenoid valve connector.	Replace the wastegate control solenoid valve. <Ref. to FU(w/o STI)-117, Wastegate Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the wastegate control solenoid valve.
Judge as NG when the terminal output voltage remains Low during outputting the duty signal.

2. COMPONENT DESCRIPTION



(A) Turbocharger (B) Intake duct

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of wastegate control	≤ 80%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 640 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BW:DTC P0246 TURBOCHARGER/SUPERCHARGER WASTEGATE SOLENOID "A" HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Poor driving performance

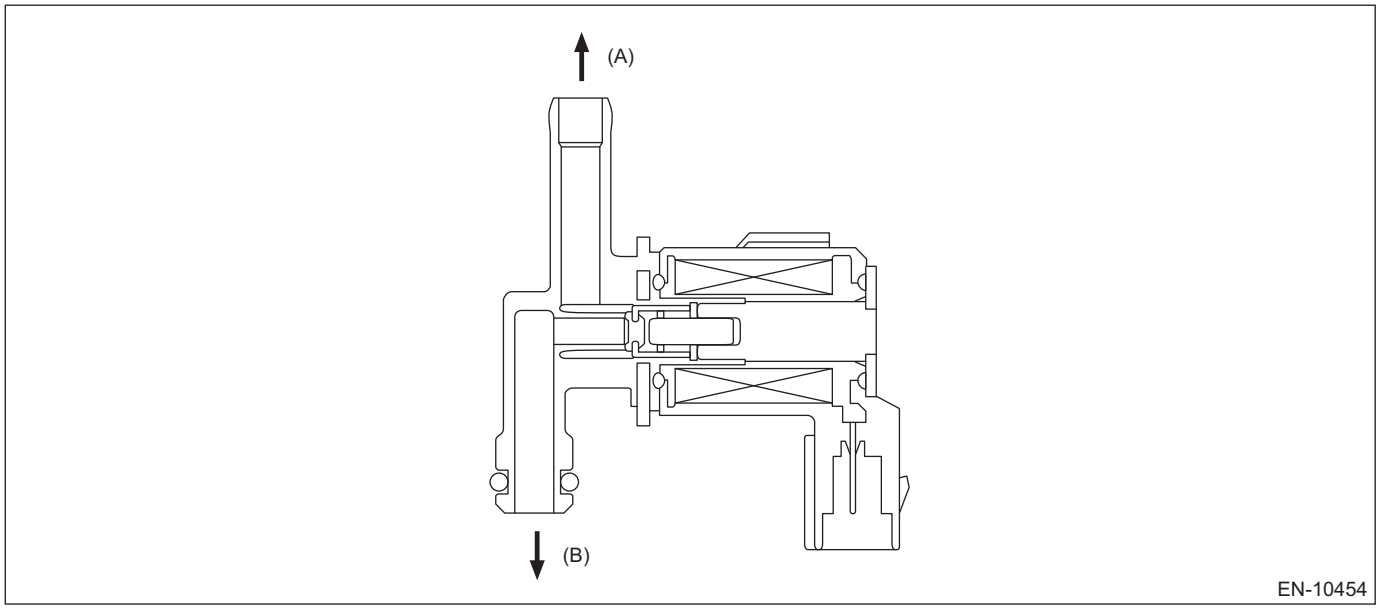
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND WASTEGATE CONTROL SOLENOID VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the wastegate control solenoid valve. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 11 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair short circuit to power in harness between ECM connector and wastegate control solenoid valve connector.	Go to step **2**.
2	**CHECK WASTEGATE CONTROL SOLENOID VALVE.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between wastegate control solenoid valve terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the wastegate control solenoid valve. <Ref. to FU(w/o STI)-117, Wastegate Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the wastegate control solenoid valve.
Judge as NG when overcurrent is detected.

2. COMPONENT DESCRIPTION



(A) Turbocharger (B) Intake duct

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Duty ratio of wastegate control	≥ 20%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 17 A

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

BX:DTC P0300 RANDOM/MULTIPLE CYLINDER MISFIRE DETECTED

DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stalls.
- Improper idling
- Rough driving

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from all fuel injectors. 3) Measure the resistance between all fuel injector connectors and engine ground. ***Connector & terminal*** ***#1 (E5) No. 1 — Engine ground:*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 1 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 1 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 1 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on all cylinders. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
3	**CHECK FUEL INJECTOR.** Check all fuel injectors. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **4**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
4	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>	Go to step **5**.
5	**CHECK CRANKSHAFT POSITION SENSOR PLATE.** Check the crankshaft position sensor plate.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(w/o STI)-242, Cylinder Block.>	Go to step **6**.
6	**CHECK INSTALLATION CONDITION OF TIMING CHAIN.** Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK FUEL LEVEL.** Inspect the fuel level.	Is the fuel meter indication higher than the “Lower” level?	Go to step **8**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **11**.
8	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(w/o STI)-87, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(w/o STI)-86, PCV Valve.>	Go to step **9**.
9	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Go to step **10**.
10	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Go to step **11**.
11	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h (37.3 MPH).	Does the malfunction indicator light illuminate or blink?	Go to step **12**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
12	**CHECK AIR INTAKE SYSTEM.** Check installation condition of the air intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **13**.

Step		Check	Yes	No
13	**CHECK ALL CYLINDERS.** Check the following items for the cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Is there a fault in any cylinder?	Repair or replace the faulty part of the faulty cylinder. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(w/o STI)(diag)-401, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BY:DTC P0301 CYLINDER 1 MISFIRE DETECTED

NOTE:
For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(w/o STI)(diag)-407, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the presence of misfire occurrence. (Revolution fluctuation method)
Monitoring exhaust gas misfire that adversely affects exhaust gas and monitoring misfire that damages the catalyst are made obligatory by the law. Misfire affecting these two has two patterns below:
- Intermittent misfire (a single cylinder misfires at random times, or different cylinders misfire at random): Exhaust gas misfire
- Every-time misfire (a single cylinder misfires every time): Exhaust gas misfire, catalyst-damaging misfire

The following detecting methods are adopted for these detection.
1) Intermittent misfire: Exhaust gas misfire
- 180° Interval Difference Method
- 360° Interval Difference Method
- 720° Interval Difference Method

2) Every-time misfire: Exhaust gas misfire, catalyst-damaging misfire
- 180° Interval Difference Method
- 360° Interval Difference Method

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Fuel shut-off function	Not in operation
Engine speed	400 — 6500 rpm (CVT model) 550 — 6800 rpm (MT model)
Intake manifold pressure	
• Normal ignition (Changes based on the engine speed and atmospheric pressure.)	19 — 48.3 kPa (142.5 — 362.3 mmHg, 5.6 — 14.3 inHg) (CVT model) 13.8 — 43.7 kPa (103.5 — 327.8 mmHg, 4.1 — 12.9 inHg) (MT model)
• Idle ignition (Changes based on the engine speed and atmospheric pressure.)	19 — 48.7 kPa (142.5 — 365.3 mmHg, 5.6 — 14.4 inHg) (CVT model) 13.8 — 50.3 kPa (103.5 — 377.3 mmHg, 41 — 14.9 inHg) (MT model)
Time elapsed after engine start	≥ 2 crankshaft revolutions
Following condition A or B is met	
A: Engine coolant temperature at engine starting	> –7°C (19.4°F)
B: Following conditions (b1) and (b2) are met	
(b1) Engine coolant temperature at engine starting	≤ –7°C (19.4°F)
(b2) Engine coolant temperature	≥ 21°C (69.8°F)

3. GENERAL DRIVING CYCLE

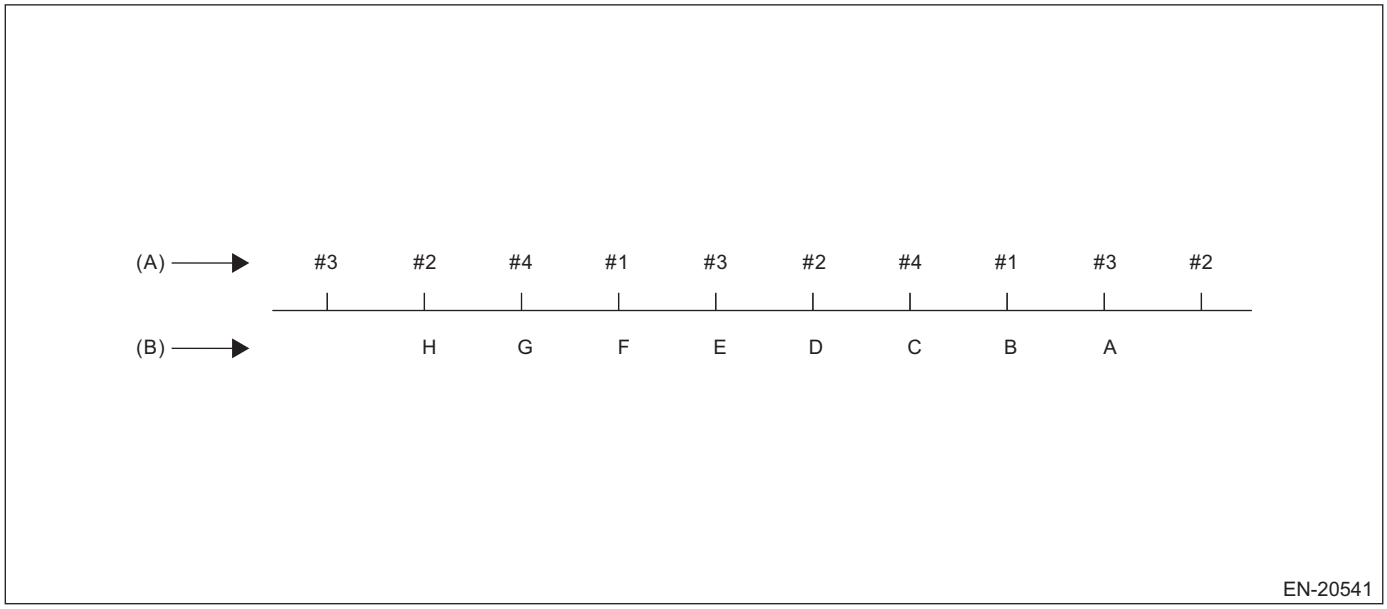
- If conditions are met, it is possible to detect the misfires from idling to high engine speed. However, in case any engine load or breakage occurs, perform with the engine at idle.
- Perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

When a misfire occurs, the engine speed will decrease and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether a misfire is occurring or not comparing the calculated result with judgment value. Count the number of misfires, if the misfire ratio is higher during 1000 revs. or 200 revs., judge corresponding cylinders as NG.

Diagnostic value calculation (Calculate from angle speed) →	Misfire detection in every single ignition (Compare diagnostic value with judgment value) →	NG judgment (Misfire occurrence judgment required by the law) (Compare number of misfire with judgment value)
	• 180 Degree Interval Difference Method • 360 Degree Interval Difference Method • 720 Degree Interval Difference Method	• NG judgment for exhaust gas misfire • NG judgment for catalyst-damaging misfire

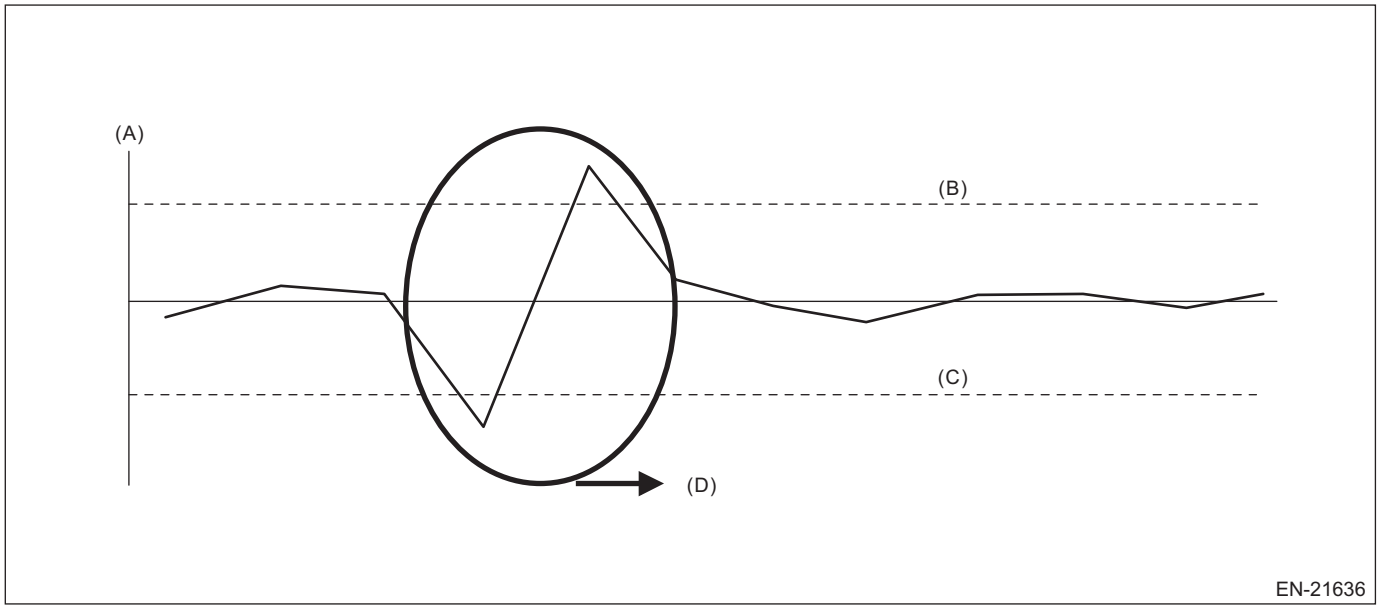
As shown in the following figure, pick a cylinder as the standard and name it A. And the former crankshaft position speed is named B, the second former crankshaft position speed is named C, the third is named D, etc.



(A) Ignition order (B) Crankshaft position speed

180° Interval Difference Method

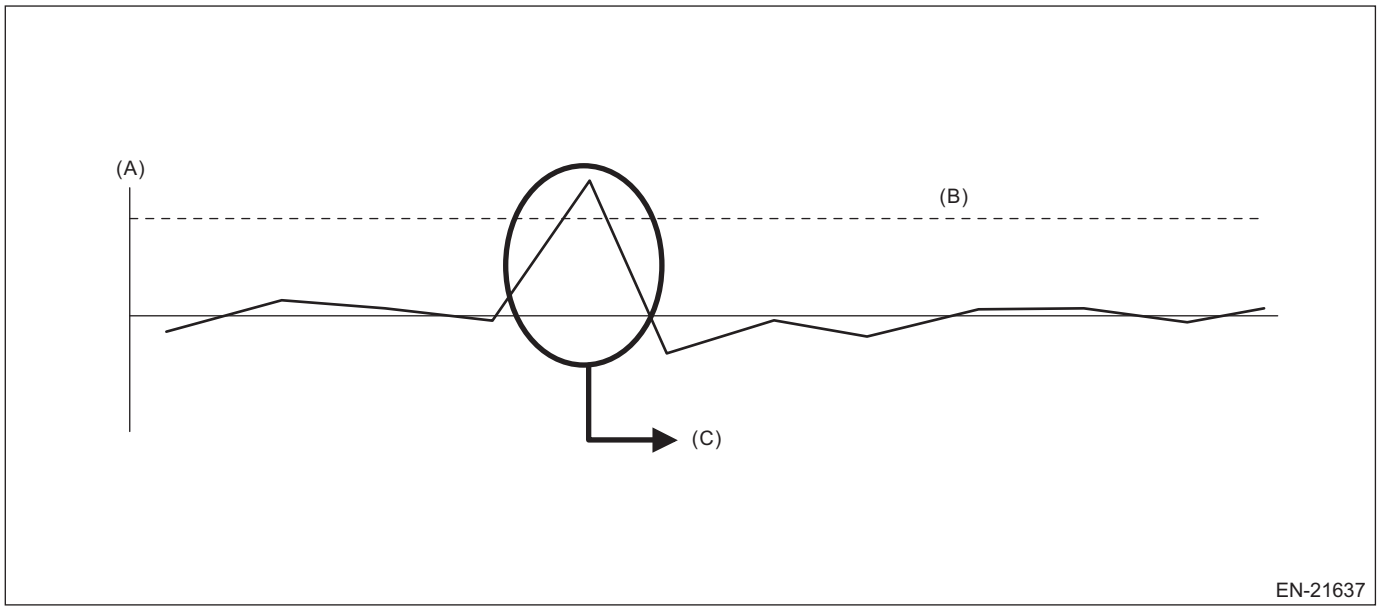
Diagnostic value	180 degree interval difference = (A – B) – (B – C)
Judge as a misfire in the following cases. • 180 degree interval difference ≥ Judgment value of positive side • 180 degree interval difference ≤ Judgment value of negative side (Diagnostic value before 180° CA)	



(A) 180 degree interval difference
(B) Threshold valve (positive number)
(C) Threshold valve (negative number)
(D) Judged as misfire.

360° Interval Difference Method

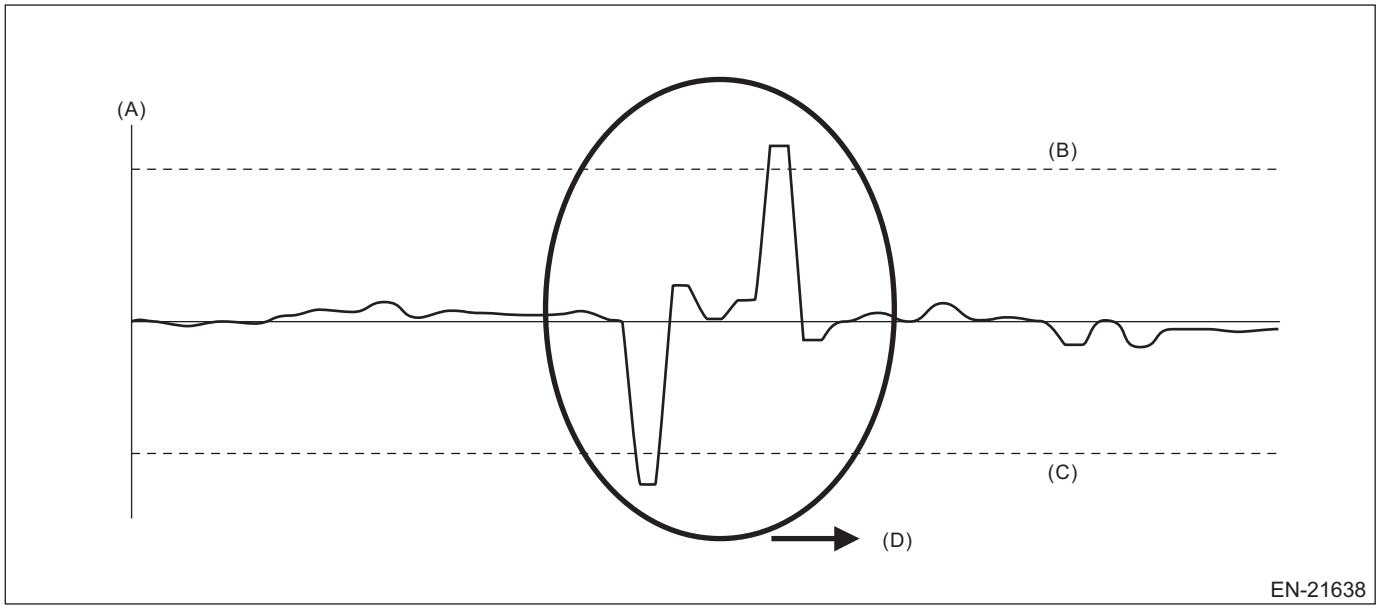
Diagnostic value	360 degree interval difference = (B – A) – (D – C)
Misfire judgment	360 degree interval difference > Judgment value → Judged as misfire



(A) 360 degree interval difference (B) Threshold valve (C) Judged as misfire.

720° Interval Difference Method

Diagnostic value	720 degree interval difference = (A – B) – (E – F)
Judge as a misfire in the following cases. • 720 degree interval difference ≥ Judgment value of positive side • 720 degree interval difference ≤ Judgment value of negative side (Diagnostic value before 720° CA)	



(A) 720 degree interval difference
(B) Threshold valve (positive number)
(C) Threshold valve (negative number)
(D) Judged as misfire.

- **Exhaust gas misfire (misfire occurrence level which influences exhaust gas)**

Judgment value (Judge that malfunction occurs when the misfire ratio is high in 1000 engine revs.)

Malfunction Criteria	Threshold Value
Diagnostic value of exhaust gas misfire	≥ 16 × 100/2000% in 1000 revs. (CVT model) ≥ 35 × 100/2000% in 1000 revs. (MT model)

Time needed for diagnosis: 1000 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

- **Catalyst-damaging misfire (misfire occurrence level that will damage catalyst)**

Judgment value

Malfunction Criteria	Threshold Value
Catalyst-damaging misfire diagnostic value	≥ Value from Map

Map

CB:DTC P0304 CYLINDER 4 MISFIRE DETECTED

DTC detecting condition:

- Detected when two consecutive driving cycles with fault occur.
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

Trouble symptom:

- Engine stalls.
- Improper idling
- Rough driving

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 1 — Engine ground:*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 1 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 1 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 1 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
3	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **4**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
4	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>	Go to step **5**.
5	**CHECK CRANKSHAFT POSITION SENSOR PLATE.** Check the crankshaft position sensor plate.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(w/o STI)-242, Cylinder Block.>	Go to step **6**.
6	**CHECK INSTALLATION CONDITION OF TIMING CHAIN.** Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK FUEL LEVEL.** Inspect the fuel level.	Is the fuel meter indication higher than the “Lower” level?	Go to step **8**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **12**.
8	**CHECK PCV VALVE.** Check the PCV valve. <Ref. to EC(w/o STI)-87, INSPECTION, PCV Valve.>	Is the check result OK?	Repair or replace the PCV valve. <Ref. to EC(w/o STI)-86, PCV Valve.>	Go to step **9**.
9	**CHECK PCV HOSE ASSEMBLY.** Check the PCV hose assembly.	Is the PCV hose assembly deformed, cracked or damaged?	Repair or replace the PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Go to step **10**.
10	**CHECK PCV HOSE ASSEMBLY.** Check the clamp of PCV hose assembly.	Is the clamp of PCV hose assembly damaged or loose?	Repair or replace the clamp of PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>	Go to step **12**.
11	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h (37.3 MPH) or more.	Does the malfunction indicator light illuminate or blink?	Go to step **12**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
12	**CHECK AIR INTAKE SYSTEM.** Check installation condition of the intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **13**.

Step		Check	Yes	No
13	**CHECK CYLINDER.** Check the following items for the cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

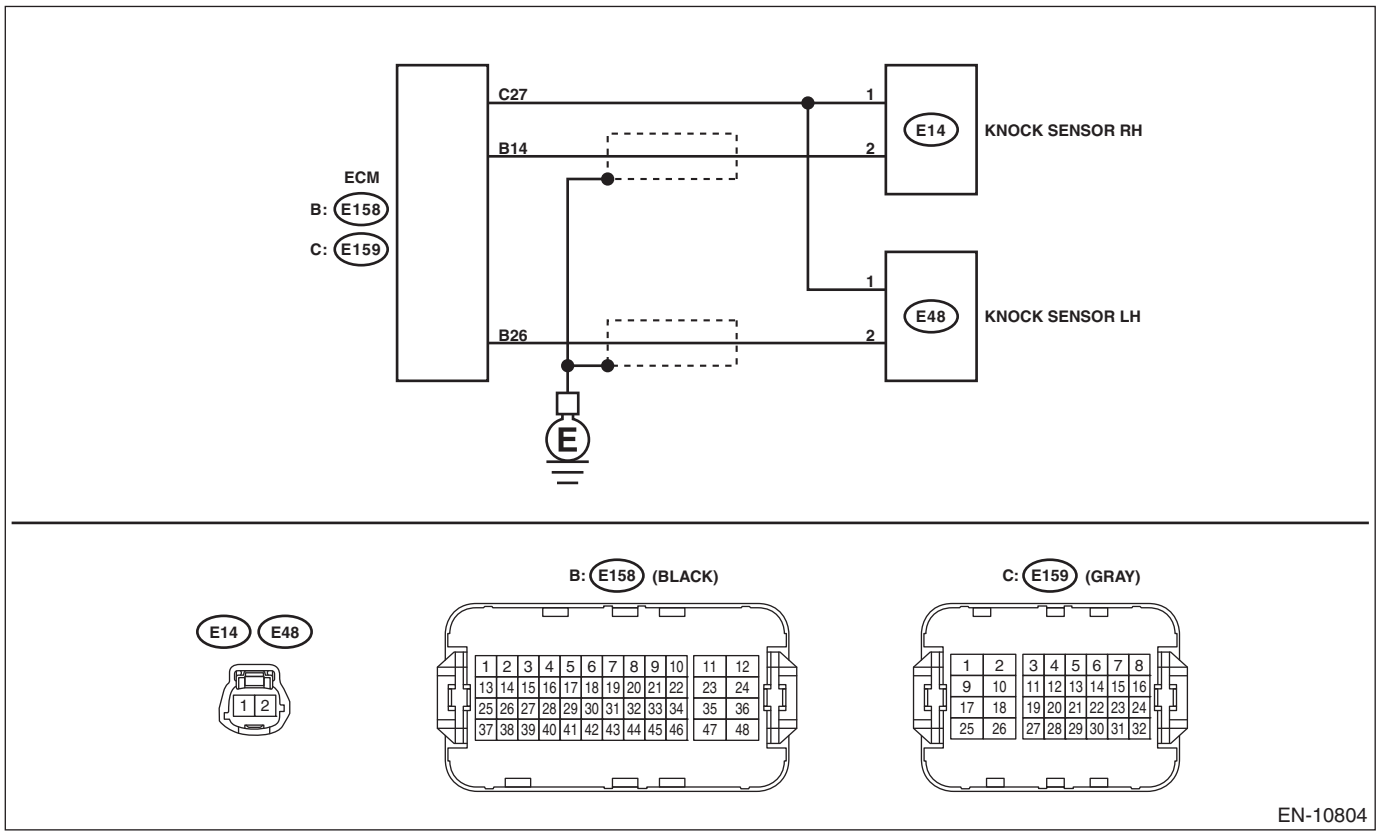
1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0301. <Ref. to EN(w/o STI)(diag)-401, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CC:DTC P0327 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT LOW BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Poor driving performance
- Knocking occurs

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



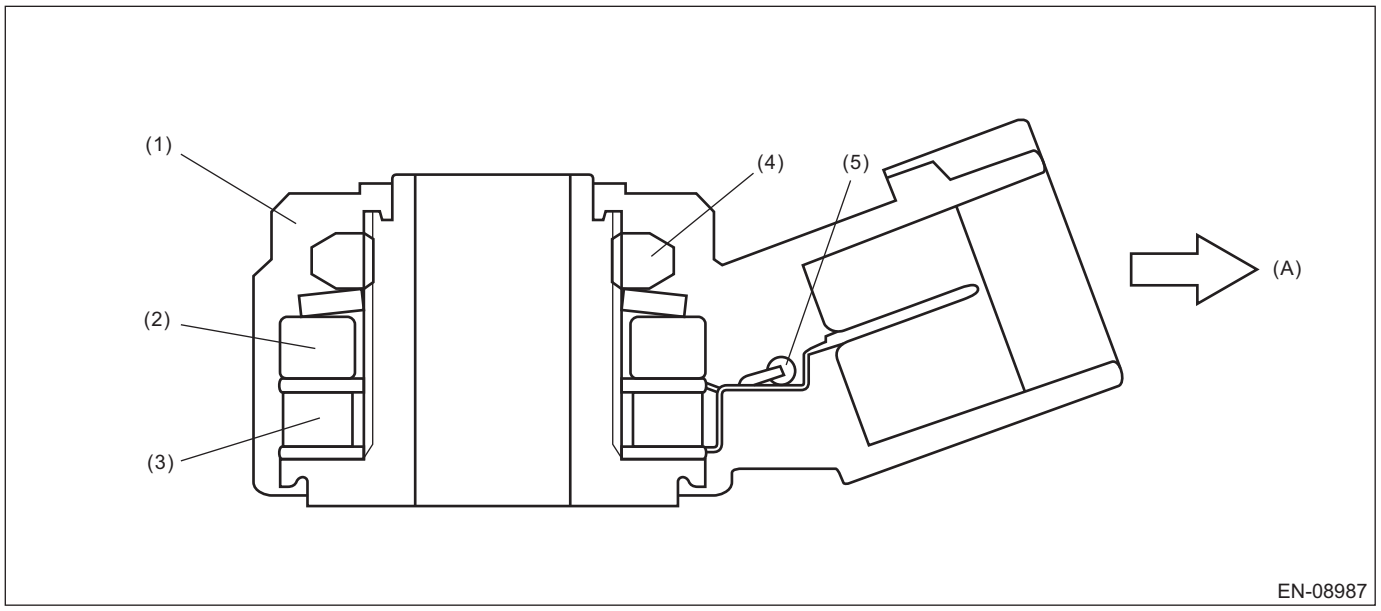
Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 14 — (E159) No. 27:***	Is the resistance less than 500 kΩ?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK KNOCK SENSOR.** 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor connectors. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 500 kΩ?	Replace the knock sensor. <Ref. to FU(w/o STI)-106, Knock Sensor.>	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. NOTE: The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.
3	**CHECK INPUT SIGNAL OF ECM.** 1) Connect the ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 14 (+) — Engine ground (–):***	Is the voltage 2 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. NOTE: The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

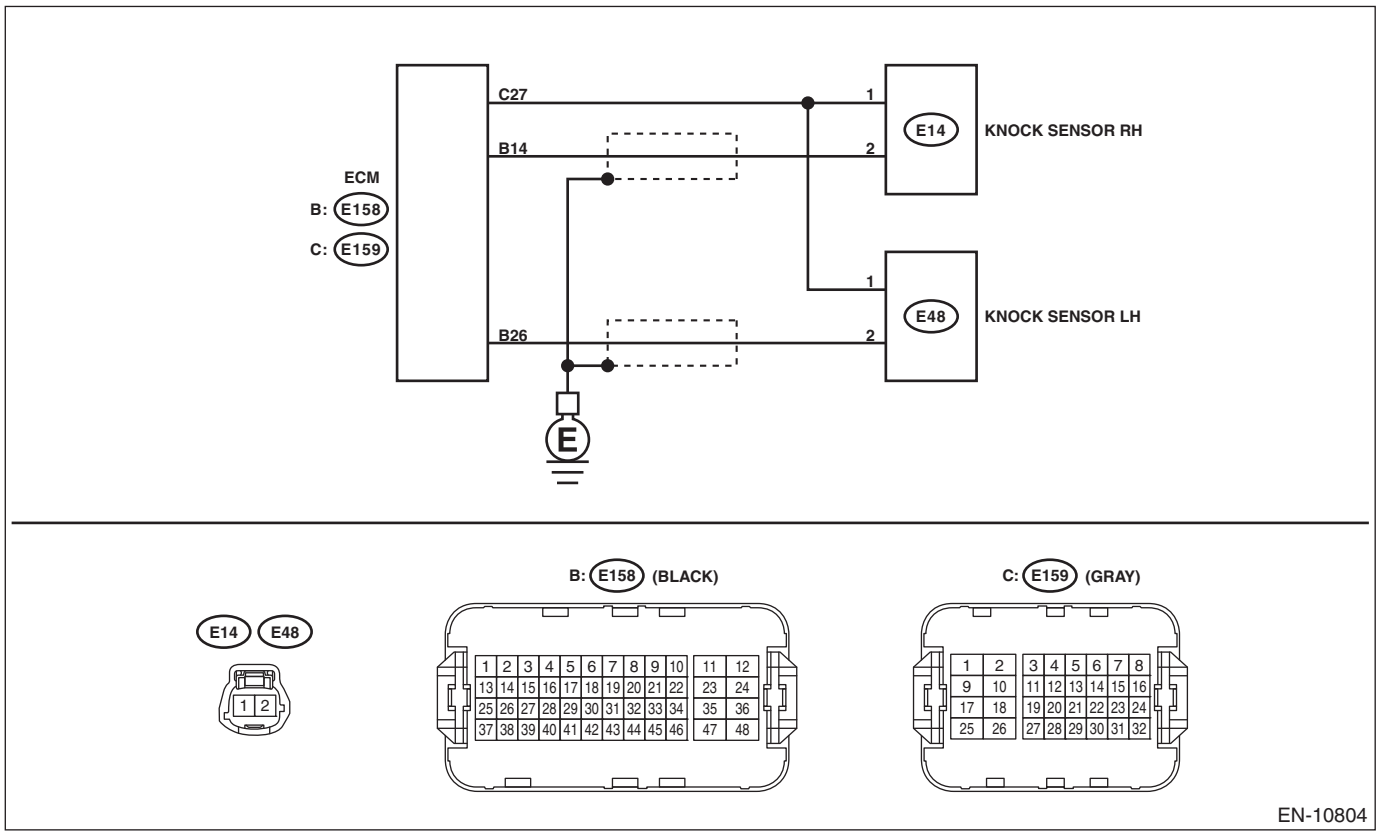
Malfunction Criteria	Threshold Value
Output voltage	< 0.22 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CD:DTC P0328 KNOCK/COMBUSTION VIBRATION SENSOR 1 CIRCUIT HIGH BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Poor driving performance
- Knocking occurs

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

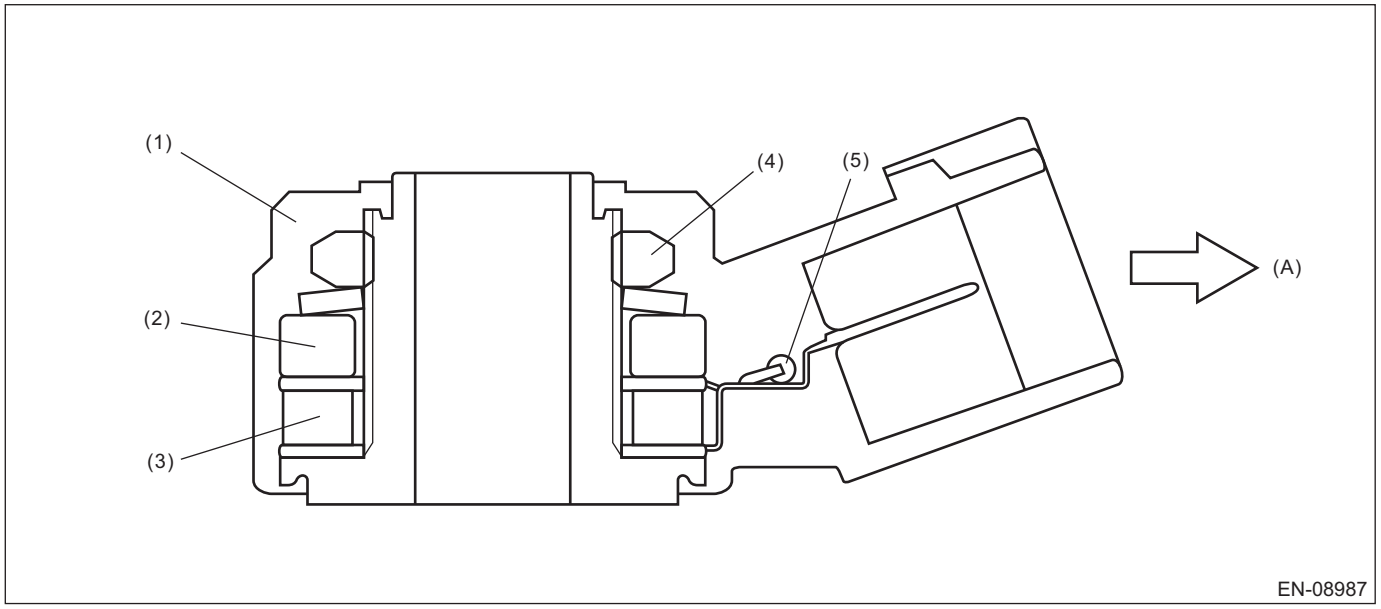


Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal (E158) No. 14 — (E159) No. 27:***	Is the resistance 600 kΩ or more?	Go to step **2**.	Repair the poor contact of ECM connector.
2	**CHECK KNOCK SENSOR.** 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor terminals. ***Terminals No. 1 — No. 2:***	Is the resistance 600 kΩ or more?	Replace the knock sensor. <Ref. to FU(w/o STI)-106, Knock Sensor.>	Repair the open circuit in harness between ECM connector and knock sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of knock sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(A) To knock sensor harness

(1) Case
(2) Weight
(3) Piezoelectric element
(4) Nut
(5) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

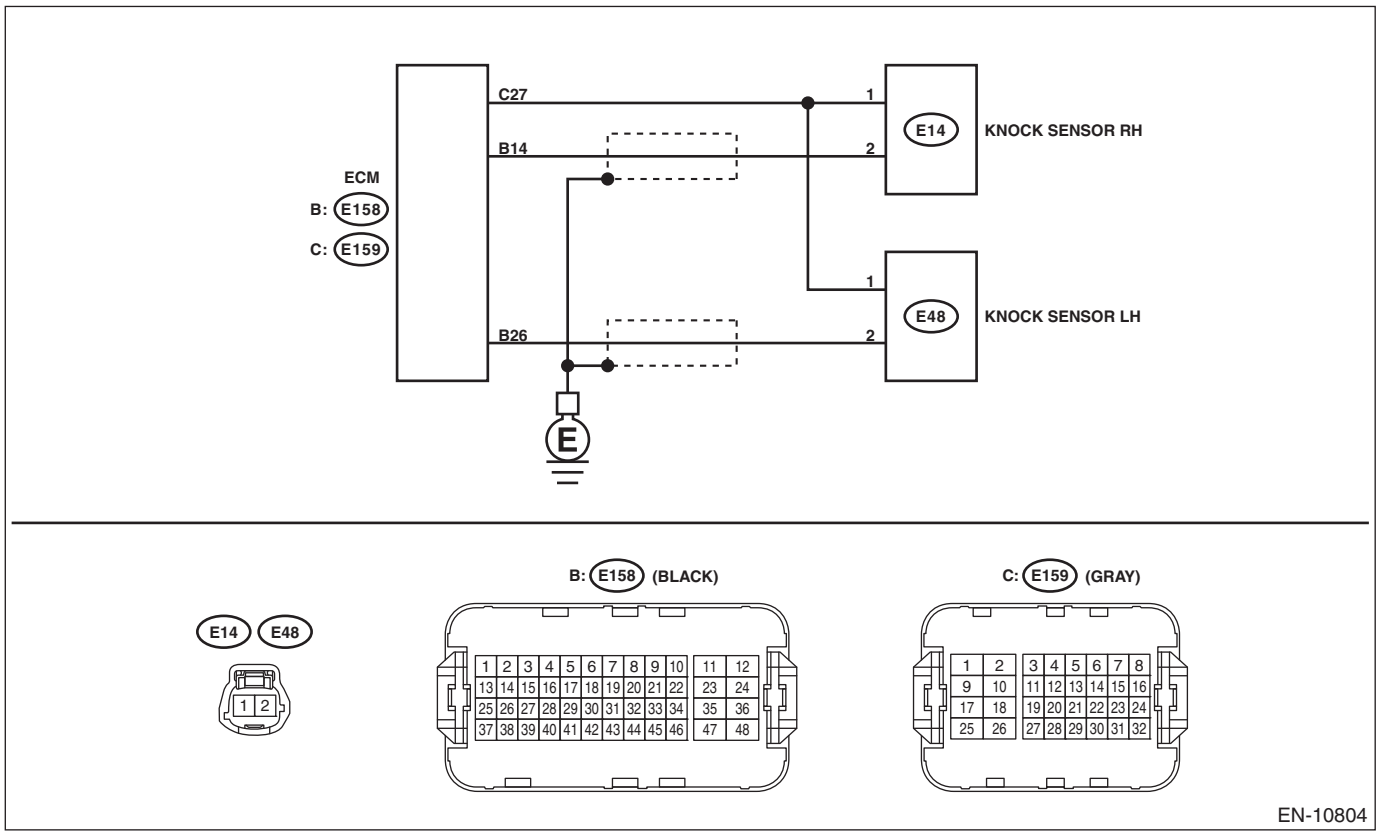
Malfunction Criteria	Threshold Value
Output voltage	> 4.73 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CE:DTC P0332 KNOCK/COMBUSTION VIBRATION SENSOR 2 CIRCUIT LOW BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Driving performance problem
- Knocking occurs

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND KNOCK SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 26 — (E159) No. 27:***	Is the resistance less than 500 kΩ?	Go to step **2**.	Go to step **3**.

	Step	Check	Yes	No
2	**CHECK KNOCK SENSOR.** 1) Disconnect the connector from the knock sensor. 2) Measure the resistance between knock sensor connectors. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 500 kΩ?	Replace the knock sensor. <Ref. to FU(w/o STI)-106, Knock Sensor.>	Repair the short circuit to ground in harness between ECM connector and knock sensor connector. NOTE: The harness between both connectors are shielded. Remove the shield and repair the short circuit of harness.
3	**CHECK INPUT SIGNAL OF ECM.** 1) Connect the ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 26 (+) — Engine ground (–):***	Is the voltage 2 V or more?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. CG:DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

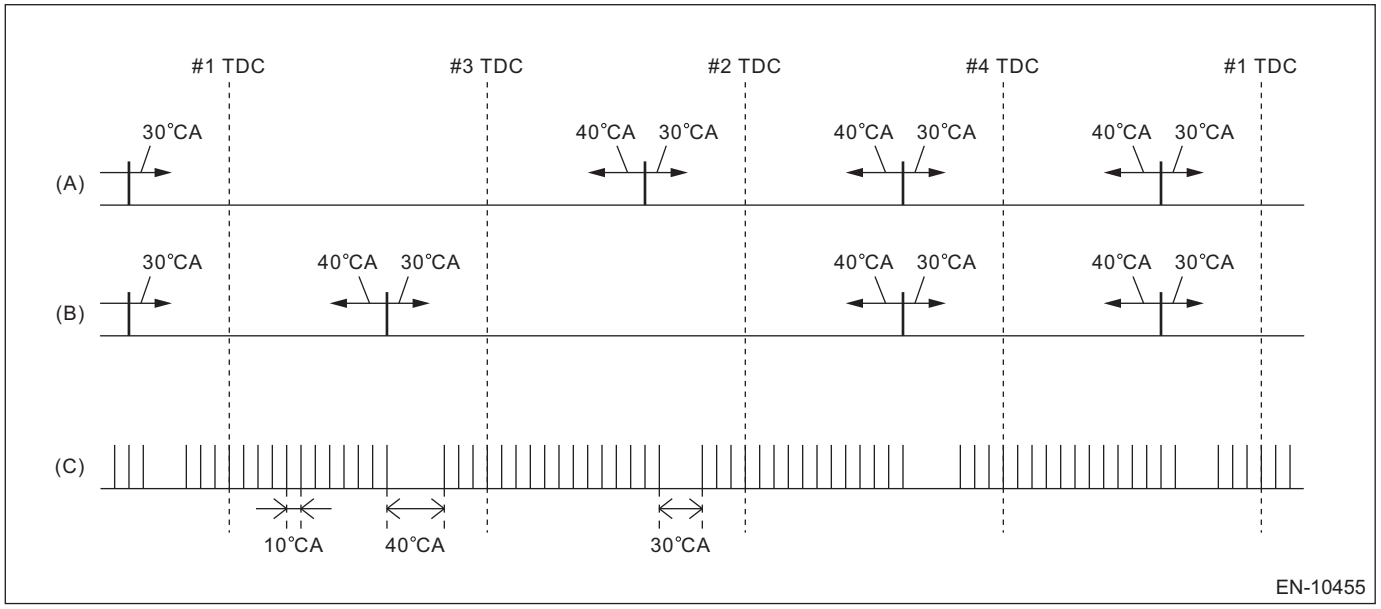
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and crankshaft position sensor connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
3	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and crankshaft position sensor connector.	Go to step **5**.
5	**CHECK CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step **6**.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>
6	**CHECK CRANKSHAFT POSITION SENSOR.** Check waveform of crankshaft position sensor. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of crankshaft position sensor connector • Poor contact of coupling connector

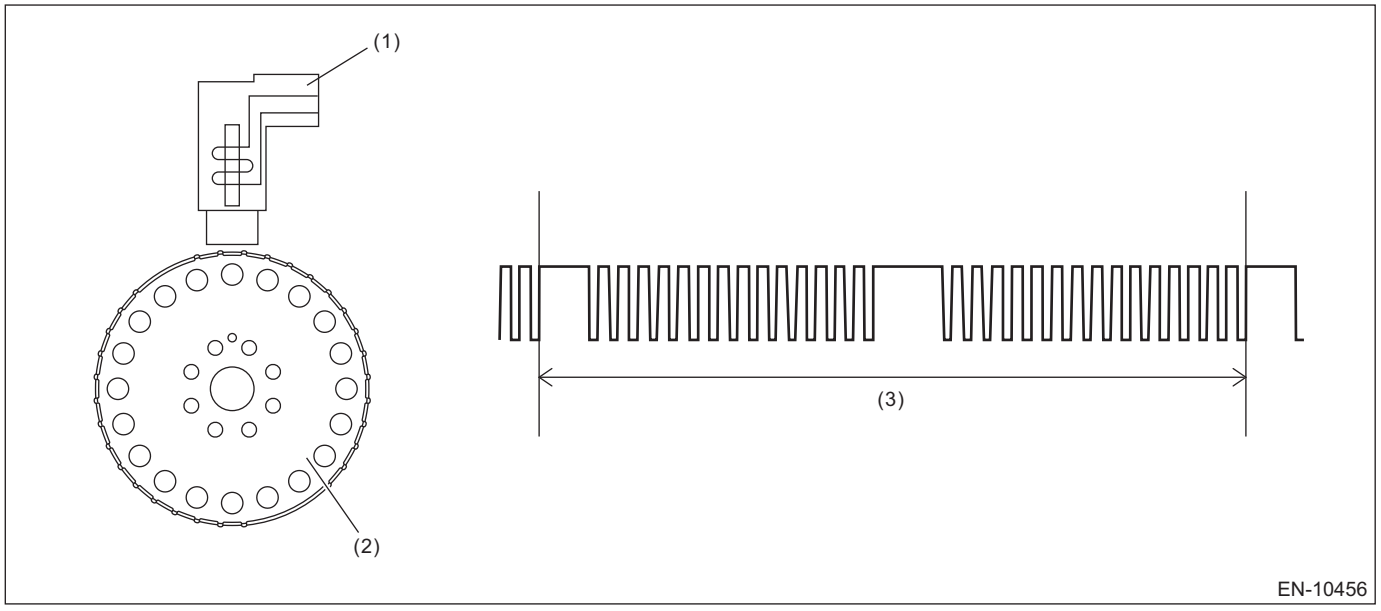
1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the crankshaft position sensor.
Judge as NG when the crank signal is not input even though the starter was rotated.

2. COMPONENT DESCRIPTION



(A) Intake cam signal RH (B) Intake cam signal LH (C) Crankshaft signal



(1) Crankshaft position sensor (2) Crankshaft position sensor plate (3) One crankshaft rotation

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Number of crankshaft position sensor signals during cranking	= 0

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CH:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Failure of engine to start

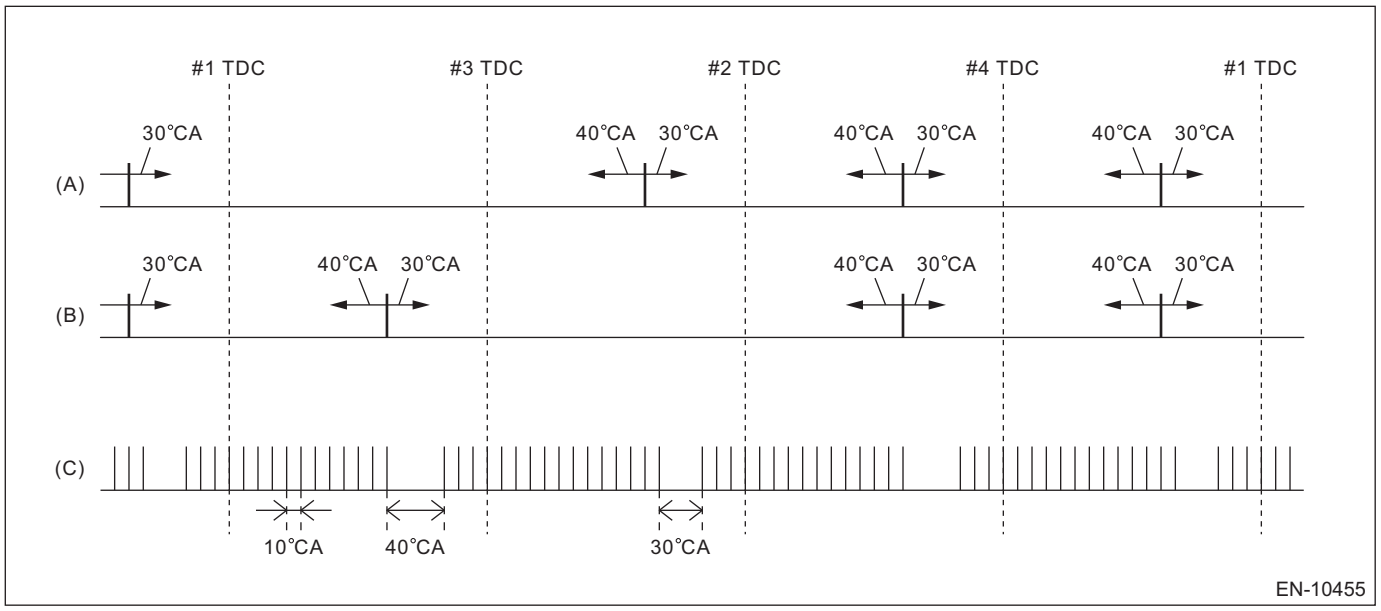
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installation bolt tightened securely?	Go to step **2**.	Tighten the crankshaft position sensor installation bolt securely. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>
2	**CHECK CRANKSHAFT POSITION SENSOR PLATE.** Check the crankshaft position sensor plate.	Is there crack or damage in the crankshaft position sensor plate teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(w/o STI)-242, Cylinder Block.>	Go to step **3**.
3	**CHECK INSTALLATION CONDITION OF TIMING CHAIN.** Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.>	Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>

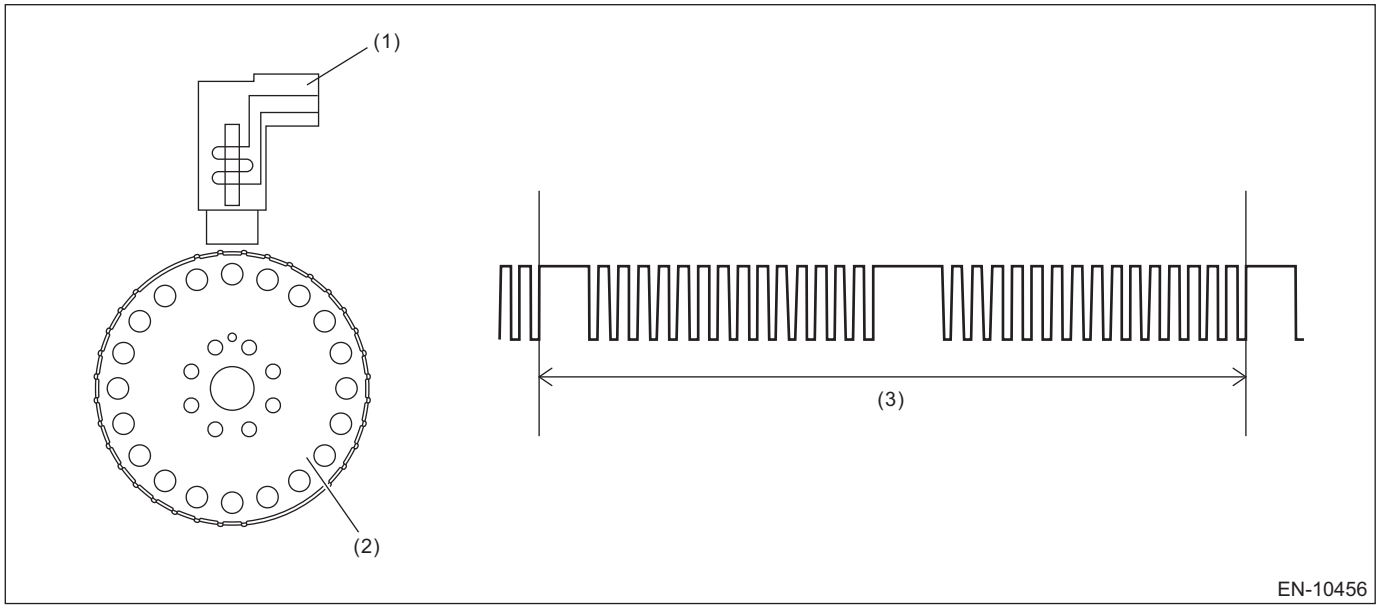
1. OUTLINE OF DIAGNOSIS

Detect for faults in crankshaft position sensor output properties.
Judge as NG when there is a problem in the number of crankshaft signals for every revolution of crankshaft.

2. COMPONENT DESCRIPTION



(A) Intake cam signal RH (B) Intake cam signal LH (C) Crankshaft signal



(1) Crankshaft position sensor (2) Crankshaft position sensor plate (3) One crankshaft rotation

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
Amount of crank sensor signal during 0.5 rev of crankshaft	< 13 or ≥ 20

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
|(Present value of diagnosis 1) – (Previous value of diagnosis 1)|	≠ 1

Time needed for diagnosis: 10 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CI: DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

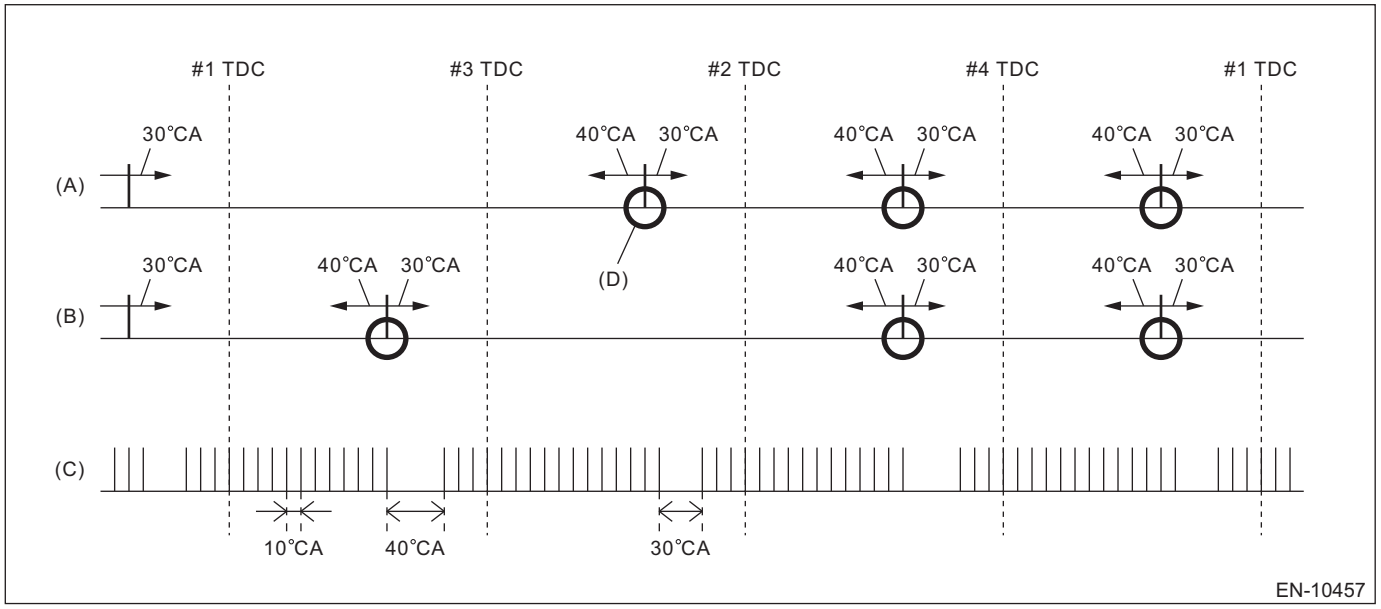
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor RH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor RH connector. ***Connector & terminal*** ***(E158) No. 20 — (E36) No. 2:*** ***(E158) No. 34 — (E36) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and camshaft position sensor RH connector.
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the resistance between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor RH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E36) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor RH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR RH.** Check installation condition of the camshaft position sensor RH.	Is the camshaft position sensor RH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor RH installation bolt securely. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
6	**CHECK CAMSHAFT POSITION SENSOR RH.** Check the waveform of the camshaft position sensor RH. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor RH. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor RH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION



(A) Intake cam signal RH
(B) Intake cam signal LH
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

Diagnosis 2

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Elapsed time after starting the engine	≥ 200 ms

4. GENERAL DRIVING CYCLE

Diagnosis 1: Perform the diagnosis only once.
Diagnosis 2: Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Diagnosis 1

Judge as NG when no input status of camshaft position sensor signal continues for 3 sec. during cranking.

Judgment value

Malfunction Criteria	Threshold Value
Number of camshaft position sensor signals during cranking	= 0

Time needed for diagnosis: 3 seconds
Diagnosis 2

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 1.5 revs of crankshaft	= 0

Time needed for diagnosis: 6 engine revs.
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

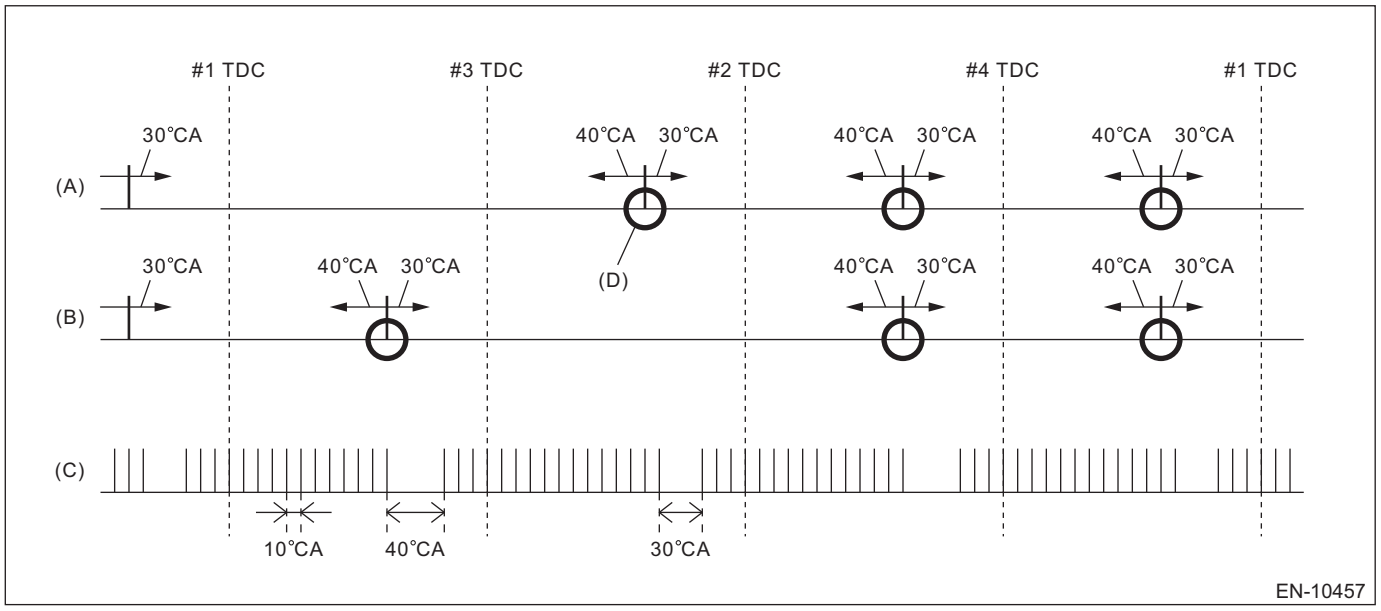
CJ:DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR

NOTE:
For the diagnostic procedure, refer to DTC P0340. <Ref. to EN(w/o STI)(diag)-428, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION



(A) Intake cam signal RH
(B) Intake cam signal LH
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 3 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the condition continues where the number of camshaft position sensor signals are not 3 times during 2 revs of crankshaft.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	≠ 3 times

Time needed for diagnosis: Engine two revolutions × 4 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CK:DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor LH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor LH connector. ***Connector & terminal*** ***(E158) No. 21 — (E35) No. 2:*** ***(E158) No. 34 — (E35) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and camshaft position sensor LH connector.
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the resistance between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor LH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor LH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR LH.** Check installation condition of the camshaft position sensor LH.	Is the camshaft position sensor LH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor LH installation bolt securely. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
6	**CHECK CAMSHAFT POSITION SENSOR LH.** Check the waveform of the camshaft position sensor LH. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor LH. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor LH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0340. <Ref. to EN(w/o STI)(diag)-428, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CL:DTC P0346 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0345. <Ref. to EN(w/o STI)(diag)-433, DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0341. <Ref. to EN(w/o STI)(diag)-432, DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 1 OR SINGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CM:DTC P0351 IGNITION COIL "A" PRIMARY CONTROL CIRCUIT/OPEN

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK IGNITION COIL POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the voltage between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 1 (+) — Engine ground (–):*** ***DTC P0352; (E32) No. 1 (+) — Engine ground (–):*** ***DTC P0353; (E33) No. 1 (+) — Engine ground (–):*** ***DTC P0354; (E34) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open or short to ground in harness of power supply circuit • Blown out of fuse • Poor contact of IG relay connector • Poor contact of coupling connector • Faulty IG relay
2	**CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 3 — Engine ground:*** ***DTC P0352; (E32) No. 3 — Engine ground:*** ***DTC P0353; (E33) No. 3 — Engine ground:*** ***DTC P0354; (E34) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **3**.	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.
3	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ignition coil connector and engine ground. ***Connector & terminal*** ***DTC P0351; (E31) No. 2 — Engine ground:*** ***DTC P0352; (E32) No. 2 — Engine ground:*** ***DTC P0353; (E33) No. 2 — Engine ground:*** ***DTC P0354; (E34) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.
4	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** Measure the resistance of harness between ECM connector and ignition coil connector. ***Connector & terminal*** ***DTC P0351; (E159) No. 8 — (E31) No. 2:*** ***DTC P0352; (E159) No. 16 — (E32) No. 2:*** ***DTC P0353; (E159) No. 24 — (E33) No. 2:*** ***DTC P0354; (E159) No. 32 — (E34) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in harness between ECM connector and ignition coil connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Go to step **6**.
6	**CHECK SPARK PLUG CONDITION.** 1) Remove the spark plug of the corresponding cylinder. <Ref. to IG(w/o STI)-4, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(w/o STI)-8, INSPECTION, Spark Plug.>	Is the check result OK?	Replace the ignition coil. <Ref. to IG(w/o STI)-11, Ignition Coil.>	Replace the spark plug. <Ref. to IG(w/o STI)-4, Spark Plug.>

1. OUTLINE OF DIAGNOSIS

Based on the self-diagnostic result of the ignition coil driving IC, judge the ignition coil driving circuit as normal or abnormal.

The ignition coil driving IC detects “no ignition” status as a malfunction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	> 0 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Fault signal from ignition drive IC	ON

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CN:DTC P0352 IGNITION COIL "B" PRIMARY CONTROL CIRCUIT/OPEN

NOTE:

CQ:DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

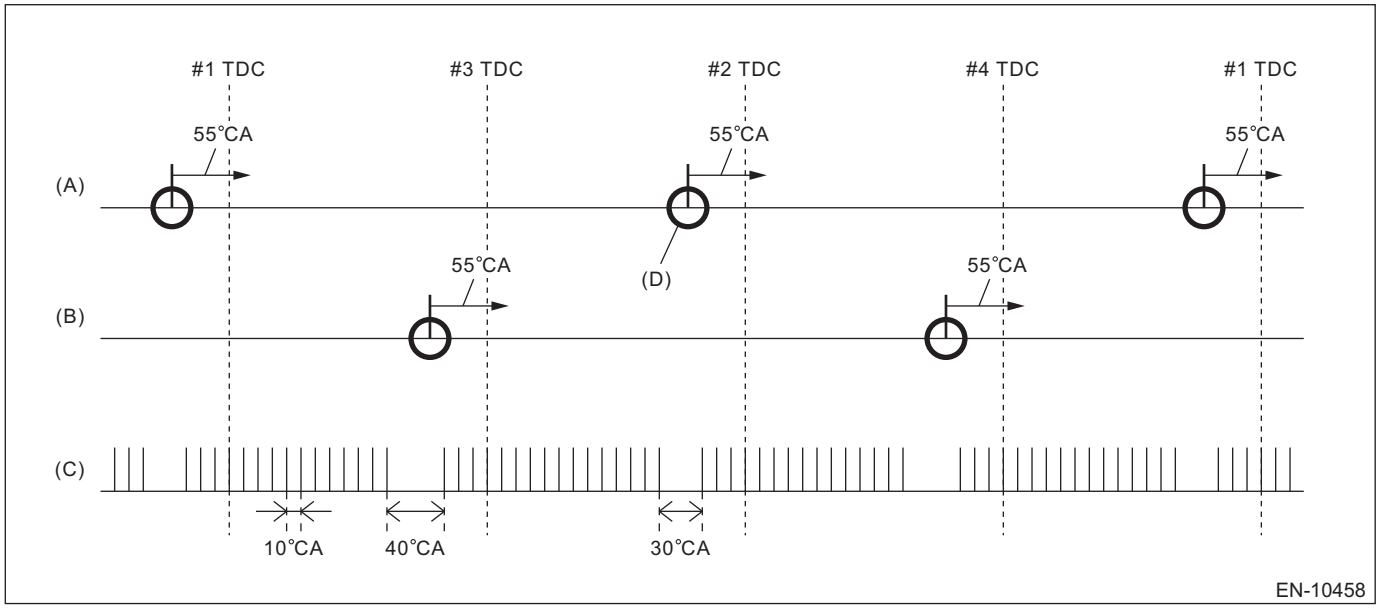
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay and camshaft position sensor RH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor RH connector. ***Connector & terminal*** ***(E158) No. 32 — (E62) No. 2:*** ***(E158) No. 34 — (E62) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and camshaft position sensor RH connector.
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the resistance between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor RH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR RH CONNECTOR.** Measure the voltage between camshaft position sensor RH connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor RH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR RH.** Check installation condition of the camshaft position sensor RH.	Is the camshaft position sensor RH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor RH installation bolt securely. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
6	**CHECK CAMSHAFT POSITION SENSOR RH.** Check the waveform of the camshaft position sensor RH. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor RH. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor RH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the camshaft position sensor.
When there is no camshaft position signal input continuously, judge as NG.

2. COMPONENT DESCRIPTION



(A) Exhaust cam signal RH
(B) Exhaust cam signal LH
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 2 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 0.2 s

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 1.5 revs of crankshaft	= 0

Time needed for diagnosis: 6 engine revs.
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

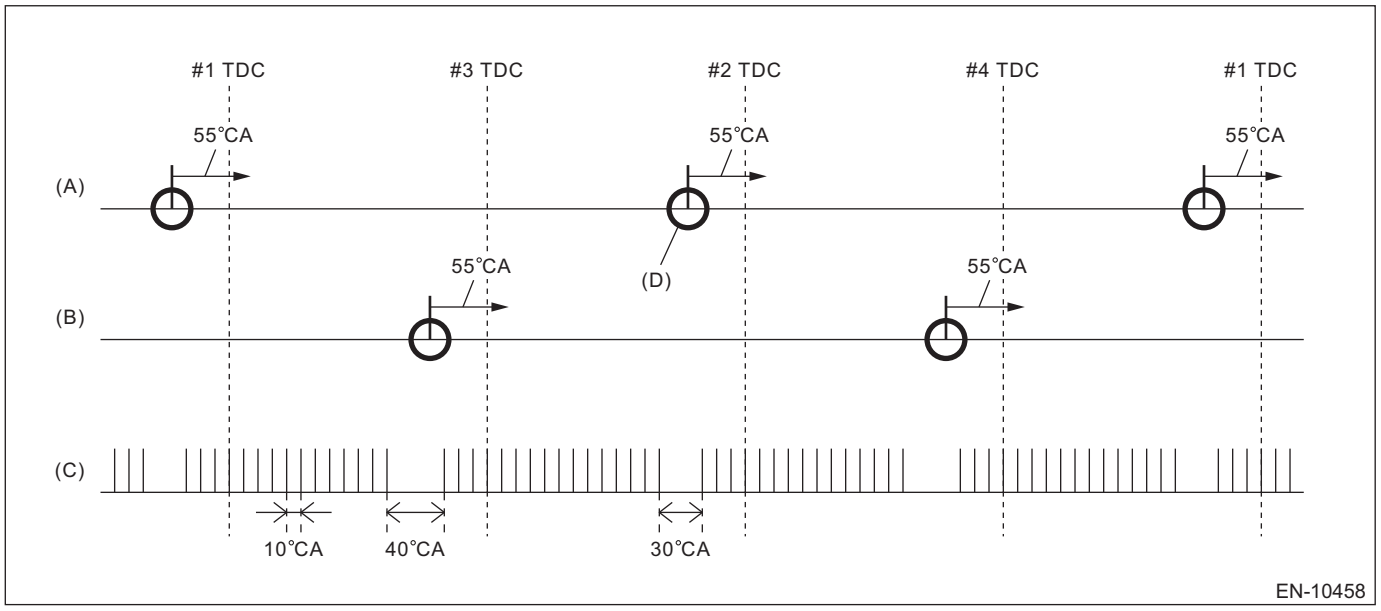
CR:DTC P0366 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 1

NOTE:
For the diagnostic procedure, refer to DTC P0365. <Ref. to EN(w/o STI)(diag)-440, DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor property.
Judge as NG when the number of camshaft signals remains abnormal.

2. COMPONENT DESCRIPTION



(A) Exhaust cam signal RH
(B) Exhaust cam signal LH
(C) Crankshaft signal
(D) Camshaft position signal: When normal, there will be 2 camshaft position signals for every 2 crankshaft revolutions.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the condition continues where the number of camshaft position sensor signals are not 2 times during 2 revs of crankshaft.

Judgment value

Malfunction Criteria	Threshold Value
Amount of camshaft sensor signal during 2 revs of crankshaft	≠ 2 times

Time needed for diagnosis: Engine two revolutions × 4 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CS:DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine stalls.
- Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY OF CAMSHAFT POSITION SENSOR LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from camshaft position sensor LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E65) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and camshaft position sensor LH connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and camshaft position sensor LH connector. ***Connector & terminal*** ***(E158) No. 33 — (E65) No. 2:*** ***(E158) No. 34 — (E65) No. 3:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in the harness between the ECM connector and camshaft position sensor LH connector.
3	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the resistance between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E65) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in the harness between the ECM connector and camshaft position sensor LH connector.
4	**CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR LH CONNECTOR.** Measure the voltage between camshaft position sensor LH connector and engine ground. ***Connector & terminal*** ***(E65) No. 2 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and camshaft position sensor LH connector.	Go to step **5**.
5	**CHECK CONDITION OF CAMSHAFT POSITION SENSOR LH.** Check installation condition of the camshaft position sensor LH.	Is the camshaft position sensor LH installation bolt tightened securely?	Go to step **6**.	Tighten the camshaft position sensor LH installation bolt securely. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
6	**CHECK CAMSHAFT POSITION SENSOR LH.** Check the waveform of the camshaft position sensor LH. <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.>	Is there any abnormality in waveform?	Replace the camshaft position sensor LH. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.>	Repair the following item. • Poor contact of ECM connector • Poor contact of camshaft position sensor LH connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0365. <Ref. to EN(w/o STI)(diag)-440, DTC P0365 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CT:DTC P0391 CAMSHAFT POSITION SENSOR "B" CIRCUIT RANGE/PERFORMANCE BANK 2

NOTE:
For the diagnostic procedure, refer to DTC P0390. <Ref. to EN(w/o STI)(diag)-444, DTC P0390 CAMSHAFT POSITION SENSOR "B" CIRCUIT BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0366. <Ref. to EN(w/o STI)(diag)-436, DTC P0346 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE BANK 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CU:DTC P0401 EGR ABNORMAL (EGR AMOUNT TOO SMALL)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Knocking occurs occasionally (P0401)
- Improper idling (P0402)
- Movement performance problem (P0402)

NOTE:
After servicing or replacing faulty parts, perform the final check of basic diagnostic procedure. <Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

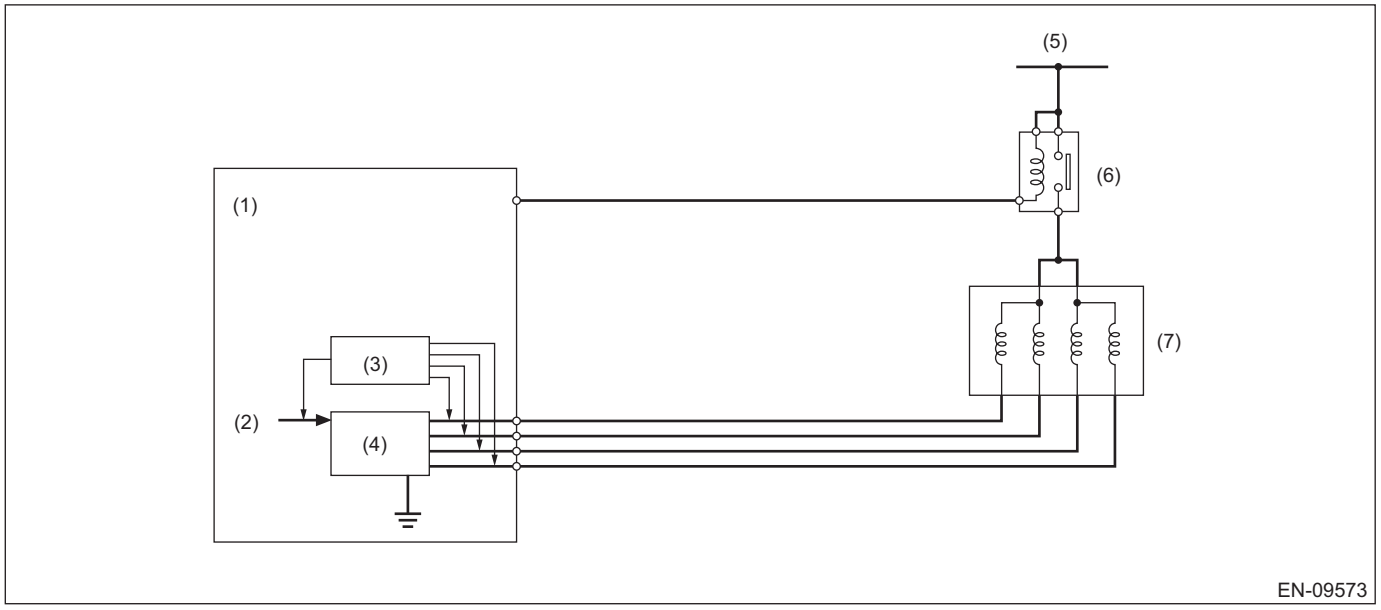
	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Are DTCs other than P0401 and P0402 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, LIST, List of Diagnostic Trouble Code (DTC).>	• DTC P0401 is displayed: Go to step **2**. • DTC P0402 is displayed: Go to step **3**.
2	**CHECK DTC P0401.** 1) Turn the ignition switch to OFF. 2) Check that there are no clogging inside the pipes composing the EGR system. NOTE: Check the following items. • Throttle valve • EGR cooler • EGR control valve • EGR pipe • EGR pipe adapter	Is the check result OK?	Go to step **4**.	Clean and replace the defective parts.
3	**CHECK DTC P0402.** 1) Turn the ignition switch to OFF. 2) Check that there are no leaks in the pipes composing the EGR system. NOTE: Check the following items. • Looseness of each flange joint section • Improper installation of throttle body • Improper installation of manifold absolute pressure and intake air temperature sensor • Foreign matter adhering to EGR valve	Is the check result OK?	Go to step **4**.	Clean and replace the defective parts.

Step		Check	Yes	No
4	**CHECK FOR REPRODUCTION OF FAILURE.** Perform the corresponding inspection mode. <Ref. to EN(w/o STI)(diag)-71, Inspection Mode.>	Does the malfunction indicator light illuminate?	Replace the EGR control valve and manifold absolute pressure and intake air temperature sensor. <Ref. to EC(w/o STI)-37, EGR Control Valve.> <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>	End.

1. OUTLINE OF DIAGNOSIS

Detect EGR system malfunction.
Intake manifold pressure is constant because the throttle valve is fully closed during deceleration fuel cut. At this time, when the EGR control valve is opened/closed, the intake manifold pressure will change. ECM compares the difference between the intake manifold pressure that has been estimated when the EGR control valve open or close is commanded and the intake manifold pressure that has been measured actually, and then judges that the EGR system is in the normal, excessive flow or insufficient flow status.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Intake air temperature	≥ 0°C (32°F)
Engine speed	1200 rpm to Value of Map 1
Vehicle speed	≥ 34 km/h (21.1 MPH)
Neutral switch	OFF
Time of fuel shut-off operation	≥ 2 s
Forced operation of EGR valve open delay time (low flow monitor only)	≥ 1 s

Map 1

Barometric pressure (kPa (mmHg, inHg))	75.06 (563, 22.2)	80.00 (600.2, 23.6)	87.00 (652.7, 25.7)	101.00 (757.7, 29.8)	102.00 (765.2, 30.1)	103.00 (772.7, 30.4)	104.00 (780.2, 30.7)
Engine speed (rpm)	2300	2400	2400	2600	2600	2600	2600

4. GENERAL DRIVING CYCLE

During deceleration fuel cut from 34 km/h (21.1 MPH) or more, perform diagnosis only once.
Be careful of vehicle speed and engine speed. (Diagnosis will not be completed if the vehicle speed and engine speed conditions become out of specification due to deceleration.)

5. DIAGNOSTIC METHOD

Calculate the estimated intake manifold pressure (reference pressure) in accordance with engine speed, throttle opening angle and barometric pressure, which is observed when enable conditions are established.
1. EGR insufficient flow (P0401) is detected if the difference between measured intake manifold pressure and reference pressure (for 57-step) is equal to or more than the judgment value when enable conditions are established and EGR valve open is commanded (57-step).
2. EGR excessive flow (P0402) is detected if the difference between measured intake manifold pressure and reference pressure (for 0-step) is equal to or more than the judgment value when enable conditions are established and EGR valve close is commanded (0-step).
3. If both judgment values are exceeded, both P0401 and P0402 are detected.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
<Low flow monitor> Intake manifold absolute pressure for reference – Average value of intake manifold absolute pressure	> Value of Map 2	P0401
<High flow monitor> Average value of intake manifold absolute pressure – Intake manifold absolute pressure for reference	> Value of Map 3	P0402

Map 2

		Engine speed (rpm)							
		1200	1400	1600	1800	2000	2200	2400	2600

(kPa (mmHg, inHg))									

Time needed for diagnosis: 3.2 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CV:DTC P0402 EGR "A" FLOW EXCESSIVE DETECTED

NOTE:
For the diagnostic procedure and detection standard, refer to DTC P0401. <Ref. to EN(w/o STI)(diag)-448, DTC P0401 EGR ABNORMAL (EGR AMOUNT TOO SMALL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CW:DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Idle mixture is out of specifications.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK EXHAUST SYSTEM.** Check for gas leaks or air suction caused by loose or dislocated nuts and bolts, and open hole at exhaust pipes. NOTE: Check the following positions. • Between cylinder head and front exhaust pipe • Between front exhaust pipe and front catalytic converter • Between front catalytic converter and rear catalytic converter • Loose or improperly attached front oxygen (A/F) sensor or rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace the exhaust system. <Ref. to EX(w/o STI)-2, General Description.>	Go to step **2**.
2	**CHECK WAVEFORM DATA ON THE SUBARU SELECT MONITOR (WHILE DRIVING).** 1) Drive at a constant speed between 80 — 112 km/h (50 — 70 MPH). 2) After 5 minutes have elapsed in the condition of step 1), use the Subaru Select Monitor while still driving to read the waveform data. • At normal condition  • At abnormal condition (numerous inversion)  	Is a normal waveform displayed?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK WAVEFORM DATA ON THE SUBARU SELECT MONITOR (WHILE IDLING).** 1) Run the engine at idle. 2) In the condition of step 1), use the Subaru Select Monitor to read the waveform data. • At normal condition  EN-06668 • At abnormal condition 1 (numerous inversion)  EN-06669 • At abnormal condition 2 (noise input)  EN-06670	Is a normal waveform displayed?	Go to step **4**.	• The waveform is displayed at abnormal condition 1: Go to step **4**. • The waveform is displayed at abnormal condition 2: Go to step **5**.
4	**CHECK CATALYTIC CONVERTER.** Check the catalytic converter.	Is the catalytic converter damaged?	Replace the catalytic converter. <Ref. to EC(w/o STI)-6, Front Catalytic Converter.> <Ref. to EC(w/o STI)-7, Rear Catalytic Converter.>	Go to step **5**.
5	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
7	**CHECK REAR OXYGEN SENSOR SHIELD.** 1) Turn the ignition switch to OFF. 2) Expose the rear oxygen sensor connector body side harness sensor shield. 3) Measure the resistance between sensor shield and engine ground.	Is the resistance less than 1 Ω?	Go to step **8**.	Repair the open circuit of rear oxygen sensor harness.
8	**CHECK ENGINE OIL AMOUNT AND EXHAUST GAS.** 1) Check the engine oil amount. <Ref. to LU(w/o STI)-11, INSPECTION, Engine Oil.> 2) Check exhaust gas during idling.	Does the engine oil amount drop or white smoke emit from the muffler?	Check the engine, and repair the defective part. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.> After repairing the engine, replace the catalytic converter. <Ref. to EC(w/o STI)-6, Front Catalytic Converter.> <Ref. to EC(w/o STI)-7, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step **9**.

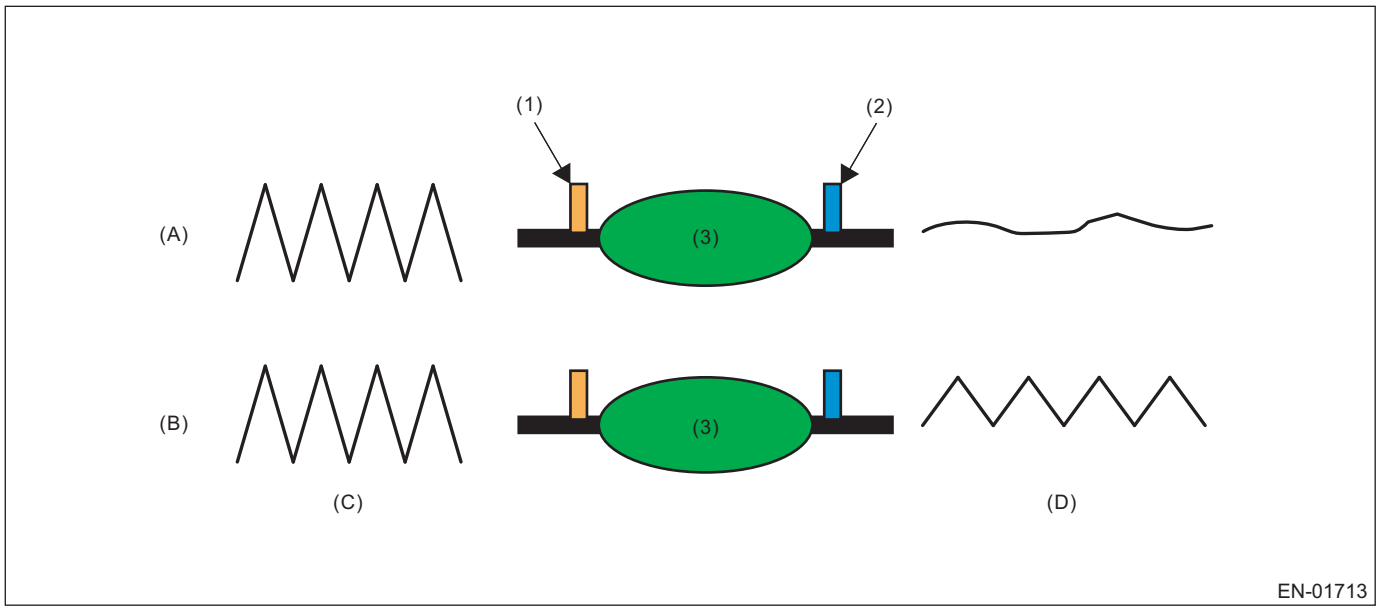
	Step	Check	Yes	No
9	**CHECK IGNITION SYSTEM.** 1) Check the spark plug. <Ref. to IG(w/o STI)-8, INSPECTION, Spark Plug.> 2) Check the status of the ignition coil connector and the spark plug terminal.	Is there any fault in the ignition system?	After repairing the ignition system, replace the catalytic converter. <Ref. to EC(w/o STI)-6, Front Catalytic Converter.> <Ref. to EC(w/o STI)-7, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step **10**.
10	**CHECK FUEL SYSTEM.** 1) Refer to and check the items in “Insufficient fuel supply to fuel injector” (except for “a. Fuel pump does not operate.”) and “Leakage or blow out of fuel”. <Ref. to FU(w/o STI)-198, INSPECTION, Fuel System Trouble in General.> 2) Check throttle body. <Ref. to FU(w/o STI)-16, INSPECTION, Throttle Body.> 3) Check intake manifold. <Ref. to FU(w/o STI)-41, INSPECTION, Intake Manifold.>	Is there any fault in the fuel system?	After repairing the fuel system, replace the catalytic converter. <Ref. to EC(w/o STI)-6, Front Catalytic Converter.> <Ref. to EC(w/o STI)-7, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0420 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).> After checking the DTC, replace the catalytic converter. <Ref. to EC(w/o STI)-6, Front Catalytic Converter.> <Ref. to EC(w/o STI)-7, Rear Catalytic Converter.> After the catalytic converter is replaced, perform step 2 to check the normal waveform is displayed, and then exit the procedure.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the deterioration of the catalyst function.
Though the rear oxygen sensor output changes slowly with a new catalyst, the sensor output with a deteriorated catalyst becomes high and the inversion time is shortened.
For this reason, the catalyst diagnosis is carried out by monitoring the rear oxygen sensor output and comparing it with the front oxygen (A/F) sensor output.

2. COMPONENT DESCRIPTION



(A) Normal
(B) Deterioration
(C) Output waveform from the front oxygen (A/F) sensor
(D) Output waveform from the rear oxygen sensor
(1) Front oxygen (A/F) sensor
(2) Rear oxygen sensor
(3) Catalytic converter

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Sub feedback	In operation
Amount of intake air	≥ 5 g/s (0.18 oz/s) and < 45 g/s (1.59 oz/s)
Estimated catalyst temperature	≥ 460°C (860°F) (CVT model) ≥ 425°C (797°F) (MT model)
Vehicle speed	≥ 40 km/h (24.9 MPH)
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)
Experiences the following conditions after experiencing all of the above conditions Rear oxygen output voltage after fuel cut	≥ 0.55 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once at a constant 40 km/h (24.9 MPH) or higher.

5. DIAGNOSTIC METHOD

After the enable conditions have been established, calculate the front oxygen (A/F) sensor lambda deviation sum value and the rear oxygen sensor output voltage deviation sum value in every 32 ms × 4 times. If the front oxygen (A/F) sensor lambda deviation sum value is the predetermined value or more, calculate the diagnostic value.

If the duration of time while the following conditions are met is within the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Rear oxygen sensor output voltage deviation sum value / front oxygen (A/F) sensor lambda deviation sum value	> 12 (CVT model) > 8.5 (MT model)

Time needed for diagnosis: 30 — 55 seconds

Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CX:DTC P0441 EVAP SYSTEM (CPC) INCORRECT PURGE FLOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0441 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE.** Operate the purge control solenoid valve using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the purge control solenoid valve operate?	Go to step **3**.	Replace the purge control solenoid valve. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>
3	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** Turn the ignition switch to OFF.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of purge flow by the change of Evaporative Leak Check Module pressure sensor output value before/after purge introduction.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Integrated purge gas amount since engine starting	≥ 20 g (0.71 oz)*
(Purge control duty ratio = 0% duration time	≥ 1.5 s
Purge control duty ratio from above)	≠ 0%
Ambient air temperature	> –25°C (–13°F)
Time when the second purge valve control is OFF	≥ 1.5 s
Time when the evaporative system leak check module switching valve is closed	< 25 s

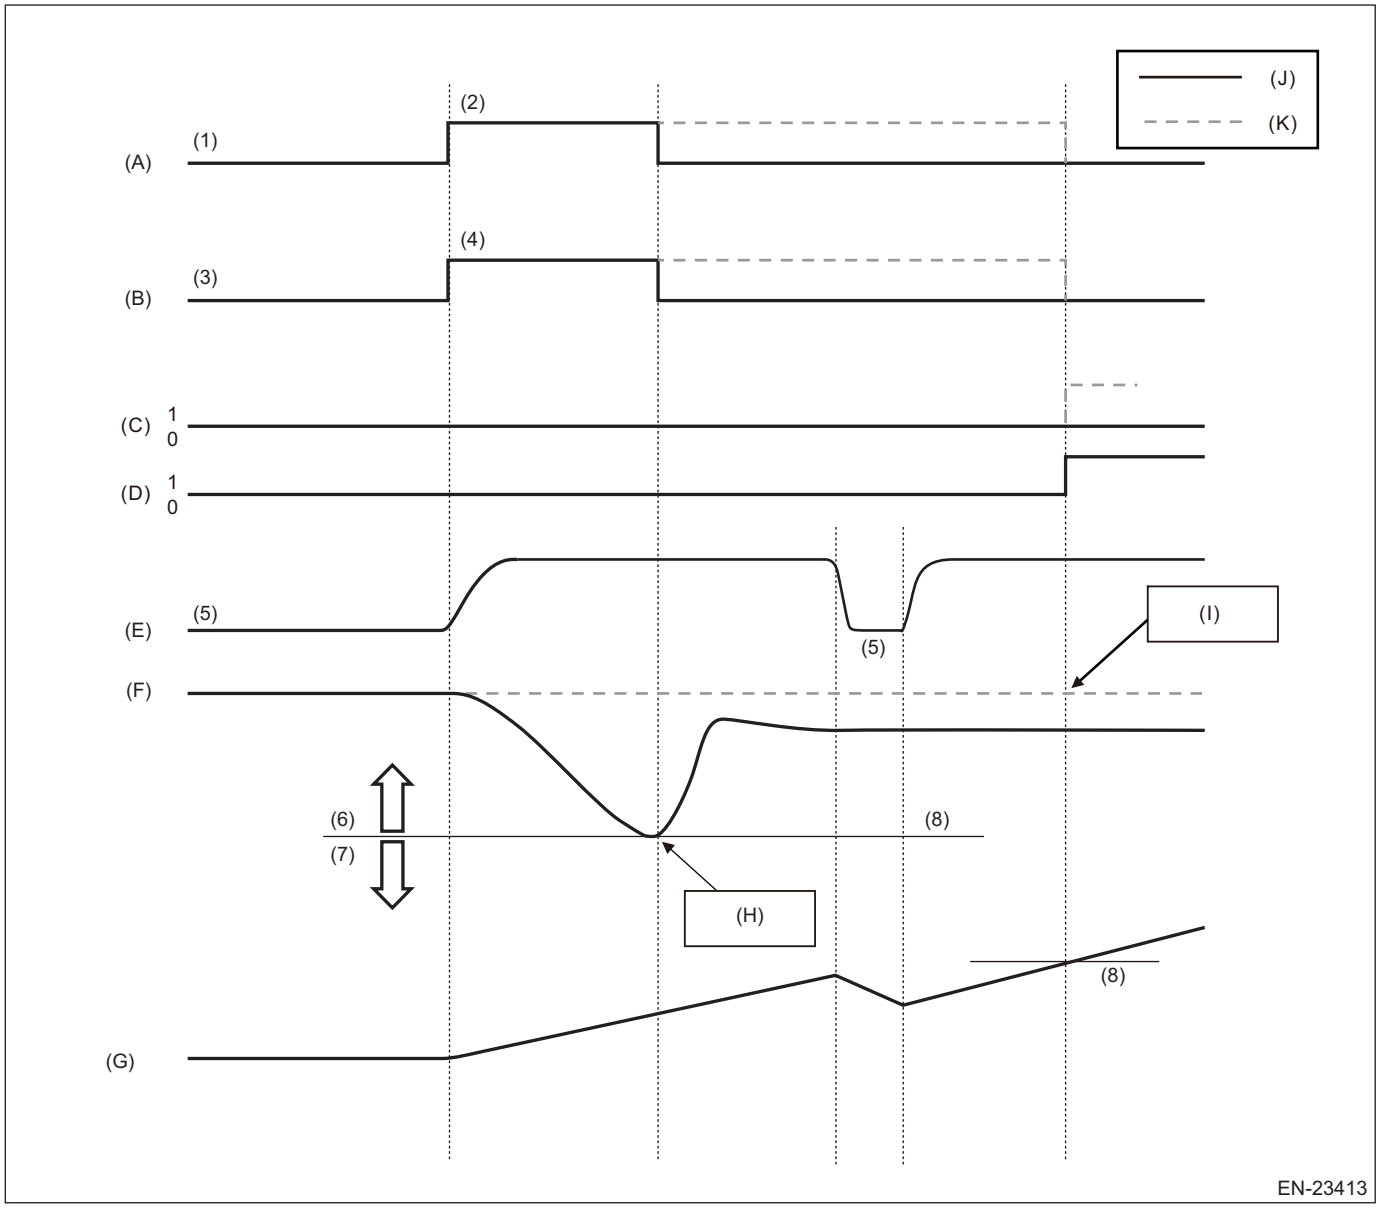
* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after engine start.

4. DIAGNOSTIC METHOD

Close the Evaporative Leak Check Module switching valve, and close the fuel tank completely, and perform the forced purging. If pressure change amount is 667 Pa (5 mmHg, 0.2 inHg) or less, judge as malfunction of purge flow.



(1)	Disable	(4)	Close	(7)	Pass
(2)	Enable	(5)	0%	(8)	Threshold
(3)	Open	(6)	Fail		

(A)	Monitoring	(E)	Purge control duty ratio	(I)	Abnormality Judgment
(B)	Evaporative leak system switching valve	(F)	Evaporative leak system pressure (gauge)	(J)	Normal
(C)	Malfunction flag	(G)	Sum value (purge gas – generated evaporating gas)	(K)	Trouble
(D)	Molecule	(H)	Pass Judgment		

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Evaporative Leak Check Module pressure (gauge)	> –400 Pa (–3 mmHg, –0.1 inHg)
Integrated purge gas amount	≥ 3 g (0.11 oz)*

* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.

Time needed for diagnosis: Less than 1 second

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

CY:DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Fuel odor
- There is a hole of more than 1 mm (0.04 in) dia. in evaporation system or fuel tank.
- Fuel filler cap loose or lost

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK FUEL FILLER CAP.** 1) Turn the ignition switch to OFF. 2) Check the fuel filler cap. NOTE: The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain has caught while tightening.	Is the fuel filler cap tightened securely?	Go to step **2**.	Tighten fuel filler cap securely.
2	**CHECK FUEL FILLER CAP.** Check the fuel filler cap.	Is the fuel filler cap genuine?	Go to step **3**.	Replace with a genuine fuel filler cap.
3	**CHECK FUEL FILLER PIPE GASKET.** Check the fuel filler pipe gasket.	Is there any damage to the seal between fuel filler cap and fuel filler pipe?	Repair or replace the fuel filler cap and fuel filler pipe. <Ref. to FU(w/o STI)-156, Fuel Filler Pipe.>	Go to step **4**.
4	**CHECK PURGE CONTROL SOLENOID VALVE.** Check air-tightness of the purge control solenoid valve. <Ref. to EC(w/o STI)-30, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step **5**.	Replace the purge control solenoid valve. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>
5	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** Check the line of evaporative emission control system.	Are there holes on the evaporation line?	Repair or replace the evaporation line. <Ref. to FU(w/o STI)-192, Fuel Delivery and Evaporation Lines.>	Go to step **6**.
6	**CHECK CANISTER.** Check the canister.	Are there holes on the canister?	Replace the canister. <Ref. to EC(w/o STI)-8, Canister.>	Go to step **7**.
7	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the leak check valve assembly.	Are there damage or holes on the leak check valve assembly?	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Go to step **8**.
8	**CHECK FUEL TANK.** Remove the fuel tank. <Ref. to FU(w/o STI)-145, Fuel Tank.>	Are there damage or holes on the fuel tank?	Repair or replace the fuel tank. <Ref. to FU(w/o STI)-145, Fuel Tank.>	Go to step **9**.

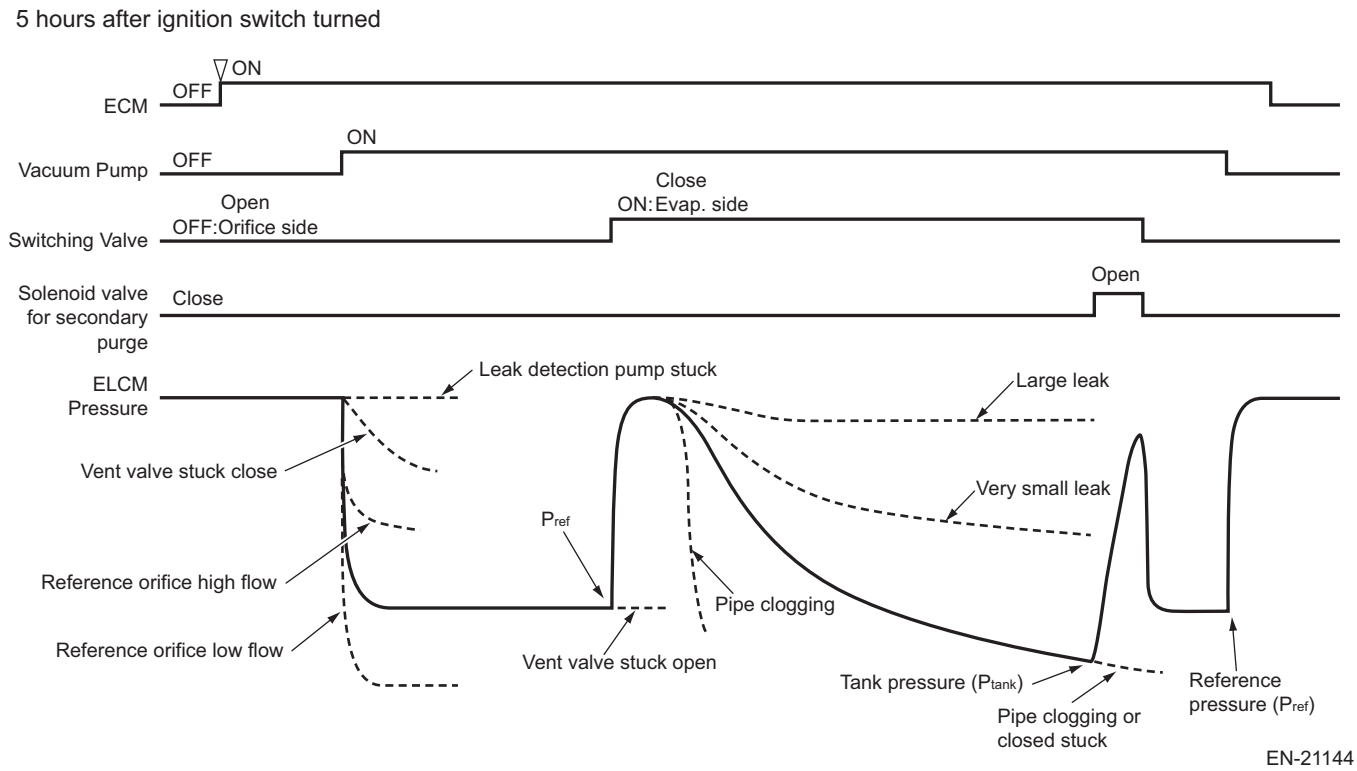
	Step	Check	Yes	No
9	**CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.** Check the condition of evaporative emission control system.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

This diagnosis judges whether the Evaporative Leak Check Module operation is normal or not, and whether the evaporative emission system has leak and clogging or not.
To purge the canister, after driving, perform the five hours soaking after ignition switch OFF in order to stabilize the evaporative gas status. * After 5 or 7 or 9.5 hours passed, ECM is activated by soaking timer, and the leak check is started.
Judges whether the Evaporative Leak Check Module operation is normal or not, by measuring the reference pressure status via reference orifice (0.02 inch orifice). Judge as malfunction if the reference pressure is out of specified range. Then, judge whether there is a leak or not, by comparing the pressure (leak pressure) when the reference pressure and the evaporative emission system are in negative pressure condition. Judge as system leak in the evaporative emission system if the leak pressure is higher than reference pressure. Judge as clogging of pipe if the leak pressure becomes lower than the reference pressure within the specified amount of time.
0.02 inch leak and 0.04 inch leak can be distinguished by measuring the leak pressure.
The diagnosis results are stored inside ECM until the engine is started again.
*: When the test conditions are not met in 5 hours, perform diagnosis at elapsed time of 7 hours. When the test conditions are not met in 7 hours, perform diagnosis at elapsed time of 9.5 hours.

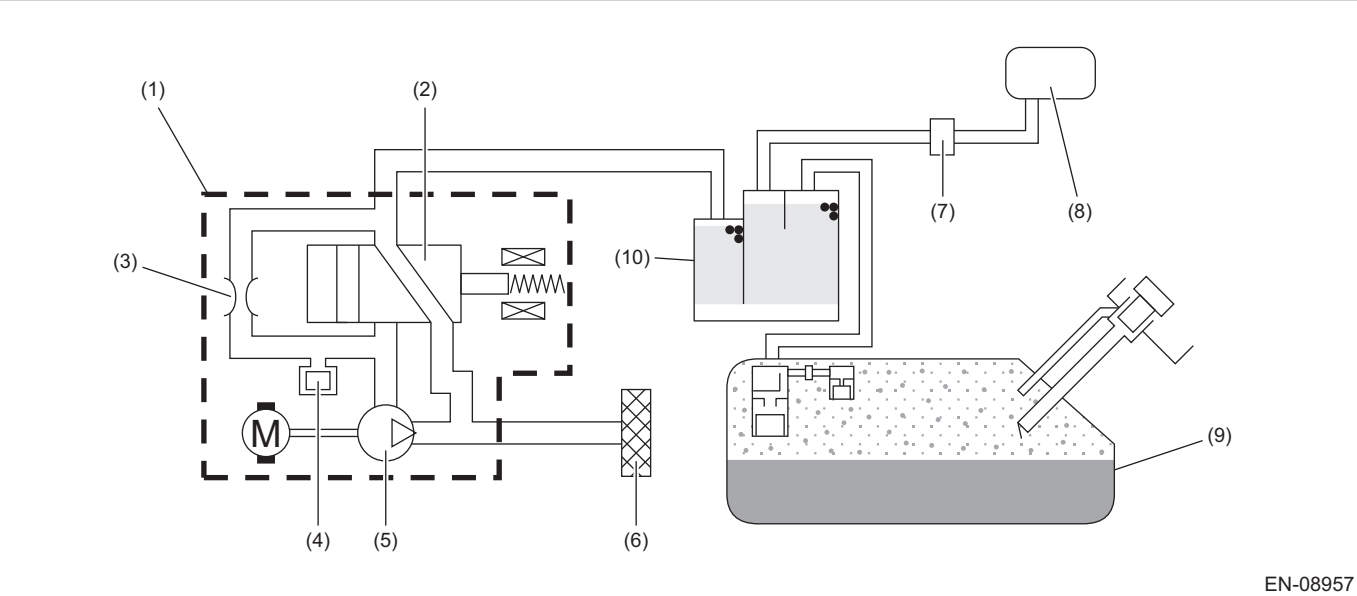
Diagnostic item	
Evaporative Leak Check Module system (leak check valve assembly main body)	Vacuum pump stuck Switching valve stuck to open Switching valve stuck to close Reference orifice flow large Reference orifice flow small
Leak check	Large leak • 0.04 inch leak • Fuel cap loose • Fuel cap off • System malfunction
	Very small leak • 0.02 inch leak
Clogging of pipe	—

OUTLINE OF DIAGNOSIS



2. COMPONENT DESCRIPTION

Evaporative Leak Check Module consists of the pressure sensor, the reference orifice (diameter of 0.02 inch), the vacuum pump which introduces the negative pressure into evaporative emission system, and the switching valve which switches the passage to introduce the negative pressure.



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Activation of soaking timer	Completed
Intake air temperature	≥ 4.4°C (39.9°F)
Engine oil temperature	≥ 4.4°C (39.9°F)
Engine coolant temperature	≥ 4.4°C (39.9°F) and < 45°C (113°F)
Accumulated purge amount during previous driving cycle	≥ Value of Map 1

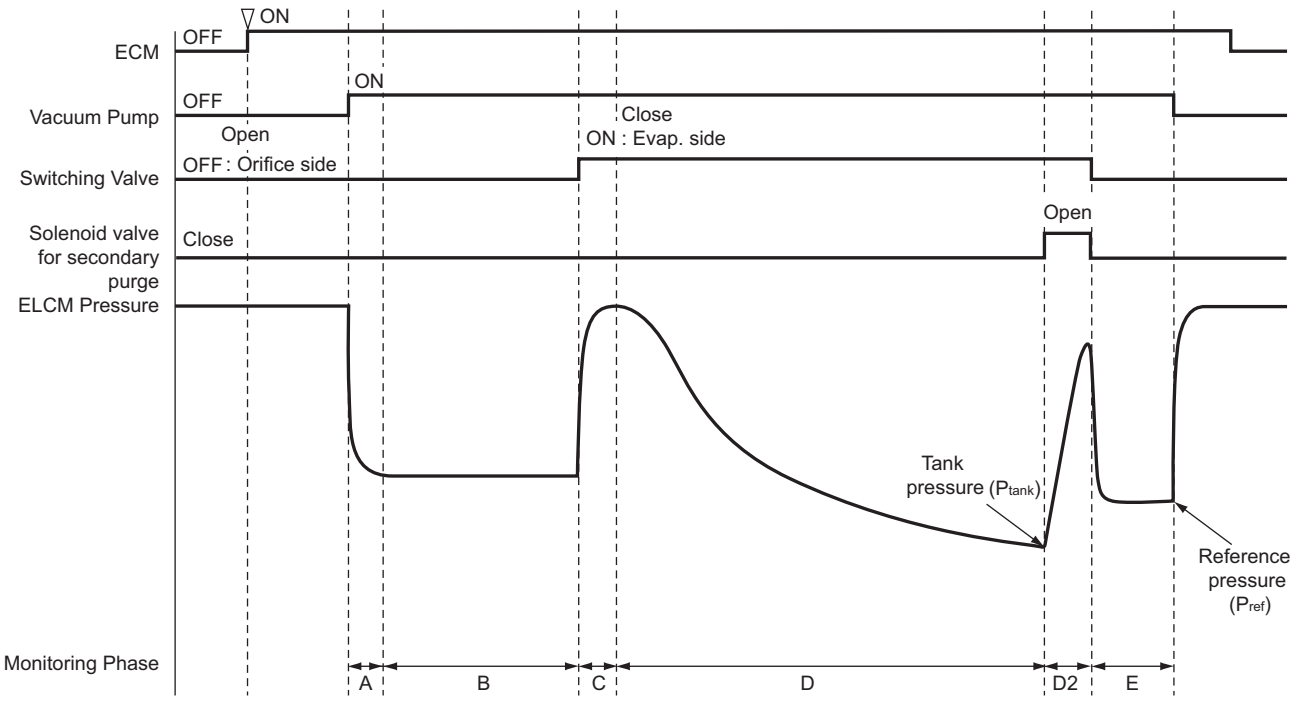
Map 1

Engine coolant temperature when ECM is activated after soak time (°C (°F))	0 (32)	30 (86)	35 (95)	40 (104)	45 (113)
Accumulated purge amount during previous driving cycle (g (oz))	129 (4.55)	129 (4.55)	427 (15.06)	711 (25.08)	996 (35.13)

4. GENERAL DRIVING CYCLE

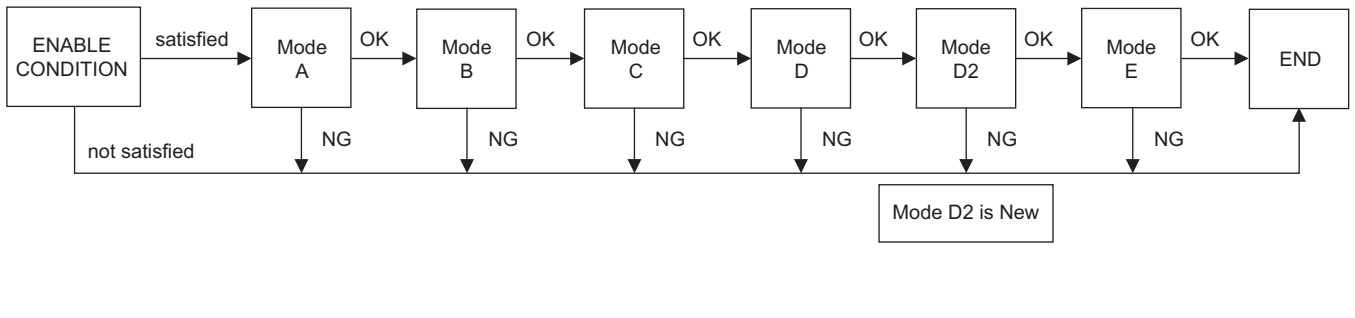
Perform the diagnosis only once when 5 or 7 or 9.5 hours has passed after ignition switch is OFF. For more detail, refer to “OUTLINE OF DIAGNOSIS”. <Ref. to EN(w/o STI)(diag)-466, OUTLINE OF DIAGNOSIS, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

5. DIAGNOSTIC METHOD



EN-23387

Mode	Explanation of Mode	Diagnosis Period
A	Vacuum pump operation confirmation and characteristics stability	7 s
B	Measurement of reference pressure for setting the target negative pressure	350 s
C	Switching valve operation confirmation	12 s
D	Pipe clogging diagnosis and leak pressure measurement	900 s
D2	Pipe clogging diagnosis of high-pressure line	60 s
E	Reference pressure measurement for judgment	50 s



EN-20167

Mode A (Vacuum pump operation confirmation and characteristics stability)

Purpose: Detect the vacuum pump operation trouble.
Judge as NG when the following conditions are established.
Judge as OK if the following conditions are not established, and warm up for five minutes to stabilize the vacuum pump characteristics.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value	> –224 Pa (–1.7 mmHg, –0.1 inHg)	P2404

Mode B (Measurement of reference pressure for setting the target negative pressure)

Judgment 1
Purpose: Judge the reference pressure stability.
Judge as NG when the following conditions are established.
Judgment 2
Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
<Judgment 1>		
|Pressure sensor maximum output value – Pressure sensor minimum output value|	> 493 Pa (3.7 mmHg, 0.1 inHg)	P2404
or		
<Judgment 2>		
Reference pressure for setting the target negative pressure	< Value of Map 2	P2404
or		
<Judgment 3>		
Reference pressure for judgment	> Value of Map 3	P2404

Map 2

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure (Pa (mmHg, inHg))	–3972 (–29.8, –1.2)	–4079 (–30.6, –1.2)	–4186 (–31.4, –1.2)	–4292 (–32.2, –1.3)

Map 3

Barometric pressure kPa (mmHg, inHg)	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for setting the target negative pressure (Pa (mmHg, inHg))	–942 (–7.1, –0.3)	–1048 (–7.9, –0.3)	–1155 (–8.7, –0.3)	–1262 (–9.5, –0.4)

Mode C (Switching valve operation confirmation)

Purpose: Measure the pressure increase when switching valve is changed from open to close, and detect the stuck to open/close malfunctions of the switching valve.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Pressure sensor output value – Reference pressure for setting the target negative pressure	< 224 Pa (1.7 mmHg, 0.1 inHg)	P2404

Mode D (Clogging of pipe diagnosis and leak pressure measurement)

1. **Clogging of pipe**
   Purpose: Measure the time required for the evaporative emission system to reach the target negative pressure by the vacuum pump, and detect the clogging of pipe trouble.
   Judge as clogging of pipe malfunction if the evaporative emission system reaches to the target negative pressure within the specified time.
2. **Leak pressure measurement**
   Purpose: Measure the pressure (leak pressure) when the evaporative emission system becomes the negative pressure by the vacuum pump.
   Store the pressure as a leak pressure while the following conditions are met.

Phase D

Judgment value

Malfunction Criteria	Threshold Value	DTC
<Phase D> When reaching to the target negative pressure	≤ 27000 ms	P1451
<Phase D2> Reference pressure for judgment of the target negative pressure	< –667 Pa (–5 mmHg, –0.2 inHg)	P04AF
<Large leak (0.04 inch)> Leak pressure	≥ Value of Map 4	P0455
<Very small leak (0.02 inch)> Leak pressure	> Reference pressure of 0.018 inch (Pa) and < Map 4 (Pa)	P0456

Map 4

Reference pressure (Pa (mmHg, inHg))	–4856 (–36.4, –1.4)	–4000 (–30, –1.2)	–2750 (–20.6, –0.8)	–1500 (–11.3, –0.4)	–824 (–6.2, –0.2)
Threshold Value (Pa (mmHg, inHg))	–1785 (–13.4, –0.5)	–1463 (–11, –0.4)	–991 (–7.4, –0.3)	–520 (–3.9, –0.2)	–265 (–2, –0.1)

Formula for threshold value = Reference pressure × 0.377 – 0.341
Time needed for diagnosis: 24 min

Mode E (Measurement of reference pressure for judgment)

Judgment 1
Purpose: Judge the reference pressure stability.
Judge as NG when the following conditions are established.
Judgment 2
Purpose: Judge whether the reference pressure is within the normal range, and detect the vacuum pump and orifice malfunctions. Judge the vacuum pump performance stability.
Judge as NG when the following conditions are established.
Judgment 3
Purpose: Judge the presence of evaporative emission system leak.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
<Judgment 1>		
|Pressure sensor maximum output value – Pressure sensor minimum output value|	> 493 Pa (3.7 mmHg, 0.1 inHg)	P2404
or		
<Judgment 2>		
Reference pressure for judgment	< Value of Map 5 or > Value of Map 6	P2404
or		
<Judgment 3>		
|Reference pressure for setting the target negative pressure – Reference pressure for judgment|	> 941 Pa (7.1 mmHg, 0.3 inHg)	P2404

Map 5

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment (kPa (mmHg, inHg))	–4.5 (–34.02, –1.3)	–4.6 (–34.815, –1.4)	–4.7 (–35.618, –1.4)	–4.9 (–36.42, –1.4)

Map 6

Barometric pressure (kPa (mmHg, inHg))	70 (525, 20.7)	80 (600, 23.6)	90 (675, 26.6)	100 (750, 29.5)
Reference pressure for judgment (kPa (mmHg, inHg))	–0.8 (–6.18, –0.2)	–0.9 (–6.983, –0.3)	–1 (–7.785, –0.3)	–1.1 (–8.58, –0.3)

Time needed for diagnosis: 24 min
Malfunction will be confirmed at next engine start.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

CZ:DTC P0456 EVAP SYSTEM (CPC) LEAK DETECTED (VERY SMALL LEAK)

NOTE:
For the diagnostic procedure, refer to DTC P0455. <Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DA:DTC P0458 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT LOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

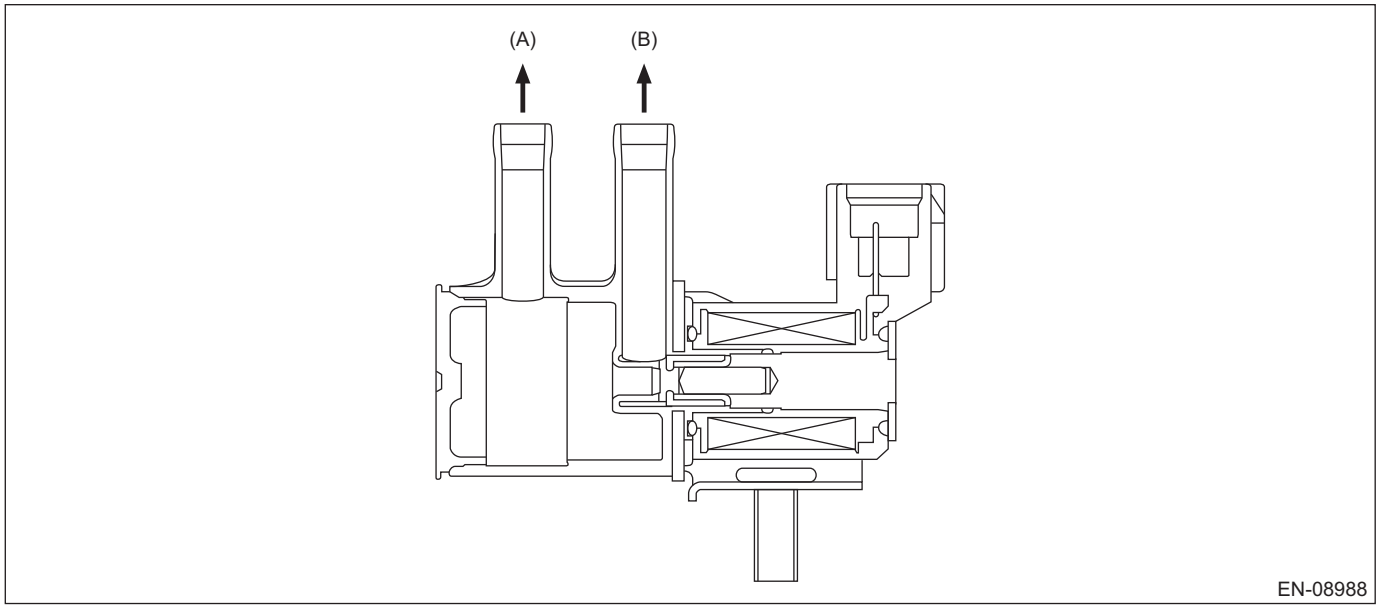
	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 4 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** Measure the voltage between purge control solenoid valve 1 connector and engine ground. ***Connector & terminal*** ***(E4) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 1. 4) Measure the resistance between the purge control solenoid valve 1 connector and engine ground. ***Connector & terminal*** ***(E4) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and purge control solenoid valve 1 connector.
5	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** Measure the resistance of harness between ECM connector and purge control solenoid valve 1 connector. ***Connector & terminal*** ***(E159) No. 4 — (E4) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit in harness between ECM connector and purge control solenoid valve 1 connector.
6	**CHECK PURGE CONTROL SOLENOID VALVE 1.** 1) Remove the purge control solenoid valve 1. 2) Measure the resistance between purge control solenoid valve 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair the poor contact of the purge control solenoid valve 1 connector.	Replace the purge control solenoid valve 1. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.

Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid valve control duty	≤ 80%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DB:DTC P0459 EVAP SYSTEM (CPC) PURGE CONTROL VALVE "A" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

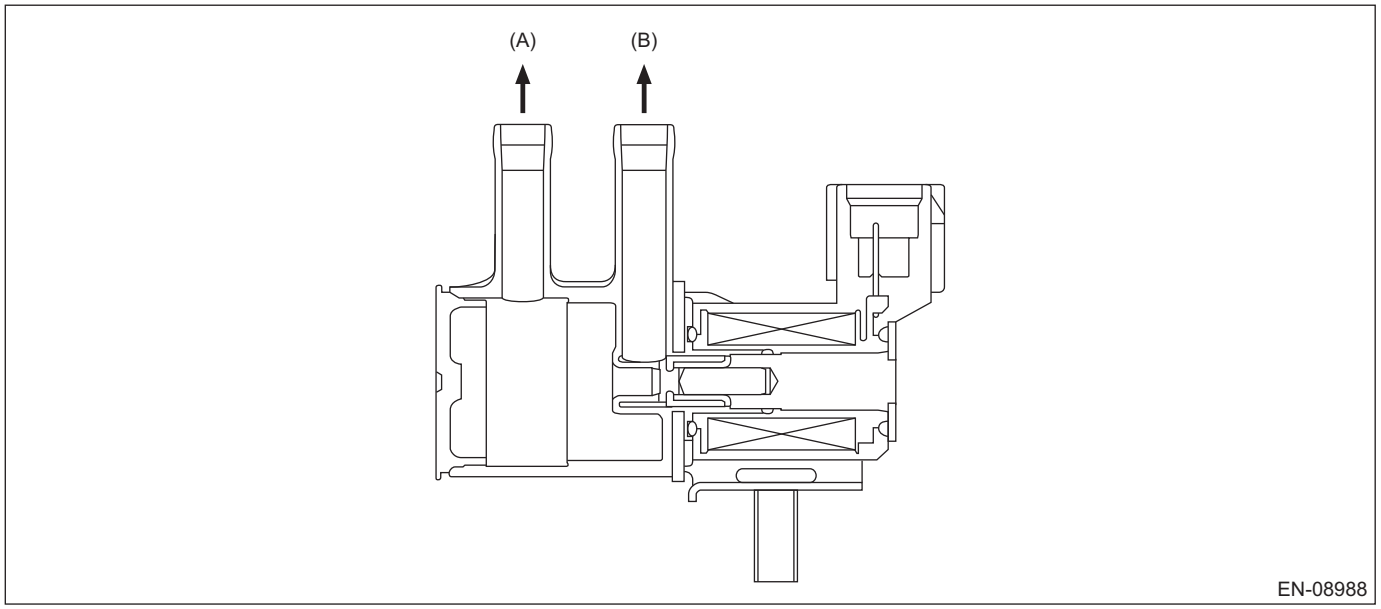
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 1. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 4 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and purge control solenoid valve 1 connector.	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE 1.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between purge control solenoid valve 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the purge control solenoid valve 1. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid valve control duty	≥ 20%

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 5 A

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DC:DTC P0461 FUEL LEVEL SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

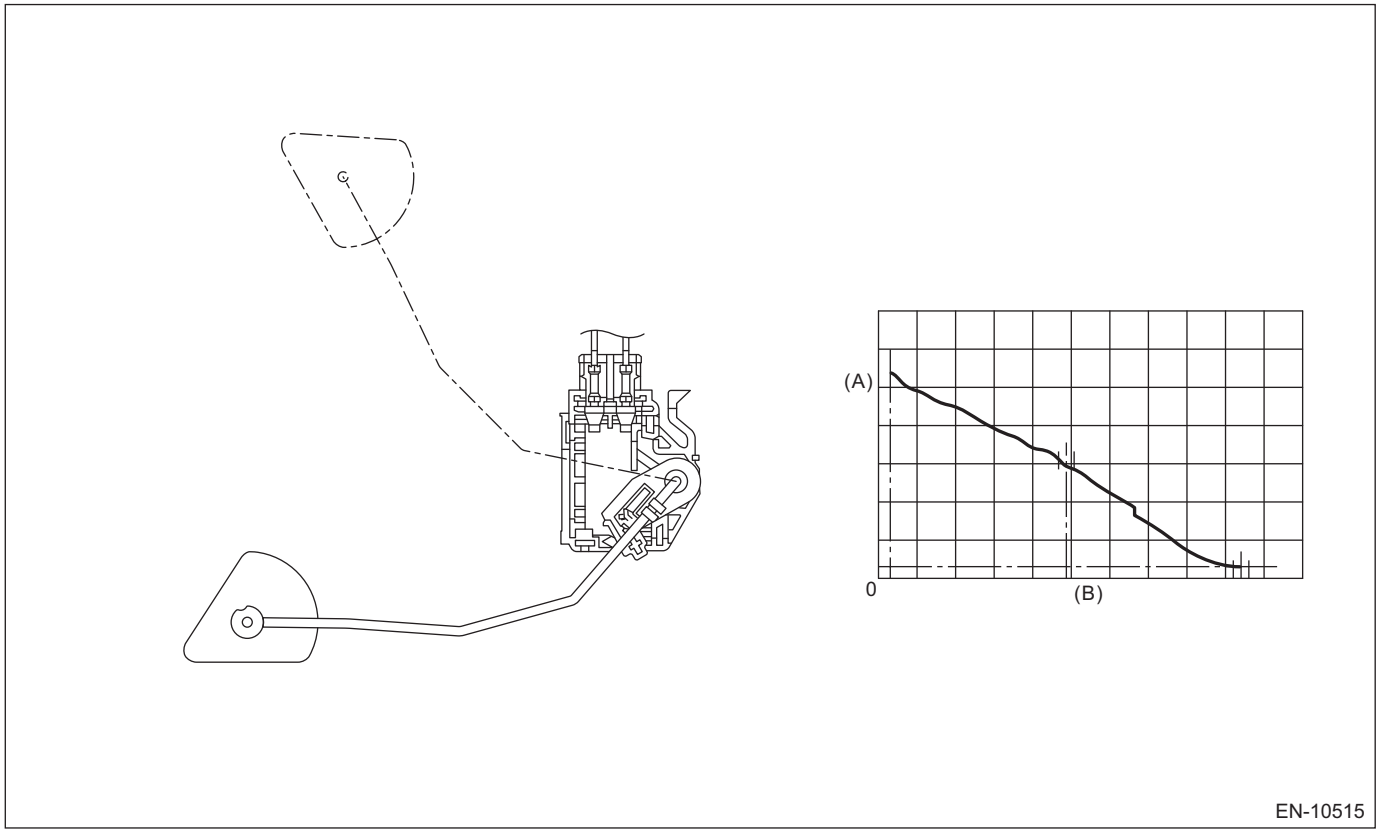
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0461 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the fuel level sensor and fuel sub level sensor. <Ref. to FU(w/o STI)-169, Fuel Level Sensor.> <Ref. to FU(w/o STI)-172, Fuel Sub Level Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect malfunctions of the fuel level sensor output property.
If the fuel level does not vary in a particular driving condition / engine condition where it should, judge as NG.

2. COMPONENT DESCRIPTION



(A) Fuel level (B) Resistance

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 5 s
Battery voltage	≥ 10.9 V
Fuel injection time sum value	≥ 1148.2 s

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Max. value – min. value of fuel level	< 3.646%

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

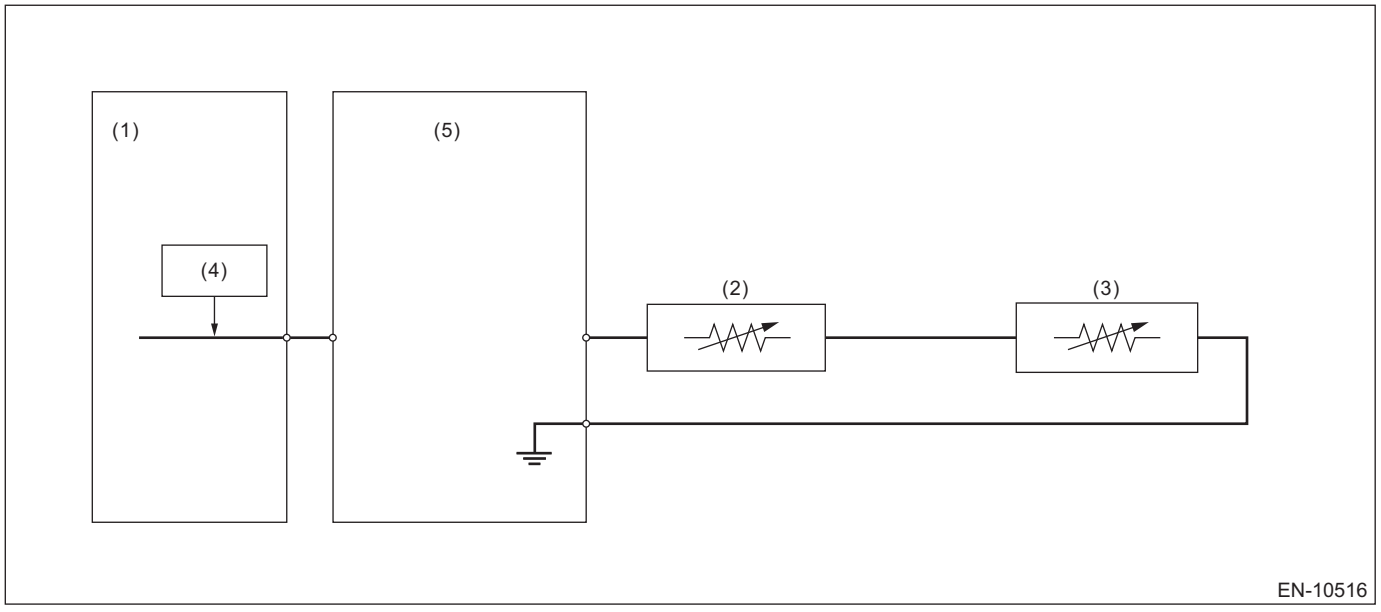
DD:DTC P0462 FUEL LEVEL SENSOR "A" CIRCUIT LOW

NOTE:
For the diagnostic procedure, refer to DTC P0463. <Ref. to EN(w/o STI)(diag)-483, DTC P0463 FUEL LEVEL SENSOR "A" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel level sensor. Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel sub level sensor
(3) Fuel level sensor
(4) Detecting circuit
(5) Combination meter

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 3000 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 2.21 V

Time needed for diagnosis: 2560 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DE:DTC P0463 FUEL LEVEL SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

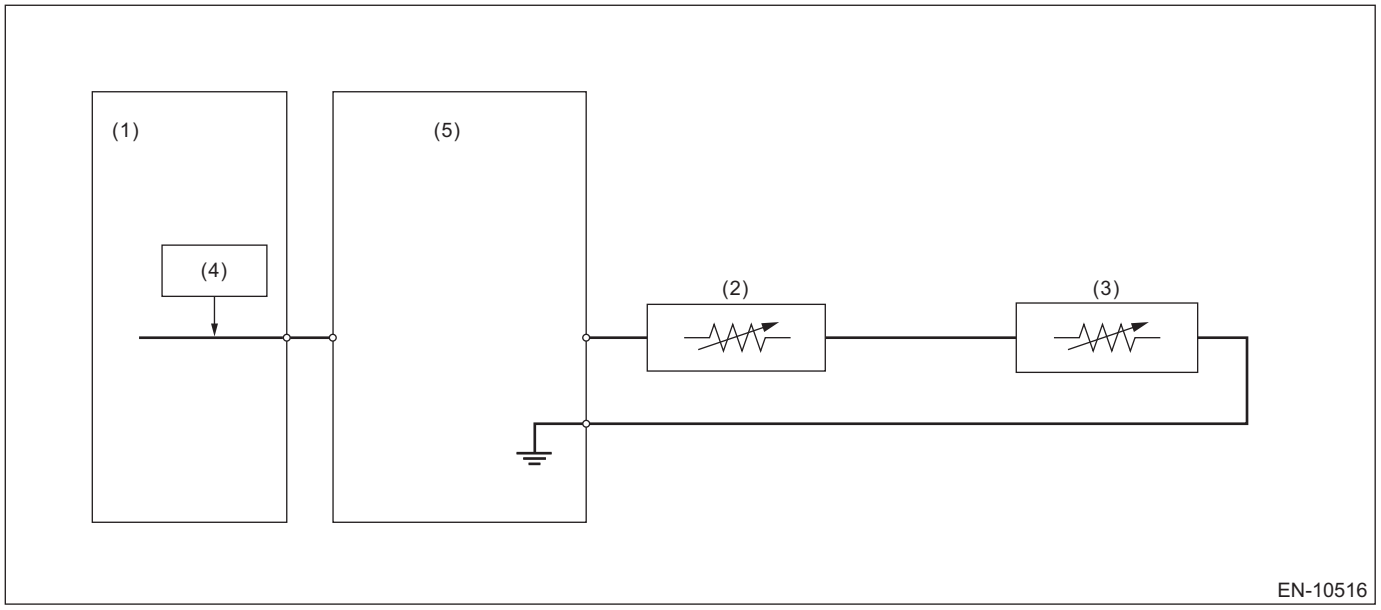
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTC P0462 or P0463 displayed? (Current malfunction)	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel level sensor. Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Fuel sub level sensor
(3) Fuel level sensor
(4) Detecting circuit
(5) Combination meter

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 3000 ms

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 12 V

Time needed for diagnosis: 1040 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DF:DTC P04AC EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT LOW

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

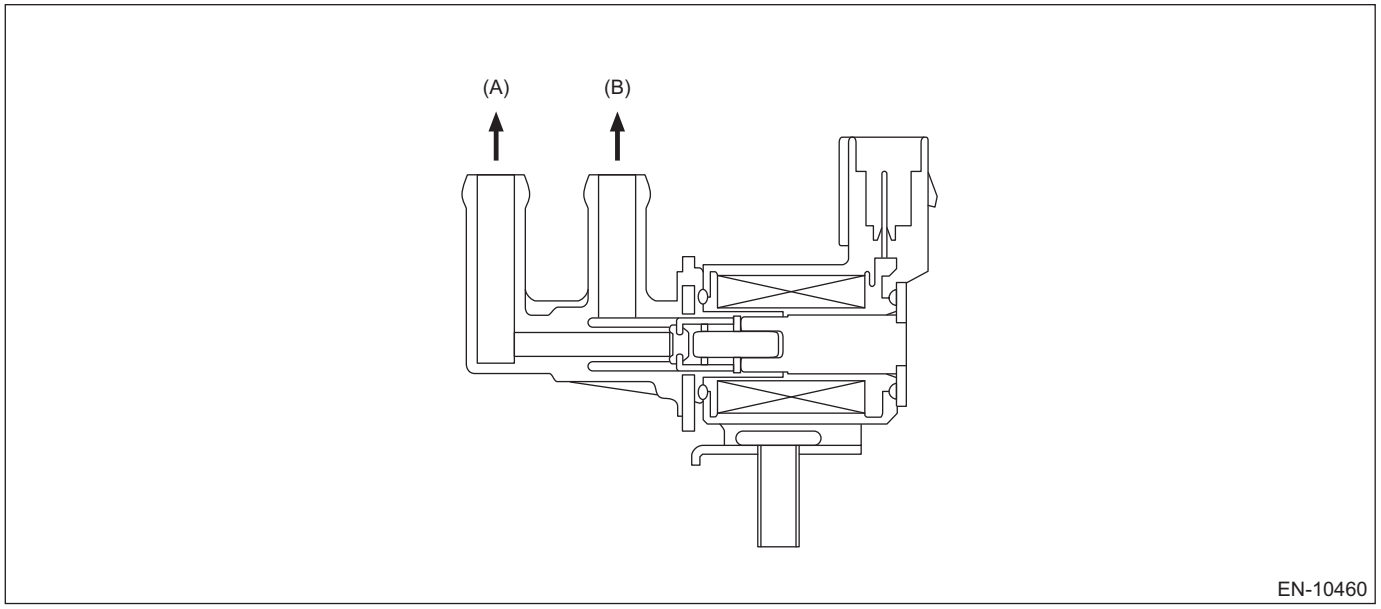
	Step	Check	Yes	No
1	**CHECK OUTPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 12 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** Measure the voltage between purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 2. 4) Measure the resistance between the purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the ground short circuit of harness between ECM connector and purge control solenoid valve 2 connector.
5	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** Measure the resistance of harness between ECM connector and purge control solenoid valve 2 connector. ***Connector & terminal*** ***(E159) No. 12 — (E52) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit in harness between ECM connector and purge control solenoid valve 2 connector.
6	**CHECK PURGE CONTROL SOLENOID VALVE 2.** 1) Remove the purge control solenoid valve 2. 2) Measure the resistance between purge control solenoid valve 2 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 10 — 100 Ω?	Repair the poor contact of the purge control solenoid valve 2 connector.	Replace the purge control solenoid valve 2. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve 2.

Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid valve 2 control signal	OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DG:DTC P04AD EVAP SYSTEM (CPC) PURGE CONTROL VALVE "B" CIRCUIT HIGH

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

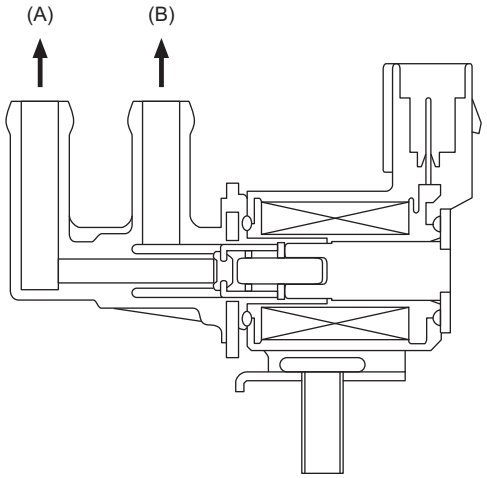
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from purge control solenoid valve 2. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 12 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and purge control solenoid valve 2 connector.	Go to step **2**.
2	**CHECK PURGE CONTROL SOLENOID VALVE 2.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between purge control solenoid valve 2 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Replace the purge control solenoid valve 2. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the purge control solenoid valve 2.
Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



EN-10460

(A) To canister (B) To intake manifold

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Purge control solenoid 2 control signal	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output current	≥ 5 A

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DH:DTC P04AF EVAP SYSTEM PURGE CONTROL VALVE (CPC) "B" STUCK CLOSED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK BETWEEN CANISTER AND PURGE CONTROL VALVE 2.** Check the piping between the canister and the purge control valve 2.	Is there clogging in the piping between the canister and the purge control valve 2?	Repair or replace the piping between the canister and the purge control valve 2. <Ref. to FU(w/o STI)-192, Fuel Delivery and Evaporation Lines.>	Go to step **2**.
2	**CHECK BETWEEN CANISTER AND PURGE CONTROL VALVE 2.** Check the piping between the canister and the purge control valve 2.	Is there closed stuck state in the piping between the canister and the purge control valve 2?	Repair or replace the purge control valve 2. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>	Go to step **3**.
3	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there clogging in the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve 2 and the turbocharger. <Ref. to IN(w/o STI)-58, Turbocharger.>	Go to step **4**.
4	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(w/o STI)(diag)-81, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P04AF displayed on the display? (Current malfunction)	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	End.

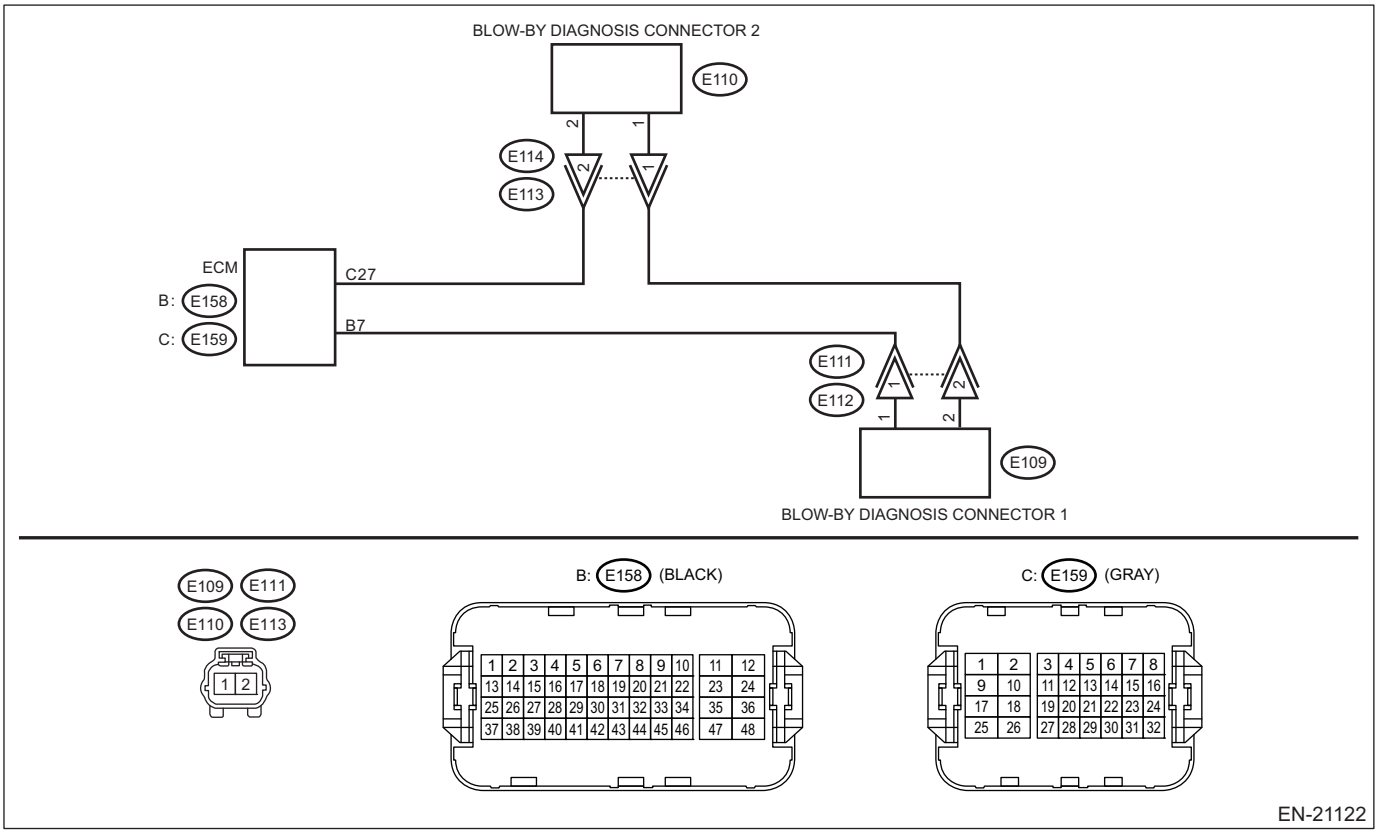
1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DI: DTC P04DB CRANKCASE VENTILATION SYSTEM (PCV) DISCONNECTED

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



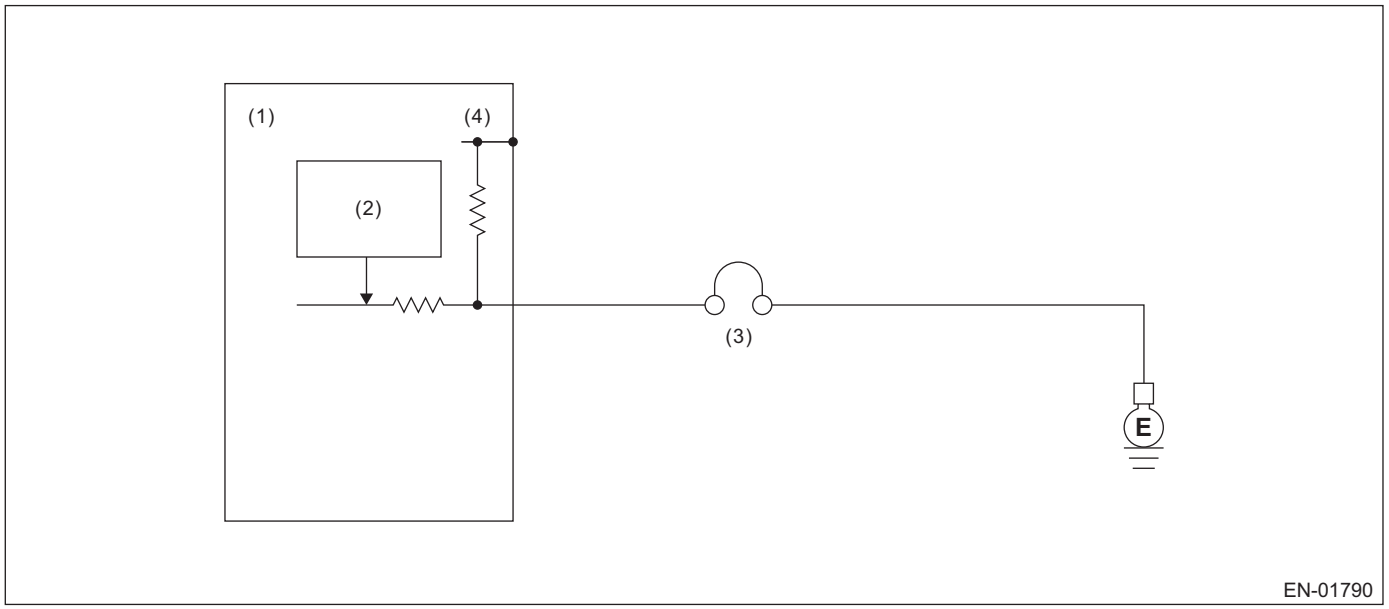
Step		Check	Yes	No
1	**CHECK BLOW-BY HOSE.** Check the blow-by hose condition.	Is there any disconnection or crack in blow-by hose?	Install or replace the blow-by hose.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND PCV HOSE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the PCV hose assembly. 4) Measure the resistance of harness between ECM connector and PCV hose assembly connector. ***Connector & terminal*** ***(E158) No. 7 — (E109) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and PCV hose assembly connector • Poor contact of coupling connector

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND PCV HOSE ASSEMBLY CONNECTOR.** Measure the resistance between PCV hose assembly connector and chassis ground. ***Connector & terminal*** ***(E158) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and PCV hose assembly connector.
4	**CHECK HARNESS BETWEEN LEAK DIAGNOSIS CONNECTORS.** Measure the resistance of harness between leak diagnosis connectors. ***Connector & terminal*** ***(E109) No. 2 — (E110) No. 1:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in the wiring harness between leak diagnosis connectors.
5	**CHECK GROUND CIRCUIT OF PCV HOSE ASSEMBLY.** Measure the resistance of harness between PCV hose assembly connector and engine ground. ***Connector & terminal*** ***(E110) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **6**.	Repair the open circuit in harness between PCV hose assembly connector and engine ground.
6	**CHECK PCV HOSE ASSEMBLY.** Measure the resistance between terminals of each leak diagnosis connector. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω at all measurement?	Repair the poor contact of ECM and PCV hose assembly connector.	Replace the PCV hose assembly. <Ref. to EC(w/o STI)-81, PCV Hose Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the blow-by hose disconnection abnormality.
Judge as NG when the diagnosis terminal voltage is high.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Detecting circuit
(3) PCV diagnosis connector
(4) 5 V

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Positive crankcase ventilation diagnosis voltage	> 2.8 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DJ:DTC P04F0 EVAP SYSTEM HIGH PRESSURE PURGE LINE (CPC2) PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

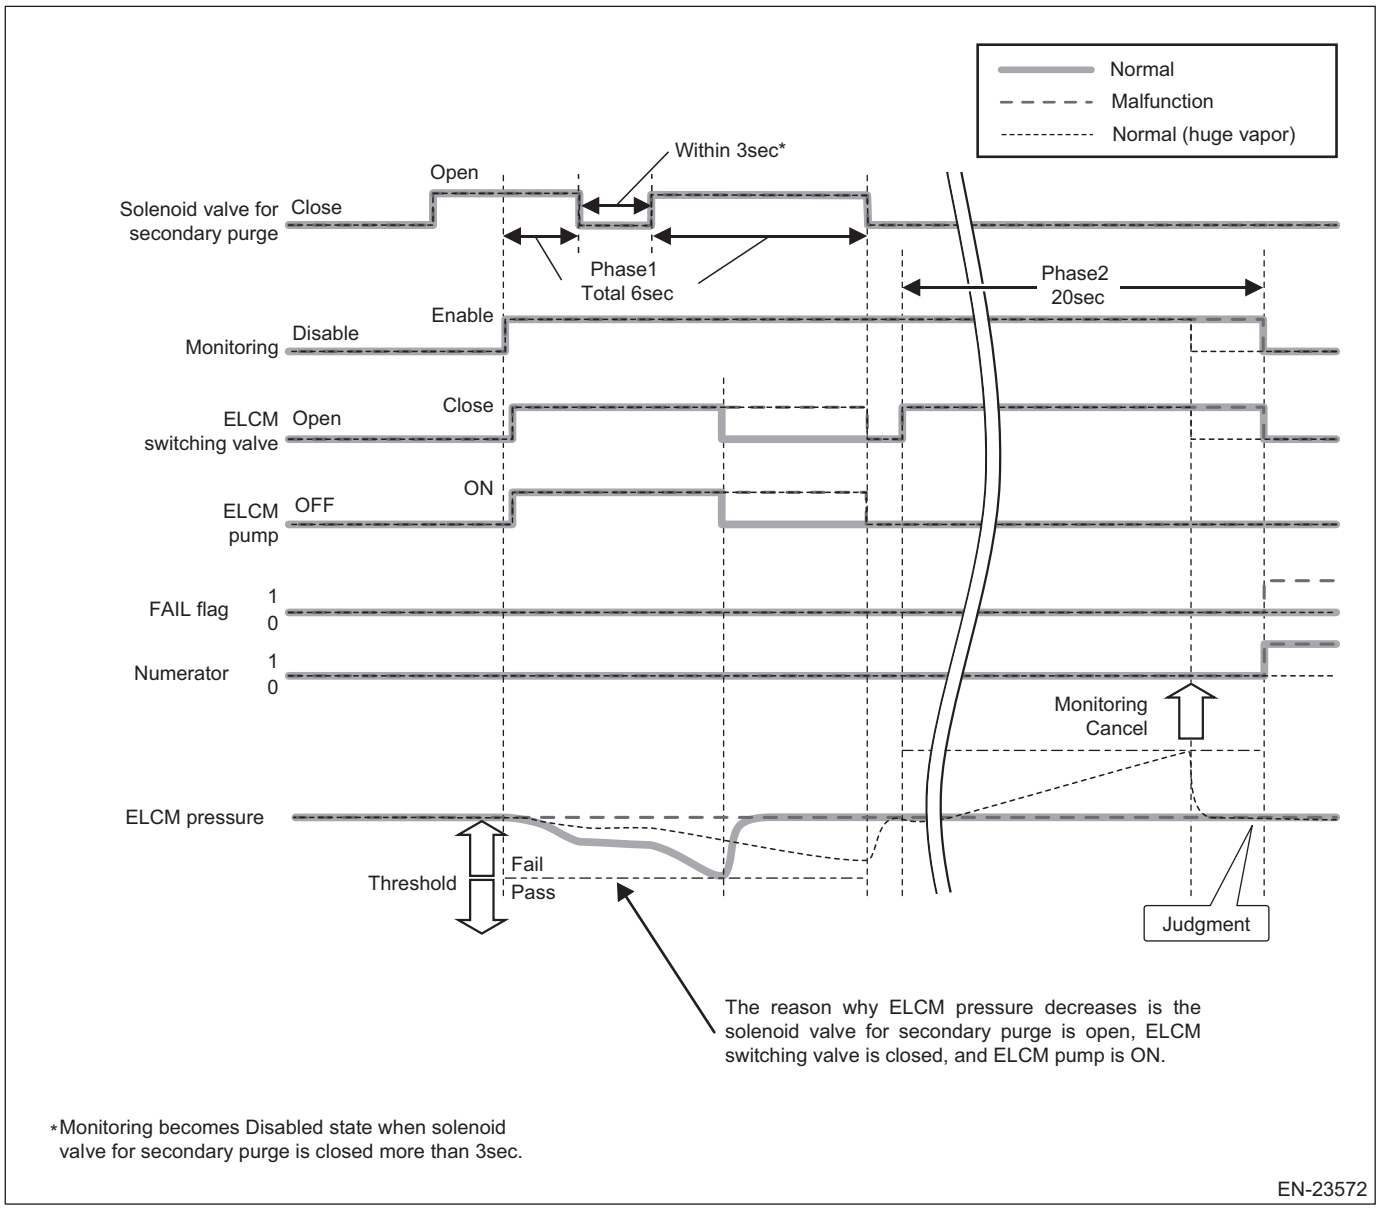
	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P04F0 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there dislocation of the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve 2 and the turbocharger. <Ref. to IN(w/o STI)-58, Turbocharger.>	Go to step **3**.
3	**CHECK PIPING BETWEEN PURGE CONTROL VALVE 2 AND TURBOCHARGER.** Check the piping between the purge control valve 2 and the turbocharger.	Is there clogging in the piping between the purge control valve 2 and the turbocharger?	Repair or replace the piping between the purge control valve and the turbocharger. <Ref. to IN(w/o STI)-58, Turbocharger.>	Go to step **4**.
4	**CHECK PURGE CONTROL VALVE 2.** Check the purge control valve 2.	Is there closed or open stuck state in the purge control valve 2?	Repair or replace the purge control valve 2 or leak check valve. <Ref. to EC(w/o STI)-86, PCV Valve.> <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Go to step **5**.
5	**CHECK PURGE CONTROL VALVE 1.** Check the main body of the purge control valve 1.	Is there any leakage in the main body of the purge control valve 1?	Repair or replace the purge control valve 1. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>	Go to step **6**.
6	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.** 1) Turn the ignition switch to OFF. 2) Make sure that the delivery mode fuse is removed.	Are there holes, cracks, clogging, or disconnection, misconnection of hoses or pipes in evaporative emission control system?	Repair or replace the hoses or pipes.	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK VACUUM PUMP OPERATION OF LEAK CHECK VALVE ASSEMBLY.** Check the vacuum pump operation of the leak check valve assembly. <Ref. to EC(w/o STI)-71, INSPECTION, Leak Check Valve Assembly.>	Does the vacuum pump operate?	Go to step **8**.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>
8	**CHECK SWITCHING VALVE OPERATION OF LEAK CHECK VALVE ASSEMBLY.** Check the switching valve operation of the leak check valve assembly. <Ref. to EC(w/o STI)-71, INSPECTION, Leak Check Valve Assembly.>	Does the switching valve operate?	End.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Monitor Method
This monitor intrusively performs a functional check to detect incorrect purge flow when the engine is running in very high boost conditions.
Theory of operation: At very high boost conditions, the pressure drop caused by the air filter creates a slight vacuum in the high pressure purge line. Refer to following Figure 1.
Phase 1: The monitor removes the air in EVAP system by closing the Evaporative Leak Check Module switching valve and Evaporative Leak Check Module pump is intrusively activated when the solenoid valve for high pressure purge is open and all enable conditions are satisfied. In the case of normal condition, Evaporative Leak Check Module pressure (gauge) will decrease to reach the threshold value. However, if the hose is disconnected, the Evaporative Leak Check Module pressure will remain above the threshold value.

Phase 2: Since there is a possibility that a large amount of EVAP vapor is generated during Phase 1, the monitor may determine a false fail. To prevent this condition, the EVAP system is sealed and the pressure is measured again after a predetermined time (following Phase 1). If the measured pressure exceeds a second threshold value, the monitor is cancelled. If the pressure does not reach the second threshold value, the monitor determines a malfunction (disconnection).



2. EXECUTION CONDITION

Secondary parameters	Execution condition
<Phase1>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Integrated purge air amount since engine starting	≥ 72 g (2.54 oz)*
Purge control duty ratio = 0% duration time	≥ 1 s
Ambient air temperature	> 4.4°C (39.9°F) and < 35°C (95°F)

Secondary parameters	Execution condition
Fuel level	≥ 9 L (2.38 US gal, 1.98 Imp gal)
Cumulative time for establishment of the following conditions	≥ 6 s
• Intake air amount per 1 second	> Map
• Second purge valve control	Open
<Phase2>	
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Fuel level	≥ 9 L (2.38 US gal, 1.98 Imp gal)
Establishing time of Phase 2	≥ 20 s

* It is approximately 2 sec per the integration of purge to reach 1g at vehicle speed of 40 MPH.

Map

Fuel level (L (US gal, Imp gal))	9 (2.38, 1.98)	10 (2.64, 2.2)	20 (5.28, 4.4)	30 (7.93, 6.6)	40 (10.57, 8.8)	50 (13.21, 11)	60 (15.85, 13.2)
Intake air amount per 1 second (g/s (oz/s))	80 (2.82)	80 (2.82)	60 (2.12)	60 (2.12)	60 (2.12)	60 (2.12)	60 (2.12)

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
<Phase1>	
Evaporative Leak Check Module pressure (gauge)	> –267 Pa (–2 mmHg, –0.08 inHg)
<Phase2>	
Evaporative Leak Check Module pressure (gauge)	< 267 Pa (2 mmHg, 0.08 inHg)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DK:DTC P0500 VEHICLE SPEED SENSOR "A" CIRCUIT

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC OF VDC.** Read the VDC DTC using the Subaru Select Monitor or general scan tool. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC of VDC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when outside of the judgment value.
Judge NG when the received data from VDCCM&H/U is abnormal vehicle speed, and the vehicle speed data is impossible.

2. COMPONENT DESCRIPTION

Vehicle speed signals are taken in to the VDC control module and hydraulic control unit, and normal/erroneous data of the ABS wheel speed sensor is received by CAN communication from the VDC control module and hydraulic control unit.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Speed of front wheels received from VDC control module & hydraulic control unit	≥ 300 km/h (186.4 MPH)

Time needed for diagnosis: 2560 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DL:DTC P0506 IDLE CONTROL SYSTEM RPM - LOWER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Hard to start the engine.
- Engine does not start.
- Improper idling
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0506 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK AIR CLEANER ELEMENT.** 1) Turn the ignition switch to OFF. 2) Check the air cleaner element.	Is there excessive clogging on air cleaner element?	Replace the air cleaner element. <Ref. to IN(w/o STI)-11, Air Cleaner Element.>	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Remove the electronic throttle control. <Ref. to FU(w/o STI)-15, REMOVAL, Throttle Body.> 2) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the DTC diagnosis. <Ref. to EN(w/o STI)(diag)-684, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Engine coolant temperature	≥ 60°C (140°F)
Vehicle speed	= 0 km/h (0 MPH)

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 10 s
Time of no change in park/neutral position switch	≥ 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Target engine speed	< – 100 rpm

Time needed for diagnosis: 15 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DM:DTC P0507 IDLE CONTROL SYSTEM RPM - HIGHER THAN EXPECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Engine keeps running at higher speed than specified idle speed.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0507 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK AIR INTAKE SYSTEM.** 1) Start and idle the engine. 2) Check the following items. • Loose installation of intake manifold and throttle body • Cracks of intake manifold gasket and throttle body gasket • Disconnection of vacuum hoses	Is there any fault in air intake system?	Repair air suction and leaks.	Go to step **3**.
3	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control. <Ref. to FU(w/o STI)-15, REMOVAL, Throttle Body.> 3) Check the electronic throttle control.	Are foreign matter found inside electronic throttle control?	Remove foreign matter from electronic throttle control.	Perform the DTC diagnosis. <Ref. to EN(w/o STI)(diag)-684, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling. Judge as NG when actual engine speed is not close to target engine speed during idling.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Lambda value (left and right)	≥ 0.85 and < 1.151
Engine coolant temperature	≥ 60°C (140°F)
Vehicle speed	= 0 km/h (0 MPH)

Secondary parameters	Execution condition
Elapsed time after starting the engine	≥ 10 s
Time of no change in park/neutral position switch	≥ 5 s
Cold start diagnosis	Not in operation
Main feedback	In operation
Idle speed control feedback	In operation

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at idling after warming up engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Actual engine speed – Target engine speed	> 200 rpm

Time needed for diagnosis: 15 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DN:DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine keeps running at higher speed than specified idle speed.
- Engine keeps running at a lower speed than the specified idle speed.
- Engine stalls.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

EN-21440

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P050A displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE OIL.** Check the engine oil.	Is there a proper amount of engine oil?	Go to step **3**.	Replace engine oil. <Ref. to LU(w/o STI)-11, REPLACEMENT, Engine Oil.>
3	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **4**.
4	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **5**.
5	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **6**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
6	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **7**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
7	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/min)?	Go to step **8**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
8	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature value from the value of «IAT Sensor #11». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **9**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 1 — Engine ground:*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 1 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 1 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 1 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **10**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
10	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **11**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
11	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **12**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
12	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>	Go to step **13**.
13	**CHECK CRANKSHAFT POSITION SENSOR PLATE.** Check the crankshaft position sensor plate.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(w/o STI)-242, Cylinder Block.>	Go to step **14**.
14	**CHECK INSTALLATION CONDITION OF TIMING CHAIN.** Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.>	Go to step **15**.

	Step	Check	Yes	No
15	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **16**.	Replace the electronic throttle control relay. <Ref. to FU(w/o STI)-132, Electronic Throttle Control Relay.>
16	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **17**.	Repair the open or short to ground in the power supply circuit.
17	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **18**.
18	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **19**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
19	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B134) No. 39 — (B225) No. 17:*** ***(B134) No. 11 — (B225) No. 14:***	Is the resistance less than 1 Ω?	Go to step **20**.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.
20	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from electronic throttle control. 3) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 18 — Engine ground:*** ***(E158) No. 17 — Engine ground:*** ***(E158) No. 29 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **21**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
21	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:*** ***(E57) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **22**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
22	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 17 — (E57) No. 1:*** ***(E158) No. 30 — (E57) No. 3:*** ***(E158) No. 29 — (E57) No. 4:***	Is the resistance less than 1 Ω?	Go to step **23**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
23	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **24**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
24	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **25**.
25	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 18 — (E158) No. 17:*** ***(E158) No. 18 — (E158) No. 29:***	Is the resistance 1 MΩ or more?	Go to step **26**.	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
26	**CHECK SENSOR OUTPUT.** 1) Connect all connectors. 2) Turn the ignition switch to ON. 3) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Main-Throttle Sensor» 0.60 — 0.65 V?	Go to step **27**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>
27	**CHECK SENSOR OUTPUT.** Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Sub-Throttle Sensor» 0.60 — 0.65 V?	Go to step **28**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>
28	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E159) No. 1 — (E57) No. 5:*** ***(E159) No. 2 — (E57) No. 6:***	Is the resistance less than 1 Ω?	Go to step **29**.	Repair the open circuit of harness between ECM connector and electronic throttle control.
29	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 5 (+) — Engine ground (–):*** ***(E57) No. 6 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **30**.
30	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 5 — Engine ground:*** ***(E57) No. 6 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **31**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
31	**CHECK ELECTRONIC THROTTLE CONTROL MOTOR HARNESS.** Measure the resistance between electronic throttle control connectors. ***Connector & terminal*** ***(E57) No. 5 — (E57) No. 6:***	Is the resistance 1 MΩ or more?	Go to step **32**.	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

Step		Check	Yes	No
32	**CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **33**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
33	**CHECK ELECTRONIC THROTTLE CONTROL.** Measure the resistance between electronic throttle control terminals. ***Terminals*** ***No. 5 — No. 6:***	Is the resistance 50 Ω or less?	Go to step **34**.	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>
34	**CHECK ELECTRONIC THROTTLE CONTROL.** Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Specified value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>

1. OUTLINE OF DIAGNOSIS

• When cold, the abnormality in the control of target engine speed increase is detected. (P050A)

Judge as NG if the idle speed diagnosis is NG.
• Idle speed diagnosis
Judge as NG when actual engine speed is not close to target engine speed at cold start.

• Detect malfunctions of the catalyst advanced idling retard angle control. (P050B)

Judge as NG when ECM is not controlling the angle properly during catalyst advanced idling retard angle control.
• Final ignition timing diagnosis
Judge as NG when actual retard amount is under the specified value at cold start.

2. EXECUTION CONDITION

<Idle speed diagnosis>

Secondary parameters	Execution condition	DTC
Battery voltage	≥ 10.9 V	P050A
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)	
Vehicle speed	≤ 1.9 km/h (1.2 MPH)	
Throttle position	< 0.312%	
Integrated value of intake air amount	< Value of Map 1	
Time of no change in park/neutral position switch	≥ 3000 ms	
Elapsed time after starting the engine	≥ 2000 ms	

<Final ignition timing diagnosis: idle>

Secondary parameters	Execution condition	DTC
Battery voltage	≥ 10.9 V	P050B
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)	

Secondary parameters	Execution condition	DTC
Throttle position	< 0.312%	
Integrated value of intake air amount	< Value of Map 1	
Time of no change in park/neutral position switch	≥ 3000 ms	
Target retard amount	≥ 8.5°CA	

<Final ignition timing diagnosis: non-idle>

Secondary parameters	Execution condition	DTC
Battery voltage	≥ 10.9 V	P050B
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)	
Integrated value of intake air amount	< Value of Map 2	
Target retard amount	≥ 8.5°CA	

Map 1 (CVT model)

Engine coolant temperature at engine starting (°C (°F))	–40 (–40)	–20 (–4)	0 (32)	10 (50)	20 (68)	30 (86)	40 (104)	50 (122)

3. GENERAL DRIVING CYCLE

Perform the diagnosis at cold start.

4. DIAGNOSTIC METHOD

• Idle speed diagnosis

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Actual engine speed – Target engine speed	< –300 rpm	P050A

Time needed for diagnosis: 7 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• Final ignition timing diagnosis: idle

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Final ignition timing – Ignition timing during CSERS * *: Ignition timing during CSERS (Cold Start Emission Reduction Strategy) = Base ignition timing – Retard amount	> 8.5°CA (CVT model) > 6.5°CA (MT model)	P050B

Time needed for diagnosis: 7 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

• Final ignition timing diagnosis: non-idle (CVT model only)

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value	DTC
Final ignition timing – Ignition timing during CSERS * *: Ignition timing during CSERS (Cold Start Emission Reduction Strategy) = Base ignition timing – Retard amount	> 8.5°CA	P050B

Time needed for diagnosis: 7 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

DO:DTC P050B COLD START IGNITION TIMING PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P050A. <Ref. to EN(w/o STI)(diag)-504, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P050A. <Ref. to EN(w/o STI)(diag)-504, DTC P050A COLD START IDLE CONTROL SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

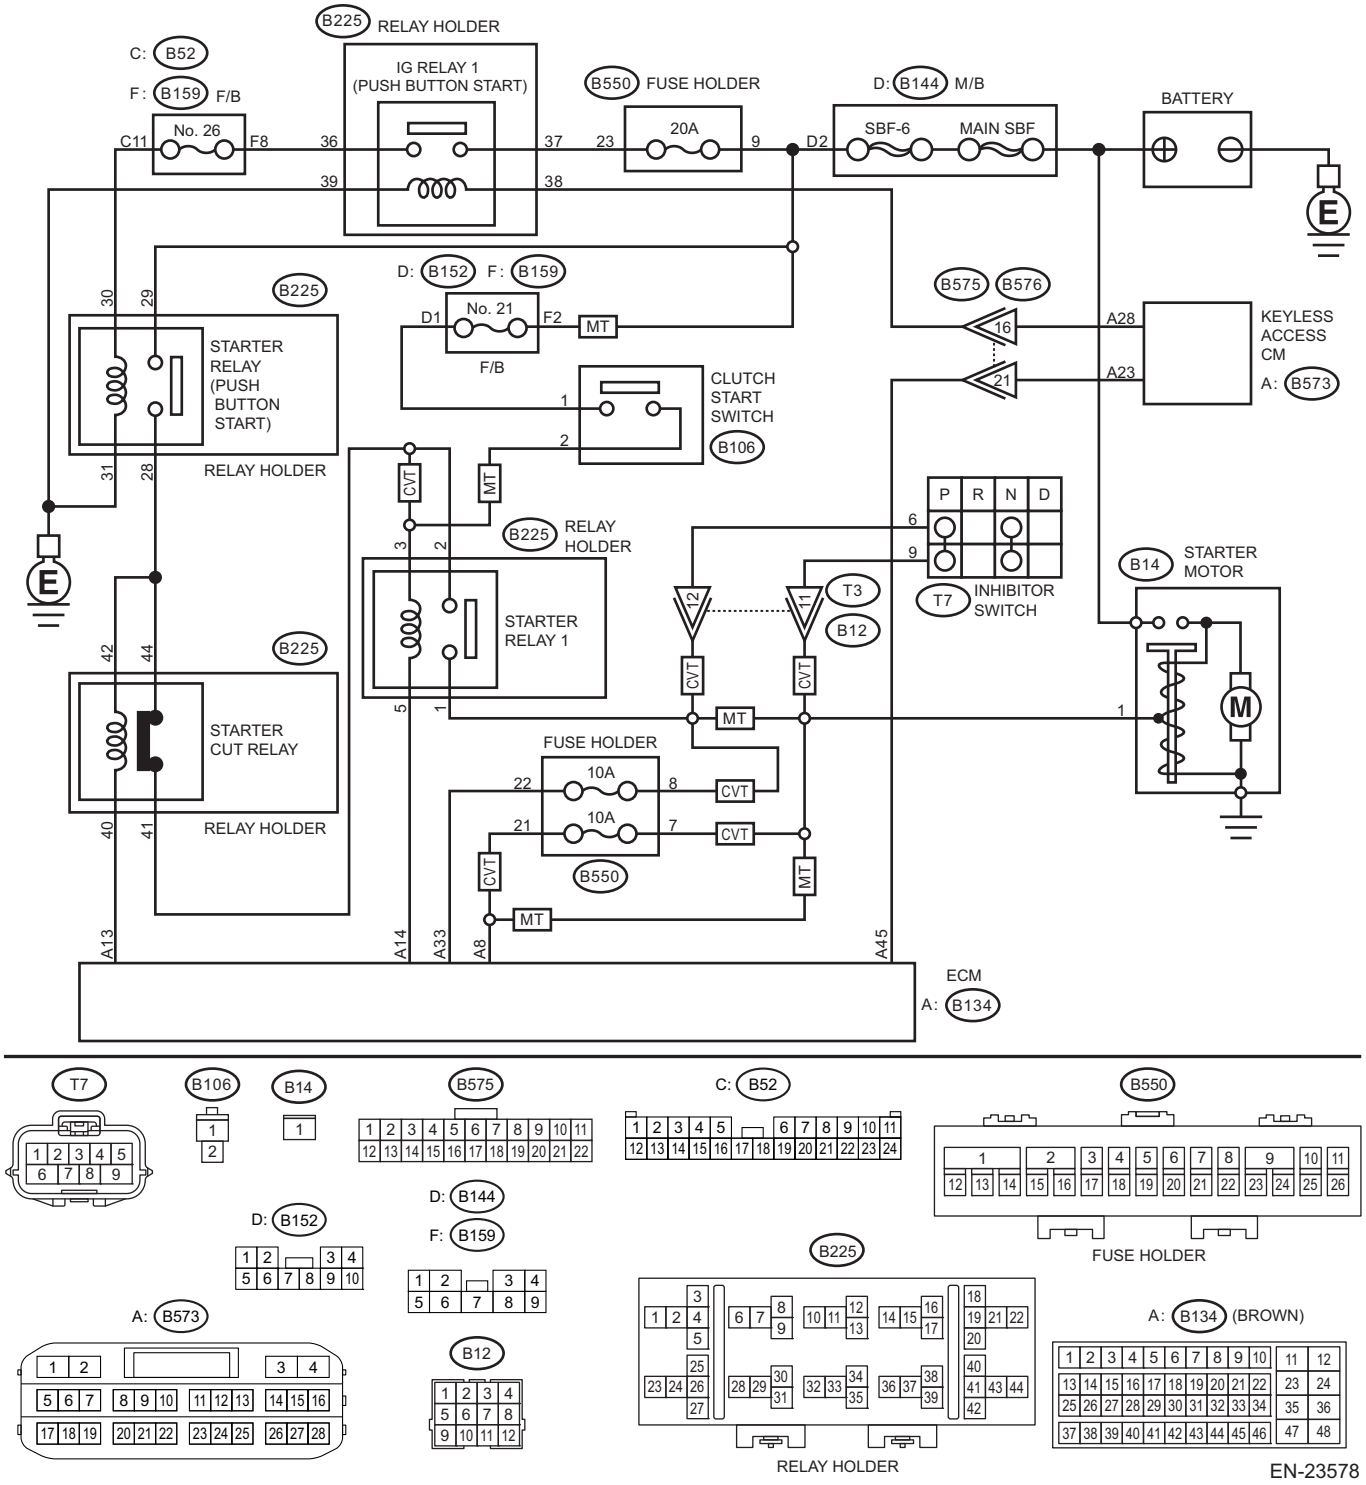
DP:DTC P0512 STARTER (SWITCH) REQUEST CIRCUIT

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-23578

Step		Check	Yes	No
1	**CHECK PUSH BUTTON IGNITION SWITCH.** Operate the push button ignition switch.	Does it operate smoothly without catch?	Go to step **2**.	Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>

Step		Check	Yes	No
2	**CHECK DTC.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Start and idle the engine for three minutes or more.	Is DTC P0512 output? (Current malfunction)	Go to step **3**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK HARNESS BETWEEN ECM AND KEYLESS ACCESS CM.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition to ON. 4) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 45 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power supply in harness between ECM connector and keyless access CM connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW.
Judge as ON NG when the starter SW signal remains ON.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 475 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as ON NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW1 voltage	≥ 6 V

Time needed for diagnosis: 30 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

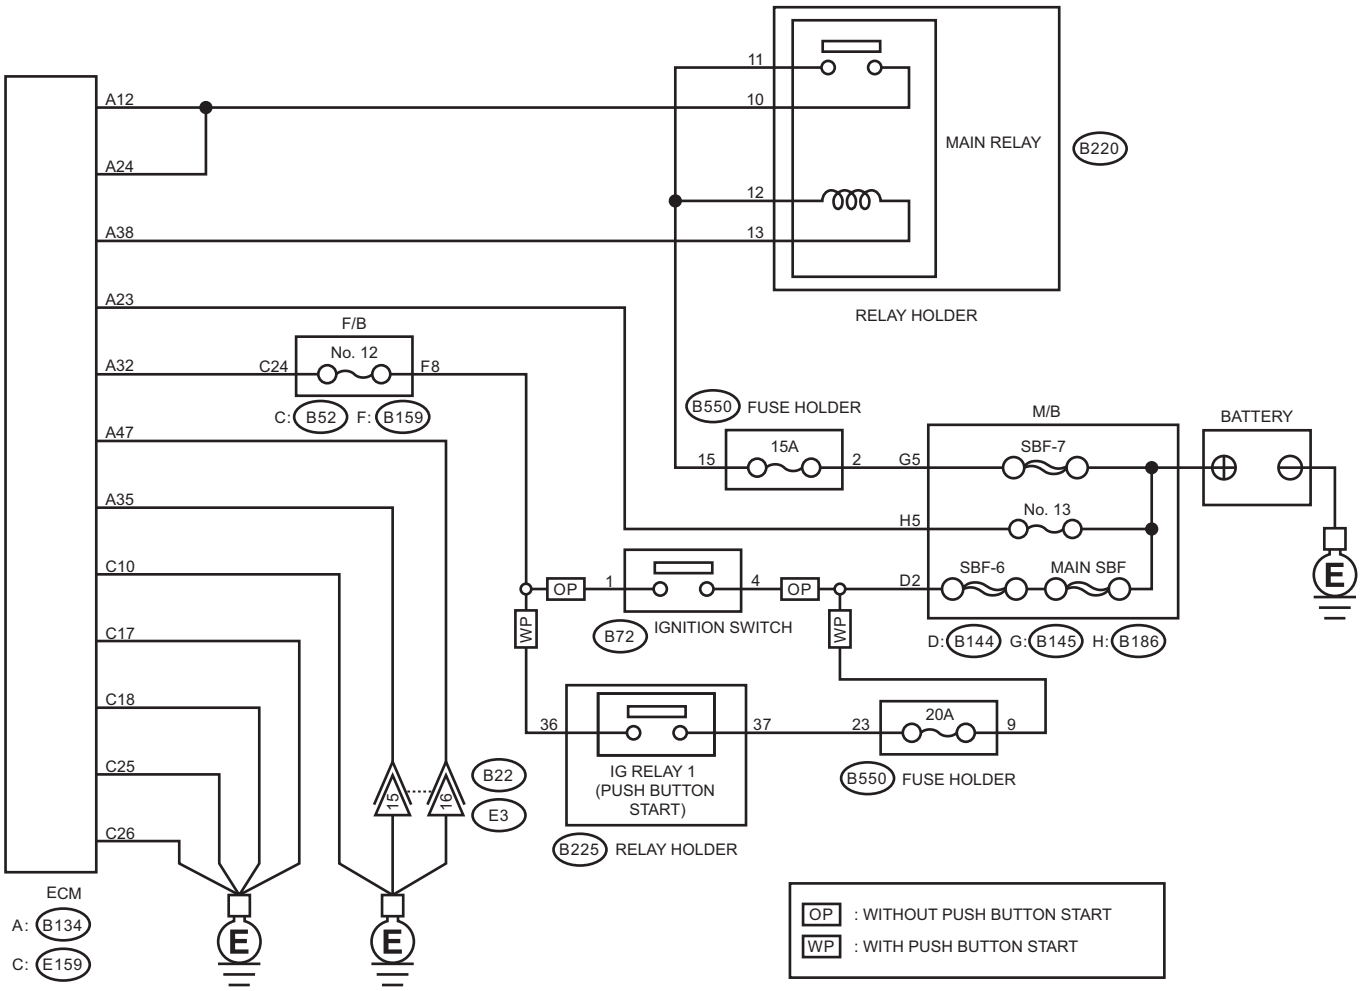
DQ:DTC P0560 SYSTEM VOLTAGE

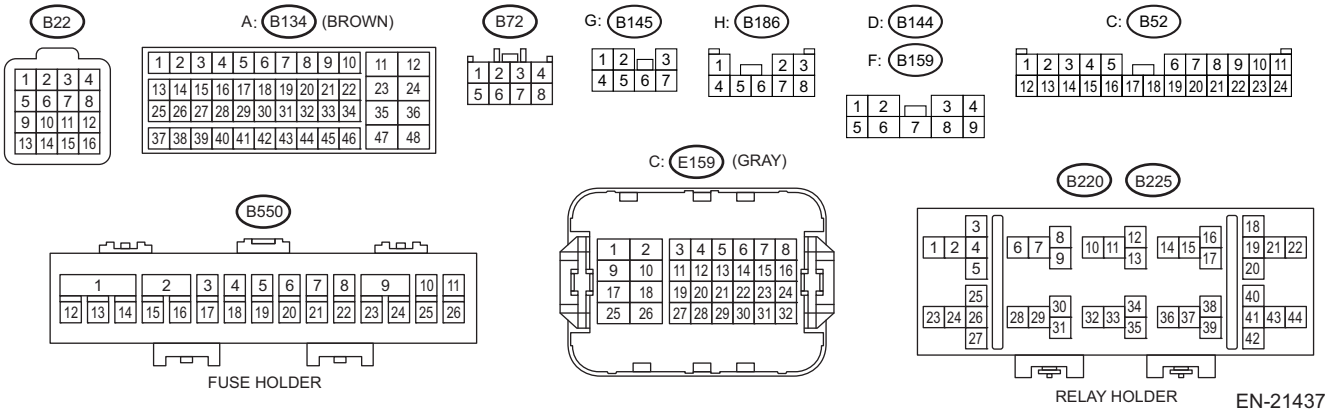
DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to OFF. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 23 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND MAIN FUSE BOX CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 23 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and battery terminal.
3	**CHECK FUSE NO. 13 (MAIN FUSE BOX).** Check the fuse No. 13.	Is the fuse blown out?	Replace the fuse.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and battery • Poor contact of ECM connector • Poor contact of battery terminal

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of back-up power supply circuit.
Judge as NG when the backup power voltage is low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Voltage of back-up power supply	< 6 V

Time needed for diagnosis: 2560 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DR:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine does not start.
- Engine stalls.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0604 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the functional malfunction of the microcomputer RAM.
When there is a problem in the CPU normal RAM, judge as NG.
If it is possible to write data to the whole area of RAM in the initial routine, and is possible to read the same data, it is judged as OK, and if not, NG.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
ECM initialization	Execution

Diagnosis with the initial routine.

3. GENERAL DRIVING CYCLE

Perform the diagnosis as soon as the ignition switch is turned to ON.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Write the specified value into the RAM.	Different from written value

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DS:DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(w/o STI)(diag)-524, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the SUM value of the microcomputer ROM is outside the standard value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
ECM initialization	Execution

3. GENERAL DRIVING CYCLE

Perform the diagnosis when the ignition switch is turned from OFF to ON.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Judgment value

Malfunction Criteria	Threshold Value
SUM value of ROM	Malfunction

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

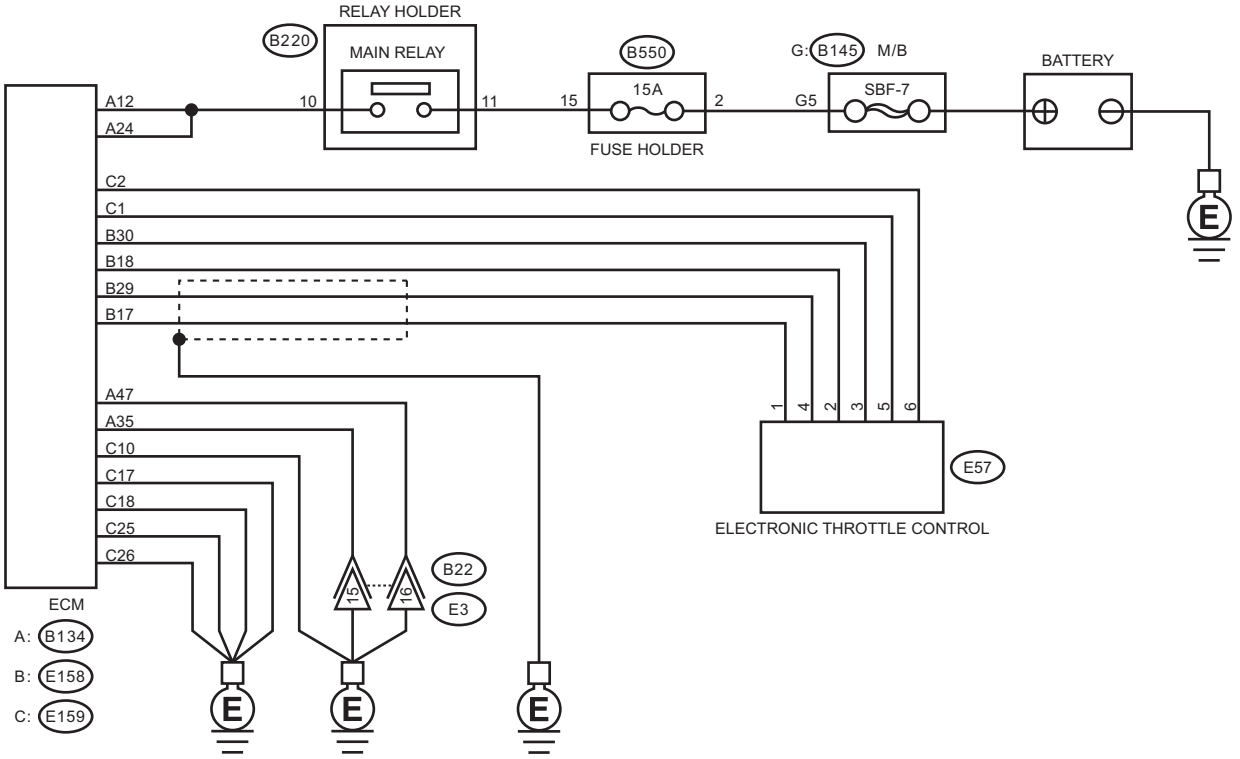
DT:DTC P0606 CONTROL MODULE PROCESSOR

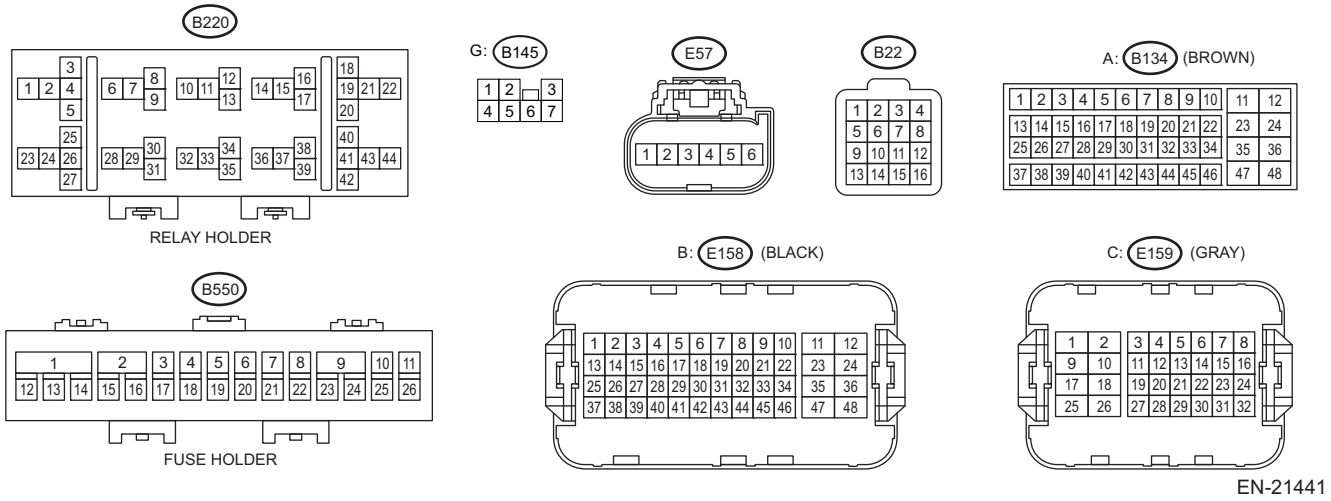
DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-21441

Step		Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 12 (+) — Engine ground (–):*** ***(B134) No. 24 (+) — Engine ground (–):***	Is the voltage 10 — 13 V?	Go to step **2**.	Repair the open or short to ground in the power supply circuit.

	Step	Check	Yes	No
2	**CHECK INPUT VOLTAGE OF ECM.** 1) Start the engine. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 12 (+) — Engine ground (–):*** ***(B134) No. 24 (+) — Engine ground (–):***	Is the voltage 13 — 15 V?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 18 — (E57) No. 2:*** ***(E158) No. 30 — (E57) No. 3:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
4	**CHECK ECM GROUND HARNESS.** 1) Connect all connectors. 2) Turn the ignition to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 (+) — Engine ground (–):*** ***(B134) No. 47 (+) — Engine ground (–):*** ***(E159) No. 10 (+) — Engine ground (–):*** ***(E159) No. 17 (+) — Engine ground (–):*** ***(E159) No. 18 (+) — Engine ground (–):*** ***(E159) No. 25 (+) — Engine ground (–):*** ***(E159) No. 26 (+) — Engine ground (–):***	Is the voltage less than 1 V?	Check the connector for poor contact and check the harness. Replace the ECM if no fault is found. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in ground circuit • Loose engine ground terminal • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Judge as NG when any one of the followings is established.
Judgment1:
When the input amplifier circuit operation of throttle position sensor 1 is abnormal.
Judgment2:
When the learning value of backup RAM is incorrect.
Judgment3:
When SUM value of backup RAM is outside the standard value.
Judgment4:
When the communication between main CPU and sub CPU is abnormal.
Judgment5:
If the CPU operation is abnormal.
Judgment6:
If the CPU operation is abnormal (FPU check).

2. EXECUTION CONDITION

Judgment1,3:

Secondary parameters	Execution condition
ECM initialization	Execution

Judgment2:

Secondary parameters	Execution condition
Ignition switch	OFF → ON

Judgment4,5,6:

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

3. GENERAL DRIVING CYCLE

Judgment1,3:
Perform the diagnosis only once.
Judgment2,4,5,6:
Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.
Judgment1:

Judgment value

Malfunction Criteria	Threshold Value
(1) Throttle minimum stop position	≥ 2.2 V

Judgment2:

Malfunction Criteria	Threshold Value
(2) The learned value of accelerator pedal position in back-up RAM area 1	≠ The learned value of accelerator pedal position in back-up RAM area 2

Judgment3:

Malfunction Criteria	Threshold Value
(3) The sum of back-up RAM at the ECM shut down	≠ The sum of back-up RAM at the ECM powered-on

Judgment4:

Malfunction Criteria	Threshold Value
(4) Communication between main CPU and sub CPU	Lost

Judgment5:

Malfunction Criteria	Threshold Value
(5) The calculated data of throttle control by main CPU	≠ The calculated data of throttle control by sub CPU

Judgment6:

Malfunction Criteria	Threshold Value
(6) The calculated data by main CPU	≠ The calculated data by FPU

Time needed for diagnosis:
Judgment1,2,3,4,5: Less than 1 s
Judgment6: 200 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DU:DTC P060A INTERNAL CONTROL MODULE MONITORING PROCESSOR PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(w/o STI)(diag)-524, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitoring IC operation is abnormal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when one of the following conditions is established.

Judgment value

Malfunction Criteria	Threshold Value
Communication status between main CPU and sub CPU	Malfunction

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DV:DTC P060B INTERNAL CONTROL MODULE A/D PROCESSING PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(w/o STI)(diag)-524, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the AD converter operation is abnormal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
| (A/D voltage for control – A/D voltage for observation)|	≥ 0.5 V

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when one of the following conditions is established.

Judgment value

Malfunction Criteria	Threshold Value
| (A/D voltage for control – previous A/D voltage for control)|	≤ 0.2 V
| (A/D voltage for observation – previous A/D voltage for observation)|	≤ 0.2 V

Time needed for diagnosis: 200 ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DW:DTC P0616 STARTER RELAY "A" CIRCUIT LOW

1. MODEL WITHOUT PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P0616 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the starter relay 1. 3) Disconnect the connector from ECM. 4) Disconnect the connector from starter motor. 5) Measure the resistance of harness between ECM connector and starter relay 1 connector. ***Connector & terminal*** ***(B134) No. 8 — (B225) No. 1:*** NOTE: For CVT model, place the select lever in "P" range or "N" range.	Is the resistance less than 1 Ω?	Go to step **3**.	NOTE: Check the following item and repair or replace if necessary. • Open circuit of harness between ECM connector and starter relay 1 connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.

2. MODEL WITH PUSH BUTTON START

Immediately at fault recognition

Trouble symptom:

Failure of engine to start

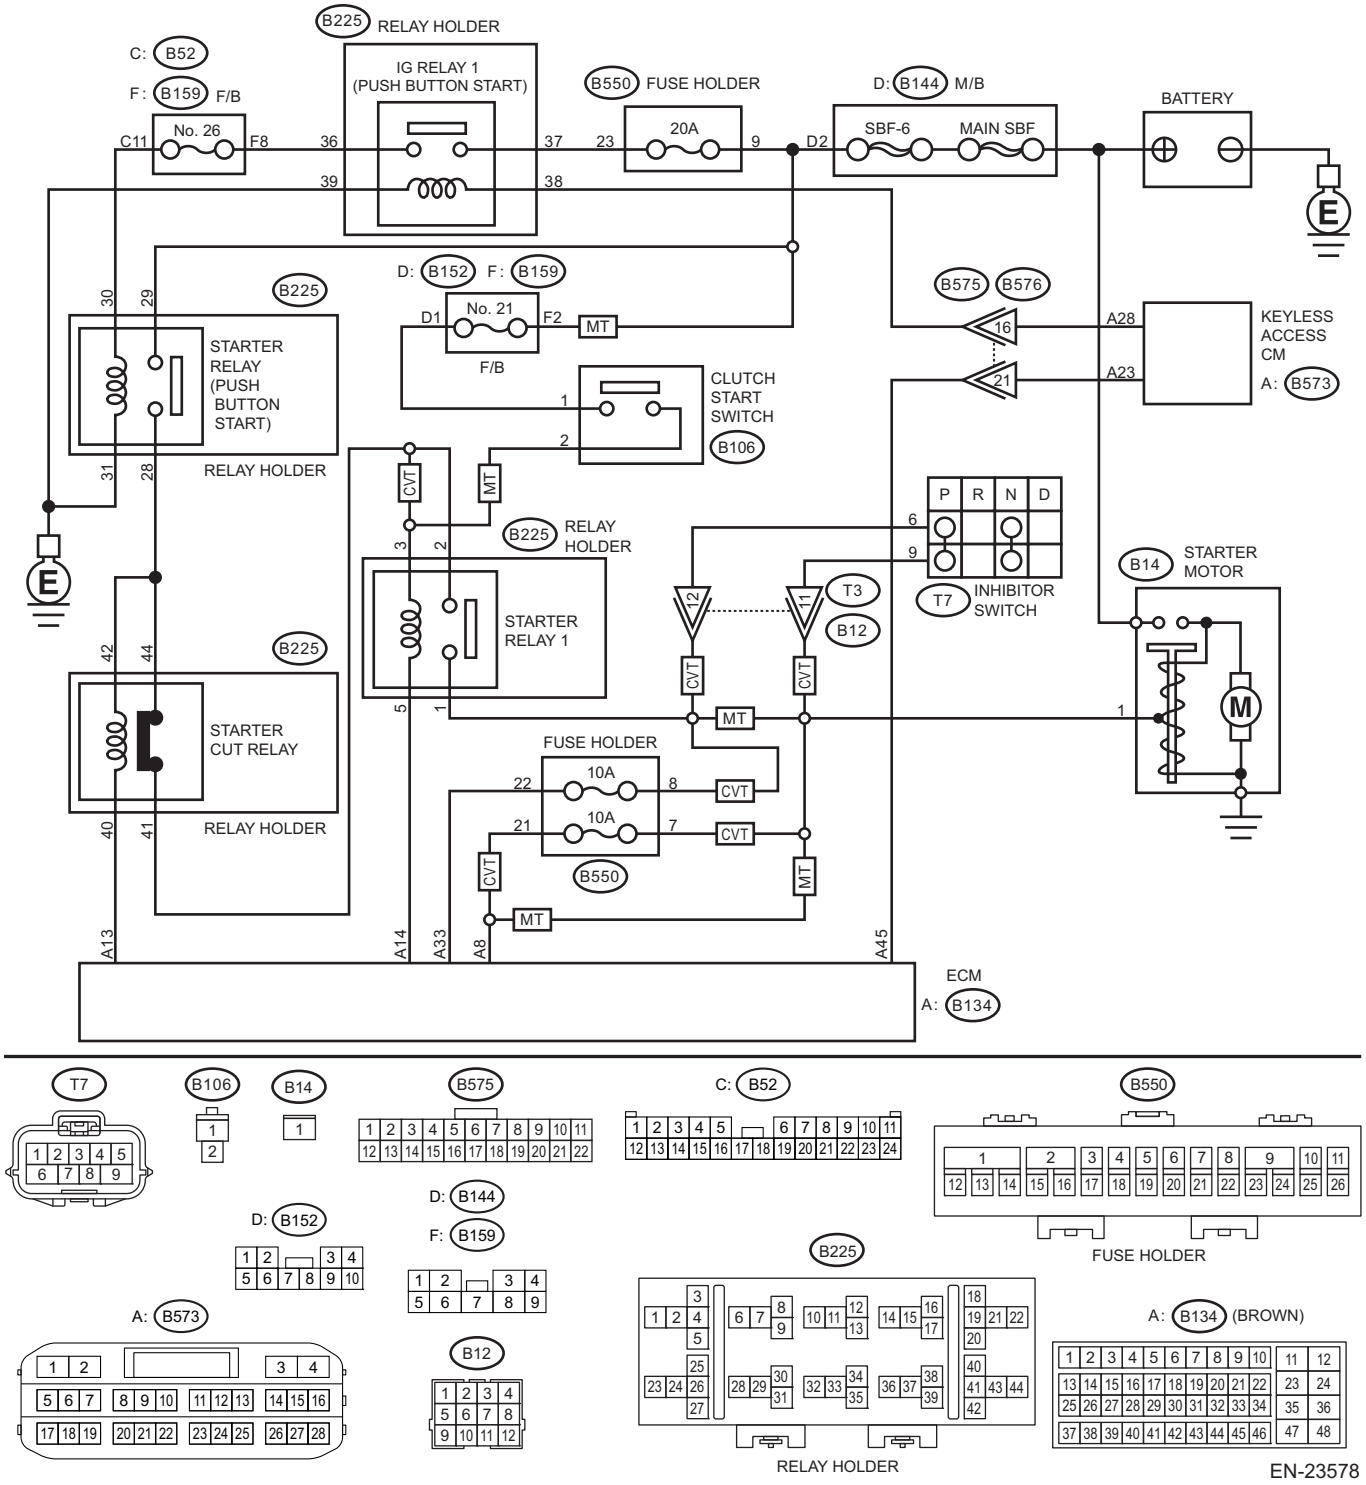
CAUTION:

• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-23578

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from ECM. 3) Remove the starter relay 1. 4) Measure the resistance of harness between ECM connector and starter relay 1 connector. NOTE: For CVT model, place the select lever in "P" range or "N" range. ***Connector & terminal*** ***(B134) No. 8 — (B225) No. 1:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and starter relay 1 connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Disconnect the connector from starter motor. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 8 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.

3. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW 2.
Judge as OFF NG when the starter SW 2 signal remains OFF.

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Vehicle speed	< 1 km/h (0.6 MPH)
Engine speed	Increases from 0 rpm to 500 rpm or more
Starter relay	ON

5. GENERAL DRIVING CYCLE

Perform the diagnosis only once after starting the engine.

6. DIAGNOSTIC METHOD

Judge as OFF NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW2 signal of 6 V or more	Not detected

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DX:DTC P0617 STARTER RELAY "A" CIRCUIT HIGH

1. MODEL WITHOUT PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P0617 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 8 (+) — Chassis ground (–):*** NOTE: For CVT model, place the select lever in "P" range or "N" range.	Is the voltage 10 V or more?	Repair the short circuit to power in harness between ECM connector and starter relay 1 connector.	Repair the poor contact of ECM connector.

2. MODEL WITH PUSH BUTTON START

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK STARTER MOTOR.** 1) Turn the ignition to ON. 2) Check the starter motor condition.	Is the starter motor rotating?	Go to step **2**.	Repair the short circuit to power supply in harness. NOTE: In this case, repair the following harnesses: • Short circuit to power supply in harness between ECM connector and starter relay connector • Short circuit to power supply in harness between ECM connector and starter motor • Short circuit to power supply in harness between starter relay 1 connector and starter motor
2	**CHECK HARNESS BETWEEN STARTER CUT RELAY CONNECTOR AND STARTER RELAY 1 CONNECTOR.** 1) Turn the ignition to OFF. 2) Disconnect the connector from starter motor. 3) Remove the starter cut relay and starter relay 1. 4) Turn the ignition to ON. 5) Measure the voltage between starter relay 1 connector and chassis ground. ***Connector & terminal*** ***(B225) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in harness between starter cut relay connector and starter relay 1 connector.	Go to step **3**.
3	**CHECK STARTER CUT RELAY.** 1) Connect the battery to starter cut relay terminals No. 40 and No. 42. 2) Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.> Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND STARTER RELAY 1 CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 14 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and starter relay 1 connector.
5	**CHECK STARTER RELAY 1.** Measure the resistance between starter relay 1 terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the starter relay 1. <Ref. to EN(w/o STI)(diag)-11, LOCATION, Electrical Component Location.>

Step		Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM, STARTER RELAY 1 CONNECTOR AND STARTER MOTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 8 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power supply in harness. NOTE: In this case, repair the following harnesses: • Short circuit to power supply in harness between ECM connector and starter relay 1 connector • Short circuit to power supply in harness between ECM connector and starter motor • Short circuit to power supply in harness between starter relay 1 connector and starter motor	Repair the poor contact of ECM connector.

3. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter SW 2.
Judge as ON NG when the starter SW 2 signal remains ON.

4. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Engine speed	≥ 475 rpm
Starter relay	OFF

5. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

6. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Starter SW2 signal	≥ 6 V

Time needed for diagnosis: 30 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DY:DTC P062D FUEL INJECTOR DRIVER CIRCUIT PERFORMANCE BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Engine does not start.
- Engine stalls.

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P062D displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***#1 (E158) No. 11 — (E158) No. 12:*** ***#2 (E158) No. 23 — (E158) No. 24:*** ***#3 (E158) No. 35 — (E158) No. 36:*** ***#4 (E158) No. 47 — (E158) No. 48:***	Is resistance 1.89 — 2.31 Ω at 20°C (68°F)?	Go to step **4**.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Disconnect the connector from fuel injector. 2) Measure the resistance of harness between ECM connector and defective fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Repair or replace the following items. • Poor contact of fuel injector connector • Defective fuel injector <Ref. to FU(w/o STI)-49, Fuel Injector.>	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
4	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Disconnect the connector from fuel injector. 2) Measure the resistance between ECM connector and engine ground on defective fuel injectors. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel injector circuit function.
Judge as NG when ECM with two fuel injectors or more detects any malfunction in the diagnostic items listed below.

Diagnostic item	Malfunction Criteria
Overcurrent	Fuel injector current is high.
Low current	Fuel injector current is low.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 9.4 V
Engine speed	> 0 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis for Overcurrent

Judgment value

Malfunction Criteria	Threshold Value
Fuel injector current	≥ 18 A

Low Current Diagnosis

Judgment value

Malfunction Criteria	Threshold Value
Fuel injector current	≤ 8.8 A

Time needed for diagnosis: TDC × 50 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

DZ:DTC P062F INTERNAL CONTROL MODULE EEPROM ERROR

NOTE:
For the diagnostic procedure, refer to DTC P0606. <Ref. to EN(w/o STI)(diag)-524, DTC P0606 CONTROL MODULE PROCESSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the EEPROM operation is abnormal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Perform the diagnosis during self shut.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Writing result to EEPROM	Malfunction

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

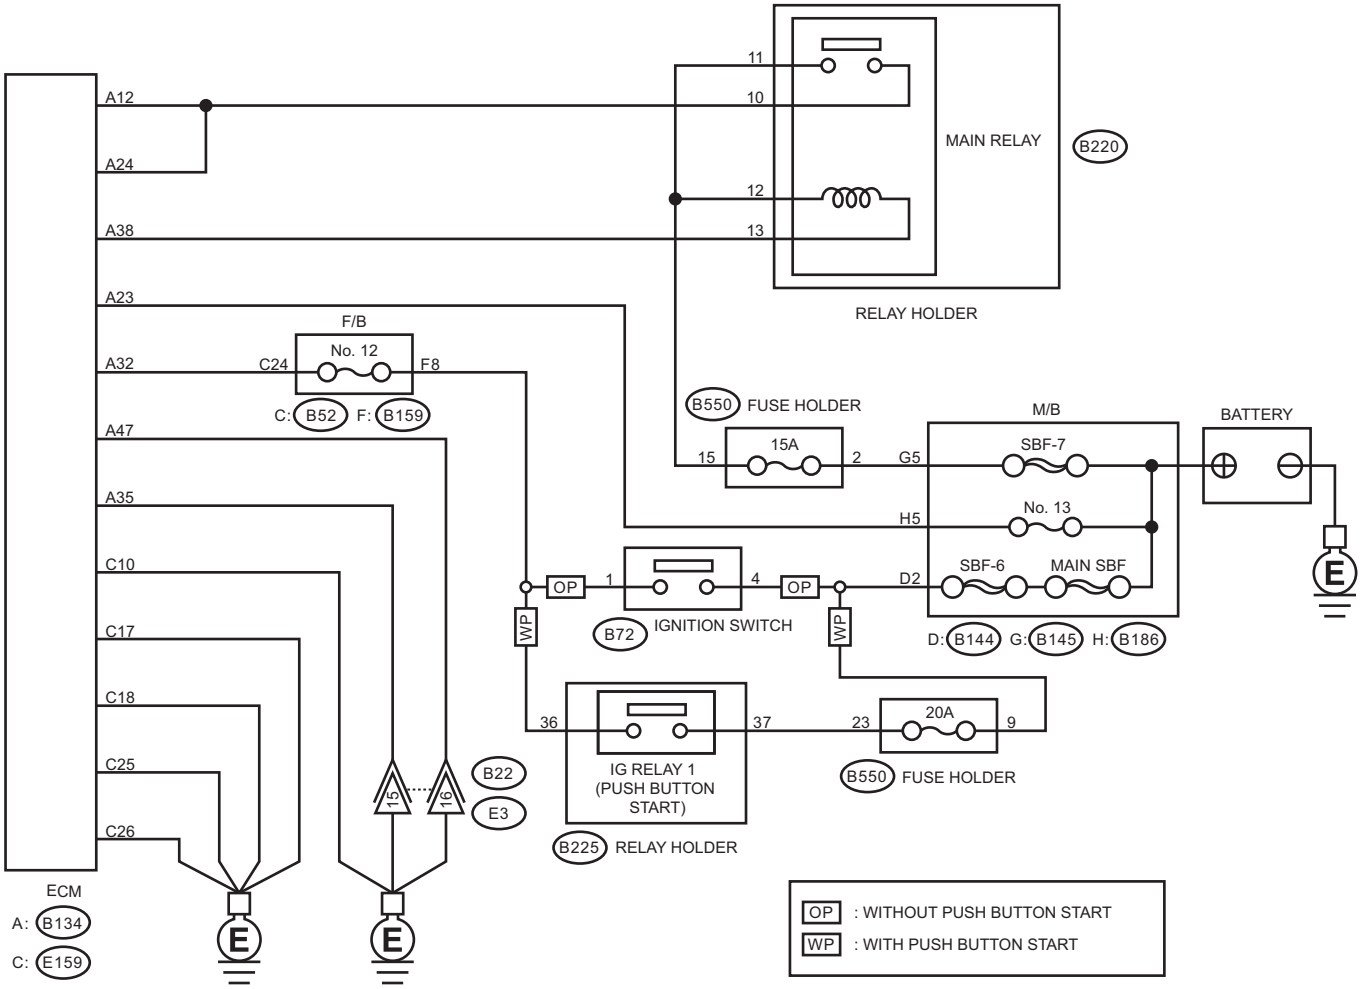
EA:DTC P0685 ECM/PCM POWER RELAY CONTROL CIRCUIT/OPEN

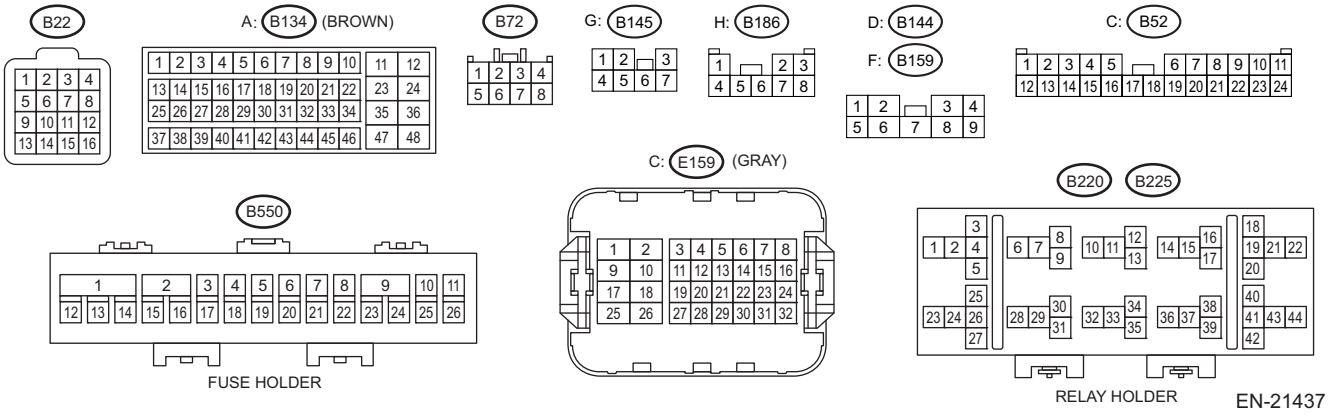
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **2**.	Connect the ECM connector correctly.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Remove the main relay. 3) Disconnect the connector from ECM. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 38 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and main relay connector.
3	**CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.** 1) Install the main relay. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 12 (+) — Engine ground (–):*** ***(B134) No. 24 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the harness and connector. NOTE: In this case, repair the following item: • Short circuit to power supply in harness between ECM connector and main relay connector • Defective main relay	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect the main relay stuck to ON.
Judge as NG when ECM keeps operating for more than predetermined time although the main relay does not turn to OFF after ignition switch is turned to OFF.

2. COMPONENT DESCRIPTION

The main relay controls the current in the coil section to switch ON/OFF the ECM by receiving instructions from the ignition switch and Evaporative Leak Check Module.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Main relay	OFF instruction

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the following driving cycle starts after the ignition switch is OFF.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
ECM status	In operation

Time needed for diagnosis: 2.5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

EB:DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

NOTE:
For the diagnostic procedure, refer to CVT section. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Judge as NG when there is CAN communication with the TCM and there is a MIL lighting request.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
MIL lighting request from TCM	Yes

Time needed for diagnosis: 2560 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EC:DTC P081A STARTER DISABLE CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Failure of engine to start

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN STARTER RELAY (PUSH BUTTON START) CONNECTOR AND STARTER CUT RELAY CONNECTOR.** 1) Turn the ignition to OFF. 2) Remove the starter relay (push button start). 3) Remove the starter cut relay. 4) Measure the resistance of harness between starter relay (push button start) connector and starter cut relay connector. ***Connector & terminal*** ***(B225) No. 28 — (B225) No. 42:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the open circuit in harness between starter relay (push button start) connector and starter cut relay connector.
2	**CHECK HARNESS BETWEEN ECM AND STARTER CUT RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and starter cut relay connector. ***Connector & terminal*** ***(B134) No. 13 — (B225) No. 40:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and starter cut relay connector.
3	**CHECK STARTER CUT RELAY.** 1) Connect the battery to starter cut relay terminals No. 40 and No. 42. 2) Measure the resistance between starter cut relay terminals. ***Terminals*** ***No. 41 — No. 44:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Replace the starter cut relay. <Ref. to SL-113, Starter Cut Relay.>

1. OUTLINE OF DIAGNOSIS

Detect abnormal continuity in the starter cut relay.
Judge as NG when the starter cut relay output line is open.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 8 V
Vehicle speed	< 1 km/h (0.6 MPH)
Starter cut relay	OFF
Engine speed	Increases from 0 rpm to 500 rpm or more

3. GENERAL DRIVING CYCLE

Perform the diagnosis only once when the engine condition is turned from before starting to after starting.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Starter cut relay control signal that exceeds 3.2 V	Not detected

Time needed for diagnosis: 640 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

ED:DTC P0851 PARK/NEUTRAL SWITCH INPUT CIRCUIT LOW

1. CVT MODEL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK SELECT CABLE.** Check the select cable.	Is there any fault in select cable?	Repair or adjust the select cable. <Ref. to CS-44, Select Cable.>	Go to step **2**.
2	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Place the select lever in other than "P" range and "N" range. 3) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 33 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the transmission harness connector (T3). 4) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 33 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and transmission harness connector.
4	**CHECK TRANSMISSION HARNESS CONNECTOR.** 1) Disconnect the connector from inhibitor switch. 2) Measure the resistance between transmission harness connector and engine ground. ***Connector & terminal*** ***(T3) No. 12 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>	Repair short circuit to ground in harness between transmission harness connector and inhibitor switch connector.

2. OUTLINE OF DIAGNOSIS (CVT MODEL)

Detect the open or short circuit of neutral SW.
Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION (CVT MODEL)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Starter relay feedback voltage	< 1.5 V
Data received from TCM	≠ “P” range/“N” range

4. GENERAL DRIVING CYCLE (CVT MODEL)

Perform the diagnosis continuously in 2 seconds after starting the engine.

5. DIAGNOSTIC METHOD (CVT MODEL)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Neutral position switch voltage	≤ 1 V

Time needed for diagnosis: 80 ms × 80 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT MODEL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Place the gear shift lever in a position other than neutral. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 33 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the neutral position switch. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 33 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the neutral position switch. <Ref. to 6MT(TY75)-47, Switches and Harness.>	Repair the short circuit to ground harness between ECM connector and neutral position switch connector.

7. OUTLINE OF DIAGNOSIS (MT MODEL)

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION (MT MODEL)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

Secondary parameters	Execution condition
The number of driving condition change from a) to b)	= 1 time (s)
a) Vehicle speed	≤ 0 km/h (0 MPH)
Engine speed	≥ 600 rpm and ≤ 900 rpm
b) Vehicle speed	≤ 64 km/h (39.8 MPH)
Engine speed	≥ 1450 rpm and ≤ 1950 rpm

9. GENERAL DRIVING CYCLE (MT MODEL)

Perform the diagnosis only once after the enable conditions have been established.

10.METHOD OF DIAGNOSIS (MT MODEL)

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	≤ 1 V

Time needed for diagnosis: 1 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

EE:DTC P0852 PARK/NEUTRAL SWITCH INPUT CIRCUIT HIGH

1. CVT MODEL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK SELECT CABLE.** Check the select cable.	Is there any fault in select cable?	Repair or adjust the select cable. <Ref. to CS-44, Select Cable.>	Go to step **2**.
2	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground with select lever at “P” range and “N” range. ***Connector & terminal*** ***(B134) No. 33 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Repair the poor contact of ECM connector.	Go to step **3**.

Step		Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from inhibitor switch. 4) Measure the resistance of harness between ECM connector and inhibitor switch connector. ***Connector & terminal*** ***(B134) No. 33 — (T7) No. 6:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Blown out of fuse • Open circuit in harness between ECM connector and inhibitor switch connector • Poor contact of coupling connector
4	**CHECK INHIBITOR SWITCH GROUND LINE.** Measure the resistance of harness between inhibitor switch connector and engine ground. ***Connector & terminal*** ***(T7) No. 9 — Engine ground:***	Is the resistance less than 5 Ω?	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between inhibitor switch connector and starter motor ground line • Poor contact of coupling connector • Poor contact of starter motor connector • Poor contact of starter motor ground • Starter motor

2. OUTLINE OF DIAGNOSIS (CVT MODEL)

Detect the open or short circuit of neutral SW.
Judge as NG when the ECM neutral terminal input differs from the reception data from TCM.

3. EXECUTION CONDITION (CVT MODEL)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Starter relay feedback voltage	< 1.5 V
Data received from TCM	= “P” range/“N” range

4. GENERAL DRIVING CYCLE (CVT MODEL)

Perform the diagnosis continuously in 2 seconds after starting the engine.

5. DIAGNOSTIC METHOD (CVT MODEL)

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Neutral position switch voltage	≥ 6.6 V

Time needed for diagnosis: 80 ms × 80 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

6. MT MODEL

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
Improper idling

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK INPUT SIGNAL OF ECM.** 1) Turn the ignition switch to ON. 2) Place the gear shift lever in neutral. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 33 (+) — Engine ground (–):***	Is the voltage less than 1 V?	Repair the poor contact of ECM connector.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the neutral position switch. 4) Measure the resistance of harness between ECM connector and neutral position switch connector. ***Connector & terminal*** ***(B134) No. 33 — (B25) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit in harness between ECM connector and transmission harness connector.
3	**CHECK HARNESS BETWEEN NEUTRAL POSITION SWITCH CONNECTOR AND CHASSIS GROUND.** Measure the resistance of harness between neutral position switch connector and chassis ground. ***Connector & terminal*** ***(B25) No. 1 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between neutral position switch connector and chassis ground • Poor contact of coupling connector
4	**CHECK NEUTRAL POSITION SWITCH.** 1) Place the gear shift lever in neutral. 2) Measure the resistance between neutral position switch connector terminals. ***Connector & terminal*** ***(T2) No. 1 — (T2) No. 2:***	Is the resistance less than 1 Ω?	Repair the poor contact of neutral position switch connector.	Replace the neutral position switch. <Ref. to 6MT(TY75)-47, Switches and Harness.>

7. OUTLINE OF DIAGNOSIS (MT MODEL)

Detect the open or short circuit of neutral SW.
Judge as NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

8. EXECUTION CONDITION (MT MODEL)

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
The number of driving condition change from a) to b)	= 1 time (s)
a) Vehicle speed	≤ 0 km/h (0 MPH)
Engine speed	≥ 600 rpm and ≤ 900 rpm
b) Vehicle speed	≤ 64 km/h (39.8 MPH)
Engine speed	≥ 1450 rpm and ≤ 1950 rpm

9. GENERAL DRIVING CYCLE (MT MODEL)

Perform the diagnosis only once after the enable conditions have been established.

10.METHOD OF DIAGNOSIS (MT MODEL)

Judge NG when the malfunction criteria below are completed determined times or more after the neutral SW change.

Judgment value

Malfunction Criteria	Threshold Value
Neutral switch output voltage	≥ 6.6 V

Time needed for diagnosis: 1 times
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

EF:DTC P1134 A/F / O2 SENSOR BANK1 SENSOR1 SERIAL PERIPHERAL INTERFACE (SPI) COMMUNICATION

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P1134 displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the A/F sensor microcomputer operation is abnormal.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Communication status between CPU and A/F sensor microcomputer	Malfunction

Time needed for diagnosis: 80 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EG:DTC P1160 THROTTLE RETURN SPRING

NOTE:
For the diagnostic procedure, refer to DTC. <Ref. to EN(w/o STI)(diag)-684, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the throttle position is out of specified value with ignition switch OFF.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	OFF
Continuous time when throttle motor control duty is 0%	= 1.25 s

3. GENERAL DRIVING CYCLE

Perform the diagnosis when the ignition switch is turned from ON to OFF.

4. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Throttle position	< 13.9% or > 20.6%

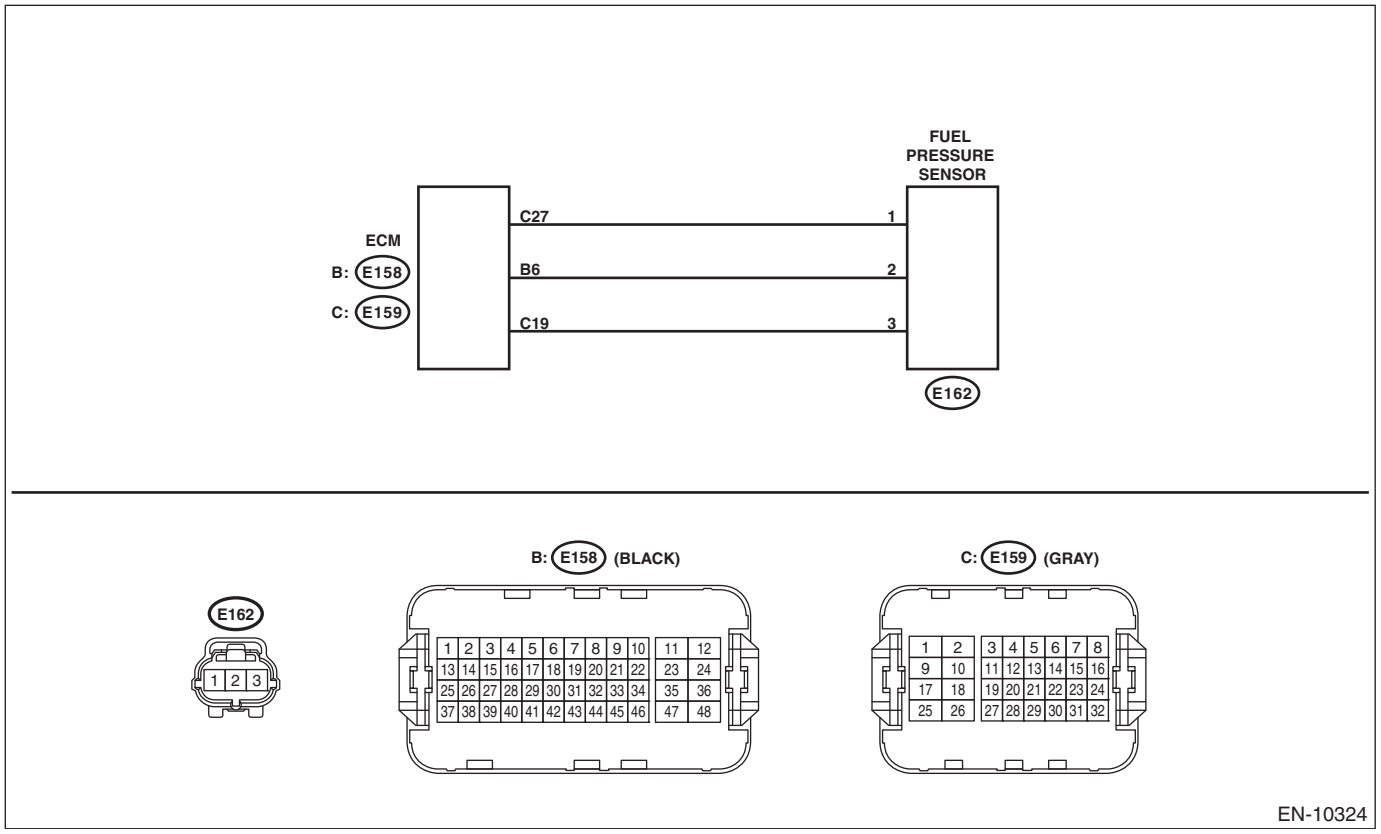
Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EH:DTC P1191 FUEL RAIL PRESSURE SENSOR "A" CIRCUIT NO ACTIVITY DETECTED

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «Fuel Rail Pressure A» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Fuel Rail Pressure A» 2500 kPa (25.49 kgf/cm^2, 362.6 psi) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK FUEL PRESSURE SENSOR POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the fuel pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between fuel pressure sensor connector and engine ground. ***Connector & terminal*** ***(E162) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Go to step **6**.

	Step	Check	Yes	No
3	**CHECK FUEL PRESSURE SENSOR SIGNAL.** 1) Connect all connectors. 2) Start the engine. 3) Read the value of «Fuel Rail Pressure A» when idling using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. 4) Measure the voltage between ECM connectors. ***Connector & terminal*** ***(E158) No. 6 (+) — (E159) No. 27 (–):***	When the value of «Fuel Rail Pressure A» during idling is approx. 4,000 kPa (40.79 kgf/cm^2, 580.2 psi), is the voltage 0.75 — 1.5 V?	Repair the poor contact of ECM connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the fuel pressure sensor. 4) Measure the resistance of harness between ECM connector and fuel pressure sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E162) No. 1:*** ***(E158) No. 6 — (E162) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 6 — Engine ground:*** ***(E159) No. 27 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the fuel pressure sensor. <Ref. to FU(w/o STI)-67, Fuel Pressure Sensor.>	Go to step **6**.
6	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and fuel pressure sensor connector. ***Connector & terminal*** ***(E159) No. 19 — (E162) No. 3:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit in harness between ECM connector and fuel pressure sensor connector.
7	**CHECK HARNESS BETWEEN ECM AND FUEL PRESSURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 19 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Repair the ground short circuit of harness between ECM connector and fuel pressure sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the signal stuck of the fuel pressure sensor.
Judge as NG when the voltage change amount per unit time of the fuel pressure sensor does not exceed the threshold value.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 475 rpm
Fuel cut	Not performed

3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Change amount per unit time of fuel pressure sensor voltage	< 3.8 V/s

Time needed for diagnosis: 10 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

EI: DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM terminals on faulty fuel injectors. ***Connector & terminal*** ***#1 (E158) No. 11 — (E158) No. 12:*** ***#2 (E158) No. 23 — (E158) No. 24:*** ***#3 (E158) No. 35 — (E158) No. 36:*** ***#4 (E158) No. 47 — (E158) No. 48:***	Is resistance 1.89 — 2.31 Ω at 20°C (68°F)?	Go to step **2**.	Go to step **3**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between ECM and engine ground on faulty injectors. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of ECM connector.	Go to step **3**.
3	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Repair the open or ground short circuit in harness between ECM connector and fuel injector connector.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel injector circuit function.
Judge as NG when ECM detects any malfunction in the diagnostic items listed below.

Diagnostic item	Malfunction Criteria
Power supply short	ECM low side terminal voltage of the fuel injector circuit is high.
Ground short	ECM low side terminal voltage of the fuel injector circuit is low.
Open circuit	Fuel injector current is low.
Overcurrent	Fuel injector current is high.
Short circuit	The time when the fuel injector current reaches the target current is short.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 9.4 V
Engine speed	> 0 rpm

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1: Power supply short

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	≥ 4.1 V

Diagnosis 2: Ground short

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	≤ 0.8 V

Diagnosis 3: Open circuit

Judgment value

Malfunction Criteria	Threshold Value
Fuel injector current	≤ 0.5 A

Diagnosis 4: Short circuit

Judgment value

Malfunction Criteria	Threshold Value
Time for reaching target current	≤ 0.075 ms

Diagnosis 5: Overcurrent

Judgment value

Malfunction Criteria	Threshold Value
Fuel injector current	≥ 22 A

Time needed for diagnosis: TDC × 50 times
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EJ:DTC P1262 CYLINDER 2 DIRECT FUEL INJECTOR CIRCUIT/OPEN

NOTE:
For the diagnostic procedure, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

EK:DTC P1263 CYLINDER 3 DIRECT FUEL INJECTOR CIRCUIT/OPEN

NOTE:
For the diagnostic procedure, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

EL:DTC P1264 CYLINDER 4 DIRECT FUEL INJECTOR CIRCUIT/OPEN

NOTE:
For the diagnostic procedure, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P1261. <Ref. to EN(w/o STI)(diag)-565, DTC P1261 CYLINDER 1 DIRECT FUEL INJECTOR CIRCUIT/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

EM:DTC P1449 EVAP SYSTEM CLOG DETECTED (AIR FILTER)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

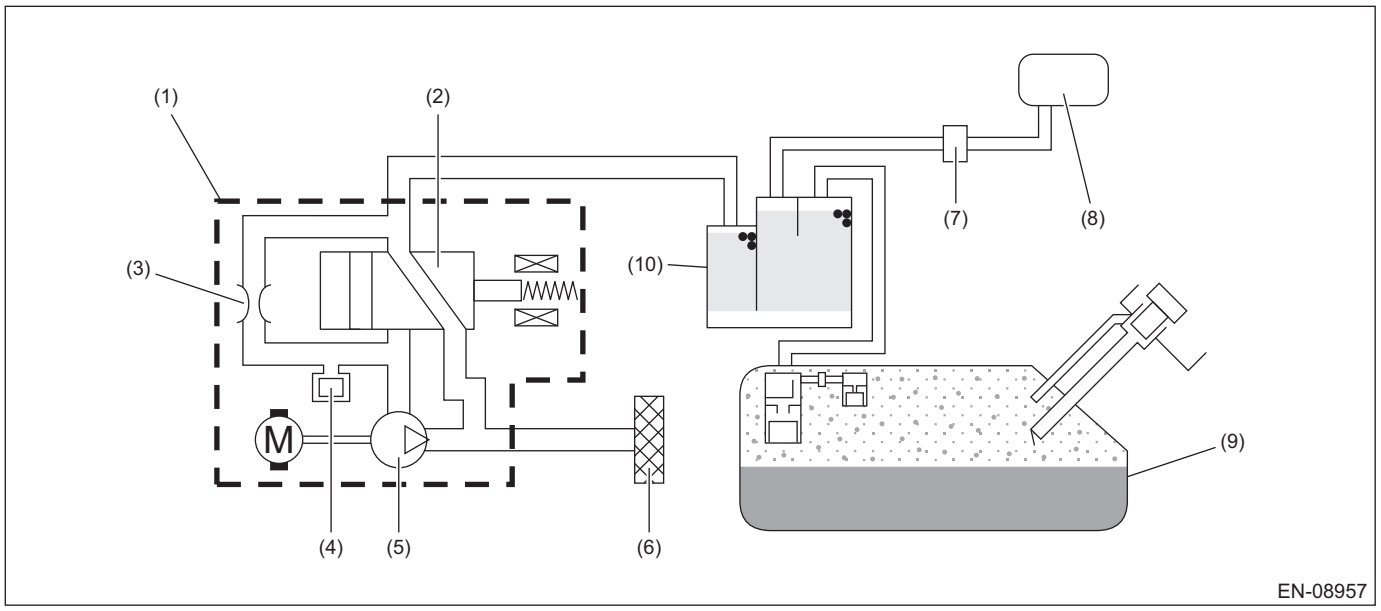
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P1449 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DRAIN TUBE A AND DRAIN PIPE BETWEEN LEAK CHECK VALVE ASSEMBLY AND DRAIN FILTER.** Check the drain tube A or the drain pipe between leak check valve assembly and drain filter.	Is the drain tube A or the drain pipe between leak check valve assembly and drain filter clogged?	Replace the drain tube A or the drain pipe between leak check valve assembly and drain filter. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.> <Ref. to EC(w/o STI)-51, Drain Filter.>	Go to step **3**.
3	**CHECK DRAIN FILTER.** Check the drain filter.	Is the drain filter clogged?	Replace the drain filter. <Ref. to EC(w/o STI)-51, Drain Filter.>	Go to step **4**.
4	**CHECK LEAK CHECK VALVE ASSEMBLY (PRESSURE SENSOR).** 1) Start monitoring «Absolute Evap Sys. Pressure» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> 2) Check that the value of «Absolute Evap Sys. Pressure» is not changed while wiggling the harness and connector between the leak check valve assembly and ECM.	Does the value of «Absolute Evap Sys. Pressure» change?	Repair the harness and connector.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the drain filter clogging by the pressure change during purge introduction.
Judge as drain filter clogging malfunction if the pressure in the evaporative emission system piping suddenly decreases by the purging.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

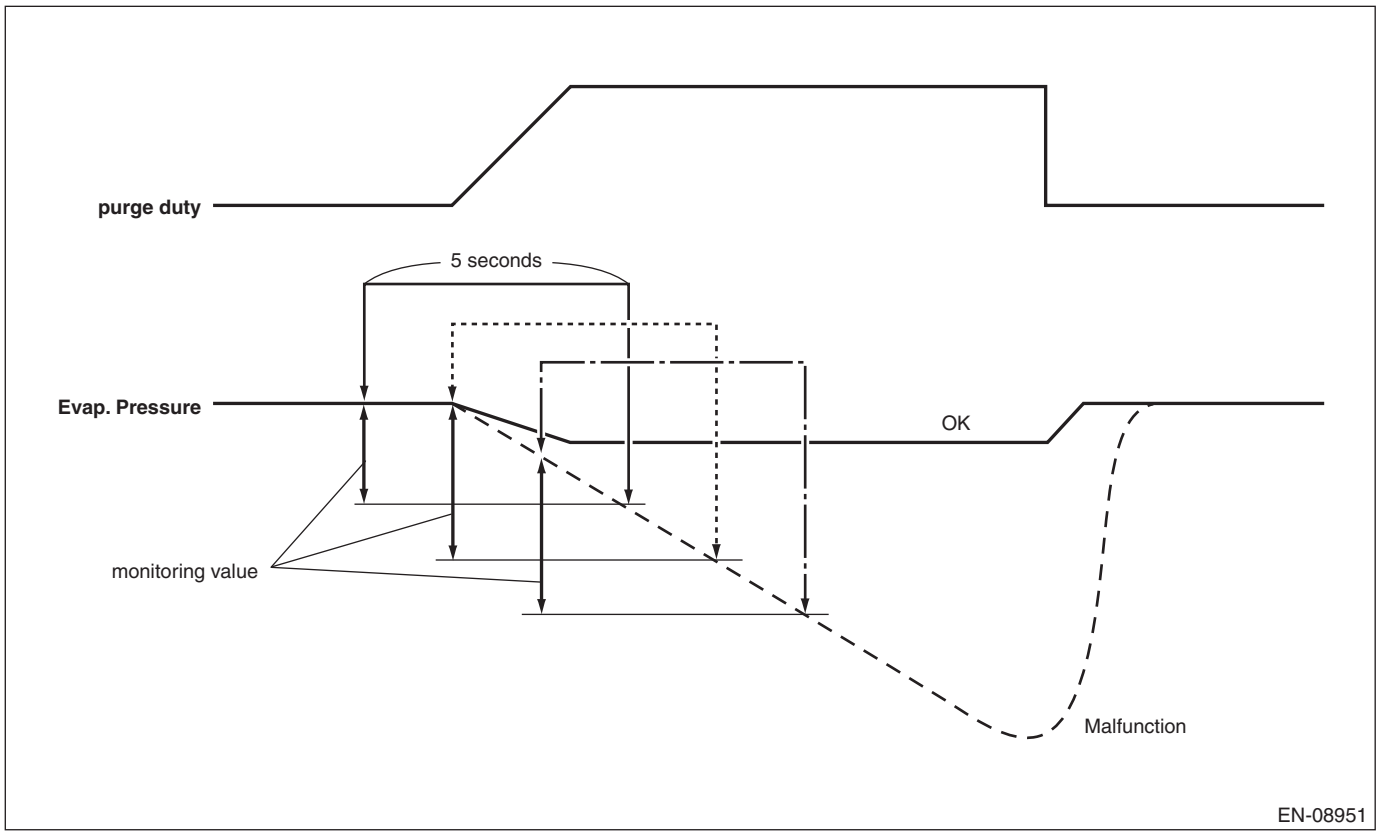
3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Elapsed time after starting the engine	≥ 20000 ms
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when purging is performed after 20000 ms have passed since the engine started.

5. DIAGNOSTIC METHOD



Calculate the difference between the Evaporative Leak Check Module pressure sensor output value of 5 seconds ago and the value at the present moment, and if the value is greater than the judgment value, detect as filter clogging trouble and judge as malfunction.
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
|Pressure sensor output value as of 5 seconds ago – Current pressure sensor output value|	> 980 Pa (7.4 mmHg, 0.3 inHg)

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

EN:DTC P1451 EVAP SYSTEM CLOG DETECTED (PIPE)

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DRAIN TUBE BETWEEN CANISTER AND LEAK CHECK VALVE ASSEMBLY.** Check the drain tube.	Is the drain tube between canister and leak check valve assembly clogged?	Replace the drain tube between the canister and leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Go to step **2**.
2	**CHECK HOSE AND TUBE BETWEEN CANISTER AND FUEL TANK.** Check the hose or tube between the canister and fuel tank.	Are the hose and tube between the canister and fuel tank clogged?	Replace the hose or tube between the canister and fuel tank. <Ref. to EC(w/o STI)-8, Canister.> <Ref. to FU(w/o STI)-145, Fuel Tank.>	Replace the canister. <Ref. to EC(w/o STI)-8, Canister.> After the operation is complete, go to the next step. Go to step **3**.
3	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(w/o STI)(diag)-81, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P1451 displayed on the display? (Current malfunction)	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	End.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

NOTE:
For the diagnostic procedure, refer to DTC P1499. <Ref. to EN(w/o STI)(diag)-577, DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P1499. <Ref. to EN(w/o STI)(diag)-577, DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

EU:DTC P1498 COIL 4 EGR "A" CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine breathing

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

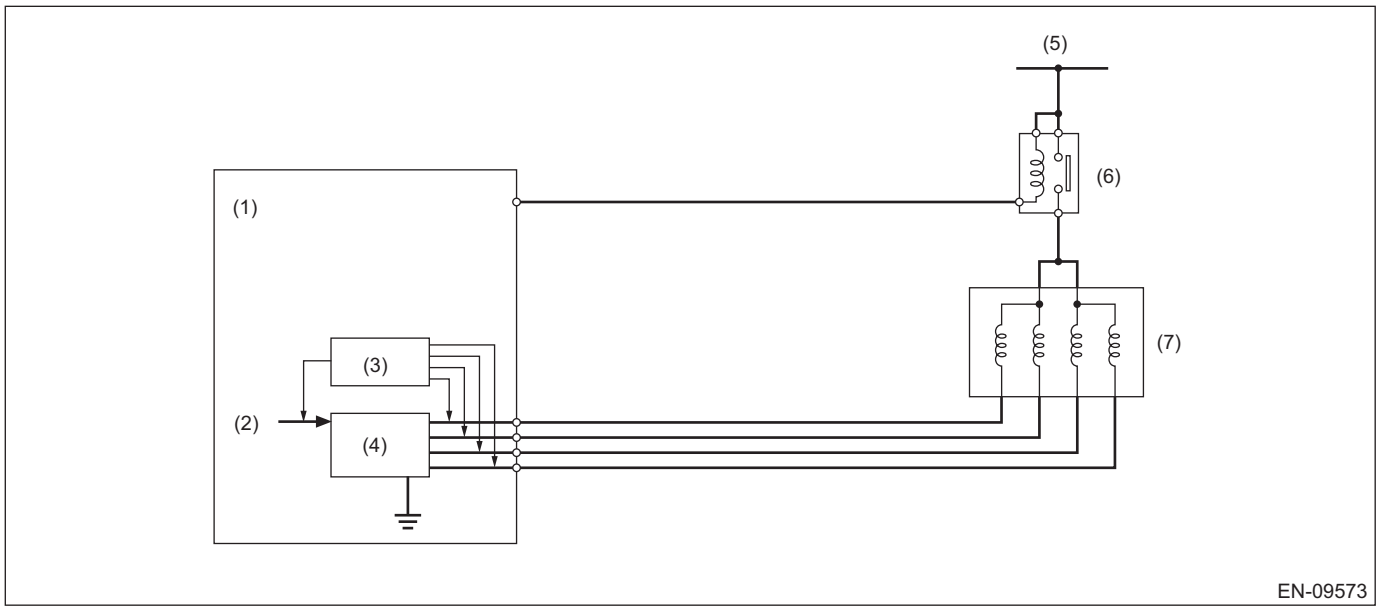
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY TO EGR CONTROL VALVE.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the EGR control valve. 3) Turn the ignition switch to ON. 4) Measure the voltage between EGR control valve connector and engine ground. ***Connector & terminal*** ***(E18) No. 2 (+) — Engine ground (–):*** ***(E18) No. 5 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between EGR control valve and main relay connector • Poor contact of coupling connector
2	**CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and EGR control valve connector. ***Connector & terminal*** ***DTC P1492; (E159) No. 5 — (E18) No. 3:*** ***DTC P1494; (E159) No. 21 — (E18) No. 1:*** ***DTC P1496; (E159) No. 13 — (E18) No. 4:*** ***DTC P1498; (E159) No. 29 — (E18) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of the harness between the ECM connector and EGR control valve connector.
3	**CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***DTC P1492; (E159) No. 5 — Engine ground:*** ***DTC P1494; (E159) No. 21 — Engine ground:*** ***DTC P1496; (E159) No. 13 — Engine ground:*** ***DTC P1498; (E159) No. 29 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair ground short circuit of harness between ECM connector and EGR control valve connector.
4	**CHECK FOR POOR CONTACT.** Check for poor contact between ECM connector and EGR control valve connector.	Is there poor contact in ECM or EGR control valve connector?	Repair the poor contact of ECM or EGR control valve connector.	Replace EGR control valve. <Ref. to EC(w/o STI)-37, EGR Control Valve.>

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
EGR control signal	OFF
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Terminal voltage	≤ 2.2 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EV:DTC P1499 COIL 4 EGR "A" CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Improper idling
- Poor driving performance
- Engine breathing

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

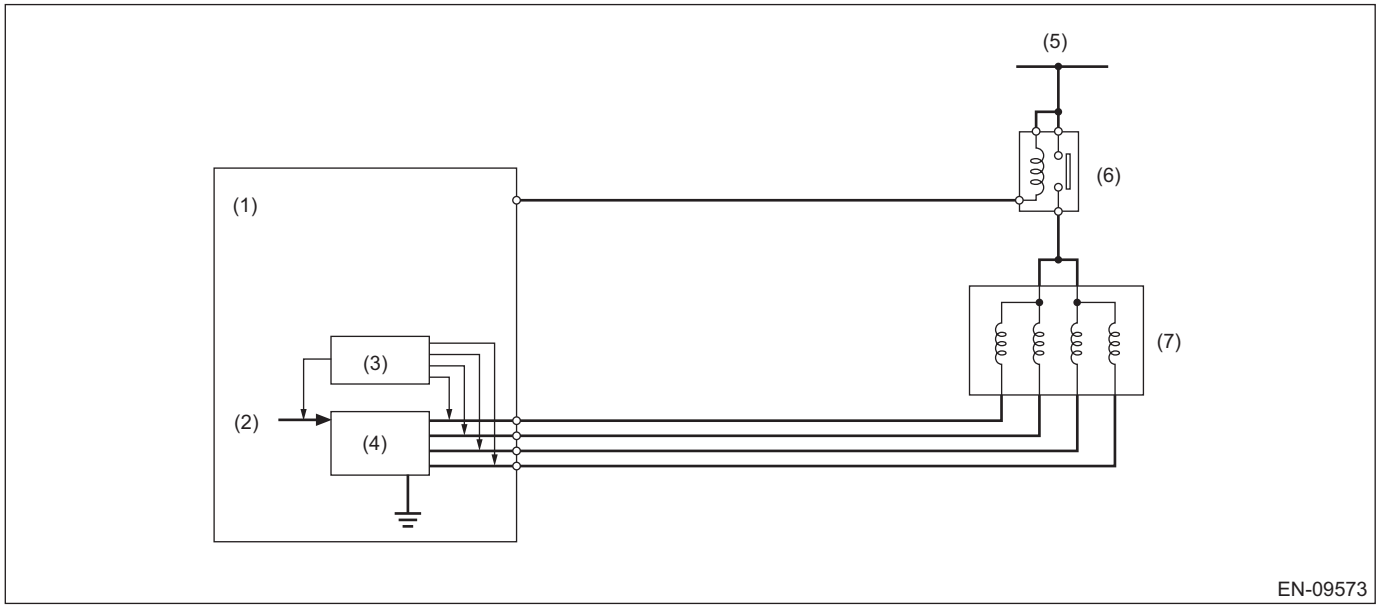
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND EGR CONTROL VALVE CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the EGR control valve. 4) Turn the ignition switch to ON. 5) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***DTC P1493; (E159) No. 5 (+) — Engine ground (–):*** ***DTC P1495; (E159) No. 21 (+) — Engine ground (–):*** ***DTC P1497; (E159) No. 13 (+) — Engine ground (–):*** ***DTC P1499; (E159) No. 29 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power supply in the harness between the ECM connector and EGR control valve connector.	Go to step **2**.
2	**CHECK EGR CONTROL VALVE.** Check EGR control valve. <Ref. to EC(w/o STI)-37, EGR Control Valve.>	Is the check result OK?	Repair the poor contact of ECM connector.	Replace EGR control valve. <Ref. to EC(w/o STI)-37, EGR Control Valve.>

1. OUTLINE OF DIAGNOSIS

- Detects open or short circuit of EGR.
- Judge as NG when the ECM output level differs from the actual terminal level.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Computer unit (CPU)
(3) Detecting circuit
(4) Switch circuit
(5) Battery voltage
(6) Main relay
(7) EGR control valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
EGR control signal	ON

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Terminal current	≥ 5 A

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

EW:DTC P1603 ENGINE STALL HISTORY

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

NOTE:
This DTC may be detected even if fault does not occur in the vehicle. If the customer does not ask for inspection, perform the clear memory mode without inspection and return the vehicle to the user.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P1603 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the value in «Fuel Level». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Fuel Level» 16.4% or more?	Go to step **3**.	Fuel may be run out. If the fault occurs after refueling, continue the diagnosis. Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FREEZE FRAME DATA.** Read the value of «Control module voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Control module voltage» 11 V or more?	Go to step **4**.	Check the battery and generator. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(w/o STI)-44, INSPECTION, Generator.>
4	**CHECK FOR MALFUNCTION OCCURRENCE.** Check "Check List for Interview".	Did you ask the customer about the driving condition and engine speed status when the fault occurred?	• The engine speed dropped slowly and then the engine stalled during idling or deceleration: Go to step **5**. • The engine speed dropped rapidly and then the engine stalled during idling or deceleration: Go to step **82**. • The engine stalled during standing start, acceleration, or constant speed driving: Go to step **89**.	Ask the customer about the driving condition and engine speed status when fault occurred.
5	**CHECK FREEZE FRAME DATA.** 1) Read the values of «Short term fuel trim B1» and «Long term fuel trim B1», using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Obtain the sum values of «Short term fuel trim B1» and «Long term fuel trim B1» in each freeze frame data.	Is the sum value of «Short term fuel trim B1» and «Long term fuel trim B1» within ±15% in each freeze frame data?	Go to step **56**.	• More than 15% in each freeze frame data: Go to step **6**. • Less than –15% in any one of freeze frame data: Go to step **40**.
6	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system. <Ref. to IN(w/o STI)-2, General Description.>	Go to step **7**.
7	**CHECK PURGE CONTROL SOLENOID VALVE.** Check purge control solenoid valve 1 and purge control solenoid valve 2. <Ref. to EC(w/o STI)-30, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step **8**.	Replace the faulty purge control solenoid valve. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>

	Step	Check	Yes	No
8	**CHECK FREEZE FRAME DATA.** Read the value of «Stop Light Switch» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Stop Light Switch» indicate OFF in all freeze frame data?	Go to step **11**.	Go to step **9**.
9	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) Read the value of «Short term fuel trim B1» both when the brake pedal is released and depressed using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Short term fuel trim B1» with the brake pedal depressed increase by 10% or more compared to when the pedal is released?	Replace the brake booster. <Ref. to BR-91, Brake Booster.>	Go to step **10**.
10	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) While reproducing the faulty condition of the vehicle, read the values of «Short term fuel trim B1» and «Long term fuel trim B1» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 3) Obtain the sum values of «Short term fuel trim B1» and «Long term fuel trim B1».	Is the sum value of «Short term fuel trim B1» and «Long term fuel trim B1» within ±15%?	Go to step **11**.	Replace the brake booster. <Ref. to BR-91, Brake Booster.>
11	**CHECK IGNITION SYSTEM.** Check the ignition system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **12**.	Repair the ignition system. <Ref. to IG(w/o STI)-2, General Description.>
12	**CHECK FREEZE FRAME DATA.** Read the value of «A/F Sensor #1» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «A/F Sensor #1» 1 or more?	Go to step **17**.	Go to step **13**.
13	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.>	Is the check result OK?	Go to step **14**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

	Step	Check	Yes	No
14	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B134) No. 16 — (B3) No. 3:*** ***(B134) No. 28 — (B3) No. 2:***	Is the resistance less than 1 Ω?	Go to step **15**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
15	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 16 — Engine ground:*** ***(B134) No. 28 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **16**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
16	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) Compare with the reference value of «Load Value» described in “Engine Current Data Display” under “Subaru Select Monitor”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> NOTE: • The value of «Calculated load value» change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance. • For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Calculated load value» falls between 90 — 110% of the value described in the list?	Go to step **21**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
17	**CHECK FRONT OXYGEN (A/F) SENSOR DATA.** 1) Start the engine and warm up completely. 2) Raise the engine speed up to 2,500 rpm and maintain it for approx. three minutes. 3) Release the accelerator pedal and idle the engine. 4) Using «Injection Quantity Control» in the «Active Test» item, read the value of «A/F Sensor #1» at the increase rate of both 12% and – 12%. NOTE: • Perform the operation immediately after the engine comes into idling condition, otherwise the front oxygen (A/F) sensor will be cooled. • For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the value of «A/F Sensor #1» change to less than 0.88 at the increase rate of 12%, and to 1.12 or more at the rate of – 12%?	Go to step **21**.	Go to step **18**.

	Step	Check	Yes	No
18	**CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between front oxygen (A/F) sensor connector and engine ground. ***Connector & terminal*** ***(E24) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **19**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
19	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:*** ***(E159) No. 9 — (E24) No. 2:***	Is the resistance less than 1 Ω?	Go to step **20**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
20	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 15 — Engine ground:*** ***(E158) No. 27 — Engine ground:*** ***(E158) No. 39 — Engine ground:*** ***(E159) No. 9 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **21**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
21	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Coolant Temp.» and «Ambient Temperature». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Coolant Temp.» 120°C (248°F) or more? Or, is the value of «Coolant Temp.» lower than «Ambient Temperature» by 15°C (27°F) or more?	Go to step **22**.	Go to step **25**.
22	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **23**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
23	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E8) No. 1:*** ***(E158) No. 38 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **24**.	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.
24	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 — Engine ground:*** ***(E159) No. 27 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **25**.	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.
25	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the value in «Evap Purge Flow». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Evap Purge Flow» 0% in all freeze frame data?	Go to step **35**.	Go to step **26**.
26	**CHECK PURGE CONTROL SOLENOID VALVE 1.** 1) On the «Active Test» item, select «CPC Solenoid Valve», and perform ON/OFF. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.> 2) Check if the ventilation changes according to ON/OFF switching operation.	Does the ventilation of purge control solenoid valve 1 change correctly?	Go to step **30**.	Go to step **27**.
27	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from purge control solenoid valve 1. 3) Turn the ignition switch to ON. 4) Measure the voltage between purge control solenoid valve 1 connector and engine ground. ***Connector & terminal*** ***(E4) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **28**.	Repair the power supply circuit.
28	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and purge control solenoid valve 1 connector. ***Connector & terminal*** ***(E159) No. 4 — (E4) No. 2:***	Is the resistance less than 1 Ω?	Go to step **29**.	Repair the open circuit in harness between ECM connector and purge control solenoid valve 1 connector.

	Step	Check	Yes	No
29	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 1 CONNECTOR.** Measure the resistance between the purge control solenoid valve 1 connector and engine ground. ***Connector & terminal*** ***(E4) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **30**.	Repair the ground short circuit of harness between ECM connector and purge control solenoid valve 1 connector.
30	**CHECK PURGE CONTROL SOLENOID VALVE 2.** 1) Connect all connectors. 2) On the «Active Test» item, select «CPC Solenoid 2», and perform ON/OFF. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.> 3) Check if the ventilation changes according to ON/OFF switching operation.	Does the ventilation of purge control solenoid valve 2 change correctly?	Go to step **35**.	Go to step **31**.
31	**CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from purge control solenoid valve 2. 3) Turn the ignition switch to ON. 4) Measure the voltage between purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **32**.	Repair the power supply circuit.
32	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and purge control solenoid valve 2 connector. ***Connector & terminal*** ***(E159) No. 12 — (E52) No. 2:***	Is the resistance less than 1 Ω?	Go to step **33**.	Repair the open circuit in harness between ECM connector and purge control solenoid valve 2 connector.
33	**CHECK HARNESS BETWEEN ECM AND PURGE CONTROL SOLENOID VALVE 2 CONNECTOR.** Measure the resistance between the purge control solenoid valve 2 connector and engine ground. ***Connector & terminal*** ***(E52) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **34**.	Repair the ground short circuit of harness between ECM connector and purge control solenoid valve 2 connector.
34	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

	Step	Check	Yes	No
35	**CHECK OF FUEL PUMP.** 1) On the «Active Test» item, select «Fuel Pump Relay», and perform ON/OFF drive operation. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.> 2) Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.	Does the fuel pump emit operating sound?	Go to step **37**.	Go to step **36**.
36	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
37	**CHECK FUEL TANK.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** Check if any foreign matters such as iron powder exist in the fuel tank.	Is there any foreign matter in the fuel tank?	Remove foreign matter from the fuel tank.	Go to step **38**.
38	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **39**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
39	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A» in all freeze frame data?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>
40	**CHECK IGNITION SYSTEM.** Check the ignition system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **41**.	Repair the ignition system. <Ref. to IG(w/o STI)-2, General Description.>

	Step	Check	Yes	No
41	**CHECK FREEZE FRAME DATA.** Compare with the reference value of «Load Value» described in “Engine Current Data Display” under “Subaru Select Monitor”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> NOTE: • The value of «Calculated load value» change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance. • For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Calculated load value» 110% or more of the value described in the list?	Go to step **43**.	Go to step **42**.
42	**CHECK FREEZE FRAME DATA.** Read the value of «A/F Sensor #1» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «A/F Sensor #1» less than 1?	Go to step **47**.	Go to step **52**.
43	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.>	Is the check result OK?	Go to step **44**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
44	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B134) No. 16 — (B3) No. 3:*** ***(B134) No. 28 — (B3) No. 2:***	Is the resistance less than 1 Ω?	Go to step **45**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
45	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 16 — Engine ground:*** ***(B134) No. 28 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **46**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

	Step	Check	Yes	No
46	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) Compare with the reference value of «Load Value» described in "Engine Current Data Display" under "Subaru Select Monitor". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> NOTE: • The value of «Calculated load value» change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance. • For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Calculated load value» falls between 90 — 110% of the value described in the list?	Go to step **47**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
47	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) Raise the engine speed up to 2,500 rpm and maintain it for approx. three minutes. 3) Release the accelerator pedal and idle the engine. 4) Select «Injection Quantity Control» in the «Active Test» item, and read the value of «A/F Sensor #1» at the increase rate of both 12% and –12%. NOTE: • Perform the operation immediately after the engine comes into idling condition, otherwise the front oxygen (A/F) sensor will be cooled. • For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the value of «A/F Sensor #1» change to less than 0.88 at the increase rate of 12%, and to 1.12 or more at the rate of –12%?	Go to step **52**.	Go to step **48**.
48	**CHECK FREEZE FRAME DATA.** Read the value of «A/F Sensor #1 Resistance» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «A/F Sensor #1 Resistance» 500 Ω or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>	Go to step **49**.

	Step	Check	Yes	No
49	**CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between front oxygen (A/F) sensor connector and engine ground. ***Connector & terminal*** ***(E24) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **50**.	Repair the power supply line. NOTE: In this case, repair the following item: • Open circuit in harness between A/F, oxygen sensor relay and front oxygen (A/F) sensor connector • Poor contact of A/F, oxygen sensor relay connector • Poor contact of coupling connector • Malfunction of A/F, oxygen sensor relay
50	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:*** ***(E159) No. 9 — (E24) No. 2:***	Is the resistance less than 1 Ω?	Go to step **51**.	Repair the open circuit of harness between ECM connector and front oxygen (A/F) sensor connector.
51	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 15 — Engine ground:*** ***(E158) No. 27 — Engine ground:*** ***(E158) No. 39 — Engine ground:*** ***(E159) No. 9 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **52**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
52	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Coolant Temp.» and «Ambient Temperature». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Coolant Temp.» 120°C (248°F) or more? Or, is the value of «Coolant Temp.» lower than «Ambient Temperature» by 15°C (27°F) or more?	Go to step **53**.	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>
53	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **54**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
54	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E8) No. 1:*** ***(E158) No. 38 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **55**.	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.
55	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 — Engine ground:*** ***(E159) No. 27 — Engine ground:***	Is the resistance 1 MΩ or more?	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.
56	**CHECK IGNITION SYSTEM.** Check the ignition system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **57**.	Repair the ignition system. <Ref. to IG(w/o STI)-2, General Description.>

	Step	Check	Yes	No
57	**CHECK FREEZE FRAME DATA.** 1) Using Subaru Select Monitor, read the values of «Idle Mass Air Flow Feedback correct», «ISC Learning Value» and «Idle dirty throttle correct» in freeze frame data. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Obtain the sum value of «Idle Mass Air Flow Feedback correct», «ISC Learning Value» and «Idle dirty throttle correct». 3) Start the engine and warm up completely. 4) Using Subaru Select Monitor, read the values of «Idle Mass Air Flow Feedback correct», «ISC Learning Value» and «Idle dirty throttle correct» in current data at normal idling. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> 5) Obtain the sum value of «Idle Mass Air Flow Feedback correct», «ISC Learning Value» and «Idle dirty throttle correct».	Is the sum value of freeze frame data less than 80% of the sum value of current data?	Go to step **58**.	Go to step **60**.
58	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system. <Ref. to IN(w/o STI)-2, General Description.>	Go to step **59**.
59	**CHECK AIR INTAKE SYSTEM.** Check the air intake system related parts. • Brake booster: <Ref. to BR-95, INSPECTION, Brake Booster.> • Mass air flow and intake air temperature sensor: <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.> • PCV pipe: <Ref. to EC(w/o STI)-78, INSPECTION, PCV Pipe.> • PCV connector: <Ref. to EC(w/o STI)-79, INSPECTION, PCV Connector.> • PCV hose: <Ref. to EC(w/o STI)-80, INSPECTION, PCV Hose.> • PCV hose assembly: <Ref. to EC(w/o STI)-84, INSPECTION, PCV Hose Assembly.> • PCV valve: <Ref. to EC(w/o STI)-87, INSPECTION, PCV Valve.> • Purge control solenoid valve 1 and purge control solenoid valve 2: <Ref. to EC(w/o STI)-30, INSPECTION, Purge Control Solenoid Valve.>	Are all of the air intake system related parts normal?	Go to step **77**.	Replace the parts if defective.

Step		Check	Yes	No
60	**CHECK FREEZE FRAME DATA.** 1) Using the Subaru Select Monitor, read the values of the followings: «VVT Adv. Ang. Amount R», «VVT Advance Target Angle Amount R», «VVT Adv. Ang. Amount L», «VVT Advance Target Angle Amount L», «Exh. VVT Retard Ang. R», «Ex VVT Retard Target Angle R», «Exh. VVT Retard Ang. L» and «Ex VVT Retard Target Angle L». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Using the Subaru Select Monitor, compare the respective values between the followings: «VVT Adv. Ang. Amount R» and «VVT Advance Target Angle Amount R», «VVT Adv. Ang. Amount L» and «VVT Advance Target Angle Amount L», «Exh. VVT Retard Ang. R» and «Ex VVT Retard Target Angle R», «Exh. VVT Retard Ang. L» and «Ex VVT Retard Target Angle L».	Does all of the advance angle amount and retard angle amount synchronize with their target values?	Go to step **77**.	Diagnose the part that does not synchronize. • Intake RH: Go to step **61**. • Intake LH: Go to step **65**. • Exhaust RH: Go to step **69**. • Exhaust LH: Go to step **73**.
61	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake oil control solenoid RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **62**.	Repair the power supply circuit.
62	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and intake oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 7 — (E38) No. 2:***	Is the resistance less than 1 Ω?	Go to step **63**.	Repair the open circuit in harness between ECM connector and intake oil control solenoid RH connector.
63	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **64**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.
64	**CHECK INTAKE OIL CONTROL SOLENOID RH.** Check the intake oil control solenoid RH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the intake cam sprocket RH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the intake oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

	Step	Check	Yes	No
65	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake oil control solenoid LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **66**.	Repair the power supply circuit.
66	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and intake oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 15 — (E37) No. 2:***	Is the resistance less than 1 Ω?	Go to step **67**.	Repair the open circuit in harness between ECM connector and intake oil control solenoid LH connector.
67	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **68**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.
68	**CHECK INTAKE OIL CONTROL SOLENOID LH.** Check the intake oil control solenoid LH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the intake cam sprocket LH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the intake oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
69	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust oil control solenoid RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **70**.	Repair the power supply circuit.
70	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 23 — (E63) No. 2:***	Is the resistance less than 1 Ω?	Go to step **71**.	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid RH connector.

	Step	Check	Yes	No
71	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **72**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.
72	**CHECK EXHAUST OIL CONTROL SOLENOID RH.** Check the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the exhaust cam sprocket RH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
73	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust oil control solenoid LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **74**.	Repair the power supply circuit.
74	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 31 — (E66) No. 2:***	Is the resistance less than 1 Ω?	Go to step **75**.	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid LH connector.
75	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **76**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.
76	**CHECK EXHAUST OIL CONTROL SOLENOID LH.** Check the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the exhaust cam sprocket LH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
77	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **78**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
78	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E8) No. 1:*** ***(E158) No. 38 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **79**.	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector.
79	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 — Engine ground:*** ***(E159) No. 27 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **80**.	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector.
80	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.>	Is the check result OK?	Go to step **81**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
81	**CHECK MANIFOLD ABSOLUTE PRESSURE AND INTAKE AIR TEMPERATURE SENSOR.** Check the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, INSPECTION, Manifold Absolute Pressure and Intake Air Temperature Sensor.>	Is the check result OK?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Check the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>
82	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from fuel injector. 4) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **83**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

	Step	Check	Yes	No
83	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **84**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
84	**CHECK IGNITION SYSTEM.** Check the ignition system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **85**.	Repair the ignition system. <Ref. to IG(w/o STI)-2, General Description.>
85	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «A/C Compressor Signal» and «Idle A/C load correct». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Does the value of «A/C Compressor Signal» indicate ON output, and does the value of «Idle A/C load correct» increase?	Check the air conditioner. <Ref. to AC(diag)-8, INSPECTION, Diagnostics with Phenomenon.> <Ref. to AC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Go to step **86**.
86	**CHECK FREEZE FRAME DATA.** 1) Using the Subaru Select Monitor, read the value of «Electric Load Feedback Val». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Compare the value of «Electric Load Feedback Val» with that of «ISC Learning Value», which is described in “Engine Current Data Display”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Electric Load Feedback Val» 20% or more of «ISC Learning Value»?	Check the generator and power assisted system. <Ref. to SC(w/o STI)-44, INSPECTION, Generator.> <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>	Go to step **87**.
87	**CHECK FREEZE FRAME DATA.** 1) Using the Subaru Select Monitor, read the values of «Vehicle Speed», «Engine Speed» and «AT turbine speed». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is there any freeze frame data indicating that the value of «Vehicle Speed» is less than 30 km/h (18.6 MPH), and that the difference in values between «Engine Speed» and «AT turbine speed» is less than 100 rpm?	Repair the CVT. <Ref. to CVT(TR690)-3, General Description.>	Go to step **88**.

	Step	Check	Yes	No
88	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC of CVT displayed? (Current malfunction) <Ref. to CVT(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to CVT(diag)-35, List of Diagnostic Trouble Code (DTC).>	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
89	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Calculated load value» and «Relative Throttle Pos.». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Calculated load value» decreasing while that of «Relative Throttle Pos.» is increasing?	Go to step **90**.	Go to step **94**.
90	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.>	Is the check result OK?	Go to step **91**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
91	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B134) No. 16 — (B3) No. 3:*** ***(B134) No. 28 — (B3) No. 2:***	Is the resistance less than 1 Ω?	Go to step **92**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
92	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 16 — Engine ground:*** ***(B134) No. 28 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **93**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.

	Step	Check	Yes	No
93	**CHECK CURRENT DATA.** 1) Start the engine and warm up completely. 2) Compare with the reference value of «Load Value» described in "Engine Current Data Display" under "Subaru Select Monitor". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> NOTE: • The value of «Calculated load value» change depending on how the engine internal parts settle in. If the value is out of standard, judge it again by comparing the vehicle with another one with the same specifications and similar conditions such as travel distance. • For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Calculated load value» falls between 90 — 110% of the value described in the list?	Go to step **94**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
94	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from fuel injector. 4) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **95**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
95	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **96**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
96	**CHECK IGNITION SYSTEM.** Check the ignition system. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **97**.	Repair the ignition system. <Ref. to IG(w/o STI)-2, General Description.>

	Step	Check	Yes	No
97	**CHECK OF FUEL PUMP.** 1) On the «Active Test» item, select «Fuel Pump Relay», and perform ON/OFF drive operation. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.> 2) Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.	Does the fuel pump emit operating sound?	Go to step **99**.	Go to step **98**.
98	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
99	**CHECK FUEL TANK.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** Check if any foreign matters such as iron powder exist in the fuel tank.	Is there any foreign matter in the fuel tank?	Remove foreign matter from the fuel tank.	Go to step **100**.
100	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **101**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
101	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A» in all freeze frame data?	Go to step **102**.	Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>
102	**CHECK ENGINE RUNNING CONDITION.** Check the engine running condition using "Roughness monitor" in the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is there a large difference in the speed between each cylinder?	It is possible that the compression pressure of the engine is not sufficient. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the engine stops except by operating the ignition switch after starting the engine.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Engine condition	After engine starting

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	≤ 300 rpm

Time needed for diagnosis: 60 ms
Malfunction indicator light illumination: Does not illuminate.

EX:DTC P1604 STARTABILITY MALFUNCTION

DTC detecting condition:
Immediately at fault recognition

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

NOTE:
This DTC may be detected even if fault does not occur in the vehicle. If the customer does not ask for inspection, perform the clear memory mode without inspection and return the vehicle to the user.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P1604 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK IMMOBILIZER.** Check the immobilizer. <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Repair the immobilizer. <Ref. to IM(diag)-2, Basic Diagnostic Procedure.>
3	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Is it possible to reproduce the faulty phenomenon or to identify the faulty condition?	Go to step **30**.	Go to step **4**.

Step		Check	Yes	No
4	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Engine Speed» and «Control module voltage». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Engine Speed» 0 rpm?	• When the value of «Control module voltage» is less than 5 V: Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> • When the value of «Control module voltage» is 5 V or more: Go to step **5**.	• When the value of «Engine Speed» is less than 250 rpm: Go to step **12**. • When the value of «Engine Speed» is 250 rpm or more: Go to step **20**.
5	**CHECK FREEZE FRAME DATA.** Read the value of «Control module voltage» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Control module voltage» less than 9 V?	It is possible that the engine friction is too large. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>	• When the value of «Control module voltage» changes in any one of freeze frame data: Go to step **6**. • When the value of «Control module voltage» does not change in all freeze frame data: Check the starter motor circuit. <Ref. to EN(w/o STI)(diag)-101, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
6	**CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installed correctly?	Go to step **7**.	Install the crankshaft position sensor correctly. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>
7	**CHECK CRANKSHAFT POSITION SENSOR.** Check the crankshaft position sensor. <Ref. to FU(w/o STI)-97, INSPECTION, Crankshaft Position Sensor.>	Is the check result OK?	Go to step **8**.	Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.>
8	**CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Repair the power supply circuit.

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
10	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.
11	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
12	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Coolant Temp.», «Ambient Temperature» and «Fuel Pump Duty». NOTE: For detailed operation procedures, refer to “Freeze Frame Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Coolant Temp.» 120°C (248°F) or more? Or, is the value of «Coolant Temp.» lower than «Ambient Temperature» by 15°C (27°F) or more?	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>	• When the value of «Fuel Pump Duty» is 60% or more: Go to step **13**. • When the value of «Fuel Pump Duty» is less than 60%: Check the fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	**CHECK OF FUEL PUMP.** 1) On the «Active Test» item, select «Fuel Pump Relay», and perform ON/OFF drive operation. NOTE: For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(w/o STI)(diag)-97, Active Test.> 2) Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.	Does the fuel pump emit operating sound?	Go to step **15**.	Go to step **14**.

	Step	Check	Yes	No
14	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
15	**CHECK FUEL TANK.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** Check if any foreign matters such as iron powder exist in the fuel tank.	Is there any foreign matter in the fuel tank?	Remove foreign matter from the fuel tank.	Go to step **16**.
16	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **17**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
17	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A» in all freeze frame data?	Go to step **18**.	Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>
18	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from fuel injector. 4) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.

	Step	Check	Yes	No
19	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **29**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
20	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Coolant Temp.», «Ambient Temperature» and «Engine Speed». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Coolant Temp.» 120°C (248°F) or more? Or, is the value of «Coolant Temp.» lower than «Ambient Temperature» by 15°C (27°F) or more?	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>	• When the minimum value of «Engine Speed» is less than 300 rpm: Go to step **21**. • When the minimum value of «Engine Speed» is 300 rpm or more: It is possible that the engine compression pressure is not sufficient. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>
21	**CHECK FUEL INJECTOR.** Check fuel injector. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is there any deposit in the fuel injectors?	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>	Go to step **22**.
22	**CHECK FUEL TANK.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** Check if any foreign matters such as iron powder exist in the fuel tank.	Is there any foreign matter in the fuel tank?	Remove foreign matter from the fuel tank.	Go to step **23**.
23	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the value in «Coolant Temp.». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Coolant Temp.» 40 — 90°C (104 — 194°F)?	Go to step **25**.	Go to step **24**.

	Step	Check	Yes	No
24	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure five minutes after the engine is stopped. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.> NOTE: If the engine does not start, measure the fuel pressure five minutes after cranking is completed.	Is the measured value 147 kPa (1.5 kgf/cm^2, 21 psi) or more?	Go to step **29**.	Replace the pressure regulator. <Ref. to FU(w/o STI)-181, Fuel Filter.>
25	**CHECK FUEL INJECTOR.** 1) After the engine is stopped, scavenge inside of the intake manifold by applying compressed air. 2) Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.	Is the HC concentration less than 4,000 ppm?	Go to step **27**.	Go to step **26**.
26	**CHECK FUEL INJECTOR.** Check fuel injector. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **27**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
27	**CHECK THROTTLE BODY.** Check throttle body. <Ref. to FU(w/o STI)-16, INSPECTION, Throttle Body.>	Is there any deposit in the throttle body?	Replace the throttle body. <Ref. to FU(w/o STI)-15, Throttle Body.>	Go to step **28**.
28	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system. <Ref. to IN(w/o STI)-2, General Description.>	Go to step **29**.
29	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Go to step **30**.
30	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Does cranking occur?	• When the engine speed is abnormal during cranking: Go to step **37**. • When an initial combustion does not occur: Go to step **40**. • When the engine stalls immediately after engine start: Go to step **57**. • When the engine takes time to start: Go to step **80**.	Go to step **31**.

	Step	Check	Yes	No
31	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Does the sound occur by a protruding starter pinion gear during cranking?	• When the starter motor does not rotate: Go to step **32**. • When the starter motor rotates but does not engage: Go to step **34**.	Go to step **35**.
32	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>	Is the check result OK?	Go to step **33**.	Charge or replace the battery. <Ref. to SC(w/o STI)-50, Battery.>
33	**CHECK ENGINE MAIN BODY.** Using the ST, rotate the crankshaft. ST 18252AA000 CRANKSHAFT SOCKET	Does the crankshaft rotate smoothly?	Check the starter motor. <Ref. to SC(w/o STI)-23, INSPECTION, Starter.> NOTE: It is possible that the engine friction increased temporarily. Check if any foreign matter is mixed in engine oil. If a foreign matter is found, check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>	It is possible that the engine friction is too large. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>
34	**CHECK STARTER MOTOR.** Check the starter motor. <Ref. to SC(w/o STI)-23, INSPECTION, Starter.>	Is there any wear or damage in the starter pinion gear?	Repair the starter motor. <Ref. to SC(w/o STI)-7, Starter.>	• CVT model: Replace the torque converter assembly. <Ref. to CVT(TR690)-143, Torque Converter Assembly.> • MT model: Replace the flywheel. <Ref. to CL-15, Flywheel.>
35	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>	Is the check result OK?	Go to step **36**.	Charge or replace the battery. <Ref. to SC(w/o STI)-50, Battery.>
36	**CHECK STARTER MOTOR.** Check the starter motor. <Ref. to SC(w/o STI)-23, INSPECTION, Starter.>	Is the check result OK?	Check the starter motor circuit. <Ref. to EN(w/o STI)(diag)-101, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>	Repair the starter motor. <Ref. to SC(w/o STI)-7, Starter.>

	Step	Check	Yes	No
37	**CHECK CURRENT DATA.** Read the value of «Engine Speed» during cranking using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Engine Speed» 300 rpm or more?	It is possible that the compression pressure of the engine is not sufficient. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>	Go to step **38**.
38	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>	Is the check result OK?	Go to step **39**.	Charge or replace the battery. <Ref. to SC(w/o STI)-50, Battery.>
39	**CHECK ENGINE MAIN BODY.** Using the ST, rotate the crankshaft. ST 18252AA000 CRANKSHAFT SOCKET	Does the crankshaft rotate smoothly?	Check the starter motor. <Ref. to SC(w/o STI)-23, INSPECTION, Starter.> NOTE: It is possible that the engine friction increased temporarily. Check if any foreign matter is mixed in engine oil. If a foreign matter is found, check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>	It is possible that the engine friction is too large. Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>
40	**CHECK OPERATION OF EACH FUEL INJECTOR.** Using a sound scope, check each fuel injector for operation sound during cranking.	Does the fuel injector emit operating sound?	Go to step **41**.	Go to step **54**.
41	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **42**.	Go to step **52**.
42	**CHECK IGNITION CONDITION.** Check the ignition condition. <Ref. to EN(w/o STI)(diag)-114, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Is the check result OK?	Go to step **43**.	Go to step **46**.

	Step	Check	Yes	No
43	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Does the fault occur only within approx. 15 to 120 minutes after the engine is stopped?	Go to step **45**.	• When the fault occurs in two or three minutes or a long time after the engine is stopped: Go to step **44**. • When the fault occurrence pattern is inconsistent: Go to step **94**.
44	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure five minutes after the engine is stopped. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.> NOTE: If the engine does not start, measure the fuel pressure five minutes after cranking is completed.	Is the measured value 147 kPa (1.5 kgf/cm^2, 21 psi) or more?	Go to step **94**.	Replace the pressure regulator. <Ref. to FU(w/o STI)-181, Fuel Filter.>
45	**CHECK FUEL INJECTOR.** 1) After the engine is stopped, scavenge inside of the intake manifold by applying compressed air. 2) Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.	Is the HC concentration less than 4,000 ppm?	Go to step **94**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
46	**CHECK SPARK PLUG.** Check the spark plug. <Ref. to IG(w/o STI)-8, INSPECTION, Spark Plug.>	Is the check result OK?	Go to step **47**.	Replace all spark plugs on all cylinders. <Ref. to IG(w/o STI)-4, Spark Plug.>
47	**CHECK CURRENT DATA.** Record the value of «Engine Speed» during cranking using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the recorded value of «Engine Speed» contain data of 0 rpm?	It is possible that temporary fault occurs in the crankshaft position sensor circuit. Check the crankshaft position sensor circuit. <Ref. to EN(w/o STI)(diag)-421, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **48**.

	Step	Check	Yes	No
48	**CHECK IGNITION COIL POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition coil. 3) Turn the ignition switch to ON. 4) Measure the voltage between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 1 (+) — Engine ground (–):*** ***(E32) No. 1 (+) — Engine ground (–):*** ***(E33) No. 1 (+) — Engine ground (–):*** ***(E34) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **49**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open or short to ground in power supply circuit • Poor contact of coupling connector • Blown out of fuse
49	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and ignition coil connector. ***Connector & terminal*** ***(E159) No. 8 — (E31) No. 2:*** ***(E159) No. 16 — (E32) No. 2:*** ***(E159) No. 24 — (E33) No. 2:*** ***(E159) No. 32 — (E34) No. 2:***	Is the resistance less than 1 Ω?	Go to step **50**.	Repair the open circuit in harness between ECM connector and ignition coil connector.
50	**CHECK HARNESS BETWEEN ECM AND IGNITION COIL CONNECTOR.** Measure the resistance of harness between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 8 — Engine ground:*** ***(E159) No. 16 — Engine ground:*** ***(E159) No. 24 — Engine ground:*** ***(E159) No. 32 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **51**.	Repair the ground short circuit of harness between ECM connector and ignition coil connector.
51	**CHECK HARNESS OF IGNITION COIL GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between ignition coil connector and engine ground. ***Connector & terminal*** ***(E31) No. 3 — Engine ground:*** ***(E32) No. 3 — Engine ground:*** ***(E33) No. 3 — Engine ground:*** ***(E34) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Replace the ignition coil. <Ref. to IG(w/o STI)-11, Ignition Coil.> If the fault occurs after servicing, continue the diagnosis. Go to step **99**.	Repair the open circuit in harness between ignition coil connector and engine grounding terminal.
52	**CHECK OF FUEL PUMP.** 1) On the «Active Test» item, select «Fuel Pump Relay», and perform ON/OFF drive operation. NOTE: For detailed operation procedures, refer to the “Active Test”. <Ref. to EN(w/o STI)(diag)-97, Active Test.> 2) Check if operating sound occurs in the fuel pump according to ON/OFF switching operation.	Does the fuel pump emit operating sound?	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>	Go to step **53**.

	Step	Check	Yes	No
53	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> If the fault occurs after servicing, continue the diagnosis. Go to step **94**.	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
54	**CHECK CURRENT DATA.** Record the value of «Engine Speed» during cranking using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the recorded value of «Engine Speed» contain data of 0 rpm?	It is possible that temporary fault occurs in the crankshaft position sensor circuit. Check the crankshaft position sensor circuit. <Ref. to EN(w/o STI)(diag)-421, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **55**.
55	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from fuel injector. 4) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **56**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
56	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.

	Step	Check	Yes	No
57	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, INSPECTION, Mass Air Flow and Intake Air Temperature Sensor.>	Is the check result OK?	Go to step **58**.	Go to step **78**.
58	**CHECK AIR INTAKE SYSTEM.** Check the installing condition of the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system. <Ref. to IN(w/o STI)-2, General Description.>	Go to step **59**.
59	**CHECK ELECTRONIC THROTTLE CONTROL.** 1) Disconnect the connectors from electronic throttle control. 2) Start the engine with the electronic throttle control connector disconnected.	Does the engine start?	Go to step **60**.	Go to step **61**.
60	**CHECK THROTTLE BODY.** Check throttle body. <Ref. to FU(w/o STI)-16, INSPECTION, Throttle Body.>	Is there any deposit in the throttle body?	Replace the throttle body. <Ref. to FU(w/o STI)-15, Throttle Body.>	Go to step **61**.
61	**CHECK FREEZE FRAME DATA.** 1) Using the Subaru Select Monitor, read the values of the followings: «VVT Adv. Ang. Amount R», «VVT Advance Target Angle Amount R», «VVT Adv. Ang. Amount L», «VVT Advance Target Angle Amount L», «Exh. VVT Retard Ang. R», «Ex VVT Retard Target Angle R», «Exh. VVT Retard Ang. L» and «Ex VVT Retard Target Angle L». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.> 2) Using the Subaru Select Monitor, compare the respective values between the followings: «VVT Adv. Ang. Amount R» and «VVT Advance Target Angle Amount R», «VVT Adv. Ang. Amount L» and «VVT Advance Target Angle Amount L», «Exh. VVT Retard Ang. R» and «Ex VVT Retard Target Angle R», «Exh. VVT Retard Ang. L» and «Ex VVT Retard Target Angle L».	Does all of the advance angle amount and retard angle amount synchronize with their target values?	Go to step **112**.	Diagnose the part where there is difference of 10 deg or more. • Intake RH: Go to step **62**. • Intake LH: Go to step **66**. • Exhaust RH: Go to step **70**. • Exhaust LH: Go to step **74**.
62	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake oil control solenoid RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **63**.	Repair the power supply circuit.

	Step	Check	Yes	No
63	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and intake oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 7 — (E38) No. 2:***	Is the resistance less than 1 Ω?	Go to step **64**.	Repair the open circuit in harness between ECM connector and intake oil control solenoid RH connector.
64	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance between intake oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E38) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **65**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid RH connector.
65	**CHECK INTAKE OIL CONTROL SOLENOID RH.** Check the intake oil control solenoid RH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the intake cam sprocket RH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the intake oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
66	**CHECK POWER SUPPLY TO THE INTAKE OIL CONTROL SOLENOID LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake oil control solenoid LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **67**.	Repair the power supply circuit.
67	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and intake oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 15 — (E37) No. 2:***	Is the resistance less than 1 Ω?	Go to step **68**.	Repair the open circuit in harness between ECM connector and intake oil control solenoid LH connector.
68	**CHECK HARNESS BETWEEN ECM AND INTAKE OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance between intake oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E37) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **69**.	Repair the short circuit to ground in harness between ECM connector and intake oil control solenoid LH connector.
69	**CHECK INTAKE OIL CONTROL SOLENOID LH.** Check the intake oil control solenoid LH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the intake cam sprocket LH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the intake oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>

	Step	Check	Yes	No
70	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust oil control solenoid RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **71**.	Repair the power supply circuit.
71	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and exhaust oil control solenoid RH. ***Connector & terminal*** ***(E159) No. 23 — (E63) No. 2:***	Is the resistance less than 1 Ω?	Go to step **72**.	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid RH connector.
72	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID RH CONNECTOR.** Measure the resistance between exhaust oil control solenoid RH connector and engine ground. ***Connector & terminal*** ***(E63) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **73**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid RH connector.
73	**CHECK EXHAUST OIL CONTROL SOLENOID RH.** Check the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the exhaust cam sprocket RH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the exhaust oil control solenoid RH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
74	**CHECK POWER SUPPLY TO THE EXHAUST OIL CONTROL SOLENOID LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust oil control solenoid LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **75**.	Repair the power supply circuit.
75	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and exhaust oil control solenoid LH. ***Connector & terminal*** ***(E159) No. 31 — (E66) No. 2:***	Is the resistance less than 1 Ω?	Go to step **76**.	Repair the open circuit in harness between ECM connector and exhaust oil control solenoid LH connector.

	Step	Check	Yes	No
76	**CHECK HARNESS BETWEEN ECM AND EXHAUST OIL CONTROL SOLENOID LH CONNECTOR.** Measure the resistance between exhaust oil control solenoid LH connector and engine ground. ***Connector & terminal*** ***(E66) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **77**.	Repair the short circuit to ground in harness between ECM connector and exhaust oil control solenoid LH connector.
77	**CHECK EXHAUST OIL CONTROL SOLENOID LH.** Check the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-104, INSPECTION, Oil Control Solenoid.>	Is the check result OK?	Replace the exhaust cam sprocket LH. <Ref. to ME(w/o STI)-134, Cam Sprocket.>	Replace the exhaust oil control solenoid LH. <Ref. to FU(w/o STI)-103, Oil Control Solenoid.>
78	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the mass air flow and intake air temperature sensor. 4) Measure the resistance of harness between ECM connector and the mass air flow and intake air temperature sensor connector. ***Connector & terminal*** ***(B134) No. 16 — (B3) No. 3:*** ***(B134) No. 28 — (B3) No. 2:***	Is the resistance less than 1 Ω?	Go to step **79**.	Repair the open circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
79	**CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 16 — Engine ground:*** ***(B134) No. 28 — Engine ground:***	Is the resistance 1 MΩ or more?	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.> If the fault occurs after servicing, continue the diagnosis. Go to step **112**.	Repair the ground short circuit of harness between ECM connector and the mass air flow and intake air temperature sensor connector.
80	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **81**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.> If the fault occurs after servicing, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> If the fault still occurs after replacing the ECM, continue the diagnosis. Go to step **123**.

	Step	Check	Yes	No
81	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from the engine coolant temperature sensor. 4) Measure the resistance of harness between ECM connector and engine coolant temperature sensor connector. ***Connector & terminal*** ***(E159) No. 27 — (E8) No. 1:*** ***(E158) No. 38 — (E8) No. 2:***	Is the resistance less than 1 Ω?	Go to step **82**.	Repair the open circuit of the harness between the ECM connector and engine coolant temperature sensor connector. If the fault occurs after servicing, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> If the fault still occurs after replacing the ECM, continue the diagnosis. Go to step **123**.
82	**CHECK HARNESS BETWEEN ECM AND ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 38 — Engine ground:*** ***(E159) No. 27 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **83**.	Repair the short circuit to ground in harness between ECM connector and engine coolant temperature sensor connector. If the fault occurs after servicing, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> If the fault still occurs after replacing the ECM, continue the diagnosis. Go to step **123**.
83	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Read the values of «Long term fuel trim B1» and «Atmosphere Pressure», using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Is the value of «Long term fuel trim B1» –25 — 25%, and «Atmosphere Pressure» 80 kPa (600 mmHg, 23.6 inHg) or more?	Go to step **86**.	Go to step **84**.
84	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Perform the Clear Memory Mode. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Start the engine.	Does the engine start?	Go to step **85**.	Go to step **86**.

	Step	Check	Yes	No
85	**CHECK IDLE SPEED.** Check the idle speed.	Is the idle speed stable?	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.> If the fault occurs after servicing, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> If the fault still occurs after replacing the ECM, continue the diagnosis. Go to step **123**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.> If the fault occurs after servicing, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> If the fault still occurs after replacing the ECM, continue the diagnosis. Go to step **123**.
86	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **87**.	Go to step **93**.
87	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, read the values in «Fuel Rail Pressure A» and «Commanded Fuel Rail Pressure A». NOTE: For detailed operation procedures, refer to "Freeze Frame Data Display For Engine". <Ref. to EN(w/o STI)(diag)-62, DISPLAY OF ENGINE FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>	Is the value in «Fuel Rail Pressure A» synchronized with the one in «Commanded Fuel Rail Pressure A» in all freeze frame data?	Go to step **88**.	Check the high-pressure fuel pump. <Ref. to FU(w/o STI)-77, INSPECTION, High Pressure Fuel Pump.>

	Step	Check	Yes	No
88	**CHECK SPARK PLUG.** Check the spark plug. <Ref. to IG(w/o STI)-8, INSPECTION, Spark Plug.>	Is the check result OK?	Go to step **89**.	• When spark plugs in some cylinders are faulty: Replace the faulty spark plugs of the cylinders, then check the ignition system and fuel system in the faulty cylinders. <Ref. to IG(w/o STI)-4, Spark Plug.> If the fault occurs after servicing, continue the diagnosis. Go to step **123**. • When all spark plugs in all cylinders are faulty: Replace faulty spark plugs in all cylinders. <Ref. to IG(w/o STI)-4, Spark Plug.> If the fault occurs after servicing, continue the diagnosis. Go to step **123**.
89	**CHECK FOR MALFUNCTION OCCURRENCE.** Check for the condition of fault occurrence.	Does the fault occur only within approx. 15 to 120 minutes after the engine is stopped?	Go to step **91**.	• When the fault occurs in two or three minutes or a long time after the engine is stopped: Go to step **90**. • When the fault occurrence pattern is inconsistent: Go to step **123**.
90	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure five minutes after the engine is stopped. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.> NOTE: If the engine does not start, measure the fuel pressure five minutes after cranking is completed.	Is the measured value 147 kPa (1.5 kgf/cm^2, 21 psi) or more?	Go to step **123**.	Replace the pressure regulator. <Ref. to FU(w/o STI)-181, Fuel Filter.>
91	**CHECK PURGE CONTROL SOLENOID VALVE.** Check purge control solenoid valve 1 and purge control solenoid valve 2. <Ref. to EC(w/o STI)-30, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step **92**.	Replace the faulty purge control solenoid valve. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>

	Step	Check	Yes	No
92	**CHECK FUEL INJECTOR.** 1) After the engine is stopped, scavenge inside of the intake manifold by applying compressed air. 2) Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.	Is the HC concentration less than 4,000 ppm?	Go to step **123**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
93	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> If the fault occurs after servicing, continue the diagnosis. Go to step **123**.	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
94	**CHECK FUEL INJECTOR.** Check fuel injector. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **95**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
95	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from fuel injector. 4) Measure the resistance of harness between ECM connector and fuel injector connector. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **96**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
96	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***#1 (E158) No. 12 — Engine ground:*** ***#1 (E158) No. 11 — Engine ground:*** ***#2 (E158) No. 24 — Engine ground:*** ***#2 (E158) No. 23 — Engine ground:*** ***#3 (E158) No. 36 — Engine ground:*** ***#3 (E158) No. 35 — Engine ground:*** ***#4 (E158) No. 48 — Engine ground:*** ***#4 (E158) No. 47 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **97**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
97	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Go to step **98**.

	Step	Check	Yes	No
98	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the camshaft position sensor. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
99	**CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installed correctly?	Go to step **100**.	Install the crankshaft position sensor correctly. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>
100	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor.	Is the camshaft position sensor installed correctly?	Go to step **101**.	Install the camshaft position sensor correctly. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
101	**CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **102**.	Repair the power supply circuit.
102	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **103**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
103	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **104**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

	Step	Check	Yes	No
104	**CHECK POWER SUPPLY OF INTAKE CAMSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E35) No. 1 (+) — Engine ground (–):*** ***(E36) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **105**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and intake camshaft position sensor connector • Poor contact of coupling connector
105	**CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and intake camshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 21 — (E35) No. 2:*** ***(E158) No. 34 — (E35) No. 3:*** ***(E158) No. 20 — (E36) No. 2:*** ***(E158) No. 34 — (E36) No. 3:***	Is the resistance less than 1 Ω?	Go to step **106**.	Repair the open circuit in the harness between ECM connector and intake camshaft position sensor connector.
106	**CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between intake camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 — Engine ground:*** ***(E36) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **107**.	Repair short circuit to ground in the harness between ECM connector and intake camshaft position sensor connector.
107	**CHECK POWER SUPPLY OF EXHAUST CAMSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E62) No. 1 (+) — Engine ground (–):*** ***(E65) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **108**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay and exhaust camshaft position sensor connector • Poor contact of coupling connector

	Step	Check	Yes	No
108	**CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and exhaust camshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 32 — (E62) No. 2:*** ***(E158) No. 34 — (E62) No. 3:*** ***(E158) No. 33 — (E65) No. 2:*** ***(E158) No. 34 — (E65) No. 3:***	Is the resistance less than 1 Ω?	Go to step **109**.	Repair the open circuit in the harness between ECM connector and exhaust camshaft position sensor connector.
109	**CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between exhaust camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 — Engine ground:*** ***(E65) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **110**.	Repair short circuit to ground in the harness between ECM connector and exhaust camshaft position sensor connector.
110	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Go to step **111**.
111	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the camshaft position sensor. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
112	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **113**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>
113	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure during cranking and five minutes after the engine is stopped. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the value of the fuel pressure during cranking 304 — 353 kPa (3.1 — 3.6 kgf/cm^2, 44 — 51 psi), and is the fuel pressure five minutes after engine stop 147 kPa (1.5 kgf/cm^2, 21 psi) or more?	Go to step **114**.	Go to step **122**.

	Step	Check	Yes	No
114	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Read the value of «Long term fuel trim B1» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Long term fuel trim B1» fall within a range of –15 — 15%?	Go to step **115**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
115	**CHECK FOR MALFUNCTION OCCURRENCE.** Start the engine and check the idling speed.	Is the idling speed stable all time?	It is possible that the fault comes from fuel. Replace fuel.	Go to step **116**.
116	**CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installed correctly?	Go to step **117**.	Install the crankshaft position sensor correctly. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>
117	**CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **118**.	Repair the power supply circuit.
118	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **119**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
119	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **120**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.
120	**CHECK COMPRESSION PRESSURE.** Check the compression pressure. <Ref. to ME(w/o STI)-24, INSPECTION, Compression.>	Is the check result OK?	Go to step **121**.	Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>

	Step	Check	Yes	No
121	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Check the valve timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> When the valve timing is normal, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
122	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
123	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** Measure the fuel pressure during cranking and five minutes after the engine is stopped. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the value of the fuel pressure during cranking 304 — 353 kPa (3.1 — 3.6 kgf/cm^2, 44 — 51 psi), and is the fuel pressure five minutes after engine stop 147 kPa (1.5 kgf/cm^2, 21 psi) or more?	Go to step **124**.	Go to step **131**.
124	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Read the value of «Long term fuel trim B1» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.>	Does the value of «Long term fuel trim B1» fall within a range of –15 — 15%?	Go to step **125**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
125	**CHECK FOR MALFUNCTION OCCURRENCE.** Start the engine and check the idling speed.	Is the idling speed stable all time?	It is possible that the fault comes from fuel. Replace fuel.	Go to step **126**.
126	**CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installed correctly?	Go to step **127**.	Install the crankshaft position sensor correctly. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>

	Step	Check	Yes	No
127	**CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **128**.	Repair the power supply circuit.
128	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **129**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
129	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **130**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.
130	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
131	**CHECK OF FUEL PUMP.** Check fuel pump. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.>	Is the check result OK?	Go to step **132**.	Replace the fuel pump. <Ref. to FU(w/o STI)-161, Fuel Pump.>
132	**CHECK FUEL PUMP SYSTEM.** Check fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Go to step **133**.	Repair the fuel pump system. <Ref. to EN(w/o STI)(diag)-385, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
133	**CHECK PURGE CONTROL SOLENOID VALVE.** Check purge control solenoid valve 1 and purge control solenoid valve 2. <Ref. to EC(w/o STI)-30, INSPECTION, Purge Control Solenoid Valve.>	Is the check result OK?	Go to step **134**.	Replace the faulty purge control solenoid valve. <Ref. to EC(w/o STI)-25, Purge Control Solenoid Valve.>

	Step	Check	Yes	No
134	**CHECK FUEL INJECTOR.** 1) After the engine is stopped, scavenge inside of the intake manifold by applying compressed air. 2) Measure the HC concentration inside the intake manifold 15 minutes after scavenging is completed.	Is the HC concentration less than 4,000 ppm?	Go to step **135**.	Replace the fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
135	**CHECK INTAKE VALVE.** Check the intake valve. <Ref. to ME(w/o STI)-220, INSPECTION, Cylinder Head.>	Is there any deposit in the intake valve?	Clean the intake valve. <Ref. to ME(w/o STI)-202, Cylinder Head.>	Go to step **136**.
136	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** Check the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, INSPECTION, Engine Coolant Temperature Sensor.>	Is the check result OK?	Go to step **137**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>
137	**CHECK INSTALLATION CONDITION OF CRANKSHAFT POSITION SENSOR.** Check installation condition of the crankshaft position sensor.	Is the crankshaft position sensor installed correctly?	Go to step **138**.	Install the crankshaft position sensor correctly. <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>
138	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor.	Is the camshaft position sensor installed correctly?	Go to step **139**.	Install the camshaft position sensor correctly. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.>
139	**CHECK POWER SUPPLY TO CRANKSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the crankshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **140**.	Repair the power supply circuit.
140	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and crankshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 19 — (E10) No. 2:*** ***(E158) No. 31 — (E10) No. 3:***	Is the resistance less than 1 Ω?	Go to step **141**.	Repair the open circuit in the harness between the ECM connector and crankshaft position sensor connector.
141	**CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between crankshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E10) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **142**.	Repair short circuit to ground in harness between ECM connector and crankshaft position sensor connector.

	Step	Check	Yes	No
142	**CHECK POWER SUPPLY OF INTAKE CAMSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the intake camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between intake camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E35) No. 1 (+) — Engine ground (–):*** ***(E36) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **143**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit or short circuit to ground in harness between main relay connector and intake camshaft position sensor connector • Poor contact of coupling connector
143	**CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and intake camshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 21 — (E35) No. 2:*** ***(E158) No. 34 — (E35) No. 3:*** ***(E158) No. 20 — (E36) No. 2:*** ***(E158) No. 34 — (E36) No. 3:***	Is the resistance less than 1 Ω?	Go to step **144**.	Repair the open circuit in the harness between ECM connector and intake camshaft position sensor connector.
144	**CHECK HARNESS BETWEEN ECM AND INTAKE CAMSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between intake camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E35) No. 2 — Engine ground:*** ***(E36) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **145**.	Repair short circuit to ground in the harness between ECM connector and intake camshaft position sensor connector.
145	**CHECK POWER SUPPLY OF EXHAUST CAMSHAFT POSITION SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the exhaust camshaft position sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between exhaust camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E62) No. 1 (+) — Engine ground (–):*** ***(E65) No. 1 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **146**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between main relay and exhaust camshaft position sensor connector • Poor contact of coupling connector

	Step	Check	Yes	No
146	**CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and exhaust camshaft position sensor connector. ***Connector & terminal*** ***(E158) No. 32 — (E62) No. 2:*** ***(E158) No. 34 — (E62) No. 3:*** ***(E158) No. 33 — (E65) No. 2:*** ***(E158) No. 34 — (E65) No. 3:***	Is the resistance less than 1 Ω?	Go to step **147**.	Repair the open circuit in the harness between ECM connector and exhaust camshaft position sensor connector.
147	**CHECK HARNESS BETWEEN ECM AND EXHAUST CAMSHAFT POSITION SENSOR CONNECTOR.** Measure the resistance between exhaust camshaft position sensor connector and engine ground. ***Connector & terminal*** ***(E62) No. 2 — Engine ground:*** ***(E65) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **148**.	Repair short circuit to ground in the harness between ECM connector and exhaust camshaft position sensor connector.
148	**CHECK COMPRESSION PRESSURE.** Check the compression pressure. <Ref. to ME(w/o STI)-24, INSPECTION, Compression.>	Is the check result OK?	Go to step **149**.	Check the engine. <Ref. to ME(w/o STI)-323, INSPECTION, Symptoms and causes.>
149	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the crankshaft position sensor. <Ref. to FU(w/o STI)-96, Crankshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Go to step **150**.
150	**CHECK FOR MALFUNCTION OCCURRENCE.** 1) Replace the camshaft position sensor. <Ref. to FU(w/o STI)-100, Camshaft Position Sensor.> 2) Check that the fault is removed.	Is the fault removed?	Perform the Clear Memory Mode to complete. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.>	Check the valve timing. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.> When the valve timing is normal, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the status enters into any one of the followings.
- Although starter signal input is present in ECM, the engine does not start (diagnosis 1)
- Although starter signal input is present in ECM, starting takes more time than it should (diagnosis 1)
- The engine stops immediately after starting except by operating the ignition switch (diagnosis 2)

2. EXECUTION CONDITION

Diagnosis 1

Secondary parameters	Execution condition
Starter signal	ON

Diagnosis 2

Secondary parameters	Execution condition
Elapsed time after starting the engine	≤ 2 s

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

4. DIAGNOSTIC METHOD

Diagnosis 1

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	< 500 rpm

Time needed for diagnosis: 2 — 26 seconds

Diagnosis 2

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Engine speed	< 300 rpm

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Does not illuminate.

EY:DTC P1C00 BATTERY MONITOR MODULE "A" PERFORMANCE

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTC using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC P1C00 displayed? (Current malfunction)	Replace the battery sensor. <Ref. to SC(w/o STI)-57, Battery Sensor.>	Even if DTC is detected, it has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

1. OUTLINE OF DIAGNOSIS

Judge as NG when faulty signal of each part is sent from the battery sensor.

2. COMPONENT DESCRIPTION

The battery sensor monitors the data of battery voltage, current, temperature, etc. ECM receives these data via LIN communication with the battery sensor.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Ignition switch	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Receives internal abnormality	ON
or	
Receives temperature sensor error	ON
or	
Receives voltage sensor error	ON
or	
Receives current sensor error	ON

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Does not illuminate.

EZ:DTC P2004 TGV CONTROL STUCK OPEN BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2004 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE RH.** 1) Remove the tumble generator valve assembly RH. 2) Check the tumble generator valve.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve RH. <Ref. to FU(w/o STI)-42, Tumble Generator Valve Assembly.> NOTE: The tumble generator valve cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve "close" signal output time	≥ 3.2 s

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	≥ 71.4 deg

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FA:DTC P2005 TGV CONTROL STUCK OPEN BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2005 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE LH.** 1) Remove the tumble generator valve assembly LH. 2) Check the tumble generator valve.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve LH. <Ref. to FU(w/o STI)-42, Tumble Generator Valve Assembly.> NOTE: The tumble generator valve cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P2004. <Ref. to EN(w/o STI)(diag)-648, DTC P2004 TGV CONTROL STUCK OPEN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

FB:DTC P2006 TGV CONTROL STUCK CLOSED BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2006 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE RH.** 1) Remove the tumble generator valve assembly RH. 2) Check the tumble generator valve.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve RH. <Ref. to FU(w/o STI)-42, Tumble Generator Valve Assembly.> NOTE: The tumble generator valve cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.
Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve "open" signal output time	≥ 4.6 s

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Tumble generator valve opening angle	< 71.4 deg

Time needed for diagnosis: 3000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FC:DTC P2007 TGV CONTROL STUCK CLOSED BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2007 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK TUMBLE GENERATOR VALVE LH.** 1) Remove the tumble generator valve assembly LH. 2) Check the tumble generator valve.	Is there any dirt or clogging with foreign objects in the tumble generator valve?	Clean the tumble generator valve.	Replace the tumble generator valve LH. <Ref. to FU(w/o STI)-42, Tumble Generator Valve Assembly.> NOTE: The tumble generator valve cannot be disassembled.

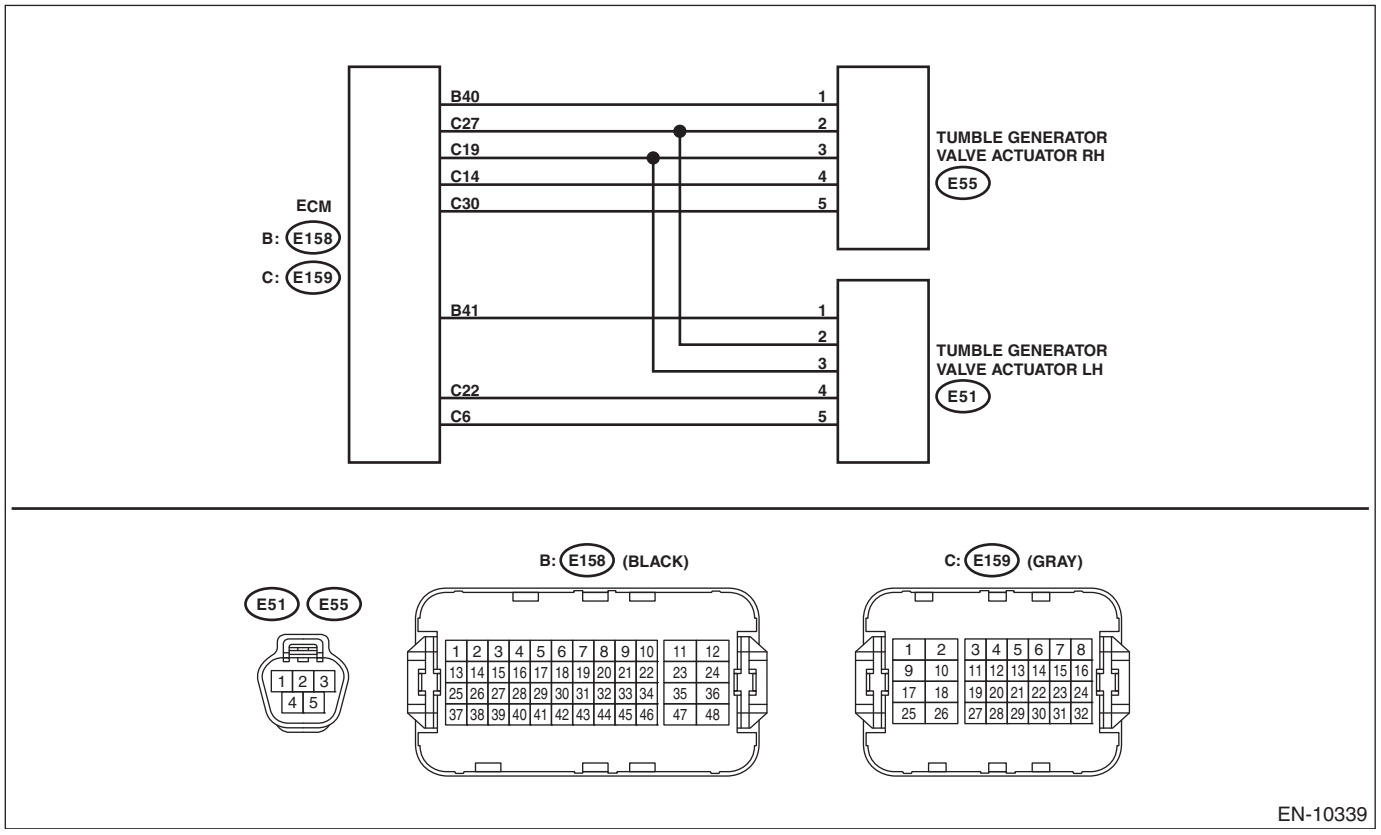
1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P2006. <Ref. to EN(w/o STI)(diag)-650, DTC P2006 TGV CONTROL STUCK CLOSED BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

FD:DTC P2009 TGV CONTROL CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

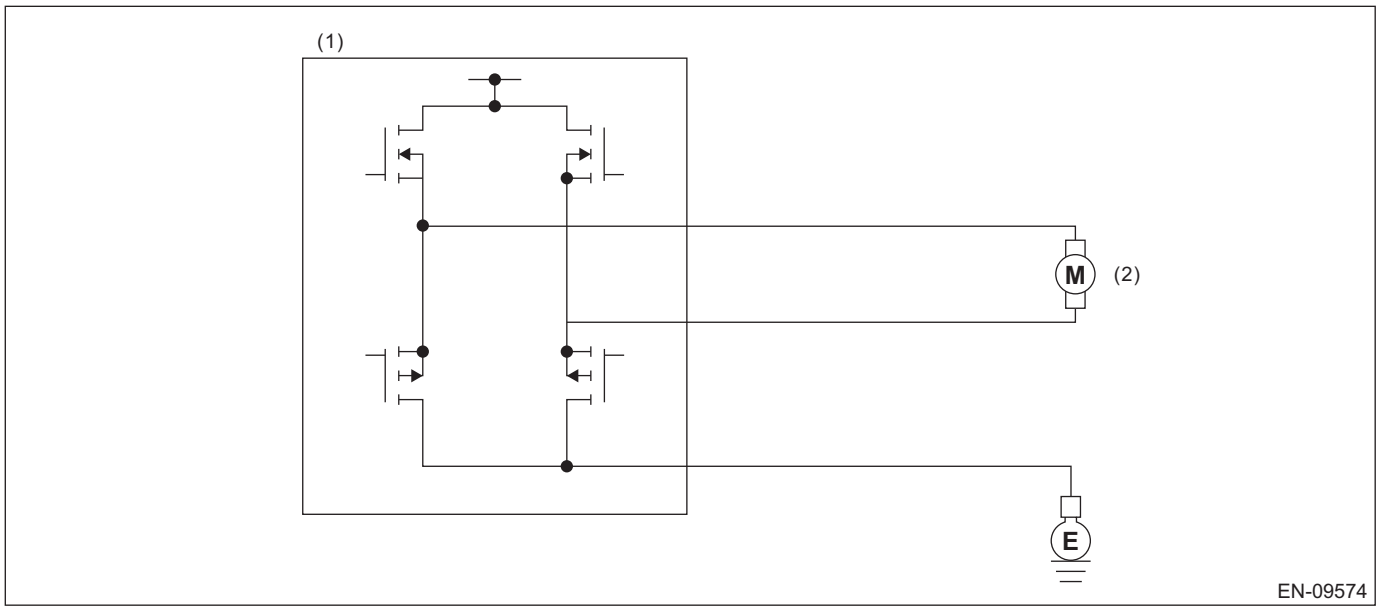


Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 14 (+) — Engine ground (–):*** ***(E159) No. 30 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator RH connector.	Replace the tumble generator valve actuator RH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect the short circuit of tumble generator valve motor.
Judge as NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve drive signal	Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

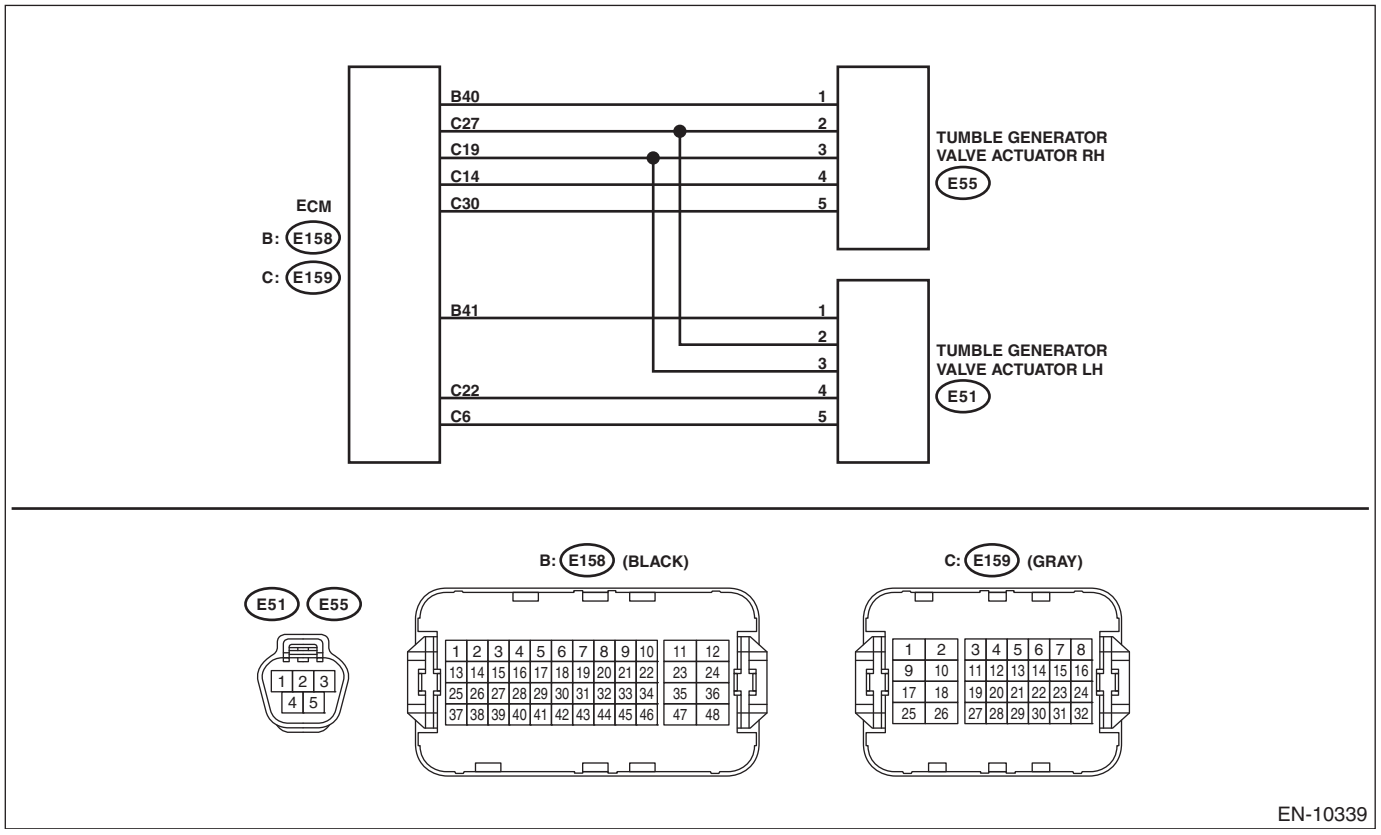
Malfunction Criteria	Threshold Value
Overcurrent signal from tumble generator valve drive IC	ON

Time needed for diagnosis: 320 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FE:DTC P2012 TGV CONTROL CIRCUIT LOW BANK 2

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

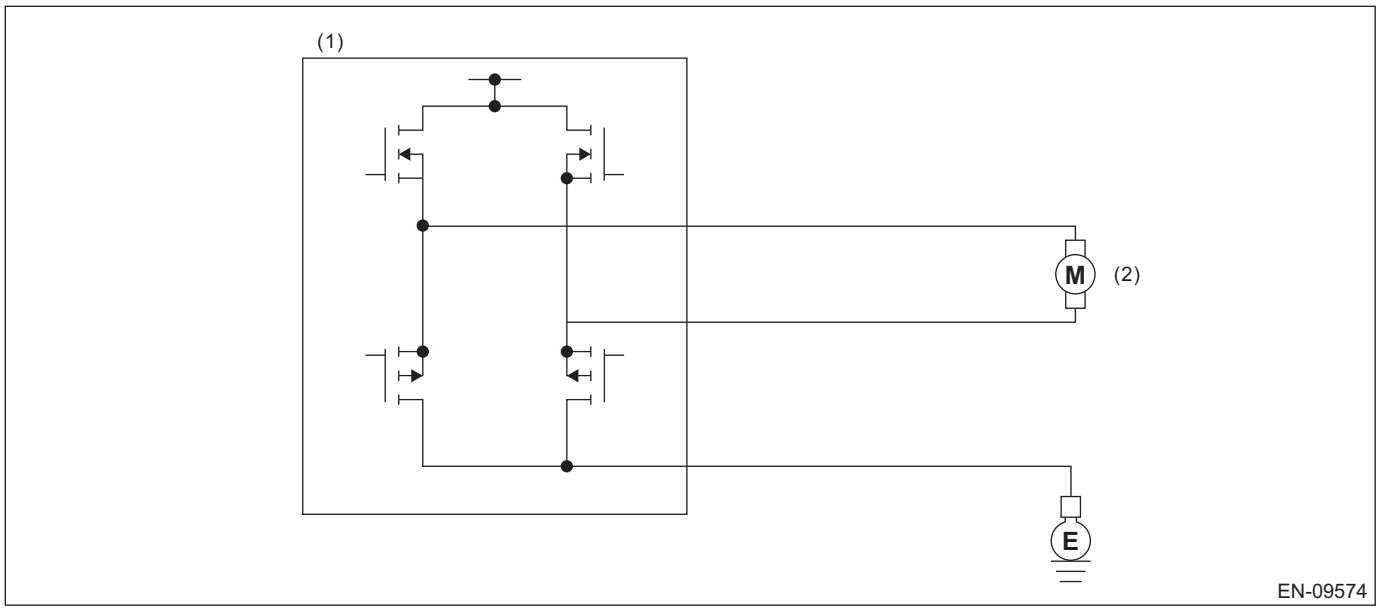


Step		Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(E159) No. 6 (+) — Engine ground (–):*** ***(E159) No. 22 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator LH connector.	Replace the tumble generator valve actuator LH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.
Judge as NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM) (2) Tumble generator valve

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Tumble generator valve drive signal	Open or Closed

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Overcurrent signal from tumble generator valve drive IC	ON

Time needed for diagnosis: 320 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FF: DTC P2016 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

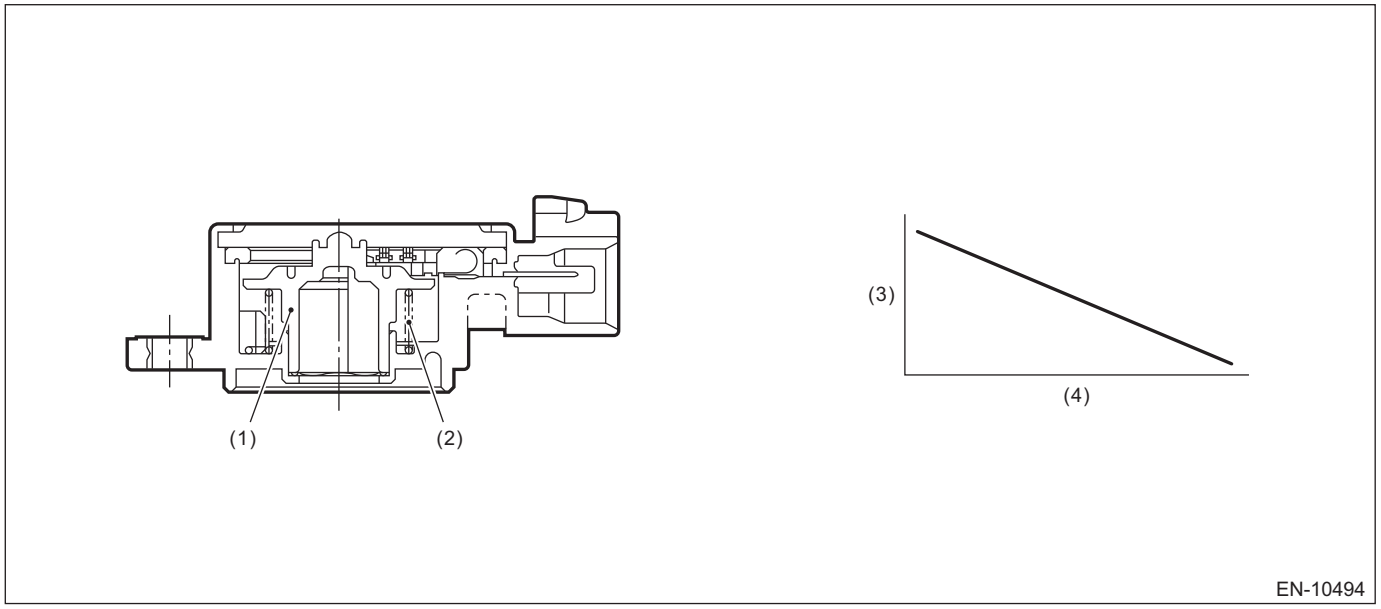
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor R» less than 0.2 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF TUMBLE GENERATOR VALVE ACTUATOR RH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve actuator RH. 3) Turn the ignition switch to ON. 4) Measure the voltage between tumble generator valve actuator RH connector and engine ground. ***Connector & terminal*** ***(E55) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve actuator RH connector • Poor contact of ECM connector
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and tumble generator valve actuator RH connector. ***Connector & terminal*** ***(E158) No. 40 — (E55) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between ECM connector and tumble generator valve actuator RH connector.
4	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 40 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and tumble generator valve actuator RH connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and tumble generator valve actuator RH connector.	Is there poor contact of ECM or the tumble generator valve actuator RH connector?	Repair the poor contact of ECM or tumble generator valve actuator RH connector.	Replace the tumble generator valve actuator RH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.21 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FG:DTC P2017 TGV POSITION SENSOR/SWITCH CIRCUIT HIGH BANK 1

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

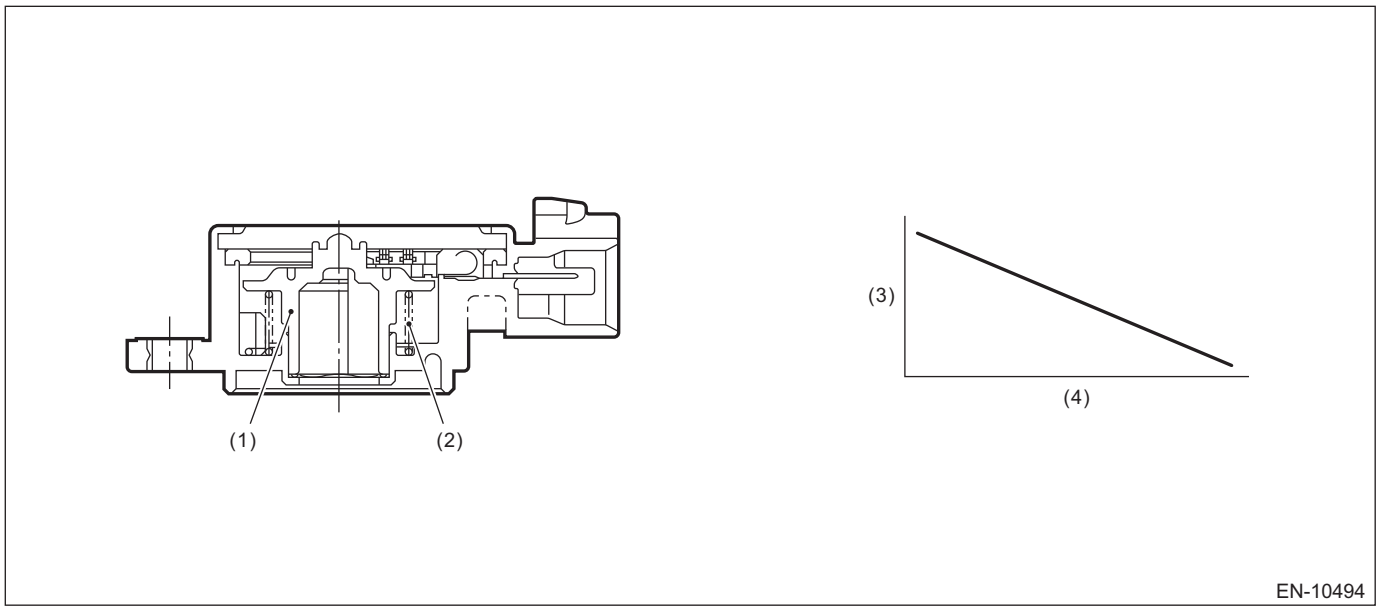
CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor R» 5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve actuator RH. 3) Start the engine. 4) Read the value of «TGV Position Sensor R» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor R» 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator RH connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR RH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between tumble generator valve actuator RH connector and engine ground. ***Connector & terminal*** ***(E55) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve actuator RH connector • Poor contact of ECM connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of tumble generator valve actuator RH connector.	Is there poor contact of the tumble generator valve actuator RH connector?	Repair the poor contact of tumble generator valve actuator RH connector.	Replace the tumble generator valve actuator RH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.47 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FH:DTC P2021 TGV POSITION SENSOR/SWITCH CIRCUIT LOW BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:

- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

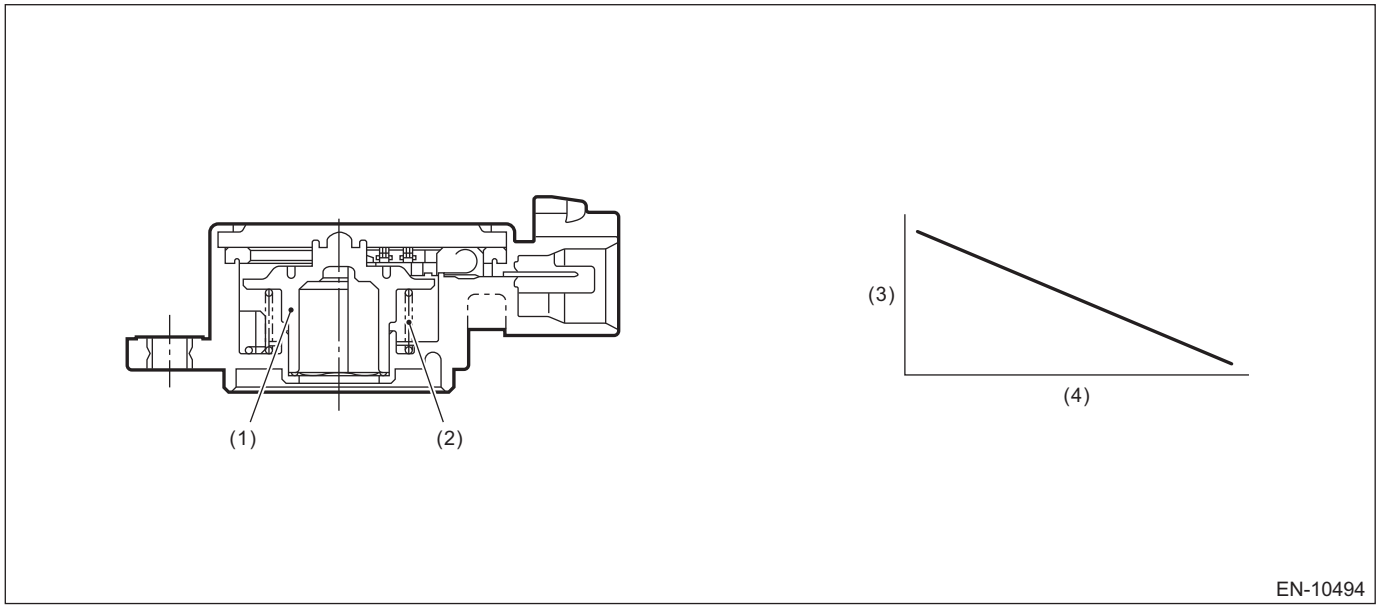
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor L» less than 0.2 V?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF TUMBLE GENERATOR VALVE ACTUATOR LH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve actuator LH. 3) Turn the ignition switch to ON. 4) Measure the voltage between tumble generator valve actuator LH connector and engine ground. ***Connector & terminal*** ***(E51) No. 3 (+) — Engine ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve actuator LH connector • Poor contact of ECM connector
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and tumble generator valve actuator LH connector. ***Connector & terminal*** ***(E158) No. 41 — (E51) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between ECM connector and tumble generator valve actuator LH connector.
4	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 41 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and tumble generator valve actuator LH connector.
5	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and tumble generator valve actuator LH connector.	Is there poor contact of ECM or the tumble generator valve actuator LH connector?	Repair the poor contact of ECM or tumble generator valve actuator LH connector.	Replace the tumble generator valve actuator LH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of tumble generator valve position sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Rotor
(2) Return spring
(3) Voltage (V)
(4) Tumble generator valve opening angle (°)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.21 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FI: DTC P2022 TGV POSITION SENSOR/SWITCH CIRCUIT HIGH BANK 2

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Engine stalls.
- Poor driving performance

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Start the engine. 2) Read the value of «TGV Position Sensor L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor L» 5 V or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from tumble generator valve actuator LH. 3) Start the engine. 4) Read the value of «TGV Position Sensor L» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «TGV Position Sensor L» 5 V or more?	Repair the short circuit to power in harness between ECM connector and tumble generator valve actuator LH connector.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND TUMBLE GENERATOR VALVE ACTUATOR LH CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between tumble generator valve actuator LH connector and engine ground. ***Connector & terminal*** ***(E51) No. 2 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and tumble generator valve actuator LH connector • Poor contact of ECM connector
4	**CHECK FOR POOR CONTACT.** Check for poor contact of tumble generator valve actuator LH connector.	Is there poor contact of the tumble generator valve actuator LH connector?	Repair the poor contact of tumble generator valve actuator LH connector.	Replace the tumble generator valve actuator LH. <Ref. to FU(w/o STI)-44, Tumble Generator Valve Actuator.> NOTE: The tumble generator valve actuator cannot be disassembled.

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.47 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

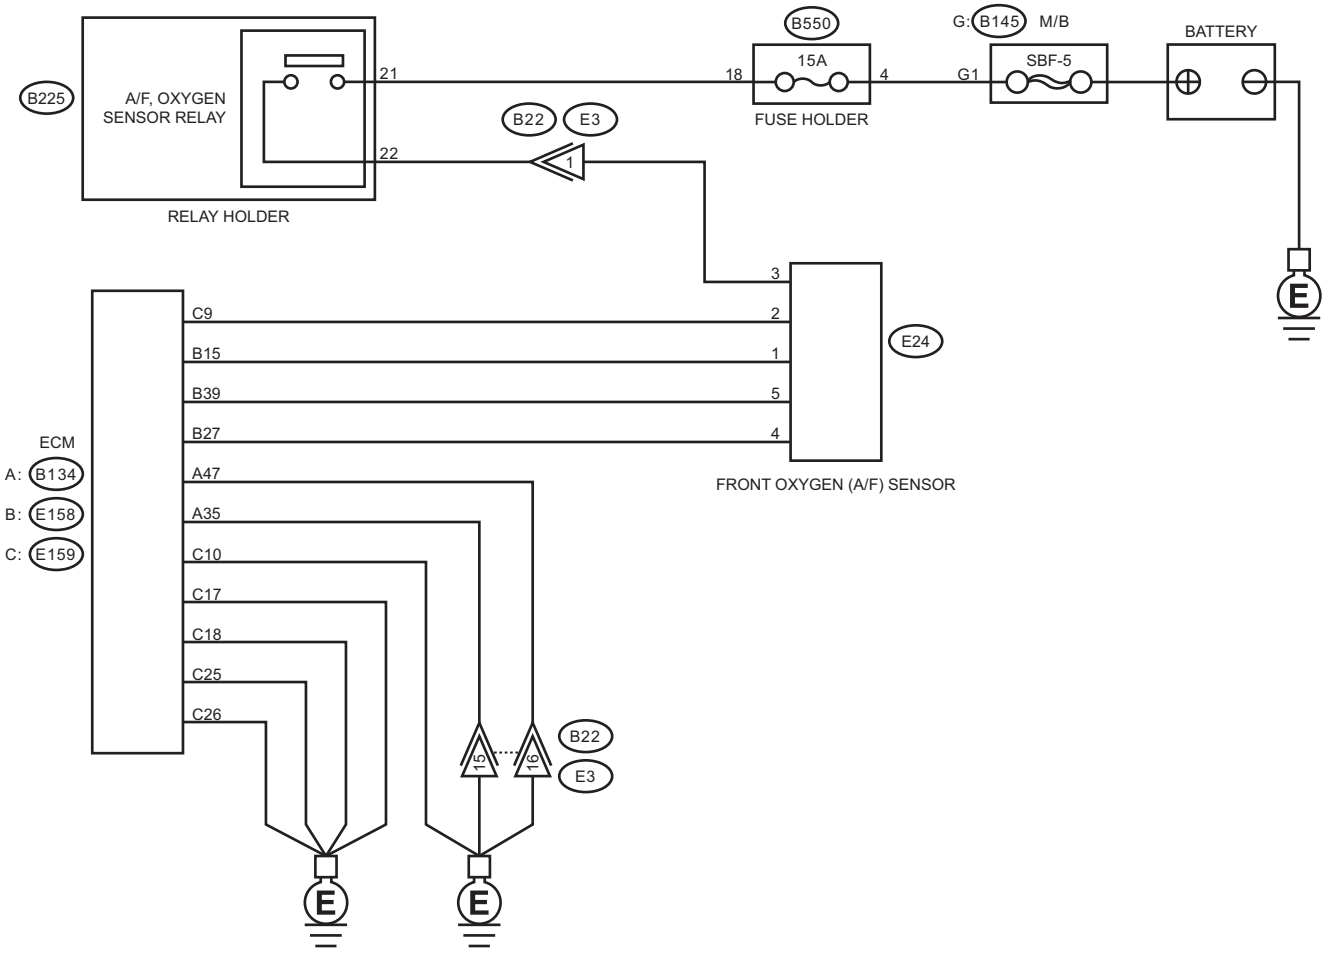
FJ: DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1

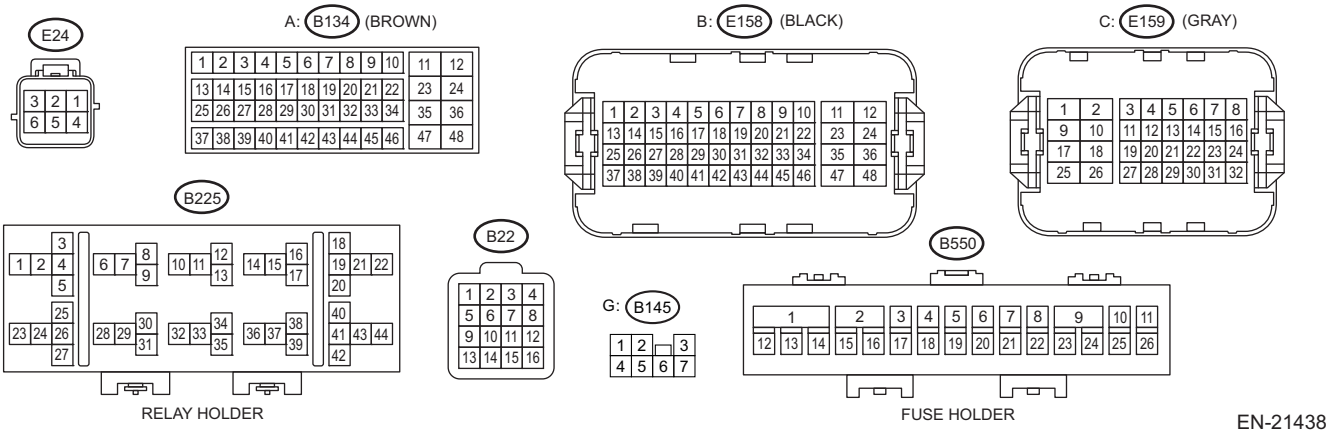
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

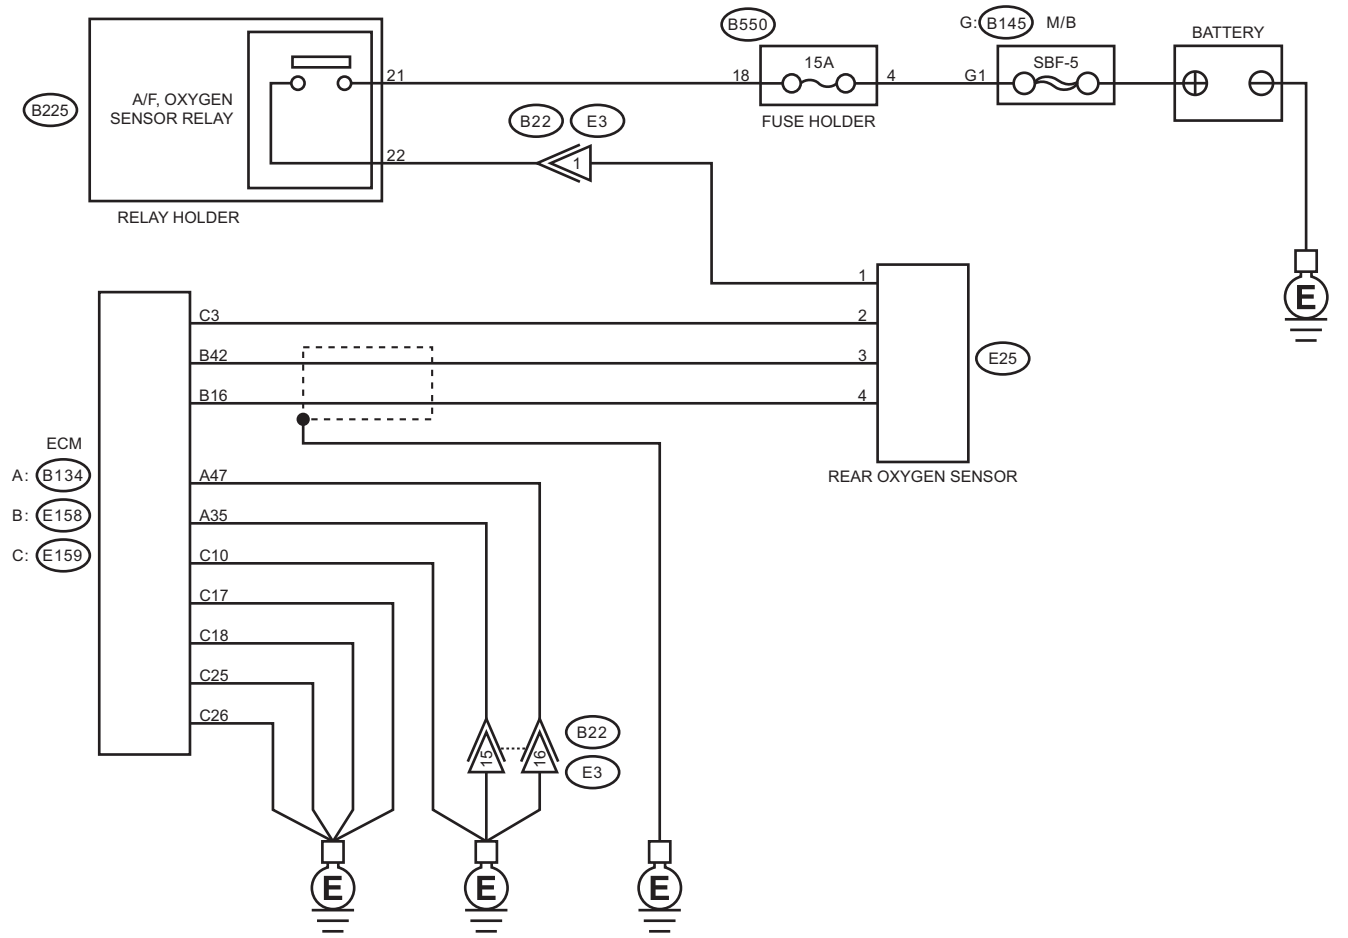
CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

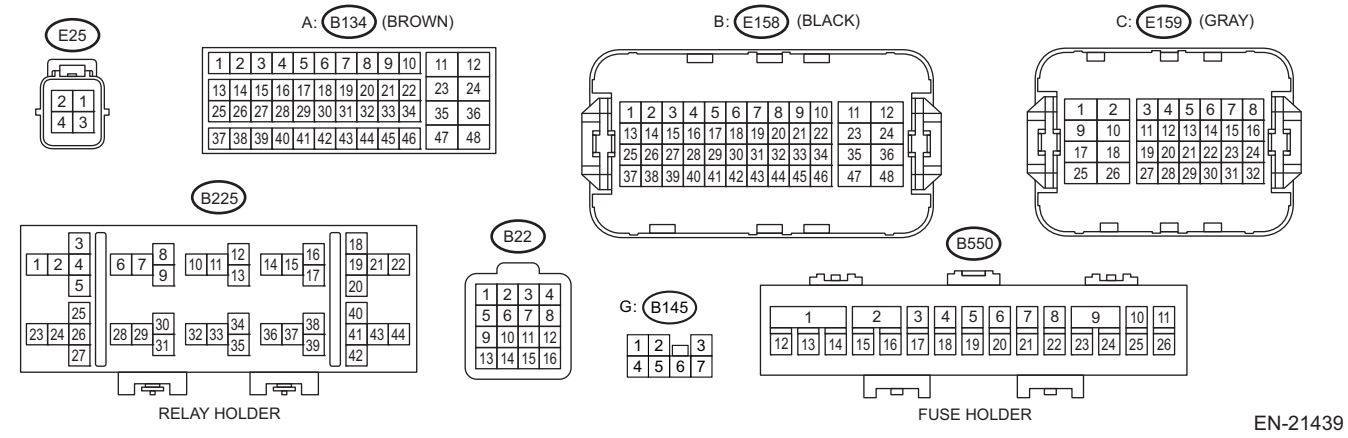
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>









Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2096 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **3**.
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B158) No. 15 — Chassis ground:*** ***(B158) No. 27 — Chassis ground:*** ***(B158) No. 39 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
5	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(E24) No. 1 (+) — Chassis ground (–):*** ***(E24) No. 4 (+) — Chassis ground (–):*** ***(E24) No. 5 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Go to step **6**.
6	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **7**.
7	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **8**.
8	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **9**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>

	Step	Check	Yes	No
9	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **10**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>
10	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/s)?	Go to step **11**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
11	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature value from the value of «IAT Sensor #11». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **12**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>

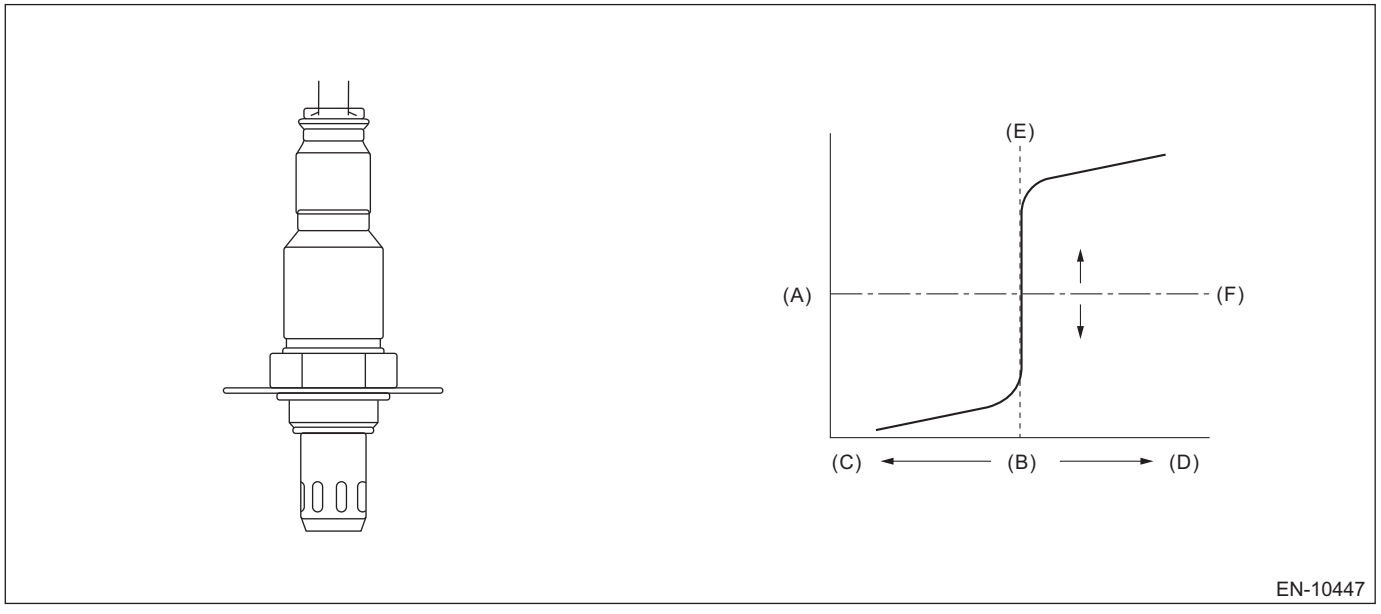
	Step	Check	Yes	No
12	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» 0.490 V or more?	Go to step **13**.	Go to step **14**.
13	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» 0.250 V or more?	Go to step **15**.	Go to step **14**.
14	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **16**.
15	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» kept at 0.250 V or less for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>	Go to step **16**.

	Step	Check	Yes	No
16	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **17**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
17	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(E25) No. 4 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Control the sub feedback learning and judge as NG when the learning value is in the lean zone.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Fuel level increase	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during sub feedback operation.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	≤ –0.026

Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FK:DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:

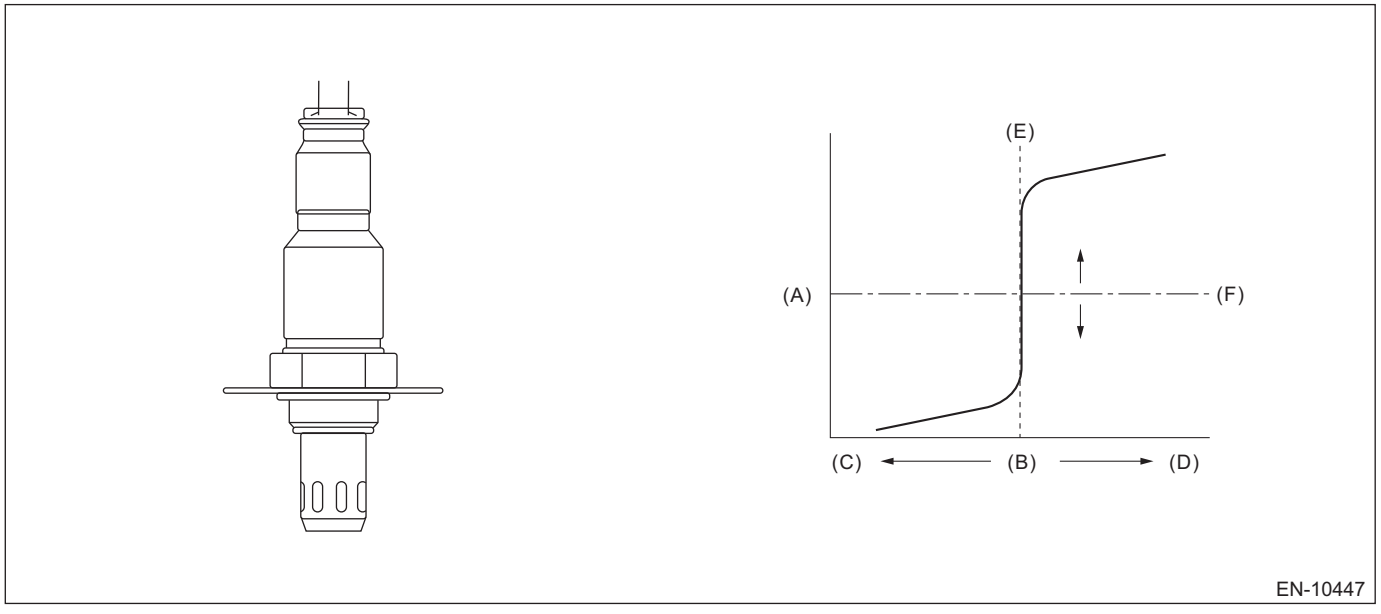
14	**CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.** Check the rear oxygen sensor connector and coupling connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **16**.
15	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» kept at 0.8 V or more for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>	Go to step **16**.

	Step	Check	Yes	No
16	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **17**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
17	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(E25) No. 4 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of ECM connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the size of the sub feedback learning value.
Sub feedback learning is being performed. When the learning value goes to the rich side, judge as NG.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Sub feedback	In operation
Fuel level increase	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during sub feedback operation.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sub feedback learning value	≥ 0.027

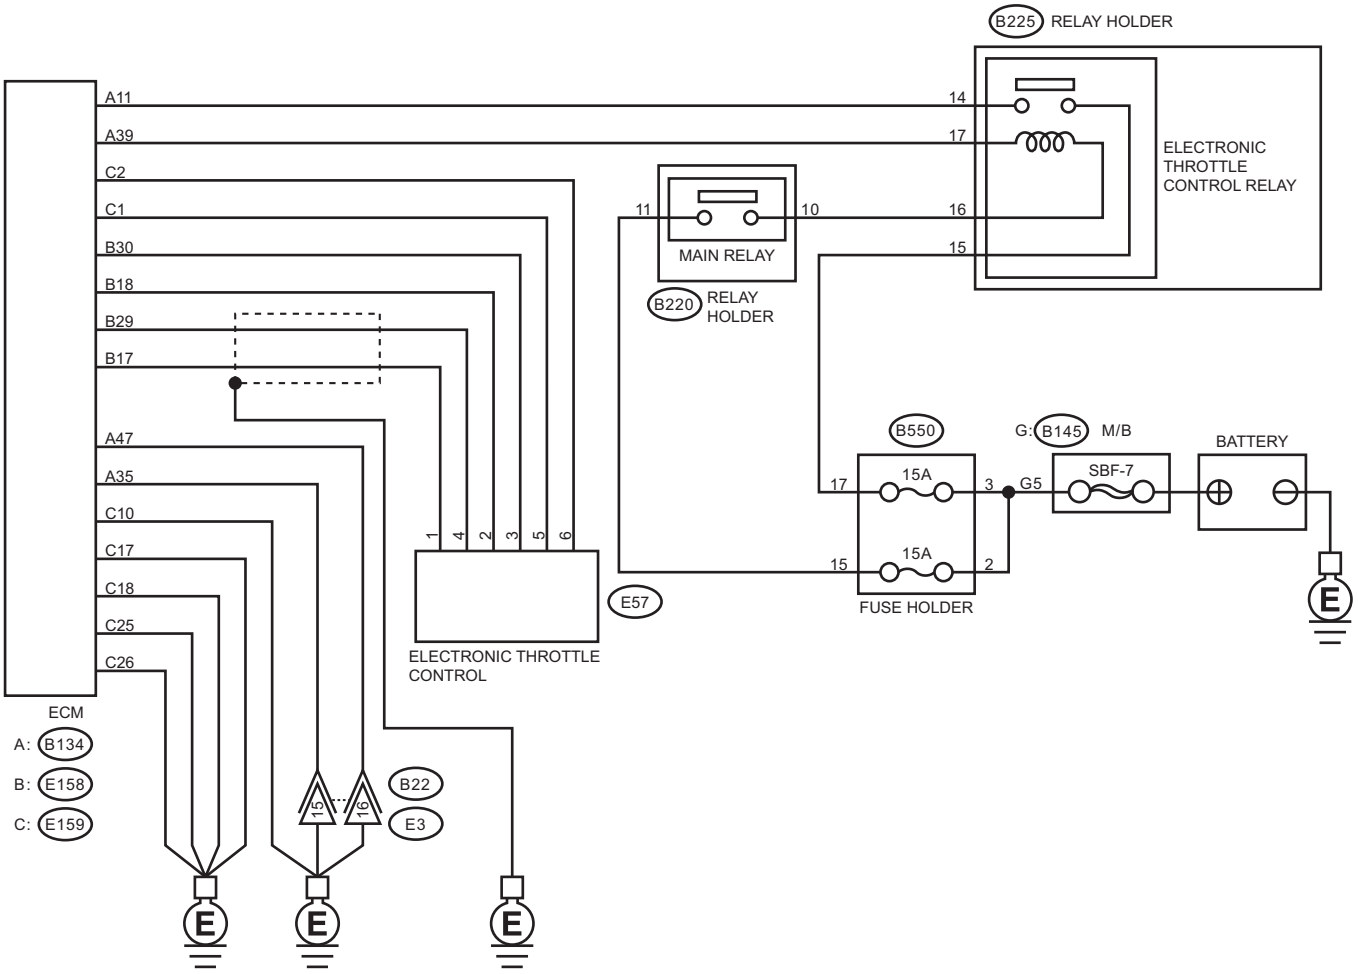
Time needed for diagnosis: 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

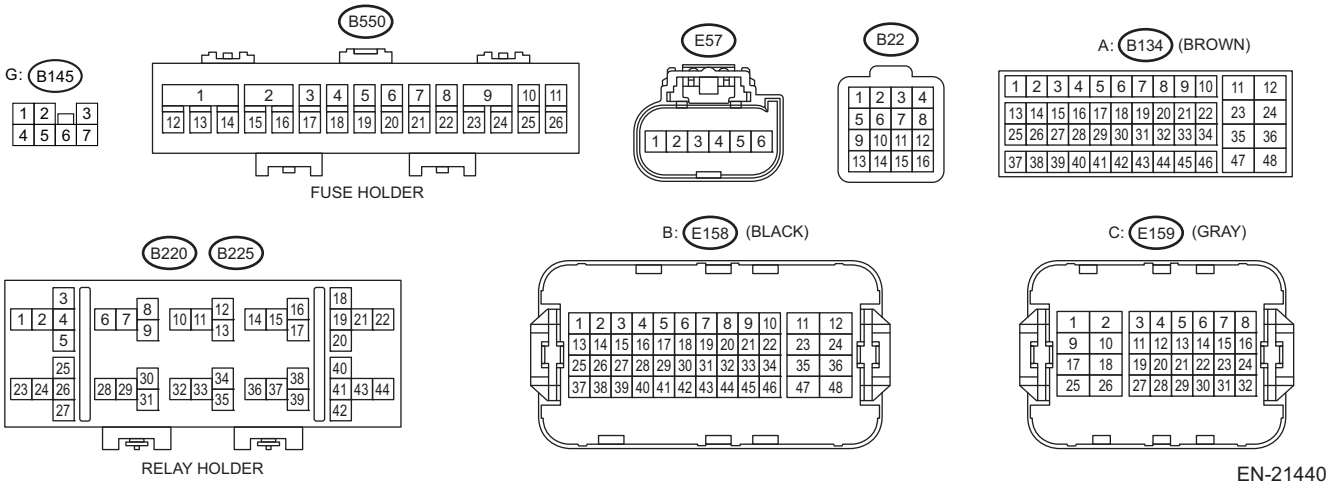
FL: DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-21440

	Step	Check	Yes	No
1	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the electronic throttle control relay. <Ref. to FU(w/o STI)-132, Electronic Throttle Control Relay.>
2	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
5	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B134) No. 39 — (B225) No. 17:*** ***(B134) No. 11 — (B225) No. 14:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.
6	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from electronic throttle control. 3) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 18 — Engine ground:*** ***(E158) No. 17 — Engine ground:*** ***(E158) No. 29 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
7	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:*** ***(E57) No. 4 — Engine ground:***	Is the resistance 220 kΩ or more?	Go to step **8**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
8	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 17 — (E57) No. 1:*** ***(E158) No. 30 — (E57) No. 3:*** ***(E158) No. 29 — (E57) No. 4:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
9	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **10**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
10	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **11**.
11	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 18 — (E158) No. 17:*** ***(E158) No. 18 — (E158) No. 29:***	Is the resistance 1 MΩ or more?	Go to step **12**.	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

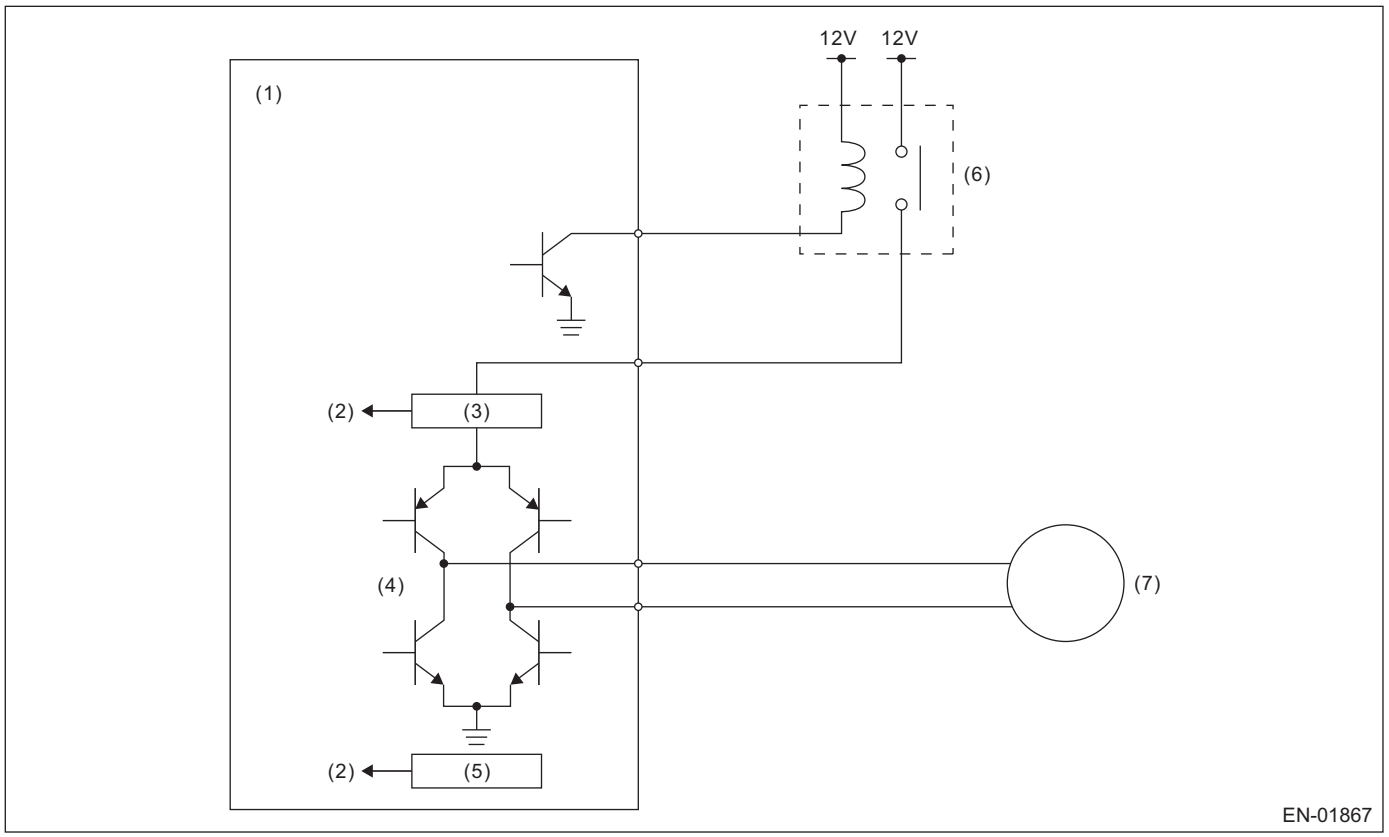
	Step	Check	Yes	No
12	**CHECK SENSOR OUTPUT.** 1) Connect all connectors. 2) Start the engine and warm up completely. 3) Stop the engine, and then turn the ignition switch to ON (engine OFF). 4) Read the value of «Main-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Main-Throttle Sensor» 0.60 — 0.65 V?	Go to step **13**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>
13	**CHECK SENSOR OUTPUT.** Read the value of «Sub-Throttle Sensor» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Sub-Throttle Sensor» 0.60 — 0.65 V?	Go to step **14**.	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>
14	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E159) No. 1 — (E57) No. 5:*** ***(E159) No. 2 — (E57) No. 6:***	Is the resistance less than 1 Ω?	Go to step **15**.	Repair the open circuit of harness between ECM connector and electronic throttle control.
15	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 5 (+) — Engine ground (–):*** ***(E57) No. 6 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **16**.
16	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL MOTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 5 — Engine ground:*** ***(E57) No. 6 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **17**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
17	**CHECK ELECTRONIC THROTTLE CONTROL MOTOR HARNESS.** Measure the resistance between electronic throttle control connectors. ***Connector & terminal*** ***(E57) No. 5 — (E57) No. 6:***	Is the resistance 1 MΩ or more?	Go to step **18**.	Repair the short circuit in harness between ECM connector and electronic throttle control connector.

	Step	Check	Yes	No
18	**CHECK ELECTRONIC THROTTLE CONTROL GROUND CIRCUIT.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **19**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of coupling connector
19	**CHECK ELECTRONIC THROTTLE CONTROL.** Measure the resistance between electronic throttle control terminals. ***Terminals*** ***No. 5 — No. 6:***	Is the resistance 50 Ω or less?	Go to step **20**.	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>
20	**CHECK ELECTRONIC THROTTLE CONTROL.** Move the throttle valve to the fully opened and fully closed positions with fingers. Check that the valve returns to the specified position when releasing fingers.	Does the valve return to the specified position? Standard value: 3 mm (0.12 in) from fully closed position	Repair the poor contact of ECM connector.	Replace the electronic throttle control. <Ref. to FU(w/o STI)-15, Throttle Body.>

1. OUTLINE OF DIAGNOSIS

In the diagnosis with ignition switch ON, judge as NG when the opening angle with the throttle driven to close direction is out of the specified range.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Detecting circuit
(3) Overcurrent detection circuit
(4) Drive circuit
(5) Temperature detection circuit
(6) Electronic throttle control relay
(7) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Perform the diagnosis when the ignition switch is turned from OFF to ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Throttle position during throttle minimum stop position learning	≥ 36%

Time needed for diagnosis: 190 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

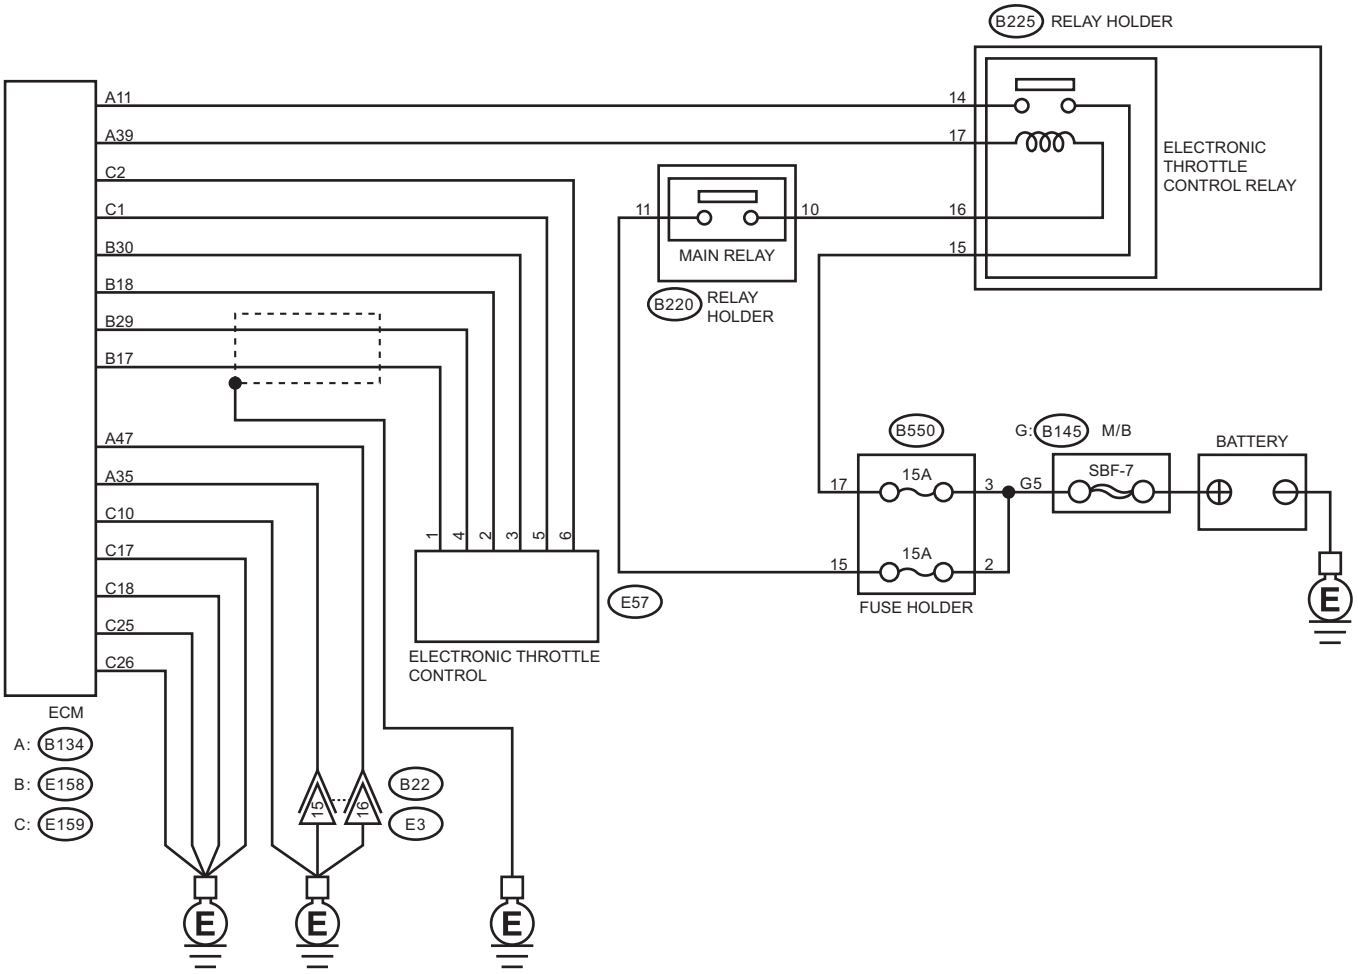
FM:DTC P2102 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT LOW

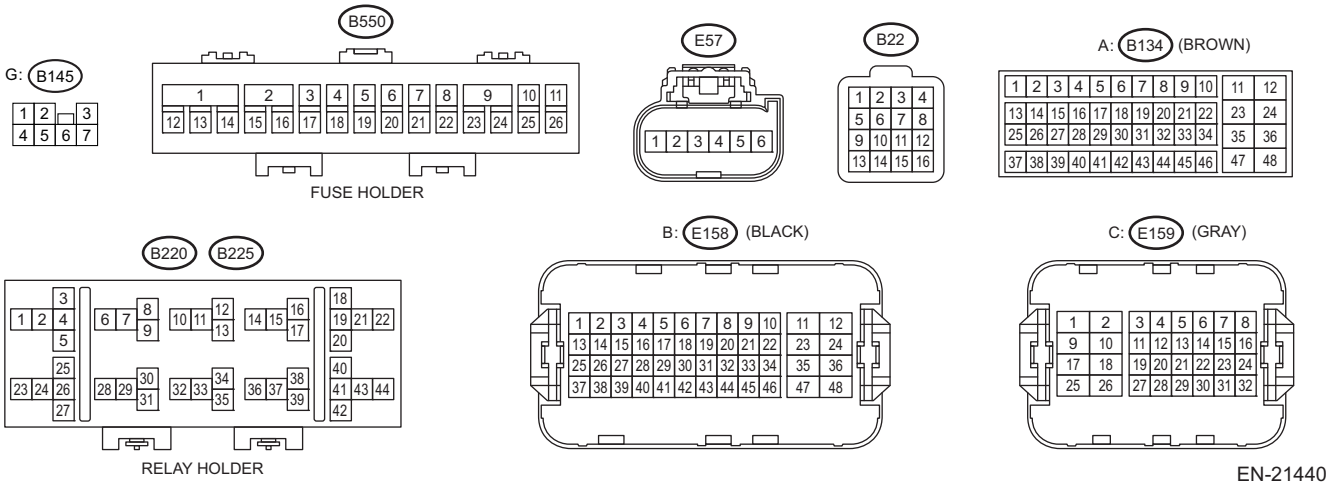
DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance
- Engine stalls.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





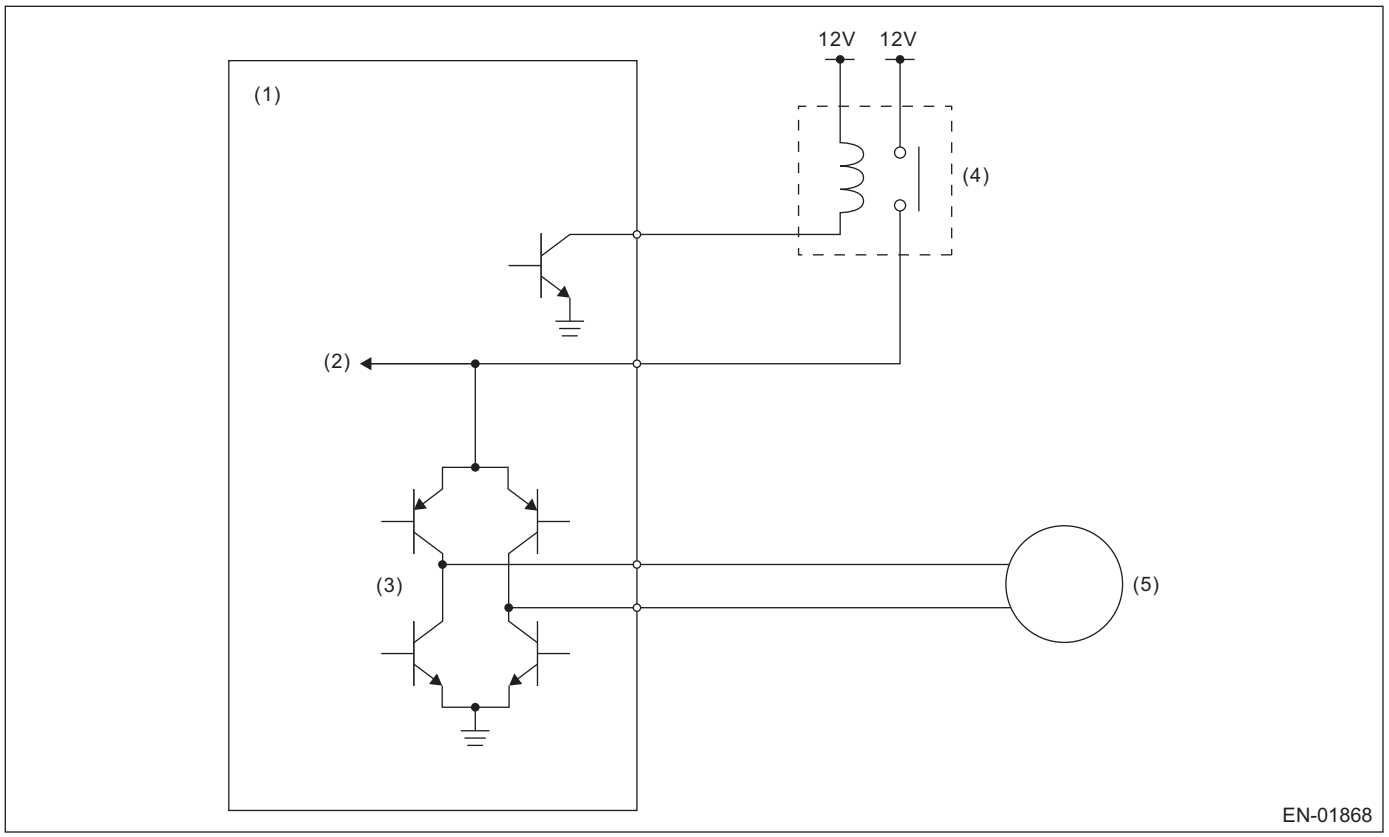
EN-21440

	Step	Check	Yes	No
1	**CHECK ELECTRONIC THROTTLE CONTROL RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the electronic throttle control relay. 3) Connect the battery to terminals No. 16 and No. 17 of electronic throttle control relay. 4) Measure the resistance between electronic throttle control relay terminals. ***Terminals*** ***No. 14 — No. 15:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the electronic throttle control relay. <Ref. to FU(w/o STI)-132, Electronic Throttle Control Relay.>
2	**CHECK POWER SUPPLY OF ELECTRONIC THROTTLE CONTROL RELAY.** Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 15 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Disconnect the connector from ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 17 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control relay connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between electronic throttle control relay connector and chassis ground. ***Connector & terminal*** ***(B225) No. 14 — Chassis ground:*** ***(B225) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.
5	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY CONNECTOR.** Measure the resistance between ECM connector and electronic throttle control relay connector. ***Connector & terminal*** ***(B134) No. 39 — (B225) No. 17:*** ***(B134) No. 11 — (B225) No. 14:***	Is the resistance less than 1 Ω?	Repair the poor contact of ECM connector.	Repair the open circuit in harness between ECM connector and electronic throttle control relay connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the electronic throttle control power is not supplied even when ECM sets the electric control throttle relay to ON, or when the monitored electronic throttle control relay does not switch to OFF even when ECM sets the electronic throttle control relay to OFF.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Voltage detection circuit
(3) Drive circuit
(4) Electronic throttle control relay
(5) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
<For electronic throttle control power supply>	
Battery voltage	≥ 6 V
Electronic throttle control relay output	ON
<For electronic throttle control relay monitor>	
Battery voltage	≥ 10.9 V
Electronic throttle control relay output	OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
<For electronic throttle control power supply>	
Electronic throttle control power voltage	< 6 V
<For electronic throttle control relay monitor>	

Judgment value

Malfunction Criteria	Threshold Value
Electronic throttle control relay monitor voltage	≤ 1 V

Time needed for diagnosis: 510 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FN:DTC P2103 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT HIGH

DTC detecting condition:

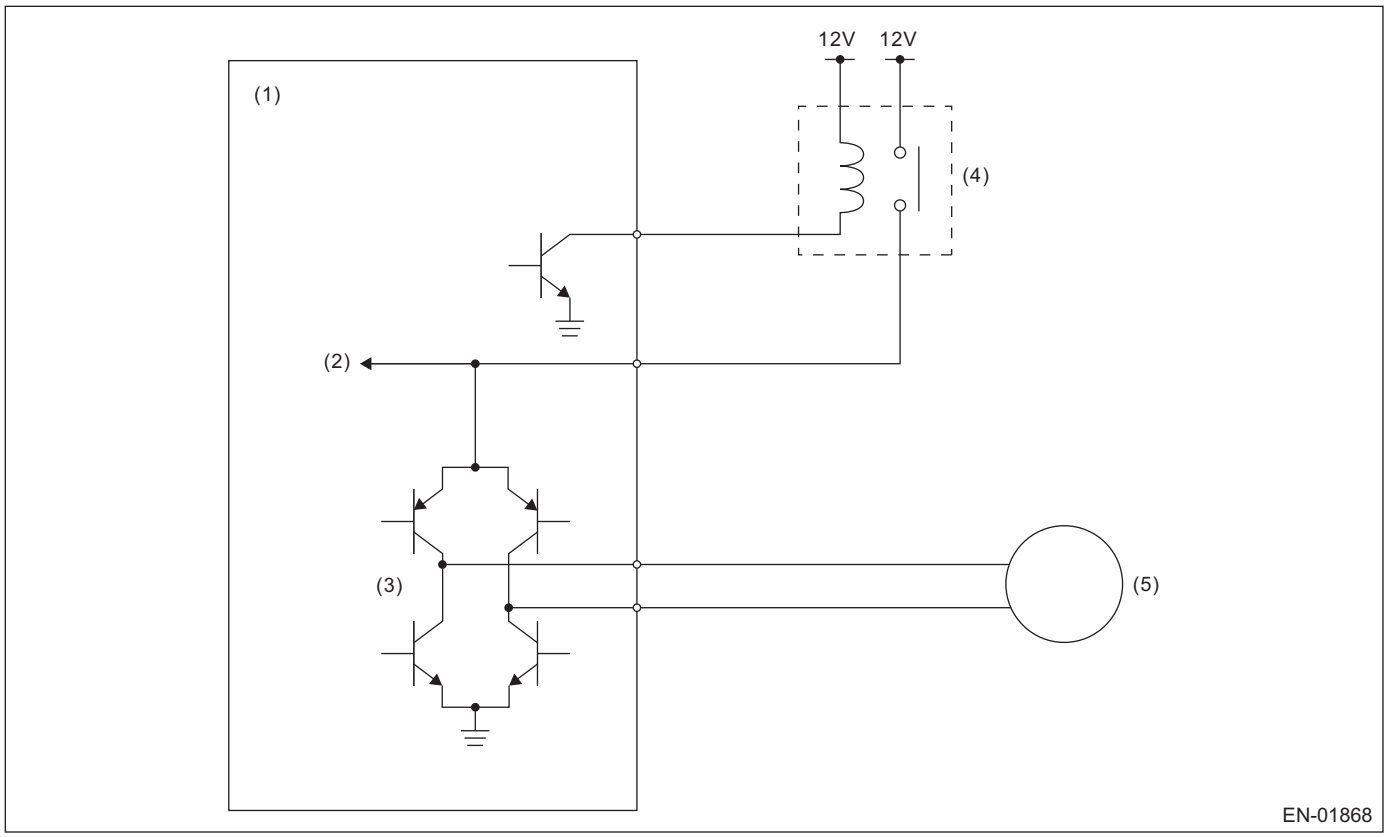
Repair the poor contact of ECM connector.	Repair the short circuit to ground in harness between ECM connector and electronic throttle control relay connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the monitored electronic throttle control relay does not switch to ON even when ECM sets the electric control throttle relay to ON.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Voltage detection circuit
(3) Drive circuit
(4) Electronic throttle control relay
(5) Motor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Electronic throttle control relay output	ON

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Electronic throttle control relay monitor voltage	≥ 6 V

Time needed for diagnosis: 510 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

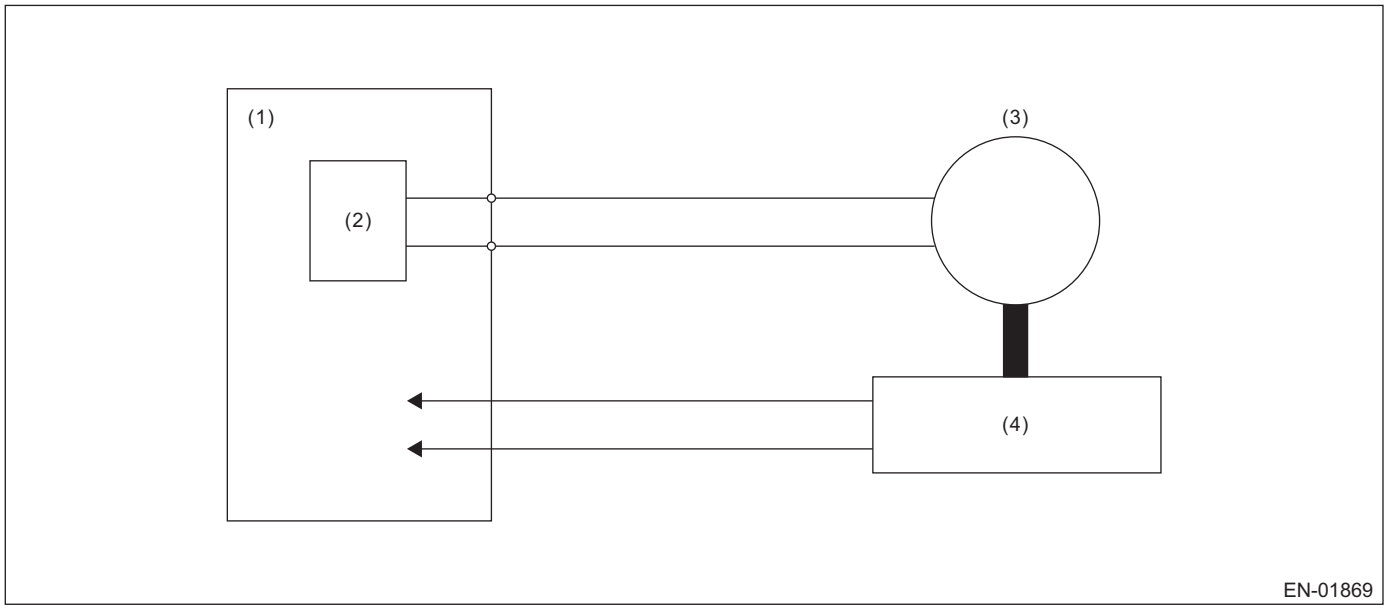
FO:DTC P2109 THROTTLE/PEDAL POSITION SENSOR "A" MINIMUM STOP PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(w/o STI)(diag)-684, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when full close point learning cannot conducted or abnormal value is detected.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Drive circuit
(3) Motor
(4) Throttle position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Perform the diagnosis at full closed point learning.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Throttle position when the ignition switch is ON – Throttle minimum stop position	< 2.6% (sensor 1) < 2.6% (sensor 2)

Time needed for diagnosis: 200 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FP:DTC P2119 THROTTLE ACTUATOR "A" CONTROL THROTTLE BODY RANGE/PERFORMANCE

NOTE:
For the diagnostic procedure, refer to DTC P2101. <Ref. to EN(w/o STI)(diag)-684, DTC P2101 THROTTLE ACTUATOR "A" CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Judge as NG when the throttle is open stuck, or when the difference between actual throttle opening angle and estimated opening angle is out of range. Judge as NG when any one of the six items for diagnosis is applied.

Throttle open stuck:

- Throttle position is out of range
- Intake air amount is out of range

When the difference between actual throttle opening angle and estimated opening angle is out of range:

- All time monitoring
- Actual opening angle change amount is small
- Actual opening angle change amount is large
- Actual opening angle does not change

2. EXECUTION CONDITION

Diagnosis 1: Throttle position is out of range

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
DTC P0606 CONTROL MODULE PROCESSOR	Under detection

Diagnosis 2: Intake air amount is out of range

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
DTC P0606 CONTROL MODULE PROCESSOR	Under detection

Diagnosis 3: All time monitoring

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

Diagnosis 4: Actual opening angle change amount small

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
Actual opening angle change amount	> 0.84%/ms

Diagnosis 5: Actual opening angle change amount large

Secondary parameters	Execution condition
Battery voltage	≥ 6 V
Actual opening angle change amount	> 2.1%/ms

Diagnosis 6: Actual opening angle not change

Secondary parameters	Execution condition
Battery voltage	> 6 V
Continuous time when actual opening angle changing amount is 0%/ms	≥ 5 s

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG if the criteria below are met.

Diagnosis 1: Throttle position is out of range

Judgment value

Malfunction Criteria	Threshold Value
Throttle position	≥ 17.3%

Diagnosis 2: Intake air amount is out of range

Judgment value

Malfunction Criteria	Threshold Value
Amount of intake air	> 19.16 g/s (0.68 oz/s)

Diagnosis 3: All time monitoring

Judgment value

Malfunction Criteria	Threshold Value
Difference between actual throttle opening angle and estimated opening angle	≥ 4.2%

Diagnosis 4: Actual opening angle change amount small

Judgment value

Malfunction Criteria	Threshold Value
Difference between actual throttle opening angle and estimated opening angle	≥ 2.1%

Diagnosis 5: Actual opening angle change amount large

Judgment value

Malfunction Criteria	Threshold Value
Difference between actual throttle opening angle and estimated opening angle	≥ 4.2%

Diagnosis 6: Actual opening angle not change

Judgment value

Malfunction Criteria	Threshold Value
Difference between actual throttle opening angle and target throttle opening angle	≥ 1.68%

Time needed for diagnosis:

Diagnosis 1: Throttle position is out of range

200 ms

Diagnosis 2: Intake air amount is out of range

200 ms

Diagnosis 3: All time monitoring

2000 ms

Diagnosis 4: Actual opening angle change amount small

1000 ms

Diagnosis 5: Actual opening angle change amount large

500 ms

Diagnosis 6: Actual opening angle not change

1000 ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FQ:DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

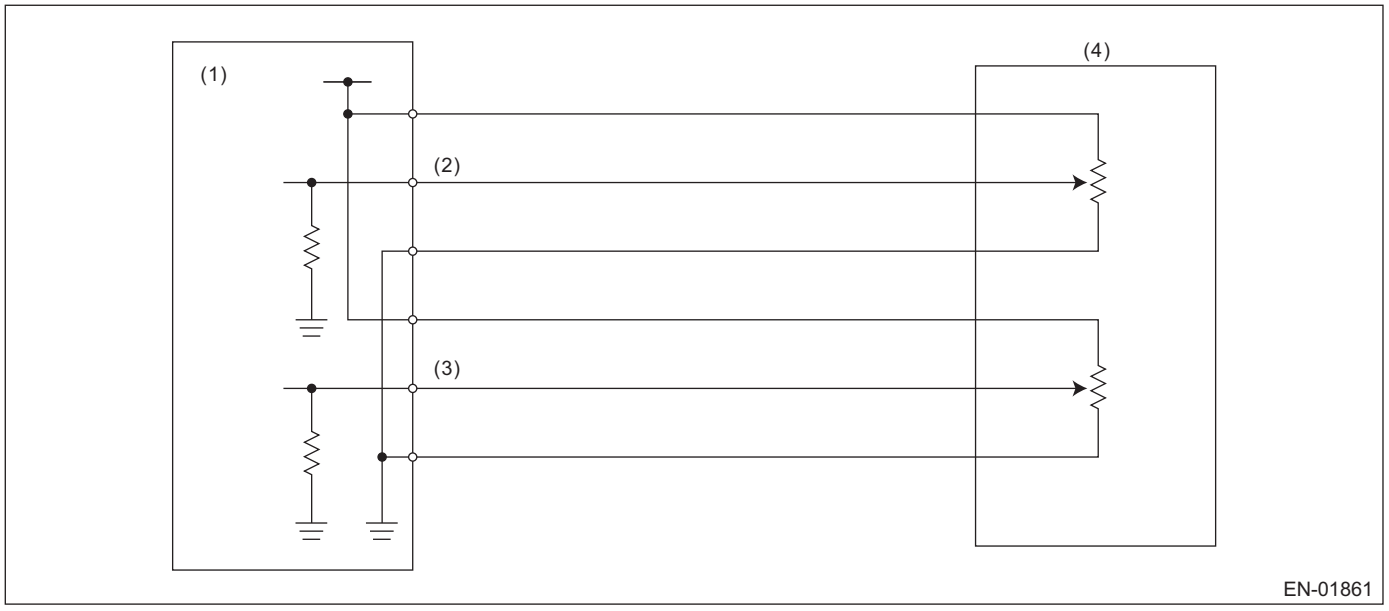
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the accelerator pedal position sensor. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 30 — Engine ground:*** ***(B134) No. 17 — Engine ground:*** ***(B134) No. 17 — (B134) No. 19:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the accelerator pedal. <Ref. to SP(w/o STI)-4, Accelerator Pedal.>	Repair the short circuit to ground in harness between ECM connector and accelerator pedal position sensor connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 1 output voltage	< 0.54 V

Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FR:DTC P2123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT HIGH

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
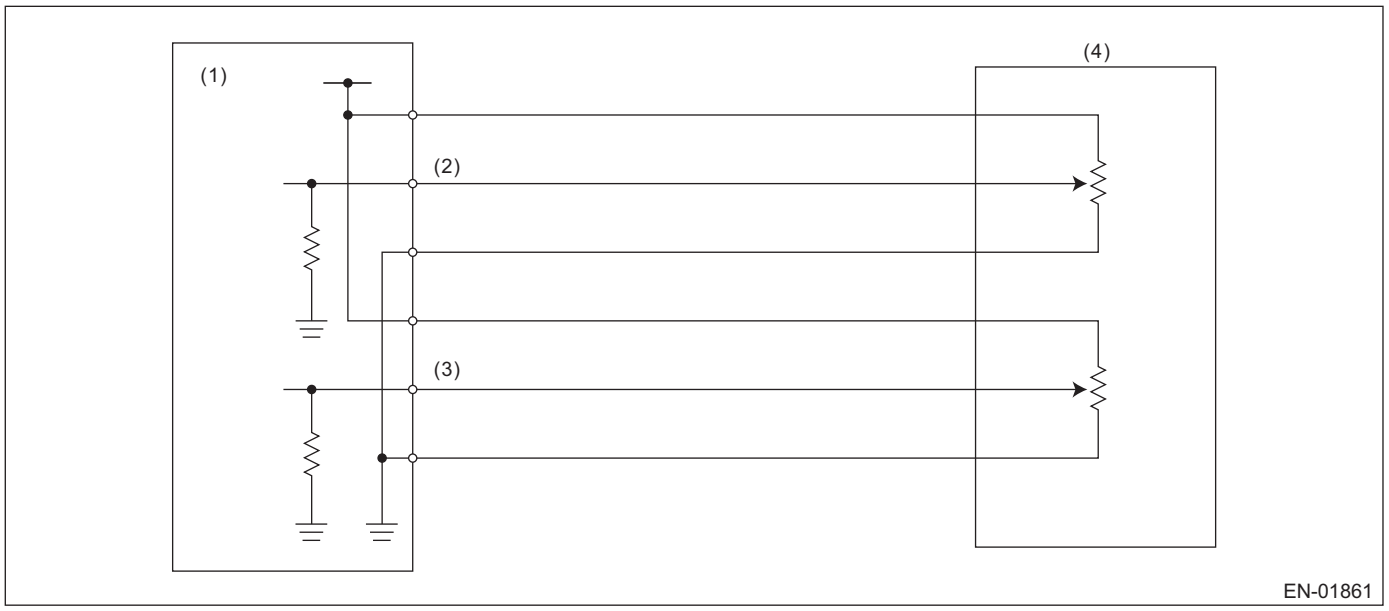
1	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the accelerator pedal position sensor. 4) Measure the resistance of harness between ECM connector and accelerator pedal position sensor connector. ***Connector & terminal*** ***(B134) No. 29 — (B315) No. 3:*** ***(B134) No. 19 — (B315) No. 2:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and accelerator pedal position sensor connector • Poor contact of joint connector
2	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between accelerator pedal position sensor connector and chassis ground. ***Connector & terminal*** ***(B315) No. 3 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.	Go to step **4**.
4	**CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(B134) No. 18 — (B134) No. 29:***	Is the resistance 1 MΩ or more?	Repair the poor contact of accelerator pedal position sensor connector. Replace the accelerator pedal if defective. <Ref. to SP(w/o STI)-4, Accelerator Pedal.>	Repair the short circuit to power supply in harness between ECM connector and accelerator pedal position sensor connector.

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 2.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Engine control module (ECM)
(2) Accelerator pedal position sensor 1 signal
(3) Accelerator pedal position sensor 2 signal
(4) Accelerator pedal position sensor

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Sensor 2 output voltage	> 4.77 V

Time needed for diagnosis: 100 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

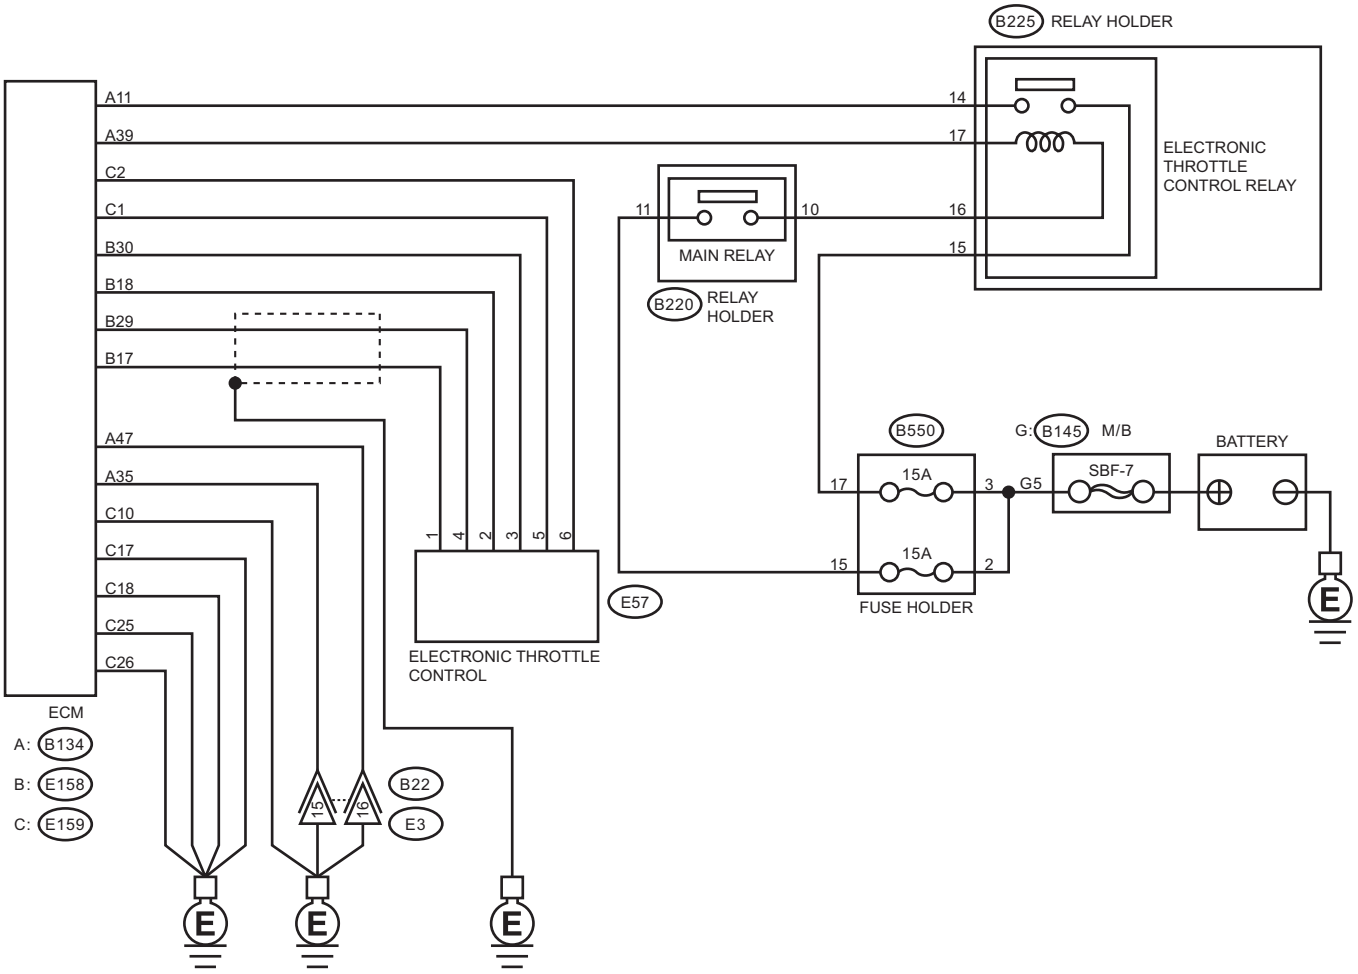
FU:DTC P2135 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A"/"B" VOLTAGE CORRELATION

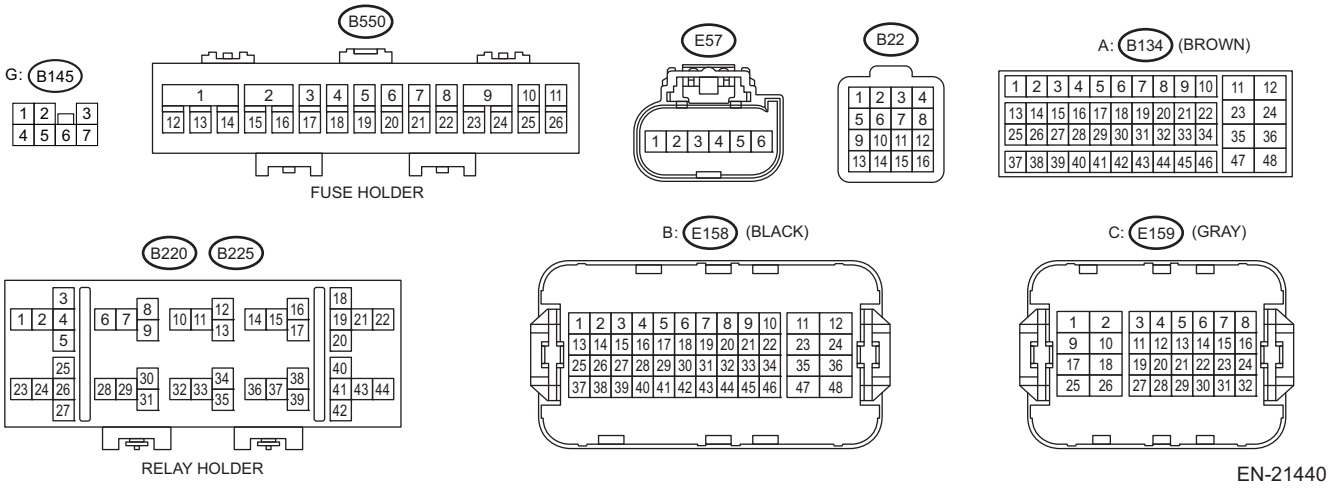
DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





EN-21440

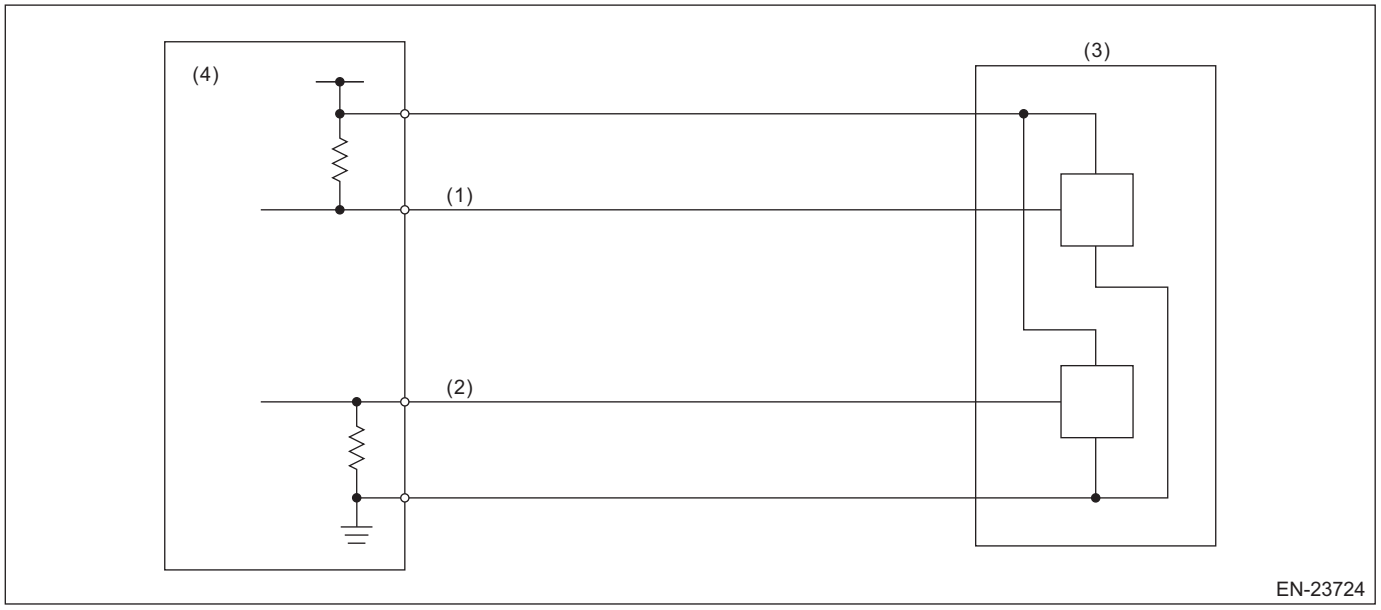
	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from electronic throttle control. 4) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 18 — Engine ground:*** ***(E158) No. 17 — Engine ground:*** ***(E158) No. 29 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **2**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector.
2	**CHECK SHORT CIRCUIT INSIDE THE ECM.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 — Engine ground:*** ***(E57) No. 4 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the ground short circuit of harness between ECM connector and electronic throttle control connector. Replace the ECM if defective. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
3	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and electronic throttle control connector. ***Connector & terminal*** ***(E158) No. 17 — (E57) No. 1:*** ***(E158) No. 30 — (E57) No. 3:*** ***(E158) No. 29 — (E57) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and electronic throttle control connector.
4	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Connect the connector to ECM. 2) Measure the resistance between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 3 — Engine ground:***	Is the resistance less than 5 Ω?	Go to step **5**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit of harness between ECM connector and engine ground • Poor contact of ECM connector • Poor contact of coupling connector
5	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between electronic throttle control connector and engine ground. ***Connector & terminal*** ***(E57) No. 1 (+) — Engine ground (–):*** ***(E57) No. 4 (+) — Engine ground (–):***	Is the voltage 5 V or more?	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.	Go to step **6**.

Step		Check	Yes	No
6	**CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connectors. ***Connector & terminal*** ***(E158) No. 18 — (E158) No. 17:*** ***(E158) No. 18 — (E158) No. 29:***	Is the resistance 1 MΩ or more?	Repair the poor contact of electronic throttle control connector. Replace the electronic throttle control if defective. <Ref. to FU(w/o STI)-15, Throttle Body.>	Repair the short circuit to power in the harness between ECM connector and electronic throttle control connector.

1. OUTLINE OF DIAGNOSIS

Judge as NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

2. COMPONENT DESCRIPTION



(1) Throttle position sensor 1 signal
(2) Throttle position sensor 2 signal
(3) Throttle position sensor
(4) Engine control module (ECM)

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 6 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Throttle position sensor 1 voltage – (5 V – throttle position sensor 2 voltage)|	> 0.79 V

Time needed for diagnosis: 120 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

FV:DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D"/"E" VOLTAGE CORRELATION

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
- Improper idling
- Poor driving performance

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**

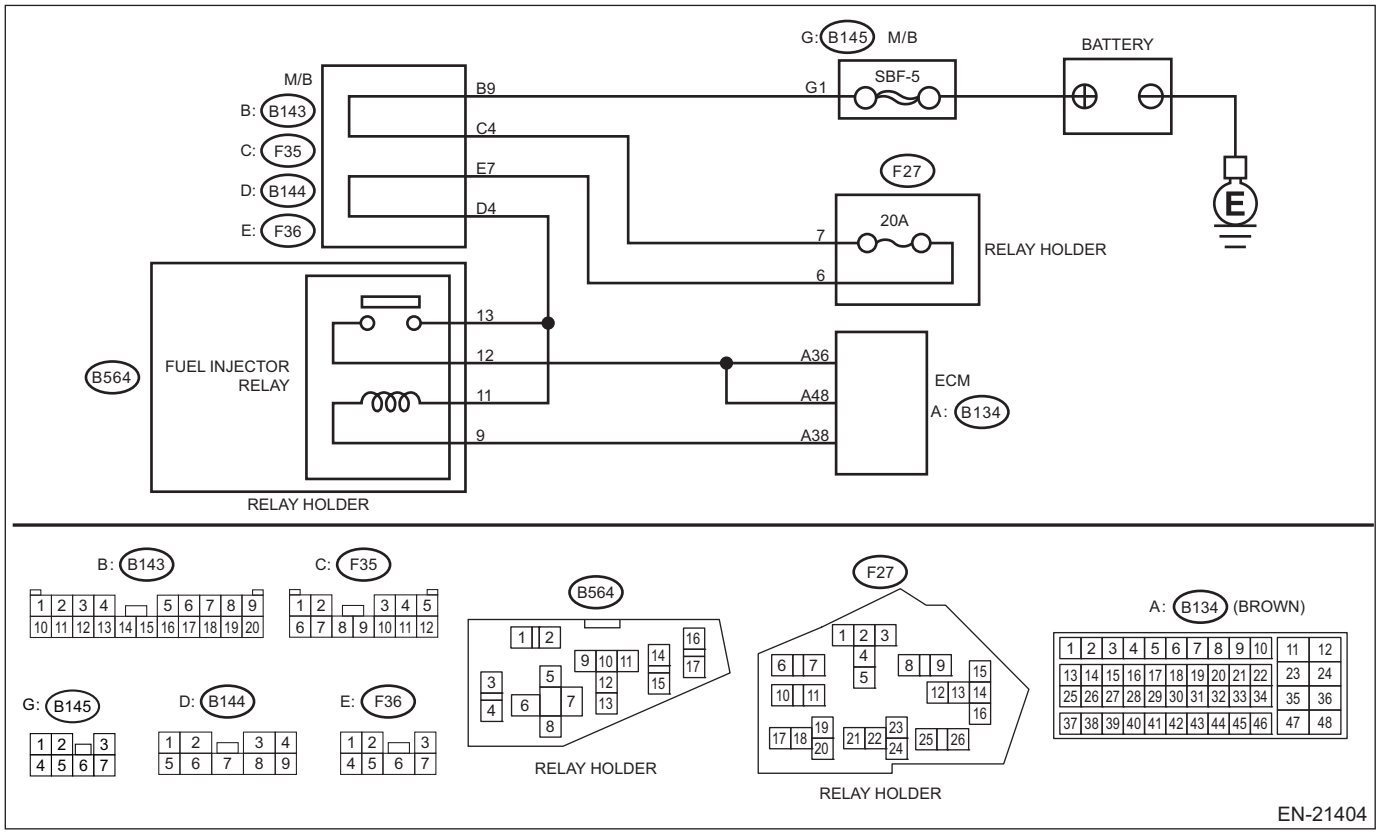
FW:DTC P2146 FUEL INJECTOR GROUP "A" SUPPLY VOLTAGE CIRCUIT/ OPEN

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***(B134) No. 36 (+) — Engine ground (–):*** ***(B134) No. 48 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Repair the poor contact of ECM connector.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Remove the fuel injector relay. 4) Measure the resistance between fuel injector relay connector and engine ground. ***Connector & terminal*** ***(B564) No. 12 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and fuel injector relay connector.

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR RELAY CONNECTOR.** Measure the resistance of harness between ECM connector and fuel injector relay connector. ***Connector & terminal*** ***(B134) No. 36 — (B564) No. 12:*** ***(B134) No. 48 — (B564) No. 12:*** ***(B134) No. 38 — (B564) No. 9:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between ECM connector and fuel injector relay connector.
4	**CHECK INPUT VOLTAGE OF FUEL INJECTOR RELAY.** Measure the voltage between fuel injector relay connector and the engine ground. ***Connector & terminal*** ***(B564) No. 13 (+) — Engine ground (–):*** ***(B564) No. 11 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Replace the fuel injector relay. <Ref. to FU(w/o STI)-136, Fuel Injector Relay.>	Repair the open or ground short in the harness of power supply circuit.

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of injector power supply circuit and injector booster circuit.

2. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Injector power supply voltage (diagnosis 2 only)	6 — 17.2 V

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Diagnosis 1

Judgment value

Malfunction Criteria	Threshold Value
Injector power supply voltage	< 6 V or > 17.2 V

Diagnosis 2

Judgment value

Malfunction Criteria	Threshold Value
Injector booster power supply voltage	< 5.98 V or > 70.72 V

Time needed for diagnosis

- Diagnosis 1: 1000 ms
- Diagnosis 2: 280 ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

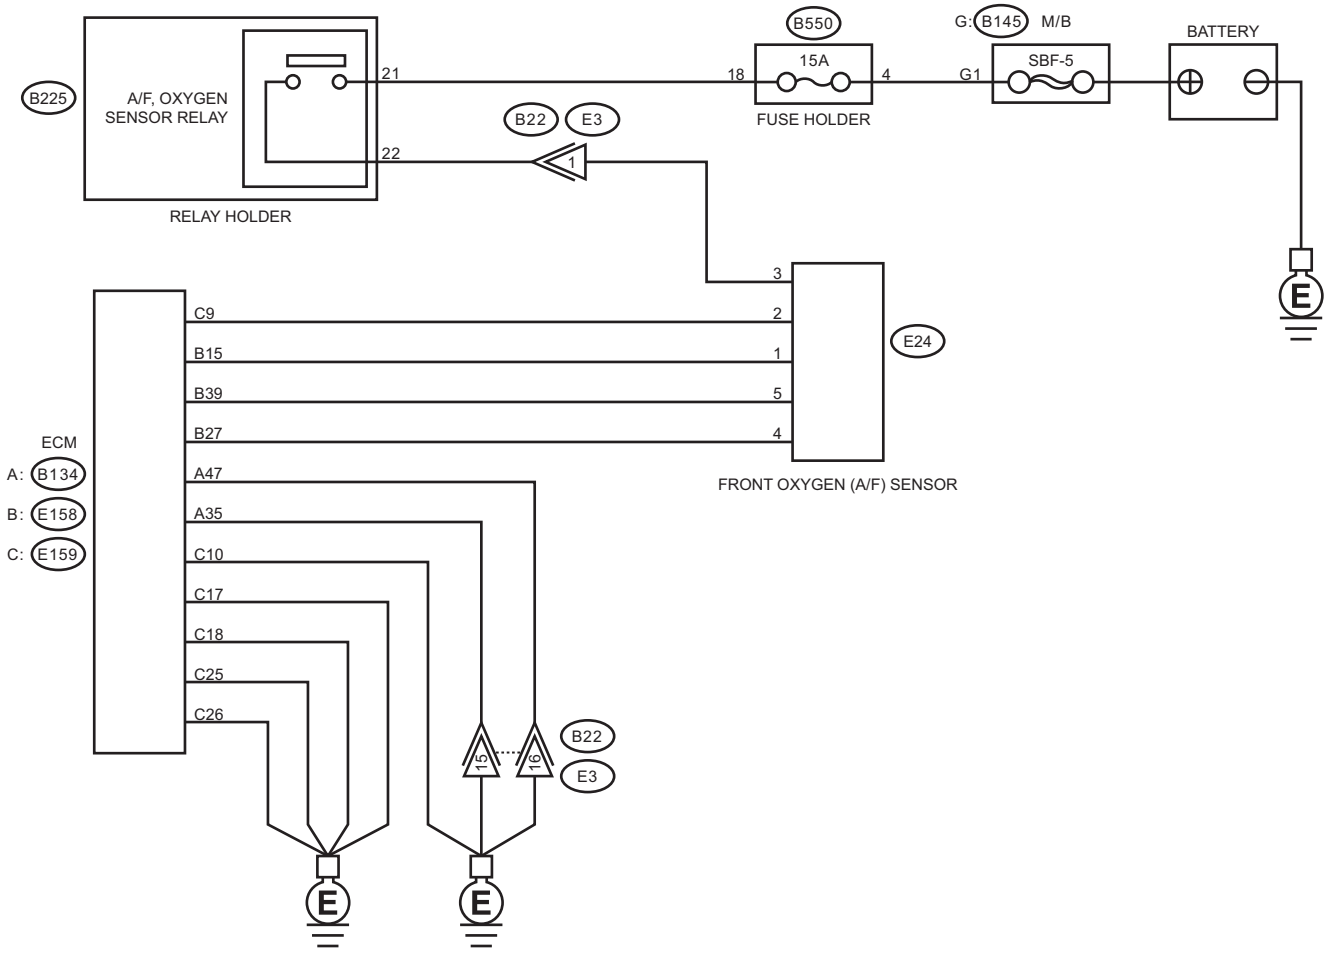
FX:DTC P2195 A/F /O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 1

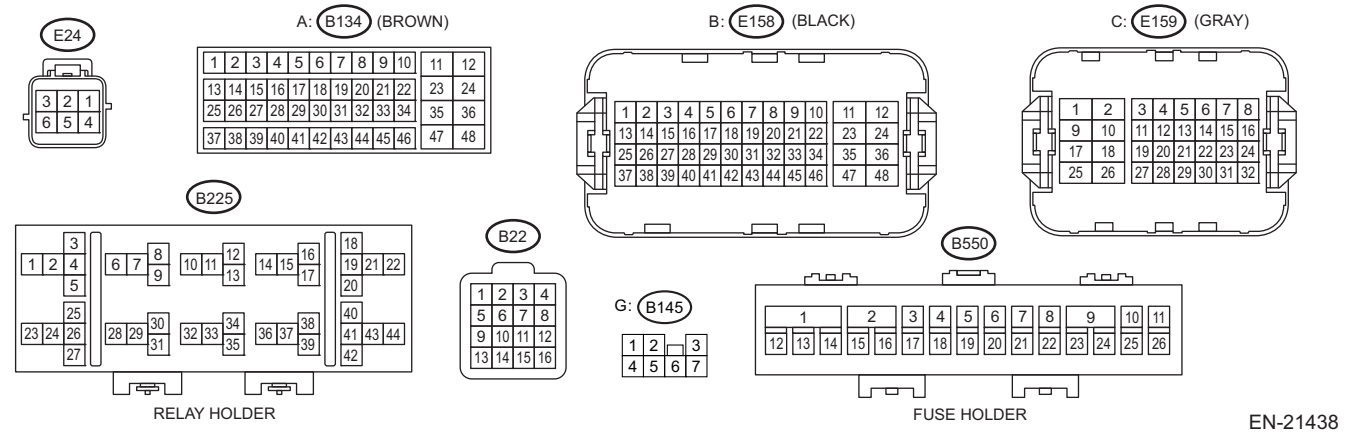
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

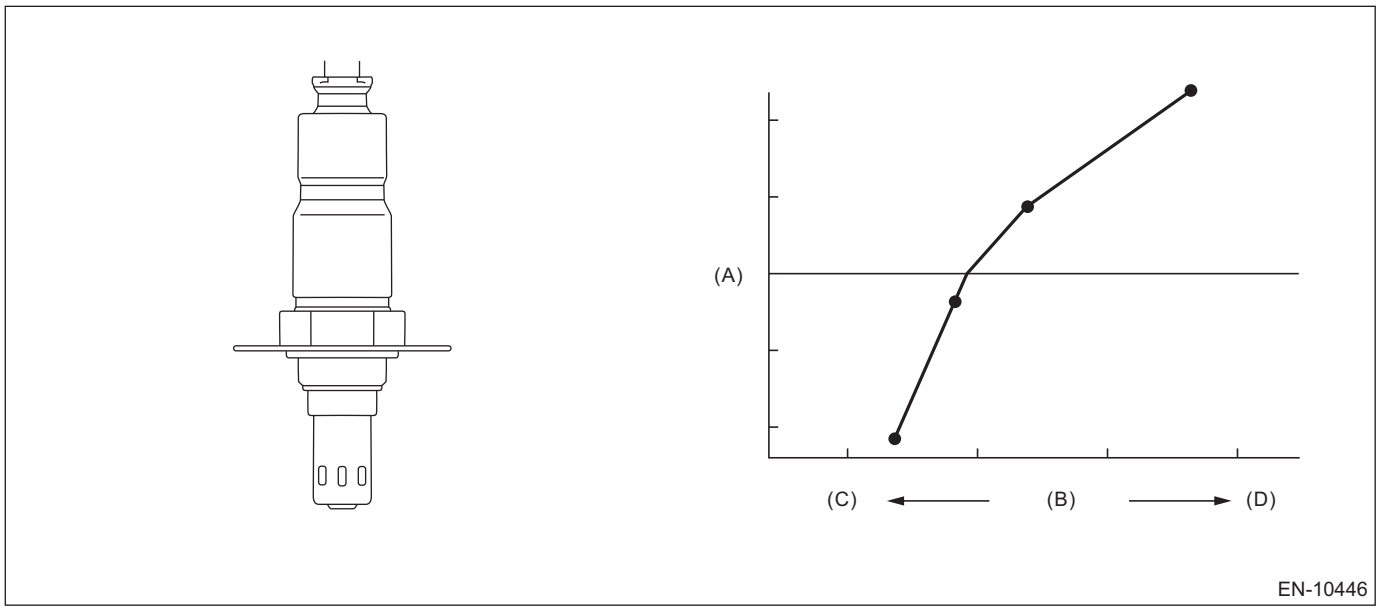
	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(E158) No. 15 — Chassis ground:*** ***(E158) No. 27 — Chassis ground:*** ***(E158) No. 39 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Disconnect the connectors from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(E158) No. 15 (+) — Chassis ground (–):*** ***(E158) No. 27 (+) — Chassis ground (–):*** ***(E158) No. 39 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Repair the poor contact of ECM connector.

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains lean.
Judge as NG when lambda value is determined as abnormal in accordance with driving conditions such as intake air amount, main feedback control, and front oxygen (A/F) sensor λ value and rear oxygen sensor voltage value.

λ value = Actual air fuel ratio/Theoretical air fuel ratio
λ > 1: Lean
λ < 1: Rich

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Amount of intake air	≥ 6 g/s (0.8 lb/min)
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the conditions are established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	> 1.15
Output voltage value of rear oxygen sensor	≥ 0.55 V

Time needed for diagnosis: 10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

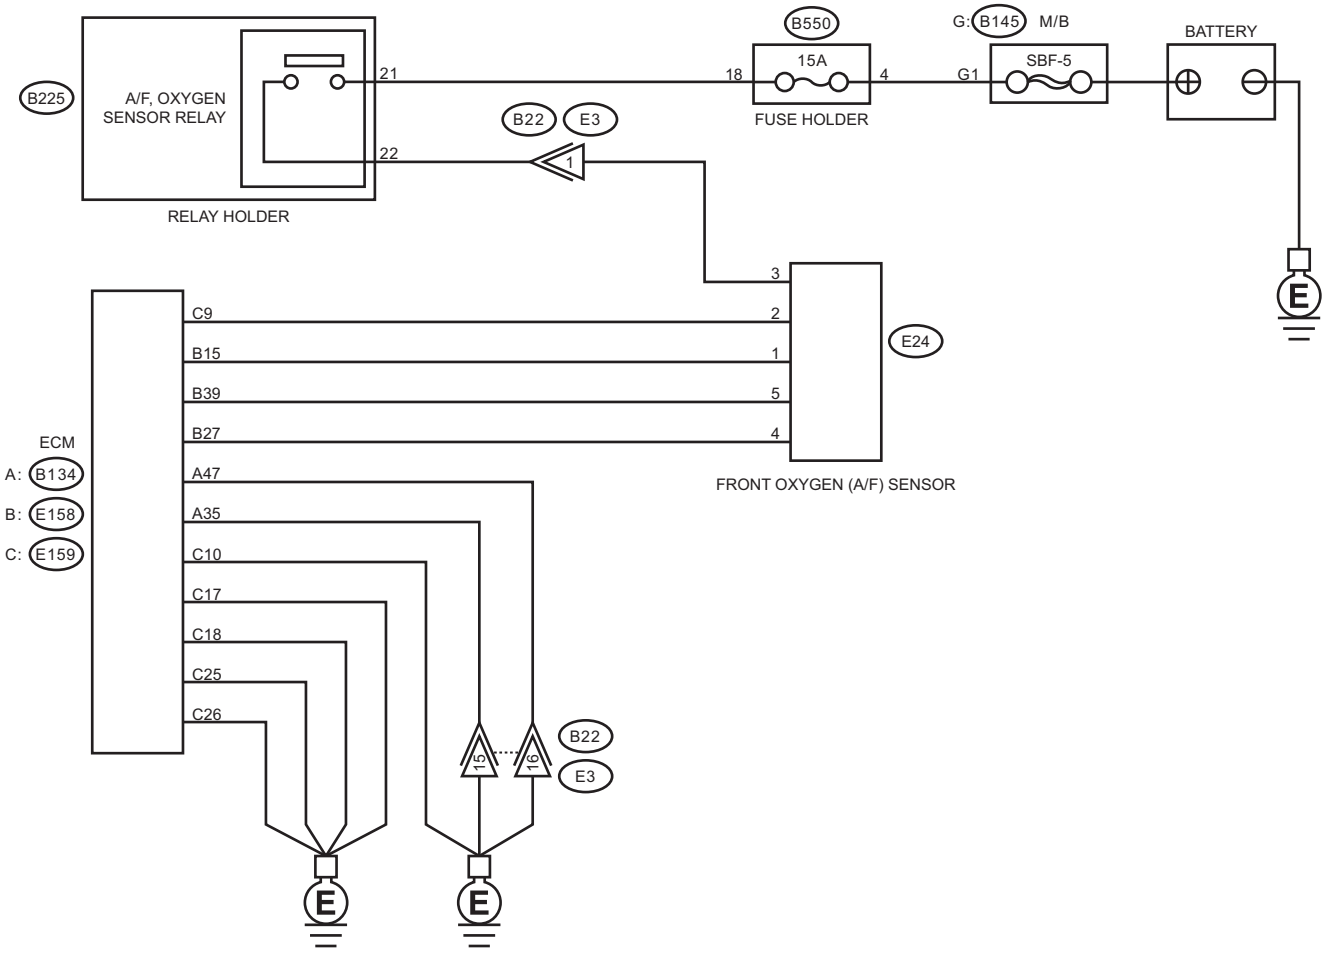
FY:DTC P2196 A/F /O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 1

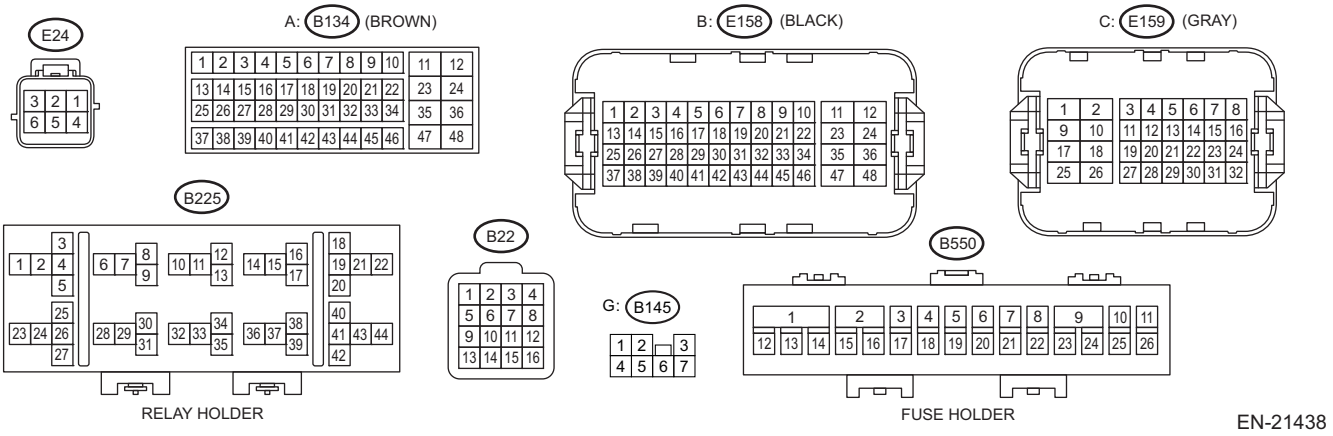
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

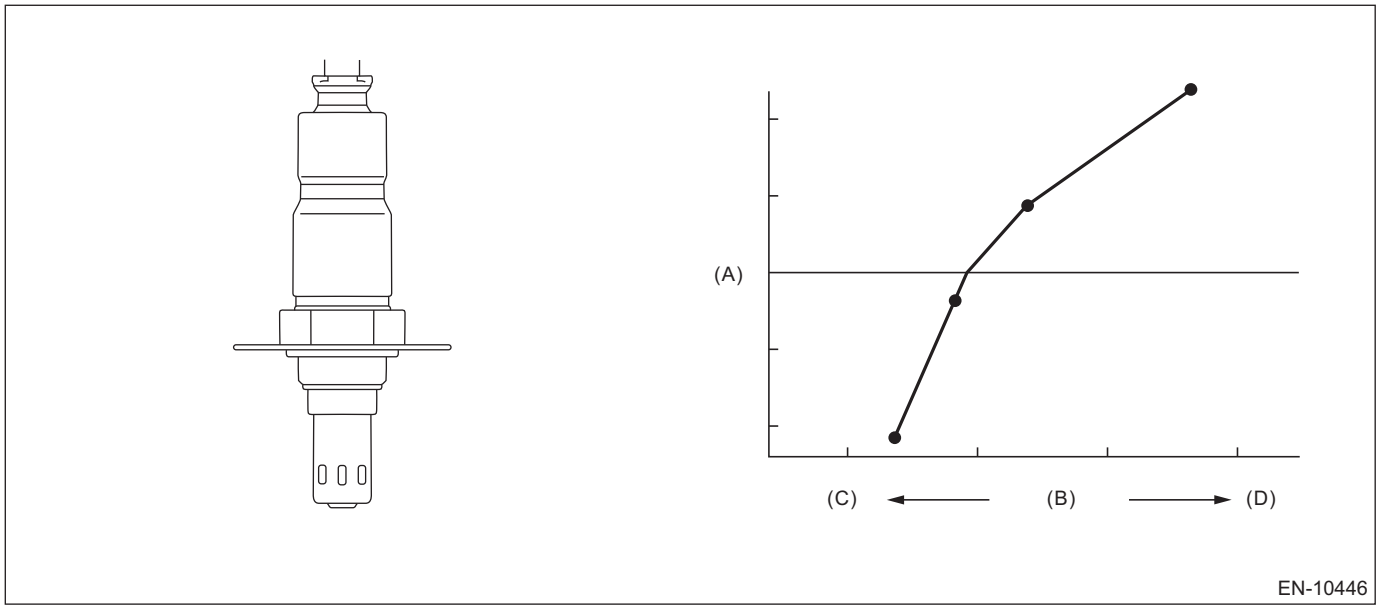
	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector
3	**CHECK FOR POOR CONTACT.** Check for poor contact of the front oxygen (A/F) sensor connector.	Is there poor contact of front oxygen (A/F) sensor connector?	Repair the poor contact of front oxygen (A/F) sensor connector.	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect that λ value remains rich.
Judge as NG when lambda value is determined as abnormal in accordance with driving conditions such as intake air amount, main feedback control, and front oxygen (A/F) sensor λ value and rear oxygen sensor voltage value.

λ value = Actual air fuel ratio/Theoretical air fuel ratio
λ > 1: Lean
λ < 1: Rich

2. COMPONENT DESCRIPTION



(A) Electromotive force (B) Air fuel ratio (C) Rich
(D) Lean

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main feedback	In operation
Amount of intake air	≥ 6 g/s (0.8 lb/min)
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the conditions are established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
λ value	< 0.85
Output voltage value of rear oxygen sensor	≤ 0.15 V

Time needed for diagnosis: 10000 ms
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

FZ: DTC P219A BANK 1 AIR-FUEL RATIO IMBALANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.
Trouble symptom:
- Engine stalls.
- Improper idling

CAUTION:

Step		Check	Yes	No
1	**CHECK FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Check the front oxygen (A/F) sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.
2	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connectors from front oxygen (A/F) sensor. 4) Measure the resistance of harness between ECM connector and front oxygen (A/F) sensor connector. ***Connector & terminal*** ***(E158) No. 15 — (E24) No. 1:*** ***(E158) No. 27 — (E24) No. 4:*** ***(E158) No. 39 — (E24) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and front oxygen (A/F) sensor connector • Poor contact of coupling connector

	Step	Check	Yes	No
3	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(E158) No. 15 — Chassis ground:*** ***(E158) No. 27 — Chassis ground:*** ***(E158) No. 39 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and front oxygen (A/F) sensor connector.
4	**CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between front oxygen (A/F) sensor connector and chassis ground. ***Connector & terminal*** ***(E24) No. 1 (+) — Chassis ground (–):*** ***(E24) No. 4 (+) — Chassis ground (–):*** ***(E24) No. 5 (+) — Chassis ground (–):***	Is the voltage 8 V or more?	Repair the short circuit to power in the harness between ECM connector and front oxygen (A/F) sensor connector.	Go to step **5**.
5	**CHECK EXHAUST SYSTEM.** Check the exhaust system.	Are there holes or loose bolts on exhaust system?	Repair the exhaust system.	Go to step **6**.
6	**CHECK AIR INTAKE SYSTEM.** Check the air intake system.	Are there holes, loose bolts or disconnection of hose on air intake system?	Repair the air intake system.	Go to step **7**.
7	**CHECK FUEL PRESSURE.** **WARNING:** **Place "NO OPEN FLAMES" signs near the working area.** **CAUTION:** **• Be careful not to spill fuel.** **• Before attaching/detaching a fuel pressure gauge, release the fuel pressure.** 1) Connect the front oxygen (A/F) sensor connector. 2) Measure the fuel pressure. <Ref. to ME(w/o STI)-32, INSPECTION, Fuel Pressure.>	Is the measured value 340 — 400 kPa (3.5 — 4.1 kgf/cm^2, 49 — 58 psi)?	Go to step **8**.	Check the fuel pump and fuel delivery line. <Ref. to FU(w/o STI)-167, INSPECTION, Fuel Pump.> <Ref. to FU(w/o STI)-197, INSPECTION, Fuel Delivery and Evaporation Lines.>
8	**CHECK ENGINE COOLANT TEMPERATURE SENSOR.** 1) Start the engine and warm up completely. 2) Read the value of «Coolant Temp.» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Coolant Temp.» 75°C (167°F) or more?	Go to step **9**.	Replace the engine coolant temperature sensor. <Ref. to FU(w/o STI)-92, Engine Coolant Temperature Sensor.>

	Step	Check	Yes	No
9	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Read the value of «Mass Air Flow» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Mass Air Flow» 2 — 5 g/s (0.26 — 0.66 lb/min)?	Go to step **10**.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
10	**CHECK MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR.** 1) Start the engine and warm up engine until coolant temperature is higher than 75°C (167°F). 2) For CVT models, set the select lever to "P" range or "N" range, and for MT models, place the gear shift lever in the neutral position. 3) Turn the A/C switch to OFF. 4) Turn all the accessory switches to OFF. 5) Open the front hood. 6) Measure the ambient temperature. 7) Read the value of «IAT Sensor #11» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Subtract ambient temperature value from the value of «IAT Sensor #11». Is the obtained value –10 — 50°C (–18 — 90°F)?	Go to step **11**.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(w/o STI)-112, Mass Air Flow and Intake Air Temperature Sensor.>
11	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and keep the engine speed at 3,000 rpm. (2 minutes maximum) 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» 0.490 V or more?	Go to step **12**.	Go to step **13**.

	Step	Check	Yes	No
12	**CHECK REAR OXYGEN SENSOR DATA.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), and rapidly reduce the engine speed from 3,000 rpm. 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» 0.250 V or less?	Go to step **14**.	Go to step **13**.
13	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **15**.
14	**CHECK FRONT OXYGEN (A/F) SENSOR USING REAR OXYGEN SENSOR SIGNAL.** 1) Warm up the engine until engine coolant temperature is higher than 75°C (167°F), then keep the engine idling for 5 minutes or more. 2) Read the value of «Oxygen sensor #12» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value of «Oxygen sensor #12» kept at 0.250 V or less for 5 minutes or more?	Replace the front oxygen (A/F) sensor. <Ref. to FU(w/o STI)-119, Front Oxygen (A/F) Sensor.>	Go to step **15**.
15	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **16**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and rear oxygen sensor connector • Poor contact of coupling connector
16	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and chassis ground. ***Connector & terminal*** ***(E25) No. 4 (+) — Chassis ground (–):***	Is the voltage 0.2 — 0.5 V?	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>	Go to step **17**.

	Step	Check	Yes	No
17	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from fuel injector on faulty cylinders. 3) Measure the resistance between fuel injector connector and engine ground on faulty cylinders. ***Connector & terminal*** ***#1 (E5) No. 1 — Engine ground:*** ***#1 (E5) No. 2 — Engine ground:*** ***#2 (E16) No. 1 — Engine ground:*** ***#2 (E16) No. 2 — Engine ground:*** ***#3 (E6) No. 1 — Engine ground:*** ***#3 (E6) No. 2 — Engine ground:*** ***#4 (E17) No. 1 — Engine ground:*** ***#4 (E17) No. 2 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **18**.	Repair the short circuit to ground in harness between ECM connector and fuel injector connector.
18	**CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.** Measure the resistance of harness between ECM and fuel injector connector on faulty cylinders. ***Connector & terminal*** ***#1 (E158) No. 12 — (E5) No. 1:*** ***#1 (E158) No. 11 — (E5) No. 2:*** ***#2 (E158) No. 24 — (E16) No. 1:*** ***#2 (E158) No. 23 — (E16) No. 2:*** ***#3 (E158) No. 36 — (E6) No. 1:*** ***#3 (E158) No. 35 — (E6) No. 2:*** ***#4 (E158) No. 48 — (E17) No. 1:*** ***#4 (E158) No. 47 — (E17) No. 2:***	Is the resistance less than 1 Ω?	Go to step **19**.	Repair the open circuit of the harness between the ECM connector and fuel injector connector.
19	**CHECK FUEL INJECTOR.** Check the fuel injector on faulty cylinder. <Ref. to FU(w/o STI)-65, INSPECTION, Fuel Injector.>	Is the check result OK?	Go to step **20**.	Replace the faulty fuel injector. <Ref. to FU(w/o STI)-49, Fuel Injector.>
20	**CHECK INSTALLATION CONDITION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.** Check installation condition of the camshaft position sensor and crankshaft position sensor.	Is the camshaft position sensor or crankshaft position sensor loosely installed?	Tighten the camshaft position sensor or crankshaft position sensor. <Ref. to FU(w/o STI)-101, INSTALLATION, Camshaft Position Sensor.> <Ref. to FU(w/o STI)-96, INSTALLATION, Crankshaft Position Sensor.>	Go to step **21**.
21	**CHECK CRANKSHAFT POSITION SENSOR PLATE.** Check the crankshaft position sensor plate.	Is the crankshaft position sensor plate rusted or does it have broken teeth?	Replace the crankshaft position sensor plate. <Ref. to ME(w/o STI)-242, Cylinder Block.>	Go to step **22**.
22	**CHECK INSTALLATION CONDITION OF TIMING CHAIN.** Turn the crankshaft using ST, and align the alignment mark on crank sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET	Is the timing chain dislocated from its proper position?	Correct the installation condition of timing chain. <Ref. to ME(w/o STI)-112, Timing Chain Assembly.>	Go to step **23**.

	Step	Check	Yes	No
23	**CHECK FUEL LEVEL.** Check display of fuel gauge.	Is the fuel meter indication higher than the “Lower” level?	Go to step **24**.	Refill the fuel so that the fuel meter indication is higher than the “Lower” level, and proceed to the next step. Go to step **24**.
24	**CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.** 1) Clear the memory using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-96, Clear Memory Mode.> 2) Start the engine, and drive the vehicle for 10 minutes or more at 60 km/h (37.3 MPH) or more.	Does the malfunction indicator light illuminate or blink?	Go to step **25**.	Repair the poor contact of connector. NOTE: In this case, repair the following item: • Poor contact of ignition coil connector • Poor contact of fuel injector connector on faulty cylinders • Poor contact of ECM connector • Poor contact of coupling connector
25	**CHECK AIR INTAKE SYSTEM.** Check installation condition of the air intake system.	Is there any fault in air intake system?	Repair the air intake system. NOTE: Check the following items. • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses?	Go to step **26**.
26	**CHECK MISFIRE SYMPTOM.** 1) Turn the ignition switch to ON. 2) Check for DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Does the Subaru Select Monitor or general scan tool indicate only one DTC?	Go to step **29**.	Go to step **27**.
27	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTC P0301 and P0303 displayed? (Current malfunction)	Go to step **30**.	Go to step **28**.
28	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are DTC P0302 and P0304 displayed? (Current malfunction)	Go to step **31**.	Go to step **32**.

	Step	Check	Yes	No
29	**ONLY ONE CYLINDER.** Check the following items for one cylinder only. • Spark plug • Ignition coil • Fuel injector • Compression	Is there any fault in the cylinder?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
30	**GROUP OF #1 AND #3 CYLINDERS.** Check the following items for groups of #1 and #3 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Are there any faults in #1 and #3 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
31	**GROUP OF #2 AND #4 CYLINDERS.** Check the following items for groups of #2 and #4 cylinders. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Are there any faults in #2 and #4 cylinders?	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression • Skipping timing chain teeth	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
32	**CYLINDER AT RANDOM.** 1) Start the engine. 2) Check the idling.	Is the engine idle rough?	Go to DTC P0171. <Ref. to EN(w/o STI)(diag)-353, DTC P0171 SYSTEM TOO LEAN BANK 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Repair or replace faulty parts. NOTE: Check the following items. • Spark plug • Ignition coil • Fuel injector • Compression

1. OUTLINE OF DIAGNOSIS

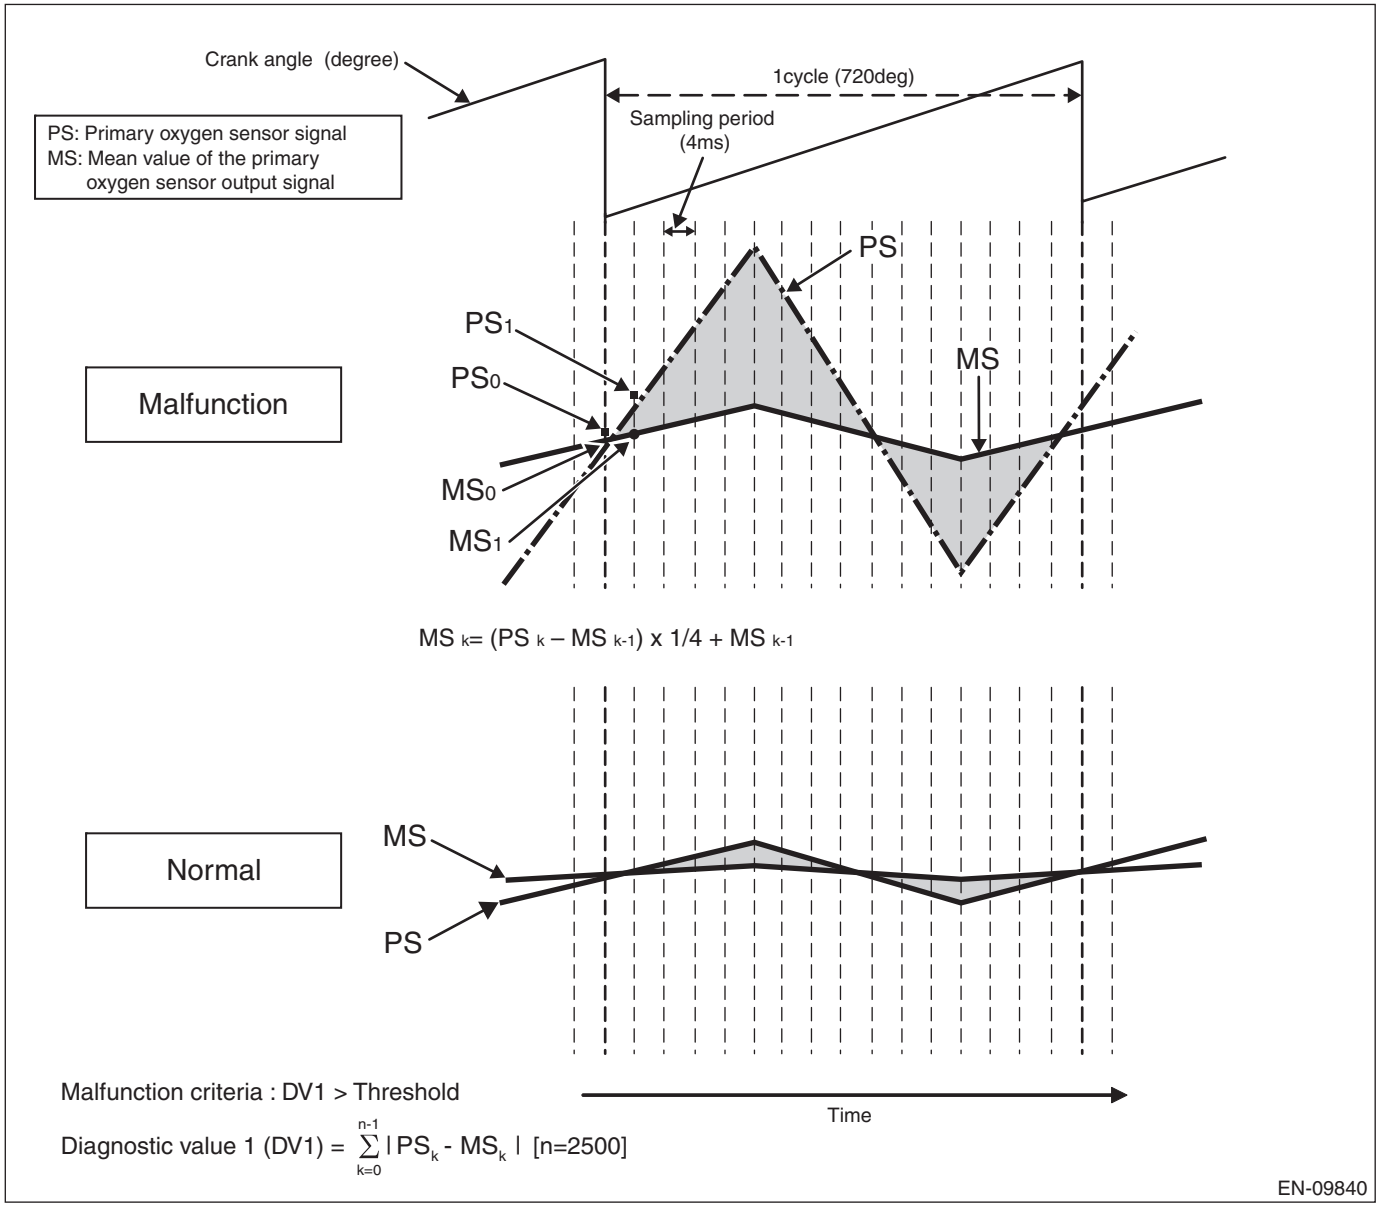
This diagnostic monitor performs a functional check of the fuel system to determine an air-fuel ratio cylinder imbalance.
This diagnosis is composed of two monitors.
The outline of “monitor A1” is as follows. When an air-fuel ratio cylinder imbalance occurs, the primary oxygen sensor output signal will oscillate with increased amplitude. This monitor utilizes this behavior to make a diagnosis. The monitor integrates the difference between the amplification value and the mean value of the first oxygen sensor output signal and compares it to a threshold to make a judgment.
The outline of “monitor B1” is as follows. Similarly, when an imbalance occurs, the engine speed also fluctuates with increased amplitude. This monitor utilizes this behavior to make a diagnosis. For reference, it should be noted that this imbalance monitor method is actually similar to the current misfire diagnostic monitor, and the parameter “domg360” (units: degrees CA) is shared between the imbalance and misfire monitors. The imbalance monitor is performed during idle condition when the engine is warm. The monitor integrates the count of “domg360” which exceeds a threshold in 1000 revolution.
When both the “monitor A1” value and the “monitor B1” value exceed a predetermined threshold, this monitor determines a malfunction and stores a fault code.

And then the strategy above is adapted to the rich and the lean side. It means the different malfunction criteria are set up on the both sides because the “Imbalance Diagnostic A1” value and the “Imbalance Diagnostic B1” value show the different behavior according to the A/F of the malfunction cylinder. In addition, the same fault code is used for both sides.

Monitor A1

When there is an air-fuel ratio cylinder imbalance malfunction, the primary oxygen sensor output fluctuates widely compared with a normal sensor, as shown by the chain line in Figure 1 below. This monitor makes a diagnosis based on this phenomenon. Each primary oxygen sensor signal (PS) and mean value of the primary oxygen sensor signal (MS) is calculated from the primary oxygen sensor signal. The absolute values of (PS – MS) are sampled every 4 ms as shown in the figure. Diagnostic value 1 (DV1) is obtained by integrating the absolute value of (PS – MS) for 2500 times. A malfunction is determined when DV1 exceeds the threshold. The judgment values are determined experimentally.

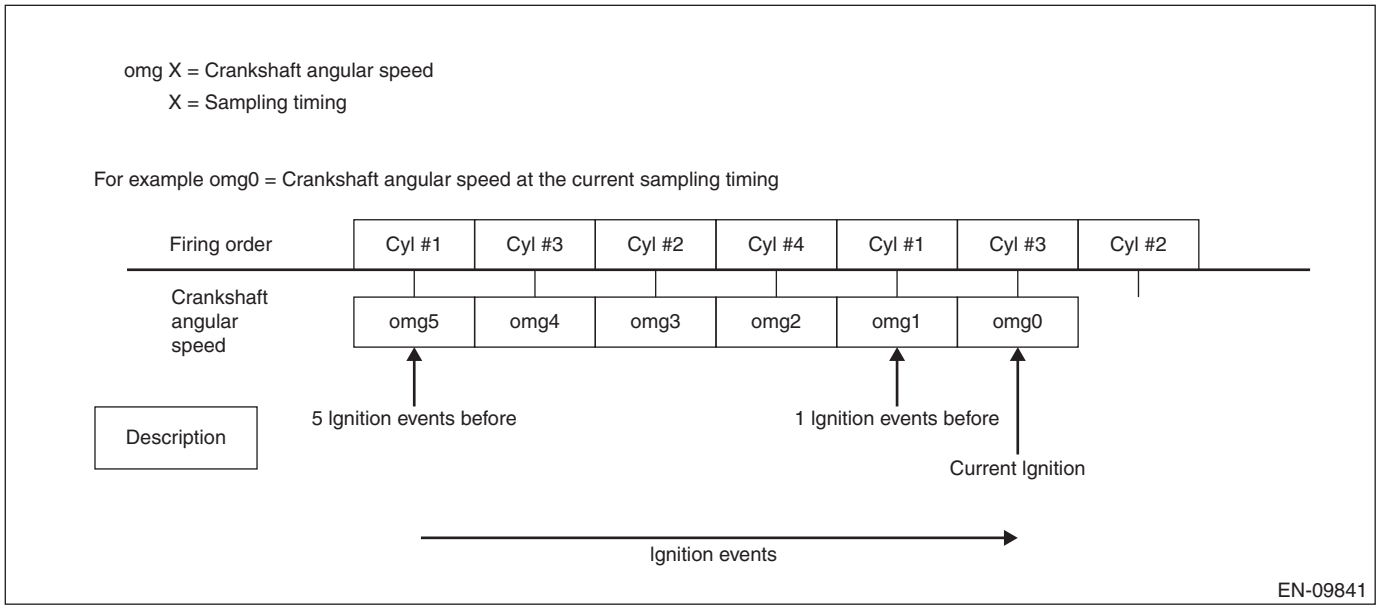
Figure 1. Compare malfunctioned primary oxygen sensor output with a normal sensor



Monitor B1

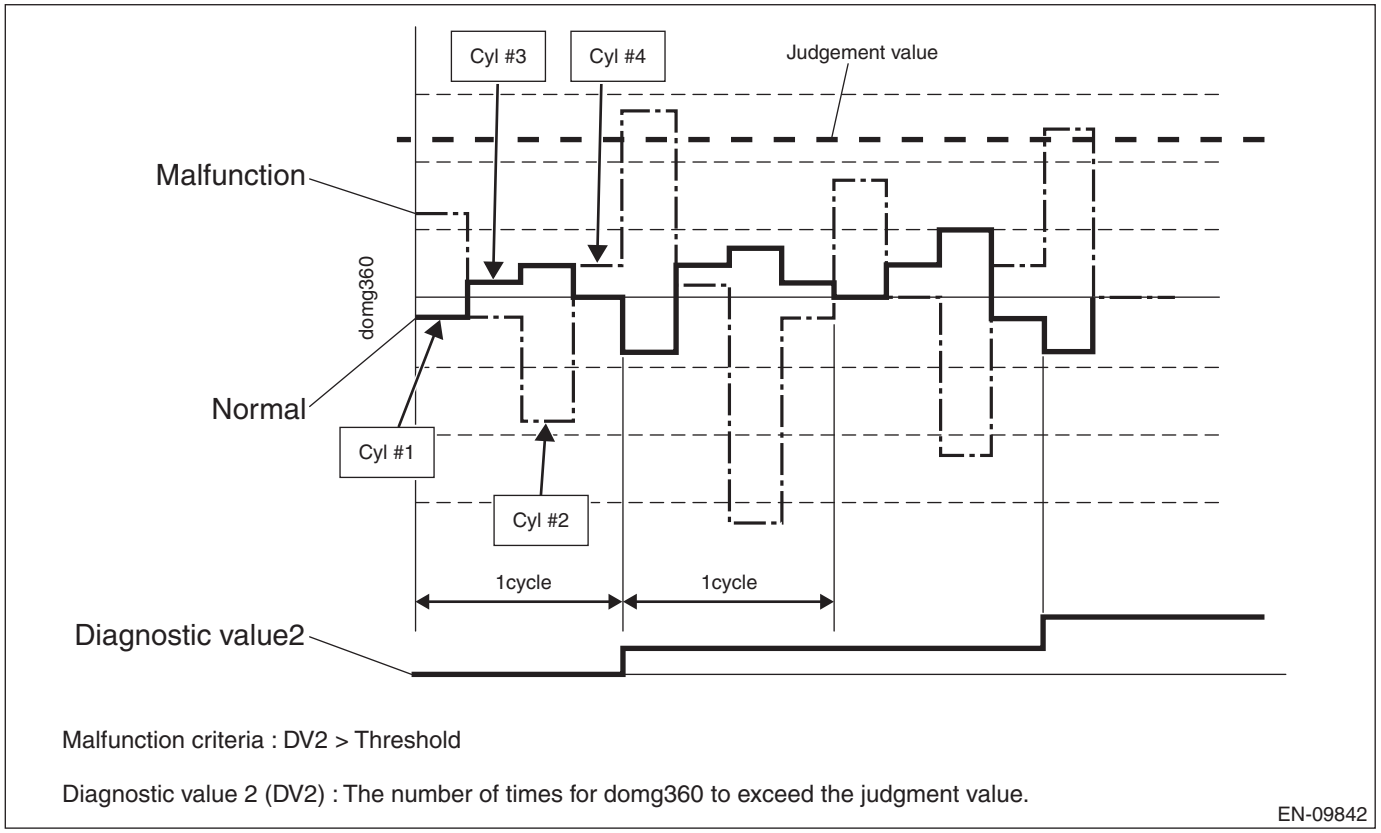
Method used: Difference method of 360 degrees CA
Monitor value: domg360 = (omg 1 – omg 0) – (omg 3 – omg 2) = angular speed
Each crankshaft angular speed is defined as Figure 2 below.

Figure 2. Description of domg360 output



This method uses the fact that the domg360 of lean conditioned cylinder caused by imbalance malfunction indicates big value, as shown by the chain line in Figure 3 below.
The number of times for domg360 to exceed the judgment value in 1000 revolutions (500 cycles) is calculated as diagnostic value 2 (DV2). A malfunction is determined when DV2 exceeds the threshold.

Figure 3. Compare malfunctioned domg360 output with a normal output



2. EXECUTION CONDITION

Monitor A1: Primary oxygen sensor fluctuation

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Barometric pressure	≥ 75.06 kPa (563 mmHg, 22.2 inHg)
Main feedback	In operation
Engine speed	> 1500 rpm and < 4000 rpm
Charging efficiency	> 70 air mass %
Time when not under catalyst neutralization control as well as not under a gradual change	≥ 0.5 s
Fuel control for short-term fuel trim by A/F sensor response monitoring (only for MT model)	≠ Intrusively changed

Monitor B1: Crankshaft speed fluctuation

Secondary parameters	Execution condition
Misfiring diagnosis monitoring	In operation
Accelerator pedal position	≠ 0%
Main feedback	In operation
Engine speed	> 1500 rpm and < 4000 rpm
Charging efficiency	> 70 air mass %

3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

4. DIAGNOSTIC METHOD

Judge as NG when Monitor A1 and Monitor B1 are both NG, and when either is OK, judge as OK.
Monitor A1

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnostic value 1 (DV1)	> Threshold value 1 (TV1)

Threshold value 1 (TV1):

Time needed for diagnosis: 10 seconds
Monitor B1
Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Diagnostic Value2 (DV2)	
(Lean side)	> 17 count
(Rich side)	> 17 count

Time needed for diagnosis: 1000 engine revs.
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GA:DTC P2227 BAROMETRIC PRESSURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P2227 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.

Step		Check	Yes	No
2	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, read the value in «Atmosphere Pressure» and «Mani. Absolute Pressure», and compare them with the actual atmospheric pressure. NOTE: For detailed operation procedures, refer to "Current Data Display For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the difference with the actual atmospheric pressure 6.35 kPa (47.64 mmHg, 1.88 inHg) or more?	Replace the part that showed larger deviation from the actual atmospheric pressure than the other. • If deviations in value for «Atmosphere Pressure» is larger: Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> NOTE: The barometric pressure sensor is built into the ECM. • If deviations in value for «Mani. Absolute Pressure» is larger: Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of barometric pressure sensor output property.
Judge as NG when the barometric pressure sensor output is largely different from the intake manifold pressure at engine start.

2. COMPONENT DESCRIPTION

The barometric pressure sensor is built into the ECM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Soaking time	≥ 60 s
Elapsed time after ignition switch is turned to ON	< 60 s

4. GENERAL DRIVING CYCLE

Perform the diagnosis once at ignition switch ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Barometric pressure – Intake manifold pressure at engine start|	≥ 12.73 kPa (95.5 mmHg, 3.8 inHg)

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GB:DTC P2228 BAROMETRIC PRESSURE SENSOR "A" CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2228 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> NOTE: The barometric pressure sensor is built into the ECM.

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of the barometric pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

The barometric pressure sensor is built into the ECM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 1.76 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GC:DTC P2229 BAROMETRIC PRESSURE SENSOR "A" CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

Step		Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2229 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> NOTE: The barometric pressure sensor is built into the ECM.

1. OUTLINE OF DIAGNOSIS

Detect the open/short circuit of the barometric pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

The barometric pressure sensor is built into the ECM.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.6 V

Time needed for diagnosis: 520 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GD:DTC P226B TURBOCHARGER/SUPERCHARGER BOOST PRESSURE TOO HIGH - MECHANICAL

DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Poor driving performance

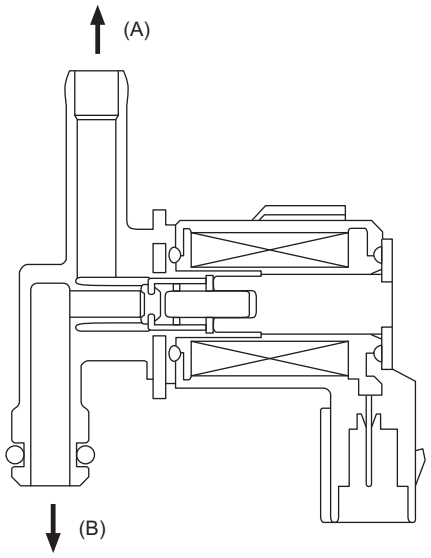
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P226B displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK WASTEGATE ACTUATOR PIPING AND WASTEGATE CONTROL SOLENOID VALVE PIPING.** Check the wastegate actuator pipe and wastegate control solenoid valve pipe.	Are there any damage or disconnection of hose in wastegate actuator piping or wastegate control solenoid valve piping?	Connect the wastegate actuator pipe or wastegate control solenoid valve pipe properly. If defective, replace the hose.	Replace the wastegate control solenoid valve. <Ref. to FU(w/o STI)-117, Wastegate Control Solenoid Valve.>

1. OUTLINE OF DIAGNOSIS

Detect the malfunction of wastegate control solenoid valve function.
Judge as NG when becoming high wastegate pressure.

2. COMPONENT DESCRIPTION



EN-10454

(A) Turbocharger
(B) Intake duct

3. EXECUTION CONDITION

Secondary parameters	Execution condition
None	

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

* Map is a value when intake air temperature is at 25°C (77°F)

Time needed for diagnosis: 2000 ms

Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

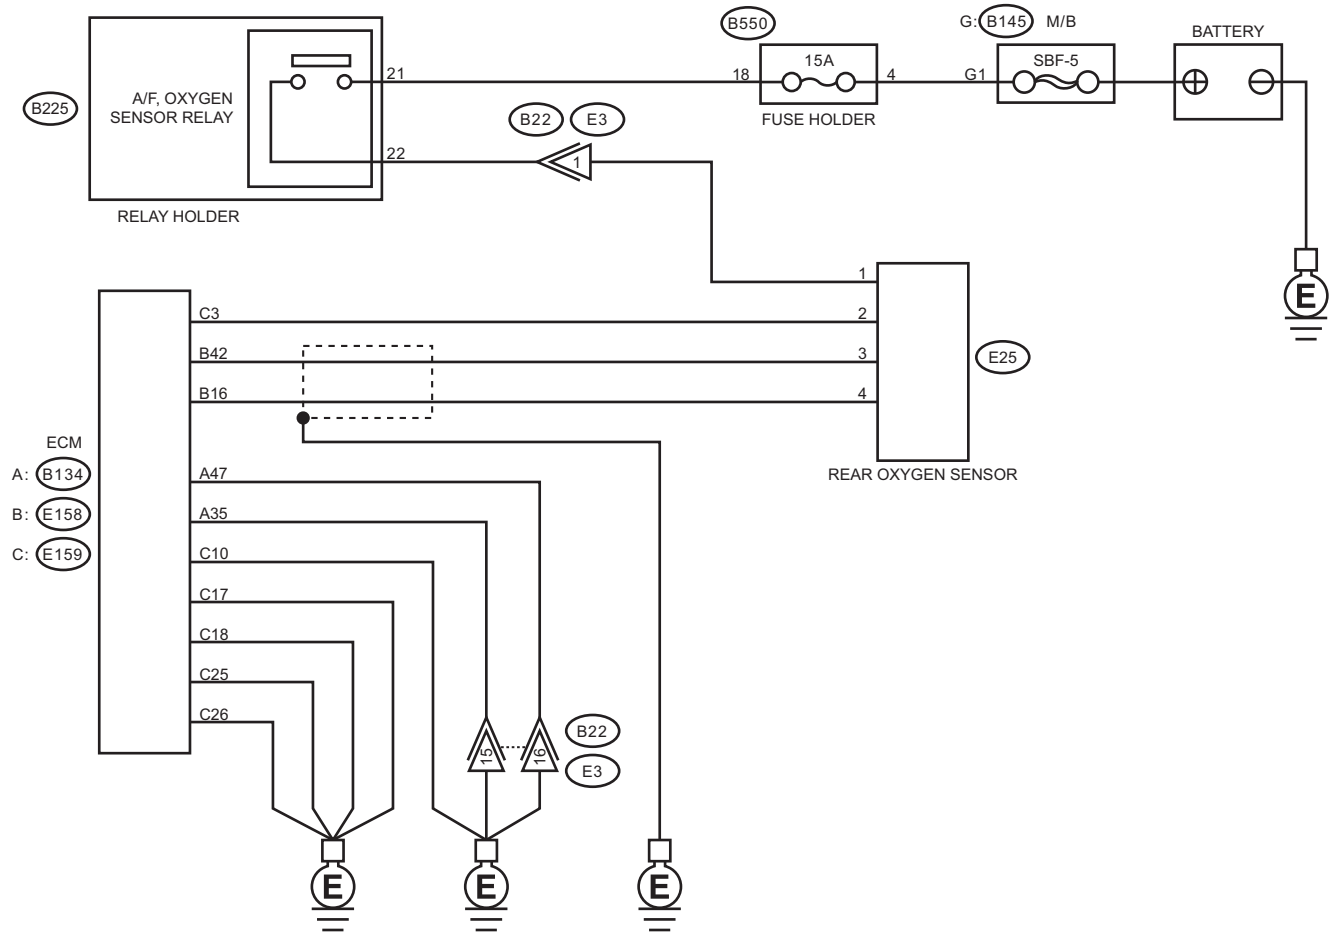
GE:DTC P2270 O2 SENSOR SIGNAL BIASED/STUCK LEAN BANK 1 SENSOR 2

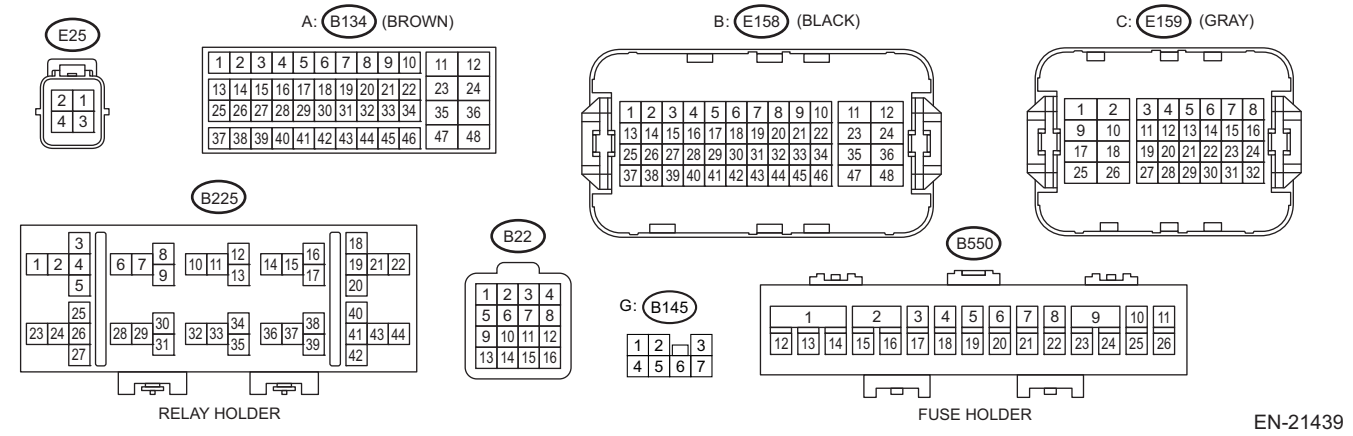
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





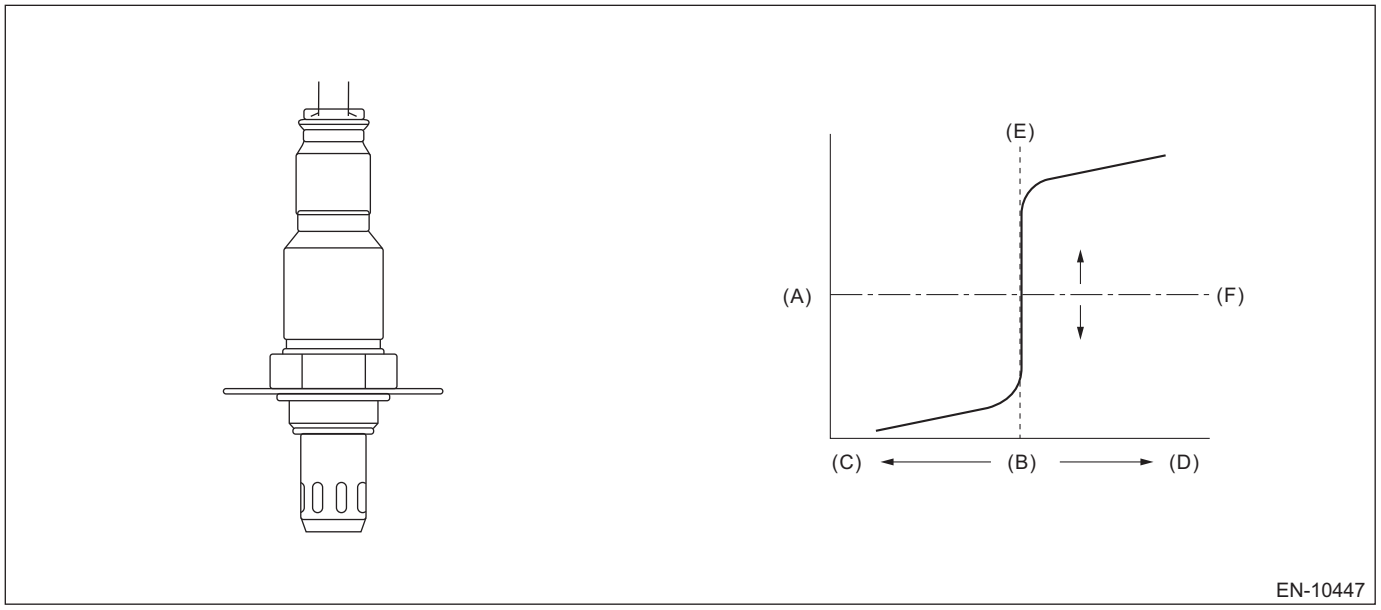
Step		Check	Yes	No
1	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
3	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Connect the connector to ECM. 2) Turn the ignition switch to ON. 3) Measure the voltage between rear oxygen sensor connector and engine ground. ***Connector & terminal*** ***(E25) No. 3 (+) — Engine ground (–):***	Is the voltage 0.15 V or more?	Repair the short circuit to power in the harness between ECM connector and rear oxygen sensor connector.	Go to step **4**.
4	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Damage (crack, hole etc.) between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the stuck of rear oxygen sensor voltage in lean state.
When rear oxygen sensor voltage remains below the threshold value for predetermined time, diagnosis interrupts target air fuel ratio for control and raises output voltage.
Judge as NG detecting the stuck in lean state when rear oxygen sensor voltage remains below the threshold value even after the interrupt control.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Sub feedback	In operation
Amount of intake air	≥ 10 g/s (1.3 lb/min)
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)
Enable conditions at interrupt control are as follows	
Air fuel ratio reduced from target air fuel ratio	= Value of Map
Continuous time when rear oxygen sensor output voltage is less than 0.55 V	≥ 5000 ms

Map

Output voltage of rear oxygen sensor (V)	0.00	0.10	0.15	0.30	0.40	0.50	0.60
Air fuel ratio reduced from target air fuel ratio (%)	15	15	5	4	4	4	4

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage of rear oxygen sensor	< 0.55 V

Time needed for diagnosis:

15 s (CVT model)
20 s (MT model)
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

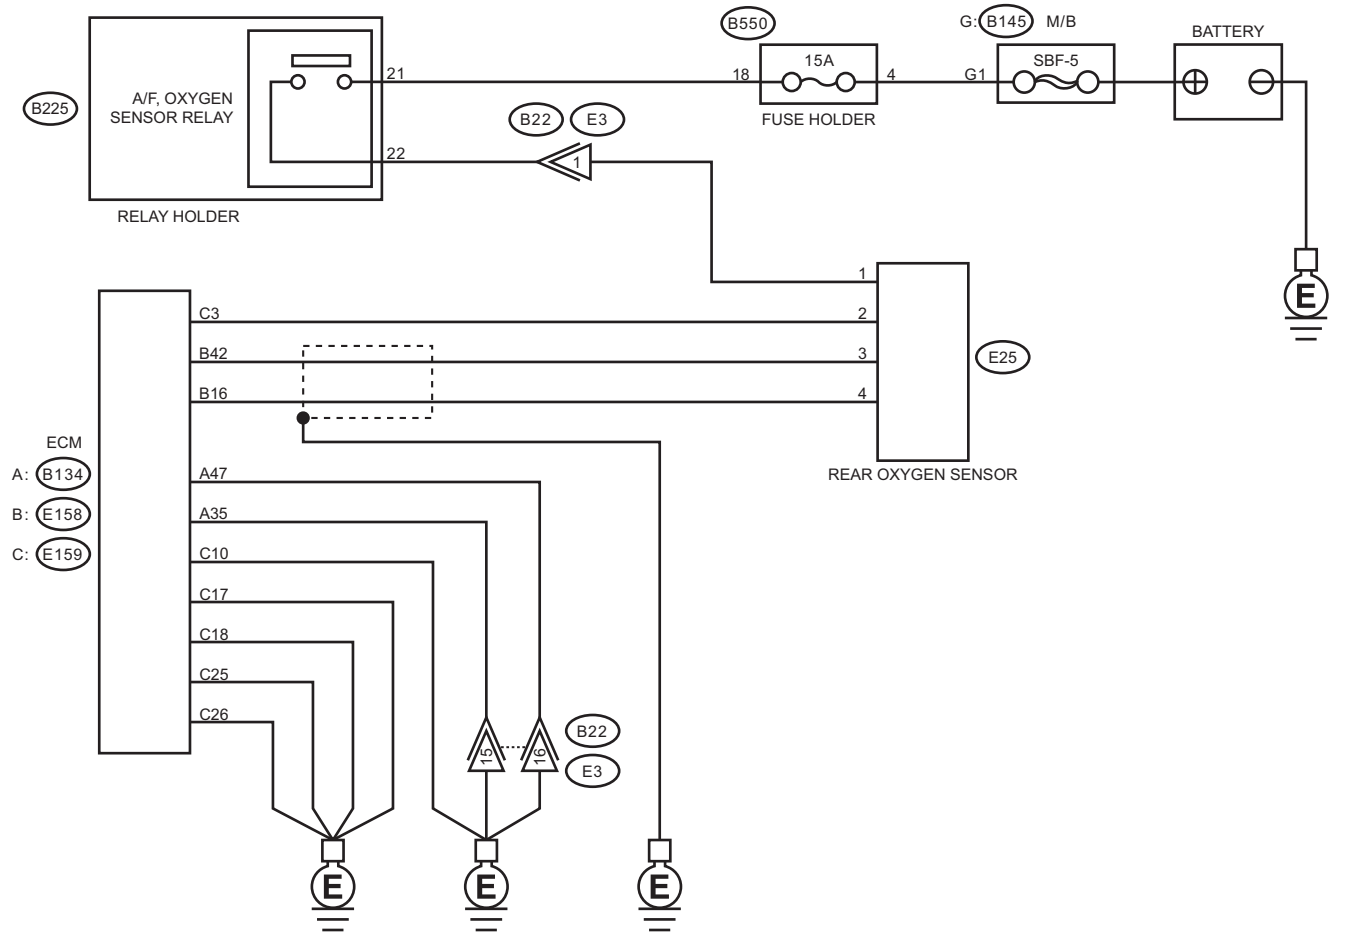
GF:DTC P2271 O2 SENSOR SIGNAL BIASED/STUCK RICH BANK 1 SENSOR 2

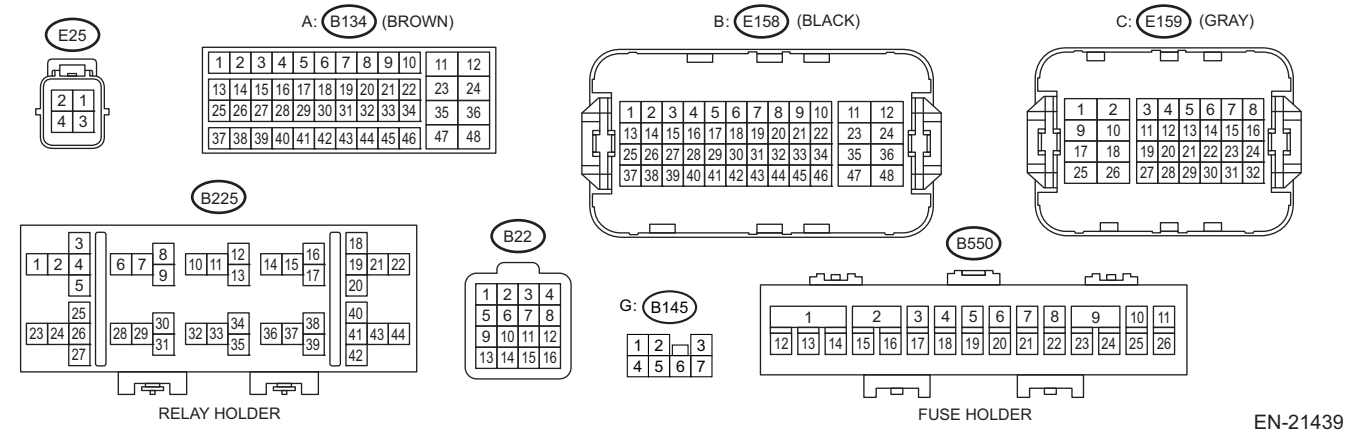
DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





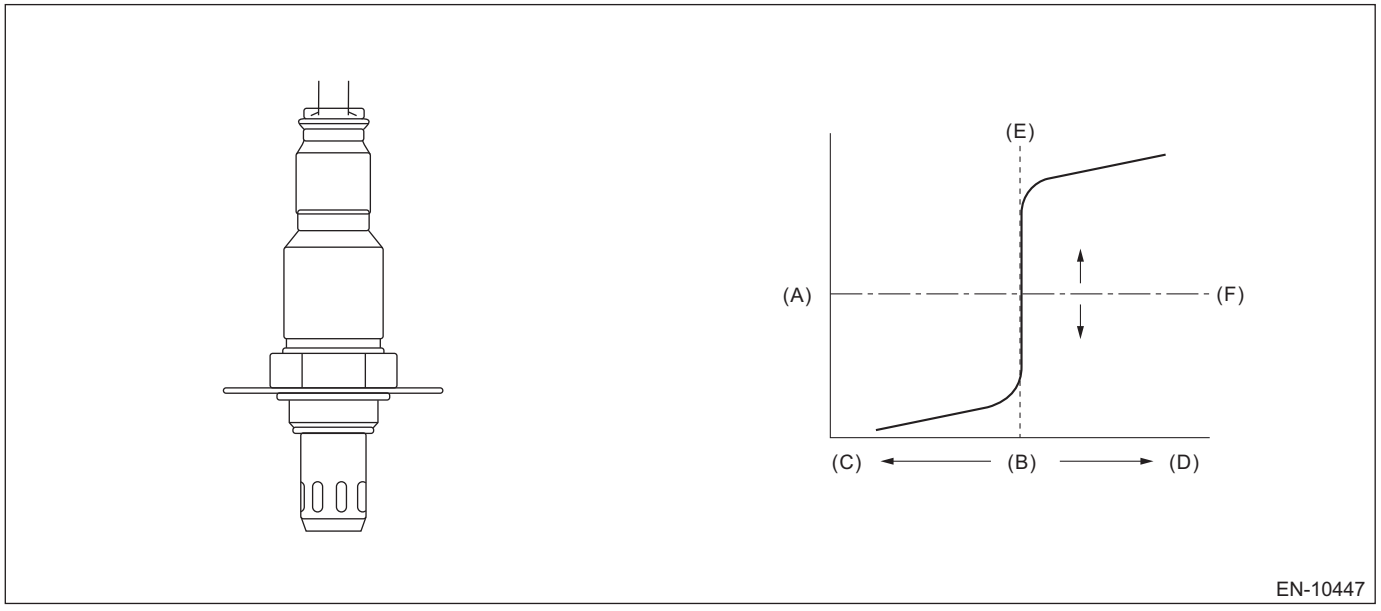
Step		Check	Yes	No
1	**CHECK REAR OXYGEN SENSOR CONNECTOR.** Check the rear oxygen sensor connector.	Has water entered the connector?	Completely remove any water inside.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from rear oxygen sensor. 4) Measure the resistance of harness between ECM connector and rear oxygen sensor connector. ***Connector & terminal*** ***(E158) No. 42 — (E25) No. 3:*** ***(E158) No. 16 — (E25) No. 4:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and rear oxygen sensor connector.
3	**CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.** Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***(E158) No. 42 — Engine ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and rear oxygen sensor connector.
4	**CHECK EXHAUST SYSTEM.** Check exhaust system parts. NOTE: Check the following items. • Looseness and improper fitting of exhaust system parts • Damage (crack, hole etc.) of parts • Damage (crack, hole etc.) between front oxygen (A/F) sensor and rear oxygen sensor	Is there any fault in exhaust system?	Repair or replace faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(w/o STI)-121, Rear Oxygen Sensor.>

1. OUTLINE OF DIAGNOSIS

Detect the stuck of rear oxygen sensor voltage in rich state.
Detect the stuck in rich state and judge as NG if rear oxygen sensor voltage remains above the threshold value for predetermined time.

2. COMPONENT DESCRIPTION



(A) Electromotive force
(B) Air fuel ratio
(C) Rich
(D) Lean
(E) Theoretical air fuel ratio
(F) Comparative voltage

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Time of fuel shut-off operation	≥ 5 s
Estimated temperature of the rear oxygen sensor element	≥ 450°C (842°F)

4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage of rear oxygen sensor	> 0.15 V

Time needed for diagnosis: 0.5 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GG:DTC P2401 EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

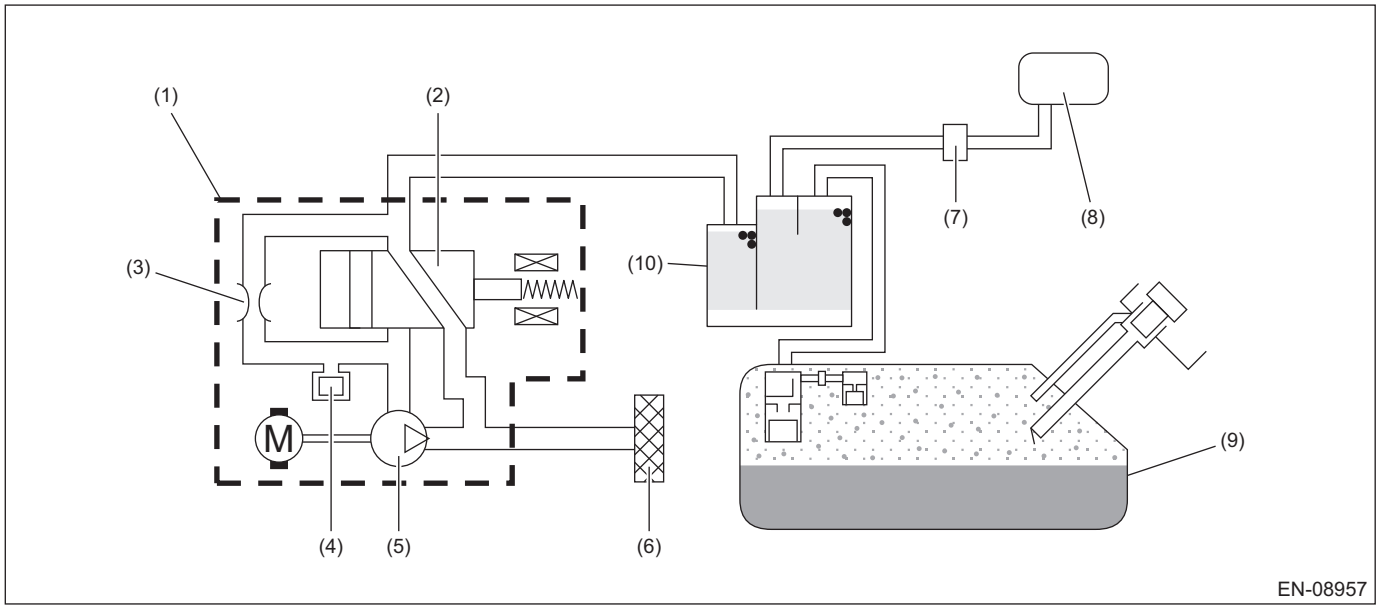
	Step	Check	Yes	No
1	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Go to step **3**.
2	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM connector.	Is there poor contact of ECM connector?	Repair the poor contact of ECM connector.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary open or short circuit of harness or temporary poor contact of connector may be the cause.
3	**CHECK POWER SUPPLY TO LEAK CHECK VALVE ASSEMBLY.** Measure the voltage between the leak check valve assembly connector and engine ground. ***Connector & terminal*** ***(R400) No. 3 (+) — Engine ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the power supply circuit.
4	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the leak check valve assembly. 4) Measure the resistance between leak check valve assembly and chassis ground. ***Connector & terminal*** ***(R400) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.
5	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B134) No. 3 — (R400) No. 4:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector

	Step	Check	Yes	No
6	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the vacuum pump of the leak check valve assembly. <Ref. to EC(w/o STI)-72, CHECK VACUUM PUMP, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module vacuum pump.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Evaporative Leak Check Module vacuum pump drive signal	OFF

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	≤ 2.2 V

Time needed for diagnosis: 2500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GH:DTC P2402 EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

Time needed for diagnosis: 2250 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GI: DTC P2404 EVAP SYSTEM LEAK DETECTION PUMP SENSE CIRCUIT RANGE/PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2404 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LEAK CHECK VALVE ASSEMBLY PUMP.** Operate the ELCM pump using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the leak check valve assembly pump operate?	Go to step **6**.	Go to step **3**.
3	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
4	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B134) No. 3 — (R400) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
5	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

	Step	Check	Yes	No
6	**CHECK LEAK CHECK VALVE ASSEMBLY SWITCHING VALVE.** Using the Subaru Select Monitor, operate the leak check valve assembly switching valve. NOTE: For detailed operation procedures, refer to the "Active Test". <Ref. to EN(w/o STI)(diag)-97, Active Test.>	Does the leak check valve assembly switching valve operate?	Go to step **10**.	Go to step **7**.
7	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between the main relay and the leak check valve assembly connector • Poor contact of main relay connector • Poor contact of coupling connector
8	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B134) No. 27 — (R400) No. 1:***	Is the resistance less than 1 Ω?	Go to step **9**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector
9	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 27 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.

Step		Check	Yes	No
10	**CHECK EVAPORATIVE EMISSION CONTROL SYSTEM.** Perform drive cycle I. <Ref. to EN(w/o STI)(diag)-81, DRIVE CYCLE I, PROCEDURE, Drive Cycle.>	Is DTC P2404 displayed? (Current malfunction)	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC P0455. <Ref. to EN(w/o STI)(diag)-465, DTC P0455 EVAP SYSTEM (CPC) LEAK DETECTED (LARGE LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GJ:DTC P2419 EVAP SYSTEM SWITCHING VALVE CONTROL CIRCUIT LOW

Detected when two consecutive driving cycles with fault occur.

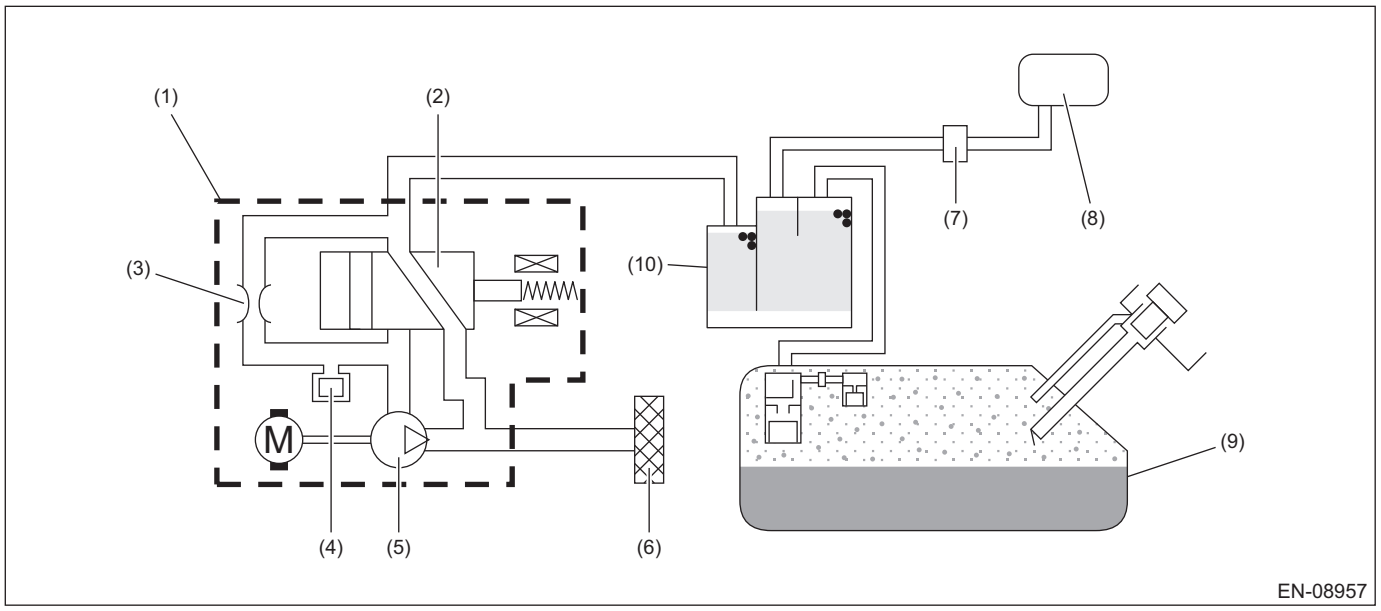
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is other than DTC P24B9 displayed? (Current malfunction)	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON (engine OFF). 2) Using the Subaru Select Monitor or general scan tool, read the value in «Absolute Evap Sys. Pressure» and «Mani. Absolute Pressure», and compare them with the actual atmospheric pressure. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual. • To read the actual atmospheric pressure, connect the Subaru Select Monitor or general scan tool to the other known good vehicle.	Is the difference with the actual atmospheric pressure 6.2 kPa (46.5 mmHg, 1.8 inHg) or more?	Replace the part that showed larger deviation from the actual atmospheric pressure than the other. • If deviations in value for «Absolute Evap Sys. Pressure» is larger: Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.> • If deviations in value for «Mani. Absolute Pressure» is larger: Replace the manifold absolute pressure and intake air temperature sensor. <Ref. to FU(w/o STI)-114, Manifold Absolute Pressure and Intake Air Temperature Sensor.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

1. OUTLINE OF DIAGNOSIS

Detect the output characteristics malfunction of Evaporative Leak Check Module pressure sensor.
Judge as NG when the Evaporative Leak Check Module pressure sensor output value is largely different from the intake manifold pressure when the ignition switch is ON.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Elapsed time after ignition switch is turned to ON	≥ 0.5 s and < 60 s
Soaking time	≥ 60 s
Evaporative Leak Check Module vacuum pump	Not in operation
Evaporative Leak Check Module switching valve	Open
Purge control	Not in operation

4. GENERAL DRIVING CYCLE

Perform the diagnosis once at ignition ON.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
|Evaporative Leak Check Module pressure sensor output value when ignition switch is ON – intake manifold pressure (absolute pressure) when ignition switch is ON|	≥ 12.4 kPa (93 mmHg, 3.7 inHg)

Time needed for diagnosis: 0.32 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GM:DTC P24BA EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT LOW

DTC detecting condition:
Immediately at fault recognition

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

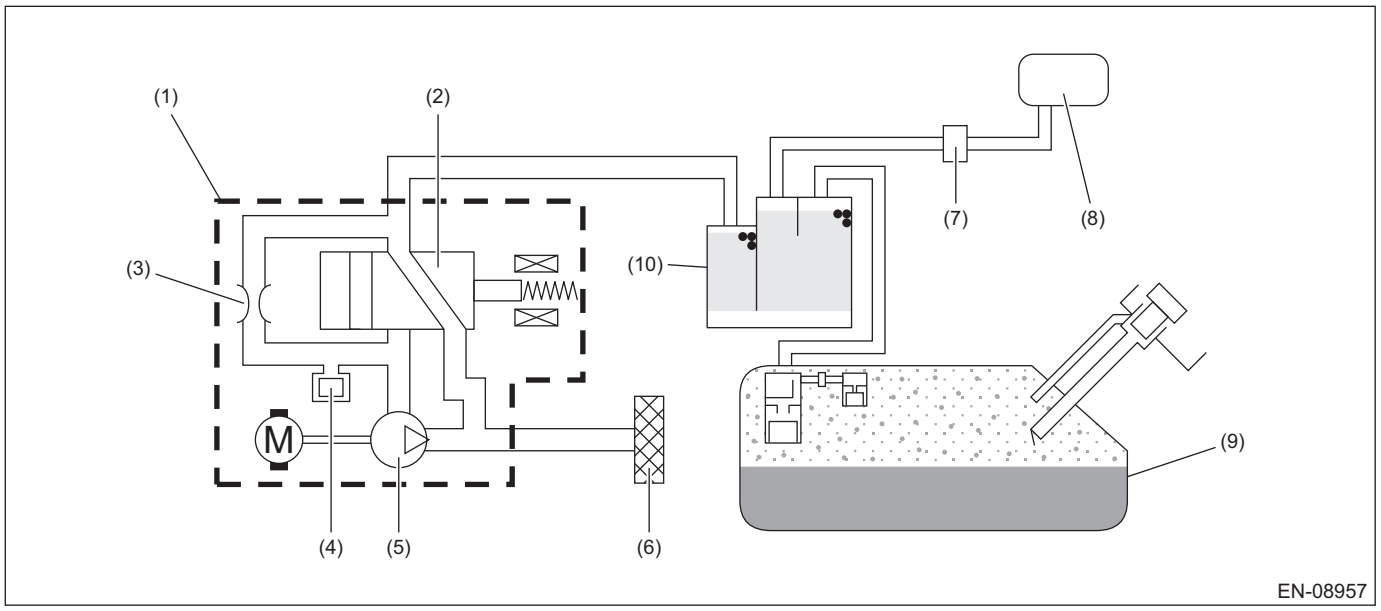
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Absolute Evap Sys. Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Absolute Evap Sys. Pressure» 34 kPa (255 mmHg, 10 inHg) or less?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK POWER SUPPLY OF LEAK CHECK VALVE ASSEMBLY.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the leak check valve assembly. 3) Turn the ignition switch to ON. 4) Measure the voltage between the leak check valve assembly connector and chassis ground. ***Connector & terminal*** ***(R400) No. 6 (+) — Chassis ground (–):***	Is the voltage 4.5 V or more?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of ECM connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 15 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and leak check valve assembly connector.
4	**CHECK FOR POOR CONTACT.** Check for poor contact of leak check valve assembly connector.	Is there poor contact in the leak check valve assembly connector?	Repair the poor contact in the leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	< 0.92 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GN:DTC P24BB EVAP SYSTEM LEAK DETECTION PUMP PRESSURE SENSOR CIRCUIT HIGH

DTC detecting condition:
Immediately at fault recognition

CAUTION:

- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

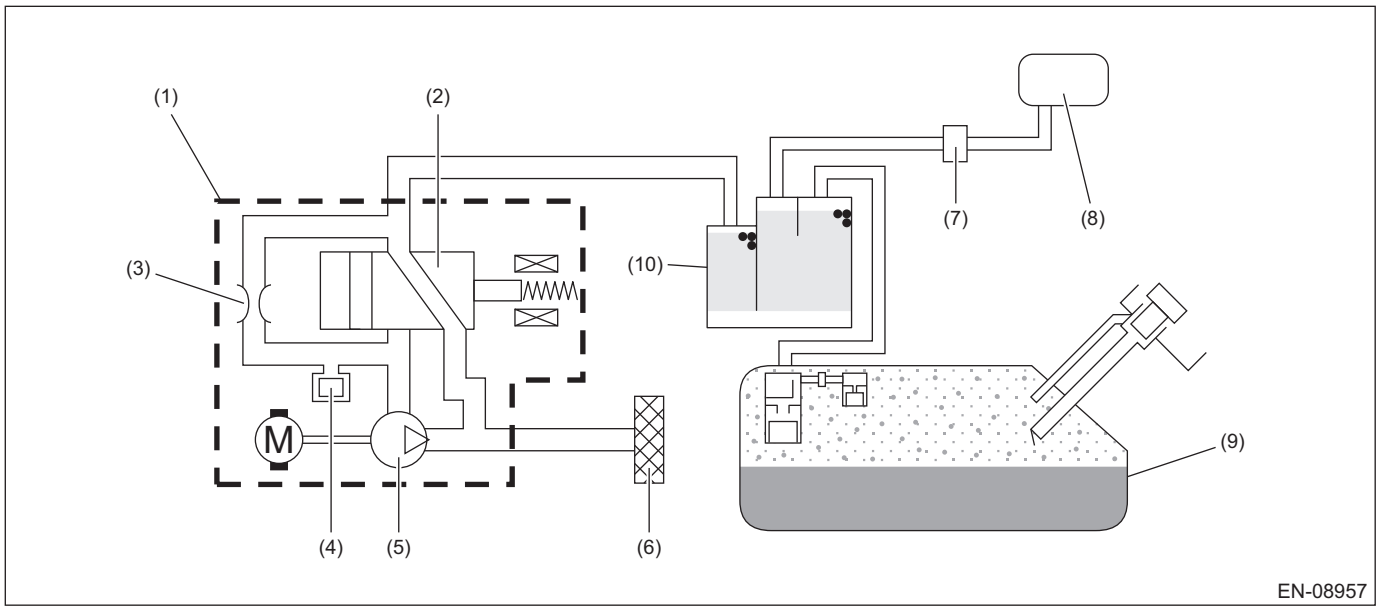
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Read the value of «Absolute Evap Sys. Pressure» using the Subaru Select Monitor or a general scan tool. NOTE: • Subaru Select Monitor For detailed operation procedures, refer to "Read Current Data For Engine". <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.> • General scan tool For detailed operation procedures, refer to the general scan tool operation manual.	Is the value in «Absolute Evap Sys. Pressure» 125 kPa (938 mmHg, 36.9 inHg) or more?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN ECM AND LEAK CHECK VALVE ASSEMBLY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Disconnect the connector from the leak check valve assembly. 4) Measure the resistance of harness between ECM connector and the leak check valve assembly connector. ***Connector & terminal*** ***(B134) No. 15 — (R400) No. 7:*** ***(B134) No. 19 — (R400) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and the leak check valve assembly connector • Poor contact of coupling connector • Poor contact of joint connector
3	**CHECK FOR POOR CONTACT.** Check for poor contact of ECM and the leak check valve assembly connector.	Is there poor contact in ECM and the leak check valve assembly connector?	Repair the poor contact of ECM and the leak check valve assembly connector.	Go to step **4**.
4	**CHECK LEAK CHECK VALVE ASSEMBLY.** Check the pressure sensor of the leak check valve assembly. <Ref. to EC(w/o STI)-73, CHECK PRESSURE SENSOR, INSPECTION, Leak Check Valve Assembly.>	Is the check result OK?	Repair the short circuit to power in harness between ECM connector and leak check valve assembly connector.	Replace the leak check valve assembly. <Ref. to EC(w/o STI)-55, Leak Check Valve Assembly.>

1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit in Evaporative Leak Check Module pressure sensor.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION



(1) Leak check valve ASSY
(2) Switching valve
(3) Reference orifice (0.02 inch orifice)
(4) Pressure sensor
(5) Vacuum pump
(6) Drain filter
(7) Purge control solenoid valve
(8) Intake manifold
(9) Fuel tank
(10) Canister

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Output voltage	> 4.25 V

Time needed for diagnosis: 1000 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

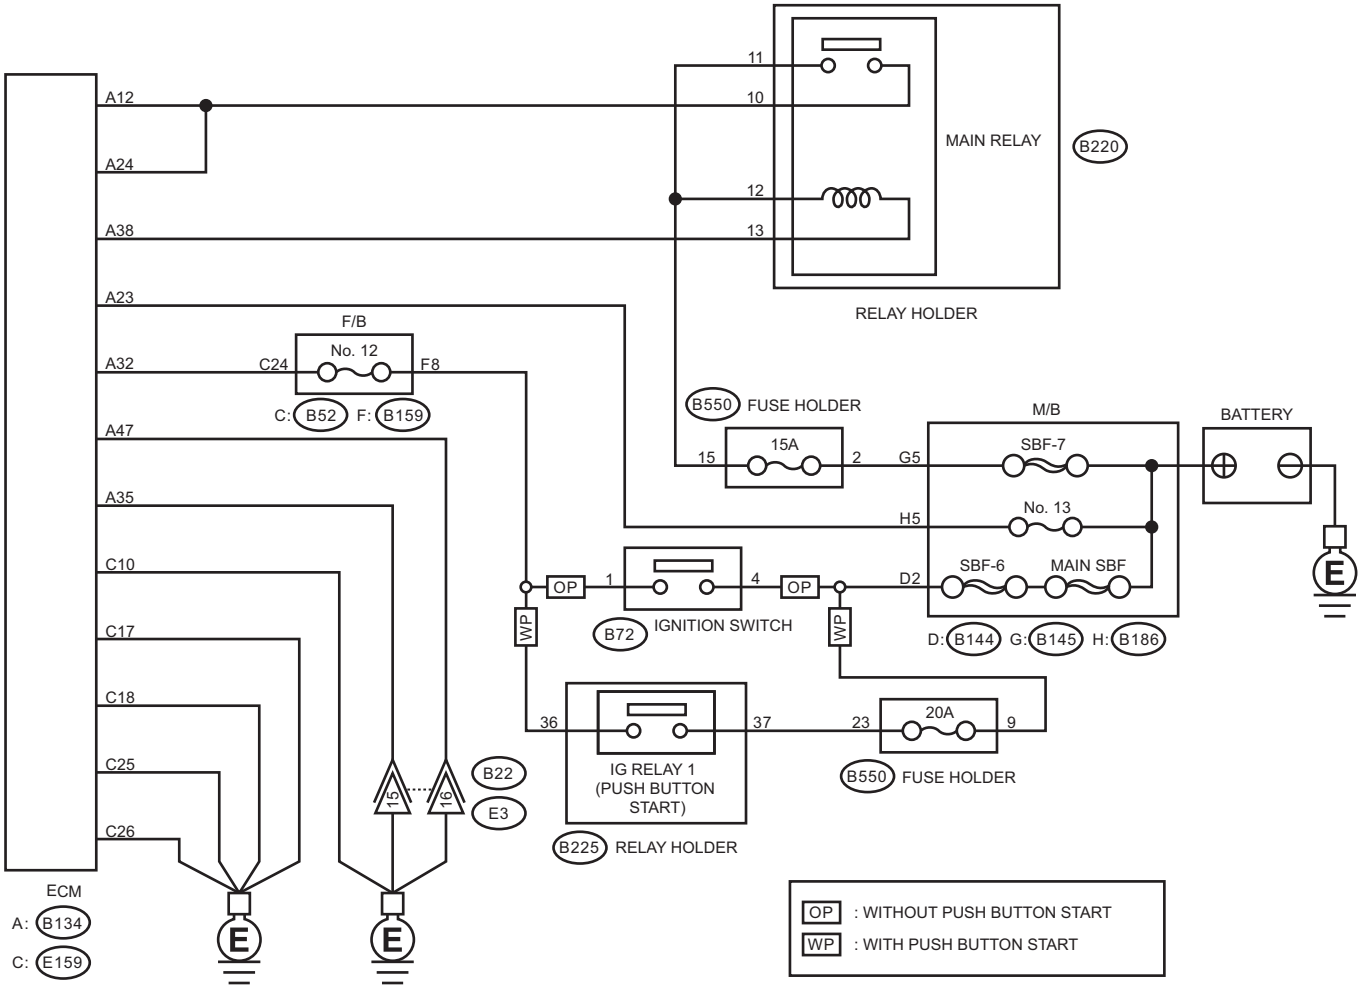
GO:DTC P2530 IGNITION SWITCH RUN POSITION CIRCUIT

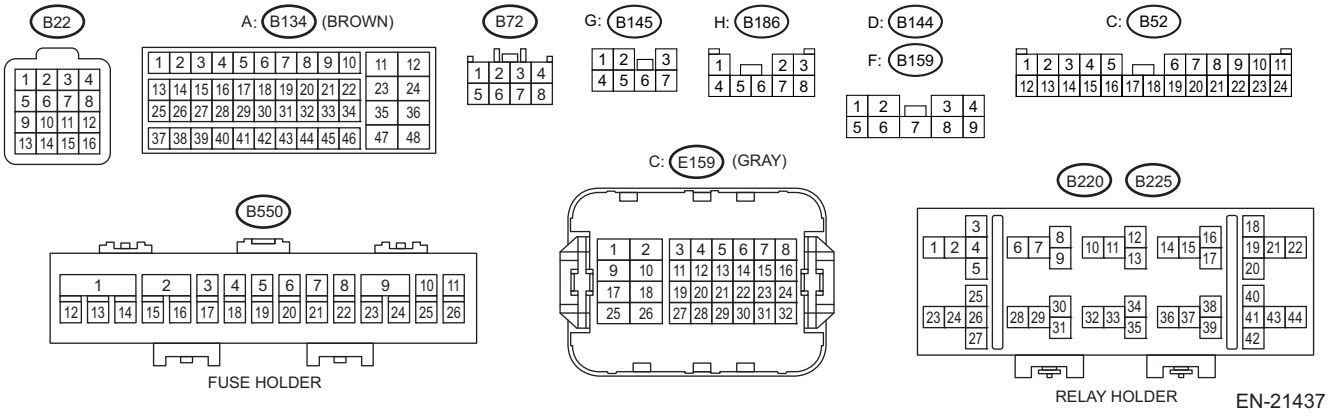
DTC detecting condition:
Immediately at fault recognition
Trouble symptom:
Improper idling

CAUTION:
- **After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.**
- **Use the check board when measuring the ECM terminal voltage and resistance.**

Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>





Step		Check	Yes	No
1	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **2**.	Connect the ECM connector correctly.

Step	Check	Yes	No
2 **CHECK INPUT VOLTAGE OF ECM.** 1) Turn the ignition switch to ON. 2) Connect the check board. ST 18460AA030 CHECK BOARD 3) Measure the voltage between ECM connector and engine ground while wiggling the harness between ECM connector and ignition switch connector (for models without push button start), or between ECM connector and IG relay 1 (push button start) connector (for models with push button start). ***Connector & terminal*** ***(B134) No. 32 (+) — Engine ground (–):***	Is the voltage 8 V or more all the time?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, the following items may be the cause of fault. Model without push button start • Open circuit or short circuit to ground in harness between ECM connector and ignition switch connector • Poor contact of ignition switch connector • Poor contact of ignition switch Model with push button start • Open circuit or short circuit to ground in harness between ECM connector and IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start)	Repair the harness and connector. NOTE: In this case, repair the following item: Model without push button start • Open circuit or short circuit to ground in harness between ECM connector and ignition switch connector • Poor contact of ignition switch connector • Poor contact of ignition switch • Faulty fuse (F/B No. 12) Model with push button start • Open circuit or short circuit to ground in harness between ECM connector and IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) connector • Poor contact in IG relay 1 (push button start) • Faulty fuse (F/B No. 12)

1. OUTLINE OF DIAGNOSIS

Detect instantaneous open in ignition switch input circuit to ECM.
Judge as NG if out of specification.

2. COMPONENT DESCRIPTION

ECM monitors the voltage of the ignition switch input circuit. Judge as ignition switch ON when the voltage is the specified value or more.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Engine speed	≥ 475 rpm

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established within the predetermined time.

Judgment value

Malfunction Criteria	Threshold Value
Number of instantaneous opens in ignition switch input circuit	≥ 5 times

Time needed for diagnosis: 5 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GP:DTC P2610 ECM/PCM ENGINE OFF TIMER PERFORMANCE

DTC detecting condition:
Detected when two consecutive driving cycles with fault occur.

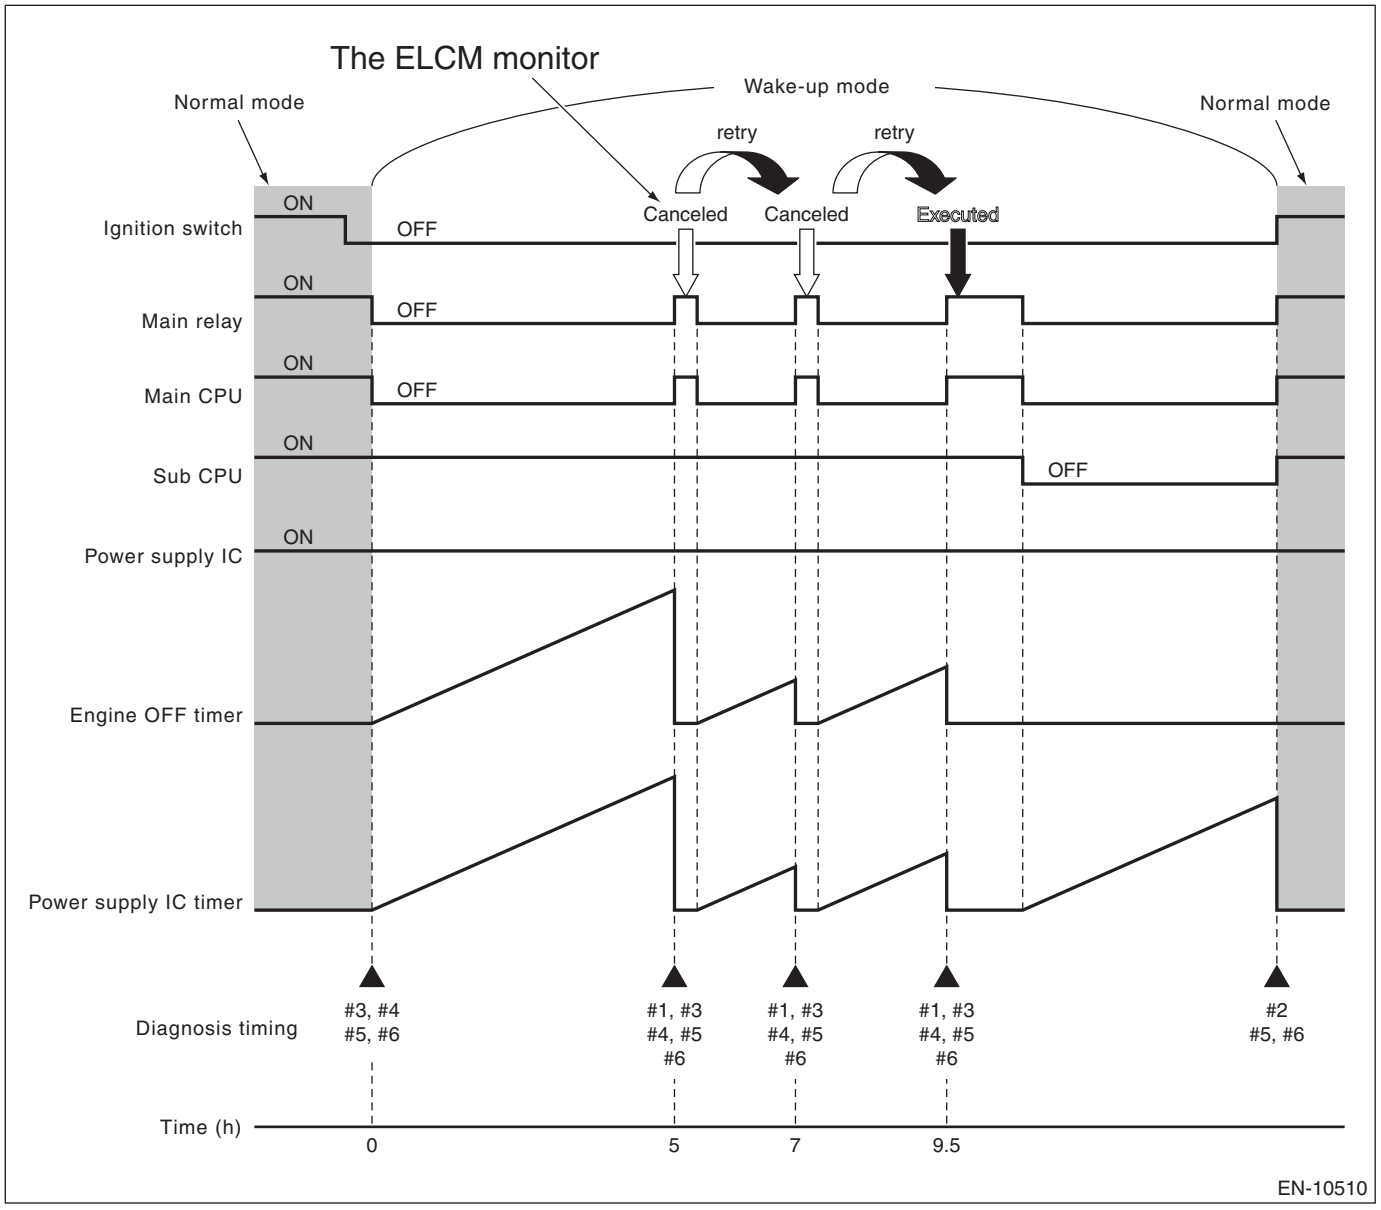
CAUTION:
After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the engine DTC using the Subaru Select Monitor or general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC other than P2610 displayed? (Current malfunction)	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(w/o STI)(diag)-119, List of Diagnostic Trouble Code (DTC).>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> NOTE: The soaking timer IC is built into the ECM.

1. OUTLINE OF DIAGNOSIS

Confirm the engine off timer accuracy by comparing engine off timer and power supply IC timer after ignition switch is turned to OFF.
This diagnosis consists of the following six cases. Judge as NG when in any one of the following cases, abnormality is detected.
Monitor1:
Diagnose the difference between wake-up request time and power supply IC timer.
Monitor2:
Diagnose the time in power supply IC timer before wake up.
Monitor3:
Diagnose the communication error between main CPU and sub CPU.
Monitor4:
Diagnose the communication error between main CPU and power supply IC.
Monitor4:
Diagnose the operation status abnormality in main CPU and sub CPU.
Monitor5:

Diagnose the ignition switch status abnormality in main CPU and sub CPU.



NOTE:
- Normal mode: main relay and ignition switch is ON.
- Wake-up mode: In soaking

2. COMPONENT DESCRIPTION

The engine off timer is built into the ECM.

3. EXECUTION CONDITION

Monitor1:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main CPU	Wake-up mode

Monitor2:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V
Main CPU	Normal mode
Wake-up experience flag	OFF

Monitor 3, 4, 5:

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

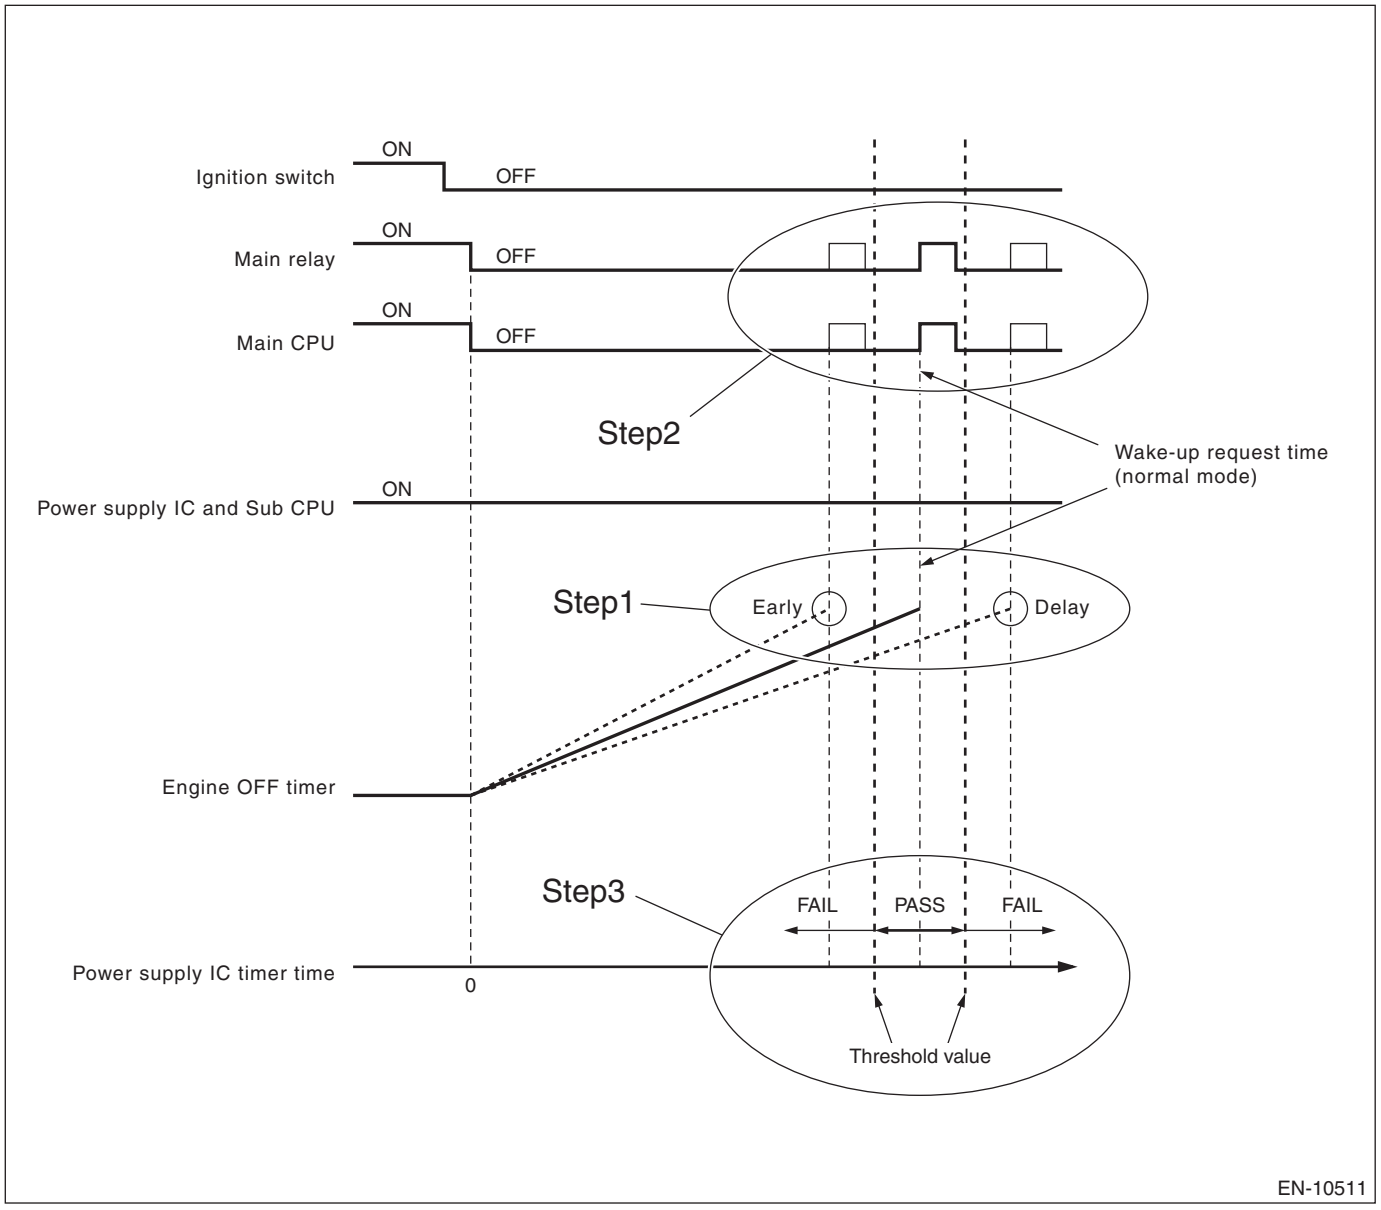
Monitor1:
Perform the diagnosis only once when wake-up operates after the ignition switch is OFF.
Monitor2:
Perform the diagnosis only once when the following driving cycle starts after the ignition switch is OFF.
Monitor3,4,5,6:
Perform the diagnosis only once after the enable conditions have been established.

5. DIAGNOSTIC METHOD

<Monitor1>

Judge as abnormal in engine off timer or power supply IC timer when the difference between wake-up request time and power supply IC timer exceeds the threshold value.

When the sub CPU is faulty, wake-up timing is either advancing or retarding compared with normal timing.



Processed in order Step 1 through Step 3.

Judge as NG when the following conditions are established.

Judgment value

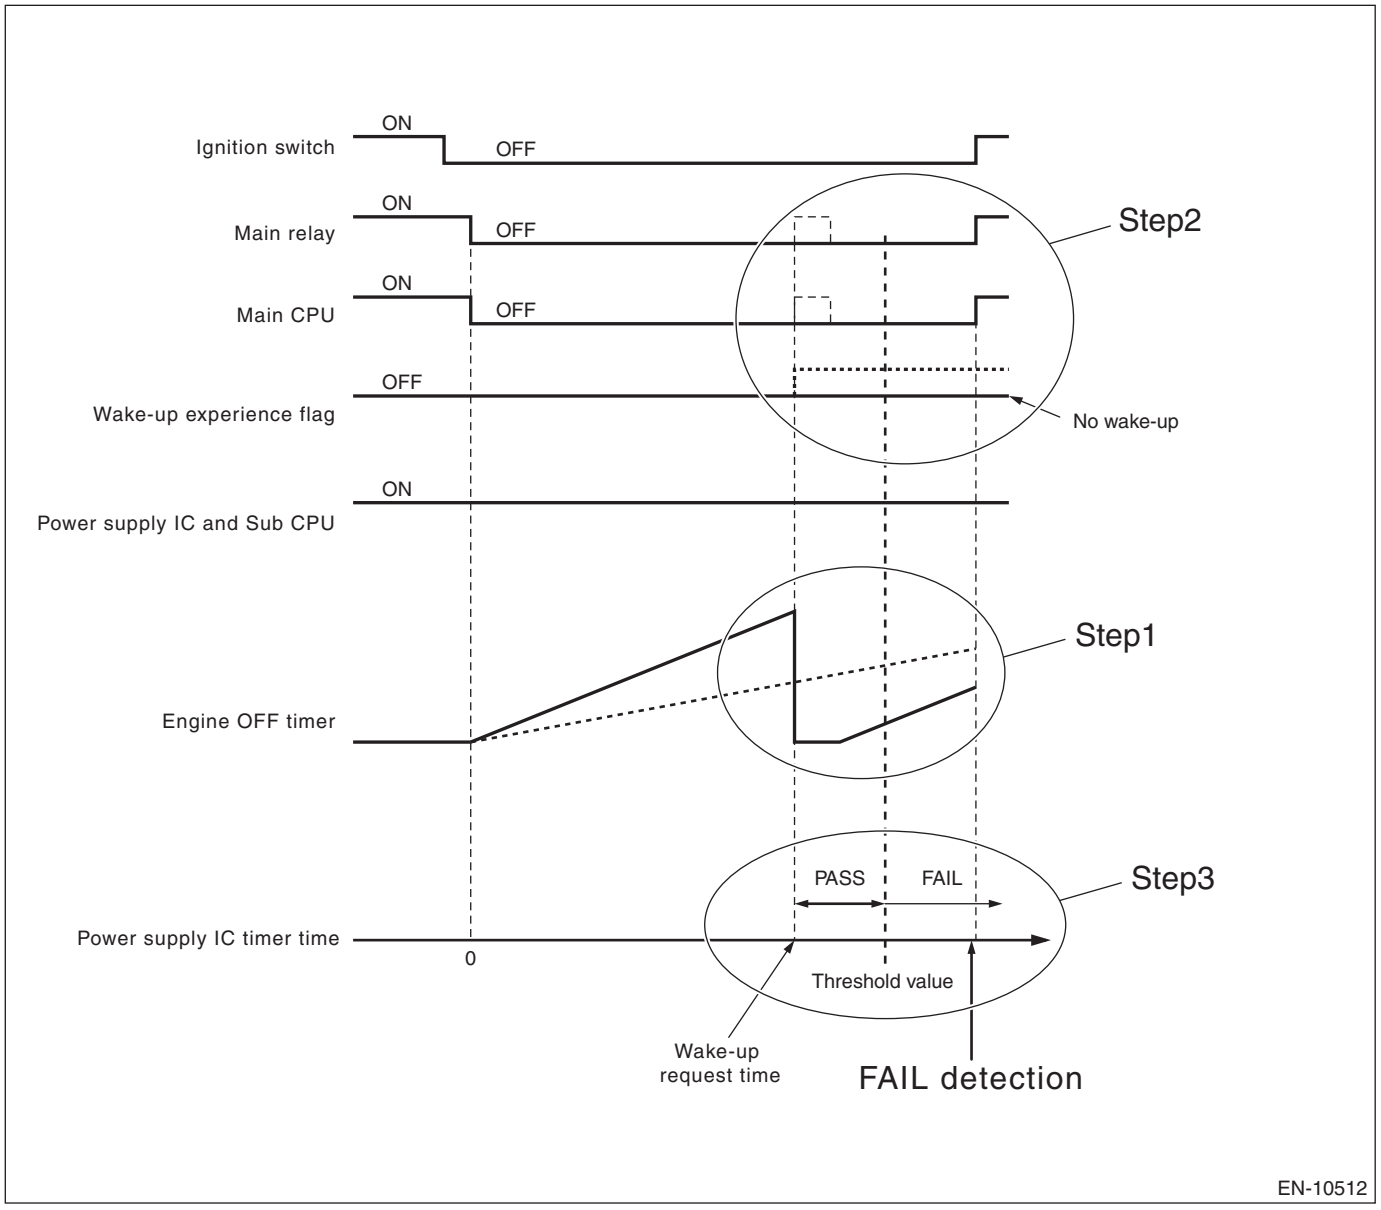
Malfunction Criteria	Threshold Value
|(Power supply IC timer) – (Wake-up request time)| / Wake-up request time	> 0.24

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

<Monitor2>

Judge as abnormal in engine off timer when the power supply IC timer exceeds the wake-up request time before wake up.

When case #1 is not performed, perform case #2.



Processed in order Step 1 through Step 3.

Judge as NG when the following conditions are established.

Judgment value

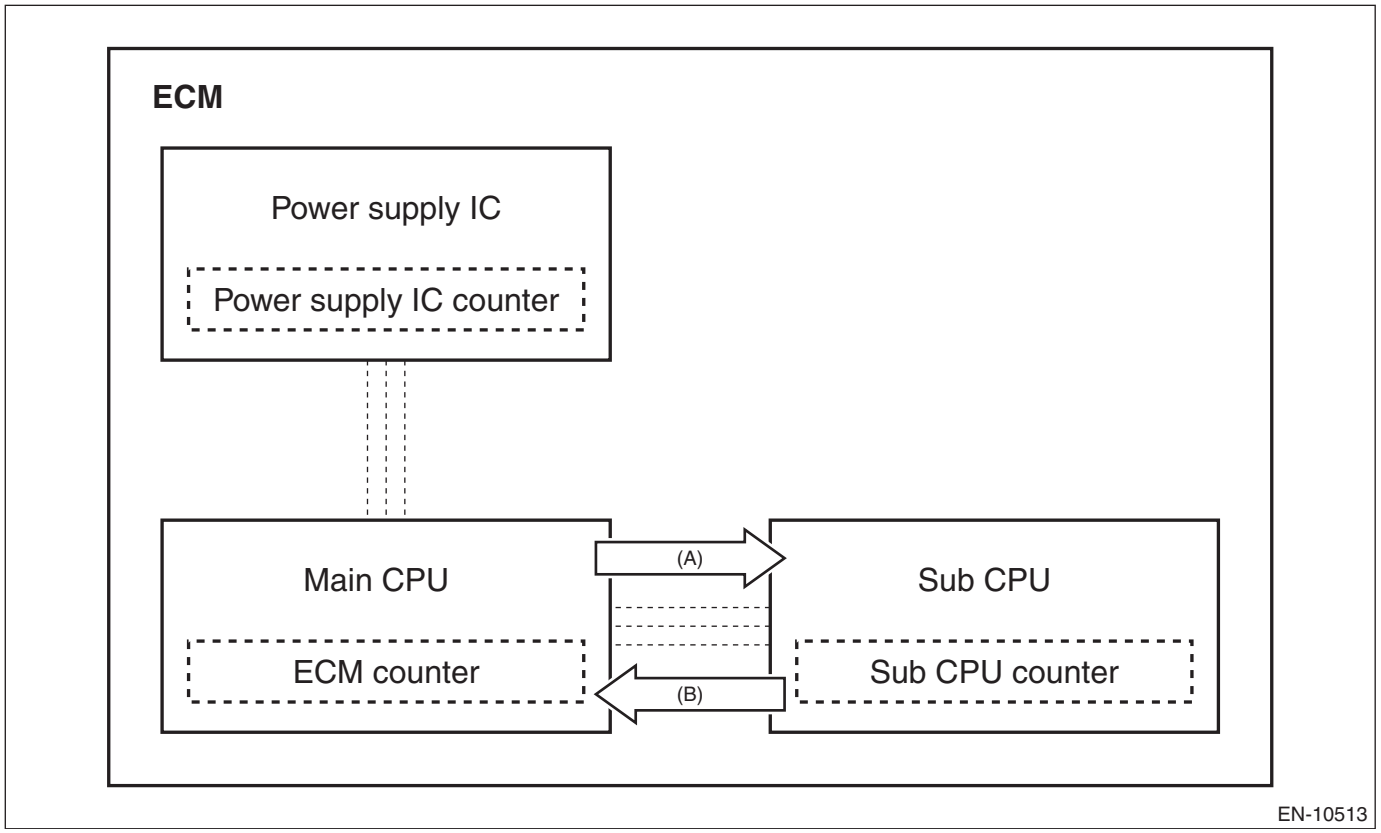
Malfunction Criteria	Threshold Value
{(Power supply IC timer) – (Wake-up request time)} / Wake-up request time	> 0.24

Time needed for diagnosis: Less than 1 second
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

<Monitor3>

Diagnose the communication error between main CPU and sub CPU.

Judge as NG when the wake-up time required from main CPU and the wake-up time received from sub CPU are different.



(A) Main CPU demands wake-up time to sub CPU.
(B) Sub CPU sends back wake-up time required by main CPU.

Judge as NG when the following conditions are established.

Judgment value

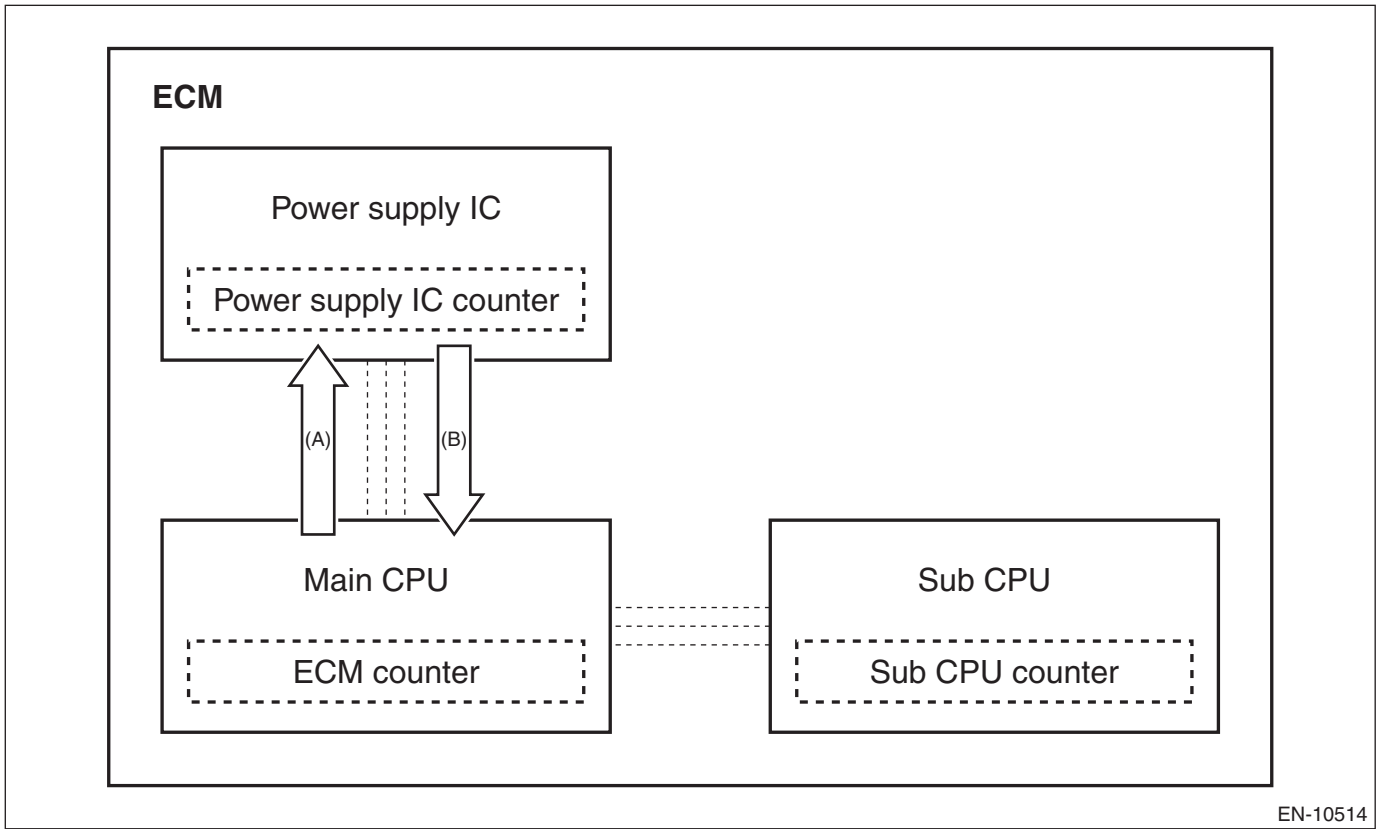
Malfunction Criteria	Threshold Value
Wake-up time required by main CPU	≠ Wake-up time sent back by sub CPU

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

<Monitor4>

Diagnose the communication error between main CPU and power supply IC.

Judge as NG when the signal required by main CPU and the signal received from power supply IC are different.



(A) Main CPU demands signals for measuring the wake-up time to power supply IC.
(B) Main CPU receives signals for measuring the wake-up time from power supply IC.

Judge as NG when the following conditions are established.

Judgment value

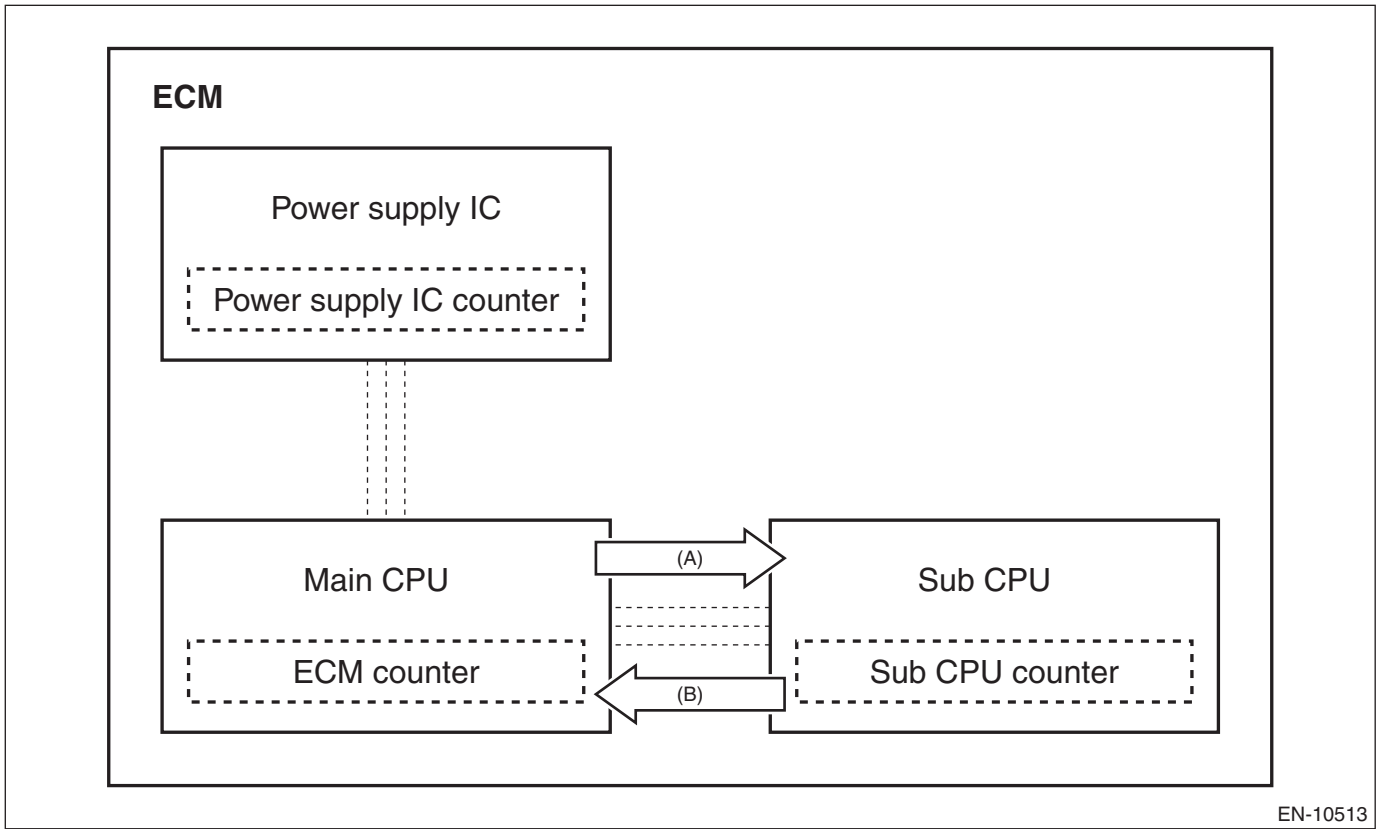
Malfunction Criteria	Threshold Value
Signal required by main CPU	≠ Signal received from power supply IC

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

<Monitor5>

On main CPU and sub CPU, there are two operation status: “normal mode” and “wake-up mode”.
Perform diagnosis for CPU operation status abnormality by detecting the difference in operating status of main CPU and sub CPU.

Judge as NG when main CPU and sub CPU is different in operating status.



(A) Main CPU demands diagnosis for operating status to sub CPU.
(B) Sub CPU sends back the operating status to main CPU.

Judge as NG when the following conditions are established.

Judgment value

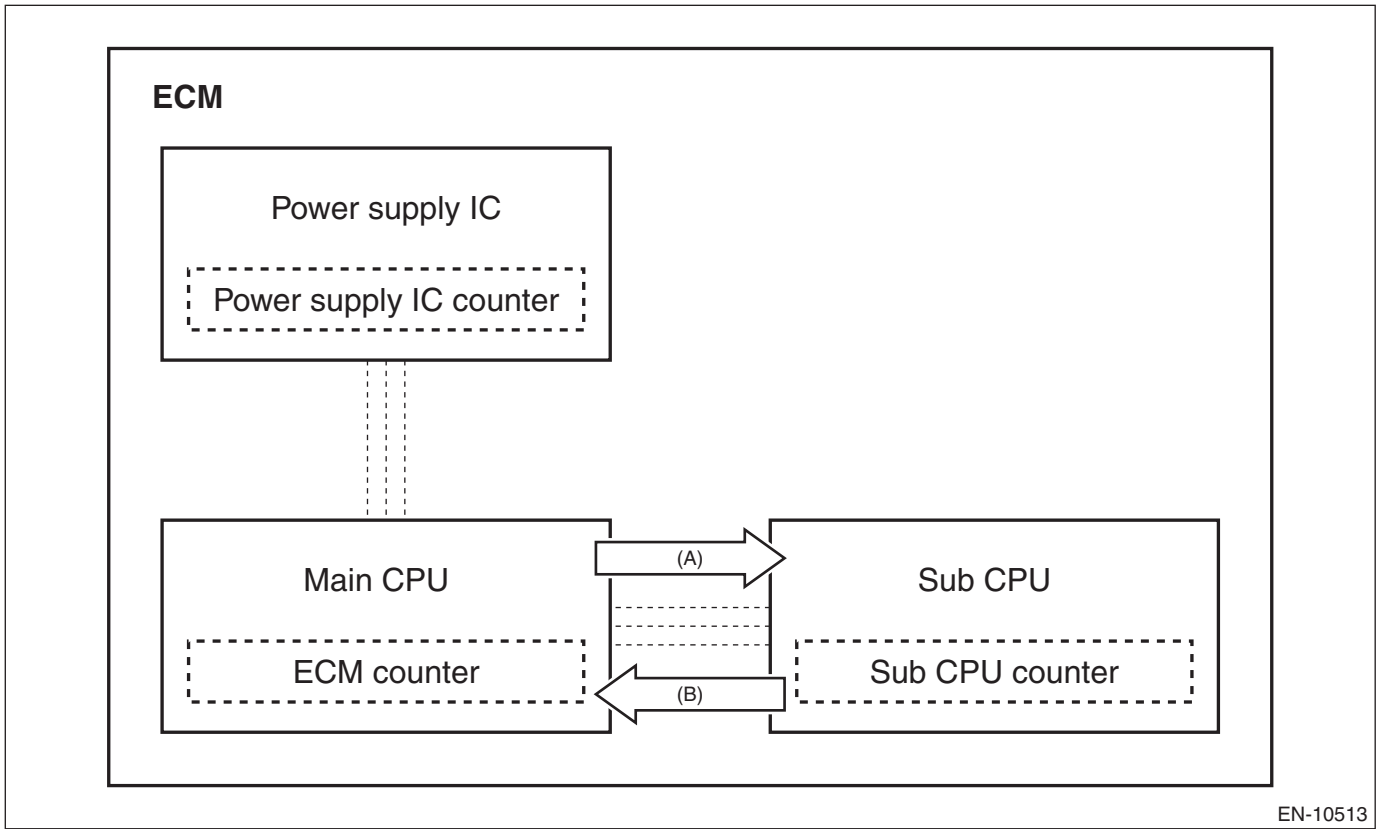
Malfunction Criteria	Threshold Value
Operating status of main CPU	≠ Operating status of sub CPU

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

<Monitor6>

Perform diagnosis for ignition switch status abnormality by detecting the difference in ignition switch status (ON or OFF) of main CPU and sub CPU.

Judge as NG when main CPU and sub CPU are different in ignition switch status.



(A) Main CPU demands ignition switch status to sub CPU.
(B) Sub CPU sends back ignition switch status to main CPU.

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Ignition switch status of main CPU	≠ Ignition switch status of sub CPU

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates when malfunction occurs in 2 continuous driving cycles.

GQ:DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
CAN bus condition	Bus off

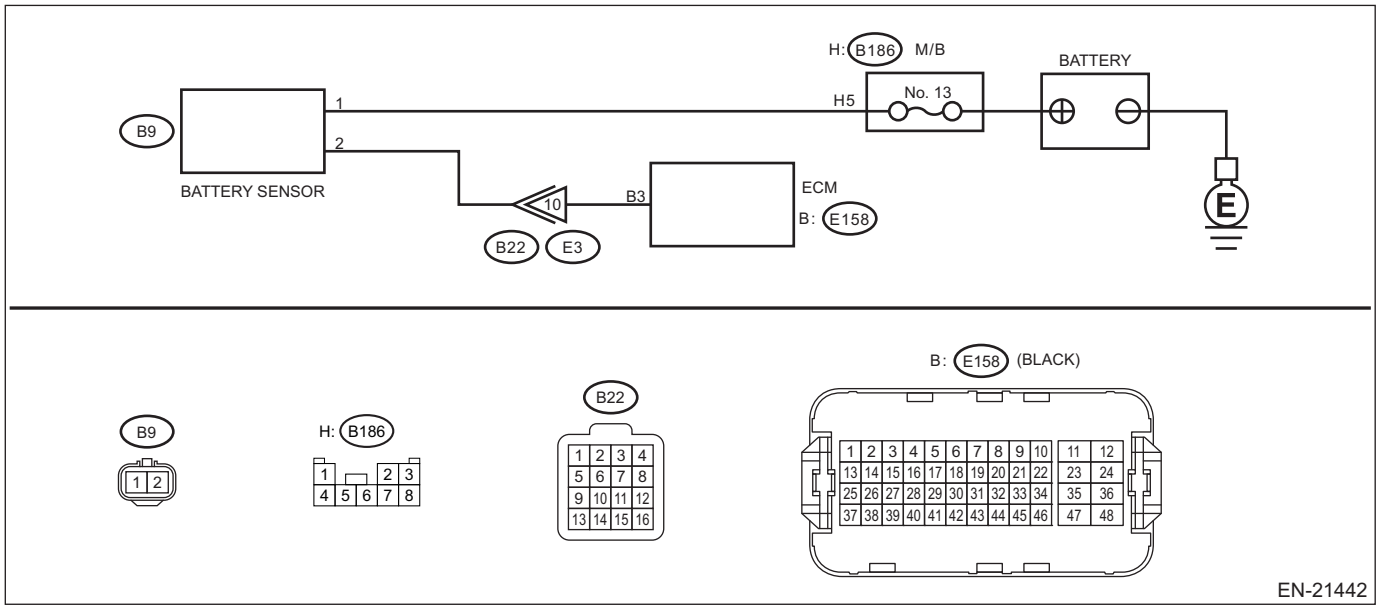
Time needed for diagnosis: 436 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GR:DTC U0077 LIN COMMUNICATION BUS "ECM/PCM" OFF

DTC detecting condition:
Immediately at fault recognition

CAUTION:
• After servicing or replacing faulty parts, perform Clear Memory Mode <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>, and Inspection Mode <Ref. to EN(w/o STI)(diag)-71, PROCEDURE, Inspection Mode.>.
• Use the check board when measuring the ECM terminal voltage and resistance.

Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read DTC using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is DTC U0077 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.
2	**CHECK ECM CONNECTOR.** Check the connecting condition of ECM connector.	Is the ECM connector correctly connected?	Go to step **3**.	Connect the ECM connector correctly.
3	**CHECK HARNESS BETWEEN BATTERY AND BATTERY SENSOR CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.> 3) Disconnect the connector from battery sensor. 4) Disconnect the positive terminal of battery. 5) Measure the resistance of the harness between battery positive cable terminal and battery sensor connector. ***Connector & terminal*** ***Positive cable terminal — (B9) No. 1:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between battery positive cable terminal and battery sensor connector.

Step		Check	Yes	No
4	**CHECK HARNESS BETWEEN ECM AND BATTERY SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and battery sensor connector. ***Connector & terminal*** ***(E158) No. 3 — (B9) No. 2:***	Is the resistance less than 1 Ω?	Repair the poor contact of ECM connector or battery sensor connector.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between ECM connector and battery sensor connector • Poor contact of coupling connector

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG when the data sent/received via LIN communication is abnormal.

2. COMPONENT DESCRIPTION

LIN communication is used to send/receive data between ECM and battery sensor.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Data sent/received with control modules connected to LIN	No change or Checksum error

Time needed for diagnosis: 1.5 seconds
Malfunction indicator light illumination: Does not illuminate.

GS:DTC U0101 LOST COMMUNICATION WITH TCM

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when CAN communication failure between TCM, VDC CM and combination meter has occurred.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
ID received from control module connected to CAN	None

Time needed for diagnosis: 500 ms
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GT:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0101. <Ref. to EN(w/o STI)(diag)-800, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GU:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0101. <Ref. to EN(w/o STI)(diag)-800, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GV:DTC U0402 INVALID DATA RECEIVED FROM TCM

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of CAN communication.
Judge as NG when data received from TCM, VDC CM and combination meter is not normal.

2. COMPONENT DESCRIPTION

(Common Specifications)
CAN Protocol 2.0 B (Active)
Frame Format: 11 Bit ID Frame (Standard Frame)
Conforms to ISO11898
Communication Speed: 500 kbps

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

5. DIAGNOSTIC METHOD

Judge as NG when the following conditions are established.

Judgment value

Malfunction Criteria	Threshold Value
Data updated from control module connected to CAN	None

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Illuminates as soon as a malfunction occurs.

GW:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0402. <Ref. to EN(w/o STI)(diag)-801, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GX:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

NOTE:
For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

1. OUTLINE OF DIAGNOSIS

NOTE:
For the detection standard, refer to DTC U0402. <Ref. to EN(w/o STI)(diag)-801, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

GY:DTC U1712 LOST LIN COMMUNICATION WITH BATTERY "1" MONITOR MODULE

NOTE:
For the diagnostic procedure, refer to DTC U0077. <Ref. to EN(w/o STI)(diag)-799, DTC U0077 LIN COMMUNICATION BUS "ECM/PCM" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

1. OUTLINE OF DIAGNOSIS

Detect malfunction of LIN communication.
Judge as NG when LIN communication failure has occurred with the battery sensor.

2. COMPONENT DESCRIPTION

The battery sensor monitors the data of battery voltage, current, temperature, etc. ECM receives these data via LIN communication with the battery sensor.

3. EXECUTION CONDITION

Secondary parameters	Execution condition
Battery voltage	≥ 10.9 V

4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously after the enable conditions have been established.

5. DIAGNOSTIC METHOD

If the duration of time while the following conditions are met is longer than the time indicated, judge as NG.

Judgment value

Malfunction Criteria	Threshold Value
Data received from control modules connected to LIN	No change or Checksum error

Time needed for diagnosis: 2 seconds
Malfunction indicator light illumination: Does not illuminate.

18.General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:
Malfunction of parts other than those listed is also possible. <Ref. to ME(w/o STI)-323, Symptoms and causes.>

Symptoms	Faulty parts
1. Engine stalls during idling.	1) Electronic throttle control 2) Manifold absolute pressure sensor 3) Mass air flow and intake air temperature sensor 4) Ignition parts (*1) 5) Engine coolant temperature sensor (*2) 6) Crankshaft position sensor (*3) 7) Camshaft position sensor (*3) 8) Fuel injection parts (*4)
2. Rough idling	1) Electronic throttle control 2) Manifold absolute pressure sensor 3) Mass air flow and intake air temperature sensor 4) Engine coolant temperature sensor (*2) 5) Ignition parts (*1) 6) Air intake system (*5) 7) Fuel injection parts (*4) 8) Crankshaft position sensor (*3) 9) Camshaft position sensor (*3) 10) Oxygen sensor 11) Fuel pump and fuel pump relay 12) EGR control valve
3. Engine does not return to idle.	1) Electronic throttle control 2) Engine coolant temperature sensor 3) Manifold absolute pressure sensor 4) Mass air flow and intake air temperature sensor 5) Accelerator pedal position sensor 6) EGR control valve 7) Engine oil temperature sensor
4. Poor acceleration	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Electronic throttle control 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) Accelerator pedal position sensor 10) Engine torque control signal circuit 11) Ignition parts (*1) 12) EGR control valve 13) Engine oil temperature sensor
5. Engine stalls, hesitates, or sputters at acceleration.	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Purge control solenoid valve 7) Fuel injection parts (*4) 8) Fuel pump and fuel pump relay 9) Electronic throttle control 10) EGR control valve

Symptoms	Faulty parts
6. Surging	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Fuel injection parts (*4) 7) Electronic throttle control 8) Fuel pump and fuel pump relay 9) EGR control valve
7. Spark knock	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor 4) Knock sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay 7) EGR control valve
8. After burning in exhaust system	1) Manifold absolute pressure sensor 2) Mass air flow and intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay

*1: Check ignition coil and spark plug.
*2: Indicate the symptom occurring only in cold temperatures.
*3: Ensure secure installation.
*4: Check fuel injector, fuel pressure regulator and fuel filter.
*5: Inspect for air leak in air intake system.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

11.	General Diagnostic Table	135

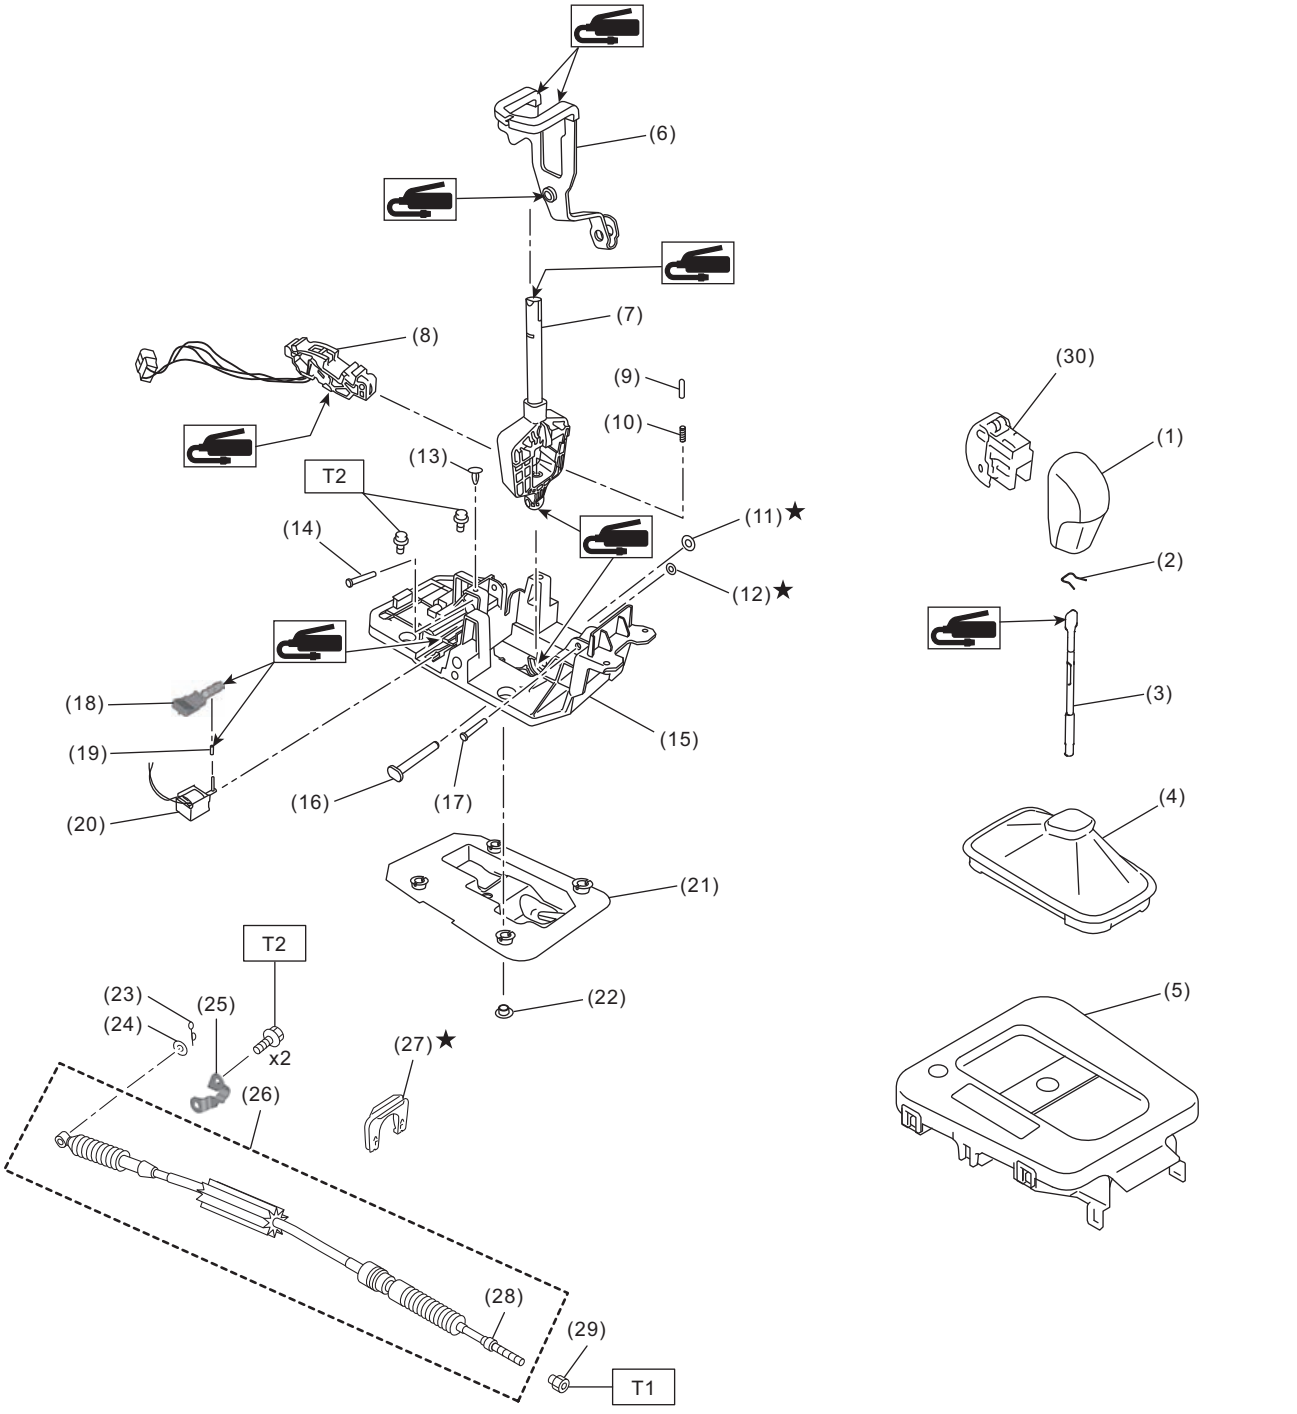
1. General Description

A: SPECIFICATION

Item	Specifications
Swing torque of rod against lever N (kgf, lbf)	3.7 (0.38, 0.83) or less

B: COMPONENT

1. AT SELECT LEVER

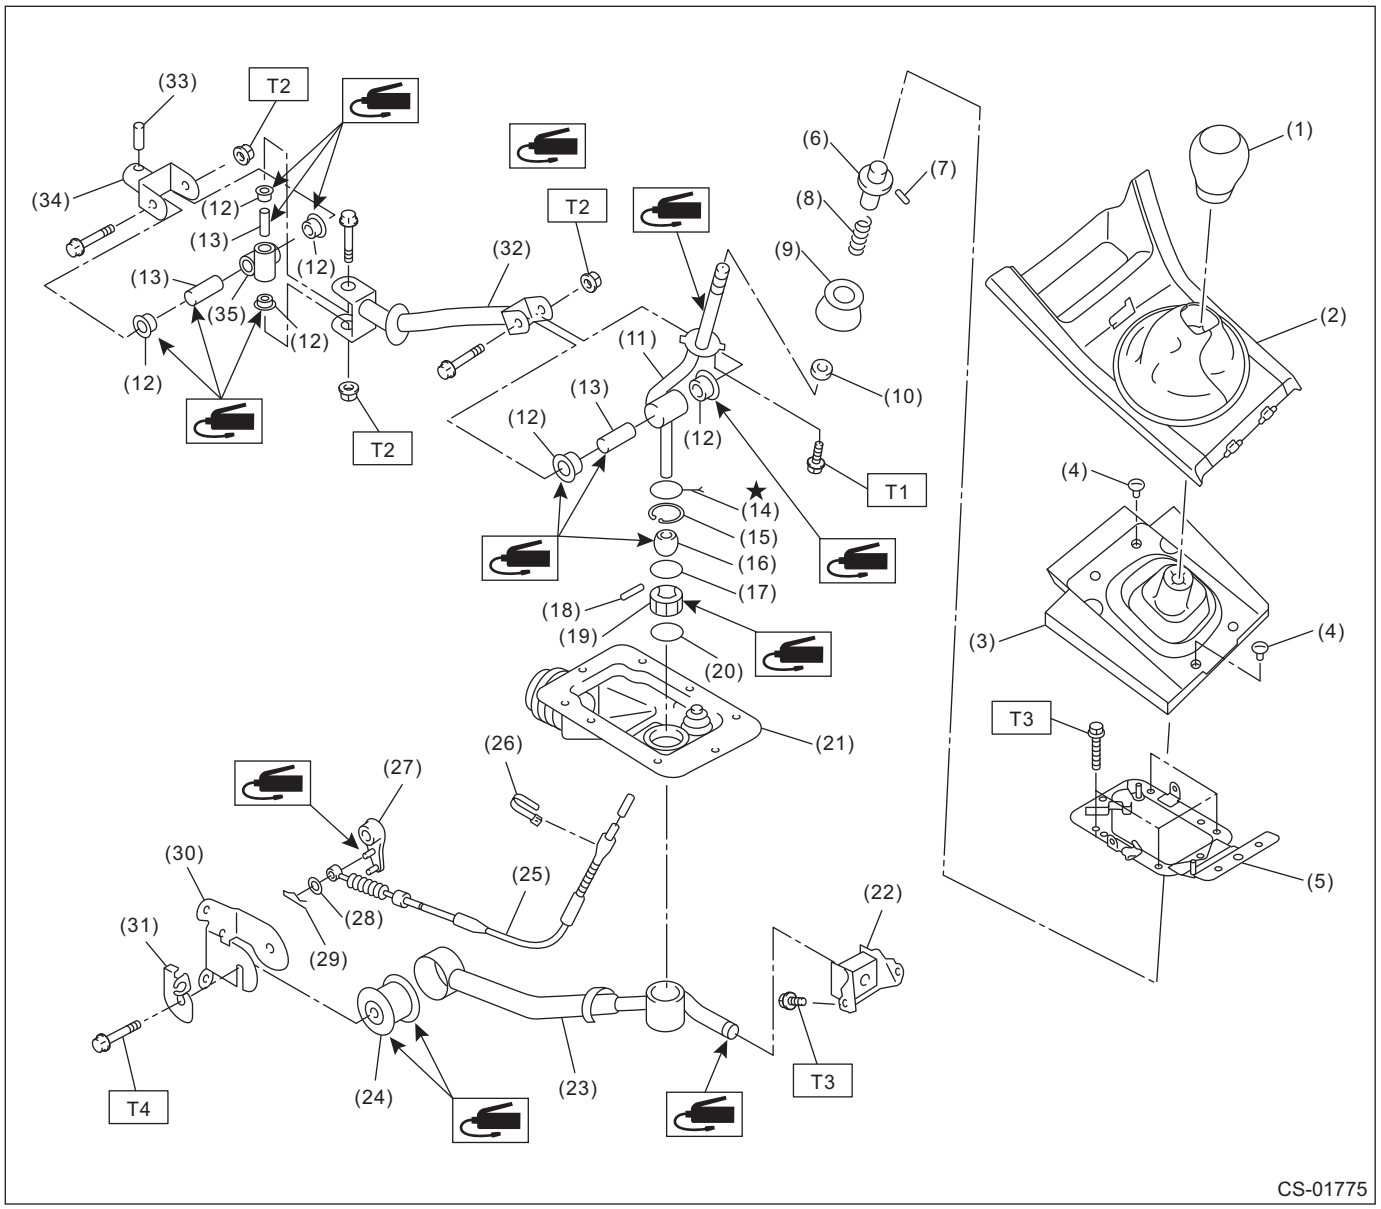


CS-10431

(1) Grip sub ASSY
(2) Clamp grip pin
(3) Rod COMPL
(4) Boot ASSY
(5) Indicator ASSY
(6) Arm COMPL
(7) Selector lever COMPL
(8) Plate guide
(9) Rod detent
(10) Detent spring
(11) Clamp push nut
(12) Clamp push nut
(13) Clamp pin
(14) Spacer pin guide
(15) Plate COMPL
(16) Shaft control
(17) Spacer pin guide
(18) Rod shift lock
(19) Cushion solenoid
(20) Solenoid unit
(21) Gasket
(22) Spacer plate
(23) Snap pin
(24) Washer
(25) Cable bracket
(26) Select cable
(27) Clamp
(28) Adjusting nut (front)
(29) Adjusting nut (rear)
(30) Button ASSY-AT

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 18 (1.8, 13.3)

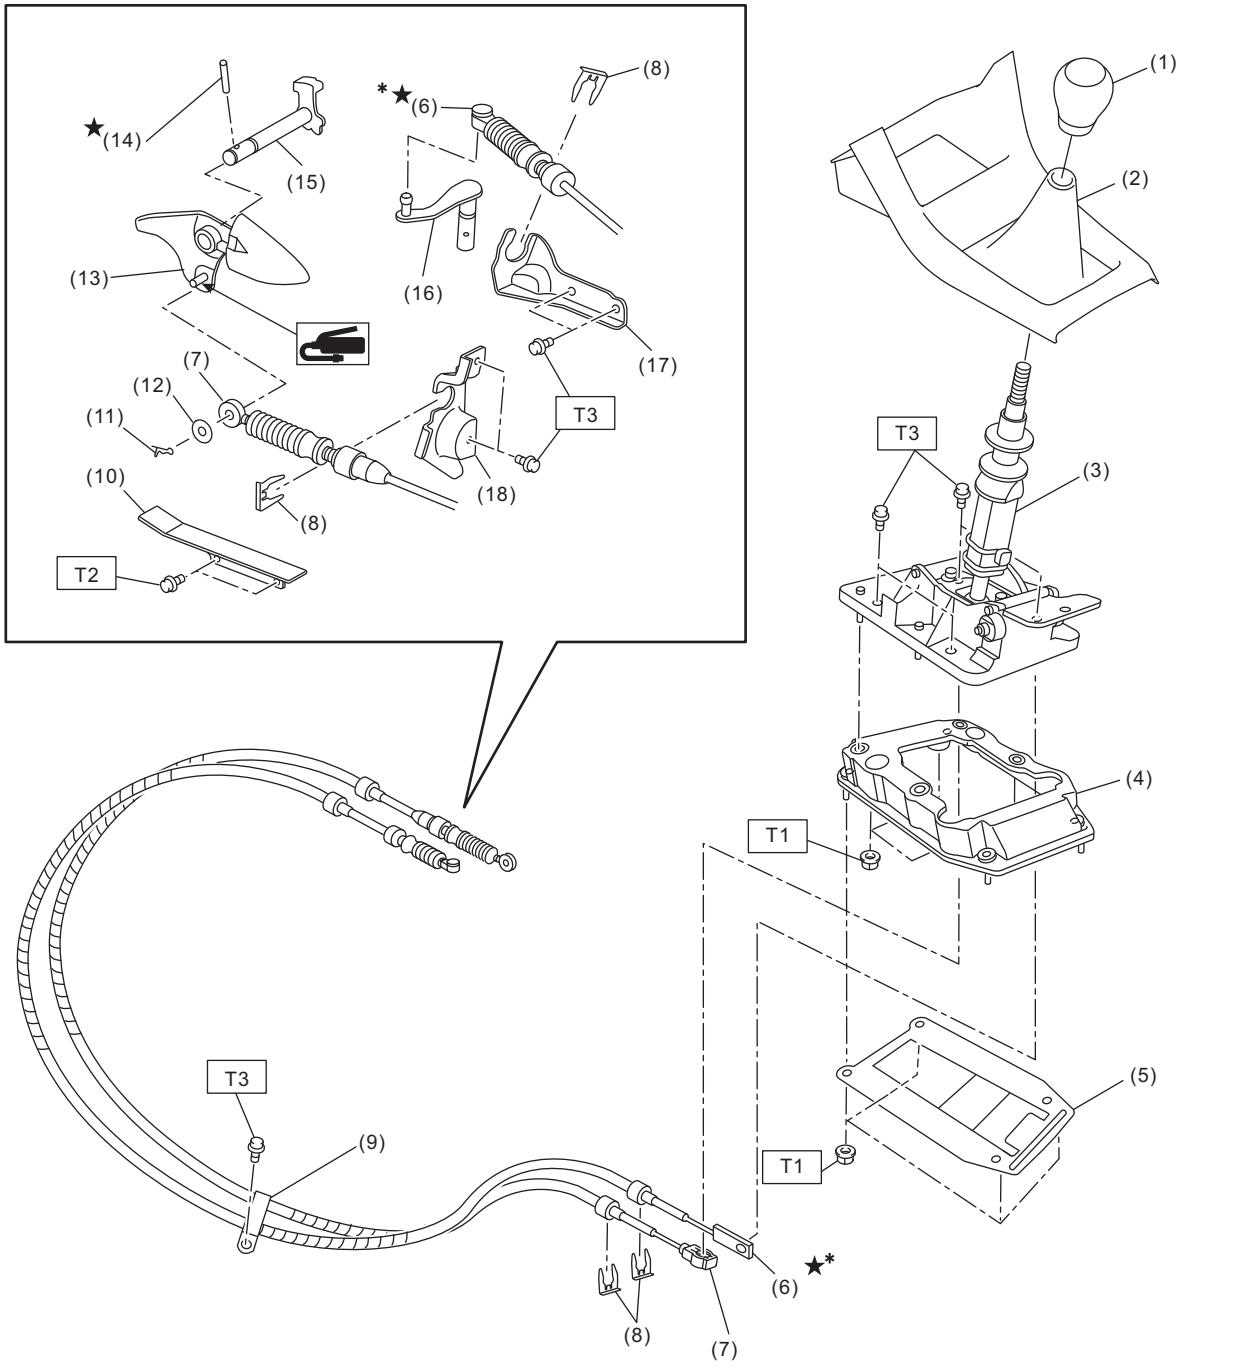
2. 6MT GEAR SHIFT LEVER (STI MODEL)



(1) Gear shift knob
(2) Cover - shift lever
(3) Boot and insulator ASSY
(4) Clamp
(5) Plate COMPL
(6) Slider
(7) Spring pin
(8) Spring
(9) Holder
(10) Seat cushion
(11) Lever
(12) Bushing
(13) Spacer
(14) Lock wire
(15) Snap ring
(16) Bushing
(17) O-ring
(18) Spring pin
(19) Bushing
(20) O-ring
(21) Boot
(22) Cushion rubber
(23) Stay
(24) Bushing
(25) Reverse check cable
(26) Band clip
(27) Reverse check lever
(28) Washer
(29) Snap pin
(30) Bracket
(31) Cable plate
(32) Rod
(33) Spring pin
(34) Joint
(35) Boss

Tightening torque: N·m (kgf-m, ft-lb)
T1: 1.3 (0.1, 1.0)
T2: 12 (1.2, 8.9)
T3: 18 (1.8, 13.3)
T4: 32 (3.3, 23.6)

3. 6MT GEAR SHIFT LEVER (EXCEPT FOR STI MODEL)



CS-10039

(1) Shift knob
(2) Cover - shift lever
(3) Gear shift lever ASSY
(4) Cable cover ASSY
(5) Cable cover plate
(6) MT gear select cable
(7) MT gear shift cable
(8) Clamp
(9) Cable clamp
(10) Dust cover
(11) Snap pin
(12) Washer
(13) Shift lever COMPL
(14) Spring pin
(15) Shifter arm No. 2
(16) Selector lever COMPL
(17) Select bracket
(18) Shift bracket

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 15 (1.5, 11.1)
T3: 18 (1.8, 13.3)

*: Always use new MT gear select cable if the cable is removed from select lever COMPL of transmission side.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

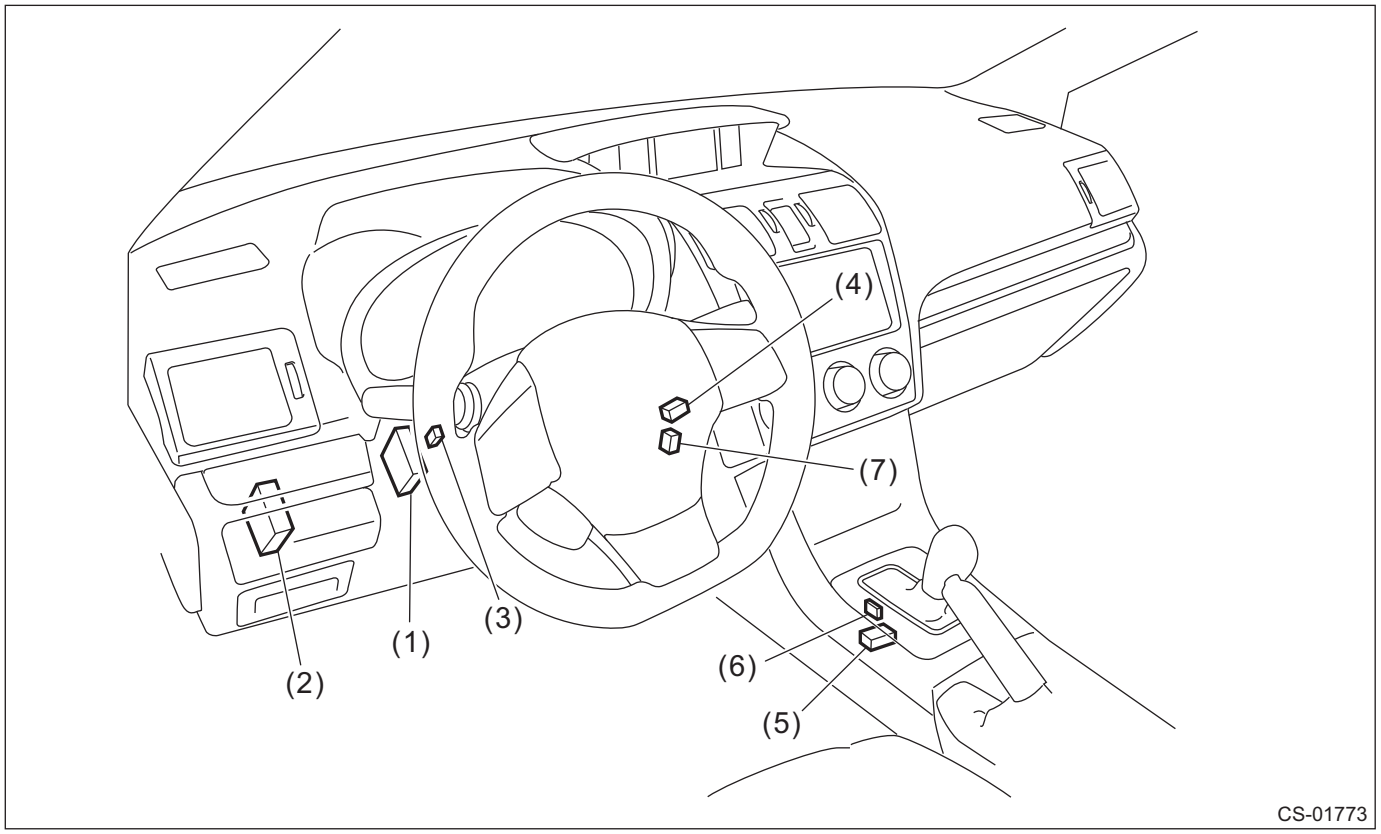
D: CAUTION

- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease, etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply a proper amount of grease to avoid damage and deformation.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Before disconnecting electrical connectors, be sure to disconnect the negative terminal from battery.

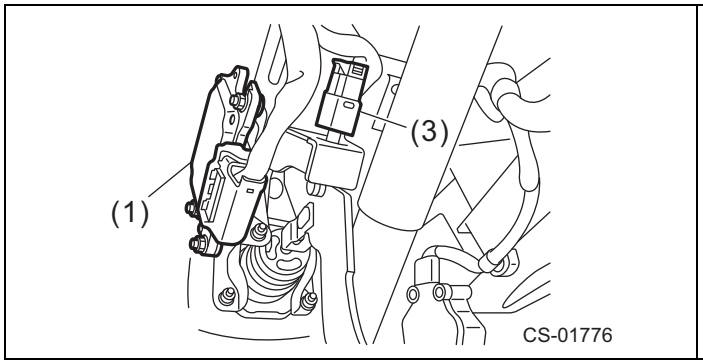
2. AT Shift Lock Control System

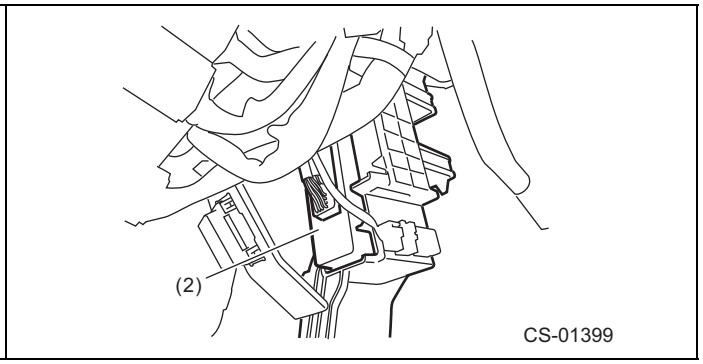
A: LOCATION

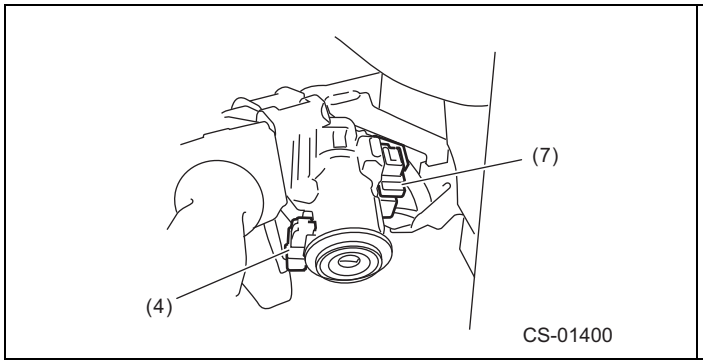
1. MODEL WITHOUT PUSH BUTTON IGNITION SWITCH

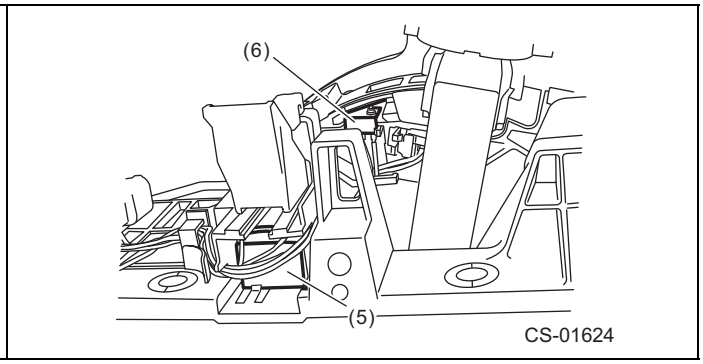


(1) TCM (“P” range)
(2) Body integrated unit
(3) Stop light and brake switch
(4) Key cylinder (with built-in key warning switch)
(5) Solenoid unit
(6) “P” range switch
(7) Key lock solenoid

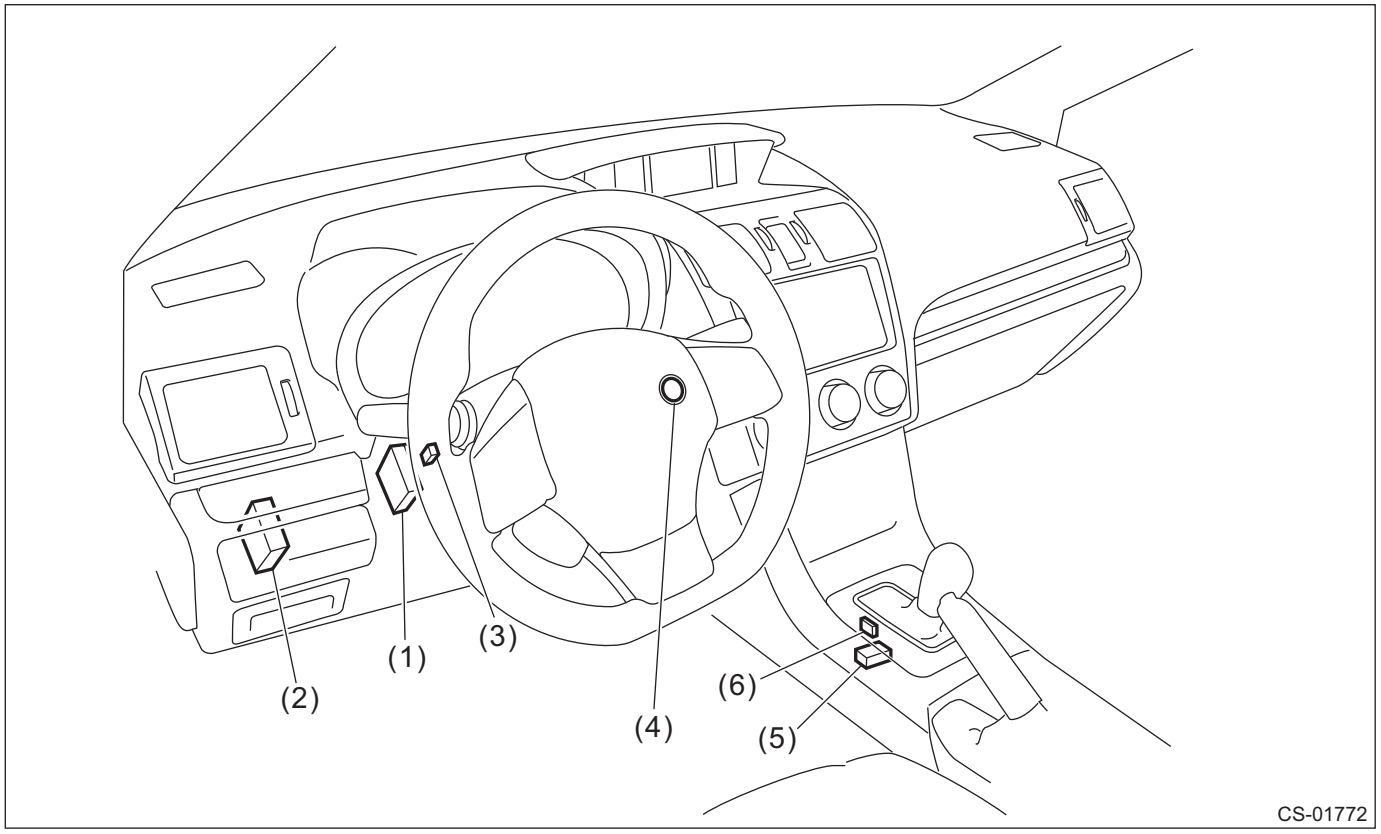




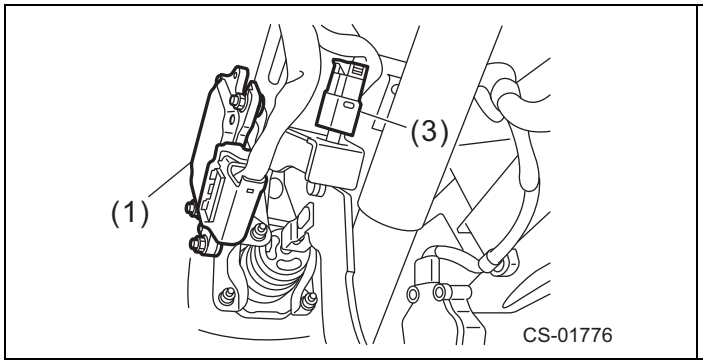


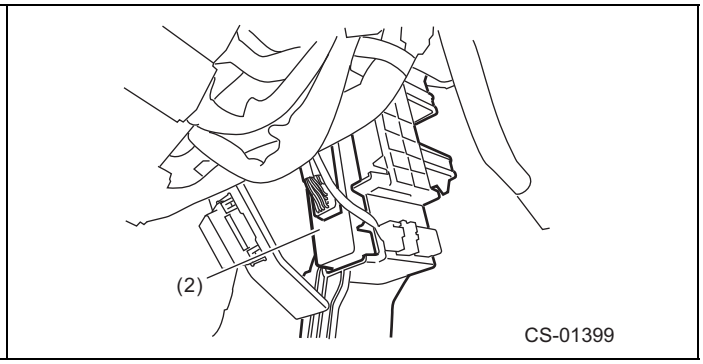


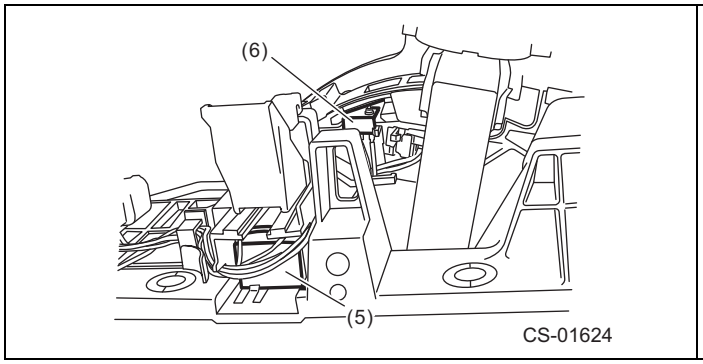
2. MODEL WITH PUSH BUTTON IGNITION SWITCH

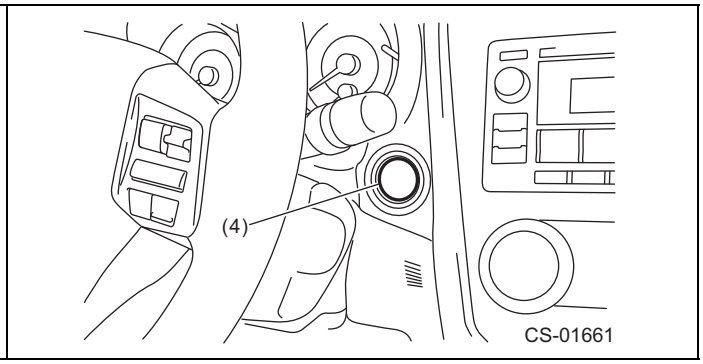


(1) TCM (“P” range)
(2) Body integrated unit
(3) Stop light and brake switch
(4) Push button ignition switch
(5) Solenoid unit
(6) “P” range switch

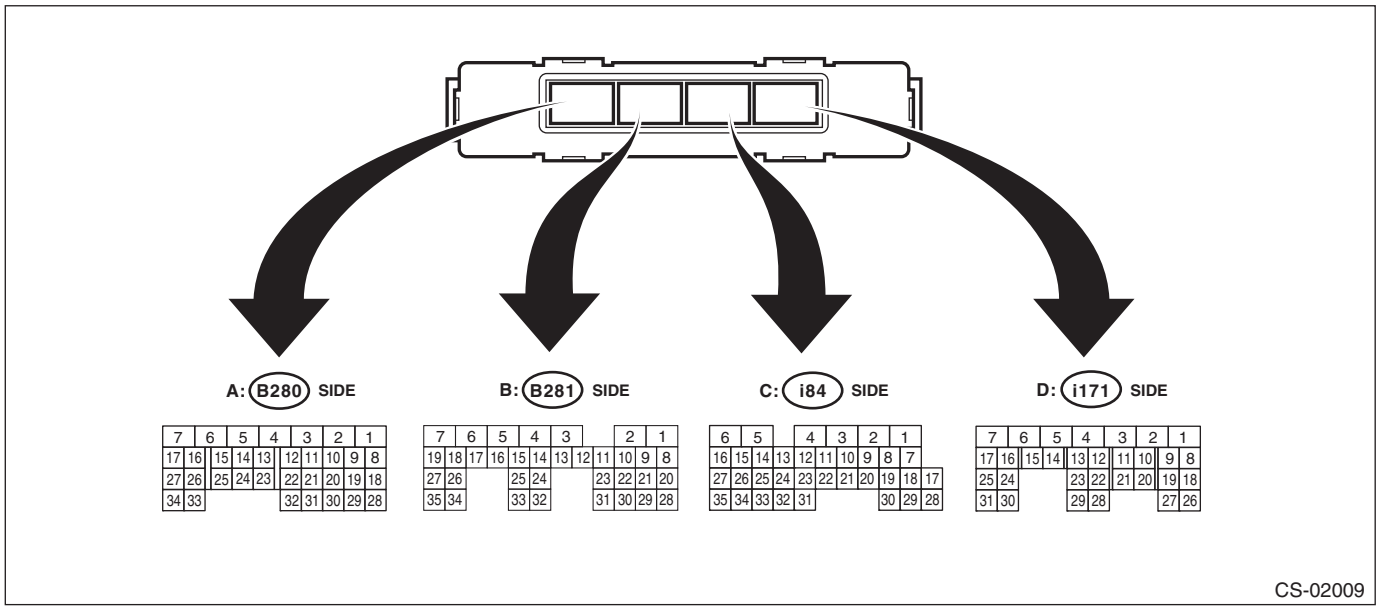








B: ELECTRICAL SPECIFICATION

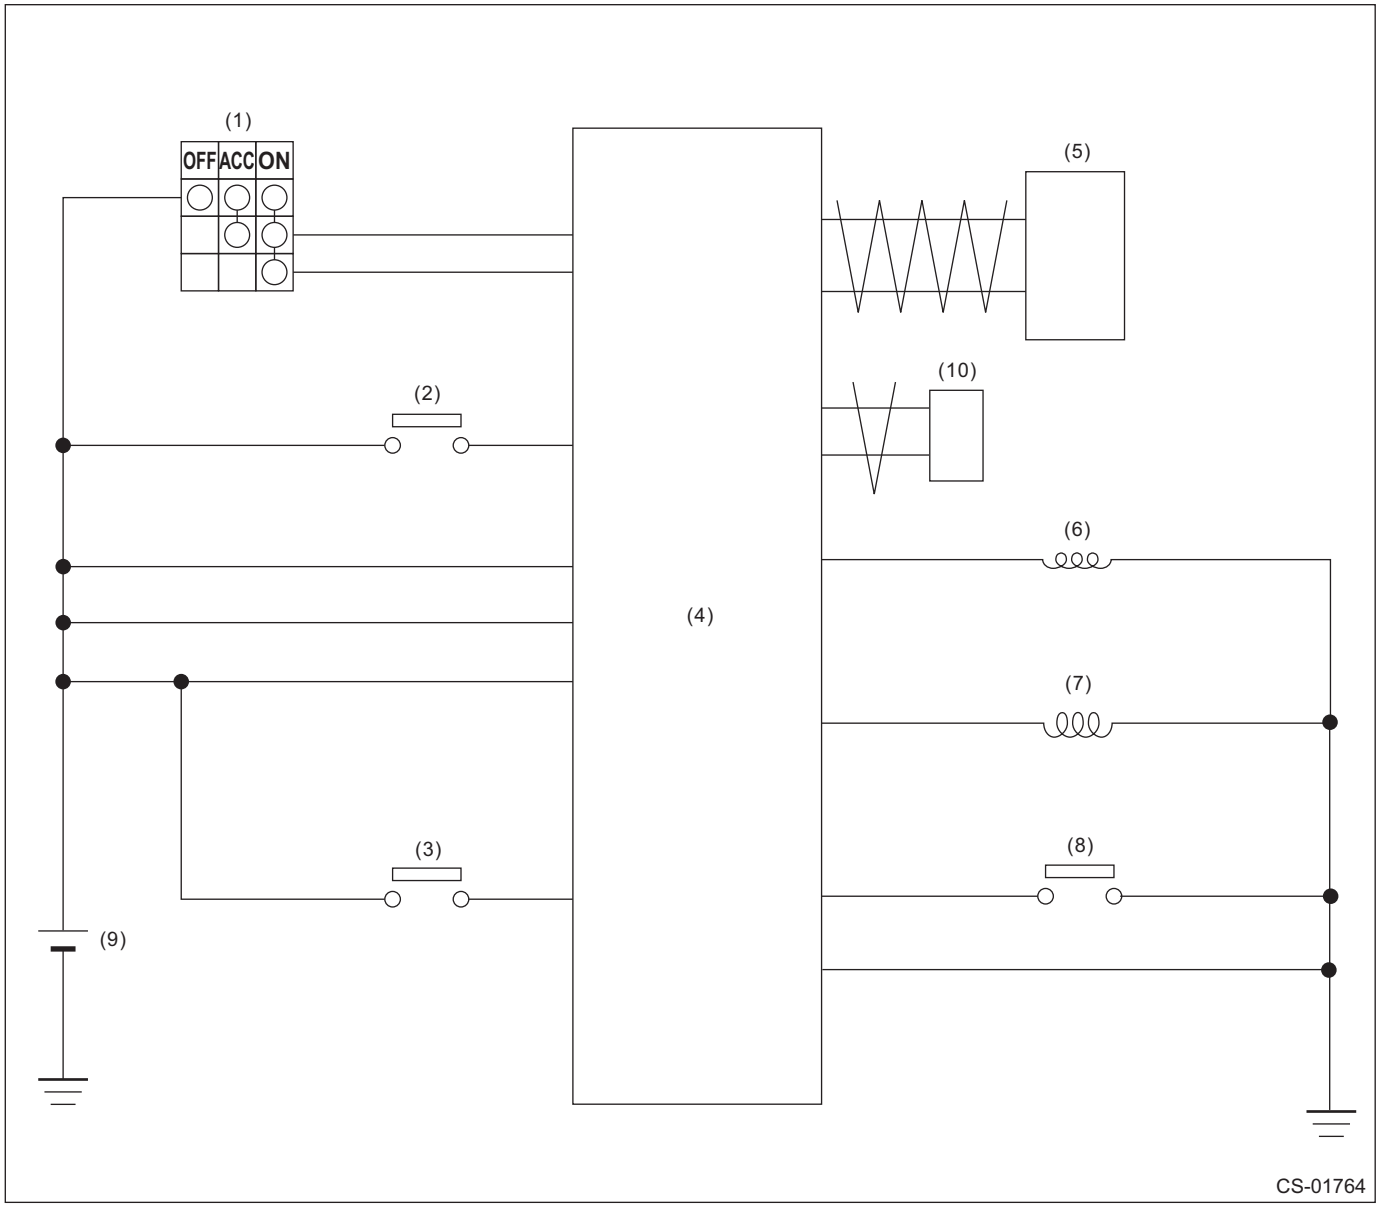


Item	Connector No.	Terminal No.	Input/Output signal
			Measured value and measuring conditions
Battery power supply	B281	6	9 — 16 V
		7	
	i84	6	
Ignition power supply	B280	32	10 — 15 V when ignition switch is at ACC
	B281	3	10 — 15 V when ignition switch is at ON or START
TCM (“P” range)	i84	27	Can not be measured because of digital communication
		35	
Stop light and brake switch	B280	10	9 — 16 V when the stop light & brake switch is ON 0 V when the stop light & brake switch is OFF
“P” range switch	B281	18	0 V when select lever is in “P” range 9 — 16 V when select lever is in other positions than “P” range
Solenoid unit signal	B281	5	9 — 16 V when shift lock is released 0 V when shift lock is operating
Key warning switch signal (Model without push button ignition switch)	B280	4	9 — 16 V when key is inserted 0 V when key is removed
Key lock solenoid signal (Model without push button ignition switch)	B281	4	7.5 — 16 V when the key is inserted with the select lever shifted in positions other than “P” range 0 V at other conditions than above

Item	Connector No.	Terminal No.	Input/Output signal
			Measured value and measuring conditions
Ground	B280	1	—
	i84	1	

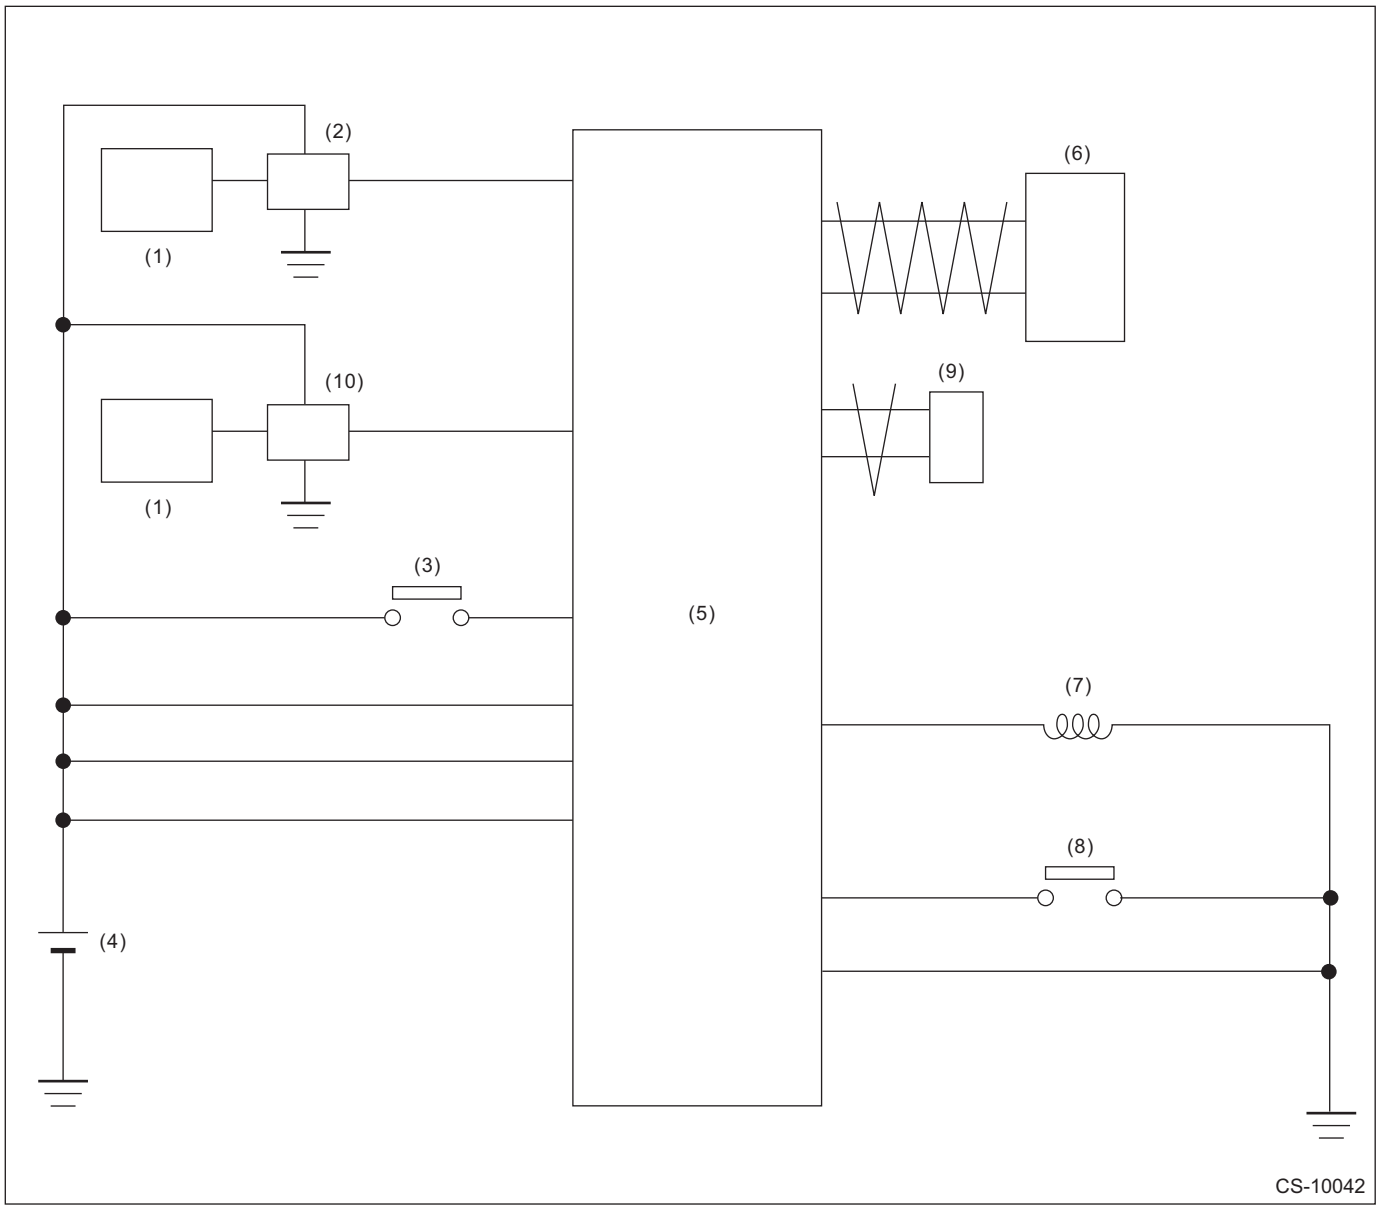
C: WIRING DIAGRAM

1. MODEL WITHOUT PUSH BUTTON IGNITION SWITCH



(1) Ignition switch
(2) Stop light and brake switch
(3) Key warning switch
(4) Body integrated unit
(5) TCM (shift range information)
(6) Key lock solenoid
(7) Shift lock solenoid
(8) “P” range switch
(9) Battery
(10) VDC CM (vehicle speed information)

2. MODEL WITH PUSH BUTTON IGNITION SWITCH



(1) Keyless access CM
(2) IG relay 1 (push button start)
(3) Stop light and brake switch
(4) Battery
(5) Body integrated unit
(6) TCM (shift range information)
(7) Shift lock solenoid
(8) “P” range switch
(9) VDC CM (vehicle speed information)
(10) Accessory relay (push button start)

D: INSPECTION

1. SHIFT LOCK OPERATION

- Model without push button ignition switch

	Step	Check	Yes	No
1	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.	Is the system name displayed?	Go to step **2**.	Perform the inspection following the diagnostic procedure in BODY CONTROL SYSTEM (DIAGNOSTICS) section. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK SHIFT LOCK.** 1) Turn the ignition switch to ON. 2) Shift the select lever to “P” range.	While brake pedal is not depressed, is it possible to move the select lever from the “P” range to other ranges?	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step **3**.
3	**CHECK SHIFT LOCK.**	While brake pedal is depressed, is it possible to move the select lever from the “P” range to other ranges?	Go to step **4**.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
4	**CHECK SHIFT LOCK.** Shift the select lever to “N” range.	Is it possible to move the select lever from the “N” range to the “P” range?	Go to step **5**.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

	Step	Check	Yes	No
5	**CHECK SHIFT LOCK.** 1) Shift the select lever to “N” range. 2) Turn the ignition switch to ACC.	While brake pedal is depressed, is it possible to move the select lever from the “N” range to the “P” range?	Go to step **6**.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
6	**CHECK KEY INTERLOCK.** 1) Turn the ignition switch to OFF. 2) Shift the select lever to other than “P” range.	Can the ignition key be removed?	Perform the inspection of “KEY INTERLOCK CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-22, KEY INTERLOCK CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step **7**.
7	**CHECK KEY INTERLOCK.** Shift the select lever to “P” range.	Can the ignition key be removed?	AT shift lock system is normal.	Perform the inspection of “KEY INTERLOCK CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-22, KEY INTERLOCK CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

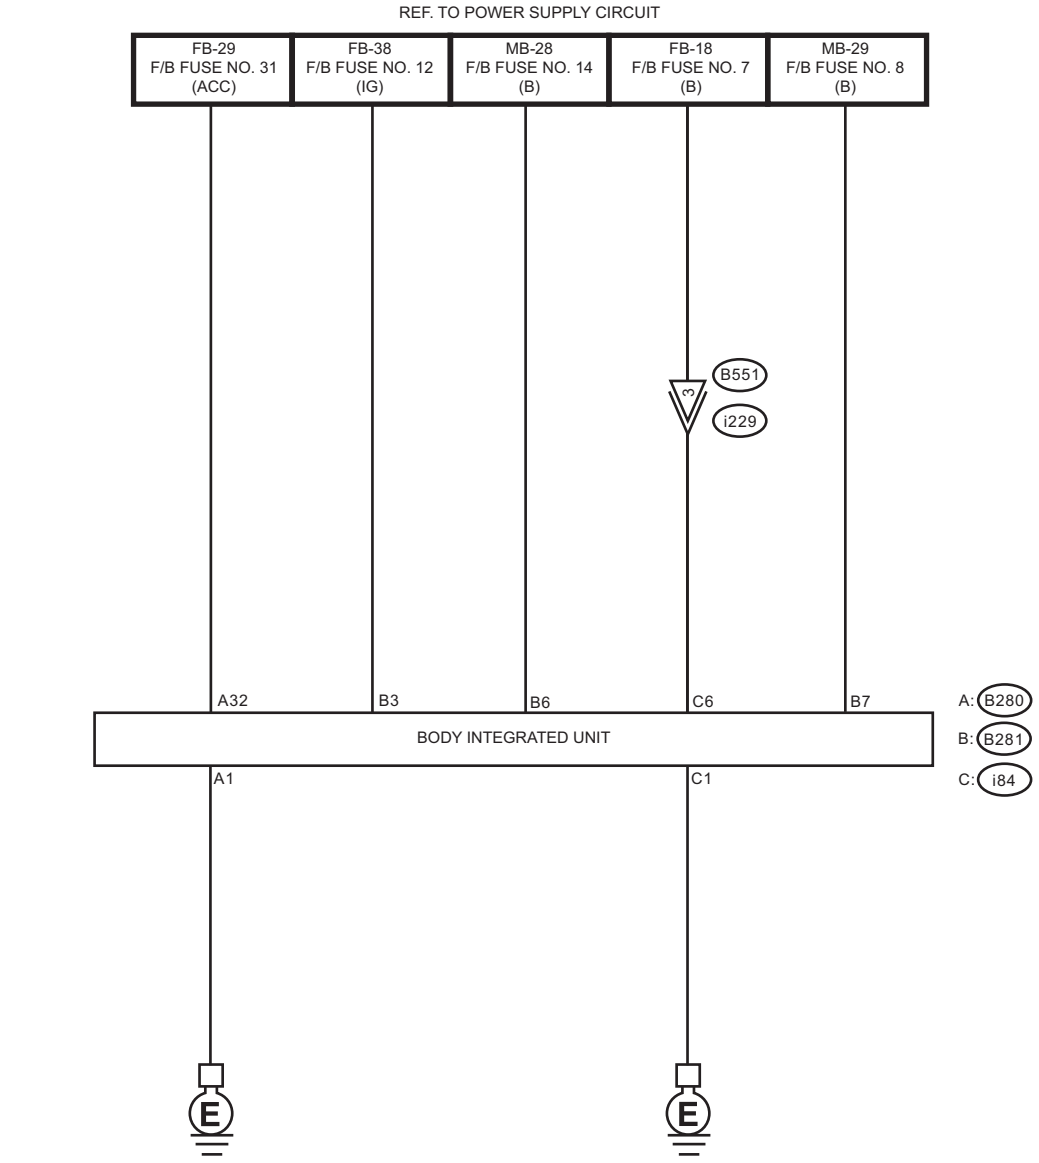
- Model with push button ignition switch

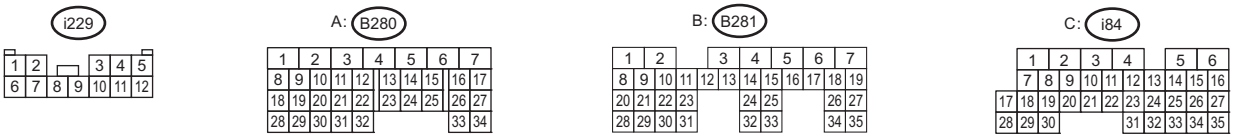
	Step	Check	Yes	No
1	**CHECK COMMUNICATION OF SUBARU SELECT MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to all systems can be executed normally.	Is the system name displayed?	Go to step **2**.	Perform the inspection following the diagnostic procedure in BODY CONTROL SYSTEM (DIAGNOSTICS) section. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
2	**CHECK SHIFT LOCK.** 1) Turn the ignition switch to ON. 2) Shift the select lever to “P” range.	While brake pedal is not depressed, is it possible to move the select lever from the “P” range to other ranges?	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>	Go to step **3**.
3	**CHECK SHIFT LOCK.**	While brake pedal is depressed, is it possible to move the select lever from the “P” range to other ranges?	Go to step **4**.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
4	**CHECK SHIFT LOCK.** Shift the select lever to “N” range.	Is it possible to move the select lever from the “N” range to the “P” range?	Go to step **5**.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>
5	**CHECK SHIFT LOCK.** 1) Shift the select lever to “N” range. 2) Turn the ignition switch to ACC.	While brake pedal is depressed, is it possible to move the select lever from the “N” range to the “P” range?	AT shift lock system is normal.	Perform the inspection of “SELECT LEVER CANNOT BE LOCKED OR RELEASED”. <Ref. to CS-19, SELECT LEVER CANNOT BE LOCKED OR RELEASED, INSPECTION, AT Shift Lock Control System.>

2. BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

NOTE:
For the DC power supply circuit, refer to “WIRING DIAGRAMS”. <Ref. to WI-32, Power Supply Circuit.>



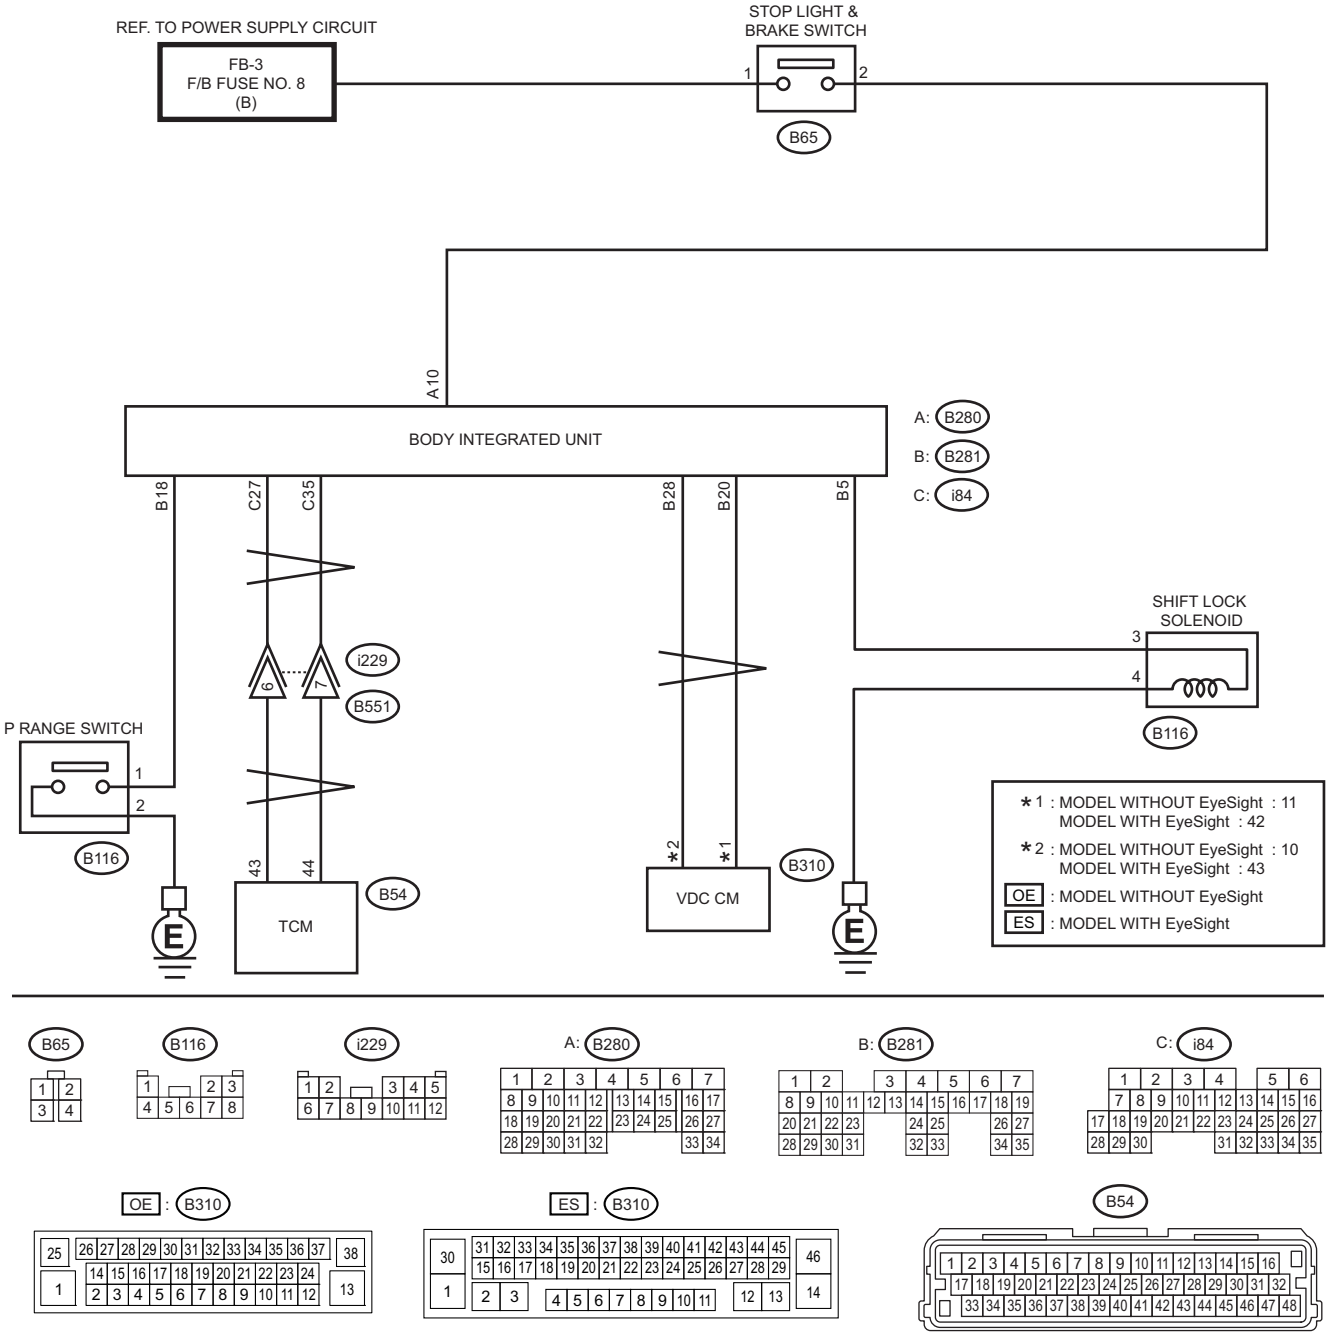


CS-10235

Step		Check	Yes	No
1	**CHECK DTC OF BODY INTEGRATED UNIT.** Check DTC of body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is the DTC of power line displayed on body integrated unit?	Repair or replace it according to the DTC.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND BATTERY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):*** ***(B280) No. 32 (+) — Chassis ground (–):*** ***(B281) No. 6 (+) — Chassis ground (–):*** ***(B281) No. 7 (+) — Chassis ground (–):*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 9 — 16 V?	Go to step **3**.	Check harness for open circuit between the body integrated unit and the battery or a blown fuse.
3	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the harness resistance between the body integrated unit and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between the body integrated unit and chassis ground.
4	**CHECK FOR POOR CONTACT.**	Is there poor contact of connector?	Repair the poor contact.	Check body integrated unit.

3. SELECT LEVER CANNOT BE LOCKED OR RELEASED



CS-10236

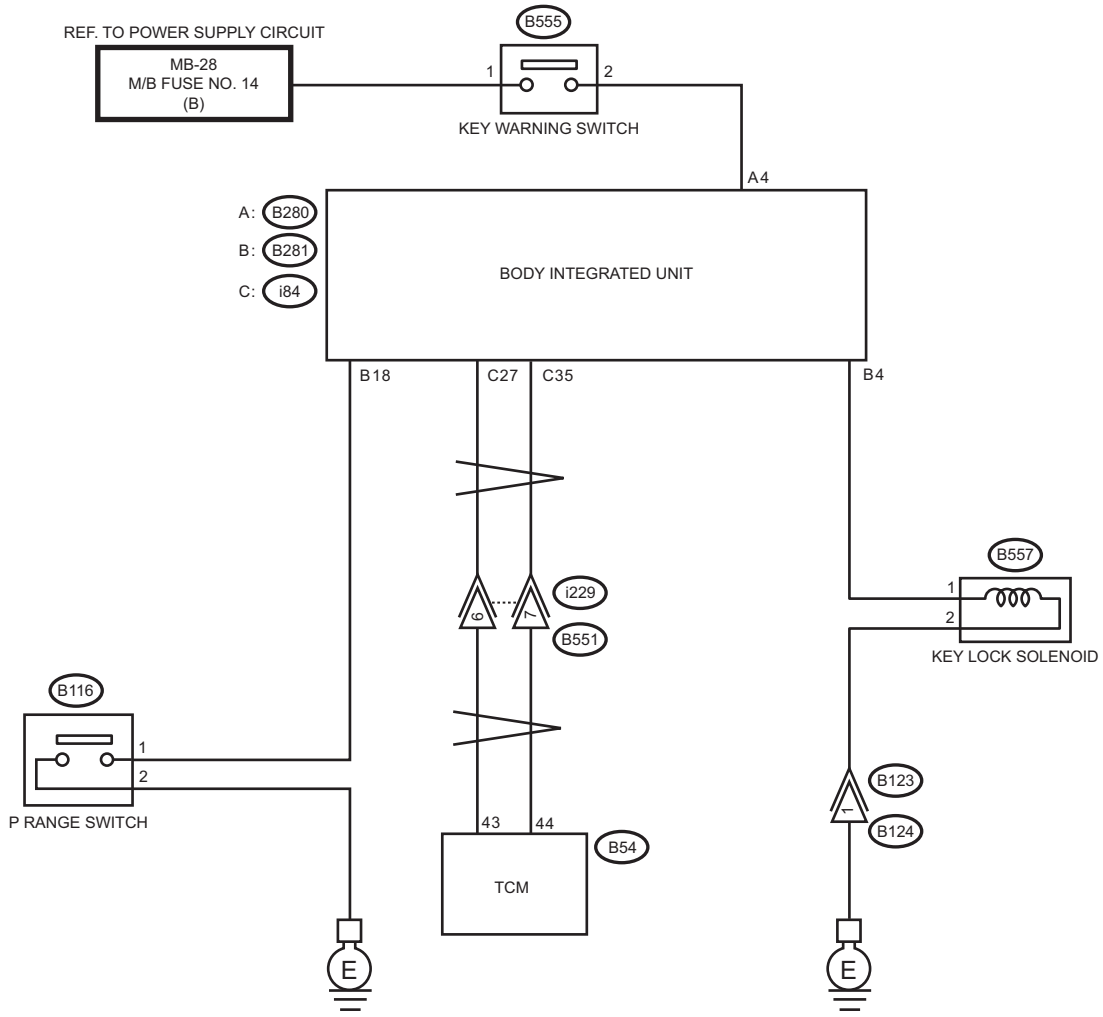
Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.** <Ref. to CS-17, BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, AT Shift Lock Control System.>	Is there any fault?	Follow the procedures to perform inspection and repair.	Go to step **2**.

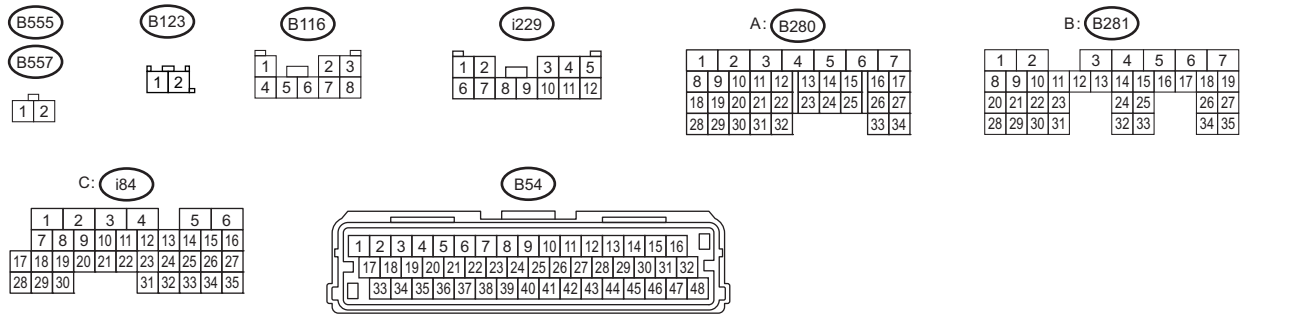
	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Connect the Subaru Select Monitor. 2) Shift the select lever to "P" range. 3) Turn the ignition switch to ON. 4) Select the current data display and display «P SW». <Ref. to BC(diag)-20, Read Current Data.>	Is the display "ON" in the P range and "OFF" in ranges other than P?	Go to step **3**.	Go to step **8**.
3	**CHECK CURRENT DATA.** Select the current data display and display «Stop Light Switch». <Ref. to BC(diag)-20, Read Current Data.>	Is "ON" displayed when the brake pedal is depressed and "OFF" displayed when the brake pedal is released?	Go to step **4**.	Go to step **11**.
4	**CHECK BODY INTEGRATED UNIT DTC.** Check the DTC of the body integrated unit when the brake pedal is pressed and when it is released. (Hold each condition for 5 seconds or more.)	Is there a DTC of a current malfunction?	Follow the DTC to perform inspection and repair.	Go to step **5**.
5	**CHECK CURRENT DATA.** Select the current data display and display «Shift lock solenoid output». <Ref. to BC(diag)-20, Read Current Data.>	Is "ON" displayed when the brake pedal is depressed and "OFF" displayed when the brake pedal is released?	Go to step **6**.	Replace the body integrated unit.
6	**CHECK CURRENT DATA.** Select the current data display and display «Shift Position». <Ref. to BC(diag)-20, Read Current Data.>	Is the display "P" in the P range and other than "P" in ranges other than P?	Go to step **7**.	Check the following items. • Inhibitor switch • Harness between inhibitor switch and TCM • TCM input signal • TCM CAN communication • Body integrated unit CAN receive
7	**CHECK CURRENT DATA.** 1) Select the current data display and display «Front Wheel Speed». <Ref. to BC(diag)-20, Read Current Data.> 2) Start the engine. 3) Raise vehicle speed gradually up to approximately 20 km/h (12 MPH).	Is a figure equivalent to the speedometer being indicated?	Go to step **12**.	Check the following items. • Wheel speed sensor • CAN communication by VDC unit • Body integrated unit CAN receive Replace the wheel speed sensor, VDC unit or body integrated unit, or both.
8	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND "P" RANGE SWITCH.** 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of "P" range switch. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and "P" range switch. ***Connector & terminal*** ***(B281) No. 18 — (B116) No. 1:***	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the "P" range switch.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN "P" RANGE SWITCH AND CHASSIS GROUND.** Measure the resistance of harness between "P" range switch and chassis ground. ***Connector & terminal*** ***(B116) No. 2 — Chassis ground:***	Is it less than 10 Ω?	Go to step **10**.	Repair or replace the harness between the "P" range switch and chassis ground.
10	**CHECK "P" RANGE SWITCH.** Measure the resistance between "P" range switch connector terminals. ***Terminals*** ***No. 2 — No. 1:***	Is it less than 1 Ω in the "P" range, and 1 MΩ or more in ranges other than "P"?	Replace the body integrated unit.	Replace the "P" range switch.
11	**CHECK STOP LIGHT SWITCH INPUT SIGNAL.** 1) Disconnect the connector from body integrated unit. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 10 (+) — Chassis ground (–):***	Is the voltage 9 V to 16 V when the brake pedal is depressed, and approx. 0 V when not depressed?	Replace the body integrated unit.	Check the stop light system.
12	**CHECK SOLENOID UNIT OPERATION.** Connect the battery to the solenoid unit connector terminal, and operate the solenoid unit. ***Terminals*** ***No. 3 (+) — No. 4 (–):***	Does the solenoid unit operate normally?	Check the lock mechanism of the select lever body.	Replace the solenoid unit.

4. KEY INTERLOCK CANNOT BE LOCKED OR RELEASED

NOTE:
Check of this item only applies to models without a push button ignition switch.





CS-10044

Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT.** <Ref. to CS-17, BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, AT Shift Lock Control System.>	Is there any fault?	Follow the procedures to inspect and repair.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** 1) Connect the Subaru Select Monitor. 2) Shift the select lever to "P" range. 3) Turn the ignition switch to ON. 4) Select the current data display and display «P SW». <Ref. to BC(diag)-20, Read Current Data.>	Is the display "ON" in the P range and "OFF" in ranges other than P?	Go to step **3**.	Go to step **6**.
3	**CHECK CURRENT DATA.** 1) Select the current data display and display the «key-lock warning SW». <Ref. to BC(diag)-20, Read Current Data.> 2) Turn the ignition switch to OFF.	Does the display change from "ON" ←→ "OFF" when the key is inserted and removed?	Go to step **4**.	Go to step **9**.
4	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Select the current data display and display «Key lock solenoid output». <Ref. to BC(diag)-20, Read Current Data.>	Is the display "OFF" in the P range and "ON" in ranges other than P?	Go to step **10**.	Go to step **5**.
5	**CHECK DTC OF BODY INTEGRATED UNIT.** 1) Set the select lever to other than "P" range. 2) Check DTC of body integrated unit.	Is B1015 (key interlock circuit abnormal) a current malfunction?	Follow the DTC to perform inspection and repair.	Go to step **10**.
6	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND "P" RANGE SWITCH.** 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of "P" range switch. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and "P" range switch. ***Connector & terminal*** ***(B281) No. 18 — (B116) No. 1:***	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the "P" range switch.	Go to step **7**.
7	**CHECK HARNESS BETWEEN "P" RANGE SWITCH AND CHASSIS GROUND.** Measure the resistance of harness between "P" range switch and chassis ground. ***Connector & terminal*** ***(B116) No. 2 — Chassis ground:***	Is it less than 10 Ω?	Go to step **8**.	Repair or replace the harness between the "P" range switch and chassis ground.
8	**CHECK "P" RANGE SWITCH.** Measure the resistance between "P" range switch connector terminals. ***Terminals*** ***No. 2 — No. 1:***	Is it less than 1 Ω in the "P" range, and 1 MΩ or more in ranges other than "P"?	Replace the body integrated unit.	Replace the "P" range switch.
9	**CHECK HARNESS BETWEEN BATTERY AND KEY WARNING SWITCH AND BODY INTEGRATED UNIT.** 1) Disconnect the connector from body integrated unit. 2) Measure the voltage between body integrated unit and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):***	Is the display 9 V or more when the key is inserted, and less than 1.5 V with the key removed?	Replace the body integrated unit.	Check the following items. • Key warning switch • Harness/fuse • Ignition circuit

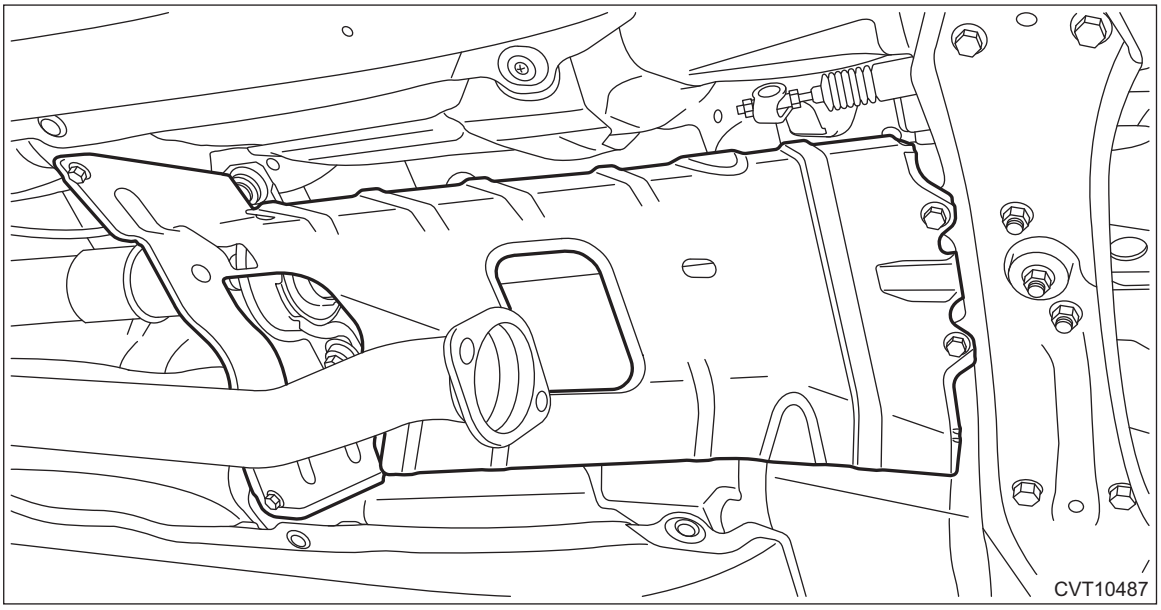
Step		Check	Yes	No
10	**CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND KEY LOCK SOLENOID.** 1) Disconnect the connector from body integrated unit. 2) Disconnect the connector of key lock solenoid. 3) Check for open circuit of harness, short circuit to battery or short circuit to ground between the body integrated unit and key lock solenoid. ***Connector & terminal*** ***(B281) No. 4 — (B557) No. 1:***	Is there any fault in the harness?	Repair or replace the harness between the body integrated unit and the key lock solenoid.	Go to step **11**.
11	**CHECK HARNESS BETWEEN KEY LOCK SOLENOID AND CHASSIS GROUND.** Measure the resistance of harness between key lock solenoid and chassis ground. ***Connector & terminal*** ***(B557) No. 2 — Chassis ground:***	Is it less than 10 Ω?	Go to step **12**.	Repair or replace the harness between the key lock solenoid and chassis ground.
12	**CHECK KEY LOCK SOLENOID OPERATION.** Connect the battery to the key lock solenoid connector terminal, and operate the solenoid. ***Terminals*** ***No. 2 (+) — No. 1 (–):***	Does the key lock solenoid operate normally?	Go to step **13**.	Replace the key lock solenoid.
13	**CHECK OUTPUT OF BODY INTEGRATED UNIT.** 1) Connect all connectors. 2) Insert the key. 3) Measure the voltage between body integrated unit and chassis ground. ***Connector & terminal*** ***(B281) No. 4 — Chassis ground:***	Is it 7.5 V to 16 V in ranges other than “P”, and approx. 0 V in the “P” range?	Check the lock mechanism of the steering lock body.	Replace the body integrated unit.

3. Select Lever

A: REMOVAL

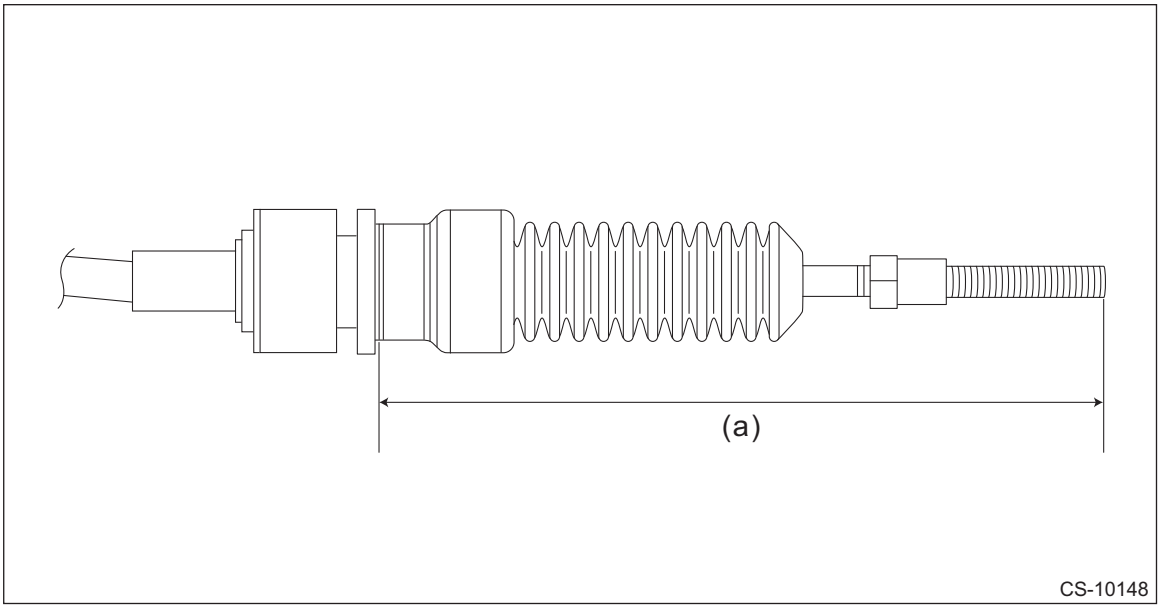
1) Shift the select lever to “N” range.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

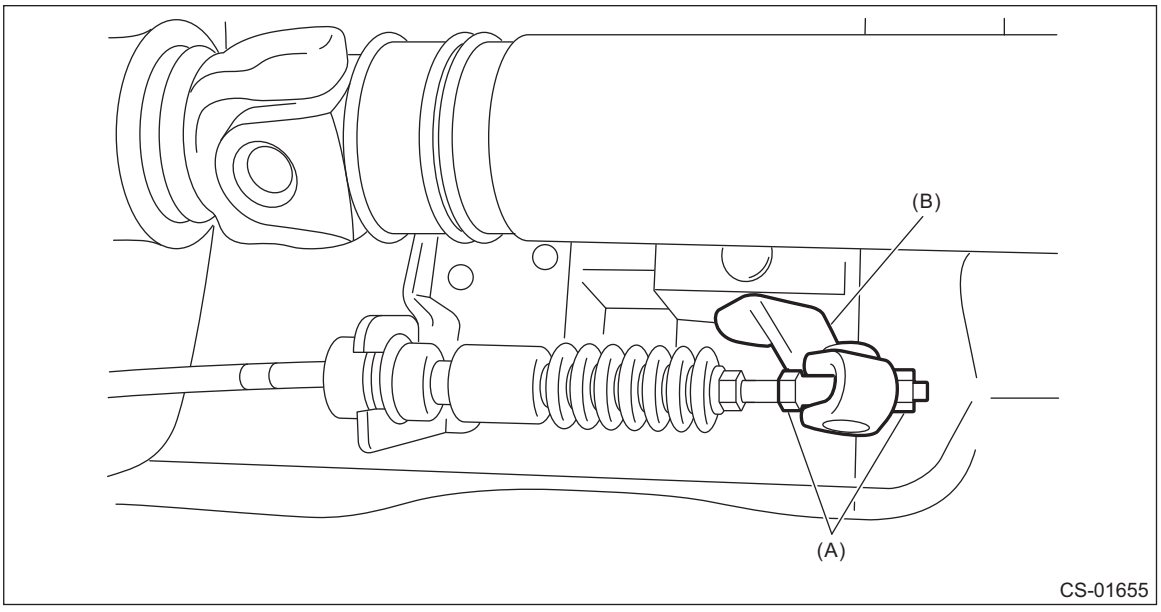
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Lift up the vehicle.
4) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
5) Remove the center exhaust cover.



6) Disconnect the cable from the arm COMPL.

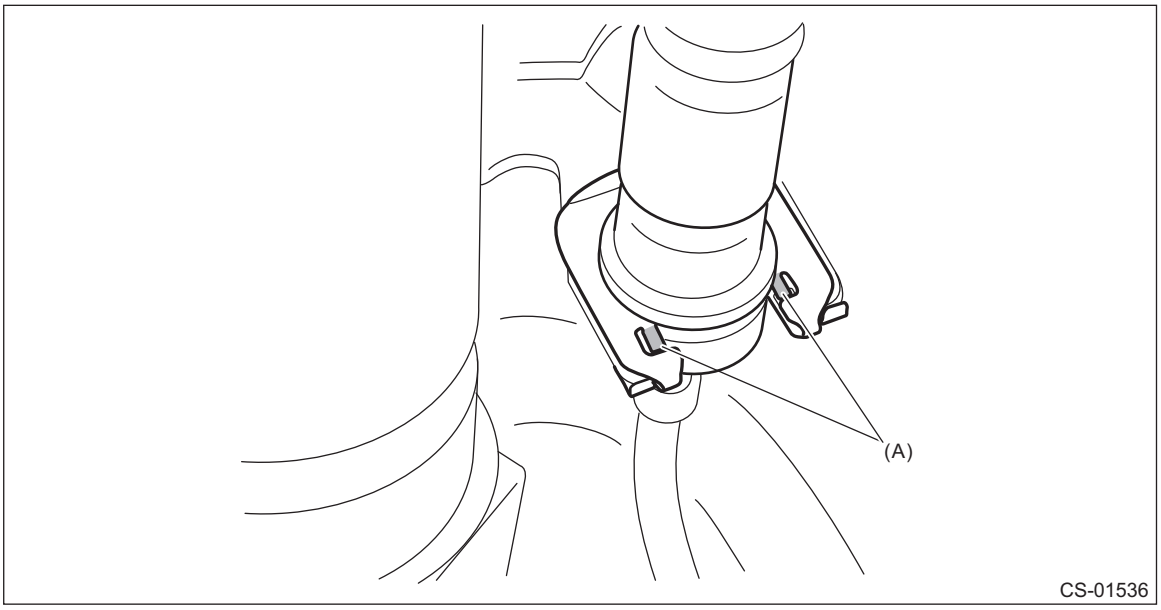
CAUTION:
Do not apply extra overload while holding the part (a).





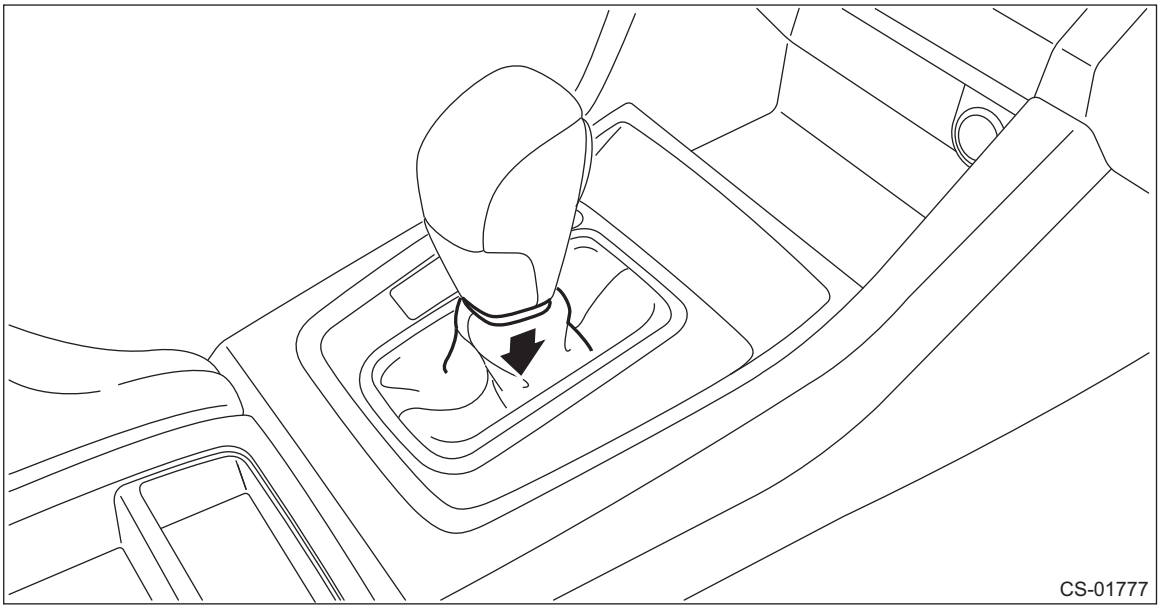
(A) Adjusting nut (B) Arm COMPL

7) Raise the claw of clamp and remove the cable.

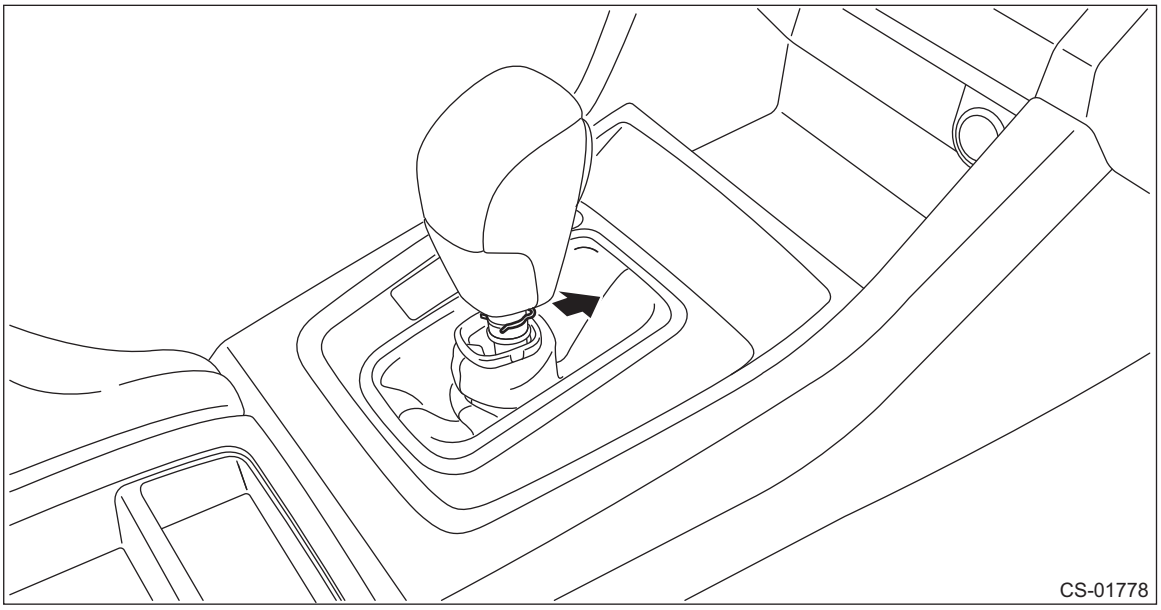


(A) Claw

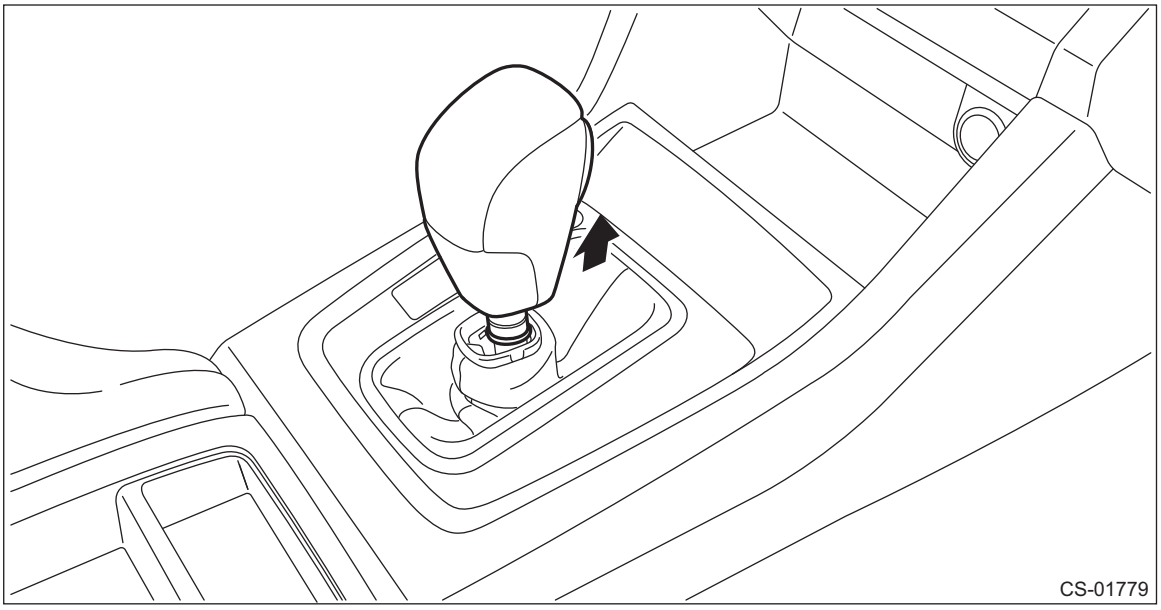
8) Lower the vehicle.
9) Shift the select lever to “N” range.
10) Lower the boot assembly vertically toward the lever.



11) Remove the clamp grip pin.



12) Remove the grip assembly.



13) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
14) Remove the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
15) Remove the panel center LWR LH and RH. <Ref. to EI-70, REMOVAL, Console Box.>

16) Disconnect the connector, and remove the indicator assembly.
