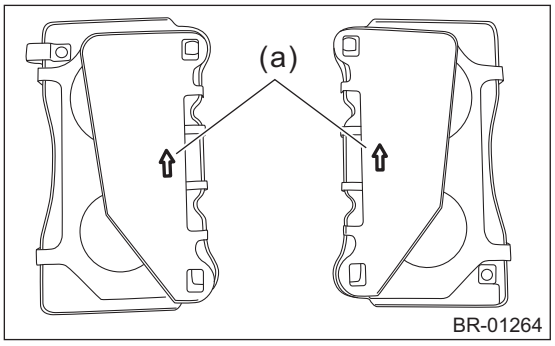
NOTE:
Install so that the arrow (a) faces upward.



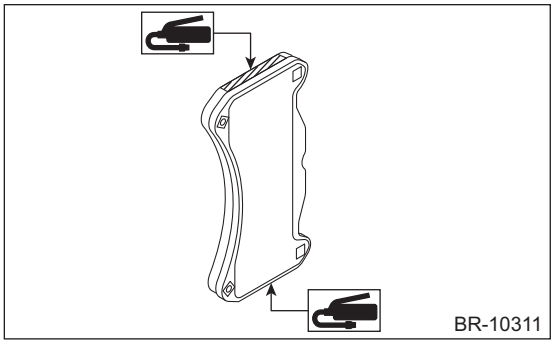
3) Install the cross spring.
4) Install the pin - disc brake.
5) Install the clip - slide pin.
6) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. OPPOSED 6-POT PISTON TYPE

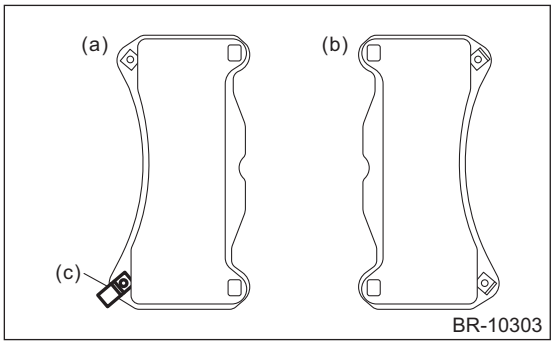
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the side surface of the pad - disc brake front.

Preparation items:
Grease: An item contained in the pad kit or equivalent



2) Install the pad - disc brake front.

NOTE:
Install the parts with the pad wear indicator facing downward.



(a) Pad - disc brake front outer
(b) Pad - disc brake front inner
(c) Pad wear indicator

3) Install the pad clip bolt.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
4) Install the cross spring.
5) Install the pin - disc brake.
6) Install the front wheels.

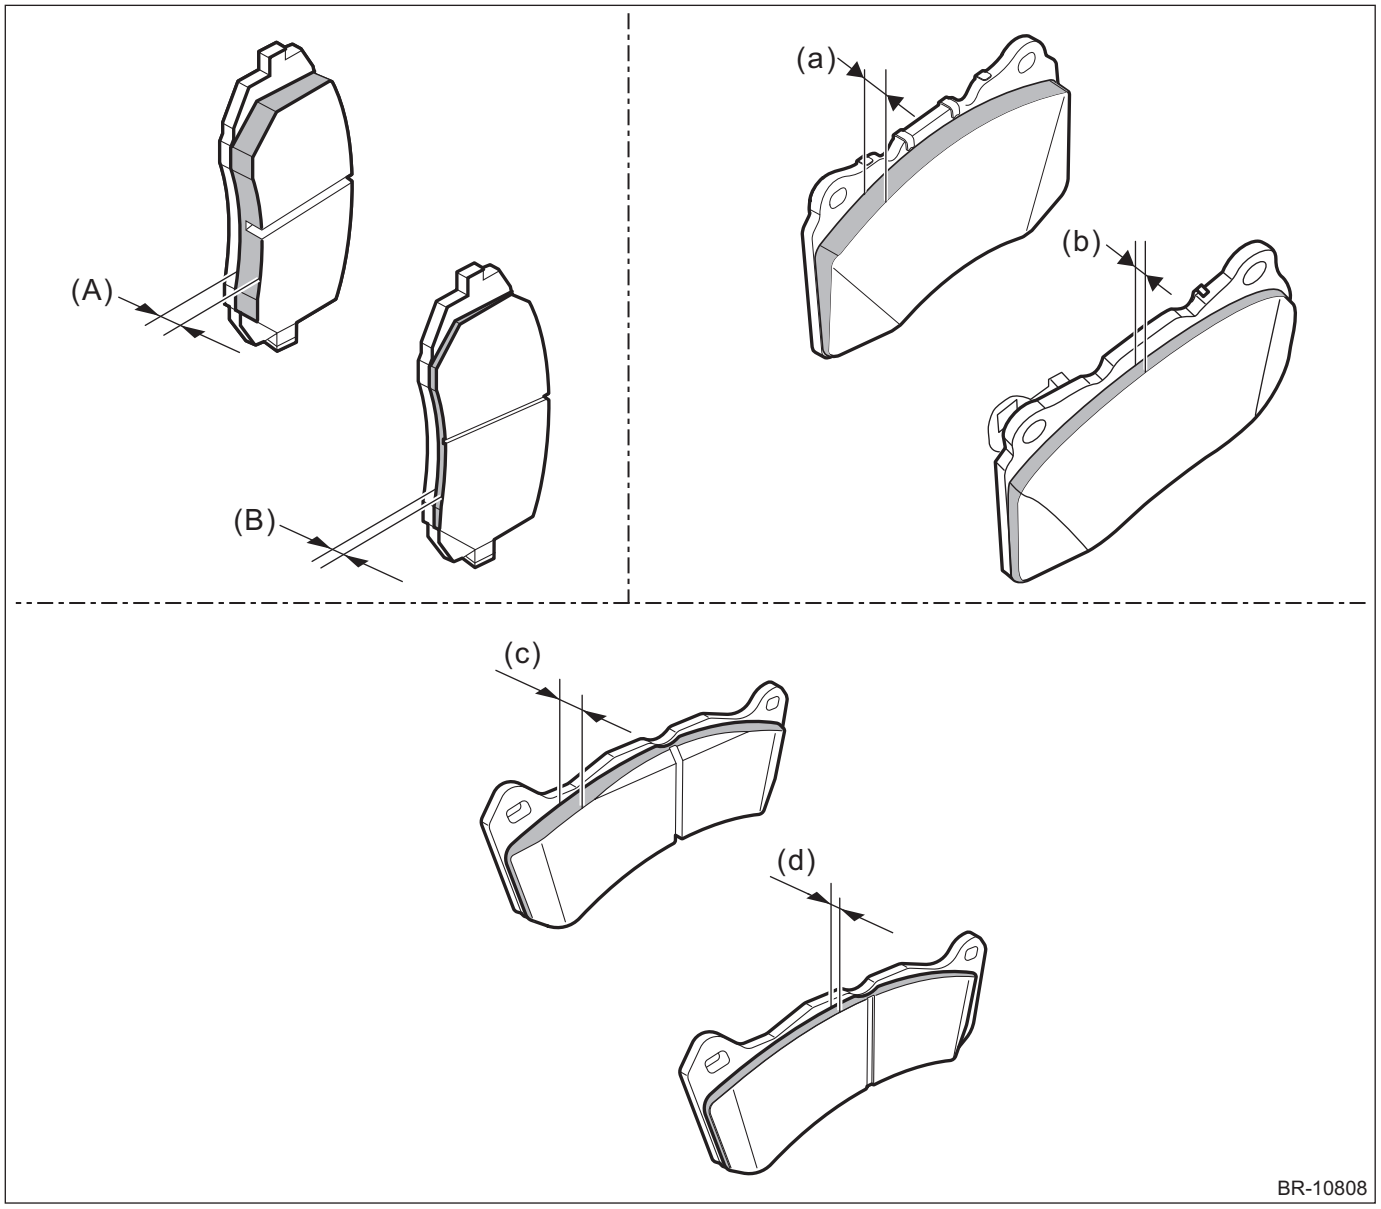
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check the thickness of the pad - disc brake front.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.

• Pad wear indicators are installed on the pad - disc brake front inner (floating 2-POT piston type) or on the pad - disc brake front outer (opposed 4-POT & 6-POT piston type), and a squeaking sound is heard when the pad is worn to the limit.



• Floating 2-POT piston type

	Standard (A)	Wear limit (B)
Pad thickness	11 mm (0.43 in)	1.5 mm (0.059 in)

• Opposed 4-POT piston type

	Standard (a)	Wear limit (b)
Pad thickness	8.8 mm (0.35 in)	1.2 mm (0.047 in)

• Opposed 6-POT piston type

	Standard (c)	Wear limit (d)
Pad thickness	9.5 mm (0.37 in)	2.8 mm (0.11 in)

2) If the wear limit is exceeded in the inspection, replace the pad - disc brake front.

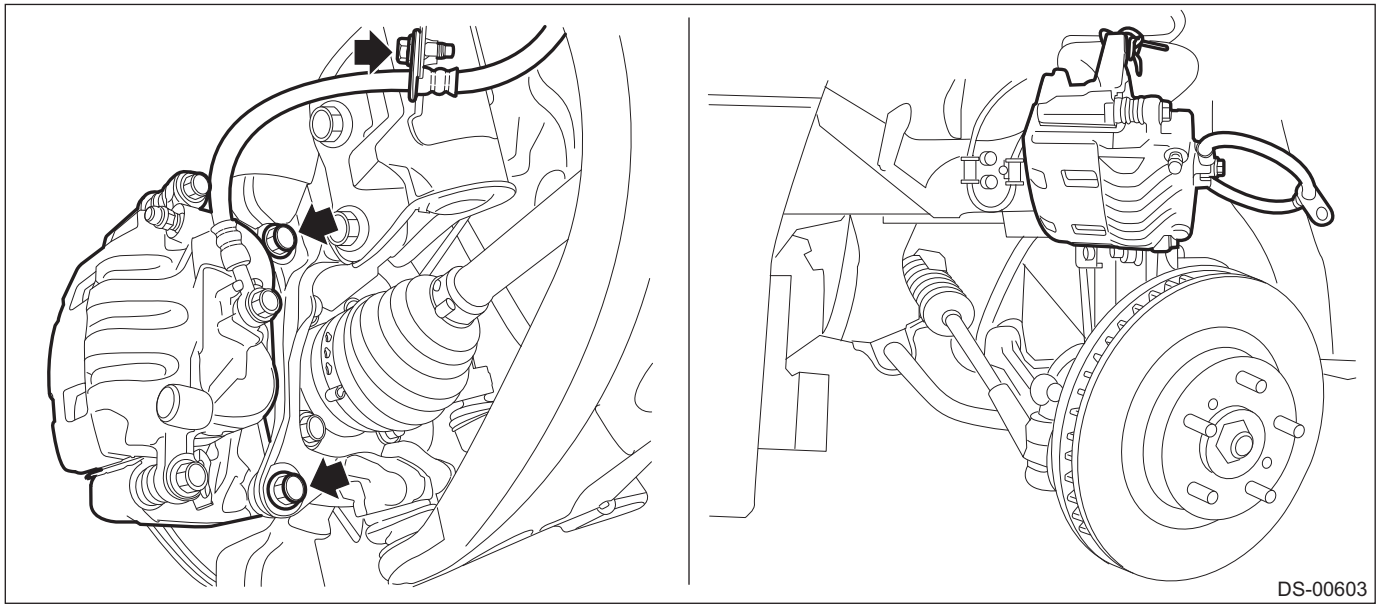
3. Front Disc Rotor

A: REMOVAL

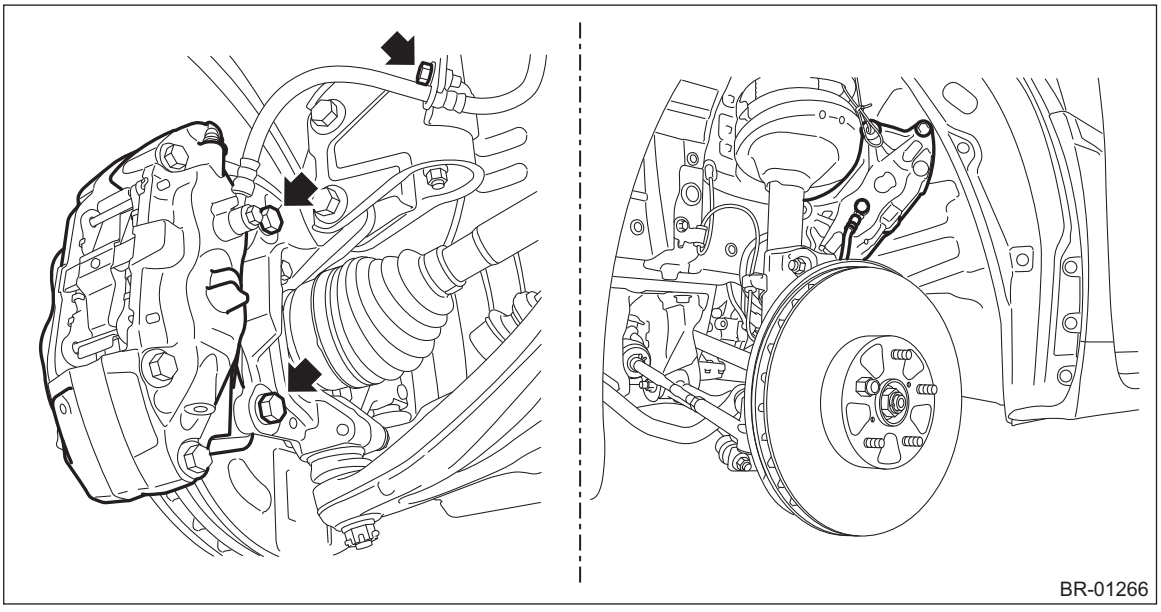
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the strut assembly.

CAUTION:
Since the 17-inch & 18-inch (Brembo) caliper bodies are easily scratched and the paint may be stripped, protect them from being contacted with other parts or tools.

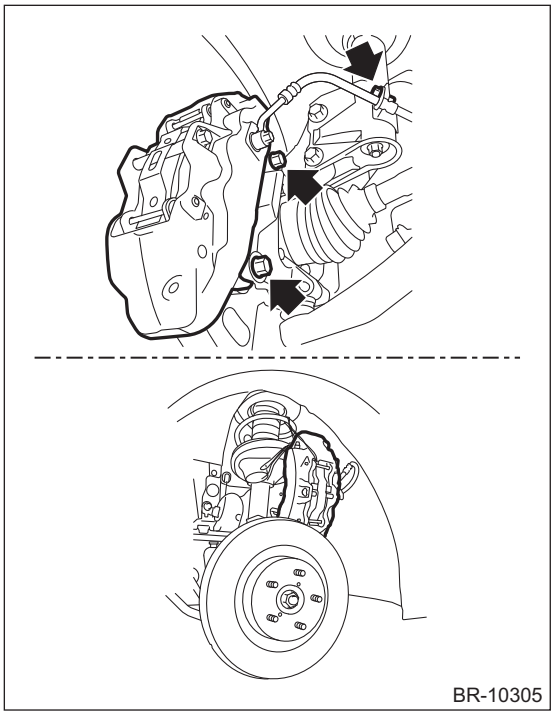
- Floating 2-POT piston type



- Opposed 4-POT piston type

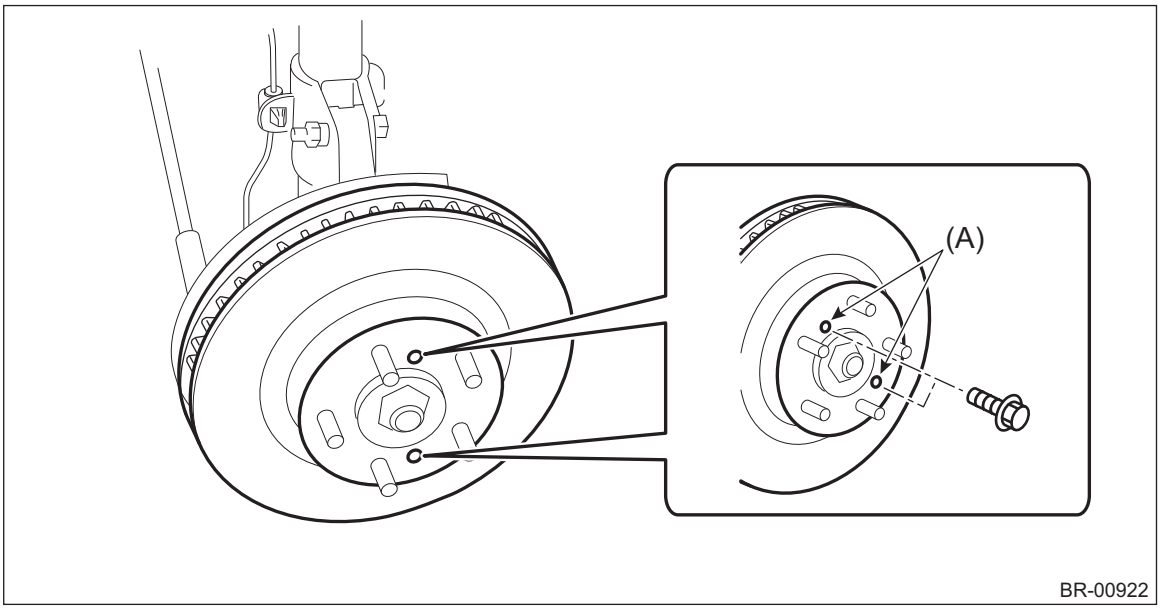


- Opposed 6-POT piston type



3) Remove the disc rotor.

NOTE:
When the disc rotor is difficult to be removed, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.



B: INSTALLATION

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the front disc rotor. <Ref. to BR-31, INSPECTION, Front Disc Rotor.>
2) Install the disc rotor.
3) Install the disc brake assembly.

Tightening torque:
Mounting bolt (floating 2-POT piston type): Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, FRONT DISC BRAKE, COMPONENT, General Description.>
Mounting bolt (opposed 4-POT & 6-POT piston type): 120 N·m (12.2 kgf-m, 88.5 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

4) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

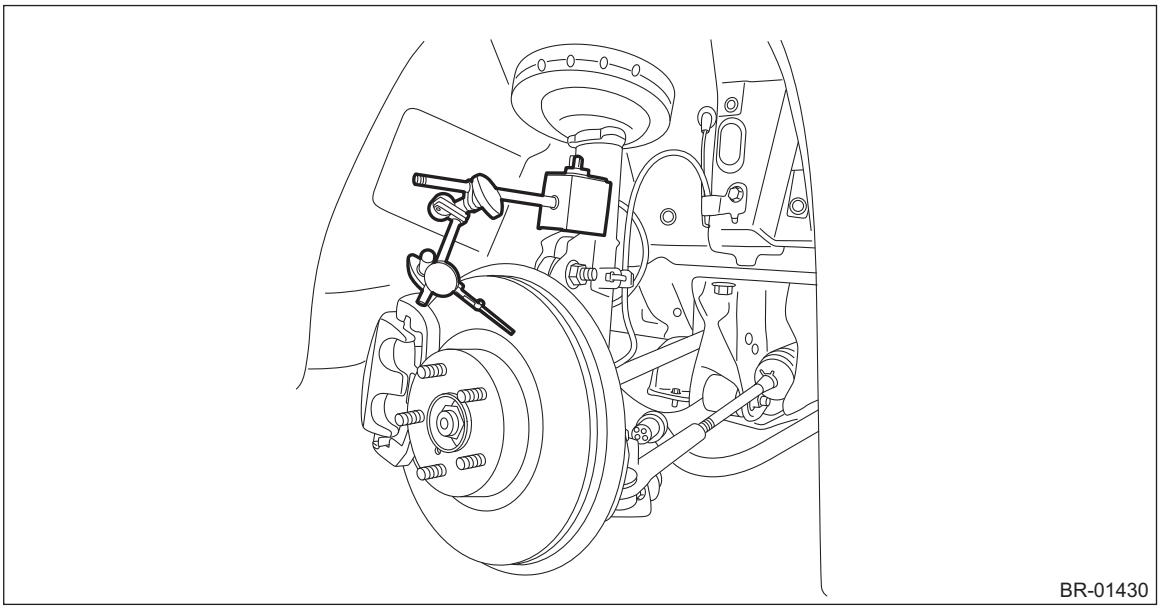
C: INSPECTION

1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - front axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-27, INSPECTION, Front Hub Unit Bearing.>
2) Check the disc rotor runout.
(1) Remove the caliper body assembly. <Ref. to BR-29, REMOVAL, Front Disc Rotor.>
(2) Secure the disc rotor by tightening the five wheel nuts.
(3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit
Floating 2-POT piston type: 0.05 mm (0.002 in)
Opposed 4-POT & 6-POT piston type: 0.075 mm (0.003 in)

NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.

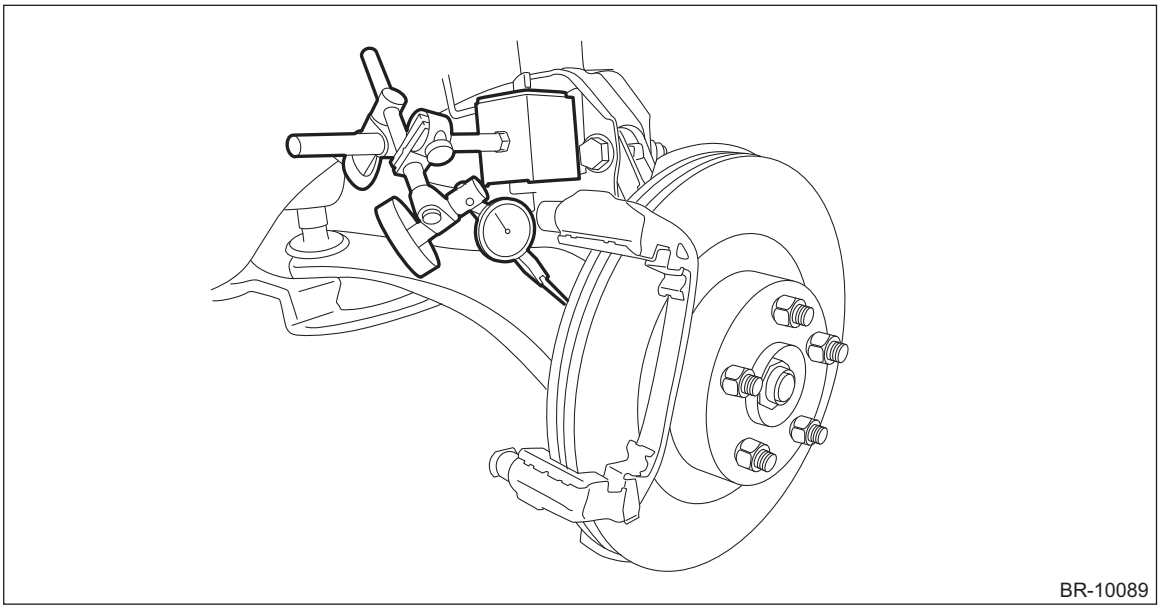


(4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.

Disc rotor runout limit
Floating 2-POT piston type: 0.05 mm (0.002 in)
Opposed 4-POT & 6-POT piston type: 0.075 mm (0.003 in)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.



3) If the inspection result shows that the disc rotor runout exceeds service limit, perform the following procedure.

- Floating 2-POT piston type & opposed 4-POT piston type: Grind the disc rotor. Check the disc rotor thickness after grinding. <Ref. to BR-32, DISC ROTOR THICKNESS CHECK, INSPECTION, Front Disc Rotor.>
- Opposed 6-POT piston type: Replace the disc rotor. <Ref. to BR-29, REMOVAL, Front Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

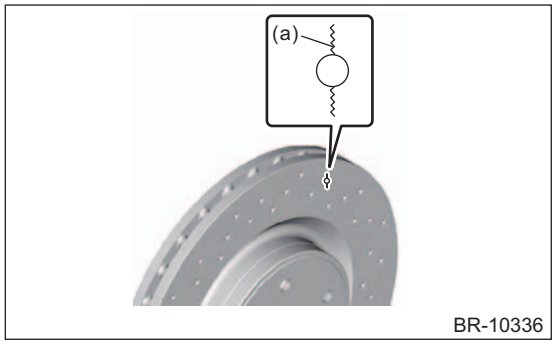
	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	17-inch (floating 2-POT piston type)	30 mm (1.18 in)	28 mm (1.1 in)	316 mm (12.44 in)
	17-inch (opposed 4-POT piston type)	30 mm (1.18 in)	28 mm (1.1 in)	326 mm (12.83 in)
	18-inch	30 mm (1.18 in)	28 mm (1.1 in)	340 mm (13.39 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

3. CHECK DISC ROTOR FOR CRACK AND DAMAGE (OPPOSED 6-POT PISTON TYPE)

1) Check the sliding surface of the disc rotor for cracks (a), damage and wear. If defective, replace the disc rotor.

CAUTION:
If there is a 5 mm (0.2 in) crack around the holes of disc rotor, always replace the disc rotor with a new one.



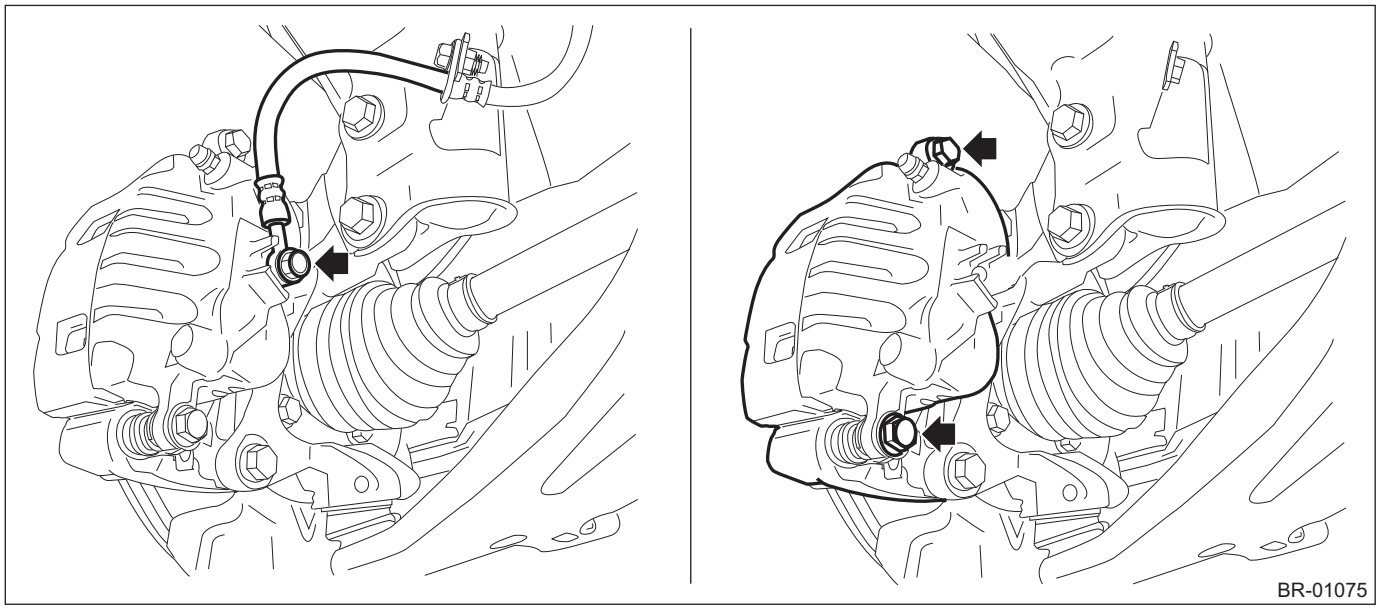
4. Front Disc Brake Assembly

A: REMOVAL

1. FLOATING 2-POT PISTON TYPE

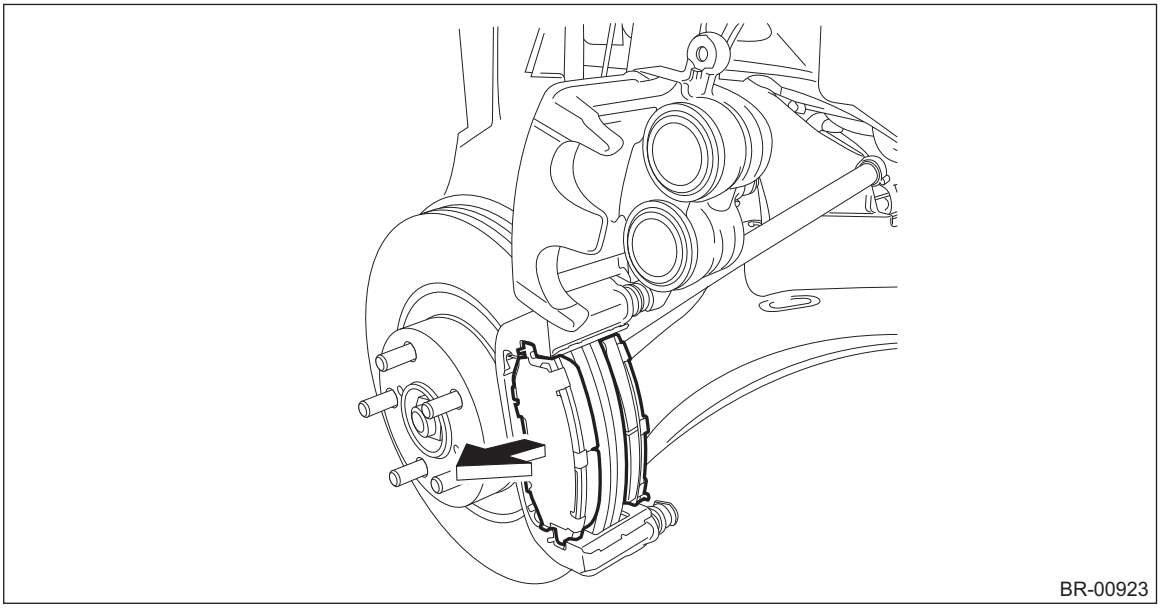
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



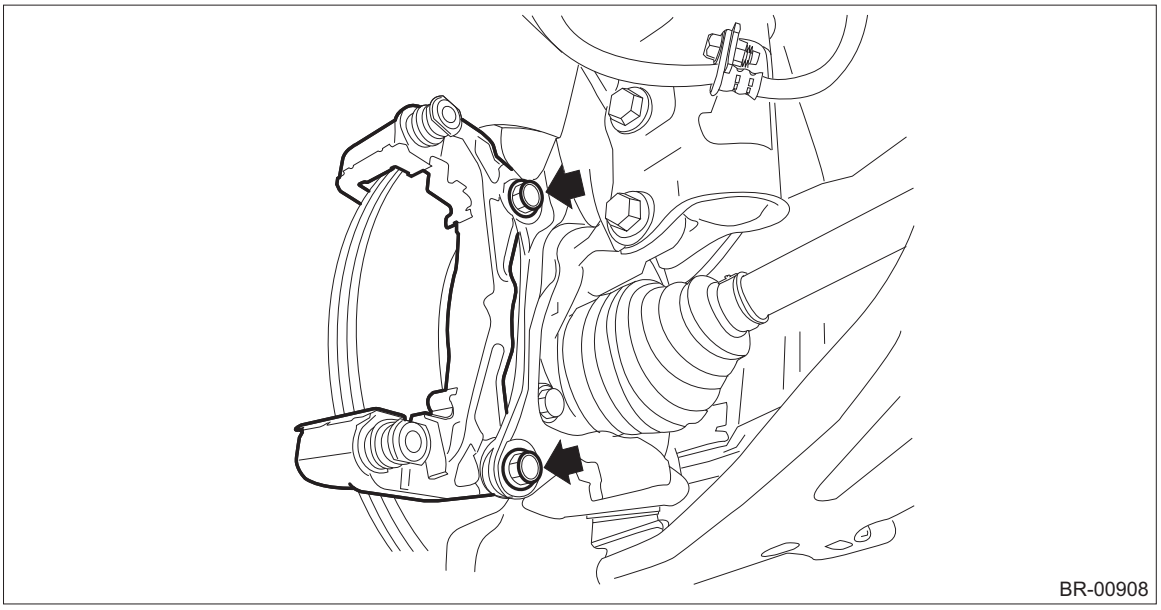
BR-01075

3) Remove the support - front disc brake.
(1) Remove the pad - disc brake front.



BR-00923

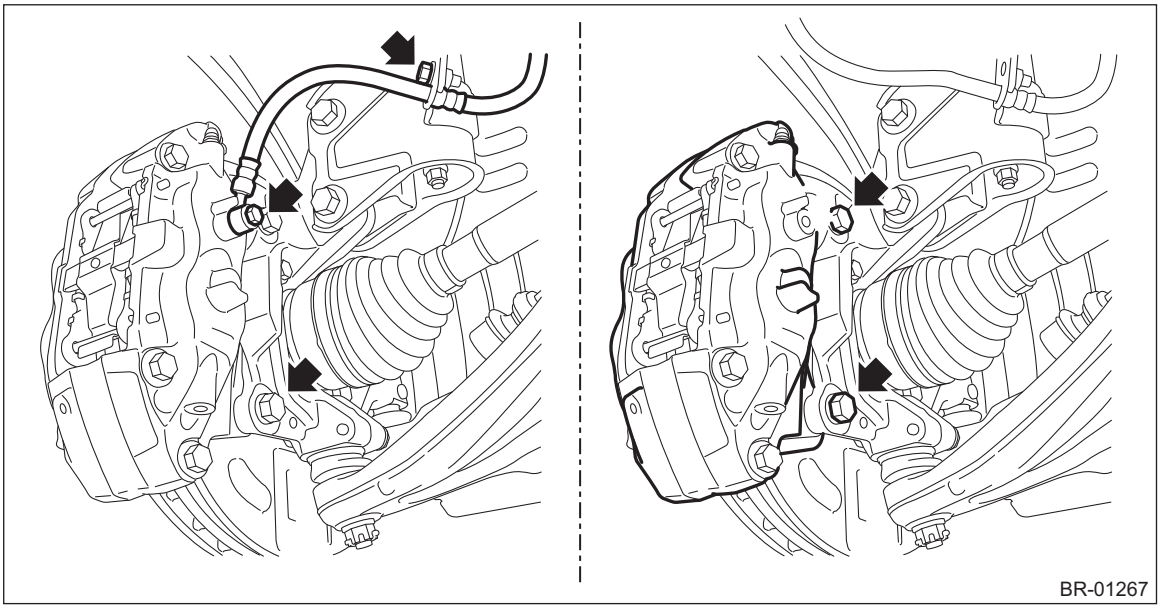
(2) Remove the mounting bolts, and then remove the support - front disc brake.



2. OPPOSED 4-POT PISTON TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front. <Ref. to BR-22, OPPOSED 4-POT PISTON TYPE, REMOVAL, Front Brake Pad.>
3) Remove the union bolt and the mounting bolt, and remove the disc brake assembly.

CAUTION:
• Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

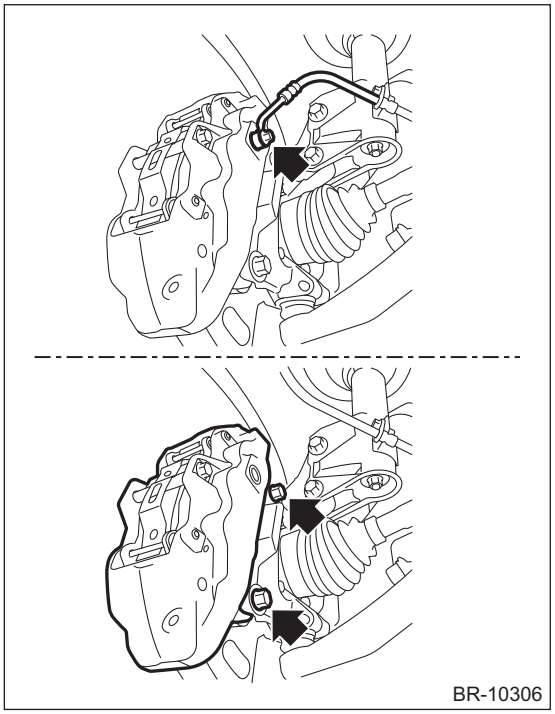


3. OPPOSED 6-POT PISTON TYPE

1) Lift up the vehicle, and then remove the front wheels.
2) Remove the pad - disc brake front. <Ref. to BR-23, OPPOSED 6-POT PISTON TYPE, REMOVAL, Front Brake Pad.>

3) Remove the union bolt and the mounting bolt, and remove the disc brake assembly.

CAUTION:
• Since the 18-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



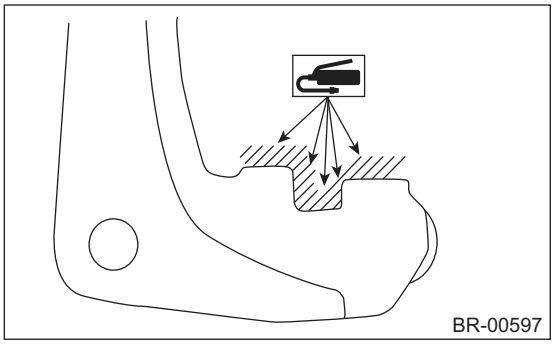
BR-10306

B: INSTALLATION

1. FLOATING 2-POT PISTON TYPE

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - front disc brake.
1) Check each part. <Ref. to BR-46, INSPECTION, Front Disc Brake Assembly.>
2) Apply a thin coat of grease to the support - front disc brake.

Preparation items:
Grease: An item contained in the pad kit or equivalent



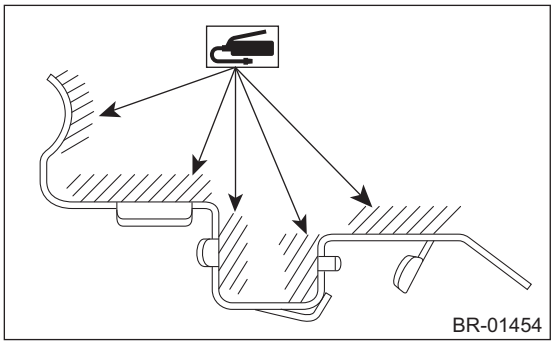
BR-00597

3) Install the support - front disc brake.

Tightening torque:
Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-5, FRONT DISC BRAKE, COMPONENT, General Description.>

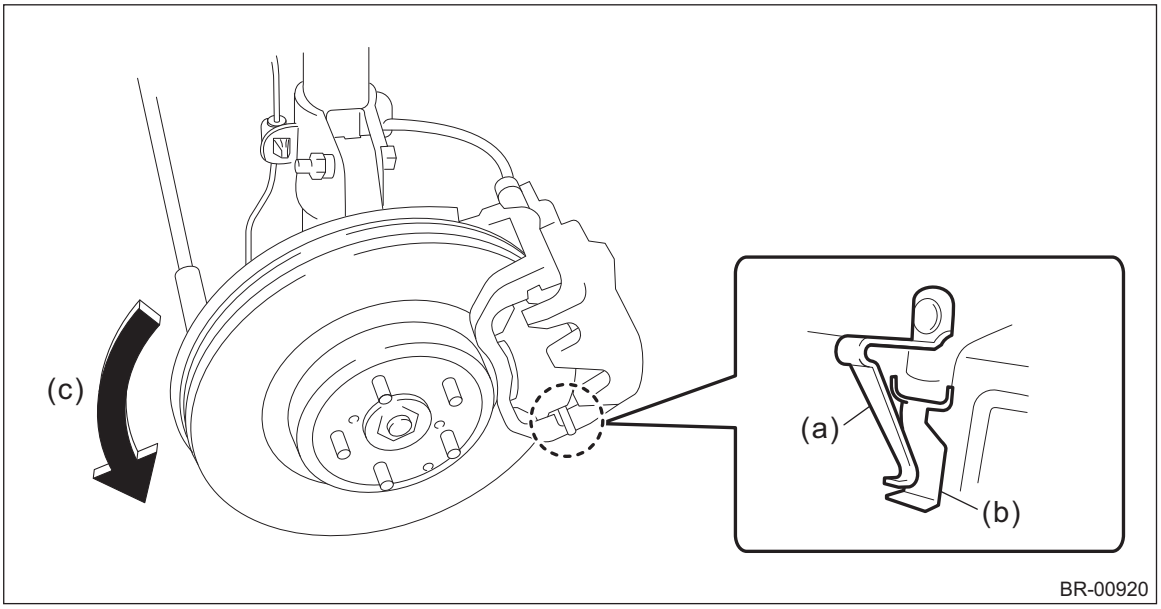
4) Apply a thin coat of grease to the pad clip.

Preparation items:
Grease: An item contained in the pad kit or equivalent



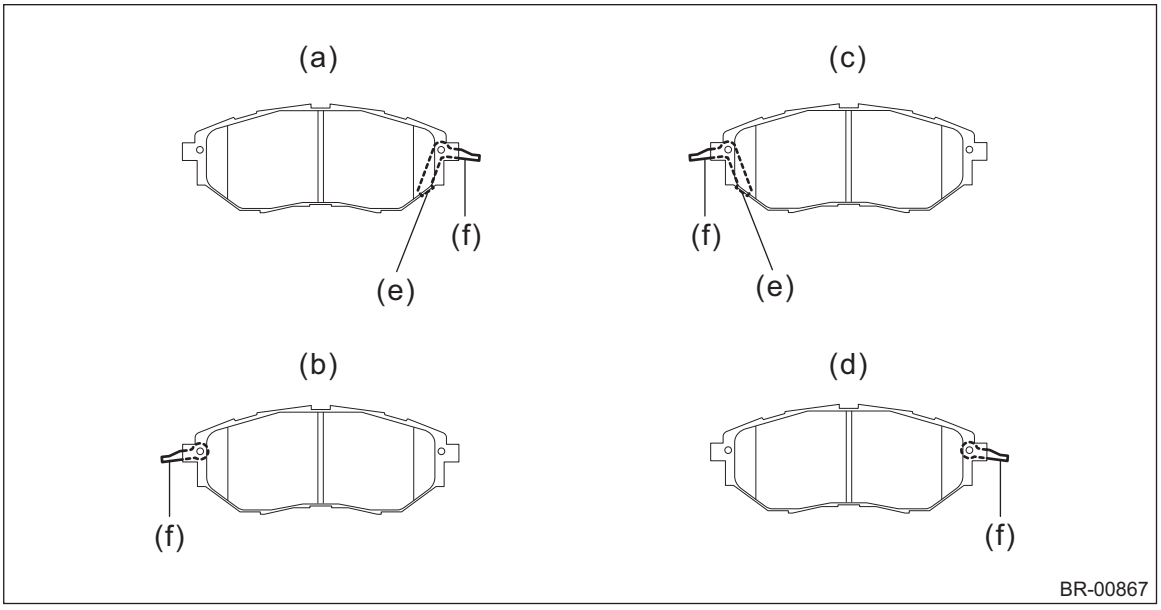
5) Install the brake pad.

CAUTION:
• Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
• Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
• If the pad return spring is deformed or damaged, replace the brake pad with a new part.



(a) Pad return spring (b) Supporting surface of pad clip (c) Direction of brake rotor rotation

NOTE:
Install the pad wear indicator in proper direction.



(a) LH — IN
(b) LH — OUT
(c) RH — IN
(d) RH — OUT
(e) Pad wear indicator
(f) Pad return spring

6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Connect the brake hose using a new brake hose gasket.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

8) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
9) Install the front wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

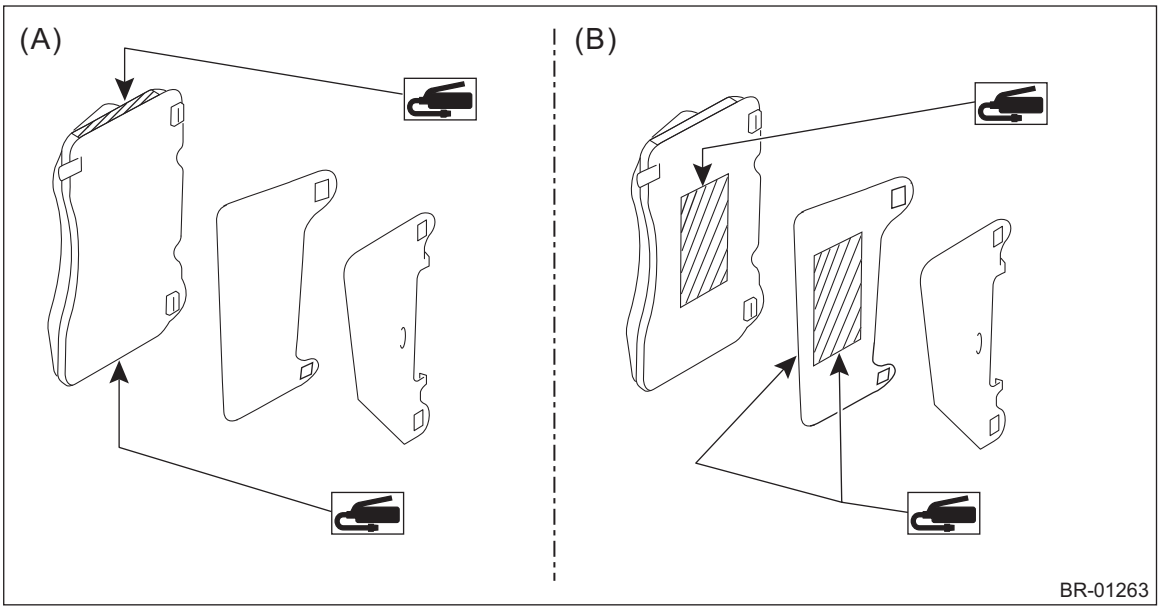
2. OPPOSED 4-POT PISTON TYPE

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-46, INSPECTION, Front Disc Brake Assembly.>
2) Install the disc brake assembly.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

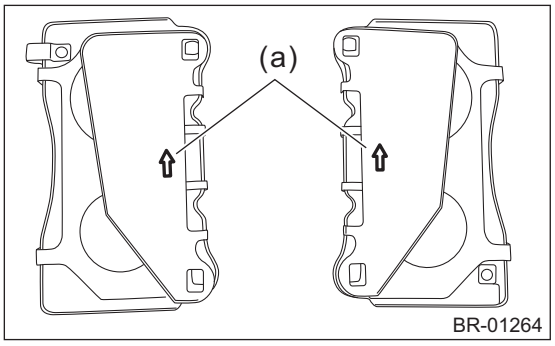
3) Connect the brake hose. <Ref. to BR-108, FRONT BRAKE HOSE, INSTALLATION, Brake Hose.>
4) Apply a thin coat of grease to the side of the pad - disc brake front, both sides of the shim - disc brake front inner and the shim mounting surface of the pad - disc brake front.

Preparation items:
Grease (pad side (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



5) Install the pad - disc brake front.

NOTE:
Install so that the arrow (a) faces upward.



6) Install the cross spring.
7) Install the pin - disc brake.
8) Install the clip - slide pin.
9) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
10) Install the front wheels.

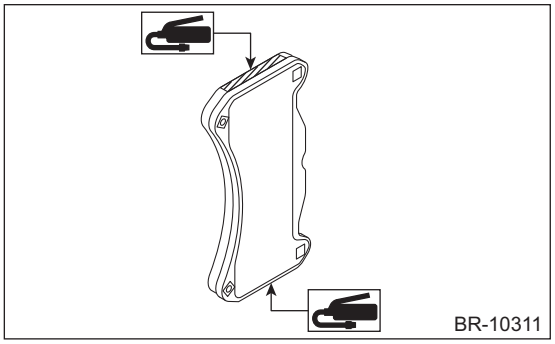
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. OPPOSED 6-POT PISTON TYPE

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-46, INSPECTION, Front Disc Brake Assembly.>
2) Install the disc brake assembly.

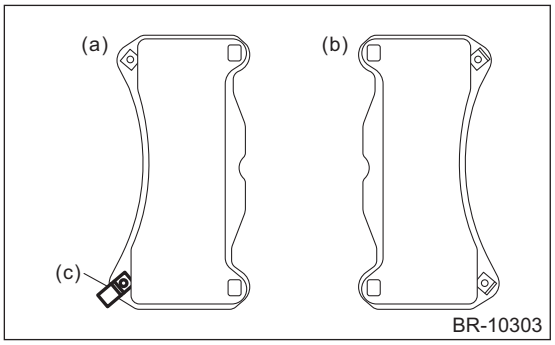
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) Connect the brake hose. <Ref. to BR-108, FRONT BRAKE HOSE, INSTALLATION, Brake Hose.>
4) Apply a thin coat of grease to the side surface of the pad - disc brake front.

Preparation items:
Grease: An item contained in the pad kit or equivalent



5) Install the pad - disc brake front.

NOTE:
Install the parts with the pad wear indicator facing downward.



(a) Pad - disc brake front outer
(b) Pad - disc brake front inner
(c) Pad wear indicator

6) Install the pad clip bolt.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

7) Install the cross spring.
8) Install the pin - disc brake.
9) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
10) Install the front wheels.

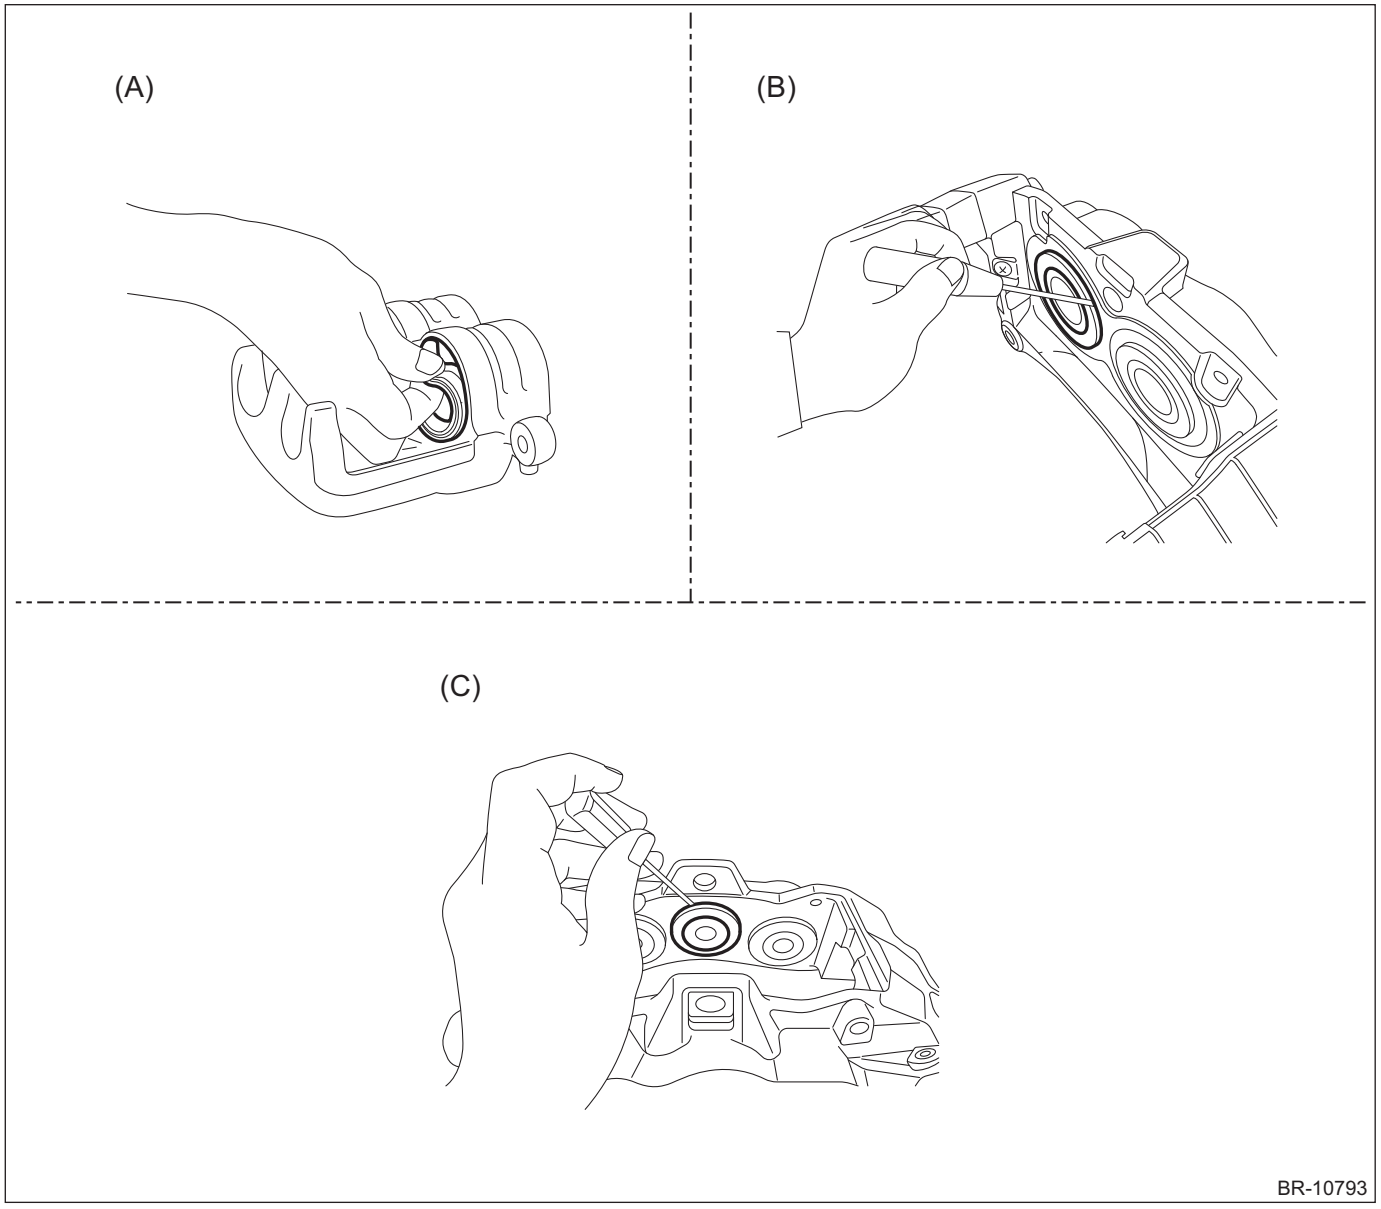
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

CAUTION:
• Be careful not to allow foreign matter to enter the brake hose connector.
• Since the 17-inch & 18-inch (Brembo) caliper bodies are easily scratched and the paint may be stripped, protect them from being contacted with other parts or tools.

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

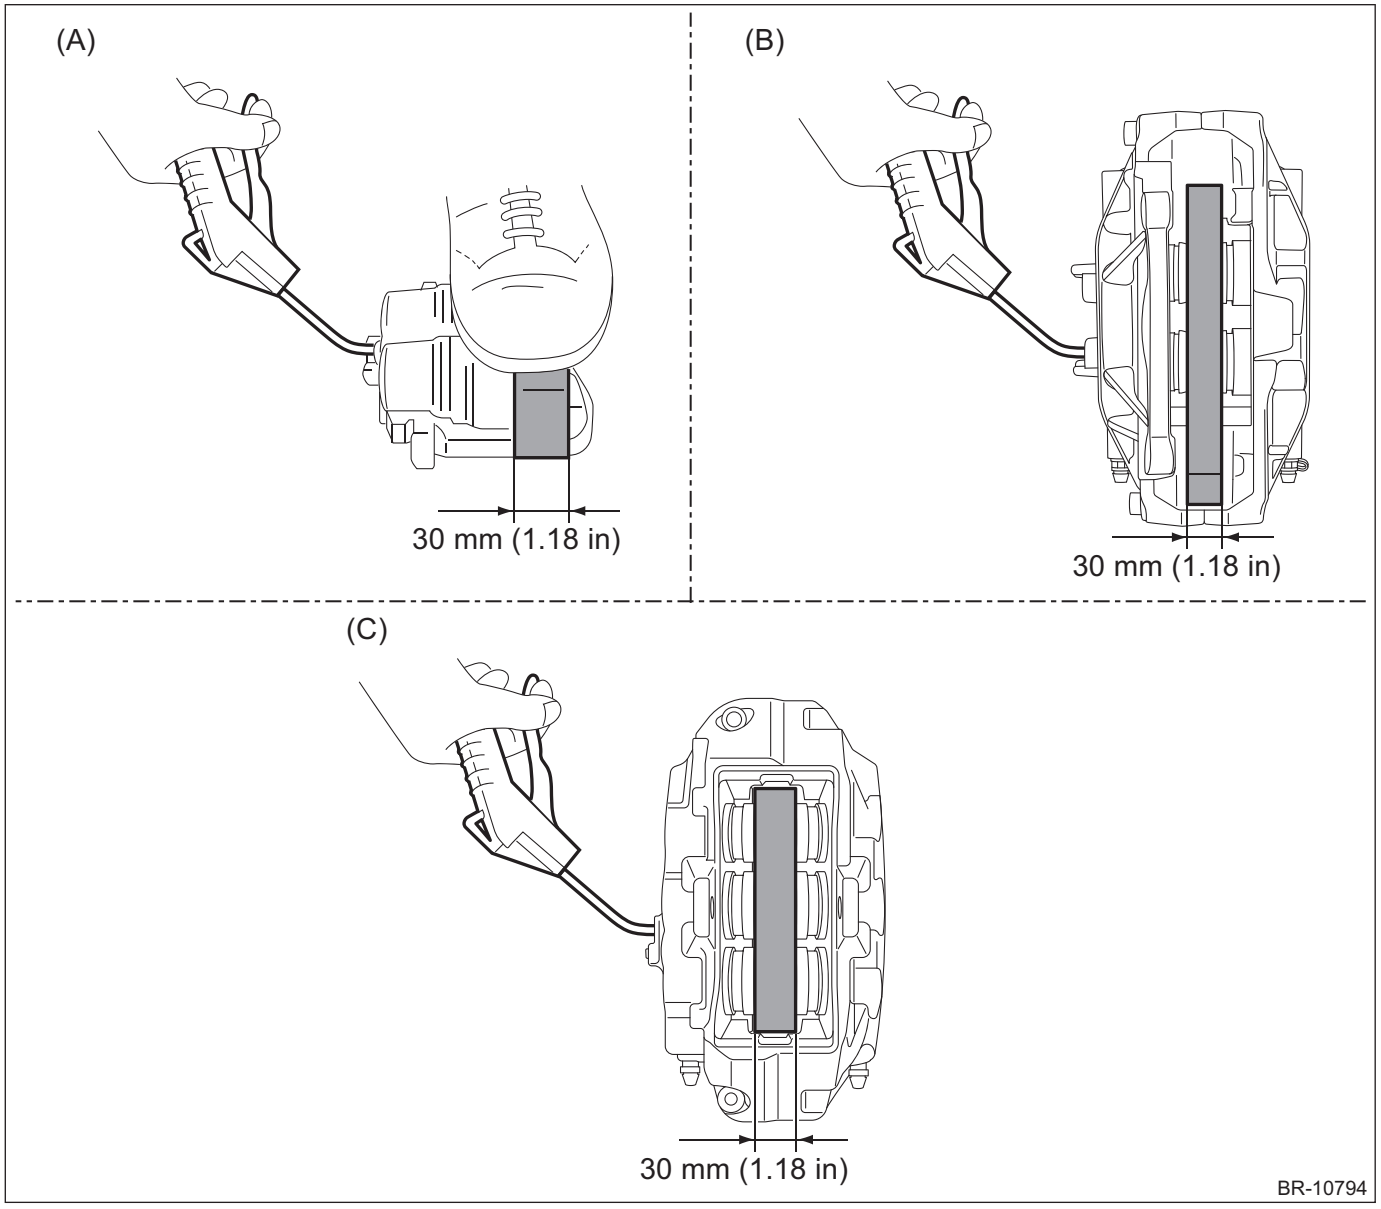
NOTE:
Remove the 4 piston boots for the opposed 4-POT piston type, and remove the 6 piston boots for the opposed 6-POT piston type.



(A) Floating 2-POT piston type (B) Opposed 4-POT piston type (C) Opposed 6-POT piston type

3) Remove the piston - disc brake.
(1) Place a wooden block in the caliper body as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.

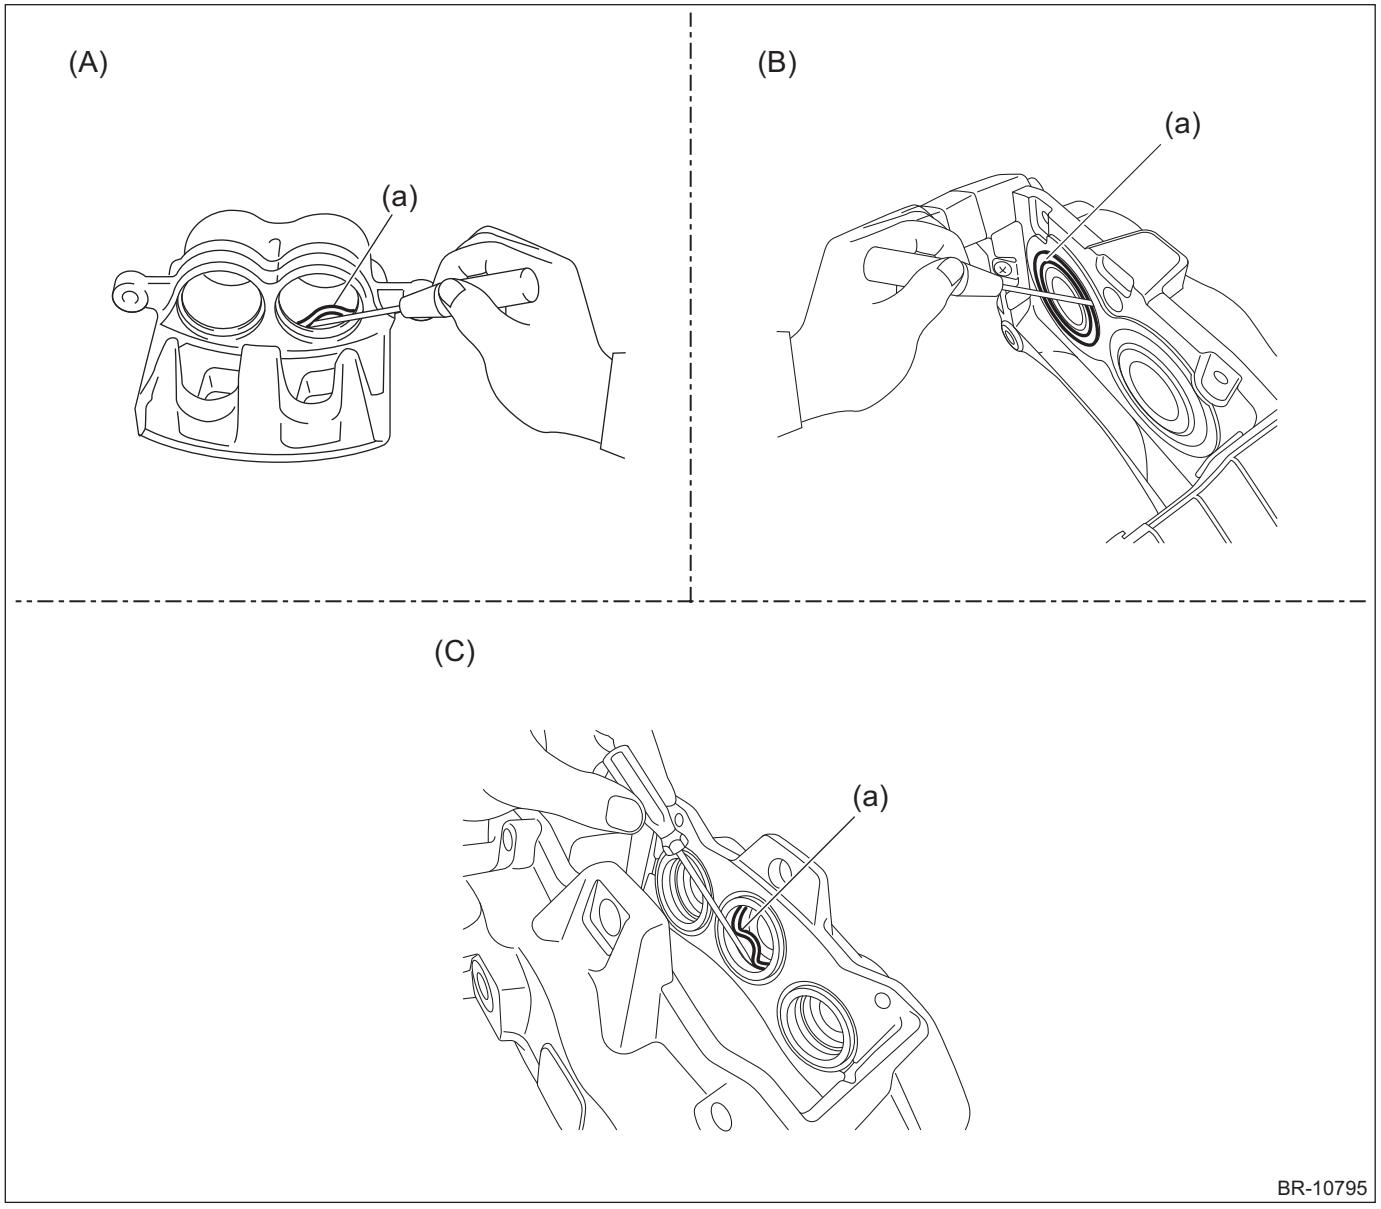


(A) Floating 2-POT piston type (B) Opposed 4-POT piston type (C) Opposed 6-POT piston type

4) Remove the piston seal (a).

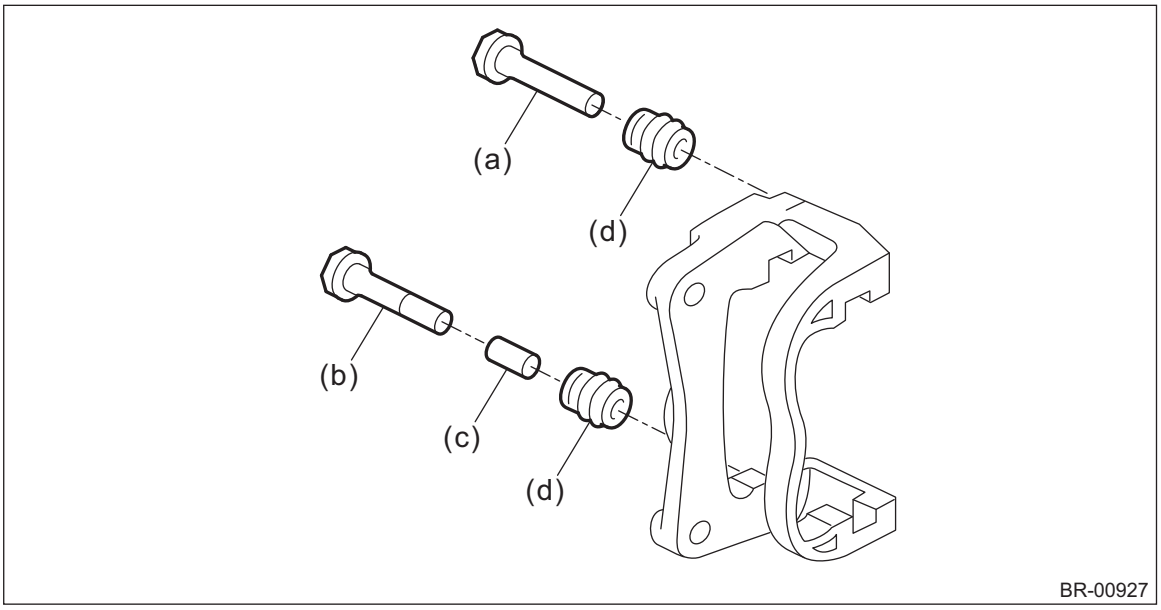
CAUTION:
Do not damage the cylinder and piston seal groove.

NOTE:
Remove the 4 piston seals for the opposed 4-POT piston type, and remove the 6 piston seals for the opposed 6-POT piston type.



(A) Floating 2-POT piston type (B) Opposed 4-POT piston type (C) Opposed 6-POT piston type

5) Remove each part from support - front disc brake. (Floating 2-POT piston type)



(a) Guide pin - front brake (black)
(b) Lock pin - front brake (silver)
(c) Lock pin - bushing
(d) Pin boot

D: ASSEMBLY

1) Check each part. <Ref. to BR-46, INSPECTION, Front Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

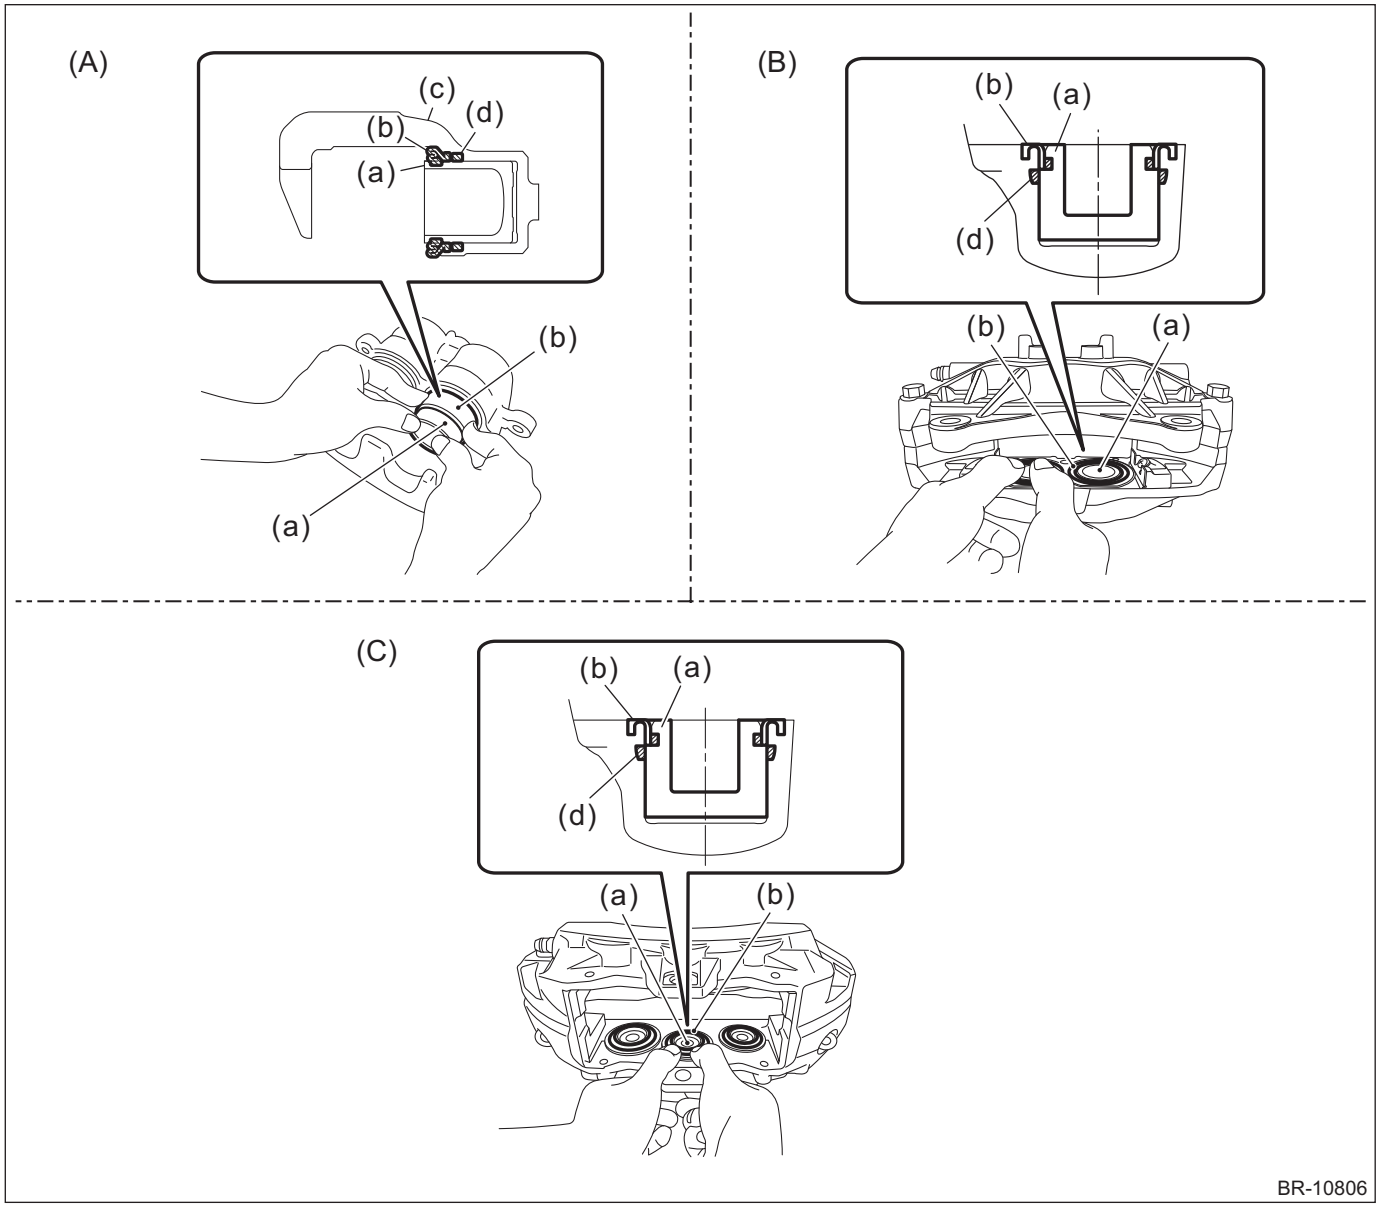
Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Preparation items:
Grease: An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

   (4) Install the piston - disc brake to the caliper body.

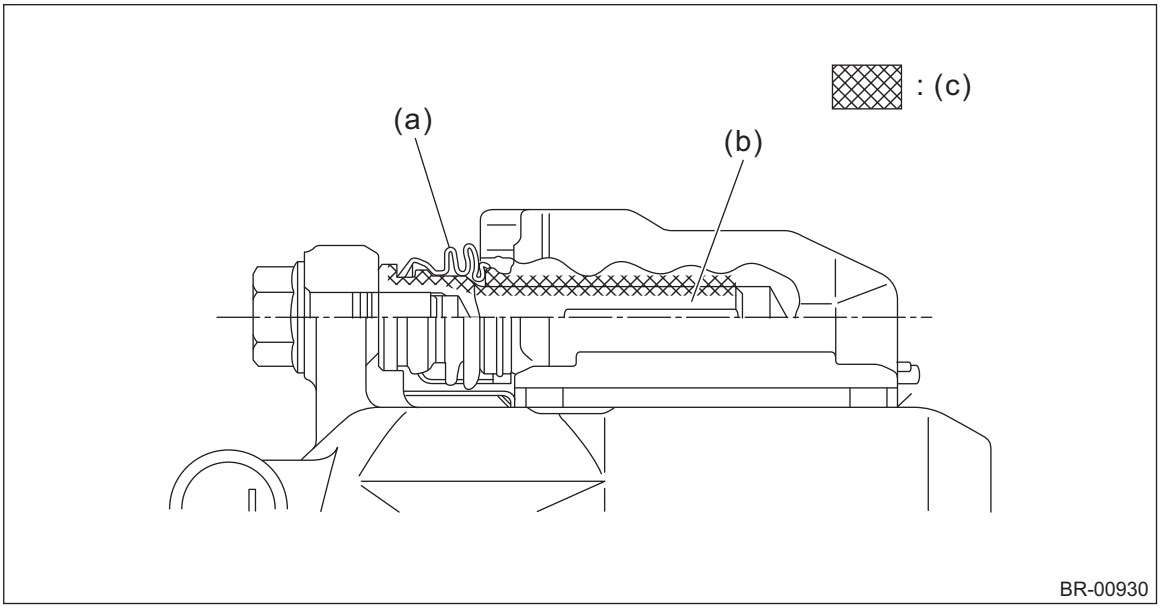
CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.



(A) Floating 2-POT piston type
(B) Opposed 4-POT piston type
(C) Opposed 6-POT piston type
(a) Piston - disc brake
(b) Piston boot
(c) Caliper body
(d) Piston seal

4) Apply grease contained in the piston seal kit to the lock pin - front brake, the outer surface of guide pin - front brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot. (Floating 2-POT piston type)
5) Install the pin boot to the lock pin - front brake and the guide pin - front brake, and insert them into the support - front disc brake. (Floating 2-POT piston type)

CAUTION:
Insert the lock pin - front brake and guide pin - front brake into specified position, and make sure that they slide and seat properly.



(a) Pin boot
(b) Lock pin - front brake or guide pin - front brake
(c) Grease applied area

E: INSPECTION

1) Check the piston sliding part of caliper body and the piston for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

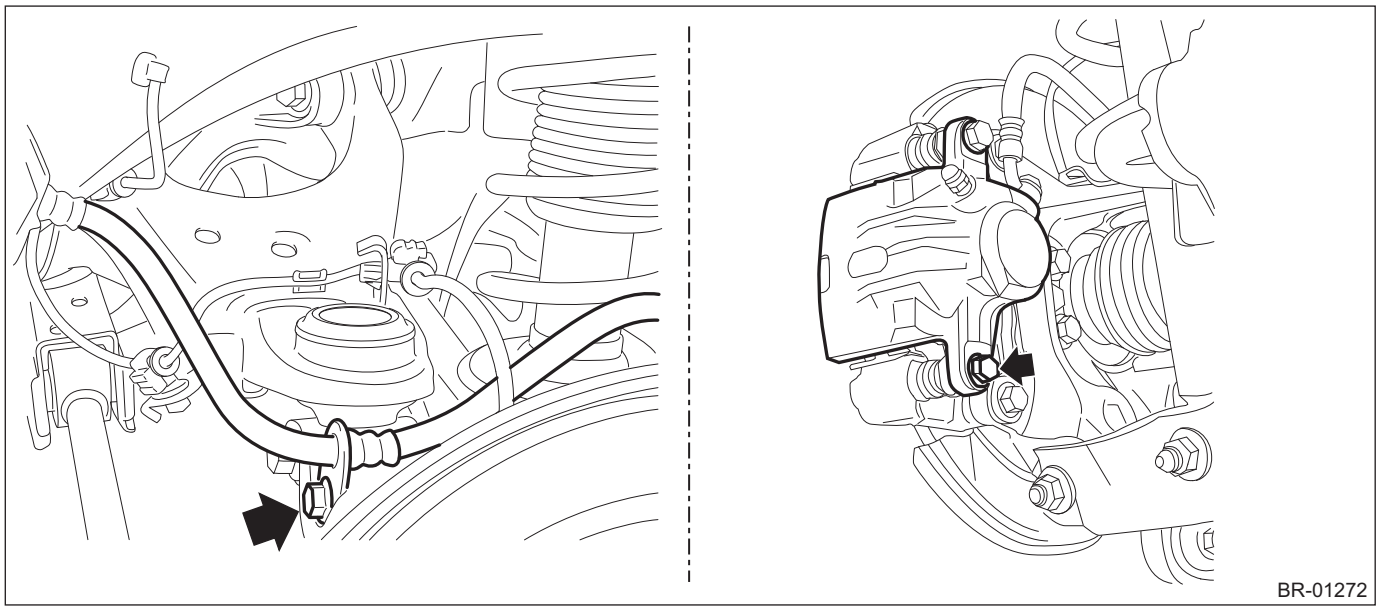
5. Rear Brake Pad

A: REMOVAL

1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear.
   (1) Remove the brake hose bracket.
   (2) Remove the caliper bolt on the lower side.
   (3) Raise the caliper body assembly and remove the pad - disc brake rear.

NOTE:
Do not disconnect the brake hose from the caliper body assembly.

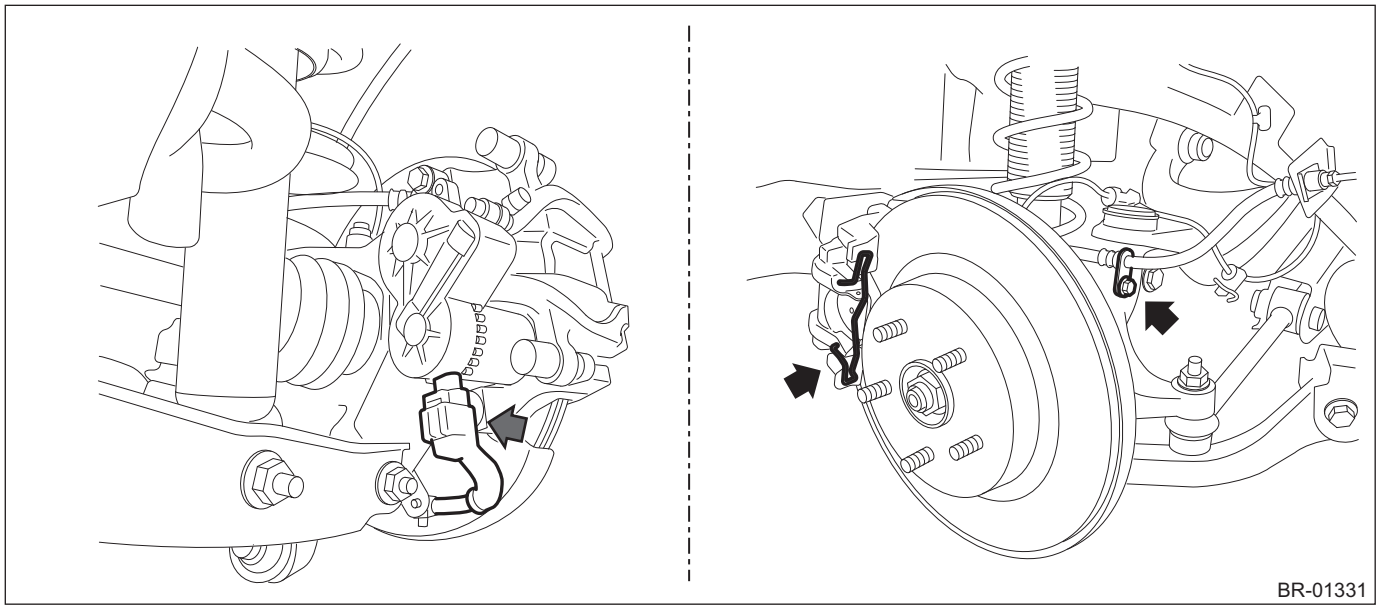


2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

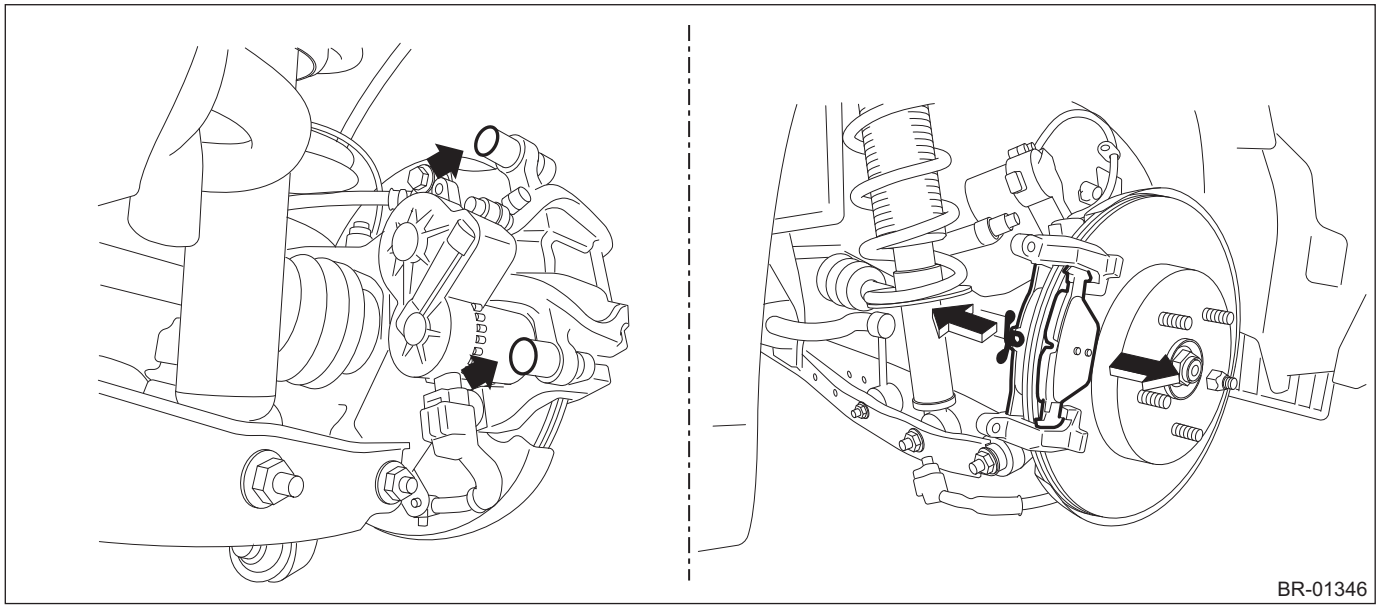
NOTE:
For detailed operation procedures, refer to “Application help”.
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Lift up the vehicle, and then remove the rear wheels.
5) Remove the pad - disc brake rear.
   (1) Disconnect the connector.

(2) Remove the pad clip and the brake hose bracket.



(3) Remove the cap and the caliper bolt, and remove the caliper body assembly.
(4) Remove the pad - disc brake rear.

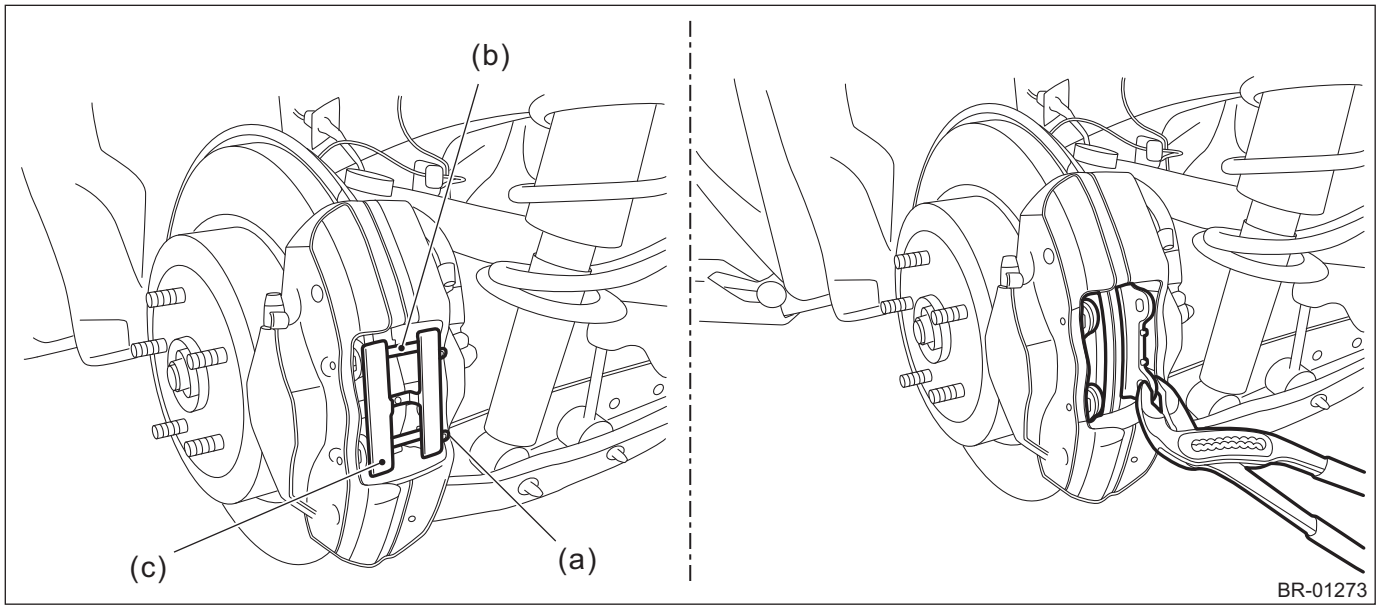
Preparation tool:
Hexagon wrench: 7 mm (0.28 in)



3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

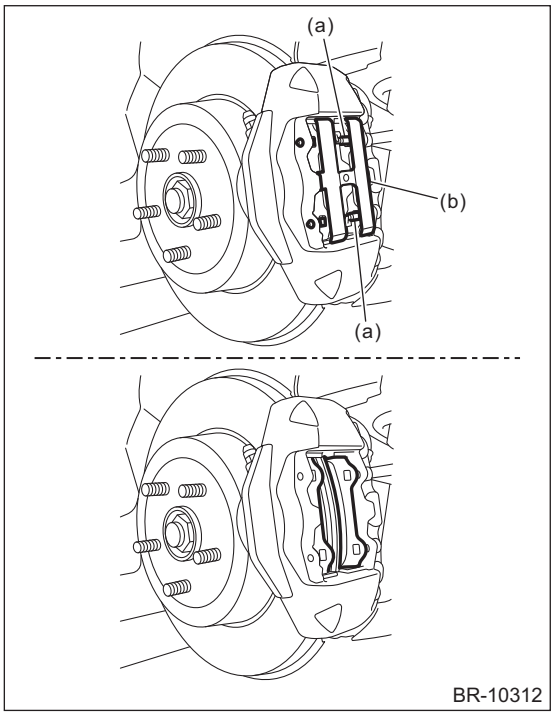
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear.
(1) Remove the clip - slide pin (a), and remove the pin - disc brake (b) and cross spring (c).

(2) While pushing back the piston with a wrench, remove the pad - disc brake rear.



4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear.
   (1) Remove the pin - disc brake (a) and cross spring (b).
   (2) Remove the pad - disc brake rear.

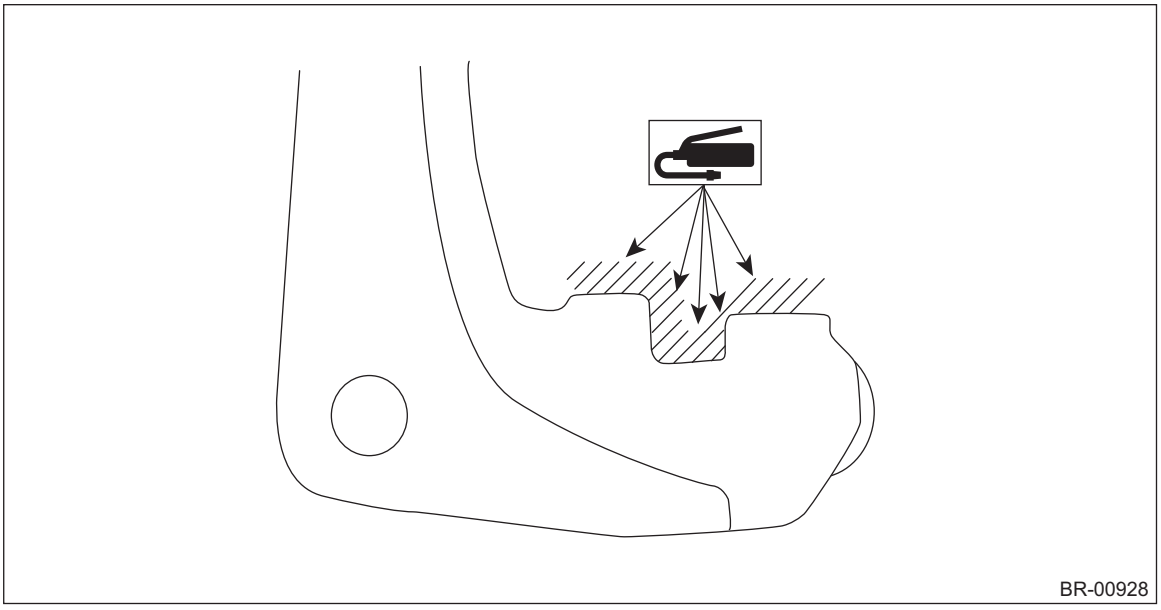


B: INSTALLATION

1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

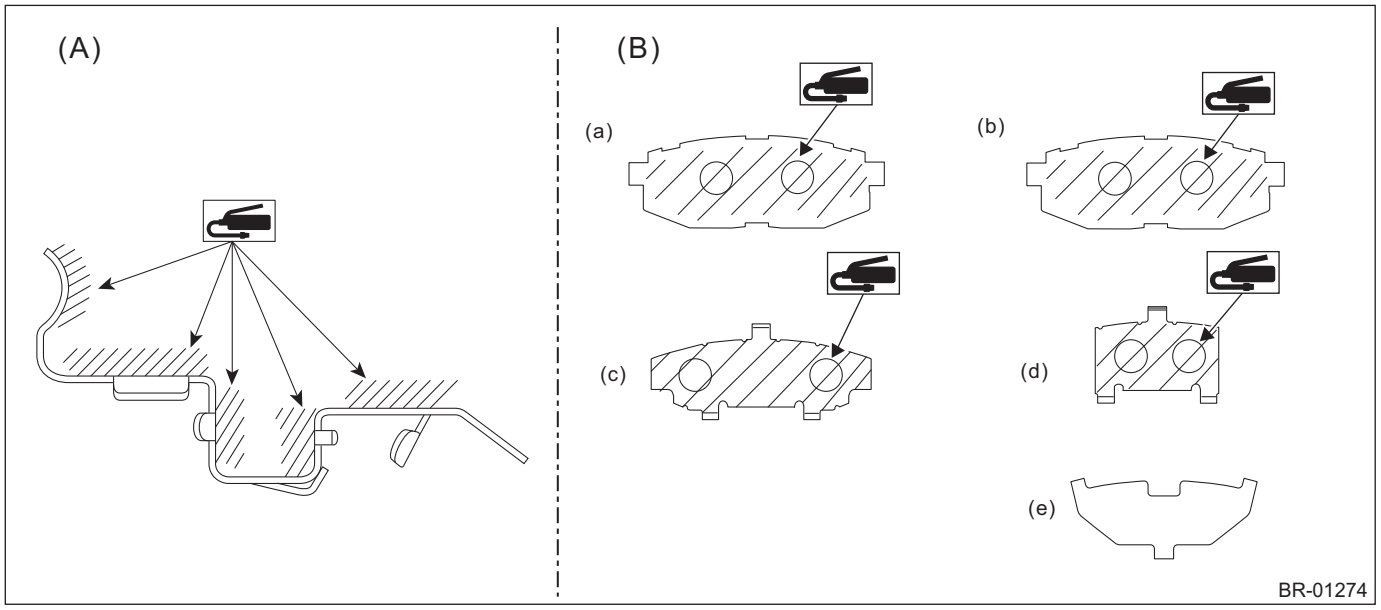
NOTE:
Remove the pad clip before installation, and remove mud, foreign matter and rust from the caliper body assembly and the support - rear disc brake.
1) Apply a thin coat of brake grease or the grease contained in pad kit to the support - rear disc brake.

Preparation items:
Grease: An item contained in the pad kit, or brake grease (Part No. 003602001)



2) Check the brake pad. <Ref. to BR-53, INSPECTION, Rear Brake Pad.>
3) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Preparation items:
Grease (pad side (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



(A) Pad clip - rear brake
(B) Pad - disc brake rear and the shim - disc brake rear

(a) Pad - disc brake rear outer
(b) Pad - disc brake rear inner
(c) Shim - disc brake rear inner
(d) Shim - disc brake rear inner
(e) Shim - disc brake rear outer

4) Install the pad - disc brake rear.

NOTE:
Install the pad wear indicator in proper direction.

5) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
6) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
7) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Install the pad - disc brake rear.
2) Install the caliper body assembly and the cap.
3) Install the pad clip and the brake hose bracket.

Tightening torque:
Caliper bolt: 25 N·m (2.5 kgf-m, 18.4 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
4) Install the connector.
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

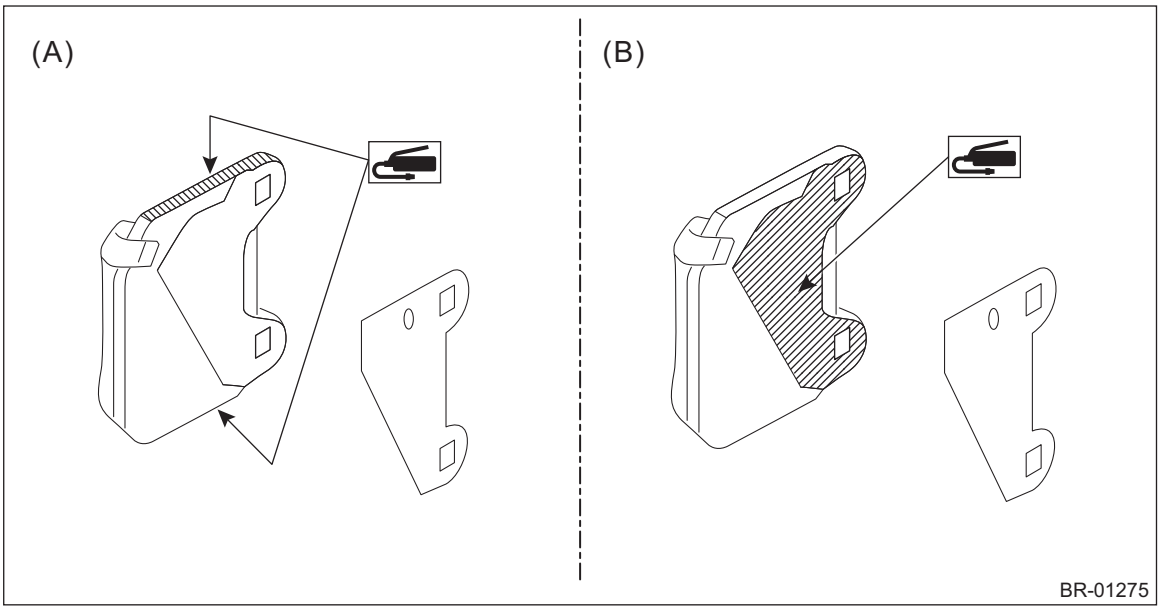
NOTE:
For detailed operation procedures, refer to “Application help”.
7) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
8) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

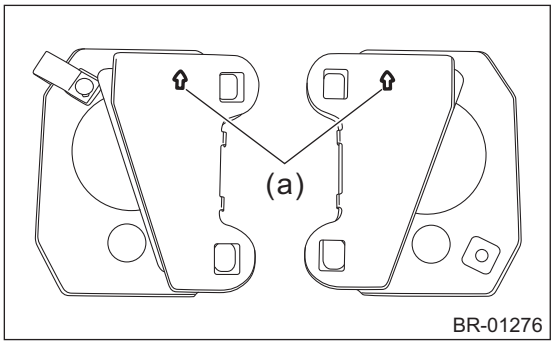
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the side of the pad - disc brake rear, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Preparation items:
Grease (pad side (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



2) Install the pad - disc brake rear.

NOTE:
Install so that the arrow (a) faces upward.



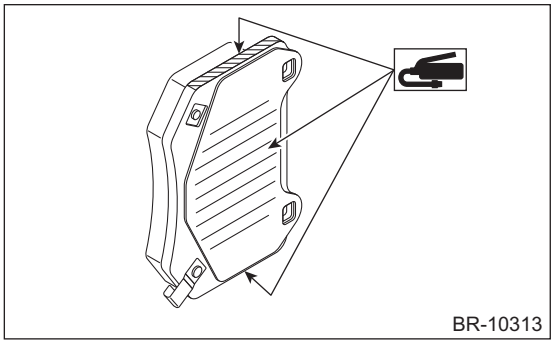
3) Install the cross spring.
4) Install the pin - disc brake.
5) Install the clip - slide pin.
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

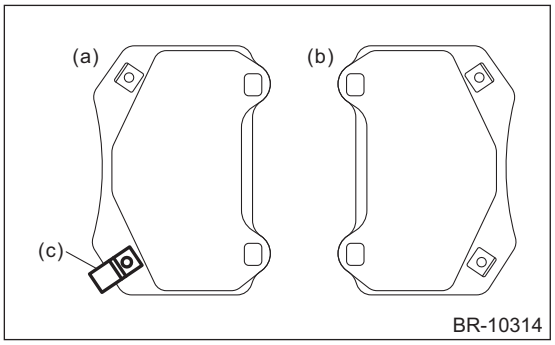
NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Apply a thin coat of grease to the pad - disc brake rear.

Preparation items:
Grease: An item contained in the pad kit or equivalent



2) Install the pad - disc brake rear.

NOTE:
Install the parts with the pad wear indicator facing downward.



(a) Pad - disc brake rear outer
(b) Pad - disc brake rear inner
(c) Pad wear indicator

3) Install the cross spring.
4) Install the pin - disc brake.
5) Install the rear wheels.

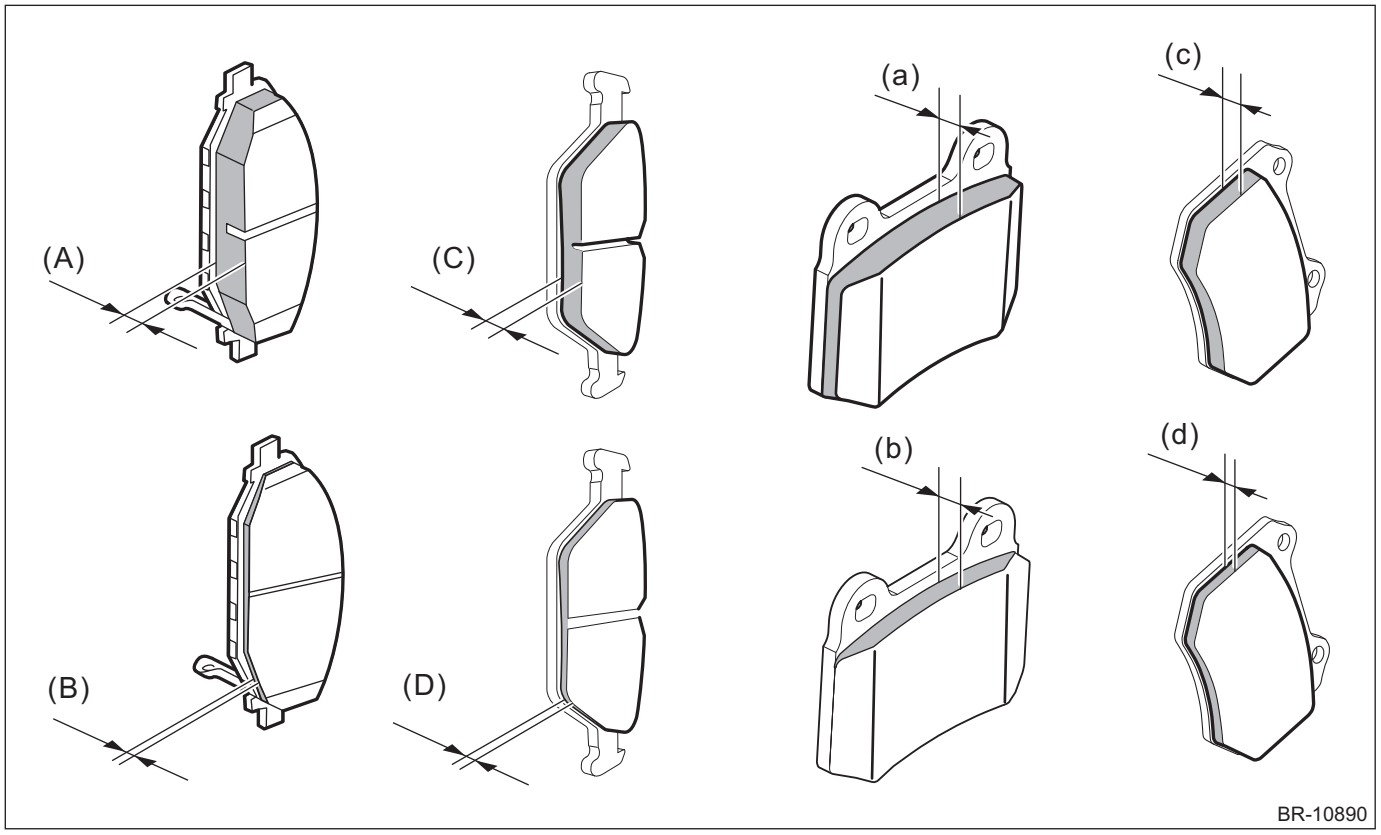
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

1) Check the thickness of the pad - disc brake rear.

NOTE:
- Always replace the pads of both wheels and both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.

• Pad wear indicators are installed on the pad - disc brake rear inner (floating 1-POT piston type & opposed 2-POT piston type except for WRX STI model) or on the pad - disc brake rear outer (opposed 2-POT piston type for WRX STI model), and a squeaking sound is heard when the pad is worn to the limit.



• Floating 1-POT piston type (drum-in-disc type)

	Standard (A)	Wear limit (B)
Pad thickness	9 mm (0.354 in)	1.5 mm (0.059 in)

• Floating 1-POT piston type (electronic parking brake type)

	Standard (C)	Wear limit (D)
Pad thickness	9 mm (0.354 in)	1.5 mm (0.059 in)

• Opposed 2-POT piston type, except for WRX STI model

	Standard (a)	Wear limit (b)
Pad thickness	9 mm (0.354 in)	1.55 mm (0.061 in)

• Opposed 2-POT piston type, for WRX STI model

	Standard (c)	Wear limit (d)
Pad thickness	10 mm (0.394 in)	2.8 mm (0.11 in)

2) If the wear limit is exceeded in the inspection, replace the brake pad.

D: REPLACEMENT

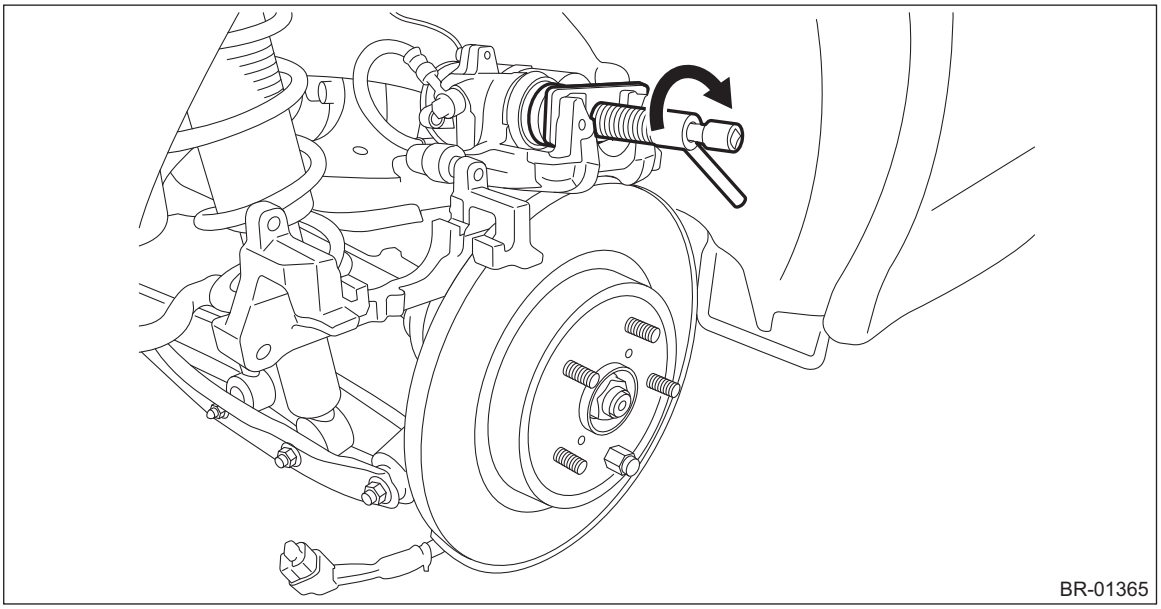
1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
3) Remove the pad - disc brake rear. <Ref. to BR-47, REMOVAL, Rear Brake Pad.>

4) Press back the piston - disc brake.
5) Install the pad - disc brake rear. <Ref. to BR-49, INSTALLATION, Rear Brake Pad.>
6) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen.
7) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.

NOTE:
Perform the following replacement procedure if the Subaru Select Monitor cannot be used.
1. Remove the disc brake assembly and the pad - disc brake rear.
2. Remove the bolt securing the lower side of the support - rear disc brake, loosen the upper side, and then slide the support - rear disc brake upward and hold it.
3. Secure the disc brake assembly as shown in the figure, and push back the piston while rotating it using the tool.

Preparation tool:
Disc brake piston tool: KTC disc parking tool rotor (E•F) ABX104
Disc brake piston tool: OTC brake caliper tool adapter No. 7317A or equivalent



4. Install the support - rear disc brake and the disc brake assembly to the specified tightening torque.

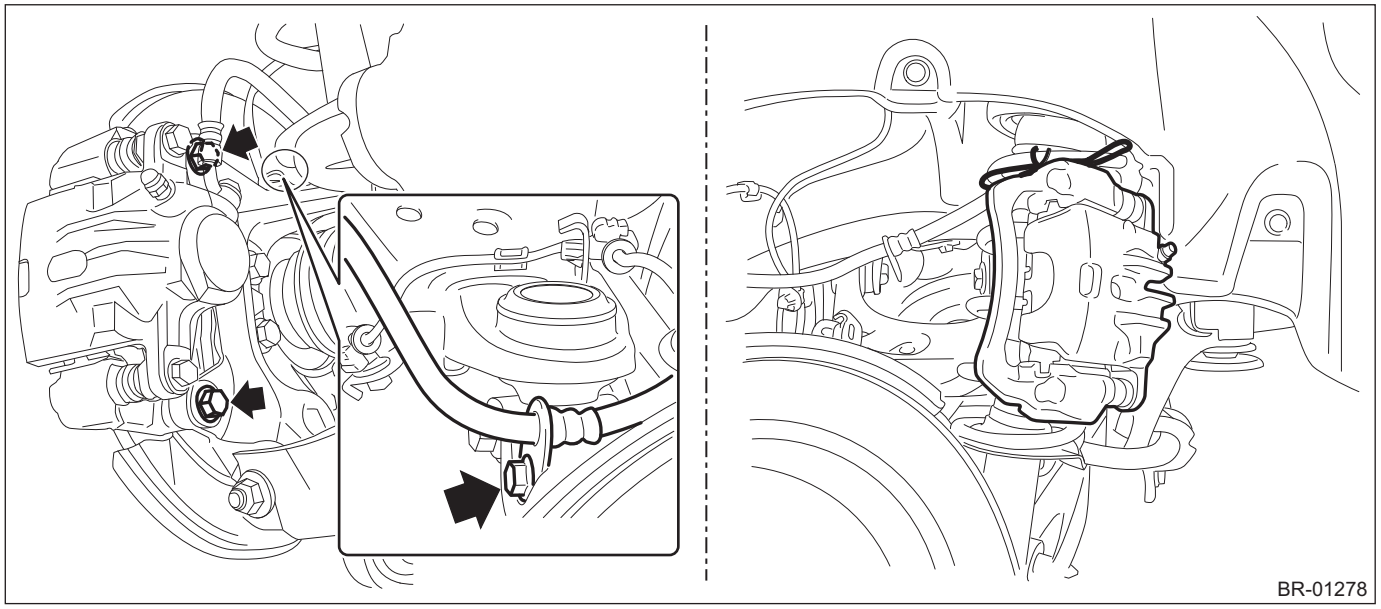
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to BR-12, REAR DISC BRAKE (ELECTRONIC PARKING BRAKE TYPE), COMPONENT, General Description.>

6. Rear Disc Rotor

A: REMOVAL

1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

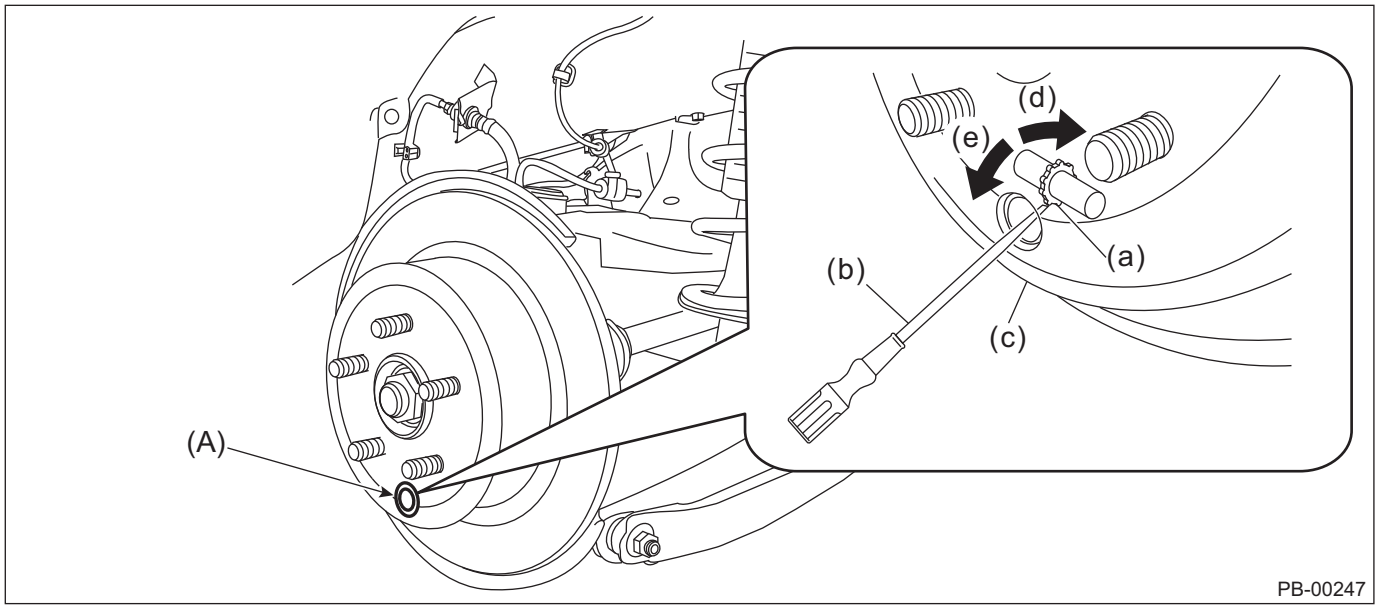
1) Lift up the vehicle, and then remove the rear wheels.
2) Release the lever assembly - hand brake.
3) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.



4) Remove the disc rotor.

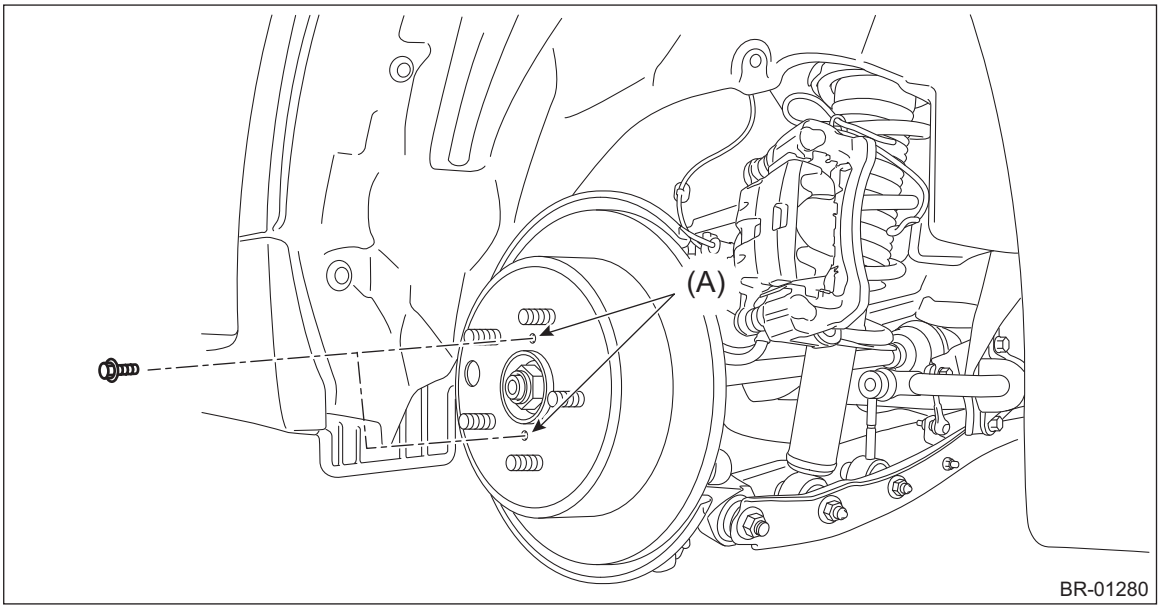
NOTE:
If it is difficult to remove the disc rotor, perform the following two methods in order.

1. Remove the adjusting hole cover (A), and rotate the adjuster assembly - rear brake in the direction of arrow (e) by inserting a flat tip screwdriver.



(a) Adjuster ASSY - rear brake
(b) Flat tip screwdriver
(c) Disc rotor
(d) Extend the adjuster ASSY - rear brake
(e) Shorten the adjuster ASSY - rear brake

2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

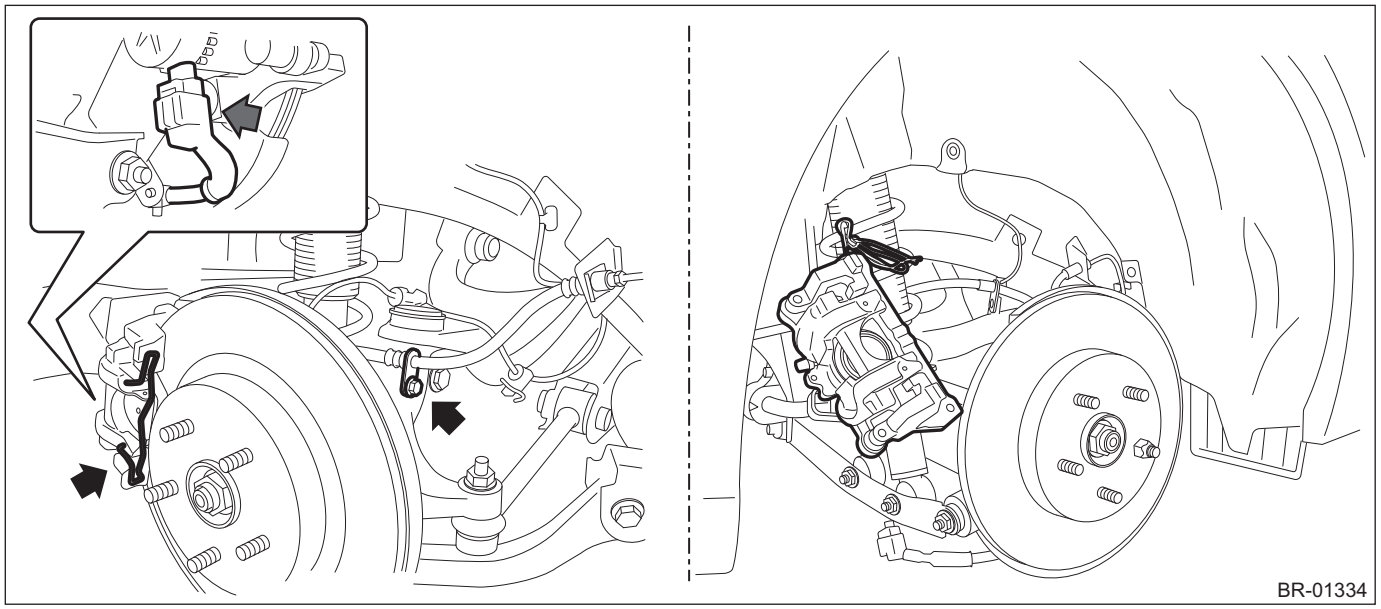


2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

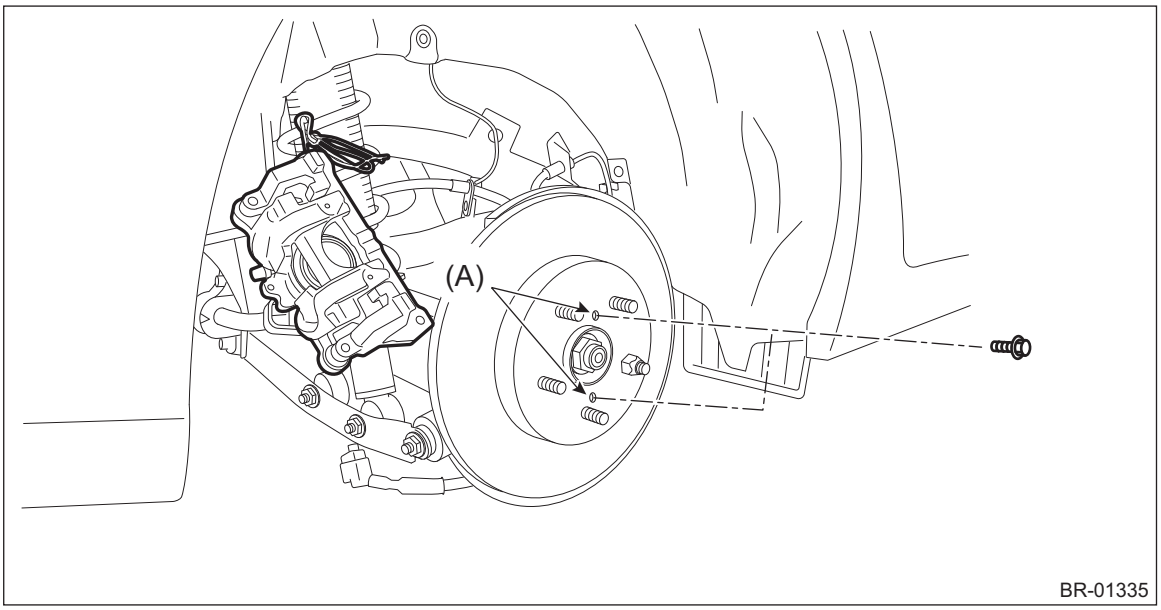
NOTE:
For detailed operation procedures, refer to “Application help”.
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Lift up the vehicle, and then remove the rear wheels.

5) Remove the disc brake assembly.
(1) Remove the pad clip, the connector and the brake hose bracket.
(2) Remove the mounting bolt, and remove the disc brake assembly.
(3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.



6) Remove the disc rotor.

NOTE:
If the disc rotor is difficult to remove, proceed as follows.
When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

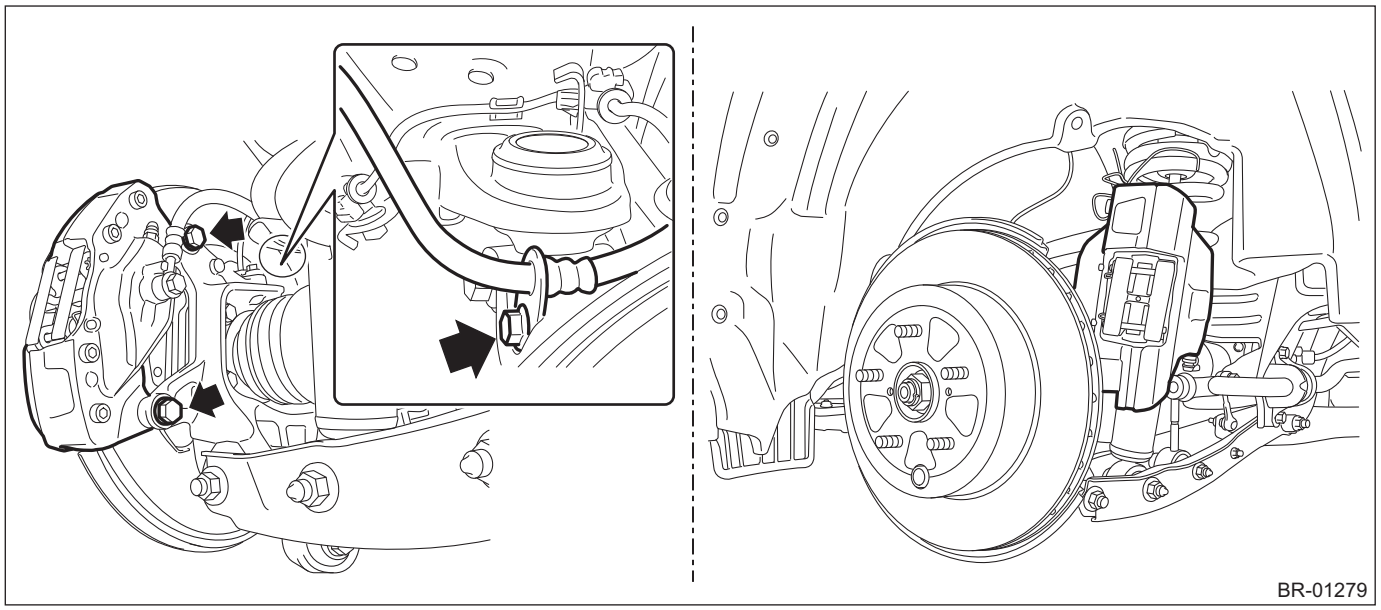


3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

1) Lift up the vehicle, and then remove the rear wheels.
2) Release the lever assembly - hand brake.
3) Remove the disc brake assembly.
(1) Remove the brake hose bracket.
(2) Remove the mounting bolt, and remove the disc brake assembly.

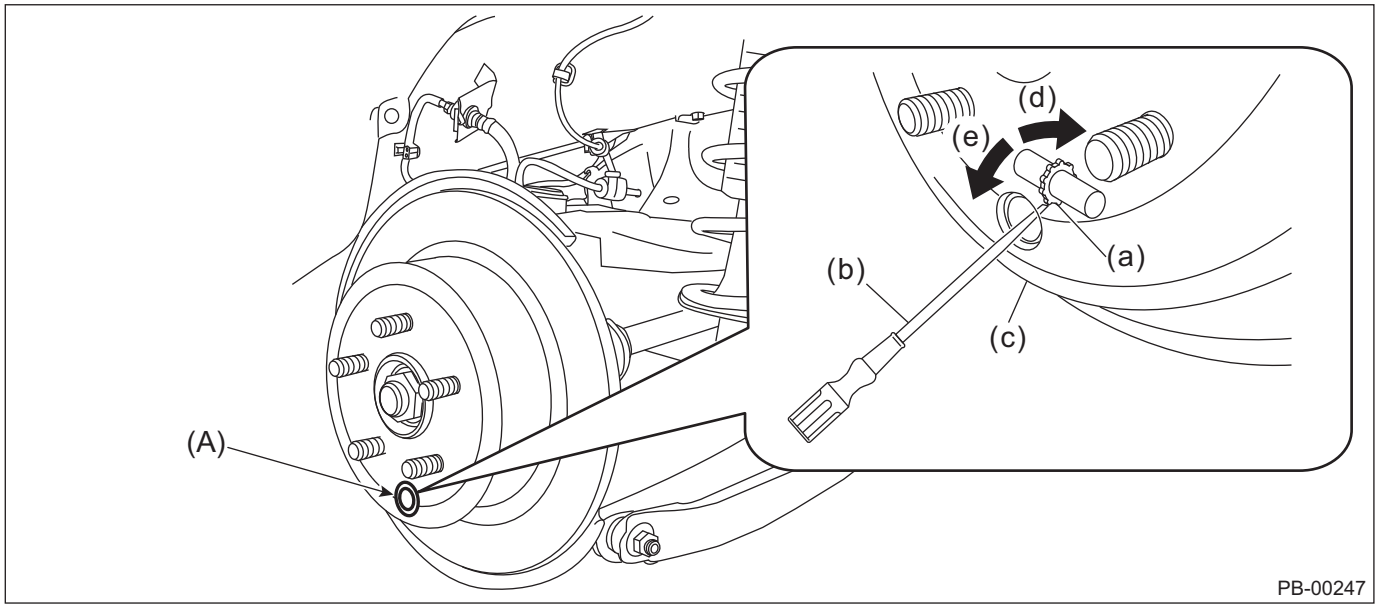
(3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

CAUTION:
Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.



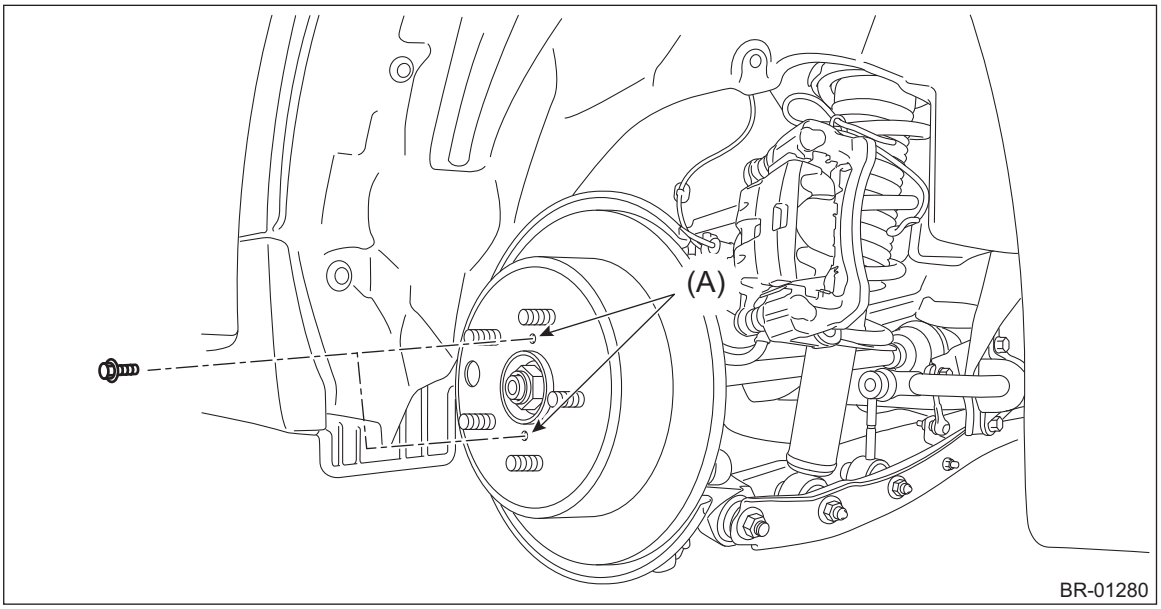
4) Remove the disc rotor.

NOTE:
If it is difficult to remove the disc rotor, perform the following two methods in order.
1. Remove the adjusting hole cover (A), and rotate the adjuster assembly - rear brake in the direction of arrow (e) by inserting a flat tip screwdriver.



(a)	Adjuster ASSY - rear brake	(c)	Disc rotor	(e)	Shorten the adjuster ASSY - rear brake
(b)	Flat tip screwdriver	(d)	Extend the adjuster ASSY - rear brake		

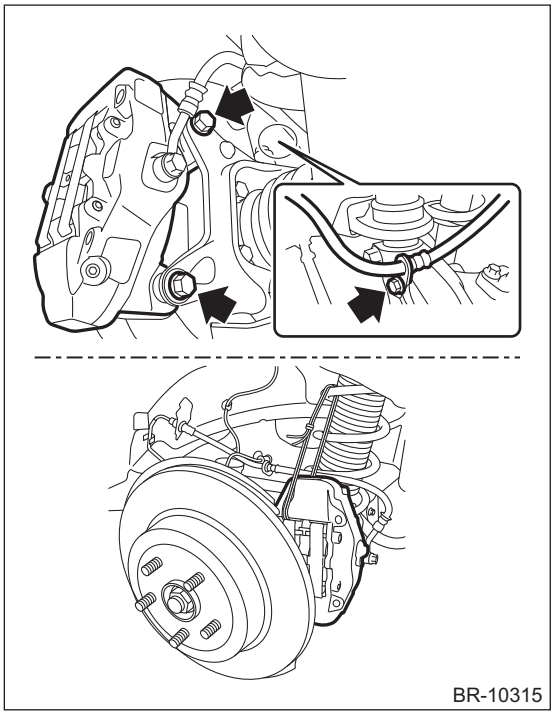
2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.



4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

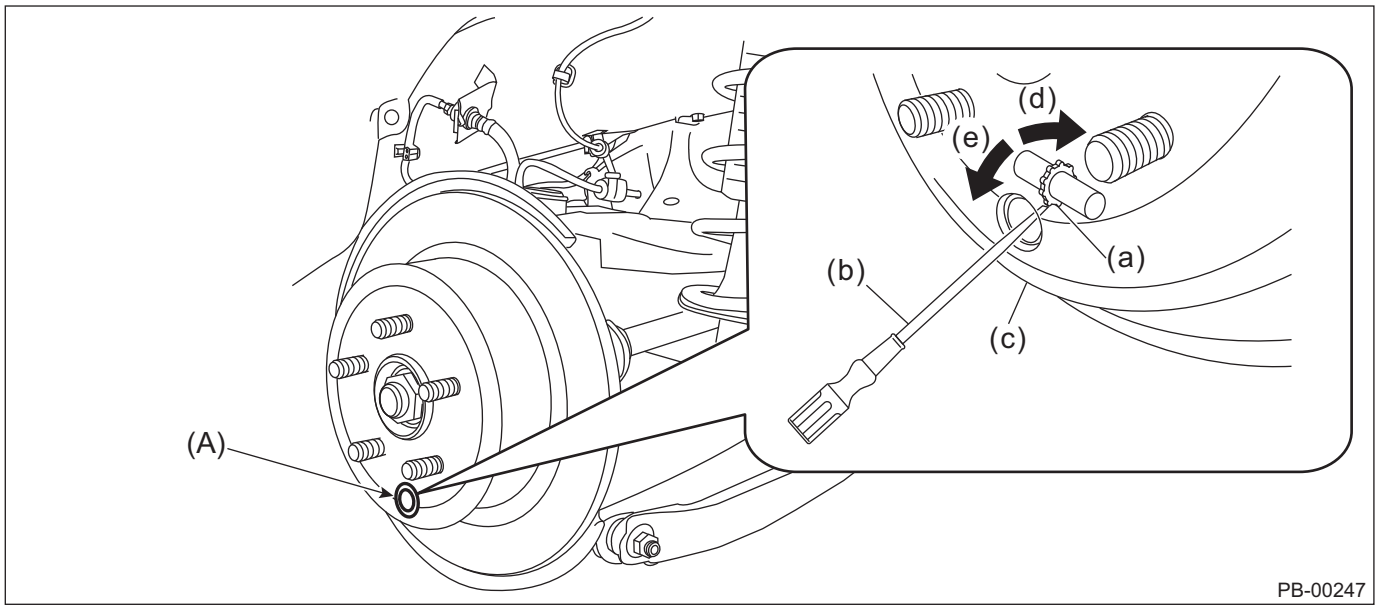
1) Lift up the vehicle, and then remove the rear wheels.
2) Release the lever assembly - hand brake.
3) Remove the disc brake assembly.
   (1) Remove the brake hose bracket.
   (2) Remove the mounting bolt, and remove the disc brake assembly.
   (3) Prepare wiring harnesses etc. to be discarded, and suspend the disc brake assembly from the shock absorber assembly.

CAUTION:
Since the 18-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.



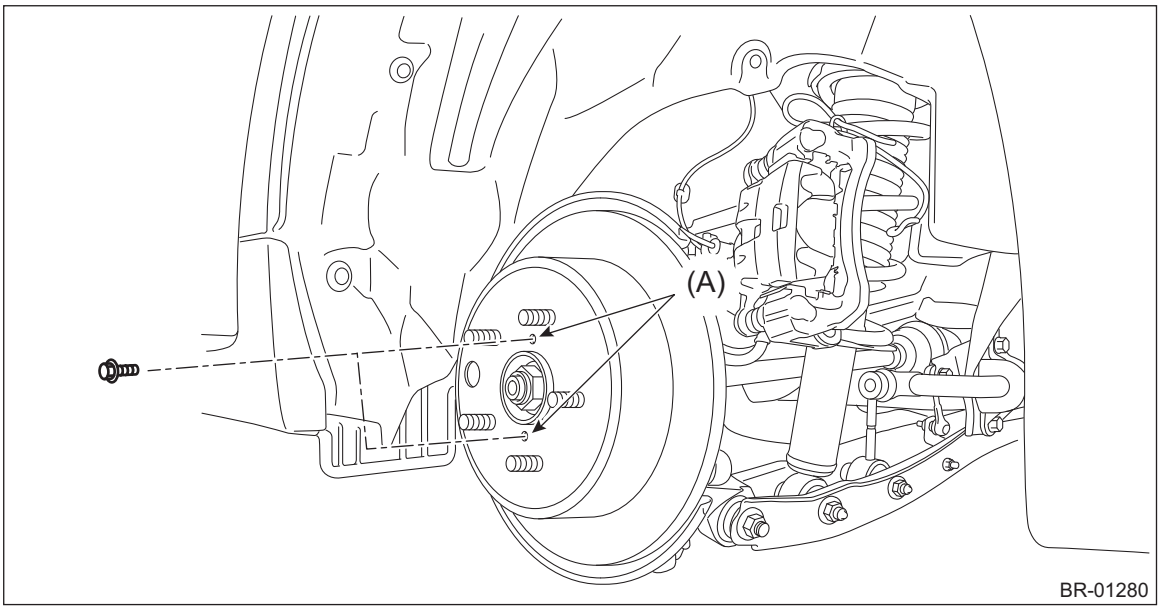
4) Remove the disc rotor.

NOTE:
If it is difficult to remove the disc rotor, perform the following two methods in order.
1. Remove the adjusting hole cover (A), and rotate the adjuster assembly - rear brake in the direction of arrow (e) by inserting a flat tip screwdriver.



(a) Adjuster ASSY - rear brake
(b) Flat tip screwdriver
(c) Disc rotor
(d) Extend the adjuster ASSY - rear brake
(e) Shorten the adjuster ASSY - rear brake

2. When the disc rotor is difficult to be removed from the hub unit COMPL - rear axle, screw in 8 mm (0.31 in) bolt to the threaded part of the disc rotor (A), and remove the disc rotor.

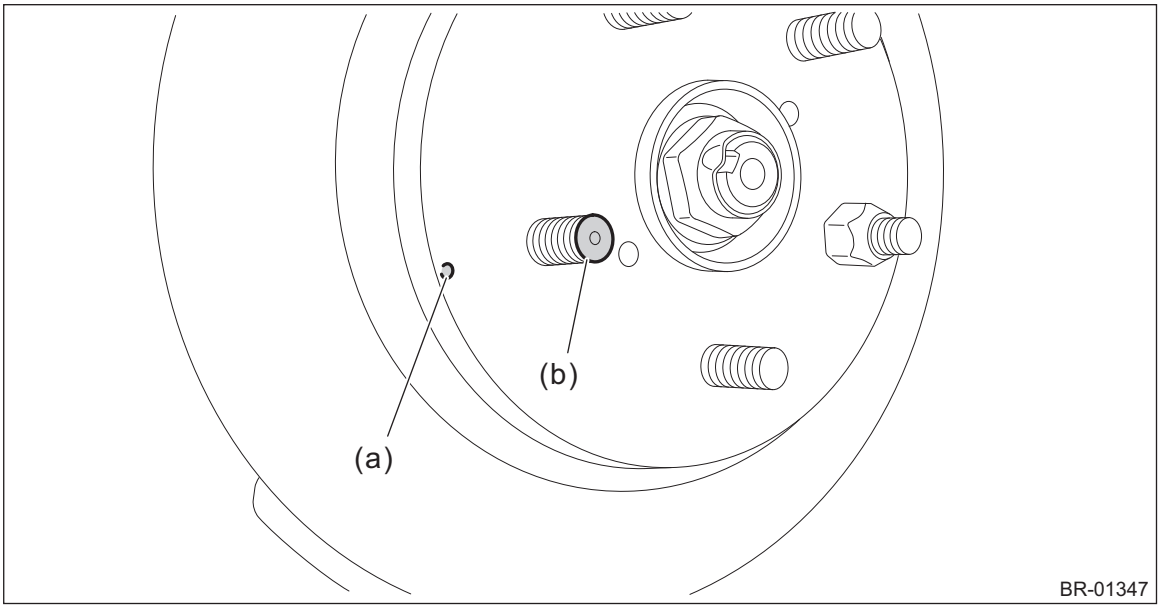


B: INSTALLATION

1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>
2) Install the disc rotor.

NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.



3) Adjust the parking brake. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
4) Install the disc brake assembly and the brake hose bracket.

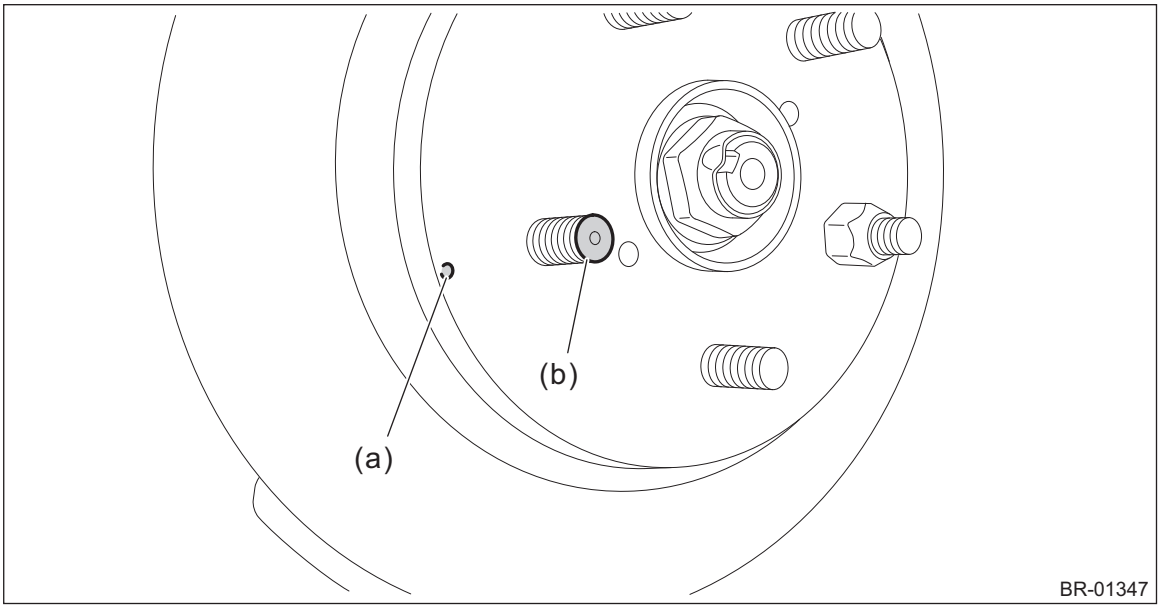
Tightening torque:
Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>
2) Install the rear disc rotor.

NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.



3) Install the disc brake assembly, the pad clip, connector and the brake hose bracket.

Tightening torque:
Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-12, REAR DISC BRAKE (ELECTRONIC PARKING BRAKE TYPE), COMPONENT, General Description.>
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

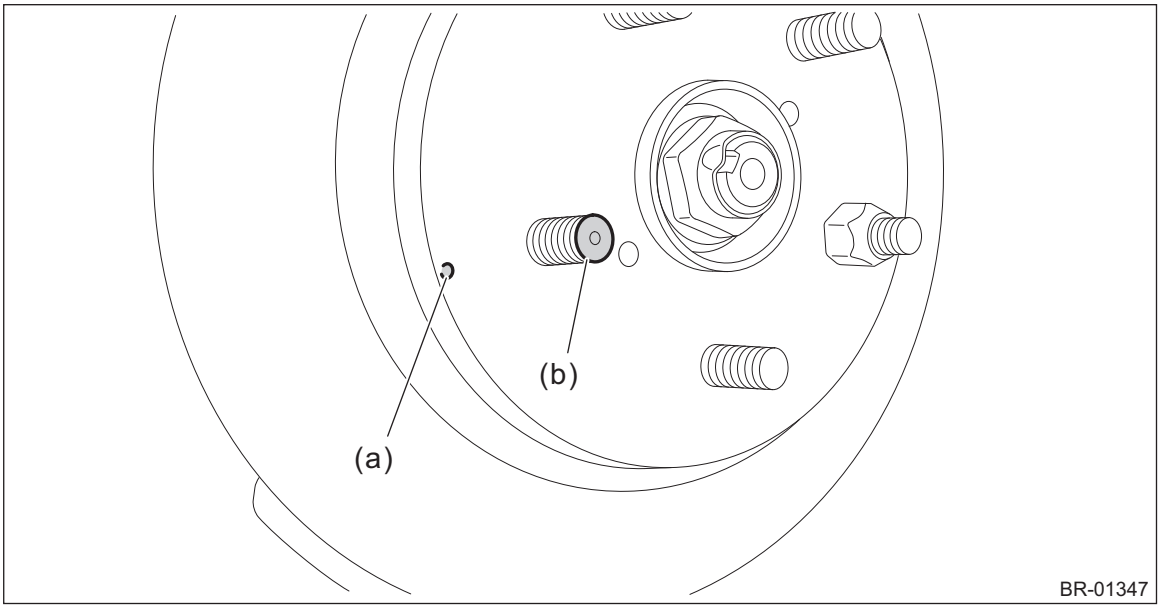
NOTE:
For detailed operation procedures, refer to "Application help".
6) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
7) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>
2) Install the disc rotor.

NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.



3) Adjust the parking brake. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
4) Install the disc brake assembly and the brake hose bracket.

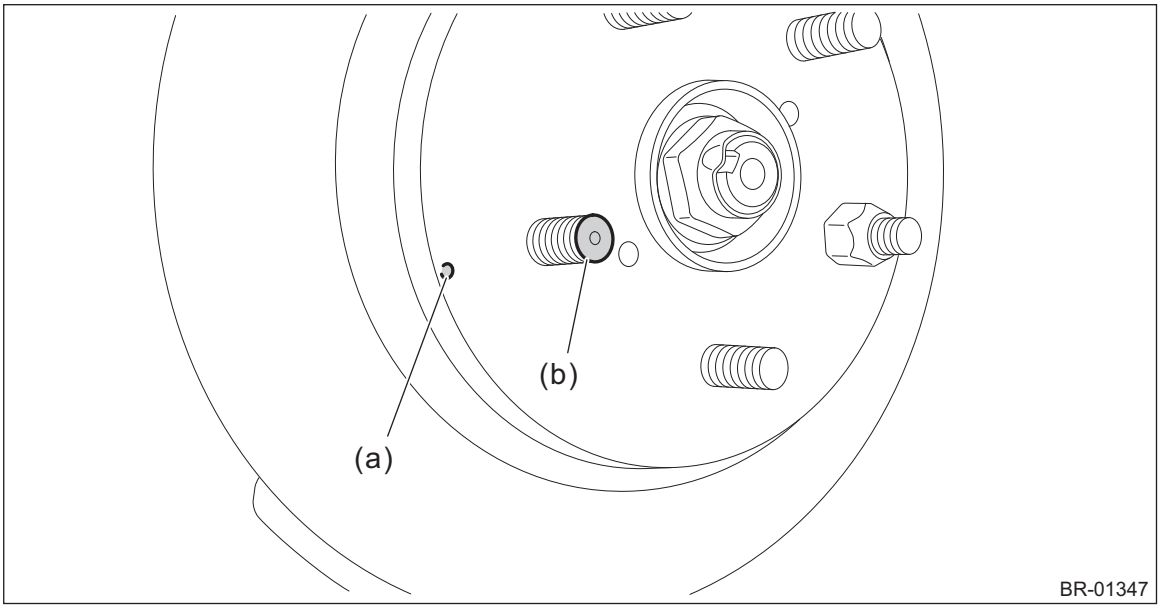
Tightening torque:
Mounting bolt: 73 N·m (7.4 kgf-m, 53.8 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check the rear disc rotor. <Ref. to BR-65, INSPECTION, Rear Disc Rotor.>
2) Install the disc rotor.

NOTE:
When installing the rear disc rotor, match the alignment mark (a) of the rear disc rotor and the alignment mark (b) of the bolt - hub.



3) Adjust the parking brake. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
4) Install the disc brake assembly and the brake hose bracket.

Tightening torque:
Mounting bolt: 73 N·m (7.4 kgf-m, 53.8 ft-lb)
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)
5) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: INSPECTION

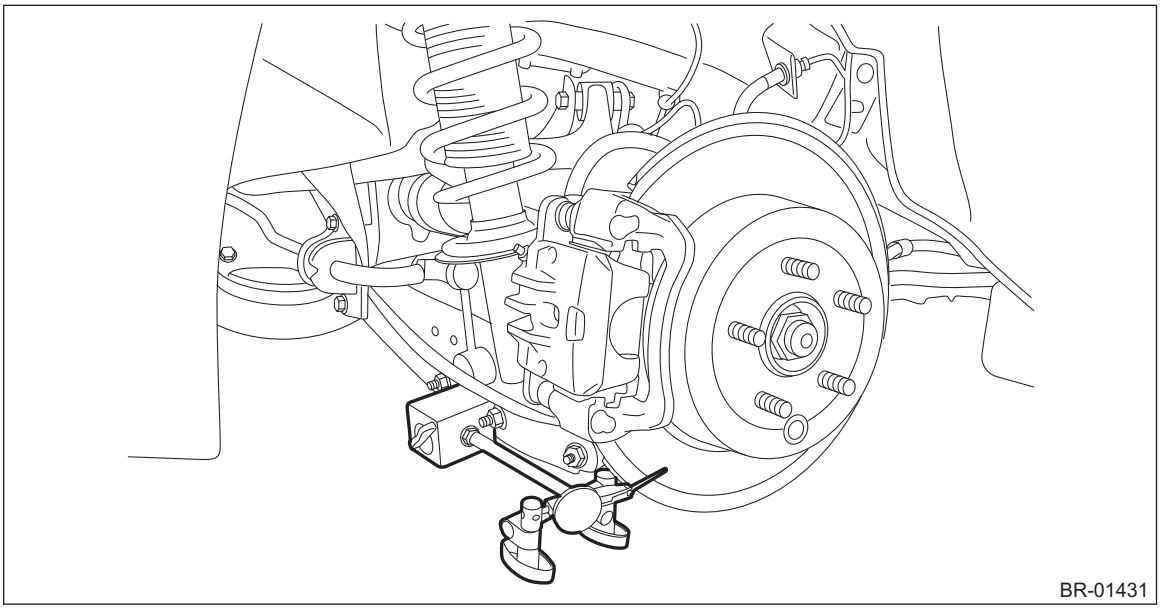
1. DISC ROTOR RUNOUT CHECK

1) Check the hub unit COMPL - rear axle for free play and runout before the inspection of disc rotor runout limit. <Ref. to DS-41, INSPECTION, Rear Hub Unit Bearing.>
2) Check the disc rotor runout.
(1) Remove the caliper body assembly. <Ref. to BR-68, REMOVAL, Rear Disc Brake Assembly.>
(2) Secure the disc rotor by tightening the five wheel nuts.
(3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the outer disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
Floating 1-POT piston type (drum-in-disc type): 0.05 mm (0.002 in)
Floating 1-POT piston type (electronic parking brake type): 0.05 mm (0.002 in)
Opposed 2-POT piston type: 0.07 mm (0.0028 in)

NOTE:
<Example of magnet stand and dial gauge installation>

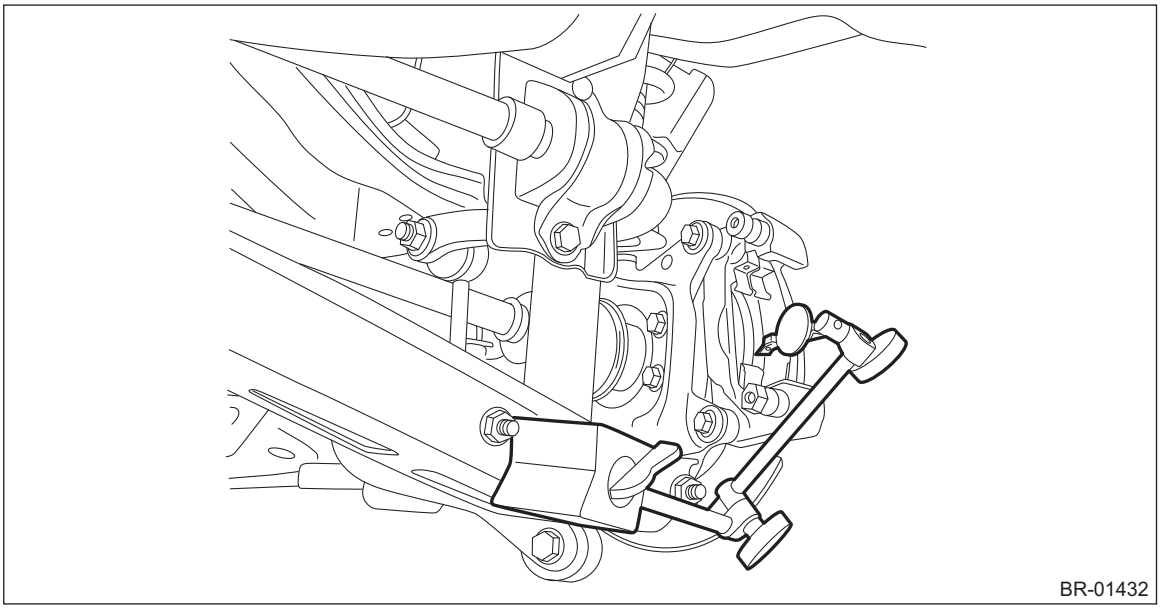
The location where the magnet stand is installed varies to stabilize the magnet stand.



(4) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference, and check the inner disc rotor runout while rotating the disc rotor.

Disc rotor runout limit:
Floating 1-POT piston type (drum-in-disc type): 0.05 mm (0.002 in)
Floating 1-POT piston type (electronic parking brake type): 0.05 mm (0.002 in)
Opposed 2-POT piston type: 0.07 mm (0.0028 in)

NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.



3) If the inspection result shows that the disc rotor runout exceeds service limit, perform the following procedure.
• Floating 1-POT piston type & opposed 2-POT piston type except for WRX STI model: Grind the disc rotor. Check the disc rotor thickness after grinding. <Ref. to BR-67, DISC ROTOR THICKNESS CHECK, INSPECTION, Rear Disc Rotor.>
• Opposed 2-POT piston type for WRX STI model: Replace the disc rotor. <Ref. to BR-60, OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL, REMOVAL, Rear Disc Rotor.>

2. DISC ROTOR THICKNESS CHECK

1) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness (A).

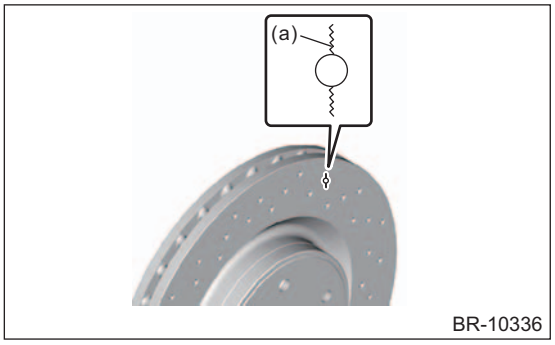
	Size	Standard	Wear limit	Disc rotor outer diameter
Disc rotor thickness (A)	15-inch	10 mm (0.39 in)	8.5 mm (0.335 in)	286 mm (11.26 in)
	17-inch (floating 1-POT piston type)	17 mm (0.67 in)	15 mm (0.59 in)	300 mm (11.81 in)
	17-inch (opposed 2-POT piston type)	20 mm (0.79 in)	18 mm (0.71 in)	316 mm (12.44 in)
	18-inch	20 mm (0.79 in)	18 mm (0.71 in)	326 mm (12.83 in)

2) If the wear limit is exceeded in the inspection, replace the disc rotor.

3. CHECK DISC ROTOR FOR CRACK AND DAMAGE (OPPOSED 2-POT PISTON TYPE FOR WRX STI MODEL)

1) Check the sliding surface of the disc rotor for cracks (a), damage and wear. If defective, replace the disc rotor.

CAUTION:
If there is a 5 mm (0.2 in) crack around the holes of disc rotor, always replace the disc rotor with a new one.



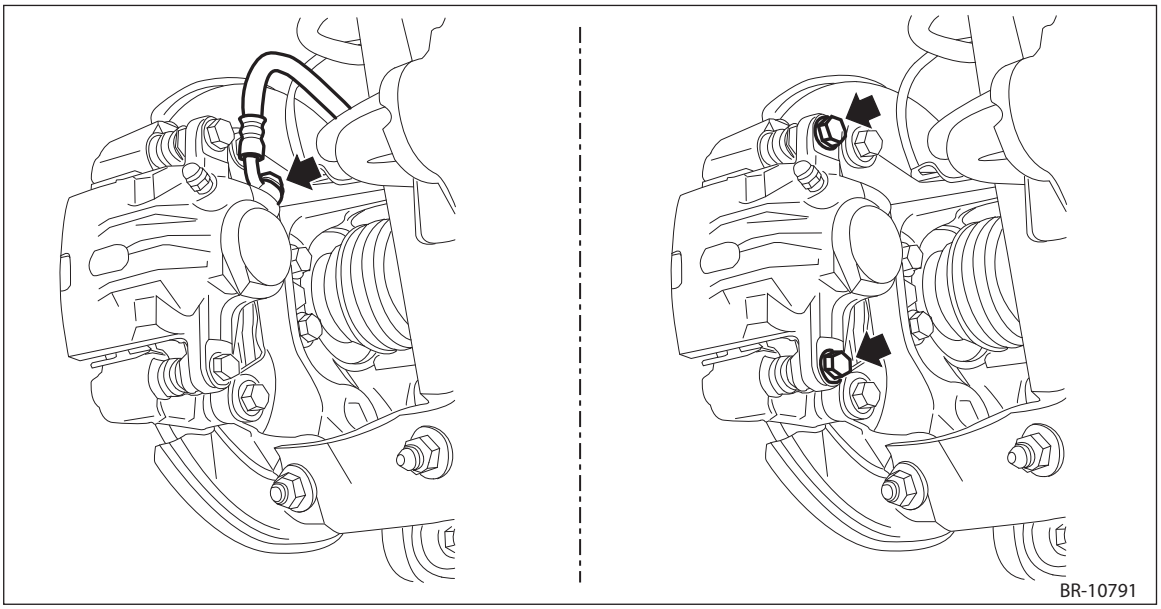
7. Rear Disc Brake Assembly

A: REMOVAL

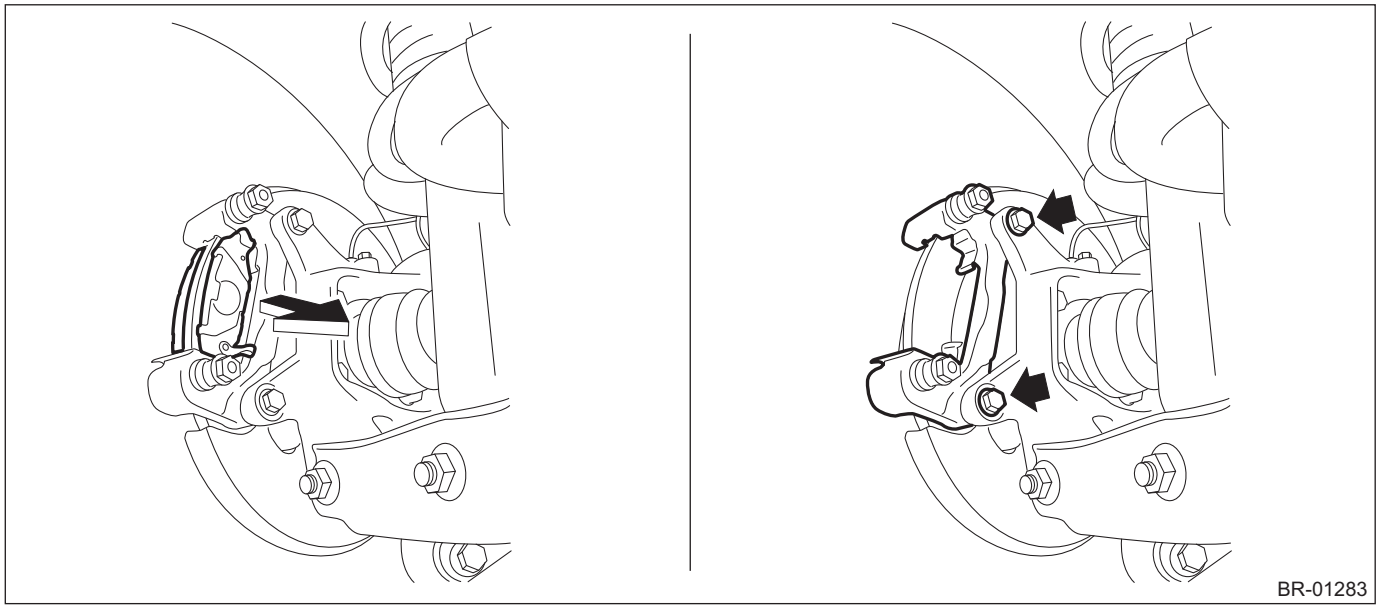
1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the union bolt and the caliper bolt, and remove the caliper body assembly.

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



3) Remove the support - rear disc brake.
   (1) Remove the pad - disc brake rear.
   (2) Remove the mounting bolts, and then remove the support - rear disc brake.



2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.

1) Release the parking brake.
2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.

3) Lift up the vehicle, and then remove the rear wheels.
4) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the parking brake actuator. <Ref. to PB-24, PARKING BRAKE ACTUATOR, REMOVAL, Parking Brake Actuator.>
6) Remove the caliper body assembly.

CAUTION:
• Do not detach the brake hose except when replacing the caliper body assembly.
• Install the plug bolt to the caliper body assembly when the brake hose is disconnected.
If air enters or fluid leaks by tilting, replace the caliper body assembly.

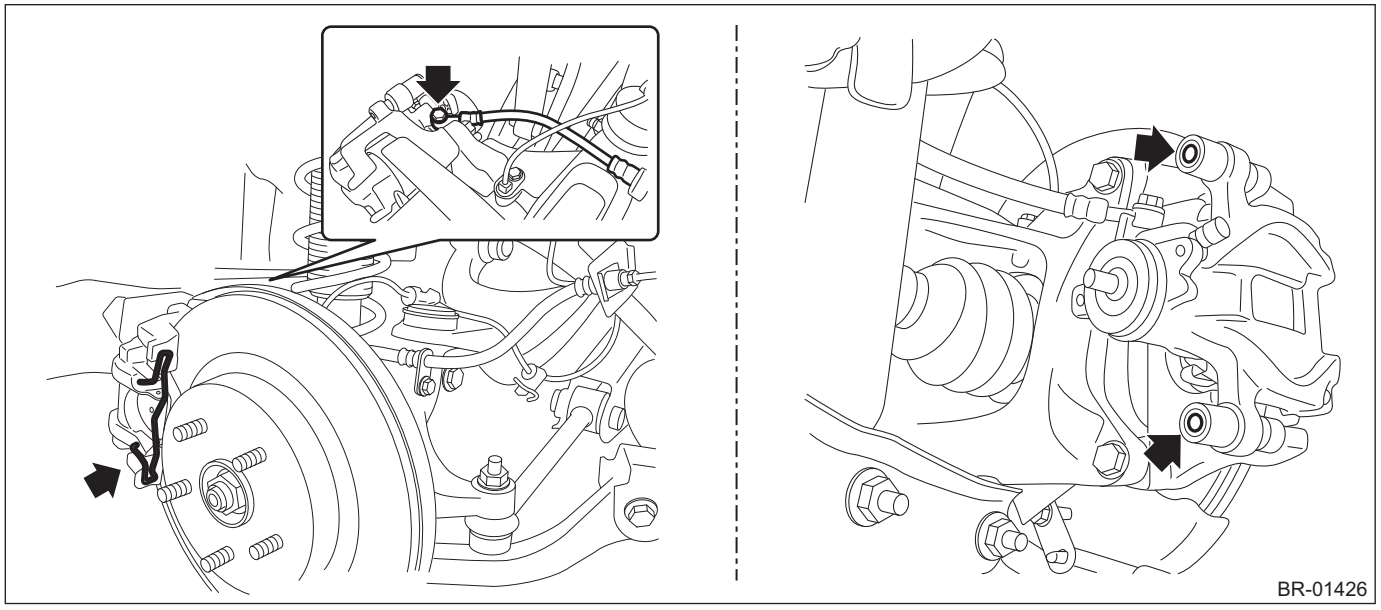
(1) Remove the union bolt, and then disconnect the brake hose.
(2) Install the fluid leakage protection plug to the caliper body.

Preparation items:
Part No.: PLUG BOLT (26642AL000)
Part No.: PLUG GASKET (26642AL010)

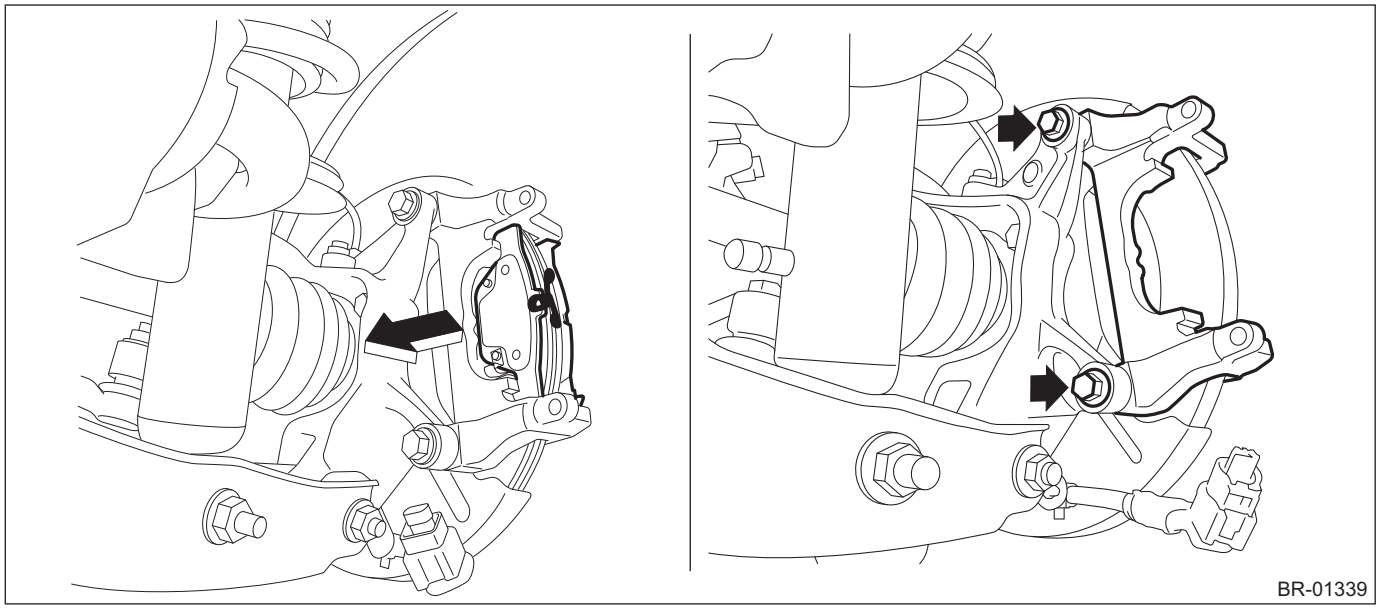
Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

(3) Remove the pad clip.
(4) Remove the cap and the caliper bolt, and remove the disc brake assembly.

Preparation tool:
Hexagon wrench: 7 mm (0.28 in)



7) Remove the support - rear disc brake.
(1) Remove the pad - disc brake rear.
(2) Remove the mounting bolts, and then remove the support - rear disc brake.



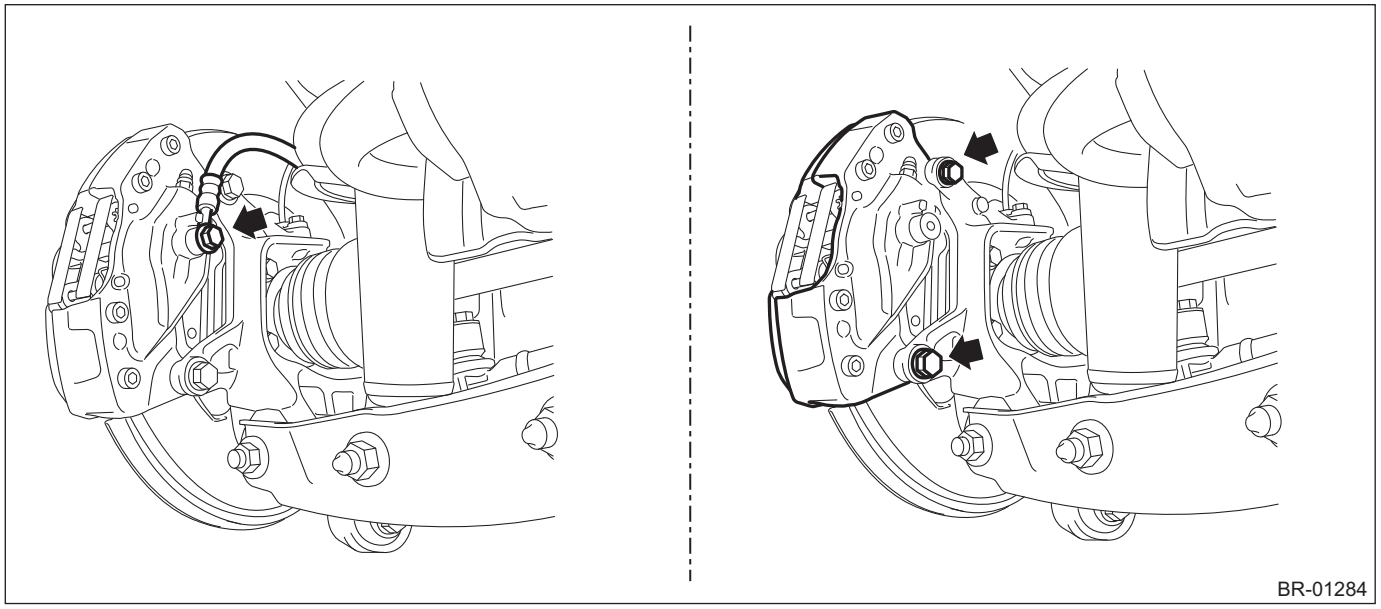
3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

CAUTION:
Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear. <Ref. to BR-48, OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL, REMOVAL, Rear Brake Pad.>
3) Remove the union bolt and the mounting bolt, and remove the disc brake assembly.

CAUTION:
• Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.

• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

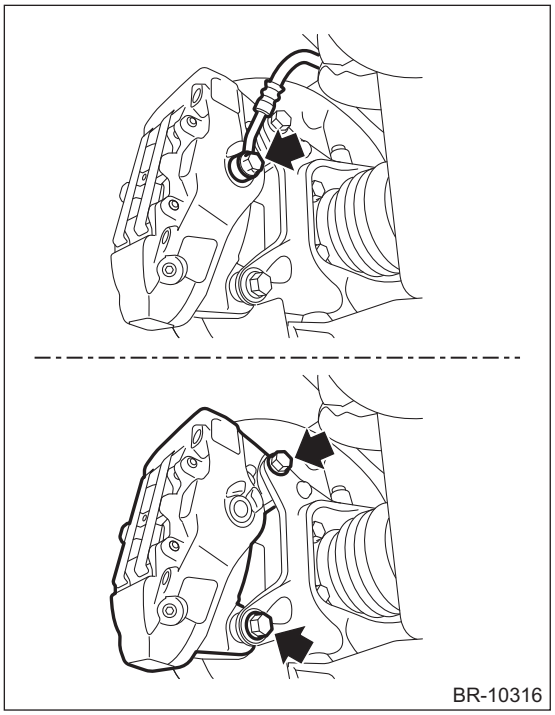


4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

CAUTION:
Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
1) Lift up the vehicle, and then remove the rear wheels.
2) Remove the pad - disc brake rear. <Ref. to BR-49, OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL, REMOVAL, Rear Brake Pad.>
3) Remove the union bolt and the mounting bolt, and remove the disc brake assembly.

CAUTION:
• Since the 18-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.

• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.



B: INSTALLATION

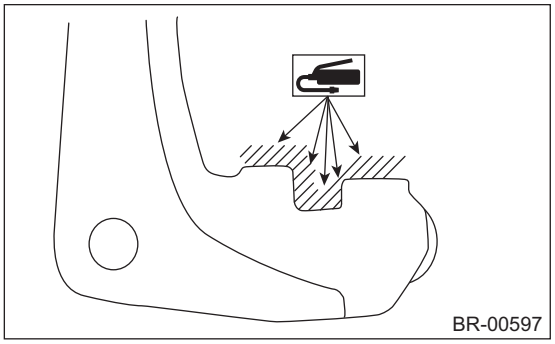
1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

NOTE:
Before installation, remove mud and foreign matter from the caliper body assembly and support - rear disc brake.

1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>

2) Apply a thin coat of grease to the support - rear disc brake.

Preparation items:
Grease: An item contained in the pad kit or equivalent

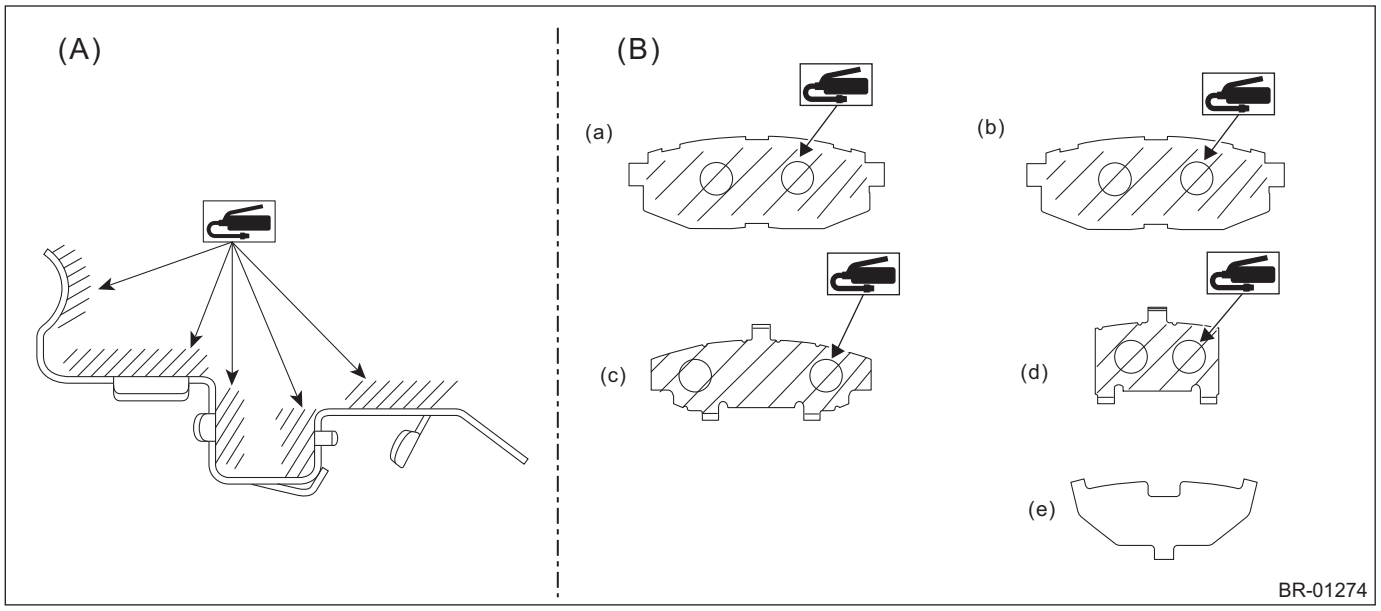


3) Install the support - rear disc brake to the housing assembly - rear axle.

Tightening torque:
Mounting bolt: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>

4) Apply a thin coat of grease to the pad clip, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Preparation items:
Grease (pad clip (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



(A) Pad clip - rear brake
(B) Pad - disc brake rear and the shim - disc brake rear

(a) Pad - disc brake rear outer
(b) Pad - disc brake rear inner
(c) Shim - disc brake rear inner
(d) Shim - disc brake rear inner
(e) Shim - disc brake rear outer

5) Install the pad - disc brake rear.

NOTE:
Install the pad wear indicator in proper direction.
6) Install the caliper body assembly.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)
7) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
8) Connect the brake hose. <Ref. to BR-110, REAR BRAKE HOSE, INSTALLATION, Brake Hose.>
9) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Install the support - rear disc brake to the housing assembly - rear axle.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-12, REAR DISC BRAKE (ELECTRONIC PARKING BRAKE TYPE), COMPONENT, General Description.>
3) Install the caliper body assembly.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
4) Connect the brake hose using a new brake hose gasket.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)
5) Install the parking brake actuator. <Ref. to PB-26, PARKING BRAKE ACTUATOR, INSTALLATION, Parking Brake Actuator.>
6) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
7) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
9) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
10) Install the rear wheels.

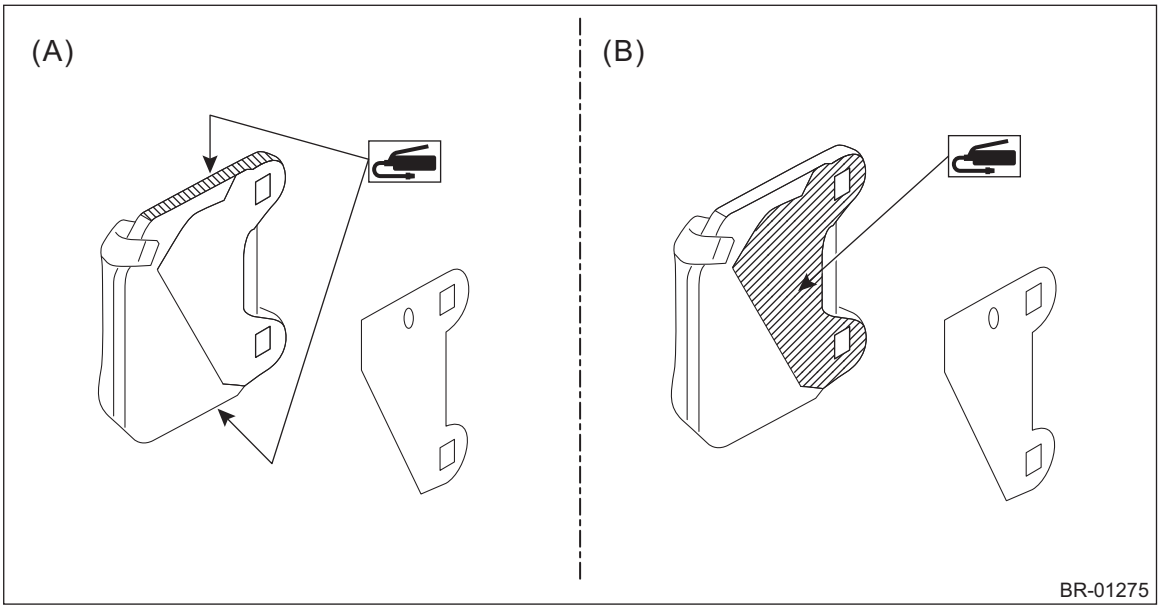
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Install the disc brake assembly.

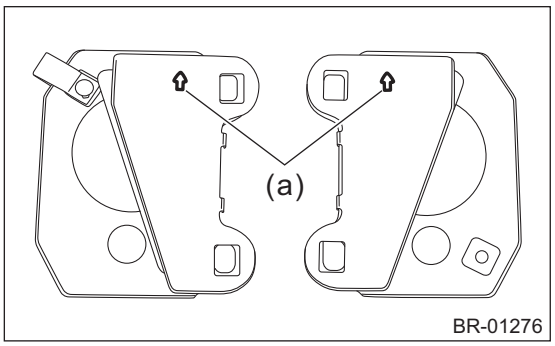
Tightening torque:
73 N·m (7.4 kgf-m, 53.8 ft-lb)
3) Apply a thin coat of grease to the side of the pad - disc brake rear, both sides of the shim - disc brake rear inner and the shim mounting surface of the pad - disc brake rear.

Preparation items:
Grease (pad clip (A)): An item contained in the pad kit or equivalent
Grease (shim and pad (B)): An item contained in the pad kit or Dow Corning Molykote AS880N



4) Install the pad - disc brake rear.

NOTE:
Install so that the arrow (a) faces upward.



5) Install the cross spring.
6) Install the pin - disc brake.
7) Install the clip - slide pin.
8) Install the brake hose bracket.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
9) Connect the brake hose. <Ref. to BR-110, REAR BRAKE HOSE, INSTALLATION, Brake Hose.>
10) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
11) Install the rear wheels.

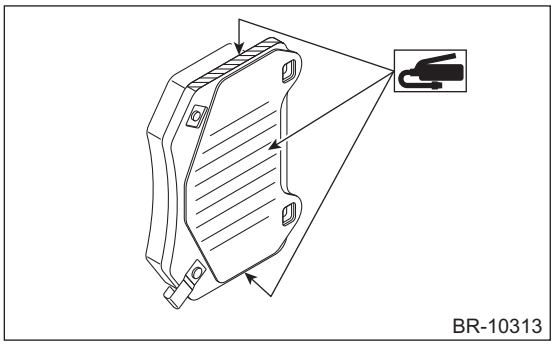
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

NOTE:
Before installation, remove mud and foreign matter from the disc brake assembly.
1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Install the disc brake assembly.

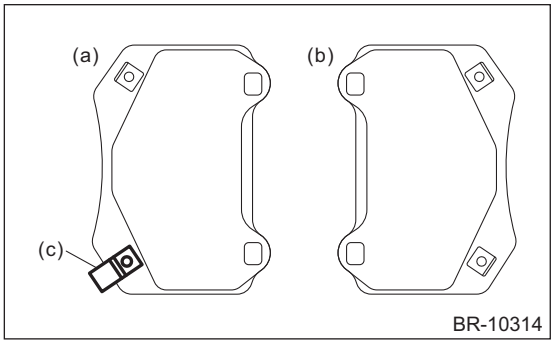
Tightening torque:
73 N·m (7.4 kgf-m, 53.8 ft-lb)
3) Apply a thin coat of grease to the pad - disc brake rear.

Preparation items:
Grease: An item contained in the pad kit or equivalent



4) Install the pad - disc brake rear.

NOTE:
Install the parts with the pad wear indicator facing downward.



(a) Pad - disc brake rear outer
(b) Pad - disc brake rear inner
(c) Pad wear indicator

5) Install the cross spring.
6) Install the pin - disc brake.
7) Install the brake hose bracket.

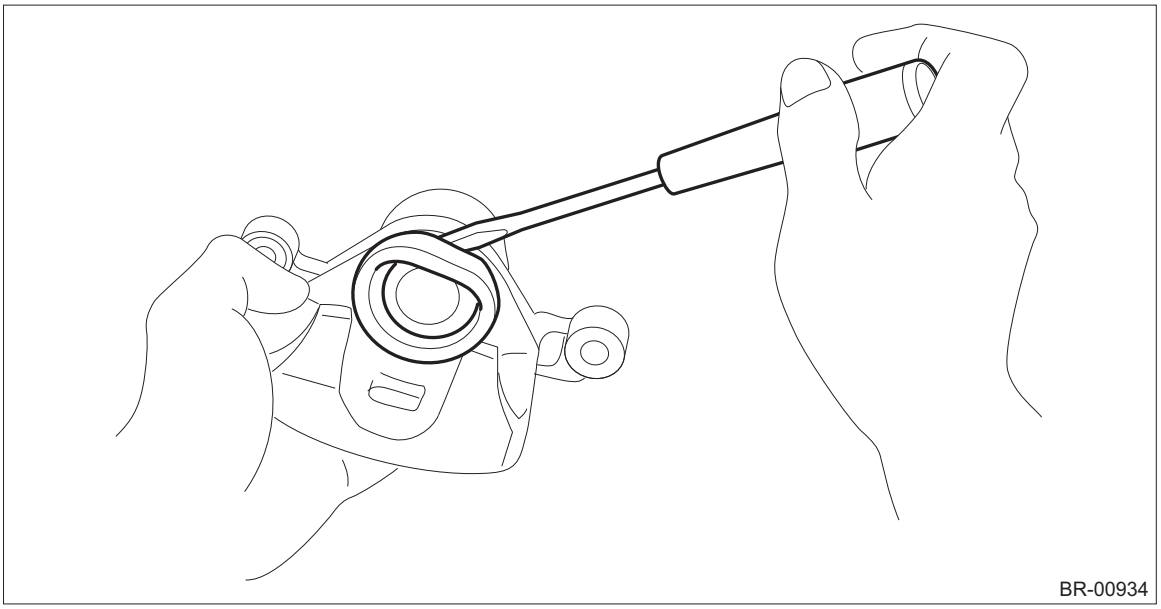
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
8) Connect the brake hose. <Ref. to BR-110, REAR BRAKE HOSE, INSTALLATION, Brake Hose.>
9) Bleed air from the brake system. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

C: DISASSEMBLY

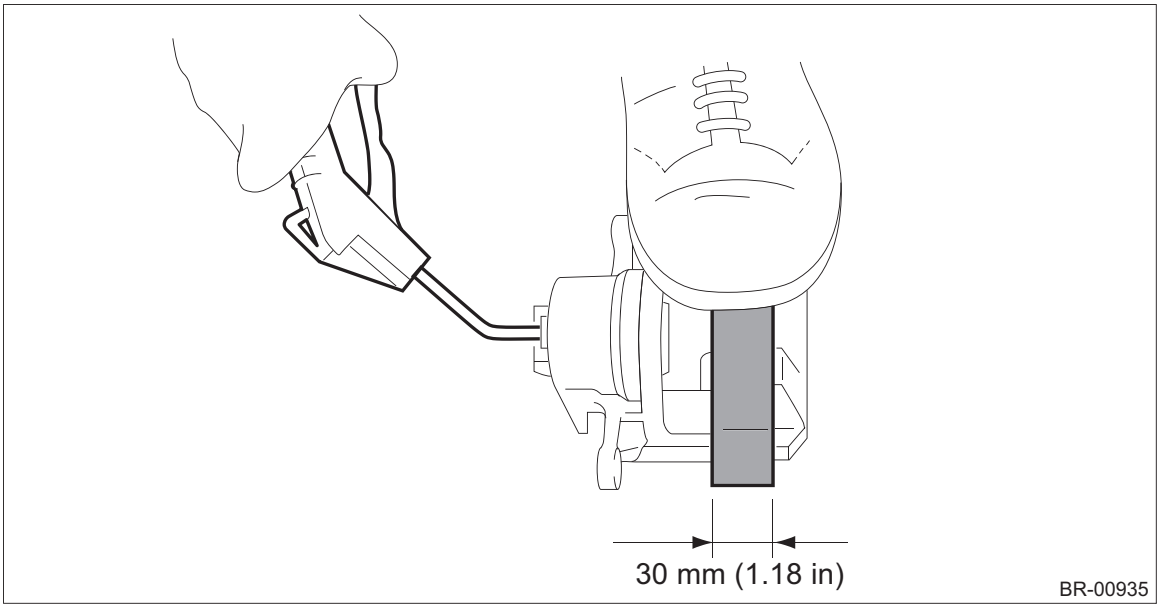
1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

CAUTION:
Be careful not to allow foreign matter to enter the brake hose connector.
1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.



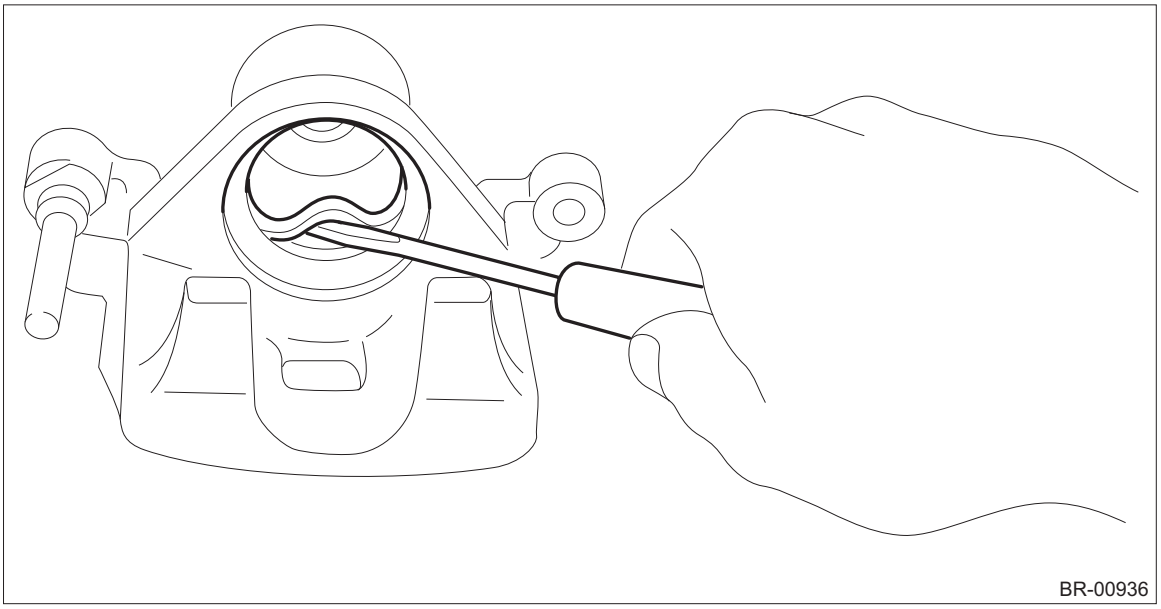
3) Remove the piston - disc brake.

(1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

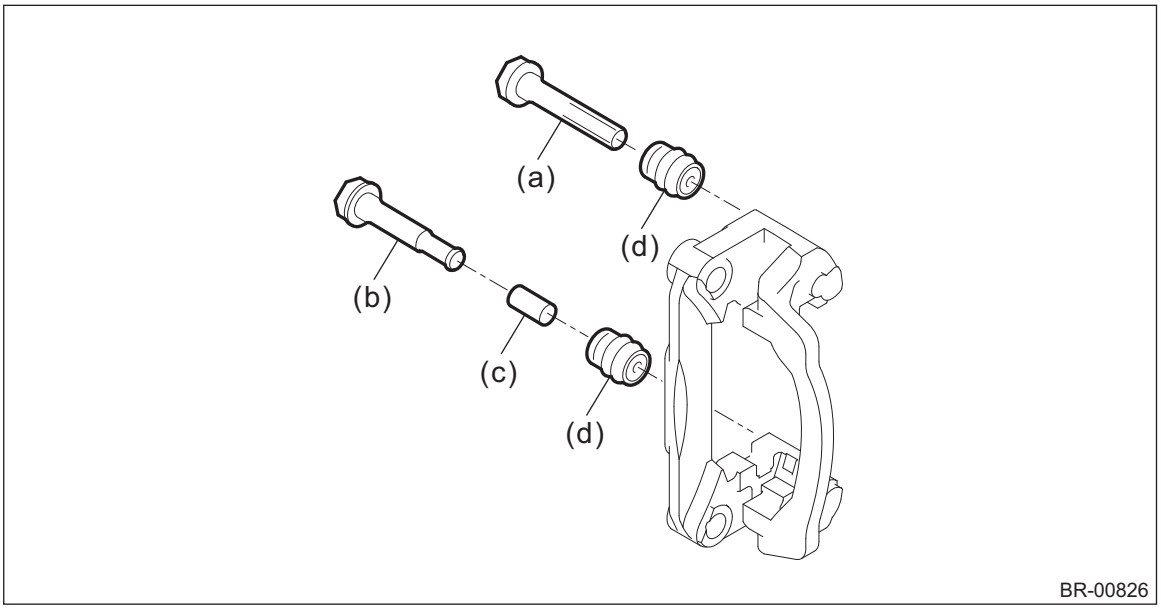


4) Remove the piston seal.

CAUTION:
Do not damage the piston sliding part and the piston seal groove.



5) Remove each part from support - rear disc brake.

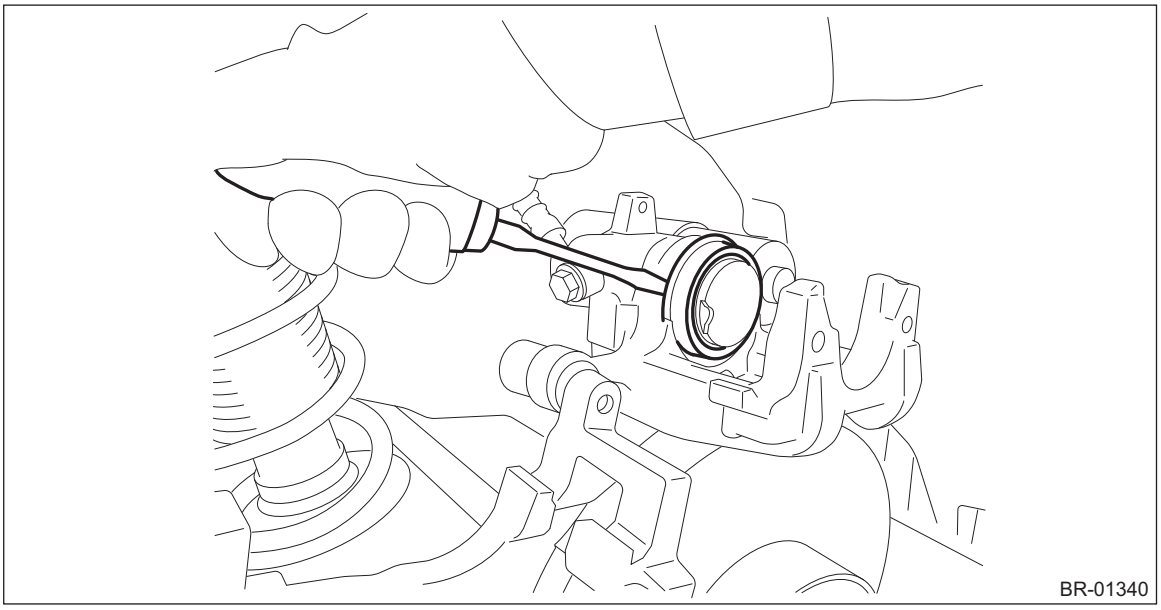


(a) Guide pin - rear brake (black)
(b) Lock pin - rear brake (silver)
(c) Lock pin - bushing
(d) Pin boot

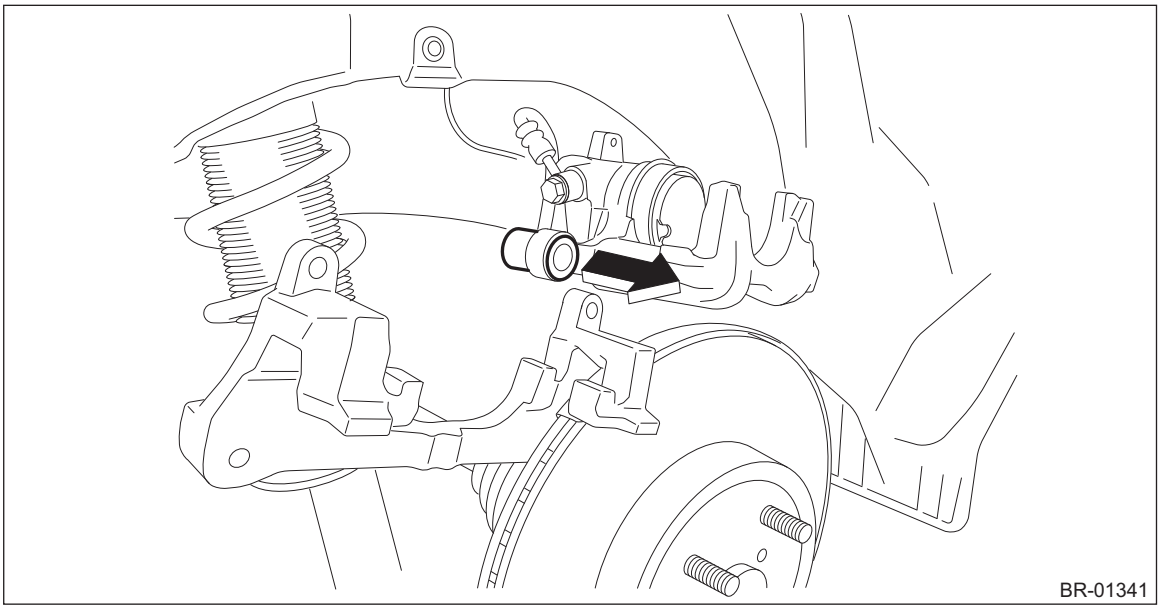
2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

CAUTION:
- **The piston cannot be removed from the caliper body assembly.**
- **Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.**

1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.



3) Remove the bushing from the support - rear disc brake.

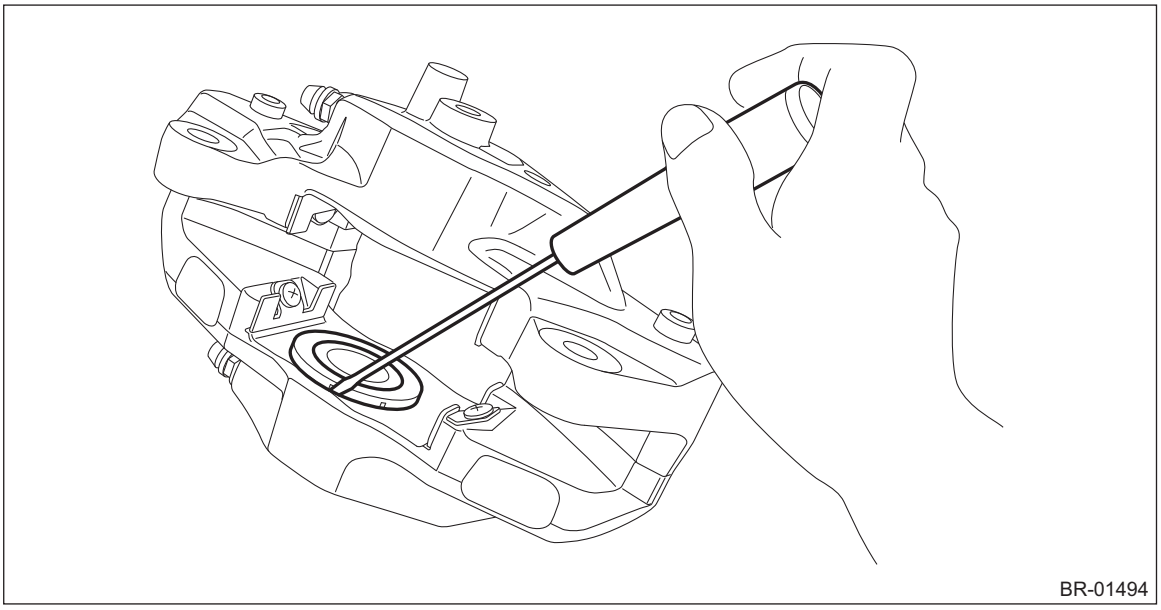


3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

CAUTION:
- **Be careful not to allow foreign matter to enter the brake hose connector.**
- **Since the 17-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.**

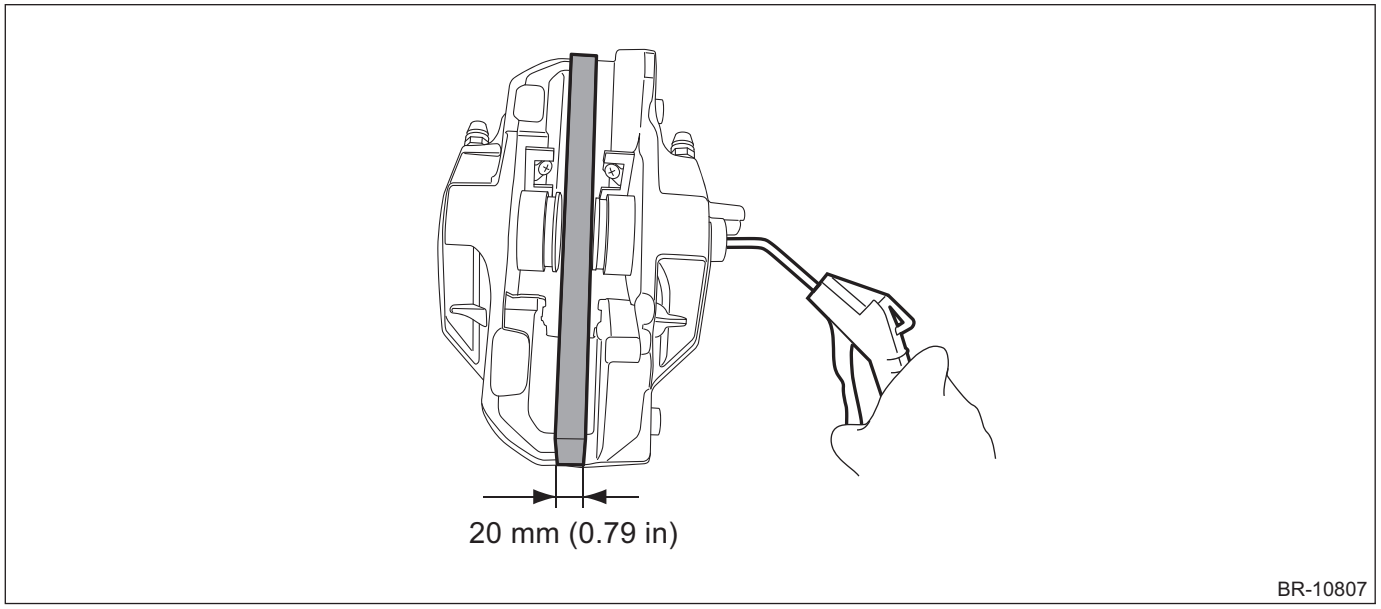
1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

NOTE:
Remove two piston boots.



3) Remove the piston - disc brake.
   (1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
   (2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

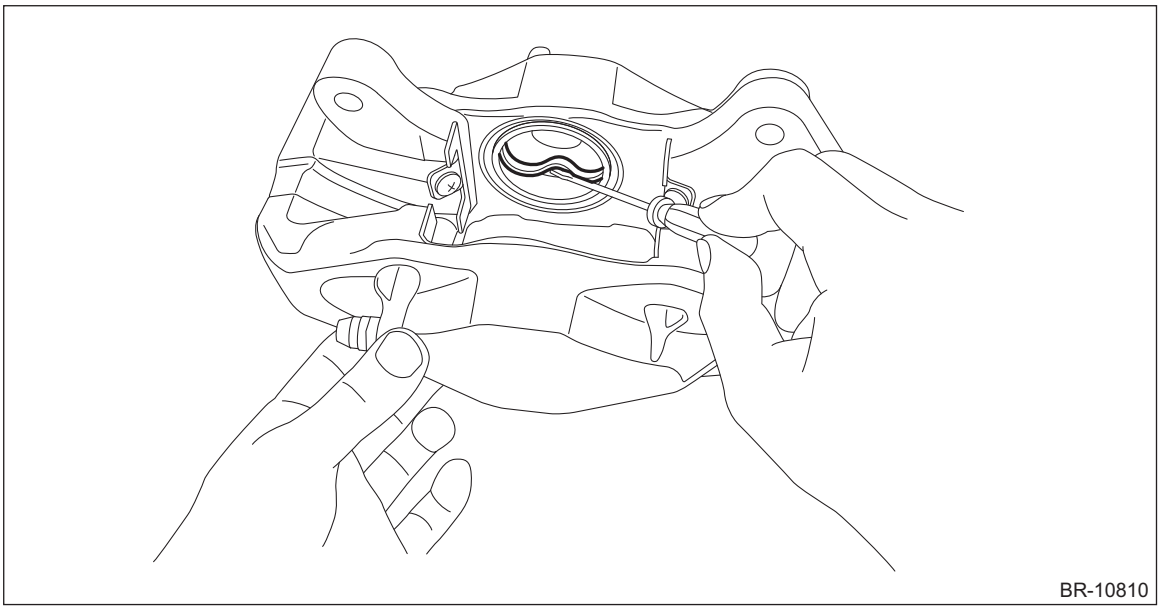
NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.



4) Remove the piston seal.

CAUTION:
Do not damage the piston sliding part and the piston seal groove.

NOTE:
Remove two piston seals.

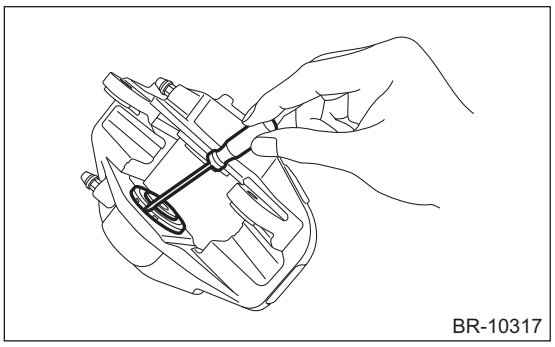


4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

CAUTION:
- **Be careful not to allow foreign matter to enter the brake hose connector.**
- **Since the 18-inch (Brembo) caliper body is easily scratched and the paint may be stripped, protect it from being contacted with other parts or tools.**

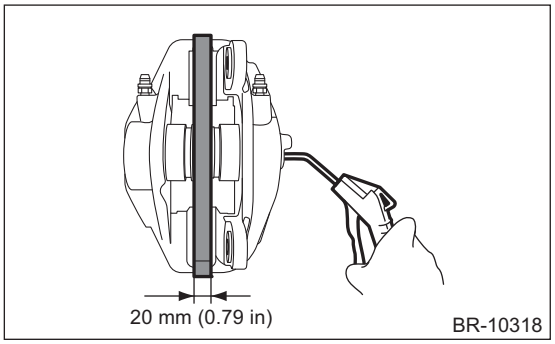
1) Remove mud and foreign matter from the caliper body assembly.
2) Remove the piston boot.

NOTE:
Remove two piston boots.



3) Remove the piston - disc brake.
(1) Place a wooden block in the caliper body assembly as shown in the figure to prevent the piston - disc brake from jumping out and being damaged.
(2) Using an air gun, gradually apply compressed air via the brake hose installation hole to push out the piston - disc brake.

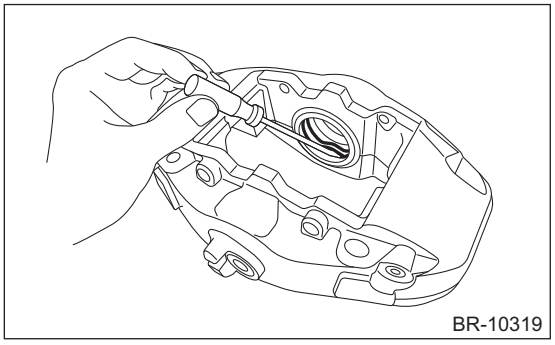
NOTE:
Instead of removing the pistons one by one, remove all pistons at once after adjusting the amount of protrusion evenly using a wooden block.



4) Remove the piston seal.

CAUTION:
Do not damage the piston sliding part and the piston seal groove.

NOTE:
Remove two piston seals.



D: ASSEMBLY

1. FLOATING 1-POT PISTON TYPE (DRUM-IN-DISC TYPE)

1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

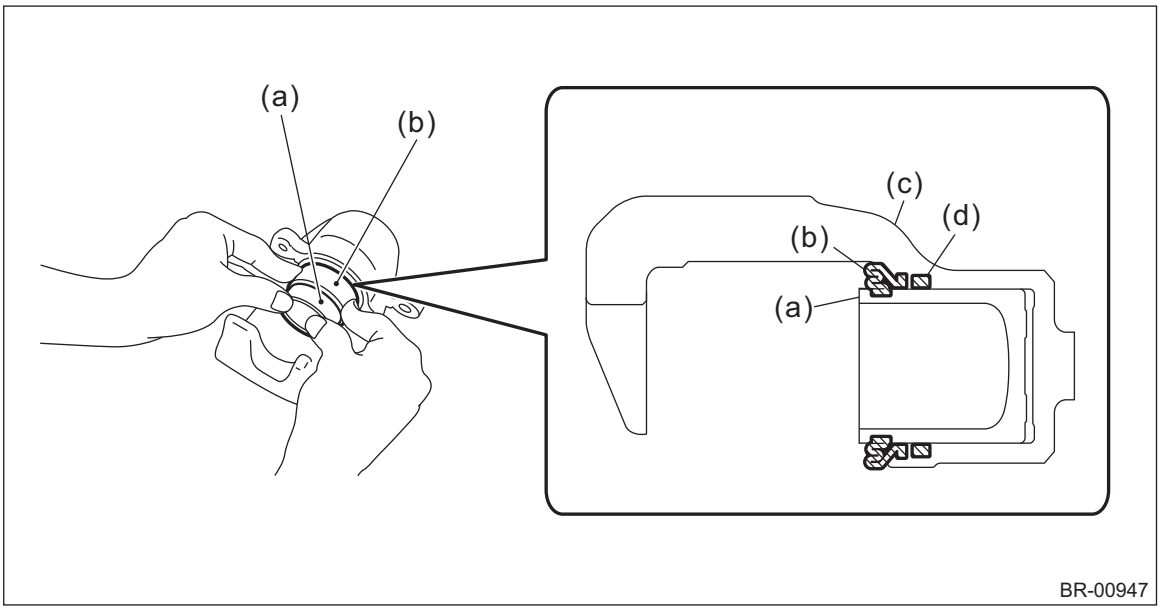
Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
(1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
(2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4
(3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Preparation items:
Grease: An item contained in the pad kit or Nippon Grease NIGLUBE RX-2
(4) Install the piston - disc brake to the caliper body.

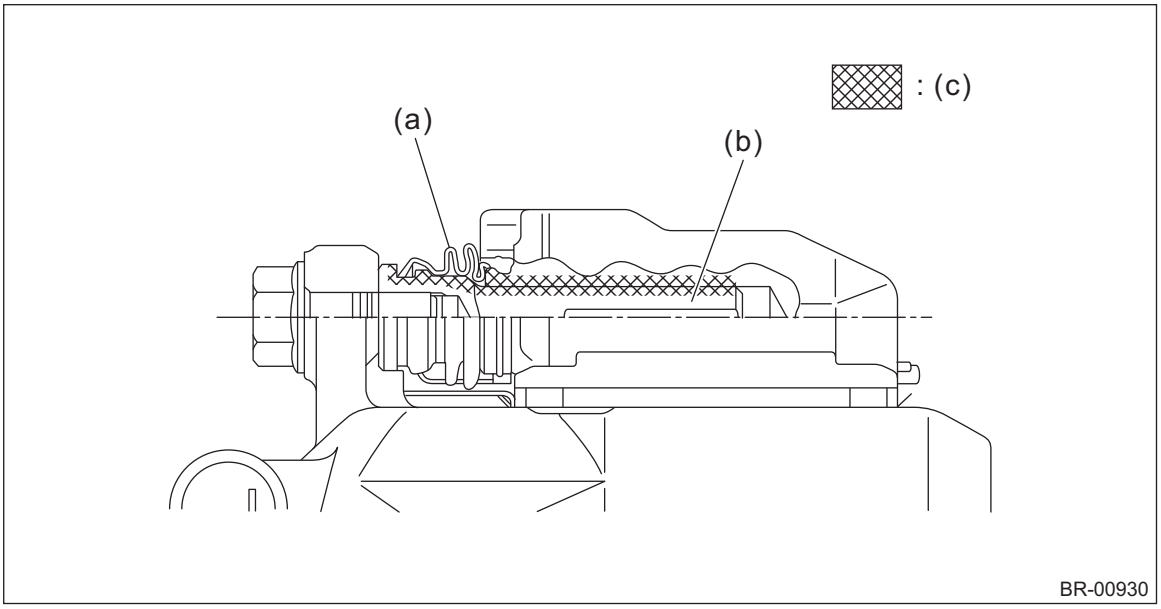
CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.



(a) Piston - disc brake
(b) Piston boot
(c) Caliper body
(d) Piston seal

4) Apply grease contained in the piston seal kit to the lock pin - rear brake, the outer surface of guide pin - rear brake, the pin sliding part of the support - front disc brake, and the grooves of pin boot.
5) Install the pin boot to the lock pin - rear brake and guide pin - rear brake, and insert them into the support - rear disc brake.

CAUTION:
Insert the lock pin - rear brake and guide pin - rear brake into specified position, and make sure that they slide and seat properly.



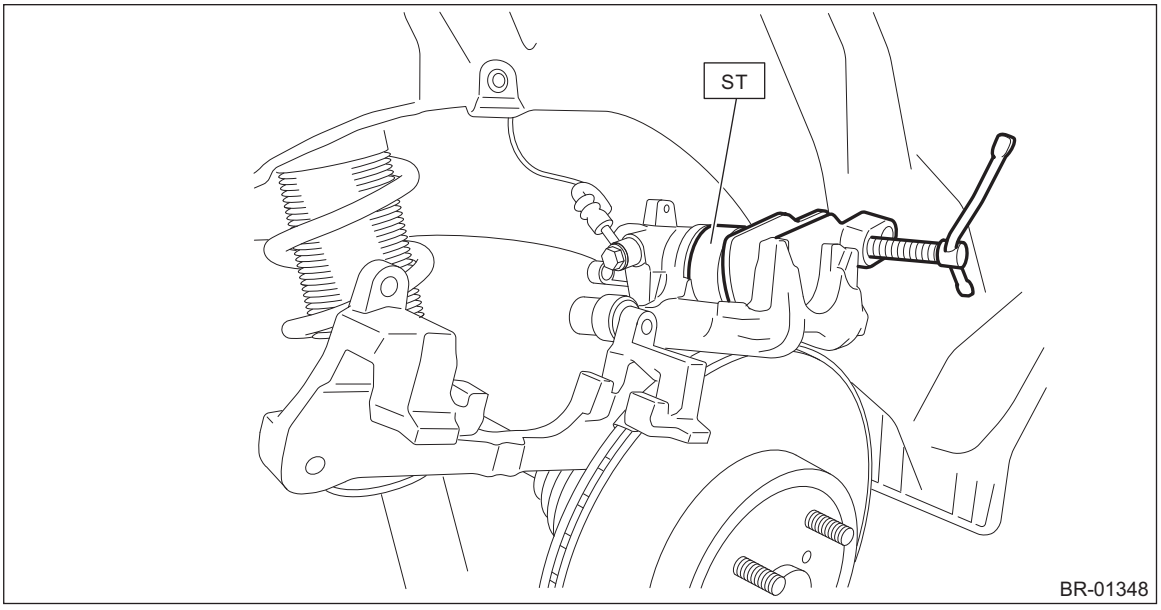
(a) Pin boot
(b) Lock pin - rear brake or guide pin - rear brake
(c) Grease applied area

2. FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE)

NOTE:
If the brake hose is disconnected, air enters inside. Therefore, this operation should be performed on the vehicle without the brake hose disconnected.
1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Install the bushing.
3) Apply a coat of grease to the inside of the new piston boot.

Preparation items:
Grease: Nippon Grease NIGLUBE RX-2 or equivalent
4) Using the ST, install the piston boot.

Preparation tool:
ST: PISTON BOOT INSTALLER (99099AL000)



3. OPPOSED 2-POT PISTON TYPE, EXCEPT FOR WRX STI MODEL

1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

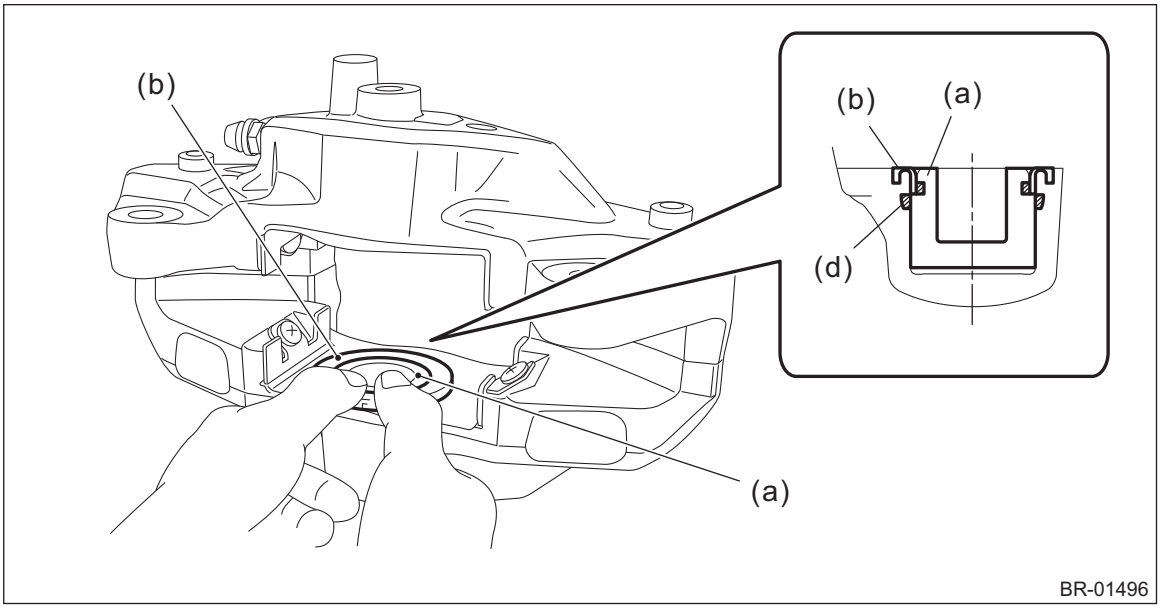
Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Preparation items:
Grease: An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

   (4) Install the piston - disc brake to the caliper body.

CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.



(a) Piston - disc brake
(b) Piston boot
(c) Caliper body
(d) Piston seal

4. OPPOSED 2-POT PISTON TYPE, FOR WRX STI MODEL

1) Check each part. <Ref. to BR-86, INSPECTION, Rear Disc Brake Assembly.>
2) Clean the inside of the caliper body using brake fluid.

Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

3) Install the piston seal and the piston - disc brake.
   (1) Apply a coat of brake fluid to piston seal and install the piston seal to the groove inside caliper body.
   (2) Apply a coat of brake fluid to the piston sliding part of caliper body and the entire outer surface of the piston - disc brake.

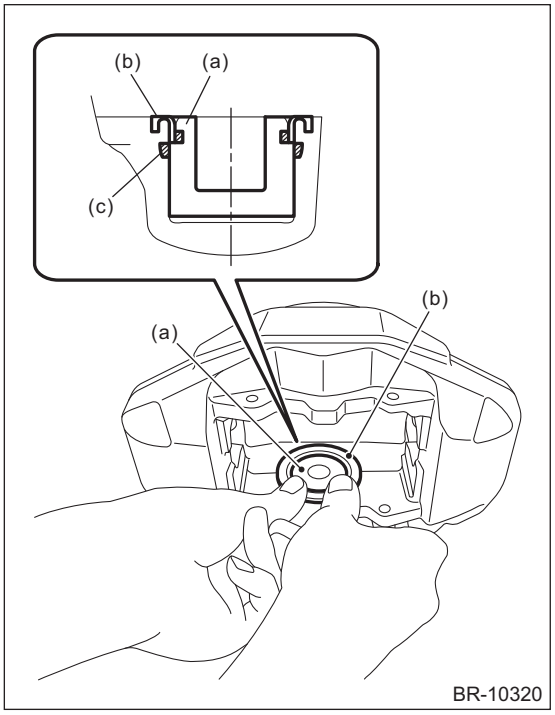
Preparation items:
Brake fluid: FMVSS No. 116, DOT3 or DOT4

   (3) Apply a coat of grease to the piston boot and fit to the groove on the ends of piston - disc brake.

Preparation items:
Grease: An item contained in the pad kit or Nippon Grease NIGLUBE RX-2

   (4) Install the piston - disc brake to the caliper body.

CAUTION:
Do not force the piston - disc brake into the sliding part of caliper body.



(a) Piston - disc brake
(b) Piston boot
(c) Piston seal

E: INSPECTION

1) Check the piston sliding part of caliper body and the piston - disc brake for uneven wear, damage or rust.
2) Check the rubber parts for damage or deterioration.
3) If faulty is found in the inspection, replace the relevant part.

8. Master Cylinder

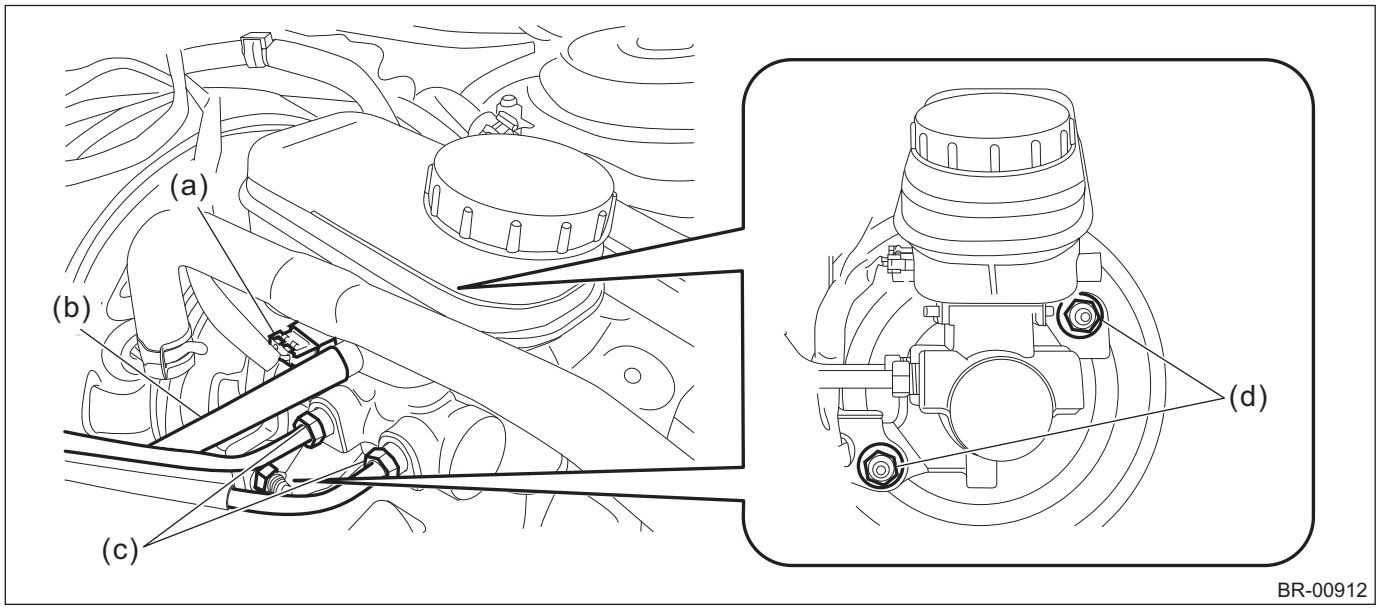
A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Prepare a container to catch grease or oil, etc. If any grease or oil spills, wipe it off and clean immediately to prevent from penetrating into floor or flowing outside.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

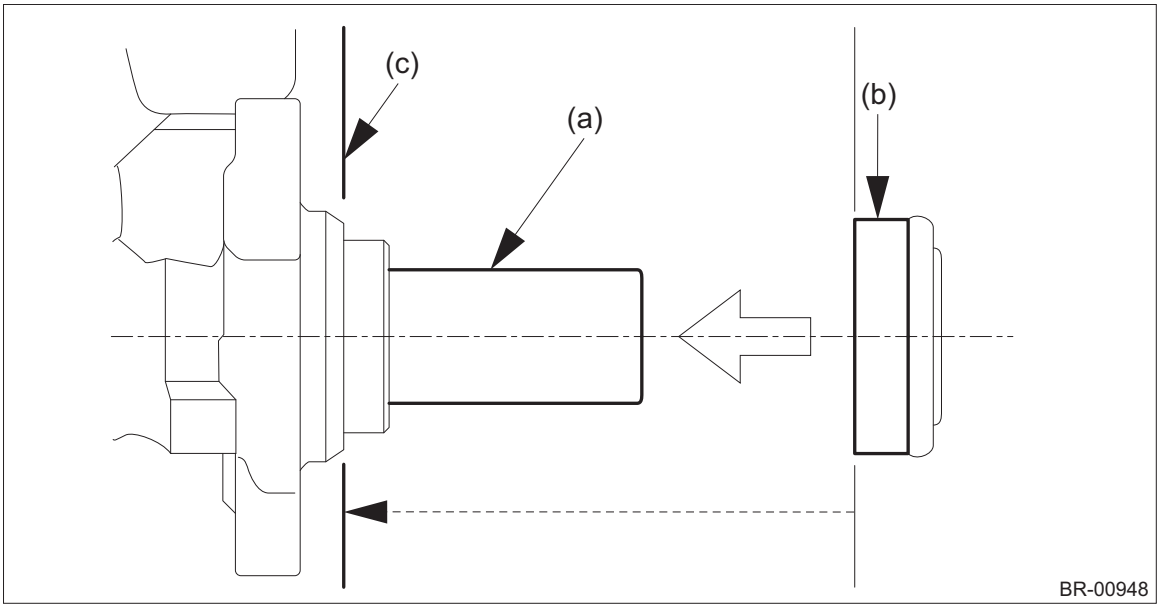
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Drain brake fluid from the reservoir tank completely.
4) Remove the master cylinder assembly.
   (1) Disconnect the fluid level gauge connector (a).
   (2) Disconnect the clutch hose (b). (MT model)
   (3) Disconnect the brake pipe (c).
   (4) Remove the nut (d), and slowly remove the master cylinder assembly from the vacuum booster assembly.



B: INSTALLATION

1) Replace the seal sub assembly for the master cylinder assembly with a new part.

CAUTION:
Be careful not to install the seal sub assembly in the wrong location.



(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.

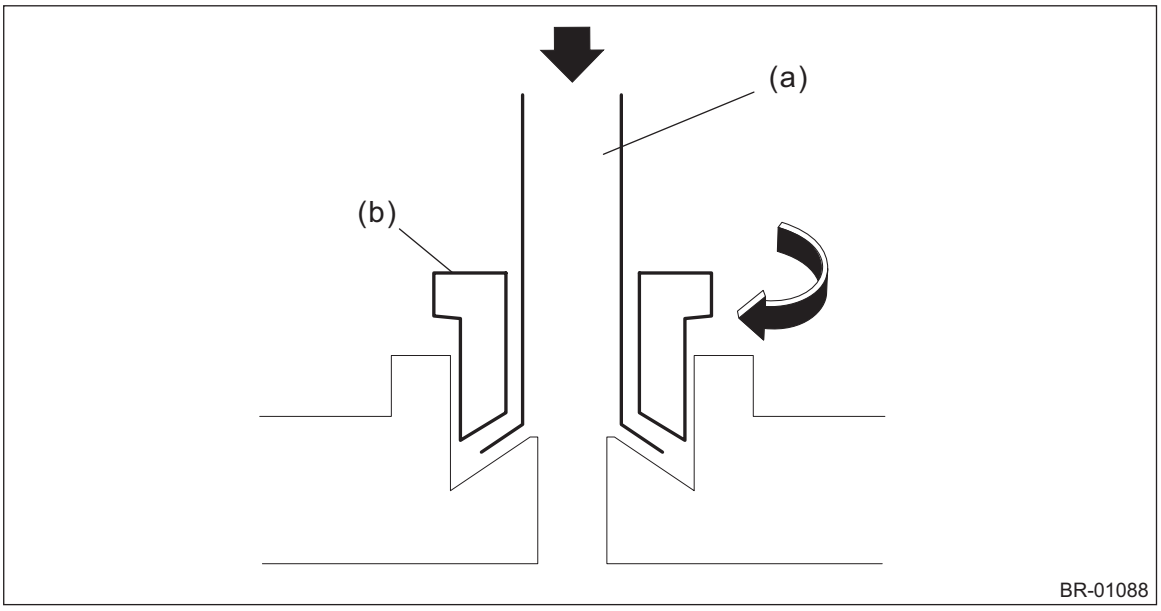
2) Install the master cylinder assembly.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Turn and tighten the flare nut (b) by hand while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)



4) Bleed air from the brake system and clutch system (MT model). <Ref. to BR-102, PROCEDURE, Air Bleeding.>
5) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>

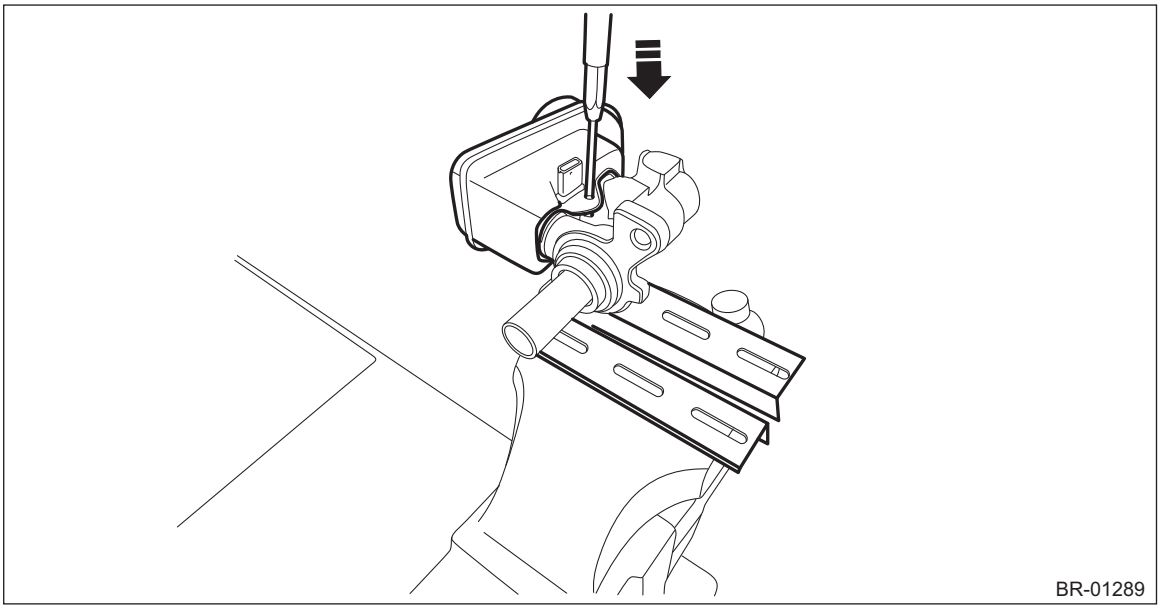
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

1) Remove the reservoir tank.

CAUTION:
Be careful not to tighten a vise excessively.

(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive out the pin using a punch and a hammer to remove the reservoir tank.

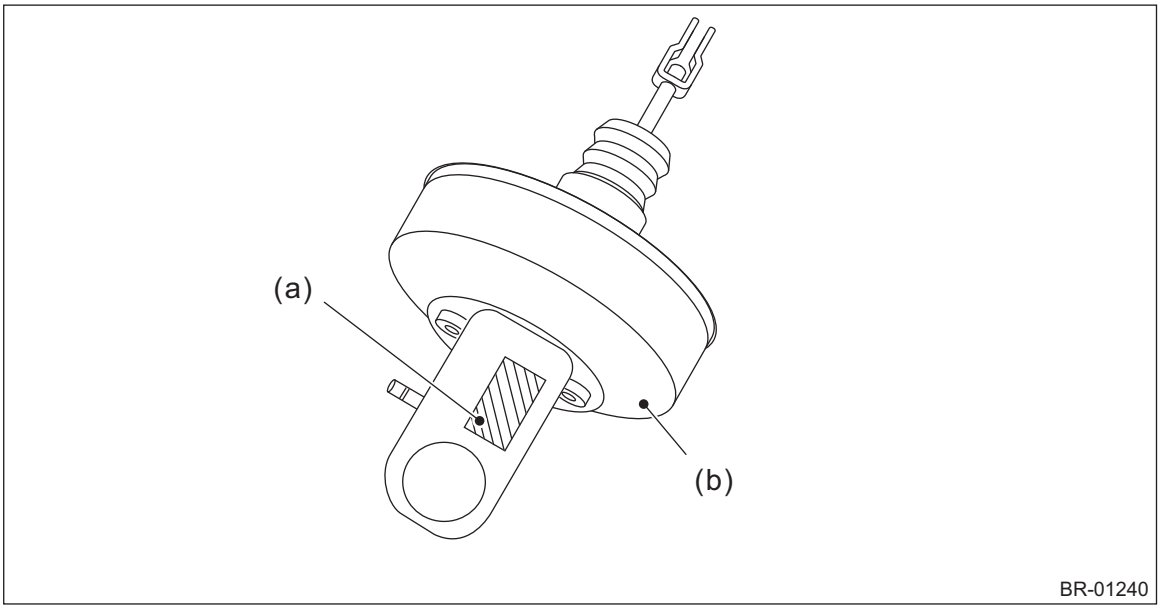


2) Remove the seal from the cylinder body assembly.

D: ASSEMBLY

CAUTION:
When replacing the reservoir tank, adhere the label to the position shown in the figure. (C0 model)

Preparation items:
Part No.: Fluid caution label (25080GA010)



(a) Label
(b) Brake booster

1) Install the seal to the cylinder body assembly.
2) Install the reservoir tank.

CAUTION:
Be careful not to tighten a vise excessively.

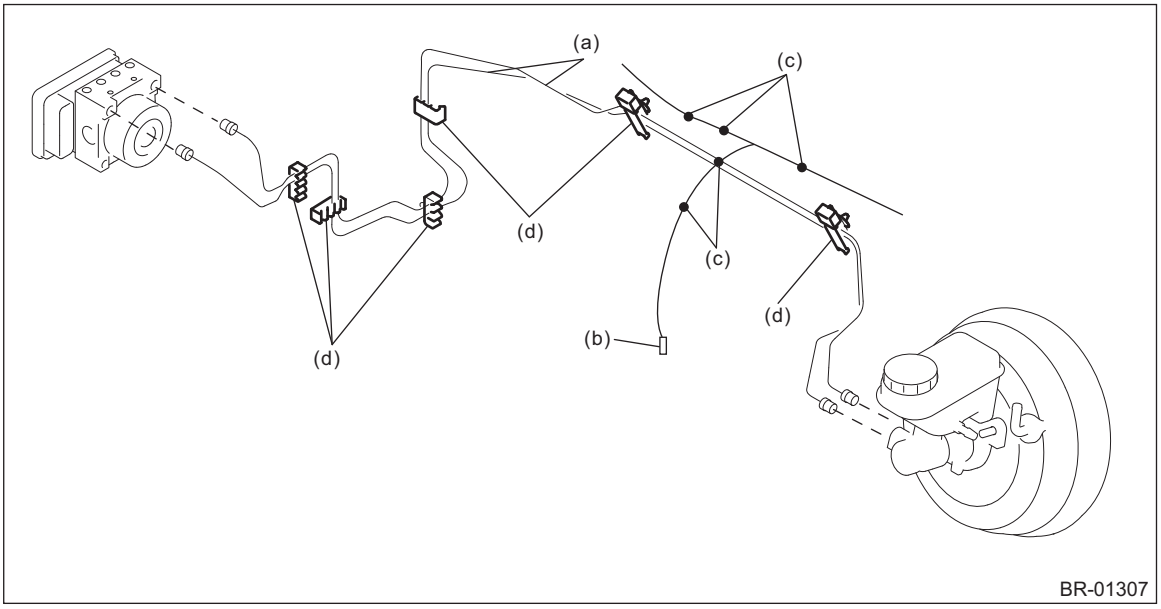
(1) Place the master cylinder assembly between aluminum plates and fix it on a vise.
(2) Drive the pin using a punch and a hammer to install the reservoir tank.

9. Brake Booster

A: REMOVAL

CAUTION:
• Do not allow brake fluid to come in contact with the painted surface of the vehicle body. If it does, wash off with water and wipe away completely.
• Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the intercooler.
• Except for STI model <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
• STI model <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
4) Disconnect the air conditioner pipe. <Ref. to AC-63, REMOVAL, Hose and Pipe.>
5) Remove the vacuum hose.
6) Remove the master cylinder assembly. <Ref. to BR-87, REMOVAL, Master Cylinder.>
7) Remove the brake pipe assembly (a).
(1) Disconnect the starter connector (b) and harness clip (c).
(2) Remove the brake pipe assembly (a) from the pipe clip (d).

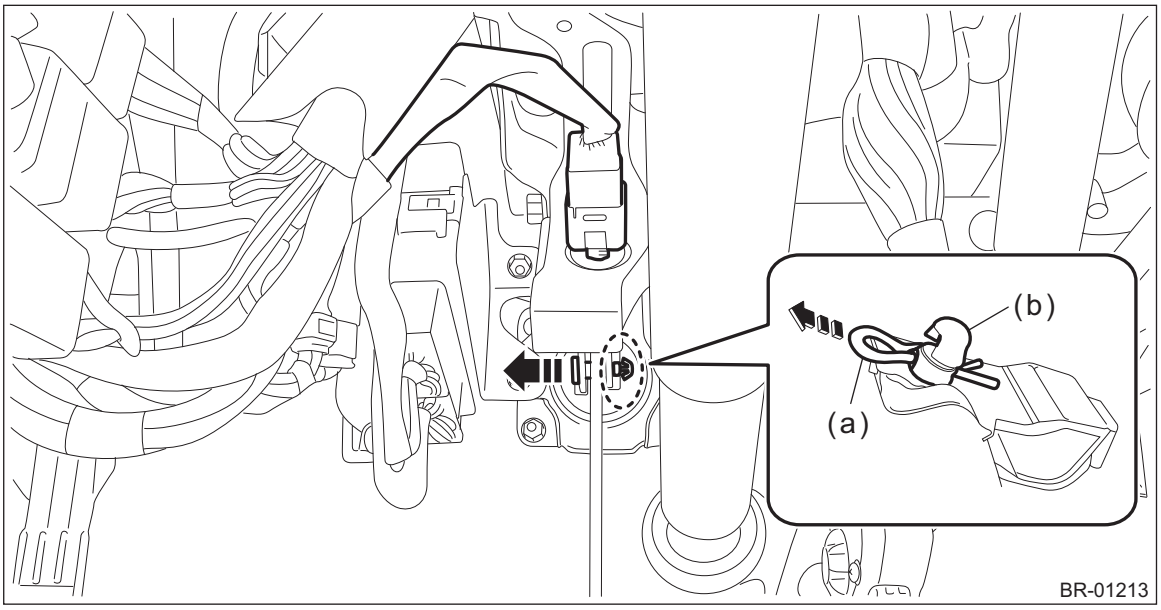


8) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
9) Remove the knee airbag module. <Ref. to AB-24, KNEE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
10) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
11) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
12) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

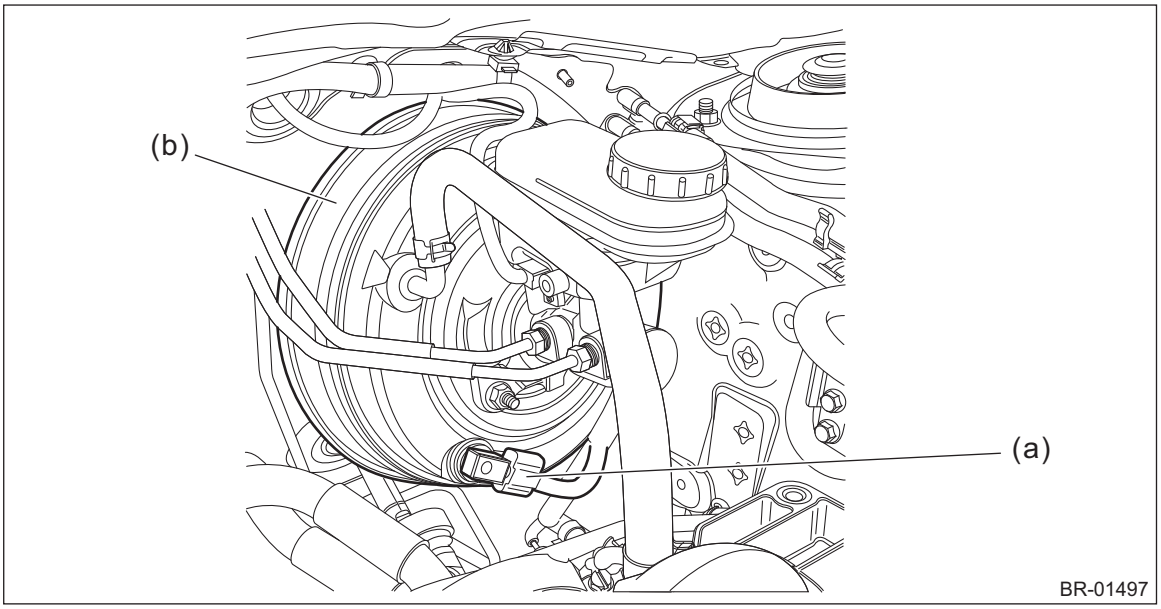
CAUTION:
• Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.

- **Do not change the push rod length.**



13) Disconnect the vacuum sensor connector. (Except for STI model)

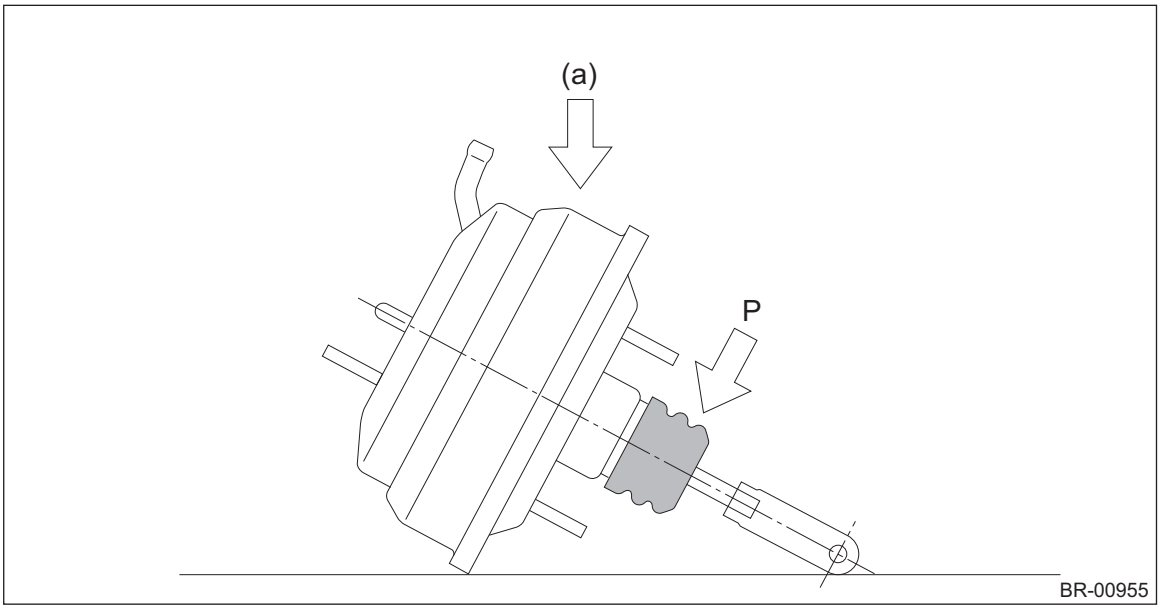
CAUTION:
- **Do not remove the vacuum sensor (a). If removed, replace the vacuum booster assembly (b) with a new part.**
- **Do not rotate the vacuum sensor (a) when disconnecting the connector of vacuum sensor (a). Otherwise the grommet on the mounting location of the vacuum sensor (a) may be damaged.**



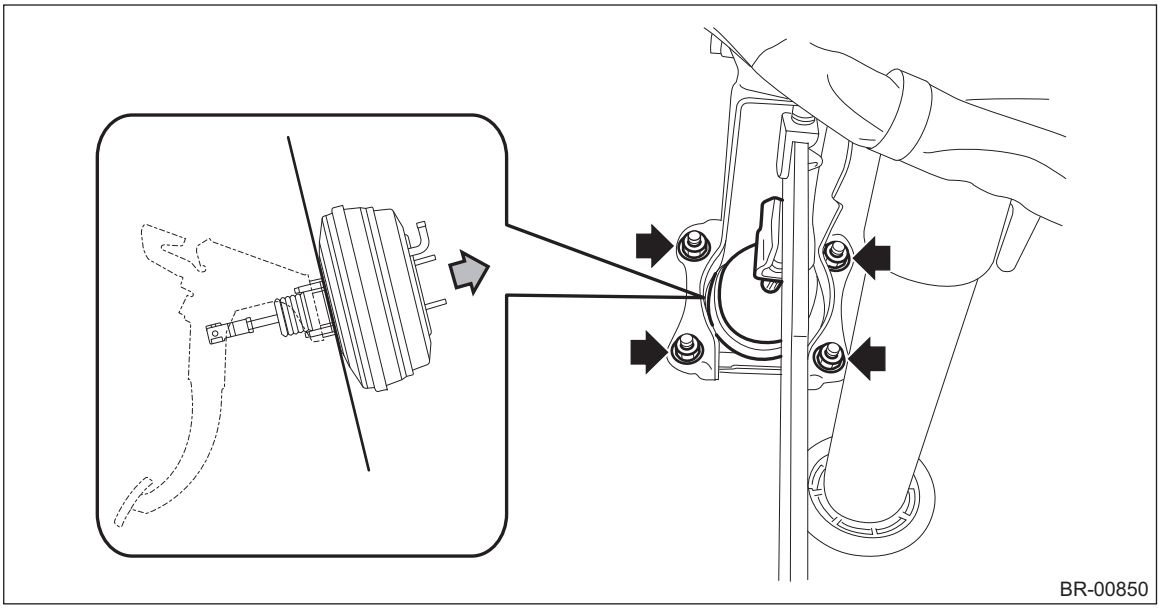
14) Remove the vacuum booster assembly.

CAUTION:
- **Do not disassemble the vacuum booster assembly.**
- **Make sure that the booster shell and vacuum pipe are not subject to strong impacts.**
- **Be careful not to drop the vacuum booster assembly. If the vacuum booster assembly is dropped accidentally, replace it.**
- **Be careful when placing the vacuum booster assembly on floor.**

• If external force (a) is applied from above when the vacuum booster assembly is placed in this position, the resin portion as indicated by "P" may become damaged.



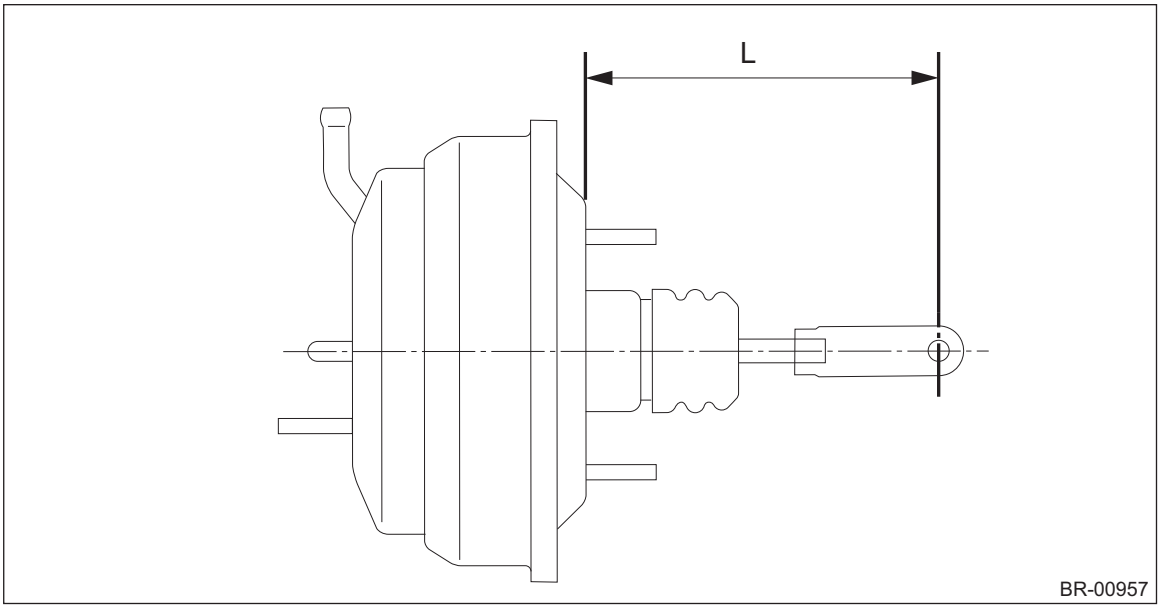
(1) Remove the nuts, and then remove the vacuum booster assembly.



B: INSTALLATION

1) Check and adjust the operating rod of the vacuum booster assembly.
   (1) Measure the length between the vacuum booster assembly mounting surface and clevis pin hole.
   (2) If it is not within the specification, loosen the lock nut, rotate the vacuum booster assembly operating rod to adjust the rod length.

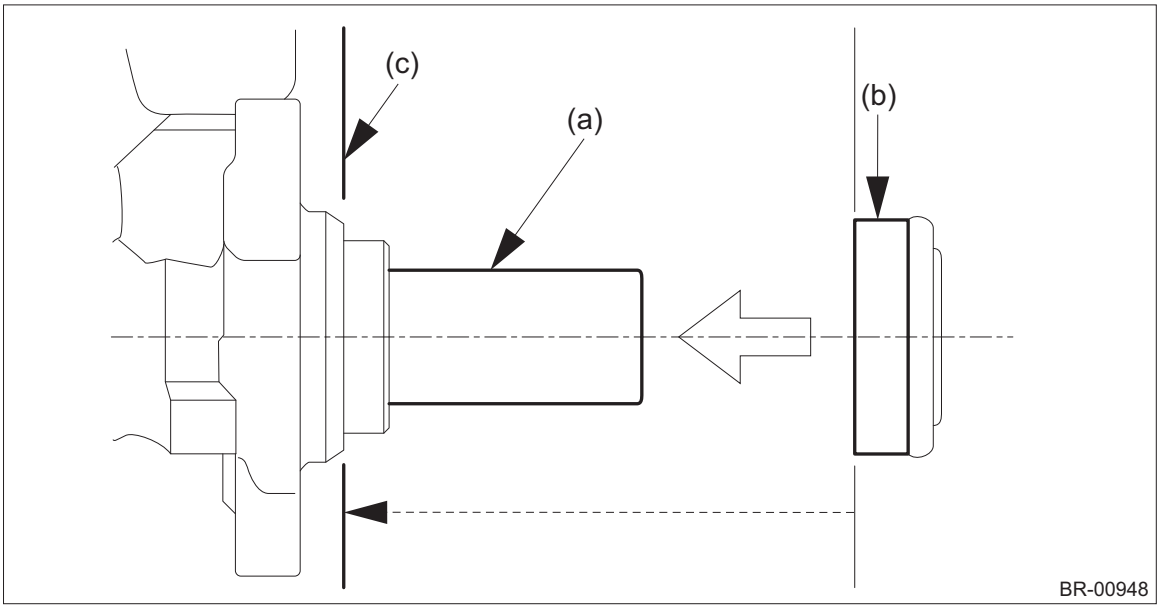
Specification L:
136.3 mm (5.37 in)



2) Install the vacuum booster assembly.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
• Apply grease to the snap pin to prevent the operating rod from wear.
• Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LTS No. 2 grease to the clevis pin.
• When installing the master cylinder assembly, replace the seal sub assembly with a new part, and install it to the vacuum booster assembly.



(a) Primary piston
(b) Seal sub ASSY
(c) Install the seal sub ASSY to this surface.

3) Install the column assembly - steering. <Ref. to PS-26, INSTALLATION, Steering Column.>
4) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.
5) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the cover assembly - instrument panel LWR driver.
7) Install the master cylinder assembly. <Ref. to BR-87, INSTALLATION, Master Cylinder.>
8) Install the vacuum hose.
9) Install the air conditioner pipe. <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>
10) Install the intercooler.
• Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
• STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>
11) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>
12) Bleed air from the brake system. <Ref. to BR-102, PROCEDURE, Air Bleeding.>
13) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
15) Perform a road test to make sure the brakes do not drag.

C: INSPECTION

1. OPERATION CHECK WHEN NOT USING MEASURING DEVICES

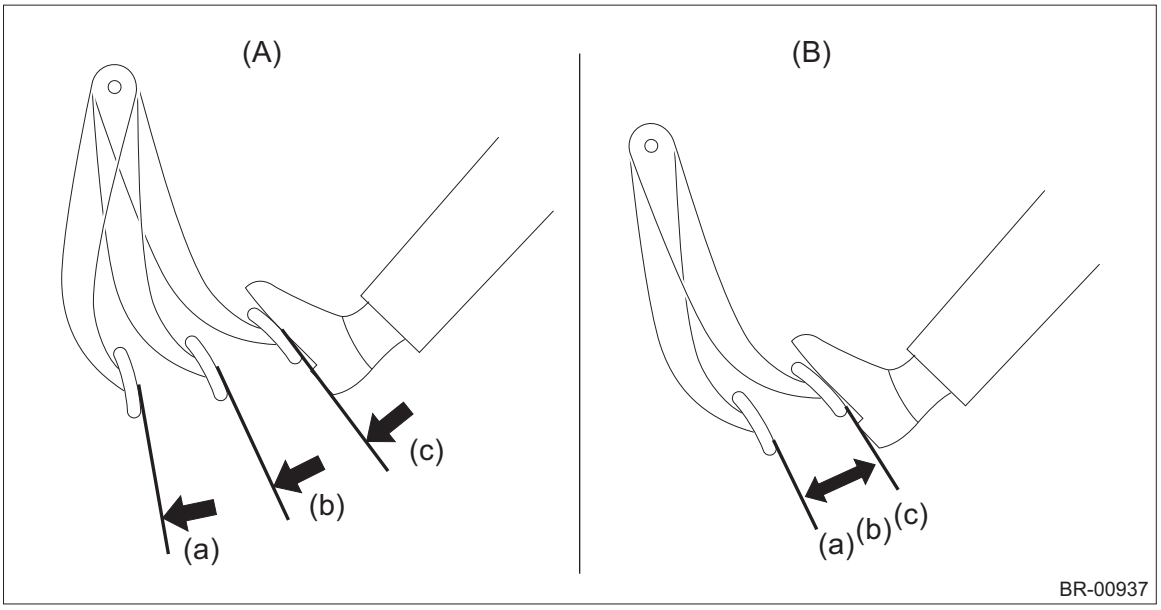
CAUTION:
When checking operation, be sure to apply the parking brake securely.
When an operation check is performed with no measuring devices, a faulty part cannot be identified correctly. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

• Air tightness check

1) Start the engine, and idle it for 1 to 2 minutes, then turn it OFF.
2) Depress the brake pedal several times applying the normal pedal force.

NOTE:
The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression.

3) If no change occurs in the pedal height when pressed, the vacuum booster assembly is faulty.



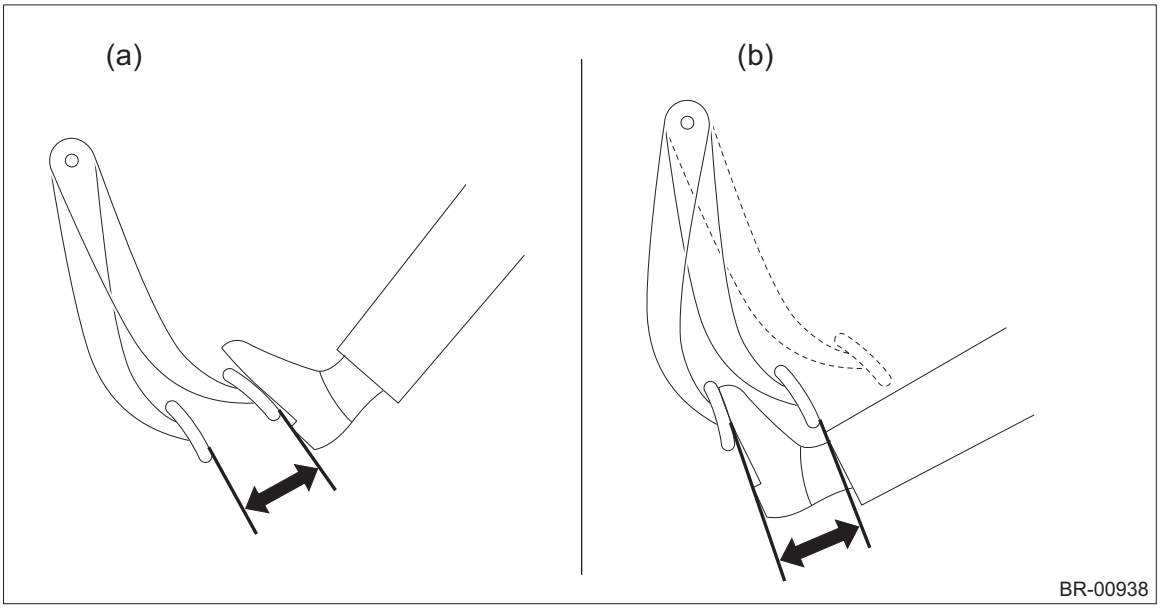
(A) Normal (B) Not OK

(a) 1st (b) 2nd (c) 3rd

NOTE:
- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

- **Check operation**

1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.



(a) When engine is stopped (b) When engine is started

2) With the brake pedal depressed, start the engine.
3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the vacuum booster assembly is faulty.

NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

- **Loaded air tightness check**

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed.
Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of vacuum booster assembly is normal. If the pedal height increases, it is faulty.

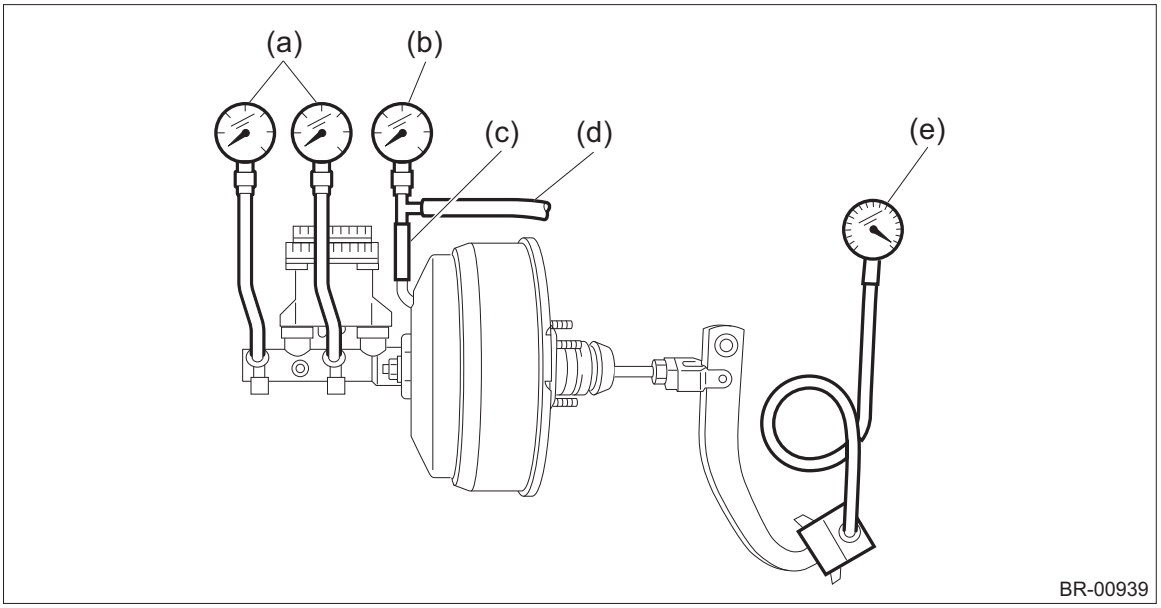
NOTE:
If a faulty part is detected after inspection, check precisely with measuring devices.

2. OPERATION CHECK WHEN USING MEASURING DEVICES

CAUTION:
When checking operation, be sure to apply the parking brake securely.

- **Check with measuring devices**

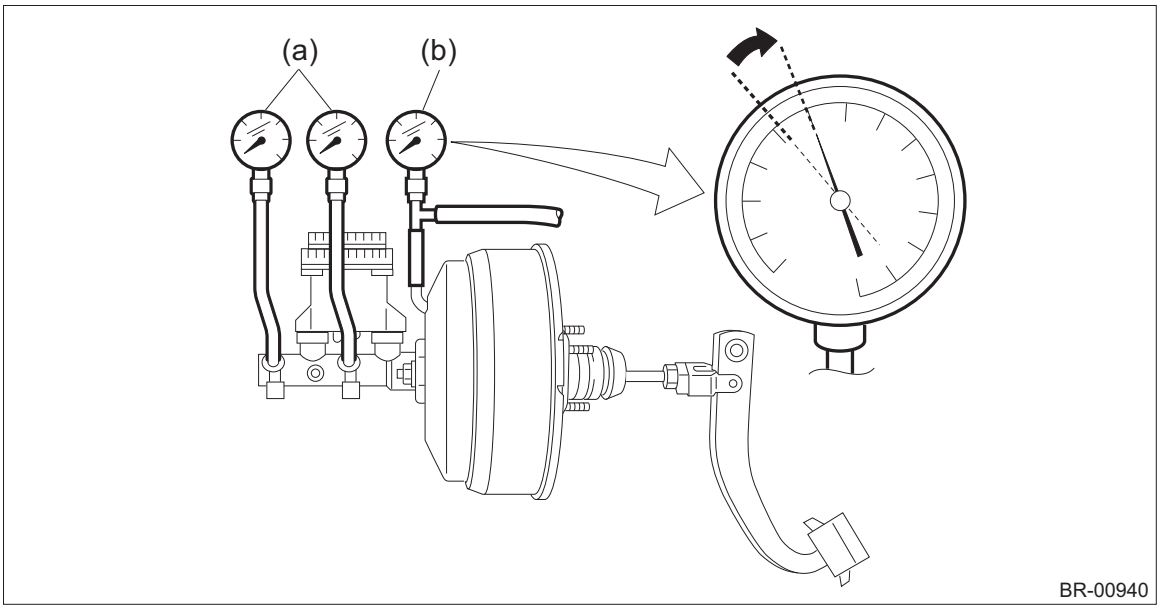
Connect a measuring device as shown in the figure. After bleeding air from the pressure gauge, perform each check.



(a) Pressure gauge
(b) Vacuum gauge
(c) Adapter hose
(d) Vacuum hose
(e) Pedal force gauge

- **Air tightness check**

1) Start the engine and keep it running at idle until vacuum pressure indicates 66.7 kPa (500 mmHg, 19.69 inHg) while the brake pedal is not depressed.



(a) Pressure gauge (b) Vacuum gauge

2) Stop the engine and check the vacuum pressure.
If the value matches the following standard, the vacuum booster assembly function is normal.

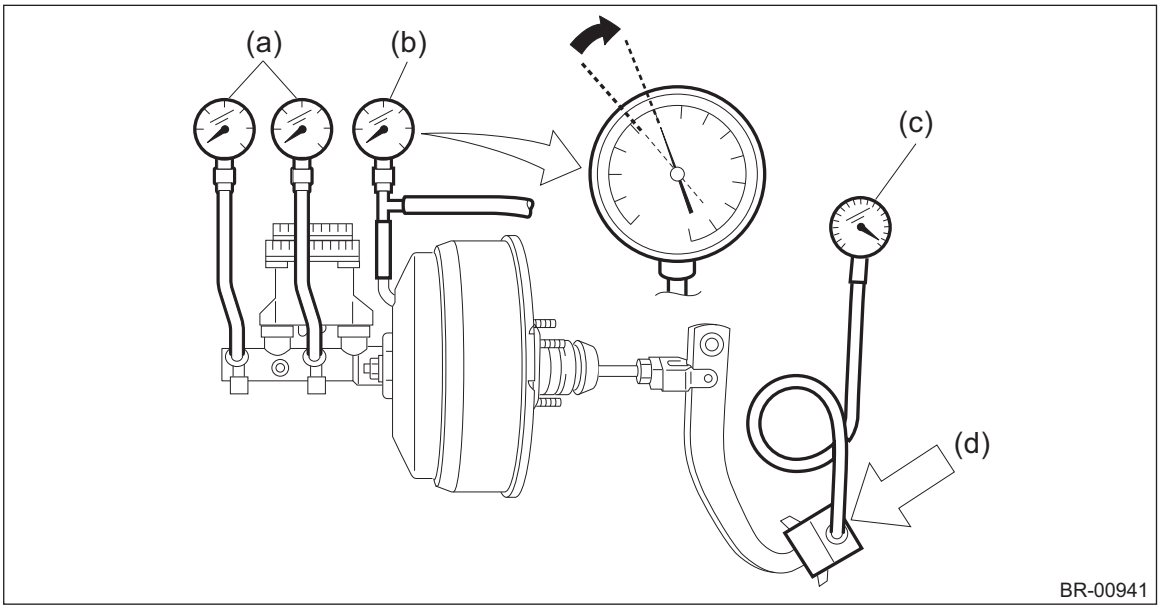
Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, it may results from one of the following causes.
- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

- **Loaded air tightness check**

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lbf).

2) Keep the engine running at idle and the pedal depressed until vacuum pressure of the vacuum gauge indicates 66.7 kPa (500 mmHg, 19.69 inHg).



(a) Pressure gauge
(b) Vacuum gauge
(c) Pedal force gauge
(d) Depressed

3) Stop the engine and check the vacuum gauge.
If the value matches the following standard, the vacuum booster function is normal.

Vacuum pressure: standard
The range of vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less.

If a faulty part is detected after inspection, refer to “AIR TIGHTNESS CHECK”.
<Ref. to BR-95, INSPECTION, Brake Booster.>
4) If the vacuum booster assembly is faulty, replace it with a new part.

• Lack of boost action check

1) Turn the engine OFF, and set the value of the vacuum gauge to “0”.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	451 (4.6, 65)	1,344 (13.7, 195)

• Boosting action check

1) Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running.
2) Check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

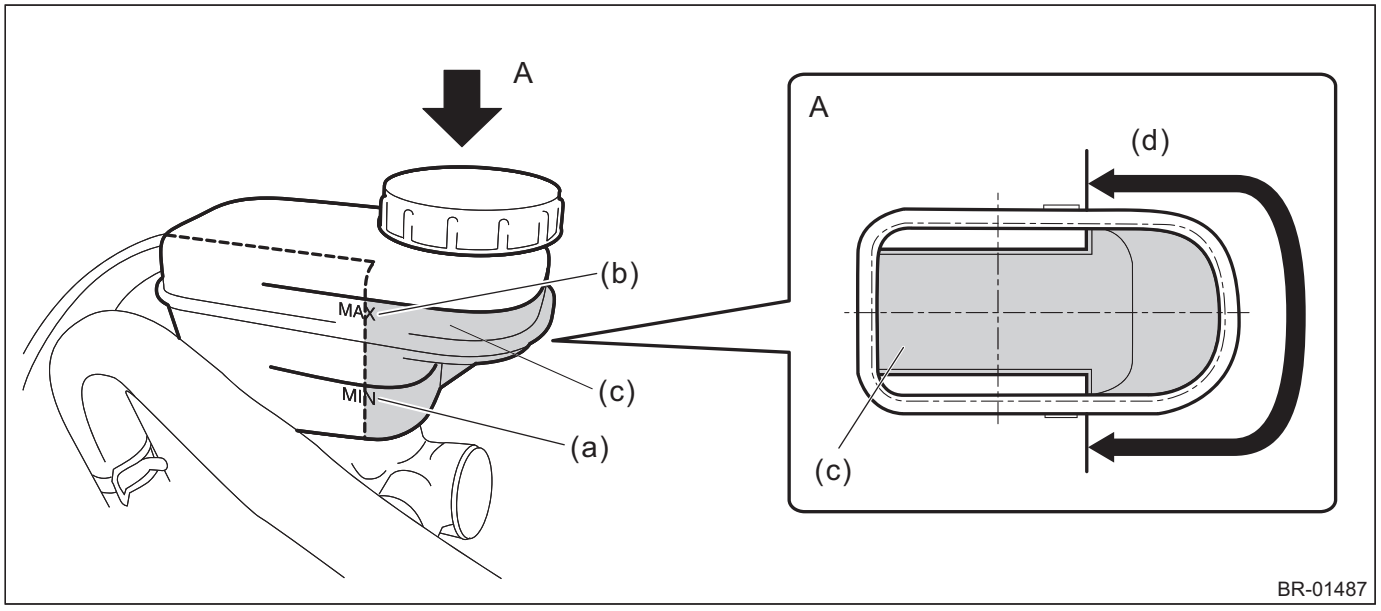
Brake pedal force: N (kgf, lbf)	147 (15, 33)	294 (30, 66)
Fluid pressure: kPa (kgf/cm^2, psi)	4,766 (48.6, 691)	9,885 (100.8, 1,434)

10.Brake Fluid

A: INSPECTION

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not allow dirt or dust to get into the reservoir tank.
1) Check the fluid for discoloration.
2) Check that the amount of brake fluid is between the lines of “MIN” and “MAX” from the front view or from the forward right and left within 90°.

CAUTION:
Always check the level using the specified direction because there is a partition in the reservoir tank.



(A) View from upper face

(a) MIN. level
(b) MAX. level
(c) Brake fluid
(d) Brake fluid level check range

3) If the brake fluid level is close to “MIN”, check the brake pipe or brake hose for any leak first. Then, check that the brake fluid level is reduced due to brake pad wear.
4) If the fluid is extremely discolored or the fluid level is less than the specified value after inspection, replenish or replace with the new fluid.

B: REPLACEMENT

CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not allow dirt or dust to get into the reservoir tank.

NOTE:
• During the operation, keep the reservoir tank filled with brake fluid to prevent entry of air.

- Operate the brake pedal slowly and depress it fully.
- For convenience and safety, perform the work with 2 people.
- The required amount of brake fluid is approximately 500 mL (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.

1) Lift up the vehicle.
2) Remove both the front and rear wheels.
3) Drain brake fluid from the reservoir tank.
4) Replenish the reservoir tank with the recommended brake fluid, and perform the same procedure as for bleeding the brake line on each brake caliper. <Ref. to BR-102, PROCEDURE, Air Bleeding.>

Preparation items:
Recommended brake fluid: FMVSS No. 116, DOT3 or DOT4

NOTE:
Repeat the full stroke depressing operation of the brake pedal slowly, until new brake fluid comes out from a transparent vinyl tube. (On each brake caliper, 20 times or more of pedal operations is necessary in order for new brake fluid from the master cylinder to come out from the bleeder - screw.)

11.Air Bleeding

A: PROCEDURE

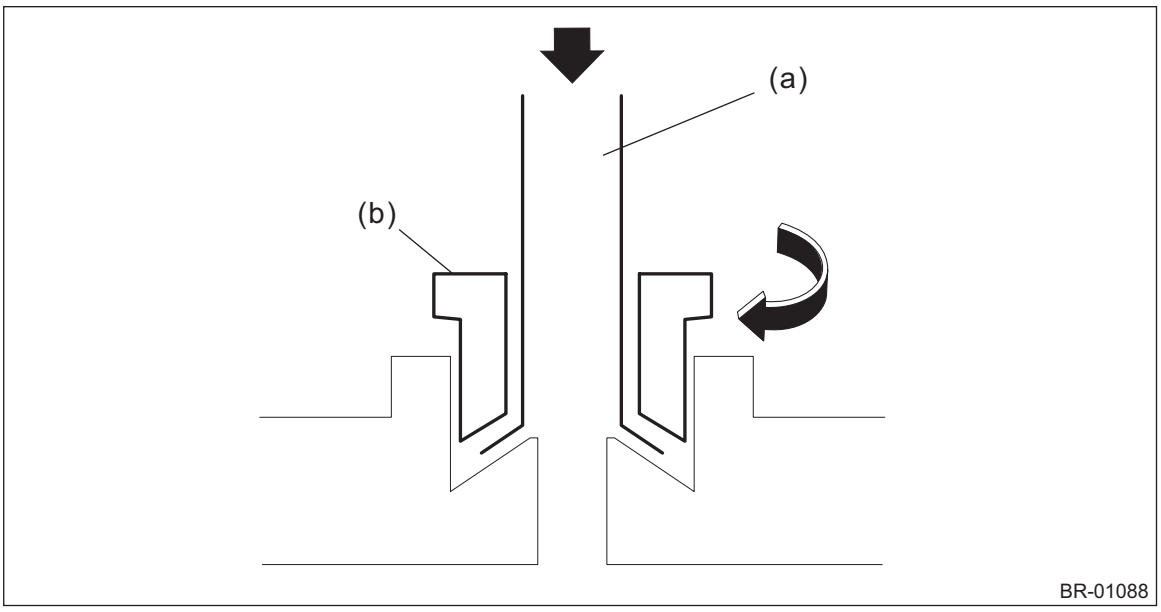
CAUTION:
• Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
• Avoid mixing brake fluid of different brands or different grades even from the same brand to prevent fluid performance from degrading.
• Do not reuse drained brake fluid. When refilling brake fluid, always refill new brake fluid.
• Do not allow dirt or dust to get into the reservoir tank.
• For convenience and safety, perform the work with 2 people.
• During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.
• After air bleeding operation, wipe off fluid around each bleeder - screw and the reservoir tank.
• Only when replacing the Brembo type brake caliper with a new part, perform the operations (1) to (6) written under the step 2-6), for air bleeding of the brake line. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
For air bleed procedure of each part, refer to the following.
• Master cylinder: <Ref. to BR-102, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
• Brake line: <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
• Hydraulic control unit: <Ref. to BR-106, HYDRAULIC CONTROL UNIT, PROCEDURE, Air Bleeding.>
• Caliper: <Ref. to BR-106, CALIPER, PROCEDURE, Air Bleeding.>

1. MASTER CYLINDER

NOTE:
• When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the brake master cylinder and the clutch master cylinder (MT model).
For air bleed procedure of the clutch fluid, refer to “CLUTCH SYSTEM” section. <Ref. to CL-30, PROCEDURE, Clutch Fluid Air Bleeding.>
• If bleeding of the master cylinder assembly is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>
1) Install the brake pipe to the master cylinder assembly.
(1) Screw and tighten the flare nut (b) so that the end of the nut contacts the back side of the brake pipe flare, while pressing the brake pipe (a) toward the master cylinder assembly side.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 19 N·m (1.9 kgf-m, 14 ft-lb)



2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
- Replenish brake fluid to the MAX level.
- During the operation, keep the reservoir tank filled with brake fluid at MIN level or higher to prevent entry of air.

3) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly that is the closest from the VDC control module & hydraulic control unit, and the other end of the vinyl tube to a collection container.
4) Loosen the bleeder - screw, depress the brake pedal slowly and hold it.
5) Tighten the bleeder - screw, and release the brake pedal quickly.
6) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:
Air bubbles are removed after repeating the procedures six to seven times.
7) Attach a transparent vinyl tube to the bleeder - screw of the left front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
8) Repeat steps 4) and 5) until there are no more air bubbles in the brake fluid in the vinyl tube.

NOTE:
- Air bubbles are removed after repeating the procedures seven to eight times.
- With the procedures so far, bleed is completed for the air that entered in the master cylinder, front brake piping hose passages and front caliper.

Next, perform the following procedures to bleed air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.
9) Attach a transparent vinyl tube to the bleeder - screw of the left rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
10) Loosen the bleeder - screw, and repeat the full stroke depressing operation of the brake pedal slowly, until the brake fluid in the transparent vinyl tube has no more air bubbles, then tighten the bleeder - screw.

NOTE:
By repeating the procedures 15 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the left rear caliper body assembly and is discharged.
11) Attach a transparent vinyl tube to the bleeder - screw of the right rear caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
12) Perform step 10).

NOTE:
• By repeating the procedures 10 times or more, air that entered in the rear brake pipe passages from the VDC control module & hydraulic control unit reaches the bleeder - screw of the right rear caliper body assembly and is discharged.
• With the procedures so far, bleed is completed for the air that entered in the rear brake piping hose passages and rear caliper from the hydraulic unit.
Lastly, perform the following procedures to bleed air that may remain in areas where the brake fluid flow stands.
13) Attach a transparent vinyl tube to the bleeder - screw of the right front caliper body assembly, and the other end of the vinyl tube to a brake fluid collection container.
14) After repeating firmly depressing of the brake pedal quickly five or six times, depress and hold the pedal.
15) Loosen the bleeder - screw to drain brake fluid. When the brake pedal reaches the full stroke position, tighten the bleeder - screw quickly, and release the brake pedal.
16) Repeat steps 14) and 15) until there are no more air bubbles in the transparent vinyl tube.

NOTE:
Repeat the procedures approximately four to five times.
17) Repeat steps 14) to 16) above for each brake caliper.

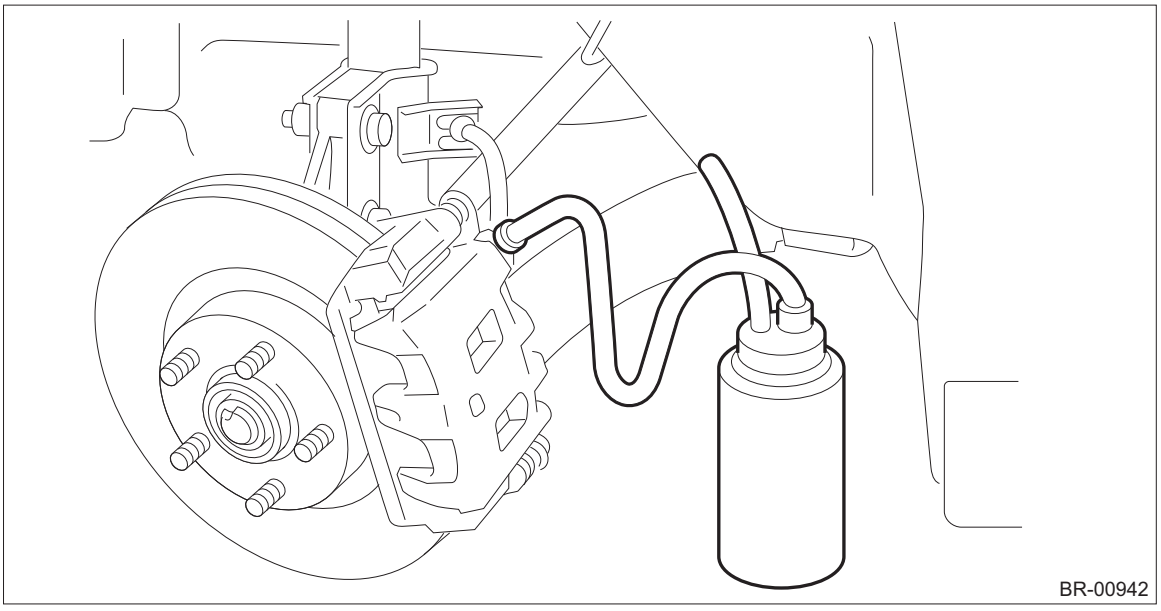
NOTE:
• Bleed air in the order starting from the front RH → front LH → rear LH → rear RH.
• For brembo type, in the order from inside → outside, bleed air starting from the front RH → front LH → rear LH → rear RH.
18) Tighten the bleeder - screw to the specified torque.

Tightening torque:
Bleeder - screw: 8 N·m (0.82 kgf-m, 5.9 ft-lb)
19) Install the cap - bleeder to each bleeder - screw.

2. BRAKE LINE

1) When the master cylinder assembly is replaced or the reservoir tank is empty, bleed the master cylinder assembly before bleeding the brake line. <Ref. to BR-102, MASTER CYLINDER, PROCEDURE, Air Bleeding.>
2) Fill the reservoir tank of the master cylinder assembly with brake fluid.

NOTE:
While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.
3) Attach one end of a transparent vinyl tube to the bleeder - screw, and the other end to a brake fluid collection container.



4) Loosen the bleeder - screw, and then repeat the full stroke depressing operation of the brake pedal, until brake fluid in the transparent vinyl tube has no more air bubbles.

NOTE:
Air bubbles are removed after repeating the depressing operation 15 times or more for the front caliper, and 20 times or more for the rear caliper.

5) Perform the steps 2) to 4) above on each brake caliper.

NOTE:
- Perform in the order starting from the front RH → front LH → rear LH → rear RH.
- For brembo type, in the order from inside → outside, bleed air starting from the front RH → front LH → rear LH → rear RH.

6) Only when replacing the Brembo type brake caliper with a new part, perform the following operations.
   (1) Remove the cross spring and pad clip bolt (front only).
   (2) Depress and hold the brake pedal with a little force (approx. 5 mm (0.2 in) of pedal stroke).
   (3) Loosen the bleeder - screw, and insert the disc brake piston tool between the pad - disc brake outer and the pad - disc brake inner to expand the pad - disc brake outer and the pad - disc brake inner.
   (4) Slowly depress the brake pedal with a full stroke, and once the brake pedal reaches the full stroke position, tighten the bleeder - screw in a quick manner and return the brake pedal.
   (5) Repeat depressing the brake pedal two or three times.
   (6) Repeat steps (2) through (5) until there are no more air bubbles in the transparent vinyl tube.

7) Tighten the loosened bleeder - screw, repeat firmly depressing of the brake pedal 5 to 6 times, and then depress and hold the brake pedal.

8) Loosen the bleeder - screw to drain the brake fluid. When the brake pedal reaches the full stroke position, immediately tighten the bleeder - screw and return the brake pedal.

9) Repeat steps 7) and 8) until there are no more air bubbles in the transparent vinyl tube.

10) Perform the steps 7) to 9) above on each brake caliper.

NOTE:
- Perform in the order starting from the front RH → front LH → rear LH → rear RH.
- For brembo type, in the order from inside → outside, bleed air starting from the front RH → front LH → rear LH → rear RH.

11) Operate the hydraulic control unit in the sequence control mode for both ABS and VDC systems.

CAUTION:
- **If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 12) to 17).**
- **For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)**

NOTE:
- Normal air bleeding operation does not help bleed air that enters the pressure control section in the hydraulic control unit.
- If there is a possibility that air enters the pressure control section in the hydraulic control unit (if VDC or ABS operates with air contained in the normal air bleeding passage), perform the sequence control mode for both of the ABS and VDC systems.

12) Perform the ABS sequence control mode. <Ref. to VDC-19, ABS Sequence Control.>

CAUTION:
Be sure to perform the ABS sequence control mode first.

13) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.

NOTE:
- Perform in the order starting from the front RH → front LH → rear LH → rear RH.
- For brembo type, in the order from inside → outside, bleed air starting from the front RH → front LH → rear LH → rear RH.
- As a reference, the number of the full stroke depressing operation is six times.

14) Perform the VDC sequence control mode. <Ref. to VDC-22, VDC Sequence Control.>

15) Perform the air bleeding operation of steps 3) and 4) for the bleeder - screw on each caliper.

16) Repeat from steps 12) to 15) for three cycles.
17) In case air still remains at step 16), repeat steps 12) to 15) again until all air is removed.
18) Fill the reservoir tank with brake fluid up to the “MAX” level.
19) Tighten the bleeder - screw to the specified torque.

Tightening torque:
Bleeder - screw: 8 N·m (0.82 kgf-m, 5.9 ft-lb)
20) Install the cap - bleeder to each bleeder - screw.
21) Check that there are no brake fluid leaks at the flare nut portion or in the entire brake system.
22) After inspection, wipe off fluid around each bleeder - screw and the reservoir tank.
23) Perform a road test and ensure that the brakes operate normally.

3. HYDRAULIC CONTROL UNIT

1) Perform steps 1) to 23) in procedure 2 for air bleeding of the brake line. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>

CAUTION:
• If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform steps 12) to 17) in procedure 2.
• For normal air bleeding operation, do not operate the sequence control for the hydraulic control unit. (Operating the sequence control may let air in the normal air bleeding passages move to the pressure control section.)
• Always start the operations in ABS sequence control mode prior to VDC sequence control mode.

NOTE:
If there is a possibility that air enters the pressure control section in the hydraulic control unit, perform the sequence control mode for both of the ABS and VDC systems. (Refer to steps 11) to 17) for brake lining.)

4. CALIPER

1) Perform steps 1) to 23) in procedure 2 for air bleeding of the brake line. <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.>

CAUTION:
• For the caliper with electronic parking actuator, never drain the brake fluid in the caliper.
• When removing the caliper with electronic parking actuator from the vehicle, make sure to apply the brake fluid seal before disconnection.
• Do not remove the brake fluid seal of the caliper with replacement electronic parking actuator, except when the caliper is installed on the vehicle.

12.Brake Hose

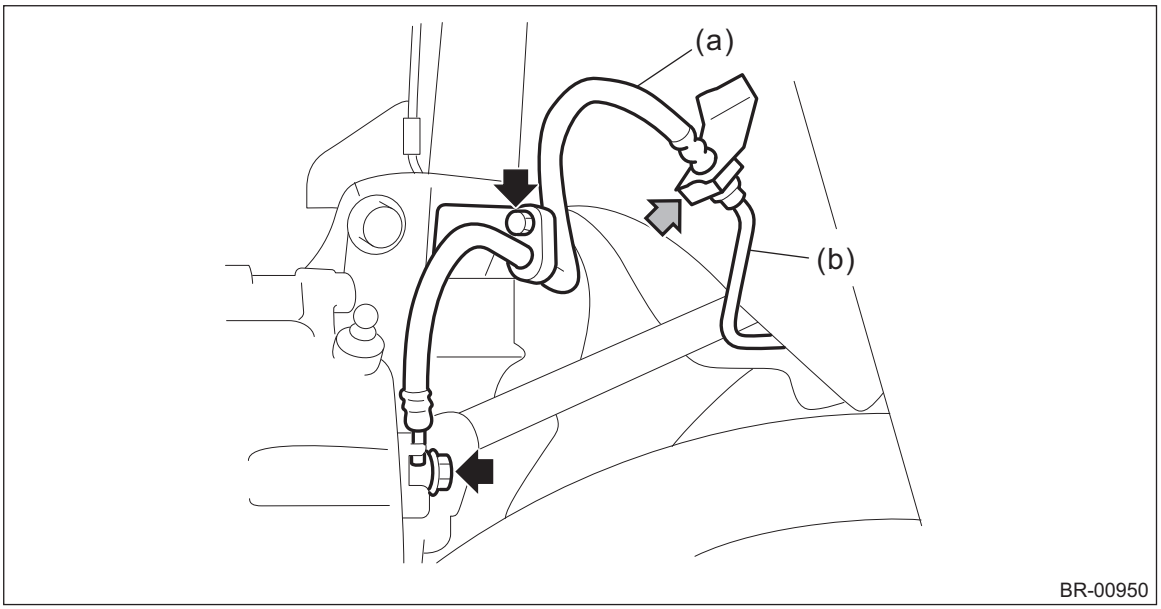
A: REMOVAL

1. FRONT BRAKE HOSE

1) Disconnect the brake hose (a) and the brake pipe (b).

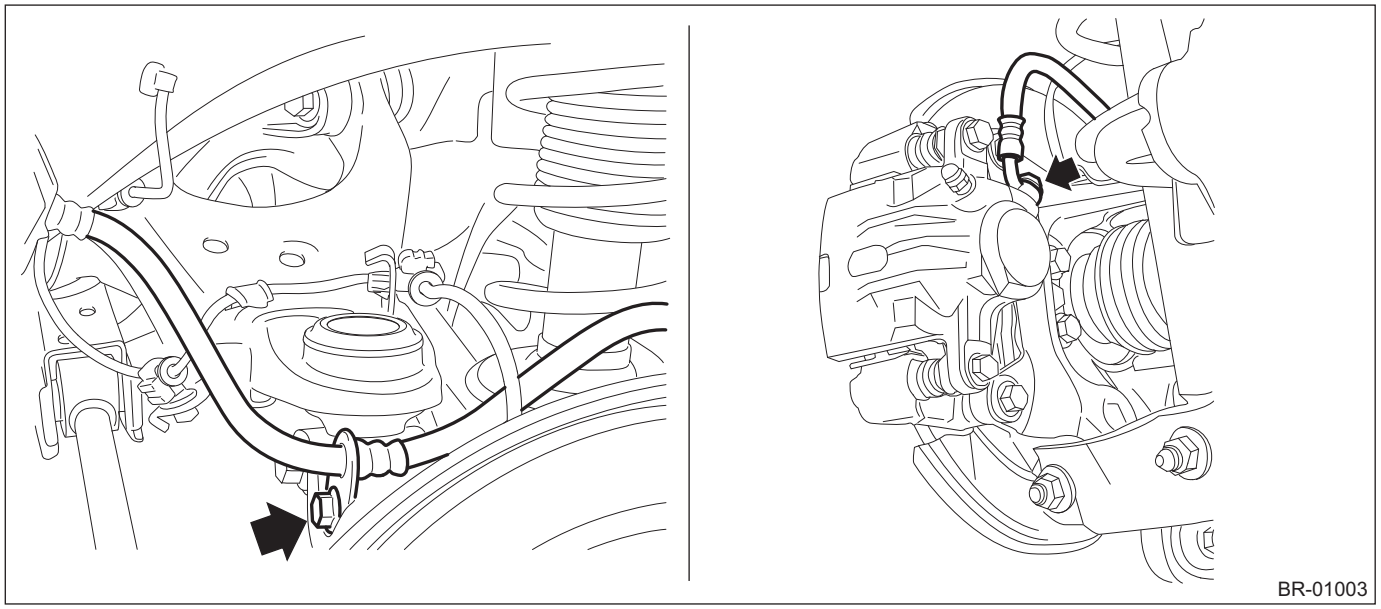
Preparation tool:
Flare nut wrench

2) Remove the clamp, strut mounting bolt and union bolt, and remove the front brake hose.



2. REAR BRAKE HOSE

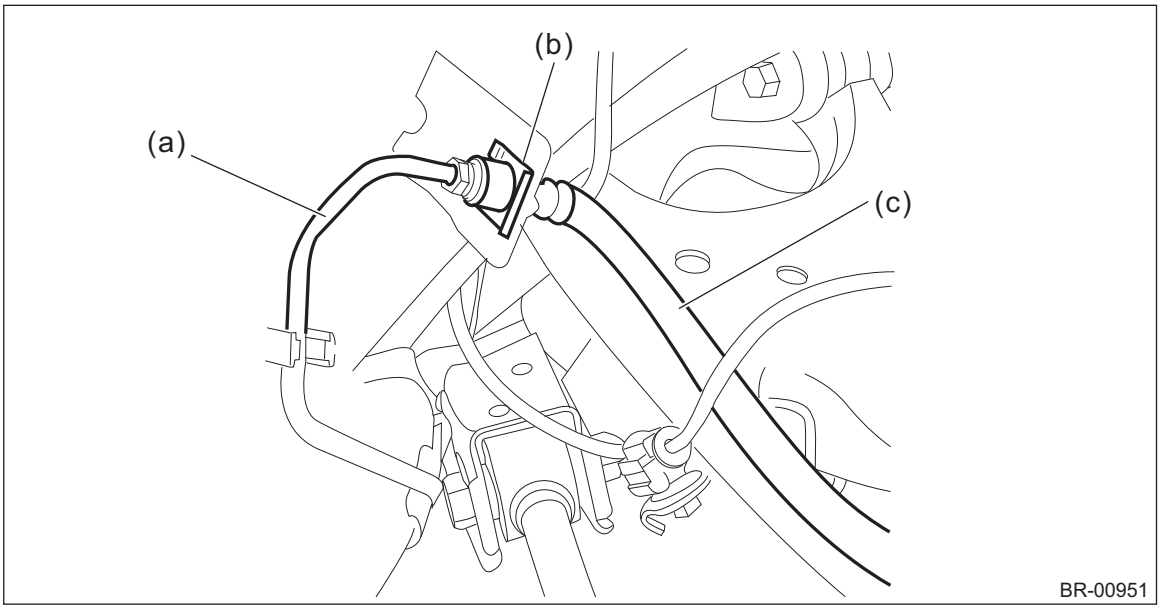
1) Remove the brake hose bracket bolt and union bolt.



2) Disconnect the brake pipe (a).

Preparation tool:
Flare nut wrench

3) Remove the brake hose clamp (b), and remove the rear brake hose (c).



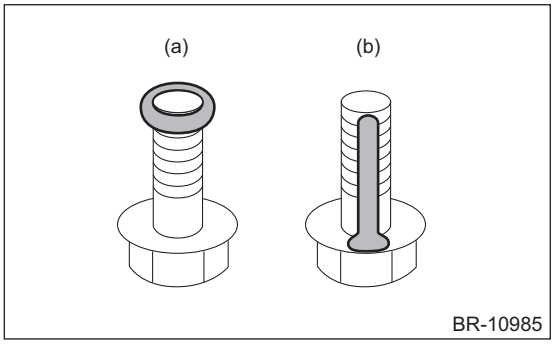
B: INSTALLATION

1. FRONT BRAKE HOSE

1) Secure the brake hose to the brake hose mount part of strut COMPL.

Tightening torque:
Brake hose: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

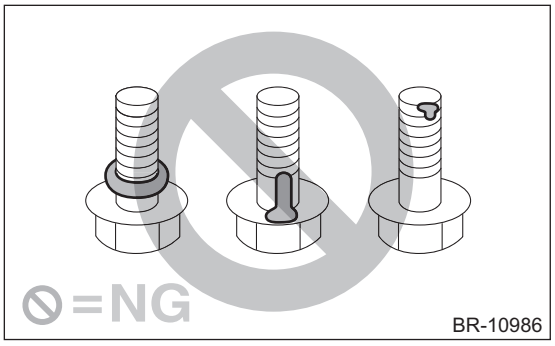
2) Apply brake grease to the union bolt as (a) or (b) shown in the figure. (Brembo type only)



(a) Apply to the peripheral surface of the tip part
(b) Apply linearly from the tip part to the flange part

CAUTION:
DO NOT apply the grease as follows:
- **Apply to the entire perimeter except for the tip part**
- **Apply from the middle of the bolt thread part to the flange part**

- **Apply an insufficient amount to the tip part**



Preparation items:
Grease: Nippon Grease NIGLUBE RX-2 or equivalent

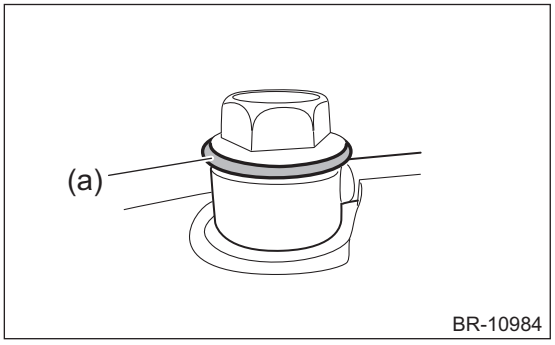
3) Connect the brake hose to the caliper body assembly using a new gasket. (Brembo type only)
(1) Temporarily tighten the union bolt by hand to its seating position.
(2) Tighten to the specified torque.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

4) After tightening, make sure that the grease is squeezed out from the entire perimeter of the flange part. (Brembo type only)

CAUTION:
If there is no protruding of the grease, go back to step 2) and perform the operation again.

NOTE:
Wipe off the protruding grease (a) with cloth, and clean with brake cleaner, etc.



5) Connect the brake hose to the caliper body assembly using a new gasket. (Brembo type only)

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

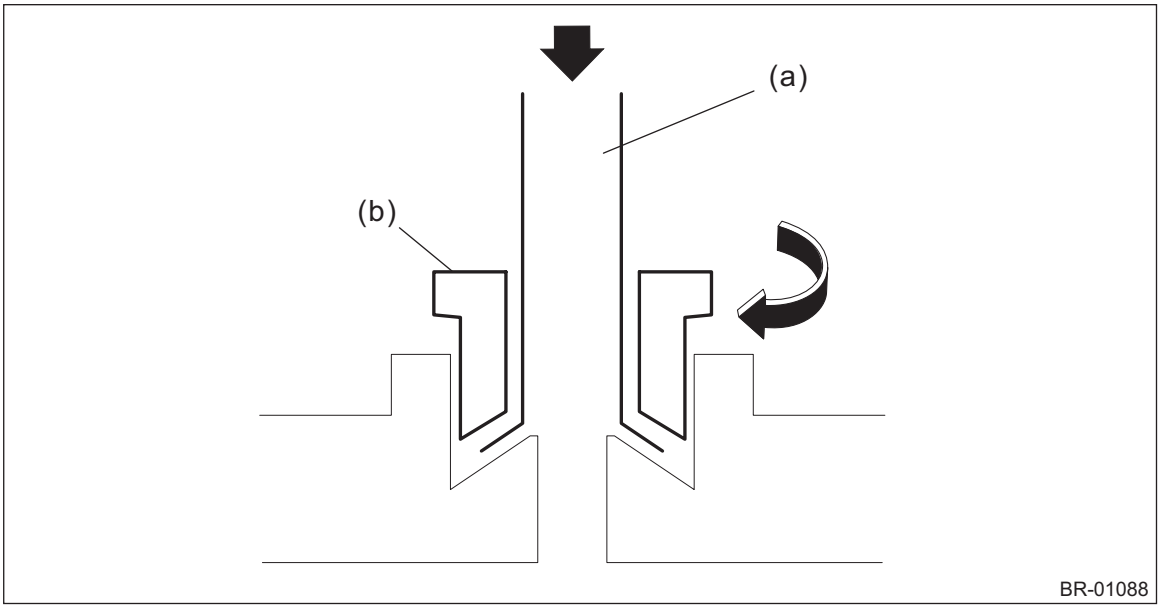
6) Position the disc rotor in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

CAUTION:
Do not twist the brake hose.

7) Connect the brake pipe and the hose, then temporarily tighten the flare nut.
8) Secure the brake hose to wheel apron bracket with clamp.
9) Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)



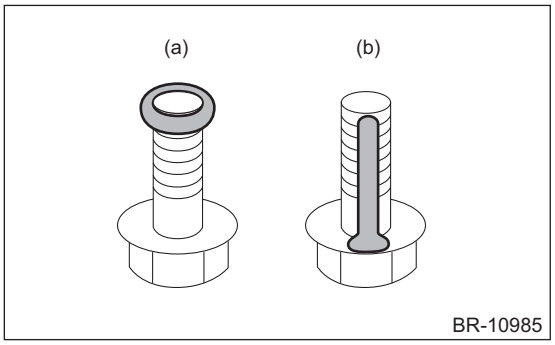
10) Bleed air from the brake system. <Ref. to BR-102, PROCEDURE, Air Bleeding.>

2. REAR BRAKE HOSE

1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp to secure brake hose.

Tightening torque:
Brake hose bracket: 33 N·m (3.4 kgf-m, 24.3 ft-lb)

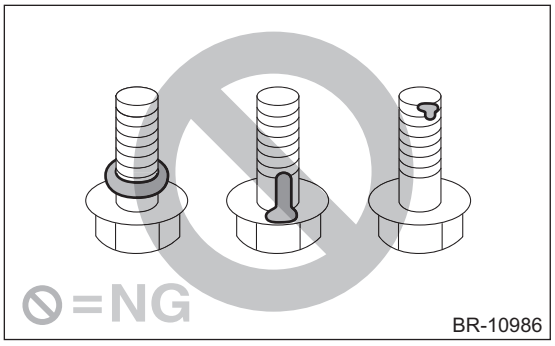
3) Apply brake grease to the union bolt as (a) or (b) shown in the figure. (Brembo type only)



(a) Apply to the peripheral surface of the tip part
(b) Apply linearly from the tip part to the flange part

CAUTION:
DO NOT apply the grease as follows:
- **Apply to the entire perimeter except for the tip part**
- **Apply from the middle of the bolt thread part to the flange part**

- **Apply an insufficient amount to the tip part**



Preparation items:
Grease: Nippon Grease NIGLUBE RX-2 or equivalent

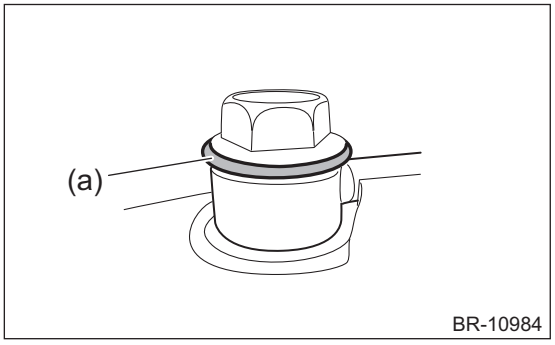
4) Connect the brake hose to the caliper body assembly using a new gasket. (Brembo type only)
(1) Temporarily tighten the union bolt by hand to its seating position.
(2) Tighten to the specified torque.

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

5) After tightening, make sure that the grease is squeezed out from the entire perimeter of the flange part. (Brembo type only)

CAUTION:
If there is no protruding of the grease, go back to step 3) and perform the operation again.

NOTE:
Wipe off the protruding grease (a) with cloth, and clean with brake cleaner, etc.



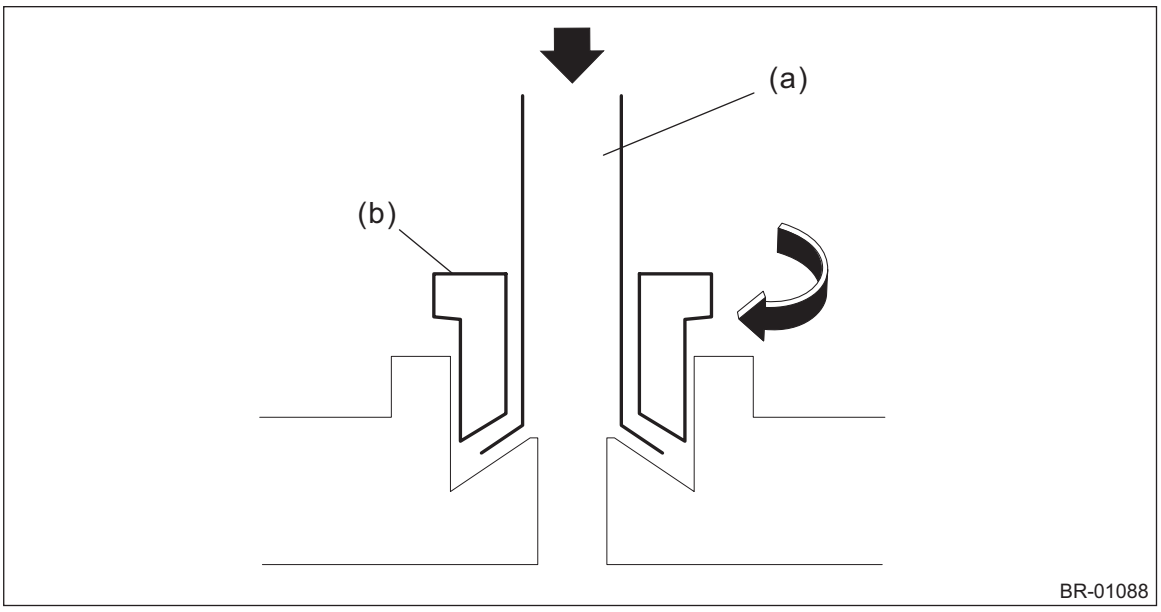
6) Install the brake hose to rear caliper body using a new gasket. (Brembo type only)

Tightening torque:
Union bolt: 26 N·m (2.7 kgf-m, 19.2 ft-lb)

7) Turn and tighten the flare nut (b) by hand while pushing the brake pipe (a) away from yourself.

CAUTION:
Be careful not to make scratches or other damage to the inside surface of the brake pipe flare.

Tightening torque:
Brake pipe flare nut: 15 N·m (1.53 kgf-m, 11.1 ft-lb)



8) Bleed air from the brake system. <Ref. to BR-102, PROCEDURE, Air Bleeding.>

C: INSPECTION

Check the hose for crack, interference with other parts, damage, and fluid leakage on connecting sections. If any faulty is found, repair or replace the relevant part.

13.Brake Pipe

A: REMOVAL

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When removing the brake pipe, do not bend.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

B: INSTALLATION

CAUTION:
- **Be careful of the following items. Failure to do so may cause the airbag system malfunction.**
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- **Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.**
- **When installing the brake pipe, do not bend.**
- **After installing the brake pipe and hose, perform air bleed.**
- **After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.**

NOTE:
The airbag system wiring harness is routed near the center brake pipe.

Tightening torque:
Front brake pipes & hoses: <Ref. to BR-14, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>
Center & rear brake pipes and hoses: <Ref. to BR-16, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>

C: INSPECTION

Check the pipe for crack and damage, and also check the connection for fluid leakage. If any faulty is found, repair or replace the relevant part.

NOTE:
Use a mirror when inspecting back sides and other locations which are hard to see.

14.Brake Pedal

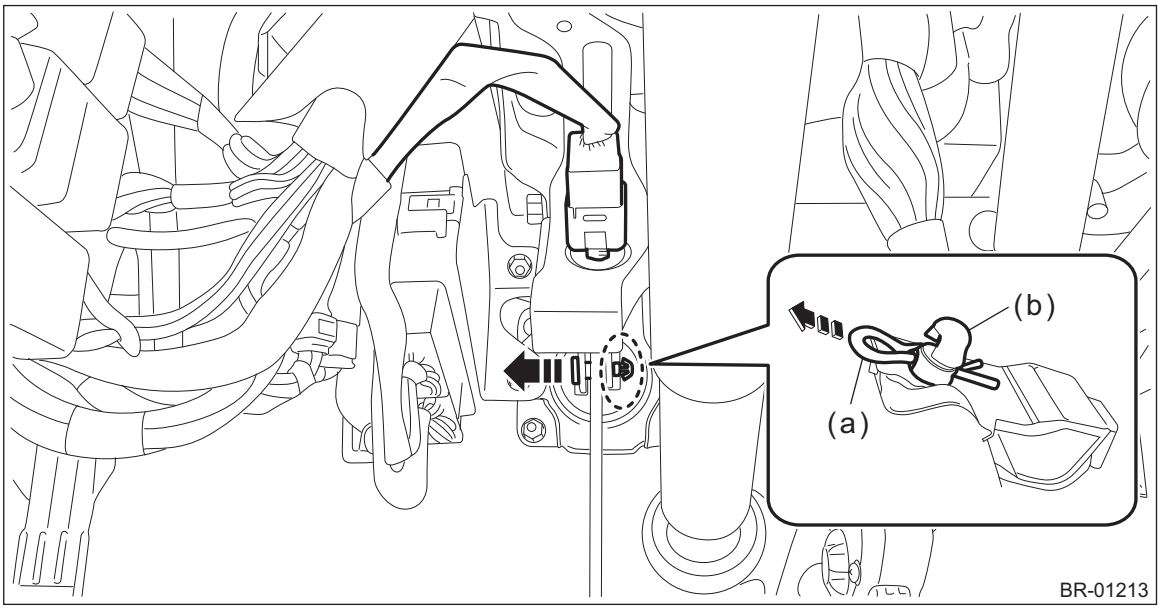
A: REMOVAL

1. CVT MODEL

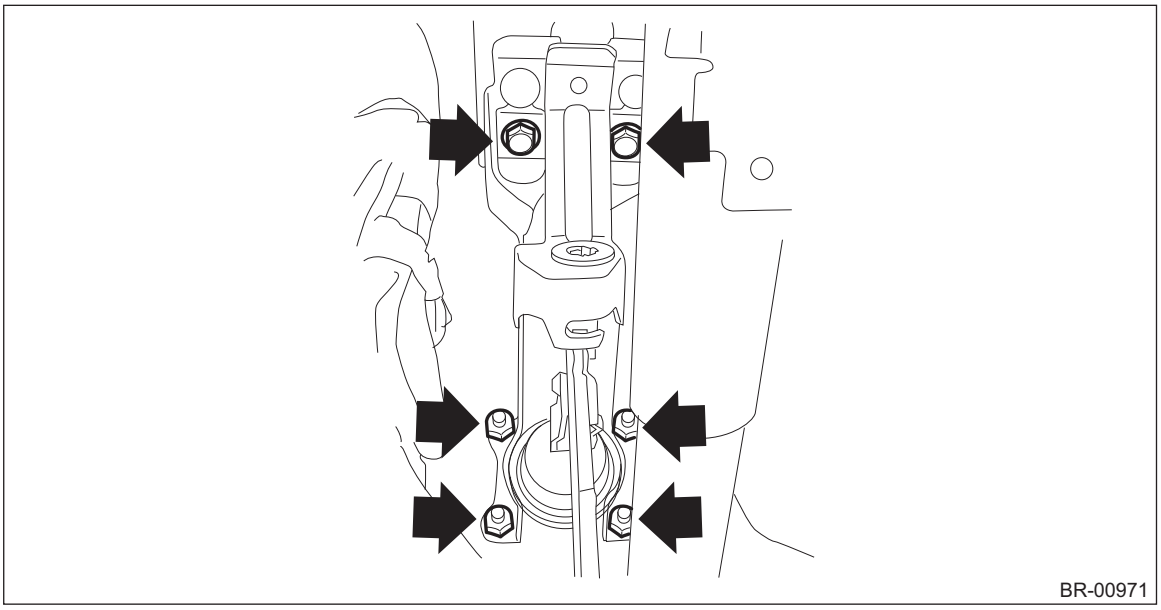
CAUTION:
Before performing service on the airbag module, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground terminal from the battery sensor, and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
5) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
6) Remove the brake pedal assembly.
   (1) Disconnect the stop light switch connector.
   (2) Remove the snap pin (a) and clevis pin (b), and remove the operating rod from the brake pedal.

CAUTION:
- **Be careful not to apply excessive force to the operating rod when handling the operating rod. The angle may change by ±3°, and it may result in damage to power piston cylinder.**
- **Do not change the push rod length.**



(3) Remove the bolt and nut, and then detach the brake pedal assembly.



2. MT MODEL

NOTE:
Brake pedal is integrated with the clutch pedal.
For removal procedures of the brake pedal, refer to Clutch section. <Ref. to CL-32, REMOVAL, Clutch Pedal.>

B: INSTALLATION

1. CVT MODEL

CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the brake pedal assembly.

CAUTION:
- **Apply grease to the snap pin to prevent the operating rod from wear.**
- **Replace the clevis pin with new parts, and apply thin coat of NIGTIGHT LTS No. 2 grease to the clevis pin.**

Tightening torque:
Brake pedal: 18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the column assembly - steering. <Ref. to PS-26, INSTALLATION, Steering Column.>
3) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>

CAUTION:
- **Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.**
- **Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.**
- **Always place the tilt lever to the lock position after the steering column is adjusted.**

4) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the cover assembly - instrument panel LWR driver.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Check that the brake light operate properly.

8) Check the brake pedal after installation. <Ref. to BR-116, INSPECTION, Brake Pedal.>

2. MT MODEL

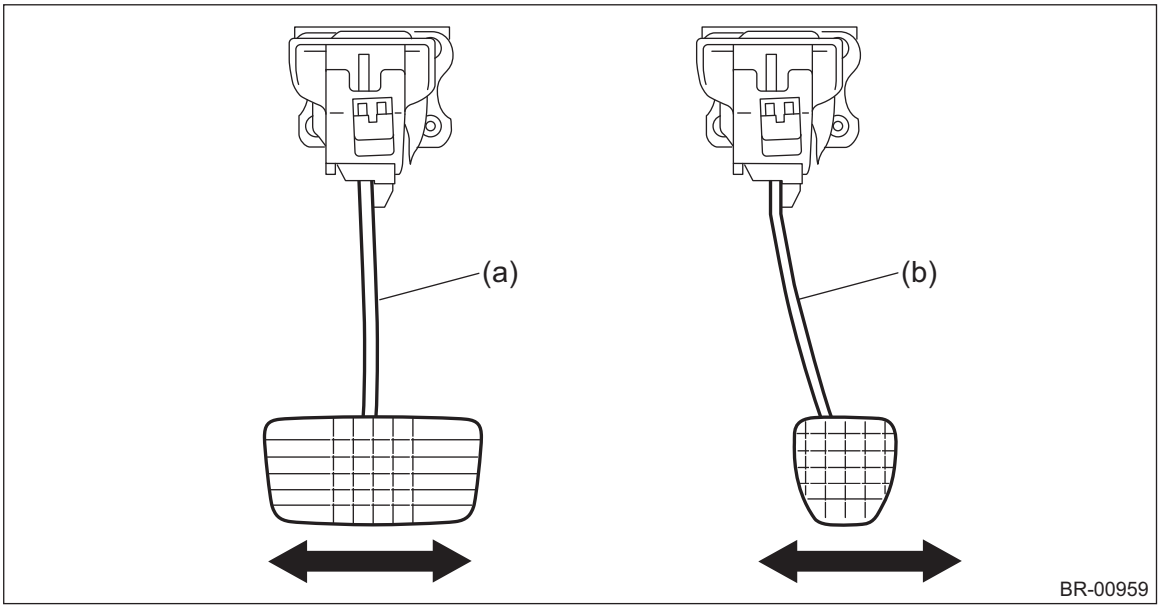
NOTE:
Brake pedal is integrated with the clutch pedal.
For installation procedure of the brake pedal, refer to Clutch section. <Ref. to CL-32, INSTALLATION, Clutch Pedal.>

C: INSPECTION

1) Move the pad - brake pedal in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lbf), and check that the pedal deflection is in the range of specifications.

CAUTION:
If excessive deflection is noted, replace with a new bushing.

Deflection of brake pedal:
Limit: 5 mm (0.197 in) or less

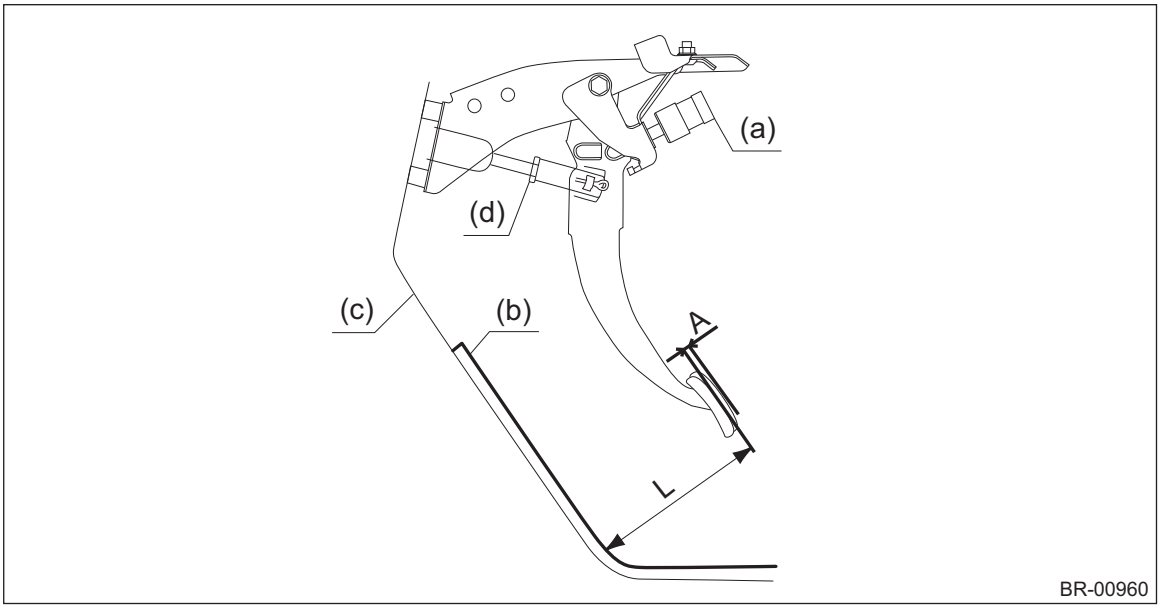


(a) Brake pedal (CVT model) (b) Brake pedal (MT model)

2) Check the position of the pedal pad.

Pedal height L:
140 — 150 mm (5.51 — 5.91 in)

Brake pedal free play A:
0.5 — 2.7 mm (0.02 — 0.11 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lbf).]



(a) Stop light switch
(b) Mat
(c) Toe board
(d) Brake booster operating rod

3) If it is not within the specification, loosen the lock nuts of vacuum booster operating rod, and rotate the rod to adjust the pedal height L within the specification.
4) Tighten the lock nut.

Tightening torque:
Operating lock nut: 22 N·m (2.2 kgf-m, 16.2 ft-lb)

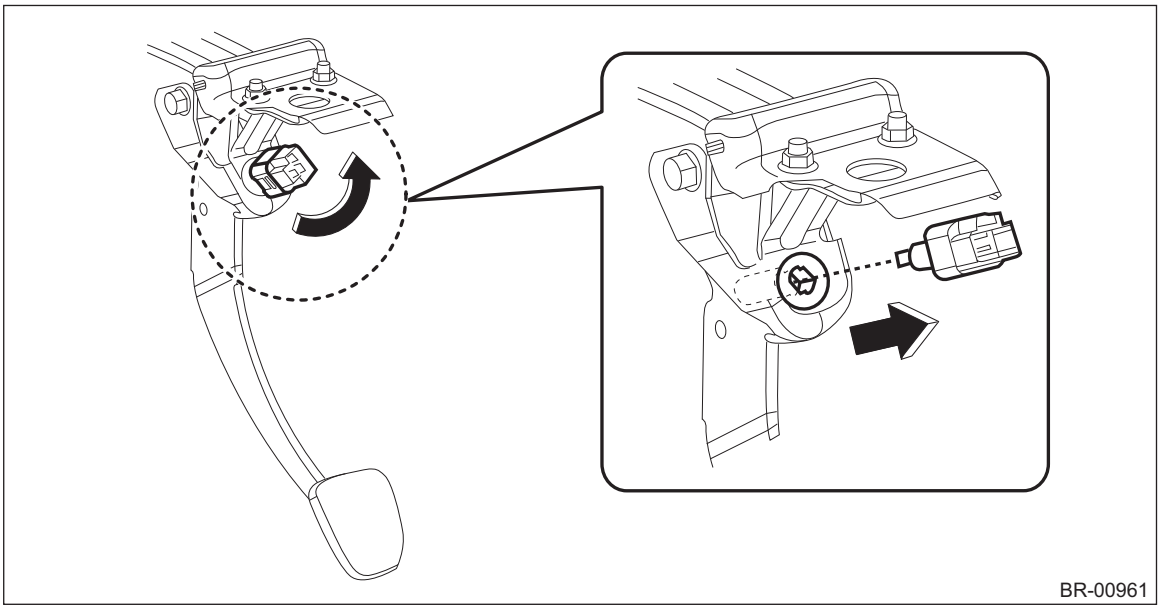
NOTE:
Check the brake pedal height. When adjusting, also adjust the stop light switch.

15.Stop Light Switch

A: REMOVAL

CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the stop light switch.
   (1) Disconnect the stop light switch connector.
   (2) Remove the stop light switch by turning it counterclockwise.



B: INSTALLATION

1) Install the stop light switch.
   (1) Adjust the stop light switch position, and then secure the stop light switch by turning it clockwise. <Ref. to BR-120, ADJUSTMENT, Stop Light Switch.>
   (2) Install the stop light switch connector.
2) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

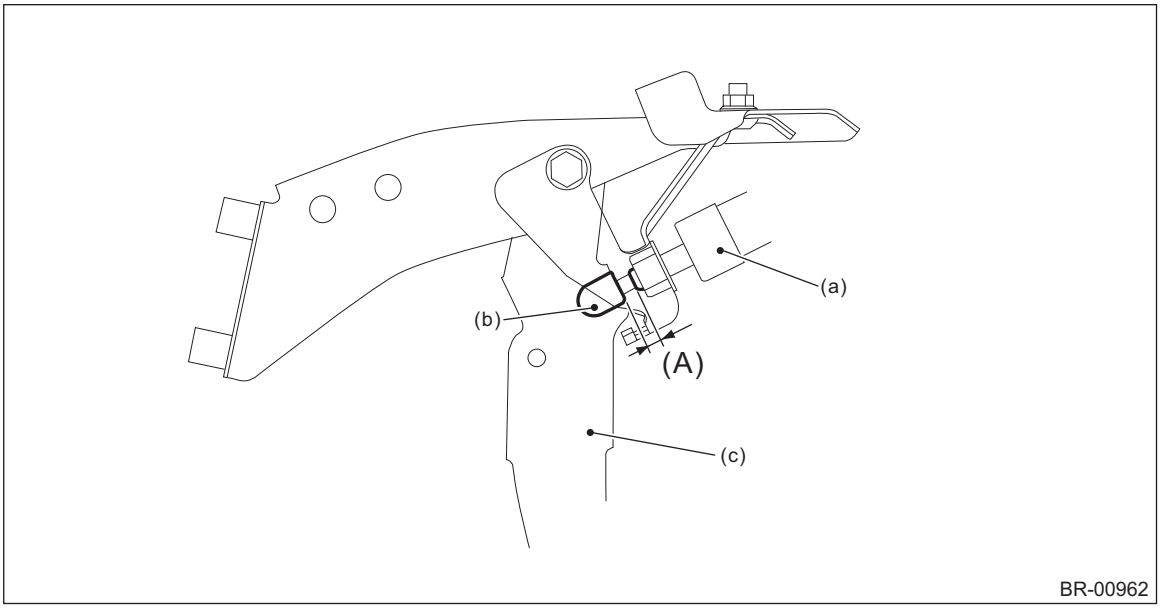
C: INSPECTION

1. CLEARANCE CHECK

1) Measure the clearance between the end of the stop light switch and the stopper.

Specification:

Clearance (A) of the stop light switch: 1 mm — 2 mm (0.04 in — 0.08 in)



(a) Stop light switch (b) Stopper (c) Brake pedal

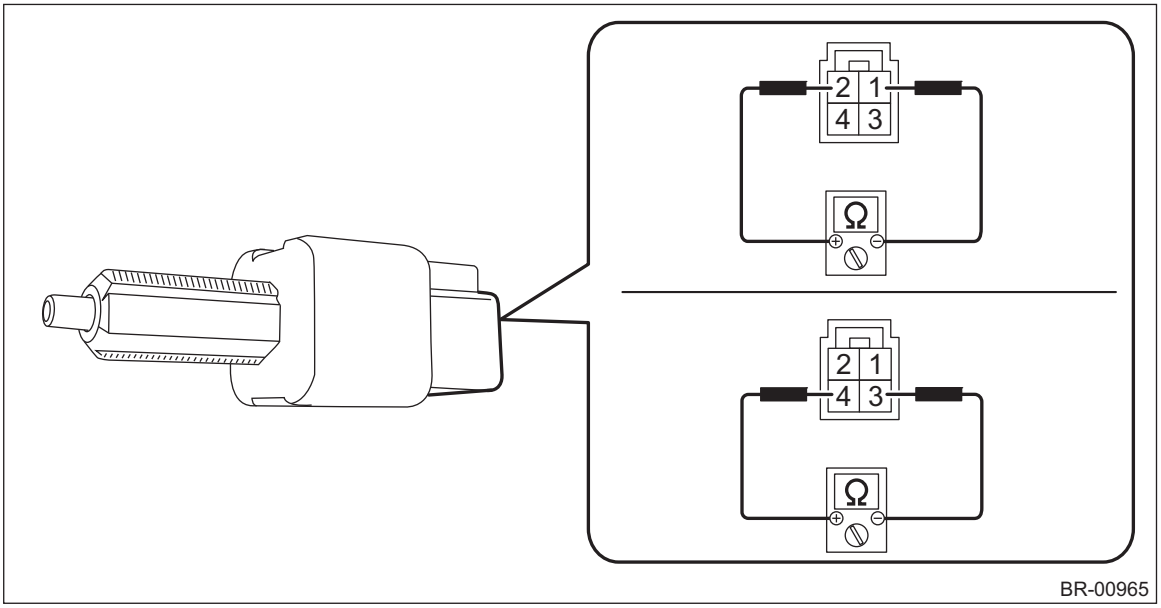
2) Adjust the position of the stop light switch if the inspection result is not within the standard value. <Ref. to BR-120, ADJUSTMENT, Stop Light Switch.>

2. INSPECT THE RESISTANCE

1) Disconnect the stop light switch connector.
2) Measure the resistance between the stop light switch connector terminals.

Preparation tool:

Circuit tester



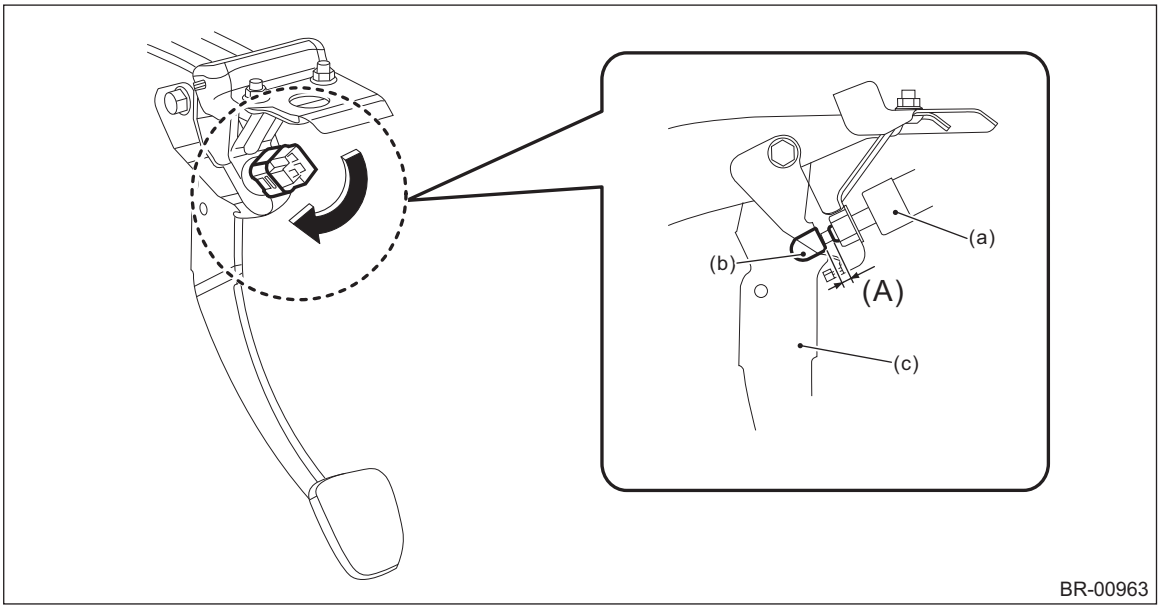
Terminal No.	Inspection conditions	Standard
1 — 2	When brake pedal is depressed	Less than 1 Ω
	When brake pedal is released	1 MΩ or more
3 — 4	When brake pedal is depressed	1 MΩ or more
	When brake pedal is released	Less than 1 Ω

3) Replace the stop light switch if the inspection result is not within the standard value.

D: ADJUSTMENT

1) While pulling up the brake pedal (c) toward you, insert the stop light switch (a) until it reaches the stopper (b).
2) Install the stop light switch by turning it clockwise.

CAUTION:
• Turn the stop light switch clockwise when installing so that it can return backward by approximately 1 mm (0.04 in) and clearance is automatically adjusted.
• When pushing the stop light switch against the brake pedal, do not apply excessive force.
• Tighten the stop light switch with a turning torque of 3 N·m (0.3 kgf-m, 2.2 ft-lb) or less.
(If it is hard to turn, reduce the switch pushing force and turn it again.)
• Insert until it contacts the stopper, and make sure that clearance (A) of the end of stop light switch and the stopper is 1 mm — 2 mm (0.04 in — 0.08 in).

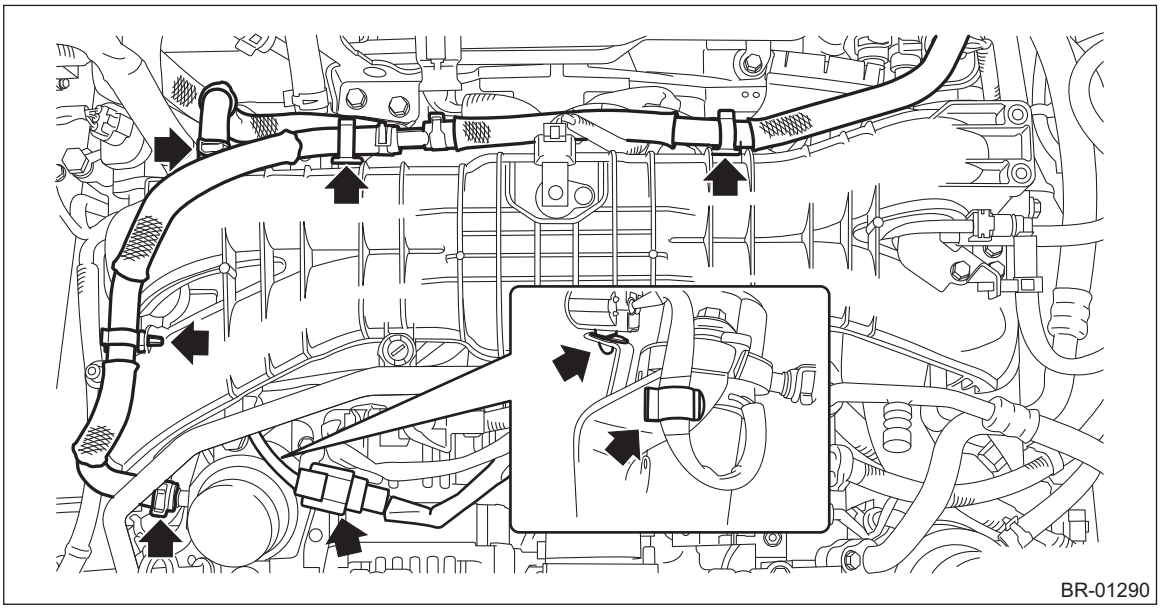


(a) Stop light switch (b) Stopper (c) Brake pedal

16.Brake Vacuum Pump

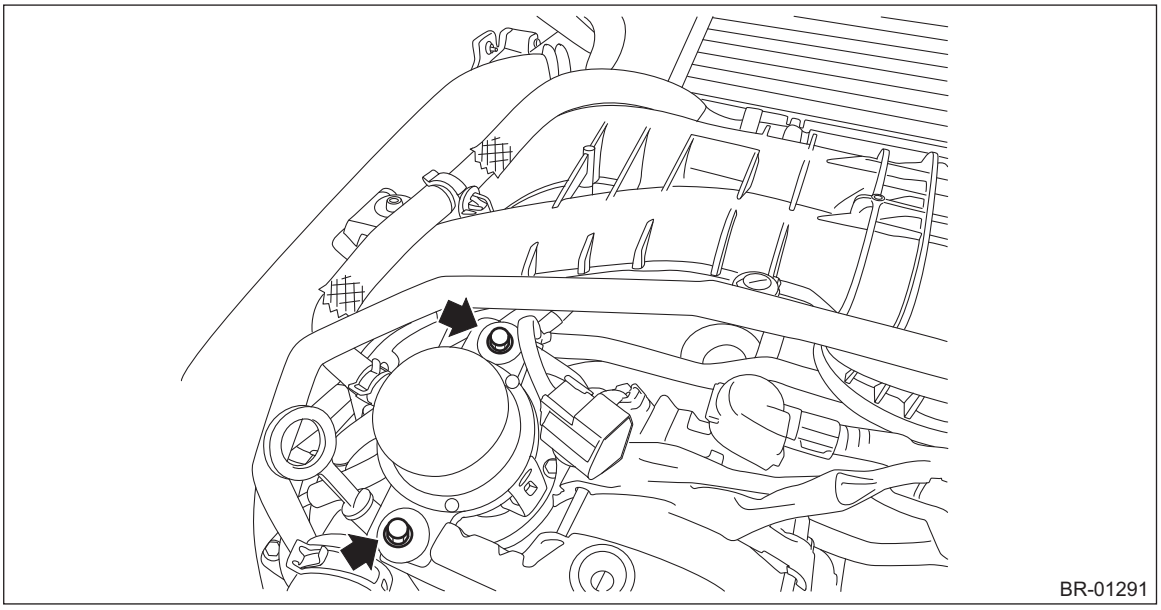
A: REMOVAL

NOTE:
Only other models than STI are equipped with the brake vacuum pump.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the collector cover. <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
3) Remove the vacuum pump assembly.
   (1) Disconnect the connectors of the vacuum pump assembly.
   (2) Remove the vacuum hose COMPL.



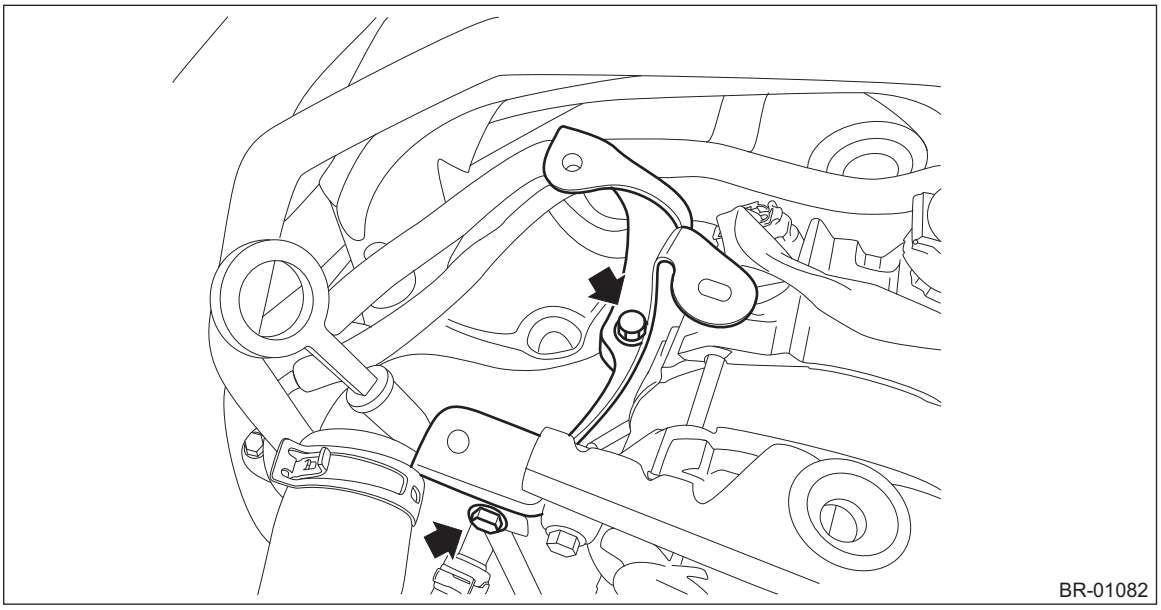
BR-01290

   (3) Remove the bolts, then remove the vacuum pump assembly.



BR-01291

4) Remove the bolts, and then remove the bracket - generator.



B: INSTALLATION

1) Install the bracket - generator.

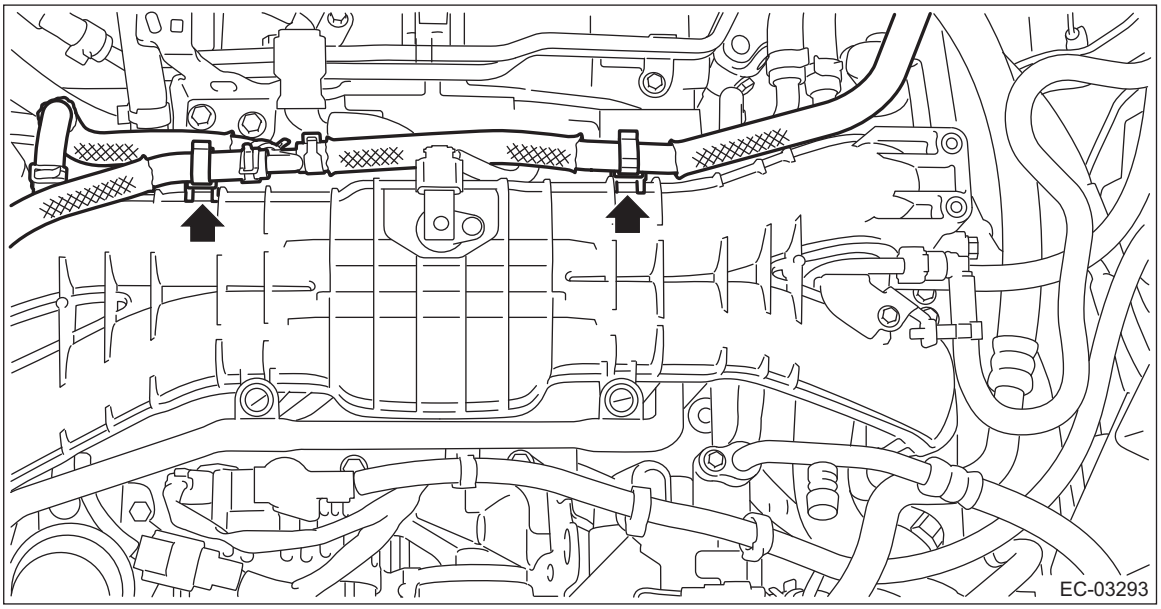
Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

2) Install the vacuum pump assembly.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

3) Install the vacuum hose COMPL.

NOTE:
Install the clip to the position (arrowed) of alignment mark ▼ of intake manifold.



4) Install the collector cover. <Ref. to IN(w/o STI)-9, INSTALLATION, Collector Cover.>
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. BRAKE VACUUM PUMP

Refer to “Read Diagnostic Trouble Code (DTC)” of “BRAKE VACUUM CONTROL”. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>

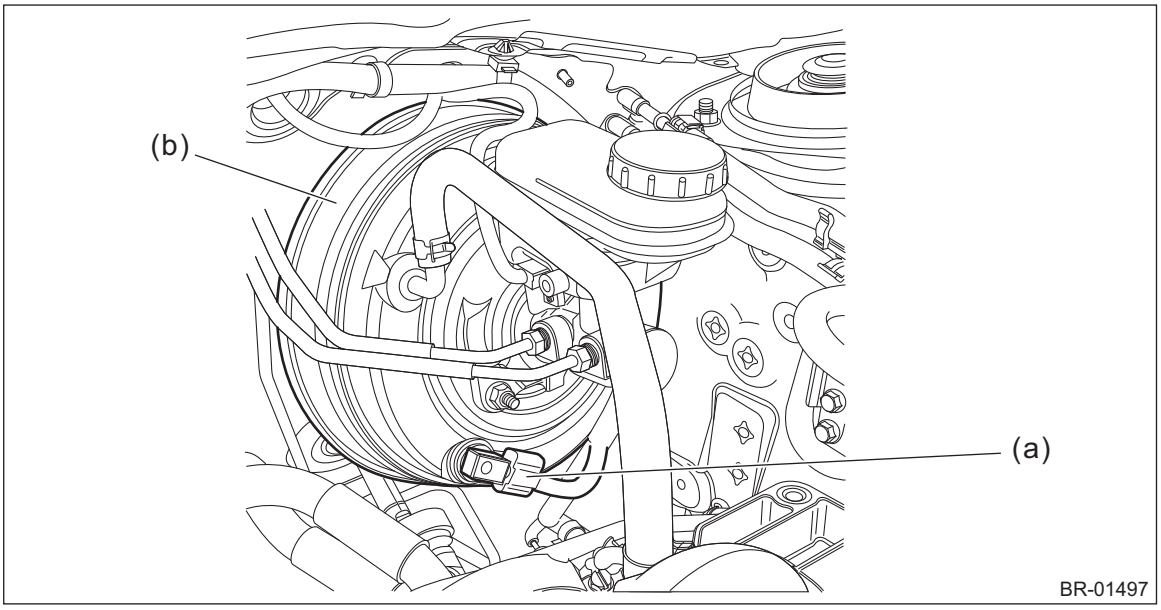
2. VACUUM HOSE

Check to see that air only flows in one direction, when air is blown into or sucked from the hose.

17.Brake Vacuum Sensor

A: NOTE

CAUTION:
• Do not remove the vacuum sensor (a). If removed, replace the vacuum booster assembly (b) with a new part.
• Do not rotate the vacuum sensor (a) when disconnecting the connector of vacuum sensor (a). Otherwise the grommet on the mounting location of the vacuum sensor (a) may be damaged.



18.General Diagnostic Table

A: INSPECTION

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder assembly, disc caliper, vacuum booster assembly or check valve	Repair or replace.
2. Unstable or uneven braking	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Repair or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Defective hub unit COMPL	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Repair or replace.
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Repair or replace.
	(7) Faulty wheel bearing	Replace.
5. Brake noise (1) (creaking sound)	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose hub unit COMPL	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	Excessively worn pad or support	Replace the pad or the support.

BRAKE VACUUM CONTROL (BVC) (DIAGNOSTICS)

BVC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	5
4.	Electrical Component Location	6
5.	Engine Control Module (ECM) I/O Signal	8
6.	Subaru Select Monitor	9
7.	Read Diagnostic Trouble Code (DTC)	10
8.	Inspection Mode	11
9.	Clear Memory Mode	12
10.	List of Diagnostic Trouble Code (DTC)	13
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	14
12.	General Diagnostic Table	31

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, reading the current data and clearing the memory.
• Remove foreign matter (dust, water, oil, etc.) from the engine control module (ECM) connector when removing or installing.

NOTE:
- To check the harness for open or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to BVC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to BVC(diag)-3, Check List for Interview.> 2) Check the brake vacuum pump warning light.	Does the brake vacuum pump warning light illuminate?	Go to step **3**.	Go to step **2**.
2	**BASIC INSPECTION.** Check the components which might affect the brake vacuum control. <Ref. to BVC(diag)-5, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair or replace each component.
3	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Record all DTC.	Is DTC displayed?	Record the DTC, time stamp and freeze frame data. Go to step **5**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **4**.
4	**PERFORM GENERAL DIAGNOSTICS.** Perform the inspection by referring to “General Diagnostic Table”. <Ref. to BVC(diag)-31, INSPECTION, General Diagnostic Table.>	Is the check result OK?	Finish the diagnosis.	Go to step **5**.
5	**PERFORM DIAGNOSIS.** 1) Correct the cause of trouble according to the DTC. <Ref. to BVC(diag)-13, LIST, List of Diagnostic Trouble Code (DTC).> 2) Perform the Clear Memory Mode. <Ref. to BVC(diag)-12, OPERATION, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to BVC(diag)-11, PROCEDURE, Inspection Mode.> 4) Read the DTC. <Ref. to BVC(diag)-10, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following item about the vehicle's state.

1. BRAKE VACUUM PUMP WARNING LIGHT STATUS

The brake vacuum pump warning light illuminates.	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate • When/How long does it illuminate?		
Ignition key position	❑ LOCK ❑ ACC ❑ ON (before starting engine) ❑ START ❑ ON (after starting engine, engine is running) ❑ ON (after starting engine, engine is at a standstill)		
Timing	❑ Immediately after turning the ignition switch to ON ❑ Immediately after turning the ignition switch to START		
	❑ While accelerating	—	km/h
		—	MPH
	❑ While driving at a constant speed	km/h	MPH
	❑ While decelerating	—	km/h
		—	MPH

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
	b) Ambient temperature	°C (°F)
	c) Altitude	m (ft)
	d) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Uphill ❑ Downhill ❑ Paved road ❑ Gravel road ❑ Muddy road ❑ Sandy place ❑ Straight road ❑ Sharp curve ❑ Gentle curve ❑ S-curve ❑ Road with a slope on both sides ❑ Others:

Check List for Interview

<table>

❑ Immediately after starting the engine
❑ Idling, etc.</td></tr>
</table>

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the main relay and ECM.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness.

2. ENGINE CONTROL MODULE (ECM)

Refer to “CAUTION” in “General Description” in ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-7, CAUTION, General Description.>

B: INSPECTION

Before performing diagnosis, check the following items which might affect the brake vacuum control.

1. BATTERY

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>

2. BRAKE VACUUM HOSE

Make sure the brake vacuum hose is not cracked or loose.

C: PREPARATION TOOL

1. SPECIAL TOOL

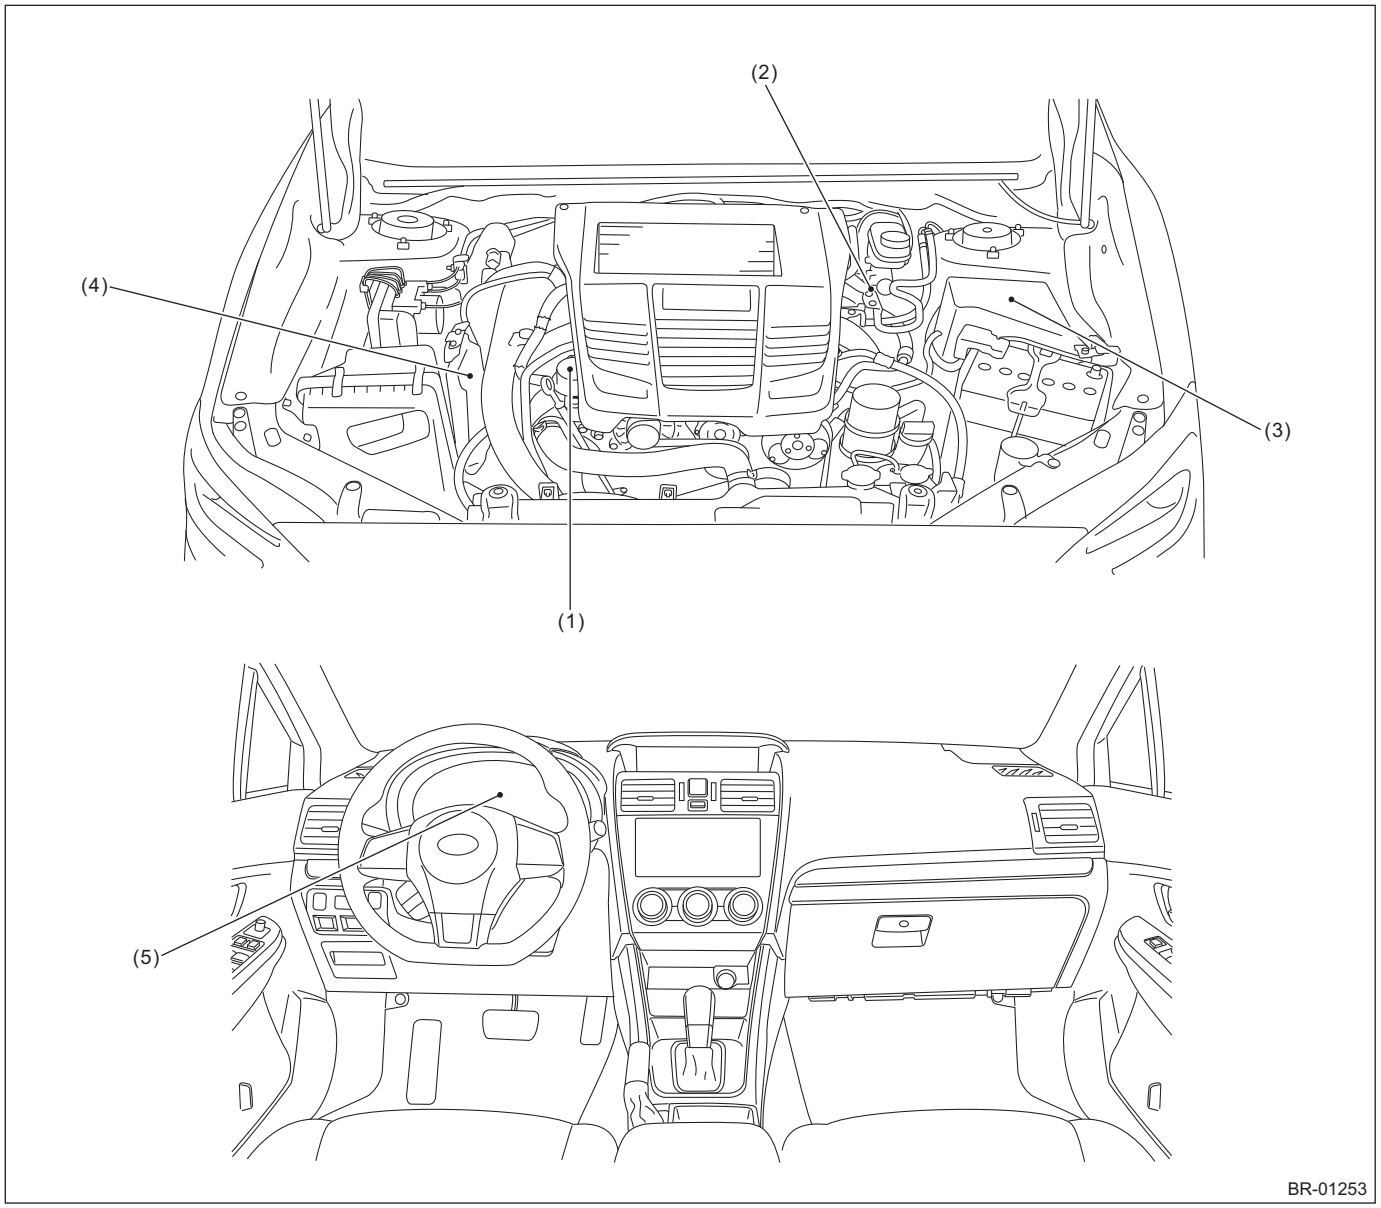
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST18460AA030	18460AA030	CHECK BOARD	Used for measuring voltage and resistance of ECM terminals.

2. GENERAL TOOL

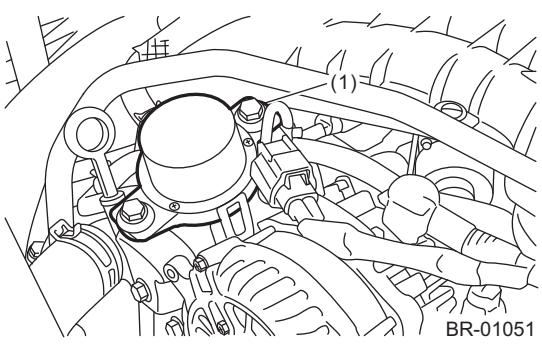
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

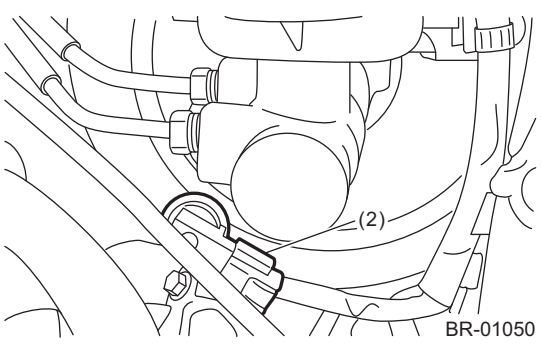
4. Electrical Component Location

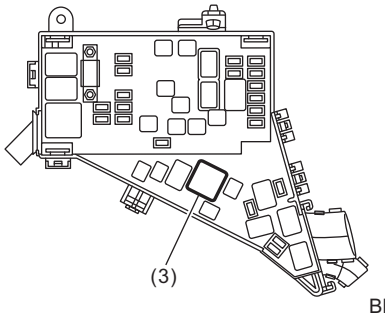
A: LOCATION



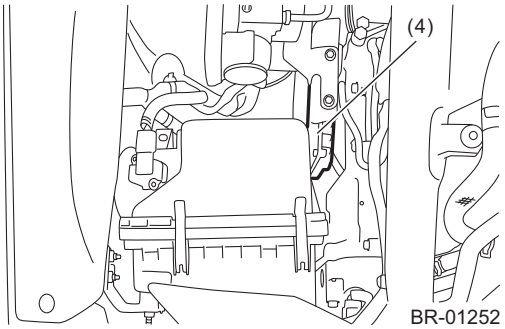
(1) Brake vacuum pump
(2) Brake booster pressure sensor
(3) Brake vacuum pump relay
(4) Engine control module (ECM)
(5) Brake vacuum pump warning light



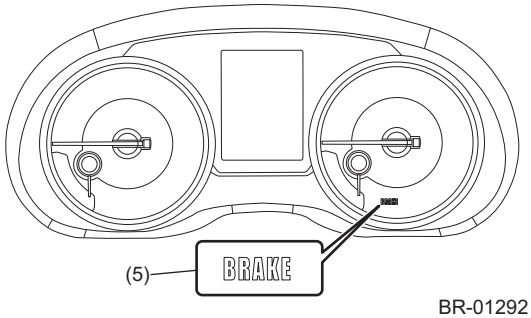




BR-01052



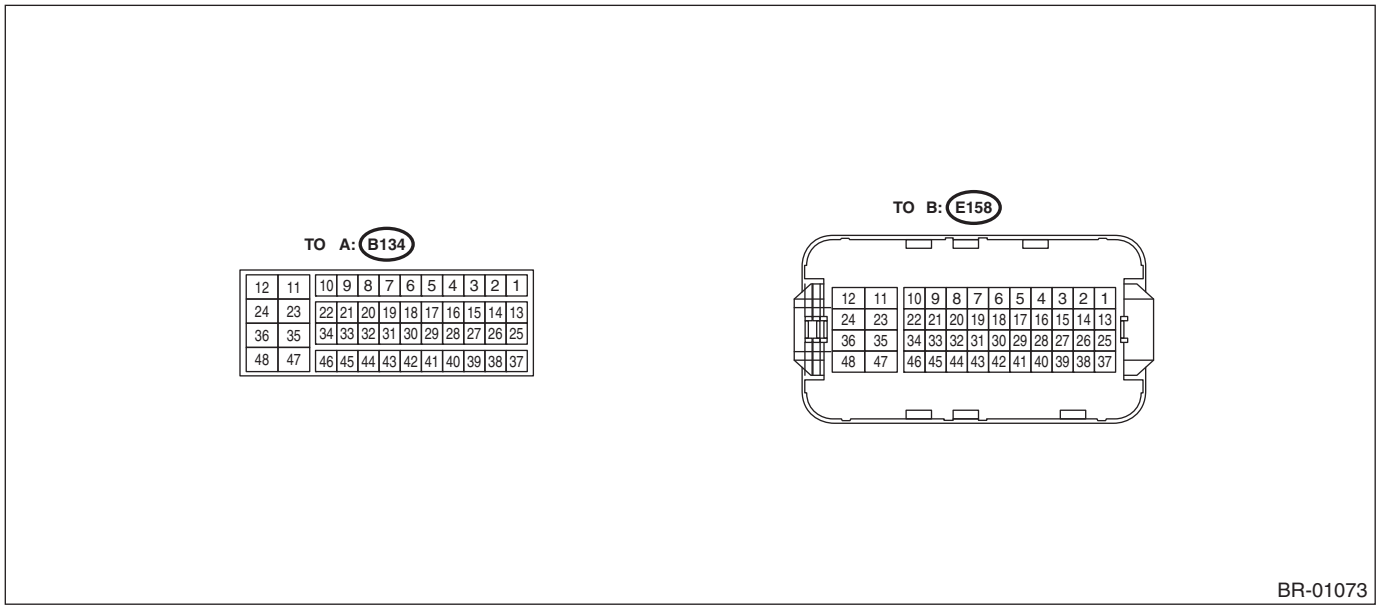
BR-01252



BR-01292

5. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION



Description		Connector No.	Terminal No.	Signal (V)		Note
				Ignition SW ON (Engine OFF)	Engine ON (Idling)	
Brake booster pressure sensor	Signal	E158	13	1 — 3.8	1 — 3.8	—
	Power supply	B134	18	5	5	—
	Ground	B134	19	0	0	—
Self-shutoff control		B134	38	0	0	—
Brake vacuum pump	Relay drive	E158	37	10 — 13 (When pump is OFF)	12 — 14 (When pump is ON)	—
				0 (When pump is ON)	0 (When pump is ON)	
	Electric load	E158	1	0 (When pump is OFF)	0 (When pump is OFF)	—
				10 — 13 (When pump is ON)	12 — 14 (When pump is ON)	

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Vacuum Pump».
5) On «Select Function» display, select «Data Monitor».

Display	Contents to be displayed	Unit of measure
Atmospheric Pressure	Atmospheric pressure is displayed.	kPa
Vacuum Pump Motor	Operation status of vacuum pump motor is displayed.	ON or OFF
Vacuum Pump Motor Relay	Operation status of vacuum pump motor relay is displayed.	ON or OFF
Brake Booster Pressure	Brake booster pressure is displayed.	kPa

NOTE:
For detailed operation procedures, refer to “Application help”.

3. FUNCTION CHECK MODE

1) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.
2) On «Start» display, select «Diagnosis».
3) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «Brake Vacuum Pump».
6) On «Select Function» display, select «Work Support».
7) On the «Work Support» display, select «Function Check Sequence».
8) When «Sequence Control Mode will be started» is shown on the screen, click the [OK] button.
9) When «Depress the brake pedal 5 times.» is shown on the screen, depress the brake pedal 5 times, and click the [OK] button while the brake pedal is not depressed.
10) Click the [OK] button after the “OK” is displayed.

NOTE:
For detailed operation procedures, refer to “Application help”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Vacuum Pump».
5) On «Select Function» display, select «DTC».

NOTE:
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to BVC(diag)-13, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

Reproduce the malfunction occurrence condition as much as possible.
Drive the vehicle at least ten minutes.

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Brake Vacuum Pump».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
11	Sensor Output Out of Range	Brake booster pressure sensor output error	<Ref. to BVC(diag)-14, DTC 11 SENSOR OUTPUT OUT OF RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
12	Compare Error in Other Sensor	Brake booster relative pressure comparison error	<Ref. to BVC(diag)-17, DTC 12 COMPARE ERROR IN OTHER SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	Pressure Sensor Signal Freeze	Brake booster pressure sensor abnormal stuck	<Ref. to BVC(diag)-20, DTC 13 PRESSURE SENSOR SIGNAL FREEZE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
21	Discrepancy in Relays (On)	Unmatched drive of brake vacuum pump relay and brake vacuum pump	<Ref. to BVC(diag)-23, DTC 21 DISCREPANCY IN RELAYS (ON), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
22	Discrepancy in Relays (Off)	Unmatched drive of brake vacuum pump relay and brake vacuum pump	<Ref. to BVC(diag)-26, DTC 22 DISCREPANCY IN RELAYS (OFF), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
23	Pump Continuous Work	Continuous drive error of brake vacuum pump	<Ref. to BVC(diag)-29, DTC 23 PUMP CONTINUOUS WORK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 11 SENSOR OUTPUT OUT OF RANGE

DTC detecting condition:
Malfunction of brake booster pressure sensor output
Trouble symptom:
Brake vacuum pump does not operate.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:

Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE BOOSTER PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake booster pressure sensor connector. 3) Measure the resistance between brake booster pressure sensor terminals. ***Terminals*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **2**.	Replace the brake booster. <Ref. to BR-91, Brake Booster.>
2	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and brake booster pressure sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between ECM connector and brake booster pressure sensor connector terminal.
3	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit to ground in harness between ECM connector and brake booster pressure sensor connector terminal.
4	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **5**.	Repair the short circuit to power supply between the ECM connector and brake booster pressure sensor connector terminal.
5	**CHECK BRAKE BOOSTER PRESSURE SENSOR POWER SUPPLY.** 1) Connect the brake booster pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **6**.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
6	**CHECK CURRENT DATA.** 1) Connect the ECM connector. 2) Turn the ignition switch to ON. 3) Depress the brake pedal several times, until the pedal becomes firm. 4) Read the current data of brake vacuum pump system using Subaru Select Monitor. <Ref. to BVC(diag)-9, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the «Atmosphere Pressure»«Brake Booster Pressure» –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

B: DTC 12 COMPARE ERROR IN OTHER SENSOR

DTC detecting condition:
Error in comparison with other brake booster relative pressure
Trouble symptom:
Brake vacuum pump does not operate.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE BOOSTER PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake booster pressure sensor connector. 3) Measure the resistance between brake booster pressure sensor terminals. ***Terminals*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **4**.	Replace the brake booster. <Ref. to BR-91, Brake Booster.>
4	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and brake booster pressure sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between ECM connector and brake booster pressure sensor connector terminal.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Repair the short circuit to ground between the ECM connector and brake booster pressure sensor connector terminal.
6	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **7**.	Repair the short circuit to power supply in harness between the ECM connector and brake booster pressure sensor connector terminal.
7	**CHECK BRAKE BOOSTER PRESSURE SENSOR POWER SUPPLY.** 1) Connect the brake booster pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **8**.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

	Step	Check	Yes	No
8	**CHECK CURRENT DATA.** 1) Connect the ECM connector. 2) Turn the ignition switch to ON. 3) Depress the brake pedal several times, until the pedal becomes firm. 4) Read the current data of brake vacuum pump system using Subaru Select Monitor. <Ref. to BVC(diag)-9, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the «Atmosphere Pressure»«Brake Booster Pressure» –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

C: DTC 13 PRESSURE SENSOR SIGNAL FREEZE

DTC detecting condition:
Stuck malfunction of brake booster pressure sensor
Trouble symptom:
Brake vacuum pump does not operate.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Check the connection of the brake booster pressure sensor connector.	Is the brake booster pressure sensor connector connected firmly?	Go to step **4**.	Connect the brake booster pressure sensor connector.
4	**CHECK BRAKE BOOSTER PRESSURE SENSOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake booster pressure sensor connector. 3) Measure the resistance between brake booster pressure sensor terminals. ***Terminals*** ***No. 1 — No. 3:*** ***No. 2 — No. 3:***	Is the resistance 15 kΩ or less?	Go to step **5**.	Replace the brake booster. <Ref. to BR-91, Brake Booster.>
5	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** 1) Disconnect the connector from ECM. 2) Measure the resistance of harness between ECM connector and brake booster pressure sensor connector terminal. ***Connector & terminal*** ***(B134) No. 18 — (B565) No. 3:*** ***(B134) No. 19 — (B565) No. 1:*** ***(E158) No. 13 — (B565) No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM connector and brake booster pressure sensor connector terminal.
6	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the resistance of harness between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 — Chassis ground:*** ***(B134) No. 19 — Chassis ground:*** ***(E158) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair the short circuit to ground in harness between ECM connector and brake booster pressure sensor connector terminal.
7	**CHECK HARNESS BETWEEN ECM AND BRAKE BOOSTER PRESSURE SENSOR CONNECTOR.** Measure the voltage between ECM connector and chassis ground. ***Connector & terminal*** ***(B134) No. 18 (+) — Chassis ground (–):*** ***(B134) No. 19 (+) — Chassis ground (–):*** ***(E158) No. 13 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **8**.	Repair the short circuit to power supply in harness between the ECM connector and brake booster pressure sensor connector terminal.

	Step	Check	Yes	No
8	**CHECK BRAKE BOOSTER PRESSURE SENSOR POWER SUPPLY.** 1) Connect the brake booster pressure sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminals. ***Connector & terminal*** ***(B134) No. 18 (+) — (B134) No. 19 (–):***	Is the voltage 4.75 — 5.25 V?	Go to step **9**.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
9	**CHECK CURRENT DATA.** 1) Connect the ECM connector. 2) Turn the ignition switch to ON. 3) Depress the brake pedal several times, until the pedal becomes firm. 4) Read the current data of brake vacuum pump system using Subaru Select Monitor. <Ref. to BVC(diag)-9, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the «Atmosphere Pressure»«Brake Booster Pressure» –1 — +1 kPa?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

D: DTC 21 DISCREPANCY IN RELAYS (ON)

DTC detecting condition:
Drive does not match between brake vacuum pump relay and brake vacuum pump.
Trouble symptom:
Brake vacuum pump does not operate.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** Check the connection of the brake booster pressure sensor and brake vacuum pump.	Are the brake booster pressure sensor and brake vacuum pump connected firmly?	Go to step **2**.	Connect the connector.
2	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump fuse. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step **3**.
3	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the brake vacuum pump relay.
4	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump relay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short to ground in the power supply circuit.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM connector and the brake vacuum pump relay connector terminal.
6	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal.
7	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP CONNECTOR.** Measure the resistance of harness between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **8**.	Repair the ground short circuit of harness between ECM connector and brake vacuum pump connector terminal.

	Step	Check	Yes	No
8	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP CONNECTOR.** Measure the voltage between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 2 (+) — Chassis ground (–):***	Is the voltage 0.5 V or less?	Go to step **9**.	Repair the short circuit to power supply in harness between the ECM connector and brake vacuum pump connector terminal.
9	**CHECK BRAKE VACUUM PUMP.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump. <Ref. to BR-121, REMOVAL, Brake Vacuum Pump.> 3) Connect the battery positive terminal to the brake vacuum pump terminal No. 1, and the negative terminal to terminal No. 2.	Does the brake vacuum pump operate?	Go to step **10**.	Replace the brake vacuum pump. <Ref. to BR-121, Brake Vacuum Pump.>
10	**CHECK ECM.** 1) Connect the brake vacuum pump relay. 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Execute the Function Check Mode of the brake vacuum pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, FUNCTION CHECK MODE, OPERATION, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

E: DTC 22 DISCREPANCY IN RELAYS (OFF)

DTC detecting condition:
Drive does not match between brake vacuum pump relay and brake vacuum pump.
Trouble symptom:
Vacuum pump does not operate properly.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **2**.	Replace the brake vacuum pump relay.
2	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump relay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open or short to ground in the power supply circuit.
3	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 1 — (B564) No. 7:*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between ECM connector and the brake vacuum pump relay connector terminal.
4	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal.
5	**CHECK MOTOR GROUND.** Measure the resistance between brake vacuum pump connector and chassis ground. ***Connector & terminal*** ***(F134) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the ground circuit.
6	**CHECK BRAKE VACUUM PUMP.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump. <Ref. to BR-121, REMOVAL, Brake Vacuum Pump.> 3) Connect the battery to the brake vacuum pump terminals No. 1 (+) and No. 2 (–).	Does the brake vacuum pump operate?	Go to step **7**.	Replace the brake vacuum pump. <Ref. to BR-121, Brake Vacuum Pump.>

	Step	Check	Yes	No
7	**CHECK ECM.** 1) Connect the brake vacuum pump relay. 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Execute the Function Check Mode of the brake vacuum pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, FUNCTION CHECK MODE, OPERATION, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

F: DTC 23 PUMP CONTINUOUS WORK

DTC detecting condition:
Malfunction in brake vacuum pump continuous drive error
Trouble symptom:
Brake vacuum pump operates continuously.

CAUTION:
Use the check board when measuring the ECM terminal voltage and resistance.
Wiring diagram:
Vacuum pump control system <Ref. to WI-363, WIRING DIAGRAM, Vacuum Pump Control System.>

	Step	Check	Yes	No
1	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to OFF. 2) Check the status of the brake vacuum hose connection.	Is the brake vacuum hose connected firmly?	Go to step **2**.	Connect the brake vacuum hose.
2	**CHECK BRAKE VACUUM HOSE.** 1) Turn the ignition switch to ON and start engine. 2) Check for leakage from the brake vacuum hose.	Is there a leak from the brake vacuum hose?	Replace the brake vacuum hose.	Go to step **3**.
3	**CHECK BRAKE VACUUM PUMP RELAY.** 1) Turn the ignition switch to OFF. 2) Remove the brake vacuum pump relay from relay box. 3) Connect the battery to the brake vacuum pump relay terminals No. 5 and No. 8. 4) Measure the resistance between brake vacuum pump relay terminals. ***Terminals*** ***No. 6 — No. 7:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the brake vacuum pump relay.
4	**CHECK BRAKE VACUUM PUMP RELAY POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Measure the voltage between brake vacuum pump relay connector and chassis ground. ***Connector & terminal*** ***(B564) No. 5 (+) — Chassis ground (–):*** ***(B564) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the open or short to ground in the power supply circuit.
5	**CHECK HARNESS BETWEEN ECM AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Measure the resistance of harness between ECM connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(E158) No. 1 — (B564) No. 7:*** ***(E158) No. 37 — (B564) No. 8:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair the open circuit of harness between ECM connector and the brake vacuum pump relay connector terminal.
6	**CHECK HARNESS BETWEEN THE BRAKE VACUUM PUMP AND BRAKE VACUUM PUMP RELAY CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the brake vacuum pump connector. 3) Measure the resistance of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal. ***Connector & terminal*** ***(B564) No. 7 — (F134) No. 2:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair the open circuit of harness between brake vacuum pump connector and brake vacuum pump relay connector terminal.
7	**CHECK ECM.** 1) Connect the brake vacuum pump relay. 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Execute the Function Check Mode of the brake vacuum pump system using the Subaru Select Monitor. <Ref. to BVC(diag)-9, FUNCTION CHECK MODE, OPERATION, Subaru Select Monitor.>	Does the brake vacuum pump operate?	Temporary poor contact occurs.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

12.General Diagnostic Table

A: INSPECTION

Symptoms		Main probable cause	Other probable cause
Poor brake performance	Long braking/ stopping distance	• Brake pad • Aeration to brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections	• Master cylinder • Brake caliper • Disc rotor • Brake pipe • Brake booster
	Long brake pedal stroke	• Aeration to brake line • Brake pedal play	• Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster
	Short brake pedal stroke	• Brake vacuum pump • Brake booster pressure sensor • Brake vacuum hose	• Master cylinder • Brake caliper • Brake pad • Brake pipe • Brake booster

1. General Description

A: SPECIFICATION

• Drum in disc type model

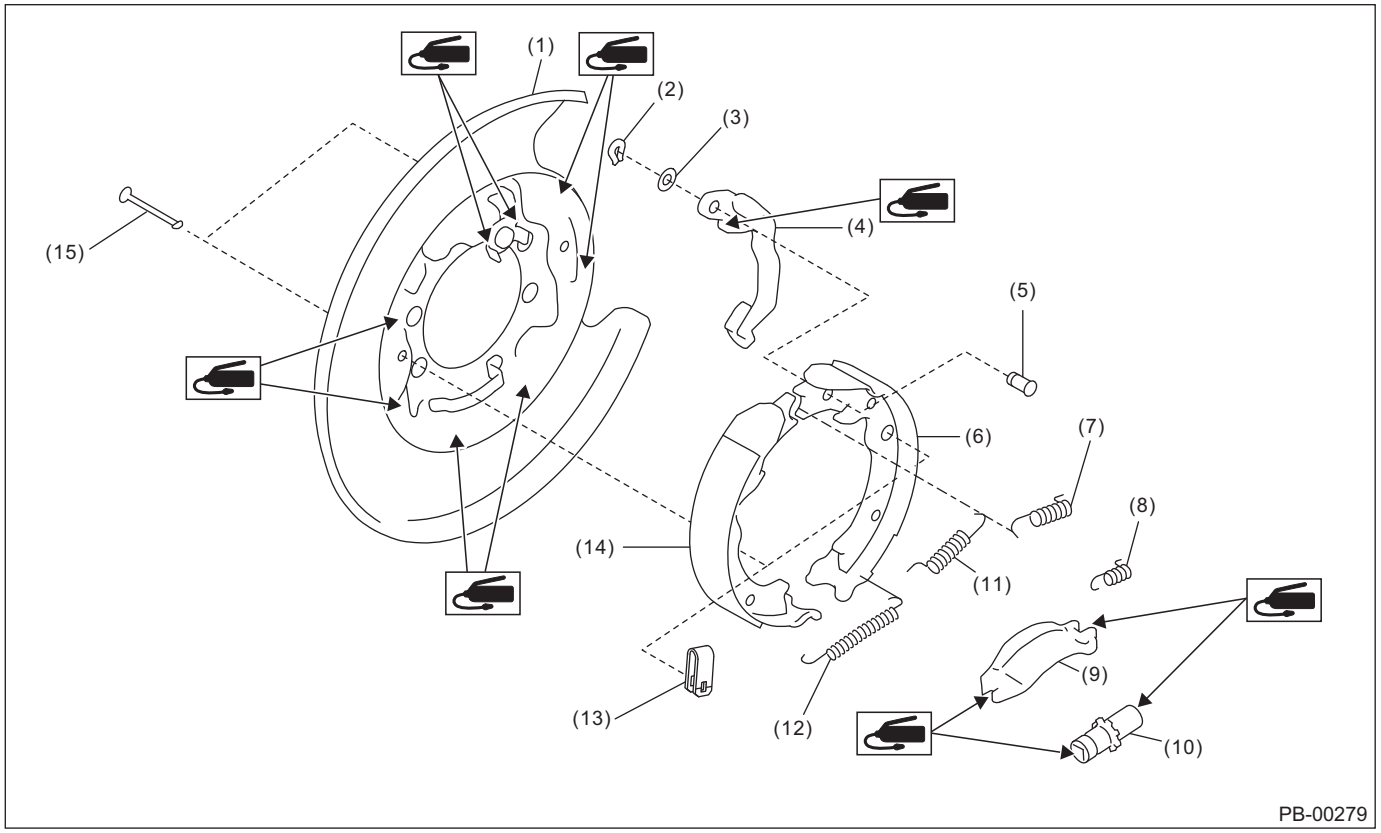
Item		Specification	
Type		Drum in disc duo servo type	
Effective drum diameter	mm (in)	190 (7.48)	
Lining dimensions (Length × Width × Thickness)	mm (in)	165 × 30 × 3.5 (6.51 × 1.181 × 0.14)	
Inside diameter	mm (in)	Standard	190 (7.48)
		Limit	191 (7.52)
Lining thickness	mm (in)	Standard	3.5 (0.14)
		Limit	1.5 (0.059)
Clearance adjustment		Manual adjustment	
Free play adjusting method		Auto adjuster	
Operation method		Manual lever type	
Lever stroke	Notches/N (kgf, lbf)	7 — 8/200 (20.4, 45)	

• Electronic parking brake model

Item	Specification
Type	Electric type
Clearance adjustment	Automatic adjusting
Operation method	Switch type

B: COMPONENT

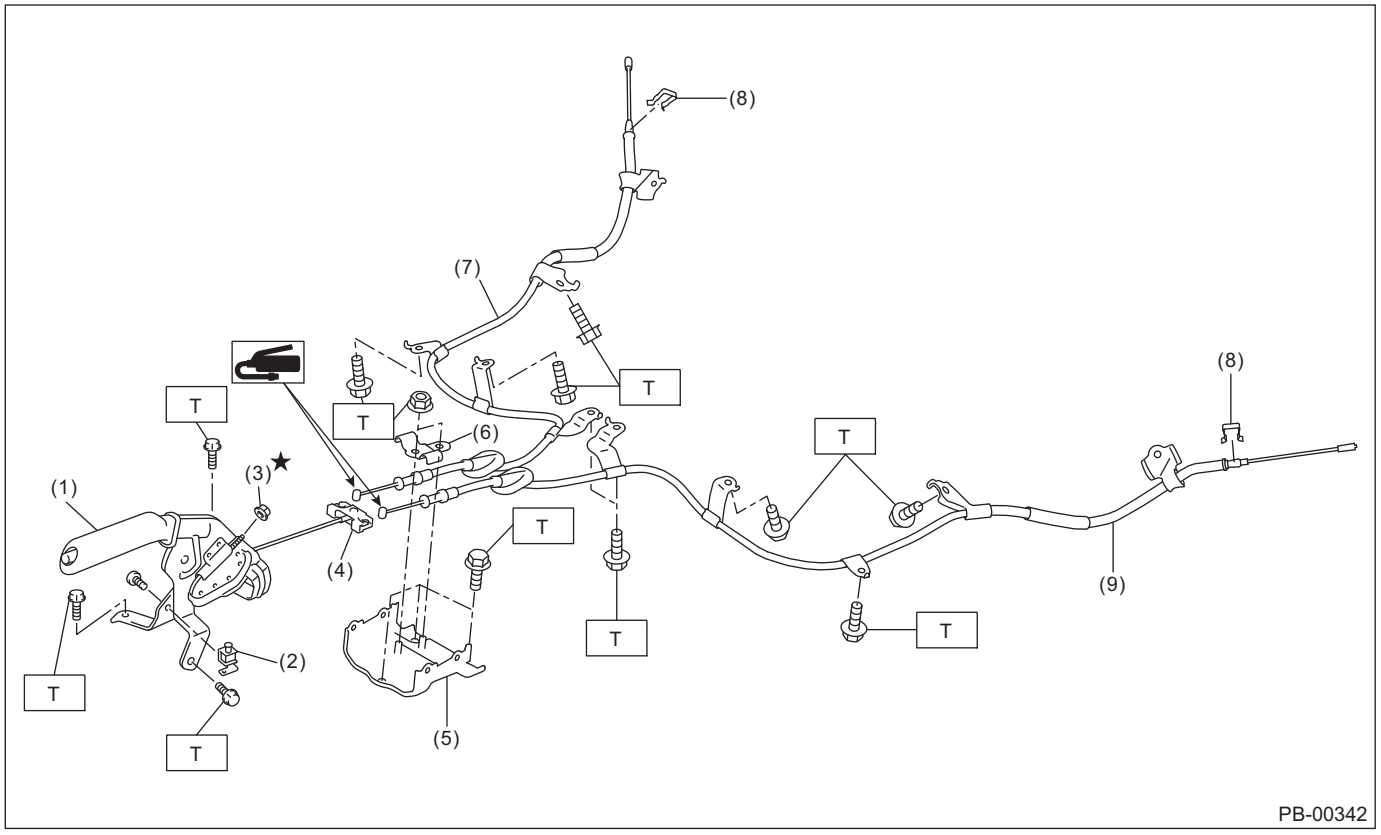
1. PARKING BRAKE (DRUM IN DISC TYPE MODEL)



(1) Back plate - rear brake
(2) Retainer - rear brake
(3) Spring washer - rear brake
(4) Parking lever - rear
(5) Pin - parking lever
(6) Parking brake shoe (secondary)
(7) Spring - secondary shoe return
(8) Spring - strut
(9) Strut - brake
(10) Adjuster ASSY - rear brake
(11) Spring - primary shoe return
(12) Spring - adjuster
(13) Spring - shoe clamp
(14) Parking brake shoe (primary)
(15) Pin - shoe hold-down

2. PARKING BRAKE LEVER & CABLE

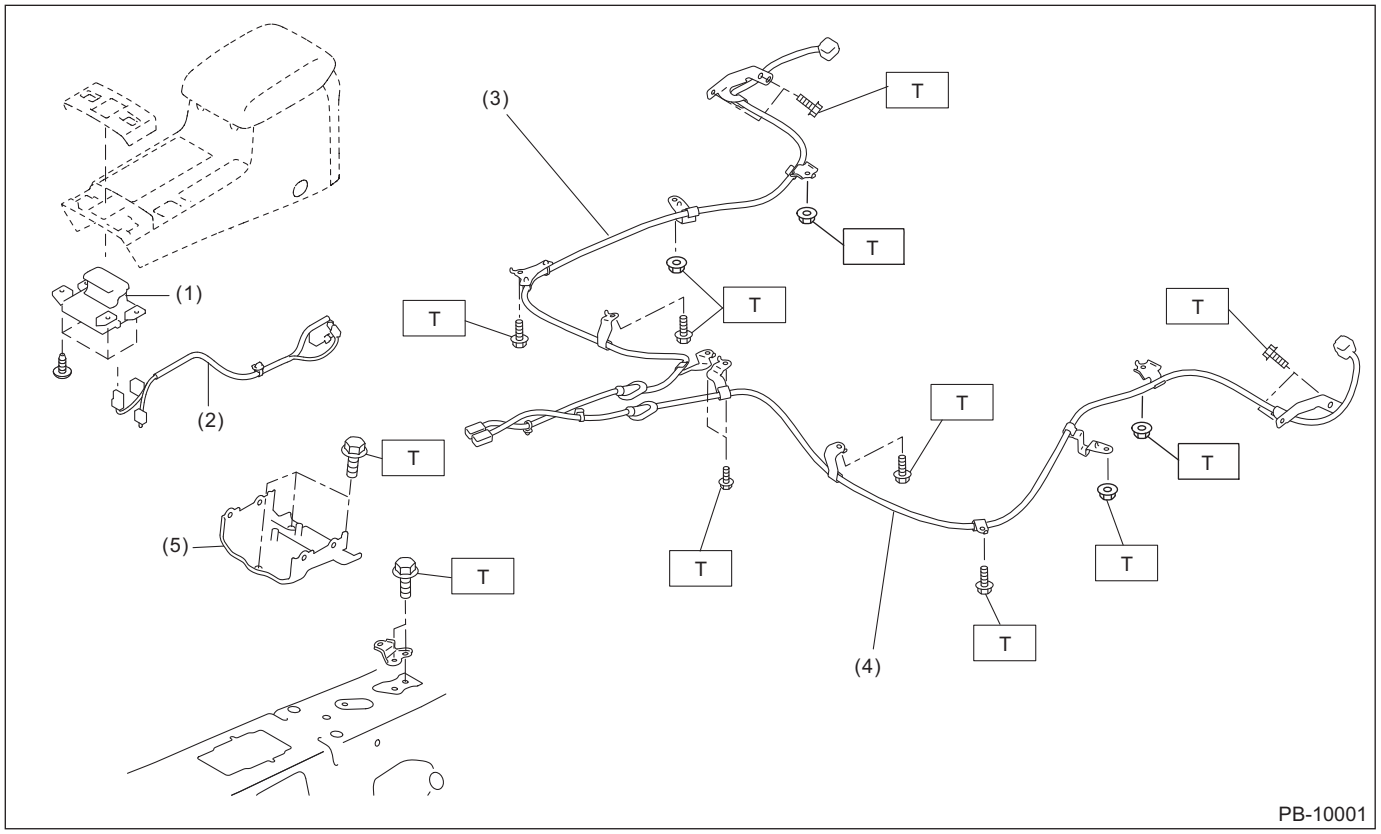
- Drum in disc type model



(1) Lever ASSY - hand brake
(2) Switch ASSY - hand brake
(3) Adjusting nut (self-locking nut)
(4) Equalizer
(5) Bracket
(6) Clamp A - hand brake cable
(7) Cable ASSY - parking brake RH
(8) Clamp B - hand brake cable
(9) Cable ASSY - parking brake LH

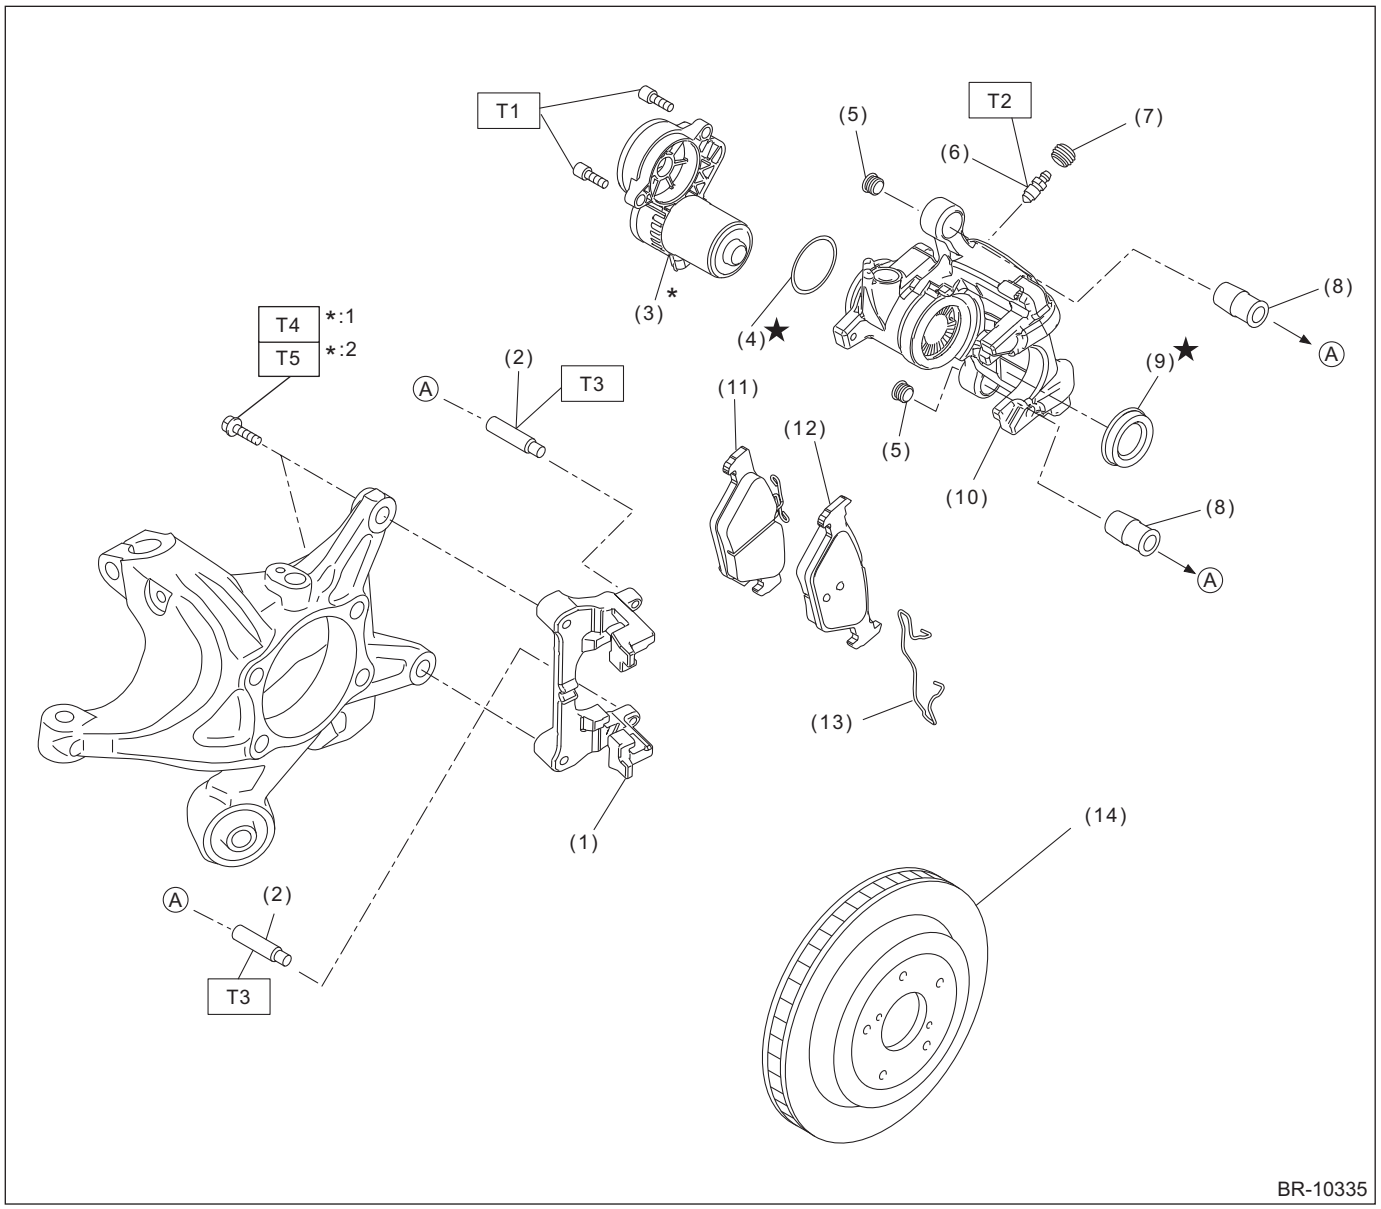
Tightening torque: N·m (kgf-m, ft-lb)
T: 18 (1.8, 13.3)

- Electronic parking brake model



(1)	Switch ASSY - electronic parking brake	(4)	Electronic parking brake harness LH	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Console box harness	(5)	Bracket	***T: 18 (1.8, 13.3)***
(3)	Electronic parking brake harness RH			

3. PARKING BRAKE ACTUATOR



(1)	Support - rear disc brake	(8)	Pin boot	*1:	14 mm (width across flats)
(2)	Guide pin - rear brake	(9)	Piston boot	*2:	17 mm (width across flats)
(3)	Parking brake actuator ASSY	(10)	Caliper body		
(4)	O-ring	(11)	Pad - disc brake rear inner	***Tightening torque: N·m (kgf-m, ft-lb)***	
(5)	Cap	(12)	Pad - disc brake rear outer	***T1:***	***8 (0.8, 5.9)***
(6)	Bleeder - screw	(13)	Pat clip	***T2:***	***17 (1.7, 12.5)***
(7)	Cap - bleeder	(14)	Disc rotor (ventilated type)	***T3:***	***25 (2.5, 18.4)***
				T4:	***66 (6.7, 48.7)***
				T5:	***110 (11.2, 81.1)***

*: The component cannot be reused when the emergency release of parking brake was performed or when the actuator has a malfunction.

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.

• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Apply grease onto sliding or revolving surfaces before installation.
• Be sure that the surface of brake disc, brake pad or brake shoe is free from grease or oil.

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

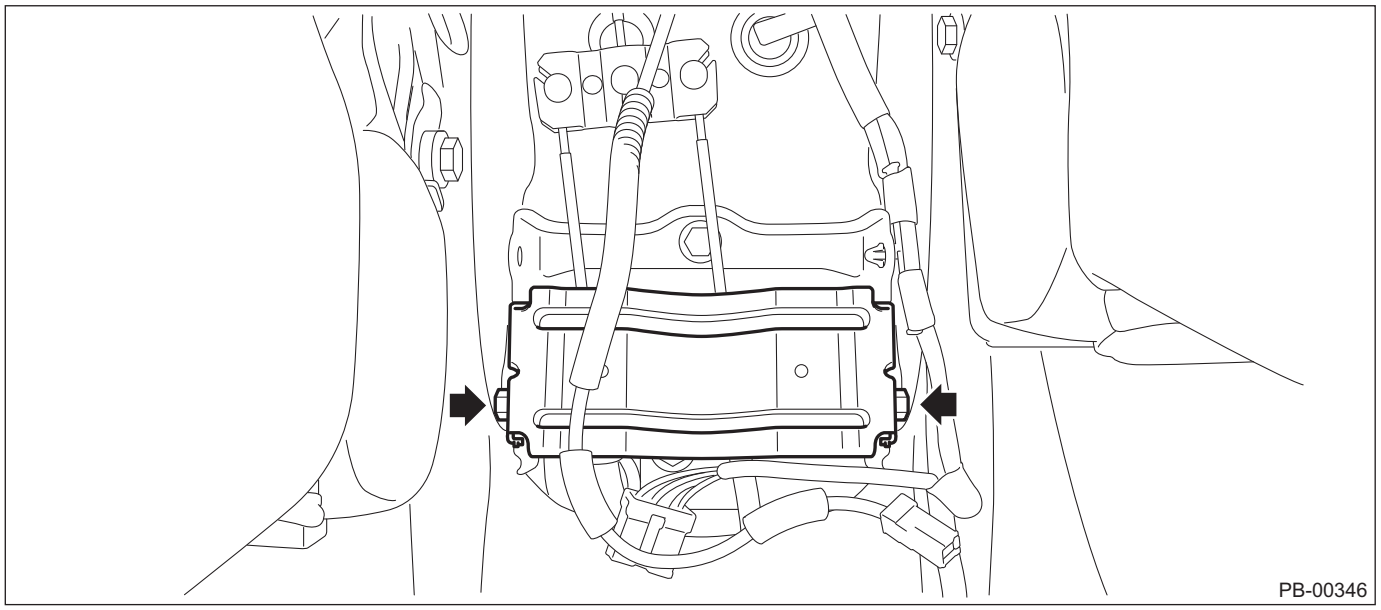
2. Parking Brake Lever

A: REMOVAL

1) Set the wheel stoppers to tires.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

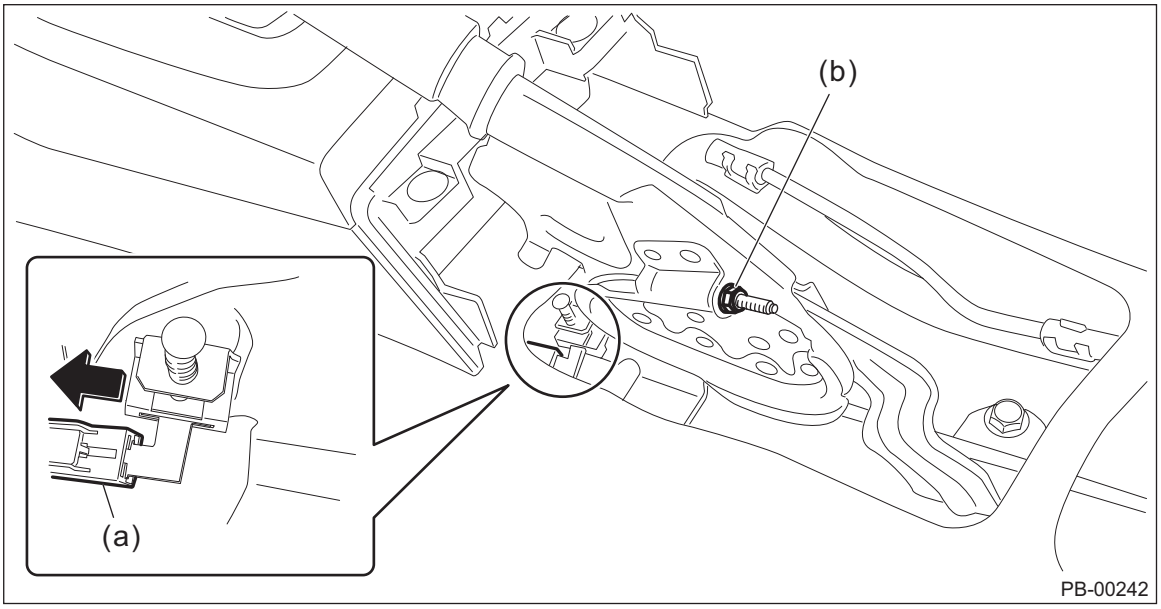
NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Remove the driver’s seat. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
5) Remove the bracket - console box.

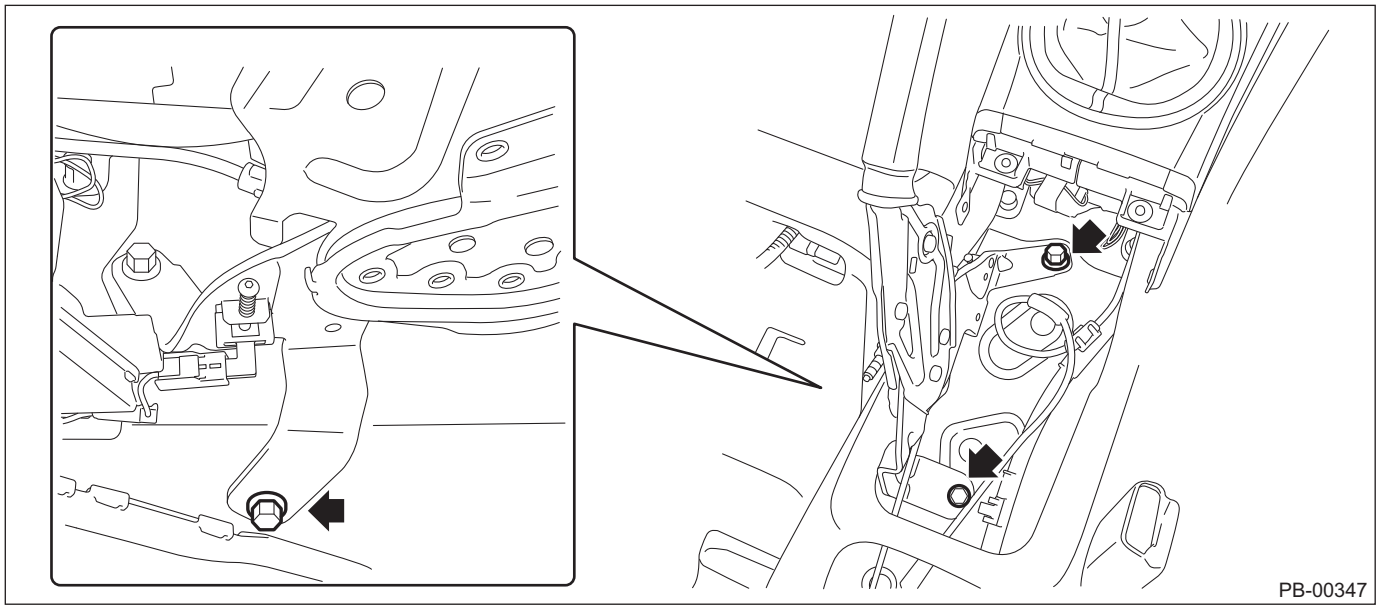


6) Remove the lever assembly - hand brake.
   (1) Disconnect the connector (a) of the switch assembly - hand brake.
   (2) Remove the adjusting nut (b).

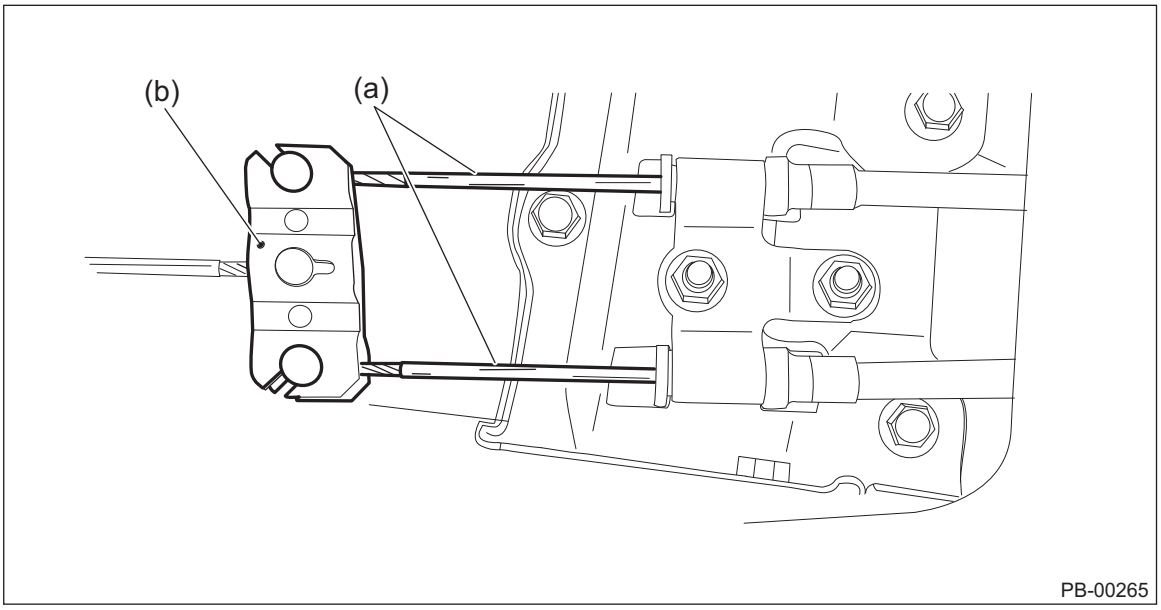
CAUTION:
A self-locking nut is used for the adjusting nut of parking cable. Therefore, replace the self-locking nut with a new one when disassembling.



(3) Remove the bolt, and then remove the lever assembly - hand brake.



7) Remove the inner cable end (a) from the equalizer (b).



B: INSTALLATION

1) Install the inner cable end to equalizer.
2) Install the bracket - console box.

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
3) Install the lever assembly - hand brake.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

CAUTION:
Do not reuse the adjusting nut (self locking nut). Always replace with a new part.
4) Be sure to adjust the lever stroke. <Ref. to PB-10, ADJUSTMENT, Parking Brake Lever.>
5) Install the console box assembly.
6) Install the driver's seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

C: INSPECTION

1. LEVER ASSY

1) Operate the lever assembly - hand brake 3 to 4 times and fully return the lever assembly - hand brake.
2) While slowly pulling up the lever assembly - hand brake, count the notches.

Lever stroke:
7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)
If it is not within the specified value, adjust the parking brake. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-19, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

3. Parking Brake Cable

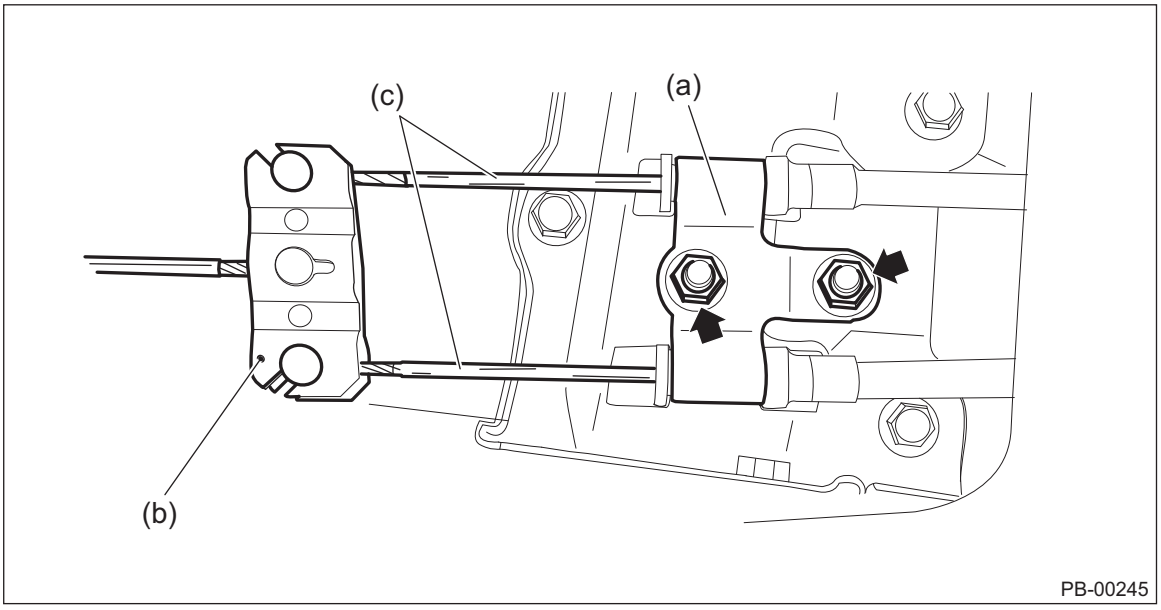
A: REMOVAL

CAUTION:
Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Before removing the rear seat, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

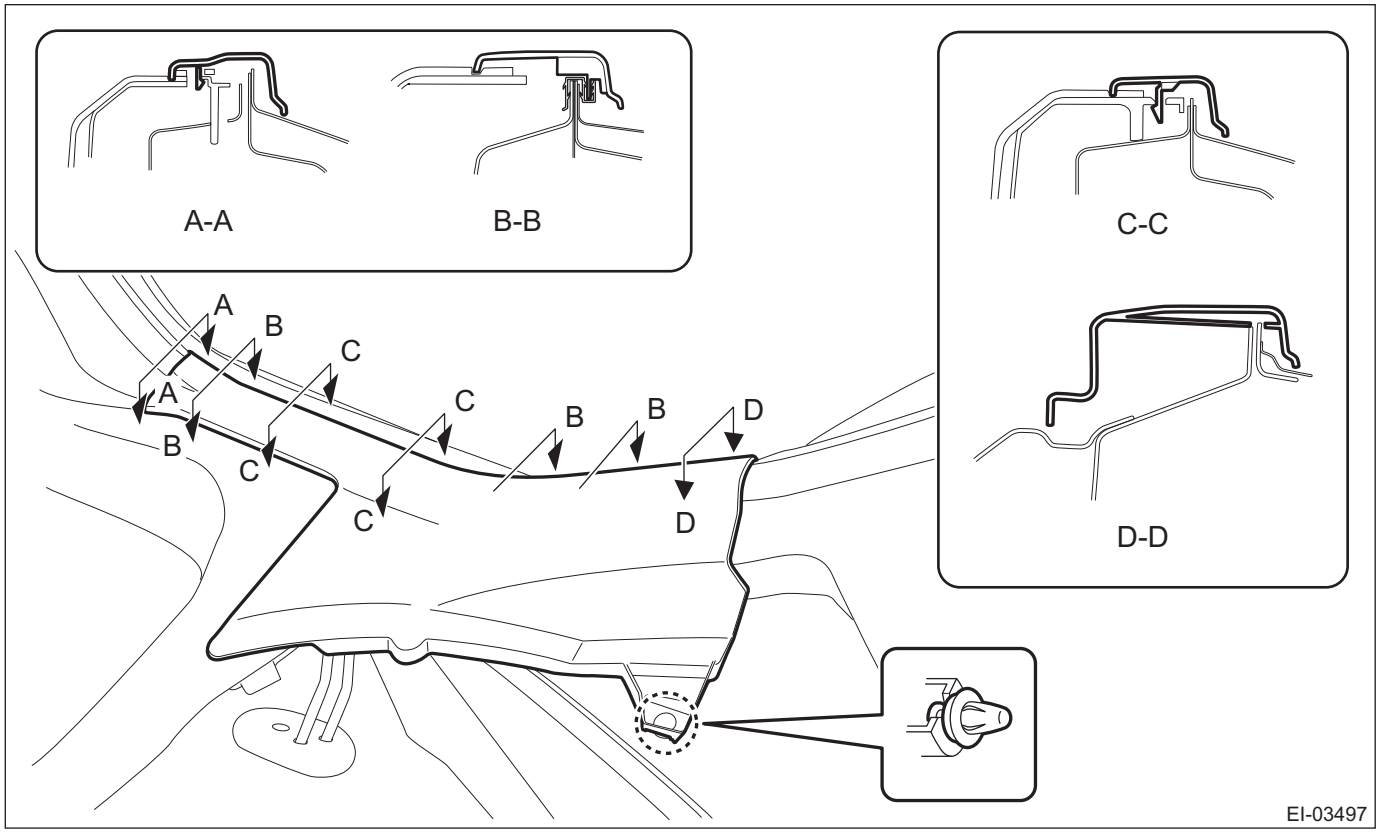
NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

2) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the lever assembly - hand brake. <Ref. to PB-8, REMOVAL, Parking Brake Lever.>
4) Remove the nut and remove the clamp A - hand brake cable (a).
5) Remove the inner cable end (c) from the equalizer (b).

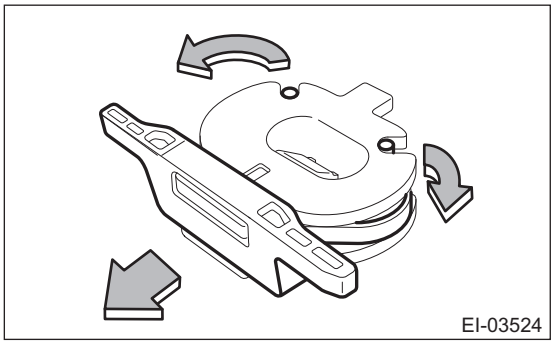


6) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
7) Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.



8) Remove the clips and knobs of the hook - seat cushion rear.

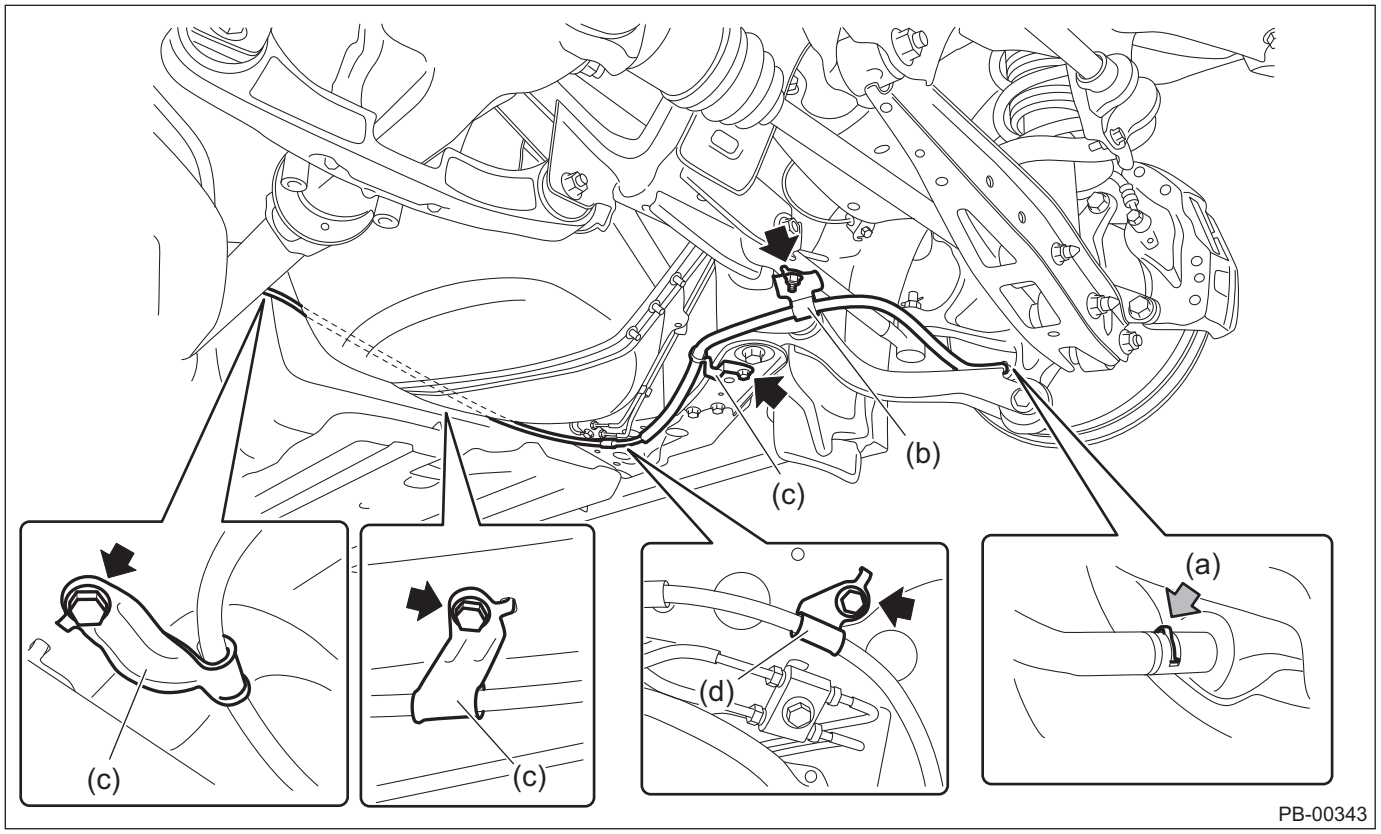


9) Turn over the floor carpet and remove the grommet of the cable assembly - parking brake from the rear floor.
10) Lift up the vehicle, and then remove the rear wheels.
11) Remove the fuel tank protector.
- Except for STI model <Ref. to FU(w/o STI)-144, REMOVAL, Fuel Tank Protector.>
- STI model <Ref. to FU(STI)-66, REMOVAL, Fuel Tank Protector.>

12) Remove the exhaust pipe and muffler.
- Center exhaust pipe & rear exhaust pipe: <Ref. to EX(STI)-12, REMOVAL, Rear Exhaust Pipe.>
- Muffler: <Ref. to EX(STI)-14, REMOVAL, Muffler.>

13) Remove the propeller shaft assembly. <Ref. to DS-12, REMOVAL, Propeller Shaft.>
14) Remove the cable assembly - parking brake from the lever section of parking brake shoe. <Ref. to PB-15, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
15) Remove the cable assembly - parking brake.
(1) Remove the clamp B - hand brake cable (a) from the back plate - rear brake.
(2) Remove the cable clamp (b) from the lateral link assembly - front.
(3) Remove the cable clamp (c) from the sub frame support.

(4) Remove the cable clamp (d) from the rear floor.



B: INSTALLATION

CAUTION:
- **After installing the backrest assembly, make sure that each seat belt operates normally.**
- **Make sure that they are properly secured on each hook on the vehicle side.**

1) Install the cable assembly - parking brake.

Tightening torque:
Cable clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the cable assembly - parking brake to the lever section of parking brake shoe. <Ref. to PB-17, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
3) Install the grommet to the rear floor.
4) Install the propeller shaft assembly. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>
5) Install the exhaust pipe and muffler.
- Center exhaust pipe & rear exhaust pipe: <Ref. to EX(STI)-12, INSTALLATION, Rear Exhaust Pipe.>
- Muffler: <Ref. to EX(STI)-15, INSTALLATION, Muffler.>

6) Install the fuel tank protector.
- Except for STI model <Ref. to FU(w/o STI)-144, INSTALLATION, Fuel Tank Protector.>
- STI model <Ref. to FU(STI)-66, INSTALLATION, Fuel Tank Protector.>

7) Place the floor mat to the original position, and then attach the clip and the knob of the hook - seat cushion rear.
8) Install the side sill covers - rear INN on the right and left side.
9) Install the rear seat cushion assembly.
10) Install the inner cable end to equalizer, and install the clamp A - hand brake cable.
11) Install the lever assembly - hand brake.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

12) Install the console box assembly.
13) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

C: INSPECTION

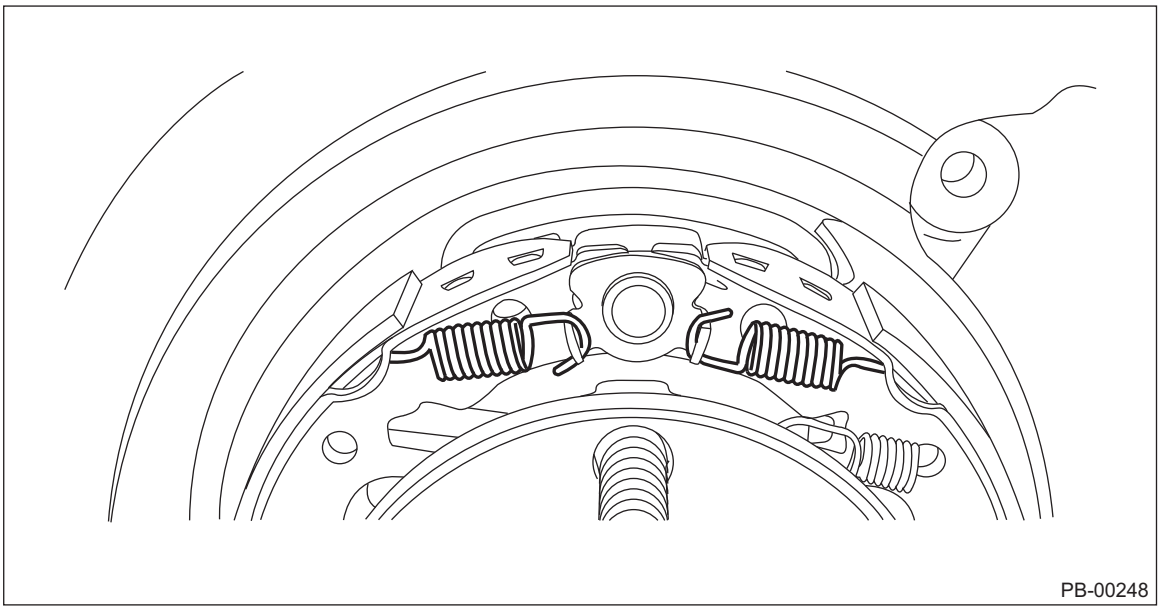
Check the removed cable and replace if damaged, rusty or malfunctioning.
1) Check the cable for smooth operation.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.

4. Parking Brake Assembly (Rear Disc Brake)

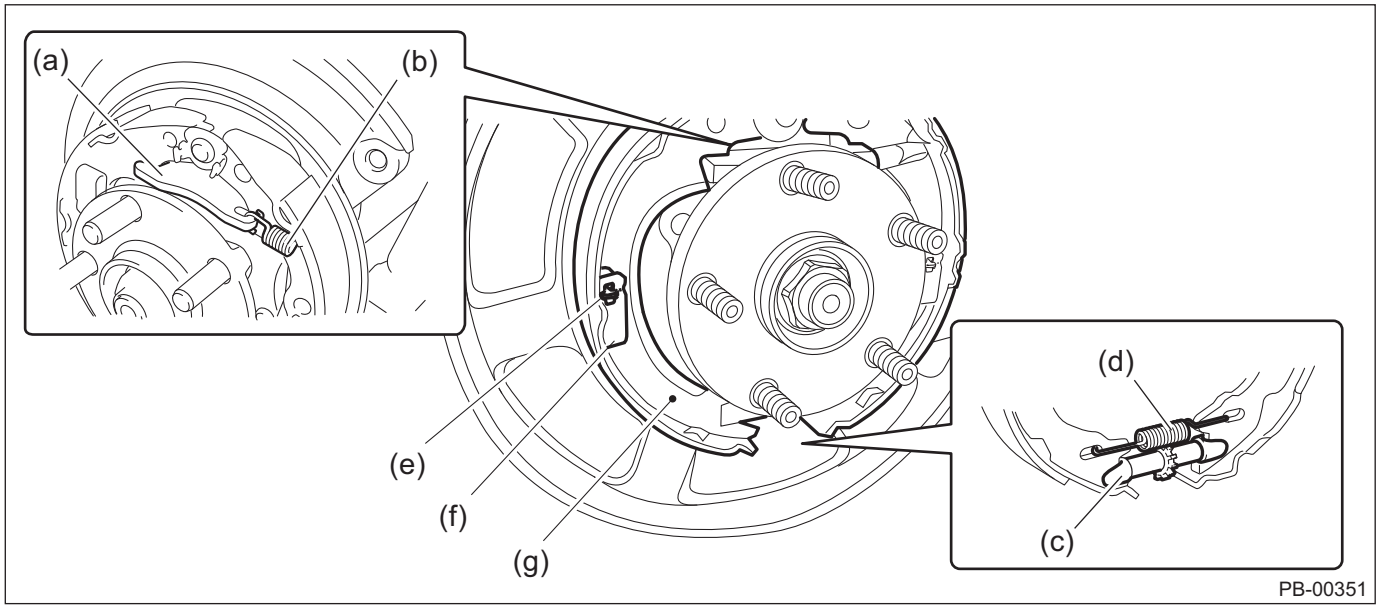
A: REMOVAL

1. DRUM IN DISC TYPE MODEL

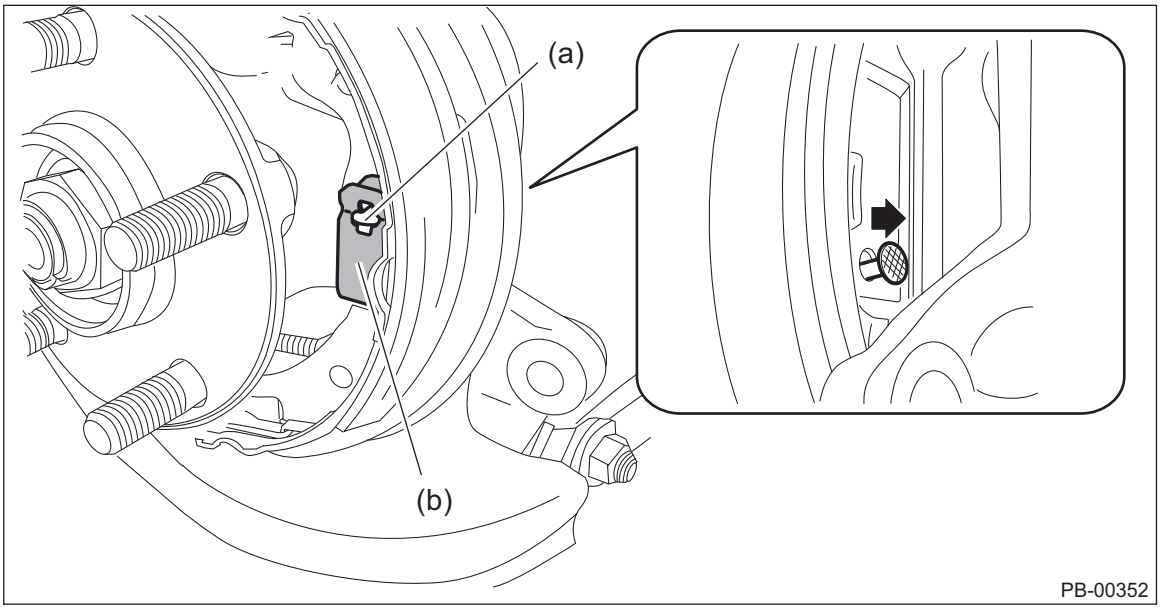
1) Release the parking brake.
2) Lift up the vehicle, and then remove the rear wheels.
3) Remove the rear disc rotor. <Ref. to BR-56, REMOVAL, Rear Disc Rotor.>
4) Remove the spring - primary shoe return and the spring - secondary shoe return.



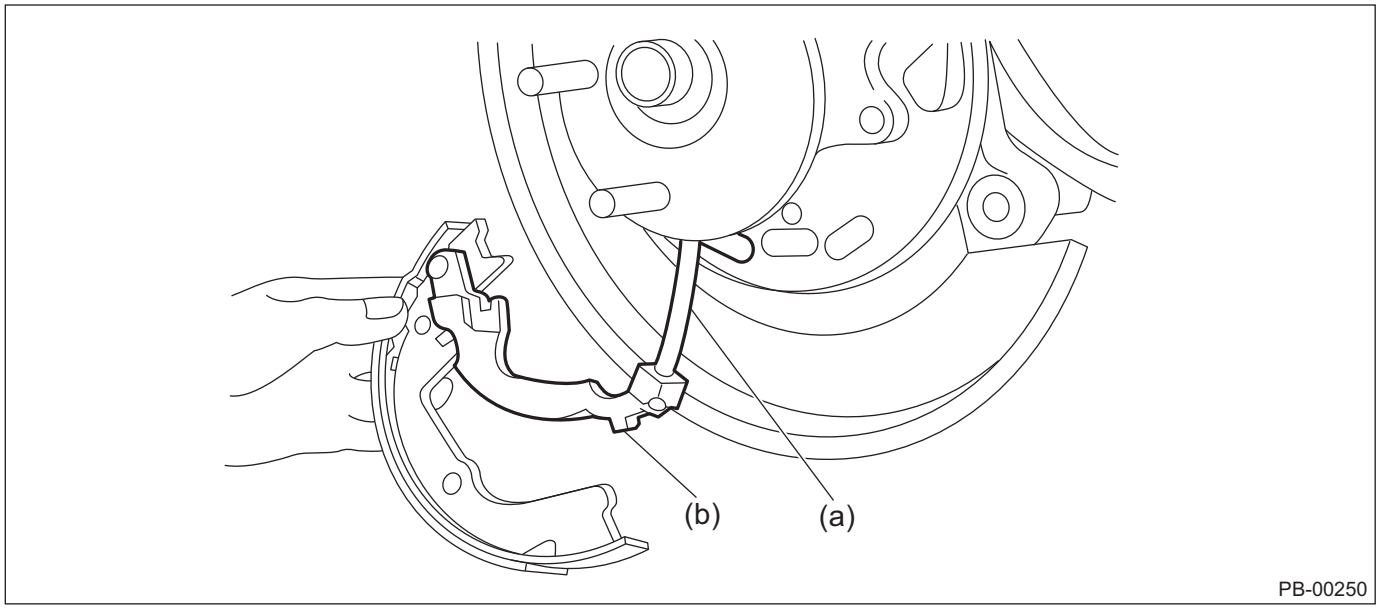
5) Remove the parking brake shoe on the primary side.
   (1) Remove the strut - brake (a) and the spring - strut (b).
   (2) Remove the adjuster assembly - rear brake (c) and the spring - adjuster (d).
   (3) Remove the pin - shoe hold-down (e) and the spring - shoe clamp (f), and remove the parking brake shoe (g).



6) Remove the pin - shoe hold-down (a) and the spring - shoe clamp (b), and remove the secondary side parking brake shoe.



7) Remove the cable assembly - hand brake cable (a) from the parking lever - rear (b).



8) Remove the retainer - rear brake and the spring washer - rear brake, and remove the parking lever - rear and the brake shoe.

2. ELECTRONIC PARKING BRAKE MODEL

NOTE:
For parking brake assembly removal and disassembly of electronic parking brake model, refer to “BRAKE” section.

- Removal: <Ref. to BR-69, FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE), REMOVAL, Rear Disc Brake Assembly.>
- Disassembly: <Ref. to BR-78, FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE), DISASSEMBLY, Rear Disc Brake Assembly.>

B: INSTALLATION

1. DRUM IN DISC TYPE MODEL

CAUTION:
Be sure the lining surface is free from brake fluid and grease.
1) Apply brake grease to the following locations.

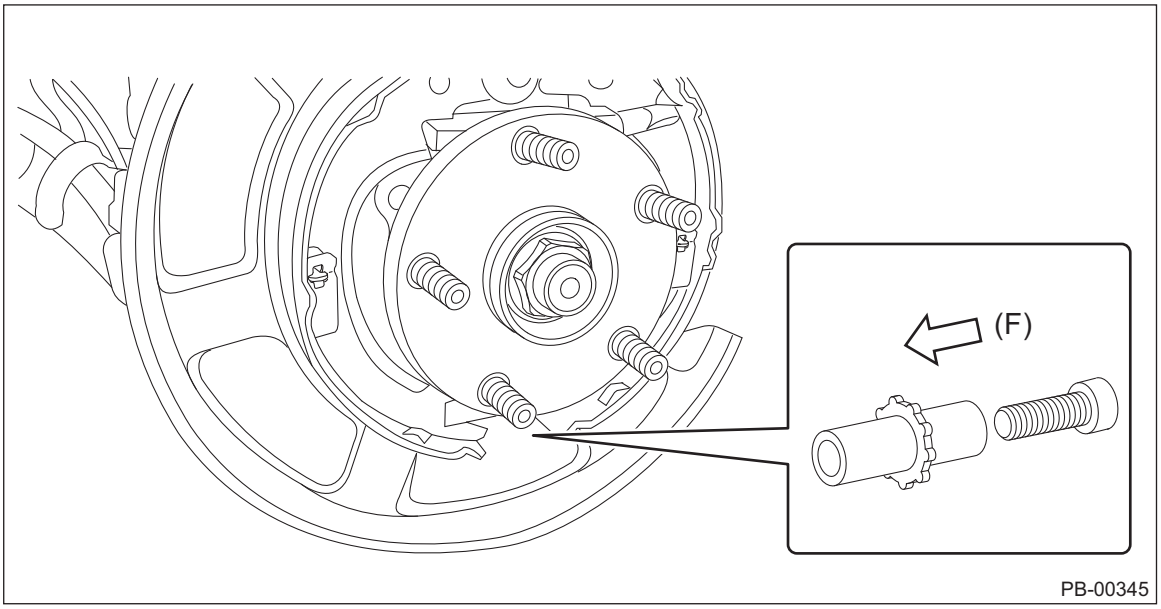
Preparation items:
Brake grease: Dow Corning Molykote 44MA or equivalent
- Six contact surfaces of the parking brake shoe rim and back plate - rear brake
- Contact surface of the parking brake shoe and the anchor pin
- Contact surface of the parking lever assembly - rear and the strut - brake
- Contact surface of the parking brake shoe and the adjuster assembly - rear brake
- Contact surface of the parking brake shoe and the strut - brake
- Contact surface of the parking lever - rear and the parking brake shoe

2) Install the parking lever - rear to the secondary side parking brake shoe.

NOTE:
Install the pin - parking lever and spring washer - rear brake to the parking lever - rear, and swage the retainer - rear brake to secure.
3) Install the cable assembly - parking brake to the parking lever - rear.

NOTE:
Check that the cable assembly - parking brake does not fall from the cable guide.
4) Attach the adjuster assembly - rear brake and the spring - adjuster to the primary side and the secondary side parking brake shoes.

NOTE:
Install the adjuster assembly - rear brake with the screw section facing to the direction shown in the figure below.



(F) Left wheel: front side of vehicle,
right wheel: rear side of vehicle

5) Install the parking brake shoes to the back plate - rear brake with the pins - shoe hold-down and the springs - shoe clamp.
6) Install the strut - brake and the spring - strut to the parking brake shoes.

NOTE:
Install the spring - strut so that it comes towards the front side of the vehicle.

7) Install the return springs on the primary side first, and then the secondary side.
8) Install the disc rotor and the disc brake assembly - rear.

Tightening torque:
STI model: 73 N·m (7.4 kgf-m, 53.8 ft-lb)
Other than STI model: Refer to "COMPONENT" of "General Description" for the tightening torque. <Ref. to BR-8, REAR DISC BRAKE (DRUM IN DISC TYPE), COMPONENT, General Description.>
9) Adjust the parking brake. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
10) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
11) If new parking brake shoes are replaced, drive the vehicle to break-in the parking brake lining.
(1) Drive the vehicle at approximately 35 km/h (22 MPH) or more.
(2) While pressing the button of lever assembly - hand brake, pull the lever assembly - hand brake with a force of 150 N (15.3 kgf, 33.7 lbf).
(3) Drive the vehicle for about 200 m (0.12 mile) in this condition.
(4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat steps (1) through (3) again.
(5) After breaking-in, re-adjust the parking brakes. <Ref. to PB-18, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. ELECTRONIC PARKING BRAKE MODEL

NOTE:
For parking brake assembly installation and assembly of electronic parking brake model, refer to "BRAKE" section.
• Installation: <Ref. to BR-73, FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE), INSTALLATION, Rear Disc Brake Assembly.>
• Assembly: <Ref. to BR-83, FLOATING 1-POT PISTON TYPE (ELECTRONIC PARKING BRAKE TYPE), ASSEMBLY, Rear Disc Brake Assembly.>

C: INSPECTION

1) Measure the inner diameter of the rear disc rotor. If scoring or worn is found on the disc, replace the rear disc rotor.

Disc rotor inner diameter:
Specification: 190 mm (7.48 in)
Service limit: 191 mm (7.52 in)
2) Measure the lining thickness. If it exceeds the limit, replace the brake shoe.

Lining thickness:
Specification: 3.5 mm (0.14 in)
Service limit: 1.5 mm (0.059 in)

NOTE:
Replace the right and left parking brake shoe as a set.

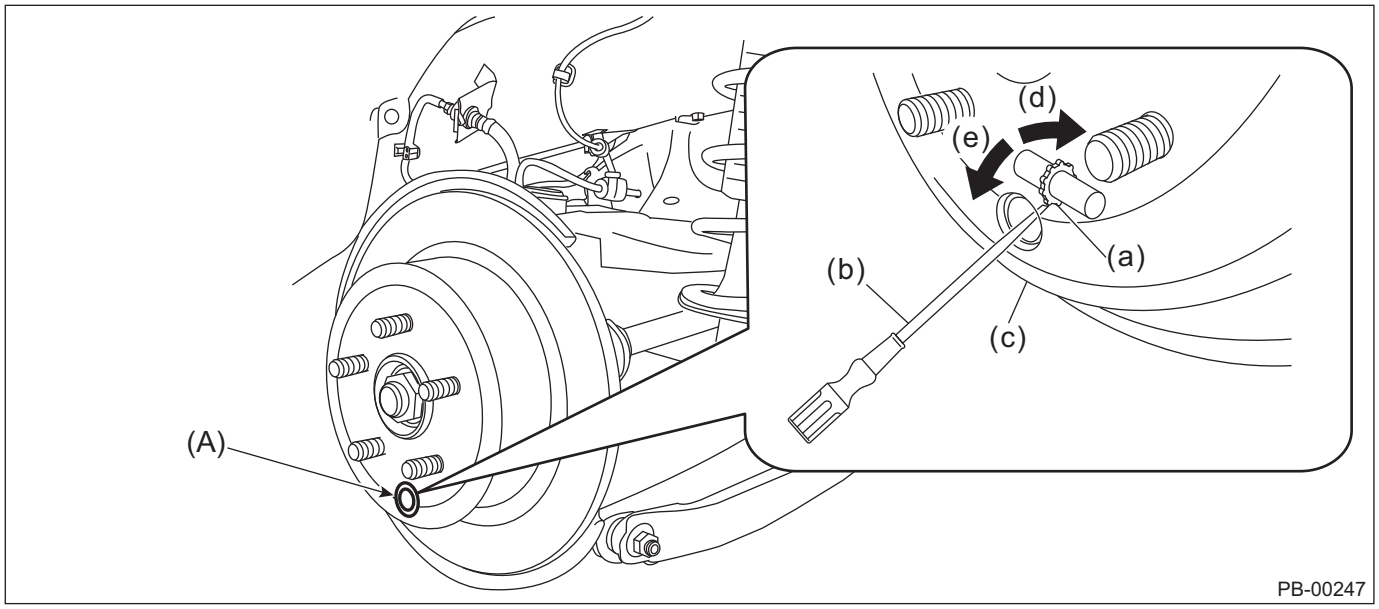
D: ADJUSTMENT

1. SHOE CLEARANCE

1) Return the lever assembly - hand brake completely.

NOTE:
If the pulling allowance of the hand brake lever is less than the standard (with no shoe clearance adjustment), loosen the adjusting nut on the lever side to make the cable free.
2) Remove the adjusting hole cover (A).

3) Insert a flat tip screwdriver from the adjustment hole, and rotate the adjuster assembly - rear brake in the direction of arrow (d) until the disc rotor cannot be turned by hand.



(a)	Adjuster ASSY - rear brake	(c)	Disc rotor	(e)	Shorten the adjuster ASSY - rear brake
(b)	Flat tip screwdriver	(d)	Extend the adjuster ASSY - rear brake		

4) Loosen the adjuster assembly - rear brake by 10 notches in the direction of the arrow (e).

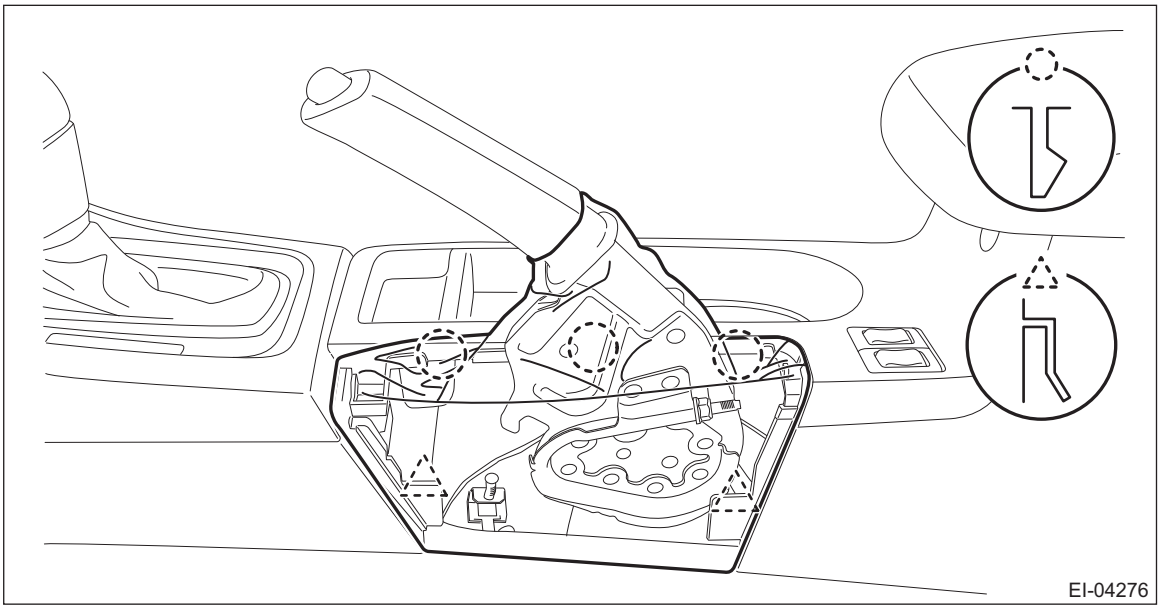
CAUTION:
- **Check there is no brake drag.**
- **Make sure that the adjuster assembly - rear brake is loosened by 10 notches. If it is not loosened sufficiently, dragging may occur.**

5) Install the adjusting hole cover to the disc rotor.
6) Check the operation stroke of the parking lever, and adjust on the lever side if necessary. <Ref. to PB-19, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2. LEVER STROKE

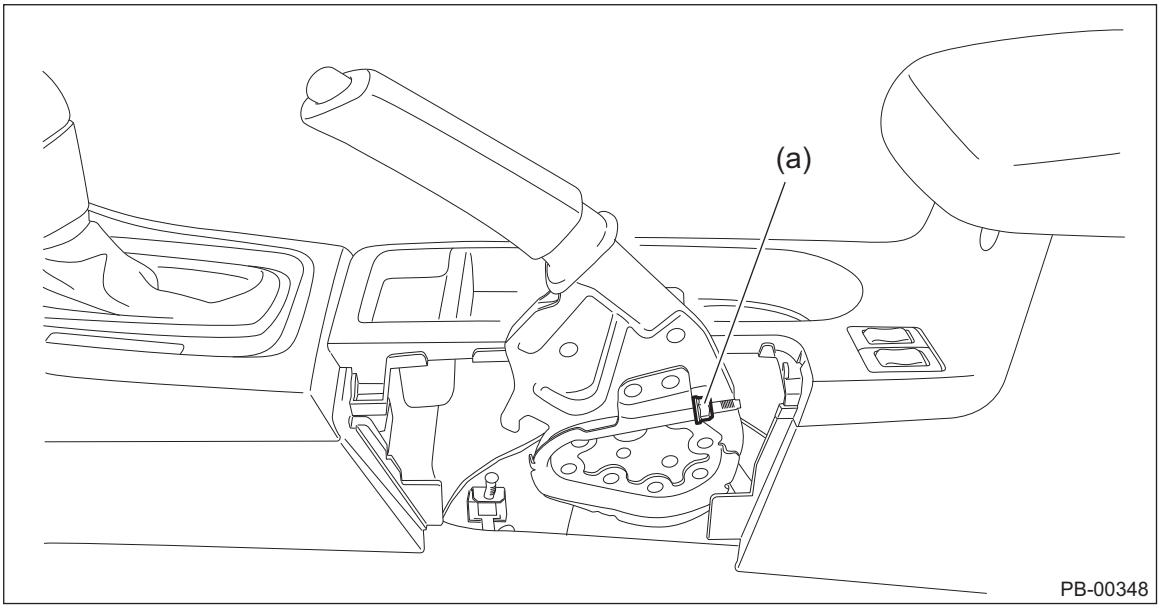
1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-18, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2) Release the claws, and then remove the boot - parking brake.



3) Pull the lever assembly - hand brake hard 3 to 5 times.
4) Turn the adjusting nut (a) until the lever stroke is at the specified value.

Lever stroke:
7 to 8 notches when pulled with a force of 200 N (20.4 kgf, 45 lbf)



5) Check there is no parking brake drag.
6) Check that the brake warning light illuminates when the lever assembly - hand brake is operated.

NOTE:
The light must illuminate when the first notch is reached after pulling the lever.
7) Install the boot - parking brake.

5. Parking Brake System

A: WIRING DIAGRAM

Refer to “Parking Brake / Brake Fluid Level Warning Light System” in the wiring diagram. <Ref. to WI-293, WIRING DIAGRAM, Parking Brake / Brake Fluid Level Warning Light System.>

B: ELECTRICAL SPECIFICATION

Refer to the Control Module I/O Signal of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-16, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. BRAKE MAINTENANCE MODE

CAUTION:

• When the brake maintenance mode is started, DTCs may be recorded. Be sure to clear DTCs after the brake maintenance mode is completed.

• When the brake maintenance mode is completed, the electronic parking brake automatically operates. Check if any other works are not performed in advance. Sufficient safety consideration is required.

NOTE:

• This function is used when inspecting and repairing the rear brake related parts.

• When the brake maintenance mode is performed, the electronic parking brake warning light illuminates, the electronic parking brake operation light illuminates, and DTC: C1984 is stored. If the system returns from the brake maintenance mode to the normal mode, the electronic parking brake warning light goes off, and DTC is cleared.

• During the brake maintenance mode, the electronic parking brake cannot be applied/released.

1) Connect the Subaru Select Monitor.

NOTE:

For detailed operation procedures, refer to “Application help”.

2) Turn the ignition to ON.

3) On «Start» display, select «Diagnosis».

4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».

5) On «Main Menu» display, select «Each System».

6) On «Select System» display, select «Brake Control System» and select «Enter».

7) On «Select Function» display, select «Work Support».

8) From the work support item list, select «Brake Maintenance Mode». And then, start the operation.

9) After the operation is complete, exit the brake maintenance mode according to the display screen.

D: INSPECTION

Refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

E: NOTE

For procedure of each component in the parking brake system, refer to the respective section.

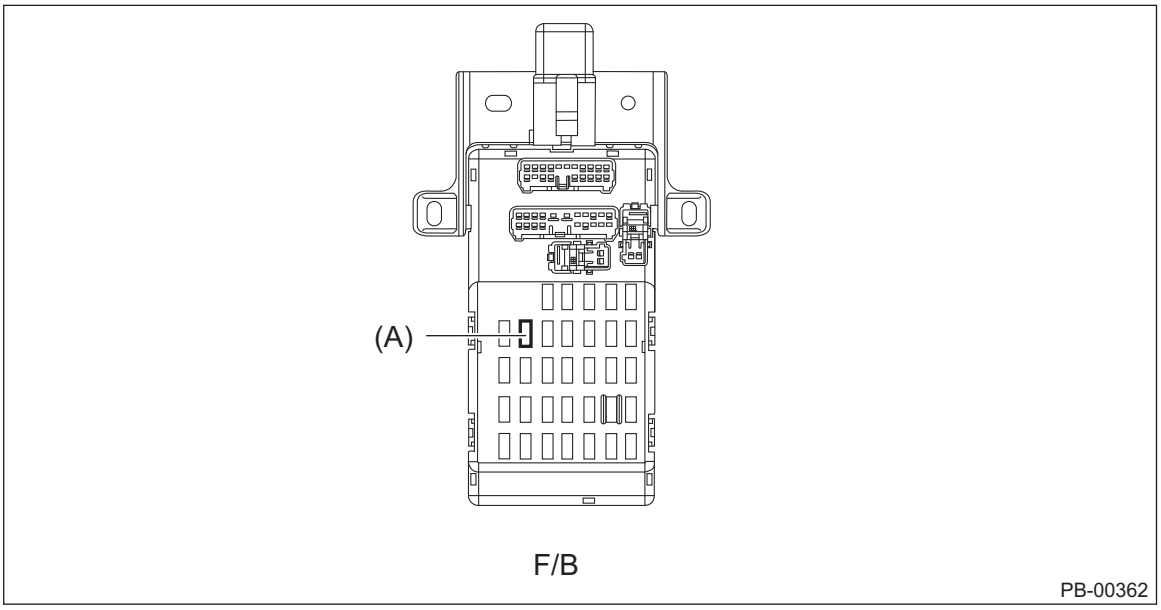
• Parking brake actuator: <Ref. to PB-23, Parking Brake Actuator.>

• Parking brake switch: <Ref. to PB-27, Parking Brake Switch.>

• Emergency release of electronic parking brake: <Ref. to PB-30, Emergency Release of Electronic Parking Brake.>

6. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 15 A (EPB control switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

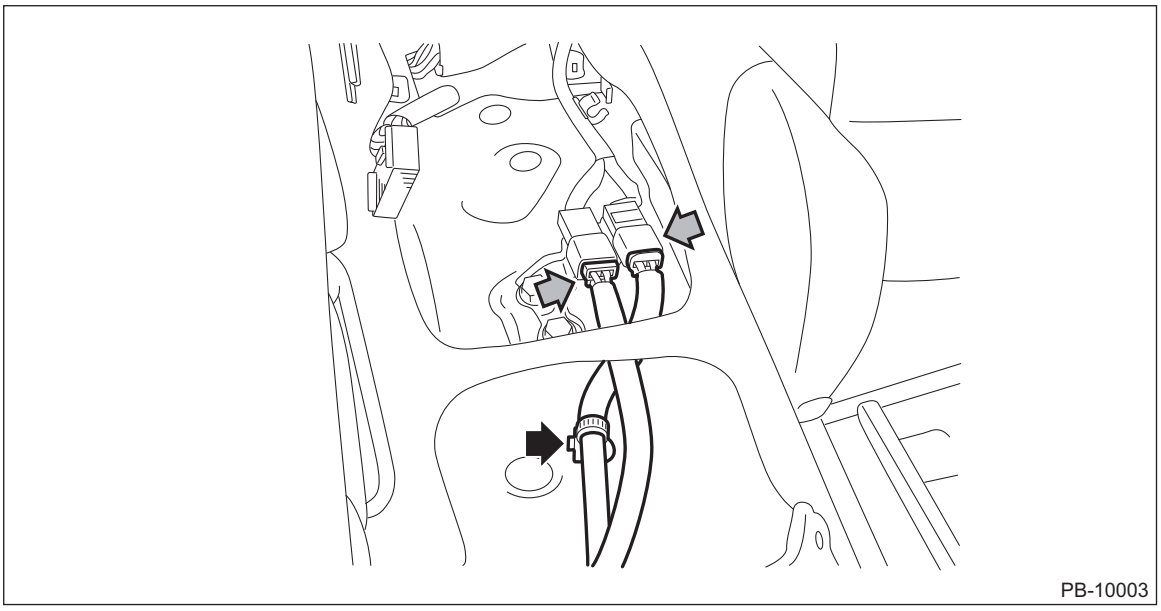
1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

7. Parking Brake Actuator

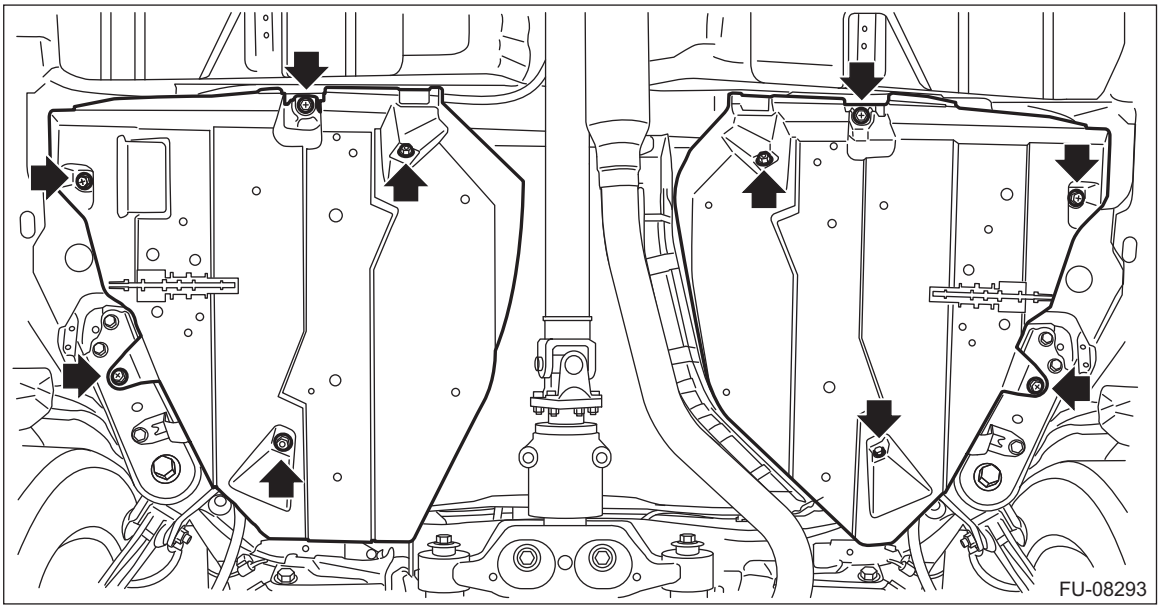
A: REMOVAL

1. PARKING BRAKE HARNESS

1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the connector and clip.

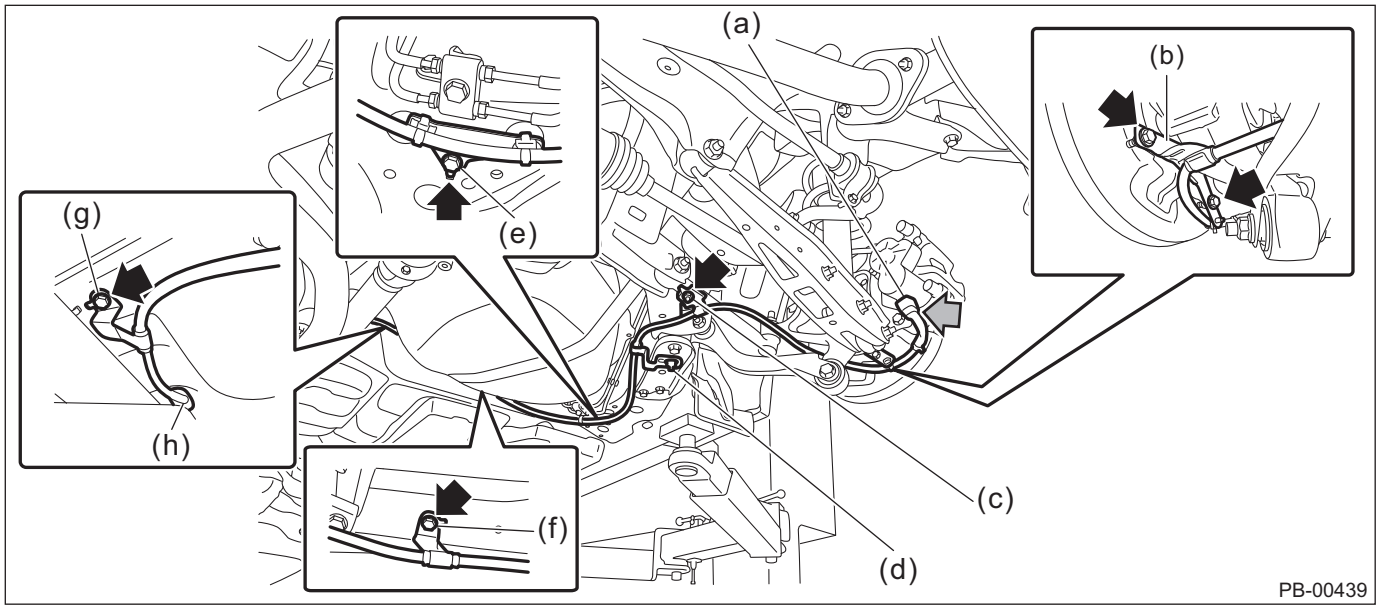


4) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Lift up the vehicle, and then remove the rear wheels.
6) Remove the bolt and nuts and remove the fuel tank protector.



7) Remove the electronic parking brake harness.
   (1) Disconnect the connector (a).
   (2) Remove the harness clamp (b) from the back plate - rear brake.
   (3) Remove the harness clamp (c) from the lateral link.
   (4) Remove the harness clamp (d) from the support - sub frame.
   (5) Remove the harness clamps (e), (f) and (g) from the rear floor.

(6) Remove the grommet (h) from the rear floor.



2. PARKING BRAKE ACTUATOR

CAUTION:

• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.

• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.

1) Release the parking brake.

2) Using the Subaru Select Monitor, go to the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:

For detailed operation procedures, refer to “Application help”.

3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

4) Lift up the vehicle, and then remove the rear wheels.

5) Remove the parking brake actuator assembly.

(1) Disconnect the connector.

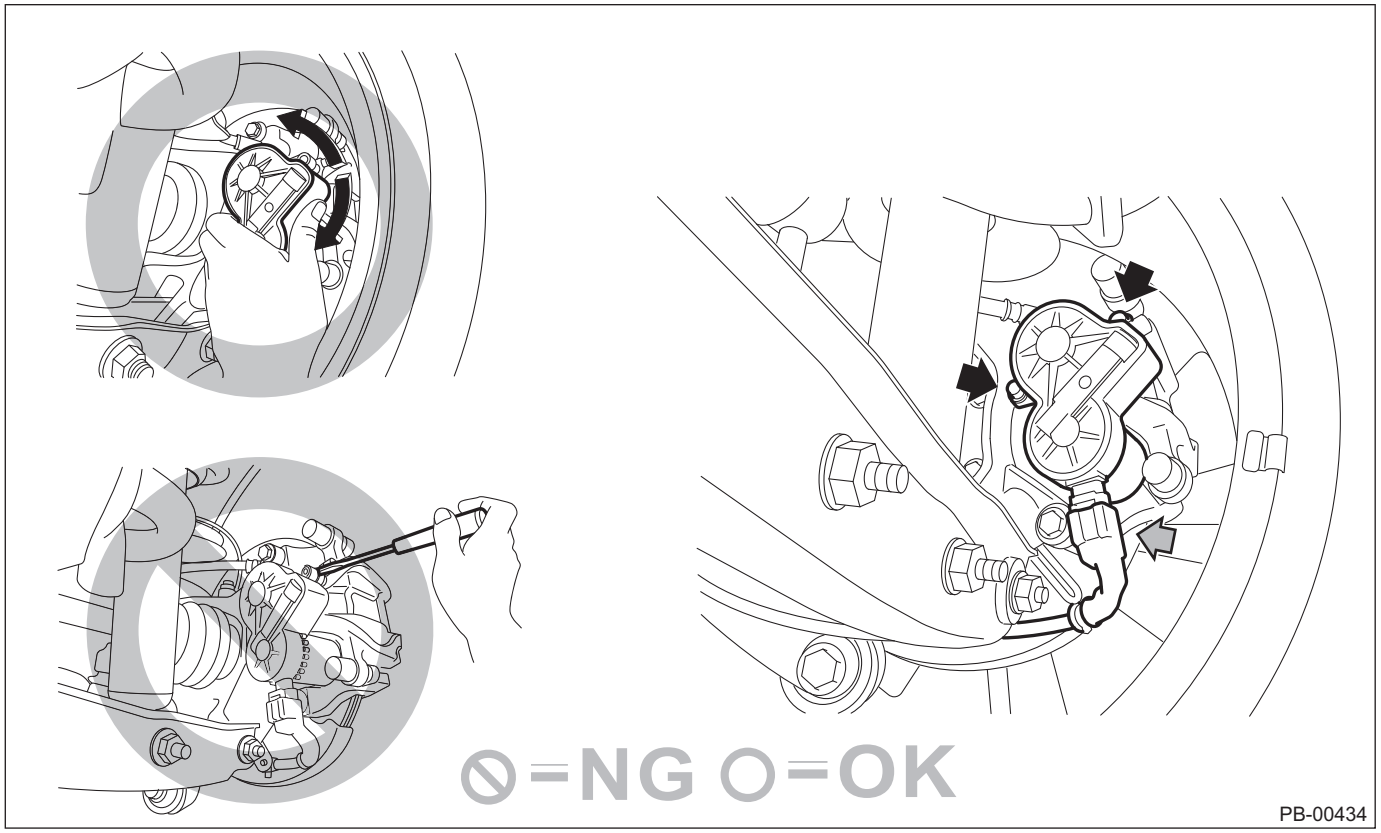
CAUTION:

• Be careful that no water and dust enter inside the connectors.

• When removing the parking brake actuator assembly, do not use any tools. Slide it upward and downward by hand to remove.

(2) Remove the bolts, and remove the parking brake actuator assembly.

Preparation tool:
Hexagon wrench: 5 mm (0.2 in)



B: INSTALLATION

1. PARKING BRAKE HARNESS

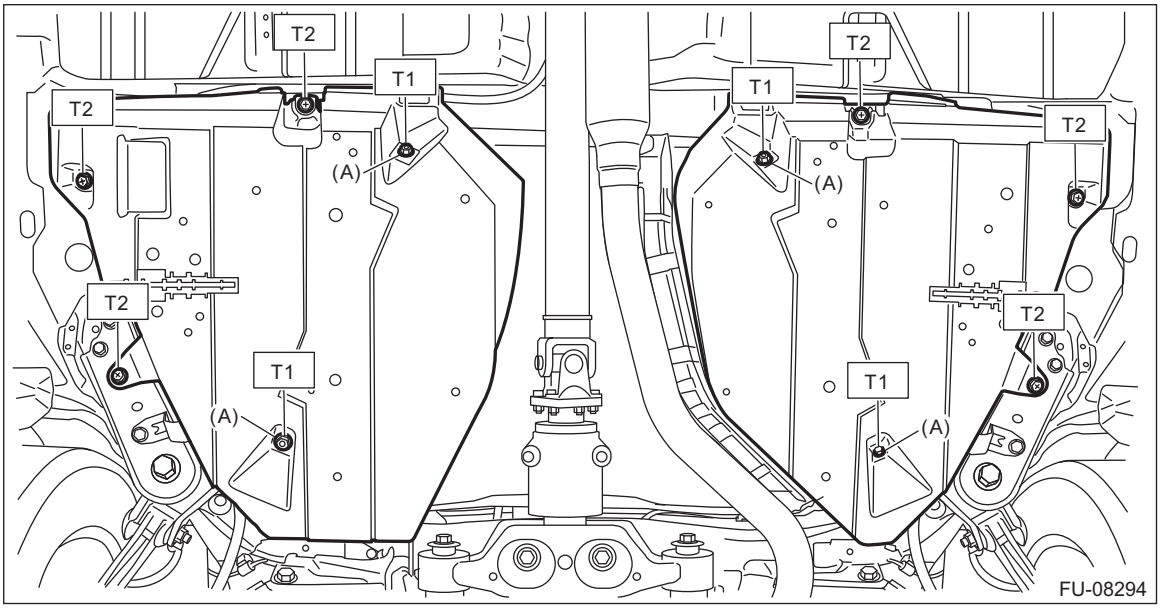
1) Install the electronic parking brake harness.

Tightening torque:
Harness clamp: 18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the fuel tank protector.

NOTE:
Use a new self-locking nut (a).

Tightening torque:
T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)



(A) Self-locking nut

3) Install the rear seat cushion assembly. <Ref. to SE-38, INSTALLATION, Rear Seat.>
4) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

2. PARKING BRAKE ACTUATOR

CAUTION:
• Do not remove the parking brake actuator assembly except when there are system malfunctions (such as emergency release of parking brake or abnormal actuator) or when the caliper is replaced. When the parking brake actuator assembly is reused, always replace the O-ring with a new part contained in the caliper body assembly.
• Do not reuse the parking brake actuator assembly when the emergency release of parking brake was performed or when the actuator has a malfunction. Always replace with a new parking brake actuator assembly.
1) Install the parking brake actuator assembly.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)
2) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
3) Using the Subaru Select Monitor, exit the brake maintenance mode according to the display screen. <Ref. to PB-21, BRAKE MAINTENANCE MODE, OPERATION, Parking Brake System.>

NOTE:
For detailed operation procedures, refer to “Application help”.
4) After the operation is completed, apply and release the parking brake five times and ensure that the brake operates normally.
5) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

8. Parking Brake Switch

A: REMOVAL

1. DRUM IN DISC TYPE MODEL

1) Set the wheel stoppers to tires.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- For CVT models, set the select lever to the “N” position before disconnecting the battery.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

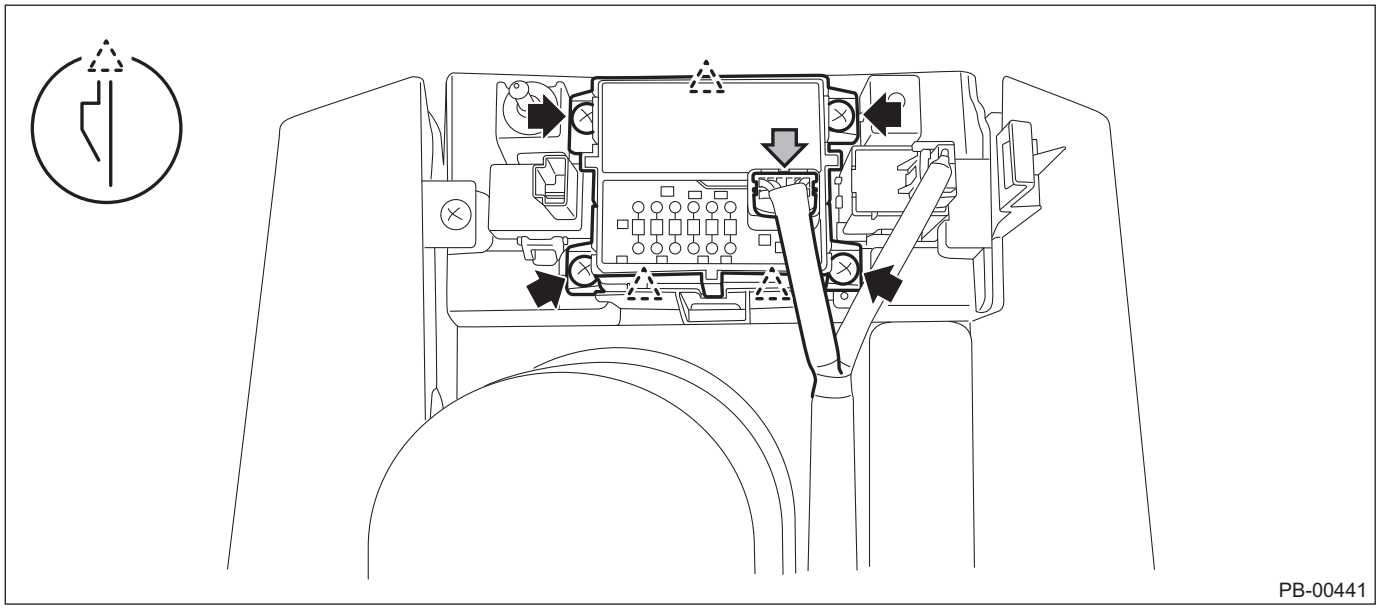
3) Remove the driver’s seat. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the console box assembly. <Ref. to EI-70, MODEL WITH PARKING BRAKE LEVER, REMOVAL, Console Box.>
5) Remove the switch assembly - hand brake.

2. ELECTRONIC PARKING BRAKE MODEL

1) Set the wheel stoppers to tires.
2) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For CVT models, set the select lever to the “N” position before disconnecting the battery.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Move the front seat to the front-most position.
4) Remove the console box assembly. <Ref. to EI-71, MODEL WITH ELECTRONIC PARKING BRAKE SWITCH, REMOVAL, Console Box.>
5) Remove the screws to remove the switch assembly - electronic parking brake.



PB-00441

B: INSTALLATION

1. DISC IN DRUM TYPE MODEL

1) Install the switch assembly - hand brake.
2) Install the console box assembly. <Ref. to EI-74, MODEL WITH ELECTRONIC PARKING BRAKE SWITCH, INSTALLATION, Console Box.>
3) Install the driver’s seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. ELECTRONIC PARKING BRAKE MODEL

1) Install the switch assembly - electronic parking brake.
2) Install the console box assembly. <Ref. to EI-74, MODEL WITH ELECTRONIC PARKING BRAKE SWITCH, INSTALLATION, Console Box.>
3) Move the front seat back to the original position.
4) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

C: INSPECTION

1. SWITCH ASSY - HAND BRAKE

Measure the resistance between the switch assembly - hand brake and chassis ground.

Preparation tool:
Circuit tester

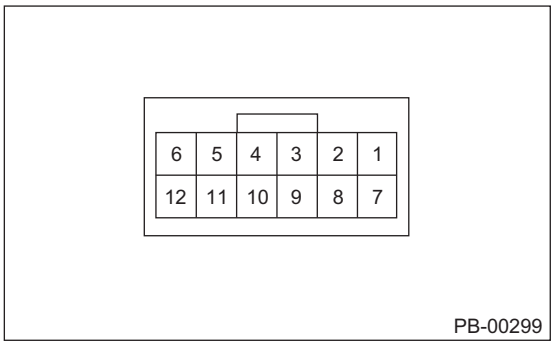
	Switch position	Standard
A	When shaft is free (ON)	Less than 1 Ω
B	When shaft is pressed in (OFF)	10 kΩ or more

If the result of inspection is not within the specified value, replace the switch assembly - hand brake.

2. SWITCH ASSY - ELECTRONIC PARKING BRAKE

Check the resistance between switch assembly - electronic parking brake terminals.

Switch position	Terminal No.	Standard
Press (Release)	6 and 2 6 and 5	Less than 1 Ω
Neutral	6 and 1 2 and 5	Less than 1 Ω
Pull (Lock)	6 and 1 6 and 2	Less than 1 Ω



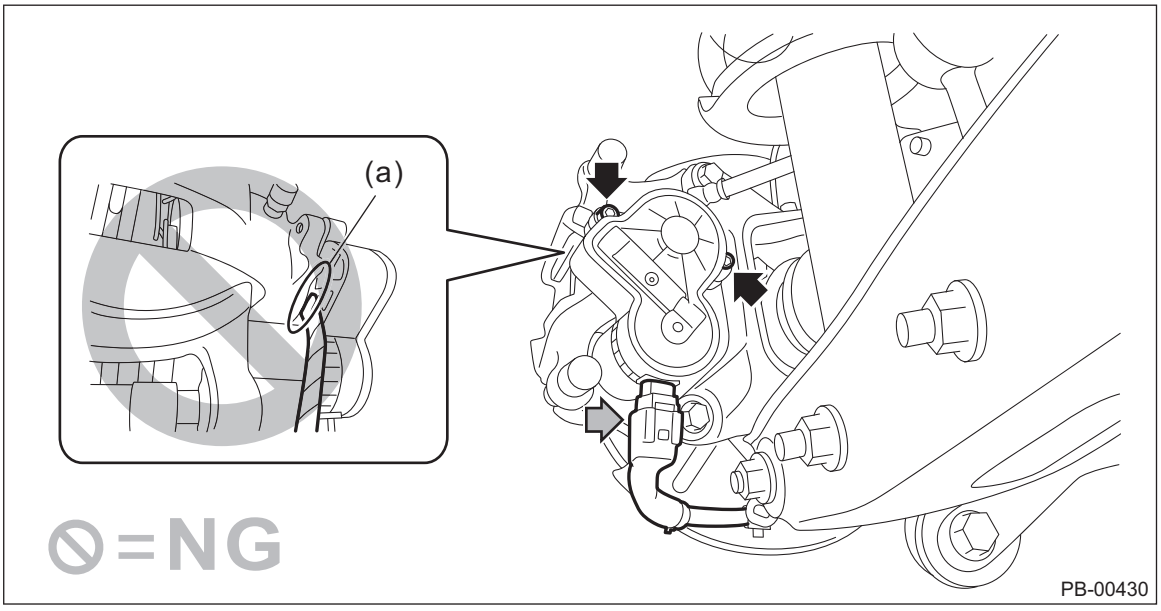
NOTE:
Replace the switch if the inspection result is not within the standard value.

9. Emergency Release of Electronic Parking Brake

A: OPERATION

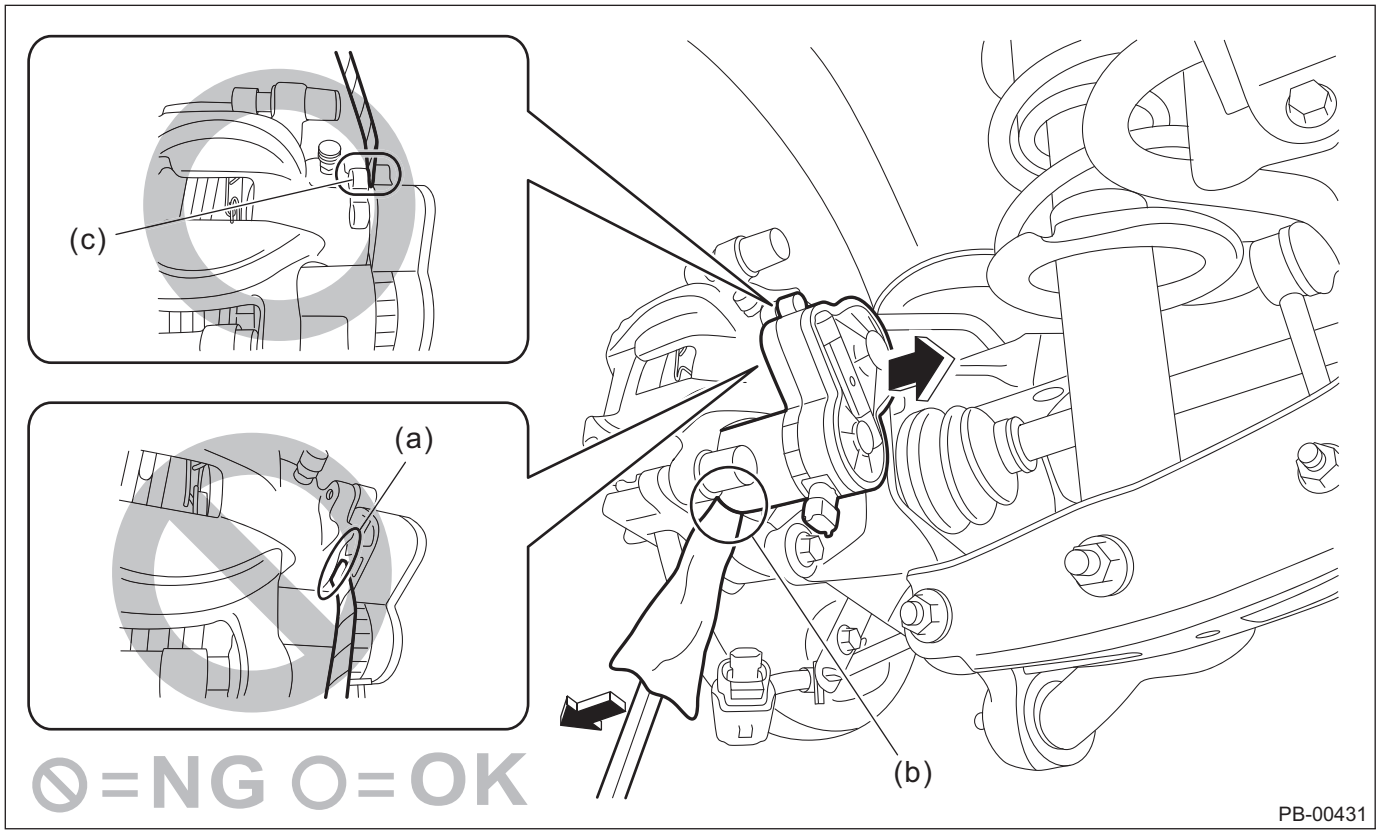
CAUTION:
• Perform this operation only when the parking brake must be released in emergency situation such as a system malfunction.
• When performing this procedure, be sure to fully confirm safety in the nearby area and park the vehicle on a horizontal ground.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Set the wheel stoppers to front tires.
3) Jack-up the rear side of vehicle and support it with rigid racks.
4) Remove the rear wheels.
5) Remove the parking brake actuator assembly.

CAUTION:
• When removing the bolt, the parking brake actuator assembly turns due to reaction force generated by the motor. Be careful not to pinch your hand.
• Wrap the tip of a screwdriver with cloth in order not to damage the caliper body that will be reused.
• Do not insert a tool into the seal surface (a) on the parking brake actuator assembly.
• Always remove the parking brake actuator assembly while holding it by hand because the parking brake actuator assembly falls off during removal.
(1) Disconnect the connector and remove the bolt.



(2) Put a crowbar between the parking brake actuator assembly and the support - rear disc brake (b).
(3) Push out the parking brake actuator assembly toward yourself.

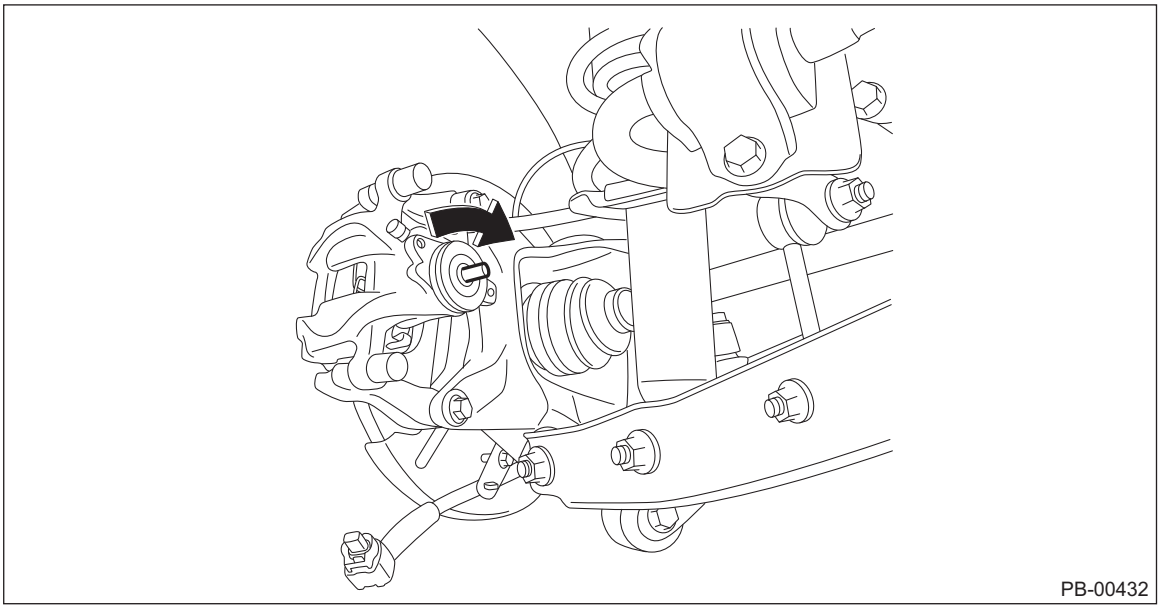
(4) Insert a crowbar into the gap (c) made by pushing the parking brake actuator assembly, and then remove it.



6) Turn the caliper body spindle bolt clockwise by approx. 1 rotation.

NOTE:
Turn both sides of LH and RH clockwise.

Preparation tool:
TORX® E12



7) Confirm that the parking brake lock is released and the disc rotor rotates.
8) Temporarily install the parking brake actuator assembly.

CAUTION:
• When the emergency release of parking brake was performed, replace the parking brake actuator assembly after the system trouble is resolved.
• Do not connect the actuator connector. It may be locked again due to continuity.
• If the vehicle needs to be moved, cover the actuator connector with vinyl tape to prevent foreign matter from entering, and secure it in an area where no interference occurs.

Tightening torque:
8 N·m (0.8 kgf-m, 5.9 ft-lb)

9) When the emergency release of parking brake was performed, be sure to perform the inspection related to the parking brake system.

NOTE:
For inspection, refer to Basic Diagnostic Procedure of “Vehicle Dynamics Control (VDC) (DIAGNOSTICS)”. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>

10.General Diagnostic Table

A: INSPECTION

- Drum in disc type model

Symptoms	Possible cause	Corrective action
Brake drag	Lever assembly - hand brake is maladjusted.	Adjust.
	Parking brake cable does not move.	Repair or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Spring - shoe return is faulty.	Replace.
Noise from brake	Spring - shoe return is faulty.	Replace.
	Spring - shoe clamp is faulty.	Replace.

- Electronic parking brake model

Symptoms	Possible cause	Corrective action
Brake drag	Defective parking brake switch	Replace.
	Defective parking brake harness	Replace.
	Defective parking brake actuator	Replace.
	Loose parking brake actuator and support installation bolt	Tighten to the specified torque.
Noise from brake	Worn or hardened pad	Replace.
	Defective parking brake actuator	Replace.

1. General Description

A: SPECIFICATION

1. HYDRAULIC TYPE

Model			STI model
Whole system	Minimum turning radius: m (ft)		5.5 (18.05)
	Steering angle	Inner wheel	36.3°±1.5°
		Outer wheel	32.0°±1.5°
	Steering wheel diameter: mm (in)		369 (14.53)
	Lock-to-lock revolution number		2.5
Gearbox	Type		Rack & pinion type Integral type
	Backlash		0 (automatic adjusting)
	Valve type		Rotary valve
Power steering pump	Type		Vane pump
	Oil tank		Installed on body
	Specific discharge rate: cm^3 (cu in)/rev.		8.5 (0.519)
	Relief pressure: kPa (kgf/cm^2, psi)		8,300 — 9,000 (85 — 92, 1,203 — 1,305)
	Hydraulic fluid control		Engine speed sensitive
	Operation flow rate: L (US qt, Imp qt)		1,000 r/min: 7.5 (7.9, 6.6) 3,000 r/min: 7.3 (7.7, 6.4)
	Revolution speed range: r/min		560 — 9,600
	Direction of rotation		Clockwise
Power steering fluid	Description		SUBARU ATF or ATF DEXRON III
	Capacity: L (US qt, Imp qt)		Oil tank: 0.2 (0.2, 0.2)
			Whole system: 0.7 (0.7, 0.6)

Steering wheel

Free play:	mm (in)	17 (0.67)

Column assembly - steering

Clearance: Between steering wheel and cover assembly - column	mm (in)	4 — 6 (0.16 — 0.24)

Steering gearbox

Sliding resistance:	N (kgf, lbf)	343 (35, 77) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in radial direction: mm (in)	Right-turn steering	Both amplitudes: 0.4 (0.016) or less
	Left-turn steering	Play in the horizontal direction: 0.6 (0.024) or less (both amplitudes) Play in the vertical direction: 0.4 (0.016) or less (both amplitudes)
Input shaft play: mm (in)	In radial direction	Both amplitudes: 0.26 (0.0102) or less
	In axial direction	Without play
Rotational resistance:	N (kgf, lbf)	Maximum allowable value: 21 (2.14, 4.7) or less Difference between right and left rotating resistance: 20% or less

Power steering oil pump

Pulley shaft	Lateral play: mm (in)	0.2 (0.008) or less
	Axial play: mm (in)	0.9 (0.035) or less
Pulley	Groove runout: mm (in)	1 (0.039) or less
	Rotational resistance: N (kgf, lbf)	9.22 (0.94, 2.07) or less
Regular pressure (unloaded): kPa (kgf/cm^2, psi)		981 (10, 142) or less

Steering effort (with power steering assist)

At standstill on paved road with engine idling:	N (kgf, lbf)	31 (3.16, 7) or less
At standstill on paved road with engine stalled:	N (kgf, lbf)	294.2 (29.9, 66.2) or less

Recommended power steering fluid

SUBARU ATF or ATF DEXRON III

2. ELECTRIC TYPE

Model			WRX model	
			17-inch wheel	18-inch wheel
Whole system	Minimum turning radius: m (ft)		5.4 (17.72)	5.5 (18.05)
	Steering angle	Inner wheel	37.5°±1.5°	36.4°±1.5°
		Outer wheel	32.9°±1.5°	32.0°±1.5°
	Steering wheel diameter: mm (in)		369 (14.53)	
	Lock-to-lock revolution number		2.8	2.7
Gearbox	Type		Rack & pinion type	
	Backlash		0 (automatic adjusting)	
Motor (Temperature 20°C (68°F))	Rated voltage: V		13.5	
	Rated torque: N·m (kgf-m, ft-lb)		5.96 (0.61, 4.4)	
	Rated revolution speed: r/min		760	
	Rated current: A		77	
	Rated output: W		491	

Steering wheel

Free play: mm (in)	17 (0.67) or less

Column assembly - steering

Clearance: Between steering wheel and cover assembly - column mm (in)	4 — 6 (0.16 — 0.24)

Steering gearbox

Sliding resistance: N (kgf, lbf)		360 (37, 81) or less Difference between right and left sliding resistance: 20% or less
Rack shaft play in radial direction: mm (in)	Right-turn steering	Both amplitudes: 0.6 (0.024) or less
	Left-turn steering	Both amplitudes: 0.6 (0.024) or less
Input shaft play: mm (in)	In radial direction	Both amplitudes: 0.6 (0.024) or less
	In axial direction	0.27 (0.0106) or less
Rotational resistance: N (kgf, lbf)		Maximum allowable value: 18 (1.8, 4) or less Difference between right and left sliding resistance: 20% or less

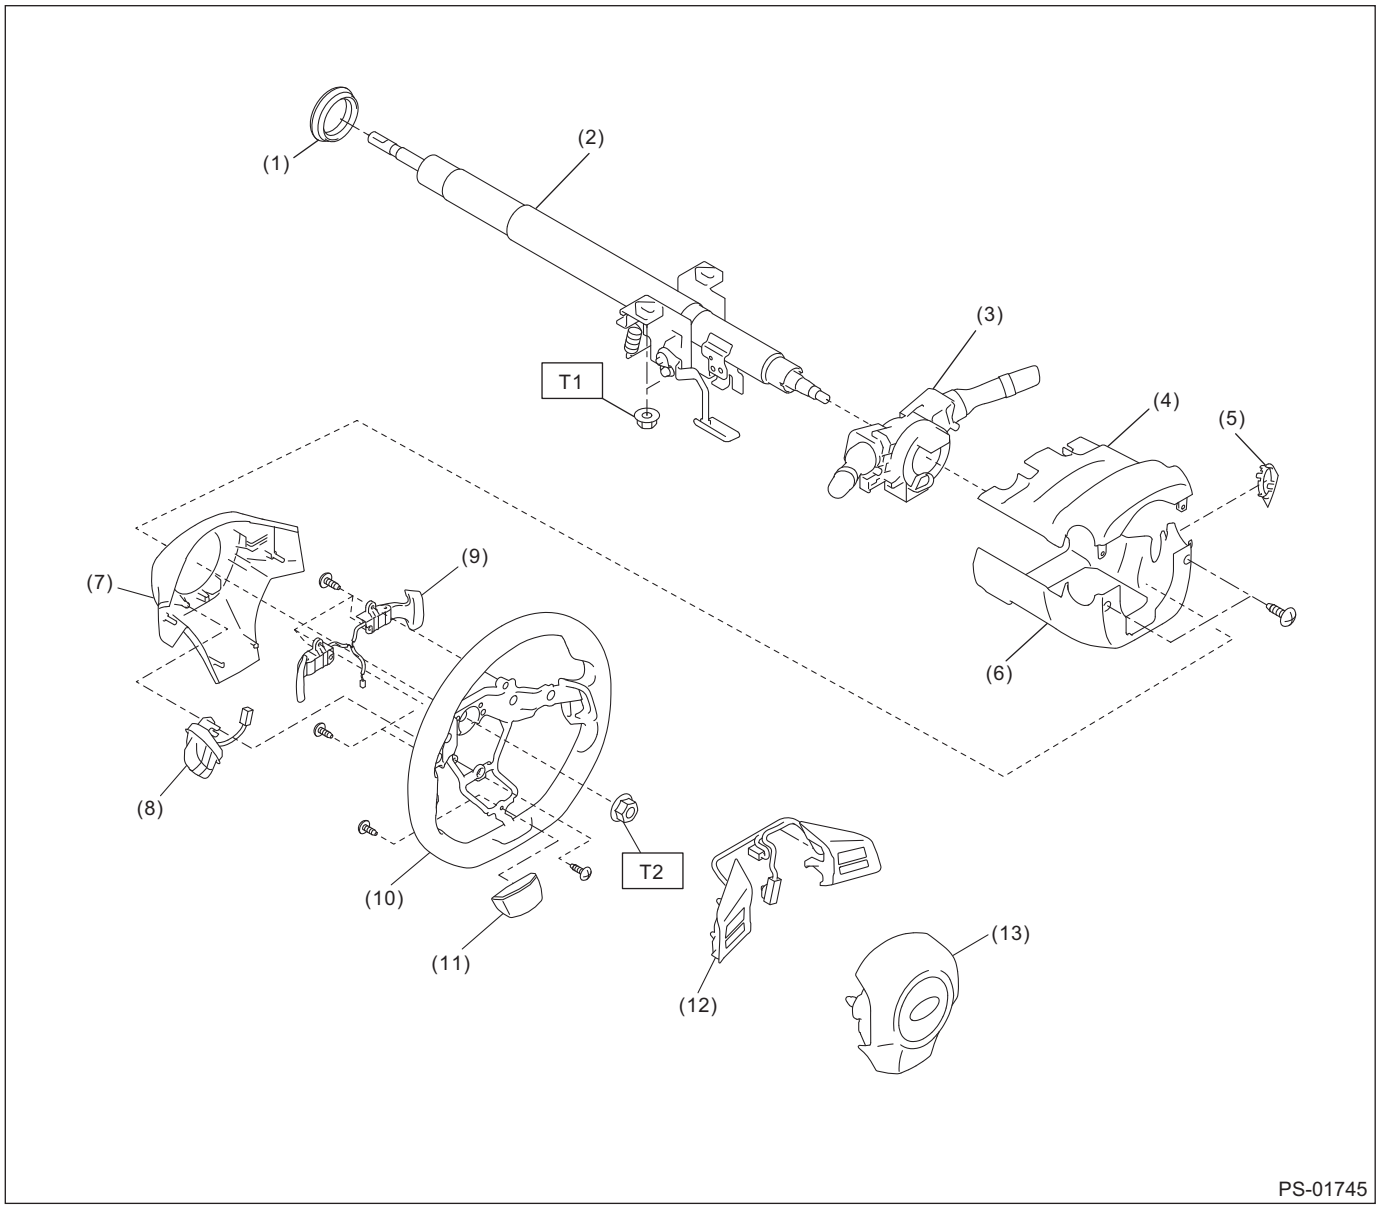
Steering effort (with power steering assist)

At standstill on paved road with engine idling:	N (kgf, lbf)	31 (3.2, 7) or less

At standstill on paved road with engine stalled:	N (kgf, lbf)	294.2 (30, 66.2) or less

B: COMPONENT

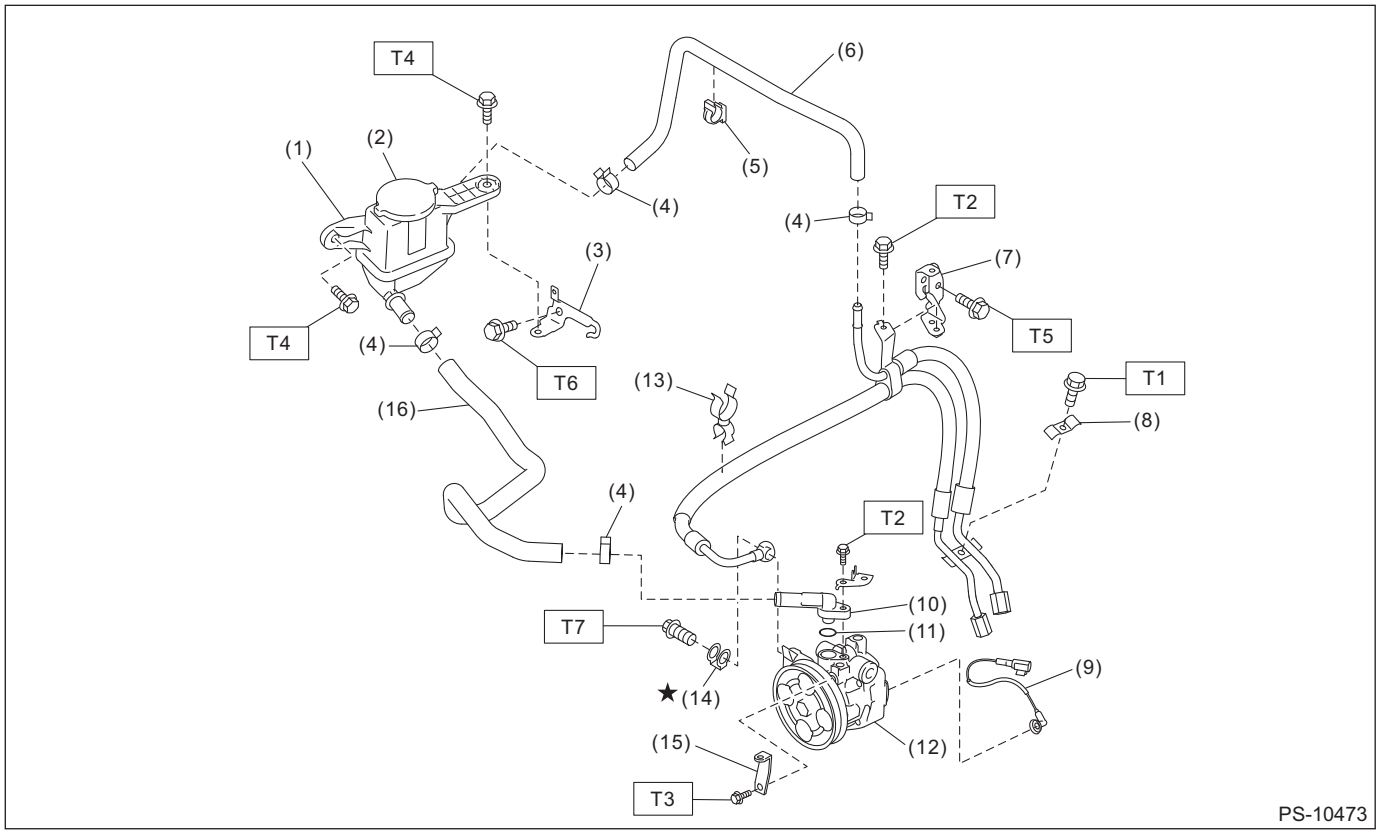
1. STEERING WHEEL AND COLUMN



(1) Bushing
(2) Column assembly - steering
(3) Switch ASSY - combination
(4) Cover ASSY - column UPR
(5) Cap - key cylinder (model with keyless access with push button start)
(6) Cover ASSY - column LWR
(7) Cover - steering wheel LWR
(8) MID switch (multi information display switch)
(9) Paddle shift
(10) Steering wheel
(11) Cover - spoke
(12) Satellite switch
(13) Airbag module

Tightening torque: N·m (kgf-m, ft-lb)
T1: 20 (2, 14.8)
T2: 39 (4, 28.8)

2. HOSE AND TANK

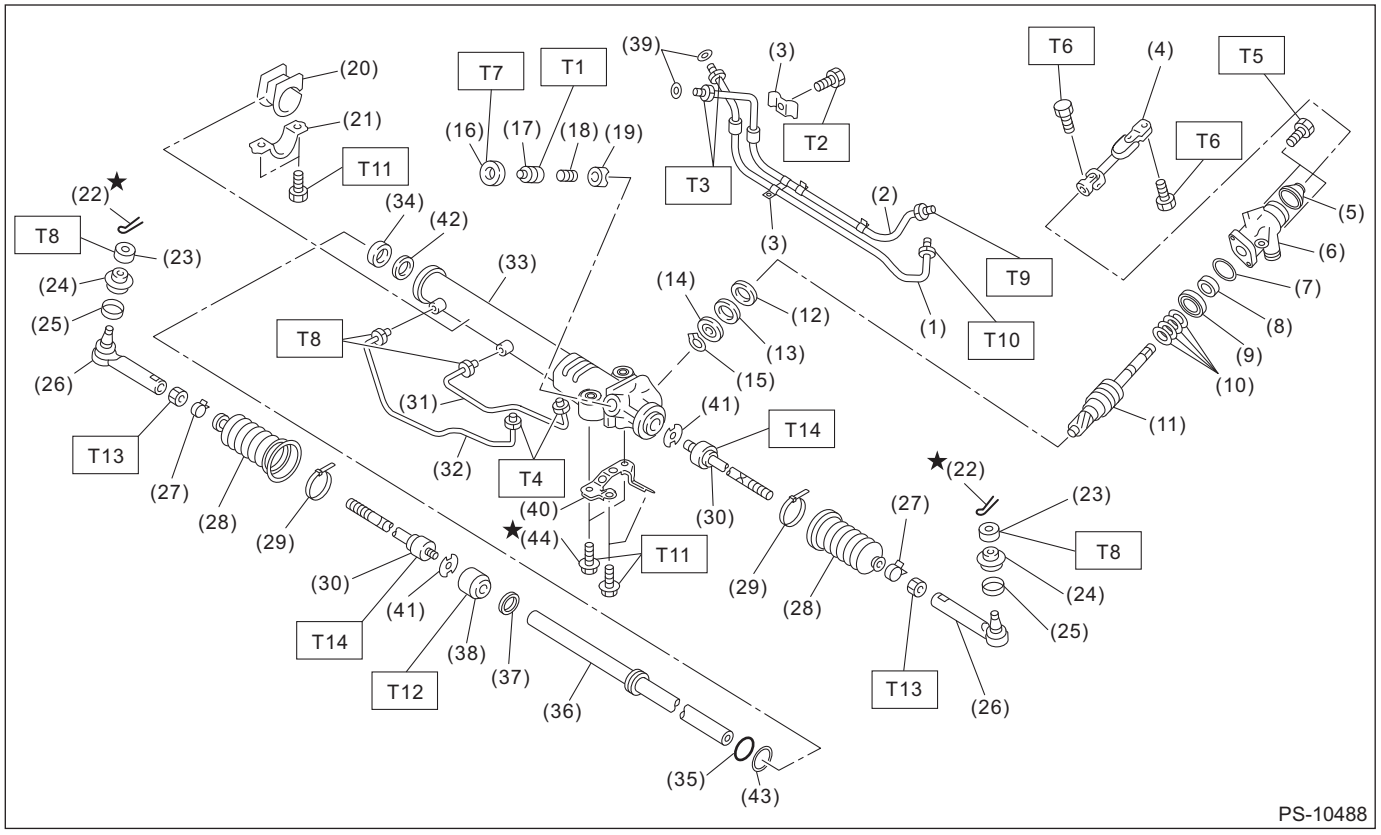


(1) Reservoir tank
(2) Cap
(3) Tank bracket
(4) Clip
(5) Hose clip
(6) Return hose
(7) Bracket - hose
(8) Clamp E
(9) Switch - harness
(10) Suction connector
(11) O-ring
(12) Oil pump
(13) Clip
(14) Eyebolt gasket
(15) Bracket - belt cover
(16) Hose - suction

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1, 7.4)
T3: 11 (1.1, 8.1)
T4: 13 (1.3, 9.6)
T5: 18 (1.8, 13.3)
T6: 33 (3.4, 24.3)
T7: 40 (4.1, 29.5)

3. STEERING GEARBOX

- Hydraulic type

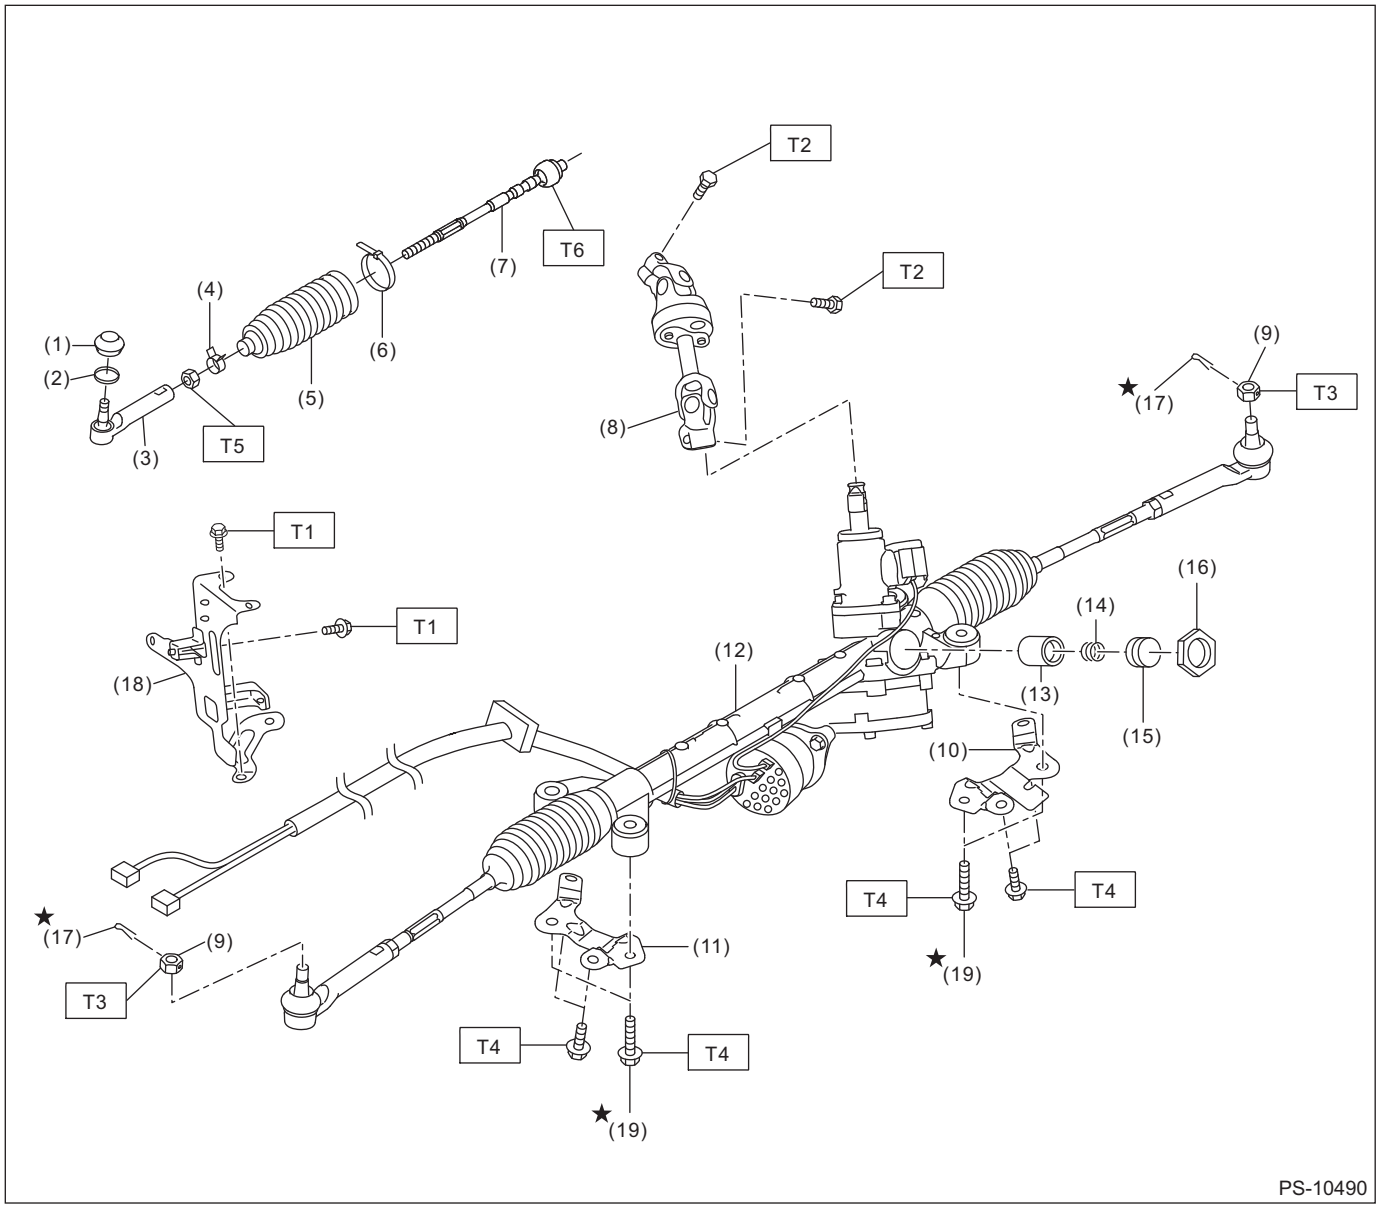


(1)	Feed pipe	(21)	Clamp	(41)	Lock washer
(2)	Return pipe	(22)	Cotter pin	(42)	Back-up ring
(3)	Clamp plate	(23)	Castle nut	(43)	O-ring
(4)	Universal joint	(24)	Dust cover	(44)	Flange bolt
(5)	Dust seal	(25)	Clip		
(6)	Valve housing	(26)	Tie-rod end		
(7)	O-ring	(27)	Clip		
(8)	Oil seal	(28)	Boot		
(9)	Bushing	(29)	Band		
(10)	Seal ring	(30)	Tie-rod		
(11)	Pinion & valve ASSY	(31)	Pipe B		
(12)	Oil seal	(32)	Pipe A		
(13)	Back-up washer	(33)	Steering body		
(14)	Ball bearing	(34)	Oil seal		
(15)	Snap ring	(35)	Piston seal ring		
(16)	Lock nut	(36)	Rack		
(17)	Adjusting screw	(37)	Oil seal		
(18)	Spring	(38)	Holder		
(19)	Sleeve	(39)	O-ring		
(20)	Adapter	(40)	Stiffener		

Tightening torque: N·m (kgf-m, ft-lb)

T1:	***Tighten to 5.9 (0.6, 4.4), and loosen by 5 degrees.***
T2:	***9 (0.9, 6.6)***
T3:	***15 (1.5, 11.1)***
T4:	***17 (1.7, 12.5)***
T5:	***20 (2, 14.8)***
T6:	***24 (2.4, 17.7)***
T7:	***25 (2.5, 18.4)***
T8:	***27 (2.8, 19.9)***
T9:	***29 (3, 21.4)***
T10:	***37 (3.8, 27.3)***
T11:	***60 (6.1, 44.3)***
T12:	***70 (7.1, 51.6)***
T13:	***85 (8.7, 62.7)***
T14:	***93 (9.5, 68.6)***

- Electric type



(1)	Dust seal	(10)	Stiffener LH	(19)	Flange bolt
(2)	Clip - boot tie-rod end	(11)	Stiffener RH		
(3)	Tie-rod end	(12)	Steering gearbox ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Clip - boot tie-rod	(13)	Pad - pressure	***T1:***	***7.5 (0.8, 5.5)***
(5)	Boot - steering gearbox	(14)	Spring - gearbox	***T2:***	***24 (2.4, 17.7)***

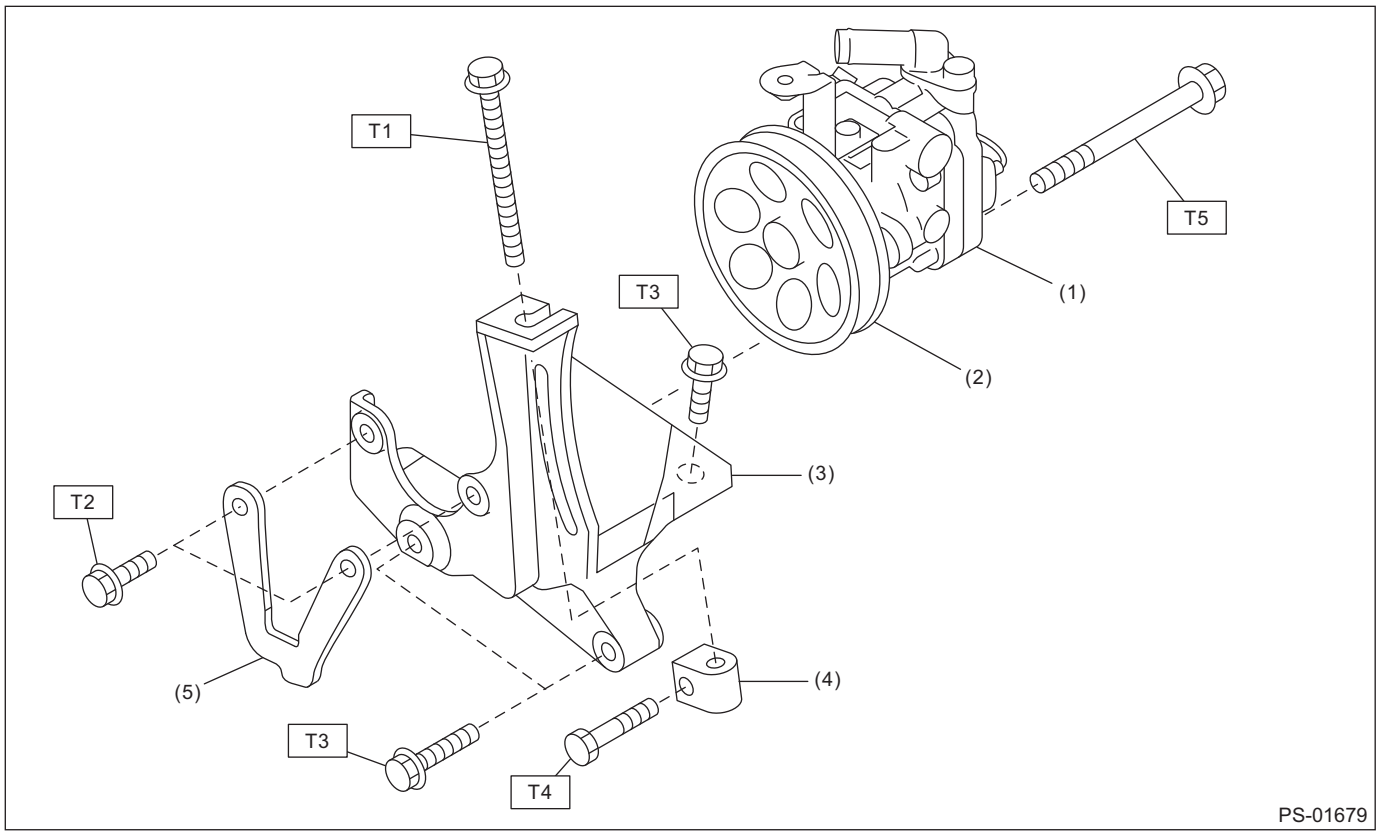
(7)	Tie-rod	(16)	Lock nut	***T4:***	***60 (6.1, 44.3)***
(8)	Universal joint ASSY - steering	(17)	Cotter pin	***T5:***	***85 (8.7, 62.7)***
(9)	Castle nut	(18)	Bracket - harness	***T6:***	***90 (9.2, 66.4)***

4. OIL PUMP



(1) Oil pump
(2) Pulley
(3) Bracket
(4) Belt tension nut
(5) Washer plate

Tightening torque: N·m (kgf-m, ft-lb)
T1: 8 (0.8, 5.9)
T2: 16 (1.6, 11.8)
T3: 22 (2.2, 16.2)
T4: 25 (2.5, 18.4)
T5: 48 (4.9, 35.4)

C: CAUTION

• When performing any work, always wear work clothes, a work cap and protective shoes. Additionally, wear a helmet, protective goggles, etc. if necessary.
• When performing a repair, identify the cause of trouble and avoid unnecessary removal, disassembly and replacement.
• Some vehicle components are extremely hot immediately after driving. Be wary of receiving burns from heated parts.
• Use SUBARU genuine grease, the recommended or equivalent. Do not mix grease etc. of different grades or manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Always use the jack-up point when the shop jacks or rigid racks are used to support the vehicle.
• Do not secure a part in a vise directly. Place cushioning materials such as wood blocks, aluminum plates, or waste cloth between the part and the vise.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, electronic power steering gearbox, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• When the wheel alignment has been adjusted, perform the following adjustment.
  – Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>

– VDC sensor midpoint setting mode: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-92571100	925711000	PRESSURE GAUGE	Used for measuring oil pressure.
 ST-926200000	926200000	STAND	• Used when inspecting characteristic of gearbox assembly and disassembling it. • Used together with BOSS D (34199AG000).
 ST34099AC010	34099AC010	ADAPTER HOSE A	Used together with PRESSURE GAUGE (925711000).
 ST34099AC020	34099AC020	ADAPTER HOSE B	Used together with PRESSURE GAUGE (925711000).

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-926230000	926230000	SPANNER	For the lock nut when adjusting backlash of gearbox.
 ST34099PA100	34099PA100	SPANNER	Used when measuring the rotational resistance of gearbox assembly.
 ST-926420000	926420000	PLUG	When fluid leaks from pinion side of gearbox assembly, remove pipe B from valve housing, attach this tool and check fluid leaking points.
 ST34099FA060	34099FA060	PUNCH HOLDER	Used for crimping.
 ST34199FE040	34199FE040	INSTALLER A, B, C	• Used for installing the oil seal to the rack assembly. • INSTALLER A: 34199FE070 • INSTALLER B: 34199FE080 • INSTALLER C: 34199FE090

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199XA030	34199XA030	INSTALLER & REMOVER	Used for removing and installing the rack oil seal (outer and inner).
 ST34199AG000	34199AG000	BOSS D	• Used when inspecting characteristic of gear-box assembly and disassembling it. • Used together with STAND (926200000).
 ST34199AG040	34199AG040	GUIDE	Used for installing seal ring of rack.
 ST34199AG070	34199AG070	FORMER	Used for forming seal ring of pinion.
 ST34199AG020	34199AG020	GUIDE	Used for installing seal ring of pinion.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199AG060	34199AG060	GUIDE G (26)	• Used for forming seal ring of rack. • Used together with FORMER PISTON (34199AG080).
 ST34099PA010	34099PA010	OIL SEAL REMOVER	Used for removing oil seal.
 ST34199AG090	34199AG090	INSTALLER & REMOVER	• Used for installing oil seal of valve housing. • Used for installing ball bearing of valve housing. • Used for removing oil seal and ball bearing from valve housing.
 ST34199AG080	34199AG080	FORMER PISTON	• Used for forming seal ring of rack. • Used together with GUIDE G (26) (34199AG060).
 ST34199AG010	34199AG010	INSTALLER	Used for pressing-fit oil seal of gearbox cylinder.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST34199FE020	34199FE020	BASE	Used for crimping.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing the steering wheel.
Ball joint puller	Used for disconnecting tie-rod end.
Dial gauge	Used when measuring steering gearbox run-out.
Magnet stand	Used when measuring steering gearbox run-out.
Circuit tester	Used for measuring voltage, resistance and current.
DST-i	Used together with Subaru Select Monitor 4.
C-clamp	Used when inspecting steering gearbox assembly.

2. Power Steering System

A: WIRING DIAGRAM

Refer to “Electric Power Steering System” in the wiring diagram. <Ref. to WI-365, WIRING DIAGRAM, Vehicle Dynamics Control System.>

B: ELECTRICAL SPECIFICATION

Refer to Control Module I/O Signal of “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS)”. <Ref. to PS(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the power steering system, refer to the respective section.

- Steering wheel: <Ref. to PS-15, Steering Wheel.>
- Universal joint assembly - steering: <Ref. to PS-19, Universal Joint.>
- Steering column: <Ref. to PS-24, Steering Column.>
- Steering gearbox (hydraulic type): <Ref. to PS-29, Steering Gearbox.>
- Electric power steering gearbox (electric type): <Ref. to PS-64, Electric Power Steering Gearbox.>
- Pipe assembly (hydraulic type): <Ref. to PS-79, Pipe Assembly.>
- Oil pump (hydraulic type): <Ref. to PS-88, Oil Pump.>
- Reservoir tank (hydraulic type): <Ref. to PS-95, Reservoir Tank.>
- Power steering fluid (hydraulic type): <Ref. to PS-96, Power Steering Fluid.>

3. Steering Wheel

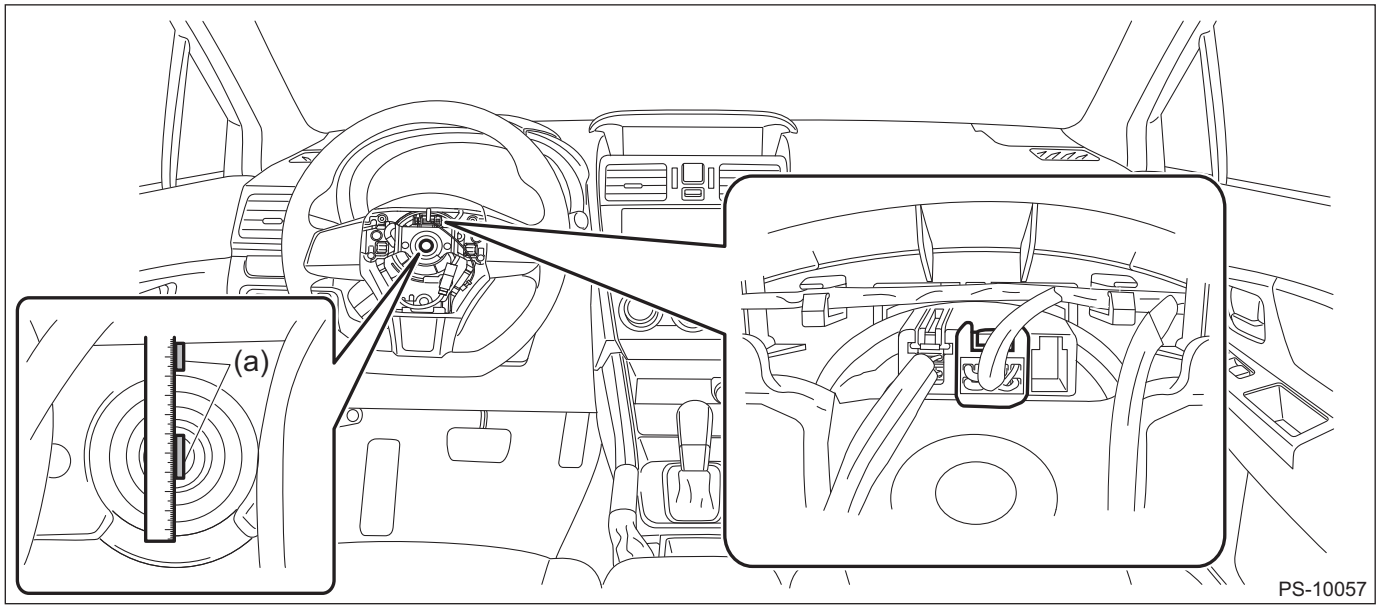
A: REMOVAL

CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Set the tire to the straight-ahead position.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel.

CAUTION:
• Always use the steering wheel puller for removal to avoid deforming the steering wheel.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
(1) Disconnect the connector and remove the nut.
(2) Put alignment marks and remove the steering wheel.

Preparation tool:
Steering wheel puller



B: INSTALLATION

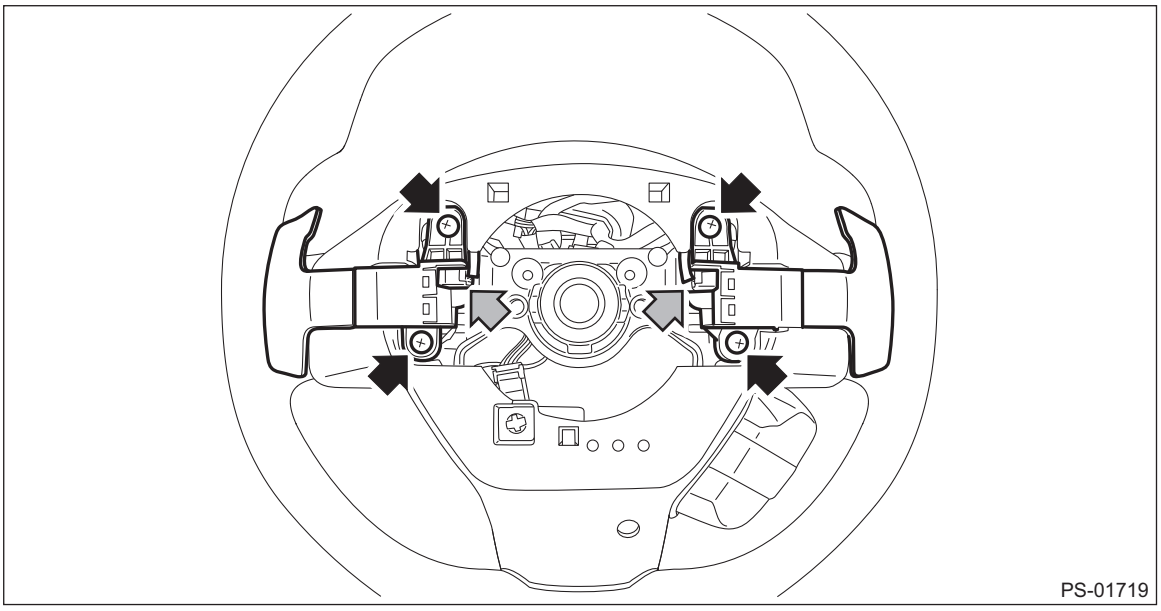
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Align the center position of the roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
2) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

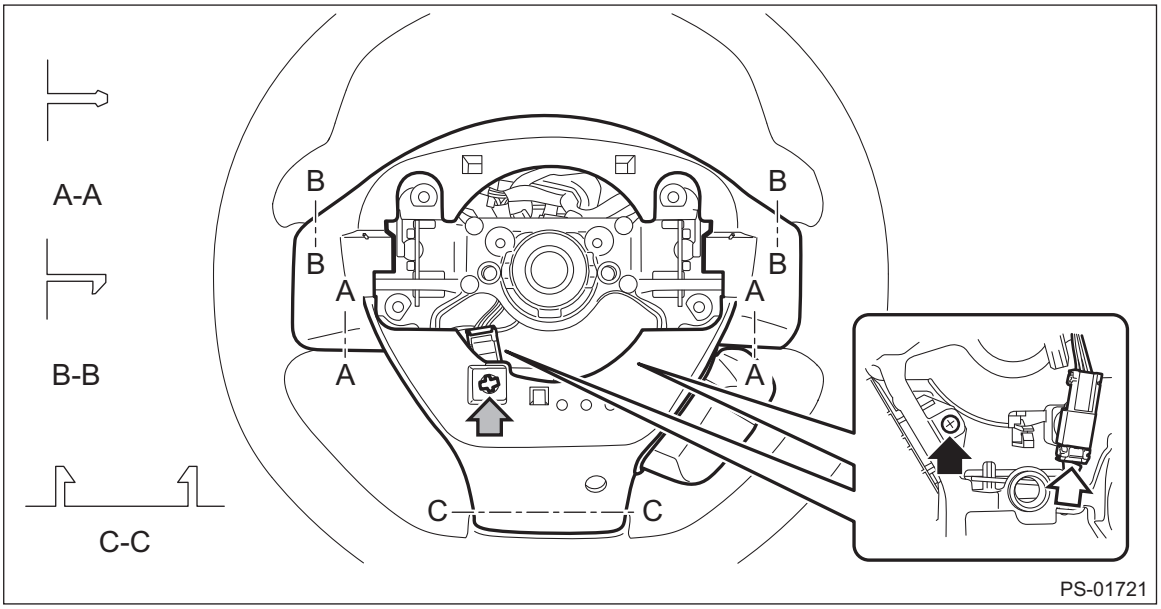
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
3) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

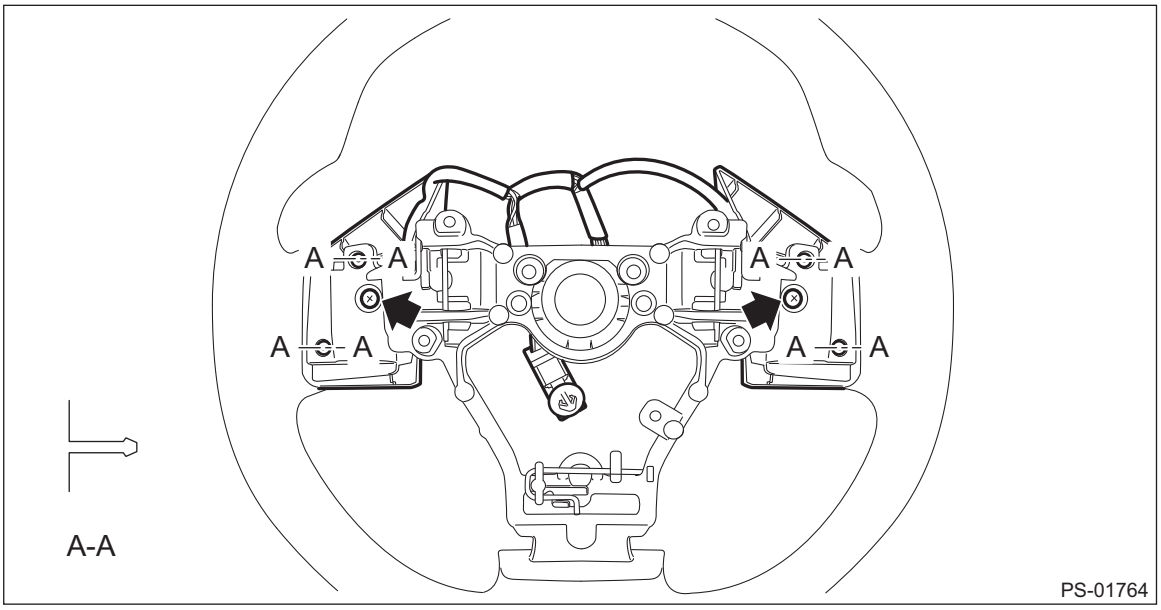
1) Remove the screw, disconnect the connector and remove the paddle shift switch. (Model with paddle shift)



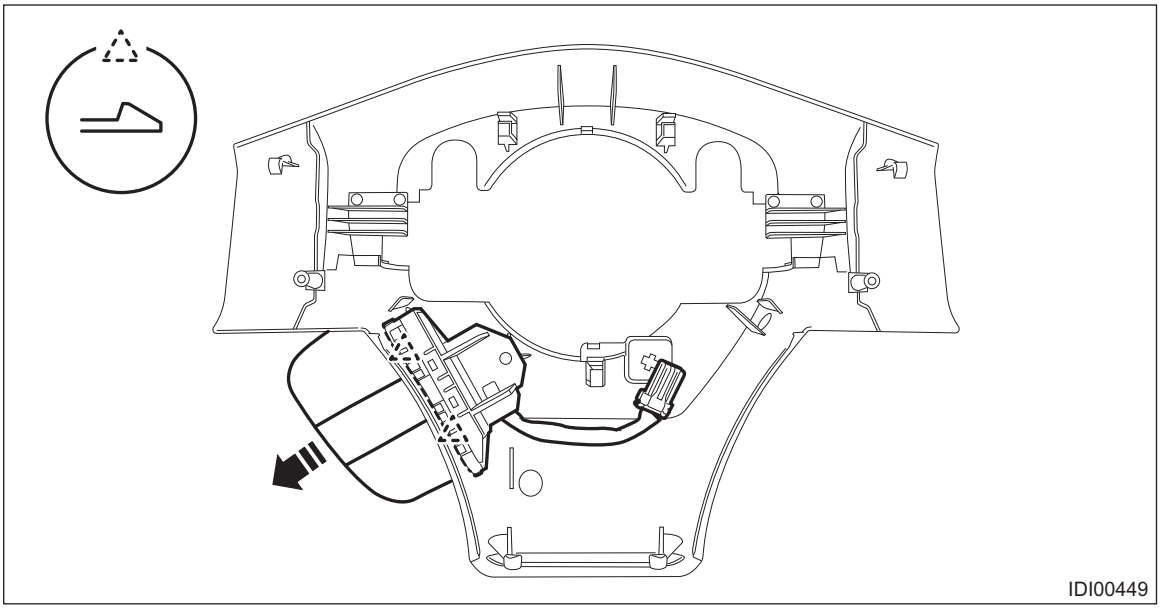
2) Remove the cover - steering wheel LWR.
(1) Remove the connectors and screws.
(2) Release the claws and harness clips, detach the cover - steering wheel LWR.



3) Release the claws and remove the screws, then detach the satellite switch.



4) Release the claws, and then remove the MID switch.



D: ASSEMBLY

CAUTION:
Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.

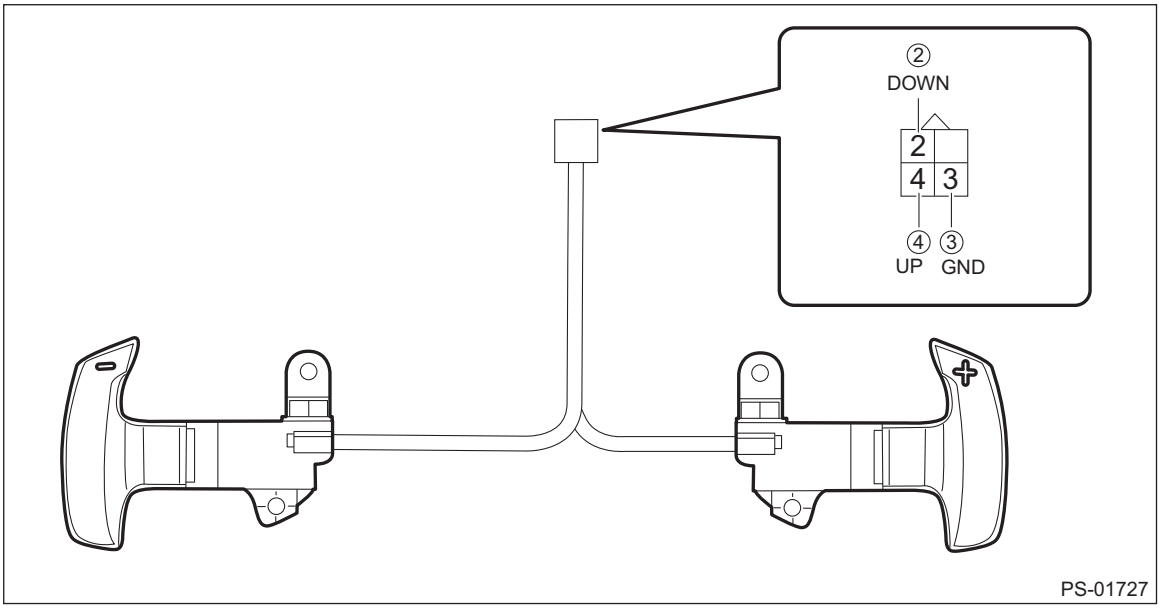
1) Install the MID switch.
2) Install the satellite switch.
3) Install the cover - steering wheel LWR.
4) Install the paddle shift switch. (Model with paddle shift)

E: INSPECTION

1. PADDLE SHIFT SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
3 — 4	Operate the + side of paddle shift assembly and hold it.	Less than 10 Ω
2 — 3	Operate the – side of paddle shift assembly and hold it.	Less than 10 Ω
2 — 3 3 — 4	Do not operate the paddle shift assembly.	Is the resistance 1 MΩ or more?

2) Replace the paddle shift switch if the inspection result is not within the standard value.

2. SATELLITE SWITCH ASSEMBLY

- Audio (navigation) switch: <Ref. to ETM-27, SATELLITE SWITCH ASSEMBLY, INSPECTION, Switches and Harness.>
- EyeSight steering switch: <Ref. to ES-35, EyeSight STEERING SWITCH, INSPECTION, Switches and Harness.>
- Cruise control command switch: <Ref. to CC-6, INSPECTION, Cruise Control Command Switch.>

3. MID SWITCH

Refer to “Switch & harness” of “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-23, MULTI INFORMATION DISPLAY SWITCH, INSPECTION, Switches and Harness.>

4. Universal Joint

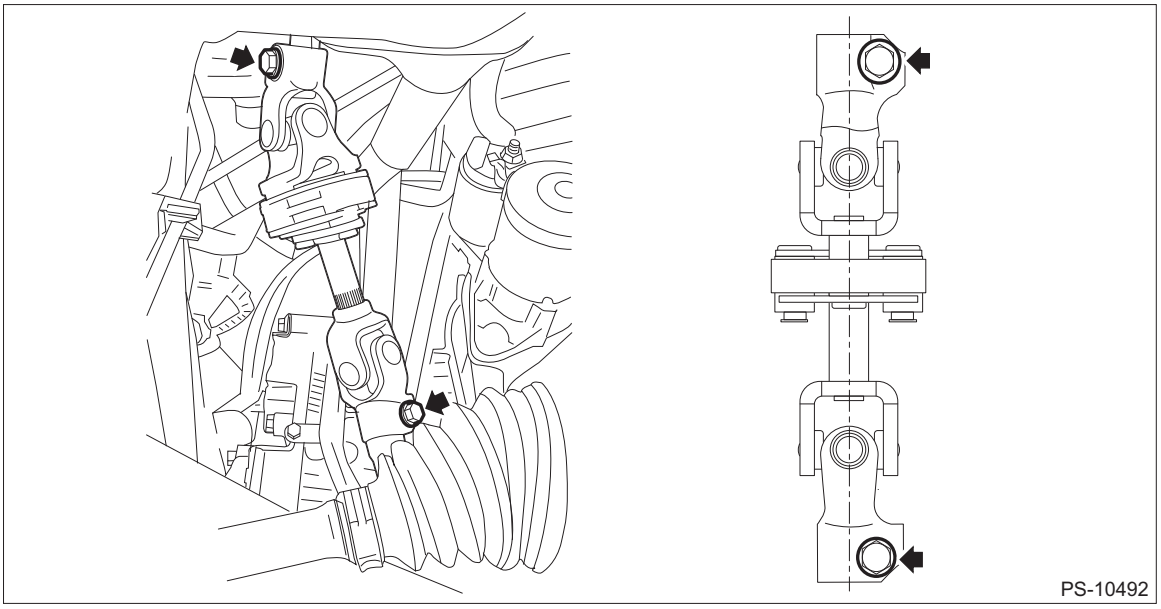
A: REMOVAL

1) Remove the universal joint assembly - steering.
(1) Place alignment marks on the universal joint assembly - steering.

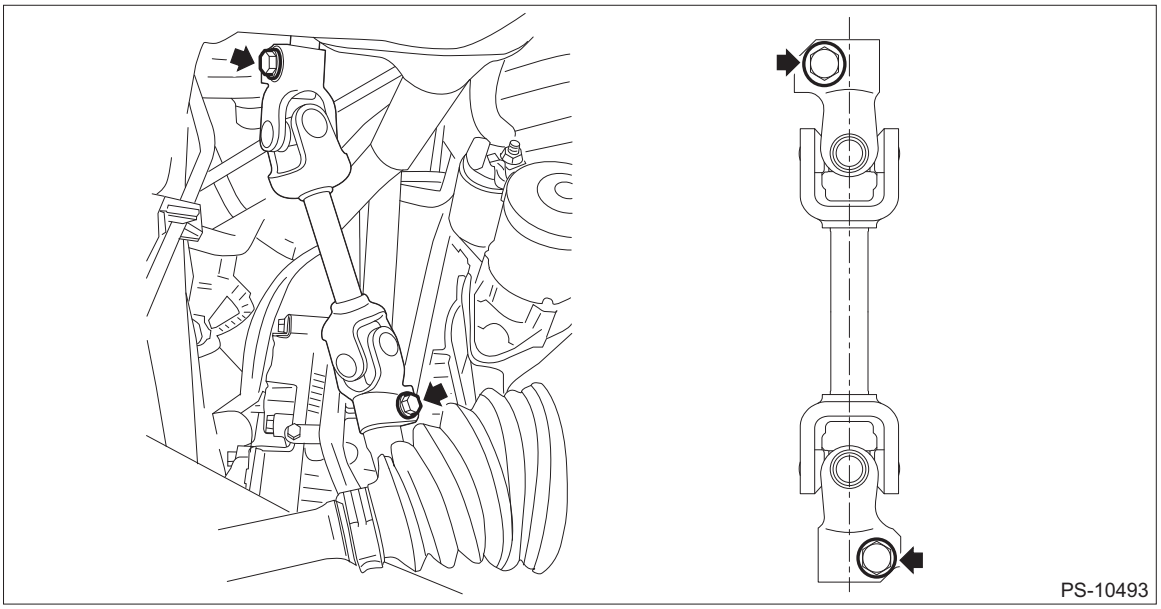
NOTE:
Place alignment marks on the following positions.
- Between the column assembly - steering and the universal joint assembly - steering
- Between the steering gearbox assembly and the universal joint assembly - steering (only when the guide is not installed)

(2) Remove the bolt, and remove the universal joint assembly - steering. (Except for WRX STI model)

CAUTION:
Do not remove the guide.



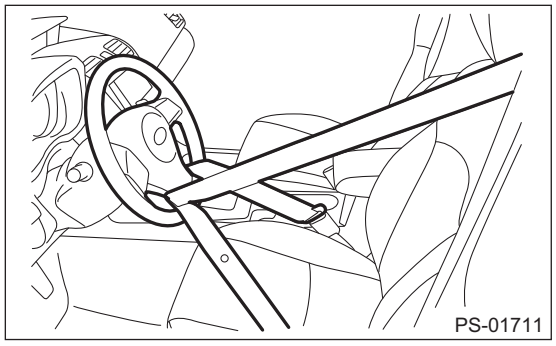
(3) Remove the bolt, and remove the universal joint assembly - steering. (WRX STI model)



2) Set the steering column and the driver's seat to the neutral position.

CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.

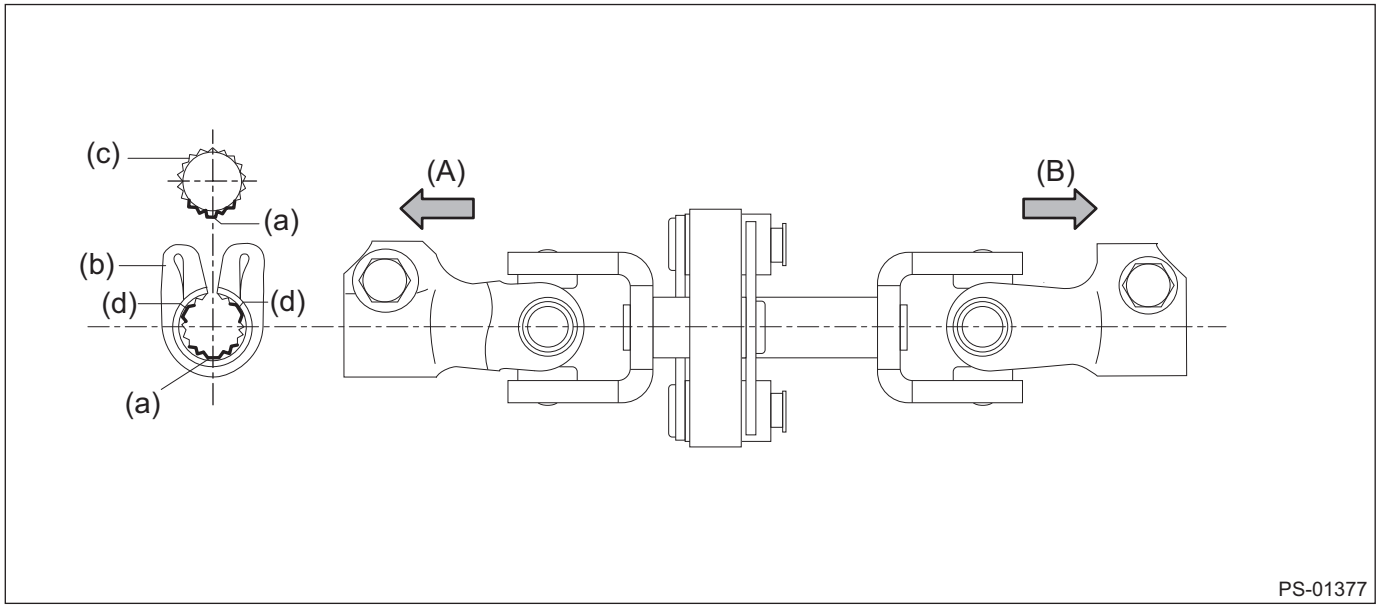
3) Prevent the steering wheel from turning using the seat belt.



B: INSTALLATION

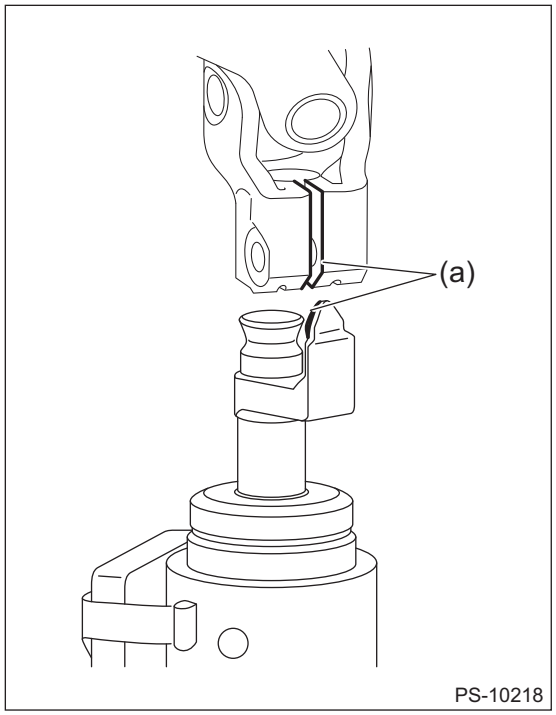
1) Before installation, check the universal joint assembly - steering. <Ref. to PS-22, INSPECTION, Universal Joint.>
2) Unfasten the seat belt and make the steering wheel turn freely.
3) Install the universal joint assembly - steering to the column shaft. (Except for WRX STI model)

CAUTION:
• Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.
• When tightening the mounting bolts of the universal joint assembly - steering, always tighten the gearbox side bolts first.
• Always place the tilt lever to the lock position after the steering column is adjusted.
(1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).
(2) Connect the universal joint assembly - steering with the column shaft.



(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly, by matching the cutout of guide (a) or the alignment marks that have been marked when removing.



(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

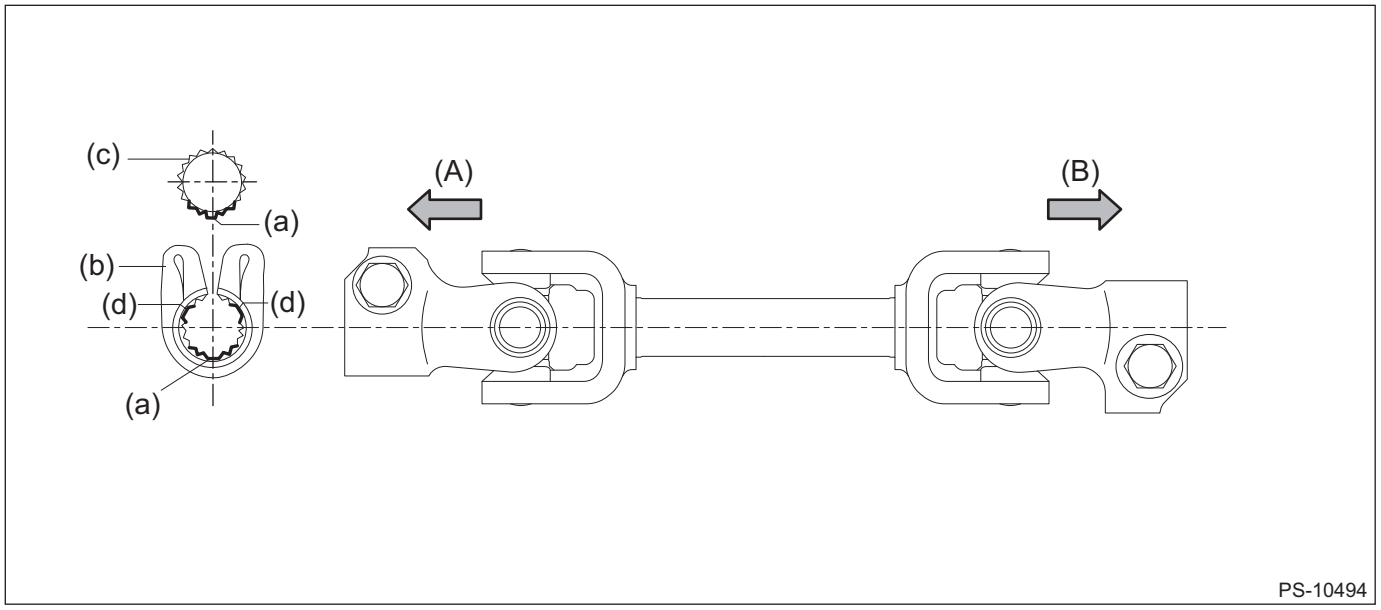
Clearance:
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

4) Install the universal joint assembly - steering to the column shaft. (WRX STI model)

CAUTION:
• Be sure to align the protrusion section (a) of the column shaft side with the cutout (a) of the serration. If another cutout portions (d) are used for alignment, the bolt of the universal joint assembly - steering cannot be assembled.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.
• When tightening the mounting bolts of the universal joint assembly - steering, always tighten the gearbox side bolts first.
• Always place the tilt lever to the lock position after the steering column is adjusted.

(1) Match the alignment marks that have been marked when removing with the column shaft (c) and the cutout portion (a) at the serrations of the yoke (b).

(2) Connect the universal joint assembly - steering with the column shaft.



(A) Column shaft side (B) Gearbox side

(3) Install the universal joint assembly - steering to the serrations of the gearbox assembly by matching the alignment marks that have been marked when removing.
(4) Tighten the bolts on the gearbox side first, and then the column shaft side.

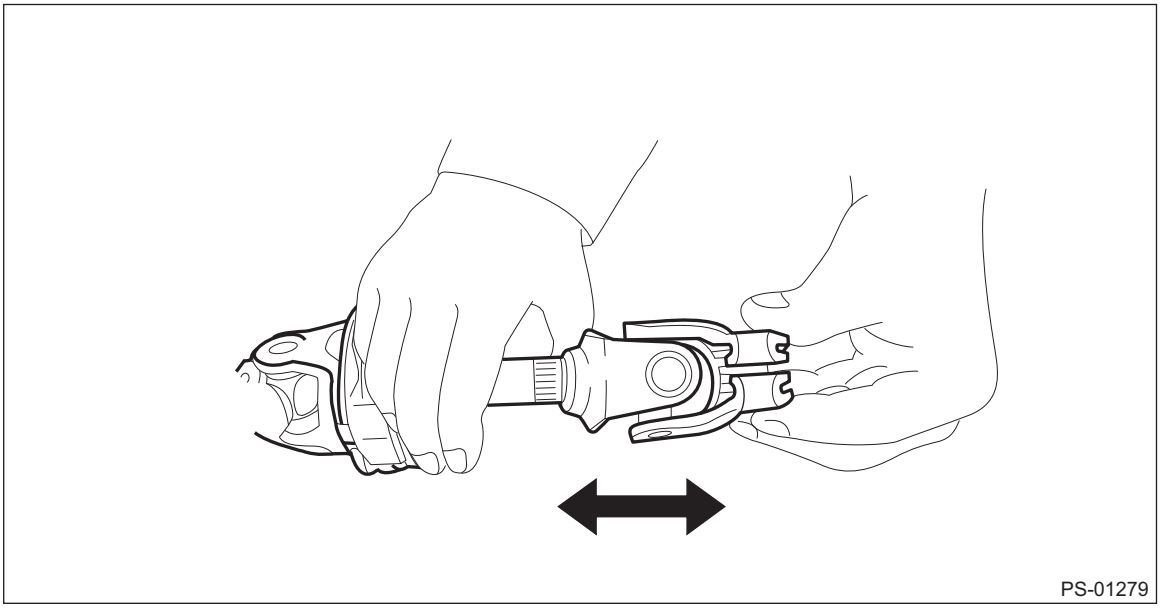
Tightening torque:
24 N·m (2.4 kgf-m, 17.7 ft-lb)

Clearance:
Universal joint assembly - steering coupling to adjacent parts: 15 mm (0.59 in) or more

C: INSPECTION

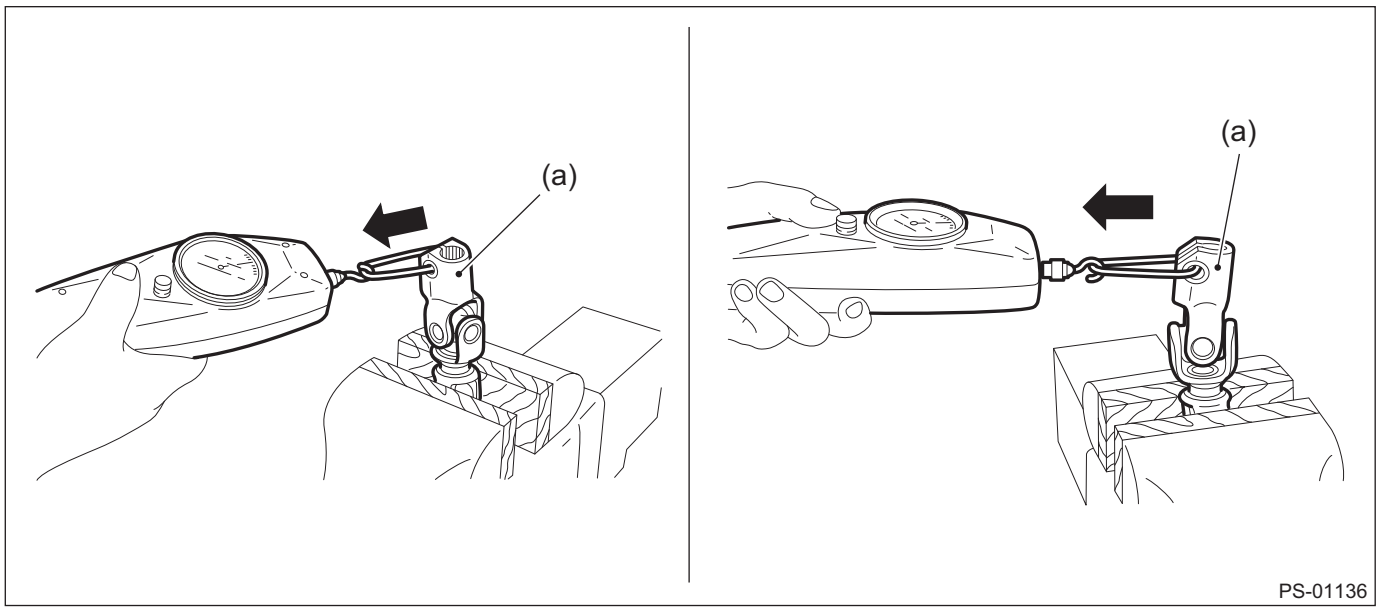
Check for wear, damage or any other faults.
1) Check the universal joint assembly - steering for excessive looseness.

Service limit:
Play of the universal joint assembly - steering: 0 mm (0 in)



2) Measure the swing torque of the universal joint assembly - steering.

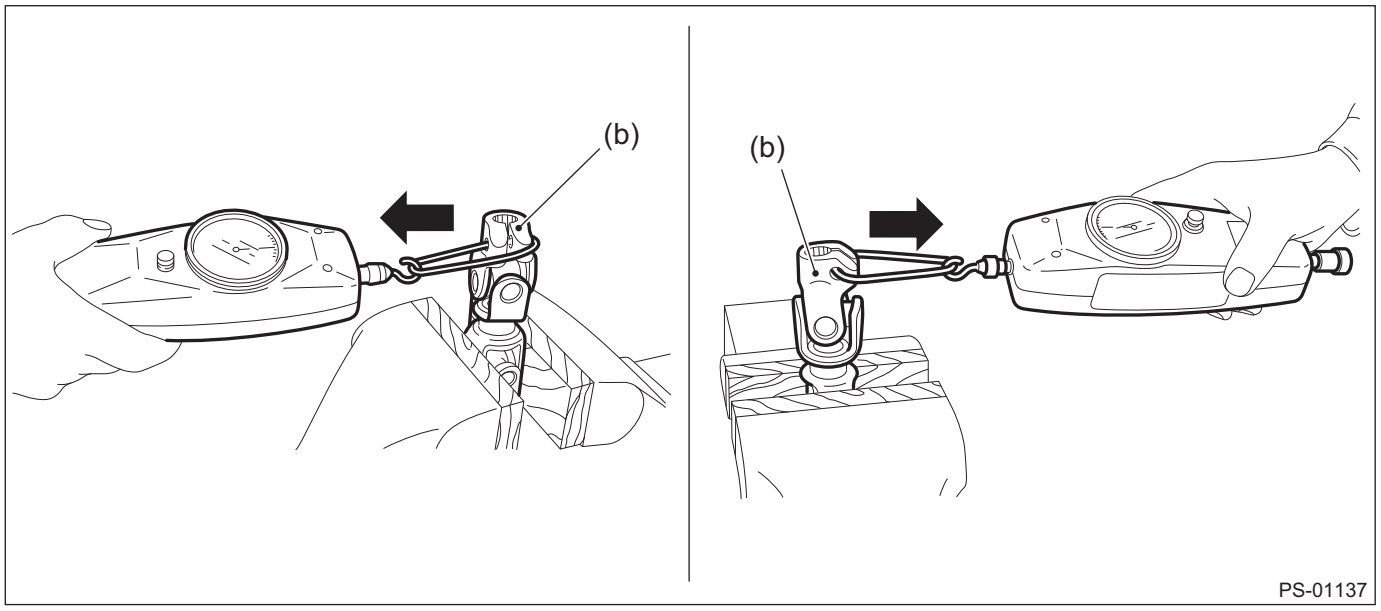
(1) Place the universal joint assembly - steering between wooden blocks and fix it on a vise.
(2) With the yoke (a) of gearbox side facing up, measure the swing torque in two directions.



Service limit:

Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less

(3) With the yoke (b) of the column assembly - steering side facing up, measure the swing torque in two directions.



Service limit:

Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less

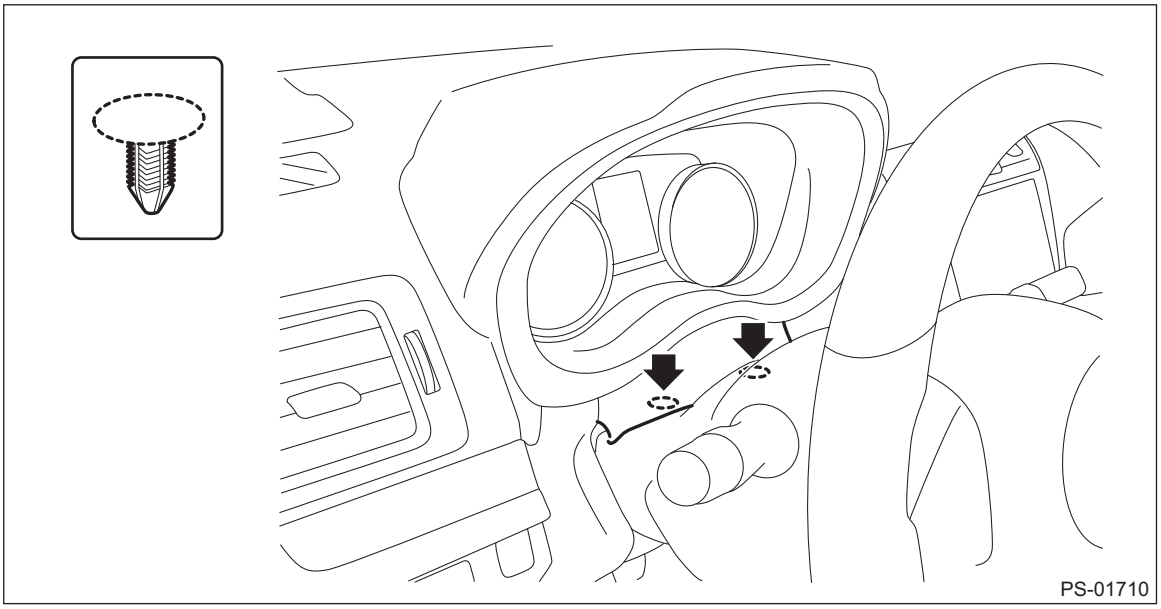
(4) Replace as necessary, if it is found defective.

5. Steering Column

A: REMOVAL

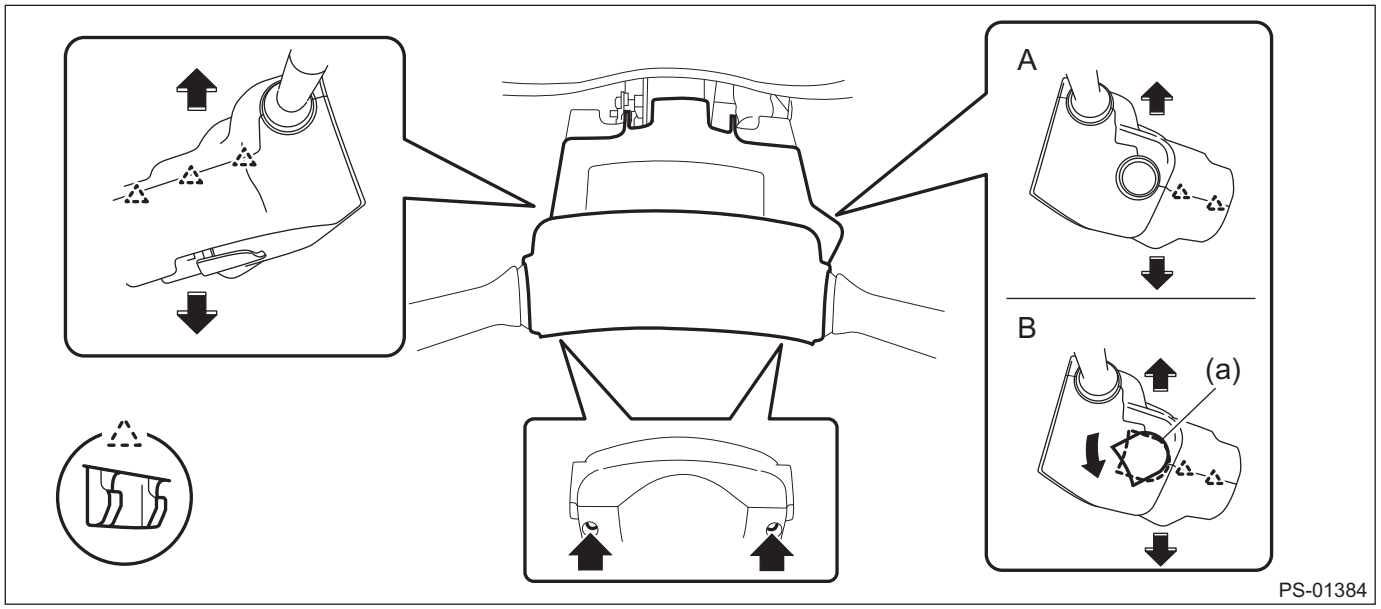
CAUTION:
Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
5) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
6) Remove the cover assembly - column.
(1) Release the clips, and remove the cover assembly - steering UPR.



(2) Remove the screws.
(3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)

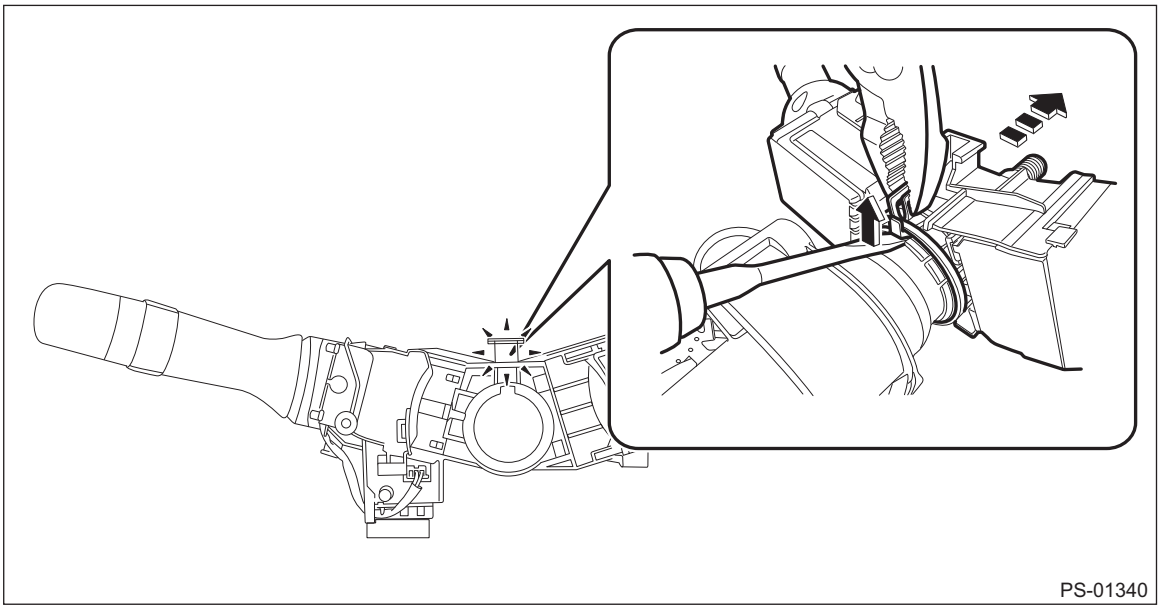
(4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



A Model without keyless access with push button start

B Model with keyless access with push button start

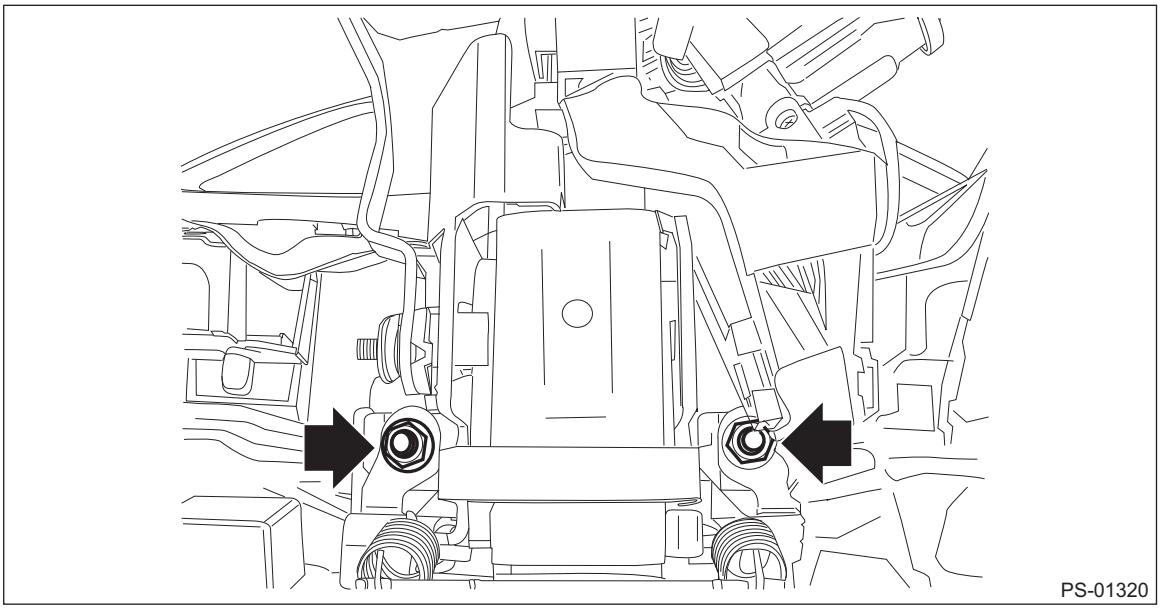
7) Remove the switch assembly - combination.
(1) Disconnect the connector, and loosen the clamp to release the claws.
(2) Pull out the switch assembly - combination from the column assembly - steering.



8) Remove all connectors from the column assembly - steering.
9) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.

10) Remove the nut under the beam COMPL - steering securing the column assembly - steering.



11) Pull out the column assembly - steering from the hole on toe board.

CAUTION:
Do not loosen the tilt lever when the column assembly - steering is not secured to the vehicle.

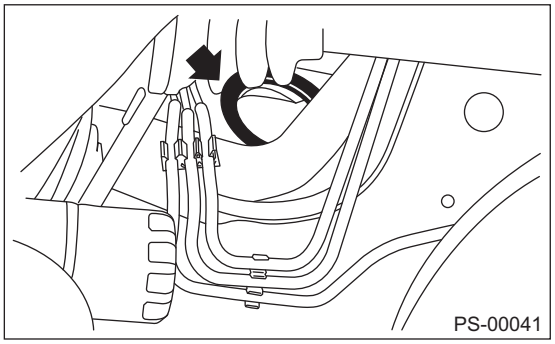
12) Remove the ignition key lock. <Ref. to SL-63, REPLACEMENT, Ignition Key Lock.>

B: INSTALLATION

CAUTION:

- **When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, electronic power steering gearbox, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>**
- **Before handling the airbag system components, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**

1) Install the bushing to the toe board.



2) Insert the end of the column assembly - steering into the toe board bushing.
3) Tighten the column assembly - steering installation nut located under the beam COMPL - steering with the tilt lever fixed.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

4) Install the ignition key lock. <Ref. to SL-63, REPLACEMENT, Ignition Key Lock.>
5) Install the switch assembly - combination.
6) Connect all the connectors under the instrument panel.
7) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy.
8) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
9) Install the cover assembly - instrument panel LWR driver.
10) Install the cover assembly - column.
11) Align the center position of the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
12) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

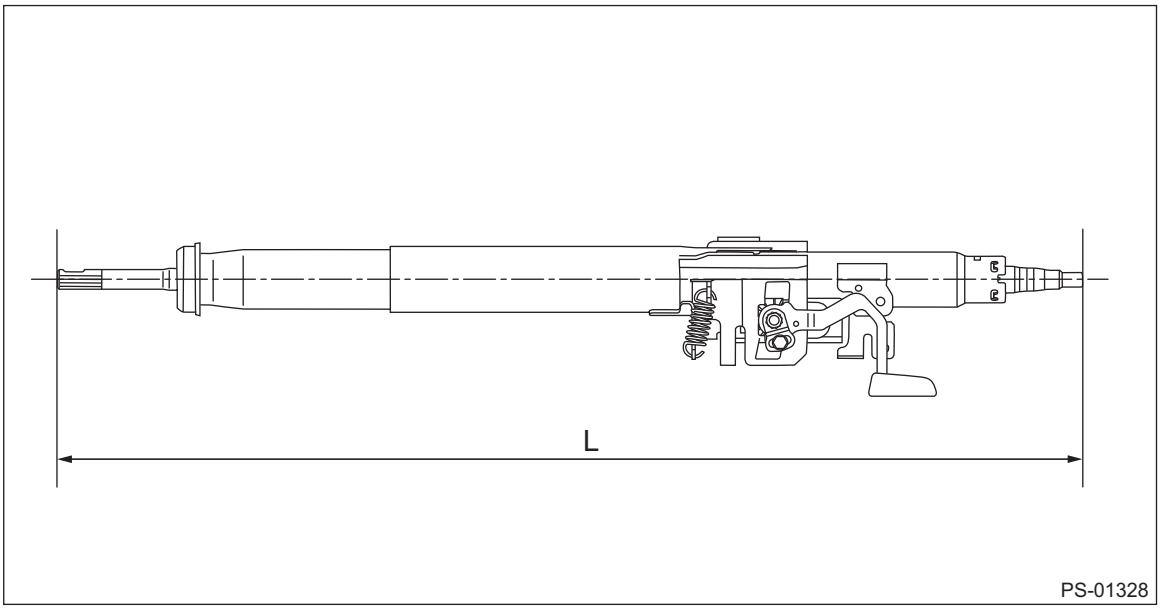
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
13) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. UNIT INSPECTION

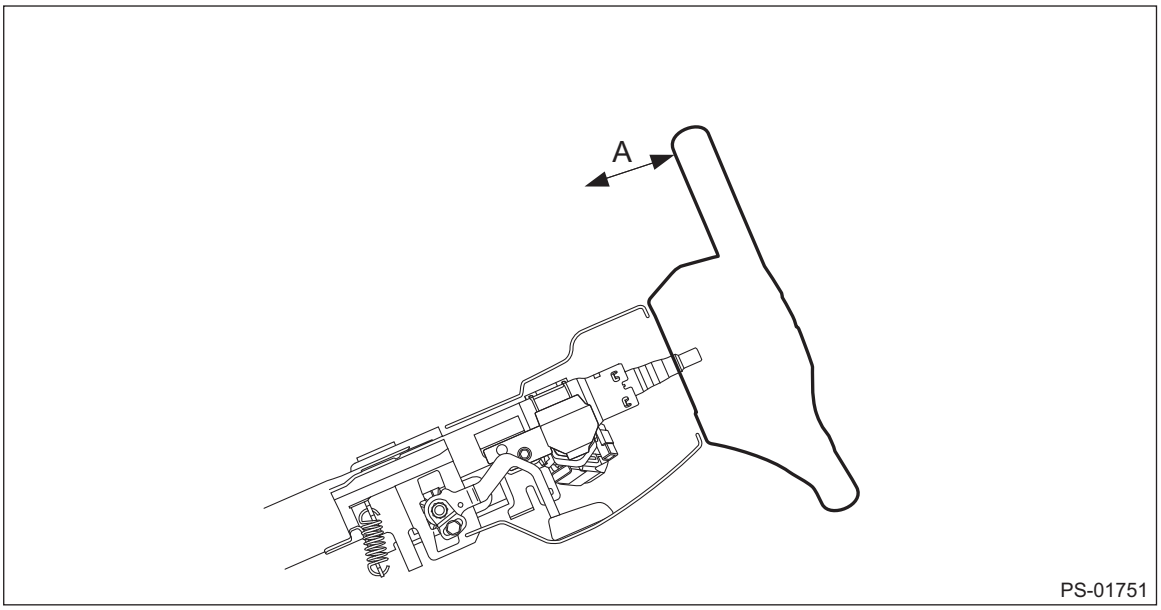
Check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.
• Measure the whole length of the column assembly - steering.

Standard: Overall length L
Tilt and telescopic column (measure while minimized)
$819.7^{+1.5}_{-1.5}$ mm ($32.27^{+0.059}_{-0.059}$ in)



• Check the steering wheel deflection in axial and vertical directions.

Specification:
Axial deflection A (deflection of steering wheel)
Less than 6 mm (0.24 in)



2. INSPECTION OF AIRBAG SYSTEM

Refer to “AIRBAG SYSTEM” section for airbag inspection procedure. <Ref. to AB-35, INSTALLATION, Driver’s Airbag Module.>

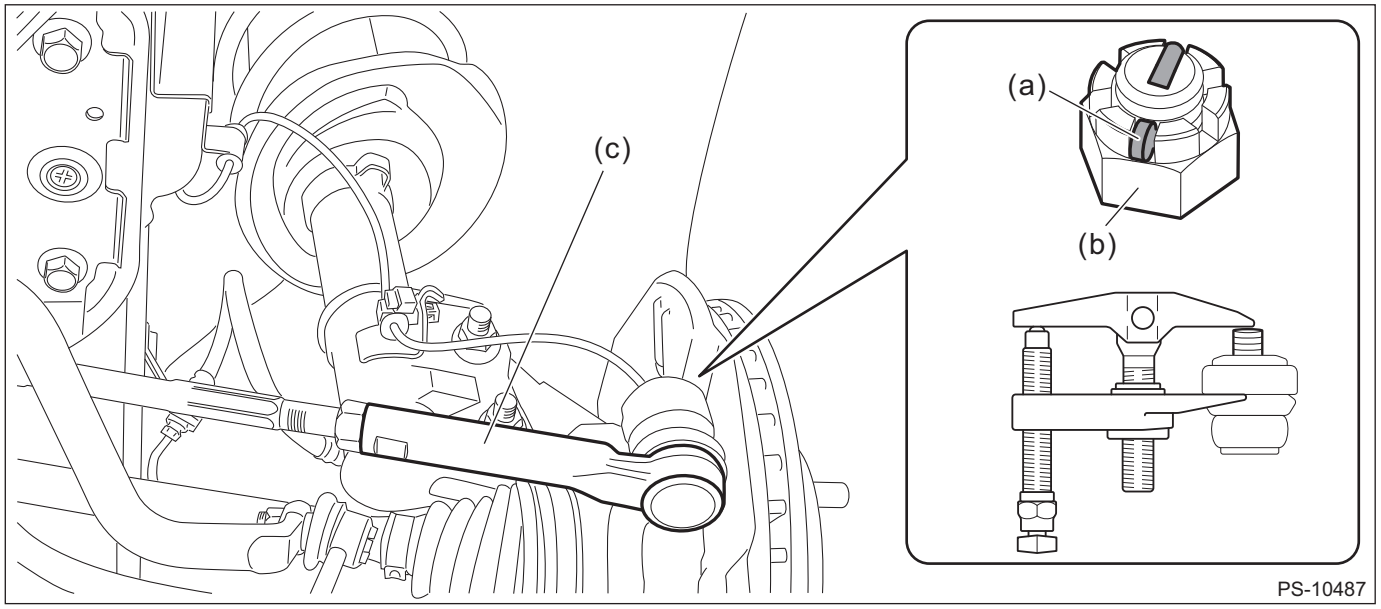
6. Steering Gearbox

A: REMOVAL

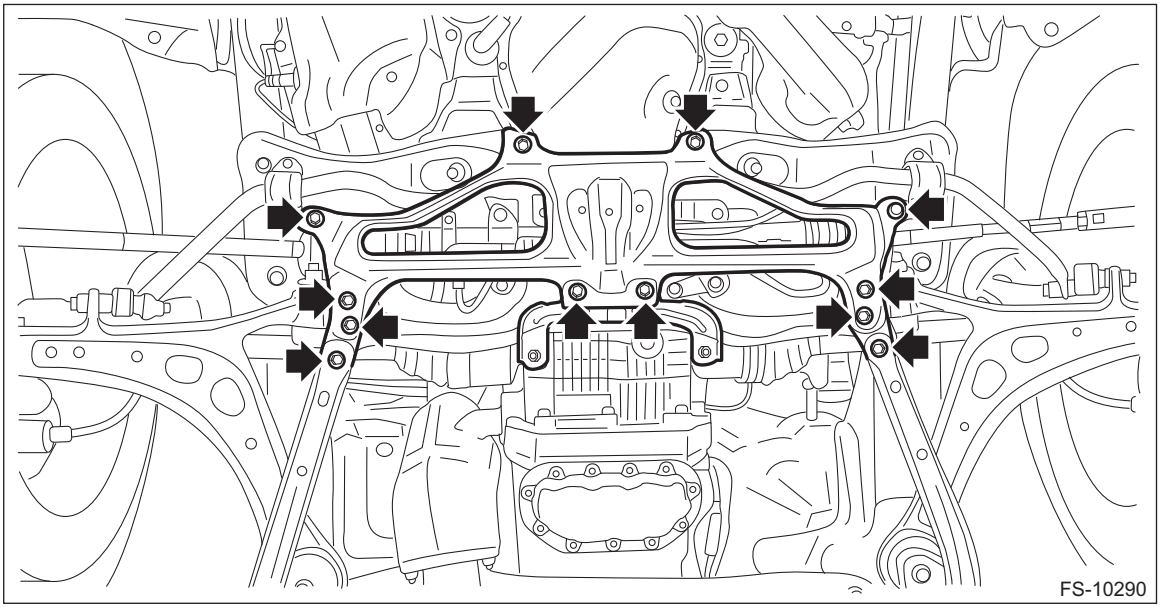
1) Lift up the vehicle, and then remove the front wheels.
2) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod end puller, remove the tie-rod end (c).

CAUTION:
Be careful not to damage the boot of the joint.

Preparation tool:
Tie-rod ball joint puller

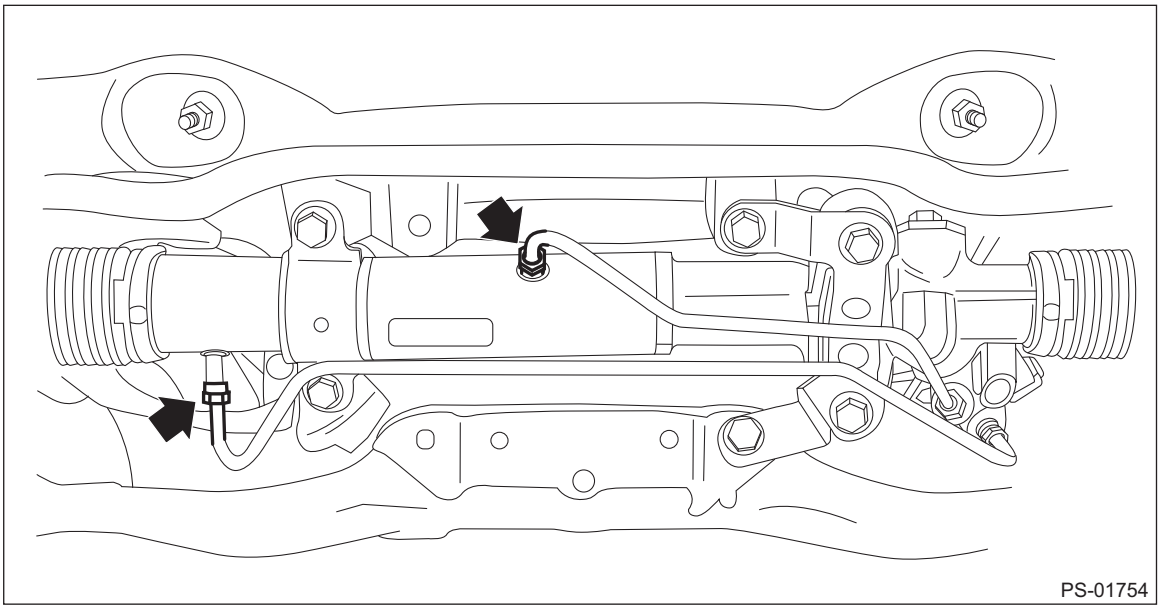


4) Remove the bolt, and remove the front crossmember support.



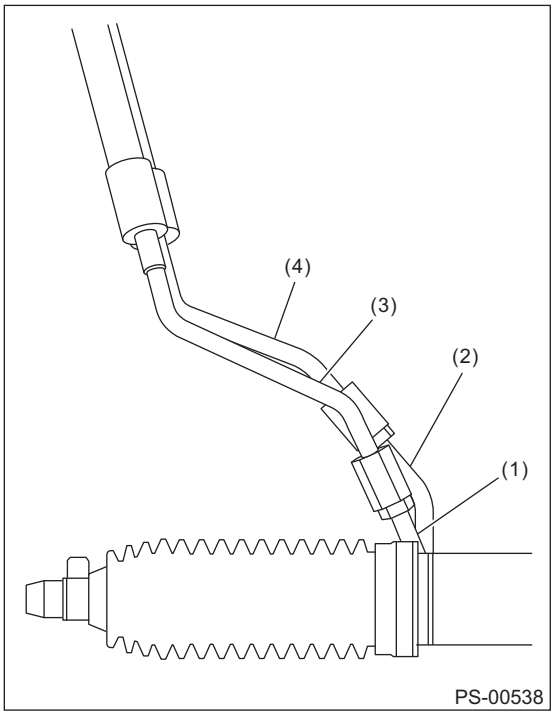
5) Remove the front stabilizer. <Ref. to FS-29, REMOVAL, Front Stabilizer.>
6) Drain the power steering fluid.

(1) Remove the pipe joint of the gearbox, and connect the vinyl hose to the pipe and the joint.



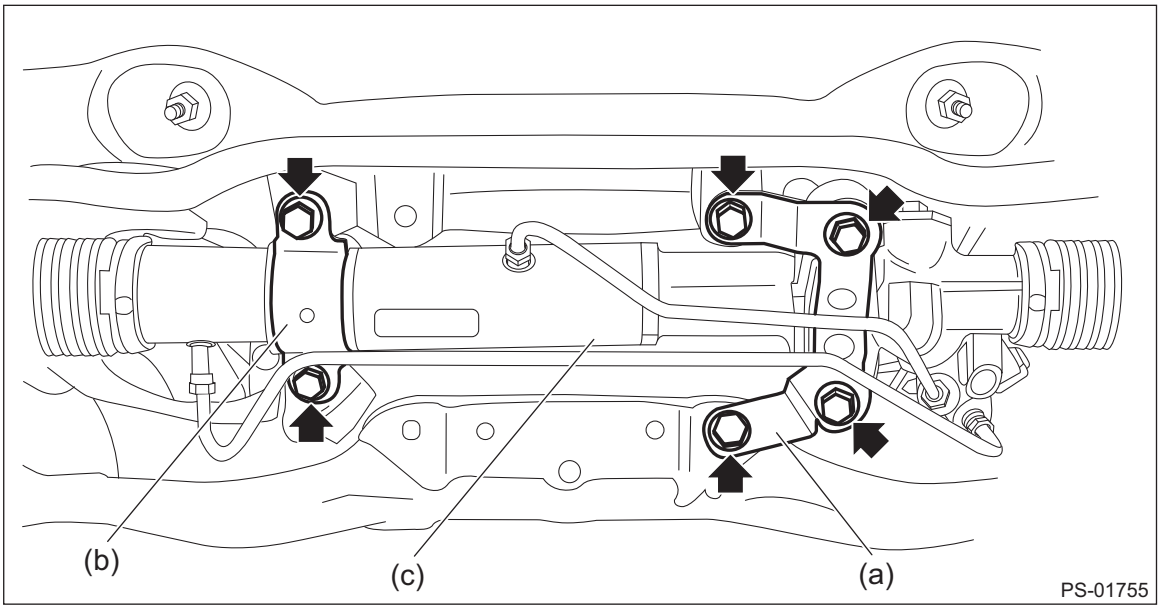
(2) Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise.
(3) Discharge the fluid similarly from other pipes.

7) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>
8) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Disconnect the feed pipe from the pressure hose first, then disconnect the return pipe from the hose - return.



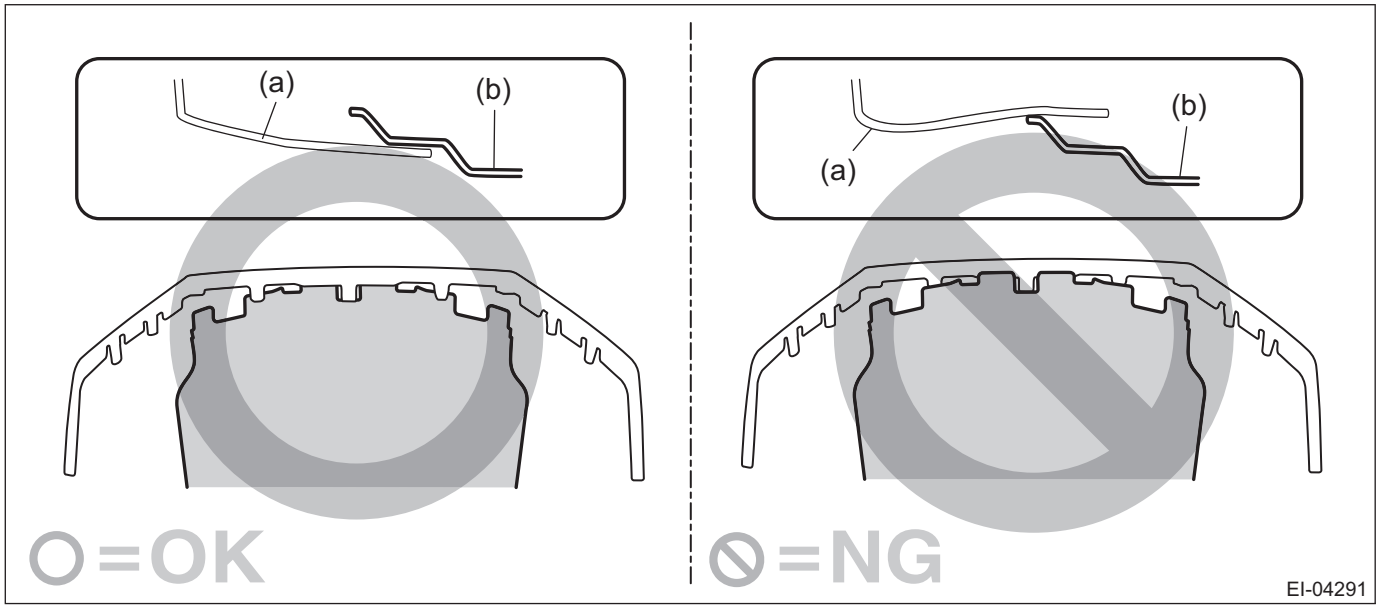
(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Hose - return

10) Remove the bolts securing the gearbox, and remove the stiffener (a), clamp (b) and gearbox (c).



B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).

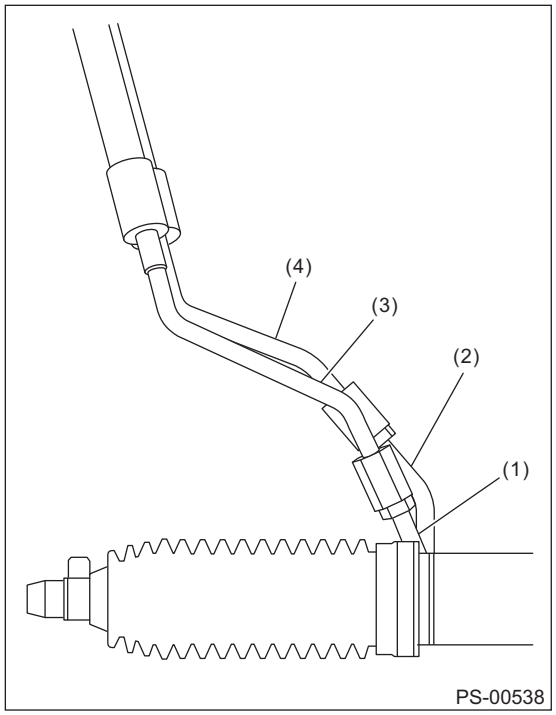


1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.
2) Install the gearbox to the crossmember through the clamp and stiffener.

CAUTION:
Since the bushing mounting bolt is applied with lubricant, always use a new bolt.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

3) Connect the return pipe to the hose - return and then connect the feed pipe to the pressure hose.



(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Hose - return

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)

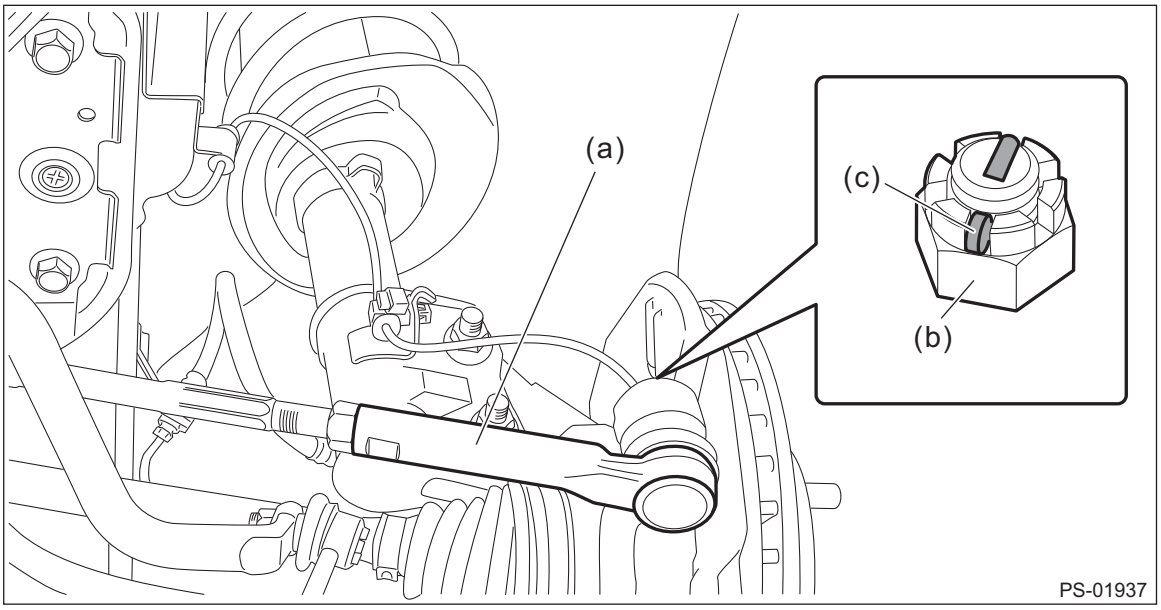
4) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>
5) Connect the tie-rod ends.
(1) Connect the tie-rod end (a) to the housing assembly - front axle.
(2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
When connecting the tie-rod, do not hit the cap at bottom of tie-rod end with a hammer.

Tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

(3) Tighten within the range of 60° so that the cotter pin hole and cutout portion of the castle nut (b) are aligned.

(4) Insert a new cotter pin (c), and bend the tip of the pin to fix it.

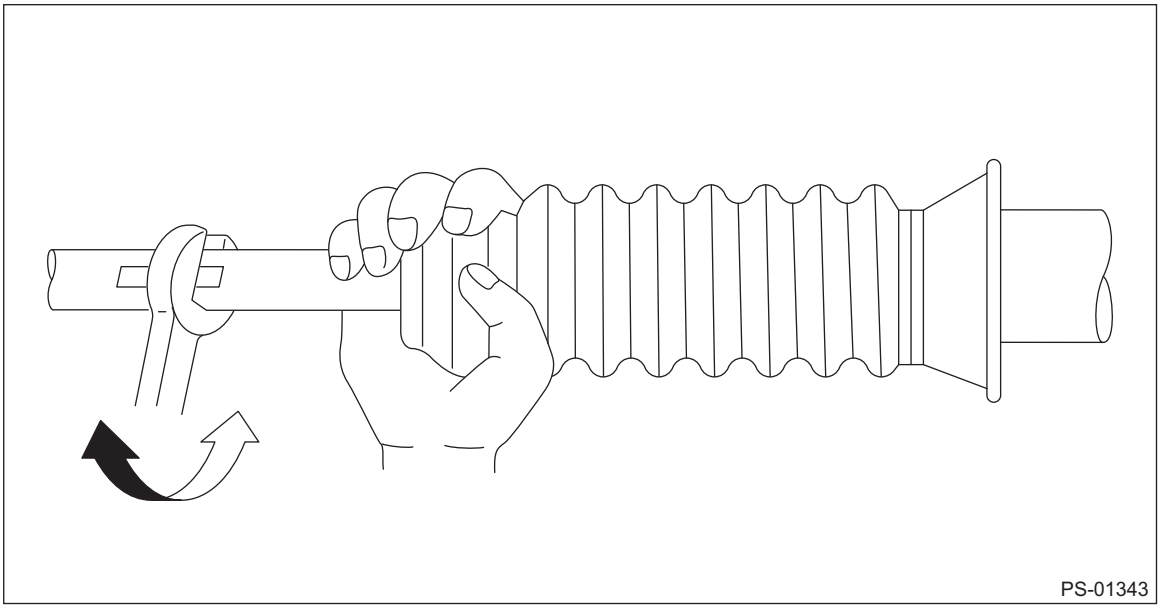


6) Install the front stabilizer. <Ref. to FS-29, INSTALLATION, Front Stabilizer.>
7) Install the front crossmember support.

Tightening torque:
Front suspension parts: <Ref. to FS-4, FRONT SUSPENSION, COMPONENT, General Description.>
8) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
9) Install the front wheels.
10) Lower the vehicle.
11) Tighten the wheel nuts to the specified torque.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
12) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
13) Pour fluid into the oil tank, and bleed air. <Ref. to PS-96, Power Steering Fluid.>
14) Check for fluid leaks.
15) Check the fluid level in oil tank.
16) Adjust the toe-in and steering angle. <Ref. to FS-16, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>

NOTE:
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.



17) Tighten the tie-rod end lock nut.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

C: DISASSEMBLY

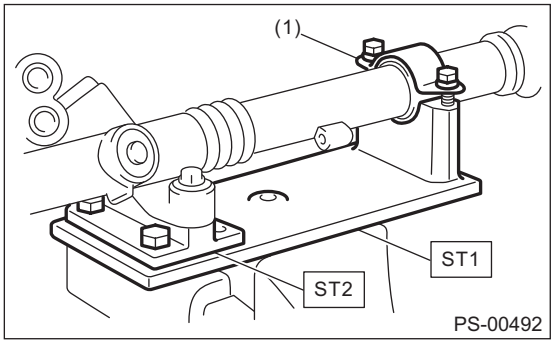
1. RACK HOUSING ASSEMBLY

1) Disconnect the four pipes from gearbox.

NOTE:
Remove the pipes C and D, which are fixed to clamp plate, as a unit.
2) Secure the gearbox removed from vehicle in a vise using ST.

CAUTION:
Using the ST, secure the gearbox assembly in a vise as shown in the figure. Do not secure the gearbox without this ST.

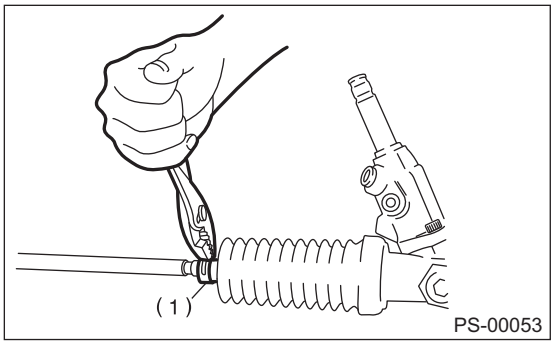
Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



(1) Clamp

3) Remove the tie-rod end and lock nut from gearbox.

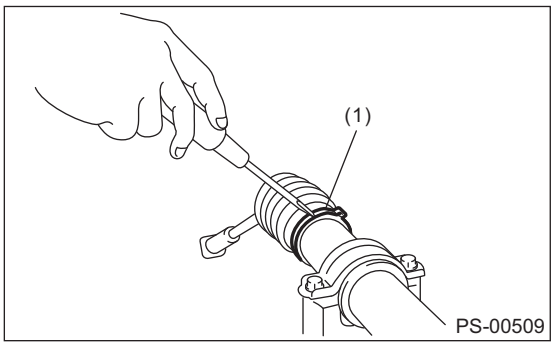
4) Remove the small clip from the boot using pliers, and then move the boot to tie-rod end side.



(1) Clip

5) Using a flat tip screwdriver, remove the band from boot.

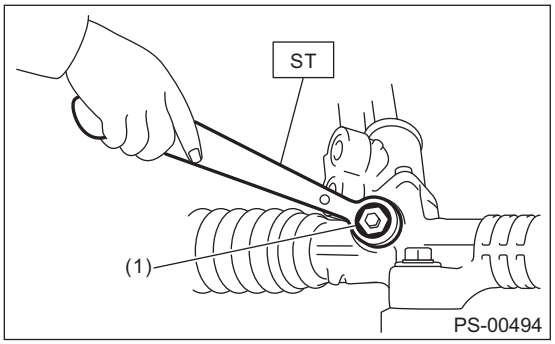
NOTE:
Replace the boot if there is damage, cracks or deterioration.



(1) Band

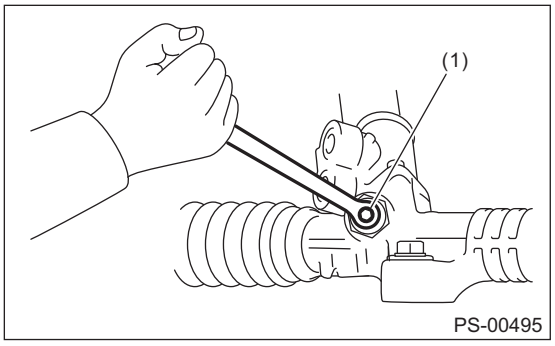
6) Using the ST, loosen the lock nut.

Preparation tool:
ST: SPANNER (926230000)



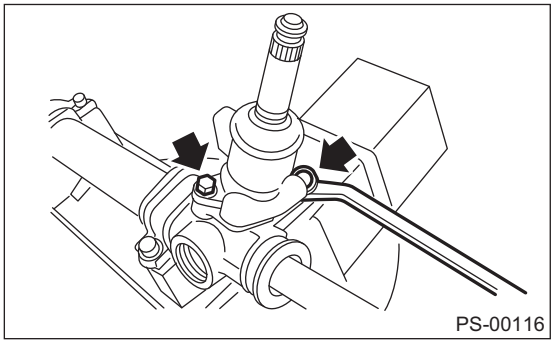
(1) Lock nut

7) Tighten the adjusting screw until it can no longer be tightened.

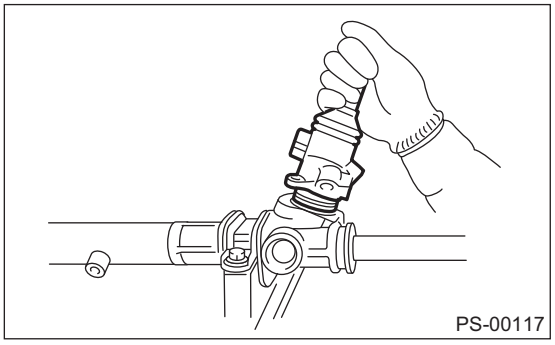


(1) Adjusting screw

8) Remove the tie-rod.
9) Loosen the adjusting screw, and remove the spring and sleeve.
10) Remove the two bolts securing valve assembly.

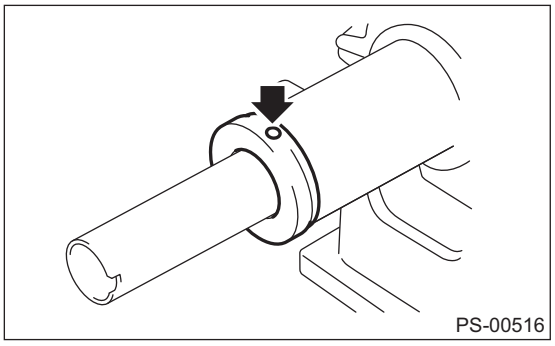


11) Carefully draw out the input shaft and remove the valve assembly.



12) Using a drill, release the crimping of holder.

CAUTION:
Make a hole of 2 mm (0.08 in) depth using a drill with 3 mm (0.12 in) diameter.

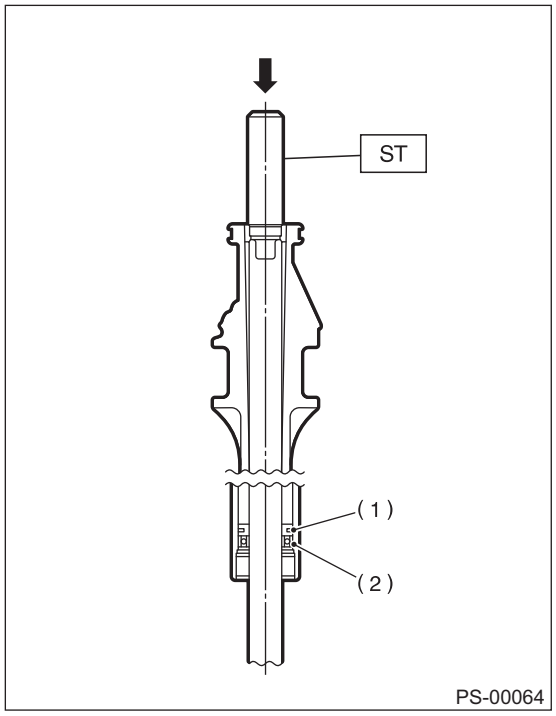


13) Remove the holder.

14) Attach the ST on the valve side of rack, and press out the rack together with the outer side oil seal while taking care that the rack and the steering body inner surface do not come into contact with each other.

Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)

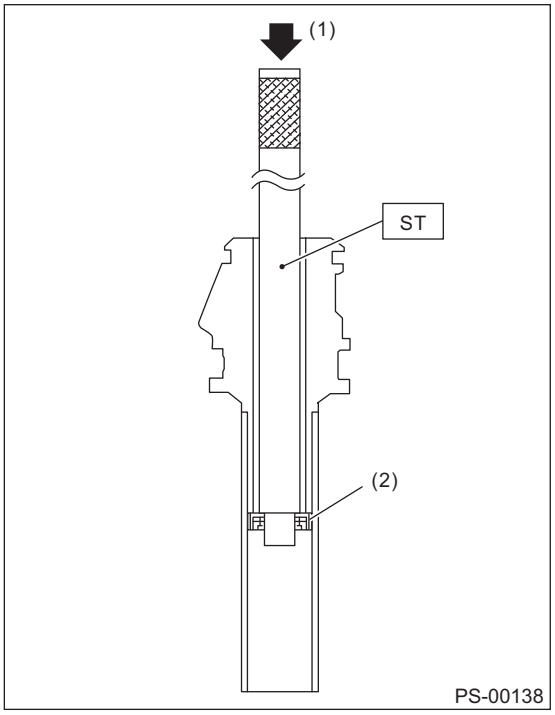
NOTE:
Block the pipe connection of steering body to prevent fluid from flowing out.



(1) Rack piston
(2) Outer side oil seal

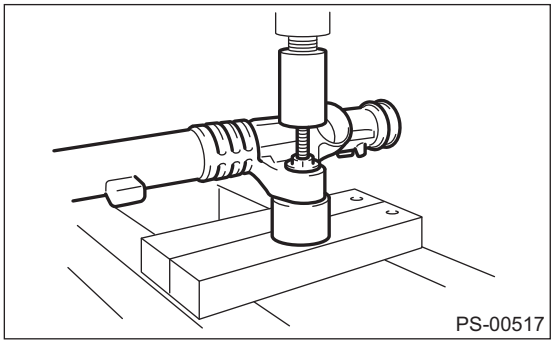
15) Insert the ST from pinion housing side and remove the oil seal and back-up ring using a press.

Preparation tool:
ST: OIL SEAL REMOVER (34099PA010)



(1) Press
(2) Oil seal

16) Using a press, remove the bushing of gearbox installation portion.

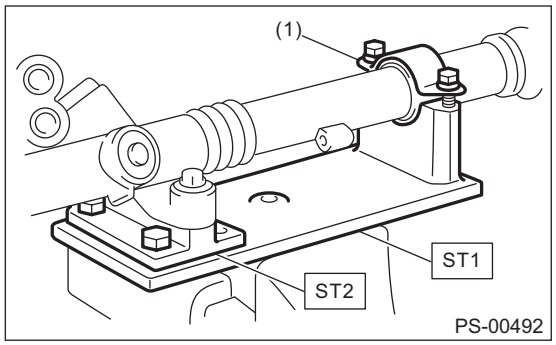


2. CONTROL VALVE

1) Disconnect the four pipes from gearbox.
2) Secure the gearbox removed from vehicle in a vise using ST.

CAUTION:
Using the ST, secure the gearbox assembly in a vise as shown in the figure. Do not secure the gearbox without this ST.

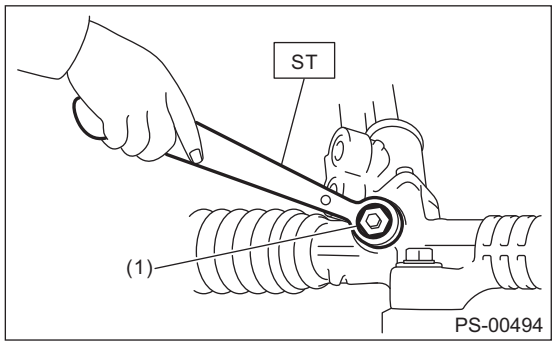
Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



(1) Clamp

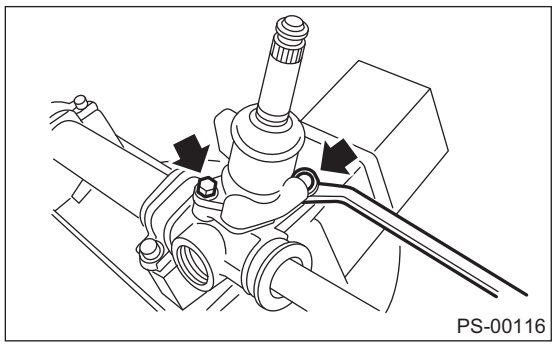
3) Using the ST, loosen the lock nut.

Preparation tool:
ST: SPANNER (926230000)

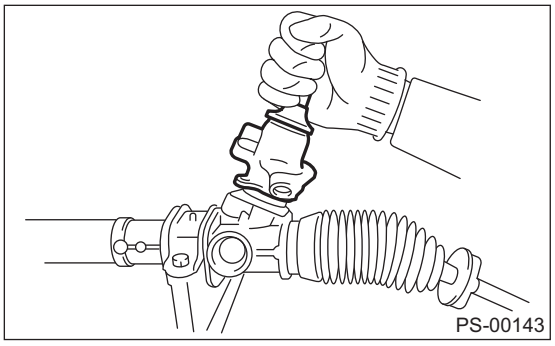


(1) Lock nut

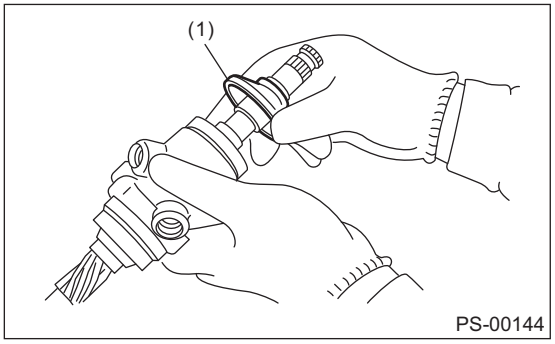
4) Loosen the adjusting screw, and remove the spring and sleeve.
5) Remove the two bolts securing valve assembly.



6) Carefully draw out the input shaft and remove the valve assembly.

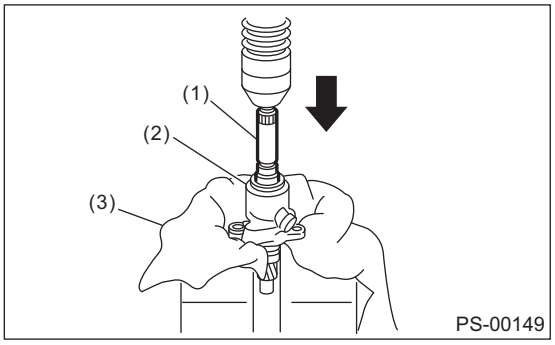


7) Put a vinyl tape around the spline portion, and slide the dust cover to remove.



(1) Dust cover

8) Using a press, remove the pinion & valve assembly from valve housing.

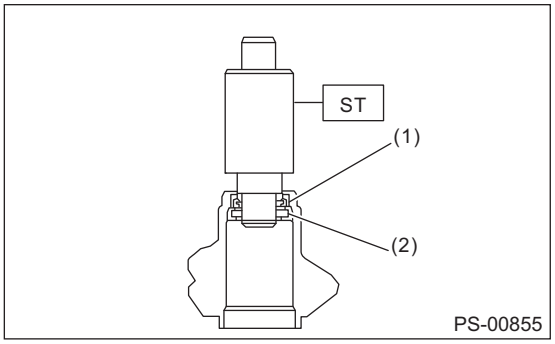


(1) Pinion & valve ASSY
(2) Valve housing
(3) Cloth

9) Using the ST and a press, remove the bushing and oil seal from the valve housing.

CAUTION:
- **Do not apply a force to the end surface of valve housing.**
- **Do not reuse the oil seal after removal.**

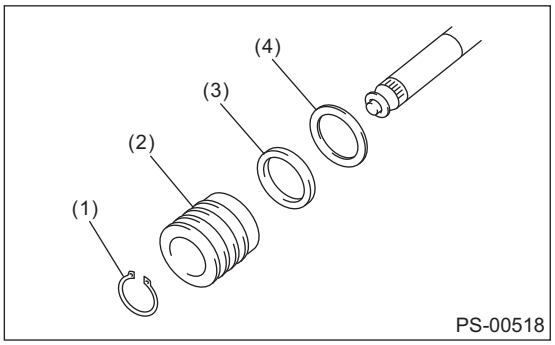
Preparation tool:
ST: INSTALLER & REMOVER (34199AG090)



(1) Oil seal
(2) Bushing

10) Using a snap ring pliers, remove the snap ring, valve, oil seal and back-up washer.

CAUTION:
Be careful not to scratch the pinion and valve assembly.

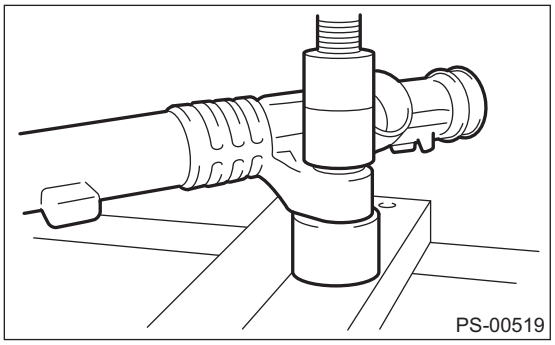


(1) Snap ring
(2) Valve
(3) Oil seal
(4) Back-up ring

D: ASSEMBLY

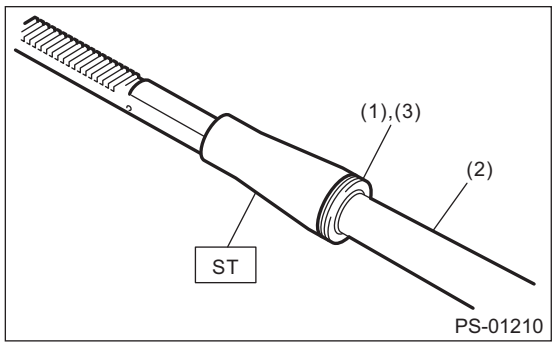
1. RACK HOUSING ASSEMBLY

1) Using a press, install the bushing to gearbox installation portion.



2) Insert the ST to rack.

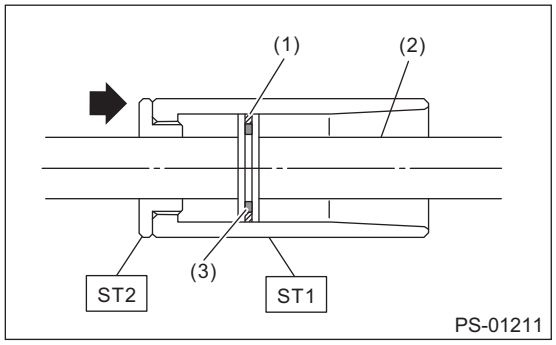
Preparation tool:
ST: GUIDE (34199AG040)



(1) Seal ring
(2) Rack
(3) O-ring

3) Install the seal ring and O-ring to piston portion of rack.
4) Using the ST, form the seal ring properly.

Preparation tool:
ST1: FORMER PISTON (34199AG080)
ST2: GUIDE G (26) (34199AG060)

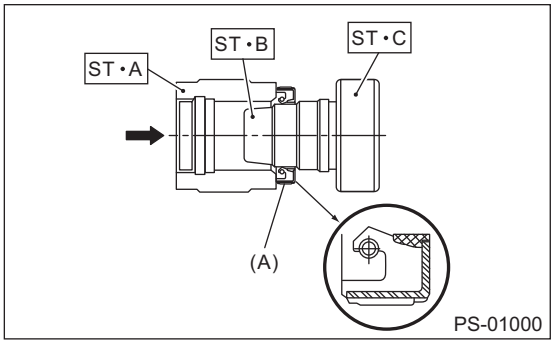


(1) Seal ring
(2) Rack
(3) O-ring

5) Using the ST-A and ST-B, attach the oil seal to ST-C.

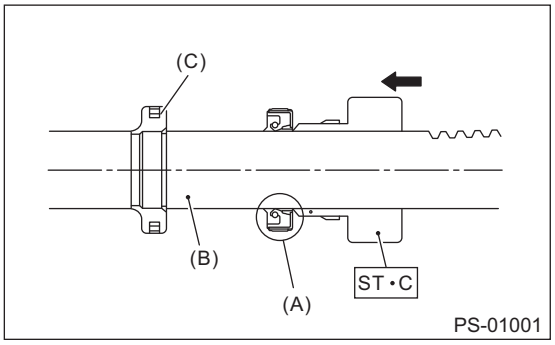
Preparation tool:
ST-A: INSTALLER A (34199FE070)
ST-B: INSTALLER B (34199FE080)
ST-C: INSTALLER C (34199FE090)

NOTE:
Face the oil seal in the direction as shown in the figure.



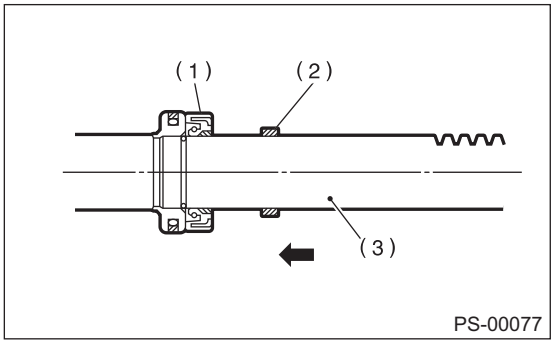
(A) Oil seal

6) Insert the ST-C with oil seal assembled from the gear side of rack. Remove the oil seal from ST-C near piston, and then remove the ST-C from rack.



(A) Oil seal
(B) Rack
(C) Piston

7) Install the back-up ring from the gear side of rack.

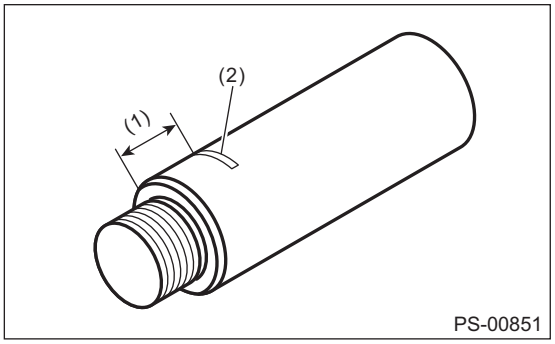


(1) Oil seal
(2) Back-up ring
(3) Rack

8) Check the threaded end of holder and gearbox cylinder end for burrs, damage, etc. Correct if faulty.
9) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Then insert the rack into steering body from cylinder side.
10) Temporarily tighten a new holder to the gearbox cylinder.
11) Put a mark at the specified position measured from the end surface of ST as shown in the figure.

Specified position:
15 mm (0.59 in)

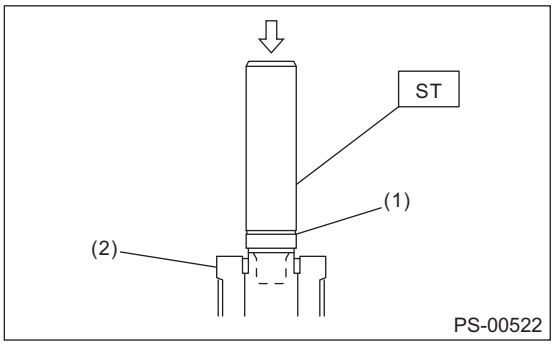
Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)



(1) 15 mm (0.59 in)
(2) Place a mark

12) Set the ST to the end of rack.

Preparation tool:
ST: INSTALLER & REMOVER (34199XA030)
13) Using a press, press-fit until the mark on the ST is aligned with the end surface of the holder.

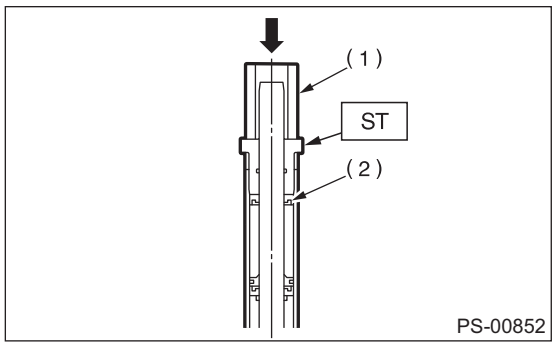


(1) Mark
(2) Holder

14) Remove the ST and holder.
15) Insert the outer side oil seal into the rack using the same procedure as steps 5) and 6).

Preparation tool:
ST-A: INSTALLER A (34199FE070)
ST-B: INSTALLER B (34199FE080)
ST-C: INSTALLER C (34199FE090)
16) Put the ST and pipe through the rack, and press-fit the outer side oil seal using a press.

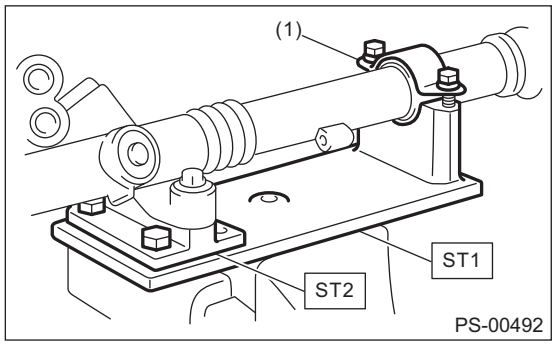
Preparation tool:
ST: INSTALLER (34199AG010)



(1) Pipe
(2) Outer side oil seal

17) Secure the gearbox in a vise using ST.

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)



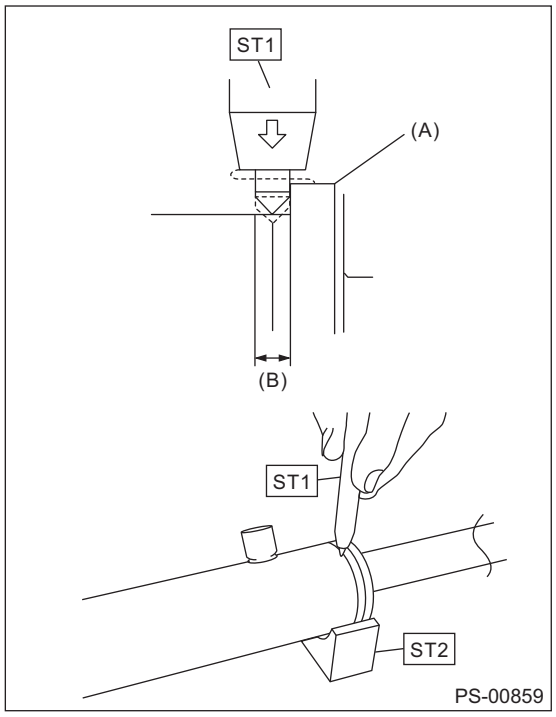
(1) Clamp

18) Tighten the holder.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

19) Using the ST, crimp so that the diameter of punch hole is 2 — 2.5 mm (0.08 — 0.10 in) and is aligned to the position of 2 mm (0.08 in) from gearbox cylinder end surface.

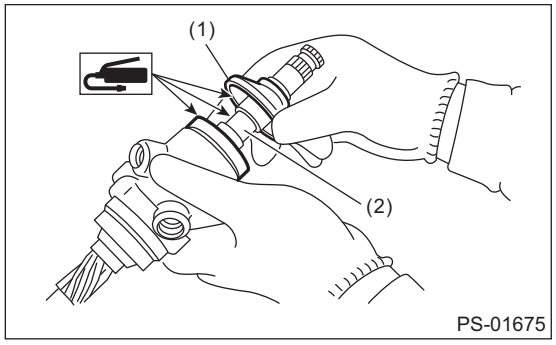
Preparation tool:
ST1: PUNCH HOLDER (34099FA060)
ST2: BASE (34199FE020)



(A) Holder
(B) 2 mm (0.08 in)

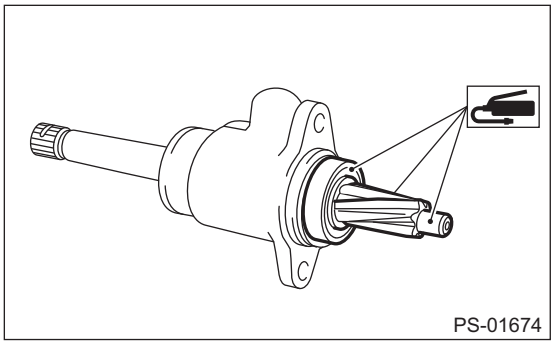
20) Put a vinyl tape around the spline portion and apply genuine grease to the dust cover and fill it to the clearance between pinion shaft and housing, then install the valve assembly.

CAUTION:
Be sure to install the dust cover to groove of shaft.



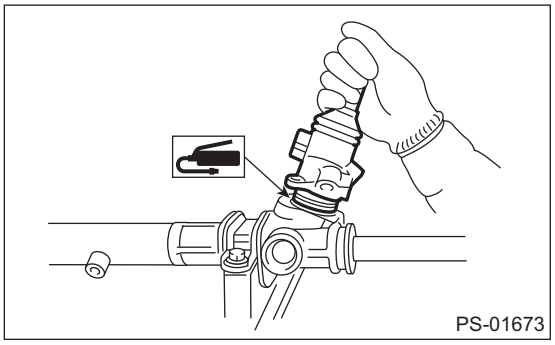
(1) Dust cover
(2) Groove

21) Apply the genuine grease to the edge and body of pinion gear and bearing of valve assembly.



22) Apply grease to a new O-ring and attach it to the valve assembly. Insert the valve assembly into the given place while facing the rack teeth toward pinion.

CAUTION:
Check that the needle bearing is not damaged. Replace with a new steering gearbox if damage is found.



23) Tighten the bolts alternately to secure the valve assembly.

CAUTION:
Be sure to alternately tighten the bolts.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

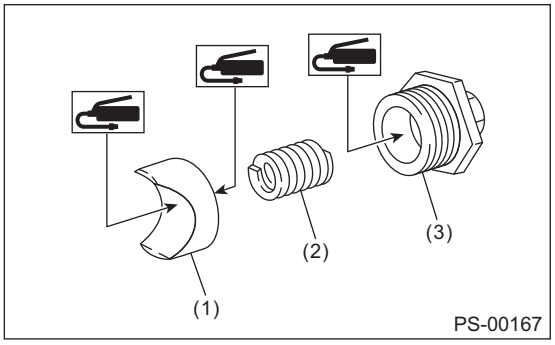
24) Temporarily tighten the tie-rod to the rack end, and then operate the rack from lock to lock for two or three times to make it fit in.

CAUTION:
Operating the rack from lock to lock without installing tie-rods may damage the oil seal. Always install the left and right tie-rods.

25) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1102

26) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

27) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
28) Tighten the adjusting screw to the specified torque, then loosen it 5°.

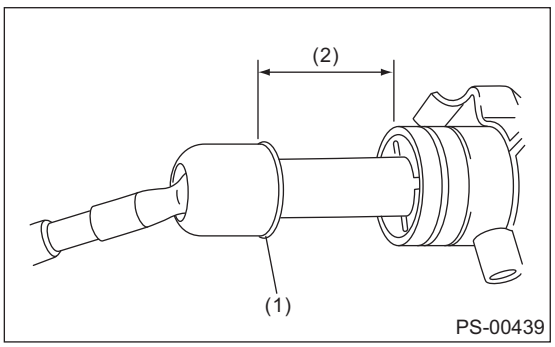
Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)
29) Remove the tie-rod.
30) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-58, LIMIT, INSPECTION, Steering Gearbox.>
31) Attach the lock nut into adjusting screw, and while holding the adjusting screw with wrench, tighten the lock nut.

Preparation tool:
Monkey type torque wrench available for width across flat 35 mm (1.4 in) operation.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.
32) Extend the rack approx. 40 mm (1.57 in) from steering body.
33) Install the tie-rod and new lock washer into rack.

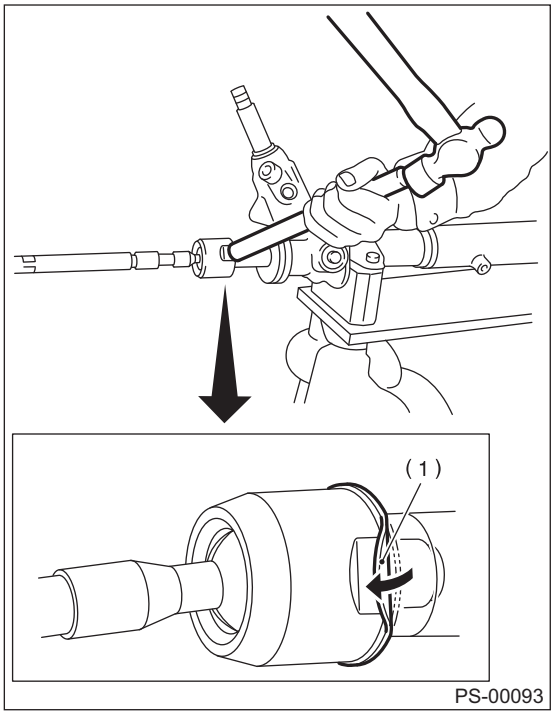
Tightening torque:
93 N·m (9.5 kgf-m, 68.6 ft-lb)



(1) Lock washer
(2) Approx. 40 mm (1.57 in)

34) Bend the lock washer and crimp it.

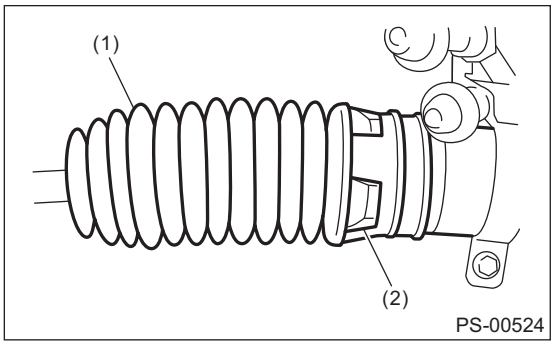
CAUTION:
Be careful not to scratch the rack when crimping lock washer.



(1) Lock washer

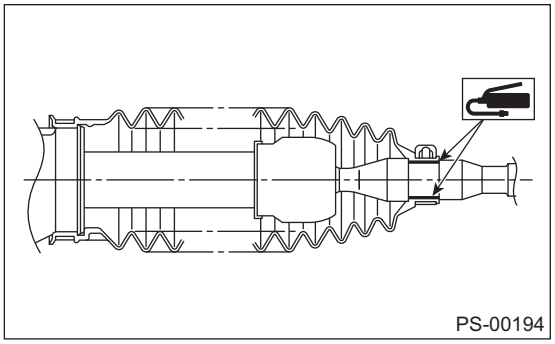
35) Apply a coat of grease to the tie-rod groove, and then install the boot to the housing.

CAUTION:
Right side boot has groove for identification, be sure to install the right and left of boot.

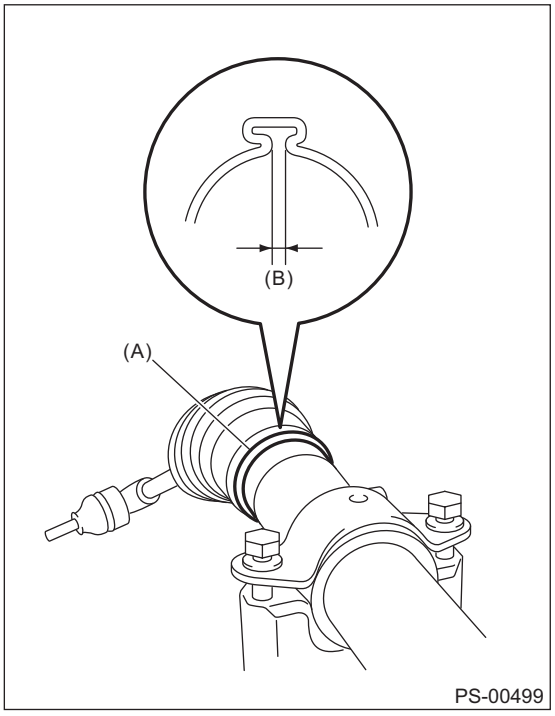


(1) Right side boot
(2) Groove for identification

NOTE:
Make sure that the boot is installed without unusual inflation or deflation.

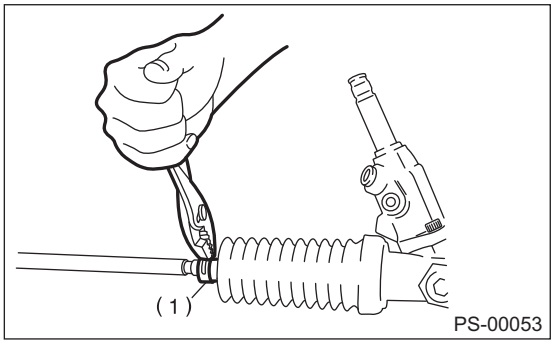


36) Install a new boot band. Using band clamp pliers, crimp it so that the clearance of crimping portion becomes 2 mm (0.079 in) or less.



(A) Boot band
(B) 2 mm (0.079 in) or less

37) Fix the boot end with small clip.



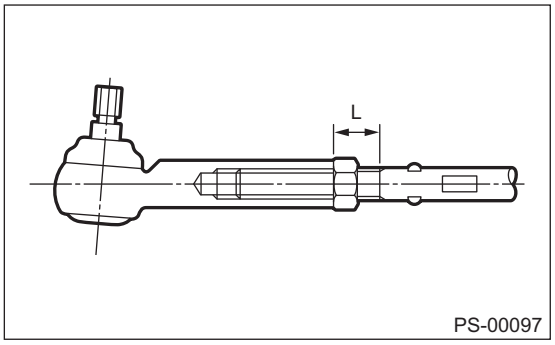
(1) Clip

38) After installing, check that the boot end is installed to the groove of the tie-rod.

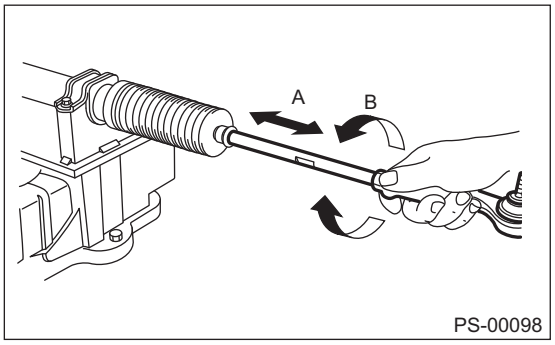
39) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut at a position as shown in the figure.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

Installed tie-rod length L:
28 mm (1.1 in)



40) Inspect the gearbox as follows:
"A" Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
"B" Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
Finally, make sure that the boot is installed in the specified position without inflating.



41) Remove the gearbox from ST.

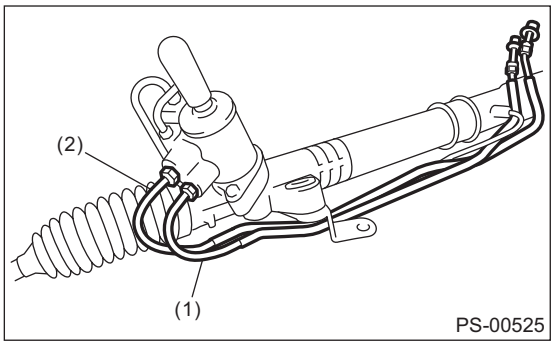
Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)

42) Install the four pipes on gearbox.
(1) Connect the pipes A and B to the four pipe joints of gearbox.

Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)

(2) Connect the feed pipe and return pipe to the gearbox.

Tightening torque:
Feed pipe: 37 N·m (3.8 kgf-m, 27.3 ft-lb)
Return pipe: 29 N·m (3 kgf-m, 21.4 ft-lb)

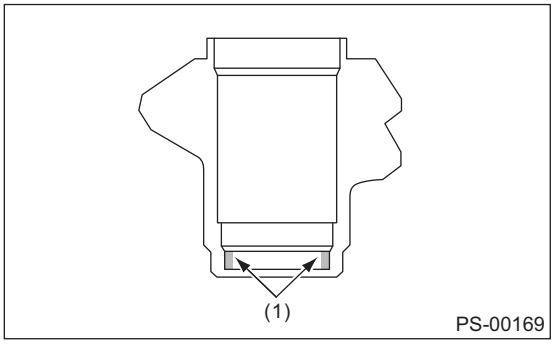


(1) Feed pipe
(2) Return pipe

2. CONTROL VALVE ASSEMBLY

Specified steering grease:
VALIANT GREASE M2

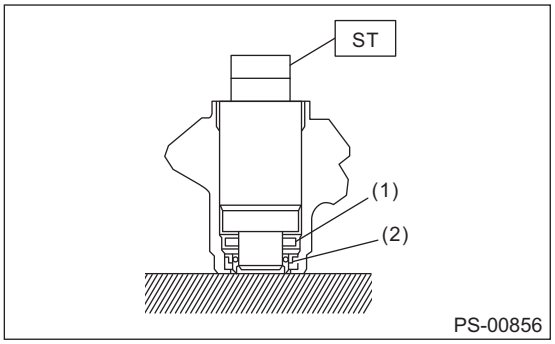
1) Clean all parts and tools before reassembling.
2) Apply a coat of specified power steering fluid to the inner wall of valve housing.



(1) Apply fluid.

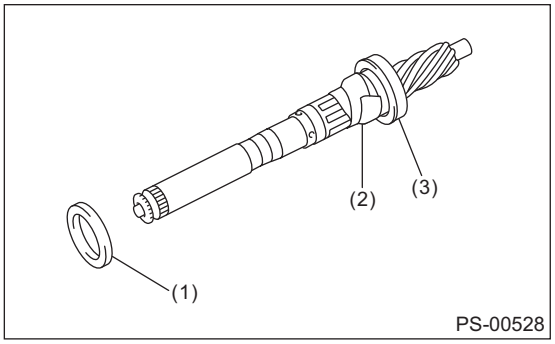
3) Apply grease to the oil seal.
4) Verify the direction of oil seal.
5) Using the ST and a press, install the oil seal and the bushing in valve housing.

Preparation tool:
ST: INSTALLER & REMOVER (34199AG090)



(1) Bushing
(2) Oil seal

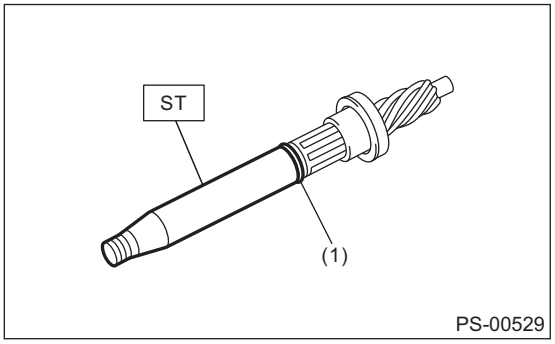
6) Apply vinyl tape to the groove of pinion.
7) Install the wave washer and oil seal to pinion, and then remove the vinyl tape.



(1) Oil seal
(2) Vinyl tape
(3) Wave washer

8) Attach the ST to pinion, and install the seal ring and O-ring.

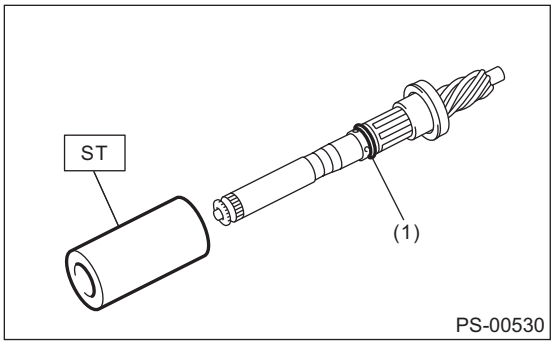
Preparation tool:
ST: GUIDE (34199AG020)



(1) Seal ring and O-ring

9) Remove the ST GUIDE, and form the seal ring properly using ST FORMER.

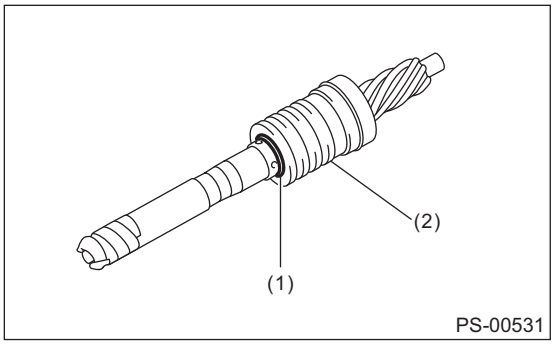
Preparation tool:
ST: FORMER (34199AG070)



(1) Seal ring

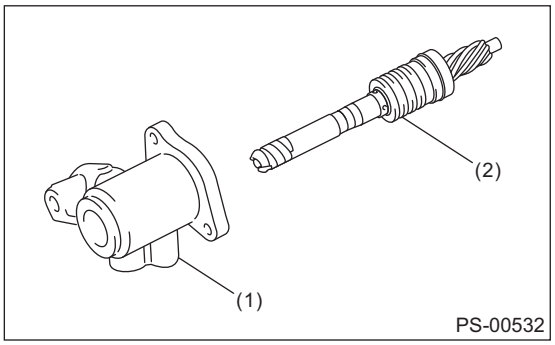
10) Put vinyl tape around pinion shaft spline to protect oil seal from damage.

11) Install the valve to pinion, and install the snap ring.



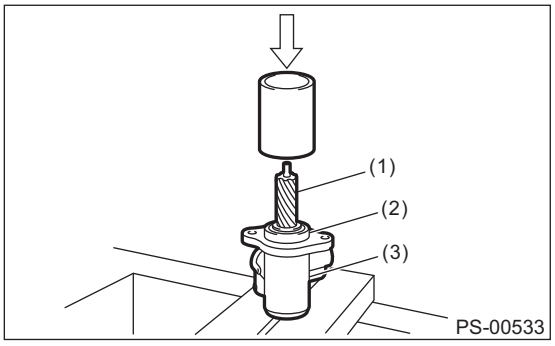
(1) Snap ring
(2) Valve

12) Attach the pinion & valve assembly into the valve housing.



(1) Valve housing
(2) Pinion & valve ASSY

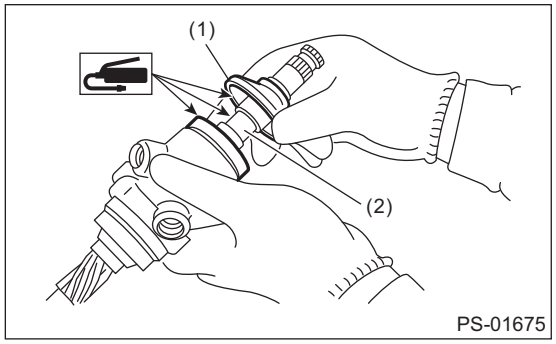
13) Using a press, push the outer race of bearing and press-fit the pinion & valve assembly into housing.



(1) Pinion & valve ASSY
(2) Bearing
(3) Housing

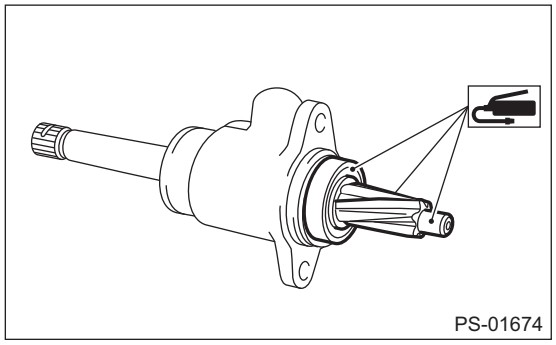
14) Apply the specified grease to the dust cover and fill it to the clearance between pinion shaft and housing.
15) Install the dust cover on valve assembly.

CAUTION:
Be sure to install the dust cover to groove of shaft.

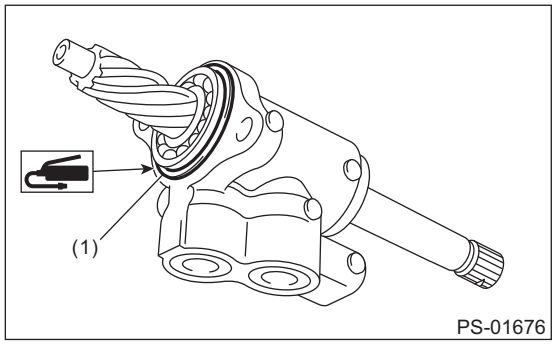


(1) Dust cover
(2) Groove

16) Apply the genuine grease to the edge and body of pinion gear and bearing of valve assembly.



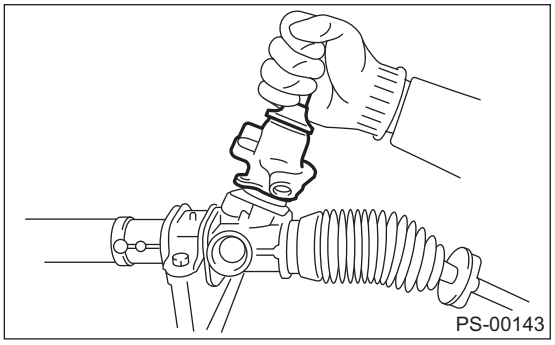
17) Apply grease to a new O-ring and attach it to the valve assembly.



(1) O-ring

18) Insert the valve assembly into the given place while facing the rack teeth toward pinion.

CAUTION:
Check that the needle bearing is not damaged. Replace with a new steering gearbox if damage is found.



19) Tighten the bolts alternately to secure the valve assembly.

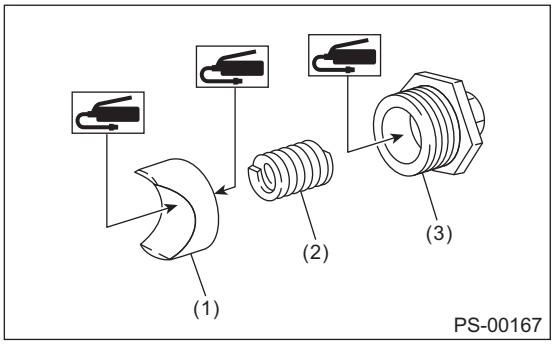
CAUTION:
Be sure to alternately tighten the bolts.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)

20) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1102

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.
Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.



(1) Sleeve
(2) Spring
(3) Adjusting screw

22) Tighten the adjusting screw to the specified torque, then loosen it.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

23) Tighten the adjusting screw to the specified torque, then loosen it 5°.

Tightening torque:
5.9 N·m (0.6 kgf-m, 4.4 ft-lb)

24) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-58, LIMIT, INSPECTION, Steering Gearbox.>

25) Attach the lock nut into adjusting screw, and while holding the adjusting screw with wrench, tighten the lock nut.

Preparation tool:
Monkey type torque wrench available for width across flat 35 mm (1.4 in) operation.

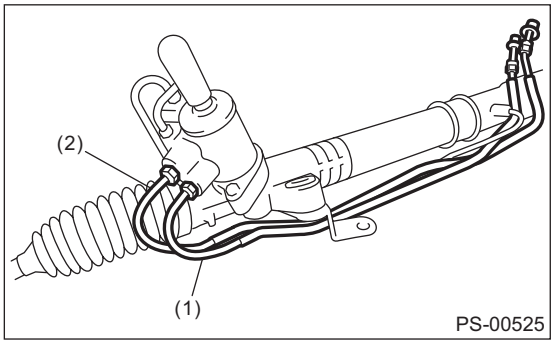
Tightening torque (lock nut):
25 N·m (2.5 kgf-m, 18.4 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.
26) Remove the gearbox from ST.

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)
27) Install the four pipes on gearbox.
(1) Connect the pipes A and B to gearbox.

Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)
(2) Connect the feed pipe and return pipe to the gearbox.

Tightening torque:
Feed pipe: 37 N·m (3.8 kgf-m, 27.3 ft-lb)
Return pipe: 29 N·m (3 kgf-m, 21.4 ft-lb)



(1) Feed pipe
(2) Return pipe

E: INSPECTION

1. BASIC INSPECTION

1) Clean all the disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.
2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bent input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new part.
3	Rack and pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of the gearbox and sliding resistance of rack, check if the rack & pinion engage uniformly and smoothly with each other. (Refer to “Service limit”.) (2) Pull out the entire rack to allow viewing of the teeth, and check for damage. When abnormality is found in either (1) or (2), replace the entire gearbox.

No.	Parts	Inspection	Corrective action
4	Gearbox unit	(1) Bending of the rack shaft (2) Bending of the cylinder portion (3) Crack or damage on the aluminum portion	Replace the gearbox with a new part.
		(4) Wear or damage on rack bushing	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new part. (Refer to “Service limit”.)
		(5) Wear on input shaft bearing	If the free play of input shaft in radial and axial direction is out of the specified range, replace the gearbox with a new part. (Refer to “Service limit”.)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration of dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipe	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

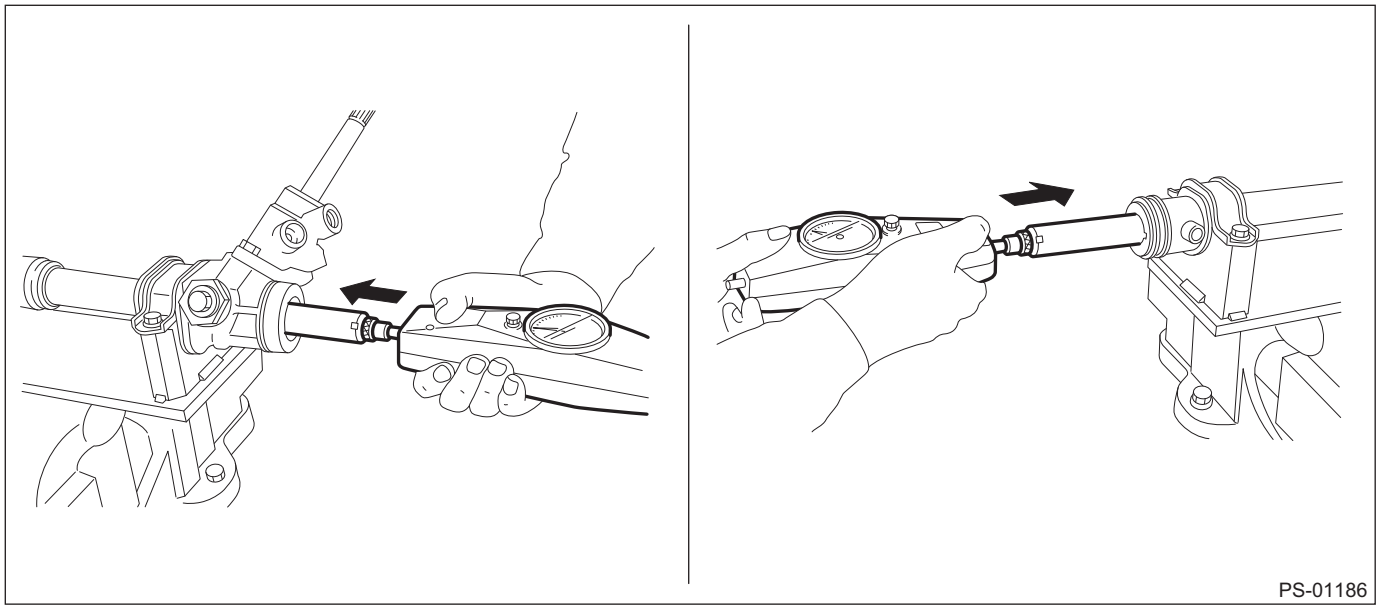
2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

CAUTION:
- **When making a measurement, secure the gearbox in a vise using ST.**
- **When fixing the gearbox in a vise, apply a wooden piece on the flange portion.**

Preparation tool:
ST1: STAND (926200000)
ST2: BOSS D (34199AG000)

Rack shaft sliding resistance



Limit: 343 N (35.0 kgf, 77 lbf) or less

Left/right differential of sliding resistance: 20% or less

Rack shaft play in the radial direction

- **Right-turn steering**

Limit

Both amplitudes: 0.4 mm (0.016 in) or less

Condition

Weighting point

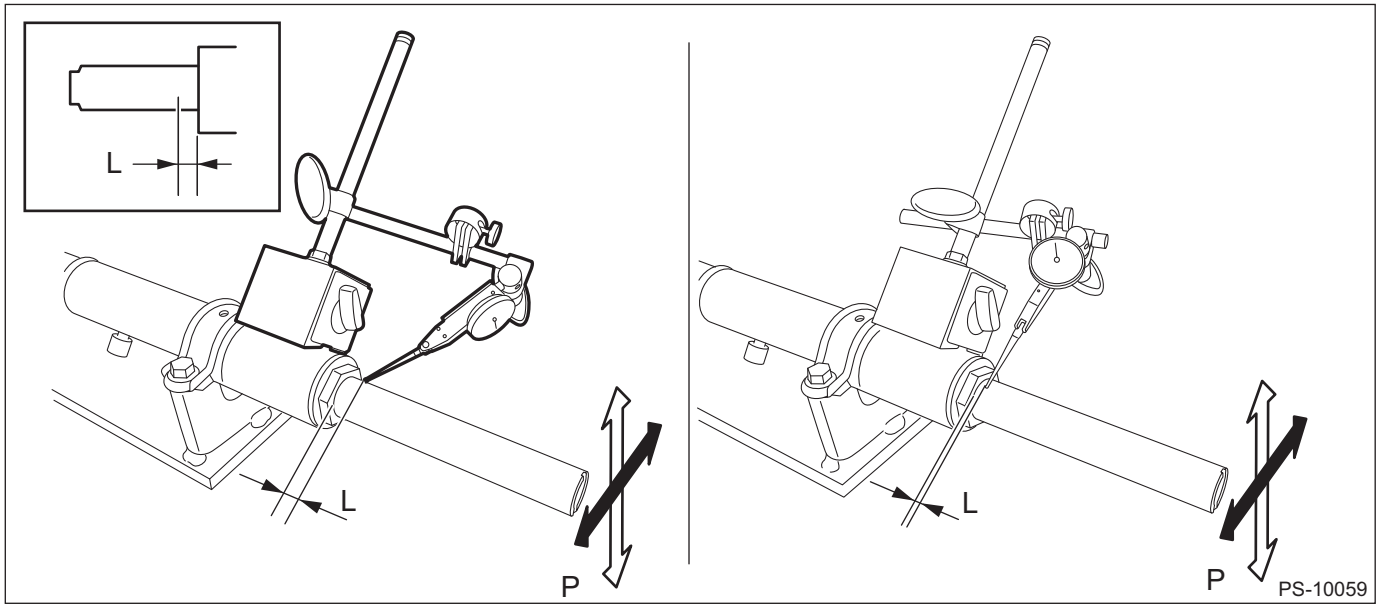
L1: 10 mm (0.39 in) from rack shaft end

Rack shaft end P: 98 N (10 kgf, 22 lb)

Measuring point

L2: 5 mm (0.2 in) from dust cover

NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.



- **Left-turn steering**

Limit

Both amplitudes: Direction ⬅ ➡: 0.6 mm (0.024 in) or less

Both amplitudes: Direction ⇦ ⇨: 0.4 mm (0.016 in) or less

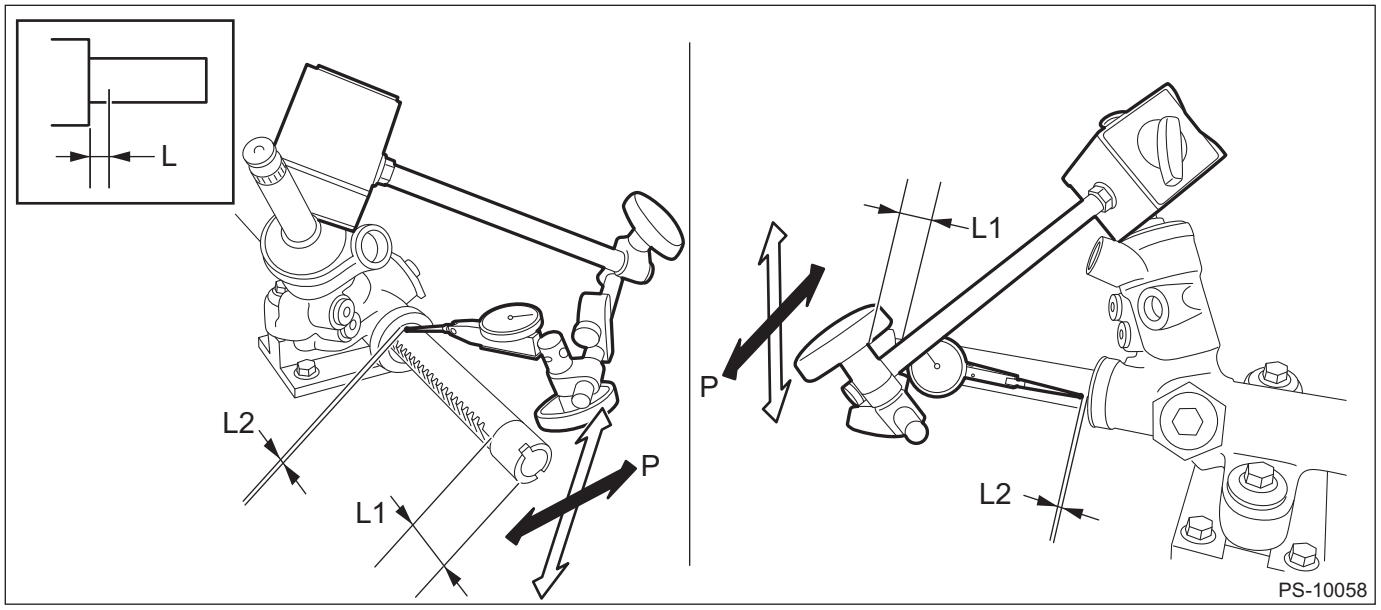
Condition

L: 5 mm (0.2 in) from dust cover

Rack shaft end P: 98 N (10 kgf, 22 lbf)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.



Input shaft play

- **In radial direction**

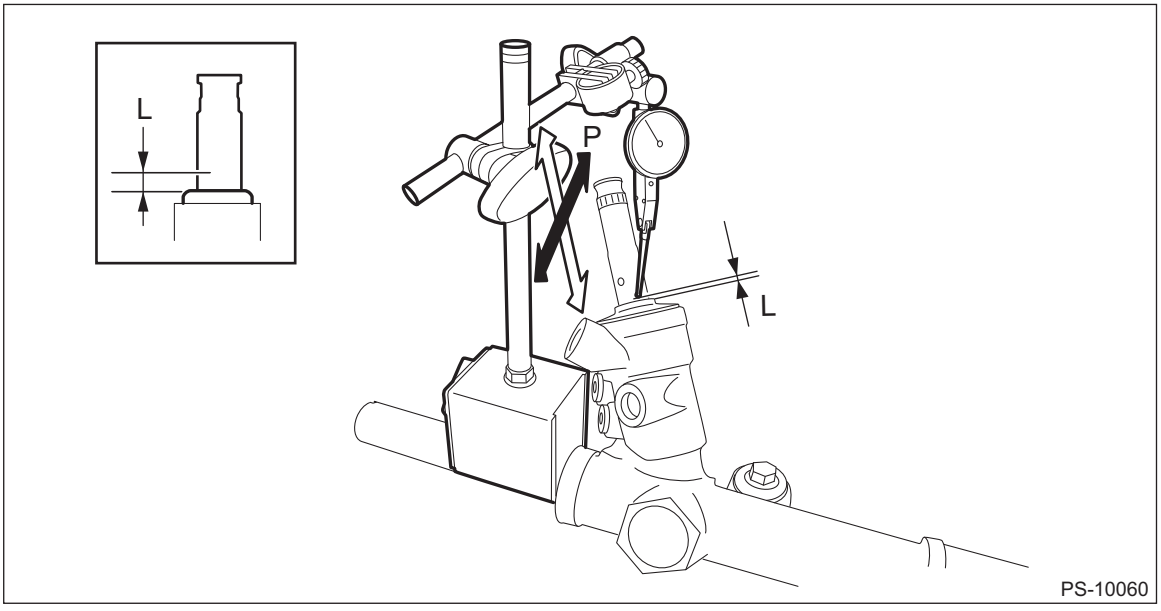
Condition

L: 5 mm (0.2 in) from dust cover
Input shaft tip P: 98 N (10 kgf, 22 lbf)

Limit

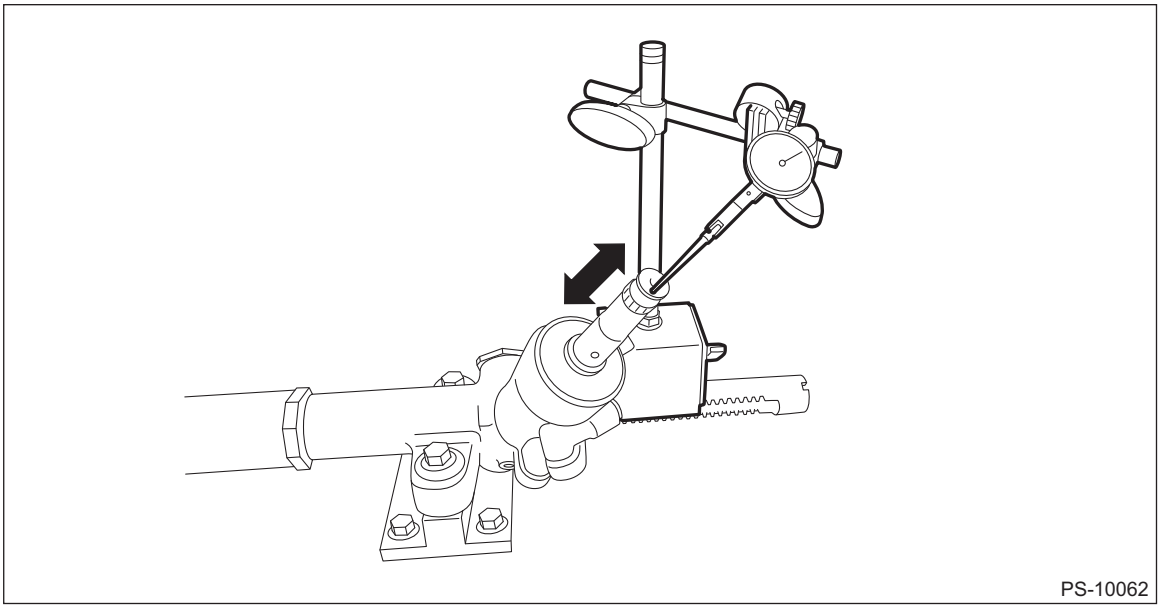
Both amplitudes: 0.26 mm (0.0102 in) or less

NOTE:
<Example of magnet stand and dial gauge installation>
The location where the magnet stand is installed varies to stabilize the magnet stand.



- **In axial direction**

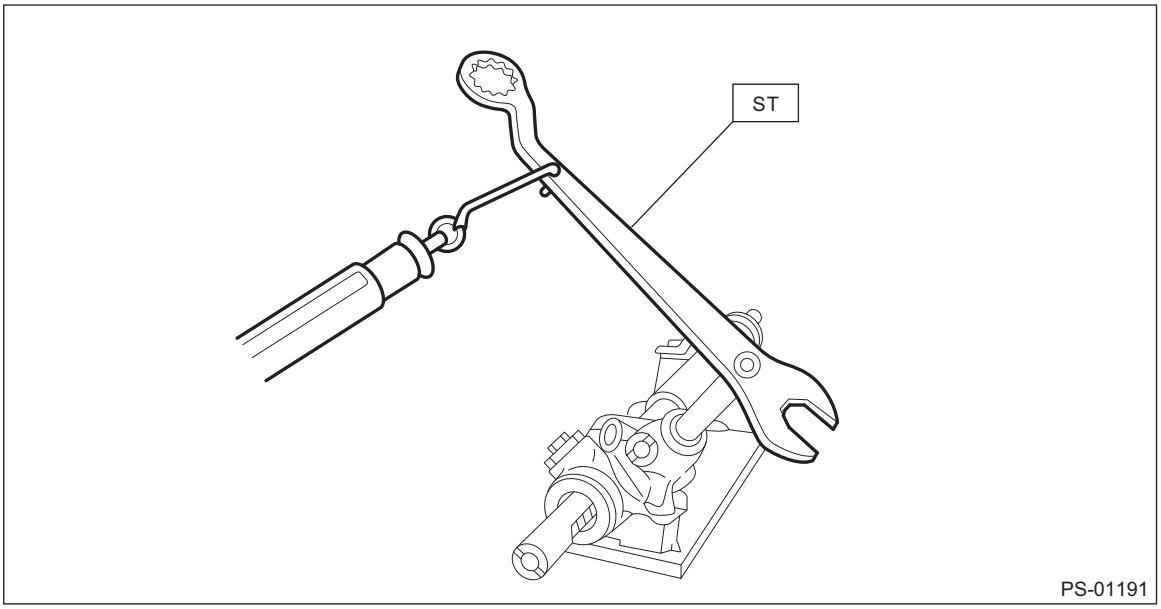
Limit
Without play



Rotational resistance of gearbox

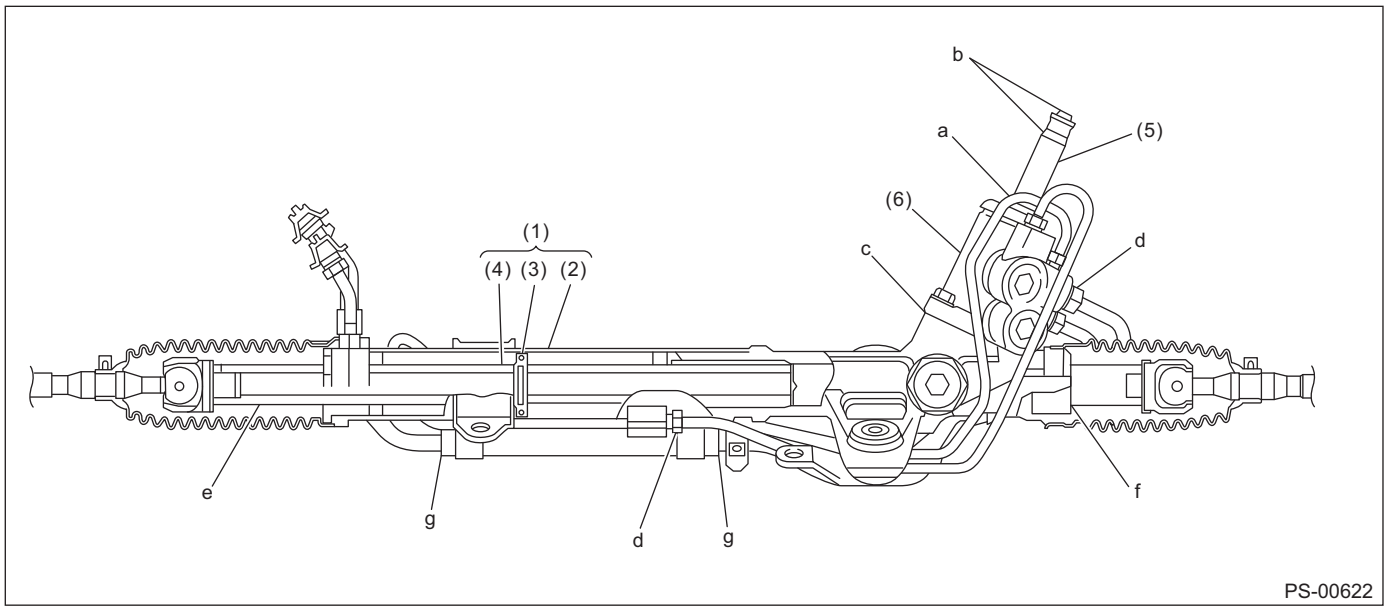
Using the ST, measure the gearbox turning resistance.

Preparation tool:
ST: SPANNER (34099PA100)



Service limit:
Maximum allowable resistance: 21 N (2.14 kgf, 4.7 lbf) or less
Difference between right and left rotational resistance: 20% or less

3. FLUID LEAKAGE



(1)	Power cylinder	(3)	Rack piston	(5)	Input shaft
(2)	Cylinder	(4)	Rack axle	(6)	Valve housing

1) Lift up the vehicle.
2) If a fluid leak is found, clean the fluid completely from the suspect area, and turn the steering wheel 30 to 40 times to the left and right from lock to lock, with the engine running, and check again for leaks immediately, and also after a few hours have passed.
3) Cause and solution for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly or valve housing side oil seal assembly with a new part.
4) Cause and solution for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new part.
5) Cause and solution for oil leakage from “c”
The oil seal is damaged. Replace the valve assembly or pinion side oil seal with a new part.
6) Cause and solution for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.
7) Cause and solution for oil leakage from “g”
The hose is damaged. Replace the hose with a new part.
8) If leak is other than a, b, c, d or g, or if oil is leaking from gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from surrounding portions. Then, turn the steering wheel from lock to lock about 30 to 40 times with the engine running, then re-inspect the leaking area immediately after and several hours after this operation.
(1) Leakage from “e”
The cylinder seal is damaged. Replace the oil seal.
(2) Leakage from “f”
There are two possible causes. Perform the following step first. Remove the pipe assembly B from the valve housing, and close the circuit using ST.

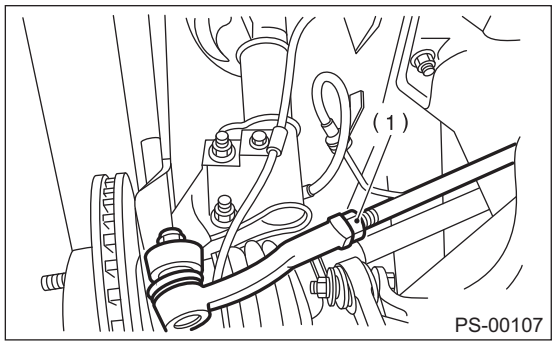
Preparation tool:
ST: PLUG (926420000)
Turn the steering wheel from lock to lock approx. 30 to 40 times with the engine running, then inspect the leaked portion immediately after and several hours after this operation.
- If leakage from “f” is noted again:

The oil seal of pinion and valve assembly is damaged. Replace the pinion & valve assembly with a new part. Or, replace the oil seal.
- If oil stops leaking from “f”:

The oil seal of rack housing is damaged. Replace the oil seal and back-up ring.

F: ADJUSTMENT

1) Adjust the front toe-in.
<Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>



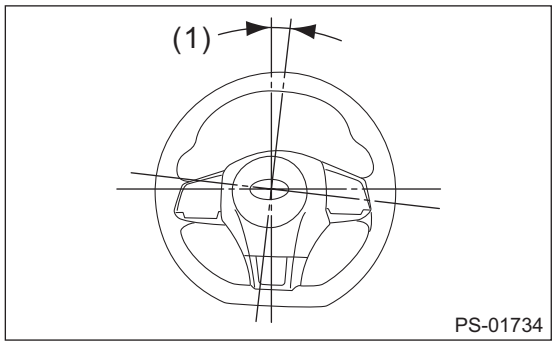
(1) Lock nut

2) Check the steering angle of the wheels.

Standard of steering angle:

Inner wheel	Outer wheel
36.3°±1.5°	32.0°±1.5°

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than 5° on the periphery of the steering wheel, correctly re-install the steering wheel.



(1) 5° or less

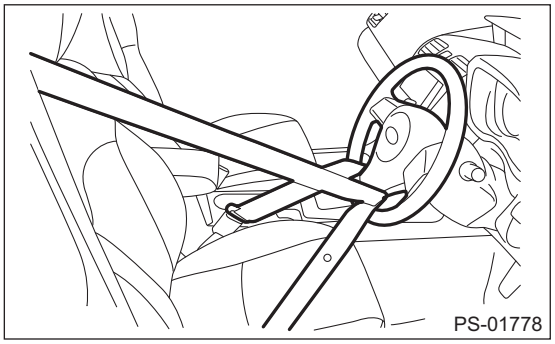
4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle.

7. Electric Power Steering Gearbox

A: REMOVAL

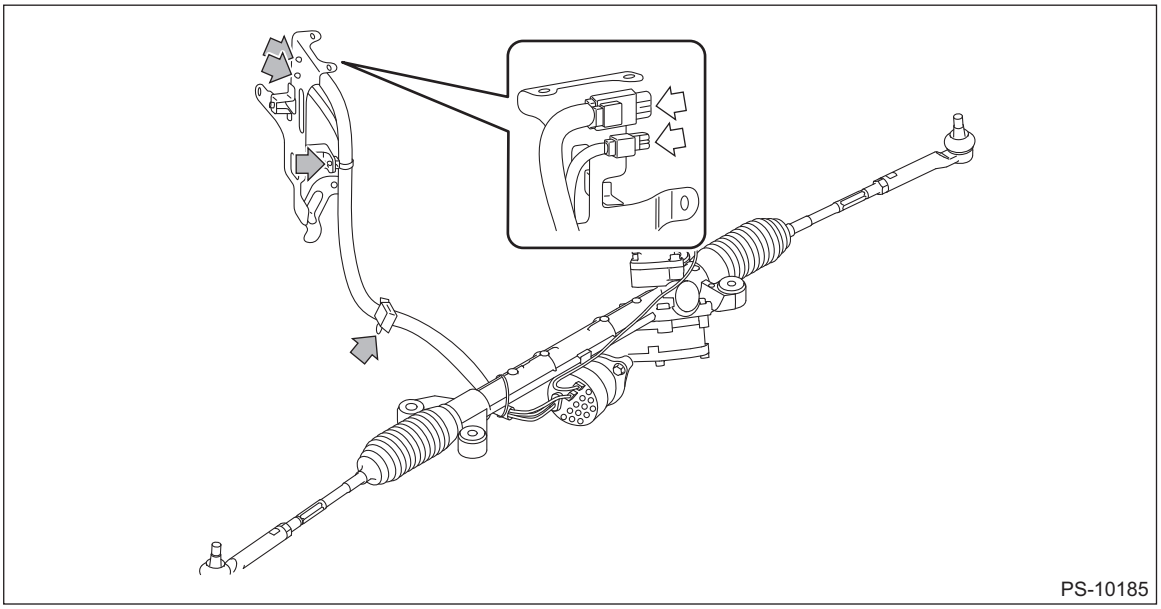
CAUTION:
For electric power steering model, be careful of the following items.
• The power steering control module continues to operate after the engine stops and calculates the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Be careful not to let any foreign matter (dust, water, oil, etc.) enter into the steering gearbox connector when removing or installing. If a foreign matter enters, completely remove it.
1) Set the steering column and the driver's seat to the neutral position.

CAUTION:
Always place the tilt lever to the lock position after the steering column is adjusted.
2) Prevent the steering wheel from turning using the seat belt.



PS-01778

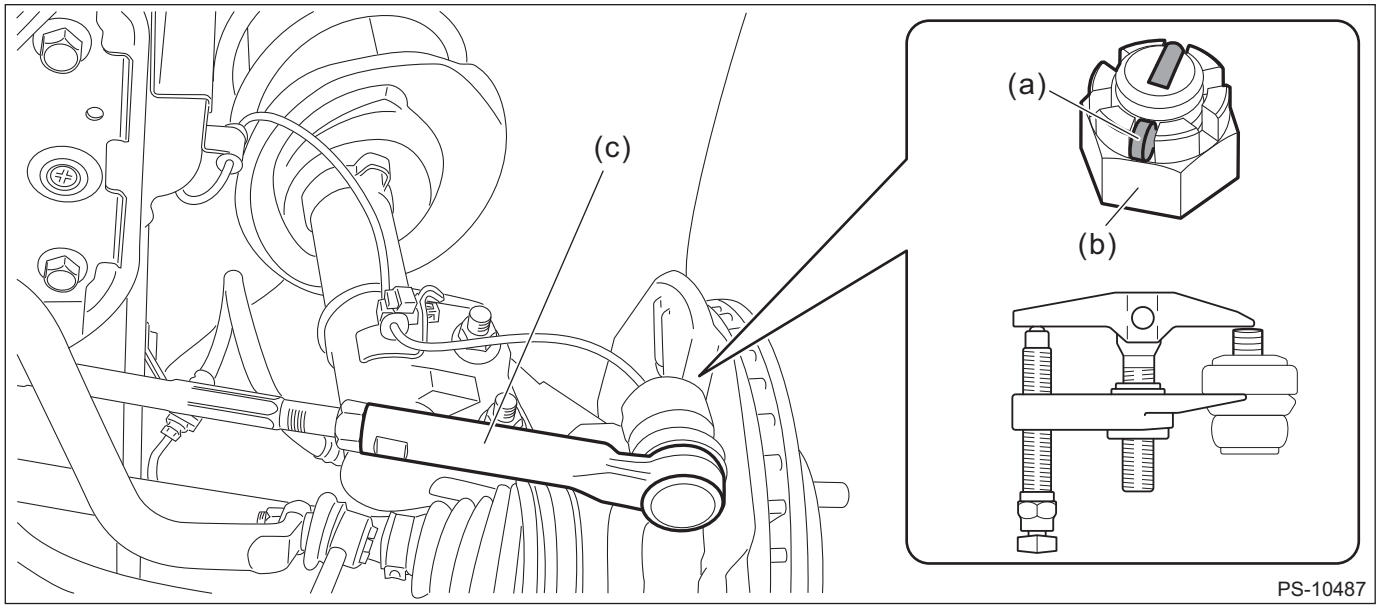
3) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Disconnect the steering gearbox connector and harness clamp.



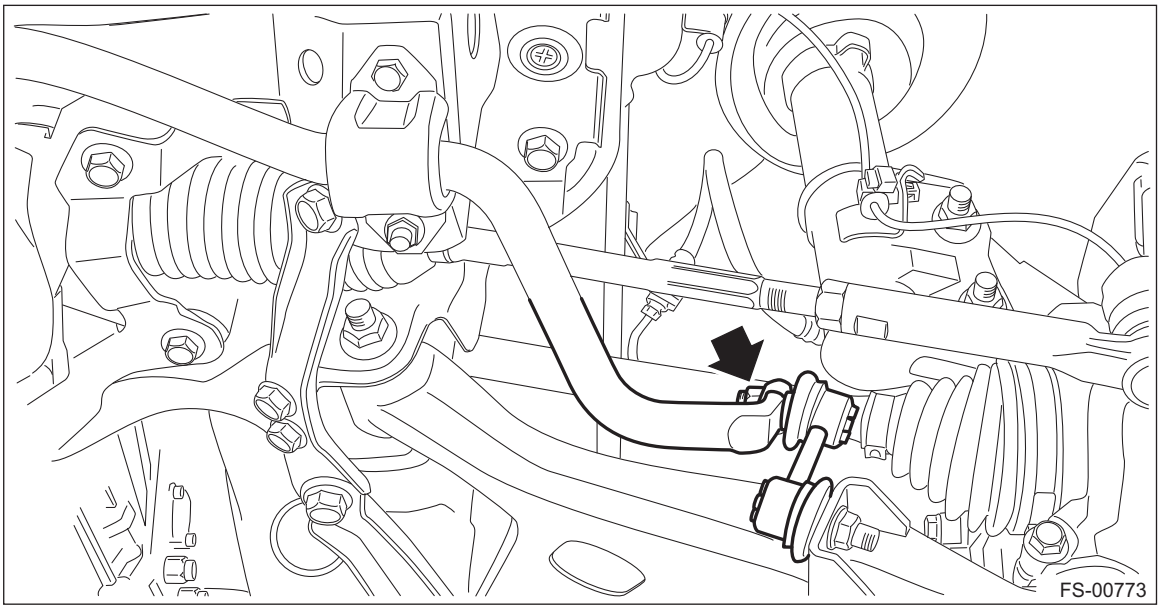
PS-10185

5) Lift up the vehicle, and then remove the front wheels.
6) Disconnect the tie-rod end.
   (1) Pull out the cotter pin (a).
   (2) Remove the castle nut (b).
   (3) Using a tie-rod ball joint puller, remove the tie-rod end (c).

Preparation tool:
Tie-rod ball joint puller

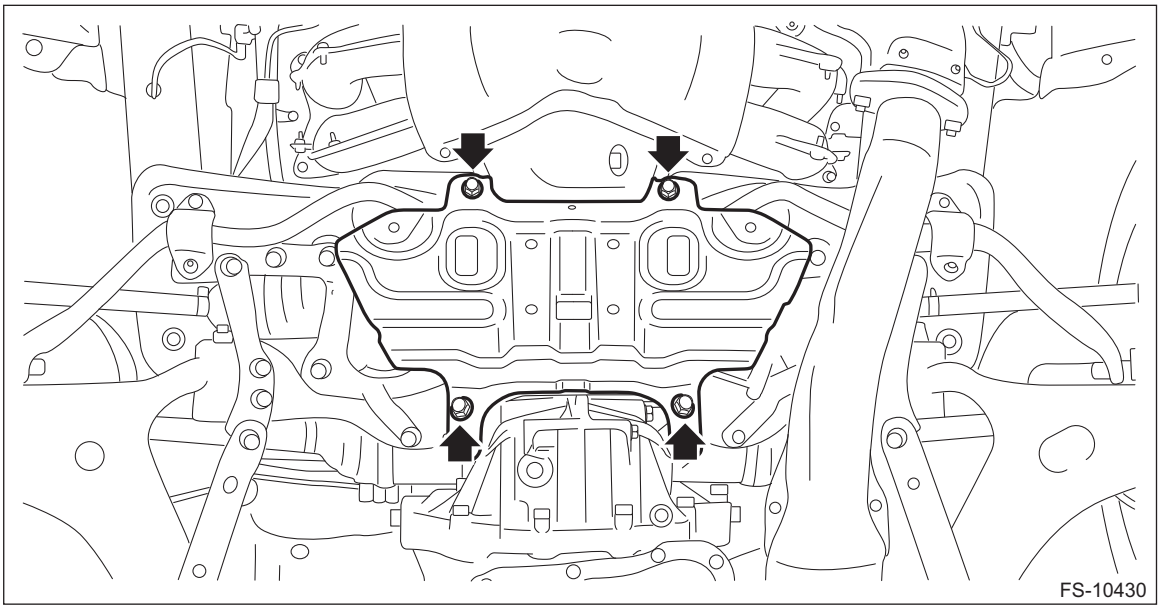


7) Disconnect the stabilizer link.

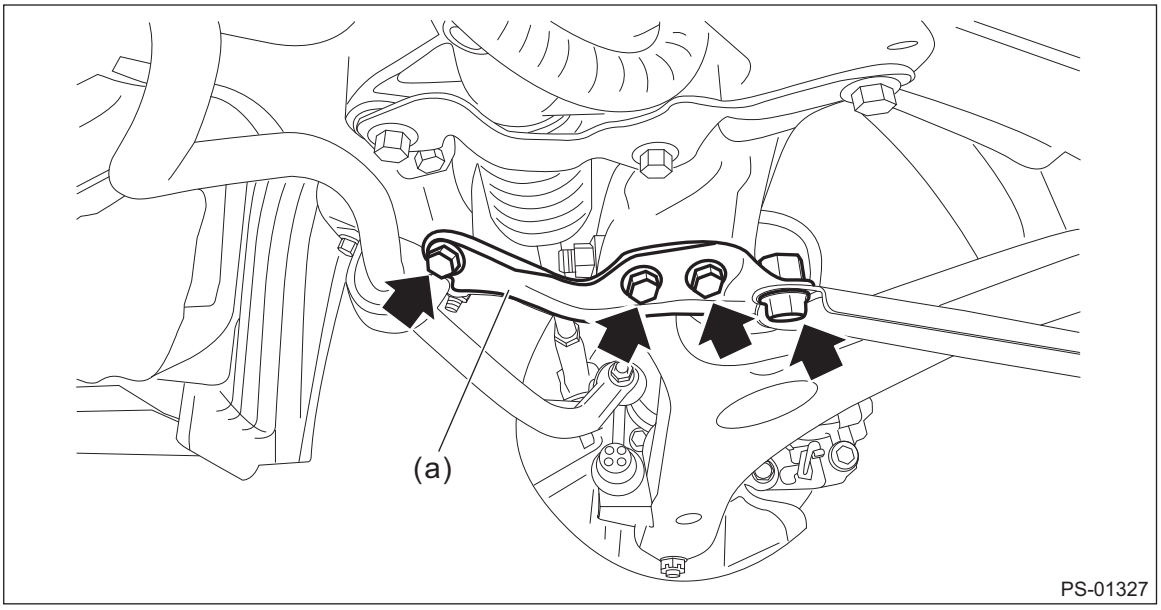


8) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
9) Remove the center exhaust pipe (rear). <Ref. to EX(w/o STI)-33, REMOVAL, Center Exhaust Pipe.>
10) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>

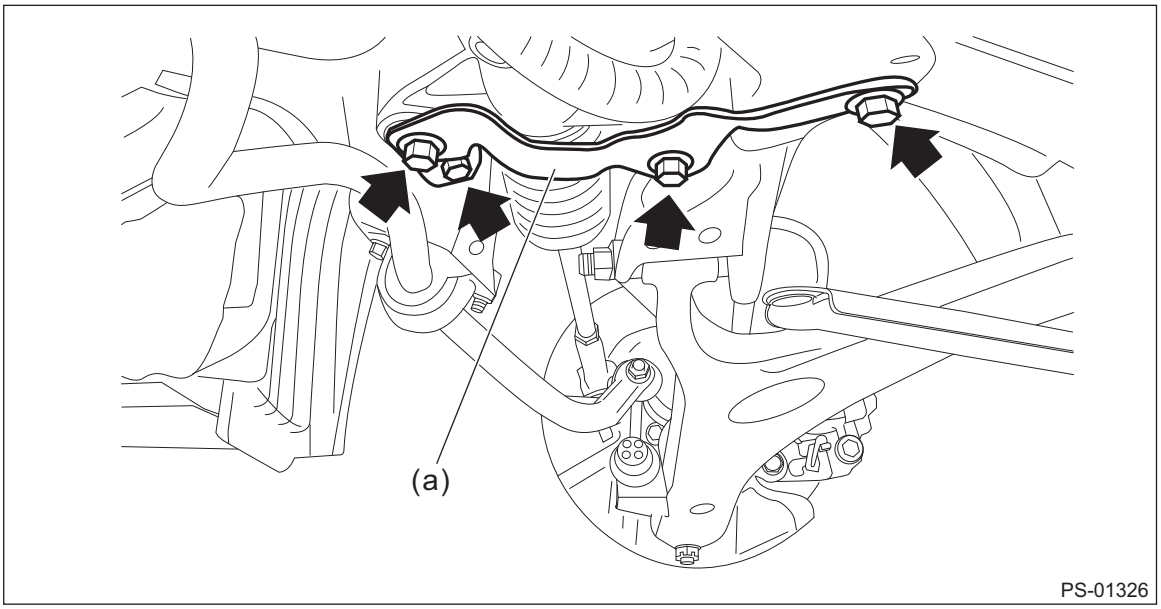
11) Remove the front crossmember support.



12) Remove the support plate - front crossmember (a).

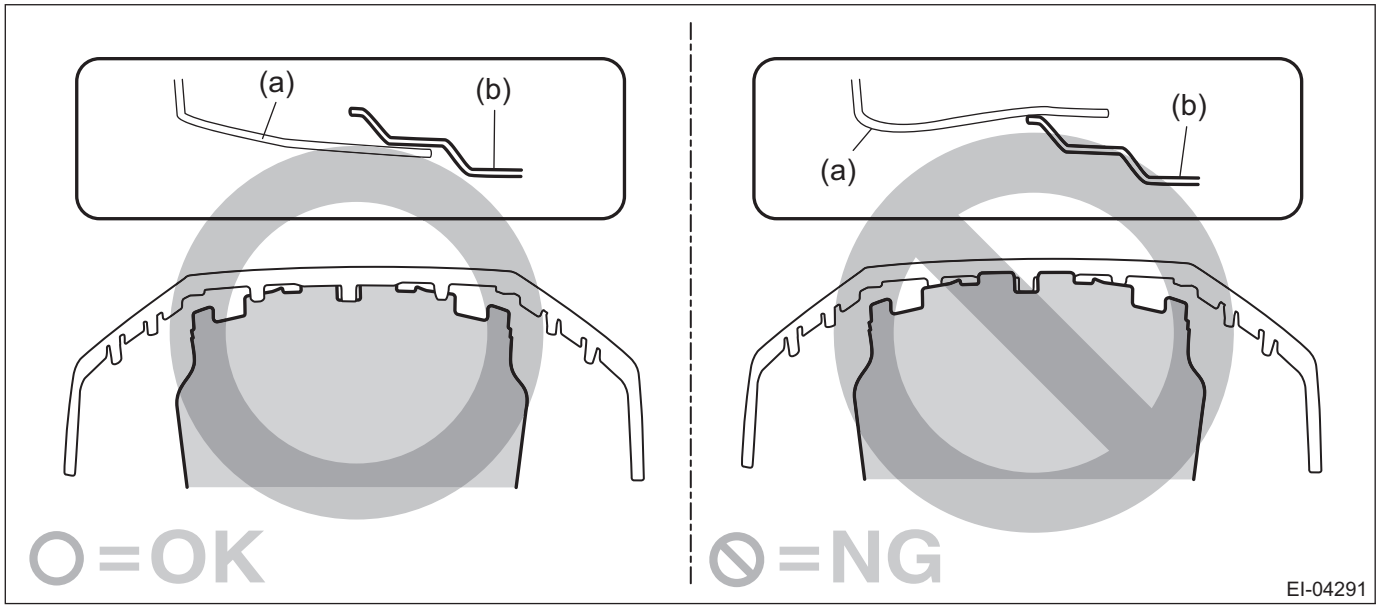


13) Remove the bolts securing the steering gearbox assembly, and remove the stiffener (a) and steering gearbox assembly.



B: INSTALLATION

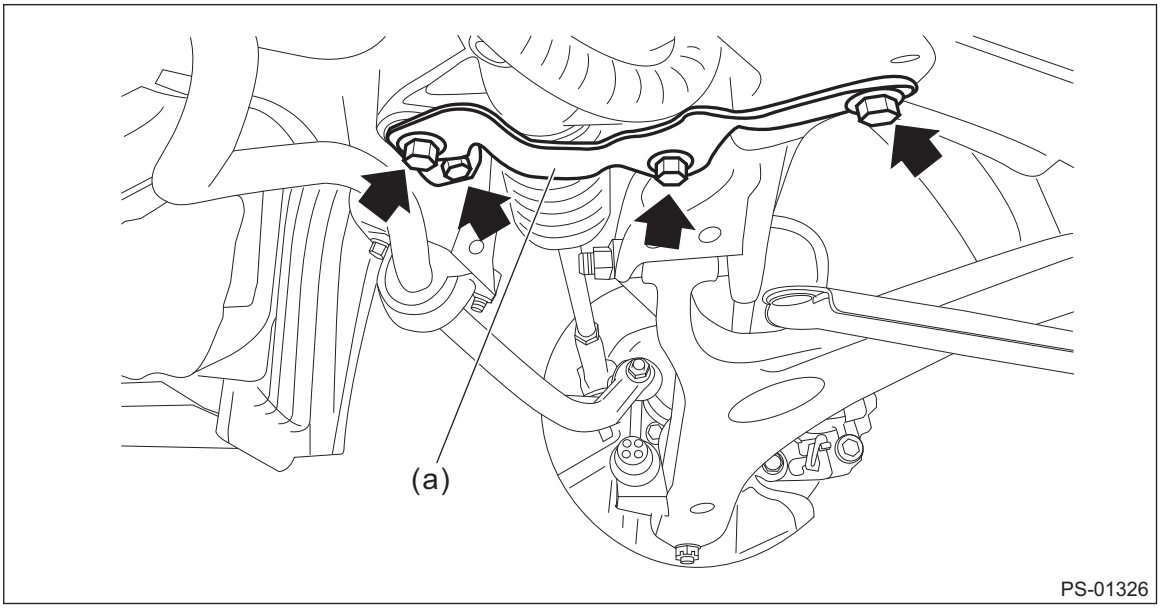
CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



1) Insert the steering gearbox assembly into crossmember, being careful not to damage the boot of the steering gearbox assembly.
2) Install the steering gearbox assembly to the crossmember by tightening the bolts through the stiffener (a) to the specified torque.

CAUTION:
Since the bushing mounting bolt is applied with lubricant, always use a new bolt.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

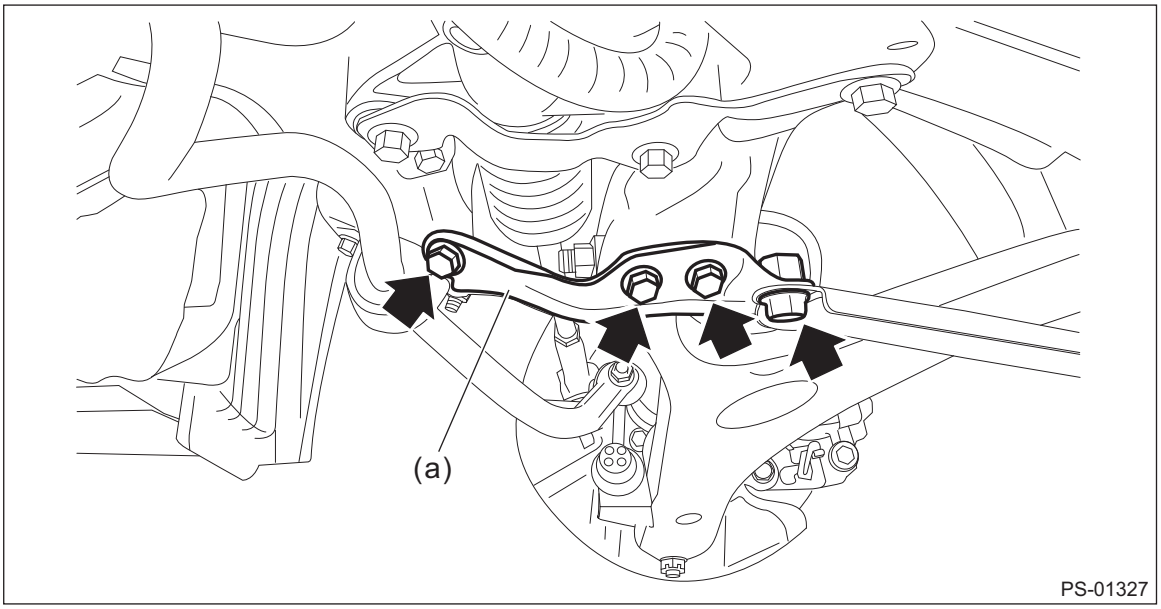


3) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>

CAUTION:
Tighten the bolts of the universal joint assembly - steering in the order of steering gearbox side and column shaft side.

4) Install the support plate - front crossmember (a).

Tightening torque:
Support plate - front crossmember: 60 N·m (6.1 kgf-m, 44.3 ft-lb)
Front support: 100 N·m (10.2 kgf-m, 73.8 ft-lb)



5) Install the front crossmember - support.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

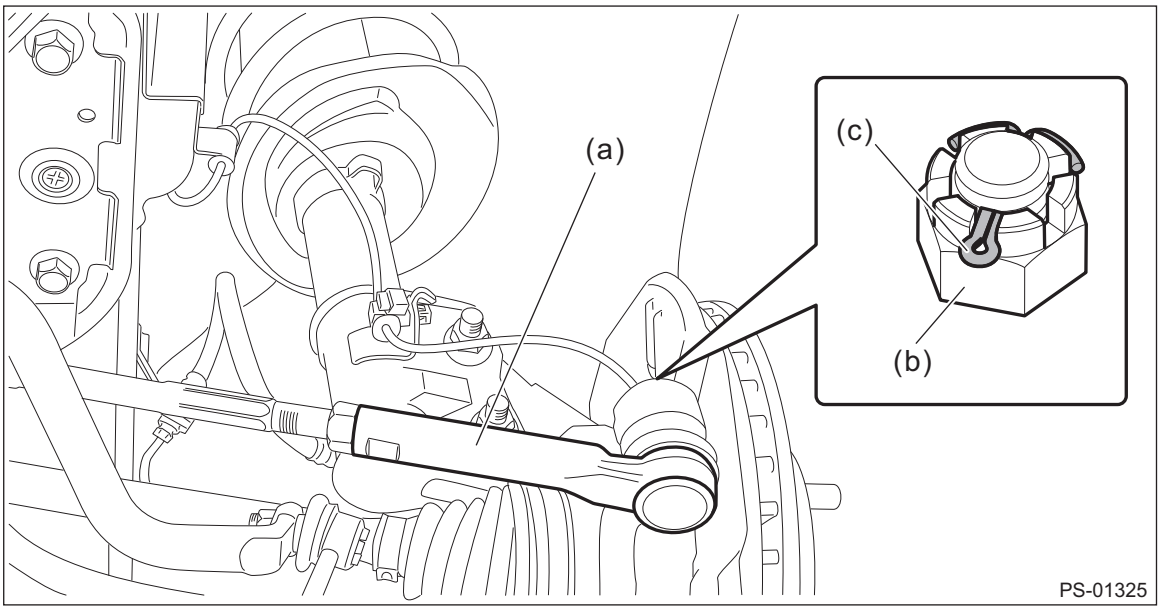
6) Install the center exhaust pipe (rear). <Ref. to EX(w/o STI)-38, INSTALLATION, Center Exhaust Pipe.>
7) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
8) Connect the tie-rod ends and knuckle arm.
(1) Connect the tie-rod end (a) to the housing assembly - front axle.

(2) Tighten the castle nuts (b) to the specified torque.

CAUTION:
During connection, do not hit the cap at bottom of tie-rod end with a hammer.

Castle nut tightening torque:
27 N·m (2.8 kgf-m, 19.9 ft-lb)

(3) Tighten within the range of 60° so that the cotter pin hole and cutout portion of the castle nut (b) are aligned.
(4) Insert a new cotter pin (c), and bend the tip of the pin to fix it.



9) Install the stabilizer link.

Tightening torque:
60 N·m (6.1 kgf-m, 44.3 ft-lb)

10) Install the front wheels.
11) Lower the vehicle.
12) Tighten the wheel nuts to the specified torque.

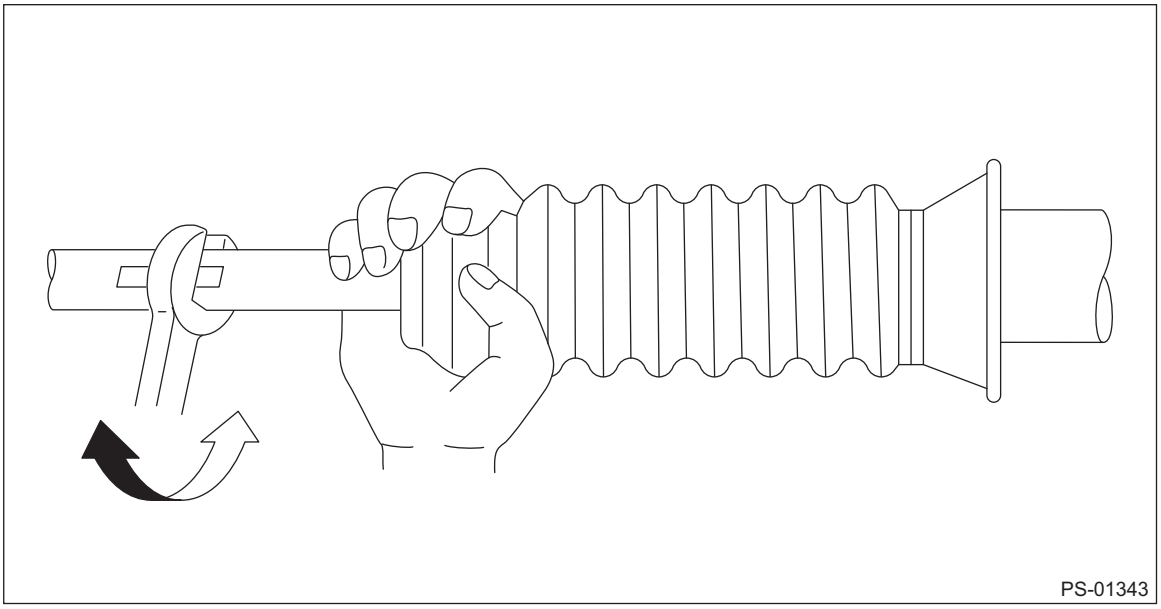
Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)

13) Connect the steering gearbox connector and harness clamp.
14) Connect the ground terminal to the battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>
15) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

CAUTION:
When the wheel alignment has been adjusted, perform the following adjustment.
– Lane keep assist learning value clear (model with EyeSight): <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>
– Steering angle sensor adjustment: <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

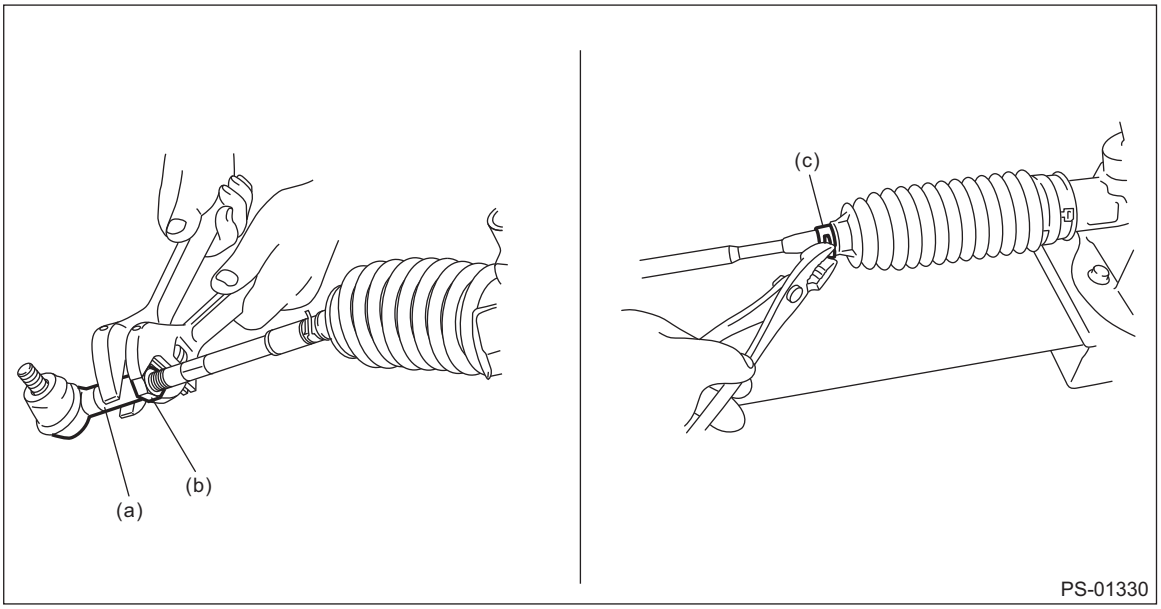
Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
When adjusting toe-in, hold the boot - steering gearbox as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.



C: DISASSEMBLY

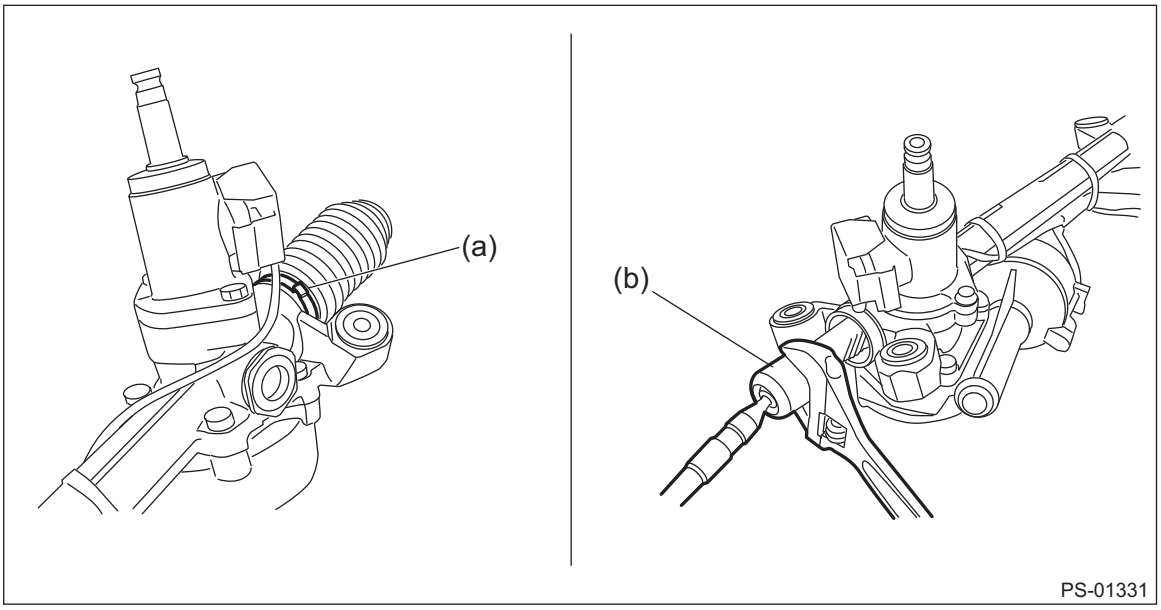
CAUTION:
• Nut for fixing the rack is on the driver's side only. When removing the tie-rod on the passenger's side, turn over the boot - steering gearbox on the driver's side, and fix the rack during operation.
• When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
1) Remove the tie-rod end (a) and lock nut (b) from the steering gearbox assembly.
2) Remove the clip - boot tie-rod (c) located outside the boot - steering gearbox using the pliers, and then slide the boot - steering gearbox to the tie-rod end side.



3) Remove the tie-rod (b) from the gearbox assembly.
(1) Using a flat tip screwdriver, remove the band - boot (a) from the boot - steering gearbox.

NOTE:
Replace the boot - steering gearbox or the band - boot (a) if there is damage, cracks or deterioration.

(2) Remove the tie-rod (b).



D: ASSEMBLY

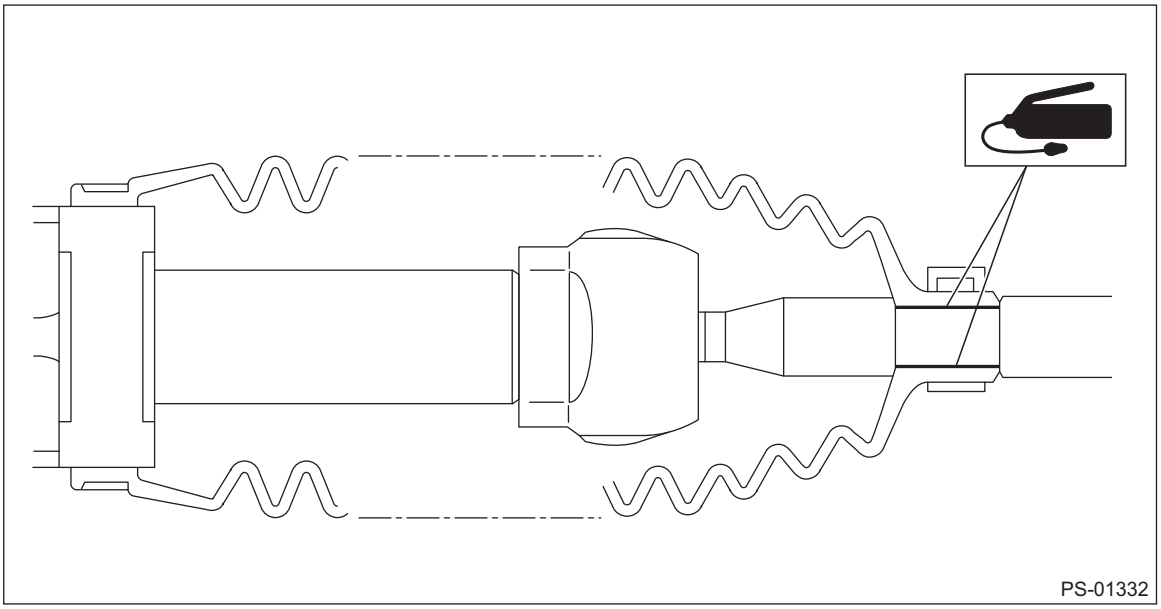
1) Install the tie-rod into rack.

Tightening torque:
90 N·m (9.2 kgf-m, 66.4 ft-lb)

NOTE:
Check the mating face of rack and tie-rod for foreign matter such as dust etc.

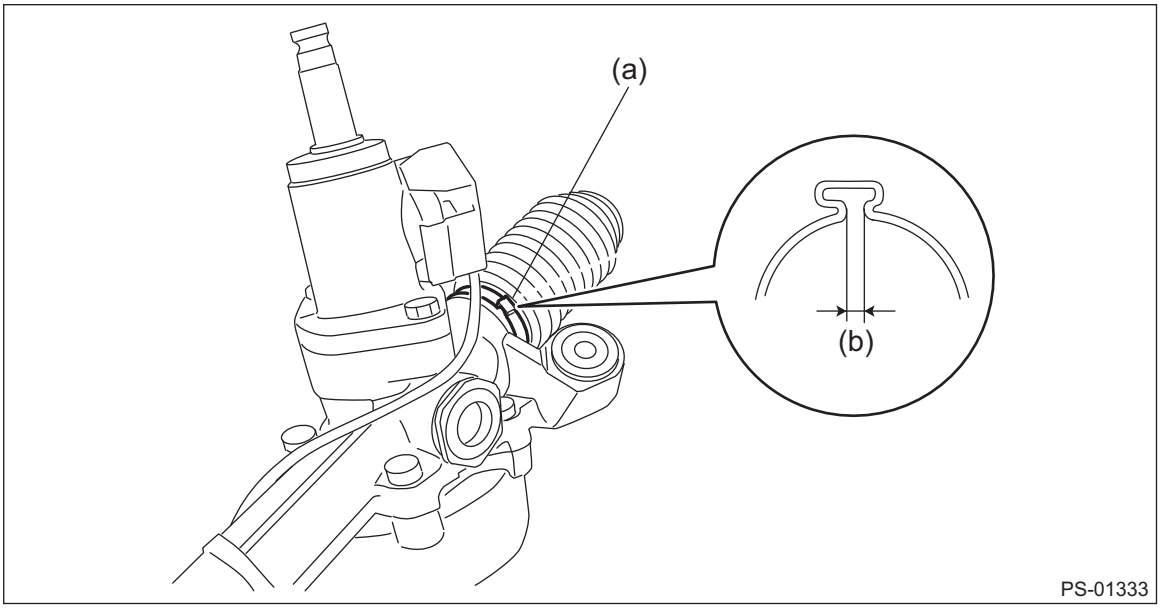
2) Apply a coat of grease to the tie-rod groove, and then install the boot - steering gearbox to the housing.

NOTE:
Make sure that the boot - steering gearbox is installed without unusual inflation or deflation.

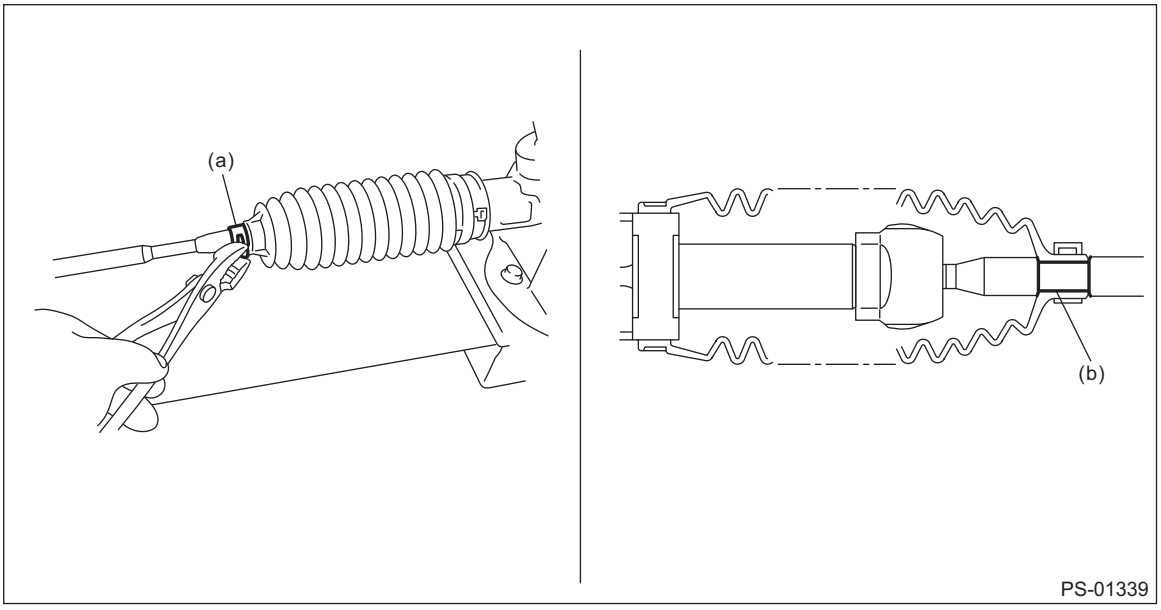


3) Using the boot clamp pliers, crimp the boot so that the clearance (b) of the band - boot (a) crimp portion becomes 2 mm (0.08 in) or less.

NOTE:
Use a new band - boot.



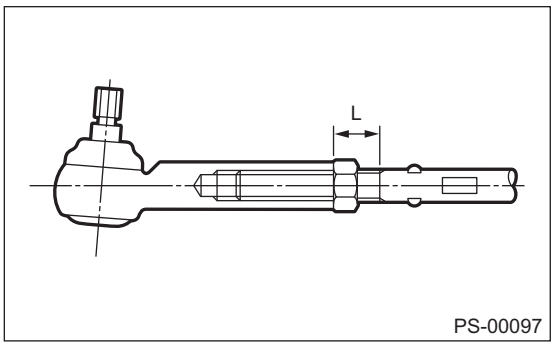
4) Fix the end of the boot - steering gearbox with clip - boot tie-rod (a).
5) After installation, check that the end of the boot - steering gearbox is installed to the groove (b) of the tie-rod.



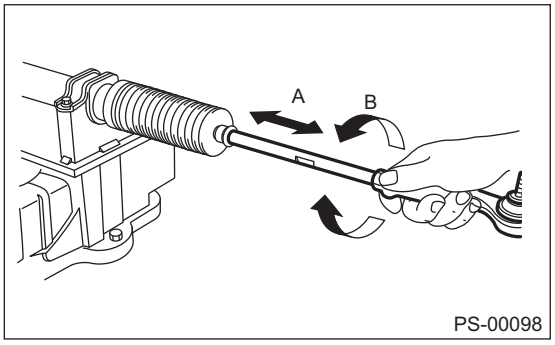
6) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut at a position as shown in the figure.

Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)

Installed tie-rod length L:
29 mm (1.14 in)



7) Inspect the steering gearbox assembly as follows:
1. “A” Holding the tie-rod end, repeat lock to lock several times as quickly as possible.
2. “B” Holding the tie-rod end, turn it slowly at a radius several times as large as possible.
3. Finally, make sure that the boot - steering gearbox is installed in the specified position without inflating.



8) Remove the steering gearbox assembly from ST.

E: INSPECTION

1. UNIT INSPECTION

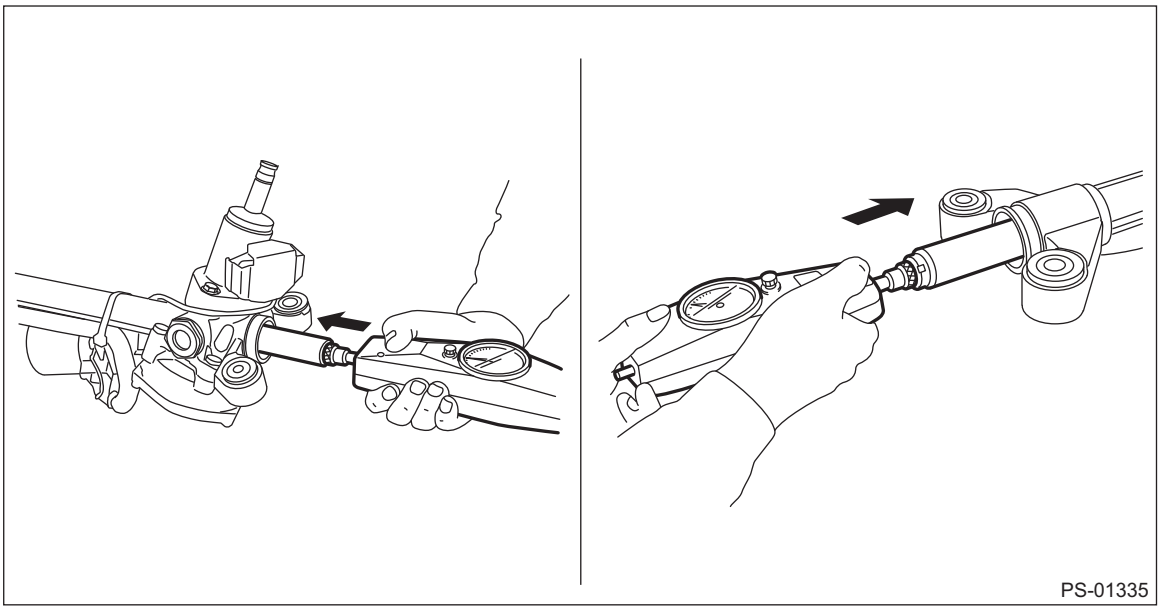
Check components for wear, damage or other faults. Adjust or replace if necessary.

2. LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:
When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.

Rack shaft sliding resistance:
Limit: 360 N (37 kgf, 81 lbf) or less
Left/right differential of sliding resistance: 20% or less



3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

NOTE:
- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
  – Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
  – Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))

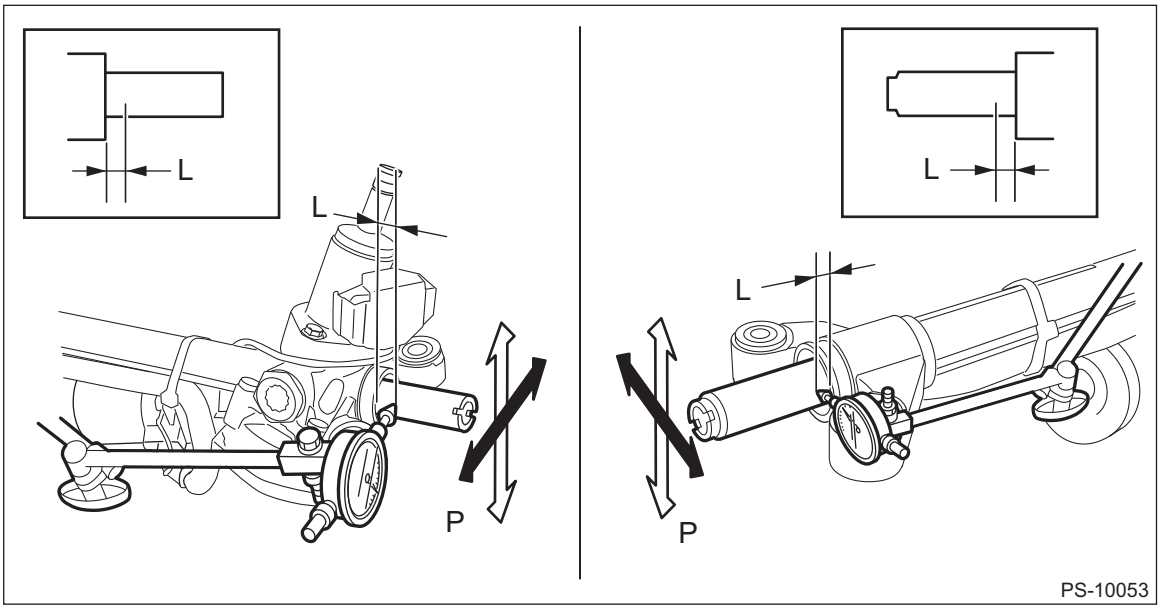
Right-turn steering:
Service limit:
Both amplitudes: 0.6 mm (0.024 in) or less

Left-turn steering:
Service limit:
Both amplitudes: 0.6 mm (0.024 in) or less

Condition:
L: 5 mm (0.20 in) from dust cover
Rack shaft end P: 98 N (10 kgf, 22 lbf)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.



4. INPUT SHAFT PLAY

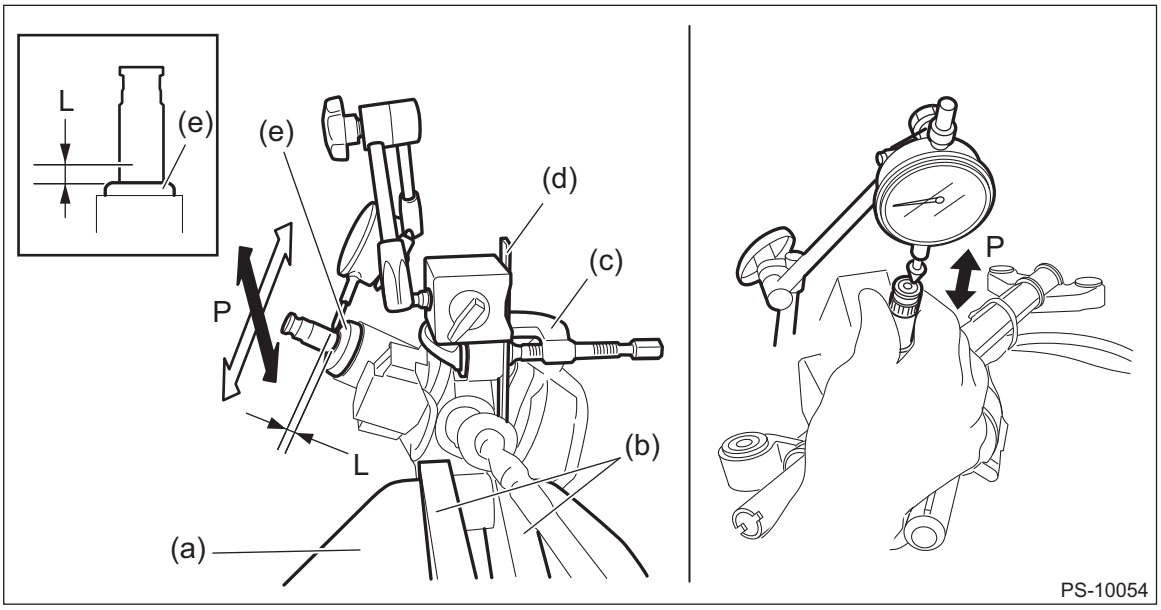
NOTE:
- When fixing the steering gearbox assembly in a vise, apply a wooden piece on the flange portion.
- When fixing the magnet stand in the steering gearbox assembly, perform the following procedure.
  – Fix the iron plate on the flange portion using a c-clamp, and place the magnet stand on the iron plate.
  – Use bolts and nuts to fix directly on the flange portion of the steering gearbox assembly. (Secure the gauge firmly on the gearbox body. (Avoid the input shaft and the rack shaft.))

In radial direction:
Limit: Both amplitudes: 0.6 mm (0.024 in) or less
Condition: Input shaft tip P = 98 N (10 kgf, 22 lbf)

In axial direction:
Limit: 0.27 mm (0.0106 in) or less
Condition: Input shaft tip P = 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

NOTE:
<Example of magnet stand and dial gauge installation>

The location where the magnet stand is installed varies to stabilize the magnet stand.



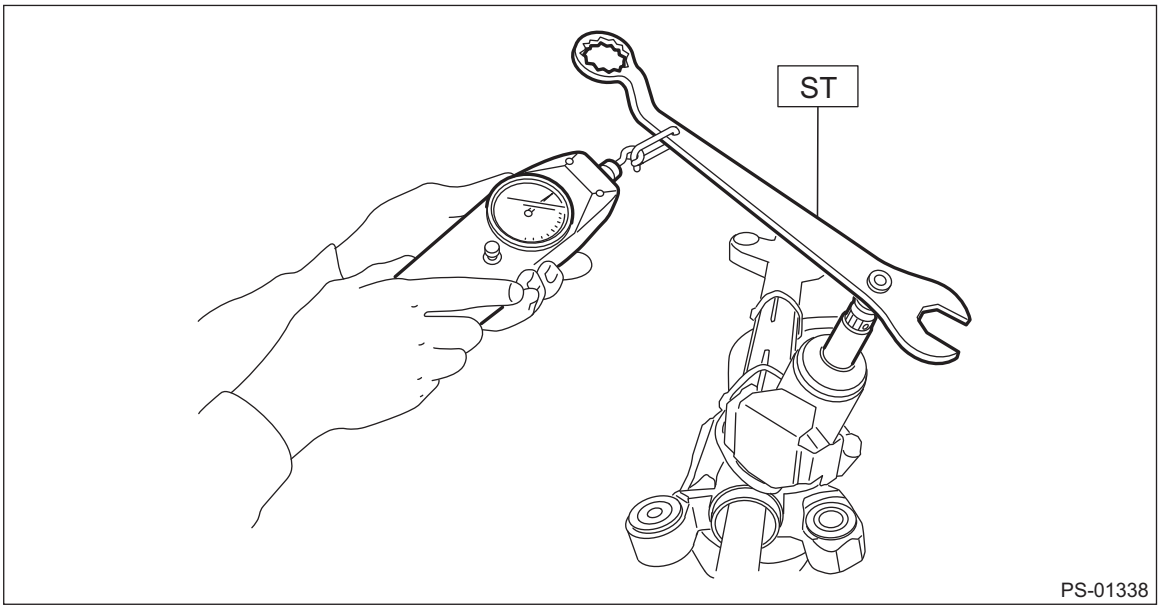
(a) Vise
(b) Wooden block
(c) C-clamp
(d) Iron plate
(e) Dust cover

5. ROTATIONAL RESISTANCE OF GEARBOX

1) Using the ST, measure the rotational resistance of the steering gearbox assembly.

Preparation tool:
ST: SPANNER (34099PA100)

Service limit:
Maximum allowable resistance: 18 N (1.8 kgf, 4 lbf) or less
Difference between right and left rotational resistance: 20% or less



F: ADJUSTMENT

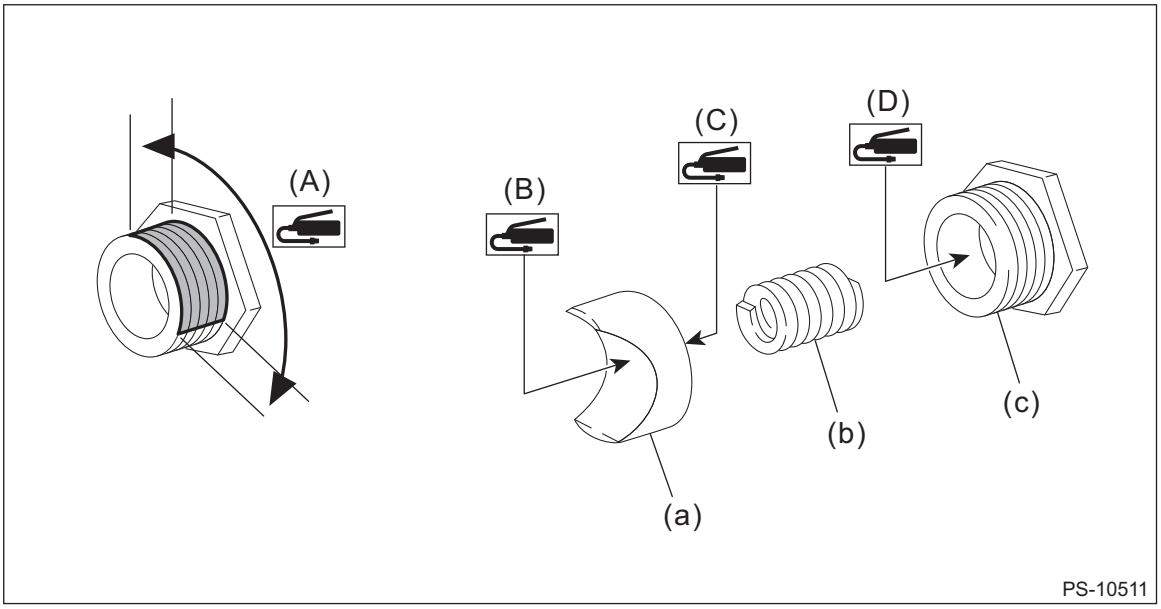
1. GEARBOX BACKLASH ADJUSTMENT

1) Remove the steering gearbox assembly. <Ref. to PS-64, REMOVAL, Electric Power Steering Gearbox.>
2) Loosen the lock nut and adjusting screw.

3) Apply a coat of grease to the sliding surface (B) of the pad - pressure (a) and seating surface (C) of spring - gearbox (b), and then insert the pad - pressure (a) into steering body.
4) Charge the adjusting screw (c) with grease (D), and then insert the spring - gearbox (b) into adjusting screw. Then install on the steering body.

Grease:
Molywhite LS-G
5) Apply liquid gasket to 1/3 or more (A) of entire perimeter of adjusting screw thread (c).

Liquid gasket:
THREE BOND 1102



6) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb), then loosen it.
7) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb), then loosen it.
8) Tighten the adjusting screw to 20 N·m (2 kgf-m, 14.8 ft-lb), then loosen it by 30°.
9) While fixing the adjusting screw, tighten the lock nuts.

Preparation tool:
Monkey type torque wrench available for width across flat 39 mm (1.5 in) operation.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

2. FRONT WHEEL ALIGNMENT ADJUSTMENT

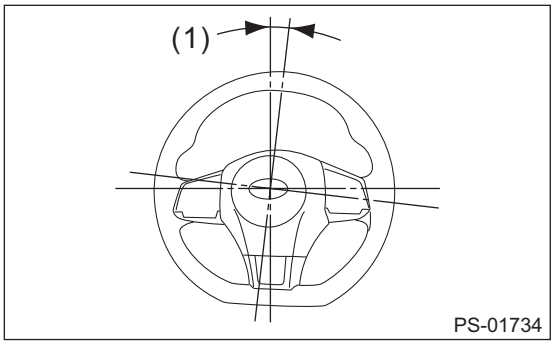
1) Adjust the front toe-in. <Ref. to FS-16, FRONT WHEEL TOE-IN, ADJUSTMENT, Wheel Alignment.>
2) Check the steering angle of the wheels.

Standard of steering angle:

Wheel size	17-inch	18-inch
Inner wheel	37.5°±1.5°	36.4°±1.5°
Outer wheel	32.9°±1.5°	32.0°±1.5°

3) When the steering wheel is in the following condition, perform the steering wheel installation over again.
- When wheels are set in the straight ahead position, the steering wheel spokes are not horizontal.

- Error is more than 5° on the periphery of the steering wheel.



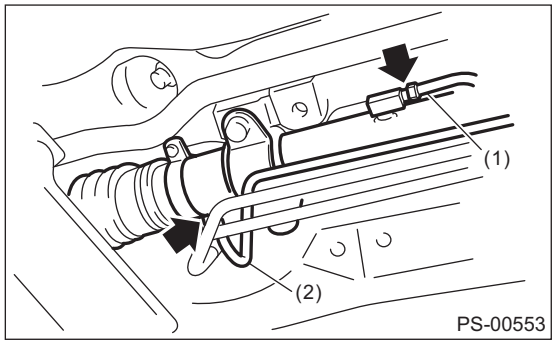
(1) 5° or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle. Also check that there are no abnormal steering effort, failure of the steering wheel to return or other faults.

8. Pipe Assembly

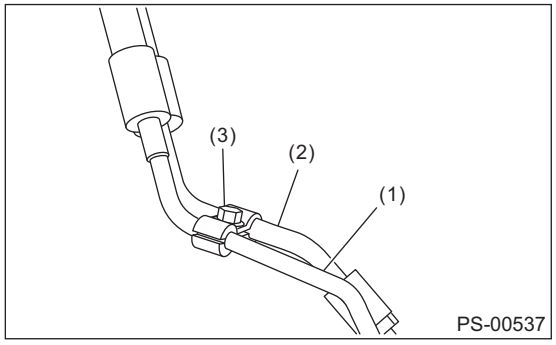
A: REMOVAL

1) Disconnect the ground terminal from battery.
2) Remove the under cover. <Ref. to EI-22, REMOVAL, Front Under Cover.>
3) Remove the front crossmember support plate. <Ref. to FS-27, REMOVAL, Front Crossmember Support Plate.>
4) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.



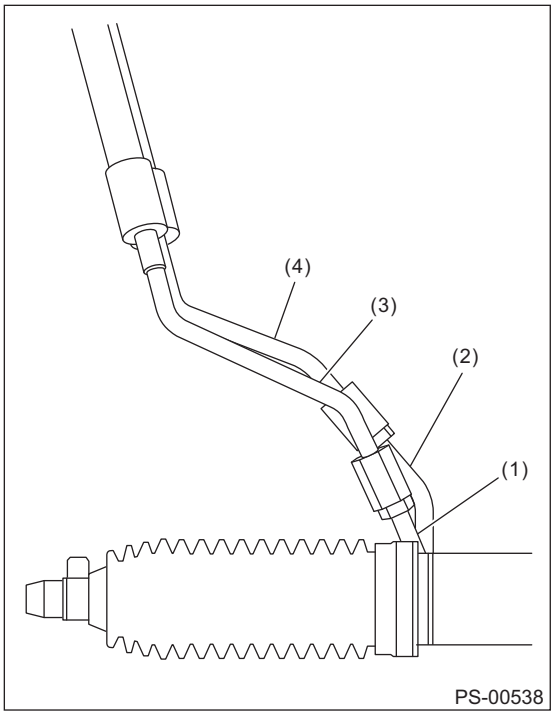
(1) Pipe A
(2) Pipe B

5) Remove the clamp E from return hose and pressure hose.



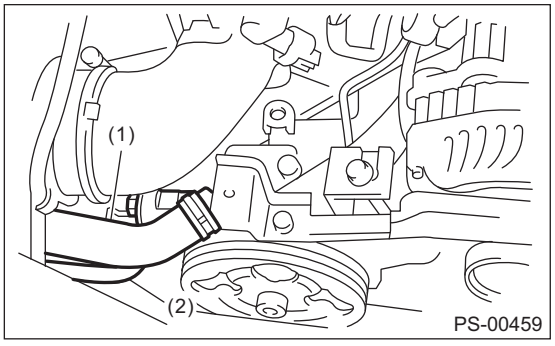
(1) Pressure hose
(2) Return hose
(3) Clamp E

6) Disconnect the return hose from return pipe and disconnect the pressure hose from feed pipe.



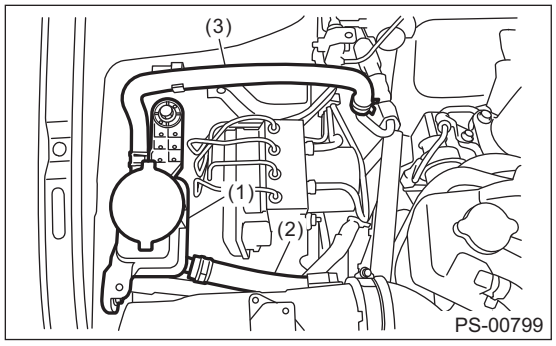
(1) Feed pipe
(2) Return pipe
(3) Pressure hose
(4) Return hose

7) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
8) Disconnect the suction hose and pressure hose from oil pump.



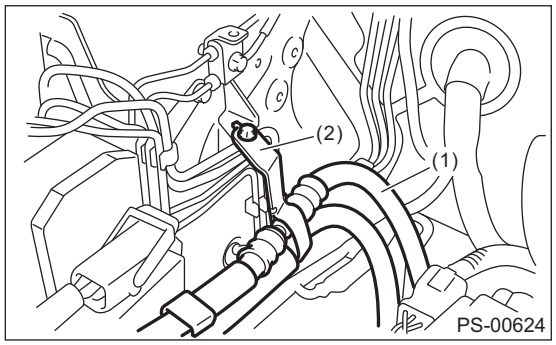
(1) Suction hose
(2) Pressure hose

9) Disconnect the suction hose and return hose from the reservoir tank.



(1) Reservoir tank
(2) Suction hose
(3) Return hose

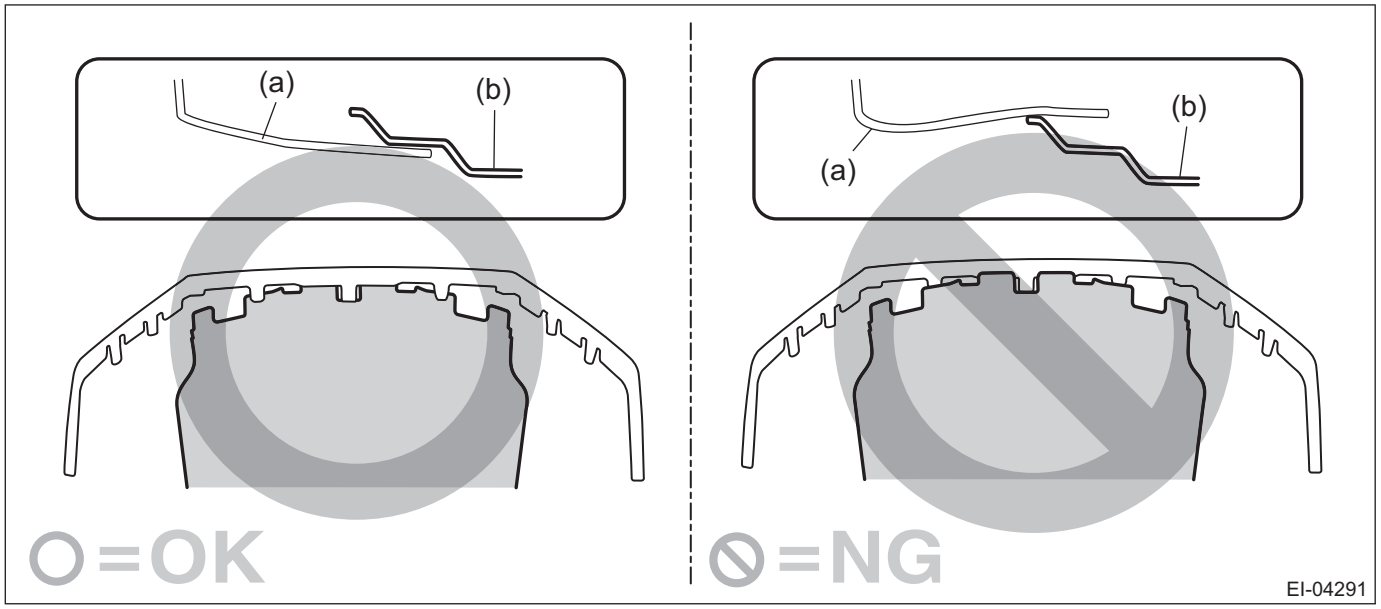
10) Remove the hose bracket and take out the hose assembly from vehicle.



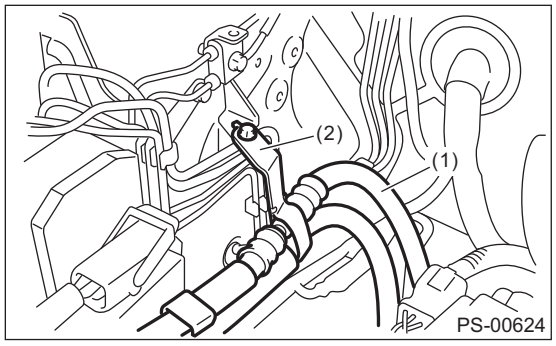
(1) Hose ASSY
(2) Hose bracket

B: INSTALLATION

CAUTION:
Install the under cover - front so that the front end of the under cover (b) comes inside the bumper face - front (a).



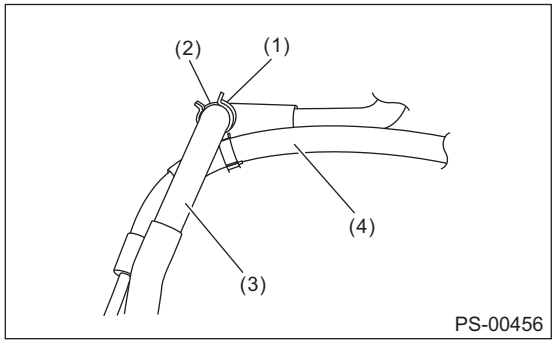
1) Temporarily tighten the hose bracket bolt.



(1) Hose ASSY
(2) Hose bracket

2) Install the plastic clip to the pressure hose and suction hose.

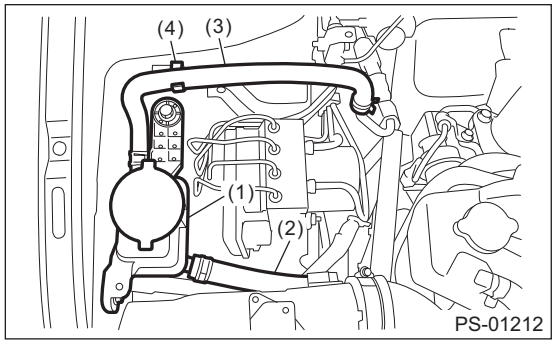
CAUTION:
Align the installation position of the plastic clip with the protector edge of the suction hose.



(1) Plastic clip
(2) Protector
(3) Suction hose
(4) Pressure hose

3) Connect the suction hose and return hose to the reservoir tank.

CAUTION:
Firmly insert the plastic clip of return hose to the bracket.



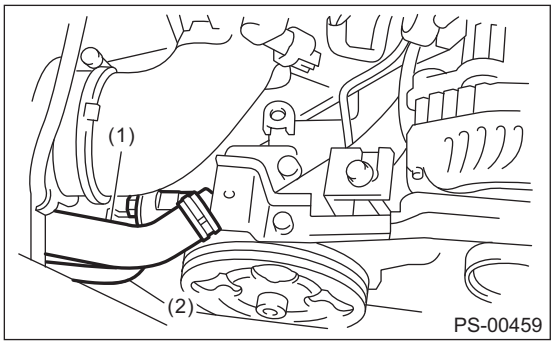
(1) Reservoir tank
(2) Suction hose
(3) Return hose
(4) Plastic clip

4) Tighten the hose bracket bolt.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

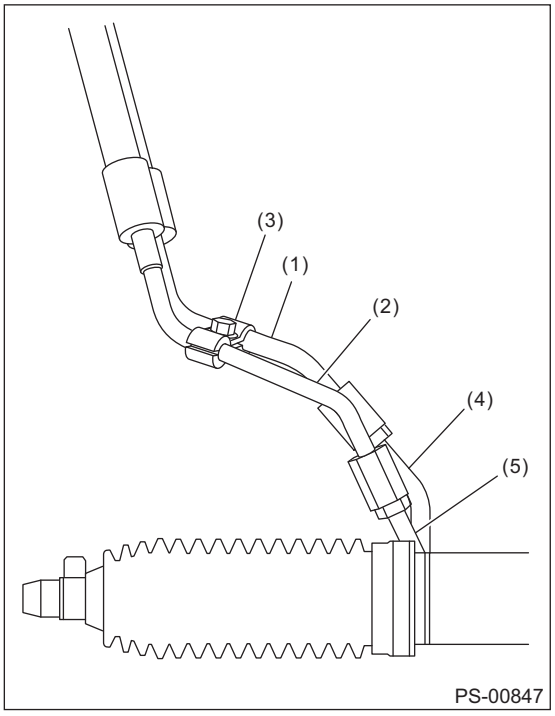
5) Connect the suction hose and pressure hose to the oil pump. Tighten the eyebolt of pressure hose.

Tightening torque:
40 N·m (4.1 kgf-m, 29.5 ft-lb)



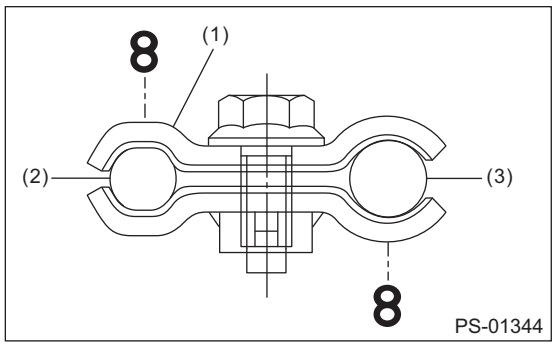
(1) Suction hose
(2) Pressure hose

6) Temporarily connect the pressure hose to feed pipe and return hose to return pipe. Temporarily tighten the bolt of clamp E.



(1) Return hose
(2) Pressure hose
(3) Clamp E
(4) Return pipe
(5) Feed pipe

NOTE:
Make sure that the character “8” on each clamp is positioned on the opposite side, as shown in the figure.



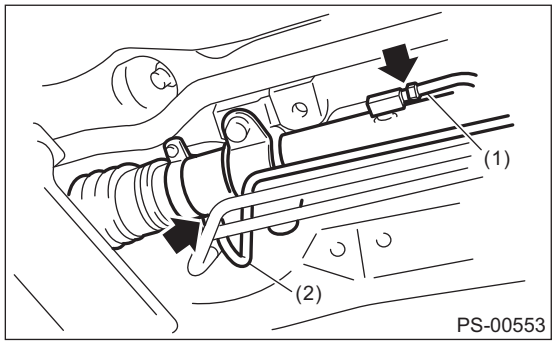
(1) Clamp E
(2) Pressure hose
(3) Return hose

7) Tighten clamp E.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
8) Tighten the pressure hose to feed pipe and return hose to return pipe.

Tightening torque:
15 N·m (1.5 kgf-m, 11.1 ft-lb)
9) Connect pipes A and B to the four pipe joints of the gearbox.

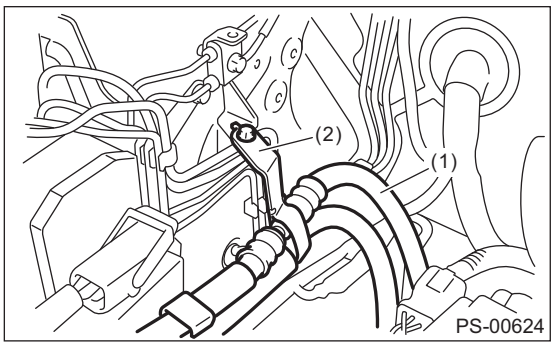
Tightening torque:
Cylinder side: 27 N·m (2.8 kgf-m, 19.9 ft-lb)
Gear housing side: 17 N·m (1.7 kgf-m, 12.5 ft-lb)



(1) Pipe A
(2) Pipe B

10) Install the front crossmember support plate and jack-up plate.
11) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
12) Lower the vehicle.
13) Tighten the bolts which hold the hose bracket.

Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)



(1) Hose ASSY
(2) Hose bracket

14) Install the air intake duct. <Ref. to IN(STI)-9, INSTALLATION, Air Intake Duct.>
15) Connect the battery ground terminal.
16) Fill with the specified fluid.

CAUTION:
Never start the engine before filling with fluid; otherwise the vane pump may become seized.
17) Finally, check the clearance between pipes or hoses as shown in the figure indicated in "General Diagnostic Table". <Ref. to PS-106, CLEARANCE CHECK (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>

C: INSPECTION

Check all disassembled parts for wear, damage or other problems. Repair or replace the defective parts as necessary.

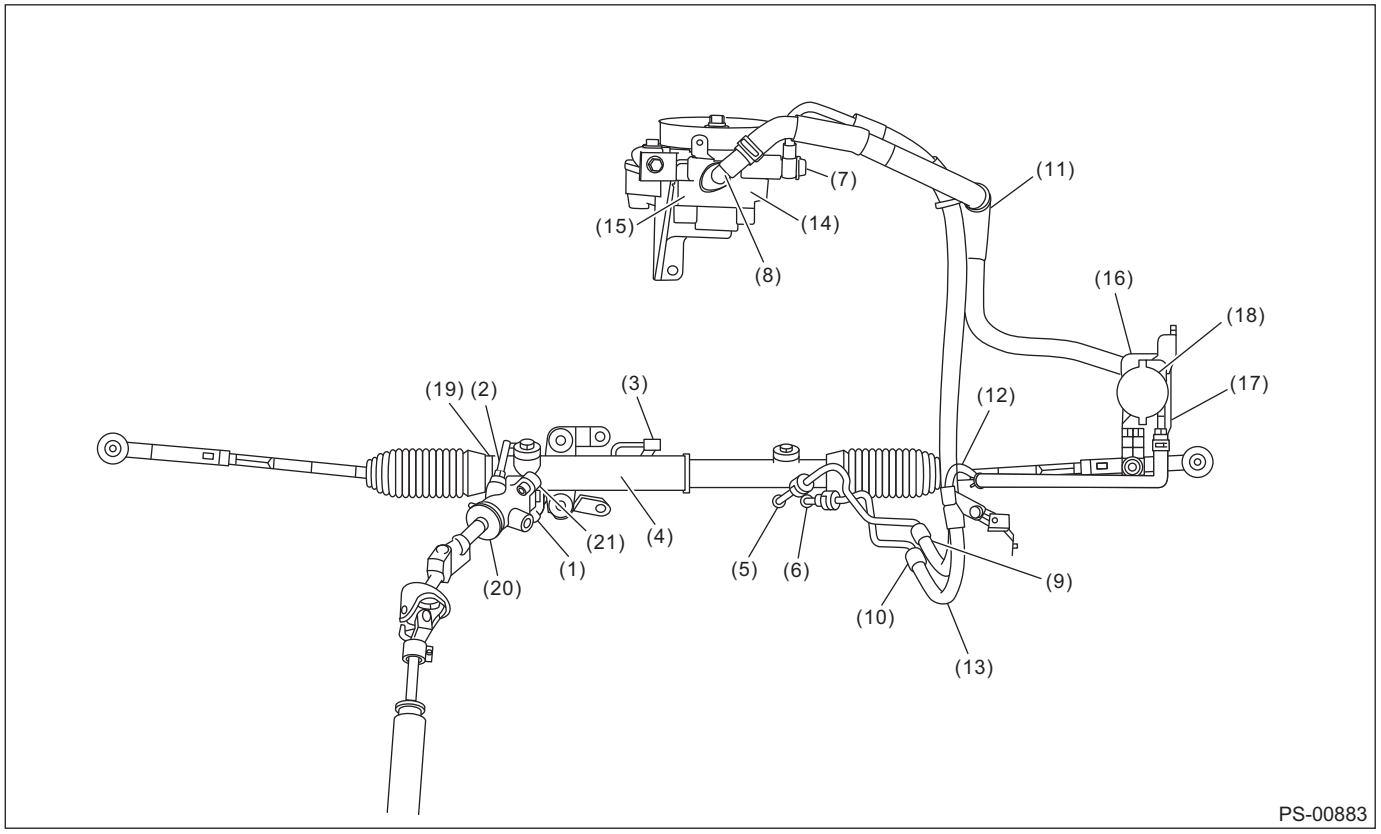
Part	Maintenance parts	Corrective action
Pipe	• O-ring fitting surface damage • Nut damage • Pipe damage	Replace with a new part.
Hose	• Flare surface damage • Flare nut damage • Outer surface cracks • Outer surface wear • Clip damage • End coupling or adapter deformation	Replace with a new part.

CAUTION:
Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe off hoses immediately if any of these come into contact with the hoses.
Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.
Continuous discharge of the relief valve for 5 seconds or more will reduce the service lives of hoses, oil pump, fluid, etc., due to over heating.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of the relief valve	Replace the oil pump.
	Poor cold characteristic of fluid	Replace fluid.

Trouble	Possible cause	Corrective action
Disconnection of the return hose	Improper connection	Repair.
	Loosening of the clip	Replace the hose and clip.
	Poor cold characteristic of fluid	Replace fluid.
Fluid slightly leaking out of hose	Wrong layout, tensioned	Replace the hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Be careful during service work.

NOTE:
There are conditions in which a fluid leak is diagnosed, but is not actually leaking. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.



Fluid leaking area	Possible cause	Corrective action
Leakage from the connections of pipes and hoses, numbered (1) through (8) in the figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eyebolt	Loosen and retighten. Replace if ineffective.
	Improper installation of hose or clamp	Replace.
	Damaged O-ring or gasket	Replace the O-ring, gasket pipe or hose with new part, if still no improvement, replace the gearbox or oil pump as well.
Leakage from hose (9) through (13) in the figure	Crack or damage in hose	Replace with a new part.
	Crack or damage in hose hardware	Replace with a new part.
Leakage from surrounding of aluminum portion of oil pump, (14) and (15) in the figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.

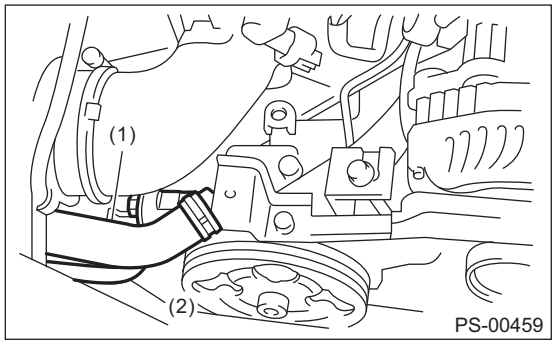
Fluid leaking area	Possible cause	Corrective action
Leakage from oil tank, (16) and (17) in the figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck of (18)	Damaged cap packing	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	Fluid level too high	Adjust the fluid level.
Leakage from power cylinder of gear-box area (19) in the figure	Damaged oil seal	Replace the oil seal.
Leakage from (20), (21) in the figure and control valve of gearbox	Damaged packing or oil seal	Replace the faulty parts.
	Damage in control valve	Replace the control valve.

9. Oil Pump

A: REMOVAL

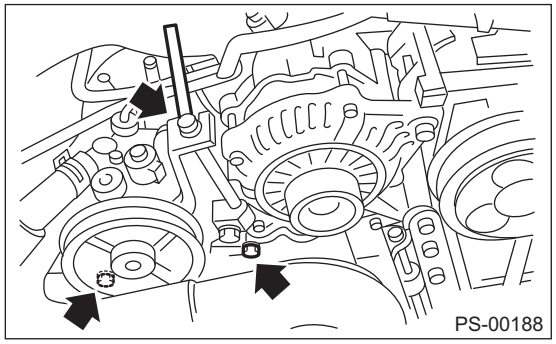
1) Disconnect the ground cable from battery.
2) Remove the V-belts (front side belt). <Ref. to ME(STI)-42, REMOVAL, V-belt.>
3) Disconnect the connector from power steering pump switch.
4) Disconnect the pressure hose and suction hose from the oil pump.

CAUTION:
- **Do not allow fluid to come into contact with the pulley belt.**
- **To prevent foreign matter from entering the hose and pipe, cover the open ends with clean cloth.**



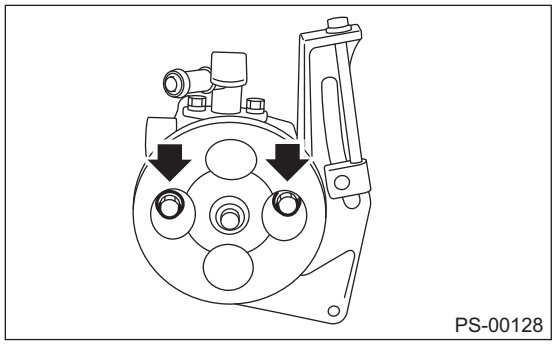
(1) Suction hose
(2) Pressure hose

5) Remove the installation bolt of the power steering pump bracket.



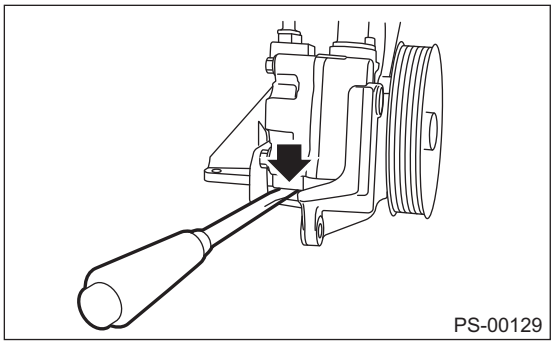
6) Place the oil pump bracket in a vise, and remove the two bolts from the front side of the oil pump.

CAUTION:
When securing the oil pump bracket in a vice, hold the oil pump bracket with the least possible force between two pieces of wood.



7) Remove the bolt from the rear side of oil pump.

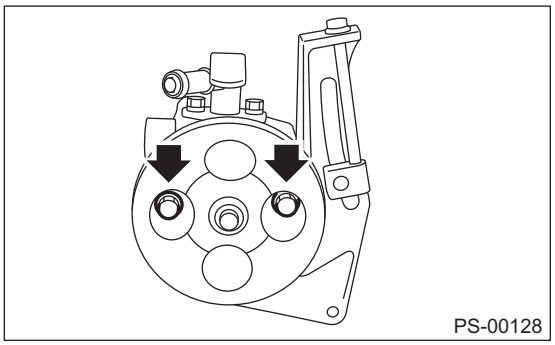
8) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.



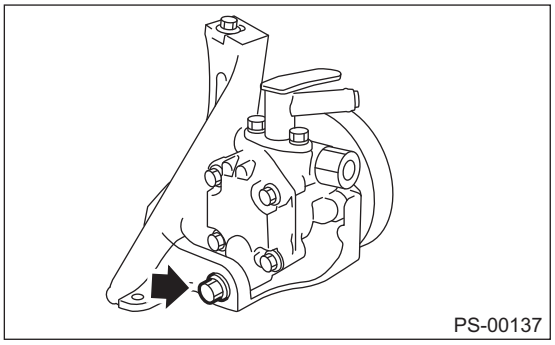
B: INSTALLATION

1) Install the oil pump to bracket.
2) Tighten the bolts which hold the oil pump to the bracket.

Tightening torque:
16 N·m (1.6 kgf-m, 11.8 ft-lb)

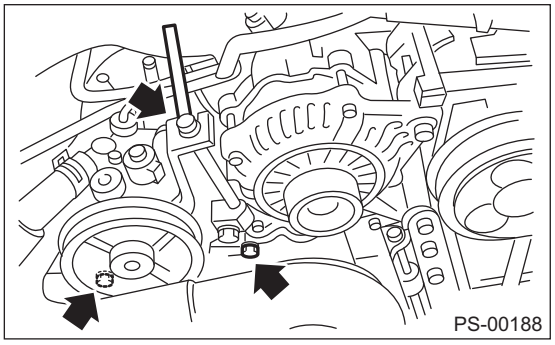


Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)



3) Attach the installation bolts of the power steering pump bracket.

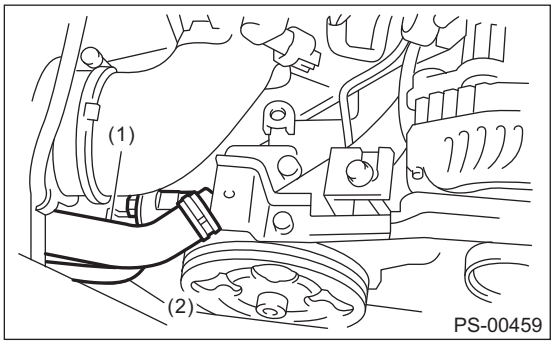
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to PS-8, OIL PUMP, COMPONENT, General Description.>



4) Connect the pressure hose and suction hose.

CAUTION:
Be careful when installing; If the hose is twisted it may come into contact with other parts.

Tightening torque:
Eyebolt
40 N·m (4.1 kgf-m, 29.5 ft-lb)



(1) Suction hose
(2) Pressure hose

5) Connect the power steering pump switch to the connector.
6) After installing the oil pump, fill the oil pump with fluid while rotating the pulley by hand and bleed the air from the oil pump.

CAUTION:
Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.
7) Install the V-belts (front side belt). <Ref. to ME(STI)-42, INSTALLATION, V-belt.>
8) Connect the battery ground terminal.
9) Fill with the specified power steering fluid. <Ref. to PS-96, Power Steering Fluid.>

CAUTION:
Never start the engine before filling with fluid; otherwise the vane pump may become seized.

C: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and replace faulty parts.

No.	Parts	Inspection	Corrective action
1	Oil pump (exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new part.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new part.

No.	Parts	Inspection	Corrective action
2	Pulley	(1) Damage	Replace the oil pump with a new part.
		(2) Bend	Measure the V groove deflection. If it exceeds the service limit, replace the oil pump with a new part.
3	Oil pump (interior)	(1) Faulty or seized of vane pump	Check the rotating resistance of pulley. If it exceeds the service limit, replace the oil pump with a new part.
		(2) Bend in the shaft or damage to bearing	If the a string is wrapped on the pulley and rotated, and the oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump, replace the oil pump with a new part.
4	O-ring	Cracking or deterioration	Replace with a new part.
5	Bracket	Cracks	Replace with a new part.

2. SERVICE LIMIT

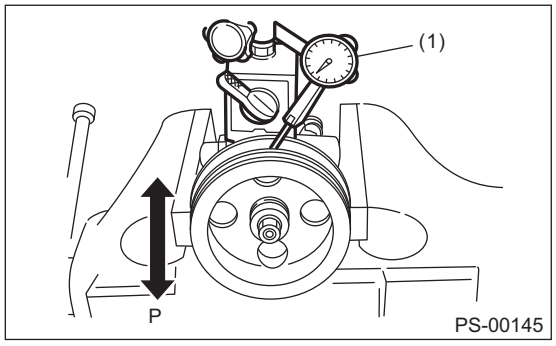
Make a measurements as follows. If it exceeds the service limit, replace with a new part.

CAUTION:
• When securing the oil pump in a vice, hold the oil pump with the least possible force between two pieces of wood.
• Do not set the outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

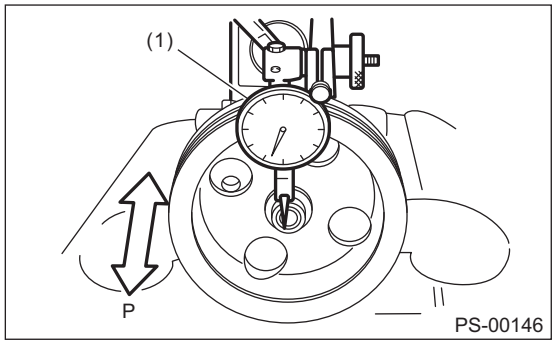
Condition:
P: When applying a force of 9.8 N (1 kgf, 2.2 lbf)

Service limit:
Play in the radial direction (direction ⬅ ➡)
0.2 mm (0.008 in) or less



(1) Dial gauge

Axial play (direction ⇦ ⇨)
0.9 mm (0.035 in) or less

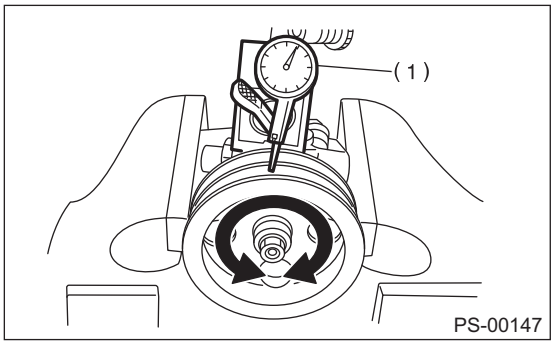


(1) Dial gauge

2) Deflection of the pulley groove

Service limit:
1 mm (0.039 in) or less

NOTE:
Read the value on one surface of V groove, set the dial gauge on the other surface, and read the value of the dial gauge.

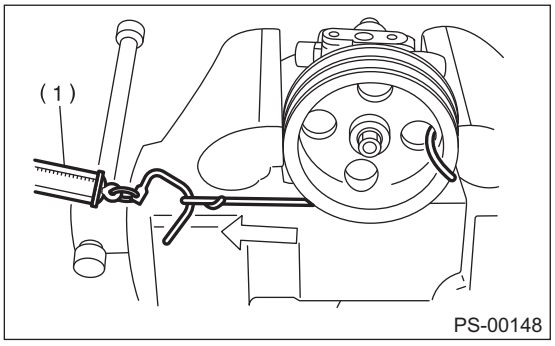


(1) Dial gauge

3) Rotating resistance of pulley

Service limit:
Maximum load: 9.22 N (0.94 kgf, 2.07 lbf) or less

NOTE:
- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation to make a judgment.



(1) Spring scale

3. HYDRAULIC PRESSURE

NOTE:
- To measure hydraulic pressure correctly, be sure to complete all the items in “INSPECTION”, prior to performing the measurement. <Ref. to PS-98, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at lock for 5 seconds or more in any case, this can damage the oil pump.
- Before attaching a pressure gauge, place cloth at locations where fluid is expected to spill. Wipe off any spilt fluid completely after the measurement.

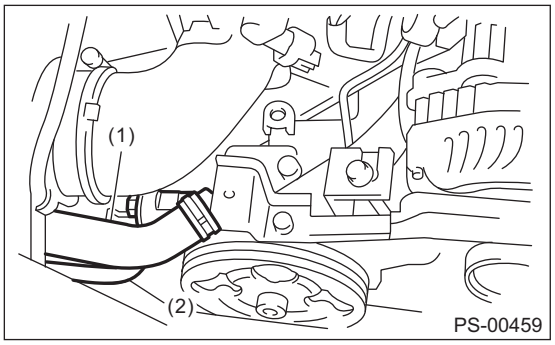
1) Regular pressure measurement
(1) Connect the ST.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)

(2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>

(3) Disconnect the pressure hose from the pump.
(4) Using the gasket and bolt, install the ST2 to the pump instead of the pressure hose.

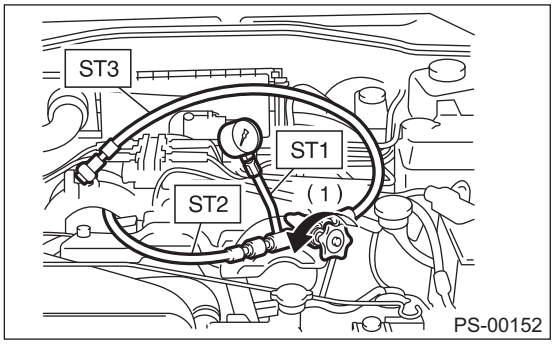
Preparation items:
Genuine part: Gasket (34621AC021)
Genuine part: Bolt (34620AC010)



(1) Suction hose
(2) Pressure hose

(5) Attach the ST3 to the end of pressure hose which is removed from pump.
(6) Replenish power steering fluid up to the specified level.
(7) Open the valve, and start the engine.
(8) Measure the regular pressure.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)

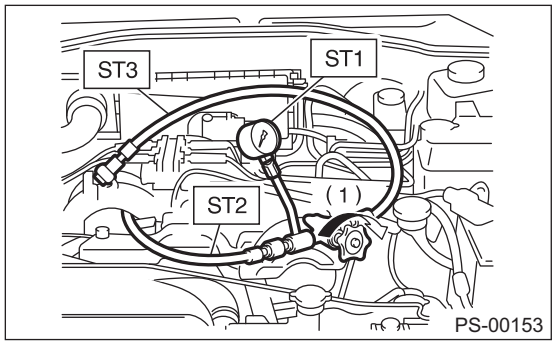


(1) Valve

Service limit:
981 kPa (10 kgf/cm^2, 142 psi) or less
(9) If it is not within the specification, replace the faulty part for the following problems. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matter in fluid line)

2) Measure the relief pressure.
(1) Using the ST, measure the relief pressure.
(2) Close the valve.
(3) Measure the relief pressure.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)



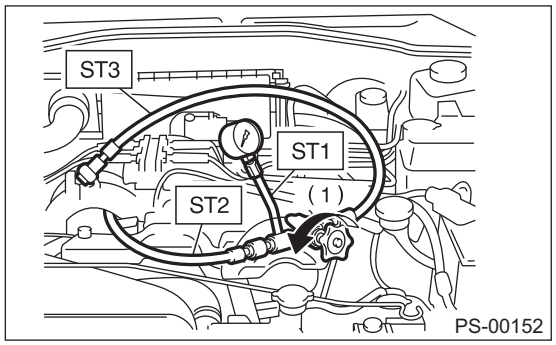
(1) Valve

Service limit:
8,300 — 9,000 kPa (85 — 92 kgf/cm^2, 1,203 — 1,305 psi)

(4) If the torque is not within specified range, replace the oil pump.

3) Measure the operating pressure.
(1) Using the ST, measure the operating pressure.
(2) Open the valve.
(3) Measure the operating pressure of control valve by turning steering wheel from stop to stop.

Preparation tool:
ST1: PRESSURE GAUGE (925711000)
ST2: ADAPTER HOSE B (34099AC020)
ST3: ADAPTER HOSE A (34099AC010)



(1) Valve

Service limit:
8,300 — 9,000 kPa (85 — 92 kgf/cm^2, 1,203 — 1,305 psi)

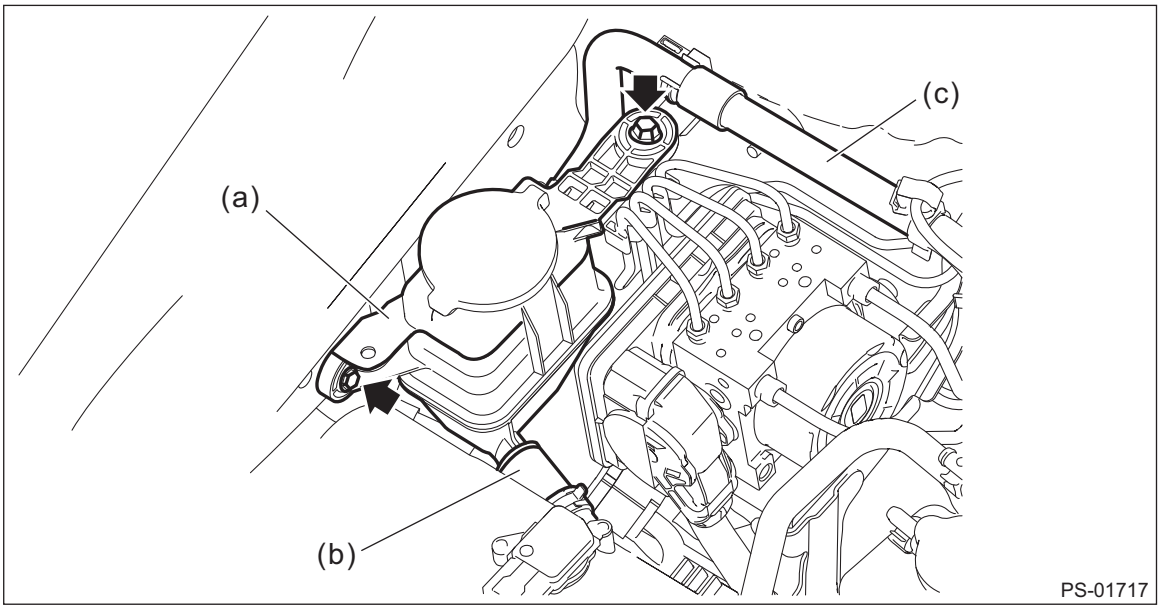
(4) If it is out of specification, measure the steering effort. <Ref. to PS-102, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>
If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

10.Reservoir Tank

A: REMOVAL

1) Drain the power steering fluid.
2) Disconnect the hose - suction and the hose - return.

CAUTION:
Plug the ends of the hose and pipe to prevent foreign matter from entering.
3) Remove the bolt and remove the reservoir - tank assembly.



(a) Reservoir - tank ASSY (b) Hose - suction (c) Hose - return

B: INSTALLATION

1) Install the reservoir - tank assembly.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)
2) Connect the hose - suction and the hose - return to the reservoir - tank assembly.
3) Replenish power steering fluid up to the specified level. <Ref. to PS-96, INSPECTION, Power Steering Fluid.>

C: INSPECTION

Check the reservoir - tank assembly for cracks, breakage or damage. If a failure is found, replace the reservoir - tank assembly.

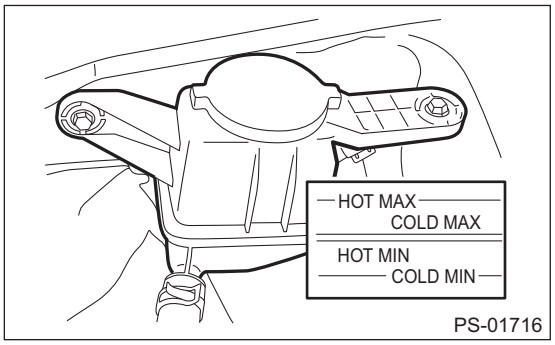
11.Power Steering Fluid

A: SPECIFICATION

Recommended power steering fluid:
SUBARU ATF or ATF DEXRON III

B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.
2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.
3) Inspect the fluid level of the reservoir - tank assembly with vehicle on level surface and engine stopped. If the level is at “MIN.” point or below, add fluid to keep the level in the specified range of the indicator. If at “MAX.” point or above, drain fluid by using a syringe or the like.
   (1) When the power steering fluid temperature is 20°C (68°F), check the fluid level on the “COLD” side.
   (2) When the power steering fluid temperature is 80°C (176°F), check the fluid level on the “HOT” side.



C: REPLACEMENT

1) Lift up the vehicle.
2) Drain the power steering fluid.
   (1) Remove the pipe joint of the gearbox, and connect the vinyl hose to the pipe and the joint.
   (2) Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise.
3) Add the specified fluid to the reservoir - tank assembly at “MAX” level.
4) Continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface while keeping the fluid at the level in the step 3).
5) If the steering wheel is turned in a low fluid level condition, air will be sucked into the pipe. If air has entered, leave it for about half an hour and then repeat step 4) again.
6) Start the engine and let it idle.
7) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface, while keeping the fluid at the level in step 3).
Normally bubbles will stop appearing after turning the steering wheel from lock to lock three times.
8) In case bubbles do not stop appearing in the tank, leave it for about half an hour and then repeat from step 3) again.
9) Lower the vehicle, and then idle the engine.
10) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).
11) In case the following happens, leave it about half an hour and then perform step 7) to 10) again.
   (1) The fluid level changes by 3 mm (0.12 in) or more.
   (2) Bubbles remain on the upper surface of the fluid.
   (3) Grinding noise is generated from oil pump.
12) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

12.Power Steering Control Module

A: NOTE

Power steering control module is integrated with the electric power steering gearbox assembly. For the operation procedure, refer to “Electric Power Steering Gearbox”. <Ref. to PS-64, Electric Power Steering Gearbox.>

13.General Diagnostic Table

A: INSPECTION

- Hydraulic type

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Pulley belt • Unequal length of pulley belts • Contact with oil or grease • Looseness or damage of the pulley belt • Poor uniformity of the pulley belt cross section • Pulley belt touches to pulley bottom • Poor revolution of pulleys (except oil pump pulley) • Poor revolution of oil pump pulley	Adjust or replace the faulty parts.
	2. Tire and wheel • Improper tire out of specifications*1 • Improper wheel out of specifications*1 • Tires not properly inflated	Replace or reinflate the tire and wheel. Instruct customers.
	3. Fluid • Low fluid level • Air entry in fluid • Dust entry in fluid • Fluid deterioration • Inadequate warm up of fluid*2	Refill the fluid, bleed air, replace or instruct customer.
	4. Idle speed • Lower idle speed • Excessive drop of idle speed at start or when turning the steering wheel*3	Adjust the idle speed or instruct customer.
	5. Measure the hydraulic pressure. <Ref. to PS-90, INSPECTION, Oil Pump.>	Replace the faulty parts.
	6. Measure the steering wheel effort. <Ref. to PS-102, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace.
	7. Fluid line • Fluid leakage from fluid line	Repair or replace.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Others • Damaged joint assembly • Unbalance of ground clearance • Unbalance of load	Replace or adjust the faulty parts, or instruct customer.
	4. Measure the steering wheel effort. <Ref. to PS-102, MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.

*1 If the tires or wheels are wider than standard, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before reaching maximum turning angle. In this situation, steering effort may become relatively heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.
*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm up fluid. If steering effort reduces normally, function is normal.

*3 In cold weather or with insufficient warm up of the engine, steering effort may be heavy due to excessive drop of idling when turning the steering wheel. Start the vehicle with increasing engine speed than usual. If the steering effort returns to normal, the function operates normally.

- Electric type

Trouble	Possible cause	Corrective action
• Steering effort is heavy in all ranges. • Steering effort is heavy at stand still. • Steering wheel vibrates when turning.	1. Tire and wheel • Improper tire out of specifications • Improper wheel out of specification • Tires not properly inflated	Replace or reinflate the tire and wheel.
	2. Measure the steering wheel effort. <Ref. to PS-103, MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.
• Vehicle leads to one side or the other. • Returning force of steering wheel to center is poor. • Steering wheel vibrates when turning.	1. Tire and wheel • Flat tire • Mixed use of different tires • Mixed use of different wheels • Abnormal wear of tire • Unequal tread remaining • Unequal pressure of tire	Adjust, repair or replace the tire and wheel.
	2. Front wheel alignment • Improper or unequal caster • Improper or unequal toe-in • Loose suspension connections	Adjust or retighten.
	3. Measure the steering wheel effort. <Ref. to PS-103, MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE), INSPECTION, General Diagnostic Table.>	Adjust or replace the faulty parts.

NOTE:
When performing repeated steering operation with the vehicle at standstill, the steering effort may be temporarily heavy because the heat generated in the system activates the power steering protection control. This is not a malfunction caused by the steering system. After a while, it will return to normal steering effort. (In this case, the steering warning light will not come on and there will be no DTC.)

1. NOISE & VIBRATION (HYDRAULIC TYPE)

CAUTION:
Do not keep the relief valve operated for five seconds or more at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:
• A grinding noise may be heard immediately after the engine start in extremely cold conditions. In this case, if the noise goes off during warm up there is no abnormal function in the system. This is due to the fluid characteristics in extremely cold condition.
• The oil pump normally makes a small whining noise due to its mechanism. Even if a noise is heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is driving.
• When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.

• There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.
Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.
These conditions do not indicate a problem in the system.
Confirm vibration by applying the parking brake on a concrete surface and turning the steering wheel from slowly to rapidly, in steps.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition for 5 seconds or more.)	Normal
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-85, INSPECTION, Pipe Assembly.>
	Looseness of the installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Looseness of oil pump pulley or other pulley(s)	Retighten.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace faulty parts in the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Air in vane pump	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Oil pump pulley bearing seized	Replace the oil pump.
	Folded hose, flattened pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Improper adjustment of pulley belt Damaged or over tensioned pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or dirty V-groove surface of oil pump pulley	Clean or replace.
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the faulty part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Faulty inside of hose or pipe Flattened hose or pipe	Repair or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Faulty pipe of gearbox or faulty hose	Replace the faulty parts of the gearbox or the hose.
Whine or growl (intermittent or continuous) While engine is running (with/without steering turned).	Looseness of oil pump, oil pump bracket attachment	Retighten.
	Fault inside of oil pump or hose	Replace the oil pump or hose, if the noise can be heard when vehicle is running as well as being stopped.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and check.

Trouble	Possible cause	Corrective action
Grinding noise (intermittent) While engine is running (with the steering turned).	Fault inside of gearbox	Replace the faulty parts of gearbox.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running (with/ without steering turned).	Engine speed is too low.	Adjust, and notify customer.
	Air in vane pump	Repair faulty part. Vent air.
	Damaged valve in oil pump or gearbox	Replace the faulty parts in gearbox and oil pump.
	Excessive play in steering, looseness of suspension parts	Retighten.

2. NOISE & VIBRATION (ELECTRIC TYPE)

NOTE:

- When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
- There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Trouble	Possible cause	Corrective action
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Noise emitted from inside of the gearbox	Replace the gearbox assembly.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust the backlash. When the noise remains after adjustment, replace the gearbox assembly.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (intermittent) While engine is running. (While operating the steering.)	Fault inside of gearbox	Replace the gearbox assembly.
	Faulty bearing of the column assembly - steering	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running. (with/ without steering turned)	Excessive play in steering, looseness of suspension parts	Retighten.

3. MEASUREMENT OF STEERING EFFORT (HYDRAULIC TYPE)

	Step	Check	Yes	No
1	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Start the engine. 3) Run the engine at idle. 4) Install a spring scale on the steering wheel. 5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-10194 NOTE: When turning the steering more quickly than necessary from a direction to the other direction at an engine speed of 2,000 r/min or higher, steering effort may be heavy. This is caused by flow characteristic of the fluid in the oil pump and is not a defect.	Is the steering effort less than 31 N (3.2 kgf, 7 lbf)?	Steering effort is normal.	Go to step **2**.
2	**CHECK STEERING EFFORT.** 1) Stop the engine and lift up the vehicle. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 15 N (1.53 kgf, 3.4 lbf)?	Go to step **3**.	Perform the backlash adjustment.
3	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **4**.	Replace the column assembly - steering.
4	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **5**.	Replace the column assembly - steering.
5	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of the joint (yoke on the column assembly - steering side). <Ref. to PS-22, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 7.3 N (0.74 kgf, 1.64 lbf)?	Go to step **6**.	Replace the universal joint assembly - steering.
6	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of the joint (yoke of gearbox side). <Ref. to PS-22, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 3.8 N (0.39 kgf, 0.86 lbf)?	Go to step **7**.	Replace the universal joint assembly - steering.
7	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **8**.
8	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends from housing.	Does the tie-rod ends have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-58, LIMIT, INSPECTION, Steering Gearbox.>	Is the rotating resistance of steering gearbox less than 21 N (2.1 kgf, 4.7 lbf)? Is the difference between clockwise and counterclockwise less than 20%?	Go to step **10**.	Readjust the backlash, and if ineffective, replace the faulty parts.
10	**CHECK GEARBOX.** Measure the sliding of gearbox. <Ref. to PS-58, LIMIT, INSPECTION, Steering Gearbox.>	Is the sliding resistance of the steering gearbox less than 343 N (35 kgf, 77 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal. Check the suspension.	Readjust the backlash, and if ineffective, replace the faulty parts.

4. MEASUREMENT OF STEERING EFFORT (ELECTRIC TYPE)

	Step	Check	Yes	No
1	**CHECK STEERING WARNING LIGHT.**	Does the steering warning light illuminate?	Using Subaru Select Monitor, read the DTC and inspect according to it. For detailed operation procedures, refer to “Application help”.	Go to step **2**.
2	**CHECK STEERING WARNING LIGHT.** 1) Display the data of «EPS operating condition» using Subaru Select Monitor. 2) Connect the Subaru Select Monitor, and turn the steering wheel. (One lock to lock)	Is the «EPS operating condition» normal without displaying any DTC code?	Go to step **3**.	If the «EPS operating condition» is “Assist limitation”, stop the engine for approx. 30 minutes and perform the procedures from step 1 again.
3	**CHECK STEERING EFFORT.** 1) Stop the vehicle on paved road. 2) Set the tire air pressure to the specification. 3) Start the engine. 4) Run the engine at idle. 5) Install a spring scale on the steering wheel. 6) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  PS-10194	Is the steering effort less than 31 N (3.2 kgf, 7.0 lbf)?	Go to step **4**.	Go to step **8**.
4	**CHECK STEERING EFFORT.** 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?	Go to step **5**.	Perform the inspection or adjustment around the suspension part.

	Step	Check	Yes	No
5	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Using Subaru Select Monitor, display the data of «Torque sensor main output» and «Torque sensor sub output». 2) Read the voltage value of torque sensor. NOTE: When measuring, place the steering wheel at the center position.	Is the voltage 2.425 — 2.575 V?	Go to step **6**.	Replace the gearbox assembly. <Ref. to PS-64, Electric Power Steering Gearbox.>
6	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. 2) Using Subaru Select Monitor, display the data of «Torque sensor main output» and «Torque sensor sub output». 3) Read the voltage value of torque sensor.	Is the voltage 2.425 — 2.575 V?	Go to step **7**.	Replace the gearbox assembly. <Ref. to PS-64, Electric Power Steering Gearbox.>
7	**CHECK TORQUE SENSOR OUTPUT VALUE.** 1) Remove the universal joint assembly - steering. NOTE: Check that the universal joint assembly - steering moves up and down smoothly without installing the bolt. Then tighten the bolts first on the gearbox side and then on the column shaft side. 2) Using Subaru Select Monitor, display the data of «Torque sensor main output» and «Torque sensor sub output». 3) Read the voltage value of torque sensor.	Is the voltage 2.425 — 2.575 V?	Go to step **8**.	Check the universal joint assembly - steering. <Ref. to PS-64, Electric Power Steering Gearbox.>
8	**CHECK STEERING WHEEL EFFORT.** 1) Remove the universal joint assembly - steering. 2) Measure the steering wheel effort.	Is the steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?	Go to step **9**.	Replace the column assembly - steering. <Ref. to PS-64, Electric Power Steering Gearbox.>
9	**CHECK STEERING WHEEL EFFORT.** Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step **10**.	Replace the column assembly - steering. <Ref. to PS-24, Steering Column.>
10	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of joint. (Yoke of column assembly - steering side) <Ref. to PS-22, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 8.1 N (0.81 kgf, 1.84 lbf)?	Go to step **11**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-19, Universal Joint.>
11	**CHECK UNIVERSAL JOINT ASSEMBLY - STEERING.** Measure the swing torque of joint. (Yoke of gearbox side) <Ref. to PS-22, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint assembly - steering less than 6.8 N (0.68 kgf, 1.54 lbf)?	Go to step **12**.	Replace the universal joint assembly - steering with a new part. <Ref. to PS-19, Universal Joint.>
12	**CHECK FRONT WHEEL.** Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step **13**.
13	**CHECK TIE-ROD ENDS.** Remove the tie-rod ends.	Does the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **14**.

	Step	Check	Yes	No
14	**CHECK BALL JOINT.** Remove the ball joint.	Does the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step **15**.
15	**CHECK GEARBOX.** Measure the rotating of gearbox. <Ref. to PS-73, LIMIT, INSPECTION, Electric Power Steering Gearbox.>	Is the rotational resistance of steering gearbox less than 18 N (1.8 kgf, 4.0 lbf)? Is the difference between clockwise and counterclockwise less than 20%?	Go to step **16**.	Replace the gearbox assembly. <Ref. to PS-64, Electric Power Steering Gearbox.>
16	**CHECK GEARBOX.** Measure the sliding of gearbox.	Is the sliding resistance of the steering gearbox less than 360 N (36.7 kgf, 80.9 lbf)? Is the difference between the right and left sliding resistances less than 20%?	Steering effort is normal.	Replace the gearbox assembly. <Ref. to PS-64, Electric Power Steering Gearbox.>

5. CLEARANCE CHECK (HYDRAULIC TYPE)

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Crossmember to hose ASSY	3 (0.12)
(2) Front exhaust pipe to hose ASSY	15 (0.59)
(3) Front frame side to hose ASSY	10 (0.39)
(4) Master cylinder to return hose	10 (0.39)
(5) Master cylinder to hose clip	10 (0.39)
(6) VDC H/U to hose ASSY	5 (0.20)
(7) Air cleaner to hose ASSY	5 (0.20)
(8) Air boot to hose ASSY	10 (0.39)
(9) Air cleaner hose to hose ASSY	10 (0.39)
(10) Brake pipe to return hose	10 (0.39)
(11) Front suspension bracket to return hose	5 (0.20)
(12) Front wheel apron to return hose	5 (0.20)
(13) VDC H/U bracket to suction hose	5 (0.20)
(14) Air cleaner case to suction hose	5 (0.20)
(15) Air intake duct to suction hose	10 (0.39)
(16) Air duct to suction hose	10 (0.39)
(17) Front wheel apron to reservoir tank	5 (0.20)
(18) VDC H/U to reserve tank	5 (0.20)
(19) Valve housing to DOJ (MT model)	12 (0.47)
(20) Valve housing to crossmember (hole)	1 (0.04)
(21) Cannon mount to crossmember	There must be no contact
(22) Pipe to crossmember	5 (0.20)
(23) Pipe to stabilizer	15 (0.59)
(24) Pipe to exhaust pipe	18 (0.71)
(25) Tie-rod end to brake dust cover	2.5 (0.10)
(26) Universal joint column side yoke to master cylinder (closest point of approach when the universal joint turns by 360°)	5 (0.20)

11.	List of Diagnostic Trouble Code (DTC)	23
12.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	25

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• The power steering control module continues to operate after the engine stops and calculate the temperature in the control module. Therefore, before starting service of the power steering system which requires disconnection of the connector, stop the engine and allow approx. 30 minutes until the control module becomes cold.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.) from the power steering control module connector.

NOTE:
• Shake the connector at the suspected trouble location to check for open or short circuits of the harness.
• Refer to “Check List for Interview”. <Ref. to PS(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** 1) Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to PS(diag)-4, Check List for Interview.> 2) Check the illumination status of the STEERING warning light while the engine is running. 3) Before performing diagnostics, check components which might affect power steering problems. <Ref. to PS(diag)-7, INSPECTION, General Description.> 4) Save the data of «Overheating protection intervention history», «IG Count after ECU Overheat Protection(latest)», «IG Count after ECU Overheat Protection(Previous)», «IG Count after ECU Overheat Protection(Before Previous)», and «Assist limited(Low voltage)» using Subaru Select Monitor. <Ref. to PS(diag)-11, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>	Is the check result OK?	Go to step **2**.	Repair or replace each component.
2	**CHECK INDICATION OF DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC using the Subaru Select Monitor. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to PS(diag)-14, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Are DTC, time stamp and freeze frame data displayed?	Record the DTC, time stamp and freeze frame data. Go to step **4**. NOTE: • For the time stamp, refer to LAN section. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> • Depending on DTCs, time stamp may not be stored.	Go to step **3**.

	Step	Check	Yes	No
3	**PERFORM GENERAL DIAGNOSTICS.** 1) If the STEERING warning light is illuminated while the engine is running, perform the Clear Memory Mode. <Ref. to PS(diag)-19, OPERATION, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 3) Read the DTC. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).> 4) Check that the DTC is not displayed.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	<Ref. to PS(diag)-15, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
4	**PERFORM DIAGNOSIS.** 1) Refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-23, LIST, List of Diagnostic Trouble Code (DTC).> 2) Correct the cause of trouble. 3) Check the illumination status of the STEERING warning light while the engine is running, and if the warning light is lit, perform Clear Memory Mode. <Ref. to PS(diag)-19, OPERATION, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 5) Read the DTC. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Check the following items regarding condition of the vehicle.

1. TROUBLE STATUS

Phenomenon of the vehicle	❑ Steering is heavy ❑ Steering is not smooth ❑ Steering is unstable (wondering) ❑ Steering does not return to center ❑ Steering is not straight
	❑ Steering force required is not the same for right and left turn ❑ Steering force required is not even ❑ Steering is too light
	❑ Noise ❑ Vibration ❑ STEERING warning light illuminates ❑ Other
Frequency	❑ Always ❑ Sometimes ❑ Immediately after starting the engine ❑ Only once ❑ Other
	❑ Recovers after leaving it for minutes
Steering wheel operation	❑ Dry steering ❑ When turning ❑ Quick steering ❑ Slow steering ❑ Returning the steering wheel
	❑ Releasing the steering wheel ❑ Only supporting the steering wheel by hand ❑ Repetitive dry steering
Steering wheel status / direction	❑ Around center position ❑ Near end of lock to lock
	❑ When turning the steering to right ❑ When turning the steering to left ❑ Both to right and to left ❑ (1) Steering angle: degrees ❑ (2) Maneuvering time: minutes
	❑ Slow steering ❑ Quick steering ❑ While holding the steering ❑ When repeating the dry wheel operation
Vehicle speed	❑ Stall 0 km/h (0 MPH) ❑ Very low speed — 20 km/h (— 12 MPH) ❑ Low speed — 40 km/h (— 25 MPH) ❑ Medium speed — 80 km/h (— 50 MPH) ❑ High speed — 80 km/h or more (— 50 MPH or more)
	❑ At starting ❑ While accelerating ❑ While decelerating ❑ When accelerating rapidly ❑ When decelerating rapidly
	❑ Other
Engine speed	❑ Idling ❑ (1) Around rpm ❑ (2) rpm — rpm ❑ (3) rpm or more / or less

2. STATE OF STEERING WARNING LIGHT

STEERING warning light illuminates	❑ Always ❑ Sometimes ❑ Only once ❑ Does not illuminate ❑ Other
Ignition key position	❑ LOCK ❑ ACC ❑ ON (when starting engine) ❑ START ❑ ON (when starting engine, while engine is running) ❑ ON (when starting engine, when engine is at a standstill)
Timing	❑ Immediately after turning the ignition ON ❑ Immediately after turning the ignition to START
	❑ Idling ❑ While accelerating ❑ While decelerating ❑ When cruising at — km/h (MPH)
	❑ When other electrical parts are operating (parts name: operating condition:)

3. ENVIRONMENT

a) Weather	❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others:
b) Outside temperature	❑ °C (°F)
c) Road	❑ Inner city ❑ Suburbs ❑ Highway ❑ Local street ❑ Alley way ❑ Private road ❑ Parking lot ❑ Mountain road ❑ Paved road ❑ Unpaved road ❑ Gravel road ❑ Sandy place ❑ Muddy road ❑ Concrete road ❑ Stone pavement ❑ Racetrack ❑ Others:
d) Road surface	❑ Dry ❑ Wet ❑ Covered with fresh snow ❑ Covered with hardened snow ❑ Others:
e) Tire	❑ Tire chain ❑ Studless tire ❑ T-type tire (front RH, front LH, rear RH, rear LH)
f) Tire inflation pressure	Front RH: kPa Front LH: kPa Rear RH: kPa Rear LH: kPa
g) Degree of wear	Front RH: mm (in) Front LH: mm (in) Rear RH: mm (in) Rear LH: mm (in)

h) Genuine part	❑ Yes ❑ No Record after-market parts if any. (Steering wheel, audio, tires, and similar parts)
i) Condition of suspension alignment	
j) Electrical load conditions	❑ Audio ❑ Air conditioner ❑ Other
k) Loaded state	Condition:
l) Repair parts	❑ None ❑ Provided Contents:
m) Others	

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

The airbag system wiring harness is routed near the power steering harness and harness bracket.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing diagnosis, check the following items which might be affecting the power steering problem.

1. BATTERY

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>

2. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOL

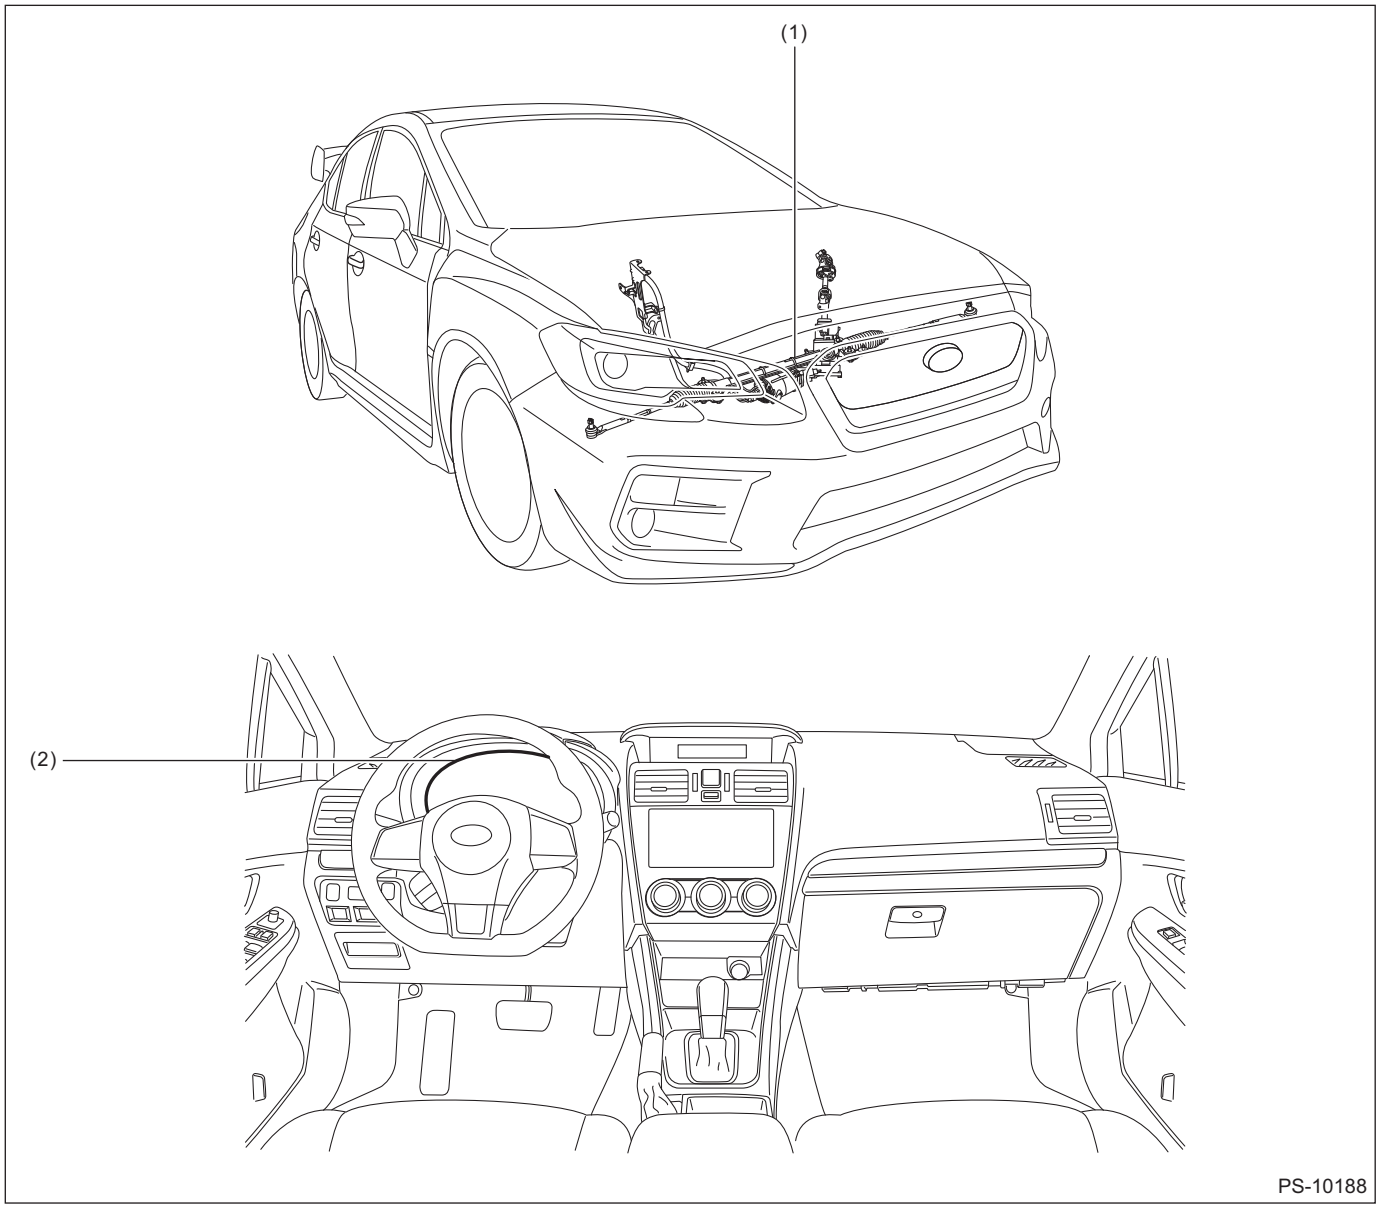
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST34199AG100	34199AG100	SPECIAL TOOL HARNESS	Used for troubleshooting the electrical system.

2. GENERAL TOOL

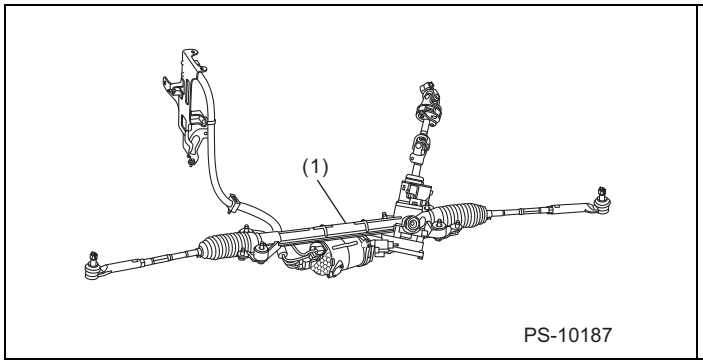
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Oscilloscope	Used for measuring the sensor.
DST-i	Used together with Subaru Select Monitor 4.

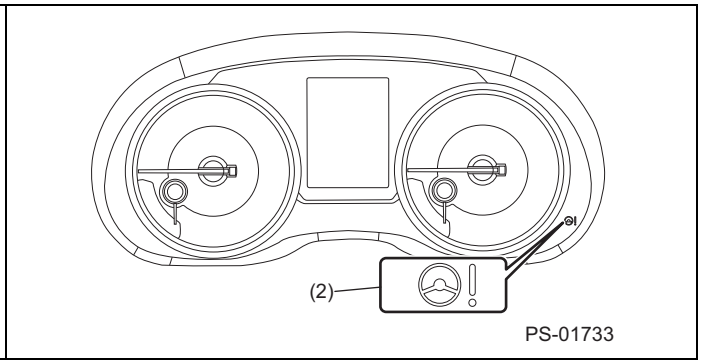
4. Electrical Component Location

A: LOCATION



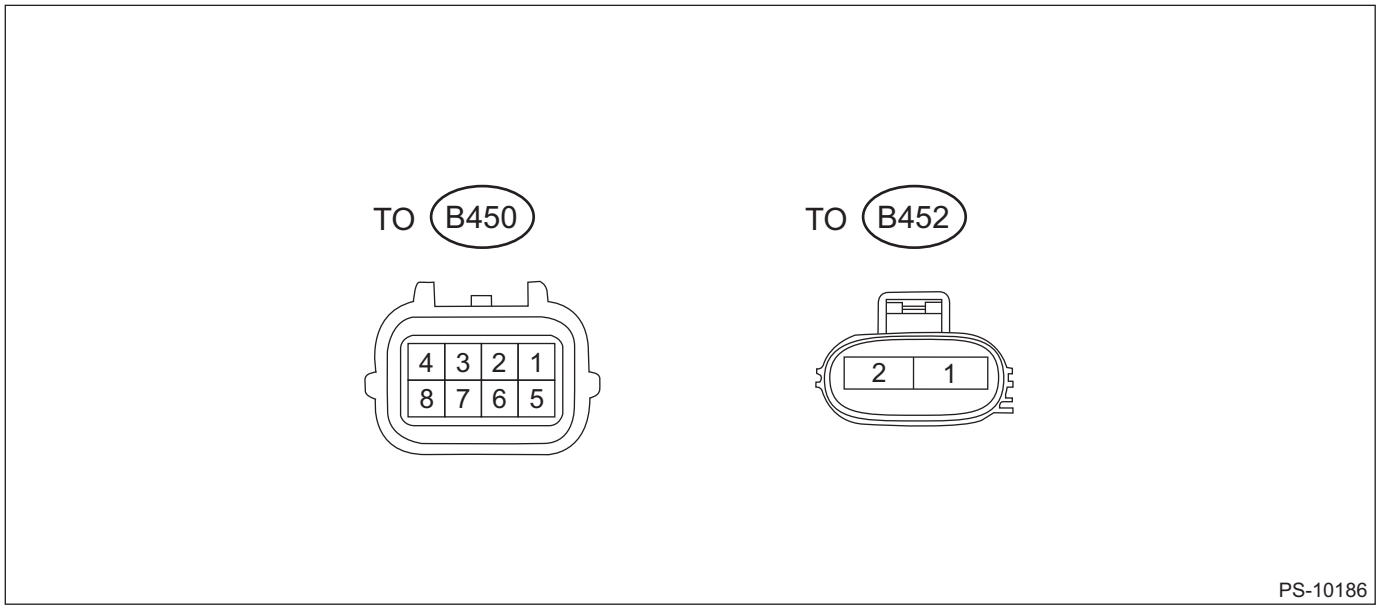
(1) Steering gearbox (including power steering control module)
(2) STEERING warning light





5. Control Module I/O Signal

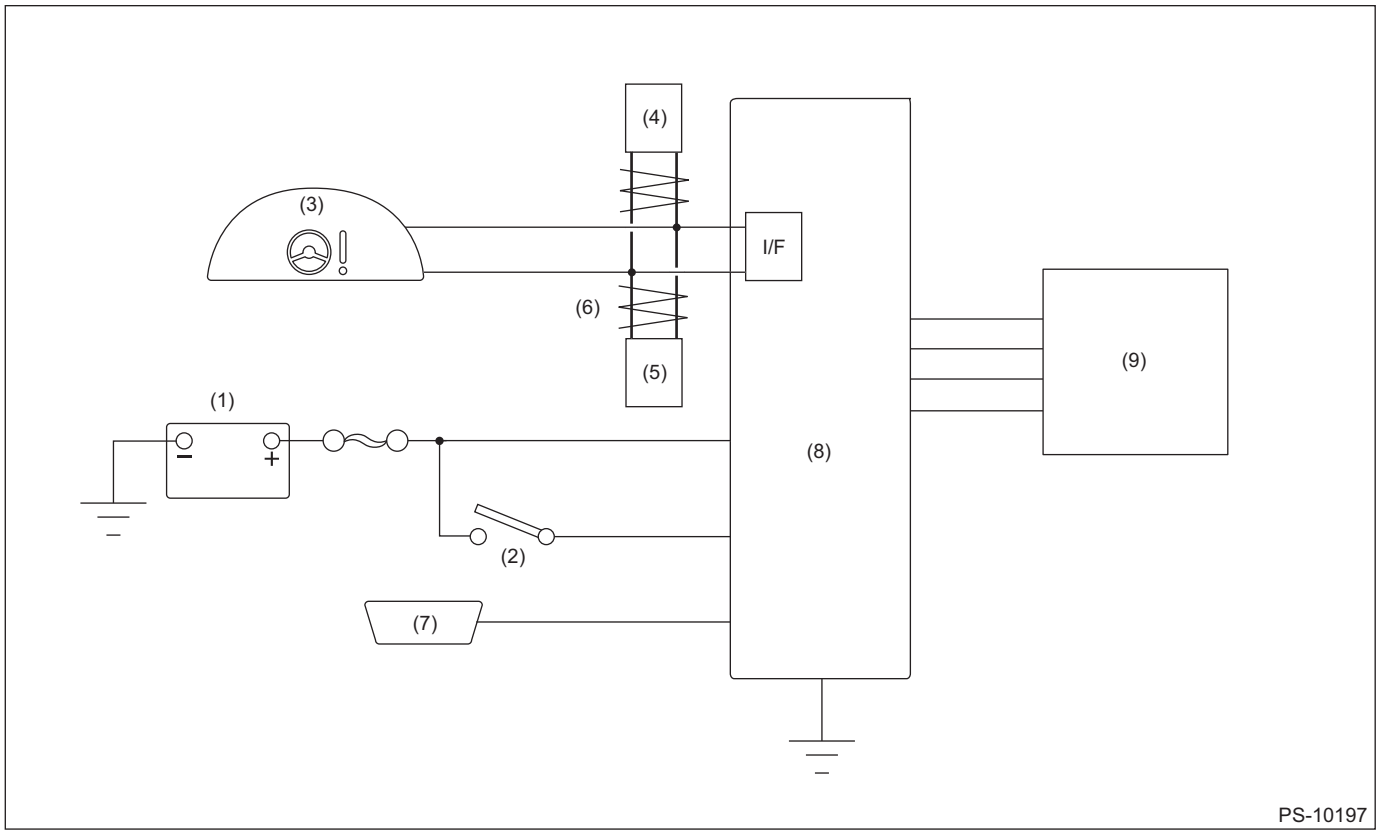
A: ELECTRICAL SPECIFICATION



NOTE:
The terminal numbers of the power steering control module connectors are as indicated in the figure.

Content	Connector No.	Terminal No.	Input/output signal
			Measured value and measuring conditions
Power supply (IG SW)	B450	3	Battery voltage is detected with the ignition switch ON when measuring between (B450) No. 3 — (B452) No. 1.
CAN communication	B450	4	Digital signal; can not be measured
CAN communication	B450	8	Digital signal; can not be measured
Power supply	B452	2	Battery voltage is constantly detected when measuring between (B452) No. 1 — (B452) No. 2.
Ground	B452	1	

B: WIRING DIAGRAM



(1) Battery
(2) Ignition switch
(3) STEERING warning light (combination meter)
(4) Engine control module (ECM)
(5) VDC CM
(6) CAN communication
(7) Data link connector
(8) Power steering control module
(9) Torque sensor

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ CURRENT DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «Data Monitor».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the motor rotation angle sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limited(Abnormal voltage)	Number of interventions by the assist limit control due to voltage malfunction*1	0 — 250	times
IGN-OFF Intervention Count while Running	Number of times the ignition switch is turned OFF while driving*1	0 — 250	times
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms
Assist Map Number	Either Not Selected/MAP1/MAP2/MAP3 is displayed.	—	—
Assist Map Number Discord	Recorded number of the assist MAP number discordance	0 — 250	times

NOTE:
- *1 When the value exceeds the maximum of 250 times, 250 is displayed.

• *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
• For detailed operation procedures, refer to “Application help”.

3. READ FREEZE FRAME DATA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

Display	Contents to be displayed	Range	Unit
Torque sensor main output	Main torque sensor output voltage is displayed.	0 — 5	V
Torque sensor sub output	Sub torque sensor output voltage is displayed.	0 — 5	V
Vehicle Speed	Vehicle speed is displayed. (CAN communication data)	0 — 255	km/h
Engine Speed	Engine speed is displayed. (CAN communication data)	0 — 12750	rpm
CU Sensing Current(q)	The current flowing to the motor relay is displayed.	–128 — 127	A
3-phase motor current (U-phase)	The U phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
3-phase motor current (V-phase)	The V phase actual current value as calculated by the micro-computer from the torque sensor input is displayed.	–128 — 127	A
Motor angular speed	Data from the motor rotation angle sensor is displayed.	–4096 — 4064	rpm
CU Temperature	The thermistor temperature of the steering control module is displayed.	–50 — 205	°C
Power supply voltage	Battery voltage is displayed.	0 — 25.5	V
Torque sensor power supply voltage	The power supply voltage output to the torque sensor is displayed.	0 — 10.2	V
IG Voltage	The power supply voltage supplied to the ECM is displayed.	0 — 25.5	V
CAN Bus Status	Either Active/Passive/Bus Off is displayed.	—	—
EPS operating condition	Either Normal/Assist Stop/Assist Limitation is displayed.	—	—
CU Target current(q)	The motor target current value required for assist is displayed.	–128 — 127	A
Steering angle	Steering angle of steering wheel is displayed.	–640 — 635	deg
Overheating protection intervention history	Number of interventions to the overheat protection control (assist limitation for protecting the power steering from overheating)*1	0 — 250	times
IG Count after ECU Overheat Protection(latest)	Number of times the ignition switch is ON from the intervention to overheat protection control (most recent) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (previous) until now*2	0 — 65000	times
IG Count after ECU Overheat Protection(Before Previous)	Number of times the ignition switch is ON from the intervention to overheat protection control (before previous) until now*2	0 — 65000	times
Assist limited(Abnormal voltage)	Number of interventions by the assist limit control due to voltage malfunction*1	0 — 250	times
IGN-OFF Intervention Count while Running	Number of times the ignition switch is turned OFF while driving*1	0 — 250	times
Motor Current	The current flowing to the motor relay is displayed.	–128 — 127	Arms
Assist Map Number	Either Not Selected/MAP1/MAP2/MAP3 is displayed.	—	—
Assist Map Number Discord	Recorded number of the assist MAP number discordance	0 — 250	times

NOTE:
• *1 When the value exceeds the maximum of 250 times, 250 is displayed.
• *2 When there is no intervention of the overheating protection control, “65535” is displayed. If an error such as control unit memory error, etc. occurs, “65534” is displayed.
• Freeze frame data stored at the time of trouble occurrence is shown on the display.

- Data of the first trouble occurrence is stored as the freeze frame data in memory.
- Three freeze frame data are stored.
- For detailed operation procedures, refer to “Application help”.

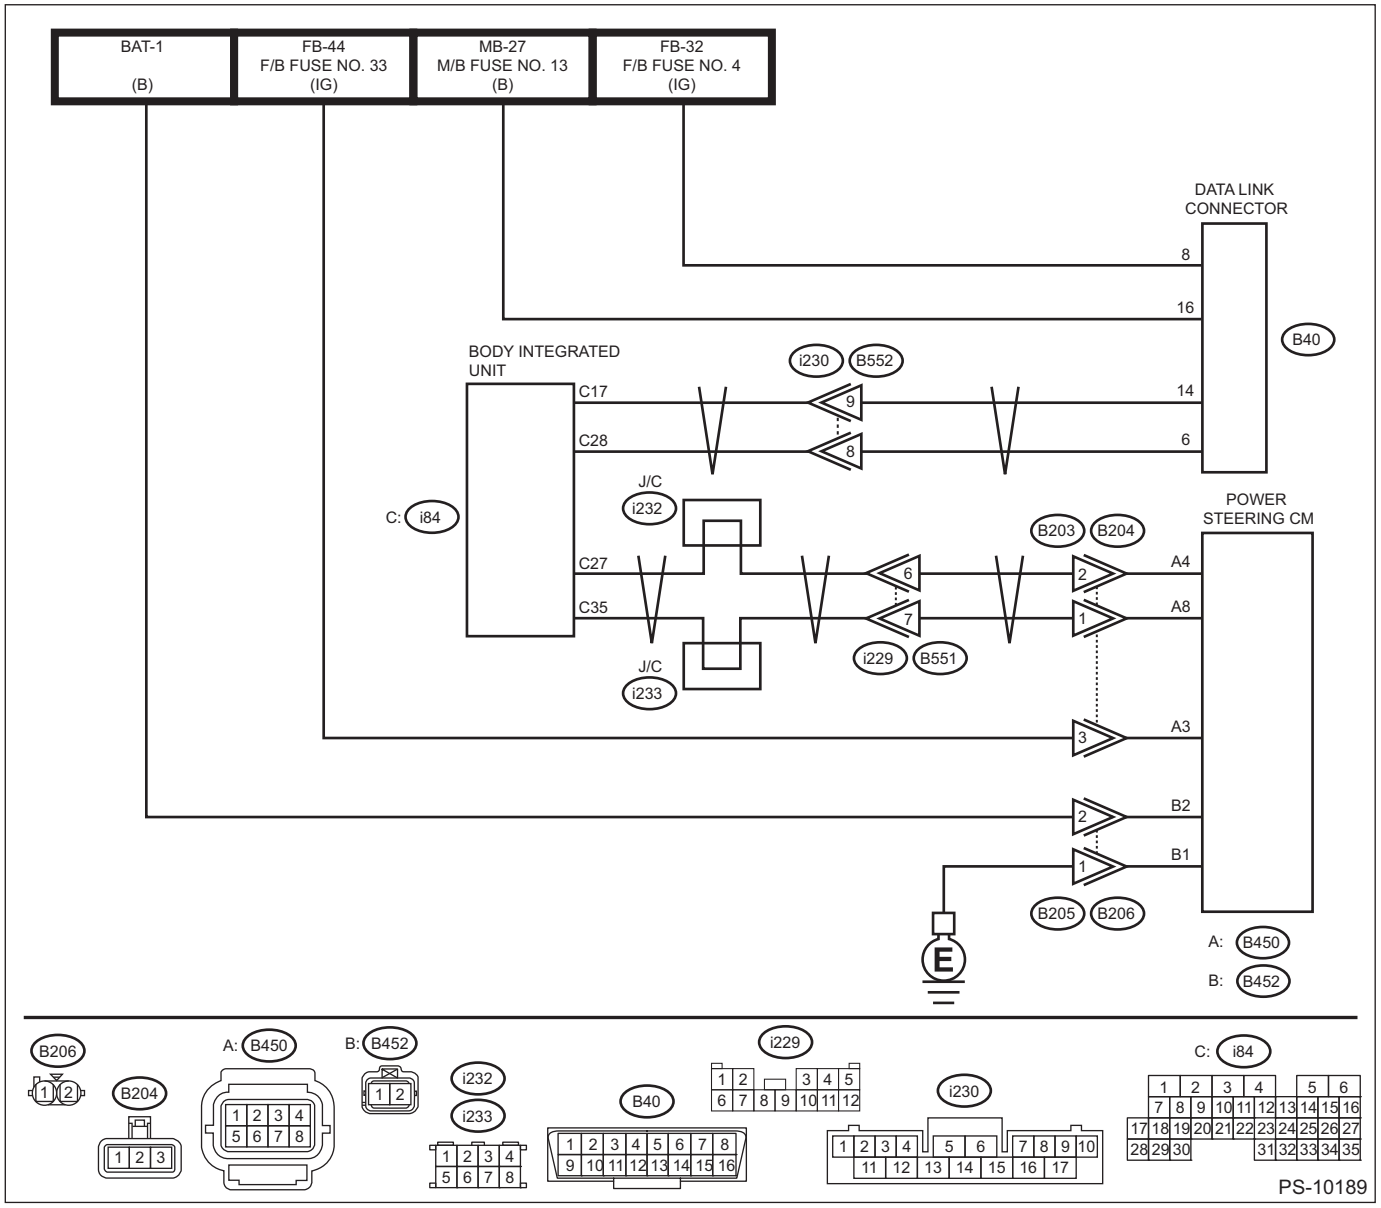
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
- Defective harness connector
- Defective power steering control module

Trouble symptom:
- Communication is impossible between the power steering control module and Subaru Select Monitor.
- After starting the engine, the STEERING warning light does not illuminate but steering effort is heavy.

Wiring diagram:
Electric power steering system <Ref. to WI-148, Electric Power Steering System.>



Step	Check	Yes	No
1 **CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the power steering using the Subaru Select Monitor.

	Step	Check	Yes	No
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE CONNECTOR INSTALLATION.** Turn the ignition switch to OFF.	Is the power steering control module connector inserted into the power steering control module until the clamp locks?	Go to step **5**.	Insert the power steering control module connector into the power steering control module.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to power steering system can be executed normally.	Is «Select Function» displayed?	Check DTC of electric power steering system. <Ref. to PS(diag)-17, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.	Does the Subaru Select Monitor communicate normally?	Go to step **8**.	Repair or replace the Subaru Select Monitor.
8	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. (Engine OFF) 2) Measure the ignition power supply voltage between the power steering control module connector and chassis ground. ***Connector & terminal*** ***(B450) No. 3 (+) — Chassis ground (–):*** ***(B452) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **9**.	Repair the open circuit in the harness between the power steering control module and the battery.
9	**CHECK HARNESS CONNECTOR BETWEEN POWER STEERING CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the power steering control module. 3) Measure the resistance of harness between power steering control module connector and chassis ground. ***Connector & terminal*** ***(B452) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the open circuit of the power steering control module ground circuit and the poor contact of connector.
10	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of power steering control module power supply, ground circuit and data link connector?	Repair the connector.	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

2. WITHOUT DTC

Detecting condition:

- Defective combination meter
- Open circuit of harness

Trouble symptom:

- The STEERING warning light will not turn off.
- «No DTC» will be displayed on Subaru Select Monitor.

NOTE:
When the STEERING warning light is OFF and «No DTC» is displayed on Subaru Select Monitor when all DTCs are read, the system is operating properly.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC U0131 detected?	Perform the diagnosis according to DTC for LAN system. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK COMBINATION METER.** Check the STEERING warning light when the ignition is turned from OFF to ON.	Does the STEERING warning light illuminate at ignition switch ON, and turn off two seconds after the engine is started?	Finish the diagnosis.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».

NOTE:
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to PS(diag)-23, List of Diagnostic Trouble Code (DTC).>
- For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

1) Start the engine.
2) Idle the engine for five seconds or more.
3) Operate the steering wheel from side to side.
4) Reproduce the malfunction occurrence condition as much as possible.

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Power Steering».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:

- Before performing memory clear, check the current data, and if there are any data of DTC, trouble status information, overheating protection intervention history, IGN count from overheating protection and assist limit history, save them.
- For detailed operation procedures, refer to “Application help”.

10.STEERING Warning Light

A: STEERING WARNING LIGHT DOES NOT COME ON

1. POWER STEERING ASSIST ENABLED

Detecting condition:
- Defective combination meter
- Defective harness

Trouble symptom:
When the ignition switch is turned to ON (engine OFF), the STEERING warning light does not illuminate.

NOTE:
It is operating normally if the warning light illuminates when the ignition switch is turned to ON (engine OFF), and turns off approximately two seconds after engine start.

	Step	Check	Yes	No
1	**CHECK ILLUMINATION OF OTHER LIGHTS.** Turn the ignition switch to ON. (Engine OFF)	Do other warning lights illuminate?	Go to step **2**.	Check the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	Is the check result OK?	Current condition is normal.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

2. POWER STEERING ASSIST DISABLED

Detecting condition:
CAN communication error (engine rpm signal not received)

Trouble symptom:
- Not assisted due to power supply voltage failure.
- The STEERING warning light is normal but there is no power steering assist (steering feels heavy).

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK BATTERY TERMINALS AND FUSE.** Check the battery terminals and the fuse.	Is the check result OK?	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Is DTC related to VDC system or ignition power supply system displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA.** 1) Start the engine. 2) Display the current data «Engine Speed» of the power steering control module using the Subaru Select Monitor.	Is «Engine Speed» the same as that in the combination meter?	Go to step **5**.	Check the CAN communication. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
5	**CHECK CURRENT DATA.** Display the current data «EPS Status» of the power steering control module using the Subaru Select Monitor.	Is «Assist limitation» displayed?	It is possible that temporary assist limitation has occurred due to overheat protection. Stop the engine for approx. 30 minutes, and check again.	Go to step **6**.
6	**CHECK CURRENT DATA.** 1) Display the current data «Torque sensor main output» and «Torque sensor sub output» of the power steering control module using the Subaru Select Monitor. 2) Move the steering wheel to the left and right.	Do the values of «Torque sensor main output» and «Torque sensor sub output» change according to the operations?	Go to step **7**.	Check the installation status of torque sensor, and check again.
7	**CHECK CURRENT DATA.** Display the current data «IG Voltage» of the power steering control module using the Subaru Select Monitor.	Is the value of «IG Voltage» steady? (While shaking the harness)	Go to step **8**.	Check the ignition switch and IG voltage harness, and repair the defective part.
8	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B204).	Are there any damages to terminal or other parts either on the power steering control module side or on the connector side?	Repair the terminal.	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

NOTE:
- During driving, the assist system will not be activated when the ignition voltage drops.
- Power steering assist is not started unless both of the ignition switch ON signal and the engine speed signal are input.
- In any of the following cases, the power steering assist is limited and steering wheel operation may become heavy.

If the steering wheel is held to an end for a long time, or the steering wheel turning to right and left at slow speed is repeated during parking, the assist limitation (overheat protection control) may operate to prevent failures by overheat.
In this case, by stopping the engine for approx. 30 minutes for cooling, the assist will start operating. While assist limitation (overheat protection control) is in active, “Assist limitation” is displayed in the «EPS operating condition» in the Subaru Select Monitor “Data Monitor”.
- History can be confirmed on «Overheating protection intervention history» or «IGN count from overheating protection» of “Data monitor”.
- The overheat protection control system is normal operation, therefore, the STEERING warning light will not come on and there will be no DTC displayed.
- If the power steering system connector is disconnected while cooling under the overheat protection control, different DTC may be recorded. If there is no DTC and assist limitation is in active, stop the engine for approx. 30 minutes for cooling.

B: STEERING WARNING LIGHT DOES NOT GO OFF

Detecting condition:
- Defective combination meter
- Open circuit of harness

Trouble symptom:

STEERING Warning Light

When starting the engine, the STEERING warning light continues to illuminate.

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC detected?	Perform the diagnosis according to DTC. <Ref. to PS(diag)-23, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>	Is the check result OK?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

11.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Note
None	Without DTC	Normal	<Ref. to PS(diag)-15, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>
	«Assist limitation» is displayed in the current data «EPS operating condition».	Assist limitation is performed due to overheat protection control.	<Ref. to PS(diag)-20, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
	«Overheating protection intervention history» in current data display shows 1 or more.	There are previous records of intervention to overheat protection control.	<Ref. to PS(diag)-20, POWER STEERING ASSIST DISABLED, STEERING WARNING LIGHT DOES NOT COME ON, STEERING Warning Light.>
C2511	TORQUE SENSOR MAIN	• Poor connector contact • Forgot to connect connector • Faulty torque sensor section circuit • Faulty torque sensor coil	<Ref. to PS(diag)-25, DTC C2511 TORQUE SENSOR MAIN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2512	TORQUE SENSOR SUB		<Ref. to PS(diag)-25, DTC C2512 TORQUE SENSOR SUB, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2513	TORQUE SENSOR MUCH TOLERANCE		<Ref. to PS(diag)-25, DTC C2513 TORQUE SENSOR MUCH TOLERANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2514	TORQUE SENSOR POWER SUPPLY		<Ref. to PS(diag)-25, DTC C2514 TORQUE SENSOR POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2521	MOTOR MALFUNCTION	• Poor connector contact • Forgot to connect connector • Harness open/short circuit • Motor open circuit • Power transistor shorted/open • Terminal power supply or ground short	<Ref. to PS(diag)-26, DTC C2521 MOTOR MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2522	RESOLVER SENSOR		<Ref. to PS(diag)-26, DTC C2522 RESOLVER SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2531	CONTROL MODULE CPU	Faulty main unit of power steering control module	<Ref. to PS(diag)-26, DTC C2531 CONTROL MODULE CPU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2532	CONTROL MODULE PERIPHERAL CIRCUIT	Faulty main unit of power steering control module	<Ref. to PS(diag)-26, DTC C2532 CONTROL MODULE PERIPHERAL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2533	CONTROL MODULE BOARD TEMPERATURE SENSOR	Faulty main unit of power steering control module	<Ref. to PS(diag)-27, DTC C2533 CONTROL MODULE BOARD TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2541	VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR	• Poor connector contact • Forgot to connect connector • Harness open/short circuit • VDC system failure	<Ref. to PS(diag)-28, DTC C2541 VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2543	ERROR PASSIVE	Defective CAN communication	<Ref. to PS(diag)-29, DTC C2543 ERROR PASSIVE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2545	EyeSight SYSTEM	EyeSight system failure	<Ref. to PS(diag)-30, DTC C2545 EyeSight SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content of diagnosis	Note
C2546	EyeSight VALUE	EyeSight system failure	<Ref. to PS(diag)-31, DTC C2546 EyeSight VALUE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2547	EyeSight CHECK SUM	• EyeSight system failure • Defective CAN communication	<Ref. to PS(diag)-31, DTC C2547 EyeSight CHECK SUM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2548	VEHICLE DYNAMICS CONTROL MODULE SYSTEM	VDC system failure	<Ref. to PS(diag)-33, DTC C2548 VEHICLE DYNAMICS CONTROL MODULE SYSTEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2549	ASSIST MAP SELECTION	• Faulty main unit of power steering control module • Defective CAN communication	<Ref. to PS(diag)-33, DTC C2549 ASSIST MAP SELECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2551	POWER SUPPLY RELAY	• Power supply voltage malfunction • Faulty relay contact	<Ref. to PS(diag)-34, DTC C2551 POWER SUPPLY RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
C2552	MOTOR RELAY	Faulty relay	<Ref. to PS(diag)-35, DTC C2552 MOTOR RELAY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Defective CAN communication	<Ref. to PS(diag)-35, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Defective CAN communication	<Ref. to PS(diag)-35, DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC C2511 TORQUE SENSOR MAIN

DTC detecting condition:
When torque sensor main output voltage failure is detected after the ignition switch is ON.
Trouble symptom:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

B: DTC C2512 TORQUE SENSOR SUB

DTC detecting condition:
When torque sensor sub output voltage failure is detected after the ignition switch is ON.
Trouble symptom:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

C: DTC C2513 TORQUE SENSOR MUCH TOLERANCE

DTC detecting condition:
When torque sensor main/sub output voltage failure is detected after the ignition switch is ON.
Trouble symptom:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

D: DTC C2514 TORQUE SENSOR POWER SUPPLY

DTC detecting condition:
When torque sensor power supply voltage failure is detected after the ignition switch is ON.
Trouble symptom:
- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

E: DTC C2521 MOTOR MALFUNCTION

DTC detecting condition:

- When motor driving element malfunction is detected after assist starts with 500 rpm engine speed reception.
- When motor current failure is detected after assist starts with 500 rpm engine speed reception.
- When motor voltage failure is detected after assist starts with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

F: DTC C2522 RESOLVER SENSOR

DTC detecting condition:
When motor turning angle sensor signal output voltage failure is detected after assist starts with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

G: DTC C2531 CONTROL MODULE CPU

DTC detecting condition:
When microcomputer malfunction is detected after the ignition switch is ON.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

H: DTC C2532 CONTROL MODULE PERIPHERAL CIRCUIT

DTC detecting condition:

- When storage medium IC malfunction inside the power steering control module is detected at initial check.
- When storage medium IC malfunction inside the power steering control module is detected after assist starts with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

I: DTC C2533 CONTROL MODULE BOARD TEMPERATURE SENSOR

DTC detecting condition:
When thermistor malfunction is detected after the ignition switch is ON.
Trouble symptom:
The steering wheel operation feels heavy.

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

J: DTC C2541 VEHICLE DYNAMICS CONTROL MODULE VEHICLE SPEED SENSOR

DTC detecting condition:
When VDCCM reception failure (related to vehicle speed sensor) is detected after the ignition switch is ON.
Trouble symptom:
The steering wheel operation feels heavy.

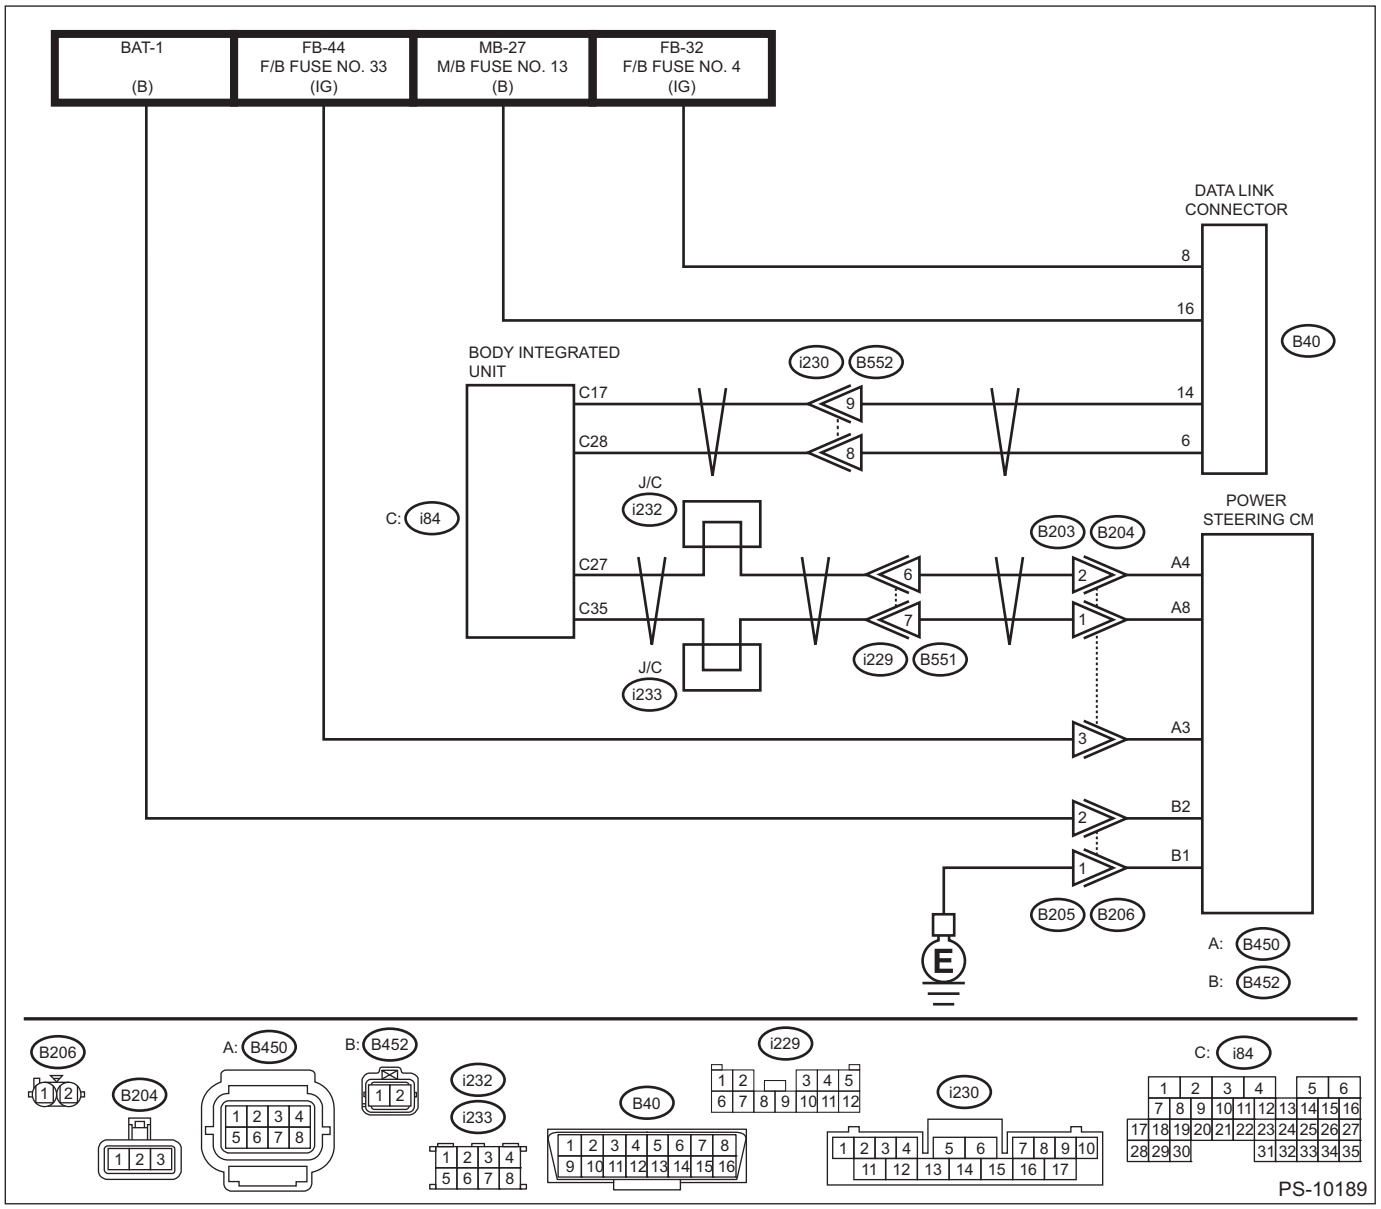
CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is a DTC related to VDC system or vehicle speed signal system detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK VEHICLE SPEED SIGNAL.** 1) Display the current data «Vehicle Speed» of the power steering control module using the Subaru Select Monitor. 2) Lift up the vehicle (so that the wheels turn freely), start the engine, and raise engine speed in gear. **CAUTION:** **Be careful that no one is near the spinning tires and nothing gets caught in them.** 3) Check for whether the data changes according to vehicle speed.	Is the data in sync with the vehicle speed?	It is possible that temporary poor communication occurs. Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.>	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

K: DTC C2543 ERROR PASSIVE

DTC detecting condition:
When send/receive failure of CAN communication is detected after the ignition switch is ON.
Trouble symptom:
- The steering wheel operation feels heavy.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.
Wiring diagram:
Electric power steering system <Ref. to WI-148, Electric Power Steering System.>



Step		Check	Yes	No
1	**CHECK PERIPHERALS.** Check the data link connector.	Is any other electrical part connected to the data link connector or harness?	Disconnect the connection of electrical parts and perform inspection again.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK DTC.** Read the DTC of the power steering control module using the Subaru Select Monitor. <Ref. to PS(diag)-17, Read Diagnostic Trouble Code (DTC).>	Is DTC C2543 a current malfunction?	Go to step **4**.	System is normal. Temporary interference from noise is a possible cause.
4	**CHECK CONNECTOR.** Check the connecting condition of connector.	Is the connector firmly installed?	Go to step **5**.	Install the connector, and check again.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector (B204).	Is there crimped or spread portion in connector terminal on vehicle harness side and power steering control module side?	Repair or replace faulty parts.	Go to step **6**.
6	**CHECK HARNESS.** Check the harness related to CAN communication system.	Is there any fault in the harness?	Repair or replace the harness.	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

L: DTC C2545 EyeSight SYSTEM

DTC detecting condition:
When the EyeSight system fail flag from stereo camera is received after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 4) Read the DTC.	Is DTC C2545 detected?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

M: DTC C2546 EyeSight VALUE

DTC detecting condition:
When the steering support indication value from stereo camera is out of range after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 4) Read the DTC.	Is DTC C2546 detected?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

N: DTC C2547 EyeSight CHECK SUM

DTC detecting condition:
When check sum error of EyeSight transmission data is detected after the ignition switch is ON.
Trouble symptom:
EyeSight steering support function does not operate.

CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTOR.**	Is there poor contact of the stereo camera connector?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of the EyeSight system.	Is DTC of EyeSight system detected?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 4) Read the DTC.	Is DTC C2547 detected?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

O: DTC C2548 VEHICLE DYNAMICS CONTROL MODULE SYSTEM

DTC detecting condition:
When error flag from VDCCM is detected for 2 seconds after the ignition switch is ON.
Trouble symptom:
The steering wheel operation feels heavy.

CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of VDC system using the Subaru Select Monitor.	Is a DTC related to VDC system (sensors) detected?	Perform the diagnosis according to the DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Is a DTC related to CAN communication detected?	Perform the diagnosis according to the DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

P: DTC C2549 ASSIST MAP SELECTION

DTC detecting condition:
- When CAN communication error is received after the ignition switch is ON.
- When the vehicle CAN information cannot be received after the ignition switch is ON.

Trouble symptom:
The steering wheel operation feels heavy.

CAUTION:
Do not clear the memory when checking the DTC.

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.**	Is there any poor contact in the connector of combination meter, body integrated unit or engine control module?	Repair the poor contact of connector.	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs.	Are there any DTCs detected for combination meter, body integrated unit or engine control module as well as DTC C2532?	Perform the diagnosis according to the DTC.	Go to step **3**.
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC related to CAN communication detected?	Perform the diagnosis according to DTC. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK POWER STEERING CONTROL MODULE.** 1) Connect all connectors. 2) Perform the Clear Memory Mode. <Ref. to PS(diag)-19, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to PS(diag)-18, Inspection Mode.> 4) Read the DTC.	Is DTC C2549 detected?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	It results from a temporary noise interference.

Q: DTC C2551 POWER SUPPLY RELAY

DTC detecting condition:

- When contact deposit malfunction of power supply relay is detected at initial check.
- When power supply voltage failure is detected after the ignition switch is ON.
- When power supply voltage drop is detected with 500 rpm engine speed reception.

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.
- EyeSight steering support function does not operate. (Models with EyeSight)

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
If power supply voltage failure exists at the vehicle side, the warning light goes off if the normal voltage returns.

Wiring diagram:
Electric power steering system <Ref. to WI-148, Electric Power Steering System.>

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK BATTERY TERMINALS AND FUSE.** Check the battery terminals and the fuse.	Is the check result OK?	Go to step **3**.	Repair or replace faulty parts.
3	**CHECK WIRING HARNESS.** 1) Disconnect the connector. (B205, B206) 2) Turn the ignition switch to ON. 3) Using a tester and special tool harness, check the voltage between terminals. ***Connector & terminal*** ***(B205) No. 2 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **4**.	Repair the open circuit of harness or the poor contact of connector between the power steering control module and the battery.
4	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester and special tool harness, check the resistance between terminals. ***Connector & terminal*** ***(B205) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit or poor contact of the harness between the power steering control module and chassis ground.
5	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering control module connector (B452). 3) Using a tester and special tool harness, check the resistance between harness terminals. ***Connector & terminal*** ***(B206) No. 1 — (B452) No. 1:*** ***(B206) No. 2 — (B452) No. 2:***	Is the resistance less than 10 Ω?	Replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>	Repair or replace the harness.

R: DTC C2552 MOTOR RELAY

Trouble symptom:

- The steering wheel operation feels heavy.
- STEERING warning light illuminates.

CAUTION:
Do not clear the memory when checking the DTC.

NOTE:
When this code is displayed, replace the steering gearbox. <Ref. to PS-64, Electric Power Steering Gearbox.>

S: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

T: DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

U: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

V: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

W: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

X: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM “A”

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Y: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Z: DTC U1235 LOST COMMUNICATION WITH EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

AA:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

NOTE:
Refer to “LAN SYSTEM (DIAGNOSTICS)” for diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: SPECIFICATION

1. HEATER SYSTEM

Item	Specifications		Condition
Heating capacity	5 kW (4,299 kcal/h, 17,059 BTU/h) or more		• Air flow control dial or switch: FOOT • Temperature control dial: HI (MAX HOT) • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 L (95.1 US gal, 79.2 Imp gal)/h
Air flow rate	290 m^3 (10,243 cu ft)/h		FOOT mode (FRESH), MAX HOT at 12.5 V
Max air flow rate	480 m^3 (16,954 cu ft)/h		• Temperature control dial: LO (MAX COOL) • Fan dial: HI (MAX): 7th position • FRESH/RECIRC switch: RECIRC
Heater core	Size (W × H × T)	257.5 × 118.5 × 27 mm (10.1 × 4.67 × 1.06 in)	—
Blower motor	Type	Magnet motor 300 W or less	12 V
	Fan type	Sirocco fan type	—
	Size (diameter × width)	150 × 75 mm (5.91 × 2.95 in)	—

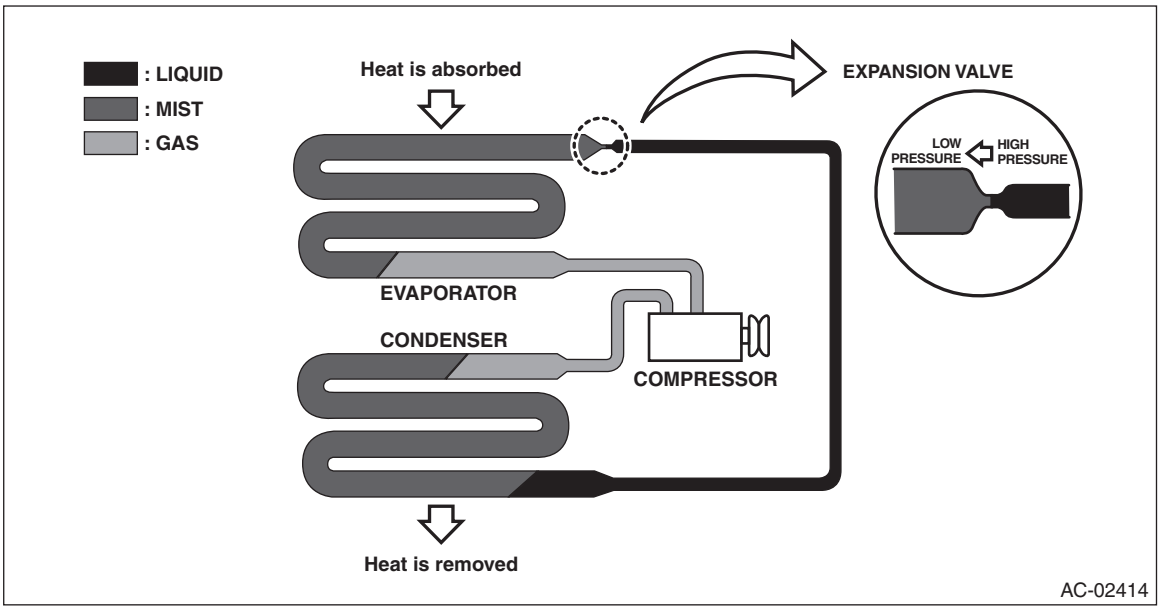
2. A/C SYSTEM

Item		Specifications
Type of air conditioner		Reheat air-mix type
Cooling capacity		5 kW (4,299 kcal/h, 17,059 BTU/h)
Refrigerant		HFC-134a (CH_2 FCF_3) [0.475±0.025 kg (1.05±0.06 lb)]
Compressor	Type	Rotary fixed capacity
	Type	Except for STI model: DKV-10Z STI model: DKV-10R
	Discharge	105 cc (6.41 cu in)/rev
	Max. permissible speed	7,700 r/min
Magnet clutch	Type	Dry, single-disc type
	Power consumption	Except for STI model: 45 W STI model: 38.8 W
	Type of belt	Except for STI model: V-belt 6 PK STI model: V-belt 4 PK
	Pulley dia. (effective dia.)	Except for STI model: 110 mm (4.33 in) STI model: 100 mm (3.94 in)
	Pulley ratio	Except for STI model: 1.3 STI model: 1.32
Condenser	Type	Sub cool type
	Core face area	0.188 m^2 (2.002 sq ft)
	Core thickness	16 mm (0.63 in)
	Radiation area	4.5 m^2 (48.44 sq ft)
Expansion valve	Type	Block
Evaporator	Type	Dual-tank
	Size (W × H × T)	290.1 × 172 × 39 mm (11.42 × 6.77 × 1.54 in)

Item			Specifications
Blower fan		Fan type	Sirocco fan
		Outer diameter × Width	150 × 75 mm (5.91 × 2.95 in)
		Power consumption	280 W
Condenser fan (sub fan)		Motor type	Magnet
		Power consumption	Except for STI model: 120 W STI model: 160 W
		Fan outer diameter	320 mm (12.6 in)
Radiator fan (main fan)		Motor type	Magnet
		Power consumption	Except for STI model: 120 W STI model: 160 W
		Fan outer diameter	320 mm (12.6 in)
Idle speed		No load	700±100 r/min
		A/C ON	Except for STI model: 700 — 865±50 r/min STI model: 750±100 r/min
Triple switch (Pressure switch)	Low-pressure switch operating pressure	ON → OFF	196±25 kPa (2±0.25 kgf/cm^2, 28.4±3.6 psi)
		OFF → ON	225±30 kPa (2.29±0.31 kgf/cm^2, 32.6±4.3 psi)
	High-pressure switch operating pressure	ON → OFF	2,940±200 kPa (29.98±2.04 kgf/cm^2, 426.3±29 psi)
		OFF → ON	2,350±200 kPa (24±2.04 kgf/cm^2, 340.7±29 psi)
	Middle-pressure switch operating pressure	ON → OFF	1,470±120 kPa (14.99±1.22 kgf/cm^2, 213.15±17.4 psi)
		OFF → ON	1,770±100 kPa (18.05±1.02 kgf/cm^2, 256.65±14.5 psi)
Thermo-control amplifier working temperature			 AC-00601 (1) ON (2) OFF (3) 1.5±0.3°C (34.7±0.5°F) (4) 1±0.5°C (33.8±0.9°F)

3. BASIC OPERATION

The cooling system cools down the compartment by using the pipes connecting parts and cycling the evaporable liquid (refrigerant) within the sealed system in a repeated process of “vaporization — liquefaction — re-vaporization”.



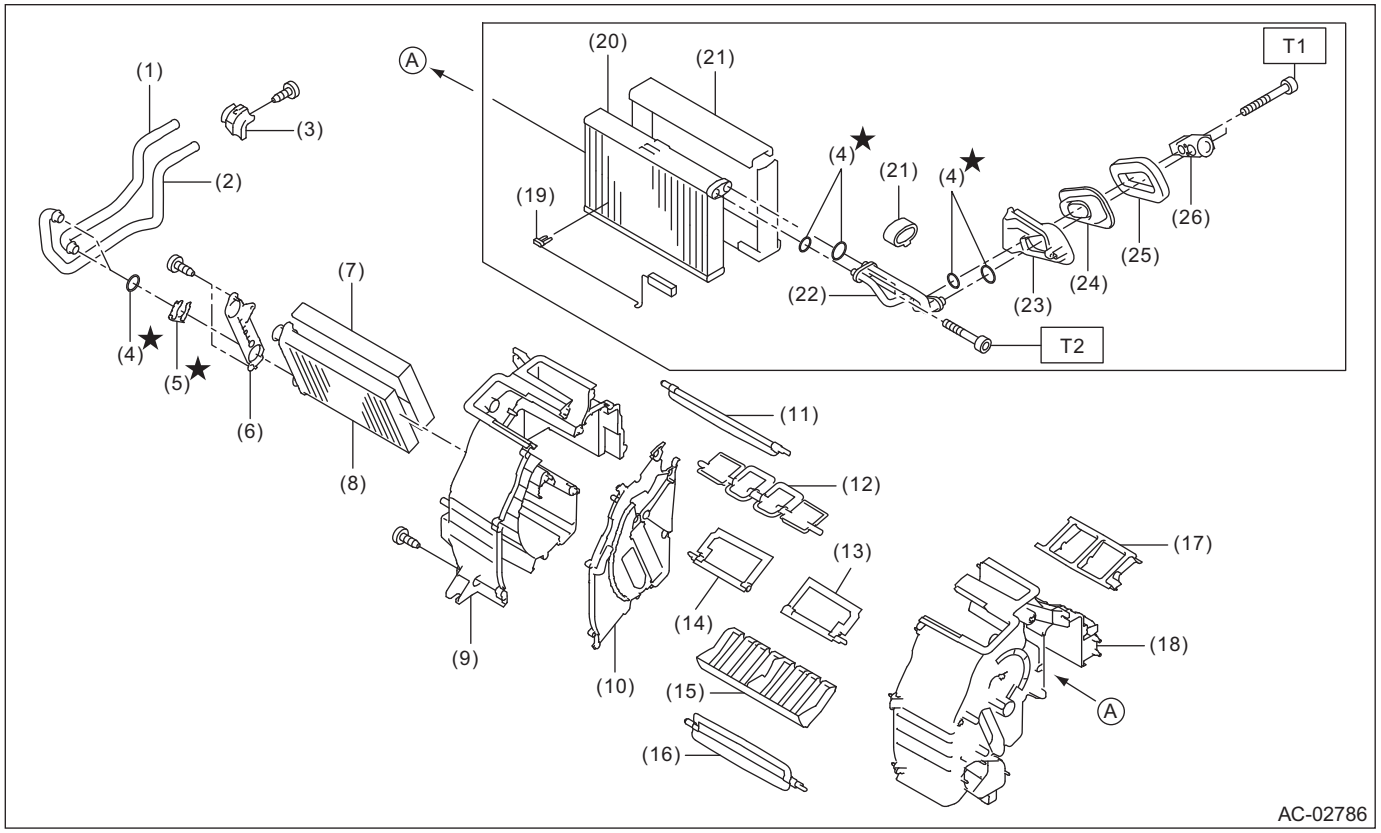
Item	Operation
Compressor	Sucks and pressurizes the low temperature, low pressure refrigerant gas that was vaporized at the evaporator by absorbing heat from the compartment, and sends the high temperature, high pressure refrigerant gas to the condenser.
Condenser	Cools the high temperature, high pressure refrigerant gas sent from the compressor for condense and liquefaction.
Expansion valve	• Sprays the high temperature, high pressure liquid refrigerant from the small hole in order to let the refrigerant expand rapidly to turn it into low temperature, low pressure mist. • The refrigerant amount is adjusted according to the refrigerant vaporization condition in the evaporator.
Evaporator	The evaporator turns into a low temperature condition when the mist refrigerant that was turned into a low temperature, low pressure condition at the expansion valve is vaporized in large quantity in the evaporator. Passing air flow through the low temperature evaporator emits cold air.

B: LOCATION

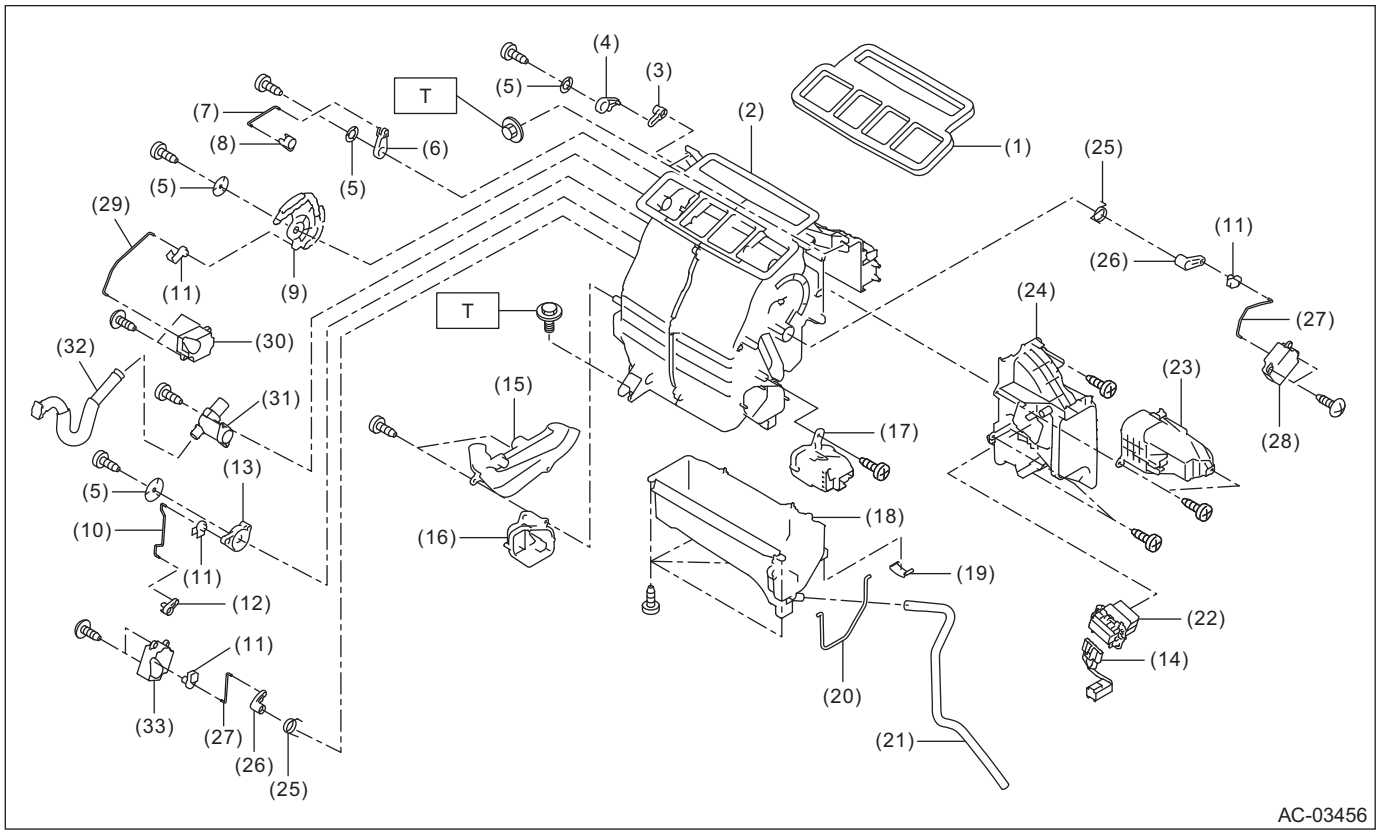
Refer to “Electrical Component Location” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-4, Electrical Component Location.>

C: COMPONENT

1. HEATER AND COOLING UNIT



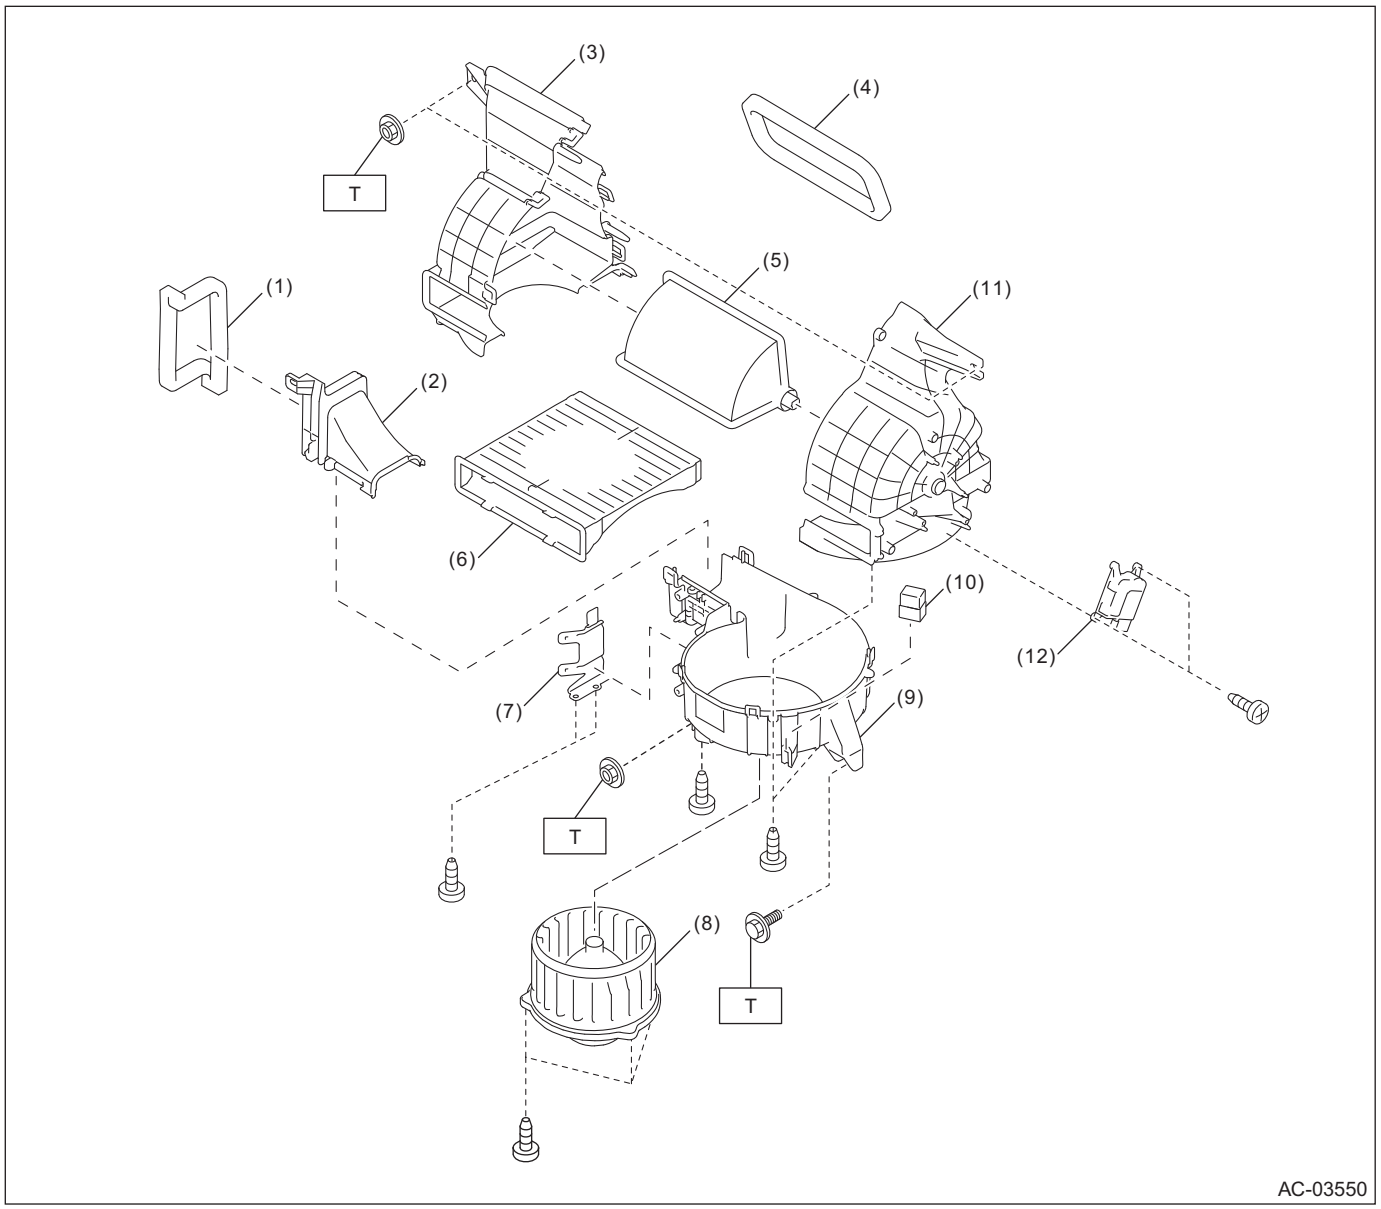
(1)	Pipe - inlet	(11)	Shutter - defroster	(21)	Packing - evaporator core
(2)	Pipe - outlet	(12)	Shutter - vent	(22)	Pipe - evaporator core
(3)	Clamp - pipe	(13)	Shutter - air mix RH	(23)	Case - expansion valve
(4)	Seal O-ring	(14)	Shutter - air mix LH	(24)	Seal - cooling
(5)	Clamp	(15)	Guide - heater unit	(25)	Packing - heater unit
(6)	Plate - heater core	(16)	Shutter - foot	(26)	Expansion valve - cooling
(7)	Packing - heater core	(17)	Case - vent duct		
(8)	Heater core	(18)	Case - heater unit UPR RH	***Tightening torque: N·m (kgf-m, ft-lb)***	
(9)	Case - heater unit UPR LH	(19)	Thermostat - cooling	***T1:***	***5 (0.5, 3.7)***
(10)	Plate CTR	(20)	Evaporator ASSY - cooling	***T2:***	***6.7 (0.7, 4.9)***



(1) Packing - heater unit
(2) Case - heater unit
(3) Lever - defroster
(4) Lever - defroster sub
(5) Washer - heater
(6) Lever - ventilator sub
(7) Rod - ventilator
(8) Lever - ventilator door
(9) Lever - mode
(10) Rod - foot
(11) Clip
(12) Lever - foot
(13) Lever - foot sub
(14) Harness - heater unit
(15) Cover - heater pipe
(16) Duct - foot LH
(17) Duct - foot RH
(18) Case - heater LWR
(19) Clip - case
(20) Packing - evaporator cover
(21) Hose - drain
(22) Power transistor
(23) Cover
(24) Cover - heater unit
(25) Spring - heater unit
(26) Lever - air mix
(27) Rod - air mix
(28) Motor - actuator mix RH
(29) Rod - mode
(30) Motor - actuator mode
(31) Aspirator - heater unit
(32) Aspirator hose
(33) Motor - actuator mix LH (dual A/C model)

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

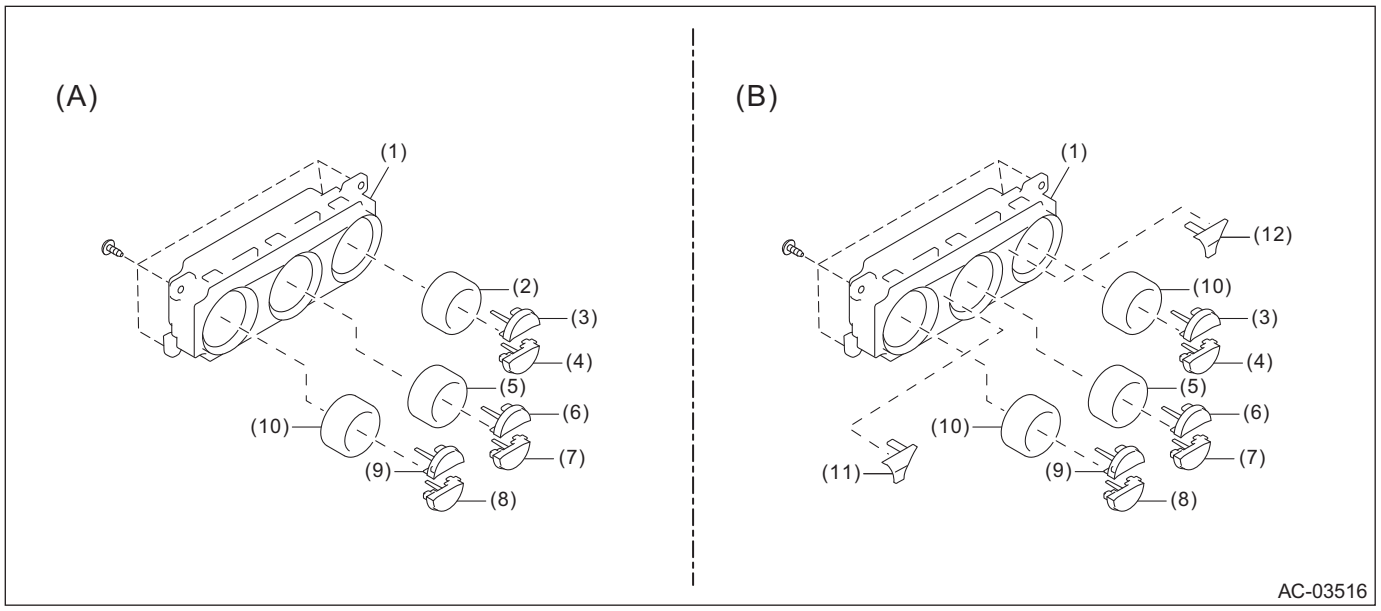
2. BLOWER MOTOR UNIT



(1) Packing
(2) Case upper - blower
(3) Case - blower intake LH
(4) Packing - blower
(5) Shutter - blower
(6) Filter kit
(7) Bracket
(8) Blower - motor
(9) Case lower - blower
(10) Blower motor relay
(11) Case - blower intake RH
(12) Motor - actuator blower

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

3. CONTROL PANEL

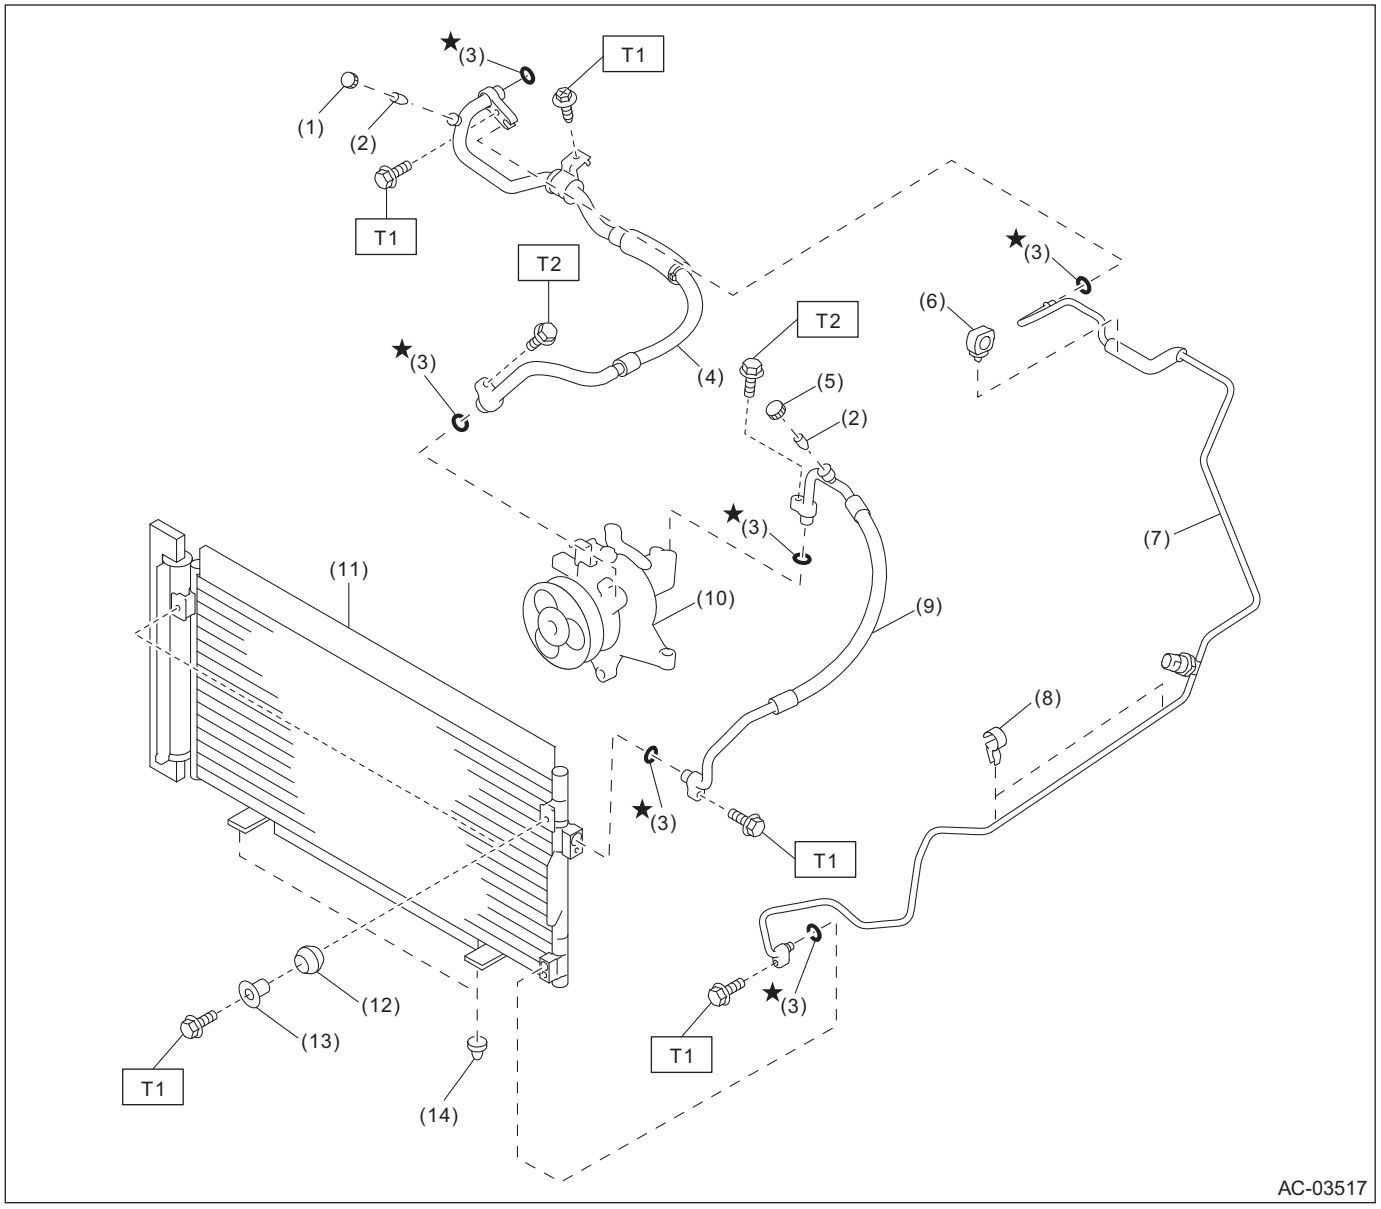


(A) Single A/C model
(B) Dual A/C model

(1) Control case
(2) Air flow control dial
(3) Defroster switch
(4) Rear window defogger switch
(5) Fan dial
(6) A/C switch
(7) FRESH/RECIRC switch
(8) OFF switch
(9) AUTO switch
(10) Temperature adjustment dial
(11) Air flow control switch
(12) Dual switch

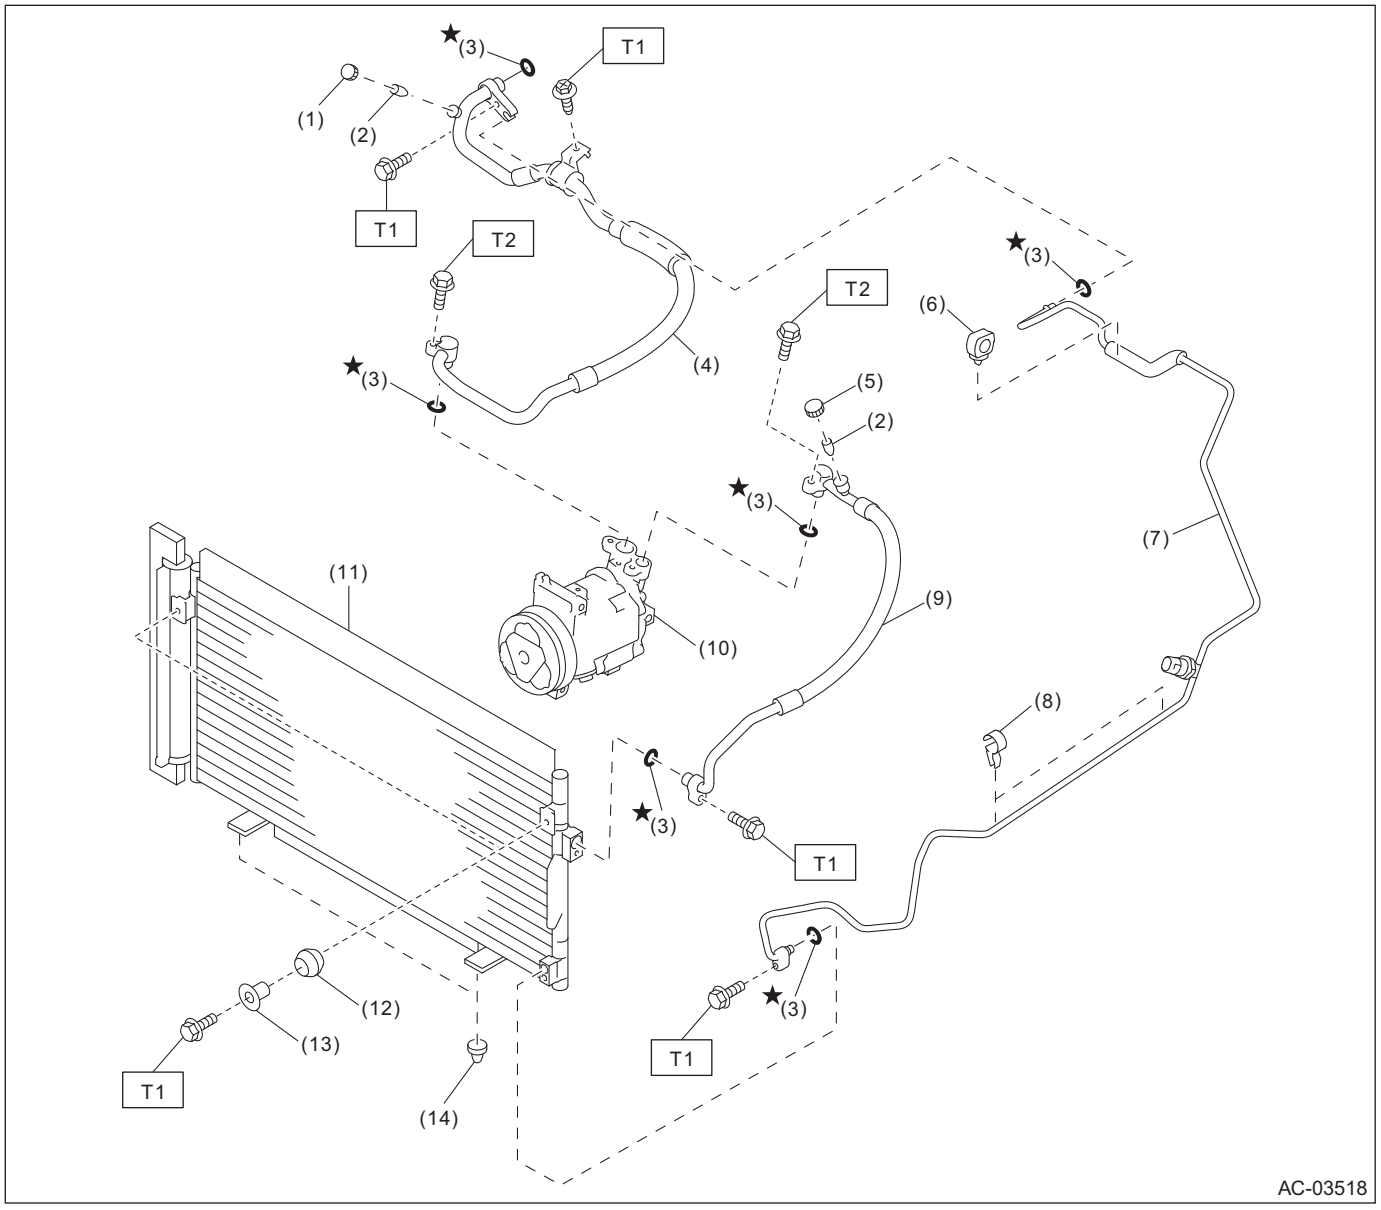
4. AIR CONDITIONING UNIT

- Except for STI model



(1)	Cap - hose pressure suction	(7)	Pipe - evaporator cooling	(13)	Spacer
(2)	Valve - hose pressure	(8)	Clip - pipe	(14)	Bushing - condenser
(3)	Seal O-ring	(9)	Hose - pressure discharge		
(4)	Hose - pressure suction	(10)	Compressor ASSY	***Tightening torque: N·m (kgf-m, ft-lb)***	
(5)	Cap - hose pressure discharge	(11)	Condenser ASSY - air conditioner	***T1:***	***7.5 (0.8, 5.5)***
(6)	Clip	(12)	Grommet	***T2:***	***10 (1, 7.4)***

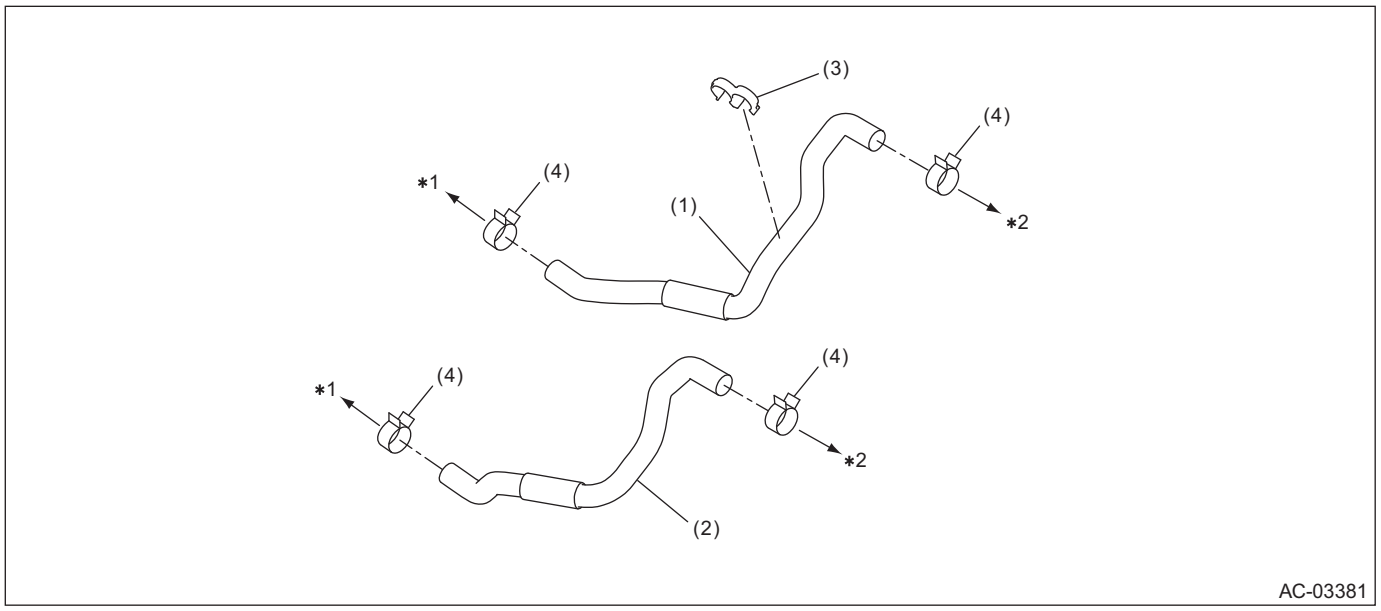
- STI model



(1) Cap - hose pressure suction
(2) Valve - hose pressure
(3) Seal O-ring
(4) Hose - pressure suction
(5) Cap - hose pressure discharge
(6) Clip
(7) Pipe - evaporator cooling
(8) Clip - pipe
(9) Hose - pressure discharge
(10) Compressor ASSY
(11) Condenser ASSY - air conditioner
(12) Grommet
(13) Spacer
(14) Bushing - condenser

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 10 (1, 7.4)

5. HEATER HOSE

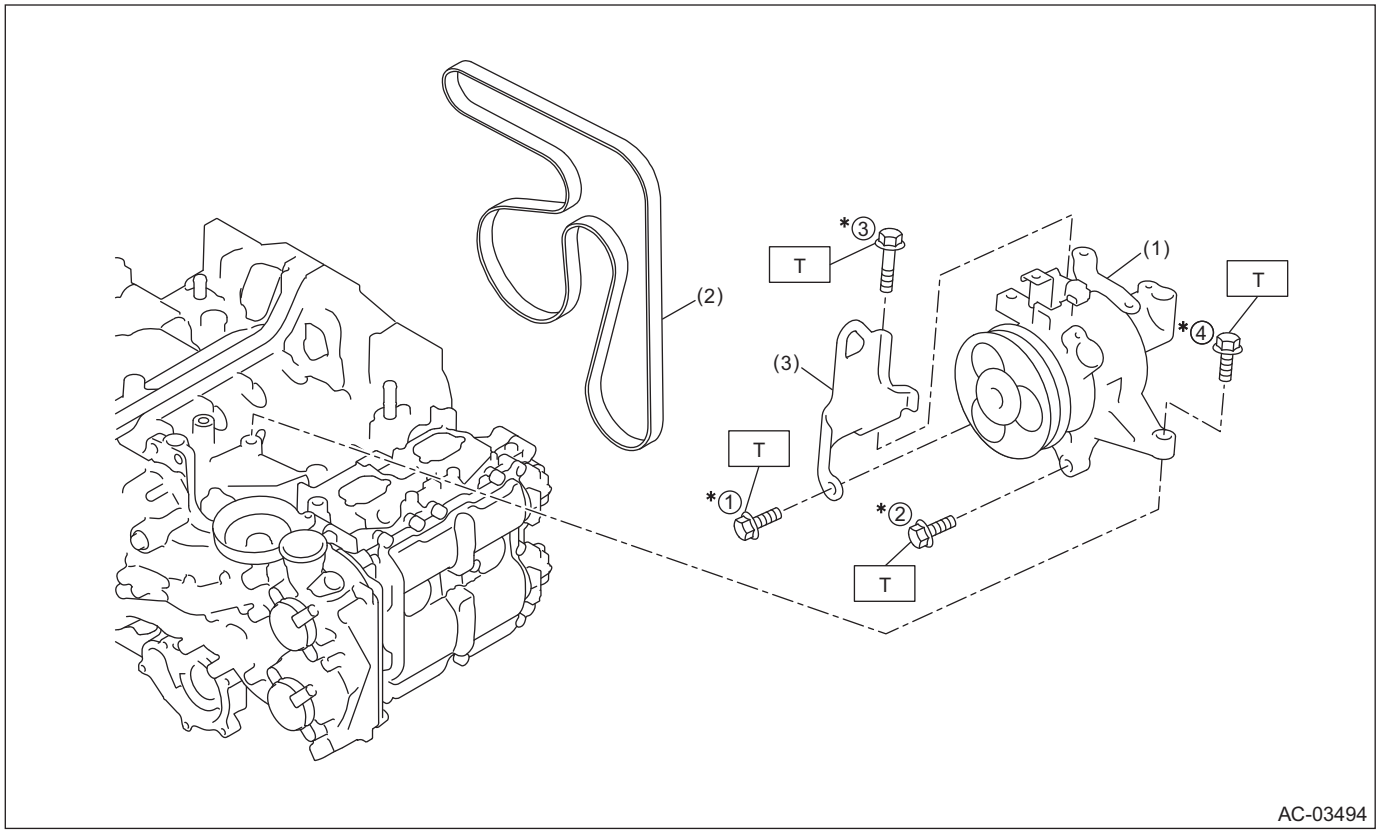


(1) Hose - heater outlet
(2) Hose - heater inlet
(3) Clip
(4) Clamp

*1: Engine side
*2: Heater core side

6. COMPRESSOR

- Except for STI model

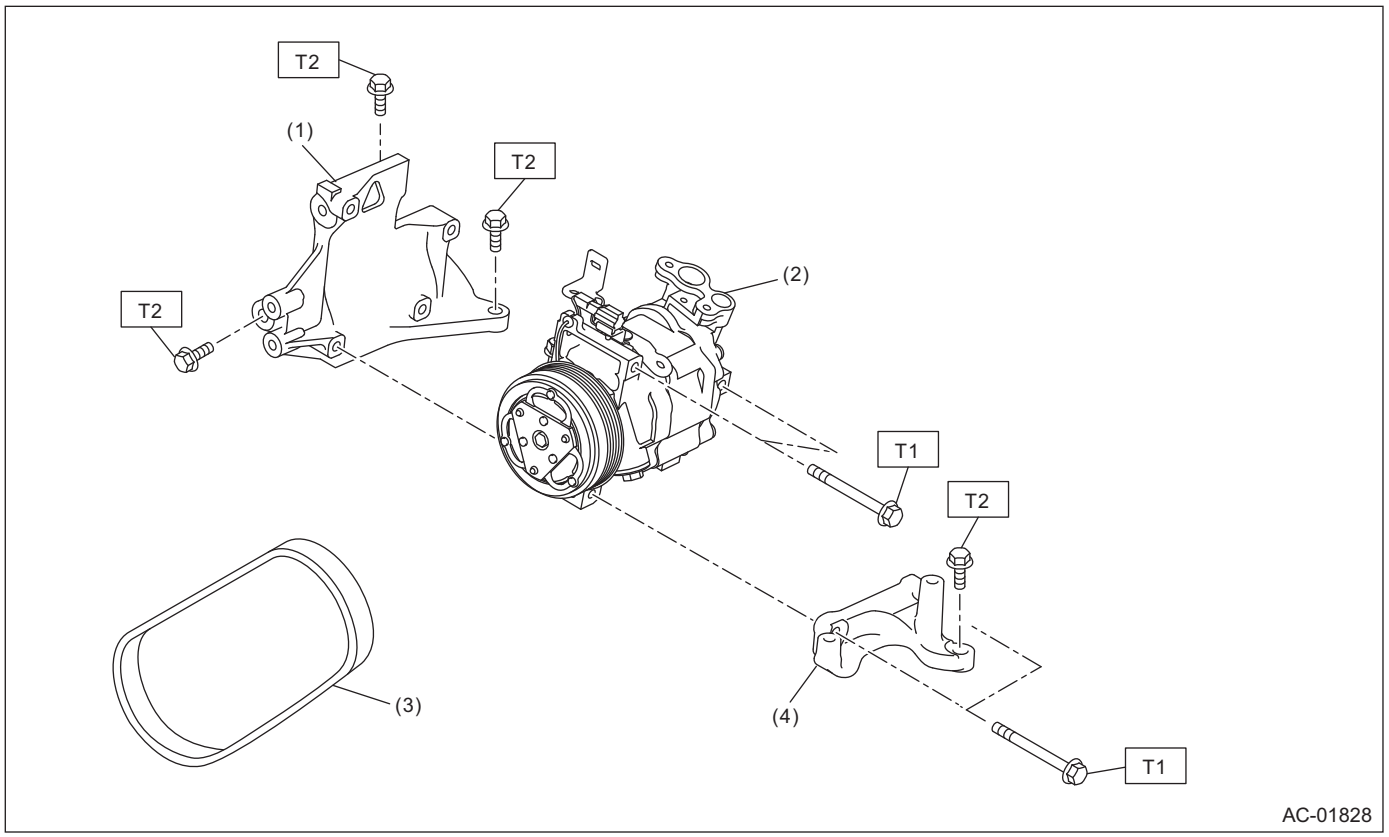


(1) Compressor ASSY
(2) V-belt (6 PK)
(3) Hanger - engine front

Tightening torque: N·m (kgf-m, ft-lb)
T: 36 (3.7, 26.6)

* Tighten the compressor in the numerical order as shown in the figure.

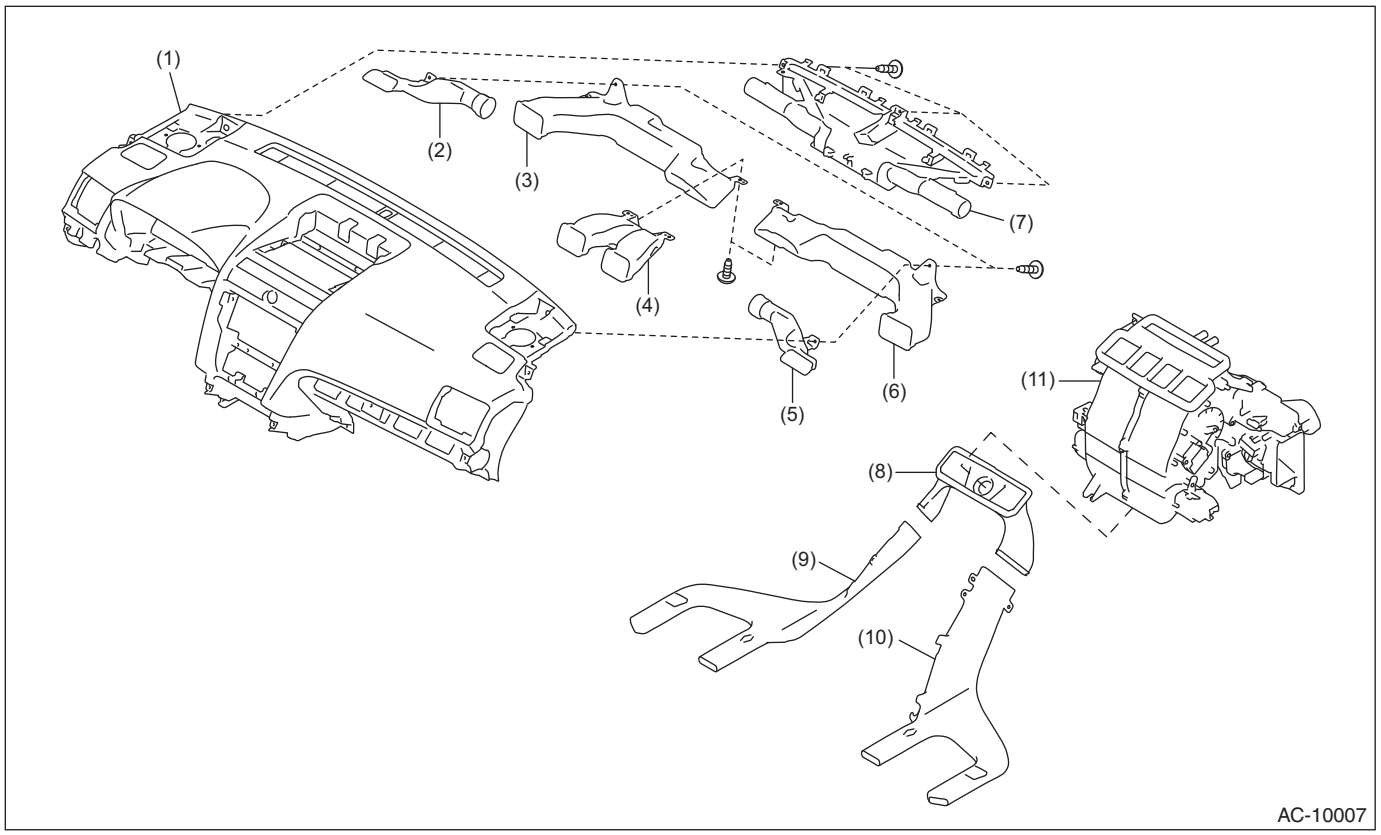
- STI model



(1) Bracket ASSY - compressor
(2) Compressor ASSY
(3) V-belt
(4) Bracket - air conditioner

Tightening torque: N·m (kgf-m, ft-lb)
T1: 26.5 (2.7, 19.5)
T2: 36 (3.7, 26.6)

7. HEATER DUCT



(1) Panel COMPL - instrument
(2) Duct - side defroster LH
(3) Duct - side ventilation LH
(4) Duct - center vent
(5) Duct - side defroster RH
(6) Duct - side ventilation RH
(7) Nozzle - front defroster
(8) Duct - rear heater CTR
(9) Duct - rear heater LH
(10) Duct - rear heater RH
(11) Heater and cooling unit ASSY

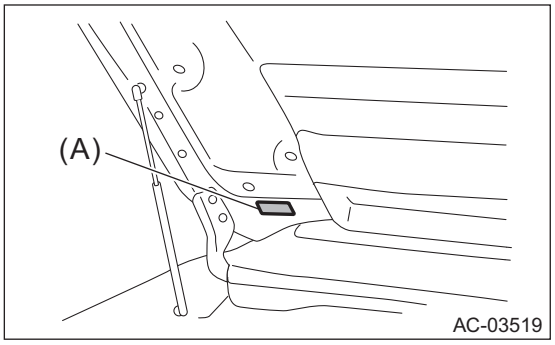
D: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.

1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system using such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle.

Before maintenance, check A/C system which is installed to the vehicle.



2. COMPRESSOR OIL

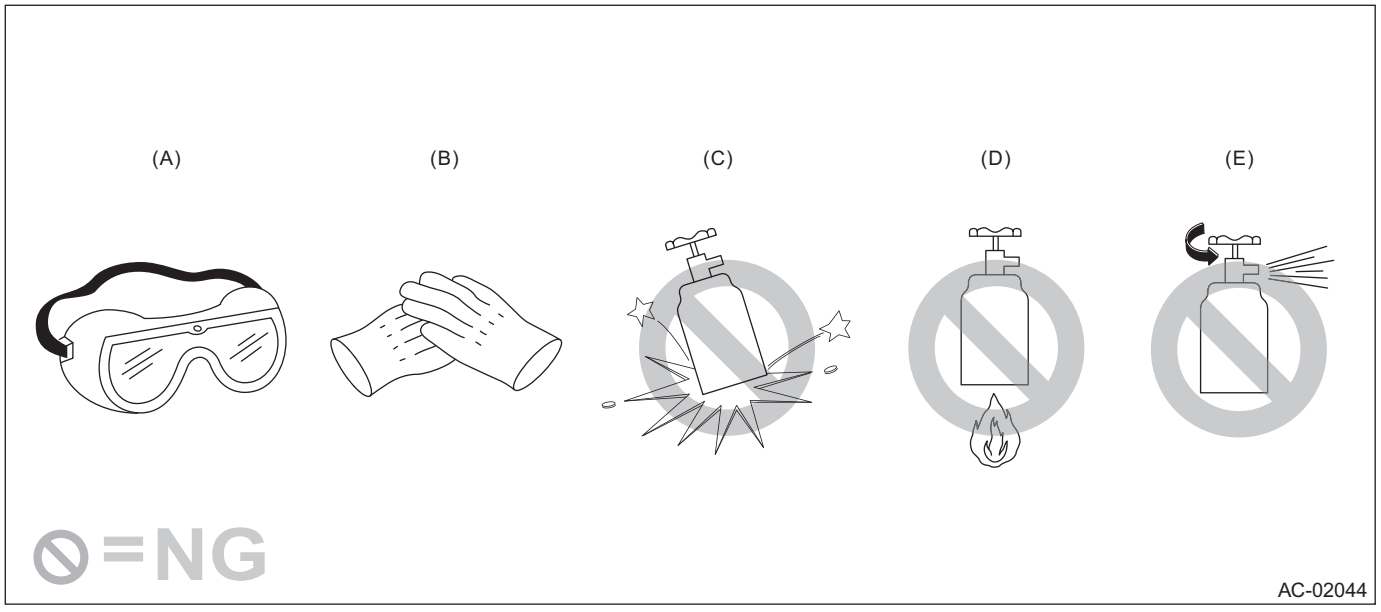
• HFC-134a compressor oil has no compatibility with that of CFC-12 system.
• Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR (ZXL200PG).
• Do not mix multiple compressor oils.
If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
• HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

• CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
• If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

4. HANDLING OF REFRIGERANT

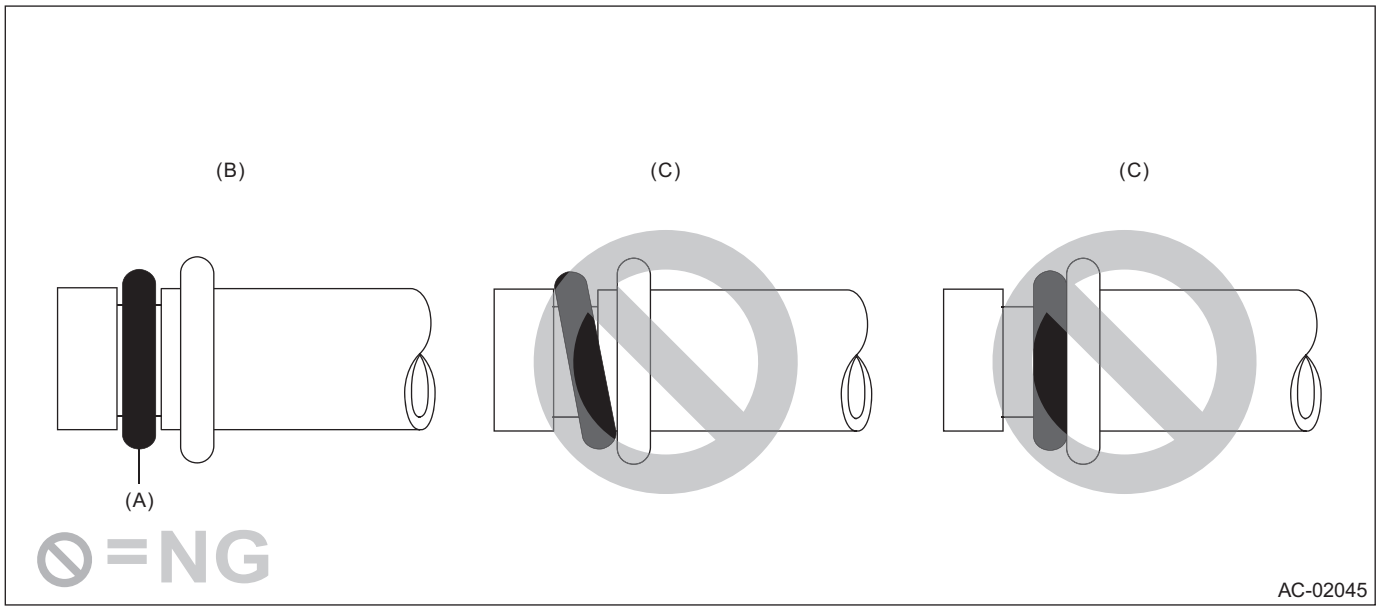
• The refrigerant boils at approx. –30°C (–22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.
If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eyes with plenty of water, and receive medical treatment from an eye doctor.
• Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of 40°C (104°F) or less.
• Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant container.)
• When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
• Provide good ventilation and do not work in a closed area.
• In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.



(A) Goggles
(B) Gloves
(C) Do not apply impact.
(D) No direct heat on container
(E) Do not discharge

5. O-RING CONNECTIONS

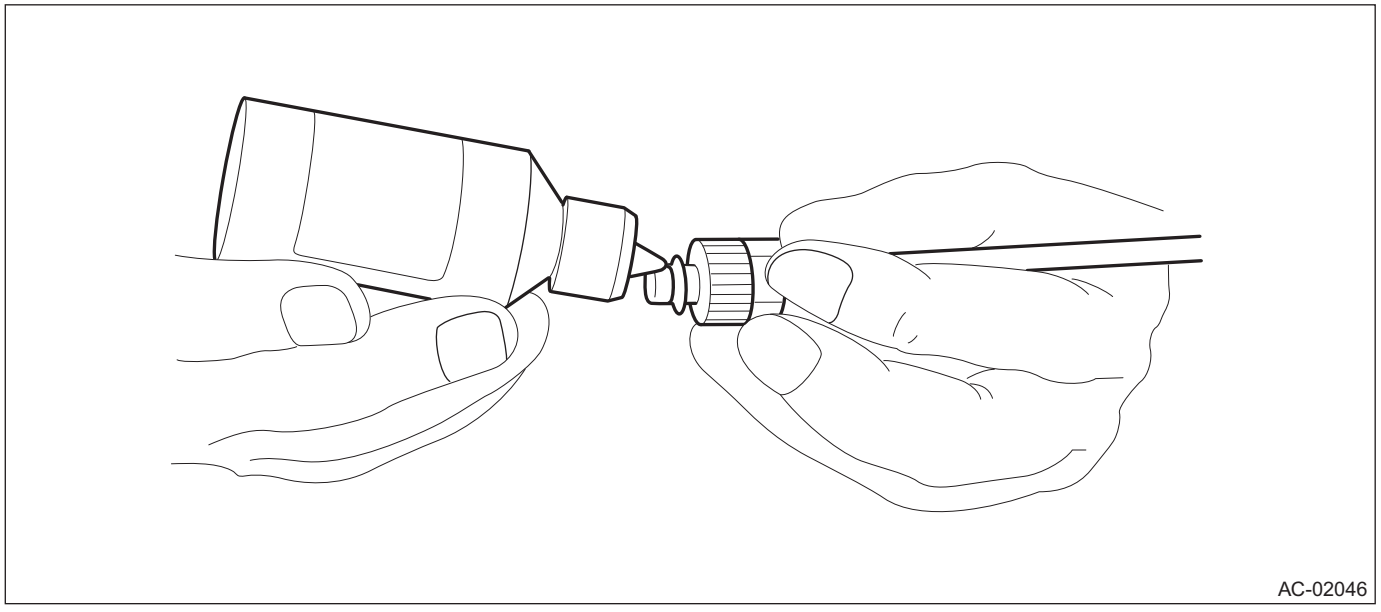
- Always use a new O-ring.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform work without using gloves or waste cloths.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of the O-ring and deformation of the pipe end.
- If the work is interrupted before completing pipe connections, recap the pipes, components and fittings with a plug or tape to prevent foreign matter from entering.
- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings straight against the pipe groove.



(A) O-ring (B) OK (C) NG

- Use compressor oil specified in the service manual to lubricate the O-rings.

Apply oil to the top and sides of O-rings before installation.
Apply compressor oil to the pipe grooves.



• After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
• If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

E: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

CAUTION:
When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.
In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the type of tool and screw, and the replacement valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool and screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

TOOL NAME/ILLUSTRATION	REMARKS
Circuit tester	Used for measuring resistance and voltage.
DST-i	Used together with Subaru Select Monitor 4.
Wrench  AC-00213	Various **WRENCHES** will be required to service any A/C system. A 7 to 40 N·m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench and various crow-foot wrenches will be needed. Open end or flare nut wrenches will be needed to affix the pipe and hose fittings.

TOOL NAME/ILLUSTRATION	REMARKS
Applicator bottle  AC-00012	A small **APPLICATOR BOTTLE** is recommended to apply compressor oil to the various parts. It can be available at a hardware store.
Manifold gauge set  AC-00013	A **MANIFOLD GAUGE SET** (with hoses) is available at either a refrigerant supplier or an automotive equipment supplier.
Refrigerant recovery system  AC-00014	A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and recycling of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.
Syringe  AC-00015	A graduated plastic **SYRINGE** will be needed to add oil into the system again. A syringe can be available at a pharmacy or drug store.

TOOL NAME/ILLUSTRATION	REMARKS
Vacuum pump  AC-00016	A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.
Can tap  AC-00017	A **CAN TAP** for the 397 g (14 oz) can is available at an automotive equipment supplier.
Thermometer/hygrometer  AC-00018	A Pocket **THERMOMETER/HYGROMETER** is available at either a industrial hardware store or a refrigerant supplier.
Electronic leak detector  AC-00019	An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier.

TOOL NAME/ILLUSTRATION	REMARKS
Weight scale  AC-00020	A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used.

2. Air Conditioning System

A: WIRING DIAGRAM

Refer to “Air Conditioning System” in the wiring diagram. <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

B: ELECTRICAL SPECIFICATION

Refer to “Auto A/C Control Module I/O Signal” of “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-6, ELECTRICAL SPECIFICATION, Auto A/C Control Module I/O Signal.>

3. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE

1. CHECK REFRIGERANT GAS PRESSURE

1) Prepare the vehicle.

NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the shade and windless condition, and open the front hood.
- Open the front windows and close all doors.

2) Check the refrigerant pressure.

Preparation tool:
Manifold gauge set

(1) Connect the manifold gauge set, and start the engine.
(2) Set the vehicle to the following conditions.

Item	Condition
Engine	Warmed up (Engine coolant temperature indicator light: OFF)
Air vent grille	Shutter is fully open.
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

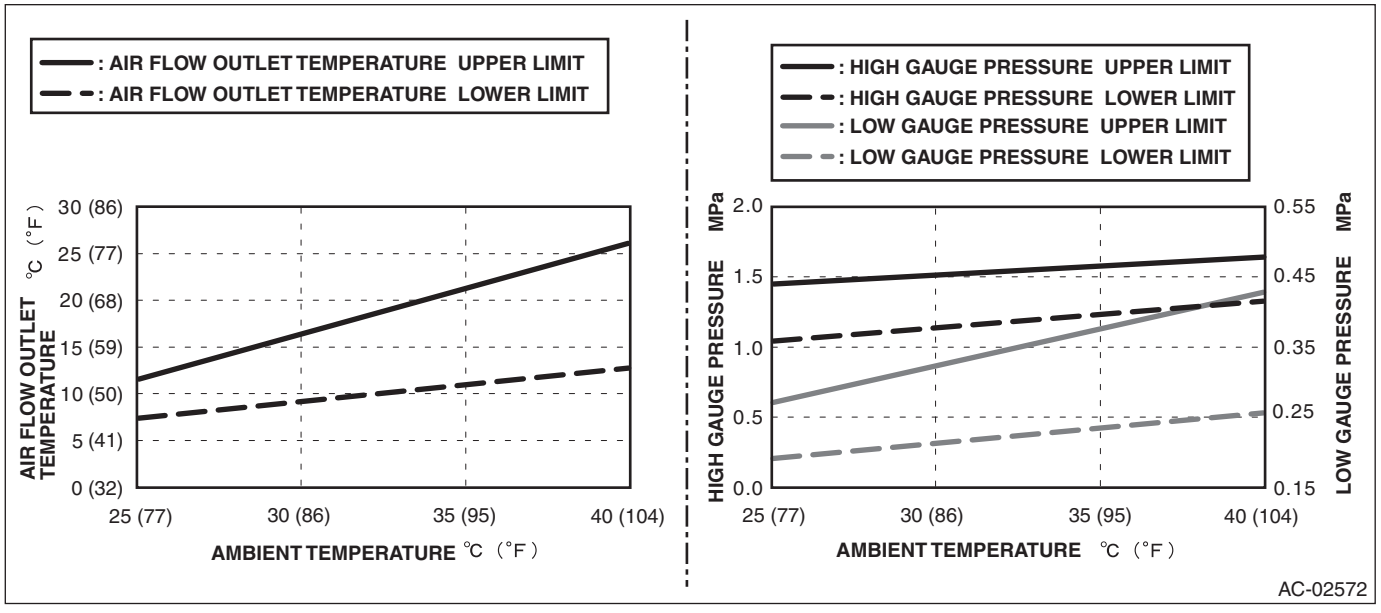
(3) In the condition of step (2), idle the engine for 30 minutes.
(4) Read the gauge values on both high pressure side and low pressure side for manifold gauge.

3) Measure the air vent grille outlet opening temperature, ambient temperature and humidity.

Preparation tool:
Thermometer and hygrometer

NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

4) Check that the high and low pressures and outlet opening temperature for ambient temperature and humidity is within the standard value described in the chart below.



5) Refer to “DIAGNOSIS WITH SYMPTOM” if the inspection result is not within the standard value. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

B: INSPECTION

1. INSPECTION WITH PRESSURE SYMPTOM

Symptoms	Reference
Both high and low pressure sides are low	<Ref. to AC-23, BOTH HIGH AND LOW PRESSURE SIDES ARE LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Both high and low pressure sides are high	<Ref. to AC-23, BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High and low pressure sides are equal, high-pressure side is low	<Ref. to AC-24, HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
High-pressure side is high	<Ref. to AC-24, HIGH-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is low	<Ref. to AC-24, LOW-PRESSURE SIDE IS LOW, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>
Low-pressure side is high	<Ref. to AC-25, LOW-PRESSURE SIDE IS HIGH, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

2. BOTH HIGH AND LOW PRESSURE SIDES ARE LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-30, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69 Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding “INSPECTION WITH PRESSURE SYMPTOM”.

3. BOTH HIGH AND LOW PRESSURE SIDES ARE HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Perform corresponding “INSPECTION WITH PRESSURE SYMPTOM”.

4. HIGH AND LOW PRESSURE SIDES ARE EQUAL, OR HIGH-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-30, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69 Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-32, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

5. HIGH-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**CHECK CONDENSER.** Check the condenser. <Ref. to AC-53, INSPECTION, Condenser.>	Is condenser OK?	Go to step **2**.	Clean or replace the condenser.
2	**CHECK RADIATOR FAN.** Check the radiator fan system. • Except for STI model: <Ref. to CO(w/o STI)-8, Radiator Fan System.> • STI model: <Ref. to CO(STI)-7, Radiator Fan System.>	Is radiator fan system normal?	Go to step **3**.	Repair the radiator fan system or replace the faulty parts.
3	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Check the high-pressure hose and condenser for kinks or clogging, and replace if defective.

6. LOW-PRESSURE SIDE IS LOW

	Step	Check	Yes	No
1	**CHECK REFRIGERANT LEAKS.** Check the refrigerant for leaks. <Ref. to AC-30, INSPECTION, Refrigerant Leak Check.> NOTE: When high-pressure side is less than 0.69 Mpa: Go to step 2.	Are there refrigerant leaks?	Repair the refrigerant leaking points.	Go to step **2**.

	Step	Check	Yes	No
2	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **3**.
3	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-61, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Inspect the compressor. <Ref. to AC(diag)-32, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

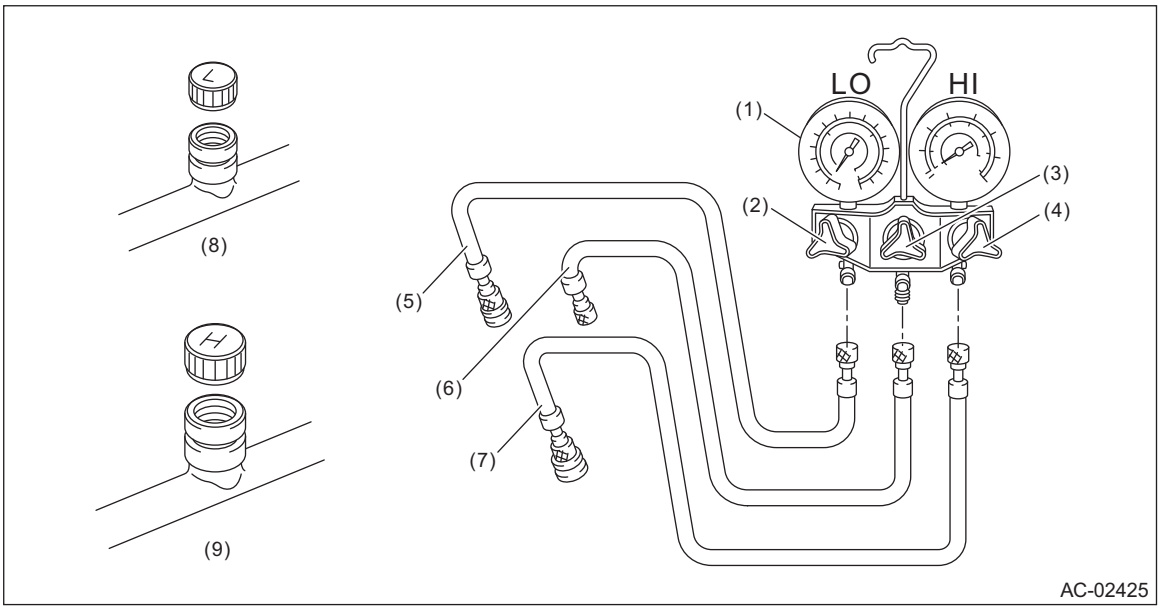
7. LOW-PRESSURE SIDE IS HIGH

	Step	Check	Yes	No
1	**FILL PROPER AMOUNT OF REFRIGERANT.** Drain all refrigerant, and refill proper amount of refrigerant. • Recovery: <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.> • Fill: <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Go to step **2**.
2	**REPLACE EXPANSION VALVE.** Replace the expansion valve. <Ref. to AC-61, REMOVAL, Expansion Valve.>	Is refrigerant pressure within the standard value?	Refrigerant pressure is normal.	Replace the evaporator. <Ref. to AC-57, REMOVAL, Evaporator.>

4. Refrigerant Recovery Procedure

A: PROCEDURE

CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
• When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
• Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.



(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Turn the ignition switch to OFF.
3) Remove the collector cover. (Except for STI model) <Ref. to IN(w/o STI)-7, REMOVAL, Collector Cover.>
4) Attach the manifold gauge set.

Preparation tool:
Manifold gauge set
(1) Check that all valves are fully closed.
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

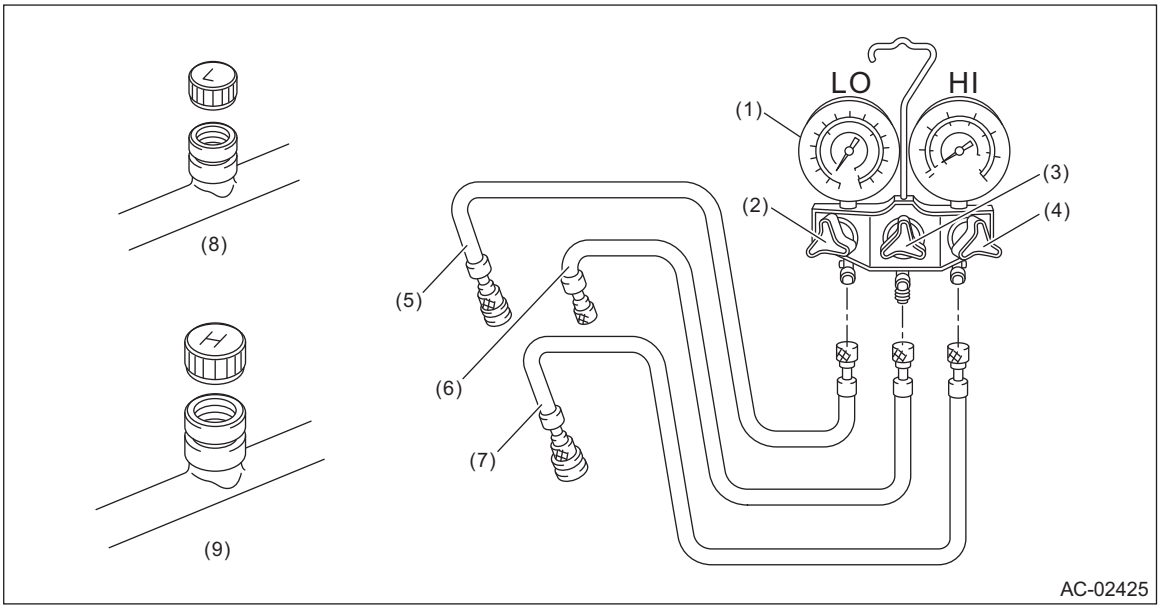
CAUTION:
Confirm that the connections are secure.
(3) Connect the center hose to the refrigerant recovery system.

Preparation tool:
Refrigerant recovery system
5) Follow the operation manual attached to the refrigerant recovery system to collect the refrigerant.

5. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:
- **While working, be sure to wear protective goggles and protective gloves.**
- **Air in the cycle can cause insufficient air conditioning, and water in the cycle can cause clogging in the cycle (icing) and rust. To remove this air and water content, use a vacuum pump to perform evacuation before filling with refrigerant. By making the inside of the cycle a vacuum, the water content will evaporate even at normal temperatures, and can be removed.**



(1)	Manifold gauge	(4)	High pressure valve	(7)	High-pressure hose
(2)	Low pressure valve	(5)	Low-pressure hose	(8)	Low-pressure side service port
(3)	Center valve	(6)	Center manifold hose (vacuum pump and charge)	(9)	High-pressure side service port

1) Attach the manifold gauge set.

Preparation tool:
Manifold gauge set
(1) Check that all valves are fully closed.
(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:
Confirm that the connections are secure.
(3) Connect the center manifold hose of the manifold gauge to the vacuum pump.

Preparation tool:
Vacuum pump
2) Perform evacuation.

CAUTION:
Make sure to perform evacuation using a vacuum pump.
(1) Open the low-pressure valve, high-pressure valve and center valve.
(2) Operate the vacuum pump.
(3) Perform evacuation for 5 minutes or more, and when the low pressure gauge needle reaches –0.1 MPa (–1 kgf/cm^2, –14 psi), close the center manifold hose valve, and stop the vacuum pump.

(4) Leave alone for 5 to 10 minutes after closing the low pressure valve and high pressure valve, and check whether there is any change in the low pressure gauge needle indication.
If the needle position changes, this indicates a leak. Check the pipe and hose connections, and repair the location with the problem.
After repair, retry charging the refrigerant from the step 1).
(5) If there is no leakage, continue evacuation for additional 20 — 30 minutes, close all valves and then stop the vacuum pump.

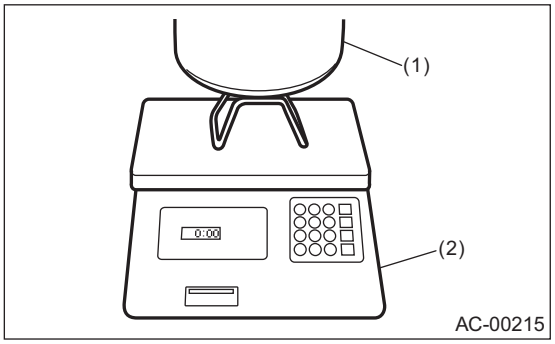
3) Charge refrigerant.
(1) Follow the can tap operation manual to attach it to the refrigerant can.

Preparation tool:
Can tap

(2) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

Preparation tool:
Weight scale

NOTE:
When 13.6 kg (30 lb) refrigerant container (1) is used, measure the amount of refrigerant with a refrigerant charging scale (2), and connect with the center manifold hose.



(3) Open the tap valve of HFC-134a supply container (refrigerant can or refrigerant container).
(4) Loosen the center manifold hose connection on the manifold gauge for a few seconds (if there is a purge valve on the manifold gauge, push this instead) to allow the air in the center manifold hose to be bled by the refrigerant pressure.
(5) Open the low pressure valve and high pressure valve of the manifold gauge to fill with refrigerant.

NOTE:
If the HFC-134a supply container is empty, close all manifold gauge valves and the tap valve of HFC-134a supply container, and replace the empty supply container with a new one. After replacing with a new HFC-134a supply container, perform air purge, and resume the filling operation.

(6) If the low pressure gauge indicates approximately 0.2 MPa (2 kgf/cm^2, 29 psi) or refrigerant filling efficiency drops, close the low pressure and high pressure valves.
(7) Check that the low pressure valve and high pressure valve are closed, turn off the A/C switch and start the engine.

CAUTION:
When filling operation is performed with the engine running, do not open the high pressure valve. Always fill from the low pressure valve.

(8) To prevent damage to the compressor, push the A/C switch ON-OFF quickly a few times.
(9) Set the vehicle to the following conditions.

Item	Condition
Engine speed	1,500 r/min
A/C switch	ON
Temperature adjustment dial	LO (MAX COOL)
Fan dial	HI (MAX)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT

Item	Condition
Window	OPEN

(10) Open the low pressure valve, check the refrigerant pressure with a manifold gauge and fill with refrigerant up to the specified amount. <Ref. to AC-23, INSPECTION WITH PRESSURE SYMPTOM, INSPECTION, Refrigerant Pressure with Manifold Gauge Set.>

4) Using an electronic leak detector (leak tester), check for refrigerant leaks in the system. <Ref. to AC-30, INSPECTION, Refrigerant Leak Check.>

5) After filling with refrigerant, close all valves and remove the manifold gauge set.

6) Attach cap to the service port of the low pressure side and high pressure side.

6. Refrigerant Leak Check

A: INSPECTION

1) Attach the manifold gauge set.

Preparation tool:

Manifold gauge set

(1) Check that all valves are fully closed.

(2) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

CAUTION:

Confirm that the connections are secure.

(3) Start the engine, operate the A/C system for approx. 10 minutes, and check that the high-pressure side indicates 0.69 MPa (7 kgf/cm^2, 100 psi) or more.

2) Turn the ignition switch to OFF to start the leak test.

Preparation tool:

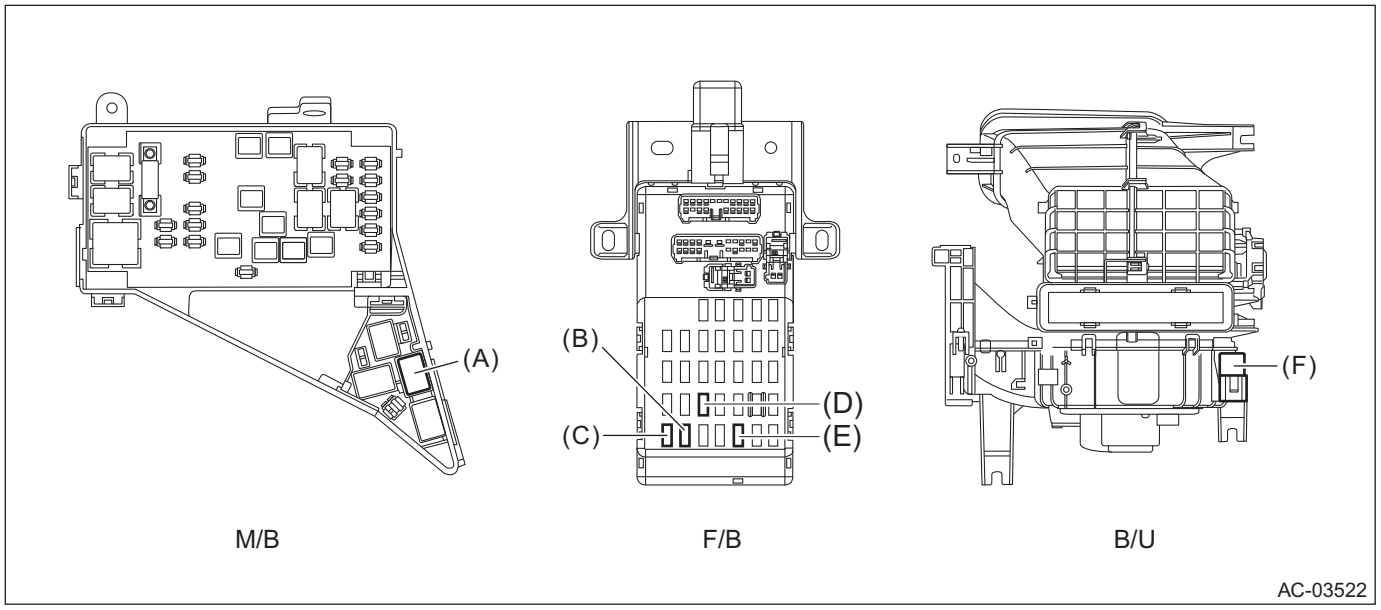
Electronic leak detector (leak tester)

Items	Condition	Corrective action
Pipe	Check the connections of pipe and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between pressure switch or pressure sensor and high-pressure pipe.	Replace the pressure switch or pressure sensor.
	Check the connection between pipe and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
Condenser	Check the welded part of condenser and core.	Replace the condenser.
Hose (high-pressure)	Check the connection between hose (high-pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (high-pressure) and condenser.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (high pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Compressor	Check the compressor pulley and vicinity of shaft seal. **CAUTION:** **Some shaft seals will show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.**	Replace the compressor.

Items	Condition	Corrective action
Hose (low-pressure)	Check the connection between hose (low pressure) and expansion valve.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the connection between hose (low pressure) and compressor.	Check the O-ring at connection and tightening torque. If necessary, replace each part.
	Check the rubber part of the flexible hose and pipe seam. **CAUTION:** **Carefully check the external surface of flexible hoses and pipes at approx. 25 mm (0.98 in) per second.**	Replace the hose (low pressure).
	Check the valve and cap in the service port.	Check the rubber seal of the valve and cap. If necessary, replace valve or cap.
Evaporator	Remove the drain hose from the heater case, and check the end part for 10 seconds or more.	Replace the evaporator.
	Check the air vent grille. NOTE: Turn the ignition switch to ON, and run the blower at high speed for approx. 1 minute. Stop the blower to check the air vent grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that position for at least 10 seconds.	Replace the evaporator.

7. Relay and Fuse

A: LOCATION



Main fuse box	A/C relay	(A)
Relay & fuse box	Fuse 15 A (blower motor relay)	(B)
	Fuse 15 A (blower motor relay)	(C)
	Fuse 7.5 A (A/C control panel, A/C relay, sub fan relay, pressure switch and blower motor relay)	(D)
	Fuse 7.5 A (A/C control panel)	(E)
Blower motor unit	Blower motor relay	(F)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

- A/C relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

- Blower motor relay

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

8. Compressor Oil

A: PROCEDURE

NOTE:
Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor assembly.
1) Increase the engine speed to 1,500 r/min.
2) Turn the A/C switch to ON.
3) Turn the temperature control dial to LO (MAX COOL).
4) Turn the FRESH/RECIRC switch to RECIRC position.
5) Turn the fan dial to HI (MAX).
6) Leave in this condition for 10 minutes.

B: ADJUSTMENT

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor assembly, the new compressor assembly will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor assembly) and install the new compressor assembly.

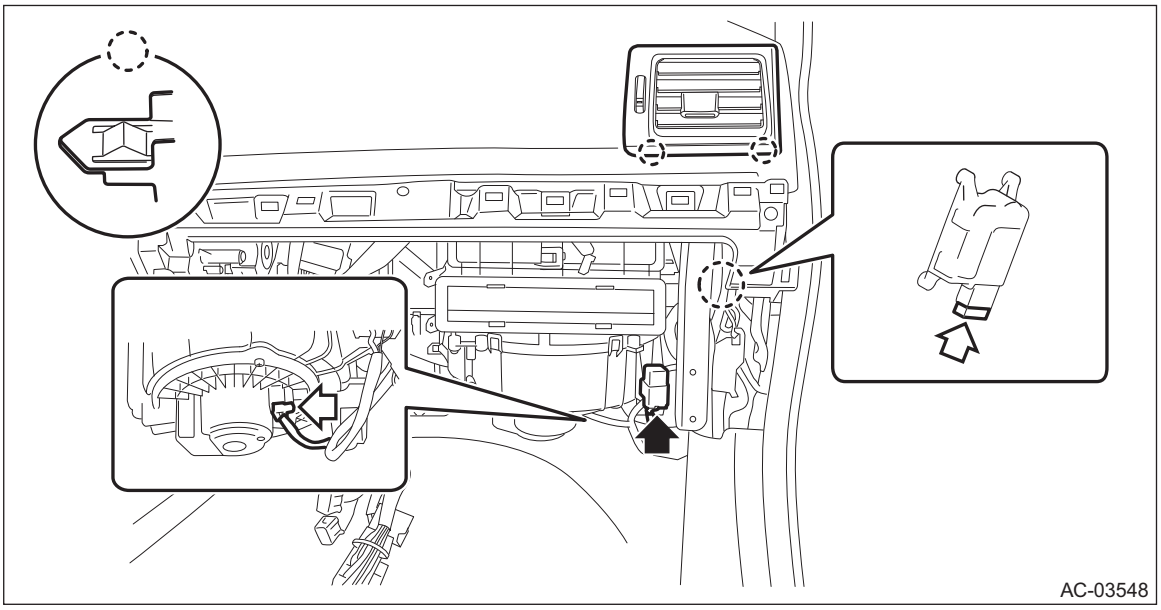
NOTE:
Since the hygroscopicity of compressor oil is high, perform this series of works quickly.

9. Blower Motor Unit Assembly

A: REMOVAL

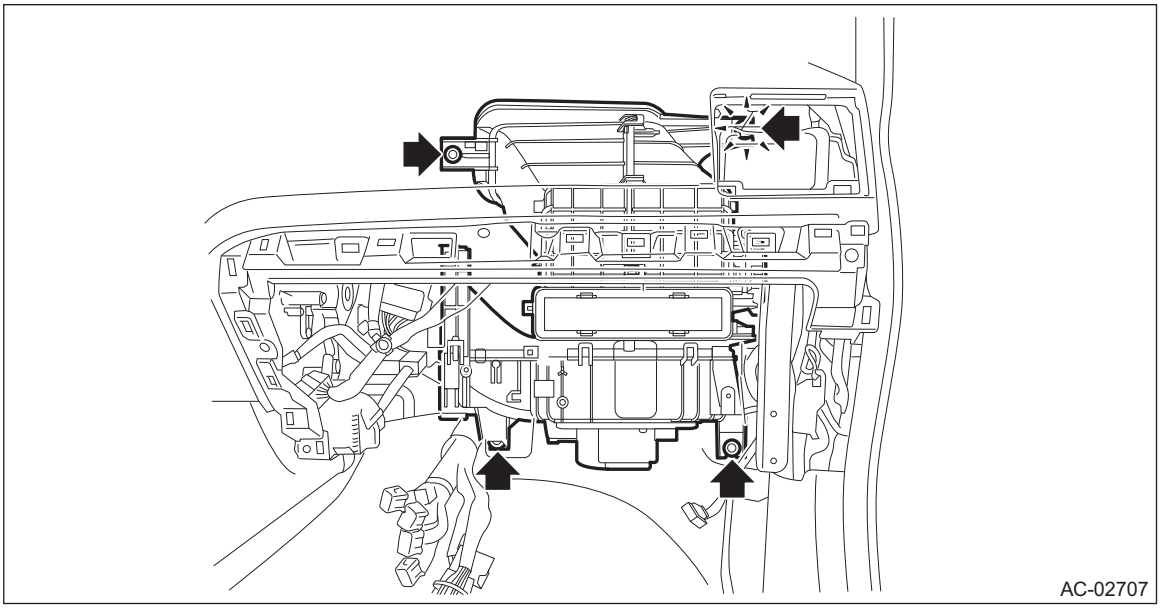
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>
4) Remove the blower motor unit assembly.
(1) Release the claws, and then remove the grille assembly - ventilation RH.
(2) Disconnect the blower motor relay and each connector.



(3) Remove the bolts and nuts to remove blower motor unit assembly.

NOTE:
Remove the RH upper nut from the mounting portion of the grille assembly - ventilation RH.



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• After installing the grille assembly - ventilation RH, check that the air vent grille of the grille assembly - ventilation RH is inserted correctly into the air vent duct.
1) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the grille assembly - ventilation RH.
3) Install the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>
4) Install the glove box.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

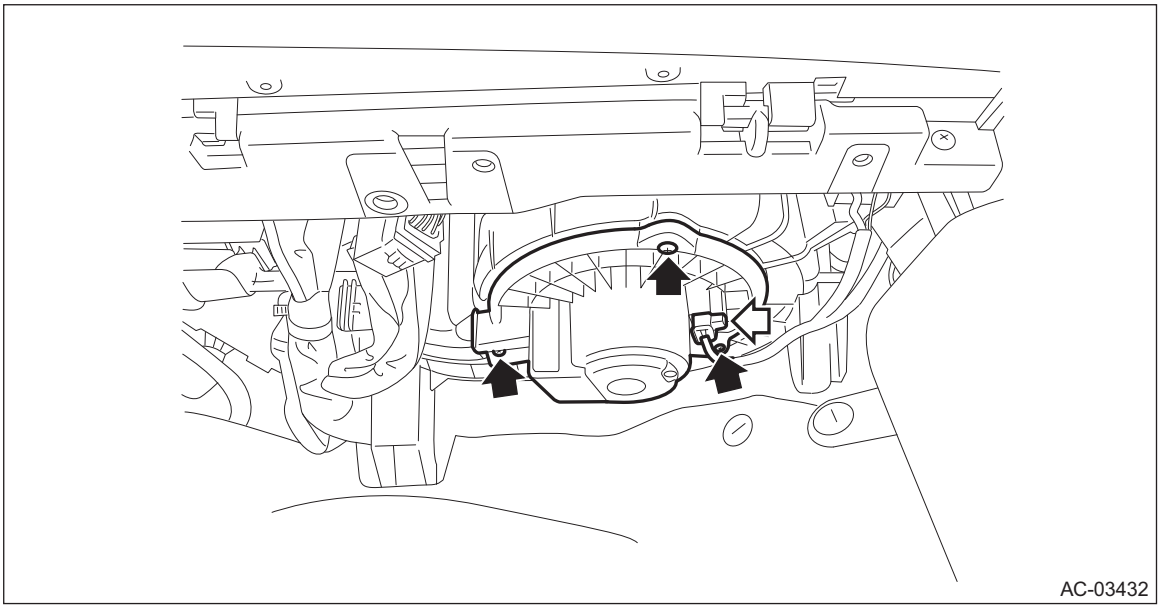
10.Blower Motor

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the blower - motor.
   (1) Disconnect the connector.
   (2) Remove the screws and detach the blower - motor.

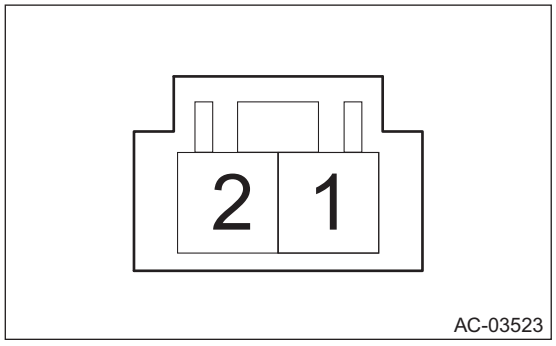


B: INSTALLATION

1) Install the blower - motor.
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check the motor operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
2 (+) — 1 (–)	Apply battery voltage.	Rotation

2) If it does not operate normally, replace the blower - motor.

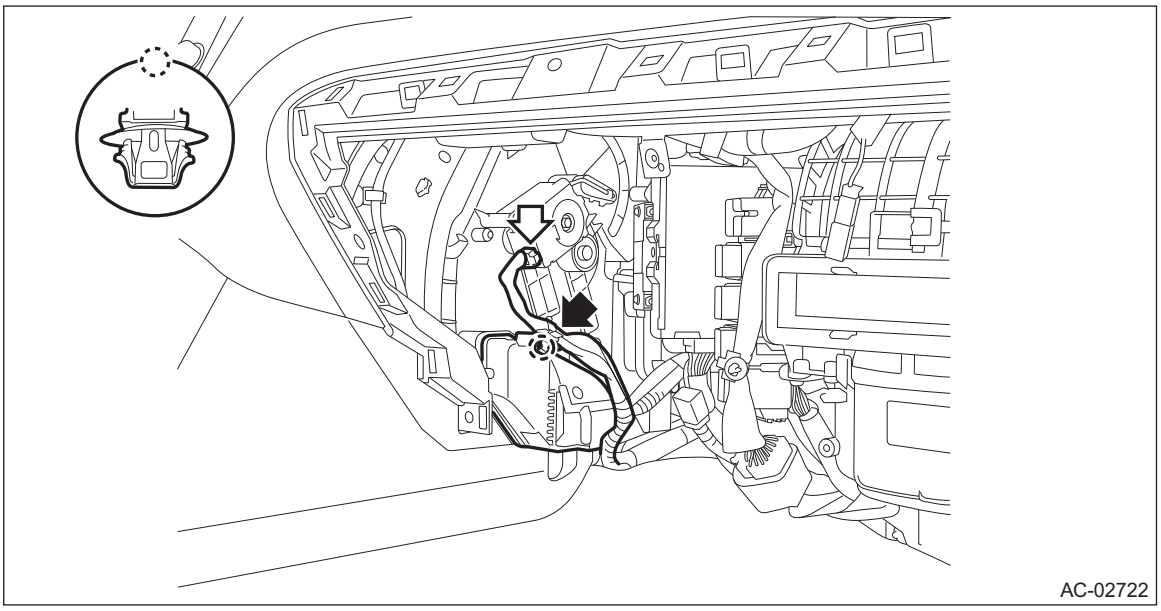
11.Power Transistor (Auto A/C Model)

A: REMOVAL

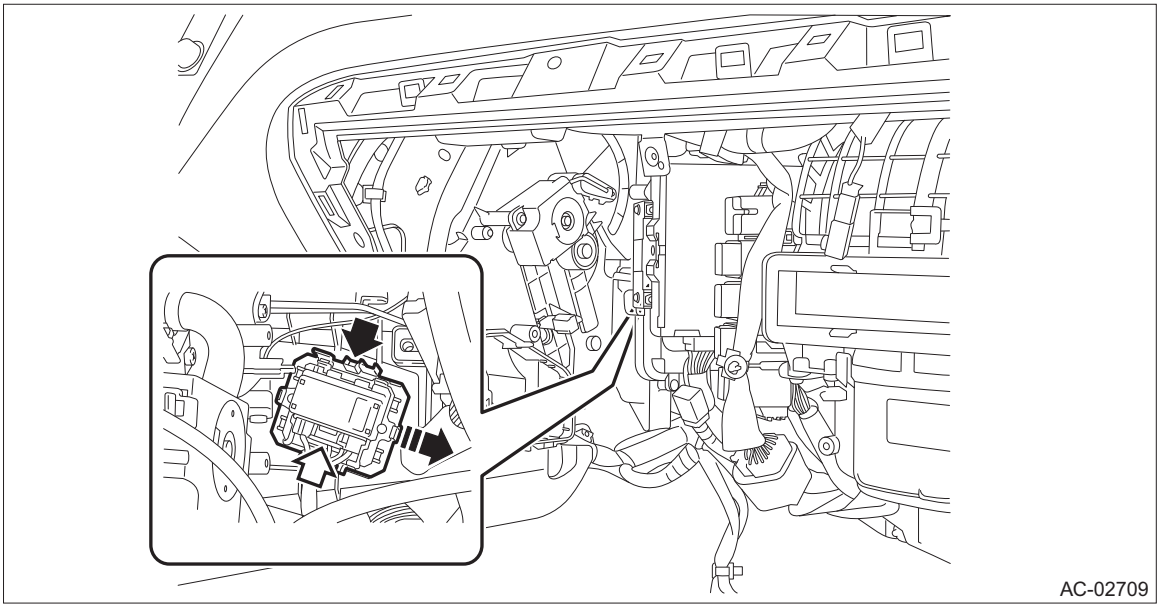
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the screws and remove the duct - foot RH.

NOTE:
Remove the connector and harness clip of the motor - actuator mix RH, and move the harness aside.



4) Remove the power transistor.
   (1) Disconnect the connector.
   (2) Remove the power transistor while pressing the power transistor claw part and sliding it.



B: INSTALLATION

1) Install the power transistor.
2) Install the duct - foot RH.

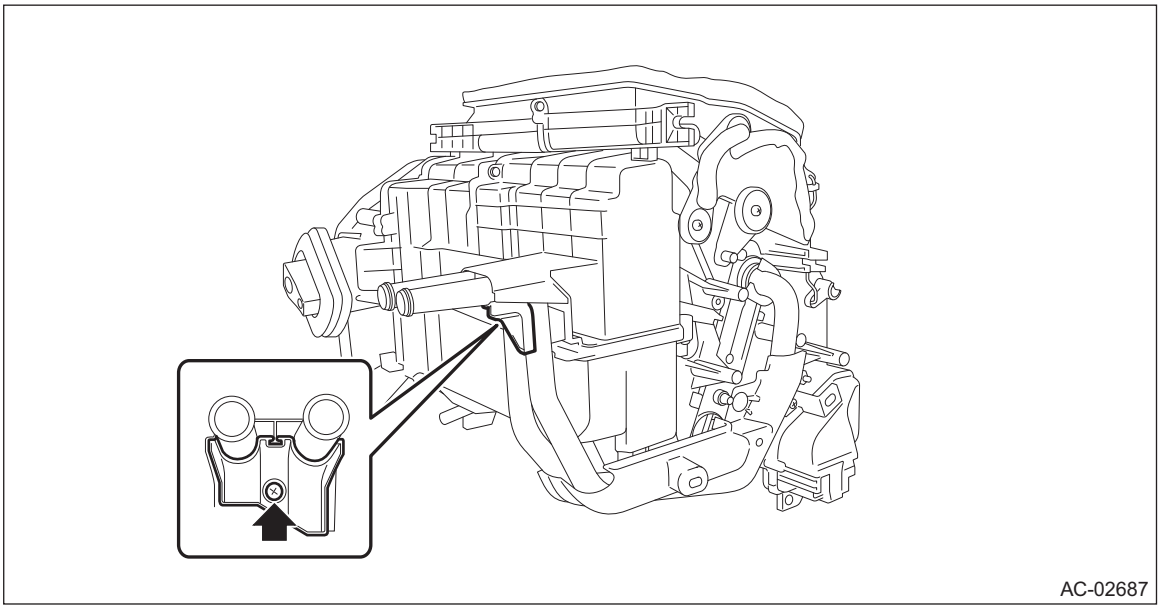
3) Install the glove box.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

12.Heater Core

A: REMOVAL

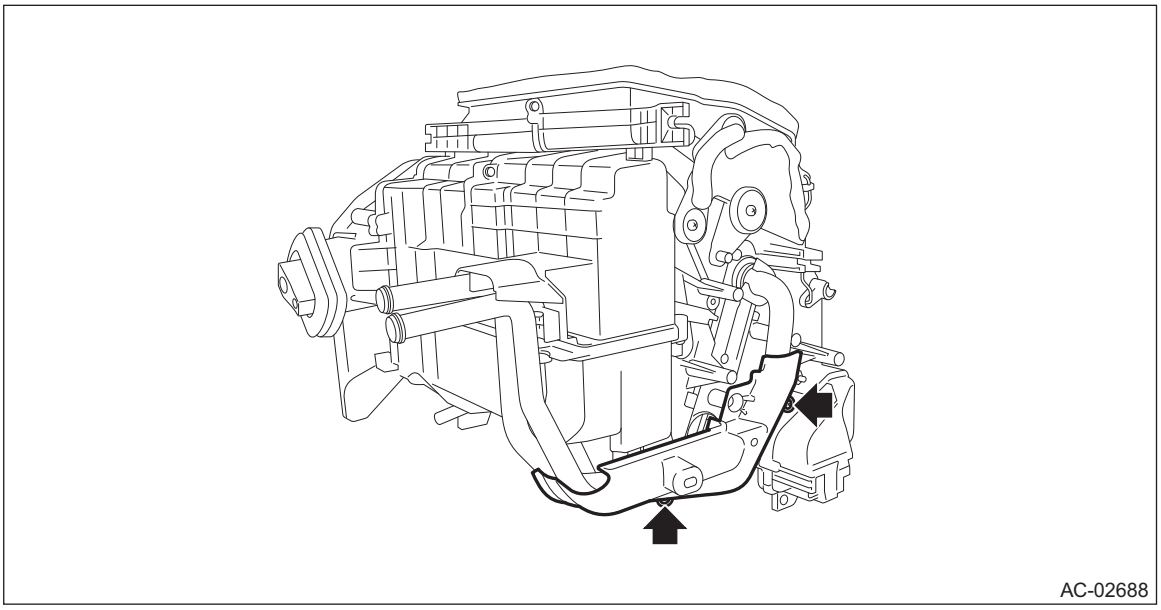
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Drain engine coolant.
• Except for STI model: <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
• STI model: <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
5) Remove the heater core.
(1) Remove the screw and detach the clamp - pipe.

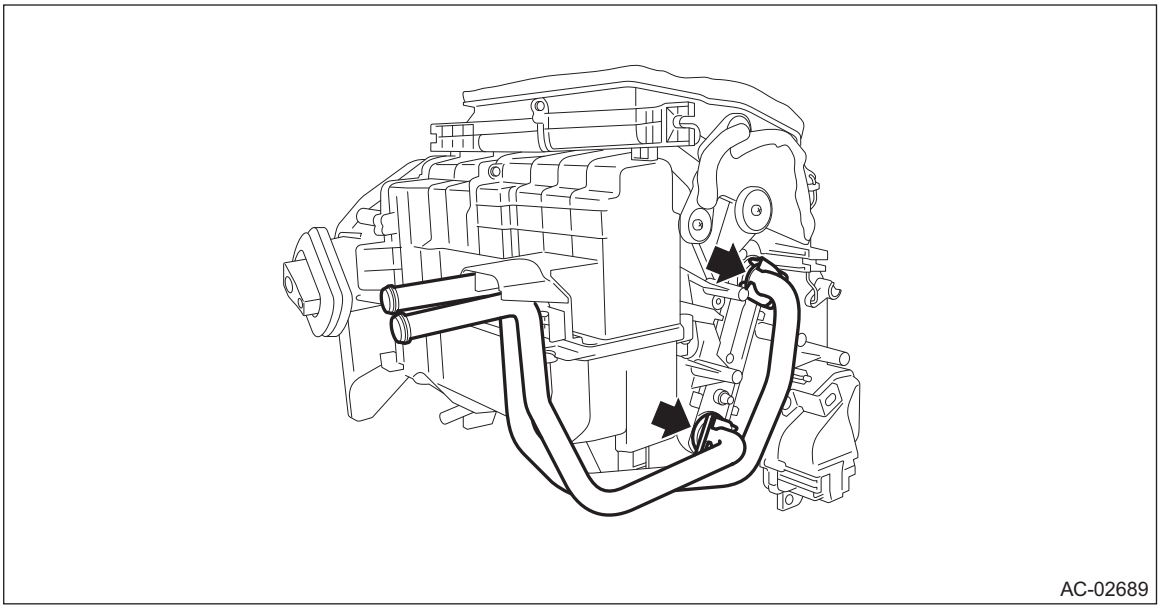


AC-02687

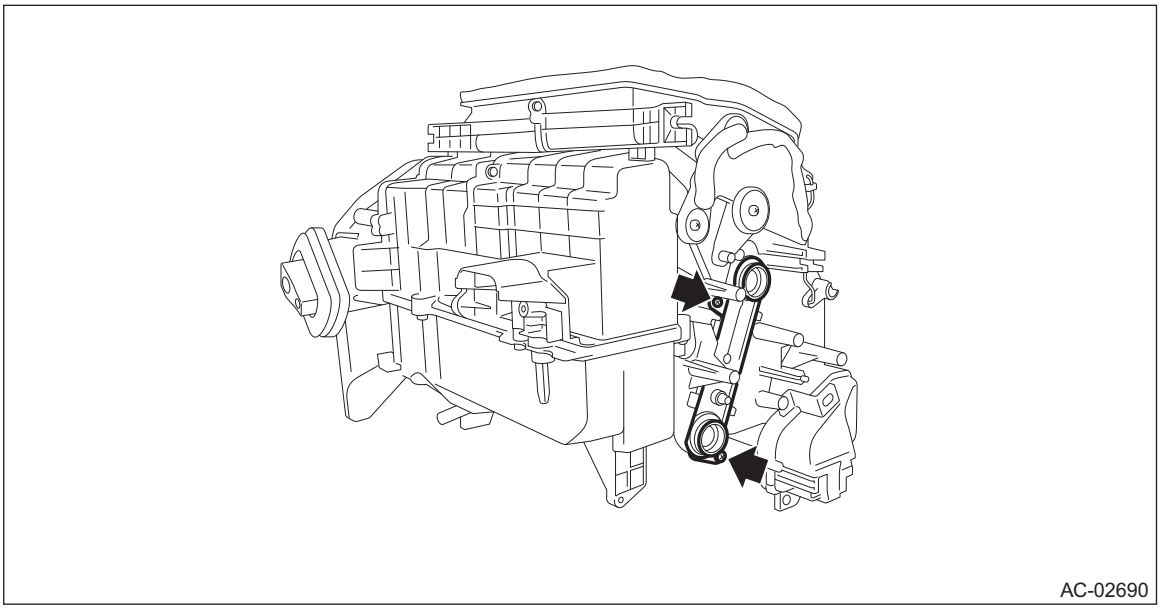
(2) Remove the screws and detach the cover - heater pipe.



(3) Remove the clamp, and remove the pipe - inlet and outlet.

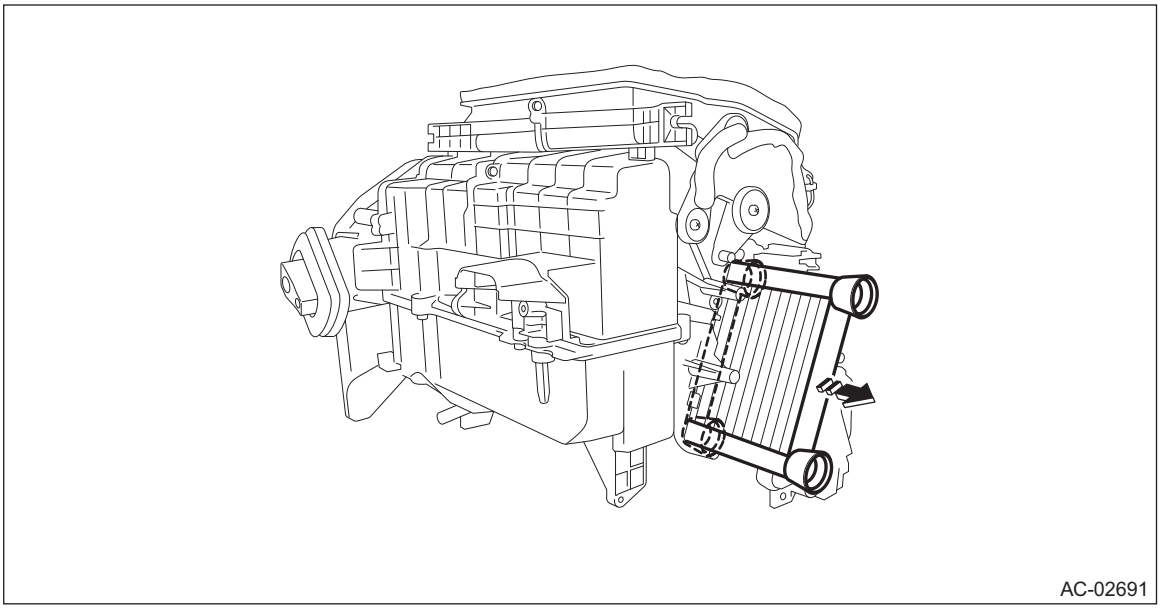


(4) Remove the screws and detach the plate - heater core.



AC-02690

(5) Remove the heater core.



AC-02691

B: INSTALLATION

CAUTION:
- **Replace O-rings and clamps with new parts and install securely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**

1) Attach the heater core.
2) Install the heater and cooling unit assembly. <Ref. to AC-55, INSTALLATION, Heater and Cooling Unit.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Fill engine coolant.
- Except for STI model: <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- STI model: <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

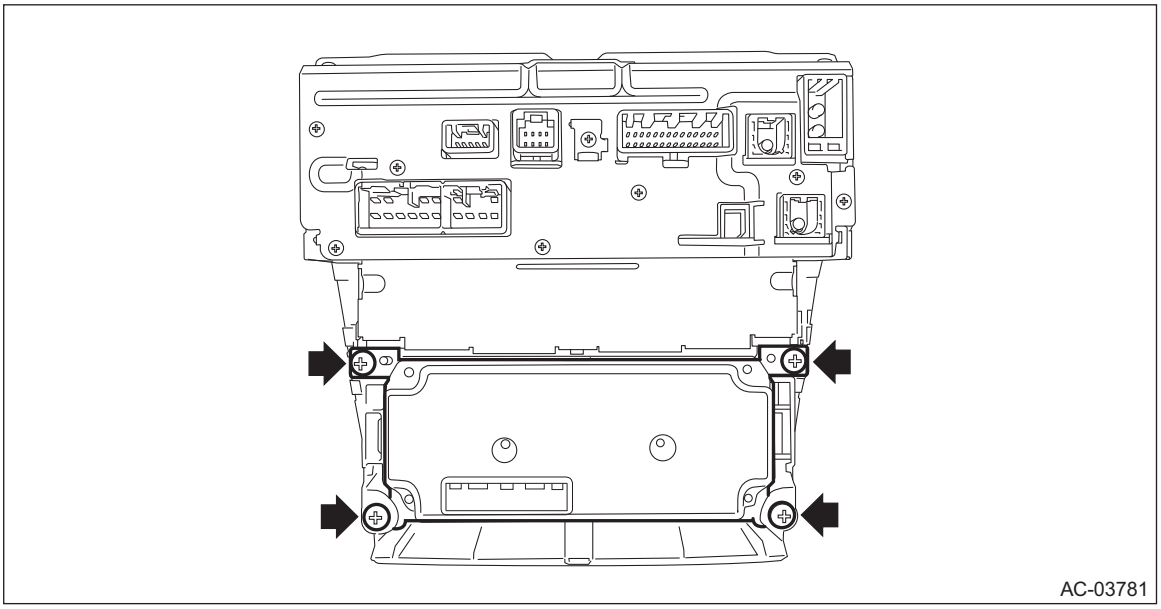
5) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

13.Control Panel

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the screws to remove the heater control assembly.



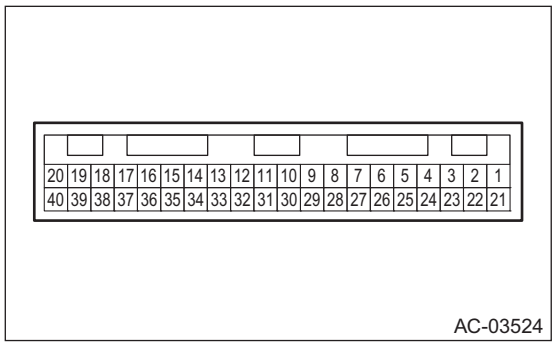
B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
1) Install the heater control assembly.
2) Install the audio assembly or navigation assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the center grille assembly.
4) Install the glove box.
5) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
6) Install the cover assembly - instrument panel LWR driver.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check the illumination operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
37 (+) — 35 (–)	Apply battery voltage.	Light ON

2) If it does not operate normally, replace the heater control assembly.

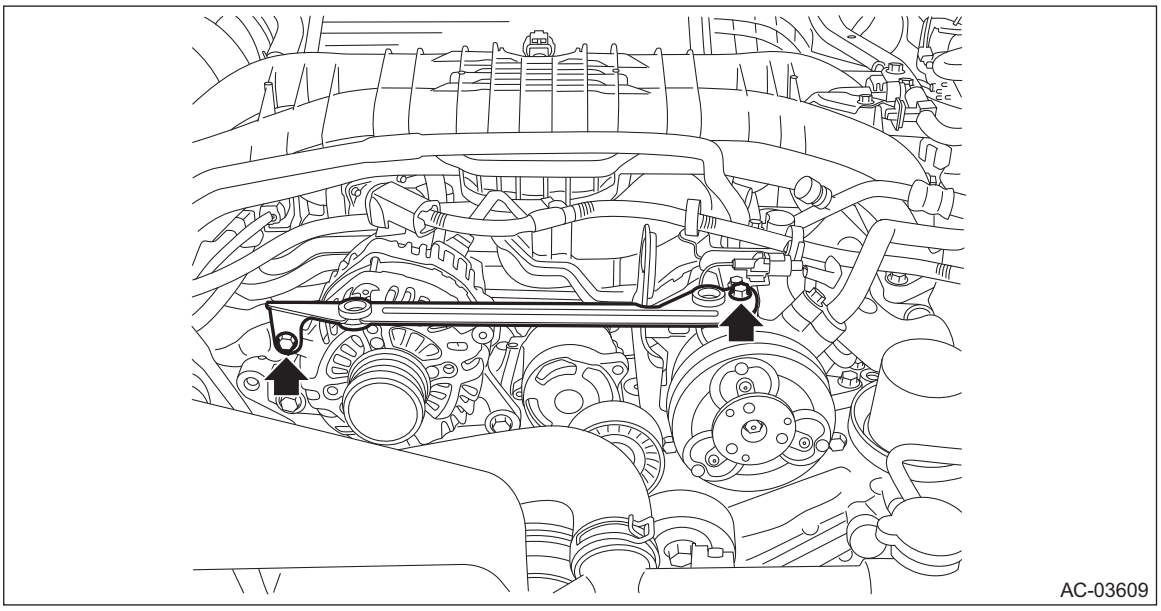
14.Compressor

A: REMOVAL

1. EXCEPT FOR STI MODEL

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

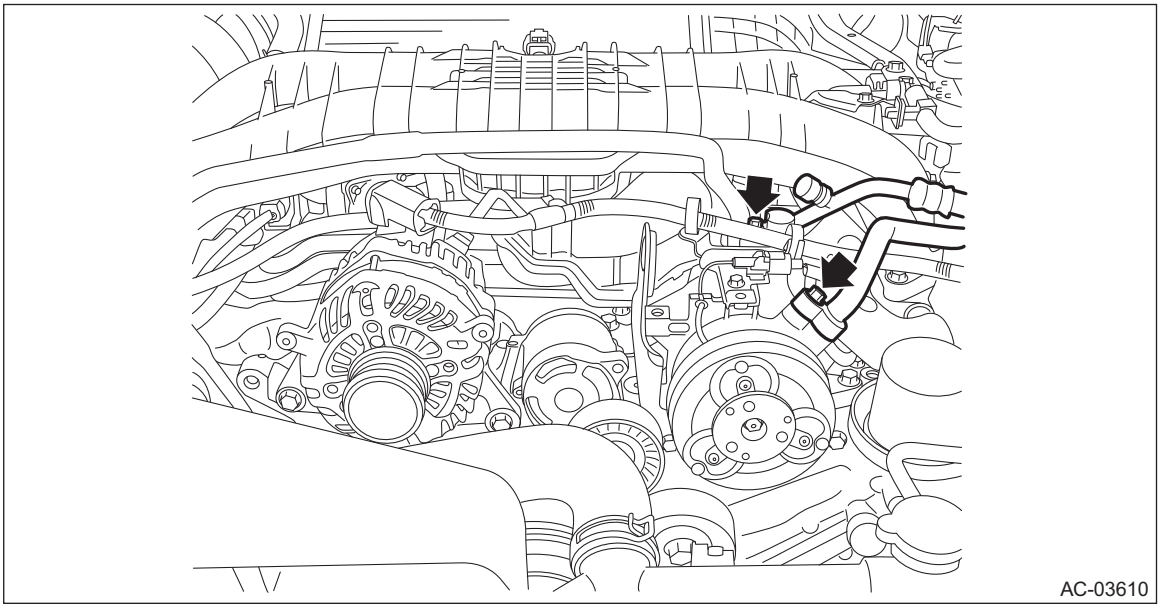
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
4) Remove the V-belts. <Ref. to ME(w/o STI)-77, REMOVAL, V-belt.>
5) Remove the bolts and remove the V-belt cover bracket.



AC-03609

6) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

CAUTION:
Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.

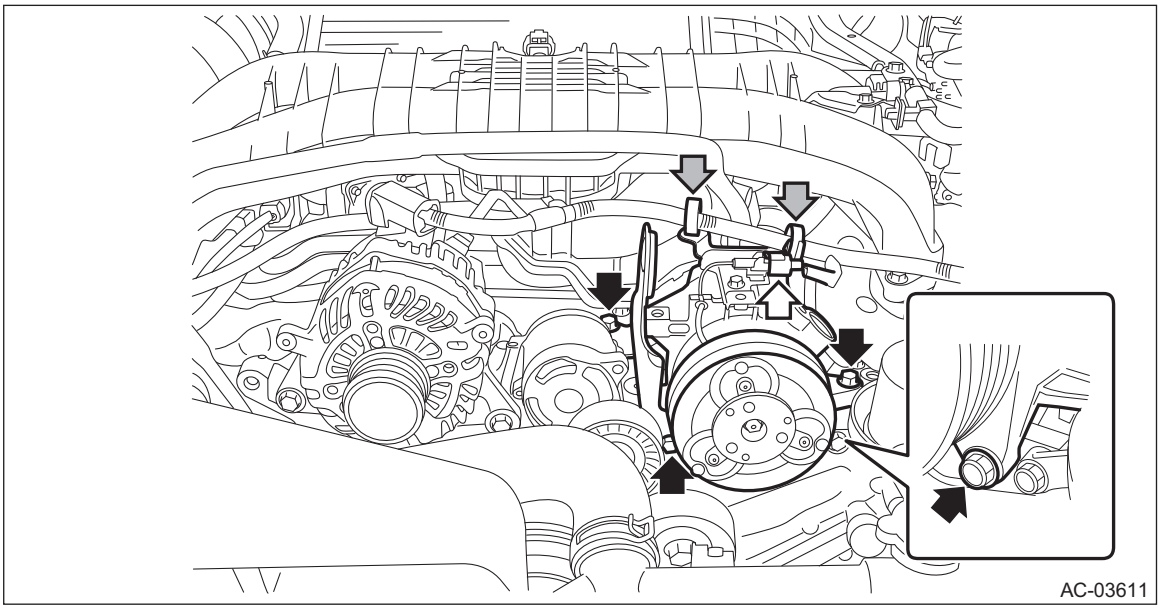


AC-03610

7) Remove the compressor assembly.

(1) Remove the harness clamp and connector.
(2) Remove the bolts and remove the compressor assembly.

NOTE:
Tighten the engine hanger together with the compressor assembly.

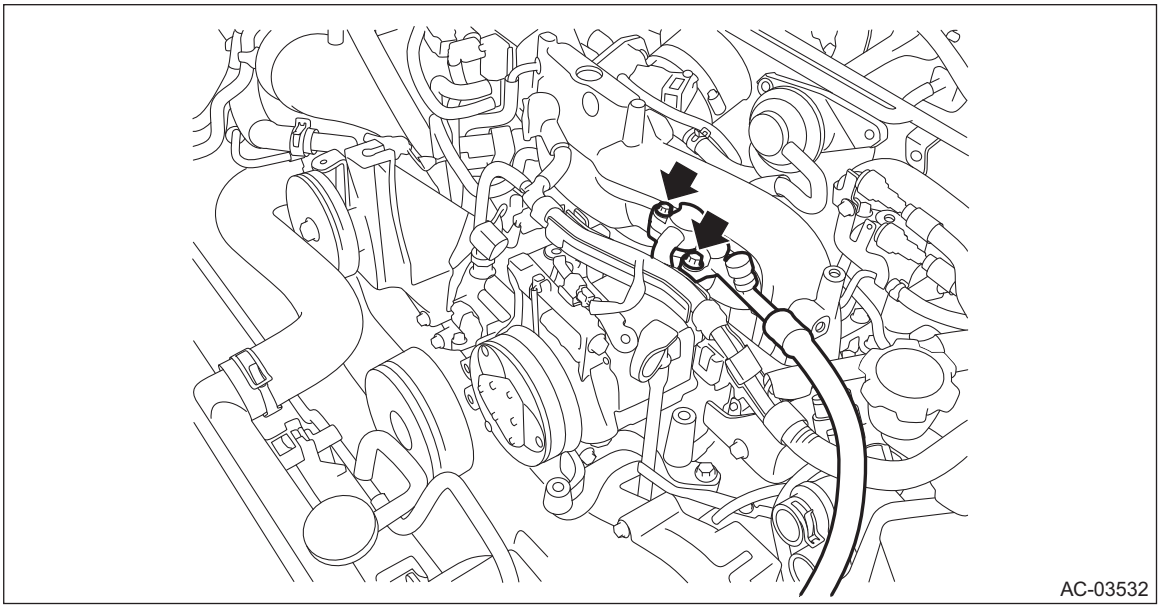


2. STI MODEL

1) Perform compressor oil return operation. <Ref. to AC-34, PROCEDURE, Compressor Oil.>
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Disconnect the ground cable from battery.

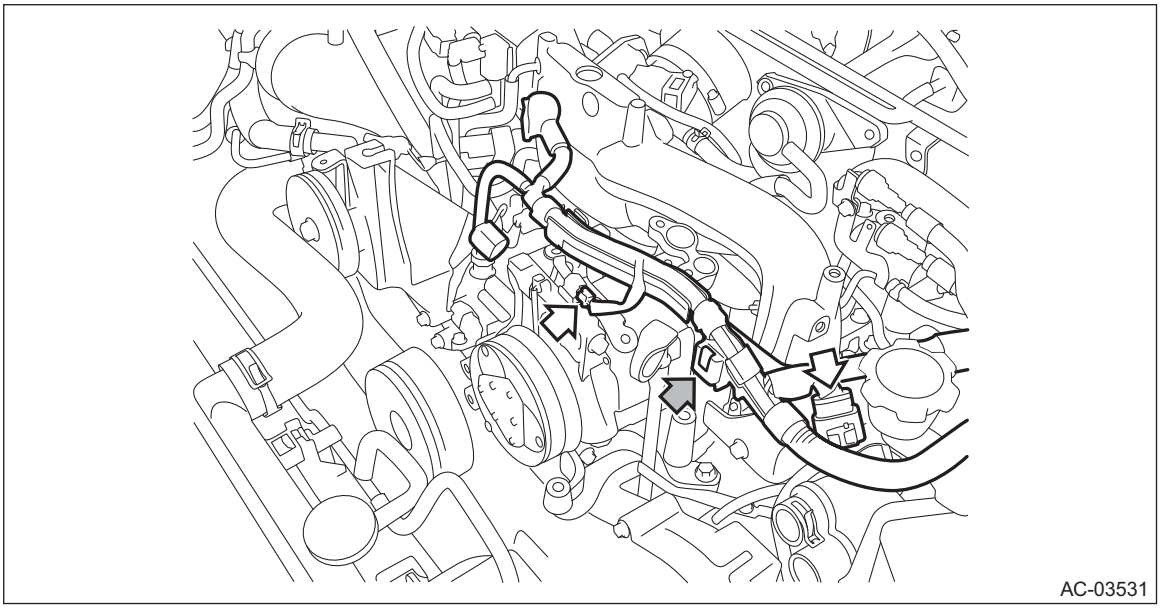
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
4) Remove the V-belts. <Ref. to ME(STI)-42, REMOVAL, V-belt.>
5) Remove the generator. <Ref. to SC(STI)-18, REMOVAL, Generator.>
6) Remove the secondary air pump. <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>
7) Remove the bolt, and detach the hose - pressure suction and the hose - pressure discharge.

CAUTION:
Seal the disconnected hose and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.



AC-03532

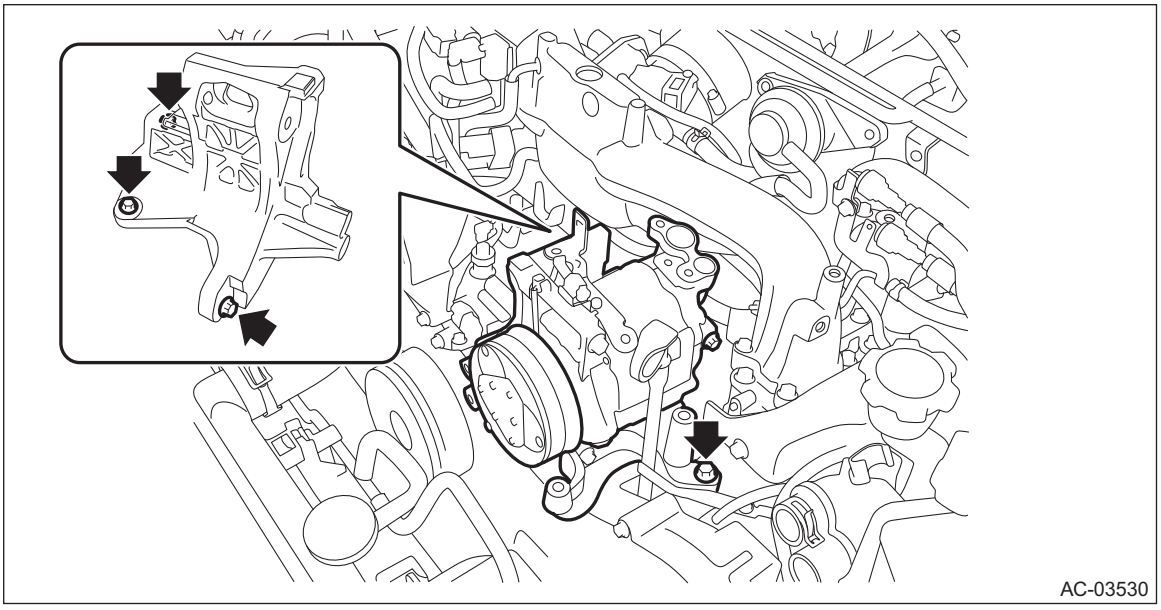
8) Remove the compressor assembly.
(1) Detach the harness clamp and each connector.



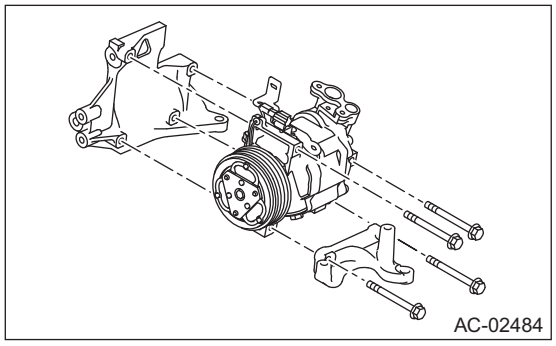
AC-03531

(2) Remove the bolts and remove the compressor assembly.

NOTE:
Since the compressor cannot be removed by itself, remove the compressor bracket as a unit.



(3) Remove the bracket assembly - compressor and the bracket - air conditioner.



B: INSTALLATION

1. EXCEPT FOR STI MODEL

CAUTION:
• Replace the O-rings on the hose - pressure suction and discharge with new parts, and then apply compressor oil.
• After replacing the compressor assembly, adjust the amount of the compressor oil. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>

1) Install the compressor assembly.

Tightening torque:
36 N·m (3.7 kgf-m, 26.6 ft-lb)

2) Install the hose - pressure suction and the hose - pressure discharge.

Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)

3) Install the V-belt cover bracket.

Tightening torque:
6.4 N·m (0.7 kgf-m, 4.7 ft-lb)

4) Install the V-belts. <Ref. to ME(w/o STI)-78, INSTALLATION, V-belt.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

2. STI MODEL

CAUTION:
• Replace the O-rings on the hose - pressure suction and discharge with new parts, and then apply compressor oil.
• After replacing the compressor assembly, adjust the amount of the compressor oil. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>

1) Install the bracket assembly - compressor and the bracket - air conditioner.

Tightening torque:
26.5 N·m (2.7 kgf-m, 19.5 ft-lb)

2) Install the compressor assembly.

Tightening torque:
36 N·m (3.7 kgf-m, 26.6 ft-lb)

3) Install the hose - pressure suction and the hose - pressure discharge.

Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)

4) Install the secondary air pump. <Ref. to EC(STI)-54, INSTALLATION, Secondary Air Pump.>
5) Install the generator. <Ref. to SC(STI)-18, INSTALLATION, Generator.>
6) Install the V-belts. <Ref. to ME(STI)-42, INSTALLATION, V-belt.>
7) Connect the battery ground terminal.
8) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1. MAGNET CLUTCH CLEARANCE INSPECTION

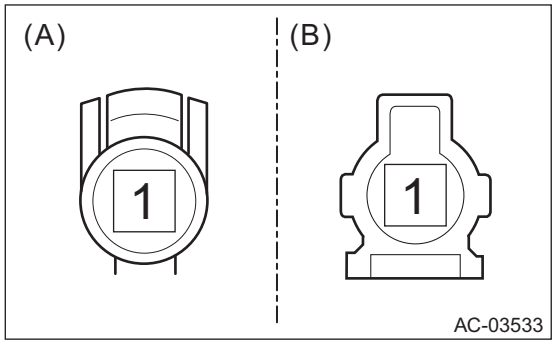
1) Check the clearance of entire circumference around the drive plate and pulley.

Specification:
0.3 — 0.6 mm (0.0118 — 0.0236 in)

2) Replace the compressor assembly if the inspection result is not within the standard.

2. MAGNET CLUTCH OPERATION INSPECTION

1) Check the magnet clutch operation when battery voltage is applied to the connector terminal.



(A) Except for STI model
(B) STI model

Terminal No.	Inspection conditions	Specification
1 (+) — Chassis ground (–)	Apply battery voltage.	Engaged

2) If it does not operate normally, replace the compressor assembly.

15.Condenser

A: REMOVAL

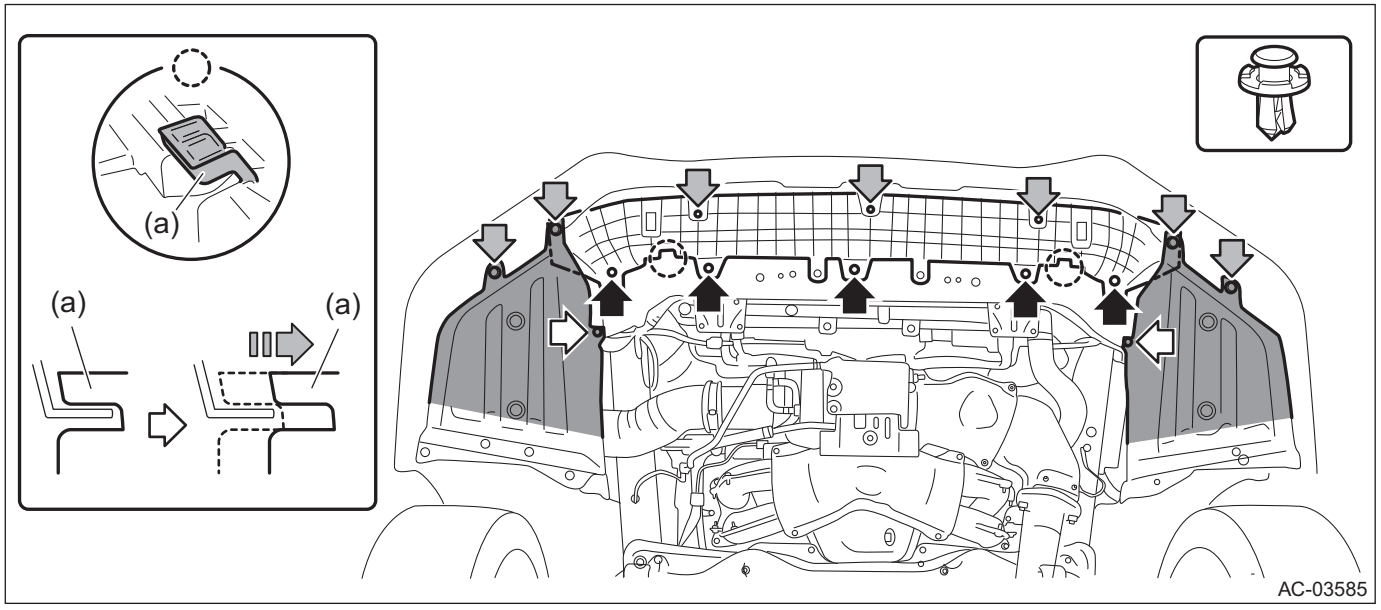
1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the air intake duct.
- Except for STI model: <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
- STI model: <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>

4) Remove the reservoir tank.
- Except for STI model: <Ref. to CO(w/o STI)-53, REMOVAL, Reservoir Tank.>
- STI model: <Ref. to CO(STI)-28, REMOVAL, Reservoir Tank.>

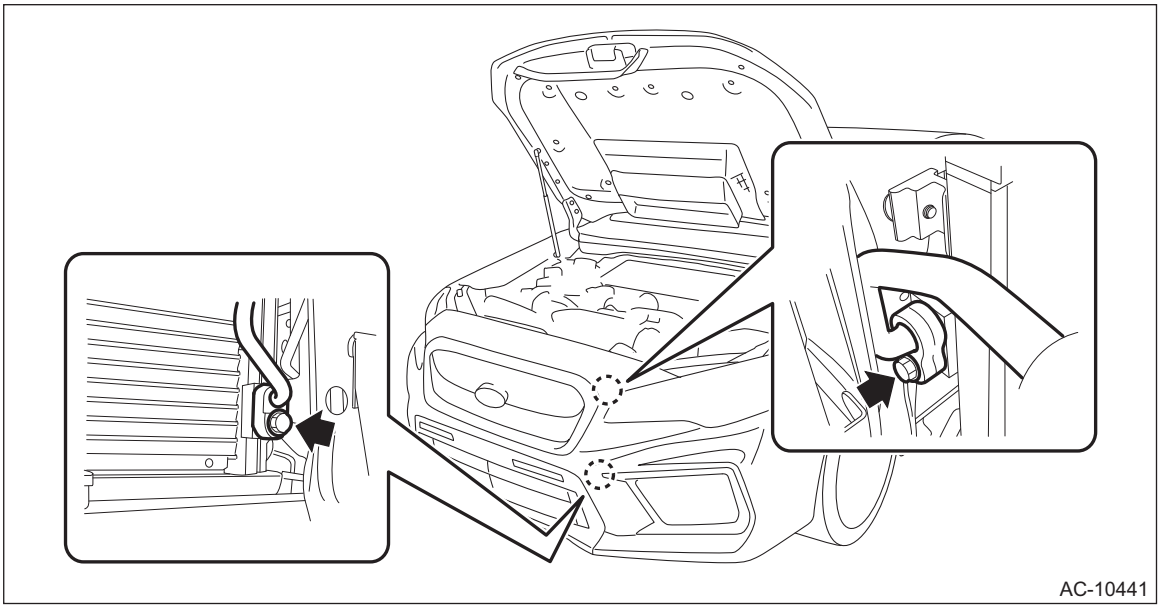
5) Lift up the vehicle.
6) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
7) Remove the bracket center lower - front.
   (1) Remove the screw and clips, and turn over the mud guard - front.
   (2) Remove the bolts and clips, and remove the bracket center lower - front.

NOTE:
While entirely pushing the bracket center lower - front forward, remove the two hooks (a) on the left and right.

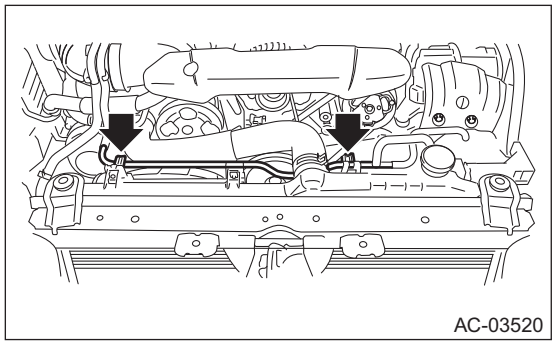


8) Remove the bolt, and detach the hose - pressure discharge and the pipe - evaporator cooling.

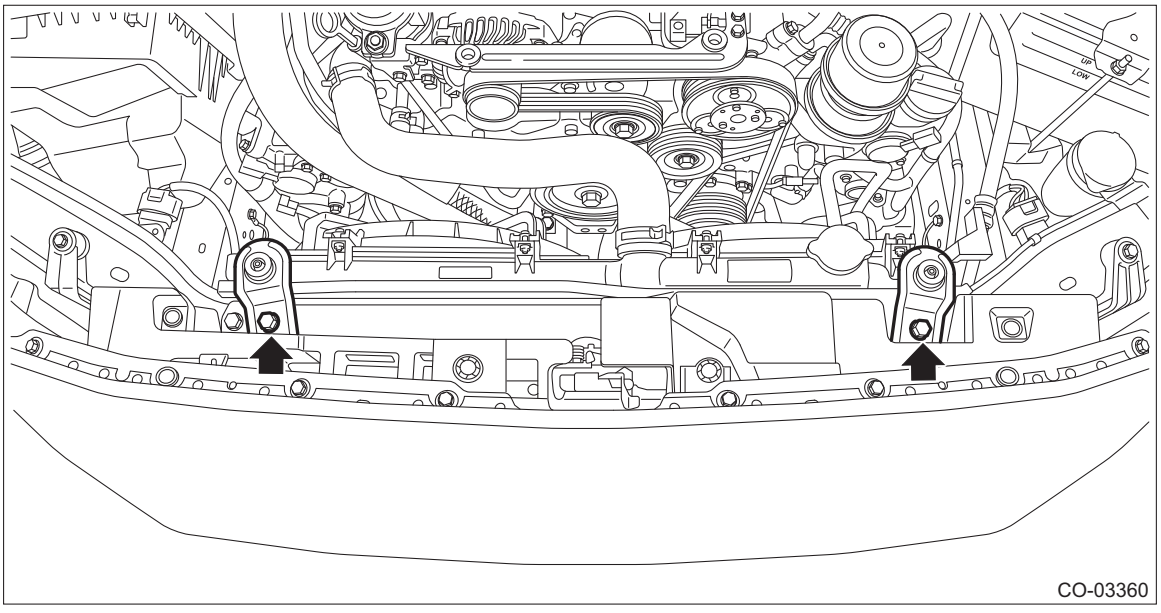
CAUTION:
Seal the disconnected hose, pipe and engaging part of condenser assembly with a plug or vinyl tape to prevent foreign matter from entering.



9) Remove the bolts of the over flow pipe. (STI model)



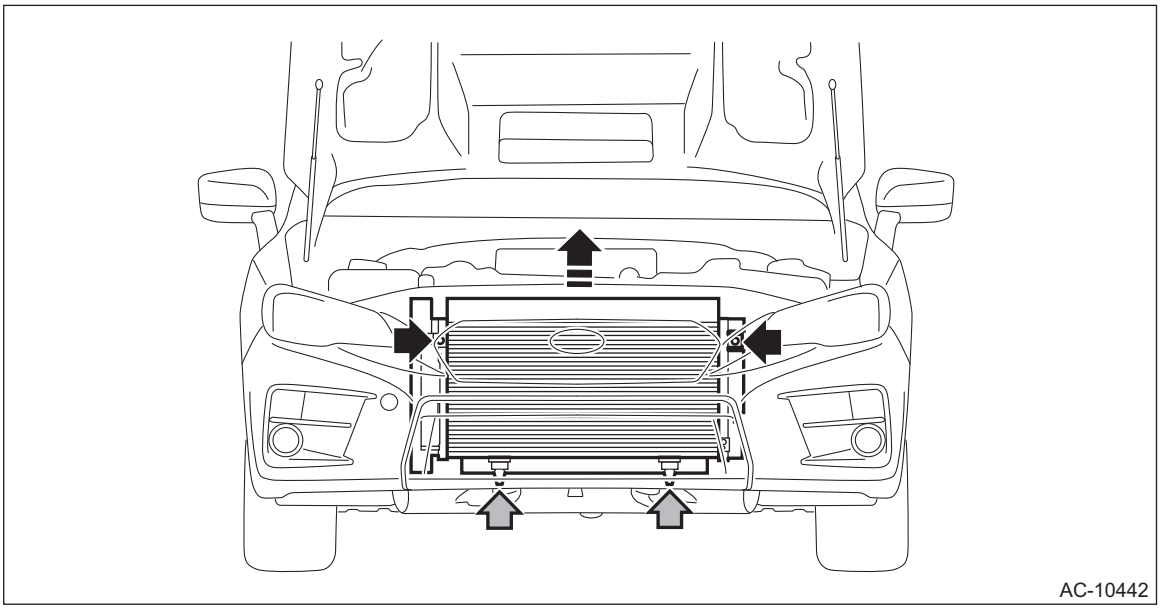
10) Remove the bolts and remove the radiator upper bracket.



11) Remove the condenser assembly - air conditioner.
(1) Remove the bolt.

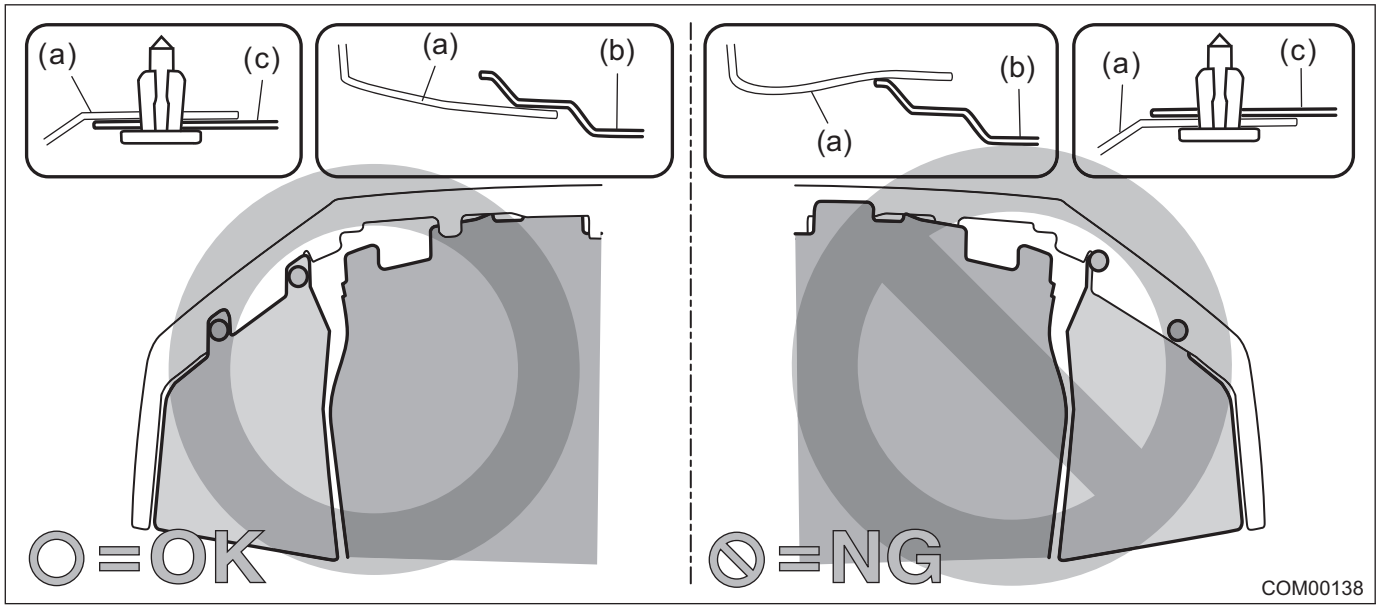
(2) Remove the lower guide, and remove the condenser assembly - air conditioner.

CAUTION:
• Push the radiator to the engine side, and pull it out through the space between the radiator and the radiator panel.
• Be careful not to damage the condenser and radiator fin. If a damaged fin is found, repair it using a thin screwdriver.



B: INSTALLATION

CAUTION:
• If the condenser assembly - air conditioner has been replaced, add an appropriate amount of compressor oil. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Replace the O-rings with new parts, and then apply compressor oil.
• Confirm that the lower guide of condenser assembly - air conditioner fits into the holes on radiator panel.
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the condenser assembly - air conditioner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the radiator upper brackets.

Tightening torque:
12 N·m (1.2 kgf-m, 8.9 ft-lb)
3) Install the over flow pipe. (STI model)

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the hose - pressure discharge and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the bracket center lower - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
6) Install the under cover - front.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
7) Lower the vehicle.
8) Install the reservoir tank.
9) Install the air intake duct.
10) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
11) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found, replace the condenser assembly - air conditioner.

16.Heater and Cooling Unit

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

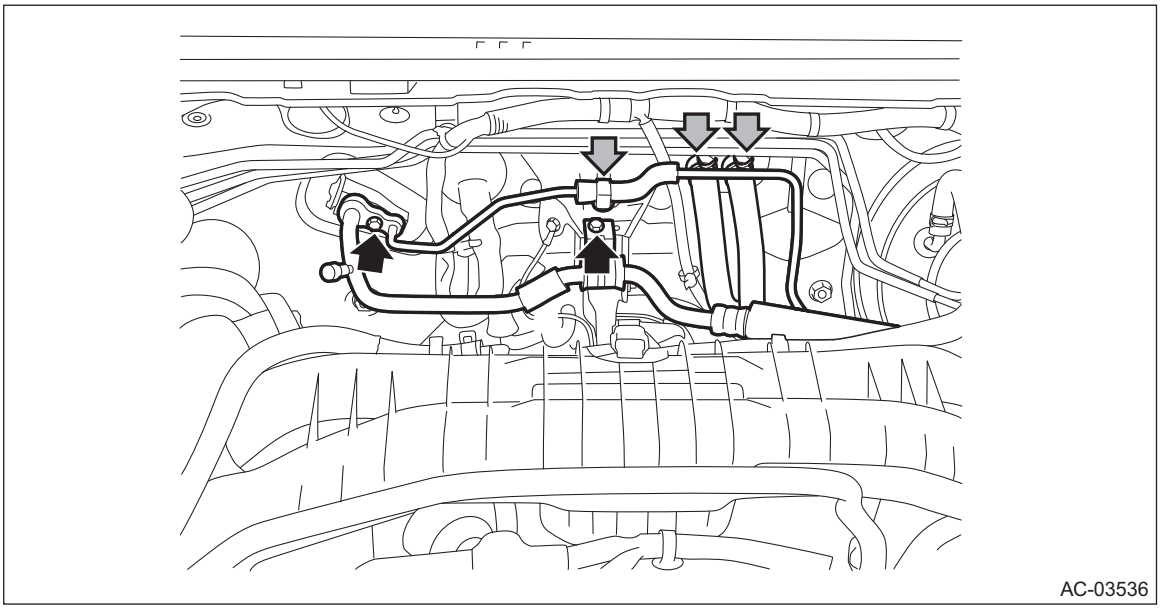
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Drain engine coolant.
- Except for STI model: <Ref. to CO(w/o STI)-15, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- STI model: <Ref. to CO(STI)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

4) Remove the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
- STI model: <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

5) Detach the clips and bolts, and detach the hose - pressure suction and the pipe - evaporator cooling.

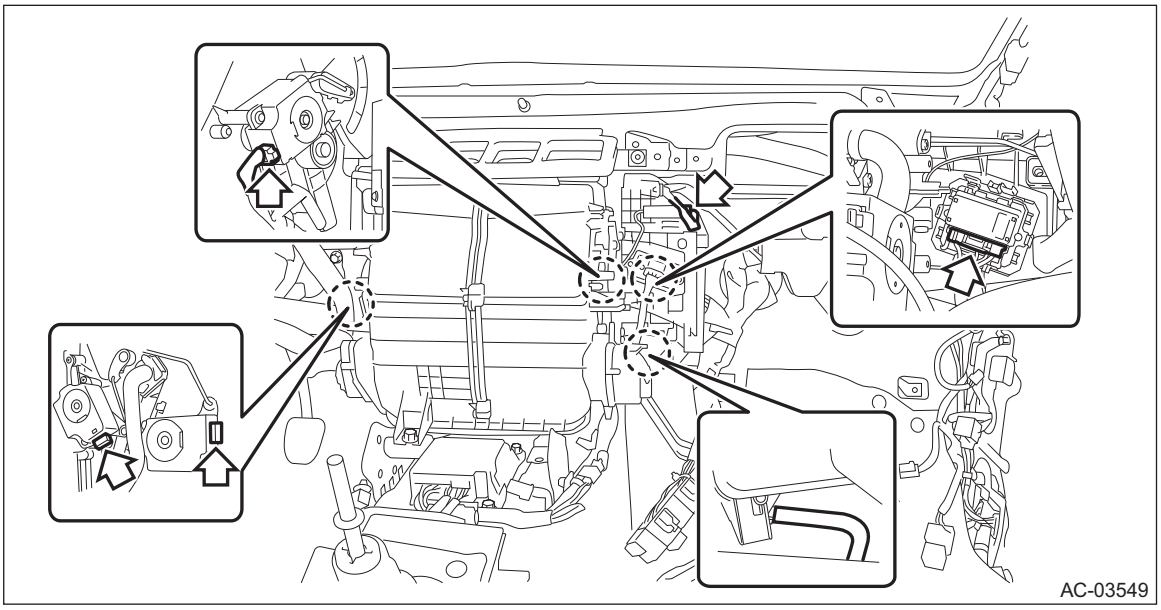
CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.
6) Loosen the heater hose clamps and detach the hoses.

NOTE:
Put alignment marks to hoses, clamps, etc.

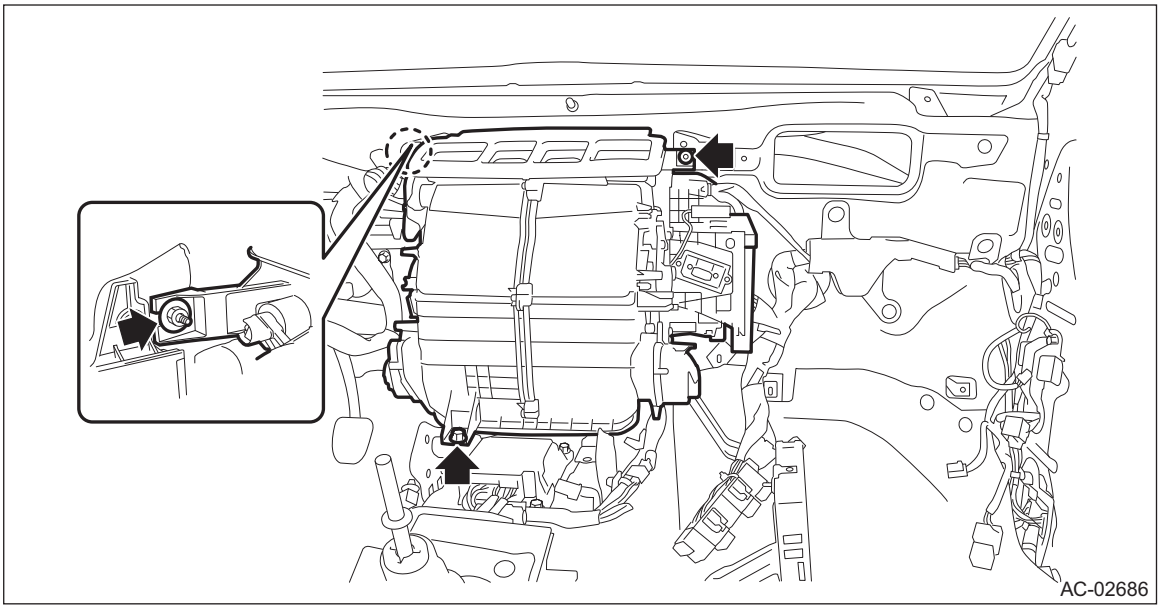


7) Remove the instrument panel assembly. <Ref. to EI-75, REMOVAL, Instrument Panel Assembly.>
8) Remove the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>
9) Remove the blower motor unit assembly. <Ref. to AC-35, REMOVAL, Blower Motor Unit Assembly.>
10) Remove the heater and cooling unit assembly.

(1) Disconnect each connector and the hose - drain.



(2) Remove the bolt and nuts, and remove the heater & cooling unit assembly.



B: INSTALLATION

CAUTION:
- **Replace O-rings with new parts and install securely.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**

1) Install the heater and cooling unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>

4) Install the instrument panel assembly. <Ref. to EI-81, INSTALLATION, Instrument Panel Assembly.>

5) Attach the heater hose.
6) Install the hose - pressure suction and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

7) Install the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Fill engine coolant.
- Except for STI model: <Ref. to CO(w/o STI)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- STI model: <Ref. to CO(STI)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

10) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

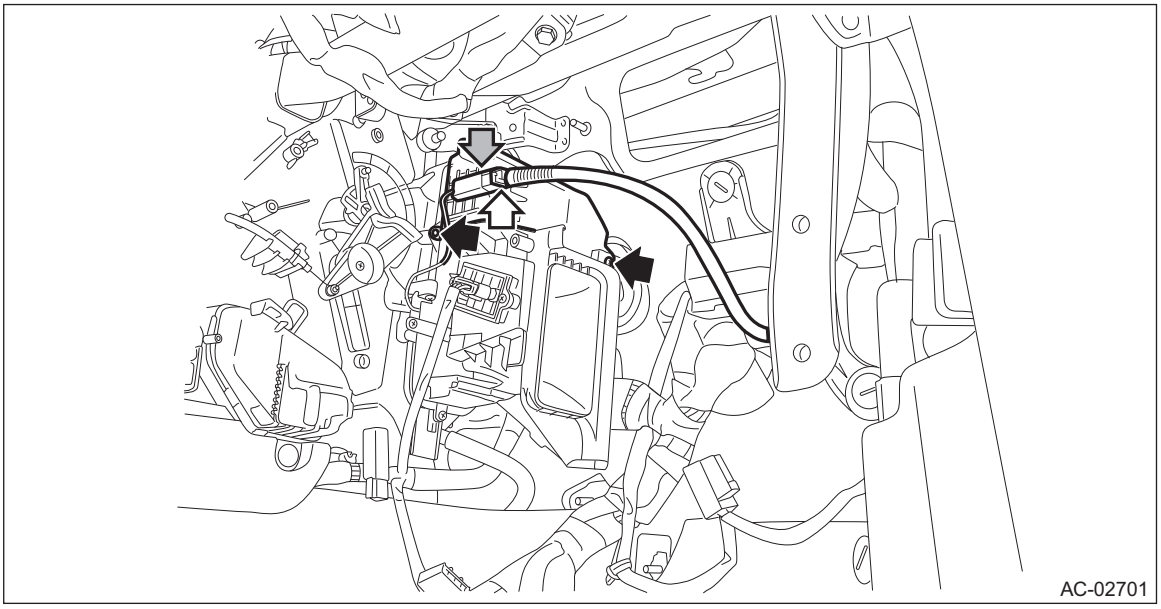
17.Evaporator

A: REMOVAL

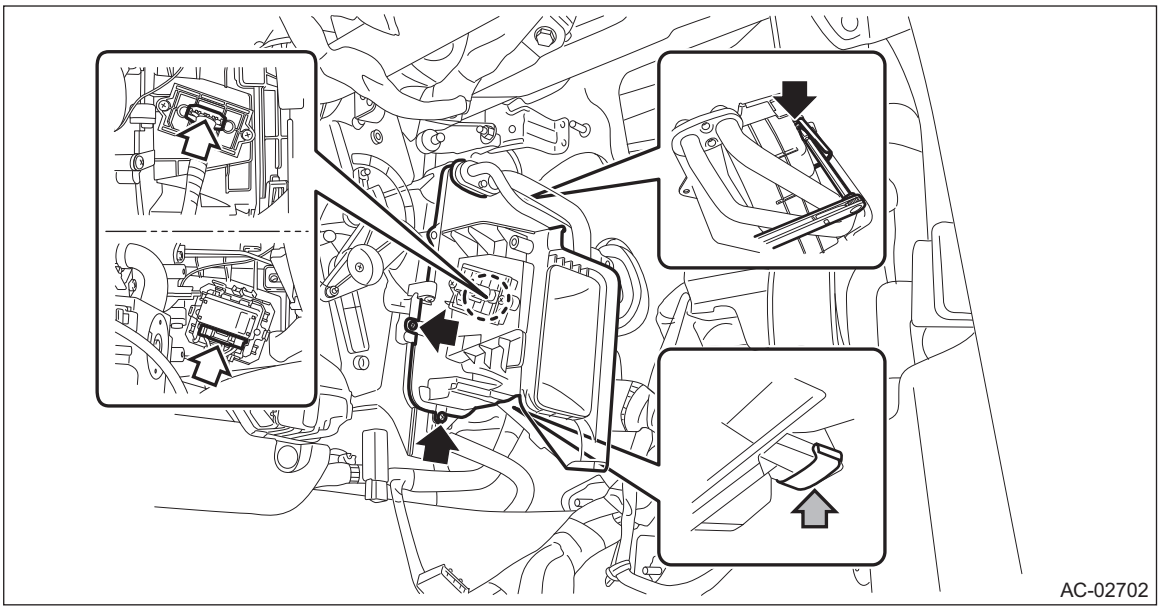
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
- STI model: <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

4) Remove the expansion valve - cooling. <Ref. to AC-61, REMOVAL, Expansion Valve.>
5) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
6) Remove the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>
7) Remove the blower motor unit assembly. <Ref. to AC-35, REMOVAL, Blower Motor Unit Assembly.>
8) Remove the evaporator assembly - cooling.
   (1) Disconnect the connector and lock of the thermostat - cooling.
   (2) Remove the screws and detach the cover.



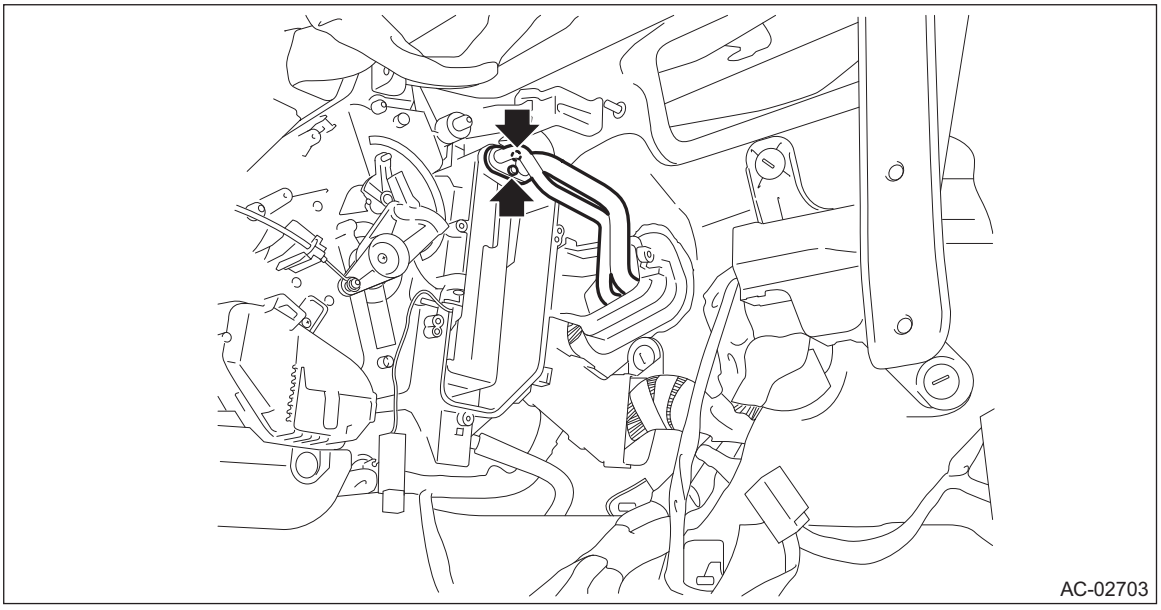
(3) Remove the cover - heater unit.
1. Disconnect the power transistor connector.
2. Remove the screws and clips to remove the cover - heater unit.



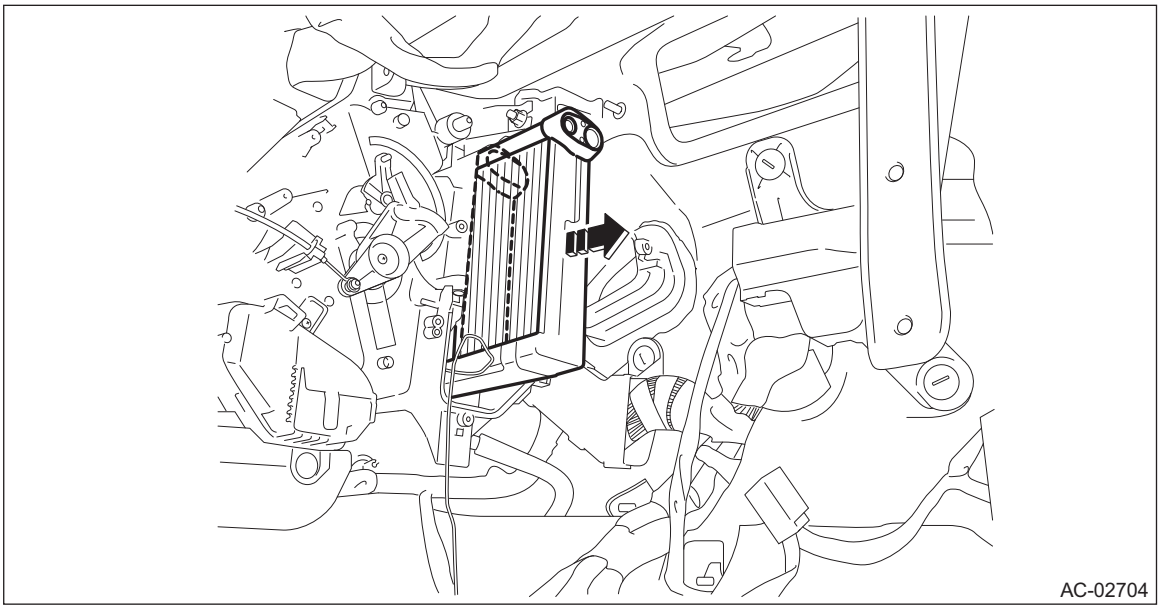
(4) Remove the bolt, and detach the pipe - evaporator core.

CAUTION:
Seal the disconnected pipe and engaging part of evaporator assembly with a plug or vinyl tape to prevent foreign matter from entering.

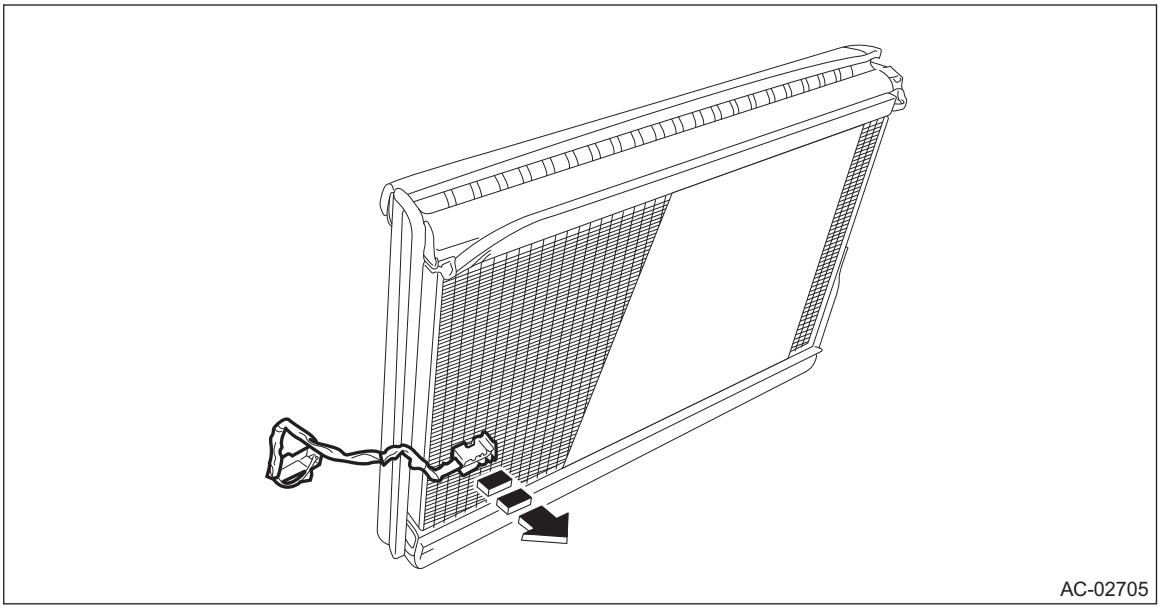
Preparation tool:
Hexagon wrench: 4 mm (0.16 in)



(5) Remove the evaporator assembly - cooling.



(6) Remove the thermostat - cooling.



B: INSTALLATION

CAUTION:
• If the evaporator assembly - cooling has been replaced, add an appropriate amount of compressor oil. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• When the evaporator assembly - cooling has been replaced, replace the packing of the expansion valve - cooling with a new one, and then apply compressor oil.
• Make sure that the water seal packing on the cover attachment area is securely attached.
• Replace the O-rings with new parts, and then apply compressor oil.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the thermostat - cooling. <Ref. to AC-81, INSTALLATION, Evaporator Sensor.>
2) Install the evaporator assembly - cooling.
3) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>
5) Install the glove box.
6) Install the expansion valve. <Ref. to AC-62, INSTALLATION, Expansion Valve.>
7) Install the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Check the evaporator fin for dust. Blow with compressed air or flush fins with water as needed.
2) If any oil leak is found, replace the evaporator assembly - cooling.

18.Expansion Valve

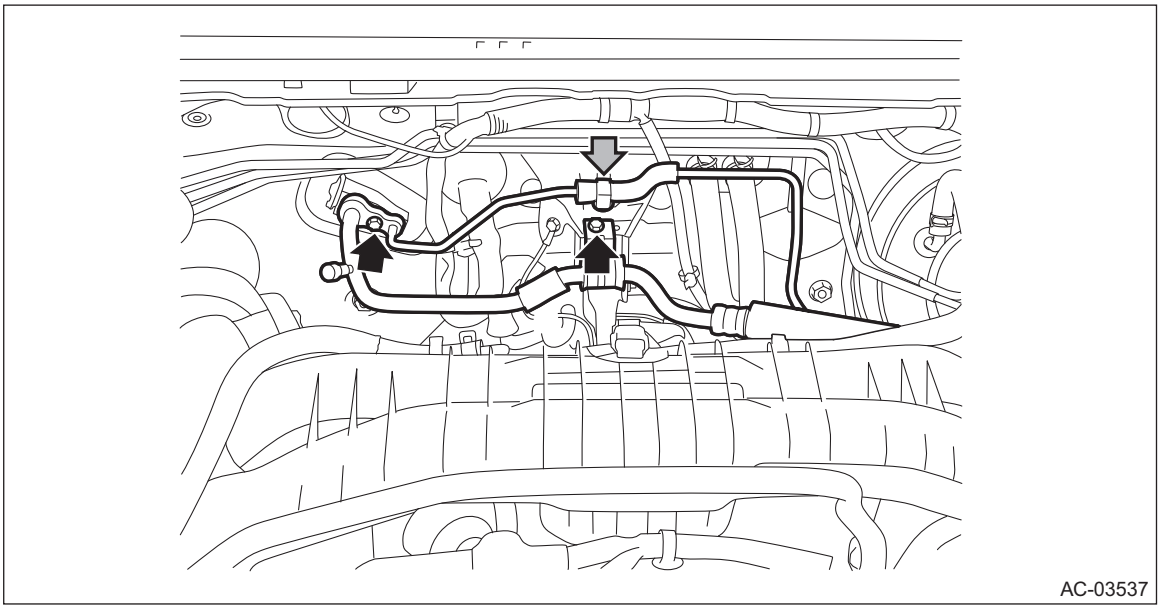
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
- STI model: <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

4) Detach the clips and bolts, and detach the hose - pressure suction and the pipe - evaporator cooling.

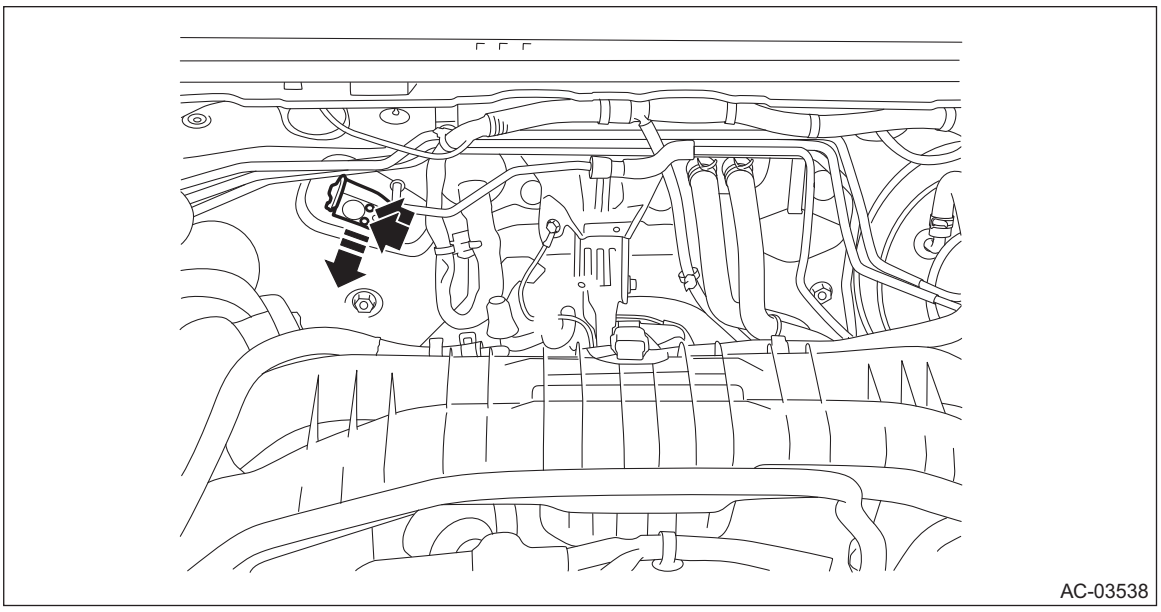
CAUTION:
Seal the disconnected hose, pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.



5) Remove the bolt, and remove the expansion valve - cooling.

CAUTION:
Seal the pipe and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.

Preparation tool:
Hexagon wrench: 4 mm (0.16 in)



B: INSTALLATION

CAUTION:
Replace the O-rings with new parts, and then apply compressor oil.
1) Install the expansion valve.

Tightening torque:
5 N·m (0.5 kgf-m, 3.7 ft-lb)
2) Install the hose - pressure suction and the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

19.Hose and Pipe

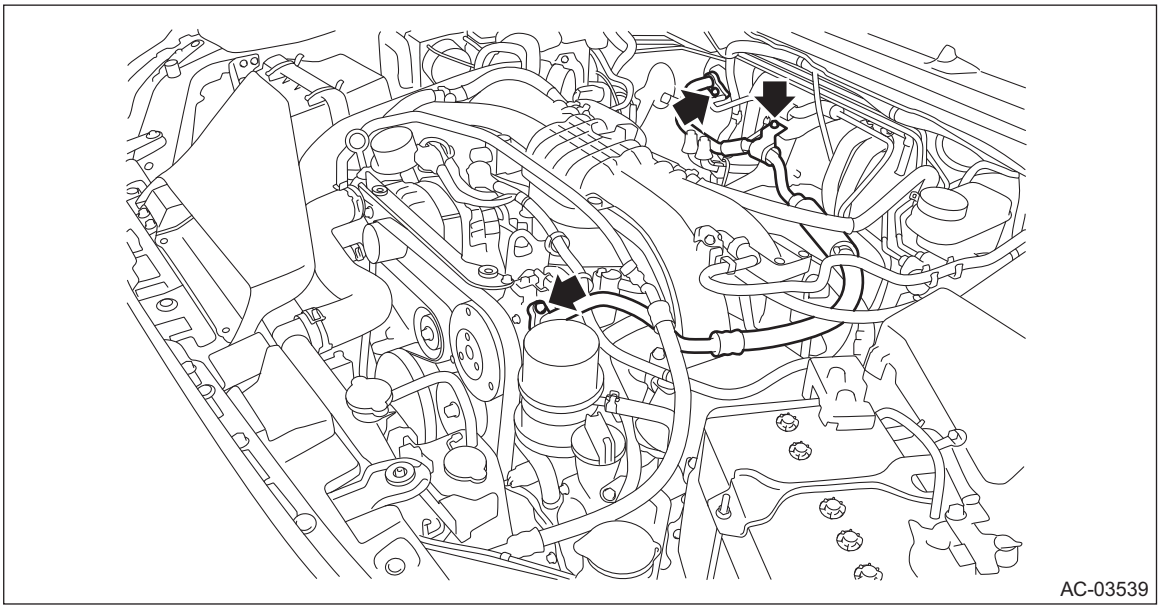
A: REMOVAL

1. LOW-PRESSURE HOSE

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Remove the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
- STI model: <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

3) Remove the bolts and detach the hose - pressure discharge on the compressor side. (STI model)
4) Remove the bolts and remove the hose - pressure suction.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, compressor and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.**
- **When disconnecting the hose for the model with oil cooler, be careful not to allow the hose to interfere with the oil cooler.**

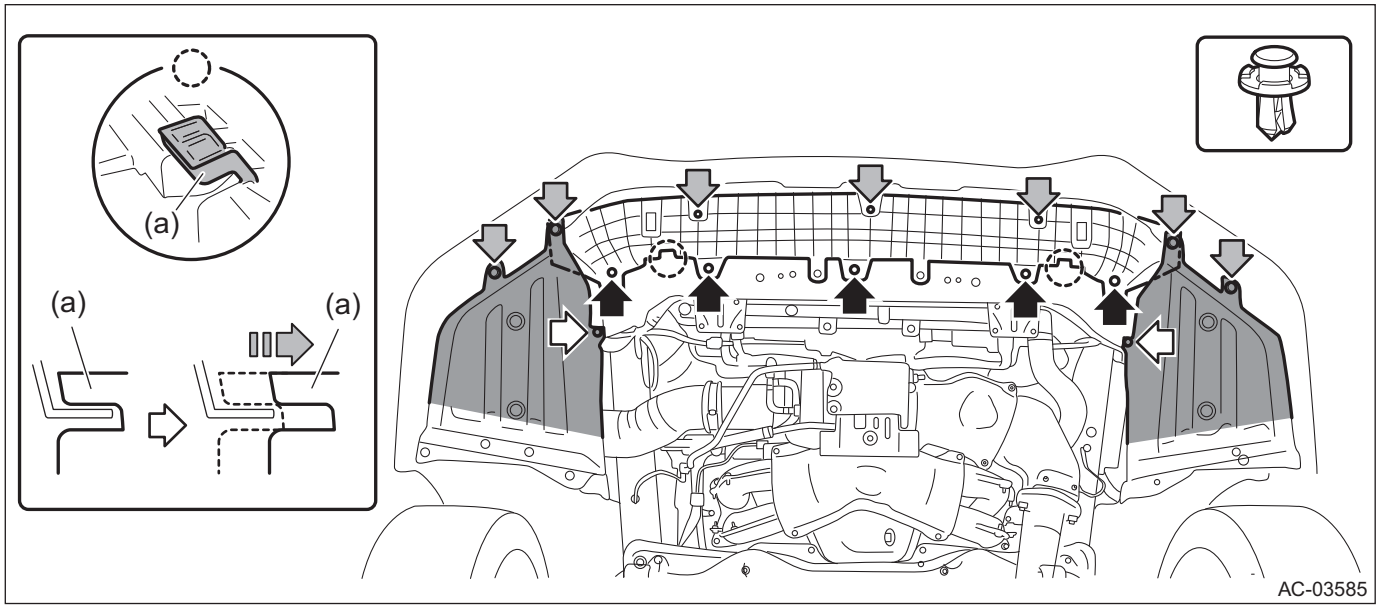


2. HIGH-PRESSURE HOSE

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Remove the reservoir tank.
- Except for STI model: <Ref. to CO(w/o STI)-53, REMOVAL, Reservoir Tank.>
- STI model: <Ref. to CO(STI)-28, REMOVAL, Reservoir Tank.>

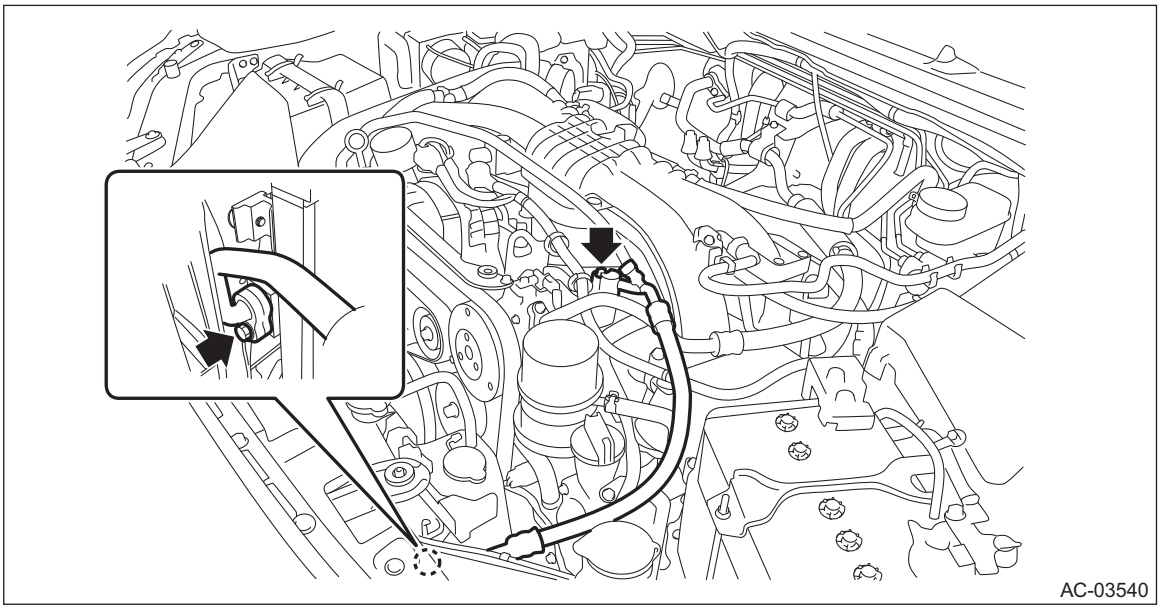
3) Lift up the vehicle.
4) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Remove the bracket center lower - front.
   (1) Remove the screw and clips, and turn over the mud guard - front.
   (2) Remove the bolts and clips, and remove the bracket center lower - front.

NOTE:
While entirely pushing the bracket center lower - front forward, remove the two hooks (a) on the left and right.



6) Remove the bolts, and remove the hose - pressure discharge.

CAUTION:
- **Do not apply excessive force to the hose.**
- **Seal the disconnected hose, compressor and engaging part of compressor with a plug or vinyl tape to prevent foreign matter from entering.**



3. A/C PIPE

1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Remove the battery.
- Except for STI model: <Ref. to SC(w/o STI)-50, REMOVAL, Battery.>
- STI model: <Ref. to SC(STI)-24, REMOVAL, Battery.>

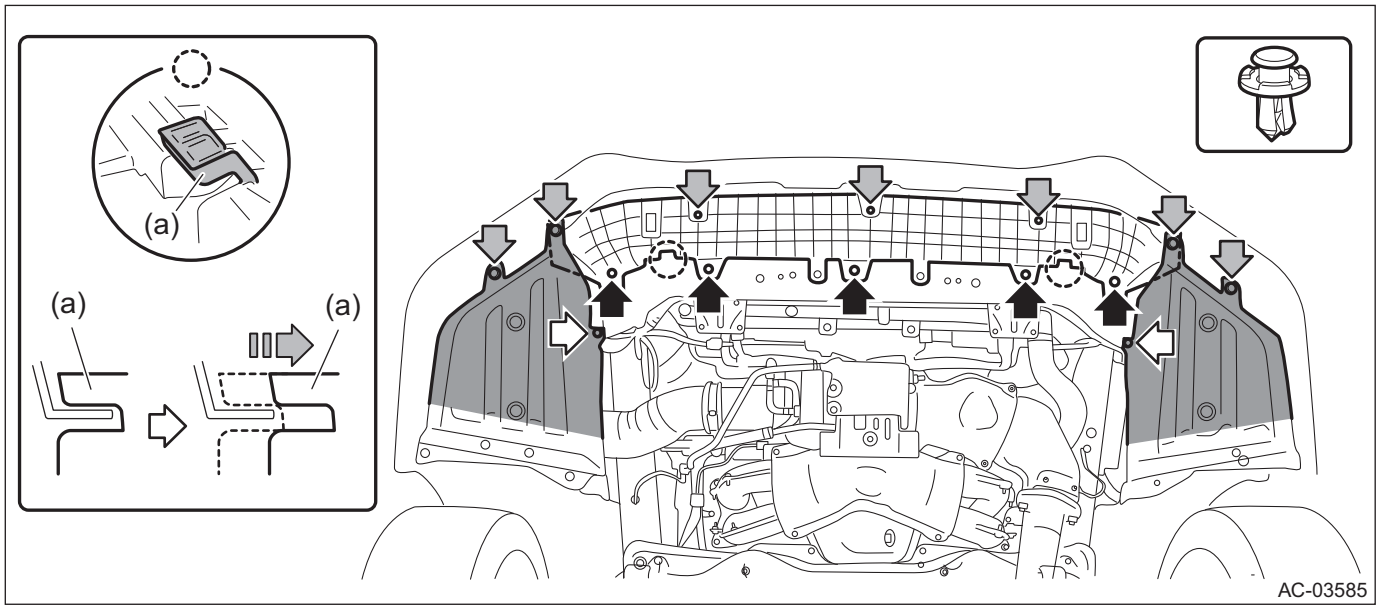
3) Remove the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-52, REMOVAL, Intercooler.>
- STI model: <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

4) Remove the secondary air pump. (STI model) <Ref. to EC(STI)-54, REMOVAL, Secondary Air Pump.>

5) Remove the reservoir tank.
- Except for STI model: <Ref. to CO(w/o STI)-53, REMOVAL, Reservoir Tank.>
- STI model: <Ref. to CO(STI)-28, REMOVAL, Reservoir Tank.>

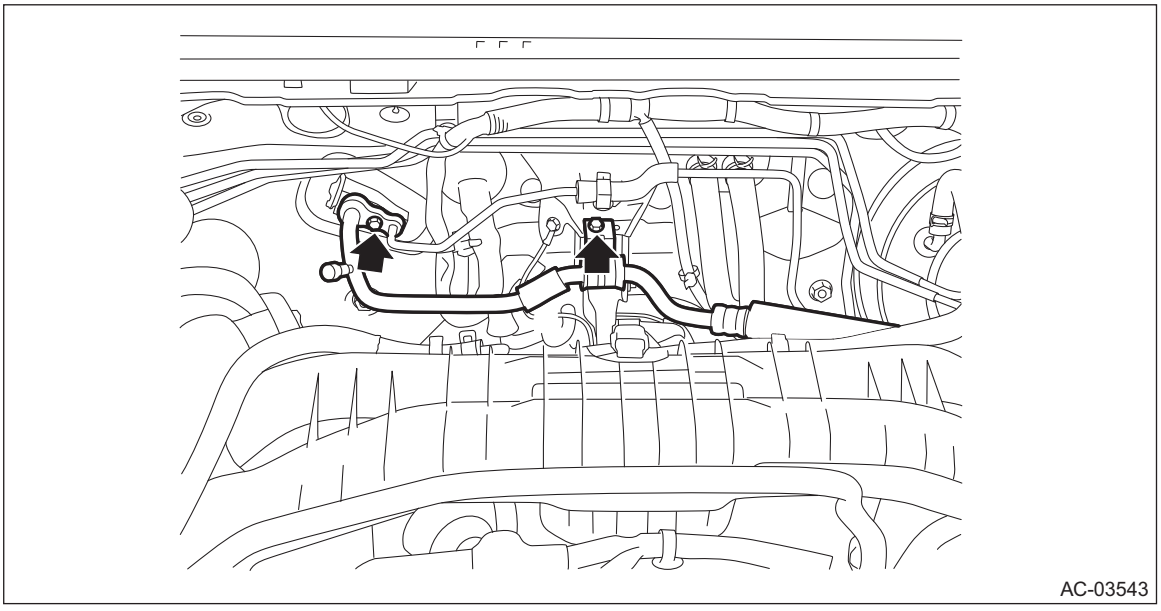
6) Lift up the vehicle.
7) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
8) Remove the bracket center lower - front.
   (1) Remove the screw and clips, and turn over the mud guard - front.
   (2) Remove the bolts and clips, and remove the bracket center lower - front.

NOTE:
While entirely pushing the bracket center lower - front forward, remove the two hooks (a) on the left and right.



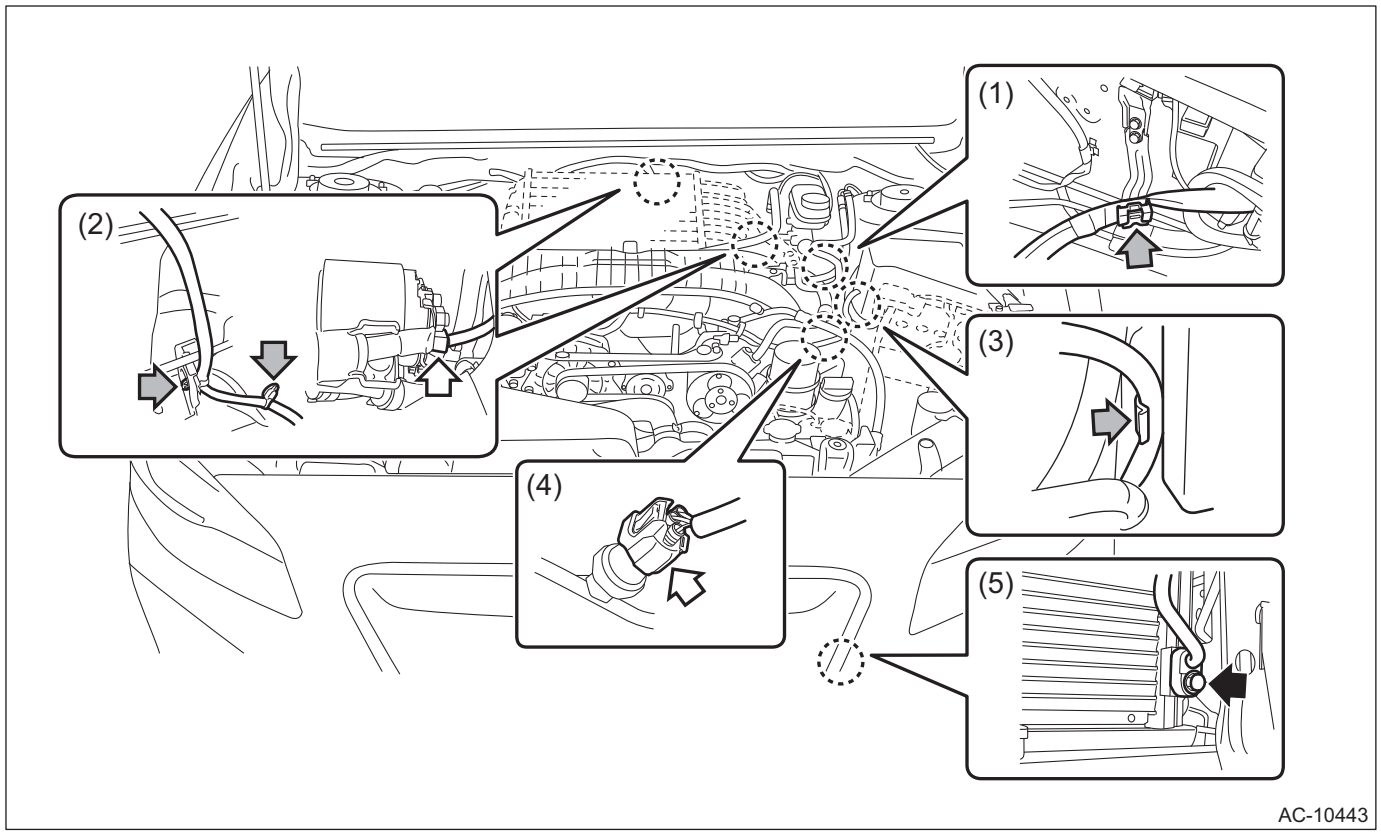
9) Remove the bolts and detach the hose - pressure suction.

CAUTION:
Seal the disconnected hose and engaging part of expansion valve with a plug or vinyl tape to prevent foreign matter from entering.



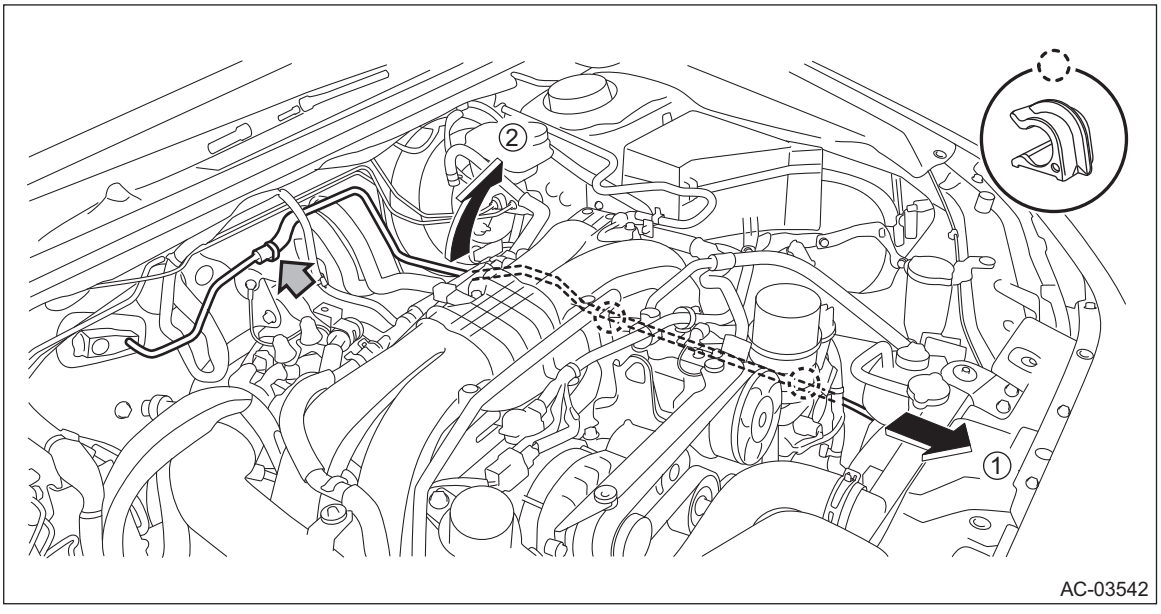
10) Remove the pipe - evaporator cooling.
   (1) Release the lock and remove the cable clamp.
   (2) Release the harness clip, and disconnect the starter connector.

(3) Disconnect the battery sensor harness from the main fuse box. (Except for STI model)
(4) Disconnect the pressure switch connector.
(5) Remove the bolt, and detach the pipe - evaporator cooling.



(6) Remove the clip - pipe and the clip, and remove the pipe - evaporator cooling in numerical order as shown in the figure.

CAUTION:
- **Do not apply excessive force to the pipe.**
- **Seal the disconnected pipe, expansion valve and engaging part of condenser with a plug or vinyl tape to prevent foreign matter from entering.**
- **Do not pull the harness and cable forcibly.**



B: INSTALLATION

1. LOW-PRESSURE HOSE

CAUTION:
• If the hose has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.

1) Install the hose - pressure suction.

Tightening torque:
Air conditioning unit: <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>

2) Install the hose - pressure suction discharge. (STI model)

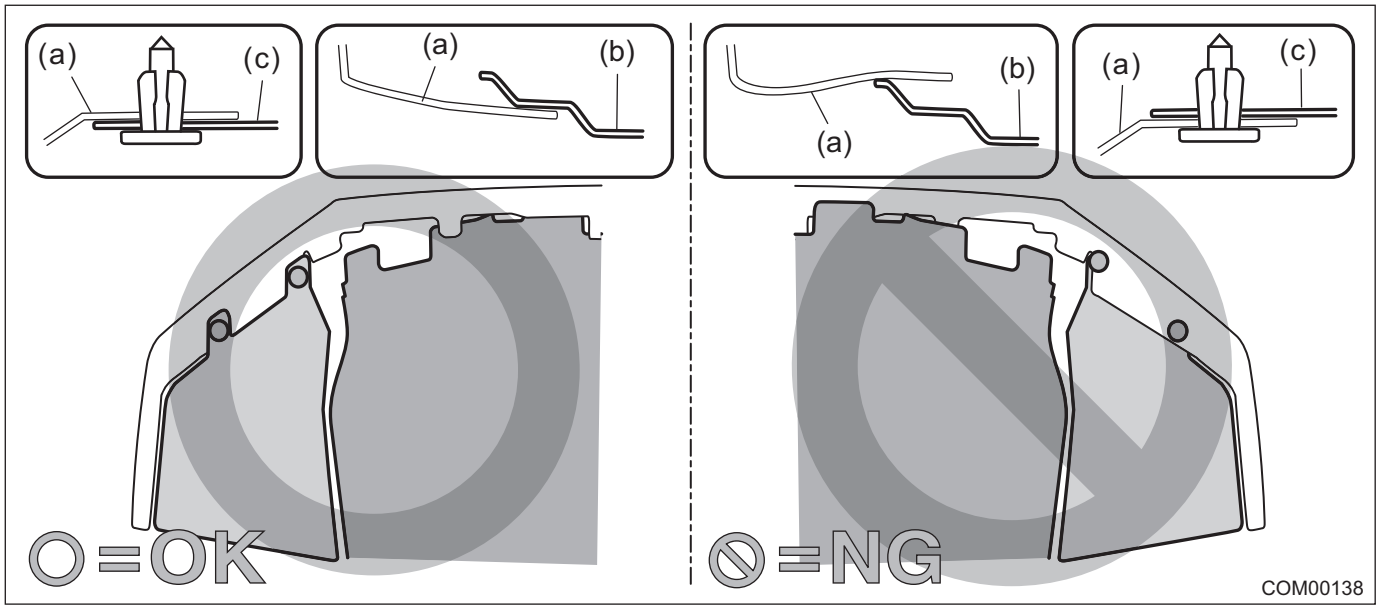
Tightening torque:
10 N·m (1 kgf-m, 7.4 ft-lb)

3) Install the intercooler.
- Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

4) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

2. HIGH-PRESSURE HOSE

CAUTION:
• If the hose has been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the hose - pressure suction discharge.

Tightening torque:
Air conditioning unit: <Ref. to AC-9, AIR CONDITIONING UNIT, COMPONENT, General Description.>

2) Install the bracket center lower - front.

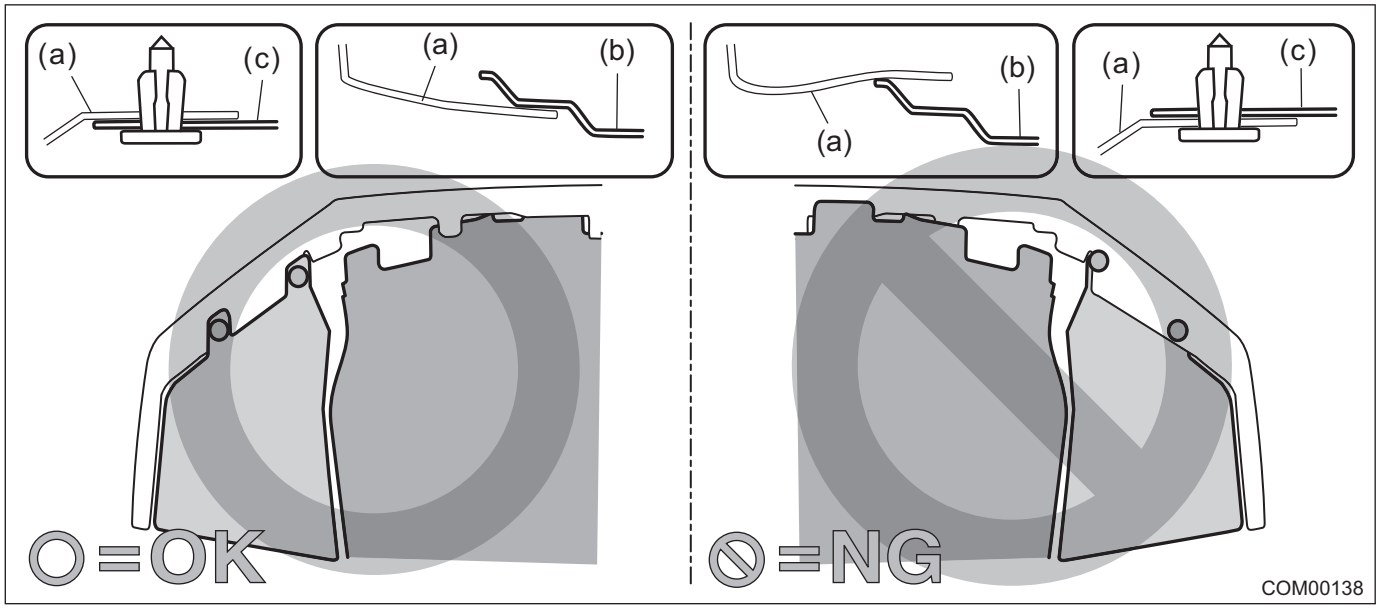
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the under cover - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Lower the vehicle.
5) Install the reservoir tank.
- Except for STI model: <Ref. to CO(w/o STI)-53, INSTALLATION, Reservoir Tank.>
- STI model: <Ref. to CO(STI)-28, INSTALLATION, Reservoir Tank.>

6) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

3. A/C PIPE

CAUTION:
• If the hose and pipe have been replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-34, ADJUSTMENT, Compressor Oil.>
• Replace the O-rings with new parts, and then apply compressor oil.
• When connecting hoses and pipes, do not apply excessive force. After installing, check that no torsion or excessive tension applied to the hoses.
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the pipe - evaporator cooling.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the hose - pressure suction.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the bracket center lower - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the under cover - front.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
5) Lower the vehicle.
6) Install the reservoir tank.

- Except for STI model: <Ref. to CO(w/o STI)-53, INSTALLATION, Reservoir Tank.>
- STI model: <Ref. to CO(STI)-28, INSTALLATION, Reservoir Tank.>

7) Install the secondary air pump. (STI model) <Ref. to EC(STI)-54, INSTALLATION, Secondary Air Pump.>
8) Install the intercooler.

- Except for STI model: <Ref. to IN(w/o STI)-54, INSTALLATION, Intercooler.>
- STI model: <Ref. to IN(STI)-12, INSTALLATION, Intercooler.>

9) Install the battery.

- Except for STI model: <Ref. to SC(w/o STI)-50, INSTALLATION, Battery.>
- STI model: <Ref. to SC(STI)-24, INSTALLATION, Battery.>

10) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

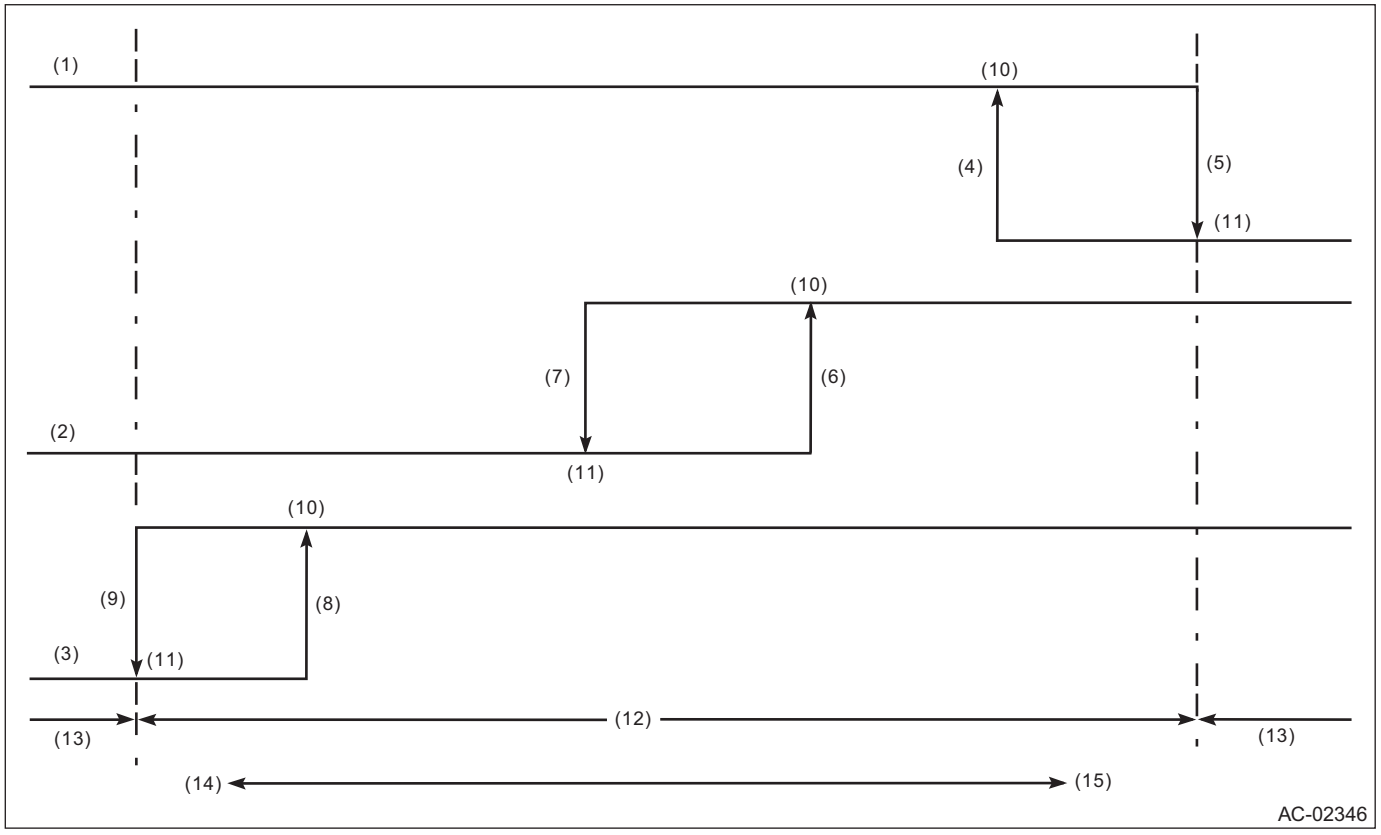
C: INSPECTION

1) Check the hoses for cracks, damage and expansion. Replace the hose if faulty.
2) Check the pipes for crack or damage. Replace the pipe if faulty.

20.Pressure Switch (Triple Pressure Switch)

A: INSPECTION

1) Connect the manifold gauge to the service valve on the high-pressure side.
2) Disconnect the connector.
3) Start the air conditioner, and check the operating pressure of switch by turning the compressor assembly (magnet clutch) to ON/OFF. Operation of each switch is as follows.



(1)	High pressure switch	(6)	1,770±100 kPa (18.05±1.02 kg/cm^2, 256.65±14.5 psi)	(11)	OFF
(2)	Middle pressure switch	(7)	1,470±120 kPa (14.99±1.22 kg/cm^2, 213.15±17.4 psi)	(12)	Operative range of compressor ASSY
(3)	Low pressure switch	(8)	225±30 kPa (2.29±0.31 kg/cm^2, 32.6±4.3 psi)	(13)	Inoperative range of compressor ASSY
(4)	2,350±200 kPa (24±2.04 kg/cm^2, 340.7±29 psi)	(9)	196±25 kPa (2±0.25 kg/cm^2, 28.4±3.6 psi)	(14)	Low pressure
(5)	2940±200 kPa (29.98±2.04 kg/cm^2, 426.3±29 psi)	(10)	ON	(15)	High pressure

NOTE:
• High pressure switch turns the compressor assembly (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged or frozen, etc.
• The middle pressure switch is used to effectively control the radiator fan output by judging high load/low load in normal pressure range.
• The low pressure switch detects a refrigerant shortage and deactivates the compressor assembly (magnet clutch) if the refrigerant pressure is abnormally low. (Because any further compressor assembly operation in such a state may lead to compressor seizure)

21.Ambient Sensor

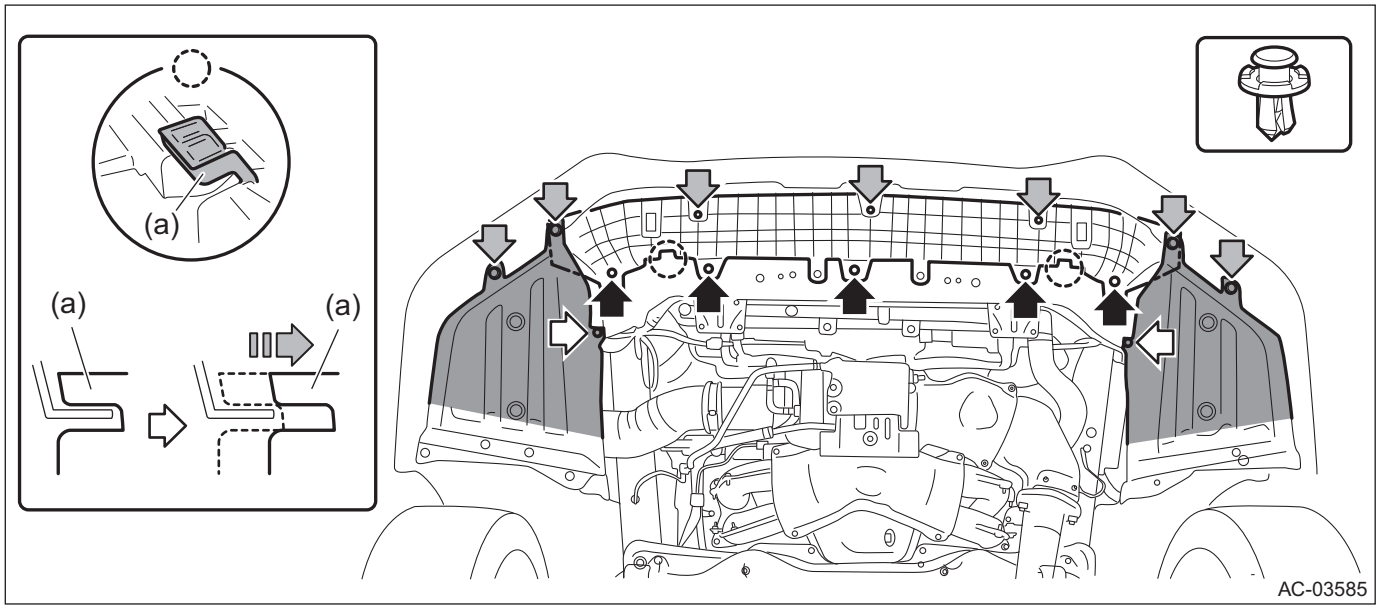
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

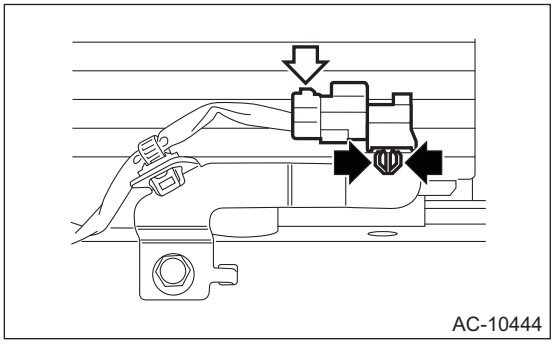
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle.
3) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the bracket center lower - front.
   (1) Remove the screw and clips, and turn over the mud guard - front.
   (2) Remove the bolts and clips, and remove the bracket center lower - front.

NOTE:
While entirely pushing the bracket center lower - front forward, remove the two hooks (a) on the left and right.

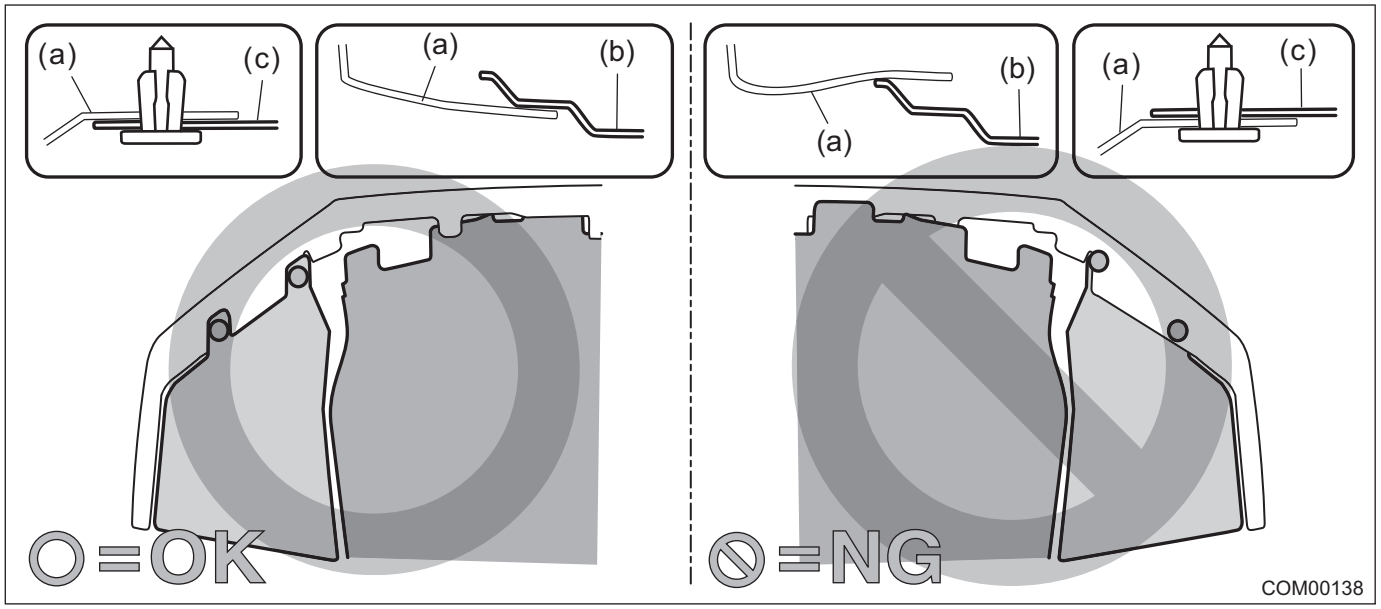


5) Remove the ambient sensor.
   (1) Disconnect the connector.
   (2) Release the claws and remove the ambient sensor.



B: INSTALLATION

CAUTION:
Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the ambient sensor.
2) Install the bracket center lower - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the under cover - front.

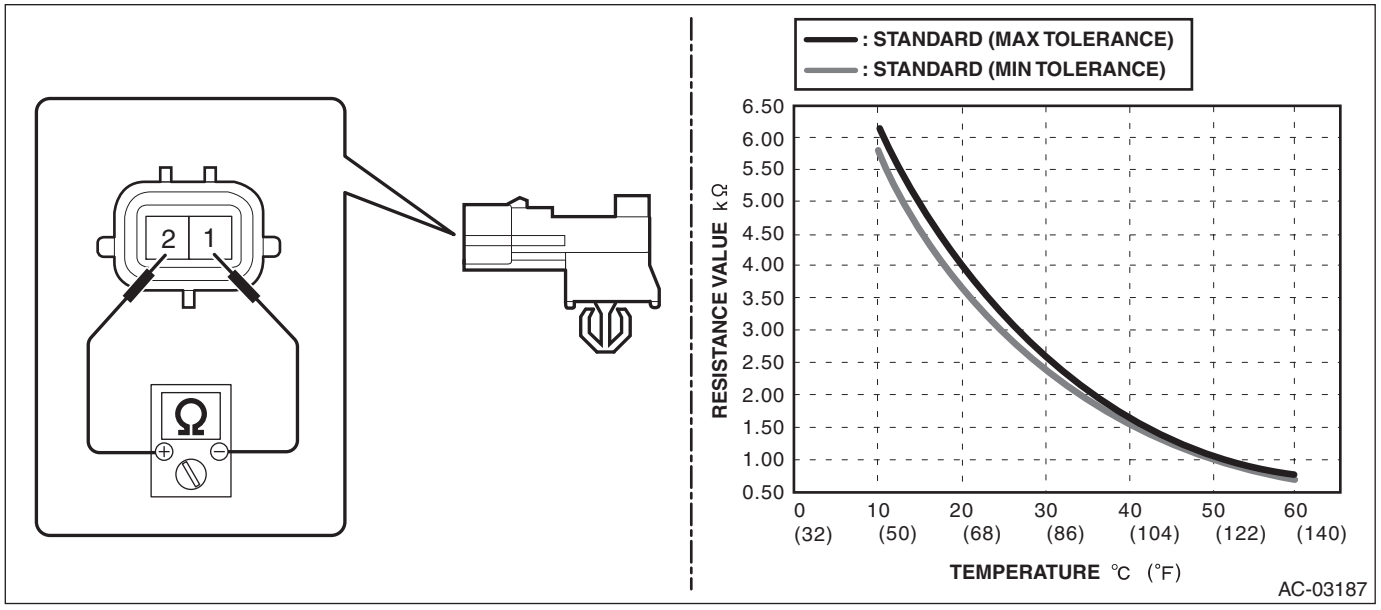
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
4) Lower the vehicle.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Visually check the ambient sensor for dirt or damage, and clean or replace as necessary.
2) Measure the resistance between connector terminals.

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	10°C	5.82 — 6.18 kΩ
	15°C	4.58 — 4.87 kΩ
	20°C	3.64 — 3.86 kΩ
	25°C	2.91 — 3.09 kΩ
	30°C	2.35 — 2.49 kΩ
	35°C	1.9 — 2.02 kΩ
	40°C	1.56 — 1.65 kΩ
	45°C	1.28 — 1.36 kΩ
	50°C	1.06 — 1.12 kΩ
	55°C	0.88 — 0.93 kΩ
	60°C	0.74 — 0.78 kΩ

3) Replace the ambient sensor if the inspection result is not within the standard value.

22.Sunload Sensor (Auto A/C Model)

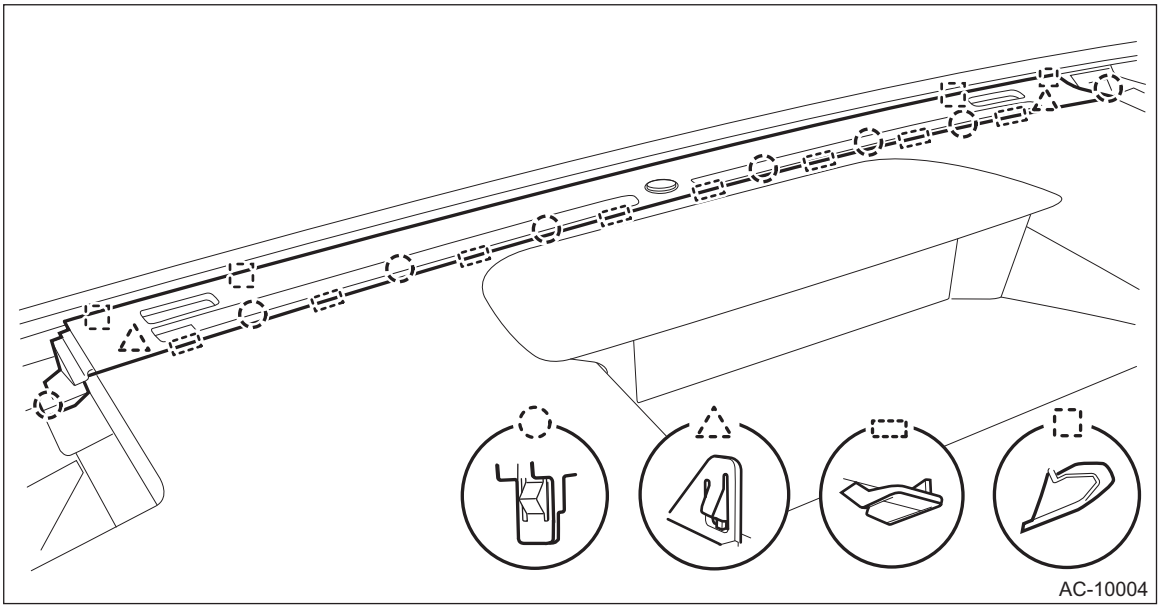
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

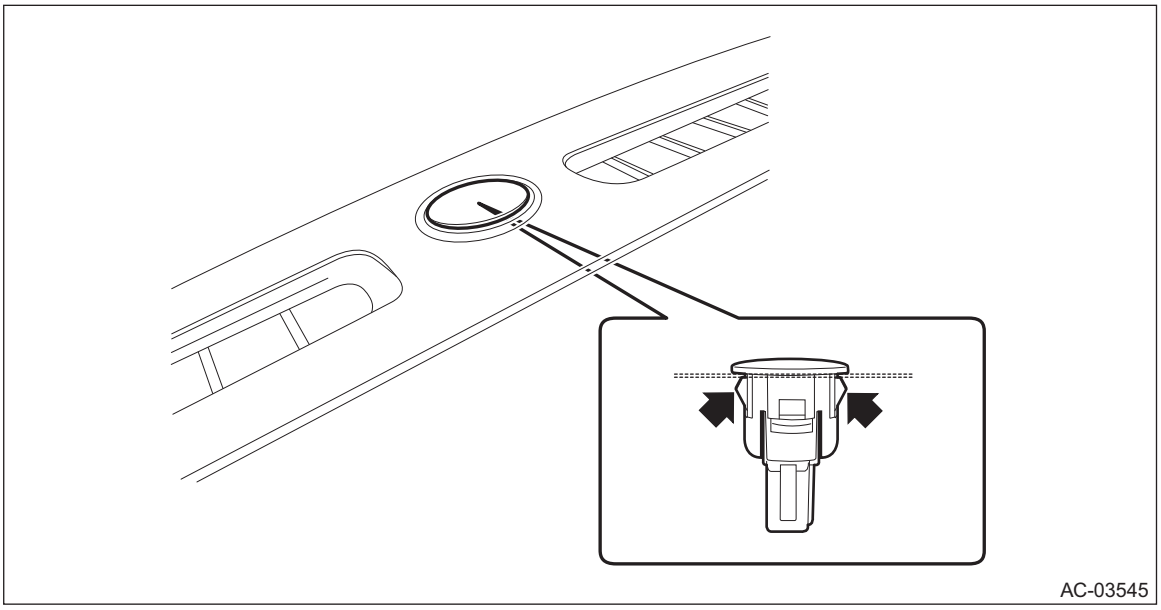
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the grille - front defroster.
   (1) Release the claws.
   (2) Disconnect the connector and remove the grille - front defroster.
   - Model without EyeSight assist monitor

   - Model with EyeSight assist monitor



3) Release the claws and remove the sunload sensor.



B: INSTALLATION

1) Install the sunload sensor.
2) Install the grille - front defroster.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check if there is anything that affects sensing, around the sunload sensor.
   (1) Is the sunload sensor free from any object that disturbs sensing?
   (2) Is the windshield glass free from any object such as sticker or film that disturbs sensing?
   - **Yes** → Go to step 2).
   - **No** → Remove everything that affects sensing.
2) Using the Subaru Select Monitor, check quantity of sunload.

NOTE:
For detailed operation procedures, refer to “Application help”.
   (1) On «Start» display, select «Diagnosis».
   (2) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
   (3) On «Main Menu» display, select «Each System».
   (4) On «Select System» display, select «Air Conditioner» and select «Enter».
   (5) On «Select Function» display, select «Data Monitor».
   (6) From the data monitor item list, select «Quantity of Sunload».
   (7) Cover the sunload sensor with cloth.
   (8) Does the «Quantity of Sunload» indicate 0 W/m^2 when the direct sunlight is shielded?
   - **Yes** → Go to step 3).
   - **No** Replace the sunload sensor.
3) From step 2), expose the sunload sensor to light.
   (1) Place intense light such as incandescent light at 300 mm (11.81 in) or less from the sunload sensor.
   (2) Does «Quantity of Sunload» indicate 2,000 W/m^2 or less?

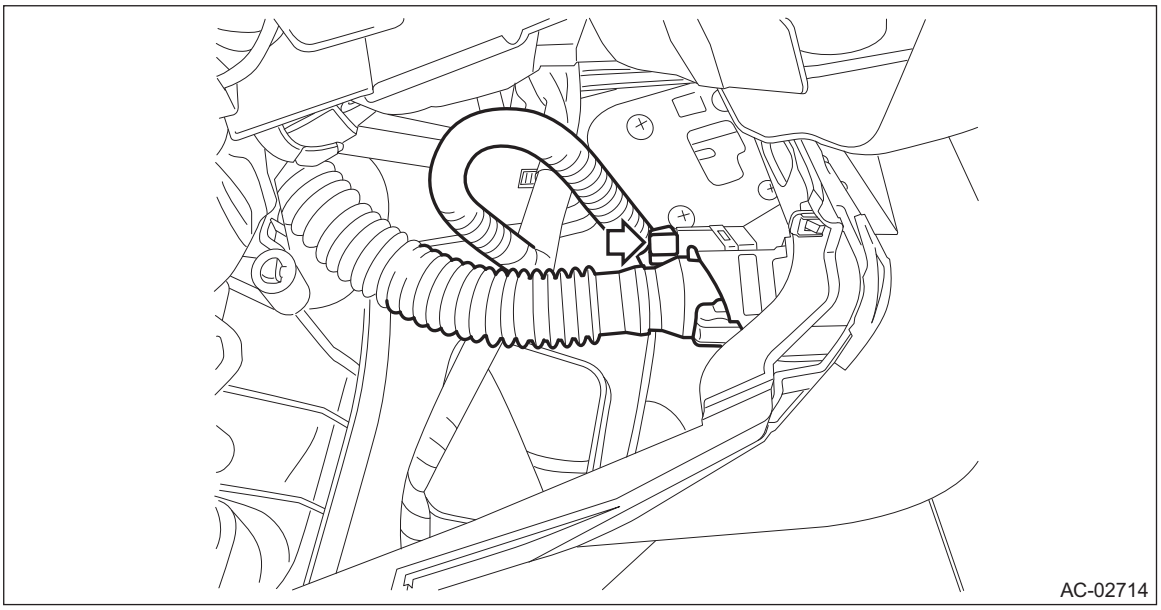
CAUTION:
The value changes depending on the angle of light.
   - **Yes** → The sunload sensor is normal.
   - **No** → Replace the sunload sensor.

23.In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL

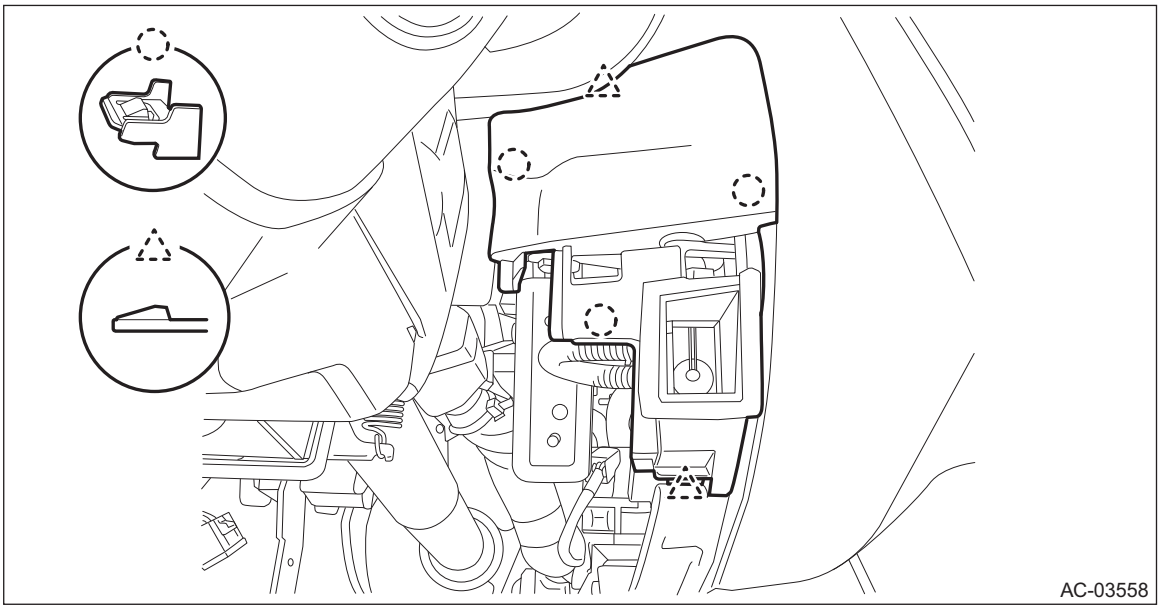
1) Disconnect the battery ground terminal and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver INN. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the cover switch - starter. (Models without the keyless access with push button start)
(1) Disconnect the connector, and remove the aspirator hose.



AC-02714

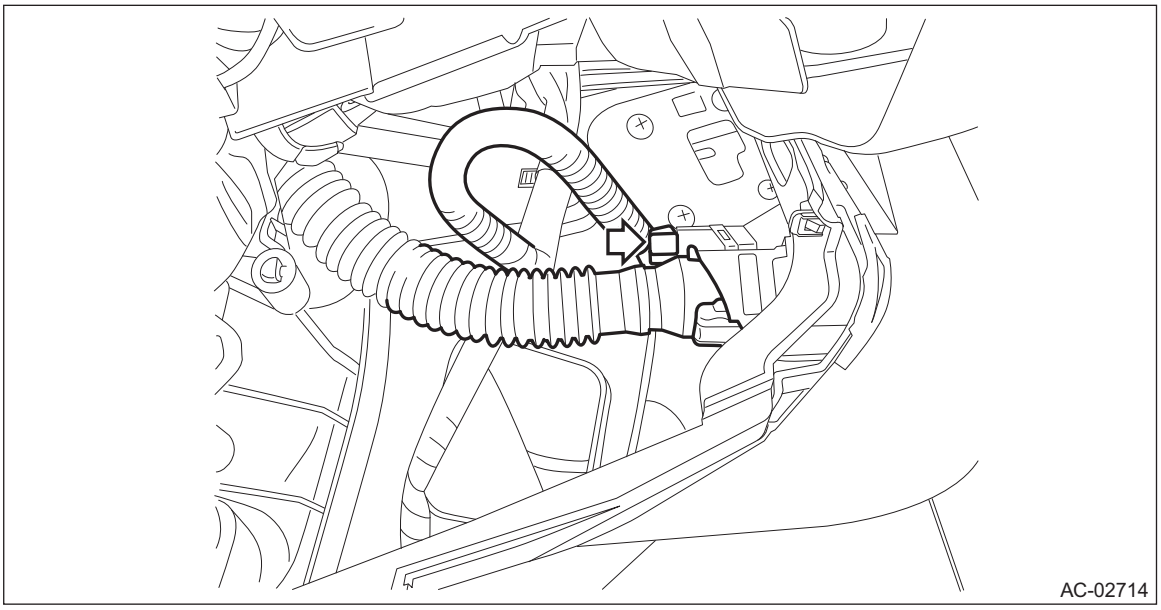
(2) Release the claws and remove the cover switch - starter.



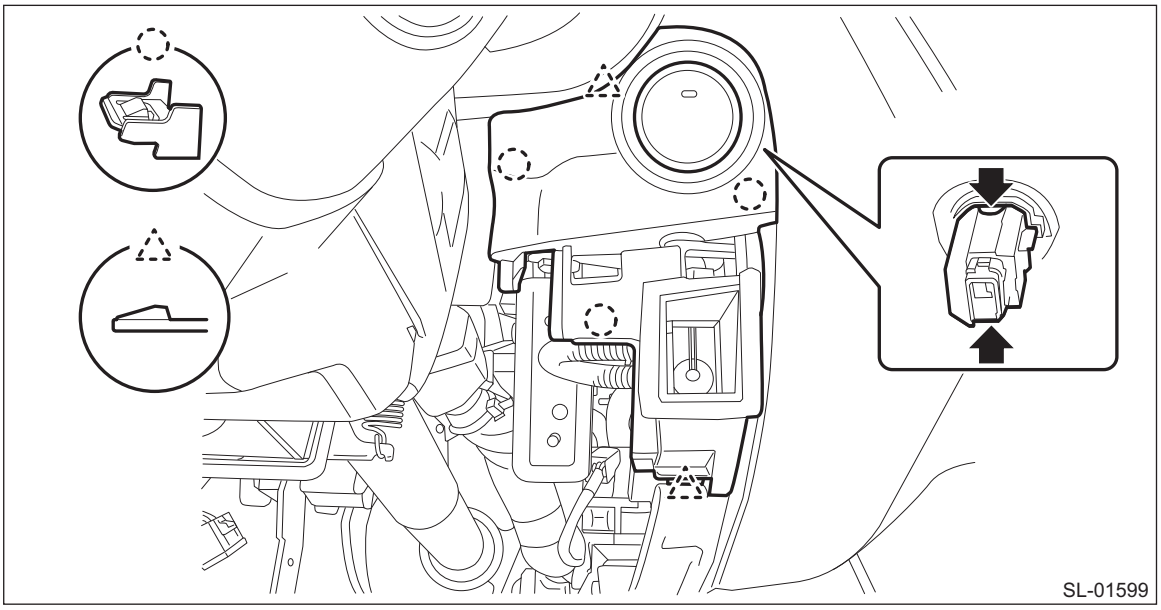
AC-03558

4) Remove the panel - switch. (Model with keyless access with push button start)

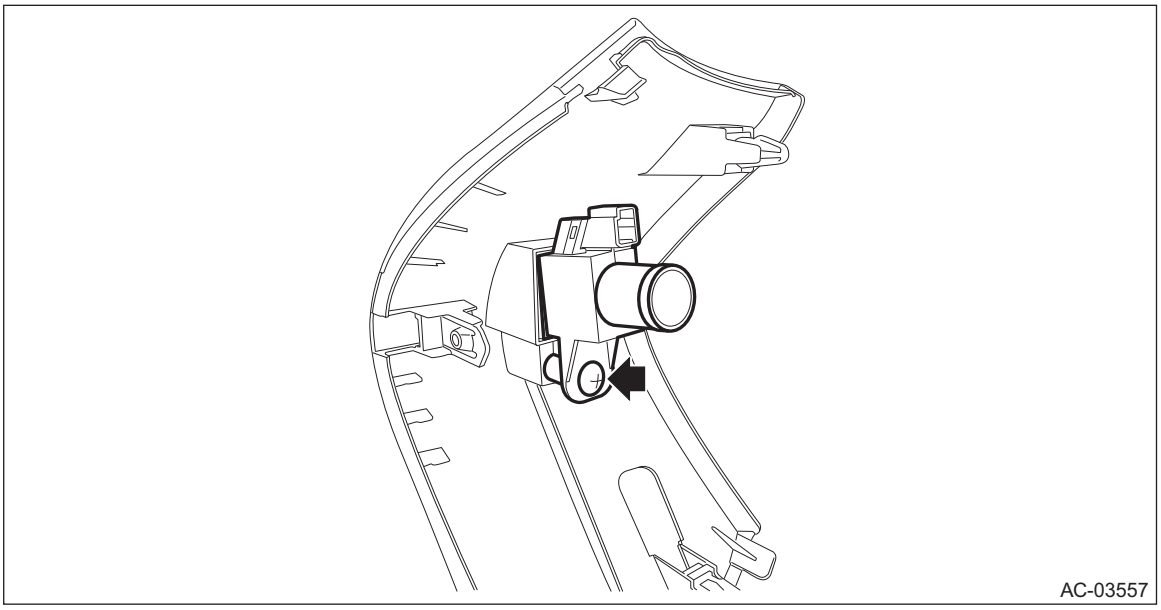
(1) Disconnect the connector, and remove the aspirator hose.



(2) Release the claw of the switch - push button start, and disconnect the connector.
(3) Release the claws, and then remove the panel - switch.



5) Remove the screws, and then remove the in-vehicle sensor.



B: INSTALLATION

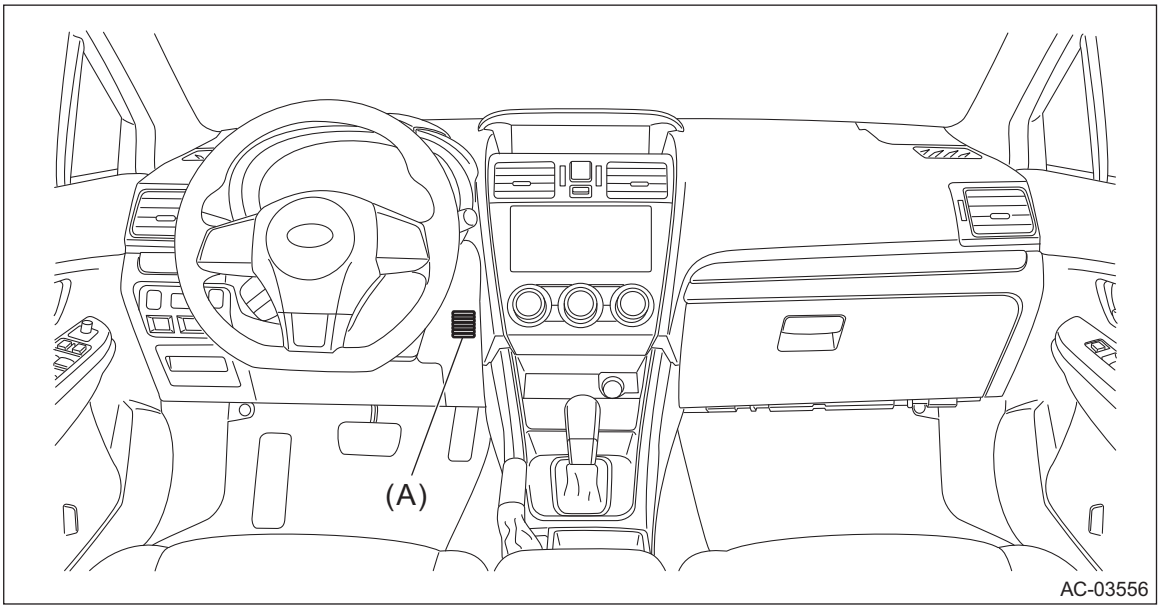
1) Install the in-vehicle sensor.
2) Install the cover switch - starter. (Model with keyless access with push button start)
3) Install the cover assembly - instrument panel LWR driver INN.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Set the vehicle to the following conditions.

Item	Condition
Ignition switch	ON
A/C switch	ON
Temperature adjustment dial	HI (MAX HOT)
Air flow control dial or switch	DEF
Fan dial	HI (MAX)

2) Check the suction port (A) for in-vehicle sensor of the cover assembly - instrument panel LWR driver INN.

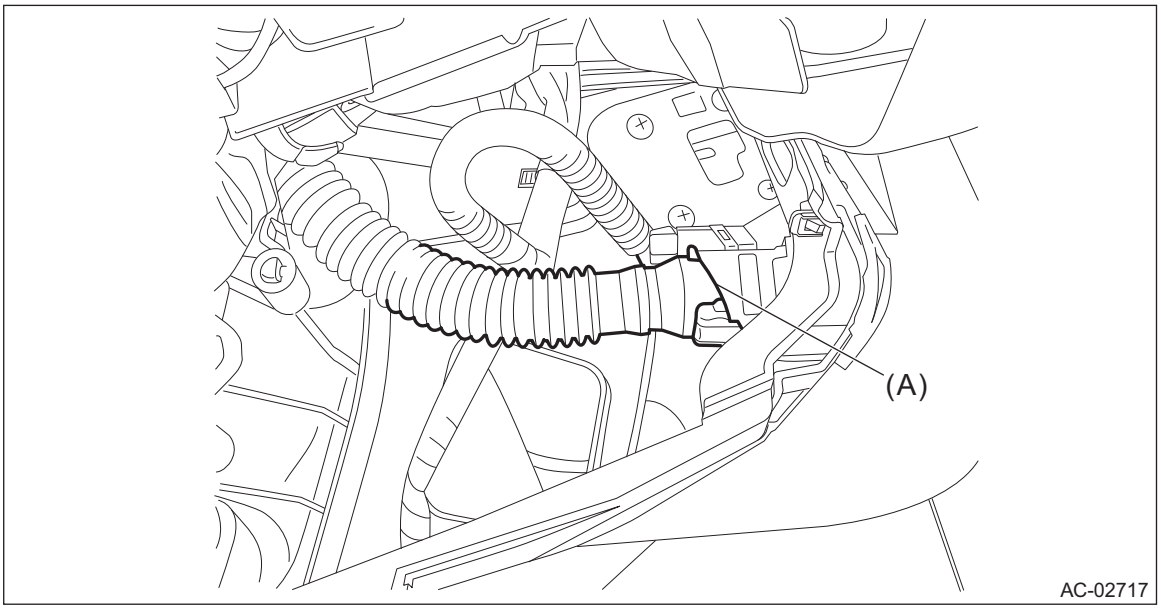


(1) Put a strip of paper close to the front side of the suction port (A).
(2) Can you see the paper moving towards the port and the air being sucked into the port?

CAUTION:
Be careful not to let the paper get sucked into the port.

- **Yes** → Go to step 5).
- **No** → Go to step 3).

3) Remove the cover assembly - instrument panel LWR driver INN, and check the aspirator hose (A).



(1) Are the aspirator hoses on both sides of the case and sensor connected securely?
(2) Is the aspirator hose free from any kinks or cracks?

- **Yes** → Go to step 4).
- **No** → Repair or replace the aspirator hose if necessary.

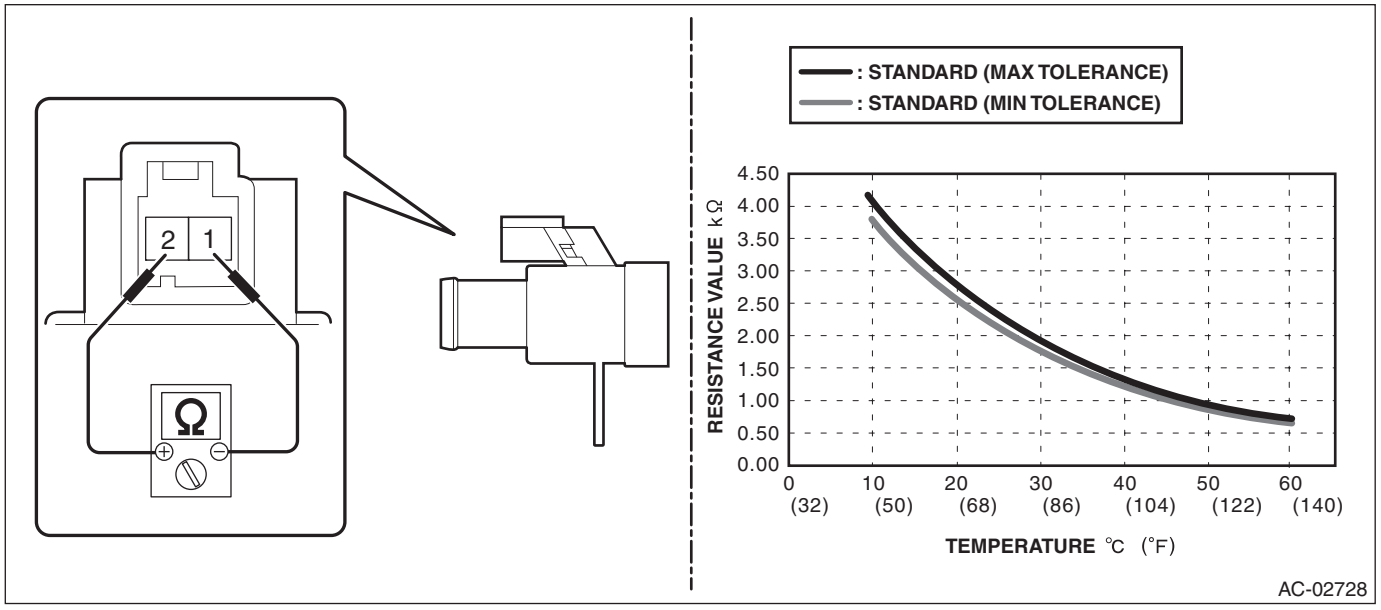
4) Check if there is anything that affects sensing, around the in-vehicle sensor.
(1) Is the in-vehicle sensor hole free from clogging?
(2) Is the peripheral area of in-vehicle sensor free from any heat-producing parts (such as audio, navigation system etc.)?

- **Yes** → Go to step 5).
- **No** → Remove everything that affects sensing.

5) Check in-vehicle sensor.
(1) Disconnect the connector.
(2) Measure the resistance between connector terminals.

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	10°C	3.772 — 4.101 kΩ
	15°C	3.096 — 3.338 kΩ
	20°C	2.556 — 2.734 kΩ
	25°C	2.121 — 2.251 kΩ
	30°C	1.756 — 1.878 kΩ
	35°C	1.462 — 1.574 kΩ
	40°C	1.223 — 1.326 kΩ
	45°C	1.028 — 1.122 kΩ
	50°C	0.868 — 0.9542 kΩ
	55°C	0.7363 — 0.8147 kΩ
	60°C	0.6273 — 0.6984 kΩ

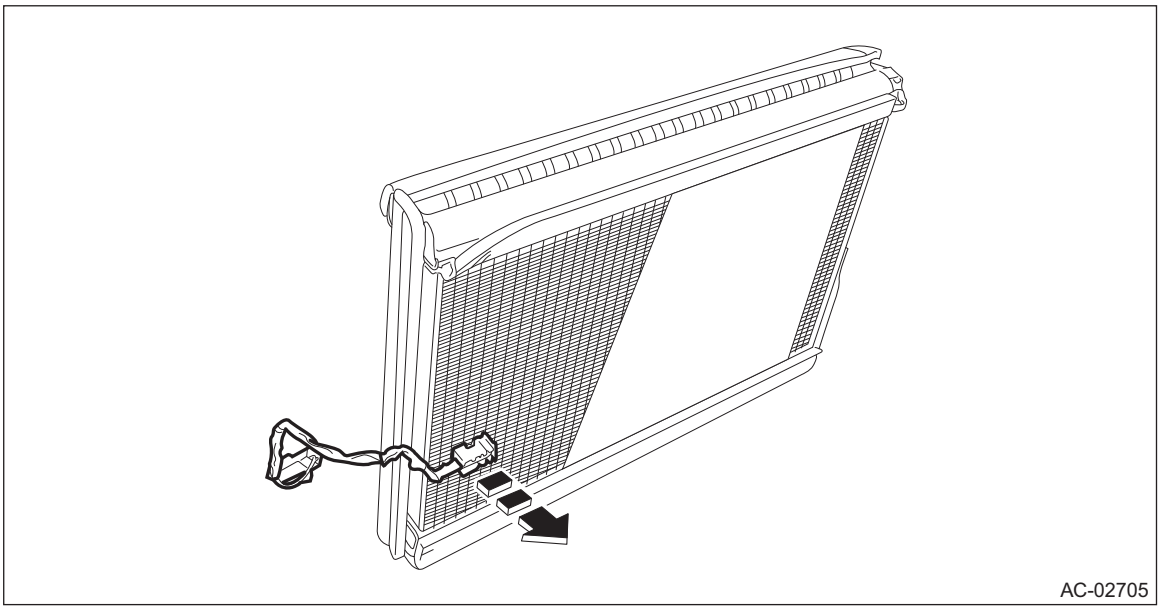
(3) Replace the in-vehicle sensor if the inspection result is not within the standard value.

24.Evaporator Sensor

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-26, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the evaporator assembly - cooling. <Ref. to AC-57, REMOVAL, Evaporator.>
4) Remove the thermostat - cooling.

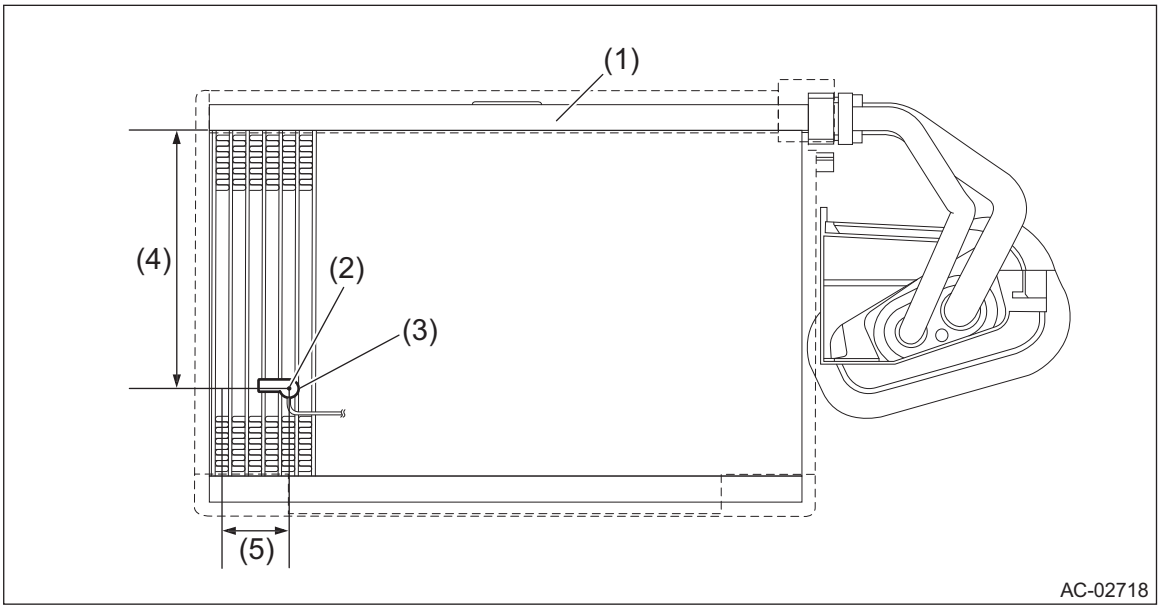


AC-02705

B: INSTALLATION

CAUTION:
- **Make sure that the water seal packing on the cover attachment area is securely attached.**
- **Replace the O-rings with new parts, and then apply compressor oil.**
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**

1) Install the thermostat - cooling at the position shown in the figure below.



(1) Evaporator ASSY - cooling
(2) Center
(3) Thermostat - cooling
(4) 130 mm (5.12 in) from the upper end of the fins
(5) Fifth row fin from the left end

2) Install the evaporator assembly - cooling. <Ref. to AC-59, INSTALLATION, Evaporator.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Charge refrigerant. <Ref. to AC-27, PROCEDURE, Refrigerant Charging Procedure.>

C: INSPECTION

1) Prepare the vehicle.

NOTE:
Check that the ambient temperature is 25 — 40°C (77 — 104°F) and that the humidity is 30% — 80%.
- Place the vehicle in the workshop or in the shade and windless condition.
- Open all windows.

2) Set the vehicle to the following conditions.

Item	Condition
Engine	Idling
Air vent grille	Shutter is fully open.
A/C switch	OFF
Temperature adjustment dial	LO (MAX COOL)
FRESH/RECIRC switch	RECIRC
Air flow control dial or switch	VENT
Fan dial	5/7 level

3) Using the Subaru Select Monitor, check evaporator temperature.

NOTE:
For detailed operation procedures, refer to “Application help”.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Air Conditioner» and select «Enter».
(5) On «Select Function» display, select «Data Monitor».
(6) From the data monitor item list, select «Evaporator Temperature».

(7) Idle the engine for 15 minutes, and then compare the air flow outlet temperature with «Evaporator Temperature».

Preparation tool:
Thermometer and hygrometer

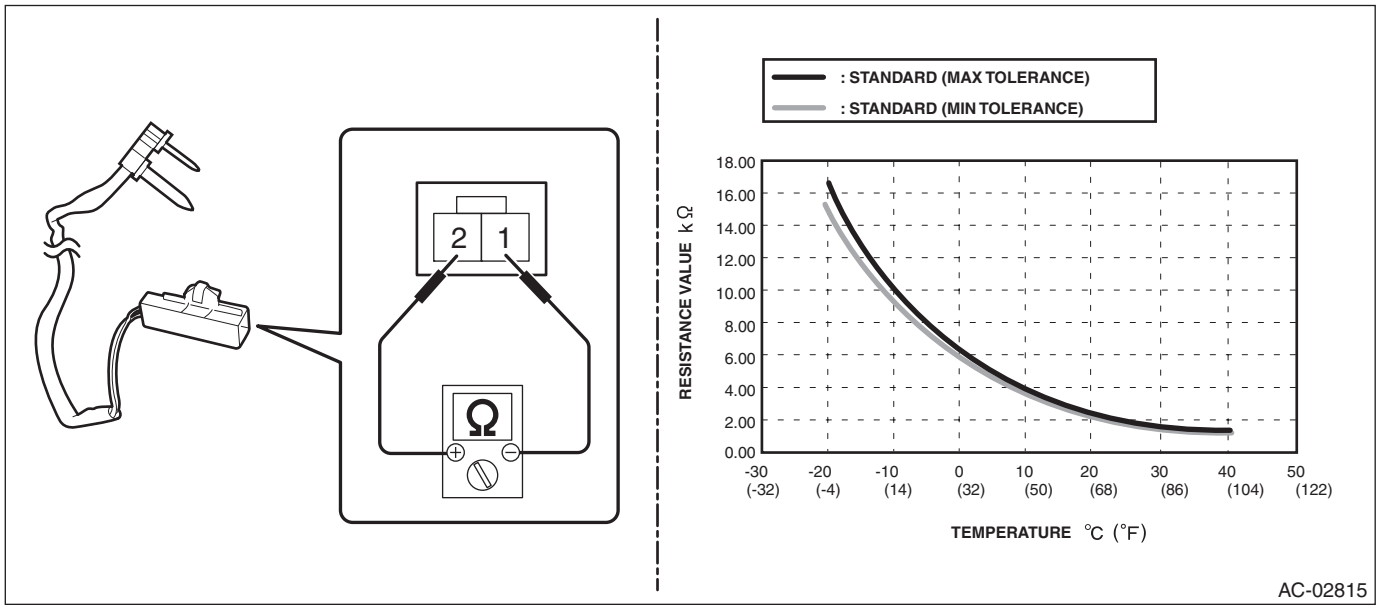
NOTE:
For outlet opening temperature, measure the average temperature of center grille assembly and side grille assembly.

(8) Do the air flow outlet temperature and «Evaporator Temperature» differ by 3°C (5.4°F) or more?
- **Yes** → Go to step 4).
- **No** → Evaporator sensor is normal.

4) Check the evaporator sensor.
(1) Disconnect the connector.
(2) Measure the resistance between connector terminals.

CAUTION:
During inspection, be careful not to touch the sensor end in order to avoid misjudgment due to body temperature.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	–20°C	15.37 — 16.62 kΩ
	–15°C	12.09 — 12.87 kΩ
	–10°C	9.576 — 10.05 kΩ
	–5°C	7.636 — 7.899 kΩ
	0°C	6.132 — 6.256 kΩ
	5°C	4.891 — 5.057 kΩ
	10°C	3.928 — 4.113 kΩ
	15°C	3.174 — 3.366 kΩ
	20°C	2.581 — 2.77 kΩ
	25°C	2.111 — 2.292 kΩ
	30°C	1.737 — 1.907 kΩ
	35°C	1.437 — 1.595 kΩ
	40°C	1.195 — 1.34 kΩ

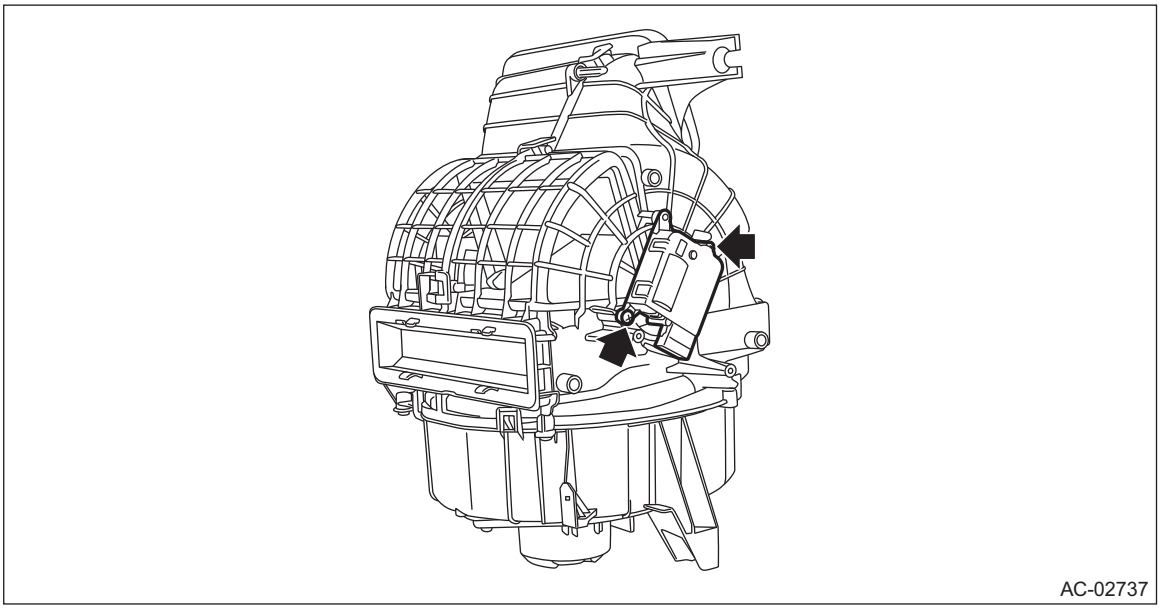
(3) Replace the evaporator sensor if the inspection result is not within the standard value.

25.FRESH/RECIRC Door Actuator

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, REMOVAL, Engine Control Module (ECM).>
4) Remove the blower motor unit assembly. <Ref. to AC-35, REMOVAL, Blower Motor Unit Assembly.>
5) Remove the screws and detach the motor - actuator blower.



AC-02737

B: INSTALLATION

CAUTION:
• After installing the grille assembly - ventilation RH, check that the air vent grille of the grille assembly - ventilation RH is inserted correctly into the air vent duct.
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the motor - actuator blower.
2) Install the blower motor unit assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the engine control module (ECM). (STI model) <Ref. to FU(STI)-56, INSTALLATION, Engine Control Module (ECM).>
4) Install the glove box.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. CHECK LINK

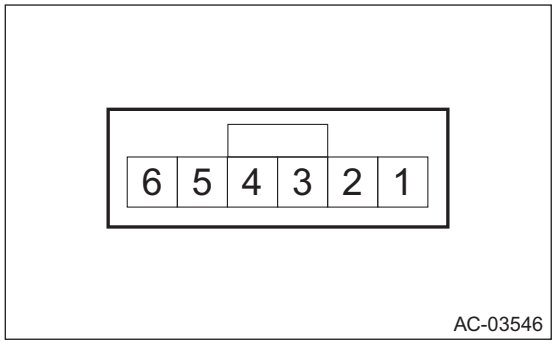
1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the FRESH/RECIRC switch, and check that the link operates normally.

3) If it does not operate normally as the result of inspection, check the motor - actuator blower.

2. CHECK ACTUATOR

1) Check the actuator operation when battery voltage is applied between the connector terminals.

CAUTION:
Disconnect the battery immediately after the actuator stops operation. Otherwise, the motor may be damaged.



Terminal No.	Inspection conditions	Operating position
1 (+) — 2 (–)	Apply battery voltage.	RECIRC
2 (+) — 1 (–)		FRESH

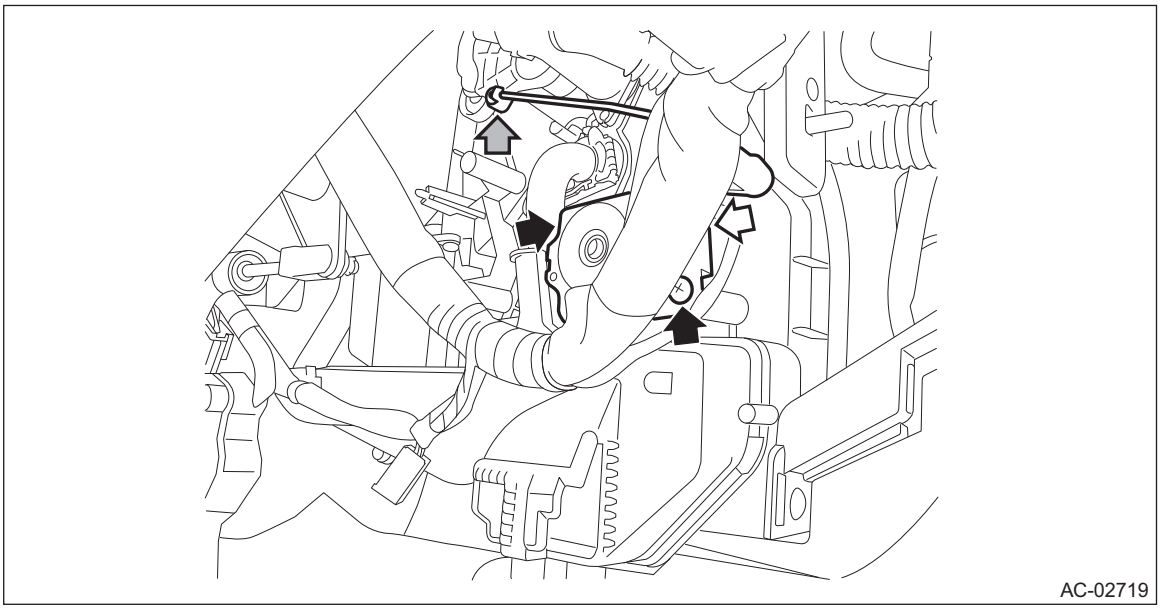
2) If it does not operate normally as the result of inspection, replace the motor - actuator blower.

26.Mode Door Actuator

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the motor - actuator mode.
   (1) Disconnect the connector, and remove the rod from the rod clamp.
   (2) Remove the screws and detach the motor - actuator mode.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the motor - actuator mode.
2) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

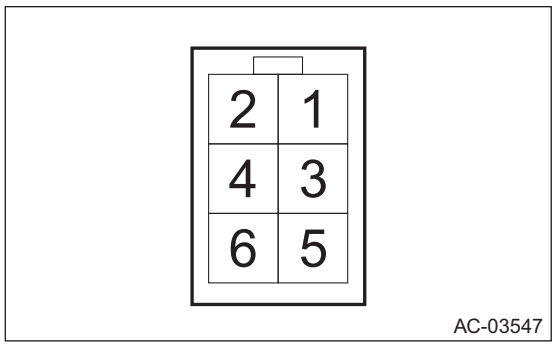
1. CHECK LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the air flow control dial or switch to check that the link operates normally.
3) If it does not operate normally as the result of inspection, check the motor - actuator mode.

2. CHECK ACTUATOR

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
3 — 1	Always	80 — 100 Ω
3 — 2		
3 — 5		
3 — 6		

2) Replace the motor - actuator mode if the inspection result is not within the standard value.

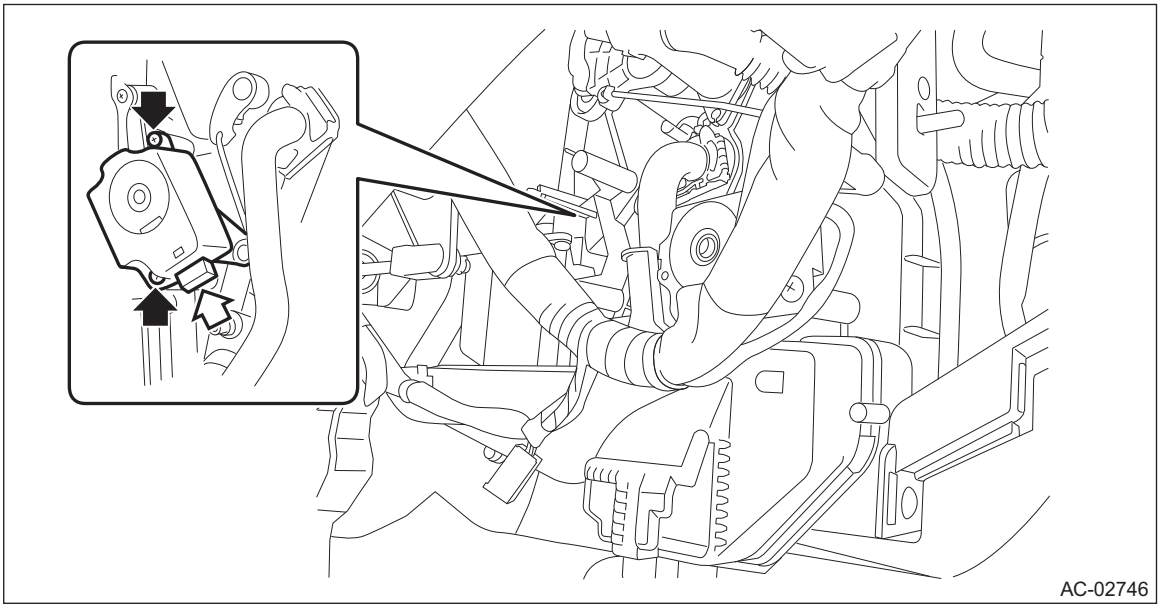
27.Air Mix Door Actuator

A: REMOVAL

1. DRIVER'S SIDE

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the motor - actuator mix.
(1) Disconnect the connector, and remove the rod from the rod clamp.
(2) Remove the screws and detach the motor - actuator mix.



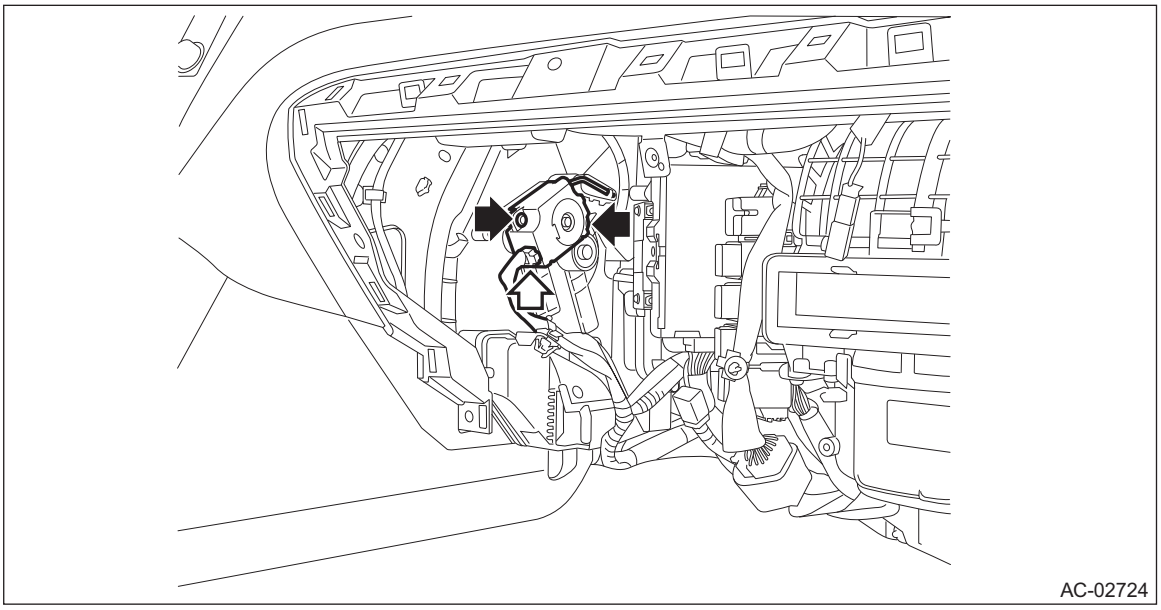
AC-02746

2. PASSENGER'S SIDE

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the motor - actuator mix.
(1) Disconnect the connector, and remove the rod from the rod clamp.

(2) Remove the screws and detach the motor - actuator mix.



B: INSTALLATION

1. DRIVER'S SIDE

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the motor - actuator mix.
2) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. PASSENGER'S SIDE

1) Install the motor - actuator mix.
2) Install the glove box.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

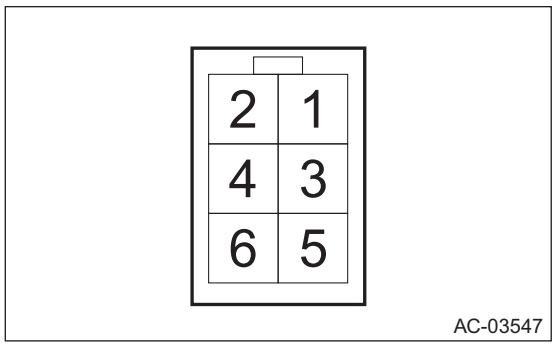
1. CHECK LINK

1) Visually check the operating range of the link, and remove the foreign matter if any.
2) Operate the temperature control dial to check that the link operates normally.
3) If it does not operate normally as the result of inspection, check the motor - actuator mix.

2. CHECK ACTUATOR

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
3 — 1	Always	80 — 100 Ω
3 — 2		
3 — 5		
3 — 6		

2) Replace the motor - actuator mix if the inspection result is not within the standard value.

28.Air Vent Grille

A: REMOVAL

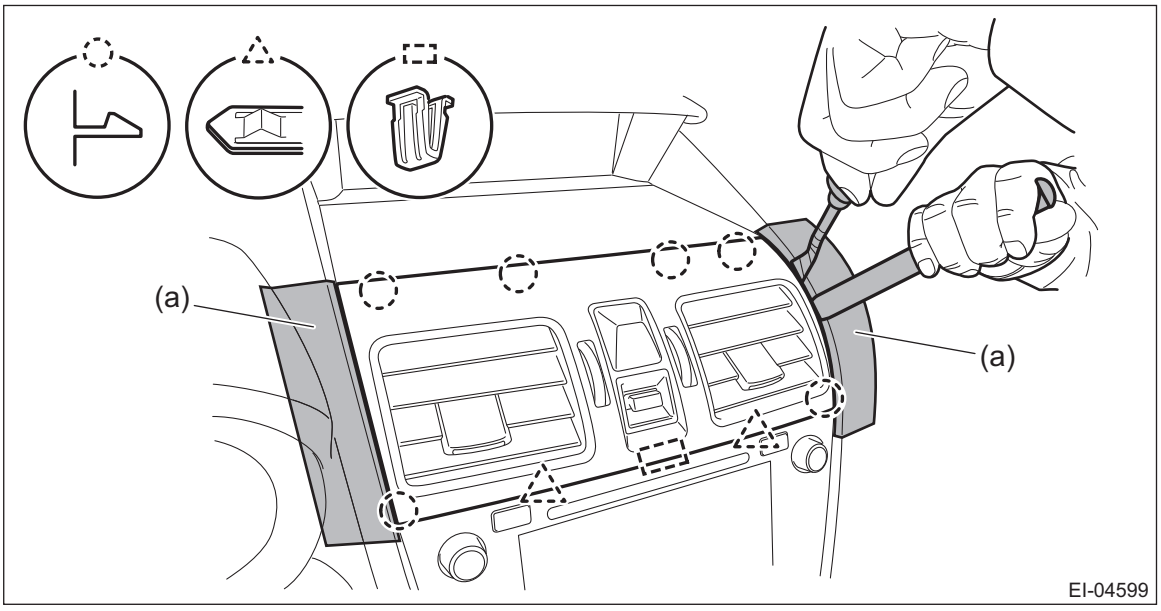
1. CENTER GRILLE ASSEMBLY

CAUTION:
- **Do not put your finger on the fin of the air vent grille. Doing so may damage the fin.**
- **Always pull the center grille assembly toward you slowly. If attempting to remove by turning it upward, the claws and connectors may be damaged.**

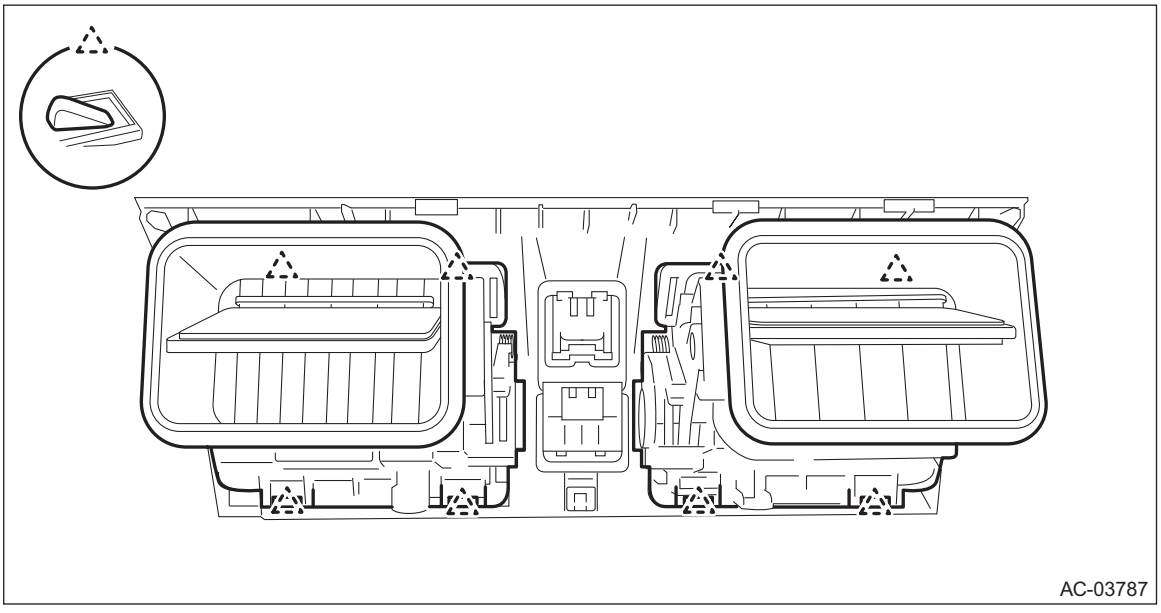
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the center grille assembly.
   (1) Attach the protective tape (a) to the instrument panel assembly.
   (2) Release the claw by using a clip remover wrapped with protective tape.
   (3) Disconnect the connector and remove the center grille assembly.



3) Release the claws, and then remove the grille assembly - CTR ventilation from the center grille assembly.



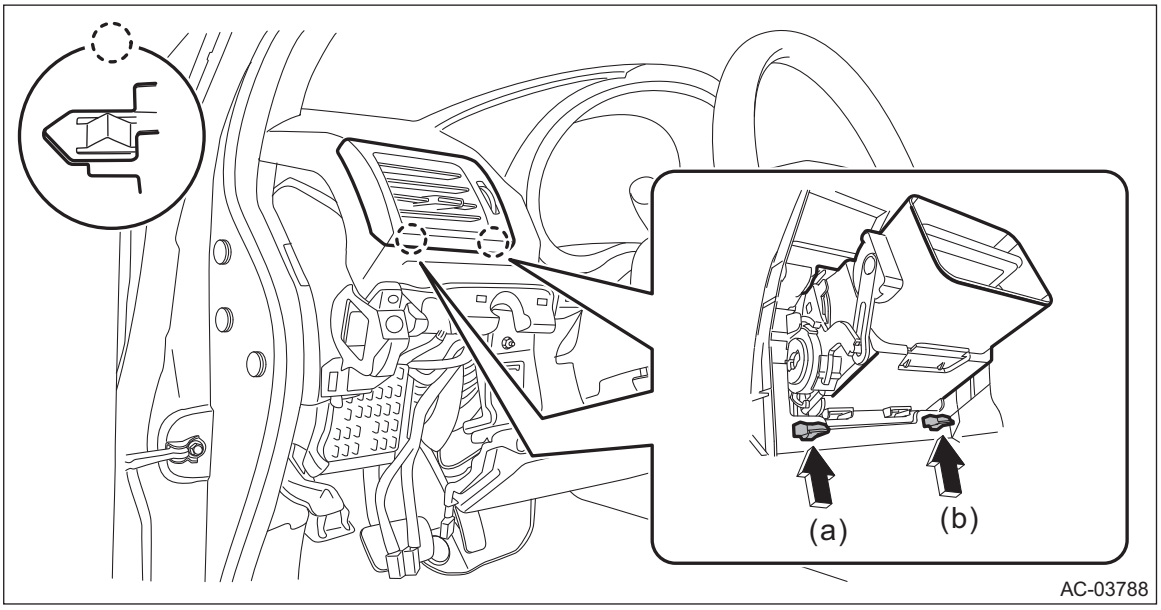
2. SIDE GRILLE ASSEMBLY

Driver's side

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the grille assembly - ventilation LH.

CAUTION:
• When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
• Do not pull the grille assembly - ventilation forcibly. Doing so may cause deformation or damage.
(1) Push the claw (a) on the outlet dial side upward from the back of the instrument panel assembly.
(2) While pushing, pull the grille assembly - ventilation toward you to release the claw.
(3) Release the other claw (b) in the same manner, then remove the grille assembly - ventilation LH.



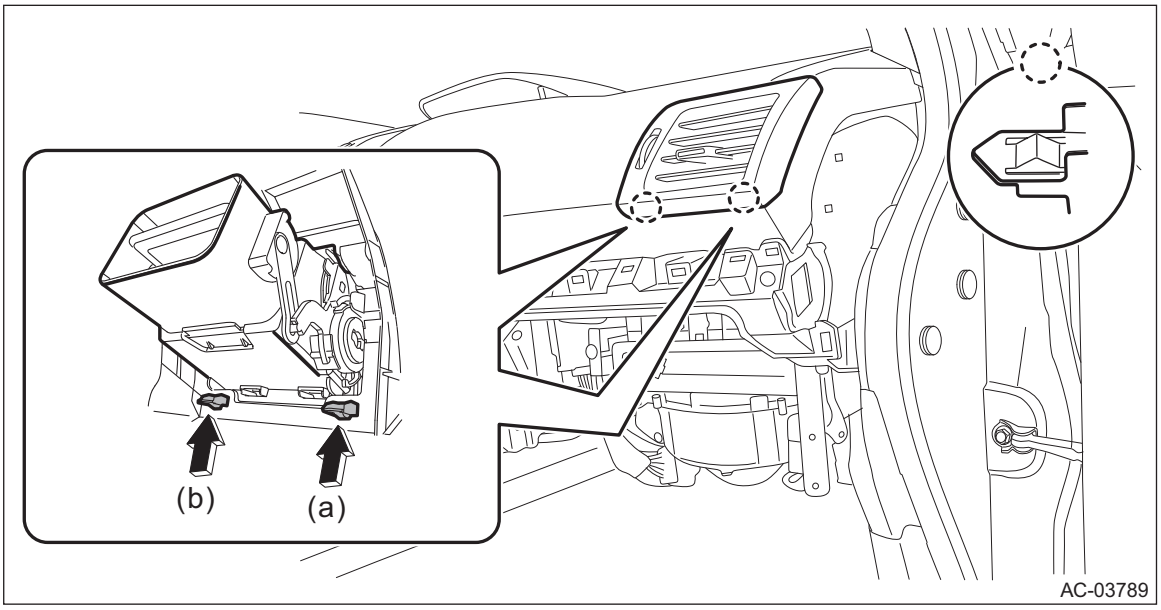
Passenger's side

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the pocket assembly and the back panel - pocket. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the grille assembly - ventilation RH.

CAUTION:
• When using a flat tip screwdriver, apply protective tape or cloth and be careful not to cause damage.
• Do not pull the grille assembly - ventilation forcibly. Doing so may cause deformation or damage.
(1) Push the claw (a) on the outlet dial side upward from the back of the instrument panel assembly.
(2) While pushing, pull the grille assembly - ventilation toward you to release the claw.

(3) Release the other claw (b) in the same manner, then remove the grille assembly - ventilation RH.



B: INSTALLATION

1. CENTER GRILLE ASSEMBLY

CAUTION:
After installing the center grille assembly, check that the air vent grille is inserted correctly into the air vent duct.

1) Install the grille assembly - CTR ventilation.
2) Install the center grille assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. SIDE GRILLE ASSEMBLY

CAUTION:
After installing the grille assembly - ventilation, check that the air vent grille is inserted correctly into the air vent duct.

1) Install the grille assembly - ventilation.
2) Install the cover assembly - instrument panel LWR driver OUT. (Driver's side)
3) Install the pocket assembly and the back panel - pocket. (Passenger's side)
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

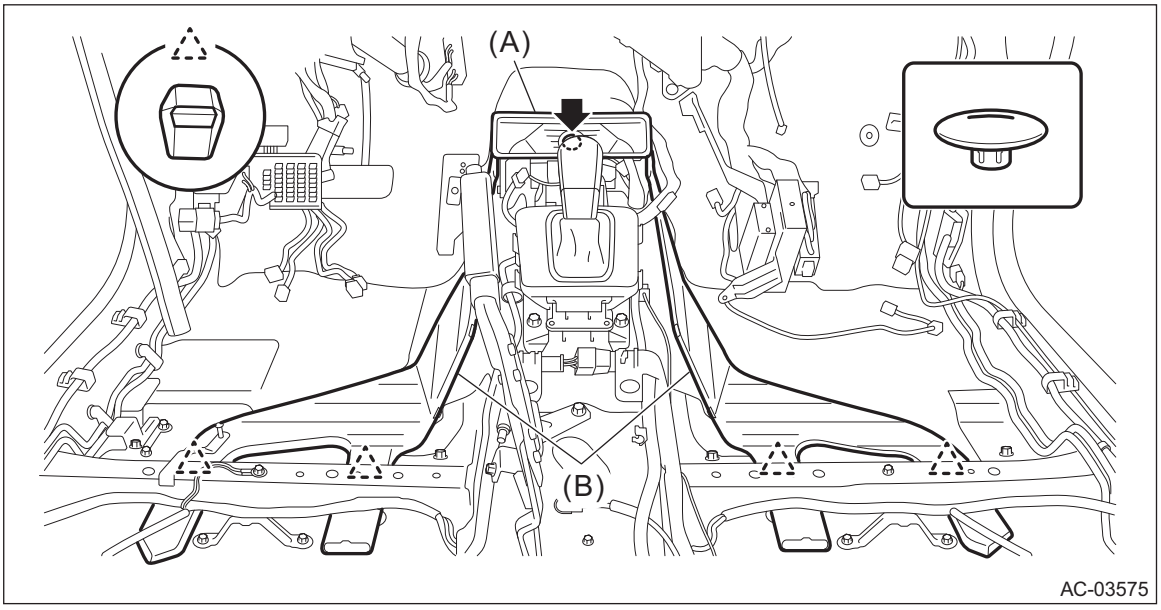
1) Check that the direction and amount of air can be adjusted smoothly. Replace the grille assembly - ventilation if faulty.
2) Check that the adjustment can be maintained in each position. Replace the grille assembly - ventilation if faulty.

29.Heater Duct

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
4) Remove the duct - rear heater.
   (1) Lift the floor carpet.
   (2) Remove the clips, and remove the duct - rear heater CTR (A).
   (3) Release the claws, and remove the duct - rear heater (B) on LH and RH sides.



B: INSTALLATION

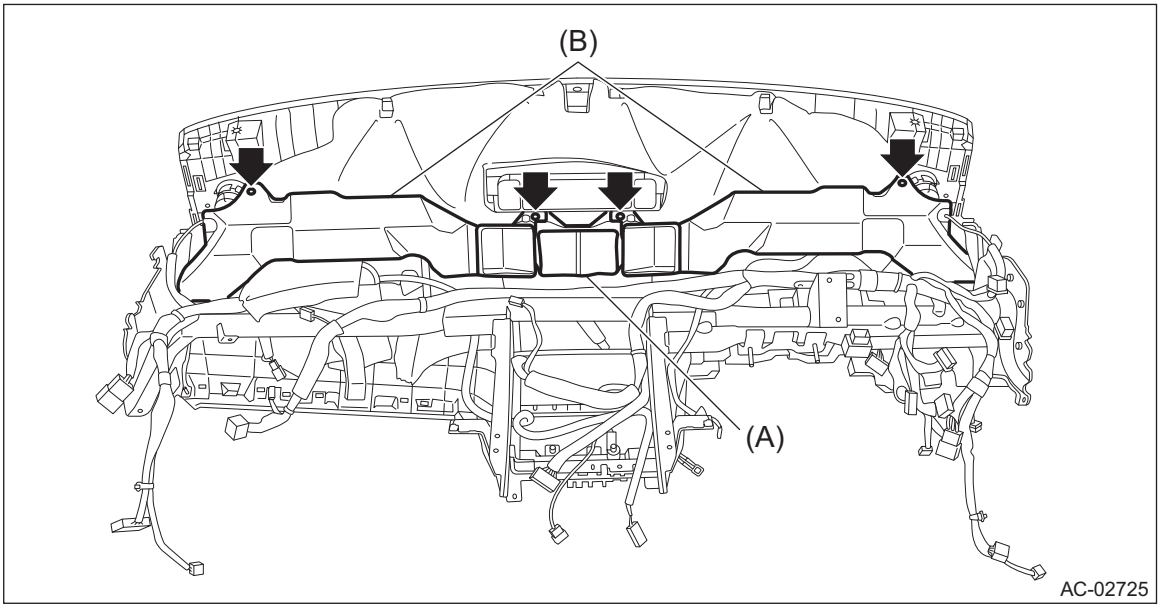
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the duct - rear heater.
2) Install the heater and cooling unit assembly. <Ref. to AC-55, INSTALLATION, Heater and Cooling Unit.>
3) Install the front seat. <Ref. to SE-12, INSTALLATION, Front Seat.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

30.Heater Vent Duct

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the instrument panel assembly. <Ref. to EI-75, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and remove the duct - center vent (A) and the duct - side ventilation (B) on LH and RH sides.



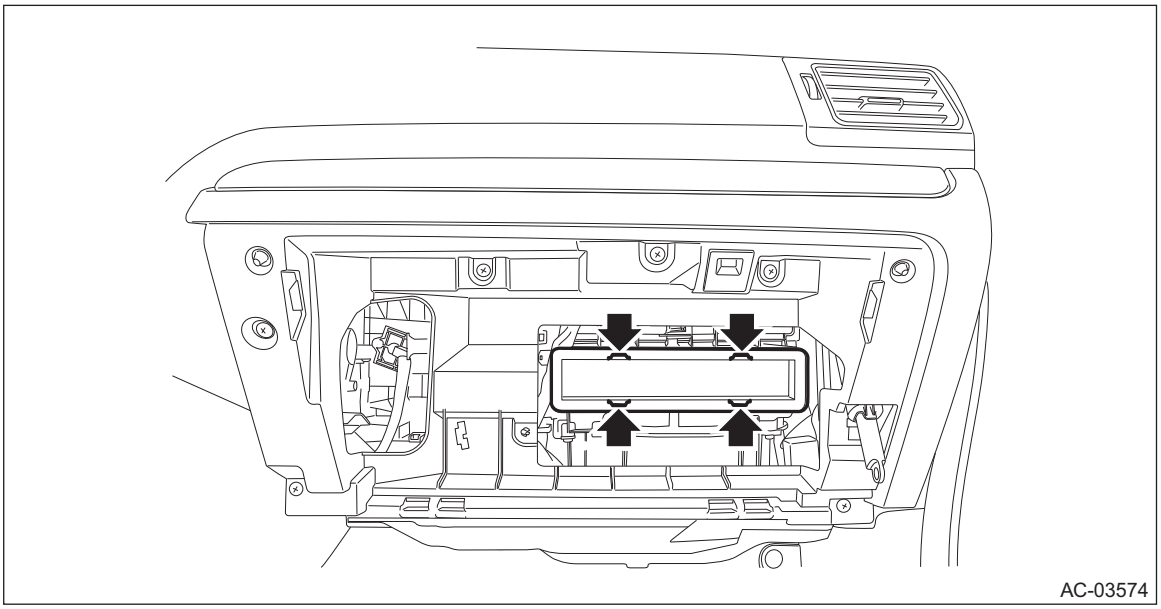
B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the heater vent duct.
2) Install the instrument panel assembly. <Ref. to EI-81, INSTALLATION, Instrument Panel Assembly.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

31.A/C Filter

A: REPLACEMENT

1) Remove the pocket assembly. <Ref. to EI-67, REMOVAL, Glove Box.>
2) Pinch the tabs to release the lock, and remove the filter kit.



NOTE:
Pull out the filter while pulling it down toward you to prevent dirt or dust from falling inside the case.
3) Install a new filter kit.
4) Install the pocket assembly.

32.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” for “HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)” section. <Ref. to AC(diag)-8, Diagnostics with Phenomenon.>

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

AC(diag)

10. Read Current Data 45
11. System Operation Check Mode 47
12. Diagnostic Procedure for Subaru Select Monitor Communication 48
13. List of Diagnostic Trouble Code (DTC) 50
14. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 53

1. Basic Diagnostic Procedure

A: PROCEDURE

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as sensor having an open circuit. Always perform the inspection in direct sunlight.

	Step	Check	Yes	No
1	**START INSPECTIONS.** 1) Prepare the tools. <Ref. to AC-17, PREPARATION TOOL, General Description.> 2) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.>	Is the check result OK?	Go to step **2**.	Fix the malfunction found in pre-inspection, and go to the next inspection step. Go to step **2**.
2	**CHECK DTC.** 1) Under the failure condition, leave the vehicle for one minute or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).> NOTE: • If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AC(diag)-48, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Subaru Select Monitor Communication.> • Record the time stamp and the freeze frame data recorded together with the DTC. For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to AC(diag)-50, LIST, List of Diagnostic Trouble Code (DTC).> After diagnosis, Go to step **3**.	Refer to Diagnostics with Phenomenon. <Ref. to AC(diag)-8, INSPECTION, Diagnostics with Phenomenon.>
3	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to AC(diag)-43, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. General Description

A: CAUTION

1) Never connect the battery in reverse polarity.
• Doing so may immediately damage the A/C control panel.
2) Do not disconnect the battery cables while the engine is running.
• A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as A/C control panel etc.
3) Before disconnecting the connectors of sensors and the A/C control panel, be sure to turn off the ignition switch.
• A/C control panel may be damaged.
4) Every A/C-related part is a precision part. Do not drop them.
5) Airbag system harness is routed near the A/C control panel and junction box.

CAUTION:
• Do not use electrical test equipment on the airbag system harness and connector.
• Be careful not to damage the airbag system harness when servicing the A/C control panel and junction box.

B: INSPECTION

Before performing diagnosis, check the following items which might affect the A/C system problems.

1. BATTERY

Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.> <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>

NOTE:
If the battery voltage does not reach the specified value, recharge or replace the battery.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

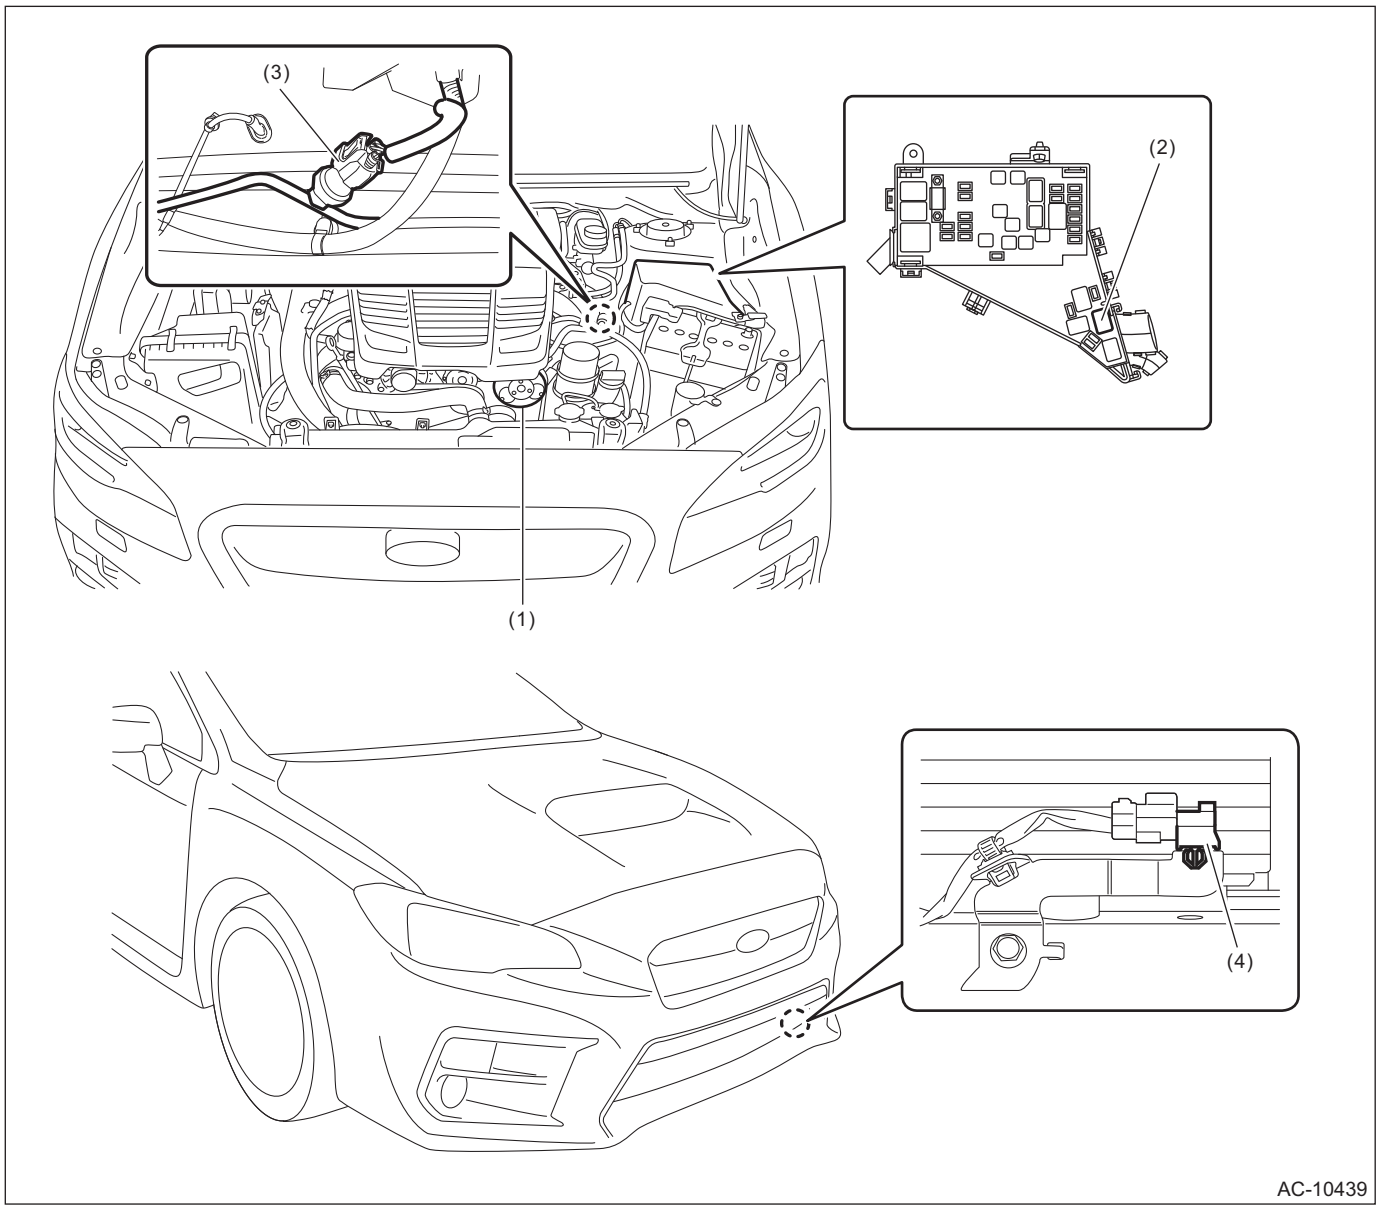
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

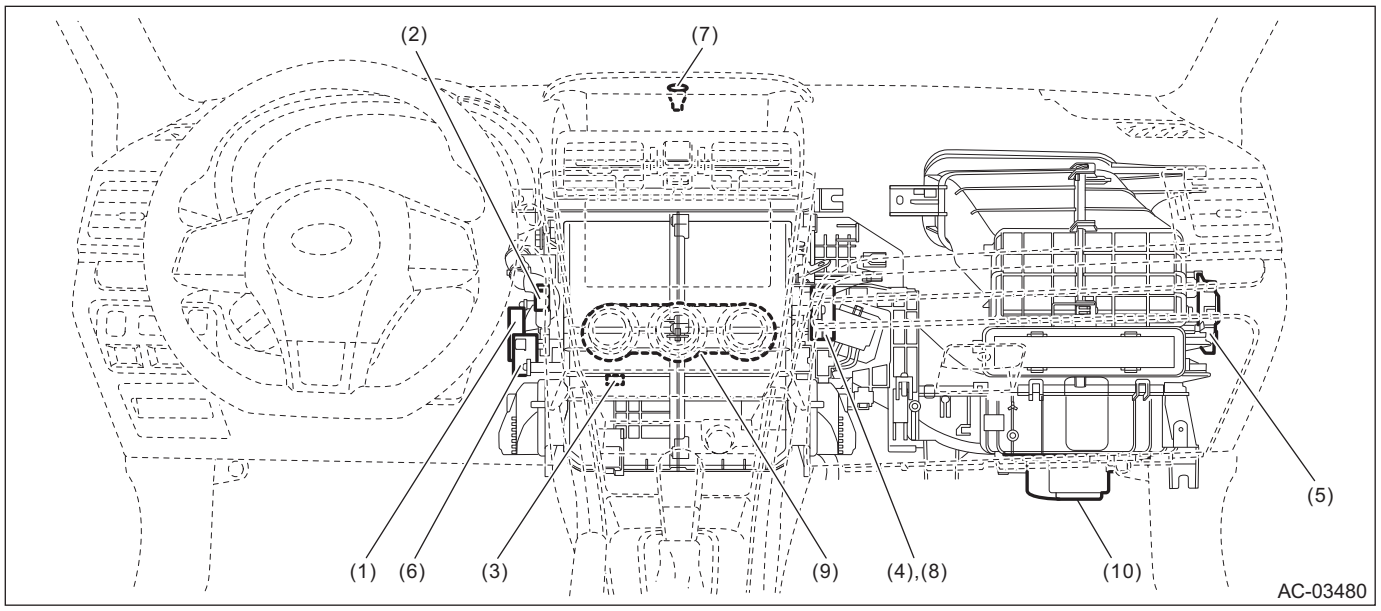
A: LOCATION

1. OUTSIDE VEHICLE



(1) A/C compressor
(2) A/C relay
(3) Pressure switch
(4) Ambient sensor

2. COMPARTMENT

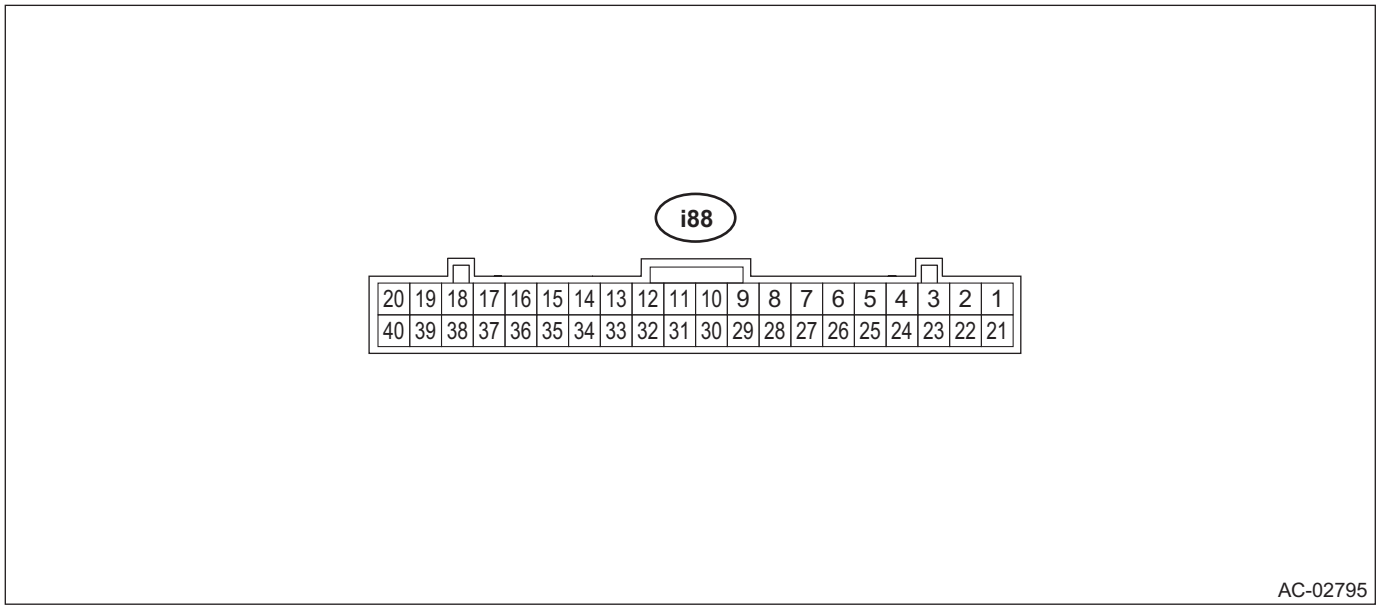


(1) Air mix door actuator LH*2
(2) In-vehicle sensor
(3) Evaporator sensor
(4) Air mix door actuator RH*2
(5) Intake door actuator
(6) Mode door actuator
(7) Sunload sensor
(8) Air mix door actuator*1
(9) A/C control panel
(10) Blower motor

*1: Without left/right independent air conditioning function
*2: With left/right independent air conditioning function

4. Auto A/C Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measuring condition	Standard
1	Mode door actuator #4	Digital signal; can not be measured	—
2	Mode door actuator #3	Digital signal; can not be measured	—
3	Mode door actuator #2	Digital signal; can not be measured	—
4	Mode door actuator #1	Digital signal; can not be measured	—
6	Intake door actuator (FRESH)	FRESH mode	8 V or more
8	Intake door actuator (RECIRC)	RECIRC mode	8 V or more
9	Blower fan ON signal	Blower fan is ON	1 V or less
10	Intake door potentiometer power supply	Ignition switch ON	5 V
11	A/C cut-off signal	A/C is cut off	1 V or less
12	Intake door potentiometer signal	Ignition switch ON	0 — 5 V
14	GND for sensors	Always	1 V or less
15	ACC power supply	ACC ON	Battery voltage
16	Sunload sensor	Sunlight is contacting sensor	1 — 4 V
17	RECIRC sensor	Ignition switch ON	25°C: 2.5 V
18	Post evaporator sensor	Depends on temperature after the evaporator.	1 — 4.5 V
19	CAN Lo	Digital signal; can not be measured	—
20	CAN Hi	Digital signal; can not be measured	—
21	Air mix door actuator LH #4*2	Digital signal; can not be measured	—
22	Air mix door actuator LH #3*2	Digital signal; can not be measured	—
23	Air mix door actuator LH #2*2	Digital signal; can not be measured	—
24	Air mix door actuator LH #1*2	Digital signal; can not be measured	—
25	Air mix door actuator #4 *1 or air mix door actuator RH #4 *2	Digital signal; can not be measured	—
26	Air mix door actuator #3 *1 or air mix door actuator RH #3 *2	Digital signal; can not be measured	—
27	Air mix door actuator #2 *1 or air mix door actuator RH #2 *2	Digital signal; can not be measured	—
28	Air mix door actuator #1 *1 or air mix door actuator RH #1 *2	Digital signal; can not be measured	—

Terminal No.	Content	Measuring condition		Standard
31	BATT	Always		Battery voltage
32	IGN	Ignition ON		Battery voltage
34	GND	Always		1 V or less
35	ILL–	Illumination ON (measure between 37 — 35)		Battery voltage
37	ILL+			
40	Fan control signal	Ignition switch: ON, Blower switch: ON	1st	Approx. 9 V
			2nd	Approx. 8 V
			3rd	Approx. 7 V
			4th	Approx. 6 V
			5th	Approx. 5 V
			6th	Approx. 3.5 V
			7th	Approx. 0.5 V

*1: Without left/right independent air conditioning function
*2: With left/right independent air conditioning function

B: WIRING DIAGRAM

1. AIR CONDITIONER AUTO A/C MODEL

Refer to “Air Conditioning System” in the wiring diagram. <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

5. Diagnostics with Phenomenon

A: INSPECTION

1. Perform diagnosis according to the diagnosis procedure for the corresponding symptom listed in the symptom table.
2. If there are multiple symptoms, perform the diagnosis in the symptom sequence (1 → 2 → ... → 13).

1. SYMPTOM TABLE

Symptoms		Diagnosis procedure
1	Nothing is displayed on the screen or indicators do not illuminate.	<Ref. to AC(diag)-9, NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
2	Air conditioner does not stop even when the OFF switch is pressed.	<Ref. to AC(diag)-10, AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	The windshield glass is not cleared even when the DEF switch is pressed.	<Ref. to AC(diag)-11, THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	Cold air not emitted.	<Ref. to AC(diag)-12, COLD AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
5	Warm air not emitted.	<Ref. to AC(diag)-16, WARM AIR NOT EMITTED, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	Compartment temperature is excessively lower than setting temperature.	<Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	Compartment temperature is excessively higher than setting temperature.	<Ref. to AC(diag)-24, COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	Air does not come out, or airflow capacity is insufficient. (Blower motor does not rotate.)	<Ref. to AC(diag)-27, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	Air goes out of control. (Blower motor rotates at high speed.)	<Ref. to AC(diag)-30, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	Cold air does not come out even when the A/C switch is pressed. The glass cannot be defogged. (Compressor does not operate.)	<Ref. to AC(diag)-32, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	Unable to switch suction vents.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	Unable to switch blow vents.	<Ref. to AC(diag)-37, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	Illumination does not come on, or cannot dim.	<Ref. to AC(diag)-38, ILLUMINATION DOES NOT COME ON OR CANNOT DIM, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

B: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. NOTHING IS DISPLAYED ON THE SCREEN OR INDICATORS DO NOT ILLUMINATE

Trouble symptom:
When the AUTO button is pressed with IGN ON, nothing is displayed on the screen or indicators do not illuminate.

Trouble causes:
- A/C control panel power supply circuit failure
- CAN communication failure

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove a fuse from fuse & relay box. 3) Check the condition of fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — A/C control panel.
2	**CHECK CONNECTOR.** Check for poor contact of connector.	Is the check result OK?	Go to step **3**.	Repair the connector.
3	**CHECK A/C CONTROL PANEL POWER SUPPLY CIRCUIT (OPEN).** 1) Remove the A/C control panel. 2) Disconnect the A/C control panel connector. 3) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 15 (+) — Chassis ground (–):*** ***(i88) No. 31 (+) — Chassis ground (–):*** ***(i88) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check for open or short circuit in the harness between A/C control panel and fuse.

	Step	Check	Yes	No
4	**CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN).** Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. ***Connector & terminal*** ***(i88) No. 34 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair the harness for ground line.
5	**CHECK FOR POOR CONTACT.** Check poor contact of A/C control panel connector.	Is the check result OK?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair the connector.

2. AIR CONDITIONER DOES NOT STOP EVEN WHEN THE OFF SWITCH IS PRESSED

Trouble symptom:
Even when the OFF switch is pressed, the blower fan does not turn off, the inlet opening remains in FRESH mode, and the compressor does not turn off.

Trouble causes:
- CAN communication failure
- A/C control panel failure
- Blower motor failure
- Intake door actuator failure
- Compressor failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the OFF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • Blower fan level • Fresh/Recircle Air Door Actuator Position Target	Does “Blower Fan Level” indicate 0 and “Fresh/Recircle Air Door Actuator Position Target” indicate 100%?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
2	**CHECK BLOWER MOTOR.** With the OFF switch pressed, check the blower motor operation.	Is the blower motor stopped?	Go to step **3**.	<Ref. to AC(diag)-30, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	**CHECK INTAKE DOOR ACTUATOR.** With the OFF switch pressed, check the FRESH/RECIRC door operation.	Does the FRESH/RECIRC door set to FRESH?	Go to step **4**.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK COMPRESSOR.** With the OFF switch pressed, check the compressor operation.	Is the compressor stopped?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-32, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

3. THE WINDSHIELD GLASS IS NOT CLEARED EVEN WHEN THE DEF SWITCH IS PRESSED

Trouble symptom:

Defroster indicator does not illuminate, outlet opening does not switch to DEF, compressor does not switch to ON, and inlet opening does not switch to FRESH, when pressing the DEF switch.

Trouble causes:

- CAN communication failure
- A/C control panel failure
- Mode door actuator failure
- Compressor failure
- Intake door actuator failure

	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Press the DEF switch of the A/C control panel. 3) Using Subaru Select Monitor, check the following data in “Read Current Data”. <Ref. to AC(diag)-45, Read Current Data.> • Mode Door Actuator Position Target • Fresh/Recircle Air Door Actuator Position Target	Does “Mode Door Actuator Position Target” indicate 100% and “Fresh/Recircle Air Door Actuator Position Target” indicate 100%?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
2	**CHECK MODE DOOR ACTUATOR.** With the DEF switch ON, check the mode door operation.	Does the air come out from the DEF outlet opening?	Go to step **3**.	<Ref. to AC(diag)-37, UNABLE TO SWITCH VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
3	**CHECK INTAKE DOOR ACTUATOR.** With the DEF switch ON, check the FRESH/RECIRC door operation.	Is FRESH/RECIRC switch turned to “FRESH”?	Go to step **4**.	<Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK COMPRESSOR.** With the DEF switch ON, check the compressor operation.	Does the compressor operate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	<Ref. to AC(diag)-32, COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

4. COLD AIR NOT EMITTED

Trouble symptom:
Cold air not emitted.
Trouble causes:
- Airflow capacity failure
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

	Step	Check	Yes	No
1	**CHECK MAX COOL.** Set the A/C control panel dials as follows. Temperature control dial: MAX COOL FRESH/RECIRC switch: RECIRC Mode switch or mode dial: VENT A/C switch: ON	Does it fail to blow the cold air?	Go to step **2**.	Go to step **4**.
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-27, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Perform repair according to inspection procedure.
3	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	Go to step **4**.	Perform repair according to refrigerant pressure inspection.

	Step	Check	Yes	No
4	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

Step		Check	Yes	No
6	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **8**.
8	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **9**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
9	**CHECK EVAPORATOR SENSOR UNIT.** Perform the inspection of evaporator sensor unit. <Ref. to AC-82, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-81, REMOVAL, Evaporator Sensor.>
10	**CHECK IN-VEHICLE SENSOR UNIT.** Check in-vehicle sensor. <Ref. to AC-78, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR UNIT.** Check the ambient sensor. <Ref. to AC-72, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>
12	**CHECK SUNLOAD SENSOR UNIT.** Check the sunload sensor unit. <Ref. to AC-75, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.
*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

5. WARM AIR NOT EMITTED

Trouble symptom:
Warm air not emitted.
Trouble causes:
- Airflow capacity failure
- Coolant level failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

	Step	Check	Yes	No
1	**CHECK MAX HOT.** Set the A/C control panel dials as follows. Temperature control dial: MAX HOT FRESH/RECIRC switch: FRESH Mode switch or mode dial: HEAT A/C switch: OFF	Does it fail to blow the hot air?	Go to step **2**.	Go to step **4**.
2	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-27, AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **3**.	Perform repair according to inspection procedure.
3	**CHECK ENGINE COOLANT.** Check engine coolant amount.	Is the engine coolant level within the specification?	Go to step **4**.	Fill engine coolant. If there is coolant leakage, repair the leaks according to Engine Cooling System Trouble in General. <Ref. to CO(w/o STI)-54, Engine Cooling System Trouble in General.> <Ref. to CO(STI)-30, Engine Cooling System Trouble in General.>
4	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
5	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

Step		Check	Yes	No
6	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **8**.
8	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **9**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
9	**CHECK EVAPORATOR SENSOR UNIT.** Perform the inspection of evaporator sensor unit. <Ref. to AC-82, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **10**.	Replace the evaporator sensor. <Ref. to AC-81, REMOVAL, Evaporator Sensor.>
10	**CHECK IN-VEHICLE SENSOR UNIT.** Check in-vehicle sensor circuit. <Ref. to AC-78, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **11**.	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
11	**CHECK AMBIENT SENSOR UNIT.** Check the ambient sensor. <Ref. to AC-72, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **12**.	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>
12	**CHECK SUNLOAD SENSOR UNIT.** Check the sunload sensor unit. <Ref. to AC-75, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.
*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

6. COMPARTMENT TEMPERATURE IS EXCESSIVELY LOWER THAN SETTING TEMPERATURE

Trouble symptom:
Compartment temperature is excessively lower than setting temperature.
Trouble causes:
- Large airflow capacity
- Refrigerant pressure failure
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-30, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **2**.	Perform repair according to inspection procedure.

	Step	Check	Yes	No
2	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	Go to step **3**.	Perform repair according to refrigerant pressure inspection.
3	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
4	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step **5**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

Step		Check	Yes	No
5	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **6**.

Step		Check	Yes	No
6	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **7**.
7	**CHECK EVAPORATOR SENSOR UNIT.** Perform the inspection of evaporator sensor unit. <Ref. to AC-82, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **8**.	Replace the evaporator sensor. <Ref. to AC-81, REMOVAL, Evaporator Sensor.>
8	**CHECK IN-VEHICLE SENSOR UNIT.** Check in-vehicle sensor circuit. <Ref. to AC-78, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **9**.	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>

	Step	Check	Yes	No
9	**CHECK AMBIENT SENSOR UNIT.** Check the ambient sensor. <Ref. to AC-72, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **10**.	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>
10	**CHECK SUNLOAD SENSOR UNIT.** Check the sunload sensor unit. <Ref. to AC-75, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.
*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

7. COMPARTMENT TEMPERATURE IS EXCESSIVELY HIGHER THAN SETTING TEMPERATURE

Trouble symptom:
Compartment temperature is excessively higher than setting temperature.
Trouble causes:
- Large airflow capacity
- CAN communication failure
- A/C control panel failure
- Air mix actuator RH failure
- Air mix actuator LH failure (only with left/right independent air conditioning function)
- Intake door actuator failure
- Evaporator sensor failure
- In-vehicle sensor failure
- Ambient sensor failure
- Sunload sensor failure

	Step	Check	Yes	No
1	**CHECK AIRFLOW CAPACITY.** Check the airflow capacity. <Ref. to AC(diag)-30, AIR GOES OUT OF CONTROL, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>	Is the check result OK?	Go to step **2**.	Perform repair according to inspection procedure.
2	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX COOL. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "60"*1?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

	Step	Check	Yes	No
3	**CHECK A/C CONTROL PANEL.** 1) Turn the temperature control dials (driver's side) and (passenger's side) to MAX HOT. 2) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Heater Control Panel Setting Value (driver's) • Heater Control Panel Setting Value (passenger's)	Do "Heater Control Panel Setting Value (Driver's)" and "Heater Control Panel Setting Value (Passenger's)" indicate "90"*2?	Go to step **4**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
4	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX COOL and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Turn the temperature control dial at MAX HOT and leave for 16 seconds or more. (For vehicles with left/right independent air conditioner, perform setting on both sides.) 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1, B14E2, B14E3 or B14E4 displayed?	Perform the diagnosis for the displayed DTC B14E1, B14E2, B14E3 or B14E4. <Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK INTAKE DOOR ACTUATOR.** Visually check the intake door actuator operation.	Is the check result OK?	Go to step **7**.	Check the intake door actuator. <Ref. to AC(diag)-35, UNABLE TO SWITCH SUCTION VENTS, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

Step		Check	Yes	No
7	**CHECK EVAPORATOR SENSOR UNIT.** Perform the inspection of evaporator sensor unit. <Ref. to AC-82, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **8**.	Replace the evaporator sensor. <Ref. to AC-81, REMOVAL, Evaporator Sensor.>
8	**CHECK IN-VEHICLE SENSOR UNIT.** Check in-vehicle sensor circuit. <Ref. to AC-78, INSPECTION, In-Vehicle Sensor (Auto A/C Model).>	Is the check result OK?	Go to step **9**.	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>
9	**CHECK AMBIENT SENSOR UNIT.** Check the ambient sensor. <Ref. to AC-72, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **10**.	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>
10	**CHECK SUNLOAD SENSOR UNIT.** Check the sunload sensor unit. <Ref. to AC-75, INSPECTION, Sunload Sensor (Auto A/C Model).>	Is the check result OK?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>

*1: For the 75°F center specification. For the 25°C center specification, the value is 18.
*2: For the 75°F center specification. For the 25°C center specification, the value is 32.

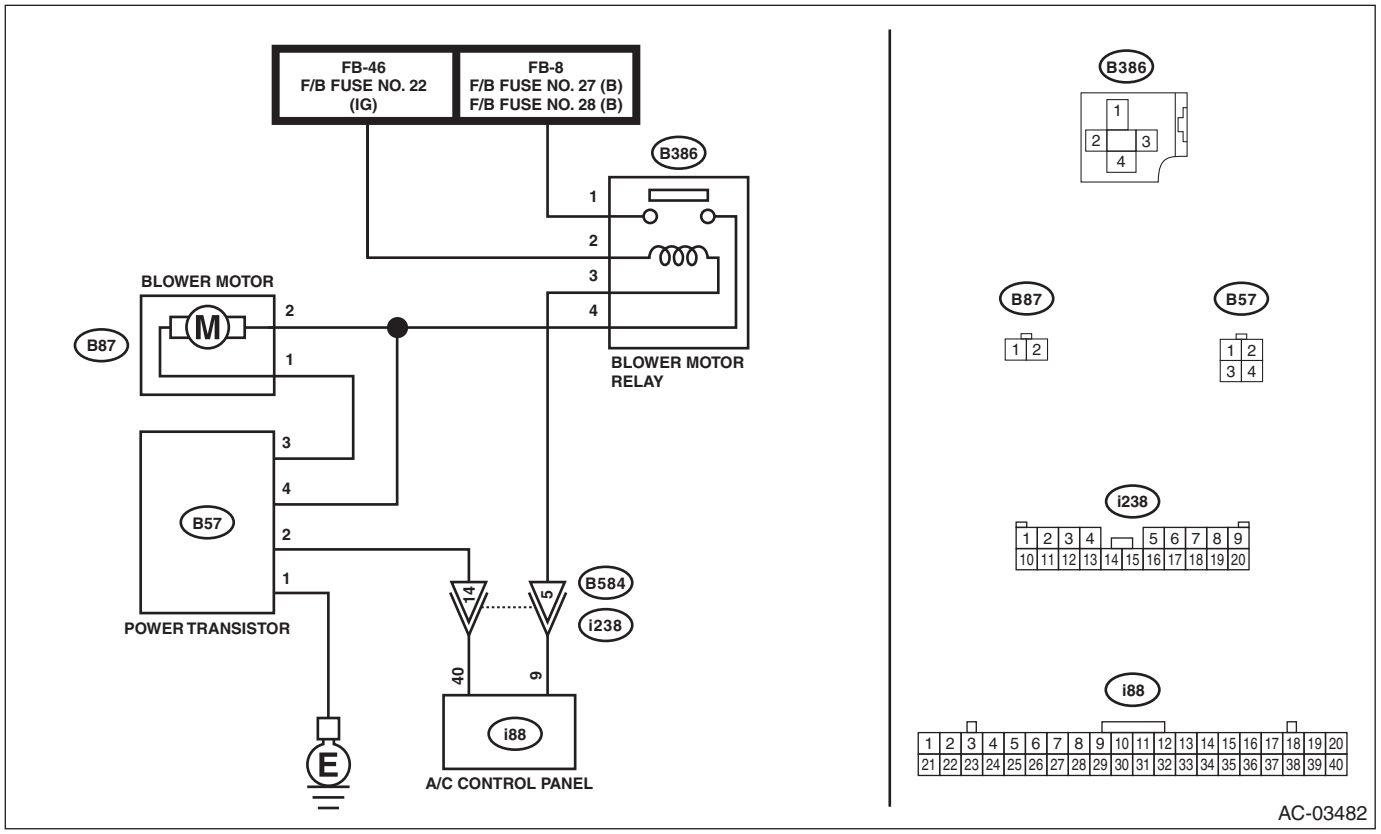
8. AIR DOES NOT COME OUT, OR AIRFLOW CAPACITY IS INSUFFICIENT

Trouble symptom:
- Airflow capacity is insufficient.
- Air does not come out when operating the fan dial.

Trouble causes:
- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Using Subaru Select Monitor, display the following data in "Read Current Data". <Ref. to AC(diag)-45, Read Current Data.> • Air mix door actuator position (driver's side) • Air mix door actuator position (passenger's) • Blower fan level 2) Turn the temperature control dial at MAX COOL and increase and decrease the A/C control panel fan dial. (For vehicles with left/right independent air conditioner, perform setting on both sides.)	Do "Air mix door actuator position (driver's side)" and "Air mix door actuator position (passenger's side)" indicate "0%"? Also, does the value of "Blower Fan Level" increase or decrease in conjunction with the fan dial operation?	Go to step **2**.	Go to step **5**.
2	**CHECK AIRFLOW CAPACITY.** Turn the temperature control dial to MAX COOL (both dials for the models equipped with left/right independent air conditioning function), A/C control panel fan dial to maximum and FRESH/RECIRC switch to RECIRC.	Is the airflow capacity insufficient for the same model?	Go to step **3**.	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK A/C FILTER.** Check the A/C filter.	Is the check result OK?	Go to step **4**.	Clean or replace the A/C filter.

	Step	Check	Yes	No
4	**CHECK EACH DUCT.** Check each duct joint for disconnection or clogging.	Is the check result OK?	Go to step **5**.	Repair the faulty duct.
5	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Turn the fan dial to the maximum position. 3) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does "Blower Fan Level" indicate "7"?	Go to step **6**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
6	**CHECK A/C CONTROL PANEL.** 1) Turn the fan dial to the minimum position. 2) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does "Blower Fan Level" indicate "1"?	Go to step **7**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
7	**CHECK CONNECTOR.** Check for poor contact of connector.	Is the check result OK?	Go to step **8**.	Repair the connector.
8	**CHECK FUSE.** 1) Remove a fuse in the fuse & relay box. 2) Check the condition of fuse.	Is the check result OK?	Go to step **9**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the pressure switch and fuse.
9	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Stop the engine. 2) Turn the fan dial OFF. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground. ***Connector & terminal*** ***(i88) No. 9 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **10**.	• Check for open or short circuit in the harness between fuse and ECM. • Check the blower relay connector and relay unit. <Ref. to AC-32, CHECK RELAY, INSPECTION, Relay and Fuse.>
10	**CHECK BLOWER MOTOR RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the fan dial to ON. 3) Using a tester, measure the voltage between the A/C control panel connector (i88) and chassis ground. ***Connector & terminal*** ***(i88) No. 9 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **11**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

	Step	Check	Yes	No
11	**CHECK BLOWER MOTOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Turn the fan dial to ON. 3) Use a tester to measure the voltage between the blower motor connector (B87) and chassis ground. ***Connector & terminal*** ***(B87) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **12**.	• Check the blower motor power supply line harness for open circuit or connector disconnection. • Check the blower relay connector and relay unit. <Ref. to AC-32, CHECK RELAY, INSPECTION, Relay and Fuse.>
12	**CHECK BLOWER MOTOR UNIT.** Check the blower motor. <Ref. to AC-37, INSPECTION, Blower Motor.>	Is the check result of the blower motor OK?	Go to step **13**.	Replace the blower motor. <Ref. to AC-37, REMOVAL, Blower Motor.>
13	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the power transistor and A/C control panel connector. 2) Using a tester, measure the resistance between harness terminals. ***Connector & terminal*** ***(B386) No. 4 — (B57) No. 4:*** ***(B87) No. 1 — (B57) No. 3:*** ***(B57) No. 2 — (i88) No. 40:*** ***(B57) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Use a tester to measure the harness resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(B57) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Go to step **15**.
15	**CHECK POWER TRANSISTOR.** Replace the power transistor with a properly functioning part.	Does the blower motor rotate?	Replace the power transistor. <Ref. to AC-38, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

9. AIR GOES OUT OF CONTROL

Trouble symptom:

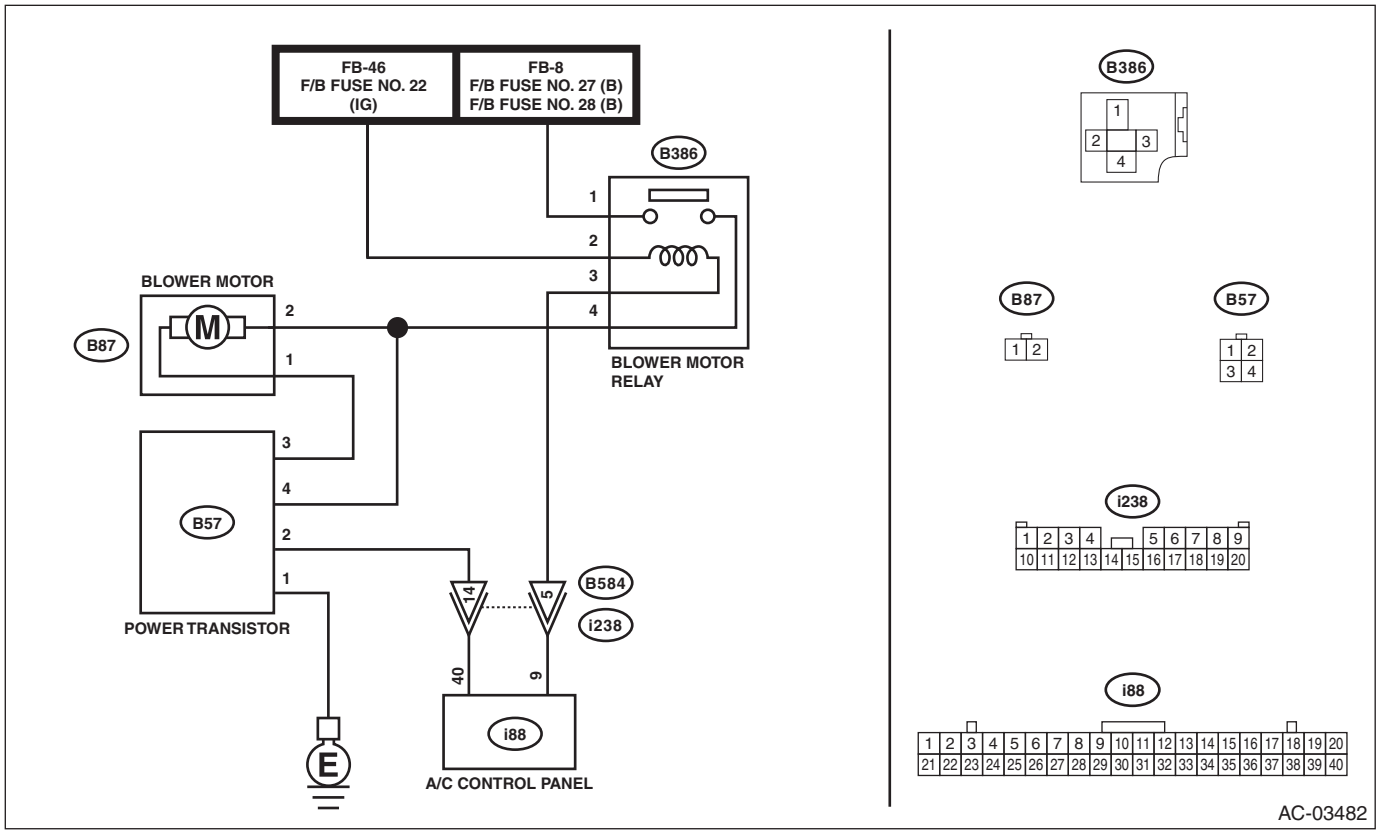
- The blower rotates even though the blower switch is not turned on.
- The blower motor continues to rotate at high speed. (Not adjustable.)

Trouble causes:

- Airflow capacity failure
- CAN communication failure
- A/C control panel failure
- Blower motor failure

Wiring diagram:

Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



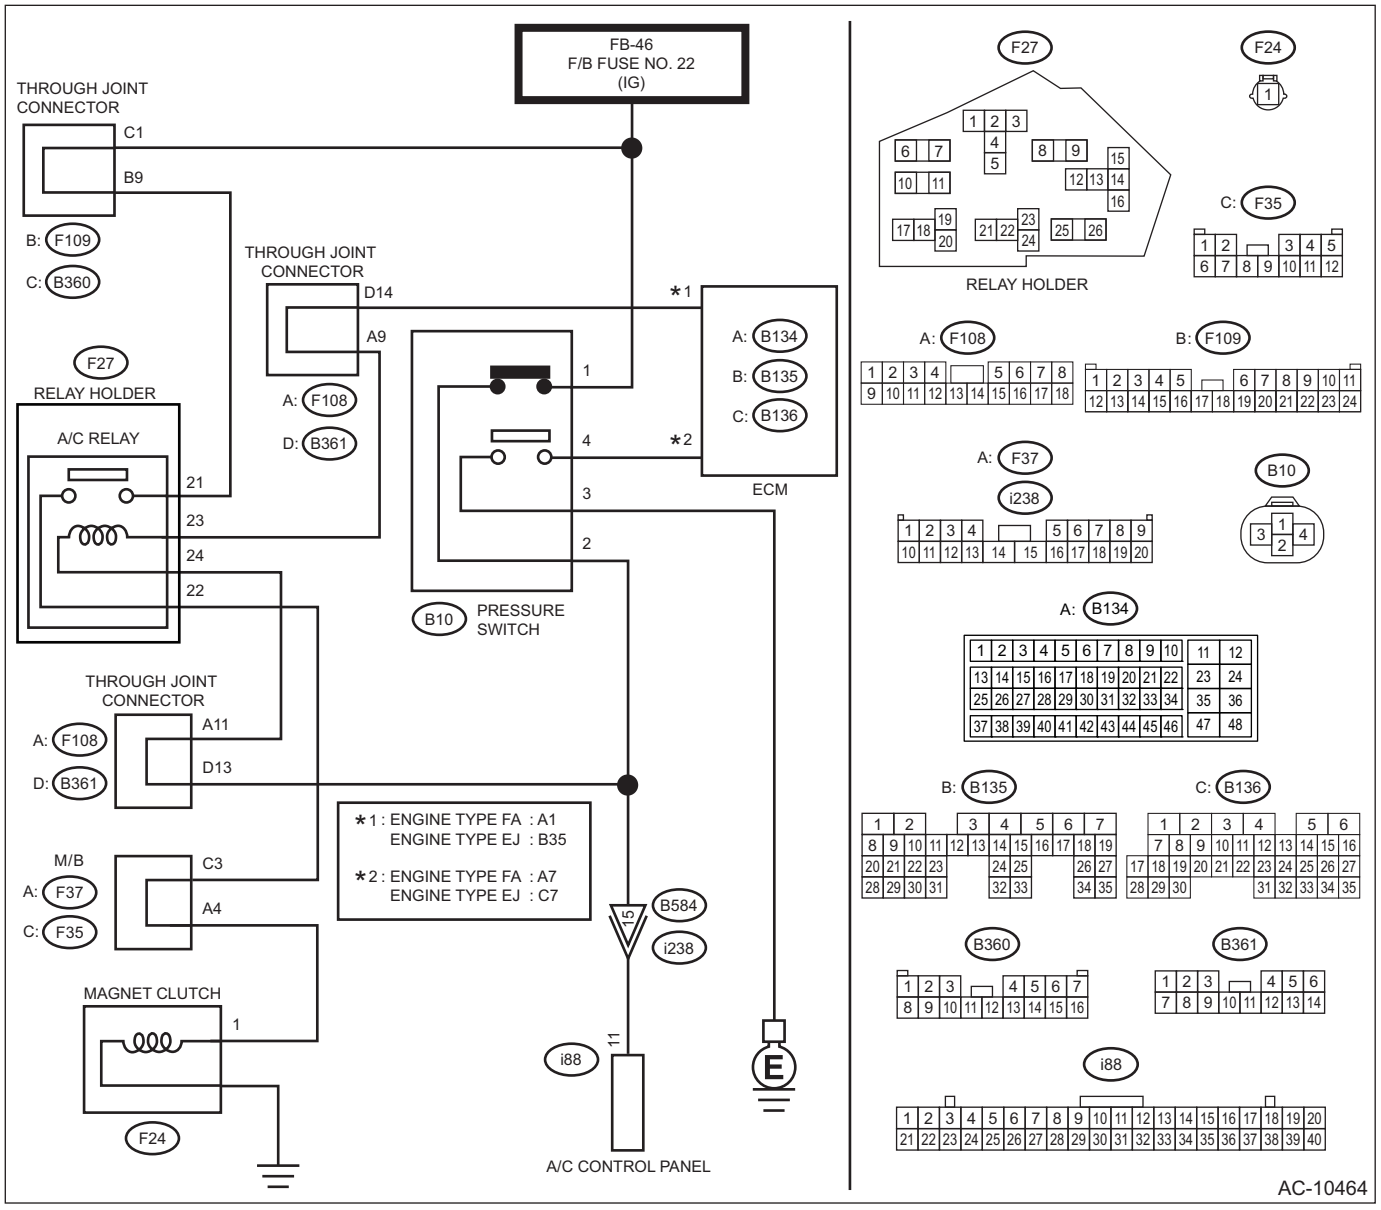
Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Turn the fan dial to the maximum position. 3) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does "Blower Fan Level" indicate "7"?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
2	**CHECK A/C CONTROL PANEL.** 1) Turn the fan dial to the minimum position. 2) Using the Subaru Select Monitor, check "Blower Fan Level" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does "Blower Fan Level" indicate "1"?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(B57) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between blower motor and power transistor.	Go to step **4**.
4	**CHECK HARNESS.** 1) Remove the A/C control panel. 2) Turn the ignition switch to ON. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(B57) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness between A/C control panel and power transistor.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HARNESS.** 1) Connect the disconnected connectors. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the power transistor connector and chassis ground. ***Connector & terminal*** ***(B57) No. 2 (+) — Chassis ground (–):***	Is the voltage approx. 9 V when fan dial in 1st, and approx. 3.5 V when fan dial in 6th?	Replace the power transistor. <Ref. to AC-38, REMOVAL, Power Transistor (Auto A/C Model).>	Go to step **6**.
6	**CHECK A/C CONTROL PANEL.** 1) Turn the fan dial OFF. 2) Disconnect the power transistor connector. 3) Use a tester to measure the resistance between the power transistor connector and chassis ground. ***Connector & terminal*** ***(B57) No. 2 — Chassis ground:***	When the fan dial is OFF and other than OFF, does the resistance change?	Replace the power transistor. <Ref. to AC-38, REMOVAL, Power Transistor (Auto A/C Model).>	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

10.COLD AIR DOES NOT COME OUT EVEN WHEN THE A/C SWITCH IS PRESSED. THE GLASS CANNOT BE DEFOGGED. (COMPRESSOR DOES NOT OPERATE.)

Trouble symptom:
Compressor does not operate after turning the A/C switch to ON and fan dial between LO and HI.
Trouble causes:
Compressor failure
Wiring diagram:

Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Leave the vehicle under the condition at ambient temperature of 15°C (59°F) or more. 2) Turn the ignition switch to ON. 3) Turn the fan dial to the maximum position. 4) Press the A/C switch.	Is "A/C" displayed on the A/C control panel?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
2	**CHECK EVAPORATOR SENSOR.** Using the Subaru Select Monitor, check "Evaporator Temperature" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the data indicate –0.5°C or more?	Go to step **4**.	Go to step **3**.
3	**CHECK EVAPORATOR SENSOR.** Check the evaporator sensor. <Ref. to AC-82, INSPECTION, Evaporator Sensor.>	Is the check result OK?	Go to step **4**.	Replace the evaporator sensor. <Ref. to AC-81, REMOVAL, Evaporator Sensor.>

	Step	Check	Yes	No
4	**CHECK PRESSURE SWITCH.** Check the pressure switch connection.	Is the check result OK?	Go to step **5**.	Repair the connector.
5	**CHECK PRESSURE SWITCH.** Using the Subaru Select Monitor, check "A/C Pressure Switch" of the current data from Air Conditioning Diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the data indicate normal?	Go to step **10**.	Go to step **6**.
6	**CHECK AMOUNT OF REFRIGERANT PRESSURE.** Check the refrigerant pressure. <Ref. to AC-22, CHECK REFRIGERANT GAS PRESSURE, PROCEDURE, Refrigerant Pressure with Manifold Gauge Set.>	Is the check result OK?	Go to step **7**.	Perform repair according to refrigerant pressure inspection.
7	**CHECK CONNECTOR.** Check poor contact of A/C control panel connector.	Is the check result OK?	Go to step **8**.	Repair the connector.
8	**CHECK FUSE.** 1) Turn the ignition switch to ON. 2) Remove a fuse in the fuse & relay box. 3) Check the fuse.	Is the check result OK?	Go to step **9**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the pressure switch and fuse.
9	**CHECK PRESSURE SWITCH SIGNAL.** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between A/C control panel connector terminal and chassis ground. ***Connector & terminal*** ***(i88) No. 11 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	• Check for open or short circuit in the harness between fuse and A/C control panel. • Check for poor contact of pressure switch connector.
10	**CHECK CAN COMMUNICATION CIRCUIT.** Using the Subaru Select Monitor, check "A/C Switch" of the current data from Engine Diagnosis. <Ref. to AC(diag)-45, Read Current Data.>	Does the data indicate ON?	Go to step **12**.	Go to step **11**.
11	**CHECK CAN COMMUNICATION CIRCUIT.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result of the LAN system OK?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair it according to DTC of LAN system.
12	**CHECK A/C RELAY ON SIGNAL.** 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector terminal and chassis ground. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 1 (+) — Chassis ground (–):*** ***Engine type: EJ*** ***(B135) No. 35 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	• Check for open or short in the harness between pressure switch and ECM. • Check poor contact of A/C relay connector. • Check the A/C relay. <Ref. to AC-32, INSPECTION, Relay and Fuse.>

	Step	Check	Yes	No
13	**CHECK A/C RELAY ON SIGNAL.** 1) Start the engine. 2) Turn the A/C switch to ON. 3) Set the temperature control dial to MAX COOL. 4) Measure the voltage between ECM connector terminal and chassis ground. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 1 (+) — Chassis ground (–):*** ***Engine type: EJ*** ***(B135) No. 35 (+) — Chassis ground (–):***	Is the voltage 0 V?	Go to step **14**.	Replace the ECM.
14	**CHECK MAGNET CLUTCH POWER SUPPLY CIRCUIT.** 1) Stop the engine. 2) Disconnect the magnet clutch connector. 3) Start the engine. 4) Turn the A/C switch to ON. 5) Set the temperature control dial to MAX COOL. 6) Measure the voltage between magnet clutch connector terminal and chassis ground. ***Connector & terminal*** ***(F24) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check the magnet clutch. <Ref. to AC-49, INSPECTION, Compressor.>	• Check for open or short circuit in the harness between fuse and magnet clutch. • Check poor contact of A/C relay connector. • Check the A/C relay. <Ref. to AC-32, INSPECTION, Relay and Fuse.>

11.UNABLE TO SWITCH SUCTION VENTS

Trouble symptom:
Even when the FRESH/RECIRC switch is pressed, the inlet opening does not switch to RECIRC → FRESH or FRESH → RECIRC.
Trouble causes:
Intake door actuator failure

	Step	Check	Yes	No
1	**VISUALLY CHECK FRESH/RECIRC DOOR OPERATION.** 1) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.> 2) Operate the FRESH/RECIRC switch, and visually check the intake door operation.	Does the intake door operate normally? Is the portion between intake door and intake door case sealed completely?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check "Fresh/Recircle Air Door Actuator Position Target" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.> 3) Operate the FRESH/RECIRC switch.	Does "Fresh/Recircle Air Door Actuator Position Target" indicate 0 ←→ 100?	Go to step **3**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

Step		Check	Yes	No
3	**CHECK DTC.** 1) Turn the FRESH/RECIRC switch to RECIRC, and leave for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E9, B14EA or B14EB displayed?	Perform the diagnosis for the displayed DTC B14E9, B14EA, or B14EB. <Ref. to AC(diag)-80, DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-82, DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-84, DTC B14EB INTAKE DOOR ACTUATOR STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK DTC.** 1) Turn the FRESH/RECIRC switch to FRESH, and leave for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E9, B14EA or B14EB displayed?	Perform the diagnosis for the displayed DTC B14E9, B14EA, or B14EB. <Ref. to AC(diag)-80, DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-82, DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-84, DTC B14EB INTAKE DOOR ACTUATOR STUCK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

12.UNABLE TO SWITCH VENTS

Trouble symptom:

- Unable to switch blow vents.
- Outlet opening does not switch in the sequence of FACE → B/L → FOOT → F/D after operating the mode switch or mode dial.

Trouble causes:

Mode door actuator failure

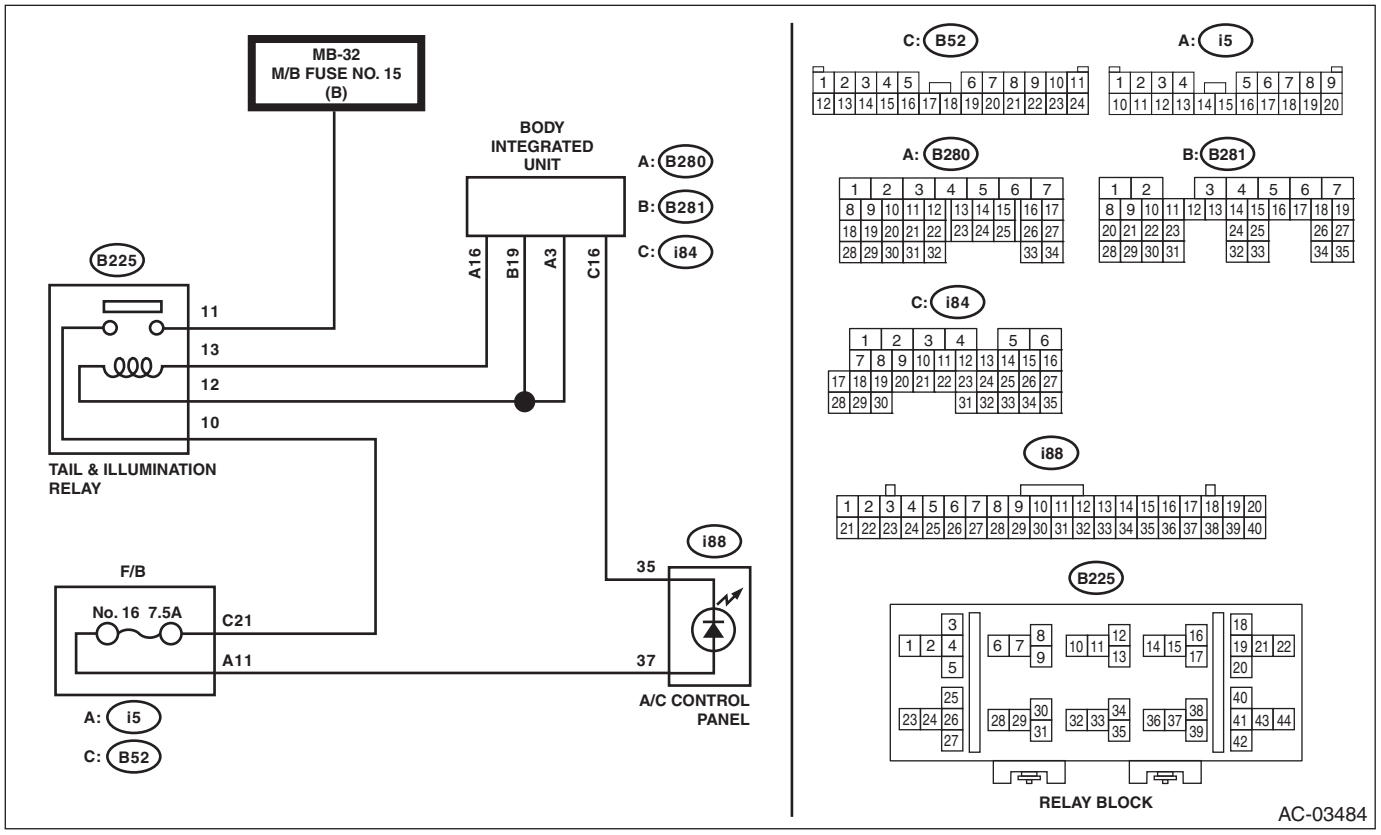
	Step	Check	Yes	No
1	**CHECK A/C CONTROL PANEL.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check "Mode Door Actuator Position Target" of the current data from the A/C diagnosis. <Ref. to AC(diag)-45, Read Current Data.> 3) Operate the mode change switch.	Does the value for "Mode Door Actuator Position Target" change?	Go to step **2**.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>
2	**CHECK DTC.** 1) Set the mode change switch to DEF, and wait for 16 seconds or more. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E5 or B14E6 displayed?	Perform the diagnosis for the displayed DTC B14E5 or B14E6. <Ref. to AC(diag)-76, DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-78, DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

Step		Check	Yes	No
3	**CHECK DTC.** 1) Set the mode change switch to VENT, and wait for 16 seconds or more. 2) Using the Subaru Select Monitor, read DTC of A/C control panel. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E5 or B14E6 displayed?	Perform the diagnosis for the displayed DTC B14E5 or B14E6. <Ref. to AC(diag)-76, DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to AC(diag)-78, DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

13.ILLUMINATION DOES NOT COME ON OR CANNOT DIM

Trouble symptom:
Even when the lighting switch is operated, the illumination does not come on. Even when the illumination control is operated, the illumination does not dim.
Trouble symptom:
Open circuit in illumination circuit
Wiring diagram:

Clearance Light and Illumination Light System <Ref. to WI-113, WIRING DIAGRAM, Clearance Light and Illumination Light System.>



Step		Check	Yes	No
1	**CHECK ILLUMINATION.** Make sure that all illuminations except A/C come on.	Do other illuminations come on?	Go to step **2**.	Check the illumination circuit. <Ref. to LI-19, INSPECTION, Clearance Light and Illumination Light System.>
2	**CHECK CONNECTOR.** Check for poor contact of connector.	Is the check result OK?	Go to step **3**.	Repair the connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the lighting switch to ON. 2) Using a tester, measure the voltage between the A/C control panel connector and chassis ground. ***Connector & terminal*** ***(i88) No. 37 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the lighting switch to OFF. 2) Measure the resistance between A/C control panel connector and body integrated unit connector. ***Connector & terminal*** ***(i88) No. 35 — (i84) No. 16:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK A/C CONTROL PANEL UNIT.** Check the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Is the check result of the A/C control panel OK?	A/C control panel illumination circuit is normal.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

NOTE:
When initialization communication using Select Monitor is impossible, perform diagnosis according to “Diagnostic Procedure Used When Abnormal Communication with Subaru Select Monitor Occurs”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AC(diag)-50, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1430	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN	—
B1431	IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B1432	AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)	—
B1433	AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)	—
B1434	EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN	—
B1435	EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT	—
B14E1	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER)	—
B14E2	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER)	—
B14E3	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER)	—
B14E4	AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)	—
B14E5	MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN	—
B14E6	MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT	—
B14E9	INTAKE DOOR ACTUATOR CIRCUIT OPEN	—
B14EA	INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT	—
B14EB	INTAKE DOOR ACTUATOR STUCK	—
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to AC(diag)-42, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to ON and then leave it for 16 seconds or more.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B14A1	SUNLOAD SENSOR CIRCUIT LOW/OPEN	—
B14A2	SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to AC(diag)-42, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Park the vehicle in the place subjected to direct sunlight.
4) Turn the ignition switch to ON and then leave it for 4 seconds or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Air Conditioner» and select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

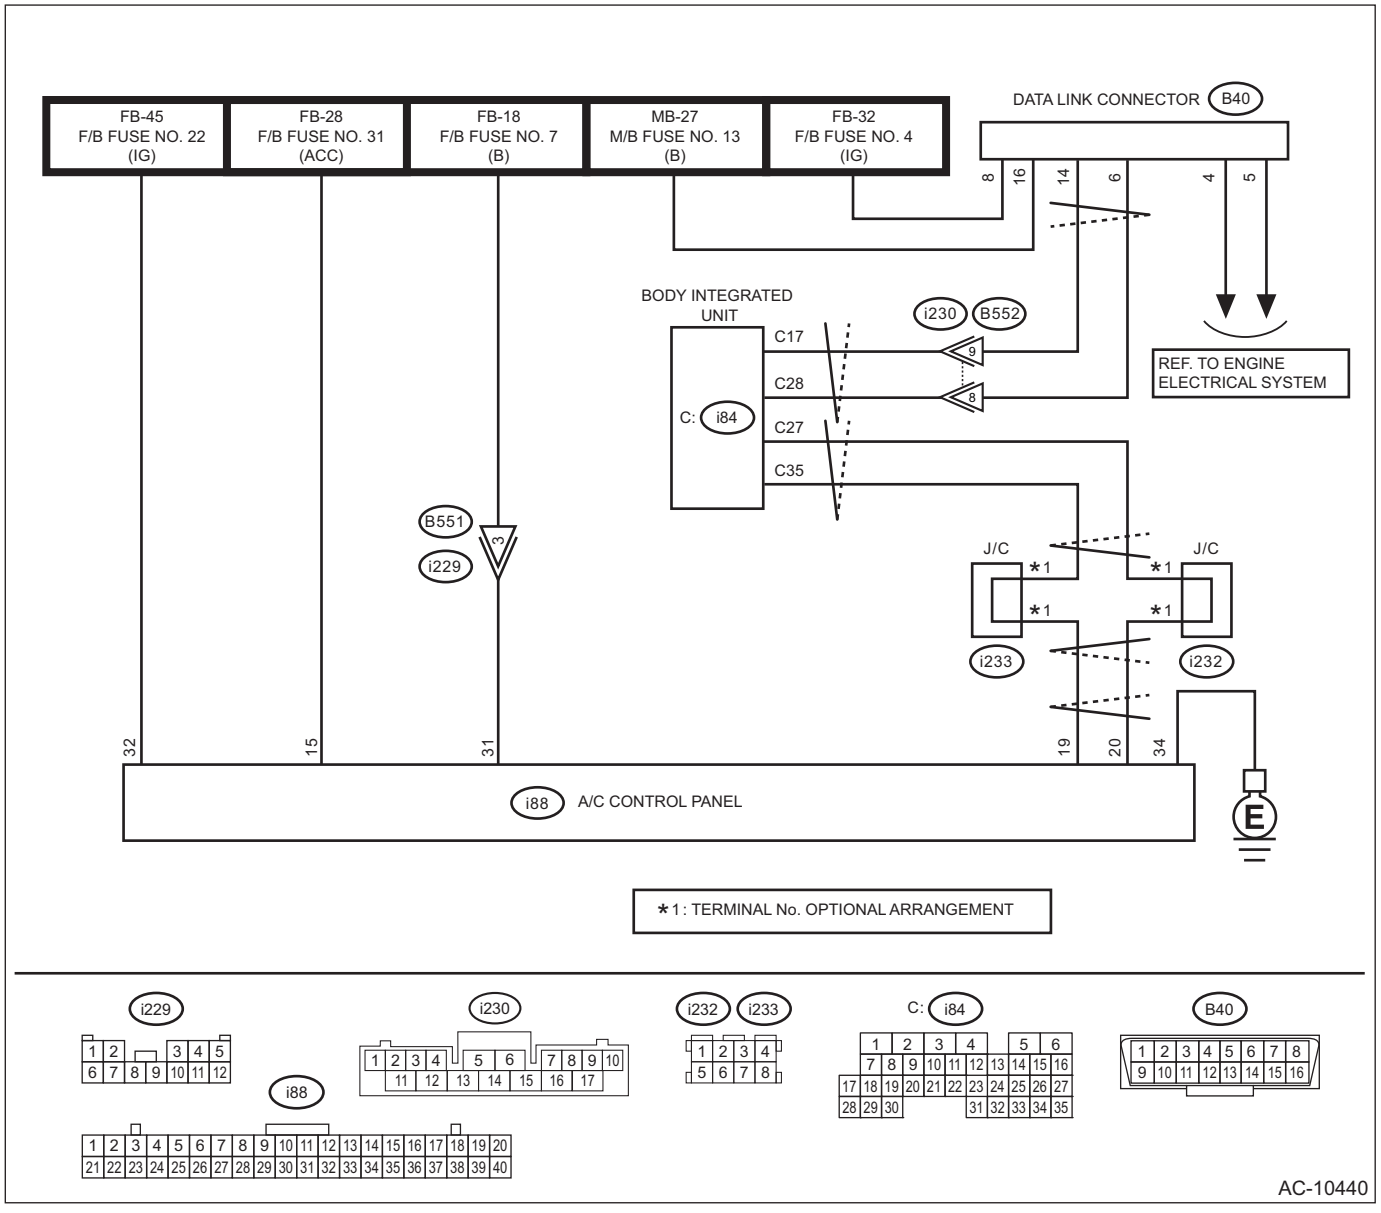
12.Diagnostic Procedure for Subaru Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Defective CAN communication circuit
Trouble symptom:
- LAN system is abnormal.
- Communication failure between Subaru Select Monitor and A/C control panel

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect DST-i to data link connector.	Does DST-i turn ON?	Go to step **4**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY CIRCUIT.** Measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse (M/B No. 13)
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).** 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, Go to step **4**.	Repair the harness and connector.
4	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step **5**.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5	**CHECK LAN SYSTEM.** Check the LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result of the LAN system OK?	Go to step **6**.	Repair it according to the diagnosis for LAN system.
6	**CHECK CONNECTOR.** Check for poor contact of power supply circuit connector.	Is the check result OK?	Go to step **7**.	Repair the connector.
7	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Remove a fuse from the fuse box. 3) Check the fuse.	Is the check result OK?	Go to step **8**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the A/C control panel — fuse.
8	**CHECK A/C CONTROL PANEL POWER SUPPLY CIRCUIT (OPEN).** 1) Disconnect the A/C control panel connector. 2) Measure the voltage between A/C control panel connector terminal and chassis ground after turning the ignition switch to ON. ***Connector & terminal*** ***(i88) No. 15 (+) — Chassis ground (–):*** ***(i88) No. 31 (+) — Chassis ground (–):*** ***(i88) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Check for open or short circuit in the harness between A/C control panel and fuse.
9	**CHECK A/C CONTROL PANEL GROUND CIRCUIT (OPEN).** Measure the resistance of harness between A/C control panel and chassis ground. ***Connector & terminal*** ***(i88) No. 34 — Chassis ground:***	Is the resistance less than 5 Ω?	Recheck the poor contact between the data link connector and select monitor.	Repair the harness for ground line.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
B1430	In-Vehicle (Post Evaporator) Temperature Sensor Circuit Open	<Ref. to AC(diag)-53, DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1431	In-Vehicle (Post Evaporator) Temperature Sensor Circuit Short-Circuit	<Ref. to AC(diag)-54, DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1432	Ambient Temperature Sensor Circuit Open (Air-Conditioner)	<Ref. to AC(diag)-55, DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1433	Ambient Temperature Sensor Circuit Short-Circuit (Air-Conditioner)	<Ref. to AC(diag)-58, DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1434	Evaporator Temperature Sensor Circuit Open	<Ref. to AC(diag)-60, DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1435	Evaporator Temperature Sensor Circuit Short-Circuit	<Ref. to AC(diag)-62, DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14A1	Sunload Sensor Circuit Low/Open	<Ref. to AC(diag)-64, DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14A2	Sunload Sensor Circuit Short-Circuit	<Ref. to AC(diag)-66, DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	<Ref. to AC(diag)-67, DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E2	Air Mix Door Actuator Stepping Motor Circuit Short-Circuit (Driver)	<Ref. to AC(diag)-70, DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E3	Air Mix Door Actuator Stepping Motor Circuit Open (Passenger)	<Ref. to AC(diag)-72, DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E4	Air Mix Door Actuator Stepping Motor Circuit Short-Circuit (Passenger)	<Ref. to AC(diag)-74, DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
B14E5	Mode Door Actuator Stepping Motor Circuit Open	<Ref. to AC(diag)-76, DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E6	Mode Door Actuator Stepping Motor Circuit Short-Circuit	<Ref. to AC(diag)-78, DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14E9	Intake Door Actuator Circuit Open	<Ref. to AC(diag)-80, DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B14EA	Intake Door Actuator Circuit Short-Circuit	<Ref. to AC(diag)-82, DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

U0073	Control Module Communication Bus Off	<Ref. to AC(diag)-85, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	Lost Communication With ECM/PCM “A”	<Ref. to AC(diag)-85, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	Lost Communication With TCM	<Ref. to AC(diag)-85, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	Lost Communication With Vehicle Dynamics Control Module	<Ref. to AC(diag)-85, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	Lost Communication With Body Control Module	<Ref. to AC(diag)-85, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	Lost Communication With Instrument Panel Cluster (IPC) Control Module	<Ref. to AC(diag)-85, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	Invalid Data Received From ECM/PCM “A”	<Ref. to AC(diag)-86, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	Invalid Data Received From TCM	<Ref. to AC(diag)-86, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	Invalid Data Received From Vehicle Dynamics Control Module	<Ref. to AC(diag)-86, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	Invalid Data Received From Body Control Module	<Ref. to AC(diag)-86, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
U0423	Invalid Data Received From Instrument Panel Cluster Control Module	<Ref. to AC(diag)-86, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1430 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:
Open circuit in the in-vehicle sensor is detected for 3 seconds or more.
Trouble symptom:
In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1430 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1431 displayed?	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i55) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i55) No. 1 — (i88) No. 14:*** ***(i55) No. 2 — (i88) No. 17:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

B: DTC B1431 IN-VEHICLE (POST EVAPORATOR) TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

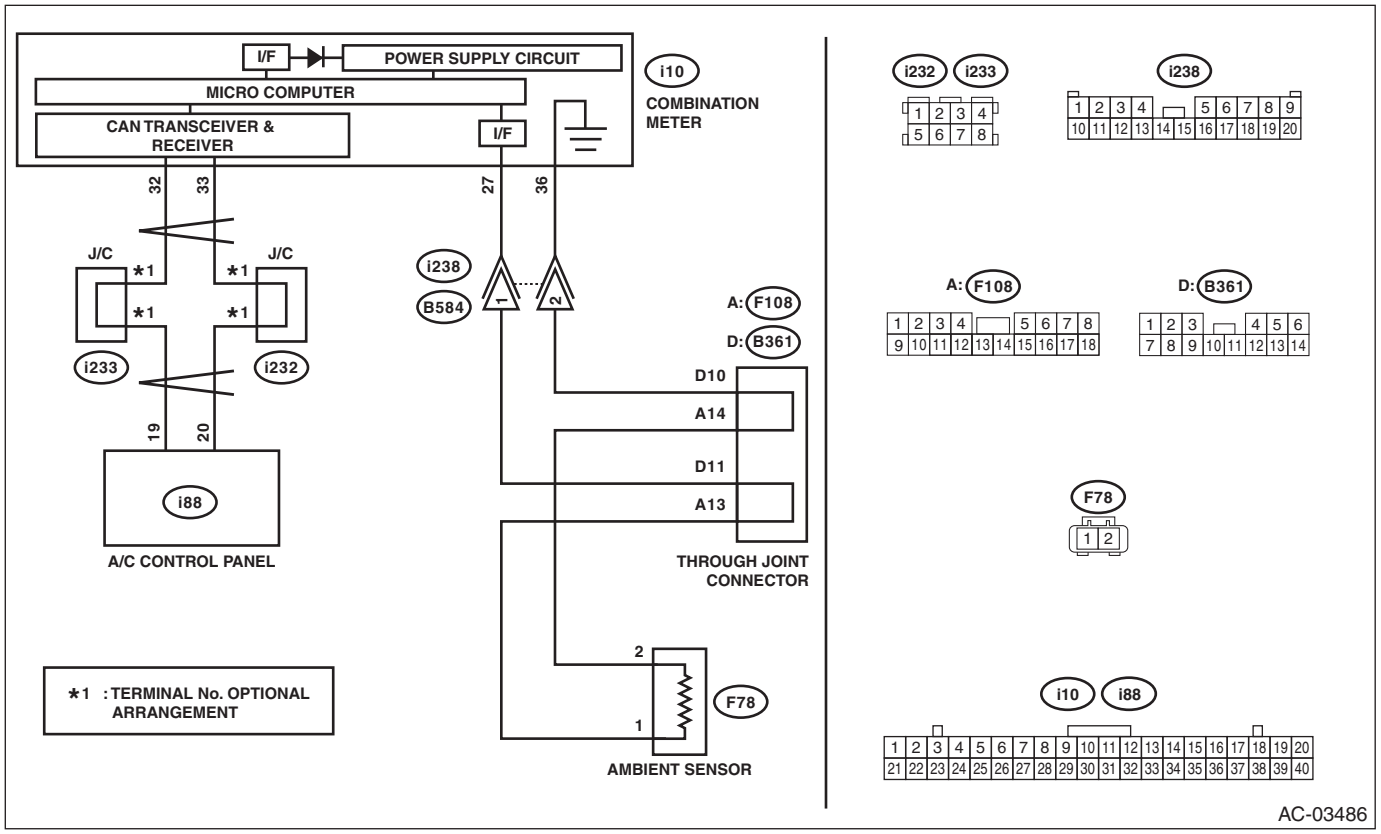
DTC detecting condition:
Short circuit in the in-vehicle sensor is detected for 3 seconds or more.
Trouble symptom:
In-vehicle air temperature is falsely recognized as 25°C (77°F), and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1431 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IN-VEHICLE SENSOR.** 1) Disconnect the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).> 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1430 displayed?	Replace the in-vehicle sensor. <Ref. to AC-76, REMOVAL, In-Vehicle Sensor (Auto A/C Model).>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i55) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i55) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

C: DTC B1432 AMBIENT TEMPERATURE SENSOR CIRCUIT OPEN (AIR-CONDITIONER)

DTC detecting condition:
Open circuit in the ambient sensor (CAN data) is detected for 3 seconds or more.
Trouble symptom:
Ambient temperature is falsely recognized, and the compartment temperature is adjusted.
Wiring diagram:

Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

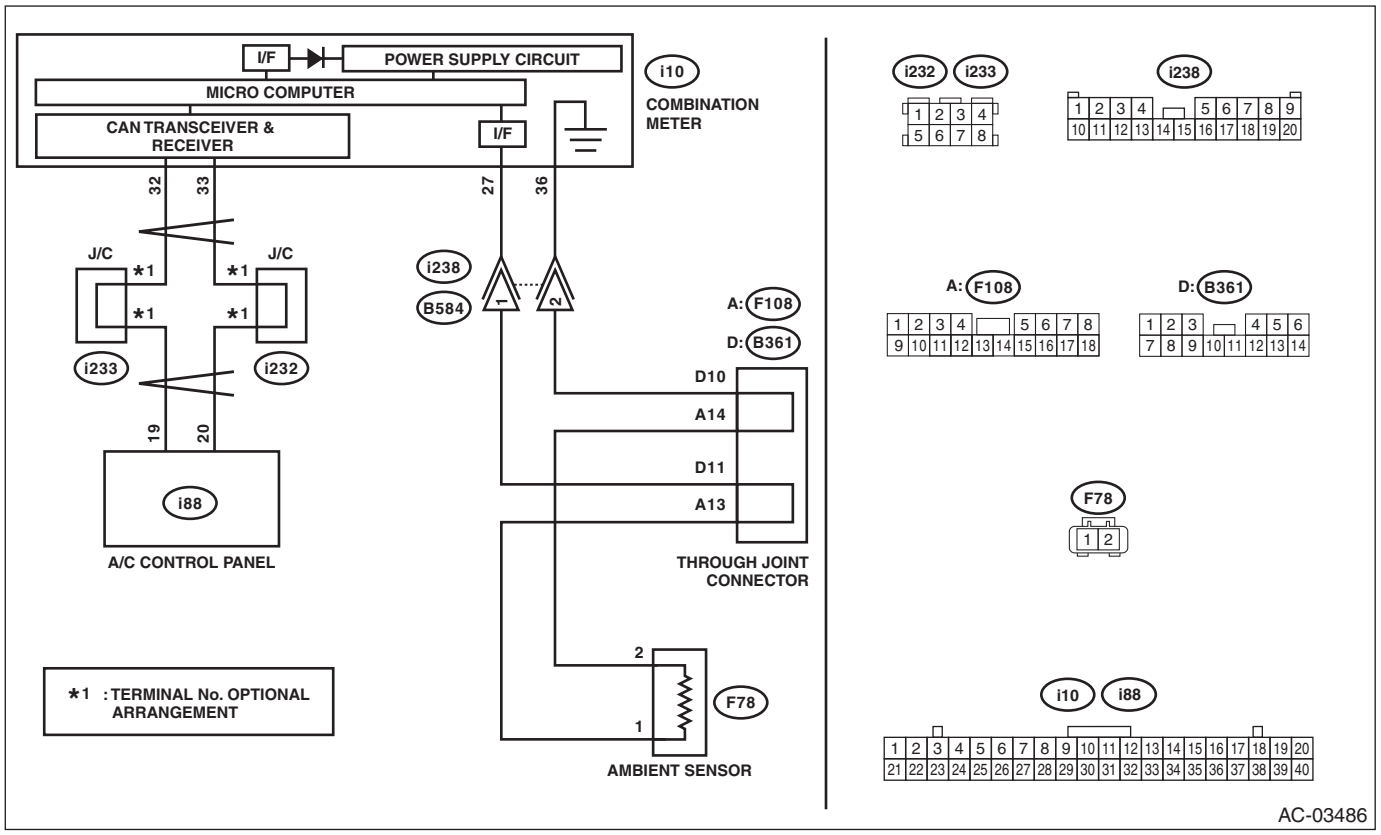


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the connecting conditions of combination meter connector and ambient sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1432 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK AMBIENT SENSOR.** 1) Disconnect the ambient sensor. 2) Short the connector F78. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1433 displayed?	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(F78) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(F78) No. 2 — (i10) No. 36:*** ***(F78) No. 1 — (i10) No. 27:***	Is there continuity?	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>	Repair or replace the open circuit of harness.

D: DTC B1433 AMBIENT TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT (AIR-CONDITIONER)

DTC detecting condition:
Short circuit in the ambient sensor (CAN data) is detected for 3 seconds or more.
Trouble symptom:
Ambient temperature is falsely recognized, and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

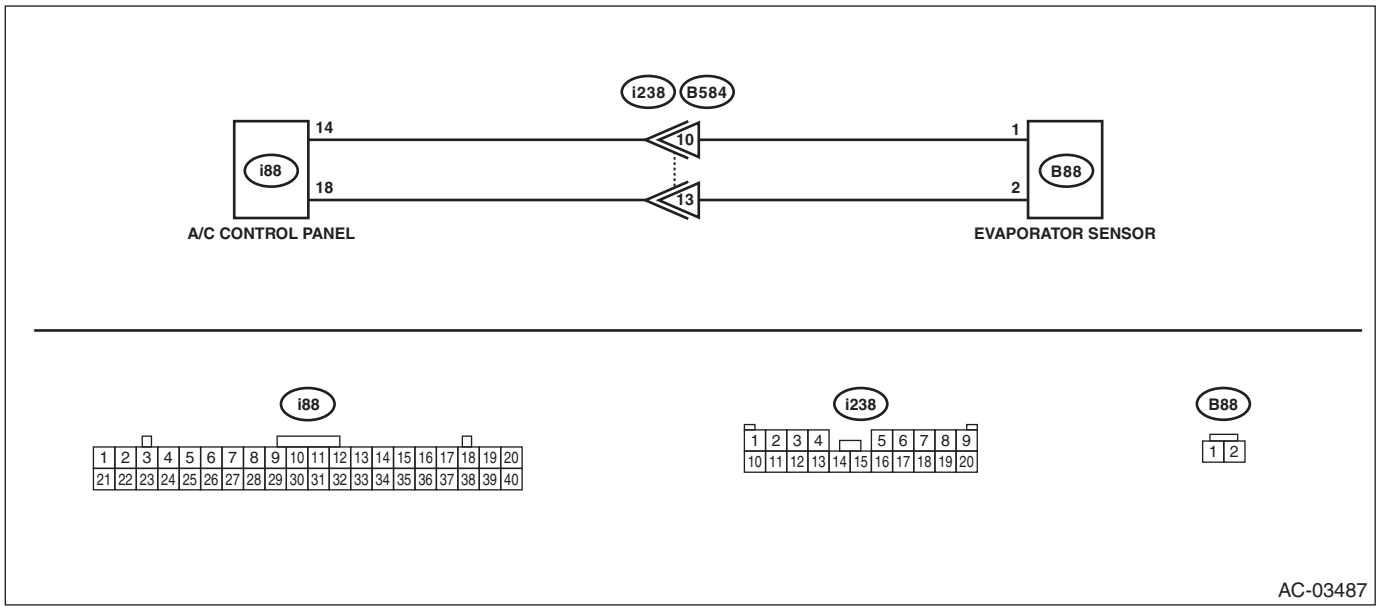


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the connecting conditions of combination meter connector and ambient sensor connector. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1433 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK AMBIENT SENSOR.** 1) Disconnect the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.> 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1432 displayed?	Replace the ambient sensor. <Ref. to AC-71, REMOVAL, Ambient Sensor.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(F78) No. 1 (+) — No. 2 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from the combination meter. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(F78) No. 2 — No. 1:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

E: DTC B1434 EVAPORATOR TEMPERATURE SENSOR CIRCUIT OPEN

DTC detecting condition:
Open circuit in the evaporator sensor is detected for 3 seconds or more.
Trouble symptom:
Evaporator temperature is falsely recognized as low, and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

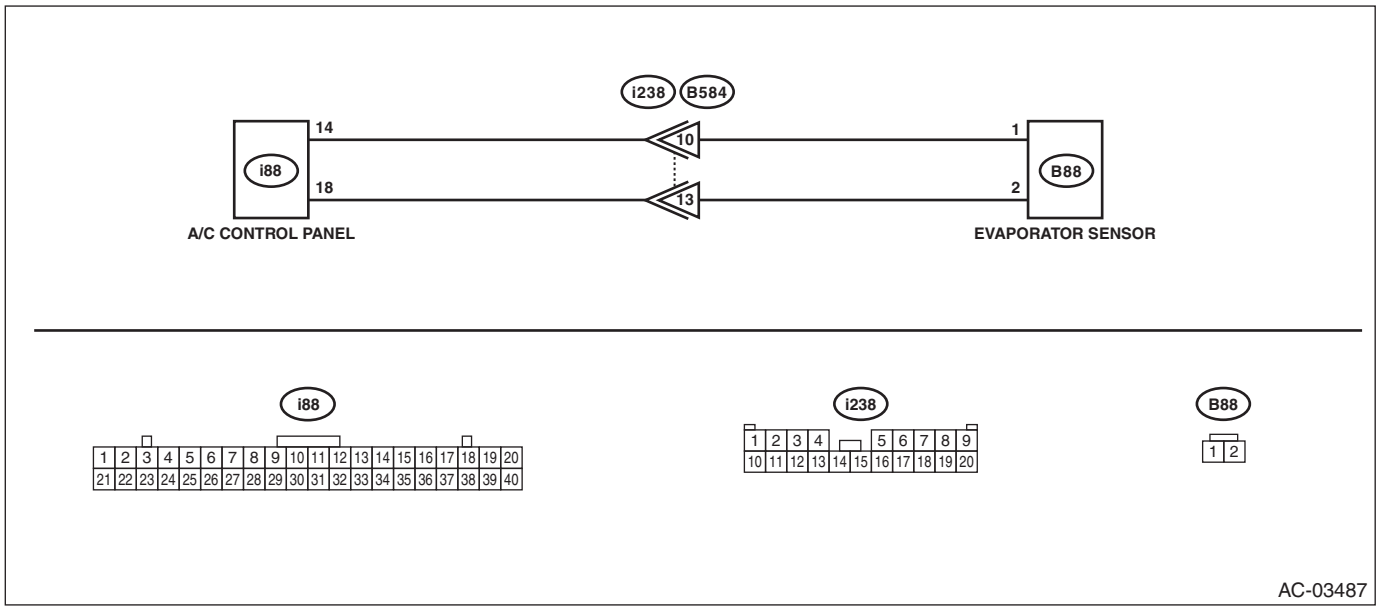


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1434 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Short the evaporator sensor connector (B88). 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1435 displayed?	Replace the evaporator sensor. <Ref. to AC-57, REMOVAL, Evaporator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B88) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B88) No. 1 — (i88) No. 14:*** ***(B88) No. 2 — (i88) No. 18:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

F: DTC B1435 EVAPORATOR TEMPERATURE SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Short circuit in the evaporator sensor is detected for 3 seconds or more.
Trouble symptom:
Evaporator temperature is falsely recognized as high, and the compartment temperature is adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1435 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK EVAPORATOR SENSOR.** 1) Disconnect the evaporator sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B1434 displayed?	Replace the evaporator sensor. <Ref. to AC-57, REMOVAL, Evaporator.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B88) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B88) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

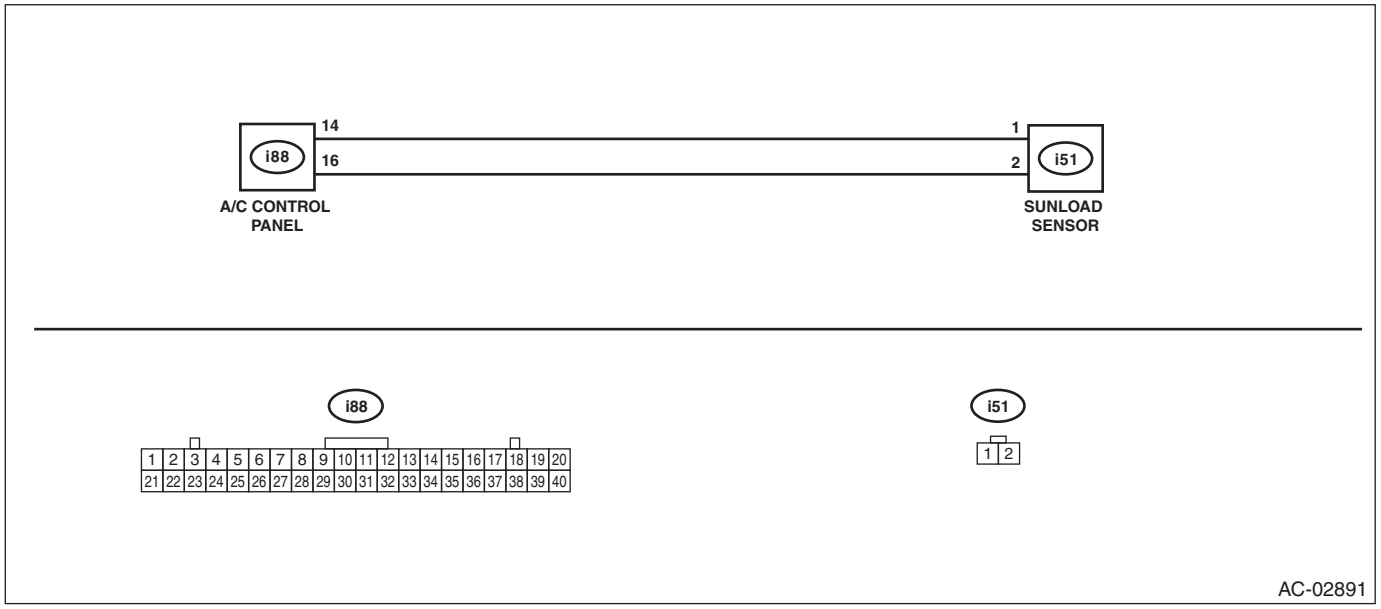
G: DTC B14A1 SUNLOAD SENSOR CIRCUIT LOW/OPEN

DTC detecting condition:
Open circuit in the sunload sensor is detected for 3 seconds or more. (Displayed for current malfunction)

NOTE:
When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor in direct sunlight.

Trouble symptom:
Operation is performed as no sunload.

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Short the connector. 3) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A2 displayed?	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Restore the temporary shorted lines made in step 2. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(i51) No. 1 — (i88) No. 14:*** ***(i51) No. 2 — (i88) No. 16:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

H: DTC B14A2 SUNLOAD SENSOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Short circuit in the sunload sensor is detected for 3 seconds or more.
Trouble symptom:
Operation is performed as no sunload.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SUNLOAD SENSOR.** 1) Disconnect the sunload sensor. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14A1 displayed?	Replace the sunload sensor. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i51) No. 2 (+) — No. 1 (–):***	Is the voltage 4.5 — 5.0 V?	Check the connection of the sunload sensor circuit.	Go to step **4**.

Step		Check	Yes	No
4	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal (i51) No. 1 — No. 2:***	Is there continuity?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

I: DTC B14E1 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (DRIVER)

DTC detecting condition:
Open circuit in the air mix door actuator stepping motor circuit is detected for 3 seconds or more.
Trouble symptom:
Temperature cannot be adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E1 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. ***Connector & terminal*** ***Without left/right independent air conditioning function*** ***(B239) No. 3 (+) — Chassis ground (–):*** ***With left/right independent air conditioning function*** ***(B235) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the air mix door actuator using a tester. ***Terminals*** ***Without left/right independent air conditioning function*** ***Air mix door actuator*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:*** ***With left/right independent air conditioning function*** ***Air mix door actuator LH*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-88, REMOVAL, Air Mix Door Actuator.>

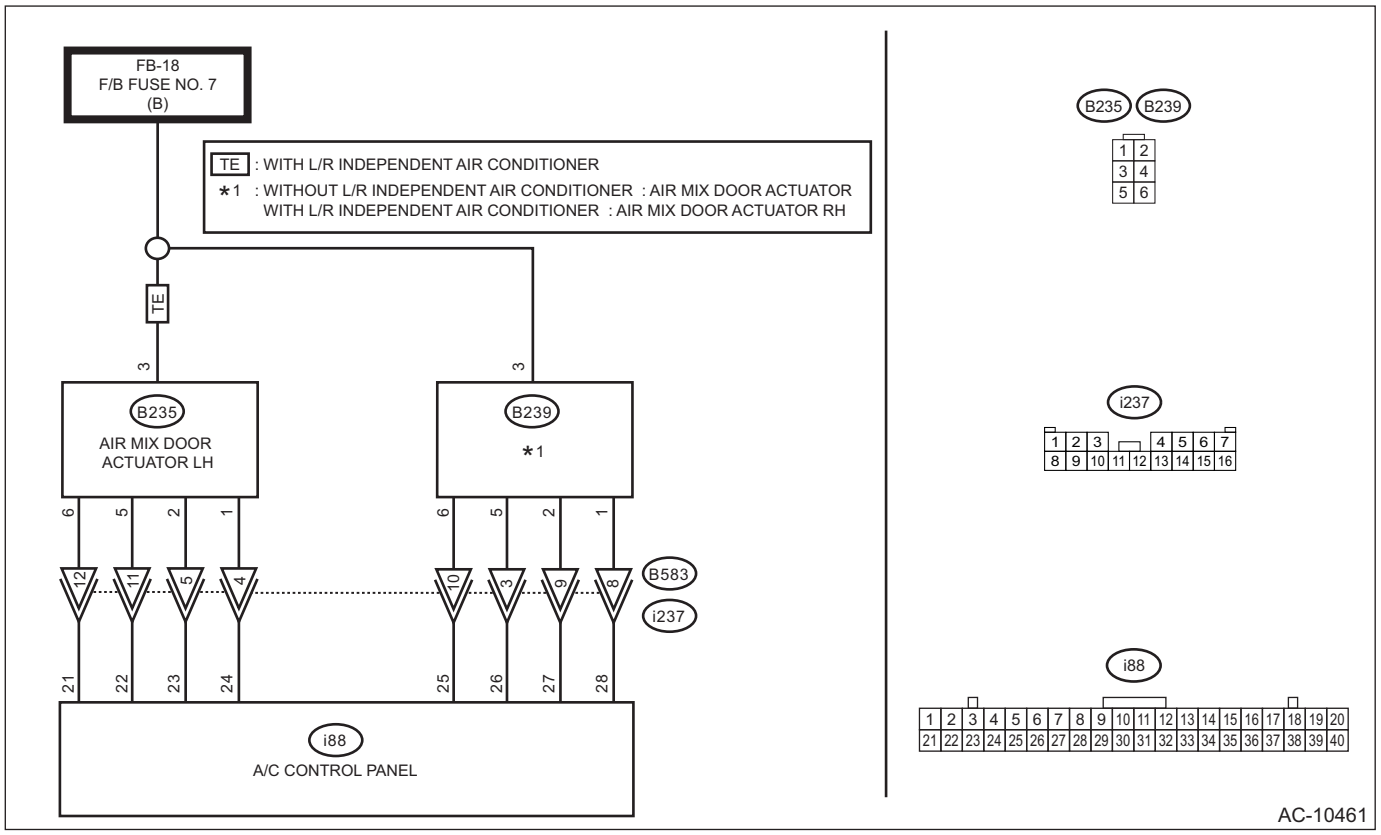
	Step	Check	Yes	No
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (OPEN).** 1) Disconnect the A/C control panel connector. 2) Measure the resistance between A/C control panel and air mix door actuator connector. ***Connector & terminal*** ***Without left/right independent air conditioning function*** ***(B239) No. 1 — (i88) No. 28:*** ***(B239) No. 2 — (i88) No. 27:*** ***(B239) No. 5 — (i88) No. 26:*** ***(B239) No. 6 — (i88) No. 25:*** ***With left/right independent air conditioning function*** ***(B235) No. 1 — (i88) No. 24:*** ***(B235) No. 2 — (i88) No. 23:*** ***(B235) No. 5 — (i88) No. 22:*** ***(B235) No. 6 — (i88) No. 21:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

J: DTC B14E2 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (DRIVER)

DTC detecting condition:
Short circuit in the air mix door actuator stepping motor circuit (short circuit to motor coil power supply) is detected for 3 seconds or more.

Trouble symptom:
Temperature cannot be adjusted.

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

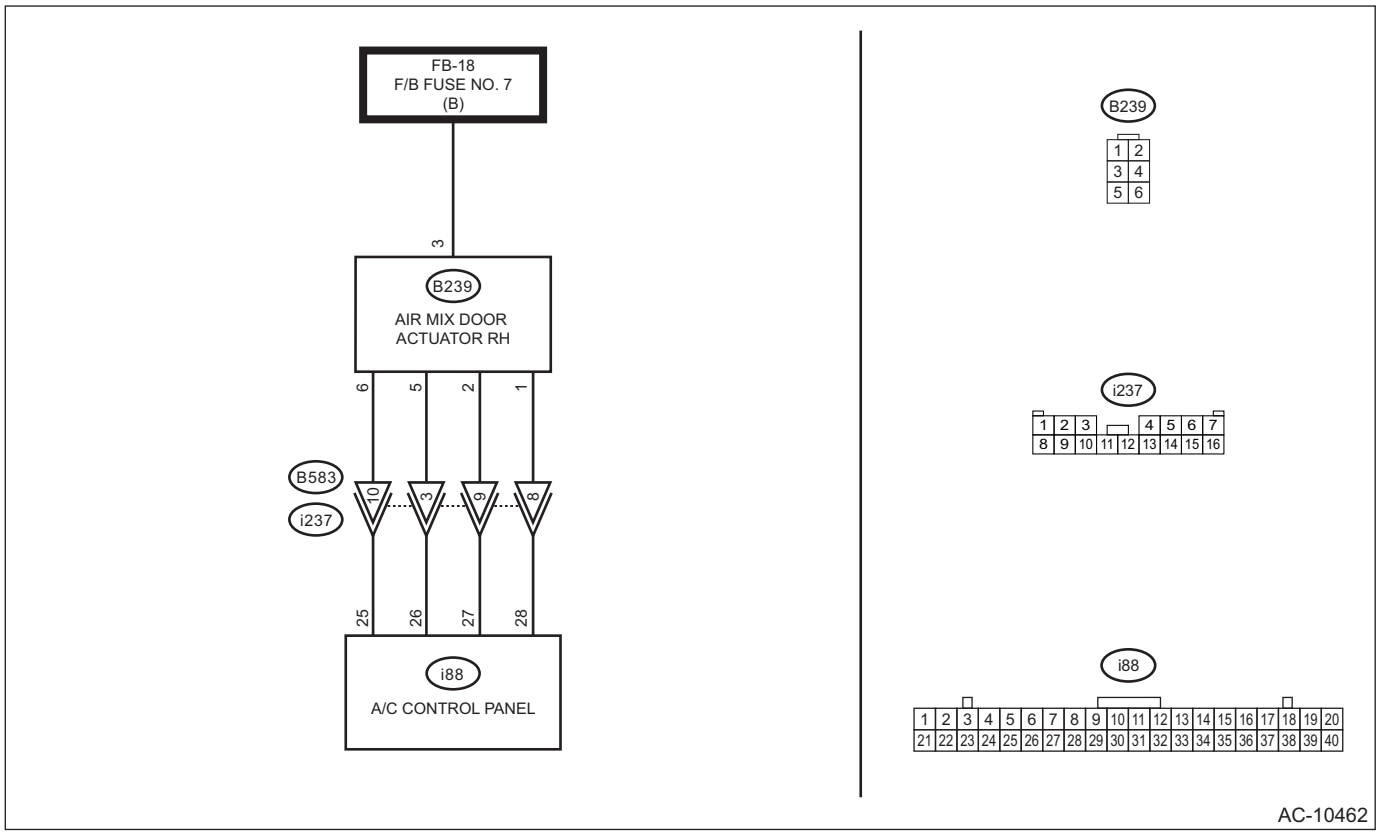


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E2 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. ***Connector & terminal*** ***Without left/right independent air conditioning function*** ***(B239) No. 3 (+) — Chassis ground (–):*** ***With left/right independent air conditioning function*** ***(B235) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the air mix door actuator using a tester. ***Terminals*** ***Without left/right independent air conditioning function*** ***Air mix door actuator*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:*** ***With left/right independent air conditioning function*** ***Air mix door actuator LH*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-88, REMOVAL, Air Mix Door Actuator.>
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (SHORTED TO POWER SUPPLY).** 1) Disconnect the A/C control panel connector. 2) Measure the voltage between air mix door actuator connector and chassis ground. ***Connector & terminal*** ***Without left/right independent air conditioning function*** ***(B239) No. 1 (+) — Chassis ground (–):*** ***(B239) No. 2 (+) — Chassis ground (–):*** ***(B239) No. 5 (+) — Chassis ground (–):*** ***(B239) No. 6 (+) — Chassis ground (–):*** ***With left/right independent air conditioning function*** ***(B235) No. 1 (+) — Chassis ground (–):*** ***(B235) No. 2 (+) — Chassis ground (–):*** ***(B235) No. 5 (+) — Chassis ground (–):*** ***(B235) No. 6 (+) — Chassis ground (–):***	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

K: DTC B14E3 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN (PASSENGER)

DTC detecting condition:
Open circuit in the air mix door actuator stepping motor circuit is detected for 3 seconds or more.
Trouble symptom:
Temperature cannot be adjusted.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E3 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

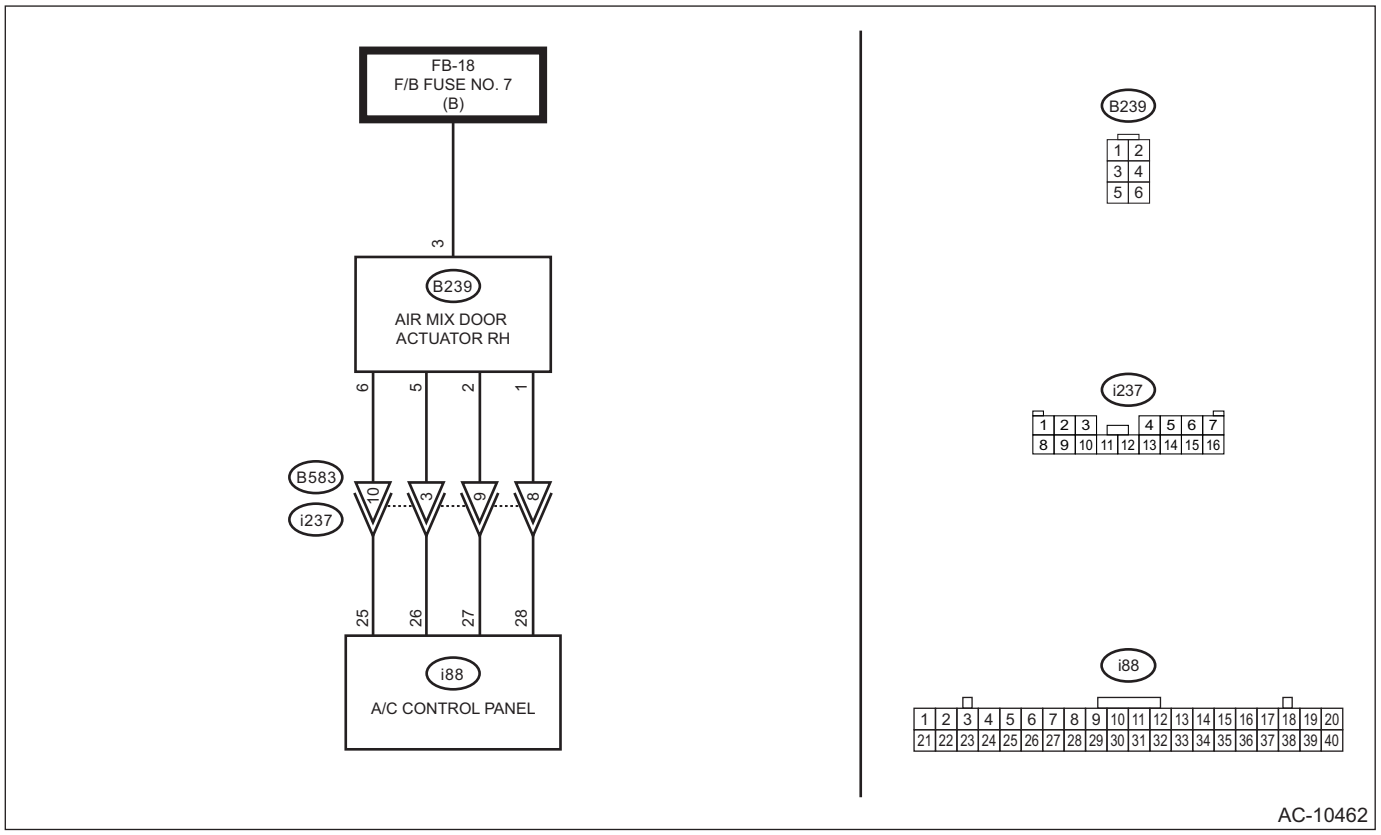
	Step	Check	Yes	No
2	**CHECK ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. ***Connector & terminal*** ***(B239) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the air mix door actuator using a tester. ***Terminals*** ***Air mix door actuator RH*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-88, REMOVAL, Air Mix Door Actuator.>
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (OPEN).** 1) Disconnect the A/C control panel connector. 2) Measure the resistance between A/C control panel and air mix door actuator connector. ***Connector & terminal*** ***(B239) No. 1 — (i88) No. 28:*** ***(B239) No. 2 — (i88) No. 27:*** ***(B239) No. 5 — (i88) No. 26:*** ***(B239) No. 6 — (i88) No. 25:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

L: DTC B14E4 AIR MIX DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT (PASSENGER)

DTC detecting condition:
Short circuit in the air mix door actuator stepping motor circuit (short circuit to motor coil power supply) is detected for 3 seconds or more.

Trouble symptom:
Temperature cannot be adjusted.

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

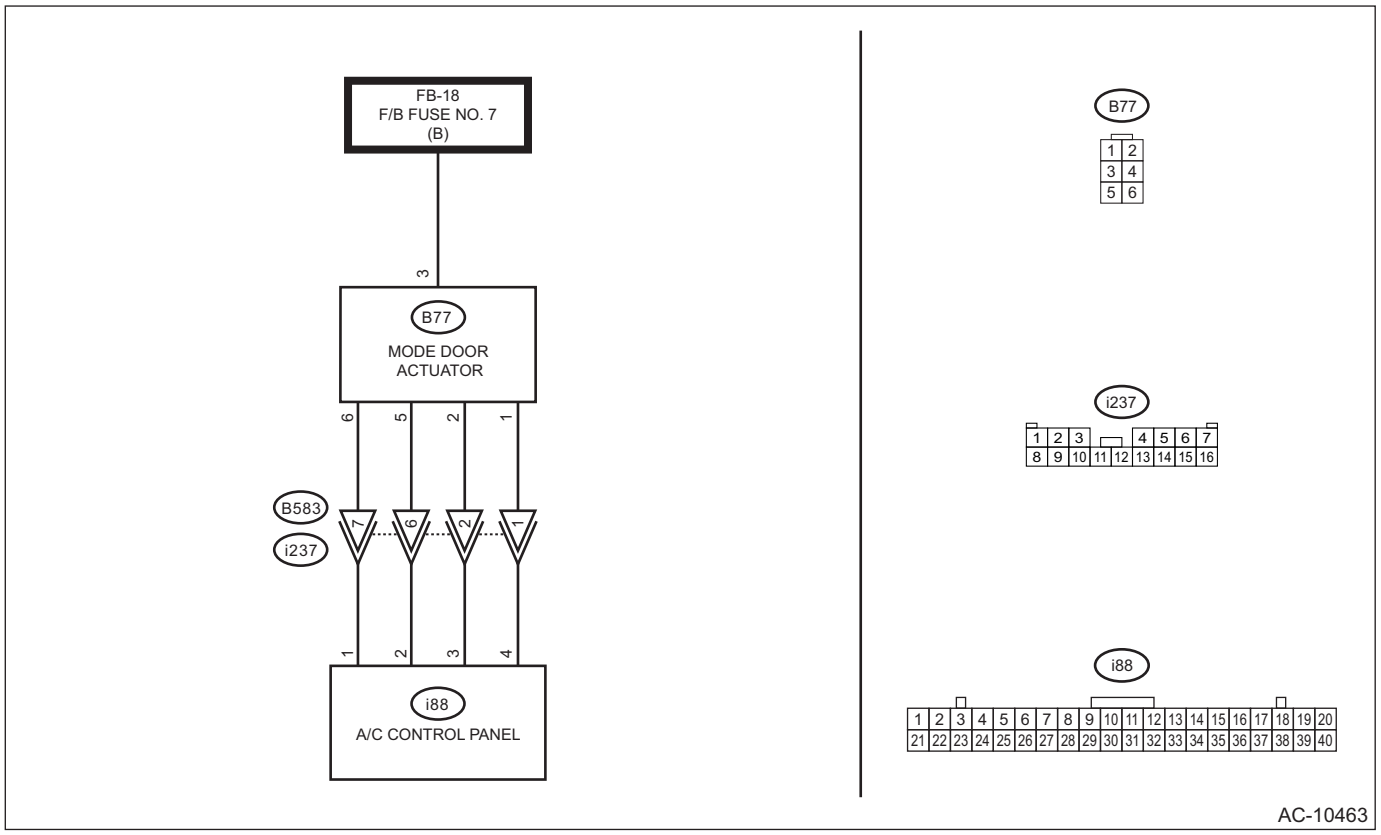


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E4 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY OF AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the air mix door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the air mix door actuator connector terminal and chassis ground. ***Connector & terminal*** ***(B239) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK AIR MIX DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the air mix door actuator using a tester. ***Terminals*** ***Air mix door actuator RH*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-88, REMOVAL, Air Mix Door Actuator.>
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND AIR MIX DOOR ACTUATOR (SHORTED TO POWER SUPPLY).** 1) Disconnect the A/C control panel connector. 2) Measure the voltage between air mix door actuator connector and chassis ground. ***Connector & terminal*** ***(B239) No. 1 (+) — Chassis ground (–):*** ***(B239) No. 2 (+) — Chassis ground (–):*** ***(B239) No. 5 (+) — Chassis ground (–):*** ***(B239) No. 6 (+) — Chassis ground (–):***	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

M: DTC B14E5 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT OPEN

DTC detecting condition:
Open circuit in the mode door actuator stepping motor circuit is detected for 3 seconds or more.
Trouble symptom:
Vent does not change.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

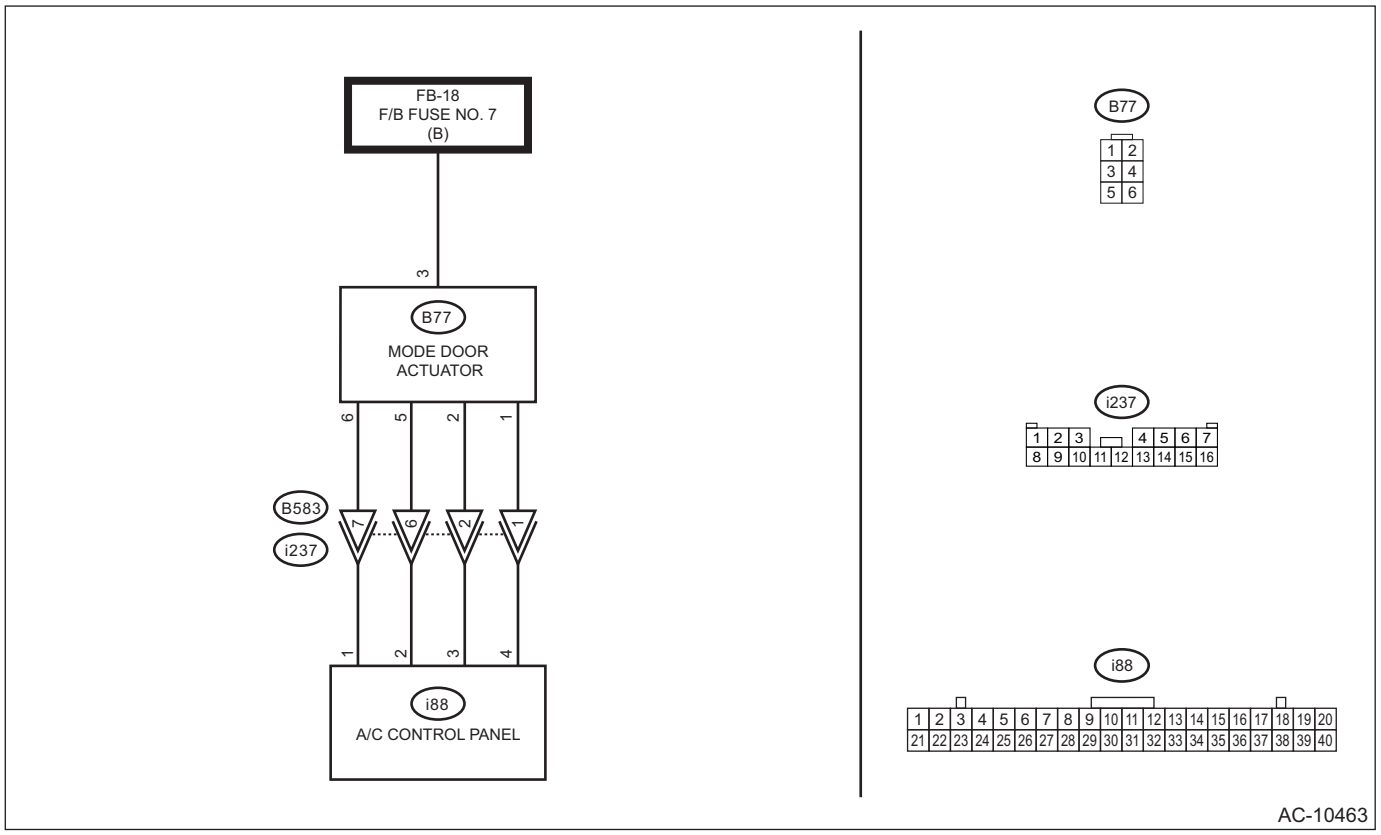


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E5 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. ***Connector & terminal*** ***(B77) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK MODE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the mode door actuator using a tester. ***Terminals*** ***Mode door actuator*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-86, REMOVAL, Mode Door Actuator.>
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND MODE DOOR ACTUATOR (OPEN).** 1) Disconnect the A/C control panel connector. 2) Measure the resistance between A/C control panel and mode door actuator connector. ***Connector & terminal*** ***(B77) No. 1 — (i88) No. 4:*** ***(B77) No. 2 — (i88) No. 3:*** ***(B77) No. 5 — (i88) No. 2:*** ***(B77) No. 6 — (i88) No. 1:***	Is there continuity?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Repair or replace the open circuit of harness.

N: DTC B14E6 MODE DOOR ACTUATOR STEPPING MOTOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Short circuit in the mode door actuator stepping motor circuit (short circuit to motor coil power supply) is detected for 3 seconds or more.
Trouble symptom:
Vent does not change.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E6 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

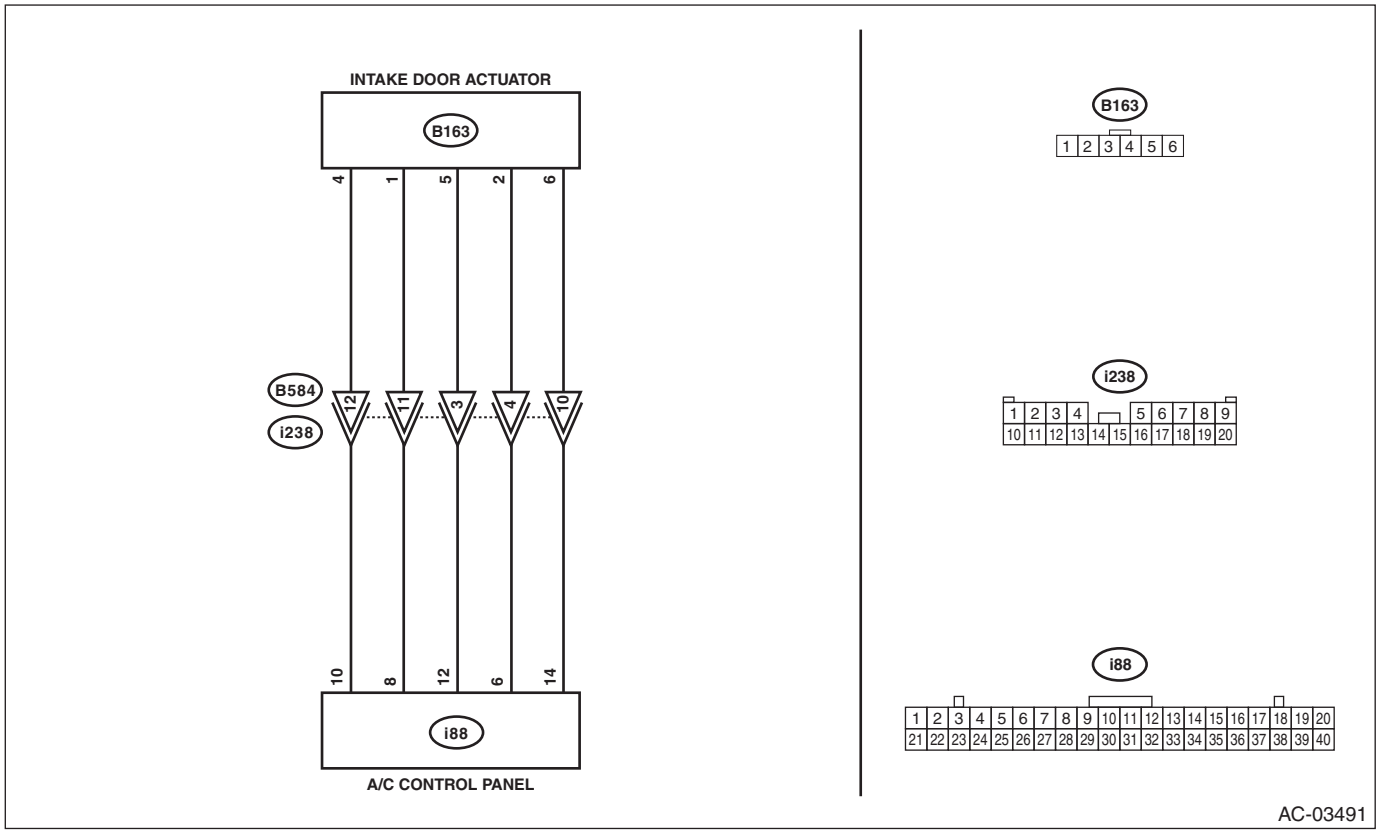
	Step	Check	Yes	No
2	**CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the mode door actuator connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between the mode door actuator connector terminal and chassis ground. ***Connector & terminal*** ***(B77) No. 3 (+) — Chassis ground (–):***	Is the voltage approx. 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK MODE DOOR ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Measure the internal resistance of the mode door actuator using a tester. ***Terminals*** ***Mode door actuator*** ***No. 3 — No. 1:*** ***No. 3 — No. 2:*** ***No. 3 — No. 5:*** ***No. 3 — No. 6:***	Is the resistance 80 — 100 Ω?	Go to step **4**.	Replace the actuator. <Ref. to AC-86, REMOVAL, Mode Door Actuator.>
4	**CHECK HARNESS BETWEEN A/C CONTROL PANEL AND MODE DOOR ACTUATOR (SHORTED TO POWER SUPPLY).** 1) Disconnect the A/C control panel connector. 2) Measure the voltage between mode door actuator connector and chassis ground. ***Connector & terminal*** ***(B77) No. 1 (+) — Chassis ground (–):*** ***(B77) No. 2 (+) — Chassis ground (–):*** ***(B77) No. 5 (+) — Chassis ground (–):*** ***(B77) No. 6 (+) — Chassis ground (–):***	Is there any voltage?	Repair or replace the short circuit of the harness.	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>

O: DTC B14E9 INTAKE DOOR ACTUATOR CIRCUIT OPEN

DTC detecting condition:
Open circuit in the intake door actuator potentiometer circuit (open circuit in potentiometer signal line) is detected for 3 seconds or more.

Trouble symptom:
FRESH/RECIRC does not operate.

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

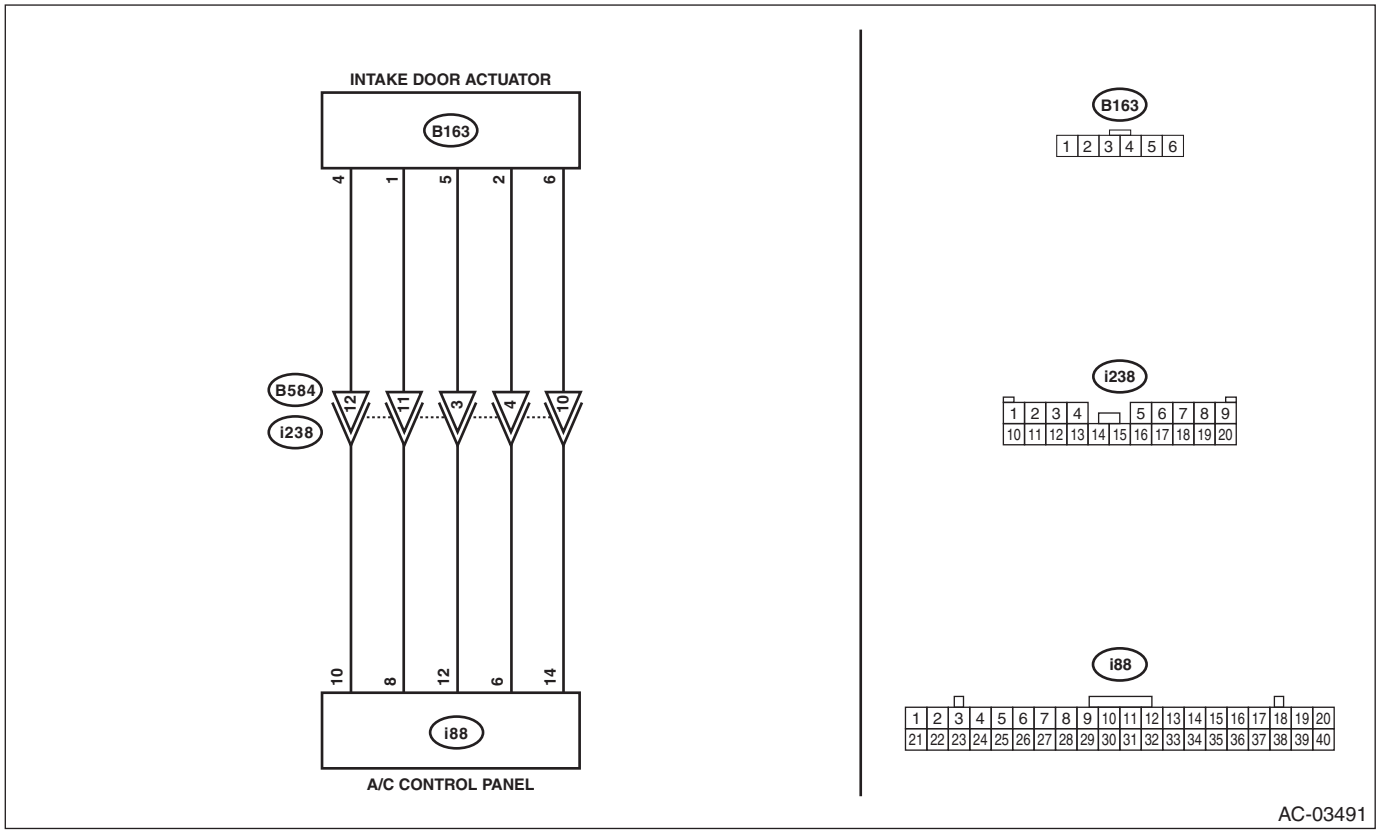


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14E9 displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B163) No. 4 (+) — No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B163) No. 1 — (i88) No. 8:*** ***(B163) No. 2 — (i88) No. 6:*** ***(B163) No. 4 — (i88) No. 10:*** ***(B163) No. 5 — (i88) No. 12:*** ***(B163) No. 6 — (i88) No. 14:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK ACTUATOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B163) No. 5 (+) — No. 6 (–):***	Is the voltage 0.5 — 4.5 V?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Go to step **5**.
5	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B163) No. 4 — No. 5:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Replace the actuator. <Ref. to AC-84, REMOVAL, FRESH/RECIRC Door Actuator.>

P: DTC B14EA INTAKE DOOR ACTUATOR CIRCUIT SHORT-CIRCUIT

DTC detecting condition:
Short circuit in the intake door actuator potentiometer circuit (short circuit to ground in potentiometer signal line) is detected for 3 seconds or more.
Trouble symptom:
FRESH/RECIRC does not operate.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14EA displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK ACTUATOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B163) No. 4 (+) — No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B163) No. 4 — (i88) No. 10:*** ***(B163) No. 5 — (i88) No. 12:*** ***(B163) No. 6 — (i88) No. 14:***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK ACTUATOR.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B163) No. 5 (+) — No. 6 (–):***	Is the voltage 0.5 — 4.5 V?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Go to step **5**.
5	**CHECK HARNESS (SHORTED BETWEEN LINES).** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B163) No. 5 — No. 6:***	Is the resistance less than 1 Ω?	Repair or replace the short circuit of the harness.	Replace the actuator. <Ref. to AC-84, REMOVAL, FRESH/RECIRC Door Actuator.>

Q: DTC B14EB INTAKE DOOR ACTUATOR STUCK

DTC detecting condition:
Lock condition is detected for 3 seconds or more during intake door actuator operation.
Trouble symptom:
FRESH/RECIRC does not operate.
Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Check the condition of connector connection. 2) Read the DTC using Subaru Select Monitor. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>	Is DTC B14EB displayed?	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, change the setting of "Fresh/Rec Air Dr Act Trgt Open Angle" from Air Conditioning Diagnosis and perform the active test. <Ref. to AC(diag)-47, System Operation Check Mode.>	Did the actuator move to the specified target opening angle?	Intake door actuator circuit is normal.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B163) No. 4 (+) — No. 6 (–):***	Is the voltage 4.5 — 5.0 V?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the connector from the A/C control panel. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B163) No. 1 — (i88) No. 8:*** ***(B163) No. 2 — (i88) No. 6:*** ***(B163) No. 4 — (i88) No. 10:*** ***(B163) No. 5 — (i88) No. 12:*** ***(B163) No. 6 — (i88) No. 14:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK INTAKE DOOR ACTUATOR.** Check the intake door actuator parts.	Is the check result of the actuator OK?	Replace the A/C control panel. <Ref. to AC-43, REMOVAL, Control Panel.>	Replace the actuator. <Ref. to AC-84, REMOVAL, FRESH/RECIRC Door Actuator.>

R: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

X: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Detected when there is malfunction in CAN data from the engine control module (ECM).

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Y: DTC U0402 INVALID DATA RECEIVED FROM TCM

This is detected when CAN data from TCM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data from BIU is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

This is detected when CAN data from meter is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AIRBAG SYSTEM

AB

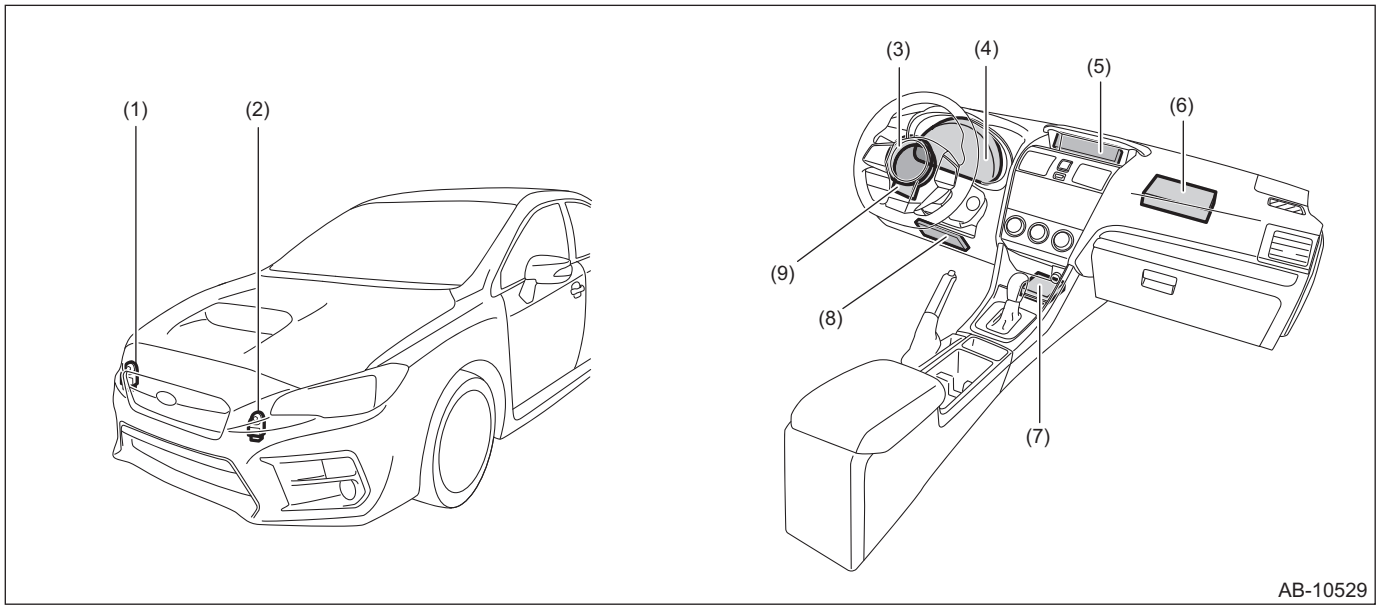
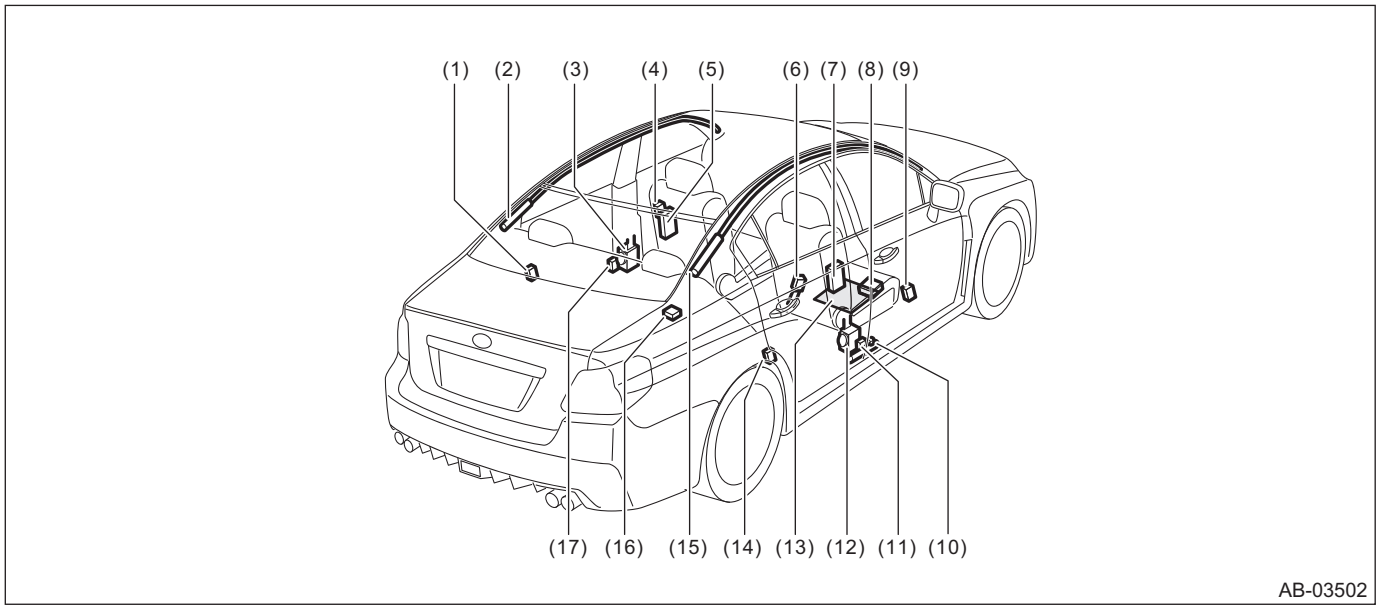
11.	Front Door Impact Sensor	54
12.	Side Airbag Sensor	56
13.	Curtain Airbag Sensor	59
14.	Satellite Safing Sensor	60
15.	Roll Connector	61
16.	Airbag Module Disposal (Deployment Processing on Vehicle)	67

1. General Description

A: COMPONENT

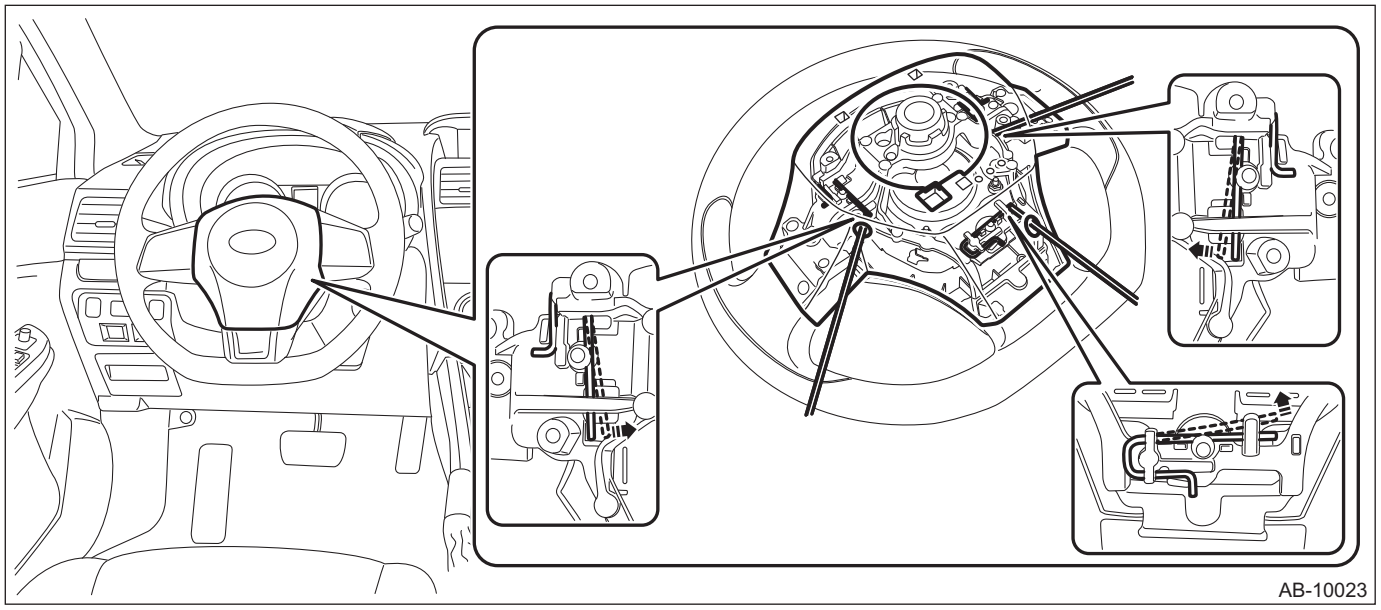


(1)	Front sub sensor RH	(4)	Airbag warning light (in combination meter)	(7)	Airbag control module
(2)	Front sub sensor LH	(5)	Airbag ON/OFF indicator light (MFD)	(8)	Knee airbag module
(3)	Driver's airbag module	(6)	Passenger's airbag module	(9)	Steering roll connector

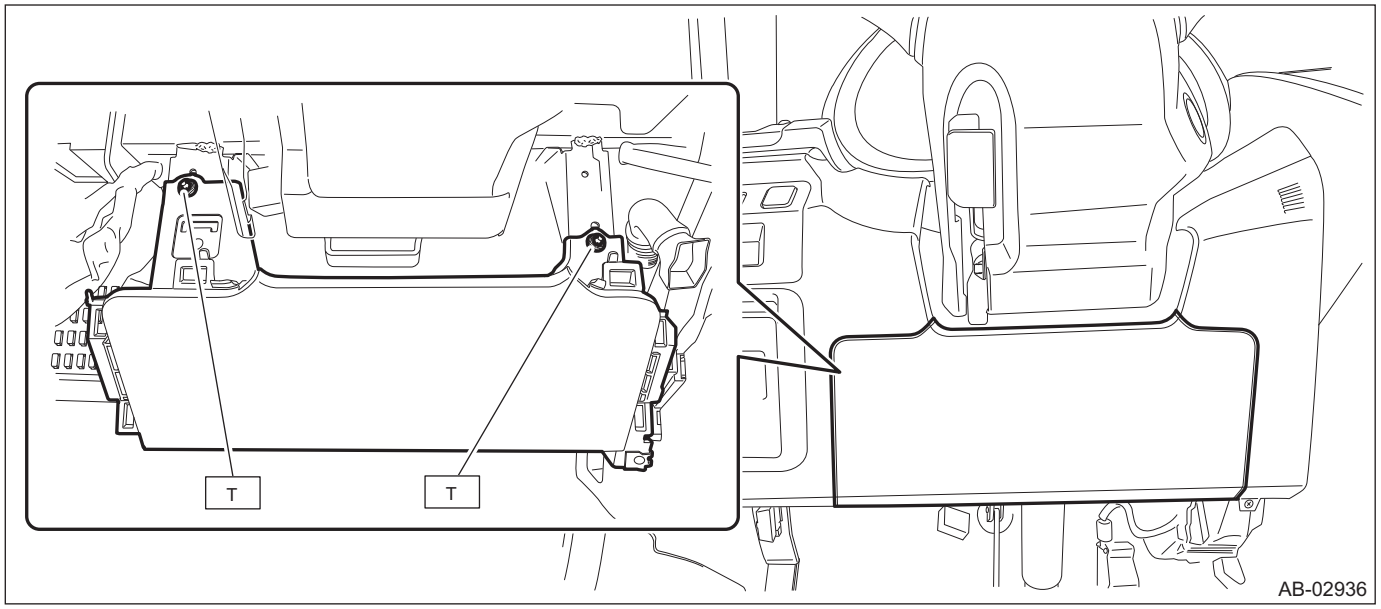


(1)	Curtain airbag sensor LH	(7)	Side airbag module RH	(13)	Occupant detection sensor
(2)	Curtain airbag module LH	(8)	Occupant detection control module	(14)	Curtain airbag sensor RH
(3)	Seat belt pretensioner LH	(9)	Front door impact sensor RH	(15)	Curtain airbag module RH
(4)	Front door impact sensor LH	(10)	Lap seat belt pretensioner RH	(16)	Satellite safing sensor
(5)	Side airbag module LH	(11)	Side airbag sensor RH	(17)	Side airbag sensor LH
(6)	Buckle switch RH	(12)	Seat belt pretensioner RH		

1. DRIVER'S AIRBAG MODULE

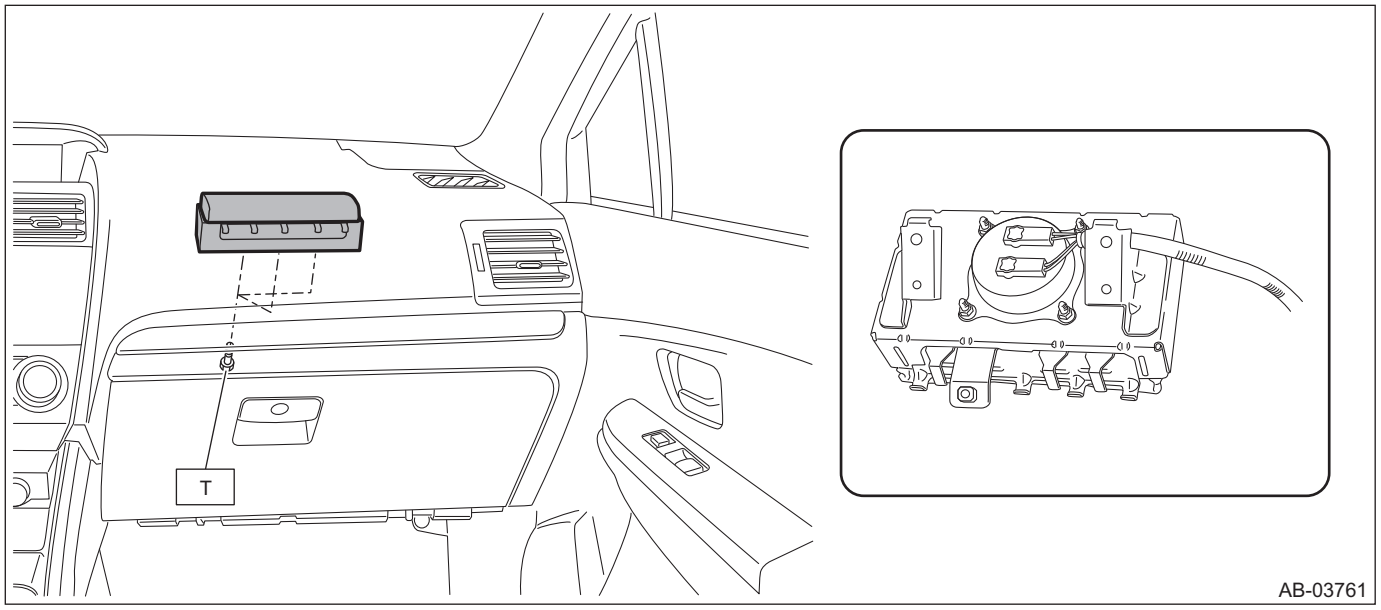


2. KNEE AIRBAG MODULE



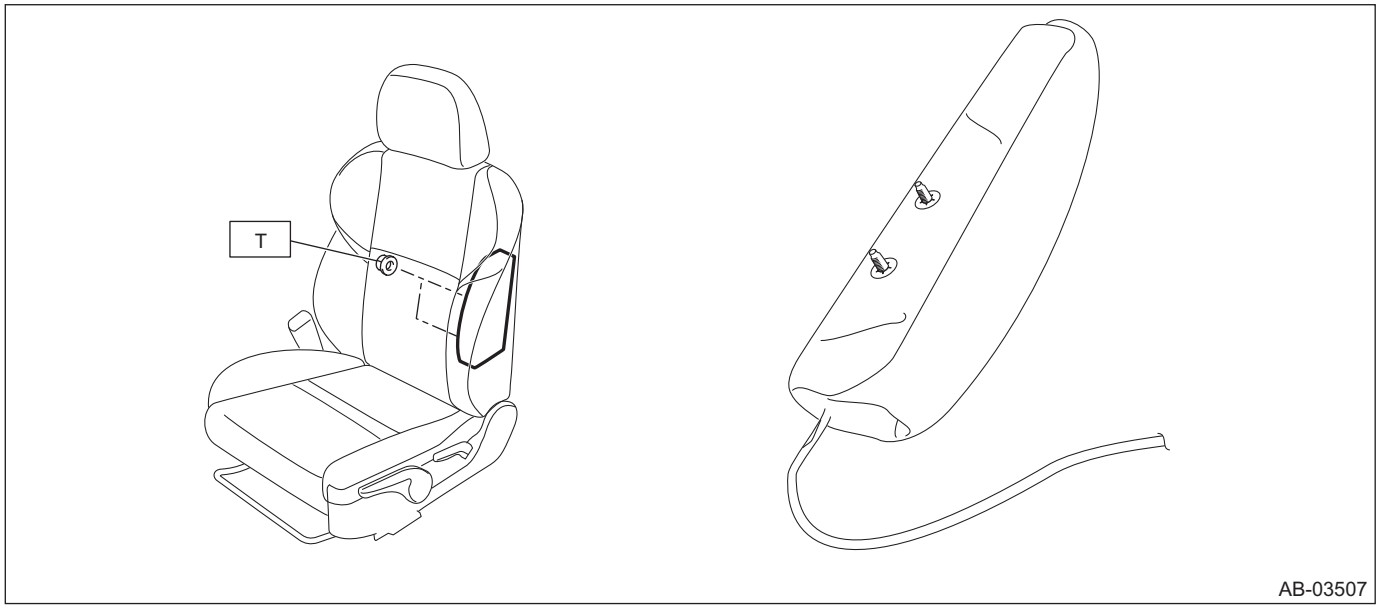
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

3. PASSENGER'S AIRBAG MODULE



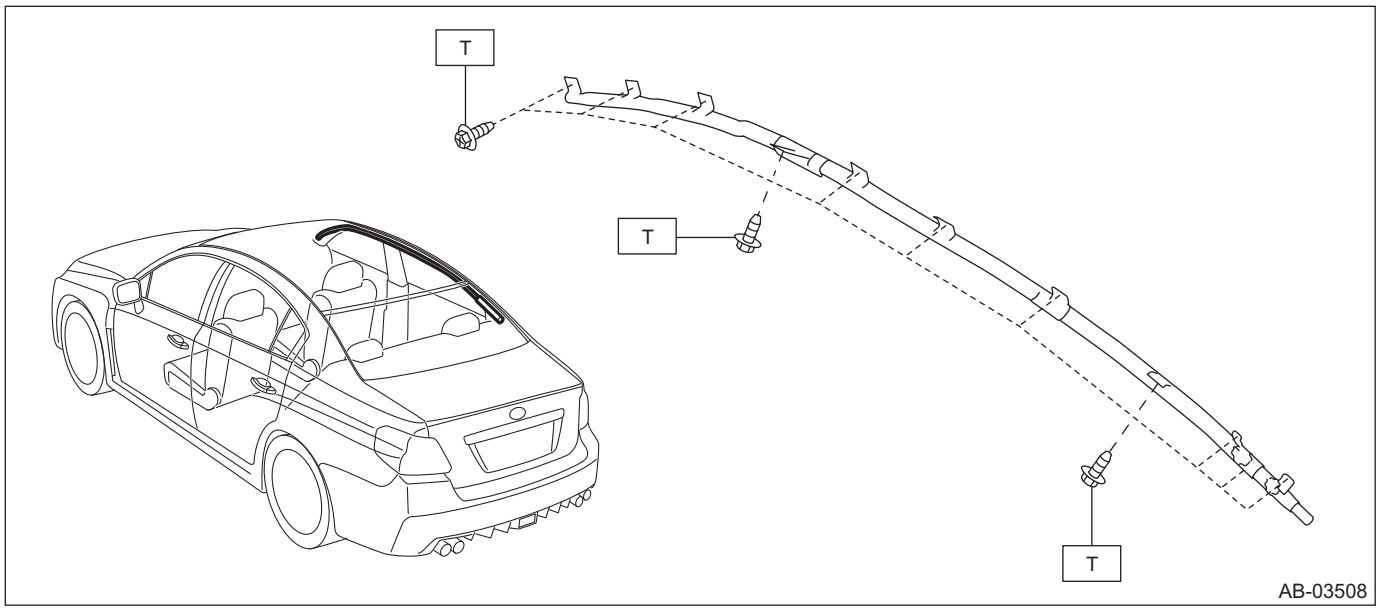
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

4. SIDE AIRBAG MODULE



Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

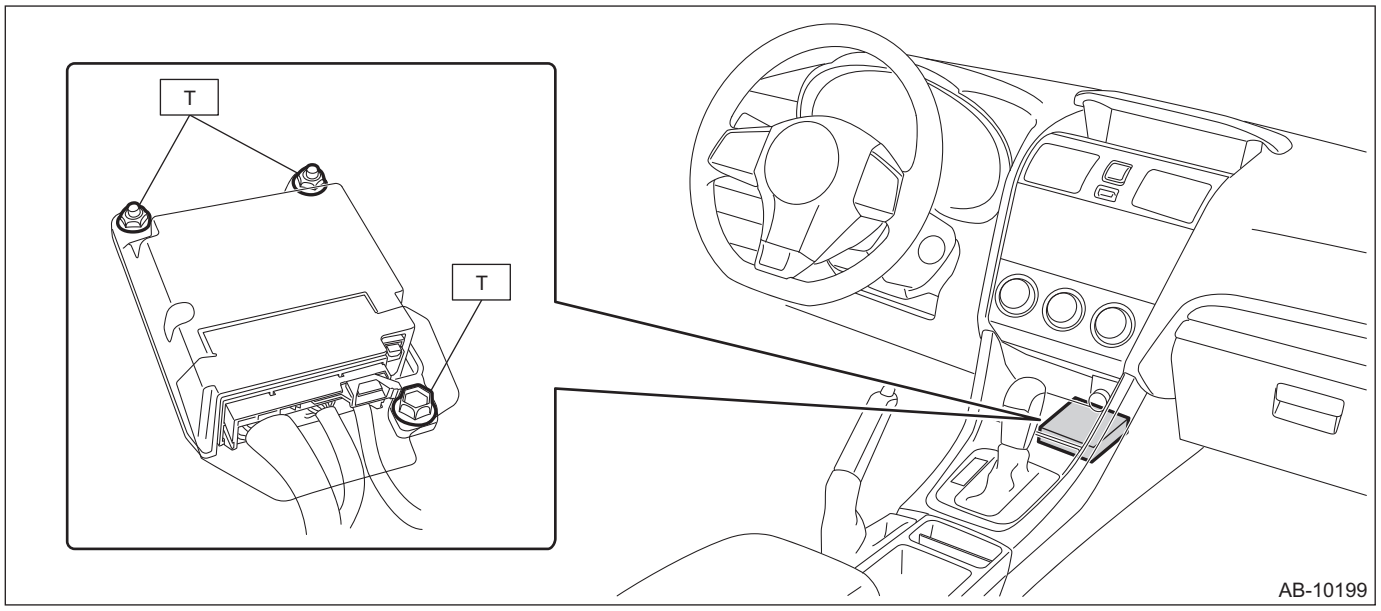
5. CURTAIN AIRBAG MODULE



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

6. AIRBAG CONTROL MODULE

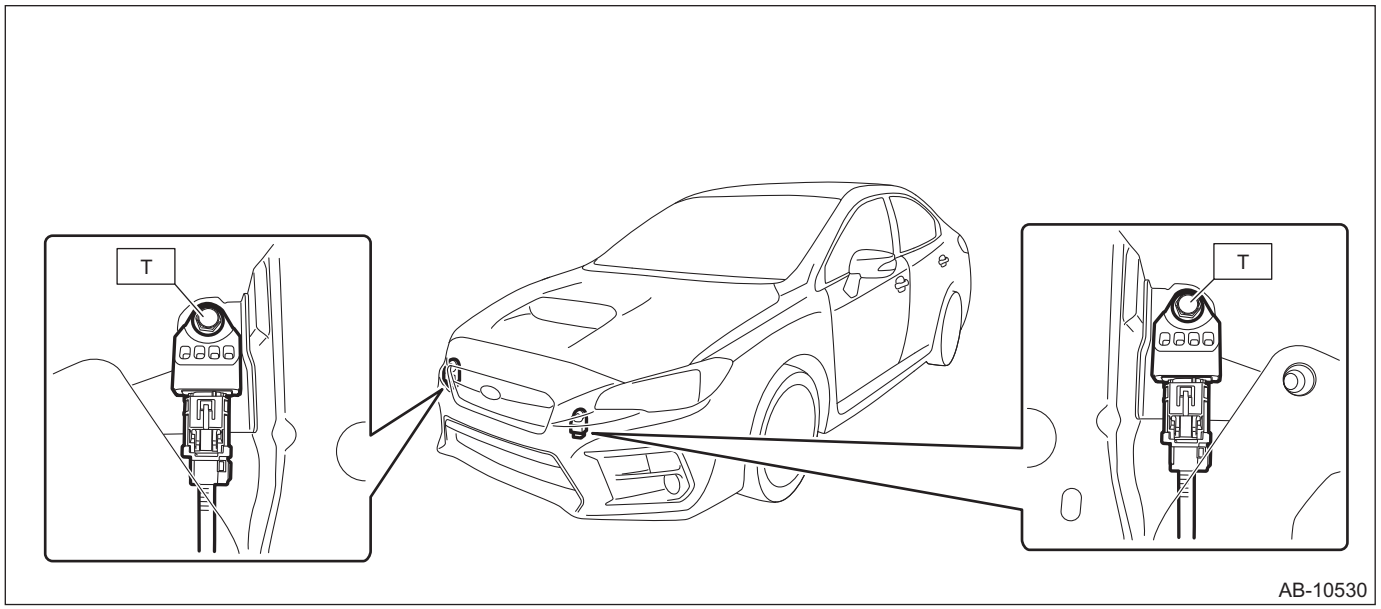
CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 25 (2.5, 18.4)

7. FRONT SUB SENSOR

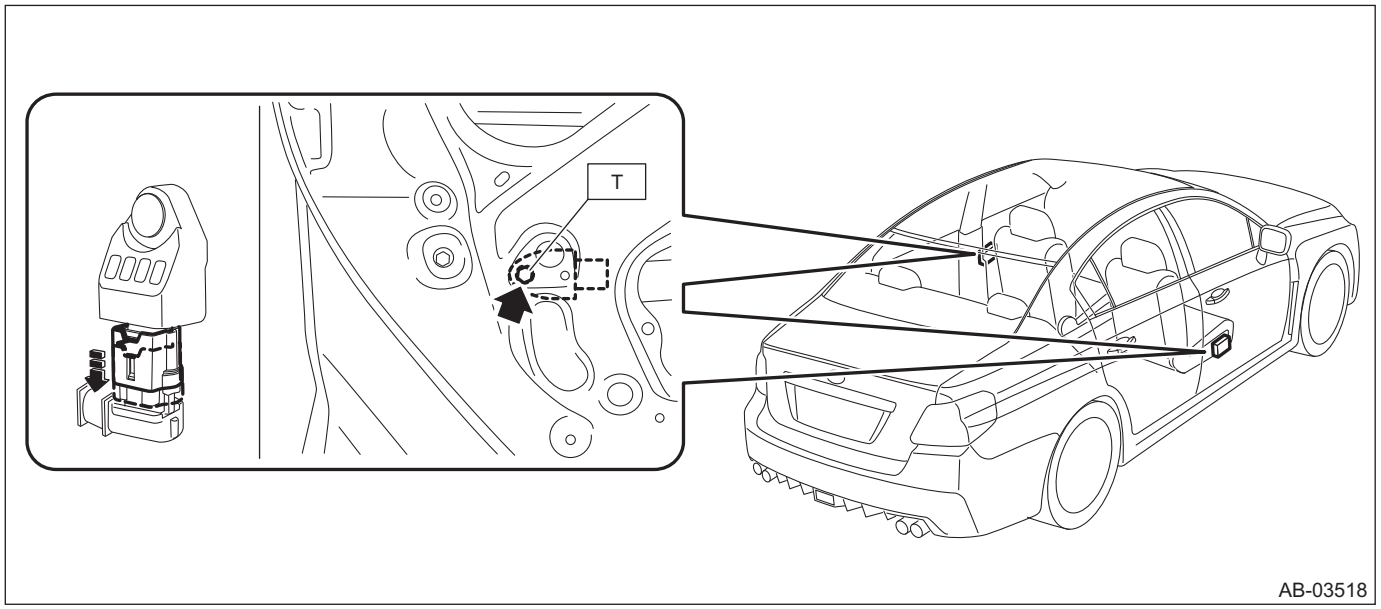
CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 13 (1.3, 9.6)

8. FRONT DOOR IMPACT SENSOR

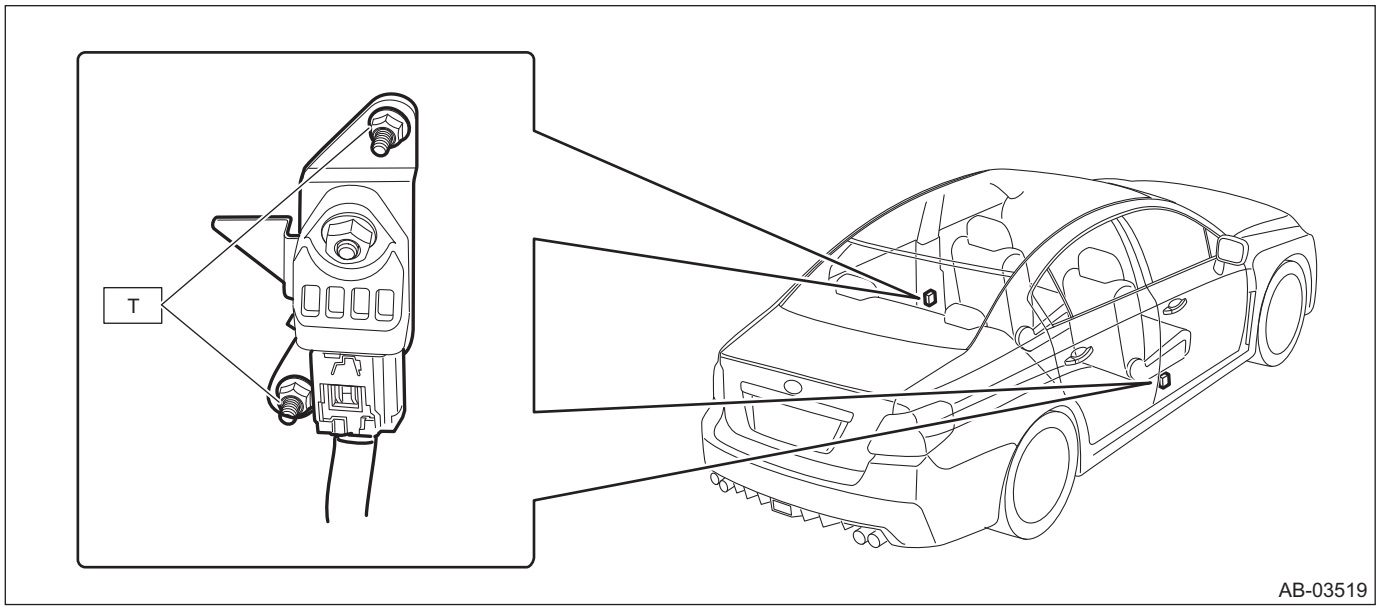
CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

9. SIDE AIRBAG SENSOR

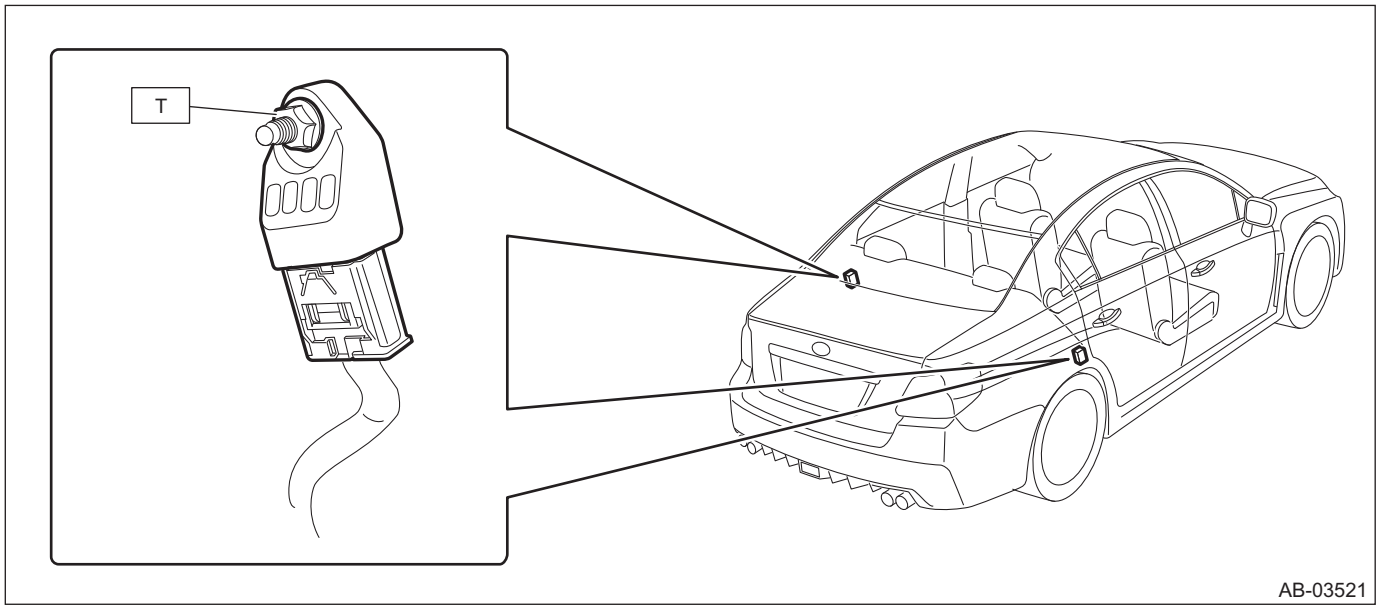
CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

10.CURTAIN AIRBAG SENSOR

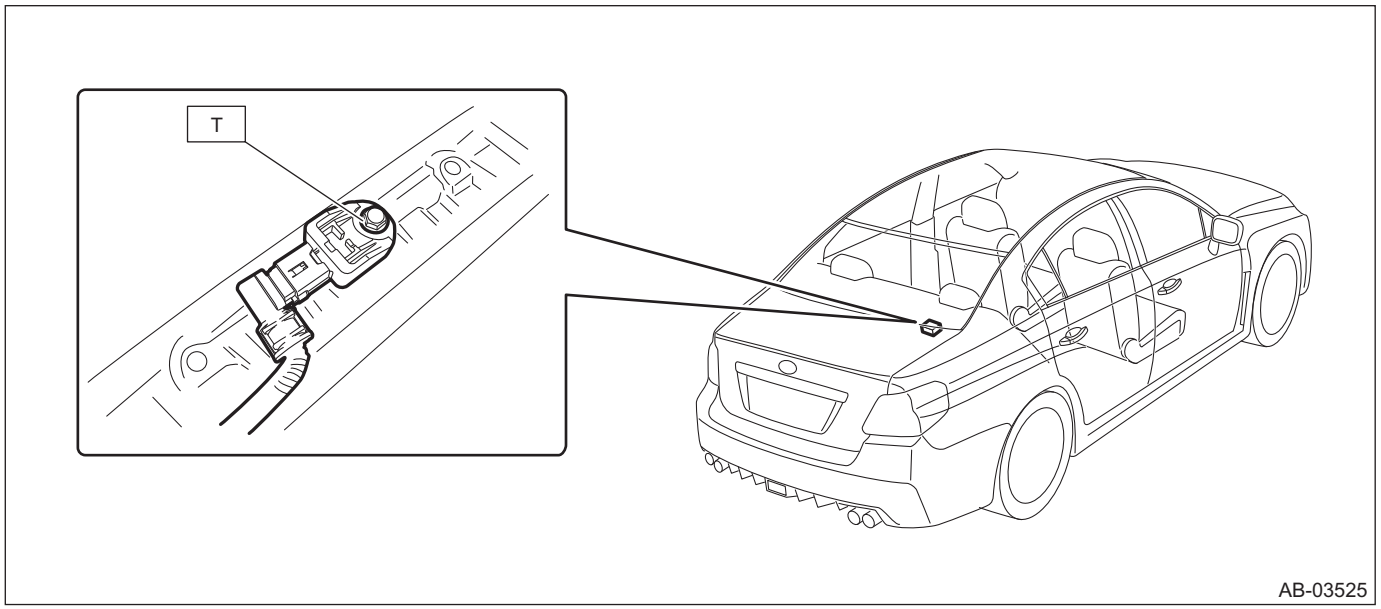
CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

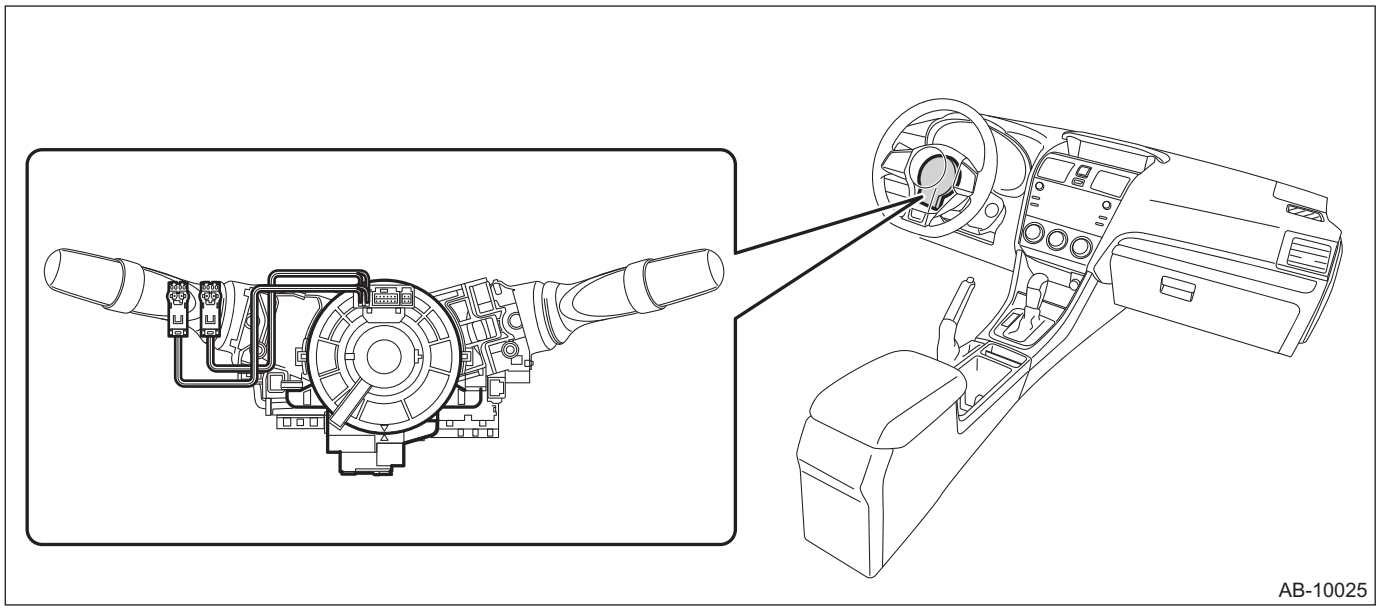
11.SATELLITE SAFING SENSOR

CAUTION:
Do not reuse mounting bolts and nuts.



Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

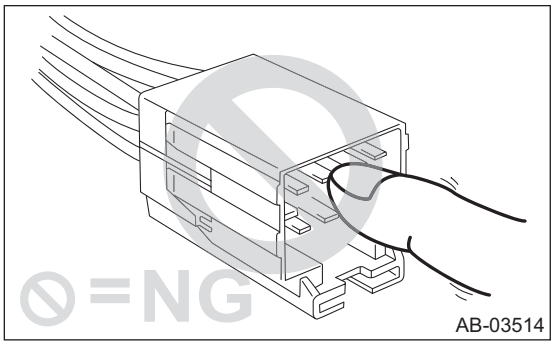
12.STEERING ROLL CONNECTOR



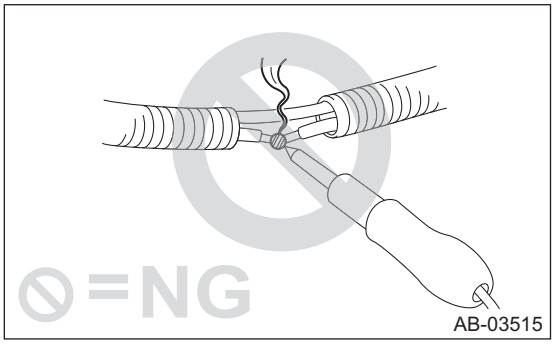
B: CAUTION

1. BEFORE STARTING ALL WORKS

• Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
  – For model with battery sensor, disconnect the ground terminal from battery sensor.
• The airbag system (including pretensioner) is fitted with a backup power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds or more before starting the service of airbag system.
• When performing an operation with the airbag system parts including pretensioners exposed, do not apply any impact to airbag modules and sensors.
• If the airbag warning light illuminates, check or repair the vehicle immediately to prevent it from airbag system malfunction.
• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.



• If damage, open circuit or rust is found on airbag system wiring harness, do not repair the harness. Always replace the faulty harness with a new genuine part.



• When painting or performing sheet metal work on the vehicle, remove the following parts. Performing the work without removing the parts may cause secondary malfunction.

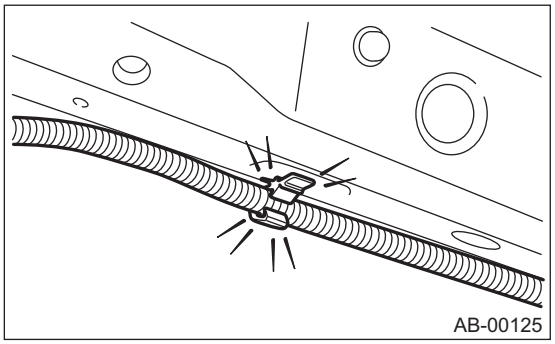
  – Front part of the vehicle including the front wheel apron, front fender and radiator panel side
    • Front sub sensor of airbag system
    • Wiring harness
  – Side or its vicinity of the vehicle including the side sill, center pillar and front and rear doors

- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor
- Satellite safing sensor
- Wiring harness

• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

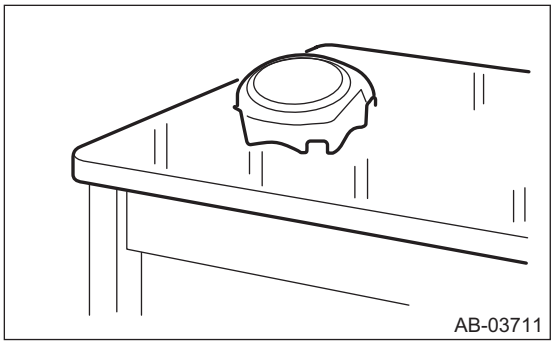
2. BEFORE STARTING PARTS REPLACEMENT

• If the following parts are deformed or damaged, replace with new parts.
  – Airbag sensors and brackets
  – Airbag modules and brackets
  – Airbag control module
  – Pretensioners and brackets
  – Harnesses
  – Cover - satellite safing
  – Plate - door
• Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

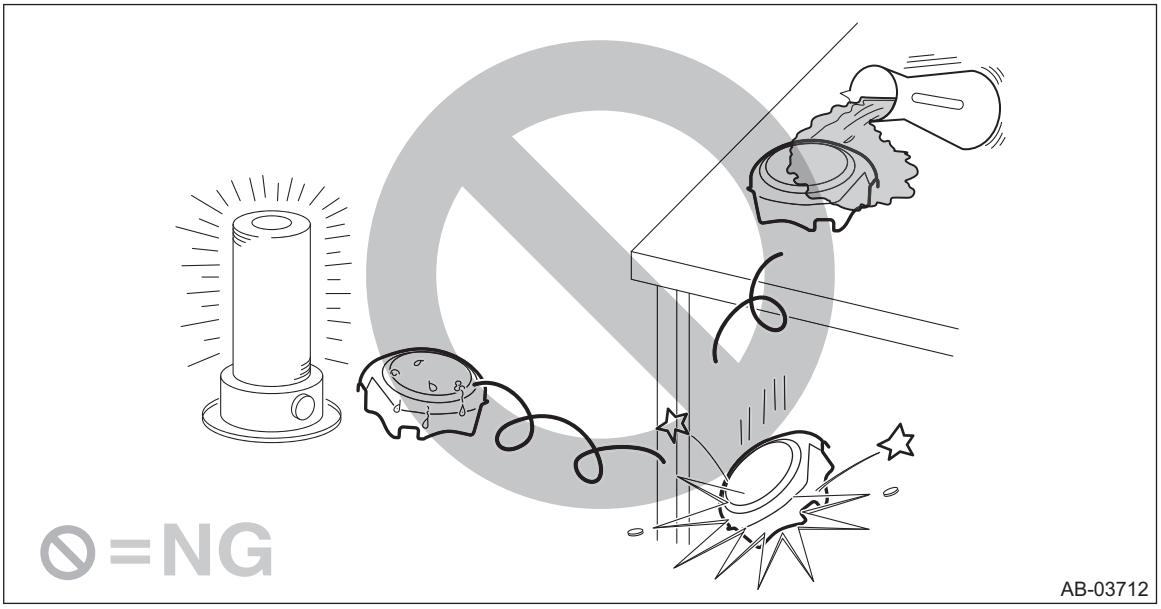


• Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
• Never reuse any activated airbag module and pretensioner.
• Do not discard undeployed airbag or pretensioner. For the disposal procedures, refer to “Airbag Module Disposal”.
• Do not reuse the bolts and nuts when the following parts are removed. Always replace with the specified new bolts and nuts.
  – Airbag control module
  – Front door impact sensor
  – Front sub sensor
  – Side airbag sensor
  – Curtain airbag sensor
  – Satellite safing sensor
• When attaching the steering wheel and steering roll connector, be sure to adjust the steering roll connector.

• After removing each parts of the airbag system, keep them with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

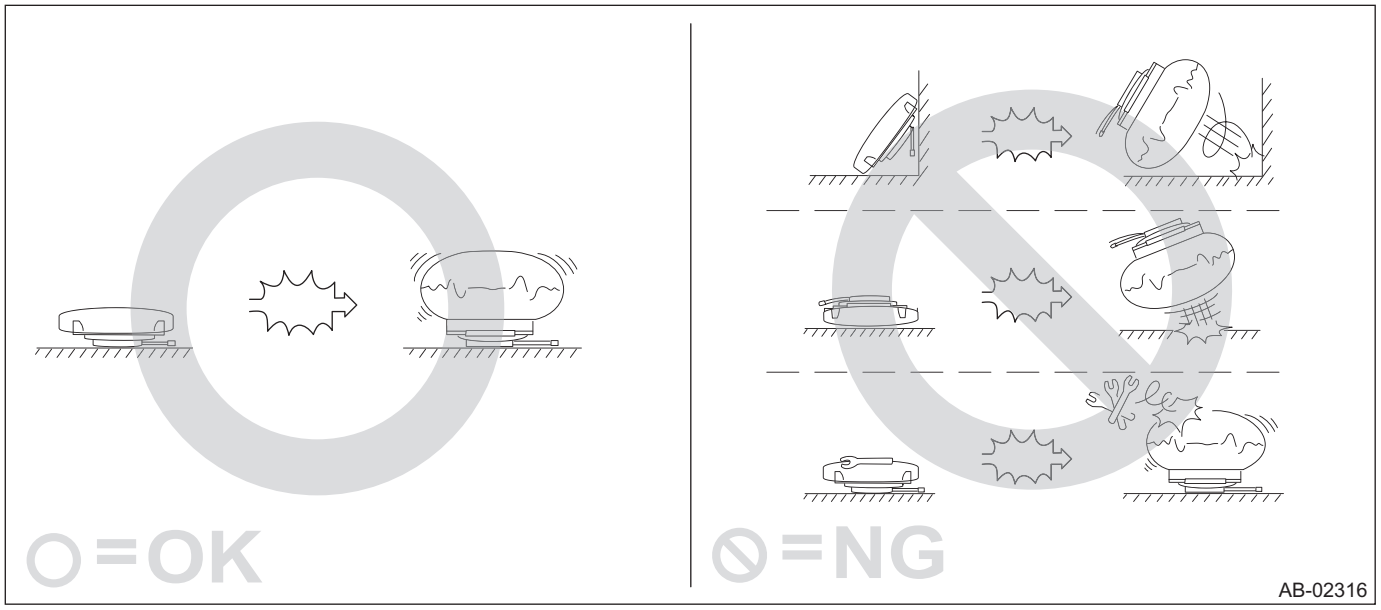


• Observe the following; the airbag system component or the internal parts of seat belt pretensioner may be damaged or the reliability may be greatly lowered.
  – Do not drop or otherwise apply impact.
  – Do not store it under high temperature environment at 85°C (185°F) or more, or do not near it to open flames.
  – Do not allow water, oil or grease to come in contact.

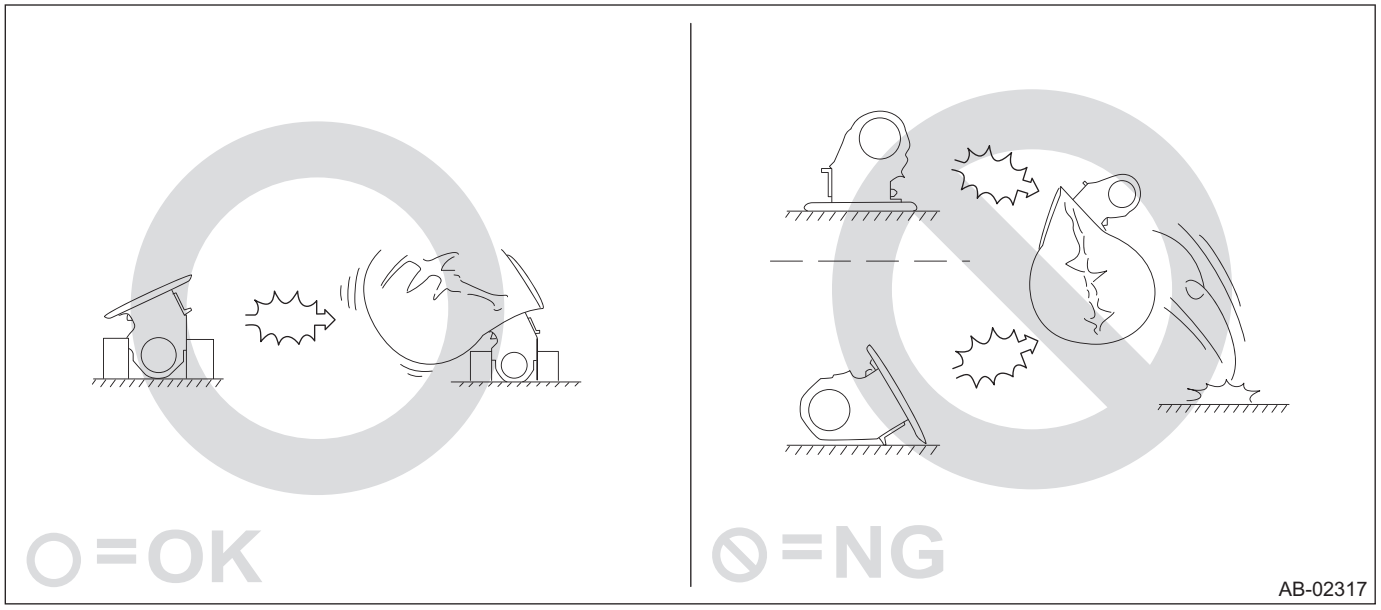


• When storing a removed airbag module, observe the following items. If the pad of the airbag module is in contact with other objects, it may cause a serious accident if the airbag accidentally operates.
  – Do not place the airbag module with the pad side facing downward.
  – Do not place any objects on the airbag module.
  – Do not pile up the airbag module.

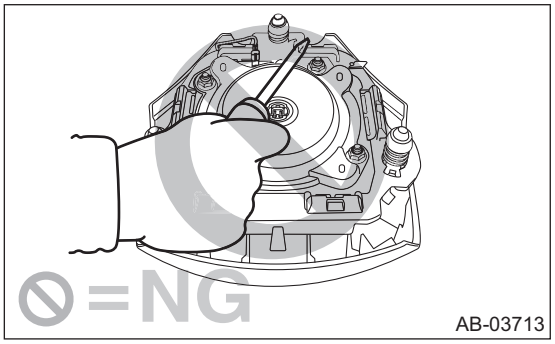
- Driver's airbag module



- Passenger's airbag module and side airbag module



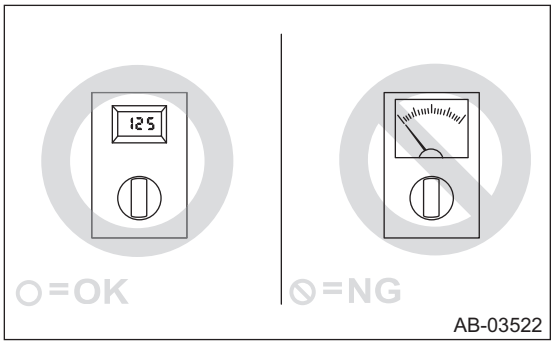
- Do not disassemble the airbag modules and pretensioners.



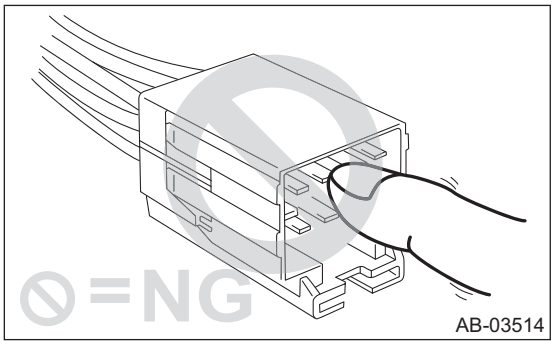
- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

3. BEFORE STARTING TROUBLESHOOTING

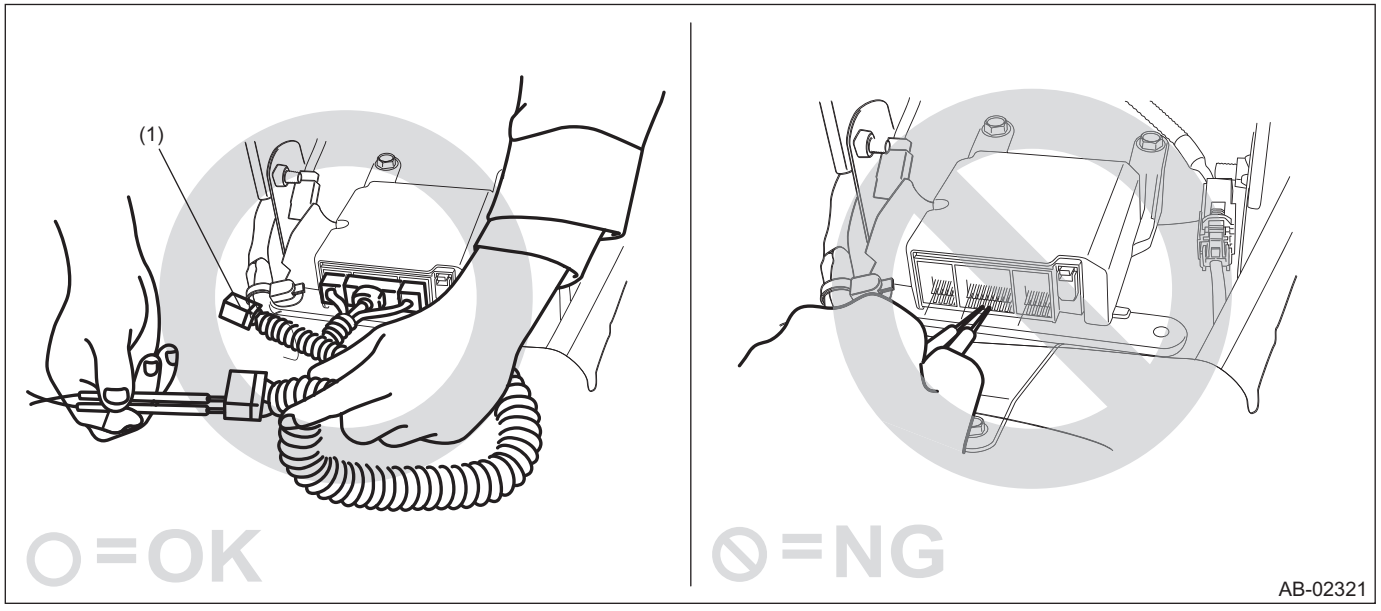
• Even if any part must be replaced as the result of troubleshooting, do not use an airbag part or pretensioner part from other vehicles. Always replace the defective parts with new parts.
• When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.



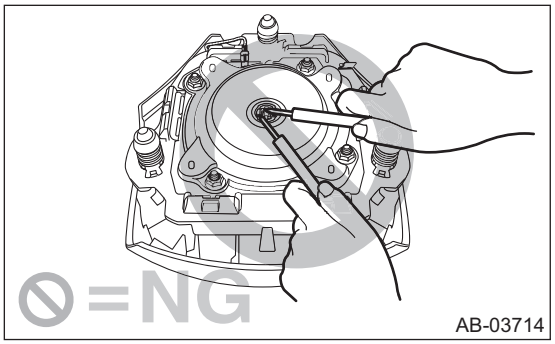
• Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals directly.



• When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.



- Do not check the continuity of airbag modules and pretensioners.



C: PREPARATION TOOL

1. SPECIAL TOOL

- TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used for unit inspection of steering roll connector.

- TEST HARNESS Q

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used for unit inspection of steering roll connector.

- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of knee airbag module. • Used for operation process of curtain airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER AM

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FJ000	98299FJ000	TEST HARNESS ADAPTER AM	• Used for operation process of passenger's airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- TEST HARNESS ADAPTER K

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FG010	98299FG010	TEST HARNESS ADAPTER K	• Used for operation process of side airbag module. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of airbag module. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Steering wheel puller	Used for removing and installing the steering wheel.
TORX® T40	Used for removing and installing the beam COMPL - steering.
Circuit tester	Used for measuring resistance, voltage and current.

2. Airbag Connector

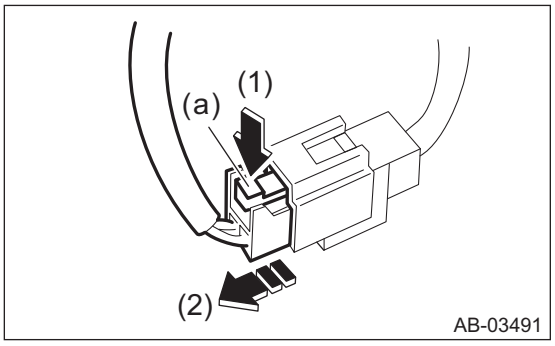
A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:

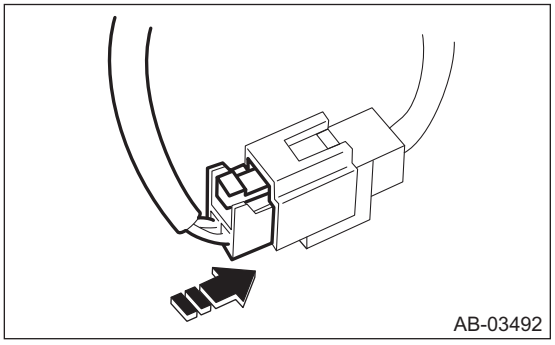
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock (a).
(2) While holding down the lock (a), disconnect the connector.



2) How to connect:

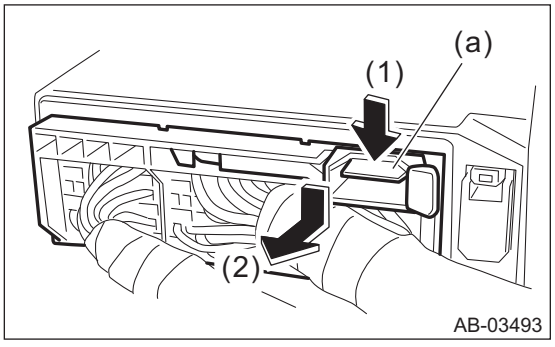
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



2. AIRBAG CONTROL MODULE

1) How to disconnect:

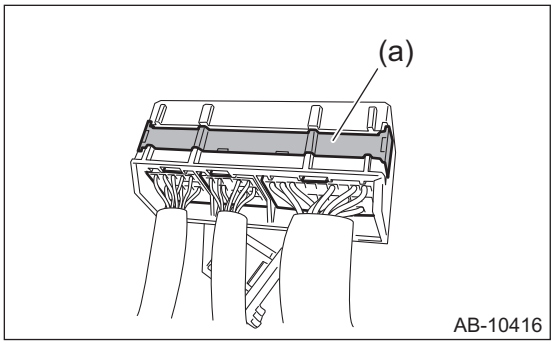
(1) Push the lock lever plate (a).
(2) While holding down the lock lever plate (a), pull the lever toward you.



2) How to disassemble:

(1) Remove the lock plate (a) at the back side of the integrated connector.

(2) Release the lock lever of each connector and pull out the connector.



3) How to connect:

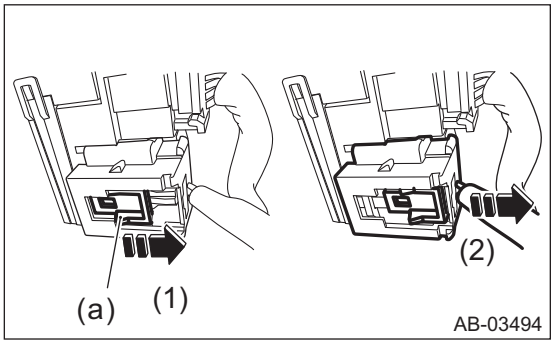
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Insert the connector and push the lock lever in securely.

3. DRIVER'S AIRBAG MODULE (STEERING ROLL CONNECTOR)

1) How to disconnect:

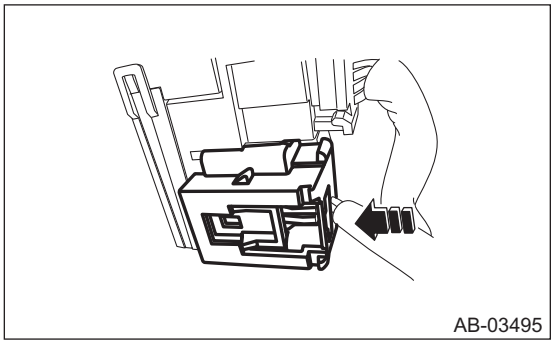
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

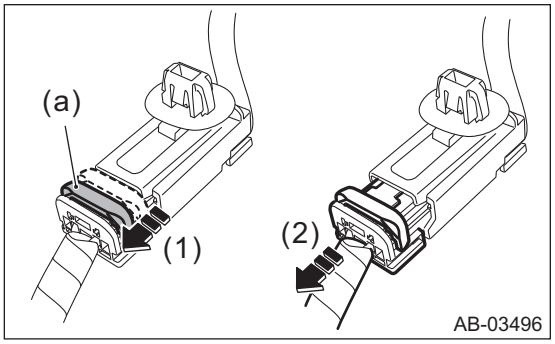


4. PASSENGER'S AIRBAG MODULE

1) How to disconnect:

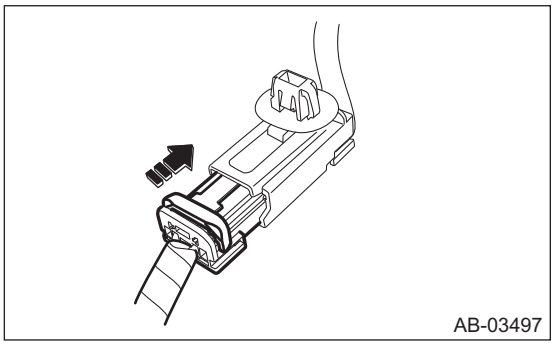
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Pull the slide lock (a) in the direction of arrow.
(2) With the slide lock pulled, disconnect the connector.



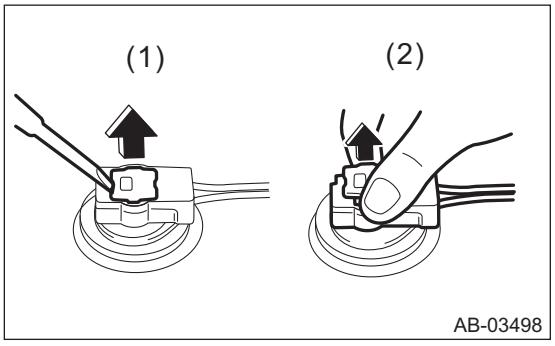
2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



5. DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER

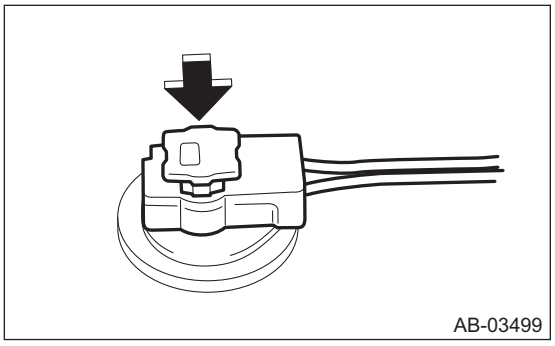
1) How to disconnect:
(1) Using a flat tip screwdriver, pry the push lock upward to unlock.
(2) Pull the connector to disconnect from the airbag module assembly or the retractor assembly.



2) How to connect:

CAUTION:
- **Be sure to insert the connector in until it is locked.**

- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**



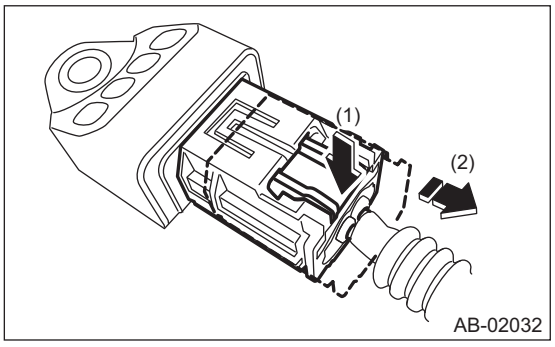
Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

6. FRONT SUB SENSOR

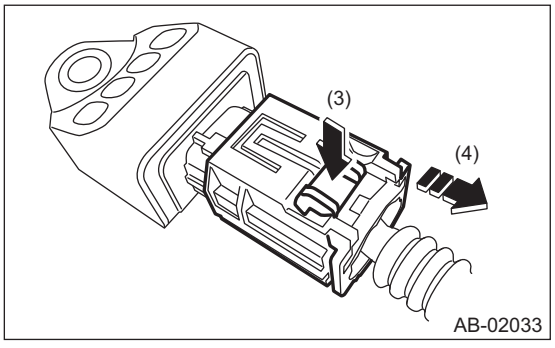
1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.
(2) Holding outer part, pull it one step in the direction of arrow.

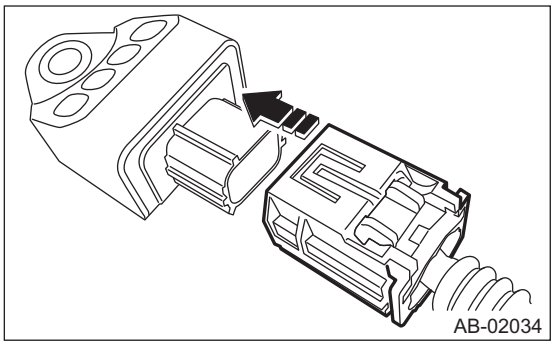


(3) Push the lock arm again.
(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.



2) How to connect:

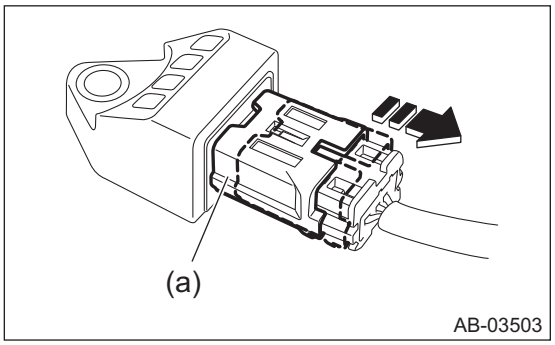
CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



7. FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR

1) How to disconnect:

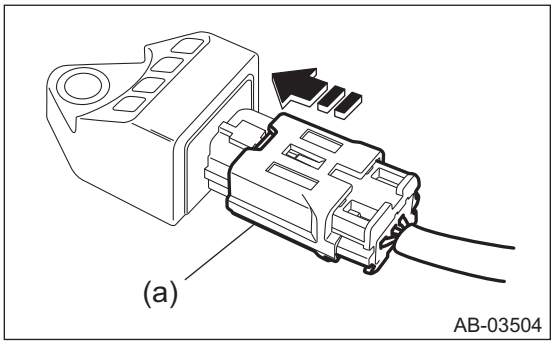
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
Holding outer part (a), pull it in the direction of arrow.



2) How to connect:

CAUTION:
- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

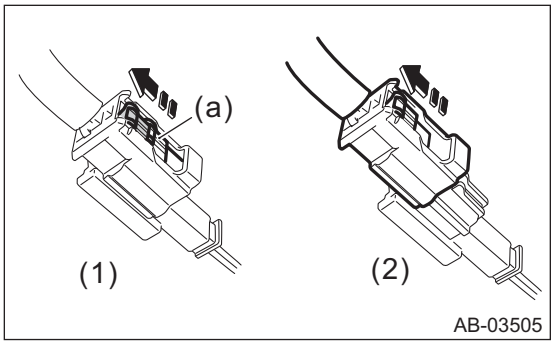


8. FRONT DOOR IMPACT SENSOR (BETWEEN AIRBAG REAR HARNESS AND DOOR HARNESS)

1) How to disconnect:

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.
(1) Pull the slide lock (a) in the direction of arrow.

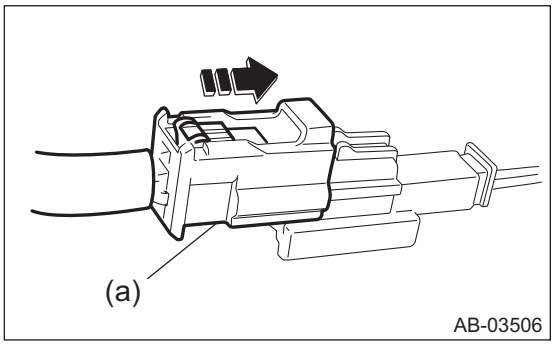
(2) With the slide lock pulled, disconnect the connector.



2) How to connect:

CAUTION:
- **The outer part (a) returns to the original position. Therefore do not touch the outer part.**
- **Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

Holding the connector, push it in securely until a clicking sound is heard.

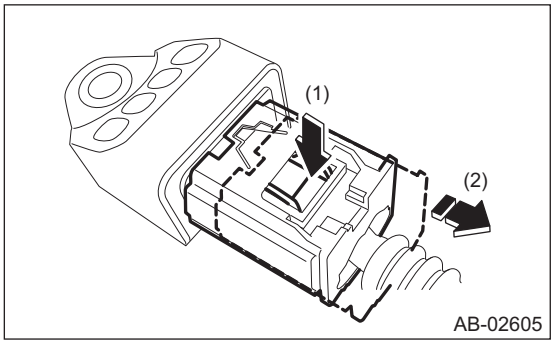


9. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:

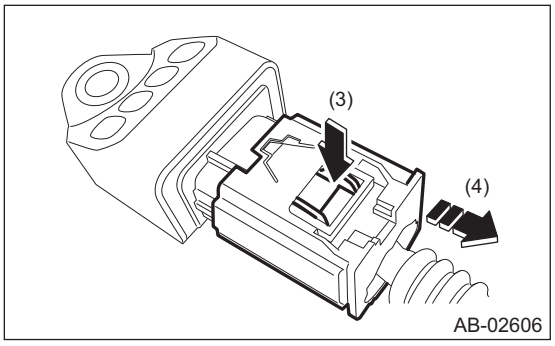
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Push the lock arm.
(2) Holding outer part, pull it one step in the direction of arrow.



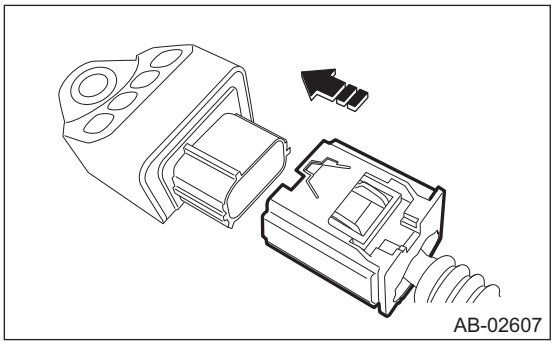
(3) Push the lock arm again.

(4) Holding outer part, pull it in the direction of arrow to disconnect the connector.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

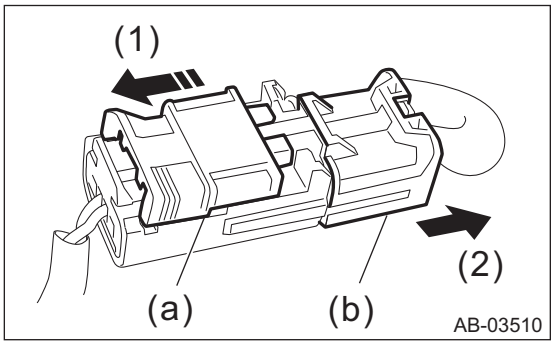


10.SIDE AIRBAG MODULE

1) How to disconnect:

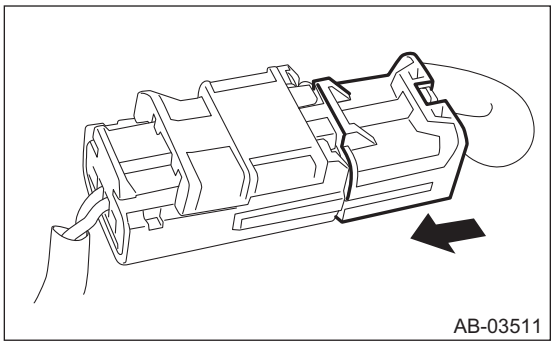
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (a) in the direction of arrow and hold it.
(2) While holding the slide lock (a), pull the connector (b) in the direction of arrow.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.

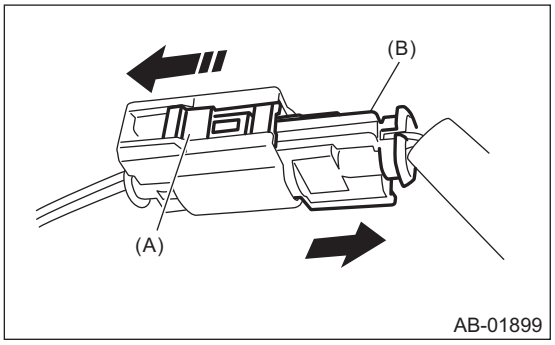


11.BUCKLE SWITCH RH

1) How to disconnect:

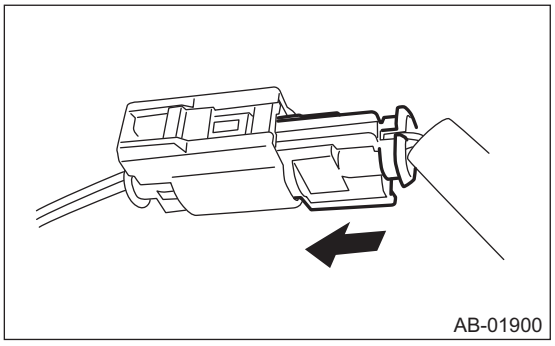
CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

(1) Move the slide lock (A) in the direction of arrow and hold it.
(2) While holding the slide lock (A), pull the connector (B) in the direction of arrow.



2) How to connect:

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
Holding the connector, push it in securely until a clicking sound is heard.



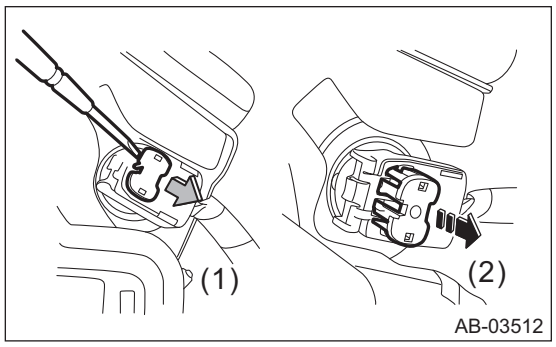
12.OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

Refer to “OCCUPANT DETECTION SYSTEM” section. <Ref. to OD(diag)-16, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>

13.KNEE AIRBAG MODULE

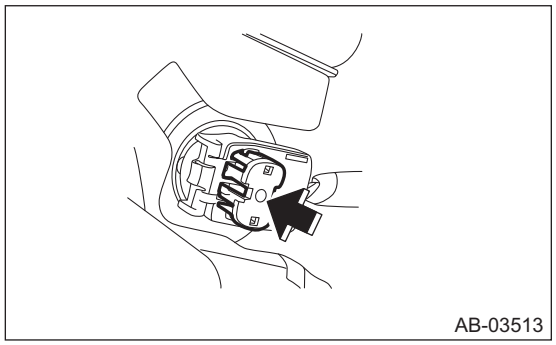
1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.
(2) Pull the connector to disconnect from the airbag module assembly.



2) How to connect:

CAUTION:
- **Be sure to insert the connector in until it is locked.**
- **Press in the push lock securely. Then pull it gently to make sure that it is locked.**



Connect the connector in the reverse order of disconnecting. At this time, be sure to insert until a clicking sound is heard.

3. Inspection Locations after a Collision

A: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

1. DRIVER'S AIRBAG MODULE ASSEMBLY

1) Frontal collision (driver's airbag module assembly activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Knee airbag module
   - Passenger's airbag module (if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Lap seat belt pretensioner (passenger's side only)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
   - Steering wheel
   - Column assembly - steering
   - Steering roll connector
2. Visually inspect the following items and replace any damaged part with a new one.
   - Side airbag module
   - Cover COMPL - front seat backrest
   - Pad assembly - front seat backrest
   - Frame assembly - front seat backrest
   - Frame assembly - front seat cushion
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (driver's airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

2. KNEE AIRBAG MODULE

1) Frontal collision (knee airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Knee airbag module
   - Passenger's airbag module (if deployed)
   - Curtain airbag module (right and left / if deployed)
   - Seat belt pretensioner (right and left)
   - Lap seat belt pretensioner (passenger's side only)
   - Front sub sensor (right and left)
   - Instrument panel assembly (because it is integrated with passenger's airbag module) (if passenger's airbag module is deployed)
   - Steering wheel
   - Column assembly - steering
   - Steering roll connector
2. Visually inspect the following items and replace any damaged part with a new one.
   - Side airbag module
   - Cover COMPL - front seat backrest
   - Pad assembly - front seat backrest
   - Frame assembly - front seat backrest
   - Frame assembly - front seat cushion
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (knee airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3. PASSENGER'S AIRBAG MODULE

1) Frontal collision (passenger's airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Driver's airbag module
   - Knee airbag module

- Passenger's airbag module
- Curtain airbag module (right and left / if deployed)
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Steering wheel
- Column assembly - steering
- Steering roll connector

2. Visually inspect the following items and replace any damaged part with a new one.
   - Side airbag module
   - Cover COMPL - front seat backrest
   - Pad assembly - front seat backrest
   - Frame assembly - front seat backrest
   - Frame assembly - front seat cushion
   - Universal joint assembly - steering
   - Steering gearbox
   - Beam COMPL - steering
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Frontal collision (passenger's airbag module not activated)
Visually inspect the following items and replace any damaged or cracked part with a new one.
Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Driver's airbag module
- Knee airbag module
- Passenger's airbag module
- Seat belt pretensioner (right and left)
- Lap seat belt pretensioner (passenger's side only)
- Front sub sensor (right and left)
- Instrument panel assembly (because it is integrated with passenger's airbag module)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No frontal collision

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

4. SIDE AIRBAG MODULE

1) Side impact (side airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Satellite safing sensor
   - Cover - satellite safing
   - Front door impact sensor (collision side)
   - Plate - door (collision side)
   - Seat belt pretensioner (if triggered or damaged)
   - Lap seat belt pretensioner (passenger's seat only) (collision side)
   - Side airbag module (collision side)
   - Side airbag sensor (collision side)
   - Curtain airbag module (collision side)

- Curtain airbag sensor (collision side)
- Cover COMPL - front seat backrest (collision side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front seat backrest (collision side)
- Frame assembly - front seat cushion (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (collision side)

2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Headrest assembly
   - Bushing - lock headrest
   - Slide rail assembly - OUT
   - Slide rail assembly - INN
   - Cover - hinge front seat
   - Knob - lifter
   - Lever - reclining
   - Seat belt pretensioner (if deployed)
   - Lap seat belt pretensioner (passenger's seat only) (if triggered)
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Side impact (side airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one. Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Cover COMPL - front seat backrest
- Pad assembly - front seat backrest
- Frame assembly - front seat backrest
- Frame assembly - front seat cushion
- Satellite safing sensor
- Cover - satellite safing
- Front door impact sensor
- Side airbag module
- Side airbag sensor
- Curtain airbag module
- Curtain airbag sensor
- Seat belt pretensioner
- Lap seat belt pretensioner (passenger's seat only)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No side impact

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

5. CURTAIN AIRBAG MODULE

1) Side impact or roll over (curtain airbag module activated)

1. Replace the following parts with new ones.
   - Airbag control module
   - Satellite safing sensor
   - Cover - satellite safing
   - Side airbag module (collision side)
   - Curtain airbag module (collision side)

- Seat belt pretensioner (if triggered or damaged)
- Lap seat belt pretensioner (passenger's seat only) (if triggered or damaged)
- Front door impact sensor (collision side)
- Side airbag sensor (collision side)
- Curtain airbag sensor (collision side)
- Cover COMPL - front backrest (collision side)
- Pad assembly - front seat backrest (collision side)
- Frame assembly - front backrest (collision side)
- Frame assembly - front seat cushion (collision side)
- Trim panel - roof assembly
- Trim panel for each pillar (collision side)
- Airbag bracket (model with sunroof) (collision side)

2. Visually inspect the following items and replace any damaged part (collision side) with a new one.
   - Assist rail - front and rear
   - Bracket - assist rail front and rear
   - Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
   - Harnesses and connectors on body side that are linked to the replaced parts

2) Side impact (curtain airbag module not activated)

Visually inspect the following items and replace any damaged or cracked part (collision side) with a new one. Specially inspect the damage of airbag module body, mounting bracket and harness connector.

- Trim panel - roof assembly
- Trim panel for each pillar
- Curtain airbag module
- Satellite safing sensor
- Cover - satellite safing
- Front door impact sensor
- Side airbag sensor
- Curtain airbag sensor
- Seat belt pretensioner (if deployed)
- Lap seat belt pretensioner (passenger's seat only) (if triggered)
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) No side impact

- Visually inspect the airbag modules for damage or contamination and replace any faulty part with a new one.
- Passenger's occupant detection system (check according to the diagnosis procedure in "OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)" section) <Ref. to OD(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

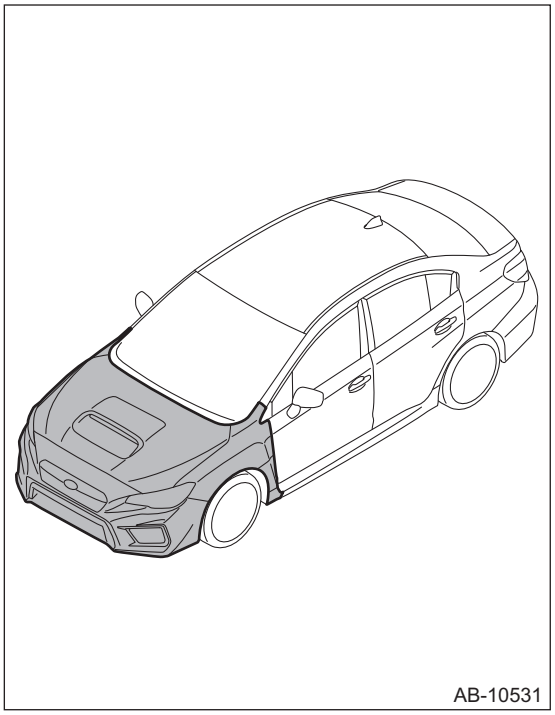
6. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module has been activated.
- Knee airbag module has been activated.
- Passenger's airbag module has been activated.
- Side airbag module has been activated.
- Curtain airbag module has been activated.
- Seat belt pretensioner has been activated.
- Lap seat belt pretensioner has been activated.

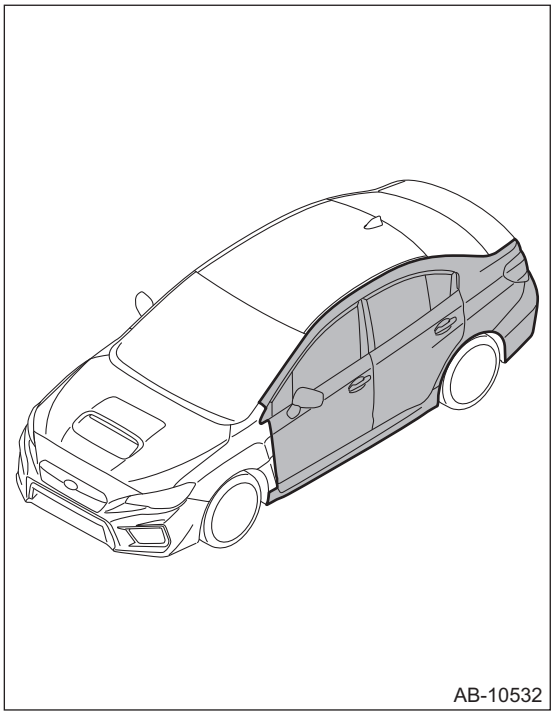
7. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.



- Front sub sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Driver's airbag module, knee airbag module or passenger's airbag module has been activated.

8. FRONT DOOR IMPACT SENSOR, SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR



- Front door impact sensor, side airbag sensor, satellite safing sensor, sensor cover and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.

- Connector is scratched, cracked or deformed.
- Side airbag module or curtain airbag module has been activated. (Operating side)

9. STEERING ROLL CONNECTOR

Check for the following, and replace the damaged parts such as cracks, deformation, etc. with new parts.
- Combination switch
- Steering roll connector

10.CHECK STEERING SYSTEM

For steering wheel, column assembly - steering, universal joint assembly - steering, and steering gearbox, check the following items, and if there is anything out of standard value, it is considered to be damaged. If so, replace it with a new part.
- Check the following items for the column assembly - steering. <Ref. to PS-27, INSPECTION, Steering Column.>
  – Mounting conditions and deflection of front and rear, upward and downward directions of the steering wheel and column assembly - steering.
  – Deflection of front and rear, upward and downward directions, and mounting condition to vehicle body of the column assembly - steering. (After a collision, absorbing part of the column assembly - steering may have been operated.)
- Check for deflection and the swing load of the universal joint assembly - steering. <Ref. to PS-22, INSPECTION, Universal Joint.>
- Check the following items for the steering gearbox. (Except for STi) <Ref. to PS-73, INSPECTION, Electric Power Steering Gearbox.>
  – Rack sliding resistance and deflection
  – Input shaft play
  – Rotational resistance of gearbox
- Check the following items for the steering gearbox. (STi) <Ref. to PS-57, INSPECTION, Steering Gearbox.>
  – Rack sliding resistance and deflection
  – Input shaft play
  – Rotational resistance of gearbox

11.PASSENGER'S SEAT

CAUTION:
If any of the following applies, replace the pad assembly - front seat cushion & frame assembly - front cushion as a unit. Do not disassemble.
- **The frame assembly - front cushion or the pad assembly - front seat cushion is cracked or deformed.**
- **Scratches, cracks, or deformation found on the occupant detection system sensor mat or occupant detection control module, or attachment brackets of the control module.**
- **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**

1) Check for the following, and replace the damaged parts with new parts.
- Body or bracket of the seat belt inner - front is scratched, cracked or deformed.
- Frame assembly - front backrest is cracked or deformed.
- Headrest assembly for deformation or play
- If the cover - front cushion and the cover COMPL - front backrest is damaged or frayed, replace the cover with a new part.
- If the cover - front cushion and the seat heater are replaced, replace the cover hang wire with a new part.

2) When the passenger's seat cover COMPL - front seat has been removed or replaced, make sure that the occupant detection system operates normally.
3) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

12.INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

1) Check the following parts equipped with the direct type connector for damage, and also check each harness for pinch and connector damage. Replace the main harness as a unit if damage is found.
- Driver's airbag module
- Knee airbag module
- Curtain airbag module
- Pretensioner

2) Check the seat cushion, backrest, slide rail and headrest for installation condition and looseness.
3) If any break or fray is found in the cover COMPL - front backrest of the driver's seat or passenger's seat, the side airbag system may not operate normally. In this case, replace the cover COMPL - front backrest with a new part.

4. Driver's Airbag Module

A: REMOVAL

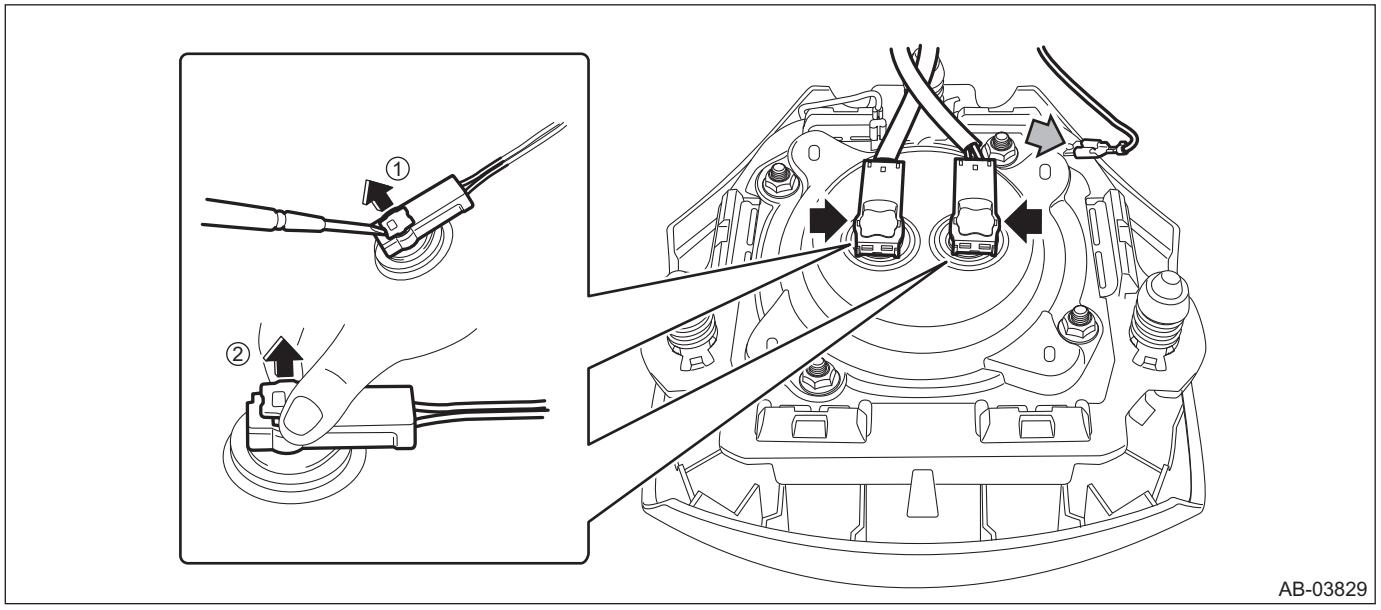
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

4) Remove the driver's airbag module.
   (1) Using a hexagon wrench etc. wrapped by protective tape, insert the snap pins and release the locks (three locations).

   (2) Disconnect the horn harness and airbag connector, and remove the driver's airbag module. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.

2) Install the driver's airbag module.

CAUTION:
• Make sure that the snap pin is securely placed inside the guide before installing the airbag module.
• Be sure to insert the connector in completely until it is locked.
• Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.
• After the airbag module is installed, make sure that the airbag module locks (three positions) are securely locked.
(1) Connect the airbag connector to the airbag module securely.
(2) Connect the horn harness.
(3) Press in the locks (three positions) to install the airbag module.

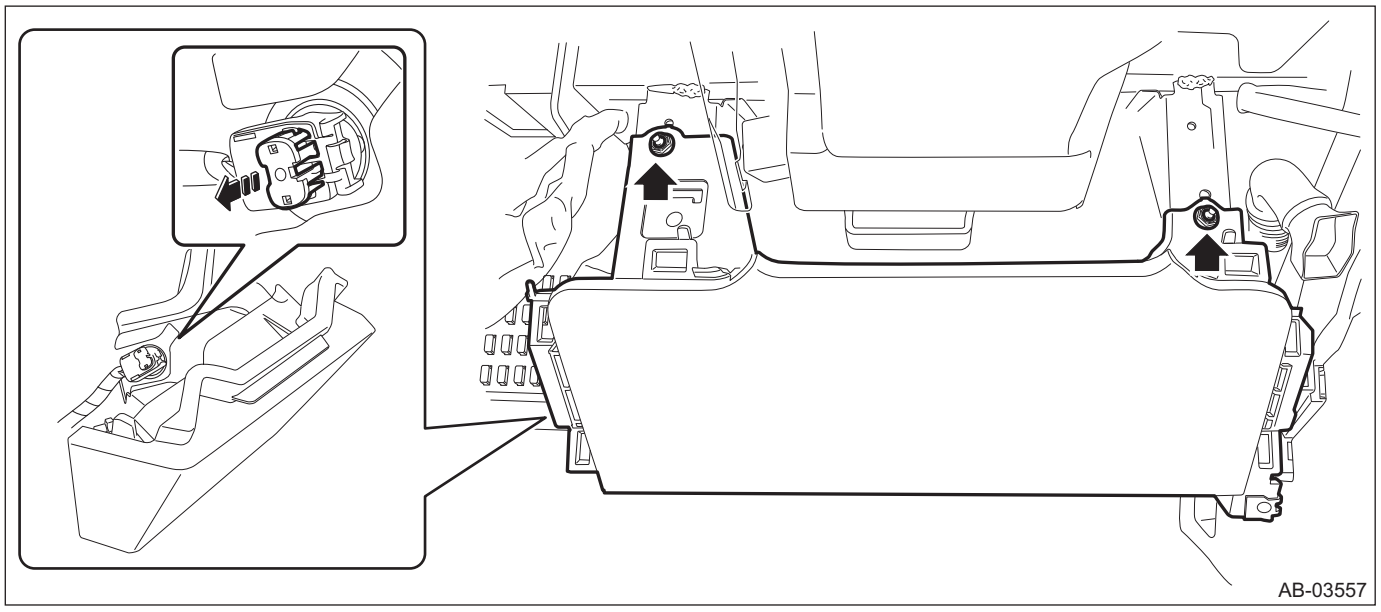
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5. Knee Airbag Module

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the nuts to remove the knee airbag module and disconnect the harness connector. <Ref. to AB-24, KNEE AIRBAG MODULE, PROCEDURE, Airbag Connector.>



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
1) Before installation, inspect the following items and replace any faulty part with a new one.
• Airbag module is cracked or deformed.
• The claw of metal case of airbag inflator is disengaged from plastic cover.
• Knee airbag module bracket is cracked or deformed.
• Harness and/or connector is cracked, deformed or open.
• Harness wire is exposed.
• Depending on the condition of the beam COMPL - steering, installation of the knee airbag module is difficult.
2) Install the knee airbag module.

CAUTION:
• Be sure to insert the connector in completely until it is locked.
• Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

6. Passenger's Airbag Module

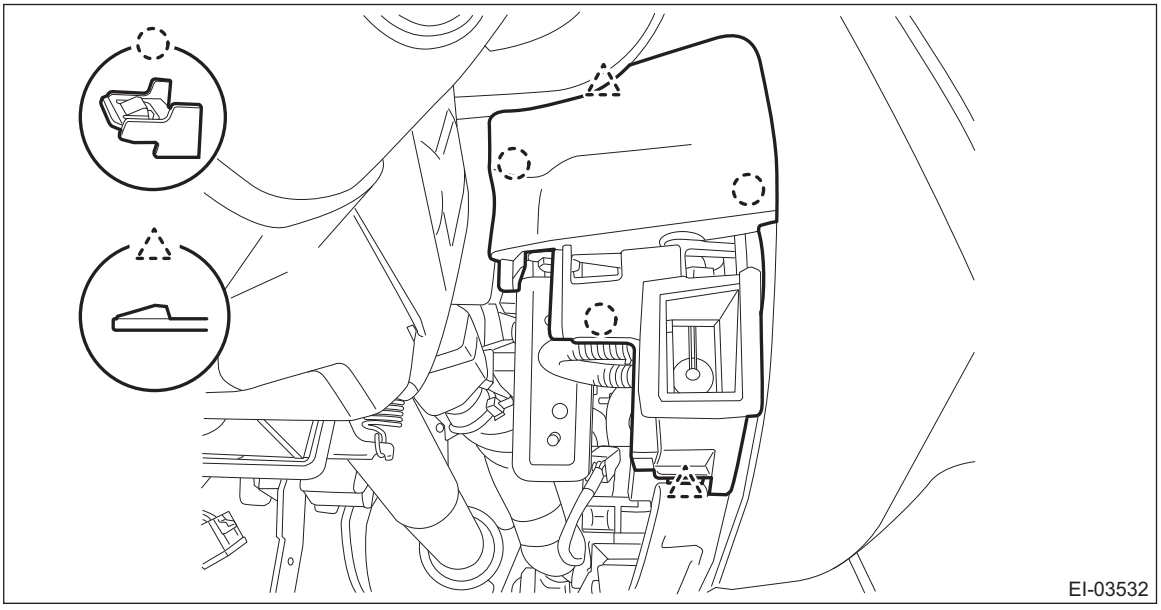
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

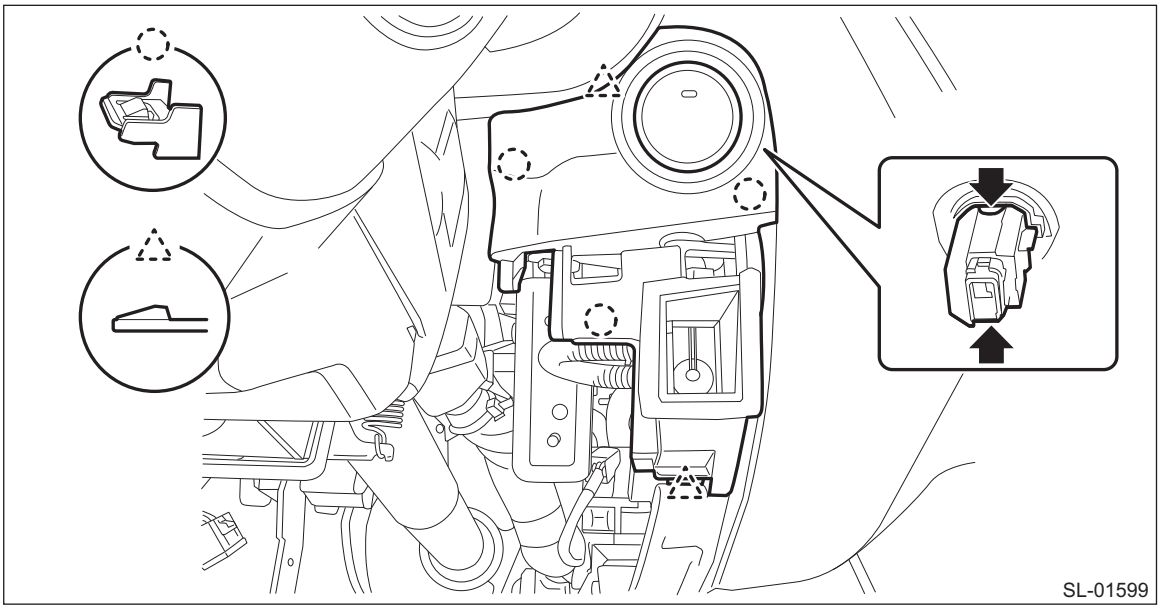
NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For the power seat model, remove the console box before removing the battery ground terminal.

3) Remove the console box assembly, the cover - shift lever and the panel center LWR on the RH and LH sides. <Ref. to EI-70, REMOVAL, Console Box.>
4) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
5) Remove the cover switch - starter. (Models without the keyless access with push button start)
   (1) Release the claws and remove the cover switch - starter.
   (2) Disconnect the connector and aspirator hose.

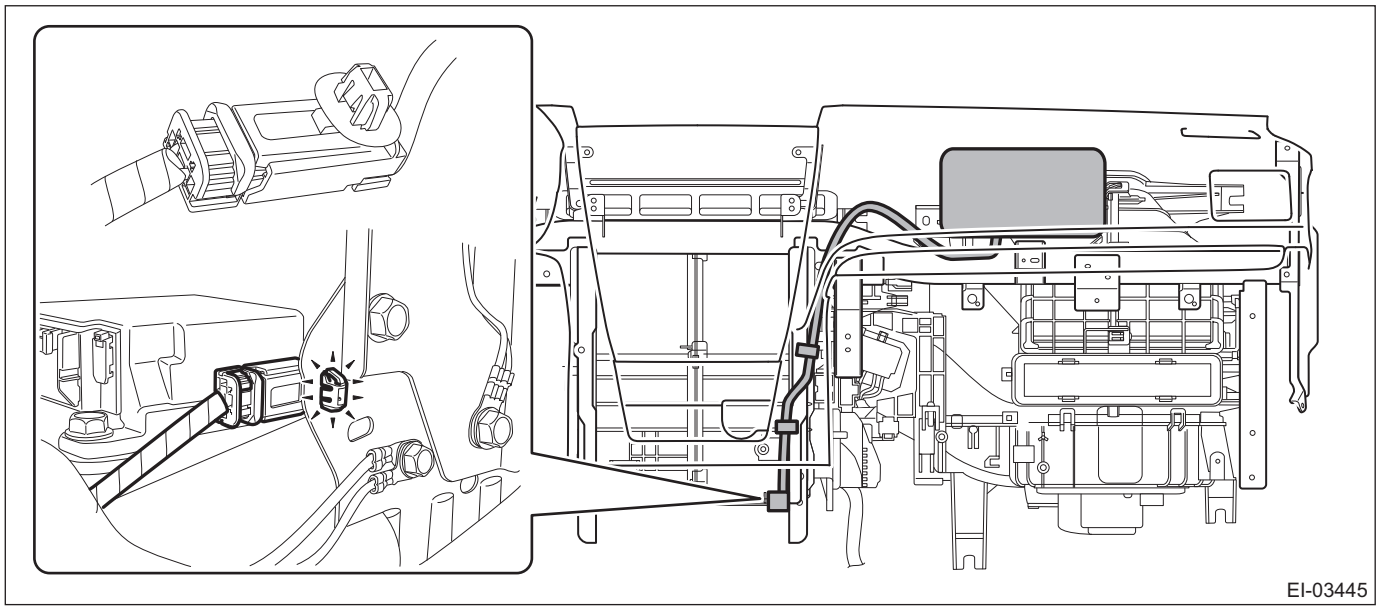


6) Remove the panel - switch. (Model with keyless access with push button start)
   (1) Release the claw of the switch - push button start, and disconnect the connector.
   (2) Release the claws, and then remove the panel - switch.

(3) Disconnect the connector and aspirator hose.

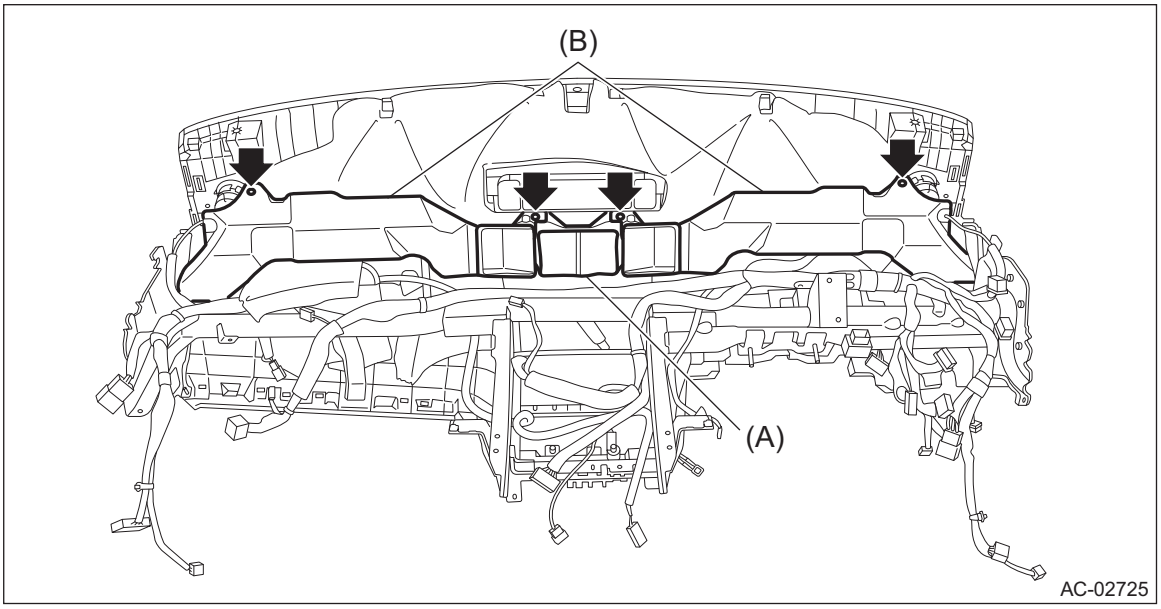


7) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
8) Remove the left and right grille speaker sides. <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
9) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-89, REMOVAL, Upper Inner Trim.>
10) Remove the glove box assembly. <Ref. to EI-67, REMOVAL, Glove Box.>
11) Remove the center grille assembly. <Ref. to AC-91, REMOVAL, Air Vent Grille.>
12) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
13) Remove the multi-function display assembly. <Ref. to IDI-19, REMOVAL, Multi-function Display (MFD).>
14) Remove the combination meter assembly. <Ref. to IDI-12, REMOVAL, Combination Meter.>
15) Disconnect the passenger's airbag module connector. <Ref. to AB-18, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>

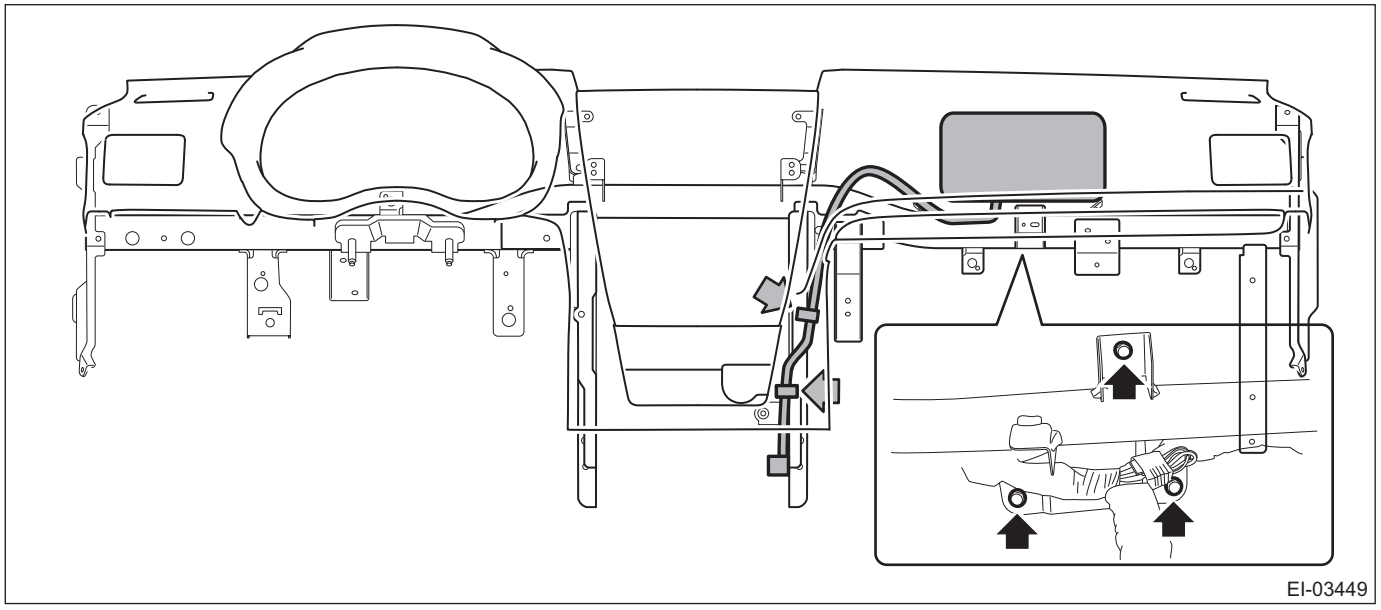


16) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>
17) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
18) Remove the cover side sill - front INN and cover side sill - front on the RH and LH side. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
19) Remove the body side weather strip - flange front.

20) Remove the instrument panel assembly and the beam COMPL - steering as a unit. <Ref. to EI-75, REMOVAL, Instrument Panel Assembly.>
21) Remove the screws and remove the front (A) and side vent duct (B) LH, RH.



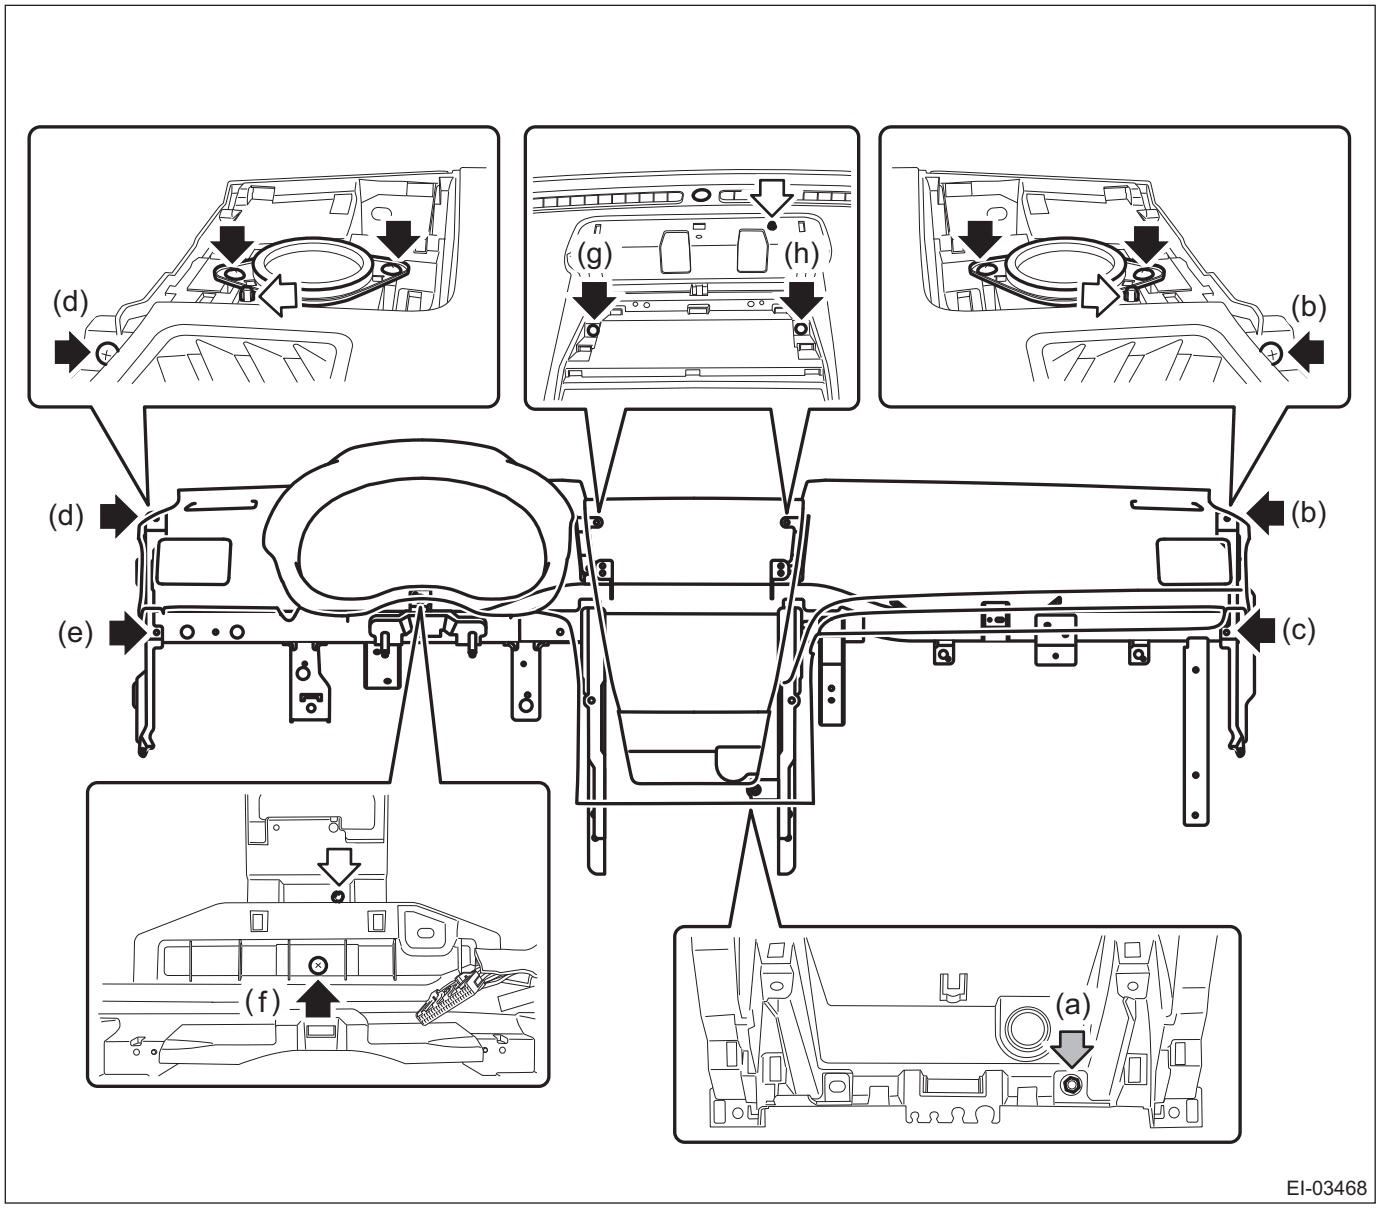
22) Separate the panel COMPL - instrument and the beam COMPL - steering.
(1) Remove the clamps and bolts of the passenger's airbag module harness.



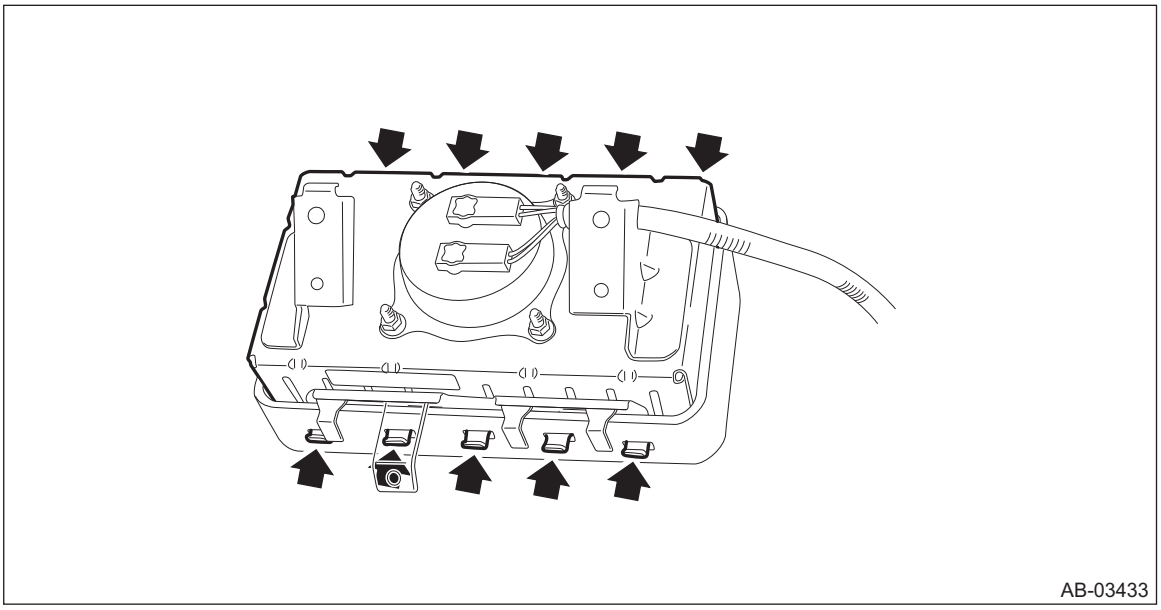
(2) Disconnect the connectors of the left and right speakers and the sunload sensor.

NOTE:
Detach the harness clamp together.
(3) Disconnect the front accessory socket connector.
(4) Remove the nut (a) and screws (b), (c), (d), (e), (f), (g) and (h).

(5) While being careful with the harness, separate the panel COMPL - instrument and the beam COMPL - steering.



23) Remove the claws, and remove the passenger's airbag module.



24) For handling of the removed airbag module, refer to "CAUTION". <Ref. to AB-9, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Passenger's airbag lid (instrument panel surface) is cracked or deformed.
- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket is cracked or deformed.

2) Install the instrument panel assembly. <Ref. to EI-81, INSTALLATION, Instrument Panel Assembly.>
3) Install the cover side sill - front on the RH and LH sides.
4) Install the cover side sill - front INN on the RH and LH sides.
5) Install the column assembly - steering. <Ref. to PS-26, INSTALLATION, Steering Column.>
6) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>

CAUTION:
• Always install the universal joint assembly - steering after installing the steering column to avoid damage to the universal joint assembly - steering.
• Be sure to follow the tightening order and tightening torque of the universal joint assembly - steering to avoid the steering effort from becoming heavy. After confirming that the steering column position is in the neutral position, tighten the universal joint assembly - steering.
• Always place the tilt lever to the lock position after the steering column is adjusted.

7) Install the combination meter assembly.
8) Install the multi-function display assembly.
9) Install the audio assembly or navigation assembly.
10) Install the center grille assembly.
11) Install the glove box assembly.

12) Install the trim panel - front pillar UPR on the RH and LH sides. <Ref. to EI-90, INSTALLATION, Upper Inner Trim.>
13) Install the grille speaker side on the RH and LH sides.
14) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

15) Install the panel - switch. (Model with keyless access with push button start)
16) Install the cover switch - starter. (Models without the keyless access with push button start)
17) Install the cover assembly - instrument panel LWR driver.
18) Install the panel center LWR on the RH and LH sides.
19) Install the cover - shift lever and the console box assembly.
20) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the "P" position.

7. Side Airbag Module

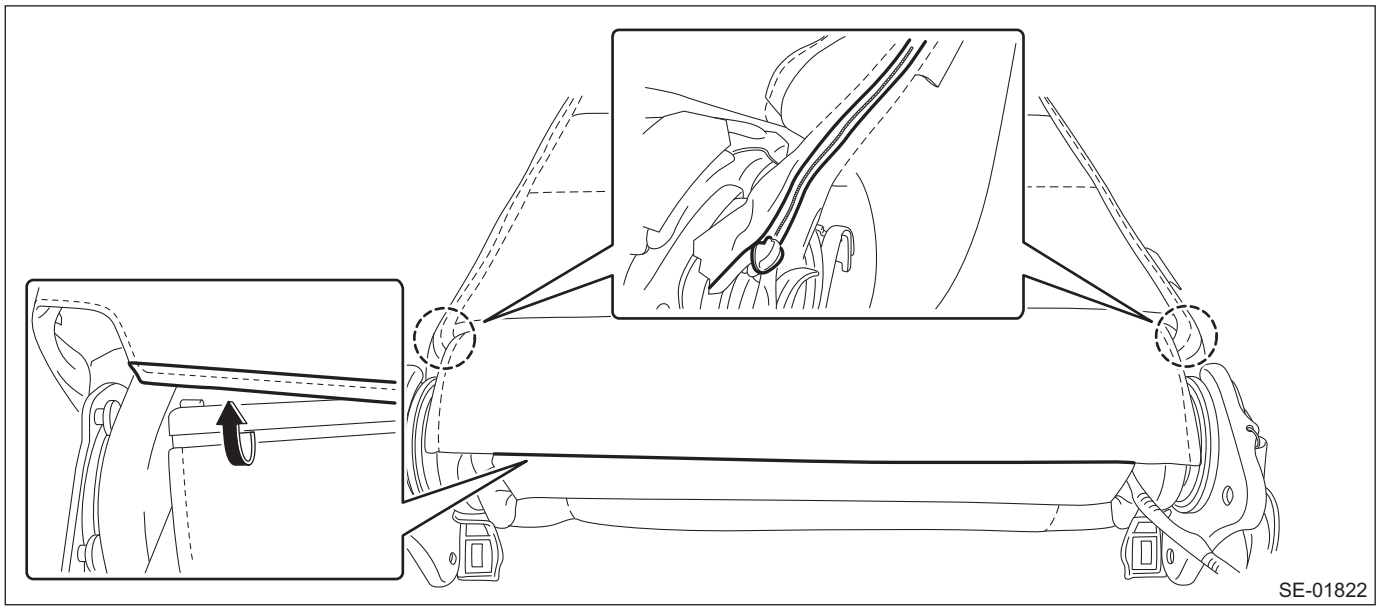
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.

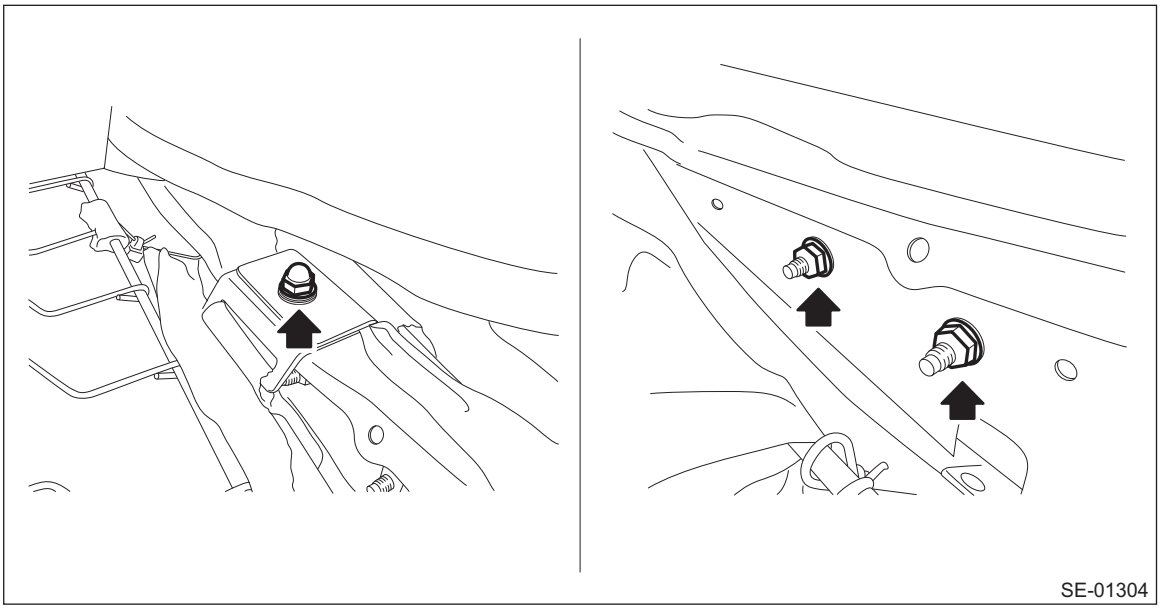
3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Separate the backrest assembly and the seat cushion assembly. <Ref. to SE-12, DISASSEMBLY, Front Seat.>
5) Remove the side airbag module.

CAUTION:
Do not open the protective cover of the side airbag module. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.



NOTE:
If it is hard to open, use a metal clip, etc.
(3) Remove the hexagon cap nut and nuts.

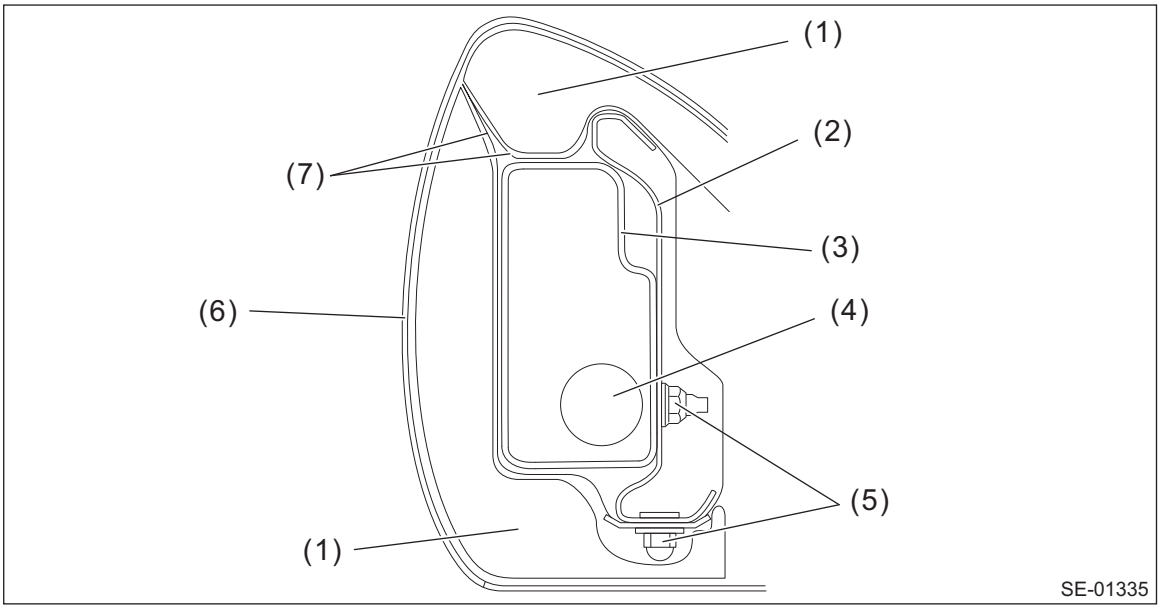
(4) While taking care not to damage the airbag protective cover, remove the side airbag module.



B: INSTALLATION

CAUTION:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**
- **Make sure that the side airbag module is installed as shown in the figure.**



(1)	Pad ASSY - front seat backrest	(4)	Side airbag module inflator	(7)	Side airbag guide cloth
(2)	Frame ASSY - front backrest	(5)	Nut		
(3)	Side airbag module protective cover	(6)	Cover COMPL - front backrest		

Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.

- **Do not reuse mounting bolts and nuts of airbag module.**

Always replace with the specified new bolts and nuts.

- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse hog rings.**

- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

1) Before installation, inspect the following items and replace any faulty part with a new one.
- Make sure that there is no foreign matter on side airbag module.
- Front seat, airbag module and mounting bracket are damaged or deformed.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.

2) Install the side airbag module to the frame assembly - front backrest.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

3) Assemble the front seat. <Ref. to SE-28, ASSEMBLY, Front Seat.>

CAUTION:
After restoring the seat, operate the reclining and sliding mechanisms to check that the side airbag harness is not caught.

4) Install the front seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8. Curtain Airbag Module

A: REMOVAL

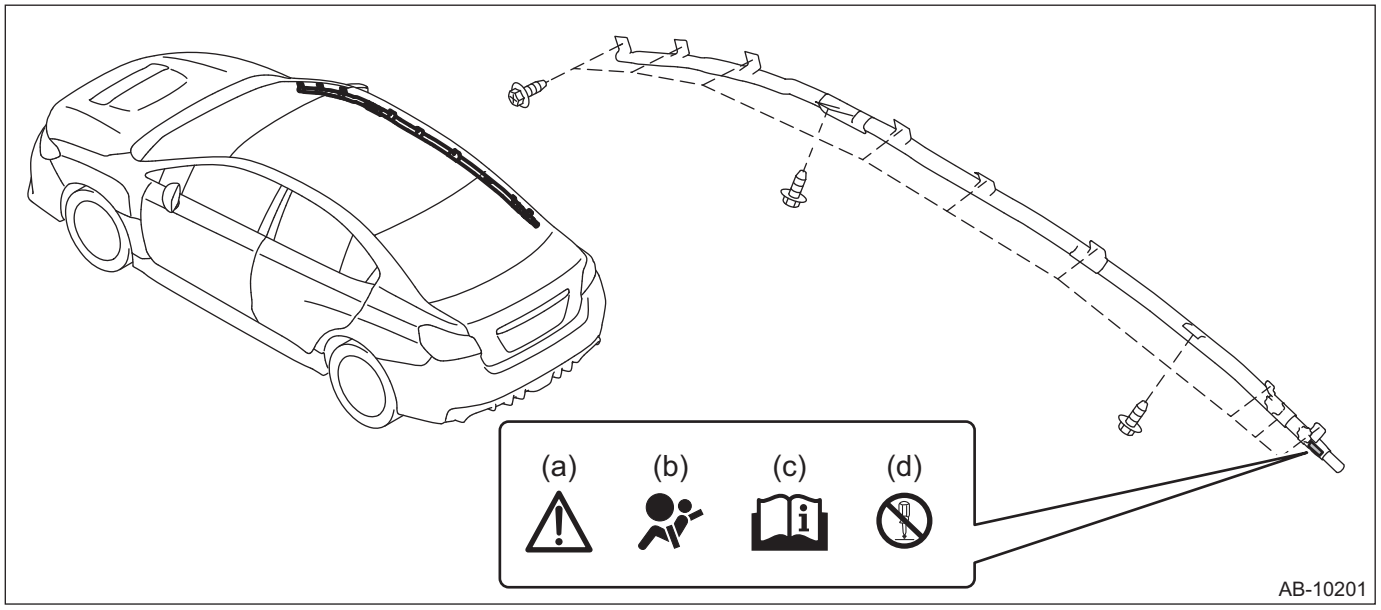
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Remove the trim panel - roof assembly. <Ref. to EI-101, REMOVAL, Roof Trim.>
4) Remove the curtain airbag module.

CAUTION:
- **Be careful not to damage the curtain airbag module during removal.**
- **Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.**
- **Remove the modules in order starting from the vehicle front.**

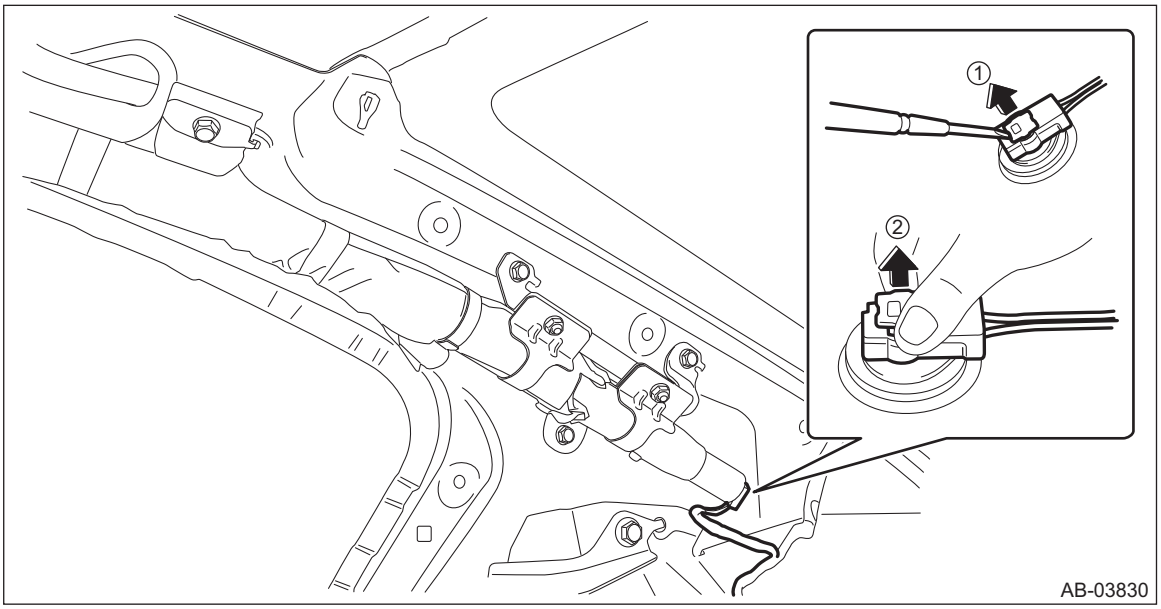
(1) Remove all the bolts and clips, and remove the curtain airbag module.



*1 Meaning of pictograms indicated on the label

(a) Flammable explosive substance encapsulated parts; be careful of handling.
(b) Indicates that this part is an airbag module.
(c) Before handling, always refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" in the service manual. For the disposal procedures of the airbag modules, refer to "Airbag Module Disposal".
(d) Do not disassemble the airbag module.

(2) Disconnect the curtain airbag module connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• When installing the curtain airbag module, install a specified part at specified place.
• Be careful not to damage the curtain airbag module during installation.
• Never open the curtain airbag module before activation. Never reuse the deployed curtain airbag module.
• Make sure that there are no foreign matter on airbag module.
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
• Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
• For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
1) Before installation, inspect the following items and replace any faulty part with a new one.
- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open.
- Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

2) Install the curtain airbag module.

CAUTION:
• Be sure to insert the connector in completely until it is locked.
• Press in the push lock of the direct type connector securely. Then pull it gently to make sure that it is locked.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

9. Airbag Control Module

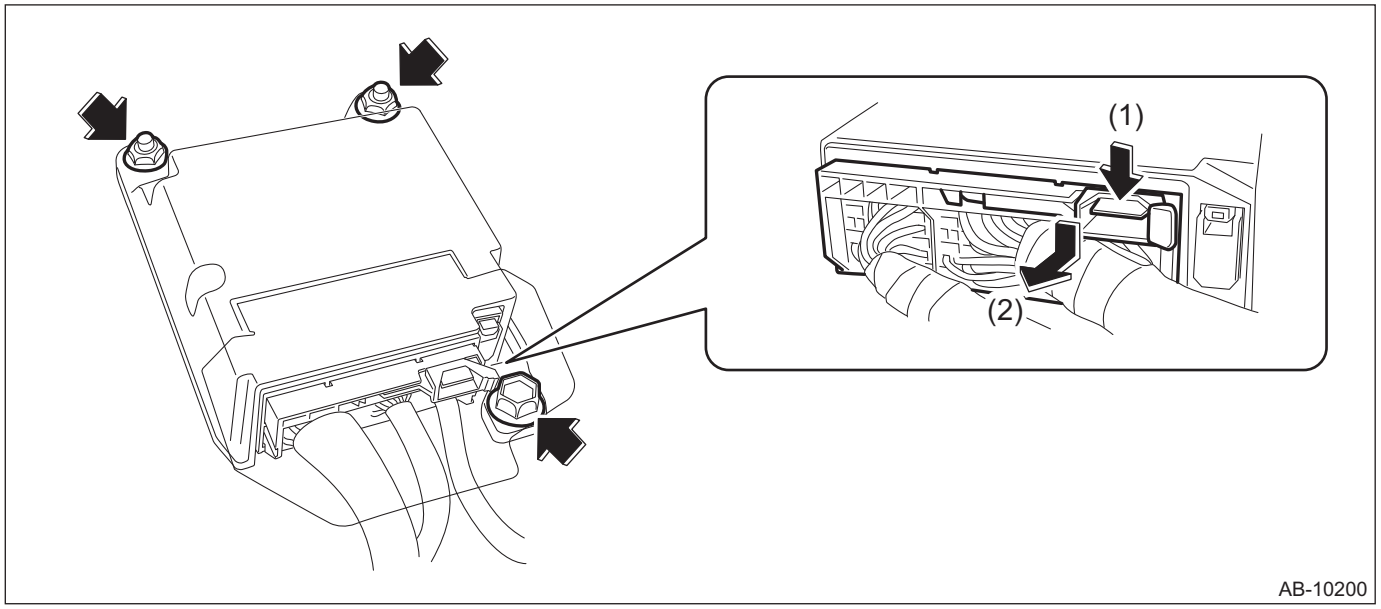
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not disassemble the airbag control module.
• If the airbag control module is deformed or if there is any trace of water on the module, replace the airbag control module with a new one.
• Do not drop the airbag control module.
• After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.

3) Remove the console box assembly and the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
4) Remove the center grille assembly. <Ref. to AC-91, REMOVAL, Air Vent Grille.>
5) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
6) Remove the airbag control module.
   (1) Disconnect the connector from airbag control module. <Ref. to AB-17, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>
   (2) Remove the bolt and nuts and remove the airbag control module.



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- Control module is deformed.
- Control module connector is damaged.
- Control module mounting bracket is damaged.

2) Install the airbag control module.

CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

3) Install the audio assembly or navigation assembly.
4) Install the center grille assembly.
5) Install the cover - shift lever and the console box assembly.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

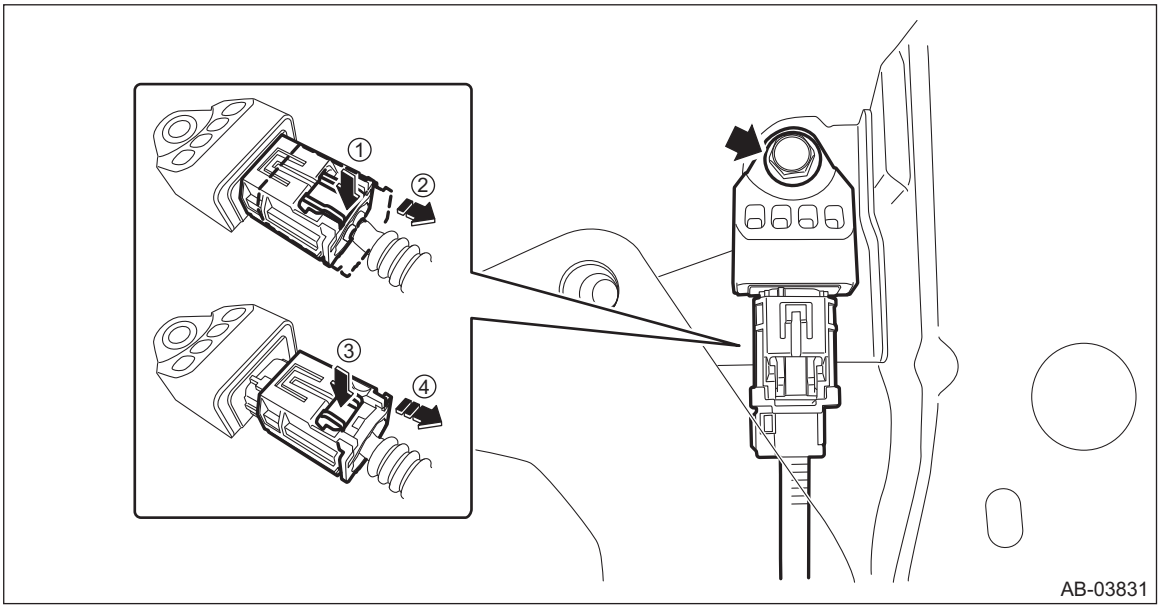
NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

10.Front Sub Sensor

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

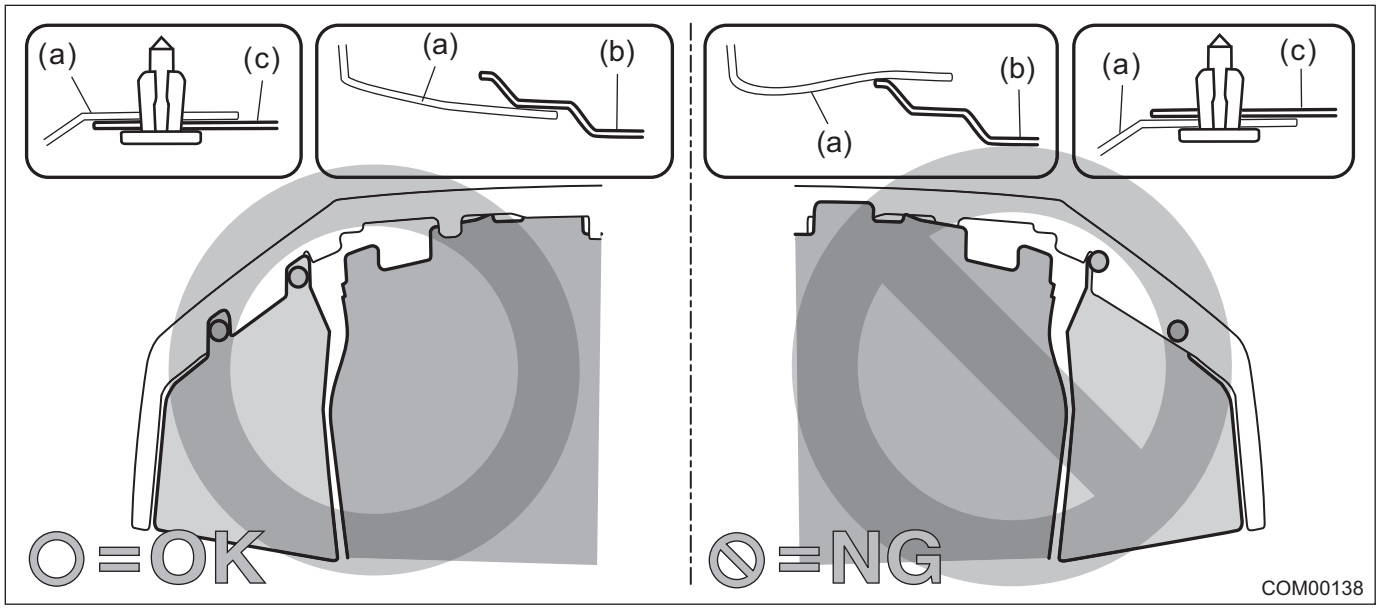
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the bumper face - front and the bumper beam COMPL - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
4) Remove the bolt, and then detach the front sub sensor. <Ref. to AB-20, FRONT SUB SENSOR, PROCEDURE, Airbag Connector.>



B: INSTALLATION

CAUTION:
- **If the airbag has been activated, replace the front sub sensor with a new part.**

• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Before installation, inspect the following items and replace any faulty part with a new part.
- Front sub sensor damage
- Connector damage

2) Install the front sub sensor.

CAUTION:
• Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.
• When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)

3) Install the bumper beam COMPL - front and the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

11.Front Door Impact Sensor

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

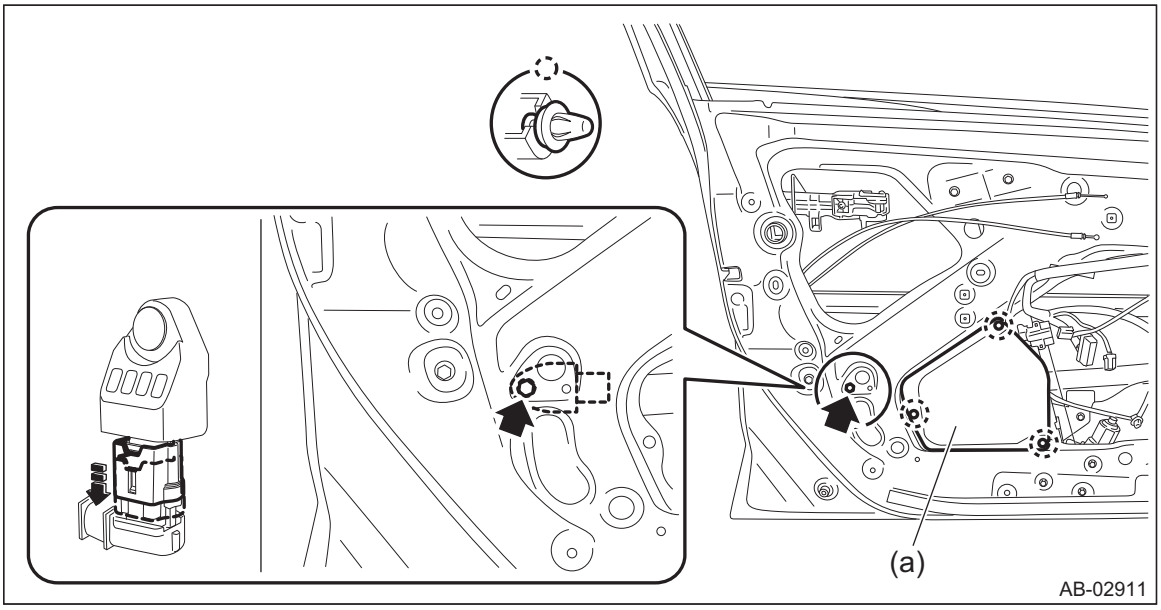
1) Operate the power window switch to close the front door glass.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

4) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
5) Remove the sealing cover. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
6) Remove the front door impact sensor.
   (1) Remove the plate - door (a).

CAUTION:
If the clip is damaged, replace it with a new part because the panel assembly - front door may be deformed.

   (2) Remove the nuts and then remove the front door impact sensor.
   (3) Disconnect the airbag connector and remove the front door impact sensor. <Ref. to AB-21, FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR, PROCEDURE, Airbag Connector.>



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The front door impact sensor or connector is damaged.
- Inner panel area of the panel assembly - front door is deformed.
- Side airbag module has been activated.

2) Install the front door impact sensor.

CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the plate - door.

4) Install the sealing cover.
5) Install the trim panel - front door.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

12.Side Airbag Sensor

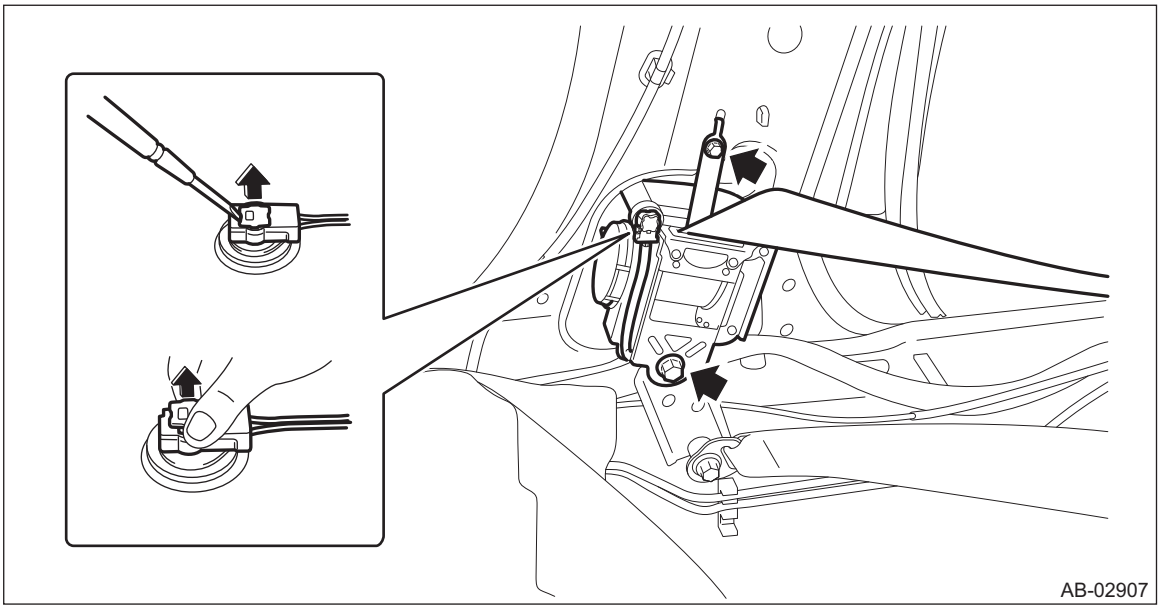
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Move the seat all the way forward, from which the side airbag sensor is to be removed.

NOTE:
This is to remove the seat belt retractor assembly.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
• For model with battery sensor, disconnect the ground terminal from battery sensor.
• For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.
4) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
5) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
6) Remove the seat belt retractor. (On the side where the side airbag sensor is removed)
(1) Turn over the floor mat to disconnect the belt tension sensor connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

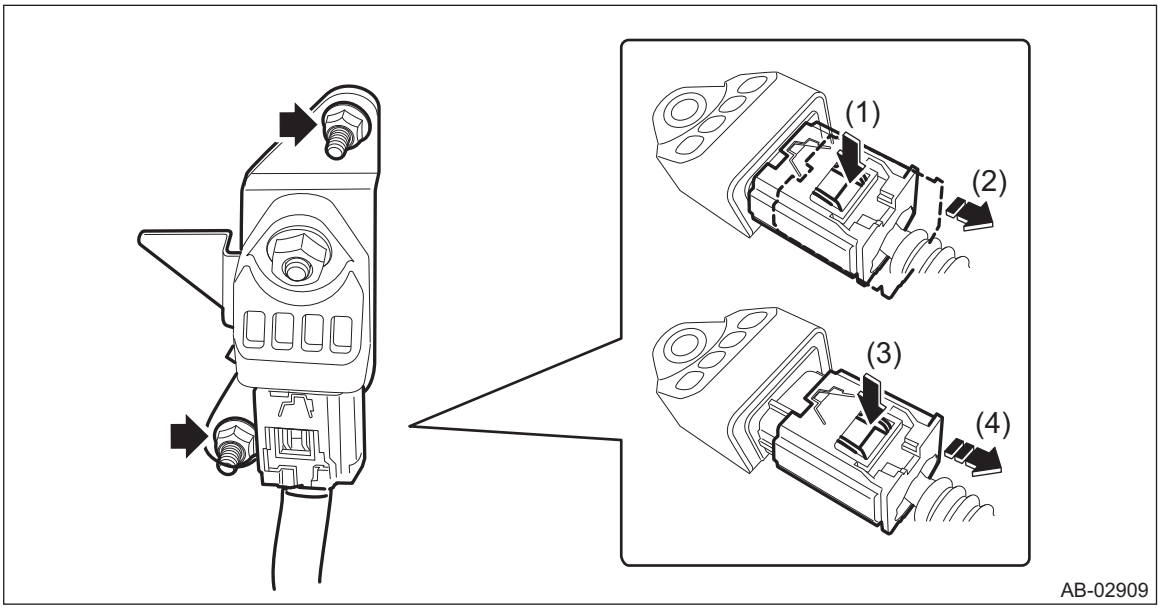
NOTE:
Also disconnect the connector of the passenger's lap seat belt pretensioner.
(2) Remove the bolt to remove the seat belt retractor.



7) Remove the nuts and then remove the side airbag sensor. <Ref. to AB-22, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>

CAUTION:
• Do not separate the side airbag sensor and bracket. It causes the airbag system malfunction.

- **If the sensor is removed from the bracket, be sure to replace with a new part.**



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The side airbag sensor, sensor bracket, or connector are damaged.
- Side airbag module has been activated.

2) Install the side airbag sensor.

CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

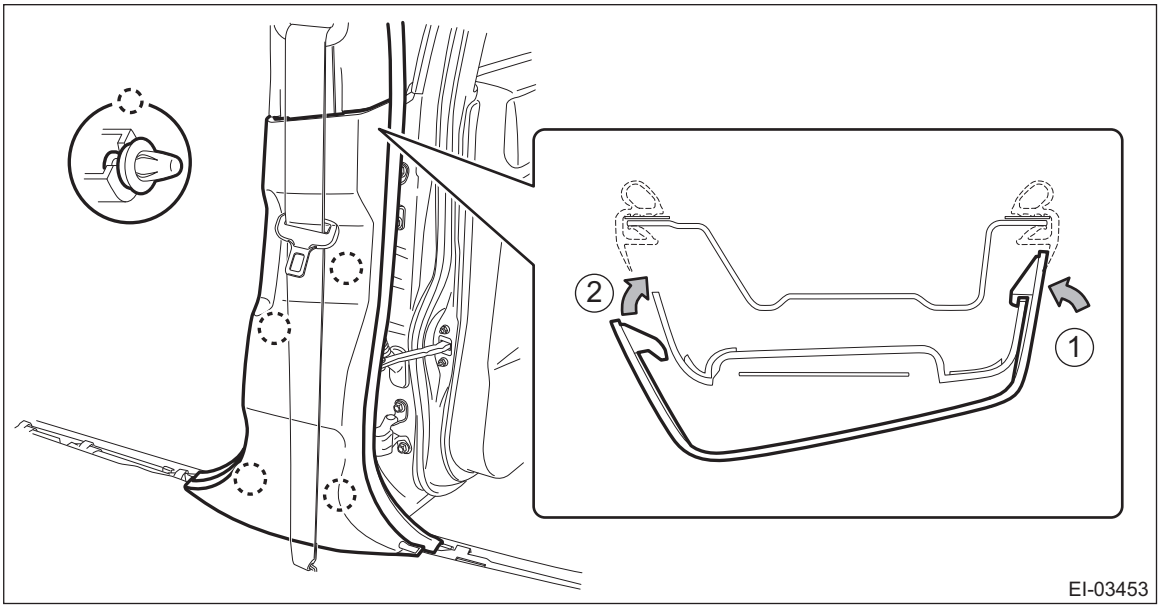
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the seat belt retractor.

Tightening torque:
Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

4) Install the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



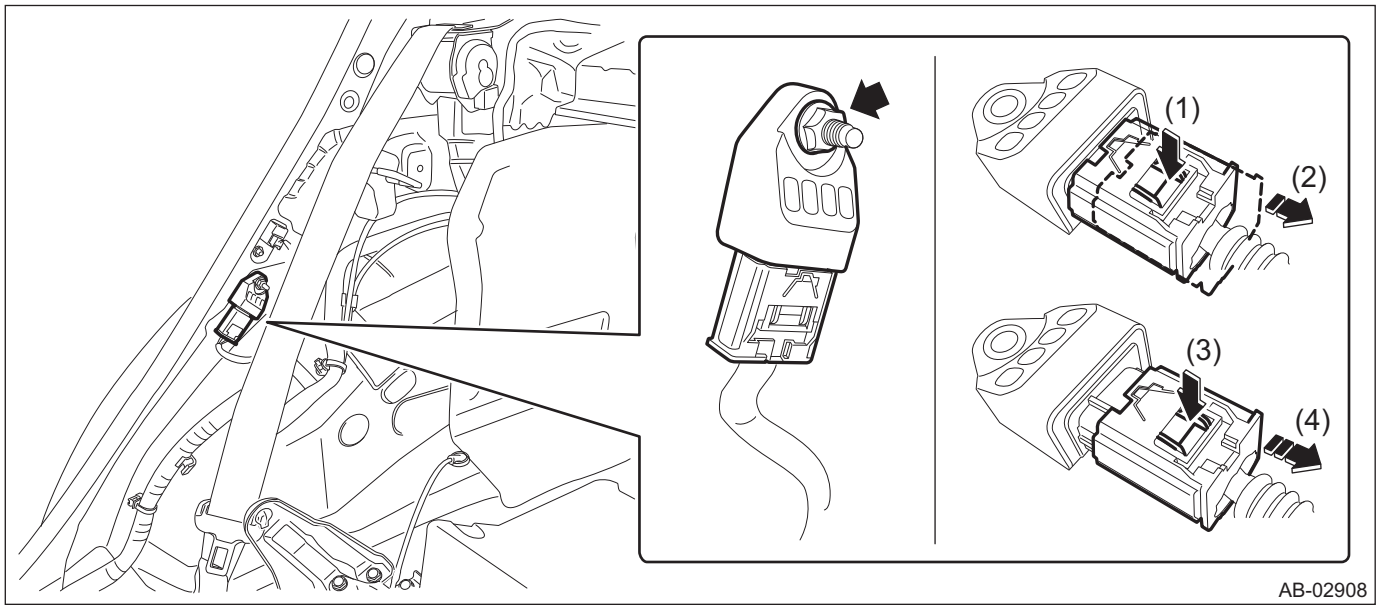
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

13.Curtain Airbag Sensor

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the cover side sill - rear INN and the trim panel - rear pillar LWR. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>
5) Remove the nuts and then remove the curtain airbag sensor. <Ref. to AB-22, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR, PROCEDURE, Airbag Connector.>



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new one.
• Curtain airbag sensor or connector is damaged.
• Curtain airbag module has been activated.
2) Install the side airbag sensor.

CAUTION:
• Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.
• When installing the sensor, insert the set pin on the backside of the sensor into the hole on the body side securely.

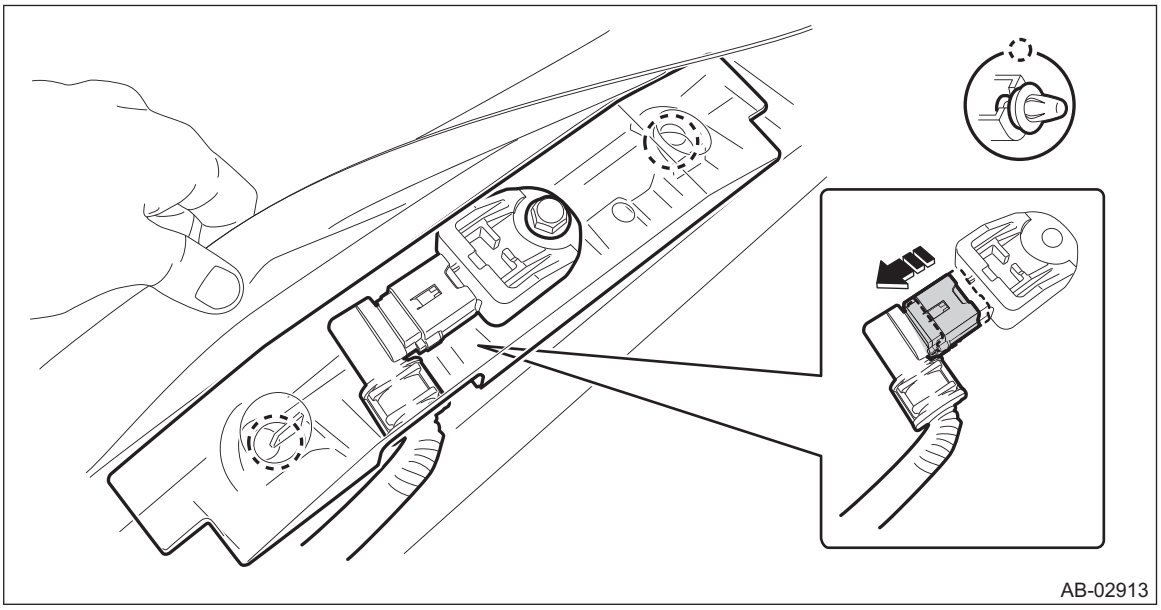
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover side sill - rear INN and the trim panel - rear pillar LWR.
4) Install the rear seat cushion assembly.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

14.Satellite Safing Sensor

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the satellite safing sensor.
   (1) Remove the clip, and remove the cover - satellite safing.
   (2) Remove the bolts and then remove the satellite safing sensor. <Ref. to AB-21, FRONT DOOR IMPACT SENSOR AND SATELLITE SAFING SENSOR, PROCEDURE, Airbag Connector.>



B: INSTALLATION

1) Before installation, inspect the following items and replace any faulty part with a new part.
- The satellite safing sensor connector is damaged.
- The cover - satellite safing is damaged.
- Side airbag or curtain airbag has been activated.

2) Install the satellite safing sensor.

CAUTION:
- **Do not reuse the bolt and nut.**

Always replace with the specified new bolts and nuts.
- **When installing the cover - satellite safing, push the cover securely until it contacts the floor panel.**
- **If the cover - satellite safing is too loose at its mounting portion to remove easily, replace with a new cover - satellite safing.**
- **After installing the cover - satellite safing, make sure that the sensor harness does not get caught.**

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

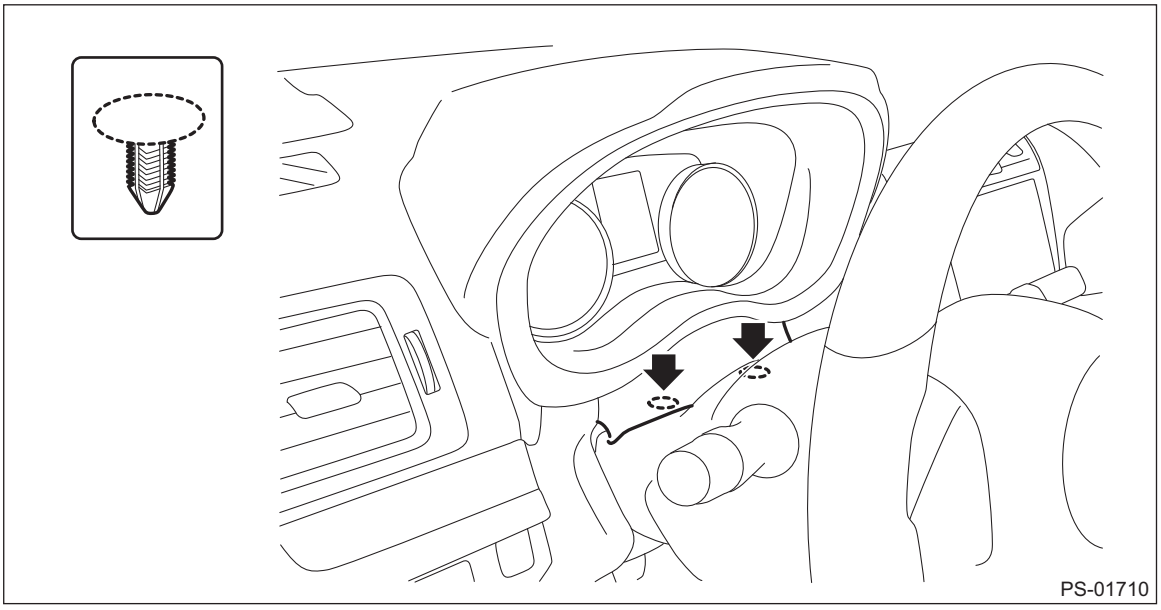
3) Install the rear seat cushion assembly.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

15.Roll Connector

A: REMOVAL

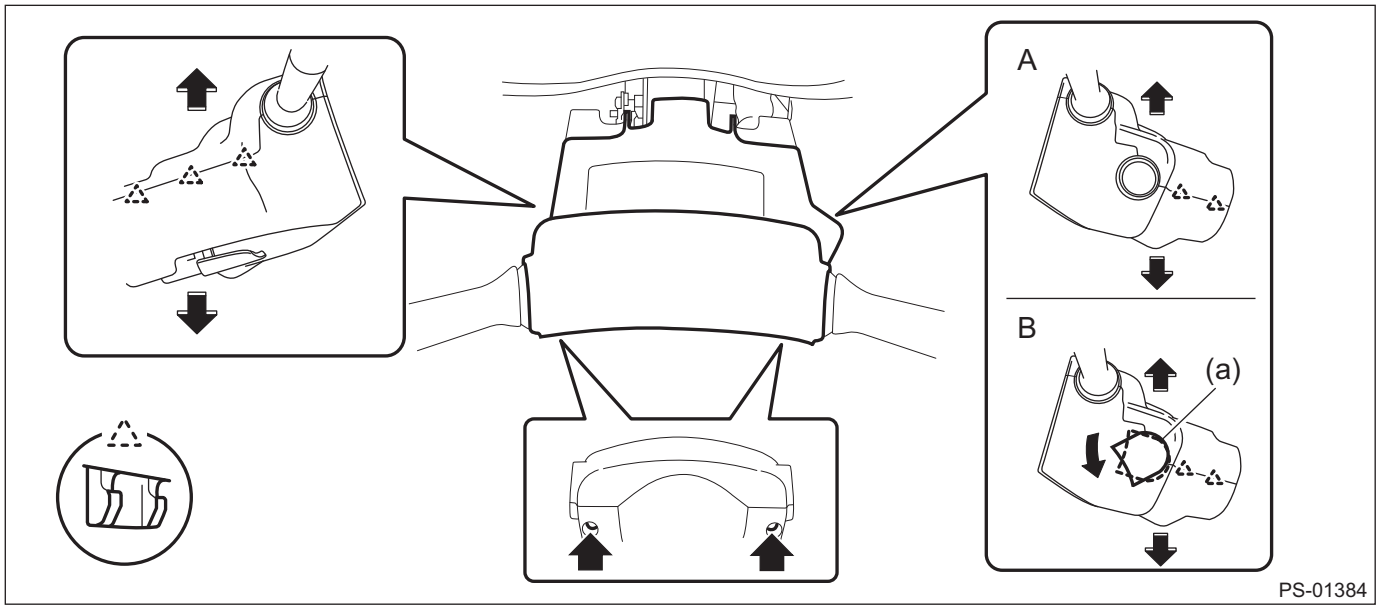
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Position the front wheels straight ahead.
2) Turn the ignition switch to OFF.
3) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
4) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
5) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
6) Remove the cover assembly - column.
(1) Release the clips, and remove the cover assembly - steering UPR.



(2) Remove the screws.
(3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)

(4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



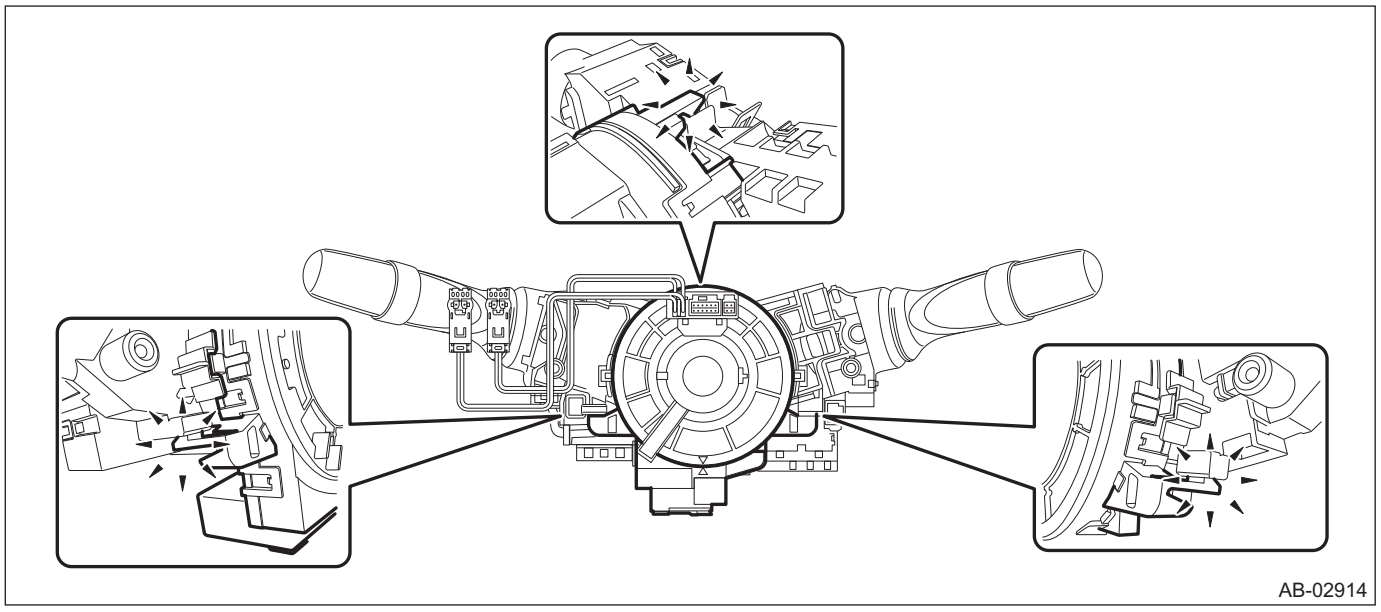
A Model without keyless access with push button start

B Model with keyless access with push button start

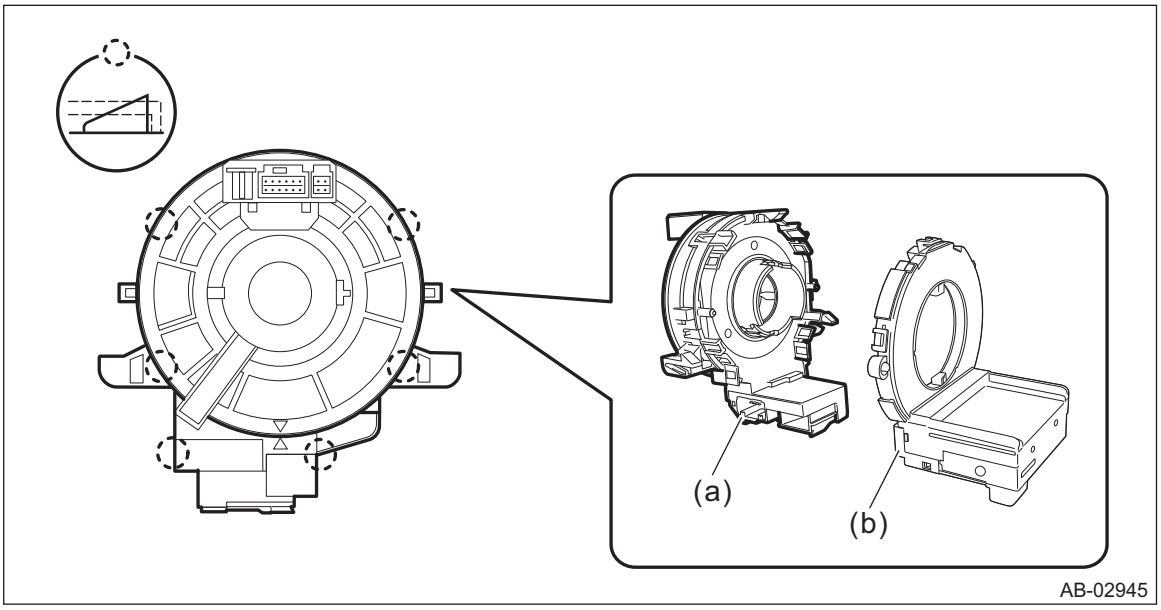
7) Remove the steering roll connector.

CAUTION:
Make sure that the steering roll connector is not turned from the original position.

(1) Disconnect the connector under the steering roll connector.
(2) Release the claws and remove the steering roll connector.



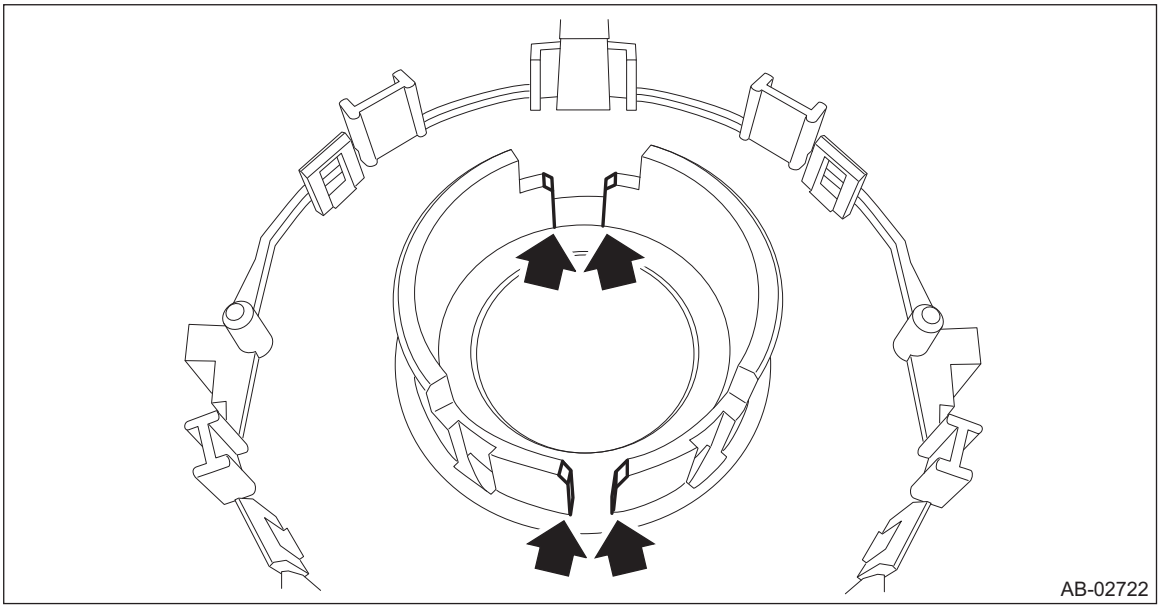
(3) Release the claws and separate the steering roll connector (a) and steering angle sensor (b).



B: INSTALLATION

CAUTION:
If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.
- **Align the center position of the steering roll connector.**
- **Perform the neutral position setting of the steering angle sensor.**

1) Before attaching a new steering roll connector, apply a thin coat of grease contained in the connector onto the areas shown by the arrows.



2) Install the steering roll connector.
3) Align the center position of the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
4) Install the cover assembly - column.
5) Install the steering wheel.

Tightening torque:
Steering wheel: 39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
6) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Perform the neutral position setting of the steering angle sensor. <Ref. to VDC-16, VDC SENSOR MID-POINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: INSPECTION

1. VISUAL INSPECTION

Check for the following, and replace the damaged parts with new parts.
- Combination switch is cracked or deformed.
- Steering roll connector is cracked or deformed.

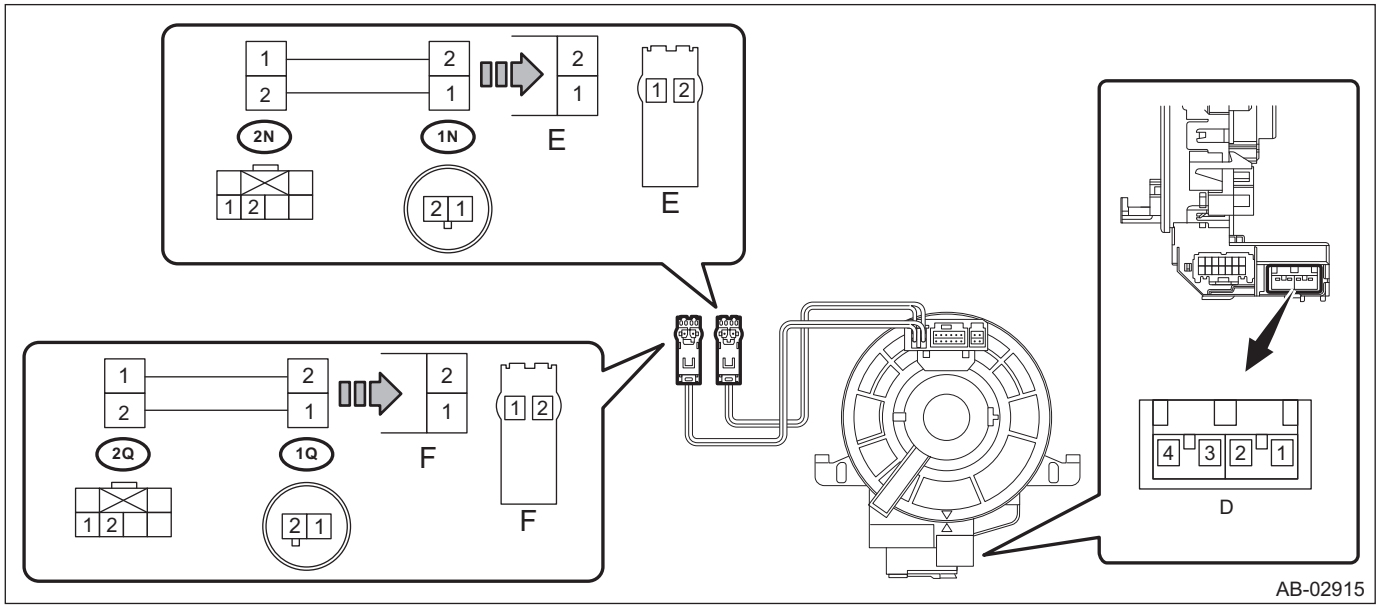
2. UNIT INSPECTION OF ROLL CONNECTOR

CAUTION:
• Do not rotate the steering roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
1) Adjust the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
2) Set the steering roll connector to the central position.
3) Connect the test harness to the connector E and connector F.

Preparation tool:
TEST HARNESS N (98299SA000)
TEST HARNESS Q (98299SA040)
- Connector E — Test harness N (1N)
- Connector F — Test harness Q (1Q)

4) With the following conditions, check the resistance between the test harness connector terminals.
- Perform the check with the steering roll connector centered (front wheels direct straightforward).
- Rotate the steering roll connector counterclockwise from the center position (front wheels direct straightforward) until it stops. Then, perform the check while rotating it clockwise to approximately 4.5 turns.

Preparation tool:
Circuit tester



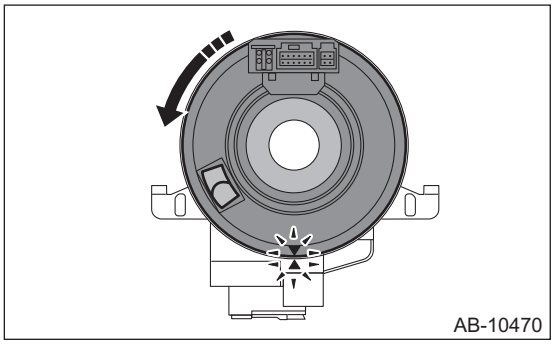
Terminal No.	Inspection conditions	Standard
(2N) No. 1 — (2N) No. 2	Always	Less than 1 Ω

Terminal No.	Inspection conditions	Standard
(2Q) No. 1 — (2Q) No. 2	Always	Less than 1 Ω

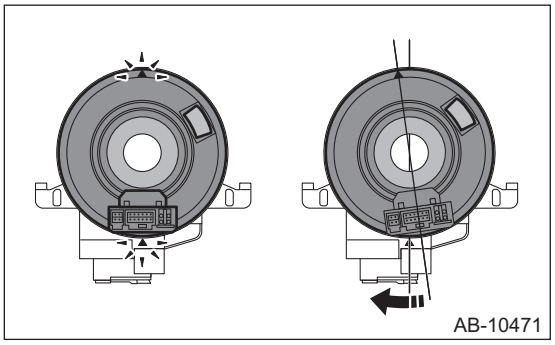
NOTE:
The connector D is designed to short the terminals D1/D2 and D3/D4 when disconnected.
5) Replace the steering roll connector with a new part if the inspection result is not within the standard value.

D: ADJUSTMENT

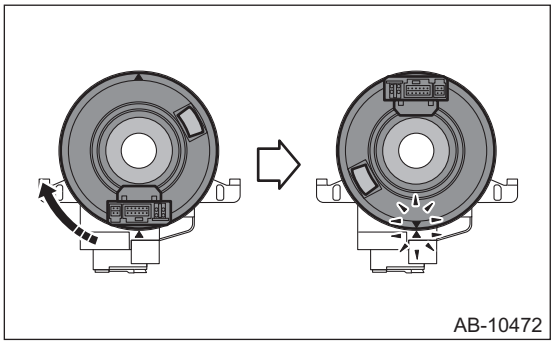
CAUTION:
• Do not rotate the steering roll connector to more than the specified number of turns. Otherwise, the roll connector internal wire may be broken.
• When determining the end stop, rotate the connector slowly without applying excessive force. Applying excessive force at the end stop may break the internal wire.
1) Check that front wheels are positioned in straight ahead direction.
2) Be sure to rotate the steering roll connector counterclockwise until it stops.



3) If the connector passes the bottom position when the rotation stops, return the connector to the bottom position.

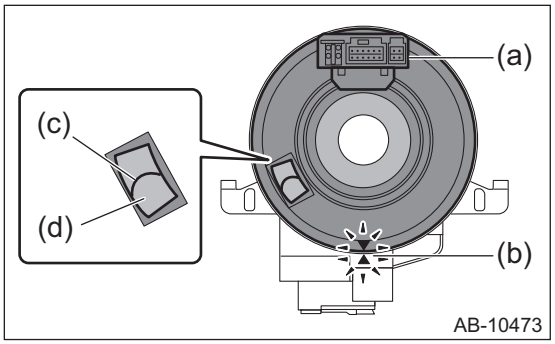


4) Check that the connector is at the bottom position. Then rotate back the steering roll connector clockwise by approx. 2.5 turns so that the connector is at the top position, and align "▲" marks.



5) Use the following items to check that the spiral cable sub assembly is at the neutral position.
- Connector (a) is at the top position.
- Combination marks (b) are aligned.

- The peak (c) of the U turn section on the flat cable can be seen from the inspection window (d).



16.Airbag Module Disposal (Deployment Processing on Vehicle)

A: PROCEDURE

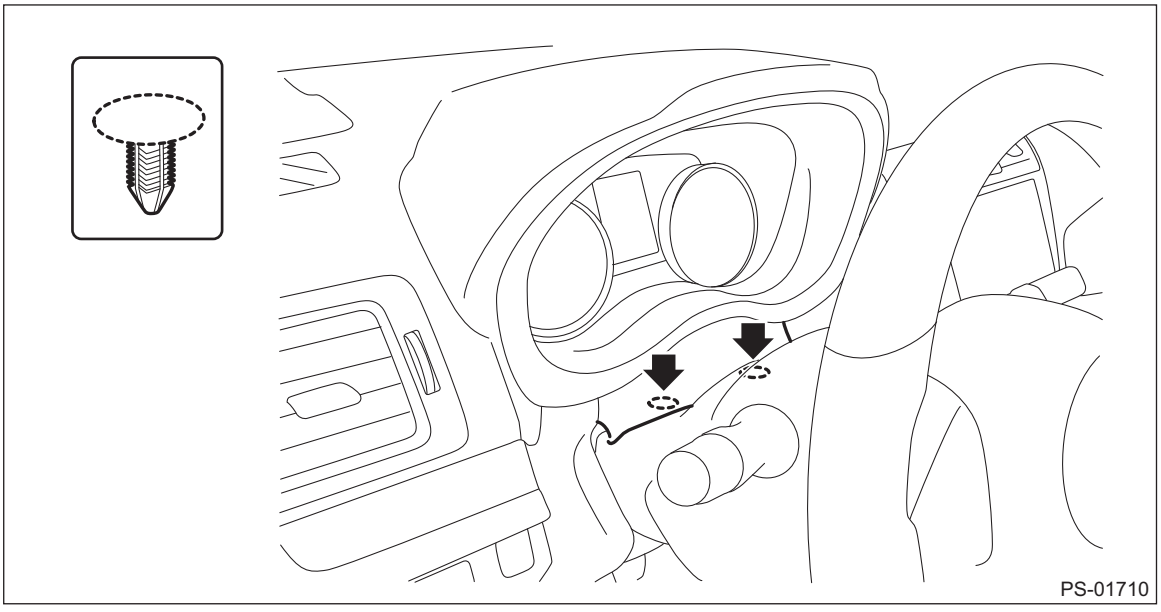
WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding an airbag module, always perform an operation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the airbag module just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

CAUTION:
• Airbag module operation process should be performed on a flat place in safety area. Do not perform the process outdoors when there is rain or strong wind.
• Activating an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within 5 m (16 ft) radius of the disposal site.
• After activating the airbag module, smoke may arise. Therefore, it must be activated in a well-ventilated place with no smoke detector nearby.
• Do not expose the activated airbag module to water.
• Wrap the activated airbag module in a sealed vinyl bag when discarding.
• If it is impossible to perform an airbag module operation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.

1. DRIVER'S AIRBAG MODULE

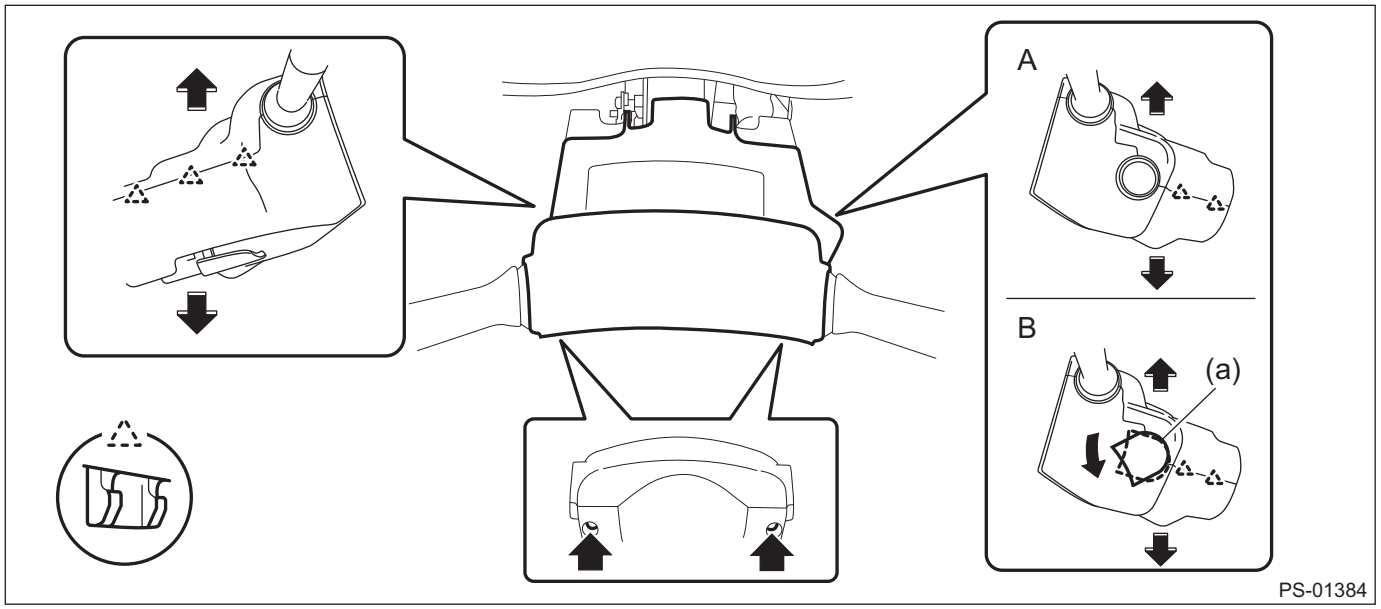
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the cover assembly - column.
(1) Release the clips, and remove the cover assembly - steering UPR.



(2) Remove the screws.
(3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)

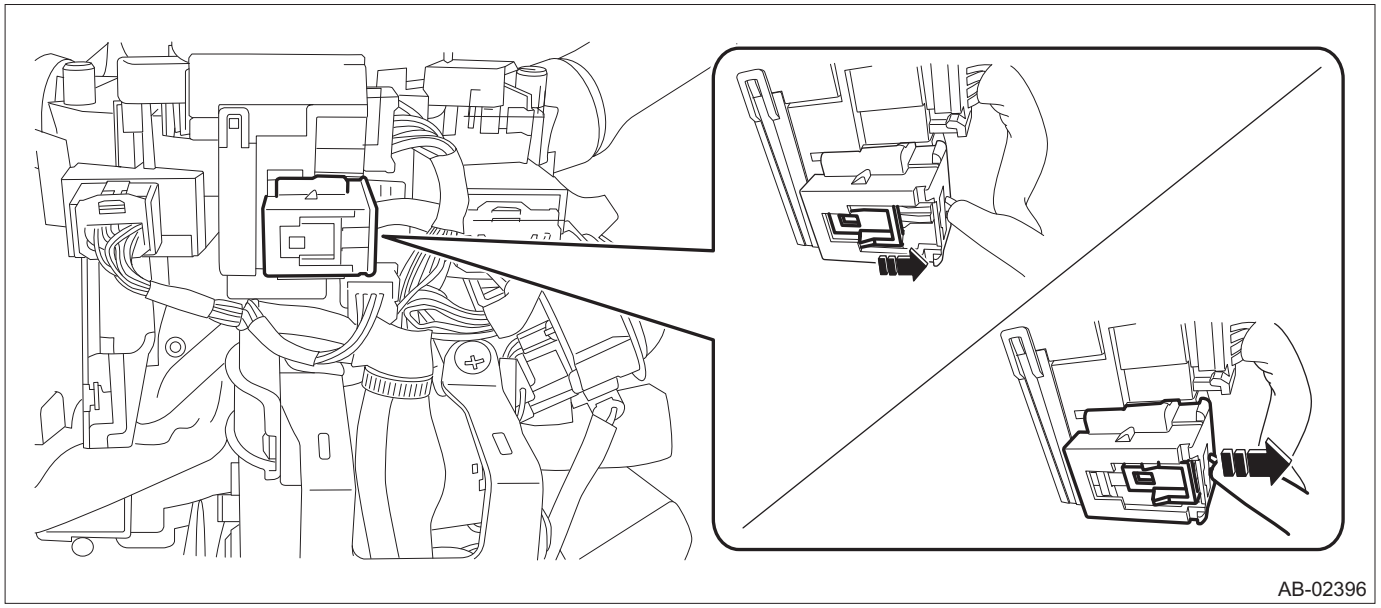
(4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



A Model without keyless access with push button start

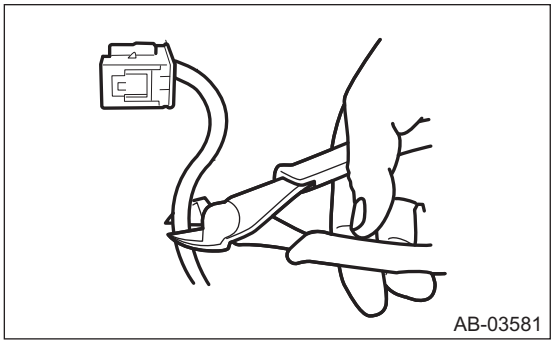
B Model with keyless access with push button start

4) Disconnect the driver's airbag module connector.



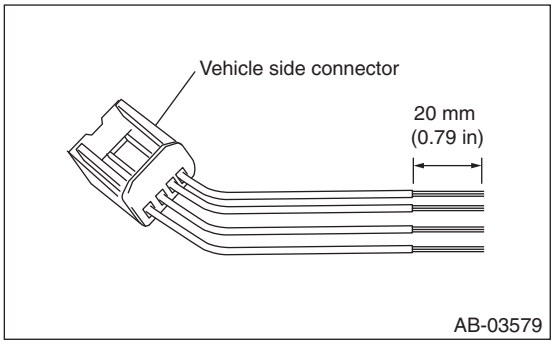
5) Cut off the harness on the body side of the removed connector approx. 70 mm (2.76 in) from the edge of the connector.

Preparation tool:
Nippers

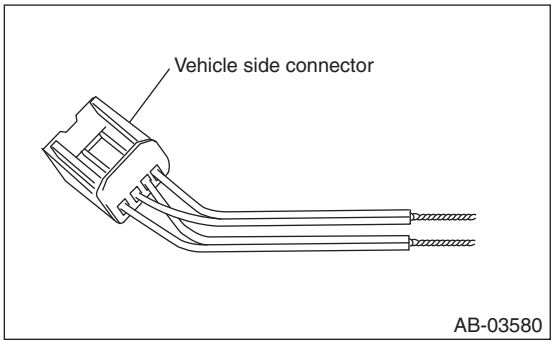


6) Peel off the shield approx. 20 mm (0.79 in) from the four harnesses of the removed body side connector.

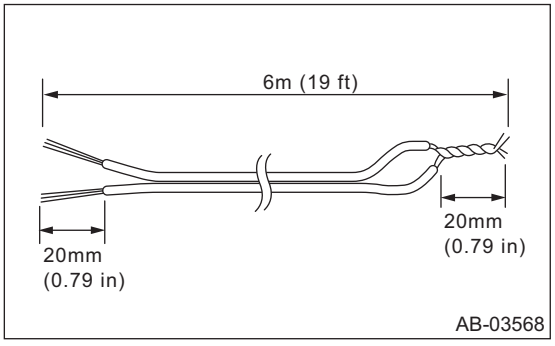
Preparation tool:
Wire stripper



7) Twist the end of harness as shown in the figure.

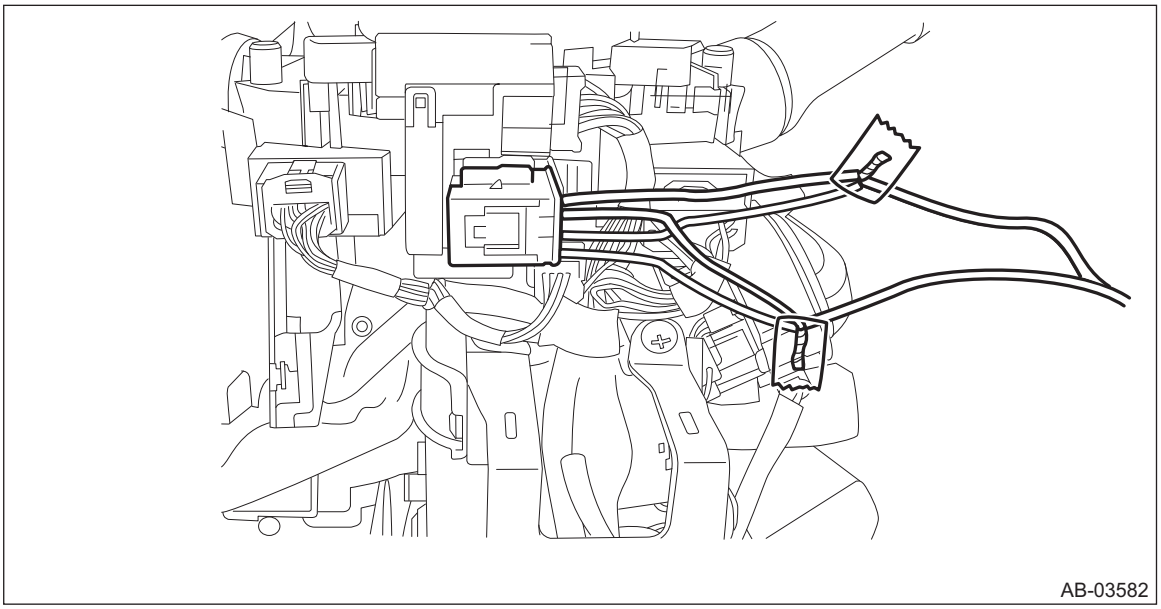


8) Prepare two vinyl-shielded parallel wires of 6 m (19 ft) long. Peel off the shield of both ends approx. 20 mm (0.79 in) and twist one end together into shorted condition.
9) The other end, not shorted, will be connected to harnesses of repaired body connector as shown in the figure, and insulated with vinyl tape.

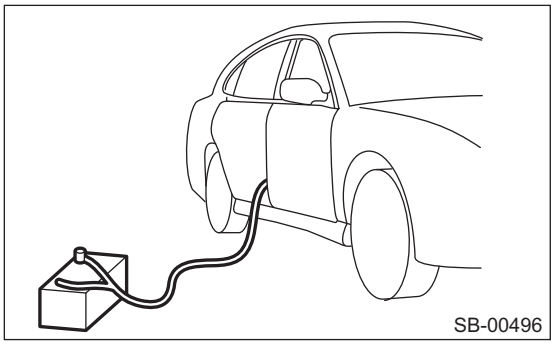


NOTE:
No concern about polarity.

10) After completing the connecting work, connect the body side connector to the connector of the airbag connector lower side again.

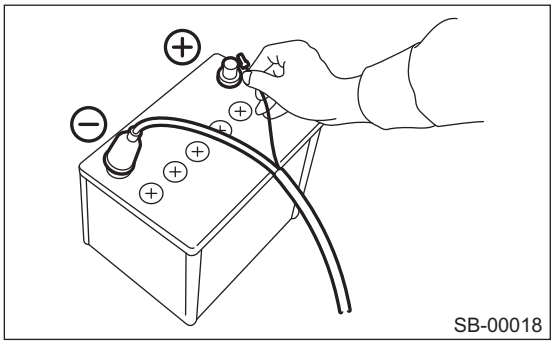


11) Bring the vinyl wire for operation out of the vehicle and make sure there is no person in the vehicle.
12) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



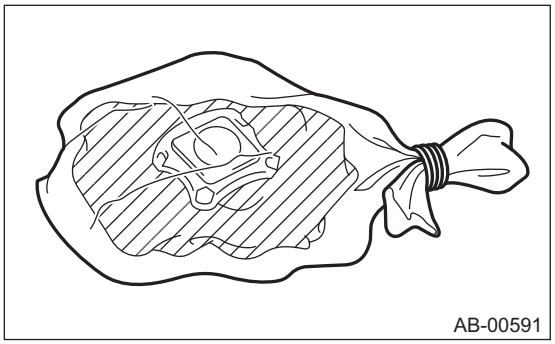
13) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
14) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
15) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
- **After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.**
- **Do not expose the activated airbag module to water.**



16) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>

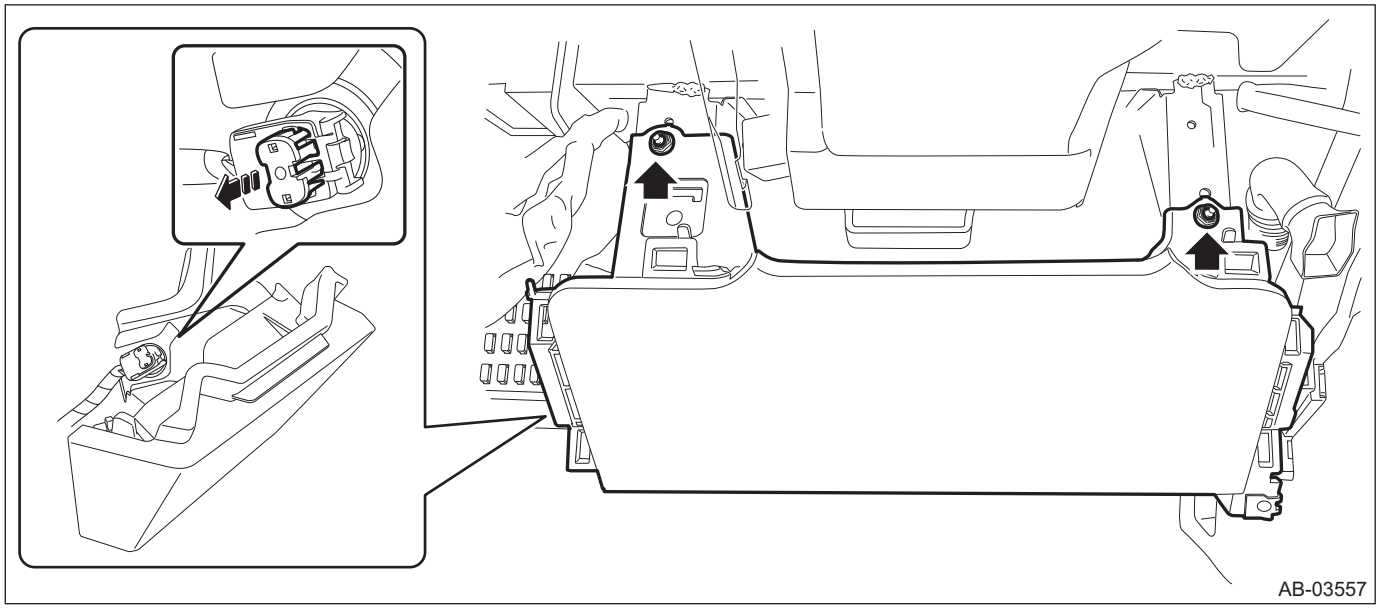
17) Place the activated airbag module in a sealed vinyl bag, then discard.



2. KNEE AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the nuts to remove the knee airbag module and disconnect the harness connector. <Ref. to AB-24, KNEE AIRBAG MODULE, PROCEDURE, Airbag Connector.>

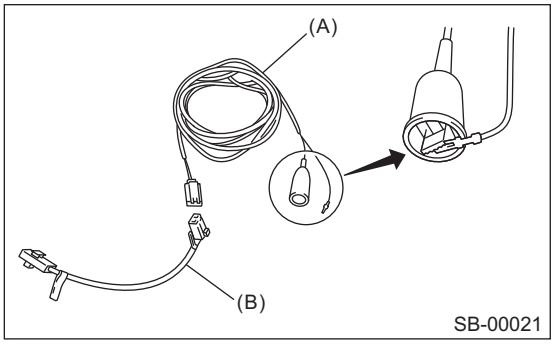


5) Short the terminal to the alligator clip furnished as airbag deployment tool.

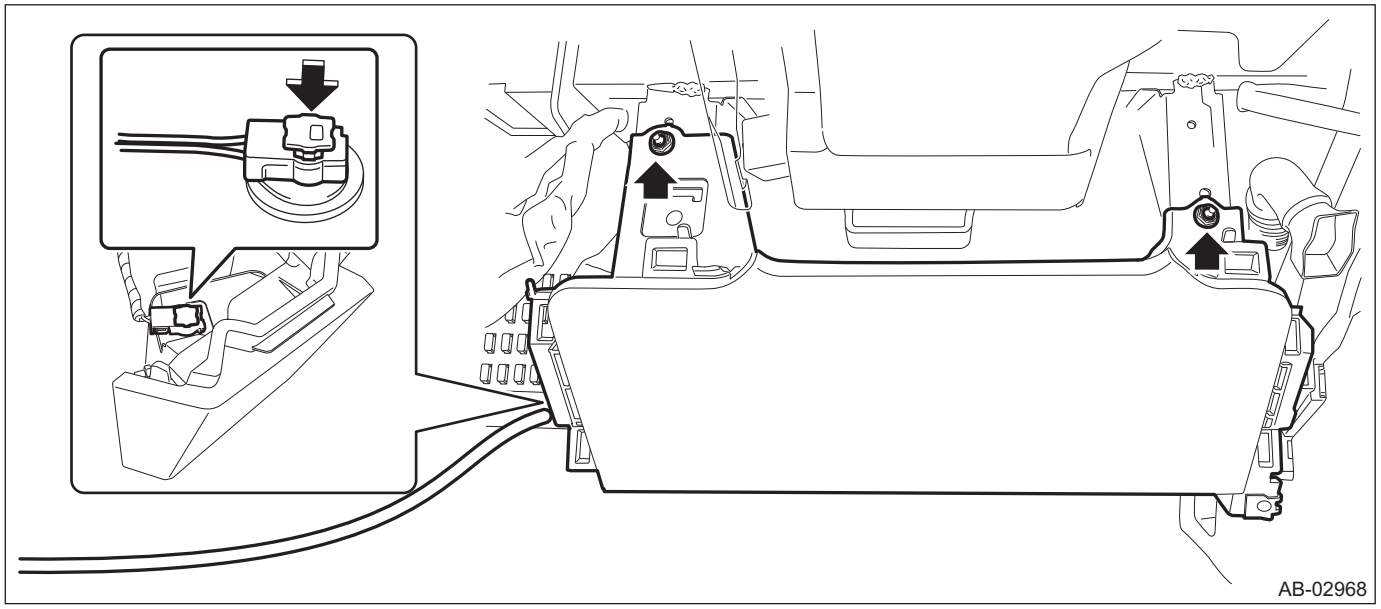
CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)
6) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

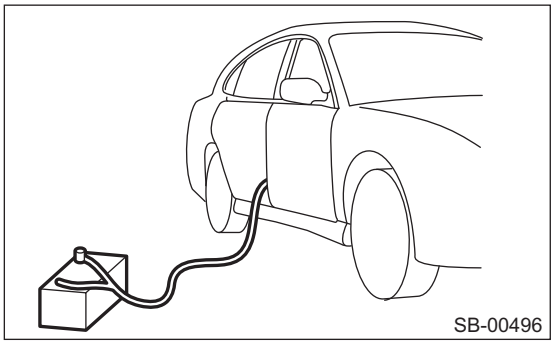


7) Connect the test harness adapter D to the knee airbag module and install the knee airbag module to the vehicle again.



Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

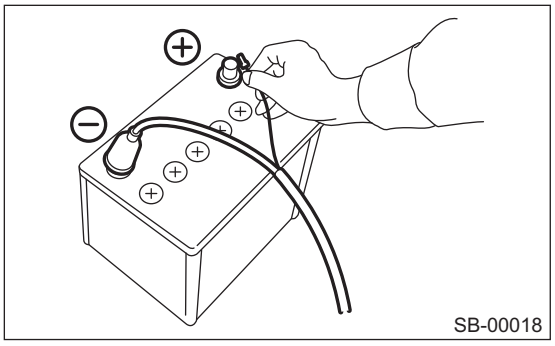
8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



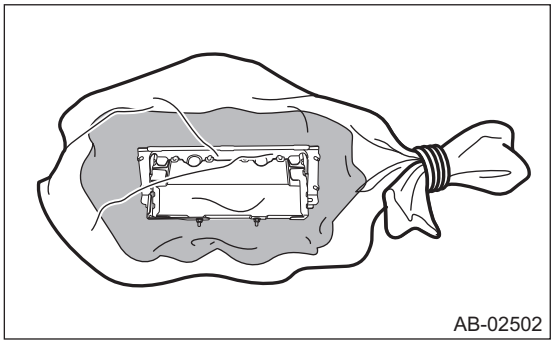
10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.

- **Do not expose the activated airbag module to water.**



13) Remove the bolts and remove knee airbag module.
14) Place the activated airbag module in a sealed vinyl bag, then discard.



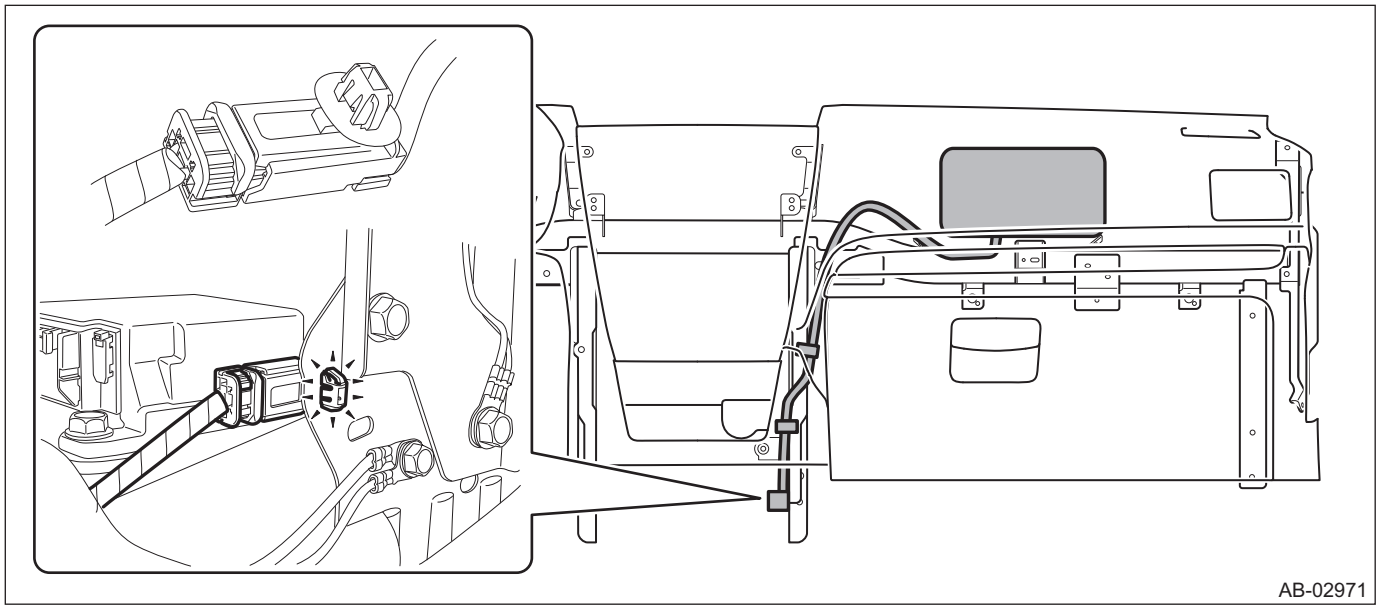
NOTE:
When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

3. PASSENGER'S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the cover - shift lever, the panel center LWR RH, and the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>

4) Disconnect the passenger's airbag module connector. <Ref. to AB-18, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>



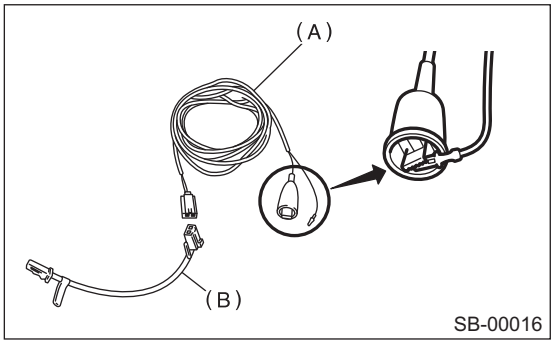
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

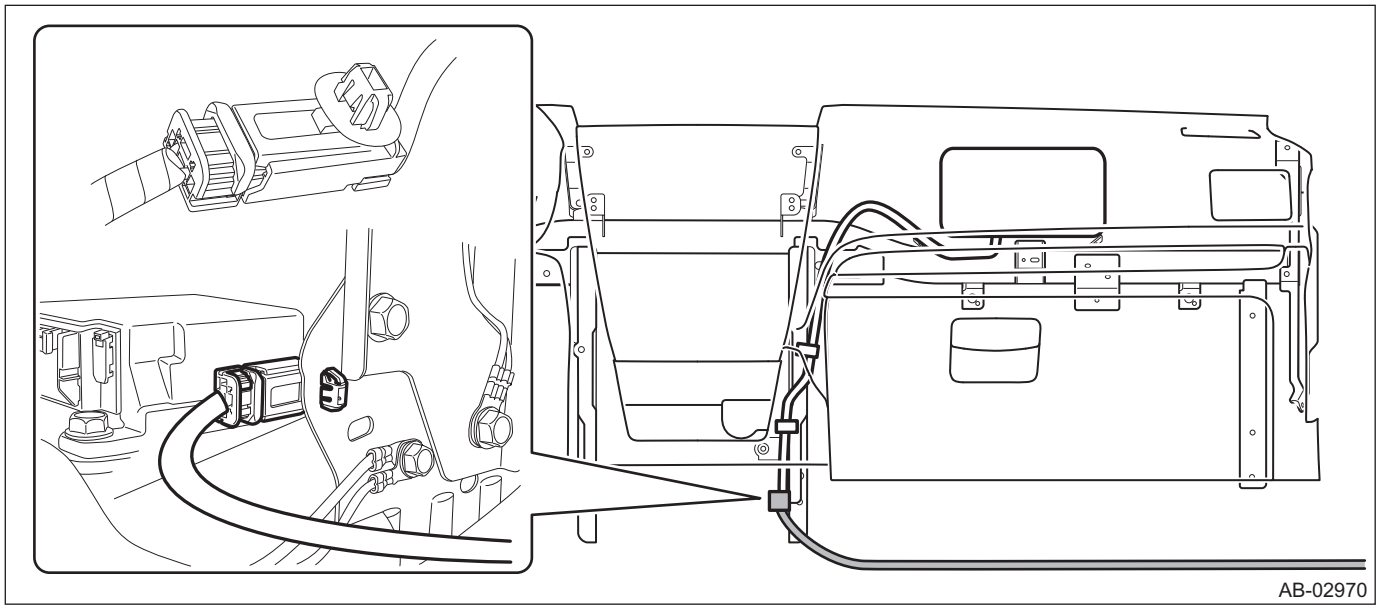
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect airbag deployment tool (A) and test harness adapter AM (B).

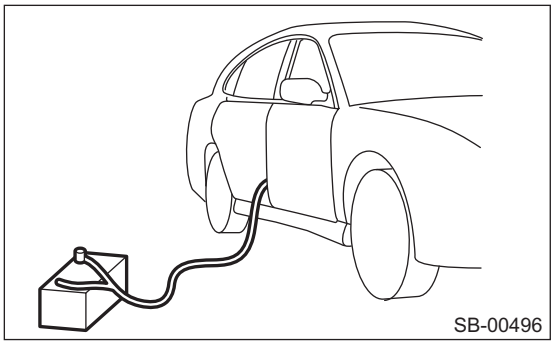
Preparation tool:
ST: TEST HARNESS ADAPTER AM (98299FJ000)



7) Connect test harness adapter AM to airbag connector.

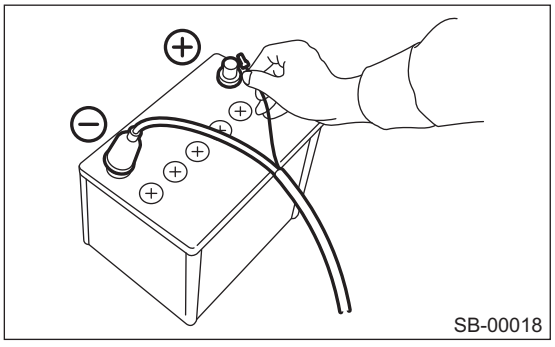


8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



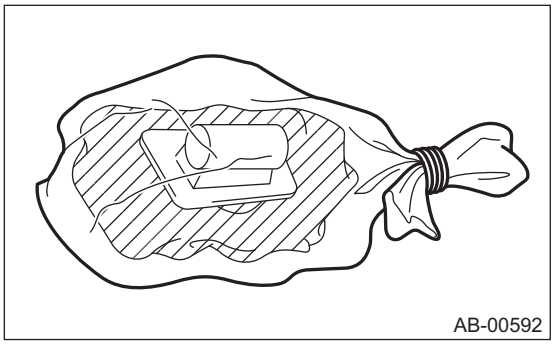
10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.



13) Remove the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>

14) Place the activated airbag module in a sealed vinyl bag, then discard.



4. SIDE AIRBAG MODULE

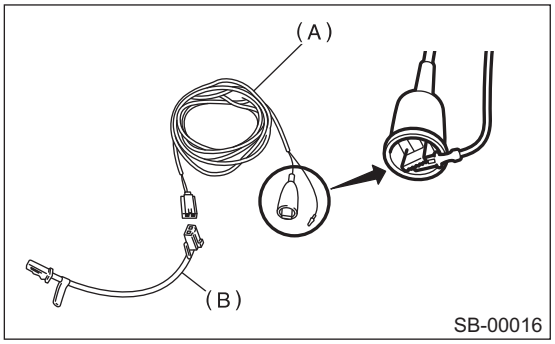
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Disconnect the side airbag module connector under the front seat cushion. <Ref. to AB-23, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
4) Adjust both the front seat and front seat backrest to the center positions.
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)
6) Connect the airbag deployment tool (A) and test harness adapter K (B).

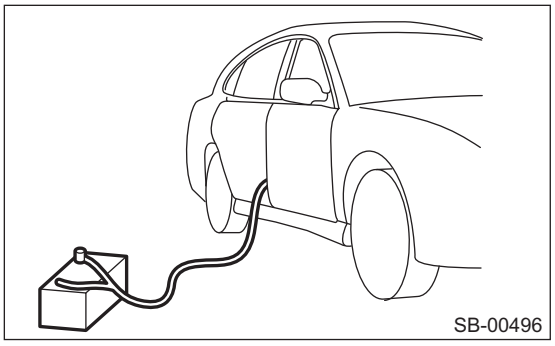
Preparation tool:
ST: TEST HARNESS ADAPTER K (98299FG010)



7) Connect the test harness adapter K to side airbag module connector (yellow).

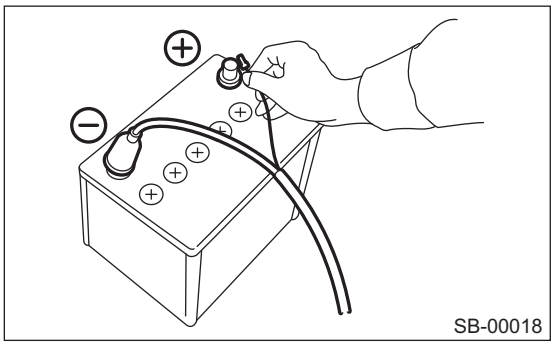
CAUTION:
Do not place any object on front seat.
8) Make sure there is no one inside the vehicle.

9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

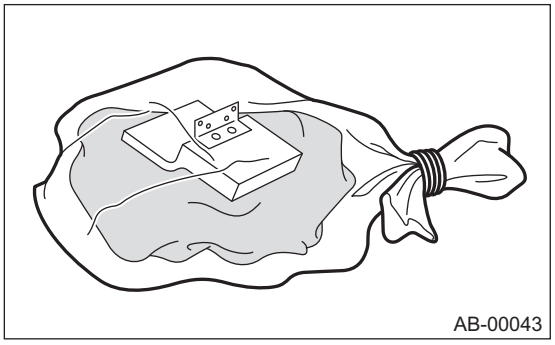


10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.



13) Remove the side airbag module. <Ref. to AB-44, REMOVAL, Side Airbag Module.>
14) Place the activated airbag module in a sealed vinyl bag, then discard.

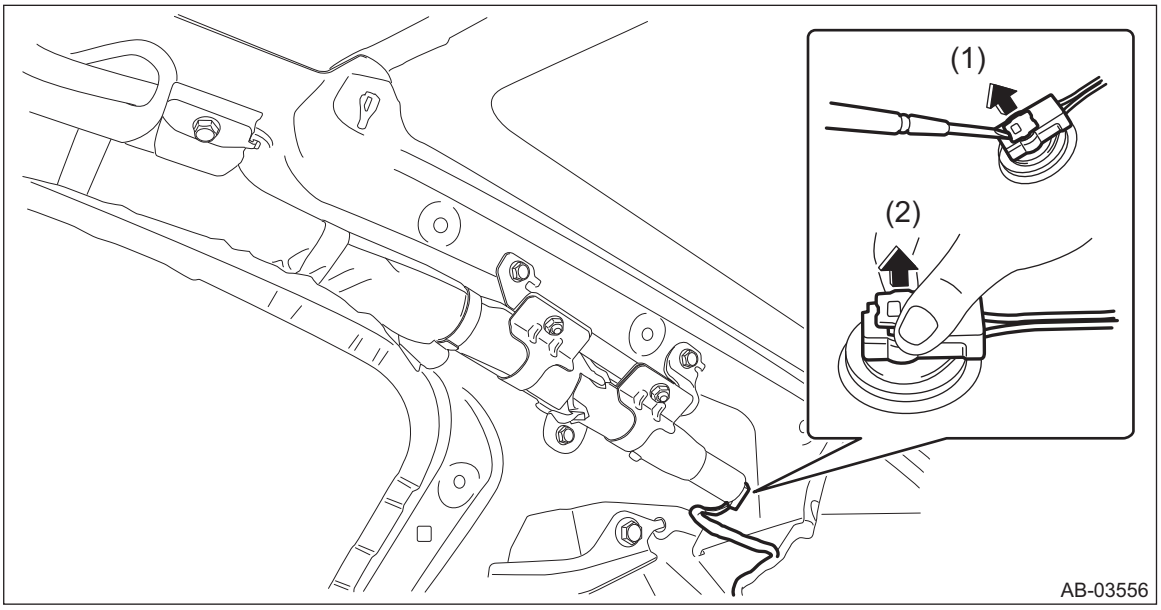


5. CURTAIN AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the roof trim. <Ref. to EI-101, REMOVAL, Roof Trim.>

4) Disconnect the curtain airbag harness. <Ref. to AB-17, PROCEDURE, Airbag Connector.>



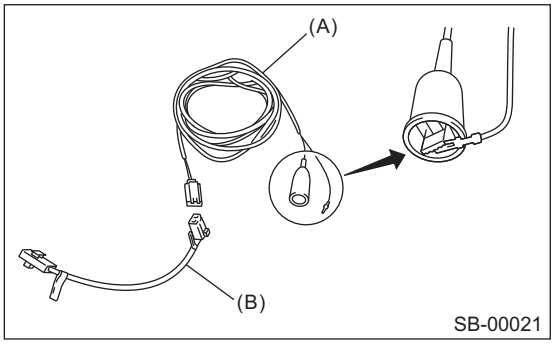
5) Short the terminal to the alligator clip furnished as airbag deployment tool.

CAUTION:
The airbag deployment tool should be kept shorted on the terminals until just before activation of airbag module.

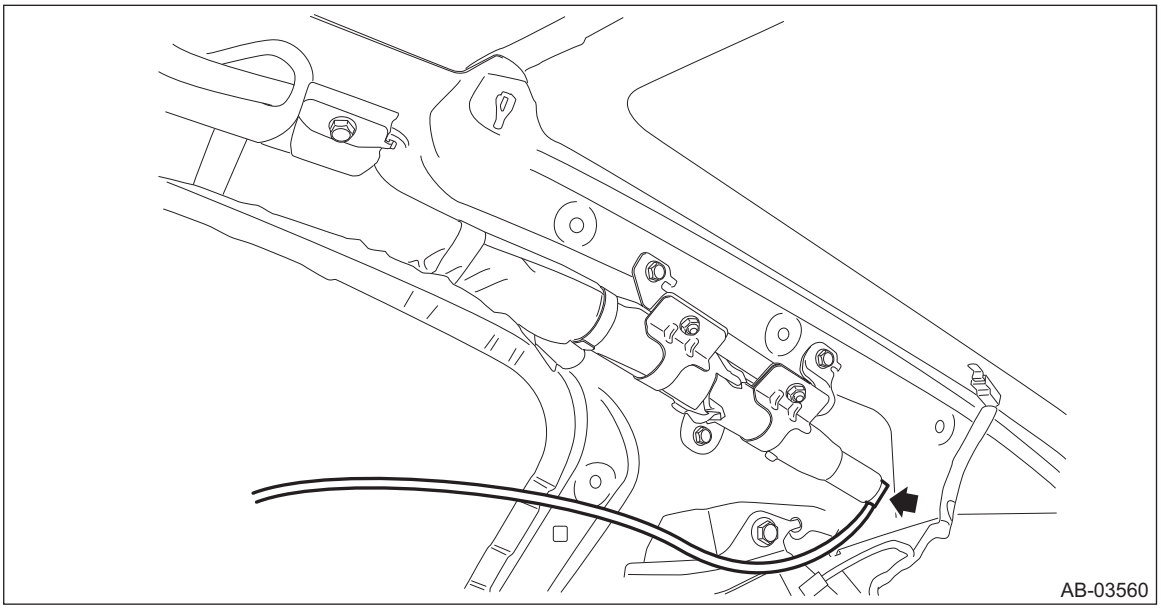
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

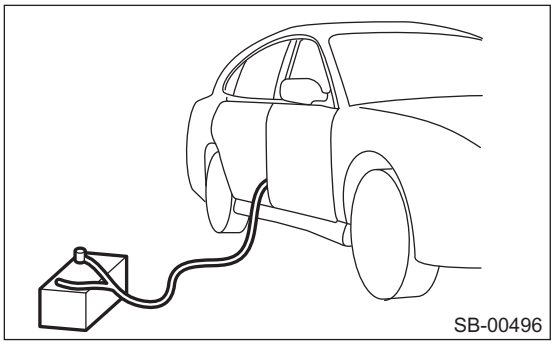
Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)



7) Connect the test harness adapter D to the curtain airbag module.

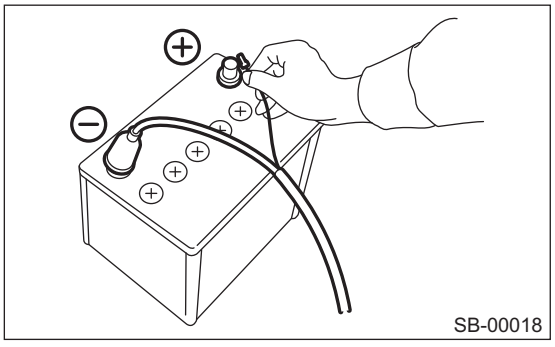


8) Make sure there is no one inside the vehicle.
9) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.

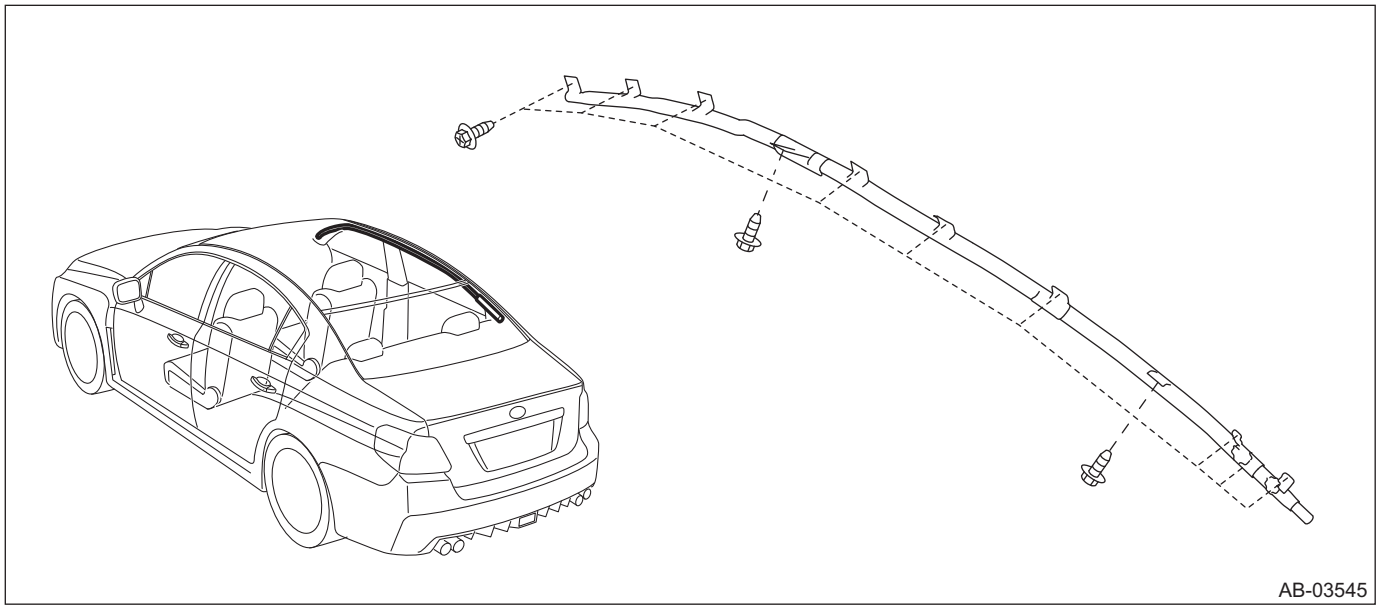


10) Move the battery at least 5 m (16 ft) from the vehicle, and confirm safety in the area.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the airbag module.

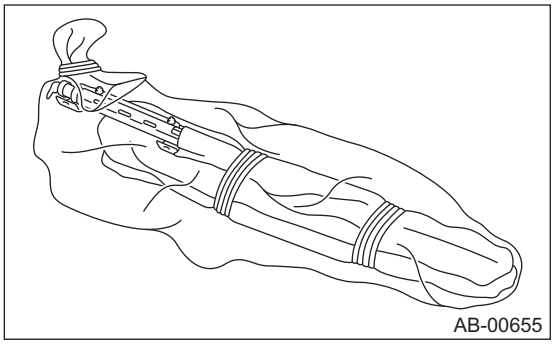
CAUTION:
• After activation, the airbag module will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated airbag module to water.



13) Remove the bolts and clips, and remove the curtain airbag module.



14) Place the activated airbag module in a sealed vinyl bag, then discard.



NOTE:
When necessary, fold the fabric part of airbag into three or four sections, rope and seal in a vinyl bag.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to AB(diag)-20, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Go to step **3**.	Go to “Airbag Warning Light Failure” <Ref. to AB(diag)-30, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from “List of Diagnostic Trouble Code (DTC)” <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read any other DTCs displayed. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.

3. General Description

A: CAUTION

Refer to “CAUTION” in “General Description” in AIRBAG SYSTEM. <Ref. to AB-9, CAUTION, General Description.>

B: INSPECTION

Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.> <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>

C: PREPARATION TOOL

CAUTION:
To measure the voltage and resistance of airbag system component, be sure to use the specified test harness.

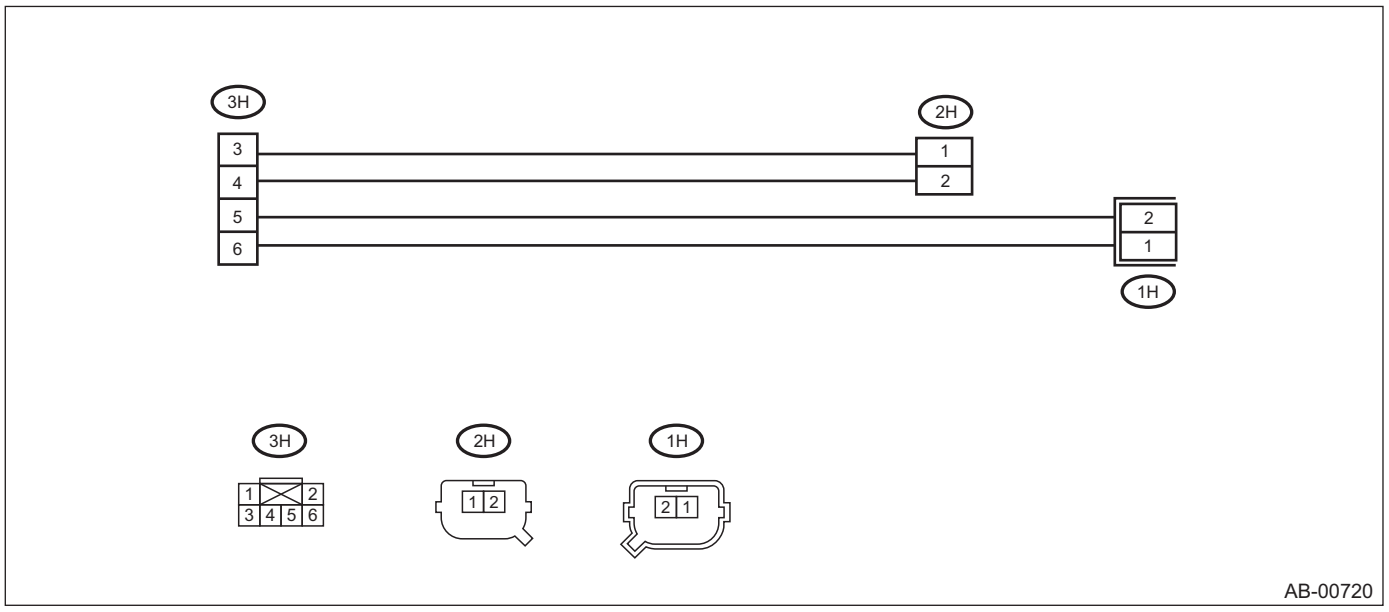
1. SPECIAL TOOL

- SUBARU SELECT MONITOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

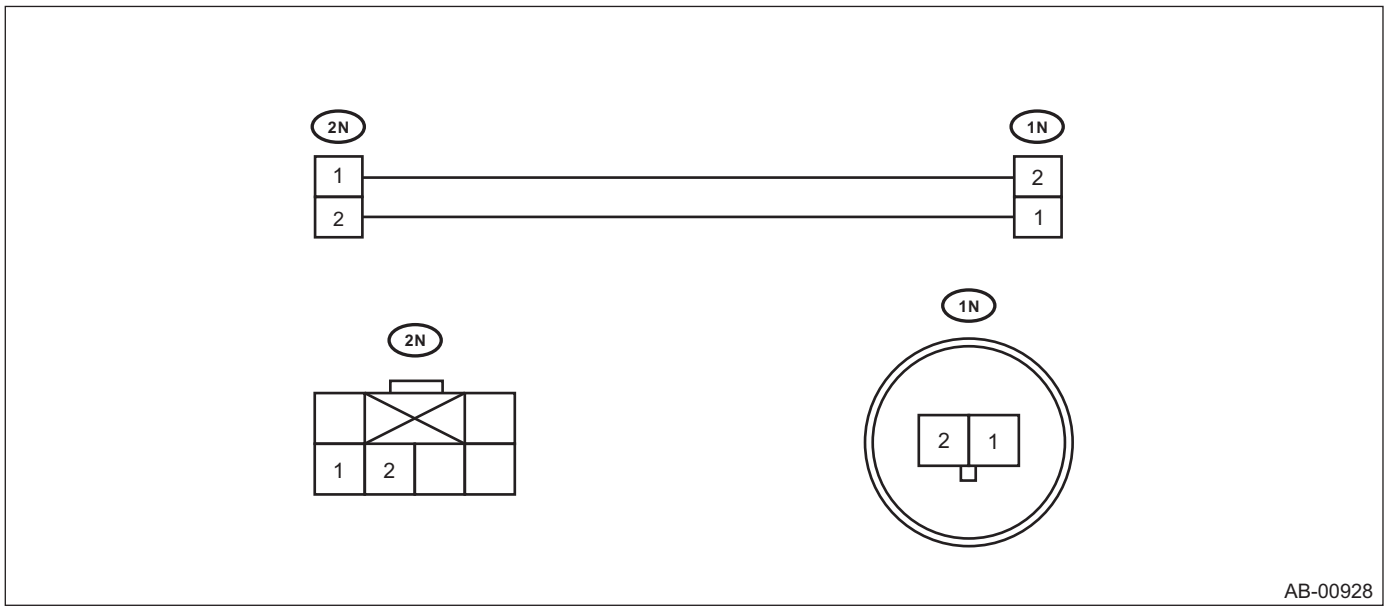
- TEST HARNESS H

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FA030	98299FA030	TEST HARNESS H	Used when measuring voltage and resistance of front sub sensor and front door impact sensor.



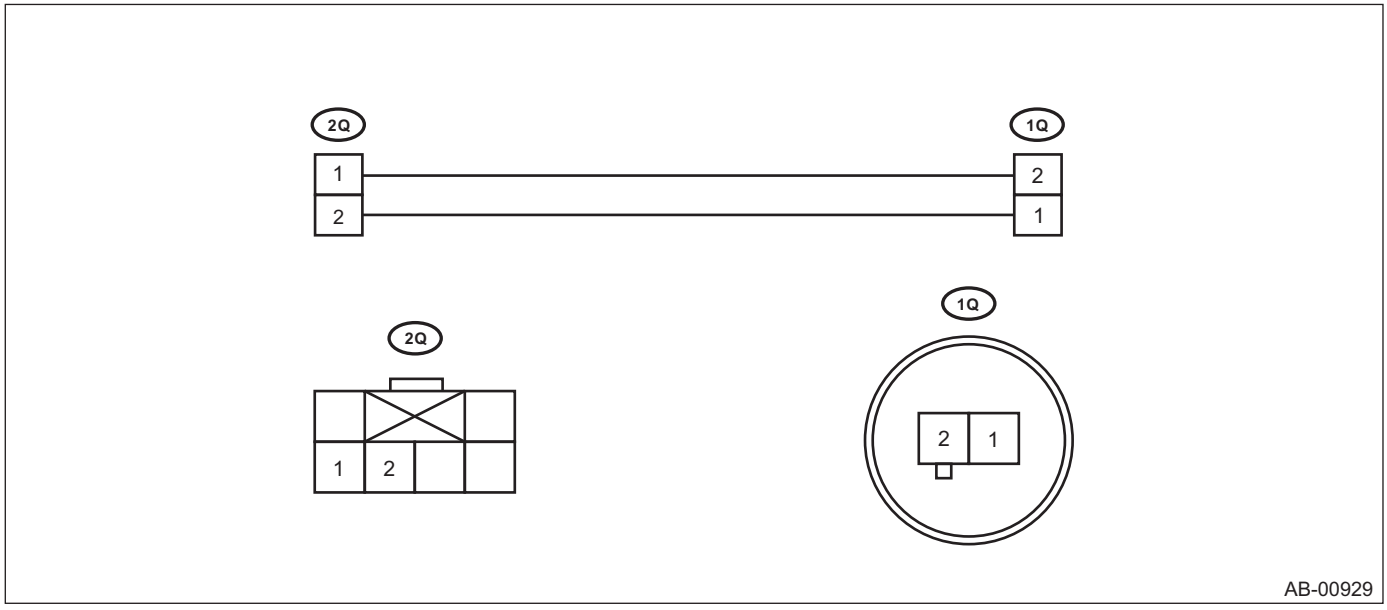
- TEST HARNESS N

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA000	98299SA000	TEST HARNESS N	Used when measuring voltage and resistance of driver's airbag module, seat belt pretensioner and curtain airbag module.



- TEST HARNESS Q

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA040	98299SA040	TEST HARNESS Q	Used when measuring voltage and resistance of driver's airbag module.



AB-00929

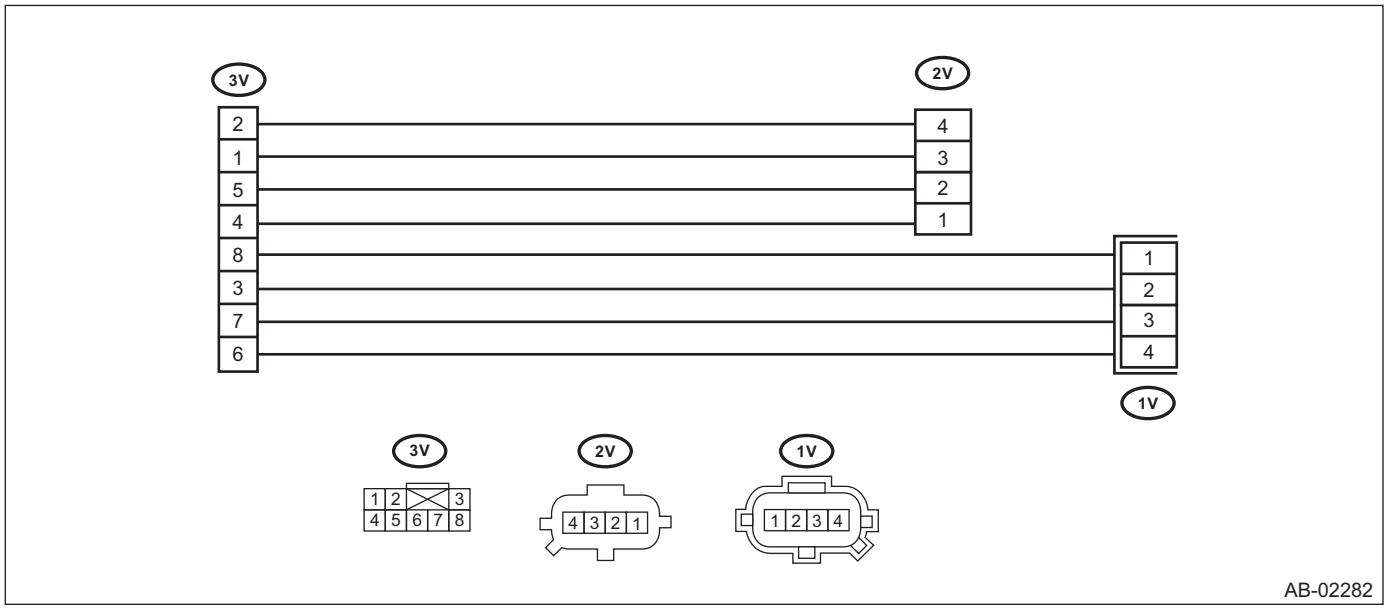
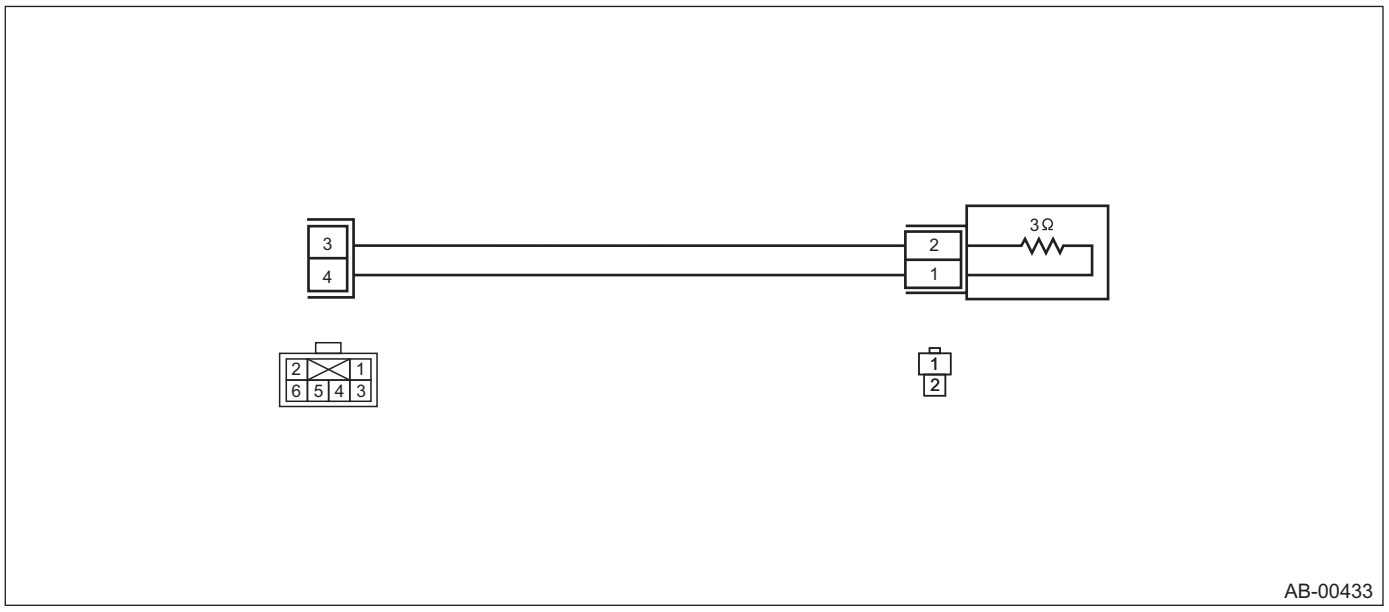
- TEST HARNESS V

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG010	98299AG010	TEST HARNESS V	Used when measuring voltage and resistance of side airbag sensor and curtain airbag sensor.



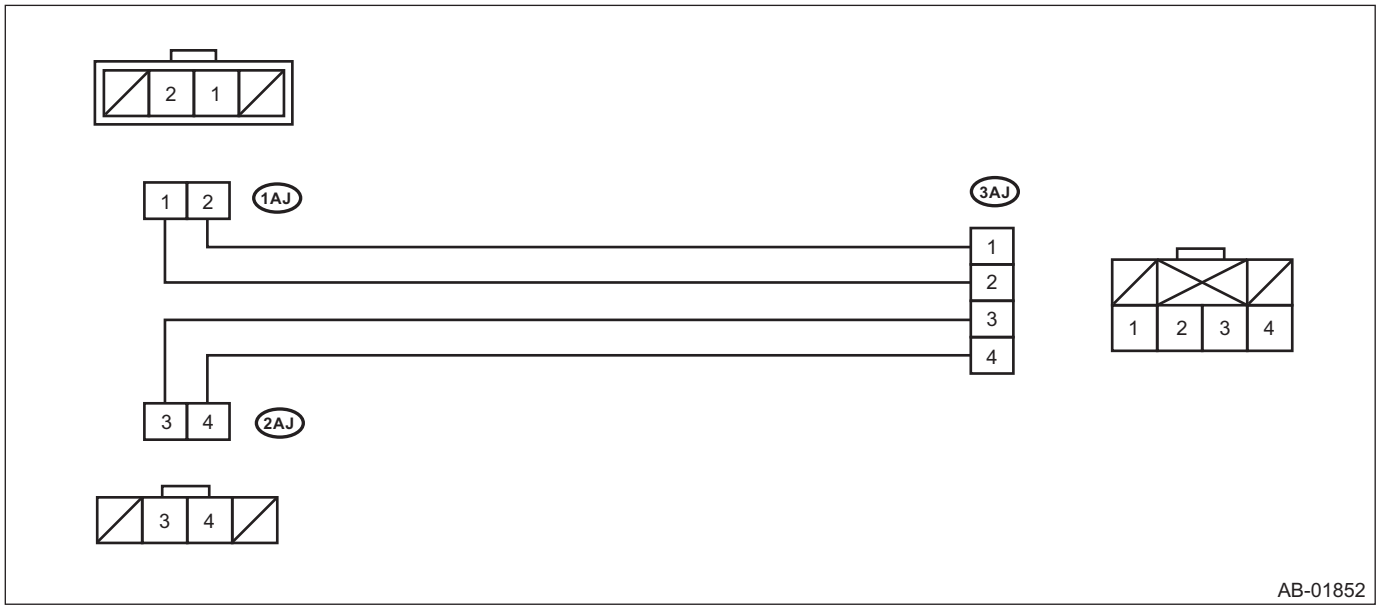
- AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module. Two STs are required for diagnosis of two-stage inflator type airbag module.



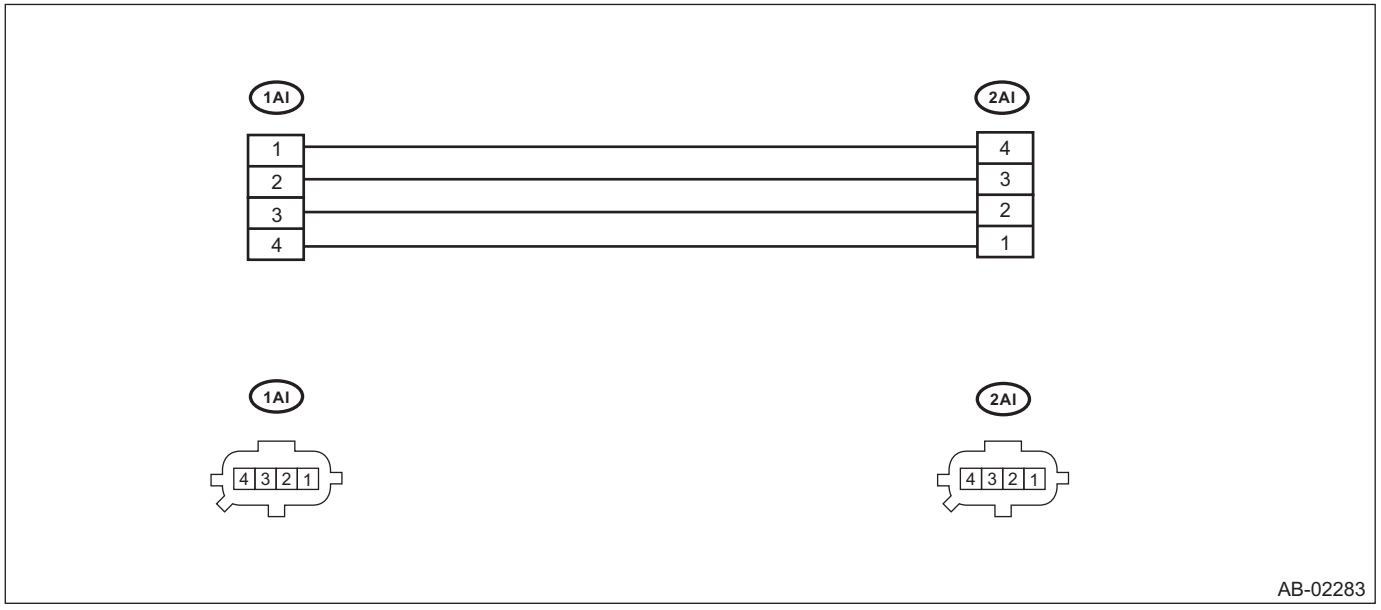
- TEST HARNESS AJ

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299FG000	98299FG000	TEST HARNESS AJ	Used when measuring power supply and resistance of side airbag harness.



- TEST HARNESS AI

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG090	98299AG090	TEST HARNESS AI	• Used for diagnoses of side airbag sensor and curtain airbag sensor. • Used together with test harness V.

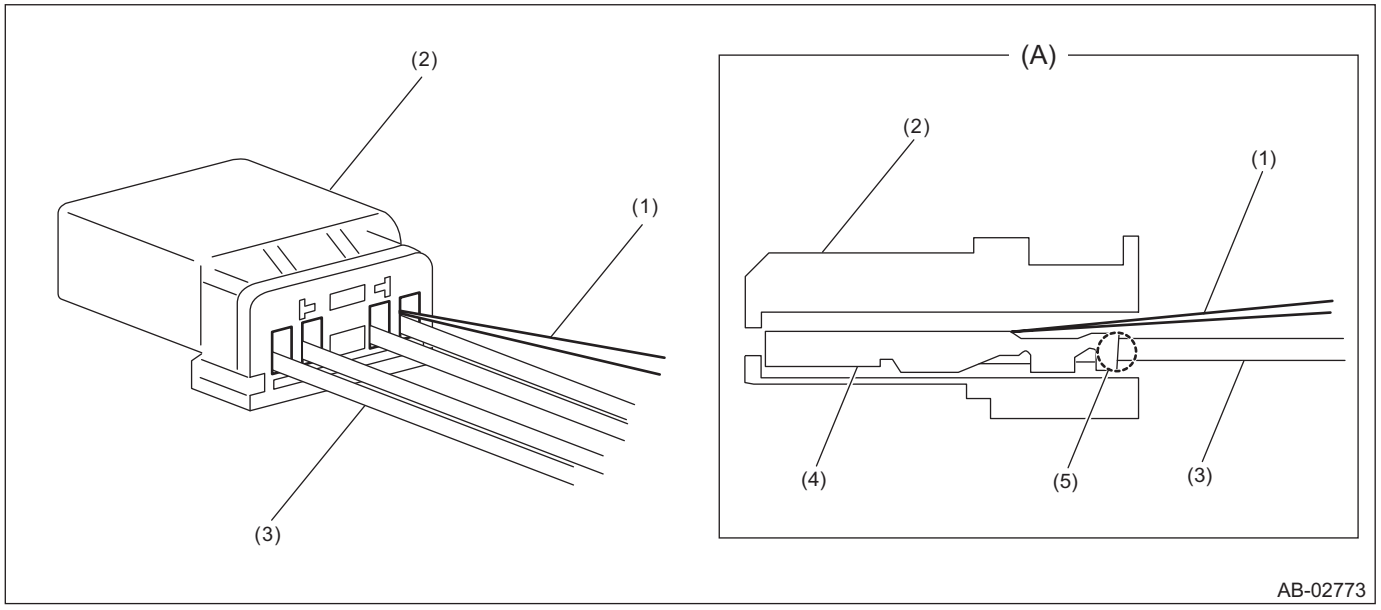


2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Probe	Used when measuring voltage and resistance of passenger's airbag module.
DST-i	Used together with Subaru Select Monitor 4.

3. HOW TO USE PROBE

Insert the probe into the harness hole, and contact it with the terminal.



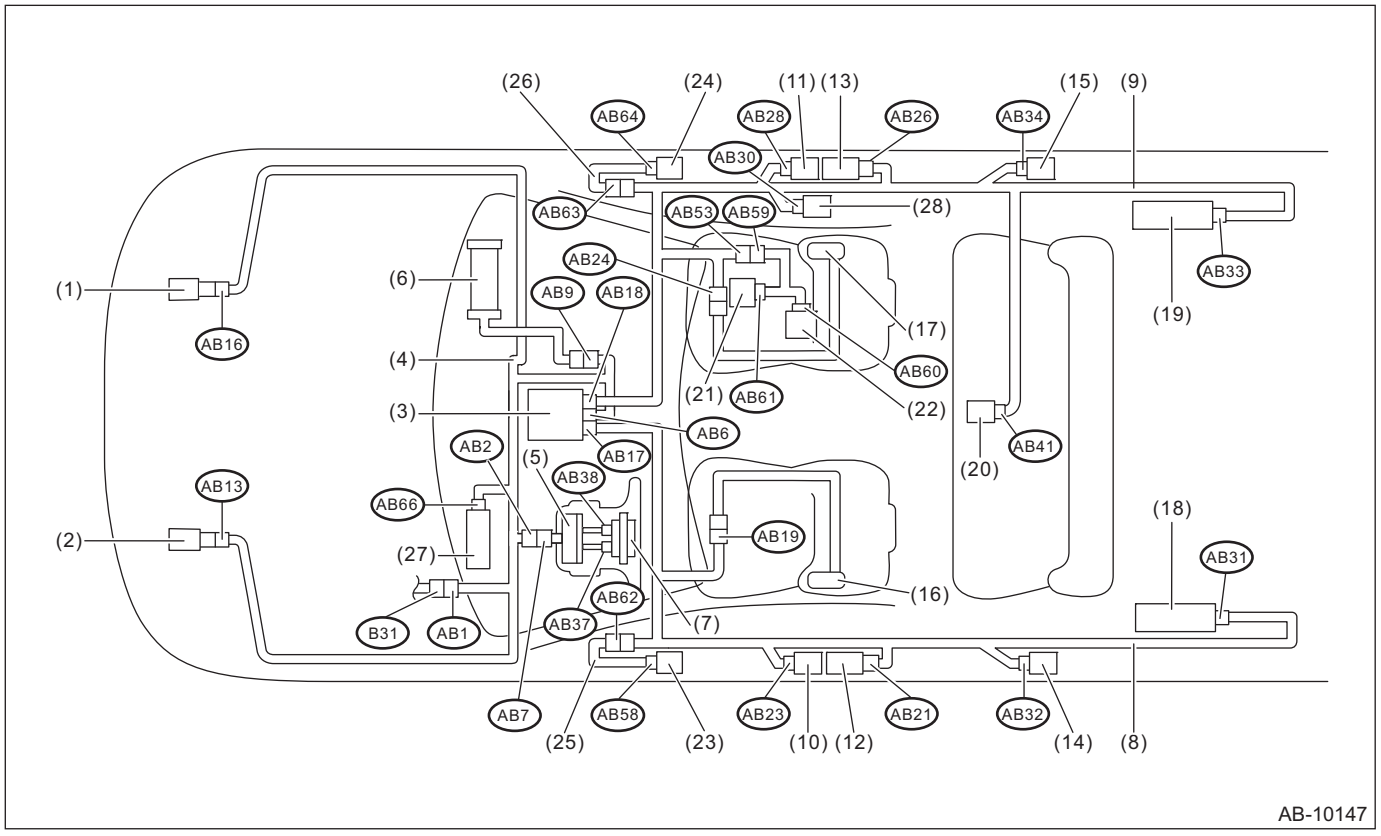
(A) Cross section

(1) Probe
(2) Connector (housing)
(3) Harness
(4) Terminal
(5) Connection

CAUTION:
• Do not insert the probe forcibly.
• Be careful not to contact it to the connection (5) between the terminal and harness. (Harness will come off easily from connector if doing so.)

4. Electrical Component Location

A: LOCATION



(1) Front sub sensor RH
(2) Front sub sensor LH
(3) Airbag control module
(4) Airbag main harness
(5) Roll connector
(6) Passenger's airbag inflator
(7) Driver's airbag inflator
(8) Airbag rear harness LH
(9) Airbag rear harness RH
(10) Side airbag sensor LH
(11) Side airbag sensor RH
(12) Seat belt pretensioner LH
(13) Seat belt pretensioner RH
(14) Curtain airbag sensor LH
(15) Curtain airbag sensor RH
(16) Side airbag inflator LH
(17) Side airbag inflator RH
(18) Curtain airbag inflator LH
(19) Curtain airbag inflator RH
(20) Satellite safing sensor
(21) Occupant detection control module
(22) Buckle switch RH
(23) Front door impact sensor LH
(24) Front door impact sensor RH
(25) Door harness LH
(26) Door harness RH
(27) Knee airbag inflator
(28) Lap seat belt pretensioner RH

Connector No.	(AB1)	(AB2)	(AB6)	(AB7)	(AB9)	(AB13)	(AB16)	(AB17)	(AB18)	(AB19)	(AB21)	(AB23)

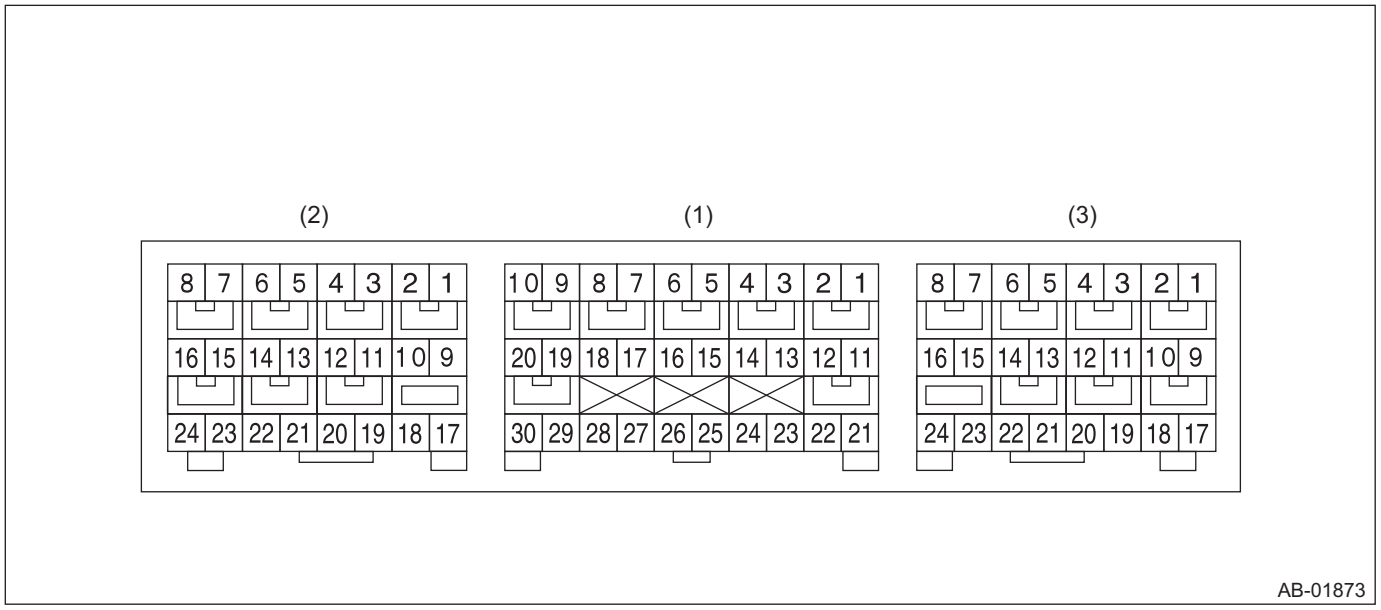
5. Airbag Connector

A: PROCEDURE

For operation procedures, refer to “Airbag Connector” of Airbag System. <Ref. to AB-17, Airbag Connector.>

6. Airbag Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



- Terminal numbers in airbag control module connector are shown in the figure.
- The airbag warning light illuminates when the connector is removed from the airbag control module.

Item		Control module terminal No.
Ignition power supply	Dedicated fuse	(1) — 21
Passenger's airbag module level one	+	(1) — 4
	–	(1) — 3
Passenger's airbag module level two	+	(1) — 1
	–	(1) — 2
Driver's airbag module level one	+	(1) — 5
	–	(1) — 6
Driver's airbag module level two	+	(1) — 8
	–	(1) — 7
Driver's knee airbag module	+	(1) — 9
	–	(1) — 10
Batch operation tool		(1) — 16
CAN-H		(1) — 13
CAN-L		(1) — 22
Front sub sensor LH	+	(1) — 30
	–	(1) — 28
Front sub sensor RH	+	(1) — 29
	–	(1) — 27
Ground line (GND)		(1) — 25
		(1) — 26
Passenger's airbag OFF indicator		(1) — 17
Passenger's airbag ON indicator		(1) — 23
Passenger's seat belt warning		(1) — 15
Telematics communication line		(1) — 24
Side airbag sensor LH Curtain airbag sensor LH Front door impact sensor LH	+	(2) — 24
	–	(2) — 23

Item		Control module terminal No.
Side airbag module LH	+	(2) — 1
	–	(2) — 2
Curtain airbag module LH	+	(2) — 8
	–	(2) — 7
Seat belt pretensioner LH	+	(2) — 5
	–	(2) — 6
Satellite safing sensor	+	(3) — 20
	–	(3) — 19
Seat belt pretensioner RH	+	(3) — 4
	–	(3) — 3
Lap seat belt pretensioner RH	+	(3) — 13
	–	(3) — 14
Side airbag sensor RH Curtain airbag sensor RH Front door impact sensor RH	+	(3) — 17
	–	(3) — 18
Side airbag module RH	+	(3) — 8
	–	(3) — 7
Curtain airbag module RH	+	(3) — 1
	–	(3) — 2
Occupant detection control module	+	(3) — 16
	–	(3) — 24

B: WIRING DIAGRAM

Refer to “Airbag System” in WI section. <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DTC detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between the airbag control module and the Subaru Select Monitor.

CAUTION:
Before performing diagnosis, refer to “CAUTION” in “General Description”. <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is there poor contact at battery terminal?	Replace or tighten the battery terminal.	Go to step **4**.
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step **9**.	Go to step **5**.
5	**CHECK SUBARU SELECT MONITOR.**	Is Subaru Select Monitor powered on?	Go to step **7**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK FUSE.** Remove a fuse in the data link connector and visually check the fuse.	Is the fuse OK?	Repair the harness between the battery and the data link connector.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
7	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step **8**.	Connect the connector of the airbag control module.
8	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Disconnect the airbag control module connector. 2) Connect the battery ground terminal. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **9**.
9	**CHECK FUSE.** Remove fuse No. 25 from the fuse & relay box, and perform visual inspection.	Is the fuse OK?	Go to step **10**.	Replace the fuse. If the fuse is blown out again, check the power supply circuit.
10	**CHECK AIRBAG CONTROL MODULE CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Confirm that the connectors of airbag control module (AB6, AB17, AB18) are securely connected.	Is the connector of the airbag control module securely connected?	Go to step **11**.	Connect the connector of the airbag control module.
11	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to the diagnosis for LAN system.	Go to step **12**.
12	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Turn the ignition switch to ON. 4) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
13	**CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 4 — Chassis ground:*** ***(2AG) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **14**.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.

Step		Check	Yes	No
14	CHECK POOR CONTACT OF CONNECTOR.	Is there poor contact of the control module power supply, ground circuit and data link connector?	Repair the connector. (Replace the harness without repairing the airbag system connector.)	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Clear the DTC stored in the airbag control module after repairing the airbag system.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

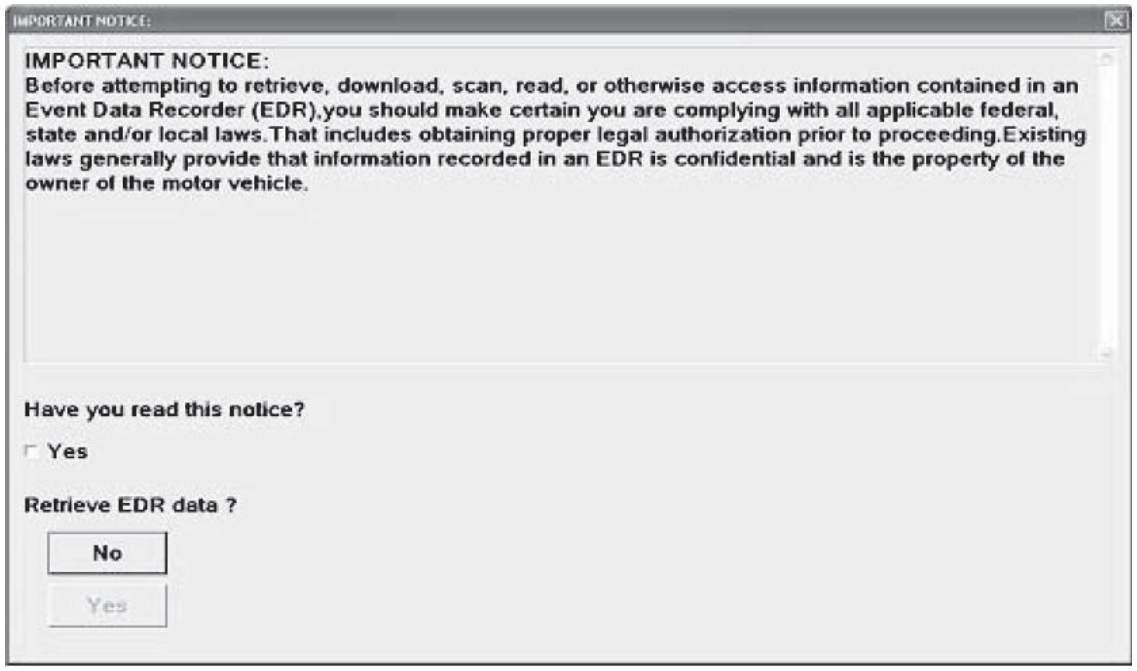
B: LIST

Item	Display	Note
Trip Count	—	—
Count	—	—
Time Count	—	—
Belt Buckle Switch RH	Unbelted/Belted	“Belted” when passenger’s seat belt is fastened “Unbelted” when passenger’s seat belt is not fastened
Passenger Occupant Status	Occupied/Empty or CRS	“Occupied” when the occupant is present “Empty or CRS” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.**
Passenger Airbag Status	ON/OFF	“ON” when the passenger occupant status is “Occupied” “OFF” when the status is “Empty or CRS”

12.Event Record Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «Work Support».
6) On «Work Support» display, select «Event Record Data». After selection, «IMPORTANT NOTICE» screen is displayed.
7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
8) If the applicable law is not violated, click the «Yes» button to display the EDR data.



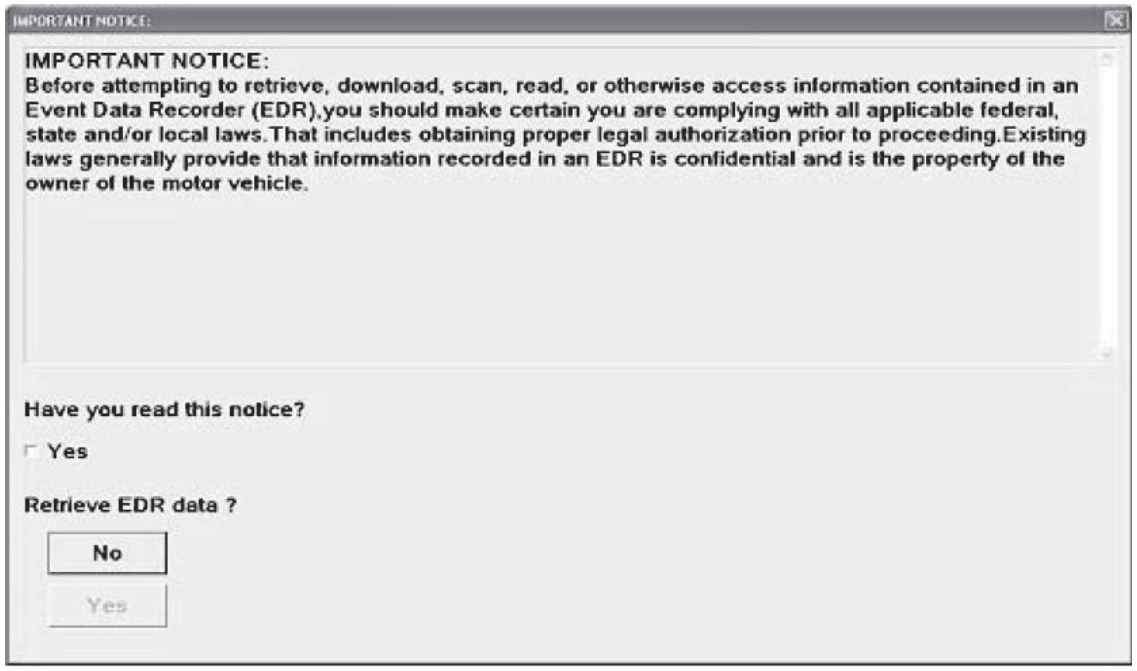
AB-02847

9) Select the items to be checked from each event record data.
10) Select the record data to be checked from each record data.
11) The selected record data is displayed. If there is no data recorded, «Event Record Data is not recorded» is displayed.
12) Select [Exit] to return to each event record data screen.

13.Batch save of Event record data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «Work Support».
6) On «Work Support» display, select «Batch save of Event record data». After selection, «IMPORTANT NOTICE» screen is displayed.
7) After checking the content of «IMPORTANT NOTICE», click the checkbox for “Yes”.
8) If the applicable law is not violated, click the «Yes» button to display the EDR data.

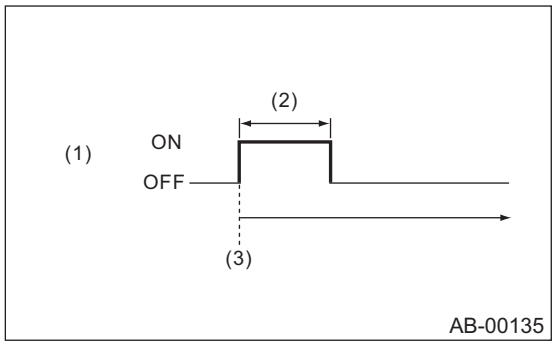


9) Specify the destination for the event record data to save the data there.
10) After saving the file, click the «OK» button to return the menu screen.

14.Airbag Warning Light Illumination Pattern

A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.



(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

15.Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

Detecting condition:

- Airbag warning light is faulty.
- Airbag control module to combination meter circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connector connection is improper.
- Connections of (AB6, AB17, AB18) to airbag control module are improper.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to diagnosis of LAN system.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check the connection status of airbag CM connector.	Is there poor contact of connector?	Reconnect the connector. Or repair the connector.	Go to step **3**.
3	**CHECK FOR POOR CONTACT.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is there any fault?	Repair it according to INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS).	Replace the airbag CM. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

B: AIRBAG WARNING LIGHT REMAINS OFF

NOTE:
For the diagnostic procedure, refer to “AIRBAG WARNING LIGHT REMAINS ON”. <Ref. to AB(diag)-30, AIRBAG WARNING LIGHT REMAINS ON, Airbag Warning Light Failure.>

16.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	CAN communication error occurred.	<Ref. to AB(diag)-46, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1126	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1126 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1145	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1145 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1146	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1146 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1170	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1170 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1185	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1185 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1195	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1195 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1196	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1196 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B1199	AIRBAG ECU MALFUNCTION	Airbag control module is faulty.	<Ref. to AB(diag)-47, DTC B1199 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>
B11E0	ROLLOVER DEPLOYMENT HISTORY	Curtain airbag module (LH/RH) and seat belt pretensioner (LH/RH) are deployed.	<Ref. to AB(diag)-47, DTC B11E0 ROLLOVER DEPLOYMENT HISTORY, Diagnostic Chart with Trouble Code.>
B11F0	DISPOSAL PROCESS COMPLETE	All airbags and pretensioners were deployed through a batch process.	<Ref. to AB(diag)-48, DTC B11F0 DISPOSAL PROCESS COMPLETE, Diagnostic Chart with Trouble Code.>
B11F3	FRONT IMPACT DEPLOYMENT	Front airbag module and seat belt pretensioner (LH/RH) are inflated.	<Ref. to AB(diag)-48, DTC B11F3 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B11F4	FRONT IMPACT DEPLOYMENT	Front airbag module and seat belt pretensioner (LH/RH) are inflated.	<Ref. to AB(diag)-48, DTC B11F4 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11F5	FRONT IMPACT DEPLOYMENT	Front airbag module and seat belt pretensioner (LH/RH) are inflated.	<Ref. to AB(diag)-48, DTC B11F5 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11F7	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11F8	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-49, DTC B11F8 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11F9	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-49, DTC B11F9 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11FA	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-49, DTC B11FA SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11FB	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-49, DTC B11FB SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B11FC	SIDE IMPACT DEPLOYMENT	• Side airbag module and curtain airbag module are deployed. • Curtain airbag module is deployed.	<Ref. to AB(diag)-49, DTC B11FC SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>
B1610	FRONT SUB SENSOR RH FAILURE	Front sub sensor RH is faulty	<Ref. to AB(diag)-49, DTC B1610 FRONT SUB SENSOR RH FAILURE, Diagnostic Chart with Trouble Code.>
B1612	FRONT SUB SENSOR RH LOST COMMUNICATION	• Open or short circuit in harness RH between airbag control module and front sub sensor. • Front sub sensor RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-49, DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1613	FRONT SUB SENSOR RH INITIALIZATION ERROR		<Ref. to AB(diag)-50, DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1615	FRONT SUB SENSOR LH FAILURE	Front sub sensor LH is faulty.	<Ref. to AB(diag)-51, DTC B1615 FRONT SUB SENSOR LH FAILURE, Diagnostic Chart with Trouble Code.>
B1617	FRONT SUB SENSOR LH LOST COMMUNICATION	• Open or short circuit in harness LH between airbag control module and front sub sensor. • Front sub sensor LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-52, DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1618	FRONT SUB SENSOR LH INITIALIZATION ERROR		<Ref. to AB(diag)-53, DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B16F2	FRONT SUB SENSOR RH RECOGNITION ERROR	• Front sensor RH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-54, DTC B16F2 FRONT SUB SENSOR RH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B16F3	FRONT SUB SENSOR LH RECOGNITION ERROR	• Front sensor LH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-55, DTC B16F3 FRONT SUB SENSOR LH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B1620	SIDE AIRBAG SENSOR RH FAILURE	Side airbag sensor RH is faulty.	<Ref. to AB(diag)-55, DTC B1620 SIDE AIRBAG SENSOR RH FAILURE, Diagnostic Chart with Trouble Code.>
B1622	SIDE AIRBAG SENSOR RH LOST COMMUNICATION	• Open or short circuit in harness RH between airbag control module and side airbag sensor. • Side airbag sensor RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-55, DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1623	SIDE AIRBAG SENSOR RH INITIALIZATION ERROR		<Ref. to AB(diag)-55, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B1625	SIDE AIRBAG SENSOR LH FAILURE	Side airbag sensor LH is faulty.	<Ref. to AB(diag)-57, DTC B1625 SIDE AIRBAG SENSOR LH FAILURE, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1627	SIDE AIRBAG SENSOR LH LOST COMMUNICATION	• Open or short circuit in harness LH between airbag control module and side airbag sensor. • Side airbag sensor LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-57, DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1628	SIDE AIRBAG SENSOR LH INITIALIZATION ERROR		<Ref. to AB(diag)-58, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B1630	CURTAIN AIRBAG SENSOR RH FAILURE	Curtain airbag sensor RH is faulty.	<Ref. to AB(diag)-60, DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE, Diagnostic Chart with Trouble Code.>
B1632	CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION	• Open or short circuit in harness RH between airbag control module and curtain airbag sensor. • Side airbag sensor RH is faulty. • Curtain airbag sensor RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-60, DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1633	CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR		<Ref. to AB(diag)-60, DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B1635	CURTAIN AIRBAG SENSOR LH FAILURE	Curtain airbag sensor LH is faulty.	<Ref. to AB(diag)-63, DTC B1635 CURTAIN AIRBAG SENSOR LH FAILURE, Diagnostic Chart with Trouble Code.>
B1637	CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION	• Open or short circuit in harness LH between airbag control module and curtain airbag sensor. • Side airbag sensor LH is faulty. • Curtain airbag sensor LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-63, DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1638	CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR		<Ref. to AB(diag)-63, DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B16F4	SIDE AIRBAG SENSOR RH RECOGNITION ERROR	• Side airbag sensor RH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-66, DTC B16F4 SIDE AIRBAG SENSOR RH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B16F5	SIDE AIRBAG SENSOR LH RECOGNITION ERROR	• Side airbag sensor LH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-67, DTC B16F5 SIDE AIRBAG SENSOR LH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B16F6	CURTAIN AIRBAG SENSOR RH RECOGNITION ERROR	• Curtain airbag sensor RH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-67, DTC B16F6 CURTAIN AIRBAG SENSOR RH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B16F7	CURTAIN AIRBAG SENSOR LH RECOGNITION ERROR	• Curtain airbag sensor LH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-67, DTC B16F7 CURTAIN AIRBAG SENSOR LH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B1642	SIDE SATELLITE SENSOR BUS RH LOST COMMUNICATION	• Open or short circuit in harness RH between airbag control module and front door impact sensor. • Side airbag sensor RH is faulty. • Curtain airbag sensor RH is faulty. • Front door impact sensor RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-69, DTC B1642 SIDE SATELLITE SENSOR BUS RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1643	SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR		<Ref. to AB(diag)-74, DTC B1643 SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B1647	SIDE SATELLITE SENSOR BUS LH LOST COMMUNICATION	• Open or short circuit in harness LH between airbag control module and front door impact sensor. • Side airbag sensor LH is faulty. • Curtain airbag sensor LH is faulty. • Front door impact sensor LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-78, DTC B1647 SIDE SATELLITE SENSOR BUS LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.>
B1648	SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR		<Ref. to AB(diag)-83, DTC B1648 SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>
B1650	OCCUPANT DETECTION SYSTEM MALFUNCTION	• Occupant detection sensor is faulty. • Occupant detection control module is faulty. • Occupant detection harness is faulty. • Rear airbag harness RH is faulty. • Fuse No. 25 is blown.	<Ref. to AB(diag)-86, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1655	FRONT BUCKLE SWITCH RH FAILURE	• Buckle switch RH circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty.	<Ref. to AB(diag)-87, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Chart with Trouble Code.>
B1660	PASSENGER'S AIRBAG ON INDICATOR FAILURE	• Passenger's airbag indicator is faulty. • Airbag control module is faulty. • Airbag main harness circuit is open, shorted or shorted to ground. • Body harness circuit is open.	<Ref. to AB(diag)-88, DTC B1660 PASSENGER'S AIRBAG ON INDICATOR FAILURE, Diagnostic Chart with Trouble Code.>
B1675	SATELLITE SAFING SENSOR FAILURE	Satellite safing sensor is faulty.	<Ref. to AB(diag)-90, DTC B1675 SATELLITE SAFING SENSOR FAILURE, Diagnostic Chart with Trouble Code.>
B1676	LOST COMMUNICATION WITH SATELLITE SAFING SENSOR	• Open or short circuit in harness between airbag control module and satellite safing sensor. • Satellite safing sensor is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-90, DTC B1676 LOST COMMUNICATION WITH SATELLITE SAFING SENSOR, Diagnostic Chart with Trouble Code.>
B1677	SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE		<Ref. to AB(diag)-91, DTC B1677 SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>
B16F8	SATELLITE SAFING SENSOR RECOGNITION ERROR	• Satellite safing sensor is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-93, DTC B16F8 SATELLITE SAFING SENSOR RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B16F9	DOOR SENSOR RH RECOGNITION ERROR	• Front door impact sensor RH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-93, DTC B16F9 DOOR SENSOR RH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B1690	DOOR SENSOR RH FAILURE	Front door impact sensor RH is faulty.	<Ref. to AB(diag)-93, DTC B1690 DOOR SENSOR RH FAILURE, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1692	LOST COMMUNICATION WITH DOOR SENSOR RH	• Open or short circuit in harness between curtain airbag sensor and front door impact sensor. • Front door impact sensor RH is faulty. • Curtain airbag sensor RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-93, DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH, Diagnostic Chart with Trouble Code.>
B1693	DOOR SENSOR RH INITIALIZATION INCOMPLETE		<Ref. to AB(diag)-94, DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>
B16FA	DOOR SENSOR LH RECOGNITION ERROR	• Front door impact sensor LH is misinstalled. • Airbag control module is faulty.	<Ref. to AB(diag)-97, DTC B16FA DOOR SENSOR LH RECOGNITION ERROR, Diagnostic Chart with Trouble Code.>
B1695	DOOR SENSOR LH FAILURE	Front door impact sensor LH is faulty.	<Ref. to AB(diag)-97, DTC B1695 DOOR SENSOR LH FAILURE, Diagnostic Chart with Trouble Code.>
B1697	LOST COMMUNICATION WITH DOOR SENSOR LH	• Open or short circuit in harness between curtain airbag sensor and front door impact sensor. • Front door impact sensor LH is faulty. • Curtain airbag sensor LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-97, DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH, Diagnostic Chart with Trouble Code.>
B1698	DOOR SENSOR LH INITIALIZATION INCOMPLETE		<Ref. to AB(diag)-97, DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>
B16F0	PASSENGER'S AIRBAG OFF INDICATOR FAILURE	• Passenger's airbag indicator is faulty. • Airbag control module is faulty. • Airbag main harness circuit is open or shorted. • Body harness circuit is open.	<Ref. to AB(diag)-101, DTC B16F0 PASSENGER'S AIRBAG OFF INDICATOR FAILURE, Diagnostic Chart with Trouble Code.>
B16F1	PASSENGER'S SEAT BELT WARNING FAILURE	• Airbag control module is faulty. • Meter is faulty. • Harness circuits between meter and airbag control module are open, shorted or shorted to ground.	<Ref. to AB(diag)-102, DTC B16F1 PASSENGER'S SEAT BELT WARNING FAILURE, Diagnostic Chart with Trouble Code.>
B1760	OCCUPANT DETECTION SENSOR MAT	• Occupant detection sensor is open, shorted between terminals, shorted to power supply or shorted to ground. • Seat heater is open. • Occupant detection control module is faulty.	<Ref. to AB(diag)-103, DTC B1760 OCCUPANT DETECTION SENSOR MAT, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1761	OCCUPANT DETECTION SENSOR MAT LIQUID COATING	• Detected that the occupant detection sensor is spattered with fluid. • Occupant detection sensor is faulty. • Occupant detection control module is faulty.	<Ref. to AB(diag)-103, DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING, Diagnostic Chart with Trouble Code.>
B1771	BUCKLE SWITCH	• Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty.	<Ref. to AB(diag)-103, DTC B1771 BUCKLE SWITCH, Diagnostic Chart with Trouble Code.>
B1795	OCCUPANT DETECTION MODULE INTERNAL CIRCUIT	Occupant detection control module is faulty.	<Ref. to AB(diag)-103, DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT, Diagnostic Chart with Trouble Code.>
B1800	SHORT IN DRIVER'S AIRBAG	• Airbag main harness circuit is shorted. • Airbag module harness (driver's side) circuit is shorted. • Roll connector circuit is shorted. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-104, DTC B1800 SHORT IN DRIVER'S AIRBAG, Diagnostic Chart with Trouble Code.>
B1801	OPEN IN DRIVER'S AIRBAG	• Airbag main harness circuit is open. • Airbag module harness circuit (driver's side) is open. • Roll connector circuit is open. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-106, DTC B1801 OPEN IN DRIVER'S AIRBAG, Diagnostic Chart with Trouble Code.>
B1802	SHORT IN DRIVER'S AIRBAG (TO GROUND)	• Airbag main harness circuit is shorted to ground. • Airbag module harness (driver's side) circuit is shorted to ground. • Roll connector circuit is shorted to ground. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-107, DTC B1802 SHORT IN DRIVER'S AIRBAG (TO GROUND), Diagnostic Chart with Trouble Code.>
B1803	SHORT IN DRIVER'S AIRBAG (TO +B)	• Airbag main harness circuit is shorted to power supply. • Airbag module harness circuit (driver's side) is shorted to power supply. • Roll connector circuit is shorted to power supply. • Airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-110, DTC B1803 SHORT IN DRIVER'S AIRBAG (TO +B), Diagnostic Chart with Trouble Code.>
B1805	SHORT IN PASSENGER'S AIRBAG	• Airbag main harness circuit is shorted. • Airbag module harness circuit (passenger's side) is shorted. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-112, DTC B1805 SHORT IN PASSENGER'S AIRBAG, Diagnostic Chart with Trouble Code.>
B1806	OPEN IN PASSENGER'S AIRBAG	• Airbag main harness circuit is open. • Airbag module harness circuit (passenger's side) is open. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-115, DTC B1806 OPEN IN PASSENGER'S AIRBAG, Diagnostic Chart with Trouble Code.>
B1807	SHORT IN PASSENGER'S AIRBAG (TO GROUND)	• Airbag main harness circuit is shorted to ground. • Airbag module harness (passenger's side) circuit is shorted to ground. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-118, DTC B1807 SHORT IN PASSENGER'S AIRBAG (TO GROUND), Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1808	SHORT IN PASSENGER'S AIRBAG (TO +B)	• Airbag main harness circuit is shorted to power supply. • Airbag module harness (passenger's side) circuit is shorted to power supply. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-121, DTC B1808 SHORT IN PASSENGER'S AIRBAG (TO +B), Diagnostic Chart with Trouble Code.>
B1810	SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP	• Airbag main harness circuit is shorted. • Airbag module harness (driver's side) circuit is shorted. • Roll connector circuit is shorted. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-124, DTC B1810 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP, Diagnostic Chart with Trouble Code.>
B1811	OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP	• Airbag main harness circuit is open. • Airbag module harness circuit (driver's side) is open. • Roll connector circuit is open. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-126, DTC B1811 OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP, Diagnostic Chart with Trouble Code.>
B1812	SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)	• Airbag main harness circuit is shorted to ground. • Airbag module harness (driver's side) circuit is shorted to ground. • Roll connector circuit is shorted to ground. • Driver's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-127, DTC B1812 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND), Diagnostic Chart with Trouble Code.>
B1813	SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)	• Airbag main harness circuit is shorted to power supply. • Airbag module harness circuit (driver's side) is shorted to power supply. • Roll connector circuit is shorted to power supply. • Airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-130, DTC B1813 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B), Diagnostic Chart with Trouble Code.>
B1815	SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP	• Airbag main harness circuit is shorted. • Airbag module harness circuit (passenger's side) is shorted. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-133, DTC B1815 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP, Diagnostic Chart with Trouble Code.>
B1816	OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP	• Airbag main harness circuit is open. • Airbag module harness circuit (passenger's side) is open. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-136, DTC B1816 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP, Diagnostic Chart with Trouble Code.>
B1817	SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)	• Airbag main harness circuit is shorted to ground. • Airbag module harness (passenger's side) circuit is shorted to ground. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-139, DTC B1817 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND), Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1818	SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)	• Airbag main harness circuit is shorted to power supply. • Airbag module harness (passenger's side) circuit is shorted to power supply. • Passenger's airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-142, DTC B1818 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B), Diagnostic Chart with Trouble Code.>
B1820	SHORT IN SIDE AIRBAG RH	• Side airbag harness RH circuit is shorted. • Side airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-145, DTC B1820 SHORT IN SIDE AIRBAG RH, Diagnostic Chart with Trouble Code.>
B1821	OPEN IN SIDE AIRBAG RH	• Side airbag harness RH circuit is open. • Side airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-147, DTC B1821 OPEN IN SIDE AIRBAG RH, Diagnostic Chart with Trouble Code.>
B1822	SHORT IN SIDE AIRBAG RH (TO GROUND)	• Side airbag harness RH circuit is shorted to ground. • Side airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-149, DTC B1822 SHORT IN SIDE AIRBAG RH (TO GROUND), Diagnostic Chart with Trouble Code.>
B1823	SHORT IN SIDE AIRBAG RH (TO +B)	• Side airbag harness RH circuit is shorted to power supply. • Side airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-151, DTC B1823 SHORT IN SIDE AIRBAG RH (TO +B), Diagnostic Chart with Trouble Code.>
B1825	SHORT IN SIDE AIRBAG LH	• Side airbag harness LH circuit is shorted. • Side airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-153, DTC B1825 SHORT IN SIDE AIRBAG LH, Diagnostic Chart with Trouble Code.>
B1826	OPEN IN SIDE AIRBAG LH	• Side airbag harness LH circuit is open. • Side airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-155, DTC B1826 OPEN IN SIDE AIRBAG LH, Diagnostic Chart with Trouble Code.>
B1827	SHORT IN SIDE AIRBAG LH (TO GROUND)	• Side airbag harness LH circuit is shorted to ground. • Side airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-157, DTC B1827 SHORT IN SIDE AIRBAG LH (TO GROUND), Diagnostic Chart with Trouble Code.>
B1828	SHORT IN SIDE AIRBAG LH (TO +B)	• Side airbag harness LH circuit is shorted to power supply. • Side airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-159, DTC B1828 SHORT IN SIDE AIRBAG LH (TO +B), Diagnostic Chart with Trouble Code.>
B1830	SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT	• Curtain airbag harness RH circuit is shorted. • Curtain airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-161, DTC B1830 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1831	OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT	• Curtain airbag harness RH circuit is open. • Curtain airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-163, DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT, Diagnostic Chart with Trouble Code.>
B1832	SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)	• Curtain airbag harness RH circuit is shorted to ground. • Curtain airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-165, DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND), Diagnostic Chart with Trouble Code.>
B1833	SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B)	• Curtain airbag harness RH is shorted to power supply. • Curtain airbag module RH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-167, DTC B1833 SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B), Diagnostic Chart with Trouble Code.>
B1835	SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT	• Curtain airbag harness LH circuit is shorted. • Curtain airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-169, DTC B1835 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT, Diagnostic Chart with Trouble Code.>
B1836	OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT	• Curtain airbag harness LH circuit is open. • Curtain airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-171, DTC B1836 OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT, Diagnostic Chart with Trouble Code.>
B1837	SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND)	• Curtain airbag harness LH circuit is shorted to ground. • Curtain airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-173, DTC B1837 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND), Diagnostic Chart with Trouble Code.>
B1838	SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B)	• Curtain airbag harness LH is shorted to power supply. • Curtain airbag module LH is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-175, DTC B1838 SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B), Diagnostic Chart with Trouble Code.>
B1860	SHORT IN DRIVER'S KNEE AIRBAG	• Airbag main harness circuit is shorted. • Knee airbag module harness circuit is shorted. • Knee airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-177, DTC B1860 SHORT IN DRIVER'S KNEE AIRBAG, Diagnostic Chart with Trouble Code.>
B1861	OPEN IN DRIVER'S KNEE AIRBAG	• Airbag main harness circuit is open. • Knee airbag module harness circuit is open. • Knee airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-179, DTC B1861 OPEN IN DRIVER'S KNEE AIRBAG, Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B1862	SHORT IN DRIVER'S KNEE AIRBAG (TO GROUND)	• Airbag main harness circuit is shorted to ground. • Knee airbag module harness circuit is shorted to ground. • Knee airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-181, DTC B1862 SHORT IN DRIVER'S KNEE AIRBAG (TO GROUND), Diagnostic Chart with Trouble Code.>
B1863	SHORT IN DRIVER'S KNEE AIRBAG (TO +B)	• Airbag main harness circuit is shorted to power supply. • Knee airbag module harness circuit is shorted to power supply. • Knee airbag module is faulty. • Airbag control module is faulty.	<Ref. to AB(diag)-183, DTC B1863 SHORT IN DRIVER'S KNEE AIRBAG (TO +B), Diagnostic Chart with Trouble Code.>
B1900	SHORT IN FRONT P/T RH	• Seat belt pretensioner RH circuit is shorted. • Pretensioner RH is faulty. • Pretensioner harness RH is shorted. • Airbag control module is faulty.	<Ref. to AB(diag)-185, DTC B1900 SHORT IN FRONT P/T RH, Diagnostic Chart with Trouble Code.>
B1901	OPEN IN FRONT P/T RH	• Seat belt pretensioner RH circuit is open. • Pretensioner RH is faulty. • Pretensioner harness RH is open. • Airbag control module is faulty.	<Ref. to AB(diag)-187, DTC B1901 OPEN IN FRONT P/T RH, Diagnostic Chart with Trouble Code.>
B1902	SHORT IN FRONT P/T RH (TO GROUND)	• Seat belt pretensioner RH circuit is shorted to ground. • Pretensioner RH is faulty. • Pretensioner harness RH is shorted to ground. • Airbag control module is faulty.	<Ref. to AB(diag)-189, DTC B1902 SHORT IN FRONT P/T RH (TO GROUND), Diagnostic Chart with Trouble Code.>
B1903	SHORT IN FRONT P/T RH (TO +B)	• Seat belt pretensioner RH circuit is shorted to power supply. • Pretensioner RH is faulty. • Pretensioner harness RH is shorted to power supply. • Airbag control module is faulty.	<Ref. to AB(diag)-191, DTC B1903 SHORT IN FRONT P/T RH (TO +B), Diagnostic Chart with Trouble Code.>
B1905	SHORT IN FRONT P/T LH	• Seat belt pretensioner LH circuit is shorted. • Pretensioner LH is faulty. • Pretensioner harness LH is shorted. • Airbag control module is faulty.	<Ref. to AB(diag)-193, DTC B1905 SHORT IN FRONT P/T LH, Diagnostic Chart with Trouble Code.>
B1906	OPEN IN FRONT P/T LH	• Seat belt pretensioner LH circuit is open. • Pretensioner LH is faulty. • Pretensioner harness LH is open. • Airbag control module is faulty.	<Ref. to AB(diag)-195, DTC B1906 OPEN IN FRONT P/T LH, Diagnostic Chart with Trouble Code.>
B1907	SHORT IN FRONT P/T LH (TO GROUND)	• Seat belt pretensioner LH circuit is shorted to ground. • Pretensioner LH is faulty. • Pretensioner harness LH is shorted to ground. • Airbag control module is faulty.	<Ref. to AB(diag)-197, DTC B1907 SHORT IN FRONT P/T LH (TO GROUND), Diagnostic Chart with Trouble Code.>
B1908	SHORT IN FRONT P/T LH (TO +B)	• Seat belt pretensioner LH circuit is shorted to power supply. • Pretensioner LH is faulty. • Pretensioner harness LH is shorted to power supply. • Airbag control module is faulty.	<Ref. to AB(diag)-199, DTC B1908 SHORT IN FRONT P/T LH (TO +B), Diagnostic Chart with Trouble Code.>

DTC	Item	Content of diagnosis	Reference
B19F0	SHORT IN FRONT P/T 2 RH	• Lap seat belt pretensioner RH circuit is shorted. • Lap seat belt pretensioner RH is faulty. • Lap seat belt pretensioner harness RH is shorted. • Airbag control module is faulty.	<Ref. to AB(diag)-201, DTC B19F0 SHORT IN FRONT P/T 2 RH, Diagnostic Chart with Trouble Code.>
B19F1	OPEN IN FRONT P/T 2 RH	• Lap seat belt pretensioner RH circuit is open. • Lap seat belt pretensioner RH is faulty. • Lap seat belt pretensioner harness RH is open. • Airbag control module is faulty.	<Ref. to AB(diag)-203, DTC B19F1 OPEN IN FRONT P/T 2 RH, Diagnostic Chart with Trouble Code.>
B19F2	SHORT IN FRONT P/T 2 RH (TO GROUND)	• Lap seat belt pretensioner RH circuit is shorted to ground. • Lap seat belt pretensioner RH is faulty. • Lap seat belt pretensioner harness RH is shorted to ground. • Airbag control module is faulty.	<Ref. to AB(diag)-205, DTC B19F2 SHORT IN FRONT P/T 2 RH (TO GROUND), Diagnostic Chart with Trouble Code.>
B19F3	SHORT IN FRONT P/T 2 RH (TO +B)	• Lap seat belt pretensioner RH circuit is shorted to power supply. • Lap seat belt pretensioner RH is faulty. • Lap seat belt pretensioner harness RH is shorted to power supply. • Airbag control module is faulty.	<Ref. to AB(diag)-207, DTC B19F3 SHORT IN FRONT P/T 2 RH (TO +B), Diagnostic Chart with Trouble Code.>

17.Diagnostic Chart with Trouble Code

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Diagnosis start condition:
Ignition voltage remains at 10 V or more for 1 second.
DTC detecting condition:
Detected when malfunction occurs in CAN line.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC B1000 AIRBAG ECU MALFUNCTION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any of B1000, B1003, B1105, B1106, B1115, B1116, B1170, B1185, B1195, B1196 or B1199 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-25, Clear Memory Mode.>

C: DTC B1003 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1003, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

D: DTC B1105 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1105, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

E: DTC B1106 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1106, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

F: DTC B1115 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1115, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

G: DTC B1116 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1116, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

H: DTC B1120 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1120, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

I: DTC B1121 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1121, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

J: DTC B1125 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1125, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

K: DTC B1126 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1126, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

L: DTC B1145 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1145, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

M: DTC B1146 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1146, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

N: DTC B1170 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1170, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

O: DTC B1185 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1185, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

P: DTC B1195 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1195, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

Q: DTC B1196 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1196, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

R: DTC B1199 AIRBAG ECU MALFUNCTION

NOTE:
For details on DTC B1199, refer to DTC B1000. <Ref. to AB(diag)-46, DTC B1000 AIRBAG ECU MALFUNCTION, Diagnostic Chart with Trouble Code.>

S: DTC B11E0 ROLLOVER DEPLOYMENT HISTORY

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
This DTC is indicated when the curtain airbag module and the seat belt pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.
- Airbag control module <Ref. to AB-50, Airbag Control Module.>
- Curtain airbag module <Ref. to AB-47, Curtain Airbag Module.>
- Front outer seat belt with pretensioner <Ref. to SB-16, Front Seat Belt.>

T: DTC B11F0 DISPOSAL PROCESS COMPLETE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Airbag disposal is completed using the ISO batch disposal tool.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of «Airbag» using the Subaru Select Monitor. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B11F0 displayed? (Current malfunction)	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-25, Clear Memory Mode.>

U: DTC B11F3 FRONT IMPACT DEPLOYMENT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
This DTC is indicated when the front airbag module and the pretensioner are deployed.
Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.
- Airbag control module <Ref. to AB-50, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-34, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-38, Passenger's Airbag Module.>
- Driver's knee airbag module <Ref. to AB-36, Knee Airbag Module.>
- Front sub sensor of both sides <Ref. to AB-52, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides <Ref. to SB-16, Front Seat Belt.>
- Steering roll connector <Ref. to AB-61, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-11, Front Seat.>
- Curtain airbag module on both sides (when activated) <Ref. to AB-47, Curtain Airbag Module.>

V: DTC B11F4 FRONT IMPACT DEPLOYMENT

NOTE:
For details on DTC B11F4, refer to DTC B11F3. <Ref. to AB(diag)-48, DTC B11F3 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

W: DTC B11F5 FRONT IMPACT DEPLOYMENT

NOTE:
For details on DTC B11F5, refer to DTC B11F3. <Ref. to AB(diag)-48, DTC B11F3 FRONT IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

X: DTC B11F7 SIDE IMPACT DEPLOYMENT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
This DTC is displayed when the side airbag module and curtain airbag module are deployed.
Once this DTC is displayed, the memory cannot be cleared. Replace the following parts.
- Airbag control module <Ref. to AB-50, Airbag Control Module.>
- Side airbag module (operating side) <Ref. to AB-44, Side Airbag Module.>

- Side airbag sensor (operating side) <Ref. to AB-56, Side Airbag Sensor.>
- Curtain airbag module (operating side) <Ref. to AB-47, Curtain Airbag Module.>
- Curtain airbag sensor (operating side) <Ref. to AB-59, Curtain Airbag Sensor.>
- Satellite safing sensor <Ref. to AB-60, Satellite Safing Sensor.>
- Front door impact sensor (operating side) <Ref. to AB-54, Front Door Impact Sensor.>
- Front outer seat belt with pretensioner on the collision side (when activated) <Ref. to SB-16, Front Seat Belt.>

Y: DTC B11F8 SIDE IMPACT DEPLOYMENT

NOTE:
For details on DTC B11F8. refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

Z: DTC B11F9 SIDE IMPACT DEPLOYMENT

NOTE:
For details on DTC B11F9, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AA:DTC B11FA SIDE IMPACT DEPLOYMENT

NOTE:
For details on DTC B11FA, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AB:DTC B11FB SIDE IMPACT DEPLOYMENT

NOTE:
For details on DTC B11FB, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AC:DTC B11FC SIDE IMPACT DEPLOYMENT

NOTE:
For details on DTC B11FC, refer to DTC B11F7. <Ref. to AB(diag)-48, DTC B11F7 SIDE IMPACT DEPLOYMENT, Diagnostic Chart with Trouble Code.>

AD:DTC B1610 FRONT SUB SENSOR RH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor RH is faulty.
If DTC B1610 is displayed, the circuit within the front sub sensor RH is faulty.
Replace the front sub sensor RH. <Ref. to AB-52, Front Sub Sensor.>

AE:DTC B1612 FRONT SUB SENSOR RH LOST COMMUNICATION

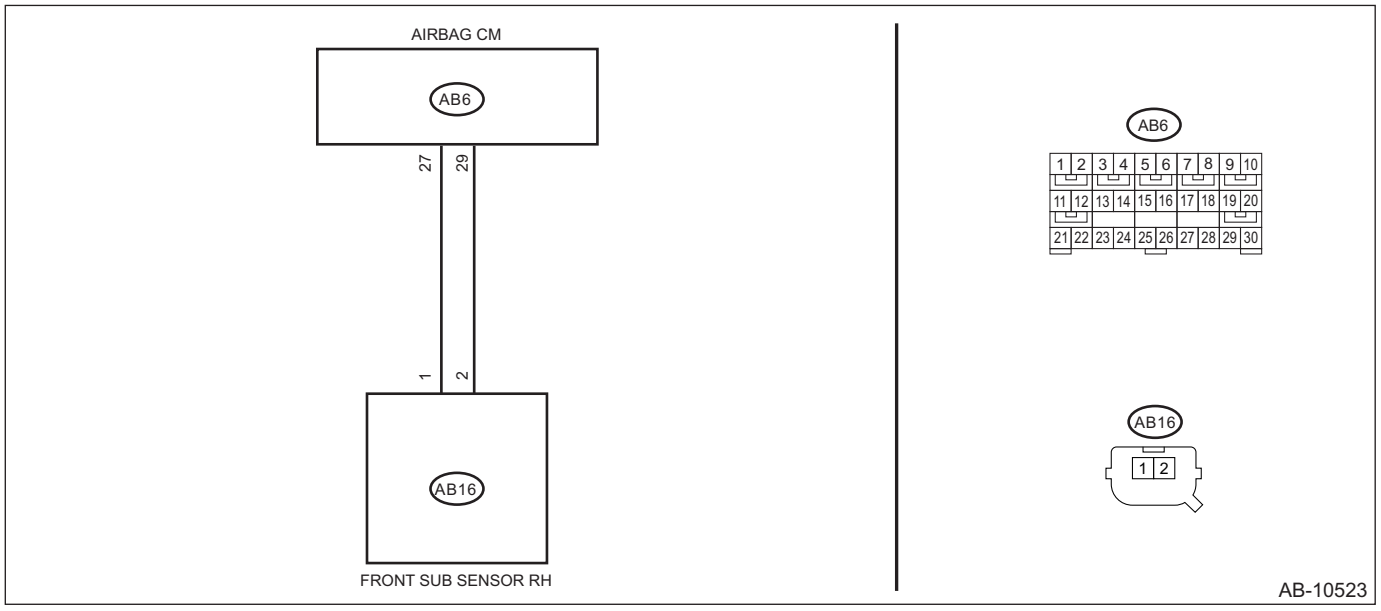
NOTE:
For details on DTC B1612, refer to DTC B1613. <Ref. to AB(diag)-50, DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AF:DTC B1613 FRONT SUB SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of front sensor bus RH
- Front sub sensor RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB16) between the airbag control module and the front sub sensor RH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connector (AB66) from knee airbag module. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Disconnect the connector (AB16) from the front sub sensor RH, and then connect the connector (1H) in the test harness H to connector (AB16). 8) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. ***Connector & terminal*** ***(4AG) No. 14 — (3H) No. 5:*** ***(4AG) No. 12 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS RH).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 12 — Chassis ground:*** ***(4AG) No. 14 — Chassis ground:*** ***(4AG) No. 12 — (4AG) No. 14:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1613 displayed?	Replace the front sub sensor RH. <Ref. to AB-52, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AG:DTC B1615 FRONT SUB SENSOR LH FAILURE

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor LH is faulty.
If DTC B1615 is displayed, the circuit within the front sub sensor LH is faulty.
Replace the front sub sensor LH. <Ref. to AB-52, Front Sub Sensor.>

AH:DTC B1617 FRONT SUB SENSOR LH LOST COMMUNICATION

NOTE:
For details on DTC B1617, refer to DTC B1618. <Ref. to AB(diag)-53, DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AI: DTC B1618 FRONT SUB SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of front sensor bus LH
- Front sub sensor LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB6, AB13) between the airbag control module and the front sub sensor LH.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connectors (AB7) and (AB2). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connector (AB66) from knee airbag module. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Disconnect the connector (AB13) from the front sub sensor LH, and then connect the connector (1H) in the test harness H to connector (AB13). 8) Measure the resistance between connector (4AG) in the test harness AG and connector (3H) in the test harness H. ***Connector & terminal*** ***(4AG) No. 7 — (3H) No. 5:*** ***(4AG) No. 9 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG MAIN HARNESS (FRONT SENSOR BUS LH).** Measure the resistance between connector (4AG) in the test harness AG and chassis ground, and the resistance between connector (4AG) terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 7 — Chassis ground:*** ***(4AG) No. 9 — Chassis ground:*** ***(4AG) No. 7 — (4AG) No. 9:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1618 displayed?	Replace the front sub sensor LH. <Ref. to AB-52, REMOVAL, Front Sub Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AJ:DTC B16F2 FRONT SUB SENSOR RH RECOGNITION ERROR

Diagnosis start condition:

Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor RH is wrongly installed.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE FRONT SUB SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor RH with a genuine sensor. <Ref. to AB-52, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

AK:DTC B16F3 FRONT SUB SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front sub sensor LH is wrongly installed.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE FRONT SUB SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front sub sensor LH with a genuine sensor. <Ref. to AB-52, REMOVAL, Front Sub Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

AL:DTC B1620 SIDE AIRBAG SENSOR RH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor RH is faulty.
When DTC B1620 is displayed, the circuit within the side airbag sensor RH is faulty.
Replace the side airbag sensor RH. <Ref. to AB-56, Side Airbag Sensor.>

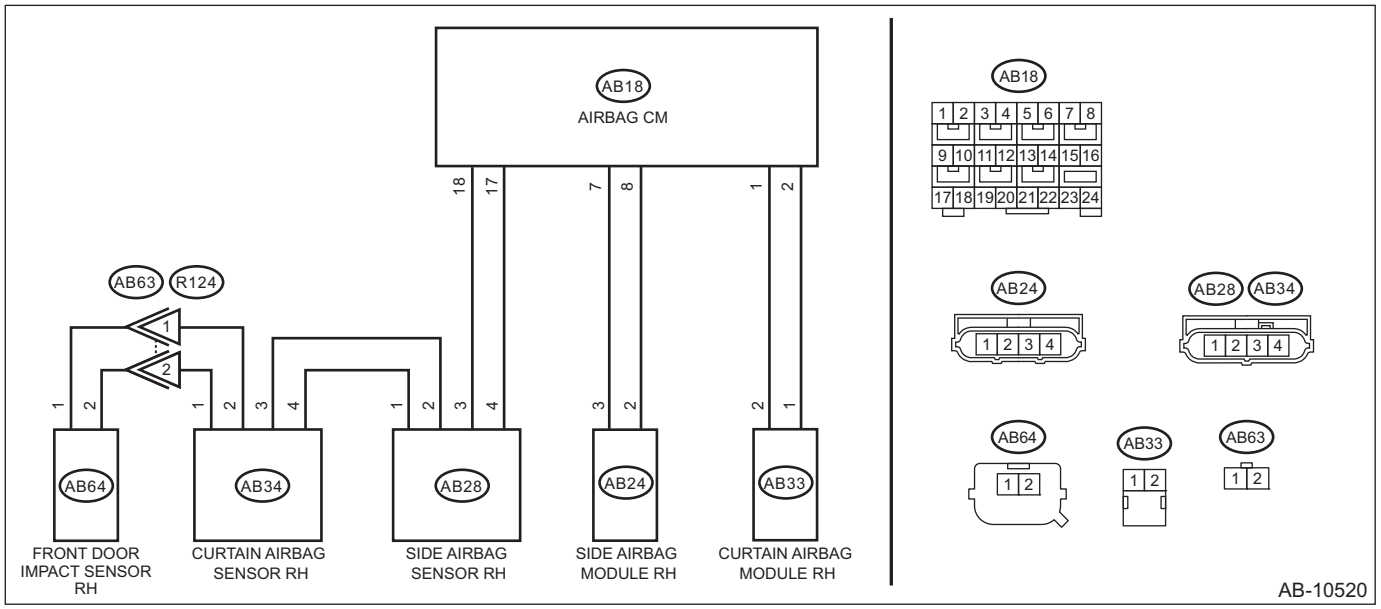
AM:DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION

NOTE:
For details on DTC B1622, refer to DTC B1623. <Ref. to AB(diag)-55, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AN:DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH and curtain airbag sensor RH are faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 9) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 1:*** ***(5AG) No. 16 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the resistance between connector (5AG) in the test harness AG and chassis ground, and the resistance between connector (5AG) terminals in the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1623 displayed?	Go to step **5**.	Go to step **6**.
5	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is the system normal?	Go to step **6**.	Replace the curtain airbag sensor RH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-50, REMOVAL, Airbag Control Module.>
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AO:DTC B1625 SIDE AIRBAG SENSOR LH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side airbag sensor LH is faulty.
When DTC B1625 is displayed, the circuit within the side airbag sensor LH is faulty.
Replace the side airbag sensor LH. <Ref. to AB-56, Side Airbag Sensor.>

AP:DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION

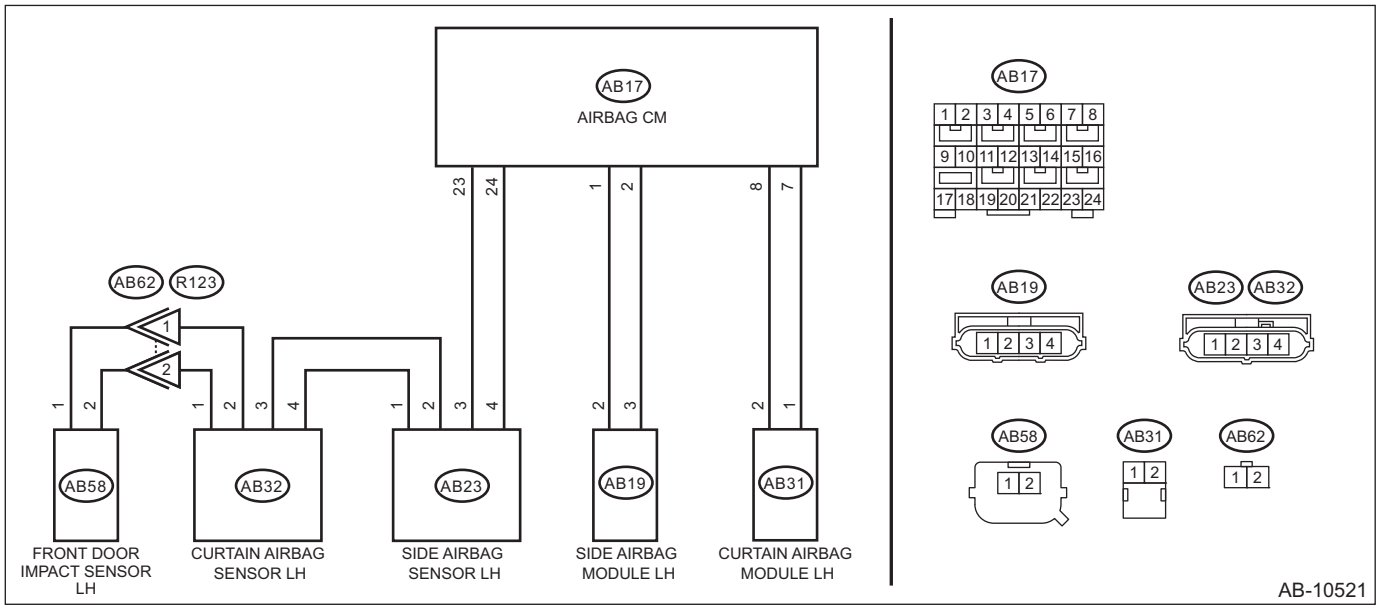
NOTE:
For details on DTC B1627, refer to DTC B1628. <Ref. to AB(diag)-58, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AQ:DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH and curtain airbag sensor LH are faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the connector (AB19) of the side airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 8) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 8 — (3V) No. 2:*** ***(5AG) No. 10 — (3V) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the resistance between connector (5AG) in the test harness AG and chassis ground, and the resistance between connector (5AG) terminals in the test harness AG. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1628 displayed?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is the system normal?	Go to step **6**.	Replace the curtain airbag sensor LH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-50, REMOVAL, Airbag Control Module.>
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AR:DTC B1630 CURTAIN AIRBAG SENSOR RH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor RH is faulty.
If DTC B1630 is displayed, the circuit within the curtain airbag sensor RH is faulty.
Replace the curtain airbag sensor RH. <Ref. to AB-59, Curtain Airbag Sensor.>

AS:DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION

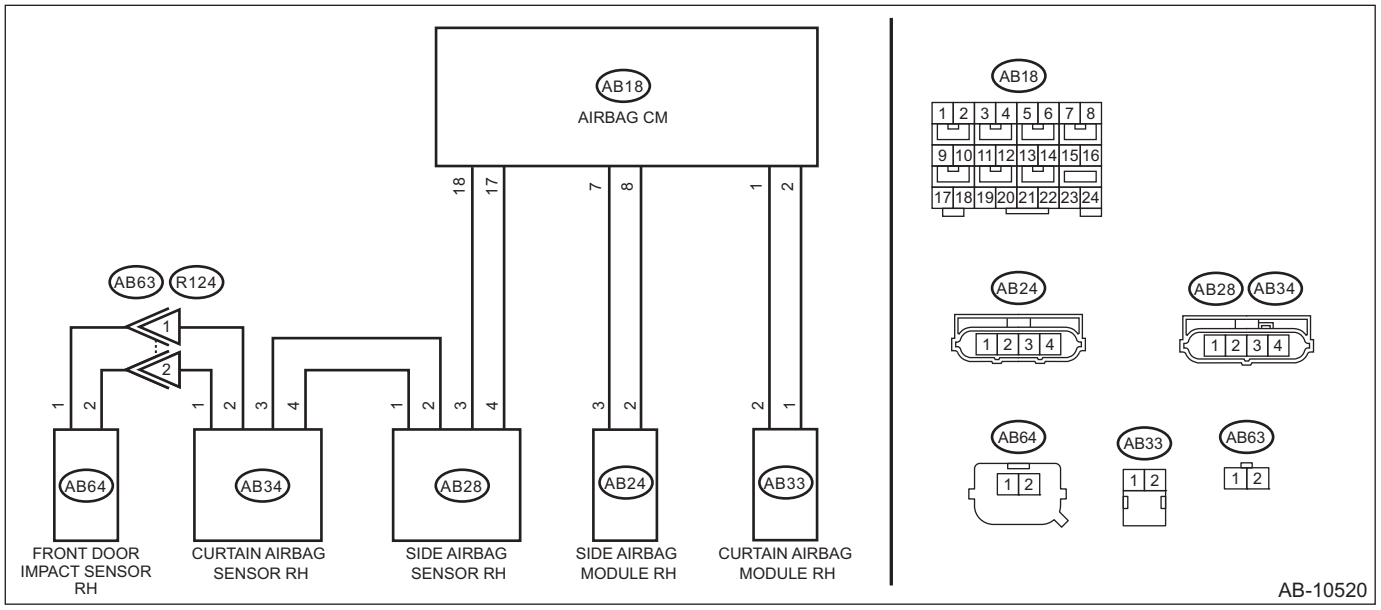
NOTE:
For details on DTC B1632, refer to DTC B1633. <Ref. to AB(diag)-60, DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AT:DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH and curtain airbag sensor RH are faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 or B1623 displayed?	Perform the diagnosis for the displayed DTC B1622 or B1623. <Ref. to AB(diag)-55, DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-55, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connector (AB28) of side airbag sensor RH. 7) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 8) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 9) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 10) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — (3V) No. 1:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1633 displayed?	Go to step **6**.	Go to step **7**.

	Step	Check	Yes	No
6	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1633 displayed?	Go to step **7**.	Go to step **8**.
7	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1633 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AU:DTC B1635 CURTAIN AIRBAG SENSOR LH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Curtain airbag sensor LH is faulty.
If DTC B1635 is displayed, the circuit within the curtain airbag sensor LH is faulty.
Replace the curtain airbag sensor LH. <Ref. to AB-59, Curtain Airbag Sensor.>

AV:DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION

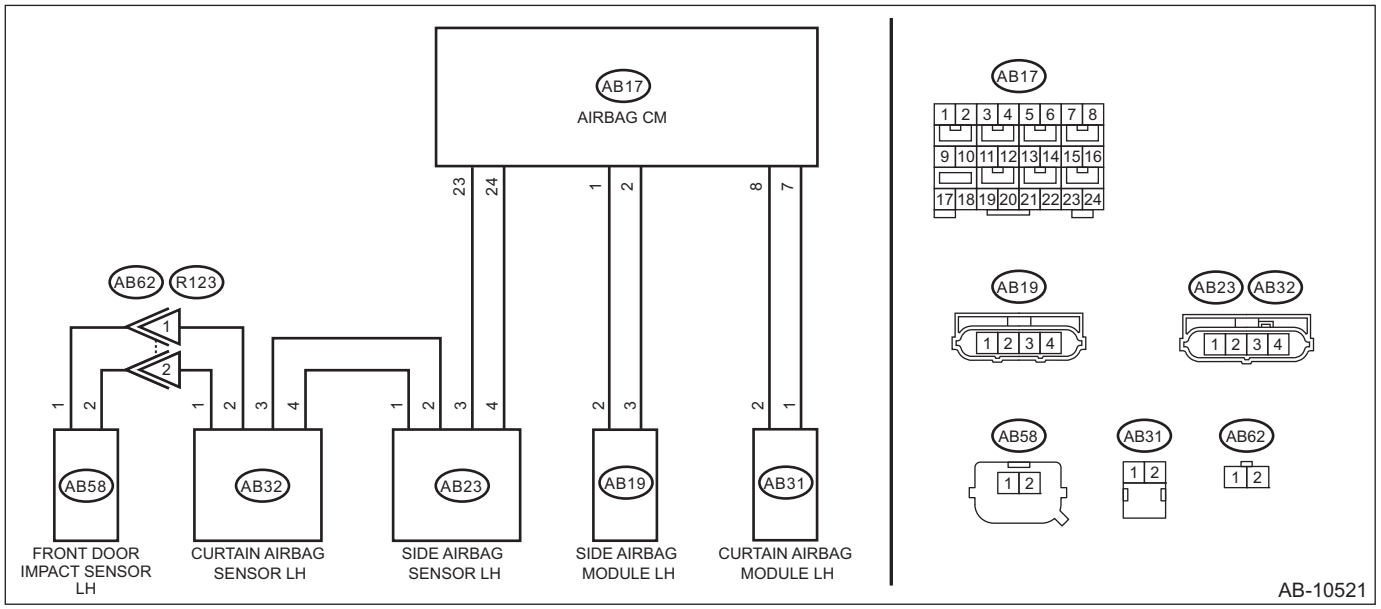
NOTE:
For details on DTC B1637, refer to DTC B1638. <Ref. to AB(diag)-63, DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>

AW:DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH and curtain airbag sensor LH are faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 or B1628 displayed?	Perform the diagnosis for the displayed DTC B1627 or B1628. <Ref. to AB(diag)-57, DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-58, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the door sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the connector (AB19) of the side airbag module LH. 5) Disconnect the connector (AB23) in the side airbag sensor LH. 6) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 7) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 8) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect it to the connector (2V) in test harness V. 9) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1638 displayed?	Go to step **6**.	Go to step **8**.

	Step	Check	Yes	No
6	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1638 displayed?	Go to step **7**.	Go to step **8**.
7	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1638 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **8**.
8	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AX:DTC B16F4 SIDE AIRBAG SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Side airbag sensor RH is misinstalled.
- Airbag CM is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE SIDE AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH with a genuine sensor. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

AY:DTC B16F5 SIDE AIRBAG SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Side airbag sensor LH is misinstalled.
- Airbag CM is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE SIDE AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH with a genuine sensor. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

AZ:DTC B16F6 CURTAIN AIRBAG SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag sensor RH is misinstalled.
- Airbag CM is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE CURTAIN AIRBAG SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH with a genuine sensor. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BA:DTC B16F7 CURTAIN AIRBAG SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag sensor LH is misinstalled.
- Airbag CM is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

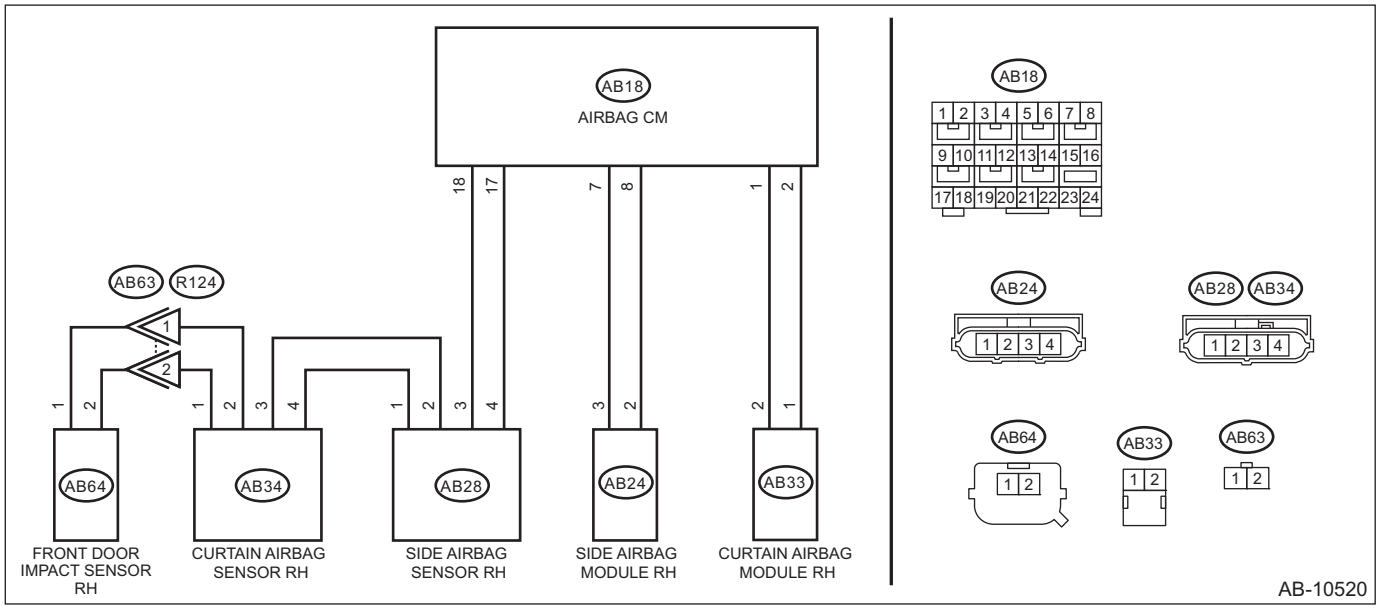
	Step	Check	Yes	No
1	**REPLACE CURTAIN AIRBAG SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH with a genuine sensor. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BB:DTC B1642 SIDE SATELLITE SENSOR BUS RH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of side sensor bus RH.
- Side airbag sensor RH is faulty.
- Curtain airbag sensor RH is faulty.
- Front door impact sensor RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 or B1623 displayed?	Perform the diagnosis for the displayed DTC B1622 or B1623. <Ref. to AB(diag)-55, DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-55, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 or B1633 displayed?	Perform the diagnosis for the displayed DTC B1632 or B1633. <Ref. to AB(diag)-60, DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-60, DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1692 or B1693 displayed?	Perform the diagnosis for the displayed DTC B1692 or B1693. <Ref. to AB(diag)-93, DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-94, DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) of side airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Disconnect the connector (AB28) from side airbag sensor RH. 9) Connect the connector (2V) in the test harness V to the connector (AB28). 10) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 14 — (3V) No. 1:*** ***(5AG) No. 16 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH. 2) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.

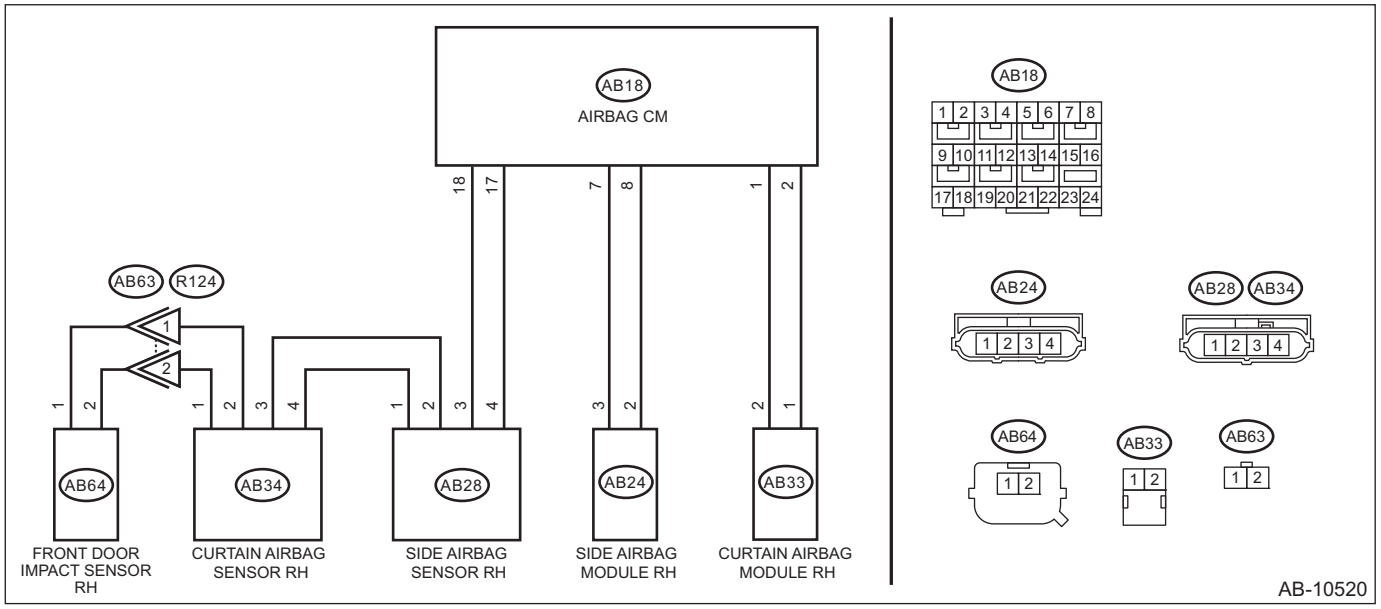
	Step	Check	Yes	No
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** 1) Disconnect the connector (AB64) from the front door impact sensor RH, and connect the connector (1H) in the test harness H to connector (AB64). 2) Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H. ***Connector & terminal*** ***(3V) No. 4 — (3H) No. 5:*** ***(3V) No. 5 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **10**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1642 displayed?	Go to step **12**.	Go to step **15**.

	Step	Check	Yes	No
12	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1642 displayed?	Go to step **13**.	Go to step **15**.
13	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1642 displayed?	Go to step **14**.	Go to step **15**.
14	**REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1642 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **15**.
15	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BC:DTC B1643 SIDE SATELLITE SENSOR BUS RH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side satellite sensor bus RH circuit is shorted, shorted to ground or shorted to power supply.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**INSPECTION OF AIRBAG SYSTEM.** 1) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 2) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is the airbag ECM malfunction, or DTC B1620, B1630, B1690 a current malfunction?	Perform the diagnosis for the displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the door harness RH, or replace the airbag rear harness along with body harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB33) from curtain airbag module RH. 4) Disconnect the connector (AB24) of side airbag module RH. 5) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Disconnect the connector (AB28) from side airbag sensor RH, and connect the connector (2V) in test harness V to connector (AB28). 8) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between test harness (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR RH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 1 (+) — Chassis ground (–):*** ***(3V) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB28) of side airbag sensor RH. 2) Connect the connector (AB28) of side airbag sensor RH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 5) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the airbag rear harness along with body harness.

Step		Check	Yes	No
6	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR RH AND CURTAIN AIRBAG SENSOR RH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 1 (+) — Chassis ground (–):*** ***(3V) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Replace the airbag rear harness along with body harness.
7	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS RH (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** 1) Disconnect the connector (AB64) from front door impact sensor RH. 2) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Go to step **8**.
8	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS RH (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** 1) Disconnect the connector (R124) in the airbag rear harness and the connector (AB63) of the door harness RH. 2) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Replace the door harness RH.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS RH (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 4 (+) — Chassis ground (–):*** ***(3V) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **11**.	Go to step **10**.
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS RH (BETWEEN CURTAIN AIRBAG SENSOR RH AND FRONT DOOR IMPACT SENSOR RH).** 1) Disconnect the connector (R124) in the airbag rear harness and the connector (AB63) of the door harness RH. 2) Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 4 (+) — Chassis ground (–):*** ***(3V) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the door harness RH.	Replace the airbag rear harness along with body harness.

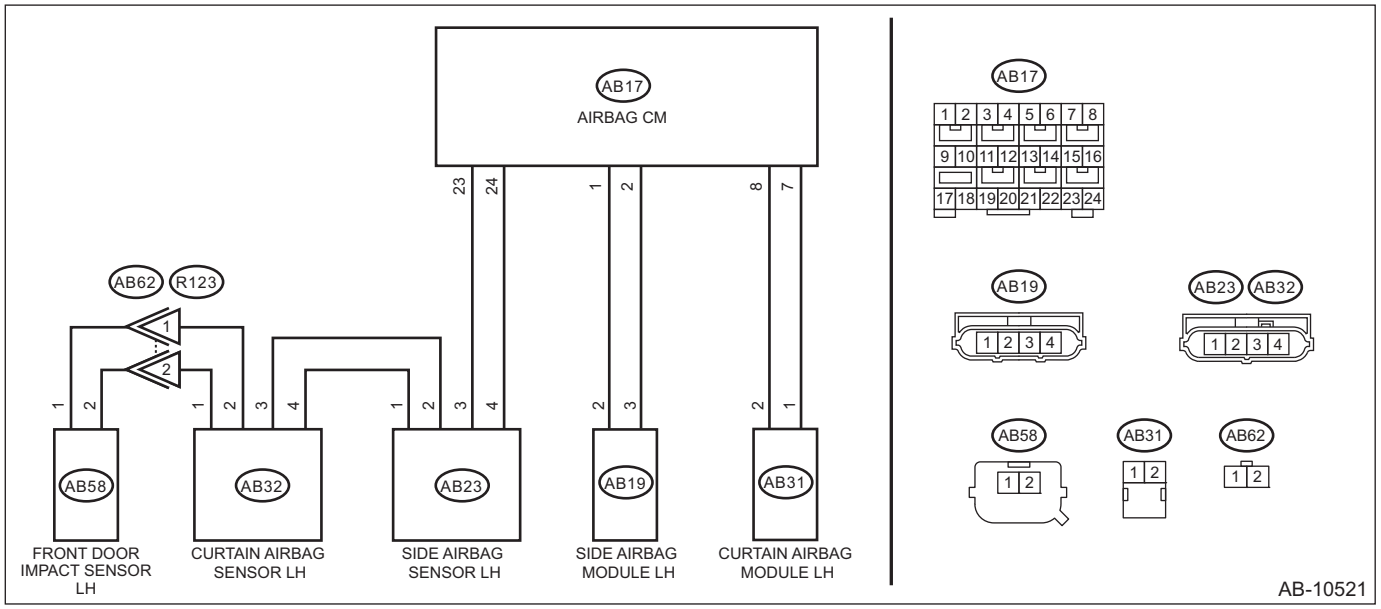
	Step	Check	Yes	No
11	**REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Replace the front door impact sensor RH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 a current malfunction?	Go to step **12**.	Finish the diagnosis.
12	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 a current malfunction?	Go to step **13**.	Finish the diagnosis.
13	**REPLACE SIDE AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor RH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1643 a current malfunction?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Finish the diagnosis.

BD:DTC B1647 SIDE SATELLITE SENSOR BUS LH LOST COMMUNICATION

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of side sensor bus LH.
- Side airbag sensor LH is faulty.
- Curtain airbag sensor LH is faulty.
- Front door impact sensor LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 or B1628 displayed?	Perform the diagnosis for the displayed DTC B1627 or B1628. <Ref. to AB(diag)-57, DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-58, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 or B1638 displayed?	Perform the diagnosis for the displayed DTC B1637 or B1638. <Ref. to AB(diag)-63, DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-63, DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **3**.
3	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1697 or B1698 displayed?	Perform the diagnosis for the displayed DTC B1697 or B1698. <Ref. to AB(diag)-97, DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-97, DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>	Go to step **4**.
4	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the connector (AB19) of the side airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Disconnect the connector (AB23) from the side airbag sensor LH. 8) Connect the connector (2V) in the test harness V to the connector (AB23). 9) Measure the resistance between connector (5AG) in the test harness AG and connector (3V) in the test harness V. ***Connector & terminal*** ***(5AG) No. 10 — (3V) No. 1:*** ***(5AG) No. 8 — (3V) No. 2:***	Is the resistance less than 10 Ω?	Go to step **6**.	Replace the airbag rear harness along with body harness.
6	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Replace the airbag rear harness along with body harness.
7	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH. 2) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 5) Measure the resistance between connector (3V) terminals in the test harness V. ***Connector & terminal*** ***(3V) No. 2 — (3V) No. 6:*** ***(3V) No. 1 — (3V) No. 7:***	Is the resistance less than 10 Ω?	Go to step **8**.	Replace the airbag rear harness along with body harness.

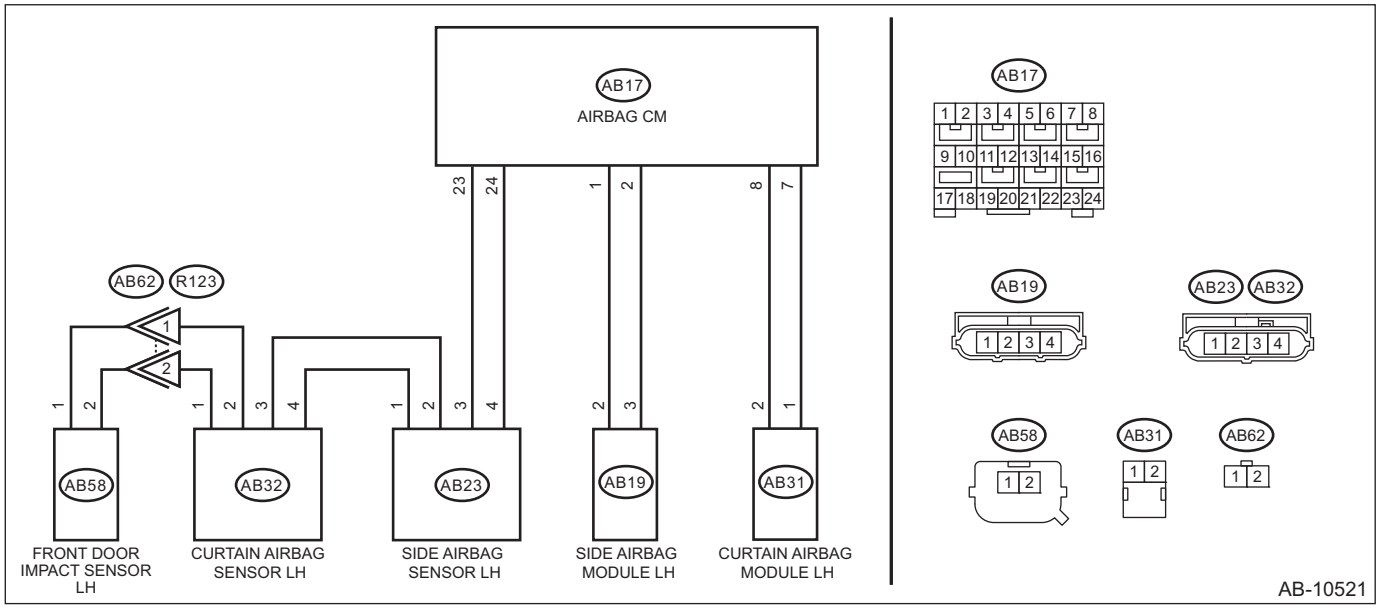
	Step	Check	Yes	No
8	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).** 1) Disconnect the connector (AB58) from the front door impact sensor LH, and connect the connector (1H) in the test harness H to connector (AB58). 2) Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H. ***Connector & terminal*** ***(3V) No. 4 — (3H) No. 5:*** ***(3V) No. 5 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **10**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND DOOR SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
11	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Go to step **12**.	Go to step **15**.
12	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Go to step **13**.	Go to step **15**.

Step		Check	Yes	No
13	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Go to step **14**.	Go to step **15**.
14	**REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1647 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **15**.
15	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BE:DTC B1648 SIDE SATELLITE SENSOR BUS LH INITIALIZATION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Side satellite sensor bus LH circuit is shorted, shorted to ground or shorted to power supply.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**INSPECTION OF AIRBAG SYSTEM.** 1) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 2) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is the airbag ECM malfunction, or DTC B1625, B1635, B1695 a current malfunction?	Perform the diagnosis for the displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the door harness LH, or replace the airbag rear harness along with body harness.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the connector (AB19) of the side airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Disconnect the connector (AB23) from side airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB23). 7) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:*** ***(3V) No. 1 — (3V) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SIDE AIRBAG SENSOR LH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 1 (+) — Chassis ground (–):*** ***(3V) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).** 1) Disconnect the connector (2V) in the test harness V from the connector (AB23) of side airbag sensor LH. 2) Connect the connector (AB23) of side airbag sensor LH and the connector (1AI) in the test harness AI. 3) Connect the connector (2AI) in the test harness AI and the connector (1V) in the test harness V. 4) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 5) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 1 — Chassis ground:*** ***(3V) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
6	**CHECK AIRBAG REAR HARNESS (BETWEEN SIDE AIRBAG SENSOR LH AND CURTAIN AIRBAG SENSOR LH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 1 (+) — Chassis ground (–):*** ***(3V) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **7**.	Replace the airbag rear harness along with body harness.
7	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS LH (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** 1) Disconnect the connector (AB58) from front door impact sensor LH. 2) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Go to step **8**.
8	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS LH (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** 1) Disconnect the connector (R123) in the airbag rear harness and the connector (AB62) of the door harness LH. 2) Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Replace the door harness LH.	Replace the airbag rear harness along with body harness.
9	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS LH (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 4 (+) — Chassis ground (–):*** ***(3V) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **11**.	Go to step **10**.
10	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS LH (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** 1) Disconnect the connector (R123) in the airbag rear harness and the connector (AB62) of the door harness LH. 2) Measure the voltage between connector (3V) in the test harness V and chassis ground. ***Connector & terminal*** ***(3V) No. 4 (+) — Chassis ground (–):*** ***(3V) No. 5 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the door harness LH.	Replace the airbag rear harness along with body harness.

	Step	Check	Yes	No
11	**REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Replace the front door impact sensor LH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 2) Connect all connectors. 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 a current malfunction?	Go to step **12**.	Finish the diagnosis.
12	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 a current malfunction?	Go to step **13**.	Finish the diagnosis.
13	**REPLACE SIDE AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the side airbag sensor LH. <Ref. to AB-56, REMOVAL, Side Airbag Sensor.> 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1648 a current malfunction?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Finish the diagnosis.

BF:DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

NOTE:
Refer to “Occupant Detection System” for details on DTC B1650. <Ref. to OD(diag)-26, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BG:DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

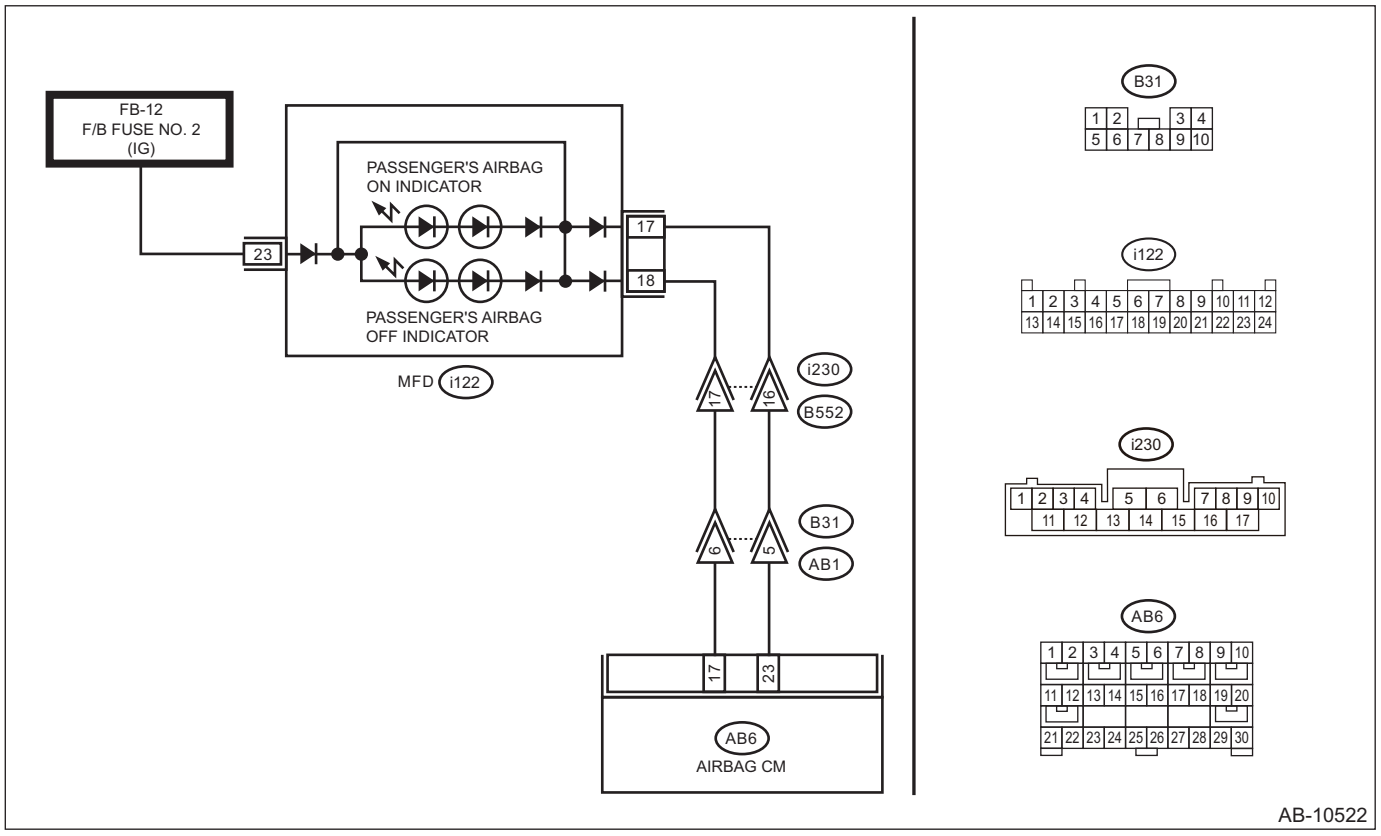
NOTE:
Refer to “Occupant Detection System” for details on DTC B1655. <Ref. to OD(diag)-27, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BH:DTC B1660 PASSENGER'S AIRBAG ON INDICATOR FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open or shorted.
- Body harness circuit is open.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK FOR POOR CONTACT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Check that the connector between the airbag control module and MFD is securely connected.	Is there poor contact of any connector?	Repair the bulkhead harness. Or replace the airbag main harness along with body harness.	Go to step **2**.
2	**CHECK AIRBAG MAIN HARNESS.** 1) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 2) Connect the battery ground terminal and turn the ignition switch to ON. NOTE: Neither of ON/OFF illuminates when it is normal.	Does the passenger's airbag indicator illuminate?	Go to step **3**.	Go to step **4**.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the MFD and disconnect the connector (i122). 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 5) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 9 — (2AG) No. 8:*** ***(2AG) No. 9 — Chassis ground:*** ***(2AG) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the MFD. <Ref. to IDI-19, REMOVAL, Multi-function Display (MFD).>	Repair the bulkhead harness. Or replace the airbag main harness along with body harness.
4	**CHECK AIRBAG MAIN HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 4) Connect the connectors (7AG) and (8AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's airbag indicator illuminate?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK AIRBAG MAIN HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the MFD and disconnect the connector (i122). 3) Measure the resistance between connector (2AG) in the test harness AG and connector (i122). ***Connector & terminal*** ***(2AG) No. 9 — (i122) No. 18:*** ***(2AG) No. 8 — (i122) No. 17:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair the bulkhead harness. Or replace the airbag main harness along with body harness.
6	**CHECK BODY HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (i122) and chassis ground. ***Connector & terminal*** ***(i122) No. 23 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the MFD. <Ref. to IDI-19, REMOVAL, Multi-function Display (MFD).>	Check the power supply circuit of MFD.

BI: DTC B1675 SATELLITE SAFING SENSOR FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Satellite safing sensor is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE SATELLITE SAFING SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-60, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BJ:DTC B1676 LOST COMMUNICATION WITH SATELLITE SAFING SENSOR

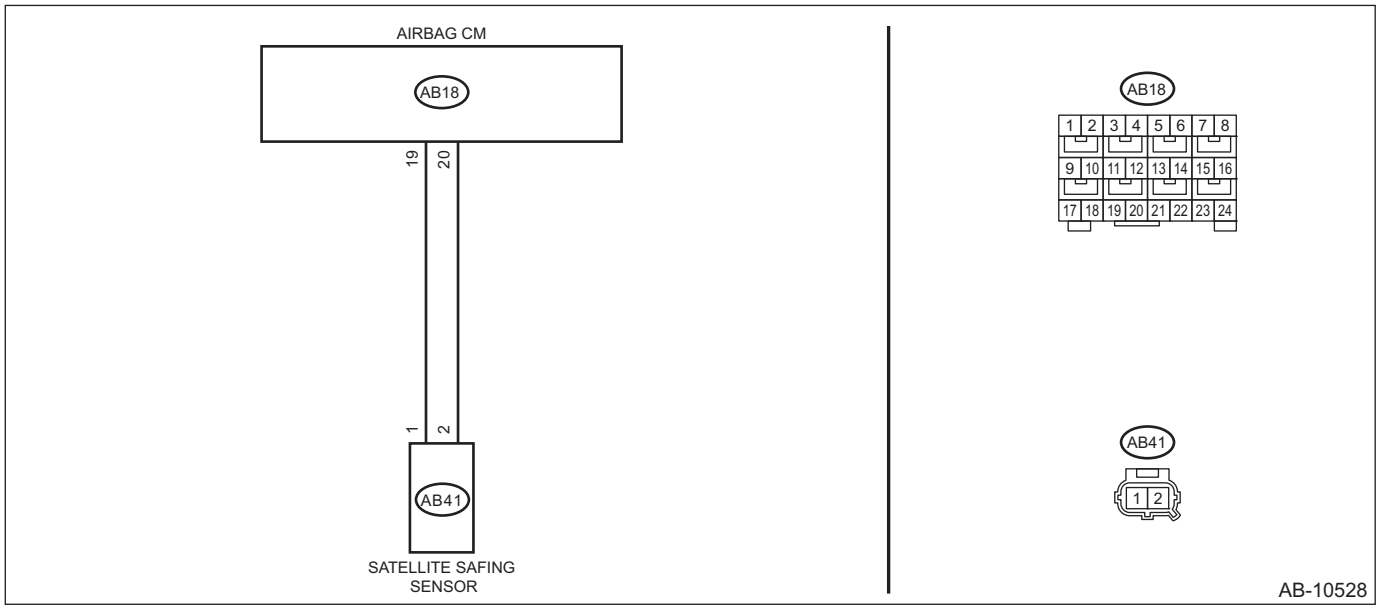
NOTE:
For details on DTC B1676, refer to DTC B1677. <Ref. to AB(diag)-91, DTC B1677 SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>

BK:DTC B1677 SATELLITE SAFING SENSOR INITIALIZATION INCOMPLETE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of satellite safing sensor
- Satellite safing sensor is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors (AB18, AB41) between the airbag control module and the satellite safing sensor.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SATELLITE SAFING SENSOR).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB21, AB26) from seat belt pretensioner. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connectors (AB31, AB33) from curtain airbag module. 5) Disconnect connectors (AB19) and (AB24) from the side airbag module. 6) Disconnect the connectors (AB17, AB6, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Disconnect the connector (AB41) from the satellite safing sensor and connect to the test harness H connector (1H). 9) Measure the resistance between connector in the test harness AG and connector in the test harness H. ***Connector & terminal*** ***(4AG) No. 5 — (3H) No. 6:*** ***(5AG) No. 13 — (3H) No. 5:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag rear harness along with body harness.
3	**CHECK AIRBAG REAR HARNESS (BETWEEN AIRBAG CONTROL MODULE AND SATELLITE SAFING SENSOR).** Measure the resistance between connector in the test harness AG and chassis ground, and the resistance between connector terminals in the test harness AG. ***Connector & terminal*** ***(4AG) No. 5 — Chassis ground:*** ***(5AG) No. 13 — Chassis ground:*** ***(4AG) No. 5 — (5AG) No. 13:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Using the Subaru Select Monitor, perform the clear memory for «Airbag». <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Execute the inspection mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC of «Airbag» using the Subaru Select Monitor. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1677 displayed?	Replace the satellite safing sensor. <Ref. to AB-60, REMOVAL, Satellite Safing Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.**	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BL:DTC B16F8 SATELLITE SAFING SENSOR RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Satellite safing sensor is misinstalled.
- Airbag control module is faulty.

	Step	Check	Yes	No
1	**REPLACE SATELLITE SAFING SENSOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-60, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BM:DTC B16F9 DOOR SENSOR RH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Front door impact sensor RH is misinstalled.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE FRONT DOOR IMPACT SENSOR RH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH with a genuine sensor. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BN:DTC B1690 DOOR SENSOR RH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor RH is faulty.
If DTC B1690 is displayed, the circuit within the front door impact sensor RH is faulty.
Replace the front door impact sensor RH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.>

BO:DTC B1692 LOST COMMUNICATION WITH DOOR SENSOR RH

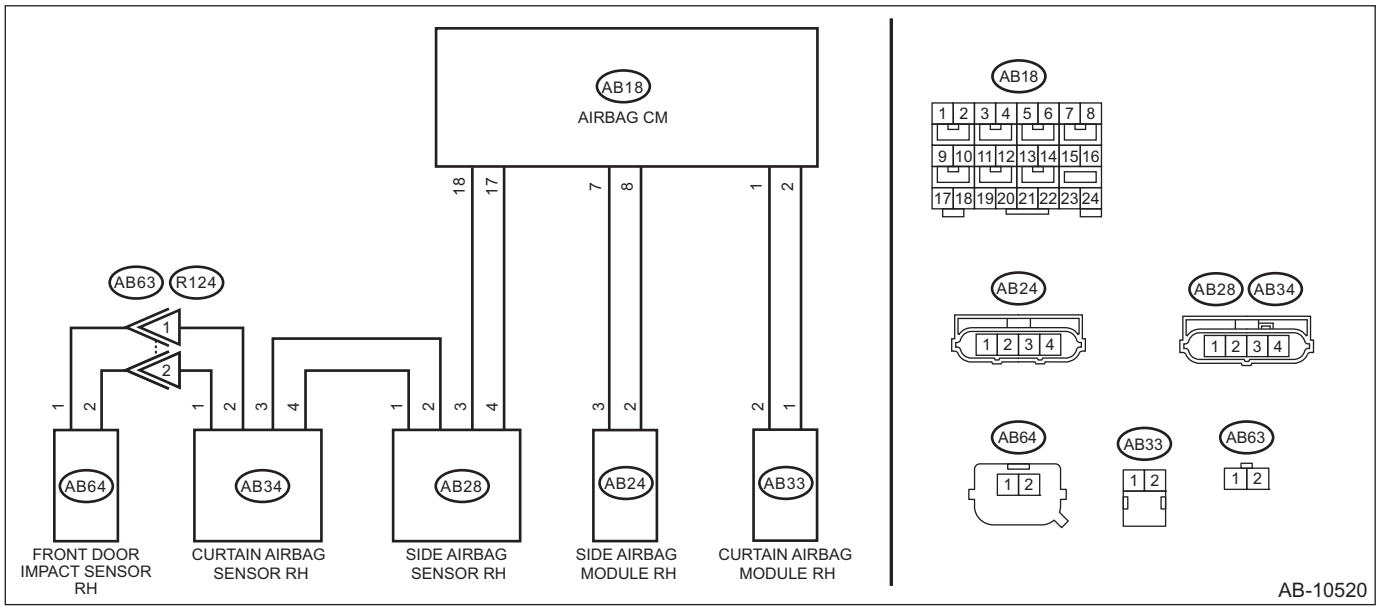
NOTE:
For details on DTC B1692, refer to DTC B1693. <Ref. to AB(diag)-94, DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>

BP:DTC B1693 DOOR SENSOR RH INITIALIZATION INCOMPLETE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Open or short circuit in harness of side sensor bus RH.
- Front door impact sensor RH is faulty.
- Curtain airbag sensor RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1622 or B1623 displayed?	Perform the diagnosis for the displayed DTC B1622 or B1623. <Ref. to AB(diag)-55, DTC B1622 SIDE AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-55, DTC B1623 SIDE AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1632 or B1633 displayed?	Perform the diagnosis for the displayed DTC B1632 or B1633. <Ref. to AB(diag)-60, DTC B1632 CURTAIN AIRBAG SENSOR RH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-60, DTC B1633 CURTAIN AIRBAG SENSOR RH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **3**.
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor RH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **4**.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the connector (AB24) from side airbag module RH. 6) Disconnect the connector (AB34) from curtain airbag sensor (RH), and connect the connector (2V) in test harness V to connector (AB34). 7) Disconnect the connector (AB64) from the front door impact sensor RH, and connect the connector (1H) in the test harness H to connector (AB64). 8) Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H. ***Connector & terminal*** ***(3V) No. 4 — (3H) No. 5:*** ***(3V) No. 5 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR RH AND DOOR SENSOR RH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
6	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1693 displayed?	Go to step **7**.	Go to step **9**.
7	**REPLACE FRONT DOOR IMPACT SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor RH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1693 displayed?	Go to step **8**.	Go to step **9**.
8	**REPLACE CURTAIN AIRBAG SENSOR RH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor RH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1693 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BQ:DTC B16FA DOOR SENSOR LH RECOGNITION ERROR

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Front door impact sensor LH is misinstalled.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REPLACE FRONT DOOR IMPACT SENSOR LH.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH with a genuine sensor. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>

BR:DTC B1695 DOOR SENSOR LH FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
Front door impact sensor LH is faulty.
If DTC B1695 is displayed, the circuit within the front door impact sensor LH is faulty.
Replace the front door impact sensor LH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.>

BS:DTC B1697 LOST COMMUNICATION WITH DOOR SENSOR LH

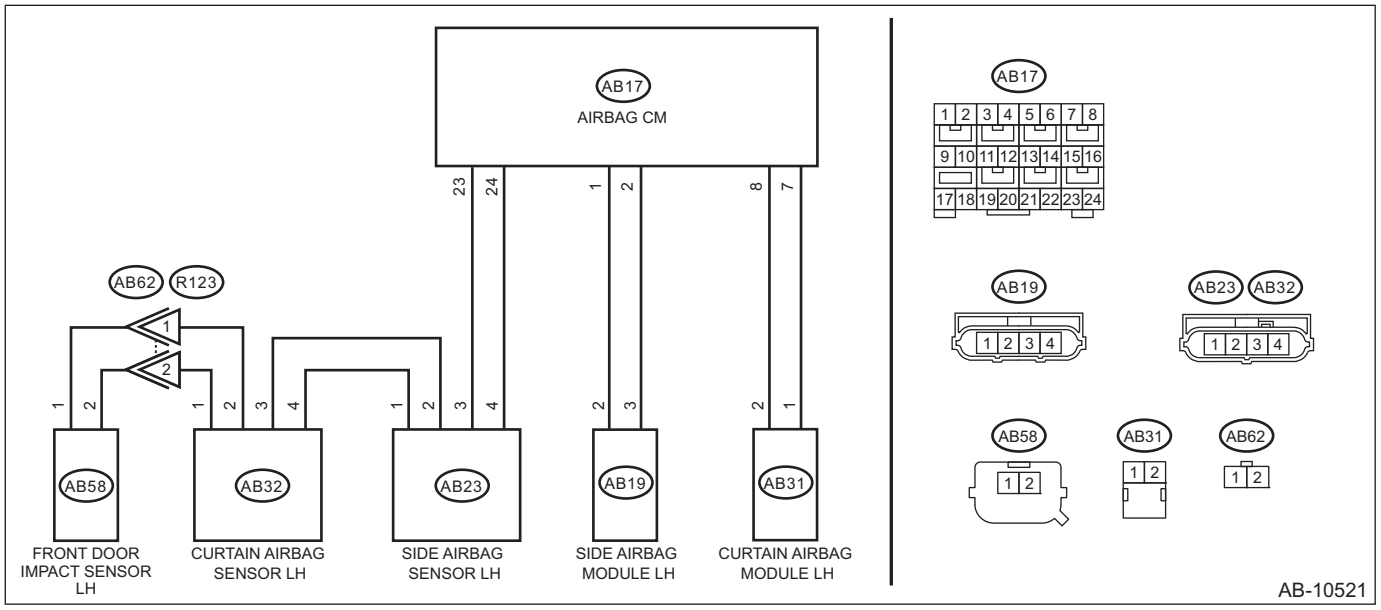
NOTE:
For details on DTC B1697, refer to DTC B1698. <Ref. to AB(diag)-97, DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE, Diagnostic Chart with Trouble Code.>

BT:DTC B1698 DOOR SENSOR LH INITIALIZATION INCOMPLETE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Open or short circuit in harness of side sensor bus LH.
- Front door impact sensor LH is faulty.
- Curtain airbag sensor LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:

Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1627 or B1628 displayed?	Perform the diagnosis for the displayed DTC B1627 or B1628. <Ref. to AB(diag)-57, DTC B1627 SIDE AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-58, DTC B1628 SIDE AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1637 or B1638 displayed?	Perform the diagnosis for the displayed DTC B1637 or B1638. <Ref. to AB(diag)-63, DTC B1637 CURTAIN AIRBAG SENSOR LH LOST COMMUNICATION, Diagnostic Chart with Trouble Code.> <Ref. to AB(diag)-63, DTC B1638 CURTAIN AIRBAG SENSOR LH INITIALIZATION ERROR, Diagnostic Chart with Trouble Code.>	Go to step **3**.
3	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the front door impact sensor LH.	Is there poor contact?	Replace the airbag rear harness and the door harness.	Go to step **4**.
4	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the connector (AB19) from side airbag module LH. 5) Disconnect the connector (AB32) from curtain airbag sensor LH, and connect the connector (2V) in test harness V to connector (AB32). 6) Disconnect the connector (AB58) from the front door impact sensor LH, and connect the connector (1H) in the test harness H to connector (AB58). 7) Measure the resistance between connector (3V) in the test harness V and connector (3H) in the test harness H. ***Connector & terminal*** ***(3V) No. 4 — (3H) No. 5:*** ***(3V) No. 5 — (3H) No. 6:***	Is the resistance less than 10 Ω?	Go to step **5**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.

	Step	Check	Yes	No
5	**CHECK AIRBAG REAR HARNESS AND DOOR HARNESS (BETWEEN CURTAIN AIRBAG SENSOR LH AND FRONT DOOR IMPACT SENSOR LH).** Measure the resistance between connector (3V) in test harness V and chassis ground, and the resistance between connector (3V) terminals in test harness V. ***Connector & terminal*** ***(3V) No. 4 — Chassis ground:*** ***(3V) No. 5 — Chassis ground:*** ***(3V) No. 4 — (3V) No. 5:***	Is the resistance 1 MΩ or more?	Go to step **6**.	Check the door harness, and if any fault is found, replace the harness. If there is no fault, replace the airbag rear harness together with body harness.
6	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1698 displayed?	Go to step **7**.	Go to step **9**.
7	**REPLACE FRONT DOOR IMPACT SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the front door impact sensor LH. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1698 displayed?	Go to step **8**.	Go to step **9**.
8	**REPLACE CURTAIN AIRBAG SENSOR LH AND CHECK AIRBAG CONTROL MODULE AFTER REPLACEMENT.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Replace the curtain airbag sensor LH. <Ref. to AB-59, REMOVAL, Curtain Airbag Sensor.> 3) Connect all connectors. 4) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1698 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

BU:DTC B16F0 PASSENGER'S AIRBAG OFF INDICATOR FAILURE

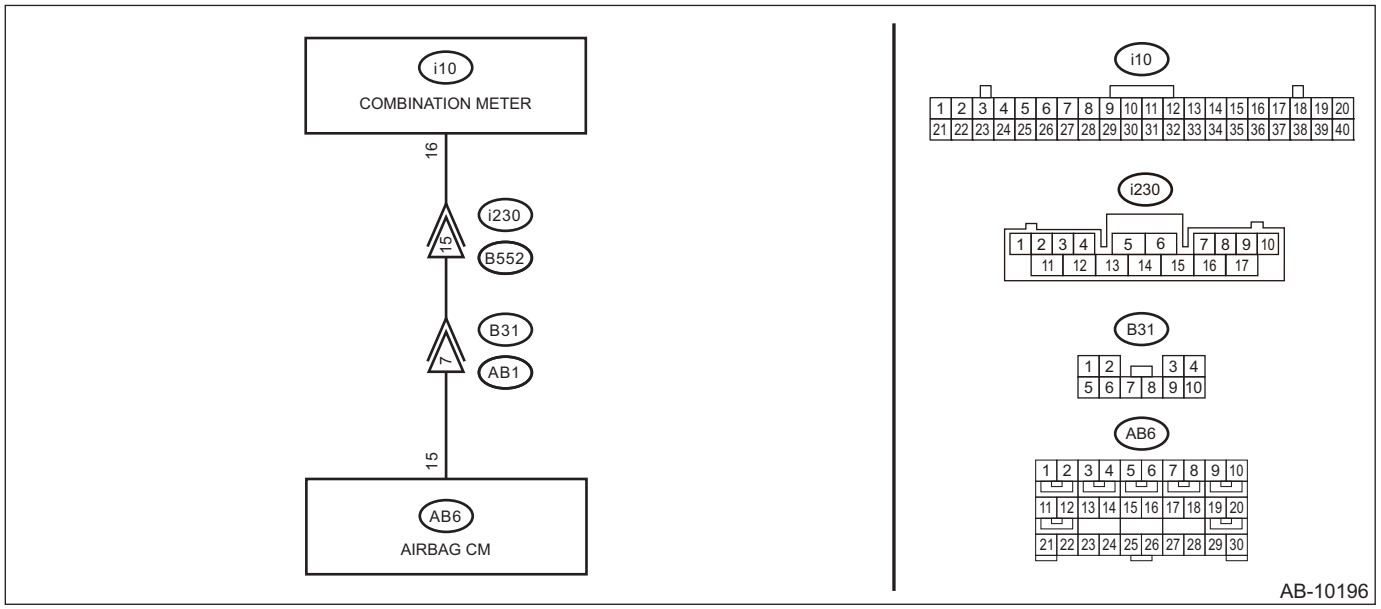
NOTE:
For details on DTC B16F0, refer to DTC B1660. <Ref. to AB(diag)-88, DTC B1660 PASSENGER'S AIRBAG ON INDICATOR FAILURE, Diagnostic Chart with Trouble Code.>

BV:DTC B16F1 PASSENGER'S SEAT BELT WARNING FAILURE

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag control module is faulty.
- Meter is faulty.
- Harness circuits between meter and airbag control module are open, shorted or shorted to ground.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds and go off?	Go to step **3**.	Go to step **2**.
2	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(2AG) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Replace the meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>	Repair the bulkhead harness and instrument panel harness. Or replace the airbag main harness along with body harness.
3	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 3) Connect the connectors (7AG) and (8AG) in the test harness AG. 4) Turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds, then repeatedly light and go off?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK AIRBAG HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 3. 3) Disconnect the connector (i10) from meter. 4) Measure the resistance between connector (2AG) in the test harness AG and connector (i10). ***Connector & terminal*** ***(2AG) No. 10 — (i10) No. 16:***	Is the resistance less than 10 Ω?	Replace the meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>	Repair the bulkhead harness and instrument panel harness. Or replace the airbag main harness along with body harness.

BW:DTC B1760 OCCUPANT DETECTION SENSOR MAT

NOTE:
Refer to “Occupant Detection System” for details on DTC B1760. <Ref. to OD(diag)-28, DTC B1760 OCCUPANT DETECTION SENSOR MAT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BX:DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING

NOTE:
Refer to “Occupant Detection System” for details on DTC B1761. <Ref. to OD(diag)-30, DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BY:DTC B1771 BUCKLE SWITCH

NOTE:
Refer to “Occupant Detection System” for details on DTC B1771. <Ref. to OD(diag)-30, DTC B1771 BUCKLE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BZ:DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT

NOTE:
Refer to “Occupant Detection System” for details on DTC B1795. <Ref. to OD(diag)-30, DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CA:DTC B1800 SHORT IN DRIVER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness (driver's side) circuit is shorted.
- Roll connector circuit is shorted.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the driver's knee airbag module connector (AB66). 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 1 — (3AG) No. 3:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-61, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1800 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CB:DTC B1801 OPEN IN DRIVER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the driver's knee airbag module connector (AB66). 4) Disconnect the airbag resistor from the connector (2N) in test harness N. 5) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR.** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2Q) terminals in test harness Q. ***Connector & terminal (2Q) No. 1 — (2Q) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1801 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CC:DTC B1802 SHORT IN DRIVER'S AIRBAG (TO GROUND)

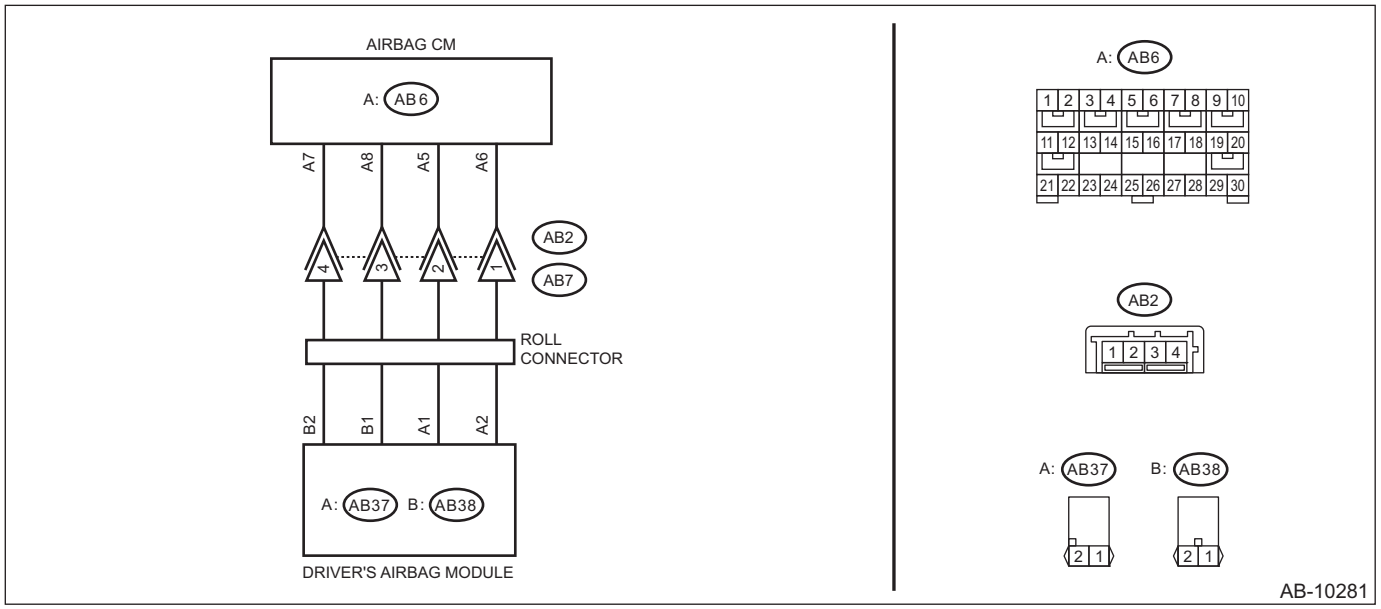
Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is shorted to ground.
- Airbag module harness (driver's side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

Diagnostic Chart with Trouble Code

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).

Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the driver's knee airbag module connector (AB66). 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Measure the resistance between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 — Chassis ground:*** ***(2Q) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 — Chassis ground:*** ***(3AG) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1802 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CD:DTC B1803 SHORT IN DRIVER'S AIRBAG (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (driver's side) circuit is shorted to power supply.
- Roll connector circuit is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

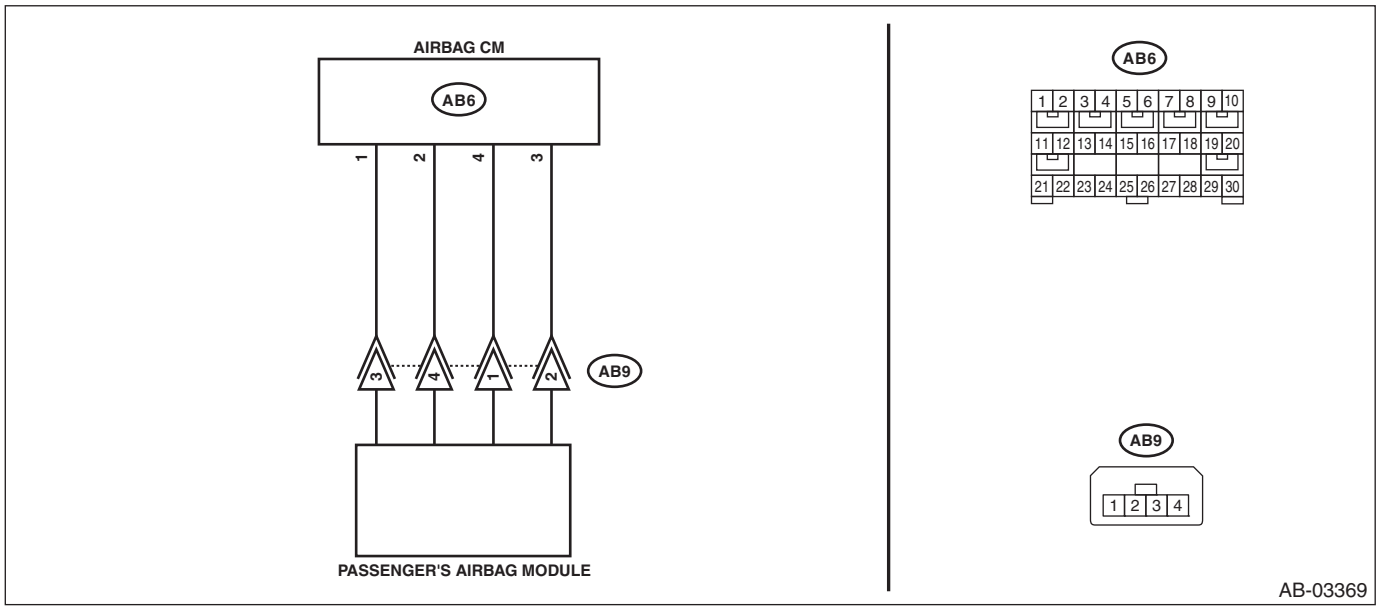
	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the driver's knee airbag module connector (AB66). 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Measure the voltage between connector (2Q) in the test harness Q and chassis ground. ***Connector & terminal*** ***(2Q) No. 1 (+) — Chassis ground (–):*** ***(2Q) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 1 (+) — Chassis ground (–):*** ***(3AG) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1803 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CE:DTC B1805 SHORT IN PASSENGER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness circuit (passenger's side) is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, connect the connector (1AG) in the test harness AG, and release the short mechanism of the connectors (AB6, AB17, AB18). 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AG from the connectors (AB6, AB17, AB18). 2) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 3) Connect the connectors (AB7) and (AB2). 4) Connect the connector (AB66) to the driver's knee airbag module. 5) Connect the battery ground terminal and turn the ignition switch to ON. 6) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1805 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.

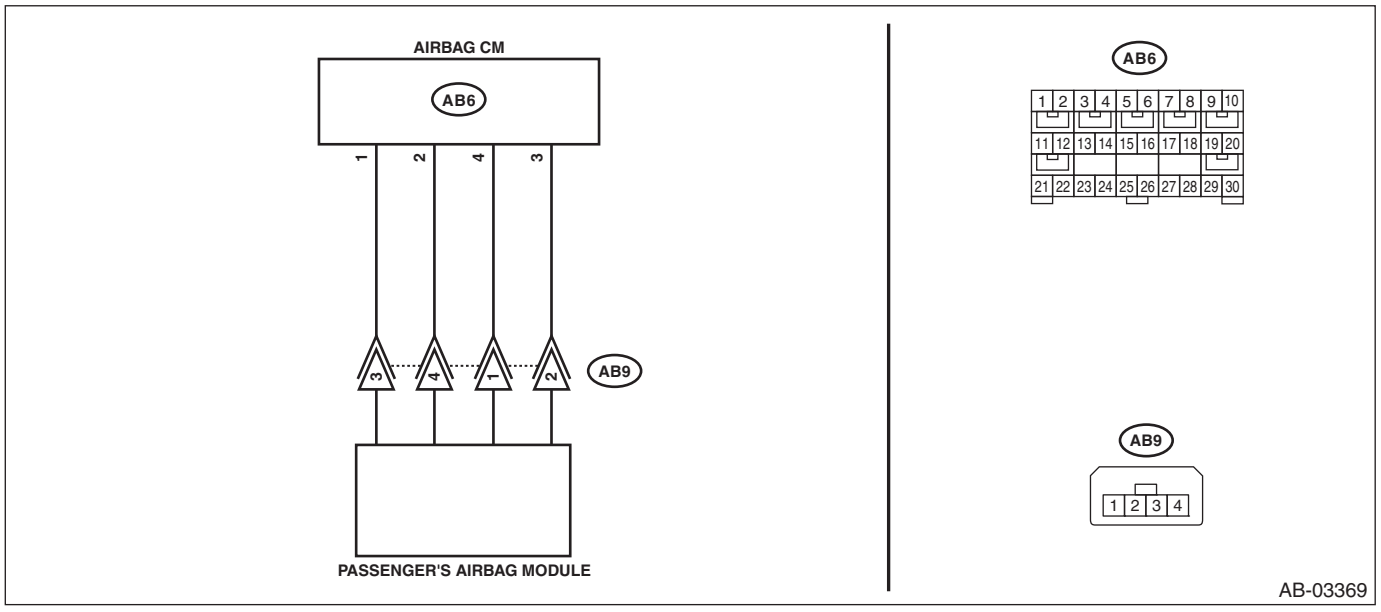
	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CF:DTC B1806 OPEN IN PASSENGER'S AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (passenger's side) circuit is open.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 2) Connect the connectors (AB7) and (AB2). 3) Connect the connector (AB66) to the driver's knee airbag module. 4) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 5) Connect the battery ground terminal and turn the ignition switch to ON. 6) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1806 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

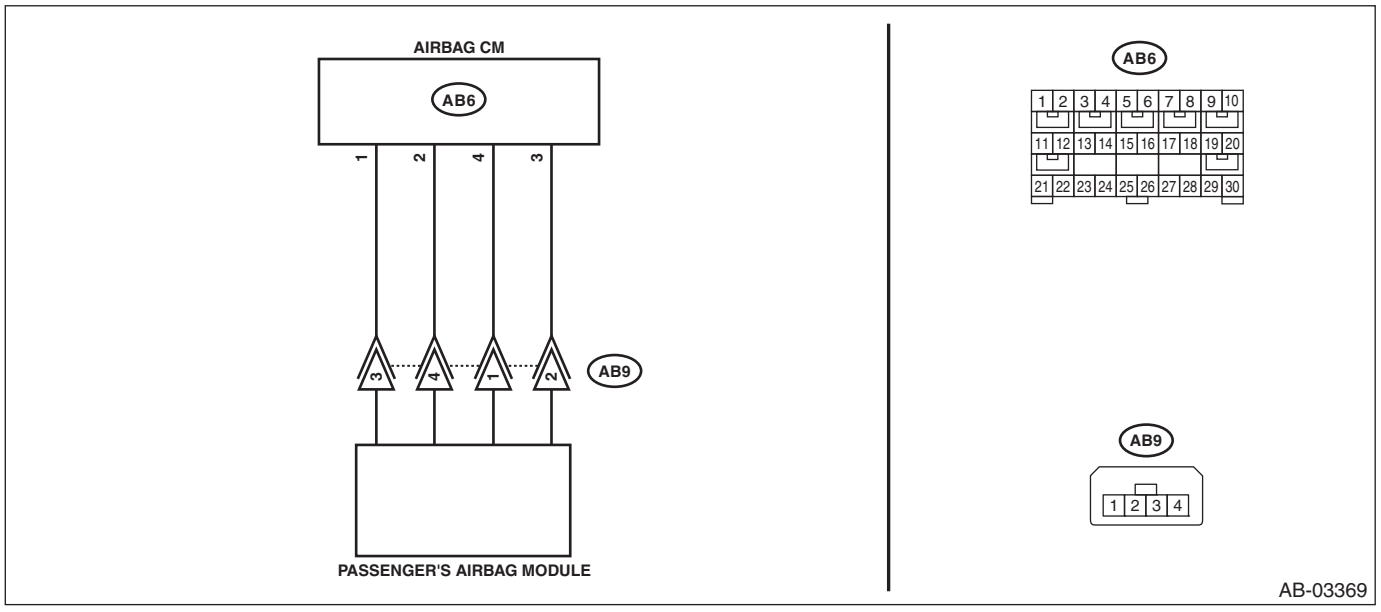
	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery negative terminal, and clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1806 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CG:DTC B1807 SHORT IN PASSENGER'S AIRBAG (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to ground.
- Airbag module harness (passenger's side) circuit is shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — Chassis ground:*** ***(AB9) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 2) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1807 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

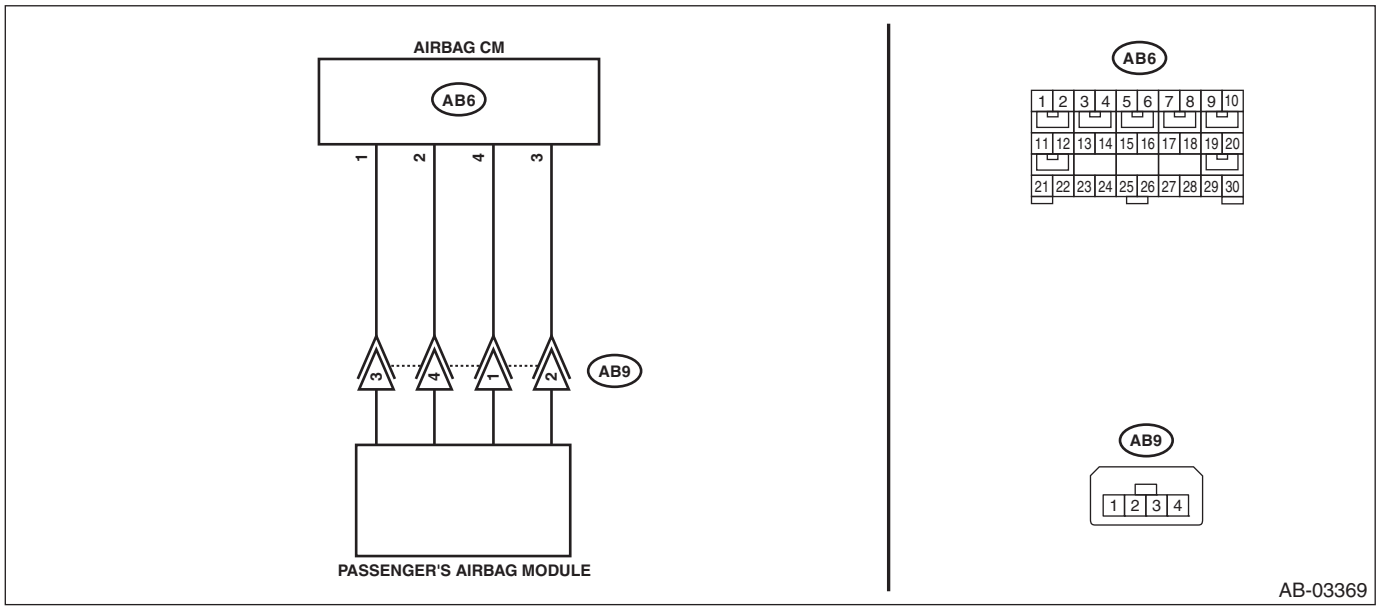
	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Release the short circuit of connector (AB9). 3) Connect the passenger's airbag module connector (AB9). 4) Connect the connectors (AB7) and (AB2). 5) Connect the connector (AB66) to the driver's knee airbag module. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1807 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CH:DTC B1808 SHORT IN PASSENGER'S AIRBAG (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (passenger's side) circuit is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 (+) — Chassis ground (–):*** ***(AB9) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 3) Using a probe, short the terminals No. 1 and No. 2 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 1 — (AB9) No. 2:*** 4) Connect the battery ground terminal and turn the ignition switch to ON. 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1808 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Release the short circuit of connector (AB9). 3) Connect the passenger's airbag module connector (AB9). 4) Connect the connectors (AB7) and (AB2). 5) Connect the connector (AB66) to the driver's knee airbag module. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1808 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CI: DTC B1810 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness (driver's side) circuit is shorted.
- Roll connector circuit is shorted.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal (2N) No. 1 — (2N) No. 2:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Go to step **4**.
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Disconnect the test harness Q from connector (AB37). 3) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 2 — (3AG) No. 4:***	Is the resistance 1 MΩ or more?	Replace the roll connector. <Ref. to AB-61, Roll Connector.>	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1810 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CJ:DTC B1811 OPEN IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is open.
- Airbag module harness (driver's side) circuit is open.
- Roll connector circuit is open.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

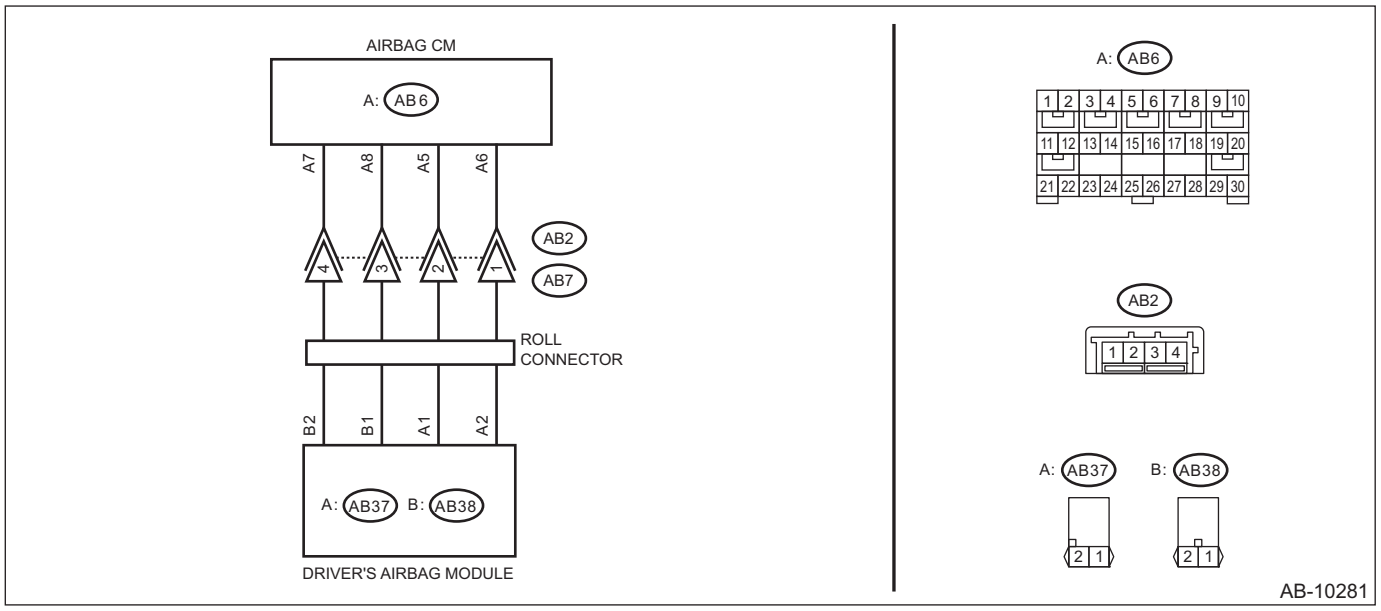
	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR AND AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the console front panel and disconnect the connector (AB9). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the airbag resistor from the connector (2N) in test harness N. 5) Disconnect the airbag resistor from the connector (2Q) of test harness Q. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **5**.	Go to step **4**.
4	**CHECK ROLL CONNECTOR.** 1) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 2) Measure the resistance between connector (2N) terminals in test harness N. ***Connector & terminal*** ***(2N) No. 1 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Replace the airbag main harness along with body harness.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1811 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CK:DTC B1812 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is shorted to ground.
- Airbag module harness (driver's side) circuit is shorted to ground.
- Roll connector circuit is shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.

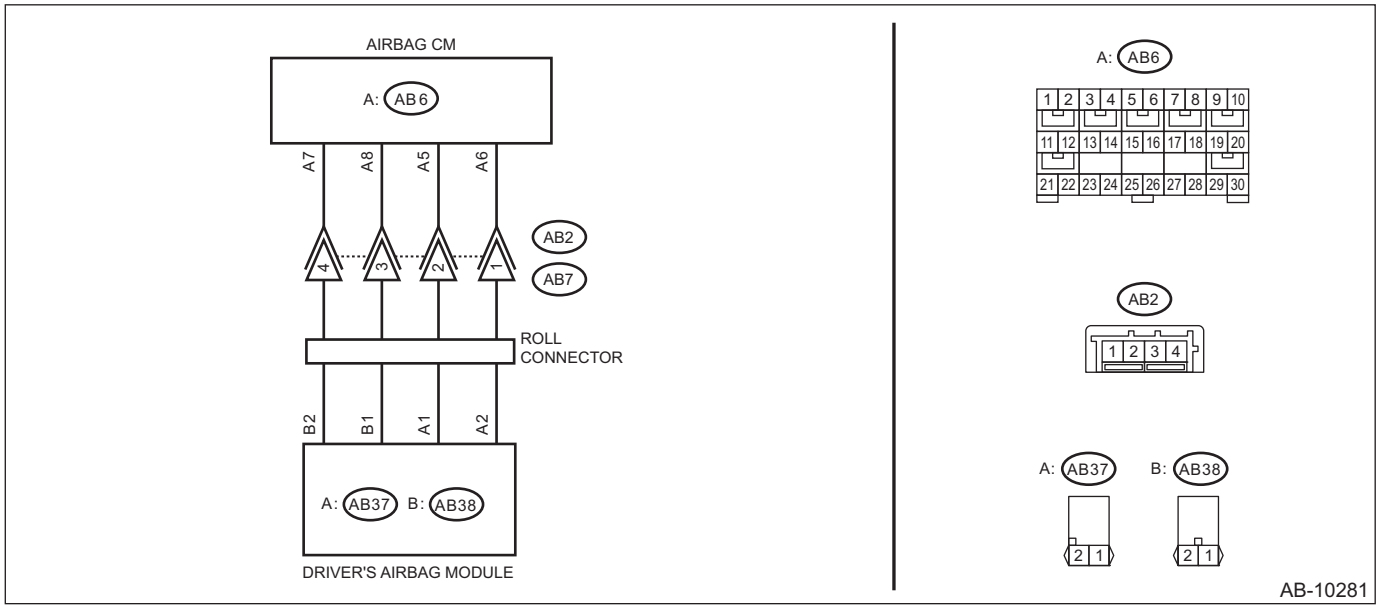
	Step	Check	Yes	No
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Measure the resistance between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 — Chassis ground:*** ***(2N) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 — Chassis ground:*** ***(3AG) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1812 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CL:DTC B1813 SHORT IN DRIVER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (driver's side) circuit is shorted to power supply.
- Roll connector is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>

NOTE:
Prior to starting work, prepare two AIRBAG RESISTORs (98299PA040).
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DRIVER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the driver's airbag module. <Ref. to AB-34, Driver's Airbag Module.>	Go to step **3**.
3	**CHECK ROLL CONNECTOR.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the airbag resistor from the connector (2N) in test harness N and from the connector (2Q) in test harness Q. 5) Measure the voltage between connector (2N) in the test harness N and chassis ground. ***Connector & terminal*** ***(2N) No. 1 (+) — Chassis ground (–):*** ***(2N) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the roll connector. <Ref. to AB-61, Roll Connector.>
4	**CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).** 1) Disconnect the test harness N from connector (AB38). 2) Disconnect the test harness Q from connector (AB37). 3) Remove the console front panel and disconnect the connector (AB9). 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 2 (+) — Chassis ground (–):*** ***(3AG) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Replace the airbag main harness along with body harness.
5	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1813 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CM:DTC B1815 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted.
- Airbag module harness circuit (passenger's side) is shorted.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from the airbag control module, connect the connector (1AG) in the test harness AG, and release the short mechanism of the connectors (AB6, AB17, AB18). 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Disconnect the test harness AG from the connectors (AB6, AB17, AB18). 2) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 3) Connect the connectors (AB7) and (AB2). 4) Connect the connector (AB66) to the driver's knee airbag module. 5) Connect the battery ground terminal and turn the ignition switch to ON. 6) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1815 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CN:DTC B1816 OPEN IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is open.
- Airbag module harness (passenger's side) circuit is open.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

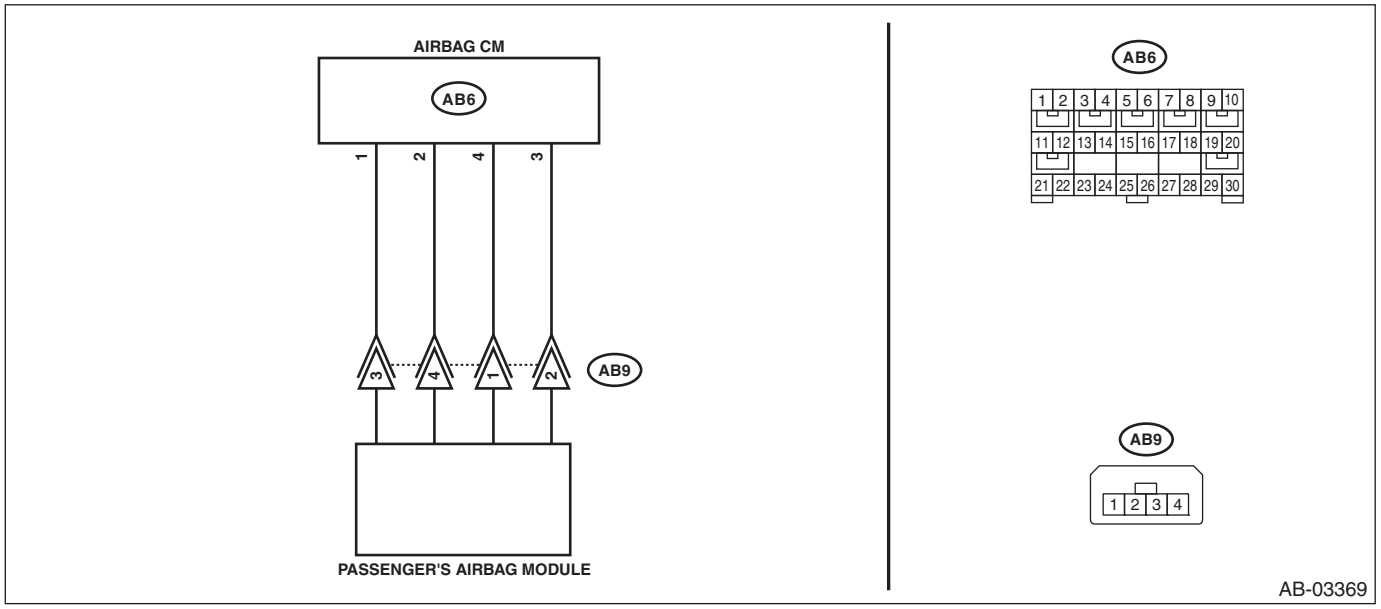
	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the terminals of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 2) Connect the connectors (AB7) and (AB2). 3) Connect the connector (AB66) to the driver's knee airbag module. 4) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 5) Connect the battery ground terminal and turn the ignition switch to ON. 6) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 7) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1816 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the passenger's airbag module connector (AB9). 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1816 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CO:DTC B1817 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Airbag main harness circuit is shorted to ground.
- Airbag module harness (passenger's side) circuit is shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the resistance between the connector (AB9) and chassis ground. <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the resistance, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — Chassis ground:*** ***(AB9) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 2) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 3) Connect the battery ground terminal and turn the ignition switch to ON. 4) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 5) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1817 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

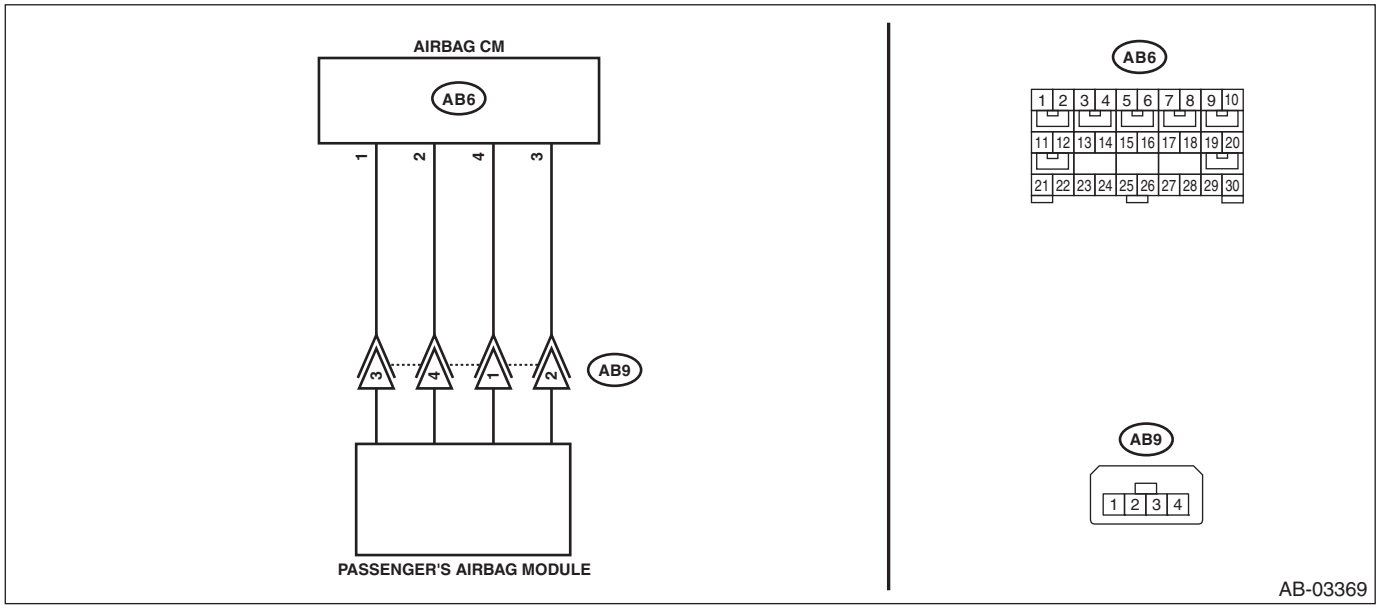
	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Release the short circuit of connector (AB9). 3) Connect the passenger's airbag module connector (AB9). 4) Connect the connectors (AB7) and (AB2). 5) Connect the connector (AB66) to the driver's knee airbag module. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1817 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CP:DTC B1818 SHORT IN PASSENGER'S AIRBAG DUAL STAGE - 2ND STEP CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Airbag module harness (passenger's side) circuit is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB7) and (AB2). 3) Disconnect the connector (AB66) from the driver's knee airbag module. 4) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 5) Disconnect the passenger's airbag module connector (AB9). 6) Using a probe, measure the voltage between the connector (AB9) and chassis ground. <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When measuring the voltage, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 (+) — Chassis ground (–):*** ***(AB9) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Replace the airbag main harness along with body harness.
3	**CHECK AIRBAG CONTROL MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Connect the connectors (AB6, AB17, AB18) and the airbag control module. 3) Using a probe, short the terminals No. 3 and No. 4 of connector (AB9). <Ref. to AB(diag)-14, HOW TO USE PROBE, PREPARATION TOOL, General Description.> **CAUTION:** **When shorting the terminals, make sure that the probe is inserted from the back side (harness side) of the connector. Also, do not insert the probe forcibly.** ***Connector & terminal*** ***(AB9) No. 3 — (AB9) No. 4:*** 4) Connect the battery ground terminal and turn the ignition switch to ON. 5) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 6) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1818 displayed?	Replace the airbag control module. <Ref. to AB-50, REMOVAL, Airbag Control Module.>	Go to step **4**.

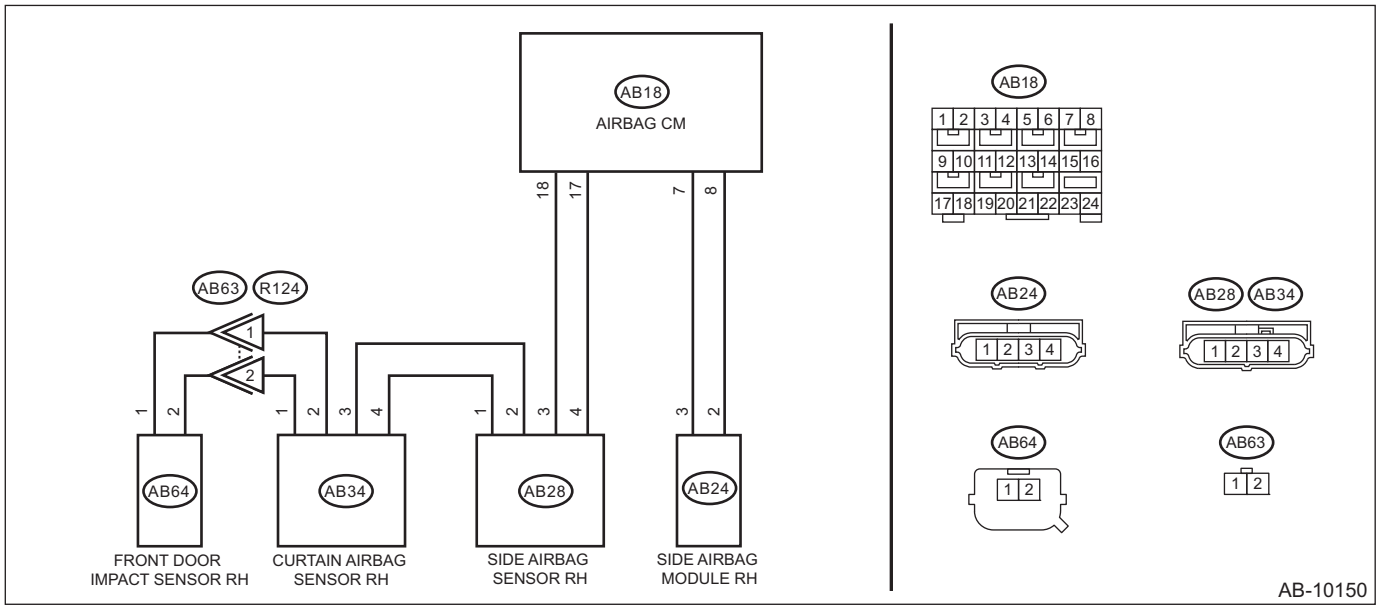
	Step	Check	Yes	No
4	**CHECK PASSENGER'S AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Release the short circuit of connector (AB9). 3) Connect the passenger's airbag module connector (AB9). 4) Connect the connectors (AB7) and (AB2). 5) Connect the connector (AB66) to the driver's knee airbag module. 6) Connect the battery ground terminal and turn the ignition switch to ON. 7) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 8) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1818 displayed?	Replace the passenger's airbag module. <Ref. to AB-38, REMOVAL, Passenger's Airbag Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CQ:DTC B1820 SHORT IN SIDE AIRBAG RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness RH circuit is shorted.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24) from the side airbag module RH, and connect the connector (1AJ) in the test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module RH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

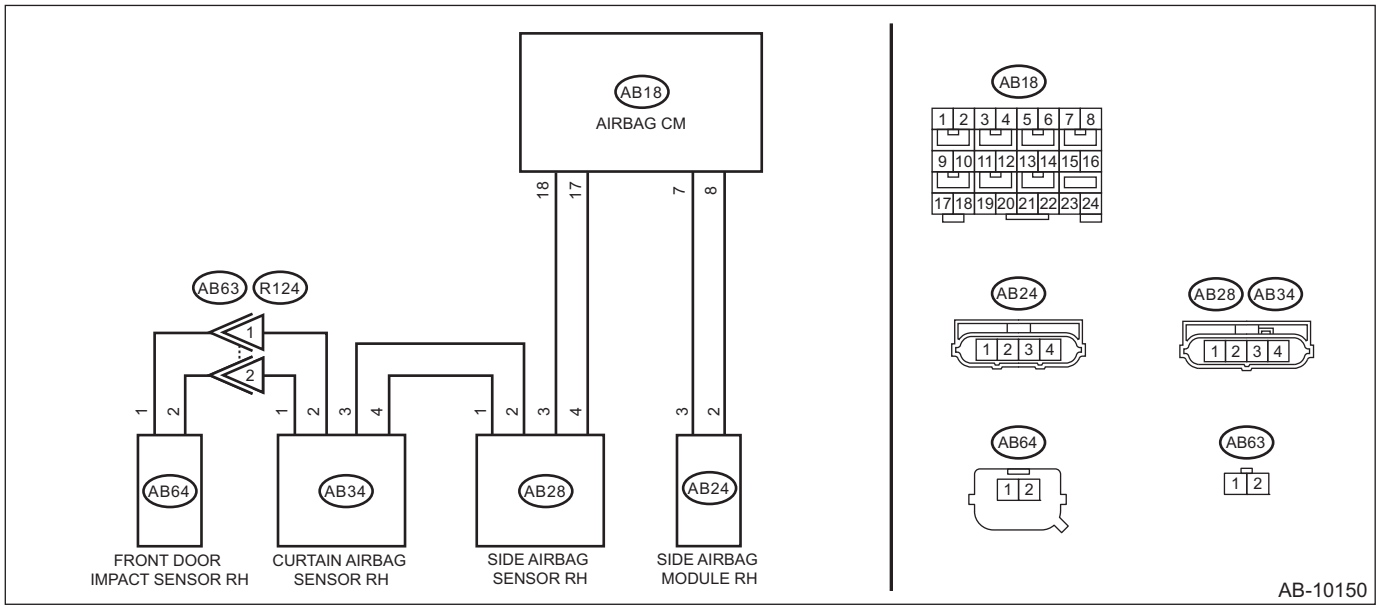
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness AJ. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (5AG) terminals in test harness AG. ***Connector & terminal (5AG) No. 5 — (5AG) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1820 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CR:DTC B1821 OPEN IN SIDE AIRBAG RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness RH circuit is open.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24) from the side airbag module RH, and connect the connector (1AJ) in the test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module RH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

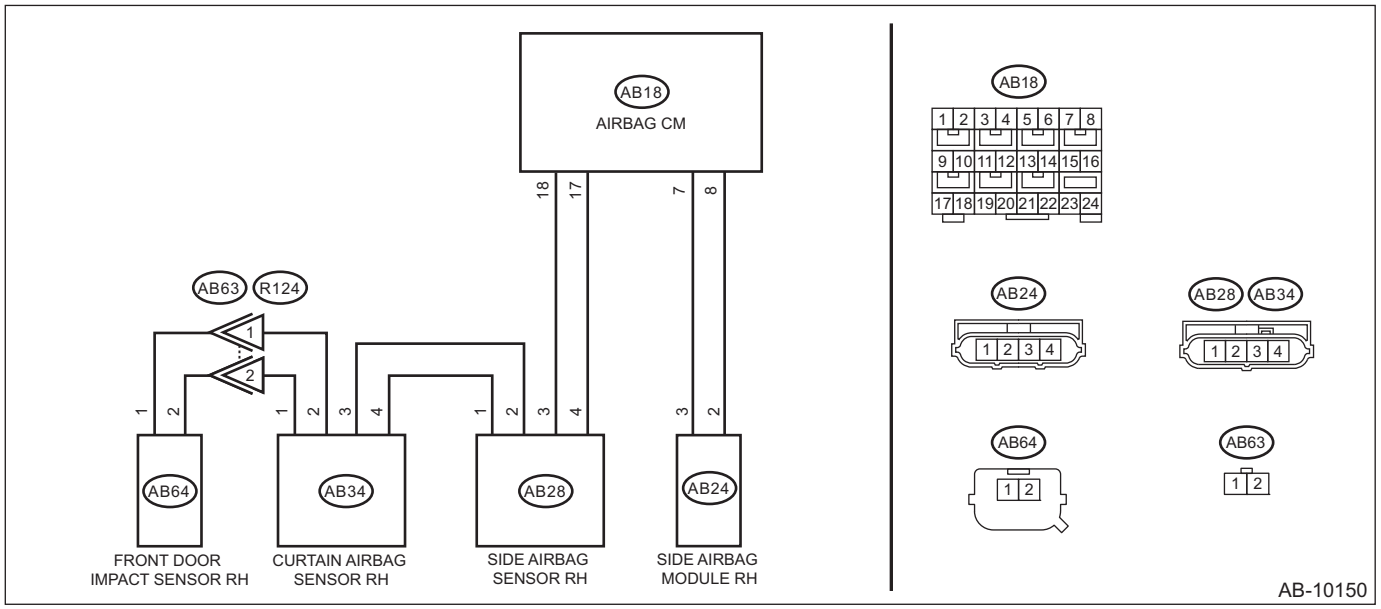
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness AJ. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). ***Connector & terminal*** ***(5AG) No. 5 — (3AJ) No. 1:*** ***(5AG) No. 7 — (3AJ) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1821 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CS:DTC B1822 SHORT IN SIDE AIRBAG RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness RH circuit is shorted to ground.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24), and connect the connector (1AJ) in test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module RH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

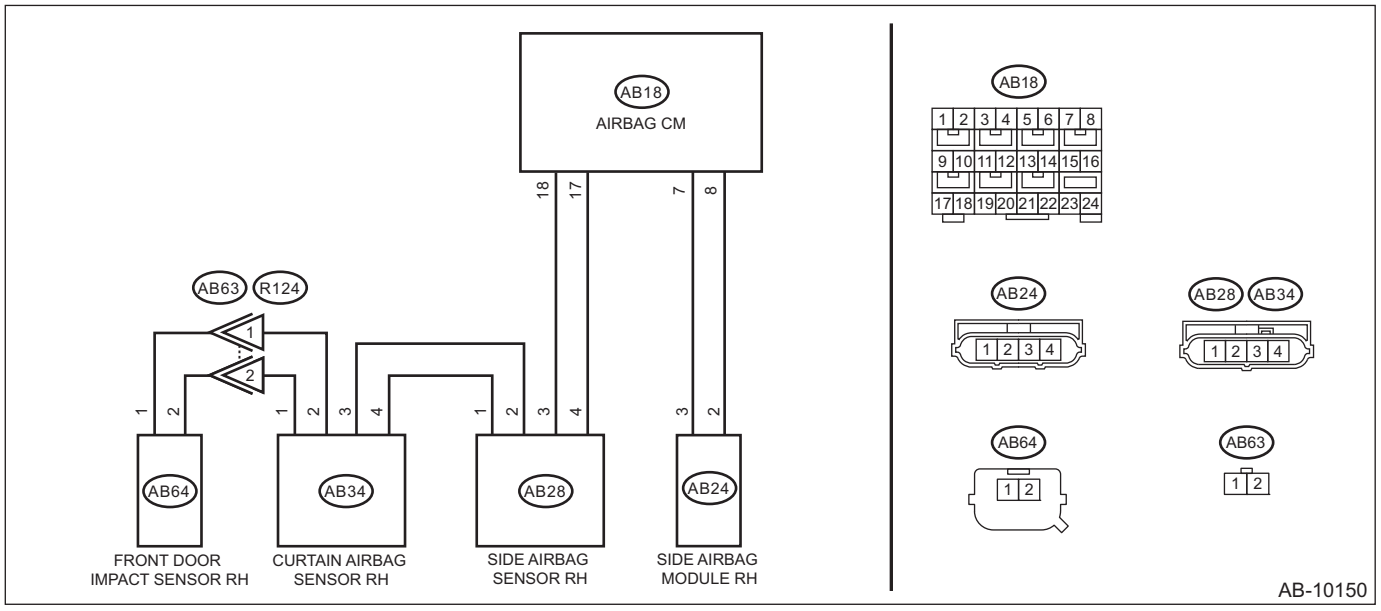
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness AJ. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 5 — Chassis ground:*** ***(5AG) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1822 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CT:DTC B1823 SHORT IN SIDE AIRBAG RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness RH is shorted to power supply.
- Side airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB24), and connect the connector (1AJ) in test harness AJ to connector (AB24). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module RH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

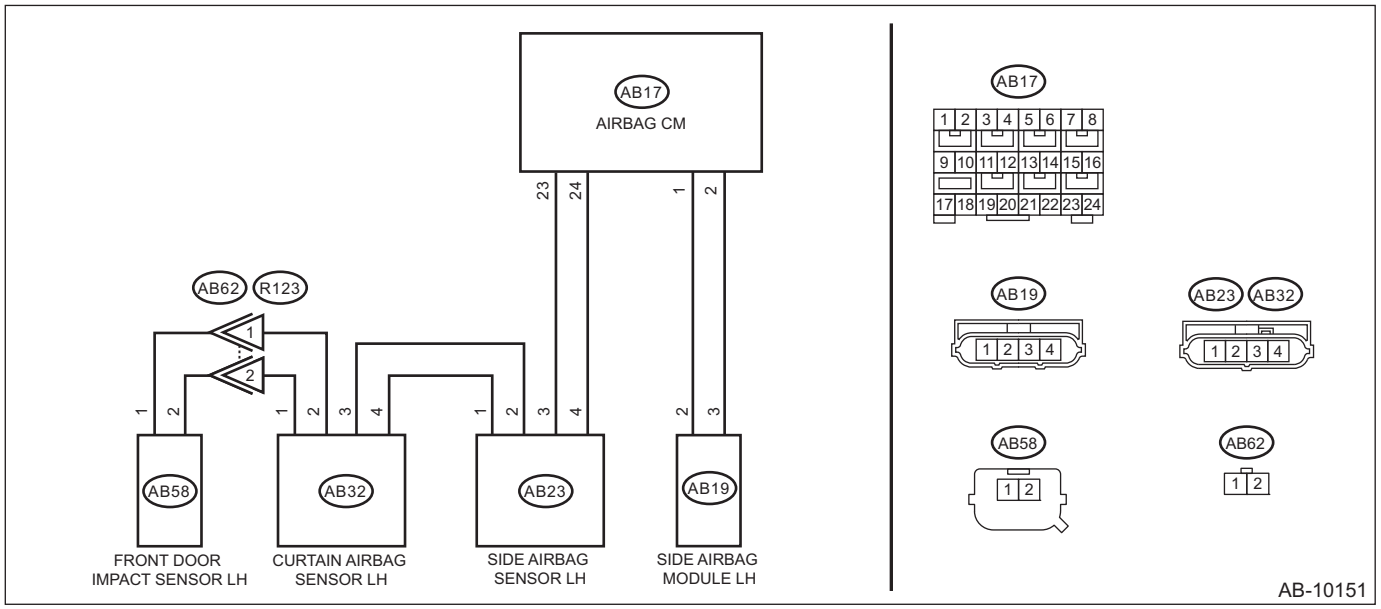
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB33) from curtain airbag module RH. 5) Disconnect the airbag resistor from test harness. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 5 (+) — Chassis ground (–):*** ***(5AG) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1823 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CU:DTC B1825 SHORT IN SIDE AIRBAG LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness LH circuit is shorted.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19) from the side airbag module LH, and connect the connector (1AJ) in test harness AJ to the connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module LH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

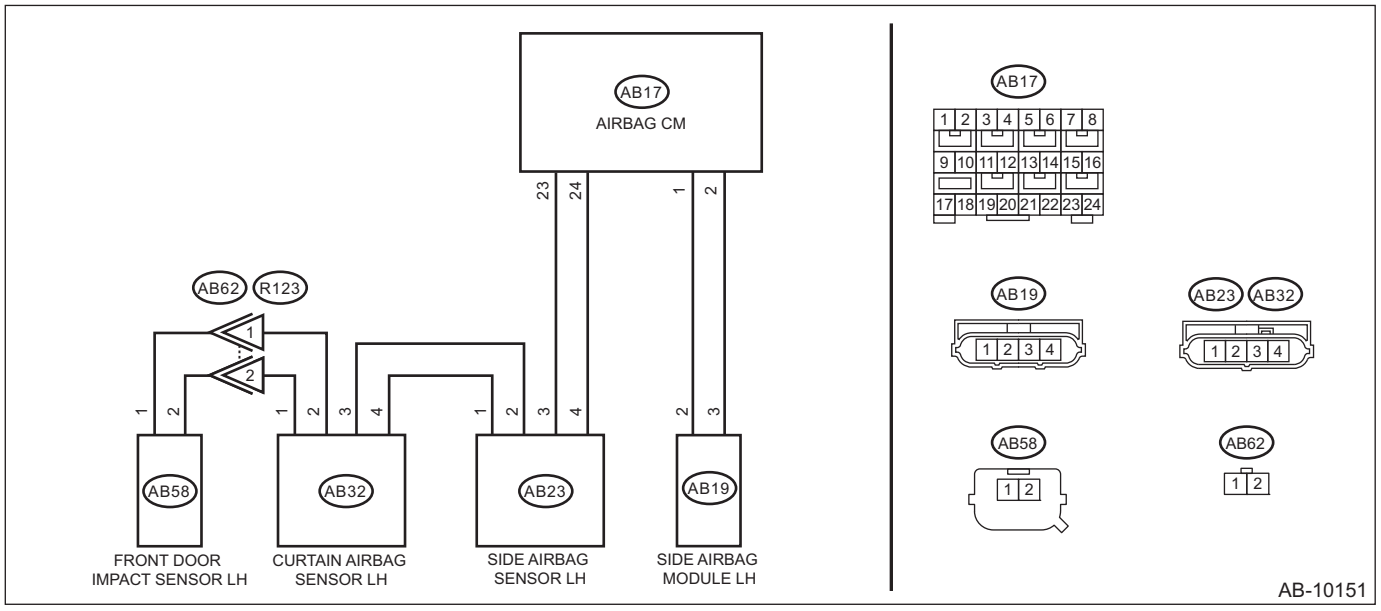
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (5AG) terminals in test harness AG. ***Connector & terminal (5AG) No. 1 — (5AG) No. 3:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1825 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CV:DTC B1826 OPEN IN SIDE AIRBAG LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness LH circuit is open.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19) from the side airbag module LH, and connect the connector (1AJ) in test harness AJ to the connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module LH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

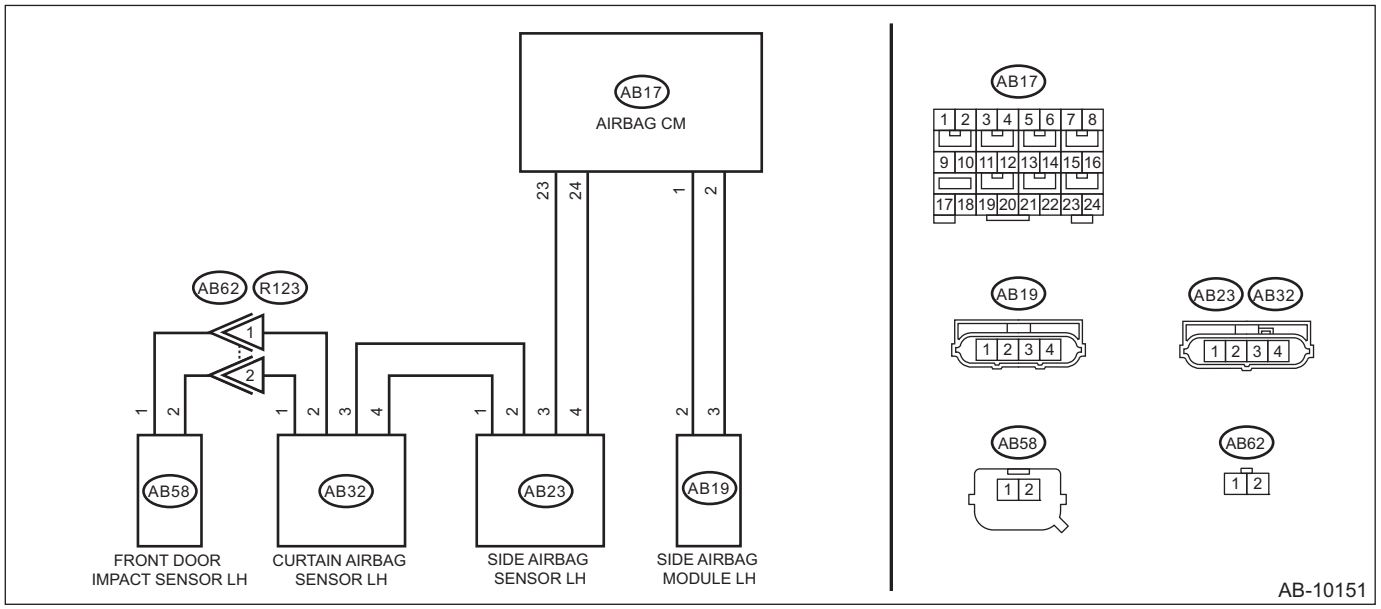
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the airbag resistor from test harness AJ. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between the test harness AG connector (5AG) and the test harness AJ connector (3AJ). ***Connector & terminal*** ***(5AG) No. 1 — (3AJ) No. 2:*** ***(5AG) No. 3 — (3AJ) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1826 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CW:DTC B1827 SHORT IN SIDE AIRBAG LH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness LH circuit is shorted to ground.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19), and connect the connector (1AJ) in test harness AJ to connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module LH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

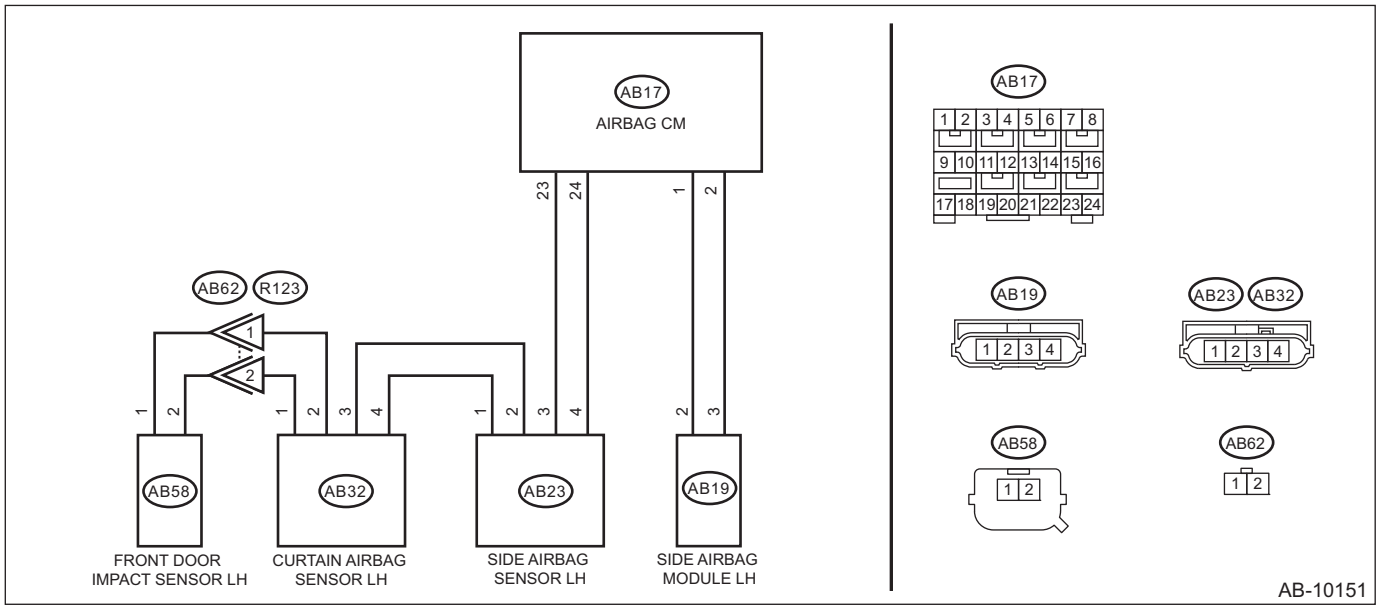
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 1 — Chassis ground:*** ***(5AG) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1827 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CX:DTC B1828 SHORT IN SIDE AIRBAG LH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Side airbag harness LH is shorted to power supply.
- Side airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SIDE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB19), and connect the connector (1AJ) in test harness AJ to connector (AB19). 3) Connect the airbag resistor to the test harness AJ connector (3AJ). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the side airbag module LH. <Ref. to AB-44, REMOVAL, Side Airbag Module.>	Go to step **3**.

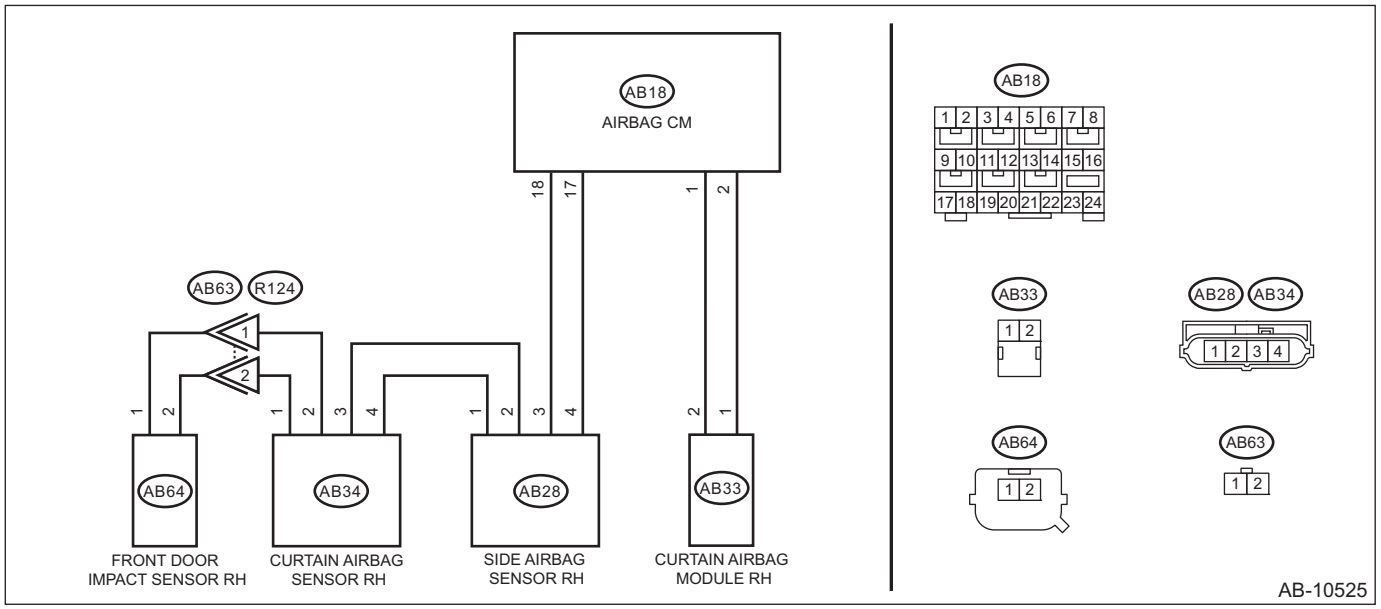
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB31) from curtain airbag module LH. 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (5AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(5AG) No. 1 (+) — Chassis ground (–):*** ***(5AG) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1828 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CY:DTC B1830 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Curtain airbag harness RH circuit is shorted.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



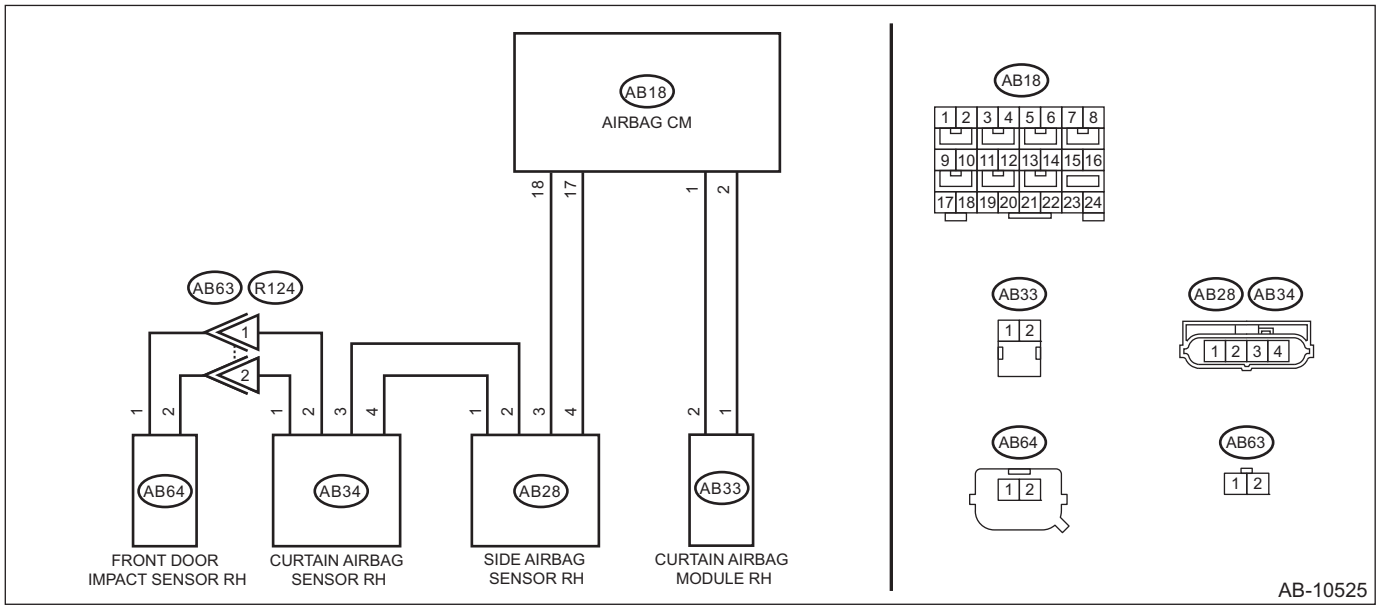
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 17 — (3AG) No. 19:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1830 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

CZ:DTC B1831 OPEN IN CURTAIN AIRBAG RH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag harness RH circuit is open.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



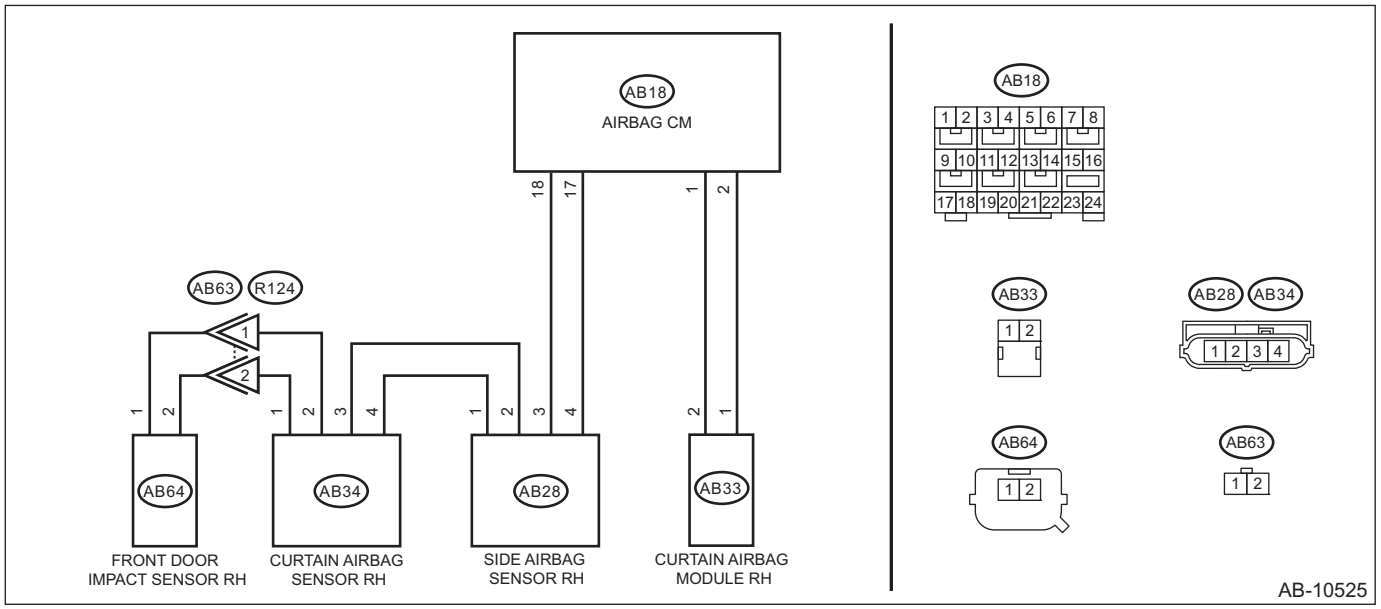
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33) from curtain airbag module RH. 3) Connect the connector (1N) in the test harness N to the connector (AB33). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 19 — (2N) No. 1:*** ***(3AG) No. 17 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1831 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DA:DTC B1832 SHORT IN CURTAIN AIRBAG RH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag harness RH circuit is shorted to ground.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



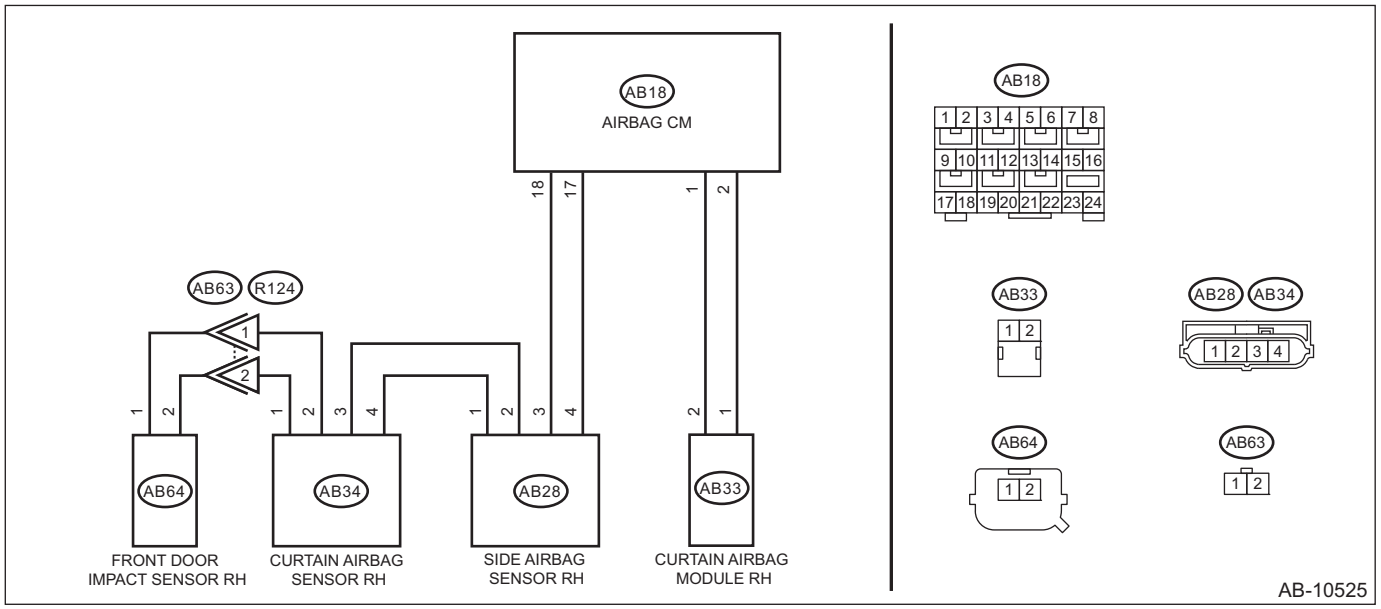
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 19 — Chassis ground:*** ***(3AG) No. 17 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1832 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DB:DTC B1833 SHORT IN CURTAIN SHIELD AIRBAG RH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag harness RH is shorted to power supply.
- Curtain airbag module RH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB33), and connect the connector (1N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module RH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

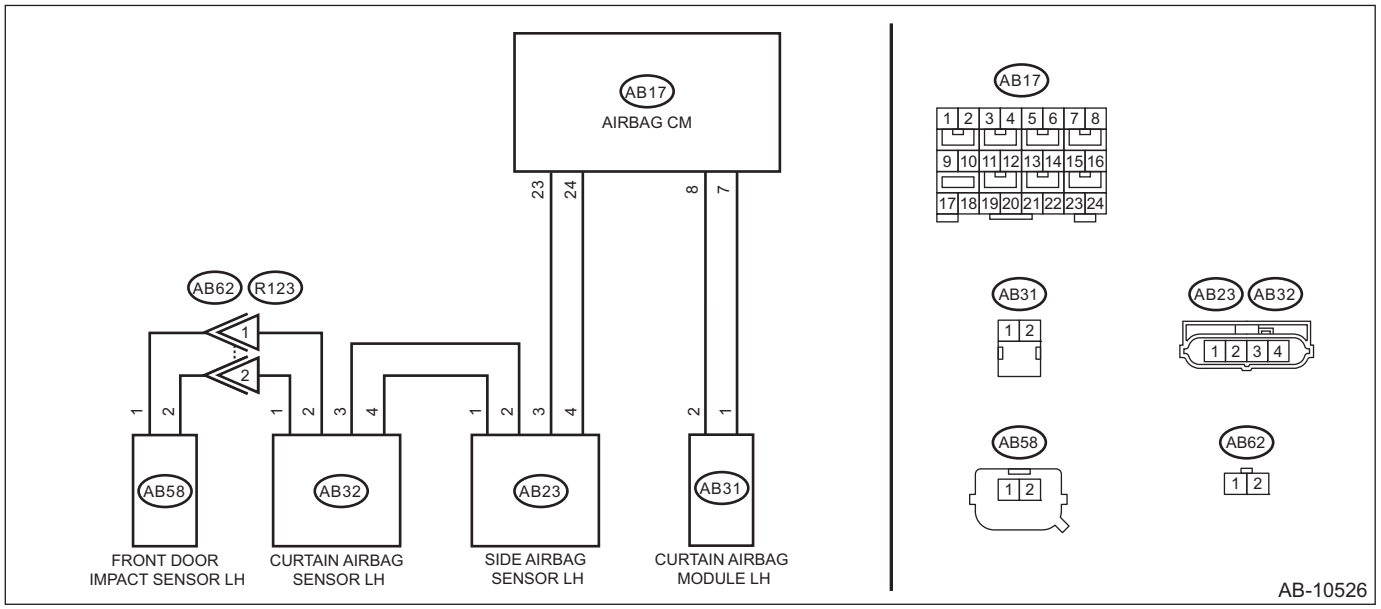
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the airbag resistor from test harness N. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 19 (+) — Chassis ground (–):*** ***(3AG) No. 17 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1833 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DC:DTC B1835 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Curtain airbag harness LH circuit is shorted.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

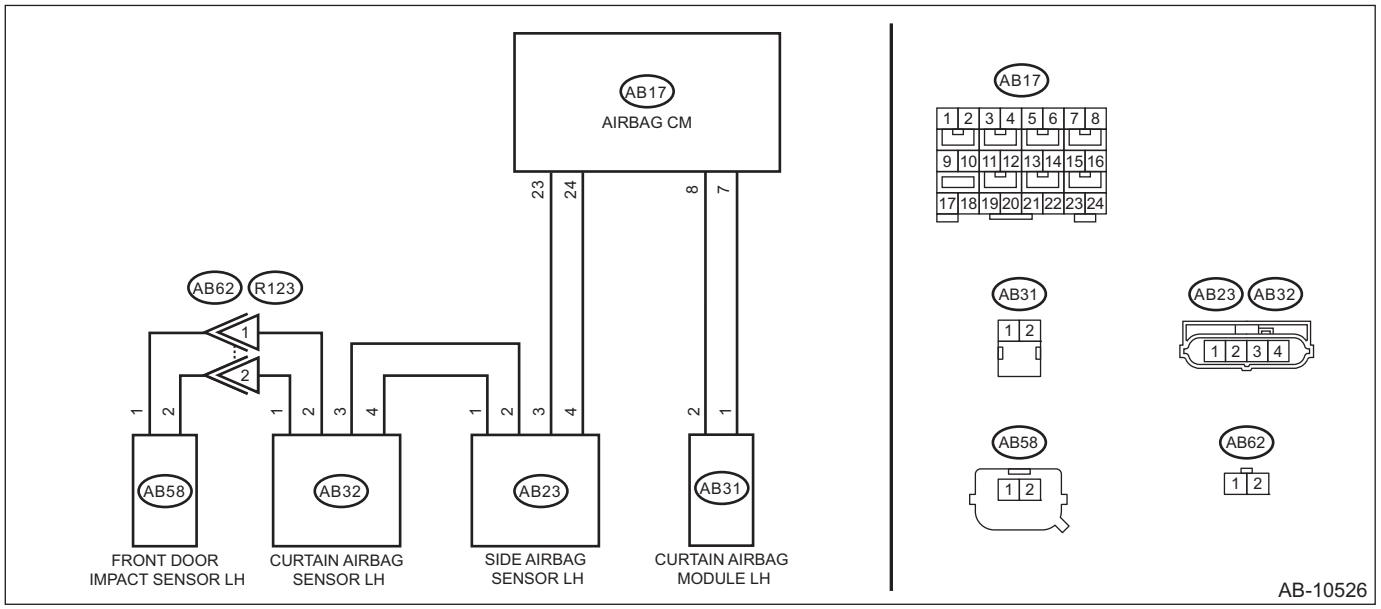
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 11 — (3AG) No. 13:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1835 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DD:DTC B1836 OPEN IN CURTAIN AIRBAG LH SQUIB CIRCUIT

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Curtain airbag harness LH circuit is open.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



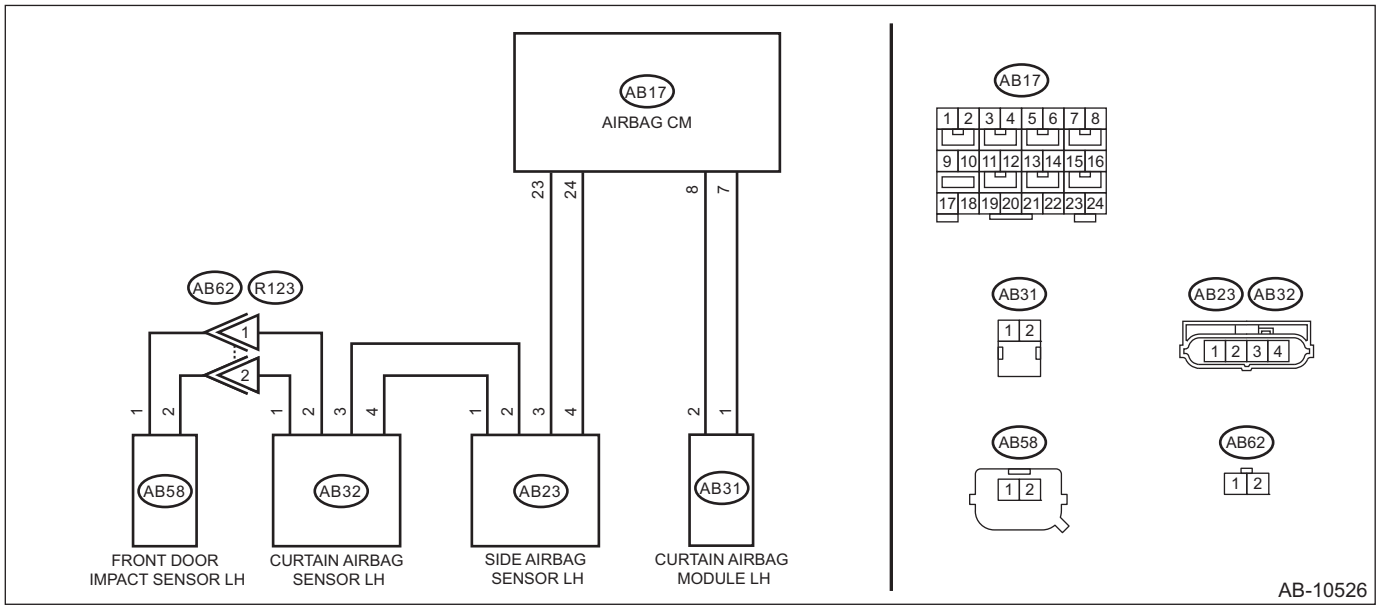
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31) from curtain airbag module LH. 3) Connect the connector (1N) in the test harness N to the connector (AB31). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 11 — (2N) No. 1:*** ***(3AG) No. 13 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1836 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DE:DTC B1837 SHORT IN CURTAIN AIRBAG LH SQUIB CIRCUIT (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag harness LH circuit is shorted to ground.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



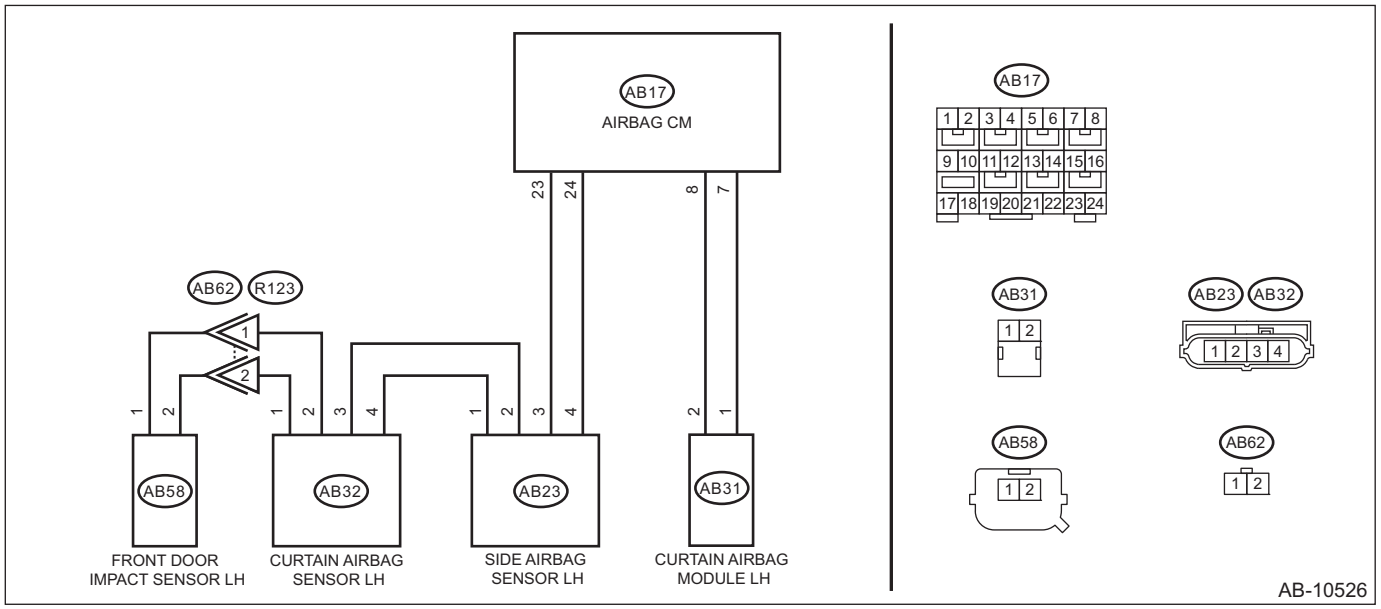
Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 11 — Chassis ground:*** ***(3AG) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1837 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DF:DTC B1838 SHORT IN CURTAIN SHIELD AIRBAG LH SQUIB CIRCUIT (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:
- Curtain airbag harness LH is shorted to power supply.
- Curtain airbag module LH is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module, curtain airbag module LH and the curtain airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK CURTAIN AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB31), and connect the connector (1N) in test harness N to connector (AB31). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the curtain airbag module LH. <Ref. to AB-47, Curtain Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 11 (+) — Chassis ground (–):*** ***(3AG) No. 13 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1838 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DG:DTC B1860 SHORT IN DRIVER'S KNEE AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted.
- Knee airbag module harness circuit is shorted.
- Knee airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK KNEE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Remove the console front panel and disconnect the connector (AB9). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 14 — (3AG) No. 16:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1860 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DH:DTC B1861 OPEN IN DRIVER'S KNEE AIRBAG

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is open.
- Knee airbag module harness circuit is open.
- Knee airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK KNEE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Remove the console front panel and disconnect the connector (AB9). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 14 — (2N) No. 1:*** ***(3AG) No. 16 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1861 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DI: DTC B1862 SHORT IN DRIVER'S KNEE AIRBAG (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to ground.
- Knee airbag module harness circuit is shorted to ground.
- Knee airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK KNEE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Remove the console front panel and disconnect the connector (AB9). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 14 — Chassis ground:*** ***(3AG) No. 16 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1862 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DJ:DTC B1863 SHORT IN DRIVER'S KNEE AIRBAG (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Airbag main harness circuit is shorted to power supply.
- Knee airbag module harness circuit is shorted to power supply.
- Knee airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the knee airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step **2**.
2	**CHECK KNEE AIRBAG MODULE.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB66) from knee airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB66). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG MAIN HARNESS (KNEE AIRBAG HARNESS).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Remove the instrument panel lower cover and column cover, and disconnect the connector (AB7) from (AB2). 4) Remove the console front panel and disconnect the connector (AB9). 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 14 (+) — Chassis ground (–):*** ***(3AG) No. 16 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag main harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1863 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DK:DTC B1900 SHORT IN FRONT P/T RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner RH circuit is shorted.
- Pretensioner RH is faulty.
- Pretensioner harness RH is shorted.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 18 — (3AG) No. 20:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1900 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DL:DTC B1901 OPEN IN FRONT P/T RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner RH circuit is open.
- Pretensioner RH is faulty.
- Pretensioner harness RH is open.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 18 — (2N) No. 2:*** ***(3AG) No. 20 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1901 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DM:DTC B1902 SHORT IN FRONT P/T RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner RH circuit is shorted to ground.
- Pretensioner RH is faulty.
- Pretensioner harness RH is shorted to ground.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 — Chassis ground:*** ***(3AG) No. 20 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1902 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DN:DTC B1903 SHORT IN FRONT P/T RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner RH circuit is shorted to power supply.
- Pretensioner RH is faulty.
- Pretensioner harness RH is shorted to power supply.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner RH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB33) from curtain airbag module RH. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 18 (+) — Chassis ground (–):*** ***(3AG) No. 20 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1903 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DO:DTC B1905 SHORT IN FRONT P/T LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner LH circuit is shorted.
- Pretensioner LH is faulty.
- Pretensioner harness LH is shorted.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) terminals in test harness AG. ***Connector & terminal (3AG) No. 10 — (3AG) No. 12:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1905 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DP:DTC B1906 OPEN IN FRONT P/T LH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner LH circuit is open.
- Pretensioner LH is faulty.
- Pretensioner harness LH is open.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(3AG) No. 10 — (2N) No. 1:*** ***(3AG) No. 12 — (2N) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1906 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DQ:DTC B1907 SHORT IN FRONT P/T LH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner LH circuit is shorted to ground.
- Pretensioner LH is faulty.
- Pretensioner harness LH is shorted to ground.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 — Chassis ground:*** ***(3AG) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1907 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DR:DTC B1908 SHORT IN FRONT P/T LH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Seat belt pretensioner LH circuit is shorted to power supply.
- Pretensioner LH is faulty.
- Pretensioner harness LH is shorted to power supply.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner LH. 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for six seconds and go off?	Replace the seat belt pretensioner LH. <Ref. to SB-16, Front Seat Belt.>	Go to step **3**.

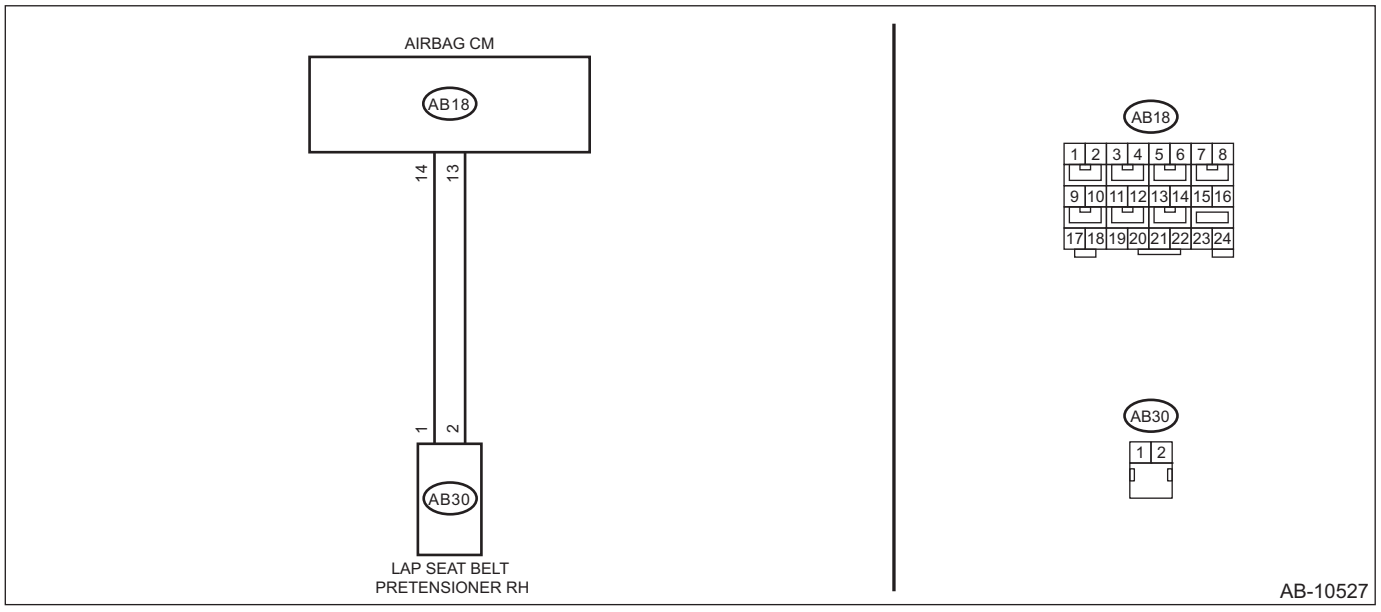
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (PRE-TENSIONER HARNESS LH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from the connector (2N) of test harness N. 3) Disconnect the connector (AB19) from side airbag module LH. 4) Disconnect the connector (AB31) from curtain airbag module LH. 5) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 7) Connect the battery ground terminal and turn the ignition switch to ON. 8) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(3AG) No. 10 (+) — Chassis ground (–):*** ***(3AG) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B1908 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DS:DTC B19F0 SHORT IN FRONT P/T 2 RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Lap seat belt pretensioner RH circuit is shorted.
- Lap seat belt pretensioner RH is faulty.
- Lap seat belt pretensioner harness RH is shorted.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK LAP SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner RH. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (6AG) terminals in test harness AG. ***Connector & terminal (6AG) No. 5 — (6AG) No. 7:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F0 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DT:DTC B19F1 OPEN IN FRONT P/T 2 RH

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Lap seat belt pretensioner RH circuit is open.
- Lap seat belt pretensioner RH is faulty.
- Lap seat belt pretensioner harness RH is open.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK LAP SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner RH. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.

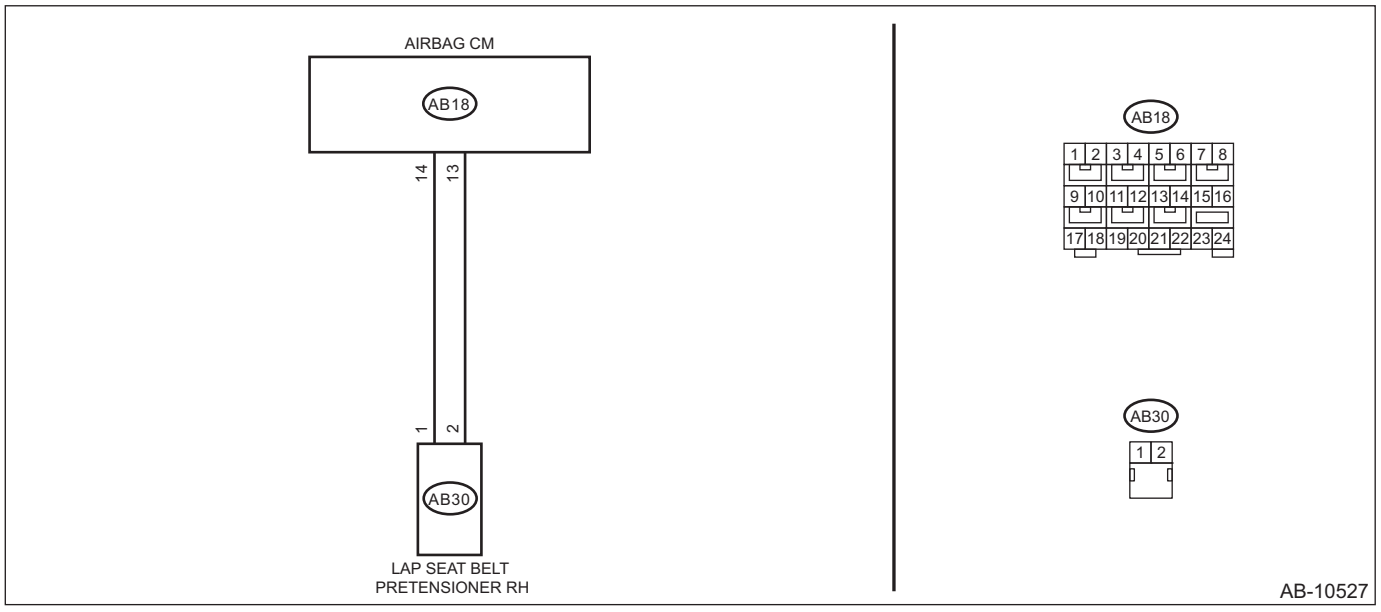
	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. ***Connector & terminal*** ***(6AG) No. 5 — (2N) No. 2:*** ***(6AG) No. 7 — (2N) No. 1:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F1 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DU:DTC B19F2 SHORT IN FRONT P/T 2 RH (TO GROUND)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Lap seat belt pretensioner RH circuit is shorted to ground.
- Lap seat belt pretensioner RH is faulty.
- Lap seat belt pretensioner harness RH is shorted to ground.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>



Step		Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK LAP SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner RH. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 5 — Chassis ground:*** ***(6AG) No. 7 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F2 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

DV:DTC B19F3 SHORT IN FRONT P/T 2 RH (TO +B)

Diagnosis start condition:
Ignition voltage is 10 V to 16 V.
DTC detecting condition:

- Lap seat belt pretensioner RH circuit is shorted to power supply.
- Lap seat belt pretensioner RH is faulty.
- Lap seat belt pretensioner harness RH is shorted to power supply.
- Airbag control module is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Airbag system <Ref. to WI-70, WIRING DIAGRAM, Airbag System.>

	Step	Check	Yes	No
1	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the airbag control module and the lap seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step **2**.
2	**CHECK LAP SEAT BELT PRETENSIONER.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connector (AB30) from the lap seat belt pretensioner RH. 3) Connect the connector (1N) in the test harness N to the connector (AB30). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the lap seat belt pretensioner RH. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS (LAP SEAT BELT PRETENSIONER HARNESS RH).** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the airbag resistor from test harness N. 3) Disconnect the connector (AB33) from curtain airbag module RH. 4) Disconnect the connector (AB24) from side airbag module RH. 5) Disconnect the connector (AB26) from seat belt pretensioner. 6) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 7) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 8) Connect the battery ground terminal and turn the ignition switch to ON. 9) Measure the voltage between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 5 (+) — Chassis ground (–):*** ***(6AG) No. 7 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG CONTROL MODULE.** 1) Connect all connectors. 2) Clear the memory. <Ref. to AB(diag)-25, Clear Memory Mode.> 3) Perform the Inspection Mode. <Ref. to AB(diag)-24, Inspection Mode.> 4) Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC B19F3 displayed?	Replace the airbag control module. <Ref. to AB-50, Airbag Control Module.>	Go to step **5**.
5	**CHECK FOR ANY OTHER DTC ON DISPLAY.** Read the DTC. (Current malfunction) <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is any other DTC displayed?	Perform the diagnosis for other displayed DTCs. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**CHECK WARNING LIGHT.** Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step **2**.	Perform the diagnosis according to phenomenon of the problem.
2	**READ DTC.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to OD(diag)-18, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Are any DTCs displayed?	Go to step **3**.	Go to “Airbag Warning Light Failure” <Ref. to AB(diag)-30, Airbag Warning Light Failure.>.
3	**PERFORM DIAGNOSIS.** 1) Determine the possible cause from “List of Diagnostic Trouble Code (DTC)” <Ref. to OD(diag)-25, List of Diagnostic Trouble Code (DTC).>. 2) Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-21, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-20, Inspection Mode.> 6) Read any other DTCs displayed.	Are any DTCs displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. CONDITIONS OF MALFUNCTION

Customer's Name		Inspector's Name	
Date Vehicle Brought in	/ /	Registration No.	
Odometer reading	km miles	V.I.N.	
Date Problem Occurred	/ /	Registration Year	/ /

3. General Description

A: CAUTION

1) The occupant detection system (passenger seat only) control module and the occupant detection sensor are fixed to the seat cushion frame. Never remove the occupant detection control module or the occupant detection sensor from the seat cushion frame.
2) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the occupant detection system may not operate properly.
3) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.
4) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.
5) Do not disconnect the battery cables while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.
6) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 60 seconds or more. Occupant detection control module may be damaged.
7) Every occupant detection system-related part is a precision part. Do not drop them.

CAUTION:
• Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
• Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
• Refer to CAUTION in Airbag System when repairing the occupant detection system. <Ref. to AB-9, CAUTION, General Description.>

B: INSPECTION

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>

C: PREPARATION TOOL

CAUTION:
To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

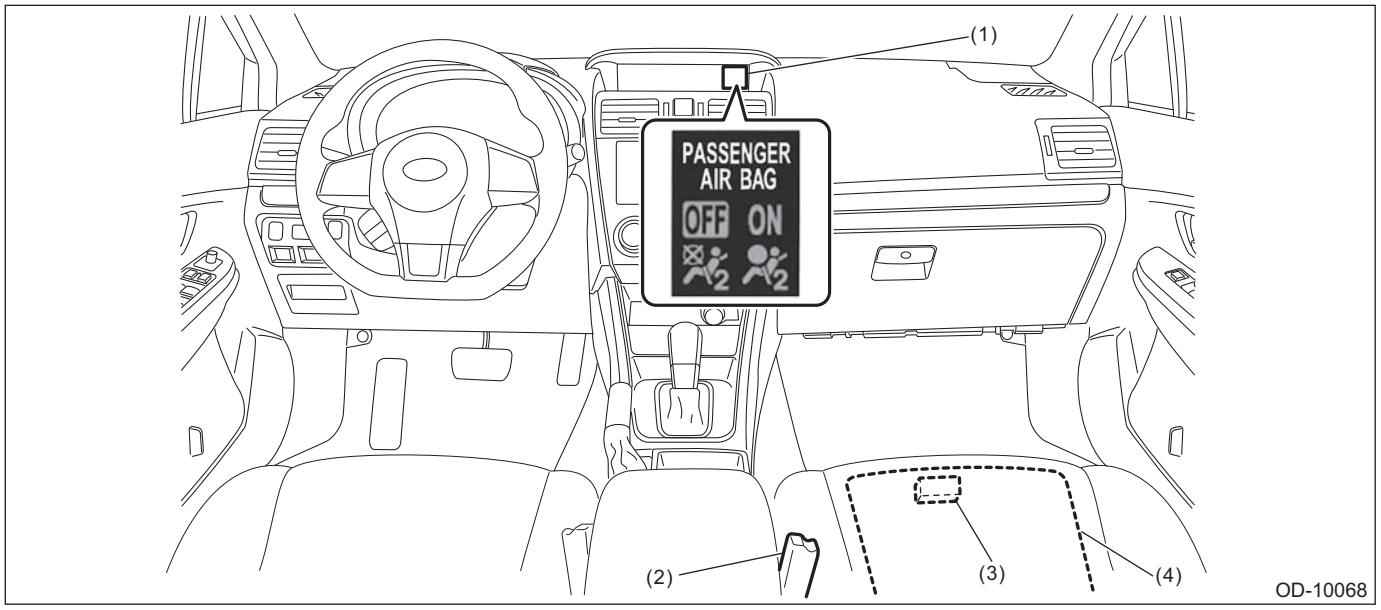
2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION



(1) Airbag ON/OFF indicator light
(2) Buckle switch (passenger's seat)
(3) Occupant detection control module
(4) Occupant detection sensor

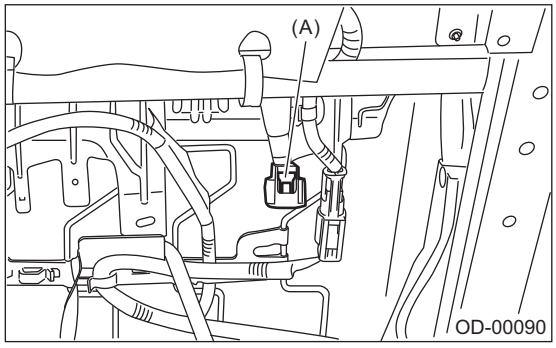
5. Airbag Connector

A: PROCEDURE

1. OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS)

1) How to disconnect:
Press the lock arm (A) and disconnect the connector.

CAUTION:
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.



2) How to connect:
Holding the connector, push it in securely until a clicking sound is heard.

CAUTION:
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

2. AIRBAG CONTROL MODULE

Refer to the airbag system section. <Ref. to AB-17, AIRBAG CONTROL MODULE, PROCEDURE, Airbag Connector.>

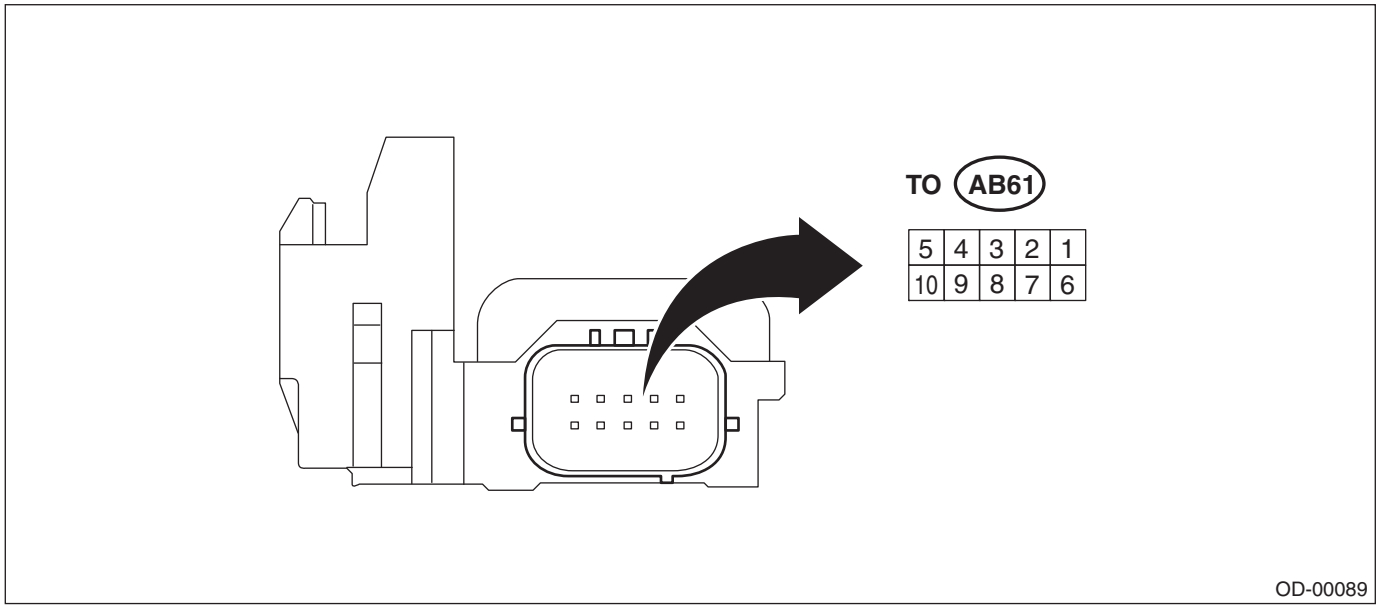
3. BUCKLE SWITCH RH

Refer to the airbag system section. <Ref. to AB-24, BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

6. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CAUTION:
Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.



Terminal No.	Terminal name	Input/Output value	Note
1	Airbag CM communication (FSR+)	—	Communication line
2	Not used	—	—
3	Not used	—	—
4	Buckle switch – (BER–)	0 V	Switch ground
5	Not used	—	—
6	IG power supply (IG)	8 — 16 V	When ignition SW is ON
7	Not used	—	—
8	Buckle switch + (BER+)	0 — IG voltage	Ignition voltage when the switch is ON
9	Airbag CM communication (FSR–)	0 V	GND
10	Not used	—	—

B: WIRING DIAGRAM

Refer to “Occupant Detection System” in the wiring diagram. <Ref. to WI-290, WIRING DIAGRAM, Occupant Detection System.>

7. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING THE AIRBAG SYSTEM IS IMPOSSIBLE

Detecting condition:
Defective harness connector
Trouble symptom:
Communication is impossible between the airbag control module and the Subaru Select Monitor.

NOTE:
Refer to “Communication for Initializing Impossible” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-20, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. COMMUNICATION FOR INITIALIZING ONLY THE OCCUPANT DETECTION SYSTEM IS IMPOSSIBLE

NOTE:
The occupant detection system communicates with the Subaru Select Monitor via the airbag control module.
Detecting condition:
Defective harness connector between airbag control module and occupant detection control module
Trouble symptom:
Communication is impossible between the airbag control module and the occupant detection control module.
Perform the diagnosis from step 2 in “DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION”. <Ref. to OD(diag)-26, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

Read out DTCs stored in the airbag system and the occupant detection system.

1. AIRBAG SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-32, List of Diagnostic Trouble Code (DTC).>

2. OCCUPANT DETECTION SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection» and then select «Enter».
5) On «Occupant Detection» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to OD(diag)-25, List of Diagnostic Trouble Code (DTC).>

9. Inspection Mode

A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

10.Clear Memory Mode

A: OPERATION

After repairing the occupant detection system, clear the DTCs stored in the airbag control module and the occupant detection control module.

1. AIRBAG SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Airbag» and select «Enter».
5) On «Airbag» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

2. OCCUPANT DETECTION SYSTEM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection» and then select «Enter».
5) On «Occupant Detection» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

11.Read Current Data

A: OPERATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

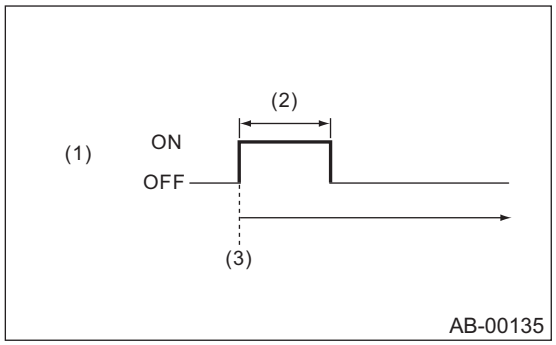
NOTE:
For detailed operation procedures, refer to “Application help”.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Occupant Detection».
5) On «Occupant Detection» display, select «Data Monitor».
The following table is for support data.

Item	Display	Note
Front Passenger Seat Status	Empty or Child / Adult or Child	“Adult or Child” when the seat is occupied “Empty or Child” when the seat is unoccupied or when child restraint seat is installed **CAUTION:** **When checking the operating status, be careful of the followings.** **• When the seat is unoccupied: Do not place anything on the seat.** **• Child restraint seat: Install the seat according to its instruction manual.** **• When the seat is occupied: Someone who weighs at least approx. 70 kg (155 lb) must be seated during the check.**

12.Airbag Warning Light Illumination Pattern

A: INSPECTION

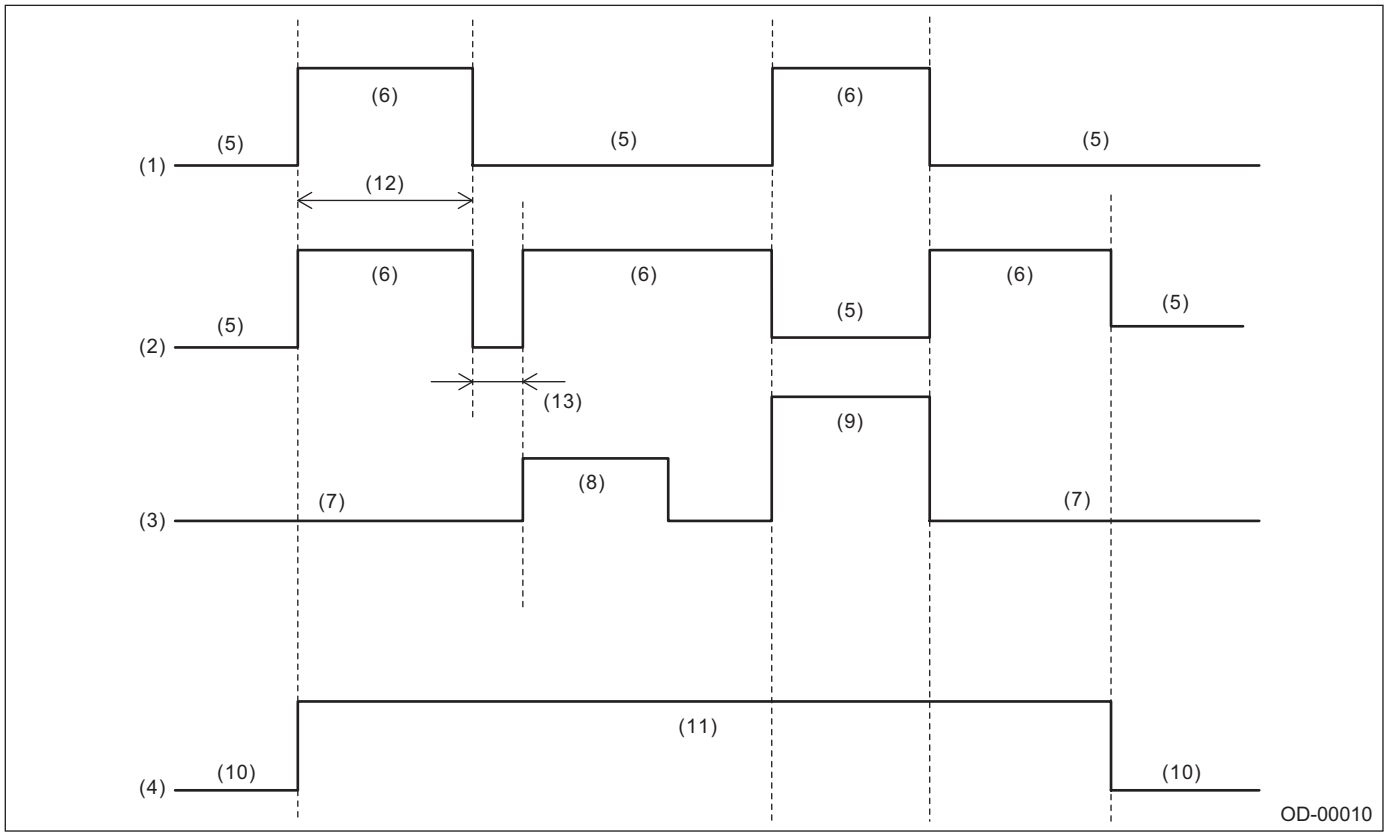
Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.



(1) Airbag warning light
(2) Approx. 6 seconds
(3) Ignition switch ON

13.Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

A: INSPECTION



(1)	Passenger's airbag ON indicator light	(6)	Light ON	(10)	OFF
(2)	Passenger's airbag OFF indicator light	(7)	Empty	(11)	ON
(3)	Occupant seating	(8)	Child	(12)	Approx. 6 seconds
(4)	Ignition switch	(9)	Adult	(13)	Approx. 2 seconds
(5)	Light OFF				

14.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
B1650	Occupant Detection System Malfunction	• Occupant detection sensor is faulty. • Occupant detection control module is faulty. • Occupant detection harness is faulty. • Fuse No. 25 is blown. • Rear airbag harness is faulty.	<Ref. to OD(diag)-26, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1655	Front Buckle Switch RH Failure	• Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty.	<Ref. to OD(diag)-27, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1760	Occupant Detection Sensor Mat	• Occupant detection sensor is faulty. • Occupant detection sensor is open, shorted between terminals, shorted to power supply or shorted to ground. • Seat heater is open. • Occupant detection control module is faulty.	<Ref. to OD(diag)-28, DTC B1760 OCCUPANT DETECTION SENSOR MAT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1761	Occupant Detection Sensor Mat Liquid Coating	• Detected that the occupant detection sensor is spattered with fluid. • Occupant detection sensor is faulty. • Occupant detection control module is faulty.	<Ref. to OD(diag)-30, DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1771	Buckle Switch	• Passenger's buckle switch is faulty. • Passenger's buckle switch circuit is open, shorted or shorted to ground. • Occupant detection system is faulty. • Occupant detection harness is faulty.	<Ref. to OD(diag)-30, DTC B1771 BUCKLE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1795	Occupant Detection Module Internal Circuit	Occupant detection control module is faulty.	<Ref. to OD(diag)-30, DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

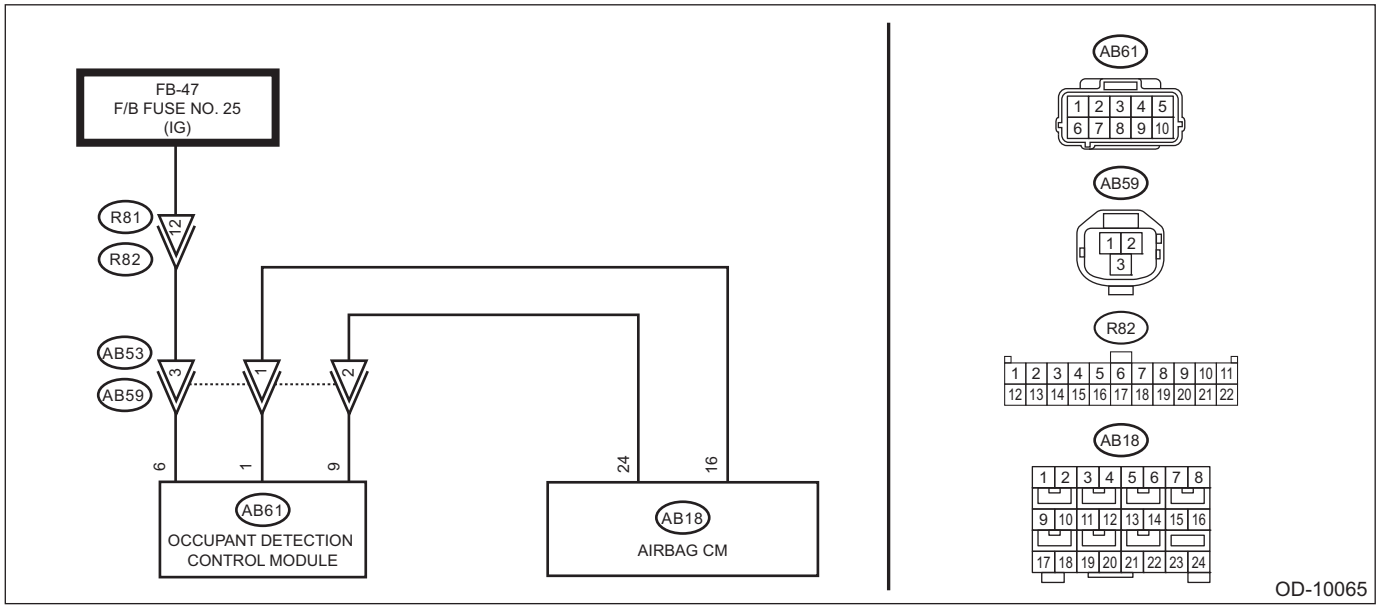
15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION

Diagnosis start condition:
Ignition voltage is 8 V to 16 V.
DTC detecting condition:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Fuse No. 25 is blown out.
- Rear airbag harness is faulty.

CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to AB(diag)-4, CAUTION, General Description.>
Wiring diagram:
Occupant detection system <Ref. to WI-290, WIRING DIAGRAM, Occupant Detection System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-19, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B1760, B1761, B1771 or B1795 displayed?	Perform the diagnosis for the displayed DTC B1760, B1761, B1771 or B1795.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the airbag rear harness along with body harness. Or replace the occupant detection harness (seat harness).)	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK AIRBAG REAR HARNESS.** 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 60 seconds or more. 2) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 3) Disconnect the connectors (AB6, AB17, AB18) from airbag control module. 4) Connect the connector (1AG) in the test harness AG to the connectors (AB6, AB17, AB18). 5) Connect the connector (1AP) in the test harness AP to the connector (AB53). 6) Measure the resistance between connector (6AG) in the test harness AG and connector (2AP) in the test harness AP. ***Connector & terminal*** ***(6AG) No. 9 — (2AP) No. 1:*** ***(6AG) No. 11 — (2AP) No. 2:***	Is the resistance less than 10 Ω?	Go to step **4**.	Replace the airbag rear harness along with body harness.
4	**CHECK AIRBAG REAR HARNESS.** Measure the resistance between connector (6AG) in the test harness AG and chassis ground. ***Connector & terminal*** ***(6AG) No. 9 — Chassis ground:*** ***(6AG) No. 11 — Chassis ground:*** ***(6AG) No. 9 — (6AG) No. 11:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Replace the airbag rear harness along with body harness.
5	**CHECK OCCUPANT DETECTION HARNESS.** 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AP) in the test harness AP and chassis ground. ***Connector & terminal*** ***(2AP) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order. <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness together with body harness.

B: DTC B1655 FRONT BUCKLE SWITCH RH FAILURE

Diagnosis start condition:
Ignition voltage is 8 V to 16 V.
DTC detecting condition:
- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Occupant detection system is faulty.
- Occupant detection harness is faulty.

Wiring diagram:

Occupant detection system <Ref. to WI-290, WIRING DIAGRAM, Occupant Detection System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-19, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B1760, B1761, B1771 or B1795 displayed?	Perform the diagnosis for the displayed DTC B1760, B1761, B1771 or B1795.	Go to step **2**.
2	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	When the connector is not fully connected, reconnect the connector correctly. Replace the airbag harness if the connector is faulty.	Go to step **3**.
3	**CHECK BUCKLE SWITCH.** 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 60 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE and test harness connector Y to buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-16, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

C: DTC B1760 OCCUPANT DETECTION SENSOR MAT

Diagnosis start condition:
When the ignition voltage is 8 V to 16 V.
DTC detecting condition:
- Occupant detection sensor is faulty.
- Occupant detection sensor circuit is open, shorted between terminals, shorted to power supply or shorted to ground.
- Seat heater circuit is open.
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK AIRBAG WARNING LIGHT.** Check whether or not the airbag warning light illuminates.	Does it Illuminate?	Go to step **2**.	Read the DTC, and if DTC B1760 is recorded as a past malfunction, Go to step **3**.
2	**CHECK STATUS OF PASSENGER'S SEAT.** Check if the passenger's seat cushion is wet.	Is it wet?	Go to step **3**.	Go to step **6**.
3	**DRY PASSENGER'S SEAT.** Dry the passenger's seat well naturally.	Is it dry?	Go to step **4**.	After drying well, Go to step **4**.
4	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B1760 (current malfunction) displayed again?	When DTC B1760 is displayed, Go to step **5**.	Clear the memory. <Ref. to OD(diag)-21, OPERATION, Clear Memory Mode.>
5	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of connectors between the occupant detection control module and the occupant detection sensor.	Is there poor contact of connector?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the occupant detection harness or replace the occupant detection system (passenger's & frame assembly).) <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>
6	**CHECK POOR CONTACT OF CONNECTORS.** Check for poor contact of connectors between the occupant detection control module and the occupant detection sensor.	Is there poor contact of connector?	When the connector is not fully connected, reconnect the connector correctly. Replace the faulty harness if the connector is faulty. (Replace the occupant detection harness or replace the occupant detection system (passenger's & frame assembly).) <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Because the seat inside may be wet, dry the seat well, and then, Go to step **7**.
7	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-19, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B1760 (current malfunction) displayed again?	Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>	Clear the memory. <Ref. to OD(diag)-21, OPERATION, Clear Memory Mode.>

D: DTC B1761 OCCUPANT DETECTION SENSOR MAT LIQUID COATING

Diagnosis start condition:
Ignition voltage is 8 V to 16 V.
DTC detecting condition:
- Occupant detection sensor is spattered with fluid.
- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.

	Step	Check	Yes	No
1	**CHECK AIRBAG WARNING LIGHT.** Check whether or not the airbag warning light illuminate.	Does it Illuminate?	Go to step **2**.	Read the DTC, and if DTC B1761 is recorded as a past malfunction, Go to step **3**.
2	**CHECK STATUS OF PASSENGER'S SEAT.** Check if the passenger's seat cushion is wet.	Is it wet?	Go to step **3**.	Go to step **4**.
3	**DRY PASSENGER'S SEAT.** Dry the passenger's seat well naturally.	Is it dry?	Go to step **4**.	After drying well, Go to step **4**.
4	**CHECK DTC.** Read the DTC of the occupant detection system. <Ref. to OD(diag)-19, OCCUPANT DETECTION SYSTEM, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	When DTC B1761 is displayed again, replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.> When any other DTC is displayed, perform the diagnosis for the displayed DTC.	Clear the memory. <Ref. to OD(diag)-21, OCCUPANT DETECTION SYSTEM, OPERATION, Clear Memory Mode.>

E: DTC B1771 BUCKLE SWITCH

Diagnosis start condition:
Ignition voltage is 8 V to 16 V.
DTC detecting condition:
- Passenger's seat buckle switch is faulty.
- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Occupant detection system is faulty.
- Occupant detection harness is faulty.

Perform the diagnosis from step 2 in "DTC B1655 FRONT BUCKLE SWITCH RH FAILURE". <Ref. to OD(diag)-27, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT

Diagnosis start condition:
Ignition voltage is 8 V to 16 V.
DTC detecting condition:
Occupant detection control module is faulty.
When "DTC B1795 OCCUPANT DETECTION MODULE INTERNAL CIRCUIT" is displayed, the occupant detection control module is faulty. Replace the occupant detection system (passenger's & frame assembly). <Ref. to SE-27, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

(3)	Seat belt - CTR LH	(6)	Cover - belt rear	***T2: 53 (5.4, 39.1)***

B: CAUTION

For details of the following precautions for seat belt pretensioner, refer to “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>

- Before performing vehicle maintenance, turn the ignition switch to OFF and wait for 60 seconds or more after disconnecting the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
  - For model with battery sensor, disconnect the ground terminal from battery sensor.
- Do not drop or apply any impact to the pretensioner.
- Do not allow oil, grease or water to come in contact with the pretensioner.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new genuine part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new genuine parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.
- Before disposal, make sure to perform an operation process to the pretensioners. <Ref. to SB-26, PROCEDURE, Disposal of Pretensioner.>
- If material from the pretensioner enters the eyes or contacts skin during operation process, wash it away with clean water, and then consult a doctor.

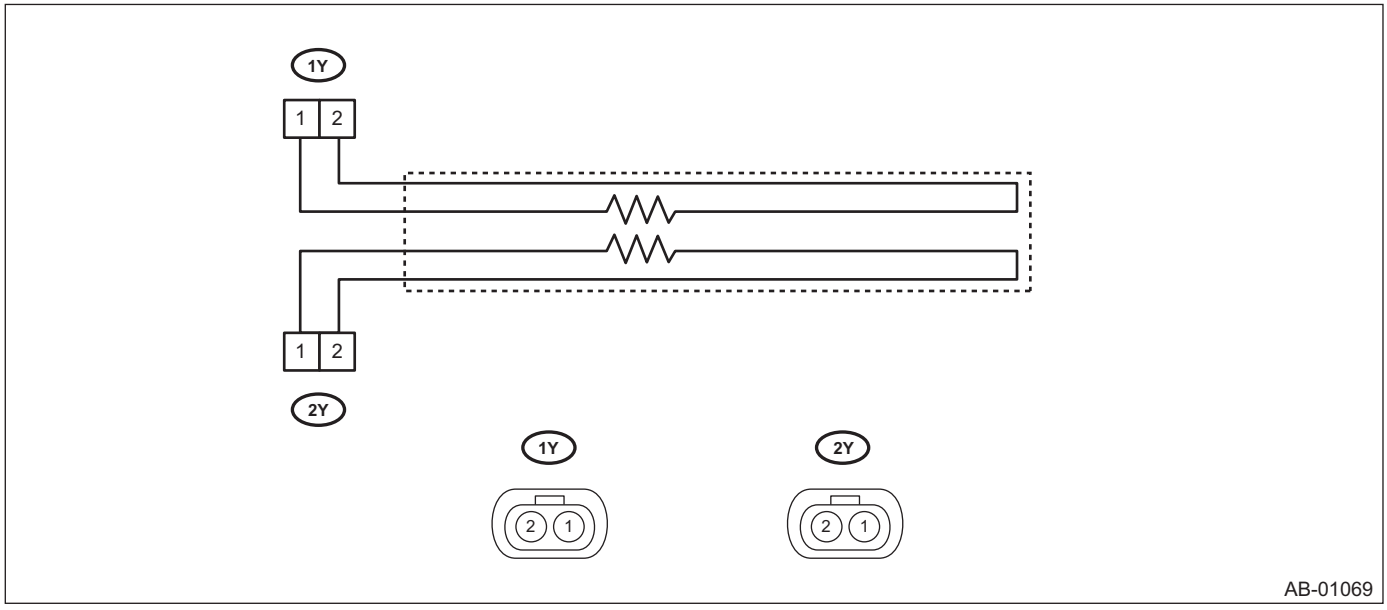
- TEST HARNESS Y

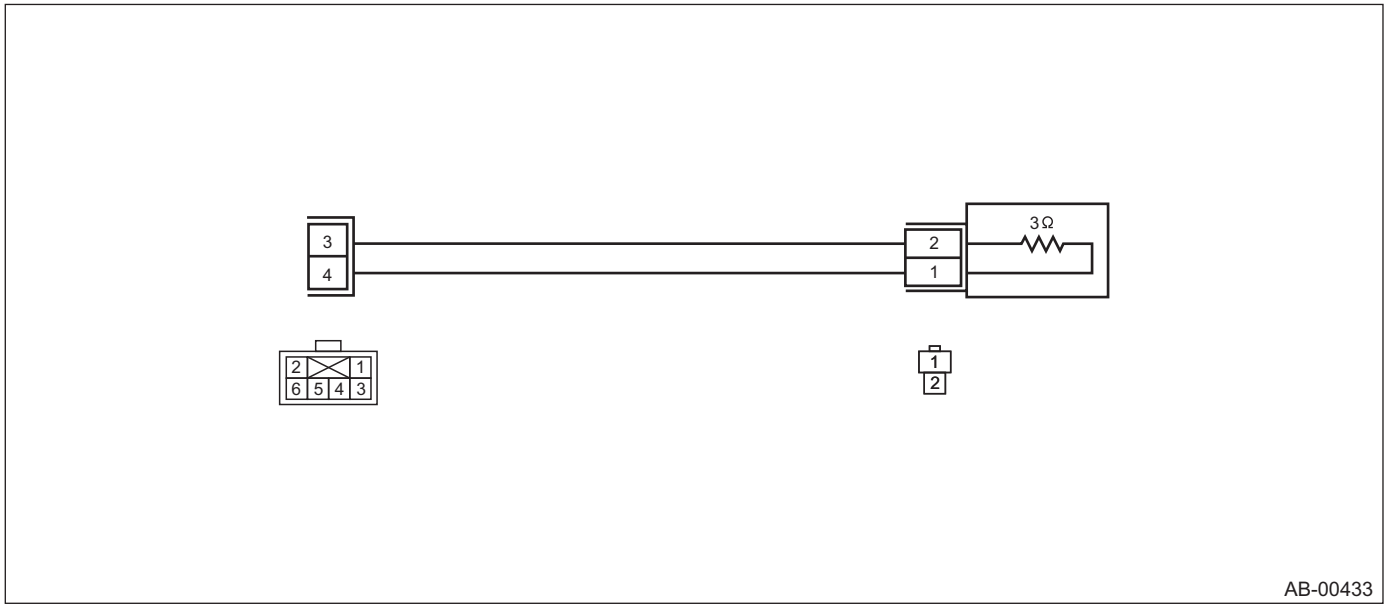
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299AG040	98299AG040	TEST HARNESS Y	Used for troubleshooting seat belt buckle switch.



AB-01069

- AIRBAG RESISTOR

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299PA040	98299PA040	AIRBAG RESISTOR	Used in replacement of airbag module for which resistance value is same as airbag module.



- TEST HARNESS ADAPTER D

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST98299SA010	98299SA010	TEST HARNESS ADAPTER D	• Used for operation process of pretensioner. • Used together with AIRBAG DEPLOYMENT TOOL. (98299PA030)

- AIRBAG DEPLOYMENT TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST98299PA030	98299PA030	AIRBAG DEPLOYMENT TOOL	• Used for operation process of pretensioner. • Used together with each test harness adapter.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Pretensioner Connector

A: PROCEDURE

For connectors of seat belt pretensioner, lap seat belt pretensioner and buckle switch RH, refer to “Airbag Connector” of “AIRBAG SYSTEM” section or “OCCUPANT DETECTION SYSTEM” section.

- Airbag system: <Ref. to AB-17, PROCEDURE, Airbag Connector.>
- Occupant detection system: <Ref. to OD(diag)-16, PROCEDURE, Airbag Connector.>

3. Inspection Locations after a Collision

A: INSPECTION

Refer to “Inspection Locations after a Collision” of “AIRBAG SYSTEM” section. <Ref. to AB-26, Inspection Locations after a Collision.>

4. Seat Belt Warning System

A: WIRING DIAGRAM

Refer to “Seat Belt Warning System” in the wiring diagram. <Ref. to WI-326, WIRING DIAGRAM, Seat Belt Warning System.>

B: INSPECTION

CAUTION:
• Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
• When inspecting the airbag main harness, disconnect the connectors of the driver’s airbag module, passenger’s airbag module and knee airbag module for safety reasons.
• When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.
Trouble symptom
- Driver’s side seat belt warning light does not illuminate or it remains illuminating.
- Warning buzzer does not beep.

	Step	Check	Yes	No
1	**CHECK FUNCTION.** 1) Sit on the driver’s seat and passenger’s seat and disconnect the seat belts of the both. 2) Turn the ignition switch to ON (engine OFF). 3) Check the illumination of the driver’s seat belt warning light in the combination meter, and the passenger’s seat belt warning light in the MFD, and the sounding of the buzzer.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **2**.	Go to step **12**.
2	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 1. (For approximately six seconds after starting sounding) 2) Connect and disconnect the seat belts of the driver’s and passenger’s. 3) Check the illumination of the driver’s seat belt warning light in the combination meter and the passenger’s seat belt warning light in the MFD.	Do the seat belts warning light illuminate ←→ go off according to the operation?	Go to step **3**.	Go to step **8**.
3	**CHECK FUNCTION.** 1) Wait until the buzzer sound stops in step 2. (For approximately six seconds after starting sounding) 2) Start the engine, and set the vehicle speed at 20 km/h (12 MPH) or more. 3) Check the seat belt warning lights of the driver’s and the passenger’s, and if the warning buzzer sounds.	Do the driver’s warning light and passenger’s warning light blink and the buzzer sound while blinking?	Go to step **4**.	Go to step **14**.
4	**CHECK HARNESS.** 1) Disconnect the negative terminal from the battery, and wait for 60 seconds or more. NOTE: For model with battery sensor, disconnect the ground terminal from battery sensor. 2) Disconnect the connectors of the combination meter and the seat belt buckle switch LH. 3) Check for short circuit to battery, open circuit and short circuit to ground between the combination meter and the seat belt buckle switch LH. ***Connector & terminal*** ***(i10) No. 15 — (R108) No. 1:***	Is the harness normal?	Go to step **5**.	Repair or replace the harness.

	Step	Check	Yes	No
5	**CHECK HARNESS.** Measure the resistance between the seat belt buckle switch LH and chassis ground. ***Connector & terminal*** ***(R108) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the harness.
6	**CHECK SEAT BELT BUCKLE SWITCH LH.** Measure the resistance between the connector terminals of the driver's seat belt switch when the driver's seat belt is fastened and detached. ***Connector & terminal*** ***(R108) No. 1 — (R108) No. 2:***	Is the resistance when the belt is fastened 1 MΩ or more, and less than 10 Ω when the belt is detached?	Go to step **7**.	Replace the seat belt inner - front LH. <Ref. to SB-16, SEAT BELT OUTER - FRONT, REMOVAL, Front Seat Belt.>
7	**CHECK COMBINATION METER.** Perform the self-diagnosis of combination meter. <Ref. to IDI-6, SELF-DIAGNOSIS DISPLAY MODE, OPERATION, Combination Meter System.>	At the start of combination meter self diagnosis, did the buzzer sound and the seat belt warning light illuminate?	Replace the combination meter. There may be a reception failure of the combination meter.	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>
8	**CHECK DATA MONITOR.** 1) Sit in the passenger's seat. 2) Using the Subaru Select Monitor, select «Data monitor» to display data of «Passenger seat seat-belt wearing state». NOTE: For detailed operation procedures, refer to "Application help". 3) Fasten and detach the passenger's side seat belt buckle, and read the data of the seat belt switch. <Ref. to MET(diag)-14, LIST, Read Current Data.>	Does the seat belt switch display turn ON ←→ OFF according to the operation of the seat belt buckle?	Go to step **12**.	Go to step **9**.
9	**CHECK AIRBAG SYSTEM AND OCCUPANT DETECTION SYSTEM.** Perform the check in accordance with the diagnostic procedure DTC B1650 of the airbag system. <Ref. to OD(diag)-26, DTC B1650 OCCUPANT DETECTION SYSTEM MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the inspection result normal?	Go to step **10**.	Repair or replace with new parts according to DTC B1650.
10	**CHECK BUCKLE SWITCH RH.** Perform the check in accordance with the diagnostic procedure DTC B1655 of the occupant detection system. <Ref. to OD(diag)-27, DTC B1655 FRONT BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the inspection result normal?	Go to step **11**.	Repair or replace with new parts according to DTC B1655.
11	**CHECK AIRBAG CONTROL MODULE AND COMBINATION METER.** Check the airbag control module, occupant detection sensor and seat belt buckle switch RH. Perform the check in accordance with the diagnostic procedure DTC B16F1 of the airbag system. <Ref. to AB(diag)-102, DTC B16F1 PASSENGER'S SEAT BELT WARNING FAILURE, Diagnostic Chart with Trouble Code.>	Is the inspection result normal?	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>	Repair or replace with new parts according to DTC B16F1.

	Step	Check	Yes	No
12	**CHECK MFD POWER SUPPLY VOLTAGE.** 1) Disconnect the MFD connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the ignition power supply and the MFD. ***Connector & terminal*** ***(i122) No. 23 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **13**.	Check the harness for open or short between the fuse and MFD.
13	**CHECK MFD GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure the resistance between MFD and chassis ground. ***Connector & terminal*** ***(i122) No. 21 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **14**.	Repair or replace the harness.
14	**CHECK HARNESS BETWEEN MFD AND COMBINATION METER.** 1) Disconnect the harness of the MFD and the combination meter. 2) Measure the resistance between MFD and combination meter. ***Connector & terminal*** ***(i122) No. 12 — (i10) No. 28:***	Is the resistance less than 10 Ω?	Go to step **15**.	Repair or replace the harness.
15	**CHECK COMMUNICATION STATUS BETWEEN MFD AND COMBINATION METER.** 1) Remove the MFD, and install a properly operating MFD (new MFD). 2) Connect the connector and then turn the ignition switch to ON.	Is the MFD properly displayed?	Replace the MFD.	Replace the combination meter case assembly.

5. Front Seat Belt

A: REMOVAL

1. SEAT BELT OUTER - FRONT

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
• Do not drop or subject the pretensioner to any impact.
• Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

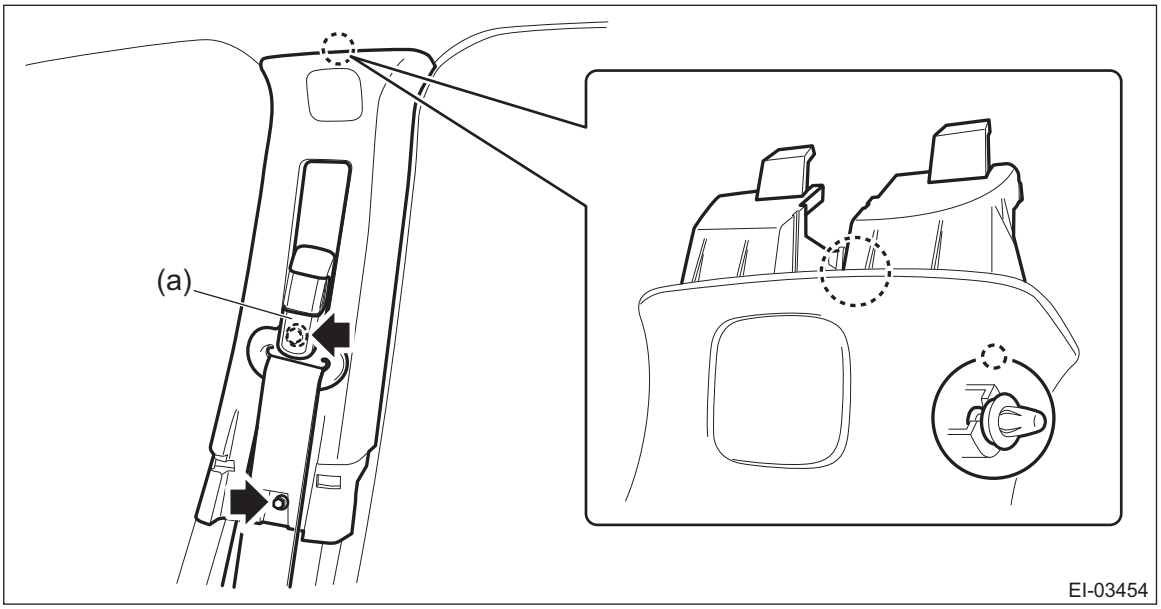
NOTE:
• For model with battery sensor, disconnect the ground terminal from battery sensor.
• For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Tilt the front seat backrest assembly forward, and move the front seat all the way forward.

CAUTION:
For the power seat, move the seat, disconnect the battery ground cable, and then wait for 60 seconds or more before starting work.

4) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
5) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
6) Remove the trim panel - center pillar UPR. (On the side where seat belt assembly is removed)
   (1) Remove the cover through (a), and remove the seat belt anchor bolt.
   (2) Remove the bolt on the lower side of the trim panel - center pillar UPR.
   (3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.

CAUTION:
Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.



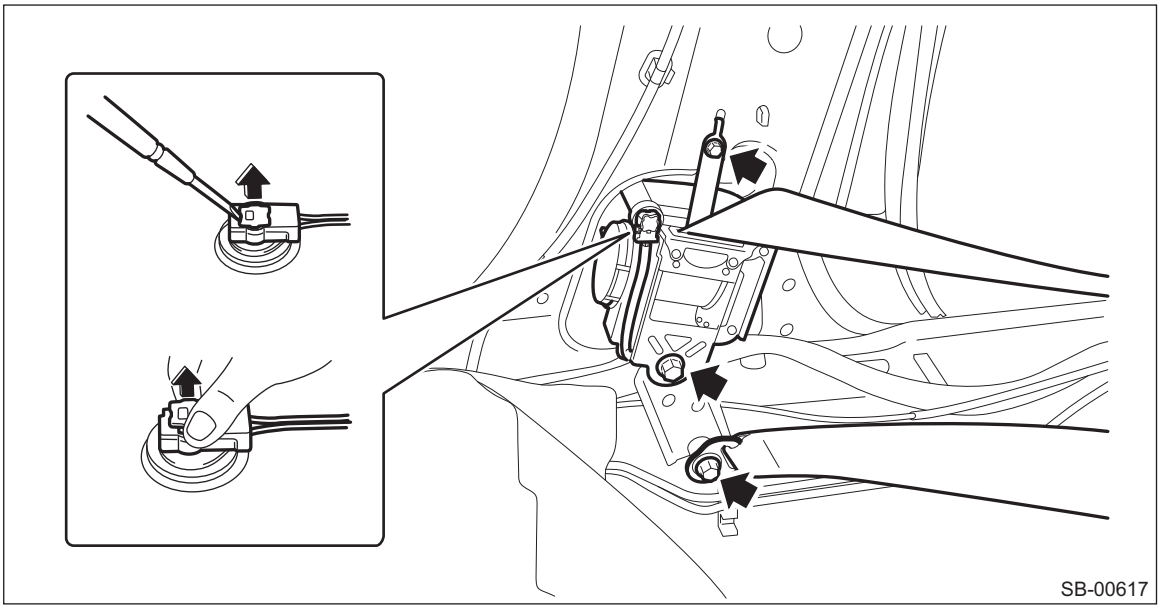
7) Remove the seat belt outer - front.

(1) Turn over the floor mat to disconnect the belt tension sensor connector. <Ref. to AB-19, DRIVER'S AIRBAG MODULE, CURTAIN AIRBAG MODULE AND PRETENSIONER, PROCEDURE, Airbag Connector.>

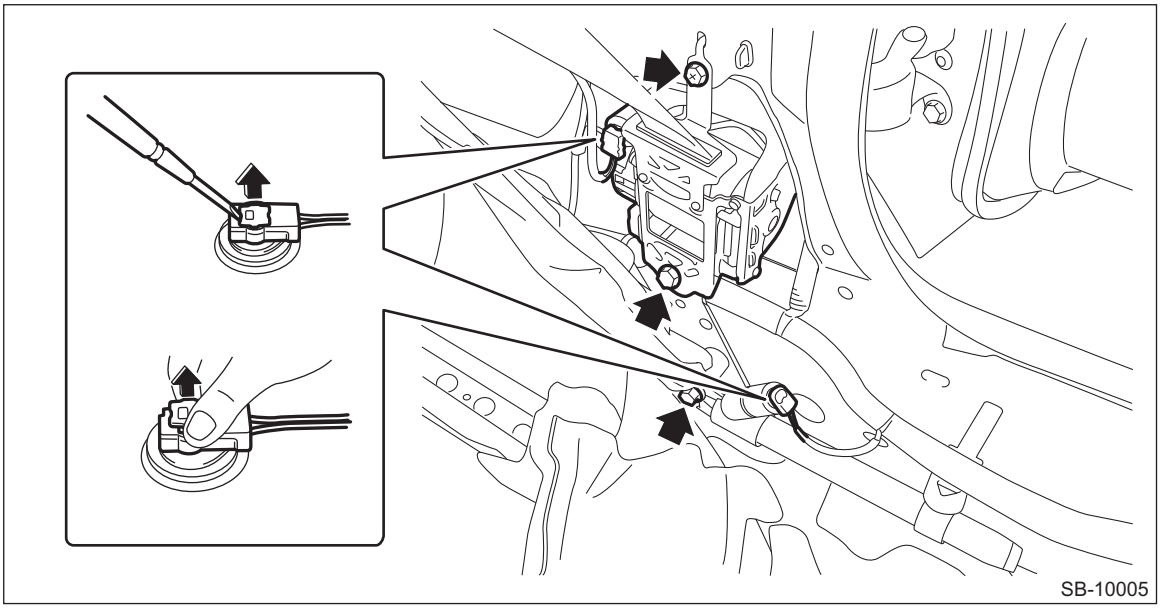
NOTE:
Also disconnect the connector of the passenger's lap seat belt pretensioner.

(2) Remove the bolt to remove the seat belt retractor.
(3) Remove the lower anchor bolt, and remove the seat belt outer - front.

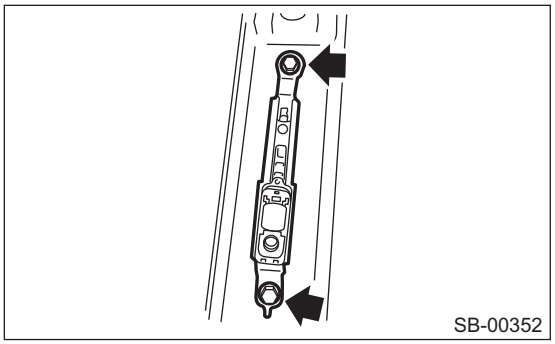
- Driver's side



- Passenger's side



8) Remove the bolts, and then remove the adjuster assembly - seat belt.



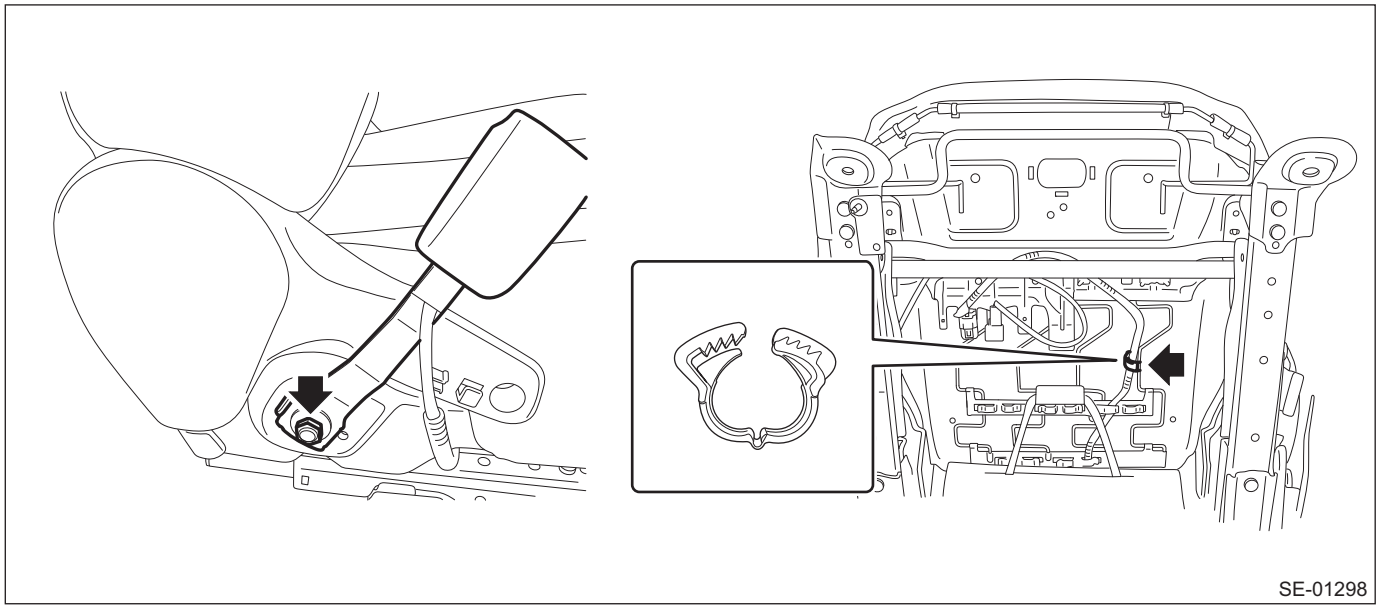
2. SEAT BELT INNER - FRONT

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- For model with the power seat, move the seat to the front-most position before removing the battery ground terminal.

3) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the seat belt inner - front.
   (1) Remove the nut, and remove the seat belt inner - front.
   (2) Remove the clip for the inner seat belt harness located under the seat cushion.



B: INSTALLATION

1. SEAT BELT OUTER - FRONT

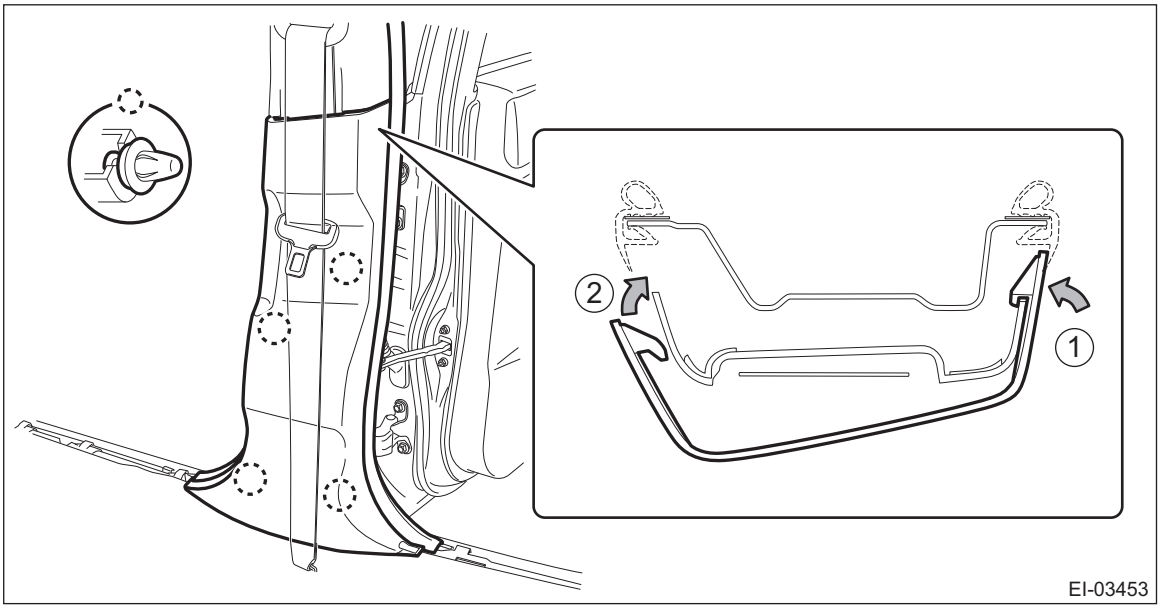
CAUTION:
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**
- **The parts of the driver and passenger sides are not the same. Before installation, make sure that the correct part is used.**
- **During installation, make sure that the seat belts are not twisted.**

• After installation, make sure that the seat belt can be pulled out and retracted smoothly.
• Make sure that the seat belt harness is not caught anywhere. Wrong harness rooting may cause the harness short from pinch.
• Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
1) Before installation, perform a unit inspection of retractor. <Ref. to SB-20, INSPECTION, Front Seat Belt.>
2) Install the adjuster assembly - seat belt and the seat belt outer - front.

Tightening torque:
Front seat belt: <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>
3) Install the trim panel - rear pillar UPR.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the trim panel - center pillar LWR.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



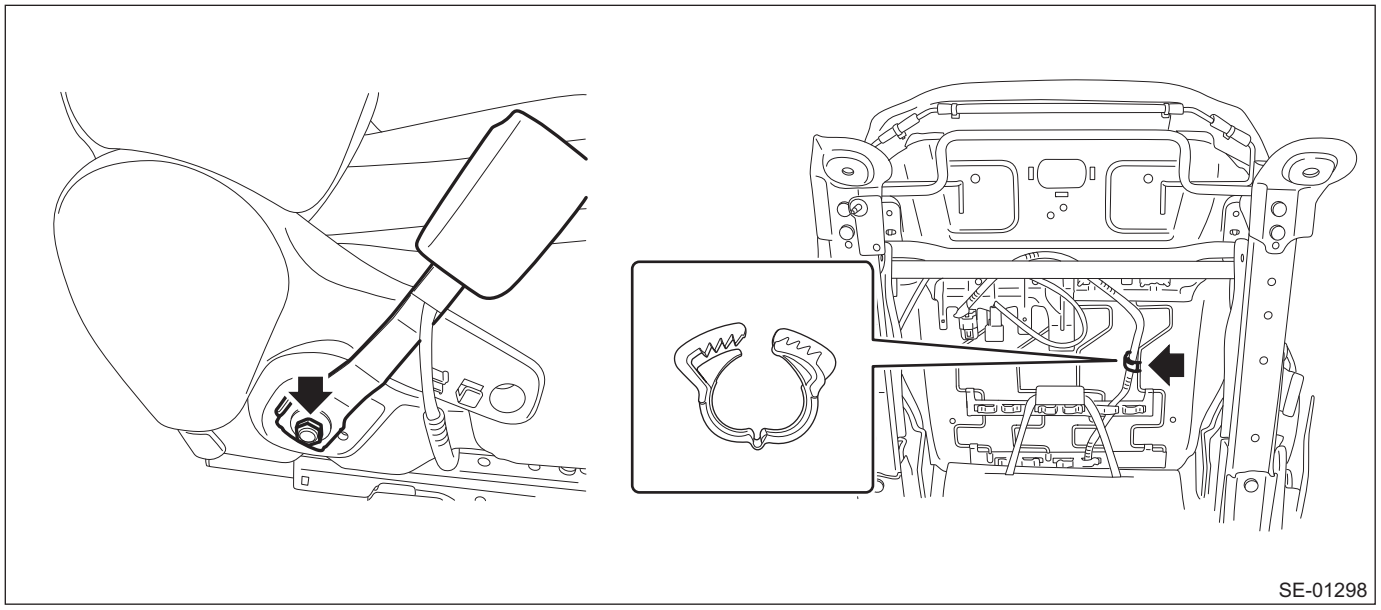
5) Install the trim panel - center pillar LWR, cover side sill - front INN, and cover side sill - rear INN.
6) Install the rear seat cushion assembly.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) After installation, check the following points.
• The seat belt is not twisted.
• The seat belt can be pulled out and retracted smoothly.
• The adjuster assembly - seat belt can be moved smoothly.
• Check that the airbag warning light lights up for approximately 6 seconds and then turns off when connecting the battery ground cable and turning the ignition switch to ON.

2. SEAT BELT INNER - FRONT

CAUTION:
• Before installation, make sure that the correct part is used.
• During installation, make sure that the seat belts are not twisted.
• Check that there is no pinching of the seat belt harness. Wrong harness rooting may cause the harness short from pinch.
• Do not forget the wave washer, when installing front seat inner belt assembly.
1) Install the seat belt inner - front.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2) Locate the seat belt harness and retain it with a harness clip.



3) Install the seat assembly to the body. <Ref. to SE-12, INSTALLATION, Front Seat.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

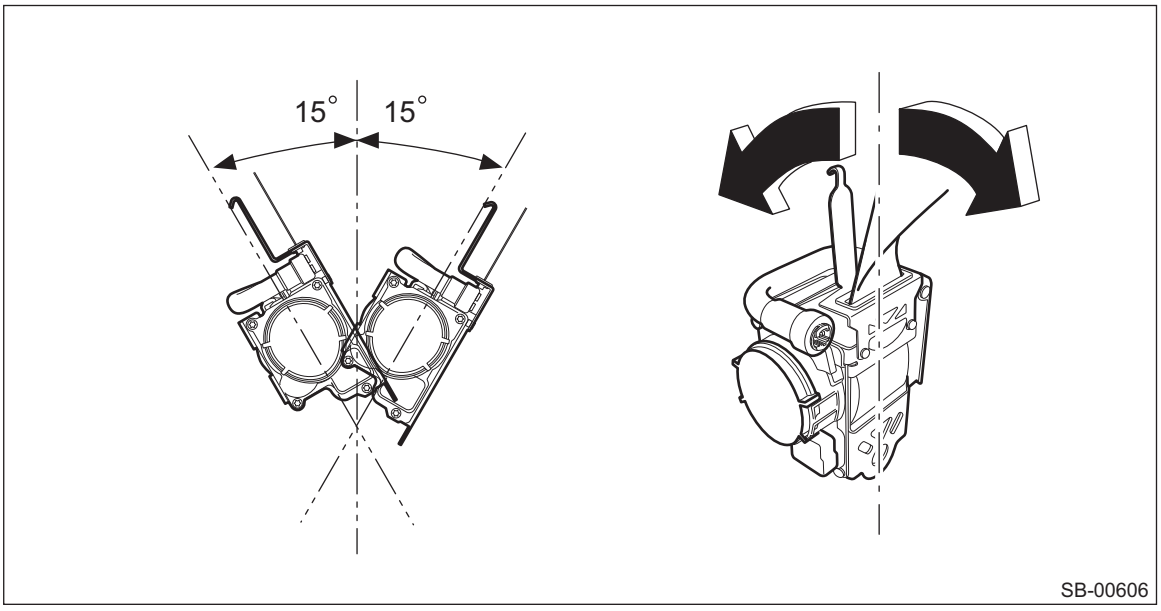
C: INSPECTION

1. VISUAL INSPECTION

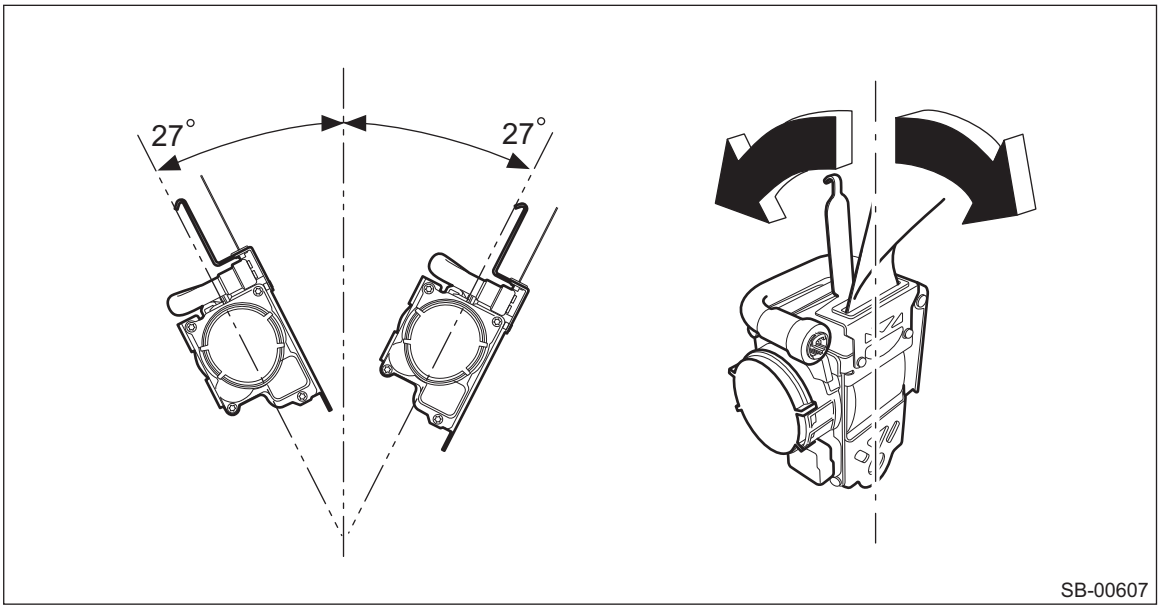
Check for the following, and replace with new parts if necessary.
- Pretensioner is cracked or deformed.
- Adjuster assembly - seat belt is cracked or deformed.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - front is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.
- It does not lock if the inclination angle is 15° or less.



- It remains locked if the inclination angle is 27° or more.



3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - front with a new part.

3. SEAT BELT SWITCH INSPECTION

Preparation tool:
Circuit tester

- Driver's seat

Measure the resistance between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
2 — 1	Tongue plate inserted	1 MΩ or more	2 — 1	Tongue plate detached	1 Ω or less	

Replace the seat belt inner - front if the inspection result is not within the standard.

- Passenger's seat

Measure the current value between the terminals when the seat belt inner - front is in each of the following operation conditions.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Tongue plate inserted	12 — 18 mA	1 — 2	Tongue plate detached	4 — 7 mA	

Replace the seat belt inner - front if the inspection result is not within the standard.

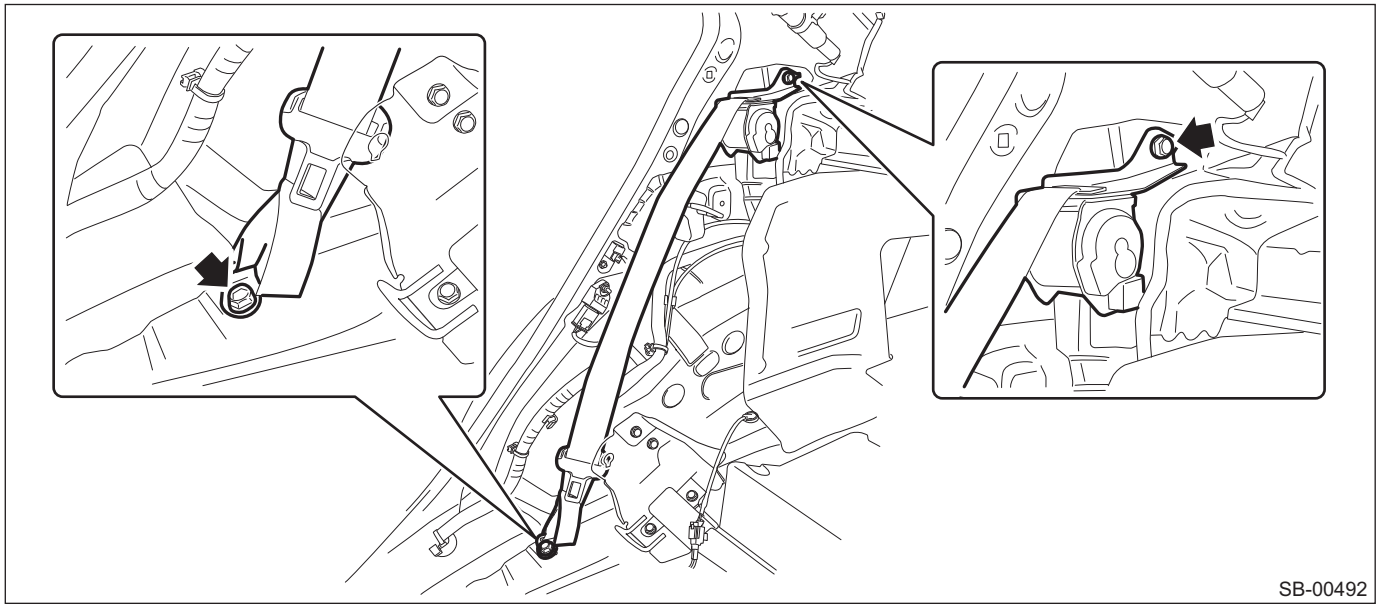
6. Rear Seat Belt

A: REMOVAL

1. SEAT BELT OUTER - REAR RH & LH

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the cover side sill - rear INN and the trim panel - center pillar LWR. (On the side where seat belt assembly is removed) <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
5) Remove the bolts, and remove the seat belt outer - rear.

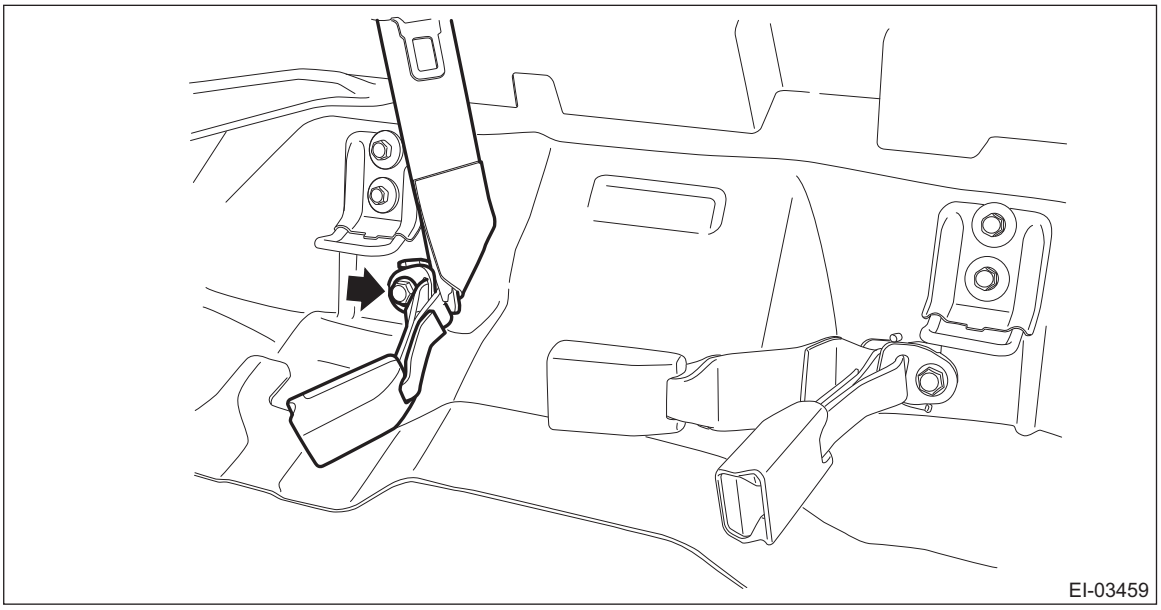


2. SEAT BELT - REAR SHOULDER CTR

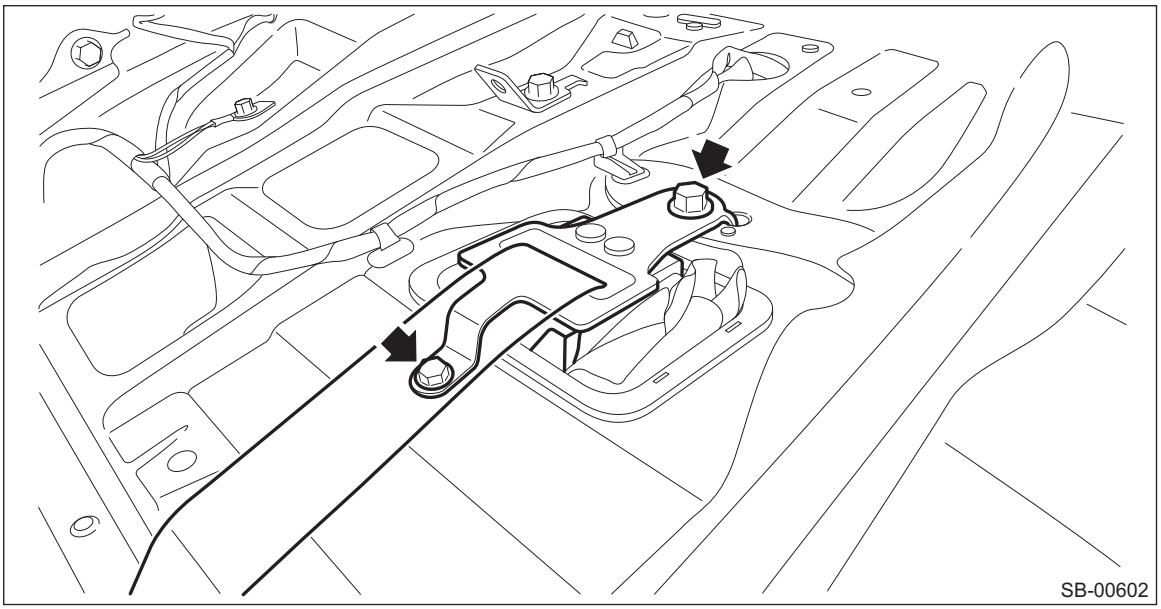
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the side sill cover - rear INN, trim panel - rear pillar UPR, and trim panel - rear pillar LWR on the RH and LH sides. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>

5) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.



6) Remove the high-mounted stop light. <Ref. to LI-70, REMOVAL, High-mounted Stop Light.>
7) Remove the trim panel - rear shelf assembly. <Ref. to EI-94, REMOVAL, Rear Shelf Trim.>
8) Remove the bolts, and remove the seat belt - rear shoulder CTR.

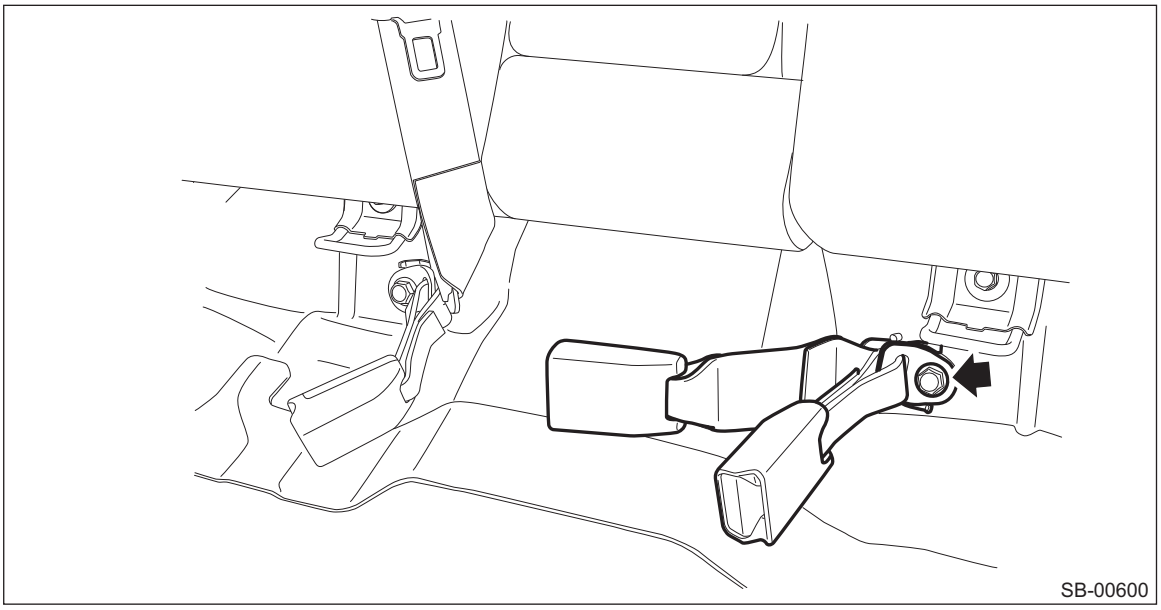


3. SEAT BELT - CTR RH AND LH

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>

4) Remove the bolts, and remove the seat belt - CTR RH and LH.



B: INSTALLATION

1. SEAT BELT OUTER - REAR RH & LH

1) Before installation, perform a unit inspection of retractor. <Ref. to SB-25, INSPECTION, Rear Seat Belt.>
2) Install the seat belt outer - rear.

CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque.: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

3) Install the trim panel - rear pillar LWR, trim panel - rear pillar UPR, and cover side sill - rear INN.
4) Install the rear seat cushion assembly.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

2. SEAT BELT - REAR SHOULDER CTR

1) Install the retractor of seat belt - rear shoulder CTR.

Tightening torque:
Refer to "COMPONENT" of "General Description" for the tightening torque.: <Ref. to SB-3, REAR SEAT BELT, COMPONENT, General Description.>

2) Install the trim panel assembly - rear shelf.
3) Install the high-mounted stop light.
4) Install the lower anchor of seat belt - rear shoulder CTR.

CAUTION:
- **During installation, make sure that the seat belts are not twisted.**
- **After installation, make sure that the seat belts are smoothly extended and wound.**

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

5) Install the trim panel - rear pillar LWR, trim panel - rear pillar UPR, and cover side sill - rear INN.
6) Install the rear seat cushion assembly.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt can be pulled out and retracted smoothly.

3. SEAT BELT - CTR RH AND LH

1) Install the seat belt - CTR RH/LH.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

2) Install the rear seat cushion assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) After installation, check the following points.
- The seat belt is not twisted.
- The seat belt buckle is pulled out properly, and seat belt engagement can be performed smoothly.

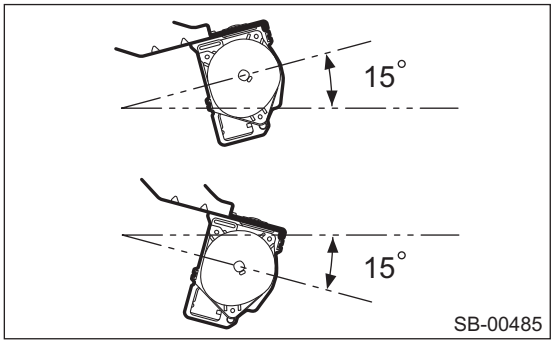
C: INSPECTION

1. VISUAL INSPECTION

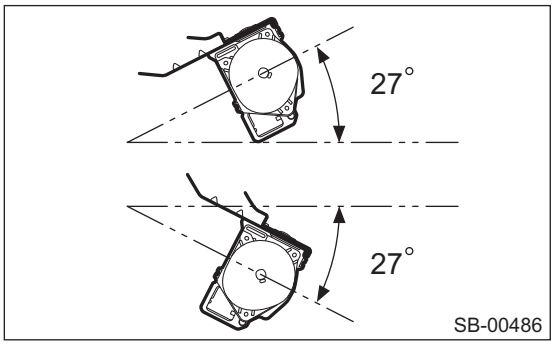
Check for the following, and replace with new parts if necessary.
- Seat belt is slackened, bent or worn.
- Seat belt is abnormally wound or extended.
- Seat belt inner - rear is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

2. ELR LOCK MECHANISM INSPECTION

1) Hold the retractor upright (as installed in the vehicle) and check the ELR lock mechanism.
2) Tilt the retractor from the upright posture and check the following points.
- It does not lock if the inclination angle is 15° or less.



- It remains locked if the inclination angle is 27° or more.



3) If the ELR lock mechanism does not operate properly, replace the seat belt outer - rear with a new part.

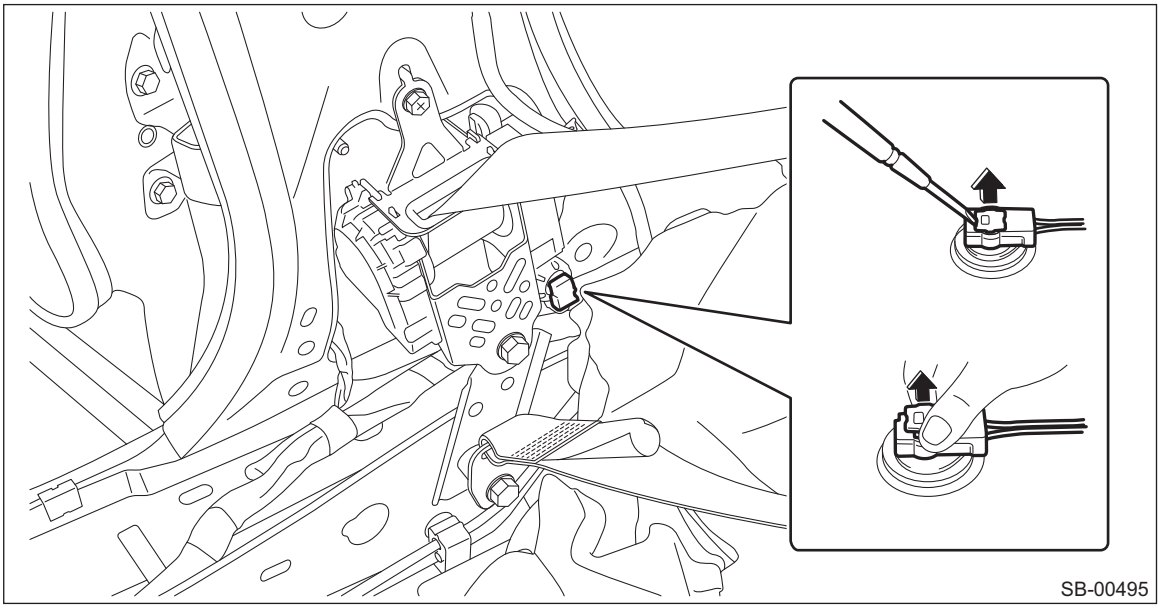
7. Disposal of Pretensioner

A: PROCEDURE

WARNING:
Make sure to follow the instructions below. Otherwise, personal injuries may occur.
• Before discarding a pretensioner, always perform an activation process to prevent any false activation.
• Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
• Do not touch the pretensioner just after activation because it is very hot. Before handling it for disposal, wait for 40 minutes.

CAUTION:
• Perform a pretensioner operation process in a safe, level place. Do not perform the process outdoors when there is a strong rain or wind.
• Do not drop or damage the pretensioner.
• A large explosive noise will occur when the pretensioner is deployed. Warn persons in the area, and do not allow anyone to approach a radius of 5 m (16 ft) from the discard location.
• After activating the pretensioner, smoke may arise. Therefore, always perform an operation process in a well-ventilated place without any smoke sensor.
• Do not expose the activated pretensioner to water.
• Wrap the activated pretensioner in a sealed vinyl bag when discarding.
• If it is impossible to perform a pretensioner activation process due to some situational reasons, consult SUBARU dealership or one of the authorized workshops.
1) Fold the backrest all the way forward, and move the front seat all the way forward.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
4) Disconnect connector (a) of the pretensioner.



SB-00495

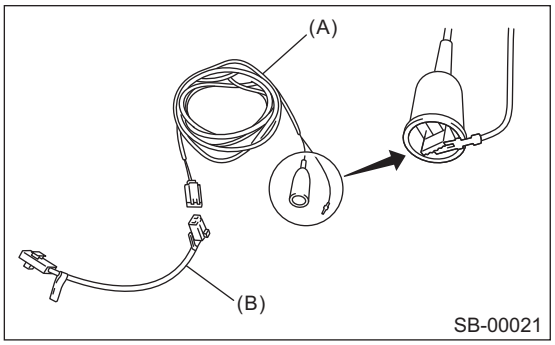
5) Short the alligator clip and terminal of the airbag deployment tool together.

CAUTION:
Short the airbag deployment tool terminals until just before the pretensioner operation process.

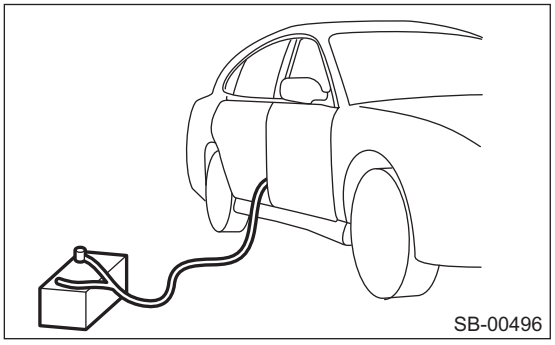
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

6) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

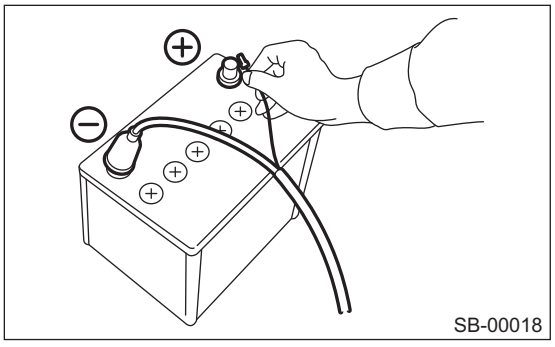


7) Connect the test harness adapter D connector to the pretensioner.
8) Make sure there is no one inside the vehicle.
9) Extend the wiring of the airbag deployment tool to its limit, and completely close all the windows and sunroof.



10) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.
11) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
12) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:
• After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated pretensioner to water.



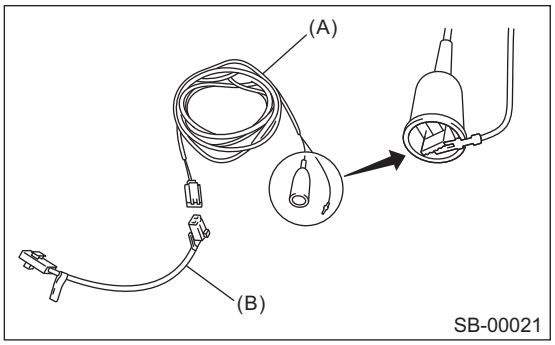
13) Perform operation process of lap seat belt pretensioner from steps 14) to 22) for the passenger's side.
14) Disconnect the connector from the lap seat belt pretensioner.
15) Short the alligator clip and terminal of the airbag deployment tool together.

CAUTION:
Short the airbag deployment tool terminals until just before the pretensioner operation process.

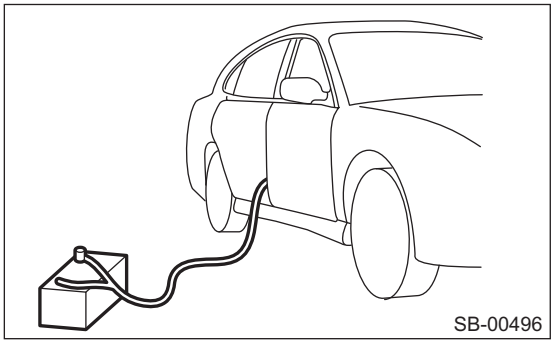
Preparation tool:
ST: AIRBAG DEPLOYMENT TOOL (98299PA030)

16) Connect the airbag deployment tool (A) and test harness adapter D (B).

Preparation tool:
ST: TEST HARNESS ADAPTER D (98299SA010)

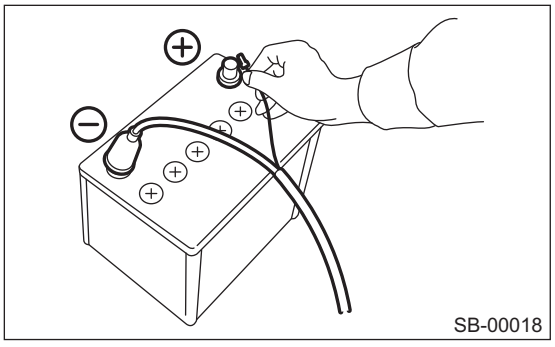


17) Connect the test harness adapter D connector to the lap seat belt pretensioner.
18) Make sure there is no one inside the vehicle.
19) Extend the wiring of airbag deployment tool to the limit, and close all the windows and sunroof completely.



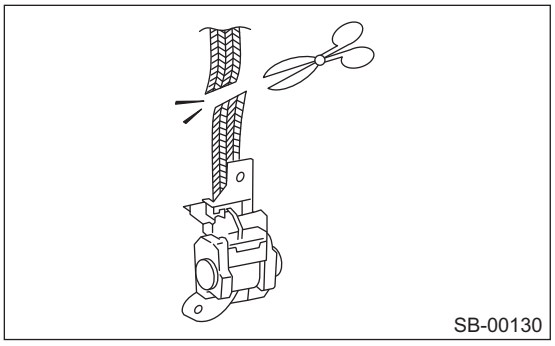
20) Move the battery 5 m (16 ft) or more from the vehicle, and affix nearby.
21) Connect the airbag deployment tool alligator clip to the battery negative (–) terminal.
22) Connect the other cable of airbag deployment tool to the battery positive (+) terminal, and activate the pretensioner.

CAUTION:
• After activation, the pretensioner will be extremely hot. Let it cool down for at least 40 minutes in an area with no one around.
• Do not expose the activated pretensioner to water.

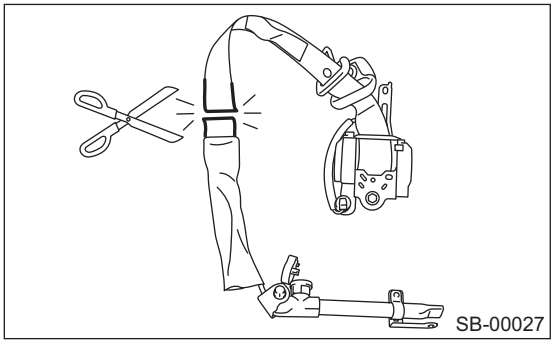


23) Remove the seat belt outer - front. <Ref. to SB-16, REMOVAL, Front Seat Belt.>

24) Cut the seat belt at a position as close as possible to the seat belt retractor.



25) Cut the seat belt at a position as close as possible to the lap seat belt pretensioner.



26) Place the activated pretensioner in a sealed vinyl bag, then discard.

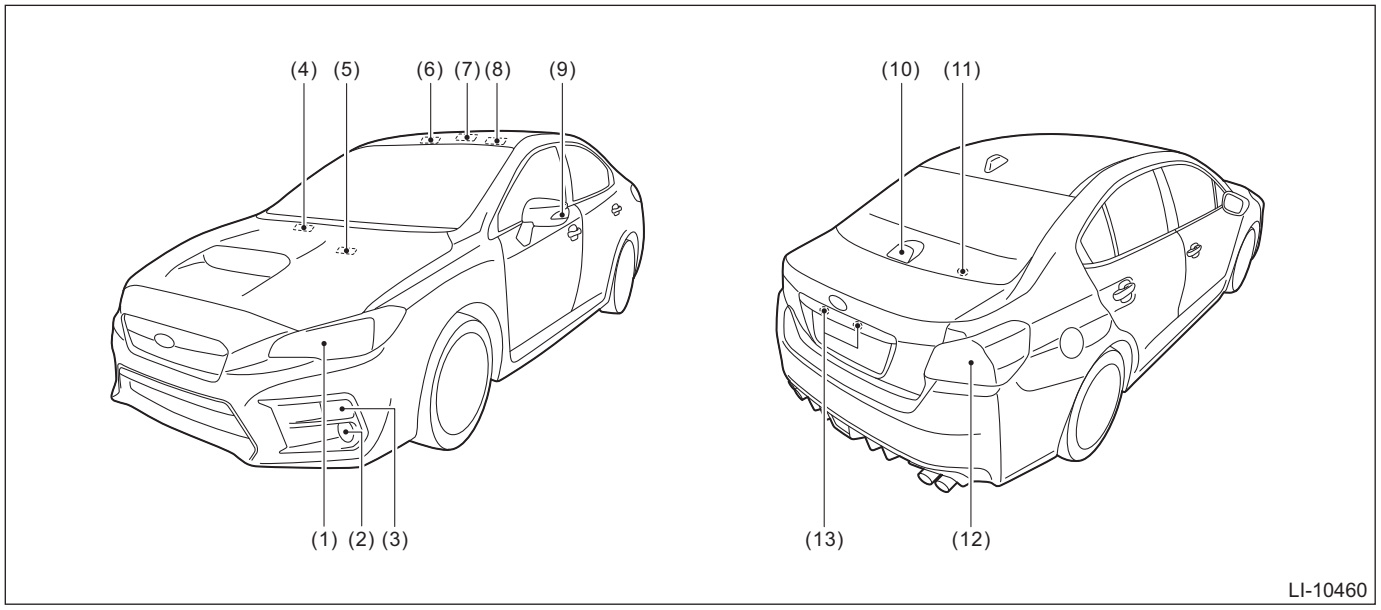
1. General Description

A: SPECIFICATION



No.	Description		Capacity and wattage	Type
(1)	Headlight (halogen type)	Low beam	12 V — 55 W	H11
		High beam	12 V — 60 W	HB3
		Parking light	12 V — 5 W	W5W
		Side marker light	12 V — 5 W	W5W
	Headlight (LED type)	Low beam/high beam	12.5 V — 23/28 W (LED)	*
		Front turn signal light	12 V — 21 W	WY21W
		Daytime running light/parking light	12 V — 13.5/1 W (LED)	*
		Side marker light	12 V — 5 W	W5W
(2)	Front fog light	Except for LED type	12 V — 19 W	H16
		LED type	12 V — 5.4 W (LED)	*
(3)	Front turn signal light (halogen type)		12 V — 21 W	WY21W
(4)	Glove box light		12 V (LED)	*
(5)	Pocket light		12 V (LED)	*
(6)	Spot map light		12 V — 8 W	—
(7)	Room light		12 V — 8 W	—
(8)	Vanity mirror light		12 V — 2 W	—
(9)	Side turn signal light		12 V — 1.1 W (LED)	*
(10)	High-mounted stop light		12 V — 0.7 W (LED)	*
(11)	Trunk room light		12 V — 5 W	W5W
(12)	Rear combination light	Tail & stop light	12 V — 0.3/3.5 W (LED)	*
		Back-up light	12 V — 16 W	W16W
		Turn signal light	12 V — 21 W	WY21W
		Side marker light	12 V — 5 W	W5W
(13)	License plate light		12 V — 5 W	W5W

*: Non-disassembly type

B: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.

- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
- Always replace with a bulb that is the same model and wattage as those of the old one.

C: PREPARATION TOOL

1. SPECIAL TOOL

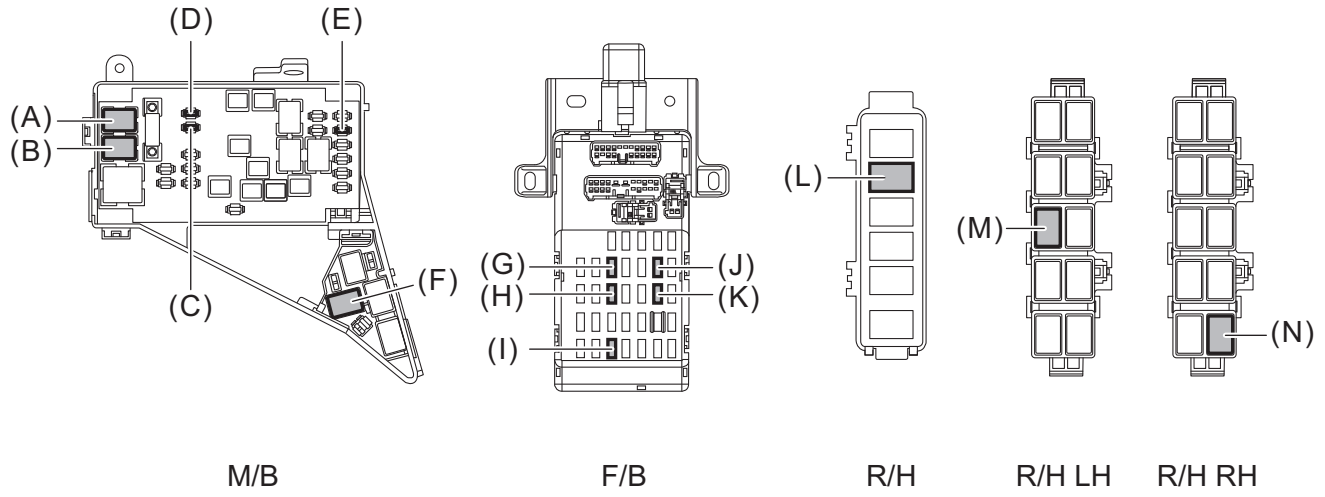
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Relay and Fuse

A: LOCATION



Main fuse box	Headlight relay (HI)	(A)
	Headlight relay (LO)	(B)
	Fuse 30 A (combination light LH/RH)	(C)
	Fuse 15 A (combination light LH/RH, daytime running light relay)	(D)
	Fuse 15 A (tail and illumination relay, daytime running light relay)	(E)
	Daytime running light relay	(F)
Relay & fuse box	Fuse 7.5 A (stop light and brake switch)	(G)
	Fuse 10A (trunk room light)	(H)
	Fuse 15 A (front fog light relay)	(I)
	Fuse 7.5 A (turn signal & hazard unit)	(J)
	Fuse 10A (inhibitor switch, back-up light switch, auto headlight beam leveler CU)	(K)
Relay holder*1	Stop light relay	(L)
Relay holder LH*2	Tail & illumination relay	(M)
Relay holder RH*2	Front fog light relay	(N)

*1: Engine compartment side
*2: Passenger room side

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	LI-01273

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	LI-01274

2) Replace the relay if the inspection result is not within the standard value.

3. Headlight System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram.
- Halogen type: <Ref. to WI-235, HALOGEN MODEL, WIRING DIAGRAM, Headlight System.>
- LED type: <Ref. to WI-238, LED MODEL, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. CHECK HALOGEN HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the headlight and tail light illuminate?	The headlight system is normal.	Go to step **2**.
2	**CHECK BULB.** Check the headlight bulb.	Is the bulb normal?	Go to step **3**.	Replace the headlight bulb.
3	**CHECK CURRENT DATA.** Display the data of «Lighting I Switch Input» and «Lighting II Switch Input» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **6**.	Go to step **4**.
4	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-29, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **5**.	Replace the combination switch (light). <Ref. to LI-28, Combination Switch (Light).>
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Lighting I Lamp Output» and «Lighting II Lamp Output» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Go to step **7**.

	Step	Check	Yes	No
7	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Check the harness between body integrated unit and headlight and between body integrated unit and tail light.	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

2. CHECK LED HEADLIGHT SYSTEM

Trouble symptom:
Headlight does not illuminate, or headlight is weak.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the headlight and tail light illuminate?	The headlight system is normal.	Go to step **2**.
2	**CHECK BULB.** Display the data «LED HEADLAMP(RH) error Signal» and «LED HEADLAMP(LH) error Signal» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is «Light On» displayed?	Go to step **3**.	Replace the headlight assembly. <Ref. to LI-33, Headlight Assembly.>
3	**CHECK CONNECTOR CONNECTION.** Check that the headlight connector is connected.	Is the connector connected?	Go to step **4**.	Connect the connector. When it does not illuminate even though the switch is turned to ON: Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the headlight connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the headlight connector and chassis ground. ***Connector & terminal*** ***LH side*** ***(F125) No. 1 (+) — Chassis ground (–):*** ***(F125) No. 3 (+) — Chassis ground (–):*** ***RH side*** ***(F126) No. 1 (+) — Chassis ground (–):*** ***(F126) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 — 13.5 V?	Go to step **5**.	Go to step **6**.

Step		Check	Yes	No
5	**CHECK HEADLIGHT.** Apply battery voltage between headlight unit connector terminals. ***Terminals*** ***Low beam*** ***No. 3 (+) — No. 4 (–):*** ***High beam*** ***No. 1 (+) — No. 2 (–):***	Does the headlight (low beam and high beam) come on at normal brightness?	Go to step **6**.	Replace the headlight assembly. <Ref. to LI-33, Headlight Assembly.> If «LED HEADLAMP(RH) error Signal» and «LED HEADLAMP(LH) error Signal» indicate no illumination in step 2), check the malfunction signal line. If short circuit to power supply occurs, repair or replace the harness.
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Lighting I Lamp Output» and «Lighting II Lamp Output» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the switch 1 (TAIL/PARKING) and switch 2 (HEAD) positions?	Go to step **9**.	Go to step **7**.
7	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-29, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **8**.	Replace the combination switch (light). <Ref. to LI-28, Combination Switch (Light).>
8	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.
9	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and the headlight and tail light connectors. 3) Check the harness between body integrated unit and headlight and between body integrated unit and tail light.	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

3. AUTO HEADLIGHT SYSTEM CHECK

NOTE:
Check the respective headlight systems before checking the auto headlight system.

• Halogen headlight: <Ref. to LI-6, CHECK HALOGEN HEADLIGHT SYSTEM, INSPECTION, Headlight System.>
• LED headlight: <Ref. to LI-7, CHECK LED HEADLIGHT SYSTEM, INSPECTION, Headlight System.>

	Step	Check	Yes	No
1	**CHECK HEADLIGHT AND TAIL LIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Make the light control sensor vicinity dark. 3) Set the lighting switch to AUTO position. 4) Make the light control sensor vicinity bright. 5) Turn the lighting switch to the OFF position and turn to the AUTO position again.	Do the parking light, headlight and tail light illuminate?	The auto headlight system is normal.	Go to step **2**.
2	**CHECK CURRENT DATA.** 1) Using the Subaru Select Monitor, display the data of «Illumination Sensor Output». 2) Measure the voltage when the area around the light control sensor, which was dark, becomes bright. NOTE: For detailed operation procedures, refer to “Application help”. ***Illumination sensor output*** ***Dark condition: Approx. 0.6 V or less*** ***Bright condition: Approx. 3 V or more***	Is the voltage output according to the brightness?	Go to step **5**.	Go to step **3**.
3	**CHECK LIGHT CONTROL SENSOR.** Check the light control sensor. <Ref. to LI-31, INSPECTION, Light Control Sensor.>	Is the light control sensor normal?	Go to step **4**.	Replace the light control sensor.
4	**CHECK HARNESS.** 1) Disconnect the connectors from body integrated unit and light control sensor. 2) Check the harness between body integrated unit and light control sensor. ***Connector & terminal*** ***(B280) No. 19 — (i89) No. 2:*** ***(B280) No. 29 — (i89) No. 1:*** ***(B281) No. 1 — (i89) No. 3:***	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.
5	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the data of «Lighting AUTO input».	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Go to step **6**.
6	**CHECK COMBINATION SWITCH (LIGHT).** 1) Turn the ignition switch to OFF. 2) Check the combination switch (light). <Ref. to LI-29, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal?	Go to step **7**.	Replace the combination switch (light). <Ref. to LI-28, Combination Switch (Light).>

Step		Check	Yes	No
7	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and combination switch (light). 2) Check the harness between body integrated unit and combination switch (light).	Is harness normal?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:
Welcome lighting does not illuminate.

Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is it turned to the setting other than «OFF»?	Go to step **2**.	Turn to the setting other than «OFF».
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Illumination Sensor Setting» using Subaru Select Monitor.	Is the setting «ON»?	Go to step **3**.	Turn the setting to «ON».
3	**CHECK AUTO HEADLIGHT.** 1) Set the lighting switch to AUTO position. 2) Make the light control sensor vicinity dark. 3) Turn the ignition switch to ON.	Do the parking light, tail and headlight illuminate?	Go to step **4**.	Check the auto headlight system. <Ref. to LI-8, AUTO HEADLIGHT SYSTEM CHECK, INSPECTION, Headlight System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Go to step **5**.	• Check keyless entry system. <Ref. to SL-16, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
5	**CHECK BODY INTEGRATED UNIT.** 1) Display the data of «IGN voltage» using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is the voltage 10 — 15 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

5. CHECK OF WELCOME LIGHTING SYSTEM

Trouble symptom:

Welcome lighting does not go off.

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Welcome Light Off Delay Time(Approaching)» or «Welcome Light Off Delay Time(Exiting)» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the illumination time setting correct?	Go to step **2**.	Set the illumination time.
2	**CHECK THE LIGHTS.** Set the lighting switch to the switch 1 (TAIL/PARKING) and switch 2 (HEAD).	Do the parking light, tail light and headlight illuminate?	Go to step **3**.	Check the combination switch (light) and each light circuit.
3	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Driver's door SW input».	Does the display switch between «OFF» ←→ «ON» when driver's door is opened/closed?	Go to step **4**.	Check the door switch. <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
4	**CHECK DOOR LOCK.** Operate the door lock using the keyless transmitter or the access key.	Do the lock and unlock operate properly?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	• Check keyless entry system. <Ref. to SL-16, INSPECTION, Keyless Entry System.> • Check the keyless access with push button start system. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

6. CHECK WIPER INTERLOCK HEADLIGHT SYSTEM

Trouble symptom:

The headlights do not go off when the wiper is deactivated, or the headlights do not turn on when the wiper is activated.

	Step	Check	Yes	No
1	**CHECK HEADLIGHT SYSTEM.** Check the operation of the headlight system.	Is the headlight system normal?	Go to step **2**.	Check and repair the headlight system. • Halogen headlight: <Ref. to LI-6, CHECK HALOGEN HEADLIGHT SYSTEM, INSPECTION, Headlight System.> • LED headlight: <Ref. to LI-7, CHECK LED HEADLIGHT SYSTEM, INSPECTION, Headlight System.>

	Step	Check	Yes	No
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Illumination Sensor Setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is the setting «ON»?	Go to step **3**.	Turn the setting to «ON».
3	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Wiper link Auto Light Setup» using Subaru Select Monitor.	Is the setting «ON»?	Go to step **4**.	Turn the setting to «ON».
4	**CHECK BODY INTEGRATED UNIT.** 1) Display the data of «IGN voltage» using Subaru Select Monitor. 2) Turn the ignition switch to ON.	Is the voltage 10 — 15 V?	Go to step **7**.	Go to step **5**.
5	**CHECK HARNESS.** Measure the voltage between F/B fuse No. 12 and chassis ground.	Is the voltage 10 V or more?	Repair or replace the harness between the body integrated unit and the ignition switch.	Go to step **6**.
6	**CHECK CONNECTOR.** Check the connector or terminal of the body integrated unit for poor contact.	Is there any fault?	Repair or replace the connector and harness.	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Lighting AUTO input».	Does the display switch between «OFF» ←→ «ON» when the lighting switch is moved from OFF position to the AUTO position?	Go to step **12**.	Go to step **8**.
8	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B281) No. 16 (+) — Chassis ground (–):***	Does the voltage switch between OFF (9 to 16 V) ←→ ON (less than 1 V) when the lighting switch is moved from OFF position to the AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Go to step **9**.
9	**CHECK HARNESS.** 1) Disconnect the connectors of the combination switch (light) and the body integrated unit. 2) Check the harness between the combination switch (light) and the body integrated unit. ***Connector & terminal*** ***(B71) No. 19 — (B281) No. 16:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair or replace the harness between the combination switch (light) and the body integrated unit.

	Step	Check	Yes	No
10	**CHECK HARNESS.** Check the harness between the combination switch (light) and chassis ground. ***Connector & terminal*** ***(B71) No. 12 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **11**.	Repair or replace the harness between the combination switch (light) and chassis ground.
11	**CHECK COMBINATION SWITCH (LIGHT).** Check the combination switch (light). <Ref. to LI-29, INSPECTION, Combination Switch (Light).>	Is the combination switch (light) normal when the combination switch (light) is moved to AUTO position?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Replace the combination switch (light).
12	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Fr wiper input».	Does the display switch between «OFF» ←→ «ON» when the combination switch (wiper) is operated from OFF position to INT/LO/HI?	Go to step **17**.	Go to step **13**.
13	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 2 (+) — Chassis ground (–):***	Does the voltage switch between OFF (less than 1 V) ←→ ON (9 to 16 V) when the combination switch (wiper) is operated to INT/LO/HI?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Go to step **14**.
14	**CHECK HARNESS.** 1) Disconnect the connectors of the front wiper motor and the body integrated unit. 2) Check the harness between the front wiper motor and the body integrated unit. ***Connector & terminal*** ***(B8) No. 1 — (B280) No. 2:***	Is the resistance less than 10 Ω?	Go to step **15**.	Repair or replace the harness between the front wiper motor and the body integrated unit.
15	**CHECK HARNESS.** Check the harness between the front wiper motor and chassis ground. ***Connector & terminal*** ***(B8) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **16**.	Repair or replace the harness between the he front wiper motor and chassis ground.
16	**CHECK FRONT WIPER MOTOR.** Check the continuity between front wiper motor terminals. ***Connector & terminal*** ***(B8) No. 3 — (B8) No. 5:***	Is there continuity?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Replace the front wiper motor. <Ref. to WW-26, Front Wiper Motor and Link.>

	Step	Check	Yes	No
17	**CHECK BODY INTEGRATED UNIT.** Using the Subaru Select Monitor, display the data of «Front washer switch input».	Does the display switch between «OFF» ←→ «ON» when the front washer switch on the combination switch (wiper) is operated from OFF position?	Check the connection status of the harness and connector that may have a temporary poor contact.	Go to step **18**.
18	**CHECK BODY INTEGRATED UNIT.** Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B281) No. 32 (+) — Chassis ground (–):***	Does the voltage switch between OFF (9 to 16 V) ←→ ON (less than 1 V) when the front washer switch on the combination switch (wiper) is operated?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Go to step **19**.
19	**CHECK HARNESS.** 1) Disconnect the connectors of the combination switch (wiper) and the body integrated unit. 2) Check the harness between the combination switch (wiper) and the body integrated unit. ***Connector & terminal*** ***(B558) No. 3 — (B281) No. 32:***	Is the resistance less than 10 Ω?	Go to step **20**.	Repair or replace the harness between the combination switch (wiper) and the body integrated unit.
20	**CHECK HARNESS.** Check the harness between the combination switch (wiper) and chassis ground. ***Connector & terminal*** ***(B558) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **21**.	Repair or replace the harness between the combination switch (wiper) and chassis ground.
21	**CHECK COMBINATION SWITCH (WIPER).** Check the continuity between terminals when the front washer switch on the combination switch (wiper) is pressed. ***Connector & terminal*** ***(B558) No. 3 — (B558) No. 2:***	Is there continuity?	Check the body integrated unit and replace it if defective. • Inspection: <Ref. to BC(diag)-2, Basic Diagnostic Procedure.> • Replacement: <Ref. to SL-80, Body Integrated Unit.>	Replace the combination switch (wiper). <Ref. to WW-10, Combination Switch (Wiper).>

7. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-29, INSPECTION, Combination Switch (Light).>

8. CHECK DIMMER & PASSING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-29, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the headlight system, refer to the respective section.
- Headlight assembly: <Ref. to LI-33, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-41, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-31, Light Control Sensor.>

4. High Beam Assist System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram.

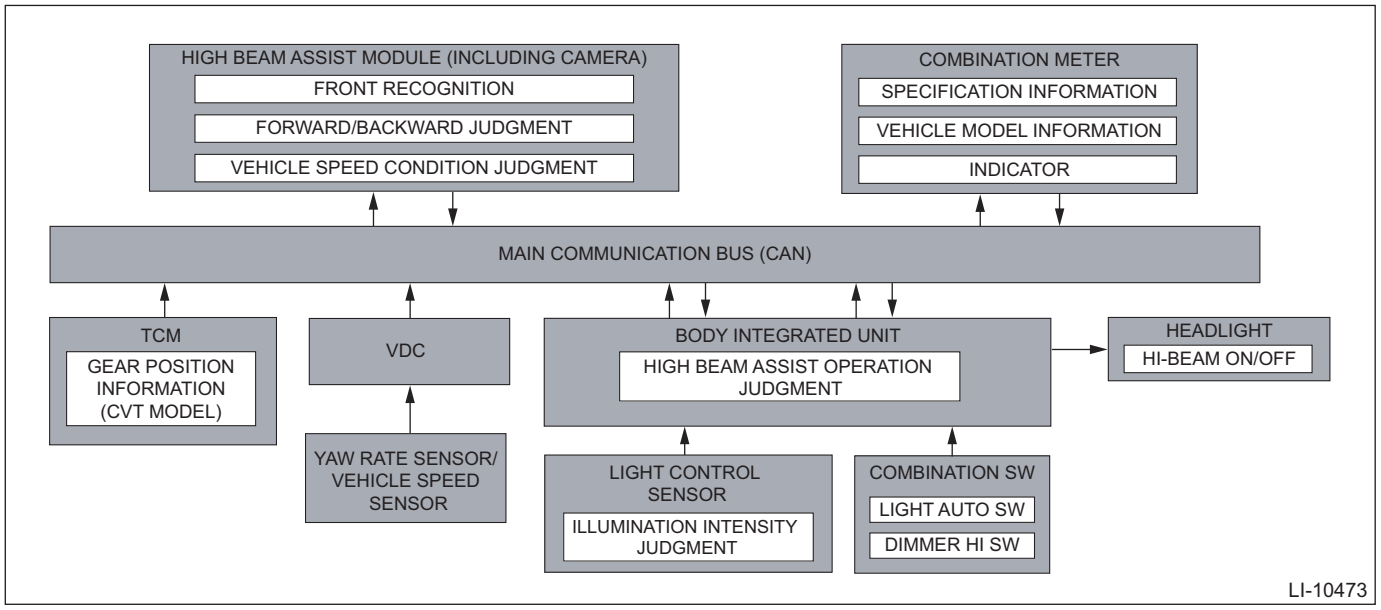
- Halogen type: <Ref. to WI-235, HALOGEN MODEL, WIRING DIAGRAM, Headlight System.>
- LED type: <Ref. to WI-238, LED MODEL, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. BASIC INSPECTION

For inspection, refer to “Diagnostics with Phenomenon” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-59, Diagnostics with Phenomenon.>

2. SYSTEM BLOCK DIAGRAM



NOTE:
In high beam assist system, the headlight is automatically switched between high beam and low beam in the way that the stereo camera of EyeSight system recognizes the conditions ahead of the vehicle.

C: NOTE

For operation procedures of each component of the headlight system, refer to the respective section.

- Headlight assembly: <Ref. to LI-33, Headlight Assembly.>
- Headlight bulb: <Ref. to LI-41, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Light control sensor: <Ref. to LI-31, Light Control Sensor.>
- Body integrated unit: <Ref. to SL-80, Body Integrated Unit.>
- Stereo camera: <Ref. to ES-7, Stereo Camera.>

5. Day Time Running Light System

A: WIRING DIAGRAM

Refer to “Headlight System” in the wiring diagram.

- Halogen type: <Ref. to WI-235, HALOGEN MODEL, WIRING DIAGRAM, Headlight System.>
- LED type: <Ref. to WI-238, LED MODEL, WIRING DIAGRAM, Headlight System.>

B: INSPECTION

1. DAYTIME RUNNING LIGHT MODULE CHECK (HALOGEN HEADLIGHT MODEL)

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuses of the daytime running light relay and headlight HI.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK RELAY.** Check the headlight HI relay in the main fuse box. <Ref. to LI-4, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step **3**.	Replace the relay.
3	**CHECK HEADLIGHT ILLUMINATION.** 1) Turn the ignition switch to ON. 2) Turn the lighting switch from OFF position to the switch II (HEAD) position. 3) Turn the dimmer & passing switch to the switch UP position.	Does the headlight (high beam) illuminate?	Go to step **4**.	Check the combination switch (light) and headlight bulb.
4	**CHECK BODY INTEGRATED UNIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> NOTE: For detailed operation procedures, refer to “Application help”.	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **5**.
5	**CHECK BODY INTEGRATED UNIT.** Display the data of «Daytime Running Light(DRL) Setting for North America» using Subaru Select Monitor.	Is the setting «High Beam Dimming System»?	Go to step **6**.	Set the setting to «High Beam Dimming System».
6	**CHECK CURRENT DATA.** Display the following items using Subaru Select Monitor. • «Parking Brake Switch Input» • «EPB Operating status» (model with EPB) • «Shift position» • «Lighting II Switch Input»	Is the input signal normal?	Go to step **7**.	Check the defective part.
7	**CHECK CURRENT DATA.** 1) Start the engine. 2) Release the parking brake and place the shift position to other than P range. 3) Display the data of «DRL Cancel Output» using Subaru Select Monitor.	Does the display of «DRL Cancel Output» switch «OFF» ←→ «ON» when switching the lighting switch from OFF position to II (HEAD) position?	Go to step **8**.	Replace the body integrated unit.
8	**CHECK DAYTIME RUNNING LIGHT RESISTOR.** 1) Turn the ignition switch to OFF. 2) Check the daytime running light resistor. <Ref. to LI-91, INSPECTION, Day Time Running Resistor.>	Does the daytime running light resistor normal?	Go to step **9**.	Replace the daytime running light resistor. <Ref. to LI-90, Day Time Running Resistor.>

	Step	Check	Yes	No
9	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit, daytime running light relay, daytime running light resistor, and headlight. 2) Check each harness.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

2. DAYTIME RUNNING LIGHT MODULE CHECK (LED HEADLIGHT MODEL)

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse upstream of the daytime running light relay.	Is the fuse OK?	Go to step **2**.	Replace the fuse.
2	**CHECK RELAY.** Check the daytime running light relay. <Ref. to LI-4, INSPECTION, Relay and Fuse.>	Is the relay OK?	Go to step **3**.	Replace the relay.
3	**CHECK BODY INTEGRATED UNIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> NOTE: For detailed operation procedures, refer to "Application help".	Is DTC displayed?	Perform the diagnosis according to DTC. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK BODY INTEGRATED UNIT.** Display the data of «Daytime Running Light(DRL) Setting for North America» using Subaru Select Monitor.	Is the setting «Alternate DRL System»?	Go to step **5**.	Set the setting to «Alternate DRL System».
5	**CHECK CURRENT DATA.** Display the following items using Subaru Select Monitor. • «Parking Brake Switch Input» • «EPB Operating status» (model with EPB) • «Shift position» • «Lighting II Switch Input»	Is the input signal normal?	Go to step **6**.	Check the defective part.
6	**CHECK CURRENT DATA.** 1) Start the engine. 2) Release the parking brake and place the shift position to other than P range. 3) Display the data of «Daytime Running Light(Alternate System) Output» using Subaru Select Monitor.	Does the display of «Daytime Running Light(Alternate System) Output» switch «OFF» ⟷ «ON» when switching the lighting switch from OFF position to II (HEAD) position?	Go to step **7**.	Replace the body integrated unit.
7	**CHECK DAYTIME RUNNING LIGHT ILLUMINATION.** 1) Disconnect the headlight connector (gray). 2) Apply battery voltage on the headlight unit DRL terminal input. ***Terminals*** ***No. 7 (+) — No. 9 (–):***	Does the daytime running light illuminate?	Go to step **8**.	Replace the headlight. <Ref. to LI-33, Headlight Assembly.>
8	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit, daytime running light relay and headlight. 2) Check each harness.	Is harness normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the daytime running light system, refer to the respective section.

- Headlight assembly: <Ref. to LI-33, Headlight Assembly.>

- Headlight bulb: <Ref. to LI-41, Headlight Bulb.>
- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Daytime running resistor: <Ref. to LI-90, Day Time Running Resistor.>

6. Clearance Light and Illumination Light System

A: WIRING DIAGRAM

Refer to “Clearance Light and Illumination Light System” in the wiring diagram.
- ENGINE TYPE FA: <Ref. to WI-113, ENGINE TYPE FA, WIRING DIAGRAM, Clearance Light and Illumination Light System.>
- ENGINE TYPE EJ: <Ref. to WI-118, ENGINE TYPE EJ, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. CHECK LIGHTING SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-29, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the clearance light & illumination light system, refer to the respective sections.
- Headlight assembly: <Ref. to LI-33, Headlight Assembly.>
- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Parking light bulb: <Ref. to LI-51, Clearance/Parking Light Bulb.>
- Front side marker light bulb: <Ref. to LI-52, Front Side Marker Light Bulb.>
- Rear combination light assembly: <Ref. to LI-61, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-64, Tail/Stop Light Bulb.>
- Rear side marker light bulb: <Ref. to LI-66, Rear Side Marker Light Bulb.>
- License plate light: <Ref. to LI-68, License Plate Light.>
- LED illumination light: <Ref. to LI-80, LED Illumination Light.>
- Ignition switch illumination: <Ref. to LI-83, Ignition Switch Illumination.>

7. Front Fog Light System

A: WIRING DIAGRAM

Refer to “Front Fog Light System” in the wiring diagram. <Ref. to WI-223, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. CHECK FRONT FOG LIGHT SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-29, INSPECTION, Combination Switch (Light).>

C: NOTE

For operation procedures of each component of the front fog light system, refer to the respective section.

- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Front fog light assembly: <Ref. to LI-53, Front Fog Light Assembly.>
- Front fog light bulb: <Ref. to LI-58, Front Fog Light Bulb.>

8. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

Refer to “Turn Signal Light and Hazard Light System” in the wiring diagram. <Ref. to WI-361, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. CHECK TURN SIGNAL SWITCH

Refer to “Combination Switch (Light)”. <Ref. to LI-29, INSPECTION, Combination Switch (Light).>

2. CHECK HAZARD SWITCH

Refer to “Hazard Switch”. <Ref. to LI-43, INSPECTION, Hazard Switch.>

3. CHECK TURN SIGNAL & HAZARD UNIT

Refer to “Turn Signal Light & Hazard Light Unit”. <Ref. to LI-45, INSPECTION, Turn Signal Light & Hazard Light Unit.>

4. CHECK OF LANE CHANGE SIGNAL

Trouble symptom:
Lane change signal function does not operate.

	Step	Check	Yes	No
1	**CHECK CUSTOMIZATION.** Display the data of «Lane change signal setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting «ON»?	Go to step **2**.	Change the setting to «ON».
2	**CHECK CURRENT DATA.** 1) Turn the ignition switch to ON. 2) Display the data of «Left turn signal input» and «Right turn signal input» using Subaru Select Monitor.	Does the display switch between «OFF» ←→ «ON» when the combination switch is operated from OFF position?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Go to step **3**.
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors of the body integrated unit and turn signal & hazard unit. 3) Check the harness between body integrated unit and turn signal & hazard unit. ***Connector & terminal*** ***(i171) No. 18 — (B32) No. 8:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK HARNESS.** Measure the resistance between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i171) No. 18 — Chassis ground:*** NOTE: Check with the combination switch in the OFF position.	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the harness.
5	**CHECK HARNESS.** 1) Disconnect the connector of the combination switch. 2) Measure the resistance between the combination switch connector and chassis ground. ***Connector & terminal*** ***(B71) No. 12 — Chassis ground:***	Is the resistance less than 1 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

C: NOTE

For operation procedures of each component of the turn signal and hazard light system, refer to the respective sections.

- Combination switch (light): <Ref. to LI-28, Combination Switch (Light).>
- Front turn signal light assembly: <Ref. to LI-47, Front Turn Signal Light Assembly.>
- Front turn signal light bulb: <Ref. to LI-50, Front Turn Signal Light Bulb.>
- Side turn signal light assembly: <Ref. to LI-60, Side Turn Signal Light Assembly.>
- Rear combination light assembly: <Ref. to LI-61, Rear Combination Light Assembly.>
- Rear turn signal light bulb: <Ref. to LI-65, Rear Turn Signal Light Bulb.>
- Hazard switch: <Ref. to LI-43, Hazard Switch.>
- Turn signal & hazard unit: <Ref. to LI-45, Turn Signal Light & Hazard Light Unit.>

9. Back-up Light System

A: WIRING DIAGRAM

Refer to “Back-up Light System” in the wiring diagram.

- ENGINE TYPE FA: <Ref. to WI-102, ENGINE TYPE FA, WIRING DIAGRAM, Back-up Light System.>
- ENGINE TYPE EJ: <Ref. to WI-104, ENGINE TYPE EJ, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. CHECK BACK-UP LIGHT SWITCH (MT MODEL)

Refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section.

- Except for STI model: <Ref. to 6MT(TY75)-48, BACK-UP LIGHT SWITCH, INSPECTION, Switches and Harness.>
- STI model: <Ref. to 6MT(TY85)-41, INSPECTION, Back-up Light Switch.>

2. CHECK INHIBITOR SWITCH (CVT MODEL)

Refer to “Inhibitor Switch” in “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR690)-93, INSPECTION, Inhibitor Switch.>

C: NOTE

For operation procedures of each component of the back-up light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-61, Rear Combination Light Assembly.>
- Back-up light bulb: <Ref. to LI-67, Back-up Light Bulb.>

10.Stop Light System

A: WIRING DIAGRAM

Refer to “Stop Light System” in the wiring diagram.

- ENGINE TYPE FA
  – Model without EyeSight: <Ref. to WI-346, ENGINE TYPE FA (WITHOUT EyeSight), WIRING DIAGRAM, Stop Light System.>
  – Model with EyeSight: <Ref. to WI-347, ENGINE TYPE FA (WITH EyeSight), WIRING DIAGRAM, Stop Light System.>
- ENGINE TYPE EJ: <Ref. to WI-349, ENGINE TYPE EJ, WIRING DIAGRAM, Stop Light System.>

B: INSPECTION

1. CHECK STOP LIGHT SWITCH

Refer to “Stop Light Switch” in “BRAKE” section. <Ref. to BR-118, INSPECTION, Stop Light Switch.>

C: NOTE

For operation procedures of each component of the stop light system, refer to the respective section.

- Rear combination light assembly: <Ref. to LI-61, Rear Combination Light Assembly.>
- Tail light/stop light bulb: <Ref. to LI-64, Tail/Stop Light Bulb.>
- High-mounted stop light: <Ref. to LI-70, High-mounted Stop Light.>

11.Interior Light System

A: WIRING DIAGRAM

Refer to “Interior Light System” in the wiring diagram. <Ref. to WI-250, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. CHECK DOOR SWITCH

Refer to “Door Switch”. <Ref. to LI-92, INSPECTION, Door Switch.>

2. CHECK TRUNK LID LATCH SWITCH

Refer to “Trunk Lid Latch and Actuator Assembly” in “SECURITY AND LOCKS” section. <Ref. to SL-49, ACTUATOR, INSPECTION, Trunk Lid Latch and Actuator Assembly.>

C: NOTE

For operation procedures of each component of the interior light system, refer to the respective section.

- Spot map light: <Ref. to LI-72, Spot Map Light.>
- Room light: <Ref. to LI-76, Room Light.>
- Trunk room light: <Ref. to LI-78, Trunk Room Light.>
- LED illumination light: <Ref. to LI-80, LED Illumination Light.>
- Door switch: <Ref. to LI-92, Door Switch.>

12.Auto Headlight Beam Leveler System

A: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM

Refer to “Control Module I/O Signal” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

Refer to “Basic Diagnostic Procedure” of “AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)” section. <Ref. to AL(diag)-2, Basic Diagnostic Procedure.>

D: PROCEDURE

When parts related to the auto headlight beam leveler system are removed or replaced, perform the following procedures to initialize or reinitialize.

NOTE:
Before performing initialization or reinitialization, check the following:
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle’s fuel tank is fully filled.
- Refer to the following chart to determine whether to initialize or reinitialize.

Initialization	When the auto headlight beam leveler CM was replaced with a new module.
Reinitialization	• When the auto headlight beam leveler CM was replaced with a part from another vehicle. • When suspension parts have been removed or replaced. (Crossmember, front arm, sub frame, lateral link, housing, strut etc.) • When the vehicle height sensor has been replaced or removed.

CAUTION:
If the indicator does not flash three times or the headlight beam does not operate, it can be assumed that there is an open circuit or faulty wiring in the harness of the auto headlight beam leveler CM, vehicle height sensors or headlight assembly. Perform inspection and repair according to the inspection results, then perform initialization/reinitialization again.
- **Initialization: <Ref. to LI-26, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**
- **Reinitialization: <Ref. to LI-26, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>**

1. INITIALIZATION

1) Check that the indicator in the meter is flashing twice repeatedly with the ignition switch ON.
2) Turn the ignition switch to OFF.
3) Bounce the vehicle several times to normalize the suspension.
4) Make certain that someone is seated in the driver’s seat.
5) Turn the ignition switch to ON, and, within 1.5 to 20 seconds, turn the headlight switch OFF → ON three times.
6) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that initialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
7) Perform beam adjustment for the headlight. <Ref. to LI-38, ADJUSTMENT, Headlight Assembly.>

2. REINITIALIZATION

1) Bounce the vehicle several times to normalize the suspension.
2) Make certain that someone is seated in the driver’s seat.

3) Turn the ignition switch to ON, and, within 1.5 to 10 seconds, turn the headlight switch OFF → ON five or more successive times.
4) Check that the headlight beam drops once, then returns to normal.
5) After confirming 4), turn the ignition switch to OFF (ACC OFF) within 30 seconds.
6) Turn the ignition switch to ON again, and, within 1.5 to 10 seconds, turn the headlight switch OFF → ON five or more successive times.
7) Make sure that the indicator in the meter flashes three times and then turns OFF, indicating that reinitialization has been successfully completed. (At this time, the headlight beam drops once, and then returns to the original position.)
8) Perform beam adjustment for the headlight. <Ref. to LI-38, ADJUSTMENT, Headlight Assembly.>

E: NOTE

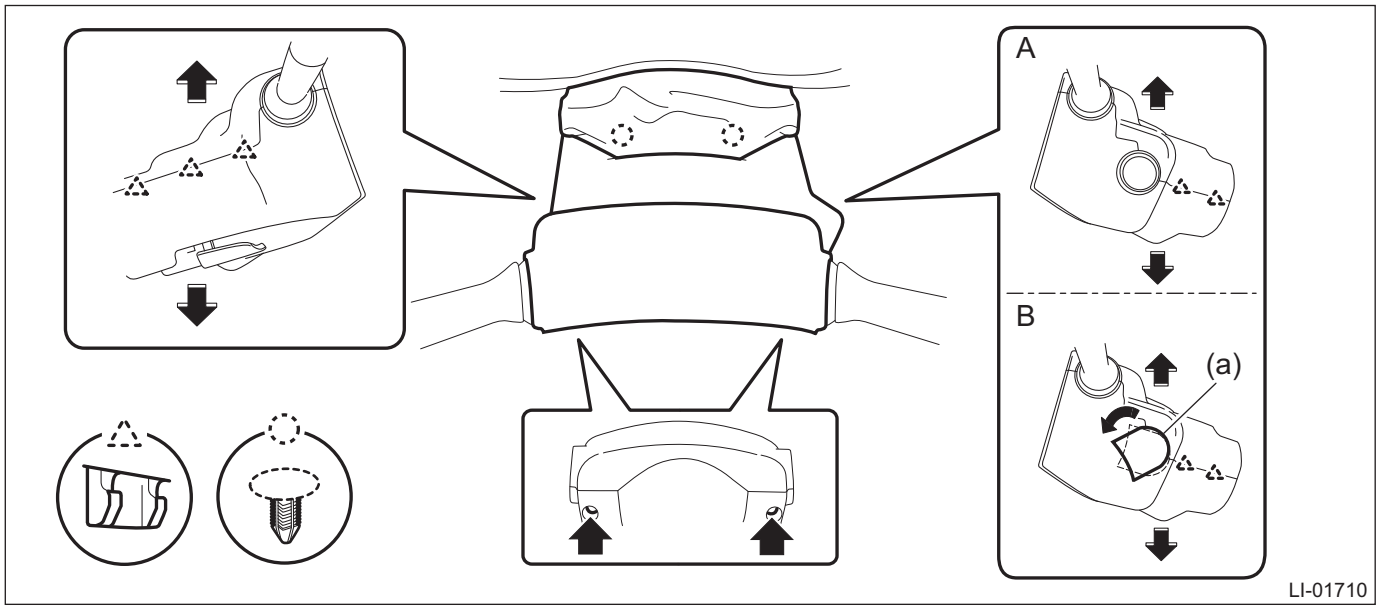
For operation procedures of each component of the auto headlight beam leveler system, refer to the respective section.
- Auto headlight beam leveler CM: <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>
- Vehicle height sensor: <Ref. to LI-88, Rear Height Sensor.>

13.Combination Switch (Light)

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

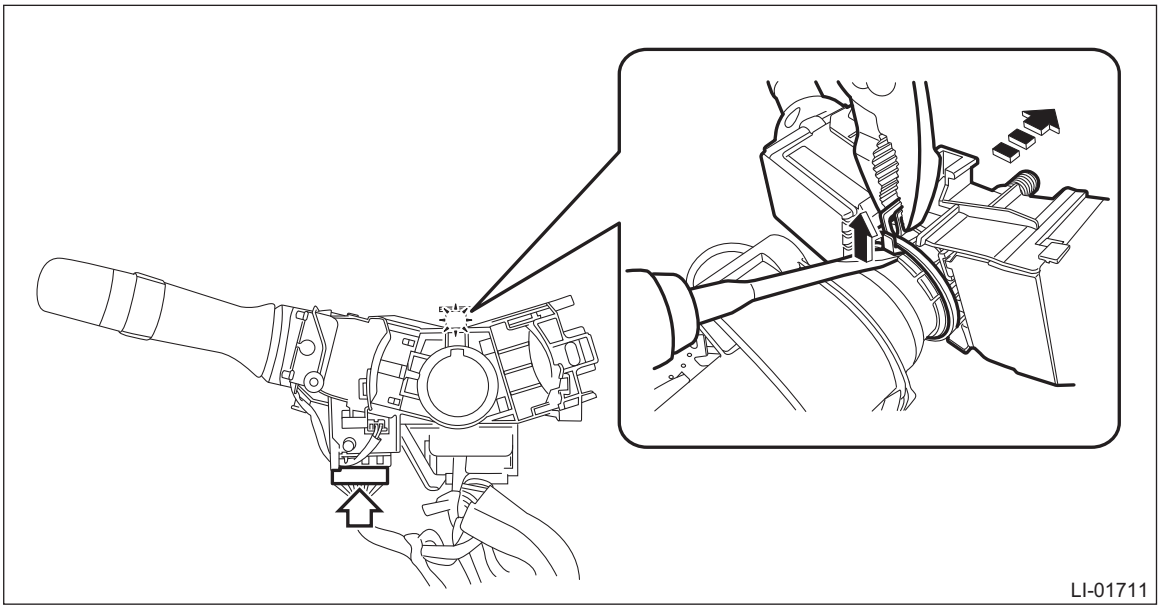
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
5) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.
   (2) Remove the screws.
   (3) Remove the cap - key cylinder (a).
   (4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



A Model without keyless access with push button start
B Model with keyless access with push button start

6) Remove the steering roll connector. <Ref. to AB-61, REMOVAL, Roll Connector.>
7) Remove the switch assembly - combination wiper select. <Ref. to WW-10, REMOVAL, Combination Switch (Wiper).>
8) Remove the switch assembly - combination turn dimmer.
   (1) Disconnect the connector.
   (2) Using pliers, loosen the clamp.

(3) With the clamp loosened, release the claw using a flat tip screwdriver, and remove the switch assembly - combination turn dimmer.



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

1) Install the switch assembly - combination turn dimmer.
   (1) Using pliers, loosen the clamp.
   (2) Insert the switch assembly - combination turn dimmer so that the claw is engaged with the cutout of the column assembly - steering while the clamp is loose.
   (3) Install the clamp, then connect the connector.

NOTE:
If it is replaced with a new part, engage the claw before pulling out the fixing pin of the clamp.
2) Install the switch assembly - combination wiper select.
3) Install the steering roll connector. <Ref. to AB-63, INSTALLATION, Roll Connector.>
4) Install the cover assembly - column.
5) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

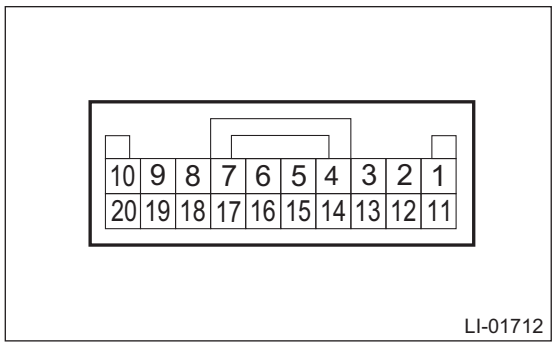
Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)

6) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



- Lighting switch

Terminal No.	Inspection conditions	Standard
18 — 12 19 — 12 20 — 12	Switch OFF	1 MΩ or more
19 — 12	Switch AUTO	Less than 1 Ω
18 — 12	Switch 1 (TAIL/PARKING)	Less than 1 Ω
18 — 12 20 — 12	Switch 2 (HEAD)	Less than 1 Ω

- Dimmer & passing switch

Terminal No.	Inspection conditions	Standard
11 — 12 17 — 12	Switch PASS	Less than 1 Ω
11 — 12	Switch UP	Less than 1 Ω

- Turn signal switch

Terminal No.	Inspection conditions	Standard
13 — 12	Switch TURN (RH)	Less than 1 Ω
15 — 12	Switch TURN (LH)	Less than 1 Ω

- Front fog light switch

Terminal No.	Inspection conditions	Standard
4 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Replace the switch assembly - combination turn dimmer if the inspection result is not within the standard value.

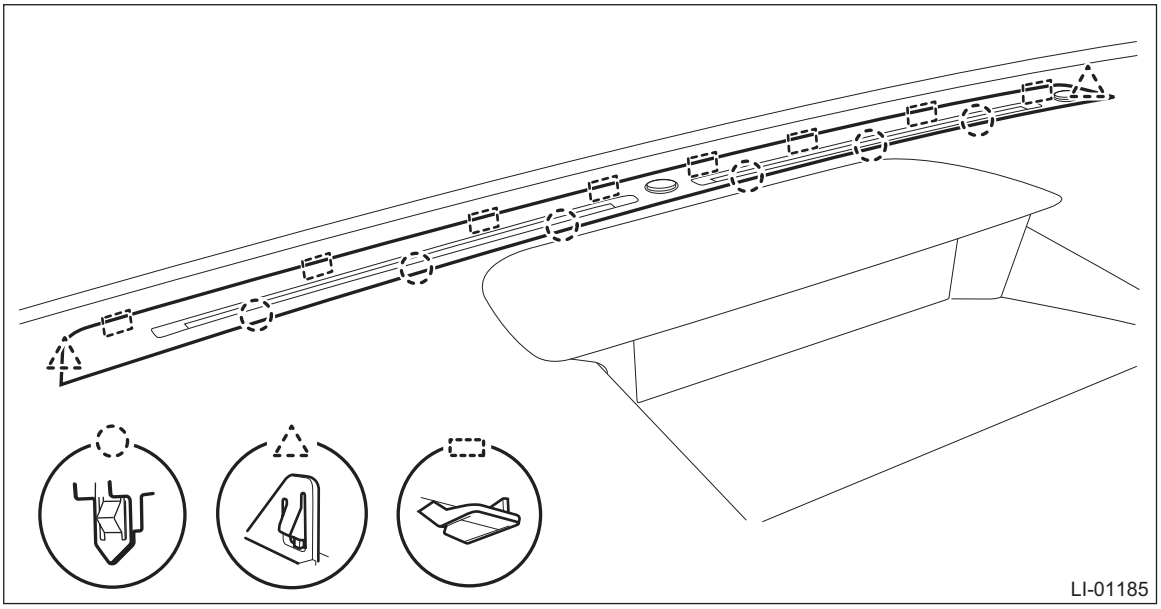
14.Light Control Sensor

A: REMOVAL

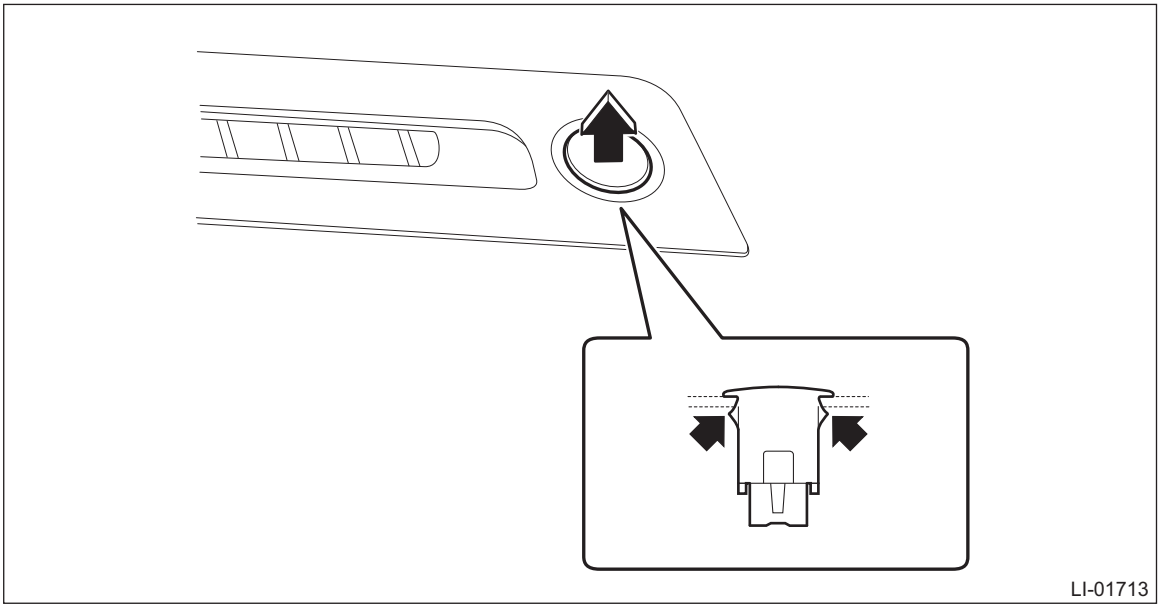
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the grille - front defroster.
   (1) Release the claws.
   (2) Disconnect the connector and remove the grille - front defroster.



3) Release the claws, and then remove the sensor - automatic light.



B: INSTALLATION

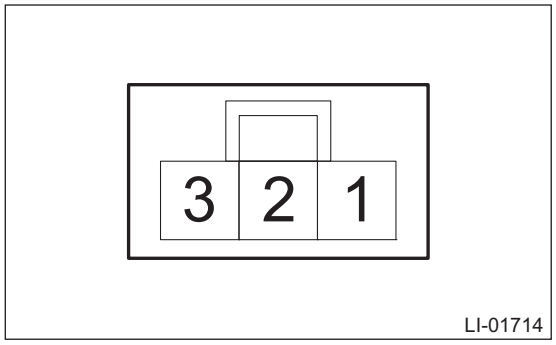
1) Install the sensor - automatic light.
2) Install the grille - front defroster.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Connect the connector and then turn the ignition switch to ON.

2) Set the lighting switch to AUTO position.
3) Measure the voltage between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Measure the voltage when the area around the sensor - automatic light, which was dark, becomes bright.	Dark condition: Approx. 0.6 V or less
		Bright condition: Approx. 3 V or more

4) Replace the sensor - automatic light if the inspection result is not within the standard value.

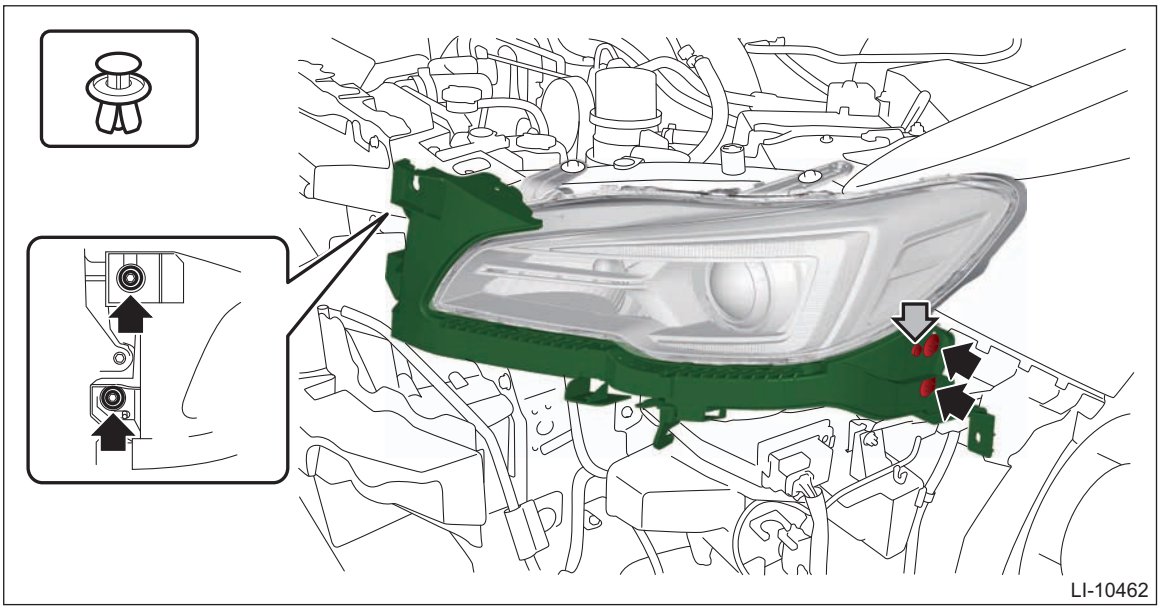
15.Headlight Assembly

A: REMOVAL

CAUTION:
Do not perform work with wet hands, because there is a possibility of electrical shock.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the clips and remove the air intake duct. (When removing the headlight RH)
- Except for STI model: <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
- STI model: <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>

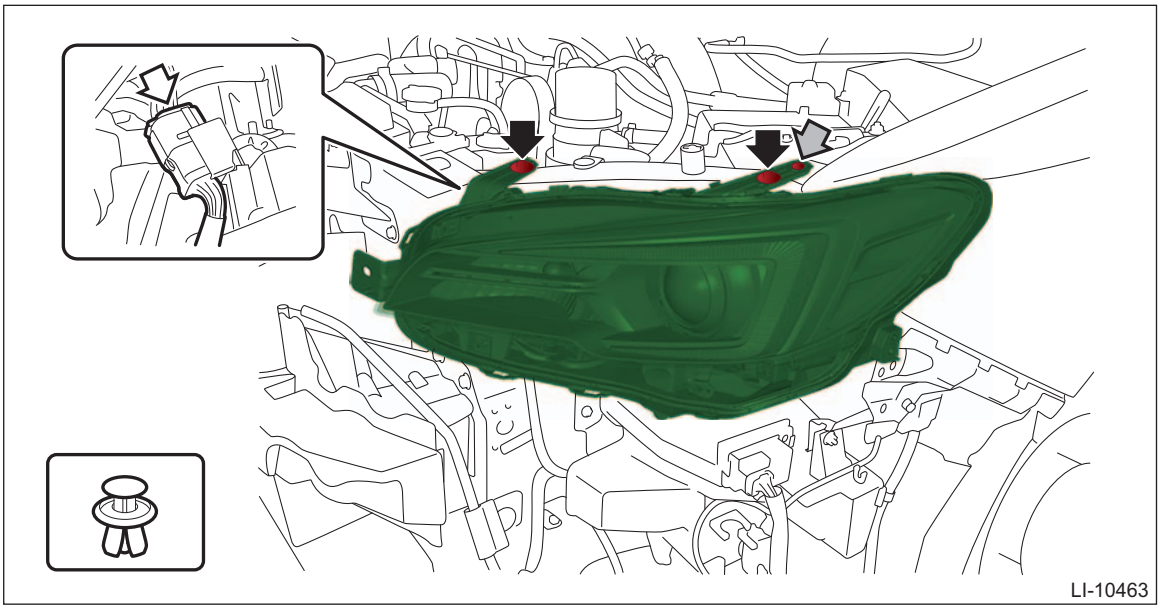
3) Remove the bumper face - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
4) Remove the keyless buzzer or access buzzer. <Ref. to SL-78, REMOVAL, Keyless Buzzer.>
5) Remove the bolts and clips, and remove the bracket - front bumper corner.



6) Remove the light assembly - head.

CAUTION:
Be careful not to damage the light assembly - head and the fender front.
(1) Disconnect the connector.

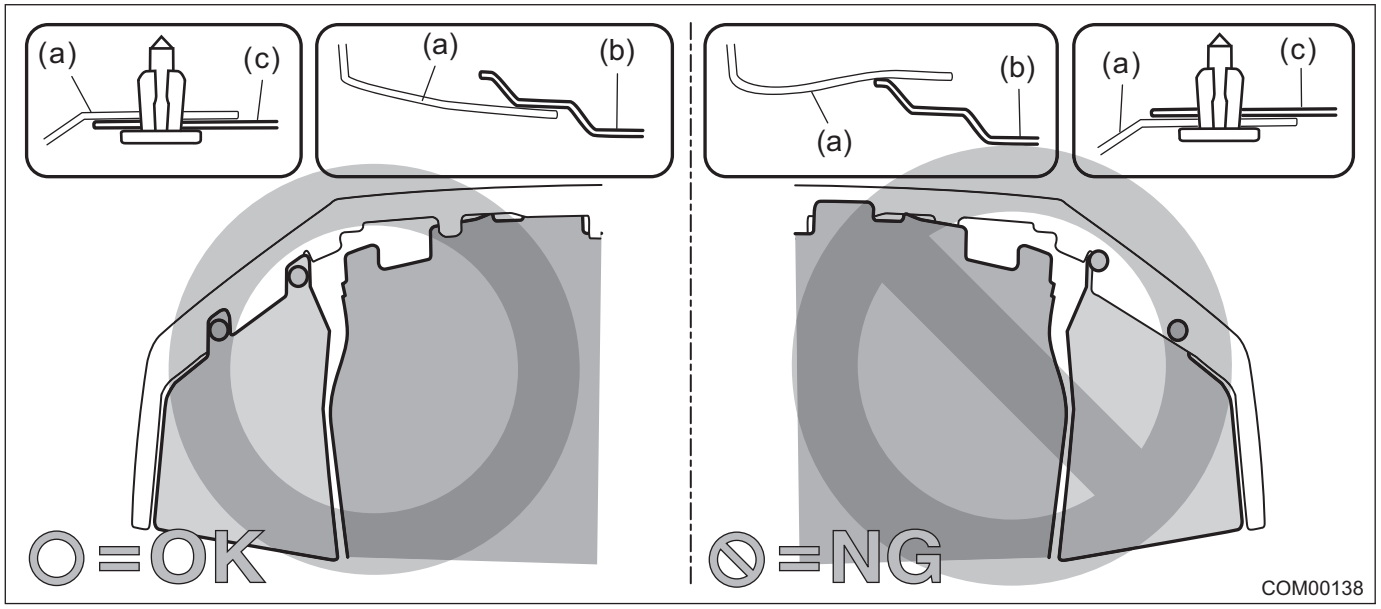
(2) Remove the bolts and clips, and remove the light assembly - head.



B: INSTALLATION

CAUTION:

• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the bracket - front bumper corner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the keyless buzzer or access buzzer.
4) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>

5) Install the air intake duct. (When the headlight RH was removed)
6) Check and adjust the clearance between the hood COMPL - front and the light assembly - head. <Ref. to EB-15, ADJUSTMENT, Front Hood.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Adjust the headlight beam and fog light beam.
• Adjust the headlight beam. <Ref. to LI-38, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
• Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: DISASSEMBLY

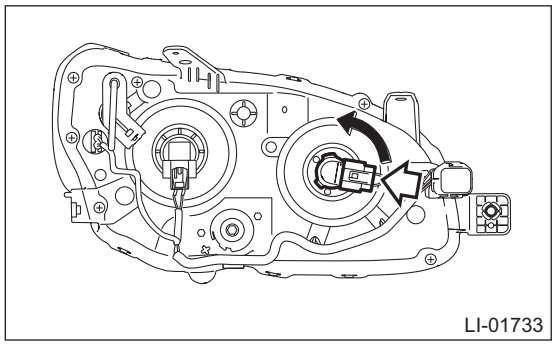
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

• Halogen type

1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the high beam bulb.

CAUTION:
For the high beam bulb on the RH side, rotate in the opposite direction of arrow shown in the figure.



LI-01733

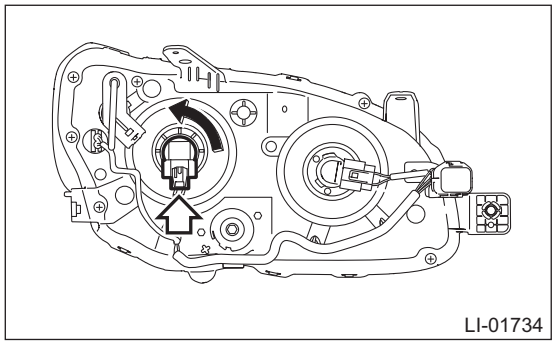
• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

2. LOW BEAM BULB

• Halogen type

1) Disconnect the connector.
2) Rotate in the direction of arrow shown in the figure to remove the low beam bulb.



LI-01734

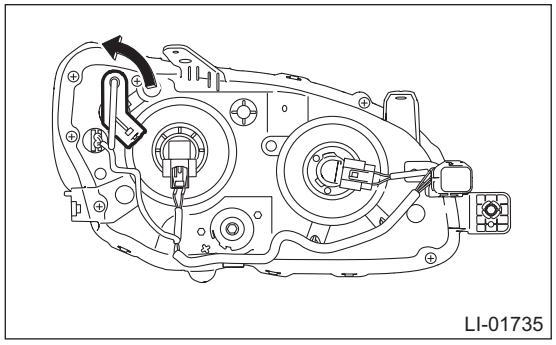
• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB

• Halogen type

Rotate the bulb socket in the direction of arrow shown in the figure to remove the parking light bulb.



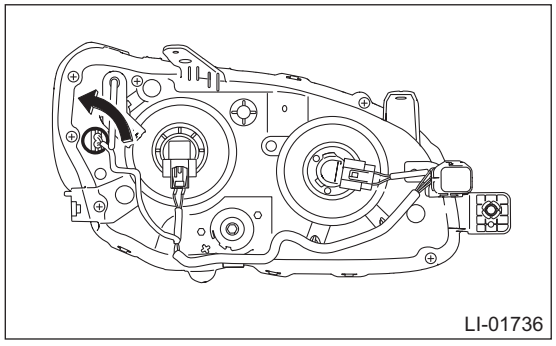
• LED type

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

4. SIDE MARKER LIGHT BULB

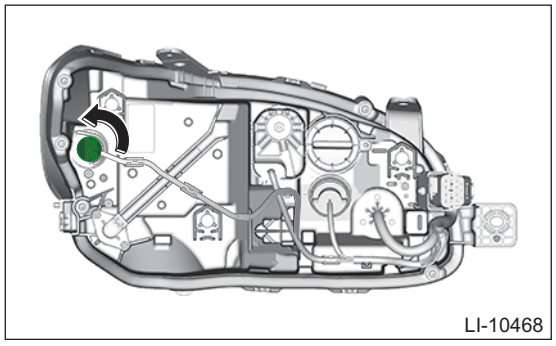
• Halogen type

Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.



• LED type

Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.



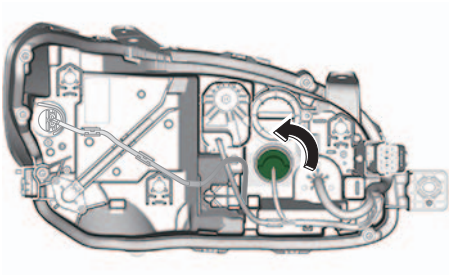
5. TURN SIGNAL LIGHT BULB

• Halogen type

For detailed procedures of the turn signal light bulb, refer to “DISASSEMBLY” of “FRONT TURN SIGNAL LIGHT ASSEMBLY”. <Ref. to LI-49, DISASSEMBLY, Front Turn Signal Light Assembly.>

• **LED type**

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.



LI-10469

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. HIGH BEAM BULB

• **Halogen type**

1) Install the high beam bulb.
2) Connect the connector.

• **LED type**

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

2. LOW BEAM BULB

• **Halogen type**

1) Install the low beam bulb.
2) Connect the connector.

• **LED type**

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

3. PARKING LIGHT BULB

• **Halogen type**

1) Install the parking light bulb.
2) Install the bulb socket.

• **LED type**

Since it is a non-disassembled part, it cannot be removed. Replace the light assembly - head if faulty.

4. SIDE MARKER LIGHT BULB

• **Halogen type**

1) Install the side marker light bulb.
2) Install the bulb socket.

• **LED type**

1) Install the side marker light bulb.
2) Install the bulb socket.

5. TURN SIGNAL LIGHT BULB

• **Halogen type**

For detailed procedures of the turn signal light bulb, refer to “ASSEMBLY” of “FRONT TURN SIGNAL LIGHT ASSEMBLY”. <Ref. to LI-49, ASSEMBLY, Front Turn Signal Light Assembly.>

- **LED type**

1) Install the turn signal light bulb.
2) Install the bulb socket.

E: ADJUSTMENT

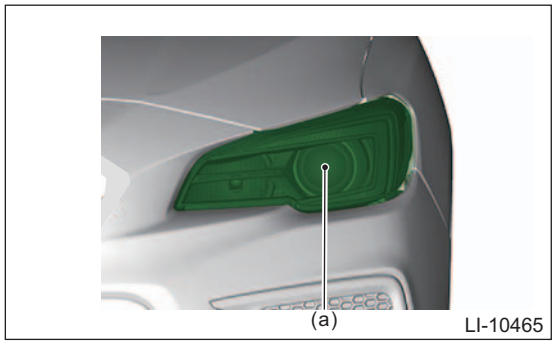
1. HEADLIGHT BEAM ADJUSTMENT

CAUTION:
- **Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.**
- **When blocking the light emitted from the headlight, use a light shield or equivalent.**

Do not apply the tape on the lens or place the cloth over it. It may raise the temperature in the light and cause deformation/bubble formations of the plastic lens.

1) Before checking the headlight beam level, be sure of the following:
- Check the area around the headlight for any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

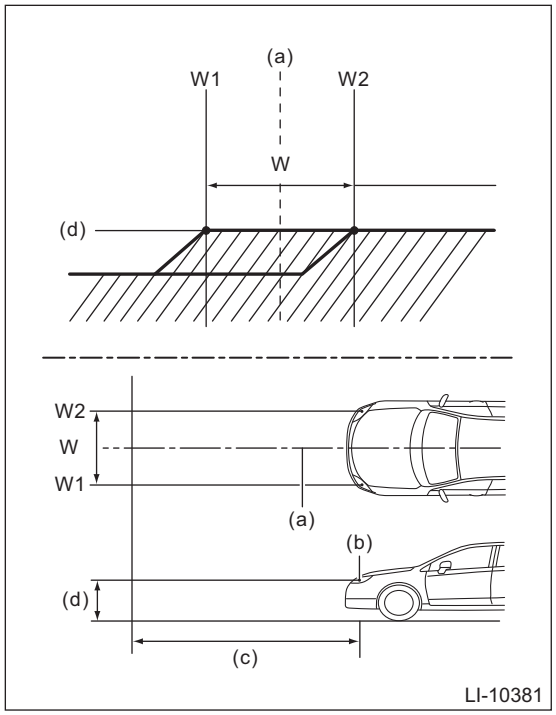
2) Set the headlight beam leveler switch to "0" position. (Model with manual leveler)
3) Bounce the vehicle several times to normalize the suspension.
4) Make certain that someone is seated in the driver's seat.
5) Measure the distance of the light source centers and the height of the light source centers for the low beam.



(a) Center of light source

6) Adjust the headlight beam.

(1) Place the vehicle with the front end facing to the measurement panel, open the front hood, and then illuminate the low beam.

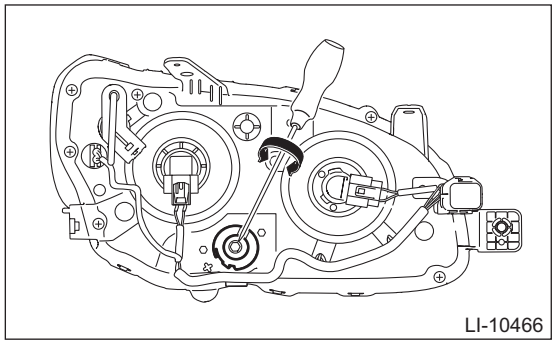


(a) Vehicle center
(b) Center of light source
(c) 3 m (10 ft)
(d) Height of light source center

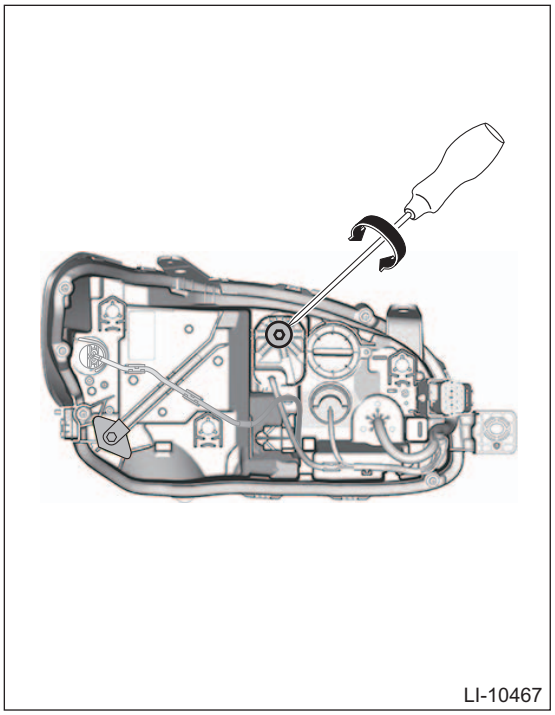
W mm (in)
Halogen type: 1,426 (56.14)
LED type: 1,402 (55.2)

(2) Adjust the beam level by turning the aiming screw.

- Halogen type



- LED type



16.Headlight Bulb

A: REMOVAL

NOTE:
Since the LED type headlight bulb is integrated into the headlight assembly, it cannot be removed.

1. HIGH BEAM

CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the clips and remove the air intake duct. (When removing the high beam bulb RH)
- Except for STI model: <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
- STI model: <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>

3) Disconnect the connector and remove the high beam bulb. <Ref. to LI-35, HIGH BEAM BULB, DISASSEMBLY, Headlight Assembly.>

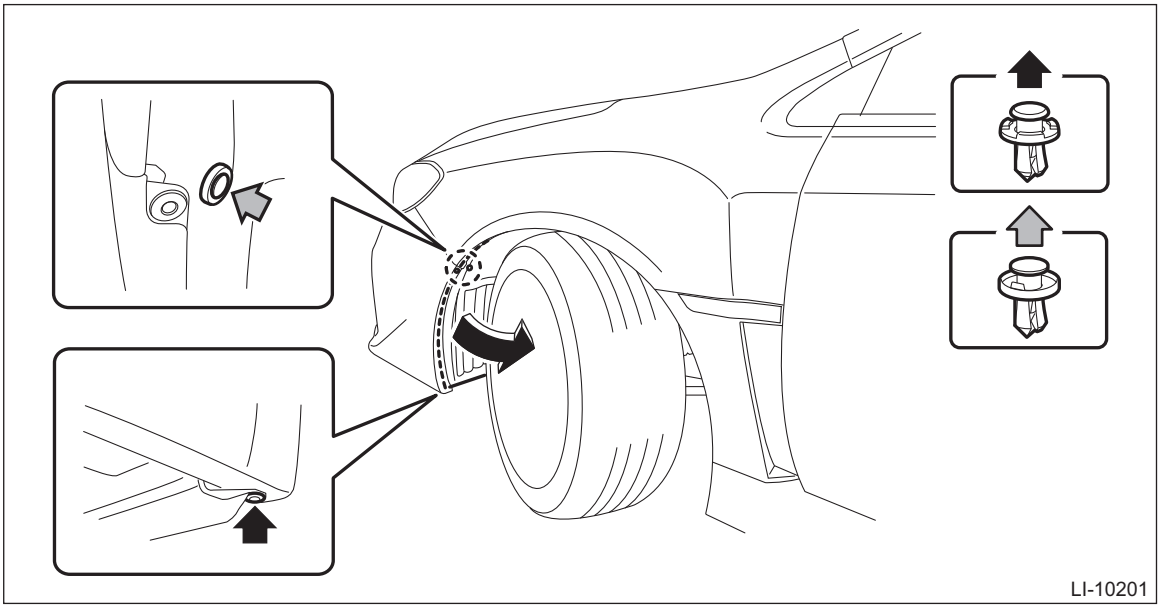
2. LOW BEAM

CAUTION:
- **Do not perform work with wet hands, because there is a possibility of electrical shock.**
- **Do not leave the light assembly - head without the bulb for a long time. Dust, moisture, etc. entering the light may affect its performance.**

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the screws and clips, and turn over the mud guard - front.



3) Disconnect the connector and remove the low beam bulb. <Ref. to LI-35, LOW BEAM BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

NOTE:
Since the LED type headlight bulb is integrated into the headlight assembly, it cannot be removed.

1. HIGH BEAM

1) Install the high beam bulb. <Ref. to LI-37, HIGH BEAM BULB, ASSEMBLY, Headlight Assembly.>
2) Install the air intake duct. (When the high beam bulb RH was removed)
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. LOW BEAM

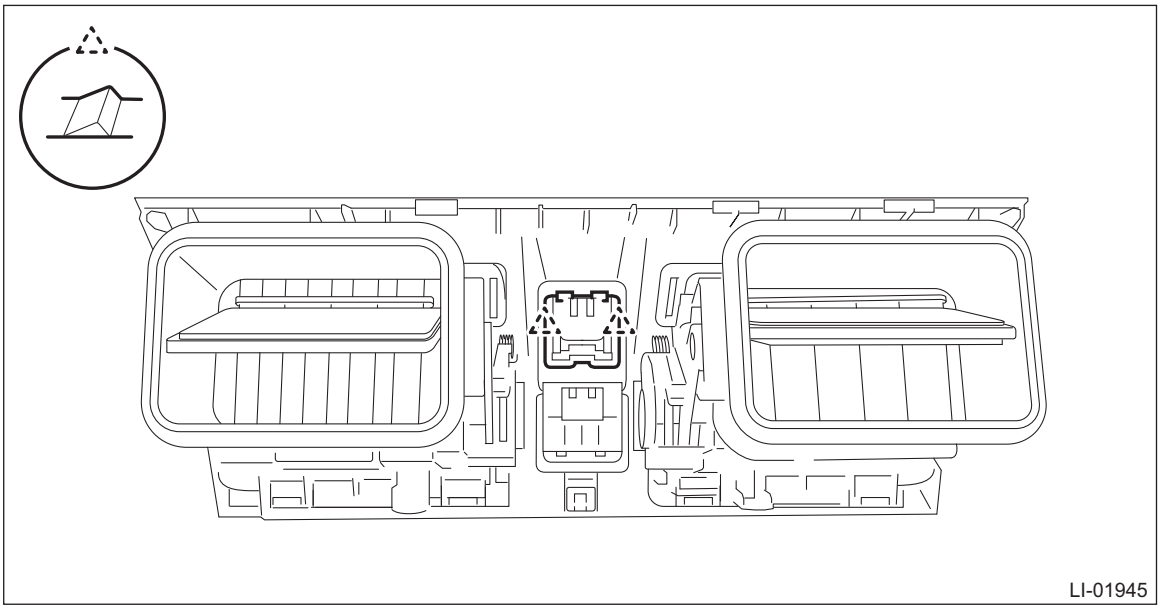
1) Install the low beam bulb. <Ref. to LI-37, LOW BEAM BULB, ASSEMBLY, Headlight Assembly.>
2) Install the mud guard - front.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

17.Hazard Switch

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Release the claws, and then remove the switch - hazard.



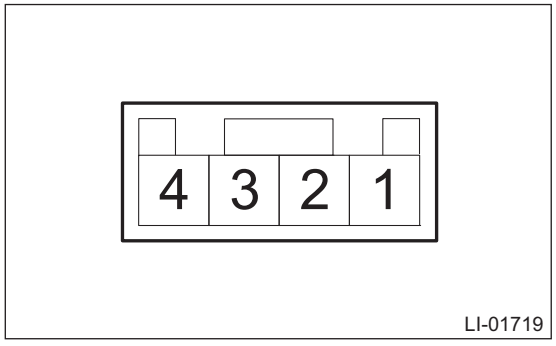
B: INSTALLATION

CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
1) Install the switch - hazard.
2) Install the center grille assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

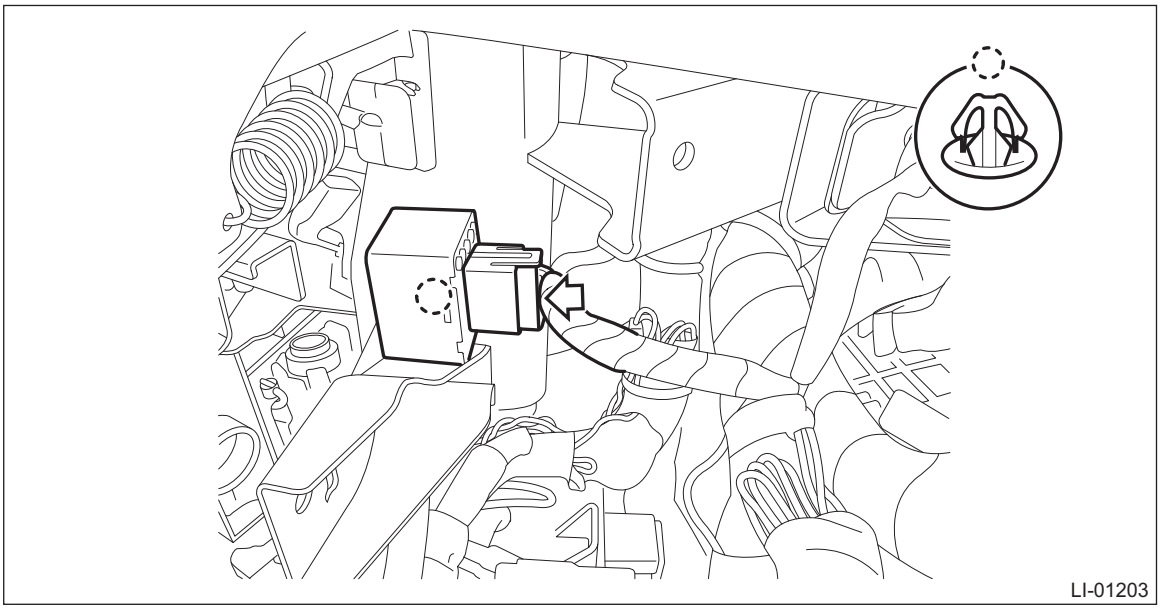
3) Replace the switch - hazard if it is found defective.

18.Turn Signal Light & Hazard Light Unit

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the turn signal & hazard unit.
   (1) Disconnect the connector.
   (2) Release the claws, and then remove the turn signal & hazard unit.



B: INSTALLATION

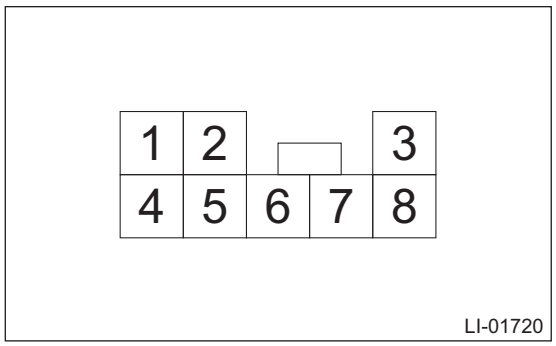
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the turn signal & hazard unit.
2) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the voltage between connector terminal and chassis ground.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
4 (+) — Chassis ground (–)	Always	10 — 14 V
1 (+) — Chassis ground (–)	IG OFF → ON	Less than 1 V → 10 — 14 V

Repair or replace the harness if the inspection result is not within the standard value.
2) Measure the resistance between connector terminal and chassis ground.

Terminal No.	Inspection conditions	Standard
7 — Chassis ground	Always	Less than 1 Ω

Repair or replace the harness if the inspection result is not within the standard value.
3) Connect the connector.
4) Measure the voltage between connector terminal and chassis ground.

Terminal No.	Input/Output	Inspection conditions	Standard
6 (+) — Chassis ground (–)	Input	Turn signal switch (right) OFF → ON	9 V or more → less than 1 V
5 (+) — Chassis ground (–)	Input	Turn signal switch (left) OFF → ON	9 V or more → less than 1 V
8 (+) — Chassis ground (–)	Input	Hazard switch OFF → ON	9 V or more → less than 1 V
2 (+) — Chassis ground (–)	Output	Turn signal switch (right) OFF → ON	Repeat less than 1 V → less than 1 V ←→ more than 9 V at 60 to 120 times per minute.
3 (+) — Chassis ground (–)	Output	Turn signal switch (left) OFF → ON	Repeat less than 1 V → less than 1 V ←→ more than 9 V at 60 to 120 times per minute.
2 (+) — Chassis ground (–)	Output	Hazard switch OFF → ON	Repeat less than 1 V → less than 1 V ←→ more than 9 V at 60 to 120 times per minute.
3 (+) — Chassis ground (–)	Output	Hazard switch OFF → ON	Repeat less than 1 V → less than 1 V ←→ more than 9 V at 60 to 120 times per minute.

Replace the turn signal & hazard unit if the inspection result is not within the standard value.

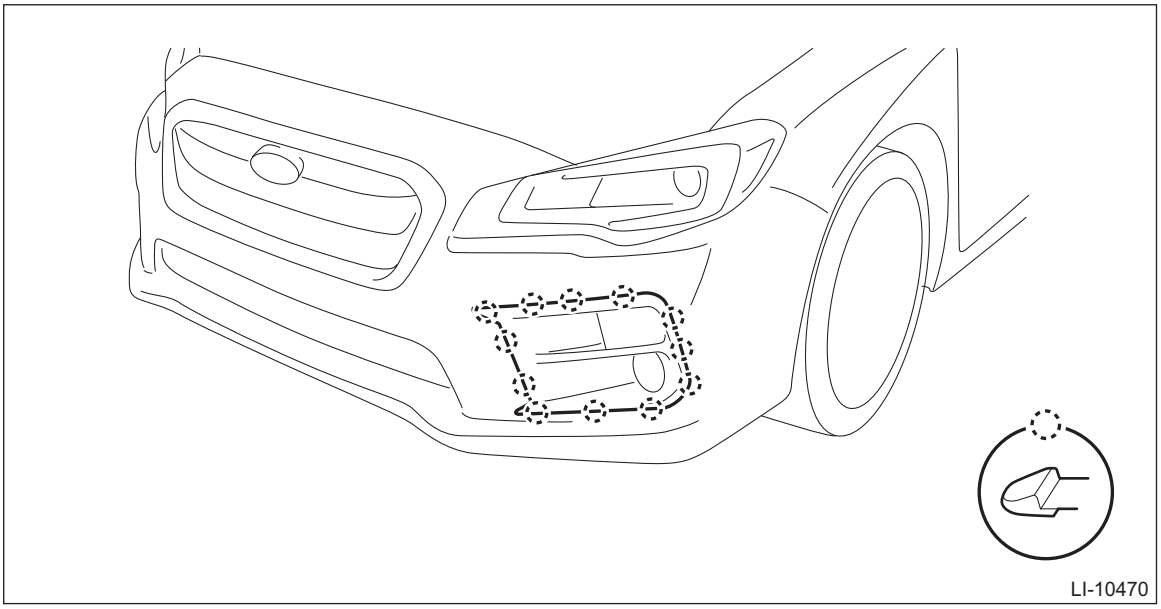
19.Front Turn Signal Light Assembly

A: REMOVAL

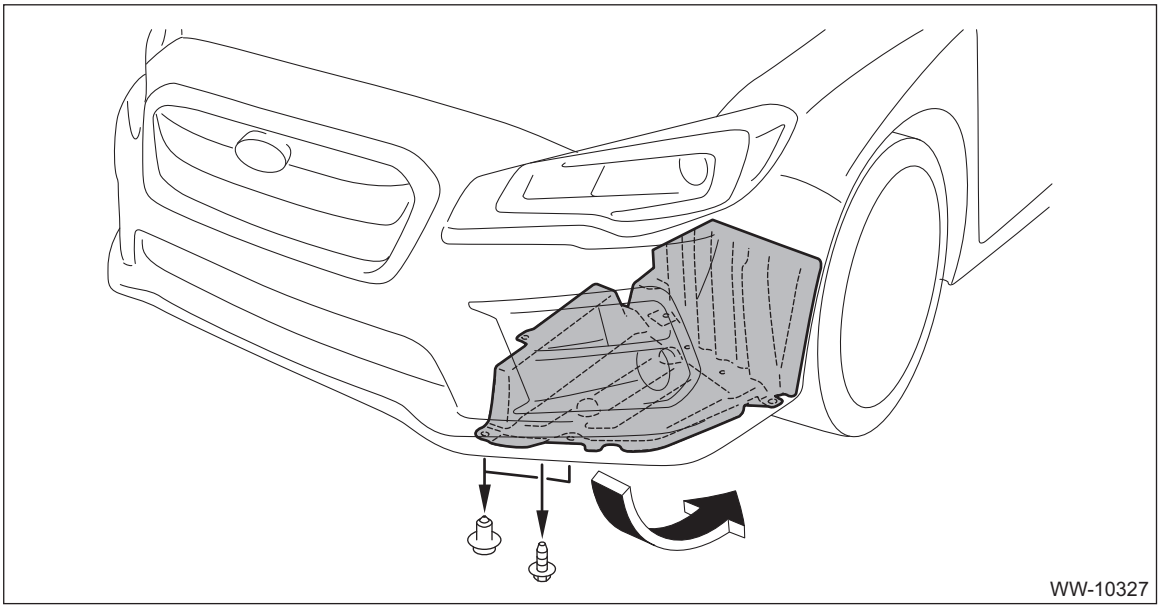
NOTE:
Front turn signal light assembly of the LED headlight is integrated into the headlight assembly. For operation procedures, refer to “Headlight Assembly”. <Ref. to LI-33, Headlight Assembly.>
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Release the claws, and then remove the cover - fog light.

NOTE:
If it is hard to remove, push the claw from the back.

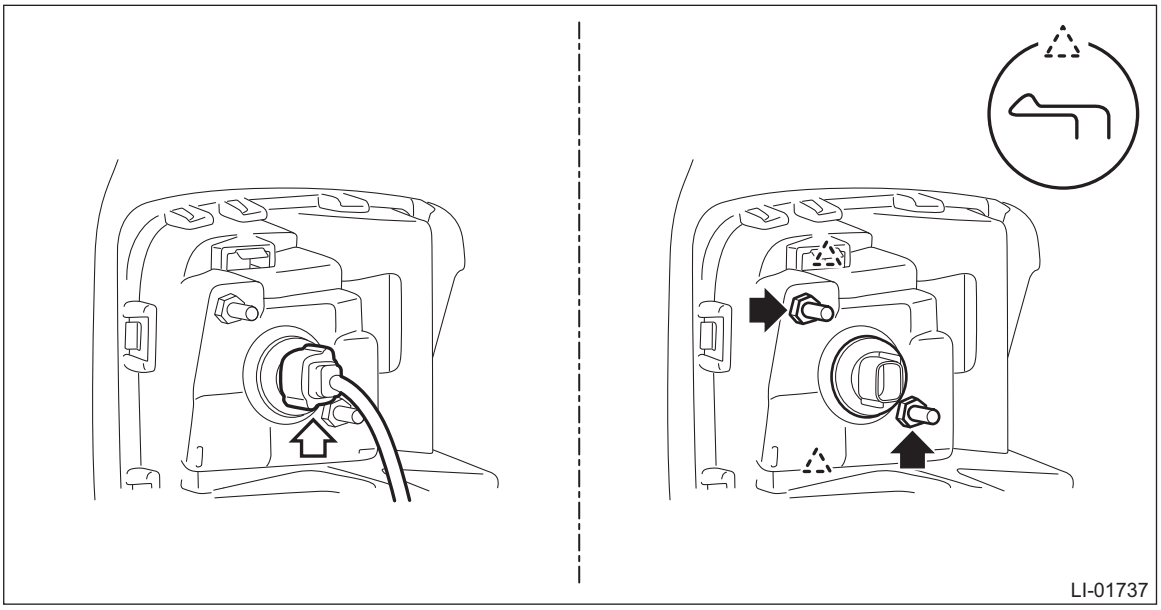


3) Lift up the vehicle.
4) Remove the screw and clips, and turn over the front side of the mud guard - front.



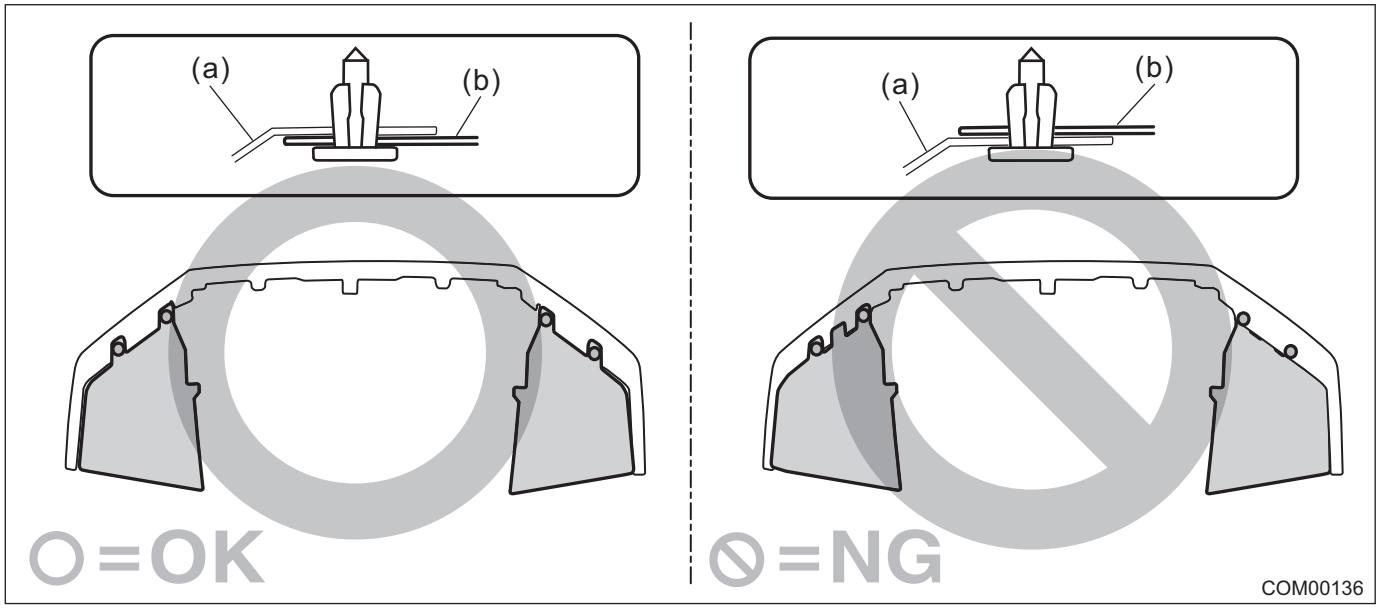
5) Remove the turn signal light assembly - front.
(1) Disconnect the connector.

(2) Release the nuts and claws, then remove the turn signal light assembly - front.



B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

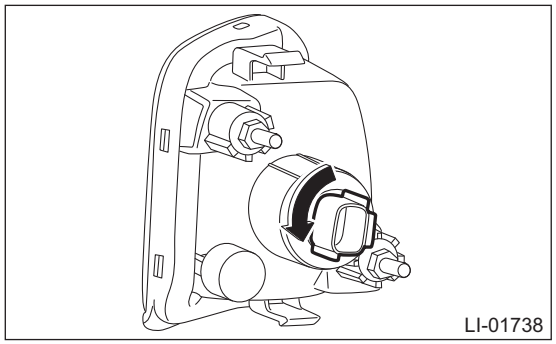


NOTE:
Front turn signal light assembly of the LED headlight is integrated into the headlight assembly. For operation procedures, refer to “Headlight Assembly”. <Ref. to LI-33, Headlight Assembly.>
1) Install the turn signal light assembly - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the mud guard - front.
3) Lower the vehicle.
4) Install the cover - fog light.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Rotate the bulb socket in the direction of arrow shown in the figure to remove the front turn signal light bulb.



D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
1) Install the front turn signal light bulb.
2) Install the bulb socket.

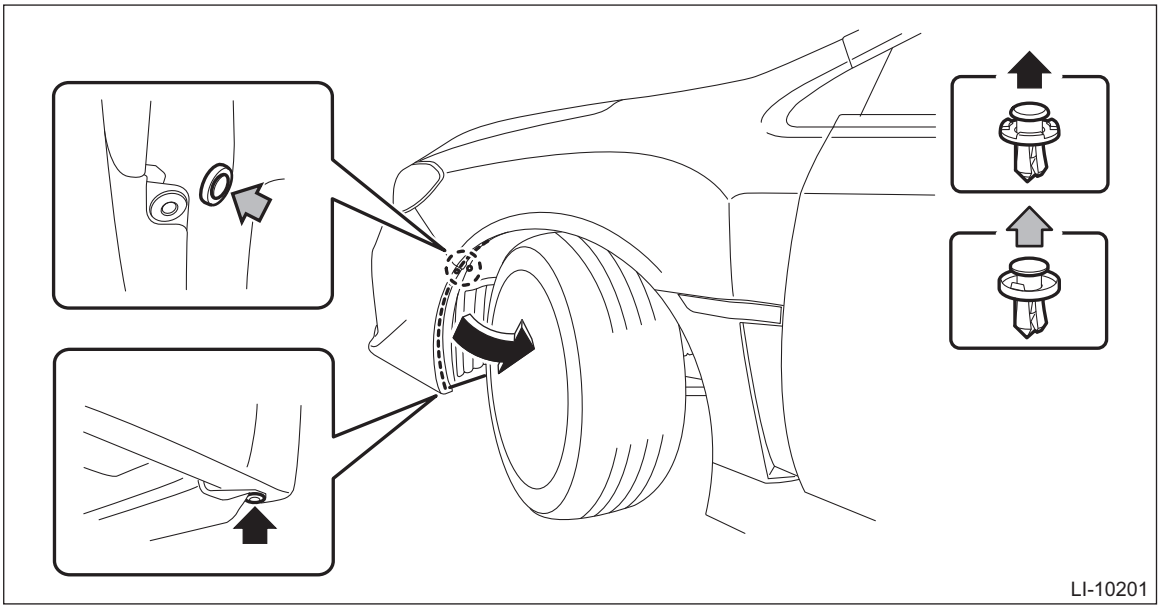
20.Front Turn Signal Light Bulb

A: REMOVAL

1. HALOGEN HEADLIGHT

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the clips and turn over the mud guard - front.



3) Disconnect the connector and remove the front turn signal light bulb. <Ref. to LI-49, DISASSEMBLY, Front Turn Signal Light Assembly.>

2. LED HEADLIGHT

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the clips and remove the air intake duct. (When removing the front turn signal light bulb RH)
- Except for STI model: <Ref. to IN(w/o STI)-26, REMOVAL, Air Intake Duct.>
- STI model: <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>

3) Remove the front turn signal light bulb. <Ref. to LI-36, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

1. HALOGEN HEADLIGHT

1) Install the front turn signal light bulb. <Ref. to LI-49, ASSEMBLY, Front Turn Signal Light Assembly.>
2) Install the mud guard - front.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. LED HEADLIGHT

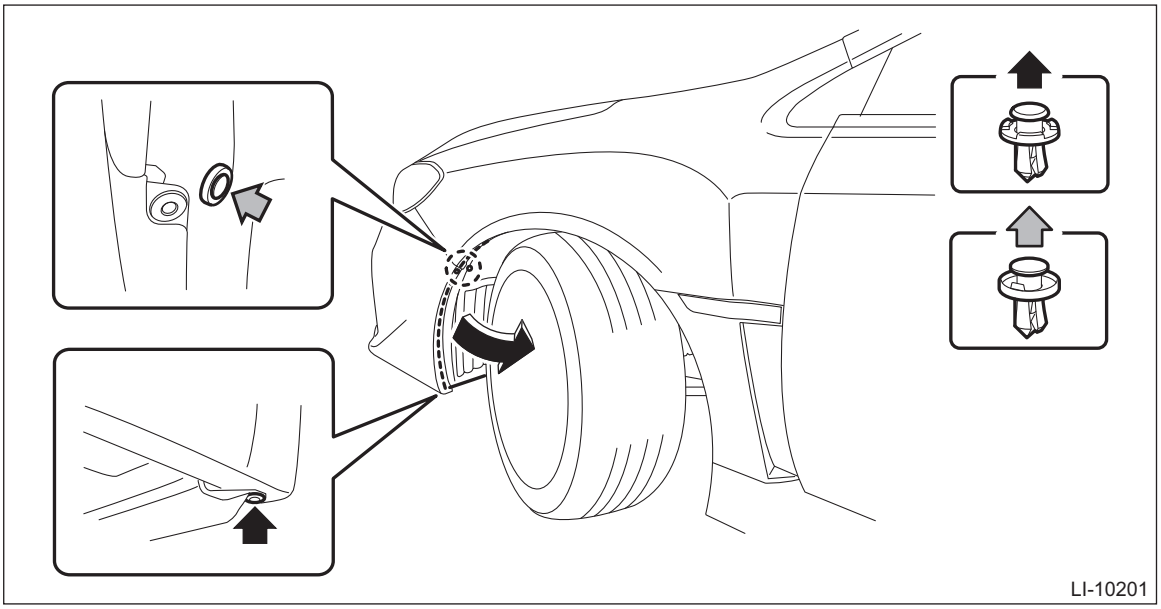
1) Install the front turn signal light bulb. <Ref. to LI-37, TURN SIGNAL LIGHT BULB, ASSEMBLY, Headlight Assembly.>
2) Install the air intake duct.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

21.Clearance/Parking Light Bulb

A: REMOVAL

NOTE:
Since the LED type parking light bulb is integrated into the headlight assembly, it cannot be removed.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Turn the steering wheel in the opposite direction from the parts to be removed. Then remove the clips and turn over the mud guard - front.



3) Remove the parking light bulb. <Ref. to LI-36, PARKING LIGHT BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

NOTE:
Since the LED type parking light bulb is integrated into the headlight assembly, it cannot be removed.
1) Install the parking light bulb. <Ref. to LI-37, PARKING LIGHT BULB, ASSEMBLY, Headlight Assembly.>
2) Install the mud guard - front.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

22.Front Side Marker Light Bulb

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the battery. (When removing the side marker light bulb LH)
- Except for STI model: <Ref. to SC(w/o STI)-50, REMOVAL, Battery.>
- STI model: <Ref. to SC(STI)-24, REMOVAL, Battery.>

3) Remove the air cleaner case (front). (When removing the side marker light bulb RH)
- Except for STI model: <Ref. to IN(w/o STI)-13, REMOVAL, Air Cleaner Case.>
- STI model: <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>

4) Disconnect the connector and remove the front side marker light bulb. <Ref. to LI-36, SIDE MARKER LIGHT BULB, DISASSEMBLY, Headlight Assembly.>

B: INSTALLATION

1) Install the front side marker light bulb. <Ref. to LI-37, SIDE MARKER LIGHT BULB, ASSEMBLY, Headlight Assembly.>
2) Install the air cleaner case (front). (When the side marker light bulb RH is removed)
- Except for STI model: <Ref. to IN(w/o STI)-16, INSTALLATION, Air Cleaner Case.>
- STI model: <Ref. to IN(STI)-8, INSTALLATION, Air Cleaner Case.>

3) Remove the battery. (When the side marker light bulb LH is removed)
- Except for STI model: <Ref. to SC(w/o STI)-50, INSTALLATION, Battery.>
- STI model: <Ref. to SC(STI)-24, INSTALLATION, Battery.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

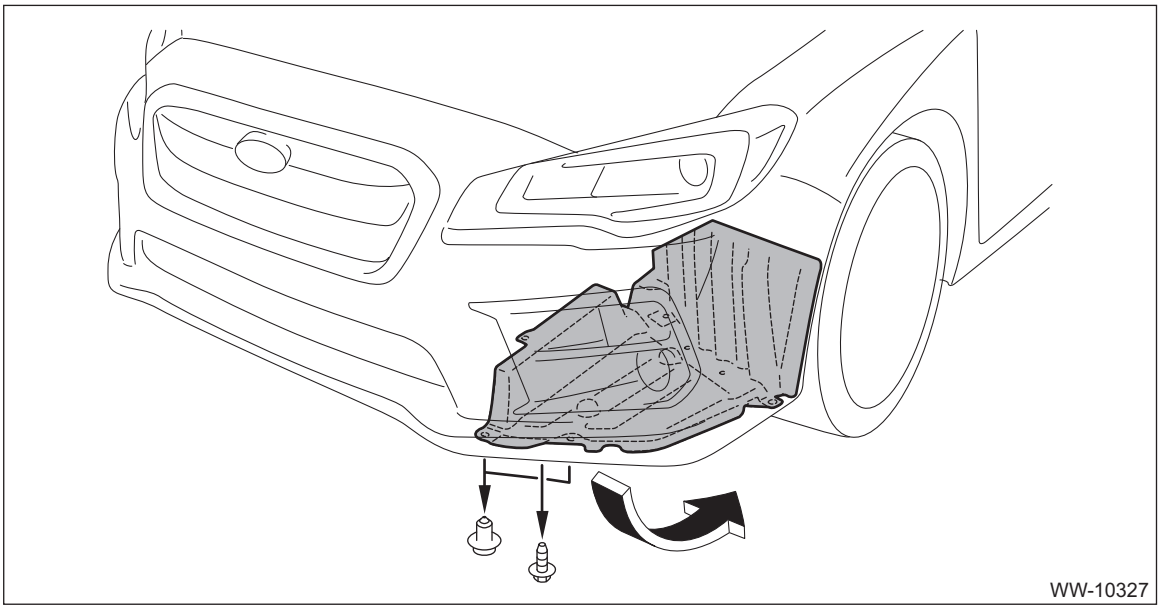
23.Front Fog Light Assembly

A: REMOVAL

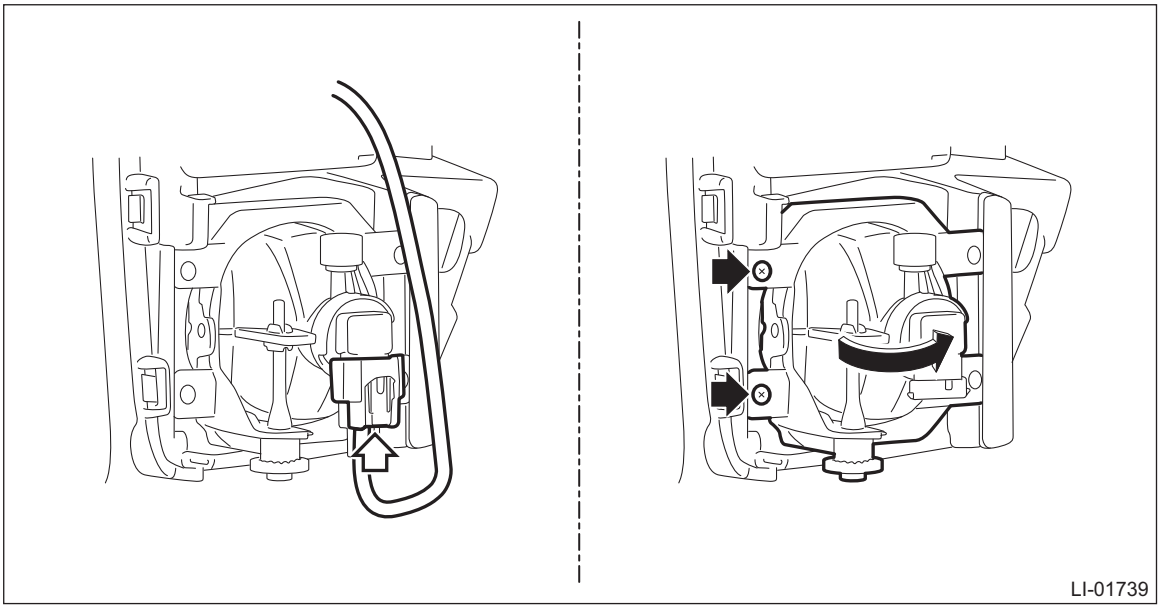
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle.
3) Remove the screw and clips, and turn over the mud guard - front.



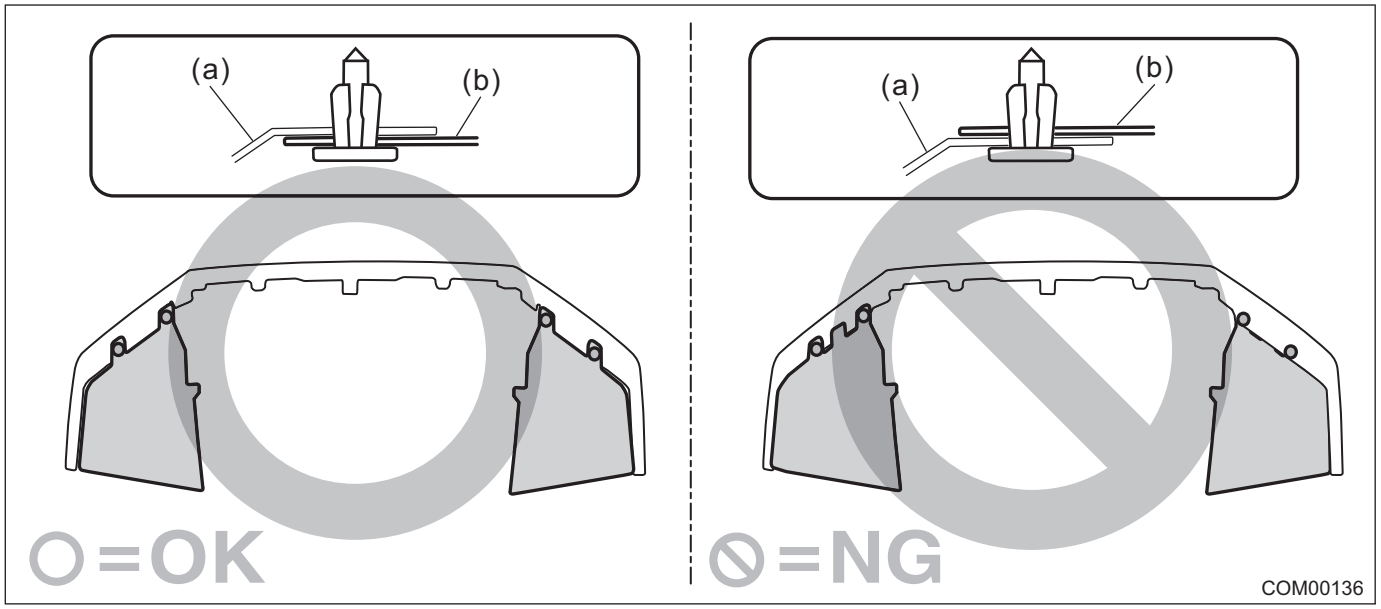
4) Remove the fog light assembly - front.
   (1) Disconnect the connector.
   (2) Remove the screws and guide, and remove the fog light assembly - front.



NOTE:
Remove the LED type in the same procedure.

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

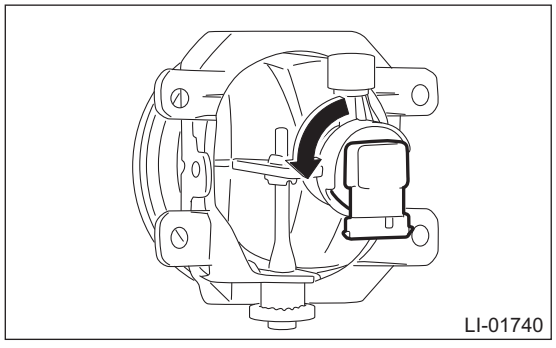


1) Install the fog light assembly - front.

NOTE:
Install the LED type in the same procedure.
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Adjust the fog light beam. <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Rotate in the direction of arrow shown in the figure to remove the front fog light bulb.



NOTE:
Since the LED type is a non-disassembled part, it cannot be removed. Replace the fog light assembly - front if faulty.

D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
Install the front fog light bulb.

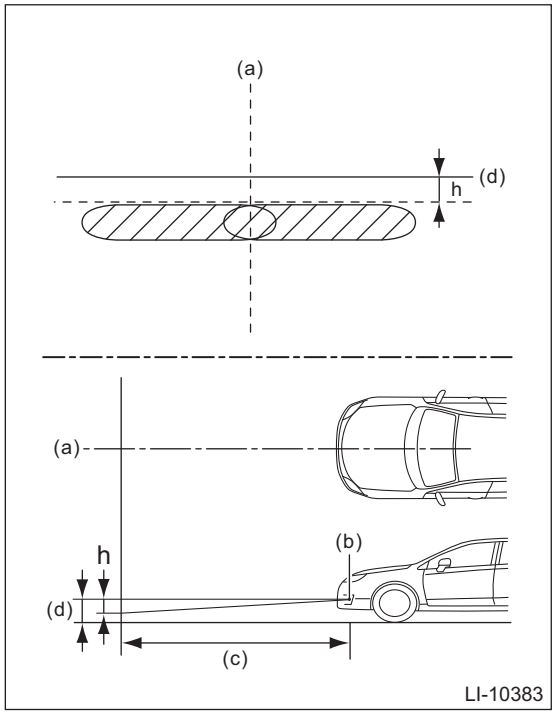
NOTE:
Since the LED type is a non-disassembled part, it cannot be removed. Replace the fog light assembly - front if faulty.

E: ADJUSTMENT

1. FOG LIGHT AIMING

1) Before checking the fog light beam level, be sure of the following:
- Check the area around the fog light for any scratches, damage or other type of deformation.
- The vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Bounce the vehicle several times to normalize the suspension.
3) Make certain that someone is seated in the driver's seat.
4) Place the vehicle with the front end facing to the measurement panel.

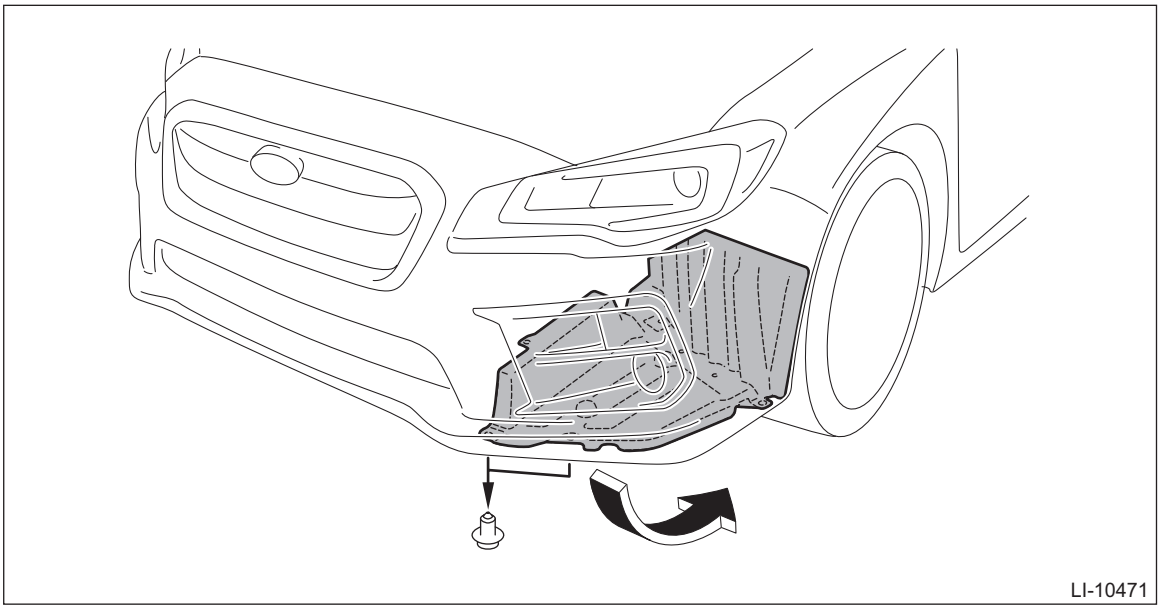


(a) Vehicle center
(b) Center of light source
(c) 3 m (10 ft)
(d) Height of light source center

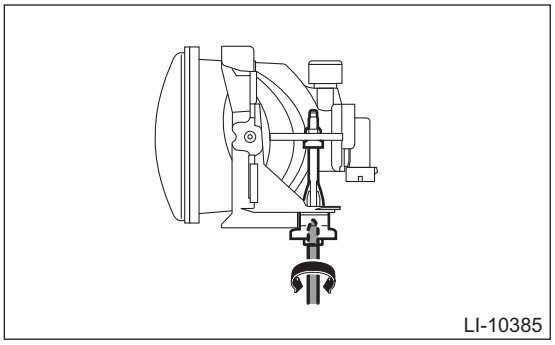
h mm (in) at 3 m (10 ft)
40 (1.58)

5) Adjust the fog light beam.

(1) Remove the clips, and turn over the mud guard - front.



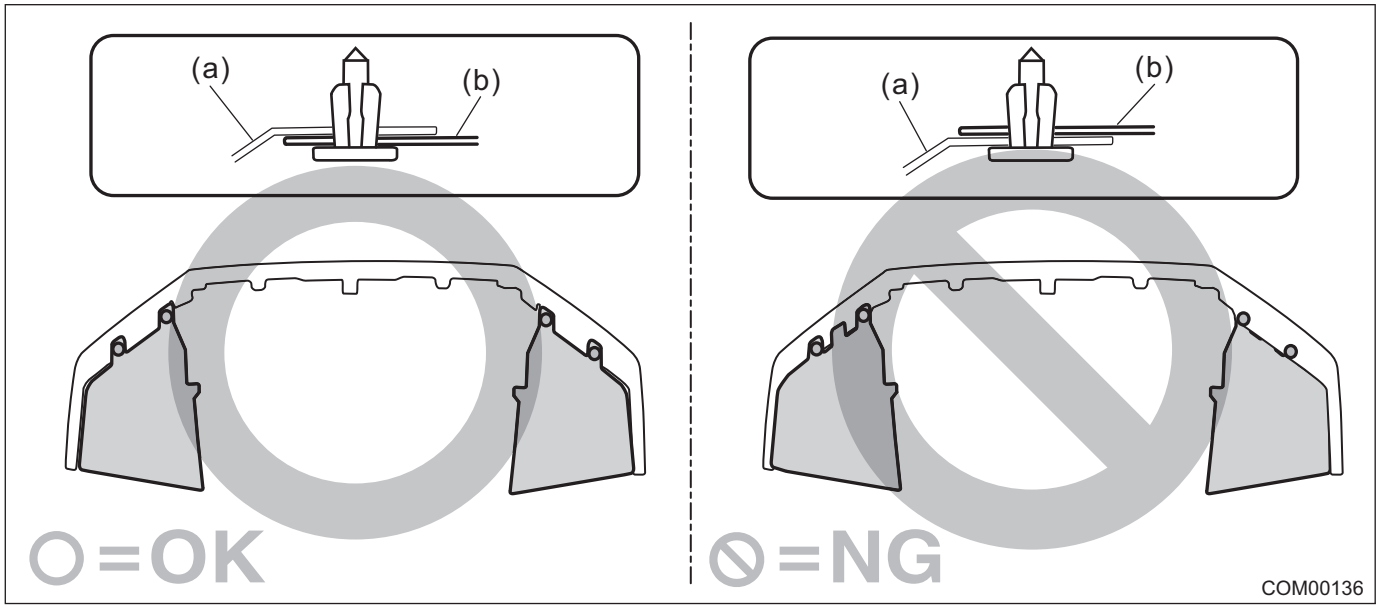
(2) Adjust the beam level by turning the aiming screw.



NOTE:
Adjust the LED type in the same procedure.

(3) Install the mud guard - front.

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

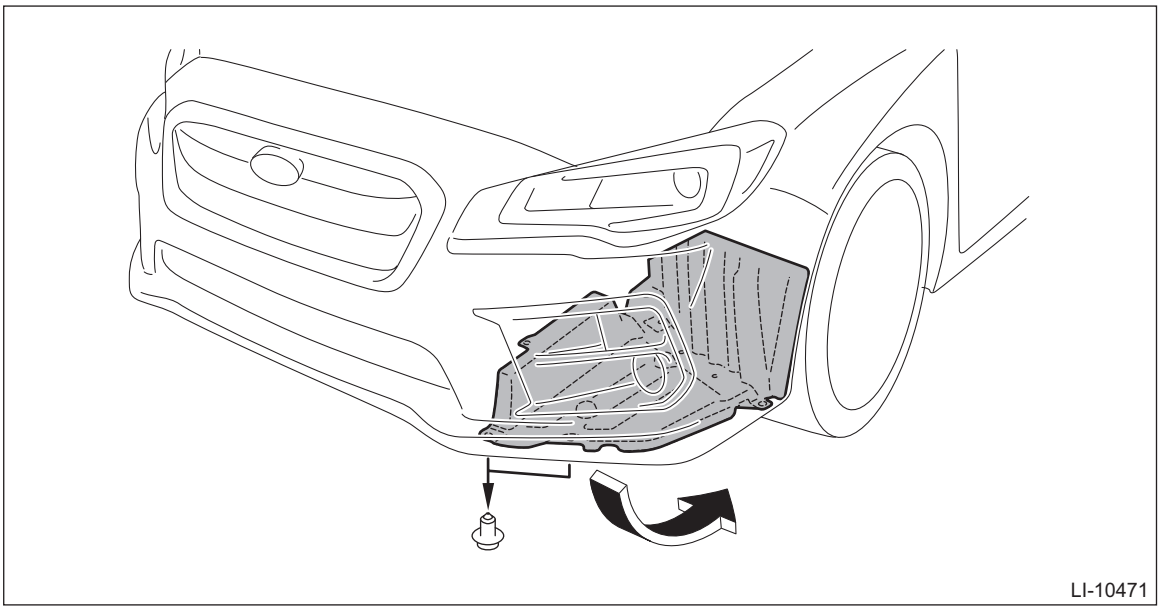


24.Front Fog Light Bulb

A: REMOVAL

NOTE:
Since the LED type front fog light bulb is integrated into the fog light assembly - front, it cannot be removed.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

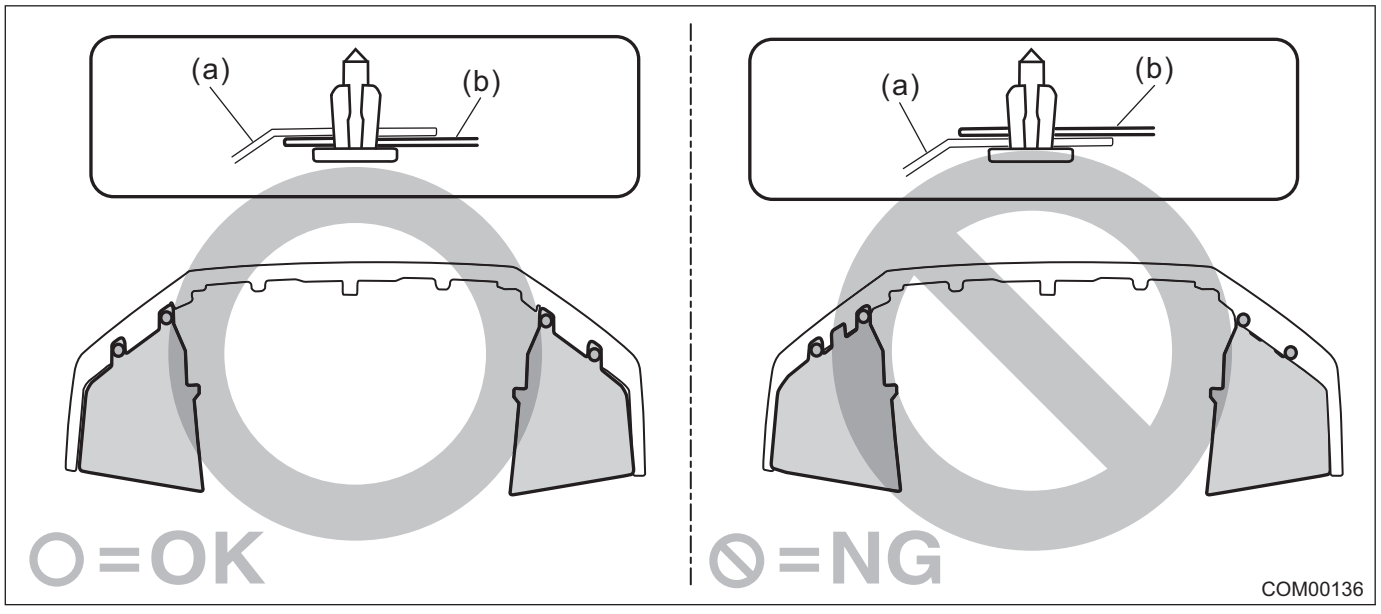
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the clips, and turn over the mud guard - front.



3) Disconnect the connector and remove the front fog light bulb. <Ref. to LI-54, DISASSEMBLY, Front Fog Light Assembly.>

B: INSTALLATION

CAUTION:
• Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



• After connecting the connector, make sure that the bulb is locked securely.

NOTE:
Since the LED type front fog light bulb is integrated into the fog light assembly - front, it cannot be removed.
1) Install the front fog light bulb. <Ref. to LI-54, ASSEMBLY, Front Fog Light Assembly.>
2) Install the mud guard - front.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

25.Side Turn Signal Light Assembly

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the side turn signal light assembly. <Ref. to GW-27, DISASSEMBLY, Outer Mirror Assembly.>

B: INSTALLATION

1) Install the side turn signal light assembly. <Ref. to GW-29, ASSEMBLY, Outer Mirror Assembly.>
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

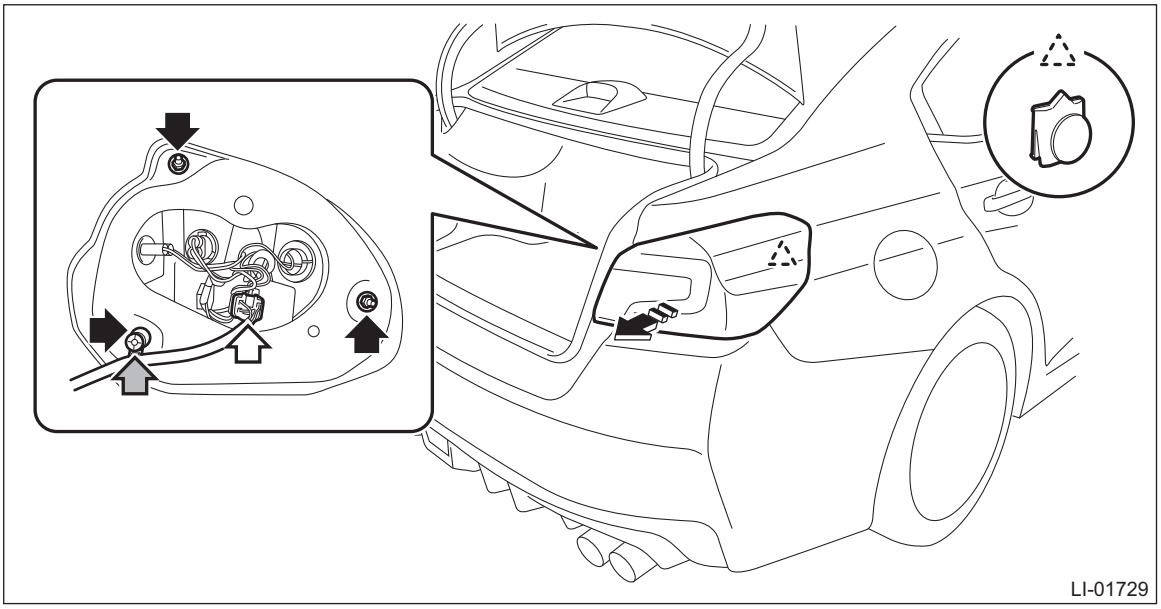
26.Rear Combination Light Assembly

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the light assembly - rear combination.

CAUTION:
Be careful not to damage the clips.
(1) Remove the harness clip and connector.
(2) Release the nuts and clips, then remove the light assembly - rear combination.



B: INSTALLATION

1) Install the light assembly - rear combination.

CAUTION:
• Always replace the gasket - rear combination with a new part. If a gasket is reused, water leakage may occur.
• Be careful not to catch the harness in between the parts.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the trunk room trim.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

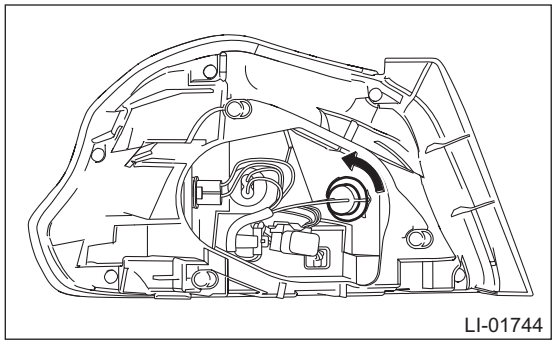
C: DISASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

NOTE:
Since the LED type is a non-disassembled part, it cannot be removed. Replace the light assembly - combination if faulty.

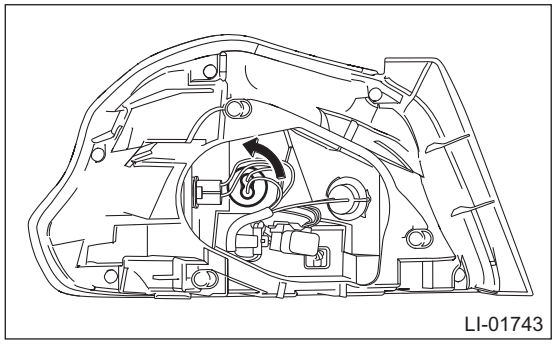
1. TURN SIGNAL LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the turn signal light bulb.



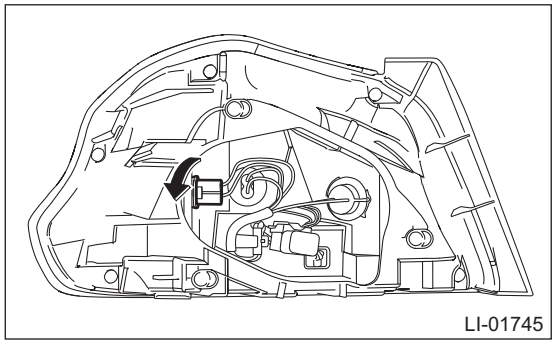
2. BACK-UP LIGHT BULB

Rotate the bulb socket in the direction of arrow shown in the figure to remove the back-up light bulb.



3. SIDE MARKER LIGHT BULB

1) Remove the back-up light bulb socket. <Ref. to LI-62, BACK-UP LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>
2) Rotate the bulb socket in the direction of arrow shown in the figure to remove the side marker light bulb.



D: ASSEMBLY

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

1. TURN SIGNAL LIGHT BULB

1) Install the turn signal light bulb.
2) Install the bulb socket.

2. BACK-UP LIGHT BULB

1) Install the back-up light bulb.
2) Install the bulb socket.

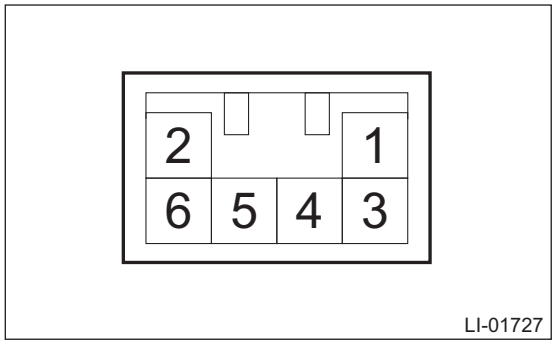
3. SIDE MARKER LIGHT BULB

1) Install the side marker light bulb.

2) Install the bulb socket.
3) Install the back-up light bulb socket. <Ref. to LI-62, BACK-UP LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>

E: INSPECTION

1) Apply battery voltage between the connector terminals to check the lighting condition of the light.



Terminal No.	Inspection conditions	Specification
6 (+) — 2 (–)	Apply battery voltage.	Stop light on
4 (+) — 2 (–)		Tail / side marker light on
3 (+) — 2 (–)		Turn signal light on
1 (+) — 2 (–)		Back-up light on

2) Replace the harness and bulb if it is found defective.

NOTE:
Since LED (Light Emitting Diode) is used for the tail & stop light bulb, replace the light assembly - rear combination.

27.Tail/Stop Light Bulb

A: NOTE

Since the LED type tail light/stop light bulb is integrated into the light assembly - rear combination, it cannot be removed.

28.Rear Turn Signal Light Bulb

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the rear turn signal light bulb. <Ref. to LI-62, TURN SIGNAL LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

B: INSTALLATION

1) Install the rear turn signal light bulb. <Ref. to LI-62, TURN SIGNAL LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk room trim.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

29.Rear Side Marker Light Bulb

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the rear side marker light bulb. <Ref. to LI-62, SIDE MARKER LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

B: INSTALLATION

1) Install the rear side marker light bulb. <Ref. to LI-62, SIDE MARKER LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk room trim.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

30.Back-up Light Bulb

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the back-up light bulb. <Ref. to LI-62, BACK-UP LIGHT BULB, DISASSEMBLY, Rear Combination Light Assembly.>

B: INSTALLATION

1) Install the back-up light bulb. <Ref. to LI-62, BACK-UP LIGHT BULB, ASSEMBLY, Rear Combination Light Assembly.>
2) Install the trunk room trim.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

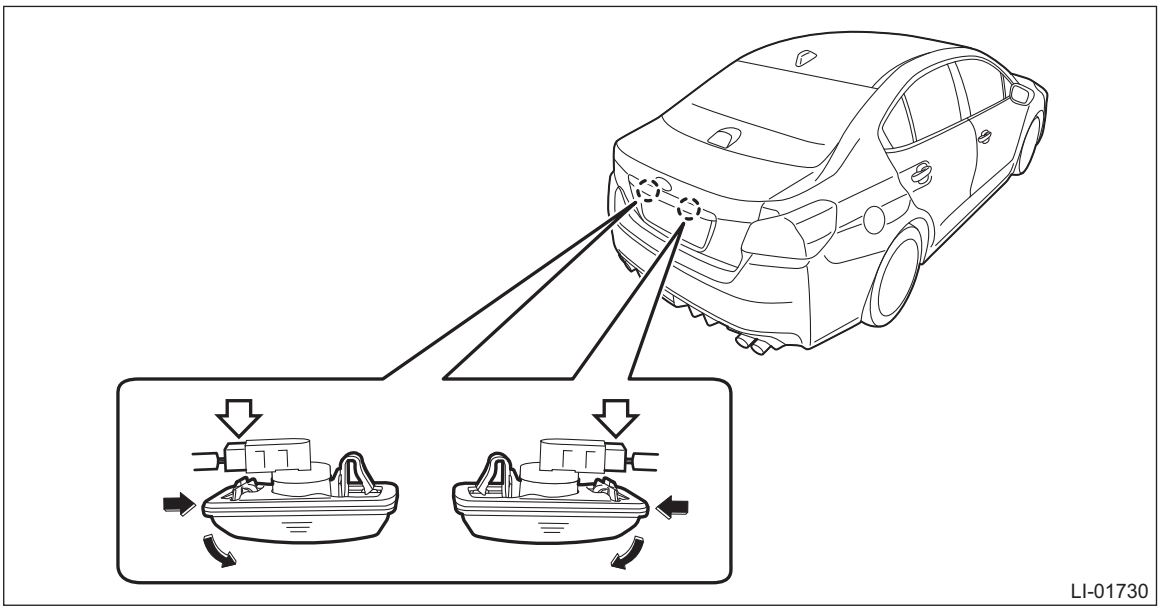
31.License Plate Light

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

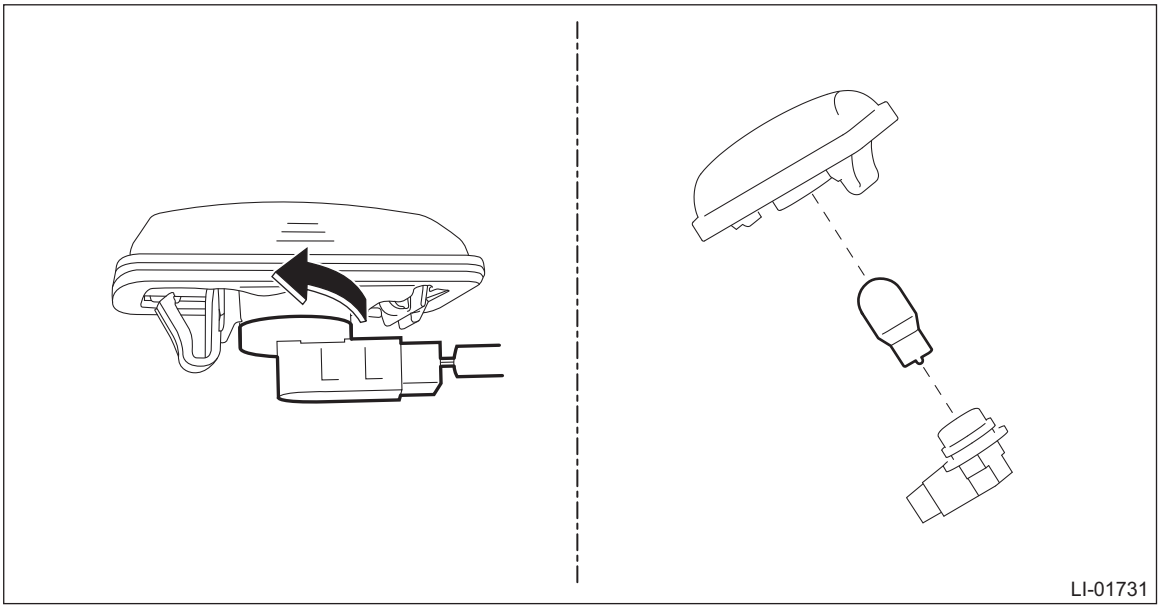
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - trunk lid. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk. <Ref. to EI-55, REMOVAL, Trunk Lid Garnish.>
4) Remove the license plate light.
   (1) Release the claws and pull out the license plate light.
   (2) Disconnect the connector, and remove the license plate light.

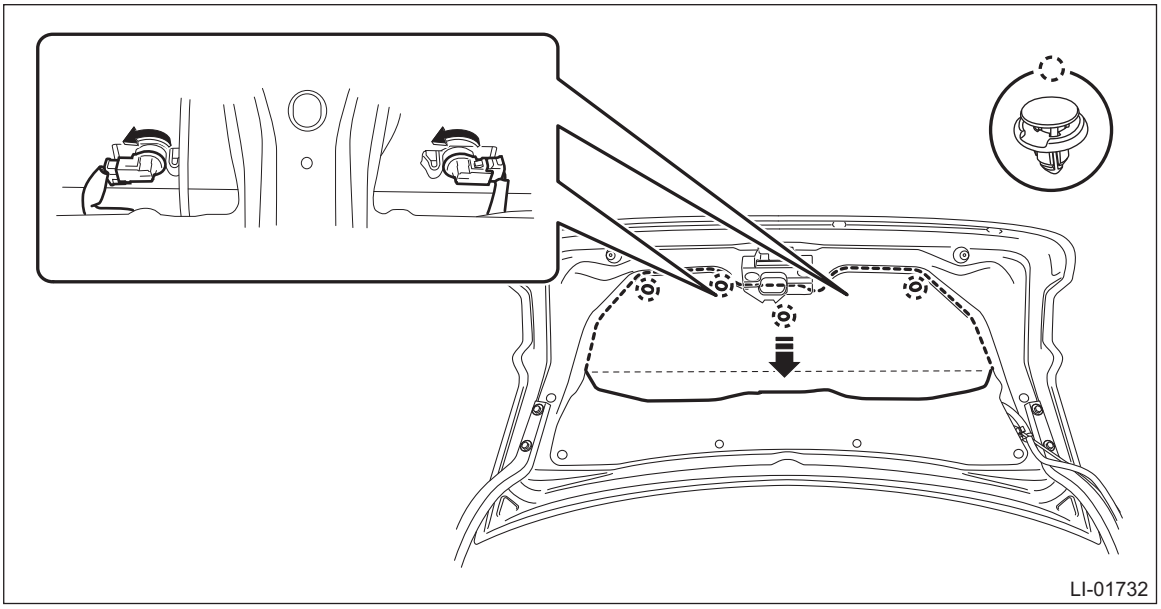


5) Rotate the bulb socket in the direction of arrow shown in the figure to remove the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



NOTE:
When removing the bulb only, remove the trim panel - trunk lid halfway, then remove the bulb socket and the bulb.



B: INSTALLATION

1) Install the license plate light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the license plate light.
3) Install the garnish - trunk. <Ref. to EI-55, INSTALLATION, Trunk Lid Garnish.>

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
4) Install the trim panel - trunk lid.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

32.High-mounted Stop Light

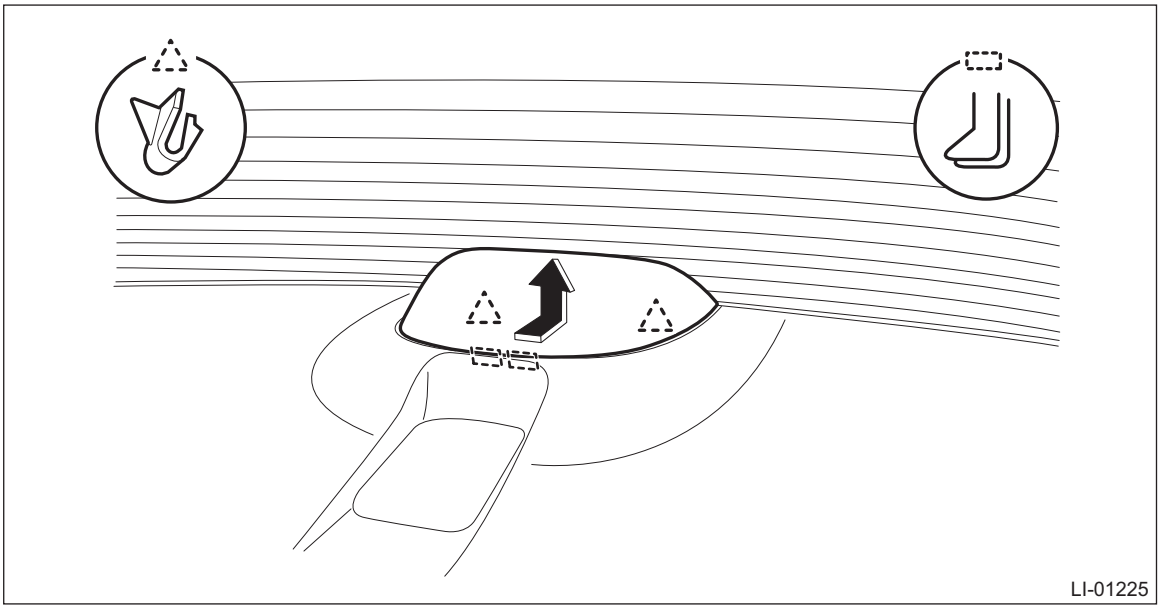
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the light assembly - high-mounted.
   (1) Disconnect the connector.

   (2) Release the claws and hooks, and remove the light assembly - high-mounted.

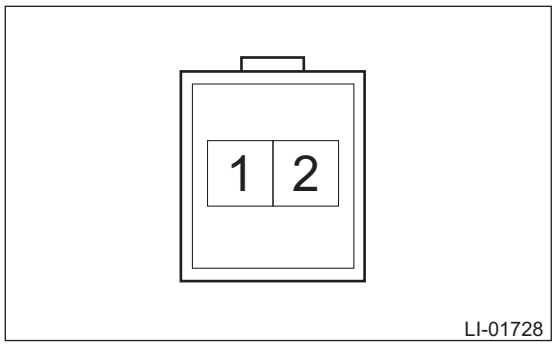


B: INSTALLATION

1) Install the light assembly - high-mounted.
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Apply battery voltage between the connector terminals to check the lighting condition of the light.



Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Apply battery voltage.	Light ON

2) Replace the light assembly - high-mounted if faulty is found in the inspection.

NOTE:
Since LED (Light Emitting Diode) is used for the high-mounted stop light, replace the light assembly - high-mounted.

33.Spot Map Light

A: REMOVAL

1. MODELS WITHOUT EyeSight

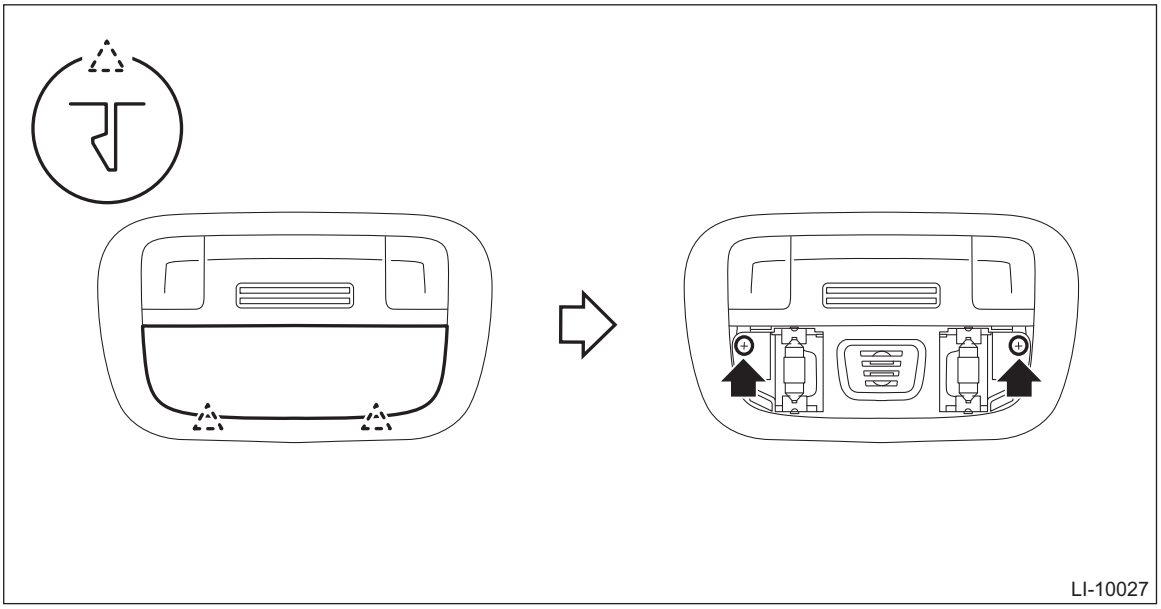
NOTE:
Do not remove the spot map light if removing the bulb only.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the light assembly - map.

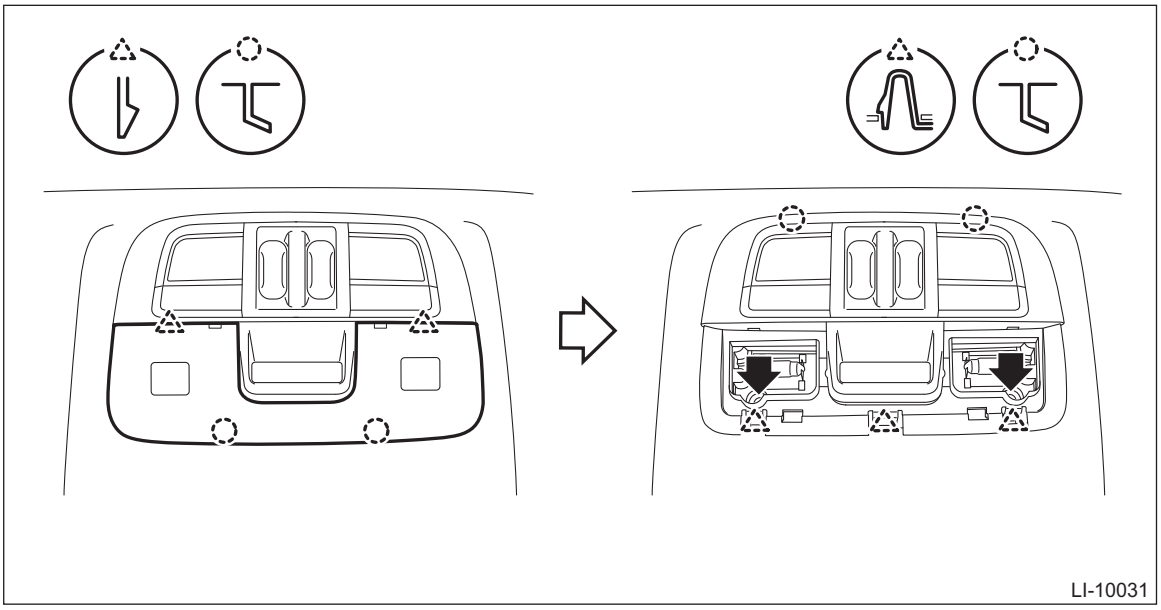
CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Release the claws and remove the lens.
(2) Remove the screws.

- Model without sunroof



- Model with sunroof



(3) Disconnect the connector and remove the light assembly - map and the map light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2. MODELS WITH EyeSight

NOTE:
- The spot map light is a single unit with the stereo camera cover. If defective, replace the stereo camera cover. <Ref. to ES-7, Stereo Camera.>
- Do not remove the stereo camera cover if removing the bulb only.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

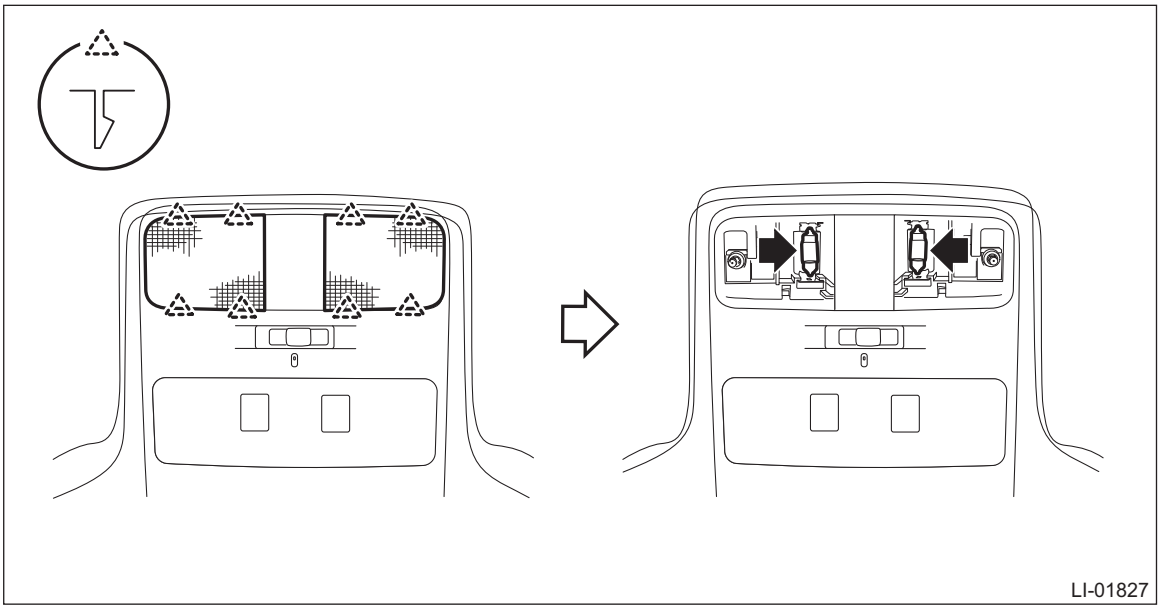
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the map light bulb.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Release the claws and remove the lens.

(2) Remove the map light bulb.



B: INSTALLATION

1. MODELS WITHOUT EyeSight

1) Install the map light bulb and light assembly - map.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2) Install the lens.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. MODELS WITH EyeSight

1) Install the map light bulb and lens.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

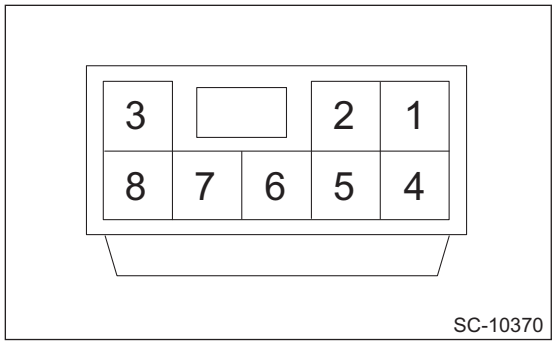
C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

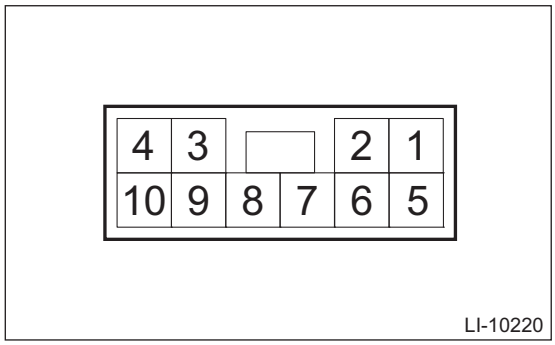
- Models without EyeSight

– Model without sunroof



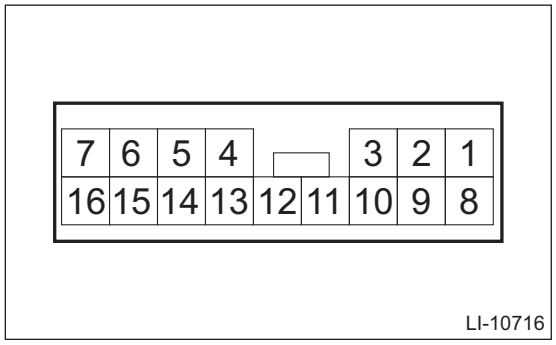
Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

– Model with sunroof



Terminal No.	Inspection conditions	Standard
1 — 4	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

• Models with EyeSight



Terminal No.	Inspection conditions	Standard
1 — 13	Switch OFF	1 MΩ or more
	Switch ON	Approx. 18 Ω

2) Replace the light assembly - map if the inspection result is not within the standard value.

34.Room Light

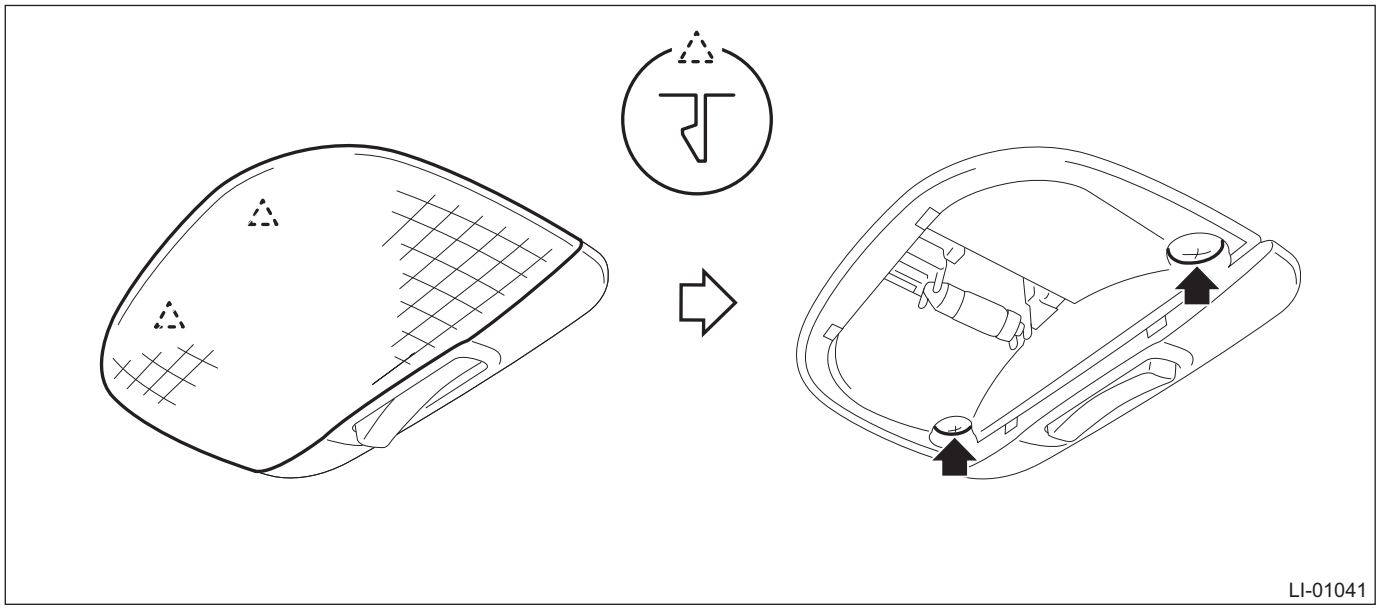
A: REMOVAL

NOTE:
Do not remove the room light if removing the bulb only.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the light assembly - room.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Release the claws and remove the lens.
(2) Remove the screws.



(3) Disconnect the connector and remove the light assembly - room and the room light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

B: INSTALLATION

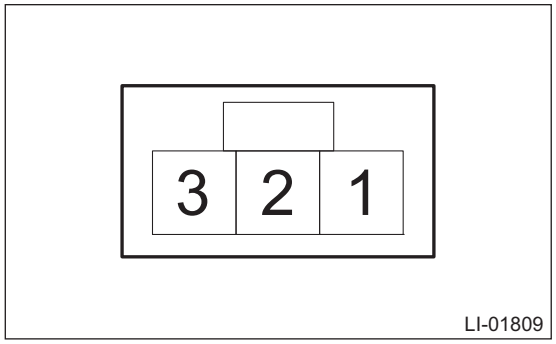
1) Install the room light bulb and light assembly - room.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the lens.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω
2 — 3	Switch door	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check the lighting condition of the light.

Terminal No.	Inspection conditions	Specification
3 (+) — 1 (–) 3 (+) — 2 (–)	Switch OFF	Light OFF
	Switch ON	Light ON
	Switch door	Light ON

3) Replace the light assembly - room if faulty is found in the inspection.

35.Trunk Room Light

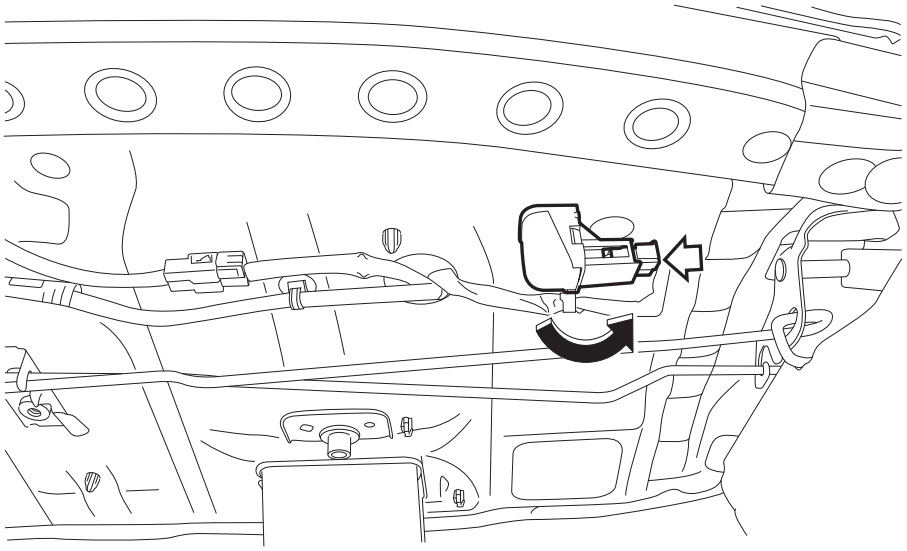
A: REMOVAL

NOTE:
Do not remove the trunk room light if removing the bulb only.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the light assembly - trunk room.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

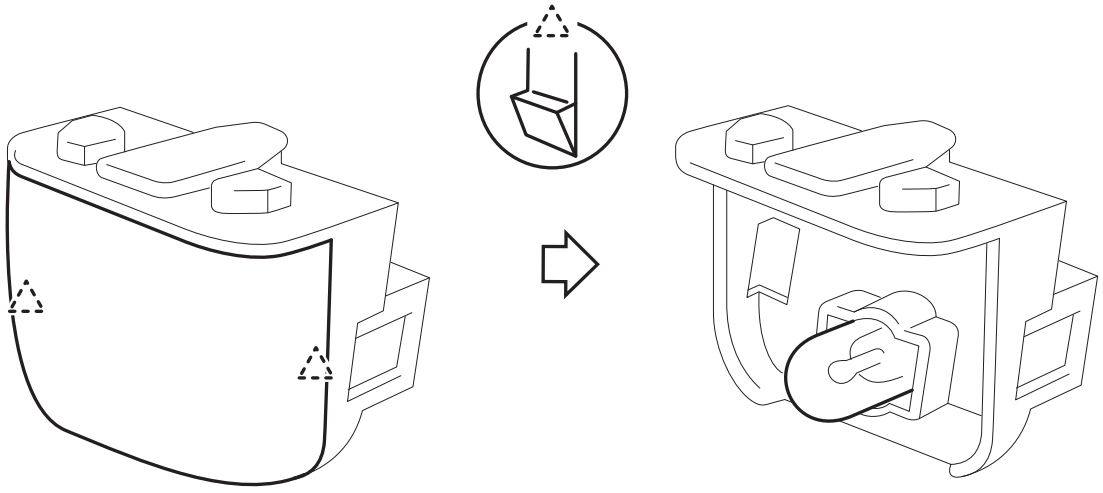
(1) Disconnect the connector.
(2) Turn the light assembly - trunk room counterclockwise to 60° and remove the light.



LI-01230

3) Release the claws and remove the lens and trunk room light bulb.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.



LI-01048

B: INSTALLATION

1) Install the trunk room light bulb and lens.

CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.

2) Install the light assembly - trunk room.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

36.LED Illumination Light

A: REMOVAL

1. GLOVE BOX LIGHT

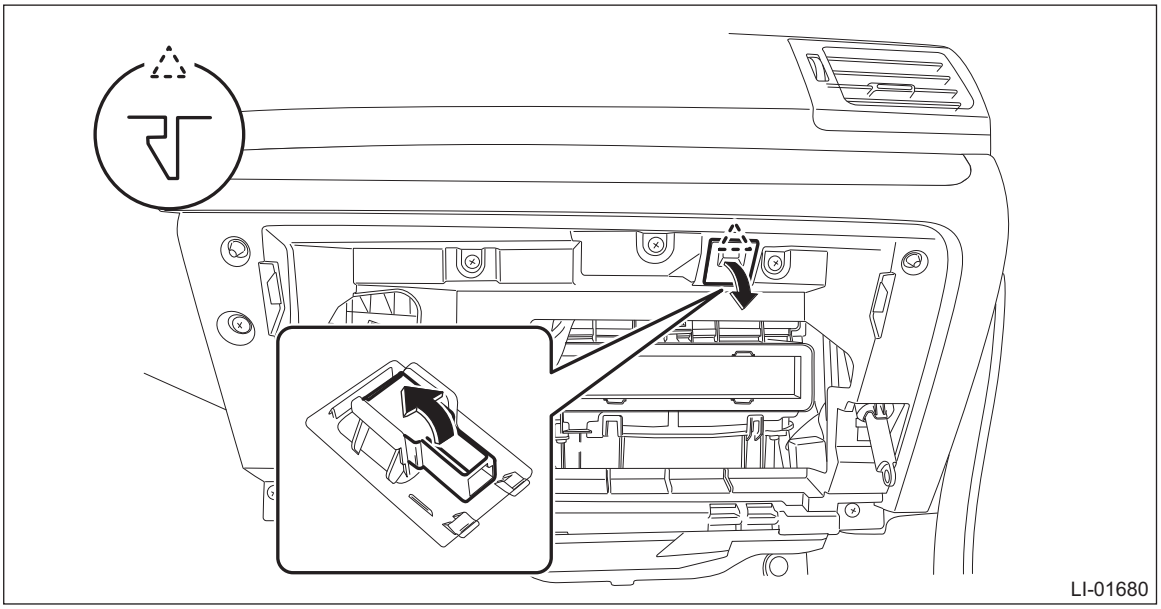
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the pocket assembly. <Ref. to EI-67, REMOVAL, Glove Box.>
3) Remove the light - pocket cover.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Release the claws.
(2) Disconnect the connector, and remove the light - pocket cover.

4) Release the claws, and remove the light - pocket.



2. POCKET LIGHT

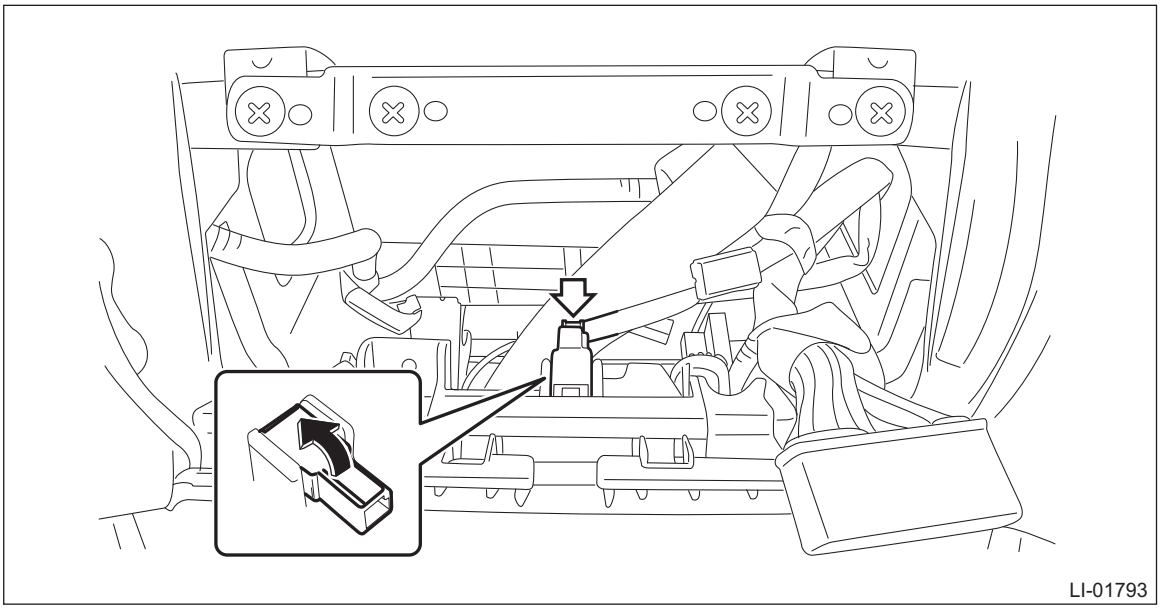
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the panel center assembly. <Ref. to EI-69, REMOVAL, Center Console.>
3) Remove the light - pocket.

CAUTION:
When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.

(1) Disconnect the connector.

(2) Release the claws, and remove the light - pocket.



B: INSTALLATION

1. GLOVE BOX LIGHT

1) Install the light - pocket.
2) Install the light - pocket cover.
3) Install the pocket assembly.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. POCKET LIGHT

1) Install the light - pocket.
2) Install the panel center assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

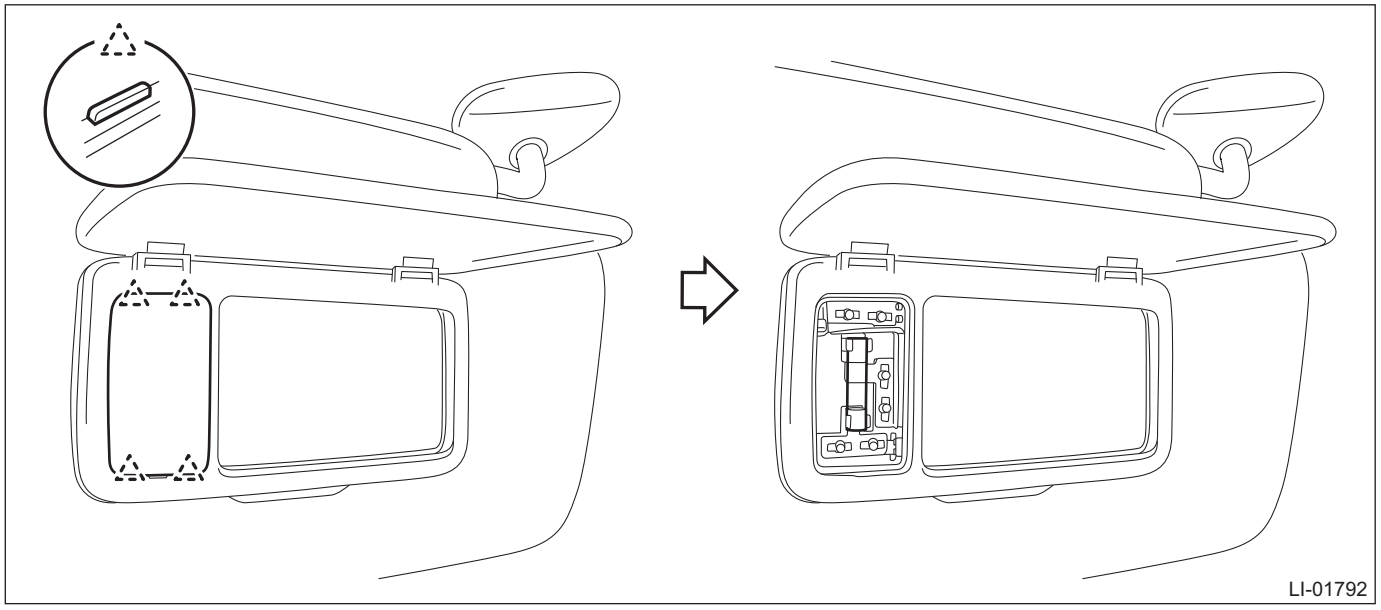
37.Vanity Mirror Light

A: REMOVAL

NOTE:
• The vanity mirror light is integrated into the sun visor assembly. Replace the sun visor assembly if faulty. <Ref. to EI-99, REMOVAL, Sun Visor.>
• Do not remove the sun visor assembly if removing the bulb only.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the sun visor assembly. <Ref. to EI-99, REMOVAL, Sun Visor.>
3) Release the claws and remove the lens and vanity mirror light bulb.

CAUTION:
• Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
• When using a flat tip screwdriver, use an appropriate sized tool for the insertion opening, apply protective tape or cloth around the tool, and be careful not to cause damage.



B: INSTALLATION

1) Install the vanity mirror light bulb and lens.

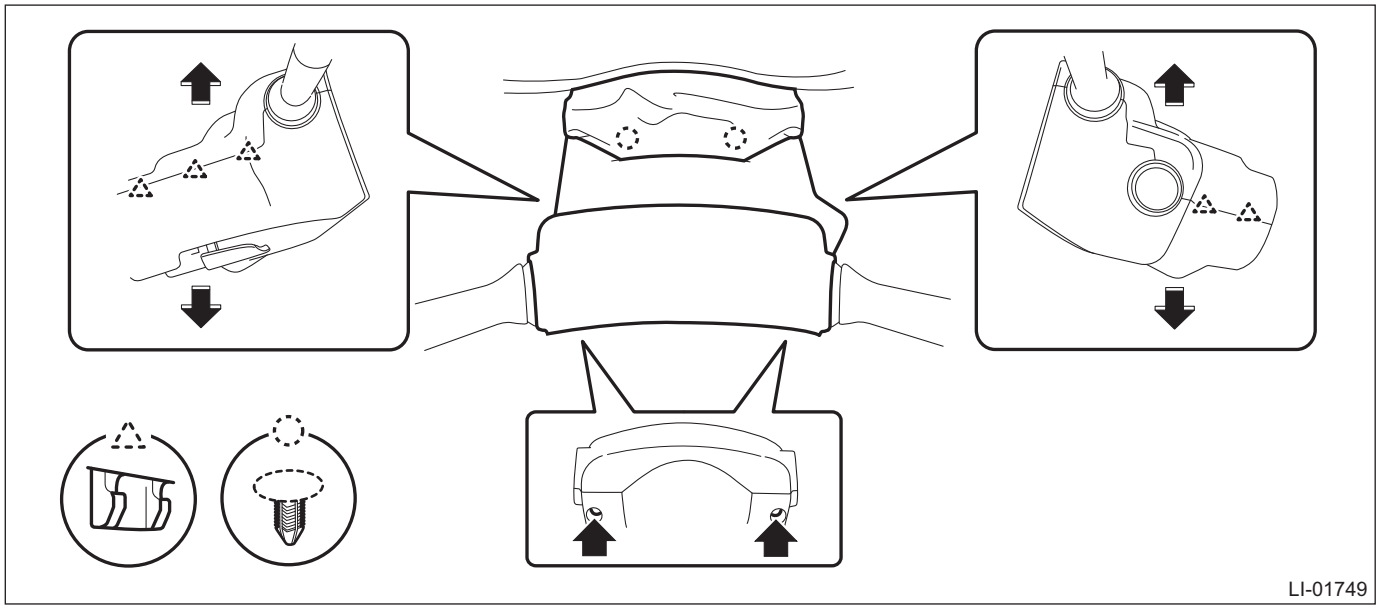
CAUTION:
Use a dry clean cloth so that no grease or water adheres to the glass portion of the bulb.
2) Install the sun visor assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

38.Ignition Switch Illumination

A: REMOVAL

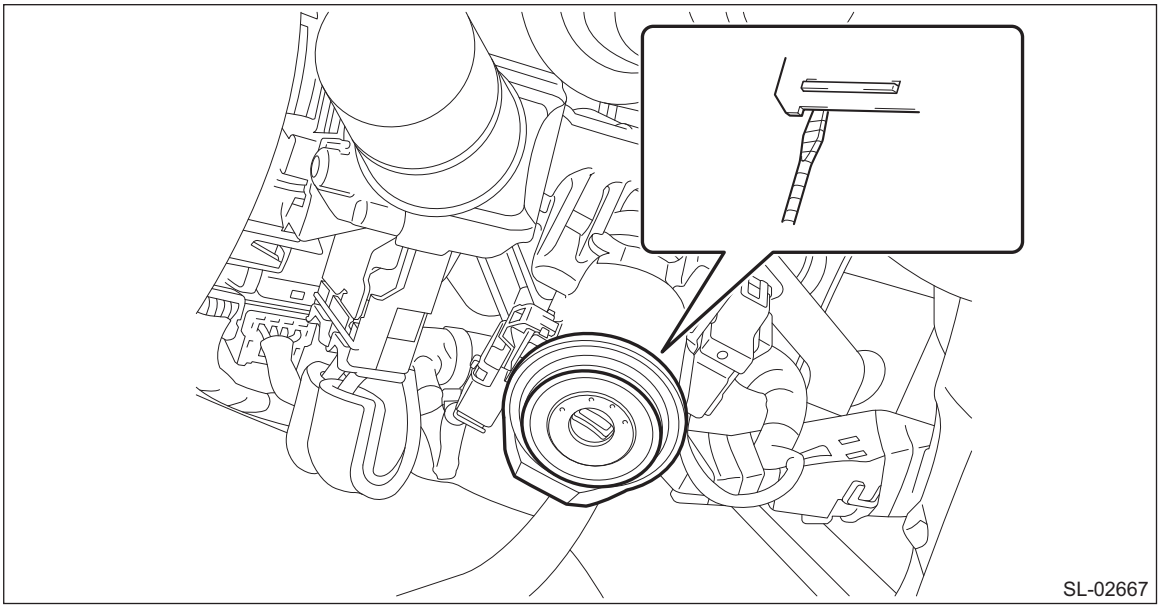
NOTE:
The ignition switch illumination is integrated into the immobilizer antenna assembly.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - column.
   (1) Remove the screws by turning the steering wheel to right and left.
   (2) Release the clips, and remove the cover assembly - steering UPR.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



3) Remove the ignition switch illumination.
   (1) Disconnect the connector.
   (2) Release the claw using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the ignition switch illumination.

CAUTION:
Do not apply excessive force to remove the ignition switch illumination lock. Otherwise they may be broken because those parts are the products made of a plastic.



B: INSTALLATION

1) Install the ignition switch illumination.
2) Install the cover assembly - column.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

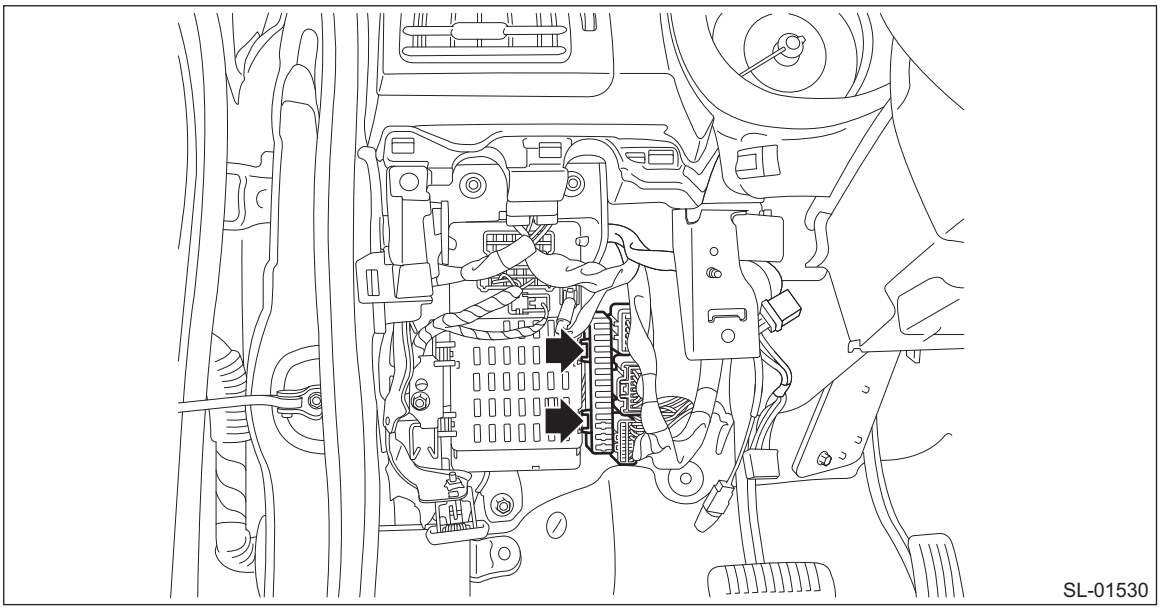
	Step	Check	Yes	No
1	**CHECK THE IGNITION SWITCH ILLUMINATION.** Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step **2**.
2	**CHECK THE IGNITION SWITCH ILLUMINATION.** Make sure the ignition switch illumination blinks when the ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the ignition switch illumination circuit. <Ref. to SL-23, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

39.Auto Headlight Beam Leveler Control Module

A: REMOVAL

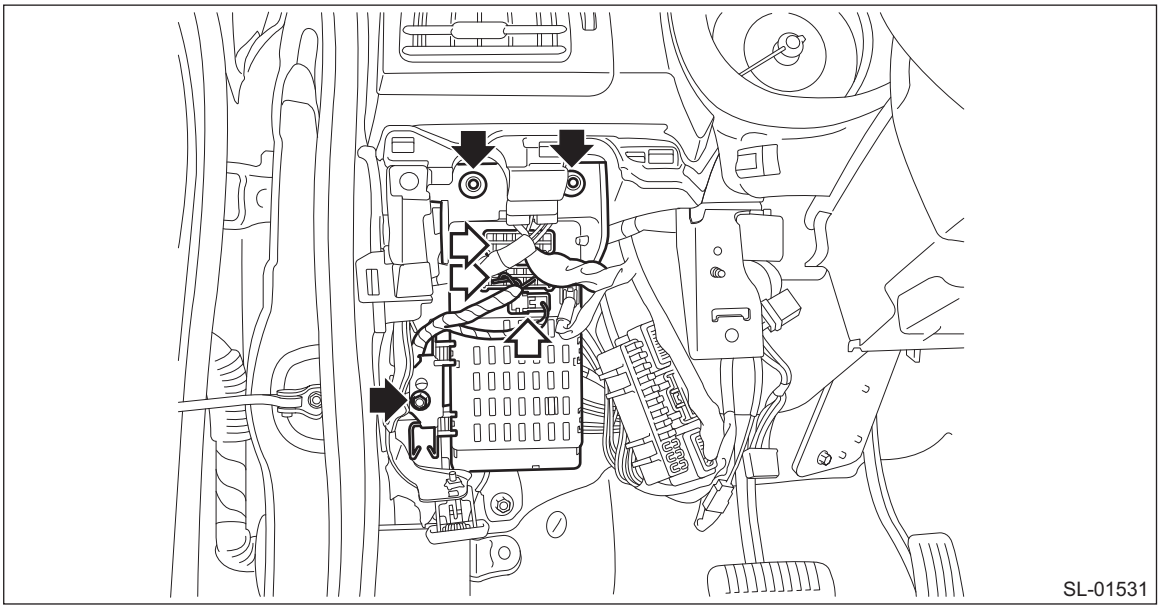
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the battery ground cable and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



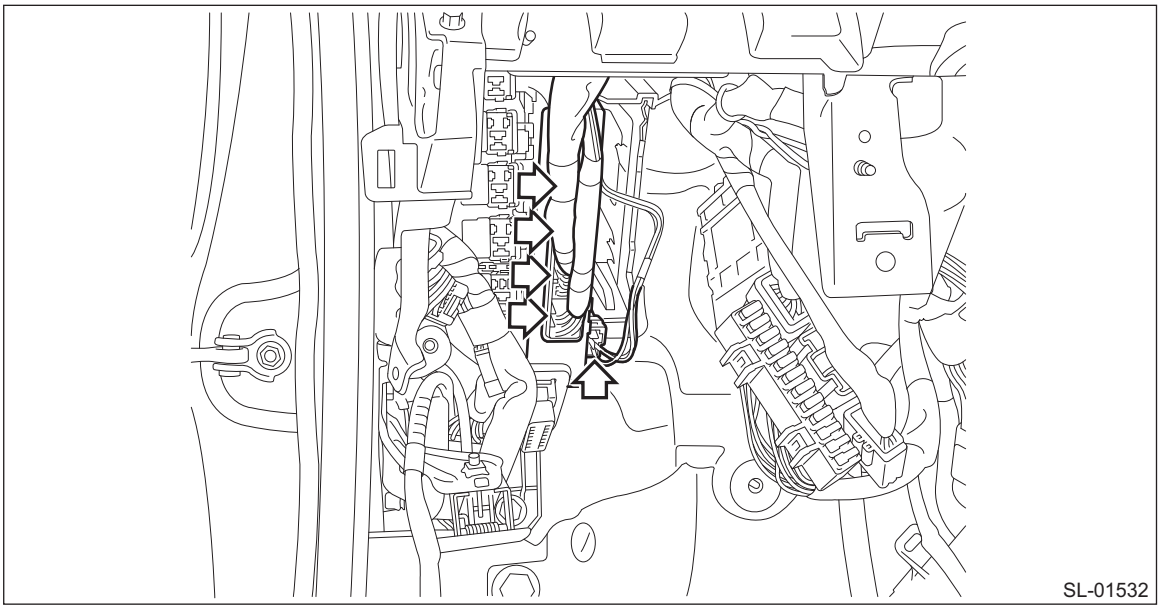
SL-01530

5) Remove the relay & fuse box.
(1) Disconnect the connector.
(2) Remove the bolts and nuts, and remove the relay & fuse box.

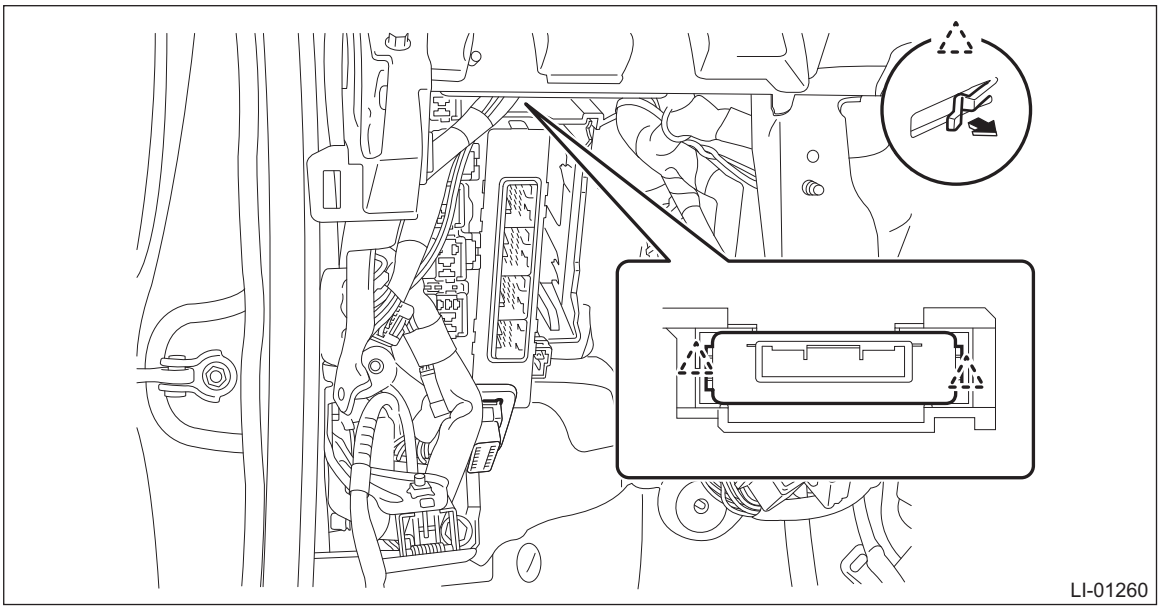


SL-01531

6) Disconnect the connector of body integrated unit.



7) Remove the auto headlight beam leveler CM.
   (1) Disconnect the connector.
   (2) Release the claws and pull out the auto headlight beam leveler CM.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the auto headlight beam leveler CM.
2) Install the relay & fuse box.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the fuse holder.
4) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the cover assembly - instrument panel LWR driver.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Perform initialization and reinitialization of the auto headlight beam leveler system. <Ref. to LI-26, PROCEDURE, Auto Headlight Beam Leveler System.>

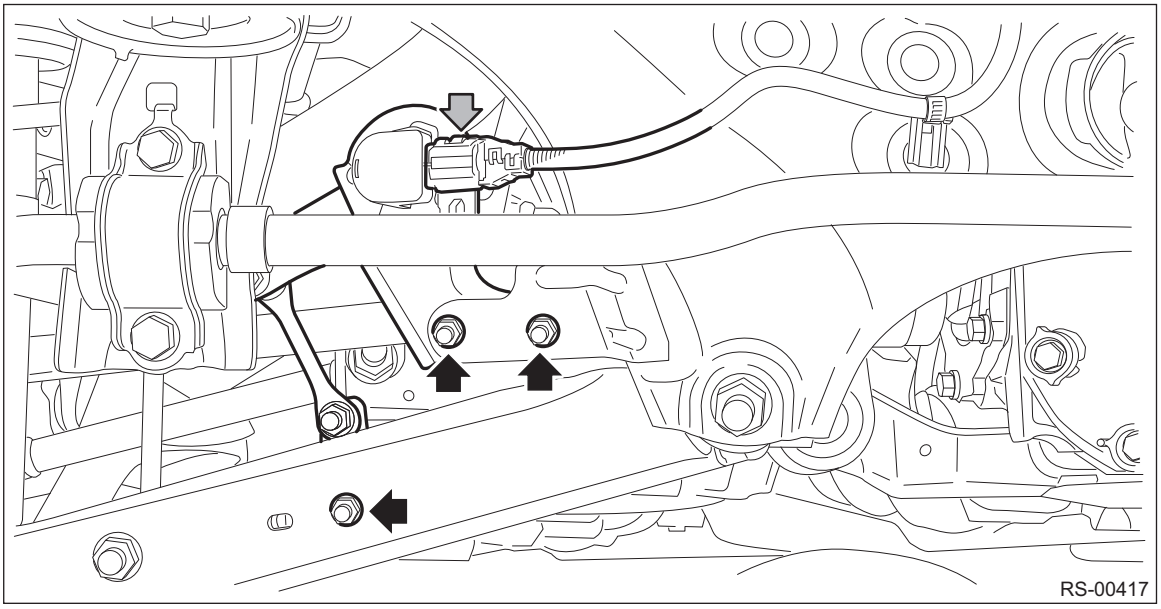
40.Rear Height Sensor

A: REMOVAL

CAUTION:
Always remove the sensor assembly - headlight beam leveler before removing any parts related to the suspension.
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Remove the rear wheel on the left side.
4) Remove the sensor assembly - headlight beam leveler.

CAUTION:
Do not disassemble the sensor and lever.
(1) Disconnect the connector.
(2) Remove the nuts, and remove the sensor assembly - headlight beam leveler.



B: INSTALLATION

CAUTION:
Do not apply impact to the sensor assembly - headlight beam leveler or forcibly move the arm. Doing so may cause sensor damage and malfunction.
1) Install the sensor assembly - headlight beam leveler.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the rear wheels.

Tightening torque:
120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) Lower the vehicle.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Perform reinitialization of the auto headlight beam leveler system. <Ref. to LI-26, REINITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

NOTE:
When replacing the rear vehicle height sensor with a new part, perform the initialization. <Ref. to LI-26, INITIALIZATION, PROCEDURE, Auto Headlight Beam Leveler System.>

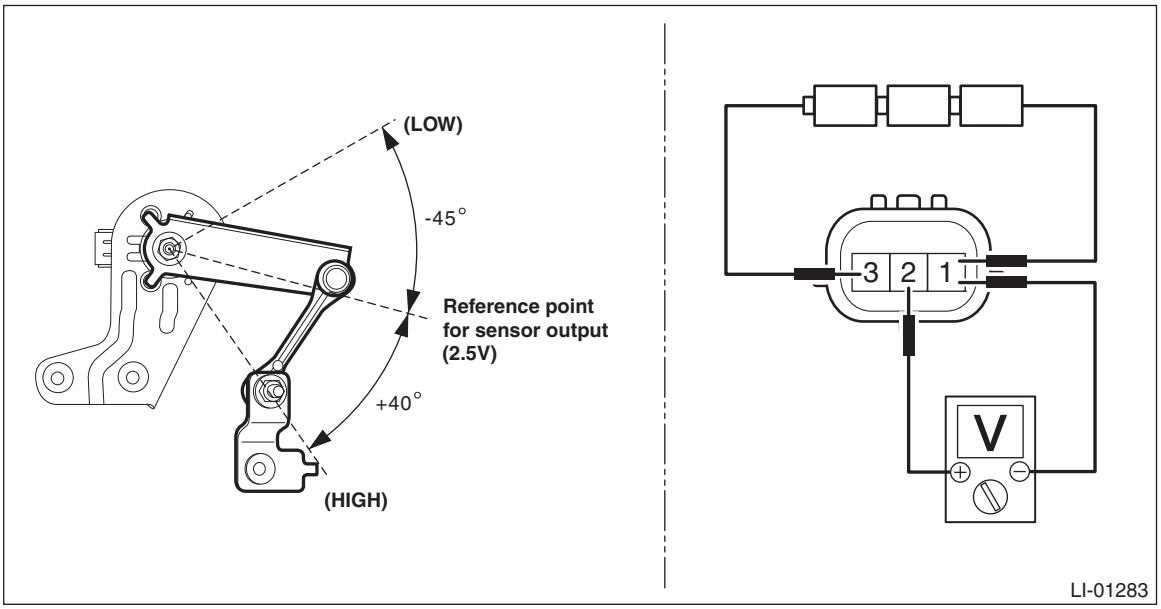
C: INSPECTION

1) Connect three dry cell batteries (1.5 V) in series.

NOTE:
- Use new dry-cell batteries.
- Using a circuit tester, check that the initial voltage of each dry-cell battery is 1.6 V or more. And also check that the voltage of three batteries in series is between 4.8 V and 5.2 V.
- For power supply, 5 V DC constant voltage power source can also be used.

2) Connect the cell battery positive terminal to the connector terminal No. 3, and the cell battery negative terminal to the connector terminal No. 1.
3) With voltage applied, measure the voltage between connector terminals when the sensor link is moved slowly up and down.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 (+) — 1 (–)	Move the link within the operation range.	Approx. 0.5 — 4.1 V

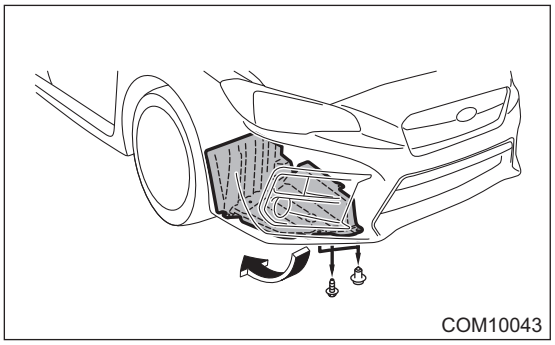
NOTE:
When the link is moved upward from the standard output position, the sensor output varies to the 0.5 V side. When the link is moved downward, the sensor output varies to the 4.1 V side.
4) Replace the sensor assembly - headlight beam leveler if the inspection result is not within the standard value.

41.Day Time Running Resistor

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

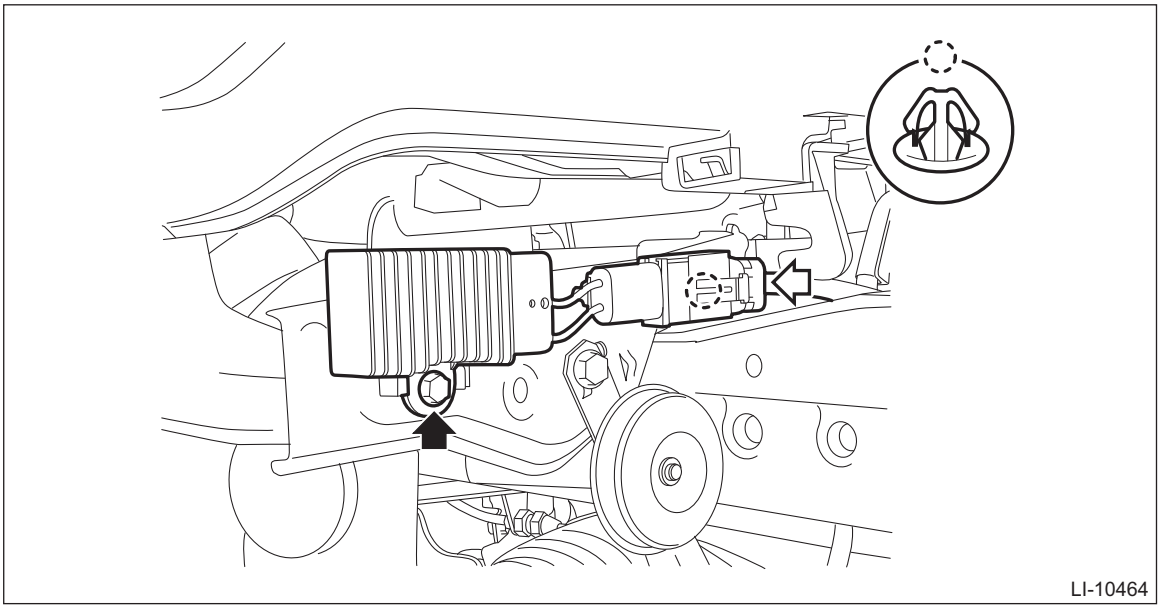
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lift up the vehicle.
3) Remove the screw and clips, and turn over the front side of the mud guard - front.



4) Remove the resistor assembly - daytime running light.

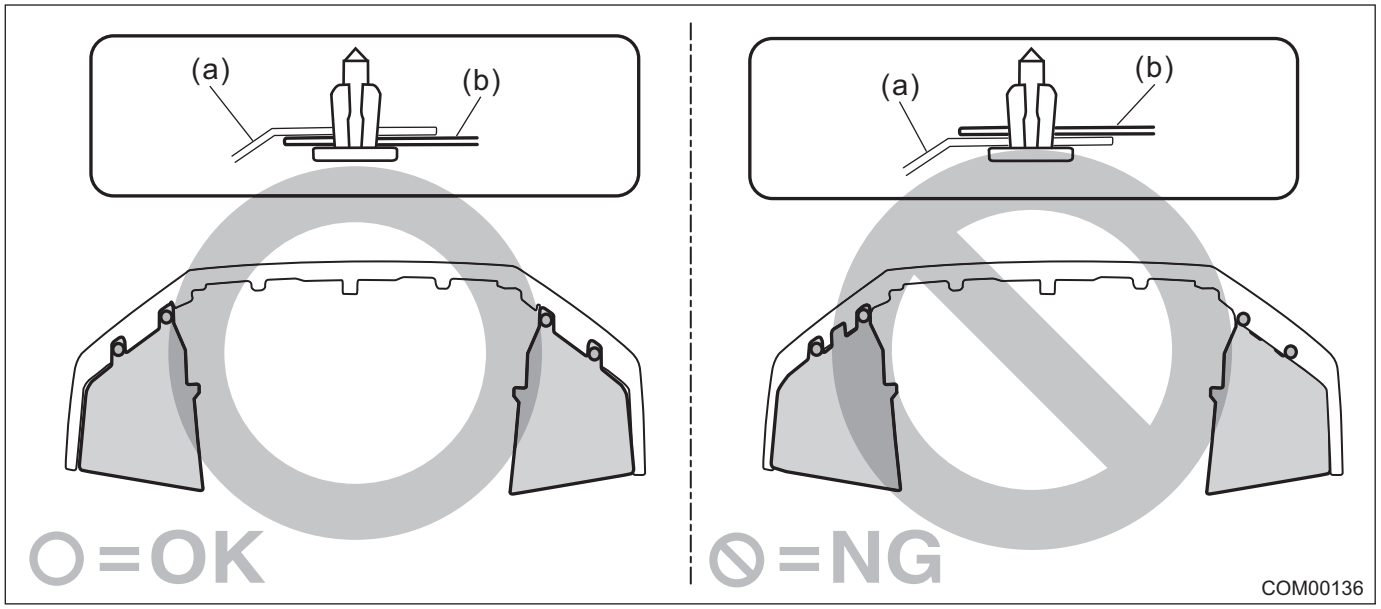
CAUTION:
The resistor may become hot. Be careful not to burn yourself when removing it.

(1) Disconnect the connector.
(2) Remove the bolts, then remove the resistor assembly - daytime running light.



B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



1) Install the resistor assembly - daytime running light.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the mud guard - front.
3) Lower the vehicle.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Connection diagram
1 — 2	Always	0.83±0.03 Ω	
2) Replace the resistor assembly - daytime running light if the inspection result is not within the standard.

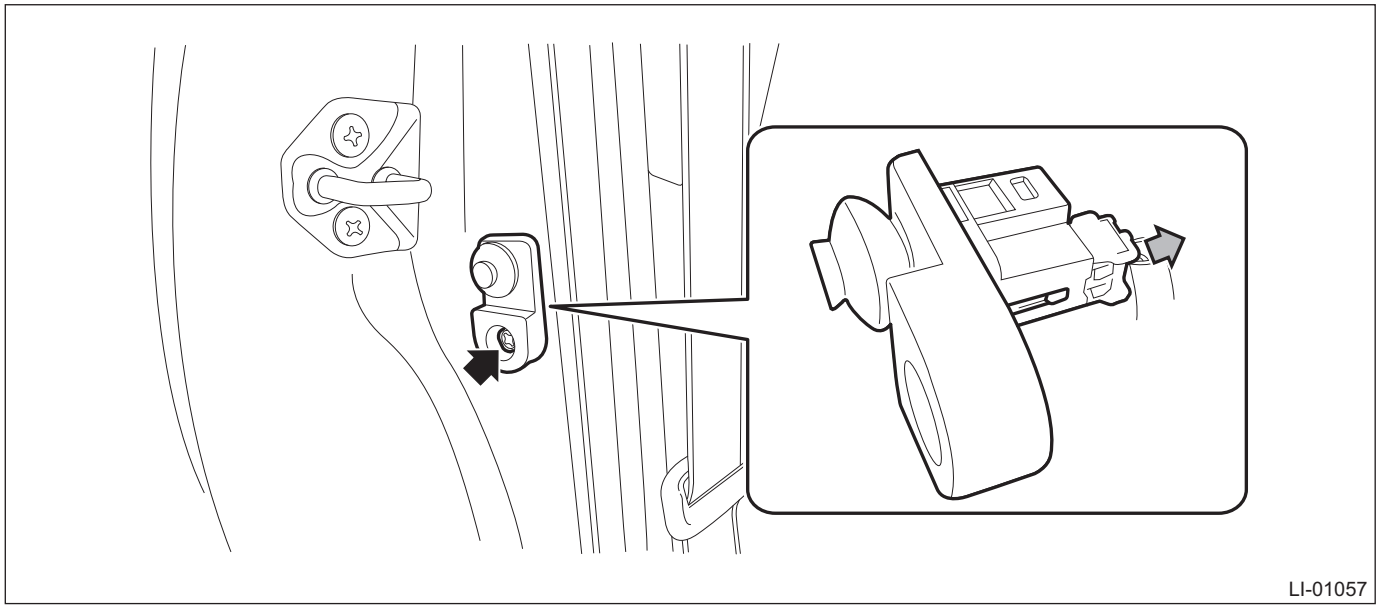
42.Door Switch

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the switch assembly - door.
   (1) Remove the screws, and pull out the switch assembly - door toward you.
   (2) Disconnect the connector and remove the switch assembly - door.



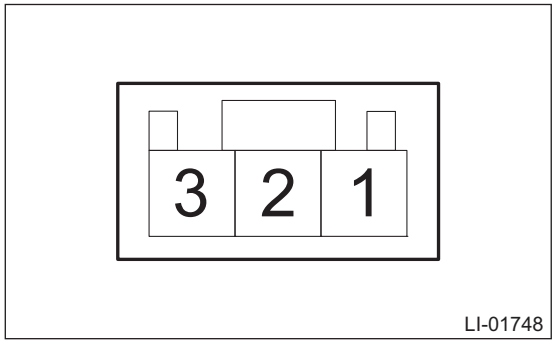
B: INSTALLATION

1) Install the switch assembly - door.
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 3	When the switch is not pressed	Less than 1 Ω
	When the switch is pressed	1 MΩ or more

2) Replace the switch assembly - door if the inspection result is not within the standard value.

AUTO HEADLIGHT BEAM LEVELER SYSTEM (DIAGNOSTICS)

14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	21
15.	Diagnostics with Phenomenon	36

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to AL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Perform the interview, and Go to step **2**.
2	**BASIC INSPECTION.** Perform the basic inspection. <Ref. to AL(diag)-5, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair the failures from the basic inspection, and Go to step **3**.
3	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select [Headlight / Foglight]. NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **4**.	Check the communication circuit.
4	**CHECK DTC.** Read DTC of [Headlight / Foglight] using the Subaru Select Monitor. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).> 1) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed? (Current malfunction)	Record the DTC, time stamp and freeze frame data, and Go to step **5**.	Perform diagnosis according to the procedures in the diagnostics with phenomenon. <Ref. to AL(diag)-36, Diagnostics with Phenomenon.>
5	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis according to the displayed DTC. 2) Repair or replace the cause of trouble. 3) Perform the clear memory of [Headlight / Foglight] using the Subaru Select Monitor. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Execute the inspection mode. <Ref. to AL(diag)-15, Inspection Mode.> 5) Read DTC of [Headlight / Foglight] using the Subaru Select Monitor. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. AUTO HEADLIGHT BEAM LEVELER SYSTEM

Inspect the following items regarding the vehicle's state.

Auto Headlight Beam Leveler System Check List for Interview Received Year Month Day		Date the Vehicle is	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions		Occurrence location	
Accessory installation condition			
Confirmation of trouble condition			
❑ Diagnostic code			

2. STEERING RESPONSIVE HEADLIGHT

Inspect the following items regarding the vehicle's state.

Steering Responsive Headlight Check List for Interview Received Year Month Day		Date the Vehicle is	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • •			
Date and time when the trouble occurred		Frequency of trouble occurrence	Always occurs Sometimes occurs (times per day, times per month)
Condition of trouble occurrence (How the trouble occurs)		Weather	Fine • Cloudy • Rainy • Snowy • Others ( )
		Temperature	°C (°F) — °C (°F)
Road conditions			

Check List for Interview

Accessory installation condition	
Confirmation of trouble condition	
Curve of trouble occurrence	❑ Right-hand curve ❑ Left-hand curve ❑ Both
Information on curve of trouble occurrence NOTE: Check the location and curve on the map.	❑ Specific location ❑ Gentle curve ❑ Sharp curve ❑ Uphill ❑ Downhill ❑ Other
Vehicle speed at trouble occurrence	Approximately km/h (MPH)
SRH OFF indicator status	❑ Light OFF ❑ Light ON ❑ Flashing
Headlight switch operation	❑ Lo-Hi switch available ❑ Lo-Hi switch unavailable
Range inspection for CVT vehicle	❑ Shift indicator operates according to the shift position ❑ Shift indicator does not operate according to the shift position
❑ Diagnostic code	

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Before performing diagnosis, refer to “CAUTION” in “General Description” in Airbag System. <Ref. to AB-9, CAUTION, General Description.>

2. AUTO HEADLIGHT BEAM LEVELER SYSTEM/STEERING RESPONSIVE HEADLIGHT/LED HEADLIGHT SYSTEM

Before performing diagnosis, refer to “CAUTION” in “General Description” in Lighting System. <Ref. to LI-2, CAUTION, General Description.>

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to LI-4, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

2. FUNCTION CHECK

- Auto headlight beam leveler system
  1. Turn the ignition switch to ON.
  2. Turn on the headlight low beam.
  3. Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
- LED headlight system
  1. Turn the ignition switch to ON.
  2. Turn on the headlight low beam.
  3. Check that the headlight Low beam illuminates with normal brightness.
  4. Check that the LED headlight indicator on the combination meter does not illuminate.
- Steering responsive headlight (the initialize function)
  1. Stop the vehicle at approximately 1 m (3.3 ft) away and perpendicular to the wall.
  2. Make the vehicle vicinity dark.
  3. Set the vehicle headlight switch to Low beam.
  4. Make sure that the headlight cut line moves to left and right immediately after the engine started.

C: PREPARATION TOOL

1. SPECIAL TOOL

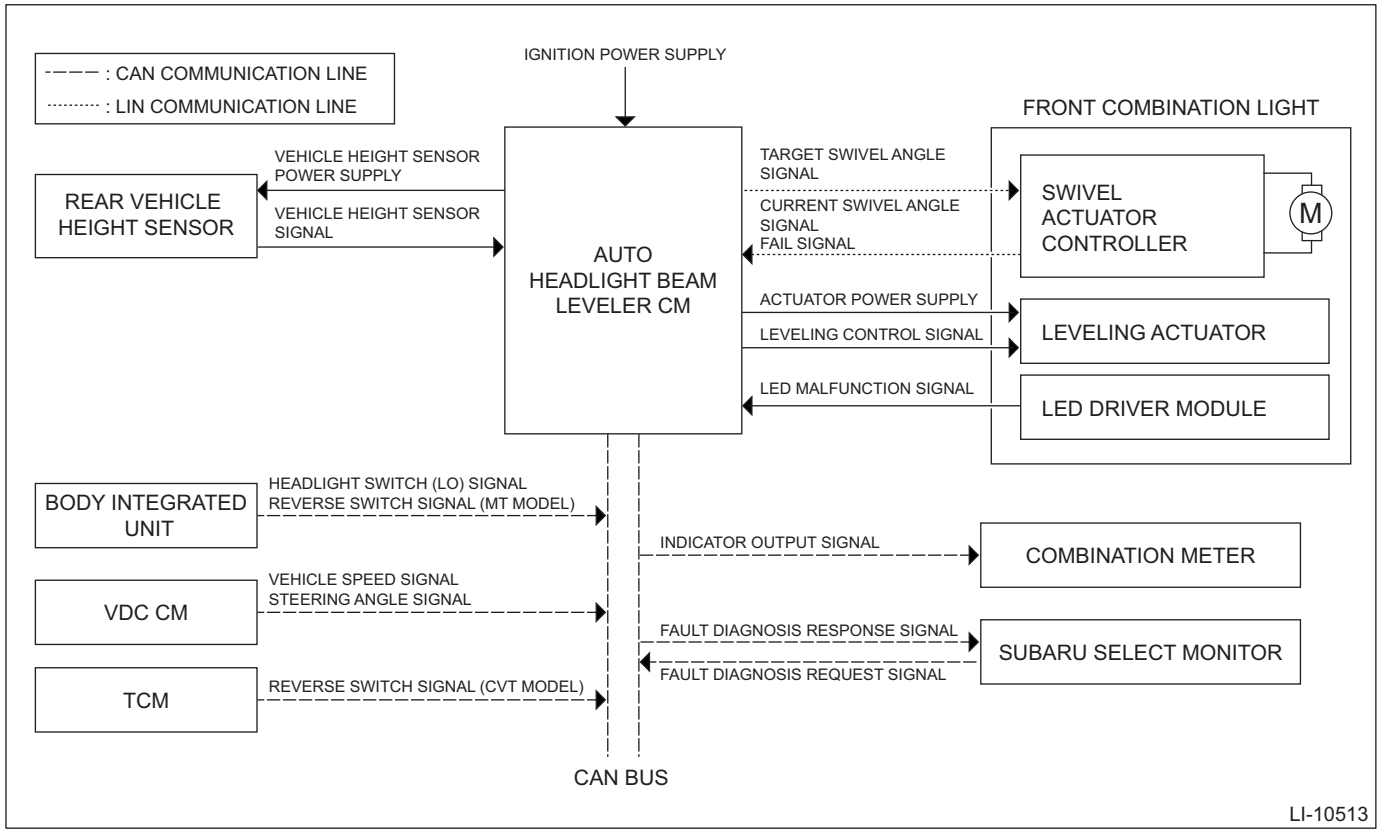
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

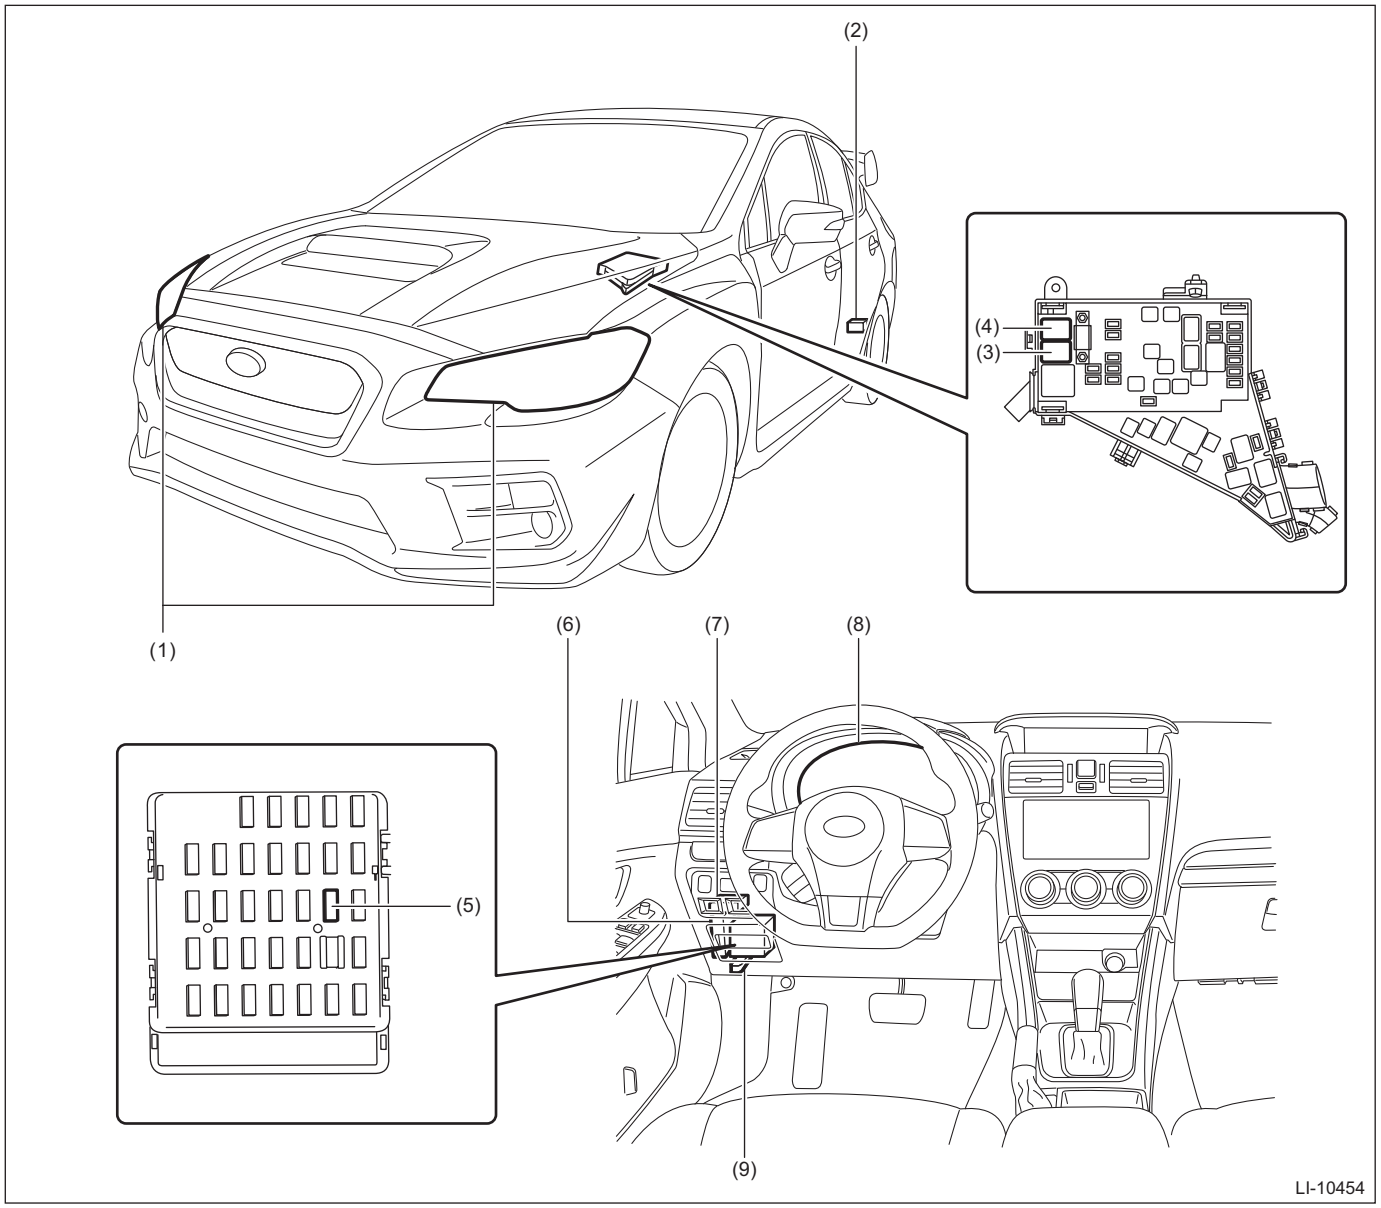
D: SYSTEM BLOCK DIAGRAM

• The auto headlight beam leveler is a system that automatically adjusts the headlight beam level (vertical directions) according to the longitudinal inclination angle of the vehicle due to heavy load or passengers' getting in/off a car.
• The steering responsive headlight is a system that calculates the corner R from the steering angle and vehicle speed to illuminate beyond the corner by moving the headlight beam to left and right.



4. Electrical Component Location

A: LOCATION

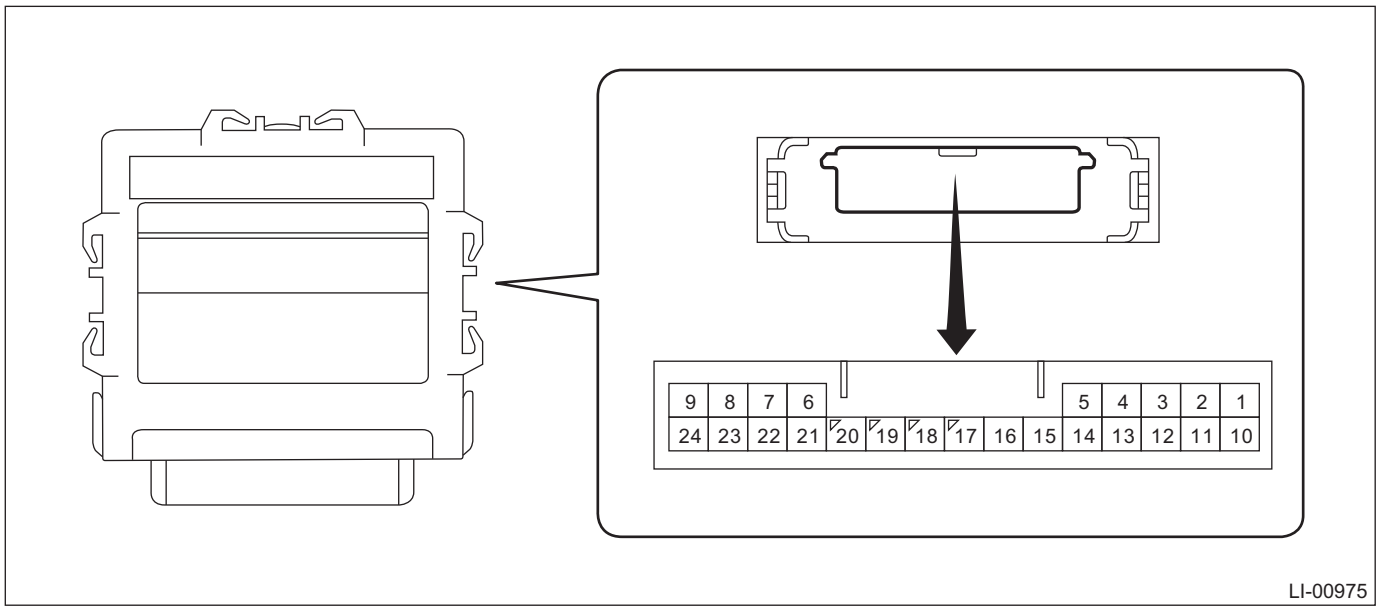


(1)	Headlight ASSY – Headlight beam leveler actuator – SRH swivel actuator	(4)	Headlight relay (Hi)	(7)	Auto headlight beam leveler CM
(2)	Rear vehicle height sensor	(5)	Fuse 10 A (auto headlight beam leveler CM)	(8)	Combination meter
(3)	Headlight relay (Lo)	(6)	Body integrated unit	(9)	Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. AUTO HEADLIGHT BEAM LEVELER CM



Terminal No.	Content	Measuring condition	Standard
1 ←→ Chassis ground	IG power supply	Ignition switch ON	8 — 16 V
2 ←→ Chassis ground	GND	Always	Less than 1 Ω
3 ←→ Chassis ground	Rr vehicle height sensor GND	Always	Less than 1 Ω
4	—	—	—
5 ←→ Chassis ground	RH headlight malfunction signal	Always	1 MΩ or more
6	—	—	—
7 ←→ Chassis ground	SRH signal (LIN)	Always	1 MΩ or more
8	—	—	—
9 ←→ Chassis ground	SRH GND	Always	Less than 1 Ω
10 ←→ Chassis ground	Leveling actuator power supply	Ignition switch ON	10 — 16 V
11 ←→ Chassis ground	Leveling actuator GND	Always	Less than 1 Ω
12 ←→ 3	Rr vehicle height sensor power supply	Ignition switch ON	4.75 — 5.25 V
13	—	—	—

Terminal No.	Content	Measuring condition	Standard
14	—	—	—
15	—	—	—
16 ←→ Chassis ground	LH headlight malfunction signal	Always	1 MΩ or more
17 ←→ Chassis ground	Leveling actuator signal	Headlight off → on	Less than 1 V → 1.0 — 14.4 V (for 17 seconds)
		Headlight on, no vehicle height change → change and hold vehicle height for 3 seconds or more	
18	—	—	—
19 ←→ Chassis ground	Rr sensor signal	IG ON (with no passenger, no load and vehicle stopped)	Approx. 2.5 V (changes according to vehicle condition)
20	—	—	—
21	—	—	—
22	—	—	—
23	CAN-H	Cannot be measured (CAN communication line)	—
24	CAN-L	Cannot be measured (CAN communication line)	—

B: WIRING DIAGRAM

Refer to “Headlight Beam Leveler System” in the wiring diagram. <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- If the auto headlight beam leveler CM can not communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to AL(diag)-11, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Communication error with auto headlight beam leveler CM

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective auto headlight beam leveler CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

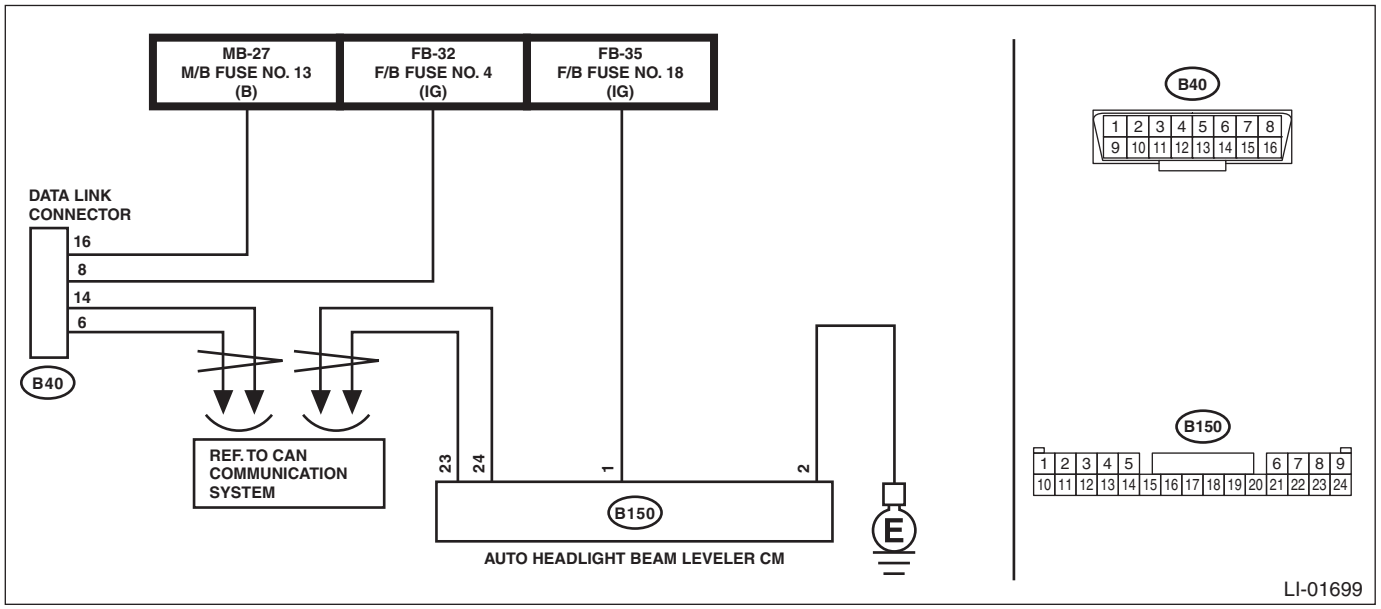
Communication is impossible between auto headlight beam leveler CM and Subaru Select Monitor.

CAUTION:

Initialization is required after replacing the auto headlight beam leveler CM.

Wiring diagram:

Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>



Step		Check	Yes	No
1	**CHECK OTHER COMMUNICATION.** Communicate with the system other than the auto headlight beam leveler CM using the Subaru Select Monitor.	Is the communication to other control module possible?	Go to step **2**.	Perform the "Communication for Initializing Impossible" of LAN system. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>
2	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **3**.	Perform the inspection according to the diagnosis for LAN system.

Step		Check	Yes	No
3	**CHECK FOR POOR CONTACT.** 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM connector. 3) Connect the disconnected connectors. 4) Communicate with the auto headlight beam leveler CM using the Subaru Select Monitor.	Is communication possible?	It is possible that temporary poor communication occurs.	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

1) Turn the ignition switch to ON.
2) Turn on the headlight low beam.
3) Check that the beam axes move when the vehicle condition is kept for three seconds or more after the vehicle posture is changed with the vehicle stopped.
4) Read the DTC of [Headlight / Foglight] using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item Name	Content	Standard	Note
Trip Count	Time stamp information, trip counter	—	—
Count	Time stamp information, original counter identification information	—	—
Time [msec]	Time stamp information, time counter	—	—
F Sensor Signal	Output voltage value from front vehicle height sensor Display range: 0.00 — 5.00 V	5 V	Fixed at 5 V because front vehicle height sensor is not equipped.
R Sensor Signal	Output voltage value from rear vehicle height sensor Display range: 0.00 — 5.00 V	Approx. 2.5 V	Changes according to vehicle condition.
Actuator Signal	Power supply voltage value to headlight beam leveler actuator Display range: 0% — 100%	Not in operation: 0% In operation: 10 — 90% (17 Sec)	Changes according to vehicle condition.
ECU ACC	IG voltage condition of auto headlight beam leveler CM Display range: 0.00 — 25.76 V	8 — 16 V	—
Indicator Signal	Meter indicator condition Display range: Light off / Light up / Blink three times at 2 Hz / Blink twice at 2 Hz / Valve check	Light off: Normal Light up: Abnormal Blink three times at 2 Hz: Blink twice at 2 Hz: Valve check:	—
Vehicle Speed Signal	Vehicle speed condition Display range: 0.00 — 3686.34 km/h	Shows vehicle speed	—
H/L Lo Signal	Headlight (Lo) lighting condition Display range: Light off/ Light up	Light off: Light switch is OFF Light up: Light sensor in operation when light switch is in HEAD or AUTO position	—
LED HEADLAMP(LH) error Signal	Open circuit detection signal status Display range: Light off/ Light up	Light off: Open circuit is not detected Light up: Open circuit is detected	—
LED HEADLAMP(RH) error Signal	Open circuit detection signal status Display range: Light off/ Light up	Light off: Open circuit is not detected Light up: Open circuit is detected	—

Item Name	Content	Standard	Note
Headlight High Beam Signal	Headlight (Hi) lighting condition	Light off: Headlight (Hi) is off Light up: Headlight (Hi) is on	—
Steering Angle Signal	Steering angle status	–3276.7 — 3276.7 deg	—
Shift Position Signal	Shift lever position	P, R, N, D, D-S, 3 range, 2 range, 1 range	—
MT Reverse Switch	Reverse switch status (MT) is displayed.	ON: Shift lever is in reverse position OFF: Shift lever is in other than reverse position	—
Engine Speed	Engine speed signal	0 — 65535 rpm	—
Vehicle Height	Vehicle height signal	Unknown: Other than the followings SDN/WGN: When in SDN/WGN model	—
Left Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (LH) signal	–3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Current Angle	SRH swivel actuator current angle (RH) signal	–3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (LH) signal	–3276.7 — 3276.7 deg	—
Right Steering Responsive Headlight Target Angle	SRH swivel actuator target angle (RH) signal	–3276.7 — 3276.7 deg	—
Left Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (LH) signal	Normal: When normal Abnormal: When abnormal	—
Right Steering Responsive Headlight Power Supply Failure	SRH swivel actuator power supply failure (RH) signal	Normal: When normal Abnormal: When abnormal	—
Left Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (LH) signal	Normal: When normal Abnormal: When abnormal	—
Right Steering Responsive Headlight Motor Failure	SRH swivel actuator motor failure (RH) signal	Normal: When normal Abnormal: When abnormal	—
Left Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (LH) signal	Normal: When normal Abnormal: When abnormal	—
Right Steering Responsive Headlight Sensor Failure	SRH swivel actuator sensor error (RH) signal	Normal: When normal Abnormal: When abnormal	—

11.Active Test

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Display	Note
Right Steering Responsive Headlight	—	SRH swivel actuator on the right side operates. NOTE: Used for unit inspection etc. of the SRH swivel actuator.
Left Steering Responsive Headlight	—	SRH swivel actuator on the left side operates. NOTE: Used for unit inspection etc. of the SRH swivel actuator.

12.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Headlight / Foglight» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Initial setting value	Customize setting	Note
SRH/ADB Setup	ON	ON	—
		OFF	—
Initial Drive Setting	ON	ON	—
		OFF	—

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to AL(diag)-21, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data (reverse switch signal) is not received from TCM.	<Ref. to AL(diag)-21, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC (vehicle speed signal) does not arrive.	<Ref. to AL(diag)-21, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit (headlight ON signal) does not arrive.	<Ref. to AL(diag)-21, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Detected when CAN data (reverse switch signal) from TCM is abnormal.	<Ref. to AL(diag)-21, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Detected when data from VDC (vehicle speed signal) is abnormal.	<Ref. to AL(diag)-21, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Detected when CAN data from body integrated unit (headlight ON signal) is abnormal.	<Ref. to AL(diag)-21, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2900	AHL CONTROL	Detected when an error occurred in auto headlight beam leveler CM.	<Ref. to AL(diag)-21, DTC B2900 AHL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2902	REAR HEIGHT SENSOR CIRCUIT	Detected when an error occurred in rear vehicle height sensor.	<Ref. to AL(diag)-22, DTC B2902 REAR HEIGHT SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2904	LED HEADLIGHT CIRCUIT RH	Detected when malfunction is found in LED headlight (right side) trouble signal line.	<Ref. to AL(diag)-24, DTC B2904 LED HEADLIGHT CIRCUIT RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2905	LED HEAD LIGHT CIRCUIT LH	Detected when malfunction is found in LED headlight (left side) trouble signal line.	<Ref. to AL(diag)-26, DTC B2905 LED HEAD LIGHT CIRCUIT LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2908	STEERING RESPONSIVE HEADLIGHT ACTUATOR RH	Detected when SRH actuator RH is abnormal.	<Ref. to AL(diag)-28, DTC B2908 STEERING RESPONSIVE HEADLIGHT ACTUATOR RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2909	STEERING RESPONSIVE HEADLIGHT ACTUATOR LH	Detected when SRH actuator LH is abnormal.	<Ref. to AL(diag)-30, DTC B2909 STEERING RESPONSIVE HEADLIGHT ACTUATOR LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2910	STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH	Detected when LIN data no-receive or data abnormality is found in the SRH actuator RH.	<Ref. to AL(diag)-32, DTC B2910 STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2911	STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH	Detected when LIN data no-receive or data abnormality is found in the SRH actuator LH.	<Ref. to AL(diag)-33, DTC B2911 STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data (reverse switch signal) is not received from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data (vehicle speed signal) is not received from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data (headlights ON signal) is not received from the body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:
Detected when CAN data (reverse switch signal) from TCM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
Detected when data (vehicle speed signal) from VDC CM is abnormal.
Trouble symptom:
The auto headlight beam leveler does not operate.

NOTE:
Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Detected when CAN data (headlights ON signal) is invalid.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC B2900 AHL CONTROL

DTC detecting condition:
Detected when internal malfunction occurs in the auto headlight beam leveler CM.
Trouble symptom:
The auto headlight beam leveler does not operate.

CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.

Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2900 displayed? (Current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2902 REAR HEIGHT SENSOR CIRCUIT

DTC detecting condition:
Detected when error occurs in the rear height sensor.
Trouble symptom:
The auto headlight beam leveler does not operate.

CAUTION:
Initialization is required after replacing the auto headlight beam leveler CM.
Wiring diagram:
Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch OFF → ON. 2) Turn on the headlight low beam. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Turn the ignition switch to OFF → ON. 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2902 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate the standard value (approx. 2.5 V when on a level road with one person in the vehicle)?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Display «R Sensor Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Change the vehicle posture.	Does the data change?	Go to step **6**.	Go to step **4**.
4	**CHECK OUTPUT VOLTAGE BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND VEHICLE HEIGHT SENSOR.** 1) Disconnect the vehicle height sensor connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the vehicle height sensor connector and chassis ground. ***Connector & terminal*** ***(R29) No. 3 (+) — Chassis ground (–):***	Is the voltage 5±0.25 V?	Go to step **5**.	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>
5	**CHECK REAR HEIGHT SENSOR.** 1) Remove the rear vehicle height sensor. 2) Perform the inspection of rear height sensor unit. <Ref. to LI-89, INSPECTION, Rear Height Sensor.>	Is the check result OK?	Go to step **6**.	Replace the rear height sensor. <Ref. to LI-88, Rear Height Sensor.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between the auto headlight beam leveler CM connector and rear height sensor connector. ***Connector & terminal*** ***(B150) No. 3 — (R29) No. 1:*** ***(B150) No. 19 — (R29) No. 2:*** ***(B150) No. 12 — (R29) No. 3:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 3 — Chassis ground:*** ***(B150) No. 19 — Chassis ground:*** ***(B150) No. 12 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Repair or replace the short circuit of the harness.

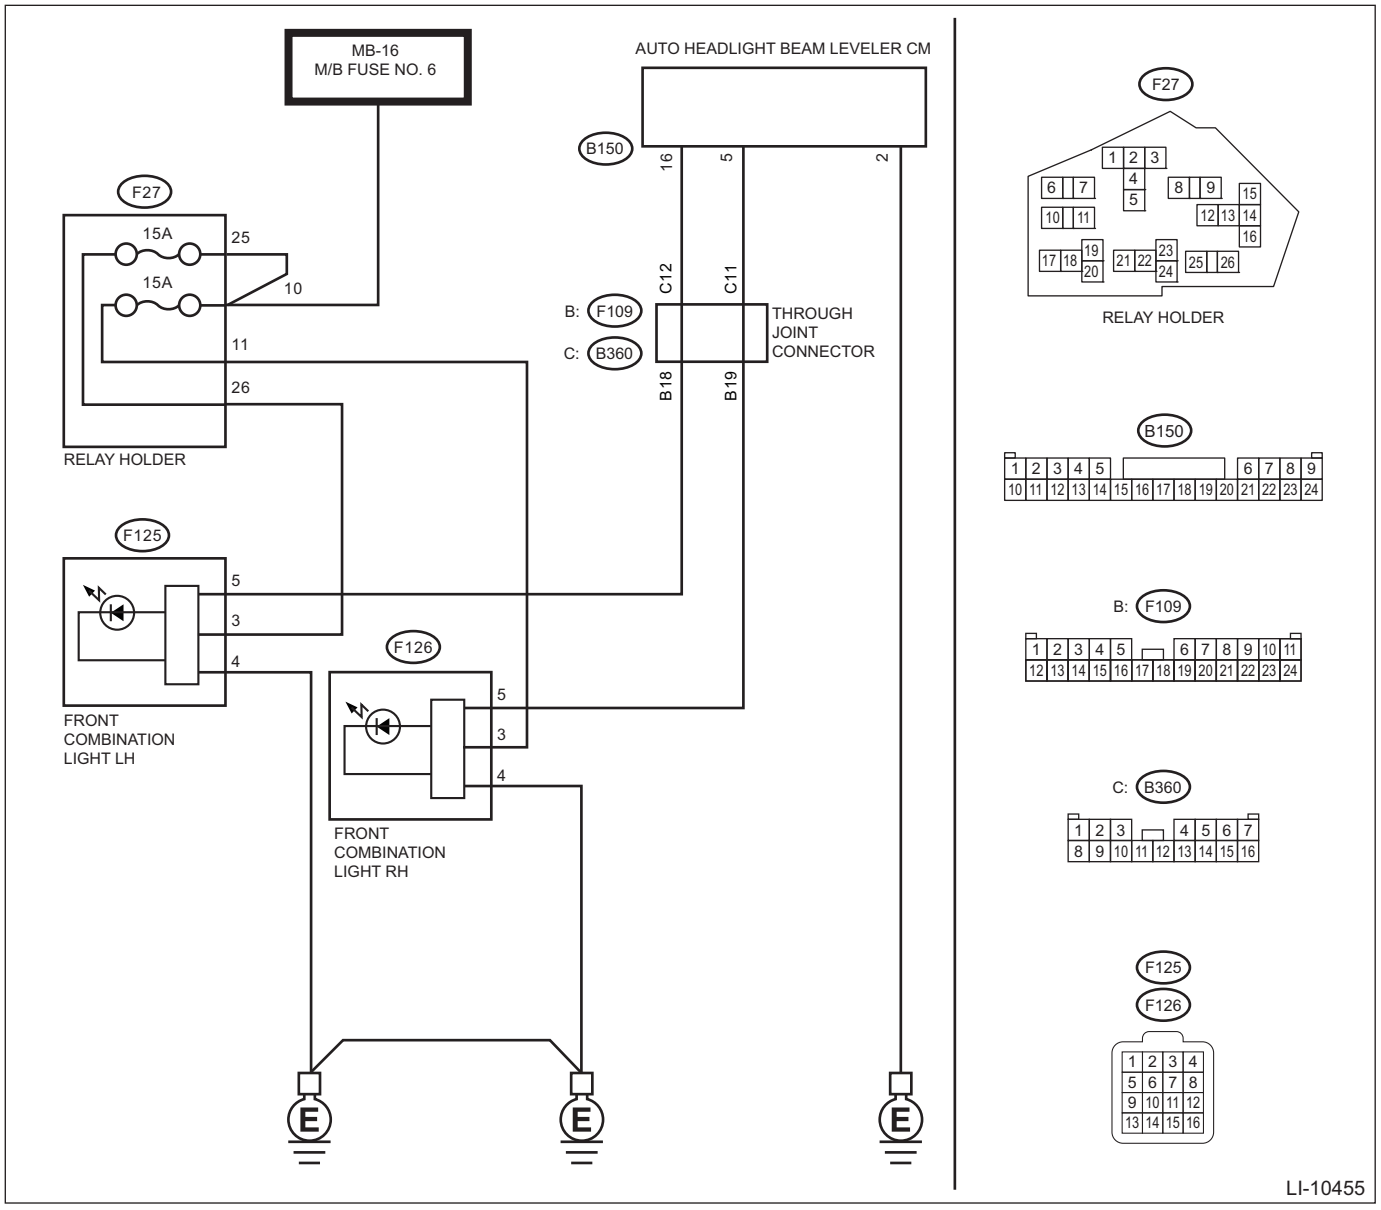
J: DTC B2904 LED HEADLIGHT CIRCUIT RH

DTC detecting condition:
LED headlight (RH) malfunction signal line error is detected for 2 seconds or more.
Trouble symptom:
LED headlight malfunction, LED headlight indicator illuminates.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-235, WIRING DIAGRAM, Headlight System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Turn the lighting switch to 2 (HEAD). 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2904 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Display «LED HEADLAMP(RH) error Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate «Light off»?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.** 1) Disconnect the headlight assembly RH and LH connectors. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD). 4) Using a tester, measure the voltage between headlight assembly RH connector and chassis ground. ***Connector & terminal*** ***(F126) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the headlight system.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between headlight assembly RH connector and chassis ground. ***Connector & terminal*** ***(F126) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HEADLIGHT SYSTEM.** 1) Connect the headlight assembly RH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD).	Does the headlight come on?	Go to step **6**.	Replace the headlight. <Ref. to LI-33, Headlight Assembly.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 5 — (F126) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Repair or replace the open circuit of harness.

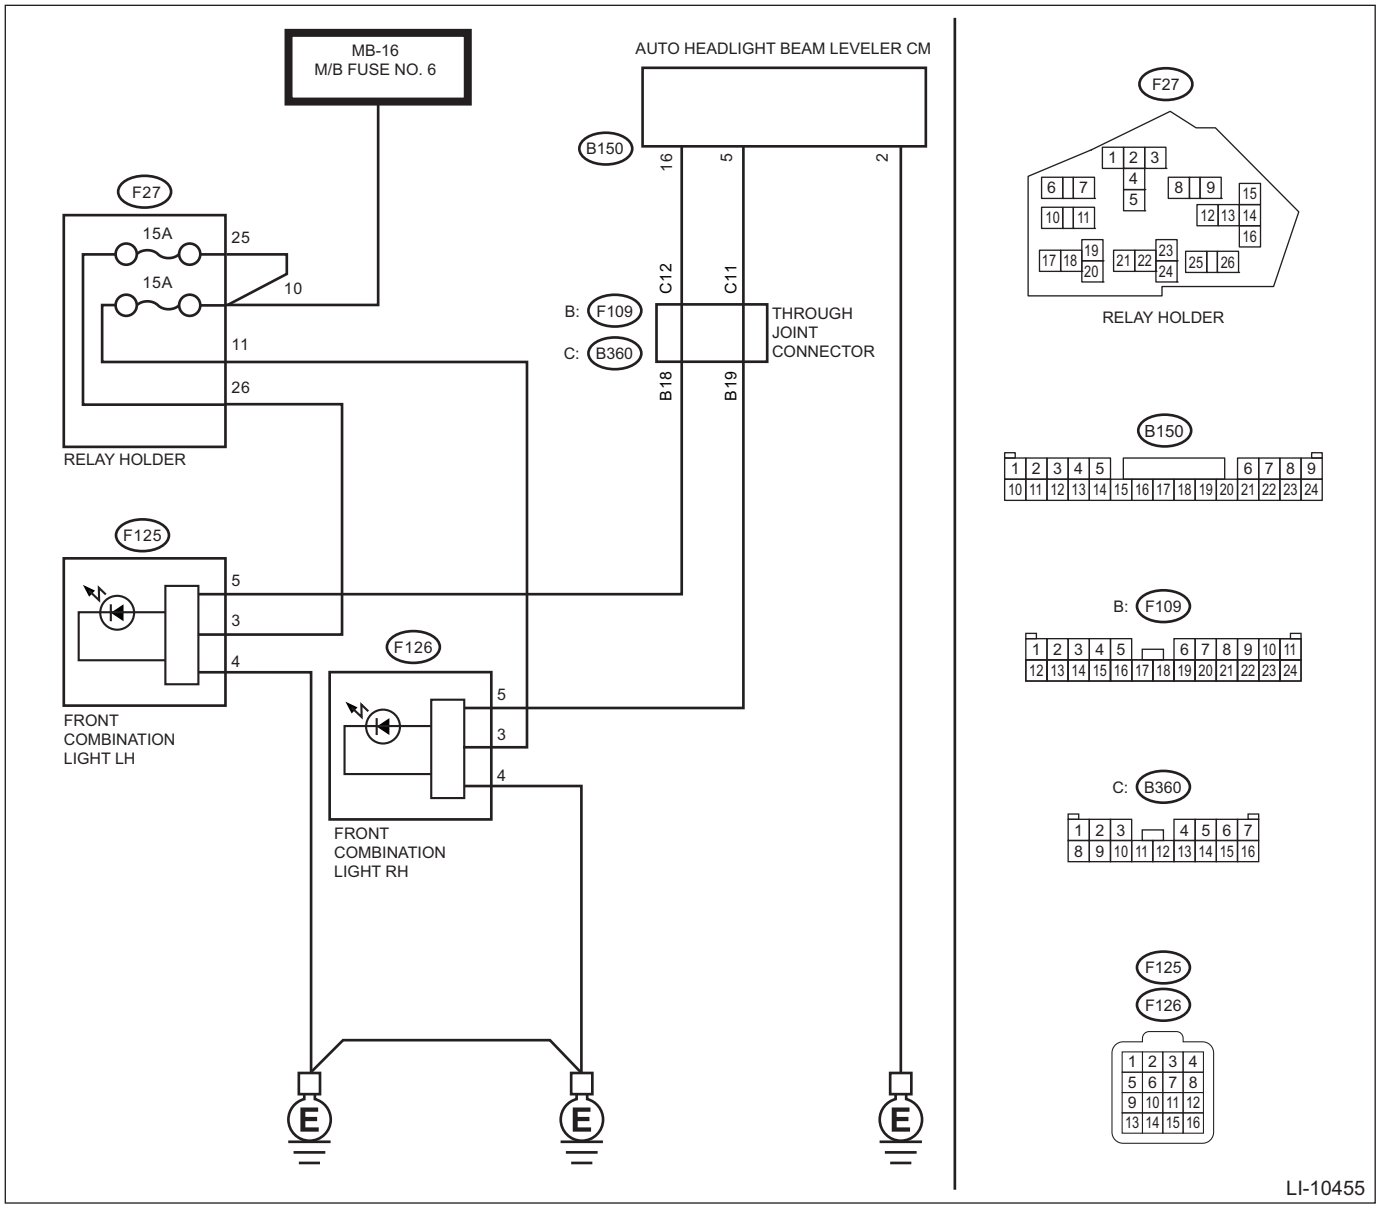
K: DTC B2905 LED HEAD LIGHT CIRCUIT LH

DTC detecting condition:
LED headlight (LH) malfunction signal line error is detected for 2 seconds or more.
Trouble symptom:
LED headlight malfunction, LED headlight indicator illuminates.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-235, WIRING DIAGRAM, Headlight System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 3) Turn the ignition switch to OFF → ON. 4) Turn the lighting switch to 2 (HEAD). 5) Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2905 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK CURRENT DATA.** Display «LED HEADLAMP(LH) error Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the data indicate «Light off»?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Go to step **3**.
3	**CHECK THE HEADLIGHT SYSTEM POWER SUPPLY CIRCUIT.** 1) Disconnect the headlight assembly LH and RH connectors. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD). 4) Using a tester, measure the voltage between headlight assembly LH connector and chassis ground. ***Connector & terminal*** ***(F125) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **4**.	Repair the headlight system.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between headlight assembly LH connector and chassis ground. ***Connector & terminal*** ***(F125) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HEADLIGHT SYSTEM.** 1) Connect the headlight assembly LH connector. 2) Turn the ignition switch to OFF → ON. 3) Turn the lighting switch to 2 (HEAD).	Does the headlight come on?	Go to step **6**.	Replace the headlight. <Ref. to LI-33, Headlight Assembly.>
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 16 — (F125) No. 5:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Repair or replace the open circuit of harness.

L: DTC B2908 STEERING RESPONSIVE HEADLIGHT ACTUATOR RH

DTC detecting condition:

Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.

- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.
- Motor lock is detected.

Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:

- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:

Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2908 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK OTHER DTCS.** Check whether or not other DTCs are stored in the auto headlight beam leveler system.	Are DTCs other than DTC B2908 stored?	Perform the diagnosis for DTC other than B2908 first.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly RH and LH connectors. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 7 — (F126) No. 14:*** ***(B150) No. 9 — (F126) No. 15:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK FORCED OPERATION OF SWIVEL ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Start the engine. 4) Perform «Right Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly RH. <Ref. to LI-33, Headlight Assembly.>

M: DTC B2909 STEERING RESPONSIVE HEADLIGHT ACTUATOR LH

DTC detecting condition:

Fail flag (failures shown below) of the SRH actuator is detected for 1 second or more.

- Overheating of the actuator driving IC is detected.
- Short circuit, open circuit of the motor coil is detected.
- Abnormality of the motor position sensor is detected.
- Motor lock is detected.

Trouble symptom:

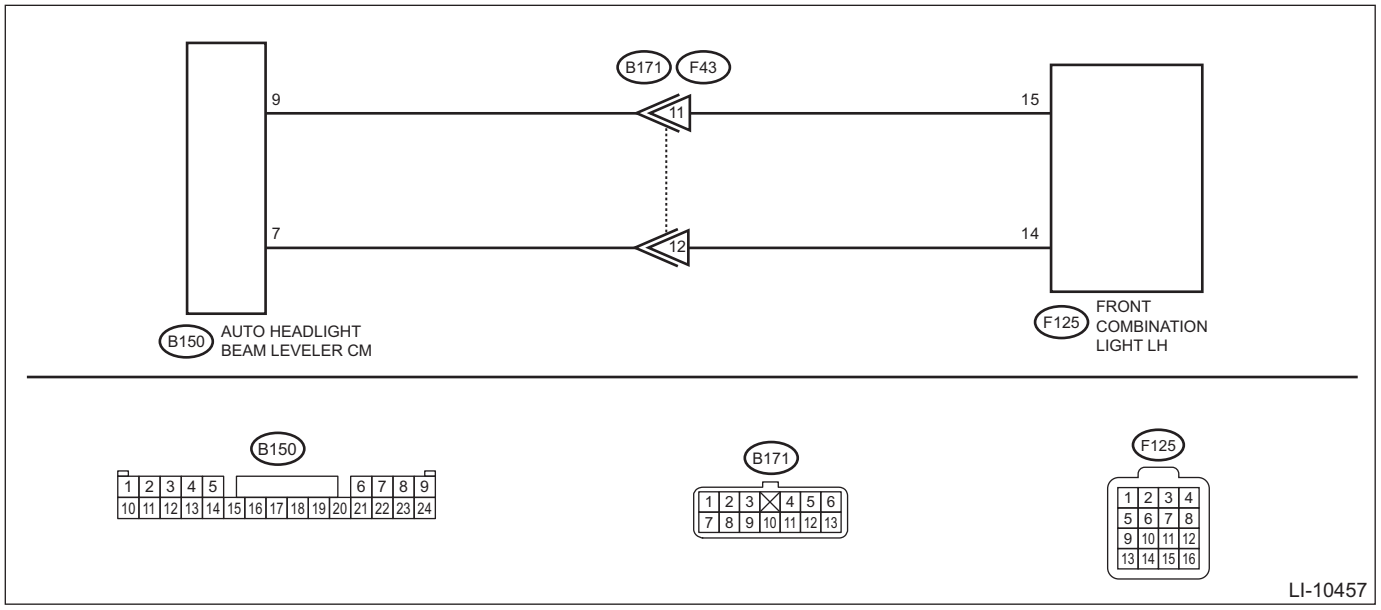
The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:

- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:

Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2909 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK OTHER DTCS.** Check whether or not other DTCs are stored in the auto headlight beam leveler system.	Are DTCs other than DTC B2909 stored?	Perform the diagnosis for DTC other than B2909 first.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly LH and RH connectors. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 7 — (F125) No. 14:*** ***(B150) No. 9 — (F125) No. 15:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK FORCED OPERATION OF SWIVEL ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Start the engine. 4) Perform «Left Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly LH. <Ref. to LI-33, Headlight Assembly.>

N: DTC B2910 STEERING RESPONSIVE HEADLIGHT COMMUNICATION RH

DTC detecting condition:
LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).
Trouble symptom:
The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2910 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly RH and LH connectors. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly RH connector. ***Connector & terminal*** ***(B150) No. 7 — (F126) No. 14:*** ***(B150) No. 9 — (F126) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Turn the ignition switch to ON. 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2911 displayed? (Current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly RH. <Ref. to LI-33, Headlight Assembly.>

O: DTC B2911 STEERING RESPONSIVE HEADLIGHT COMMUNICATION LH

DTC detecting condition:

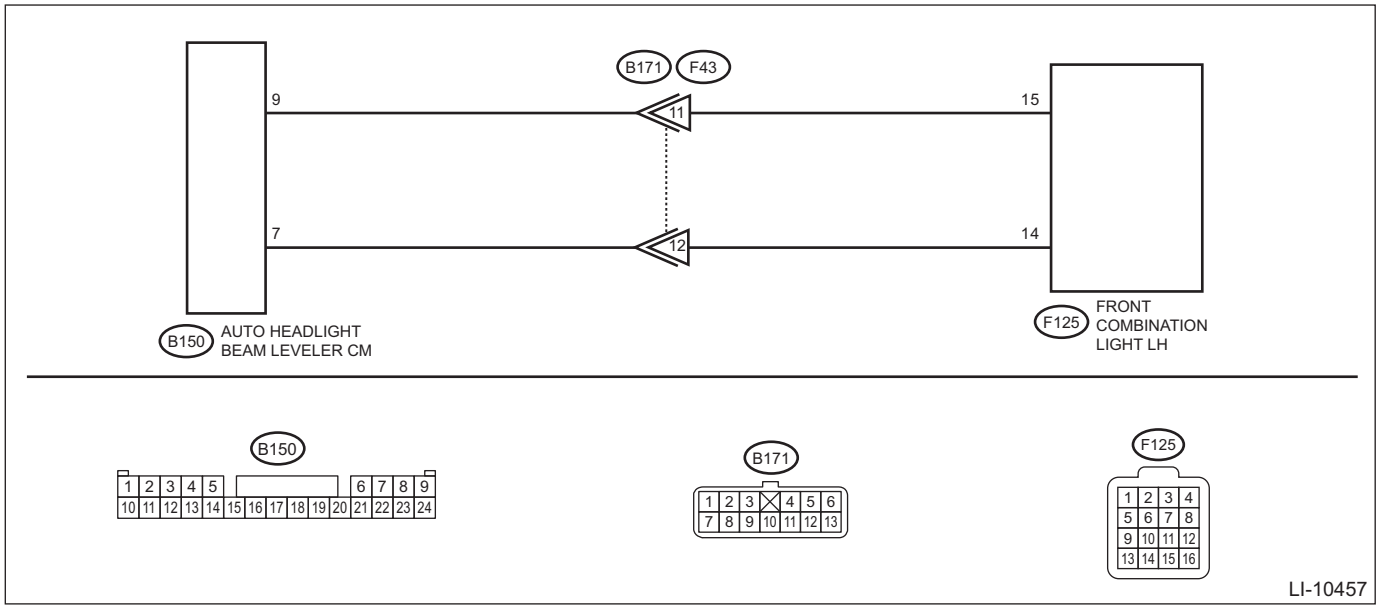
LIN data no-receive or data abnormal of the SRH actuator is detected (1 or more).

Trouble symptom:

The steering responsive headlight does not operate. SRH indicator blinks.

CAUTION:
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2911 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly LH and RH connectors. 3) Disconnect the auto headlight beam leveler CM connector. 4) Using a tester, measure the resistance between auto headlight beam leveler CM connector and headlight assembly LH connector. ***Connector & terminal*** ***(B150) No. 7 — (F125) No. 14:*** ***(B150) No. 9 — (F125) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 — Chassis ground:*** ***(B150) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 7 (+) — Chassis ground (–):*** ***(B150) No. 9 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Turn the ignition switch to ON. 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is DTC B2910 displayed? (Current malfunction)	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the headlight assembly LH. <Ref. to LI-33, Headlight Assembly.>

15.Diagnostics with Phenomenon

A: LIST

Symptoms	Reference
1. The auto headlight beam leveler does not operate.	<Ref. to AL(diag)-36, THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
2. The steering responsive headlight does not operate.	<Ref. to AL(diag)-39, THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
3. The steering responsive headlight operates in a direction different from the target.	<Ref. to AL(diag)-42, THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET, INSPECTION, Diagnostics with Phenomenon.>

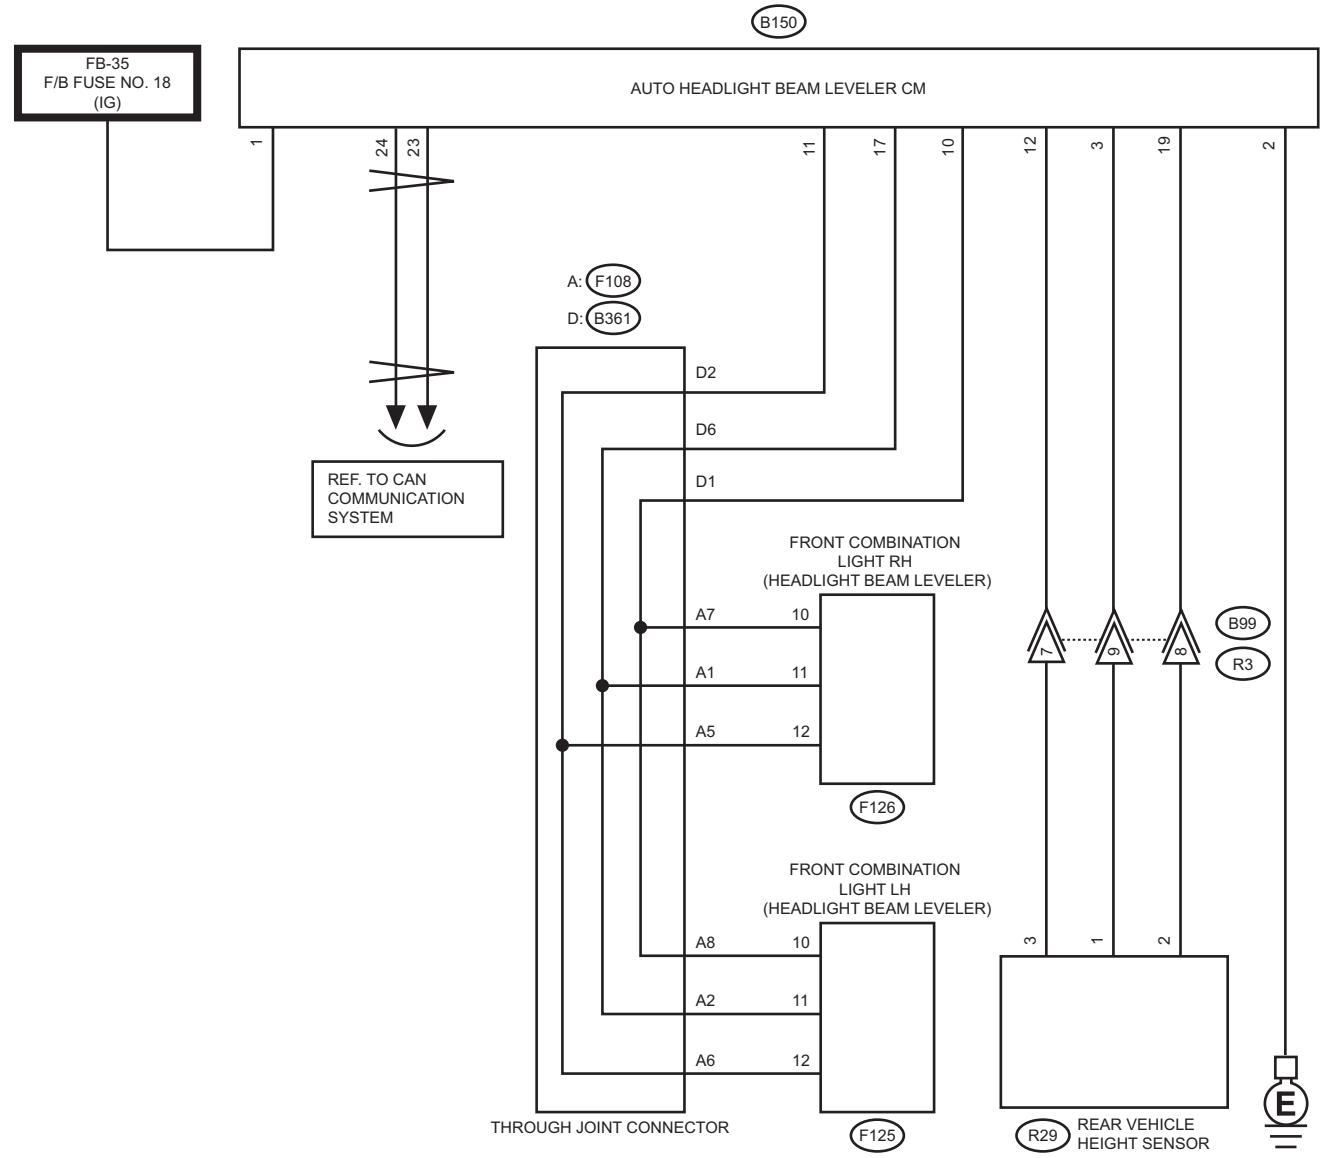
B: INSPECTION

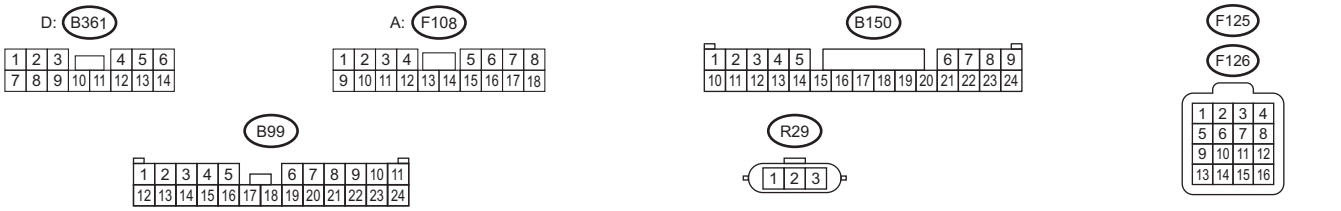
1. THE AUTO HEADLIGHT BEAM LEVELER DOES NOT OPERATE

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**

Wiring diagram:

Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>





LI-10458

Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Does the current data indicate the standard value?	Go to step **3**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN POWER SUPPLY — AUTO HEADLIGHT BEAM LEVELER CM.** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 1 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Repair or replace the harness.
3	**CHECK INDICATOR OUTPUT.** Turn the ignition switch to ON.	Does the warning indicator turn on for three seconds?	Go to step **5**.	Go to step **4**.
4	**CHECK CURRENT DATA.** 1) Display «Indicator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Turn the ignition switch to ON.	Is it set as ON for 3 seconds?	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>
5	**CHECK INDICATOR OUTPUT.** Leave the ignition switch to ON for 10 seconds.	Does the warning indicator light go off?	Go to step **6**.	Go to step **10**.
6	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) DRIVE.** 1) Connect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the headlight beam drop down once, and then return?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Go to step **7**.
7	**CHECK HEADLIGHT ASSEMBLY (ACTUATOR) OUTPUT.** 1) Display «Actuator Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.> 2) Turn the ignition switch to ON, and within 10 seconds, repeat the OFF → Low beam of headlight switch 5 times. 3) Check that the headlight beam drops once, then returns to normal. 4) Then, after waiting for 30 seconds or more with the ignition ON, turn the ignition switch to OFF.	Does the current data indicate the standard value? (Does the value change at 10 — 90%?)	Go to step **8**.	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>
8	**CHECK OUTPUT VOLTAGE BETWEEN HEADLIGHT ASSEMBLY (ACTUATOR).** 1) Disconnect the auto headlight beam leveler CM connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between the auto headlight beam leveler CM connector and chassis ground. ***Connector & terminal*** ***(B150) No. 10 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-33, Headlight Assembly.>	Go to step **9**.

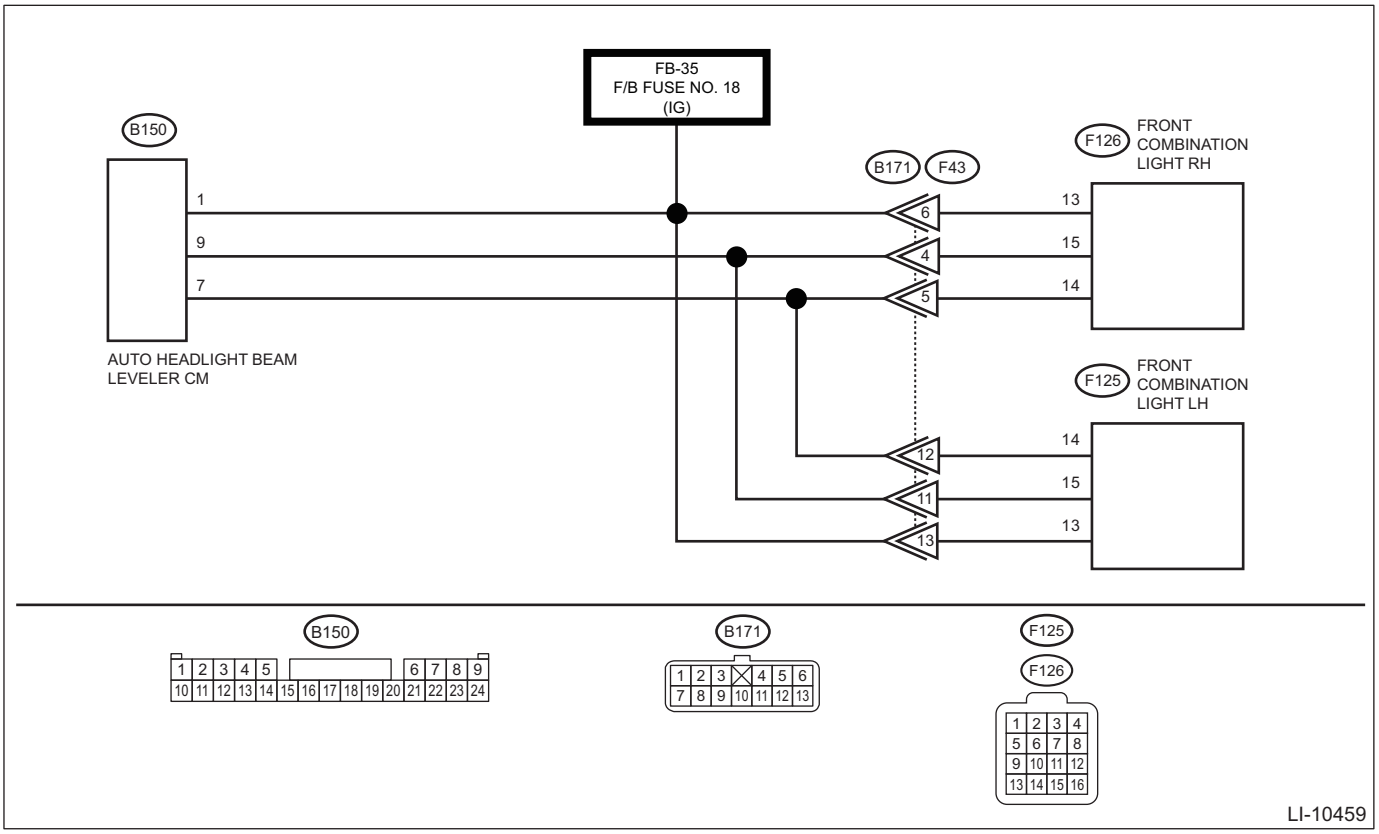
	Step	Check	Yes	No
9	**CHECK HARNESS BETWEEN AUTO HEADLIGHT BEAM LEVELER CM AND HEADLIGHT ASSEMBLY (ACTUATOR) (OPEN CIRCUIT).** 1) Disconnect the connector of headlight assembly. 2) Measure the continuity between the auto headlight beam leveler CM connector and headlight assembly (actuator) connector. ***Connector & terminal*** ***• Headlight beam leveler RH*** ***(B150) No. 10 — (F126) No. 10:*** ***(B150) No. 17 — (F126) No. 11:*** ***(B150) No. 11 — (F126) No. 12:*** ***• Headlight beam leveler LH*** ***(B150) No. 10 — (F125) No. 10:*** ***(B150) No. 17 — (F125) No. 11:*** ***(B150) No. 11 — (F125) No. 12:***	Is there continuity?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Repair the open circuit or poor contact of the connector in the harness between headlight assembly and auto headlight beam leveler CM.
10	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to AL(diag)-20, LIST, List of Diagnostic Trouble Code (DTC).>	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>

2. THE STEERING RESPONSIVE HEADLIGHT DOES NOT OPERATE

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-235, WIRING DIAGRAM, Headlight System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler system DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Using the Subaru Select Monitor, read all the DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is a U-code DTC displayed? (Current malfunction)	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Check DTC of VDC.	Is any DTC related to the vehicle speed and steering angle sensor detected?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK INITIALIZE FUNCTION.** Perform the function check (the initialize function) for the steering responsive headlight. <Ref. to AL(diag)-5, FUNCTION CHECK, INSPECTION, General Description.>	Do the left and right headlights operate?	Go to step **6**.	• Only one side does not operate: Go to step **5**. • Both sides do not operate: Go to step **6**.

	Step	Check	Yes	No
5	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **10**.
6	**CHECK REVERSE SIGNAL.** 1) Using Subaru Select Monitor, display «MT Reverse SW» for MT model, or «Shift Position Signal» for CVT model. 2) Place the shift in reverse.	For MT model, is «ON» displayed? For CVT model, is «R» displayed?	For MT model, check the reverse switch or reverse switch harness. <Ref. to 6MT(TY75)-47, Switches and Harness.> For CVT model, perform the diagnosis for CVT. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.> When DTC is not stored, check the inhibitor switch or inhibitor switch harness. <Ref. to CVT(TR690)-93, Inhibitor Switch.>	Go to step **7**.
7	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Go to step **8**.	Go to step **9**.
8	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(F126) No. 13 (+) — Chassis ground (–):*** ***(F125) No. 13 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **9**.	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

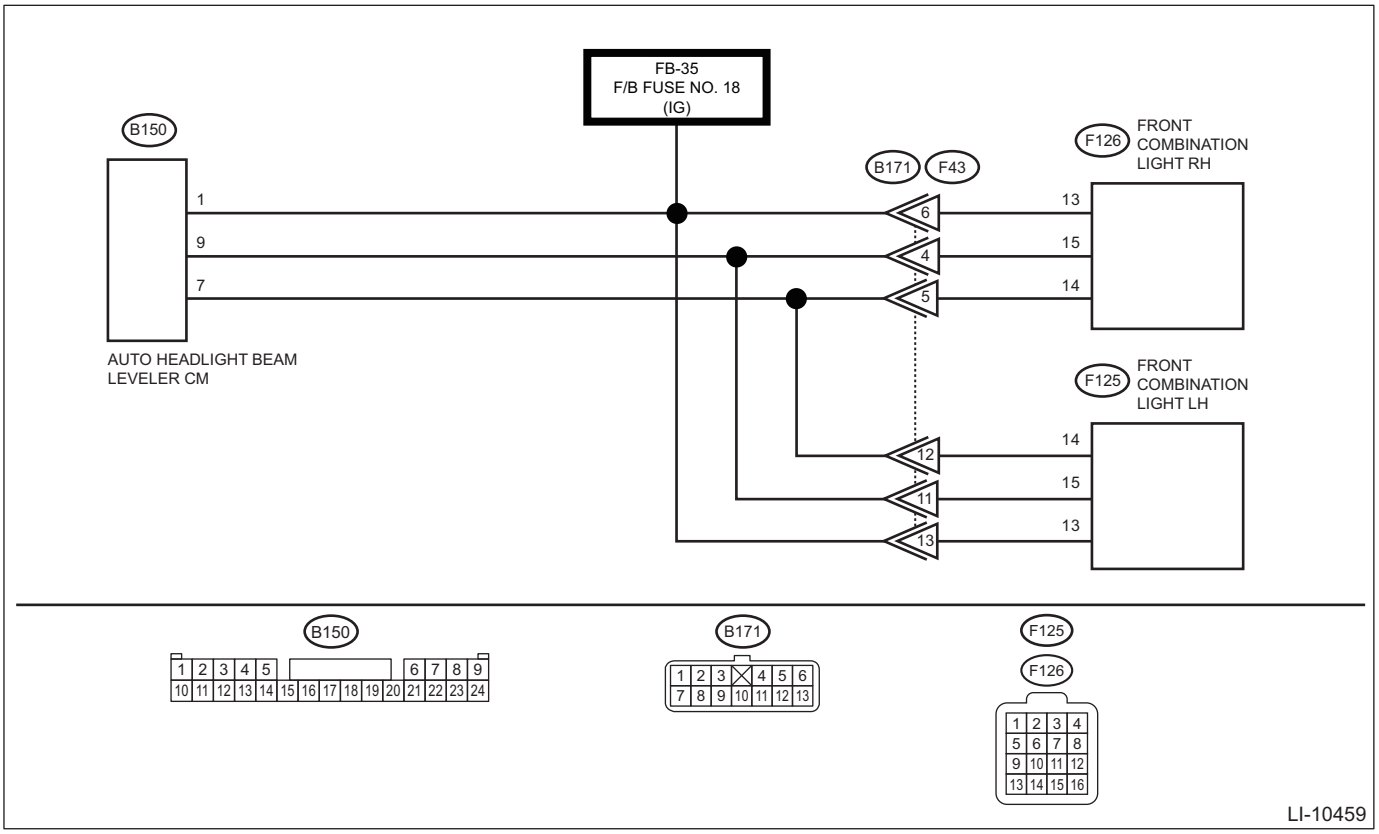
	Step	Check	Yes	No
9	**CHECK SRH OPERATION.** 1) Turn the ignition switch to OFF. 2) Connect all the disconnected connectors. 3) Drive the vehicle to verify on which side, LH side or RH side, the SRH improper operation occurred. NOTE: At night, drive a curve of steering wheel angle approximately 45 degrees or more with vehicle speed at 40 km/h (25 MPH) or more, or drive a curve of steering wheel angle approximately 80 degrees or more with vehicle speed at 15 km/h (9 MPH) or more to check the SRH operation.	Is the improper operation occurring on either left or right side only?	Perform «VSC (VDC) Centering Mode». <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	If the fault is not fixed even after the process: Go to step **10**.
10	**PERFORM ACTIVE TEST FOR SWIVEL ACTUATOR.** Perform «Right Steering Responsive Headlight» «Left Steering Responsive Headlight» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)	Go to step **12**.	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. <Ref. to LI-33, Headlight Assembly.> When the value is not the same on both sides, Go to step **11**.
11	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
12	**DRIVING CHECK.** Perform the road test to make sure there is no yawing.	Is it yawing?	Check the vehicle alignment. <Ref. to FS-10, Wheel Alignment.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

3. THE STEERING RESPONSIVE HEADLIGHT OPERATES IN A DIRECTION DIFFERENT FROM THE TARGET

CAUTION:
- **Before performing diagnosis, check the fuse in this circuit.**
- **Initialization is required after replacing the auto headlight beam leveler CM.**
- **After replacing the headlight assembly, headlight beam adjustment is required.**

Wiring diagram:
- Headlight beam leveler system <Ref. to WI-232, WIRING DIAGRAM, Headlight Beam Leveler System.>

- Headlight system <Ref. to WI-235, WIRING DIAGRAM, Headlight System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Using the Subaru Select Monitor, clear the auto headlight beam leveler system memory. <Ref. to AL(diag)-14, Clear Memory Mode.> 4) Use the Subaru Select Monitor and read DTCs. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>	Is the auto headlight beam leveler system DTC displayed? (Current malfunction)	Perform the diagnosis according to DTC. <Ref. to AL(diag)-20, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** 1) Using the Subaru Select Monitor, read all the DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is a U-code DTC displayed? (Current malfunction)	Perform the inspection according to the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DTC.** Check DTC of VDC.	Is any DTC related to the vehicle speed and steering angle sensor detected?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-60, List of Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK INITIALIZE FUNCTION.** Perform the function check (the initialize function) for the steering responsive headlight. <Ref. to AL(diag)-5, FUNCTION CHECK, INSPECTION, General Description.>	Do the left and right headlights operate?	Go to step **5**.	• Only one side does not operate: Go to step **13**. • Both sides do not operate: Go to step **12**.

	Step	Check	Yes	No
5	**CHECK INPUT SIGNAL.** Display «Vehicle Speed Signal» and «Steering Angle Signal» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is «Vehicle Speed Signal» 8 km/h (5 MPH) or less, and «Steering Angle Signal» 8.5 degree or less?	Go to step **6**.	Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>
6	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Target Angle» «Right Steering Responsive Headlight Target Angle». <Ref. to AL(diag)-16, Read Current Data.>	Is the target angle 0 degree?	Go to step **9**.	Go to step **7**.
7	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to ON. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Go to step **8**.	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
8	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(F126) No. 13 (+) — Chassis ground (–):*** ***(F125) No. 13 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
9	**CHECK SRH SWIVEL ACTUATOR CURRENT ANGLE.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Current Angle» «Right Steering Responsive Headlight Current Angle». <Ref. to AL(diag)-16, Read Current Data.>	Is the current angle 0 degree?	Go to step **12**.	Go to step **9**.
10	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **11**.
11	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(F126) No. 13 (+) — Chassis ground (–):*** ***(F125) No. 13 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Replace the headlight assembly. <Ref. to LI-33, Headlight Assembly.>	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.

	Step	Check	Yes	No
12	**CHECK AUTO HEADLIGHT BEAM LEVELER CM POWER SUPPLY.** 1) Turn the ignition switch to OFF. 2) Display «Control module voltage» using Subaru Select Monitor. <Ref. to AL(diag)-16, Read Current Data.>	Is the voltage 8 — 16 V?	Go to step **13**.	Check the battery and fuse. If no fault is found, check the auto headlight beam leveler CM power supply circuit.
13	**CHECK SWIVEL ACTUATOR POWER SUPPLY.** Using the Subaru Select Monitor, display «Left Steering Responsive Headlight Power Supply Failure» «Right Steering Responsive Headlight Power Supply Failure». <Ref. to AL(diag)-16, Read Current Data.>	Is «Failure» displayed?	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.	Go to step **14**.
14	**CHECK SWIVEL ACTUATOR POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the headlight assembly connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between headlight assembly connector and chassis ground. ***Connector & terminal*** ***(F126) No. 13 (+) — Chassis ground (–):*** ***(F125) No. 13 (+) — Chassis ground (–):***	Is the voltage 8 — 16 V?	Go to step **15**.	Check the battery and fuse. If no fault is found, check the swivel actuator power supply circuit.
15	**PERFORM ACTIVE TEST FOR SWIVEL ACTUATOR.** Perform «Active Test» using the Subaru Select Monitor. <Ref. to AL(diag)-18, Active Test.>	Is the actuator current position value approximately the same as the input value of the actuator control position? (Within 1.2 seconds)	Go to step **16**.	When the value is not the same on one side only, replace the headlight assembly of the side where the same value is not achieved. <Ref. to LI-33, Headlight Assembly.> When the value is not the same on both sides, replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>

Step		Check	Yes	No
16	**DRIVING CHECK.** Perform the road test to make sure there is no yawing.	Is it yawing?	Check the vehicle alignment. <Ref. to FS-10, Wheel Alignment.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

WIPER AND WASHER SYSTEMS

WW

		Page
1.	General Description	2
2.	Relay and Fuse	7
3.	Wiper and Washer System	9
4.	Combination Switch (Wiper)	10
5.	Wiper Blade	14
6.	Washer Tank and Motor	16
7.	Front Wiper Arm	21
8.	Front Wiper Motor and Link	26
9.	Front Washer Nozzle and Hose	31

1. General Description

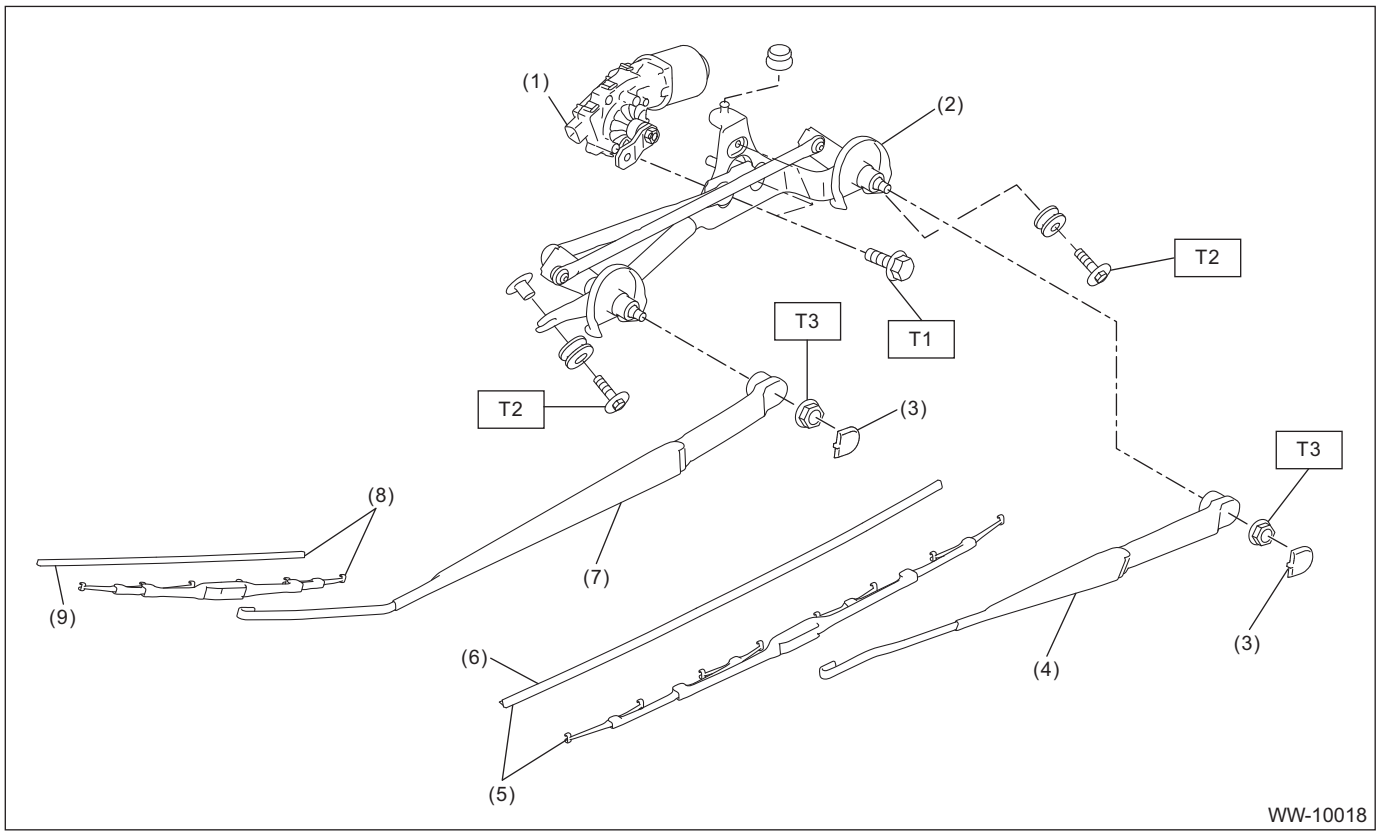
A: SPECIFICATION

Front wiper motor	Input	12 V — 60 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 60 W or less

B: COMPONENT

1. FRONT WIPER

- Models without EyeSight

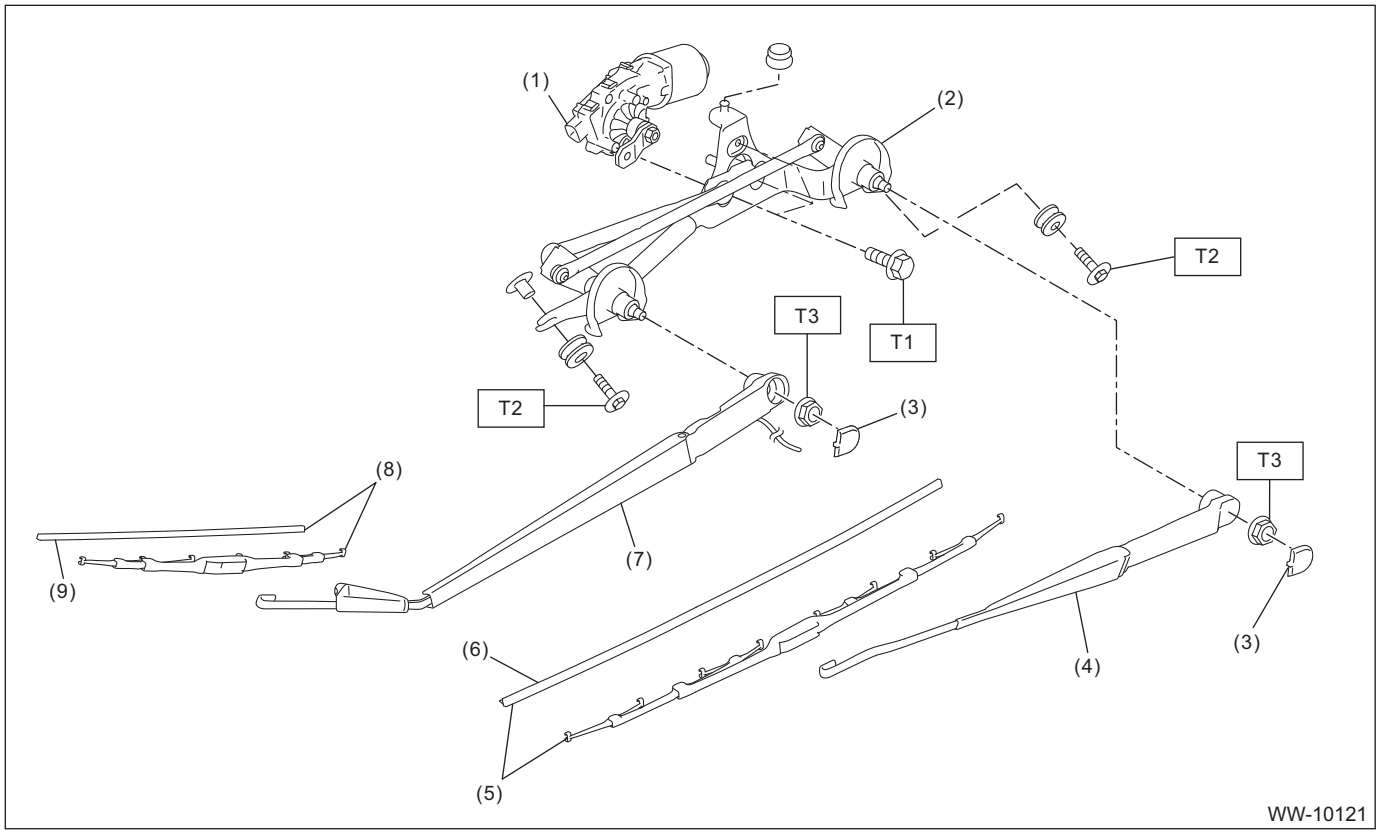


(1) Motor ASSY - windshield wiper
(2) Link ASSY - windshield wiper
(3) Cover - windshield wiper arm
(4) Arm ASSY - windshield wiper driver
(5) Blade ASSY - windshield wiper driver
(6) Rubber ASSY - windshield wiper driver
(7) Arm ASSY - windshield wiper assistor
(8) Blade ASSY - windshield wiper assistor
(9) Rubber ASSY - windshield wiper assistor

Tightening torque: N·m (kgf-m, ft-lb)

T1: 5.5 (0.6, 4.1)
T2: 6 (0.6, 4.4)
T3: 26 (2.7, 19.2)

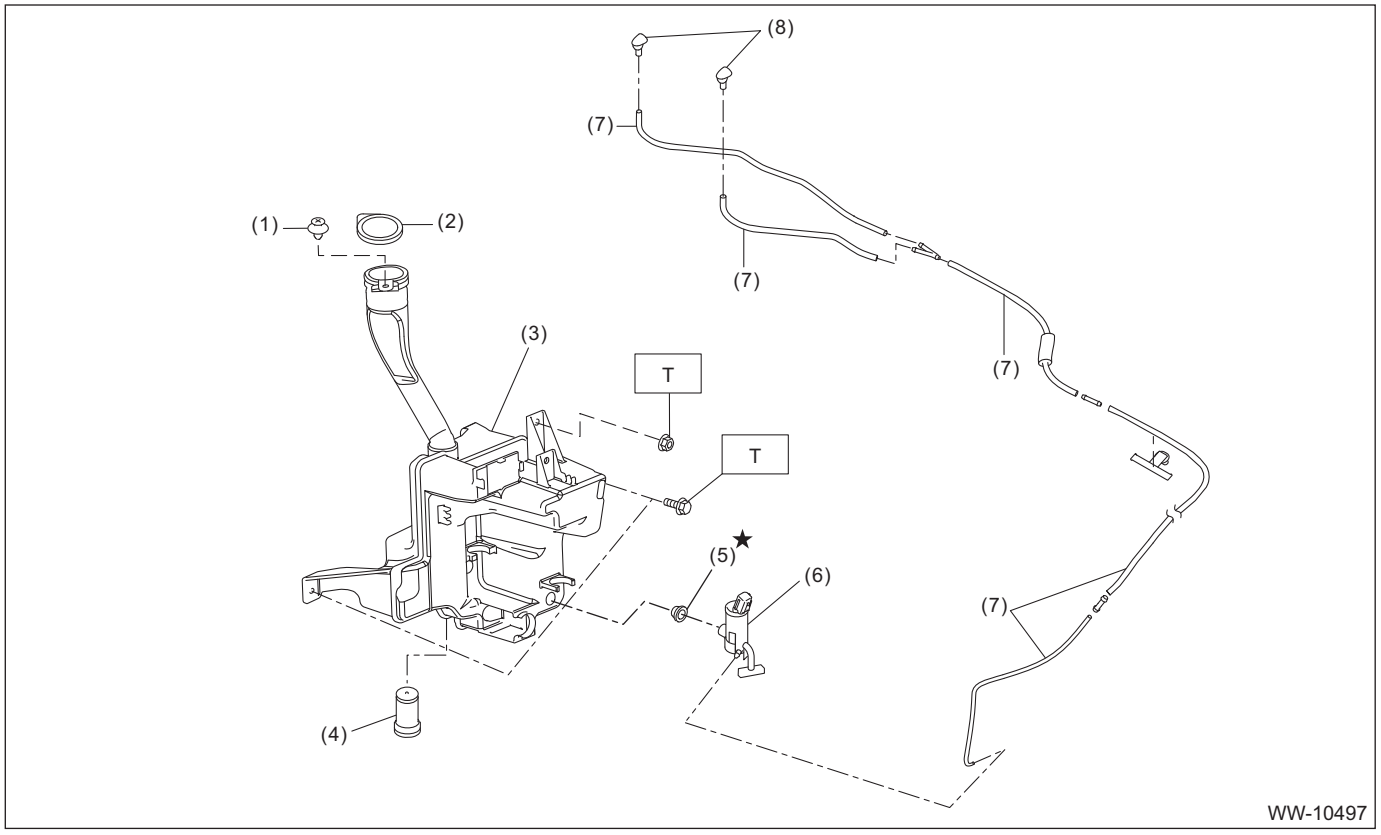
- Models with EyeSight



(1)	Motor ASSY - windshield wiper	(6)	Rubber ASSY - windshield wiper driver	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Link ASSY - windshield wiper	(7)	Arm ASSY - windshield wiper assistor	***T1: 5.5 (0.6, 4.1)***
(3)	Cover - windshield wiper arm	(8)	Blade ASSY - windshield wiper assistor	***T2: 6 (0.6, 4.4)***
(4)	Arm ASSY - windshield wiper driver	(9)	Rubber ASSY - windshield wiper assistor	***T3: 26 (2.7, 19.2)***
(5)	Blade ASSY - windshield wiper driver			

2. WASHER TANK

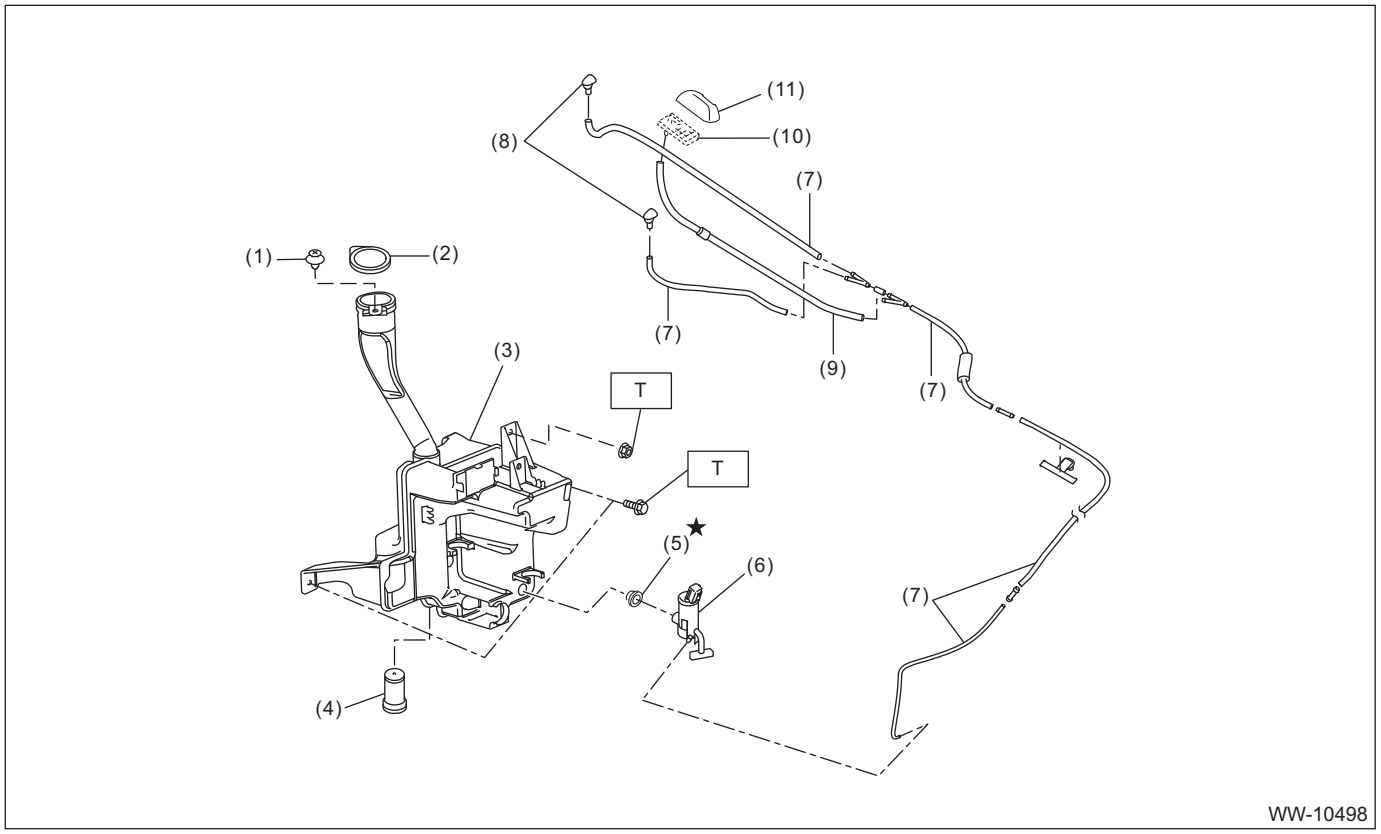
- Models without EyeSight



(1)	Clip	(5)	Packing - washer motor
(2)	Holder - windshield washer tank	(6)	Motor pump ASSY - washer front
(3)	Tank - washer	(7)	Hose - windshield washer
(4)	Sensor - washer tank	(8)	Nozzle - windshield washer

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

- Models with EyeSight



(1) Clip
(2) Holder - windshield washer tank
(3) Tank - washer
(4) Sensor - washer tank
(5) Packing - washer motor
(6) Motor pump ASSY - washer front
(7) Hose - windshield washer
(8) Nozzle - windshield washer
(9) Hose - wiper arm washer
(10) Joint - washer hose
(11) Cover - joint

Tightening torque: N·m (kgf-m, ft-lb)
T: 6 (0.6, 4.4)

C: CAUTION

- Before performing vehicle maintenance, turn the ignition switch to OFF and disconnect the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
  - For model with battery sensor, disconnect the ground terminal from battery sensor.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  - Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  - Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
- When connecting the pipe hoses, be careful not to cause bend or blockage.
- If even a small amount of silicon oil or grease enters the tank - washer and the washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

D: PREPARATION TOOL

1. SPECIAL TOOL

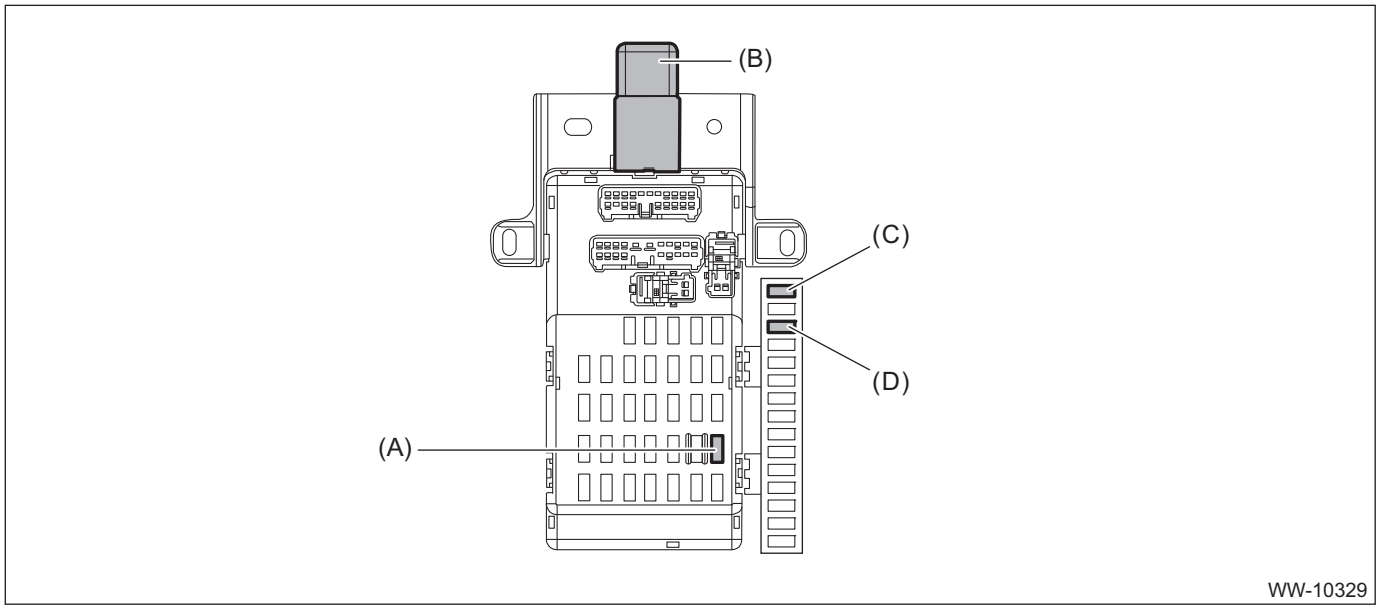
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 7.5 A (wiper)	(A)
Relay holder	Wiper relay	(B)
Fuse holder	Fuse 30 A (front wiper)	(C)
	Fuse 15 A (front washer)	(D)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SR-00180
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01085
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Wiper and Washer System

A: WIRING DIAGRAM

1. WIPER AND WASHER (FRONT)

Refer to “Front Wiper and Washer System” in the wiring diagram. <Ref. to WI-227, WIRING DIAGRAM, Front Wiper and Washer System.>

B: INSPECTION

Symptoms	Repair order
Wiper and washers do not operate.	1. Wiper fuse 2. Combination switch (wiper) 3. Motor assembly - wiper 4. Wiring harness
Wipers do not operate in LO or HI.	1. Combination switch (wiper) 2. Motor assembly - wiper 3. Wiring harness
Wipers do not operate in INT.	1. Combination switch (wiper) 2. Motor assembly - wiper 3. Wiring harness
Washer motor does not operate.	1. Combination switch (wiper) 2. Motor pump assembly - washer 3. Wiring harness
Wipers do not operate when washer switch is ON.	1. Motor assembly - wiper 2. Wiring harness
Washer fluid spray does not operate properly.	1. Motor pump assembly - washer 2. Hose assembly - washer 3. Nozzle - washer
Wiper chatters or judders during operation.	1. Oil film and dirt on the glass 2. Arm assembly - windshield wiper 3. Motor assembly - wiper

C: NOTE

For procedure of each component of the wiper and washer system, refer to the respective sections.

- Combination switch (wiper): <Ref. to WW-10, Combination Switch (Wiper).>
- Wiper blade: <Ref. to WW-14, Wiper Blade.>
- Front wiper arm: <Ref. to WW-21, Front Wiper Arm.>
- Front wiper motor and link: <Ref. to WW-26, Front Wiper Motor and Link.>
- Washer tank and motor: <Ref. to WW-16, Washer Tank and Motor.>
- Front washer nozzle & hose: <Ref. to WW-31, Front Washer Nozzle and Hose.>

4. Combination Switch (Wiper)

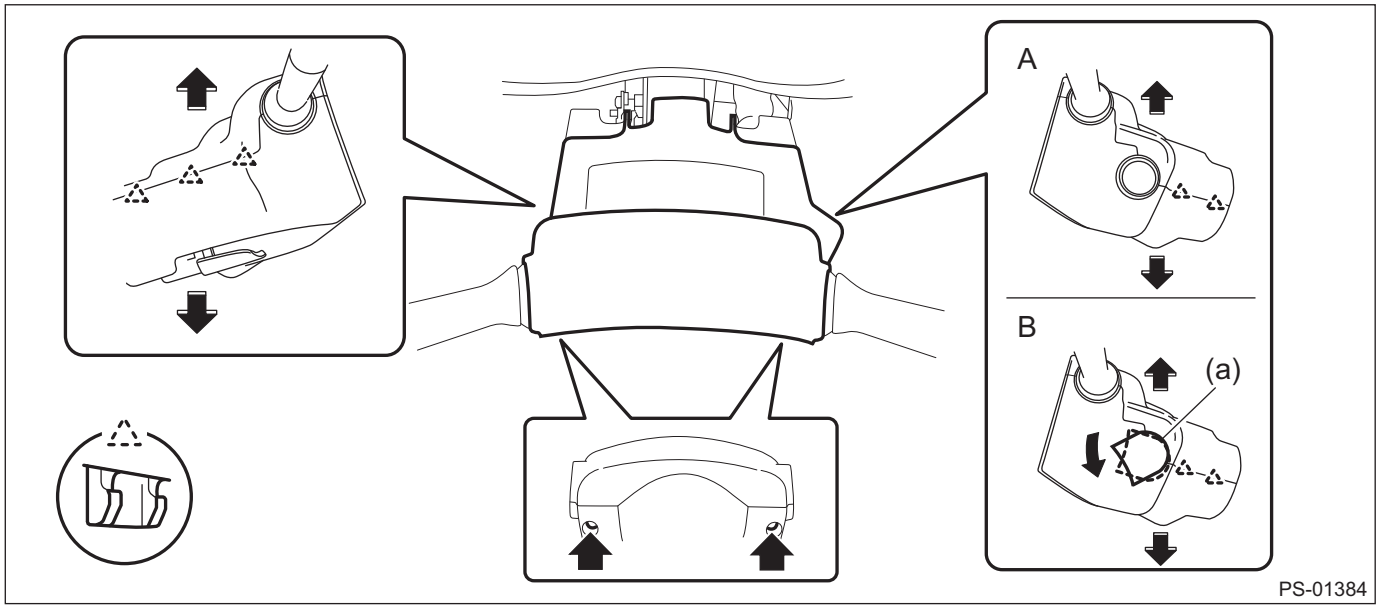
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.

   (2) Remove the screws by turning the steering wheel to right and left.
   (3) Remove the cap - key cylinder (a). (Model with keyless access with push button start)
   (4) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.

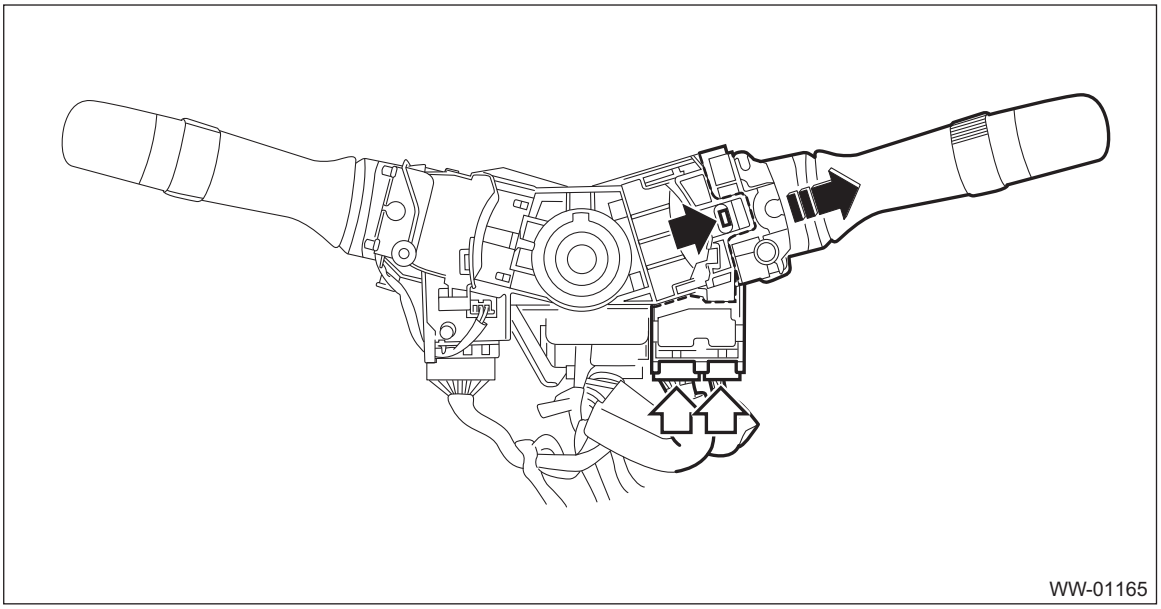


A Model without keyless access with push button start
B Model with keyless access with push button start

3) Remove the switch assembly - combination wiper select.
   (1) Disconnect the connector.

(2) Release the claws, and pull out the switch assembly - combination wiper select.

CAUTION:
Do not press the claws with excessive force. They may be damaged.



B: INSTALLATION

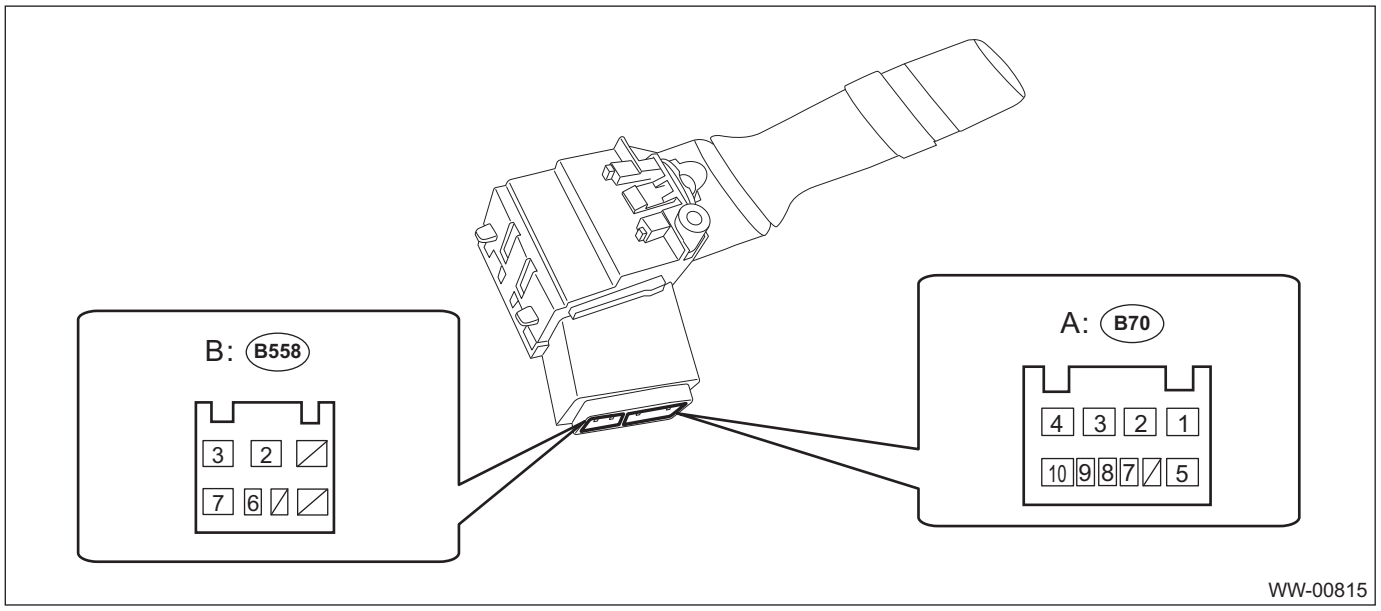
1) Install the switch assembly - combination wiper select.
2) Install the cover assembly - column.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. INSPECTION OF SWITCH UNIT

1) Operate the switches to check the continuity between terminals.

Preparation tool:
Circuit tester



Switch position	Terminal No.	Standard
OFF	A1 and A3	Less than 1 Ω
INT	A1 and A3	Less than 1 Ω

Switch position	Terminal No.	Standard
LO	A2 and A3	Less than 1 Ω
HI	A2 and A4	Less than 1 Ω
Washer ON	B3 and B2	Less than 1 Ω

2) Replace the switch if the inspection result is not within the standard value.
3) Install the switch assembly - combination wiper select. <Ref. to WW-11, INSTALLATION, Combination Switch (Wiper).>

2. FRONT WIPER

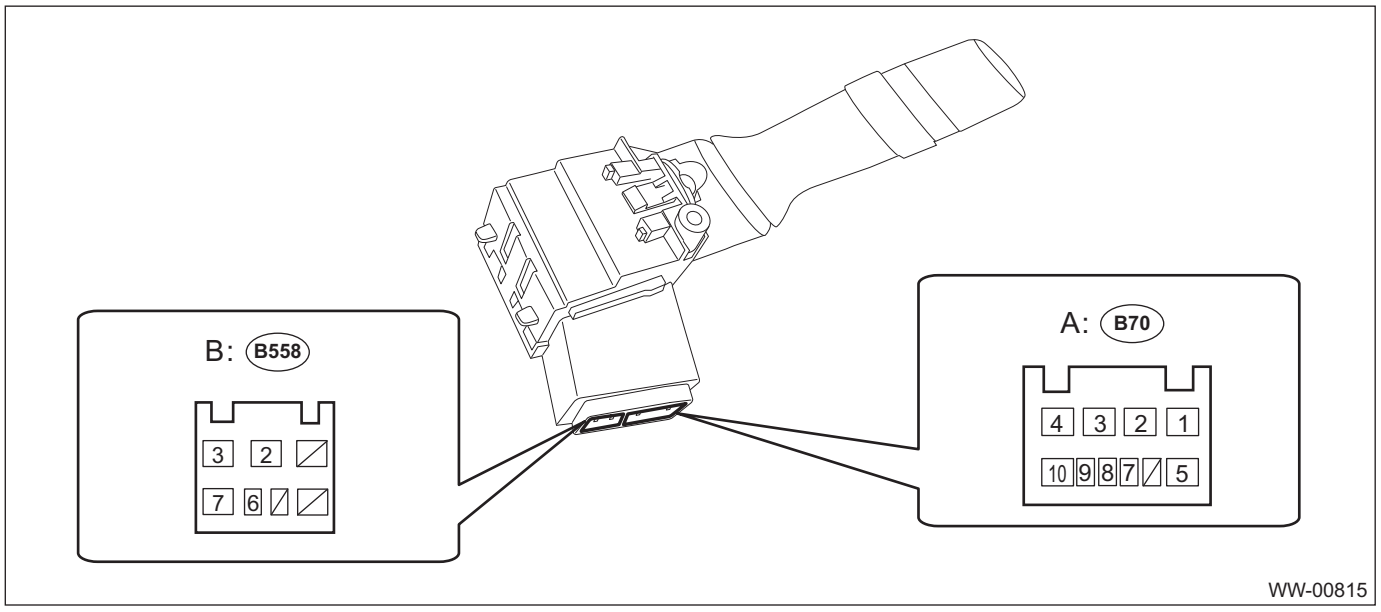
1) Check with Subaru Select Monitor

NOTE:
For detailed operation procedures, refer to “Application help”.

(1) Check the input signal when the switch assembly - combination wiper select is turned to LO or HI, using the «Data monitor» display.
(2) Does the input signal change corresponding to the switch operation?

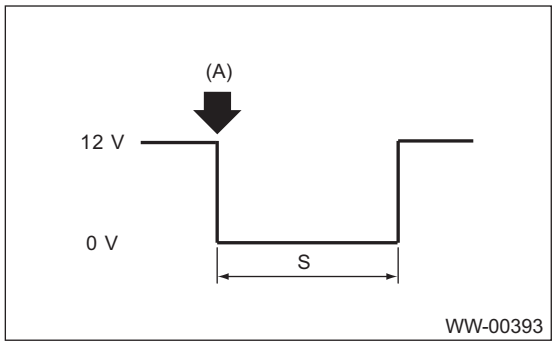
- **Yes** → Finish the diagnosis.
- **No** → Check the harness.

2) Check the intermittent operation (inspection of the combination switch (wiper) alone)



(1) Set the voltmeter between terminals No. A2 (+) and No. B2 (–).
(2) Connect the battery to connector. (Terminal No. A2 (+), terminal No. B2 & A3 (–))
(3) Turn the switch assembly - combination wiper select to INT.
(4) Connect the battery (+) to the terminal No. A2 for 5 seconds.
(5) Connect the battery (–) to the terminal No. B2, and check the voltage between terminals No. A2 and No. A3 during intermittent operation.
(6) Perform step (1) to (5) above when intermittent control switch is in MIN or MAX, and replace the switch if the operation is not as specified.

Intermittent stationary time
MIN: Approx. 2 seconds
MAX: Approx. 16 seconds

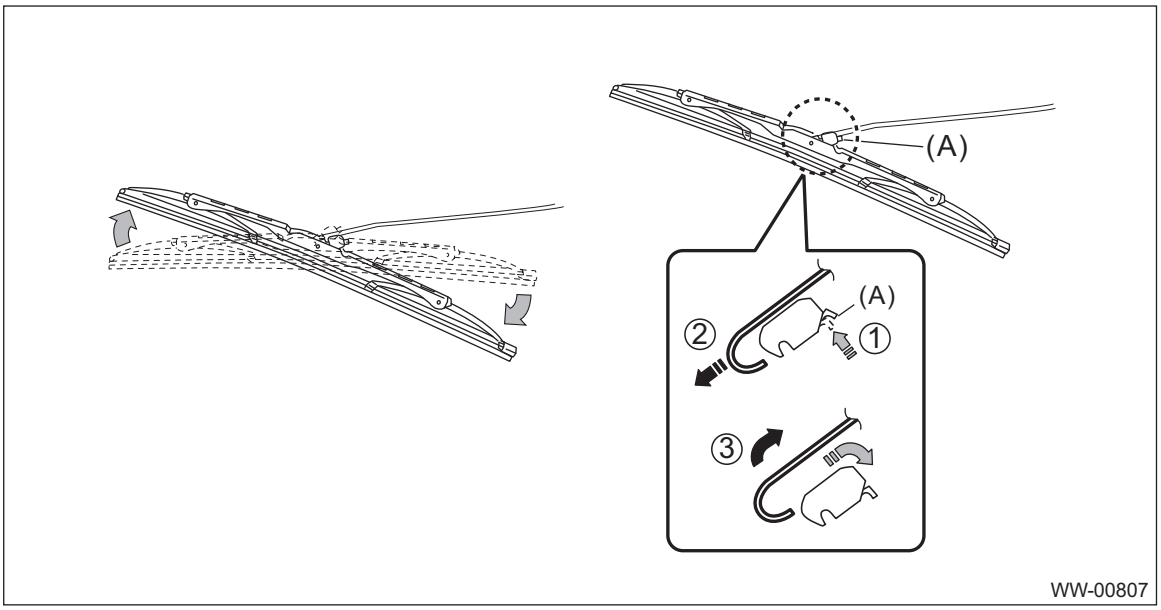


(A): Connect the battery (–) to the terminal No. B2.
S: Intermittent downtime (sec.)

5. Wiper Blade

A: REMOVAL

While pushing the locking clip (A) up, pull out the blade assembly - windshield wiper in the direction of the arrow, and remove it from the arm assembly - windshield wiper.



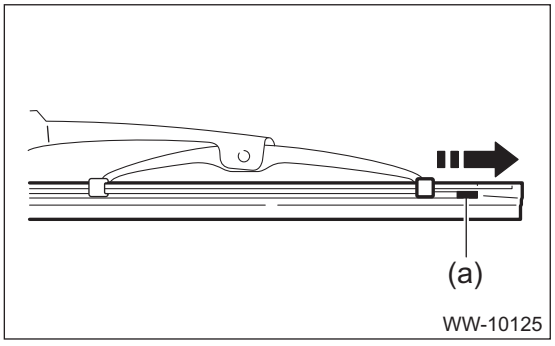
B: INSTALLATION

Install each part in the reverse order of removal.

CAUTION:
Make sure the locking clip is secured.

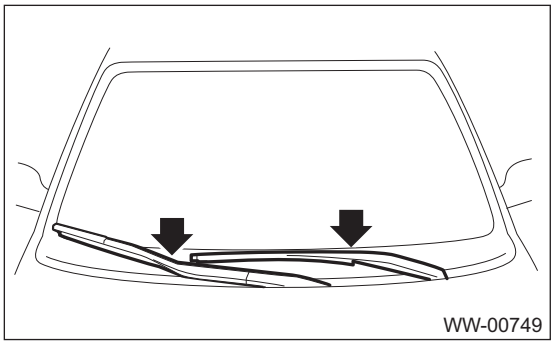
C: DISASSEMBLY

Pull side (a) of the wiper rubber stopper and remove the rubber assembly - windshield wiper.

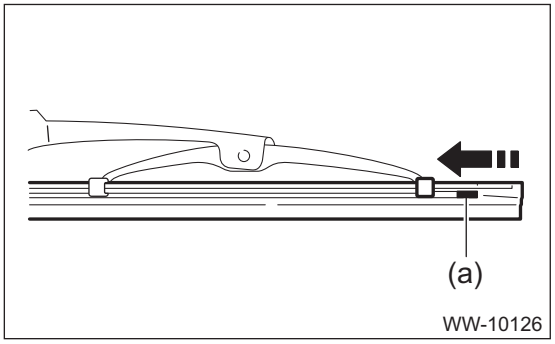


D: ASSEMBLY

1) Insert the rubber assembly - windshield wiper onto the blade - windshield wiper so that the stopper is in the position shown in the figure.



2) Make sure the pull stopper (a) of the rubber assembly - windshield wiper is securely fastened to the blade assembly - windshield wiper.



E: INSPECTION

1) Check and clean the rubber assembly - wiper.

CAUTION:
• Do not use organic solvent-based cleaner when cleaning rubber parts in order to avoid rubber part deterioration.
• Clean rubber parts using a soft cloth or paper towel dampened with windshield washer fluid or mild synthetic detergent.

Replace the rubber assembly - wiper if rubber part hardening, deformation or damage is found.
2) Operate the washer system to check if a chattering sound or insufficient wiping occurs.
3) If a chattering sound or insufficient wiping occurs, perform the following procedures.
(1) Make sure that the blade assembly - wiper is not deformed and the movable part moves smoothly.
(2) Remove oil film and dirt from the glass.

CAUTION:
• When powder-type glass cleaner is used, use after having been dissolved in water sufficiently. If it is used in less water, the glass surface may be damaged.
• Clean the glass surface using a soft cloth or sponge with glass cleaner.

(3) Operate the windshield wiper again. If a chattering sound or insufficient wiping occurs, perform the procedures again.
4) If the rubber assembly windshield wiper has not been replaced in step 1) and the defective cannot be improved, replace the rubber assembly - wiper with a new part.
5) If defective is not improved after performing step 1) to step 4), replace the blade assembly - wiper with a new part.

6. Washer Tank and Motor

A: REMOVAL

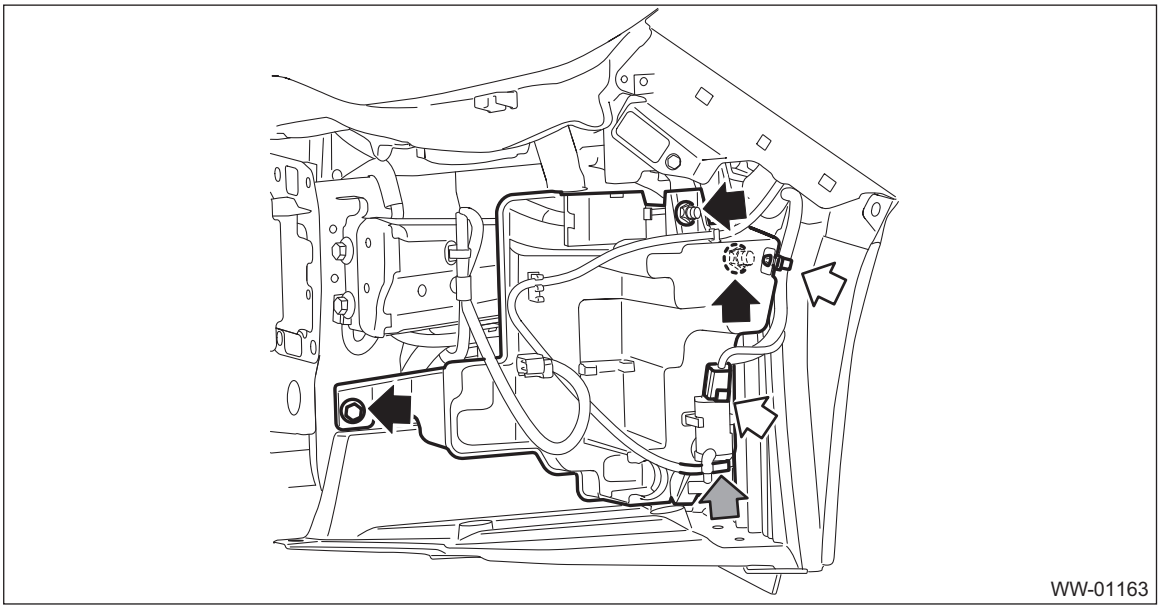
1. WASHER TANK

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the bumper face - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
3) Remove the tank - washer assembly.
   (1) Remove the clip of the holder - windshield washer tank.

   (2) Disconnect the connector from the motor pump assembly - washer and the sensor - washer tank, and then remove the harness clip.
   (3) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
   (4) Remove the bolt and nuts and remove the tank - washer assembly.

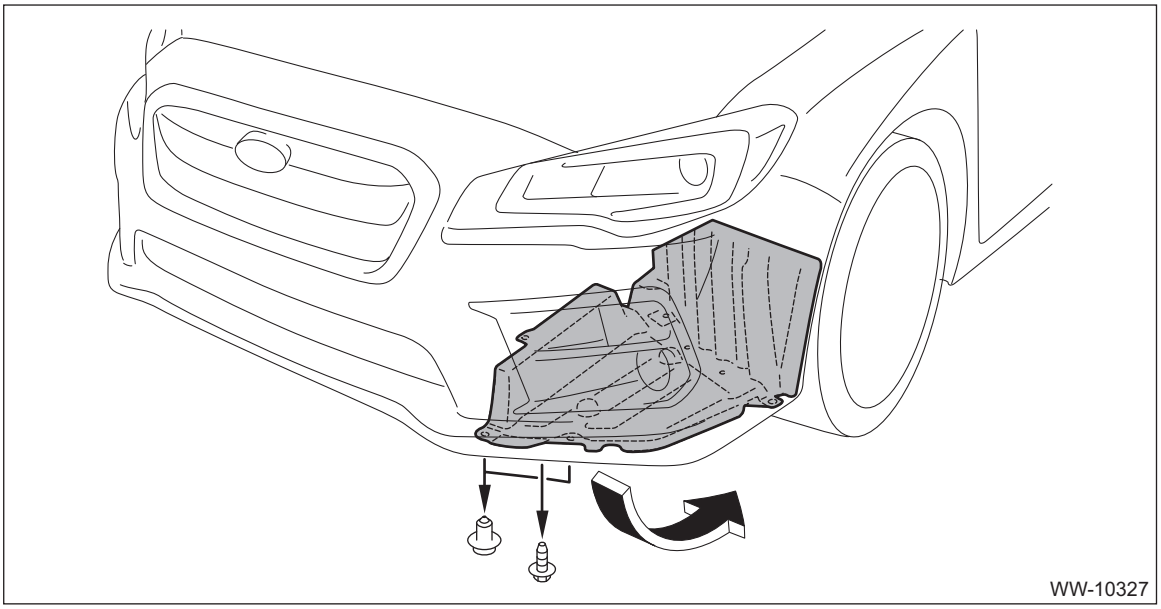


2. WASHER MOTOR

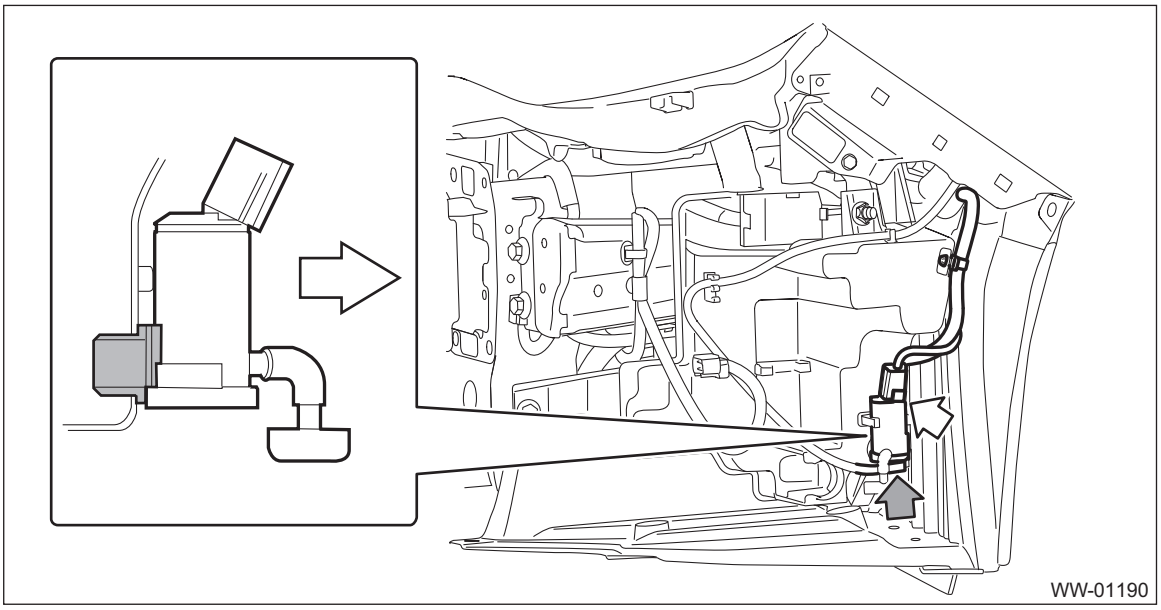
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the clips and screws, and turn over the mud guard - front LH.



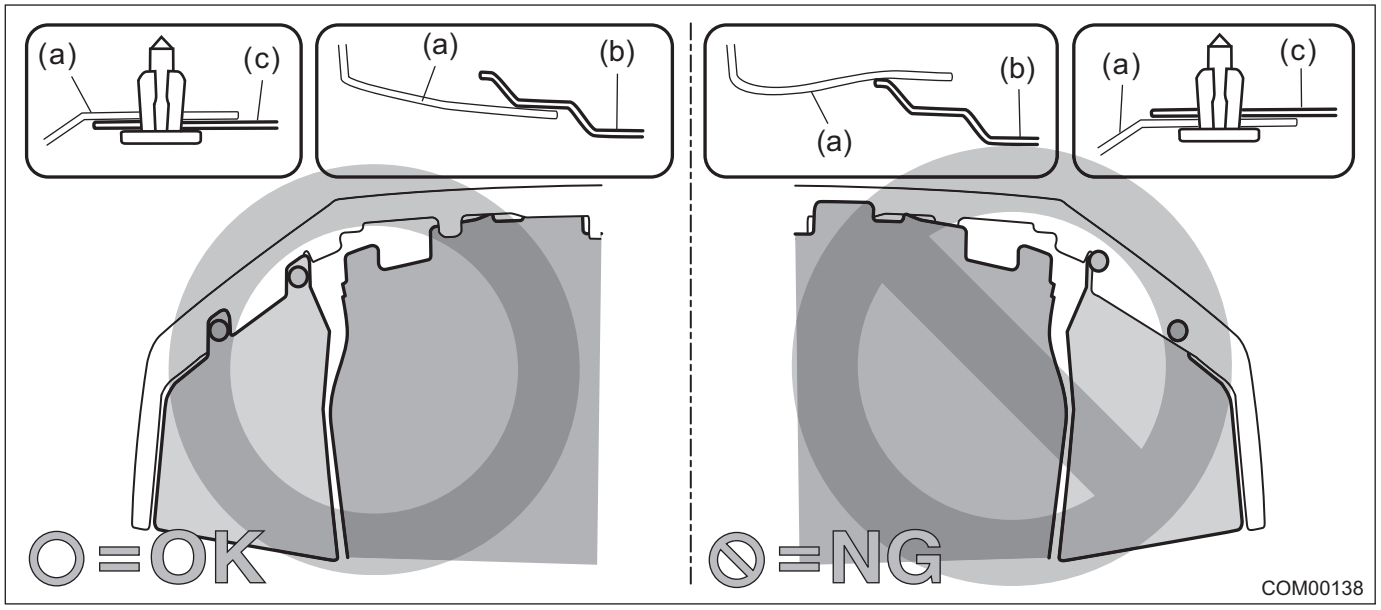
3) Disconnect the connector from the motor pump assembly - washer and remove the harness clip.
4) Prepare a container before disconnecting the hose - washer, and drain all washer fluid in the tank - washer.
5) Remove the motor pump assembly - washer.



B: INSTALLATION

1. WASHER TANK

CAUTION:
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).

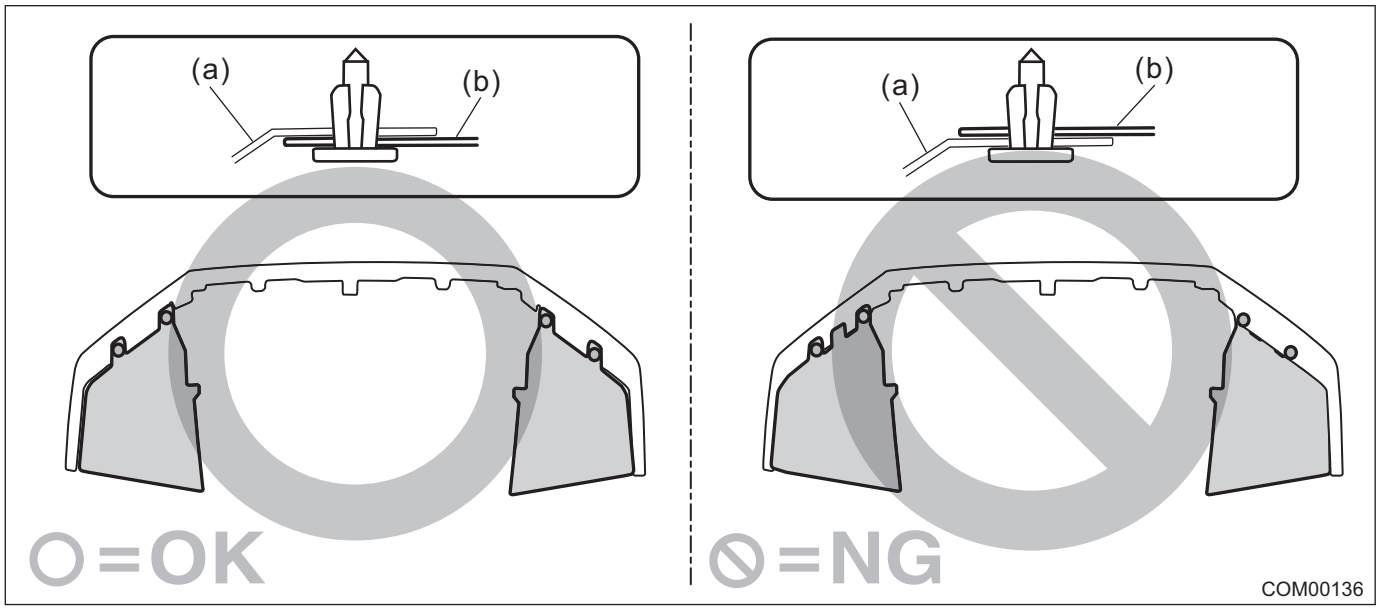


• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install the tank - washer assembly.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)
2) Connect the hose - washer.
3) Connect each connector and install the harness clip.
4) Install the mud guard - front.
5) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Add new washer fluid.
8) Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

2. WASHER MOTOR

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

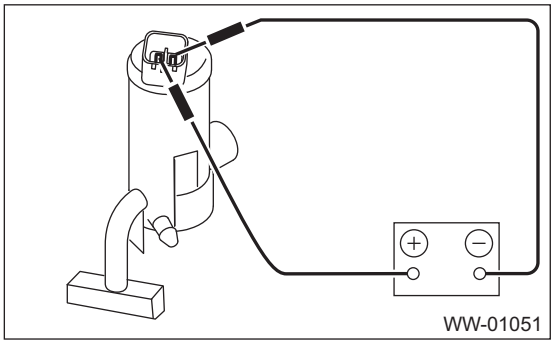


1) Install the motor pump assembly - washer to the tank - washer.
2) Connect the hose - washer.
3) Connect each connector and install the harness clip.
4) Install the mud guard - front LH.
5) Add new washer fluid.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
7) Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

C: INSPECTION

1. WASHER PUMP

Apply battery voltage to the connector terminal of the motor pump assembly - washer, and make sure that the motor operates.



2. WASHER FLUID LEVEL SENSOR

1) Check the connection status of washer fluid level sensor connector.
2) Does the low washer fluid warning light illuminate after draining the washer fluid? And does the low washer fluid warning light go off after refilling the washer fluid?

- **Yes → Normal operation.**
- **No → Perform step 3.**

3) Using a tester, measure the voltage of the washer fluid level sensor connector.
   (1) Is the voltage approx. 8.5 V or more?

- **Yes → Perform step 4.**
- **No → Check meter, and replace if necessary.**

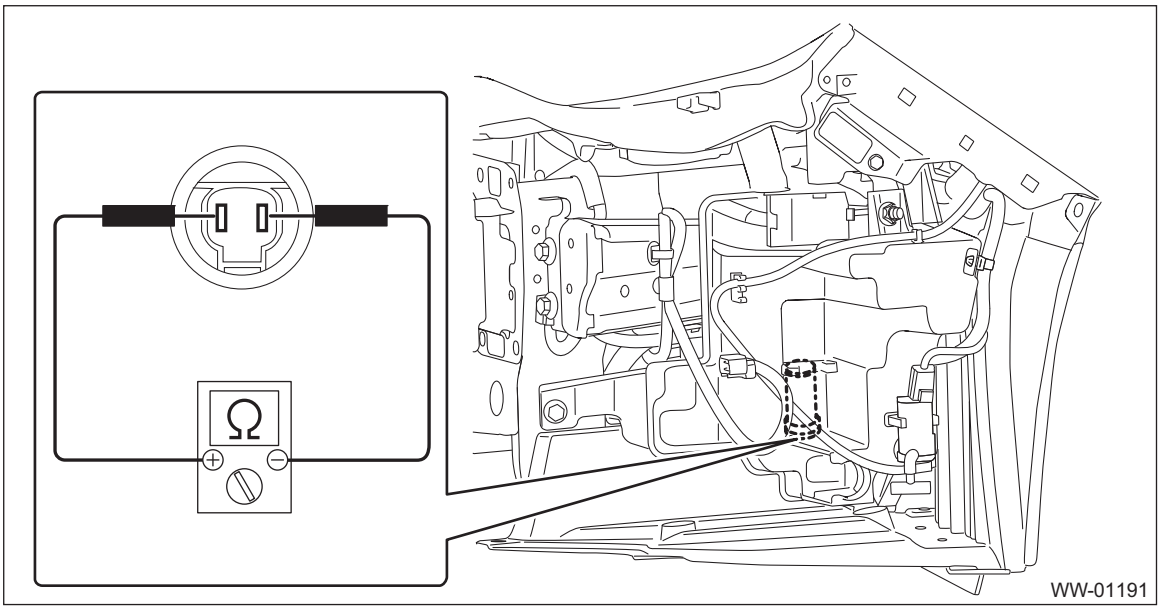
4) Does the meter indicator illuminate if you short the washer fluid level sensor connector?

- **Yes → Perform step 5.**
- **No → Check harness and meter, and replace if necessary.**

5) Using a tester, measure the resistance of the washer fluid level sensor.

(1) Turn over the mud guard.

(2) Measure the resistance of the washer fluid level sensor.



Amount of washer fluid in the tank	Standard
No remaining quantity (ON)	Less than 10 Ω
There is remaining quantity (OFF)	1 MΩ or more

(3) Is the resistance within the standard?

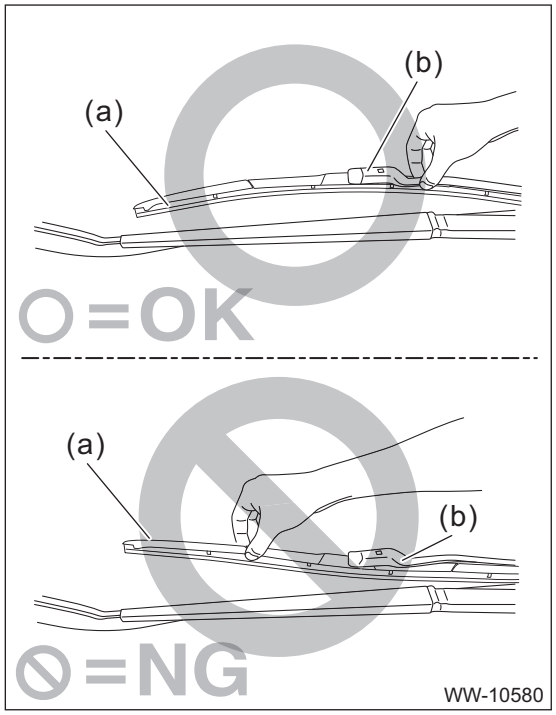
- **Yes → Normal operation.**
- **No → Replace the washer fluid level sensor along with the washer tank.**

7. Front Wiper Arm

A: REMOVAL

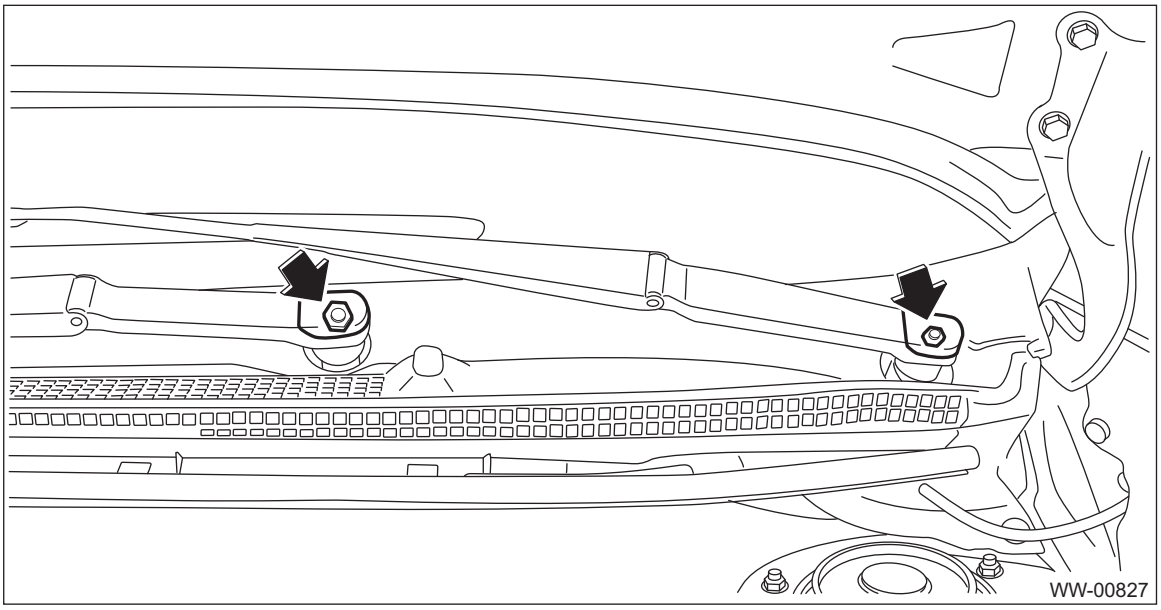
1. MODELS WITHOUT EyeSight

NOTE:
• Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.
• When raising the arm assembly - windshield wiper, always hold the arm part.



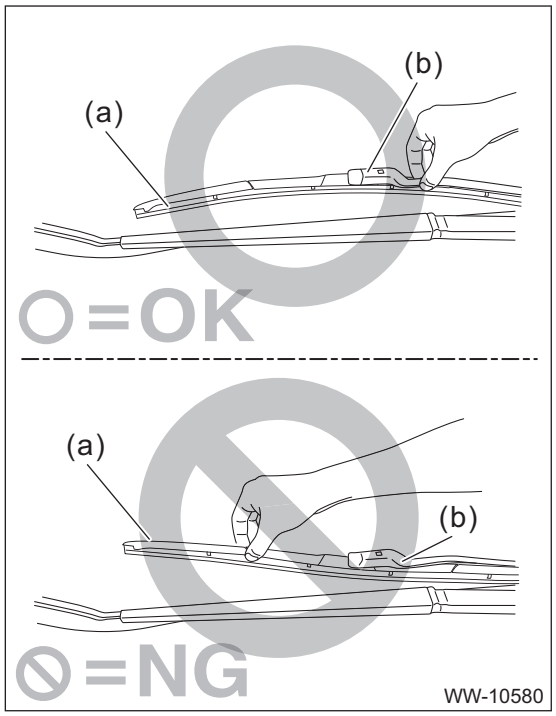
(a) Blade ASSY - windshield wiper
(b) Arm ASSY - windshield wiper

1) Remove the cover - windshield wiper arm.
2) Remove the nuts, and remove the arm assembly - windshield wiper.



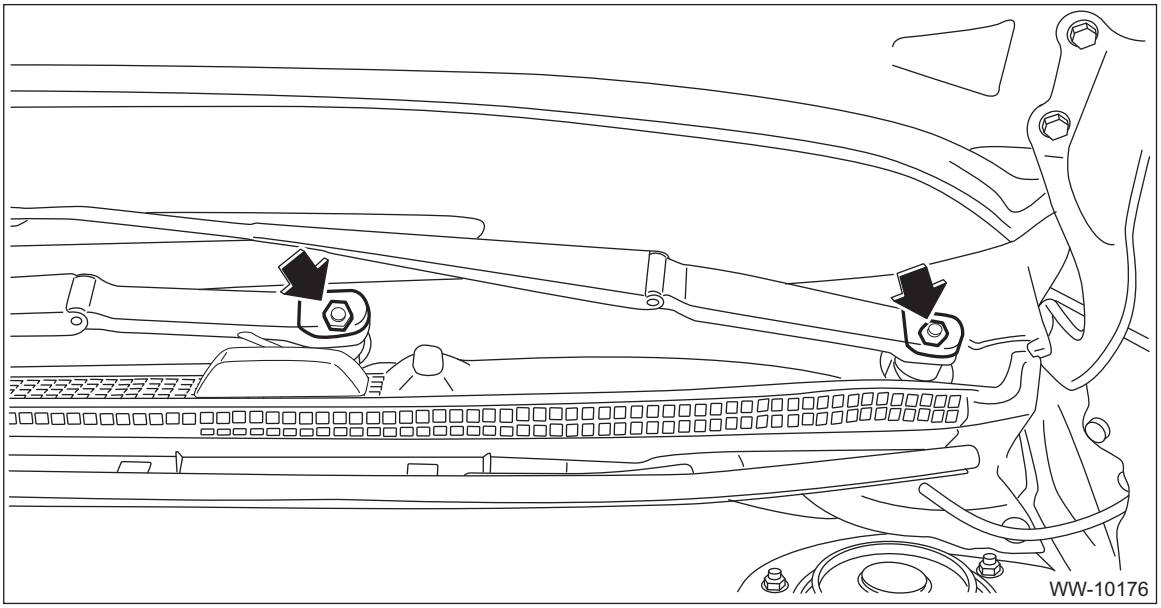
2. MODELS WITH EyeSight

NOTE:
• Since the arm assembly - windshield wiper LH and RH can interfere with each other, remove the driver's side first.
• When raising the arm assembly - windshield wiper, always hold the arm part.

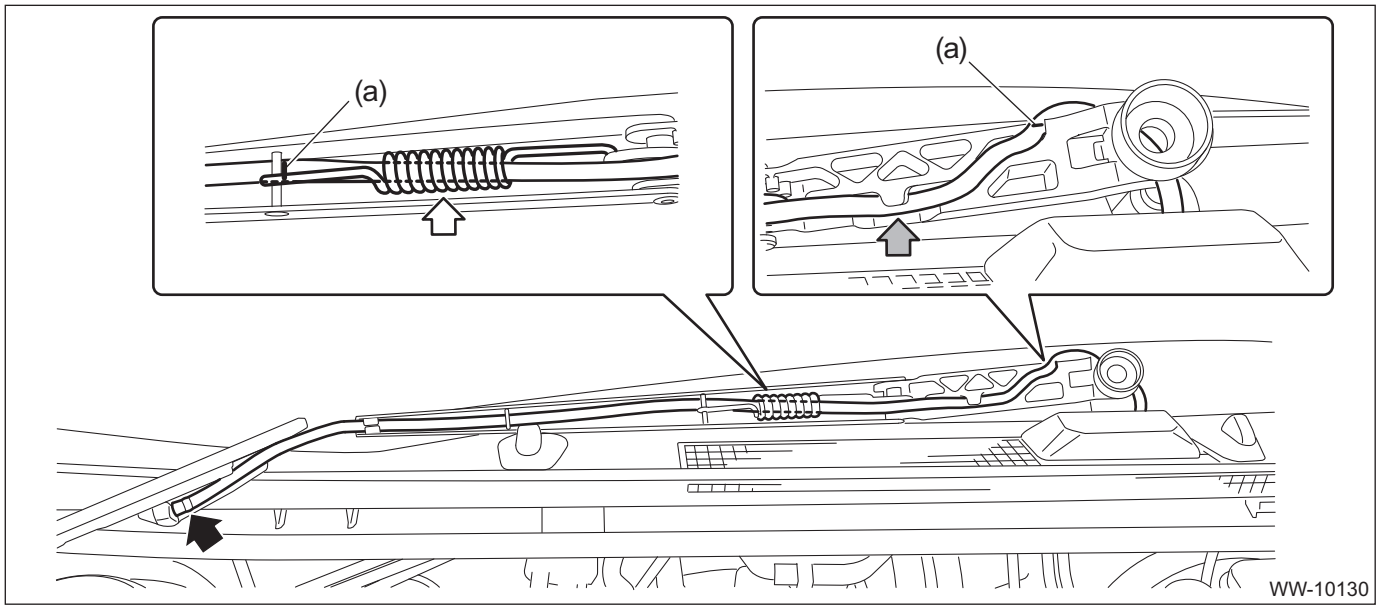


(a) Blade ASSY - windshield wiper
(b) Arm ASSY - windshield wiper

1) Remove the cover - windshield wiper arm.
2) Remove the arm assembly - windshield wiper.
   (1) Remove the nuts, and remove the arm assembly - windshield wiper.



(2) Add alignment marks (a) on two places, and remove the hose from the arm assembly - windshield wiper assistor.



3) When removing the hose from the joint - washer hose, refer to the removal of “Nozzle - wiper arm washer & hose”. <Ref. to WW-32, NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EyeSight), REMOVAL, Front Washer Nozzle and Hose.>

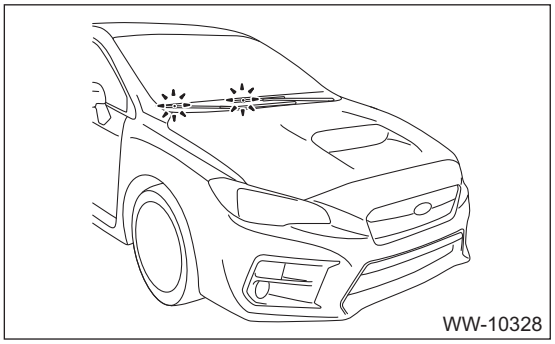
CAUTION:
Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor. If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.

B: INSTALLATION

1. MODELS WITHOUT EyeSight

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger’s side first.

1) Install the arm assembly - windshield wiper.
(1) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.



(2) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

2) Operate the windshield wiper to check that the stop position is aligned with the point mark.
If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>

2. MODELS WITH EyeSight

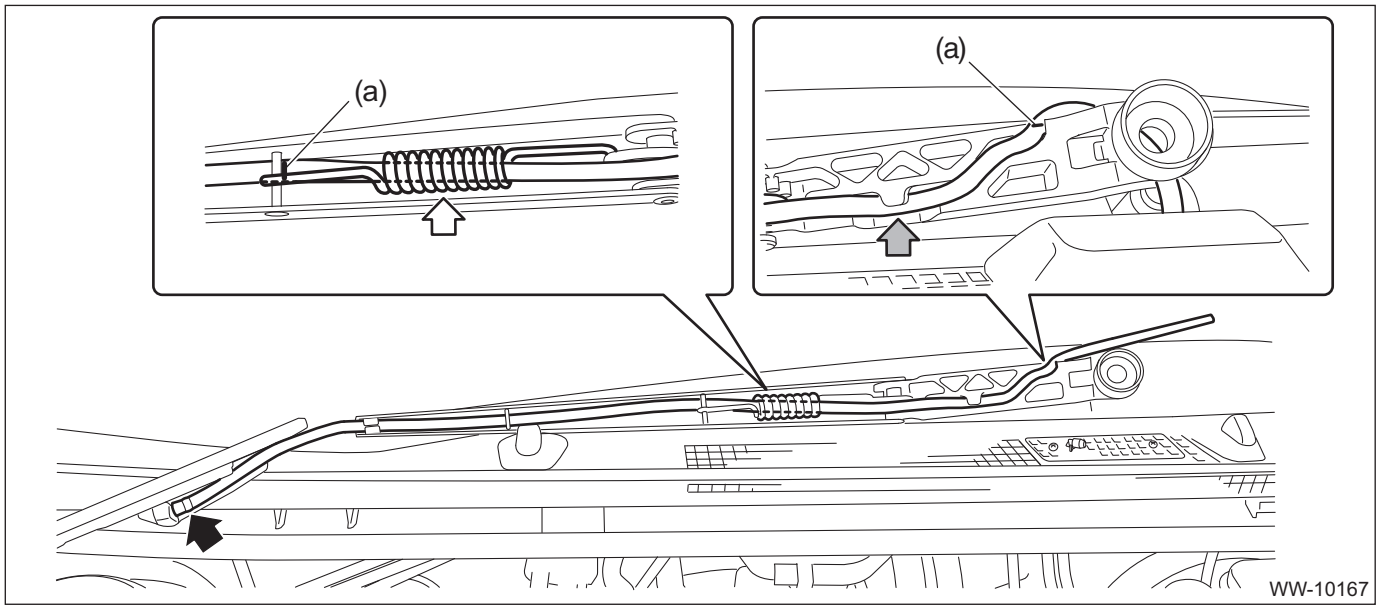
CAUTION:
Install firmly so that the hose is not bent, compressed or flattened.

NOTE:
Since the arm assembly - windshield wiper LH and RH can interfere with each other, install the passenger's side first.

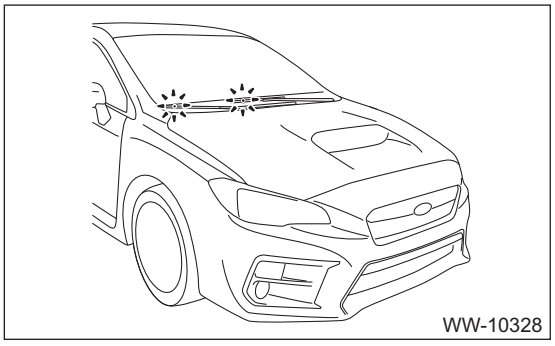
1) When the hose is removed from the joint - washer hose, refer to "Installation" of "Front washer nozzle & hose". <Ref. to WW-33, INSTALLATION, Front Washer Nozzle and Hose.>

2) Install the arm assembly - windshield wiper.

(1) Align the alignment mark (a), and install the hose to the arm assembly - windshield wiper assistor.



(2) Assemble the arm assembly - windshield wiper so that the blade assembly - windshield wiper is aligned to the ceramic print point mark of the windshield glass.

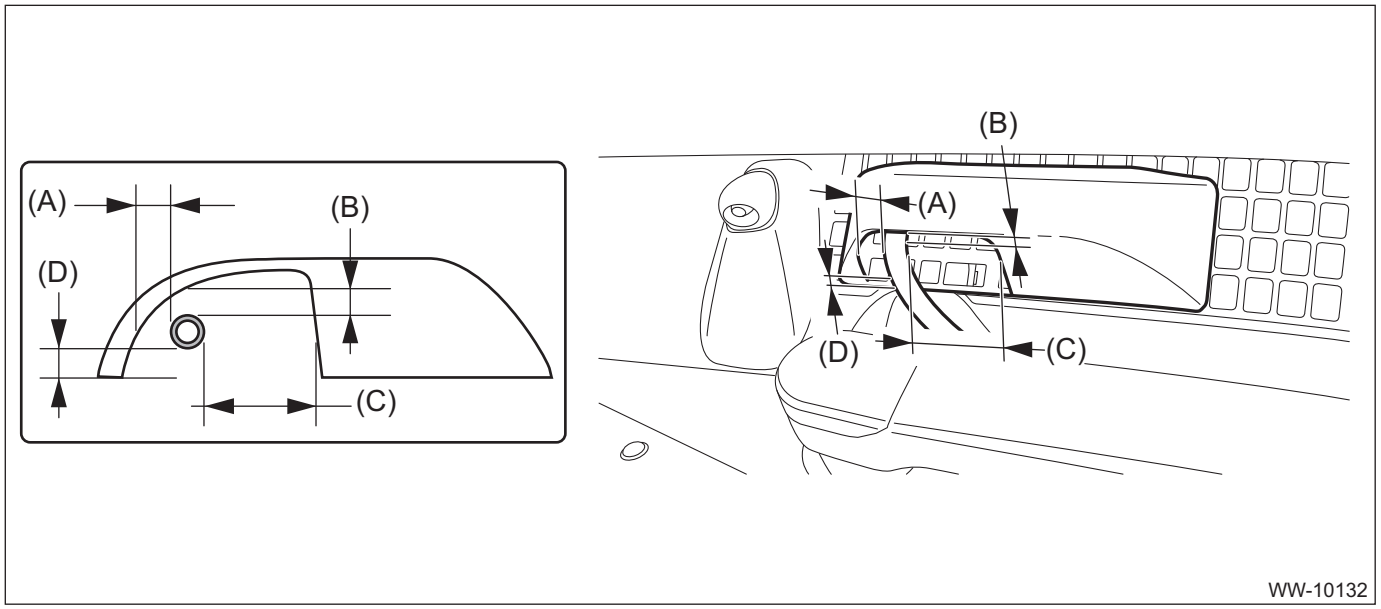


(3) Tighten the arm assembly - windshield wiper to specified torque and install the cap.

Tightening torque:
26 N·m (2.7 kgf-m, 19.2 ft-lb)

3) Operate the windshield wiper to check that the stop position is aligned with the point mark.
If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>

4) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation.



(A) Gap between hose and cover - joint outer side
(B) Gap between hose and cover - joint upper side
(C) Gap between hose and cover - joint inner side
(D) Gap between hose and cover - joint lower side

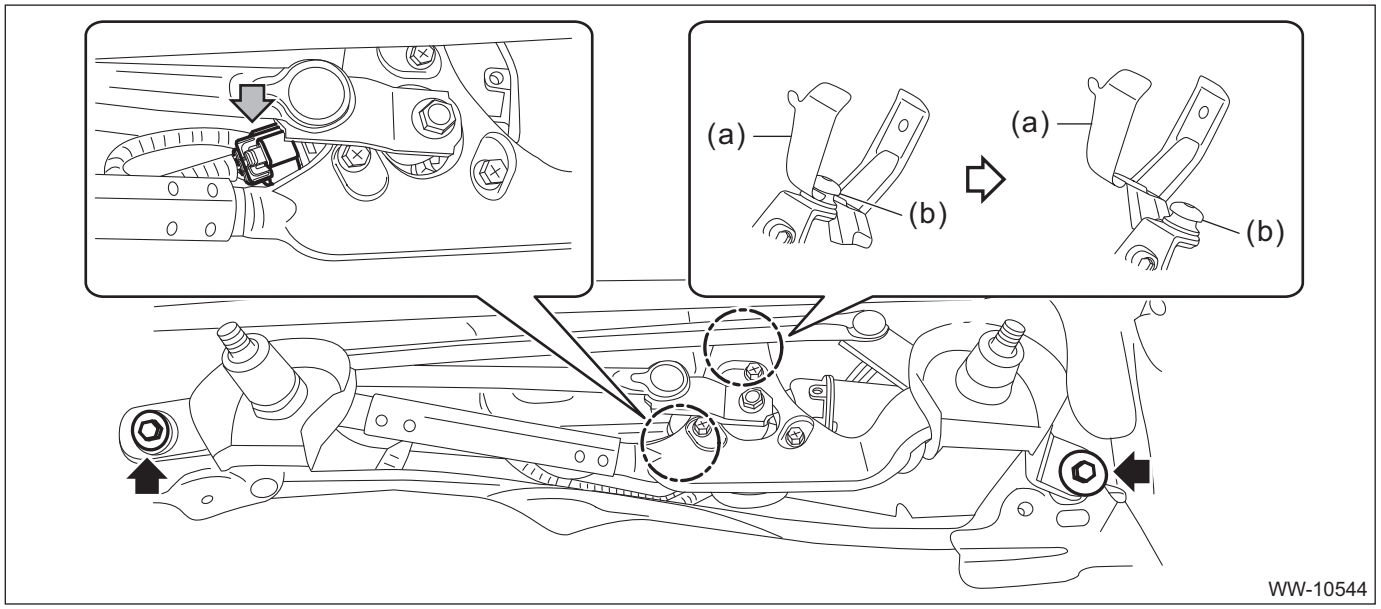
8. Front Wiper Motor and Link

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the arm assembly - windshield wiper. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
3) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-47, REMOVAL, Cowl Panel.>

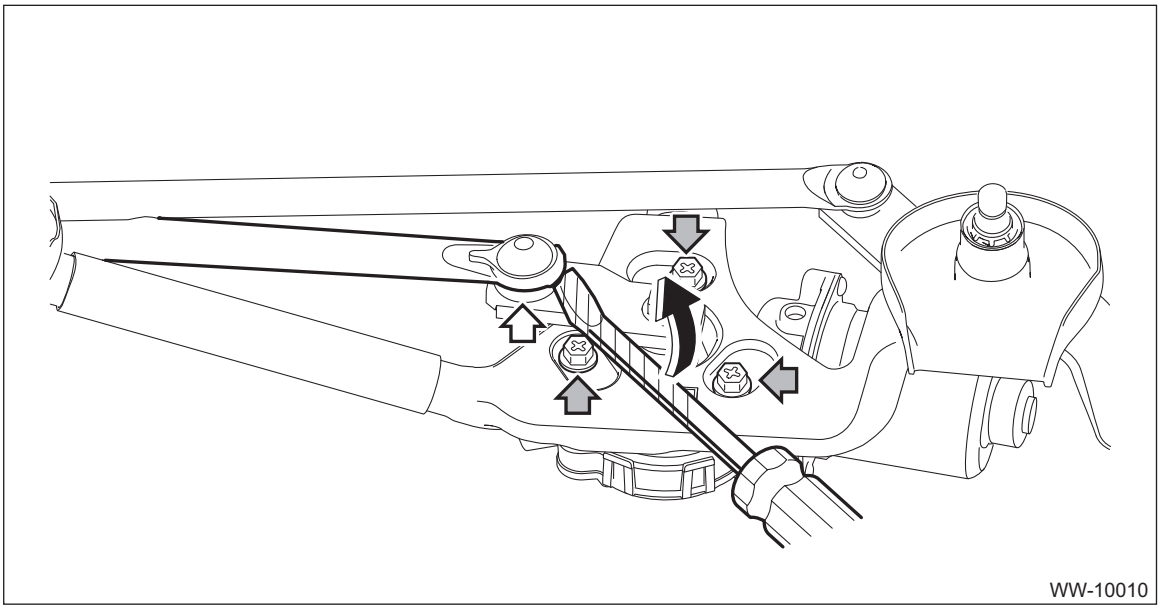
CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
4) Remove the link assembly - windshield wiper.
(1) Disconnect the connector of the motor assembly - windshield wiper.
(2) Remove the bolts and harness clips, remove the grommet part of the front wiper link assembly from the body, and then remove the link assembly - windshield wiper.



(a) Body side fitting bracket part
(b) Front wiper link ASSY grommet part

5) Remove the motor assembly - windshield wiper.
(1) Using a crowbar wrapped with protective tape, disconnect the link assembly - windshield wiper from the link plate.

(2) Remove the bolts, and remove the motor assembly - windshield wiper.



B: INSTALLATION

CAUTION:
• If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.
• Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
2) Check that the motor assembly - windshield wiper is at the auto stop position.

CAUTION:
During motor operation, do not touch the movable part.

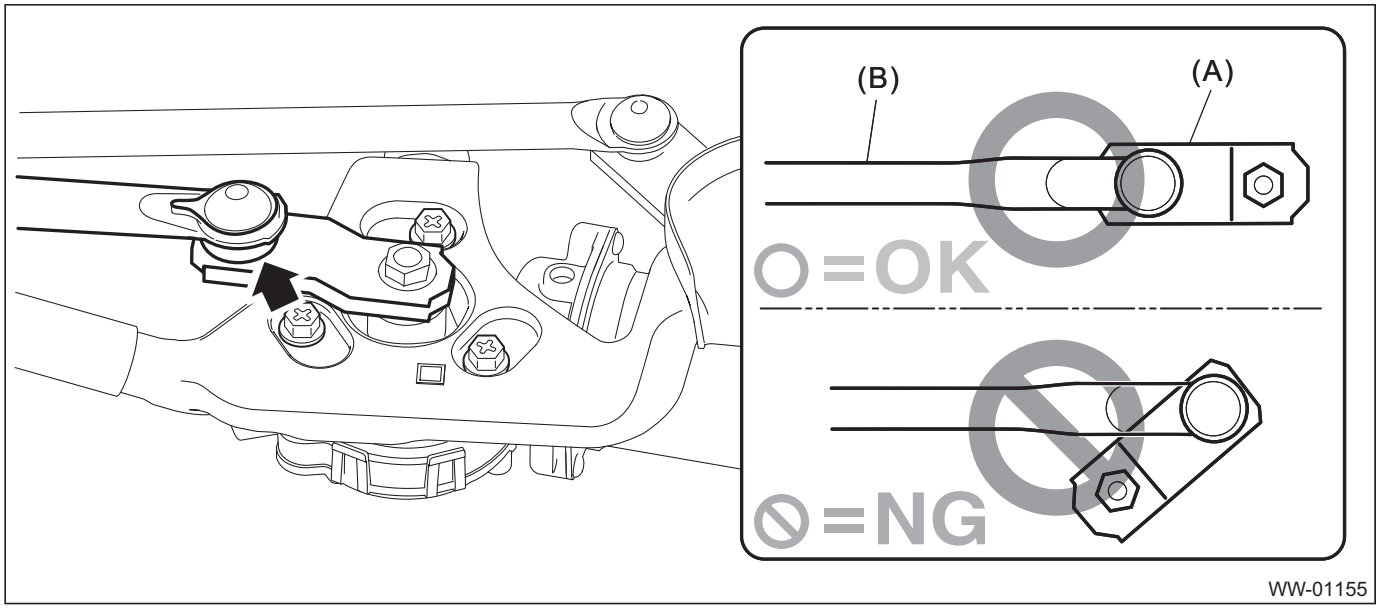
(1) Connect the harness of front wiper to the motor assembly - windshield wiper.
(2) Switch the combination switch (wiper) to ON/OFF once.

3) Disconnect the ground terminal from battery again. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

4) Install the motor assembly - windshield wiper.
(1) Align the link plate position.

CAUTION:
Install the motor assembly - windshield wiper at the position where the rod (B) and link plate (A) are aligned in a straight line.



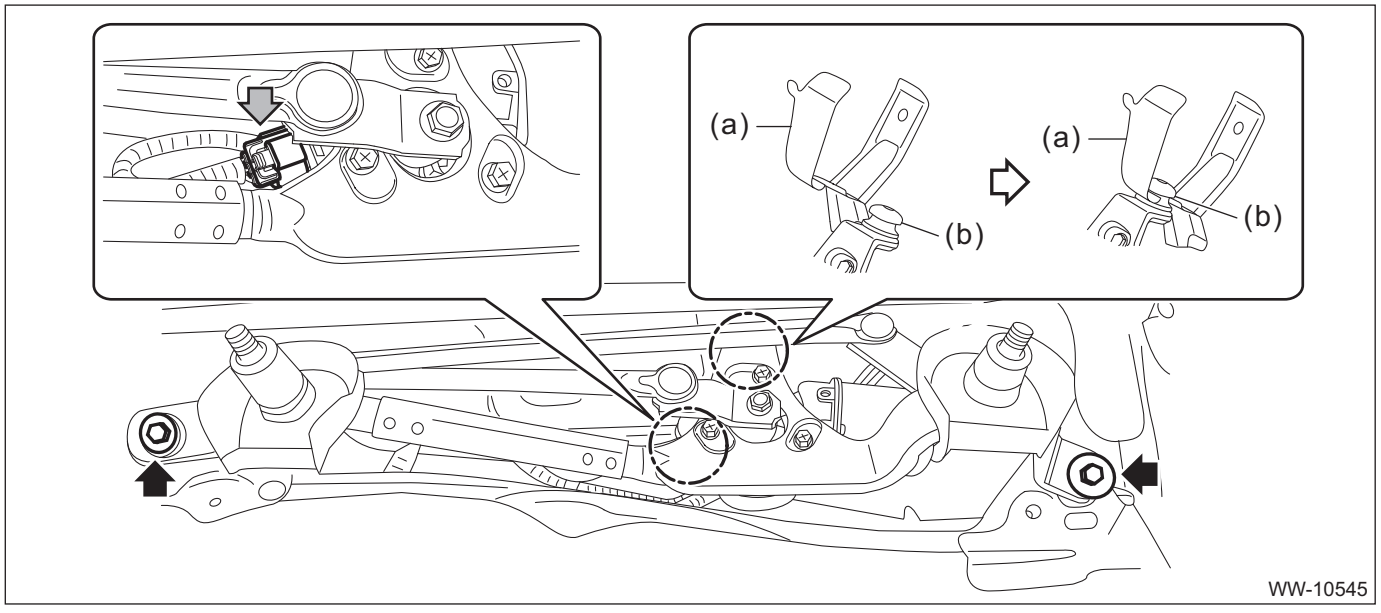
(2) Install the motor assembly - windshield wiper.

Tightening torque:
5.5 N·m (0.6 kgf-m, 4.1 ft-lb)

5) Install the link assembly - windshield wiper.
(1) Fit the grommet part of the front wiper link assembly into the body, install the bolts and harness clips, and then install the link assembly - windshield wiper.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

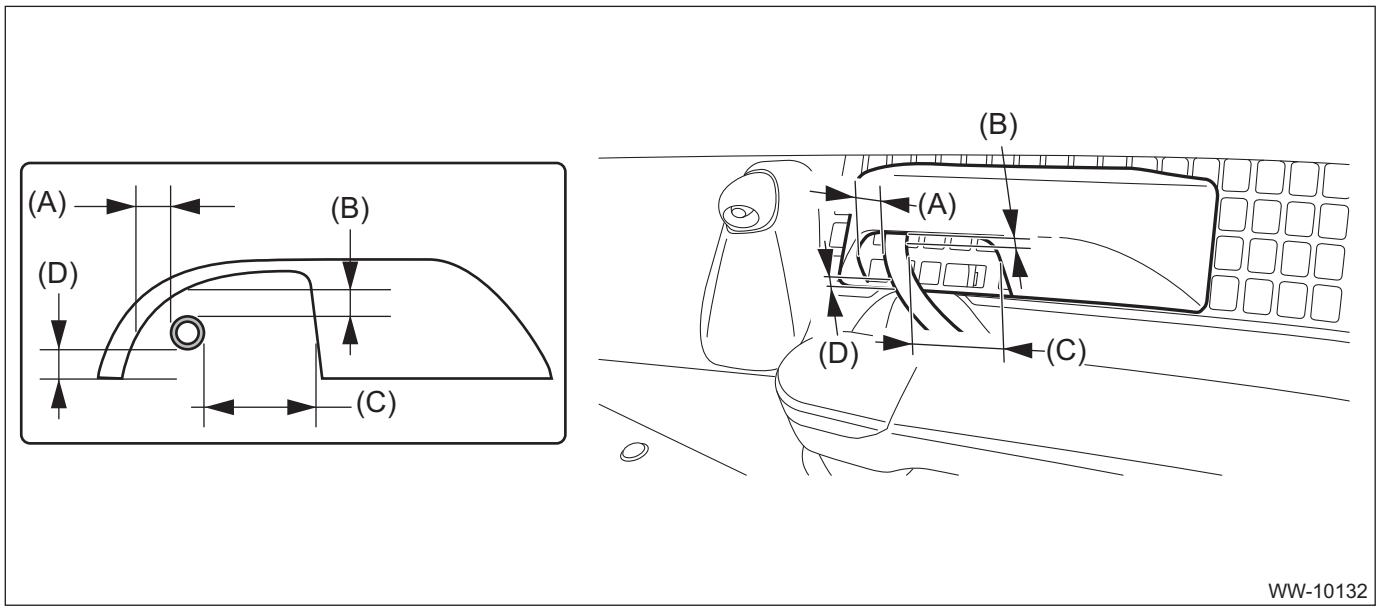
(2) Install the connector of the motor assembly - windshield wiper.



(a) Body side fitting bracket part
(b) Front wiper link ASSY grommet part

6) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-48, INSTALLATION, Cowl Panel.>
7) Install the arm assembly - windshield wiper. <Ref. to WW-23, INSTALLATION, Front Wiper Arm.>

8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) Operate the windshield wiper to check that the stop position is aligned with the point mark.
If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
10) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation. (Models with EyeSight)



(A) Gap between hose and cover - joint outer side
(B) Gap between hose and cover - joint upper side
(C) Gap between hose and cover - joint inner side
(D) Gap between hose and cover - joint lower side

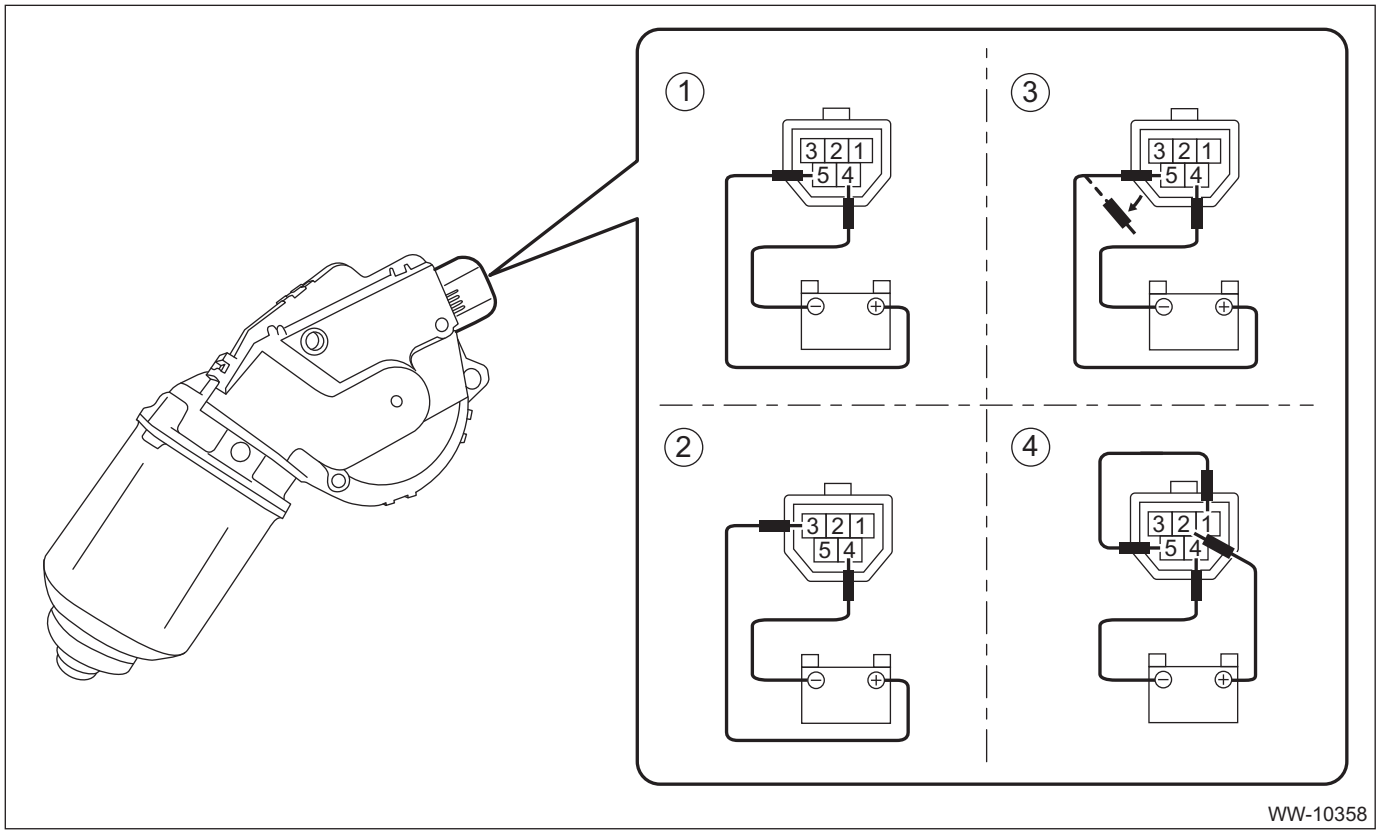
C: INSPECTION

1) Check that the following operations perform normally.

CAUTION:
Fix the motor to prevent the motor from being shorted by moving during operation.

(1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.
(2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.
(3) Connect the battery to terminals of the connector, and remove the terminal connection with motor rotating at low speed, and stop the motor assembly - windshield wiper in mid-operation.

(4) Connect the battery and check that the motor stops at the automatic stop position after the motor operates at low speed again.



NOTE:
Replace the motor assembly - windshield wiper if the inspection result is not within the standard.
2) Install the motor assembly - windshield wiper. <Ref. to WW-27, INSTALLATION, Front Wiper Motor and Link.>

9. Front Washer Nozzle and Hose

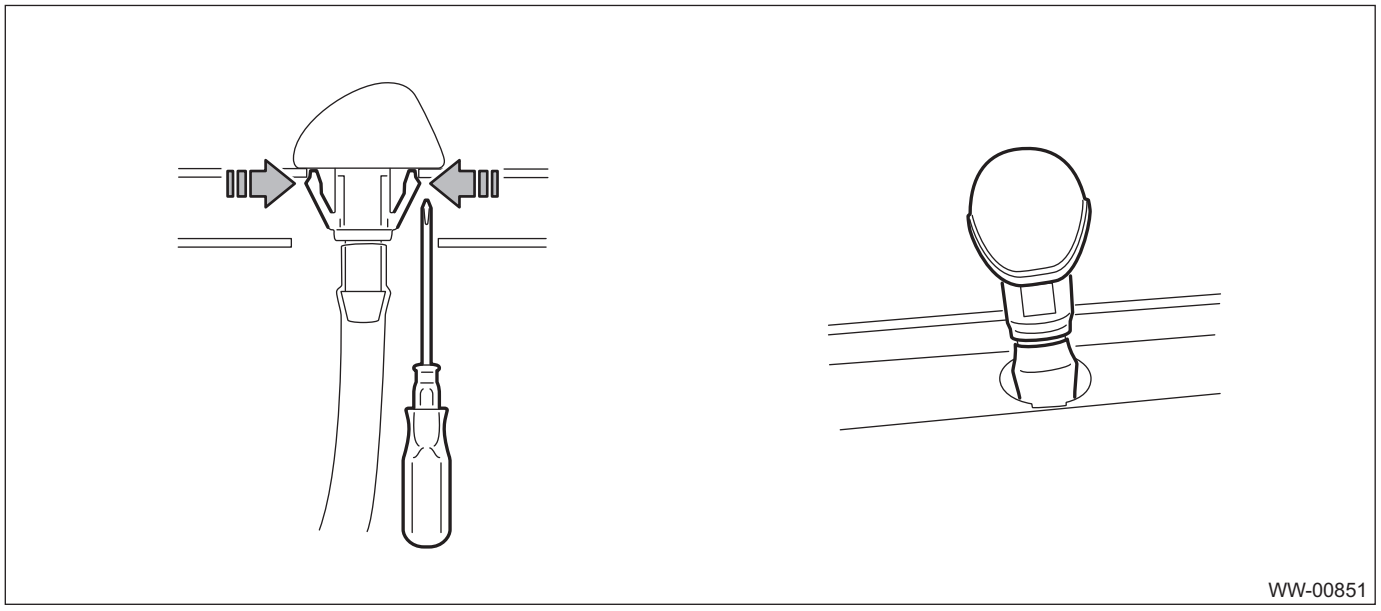
A: REMOVAL

1. NOZZLE - WINDSHIELD WASHER & HOSE

1) Remove the arm assembly - windshield wiper. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
2) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-47, REMOVAL, Cowl Panel.>

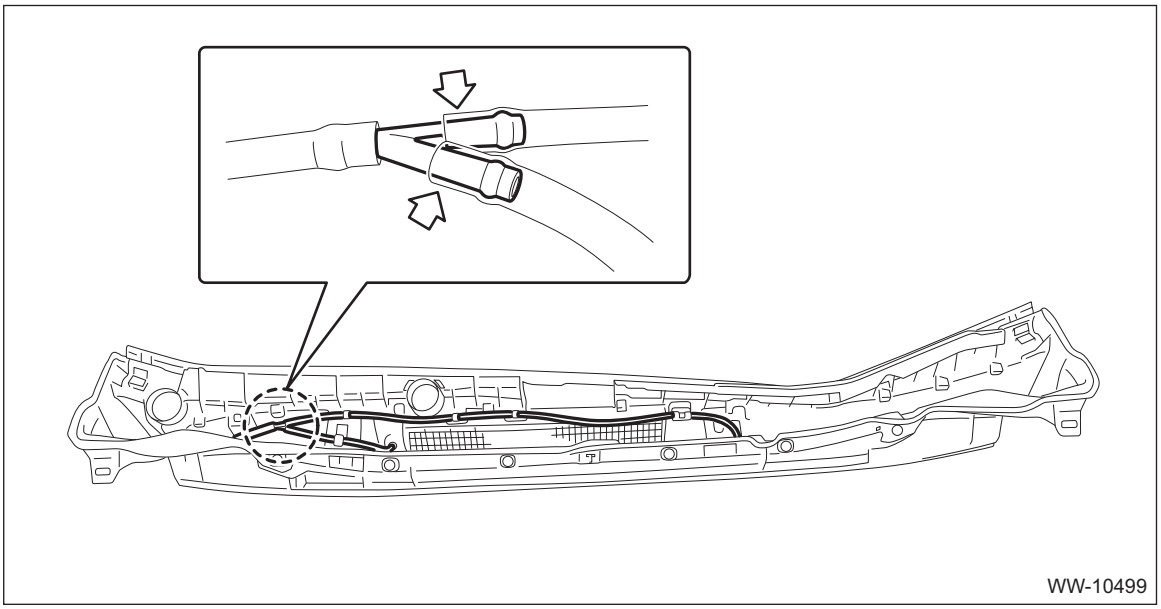
CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

3) Remove the nozzle - windshield washer.
   (1) Push the claw using a flat tip screwdriver, etc.
   (2) When the nozzle - windshield washer lifts up, pull out the nozzle - windshield washer using a clip remover, etc.
   (3) Disconnect the hose - windshield washer, and remove the nozzle - windshield washer.

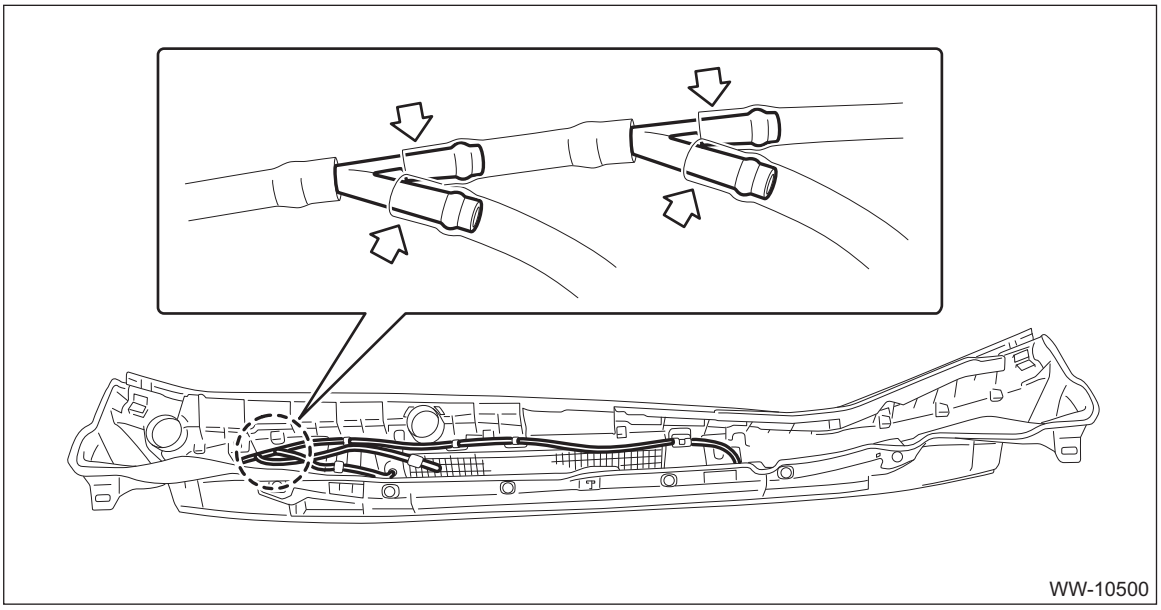


4) Disconnect the hose - windshield washer as necessary.

- (Models without EyeSight)



- (Models with EyeSight)



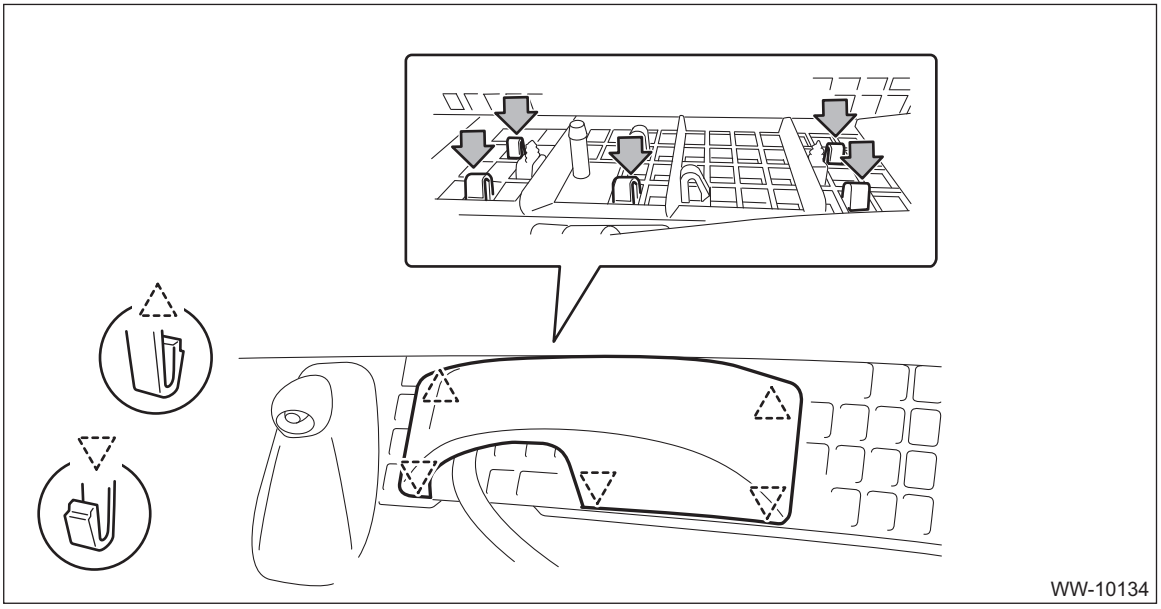
2. NOZZLE - WIPER ARM WASHER & HOSE (MODEL WITH EyeSight)

CAUTION:
Do not remove the nozzle - wiper arm washer from the arm assembly - windshield wiper assistor. If nozzle replacement is required, replace the arm assembly - windshield wiper assistor as a unit.

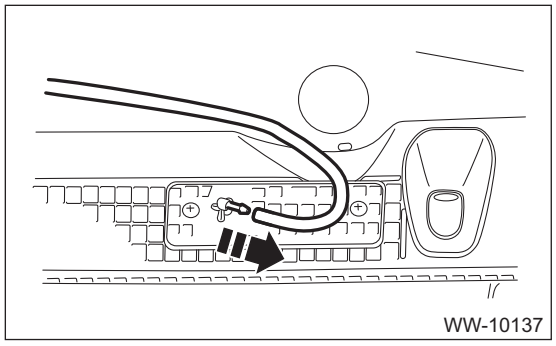
1) Remove the arm assembly - windshield wiper. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
2) Remove the cowl panel - side and the cowl panel assembly. <Ref. to EI-47, REMOVAL, Cowl Panel.>

CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.

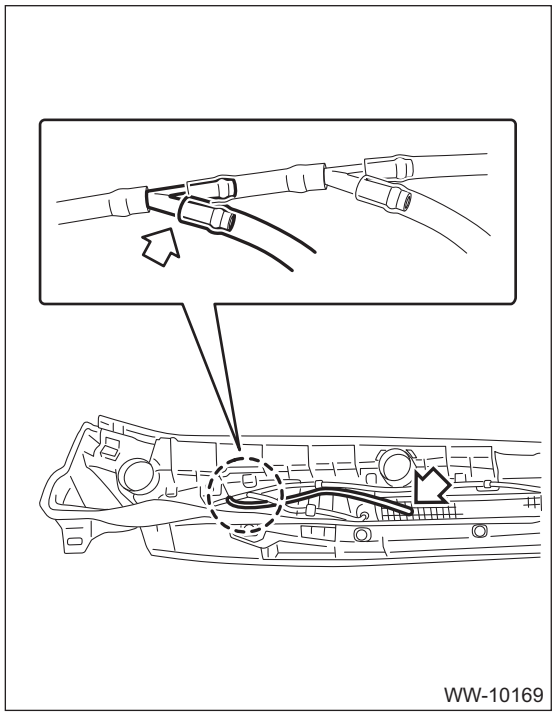
3) Release the claws, and remove the cover - joint from cowl panel assembly.



4) Remove the hose - wiper arm washer.



WW-10137

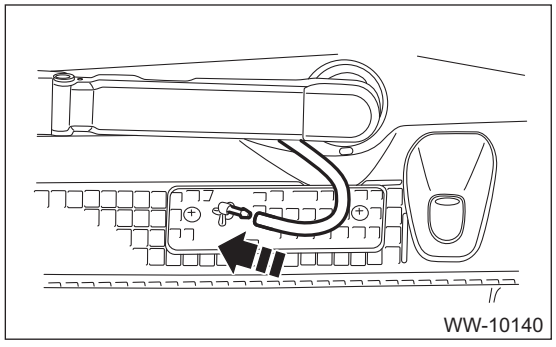


WW-10169

B: INSTALLATION

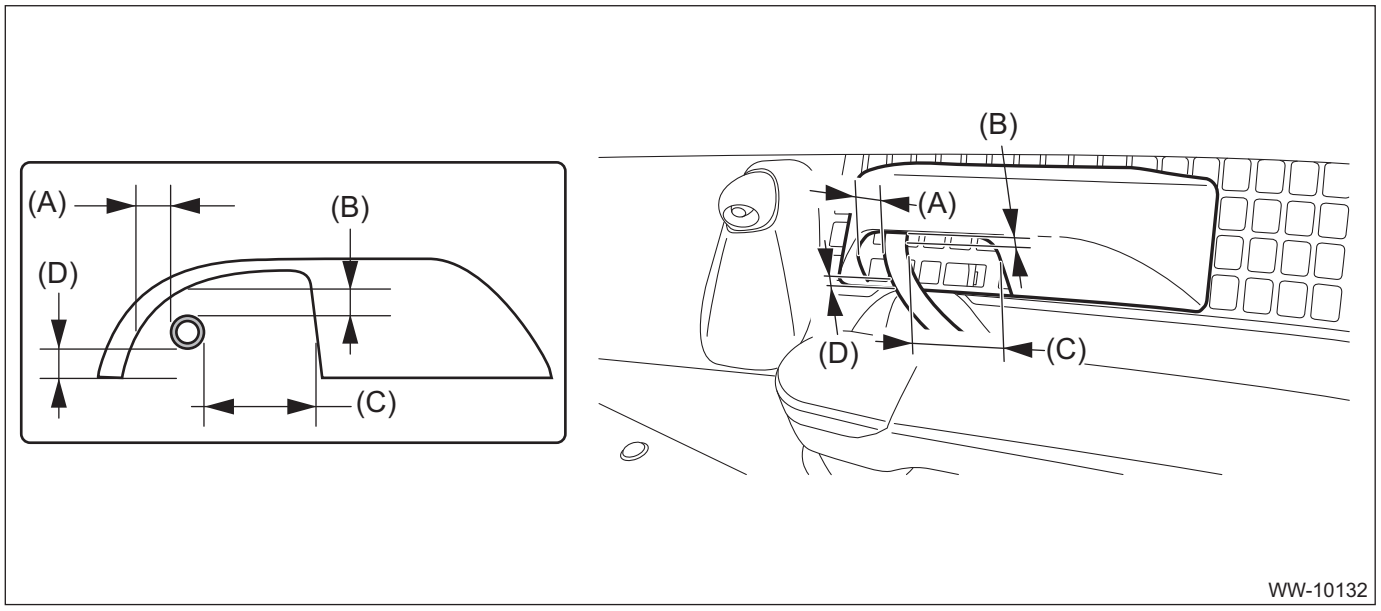
CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

1) Install the nozzle - windshield washer.
   (1) Install the nozzle - windshield washer.
   (2) Install the hose - windshield washer.
2) Install the cowl panel - side and the cowl panel assembly. <Ref. to EI-48, INSTALLATION, Cowl Panel.>
3) Install the arm assembly - windshield wiper. <Ref. to WW-23, INSTALLATION, Front Wiper Arm.>
4) Install the hose to the joint - washer hose. (Models with EyeSight)



WW-10140

5) Install the cover - joint to the cowl panel assembly. (Models with EyeSight)
6) Adjust the position of the nozzle - windshield washer. <Ref. to WW-34, ADJUSTMENT, Front Washer Nozzle and Hose.>
7) Operate the windshield wiper to check that the stop position is aligned with the point mark.
If it is not aligned with the point mark, perform the removal and installation of the windshield wiper over again. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
8) Make sure that there is a gap of 1 mm (0.04 in) or more between the hose and the cover - joint and between the hose and the joint - washer hose during windshield wiper operation. (Models with EyeSight)



(A) Gap between hose and cover - joint outer side
(B) Gap between hose and cover - joint upper side
(C) Gap between hose and cover - joint inner side
(D) Gap between hose and cover - joint lower side

C: INSPECTION

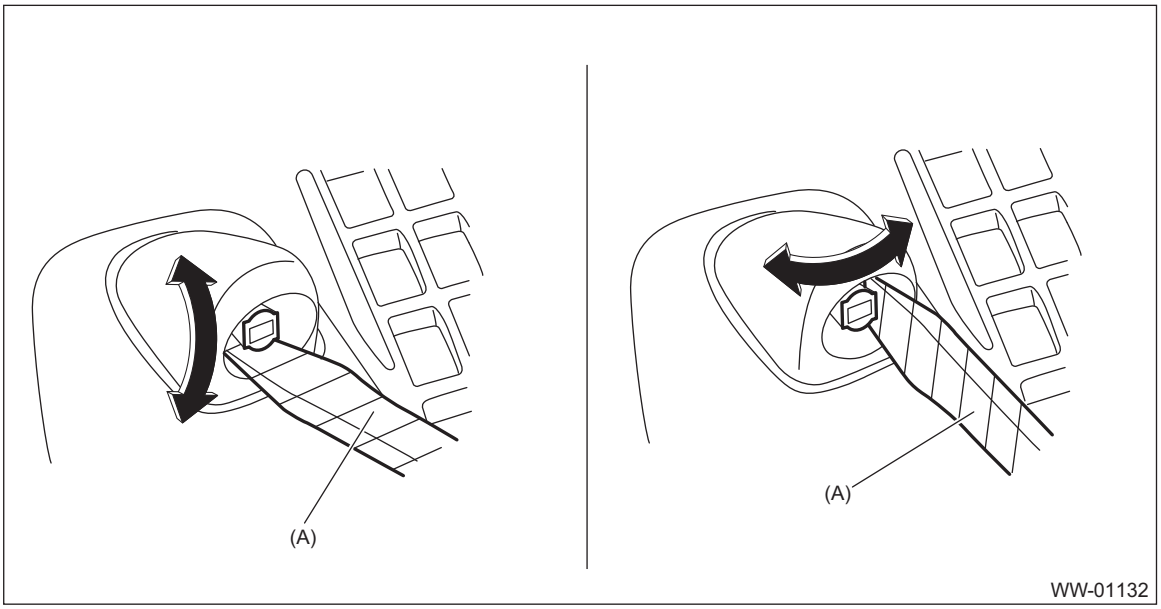
- Make sure the nozzle - windshield washer and the hose - windshield washer are not clogged.
- Make sure the hose - windshield washer is not bent.
- Check the position of the nozzle - windshield washer. <Ref. to WW-34, ADJUSTMENT, Front Washer Nozzle and Hose.>

D: ADJUSTMENT

1. NOZZLE - WINDSHIELD WASHER

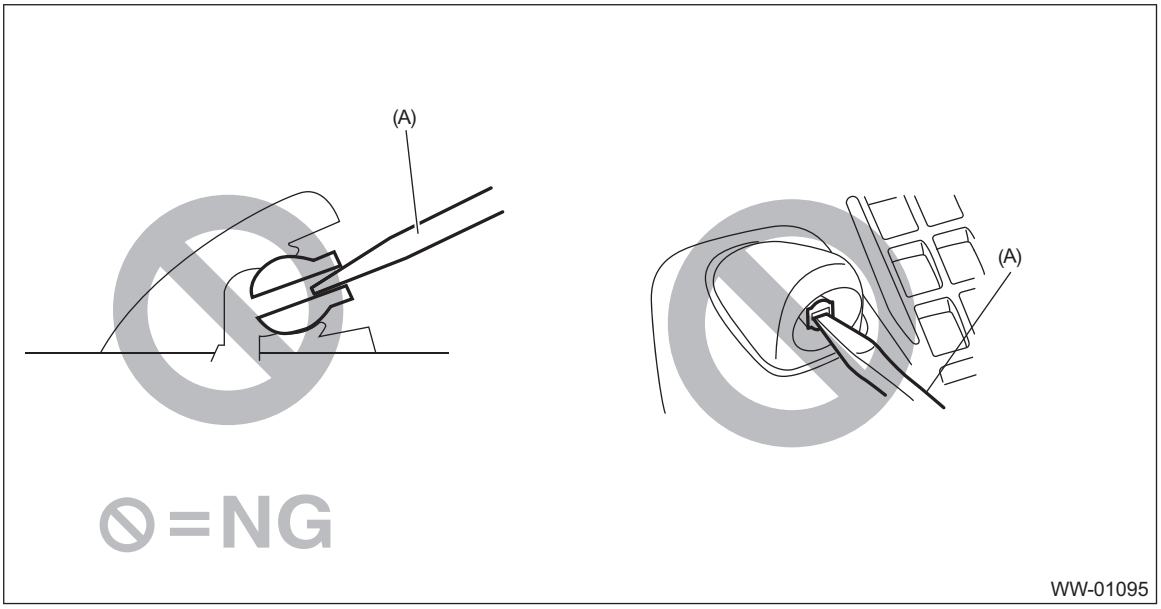
1) Turn the combination switch (wiper) to OFF position.

2) While the vehicle is at a standstill, insert a precision screwdriver (A) or equivalent wrapped with protective tape into the clearance on the upper/lower side or the right/left side of the nozzle - windshield washer to perform necessary adjustment.



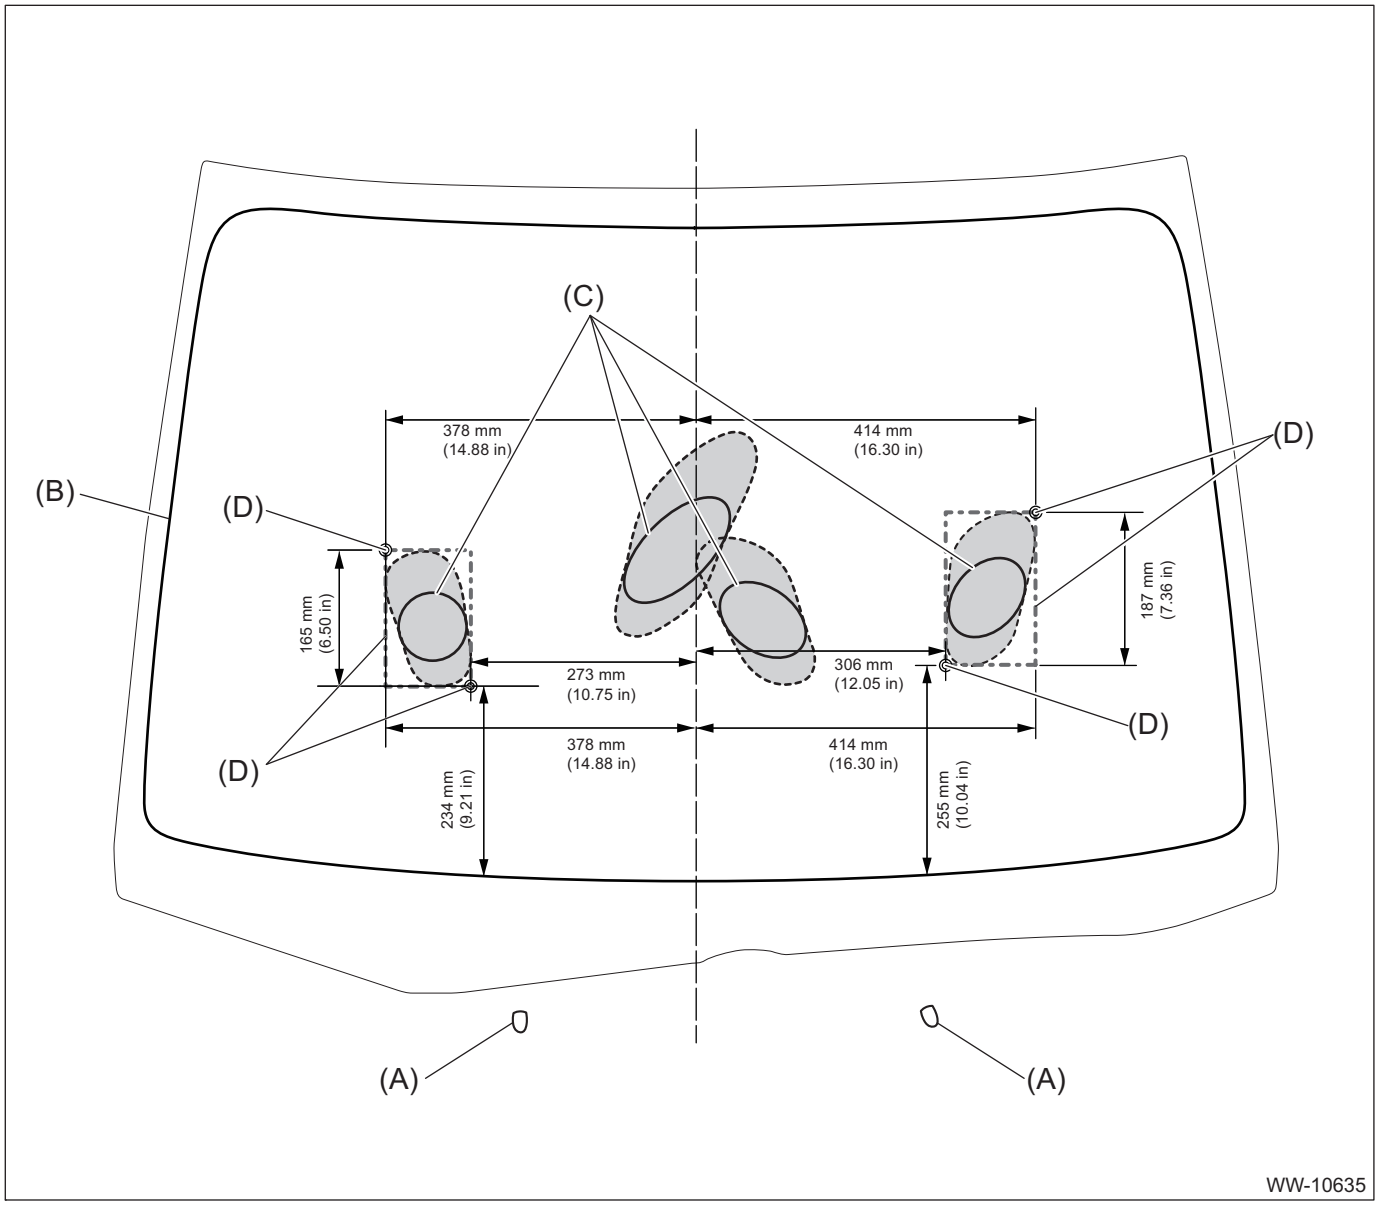
CAUTION:

- **The nozzle - windshield washer is made of resin. If precision screwdriver (A) or equivalent is inserted into discharge port for adjustment, the discharge port can be deformed, and washer fluid cannot be sprayed.**
- **Do not rotate the discharge port of the nozzle - windshield washer, otherwise it may be damaged.**



3) Adjust the washer injection position so that it sprays on the area indicated in the figure.
   (1) Place strings from the outside of the glass through the center of the inner mirror mounting part and the center of the sunload sensor, and fix them on the glass with tape.
   (2) Mark the area for adjustment shown in the figure from vehicle inside using a water-based pen.
   (3) Remove the strings and spray the washer.
   (4) Adjust the nozzle so that the splaying position is within the marked area.

(5) After adjustment, clean the inside of the glass properly.



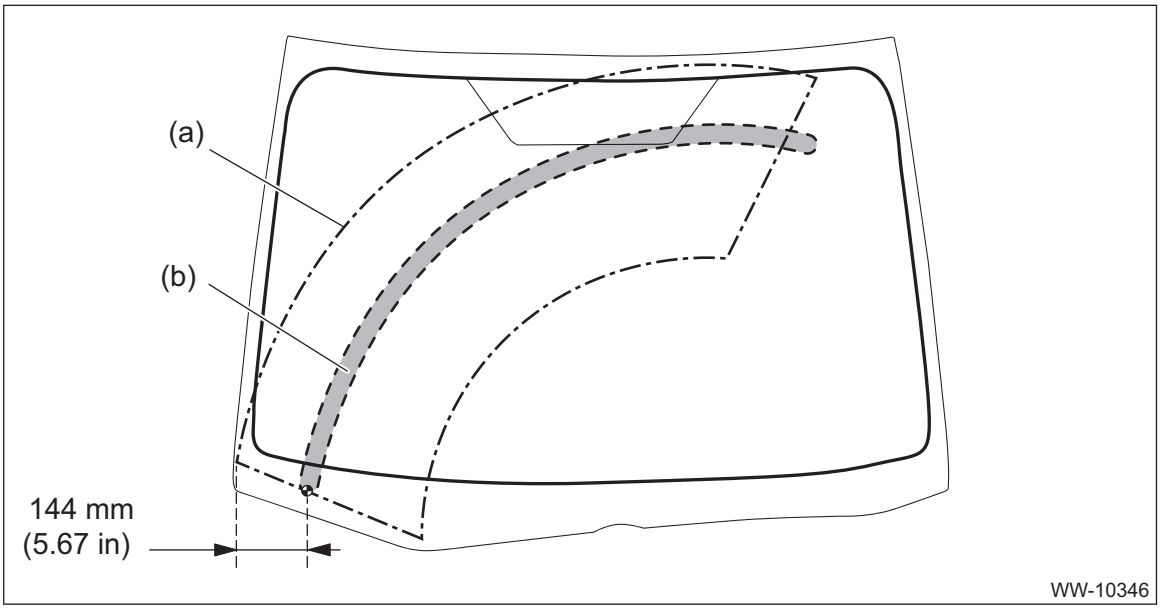
(A) Nozzle - windshield washer (B) Ceramic line (C) Standard range
(D) Mark for adjustment

2. NOZZLE - WIPER ARM WASHER (MODEL WITH EyeSight)

CAUTION:
Check and adjust the spray position of the nozzle - wiper arm at the position where the wiper arm stops.

1) Turn the combination switch (wiper) to OFF position.
2) While the vehicle is stopped, check that the washer spray position is as shown in the figure.

3) After inspection, if the spray position is really out of the specified range, replace with a new arm assembly - windshield wiper assistor.



(a) Wiping area of arm ASSY - windshield wiper assistor
(b) Spray area

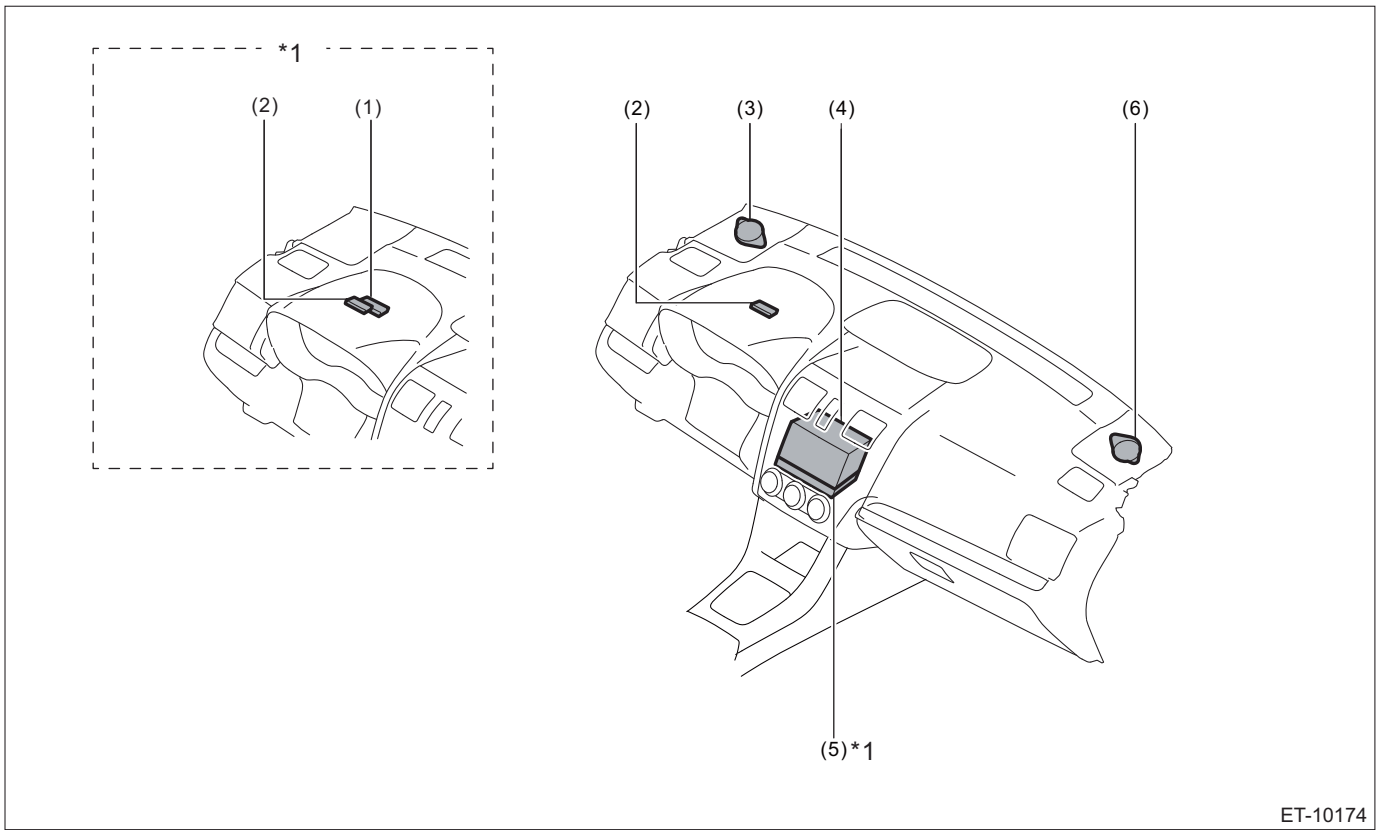
1. General Description

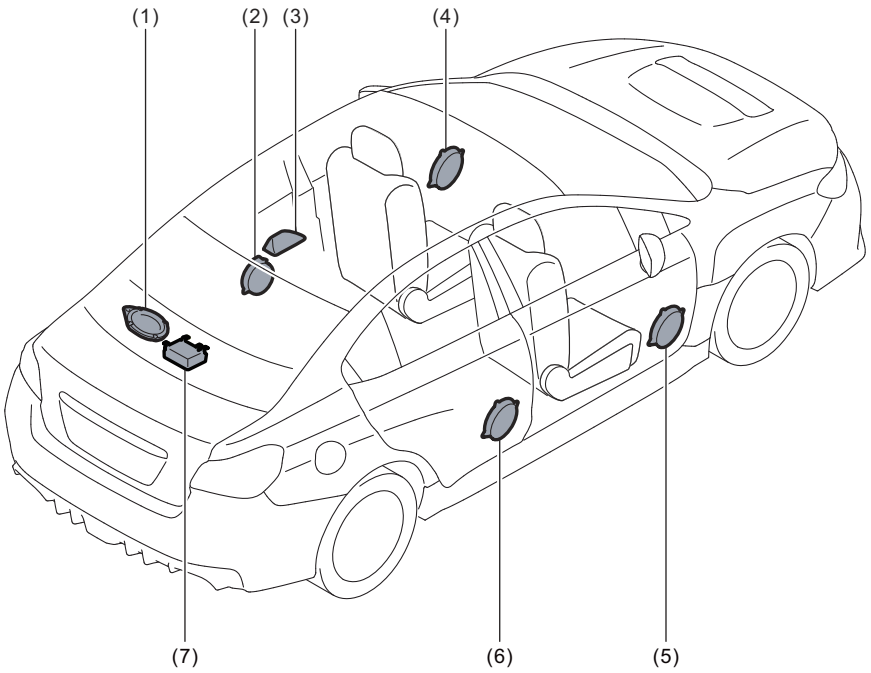
A: LOCATION

1. AUDIO AND NAVIGATION SYSTEM



(1) Telematics sub antenna
(2) GPS antenna ASSY
(3) Speaker ASSY - tweeter LH
(4) Audio ASSY or navigation ASSY
(5) Data communication module
(6) Speaker ASSY - tweeter RH

*1: Model with telematics

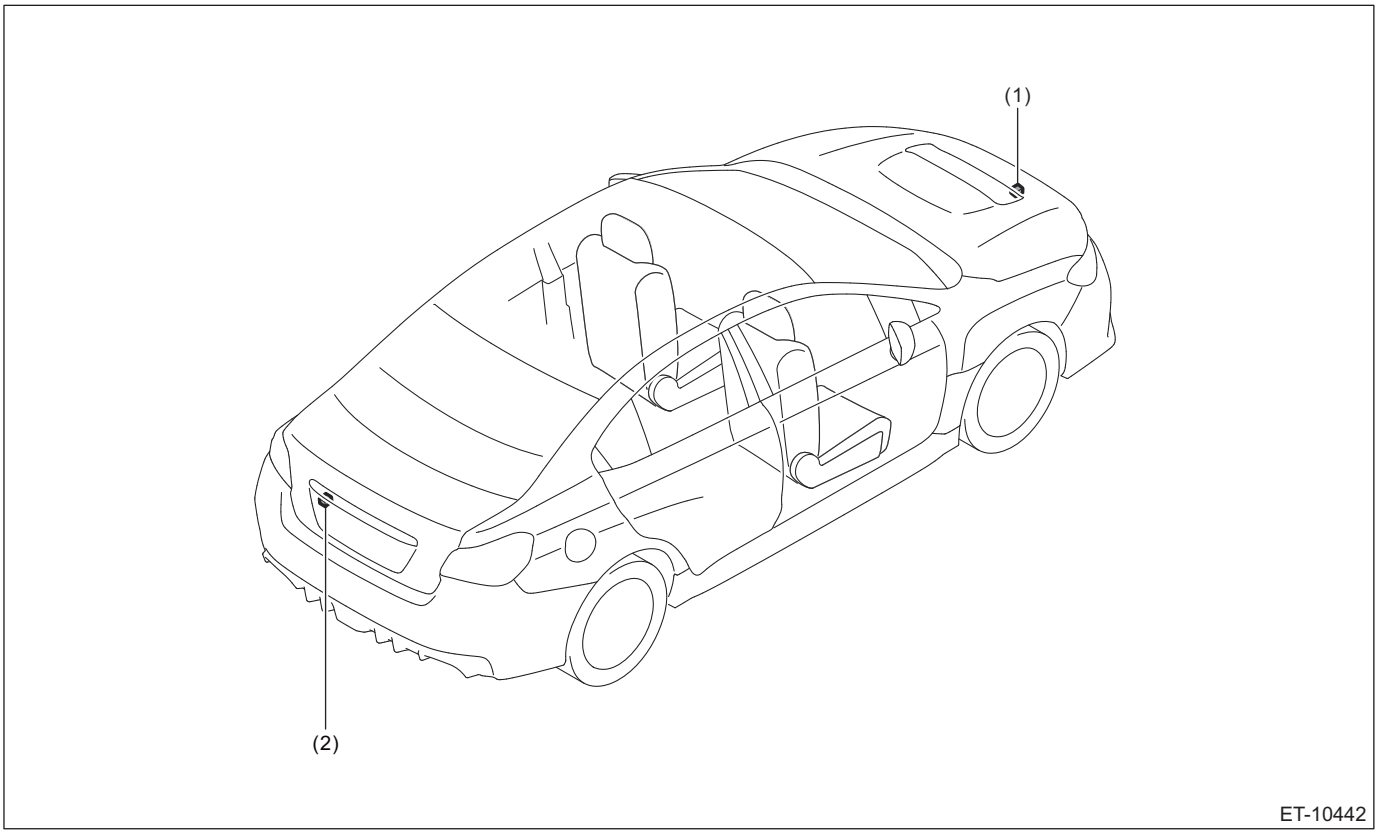


ET-10445

(1) Speaker ASSY - woofer
(2) Speaker ASSY - rear LH
(3) Antenna ASSY - roof or telematics antenna*1
(4) Speaker ASSY - front LH
(5) Speaker ASSY - front RH
(6) Speaker ASSY - rear RH
(7) Power amplifier ASSY

*1: Model with telematics

2. CAMERA



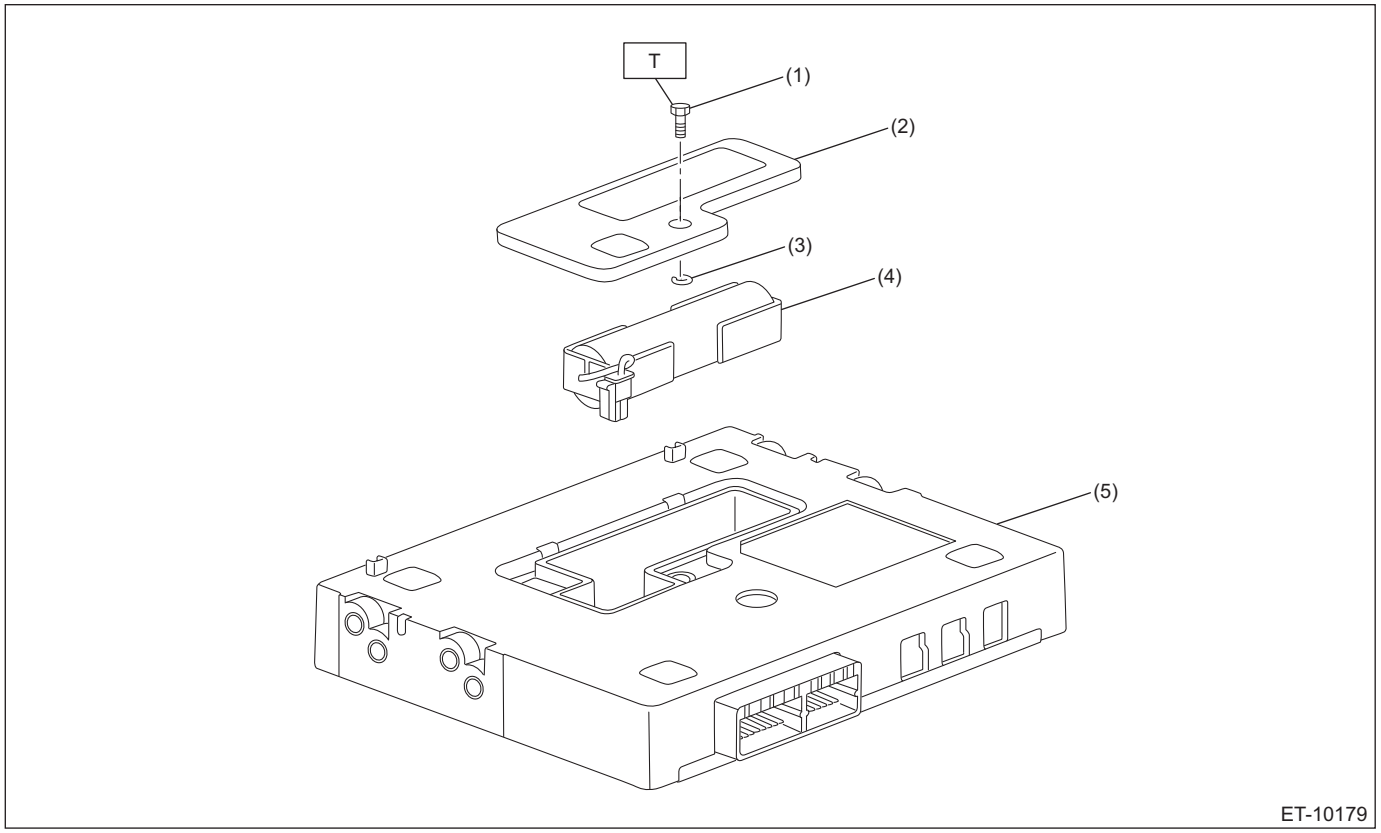
(1) Front view camera ASSY (2) Rearview camera ASSY

3. TELEMATICS SYSTEM

Refer to “LOCATION” of “TELEMATICS SYSTEM (DIAGNOSTICS)” section. <Ref. to TEL(diag)-7, LOCATION, Electrical Component Location.>

B: COMPONENT

1. DATA COMMUNICATION MODULE



(1) Cap screw
(2) Battery cover
(3) Circlip
(4) Backup battery
(5) Data communication module

Tightening torque: N·m (kgf-m, ft-lb)
T: 0.3 (0.03, 0.2)

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

1. AUDIO

Check List for Interview		Date of Vehicle Bring-in Year Month Date	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • • •			
Product information	Part No.	Manufacturer model number	Serial No.
	Software version*1		
	Connected device (example: iPod connected via USB cable)		
SUBARU STARLINK connection ID*1			
SUBARU STARLINK app version			
Mobile phone	Mobile phone carrier (example: AT&T)		
	Mobile phone model (example: Apple iPhone 6)		
	Mobile phone OS version (example: software version information)		
Date when problem occurred	Year Month Date		
Conditions at event	Weather ❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others ( )		
	Temperature °C (°F)		
	How often ❑ Always (Check here if reproduced.) ❑ Once in the past ❑ Sometimes (times a day / times a week / times a month)		
When	Example: It occurs about 30 minutes after driving.		
Occurrence condition 1 (In what situations did it occur?)	❑ Fast Driving ❑ Rough Roads ❑ Parked ❑ Unknown ❑ Others		
Occurrence condition 2 (In what operations did it occur?)	❑ ACC On ❑ Insert Disc ❑ Press Specific Button ❑ Press Specific Mode ❑ Unknown ❑ Others		
Recovering condition (What helped the status return to normal?)	❑ Recover on its own ❑ ACC Off and On ❑ Does not recover ❑ Others		

Occurrence location	❑ Unknown ❑ Any Place ❑ Driving around open areas like in the country ❑ Driving around hills or mountains ❑ Driving around cities with large buildings ❑ Driving around residential areas or no large buildings ❑ Driving around areas with power
Error message content (error message displayed)	
Display trouble	❑ Black screen ❑ White screen ❑ Blue screen ❑ Dim ❑ Vertical/horizontal noise (lines) ❑ Poor color tone ❑ Unclear ❑ Display corruption ❑ No picture ❑ Others
Occurrence conditions (screen display related problems)	❑ CD ❑ Radio ❑ External devices ❑ Others ( )
Operating problems	❑ Display does not switch ❑ Display changes unexpectedly ❑ Response is dull/slow ❑ Does not respond to key entry ❑ Does not respond to steering switch entry ❑ Does not change to night mode screen ❑ Discs cannot be inserted or ejected ❑ Others
Display/touch switch malfunction	❑ Brightness / Contrast ❑ Discoloration ❑ No rear camera ❑ Partial Display ❑ Lines in screen ❑ No Audio Control Screen ❑ No Navi Map on Screen ❑ Others
Voice recognition malfunction	❑ Voice recognition is not ready ❑ Not recognize commands ❑ Others
BEEP on operation entry	❑ Present ❑ None
Radio malfunction	❑ AM: Station (Hz) ❑ FM: Station (Hz) ❑ SXM: Station (channel) (only for North America) ❑ HD: Station (channel) (only for North America) ❑ No Sound ❑ No / Poor Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Others
SW color change at operation	❑ Present ❑ None
Audio malfunction	❑ Does not sound ❑ Front (❑ R ❑ L) ❑ Rear (❑ R ❑ L) ❑ Others ( ) ❑ Operation related problems ❑ Cannot adjust volume level ❑ Cannot use tone control or adjust tone range ❑ Cannot record ❑ Sound skipping ❑ CD ❑ DVD ❑ Others ( ) • Specific mode/disc ( )
CD/USB/SD/iPod malfunction	❑ Will not accept ❑ Will not eject (CD) ❑ Will not play ❑ Skips / Jump Chapter ❑ No Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Shows Error ❑ Others
Bluetooth Audio related malfunction	❑ Will Not Pair ❑ Will Not Play ❑ No Sound ❑ Noise / Static ❑ Disconnect on its own ❑ Others
Bluetooth handsfree related malfunction	❑ Will Not Pair ❑ Cannot Hear (Receiver) ❑ Cannot Hear (Caller) ❑ Sounds Garbled ❑ Address Book Will Not Transfer ❑ Disconnect on its own
SUBARU STARLINK malfunction	❑ Bluetooth connection not established ❑ SUBARU STARLINK app disabled ❑ SUBARU STARLINK app disabled ❑ Communication gets out of service ❑ Pandora disabled ❑ MirrorLink disabled ❑ AHA disabled ❑ USB connection not established ❑ Others
Check result	Reproductivity ❑ Reproduced ❑ Always ❑ Sometimes ❑ Cannot be reproduced ❑ Others
	Condition ❑ Cold ❑ Warm ❑ At starting ❑ Immediately after starting ❑ During warm-up ❑ At idling ❑ When start driving ❑ While driving ❑ At acceleration ❑ At deceleration ❑ When applying brake

*1: For confirmation procedure, refer to Audio System. <Ref. to ETM-12, OPERATION, Audio System.>

Check List for Interview	Date of Vehicle Bring-in Year Month Date

Check List for Interview

Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content • • • •			
Product information	Part No.	Manufacturer model number	Serial No.
	Software version*1		
	Connected device (example: iPod connected via USB cable)		
SUBARU STARLINK connection ID*1			
SUBARU STARLINK app version			
Mobile phone	Mobile phone carrier (example: AT&T)		
	Mobile phone model (example: Apple iPhone 6)		
	Mobile phone OS version (example: software version information)		
Date when problem occurred	Year Month Date		
Conditions at event	Weather ❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others ( )		
	Temperature °C (°F)		
	How often ❑ Always (Check here if reproduced.) ❑ Once in the past ❑ Sometimes (times a day / times a week / times a month)		
When	Example: It occurs about 30 minutes after driving.		
Occurrence condition 1 (In what situations did it occur?)	❑ Fast Driving ❑ Rough Roads ❑ Parked ❑ Unknown ❑ Others		
Occurrence condition 2 (In what operations did it occur?)	❑ ACC On ❑ Insert Disc ❑ Press Specific Button ❑ Press Specific Mode ❑ Unknown ❑ Others		
Recovering condition (What helped the status return to normal?)	❑ Recover on its own ❑ ACC Off and On ❑ Does not recover ❑ Others		
Occurrence location	❑ Unknown ❑ Any Place ❑ Driving around open areas like in the country ❑ Driving around hills or mountains ❑ Driving around cities with large buildings ❑ Driving around residential areas or no large buildings ❑ Driving around areas with power		
Error message content (error message displayed)			
Display trouble	❑ Black screen ❑ White screen ❑ Blue screen ❑ Dim ❑ Vertical/horizontal noise (lines) ❑ Poor color tone ❑ Unclear ❑ Display corruption ❑ No picture ❑ Others		

Check List for Interview

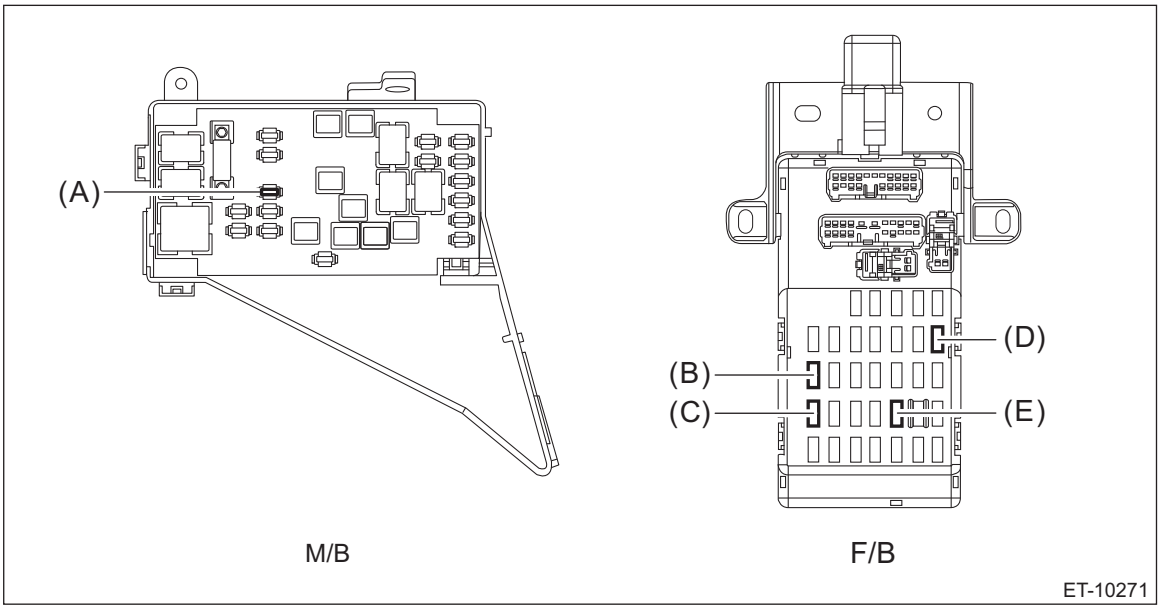
ENTERTAINMENT & MONITORING

Occurrence conditions (screen display related problems)	❑ Navigation ❑ CD ❑ Radio ❑ External devices ❑ Others ( )
Operating problems	❑ Display does not switch ❑ Display changes unexpectedly ❑ Response is dull/slow ❑ Does not respond to key entry ❑ Does not respond to steering switch entry ❑ Does not change to night mode screen ❑ Discs cannot be inserted or ejected ❑ Others
Display/touch switch malfunction	❑ Brightness / Contrast ❑ Discoloration ❑ No rear camera ❑ Partial Display ❑ Lines in screen ❑ No Audio Control Screen ❑ No Navi Map on Screen ❑ Others
Voice recognition malfunction	❑ Voice recognition is not ready ❑ Not recognize commands ❑ Others
BEEP on operation entry	❑ Present ❑ None
Radio malfunction	❑ AM: Station (Hz) ❑ FM: Station (Hz) ❑ SXM: Station (channel) (only for North America) ❑ HD: Station (channel) (only for North America) ❑ No Sound ❑ No / Poor Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Others
SW color change at operation	❑ Present ❑ None
Audio malfunction	❑ Does not sound ❑ Front (❑ R ❑ L) ❑ Rear (❑ R ❑ L) ❑ Others ( ) ❑ Operation related problems ❑ Cannot adjust volume level ❑ Cannot use tone control or adjust tone range ❑ Cannot record ❑ Sound skipping ❑ CD ❑ DVD ❑ Others ( ) • Specific mode/disc ( )
CD/USB/SD/iPod malfunction	❑ Will not accept ❑ Will not eject (CD) ❑ Will not play ❑ Skips / Jump Chapter ❑ No Sound ❑ Noise / Static ❑ Sound cuts in / out ❑ Shows Error ❑ Others
Navigation failure	❑ Cursor or map rotating ❑ Wrong location of vehicle ❑ Cursor hopping during driving ❑ Map image incomplete ❑ No GPS marks displayed ❑ Incorrect time display ❑ Guide not initiated ❑ No route search ❑ Caution remains on navigation screen ❑ Unexpected return back to opening screen ❑ No Voice Guidance ❑ Guidance Volume too Low ❑ Will Not Read Data ❑ Will Not Update ❑ Destination / Route Problem ❑ Display Does Not Change (Frozen) ❑ Overall Navi Operation Slow ❑ No GPS reception ❑ Others
Bluetooth Audio related malfunction	❑ Will Not Pair ❑ Will Not Play ❑ No Sound ❑ Noise / Static ❑ Disconnect on its own ❑ Others
Bluetooth handsfree related malfunction	❑ Will Not Pair ❑ Cannot Hear (Receiver) ❑ Cannot Hear (Caller) ❑ Sounds Garbled ❑ Address Book Will Not Transfer ❑ Disconnect on its own
SUBARU STARLINK malfunction	❑ Bluetooth connection not established ❑ SUBARU STARLINK app disabled ❑ SUBARU STARLINK app disabled ❑ Communication gets out of service ❑ Pandora disabled ❑ MirrorLink disabled ❑ AHA disabled ❑ USB connection not established ❑ Others
Check result	Reproductivity ❑ Reproduced ❑ Always ❑ Sometimes ❑ Cannot be reproduced ❑ Others
	Condition ❑ Cold ❑ Warm ❑ At starting ❑ Immediately after starting ❑ During warm-up ❑ At idling ❑ When start driving ❑ While driving ❑ At acceleration ❑ At deceleration ❑ When applying brake

*1: For confirmation procedure, refer to Navigation System. <Ref. to ETM-32, OPERATION, Navigation System.>

3. Relay and Fuse

A: LOCATION



Main fuse box	Fuse 25 A (audio amplifier)	(A)
Relay & fuse box	Fuse 20 A (rear accessory power supply socket)	(B)
	Fuse 10 A (front accessory power supply socket)	(C)
	Fuse 15 A (data communication module*1)	(D)
	Fuse 10 A (audio, navigation unit, external connection terminal, audio amplifier, data communication module*1)	(E)

*1: Model with telematics

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

4. Audio System

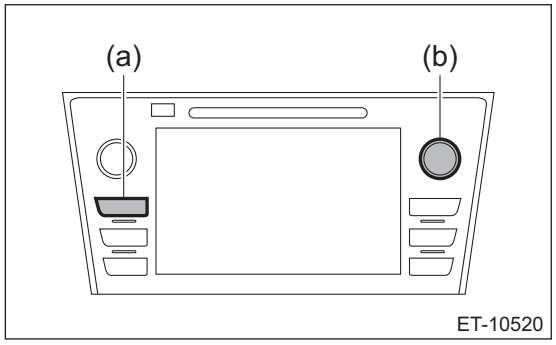
A: WIRING DIAGRAM

Refer to “Audio System” in the wiring diagram. <Ref. to WI-79, WIRING DIAGRAM, Audio System.>

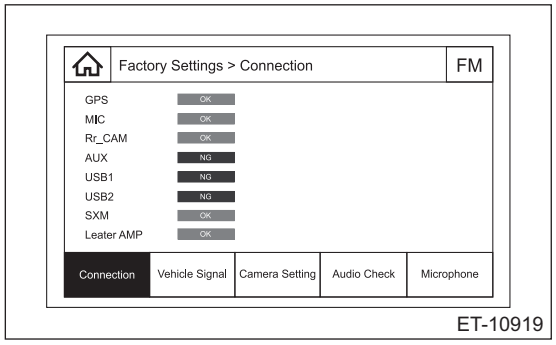
B: OPERATION

1. CHECK CONNECTIONS WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.



NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.
4) Check the connection status with the {Connection} in the {Line Diag} screen.

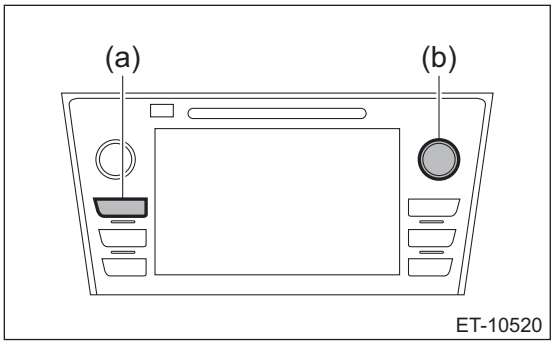


Item	Contents	Inspection
GPS	GPS antenna connection	Confirm that the indication is OK. (With GPS antenna only)
MIC	MIC connection	Confirm that the indication is OK.
Rr_CAM	Rr CAM Video connection	Confirm that the indication is OK.
AUX	AUX connection	Connect the pin jack for check to AUX terminal and check that the indication is OK.
USB1	USB connection	Connect the memory for check to USB terminal and check that the USB is OK.
USB2		
SXM	SXM connection	Confirm that the indication is OK. (With SXM only)
Leather AMP	Amplifier connection	Confirm that the indication is OK. (With AMP only)

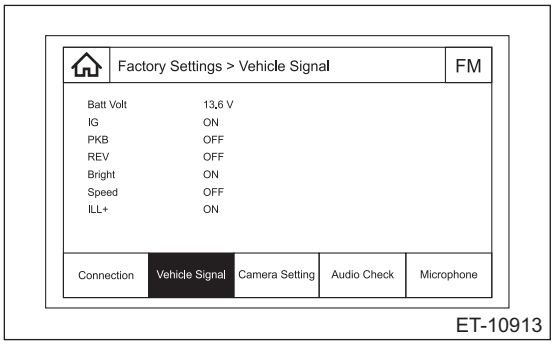
2. CHECK VEHICLE SIGNALS WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.

2) Press the button (b) twice with the button (a) pressed.



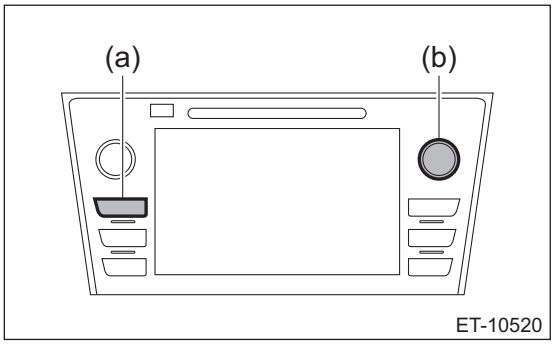
NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.
4) Check the signal status with the {Vehicle Signal} in the {Line Diag} screen.



Item	Contents	Inspection
ILL+	Illumination signal	Turn the lighting switch to ON, and check that the indication turns ON.
Speed	Speed pulse signal	Input the vehicle speed and check that the vehicle speed is displayed.
PKB	Parking brake signal	Pull the parking brake lever, and check that the indication turns ON.
REV	Reverse signal	Place the select lever in reverse and check that the indication turns ON.
IG	IGN signal	Confirm that the indication is ON.
Batt Volt	Battery voltage	Check that the battery voltage is displayed.
Bright	Bright signal	Turn the bright switch to ON, and check that the indication turns ON.

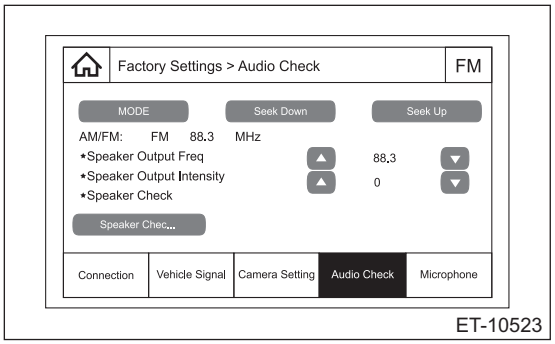
3. CHECK SPEAKER OUTPUT AND ANTENNA CONNECTION WITH LINE DIAG MODE

1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.



NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.

4) On {Audio Check} in {Line Diag} screen, check the speaker output check and antenna connection check.



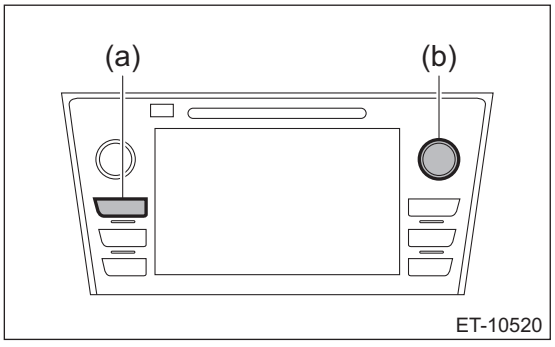
ET-10523

Item	Contents	Inspection
MODE	Radio band switching	Check that the radio band (AM/FM) can be switched.
Seek Up/Down	Seek Up/Down operation	Check that Seek Up/Down adjustment can be performed.
Speaker Check	Speaker check operation	• Standard: Front right → tweeter right → tweeter left → front left → rear left → rear right will sound in order for 0.5 seconds each. • Brand: Tweeter left → front left → rear left → sub woofer → sub woofer → rear right → front right → tweeter right will sound in order for 0.5 seconds each.

NOTE:
- The sound volume of speaker check depends on the speakers.
  – Standard speaker: Sounds by 30 steps.
  – Brand speaker: Sounds by 25 steps.
- Adjust volume level by turning the VOLUME button.

4. CHECK MICROPHONE WITH LINE DIAG MODE

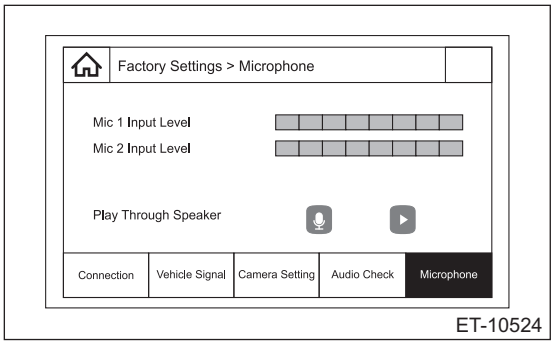
1) Turn the ignition switch to ACC.
2) Press the button (b) twice with the button (a) pressed.



ET-10520

NOTE:
Pressing the button (a) for three seconds or more or turning the ignition switch from the OFF to ACC position can exit the Line Diag mode.
3) {Line Diag} screen is displayed.

4) Check the microphone level with the {Microphone} in the {Line Diag} screen.



Check that the microphone input level changes in response to sound and voice.

C: INSPECTION

1. BASIC INSPECTION

Audio

Refer to “BASIC INSPECTION” in “Navigation System”. <Ref. to ETM-32, BASIC INSPECTION, INSPECTION, Navigation System.>

2. SYSTEM BLOCK DIAGRAM

Audio

Refer to “System Block Diagram” in “Navigation System”. <Ref. to ETM-33, SYSTEM BLOCK DIAGRAM, INSPECTION, Navigation System.>

3. MODULE I/O SIGNAL

Audio

Refer to “Control Module I/O Signal” in “Navigation System”. <Ref. to ETM-34, MODULE I/O SIGNAL, INSPECTION, Navigation System.>

D: NOTE

For procedure of each component in the audio system, refer to the respective sections.

- Audio unit: <Ref. to ETM-16, Audio.>
- Power amplifier: <Ref. to ETM-31, Power Amplifier.>
- Woofer: <Ref. to ETM-30, Woofer.>
- Front speaker
  - Tweeter (instrument panel): <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
  - Door speaker: <Ref. to ETM-19, DOOR SPEAKER, REMOVAL, Front Speaker.>
- Rear speaker: <Ref. to ETM-21, Rear Speaker.>
- Antenna: <Ref. to ETM-22, Antenna.>
- Switches and harness: <Ref. to ETM-26, Switches and Harness.>
- External connection terminal: <Ref. to ETM-52, External Connection Terminal.>

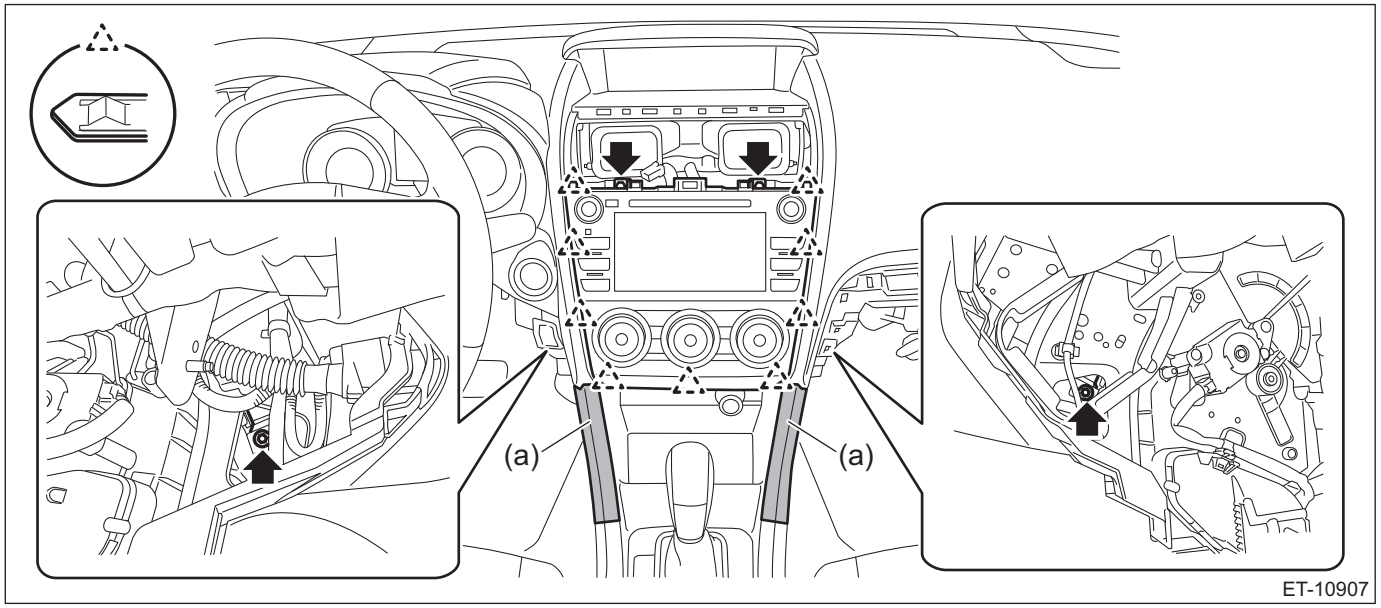
5. Audio

A: REMOVAL

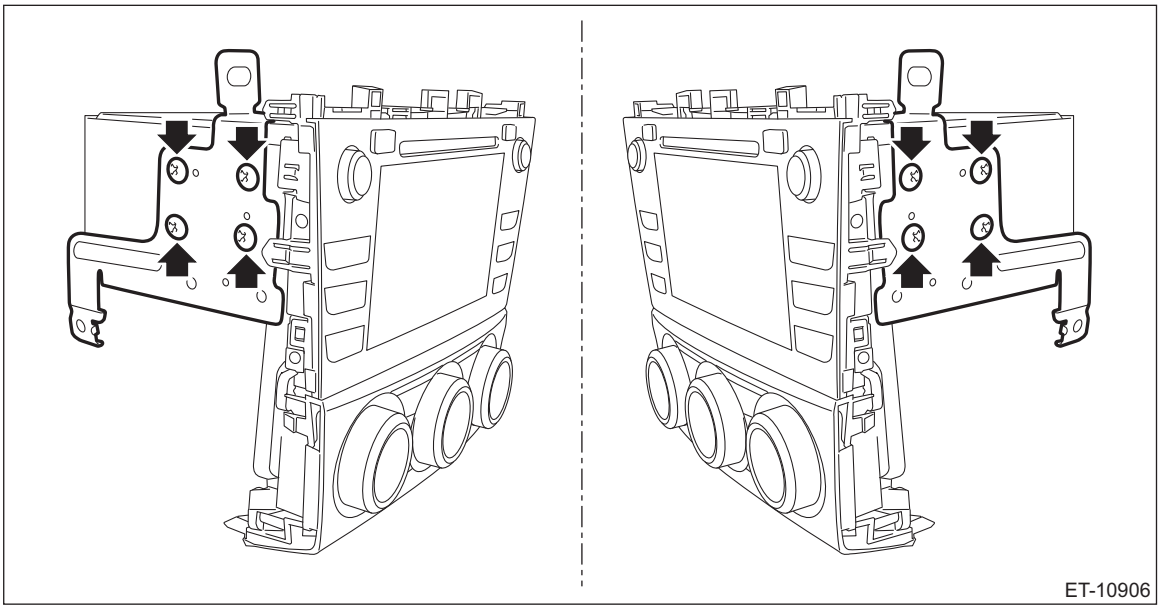
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly.
(1) Attach the protective tape (a) to the cover - shift lever.
(2) Remove the screws and bolts, release the claws, and partially pull out the audio assembly.

NOTE:
• Release the claw by using a clip remover wrapped with protective tape.
• If the antenna cable interferes with the removal operation of the side attachment bolts (for model with telematics), move the antenna cable aside before service as necessary.
(3) Disconnect the connectors, and remove the audio assembly.



7) Remove the screws, and then remove the audio bracket.



NOTE:
- The model with telematics is equipped with the data communication module under the audio assembly.

B: INSTALLATION

CAUTION:
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**
- **After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.**
- **Do not allow harness and cables to interfere with or get caught by other parts.**

1) Install the audio bracket.
2) Install the audio assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the center grille assembly.
4) Install the glove box.
5) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
6) Install the cover assembly - instrument panel LWR driver.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

6. Front Speaker

A: REMOVAL

1. TWEETER

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

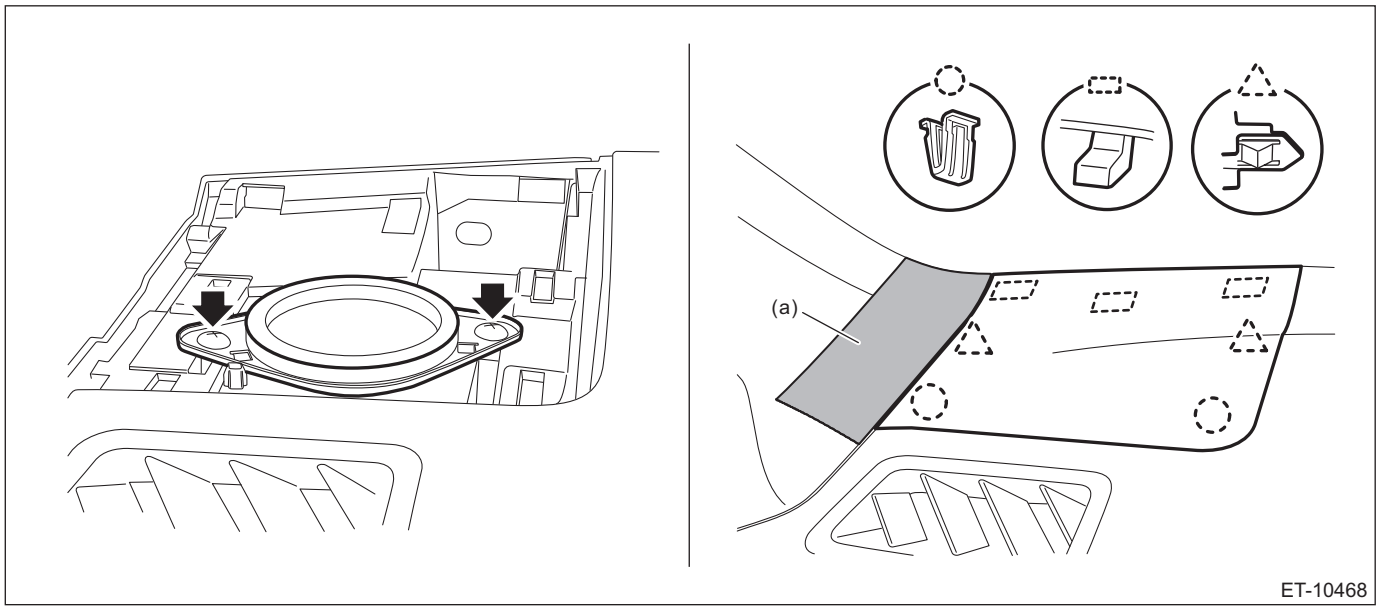
2) Remove the speaker assembly - tweeter.
   (1) Affix protective tape (a) to the trim panel - front pillar UPR.
   (2) Release the clips and claws, then detach the grille speaker side.

NOTE:
Remove the grille speaker side by using a plastic remover.

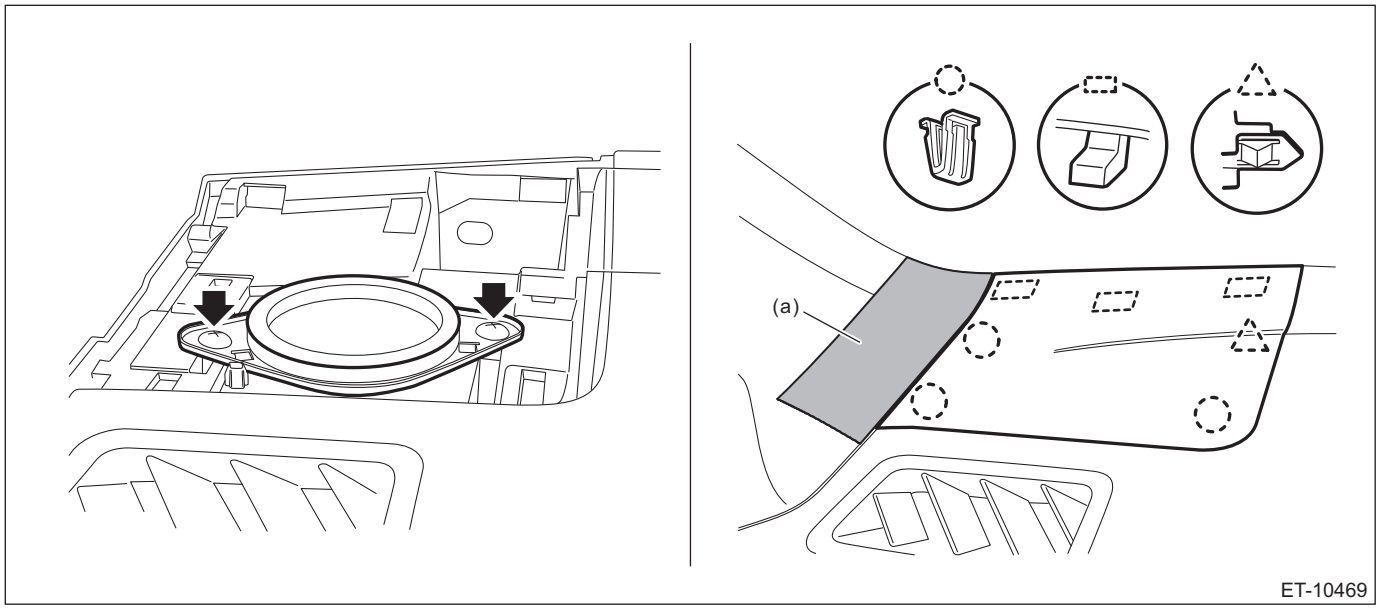
   (3) Remove the screws.

Preparation tool:
Stubby screwdriver

   (4) Disconnect the connector and remove the speaker assembly - tweeter.
   - Model without EyeSight assist monitor



- Model with EyeSight assist monitor

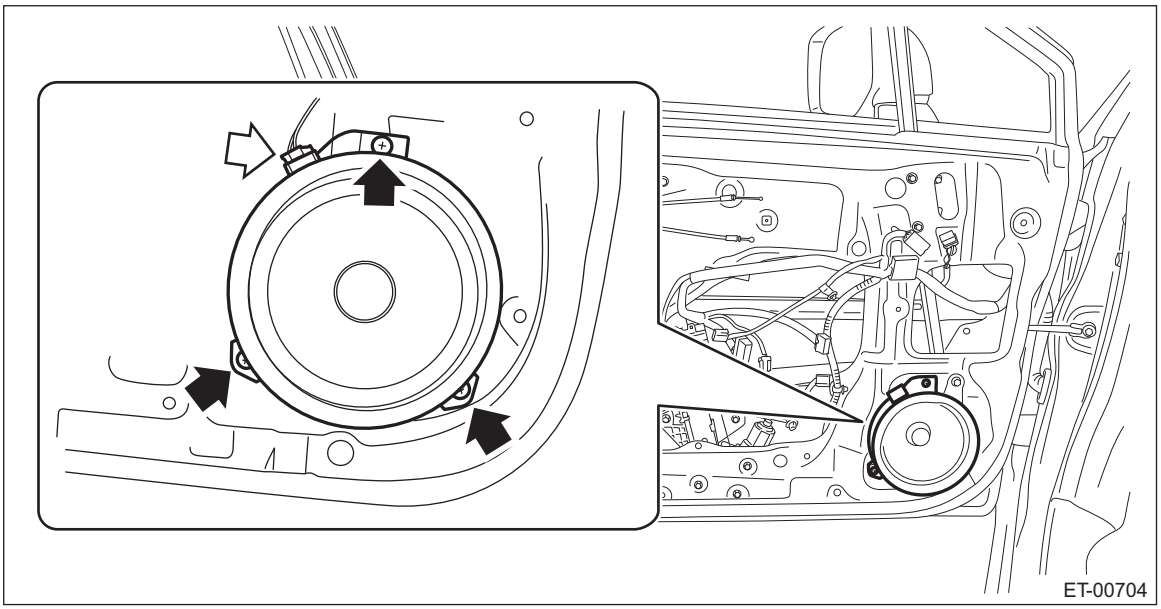


2. DOOR SPEAKER

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - front.
   (1) Disconnect the connector.
   (2) Remove the screws and remove the speaker assembly - front.



B: INSTALLATION

1. TWEETER

1) Install the speaker assembly - tweeter.
2) Install the grille speaker side.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. DOOR SPEAKER

1) Install the speaker assembly - front.
2) Install the trim panel - front door.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

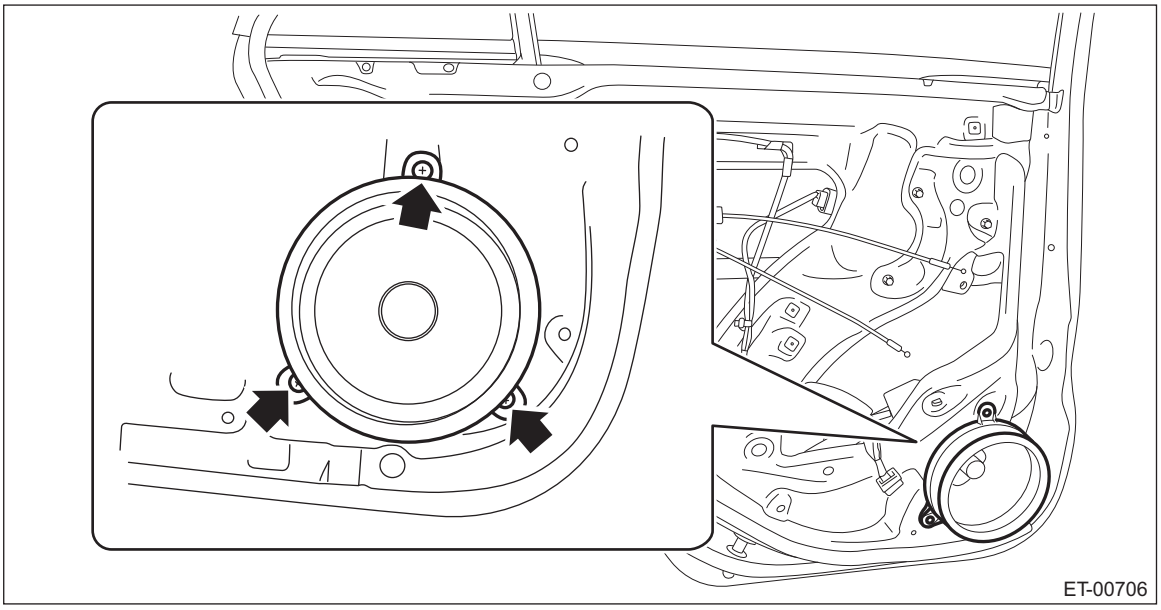
7. Rear Speaker

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the speaker assembly - rear.
   (1) Remove the screws.
   (2) Disconnect the connector behind the speaker and remove the speaker assembly - rear.



B: INSTALLATION

1) Install the speaker assembly - rear.
2) Install the trim panel - rear door.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

8. Antenna

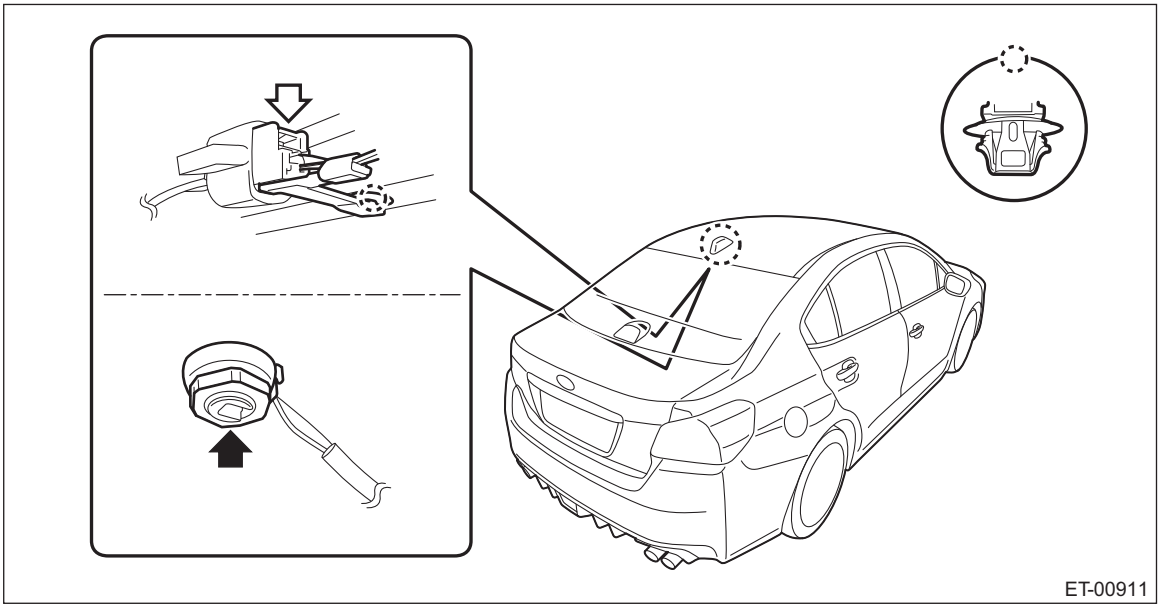
A: REMOVAL

1. ROOF ANTENNA/TELEMATICS ANTENNA

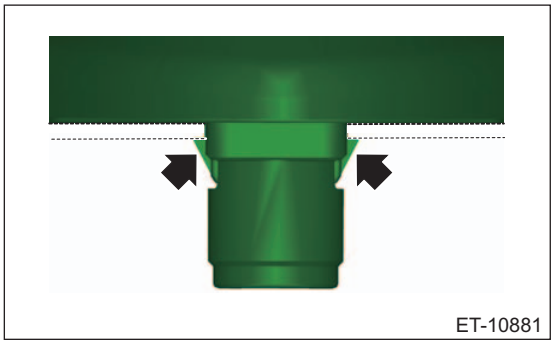
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Lower the trim panel - roof assembly. <Ref. to EI-101, REMOVAL, Roof Trim.>

NOTE:
Procedures for the trim panel - roof assembly is performed inside the vehicle.
3) Remove the antenna assembly - radio or telematics.
(1) Disconnect the connector, detach the connector clip, and then remove the nut.



(2) While pressing the temporary retaining claw, remove the antenna assembly - radio or telematics.



2. ANTENNA FEEDER CORD

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the panel center LWR LH. <Ref. to EI-70, REMOVAL, Console Box.>
8) Remove the cover side sill - front and the cover side sill - front INN. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
9) Lower the trim panel - roof assembly in the same manner as the removal procedure of the antenna assembly - radio or telematics. <Ref. to EI-101, REMOVAL, Roof Trim.>
10) Turn over the floor mat, and remove the cord assembly - antenna feeder.

3. TELEMATICS SUB ANTENNA

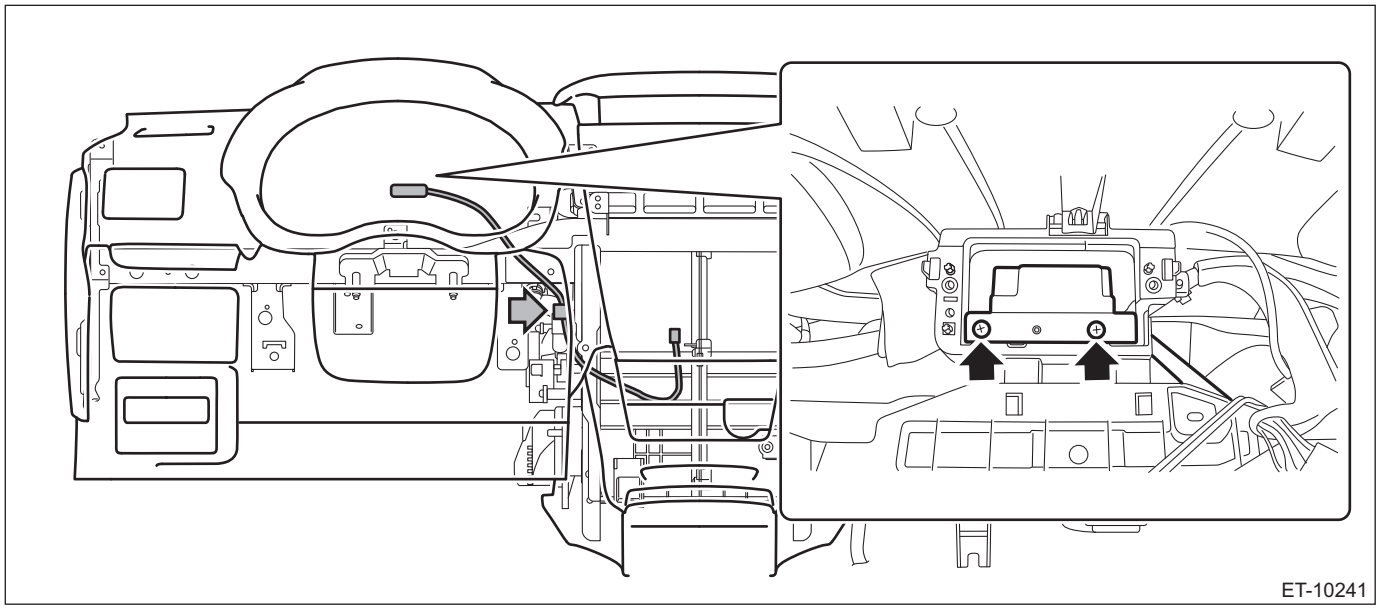
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the combination meter assembly. <Ref. to IDI-12, REMOVAL, Combination Meter.>
8) Remove the GPS antenna. <Ref. to ETM-40, REMOVAL, GPS Antenna.>

NOTE:
Remove the antenna only. Do not pull the cord.
9) Remove the telematics sub antenna.
   (1) Tie a string to the telematics sub antenna connector on the data communication module main body side.

NOTE:
A string makes operation easier during installation.

(2) Remove the screw and harness clamp, and pull out the telematics sub antenna from the combination meter side.



(3) After the telematics sub antenna has been pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

1. ROOF ANTENNA/TELEMATICS ANTENNA

1) Install the antenna assembly - radio or telematics.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

2) Install the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. ANTENNA FEEDER CORD

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the cord assembly - antenna feeder and the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
2) Install the floor mat.
3) Install the cover side sill - front INN and cover side sill - front.
4) Install the panel center LWR LH. <Ref. to EI-73, INSTALLATION, Console Box.>
5) Install the audio assembly or navigation assembly. <Ref. to ETM-17, INSTALLATION, Audio.>
6) Install the center grille assembly.
7) Install the glove box.
8) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
9) Install the cover assembly - instrument panel LWR driver.
10) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

3. TELEMATICS SUB ANTENNA

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the telematics sub antenna.
2) Install the GPS antenna assembly.
3) Install the combination meter assembly.

4) Install the audio assembly or navigation assembly. <Ref. to ETM-17, INSTALLATION, Audio.>
5) Install the center grille assembly.
6) Install the glove box.
7) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
8) Install the cover assembly - instrument panel LWR driver.
9) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

9. Switches and Harness

A: REMOVAL

1. SATELLITE SWITCH ASSEMBLY

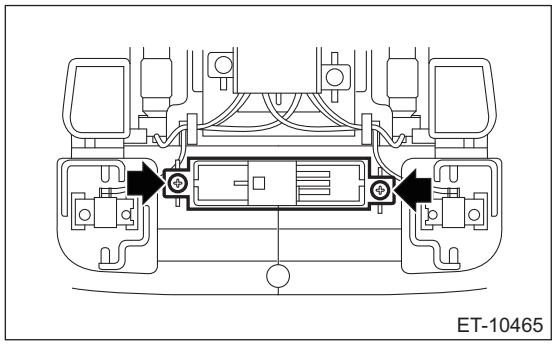
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
5) Remove the satellite switch assembly. <Ref. to PS-16, DISASSEMBLY, Steering Wheel.>

2. TELEMATICS BUTTON

1) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the light assembly - map. <Ref. to LI-72, REMOVAL, Spot Map Light.>
3) Remove the screw to remove the telematics button.



ET-10465

B: INSTALLATION

1. SATELLITE SWITCH ASSEMBLY

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel has been removed, make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the satellite switch assembly. <Ref. to PS-16, DISASSEMBLY, Steering Wheel.>
2) Align the center position of the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. TELEMATICS BUTTON

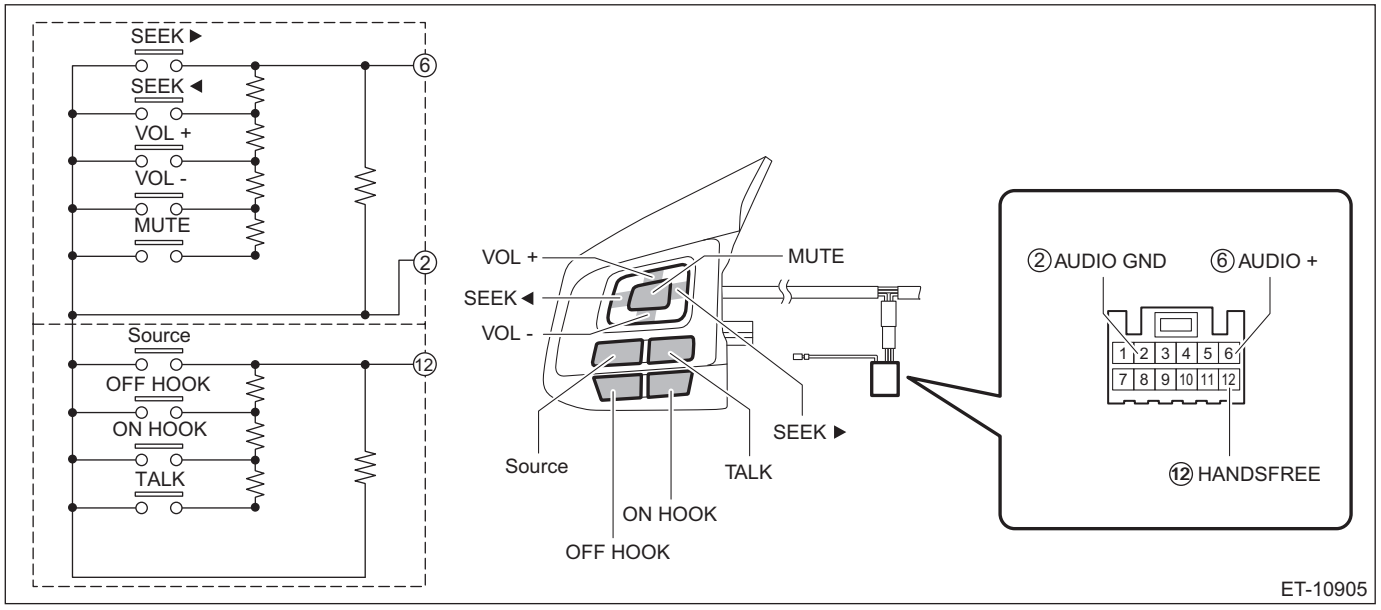
1) Install the telematics button.
2) Install the light assembly - map. <Ref. to LI-74, INSTALLATION, Spot Map Light.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. SATELLITE SWITCH ASSEMBLY

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
6 — 2	VOL (+) VOL (–) SEEK (›) SEEK (‹) LIST	A circuit is all OFF.	Approx. 100 kΩ
	VOL (+)	ON	Approx. 490 Ω
	VOL (–)	ON	Approx. 1290 Ω
	SEEK (›)	ON	Less than 1 Ω
	SEEK (‹)	ON	Approx. 160 Ω
	MUTE	ON	Approx. 2730 Ω
12 — 2	TALK Source ON HOOK OFF HOOK	B circuit is all OFF.	Approx. 100 kΩ
	TALK	ON	Approx. 1290 Ω
	Source	ON	Less than 1 Ω
	ON HOOK	ON	Approx. 490 Ω
	OFF HOOK	ON	Approx. 160 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

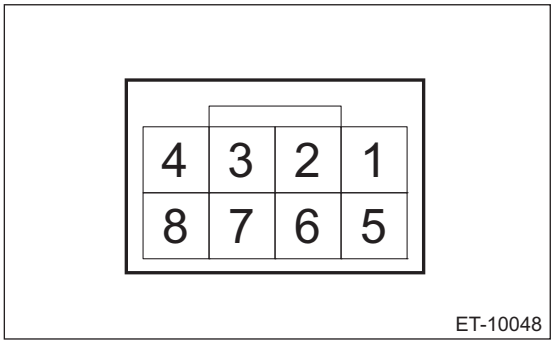
Terminal No.	Inspection conditions	Standard
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) If it is found to be defective as a result of the measurement, replace the satellite switch assembly.

2. TELEMATICS BUTTON

1) Check the button.
(1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



- SOS button

Terminal No.	Inspection conditions	Standard
6 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

- i-button

Terminal No.	Inspection conditions	Standard
3 — 1	OFF	Approx. 1.6 kΩ
	ON	Less than 1 Ω

(2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
8 (+) — 2 (–)	Apply battery voltage.	Light ON

2) Check the indicator.
(1) Apply battery voltage between the connector terminals to check the lighting condition of the indicator.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Green illumination
7 (+) — 1 (–)		Red illumination

3) Replace the telematics button if it is found defective.

10.Microphone

A: NOTE

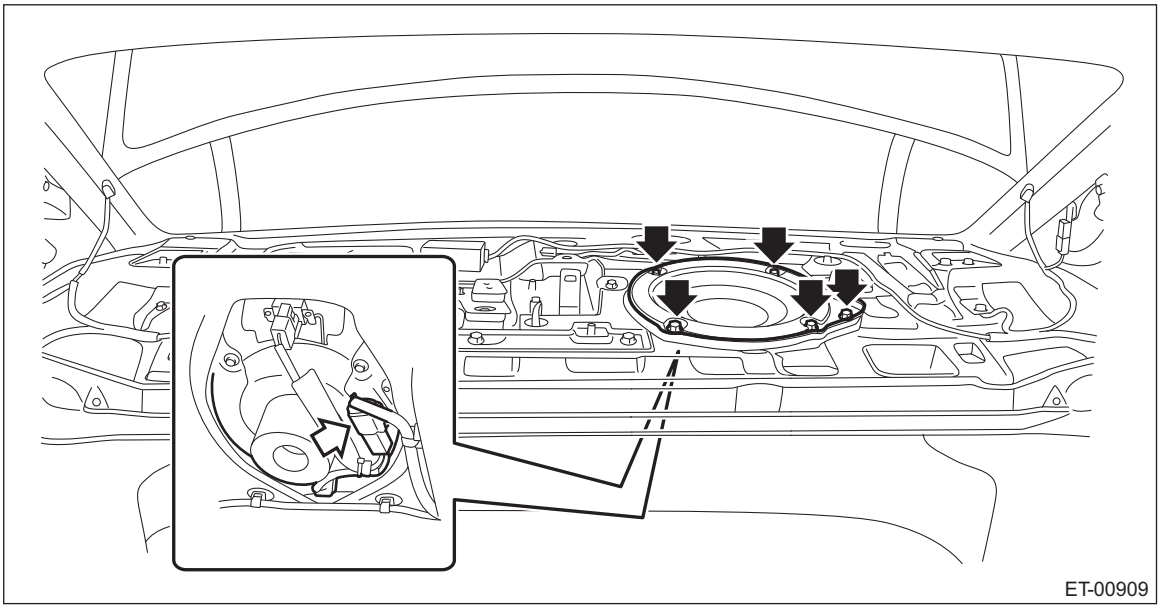
The microphone is integrated in the spot map light or stereo camera cover.
For operation procedures, refer to “LIGHTING SYSTEM” section. <Ref. to LI-72, Spot Map Light.>

11.Woofer

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
3) Remove the trim panel - rear pillar UPR and the trim panel - rear pillar LWR. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>
4) Remove the trim panel assembly - rear shelf. <Ref. to EI-94, REMOVAL, Rear Shelf Trim.>
5) Remove the speaker assembly - woofer.
   (1) Disconnect the connector.
   (2) Remove the bolts and remove the speaker assembly - woofer.



B: INSTALLATION

1) Install the speaker assembly - woofer.

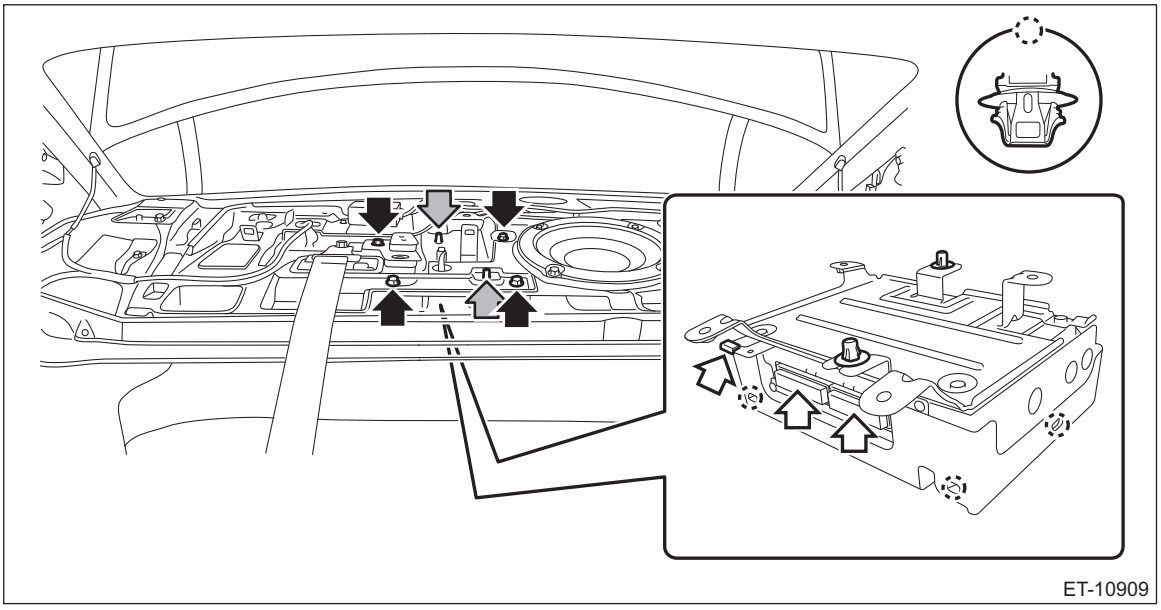
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel assembly - rear shelf. <Ref. to EI-95, INSTALLATION, Rear Shelf Trim.>
3) Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.
4) Install the rear seat cushion assembly.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

12.Power Amplifier

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
3) Remove the trim panel - rear pillar UPR and the trim panel - rear pillar LWR. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>
4) Remove the trim panel assembly - rear shelf. <Ref. to EI-94, REMOVAL, Rear Shelf Trim.>
5) Remove the power amplifier assembly.
   (1) Release the harness clips, and disconnect each connector.
   (2) Remove the bolts, release the clips, and then remove the power amplifier assembly.



B: INSTALLATION

1) Install the power amplifier assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the trim panel assembly - rear shelf. <Ref. to EI-95, INSTALLATION, Rear Shelf Trim.>
3) Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.
4) Install the rear seat cushion assembly.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

13.Navigation System

A: WIRING DIAGRAM

Refer to “Navigation System” in the wiring diagram.

- Model without telematics: <Ref. to WI-275, WITHOUT TELEMATICS, WIRING DIAGRAM, Navigation System.>
- Model with telematics: <Ref. to WI-282, WITH TELEMATICS, WIRING DIAGRAM, Navigation System.>

B: OPERATION

For the operation, refer to “Audio System”. <Ref. to ETM-12, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Audio System.>

C: INSPECTION

1. BASIC INSPECTION

1) Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to ETM-8, NAVIGATION, CHECK, Check List for Interview.>
2) Check the battery.

- Except for STI model: <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>
- STI model: <Ref. to SC(STI)-24, INSPECTION, Battery.>

3) Check the list of Diagnostics with Phenomenon, and perform diagnosis according to the procedures. <Ref. to ETM-53, NAVIGATION SYSTEM, LIST, Diagnostics with Phenomenon.>

D: NOTE

For procedure of each component in the navigation system, refer to the respective section.

- Navigation unit: <Ref. to ETM-39, Navigation Body.>
- GPS antenna: <Ref. to ETM-40, GPS Antenna.>

14.Navigation Body

A: NOTE

For the operation procedures for navigation assembly, refer to “Audio” section. <Ref. to ETM-16, Audio.>

15.GPS Antenna

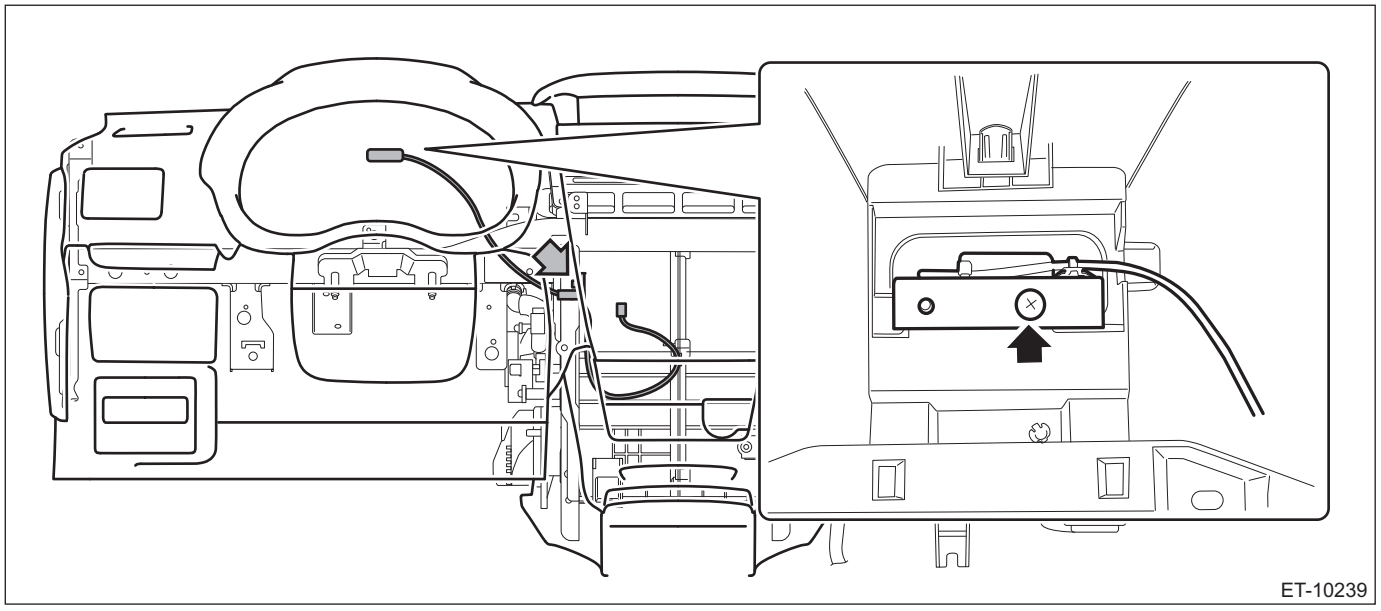
A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the navigation assembly in the same manner as the removal procedure of the audio assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the combination meter assembly. <Ref. to IDI-12, REMOVAL, Combination Meter.>
8) Remove the GPS antenna assembly.
(1) Tie a string to the GPS antenna assembly connector on the navigation unit side.

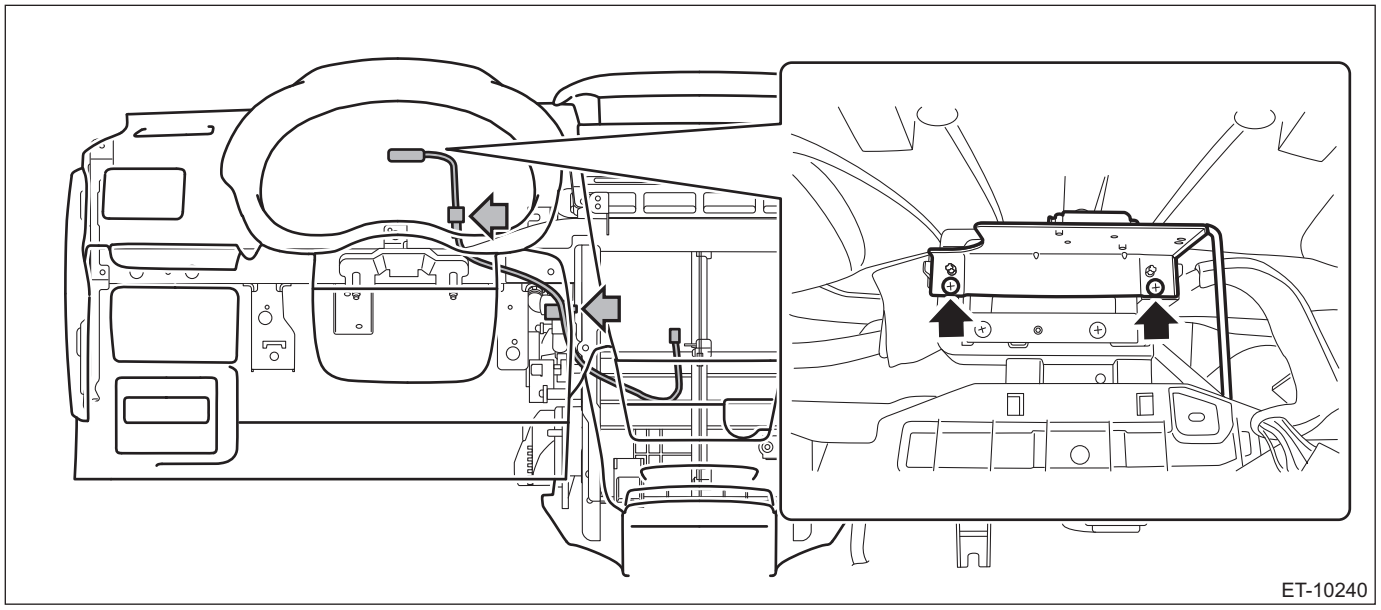
NOTE:
- A string makes operation easier during installation.
- For the model with telematics, also tie a string to the connector on the data communication module side.

(2) Remove the screw and harness clamp, and pull out the GPS antenna assembly harness from the combination meter side.
- Model without telematics



ET-10239

- Model with telematics



(3) When the GPS antenna assembly is pulled out, remove the string attached to the connector in step (1).

B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the GPS antenna assembly.
2) Install the combination meter assembly.
3) Install the navigation assembly. <Ref. to ETM-17, INSTALLATION, Audio.>
4) Install the center grille assembly.
5) Install the glove box.
6) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
7) Install the cover assembly - instrument panel LWR driver.
8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

16.Telematics System

A: WIRING DIAGRAM

Refer to “Telematics System” in the wiring diagram.

- Without audio amplifier: <Ref. to WI-351, WITHOUT AUDIO AMPLIFIER, WIRING DIAGRAM, Telematics System.>
- With audio amplifier: <Ref. to WI-355, WITH AUDIO AMPLIFIER, WIRING DIAGRAM, Telematics System.>

B: OPERATION

1. REGISTRATION (COMM CHECK)

CAUTION:
Do not press and hold the i-button for more than two seconds during communication check, or settings will return to factory mode in poor radio wave environment. If the settings has returned to factory mode, perform the communication check again. To check the mode status, see “Subscription Status” in the current data display on SSM.

1) Replace the data communication module with a new part.
2) Check the LED of overhead console or stereo camera cover assembly illuminates in green.
3) Press and hold the i-button for 2 seconds or more.

NOTE:
When the subscription is completed, the telematics system will automatically activate.

C: INSPECTION

Refer to “Basic Diagnostic Procedure” in “TELEMATICS SYSTEM (DIAGNOSTICS)”. <Ref. to TEL(diag)-2, Basic Diagnostic Procedure.>

D: NOTE

For procedure of each component in the telematics system, refer to the respective section.

- Data communication module: <Ref. to ETM-43, Data Communication Module.>
- Antenna: <Ref. to ETM-22, Antenna.>
- GPS antenna: <Ref. to ETM-40, GPS Antenna.>
- Switches and harness: <Ref. to ETM-26, Switches and Harness.>

17.Data Communication Module

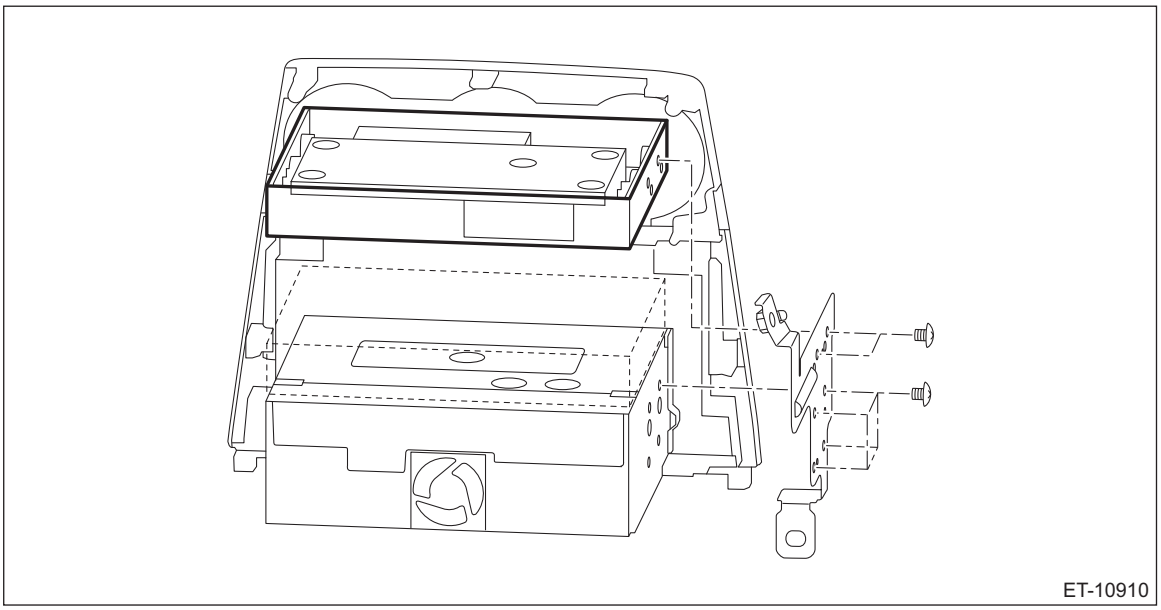
A: REMOVAL

1. DATA COMMUNICATION MODULE

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the data communication module.
(1) Remove the screws.
(2) Remove the audio bracket or navigation bracket, and then remove the data communication module.

CAUTION:
Do not drop or apply any impact to the data communication module.



2. BACKUP BATTERY

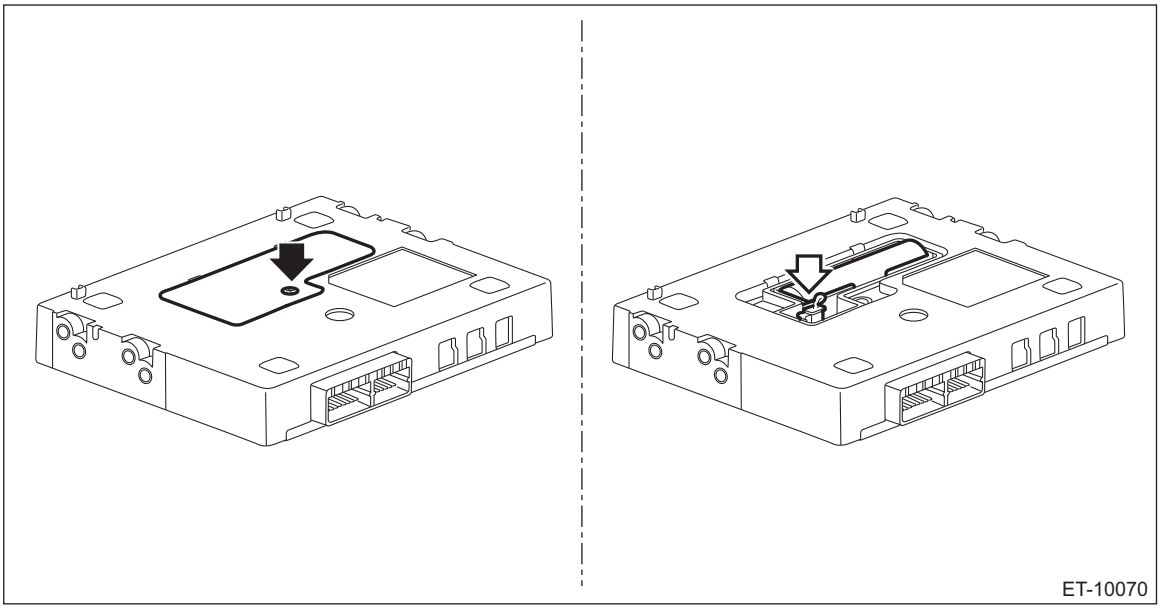
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the data communication module. <Ref. to ETM-43, DATA COMMUNICATION MODULE, REMOVAL, Data Communication Module.>
3) Remove the backup battery.

(1) Remove the screws, and then remove the battery cover.

Preparation tool:
TORX® T10

(2) Disconnect the connector and remove the backup battery.



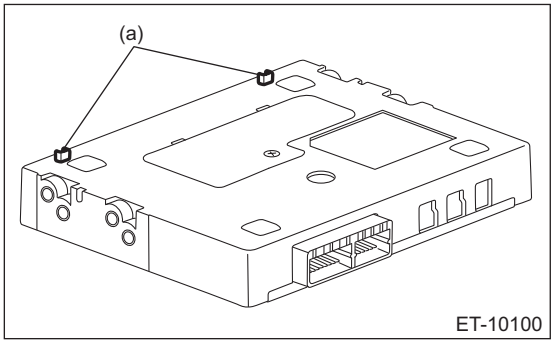
B: INSTALLATION

1. DATA COMMUNICATION MODULE

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the data communication module.

NOTE:
Align the positioning pin (a) of the data communication module with the positioning hole of the audio assembly or navigation assembly.



2) Install the audio assembly or navigation assembly. <Ref. to ETM-17, INSTALLATION, Audio.>
3) Install the center grille assembly.
4) Install the glove box.
5) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
6) Install the cover assembly - instrument panel LWR driver.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
8) Perform the registration if the data communication module is replaced with a new part. <Ref. to ETM-42, OPERATION, Telematics System.>
9) Check the LED lighting condition of the telematics button. <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

2. BACKUP BATTERY

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the backup battery.
2) Install the battery cover.

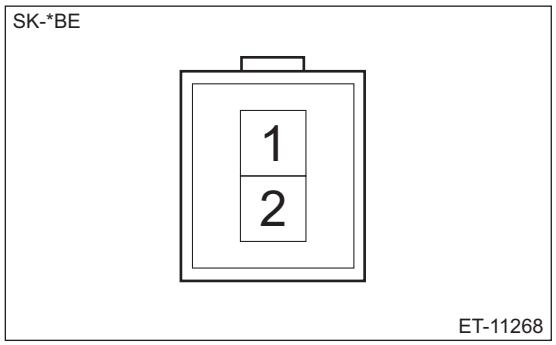
Tightening torque:
0.3 N·m (0.03 kgf-m, 0.2 ft-lb)
3) Install the data communication module. <Ref. to ETM-44, DATA COMMUNICATION MODULE, INSTALLATION, Data Communication Module.>
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. BACKUP BATTERY

1) Measure the voltage between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Standard
1 (+) — 2 (–)	2 V or more

2) Replace the backup battery if the inspection result is not within the standard value.

18.Camera

A: WIRING DIAGRAM

For wiring diagrams related to the camera, refer to the following items.
- Front: <Ref. to WI-225, WIRING DIAGRAM, Front View Monitor.>
- Rear: <Ref. to WI-316, WIRING DIAGRAM, Rearview Camera System.>

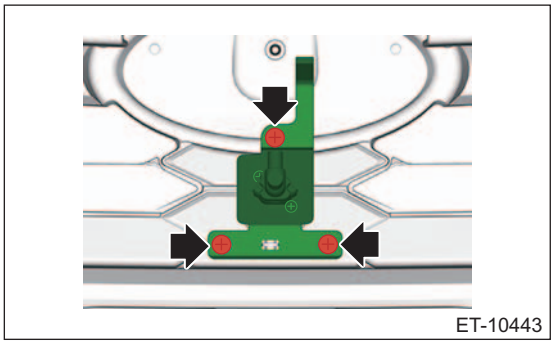
B: REMOVAL

1. FRONT

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the bumper face - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
3) Remove the screws and remove the front view camera.

CAUTION:
Do not drop or apply any impact to the front view camera because it is a precision equipment.



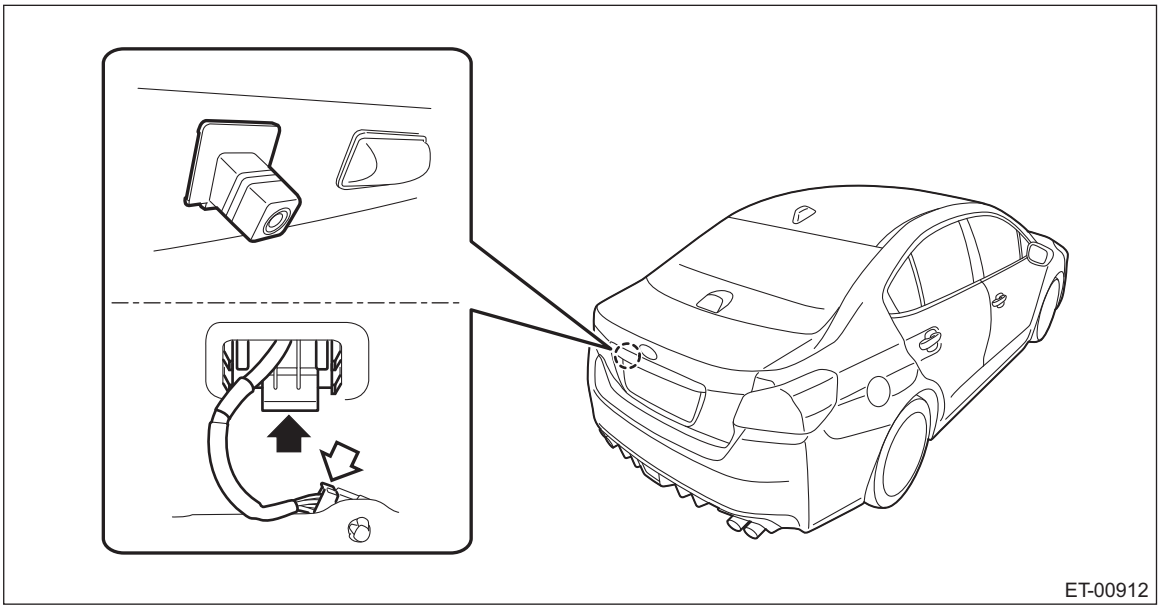
2. REAR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - trunk lid and garnish - trunk. <Ref. to EI-55, REMOVAL, Trunk Lid Garnish.>
3) Remove the rearview camera.

CAUTION:
Do not drop or apply any impact to the rearview camera because it is a precision equipment.
(1) Disconnect the connector.

(2) Disconnect the claws and hooks and remove the rear view camera.



C: INSTALLATION

1. FRONT

1) Install the front view camera.

NOTE:
Align the positioning holes of camera to the positioning pins of front grille assembly.
2) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Check the screen display and the guide line position. <Ref. to ETM-47, FRONT, INSPECTION, Camera.>

2. REAR

1) Install the rearview camera.
2) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
3) Install the trim panel - trunk lid.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Check the screen display and the guide line position. <Ref. to ETM-47, REAR, INSPECTION, Camera.>

D: INSPECTION

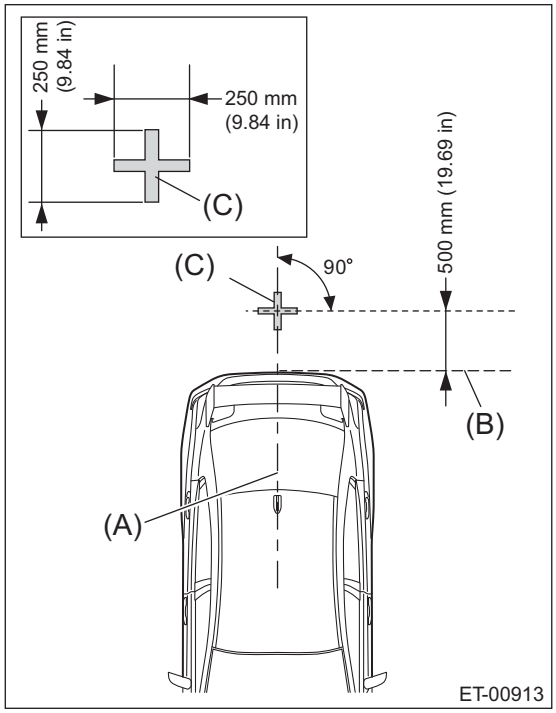
1. FRONT

1) Park the vehicle at the level place where there are enough area around the vehicle.
2) Confirm the following before checking the corresponding items.
(1) Front view camera image is not displayed. (Camera screen alone is not displayed normally)
Check the connecting condition of the front view camera using the vehicle condition check in the diagnosis mode. <Ref. to IDI-9, DIAGNOSTIC MODE, OPERATION, Multi-function Display (MFD) System.>
(2) Guide line cannot be displayed or the position of the guide line is wrong.
Perform adjustment for display and position of guide line using camera setting in the diagnosis mode. <Ref. to IDI-9, DIAGNOSTIC MODE, OPERATION, Multi-function Display (MFD) System.>

2. REAR

1) Park the vehicle at the level place where there are enough area around the vehicle.
2) Attach the tape as the target point for standard at the floor around the vehicle as shown in the figure below.

NOTE:
Standard tape width is about 30 — 50 mm (1.18 — 1.97 in) and brilliant color shall be used.



(A) Vehicle body center line
(B) Rear edge of bumper
(C) Target point

3) Confirm the following before checking the corresponding items.
(1) Rearview camera image is not displayed. (Camera screen alone is not displayed normally)
1. Check the reverse signal using Vehicle Signal Check items in Line Diag mode. <Ref. to ETM-12, CHECK VEHICLE SIGNALS WITH LINE DIAG MODE, OPERATION, Audio System.>
2. Check the connecting condition of the rearview camera using Connectivity Check items in Line Diag mode. <Ref. to ETM-12, CHECK CONNECTIONS WITH LINE DIAG MODE, OPERATION, Audio System.>
(2) Guide line cannot be displayed or the position of the guide line is wrong.
The rearview camera or its installation location on the vehicle may be deformed. Check the rearview camera and its installation location on the vehicle, and repair or replace if necessary.

19.Accessory Power Supply Socket

A: WIRING DIAGRAM

Refer to “Accessory Power Supply Socket System” in the wiring diagram.

- Front: <Ref. to WI-222, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>
- Rear
  – ENGINE TYPE FA: <Ref. to WI-312, ENGINE TYPE FA, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>
  – ENGINE TYPE EJ: <Ref. to WI-313, ENGINE TYPE EJ, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

B: REMOVAL

1. FRONT

CAUTION:
Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

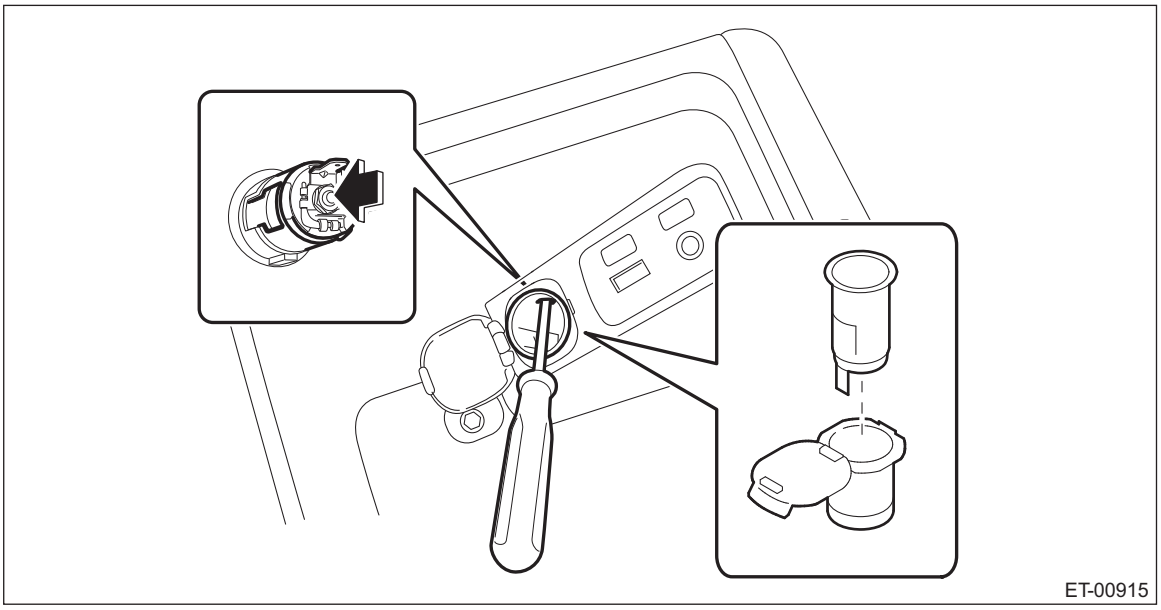
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the glove box. <Ref. to EI-67, REMOVAL, Glove Box.>
5) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
6) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
7) Remove the socket assembly.
   (1) Disconnect the connector.
   (2) While releasing the claw inside, press it in from the rear to remove the socket assembly.

   (3) Remove the clip - socket.

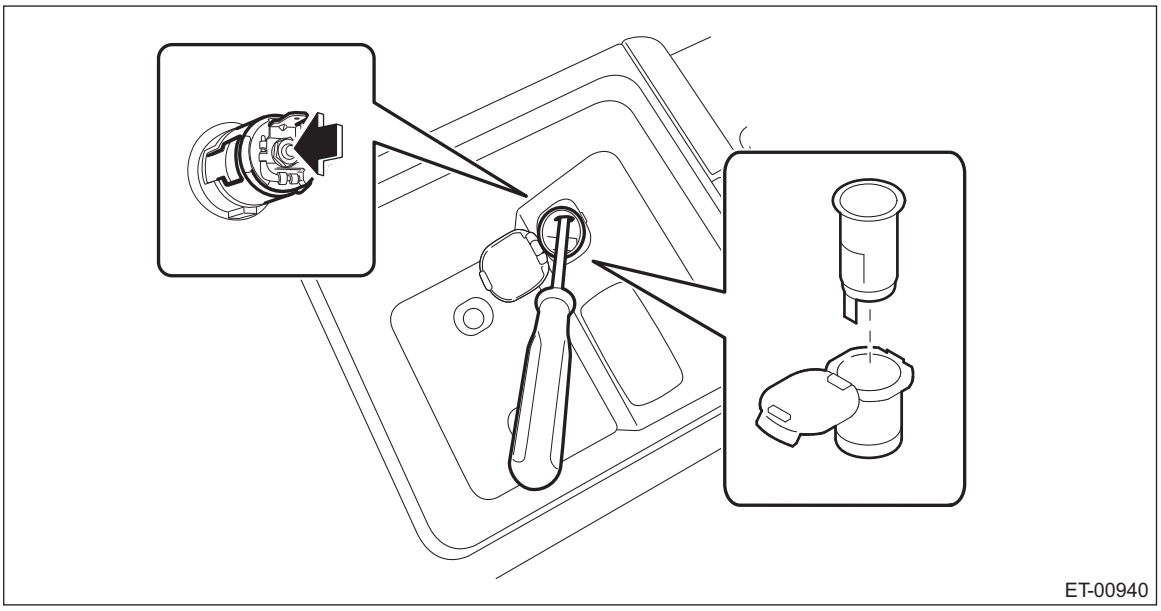
2. REAR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the socket assembly.
(1) Disconnect the connector. (STI model)
(2) While releasing the claw inside, press it in from the rear to remove the socket assembly.
• Except for STI model



• STI model



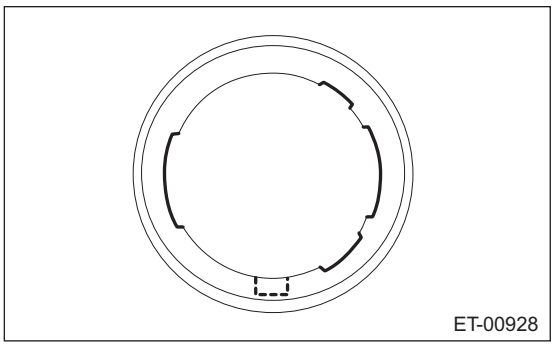
(3) Remove the cap - socket.

C: INSTALLATION

1. FRONT

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Install the clip - socket.
2) Install the socket assembly.

NOTE:
Align the groove of the clip - socket with the claw of the socket assembly.

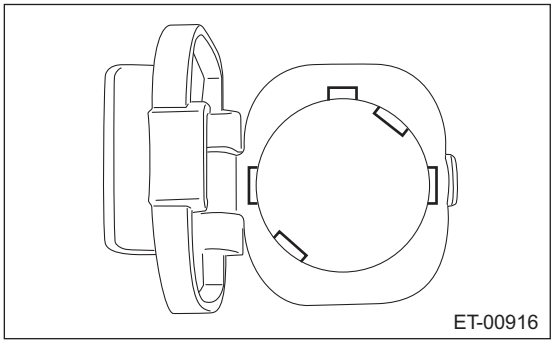


3) Install the audio assembly or navigation assembly. <Ref. to ETM-17, INSTALLATION, Audio.>
4) Install the center grille assembly.
5) Install the glove box.
6) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
7) Install the cover assembly - instrument panel LWR driver.
8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. REAR

1) Install the cap - socket.
2) Install the socket assembly.

NOTE:
Align the groove of the cap - socket with the claw of the socket assembly.



3) Install the console box assembly.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

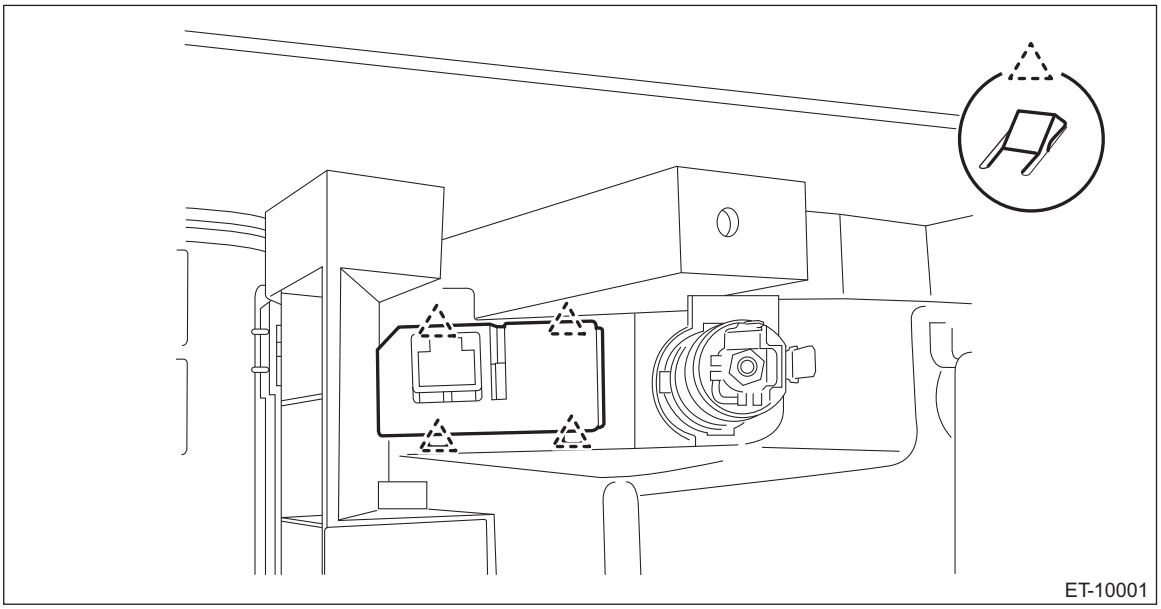
20.External Connection Terminal

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
3) While pressing the claw, press it in from the rear to remove the unit assembly - AUX.



B: INSTALLATION

1) Install the unit assembly - AUX.
2) Install the console box assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

21.Diagnostics with Phenomenon

A: LIST

1. AUDIO SYSTEM

Symptoms	Reference
Power will not turn ON.	<Ref. to ETM-57, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
The screen freezes and does not accept any operation entry.	<Ref. to ETM-59, THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY, INSPECTION, Diagnostics with Phenomenon.>
The screen is blacked out, or the screen is not displayed.	<Ref. to ETM-60, THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
System is reset.	<Ref. to ETM-61, SYSTEM IS RESET, INSPECTION, Diagnostics with Phenomenon.>
CDs cannot be played back.	<Ref. to ETM-62, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.>
Sound does not come out from the speaker.	<Ref. to ETM-63, SOUND DOES NOT COME OUT FROM THE SPEAKER, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth connection cannot be established.	<Ref. to ETM-64, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth does not operate.	<Ref. to ETM-64, BLUETOOTH DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>
Radio volume is low or interference noise occurs.	<Ref. to ETM-65, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.>
Error message is displayed.	<Ref. to ETM-57, ERROR MESSAGE IS DISPLAYED, LIST, Diagnostics with Phenomenon.>
SUBARU STARLINK is faulty.	<Ref. to ETM-54, CHECK ABNORMALITY OF SUBARU STARLINK, LIST, Diagnostics with Phenomenon.>

2. NAVIGATION SYSTEM

Symptoms	Reference
Power will not turn ON.	<Ref. to ETM-57, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
The screen freezes and does not accept any operation entry.	<Ref. to ETM-59, THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY, INSPECTION, Diagnostics with Phenomenon.>
The screen is blacked out, or the screen is not displayed.	<Ref. to ETM-60, THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
System is reset.	<Ref. to ETM-61, SYSTEM IS RESET, INSPECTION, Diagnostics with Phenomenon.>
CDs cannot be played back.	<Ref. to ETM-62, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.>
Sound does not come out from the speaker.	<Ref. to ETM-63, SOUND DOES NOT COME OUT FROM THE SPEAKER, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth connection cannot be established.	<Ref. to ETM-64, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
Bluetooth does not operate.	<Ref. to ETM-64, BLUETOOTH DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

Symptoms	Reference
Radio volume is low or interference noise occurs.	<Ref. to ETM-65, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.>
Wrong location of vehicle, or no GPS reception.	<Ref. to ETM-66, WRONG LOCATION OF VEHICLE, NO GPS RECEPTION, INSPECTION, Diagnostics with Phenomenon.>
Error message is displayed.	<Ref. to ETM-57, ERROR MESSAGE IS DISPLAYED, LIST, Diagnostics with Phenomenon.>
SUBARU STARLINK is faulty.	<Ref. to ETM-54, CHECK ABNORMALITY OF SUBARU STARLINK, LIST, Diagnostics with Phenomenon.>

3. CHECK ABNORMALITY OF SUBARU STARLINK

Symptoms	Counter-measure
SUBARU STARLINK app was terminated.	Perform the procedures described on “Check connection between smartphone and unit”. <Ref. to ETM-67, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>
Smartphone was powered off while connecting via the SUBARU STARLINK.	
Bluetooth connection stops while connecting via the SUBARU STARLINK.	
Communication gets out of service while connecting via the SUBARU STARLINK.	
Radio wave reception becomes worse while connecting via the SUBARU STARLINK.	

NOTE:
Possible error messages with relation to the above symptoms. When the message below is displayed, perform inspection according to “Inspection when an error message is displayed (SUBARU STARLINK)”. <Ref. to ETM-54, INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK), LIST, Diagnostics with Phenomenon.>

Details of message
Please disconnect mobile device and install the STARLINK application on your mobile device and try again. Bluetooth disconnected, please reconnect and try again. Smartphone data connection is poor, please try to connect again.

4. INSPECTION WHEN AN ERROR MESSAGE IS DISPLAYED (SUBARU STARLINK)

No.	Inspection	Possible cause	Action 1	Action 2
1	Check internet connection of smartphone	Check that the Internet sites can be viewed with a web browser of the smartphone. NOTE: Make sure that the displayed contents are not from previously loaded screen (cache) and that new contents can be reloaded.	When connection to the Internet fails, confirm that connection can be established where the radio wave condition is good, and go to No. 2.	Check that the smartphone can perform communication.
2	Activate SUBARU STARLINK application for the smartphone	Activate the “SUBARU STARLINK” application for the smartphone.	Check that the SUBARU STARLINK application is activated, and go to No. 5.	If the SUBARU STARLINK application is not installed, go to No. 3 and 4.
3	Install the SUBARU STARLINK application (Android)	Search the SUBARU STARLINK on Google Play, and install the application.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)

No.	Inspection	Possible cause	Action 1	Action 2
4	Install the SUBARU STARLINK application (iPhone)	Search the SUBARU STARLINK on APP Store, and install the app.	After installation, go to No. 2.	When installation cannot be completed, check the setting of the smartphone. (Communication environment, account, etc.)
5	Check connection to the SUBARU STARLINK server	Select “SETTING” tab from the SUBARU STARLINK application for the smartphone, and select “Press to check network status”.	When “The network connection is good” is displayed, go to No. 8.	For the case other than shown on the left, go to No. 6 or No. 7.
6		When “NETWORK PROBLEMS” is displayed.	Move to a location where the radio wave condition is good, and go to No. 5.	—
7		When “SERVER MAINTENANCE” is displayed.	Wait until the server maintenance completes, and go to No. 5.	—
8	Check the smartphone type	Check the phone type (iPhone or Android).	For iPhone, go to No. 10 or 12.	For Android, go to No. 10.
9	Check Bluetooth connection between smartphone — on-vehicle device	On the on-vehicle device, select [HOME]-[SETTINGS]-Bluetooth tab-“BT devices Connection”, and check that Bluetooth setting at the upper right is ON.	When the setting is OFF, switch to ON and go to No. 10.	When the setting is ON, switch to OFF once and to ON again, then go to No. 10.
10		From the Setting app for the smartphone, select Bluetooth and check that it is set to ON. (Note that procedures vary depending on a device.)	When the setting is OFF, switch to ON and go to No. 11.	When the setting is ON, switch to OFF once and to ON again, then go to No. 11.
11		Check that Bluetooth pairing is established between the smartphone and on-vehicle device. • The selected smartphone icon is displayed on the on-vehicle device. • The smartphone BT is connected to the on-vehicle device.	If the connection cannot be confirmed, go to No. 9.	—
12	Check USB connection between smartphone — on-vehicle device (with iPhone)	Check that the smartphone and on-vehicle device are connected via USB.	After connecting via USB, go to No. 13.	—
13	Check the SUBARU STARLINK initial screen	On the on-vehicle device, press down [APPS] – [SUBARU STARLINK], and check that the SUBARU STARLINK initial screen is displayed.	If the activation cannot be confirmed, go to No. 14.	—

No.	Inspection	Possible cause	Action 1	Action 2
14	Delete the SUBARU STARLINK connection information inside the on-vehicle device.	Clear the Browser cache on the on-vehicle device. (Select the tool tab from the SETTING menu, select Browser cache “Delete”, and select “OK”. Then, press [SETTINGS] from the APPS screen. From SETTING, select the Bluetooth - tab, and select BT Devices Connection. Select the “Trash can” icon of the registered device. Select “OK” on the confirmation pop-up screen.)	For Android, go to No. 15. For iPhone, go to No. 15 or 17.	—
15		Clear the Bluetooth connection information inside the on-vehicle device.	Go to No. 16.	—
16		Turn OFF the power supply of the on-vehicle device, and wait for 30 seconds or more before turning ON the power supply again.	Go to No. 17.	—
17	Delete the SUBARU STARLINK connection information inside the smartphone.	Delete data in the SUBARU STARLINK app. (Click the “SETTING” icon of the “SUBARU STARLINK” application. Then, press [CONFIG] from the APPS list screen. Select “Delete the SUBARU STARLINK application data” to delete the data in the application. Activate the Setting app for the smartphone. From SETTING, select the Bluetooth - tab, and select BT Devices Connection. Select the Bluetooth setting item. Select the connection information. Select the “Trash can” icon of the registered device. Select “Forget This Device” to delete the connection information.)	Go to No. 18.	—
18		Delete the Bluetooth connection information.	Go to No. 19.	—
19		Turn OFF the power of the smartphone, then turn it ON again.	Go to No. 20.	—
20	Re-connect SUBARU STARLINK	Establish connection according to the SUBARU STARLINK connection procedure.	—	—

5. ERROR MESSAGE IS DISPLAYED

Mode	Message	Cause	Action
aha	“Information acquisition error. (Information acquisition error.)”	When not able to get the requested information.	Please try again (Refresh etc.) later or reconnect it.
	“Poor wireless reception. (Poor wireless reception.)”	When a communication error has been detected.	Please try again in a better communications environment.
	“Entry not recognized. (Entry not recognized.)”	When an invalid operation has been executed.	Please try again (Refresh etc.) later or reconnect it.
	“The station list cannot be acquired. (The station list cannot be acquired.)”	When not able to get the station information.	Please try again (Refresh etc.) later or reconnect it.
	“The content cannot be acquired. (The content cannot be acquired.)”	• When not able to get the content information. • When not able to switch to the Top content when touching.	• Please try again (Refresh etc.) later or reconnect it. • Select the desired station again when the station list appears.
	“Action not available. (Action not available.)”	When content-specific operations such as “fast forward” or “reverse” are not available.	Please try again (Refresh etc.) later or reconnect it.
	“Failed. (Failed.)”	When data transmission failed when touching.	Please try again later.
	“aha communication error - Please check Owner's Manual. (aha communication error - Please check Owner's Manual.)”	• When invalid data is received from the aha application or there is no response. • When the connection to the aha application via Bluetooth is not available. • When the data reception from this unit is rejected.	Please try again (Refresh etc.) later or reconnect it. If it is still not improved, restart the aha application.
	“Please select the type of connection in “aha Settings”. (Please select the type of connection in “aha Settings”.)”	When aha radio setting is set to (USB) when the Android device is going to be paired via Bluetooth.	When you want to connect to the aha application with the Android device, select (Bluetooth) in the aha radio setting from the setting screen.
Pandora	“No stations have been added to your list. (No stations have been added to your list.)”	When no stations have been registered.	Please register stations.
	“Your ratings information was not saved. (Your ratings information was not saved.)”	When ratings information has not been updated to the Pandora server.	Please try again later.
	“Bookmark not saved. (Bookmark not saved.)”	When bookmark registration information has not been updated to the Pandora server.	Please try again later.
	“Pandora is not available at your current location. (Pandora is not available at your current location.)”	When Pandora is used in an area where it is not available.	Please try again at a different location.
	“The selected Pandora station is no longer available. (The selected Pandora station is no longer available.)”	When the selected station has been deleted, or has expired.	Please select another station.
	“Pandora Error. (Pandora Error.)”	When the Pandora server is undergoing maintenance, or another error has occurred.	Please try again later.

B: INSPECTION

1. POWER WILL NOT TURN ON

Wiring diagram:

- Audio system: <Ref. to WI-79, WIRING DIAGRAM, Audio System.>

- Navigation system: <Ref. to WI-275, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR CONNECTION.** Check that the connector is connected to the unit.	Is the check result OK?	Go to step **2**.	Connect the connector.
2	**CHECK CONNECTOR.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **3**.	Repair or replace the harness.
3	**CHECK POWER SUPPLY VOLTAGE.** 1) Disconnect the connector. 2) Turn the ignition switch to ACC. 3) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. ***Connector & terminal*** ***Model without power amplifier*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***Model with power amplifier*** ***(i35) No. 4 (+) — Chassis ground (–):*** ***(i35) No. 3 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **8**.	Go to step **4**.
4	**CHECK FUSE.** 1) Turn the ignition to OFF. 2) Check the fuse No. 8 inside the main fuse box.	Is the fuse OK?	Go to step **5**.	Replace the fuse. If the fuse is blown again, check or replace the short circuit of the power supply harness.
5	**CHECK HARNESS (POWER SUPPLY).** Measure the resistance between main fuse box and connector. ***Connector & terminal*** ***Model without power amplifier*** ***M/B fuse No. 8 — (i85) No. 4:*** ***Model with power amplifier*** ***M/B fuse No. 8 — (i35) No. 4:***	Is the resistance 1 Ω or less?	Go to step **6**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
6	**CHECK HARNESS (GROUND).** Measure the resistance between connector and chassis ground. ***Connector & terminal*** ***Model without power amplifier*** ***(i85) No. 7 — Chassis ground:*** ***Model with power amplifier*** ***(i35) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK BATTERY.** Check the battery. • Except for STI model: <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> • STI model: <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **8**.	Charge or replace the battery.
8	**CHECK OPERATION.** 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Does the power turn ON?	Currently no failure is found.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

2. THE SCREEN FREEZES AND DOES NOT ACCEPT ANY OPERATION ENTRY

	Step	Check	Yes	No
1	**CHECK RESTARTING DISPLAY.** Turn the ignition OFF → ACC after waiting for three minutes or more with the display turned off. (The doors must be closed)	Is the screen freeze eliminated?	Go to step **5**.	Go to step **2**.
2	**REMOVE OTHER MEDIA OR EXTERNAL DEVICES.** Remove the external devices connected to CD/USB. Also, remove the external devices with Bluetooth.	Is the screen freeze eliminated?	Go to step **3**.	Go to step **6**.
3	**CHECK OTHER EXTERNAL DEVICE CONNECTION.** When screen freeze is eliminated, connect external devices one by one to identify the device that causes screen freeze.	Is the device that reproduces screen freeze identified?	Go to step **4**.	Go to step **5**.
4	**CHECK OTHER EXTERNAL DEVICE CONNECTION.** 1) Replace the identified device with the one that has the same performance. 2) Turn the ignition switch to ACC.	Does the screen freeze occur?	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>	The external device may be defective.
5	**CHECK OPERATION PROCEDURE.** Ask how the user operates when screen freeze occurs, and perform using the same procedure.	Is the check result OK?	Currently no failure is found.	Go to step **6**.
6	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **7**.	Remove the external device and perform the inspection from step 2 again. If the fault is not fixed: Go to step **7**.

	Step	Check	Yes	No
7	**PERFORM INITIALIZATION PROCEDURE.** Perform the initialization procedure for the unit. **CAUTION:** **When the initialization procedure is performed, the data, telephone directory, etc. recorded in the unit body will be deleted. Before initialization, obtain permission from the user. <Ref. to ETM-70, SERVICE INSPECTION, OPERATION, Service Diagnostics Mode.>**	Is the screen freeze eliminated?	Go to step **5**. If the screen freeze occurs again, replace the audio or navigation unit. <Ref. to ETM-16, Audio.>	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

3. THE SCREEN IS BLACKED OUT, OR THE SCREEN IS NOT DISPLAYED

	Step	Check	Yes	No
1	**CHECK RESTARTING DISPLAY.** Turn the ignition OFF → ACC after waiting for three minutes or more with the display turned off. (The doors must be closed)	Is the screen properly displayed?	Currently no failure is found.	Go to step **2**.
2	**CHECK POWER SUPPLY BUTTON.** Check if the screen OFF mode is turned on by pressing the power supply button of the unit body.	Is the screen properly displayed?	The screen OFF mode might be activated. Currently no failure is found.	Go to step **3**.
3	**CHECK BUTTON ILLUMINATION.** Turn the ignition switch to ACC.	Do the buttons located beside the screen illuminate?	Go to step **4**.	Perform "Power will not turn ON" in Diagnostics with Phenomenon. <Ref. to ETM-57, POWER WILL NOT TURN ON, INSPECTION, Diagnostics with Phenomenon.>
4	**CHECK INDICATION WITH ILLUMINATION ON.** Turn the lighting switch to ON.	Does the screen brightness change?	Go to step **7**.	Go to step **5**.
5	**CHECK HARNESS.** Check for poor contact of the harnesses, connectors and terminals that are connected to the unit body.	Is the check result OK?	Go to step **6**.	Repair or replace the harness.
6	**CHECK BODY INTEGRATED UNIT.** Confirm the following items in «Data monitor» of «Body Control» using Subaru Select Monitor. • «Lighting I Switch Input»	Is the input signal normal?	Go to step **7**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK UNDER OVERLOAD CONDITION.** 1) Turn the ignition to OFF. 2) Leave as is for 10 minutes (cooling down), and then turn the ignition to ACC to check the operation.	Is the screen properly displayed?	Go to step **8**.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>
8	**OPERATIONAL CHECK.** Obtain the information about the audio device that the user used (SD, Bluetooth, CD, etc.), and connect the same device. Then play the device for 10 minutes or more.	Is the screen properly displayed?	Currently no failure is found.	Go to step **9**.

	Step	Check	Yes	No
9	**CHECK EXTERNAL DEVICE.** 1) Replace the external device that might cause trouble with another device. (If trouble occurs while using a CD, replace the CD with another one. If trouble occurs while using an external device that is connected via USB, replace the external device with another device.) 2) Operate for 10 minutes or more.	Is the screen properly displayed?	The external device might have trouble, resulting in the overload state.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

4. SYSTEM IS RESET

- Audio system: <Ref. to WI-79, WIRING DIAGRAM, Audio System.>
- Navigation system: <Ref. to WI-275, WIRING DIAGRAM, Navigation System.>

	Step	Check	Yes	No
1	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **2**.	Remove the external device to check the operation. If the fault is not fixed: Go to step **2**.
2	**CHECK CONNECTOR CONNECTION.** Check that the connector is connected to the unit.	Is the check result OK?	Go to step **3**.	Connect the connector.
3	**CHECK CONNECTOR.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **4**.	Repair or replace the harness.
4	**CHECK POWER SUPPLY VOLTAGE.** 1) Turn the ignition switch to ACC. 2) Using a tester, measure the voltage between connector and chassis ground. NOTE: Turn the electrical parts to OFF. ***Connector & terminal*** ***Model without power amplifier*** ***(i85) No. 4 (+) — Chassis ground (–):*** ***(i85) No. 3 (+) — Chassis ground (–):*** ***Model with power amplifier*** ***(i35) No. 4 (+) — Chassis ground (–):*** ***(i35) No. 3 (+) — Chassis ground (–):***	Is the voltage 12 V or more?	Go to step **8**.	Go to step **5**.

Step		Check	Yes	No
5	**CHECK OPEN CIRCUIT IN HARNESS (POWER SUPPLY).** Using the tester, measure the resistance between connector and chassis ground while shaking the harness. ***Connector & terminal*** ***Model without power amplifier*** ***(i85) No. 4 — Chassis ground:*** ***(i85) No. 3 — Chassis ground:*** ***Model with power amplifier*** ***(i35) No. 4 — Chassis ground:*** ***(i35) No. 3 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK OPEN CIRCUIT IN HARNESS (GROUND).** Using the tester, measure the resistance between connector and chassis ground while shaking the harness. ***Connector & terminal*** ***Model without power amplifier*** ***(i85) No. 7 — Chassis ground:*** ***Model with power amplifier*** ***(i35) No. 7 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK BATTERY.** Check the battery. • Except for STI model: <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> • STI model: <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **8**.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>
8	**CHECK UNIT OPERATION.** 1) Connect all connectors. 2) Turn the ignition switch to ACC and the power supply switch of the unit to ON.	Is the reset eliminated?	Currently no failure is found.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

5. CDS CANNOT BE PLAYED BACK

Step		Check	Yes	No
1	**CONFIRM CD INSERTION CONDITION.** Check that the CD is inserted properly.	Is the check result OK?	Go to step **2**.	Insert the CD properly.
2	**CHECK CD.** Check the CD surfaces are free from scratches or dirt.	Is the check result OK?	Go to step **3**.	The CD is defective.
3	**CHECK CD.** Replace the CD with another one. (Use a playable CD. Refer to owner's manual for details.)	Is the CD played back?	The CD is defective.	Go to step **4**.
4	**CHECK DEW CONDENSATION IN UNIT.** 1) After starting the engine, turn ON the air conditioner and dry inside the vehicle for 10 minutes or more. 2) Check the CD operation.	Is the CD played back?	Dew condensation occurred inside the unit.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

6. SOUND DOES NOT COME OUT FROM THE SPEAKER

Step		Check	Yes	No
1	**CHECK THE MODE IN WHICH NO SOUND COME OUT.** Check if sound comes out in each mode such as CD, radio, etc.	Does it have no sound in all modes?	Go to step **2**.	Check each mode in which no sound come out. For CD: <Ref. to ETM-62, CDS CANNOT BE PLAYED BACK, INSPECTION, Diagnostics with Phenomenon.> For radio: <Ref. to ETM-65, RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS, INSPECTION, Diagnostics with Phenomenon.> For Bluetooth audio: <Ref. to ETM-64, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
2	**CHECK DIAGNOSTIC MODE.** Perform {Audio Check} on the {Line Diag} screen. • Audio system: <Ref. to ETM-12, OPERATION, Audio System.> • Navigation system: <Ref. to ETM-32, OPERATION, Navigation System.>	Does it have no sound in all speakers?	Go to step **3**.	Model with power amplifier: Check the harnesses between the unit and power amplifier and between power amplifier and speaker for open circuit or short circuit. If no fault is found, replace the speaker. Check the harness between the unit and speaker for open circuit or short circuit. If no fault is found, replace the speaker. Model without power amplifier: Check the harness between the unit and speaker for open circuit or short circuit. If no fault is found, replace the speaker.

	Step	Check	Yes	No
3	**CHECK MUTE MODE.** Check if the MUTE mode is turned on when the MUTE button is installed.	Is the volume level set to the minimum?	Since the MUTE mode is on or the volume level is set to the minimum, sound does not come out.	Go to step **4**.
4	**CHECK DTC (MODEL WITH TELEMATICS).** Using the Subaru Select Monitor, read DTC of «Telematics». <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are B2A0E (mute line circuit), B2A05 (left speaker/audio circuit) and B2A06 (right speaker/audio circuit) displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-21, Inspection Mode.>	Go to step **5**.
5	**CHECK CONNECTOR.** Check for poor contact in the connector of the unit and the connector of each speaker. Check for poor contact in the amplifier connector for models with amplifier.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>	Repair or replace the harness.

7. BLUETOOTH CONNECTION CANNOT BE ESTABLISHED

	Step	Check	Yes	No
1	**CHECK BLUETOOTH DEVICE.** Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found.	Go to step **2**.
2	**CHECK BLUETOOTH DEVICE.** Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found.	Go to step **3**.
3	**CHECK BLUETOOTH DEVICE.** 1) Connect another Bluetooth device. NOTE: Supported Bluetooth standards: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.1 – PBAP: Ver. 1.1.1 – MAP: Ver. 1.0 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.2 – AVRCP: Ver. 1.4	Is communication successful?	Bluetooth device which cannot be connected might be faulty.	Go to step **4**.
4	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>	Remove the external device and perform the inspection from step 1 again.

8. BLUETOOTH DOES NOT OPERATE

	Step	Check	Yes	No
1	**CHECK BLUETOOTH DEVICE.** Restart the Bluetooth device, and connect again.	Does it start properly?	Currently no failure is found.	Go to step **2**.
2	**CHECK BLUETOOTH DEVICE.** Re-register the Bluetooth device, and connect again.	Is communication successful?	Currently no failure is found.	Go to step **3**.

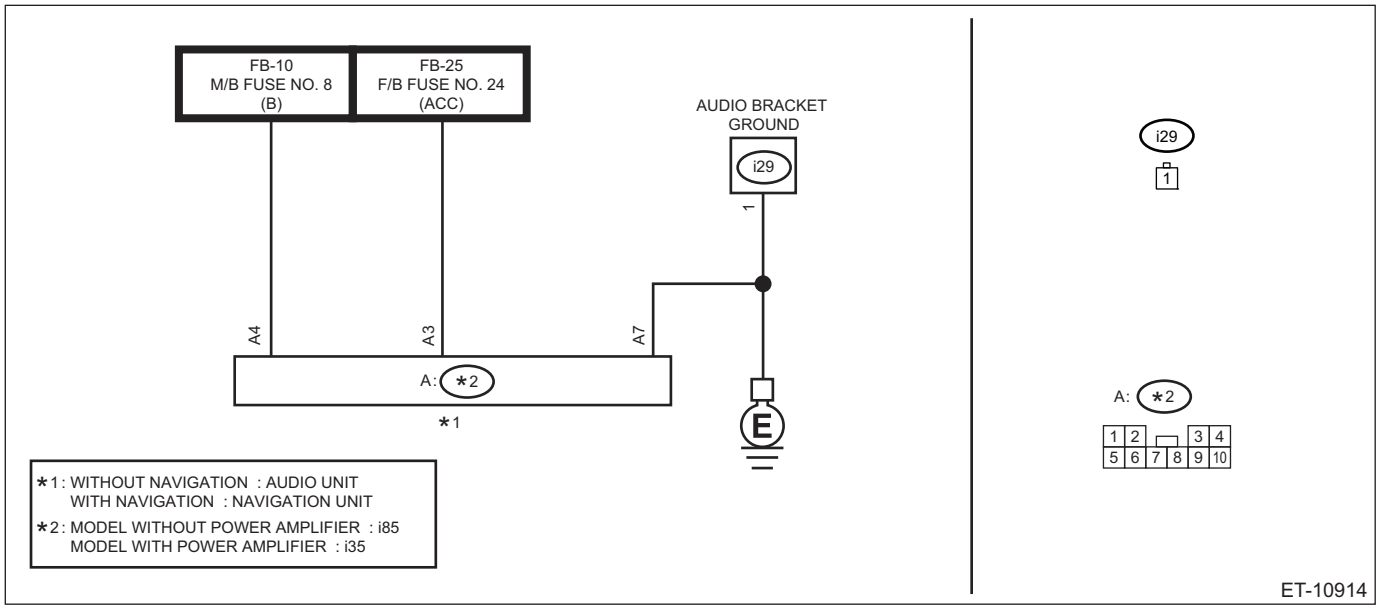
Step		Check	Yes	No
3	**CHECK BLUETOOTH DEVICE.** 1) Connect another Bluetooth device. NOTE: Supported Bluetooth standards: Ver. 3.0 +EDR compatible • Bluetooth Phone Profile – HFP: Ver. 1.6 – OPP: Ver. 1.1 – PBAP: Ver. 1.1.1 – MAP: Ver. 1.0 – SPP: Ver. 1.1 • Bluetooth Audio Device Profile – A2DP: Ver. 1.2 – AVRCP: Ver. 1.4	Is communication successful?	Bluetooth device which cannot be connected might be faulty.	Go to step **4**.
4	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>	Remove the external device and perform the inspection from step 1 again.

9. RADIO VOLUME IS LOW OR INTERFERENCE NOISE OCCURS

CAUTION:
• If non-genuine electrical parts are installed, they may cause interference noise.
• Refer to the following diagnostic procedure if equipped with the digital radio using the Internet connection.
– Check SUBARU STARLINK service: <Ref. to ETM-68, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>
– Bluetooth connection cannot be established: <Ref. to ETM-64, BLUETOOTH CONNECTION CANNOT BE ESTABLISHED, INSPECTION, Diagnostics with Phenomenon.>
– Check connection between smartphone and unit: <Ref. to ETM-67, CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT, INSPECTION, Diagnostics with Phenomenon.>

NOTE:
When the volume of Aha and Pandora is low, connect the smartphone to the Internet, and check that Aha and Pandora is audible on the smartphone itself. When it is inaudible, or the volume is too low, there is a problem with the smartphone, Internet connection or service provider. When it is audible with the smartphone without any troubles, there is a problem with connection to the vehicle (USB connection or Bluetooth connection).
• Audio system: <Ref. to WI-79, WIRING DIAGRAM, Audio System.>

- Navigation system: <Ref. to WI-275, WIRING DIAGRAM, Navigation System.>



Step		Check	Yes	No
1	**CHECK SYMPTOM.** Check in which condition (place) the noise occurs.	Does it occur in any places?	Go to step **2**.	Radio wave reception condition is poor. (In tunnel, buildings, etc.) There is no failure on the vehicle.
2	**CHECK ANTENNA.** Check for poor contact of connectors or terminals.	Is the check result OK?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Check the antenna harness for an open or short circuit, and check the booster.	Is the check result OK?	Go to step **4**.	Repair or replace the harness.
4	**CHECK UNIT GROUND CIRCUIT.** Check the unit ground connector (1P on back side).	Is the check result OK?	Go to step **5**.	Repair or replace the ground circuit.
5	**CHECK ENVIRONMENTAL CONDITION.** Check if any external devices which emit strong electromagnetic waves and noises, such as a radio antenna, is installed inside the vehicle.	Is the check result OK?	Go to step **6**.	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step **6**.
6	**CHECK NOISE OCCURRENCE CONDITION.** Stop the engine, and turn the ignition switch to ON to check for noise occurrence.	Does the noise occur while the engine stops?	Check that the engine ignition system, generator, engine ground circuit and chassis ground circuit are connected securely.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

10.WRONG LOCATION OF VEHICLE, NO GPS RECEPTION

Step		Check	Yes	No
1	**CHECK SYMPTOM.** Check in which condition (place) the vehicle is located out of position.	Does it occur in any places?	Go to step **2**.	Go to step **4**.

	Step	Check	Yes	No
2	**CHECK EXTERNAL DEVICE INSTALLATION.** Confirm that no external devices are installed near the GPS antenna or unit.	Is the check result OK?	Go to step **3**.	Remove the external device. There is no failure if it returns to normal. If the fault is not fixed: Go to step **3**.
3	**CHECK DIAGNOSTIC MODE.** Check the GPS item on the {Line Diag} screen. <Ref. to ETM-32, OPERATION, Navigation System.>	Is the display OK?	Go to step **5**.	Go to step **4**.
4	**CHECK GPS ANTENNA.** Check that the GPS antenna connector is connected.	Is the connector connected?	Replace the navigation assembly. <Ref. to ETM-39, Navigation Body.>	Replace the GPS antenna. <Ref. to ETM-40, GPS Antenna.>
5	**INSPECTION OF VEHICLE SPEED SENSOR.** Read the DTC of «Brake Control System» using the Subaru Select Monitor. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to VDC(diag)-60, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **6**.
6	**CHECK VEHICLE SPEED SIGNAL.** Check the vehicle speed pulse using an oscilloscope.	Is the pulse normal?	Replace the navigation assembly. <Ref. to ETM-39, Navigation Body.>	Go to step **7**.
7	**CHECK VEHICLE SPEED PULSE SIGNAL HARNESS.** 1) Disconnect the VDC CM connector. 2) Check the vehicle speed pulse with VDC CM connector using an oscilloscope.	Is there any noise while the vehicle stops?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Repair or replace the harness.

11.CHECK CONNECTION BETWEEN SMARTPHONE AND UNIT

	Step	Check	Yes	No
1	**CHECK COMPATIBILITY OF SMARTPHONE.** Check that the customer's smartphone is compatible with the system. • iPhone: iOS 4.3.5 or later • Android: Android 4.0 or later	Is it compatible?	Go to step **2**.	The smartphone is not compatible; therefore, it does not work with the system.
2	**ACTIVATION OF APP.** Check the SUBARU STARLINK app of the smartphone.	Is it installed?	Go to step **4**.	Go to step **3**.
3	**INSTALLATION OF APP.** Install SUBARU STARLINK app to smartphone.	Is installation successful?	Go to step **4**.	Reboot the smartphone, and install the SUBARU STARLINK.
4	**ACTIVATION OF APP.** Activate SUBARU STARLINK app.	Is SUBARU STARLINK app activated?	Go to step **5**.	Reinstall the app and activate it. If you still fail to activate it, the smartphone may be defective.

	Step	Check	Yes	No
5	**CHECK BLUETOOTH CONNECTION.** Confirm the Bluetooth connection with the unit.	Is Bluetooth connection established?	Go to step **6**.	Check that the unit can connect with other smartphones. If successful, the smartphone may be defective. If the unit cannot communicate with other smartphones, replace the audio or navigation unit. <Ref. to ETM-16, Audio.>
6	**REBOOT THE SMARTPHONE.** 1) Reboot the smartphone. 2) Reinstall the SUBARU STARLINK app.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **7**.
7	**CHECK POWER SUPPLY.** Turn the ignition to OFF → ACC ON.	Is it operating normally?	The system has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.	Go to step **8**.
8	**DELETE CACHE INFORMATION OF THE UNIT.** Delete cache information of the unit. NOTE: 1. Select SUBARU STARLINK from the APPS screen. 2. On the SUBARU STARLINK display (including an error message screen), press and hold the right bottom corner of the screen for 30 seconds or more. 3. Lift your finger off the screen. If the message [Select Audio Source] appears when you lift your finger off the screen, the cache information is successfully deleted.	Is it operating normally?	Cache information temporary stored in the unit was corrupted. Currently, it is normal.	Perform the procedures described on "Check SUBARU STARLINK service". <Ref. to ETM-68, CHECK SUBARU STARLINK SERVICE, INSPECTION, Diagnostics with Phenomenon.>

12.CHECK SUBARU STARLINK SERVICE

	Step	Check	Yes	No
1	**CHECK SMARTPHONE.** Check the smartphone connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **2**.
2	**CHECK RADIO WAVE CONDITION.** Move to a location where the radio wave condition is good, and confirm the connection.	Can the smartphone connect the Internet?	Go to step **4**.	Go to step **3**.
3	**CHECK RADIO WAVE CONDITION.** Communication network gets busy at times even in a good radio wave location. In this case, wait for some time and then try again.	Can the smartphone connect the Internet?	Go to step **4**.	The smartphone may be defective.

Step		Check	Yes	No
4	**CHECK SUBARU STARLINK.** Check service provision status with SUBARU STARLINK.	Is there any problem in the service provision status?	Try to connect after the problem in service provision is solved.	Replace the audio or navigation unit. <Ref. to ETM-16, Audio.>

22.Service Diagnostics Mode

A: OPERATION

1. PROCEDURE TO SWITCH TO SERVICE DIAGNOSTICS MODE

1) Turn the ignition switch to ACC.
2) Press “TUNE/SCROLL” knob six times while pressing “HOME” button.

2. SERVICE INSPECTION

Connection

On Service Menu, click “Connection” to display the following items.
OK: Each connection device is connected properly.
NG: Connection is not established, or connection status (including harness) is faulty.

NOTE:
Check the external connection terminals (USB 1, USB 2 and AUX) by connecting memory or a pin jack for inspection.
Check the connection status of the connector and harness. If there are no problems, the connection device or unit could be faulty.
The following shows information to be displayed and its description.

Item	Item detection method	OK judgment condition	Note
GPS	Direct line	GPS antenna is connected. (NG is displayed when short circuit is detected.)	With navigation only
MIC	Direct line	(i87) No. 6 falls to GND level.	—
Rr_CAM	Direct line	Synchronized signals from the camera are input to (i146) No. 3.	—
AUX	Direct line	(i87) No. 25 falls to GND level.	—
USB 1	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
USB 2	Communication	USB device is connected to USB-HUB to obtain USB device information properly. (Should be recognizable as a supported USB device.)	—
SXM	Direct line	XM-ANT is connected. (NG is displayed when short circuit is detected.)	It takes approx. 30 seconds to become recognizable.
Leather AMP	Communication	AMP is connected and normal communication is available.	—

Function Check

1) Panel & Steering Switch Check Mode
Once the screen is displayed, press the push switches to check that the number of pushed switches matches the number shown in pushed SW.
If the number of SW does not match, SW conditions are not properly recognized. Therefore, perform inspection for unrecognized switches.
In addition, turn the rotary switch clockwise or counterclockwise to check that the screen indicates correct status according to the operation. If the screen display does not match the actual operation, the rotary SW may be faulty. Perform inspection for the rotary SW.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
Result	Pressed	Pressing of switch is detected.
Number of switch pushed	1	One pressed switch is detected.
	2	Two pressed switches are detected.
	3	Three pressed switches are detected.
	4	Four pressed switches are detected.
Direction of switch rotation	+ direction	The rotary switch is turned clockwise.
	– direction	The rotary switch is turned counterclockwise.

2) Touch Switch Check
Once the screen appears, touch the screen. + (cursor) appears where you touched.

NOTE:
The following shows information to be displayed and its description.

Item	Contents
+ (Cursor)	Appears when the screen is touched. The displayed white-outlined + (cursor) stays on, even when a touching finger is removed, until the screen is switched.

3) Microphone Check
With the microphone input level screen displayed, make sound toward the microphone.
Fluctuate the sound volume to check that the microphone input level changes accordingly.
If the input level does not become green or the input level does not change even when the sound volume is fluctuated, the microphone may be faulty.

NOTE:
The microphone input function is enabled while this screen is displayed.
- The sound volume is indicated in eight levels.

The maximum input volume of microphone is equally divided into eight levels from level 0 to level 7.
- The microphone input level is sampled every 100 ms, and the result is indicated in eight levels.

Display of the input level is also updated every 100 ms.
The microphone input level gauge is updated even during recording.
4) System Sensors Check
GPS related check: Status of the GPS signal reception can be checked. When there is faulty in reception status, position detection or date indication, re-check the reception status at a location with a fine view and no obstacles around that will interrupt the signal reception. When normal condition is still not obtained, the GPS antenna may be faulty.
- GPS/Reception number: Normal when it is indicated in blue.
- GPS/Status: Normal when OK is indicated.
- GPS/Measurement ratio 3D:
- GPS/Measurement ratio 2D:
- GPS/Date: Normal when current time is indicated. When current date/time is not indicated, click the Date Setting button to set the current date on the displayed date setting screen.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.

SPD check: Status of the vehicle speed sensor signal can be checked.
1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
2. When VDC CM detected DTC, clear the DTC.
3. Drive the vehicle at 9 km/h (6 MPH) or more.
4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.

5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.
Gyro sensor related check: Status of the Gyro sensor signal can be checked. If fault is found with the Gyro sensor related indications, the main unit could be faulty.
- Gyro sensor/Gyro Voltage: Shake the vehicle to the left and right to check that the voltage changes.
- Gyro/Distance correction study situation: Study situation can be checked.
- Reset: Press and hold the Reset button for three seconds to reset the pulse count of SPD, relative bearing of Gyro sensor, relative angle of inclined angle sensor.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
GPS/Reception number	Blue	When notification of “Positioning with collected data is used” is received from the GPS reception device. (Status: In-use)
	Yellow	When notification of “Tracking in progress” is received from the GPS reception device. (Status: Reception in progress)
	Transparent	When notification of “Positioning with collected data is not used” or “Searching in progress” is received from the GPS reception device. (Status: Not used)
GPS/Status	OK (H3D)	When three-dimensional positioning (Hyper 3D positioning) using satellites with less accuracy degradation is used.
	OK (H2D)	When two-dimensional positioning (Hyper 2D positioning) using satellites with less accuracy degradation is used.
	OK (3D)	When three-dimensional positioning is used.
	OK (2D)	When two-dimensional positioning is used.
	NG	When the positioning data is not available.
	error	When a reception error occurred.
	—	For cases other than above.
GPS/Measurement ratio 3D		Displays ratio of three-dimensional positioning satellites.
GPS/Measurement ratio 2D		Displays ratio of two-dimensional positioning satellites.
GPS/Measurement ratio NG		Displays ratio of non-positioning satellites.
GPS/Date	Current date and time	Displays date information obtained from GPS in four digits for year and 24-hour clock for time. Date information is displayed as [Y/M/D].
GPS/Position (latitude)	Current position, latitude information.	Displays latitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.
GPS/Position (longitude)	Current position, longitude information.	Displays longitude information of the current position in “degree”, “minute” and “second”. When positioning information is not obtained, it appears as 00° 00’ 00”.

Item	Display	Contents
SPD/Pulse Count	Pulse count.	Displays SPD signal status in the following format. • The number of input pulses accumulated since this screen is displayed. (Indicated in four-digit DEC code.) • The number returns to 0 after 9999. • Reset with ACC OFF/ON.
SPD/Speed	Speed.	Displays SPD signal status in the following format. • LSB: Displays in km-per-hour as 1 [km/h]. • Displays 255 [km/h] for MAX value or more, and 0 [km/h] for MIN value or less.
Gyro sensor/Gyro Voltage	Voltage value.	Voltage value (unit: V, LSB: 1 mV).
Gyro/Distance correction study situation	Gyro/Distance correction study situation.	
Reset	Reset the following display items to [0]. • SPD pulse count	Press and hold the reset button for three seconds or more.

Vehicle Signal

On Service Menu, click “Vehicle Signal” to display the following items.

- Battery: Status of the battery voltage signal input can be checked.

Measure the battery voltage using a tester. System is normal when the indicated voltage is almost equivalent to the tester value. When the indicated voltage is different from the tester value, perform inspection for the power supply circuit of main unit.

- Vehicle speed: Status of the vehicle speed signal input can be checked.
  1. Before starting inspections, check the safety around the vehicle. (Lift up the vehicle as necessary.)
  2. When VDC CM detected DTC, clear the DTC.
  3. Drive the vehicle at 9 km/h (6 MPH) or more.
  4. Check that SPD indicates vehicle speed that is almost equivalent to the figure displayed on the combination meter.
  5. Vehicle speed is not displayed. Or, when different vehicle speed is indicated, check if CAN system DTC is stored. If so, perform the diagnosis according to the DTC. When CAN system DTC is not stored, check if the DTC related to the vehicle sensor is stored for the VDC system, and perform inspection according to the procedure. If no fault is found with the CAN system and vehicle speed sensor, and the vehicle speed is displayed on the combination meter, the unit itself may be faulty.
- IG: Status of the IG signal input can be checked.

Turn the ignition switch to ON, and check that the IG indication appears as ON. If the indication does not appear as ON, check the IG signal line.

- ILL+: Status of the illumination signal input can be checked.
  1. Before starting inspections, turn the ignition switch to ON.
  2. Set the lighting switch to TAIL (small) position.
  Make sure that the bright switch is not turned ON at this time.
  3. Check that ON lights in ILL+ and then the screen becomes dim.
  ON: Normal.
  OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.
- PKB: Status of the parking brake signal input can be checked.
- GPS/Position: Normal when longitude and latitude of the current position are indicated.

Pull the parking brake switch. Check that ON is displayed in PKB.
ON: Normal.
OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

- Bright: Status of the Bright signal input can be checked.

Operate the dial-type bright switch next to the wheel steering. System is normal when the signal indicates ON.
If the signal does not indicate ON, check the bright switch.

- REV: Status of the reverse range signal input can be checked.

1. Before starting inspections, check the safety around the rear end of the vehicle and then turn the ignition switch to ON.
2. Pull the parking brake switch and depress the brake pedal, then place the select lever in reverse.
3. Check that ON is displayed in REV.

ON: Normal.
OFF: Abnormal. Check the signal line and connector. If no faulty is found, the unit itself may be faulty.

NOTE:
The following shows information to be displayed and its description.

Item	Display	Contents
Battery voltage	Status of battery voltage	0 [V] — 24.0 [V] (Minimum unit: 0.1 [V])
Vehicle speed	Status of vehicle speed	0 [km/h] — 255 [km/h] (Minimum unit 1 [km/h])
IG	ON	IG power supply ON
	OFF	IG power supply OFF
ILL+	ON	ILL+ signal ON
	OFF	ILL+ signal OFF
PKB	ON	PKB signal ON
	OFF	PKB signal OFF
Bright	ON	Bright with dimmer
	OFF	Bright without dimmer
REV	ON	REV signal ON
	OFF	REV signal OFF

System Information

On Service Menu, click “System Information” to display the following items.
- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.
- Memory Initialization: This function is used to initialize information stored in the main unit memory.

CAUTION:
When this function is used, music information and navigation setting information saved in the main unit will be deleted. Therefore, obtain permission from the user before using this function.
When initializing the memory, perform procedures by following the indicated messages. Also, when clicking the OK button, press and hold it.

Product Information

On Service Menu, click “Product Information” to display the following items.
- Product Information: Displays the product number of the main unit.
- Connectivity ID: ID that is required upon using the STARLINK functions. When this ID is not indicated, the STARLINK functions are not accessible.
- Pandora ID: ID that is required upon using Pandora. When this ID is not indicated, Pandora is not accessible.

Diagnostic Recorder

On Service Menu, click “Diagnostic Recorder” to display the following items.
- ON/OFF: Set ON/OFF for the diagnostic recorder function.
- Data download: Output the data of the diagnostic recorder to USB.

COMMUNICATION SYSTEM

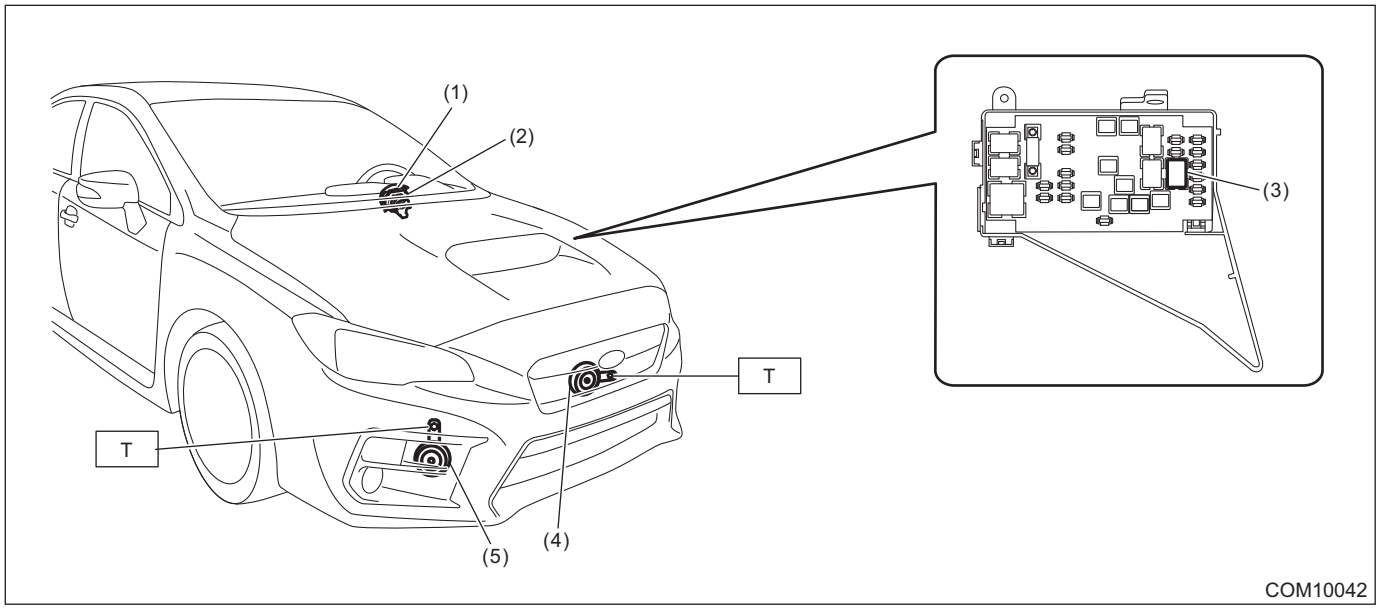
COM

Page

1. General Description 2
2. Relay and Fuse 3
3. Horn System 4
4. Horn 5
5. Horn Switch 9

1. General Description

A: COMPONENT



(1) Horn switch (driver's airbag module ASSY)
(2) Roll connector
(3) Horn relay
(4) Horn ASSY - Lo
(5) Horn ASSY - Hi

Tightening torque: N·m (kgf-m, ft-lb)

T: 18 (1.8, 13.3)

B: CAUTION

• Before performing vehicle maintenance, turn the ignition switch to OFF and disconnect the negative terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>
  – For model with battery sensor, disconnect the ground terminal from battery sensor.
• When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

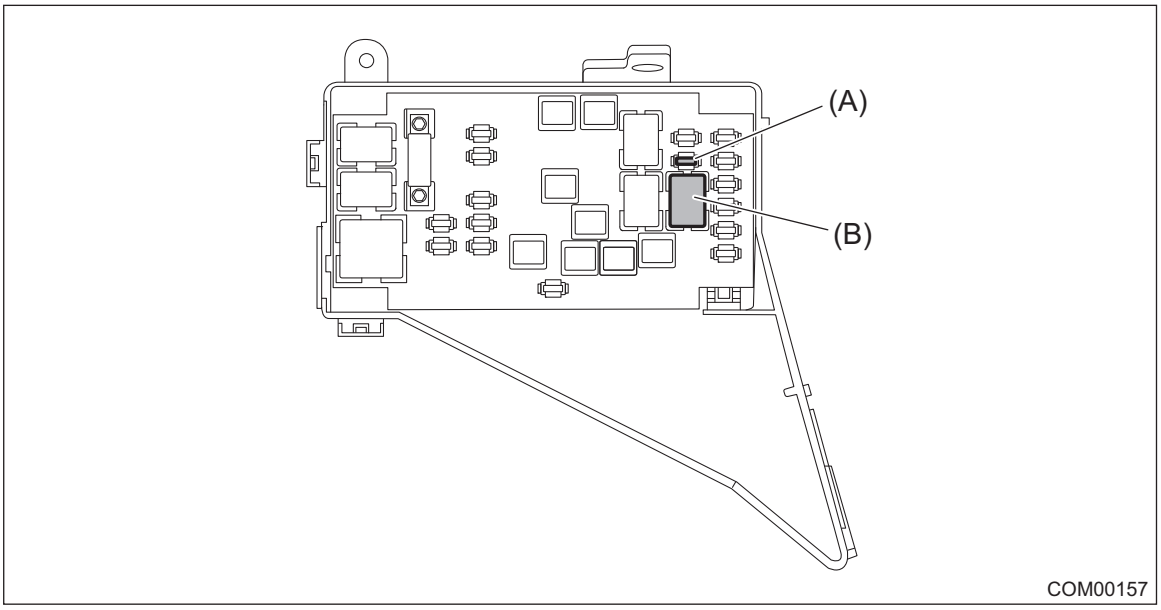
C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION



Main fuse box	Fuse 15 A (horn assembly - Hi, Lo)	(A)
	Horn relay	(B)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Horn System

A: WIRING DIAGRAM

Refer to “Horn System” in the wiring diagram. <Ref. to WI-241, WIRING DIAGRAM, Horn System.>

B: INSPECTION

Symptoms	Inspection steps
Horn does not sound	1. Check the fuse.
	2. Check the horn relay.
	3. Check the roll connector.
	4. Check the horn switch.
	5. Check the horn assembly.
	6. Check the harness.

C: NOTE

For procedure of each component in the horn system, refer to the respective section.

- Horn: <Ref. to COM-5, Horn.>
- Horn switch: <Ref. to COM-9, Horn Switch.>

4. Horn

A: REMOVAL

1. HORN ASSY - LO

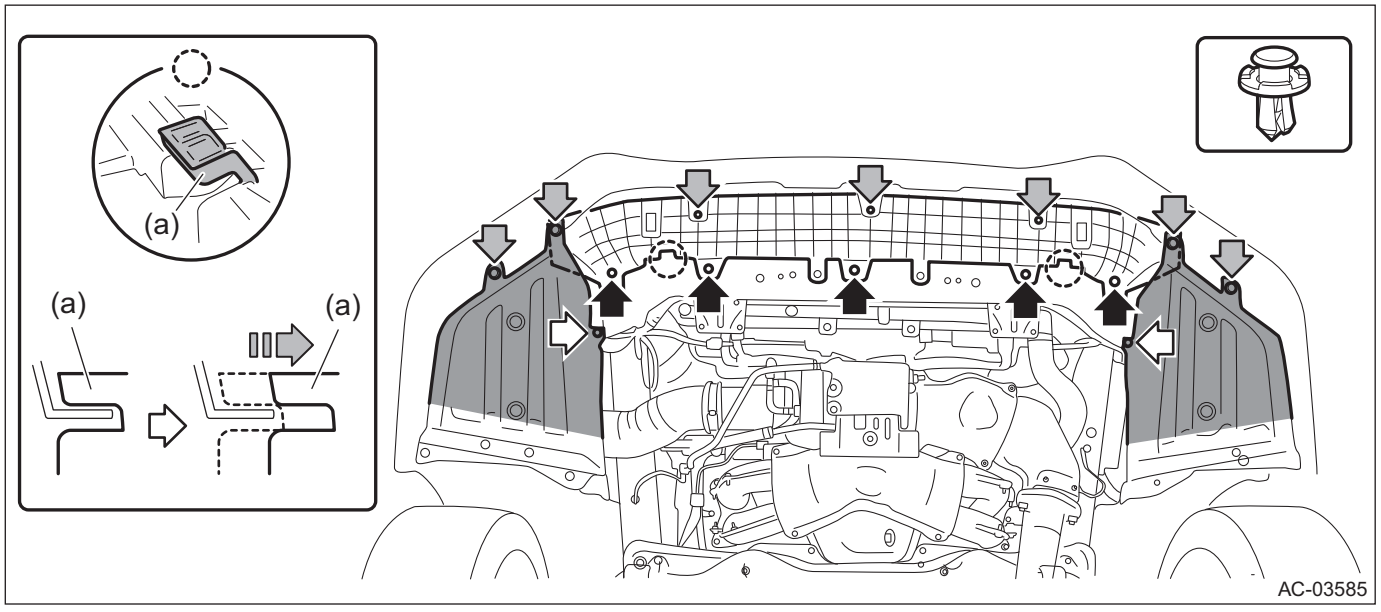
CAUTION:
When removing the horn, do not remove the bumper face – front. Bracket connection portion of the bumper face may become damaged.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

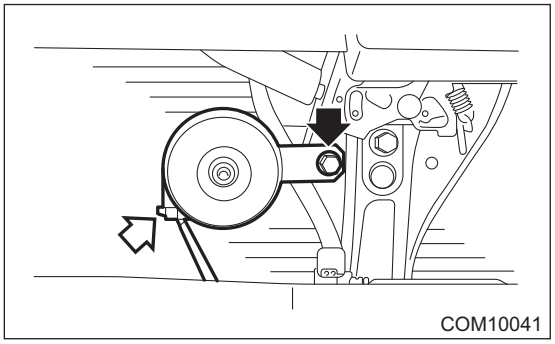
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Lift up the vehicle.
3) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
4) Remove the bracket – front center LWR.
   (1) Remove the screw and clips, and turn over the mud guard - front.
   (2) Remove the bolts and clips, and remove the bracket – front center LWR.

NOTE:
While entirely pushing the bracket – front center LWR forward, remove the two hooks (a) on the left and right.



5) Remove the horn assembly - Lo.
   (1) Disconnect the connector.
   (2) Remove the nut, and remove the horn assembly – Lo.



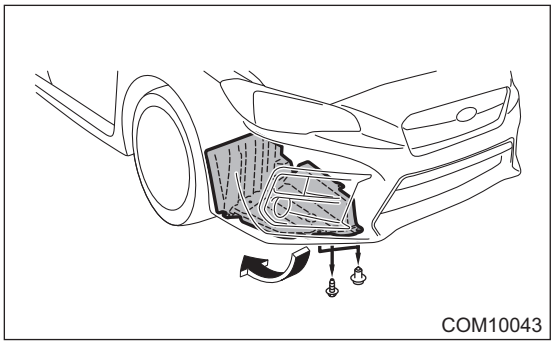
2. HORN ASSY - HI

CAUTION:
When removing the horn, do not remove the bumper face – front. Bracket connection portion of the bumper face may become damaged.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

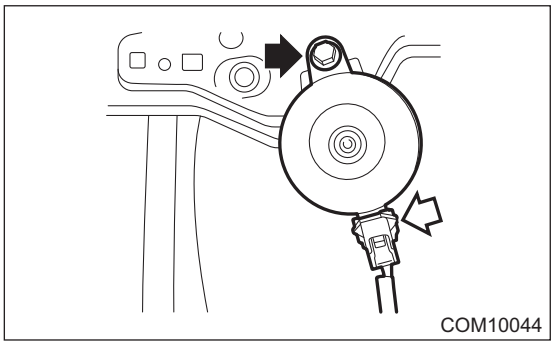
2) Remove the screw and clips, and turn over the mud guard - front on the right side.



COM10043

3) Remove the horn assembly - Hi.
   (1) Disconnect the connector.
   (2) Remove the bolt, and remove the horn assembly - Hi.

CAUTION:
The resistor may become hot. Be careful not to burn yourself.

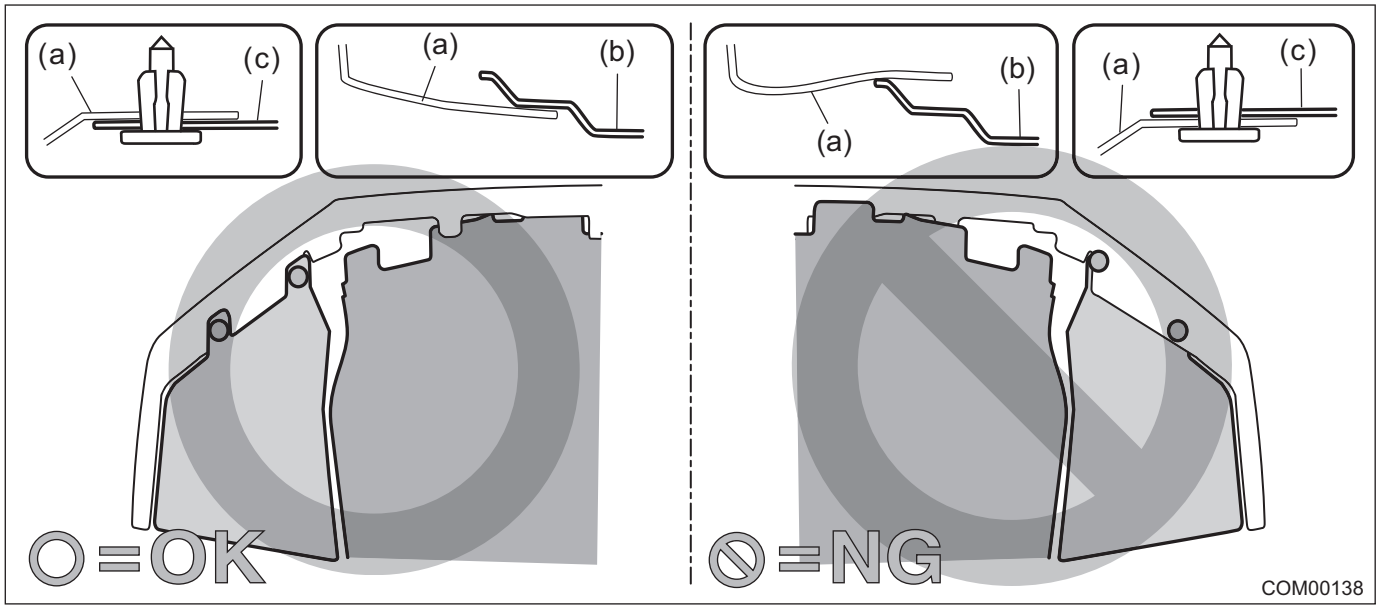


COM10044

B: INSTALLATION

1. HORN ASSY - HI

CAUTION:
Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



1) Install the horn assembly - Hi.

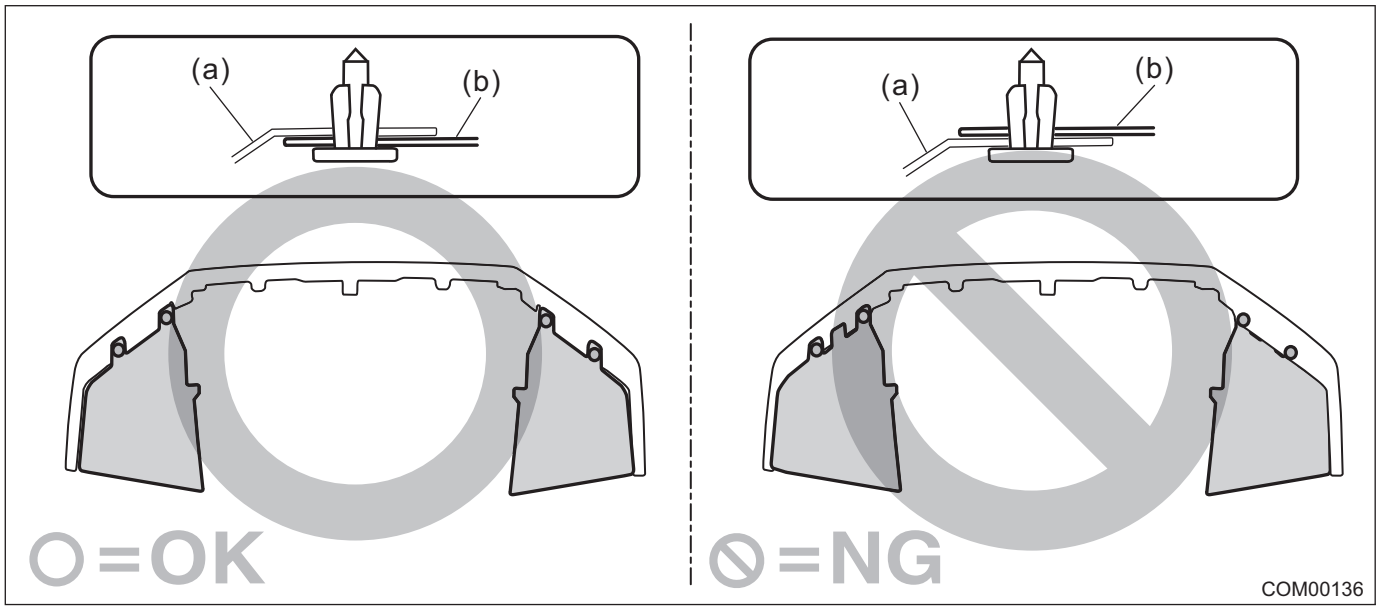
Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the bracket - front center LWR.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the mud guard - front.
4) Install the under cover - front.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
5) Lower the vehicle.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. HORN ASSY - LO

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).

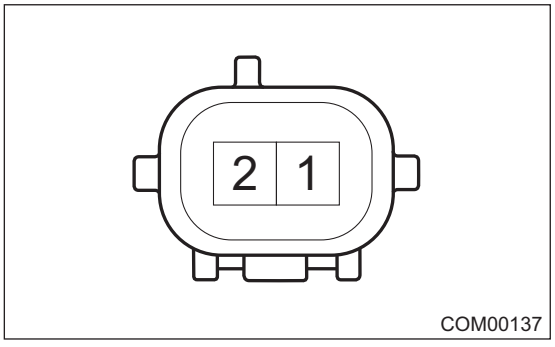


1) Install the horn assembly - Lo.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the mud guard - front.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check that the horn assembly sounds when applying the battery voltage to each connector terminal.



Terminal No.	Inspection conditions	Specification
Terminal 1 (+) — Terminal 2 (–)	Connect battery to the terminals	Sounds

2) If it does not operate normally, replace the horn assembly.

5. Horn Switch

A: NOTE

Horn switch is a unit with the driver's airbag module. For operation procedures, refer to "Driver's Airbag Module" in "AIRBAG SYSTEM". <Ref. to AB-34, Driver's Airbag Module.>

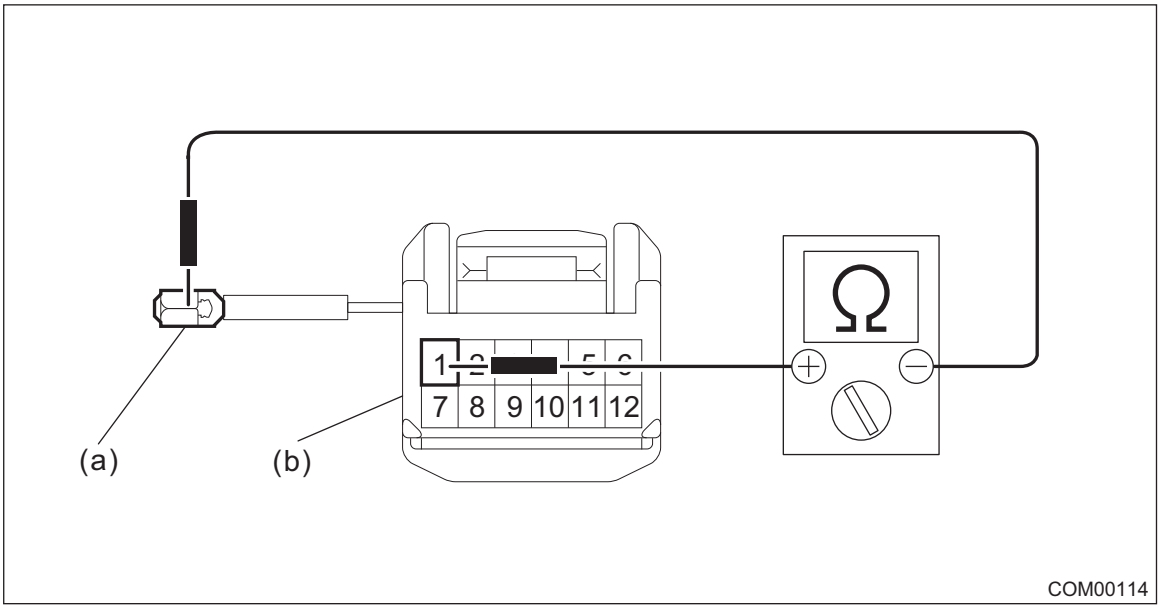
B: INSPECTION

1. CHECK HORN SWITCH

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Check that the horn switch connector is connected properly.
5) Measure the resistance between connectors.

Preparation tool:
Circuit tester



(a) Ground terminal (b) Horn switch terminal

Terminal No.	Inspection conditions	Standard
Horn switch terminal — ground terminal	Always	Less than 1 Ω

6) Replace the driver's airbag module if the inspection result is not within the standard value.

2. CHECK ROLL CONNECTOR

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• If the steering wheel and steering angle sensor (steering roll connector) are removed, be sure to perform the following operations.
– Align the center position of the steering roll connector.

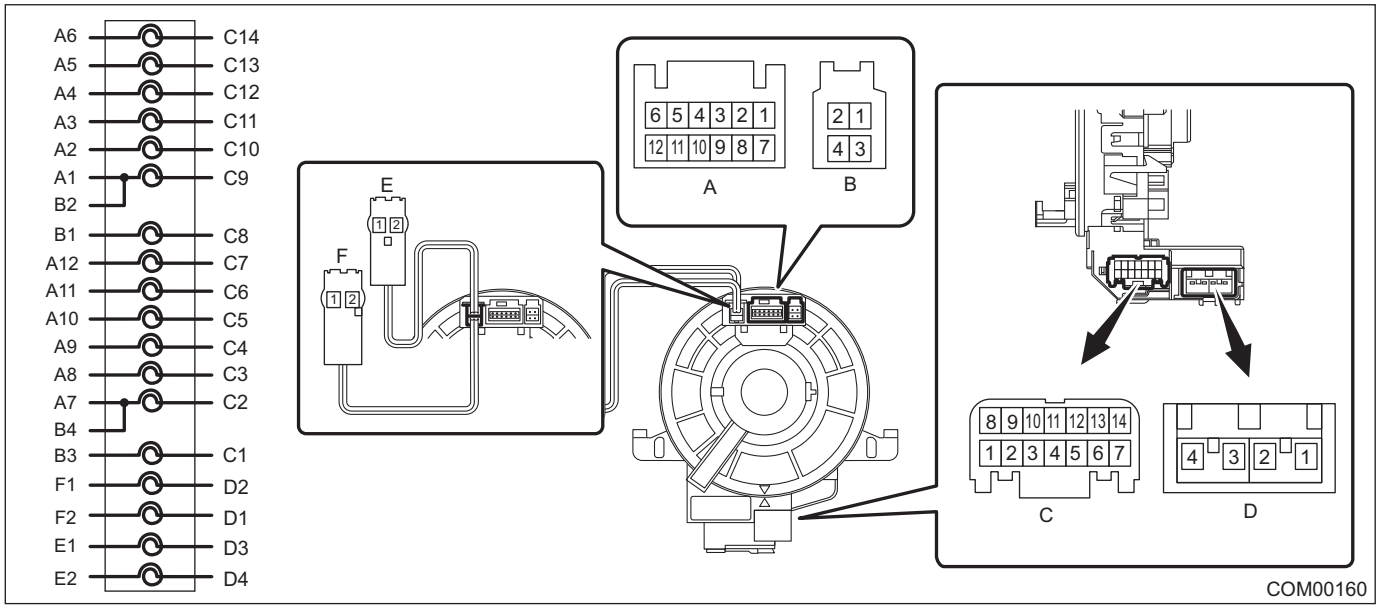
– Perform the neutral position setting of the steering angle sensor.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

3) Remove the roll connector. <Ref. to AB-61, REMOVAL, Roll Connector.>
4) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
A1 — C9	Always	Less than 1 Ω

5) Replace the roll connector if the inspection result is not within the standard value.

GLASS/WINDOWS/MIRRORS

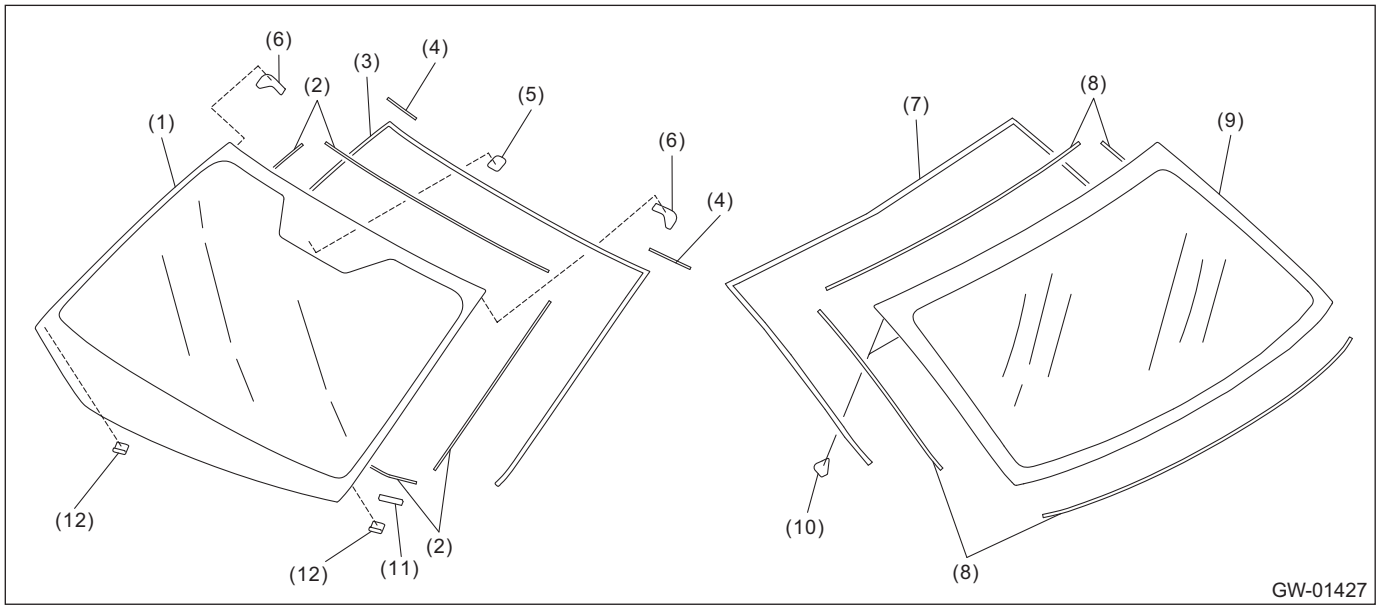
GW

		Page
1.	General Description	2
2.	Relay and Fuse	7
3.	Power Window System	9
4.	Power Window Control Switch	11
5.	Front Door Glass	19
6.	Front Regulator and Motor Assembly	23
7.	Remote Control Mirror System	25
8.	Outer Mirror Assembly	26
9.	Remote Control Mirror Switch	31
10.	Rearview Mirror	33
11.	Rear Door Glass	34
12.	Rear Regulator and Motor Assembly	36
13.	Windshield Glass	38
14.	Rear Window Glass	47
15.	Rear Window Defogger System	50
16.	Wiper Deicer System	53

1. General Description

A: COMPONENT

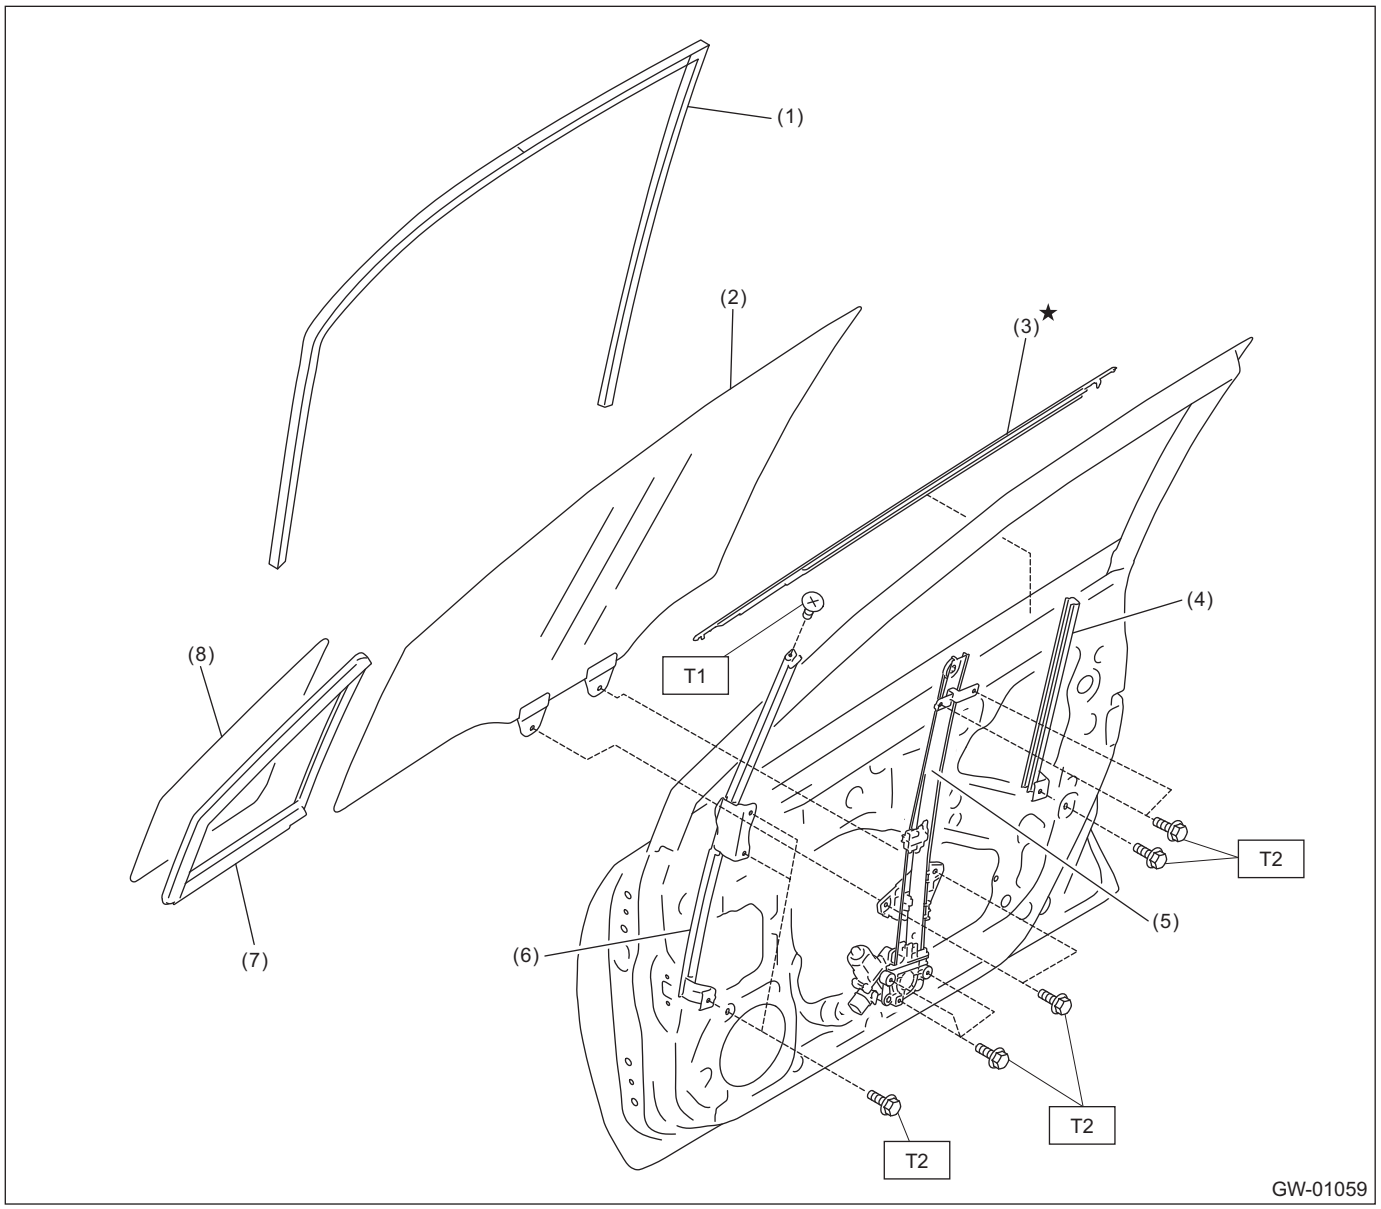
1. FIXED GLASS



(1)	Glass - front window	(5)	Base - inner mirror	(9)	Glass - rear window
(2)	Dam rubber - front	(6)	Locating pin - front window	(10)	Locating pin - rear window
(3)	Molding - front window	(7)	Molding - rear window	(11)	Seal - lower VIN
(4)	Seal - upper	(8)	Dam rubber - rear	(12)	Seal - lower

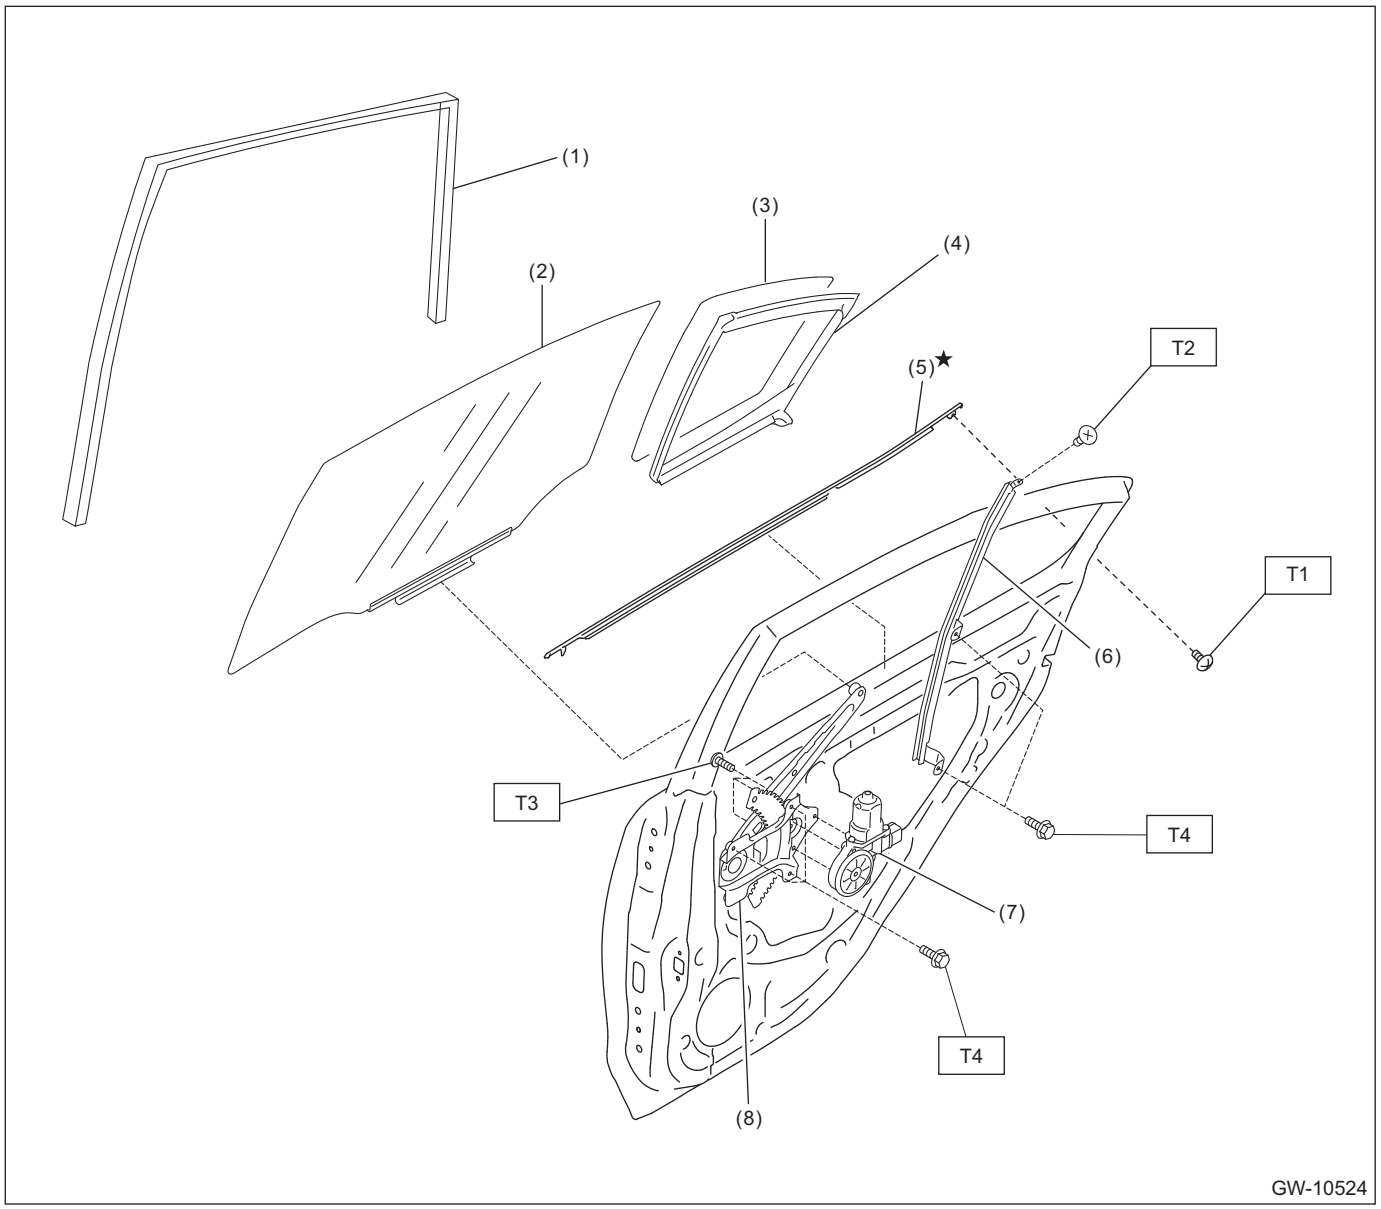
NOTE:
Base - inner mirror cannot be removed from the glass - front window.

2. FRONT DOOR GLASS



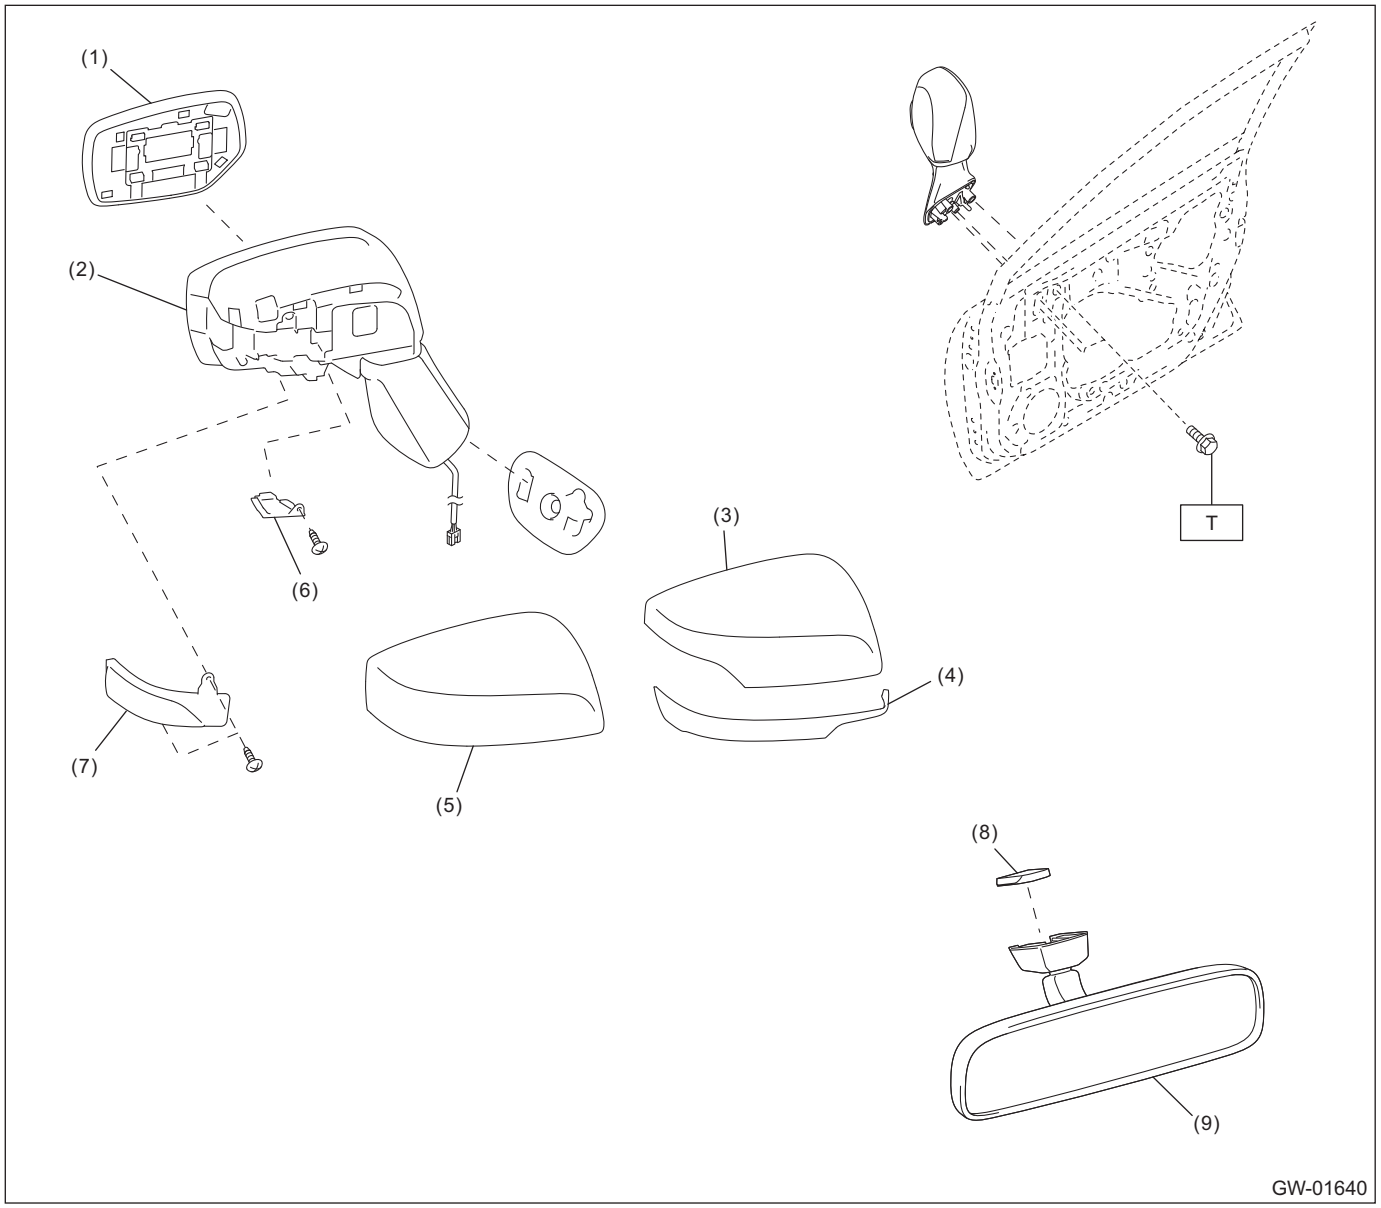
(1)	Running channel - front door	(5)	Regulator & motor ASSY - front	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Glass ASSY - front door	(6)	Sash COMPL - partition	***T1: 2.2 (0.2, 1.6)***
(3)	Weather strip outer - front door	(7)	Weather strip - front door partition	***T2: 7.5 (0.8, 5.5)***
(4)	Sash COMPL - lower	(8)	Glass - front door partition	

3. REAR DOOR GLASS



(1)	Running channel - rear door	(5)	Weather strip outer - rear door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Glass ASSY - rear door	(6)	Sash COMPL - rear partition	***T1: 2 (0.2, 1.5)***
(3)	Glass - rear door partition	(7)	Motor - rear	***T2: 2.2 (0.2, 1.6)***
(4)	Weather strip - rear door partition	(8)	Regulator - rear	***T3: 5.9 (0.6, 4.4)***
				T4: 7.5 (0.8, 5.5)

4. MIRROR



(1)	Mirror - repair	(5)	Cover - cap outer mirror (model without side turn)	(9)	Mirror ASSY - inner rearview
(2)	Mirror unit - door	(6)	Cover		
(3)	Cover - cap outer mirror (model with side turn)	(7)	Light ASSY - side turn mirror (model with side turn)	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Cover - cap outer mirror lower	(8)	Base - inner mirror	***T: 7.5 (0.8, 5.5)***	

B: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Avoid impact and damage to the glass.

C: PREPARATION TOOL

1. SPECIAL TOOL

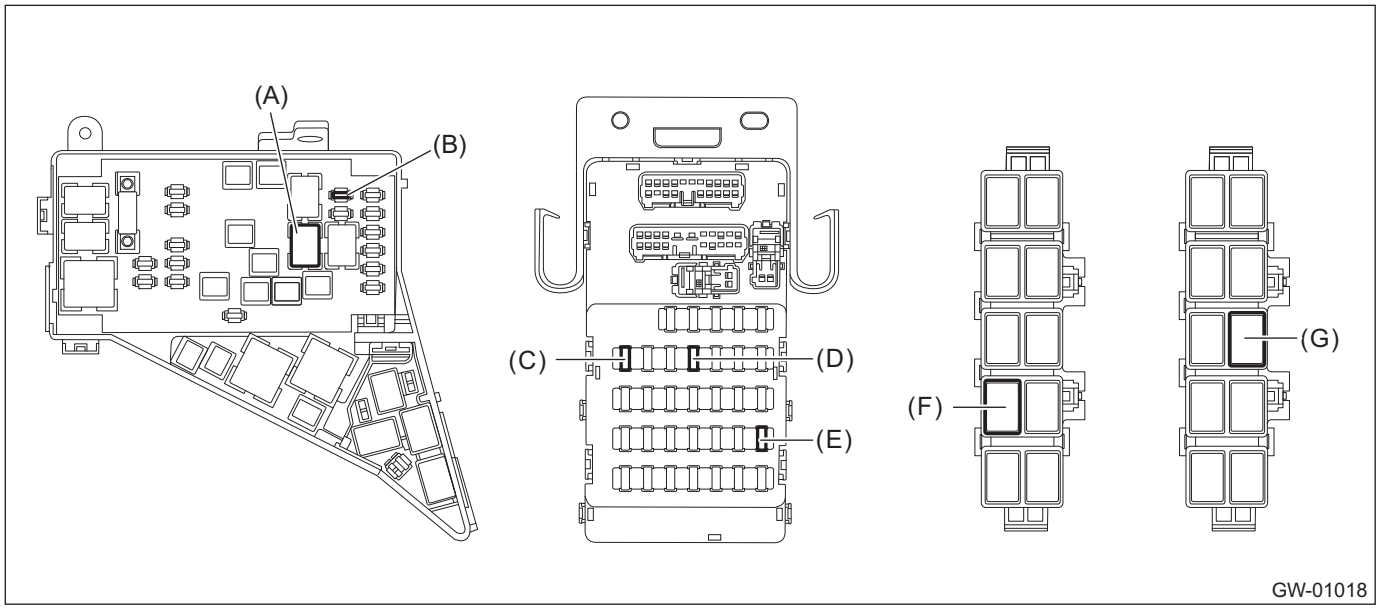
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Piano wire	Used for removing the window glass.
Cutter knife	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.

2. Relay and Fuse

A: LOCATION



Main fuse box	Rear defogger relay	(A)
	Fuse 25 A (rear defogger)	(B)
Relay & fuse box	Fuse 7.5 A (remote control mirror)	(C)
	Fuse 7.5 A (wiper deicer)	(D)
	Fuse 7.5 A (power window)	(E)
Relay holder	Power window relay	(F)
	Wiper deicer relay	(G)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

2. CHECK RELAY

1) Check the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SR-00180
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01085
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Power Window System

A: WIRING DIAGRAM

Refer to “Power Window System” in the wiring diagram. <Ref. to WI-297, WIRING DIAGRAM, Power Window System.>

B: INSPECTION

Symptoms	Inspection order
All power windows do not operate.	1. Check the fuse. 2. Check the power window relay. 3. Check the wiring harness.
Particular window does not operate.	1. Check the fuse. 2. Check the switch - power window main. 3. Check the switch - power window sub. 4. Check the power window motor. 5. Check the wiring harness.
“Window Lock” does not operate.	Check the switch - power window main.
Driver’s side window moves slightly (approx. 20 mm (0.79 in)).	1. Check the motor - front. 2. Check the switch - power window main. 3. Check the wiring harness.
Driver’s side window moves slightly (approx. 50 mm (1.97 in)). (This status is not a failure.)	Perform reset operation A. <Ref. to GW-9, RESET OPERATION A, OPERATION, Power Window System.>
Driver’s side window does not close completely. (Using AUTO UP allows the window to fully close first and then move in reverse resulting in slightly opening.)	Perform reset operation B. <Ref. to GW-9, RESET OPERATION B, OPERATION, Power Window System.>

C: OPERATION

1. RESET OPERATION A

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) Operate the switch - power window main to open the glass assembly - front door halfway.
4) Operate the switch - power window main in “UP” direction to fully close the glass assembly - front door on the driver’s side.
5) While the glass assembly - front door is fully closed, hold down the switch - power window main in “UP” direction for one second.
6) Operate the switch - power window main in “AUTO DOWN” direction to check whether the window fully opens properly.

NOTE:
If the window does not fully open properly, repeat steps 1) to 6).

2. RESET OPERATION B

1) Sit in the driver’s seat and close the door.
2) Turn the ignition switch to ON.
3) On the glass assembly - front door of the driver’s side, operate the “AUTO UP” function (fully pull up the switch) using the switch - power window main, and perform auto-reverse operations 10 times in a row (after the window fully closes, it slightly opens).
4) Check that the “AUTO UP” function no longer operates.
5) Perform reset operation A.
6) Check that the window operates properly by operating the “AUTO UP” and “AUTO DOWN” switch.

NOTE:
If the window does not fully open/close properly, repeat steps 1) to 6).

D: NOTE

For procedure of each component in the power window system, refer to the respective section.
- Power window control switch: <Ref. to GW-11, Power Window Control Switch.>

- Front door glass: <Ref. to GW-19, Front Door Glass.>
- Front regulator and motor assembly: <Ref. to GW-23, Front Regulator and Motor Assembly.>
- Rear door glass: <Ref. to GW-34, Rear Door Glass.>
- Rear regulator and motor assembly: <Ref. to GW-36, Rear Regulator and Motor Assembly.>

4. Power Window Control Switch

A: REMOVAL

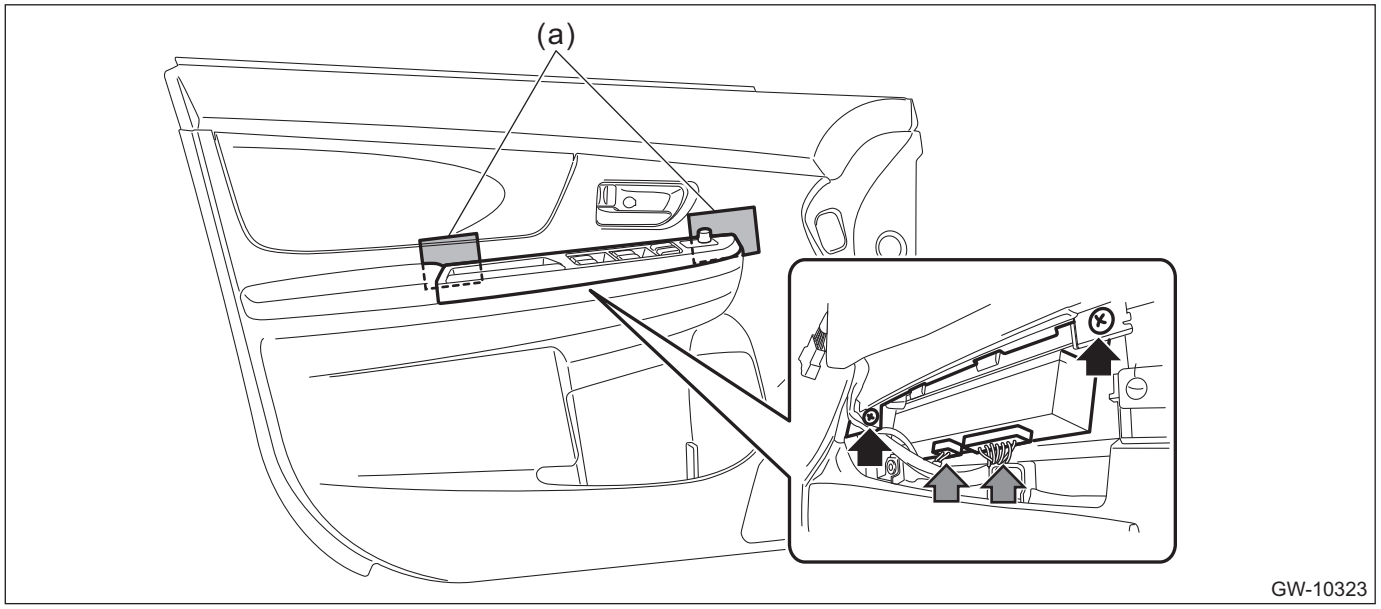
1. MAIN SWITCH

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

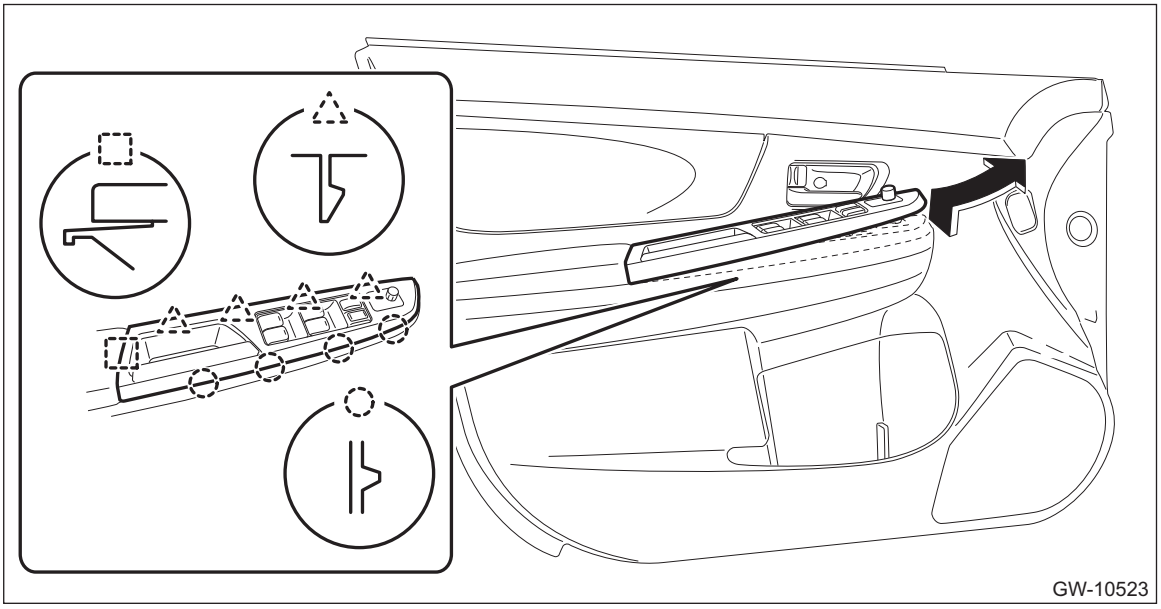
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch.

CAUTION:
Be careful not to damage the trim panel - front door with the panel - power window main switch.

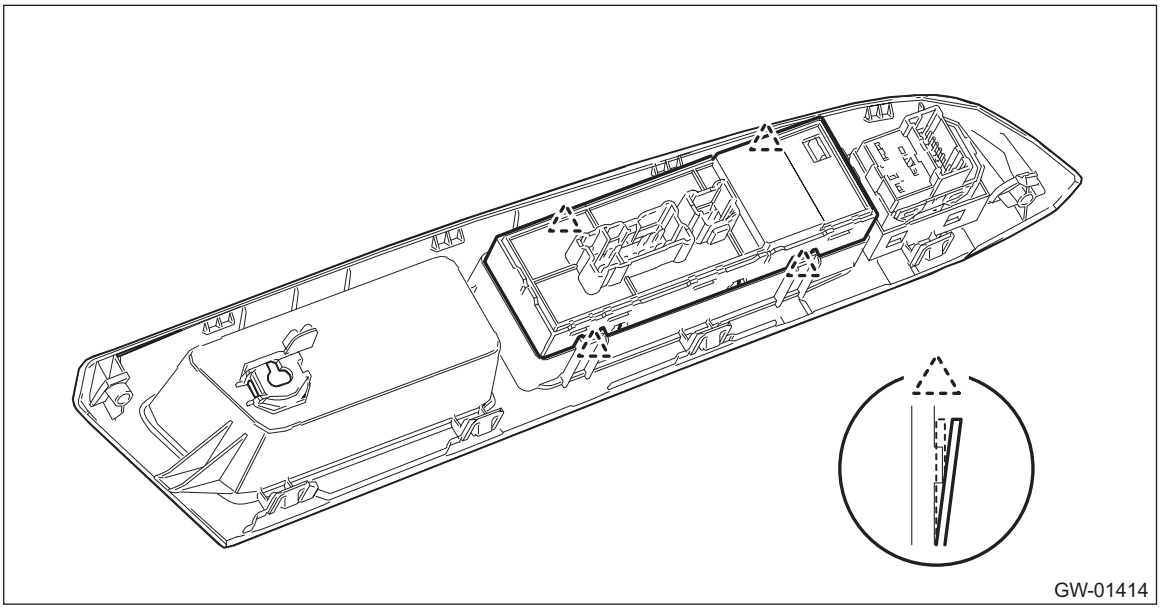
(1) Insert a sheet of protective paper (a) between panel - power window main switch and trim panel - front door.
(2) Remove the screws and disconnect the connector.



(3) Release the claws, and then remove the panel - power window main switch.



(4) Release the claws, and then remove the switch - power window main.



2. SUB-SWITCH

Switch - power window sub front

For removal of the switch - power window sub front on the passenger's seat, refer to the removal procedure of the switch - power window main. <Ref. to GW-11, MAIN SWITCH, REMOVAL, Power Window Control Switch.>

Switch - power window sub rear

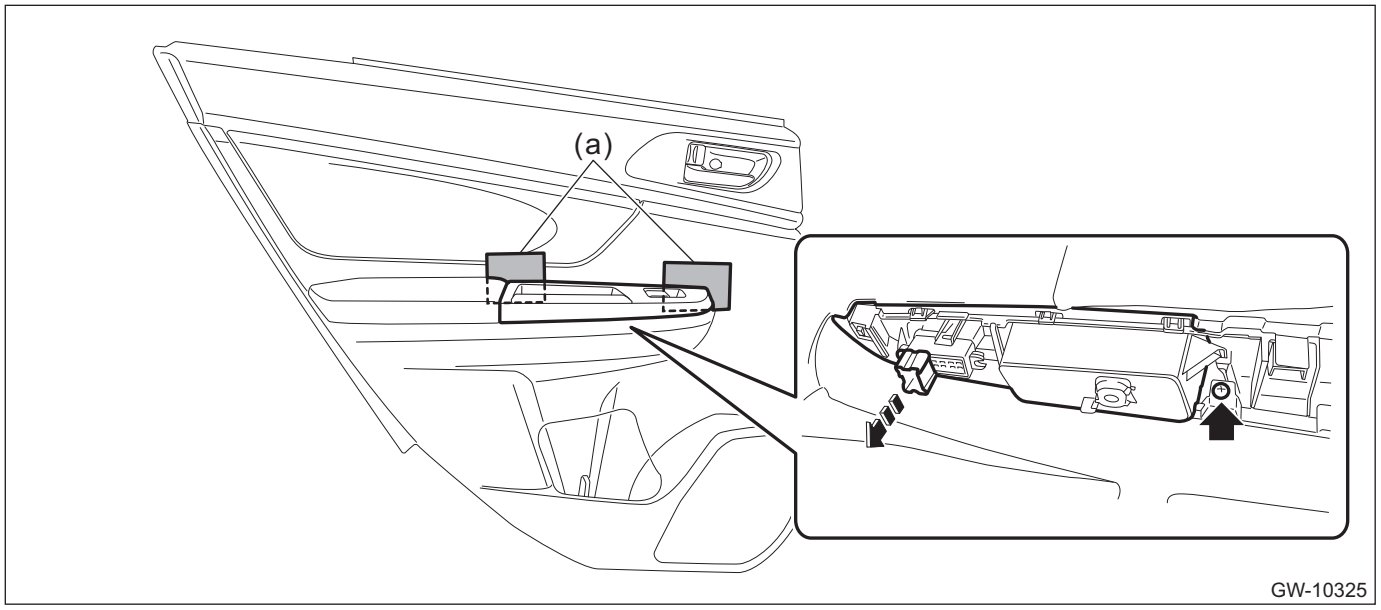
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window sub switch rear.

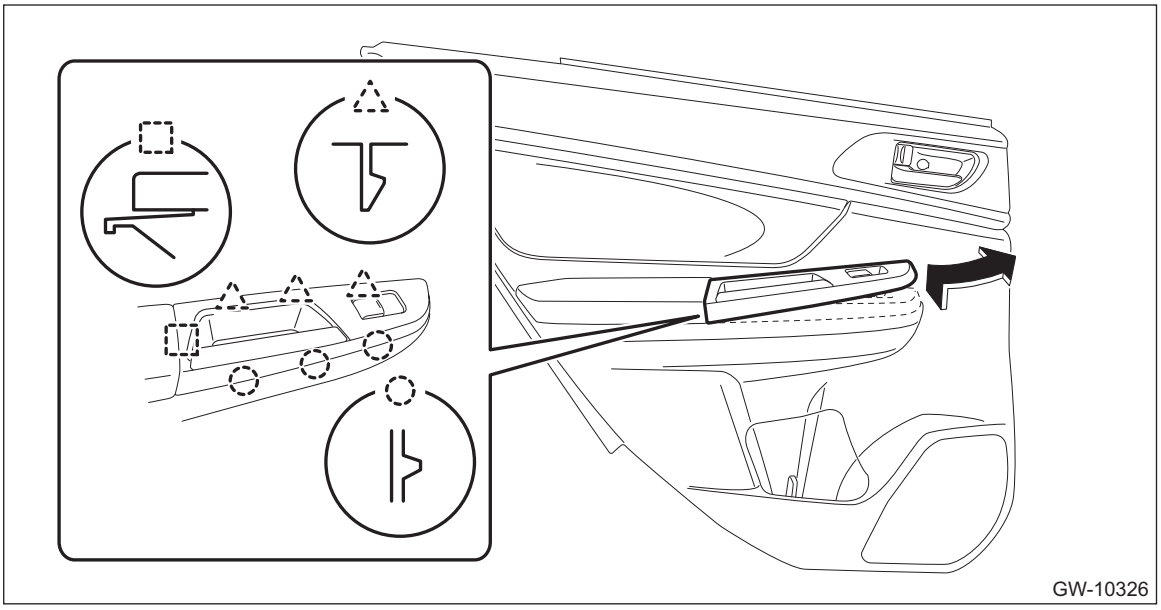
CAUTION:
Be careful not to damage the trim panel - rear door with the panel - power window sub switch rear.

(1) Insert a sheet of protective paper (a) between panel - power window sub switch rear and trim panel - rear door.

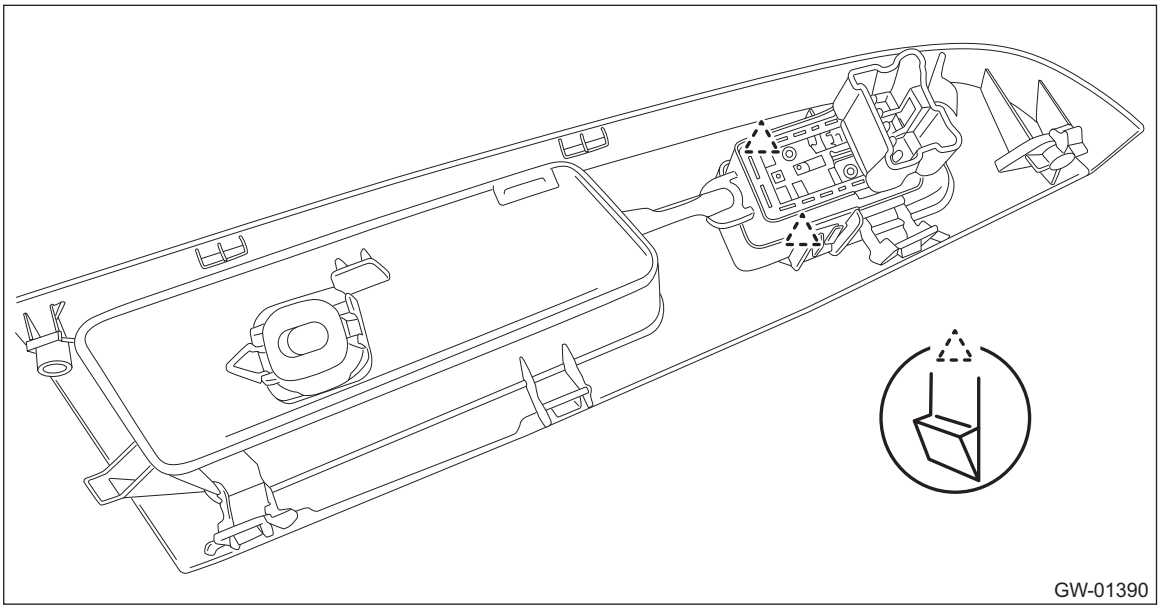
(2) Remove the screws and disconnect the connector.



(3) Release the claws, and then remove the panel - power window sub switch rear.



4) Release the claws, and then remove the switch - power window sub rear.



B: INSTALLATION

1. MAIN SWITCH

CAUTION:
• After installing the switch - power window main, always perform the initial setting.
Failure to do so may cause the improper activation of auto-reverse operation for pinching hazard prevention.
• Use protective paper to avoid damage to the trim panel.

1) Install the panel - power window main switch to the trim panel - front door.
2) Install the trim panel - front door. <Ref. to EI-62, INSTALLATION, Door Trim.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
4) Perform initial setting operation (reset operation A). <Ref. to GW-9, RESET OPERATION A, OPERATION, Power Window System.>

2. SUB-SWITCH

CAUTION:
Use protective paper to avoid damage to the trim panel.

Switch - power window sub front

For installation of the switch - power window sub front on the passenger's seat, refer to the installation procedure of the switch - power window main. <Ref. to GW-14, MAIN SWITCH, INSTALLATION, Power Window Control Switch.>

Switch - power window sub rear

1) Install the panel - power window sub switch rear to the trim panel - rear door.
2) Install the trim panel - rear door. <Ref. to EI-62, INSTALLATION, Door Trim.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. MAIN SWITCH

• Driver's seat

CAUTION:
• Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.

• **Since the passenger's seat switch cannot be checked by using the switch - power window main, use the switch - power window sub.**

Check output from the switch - power window main to the driver's side motor using the oscilloscope function in the Subaru Select Monitor.

1) Remove the switch - power window main.

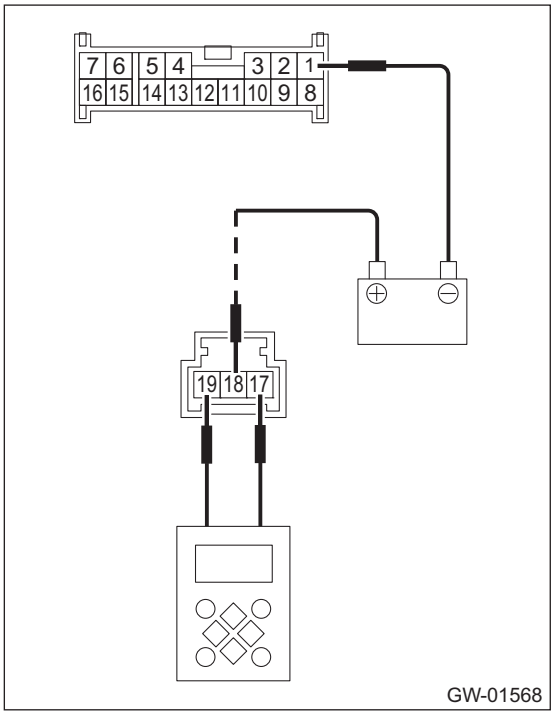
2) Connect the battery and the Subaru Select Monitor to the switch - power window main terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window main and the battery. If the connection is wrong, the switch - power window main may be damaged.

NOTE:

• When the battery is connected to the switch - power window main terminal, the letters "AUTO" on the driver's side knob illuminates.

• For detailed procedures, refer to "Subaru Select Monitor Operation Manual".



3) Operate the switch - power window main and check the output.

NOTE:

Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window main.

• **Rear seat**

1) Check the resistance between terminals of the switch - power window main.

	Terminal No.	Inspection conditions	Standard
Rear LH	14 — 15 1 — 16	UP	Less than 1 Ω
	14 — 15 14 — 16	OFF	1 MΩ or more
	1 — 15 1 — 16 15 — 16		Less than 1 Ω
	14 — 16 1 — 15	DOWN	Less than 1 Ω
Rear RH	14 — 7 1 — 6	UP	Less than 1 Ω
	14 — 6 14 — 7	OFF	1 MΩ or more
	1 — 6 1 — 7 6 — 7		Less than 1 Ω
	14 — 6 7 — 1	DOWN	Less than 1 Ω

2) If the inspection result is not within the standard, replace the switch - power window main.

2. FRONT SUB SWITCH

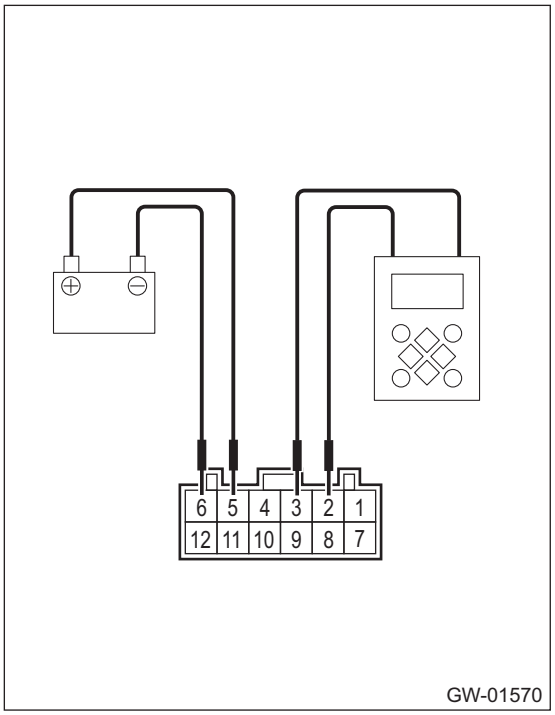
CAUTION:
Since the switch - power window main is controlled by CPU, do not check continuity for switch alone with the circuit tester. Performing continuity check with circuit tester can damage the switch - power window main circuit.

Check output from the switch - power window sub to the passenger's side motor using the oscilloscope function in the Subaru Select Monitor.

1) Remove the switch - power window sub.
2) Connect the battery and the Subaru Select Monitor to the switch - power window sub terminal.

CAUTION:
Never mix up the terminals when connecting the harness connector of the switch - power window sub and the battery. If the connection is wrong, the switch - power window sub may be damaged.

NOTE:
For detailed procedures, refer to “Subaru Select Monitor Operation Manual”.



3) Operate the switch - power window sub and check the output.

NOTE:
Since output time during window UP operation is extremely short, it cannot be checked without using a measuring instrument such as oscilloscope. Output is constantly produced while the switch is operated for window DOWN operation.

Inspection conditions	Output time	Standard
AUTO UP	Approx. 130 ms	Battery voltage
UP		
OFF	—	0 V
DOWN	During switch operation	Battery voltage
AUTO DOWN	Approx. 300 ms	

4) If the inspection result is not within the standard, replace the switch - power window sub.

3. REAR SUB SWITCH

1) Remove the switch - power window sub.

2) Check the resistance between terminals of the switch - power window sub.

	Terminal No.	Inspection conditions	Standard
Rear	4 — 5 7 — 8	OFF	Less than 1 Ω
	5 — 6 6 — 8		1 MΩ or more
	5 — 6 7 — 8	UP	Less than 1 Ω
	4 — 5 4 — 8		1 MΩ or more
	4 — 5 6 — 8	DOWN	Less than 1 Ω
	4 — 6 7 — 8		1 MΩ or more

3) Check the switch light illumination condition.

	Terminal No.	Inspection conditions	Specification
Rear	6 — 7, 4	Battery connection between terminals	Light ON

4) Replace the switch - power window sub if it is found defective.

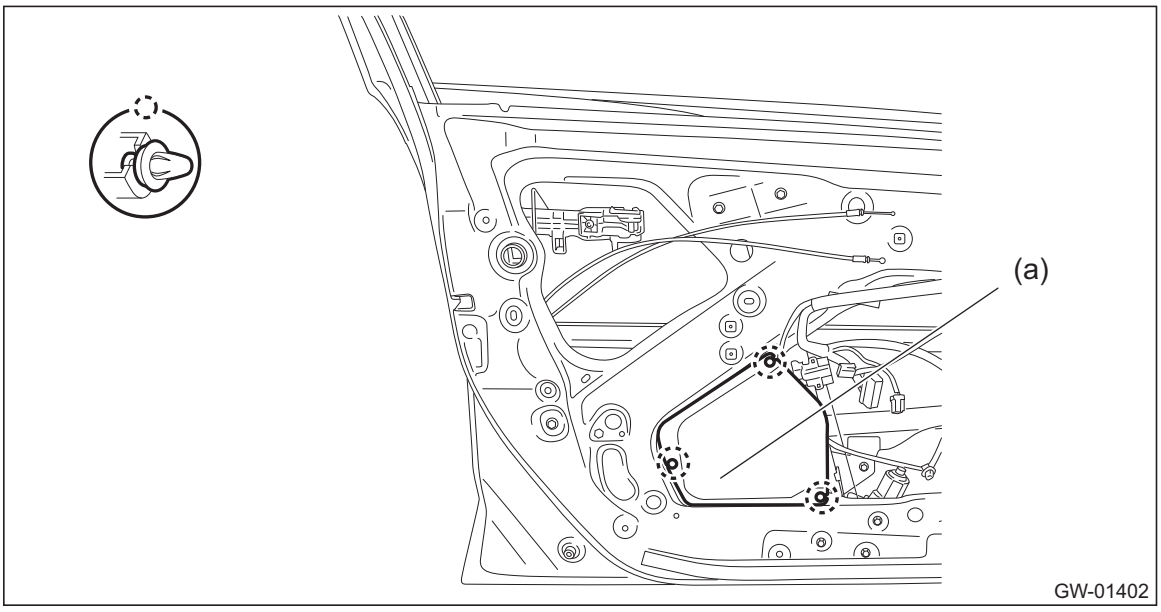
5. Front Door Glass

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

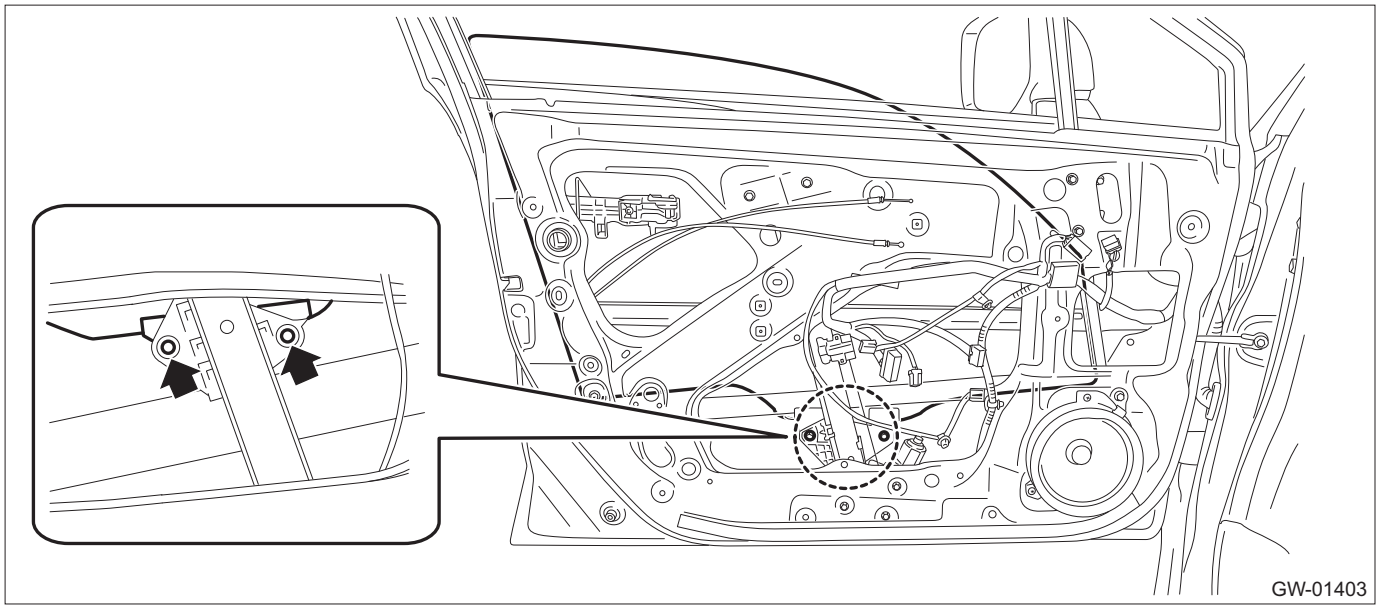
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the front door inner pad (a).

CAUTION:
If the clip is damaged, replace it with a new part because the panel assembly - front door may be deformed.



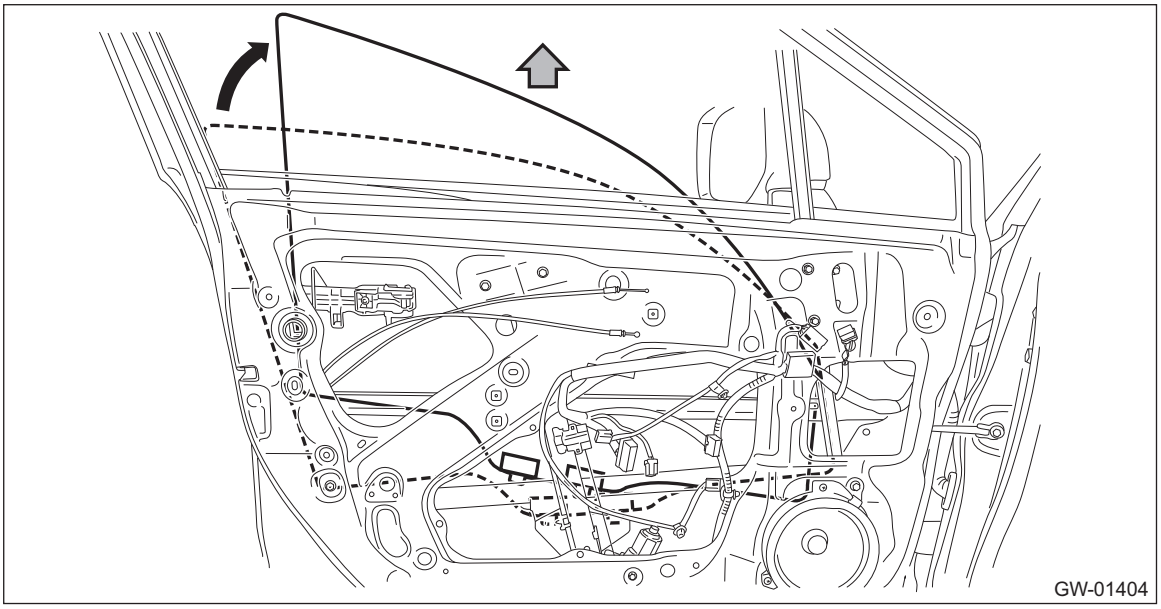
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
6) Remove the glass assembly - front door.
   (1) Connect the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window to move the glass assembly - front door to the position where the mounting bolts can be seen.

(3) Remove the mounting bolts from the glass assembly - front door.



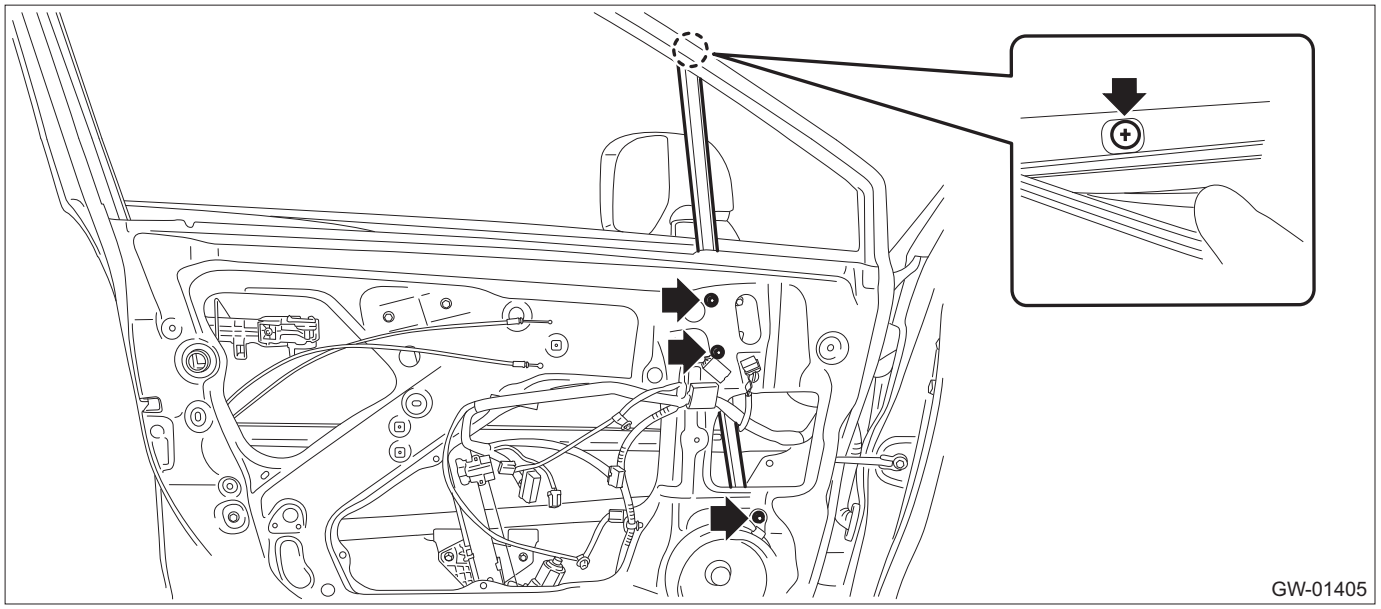
(4) While tilting the glass, remove the glass assembly - front door.

CAUTION:
Avoid impact and damage to the glass assembly - front door.

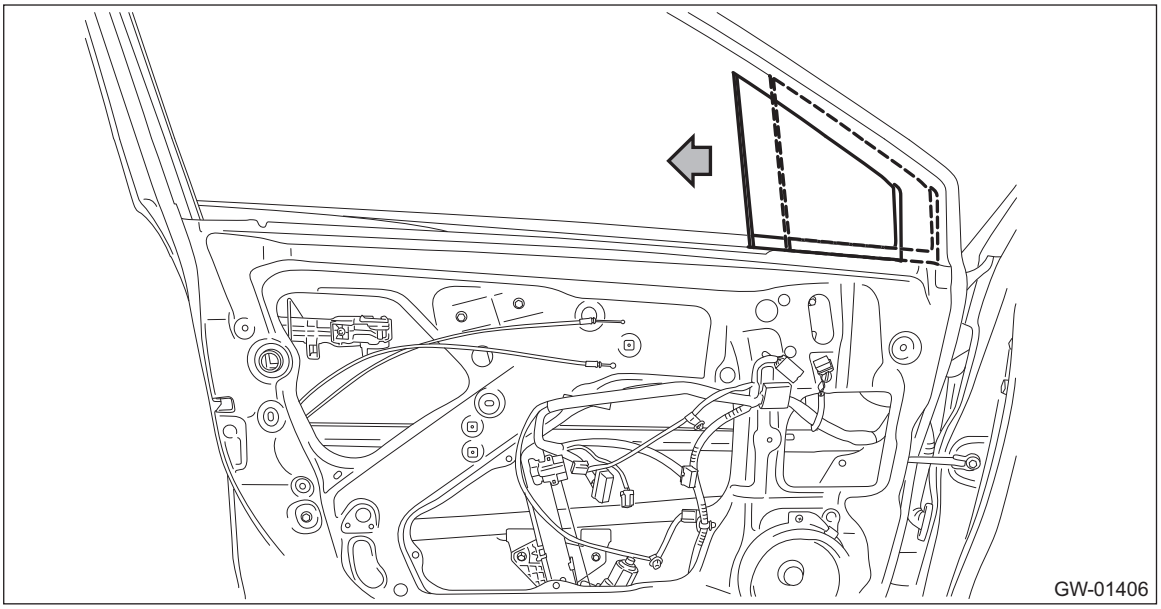


7) Remove the glass - front door partition.

(1) Remove the bolts and screws, and then remove the running channel - front door and the sash COMPL - partition.



(2) Remove the glass - front door partition.



B: INSTALLATION

1) Install the glass - front door partition.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the running channel - front door and the sash COMPL - partition.

CAUTION:
Check that the running channel - front door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.

3) Install the glass assembly - front door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the front door inner pad.
5) Install the sealing cover - front door.

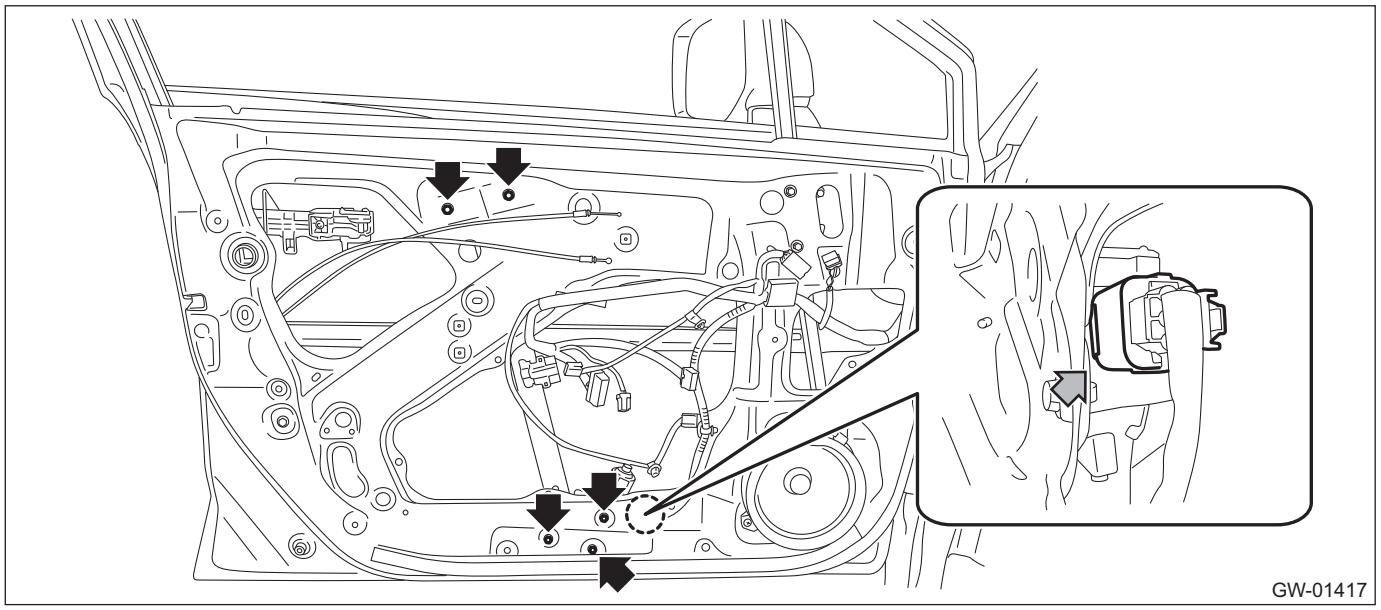
6) Install the trim panel - front door.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

6. Front Regulator and Motor Assembly

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the glass assembly - front door. <Ref. to GW-19, REMOVAL, Front Door Glass.>
5) Remove the regulator and motor assembly - front.
   (1) Disconnect the motor - front connector.
   (2) Remove the bolts, and then remove the regulator and motor assembly - front.



B: INSTALLATION

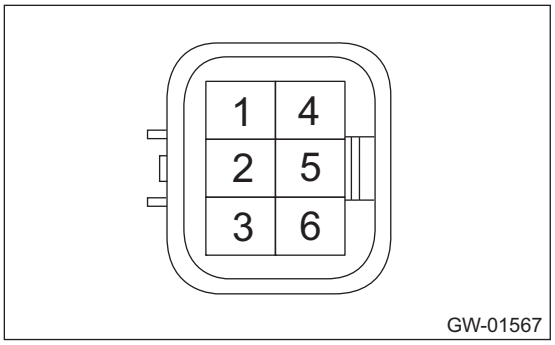
1) Install the regulator and motor assembly - front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Install the glass assembly - front door. <Ref. to GW-21, INSTALLATION, Front Door Glass.>
3) Install the sealing cover - front door.
4) Install the trim panel - front door.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Disconnect the connector of the motor - front.

2) Check the motor operation when battery voltage is applied between terminals of the motor - front connector.



- LH side

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage between terminals.	Increase
1 (+) — 4 (–)		Decrease

- RH side

Terminal No.	Inspection conditions	Specification
3 (+) — 6 (–)	Apply battery voltage between terminals.	Increase
6 (+) — 3 (–)		Decrease

3) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - front.

7. Remote Control Mirror System

A: WIRING DIAGRAM

Refer to “Remote Control Mirror System” in the wiring diagram. <Ref. to WI-320, WIRING DIAGRAM, Remote Control Mirror System.>

B: INSPECTION

1. SYMPTOM CHART

Symptoms	Inspection order
All function does not operate.	1. Check the fuse. 2. Check the remote control mirror switch. 3. Check the wiring harness.
One side of the mirror motor does not operate.	1. Check the remote control mirror switch. 2. Check the mirror motor. 3. Check the wiring harness.
Mirror heater does not operate.	1. Check the rear defogger switch. 2. Check the rear defogger relay. 3. Check the mirror heater. 4. Check the wiring harness. 5. Check body integrated unit.

NOTE:
The mirror heater operates with the rear window defogger at the same time. Refer to “INSPECTION” of “Rear Window Defogger System” for details. <Ref. to GW-50, INSPECTION, Rear Window Defogger System.>

C: NOTE

For procedure of each component in the remote control mirror system, refer to the respective section.

- Outer mirror assembly: <Ref. to GW-26, Outer Mirror Assembly.>
- Remote control mirror switch: <Ref. to GW-31, Remote Control Mirror Switch.>

8. Outer Mirror Assembly

A: REMOVAL

Refer to “DISASSEMBLY” for removal procedures of scalp cap and mirror face. <Ref. to GW-27, DISASSEMBLY, Outer Mirror Assembly.>

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>

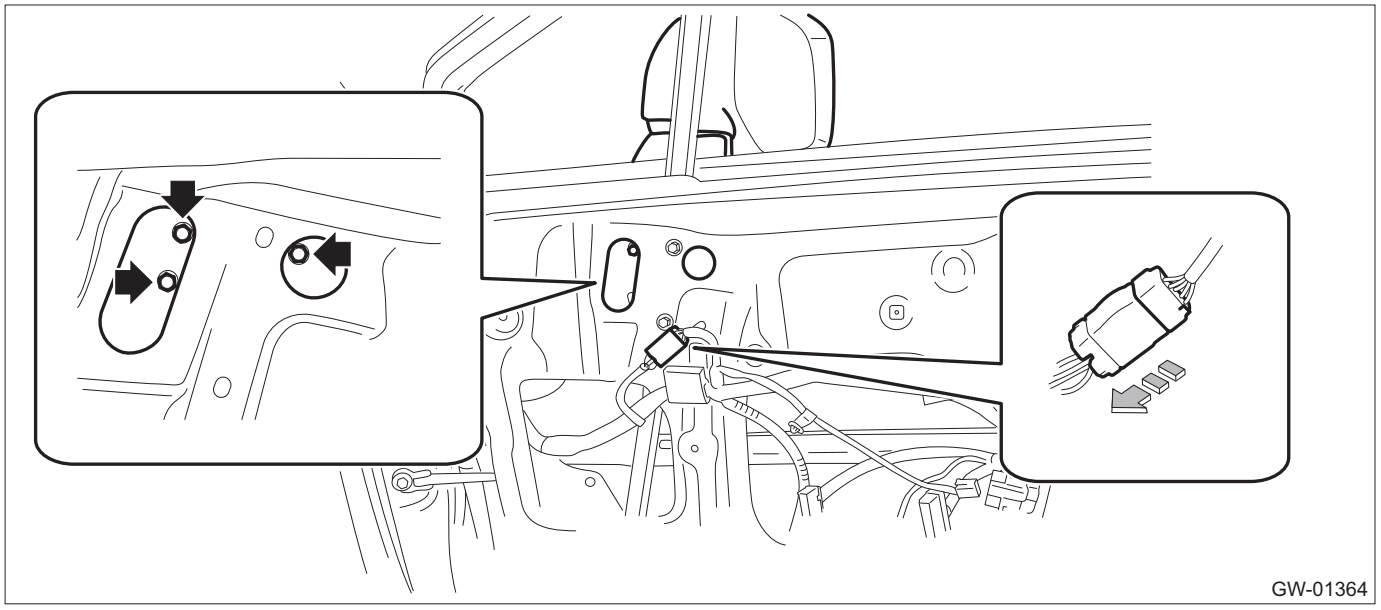
3) Turn over the sealing cover - front door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the sealing cover - front door.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the connector clip that is installed on the panel assembly - front door, and disconnect the connector.

(2) Carefully remove and turn over the sealing cover - front door within the area where the operation can be performed.

4) Remove the bolts to remove outer mirror assembly.



B: INSTALLATION

CAUTION:
Be careful not to catch the harness in between the parts.

1) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Connect the connector and install the connector clip.

3) Install the sealing cover - front door.

4) Install the trim panel - front door. <Ref. to EI-62, INSTALLATION, Door Trim.>

5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

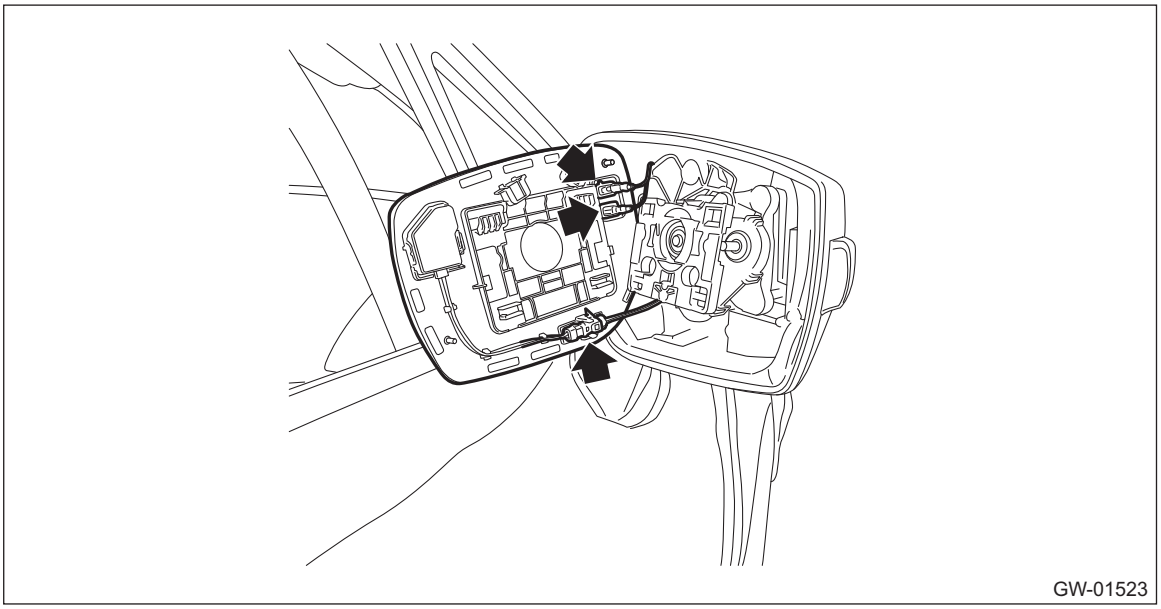
CAUTION:
- **When removing the mirror - repair, be careful not to damage the back surface of mirror - repair with a flat tip screwdriver.**
- **When installing the mirror - repair, insert the connector and clip securely.**

1) Operate the remote control mirror switch to face the mirror - repair upward.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

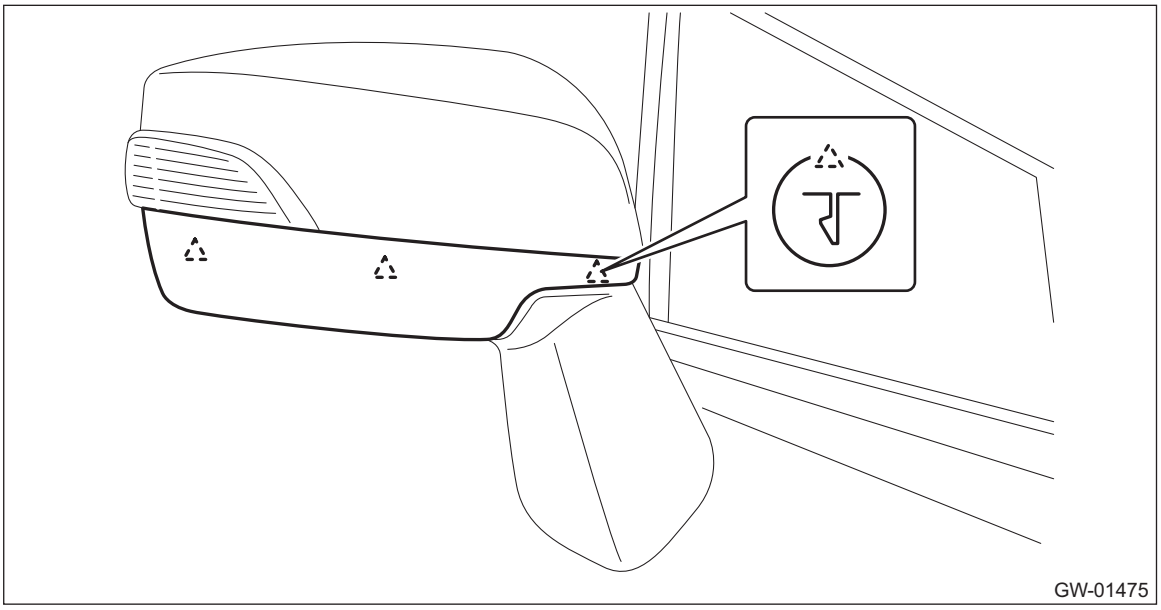
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

3) Remove the mirror - repair.
   (1) Using a flat tip screwdriver or similar tool, release the engagement shown in the figure, and slide the mirror - repair downward to remove.

   (2) Disconnect connectors. (Model with mirror heater and Blind Spot Detection/Rear Cross Traffic Alert system)

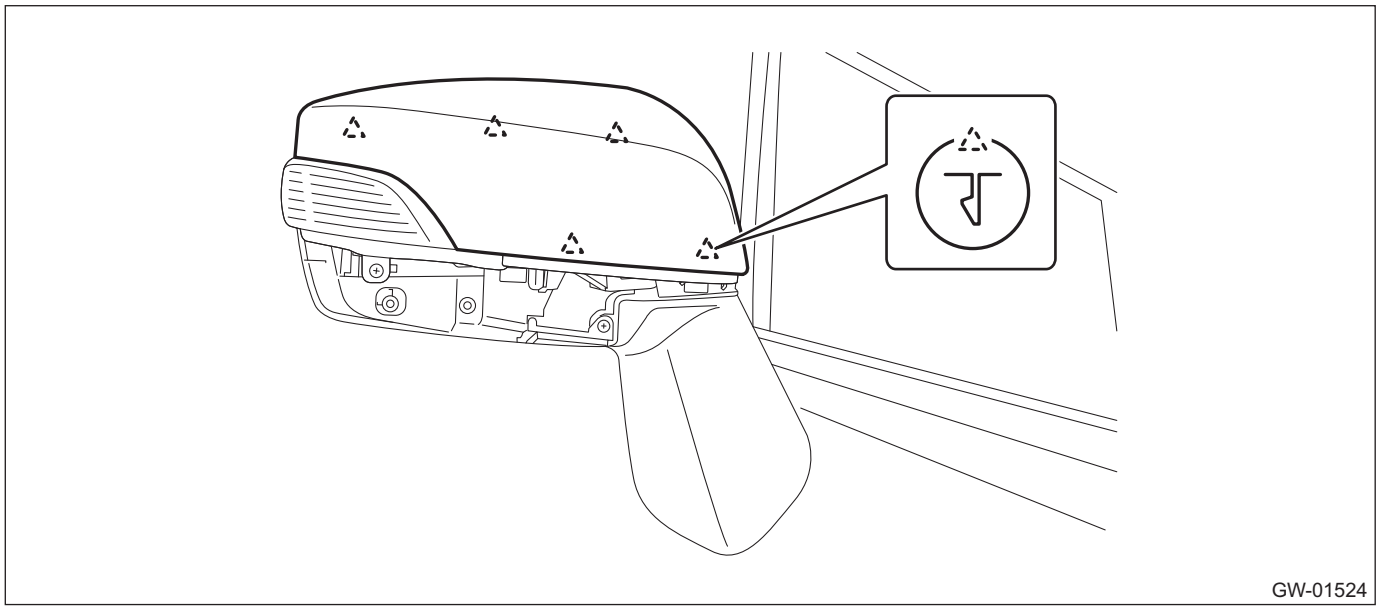


4) Release the claws, and then remove the cover - cap outer mirror lower.



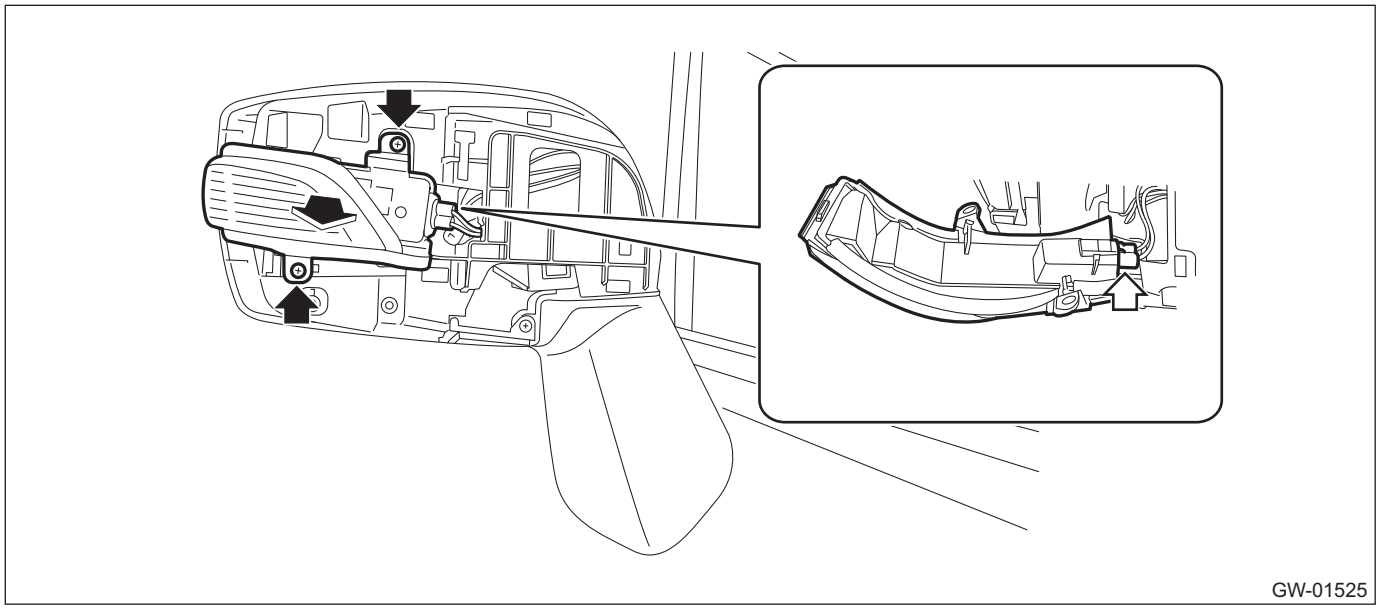
5) Release the claws, and then remove the cover - cap outer mirror.

CAUTION:
Be careful not to apply excessive force when removing the cover - cap outer mirror, as the lower hooks may become damaged.



6) Remove the light assembly - side turn mirror. (Model with side turn signal light)
(1) Remove the screws and pull out the light assembly - side turn mirror to the front of the vehicle.

(2) Disconnect the connector and remove the light assembly - side turn mirror.



D: ASSEMBLY

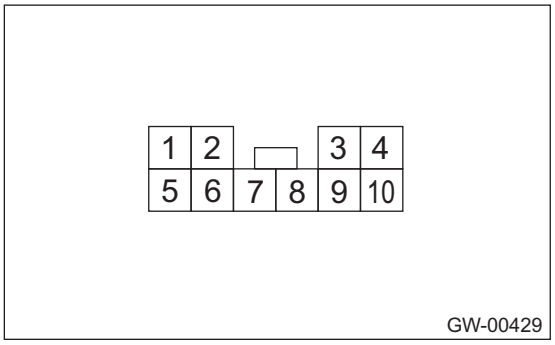
CAUTION:
Be careful not to catch the harness in between the parts.

1) Install the light assembly - side turn mirror. (Model with side turn signal light)
2) Install the cover - cap outer mirror.
3) Install the cover - cap outer mirror lower.
4) Check that all the claws are securely engaged.
5) Install the mirror - repair.

E: INSPECTION

1. CHECK OPERATION

1) Disconnect the outer mirror connector.
2) Apply battery voltage between the outer mirror connector terminals and check the mirror operation.



Terminal No.	Inspection conditions	Switch position
—	—	OFF
3 (+) — 8 (–)	Apply battery voltage between terminals.	UP
8 (+) — 3 (–)	Apply battery voltage between terminals.	DOWN
7 (+) — 3 (–)	Apply battery voltage between terminals.	LEFT
3 (+) — 7 (–)	Apply battery voltage between terminals.	RIGHT

3) If it does not operate normally, replace the outer mirror assembly.

2. CHECK OPERATION OF BLIND SPOT DETECTION/REAR CROSS TRAFFIC ALERT INDICATOR

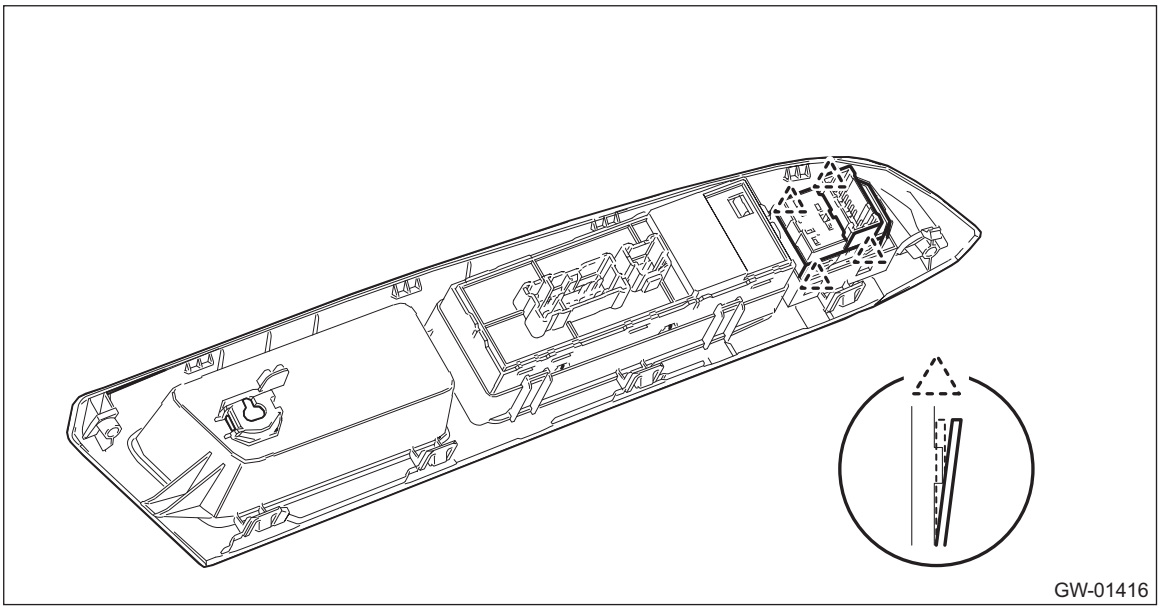
1) Check the Blind Spot Detection/Rear Cross Traffic Alert system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>
2) Check the outer mirror assembly.
   (1) Check that the BSD/RCTA indicator on the mirror surface illuminates normally when the BSD/RCTA OFF switch is turned ON while it is installed to the vehicle.
   (2) If it does not illuminate normally, replace the mirror - repair.
   (3) Check that it illuminates normally again. If it does not illuminate normally, replace the outer mirror assembly.

9. Remote Control Mirror Switch

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the panel - power window main switch. <Ref. to GW-11, REMOVAL, Power Window Control Switch.>
4) Release the claws, and then remove the switch - door mirror from the panel - power window main switch.



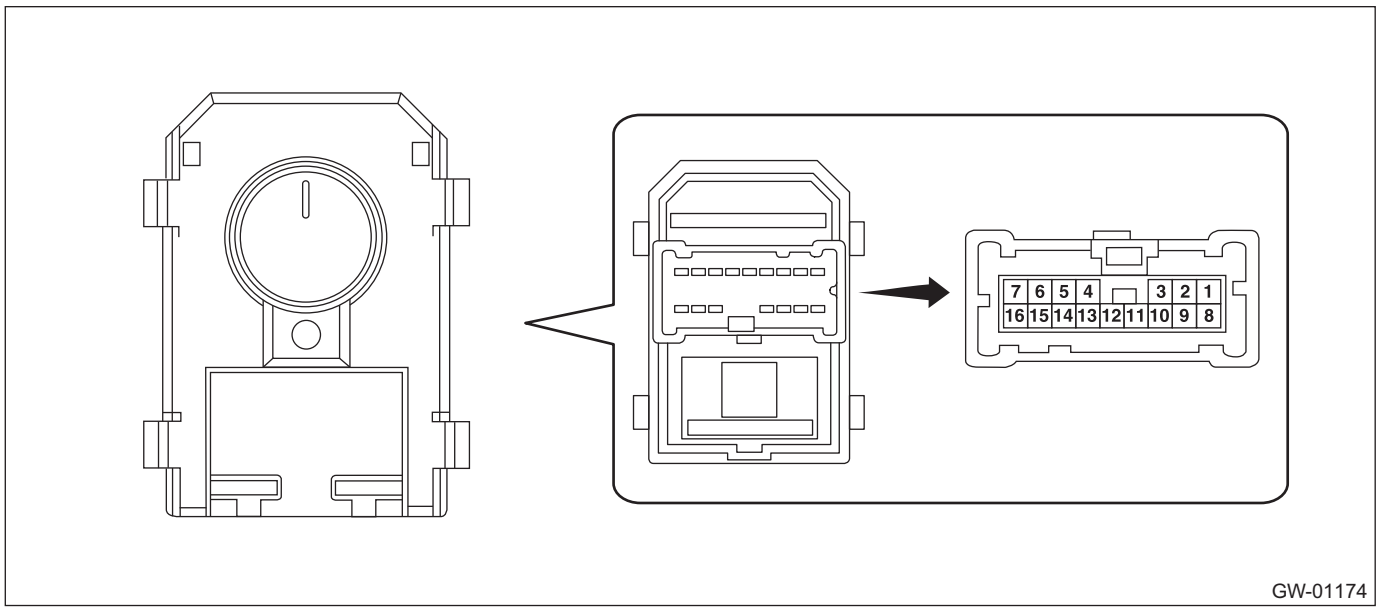
B: INSTALLATION

1) Install the switch - door mirror to the panel - power window main switch.
2) Install the panel - power window main switch to the trim panel - front door.
3) Install the trim panel - front door.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Disconnect the connector of the switch - door mirror.
2) Check the resistance between switch - door mirror terminals.

Preparation tool:
Circuit tester



- Changeover switch RH

Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 12 9 — 7	UP	Less than 1 Ω
1 — 9 12 — 7	DOWN	Less than 1 Ω
1 — 11 12 — 7	LEFT	Less than 1 Ω
1 — 12 11 — 7	RIGHT	Less than 1 Ω

- Changeover switch LH

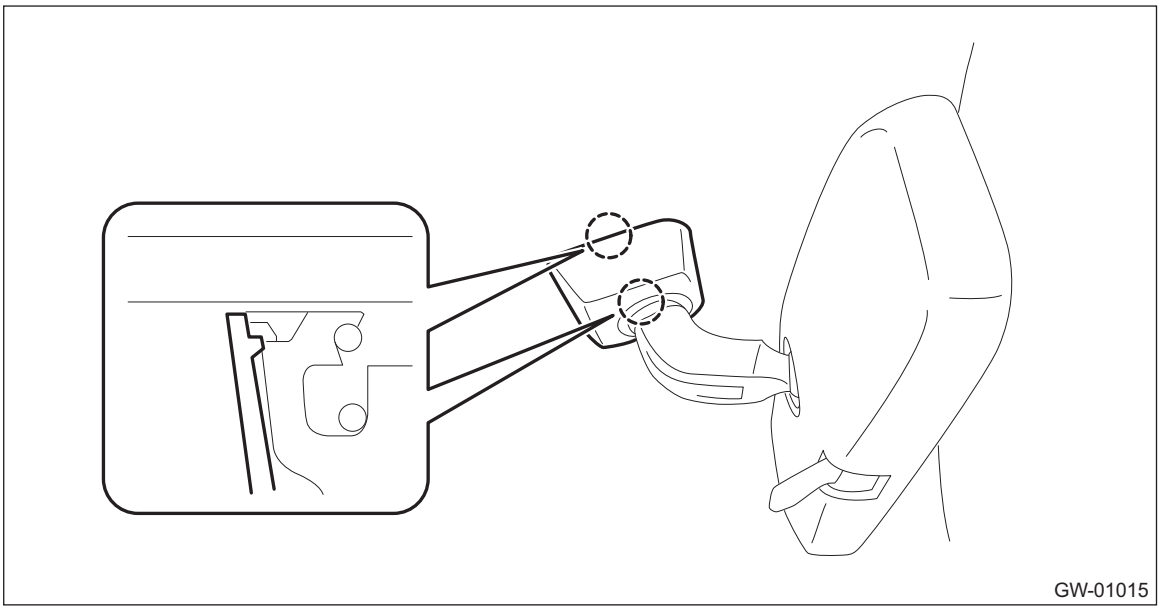
Terminal No.	Inspection conditions	Standard
—	OFF	1 MΩ or more
1 — 14 8 — 7	UP	Less than 1 Ω
1 — 8 14 — 7	DOWN	Less than 1 Ω
1 — 10 14 — 7	LEFT	Less than 1 Ω
1 — 14 10 — 7	RIGHT	Less than 1 Ω

3) If the inspection result is not within the standard, replace the switch - door mirror.

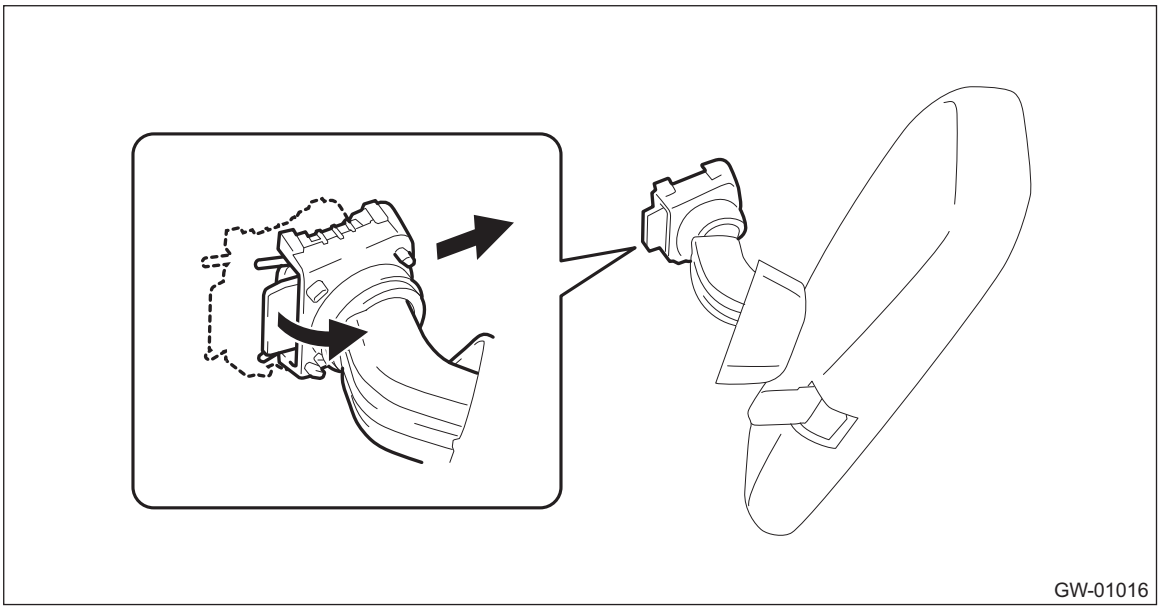
10.Rearview Mirror

A: REMOVAL

CAUTION:
Be careful not to damage the mirror surface and the glass - front window.
1) Release the claws, and then remove the cover.



2) Release the lock lever, and slide the mirror assembly - inner rearview to remove.



3) Replace the glass - front window if the base - inner mirror is damaged.

B: INSTALLATION

1) To install the mirror assembly - inner rearview, slide and push it until the claw engages.
2) Install the cover to the mirror assembly - inner rearview.

C: INSPECTION

Check that the mirror assembly - inner rearview and base - inner mirror for damage.

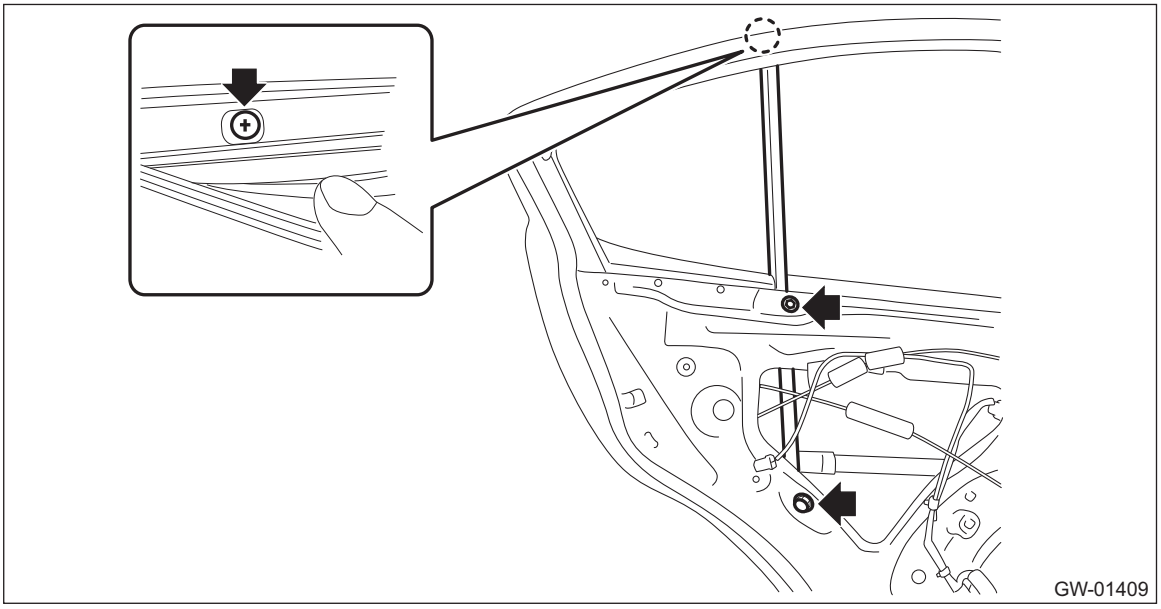
11.Rear Door Glass

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

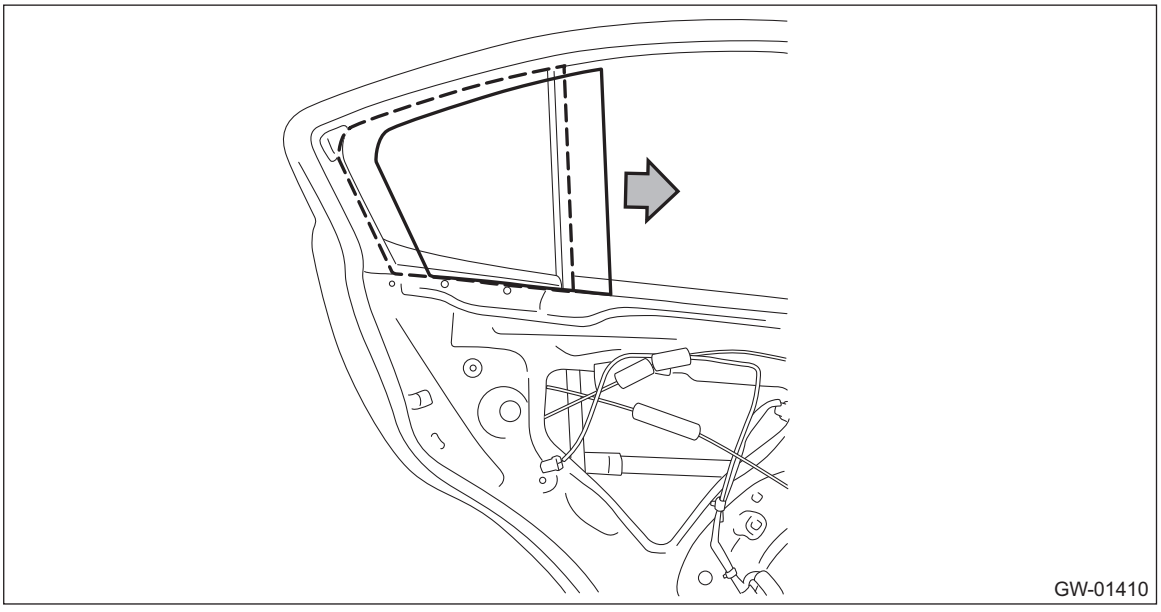
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-37, REMOVAL, Rear Sealing Cover.>
4) Reconnect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the glass assembly - rear door.
   (1) Install the switch - power window and then turn the ignition switch to ON.
   (2) Operate the switch - power window sub rear to move the glass assembly - rear door to the lowest position.
   (3) Remove the running channel - rear door.
   (4) Remove the screws and bolts, and then remove the sash COMPL - rear partition.



GW-01409

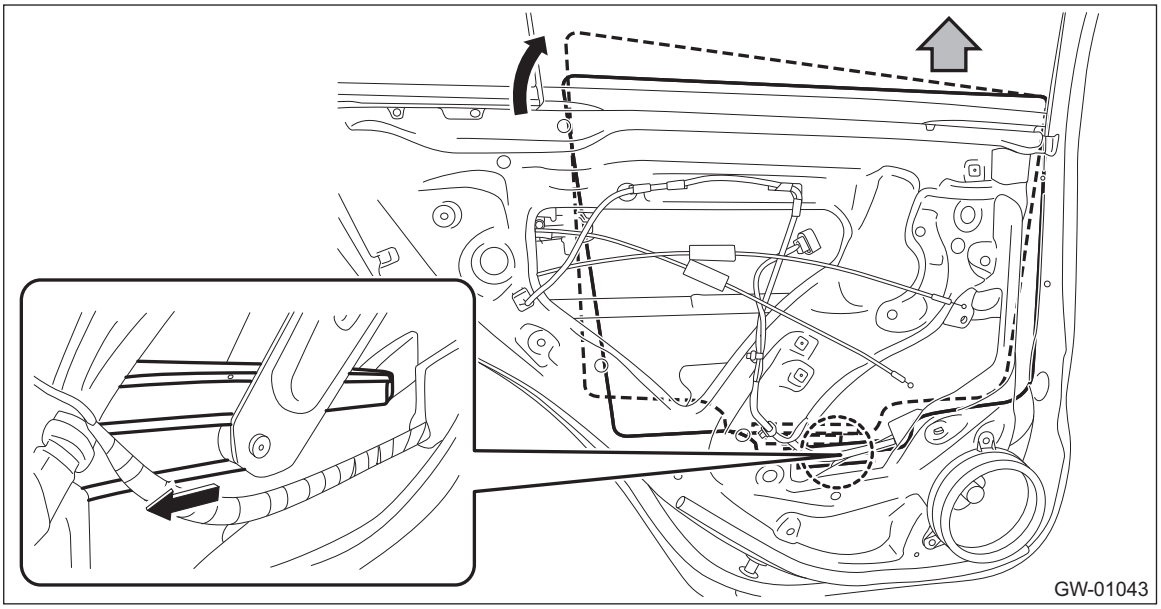
   (5) Remove the glass - rear door partition.



GW-01410

(6) While tilting the glass assembly - rear door, remove the guide from the roller of the regulator and motor assembly - rear, then remove the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.



B: INSTALLATION

1) Install the glass assembly - rear door.

CAUTION:
Avoid impact and damage to the glass assembly - rear door.
2) Install the glass - rear door partition and the sash COMPL - rear partition.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the running channel - rear door.

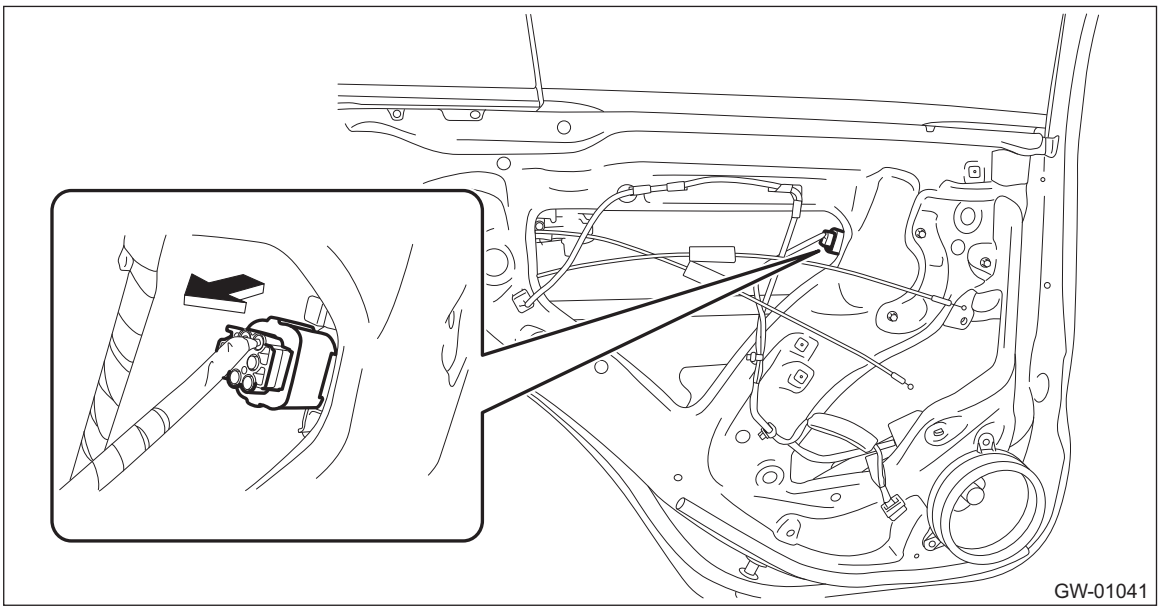
CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - rear partition.
4) Install the sealing cover - rear door. <Ref. to EB-37, INSTALLATION, Rear Sealing Cover.>
5) Install the trim panel - rear door. <Ref. to EI-62, INSTALLATION, Door Trim.>
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

12.Rear Regulator and Motor Assembly

A: REMOVAL

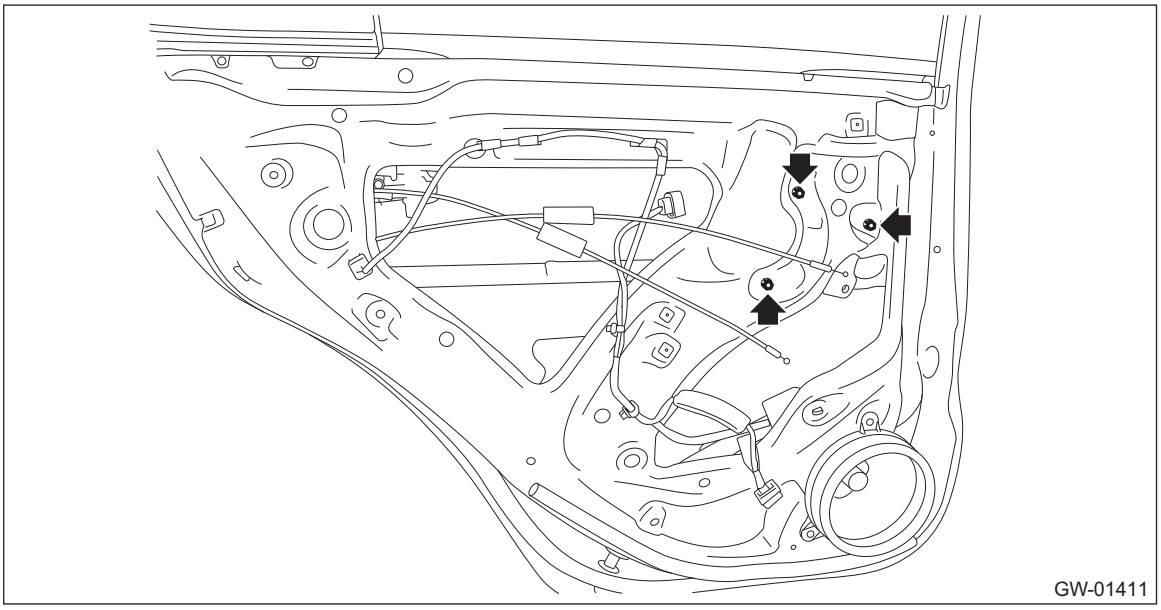
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.
4) Remove the glass assembly - rear door. <Ref. to GW-34, REMOVAL, Rear Door Glass.>
5) Remove the rear regulator and motor assembly.
   (1) Disconnect the connector of the motor - rear.



GW-01041

   (2) Remove the bolts, and then remove the regulator and motor assembly - rear.



GW-01411

B: INSTALLATION

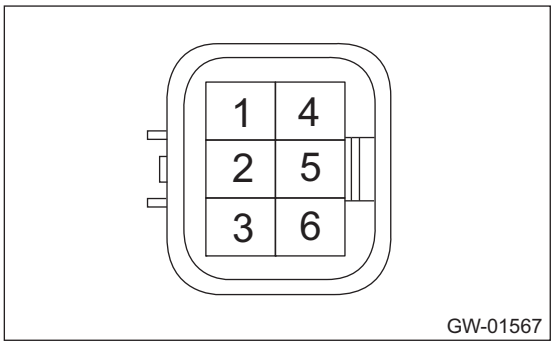
1) Install the regulator and motor assembly rear.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the glass assembly - rear door. <Ref. to GW-35, INSTALLATION, Rear Door Glass.>
3) Install the sealing cover - rear door.
4) Install the trim panel - rear door. <Ref. to EI-62, INSTALLATION, Door Trim.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Disconnect the connector of the motor - rear.
2) Check the motor operation when battery voltage is applied between terminals of the motor - rear connector.



- LH side

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage between terminals.	Increase
1 (+) — 4 (–)		Decrease

- RH side

Terminal No.	Inspection conditions	Specification
3 (+) — 6 (–)	Apply battery voltage between terminals.	Increase
6 (+) — 3 (–)		Decrease

3) If it does not operate properly as a result of inspection, replace the regulator and motor assembly - rear.

13.Windshield Glass

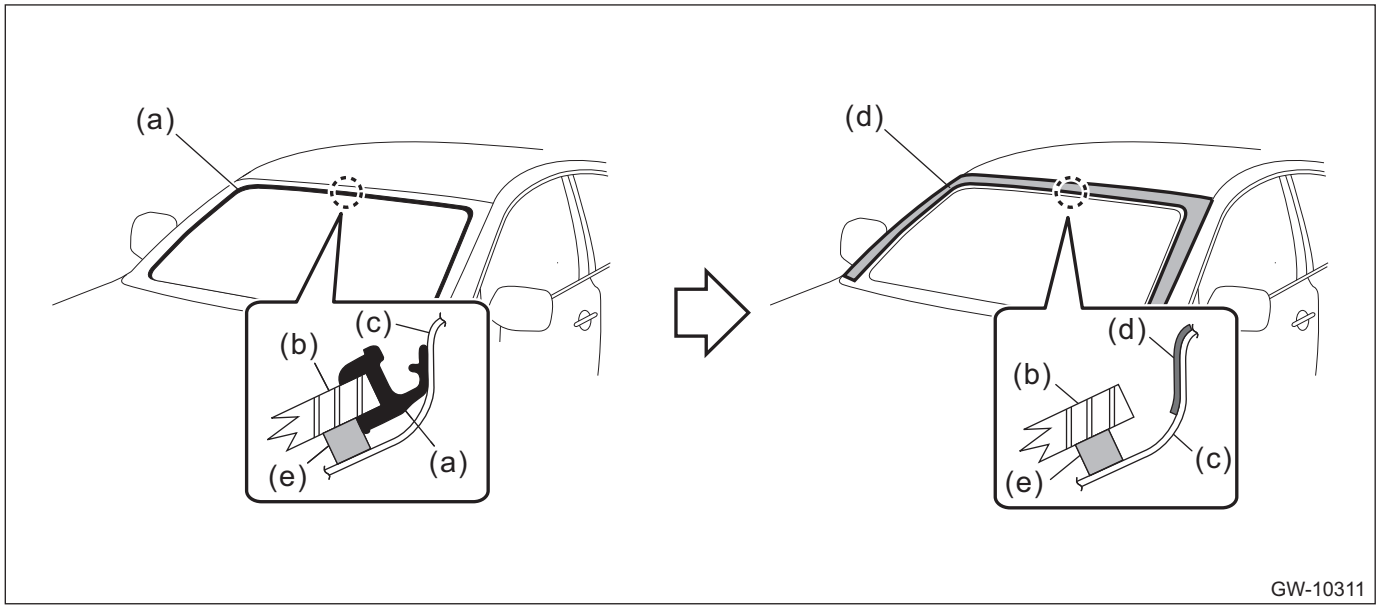
A: REMOVAL

CAUTION:
• For model with EyeSight, always remove the glass - front window after the stereo camera is removed.
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-8, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-13, Camera Adjustment, Inspection.>
• For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

1. WHEN USING WINDSHIELD GLASS KNIFE

1) Disconnect the ground cable from battery. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front pillar UPR. <Ref. to EI-89, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-47, REMOVAL, Cowl Panel.>
4) Disconnect the wiper deicer connector. (Models with wiper deicer)
5) Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.

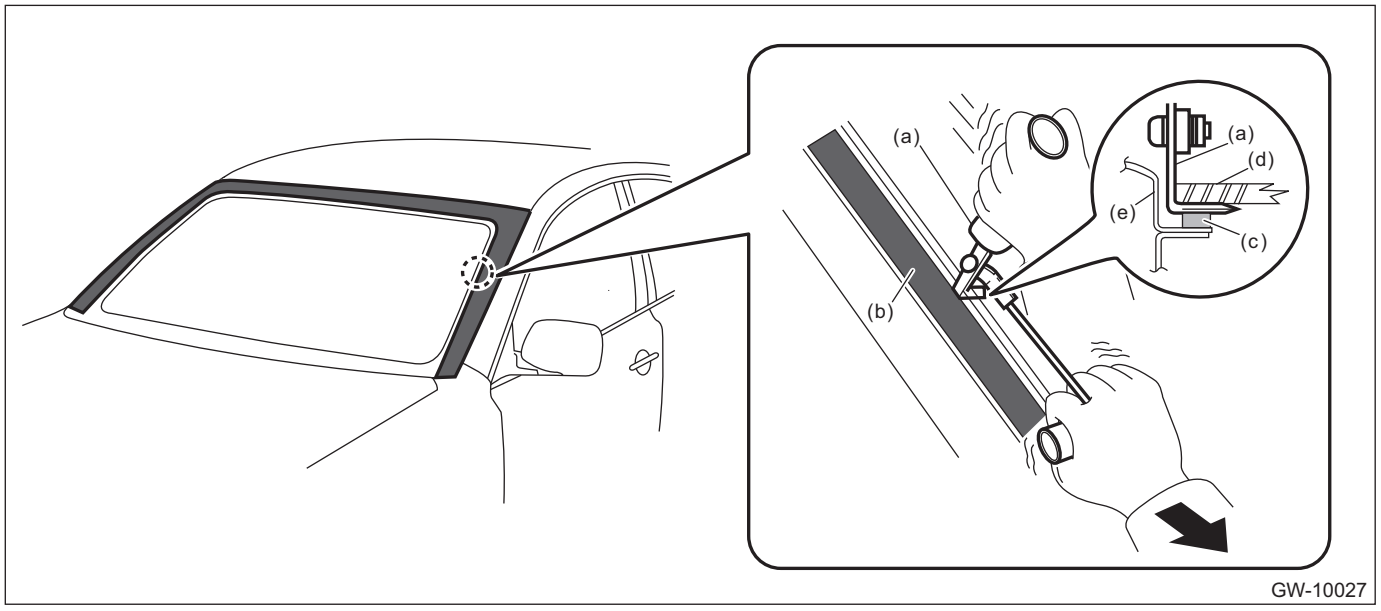


(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

7) Remove the glass - front window.
(1) Apply sufficient amount of soapy water to the adhesive part and insert the windshield glass knife.

(2) While holding the edges of the knife and the glass - front window at a right angle, move the windshield glass knife parallel to the edge of the glass - front window, and cut the adhesive along the surface and the edge of the glass - front window.

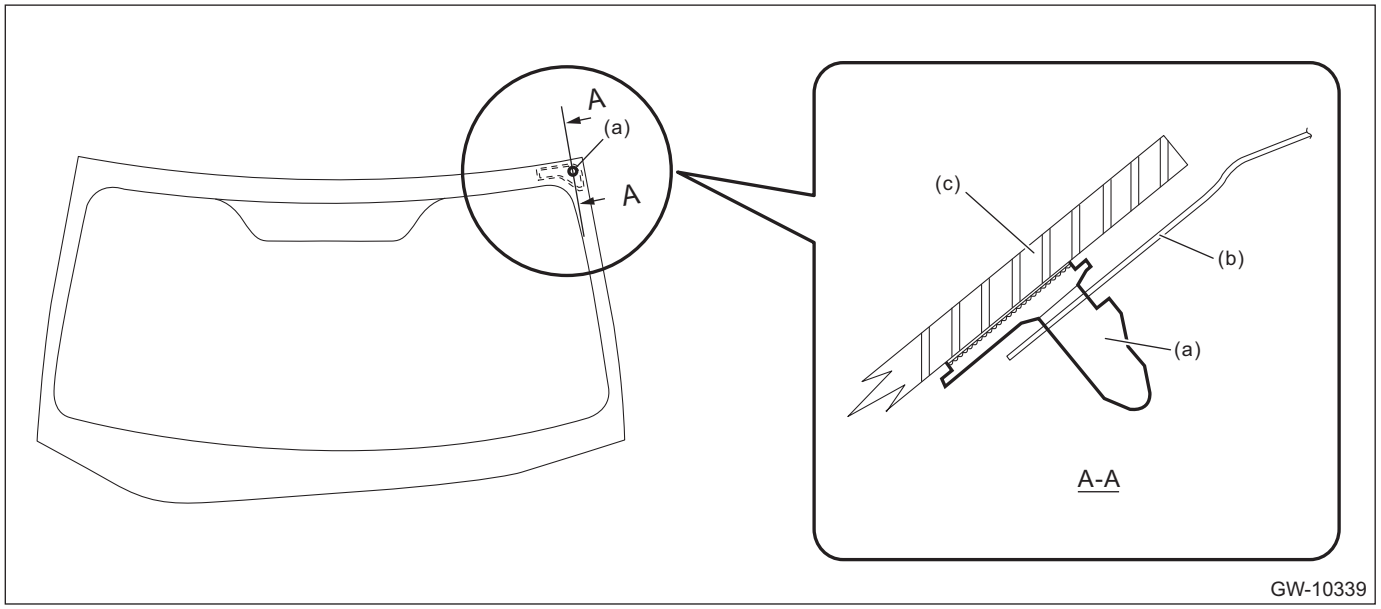
CAUTION:
• Cutting of adhesive part should be started from an area with wider gap between the glass - front window and the body.
• Never twist the windshield glass knife.



(a) Windshield glass knife
(b) Protective tape
(c) Adhesive
(d) Glass - front window
(e) Body panel

(3) Disconnect the locating pin - front window, and remove the glass - front window.

NOTE:
The locating pin - front window are bonded to the corners of the glass - front window. Use piano wire to disconnect the pins.



(a) Locating pin - front window
(b) Body panel
(c) Glass - front window

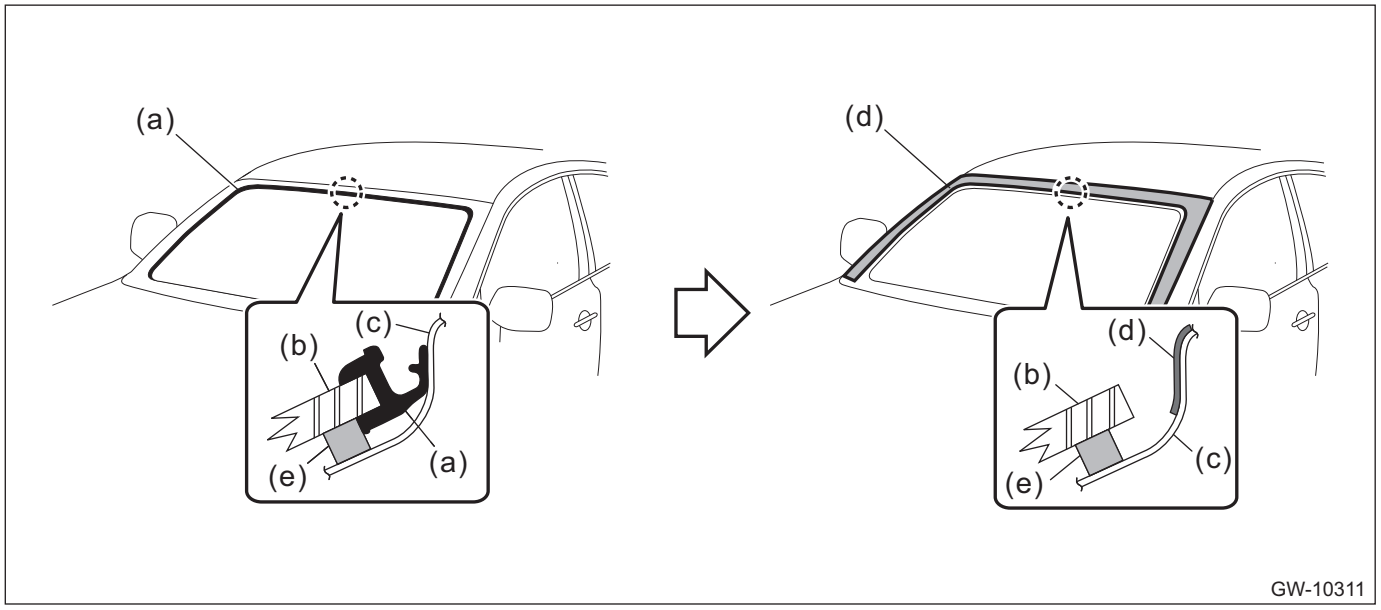
2. WHEN USING PIANO WIRE

CAUTION:
- **Do not tightly pull the piano wire against the glass - front window edge.**
- **Apply protective tape, etc, and be careful that the inner and outer components of the vehicle are not damaged.**
- **Do not cross piano wires. Otherwise they may be cut.**

1) Disconnect the ground terminal from battery. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

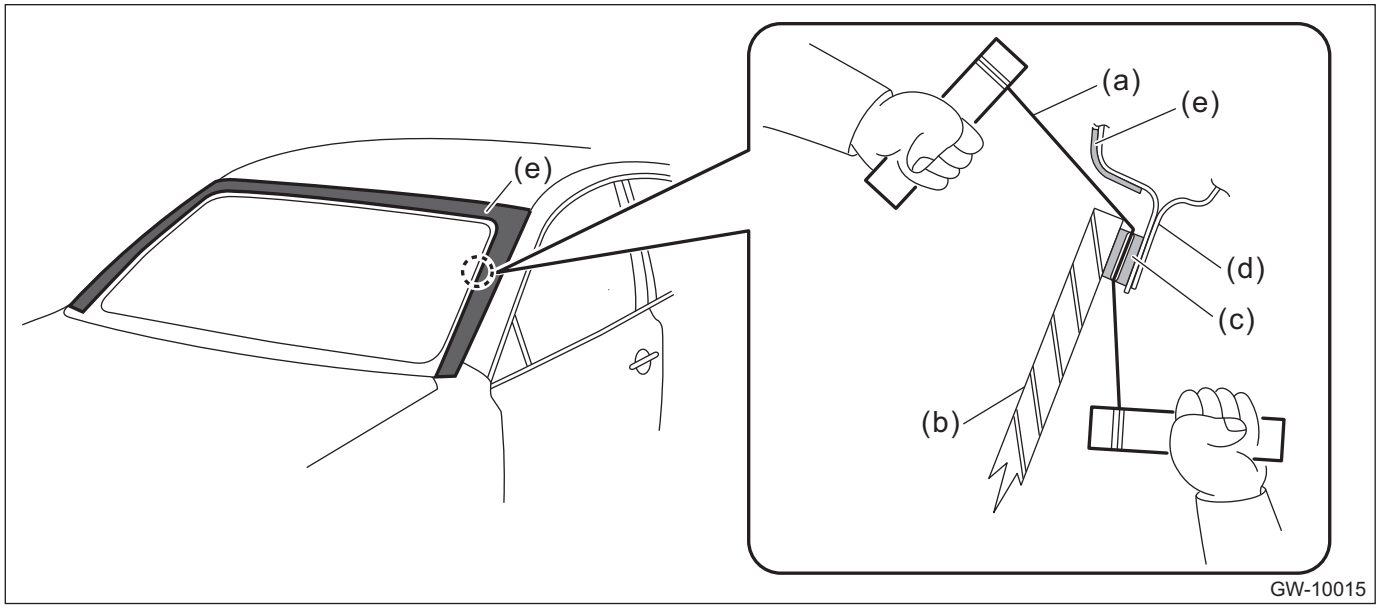
2) Remove the trim panel - front pillar UPR. <Ref. to EI-89, REMOVAL, Upper Inner Trim.>
3) Remove the cowl panel assembly. <Ref. to EI-47, REMOVAL, Cowl Panel.>
4) Disconnect the wiper deicer connector. (Models with wiper deicer)
5) Remove the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
6) Remove the molding - front window from the glass - front window, and attach protective tape on the body side of the circumference of the glass - front window.



(a) Molding - front window
(b) Glass - front window
(c) Body panel
(d) Protective tape
(e) Adhesive

7) Remove the glass - front window.
   (1) Pass the piano wire through the adhesive part.
   (2) Pull the wire ends alternately to cut off the adhesive part and the locating pin - front window.

CAUTION:
Attach a piece of wood to both piano wire ends.

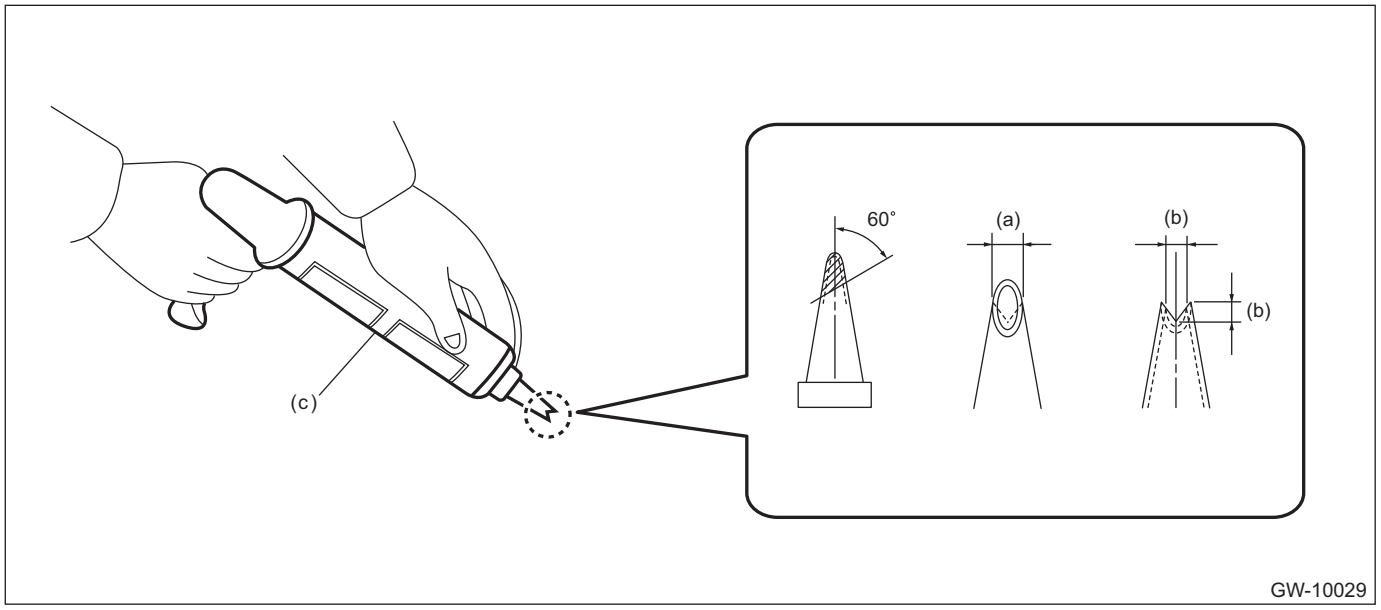


(a) Piano wire
(b) Glass - front window
(c) Adhesive
(d) Body panel
(e) Protective tape

B: INSTALLATION

CAUTION:
• For model with EyeSight, always use Subaru genuine windshield glass specially designed for EyeSight. (If the windshield glass other than the glass specially designed for EyeSight is used, the visibility of the camera is blocked or the distortion of the glass prevents the correct measurement of the object, resulting in the EyeSight abnormal operation.)
• For model with EyeSight, if the windshield glass is installed after removal or replaced, always perform the "Inspection" and "Adjustment and check" of the stereo camera.
Inspection: <Ref. to ES(diag)-8, INSPECTION, General Description.>
Adjustment and check: <Ref. to ES-13, Camera Adjustment, Inspection.>
• For model with EyeSight, if the damage is found in the glass repair prohibited area, always replace the glass. Damage in the prohibited area can affect the recognition of the stereo camera even if it is repaired, and thereby EyeSight function may not operate properly.

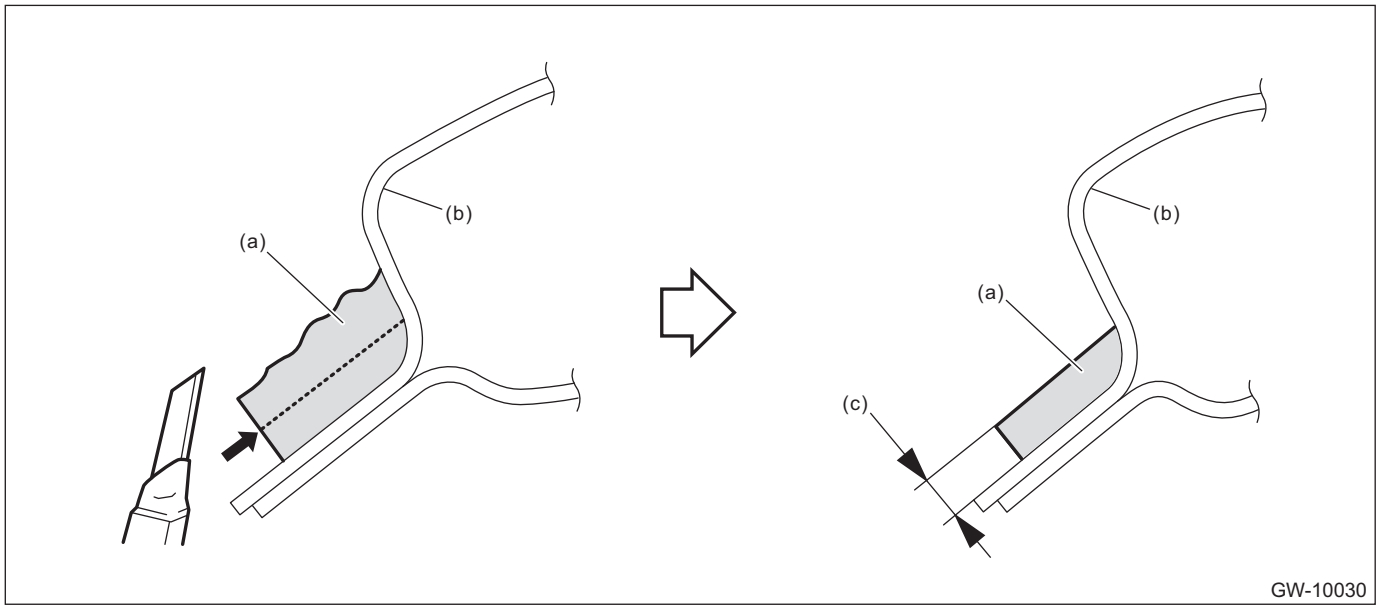
1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.



(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

CAUTION:
- **Be careful not to damage the body and paint surface.**
- **Be sure to keep some amount of old adhesive.**

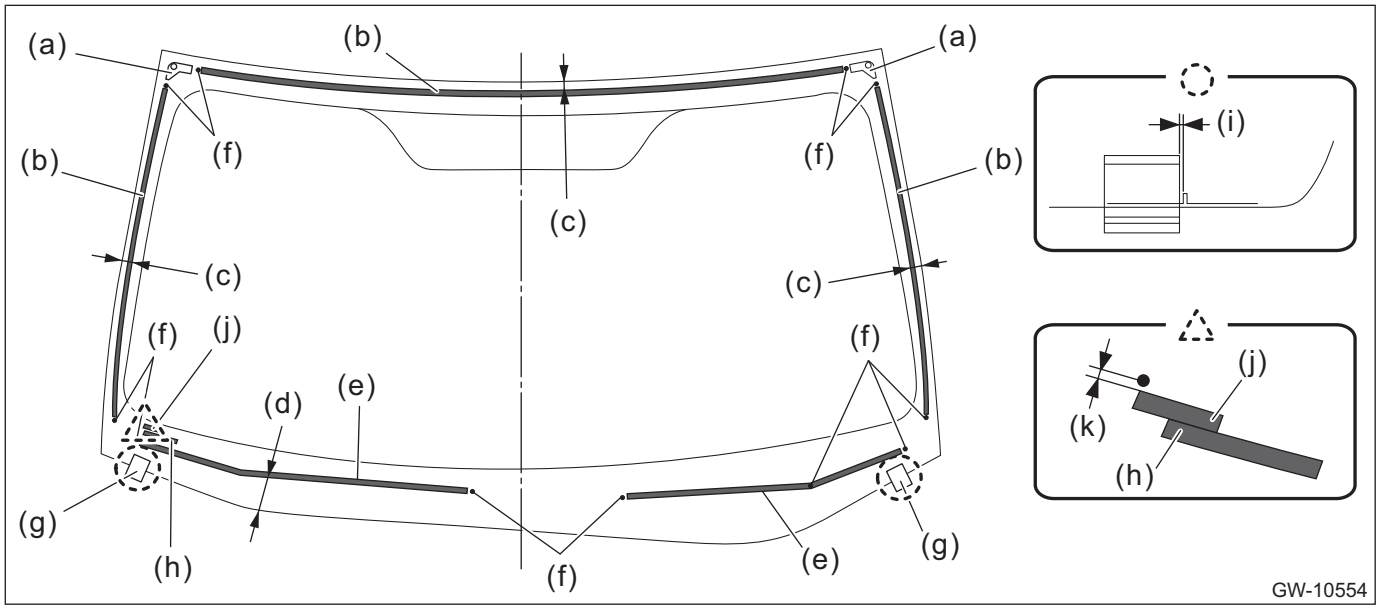


(a) Adhesive (b) Body panel (c) 2 mm (0.08 in)

3) Clean the glass - front window and the body with alcohol or appropriate cleaning solvent to completely eliminate cutting powder, dust and dirt.
4) Attach the dam rubber - front to the glass - front window.

CAUTION:
- **Attach the driver's side dam rubber - front lower to the constant distance of 14.1 mm (0.56 in) from the glass end.**

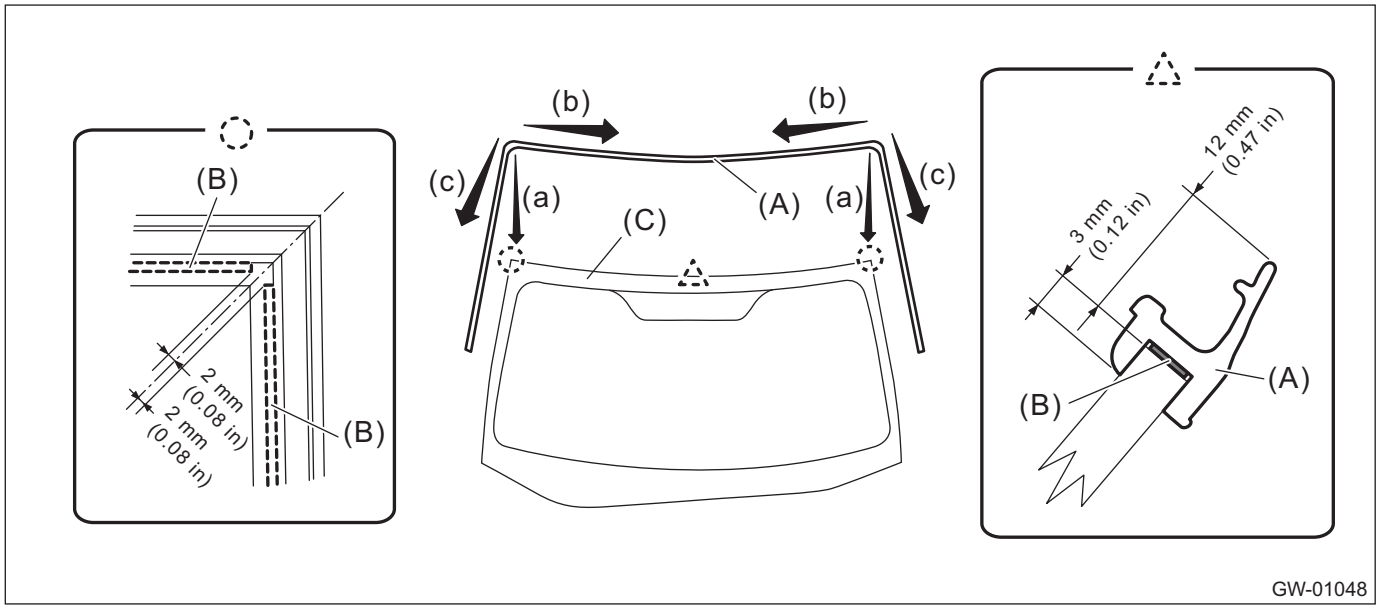
• Attach the passenger's side dam rubber - front lower straight between the dam rubber set marks while aligning with the dam rubber set mark.



(a)	Locating pin - front window	(e)	Dam rubber - front lower	(i)	0+5 mm (0+0.2 in)
(b)	Dam rubber - front upper	(f)	Dam rubber set mark	(j)	Seal - lower VIN
(c)	16 mm (0.63 in)	(g)	Seal - lower	(k)	1 mm (0.04 in)
(d)	14.1 mm (0.56 in)	(h)	VIN plate confirmation window		

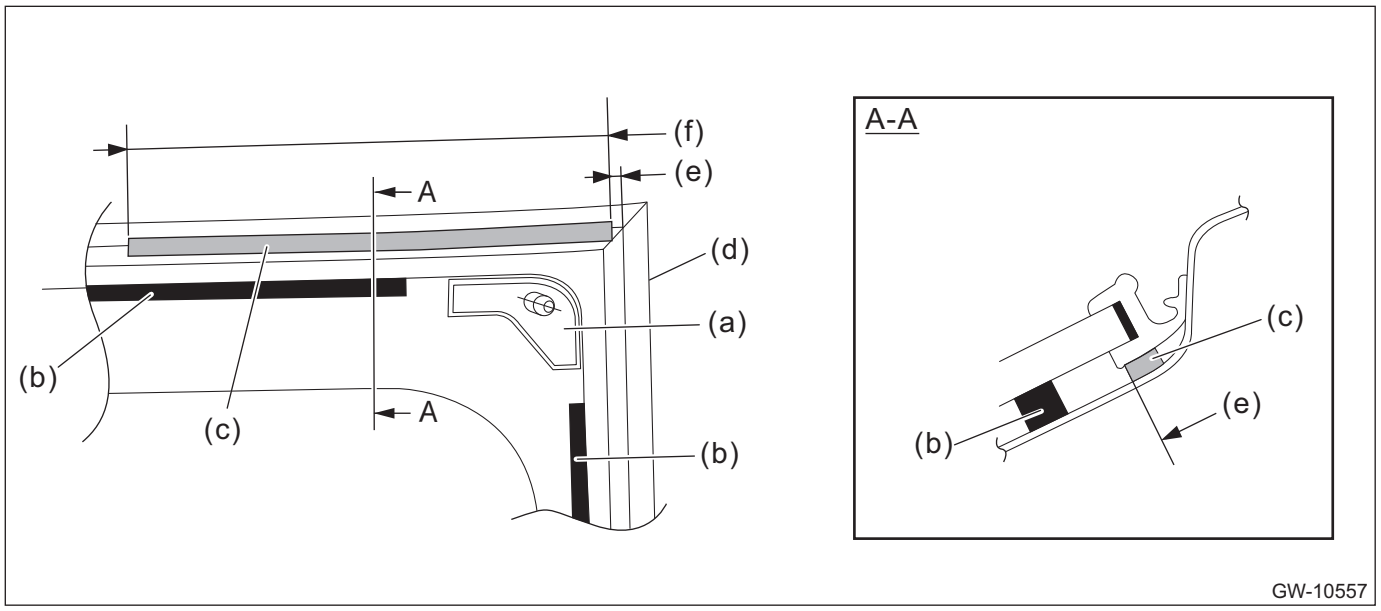
5) Attach the molding - front window to the glass - front window.

CAUTION:
Be careful to attach the molding - front window so that the molding has no loose or undulating part.



(1) Align the molding - front window (A) to the upper ends (a) of the glass - front window (C).
(2) Install the molding - front window from both corners of the upper edge toward the center (b).
(3) Install the molding - front window from both corners of the upper edge toward the lower side (c).
(4) Firmly apply the double sided tape (B) of the molding - front window evenly to the surface of the glass - front window.

6) Attach the seal - upper to the molding - front window.



(a)	Locating pin - front window	(c)	Seal - upper	(e)	0+3 mm (0+0.12 in)
(b)	Dam rubber - front upper	(d)	Molding - front window	(f)	165 mm (6.5 in)

7) Install the glass - front window.
   (1) Apply the primer to the adhesive surface of glass - front window side and body side using sponge.

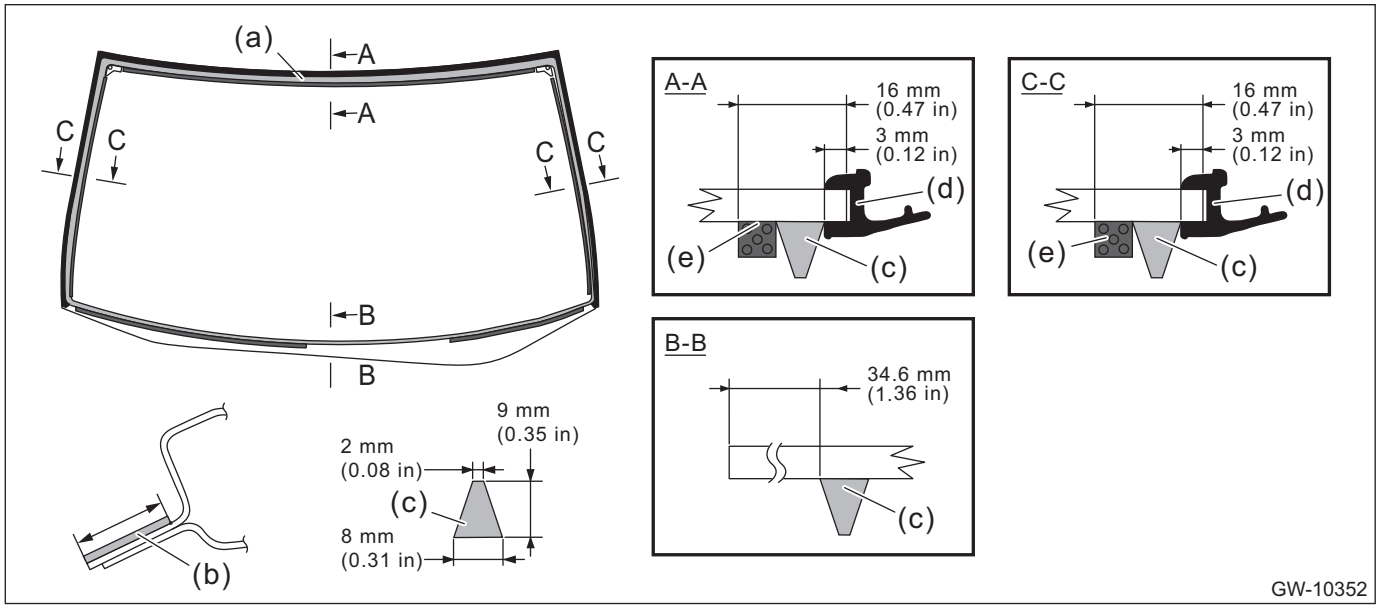
CAUTION:
Do not apply primer to adhesive remaining on the body side.

Preparation items:
Glass primer: Dow Automotive ESSEX U-401, U-402 or equivalent
Painted surface primer: Dow Automotive ESSEX U-413 or equivalent

NOTE:
- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass - front window.
- Do not touch the surface coated with primer.

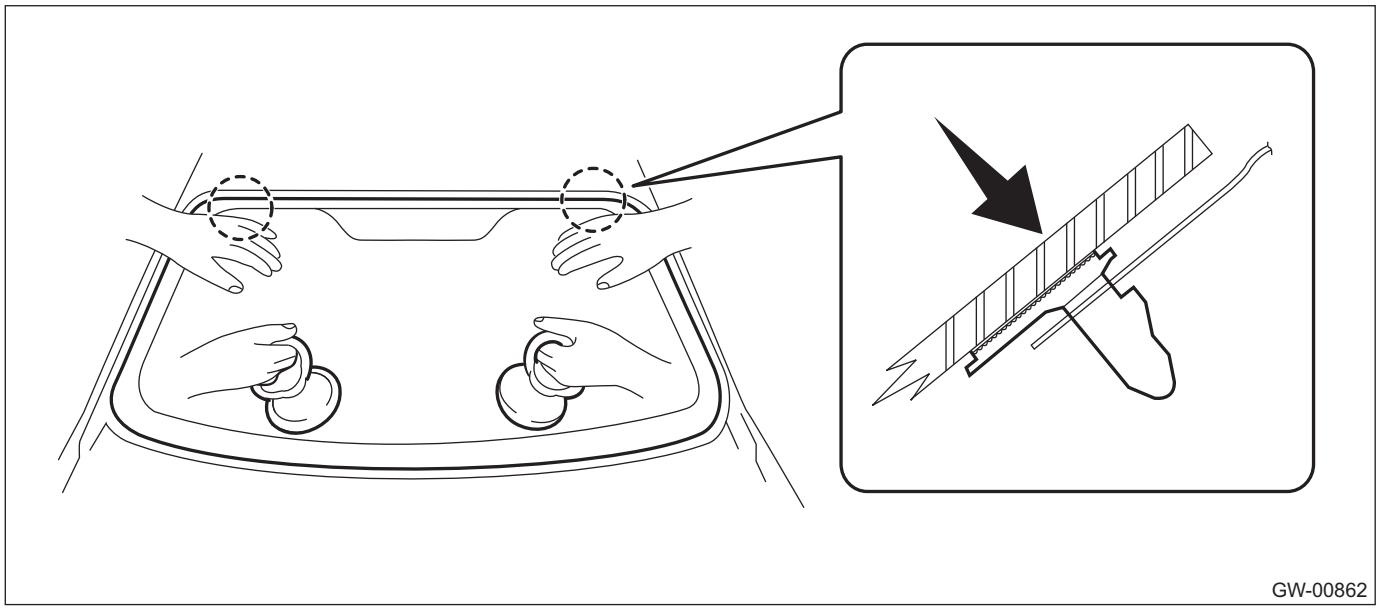
   (2) Apply adhesive to the end back surface of the glass - front window.

Preparation items:
Adhesive: Dow Automotive ESSEX U-400HV or equivalent



(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - front window
(e) Dam rubber - front

(3) Fit the locating pins - front window to the vehicle body using suction rubber cups to install the windshield glass.



(4) Lightly press the entire perimeter of the glass - front window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

8) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - front window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

9) Connect the wiper deicer connector. (Models with wiper deicer)

10) Install the cowl panel assembly. <Ref. to EI-48, INSTALLATION, Cowl Panel.>
11) Install the stereo camera cover assembly and stereo camera assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
12) Install the trim panel - front pillar UPR. <Ref. to EI-90, INSTALLATION, Upper Inner Trim.>
13) Connect the battery ground terminal. (Models with wiper deicer) <Ref. to NT-6, BATTERY, NOTE, Note.>
14) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

14.Rear Window Glass

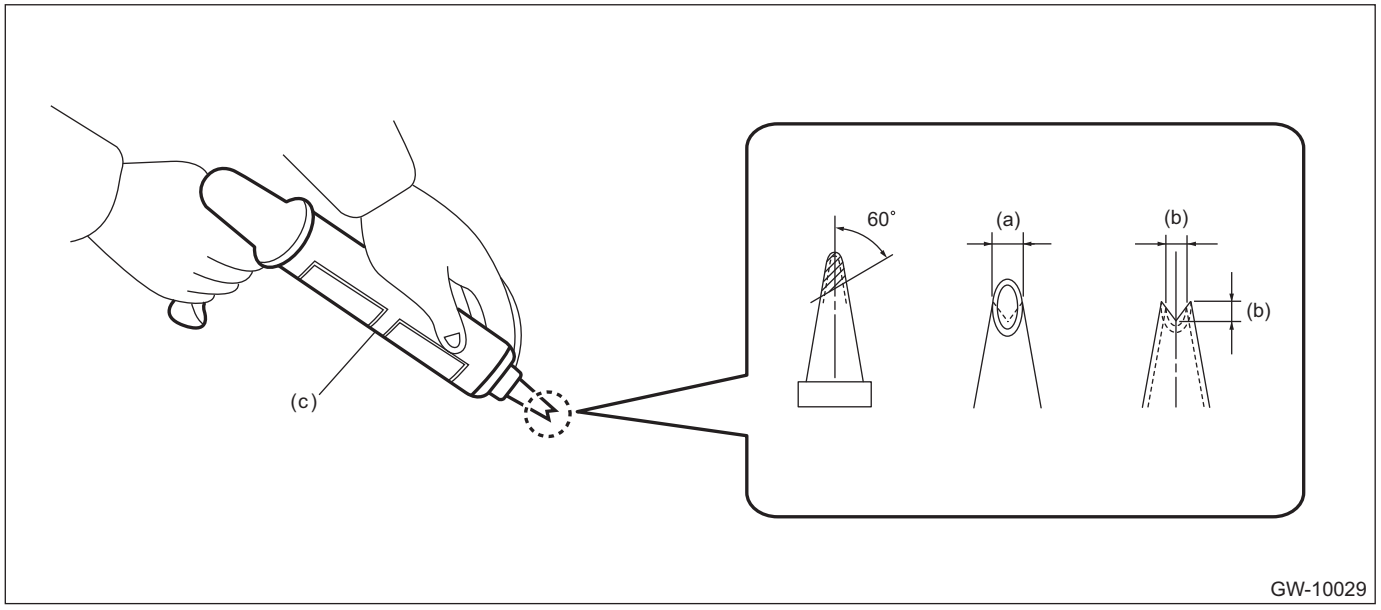
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Disconnect the rear defogger connector.
3) Remove the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-38, REMOVAL, Windshield Glass.>

B: INSTALLATION

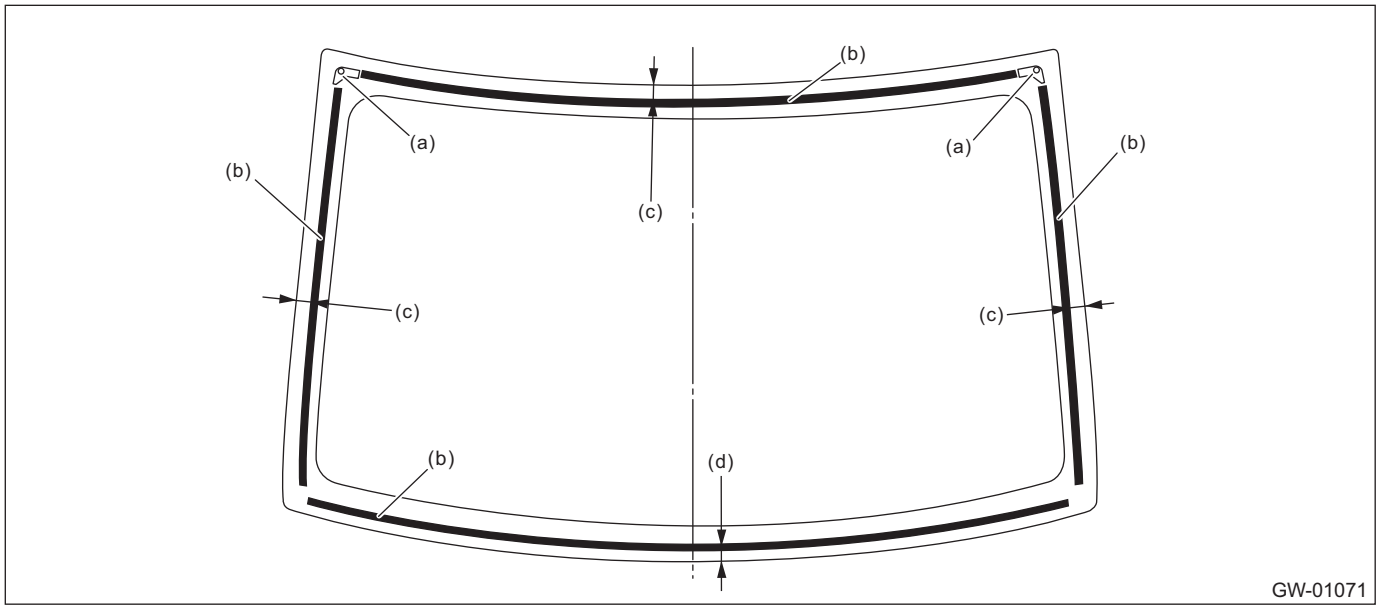
1) Fabricate the cartridge nozzle tip as shown and set the sealant gun with the adhesive.



(a) 10 mm (0.39 in) (b) 8 mm (0.31 in) (c) Sealant gun

2) Smoothen and clean the adhesive surfaces of the glass - rear window and body using the same procedures as for the glass - front window. <Ref. to GW-41, INSTALLATION, Windshield Glass.>

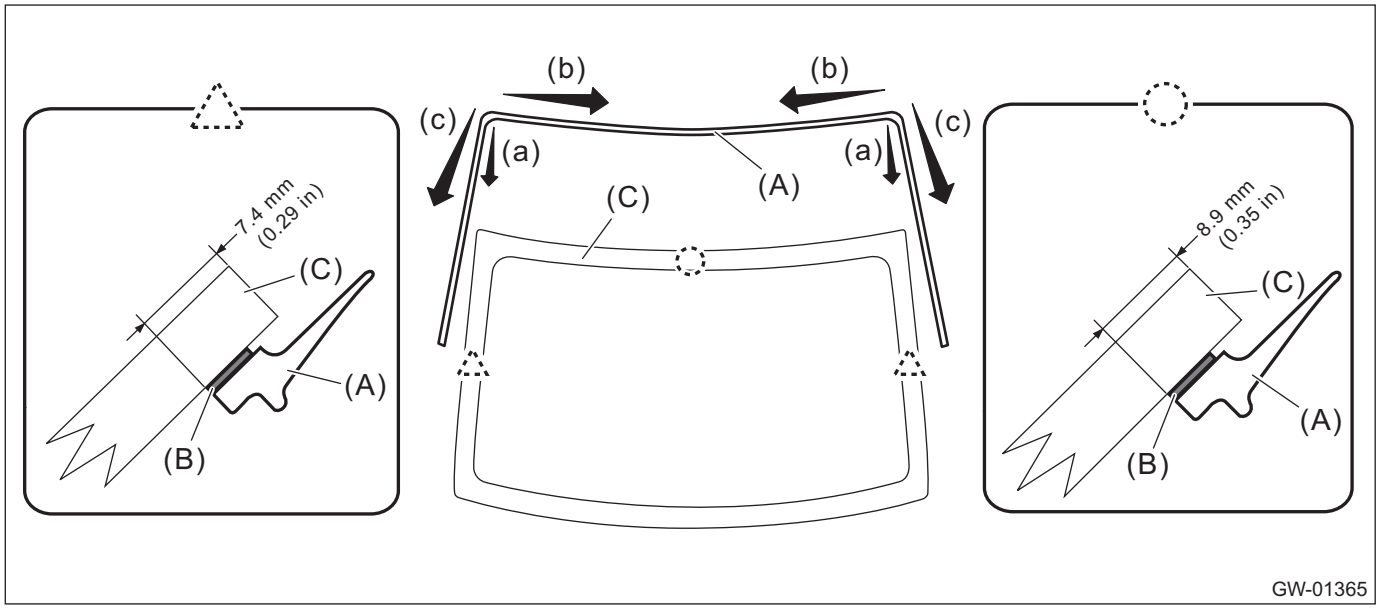
3) Attach the dam rubber - rear to the glass - rear window.



(a) Locating pin - rear window
(b) Dam rubber - rear
(c) 21.9 mm (0.86 in)
(d) 10.7 mm (0.42 in)

4) Attach the molding - rear window to the glass - rear window.

CAUTION:
Be careful to attach the molding - rear window so that the molding has no loose or undulating part.



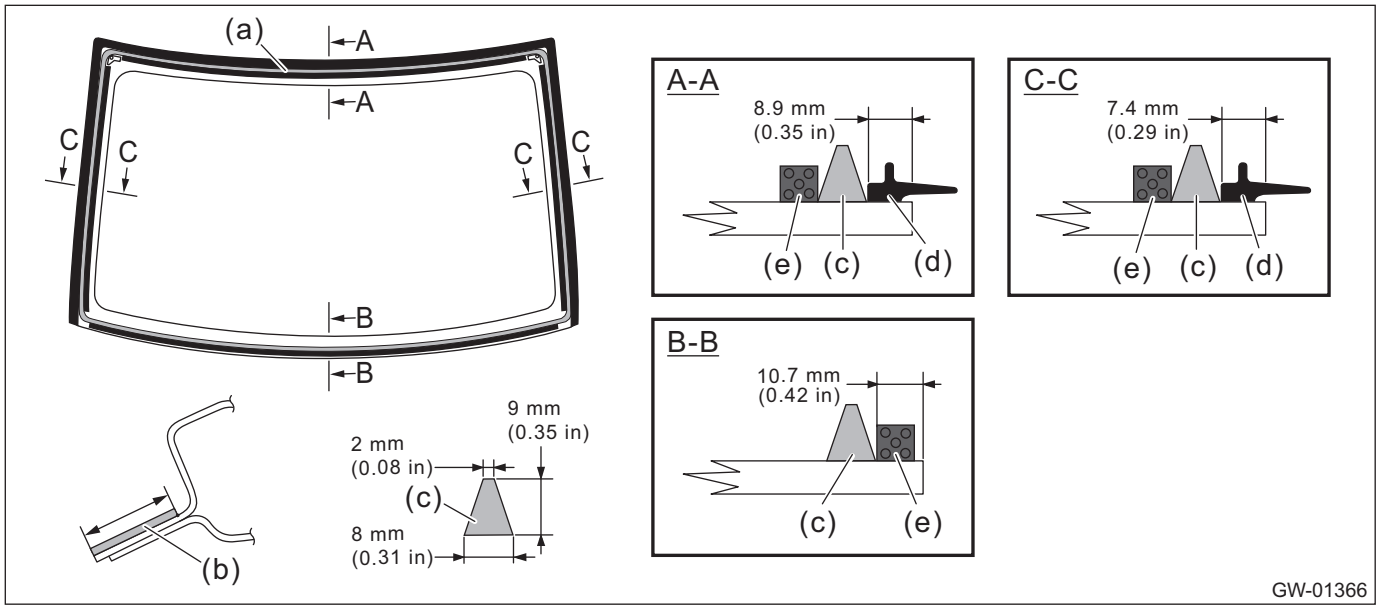
(1) Align the molding - rear window (A) to the upper ends (a) of the glass - rear window (C).
(2) Install the molding - rear window from both corners of the upper edge toward the center (b).
(3) Install the molding - rear window from both corners of the upper edge toward the lower side (c).
(4) Firmly apply the double sided tape (B) of the molding - rear window evenly to the surface of the glass - rear window.

5) Install the glass - rear window in the same procedure as for the glass - front window. <Ref. to GW-41, INSTALLATION, Windshield Glass.>

(1) Apply the primer to the adhesive surface of glass - rear window side and body side using sponge.

CAUTION:
Do not apply primer to adhesive remaining on the body side.

(2) Apply adhesive to the end back surface of the glass - rear window.



(a) Application of primer (glass side)
(b) Application of primer (body side)
(c) Adhesive
(d) Molding - rear window
(e) Dam rubber - rear

(3) Insert the locating pins - rear window into the rear panel holes, and install the glass - rear window.
(4) Lightly press the entire perimeter of the glass - rear window for tight fit.
(5) Make flush the adhesive surface jutted out using spatula.

6) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
• When opening/closing the door after the glass - rear window was bonded, always lower the glass assembly - door first, and then open/close it carefully.
• Move the vehicle slowly.
• For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

7) Connect the rear defogger connector.
8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
9) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15.Rear Window Defogger System

A: WIRING DIAGRAM

Refer to “Rear Defogger System” in the wiring diagram. <Ref. to WI-314, WIRING DIAGRAM, Rear Defogger System.>

B: INSPECTION

1. SYSTEM INSPECTION

Symptoms	Inspection order
Rear window defogger does not operate.	1. Check the fuse. 2. Check the rear defogger relay. 3. Check the rear window defogger switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
Rear window defogger system can be customized using the Subaru Select Monitor, when the customize setting {Auto A/C Setting} of the body integrated unit is set to {support}.

System name	Initial setting	Customize setting
Rear defogger operation mode	OFF after 15 min.	Repeat 15 min. operation and 2 min. stop.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:
Before performing inspection, check whether the rear defogger operation mode setting is either in initial setting or customize setting.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Data Monitor».
   (8) From the data monitor item list, select «Auto A/C Setting».
   (9) Check the vehicle equipment and the settings of body integrated unit.
   If correct, go to (10).
   If not correct, go to (13).
   (10) From the data monitor item list, select «Rr Defogger output».
   (11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
   (12) On «Select Function» display, select «Customize».
   (13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.

2) Check the operation with rear window defogger switch ON.

• When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
• When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.

3) When the operation in 2) above fails, replace the body integrated unit.

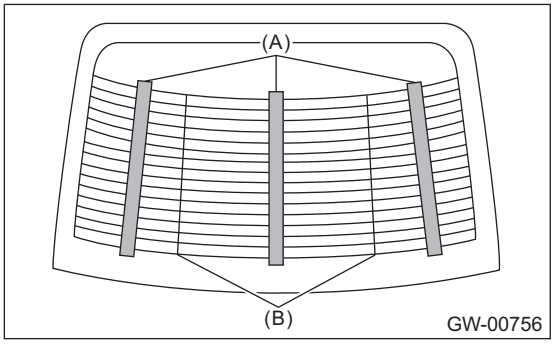
3. HEAT WIRE INSPECTION

CAUTION:
Use a dry soft cloth to wipe off dirt on the glass along the heat wires with care not to damage the heat wires.

1) Prepare the following checking items.
- Liquid crystal thermograph sheet (approximate Size: 300 × 300 mm (11.8 × 11.8 in) and thermal temperature: 35 — 40°C (95 — 104°F))
- Aluminum foil

2) Turn the ignition switch to ON.
3) Turn the defogger switch to ON.
4) Push the liquid crystal thermograph sheet from the outside of the glass - rear window.

NOTE:
Use the liquid crystal thermograph sheet every range it is separated with the separate line.



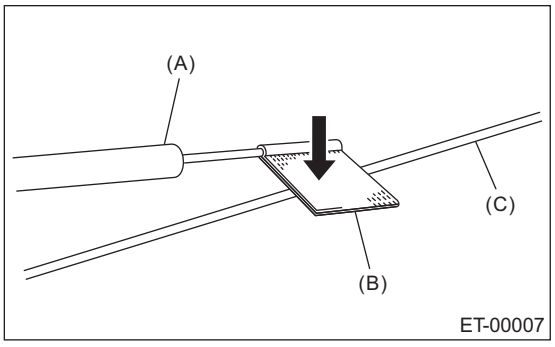
(A) Liquid crystal thermograph sheet
(B) Separate line

5) Determine the faulty heat wire by checking the color of the liquid crystal thermograph sheet.

Liquid crystal thermograph sheet	Criteria
Change occurred (red → blue)	Normal
No change (black)	Open

NOTE:
- Check from the inside of the glass - rear window if the liquid crystal thermograph sheet does not change.
- The time for the color change may differ depends on the surface temperature of the glass.

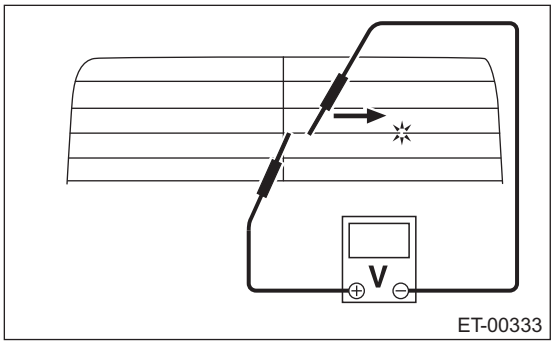
6) Wrap a piece of aluminum foil around the tip of tester probe and press it against the heat wire with your finger.



(A) Tester probe
(B) Aluminum foil
(C) Heat wire

7) To both ends of the section that has been found to include an open in the step 5), apply the tester positive (+) probe and the negative (–) probe.

8) Move the tester probe on the negative (–) side slowly along the heat wire. If voltage changes from zero while moving the tester probe, heat wire is open at the voltage change point.

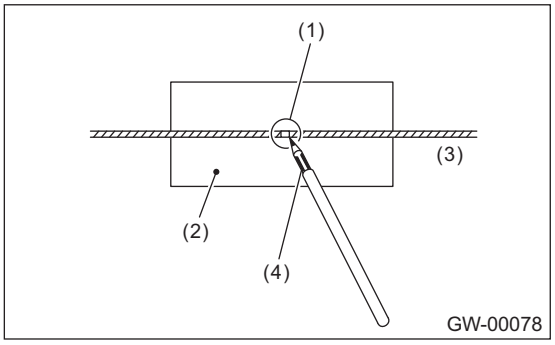


9) Repair the heat wire that determines the place of the open circuit. <Ref. to GW-52, REPAIR, Rear Window Defogger System.>

C: REPAIR

1) Clean the broken portion with alcohol or appropriate cleaning solvent.
2) Mask both side of wire with masking tape.
3) Apply the conductive silver composition to the broken portion.

Preparation items:
Conductive silver composition: Permatex QUICK GRID



(1) Broken portion
(2) Masking tape
(3) Broken wire
(4) Conductive silver composition

4) Dry using a dryer after applying the composition.
5) After repair, check the wire.

16.Wiper Deicer System

A: WIRING DIAGRAM

Refer to “Wiper Deicer System” in the wiring diagram. <Ref. to WI-373, Wiper Deicer System.>

B: INSPECTION

1. SYSTEM INSPECTION

NOTE:
- The wiper deicer does not operate when the ambient temperature becomes 5°C (41°F) or more.
- The wiper deicer operates with the rear window defogger at the same time.
- It is possible to perform a forced operation if you keep holding the rear window defogger switch for 3 seconds or more.

Symptoms	Inspection order
Wiper deicer does not operate.	1. Check the fuse. 2. Check the wiper deicer relay. 3. Check the wiper deicer switch. 4. Check the heat wire. 5. Check the wiring harness. 6. Check body integrated unit.

NOTE:
- Wiper deicer system can be customized using the Subaru Select Monitor, when the customize setting {Auto A/C Setting} of the body integrated unit is set to {support}.
- Set the system using the rear defogger operation mode, and setting will be the same as rear defogger system setting.

System name	Initial setting	Customize setting
Rear defogger operation mode	OFF after 15 min.	Continuous operation*

*: When one of the following conditions occurs, continuous operation is suspended and turned off after 15 minutes.
- Ambient temperature at 5°C (41°F) or more continues for 10 seconds.
- Malfunction occurs on ambient sensor.
- Vehicle speed of 15 km/h (9 MPH) or less continues 15 minutes (OFF when conditions are met)
- Malfunction occurs in CAN communication.
- Battery voltage remains at 10 V or less for 30 seconds.
- SI-DRIVE [I] mode driving continues for 10 seconds.

2. CHECK WITH SUBARU SELECT MONITOR

CAUTION:
Before performing the inspection, check the following settings.
- **Wiper deicer setting → “support”. If “no support”, set to “support” using customize setting.**
- **Rear defogger operation mode setting → initial setting or customize setting.**

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.
   (1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.

   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Data Monitor».
   (8) From the data monitor item list, select «Auto A/C Setting».
   (9) Check the vehicle equipment and the settings of body integrated unit.
   If correct, go to (10).
   If not correct, go to (13).

(10) From the data monitor item list, select «Rr Defogger output».
(11) Check the displayed data (ON/OFF) by operating the rear window defogger switch.
(12) On «Select Function» display, select «Customize».
(13) From the Customize item list, select «Auto A/C Setting» and match the auto A/C ECM setting to the actual vehicle equipment.

2) Check the operation with rear window defogger switch ON.
• When customize setting is set as “Continuous”, it is normal if the 15-minute operation and 2-minute stop repeats.
• When customize setting is “Normal”, it is normal if the operation lasts for 15 minutes and then turns OFF.
3) When the operation in 2) above fails, replace the body integrated unit.

3. HEAT WIRE INSPECTION

Refer to “HEAT WIRE INSPECTION” of “Rear Window Defogger System”. <Ref. to GW-51, HEAT WIRE INSPECTION, INSPECTION, Rear Window Defogger System.>

NOTE:
Heat wire inspection needs removing/installing procedure of instrument panel assembly.

C: REPAIR

Refer to “REPAIR” of “Rear Window Defogger System”. <Ref. to GW-52, REPAIR, Rear Window Defogger System.>

NOTE:
Heat wire repair needs removing/installing procedure of instrument panel assembly.

1. General Description

A: SPECIFICATION

1. COMBINATION METER ASSEMBLY

NOTE:
Specifications of the combination meter vary depending on the market and the grade.

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
Speedometer	Stepping motor type	Combination meter	—
Tachometer			
Engine coolant temperature gauge			
Fuel gauge			
ABS warning light	LED	Combination meter	On/Off
STEERING warning light			
AT oil temperature warning light			
Driver's seat belt warning light			
Door warning light			
Tire pressure warning light			
AWD warning light			
Hill start assist OFF indicator light / hill start assist warning light			
VDC warning light / VDC operation indicator light			
VDC OFF indicator light			
VDC traction mode indicator light			
High beam indicator light			
Front fog light indicator light			
Lighting indicator light			
Malfunction indicator light			
Airbag warning light			
REV indicator light			
LED headlight warning light			
Lane departure warning OFF indicator light			
Pre-collision brake OFF indicator light			
Electronic parking brake operation indicator light			
AVH ON indicator light			
AVH operation indicator light			
Oil pressure warning light			
Charge warning light			
Rear differential oil temperature warning light			
Auto leveler warning light			
Parking brake/brake fluid level warning light/vacuum pump warning light/electronic parking brake warning light			
Meter illumination back light			Light ON
Fuel level warning light			On/Off (area near the E mark is illuminated)
Turn signal indicator light		Turn signal and hazard unit	Turns on or off according to module control
Security indicator light		Body integrated unit	

Meter, display	Operation method, display method	Drive control	When checking the indicator needle operation/needle reading operation
ODO indicator	TFT	Combination meter	—
Trip indicator			
ECO gauge			
Select lever / shift position indicator			
SI-DRIVE mode indicator			
Information (intervention) display			
Warning and indicator display • Door partially latched • Engine oil level • BSD/RCTA • BSD/RCTA OFF • Washer fluid level • High Beam Assist • Access key • RAB • RAB OFF • SRH OFF			
DCCD mode indicator			
Cruise control system indicator • Constant speed cruise • SET • Set speed			
EyeSight system indicator • Adaptive cruise • Constant speed cruise • SET • READY • Preceding vehicle • Following distance setting • Set speed • Traffic lane • EyeSight warning • EyeSight temporary stop • OFF • HOLD • Lane keep • Signal			

2. MULTI FUNCTION DISPLAY

NOTE:
Specifications of the multi-function display vary depending on the market and the grade.

Display	Display method
Welcome screen, information bar screen, self-check screen, economy evaluation screen, A/C screen, fuel economy screen, triple meter screen, preventive safety screen, boost screen, setting screen, clock screen, calendar screen, interrupt (information) screen, driving assist screen	TFT
Passenger's airbag ON indicator light	LED
Passenger's airbag OFF indicator light	
Passenger's seat belt warning light	

B: LOCATION

Refer to "LOCATION" of each diagnostic section.
- Combination meter: <Ref. to MET(diag)-5, LOCATION, Electrical Component Location.>

• Multi-function display: <Ref. to MFD(diag)-6, LOCATION, Electrical Component Location.>

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
• Use gloves to avoid damage to and get fingerprints on the glass surface. Wipe off using a soft cloth, if the part is contaminated.
• When the combination meter assembly has been replaced, be sure to perform the following operations.
  – For models without the keyless access with push button start except for C0, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.
  – Be sure to reset the ODO fuel economy value of the multi-function display (MFD). <Ref. to IDI-10, ODO FUEL ECONOMY VALUE RESET, OPERATION, Multi-function Display (MFD) System.>
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

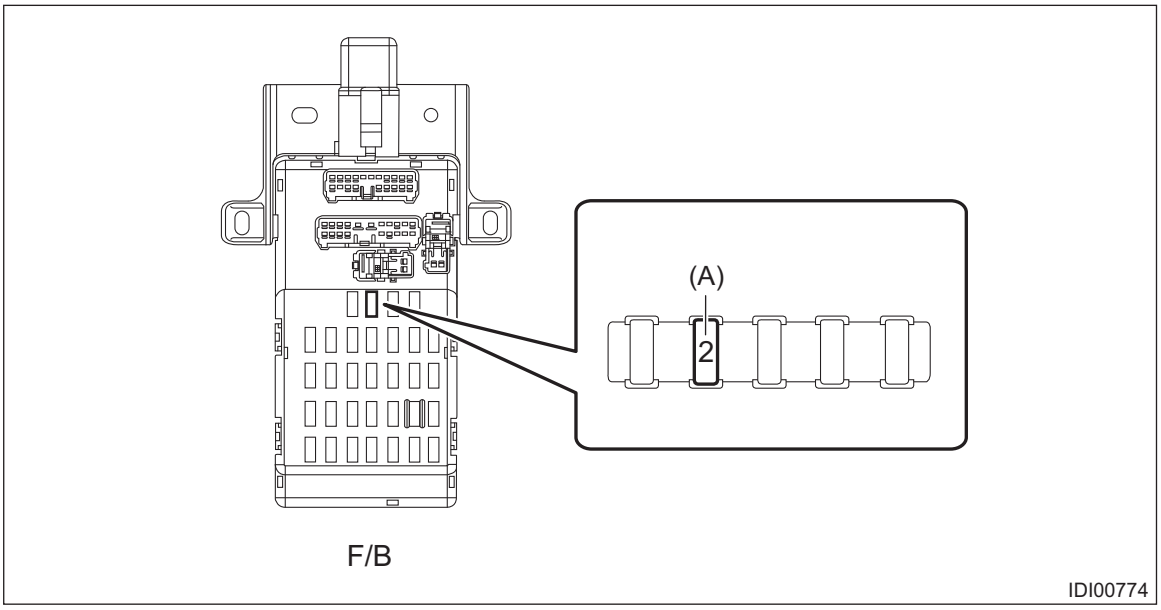
D: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	Remarks
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 7.5 A (combination meter, MFD)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Combination Meter System

A: WIRING DIAGRAM

Refer to “Combination Meter System” in the wiring diagram. <Ref. to WI-123, WIRING DIAGRAM, Combination Meter System.>

B: ELECTRICAL SPECIFICATION

1. COMBINATION METER ASSY

Refer to “Control Module I/O Signal” of “COMBINATION METER (DIAGNOSTICS)” section. <Ref. to MET(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. SELF-DIAGNOSIS DISPLAY MODE

The self-diagnosis (checking of each meter, warning light, indicator light, illumination, TFT) of combination meter can be performed in the following procedure.
1) Start the self-diagnosis display mode. (There are two methods.)

CAUTION:
Perform the steps described in (1) through (4) within 10 seconds.

- Method with lighting switch

(1)	Within 3 seconds after turning the ignition switch to ON, set the lighting switch to the parking light or headlight position.
(2)	While holding the lighting switch to the parking light or headlight position, press the trip meter knob three times.
(3)	Turn the lighting switch to OFF, and press the trip meter knob three times.
(4)	Set the lighting switch to the parking light or headlight position again, and press the trip meter knob three times.

- Method with seat belt

(1)	Unfasten → fasten the driver’s seat belt within 3 seconds after the ignition switch is turned to ON.
(2)	With the driver’s seat belt fastened, press the trip meter knob three times.
(3)	Unfasten the driver’s seat belt, and then press the trip meter knob three times.
(4)	Fasten the driver’s seat belt again, and then press the trip meter knob three times.

NOTE:
- When the self-diagnosis function operates, the warning light, indicator light, and TFT display checks are performed. After this, the buzzer will sound for 0.5 seconds every time the trip meter knob is pressed, and operation checks are performed in the order of meter indicator needle operation, meter indicator needle indication, and TFT. Turn the ignition switch to OFF (ACC OFF) to cancel the self-diagnosis function.
- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically.

2) Go to “Check meter indicator operation”.
Check meter operation, warning light, indicator light, illumination and TFT.

NOTE:
- After “_S_1” is displayed on the TFT, the meter indicator operation check mode is initiated.
- Each of the meter indicator operation display and TFT display switches every 6 seconds.

Meter indicator	TFT display, illumination	Warning light/ indicator light
MIN indication ↓ MAX indication	ILL1 (Min. brightness) ↓ *3 ILL6 (Max. brightness)	*1, *2
MAX indication ↓ MIN indication	ILL6 (Max. brightness) ↓ *3 ILL1 (Min. brightness)	

*1: Warning lights and indicator lights controlled by the meter drive circuit are illuminated. <Ref. to IDI-2, SPECIFICATION, General Description.>
*2: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
*3: Display for one second for each level.
3) Press the trip meter knob once.
4) Go to “Meter Indicator Needle Indication Check”.
Check meter operation, warning light, indicator light, and TFT.

NOTE:
• Meter indicator switches every 1.5 seconds for each indication.
• ILL indication illuminates at the same brightness as when entering “Meter Indicator Needle Indication Check”.
• During operation, “_S_2” is displayed on the TFT.

Speedometer (km/h)	Tachometer (r/min)	Fuel gauge	Engine coolant temperature gauge	Fuel level warning light	Warning light/ indicator light
0	0	Lowest point	Lowest point	Light ON	Fuel level warning light (around E) illuminates. *1
0	0	E	C	Light ON	
40	1,000	1/2	1/2	Light OFF	
100	4,000	F	H	Light OFF	
40	1,000	1/2	1/2	Light OFF	
0	0	E	C	Light ON	

*1: Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
5) Press the trip meter knob once.
6) Go to “Check TFT display”.
Check the TFT display.

NOTE:
• TFT display switches every 10 seconds.
• After “_S_3” is displayed on the TFT, the TFT display check mode is initiated.
• TFT display switches every 1 second.
• Warning lights and indicator lights controlled by the meter drive circuit go off. <Ref. to IDI-2, SPECIFICATION, General Description.>
• Warning lights and indicator lights controlled by other module are turned on/off according to the module control. <Ref. to IDI-2, SPECIFICATION, General Description.>
• The meter indication remains at the same level as “Meter Indicator Needle Indication Check”.
• ILL indication illuminates at ILL6 level (max. brightness).
• After No. 8 is displayed in the illumination order, display is repeated from No. 1 again.
• The version display contents of the illumination order No. 1 varies depending on the vehicle.

Order	TFT display
1	Version display & color gradation
2	Black
3	Red
4	Green
5	Blue
6	White
7	Color gradation
8	Cross talking

2. DEMONSTRATION MODE

The demonstration mode screen of the combination meter can be displayed according to the following procedure.

CAUTION:
• Perform the steps while the ignition switch is OFF (ACC OFF) and the odo/trip meter is not displayed.
• To avoid battery discharge, perform the operation under the following condition.
– Perform the operation while the battery is being charged.
– While performing the operation and displaying the demonstration mode, close all doors and do not operate any electrical parts.
• If the battery voltage is low, the demonstration mode is not initiated.
• To display the demonstration mode, set the "Demonstration mode permission / fault permission" of the user customize mode to "permission". For detailed operation procedures, refer to "Application help".
• When the demonstration mode display is completed, make sure to set "Demonstration mode permission / fault permission" of the user customize mode to "fault permission". Do not deliver the vehicle to the customer with "Demonstration mode permission / fault permission" set to "permission".
• Even if the backup fuse is removed, the demonstration mode can be initiated.
• Perform the steps described in (1) through (4) within 10 seconds.
• If the procedure is not performed properly, stop the operation and wait until the odo/trip meter display disappears (for approx. 10 seconds), and then perform the procedure from (1) to (4) again after confirming that the display disappeared.

(1)	Press the trip meter knob twice. NOTE: When the trip meter knob is pressed once, the odo/trip meter is displayed.
(2)	Press the MID (i/SET) switch three times within three seconds after the operation (1) above is performed.
(3)	Press the trip meter knob once, and press the MID (i/SET) switch three times.
(4)	Press the trip meter knob once, and press the MID (i/SET) switch three times.
(5)	The "demonstration mode" is initiated.

NOTE:
The demonstration mode will be cancelled in the following condition.
When resuming the operation after cancellation, the demonstration mode is displayed. However, the resuming can only be accepted after approx. 1 minute.
• At the completion of the "goodbye screen" display that is shown 60 minutes after the demonstration mode is initiated
• When the ignition switch is turned to ON
• When the MID (i/SET) switch is turned to ON for two seconds
• When the battery voltage is low
• When the push button ignition switch is pressed with the access key out of the passenger room (model with keyless access with push button start)
• When any request switch is pressed with the access key in the passenger room (model with keyless access with push button start)

D: INSPECTION

Refer to "Basic Diagnostic Procedure" of "COMBINATION METER (DIAGNOSTICS)" section. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>

E: NOTE

For procedure of each component in the combination meter system, refer to the respective section.
• Combination meter assembly: <Ref. to IDI-12, Combination Meter.>
• Speedometer: <Ref. to IDI-15, Speedometer.>
• Tachometer: <Ref. to IDI-16, Tachometer.>
• Fuel gauge: <Ref. to IDI-17, Fuel Gauge.>
• Engine coolant temperature gauge: <Ref. to IDI-18, Engine Coolant Temperature Gauge.>
• Multi information display switch: <Ref. to IDI-21, Switches and Harness.>

4. Multi-function Display (MFD) System

A: WIRING DIAGRAM

Refer to “Multi-function Display (MFD) System” in WI section. <Ref. to WI-273, WIRING DIAGRAM, Multi-function Display (MFD) System.>

B: ELECTRICAL SPECIFICATION

1. MULTI FUNCTION DISPLAY

Refer to “Control Module I/O Signal” of “MULTI-FUNCTION DISPLAY (DIAGNOSTICS)” section. <Ref. to MFD(diag)-7, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: OPERATION

1. DIAGNOSTIC MODE

The settings of the multi-function display can be changed by performing the following procedures to display the diagnostic mode. To show the demonstration display only, refer to “DEMONSTRATION DISPLAY”.

CAUTION:
- **To avoid battery discharge, perform the procedure while charging the battery.**
- **While performing the work, close the front hood and all doors, and do not operate any electrical parts.**
- **Display can not be switched to diagnostic mode if the illumination control dial is set to the position for the dimming cancel function (maximum brightness).**

1) Procedure

CAUTION:
Perform the steps described in (2) through (4) within 10 seconds.

(1)	Within 3 seconds after turning the ignition switch to ON, set the lighting switch to the parking light or headlight position.
(2)	While holding the lighting switch to the parking light or headlight position, press the MFD (ENTER or VIEW) switch three times.
(3)	Turn the lighting switch to OFF, and press the MFD (ENTER or VIEW) switch three times.
(4)	Set the lighting switch to the parking light or headlight position again, and press the MFD (ENTER or VIEW) switch three times.
(5)	Go to “Diagnostic mode”.

NOTE:
- Except for the demonstration display setting of the diagnostic mode, the display will terminate by turning the ignition switch to OFF (ACC OFF) or by selecting “Back” from the menu screen.
- The demonstration display setting of the diagnostic mode will terminate by starting the engine or removing the battery. Even if the ignition switch is turned to OFF (ACC OFF), then to ON again, the diagnostic mode will not terminate.
- To select other menus from the demonstration display setting, terminate the diagnostic mode by starting the engine or removing the battery, then access to the diagnostic mode again.

2) Display menu
Change the display and settings from each menu.

Menu	Item	Content
Demonstration display setting	—	Shows demonstration display.
Vehicle status confirmation	• CAN communication	Displays the connection status of input signals.
	• U-ART communication	
	• Camera 1	
	• Camera 2	
	• USB	
Camera setting	• Front view monitor	Adjust the activation/deactivation of guide line and the position of guide line for each camera, and then select “Set” to confirm. For resetting the guide line, select “Yes” to confirm.
	• Side view monitor	
Customize	• Key operation sound	Select “ON” or “OFF”, then select “Set” to determine.
	• Correction of lifetime fuel economy value*	Adjust the fuel economy value within the range of –10 — +10 km/l, then determine the value with MFD (ENTER or VIEW) switch.
Corner sensor	—	Select “Yes” or “No”, then select “Set” to determine.
Back	—	Finish the diagnostic mode.

*: Correction of lifetime fuel economy value is used only when the multi-function display has been replaced. This function is provided as a compensation feature to bring the current lifetime fuel economy value to the one before the replacement of multi-function display.

2. DEMONSTRATION SCREEN DISPLAY

The demonstration mode screen can be displayed according to the following procedure.

CAUTION:
- **Perform the steps while the ignition switch is OFF (ACC OFF).**
- **To avoid battery discharge, perform the operation under the following condition.**
  – Perform the operation while the battery is being charged.
  – While performing the operation and displaying the demonstration mode, do not operate any electrical parts.
- **Perform the steps described in (2) through (5) within 10 seconds.**

(1)	Sit in the driver’s seat and close the door.
(2)	Open the driver’s door, and within 5 seconds, press the MFD (ENTER or VIEW) switch three times.
(3)	Close the driver’s door, and press the MFD (ENTER or VIEW) switch three times.
(4)	Open the driver’s door, and press the MFD (ENTER or VIEW) switch three times.
(5)	Close the driver’s door, and press the MFD (ENTER or VIEW) switch three times.
(6)	Go to “Demonstration screen display”.

NOTE:
The demonstration display will be cancelled in any of the following conditions.
- When 60 minutes elapsed since the demonstration mode started
- When the ignition switch is turned to ON
- When the MFD (ENTER or VIEW) switch is turned to ON for two seconds
- When the battery voltage is low

3. ODO FUEL ECONOMY VALUE RESET

Follow the procedure below to initialize the ODO setting value.

(1)	Turn the ignition switch to ON, and press the MFD (ENTER or VIEW) switch for two seconds.
(2)	Select “Factory delivery setting” from “Setting screen”.
(3)	Select “ODO setting reset” and determine with “Yes”.
(4)	The screen that indicates the completion of the setting is displayed for three seconds. This is the end of operation.

NOTE:
- The resetting operation is confirmed twice. Select confirmation according to the screen.
- The display will terminate by turning the ignition switch to OFF (ACC OFF) or by selecting “Back” from the menu screen.

D: INSPECTION

Refer to “Basic diagnostic procedure” of “MULTI-FUNCTION DISPLAY (DIAGNOSTICS)” section. <Ref. to MFD(diag)-2, Basic Diagnostic Procedure.>

E: NOTE

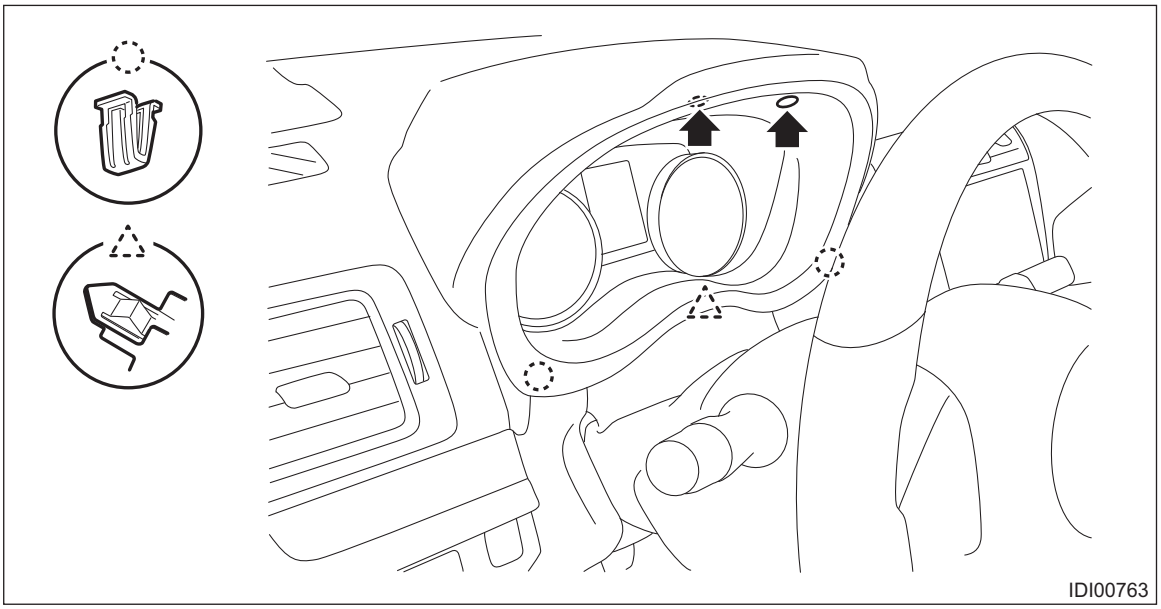
For procedure of each component in the Multi-Function Display (MFD) system, refer to the respective section.
- Multi-function display (MFD): <Ref. to IDI-19, Multi-function Display (MFD).>
- Multi-function display switch: <Ref. to IDI-21, Switches and Harness.>

5. Combination Meter

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

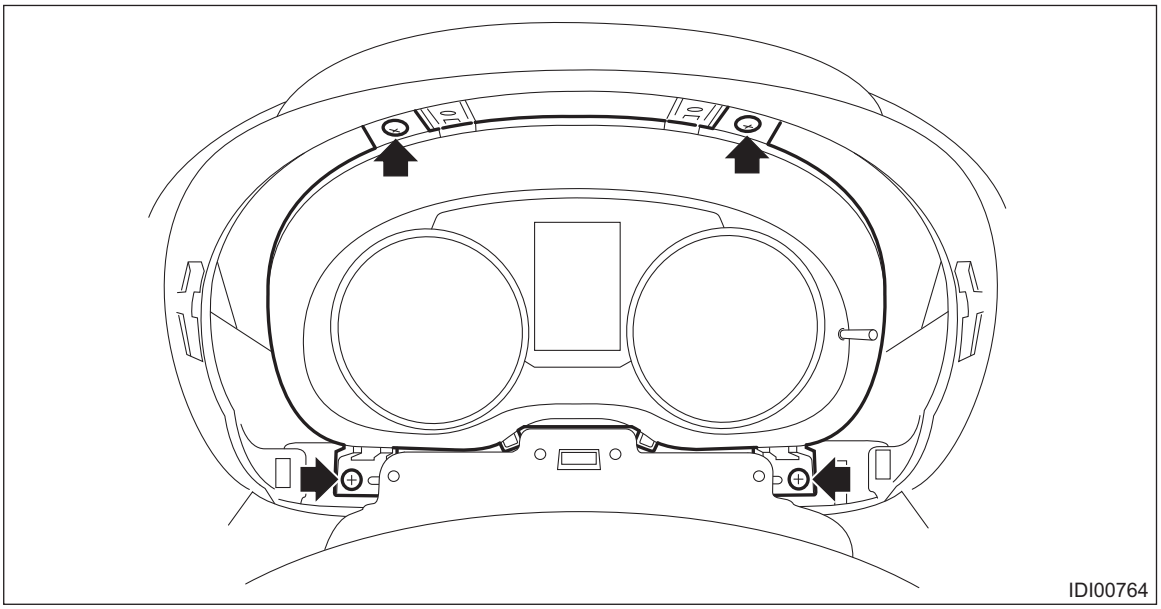
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Release the lock, tilt the steering column to the lowest end and fully extend the column by the telescopic system.
3) Release the screws, clips and claws, and remove the visor - combination meter.



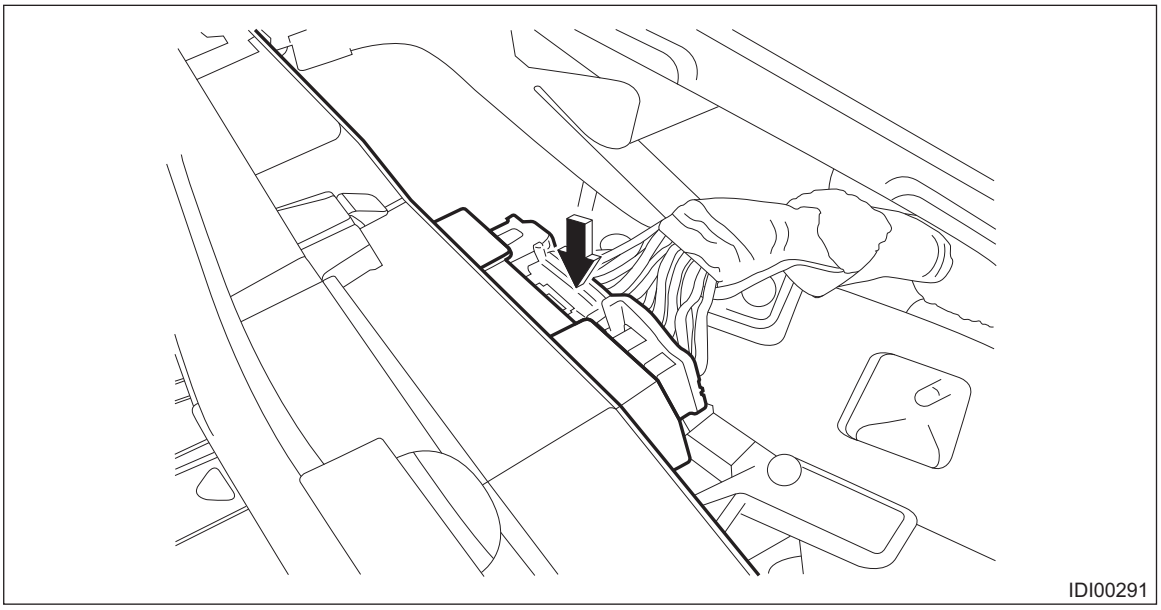
4) Remove the combination meter assembly.

CAUTION:
- **Be careful not to damage the meter or instrument panel.**
- **Pay particular attention to avoid damaging the meter glass.**

(1) Remove the screws.



(2) Pull the combination meter assembly toward you and disconnect the connector.



B: INSTALLATION

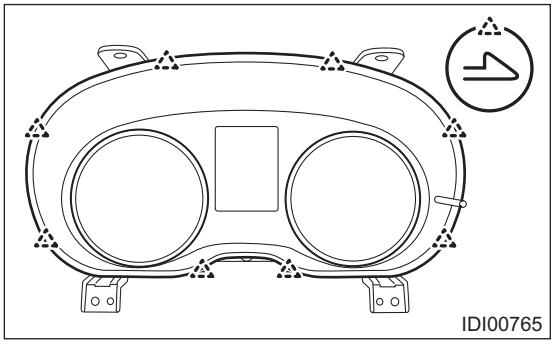
CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that each meter operates normally.**
- **When the combination meter assembly has been replaced, be sure to perform the following operations.**
  - **For models without the keyless access with push button start except for C0, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".**
  - **Be sure to reset the ODO fuel economy value of the multi-function display (MFD). <Ref. to IDI-10, ODO FUEL ECONOMY VALUE RESET, OPERATION, Multi-function Display (MFD) System.>**

1) Install the combination meter assembly.
2) Install the visor - combination meter.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

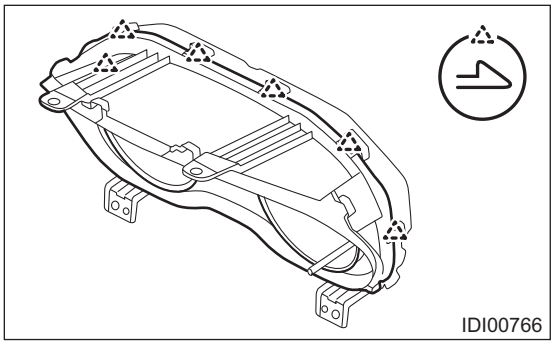
C: DISASSEMBLY

CAUTION:
- **Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.**
- **Be careful not to apply excessive force to the trip knob.**
- **Be sure not to touch the meter indicator needle.**
- **Because LEDs are used for all of warning lights and indicator lights, they are not removable from the meter - main assembly.**

1) Release the claws, and then remove the glass - combination meter.



2) Release the claws, and then remove the visor - combination meter.



D: ASSEMBLY

1) Install the visor - combination meter.
2) Install the glass - combination meter.

6. Speedometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

7. Tachometer

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

8. Fuel Gauge

A: SPECIFICATION

Since the meter - main assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

9. Engine Coolant Temperature Gauge

A: SPECIFICATION

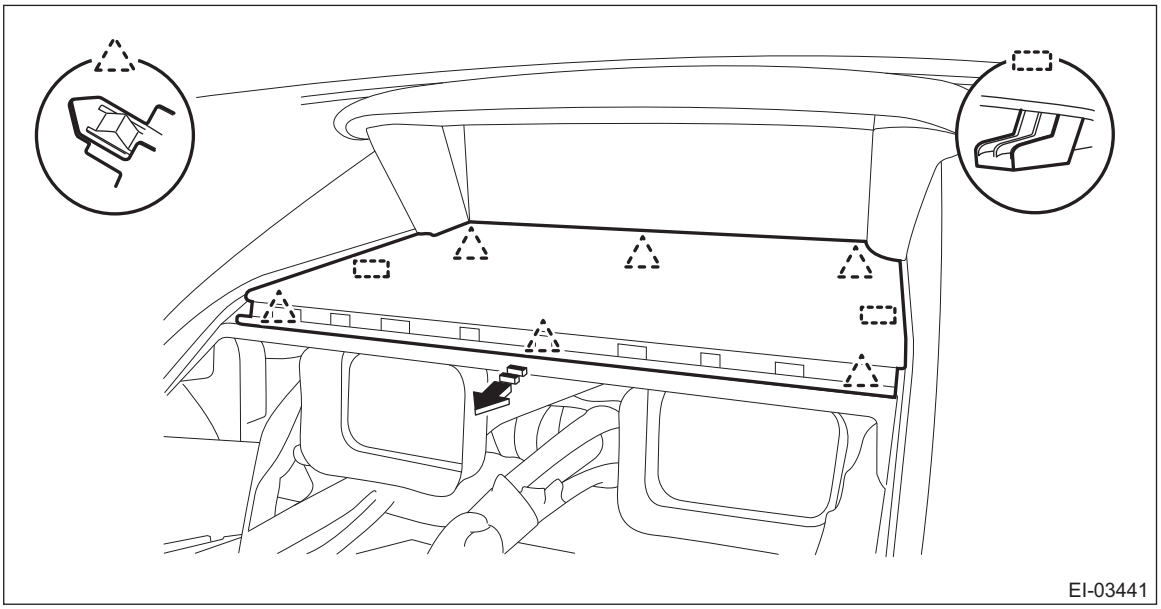
Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

10.Multi-function Display (MFD)

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

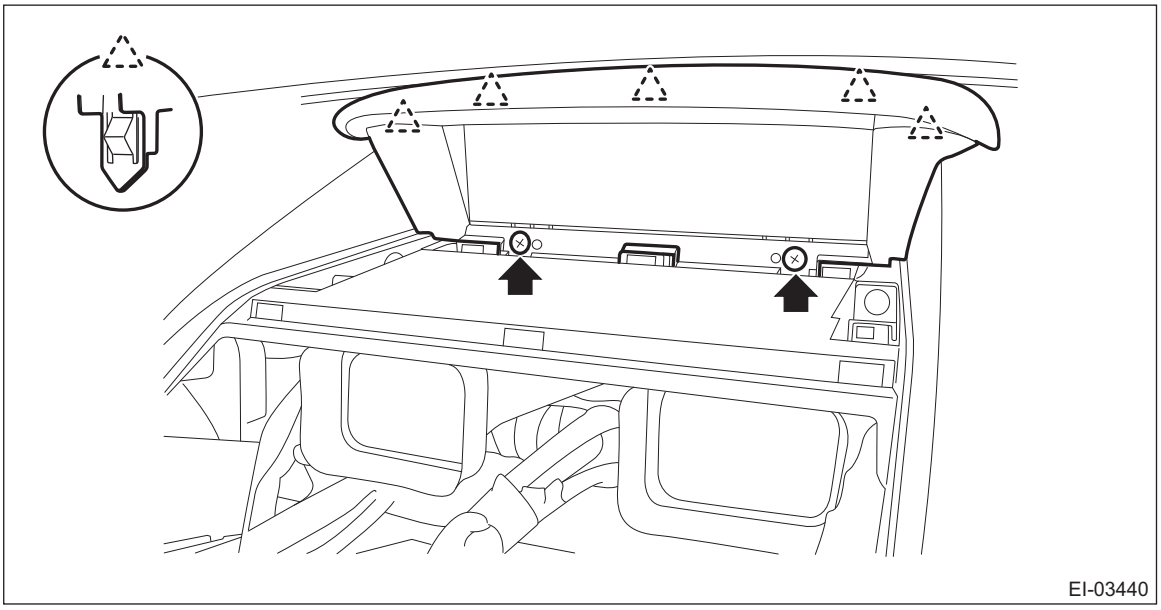
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>
3) Release the claw and hook, and then remove the cover center UPR.



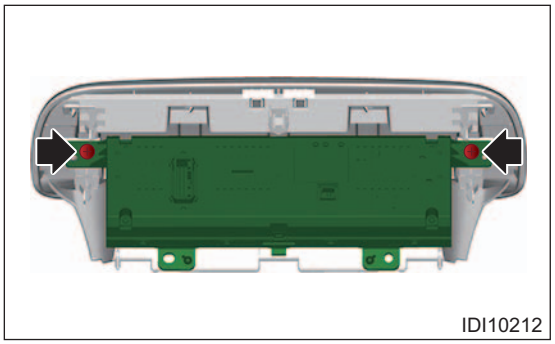
NOTE:
Lightly push up the back of the cover center UPR, hook the finger to the end portion and pull it toward you to remove it.
4) Remove the multi-function display.

CAUTION:
Be careful not to damage the multi-function display or instrument panel.

(1) Release the screws and claws.
(2) Pull the multi-function display assembly toward yourself, and disconnect the connector.



(3) Remove the screws and then remove the multi-function display.



B: INSTALLATION

CAUTION:
- **Make sure the electrical connector is connected securely.**
- **Make sure that the multi-function display operates normally.**
- **After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.**
- **When the multi-function display has been replaced, perform the following operations.**
  – Be sure to reset the ODO fuel economy value of the multi-function display (MFD). <Ref. to IDI-10, ODO FUEL ECONOMY VALUE RESET, OPERATION, Multi-function Display (MFD) System.>
  – Be sure to correction the lifetime fuel economy value of the multi-function display (MFD). <Ref. to IDI-9, DIAGNOSTIC MODE, OPERATION, Multi-function Display (MFD) System.>

1) Install the multi-function display.
2) Install the cover center UPR.
3) Install the center grille assembly.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

11.Switches and Harness

A: REMOVAL

1. MULTI INFORMATION DISPLAY SWITCH

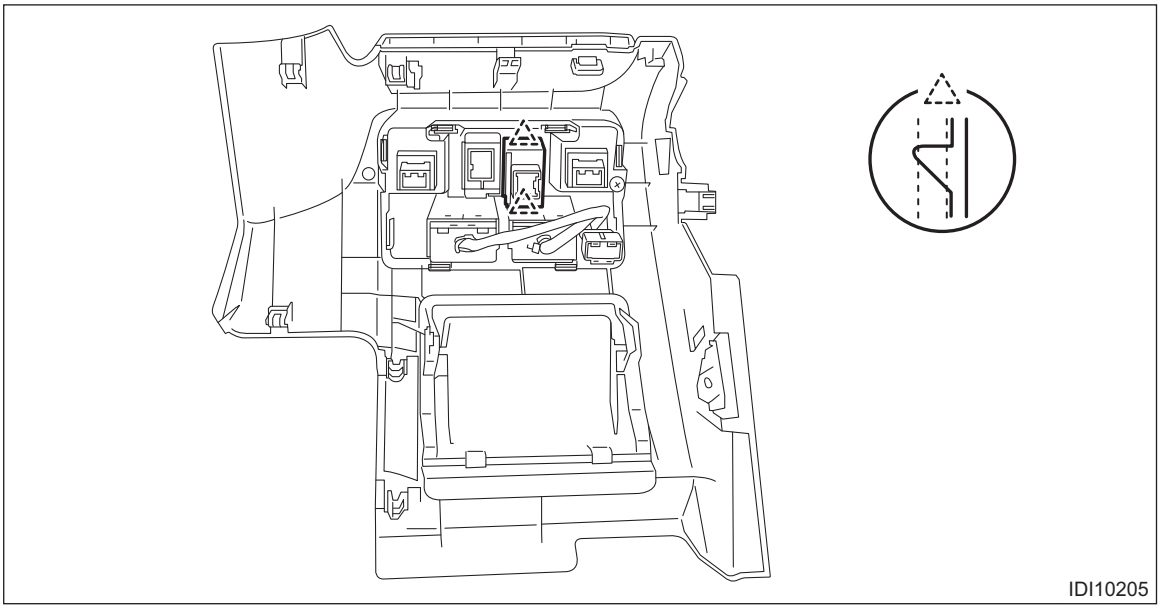
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
5) Remove the MID switch. <Ref. to PS-16, DISASSEMBLY, Steering Wheel.>

2. ILLUMINATION CONTROL SWITCH

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the illumination control switch.
(1) Release the claws and remove the illumination control switch.

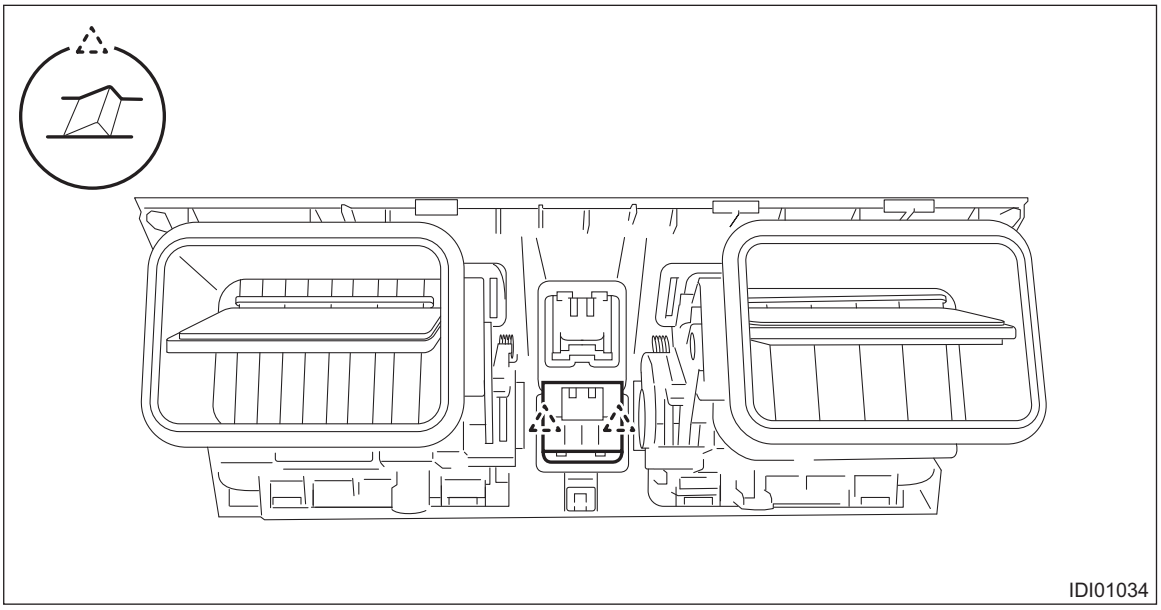


3. MULTI-FUNCTION DISPLAY SWITCH

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the center grille assembly. <Ref. to AC-91, CENTER GRILLE ASSEMBLY, REMOVAL, Air Vent Grille.>

3) Release the claws and remove the switch - multi-function display.



B: INSTALLATION

1. MULTI INFORMATION DISPLAY SWITCH

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• Make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the MID switch. <Ref. to PS-17, ASSEMBLY, Steering Wheel.>
2) Align the center position of the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.

Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. ILLUMINATION CONTROL SWITCH

1) Install the illumination control switch.
2) Install the cover assembly - instrument panel LWR driver OUT.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

3. MULTI-FUNCTION DISPLAY SWITCH

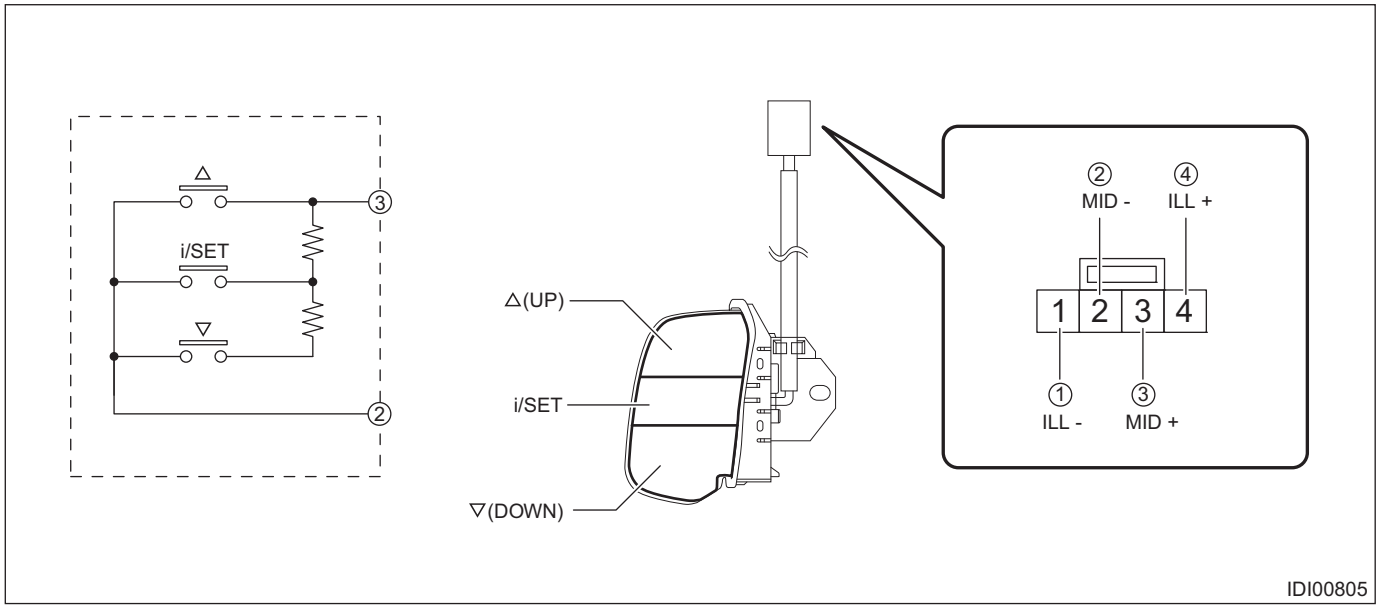
CAUTION:
After installing the center grille assembly, check that the air vent grille of the center grille assembly is inserted correctly into the air vent duct.
1) Install the switch - multi-function display.
2) Install the center grille assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. MULTI INFORMATION DISPLAY SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
3 — 2	△ (UP) i/SET ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	i/SET	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,670 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

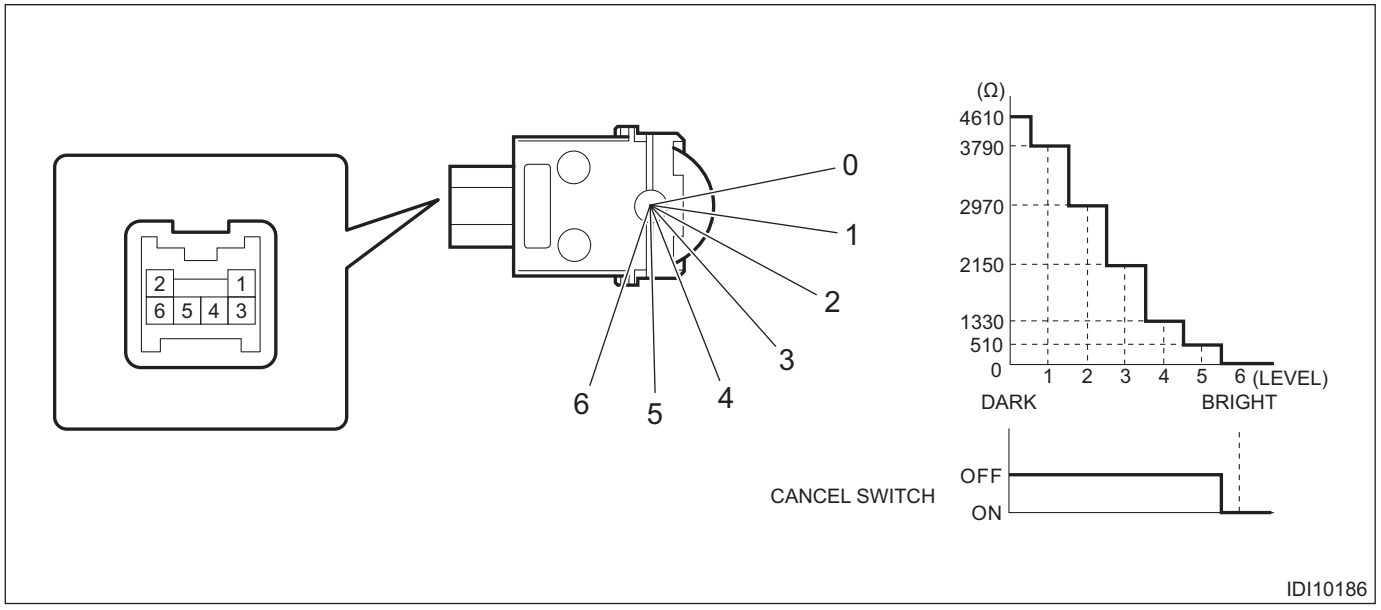
Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the MID switch if it is found defective.

2. ILLUMINATION CONTROL SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 6	Bright switch OFF	10 kΩ or more
	Bright switch ON	Less than 1 Ω
4 — 6	Always	Approx. 4,710 Ω
5 — 6	Illumination control switch upward fully open	Approx. 510 Ω
	Illumination control switch downward fully open	Approx. 4,610 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

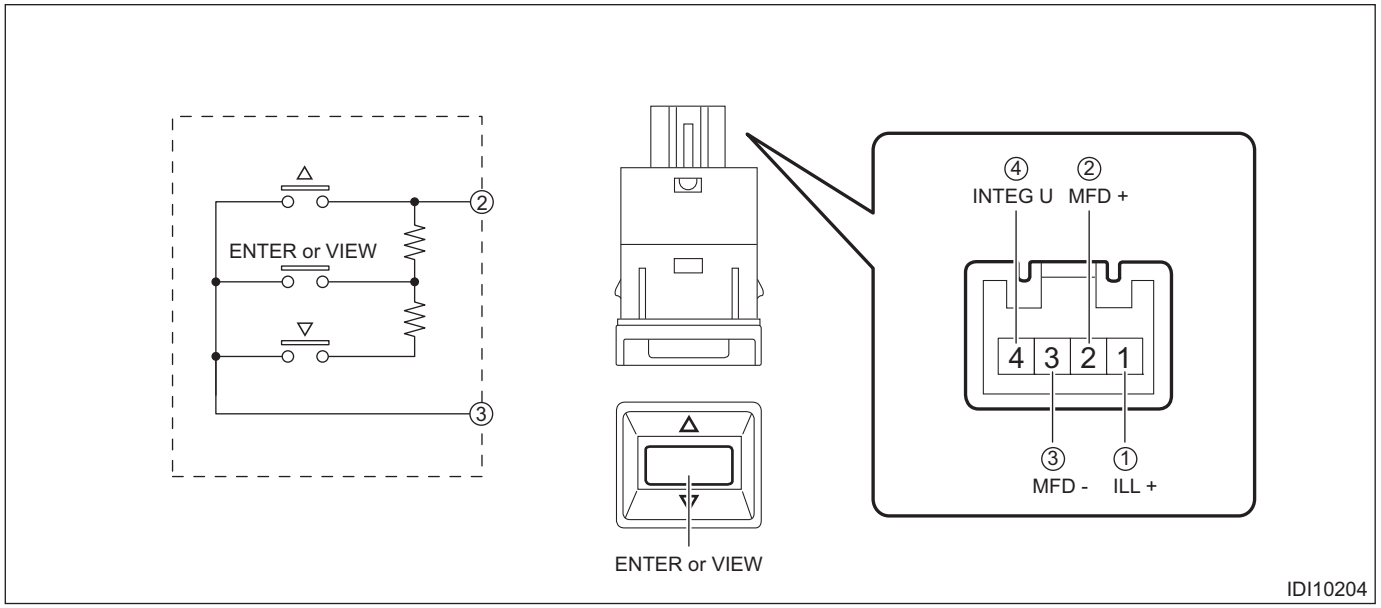
Terminal No.	Inspection conditions	Specification
2 (+) — 3(–)	Apply battery voltage.	Light ON

3) Replace the illumination control switch if it is found defective.

3. MULTI-FUNCTION DISPLAY SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
2 — 3	△ (UP) ENTER or VIEW ▽ (DOWN)	All OFF	Approx. 1 MΩ or more
	△ (UP)	ON	Less than 1 Ω
	ENTER or VIEW	ON	Approx. 1,000 Ω
	▽ (DOWN)	ON	Approx. 3,670 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

3) Replace the switch - multi-function display if it is found defective.

MULTI-FUNCTION DISPLAY(DIAGNOSTICS)

12.	User Customizing	17
13.	List of Diagnostic Trouble Code (DTC)	18
14.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	19

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to MFD(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to MFD(diag)-3, CHECK, Check List for Interview.>
2	**CHECK CAN COMMUNICATION.** Read the DTC of the CAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to LAN(diag)-111, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK MFD.** Read the DTC relating the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Record the DTCs and time stamps, and perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> Go to step **5**.	Go to step **4**.
4	**CHECK MFD.** Check the MFD display using the system operation check mode of combination meter. <Ref. to MFD(diag)-16, System Operation Check Mode.>	Is the check result OK?	System is normal.	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to MFD(diag)-14, Inspection Mode.> 3) Read the DTC relating the MFD using the Subaru Select Monitor.	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">MFD Check List for Interview</td><td colspan="2">Date the Vehicle is Received Year Month Day</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration

<tr><td colspan="3"></td></tr>
<tr><td colspan="3"></td></tr>
<tr><td>❑ Diagnostic code</td><td colspan="3"></td></tr>
</table>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the fuse condition. <Ref. to IDI-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

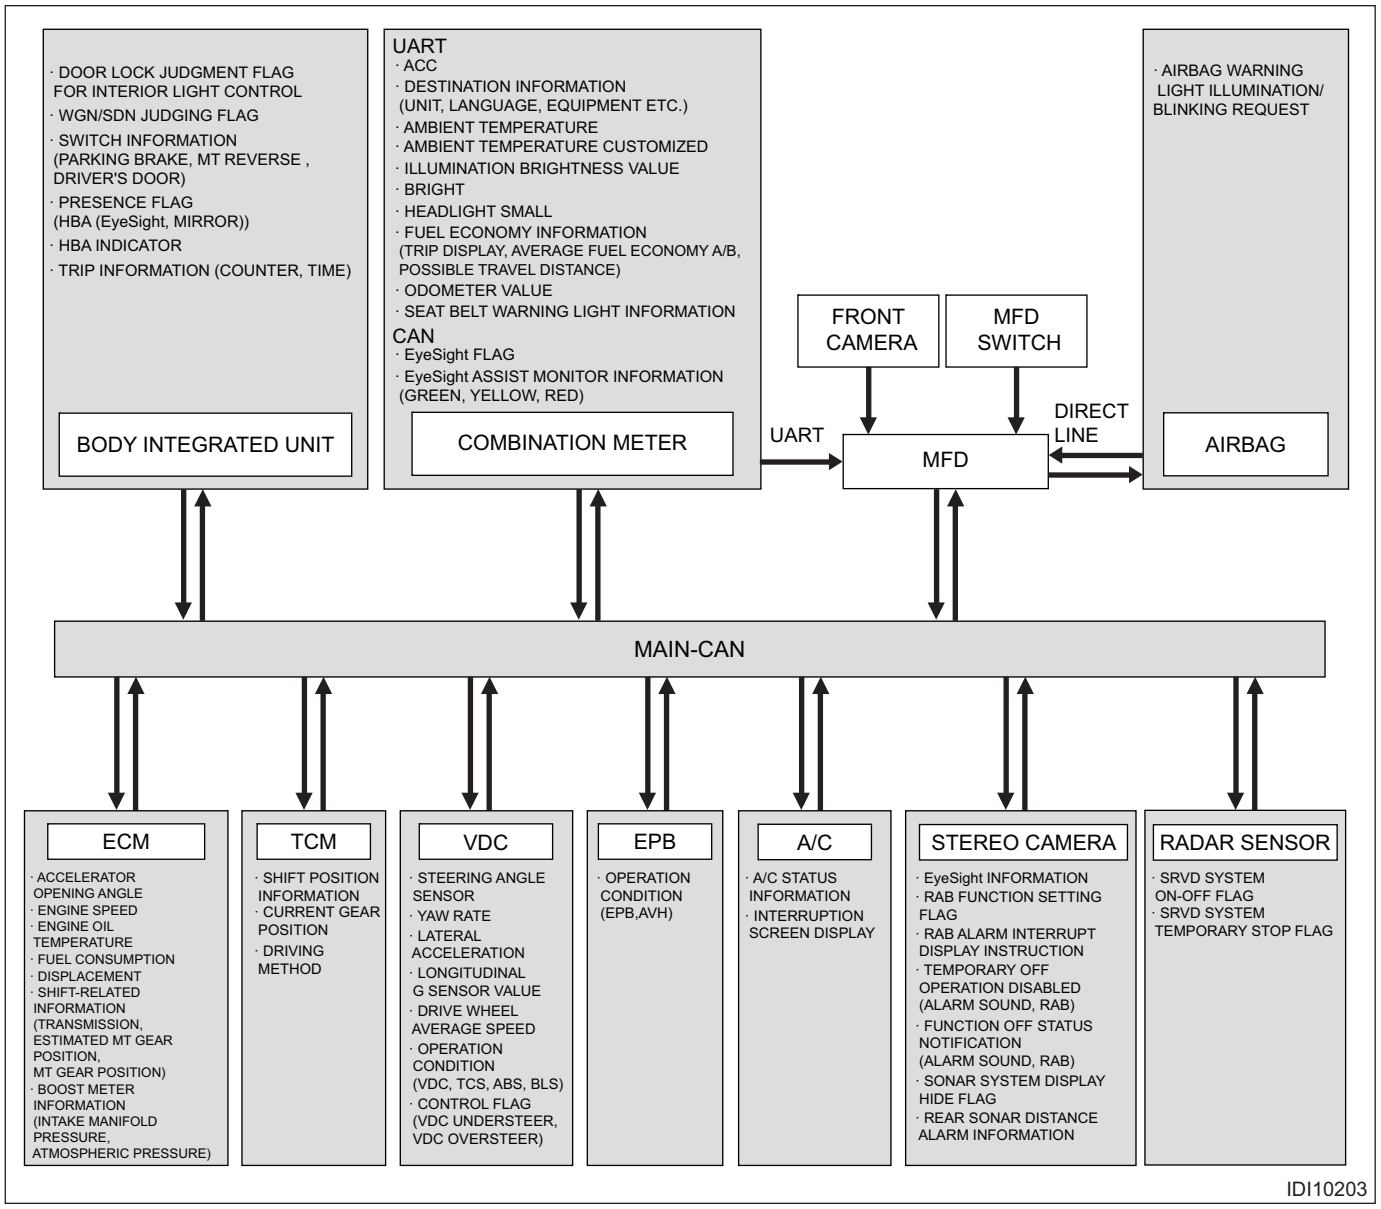
1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

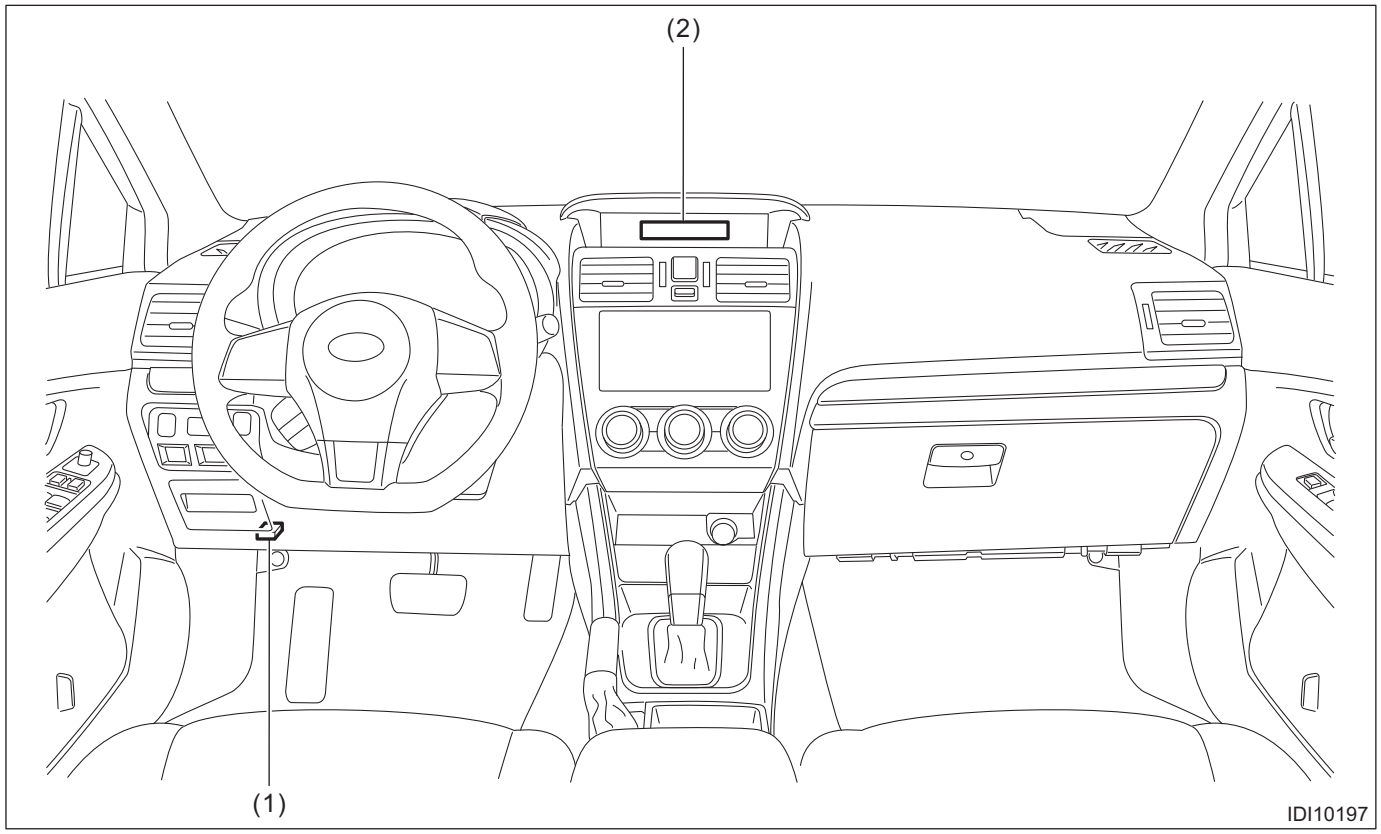
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

D: SYSTEM BLOCK DIAGRAM



4. Electrical Component Location

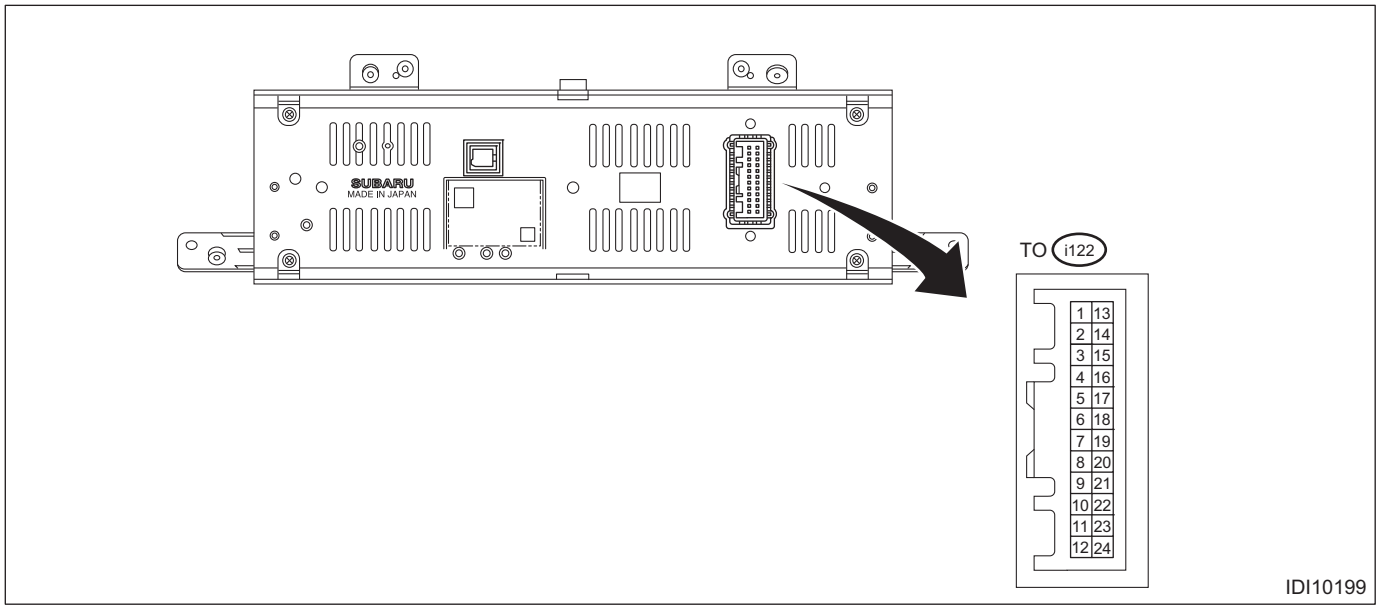
A: LOCATION



(1) Data link connector
(2) MFD

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measuring condition	Standard
1 ←→ Chassis ground	Front camera GND	Always	Less than 1 Ω
2 ←→ Chassis ground	Front camera connection detection	When not connected	Less than 0 V
3 ←→ Chassis ground	Front camera image input	Cannot be measured	—
4 ←→ Chassis ground	Power supply for front camera	IG OFF → ON	
5	—	—	—
6 ←→ Chassis ground	Side camera GND	Always	Less than 1 Ω
7 ←→ Chassis ground	Side camera connection detection	When not connected	Less than 0 V

MULTI-FUNCTION DISPLAY(DIAGNOSTICS)

Terminal No.	Content	Measuring condition	Standard
19 ←→ Chassis ground	CAN communication line (+)	Cannot be measured	—
20 ←→ Chassis ground	CAN communication line (–)	Cannot be measured	—
21 ←→ Chassis ground	GND	Always	Less than 1 Ω
22	—	—	—
23 ←→ Chassis ground	Ignition power supply	IG OFF → ON	0 V → 10 — 14 V
24 ←→ Chassis ground	Battery power supply	Always	10 — 14 V

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the MFD cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to MFD(diag)-10, INSPECTION, Subaru Select Monitor.>

If the DTCs related to the LAN system are not displayed, perform the inspection by connecting the Subaru Select Monitor to another vehicle which is operating properly and by establishing the communication.

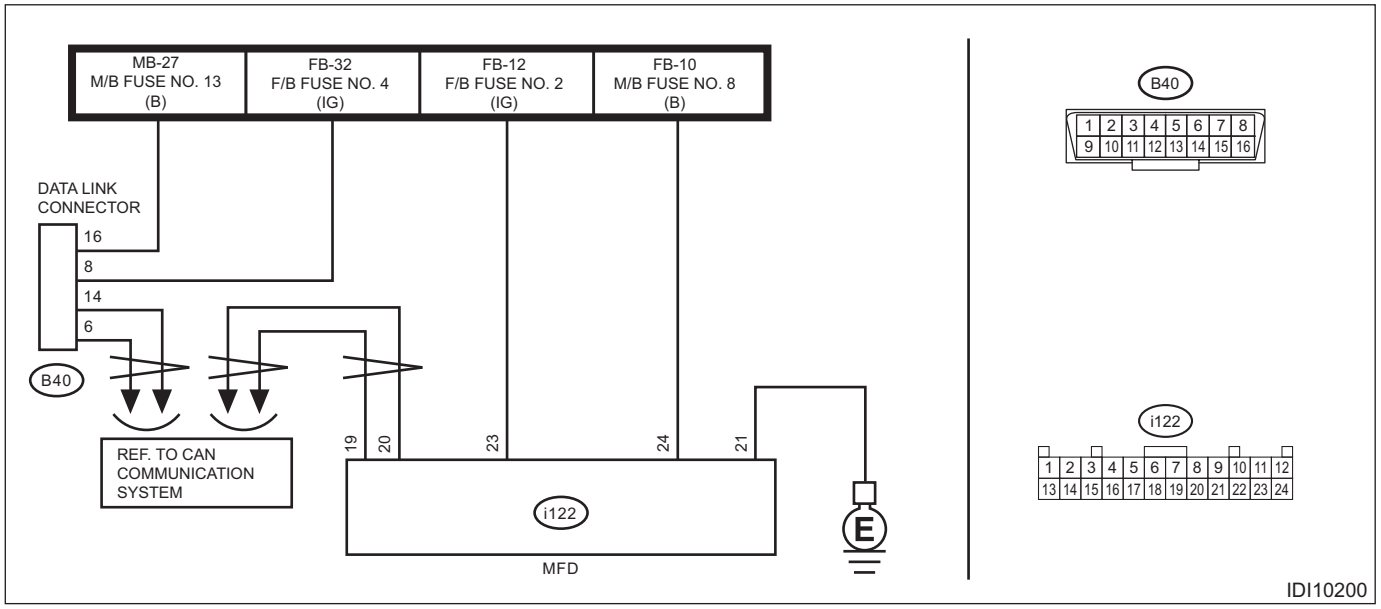
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective MFD
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:
Communication is impossible between MFD and Subaru Select Monitor.

Wiring diagram:
- Multi-function display (MFD) system <Ref. to WI-273, WIRING DIAGRAM, Multi-function Display (MFD) System.>
- CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.** Check the ignition switch.	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select «Multi-function Display» using Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.> <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>	Is the check result OK?	Go to step **3**.	Charge or replace the battery.
3	**CHECK INSTALLATION OF MFD CONNECTOR.** Check the MFD connector.	Is the MFD connector inserted until it is locked?	Go to step **4**.	Insert the MFD connector to MFD until it is locked.
4	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is there any fault in LAN system?	Perform the inspection according to the diagnosis for LAN system.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Check whether communication to MFD can be executed normally.	Is communication with «Multi-function Display» possible?	Using the Subaru Select Monitor, read DTC of «Multi-function Display». <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Go to step **7**.
6	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle to check whether the communication for initializing can be executed normally.	Is communication for initializing possible?	Go to step **7**.	Repair or replace the Subaru Select Monitor.
7	**CHECK MFD POWER SUPPLY CIRCUIT (OPEN OR SHORT CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the MFD connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the MFD connector and chassis ground. ***Connector & terminal*** ***(i122) No. 23 (+) — Chassis ground (–):*** ***(i122) No. 24 (+) — Chassis ground (–):***	Is the voltage 10 — 15 V?	Go to step **8**.	Repair the open or short circuit of harness or the poor contact of connector between the MFD and the battery.
8	**CHECK MFD GROUND CIRCUIT (OPEN).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between MFD connector and chassis ground. ***Connector & terminal*** ***(i122) No. 21 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of the MFD ground circuit or poor contact of connector.
9	**CHECK POOR CONTACT OF CONNECTOR.** Check for poor contact in MFD power supply, ground circuit and data link connector.	Is there poor contact?	Repair the poor contact.	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Multi-function Display», and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to MFD(diag)-18, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Multi-function Display», and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: OPERATION

After the ignition switch is ON, wait for 10 seconds.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Multi-function Display», and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Content	Standard/unit	Note
Ignition SW ON Count	Shows the number of times the ignition is ON.	—	—
Count	Shows count status.	—	—
Time Count	Shows the elapsed time since the ignition ON.	—	—
MFD Switch Input State	Shows the MFD switch status.	Switch OFF status Switch ON status	—
Illumination control switch input state	Shows the illumination control switch status.	0 — 100%	—
Bright switch input state	Shows the bright switch status.	Bright OFF status Bright ON status	—
Camera 2 Input State	Front camera input status	Communication OFF Communication ON	—

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Multi-function Display», and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) On «Active Test» display, select an item to be checked.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to MFD(diag)-13, OPERATION, Clear Memory Mode.>

B: LIST

ACTIVE TEST		Content	Execution condition
Color check	White indication	Forcibly changes the entire screen color to white, to judge if the white can be displayed normally.	Ignition switch ON (Engine OFF)
	Black indication	Forcibly changes the entire screen color to black, to judge if the black can be displayed normally.	
	Red indication	Forcibly changes the entire screen color to red, to judge if the red can be displayed normally.	
	Green indication	Forcibly changes the entire screen color to green, to judge if the green can be displayed normally.	
	Blue indication	Forcibly changes the entire screen color to blue, to judge if the blue can be displayed normally.	

12.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Multi-function Display», and then select «Enter».
5) On «Select Function» display, select «Customize».
6) On «Customize» display, select an item to be customized.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), some items are not displayed.

B: LIST

Item		Initial setting value	Setting value	Note
Maintenance Customizing	Periodic Inspection Update	—	Non-update/Update	Set the periodic inspection update value (distance/time) to the update value.
	Tire Check Update	—	Non-update/Update	Set the tire inspection update value (distance/time) to the update value.
	Oil Filter Update	—	Non-update/Update	Set the oil filter update value (distance/time) to the update value.
	Engine Oil Update	—	Non-update/Update	Set the engine oil update value (distance/time) to the update value.
	All Maintenance Item Update	—	Non-update/Update	Set all the maintenance item values (distance/time) to the update value.
	Periodic Inspection Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the value to update for the periodic inspection update.
	Tire Check Update Level Change (Distance)	For U5: 7500 For C5: 12000 For C4: 12000	1000 — 50000	Set the value to update for the tire inspection update.
	Oil Filter Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the value to update for the oil filter update.
	Engine Oil Update Level Change (Distance)	For U5: 6000 For C5: 10000 For C4: 15000	1000 — 50000	Set the value to update for the engine oil update.
	Periodic Inspection Update Level Change (Time)	—	0 Months — 60 Months	Set the value to update for the periodic inspection update.
	Tire Check Update Level Change (Time)	For U5: 7 Months For C5: 12 Months For C4: 12 Months	0 Months — 60 Months	Set the value to update for the tire inspection update.
	Oil Filter Update Level Change (Time)	For U5: 6 Months For C5: 6 Months For C4: 12 Months	0 Months — 60 Months	Set the value to update for the oil filter update.
	Engine Oil Update Level Change (Time)	For U5: 6 Months For C5: 6 Months For C4: 12 Months	0 Months — 60 Months	Set the value to update for the engine oil update.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content	Reference
B2223	GERDA MALFUNCTION	When transmitting and receiving of data cannot be done normally between system microcomputer and image microcomputer.	<Ref. to MFD(diag)-19, DTC B2223 GERDA MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2233	FRONT CAMERA CIRCUIT OPEN	Detected when front camera abnormality is detected.	<Ref. to MFD(diag)-19, DTC B2233 FRONT CAMERA CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to MFD(diag)-20, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1201	CAN-HS COUNTER ABNORMAL	Detected when CAN data is abnormal.	<Ref. to MFD(diag)-20, DTC U1201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	Detected when CAN data from stereo camera does not arrive.	<Ref. to MFD(diag)-20, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1650	INVALID DATA RECEIVED FROM METER (UART)	UART data from the combination meter is abnormal.	<Ref. to MFD(diag)-20, DTC U1650 INVALID DATA RECEIVED FROM METER (UART), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1651	LOST COMMUNICATION WITH METER (UART)	UART data from the combination meter has not arrived.	<Ref. to MFD(diag)-22, DTC U1651 LOST COMMUNICATION WITH METER (UART), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

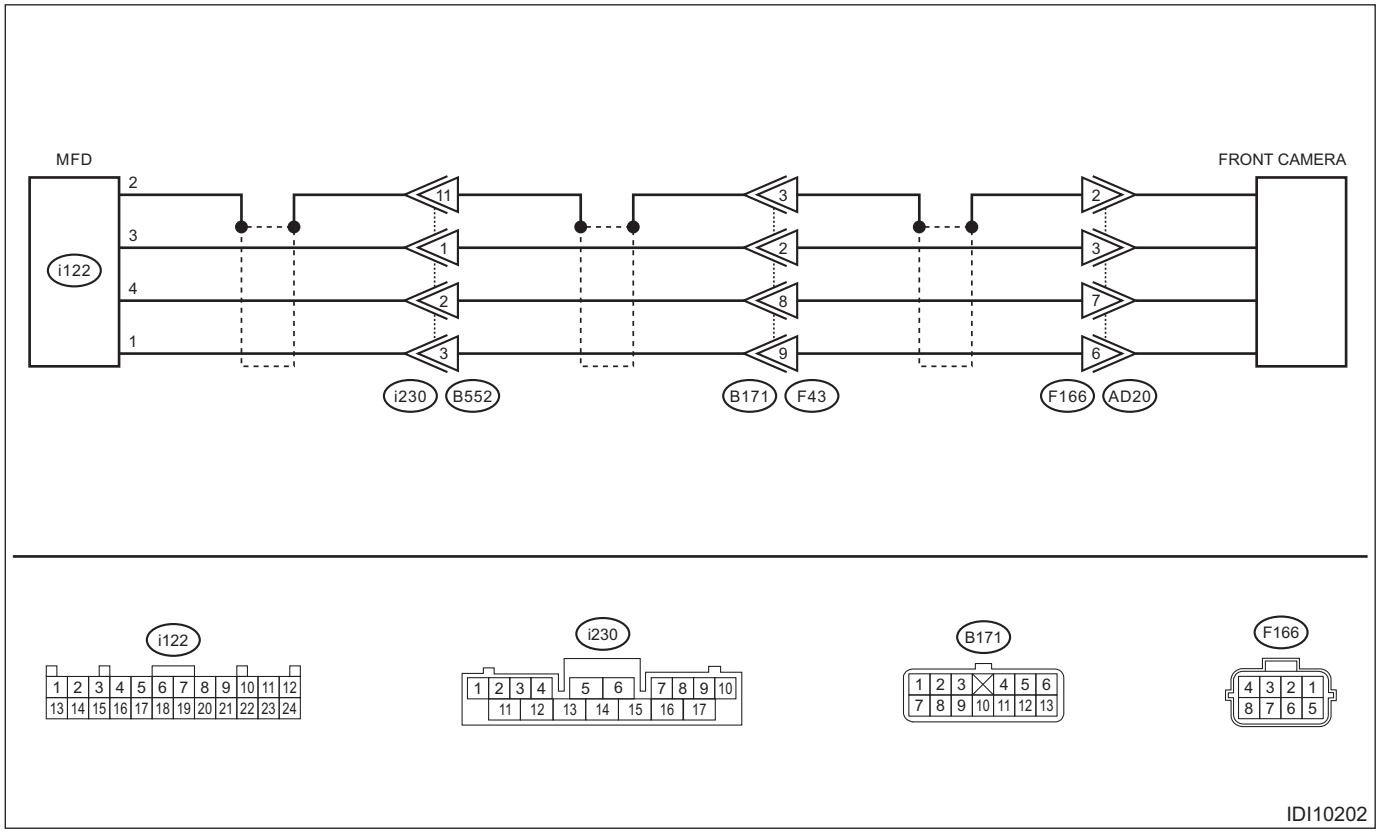
A: DTC B2223 GERDA MALFUNCTION

DTC detecting condition:
When the system microcomputer can not send/receive the data with the image microcomputer normally.
Trouble symptom:
There is no display on the TFT. Operation is normal.

NOTE:
Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>

B: DTC B2233 FRONT CAMERA CIRCUIT OPEN

DTC detecting condition:
Detected when front camera abnormality is detected.
Trouble symptom:
Front camera does not work.
Wiring diagram:
Front view monitoring system <Ref. to WI-225, Front View Monitor.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Using the Subaru Select Monitor, perform the clear memory for «Multi-function Display». 2) Turn the ignition switch to OFF. 3) Disconnect the MFD connector and reconnect it. 4) Turn the ignition switch to ON. 5) Using the Subaru Select Monitor, read DTC of «Multi-function Display».	Is DTC B2233 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again.

	Step	Check	Yes	No
2	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Disconnect the front camera connector and MFD connector. 2) Turn the ignition switch to ON. 3) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(i122) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair the short circuit of harness or replace harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** Use a tester to measure the resistance between front camera connector and MFD connector. ***Connector & terminal*** ***(i122) No. 2 — (F166) No. 2:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK DTC.** 1) Replace the front camera. 2) Read the DTC relating the MFD using the Subaru Select Monitor.	Is DTC B2233 displayed? (Current malfunction)	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>	Malfunction occurred in the front camera.

C: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U1201 CAN-HS COUNTER ABNORMAL

Detected when CAN data is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U1235 LOST COMMUNICATION WITH EyeSight

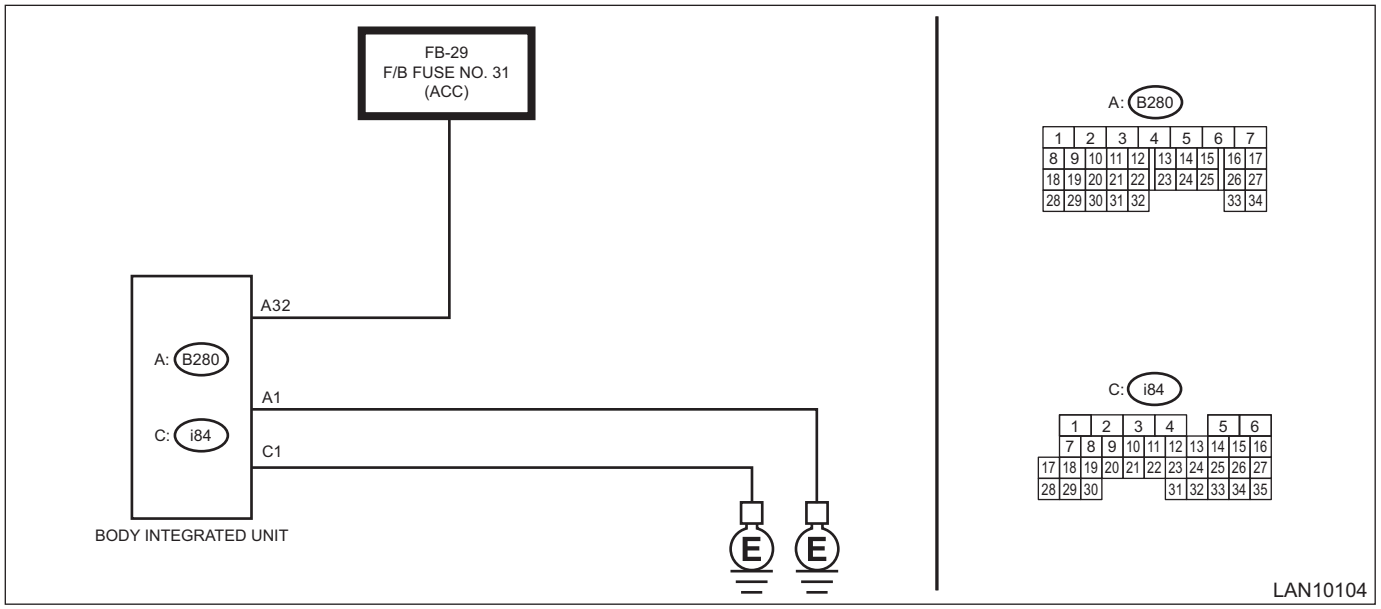
DTC detecting condition:
Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U1650 INVALID DATA RECEIVED FROM METER (UART)

DTC detecting condition:
There is an abnormality in UART data from combination meter.
Trouble symptom:
LCD is not displayed.
Wiring diagram:

Clearance Light and Illumination Light System <Ref. to WI-113, Clearance Light and Illumination Light System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Read the DTC of body integrated unit and LAN system using Subaru Select Monitor. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).> <Ref. to BC(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is any DTC other than DTC U1650 displayed?	Perform the diagnosis of DTCs other than U1650.	Go to step **2**.
2	**CHECK FUSE.** Check the fuse No. 31 in the fuse & relay box.	Is the check result OK?	Go to step **3**.	Replace the fuse. When the fuse is blown easily, check the wiring.
3	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch OFF → ACC. 3) Measure the voltage between body integrated unit connector and chassis ground using tester. ***Connector & terminal*** ***(B280) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Repair the ACC power supply circuit of the body integrated unit.

	Step	Check	Yes	No
4	**CHECK CURRENT DATA OF INTEGRATED UNIT.** 1) Connect the Subaru Select Monitor. 2) Turn the ignition switch to ON. 3) Check the current data «ACC voltage» of the body integrated unit. <Ref. to BC(diag)-20, Read Current Data.>	Is the voltage 10 V or more?	Go to step **5**.	Inspect and correct the body integrated unit connector. If there is no abnormality, replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.> (There may be a poor contact in the body integrated unit connector ((B280) terminal No. 32), or an internal malfunction of the integrated unit.) (If the current data indicates ACC voltage value ≈ Battery voltage, there will be no malfunction up to inside of the integrated unit. If U1650 is still detected in this condition as current malfunction, perform step 5 and subsequent procedures.)
5	**CHECK CONNECTOR.** 1) Disconnect the MFD connector and the combination meter connector. 2) Connect the disconnected connectors. 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1650 displayed? (Current malfunction)	Go to step **6**.	There was poor contact of connector. Repair the poor contact of connector. (Poor contact in combination connector (i10) terminal No. 20 or MFD connector (i122) terminal No. 9)
6	**CHECK COMBINATION METER.** 1) Replace the combination meter. <Ref. to IDI-12, Combination Meter.> 2) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1650 displayed? (Current malfunction)	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>	There was something wrong with the combination meter.

G: DTC U1651 LOST COMMUNICATION WITH METER (UART)

DTC detecting condition:
UART data from combination meter is not received.
Trouble symptom:
LCD is not displayed.
Wiring diagram:

Multi-function display (MFD) system <Ref. to WI-273, WIRING DIAGRAM, Multi-function Display (MFD) System.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Read the DTC of the LAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK CONNECTOR.** 1) Disconnect the MFD connector and combination meter connector. 2) Connect the disconnected connectors. 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 displayed? (Current malfunction)	Go to step **3**.	There was poor contact of connector.
3	**CHECK HARNESS.** 1) Disconnect the MFD connector and combination meter connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 28 — (i122) No. 12:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i122) No. 12 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.
5	**CHECK COMBINATION METER.** 1) Replace the combination meter. <Ref. to IDI-12, Combination Meter.> 2) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 displayed? (Current malfunction)	Go to step **6**.	There was something wrong with the combination meter.

Step		Check	Yes	No
6	**CHECK COMBINATION METER.** 1) Replace the current combination meter with the original combination meter. 2) Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).> 3) Read the DTC of the MFD using the Subaru Select Monitor. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC U1651 displayed? (Current malfunction)	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	There was an abnormality in MFD.

15.	Diagnostics with Phenomenon	28

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to MET(diag)-3, CHECK, Check List for Interview.>
2	**CHECK CAN COMMUNICATION.** Read the DTC of the CAN system using the Subaru Select Monitor. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to LAN(diag)-111, LIST, List of Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK COMBINATION METER.** Using the Subaru Select Monitor, read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Record the DTCs and time stamps, and perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.> Go to step **5**.	Go to step **4**.
4	**CHECK COMBINATION METER.** Check the operation of combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Is the check result OK?	System is normal.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. 2) Perform the Inspection Mode. <Ref. to MET(diag)-13, Inspection Mode.> 3) Using the Subaru Select Monitor, read DTC of combination meter.	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Combination Meter Check List for Interview
Received Year Month Day</td><td colspan="2">Date the Vehicle is</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.

B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems relating the wiper or light.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the fuse condition. <Ref. to IDI-5, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

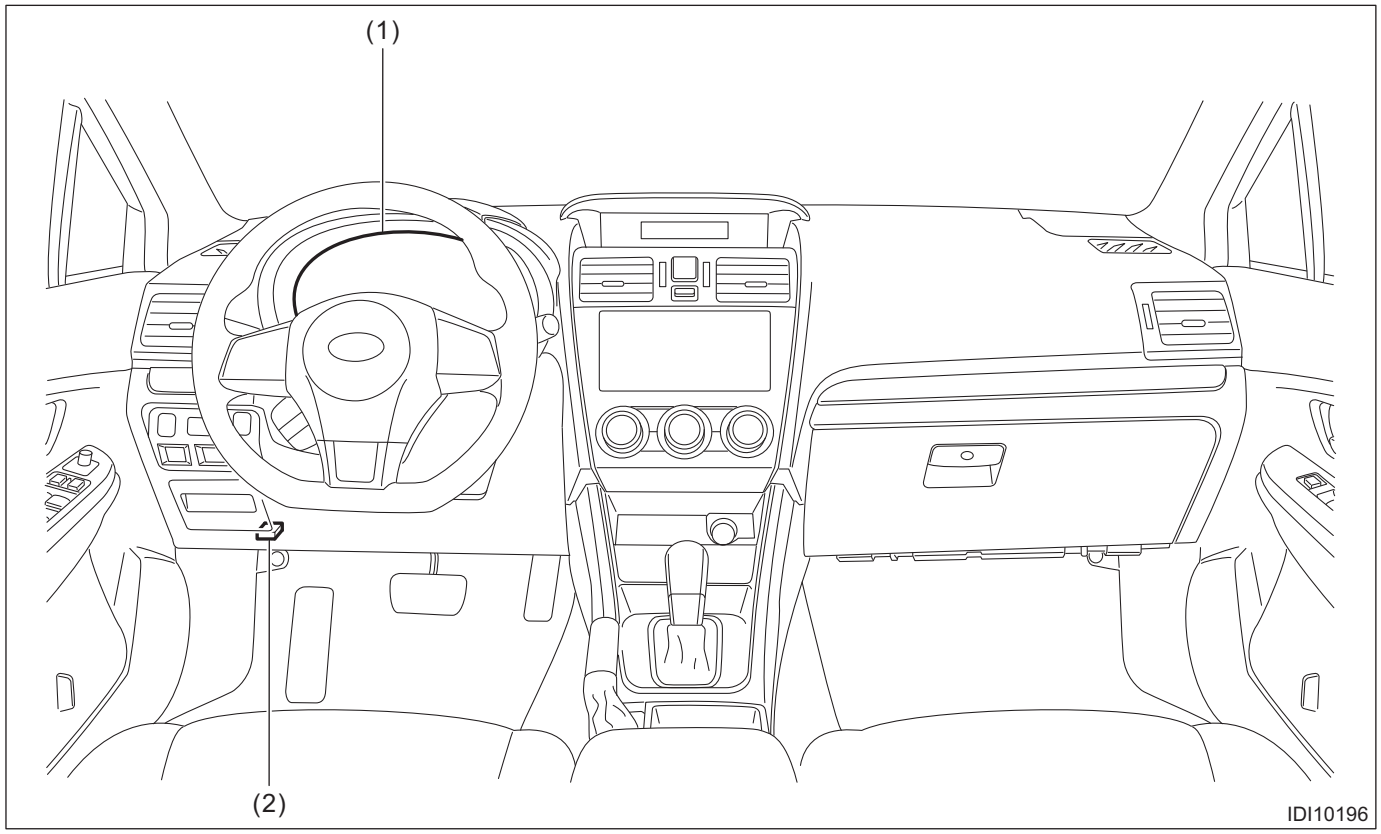
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

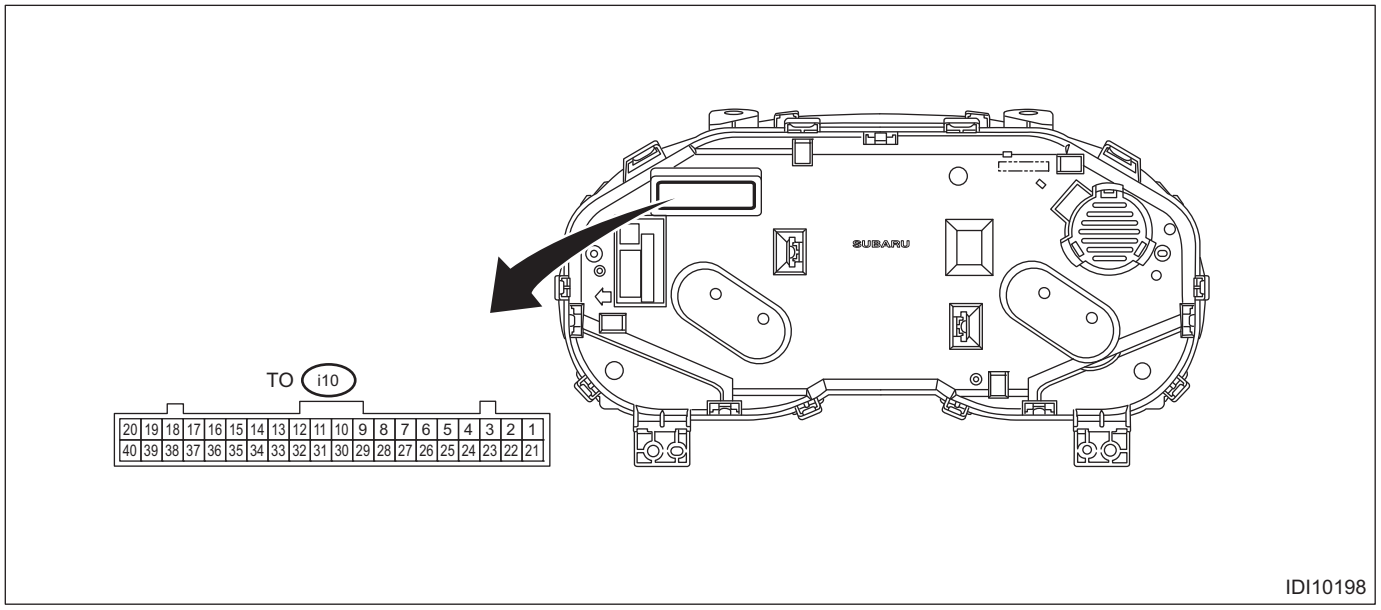
A: LOCATION



(1) Combination meter
(2) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measuring condition	Standard

40 ←→ Chassis ground	Battery power supply	Always	10 — 14 V

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the combination meter cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to MET(diag)-9, INSPECTION, Subaru Select Monitor.>

If the DTCs related to the LAN system are not displayed, perform the inspection by connecting the Subaru Select Monitor to another vehicle which is operating properly and by establishing the communication.

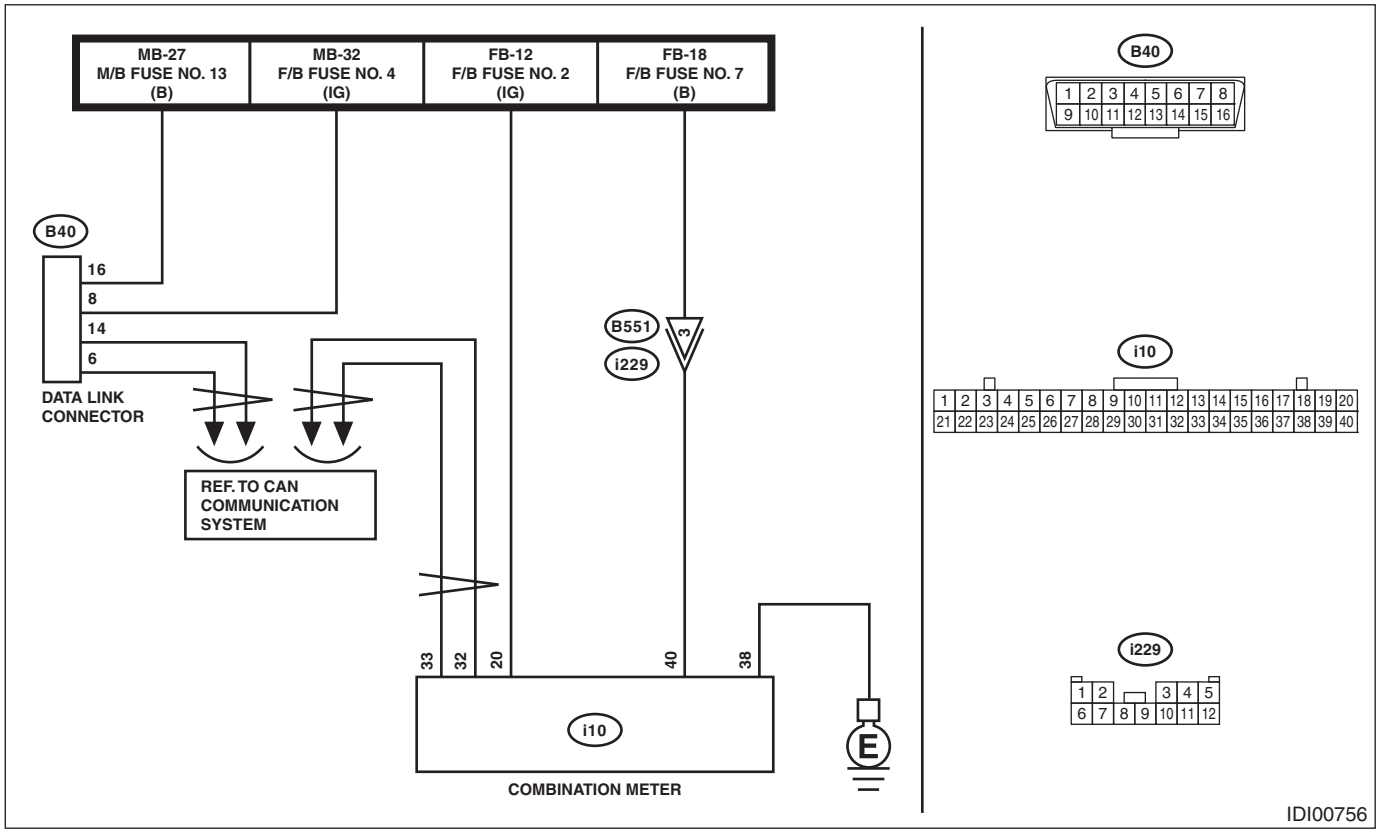
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective combination meter
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:
Communication is impossible between combination meter and Subaru Select Monitor.

Wiring diagram:
- Combination meter system <Ref. to WI-123, WIRING DIAGRAM, Combination Meter System.>
- CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse.	Is the fuse OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between the battery and combination meter.

	Step	Check	Yes	No
2	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of combination meter. 3) Turn the ignition switch to ON. 4) Use a tester to measure the voltage between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 20 (+) — Chassis ground (–):*** ***(i10) No. 40 (+) — Chassis ground (–):***	Is the voltage 10 — 13 V?	Go to step **3**.	Repair the open circuit of harness between combination meter connector and fuse.
3	**CHECK HARNESS.** Use a tester to measure the resistance between the combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 38 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between combination meter connector and chassis ground.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK COMBINATION METER.** 1) Turn the ignition switch to OFF. 2) Connect the combination meter connector. 3) Communicate with the «Combination Meter» using the Subaru Select Monitor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to MET(diag)-20, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: OPERATION

After the ignition switch is ON, wait for 10 seconds.

10.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Items to be displayed	Unit of measure	Content	Note
IG on trip number	times	Time stamp information	—
IG on supply system	—	Time stamp information	—
past time after IG on	ms	Time stamp information	—
Fuel level resistance	Ω	Fuel sensor value display	—
Ambient air temperature	°C	External temperature sensor value display	—
Air temperature correction	°C	Correction value for displaying ambient temperature	—
Mean fuel efficiency correction	%	Correction value for displaying average fuel economy	—
Second level belt warning customize	2-stage warning implemented / 2-stage warning not implemented	Implementation status of seat belt second stage warning	—
External air temperature indication value	°C	Calculated value of external temperature for indication	—
Vehicle speed data	km/h	Vehicle speed value detected by meter	—
Engine speed data	rpm	Engine speed value detected by meter	—
Driver side seat belt state	Drivers seat seat-belt wearing state / Drivers seat seat-belt non-wearing state	Seat belt fastening status	—
Passenger side seat belt state	Passenger seat seat-belt wearing state / Passenger seat seat-belt non-wearing state	Seat belt fastening status	—
Rear side (right) seat belt state	Rear seat right seat-belt wearing state / Rear seat right seat-belt non-wearing state	Seat belt fastening status	—
Rear side (center) seatbelt state	Rear seat center seat-belt wearing state / Rear seat center seat-belt non-wearing state	Seat belt fastening status	—
Rear side (left) seat belt state	Rear seat left seat-belt wearing state / Rear seat left seat-belt non-wearing state	Seat belt fastening status	—
EPS setting presence state	Electric power steering / No Electric power steering	Electric power steering equipment status	—
R.DIFF oil temperature sensing level	°C	Rear differential oil temperature sensor value	—

Items to be displayed	Unit of measure	Content	Note
Outside temperature for diagnosis	°C	External temperature sensor value display	—
Demonstration mode permission / fault permission	Demonstration mode permission / fault permission	Demonstration mode permission status	—

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) On «Active Test» display, select an item to be checked.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

CAUTION:
After executing the system operation check mode, execute the Clear Memory Mode. <Ref. to MET(diag)-12, OPERATION, Clear Memory Mode.>

12.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Combination Meter» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) On «Customize» display, select an item to be customized.

NOTE:
- For detailed operation procedures, refer to “Application help”.
- If not equipped (depending on destination area or vehicle equipment condition), some items are not displayed.

B: LIST

Items to be displayed	Initial setting value	Customize setting	Note
Air temperature correction	±0°C	–5°C — +5°C	Temperature compensation can only be performed by 1°C (1°C change = 1.8°F) interval.
Mean fuel efficiency correction	±0°%	+10% — –10%	—
Second level belt warning customize	2-stage warning implemented	2-stage warning implemented / 2-stage warning not implemented	—
Demonstration mode permission / fault permission	OFF	Demonstration mode permission / fault permission	Demonstration mode must not be permitted when used by a customer.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Content	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when CAN line abnormality is detected.	<Ref. to MET(diag)-22, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Detected when CAN data from the engine control module (ECM) does not arrive.	<Ref. to MET(diag)-22, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM does not arrive.	<Ref. to MET(diag)-22, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC does not arrive.	<Ref. to MET(diag)-22, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0128	LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE	Detected when CAN data from VDC does not arrive.	<Ref. to MET(diag)-22, DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	Detected when CAN data from electric power steering CM does not arrive.	<Ref. to MET(diag)-22, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit does not arrive.	<Ref. to MET(diag)-22, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	Detected when CAN data from airbag CM does not arrive.	<Ref. to MET(diag)-22, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0156	LOST COMMUNICATION WITH INFORMATION CENTER "A"	Detected when CAN data from MFD does not arrive.	<Ref. to MET(diag)-22, DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	Detected when CAN data from A/C CM does not arrive.	<Ref. to MET(diag)-22, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0181	LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE	Detected when CAN data from AHL CM does not arrive.	<Ref. to MET(diag)-23, DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	Detected when CAN data from keyless access CM does not arrive.	<Ref. to MET(diag)-23, DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1135	LOST COMMUNICATION WITH DCCD CONTROL MODULE	Detected when CAN data from DCCD CM does not arrive.	<Ref. to MET(diag)-23, DTC U1135 LOST COMMUNICATION WITH DCCD CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1232	LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE	Detected when CAN data from radar sensor does not arrive.	<Ref. to MET(diag)-23, DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Content	Reference
U1235	LOST COMMUNICATION WITH EyeSight	Detected when CAN data from stereo camera does not arrive.	<Ref. to MET(diag)-23, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	Detected when microcomputer in the stereo camera froze.	<Ref. to MET(diag)-23, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1533	INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE	Detected when CAN data from radar sensor is abnormal.	<Ref. to MET(diag)-23, DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1500	FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION	Fuel gauge circuit is open or shorted.	<Ref. to MET(diag)-23, DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1501	POWER SUPPLY SYSTEM ERROR DETECTION	Combination meter power supply circuit is open or shorted.	<Ref. to MET(diag)-25, DTC B1501 POWER SUPPLY SYSTEM ERROR DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1507	EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION	External air temperature sensor circuit is open or shorted.	<Ref. to MET(diag)-26, DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from the engine control module (ECM) does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data is not received from electric power steering CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

Detected when CAN data from MFD does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

Detected when CAN data is not received from A/C CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

Detected when CAN data is not received from auto headlight beam leveler CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

Detected when CAN data is not received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U1135 LOST COMMUNICATION WITH DCCD CONTROL MODULE

Detected when CAN data from DCCD CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from the radar sensor does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U1235 LOST COMMUNICATION WITH EyeSight

Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

Detected when the microcomputer of the stereo camera froze.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE

Detected when CAN data from radar sensor is abnormal.

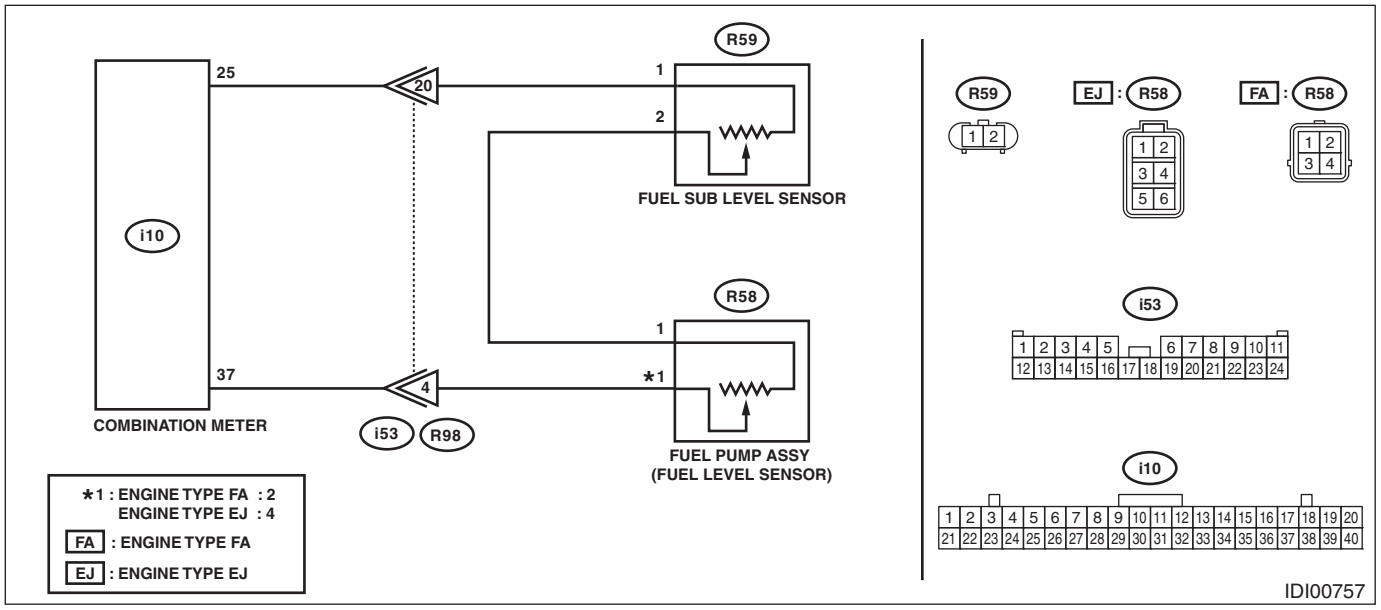
NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:
The fuel gauge circuit is open or shorted.
Trouble symptom:
- Defective fuel gauge.
- Fuel level warning light blinks.

Wiring diagram:

Fuel gauge system <Ref. to WI-231, WIRING DIAGRAM, Fuel Gauge System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK COMBINATION METER.** 1) Check the operation of combination meter using Subaru Select Monitor. 2) From the {System Operation Check Mode}, select the «Fuel Meter Operation» and «Remaining fuel warning». <Ref. to MET(diag)-16, System Operation Check Mode.>	Is the operation of combination meter OK?	Go to step **3**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector and the fuel sub level sensor connector and the fuel level sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Engine type: FA*** ***(i10) No. 25 — (R59) No. 1:*** ***(i10) No. 37 — (R58) No. 2:*** ***Engine type: EJ*** ***(i10) No. 25 — (R59) No. 1:*** ***(i10) No. 37 — (R58) No. 4:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 25 — Chassis ground:*** ***(i10) No. 37 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.
5	**CHECK FUEL SUB LEVEL SENSOR.** Check the fuel sub level sensor as a single part. <Ref. to FU(w/o STI)-179, INSPECTION, Fuel Sub Level Sensor.> <Ref. to FU(STI)-89, INSPECTION, Fuel Sub Level Sensor.>	Is the check result OK?	Go to step **6**.	Replace the sensor.

	Step	Check	Yes	No
6	**CHECK FUEL LEVEL SENSOR.** Check the fuel level sensor as a single part. <Ref. to FU(w/o STI)-170, INSPECTION, Fuel Level Sensor.> <Ref. to FU(STI)-86, INSPECTION, Fuel Level Sensor.>	Is the check result OK?	Go to step **7**.	Replace the sensor.
7	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Go to step **8**.
8	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the «Fuel level resistance» from {Data Monitor}. <Ref. to MET(diag)-14, Read Current Data.>	Does the data display 10 — 570 Ω?	System is normal.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

S: DTC B1501 POWER SUPPLY SYSTEM ERROR DETECTION

DTC detecting condition:
Open or short in combination meter power supply circuit
Trouble symptom:
Defective operation of combination meter
Wiring diagram:
Combination meter system <Ref. to WI-123, WIRING DIAGRAM, Combination Meter System.>

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Turn the ignition switch to ON, and confirm that the illumination of combination meter lights.	Does the illumination light?	Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1501 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to IDI-5, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the combination meter connector. 2) Turn the ignition switch to ON. 3) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i10) No. 20 (+) — Chassis ground (–):*** ***(i10) No. 40 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Go to step **5**.	Repair the open circuit of harness or replace harness.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

T: DTC B1507 EXTERNAL AIR TEMPERATURE OPEN/SHORT-CIRCUIT DETECTION

DTC detecting condition:
Open or short circuit in ambient sensor
Trouble symptom:
- Defective ambient temperature display
- Defective air conditioner operation

Wiring diagram:
Air conditioning system <Ref. to WI-75, WIRING DIAGRAM, Air Conditioning System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the combination meter using the Subaru Select Monitor. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC B1507 displayed? (Current malfunction)	Go to step **2**.	Go to step **6**.
2	**CHECK CURRENT DATA.** Using the Subaru Select Monitor, display the «Ambient air temperature» from {Data Monitor}. <Ref. to MET(diag)-14, Read Current Data.>	Is data displayed?	System is normal.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector and ambient sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 36 — (F78) No. 2:*** ***(i10) No. 27 — (F78) No. 1:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK HARNESS.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 36 — Chassis ground:*** ***(i10) No. 27 — Chassis ground:***	Is the resistance 10 Ω or less?	Repair the short circuit of harness or replace harness.	Go to step **5**.
5	**CHECK AMBIENT SENSOR.** Perform the inspection of ambient sensor unit. <Ref. to AC-72, INSPECTION, Ambient Sensor.>	Is the check result OK?	Go to step **6**.	Replace the sensor.
6	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect connectors.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	A temporary change of voltage occurred.

15.Diagnostics with Phenomenon

A: LIST

• Engine type: EJ

Symptoms	Reference
SI-DRIVE MODE INDICATION DOES NOT CHANGE AND MODES DO NOT SWITCH AFTER SWITCHING SI-DRIVE MODES	<Ref. to MET(diag)-28, ENGINE TYPE: EJ, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>
WHEN THE SI-DRIVE MODE IS CHANGED, “S”, “I” OR “S#” FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY IN APPROX. 5 SECONDS	<Ref. to MET(diag)-28, ENGINE TYPE: EJ, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>
“S#”, “I” or “S” blinks on SI-DRIVE mode display in the combination meter after switching SI-DRIVE modes.	<Ref. to MET(diag)-28, ENGINE TYPE: EJ, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>

• Engine type: FA

Symptoms	Reference
SI-DRIVE MODE INDICATION DOES NOT CHANGE AND MODES DO NOT SWITCH AFTER SWITCHING SI-DRIVE MODES	<Ref. to MET(diag)-31, ENGINE TYPE: FA, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>
WHEN THE SI-DRIVE MODE IS CHANGED, “S”, “I” OR “S#” FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY IN APPROX. 5 SECONDS	<Ref. to MET(diag)-31, ENGINE TYPE: FA, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>
WHEN THE SI-DRIVE MODE IS CHANGED, “S”, “I” OR “S#” FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY	<Ref. to MET(diag)-31, ENGINE TYPE: FA, CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM, Diagnostics with Phenomenon.>

B: CHECK SI-DRIVE (SUBARU INTELLIGENT DRIVE) SYSTEM

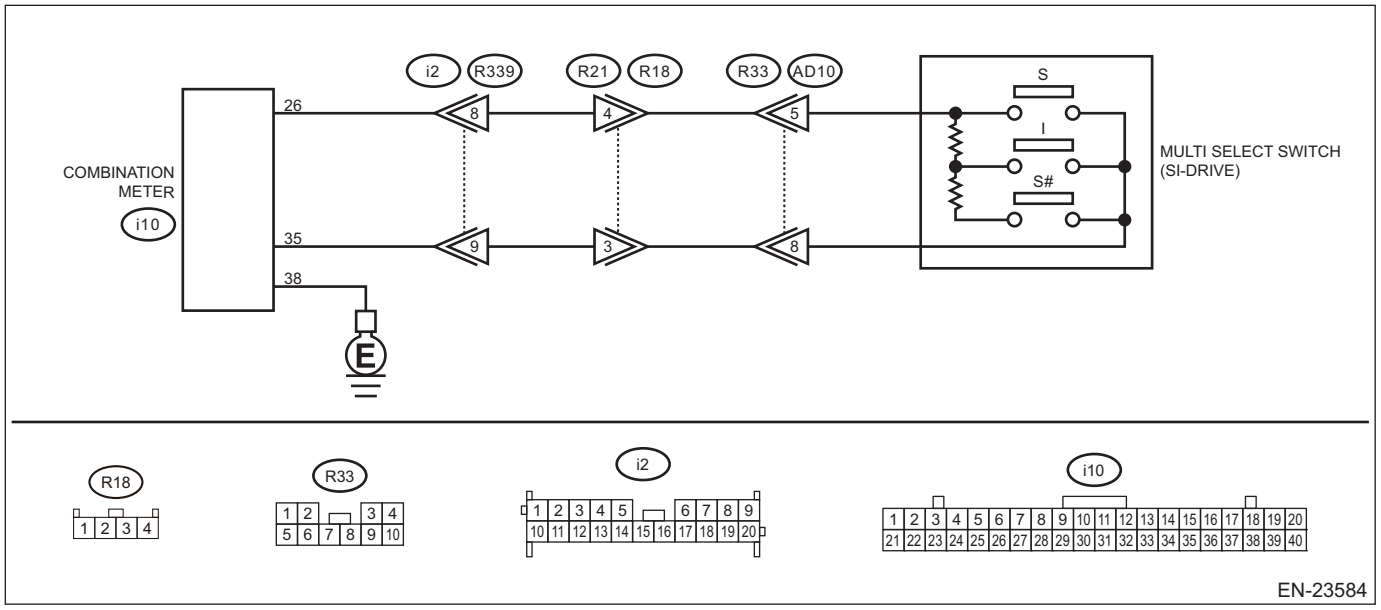
1. ENGINE TYPE: EJ

• SI-DRIVE MODE INDICATION DOES NOT CHANGE AND MODES DO NOT SWITCH AFTER SWITCHING SI-DRIVE MODES

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Switches to S (Sport) mode when turning the engine OFF in S (Sport) or S# (Sport sharp) mode and then turning the engine ON again.
2. Switches to I (intelligent) mode when turning the engine OFF in I (intelligent) mode and then turning the engine ON again.
3. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
4. Cannot switch to S# (Sport Sharp), when engine coolant temperature tells that overheating may occur. Switches to S (Sport) while driving in S# (Sport sharp) mode.
Wiring diagram:

Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK SI-DRIVE SELECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the combination meter. 3) Measure the resistance between connectors when the SI-DRIVE selector is operated. ***Connector & terminal*** ***(i10) No. 26 — (i10) No. 35:***	Does the resistance change as below? S#: 3.48 — 3.85 kΩ I: 0.95 — 1.05 kΩ S: less than 1 Ω	Go to step **4**.	Go to step **2**.
2	**CHECK HARNESS BETWEEN COMBINATION METER AND MULTI-SELECT SWITCH CONNECTOR.** 1) Disconnect the connector from multi-select switch. 2) Measure the resistance of harness between combination meter and multi-select switch connector. ***Connector & terminal*** ***(i10) No. 26 — (R33) No. 5:*** ***(i10) No. 35 — (R33) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between combination meter and multi-select switch connector • Poor contact of coupling connector
3	**CHECK HARNESS BETWEEN COMBINATION METER AND MULTI-SELECT SWITCH CONNECTOR.** Measure the resistance between multi-select switch connector and chassis ground. ***Connector & terminal*** ***(R33) No. 5 — Chassis ground:*** ***(R33) No. 8 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of multi-select switch connector. Replace the multi-select switch if defective. <Ref. to FU(STI)-55, SI-DRIVE (SUBARU Intelligent Drive) Selector.>	Repair the ground short circuit in harness between combination meter and multi-select switch connector.
4	**CHECK HARNESS BETWEEN COMBINATION METER AND CHASSIS GROUND.** Measure the resistance of harness between combination meter and chassis ground. ***Connector & terminal*** ***(i10) No. 38 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **5**.	Repair the open circuit of harness between combination meter and chassis ground.

	Step	Check	Yes	No
5	**RECHECK FAULT.** 1) Connect all connectors. 2) Switch SI-DRIVE modes.	Is there any fault?	Repair the poor contact of combination meter connector. Replace the combination meter if defective. <Ref. to IDI-12, Combination Meter.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

• WHEN THE SI-DRIVE MODE IS CHANGED, “S”, “I” OR “S#” FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY IN APPROX. 5 SECONDS

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Switches to S (Sport) mode when turning the engine OFF in S (Sport) or S# (Sport sharp) mode and then turning the engine ON again.
2. Switches to I (intelligent) mode when turning the engine OFF in I (intelligent) mode and then turning the engine ON again.
3. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
4. Cannot switch to S# (Sport Sharp), when engine coolant temperature tells that overheating may occur. Switches to S (Sport) while driving in S# (Sport sharp) mode.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTC using the Subaru Select Monitor or a general scan tool. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)” concerning the respective units.	Go to step **2**.
2	**CHECK COMBINATION METER AND CLOCK DISPLAY.** Check for abnormal display other than “S”, “I” or “S#” flashing. Examples: Malfunction indicator light illuminates.	Is there an abnormal display other than “S”, “I” or “S#” flashing?	For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK ECM AND COMBINATION METER.** Check the ECM and combination meter.	Is the part number of ECM and combination meter correct?	Replace the meter case assembly. <Ref. to IDI-12, Combination Meter.>	Replace ECM or meter case assembly with the one with the correct part number. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to IDI-12, Combination Meter.>

• "S#", "I" or "S" blinks on SI-DRIVE mode display in the combination meter after switching SI-DRIVE modes.

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Switches to S (Sport) mode when turning the engine OFF in S (Sport) or S# (Sport sharp) mode and then turning the engine ON again.
2. Switches to I (intelligent) mode when turning the engine OFF in I (intelligent) mode and then turning the engine ON again.
3. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
4. Cannot switch to S# (Sport Sharp), when engine coolant temperature tells that overheating may occur. Switches to S (Sport) while driving in S# (Sport sharp) mode.

NOTE:
In this case, there is a fault other than in SI-DRIVE system.

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** 1) Start the engine. 2) Check if malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Read the DTC using Subaru Select Monitor and check the indicated DTC. <Ref. to EN(STI)(diag)-107, List of Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE COOLANT TEMPERATURE GAUGE.** 1) Turn the ignition switch to ON. 2) Check the engine coolant temperature gauge.	Does it indicate overheating?	Inspect for the cause of overheating and repair.	Go to step **3**.
3	**CHECK COMBINATION METER INDICATION.** 1) Turn the ignition switch to ON. 2) Switch SI-DRIVE modes. 3) Check the SI-DRIVE mode display in the combination meter.	Does "S#", "I" or "S" of the SI-DRIVE mode blink in combination meter?	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	Perform test driving to check the malfunction indicator light and engine coolant temperature gauge. Complete the diagnosis if they are normal.

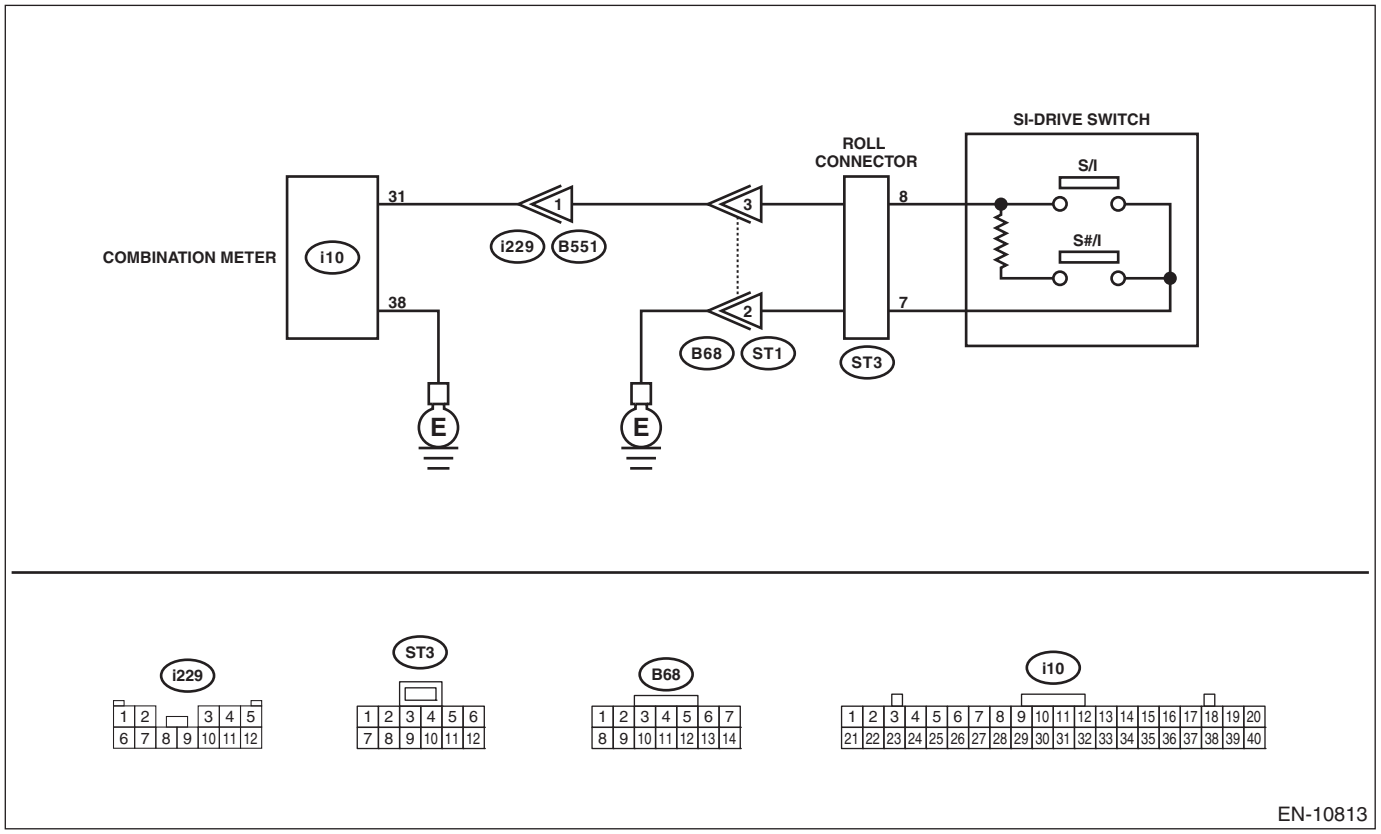
2. ENGINE TYPE: FA

• SI-DRIVE MODE INDICATION DOES NOT CHANGE AND MODES DO NOT SWITCH AFTER SWITCHING SI-DRIVE MODES

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Cannot switch to S# (Sport Sharp) mode when the engine is cold, and S# (Sport Sharp) switch prohibition buzzer sounds.
2. Switches to S (Sport) when turning the engine ON after turning the engine OFF in S# (Sport sharp) mode.
3. Returns to the mode last selected when turning the engine ON after turning the engine OFF in S (Sport) or I (Intelligent) mode.

4. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
5. If there is a possible engine coolant or engine oil temperature overheat condition, it will not be possible to switch to the S# (Sport Sharp) mode. Switches to S (Sport) while driving in S# (Sport sharp) mode.
Wiring diagram:
Engine Electrical System <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



EN-10813

Step		Check	Yes	No
1	**CHECK SI-DRIVE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the combination meter. 3) Measure the resistance when the SI-DRIVE switch is operated. ***Connector & terminal*** ***(i10) No. 31 — Chassis ground:***	Does the resistance change as below? S#/I: 1.71 — 1.89 kΩ S/I: less than 1 Ω	Go to step **5**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN COMBINATION METER AND SI-DRIVE SWITCH CONNECTOR.** Measure the resistance of harness between combination meter connector and SI-DRIVE switch connector. ***Connector & terminal*** ***(i10) No. 31 — (ST3) No. 8:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between combination meter connector and SI-DRIVE switch connector • Poor contact of coupling connector • Poor contact of roll connector • Roll connector is faulty
3	**CHECK HARNESS BETWEEN SI-DRIVE SWITCH CONNECTOR AND CHASSIS GROUND.** Measure the resistance of harness between SI-DRIVE switch connector and chassis ground. ***Connector & terminal*** ***(ST3) No. 7 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the harness and connector. NOTE: In this case, repair the following item: • Open circuit in harness between SI-DRIVE switch connector and chassis ground • Poor contact of joint connector • Poor contact of roll connector • Roll connector is faulty
4	**CHECK HARNESS BETWEEN COMBINATION METER AND SI-DRIVE SWITCH CONNECTOR.** Measure the resistance between combination meter connector and chassis ground. ***Connector & terminal*** ***(i10) No. 31 — Chassis ground:***	Is the resistance 1 MΩ or more?	Repair the poor contact of SI-DRIVE switch connector. Replace the SI-DRIVE switch if defective. <Ref. to FU(w/o STI)-124, SI-DRIVE (SUBARU Intelligent Drive) Selector.>	Repair the short circuit to ground in harness between combination meter and SI-DRIVE switch connector.
5	**CHECK HARNESS BETWEEN COMBINATION METER AND CHASSIS GROUND.** Measure the resistance of harness between combination meter and chassis ground. ***Connector & terminal*** ***(i10) No. 38 — Chassis ground:***	Is the resistance less than 5 Ω?	Go to step **6**.	Repair the open circuit of harness between combination meter and chassis ground.

	Step	Check	Yes	No
6	**RECHECK FAULT.** 1) Connect all connectors. 2) Switch SI-DRIVE modes.	Is there any fault?	Repair the poor contact of combination meter connector. Replace the meter case assembly if defective. <Ref. to IDI-12, Combination Meter.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

• WHEN THE SI-DRIVE MODE IS CHANGED, “S”, “I” OR “S#” FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY IN APPROX. 5 SECONDS

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Cannot switch to S# (Sport Sharp) mode when the engine is cold, and S# (Sport Sharp) switch prohibition buzzer sounds.
2. Switches to S (Sport) when turning the engine ON after turning the engine OFF in S# (Sport sharp) mode.
3. Returns to the mode last selected when turning the engine ON after turning the engine OFF in S (Sport) or I (Intelligent) mode.
4. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
5. If there is a possible engine coolant or engine oil temperature overheat condition, it will not be possible to switch to the S# (Sport Sharp) mode. Switches to S (Sport) while driving in S# (Sport sharp) mode.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTC using the Subaru Select Monitor or a general scan tool. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Check the appropriate DTC using the “List of Diagnostic Trouble Code (DTC)” concerning the respective units.	Go to step **2**.
2	**CHECK COMBINATION METER AND CLOCK DISPLAY.** Check for abnormal display other than “S”, “I” or “S#” flashing. Examples: Malfunction indicator light illuminates.	Is there an abnormal display other than “S”, “I” or “S#” flashing?	For the diagnostic procedure, refer to LAN section. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ECM AND COMBINATION METER.** Check the part number of ECM and combination meter.	Is the part number of ECM and combination meter correct?	Replace the meter case assembly. <Ref. to IDI-12, Combination Meter.>	Replace ECM or meter case assembly with the one with the correct part number. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to IDI-12, Combination Meter.>

• WHEN THE SI-DRIVE MODE IS CHANGED, "S", "I" OR "S#" FLASHES IN COMBINATION METER SI-DRIVE MODE DISPLAY

Diagnosis:
SI-DRIVE mode does not switch.

CAUTION:
Note that SI-DRIVE system operates the following controls when it switches the modes.
1. Cannot switch to S# (Sport Sharp) mode when the engine is cold, and S# (Sport Sharp) switch prohibition buzzer sounds.
2. Switches to S (Sport) when turning the engine ON after turning the engine OFF in S# (Sport sharp) mode.
3. Returns to the mode last selected when turning the engine ON after turning the engine OFF in S (Sport) or I (Intelligent) mode.
4. Switches to S (Sport) when the malfunction indicator light illuminates while the engine is running. In this case, Cannot switch to S# (Sport Sharp) or I (Intelligent) mode.
5. If there is a possible engine coolant or engine oil temperature overheat condition, it will not be possible to switch to the S# (Sport Sharp) mode. Switches to S (Sport) while driving in S# (Sport sharp) mode.

NOTE:
In this case, there is a fault other than in SI-DRIVE system.

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** 1) Start the engine. 2) Check if malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Read the DTC using Subaru Select Monitor and check the indicated DTC. <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK ENGINE COOLANT TEMPERATURE GAUGE.** 1) Turn the ignition switch to ON. 2) Check the engine coolant temperature gauge.	Does it indicate overheating?	Inspect for the cause of overheating and repair.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK ENGINE OIL TEMPERATURE.** 1) Turn the ignition switch to ON. 2) Check the value of «Oil Temperature» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Current Data Display For Engine”. <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>	Is the value of «Oil Temperature» 117°C (243°F) or more?	Inspect and repair the cause of engine oil temperature rise. NOTE: Ask the customer whether the vehicle has experienced a long drive in low gear or towing of heavy load. If not, drive the vehicle again after the engine oil temperature lowers, and check if the engine oil temperature rises.	Go to step **4**.
4	**CHECK COMBINATION METER INDICATION.** 1) Turn the ignition switch to ON. 2) Switch SI-DRIVE modes. 3) Check the SI-DRIVE mode display in the combination meter.	Does the SI-DRIVE mode “S”, “I” or “S#” in combination meter flash?	Replace the meter case assembly. <Ref. to IDI-12, Combination Meter.>	Perform test operation and check the malfunction indicator light, engine coolant temperature warning light, and engine oil temperature. If they are normal, finish the diagnosis.

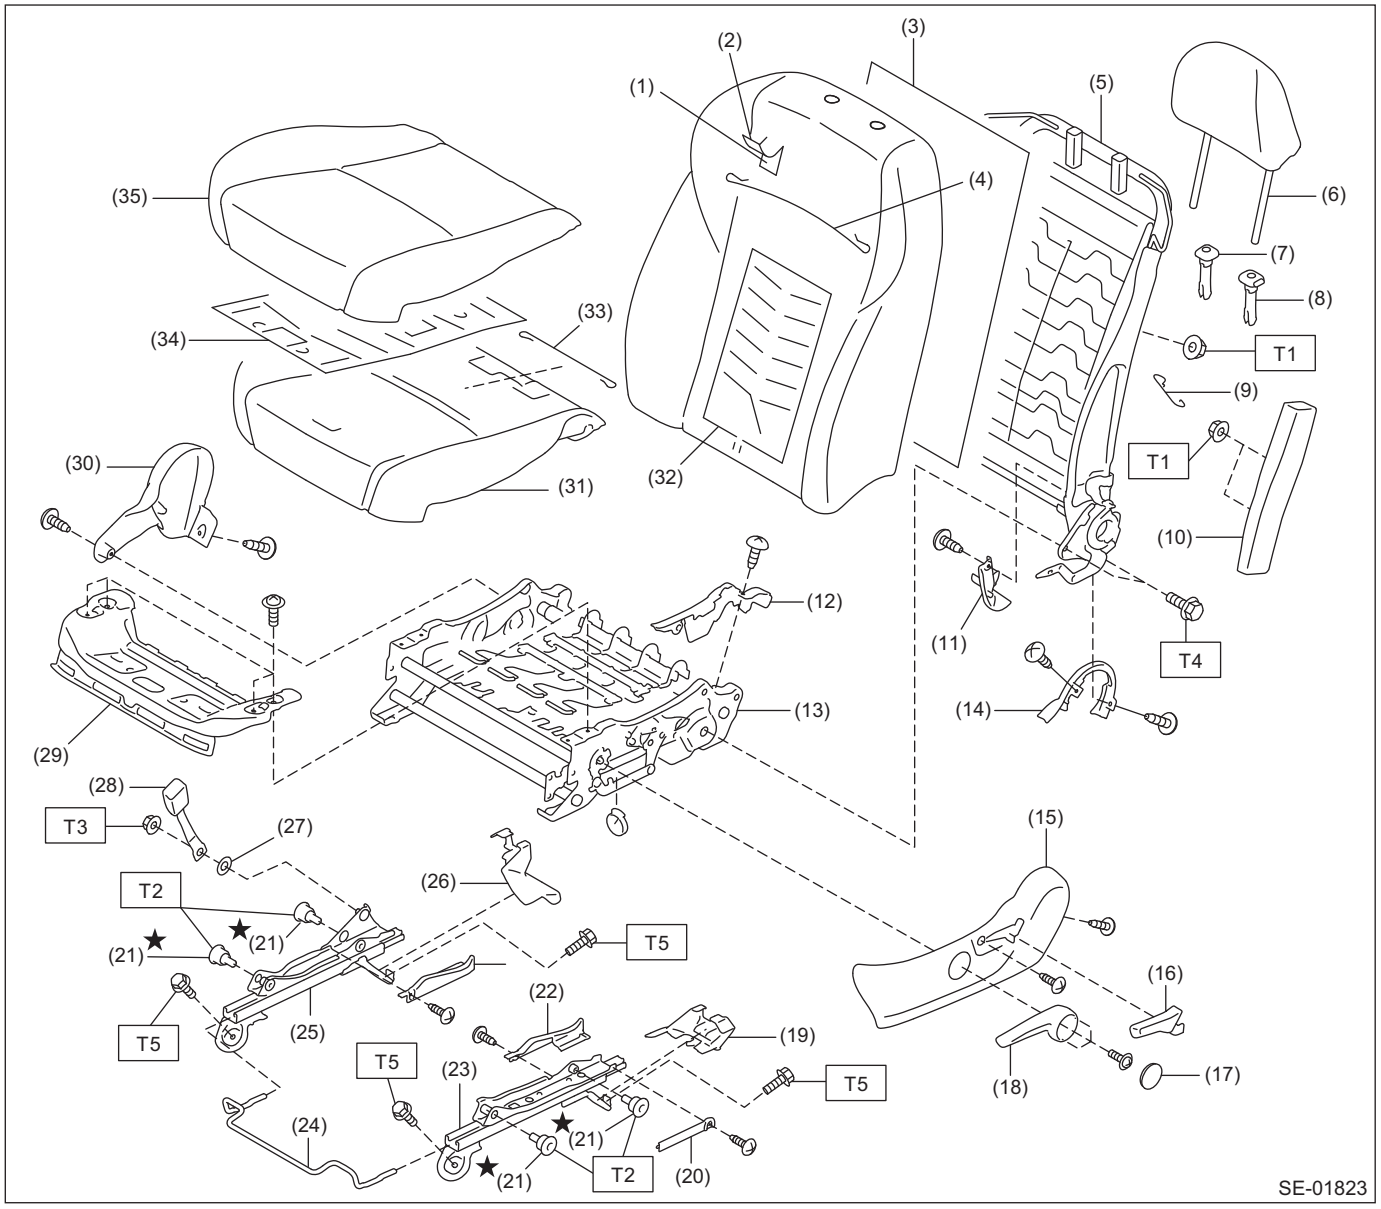
5. Seat Heater System 53

1. General Description

A: COMPONENT

1. FRONT SEAT

- Manual seat LH

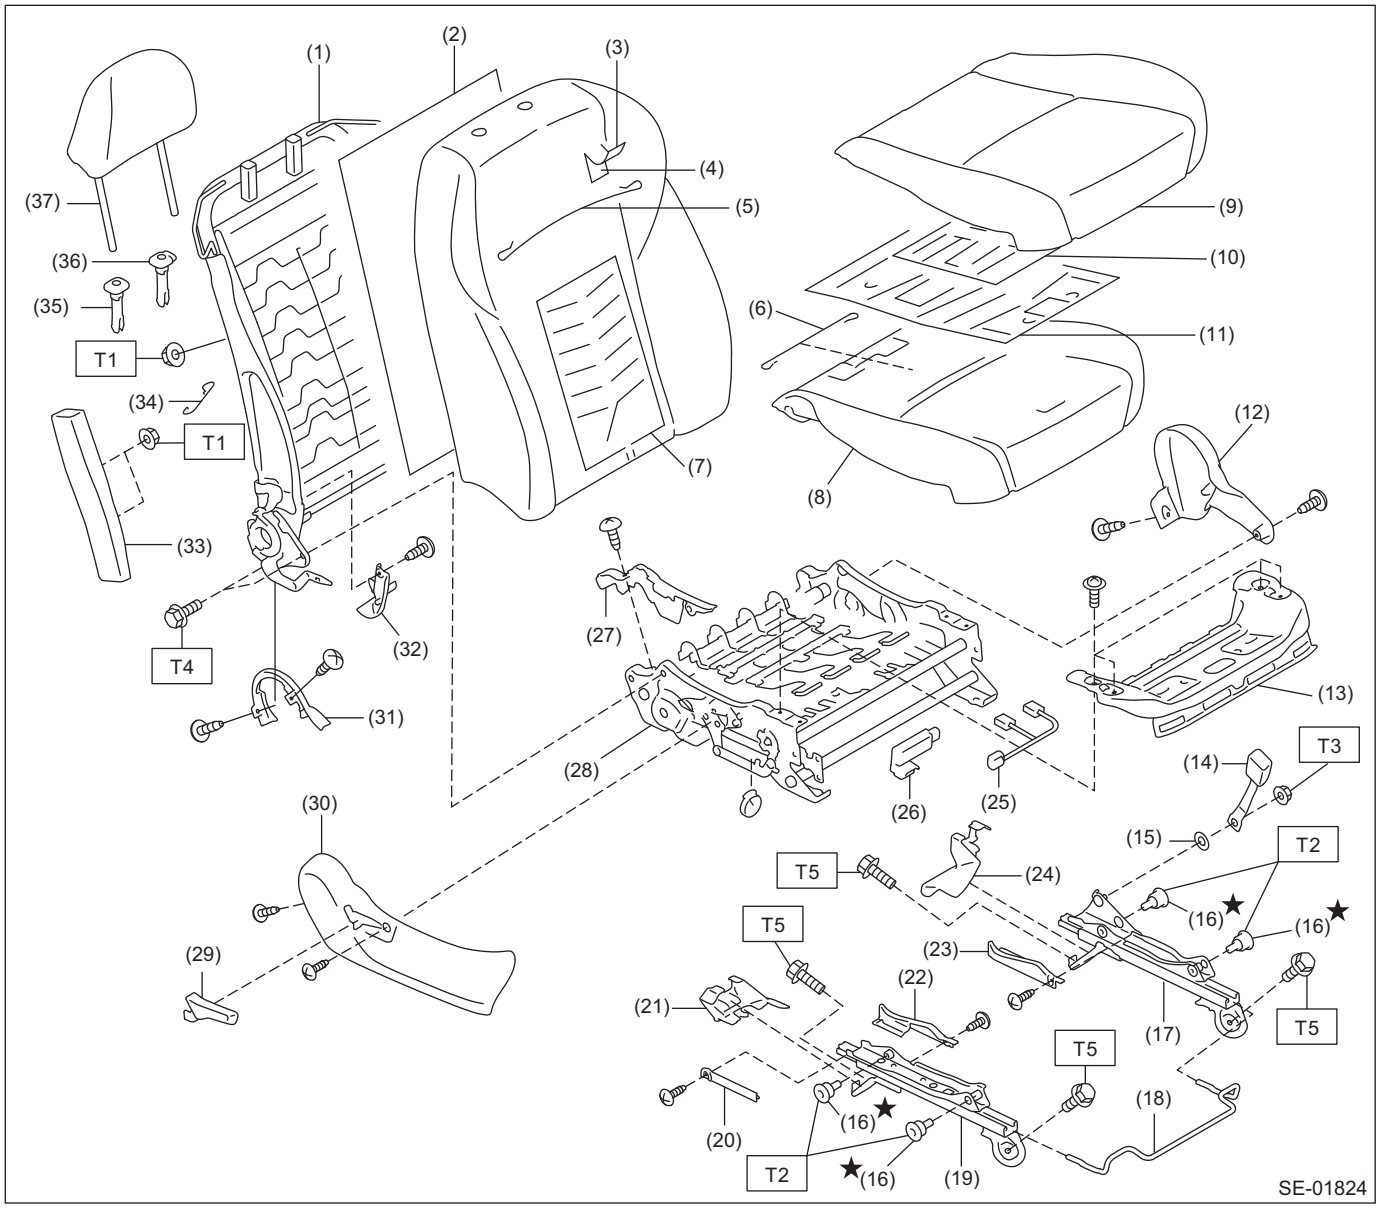


(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Cover - silencer front seat backrest
(4) Wire set - front seat backrest
(5) Frame ASSY - front backrest
(6) Headrest ASSY - front
(7) Bushing - free headrest
(8) Bushing - lock headrest
(9) Hook - backrest front
(10) Side airbag module LH
(11) Cover - inner front
(12) Cover - frame front cushion
(13) Frame ASSY - front cushion
(14) Cover - hinge base front seat
(15) Cover - hinge front seat OUT
(16) Lever - reclining
(17) Cap - lifter lever
(18) Knob - lifter
(19) Cover - bolt rear OUT
(20) Cover - slide rail OUT
(21) TORX® bolt
(22) Cover - slide rail OUT
(23) Slide rail ASSY - OUT
(24) Lever - towel bar
(25) Slide rail ASSY - INN
(26) Cover - bolt rear INN
(27) Wave washer
(28) Seat belt inner - front
(29) Panel - front seat
(30) Cover - hinge front seat INN
(31) Pad ASSY - front seat cushion
(32) Heater unit - front seat backrest
(33) Wire set - front seat cushion
(34) Heater unit - front seat cushion
(35) Cover - front cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 15 (1.5, 11.1)
T3: 38 (3.9, 28)
T4: 52 (5.3, 38.4)
T5: 53 (5.4, 39.1)

- Manual seat RH



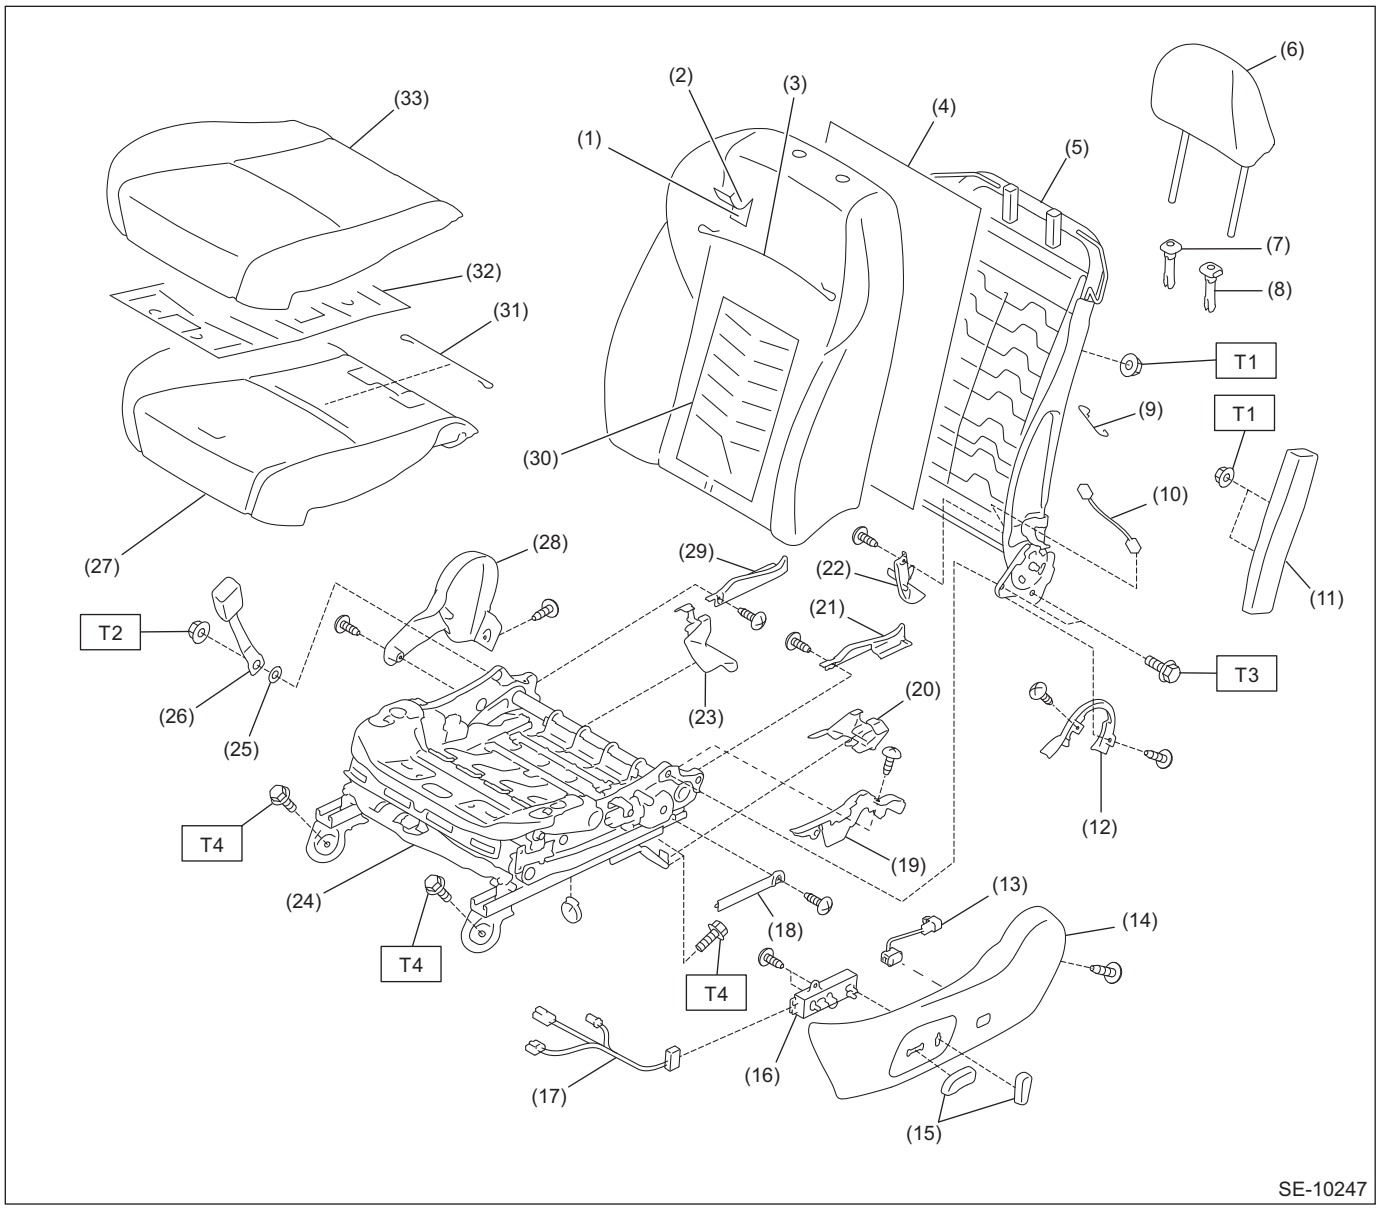
(1) Frame ASSY - front backrest
(2) Cover - silencer front seat backrest
(3) Cover COMPL - front backrest
(4) Pad ASSY - front seat backrest
(5) Wire set - front seat backrest
(6) Wire set - front seat cushion
(7) Heater unit - front seat backrest
(8) Pad ASSY - front seat cushion
(9) Cover - front cushion
(10) Occupant detection sensor
(11) Heater unit - front cushion
(12) Cover - hinge front seat INN
(13) Panel - front seat
(14) Seat belt inner - front
(15) Wave washer
(16) TORX® bolt
(17) Slide rail ASSY - INN
(18) Lever - towel bar
(19) Slide rail ASSY - OUT
(20) Cover - slide rail OUT
(21) Cover - bolt rear OUT
(22) Cover - slide rail OUT
(23) Cover - slide rail INN
(24) Cover - bolt rear INN
(25) Harness - occupant detection system
(26) Control module - occupant detection system
(27) Cover - frame front seat cushion
(28) Frame assembly - front seat cushion
(29) Lever - reclining
(30) Cover - hinge front seat OUT
(31) Cover - hinge base front seat
(32) Cover - inner front
(33) Side airbag module RH
(34) Hook - backrest front
(35) Bushing - free headrest
(36) Bushing - lock headrest
(37) Headrest ASSY - front

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 15 (1.5, 11.1)
T3: 38 (3.9, 28)
T4: 52 (5.3, 38.4)
T5: 53 (5.4, 39.1)

NOTE:
Passenger's seat cannot be disassembled because it is seat cushion pad & frame assembly.

- Power seat

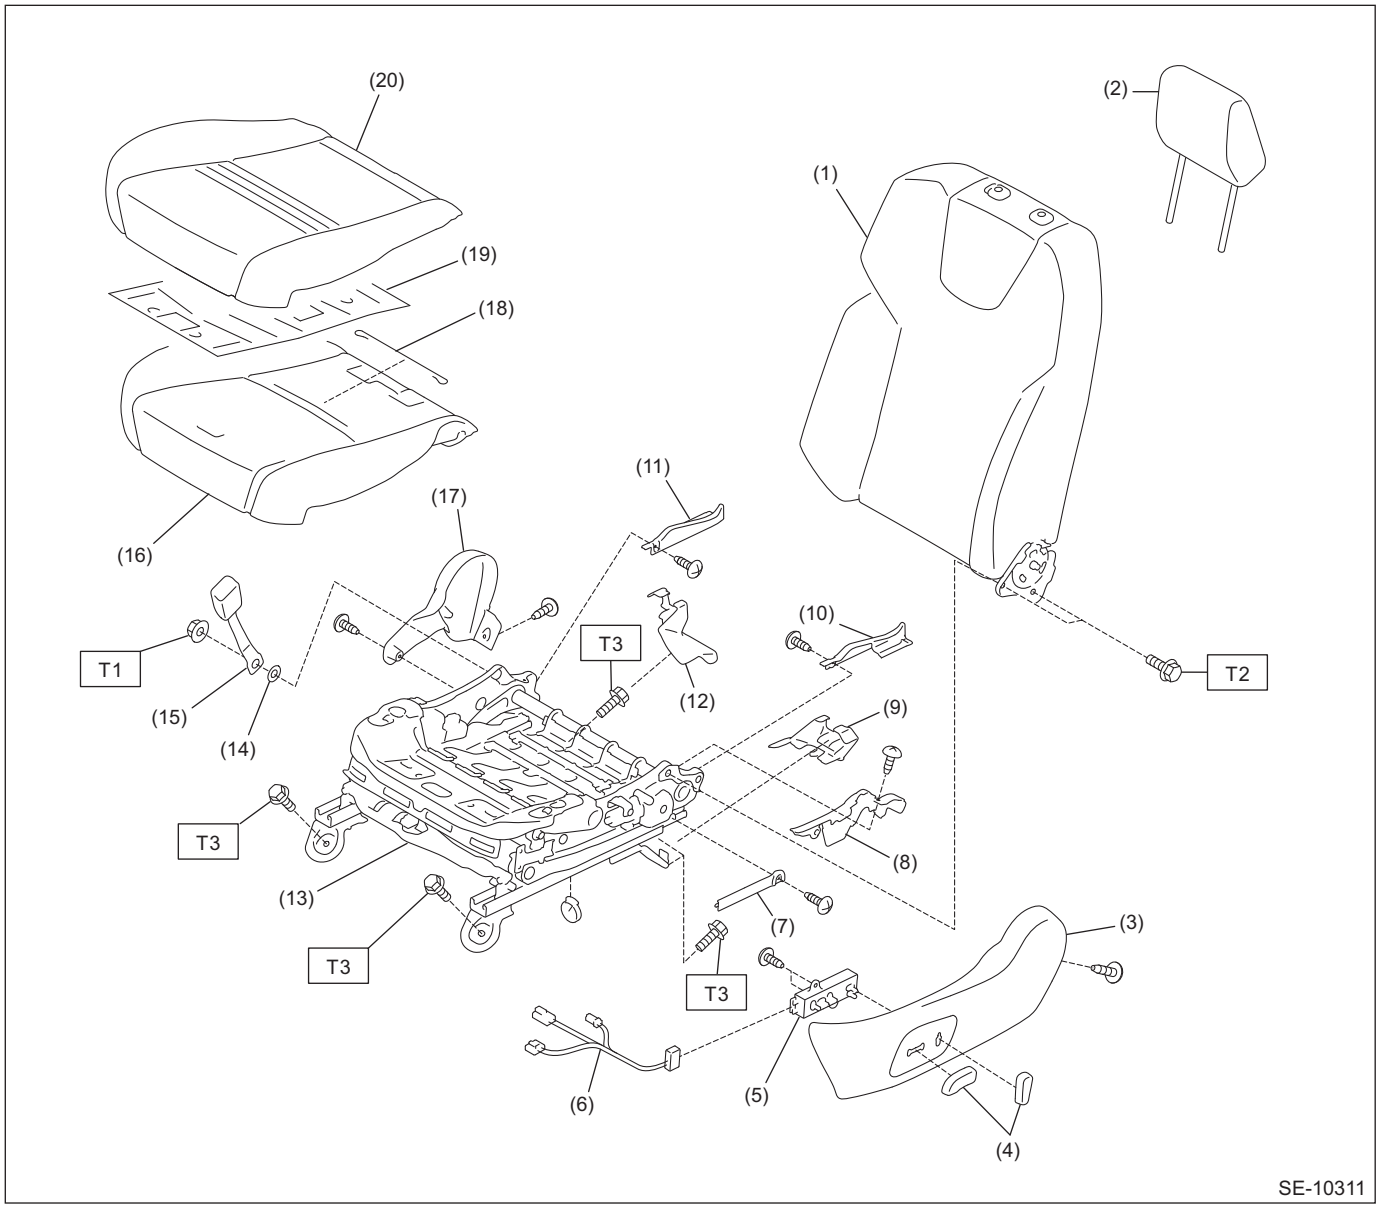


(1) Pad ASSY - front seat backrest
(2) Cover COMPL - front backrest
(3) Wire set - front seat backrest
(4) Cover - silencer front seat backrest
(5) Frame ASSY - front backrest
(6) Headrest ASSY - front
(7) Bushing - free headrest
(8) Bushing - lock headrest
(9) Hook - backrest front
(10) Harness ASSY - power seat
(11) Side airbag module
(12) Cover - hinge base front seat
(13) Lumbar switch ASSY (10-way model)
(14) Cover - hinge front seat OUT
(15) Knob - power seat
(16) Switch ASSY - power seat
(17) Harness ASSY - power seat
(18) Cover - slide rail OUT
(19) Cover - frame front seat cushion
(20) Cover - bolt rear OUT
(21) Cover - slide rail OUT
(22) Cover - inner front
(23) Cover - bolt rear INN
(24) Frame ASSY - front cushion
(25) Wave washer
(26) Seat belt inner - front
(27) Pad ASSY - front seat cushion
(28) Cover - hinge front seat INN
(29) Cover - slide rail INN
(30) Heater unit - front seat backrest
(31) Wire set - front seat cushion
(32) Heater unit - front cushion
(33) Cover - front cushion

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6 (0.6, 4.4)
T2: 38 (3.9, 28)
T3: 52 (5.3, 38.4)
T4: 53 (5.4, 39.1)

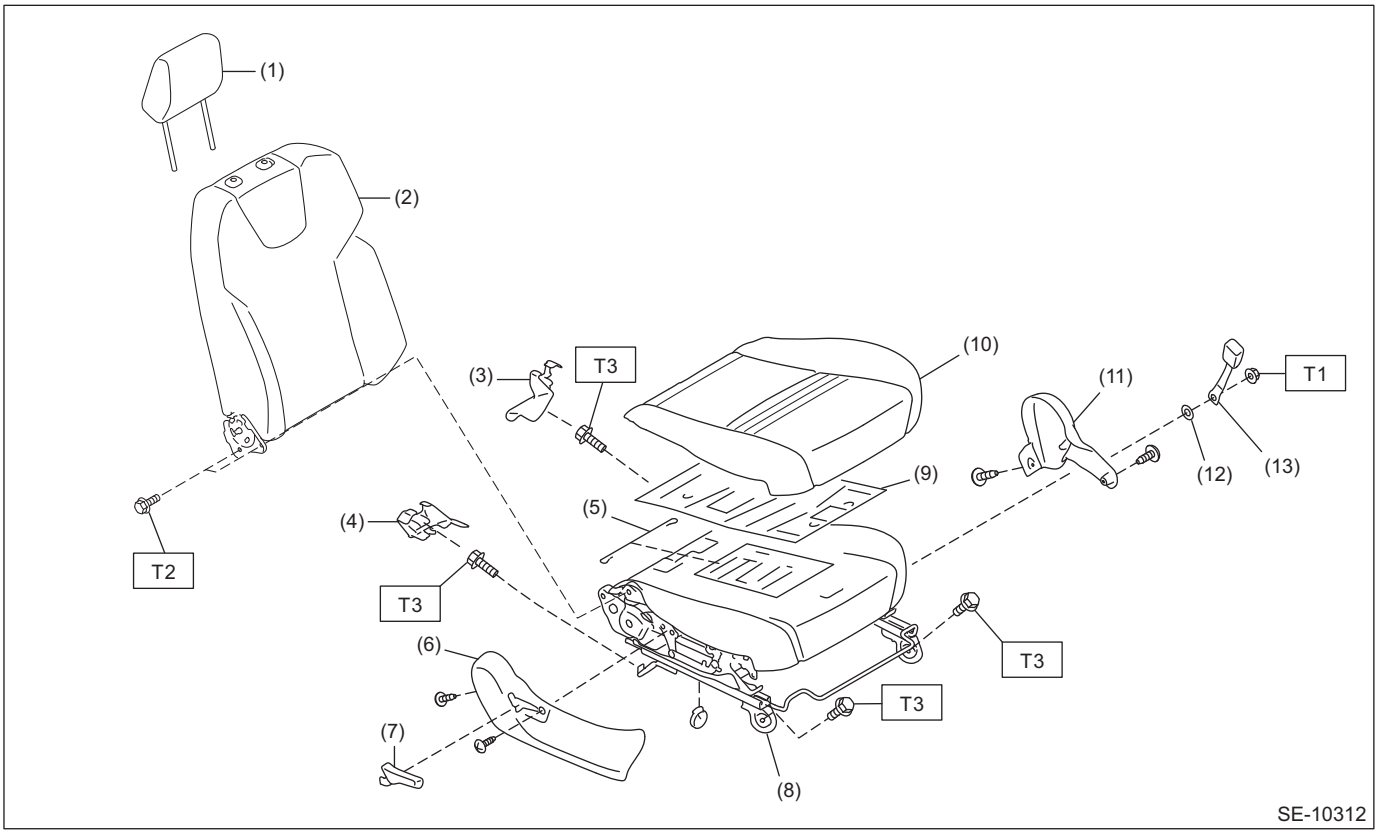
- RECARO® seat LH



(1)	Backrest ASSY - front seat	(10)	Cover - slide rail OUT	(19)	Heater unit - front seat cushion
(2)	Headrest ASSY - front	(11)	Cover - slide rail INN	(20)	Cover COMPL - front seat cushion
(3)	Cover - hinge front seat OUT	(12)	Cover - bolt rear INN		
(4)	Knob - power seat	(13)	Frame assembly - front seat cushion	***Tightening torque: N·m (kgf-m, ft-lb)***	
(5)	Switch ASSY - power seat	(14)	Wave washer	***T1: 38 (3.9, 28)***	
(6)	Harness ASSY - power seat	(15)	Seat belt inner - front	***T2: 52 (5.3, 38.4)***	
(7)	Cover - inner front	(16)	Pad ASSY - front seat cushion	***T3: 53 (5.4, 39.1)***	
(8)	Cover - frame front seat cushion	(17)	Cover - hinge front seat INN		
(9)	Cover - bolt rear OUT	(18)	Wire set - front seat cushion		

NOTE:
Since the backrest of the RECARO® seat is a backrest assembly, it cannot be disassembled.

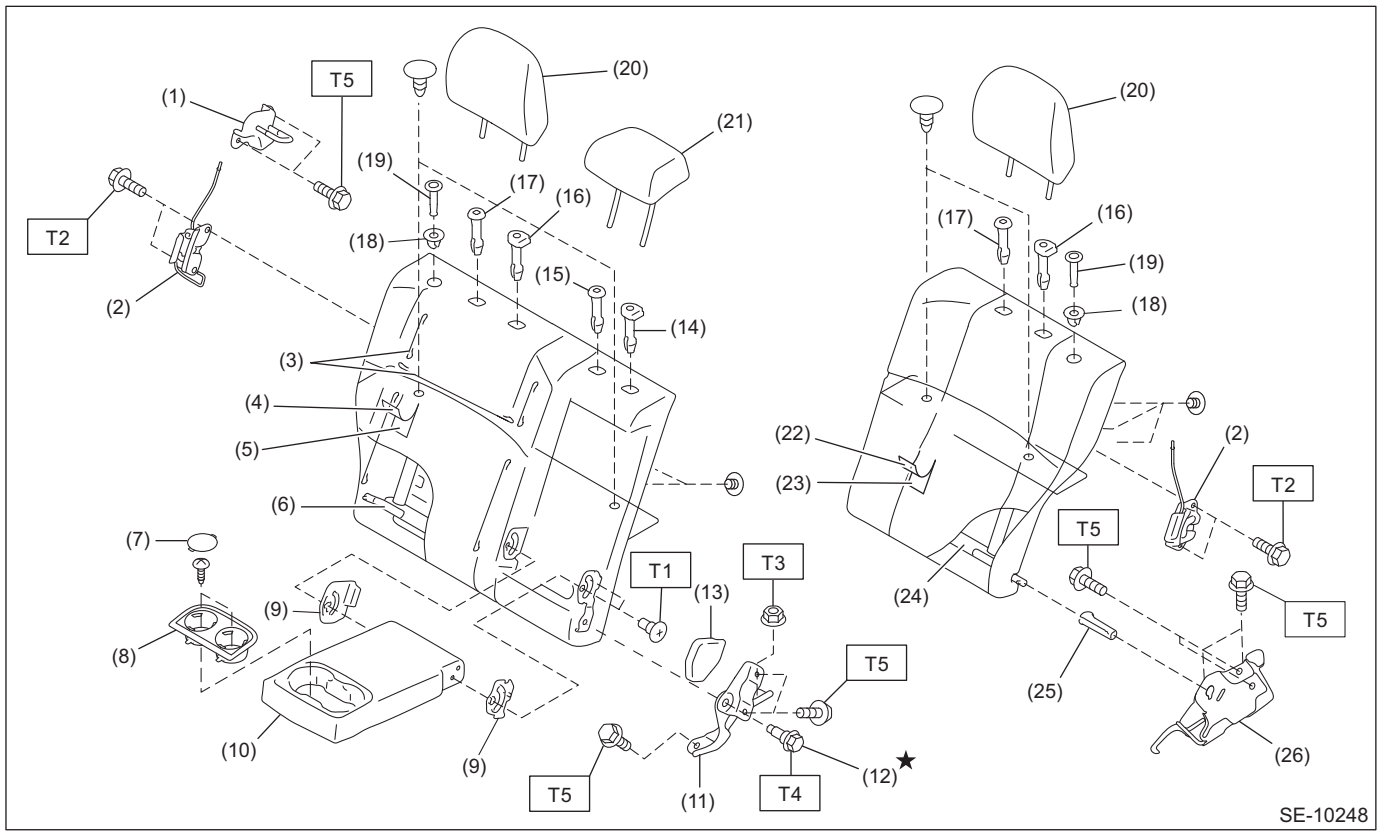
- RECARO® seat RH



(1)	Headrest ASSY - front	(7)	Lever - reclining	(13)	Seat belt inner - front
(2)	Backrest ASSY - front seat	(8)	Pad and frame ASSY - front seat cushion		
(3)	Cover - slide rail INN	(9)	Heater unit - front seat cushion	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Cover - slide rail OUT	(10)	Cover COMPL - front seat cushion	***T1:***	***38 (3.9, 28)***
(5)	Wire set - front seat cushion	(11)	Cover - hinge front seat INN	***T2:***	***52 (5.3, 38.4)***
(6)	Cover - hinge front seat OUT	(12)	Wave washer	***T3:***	***53 (5.4, 39.1)***

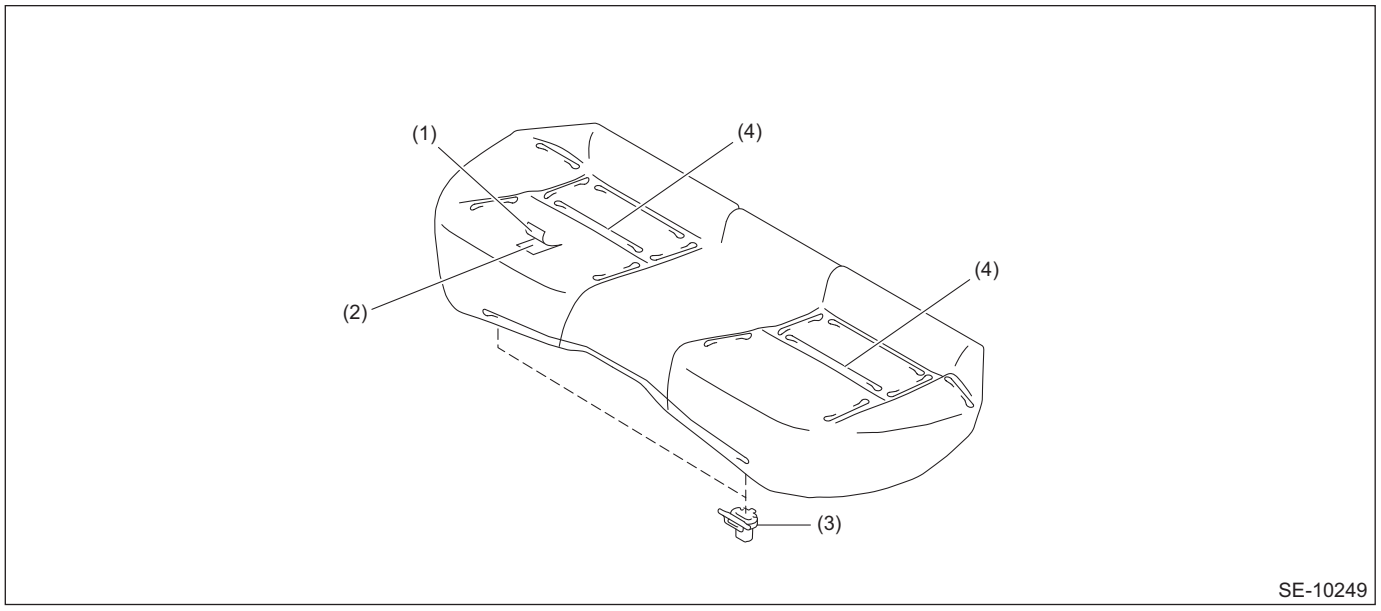
NOTE:
Since the backrest of the RECARO® seat is a backrest assembly, it cannot be disassembled.

2. REAR SEAT



(1) Striker - backrest rear
(2) Lock ASSY - backrest rear
(3) Wire set - rear backrest
(4) Cover COMPL - rear backrest RH
(5) Pad ASSY - rear seat backrest RH
(6) Frame ASSY - rear backrest RH
(7) Mat - rear cup holder
(8) Cup holder - rear armrest
(9) Cover hinge - armrest INN
(10) Armrest ASSY - rear center
(11) Hinge ASSY - backrest center
(12) Flange bolt
(13) Cover hinge - armrest OUT
(14) Bushing - lock ASSY CTR
(15) Bushing - free ASSY CTR
(16) Bushing - lock ASSY
(17) Bushing - free ASSY
(18) Knob - guide
(19) Knob - backrest rear
(20) Headrest ASSY - rear backrest
(21) Headrest ASSY - rear center
(22) Cover COMPL - rear backrest LH
(23) Pad ASSY - rear seat backrest LH
(24) Frame ASSY - rear backrest LH
(25) Bushing - backrest hinge
(26) Hinge ASSY - rear backrest

Tightening torque: N·m (kgf-m, ft-lb)
T1: 9.8 (1, 7.2)
T2: 22.5 (2.3, 16.6)
T3: 24.5 (2.5, 18.1)
T4: 28.9 (2.9, 21.3)
T5: 33 (3.4, 24.3)



(1) Cover - rear cushion
(2) Pad and frame ASSY - rear cushion
(3) Hook - seat cushion rear
(4) Wire set - rear cushion

B: CAUTION

When removing the front seat from the vehicle, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM” section. <Ref. to AB-9, CAUTION, General Description.>

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	Remarks
Long nose pliers	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
Circuit tester	Used for measuring resistance, voltage and current.

2. Front Seat

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Remove the headrest assembly - front.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- For models with power seat, lift the seating face before removing the seat. (When removing the seat belt inner - front)
- For models with power seat, remove the slide rail installing bolt before removing the battery ground cable.

3) Remove the slide rail assembly installing bolt.
   (1) Tilt the backrest assembly forward and move the front seat to the front most position.
   (2) Remove the cover - bolt rear (A) and remove the bolts.

   (3) Move the front seat to the rearmost position, and remove the bolts.

NOTE:
After the bolts are removed, move the seat to the middle position in order to make it easier to take out of the vehicle.

4) Disconnect the connector under the front seat.
- Seat belt warning light connector (driver's seat)
- Occupant detection system harness connector (passenger's seat) <Ref. to OD(diag)-16, OCCUPANT DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS), PROCEDURE, Airbag Connector.>
- Side airbag connector <Ref. to AB-23, SIDE AIRBAG MODULE, PROCEDURE, Airbag Connector.>
- Seat heater connector (model with seat heater)
- Buckle switch RH connector (passenger's seat) <Ref. to AB-24, BUCKLE SWITCH RH, PROCEDURE, Airbag Connector.>

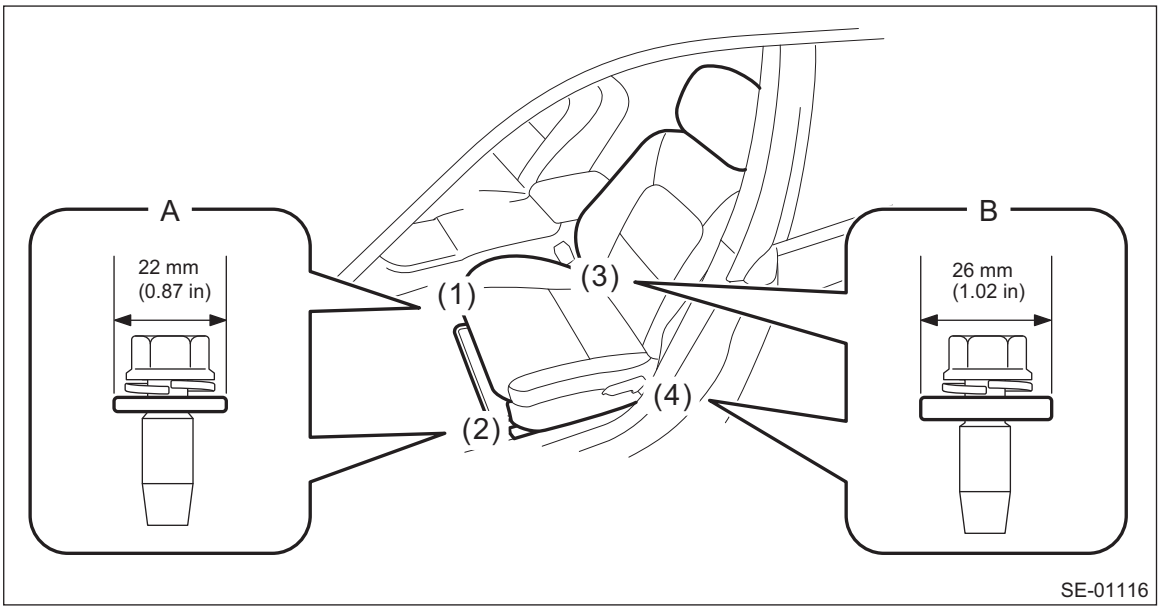
5) Take out the front seat from the vehicle.

CAUTION:
Be careful not to damage the body.

B: INSTALLATION

1) Bring the front seat inside the vehicle.
2) Connect the connectors located under the front seat.
3) Install the seat assembly.

CAUTION:
• The front seat mounting bolts differ between the front mounting points and the rear mounting points. When installing the front seat, make sure that you are using correct bolts at correct positions.
• Tighten the slide rail assembly installing bolts in the order as shown in the figure, in several steps by gradually increasing the torque until they reach the specified torque.



- **Front (bolt A): Washer diameter 22 mm (0.87 in)**
- **Rear (bolt B): Washer diameter 26 mm (1.02 in)**

Tightening torque:
Front seat assembly: 53 N·m (5.4 kgf-m, 39.1 ft-lb)
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Install the headrest assembly - front.

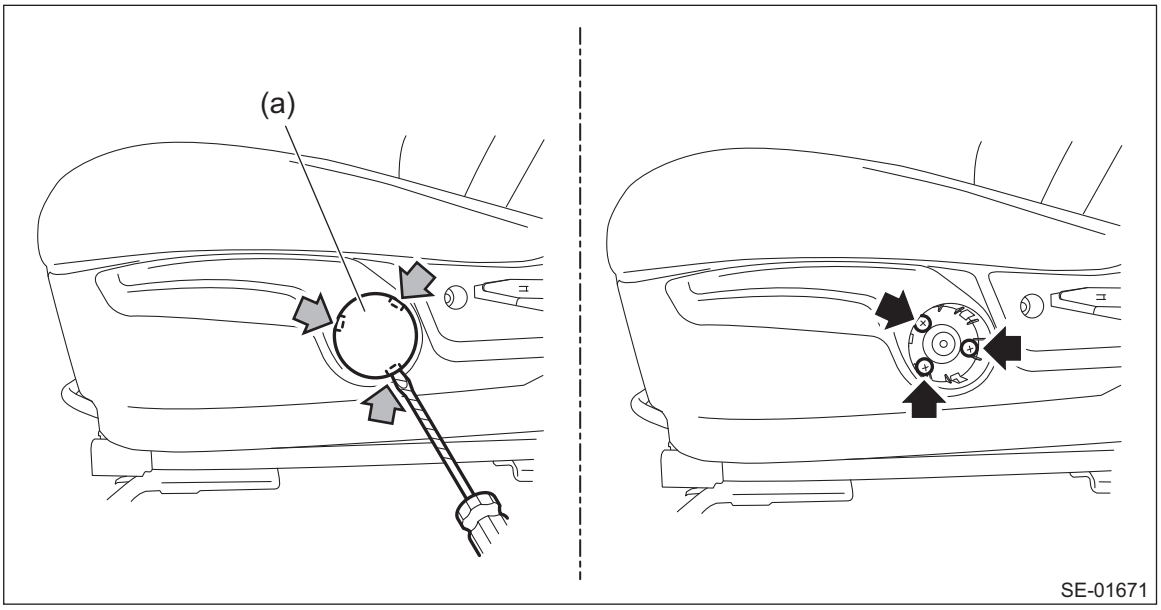
C: DISASSEMBLY

1. MANUAL SEAT (DRIVER'S SEAT)

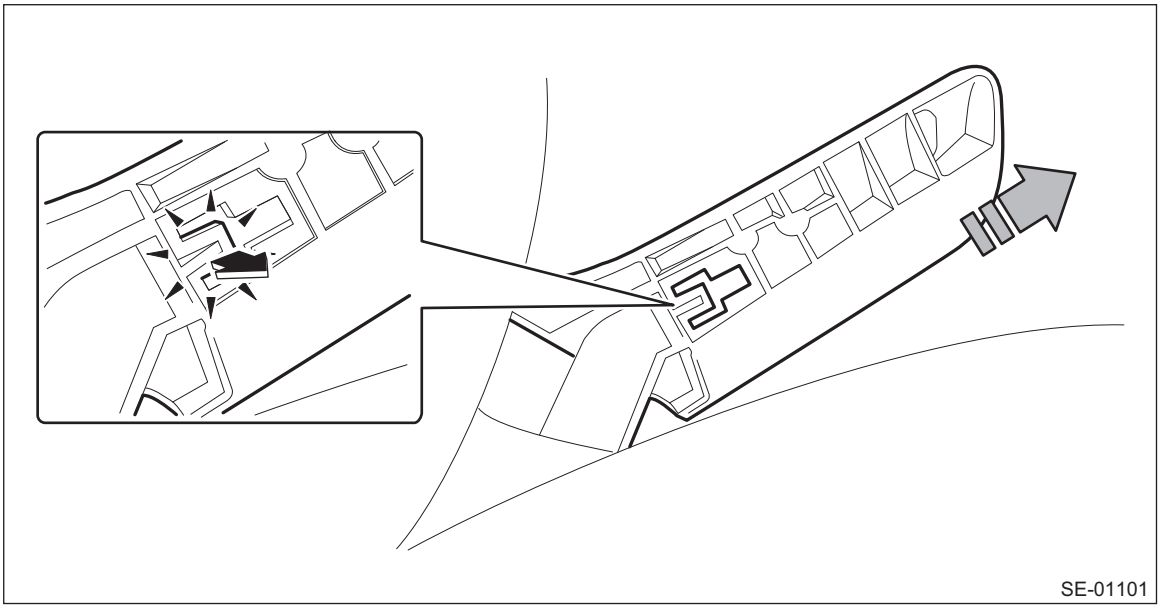
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• If the cover - front cushion and cover COMPL - front backrest are removed, make sure to replace the hang wire with a new part.
• Before assembling, make sure how the harnesses such as the side airbag harness and the seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the seat heater module is removed, replace the pad assembly with a new part.
• When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.
1) Remove the front seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the knob - lifter.
(1) Remove the cap - lifter lever (a).

NOTE:
Insert a flat tip screwdriver or similar tool wrapped with protective tape into the gap (shown with arrow) between the cap - lifter lever and the knob - lifter.

(2) Remove the screws and remove the knob - lifter.

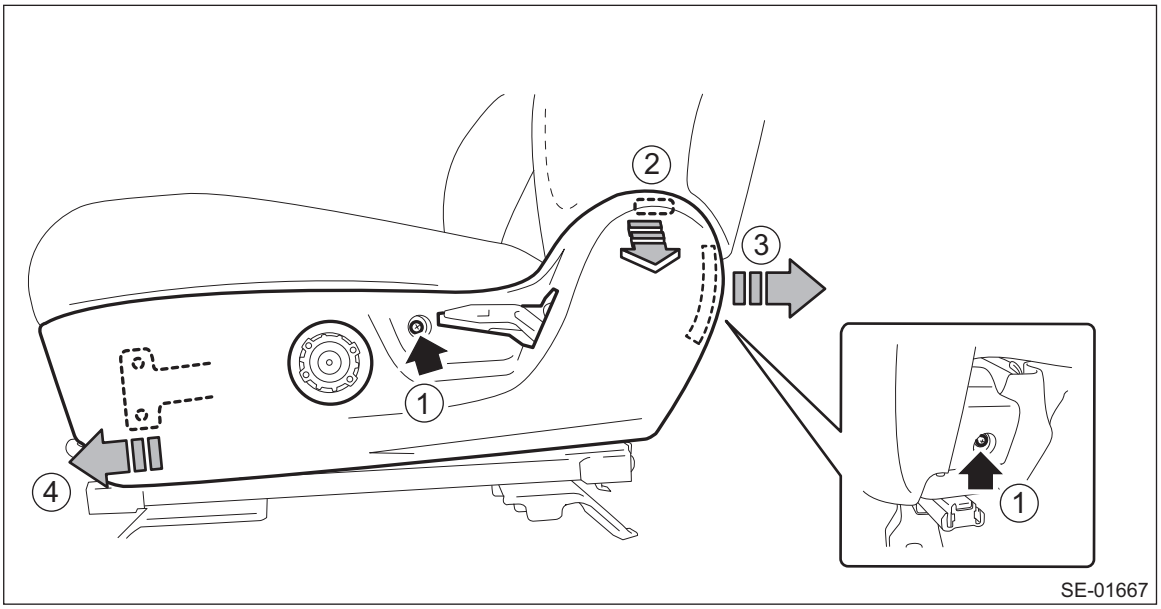


3) Remove the lever - reclining.
(1) Pull up the lever - reclining and release the claws on the back.
(2) Pull out the lever - reclining.



4) Remove the cover - hinge front seat OUT.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.
(3) Release the claw in the rear section of the cover - hinge front seat OUT.

(4) Release the claw in the front section of the cover - hinge front seat OUT, then remove the cover - hinge front seat OUT.



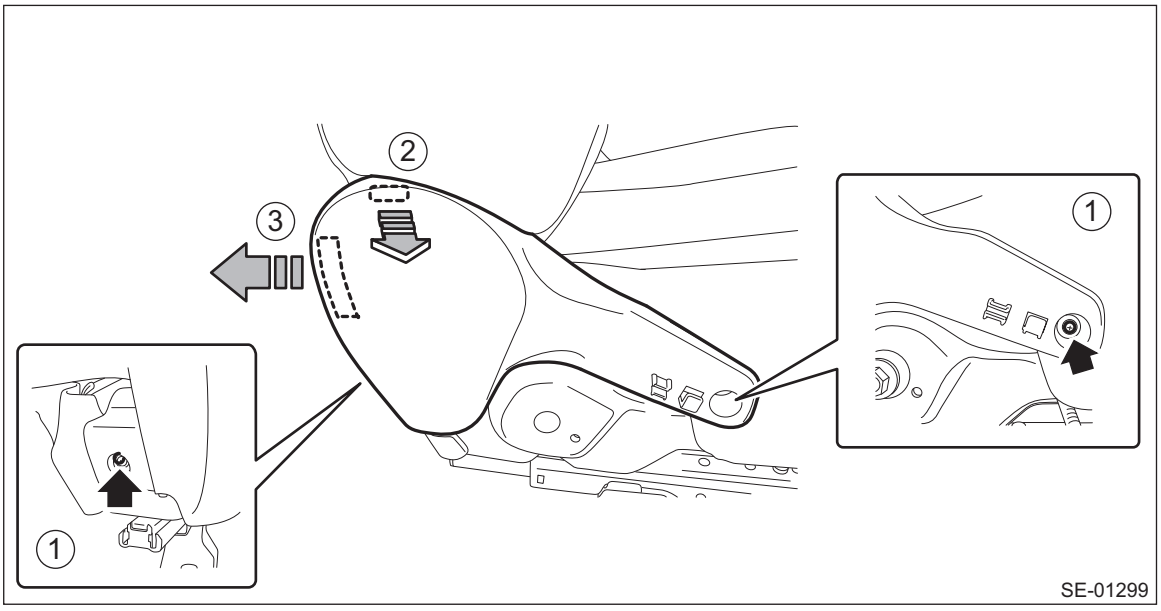
5) Remove the seat belt inner - front. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>

6) Remove the cover - hinge front seat INN.

(1) Remove the screws.

(2) Release the claw in the upper section of the cover - hinge front seat INN.

(3) Release the claw in the rear section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.

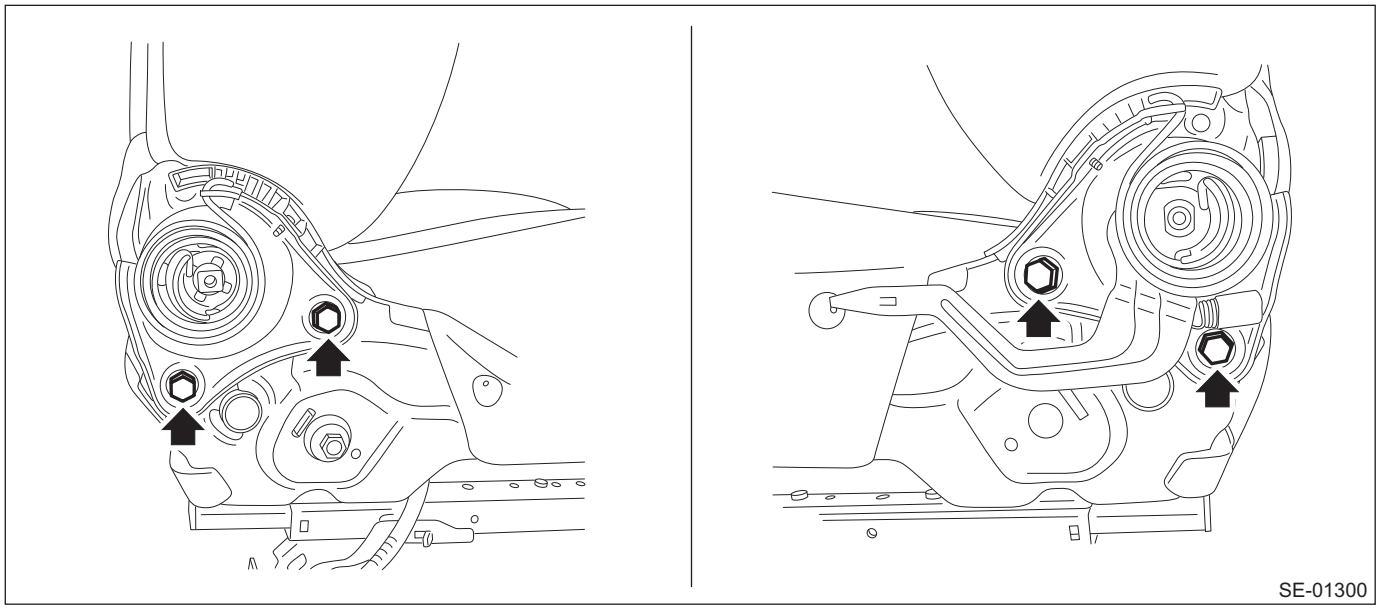


7) Separate the backrest assembly and the seat cushion assembly.

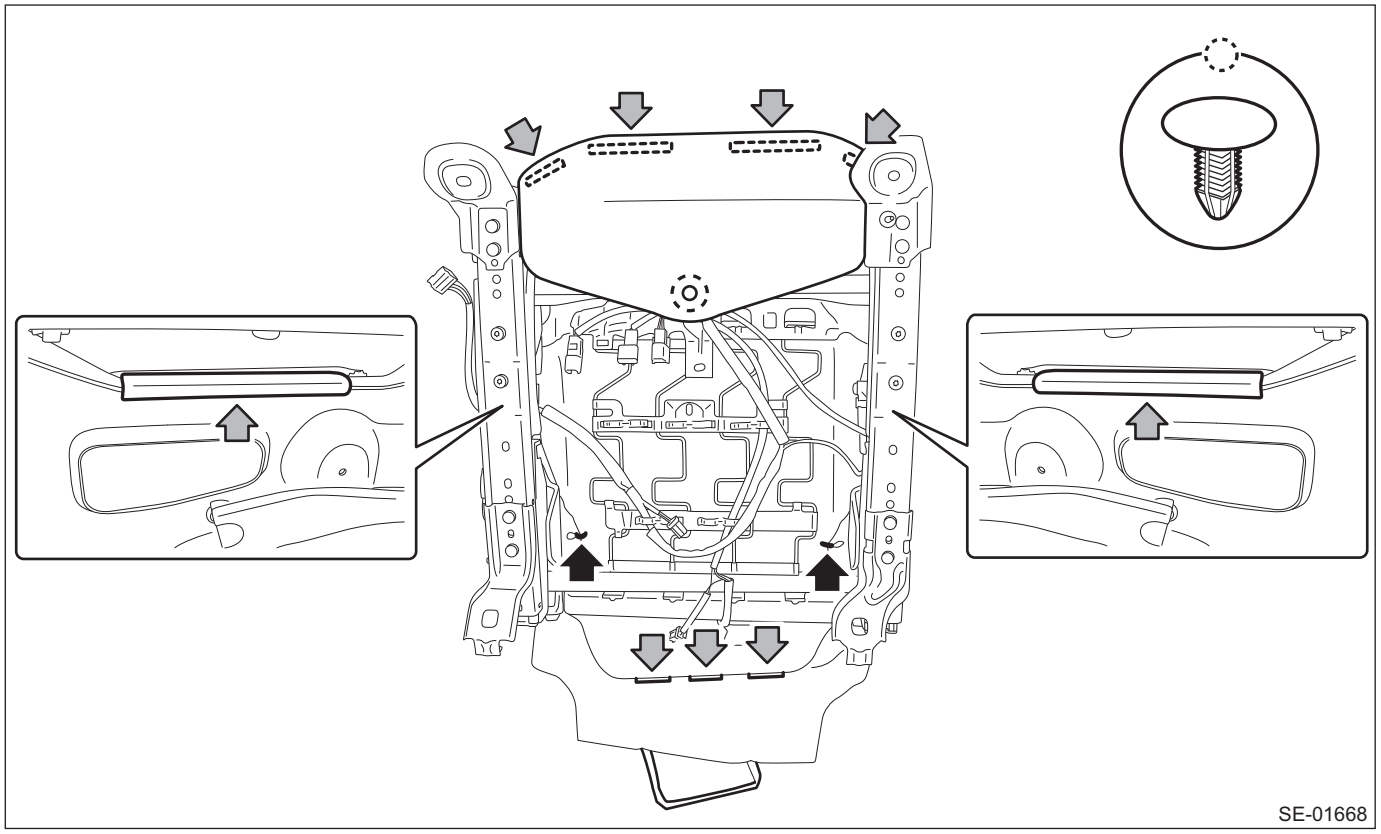
(1) Remove the clip for the side airbag harness located under the seat cushion assembly.

(2) Remove the bolts from reclining hinge of both sides.

(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



8) Remove the pad assembly - front seat cushion and the cover - front cushion.
(1) Remove the rubber band and clips.
(2) Remove the hooks and hog rings.
(3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.

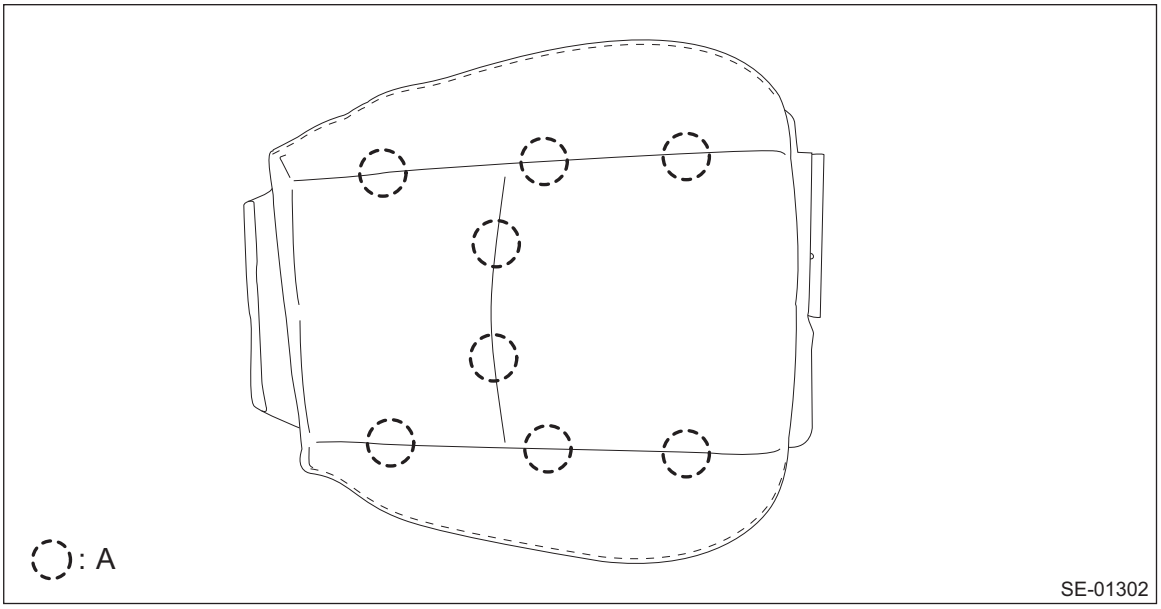


9) Remove the cover - front cushion.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part. (Driver's seat)**

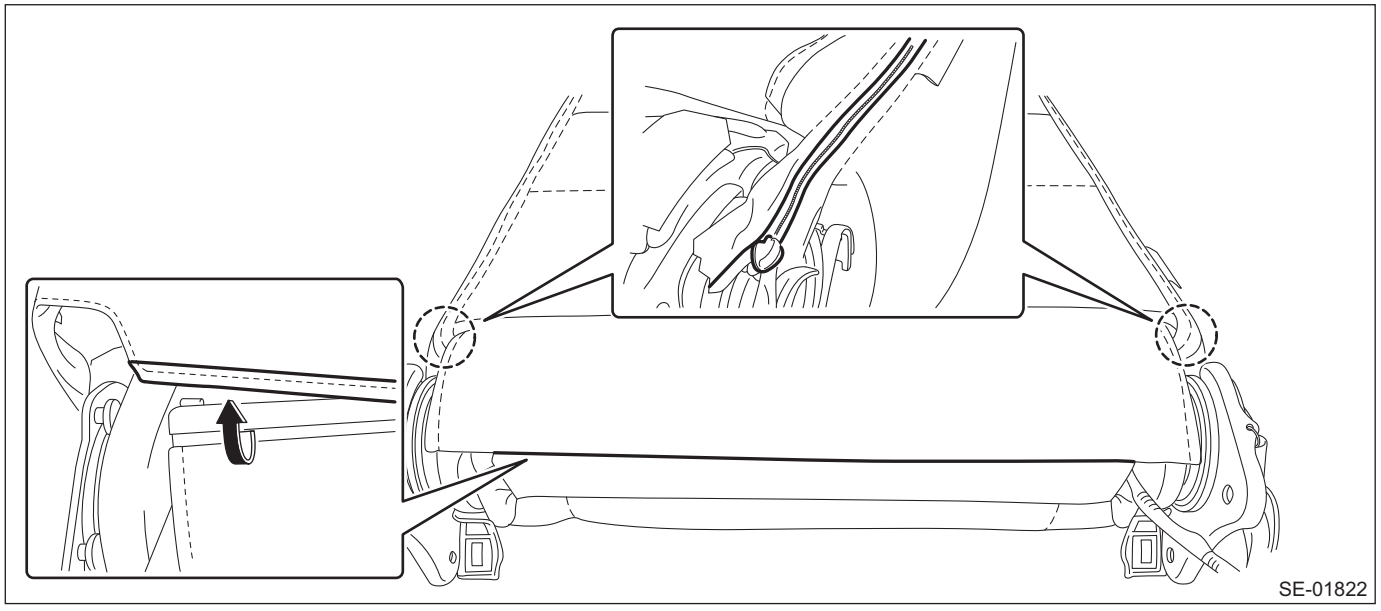
• When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.

(1) Remove the hog ring (A).

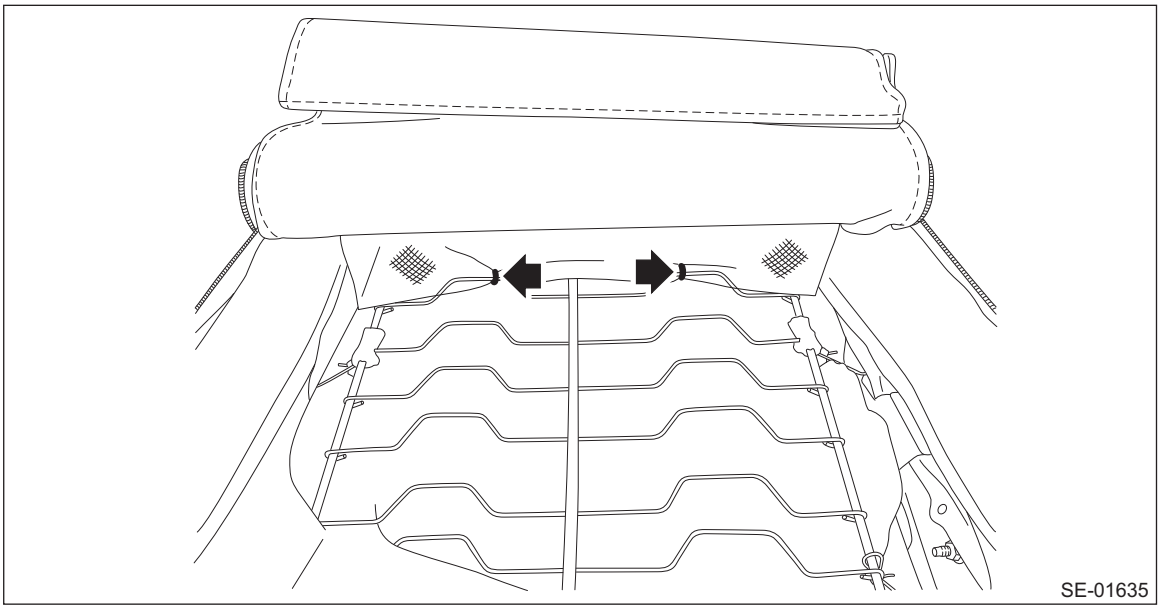


(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

10) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.



(3) Remove the hog ring.

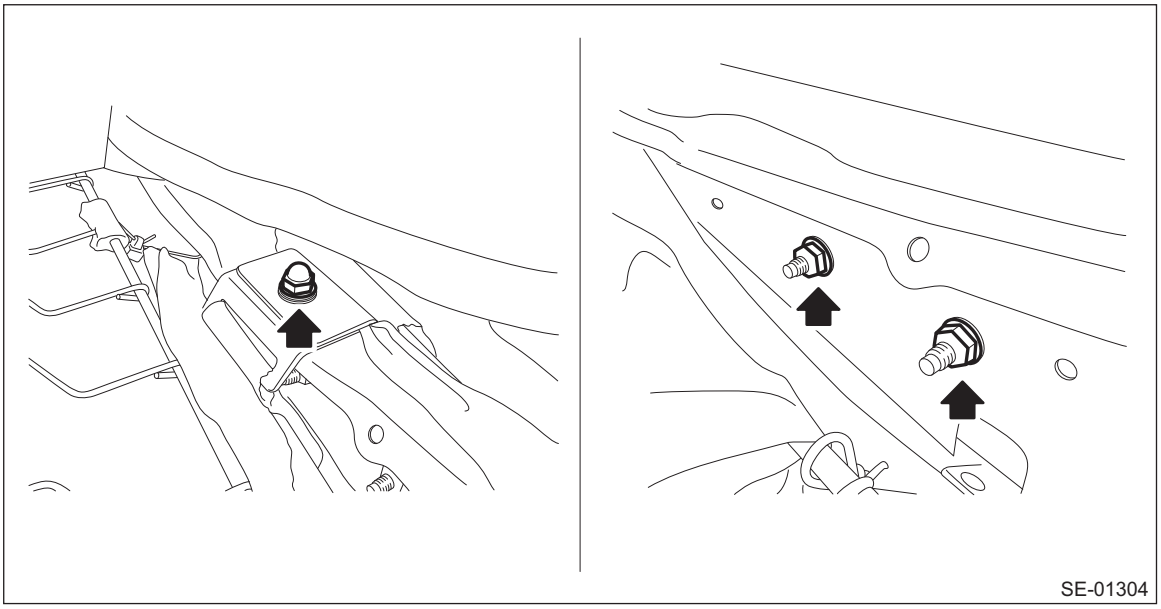


(4) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest from the backrest assembly.

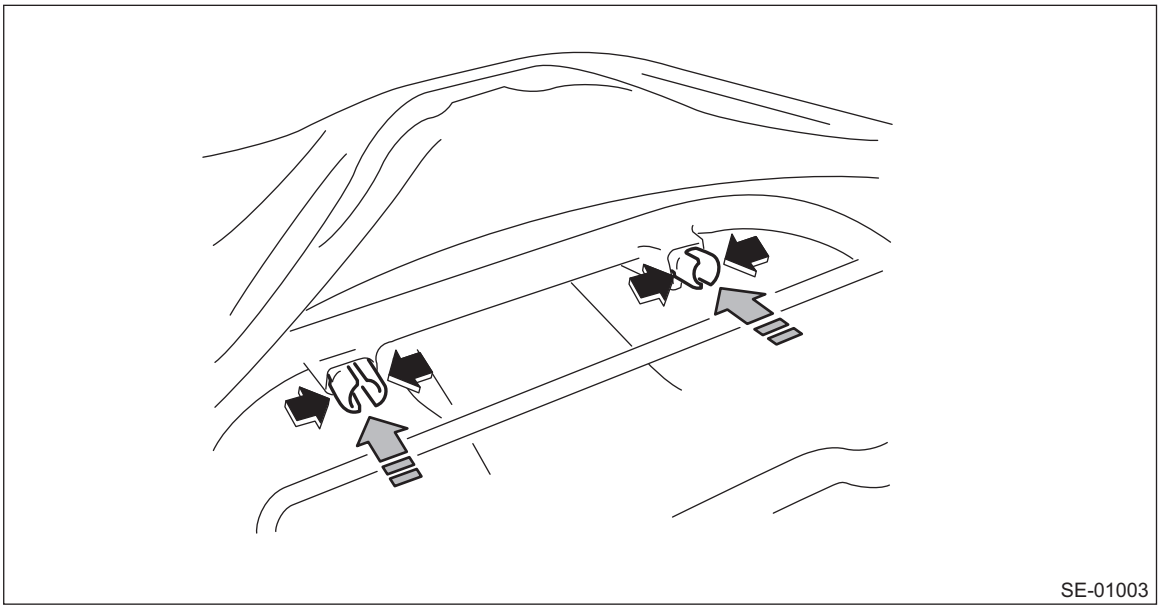
11) Remove the side airbag module.

CAUTION:
Do not open the protective cover of the side airbag. If any damage is present in the protective cover or the cloth of side airbag module comes out from the protective cover slit, replace the side airbag module with a new part.

(1) Remove the hexagon cap nut and nuts.
(2) While taking care not to damage the airbag protective cover, remove the side airbag module.



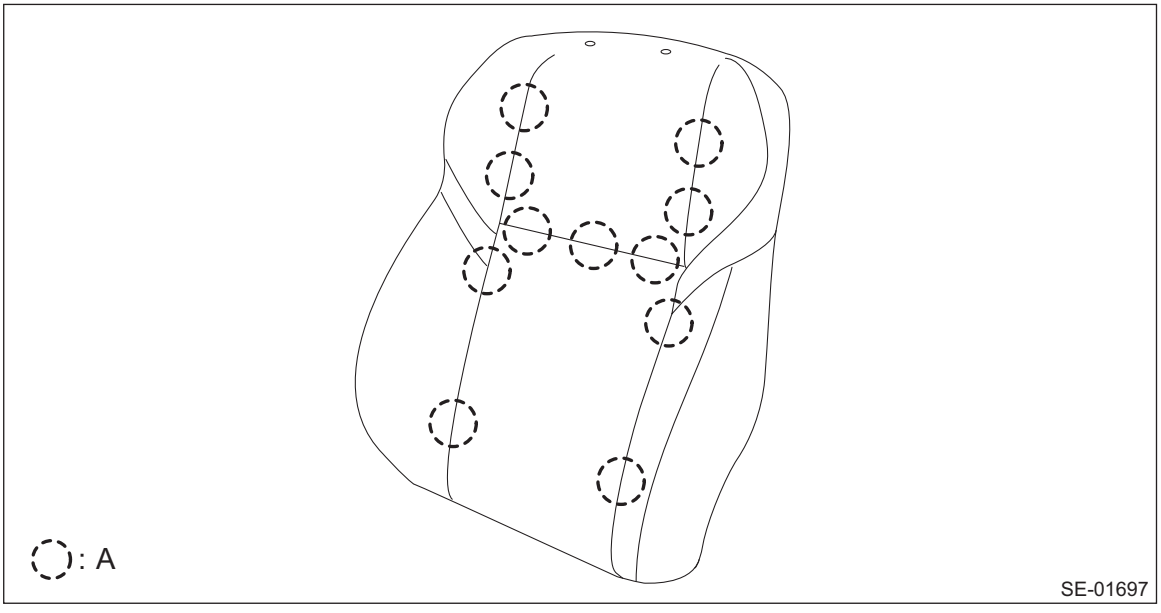
12) Remove the bushing - headrest.



NOTE:
Catch the tip of the bushing - headrest with pliers and push it outward from the inside of seat to remove it.
13) Pull out the frame assembly - front backrest.
14) Remove the cover COMPL - front backrest.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.**

(1) Remove the hog ring (A).



(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.

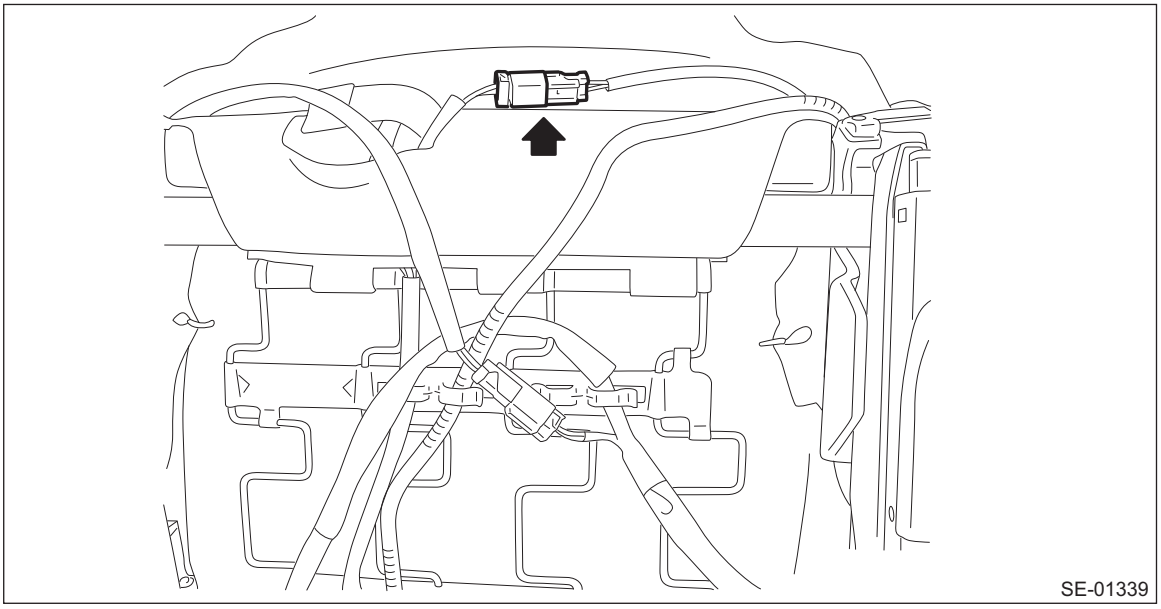
2. POWER SEAT (DRIVER'S SEAT)

CAUTION:
- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**

• If the cover - front cushion and cover COMPL - front backrest are removed, make sure to replace the hang wire with a new part.
• Before assembling, make sure how the harnesses such as the side airbag harness and the seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the seat heater module is removed, replace the pad assembly with a new part.
• When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.

NOTE:
For disassembly of RECARO® seat, refer to "RECARO® TYPE (POWER SEAT)". <Ref. to SE-24, RECARO® TYPE (POWER SEAT), DISASSEMBLY, Front Seat.>
1) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>

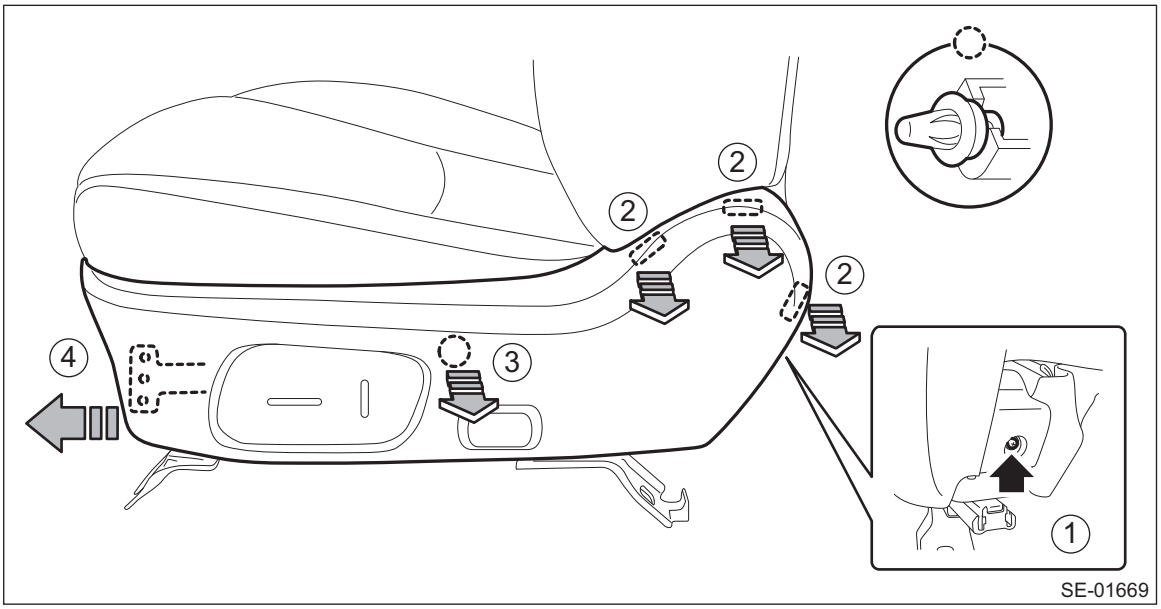
NOTE:
Before removing the seat, raise the seating face.
2) Disconnect the connector for reclining motor from the backside of seat cushion.



SE-01339

3) Remove the cover - hinge front seat OUT.
(1) Remove the screws in the rear section of the cover - hinge front seat OUT.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.
(3) Remove the clip, and release the claws in the front section of the cover - hinge front seat OUT.

(4) Disconnect the power seat switch and lumbar switch connector and remove the cover - hinge front seat OUT.



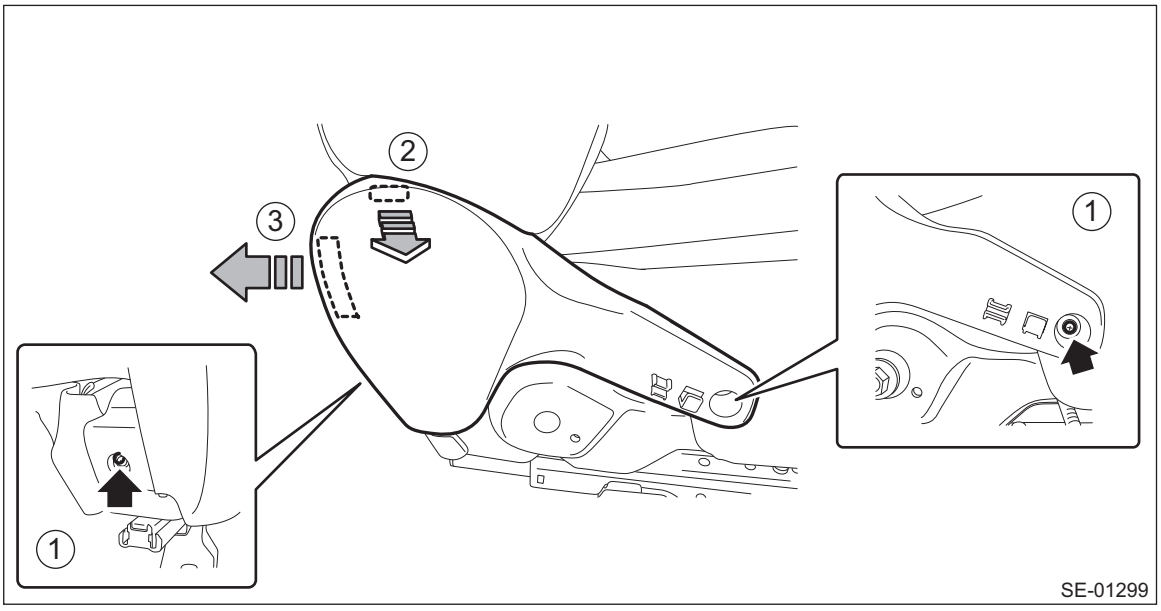
4) Remove the seat belt inner - front. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>

5) Remove the cover - hinge front seat INN.

(1) Remove the screws.

(2) Release the claw in the upper section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.

(3) Release the claw in the rear section of the cover - hinge front seat INN.

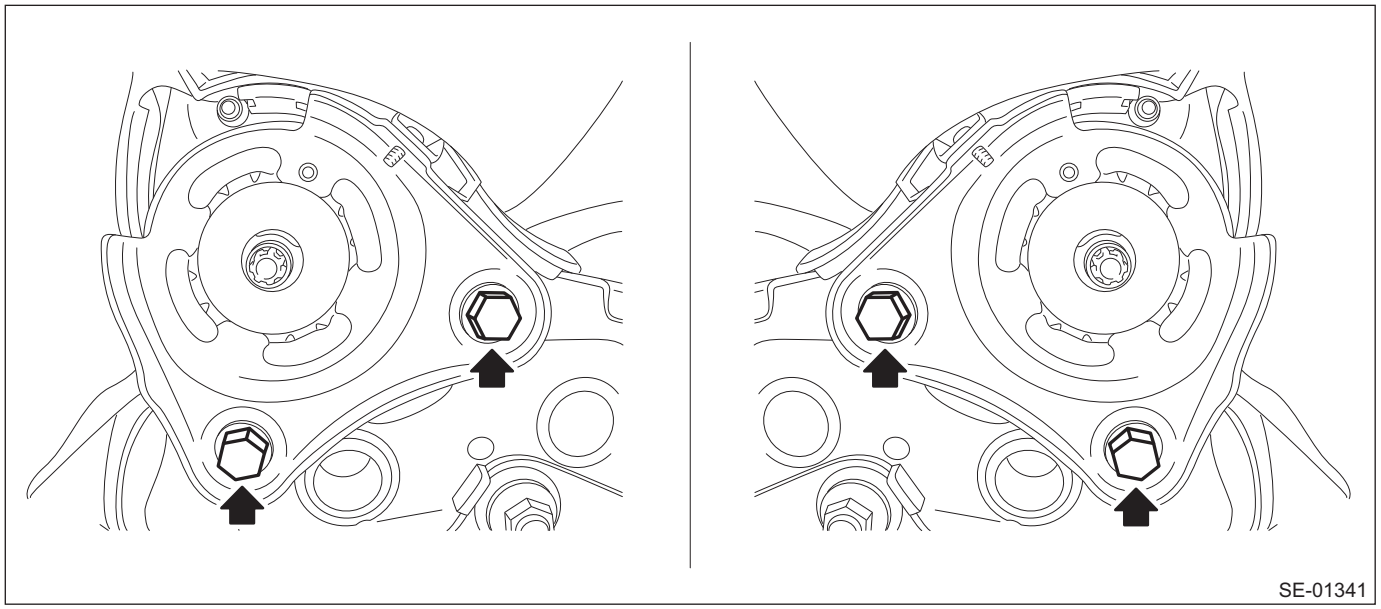


6) Separate the backrest assembly and the seat cushion assembly.

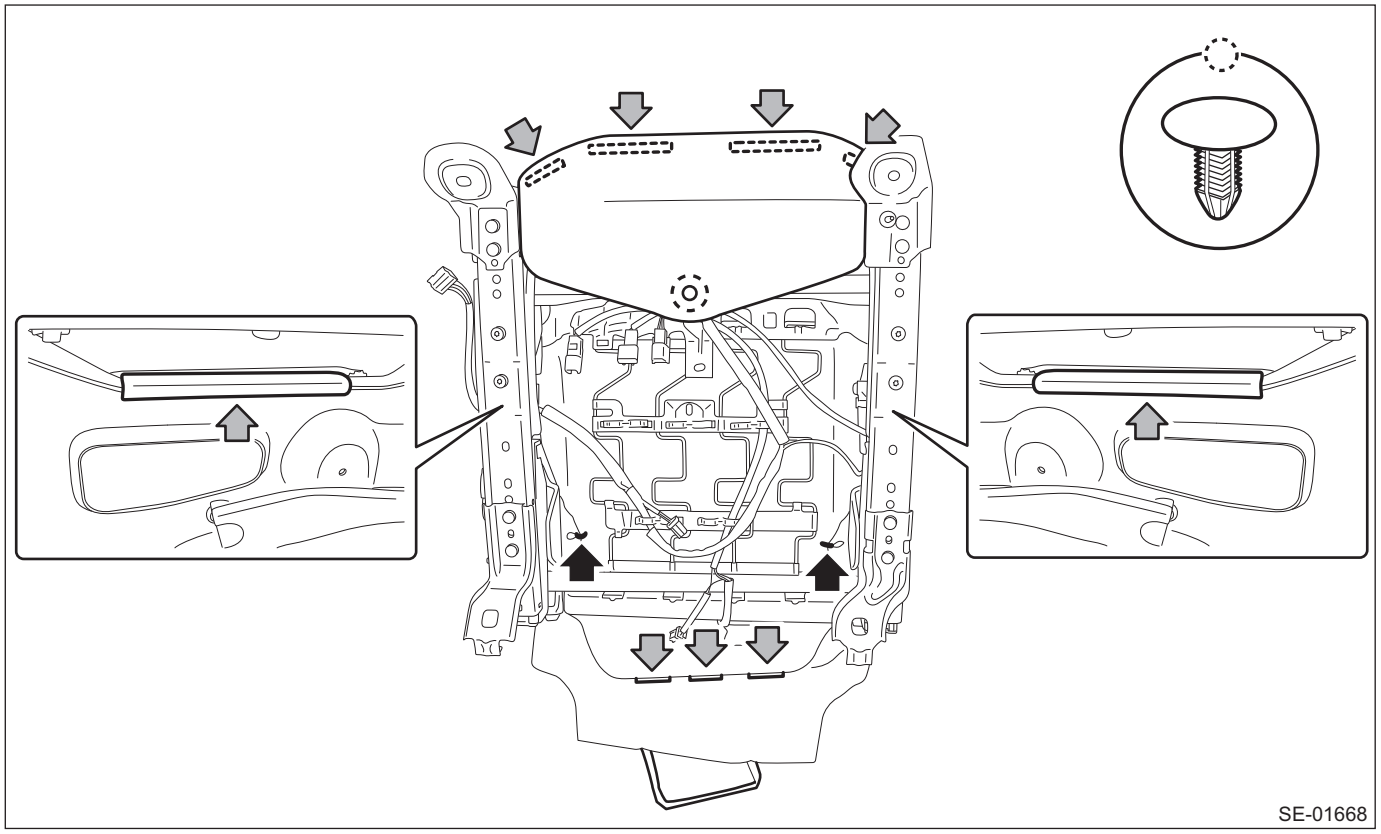
(1) Remove the clip for the side airbag harness located under the seat cushion assembly.

(2) Remove the bolts from reclining hinge of both sides.

(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



7) Remove the pad assembly - front seat cushion and the cover - front cushion.
(1) Remove the rubber band and clips.
(2) Remove the hooks and hog rings.
(3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.

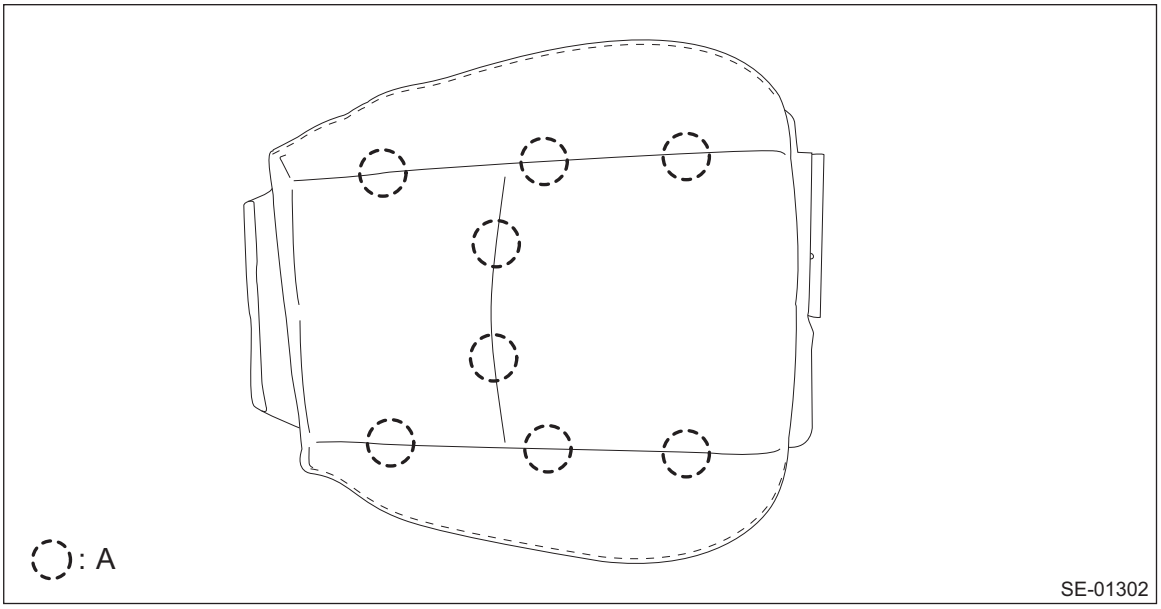


8) Remove the cover - front cushion.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**

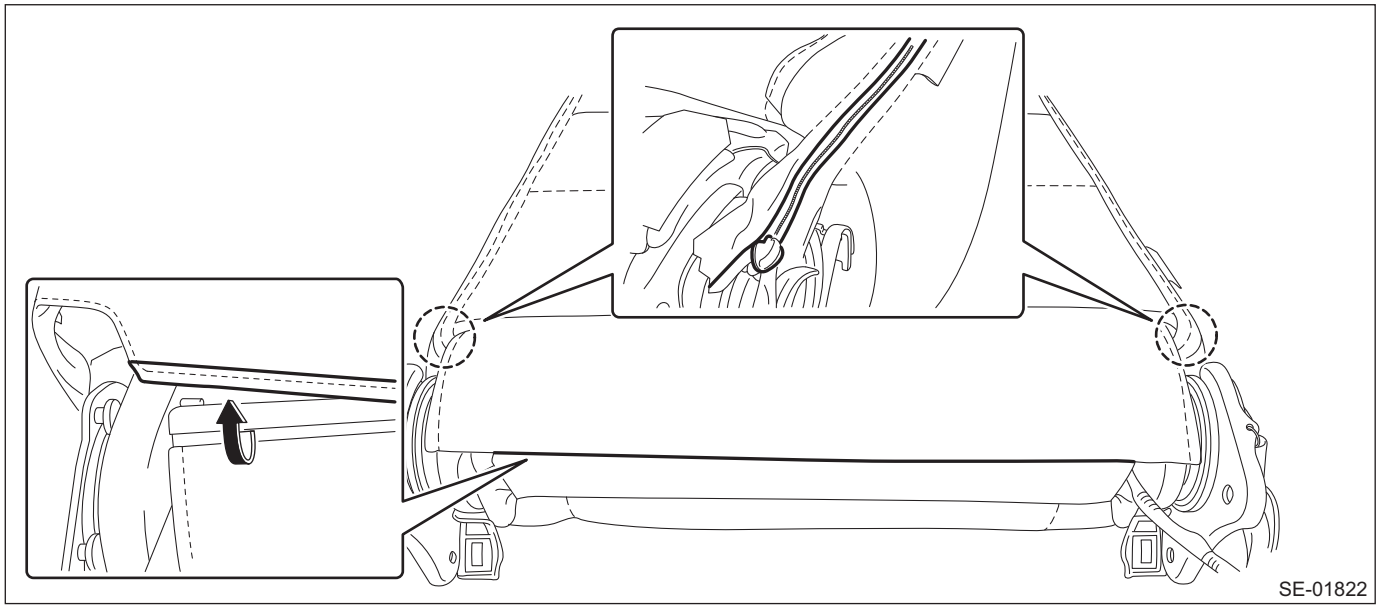
• **When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.**

(1) Remove the hog ring (A).



(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

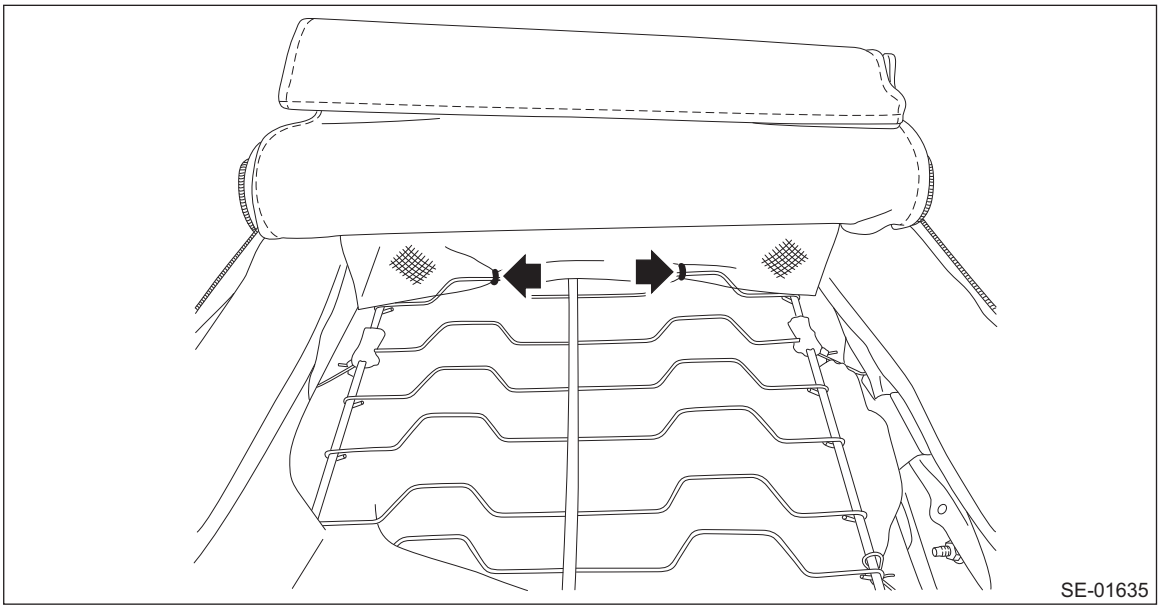
9) Remove the pad assembly - front seat backrest and the cover COMPL - front backrest.
(1) Remove the plastic fastener at the back side (bottom) of backrest assembly.
(2) Open the fastener at the rear side of backrest assembly.



(3) Remove the hog ring.

CAUTION:
Be careful not to tear the vinyl inside the seat when removing the hog rings.

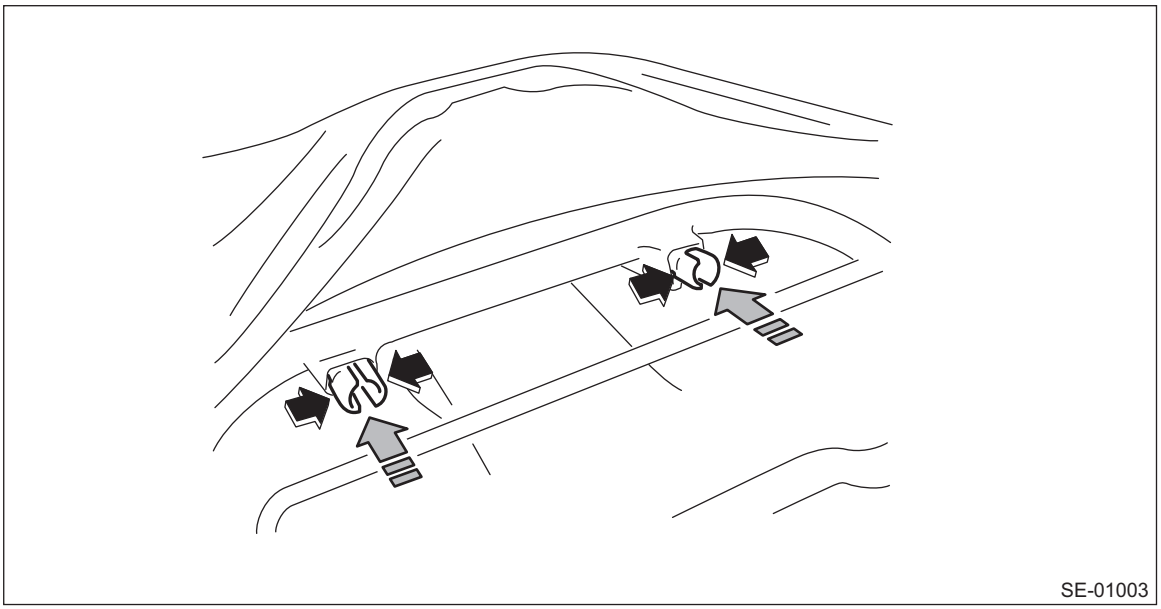
If torn, replace with a new part.



(4) Remove the backrest pad & cover from backrest assembly.

10) Remove the side airbag module. <Ref. to AB-44, REMOVAL, Side Airbag Module.>

11) Remove the headrest bushing.



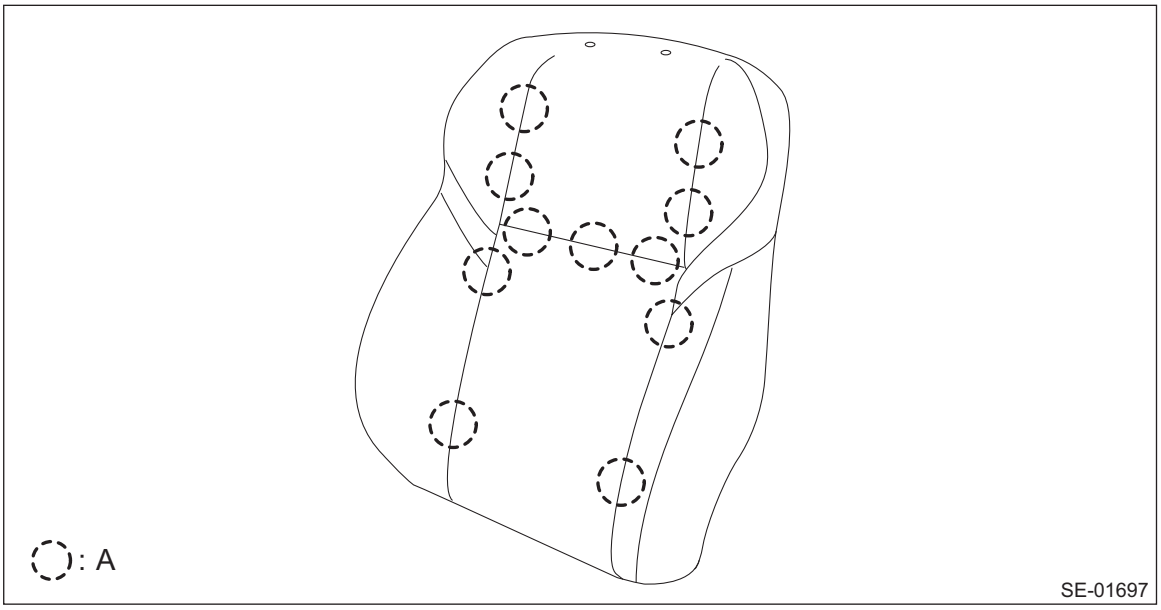
NOTE:
Catch the tip of headrest bushing with pliers and push it from inside seat to outside to remove it.

12) Pull out the frame assembly - front backrest.

13) Remove the cover COMPL - front backrest.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.**

(1) Remove the hog ring (A).



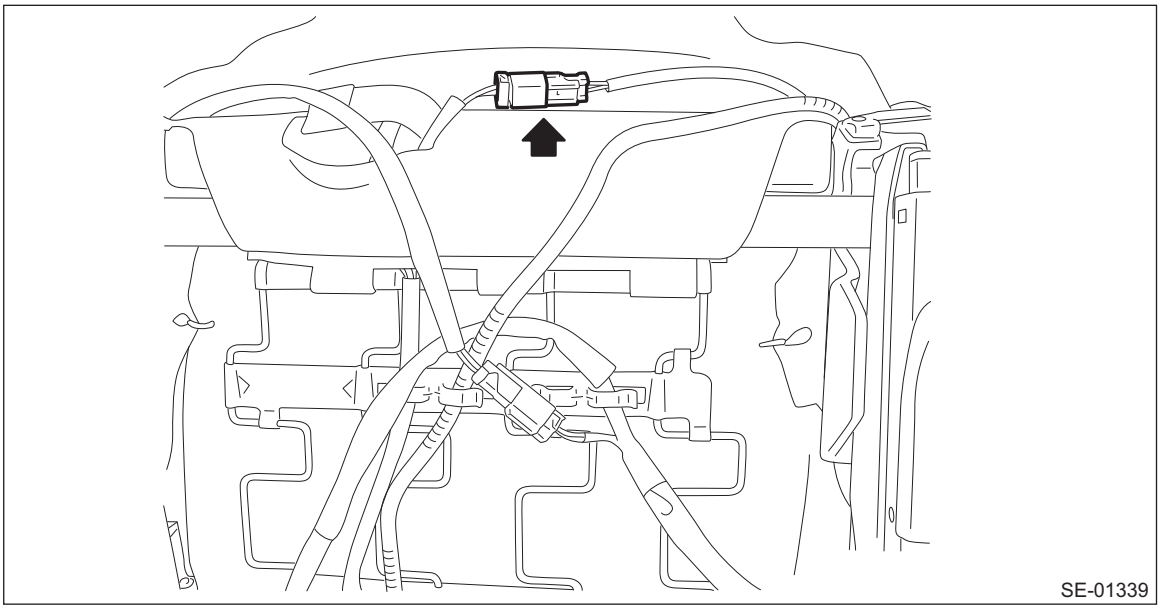
(2) Pull out the pad assembly - front seat backrest from the cover COMPL - front backrest.
(3) Remove the seat heater module from the pad assembly as necessary.

3. RECARO® TYPE (POWER SEAT)

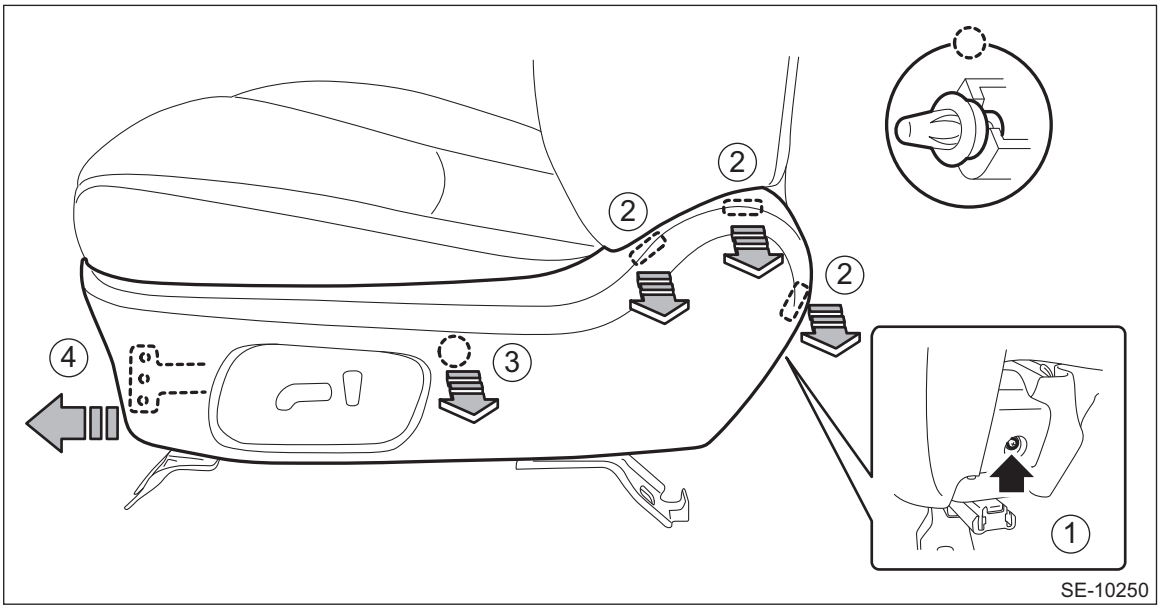
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Since the backrest of the RECARO® seat is a backrest assembly, it cannot be disassembled.
• If the cover COMPL - front cushion is removed, make sure to replace the hang wire with a new wire.
• Before assembling, make sure how the harnesses such as the side airbag harness and the seat belt inner - front harness are routed in order to avoid misarranging. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the seat heater module on the cushion side is removed, replace the pad assembly with a new part.
• If the seat heater module on the cushion side is reused, remove the polyurethane section from the reverse side completely.
1) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>

NOTE:
Before removing the seat, raise the seating face.

2) Disconnect the connector for reclining motor from the backside of seat cushion.

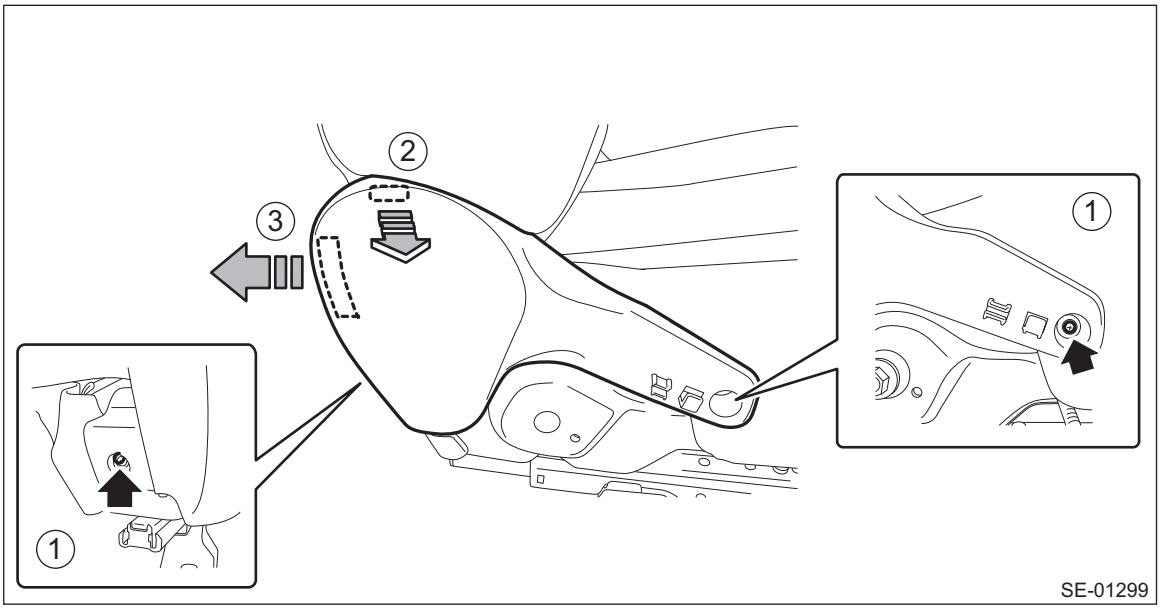


3) Remove the cover - hinge front seat OUT.
(1) Remove the screws in the rear section of the cover - hinge front seat OUT.
(2) Release the claw in the upper section of the cover - hinge front seat OUT.
(3) Remove the clip, and release the claws in the front section of the cover - hinge front seat OUT.
(4) Disconnect the power seat switch and lumbar switch connector and remove the cover - hinge front seat OUT.

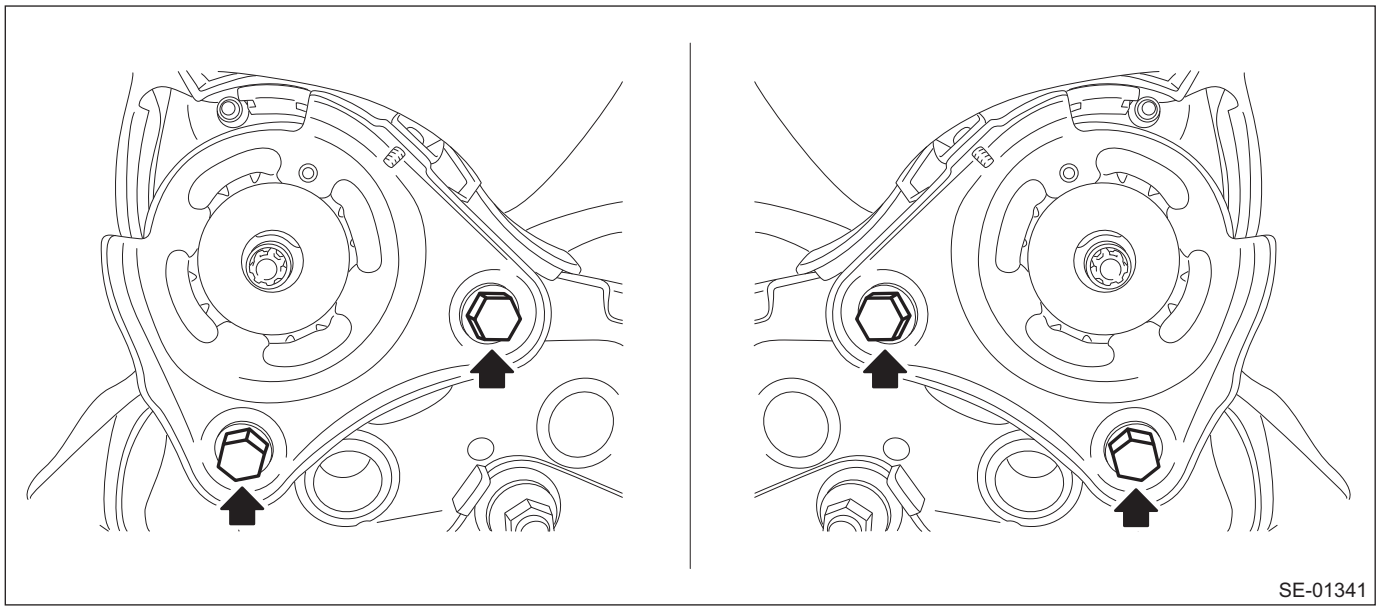


4) Remove the seat belt inner - front. <Ref. to SB-18, SEAT BELT INNER - FRONT, REMOVAL, Front Seat Belt.>
5) Remove the cover - hinge front seat INN.
(1) Remove the screws.
(2) Release the claw in the upper section of the cover - hinge front seat INN, then remove the cover - hinge front seat INN.

(3) Release the claw in the rear section of the cover - hinge front seat INN.

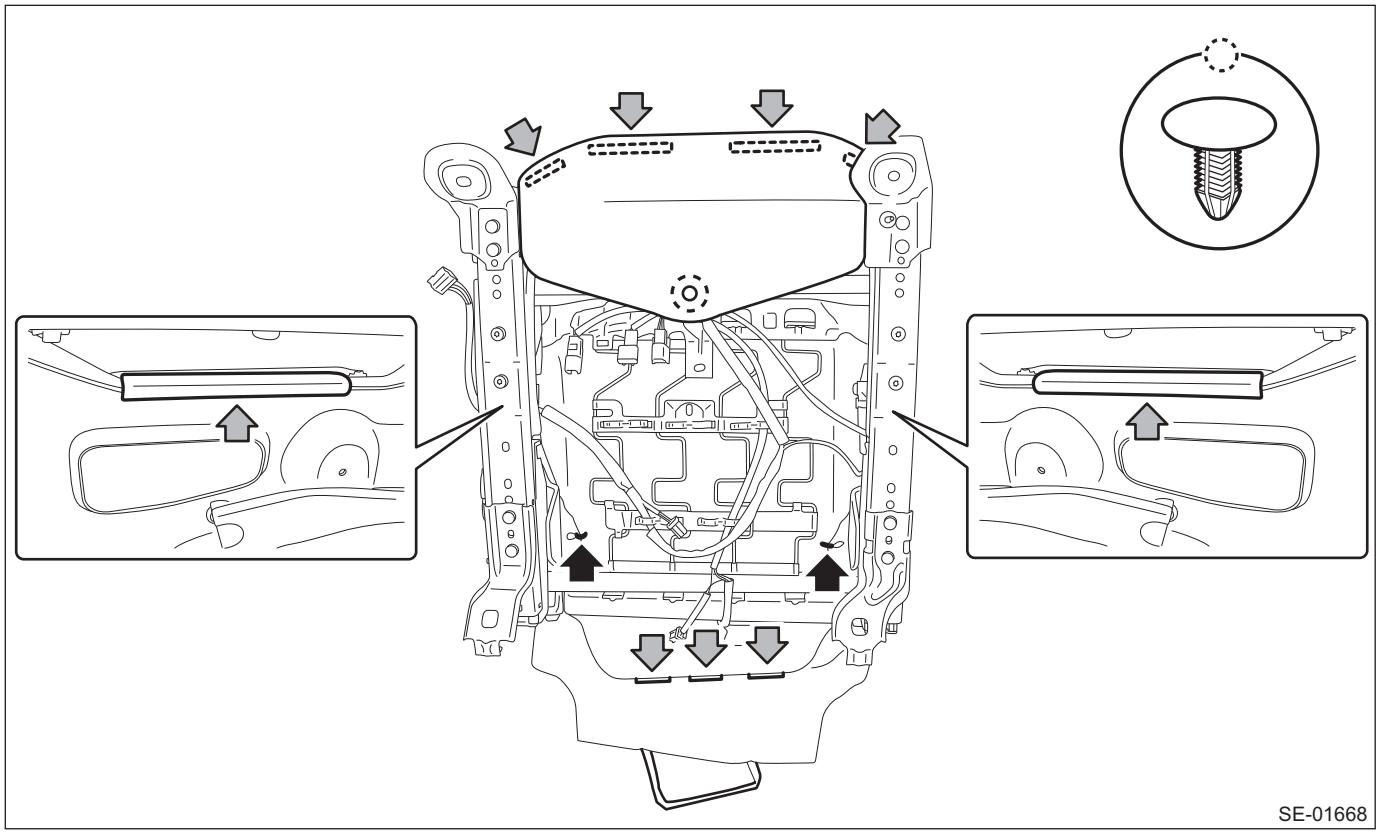


6) Separate the backrest assembly and the seat cushion assembly.
(1) Remove the clip for the side airbag harness located under the seat cushion assembly.
(2) Remove the bolts from reclining hinge of both sides.
(3) While taking care not to damage the airbag harness, separate the backrest assembly and the seat cushion assembly.



7) Remove the pad assembly - front seat cushion and the cover - front cushion.
(1) Remove the rubber band and clips.
(2) Remove the hooks and hog rings.

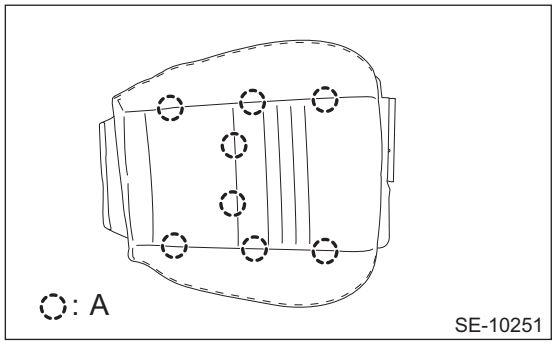
(3) Remove the pad assembly - front seat cushion and the cover - front cushion from the seat cushion assembly.



8) Remove the cover - front cushion.

CAUTION:
• If the seat heater module is removed, replace the pad assembly with a new part.
• When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.

(1) Remove the hog ring (A).



(2) Pull out the pad assembly - front seat cushion from the cover - front cushion.
(3) Remove the seat heater module from the pad assembly as necessary.

4. PASSENGER'S SEAT

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• The passenger's seat is integrated in the seat cushion pad and frame assembly. Never remove the following parts.
– Occupant detection control module
– Occupant detection sensor

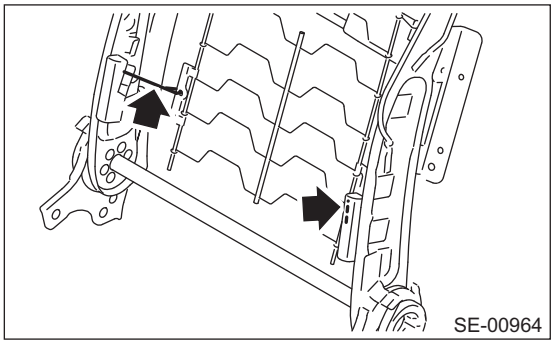
– Frame assembly - front seat cushion
– Pad assembly - front seat cushion

• If the cover - front cushion and cover COMPL - front backrest are removed, make sure to replace the hang wire with a new part. (Except for RECARO® seat)
• Since the backrest of the RECARO® seat is a backrest assembly, it cannot be disassembled.
• Never remove the occupant detection sensor connector from the occupant detection control module.
• When replacing the seat cover, be careful not to damage the occupant detection sensor while installing the hog ring.
• When removing or replacing the seat cover, perform "Occupant Detection System Inspection" after installing the seat to check if the occupant detection system operates normally. <Ref. to PI-19, SEAT, PRE-DELIVERY INSPECTION (PDI) PROCEDURE, Pre-delivery Inspection.>
• If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part.
• When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape.

1) Remove the front seat (passenger's side) from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Refer to the disassembly procedures for the driver's seat.
• Manual type: <Ref. to SE-12, MANUAL SEAT (DRIVER'S SEAT), DISASSEMBLY, Front Seat.>
• RECARO® type: <Ref. to SE-24, RECARO® TYPE (POWER SEAT), DISASSEMBLY, Front Seat.>

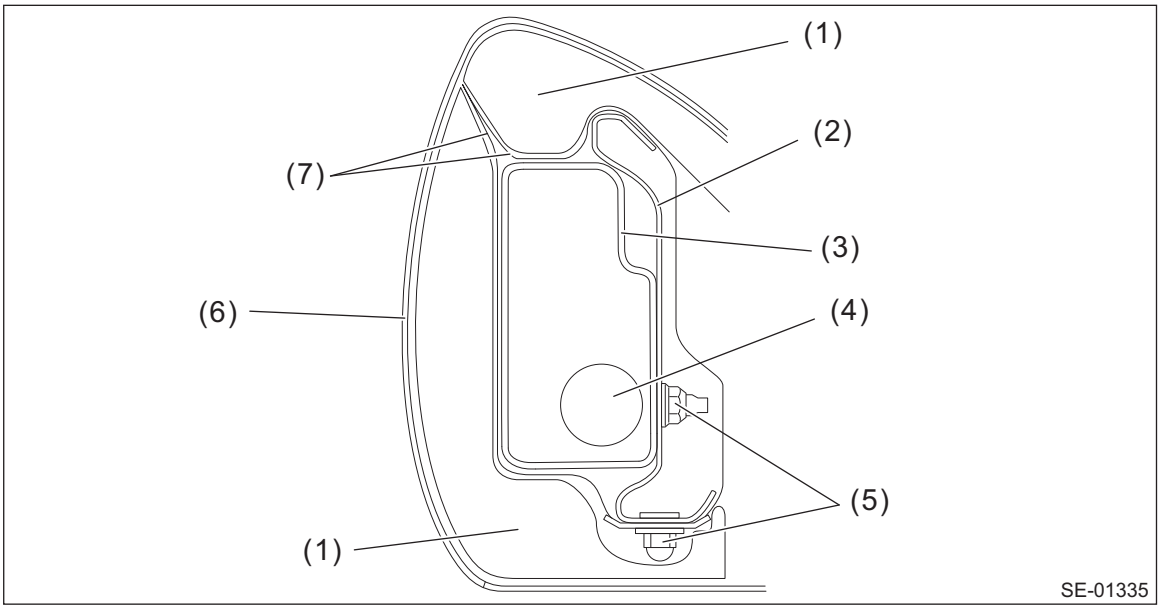
D: ASSEMBLY

CAUTION:
• Do not confuse the harness routing of the side airbag harness and the seat belt inner - front harness, etc. Assembling with harnesses improperly routed may cause the harness to get caught and short out.
• If the flat mat hook of the frame assembly - front backrest is deformed or comes off due to the deformation, replace the hook with a new part. (Except for RECARO® seat)



• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

- **Make sure that the side airbag module is installed as shown in the figure.**



(1)	Pad ASSY - front seat backrest	(4)	Side airbag module inflator	(7)	Side airbag guide cloth
(2)	Frame ASSY - front backrest	(5)	Nut		
(3)	Side airbag module protective cover	(6)	Cover COMPL - front backrest		

Besides, if the cover COMPL - front backrest is not installed securely, the side airbag may not be activated properly, therefore keep strictly to the following procedures.
- **Be careful not to stain or damage the cover COMPL - front backrest during assembly.**
- **Do not reuse the hog rings and hang wires.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - front backrest.**

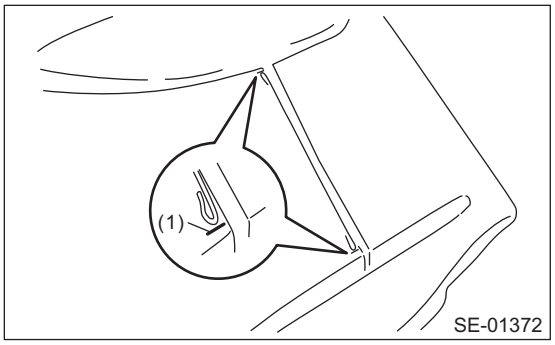
1) Install the seat heater module.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part. (Driver's seat)**
- **If the seat heater module is removed, replace the seat cushion pad & frame assembly with a new part. (Passenger's seat)**
- **If the seat heater module is reused, remove the polyurethane section from the reverse side completely and attach a new pad assembly with a double-sided tape.**

Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent

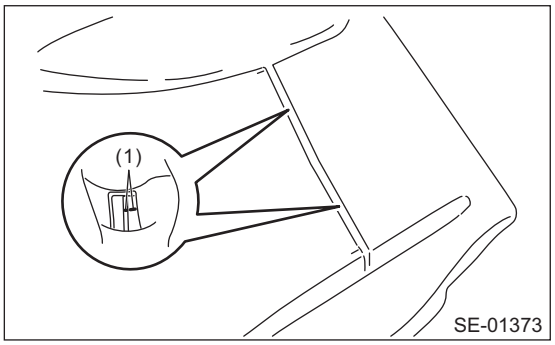
2) Make sure that there is no foreign matter on side airbag module.
3) Assemble the seat cover.

(1) Adjust so that the left and right clearances between wire and seat pad become equal, and mark the seat pad.



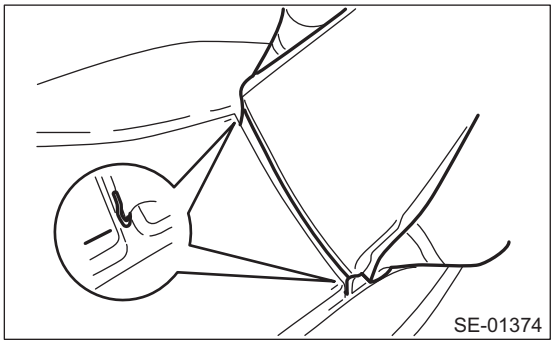
(1) Marking

(2) Mark the center of the wire on the pad side to which the hog ring is attached.

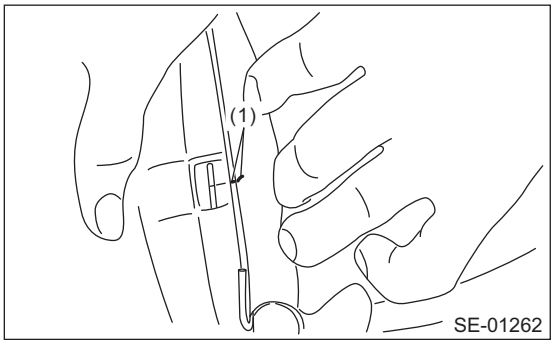


(1) Marking

(3) Insert the wire into the seat cover, and align the wire with the position marked in step 1).



(4) Mark the wire on the seat cover side according to the markings on the seat pad.

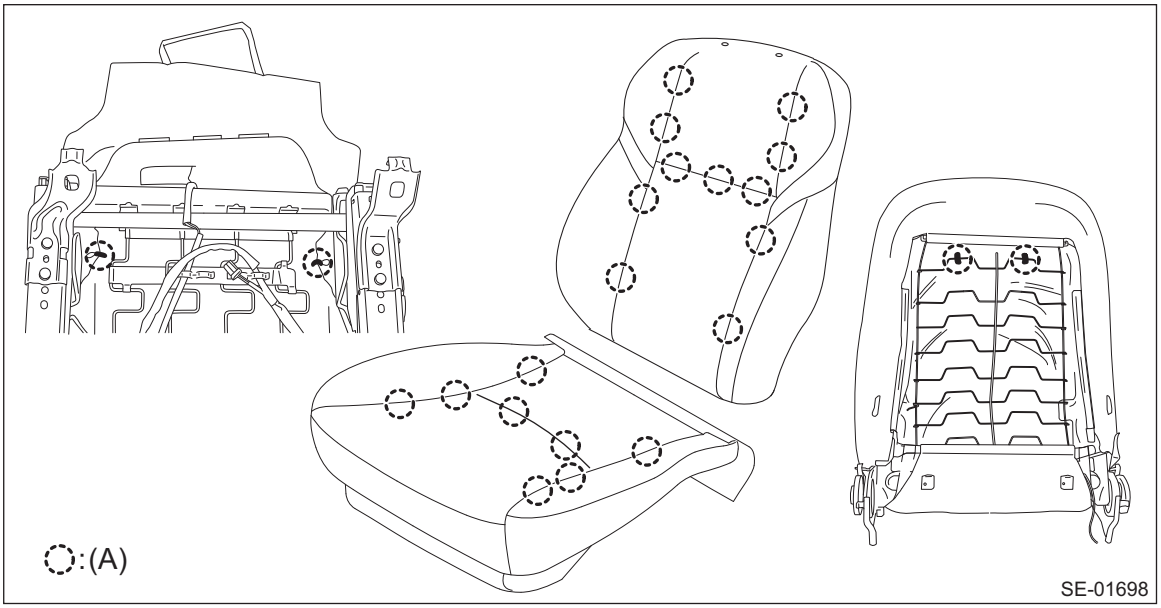


(1) Marking

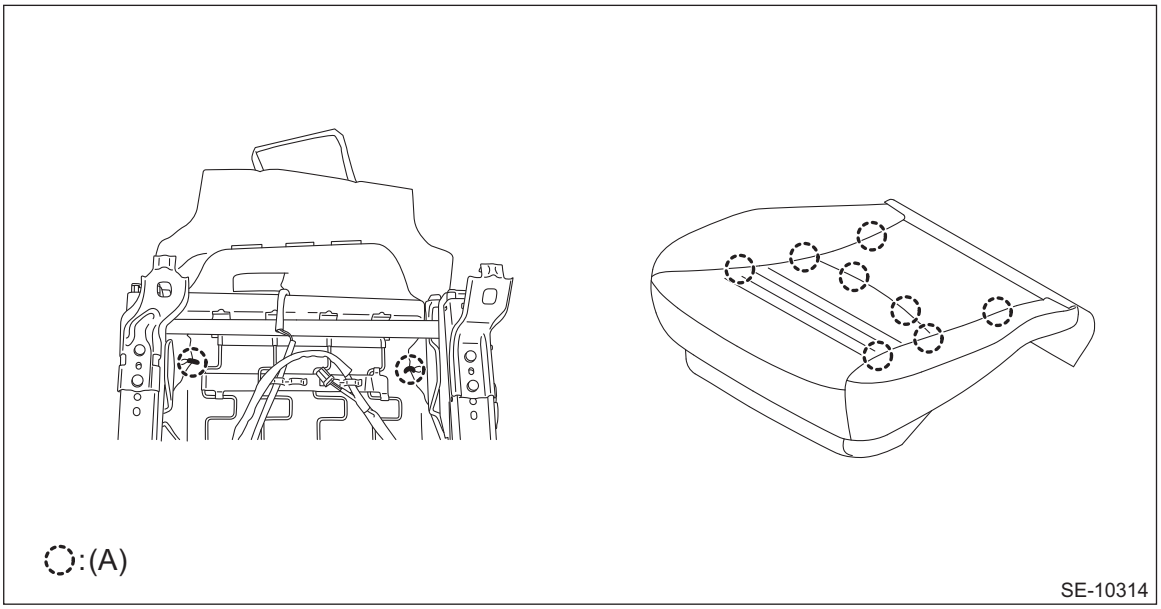
(5) Perform steps (1) — (4) to all sections to which the hog rings are attached.

(6) Make sure that all hog rings (A) are attached securely.

- Normal type



- RECARO® type

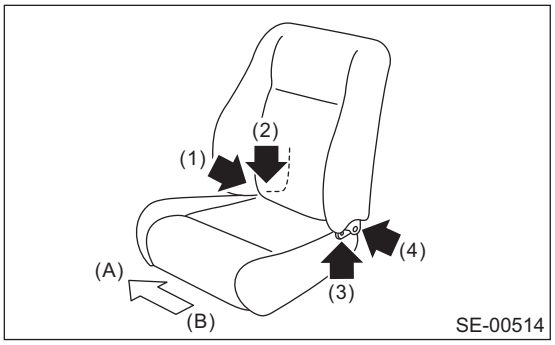


4) Assemble remaining parts in the reverse order of disassemble.

NOTE:

- When installing the seat belt inner - front, follow the procedures described in the seat belt section. <Ref. to SB-18, INSTALLATION, Front Seat Belt.>
- Install the backrest assembly and seat cushion assembly in the following procedure.
  1. Temporarily tighten the four reclining hinge bolts.
  2. Place the backrest in the most upright position.

3. Tighten the reclining hinge bolts in order from (1) to (4) two or three times, until they reach the specified torque.



(A) Vehicle inside
(B) Vehicle outside

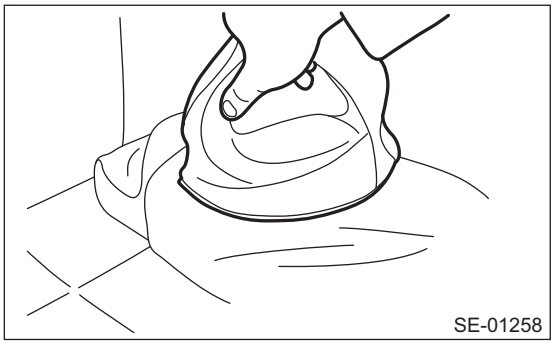
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

5) If any wrinkles are found after the assembly of the seat cover, finish the seat cover with iron.
(1) Place the wet towel on wrinkles.

(2) Touch up with warm iron.

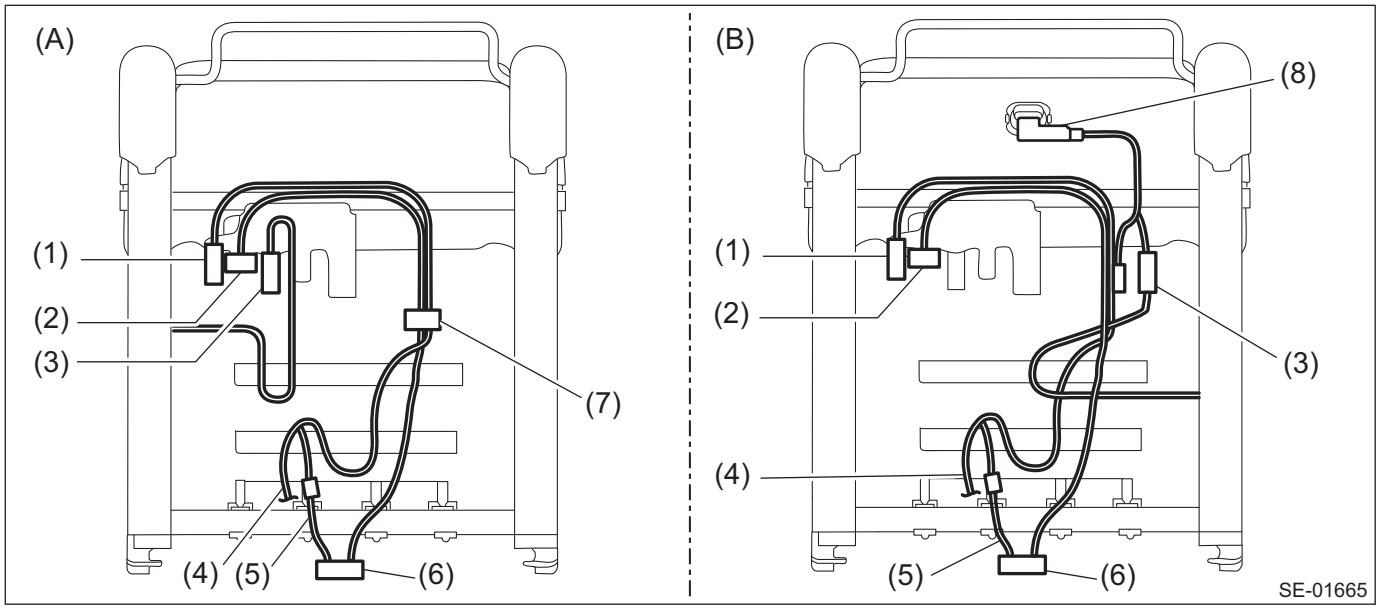
CAUTION:
Keep moving the iron, otherwise the seat cover surface can be damaged.

NOTE:
This method is available for genuine leather, synthetic leather, cloth, etc.



6) Install connectors located under the front seat.

- Manual seat

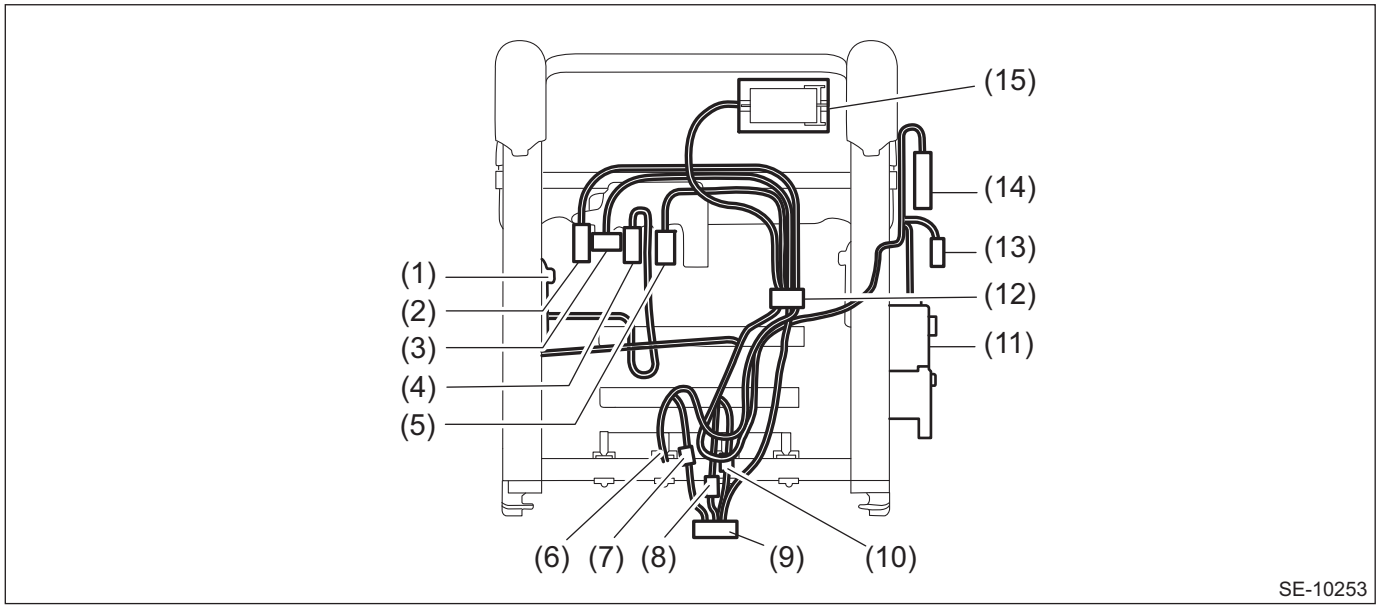


(A) 6 WAY

(B) 4 WAY

(1) Seat cushion heater connector
(2) Side airbag connector
(3) Seat belt switch connector
(4) Seat cushion - heater harness
(5) Backrest heater harness
(6) Velcro
(7) Band A
(8) Occupant detection control module

- Power seat



(1) Tilt motor
(2) Seat heater connector
(3) Side airbag connector
(4) Seat belt switch connector
(5) Power seat connector
(6) Seat cushion - heater harness
(7) Backrest heater harness
(8) Reclining motor harness
(9) Velcro
(10) Lumbar motor harness (with lumbar support)
(11) Lifter motor
(12) Band A
(13) Lumbar switch ASSY (with lumbar support)
(14) Power seat switch ASSY
(15) Slide motor

7) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

E: INSPECTION

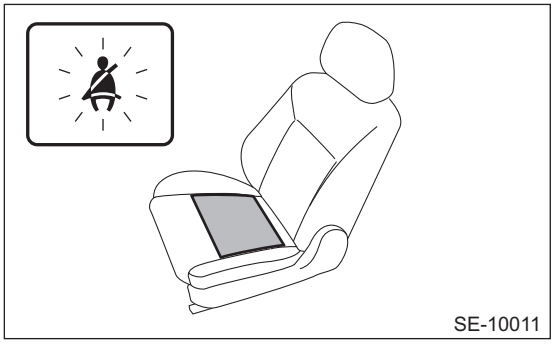
1. SEAT COVER

Check that there is no tear or fray on the cover COMPL - front backrest and the cover - front cushion.

NOTE:
If the door side of the cover COMPL - front backrest is torn or frayed, the side airbag may not be deployed properly. In this case, replace the cover COMPL - front backrest with a new part.

2. CHECK ILLUMINATION OF PASSENGER'S SEAT BELT WARNING LIGHT

Check that the passenger's seat belt warning light illuminates when the passenger's seat is occupied.

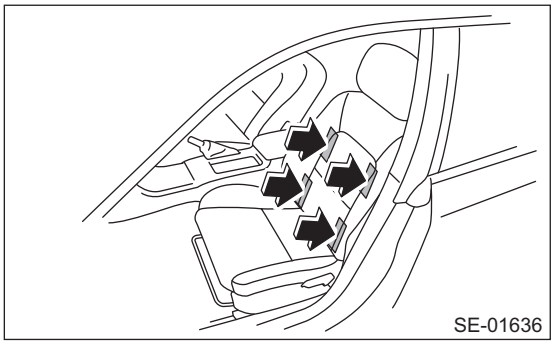


SE-10011

If it does not illuminate, check the seat belt warning system and the occupant detection system.
- Seat belt warning system: <Ref. to SB-13, Seat Belt Warning System.>
- Occupant detection system: <Ref. to OD(diag)-2, Basic Diagnostic Procedure.>

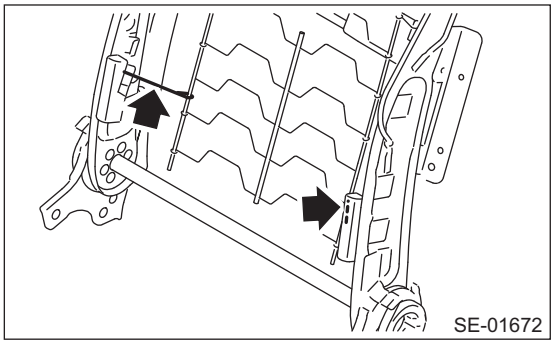
3. FLAT MAT HOOK (EXCEPT FOR RECARO® TYPE)

Check the flat mat hook by applying weight to the backrest assembly.



SE-01636

NOTE:
If the appropriate stiffness is not obtained by applying weight to the backrest assembly, the hook may be disengaged.
If it is due to the deformation of the hook, replace the hook with a new part.



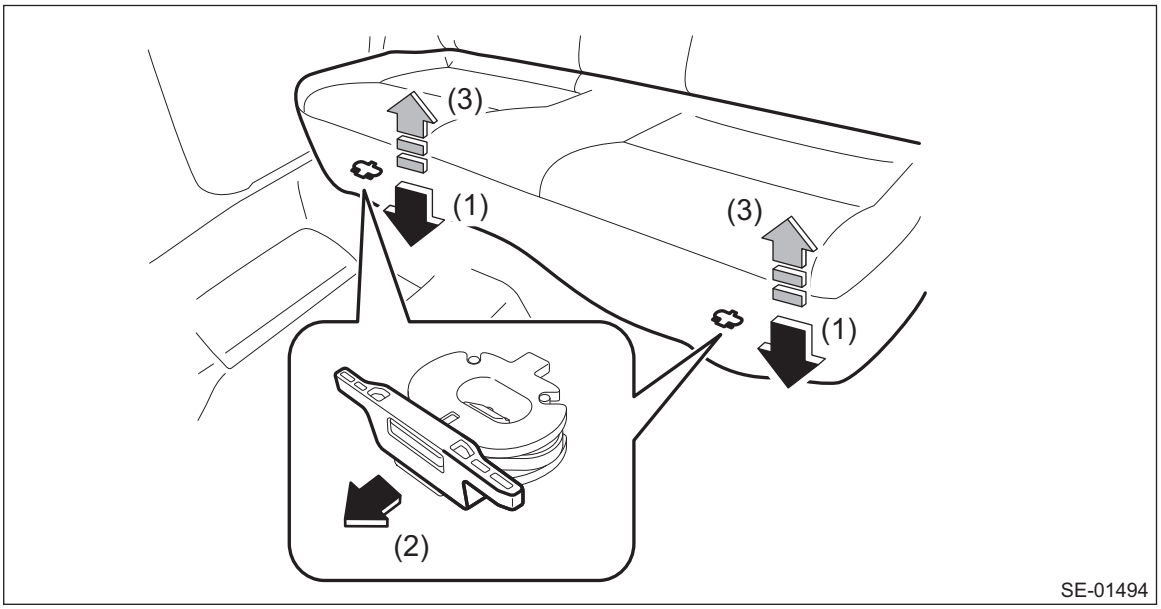
SE-01672

3. Rear Seat

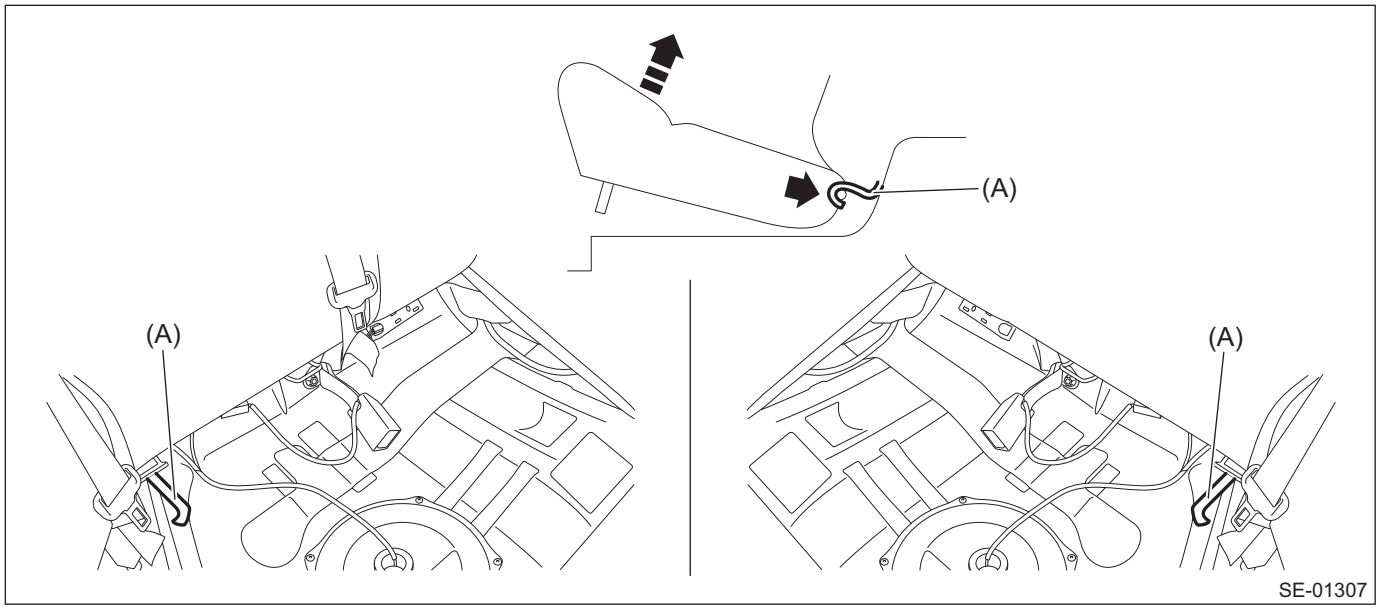
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

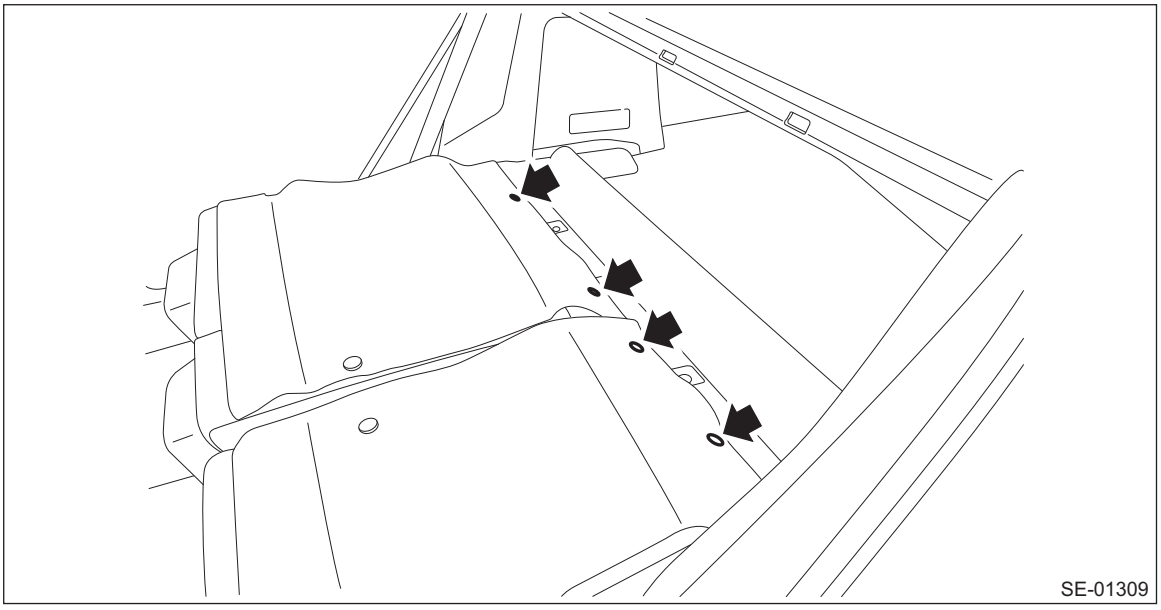
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the rear seat cushion assembly.
(1) Push the corners of the rear seat cushion from above.
(2) While pushing the corners of the rear seat cushion from above, pull the knob of the hook - seat cushion rear towards yourself.
(3) While pulling the knob towards yourself, disconnect the hooks by lifting up the rear seat cushion.



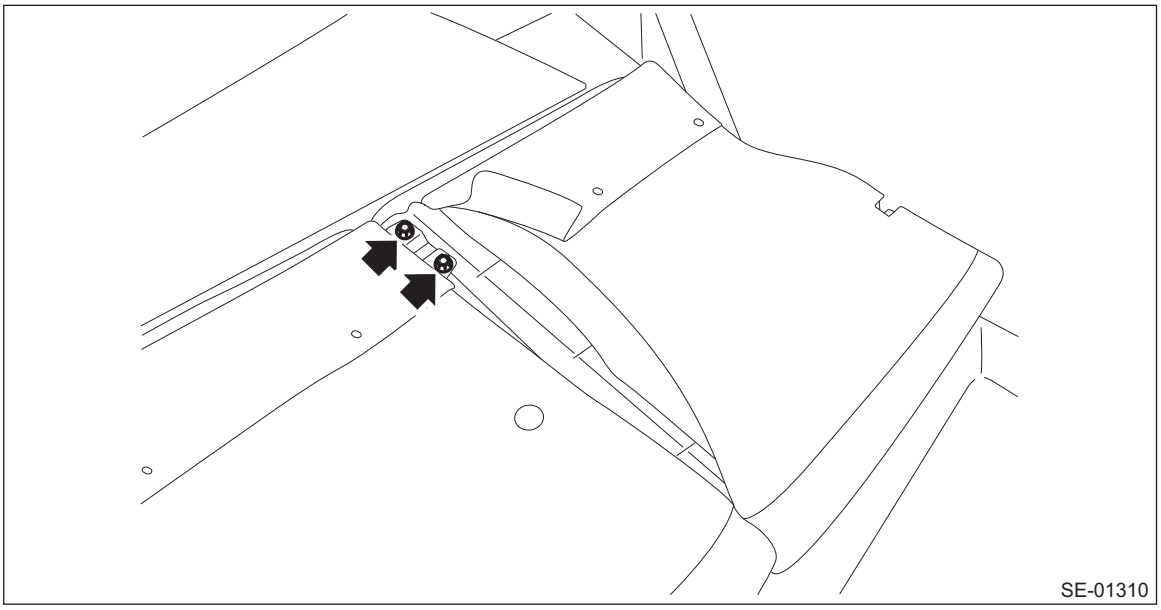
(4) Remove the hook (A) by pushing it back while lifting the front side of the rear seat cushion, and remove the rear seat cushion.



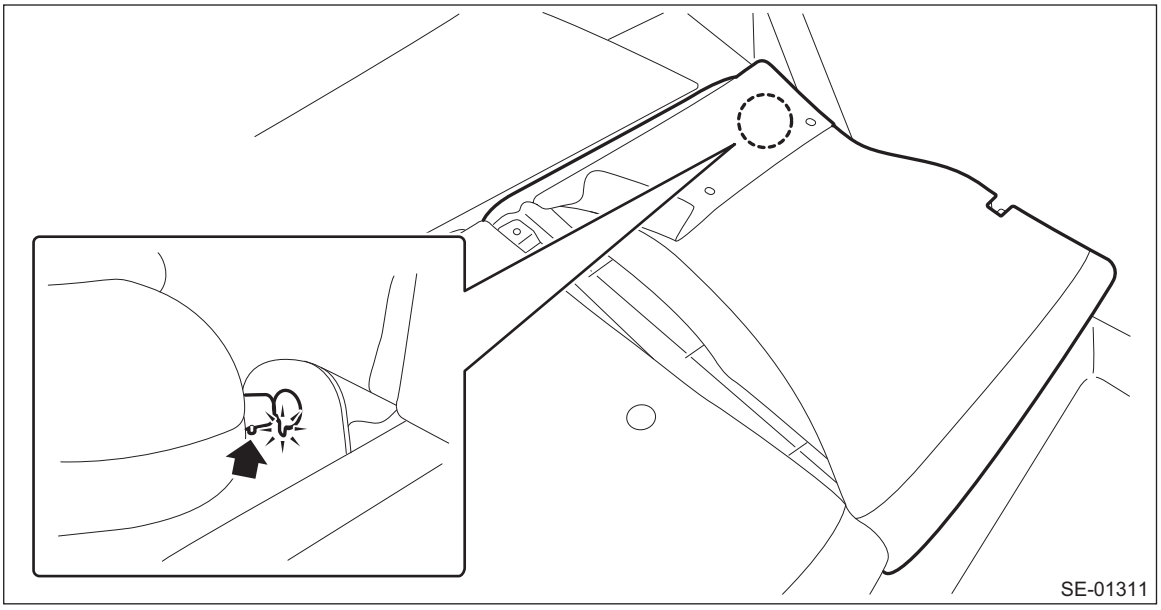
3) Remove the backrest assembly LH.
(1) Tilt the backrest assembly LH forward.
(2) Remove the clips located at the bottom of the cover COMPL - rear backrest LH and RH of the rear seat back.



(3) Turn over the cover COMPL - rear backrest LH to remove the bolts.



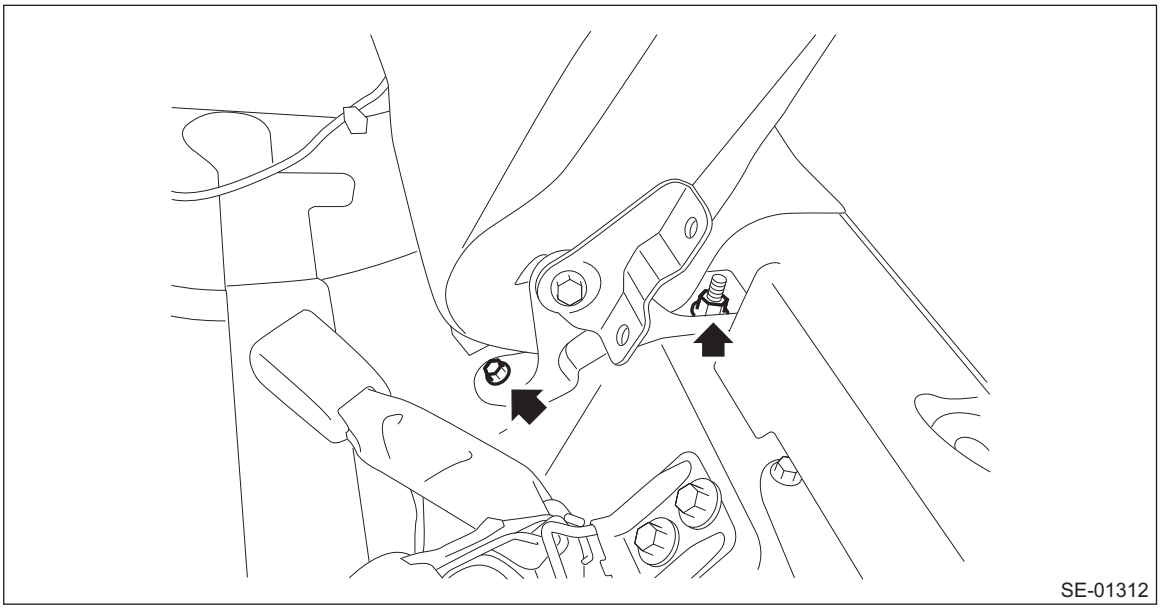
(4) Remove the backrest assembly LH from the hinge assembly.



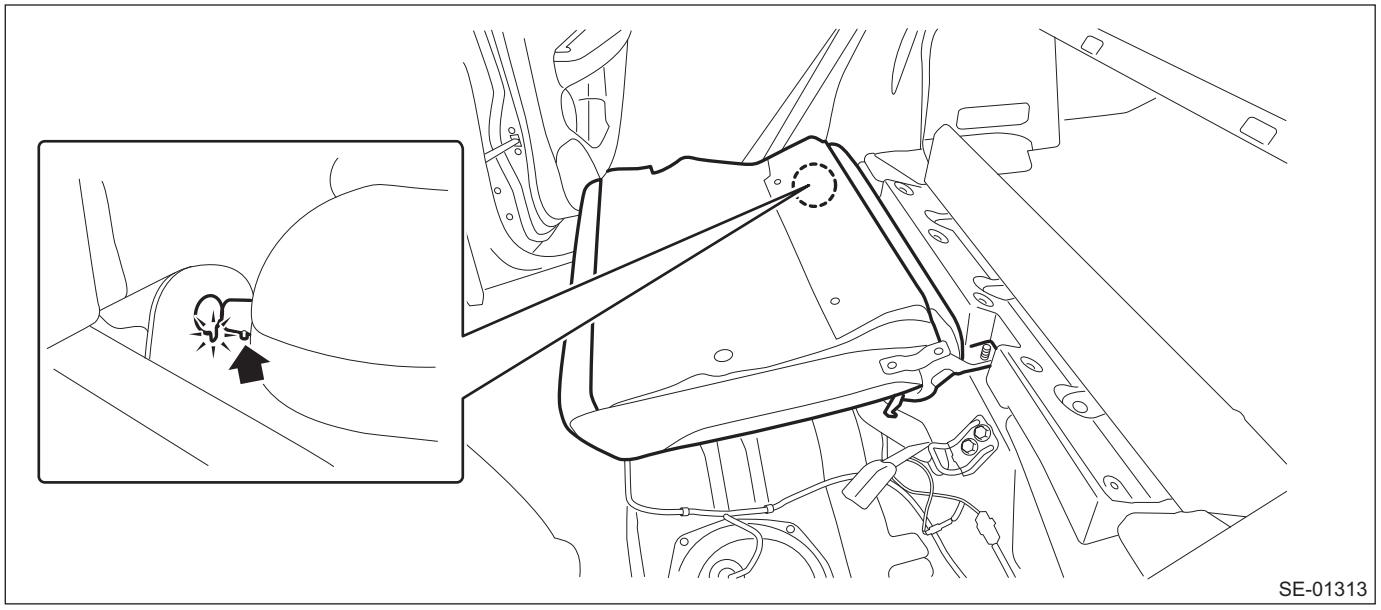
NOTE:
The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

4) Remove the backrest assembly RH.

(1) Remove the bolts and nuts.



(2) Remove the backrest assembly RH from the hinge assembly.



NOTE:
The backrest assembly cannot be removed unless pin positions on the hinge assembly side and backrest assembly side are aligned.

B: INSTALLATION

1) Install the backrest assembly RH and LH.

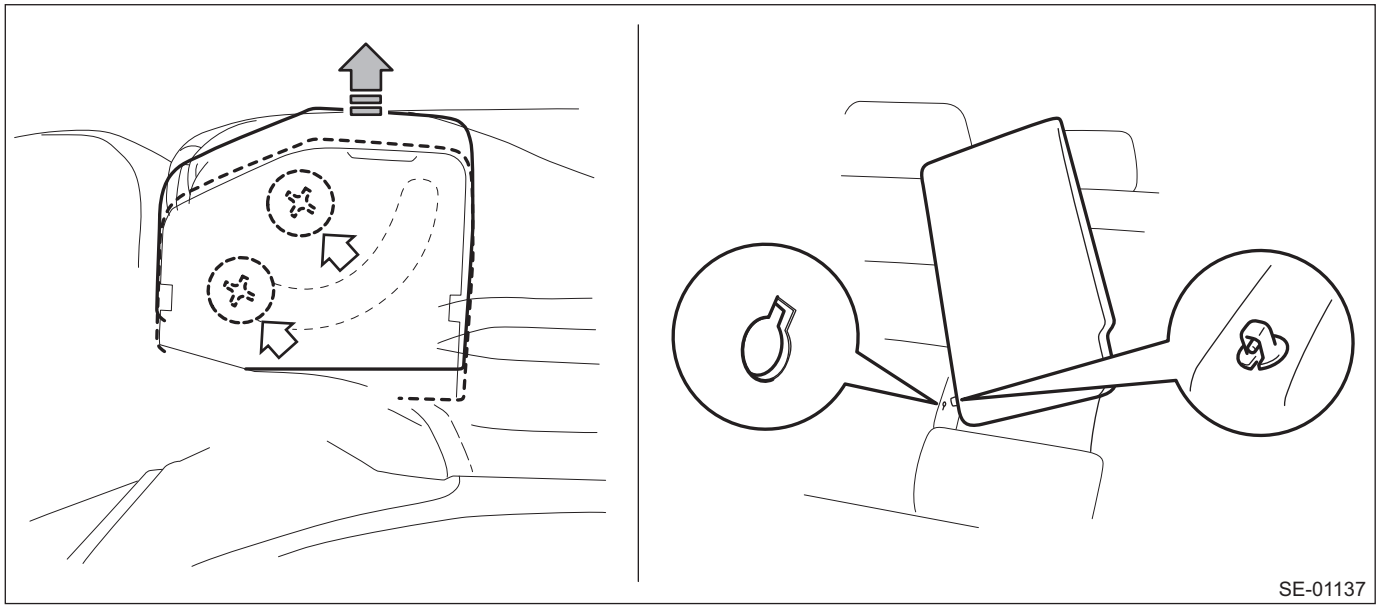
Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

NOTE:
- After installing the backrest assembly, make sure that each seat belt operates normally.
- Make sure that they are properly secured on each hook on the vehicle side.

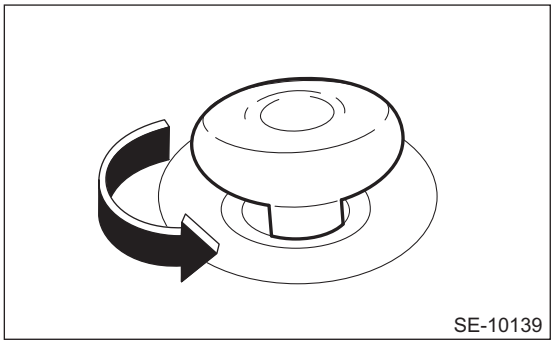
2) Install the rear seat cushion assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

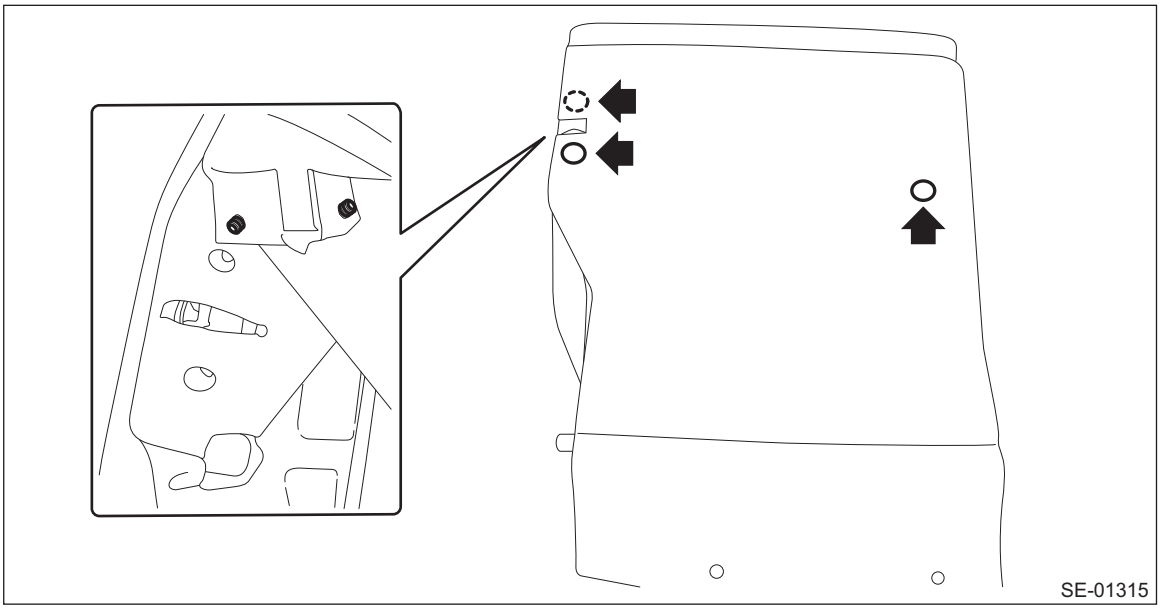
1) Remove the rear seat. <Ref. to SE-35, REMOVAL, Rear Seat.>
2) Remove the headrest assembly - rear backrest.
3) Remove the armrest assembly - rear center. (Models with armrest)
   (1) Remove the cover - armrest by pulling it in the direction of the arrow (black).
   (2) Remove the screws and remove the armrest assembly - rear center.



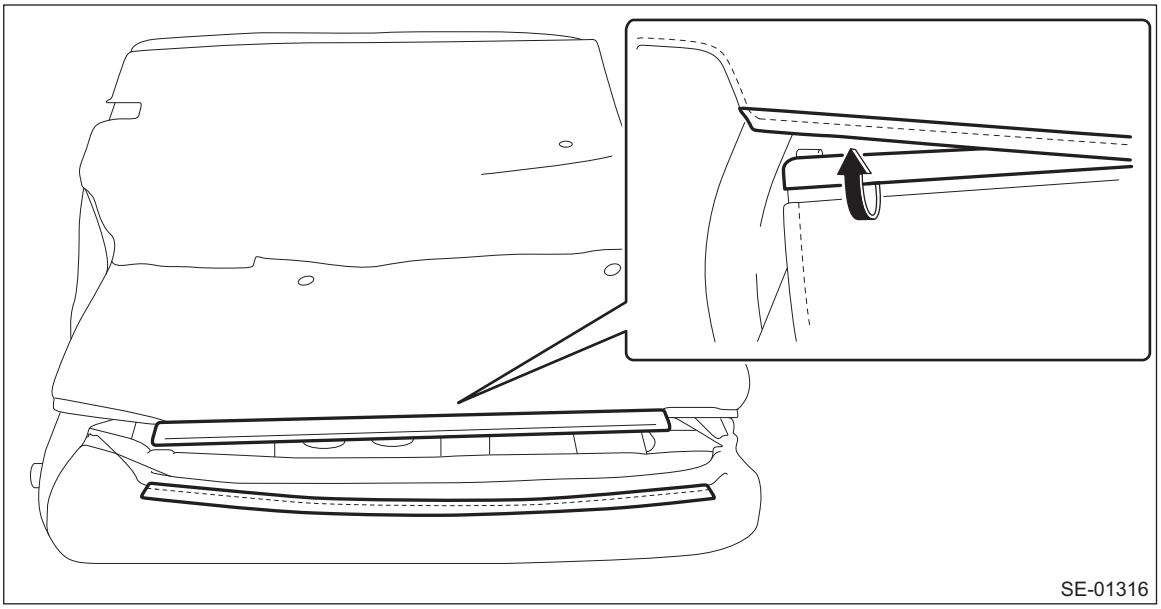
NOTE:
The armrest assembly - rear center cannot be detached unless pin positions on the RH side of the backrest assembly and on the center side of the armrest assembly - rear are aligned.
4) Remove the knob - backrest. (Screw-in type)



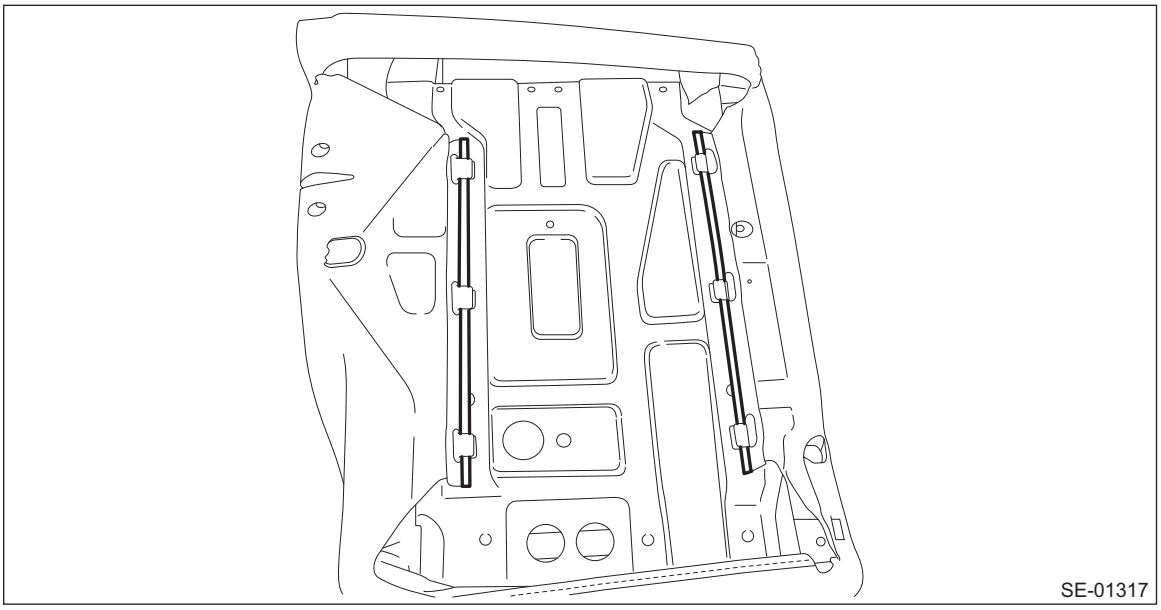
5) Remove the clips on the backside of the cover COMPL - rear backrest LH.



6) Detach the plastic fastener at the bottom of backrest assembly LH and turn over the cover COMPL - rear backrest LH.

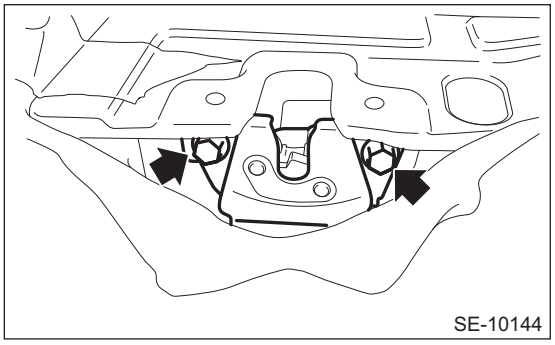


7) Remove the plastic hooks on the back side of the backrest assembly LH.

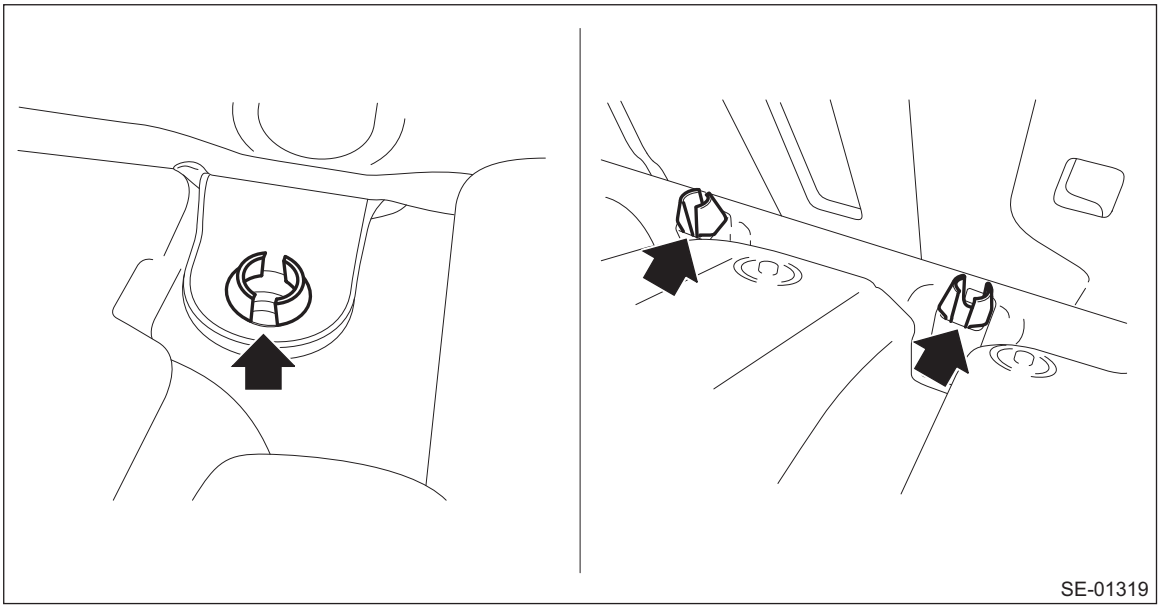


8) Remove the lock assembly - rear backrest rear LH.

CAUTION:
Be careful of burrs on the panel edges.

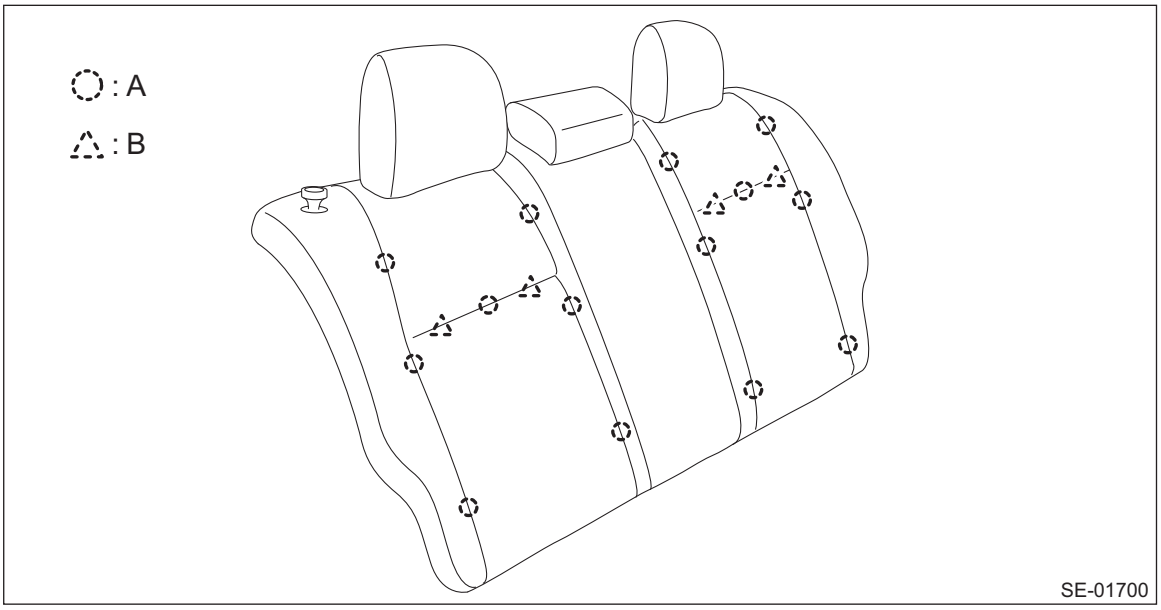


9) Remove the bushing - headrest and the bushing - lock assembly.

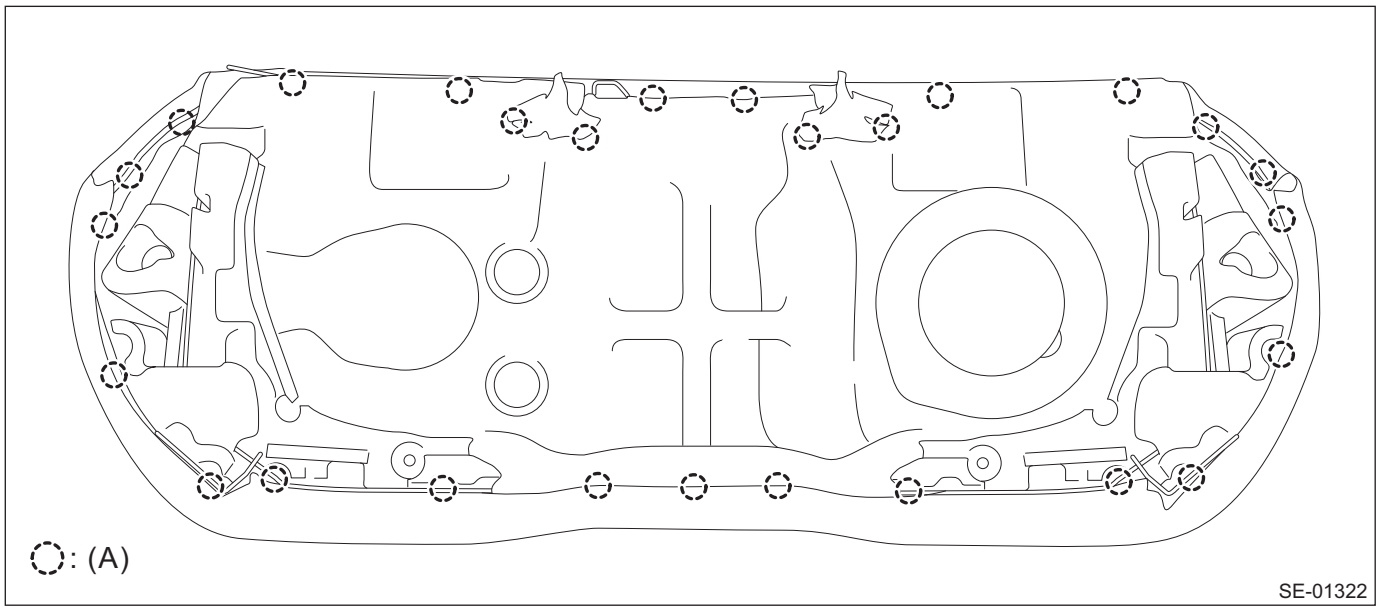


10) Remove the pad assembly - main LH from the frame assembly - rear backrest LH.

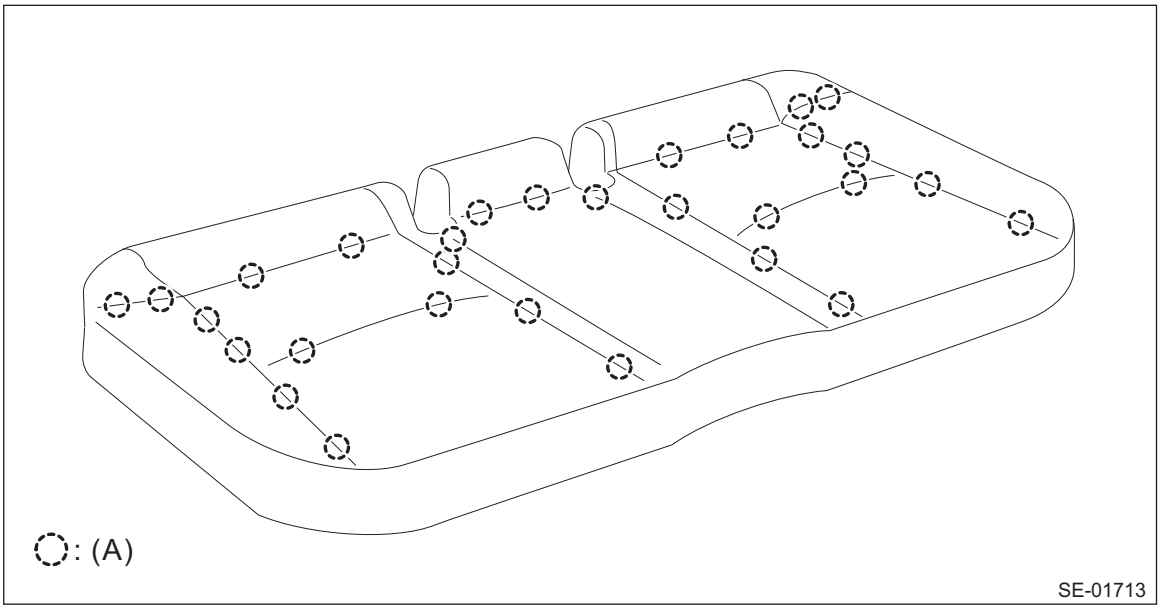
11) Remove the hog rings (A) and wire clip (B), then remove the cover COMPL - rear backrest LH.



12) Referring to the above steps, disassemble the backrest assembly RH.
13) Remove the hog rings (A) on the back side of the rear seat cushion assembly.



14) Remove the hog rings (A), then remove the cover - rear cushion.



D: ASSEMBLY

CAUTION:
- **Do not reuse the hog rings and hang wires.**
- **Secure the hog ring using hog ring pliers.**
- **Install the hog rings to the specified points securely and make sure that there is no wrinkle or twisting on the cover COMPL - rear backrest.**

1) Assemble the cover COMPL - rear backrest and the cover - rear cushion in the same manner as for the front seat. <Ref. to SE-28, ASSEMBLY, Front Seat.>
2) Install the hog rings on the back side of the rear seat cushion assembly.
3) Install the hog rings and wire clip, then install the cover COMPL - rear backrest LH.

NOTE:
- Do not contaminate or damage the cover COMPL - rear backrest and the cover - rear cushion.
- While installing the hog rings, prevent the cover COMPL - rear backrest and the cover - rear cushion from getting wrinkled.

4) Install the lock assembly - rear backrest rear LH.

Tightening torque:
22.5 N·m (2.3 kgf-m, 16.6 ft-lb)

5) Install the pad assembly - main LH.
6) Install the bushing - headrest and the bushing - lock assembly.
7) Install the plastic hooks on the back side of the backrest assembly LH.
8) Install the clips on the backside of the cover COMPL - rear backrest LH.
9) Install the knob - backrest. (Screw-in type)
10) Install the armrest assembly.

Tightening torque:
9.8 N·m (1 kgf-m, 7.2 ft-lb)

11) Referring to the above steps, install the pad assembly - main RH.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SE-9, REAR SEAT, COMPONENT, General Description.>

12) Install the headrest assembly - rear backrest.
13) Before installation, check the following items.
- No tear and fray on the cover COMPL - rear backrest and the cover - rear cushion.
- No fray or deformation on each wire cable.

14) Install the rear seat. <Ref. to SE-38, INSTALLATION, Rear Seat.>

E: INSPECTION

1. SEAT COVER

Check that there is no tear or fray on the cover COMPL - rear backrest and the cover - rear cushion.

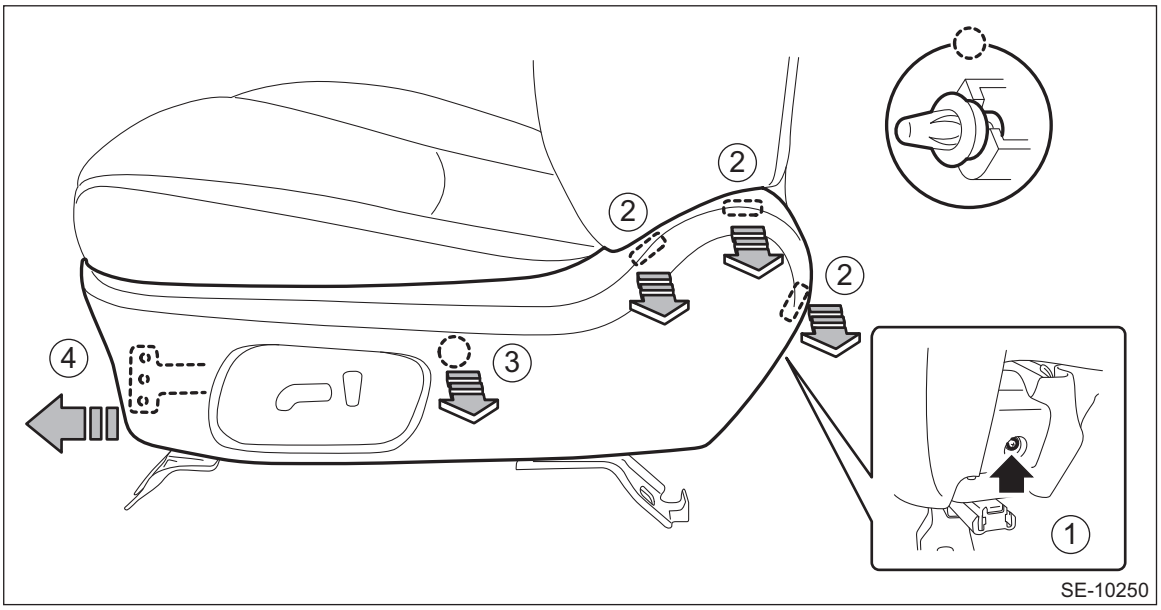
4. Power Seat System

A: REMOVAL

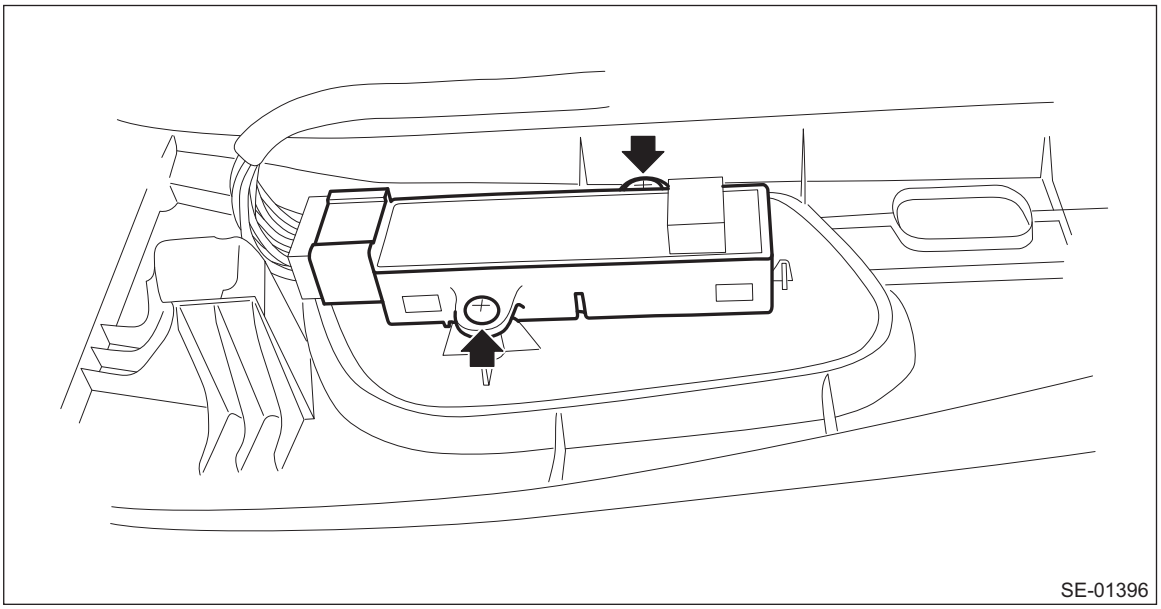
CAUTION:
When removing the front seat, disconnect the ground cable from the battery before disconnecting the airbag system and the occupant detection system harness connector, and wait for 60 seconds before starting the operation.

1. POWER SEAT SWITCH

1) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the cover - hinge front seat OUT.
   (1) Remove the screws in the rear section of the cover - hinge front seat OUT.
   (2) Release the claw in the upper section of the cover - hinge front seat OUT.
   (3) Remove the clip, and release the claws in the front section of the cover - hinge front seat OUT.
   (4) Disconnect the power seat switch connector, and remove the cover - hinge front seat OUT.
   (5) Remove the knob - power seat.

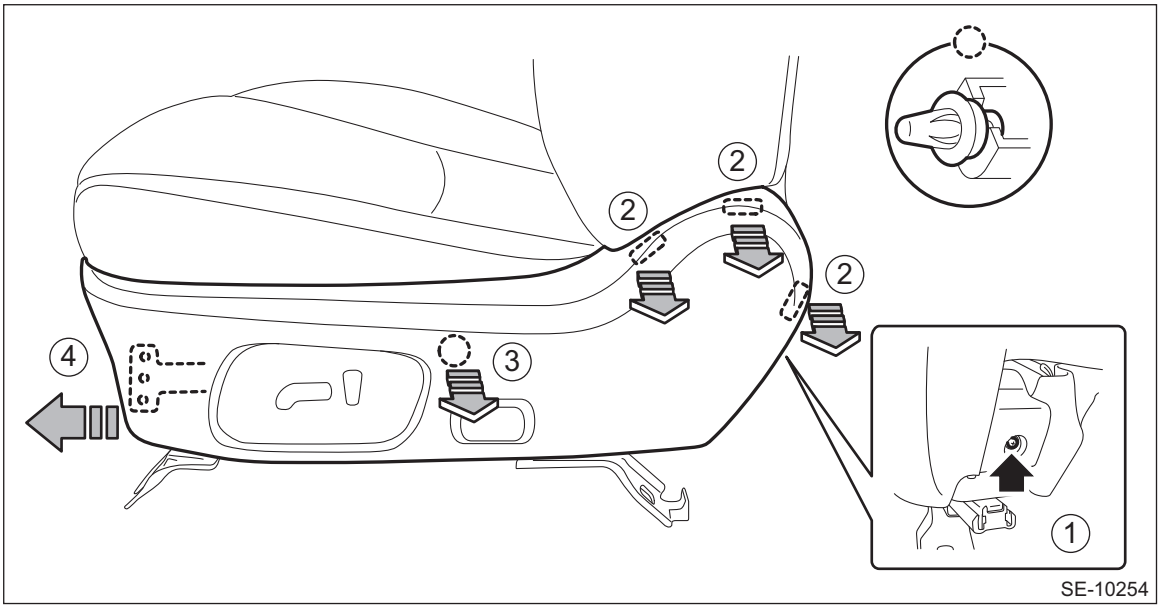


3) Remove the screws to remove the power seat switch assembly.

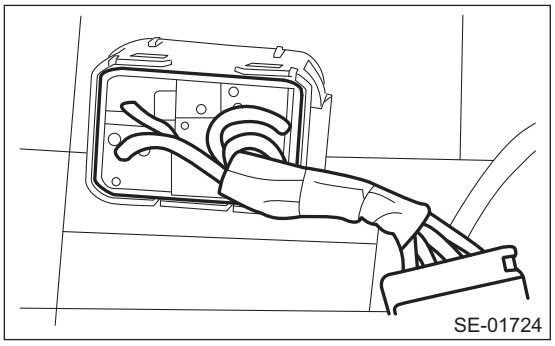


2. LUMBAR SWITCH (SEAT WITH LUMBAR FUNCTION)

1) Remove the seat from vehicle. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the cover - hinge front seat OUT.
   (1) Remove the screws in the rear section of the cover - hinge front seat OUT.
   (2) Release the claw in the upper section of the cover - hinge front seat OUT.
   (3) Remove the clip, and release the claws in the front section of the cover - hinge front seat OUT.
   (4) Disconnect the power seat switch connector, and remove the cover - hinge front seat OUT.



3) Disconnect the connector and remove the lumbar switch assembly.



B: INSTALLATION

1. POWER SEAT SWITCH

1) Install the power seat switch assembly.
2) Install the cover - hinge front seat OUT.
3) Install the knob - power seat.
4) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

2. LUMBAR SWITCH (SEAT WITH LUMBAR FUNCTION)

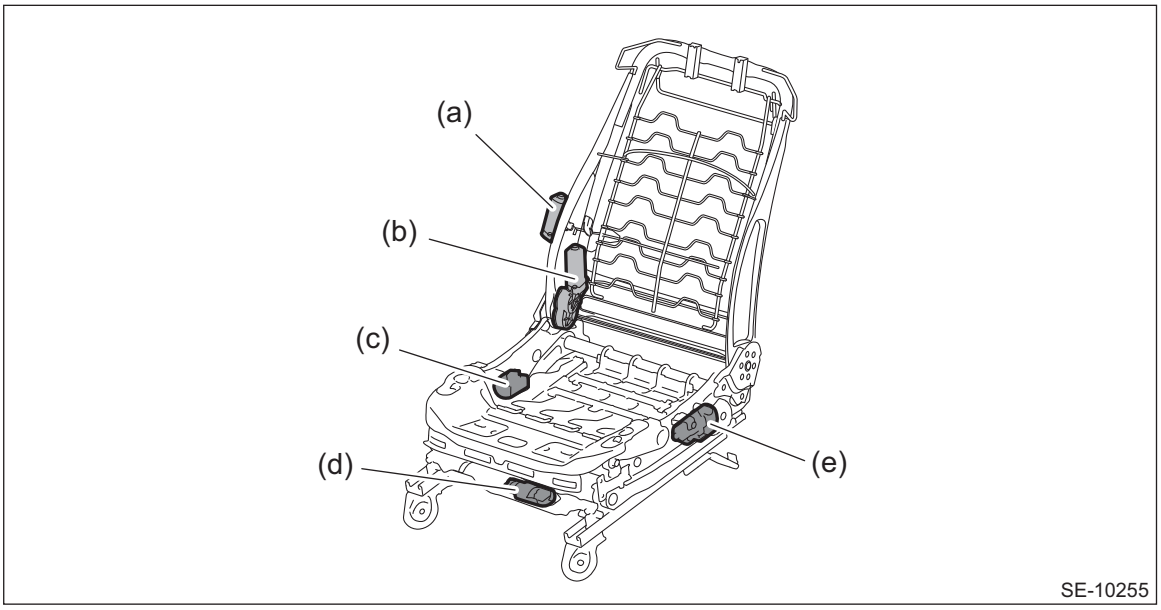
1) Install the lumbar switch assembly.
2) Install the cover - hinge front seat OUT.
3) Install the knob - power seat.
4) Install the seat assembly. <Ref. to SE-12, INSTALLATION, Front Seat.>

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Power Seat” in WI section. <Ref. to WI-296, WIRING DIAGRAM, Power Seat System.>

2. NOTE



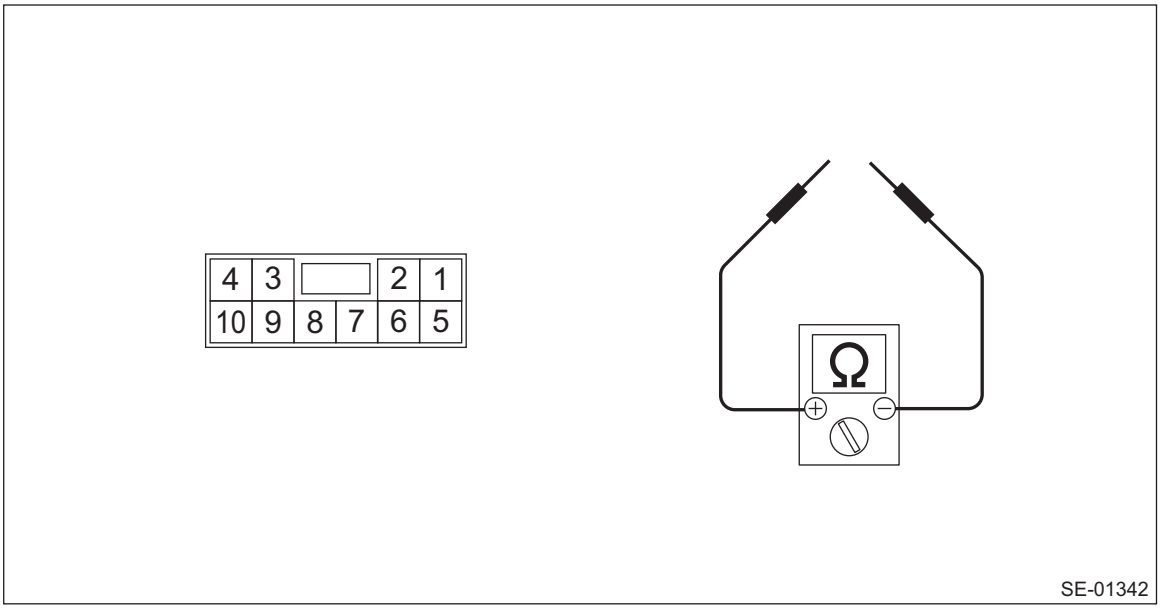
(a) Lumbar motor (10-way model)
(b) Reclining motor
(c) Tilt motor
(d) Slide motor
(e) Lifter motor

3. TROUBLE SYMPTOM

Symptoms	Criteria
All functions do not operate. <Ref. to SE-49, ALL FUNCTIONS DO NOT OPERATE, INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch (10-way model) • Power seat harness • Body harness
A part of function does not operate. <Ref. to SE-50, SOME MOTORS DO NOT OPERATE, INSPECTION, Power Seat System.>	• Power seat switch • Lumbar switch (10-way model) • Power seat harness • Relevant motor

4. CHECK POWER SEAT SWITCH

Measure resistance between terminals while operating each switch.

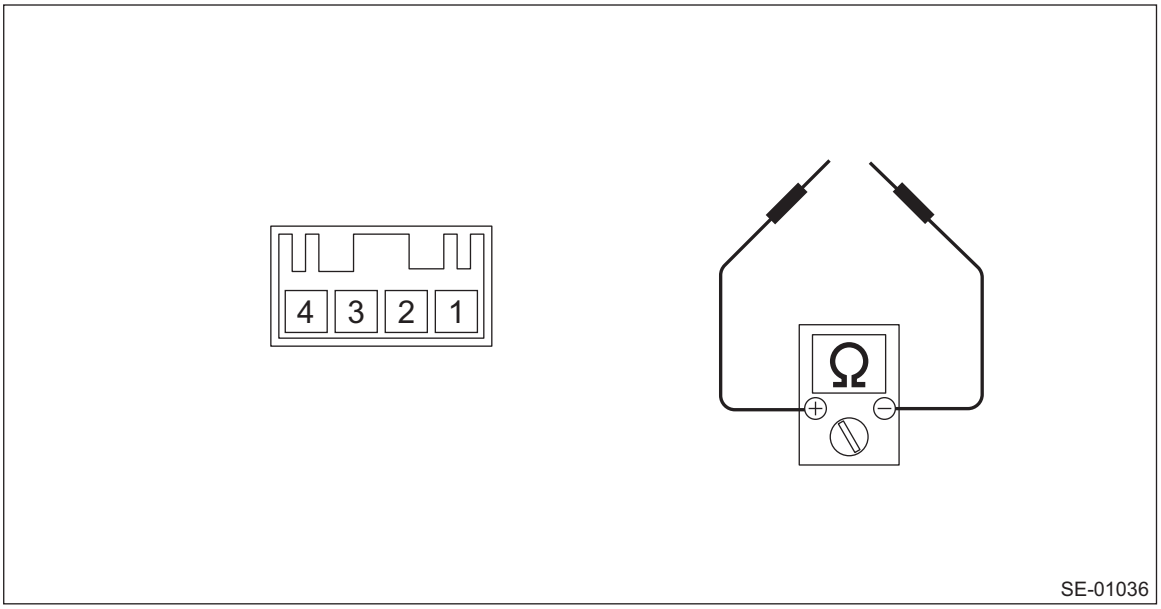


Switch position	Terminal No.	Standard
Slide forward	1 and 8 4 and 7	Less than 10 Ω
Slide rearward	1 and 7 4 and 8	Less than 10 Ω
Tilt up	1 and 3 2 and 4	Less than 10 Ω
Tilt down	1 and 2 3 and 4	Less than 10 Ω
Lifter up	1 and 6 4 and 9	Less than 10 Ω
Lifter down	1 and 9 4 and 6	Less than 10 Ω
Reclining forward	1 and 10 4 and 5	Less than 10 Ω
Reclining rearward	1 and 5 4 and 10	Less than 10 Ω

Replace the power seat switch if the inspection result is not within the standard value.

5. CHECK LUMBAR SWITCH

Measure resistance between terminals while operating each switch.



Switch position	Terminal No.	Standard
Lumbar forward	1 and 4 2 and 3	Less than 10 Ω
Lumbar backward	1 and 3 2 and 4	Less than 10 Ω

Replace the switch if the inspection result is not within the standard value.

6. ALL FUNCTIONS DO NOT OPERATE

	Step	Check	Yes	No
1	**CHECK SEAT FUNCTIONS.** Operate each power seat switch and check that each power seat function operates normally.	Does all function fail to operate?	Go to step **2**.	Check the motor which does not operate. <Ref. to SE-50, SOME MOTORS DO NOT OPERATE, INSPECTION, Power Seat System.>
2	**CHECK FUSE.** Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step **3**.
3	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the voltage between harness connector and chassis ground. ***Connector & terminal*** ***(R200) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	Check body harness.
4	**CHECK POWER SUPPLY CIRCUIT.** Measure the resistance between power seat switch harness connector and chassis ground. ***Connector & terminal*** ***(R200) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the power seat switch assembly.	Check body harness.

7. SOME MOTORS DO NOT OPERATE

- **Slide operation failure**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-48, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between power seat switch connector and slide motor connector. ***Connector & terminal*** ***(R200) No. 8 — (R202) No. 5:*** ***(R200) No. 7 — (R202) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK SLIDE MOTOR.** 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V to the slide motor and check the motor rotation. ***Connector & terminal*** ***(R202) No. 5 (+) — (R202) No. 1 (–):*** ***(R202) No. 1 (+) — (R202) No. 5 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the seat cushion frame assembly.

- **Malfunction of tilt operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-48, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between power seat switch connector and tilt motor connector. ***Connector & terminal*** ***(R200) No. 3 — (R203) No. 4:*** ***(R200) No. 2 — (R203) No. 6:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK TILT MOTOR.** 1) Connect the power seat switch connector and tilt motor connector. 2) Apply 12 V to the tilt motor and check the motor rotation. ***Connector & terminal*** ***(R203) No. 4 (+) — (R203) No. 6 (–):*** ***(R203) No. 6 (+) — (R203) No. 4 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in tilt mechanism.	Tilt motor problem. Replace the seat cushion frame assembly.

- **Malfunction of lifter operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-48, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between power seat switch connector and lifter motor connector. ***Connector & terminal*** ***(R200) No. 6 — (R204) No. 6:*** ***(R200) No. 9 — (R204) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LIFTER MOTOR.** 1) Connect the power seat switch connector and lifter motor connector. 2) Apply 12 V to the lifter motor and check the motor rotation. ***Connector & terminal*** ***(R204) No. 6 (+) — (R204) No. 4 (–):*** ***(R204) No. 4 (+) — (R204) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lifter mechanism.	Lifter motor problem. Replace the seat cushion frame assembly.

- **Malfunction of reclining operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-48, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the power seat switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between power seat switch connector and reclining motor connector. ***Connector & terminal*** ***(R200) No. 10 — (R201) No. 6:*** ***(R200) No. 5 — (R201) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK RECLINING MOTOR.** 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V voltage to the reclining motor and check the motor rotation. ***Connector & terminal*** ***(R201) No. 6 (+) — (R201) No. 4 (–):*** ***(R201) No. 4 (+) — (R201) No. 6 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the backrest frame assembly.

- **Malfunction of lumbar operation**

	Step	Check	Yes	No
1	**CHECK SWITCH.** 1) Disconnect the lumbar switch connector. 2) Measure the resistance between connector terminals when moving the switch to lumbar forward and lumbar backward. <Ref. to SE-49, CHECK LUMBAR SWITCH, INSPECTION, Power Seat System.>	Is the inspection result normal?	Go to step **2**.	Replace the lumbar switch assembly.
2	**CHECK HARNESS.** 1) Disconnect the lumbar motor connector. 2) Measure the resistance between lumbar switch connector and lumbar motor connector. ***Connector & terminal*** ***(R196) No. 2 — (R195) No. 3:*** ***(R196) No. 1 — (R195) No. 4:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check power seat harness.
3	**CHECK LUMBAR MOTOR.** 1) Connect the lumbar switch connector and lumbar motor connector. 2) Apply 12 V to the lumbar motor and check the motor rotation. ***Connector & terminal*** ***(R195) No. 4 (+) — (R195) No. 3 (–):*** ***(R195) No. 3 (+) — (R195) No. 4 (–):***	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lumbar mechanism.	Lumbar motor problem. Replace the backrest frame assembly.

5. Seat Heater System

A: REMOVAL

1. SEAT HEATER UNIT

1) Remove the front seats. <Ref. to SE-11, REMOVAL, Front Seat.>
2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-12, DISASSEMBLY, Front Seat.>
3) Remove the seat heater module.

2. SEAT HEATER SWITCH

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.

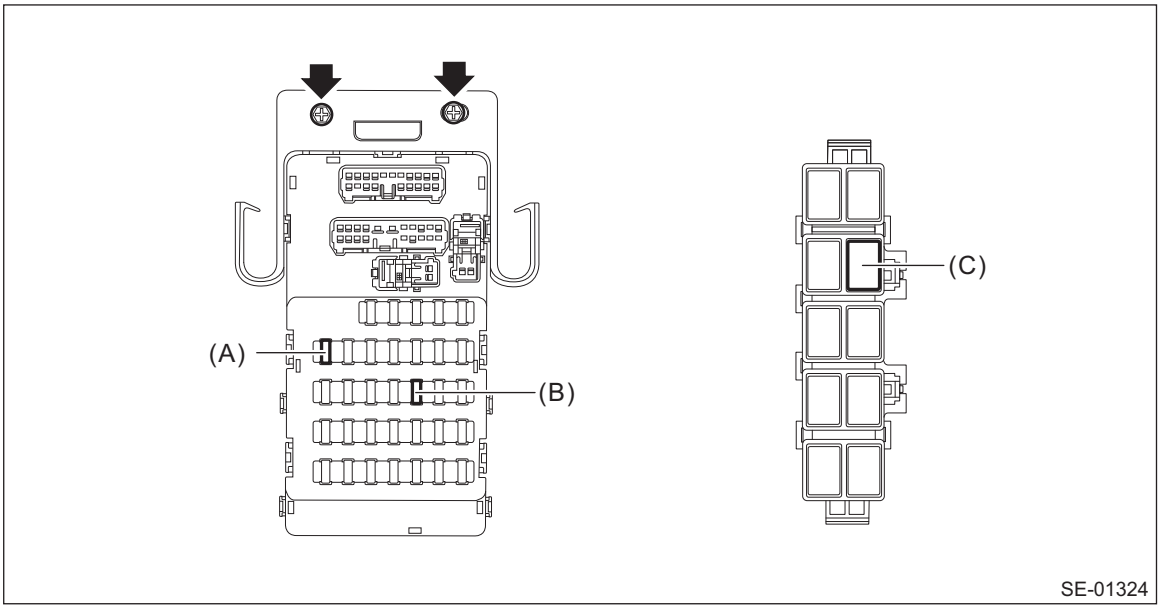
2) Remove the console box assembly. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the screws and remove the seat heater switch from the backside of the console box assembly.

3. SEAT HEATER RELAY AND FUSE

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the glove box assembly. <Ref. to EI-67, REMOVAL, Glove Box.>
4) Remove the seat heater relay and fuse.
   (1) Remove the relay & fuse box bolts.
   (2) Remove the seat heater relay from the relay holder.



Fuse box	Fuse 7.5 A (remote control mirror)	(A)
	Fuse 15 A (seat heater)	(B)
Relay holder	Seat heater relay	(C)

B: INSTALLATION

1. SEAT HEATER UNIT

1) Install the seat heater module.

CAUTION:
- **If the seat heater module is removed, replace the pad assembly with a new part.**
- **When the seat heater module is reused, remove the polyurethane from the reverse side completely and always use new double-sided tape on the new pad assembly.**

Preparation items:
Double-sided tape: NITTO DENKO 501L or equivalent

2) Assemble the backrest cover of front seat and seat cushion cover. <Ref. to SE-28, ASSEMBLY, Front Seat.>
3) Install the front seat. <Ref. to SE-12, INSTALLATION, Front Seat.>

2. SEAT HEATER SWITCH

1) Install the seat heater switch.
2) Install the console box assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

3. SEAT HEATER RELAY AND FUSE

1) Install the seat heater relay & fuse.
2) Install the glove box assembly.
3) Install the cover assembly - instrument panel LWR driver.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. WIRING DIAGRAM

Refer to “Seat Heater System” in the wiring diagram. <Ref. to WI-328, WIRING DIAGRAM, Seat Heater System.>

2. DIAGNOSTIC CHART

Symptoms	Repair order
Seat heater does not operate.	1. Check the fuse. <Ref. to SE-54, CHECK SEAT HEATER FUSE, INSPECTION, Seat Heater System.>
	2. Check the seat heater relay. <Ref. to SE-54, CHECK SEAT HEATER RELAY, INSPECTION, Seat Heater System.>
	3. Check the seat heater system power supply and ground circuit. <Ref. to SE-55, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Seat Heater System.>
	4. Check the seat heater module. <Ref. to SE-56, SEAT HEATER UNIT, INSPECTION, Seat Heater System.>
	5. Check the seat heater switch circuit. <Ref. to SE-56, SEAT HEATER SWITCH, INSPECTION, Seat Heater System.>

3. CHECK SEAT HEATER FUSE

Remove the seat heater fuse, and then visually check.
Is the fuse blown out?
- **Yes** → Replace the fuse.
- **No** → Check the power supply and ground circuits.

4. CHECK SEAT HEATER RELAY

1) Remove the seat heater relay from the relay holder.

2) Measure the resistance between seat heater relay terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard	Circuit
36 — 37	Always	1 MΩ or more	36 — 37	Apply battery voltage between terminals 38 and 39.	Less than 1 Ω	

3) Replace the seat heater relay if the inspection result is not within the standard value.

5. CHECK POWER SUPPLY AND GROUND CIRCUIT

1) Check power supply circuit
(1) Disconnect the harness connector of seat heater switch.
(2) Turn the ignition switch to ON.
(3) Measure the voltage between harness connector terminal and chassis ground.

Connector & terminal
FA engine, model without EyeSight:
RH side (R42) No. 2 (+) — Chassis ground (–):
LH side (R43) No. 2 (+) — Chassis ground (–):
FA engine, model with EyeSight:
(AD8) No. 7 (+) — Chassis ground (–):
EJ engine:
(AD8) No. 7 (+) — Chassis ground (–):
Is the voltage 12 V or more?
- **Yes** → Go to step 2.
- **No** → Check the harness between the seat heater switch and fuse.

2) Check ground circuit
Measure the resistance between harness connector terminal and chassis ground.

Connector & terminal
FA engine, model without EyeSight:
RH side (R42) No. 2 — Chassis ground:
LH side (R43) No. 2 — Chassis ground:
FA engine, model with EyeSight:
(AD8) No. 7 — Chassis ground:
EJ engine:
(AD8) No. 7 — Chassis ground:
Is the resistance less than 10 Ω?
- **Yes** → Go to step 3.
- **No** → Repair the harness.

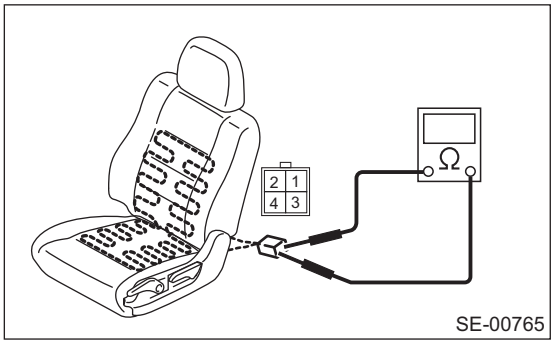
3) Check ground circuit
Measure the resistance between seat heater switch terminals.

Connector & terminal
FA engine, model without EyeSight:
RH side (R42) No. 2 — (R42) No. 3
LH side (R43) No. 2 — (R43) No. 3
FA engine, model with EyeSight:
(AD8) No. 7 — (AD8) No. 2:
EJ engine:
(AD8) No. 7 — (AD8) No. 2:
Is the resistance less than 10 Ω?
- **Yes** → The power supply and ground circuits are normal.
- **No** → Replace the seat heater switch. <Ref. to SE-53, SEAT HEATER SWITCH, REMOVAL, Seat Heater System.>

6. SEAT HEATER UNIT

1) Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

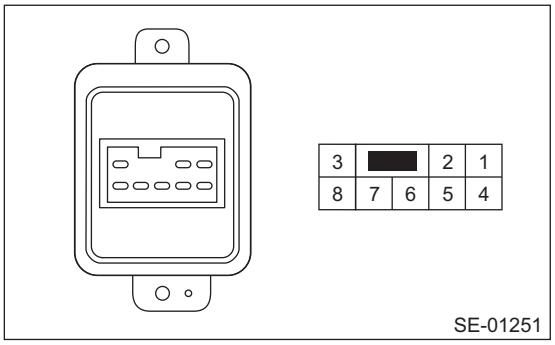
Connector & terminal
HI
No. 1 — No. 3:
No. 3 — No. 4:
LOW
No. 1 — No. 4:



2) If no continuity exists, replace the seat heater module with a new part. <Ref. to SE-12, DISASSEMBLY, Front Seat.>

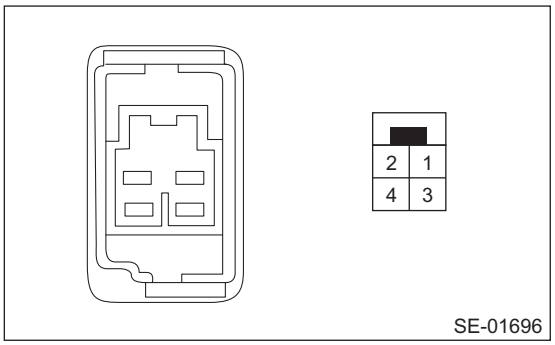
7. SEAT HEATER SWITCH

1) Inspect the continuity between the seat heater switch terminals.
- Except for FA engine, model without EyeSight



Connector & terminal
HI
No. 7 — No. 2:
No. 7 — No. 4:
No. 7 — No. 8:
LOW
No. 7 — No. 1:
No. 7 — No. 2:
No. 7 — No. 3:

- FA engine, model without EyeSight



Connector & terminal
HI
No. 2 — No. 1:
No. 4 — No. 3:
LOW
No. 2 — No. 4:

2) If no continuity exists, replace the seat heater switch with a new part. <Ref. to SE-53, SEAT HEATER SWITCH, REMOVAL, Seat Heater System.>

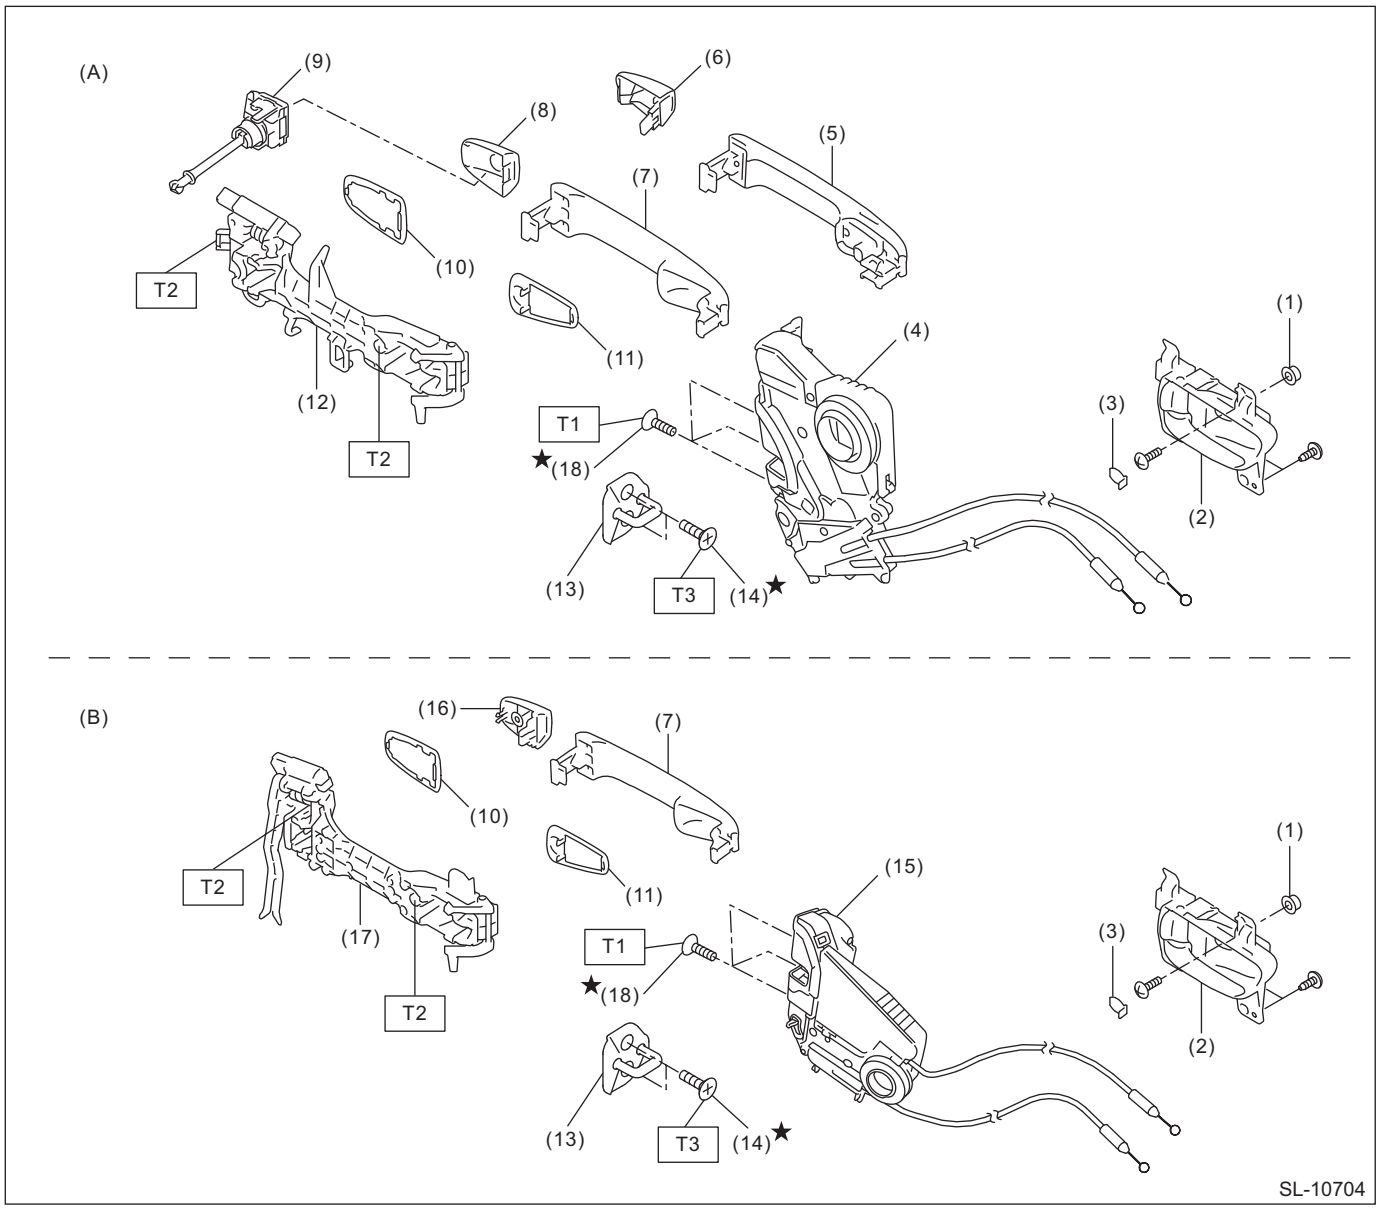
1. General Description

A: COMPONENT

1. DOOR LOCK ASSEMBLY

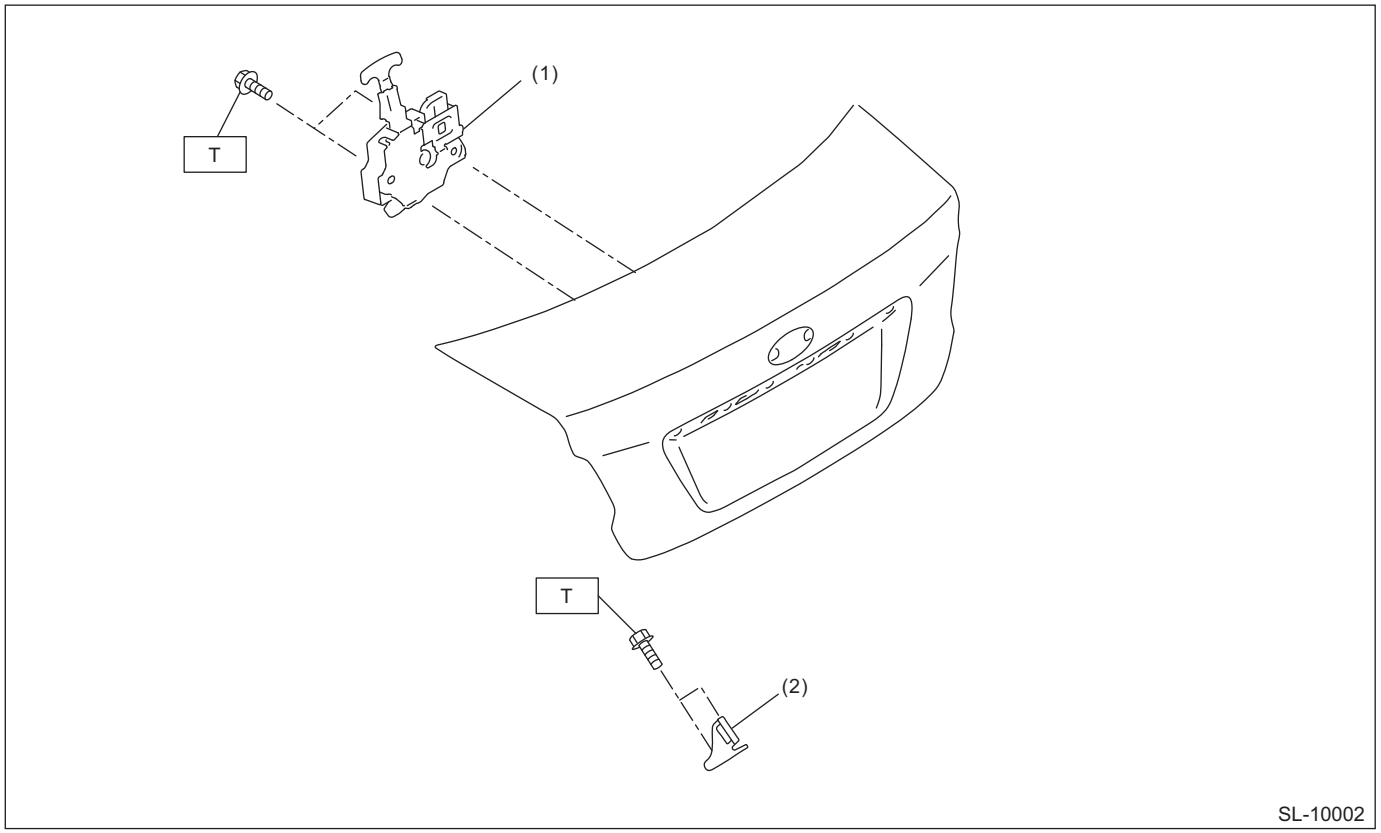


(A) Front
(B) Rear

(1) Grommet - screw
(2) Remote ASSY - door
(3) Cap remote
(4) Latch & actuator ASSY - front
(5) Handle - door outer (model with keyless access with push button start)
(6) Cover - handle front outer (passenger's seat)
(7) Handle - door outer (model without keyless access with push button start)
(8) Cover - handle front outer (driver's seat)
(9) Key lock - door (driver's seat only)
(10) Spacer - door handle outer B
(11) Spacer - door handle outer A
(12) Frame ASSY - front door outer
(13) Striker - door
(14) Screw
(15) Latch & actuator ASSY - rear
(16) Cover - handle rear outer
(17) Frame ASSY - rear door outer
(18) TORX® bolt

Tightening torque: N·m (kgf-m, ft-lb)
T1: 6.5 (0.7, 4.8)
T2: 7.5 (0.8, 5.5)
T3: 18 (1.8, 13.3)

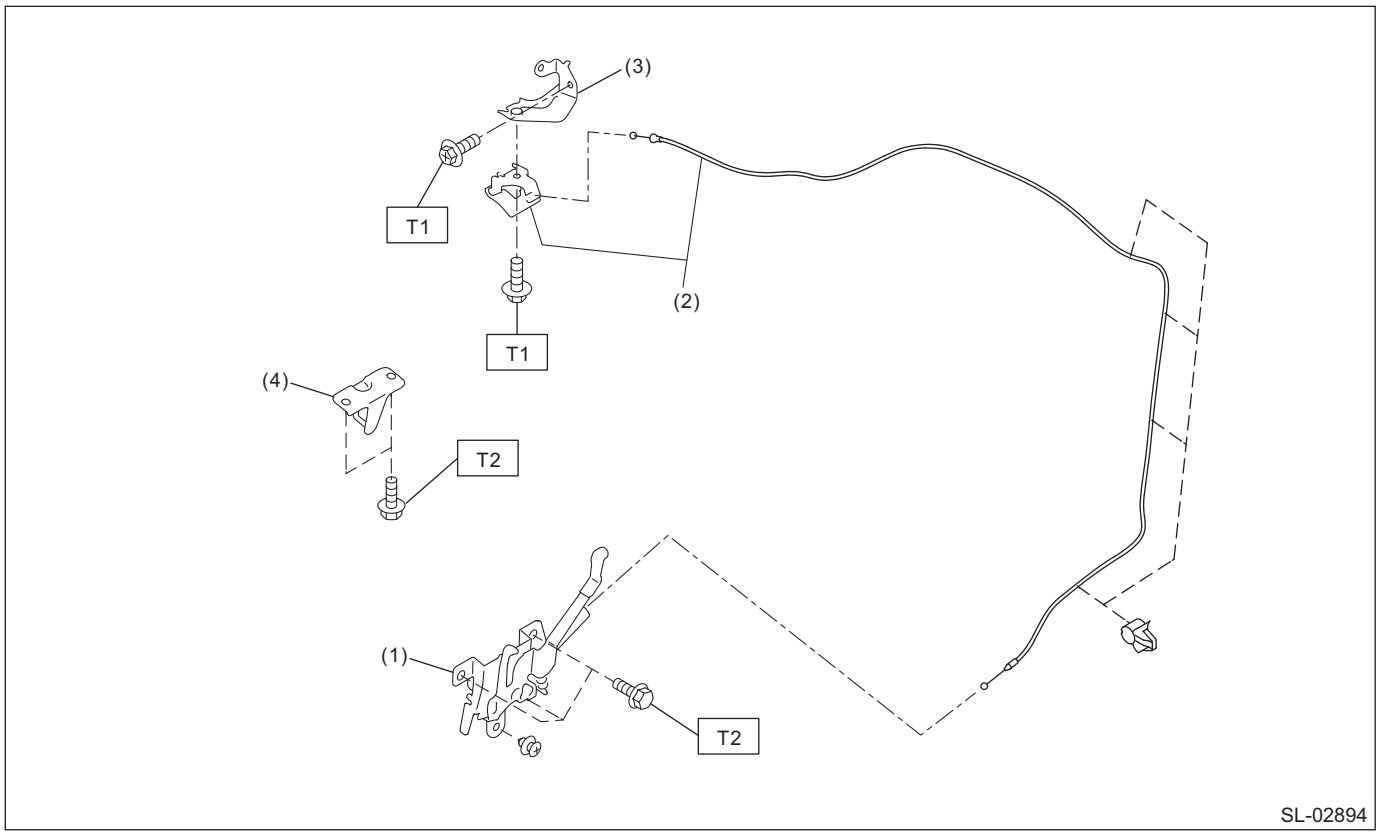
2. TRUNK LID LOCK



(1) Lock ASSY - trunk lid
(2) Striker - trunk lid

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

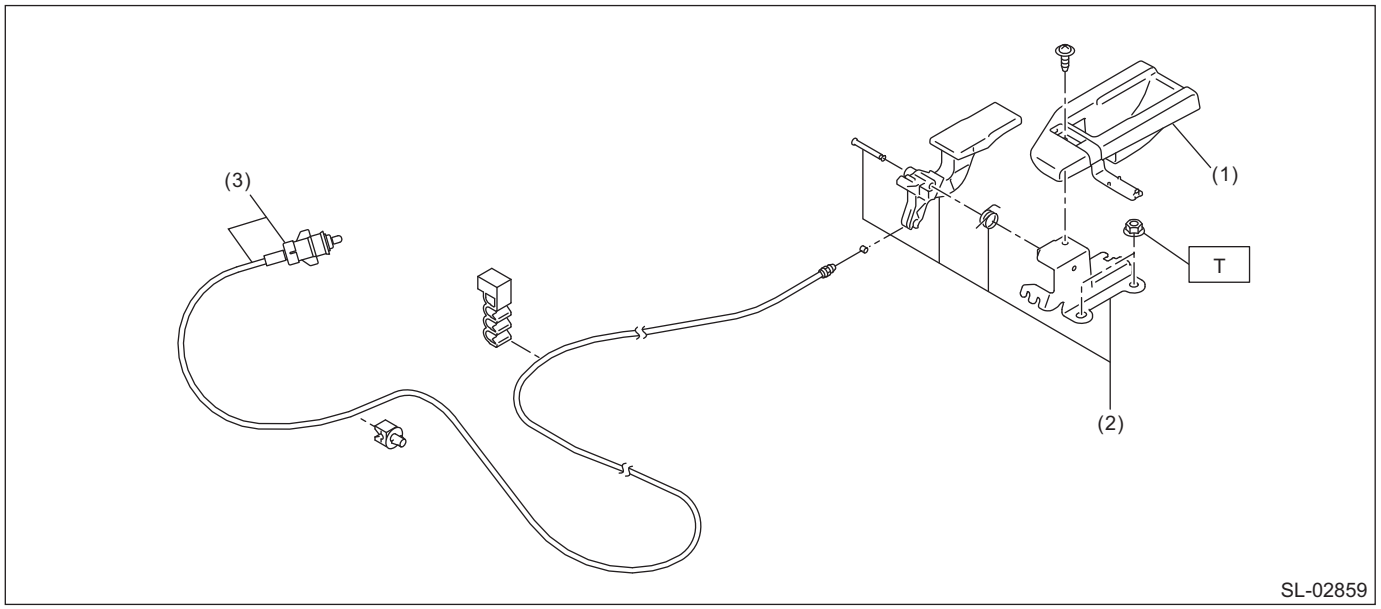
3. FRONT HOOD LOCK



(1) Lock ASSY - front hood
(2) Cable - front hood
(3) Bracket - opener handle
(4) Striker - front hood

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 33 (3.4, 24.3)

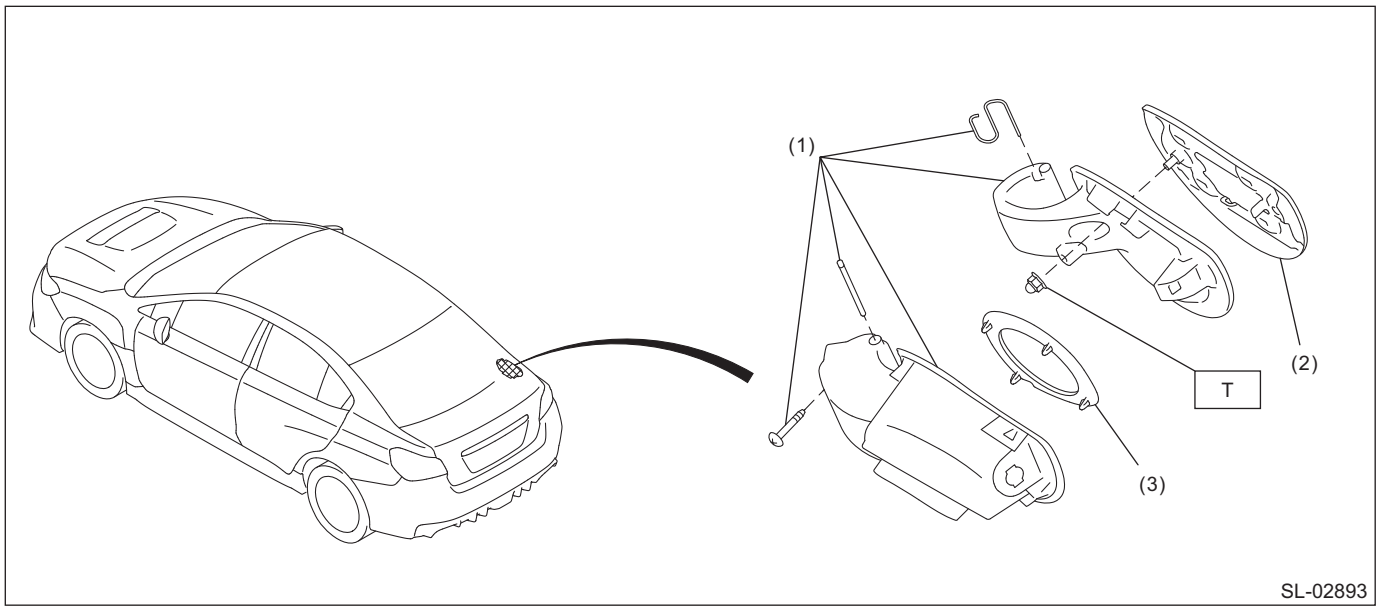
4. REMOTE OPENER



(1) Cover - handle
(2) Pull handle - opener
(3) Cable ASSY - fuel

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

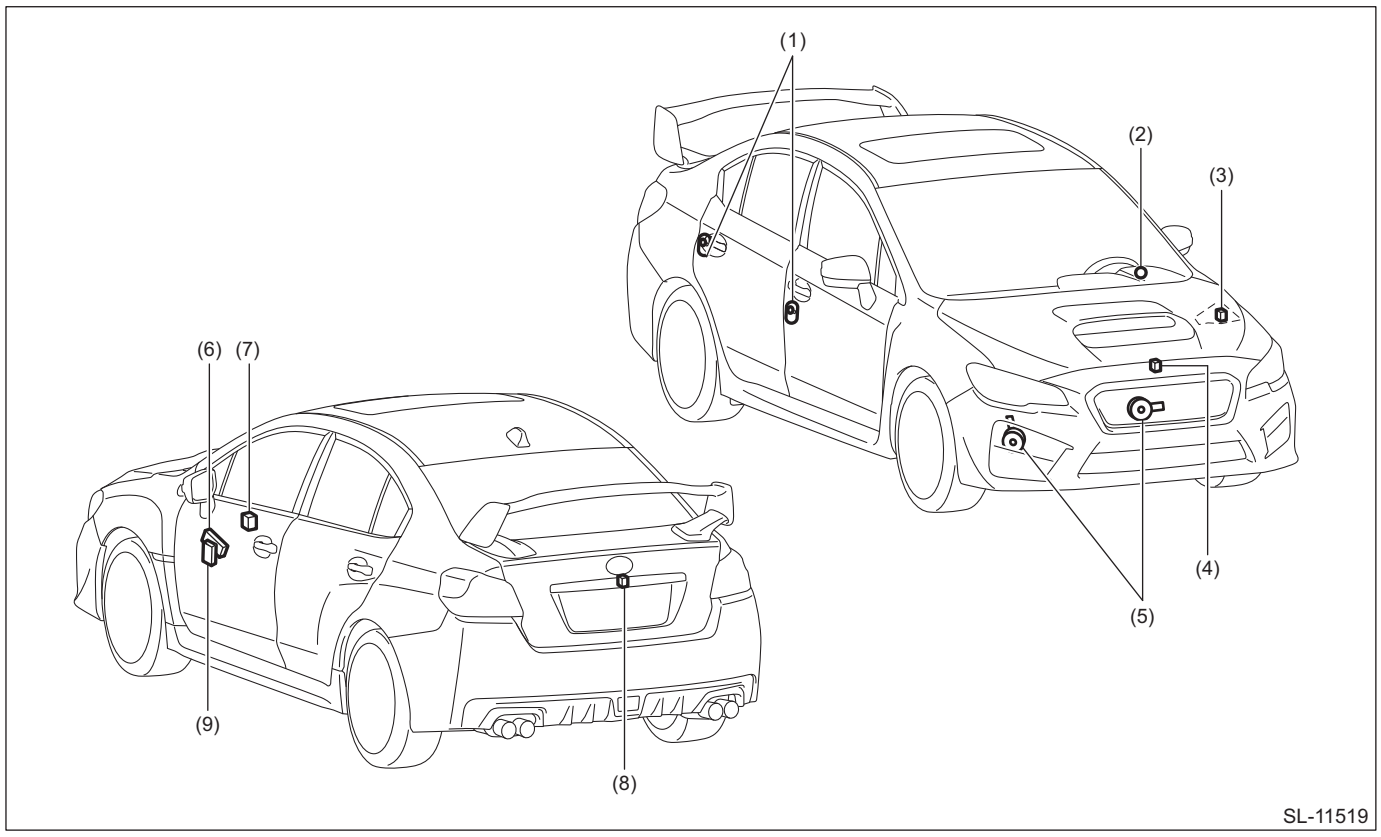
5. FUEL FLAP



(1) Saucer - COMPL
(2) Flap - COMPL fuel
(3) Ring clip

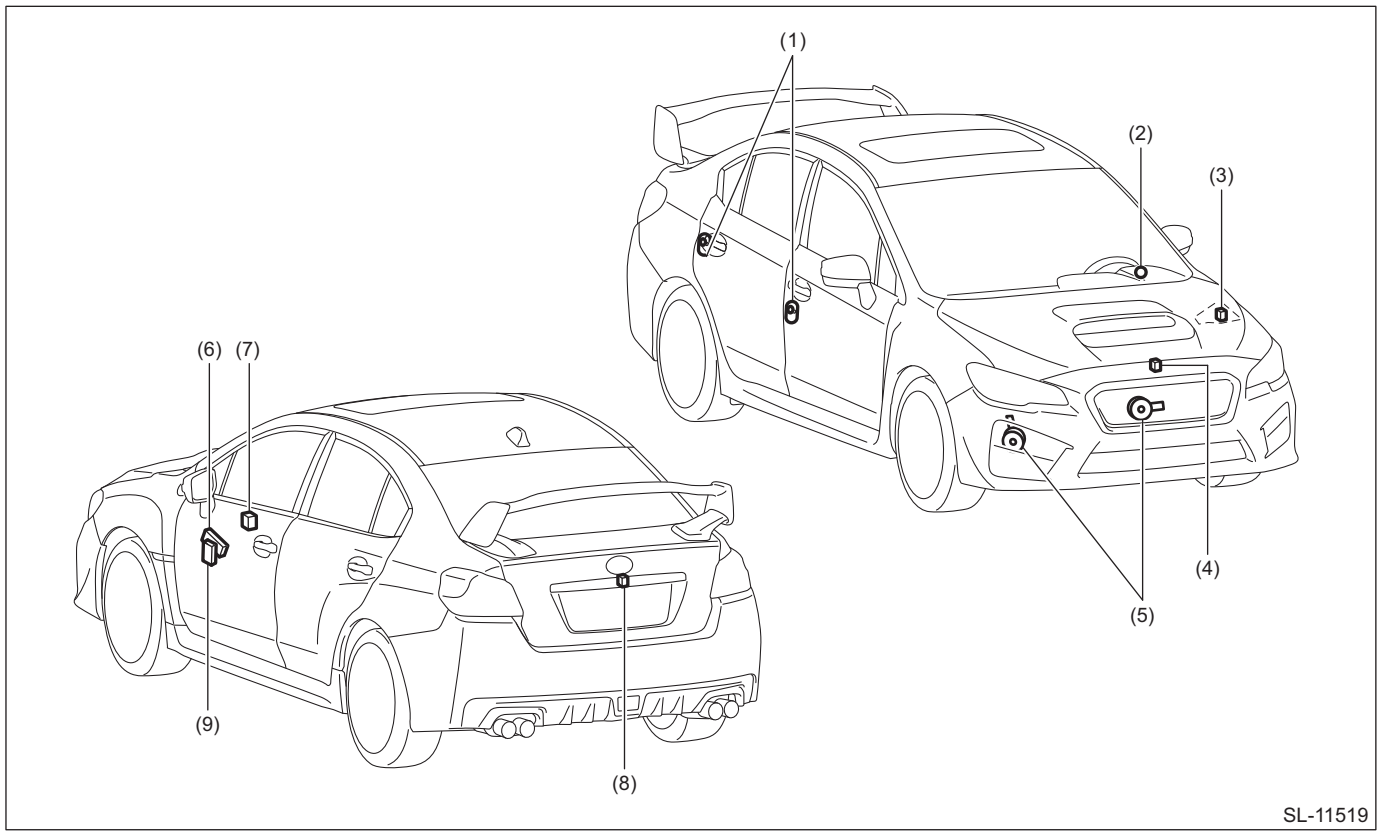
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

6. KEYLESS ENTRY SYSTEM



(1) Door switch
(2) Power window main switch
(3) Body integrated unit
(4) Keyless buzzer
(5) Keyless entry control module

7. SECURITY SYSTEM



(1)	Door switch	(4)	Hood switch	(7)	Turn signal and hazard unit
(2)	Security indicator light (in combination meter)	(5)	Horn	(8)	Trunk switch
(3)	Horn relay (in main fuse box)	(6)	Body integrated unit	(9)	Impact sensor (driver's seat instrument panel side) (dealer option)

8. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
Refer to "Electrical Component Location" of "KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)" section. <Ref. to KPS(diag)-11, Electrical Component Location.>

B: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
• If any immobilizer related part has been replaced, make sure to register the immobilizer.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

1. SPECIAL TOOL

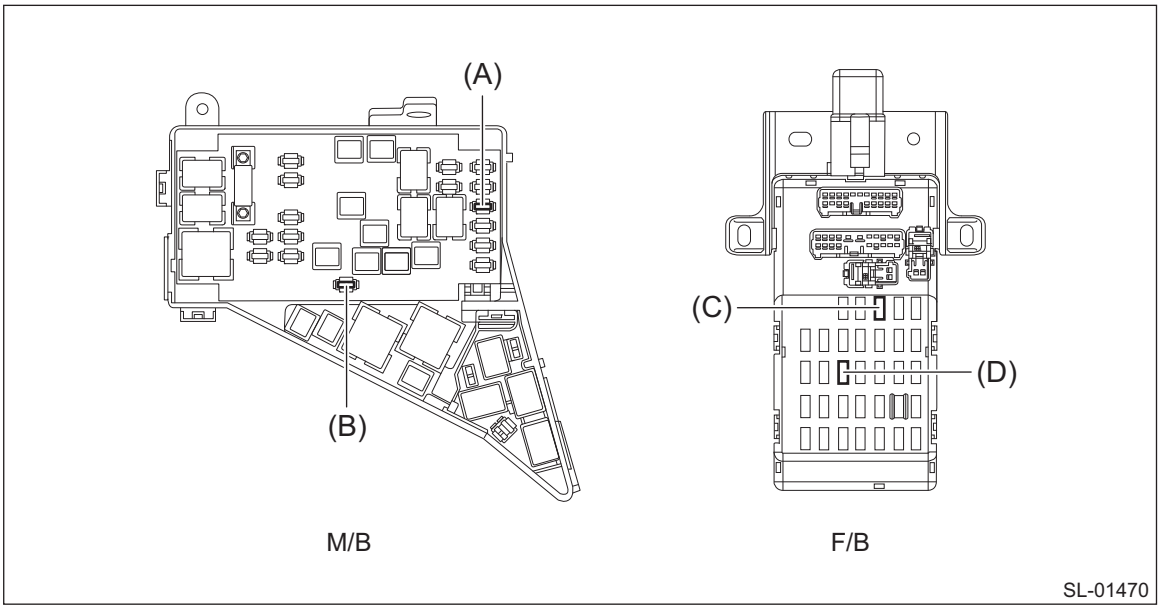
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.
 ST499987400	499987400	WRENCH COMPL	Used for adjusting the lock assembly - front hood.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Drill	Used for replacing ignition key lock.
Reverse tap	Used for replacing ignition key lock.
TORX® T30	Used for removing and installing door outer handle cover and frame assembly.
Clip remover	Used for removing trim clip.

2. Relay and Fuse

A: LOCATION



Main fuse box	Fuse 15 A (turn signal & hazard unit, body integrated unit, key warning switch)	(A)
	Fuse 20 A (body integrated unit, immobilizer antenna)	(B)
Relay & fuse box	Fuse 15 A (body integrated unit)	(C)
	Fuse 10 A (keyless access CM, TPMS & keyless entry CM)	(D)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

2. CHECK RELAY

1) Measure the resistance between relay terminals.

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 LI-01273
1 — 2	Apply battery voltage between terminals 4 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 4	Always	1 MΩ or more	 AC-02796
1 — 4	Apply battery voltage between terminals 2 and 3.	Less than 1 Ω	

Terminal No.	Inspection conditions	Standard	Circuit
1 — 2	Always	1 MΩ or more	 SL-01566
1 — 4	Always	Less than 1 Ω	
1 — 2	Apply battery voltage between terminals 3 and 5.	Less than 1 Ω	

2) Replace the relay if the inspection result is not within the standard value.

3. Door Lock Control System

A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-269, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

1. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually inspect the following fuses. • No. 3 (in fuse & relay box) • No. 7 (in fuse & relay box) • No. 8 (in main fuse box) (model without keyless access with push button start only)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-10, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-10, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the trunk opener switch and the circuit.	<Ref. to SL-12, CHECK TRUNK OPENER SWITCH CIRCUIT (INSIDE PASSENGER ROOM), INSPECTION, Door Lock Control System.>
	5. Check the door lock actuator and the circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-12, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY.** 1) Disconnect the connector of body integrated unit. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):*** ***(i171) No. 1 (+) — Chassis ground (–):*** ***(B281) No. 7 (+) — Chassis ground (–):*** ***(model without keyless access with push button start)***	Is the voltage 9 V or more?	Go to step **2**.	Check the harness for open or short circuit between body integrated unit and fuse.

	Step	Check	Yes	No
2	**CHECK GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 1 — Chassis ground:*** ***(B280) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair or replace the harness.

3. CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «Manual lock SW input». NOTE: For detailed operation procedures, refer to "Application help".	Does the display switch between OFF ←→ ON when each door lock switch is moved to LOCK?	Go to step **2**.	Go to step **3**.
2	**CHECK DOOR LOCK SWITCH.** From the condition in step 1), operate each door lock switch (driver's and passenger's) in the UNLOCK direction.	Does the display switch between OFF ←→ ON?	The door lock switch is OK.	Go to step **4**.
3	**CHECK POWER WINDOW MAIN SWITCH (DOOR LOCK SWITCH).** 1) Disconnect the power window main switch (door lock switch) connector. 2) Check the continuity between terminals when moving the power window main switch (door lock switch) in LOCK direction. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — (D7) No. 1:*** ***Passenger's side*** ***(D125) No. 4 — (D125) No. 5:***	Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?	Go to step **4**.	Replace the power window main switch or door lock switch.
4	**CHECK POWER WINDOW MAIN SWITCH (DOOR LOCK SWITCH).** Check the continuity between terminals when moving the power window main switch (door lock switch) in UNLOCK direction. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 9 — (D7) No. 1:*** ***Passenger's side*** ***(D125) No. 2 — (D125) No. 5:***	Did the indicator change from "No continuity" (1 MΩ or more) to "Continuity exists" (less than 10 Ω)?	Go to step **5**.	Replace the power window main switch or door lock switch.
5	**CHECK HARNESS.** Measure the resistance between the power window main switch (door lock switch) connector and chassis ground. ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — Chassis ground:*** ***Passenger's side*** ***(D125) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the harness.

	Step	Check	Yes	No
6	**CHECK HARNESS.** Check the harness between body integrated unit and power window main switch (door lock switch). ***Connector & terminal*** ***Driver's side*** ***(D7) No. 3 — (i84) No. 9:*** ***(D7) No. 9 — (i84) No. 20:*** ***Passenger's side*** ***(D125) No. 4 — (i84) No. 9:*** ***(D125) No. 2 — (i84) No. 20:***	Is harness normal?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

4. CHECK TRUNK OPENER SWITCH CIRCUIT (INSIDE PASSENGER ROOM)

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «R Gate Release SW input». NOTE: For detailed operation procedures, refer to "Application help".	Does the display switch between OFF ←→ ON when the trunk opener switch is operated?	The trunk opener switch is normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and trunk opener switch. 2) Check the harness between the body integrated unit and trunk opener switch. ***Connector & terminal*** ***(i84) No. 10 — (i13) No. 1:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HARNESS.** Measure the resistance between the trunk opener switch connector and chassis ground. ***Connector & terminal*** ***(i13) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK TRUNK OPENER SWITCH.** Measure the resistance between terminals both when trunk opener switch is pressed and when not pressed. ***Terminals*** ***No. 2 — No. 3:***	Is the resistance less than 10 Ω when the switch is pressed and 1 MΩ or more when not pressed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the trunk opener switch.

5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

	Step	Check	Yes	No
1	**CHECK HARNESS (DOOR LOCK).** 1) Disconnect the body integrated unit and each door lock actuator connector. 2) Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i171) No. 2 — (D72) No. 4:*** ***Front door RH*** ***(i171) No. 2 — (D18) No. 4:*** ***Rear door LH*** ***(i171) No. 2 — (D26) No. 4:*** ***Rear door RH*** ***(i171) No. 2 — (D32) No. 4:***	Is harness normal?	Go to step **2**.	Repair or replace the harness.

	Step	Check	Yes	No
2	**CHECK HARNESS (DOOR UNLOCK).** Check the harness between body integrated unit and each door lock actuator. ***Connector & terminal*** ***Front door LH*** ***(i171) No. 4 — (D72) No. 1:*** ***Front door RH*** ***(i171) No. 3 — (D18) No. 1:*** ***Rear door LH*** ***(i171) No. 3 — (D26) No. 1:*** ***Rear door RH*** ***(i171) No. 3 — (D32) No. 1:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.
3	**CHECK TRUNK UNLOCK HARNESS.** Check the harness between the body integrated unit and trunk lid lock actuator. ***Connector & terminal*** ***(i171) No. 7 — (R186) No. 1:***	Is harness normal?	Go to step **4**.	Repair or replace the harness.
4	**CHECK TRUNK UNLOCK HARNESS.** Measure the resistance between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the harness.
5	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** 1) Connect the body integrated unit connector. 2) Measure the voltage between terminals of the body integrated unit when operating the door lock switch to LOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i171) No. 2 (+) — (i171) No. 3 (–):*** ***Front door LH*** ***(i171) No. 2 (+) — (i171) No. 4 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During lock output)	Go to step **6**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
6	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between terminals of the body integrated unit when operating the door lock switch to UNLOCK direction. ***Connector & terminal*** ***Except for front door LH*** ***(i171) No. 3 (+) — (i171) No. 2 (–):*** ***Front door LH*** ***(i171) No. 4 (+) — (i171) No. 2 (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **7**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK BODY INTEGRATED UNIT OUTPUT SIGNAL.** Measure the voltage between body integrated unit and chassis ground when operating the trunk opener switch. ***Connector & terminal*** ***(i171) No. 7 (+) — Chassis ground (–):***	Does the voltage change from less than 1 V → 9 V or more? (During unlock output)	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
8	**CHECK DOOR LOCK ACTUATOR.** Check the door lock actuator. • Front door lock actuator: <Ref. to SL-37, INSPECTION, Front Door Latch and Door Lock Actuator Assembly.> • Rear door lock actuator: <Ref. to SL-45, INSPECTION, Rear Door Latch and Door Lock Actuator Assembly.>	Is the door lock actuator OK?	Go to step **9**.	Replace the door latch and door lock actuator assembly.

Step		Check	Yes	No
9	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-48, Trunk Lid Latch and Actuator Assembly.>	Is trunk lid lock actuator normal?	Check the connection status of the harness and connector that may have a temporary poor contact.	Replace the trunk lid latch & actuator assembly.

4. Keyless Entry System

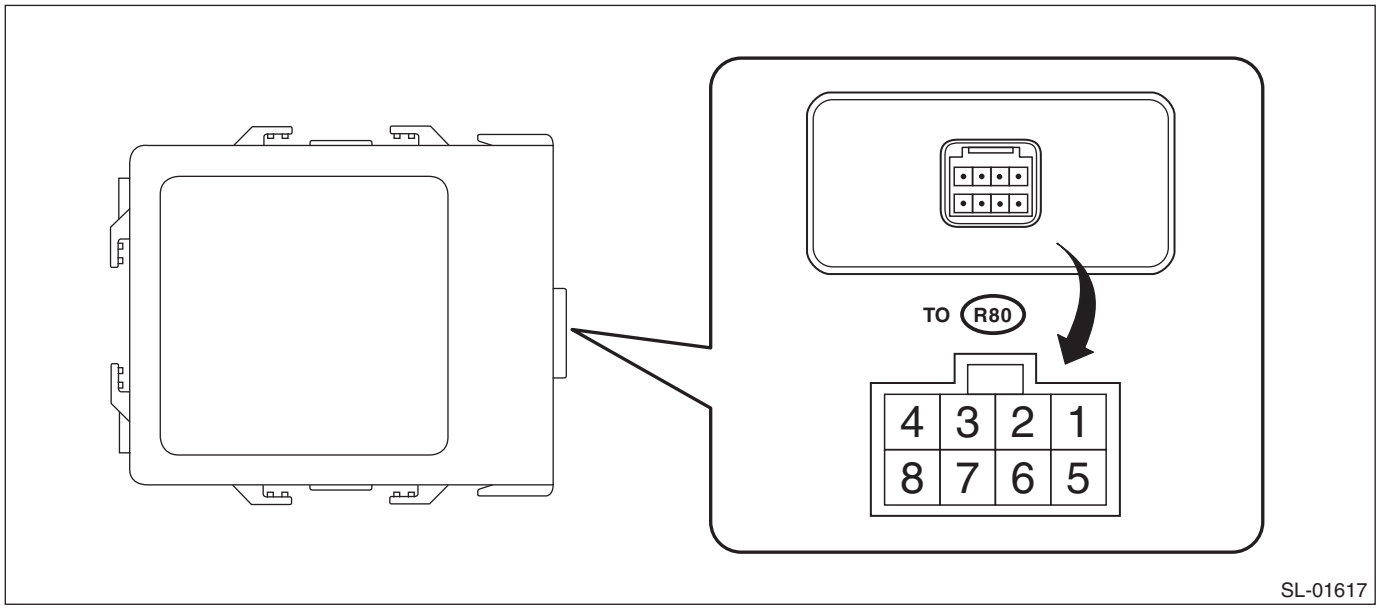
A: WIRING DIAGRAM

Refer to “Keyless Entry System” in the wiring diagram. <Ref. to WI-269, WIRING DIAGRAM, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

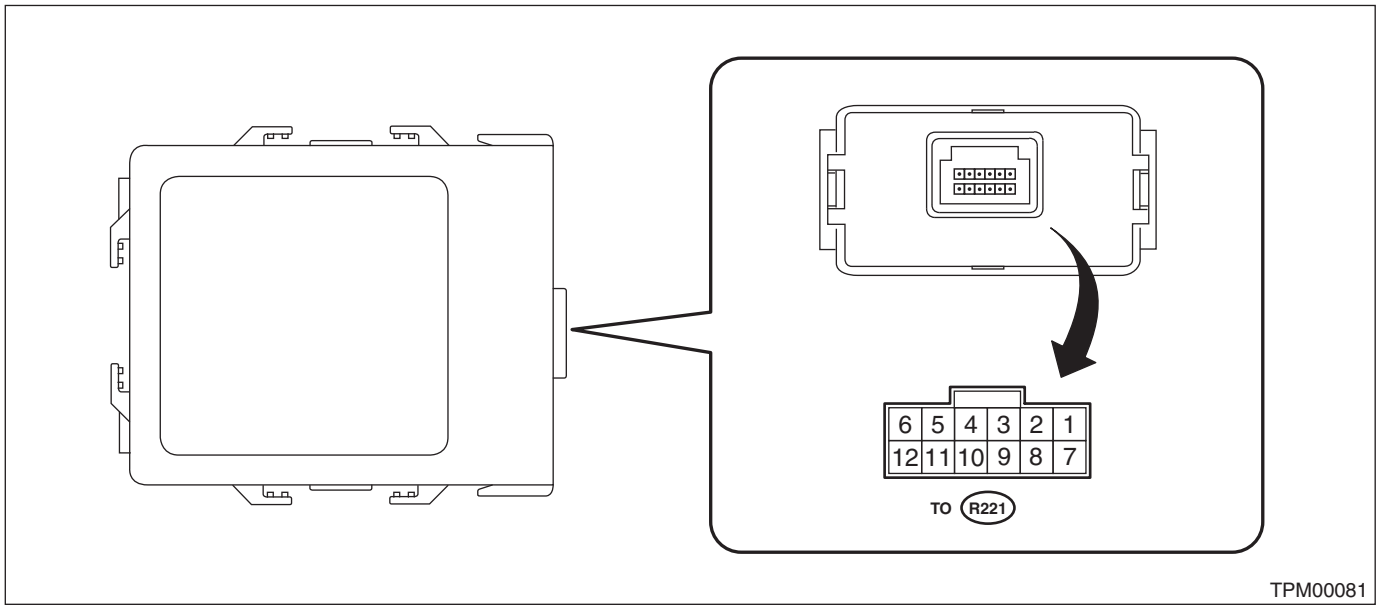
1. KEYLESS ENTRY CONTROL MODULE

- Model without tire pressure monitoring system



Terminal No.	Item	Measuring condition	Standard
3 (U-ART com.)	—	Cannot be measured	—
4 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V
7 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω

- Model with tire pressure monitoring system



Terminal No.	Item	Measuring condition	Standard
4 (IG) ←→ Chassis ground	Voltage	IG OFF → ON	0 V → 10 — 14 V

Terminal No.	Item	Measuring condition	Standard
5 (GND) ←→ Chassis ground	Resistance	Always	Less than 1 Ω
6 (+B) ←→ Chassis ground	Voltage	Always	10 — 14 V
11 (U-ART com.)	—	Cannot be measured	—

2. BODY INTEGRATED UNIT

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. SYMPTOM CHART

Symptoms	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Remove and visually inspect the following fuses. • No. 3 (in fuse & relay box) • No. 7 (in fuse & relay box) • No. 8 (in main fuse box)	If the fuse is blown out, replace the fuse with a new part. When there is no defective with the fuse, check the power supply and ground circuit. <Ref. to SL-10, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the keyless entry control module.	<Ref. to SL-18, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-19, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module.	<Ref. to SL-18, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

Symptoms	Repair order	Reference
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>	1. Check the keyless transmitter battery.	<Ref. to SL-17, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-20, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door switch signal.	<Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the keyless entry control module.	<Ref. to SL-18, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
The keyless buzzer and hazard light do not operate.	1. Check the keyless buzzer operation.	<Ref. to SL-22, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-21, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-23, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to BC(diag)-2, Basic Diagnostic Procedure.>

2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

CAUTION:
Be sure to reset keyless transmitter of other vehicles registered to the inspection target vehicle, and vehicles to which keyless transmitters were registered for inspection, to the condition before performing the inspection. (Re-register the keyless transmitters.)

Step		Check	Yes	No
1	**CHECK KEYLESS TRANSMITTER BATTERY.** 1) Remove the battery from the keyless transmitter. <Ref. to SL-83, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-84, INSPECTION, Keyless Transmitter.>	Is the voltage 2.5 V or more?	Go to step **2**.	Replace the keyless transmitter battery.

	Step	Check	Yes	No
2	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-84, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.> 1) Close all the doors and trunk lid of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors, and unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the inspection target vehicle?	Go to step **3**.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3	**CHECK KEYLESS TRANSMITTER.** Register the keyless transmitter of the inspected vehicle to another vehicle whose keyless system operates normally. <Ref. to SL-84, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Keyless Transmitter.>	Is the keyless transmitter registered correctly?	Go to step **4**.	Replace the keyless transmitter and perform registration.
4	**CHECK KEYLESS TRANSMITTER.** Check the registered keyless transmitter. 1) Close all the doors and trunk lid of the vehicle which keyless system operates normally. 2) Using the keyless transmitter, lock and unlock the doors, and unlock the trunk lid.	Can lock, unlock of doors and unlock of the trunk lid be performed properly on the vehicle?	Keyless transmitter is OK.	Replace the keyless transmitter and perform registration.

3. CHECK KEYLESS ENTRY CONTROL MODULE

	Step	Check	Yes	No
1	**CHECK KEYLESS ENTRY CONTROL MODULE.** Read the DTC of body integrated unit using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to "Application help".	Is DTC U1500 "KEYLESS UART COM. MALFUNCTION" displayed?	Go to step **2**.	Keyless entry control module is normal.
2	**CHECK POWER SUPPLY.** 1) Disconnect the keyless entry control module connector. 2) Measure the voltage between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***Model without tire pressure monitoring system*** ***(R80) No. 4 (+) — Chassis ground (–):*** ***Model with tire pressure monitoring system*** ***(R221) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check the harness for open or short circuits between the keyless entry control module and the fuse.
3	**CHECK GROUND CIRCUIT.** Measure the resistance between keyless entry control module connector and chassis ground. ***Connector & terminal*** ***Model without tire pressure monitoring system*** ***(R80) No. 7 — Chassis ground:*** ***Model with tire pressure monitoring system*** ***(R221) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.

	Step	Check	Yes	No
4	**CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.** 1) Disconnect the body integrated unit connector. 2) Check the harness between keyless entry control module and body integrated unit. ***Connector & terminal*** ***Model without tire pressure monitoring system*** ***(i171) No. 11 — (R80) No. 3:*** ***Model with tire pressure monitoring system*** ***(i171) No. 11 — (R221) No. 11:***	Is harness normal?	Replace the keyless entry control module.	Repair or replace the harness.

4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Refer to the “CHECK POWER SUPPLY AND GROUND LINE” of “Door Lock Control System” for detailed procedures. <Ref. to SL-10, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>

5. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Display the following items using Subaru Select Monitor. • «Driver’s door SW input» • «P-door SW input» • «Rear right door SW input» • «Rear left door SW input» • «R Gate SW input» NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between OFF ←→ ON when each door or trunk lid is opened/closed?	The door switch or the trunk lid latch switch is normal.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Disconnect the connector of the door switch or the trunk lid latch switch that the display does not change. 3) Check the harness between body integrated unit and defective switch. ***Connector & terminal*** ***Front door LH*** ***(i84) No. 14 — (R9) No. 1:*** ***Front door RH*** ***(i84) No. 13 — (R12) No. 1:*** ***Rear door LH*** ***(i84) No. 24 — (R22) No. 1:*** ***Rear door RH*** ***(i84) No. 25 — (R16) No. 1:*** ***Trunk lid*** ***(i84) No. 33 — (R186) No. 3:***	Is harness normal?	Go to step **3**.	Repair or replace the harness.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Measure the resistance between the faulty switch connector and chassis ground. ***Connector & terminal*** ***Front door LH*** ***(R9) No. 3 — Chassis ground:*** ***Front door RH*** ***(R12) No. 3 — Chassis ground:*** ***Rear door LH*** ***(R22) No. 3 — Chassis ground:*** ***Rear door RH*** ***(R16) No. 3 — Chassis ground:*** ***Trunk lid*** ***(R186) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the harness.
4	**CHECK DOOR SWITCH.** Measure the resistance between faulty switch terminals. ***Terminals*** ***Front LH door switch*** ***No. 1 — No. 3:*** ***Front RH door switch*** ***No. 1 — No. 3:*** ***Rear LH door switch*** ***No. 1 — No. 3:*** ***Rear RH door switch*** ***No. 1 — No. 3:*** ***Trunk lid latch switch*** ***No. 3 — No. 2:***	Is the resistance 1 MΩ or more when the door switch is pushed and the trunk lid is closed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the faulty parts. • Door switches • Trunk lid latch and actuator assembly

6. CHECK KEY WARNING SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display the data of «key-lock warning SW». NOTE: For detailed operation procedures, refer to “Application help”.	Is the normal input signal displayed when the key is inserted in/removed from the ignition switch?	The key warning switch is OK.	Go to step **2**.
2	**CHECK FUSE.** Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **3**.
3	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):***	Is the voltage 9 V or more?	Go to step **4**.	Go to step **5**.
4	**CHECK KEY WARNING SWITCH CIRCUIT.** 1) Remove the key from ignition switch. 2) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1.5 V?	The key warning switch is OK.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK KEY WARNING SWITCH.** 1) Disconnect the connector of key warning switch. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **6**.	Replace the key warning switch.
6	**CHECK KEY WARNING SWITCH.** 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse. • Harness for open or short between the body integrated unit and key warning switch.	Replace the key warning switch.

7. CHECK ROOM LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK ROOM LIGHT OPERATION.** Make sure the room light illuminates when the room light switch is ON, and goes off when the switch is OFF.	Does the room light illuminate or go off?	Go to step **2**.	Check the room light circuit. <Ref. to LI-76, INSPECTION, Room Light.>
2	**CHECK ROOM LIGHT OPERATION.** 1) Turn the room light switch to the “DOOR” position. 2) Open and close any door.	Does the room light illuminate ←→ go off (including off delay) when the door is opened and closed?	Go to step **3**.	Go to step **4**.
3	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Room light is normal.	Check keyless entry system. <Ref. to SL-16, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
4	**CHECK ROOM LIGHT.** Check the room light. <Ref. to LI-76, INSPECTION, Room Light.>	Is room light normal?	Go to step **5**.	Replace the bulb or room light assembly.
5	**CHECK HARNESS.** 1) Disconnect the connectors of body integrated unit and room light. 2) Check the harness between body integrated unit and room light. ***Connector & terminal*** ***(i84) No. 4 — (R52) No. 2:***	Is harness normal?	Go to step **6**.	Repair or replace the harness.
6	**CHECK HARNESS.** Measure the voltage between the room light connector and chassis ground. ***Connector & terminal*** ***(R52) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the harness.

8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	**CHECK HAZARD LIGHT OPERATION.** Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step **2**.	Check the hazard light circuit.
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Abnormal warning lamp flashing setting» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting ON?	Go to step **3**.	Turn the setting to ON.
3	**CHECK DATA MONITOR.** Display the data of «Hazard Output» using Subaru Select Monitor.	Is output signal present when operating the transmitter LOCK/UNLOCK button?	Go to step **4**.	Go to step **5**.
4	**CHECK KEYLESS ENTRY OPERATION.** Press the LOCK/UNLOCK button of the keyless transmitter.	Does it operate properly?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check keyless entry system. <Ref. to SL-16, SYMPTOM CHART, INSPECTION, Keyless Entry System.>
5	**CHECK HAZARD LIGHT CIRCUIT.** 1) Disconnect the connectors of the body integrated unit and turn signal & hazard unit. 2) Check the harness between body integrated unit and turn signal & hazard unit. ***Connector & terminal*** ***(i171) No. 18 — (B32) No. 8:***	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

9. CHECK KEYLESS BUZZER

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Ans.-back Buzzer» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is the setting “ON”?	Go to step **2**.	Turn the setting to “ON”.
2	**CHECK BODY INTEGRATED UNIT SETTING.** Display the data of «Keyless Buzzer Volume» using Subaru Select Monitor. Turn the setting to “7”.	Does the keyless buzzer sound?	Set to the volume that the customer requested.	Go to step **3**.
3	**CHECK BODY INTEGRATED UNIT.** Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor.	Does the keyless buzzer sound?	Check the keyless control module.	Go to step **4**.
4	**CHECK KEYLESS BUZZER CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Check the harness between body integrated unit and keyless buzzer. ***Connector & terminal*** ***(B280) No. 20 — (B164) No. 1:***	Is harness normal?	Go to step **5**.	Repair or replace the harness.
5	**CHECK HARNESS.** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 1 — Chassis ground:***	Is the resistance value 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**CHECK KEYLESS BUZZER CIRCUIT.** Measure the resistance between the keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness.
7	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Select and perform the «Keyless Buzzer Output» using Subaru Select Monitor. 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (–):***	Is the frequency 2 kHz or the voltage 9 V or more?	Replace the keyless buzzer.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

10.CHECK DOOR LOCK SWITCH

For procedures, refer to the “INSPECTION OF DOOR LOCK SWITCH” of the “Door Lock Control System”. <Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

11.CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	**CHECK IGNITION CIRCUIT.** Check the ignition circuit. <Ref. to SL-30, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>	Is the switch circuit normal?	Go to step **2**.	Repair or replace.
2	**CHECK DOOR SWITCH CIRCUIT.** Inspect door switch circuit. <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>	Is the switch circuit normal?	Go to step **3**.	Repair or replace.
3	**CHECK FUSE.** Remove and visually check fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step **4**.
4	**CHECK HARNESS.** 1) Disconnect the ignition switch illumination connector. NOTE: The ignition switch illumination is integrated into the immobilizer antenna. 2) Measure the voltage between ignition switch illumination connector and chassis ground. ***Connector & terminal*** ***(B415) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check the harness for open or short circuits between the ignition switch illumination and fuse.
5	**CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.** 1) Disconnect the connector of body integrated unit. 2) Check the harness between body integrated unit and ignition switch illumination. ***Connector & terminal*** ***(B280) No. 25 — (B415) No. 6:***	Is harness normal?	Go to step **6**.	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.
6	**CHECK IGNITION SWITCH ILLUMINATION BULB.** Apply battery voltage between terminals of the bulb. ***Terminals*** ***No. 2 (+) — No. 6 (–):***	Does the bulb illuminate?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the immobilizer antenna. <Ref. to SL-88, REMOVAL, Immobilizer Antenna.>

5. Keyless Access System

A: WIRING DIAGRAM

For wiring diagrams related to the keyless access system, refer to the following items.

- Keyless access system: <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>
- Push button start system: <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

Refer to “Basic Diagnostic Procedure” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

6. Push Button Start System

A: WIRING DIAGRAM

For wiring diagrams related to the push button start system (ignition change), refer to the following items.
- Keyless access system: <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>
- Push button start system: <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-13, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. IGNITION/ACC CHANGE FUNCTION CHECK

1) Check push button ignition switch function

(1) Check the change control through push button ignition switch, brake pedal operation, and shift position.

- CVT model

Shift lever position	Brake pedal operation	Push button ignition switch operation
P	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
P	Released	Engine running → Ignition switch OFF
P	Depressed	Ignition switch OFF → Engine started
P	Depressed	ACC ON → Engine started
P	Depressed	Ignition switch ON → Engine started
P	Depressed	Engine running → Ignition switch OFF
N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
N	Released	Engine running → ACC ON
N	Depressed	Ignition switch OFF → Engine started
N	Depressed	ACC ON → Engine started
N	Depressed	Ignition switch ON → Engine started
N	Depressed	Engine running → ACC ON
Other than P or N	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → ACC ON
Other than P or N	Released	Engine running → ACC ON
Other than P or N	Depressed	Ignition switch OFF → Ignition switch ON
Other than P or N	Depressed	ACC ON → Ignition switch ON
Other than P or N	Depressed	Engine running → ACC ON

- MT model

Shift lever position	Clutch pedal operation	Push button ignition switch operation
—	Released	Repeat Ignition switch OFF → ACC ON → Ignition switch ON → Ignition switch OFF
	Released	Engine running → Ignition switch OFF
	Depressed	Ignition switch OFF → Engine started
	Depressed	ACC ON → Engine started
	Depressed	Ignition switch ON → Engine started
	Depressed	Engine running → Ignition switch OFF

(2) Check the changeover functions other than push button ignition switch operation.
With ACC ON or the ignition switch ON, and the shift lever in “P” position, check that ACC is ON or Ignition switch is ON → Ignition switch is OFF when the vehicle is left for 1 hour or more.

(3) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-126, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

2) Check power status display

(1) Check the power indicator display of the push button ignition switch.

NOTE:
*1: Key collation is normal, and the stop light switch (AT) is ON.
Indicator display

Push button ignition switch status	Indicator lighting status
Ignition switch OFF (except for condition *1)	Light OFF
ACC ON (except for condition *1)	Orange light
Ignition switch ON (except for condition *1)	Orange light
Engine start standby (*1)	Green light
After engine is started	Light OFF

(2) If the inspection result indicates an improper operation, check the push button start system. <Ref. to KPS(diag)-126, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

NOTE:
The indicator blinks if any of the following malfunctions are detected.

Detected malfunction	Indicator lighting status
Steering lock stuck	Green blinking
Steering lock CM internal malfunction	Orange blinking
Keyless access CM internal malfunction	Orange blinking
Vehicle speed signal malfunction	Orange blinking
Start switch malfunction	Orange blinking
LIN communication failure	Orange blinking
Clutch malfunction	Orange blinking
+B back-up power input malfunction	Orange blinking

7. Security System

A: WIRING DIAGRAM

Refer to “Security System” in the wiring diagram. <Ref. to WI-331, WIRING DIAGRAM, Security System.>

B: ELECTRICAL SPECIFICATION

Refer to “Control Module I/O Signal” of “BODY CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

C: INSPECTION

1. BASIC DIAGNOSTIC PROCEDURE

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Is DTC displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DATA MONITOR.** Display the following items using Subaru Select Monitor. • «Driver’s door SW input» • «P-door SW input» • «Rear right door SW input» • «Rear left door SW input» • «R Gate SW input» • «Hood SW»	Does the display switch between OFF ←→ ON when each door, trunk lid, or front hood is opened/closed?	Go to step **3**.	Check the following parts. • Door switches <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Trunk lid latch switch <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.> • Hood switch <Ref. to SL-30, CHECK HOOD SWITCH, INSPECTION, Security System.>
3	**CHECK SECURITY SYSTEM SETTINGS.** Check the settings of the security system using the Subaru Select Monitor.	Is the setting of the security system ON?	Go to step **5**.	Go to step **4**.
4	**CHANGE SETTING OF SECURITY SYSTEM.** Change the setting of security system to ON using Subaru Select Monitor. <Ref. to SL-29, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step **5**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

	Step	Check	Yes	No
5	**CHECK KEYLESS SYSTEM OPERATION.** Check the operation of the keyless entry system or keyless access system.	Does the keyless entry system or keyless access system operate normally?	Go to step **6**.	Check the keyless entry system or keyless access system. • Keyless entry system: <Ref. to SL-16, INSPECTION, Keyless Entry System.> • Keyless access system: <Ref. to KPS(diag)-4, KEYLESS ACCESS WITH PUSH BUTTON START, CAUTION, General Description.>
6	**CHECK SECURITY SYSTEM OPERATION.** 1) Remove the key from ignition switch or turn the ignition switch to OFF, and close all doors, trunk lid and front hood. 2) Check the status of security indicator light. 3) Press the LOCK button of the keyless transmitter or access key. 4) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? 1. Before pressing the LOCK button: Blinks once within 3 seconds 2. After pressing the LOCK button • When monitoring lag is set to 0 seconds: Blinks twice every 0.5 seconds at 2 second intervals. • When monitoring lag is set to 30 seconds: Blinks once every 0.4 seconds for 30 seconds, then blinks twice every 0.5 seconds at 2 second intervals.	Go to step **7**.	Check the security indicator light. <Ref. to SL-29, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
7	**CHECK SECURITY ALARM OPERATION.** 1) Check that the security indicator light blinks twice every 0.5 seconds at 2 second intervals. 2) Operate the driver's door lock switch to the UNLOCK side. 3) Open one of the doors.	Does the security alarm operate, the horn sound and the hazard light blink?	Go to step **8**.	Check the following parts. • Horn: <Ref. to SL-29, CHECK HORN, INSPECTION, Security System.> • Hazard light: <Ref. to SL-30, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>
8	**CHECK DEACTIVATION OF SECURITY ALARM.** Press any button of the transmitter or access key while the security alarm is operating.	Do the horn sound and the blinking of the hazard light stop?	Go to step **9**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
9	**CHECK IMPACT SENSOR (DEALER OPTION).** Check the sensibility of impact sensor. <Ref. to SL-75, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>	Is the sensibility set properly?	Go to step **10**.	Adjust the sensitivity. <Ref. to SL-76, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

Step		Check	Yes	No
10	**CHECK MANUAL SETTING CHANGE OF SECURITY SYSTEM.** 1) Press the UNLOCK button of the keyless transmitter or access key. 2) Change the setting of security system. <Ref. to SL-29, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Restore the security system settings to those before the diagnosis and finish the diagnosis.	Check the following parts. • Ignition switch circuit: <Ref. to SL-66, INSPECTION, Ignition Key Lock.> • Door lock switch circuit: <Ref. to SL-11, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>

NOTE:
If the horn sounds when the security is turned on (monitor condition) using the keyless transmitter or access key, check the function setting of the body integrated unit. As a cause, it is possible that the impact sensor present (ON) / not present (OFF) setting is set to ON in the customization function though there is no impact sensor. <Ref. to BC(diag)-26, User Customizing.>

2. SECURITY SYSTEM ON/OFF SETTING

NOTE:
It can be set by «Security Alarm Setup» in unit customizing using Subaru Select Monitor.
For detailed operation procedures, refer to “Application help”.
1) Close all doors or trunk lid, and sit down on the driver’s seat. Press the UNLOCK button of the keyless transmitter or access key.
2) Turn the ignition switch to ON.
3) Press the central door unlock switch and open the driver’s door simultaneously. (Keep the central door unlock switch pressed down.)
4) When the condition in step 3) continues for 10 seconds, the system switches to a mode reverse to the current mode.

Setting	Horn activation	Meter display
ON → OFF	Twice	[AL_OF]
OFF → ON	Once	[AL_ON]

3. CHECK DOOR SWITCH

For operation procedure, refer to “CHECK DOOR SWITCH” of “Keyless Entry System”. <Ref. to SL-19, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>

4. CHECK SECURITY INDICATOR LIGHT CIRCUIT

For operation procedures, refer to “CHECK SECURITY INDICATOR LIGHT CIRCUIT” of “IMMOBILIZER (DIAGNOSTICS)” section. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>

5. CHECK HORN

Step		Check	Yes	No
1	**CHECK HORN OPERATION.** Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step **2**.	Check the horn circuit.
2	**CHECK BODY INTEGRATED UNIT.** Select and perform the «Horn Output» using Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the horn sound?	Horn circuit is OK.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HORN RELAY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of body integrated unit. 3) Remove the horn relay. 4) Check the harness between body integrated unit and horn relay. ***Connector & terminal*** ***(B280) No. 24 — Horn relay No. 4:***	Is harness normal?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Repair or replace the harness.

6. CHECK HAZARD LIGHT OPERATION

For operation procedure, refer to “CHECK HAZARD LIGHT OPERATION” of “Keyless Entry System”. <Ref. to SL-22, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>

7. CHECK IGNITION SWITCH CIRCUIT

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Display the data of «BATT voltage (control)» and «IGN voltage» using the Subaru Select Monitor. NOTE: For detailed operation procedures, refer to “Application help”.	Does the «IGN voltage» indicate 0 V when the ignition switch is OFF, and fall within a range of ±1 V from the «BATT voltage (control)» when the ignition switch is ON?	The ignition switch input circuit is OK.	Go to step **2**.
2	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between the body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check body integrated unit. <Ref. to BC(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between body integrated unit and fuse.

8. CHECK HOOD SWITCH

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, display «Hood Switch». NOTE: For detailed operation procedures, refer to “Application help”.	Does the display switch between OFF ←→ ON when the front hood is opened/closed?	The hood switch is OK.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the connector of body integrated unit. 2) Disconnect the connector of hood switch. 3) Measure the resistance of harness between body integrated unit and hood switch. ***Connector & terminal*** ***(B284) No. 33 — (F152) No. 1:*** ***(B284) No. 14 — (F152) No. 2:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the harness.
3	**CHECK HOOD SWITCH.** Measure the resistance between hood switch terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more when the hood is closed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the lock assembly - front hood. <Ref. to SL-50, Front Hood Lock Assembly.>

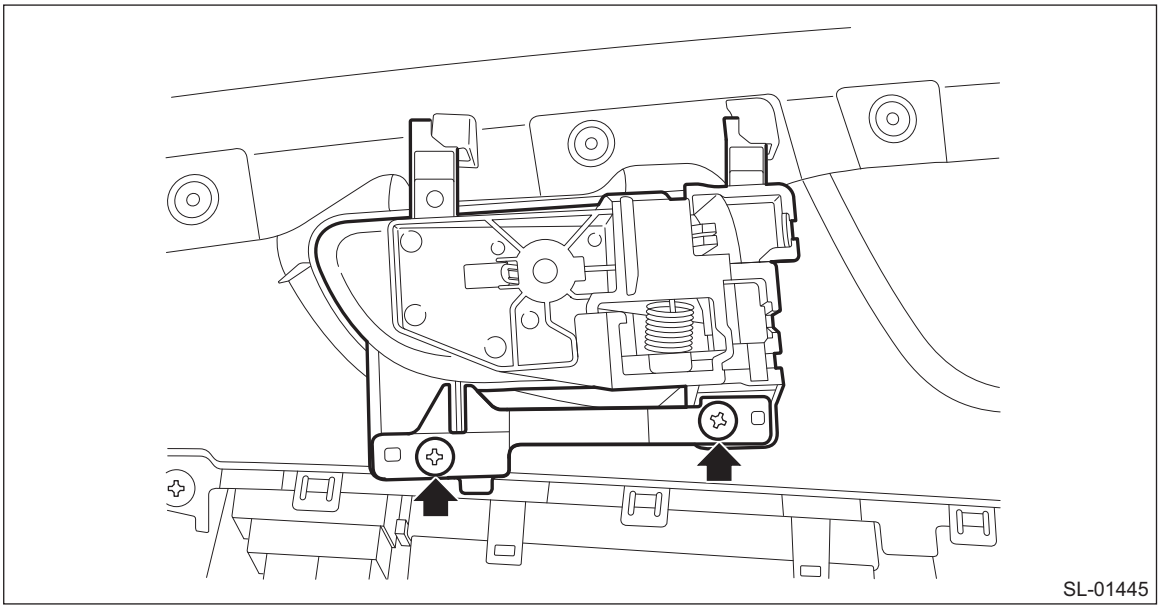
8. Front Inner Remote

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.

CAUTION:
The remote assembly - door is tightened with the plate. Be careful not to drop or damage the part.



B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
- If the lever is faulty, replace the front inner remote handle.

2) Install the remote assembly - door.

CAUTION:
Securely install the plate.
3) Install the trim panel - front door.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

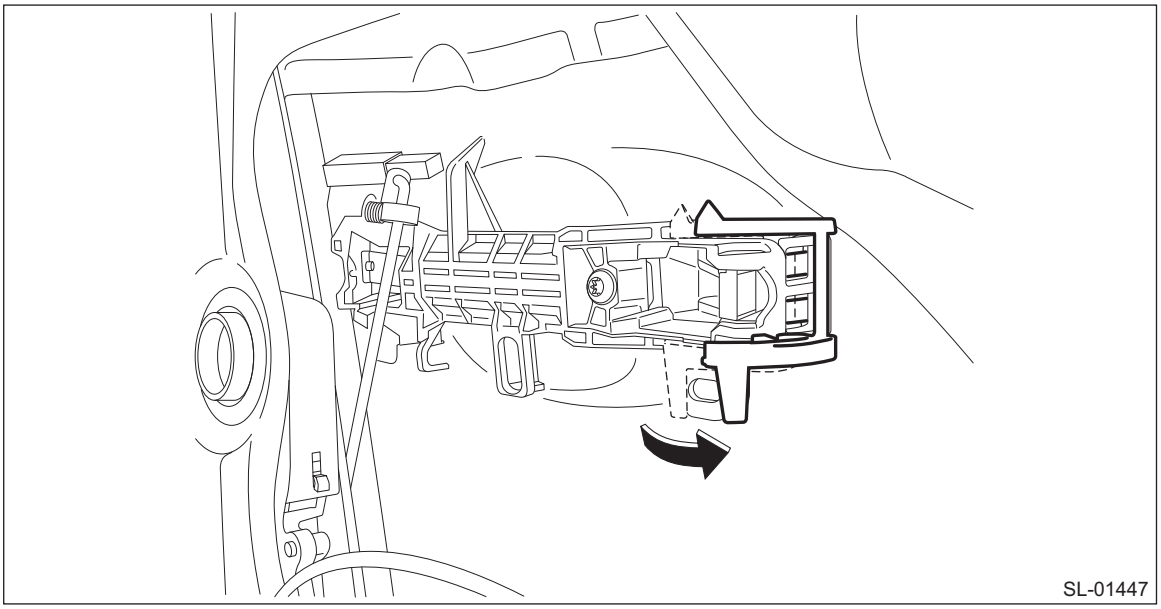
Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - front.

9. Front Outer Handle

A: REMOVAL

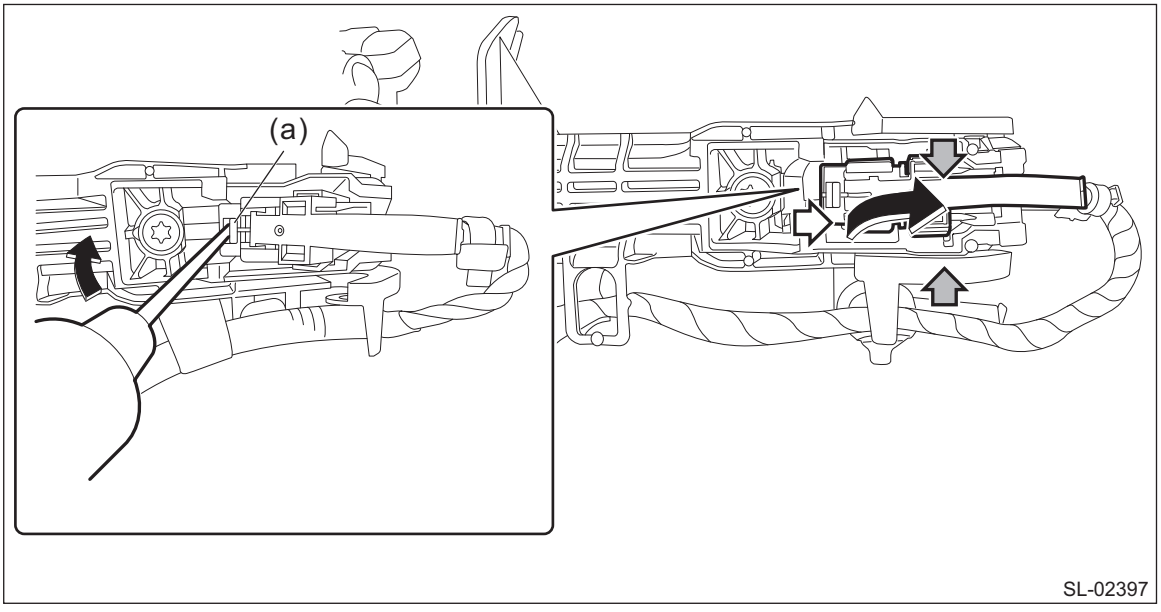
1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the holder of the frame assembly - front door outer.



SL-01447

NOTE:
• For model with keyless access with push button start, disconnect the harness clip and exterior antenna (touch sensor) connector.
• Using (a) shown in the figure as a supporting point, pry it with a flat tip screwdriver to remove.

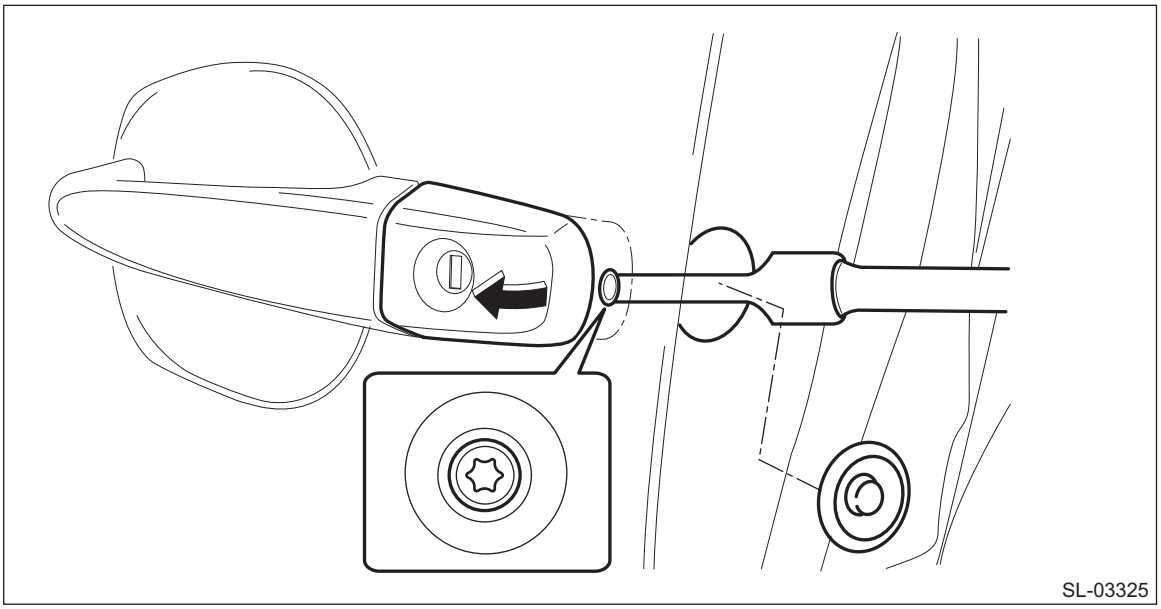


SL-02397

6) Remove the cover - handle front outer.

Preparation tool:
TORX® T30

(1) Remove the plug at the rear end of the panel assembly - front door.
(2) Loosen the TORX® bolt and remove the cover - handle front outer.

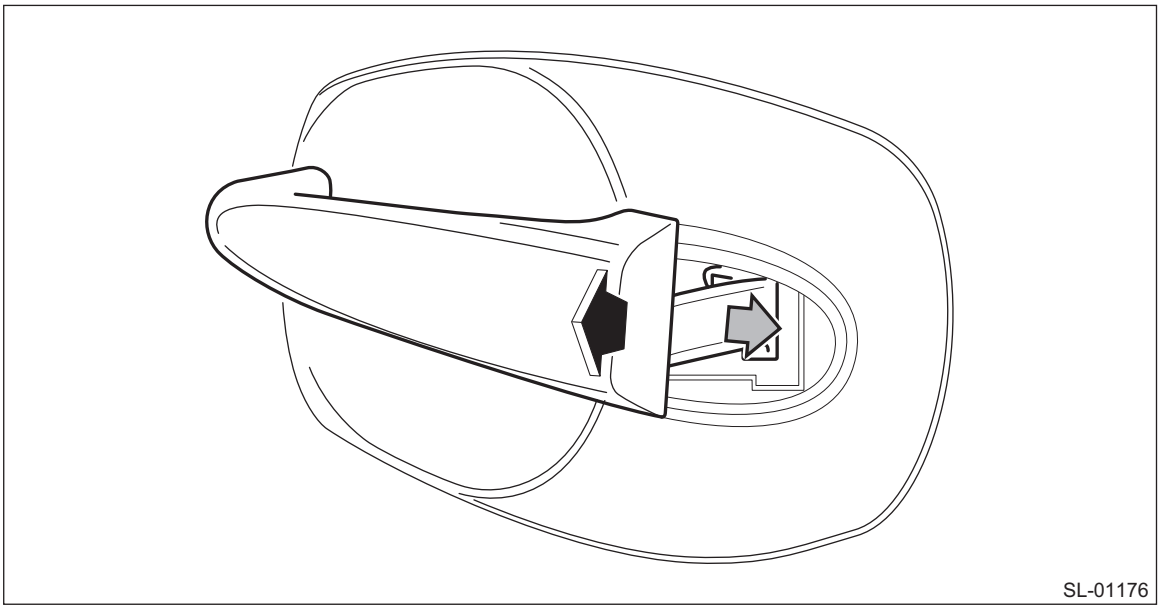


SL-03325

7) Remove the handle - door outer.

CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - front door.

(1) Pull the handle - door outer rearward to release engagement of the frame assembly - front door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.

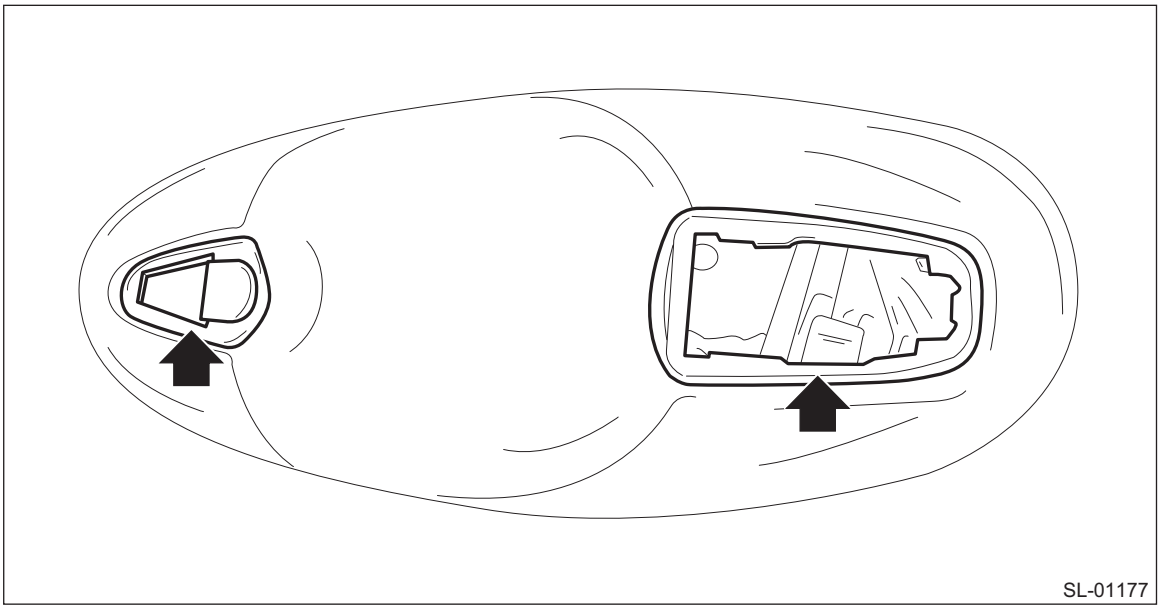


SL-01176

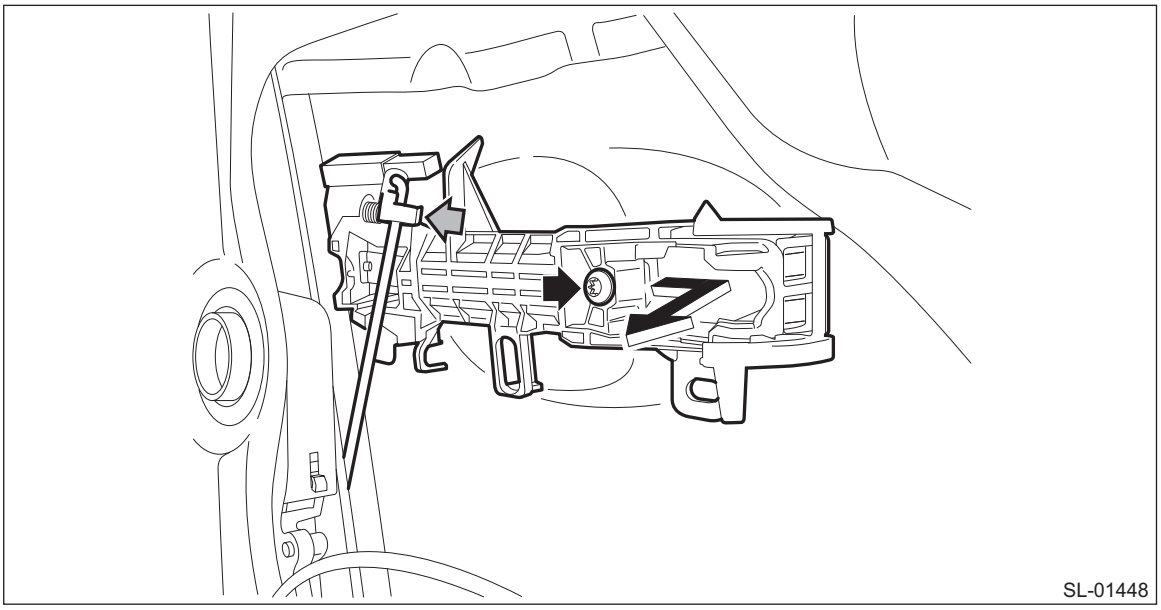
8) Remove the frame assembly - front door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.



(2) Remove the rod clamp and remove the rod.
(3) Loosen the TORX® bolt and remove the frame assembly - front door outer.



B: INSTALLATION

1) Before installation, check the following items.
- Rod is free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install the frame assembly - front door outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the spacer - door handle outer.
4) Install the handle - door outer.

NOTE:
For model with keyless access with push button start, connect the harness clip and exterior antenna (touch sensor) connector.

(1) Insert the end of the handle - door outer to the frame assembly - front door outer.
(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - front door outer.
(3) Lock the holder of the frame assembly - front door outer.

5) Install the cover - handle front outer.

CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the rod to the frame assembly front door outer, and secure it using clamps.
7) Install the sealing cover - front door.
8) Install the trim panel - front door.
9) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

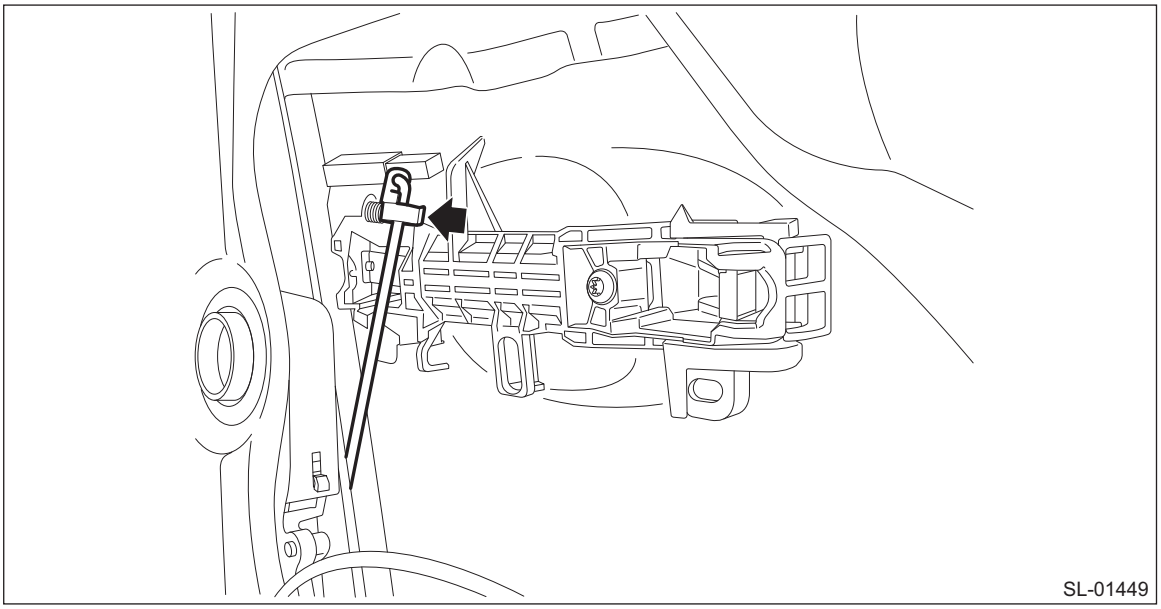
1) Check if the outer handle operates normally. If the rod is deformed, replace the door latch & actuator assembly - front.

10.Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL

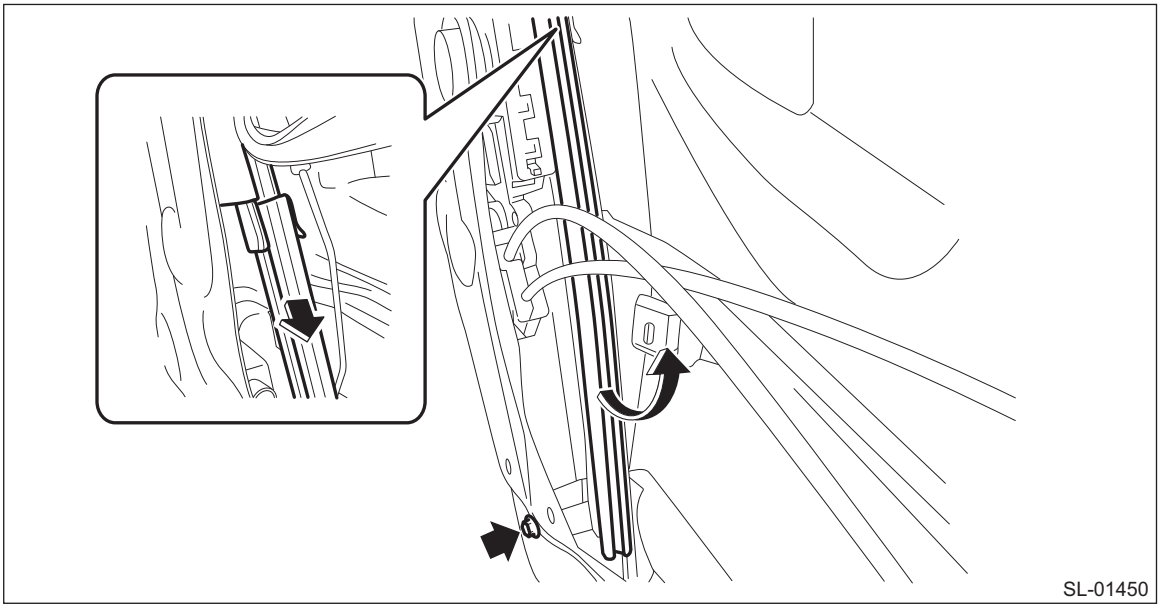
1) Raise the glass assembly - front door to the top position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the rod clamp and remove the rod.



SL-01449

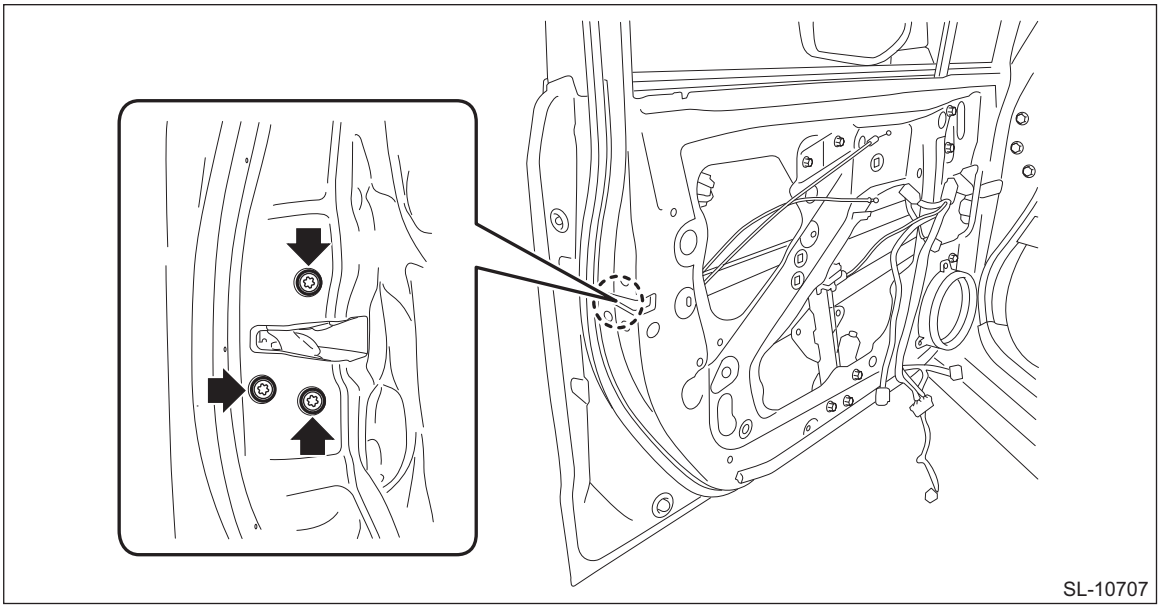
6) Remove the sash COMPL - lower.
   (1) Remove the lower side of the running channel - front door.
   (2) Remove the bolts, and remove the sash COMPL - lower.



SL-01450

7) Remove the TORX® bolt to remove the latch & actuator assembly - front.

Preparation tool:
TORX® T30



B: INSTALLATION

1) Before installation, check the following items.
- Cable and rod are free from deformation.
- Grease is applied sufficiently to rod joints.

If grease is insufficient, add it as necessary before assembling the rod.
- If the rod is deformed, replace the latch & actuator assembly - front.

2) Install the latch and actuator assembly - front.

CAUTION:
Do not reuse the TORX® bolt. Always replace with a new part.

Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

3) Install the rod to the frame assembly - front door outer, and secure it using clamps.
4) Install the sash COMPL - lower.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the sealing cover - front door.
6) Install the trim panel - front door.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

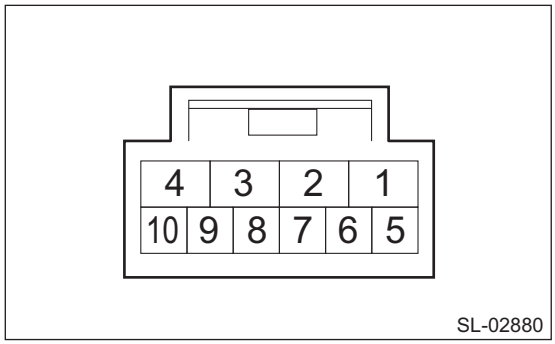
C: INSPECTION

1. LATCH

Check if the latch operates normally.
If the cable or rod is faulty, replace the latch & actuator assembly - front.

2. LOCK ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK

2) Check position switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

Terminal No.	Inspection conditions	Standard
8 — 7	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

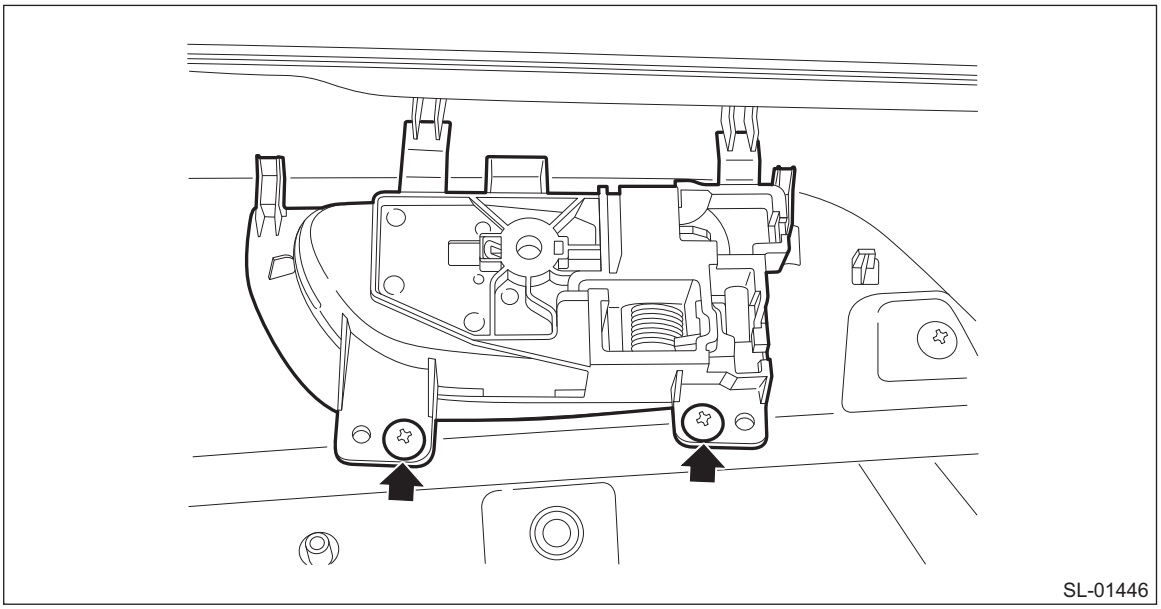
3) Replace the latch & actuator assembly - front if it is found defective.

11.Rear Inner Remote

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the screw, and remove the remote assembly - door.



B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
- If the lever is faulty, replace the rear inner remote handle.

2) Install the remote assembly - door.
3) Install the trim panel - rear door.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Check if the remote handle operates normally.
- If the lever is faulty, replace the remote handle.
- If the cable is deformed, replace the latch & actuator assembly - rear.

12.Rear Outer Handle

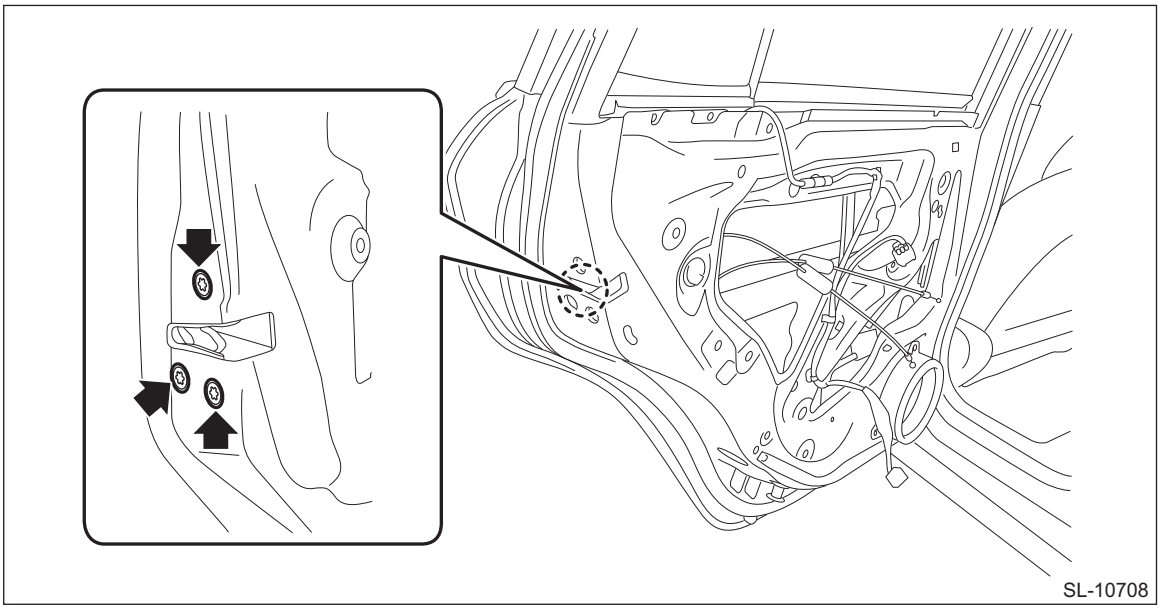
A: REMOVAL

1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

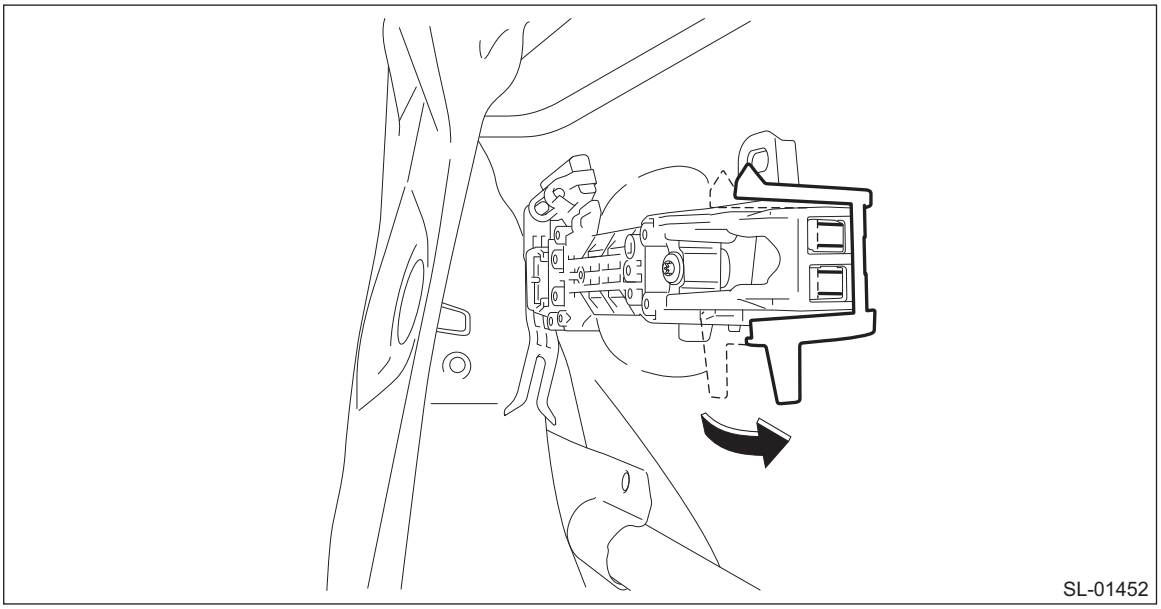
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

3) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-37, REMOVAL, Rear Sealing Cover.>
5) Remove the TORX® bolt and move downward the latch & actuator assembly - rear.

Preparation tool:
TORX® T30



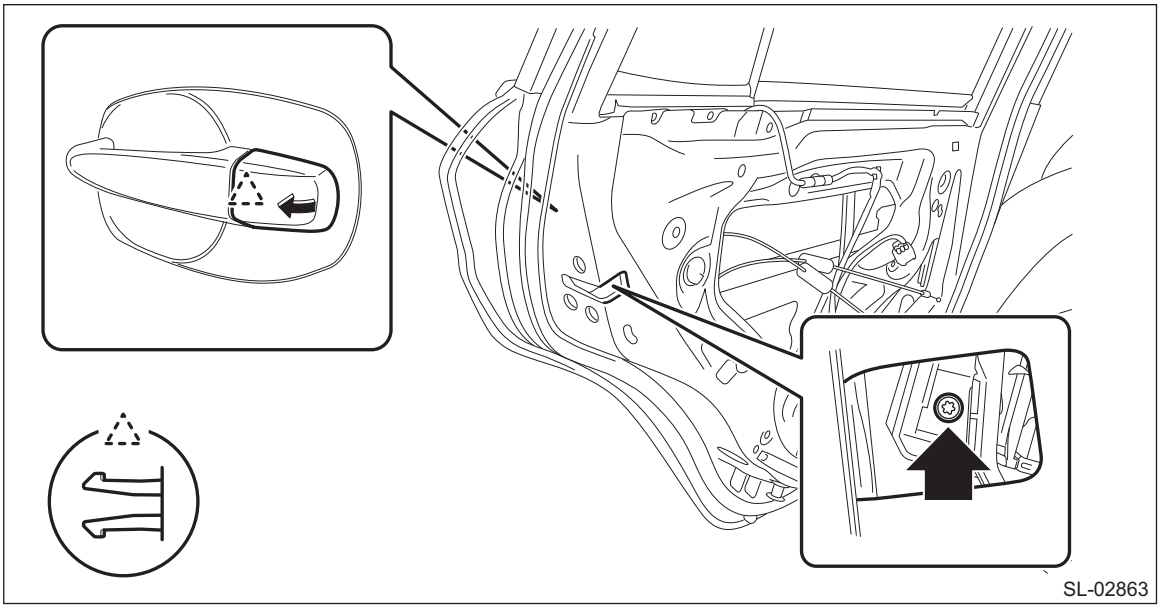
6) Remove the holder of the frame assembly - rear door outer.



7) Remove the cover - handle rear outer.

Preparation tool:
TORX® T30

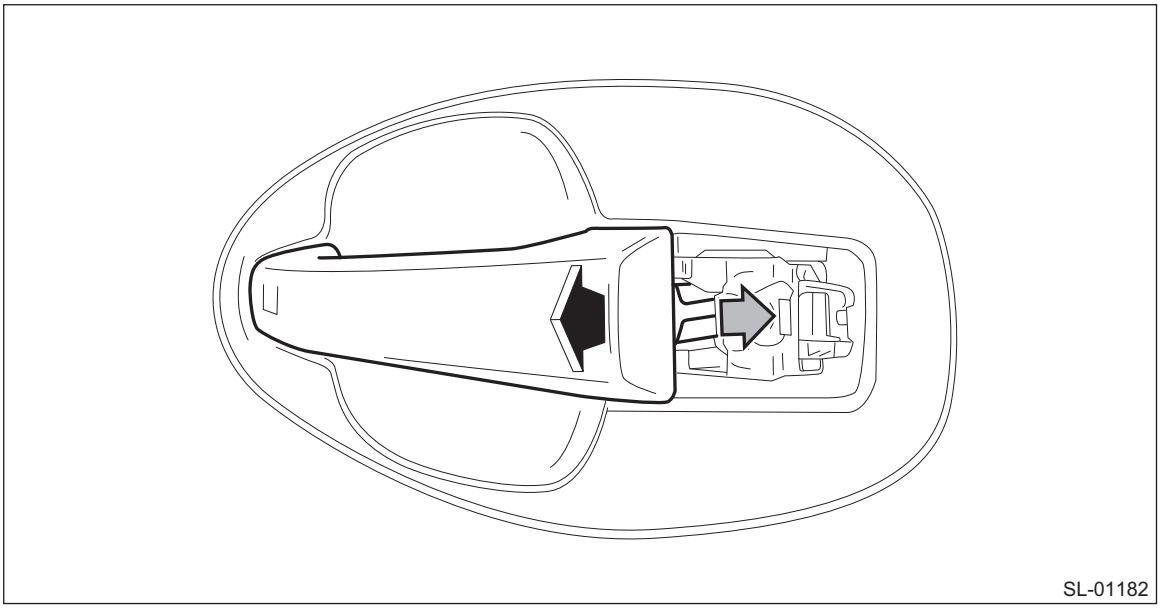
(1) Loosen the TORX® bolt.
(2) Release the claws, and then remove the cover - handle rear outer.



8) Remove the handle - door outer.

CAUTION:
Do not apply excessive force to remove the handle - door outer from the frame assembly - rear door.

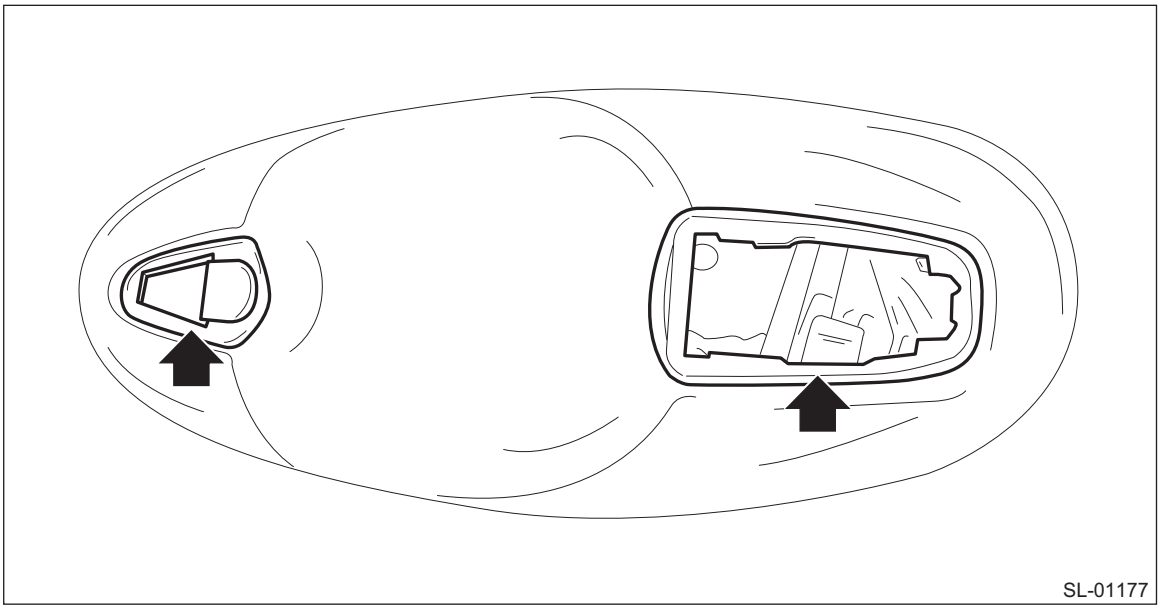
(1) Pull the handle - door outer rearward to release engagement of the frame assembly - rear door outer.
(2) Pull the handle - door outer towards yourself to remove the handle - door outer.



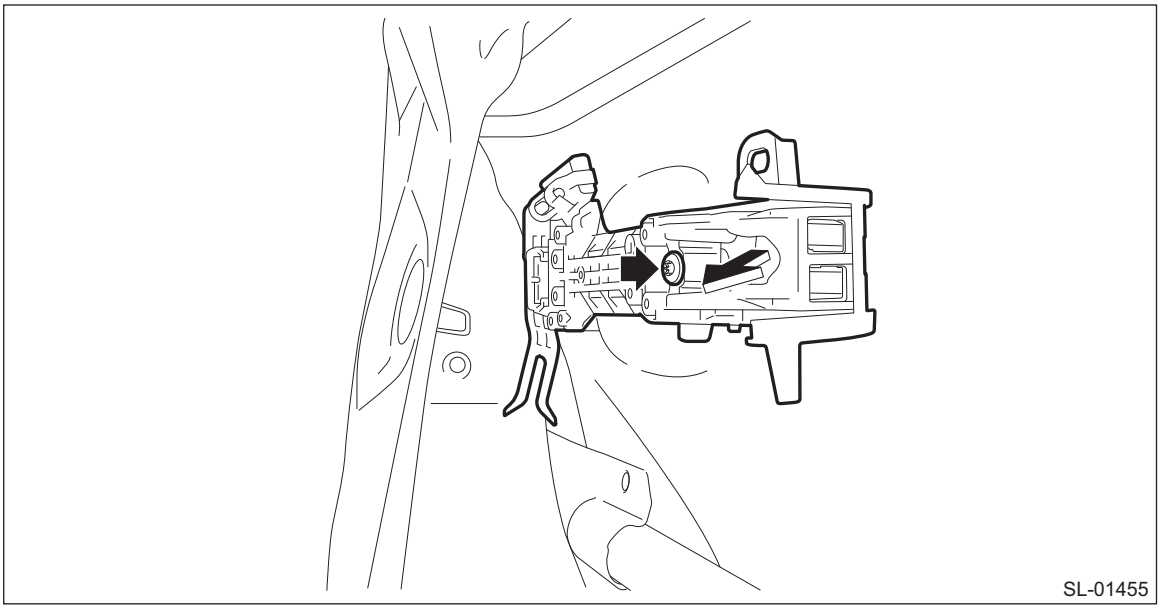
9) Remove the frame assembly - rear door outer.

Preparation tool:
TORX® T30

(1) Remove the spacer - door handle outer.



(2) Loosen the TORX® bolt and remove the frame assembly - rear door outer.



B: INSTALLATION

1) Before installation, check the following items.
- Lever is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
- If the lever is faulty, replace the frame assembly - rear door outer.

2) Install the frame assembly - rear door outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the spacer - door handle outer.
4) Install the handle - door outer.
(1) Insert the end of the handle - door outer to the frame assembly - rear door outer.

(2) Push forward while inserting the rear end of the handle - door outer to the frame assembly - rear door outer.
(3) Lock the holder of the frame assembly - rear door outer.

5) Install the cover - handle rear outer.

Preparation tool:
TORX® T30

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the latch and actuator assembly - rear.

CAUTION:
- **Do not reuse the TORX® bolt. Always replace with a new part.**
- **Hook the lever to the latch shaft.**

Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)

7) Install the sealing cover - rear door.
8) Install the trim panel - rear door.
9) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Check if the outer handle operates normally.
If the lever is faulty, replace the frame assembly - rear door outer.

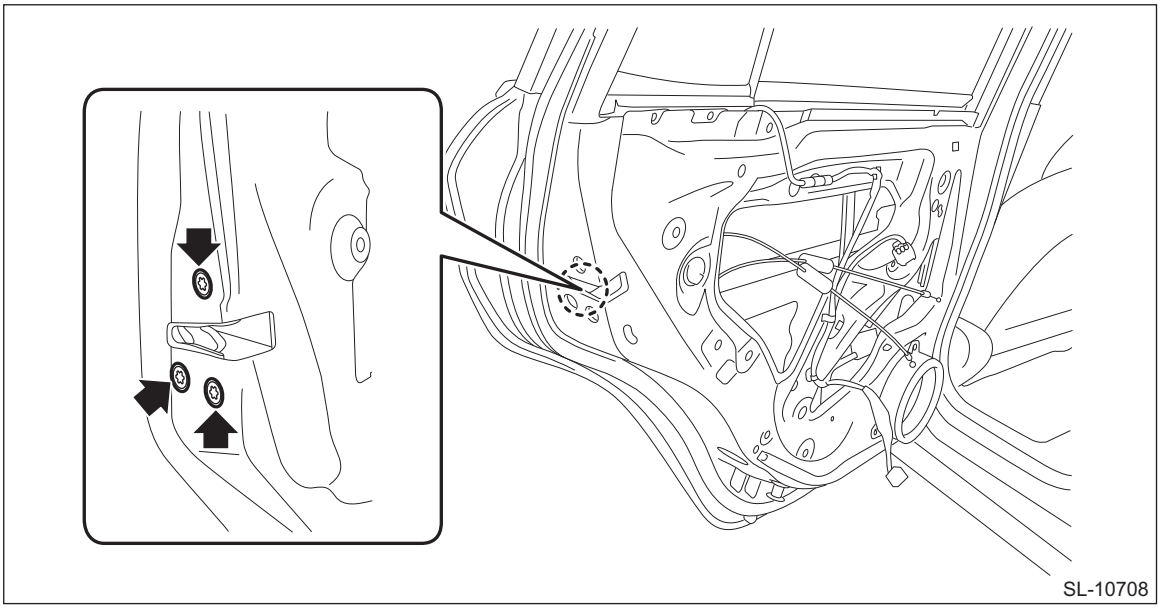
13.Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL

1) Raise the glass assembly - rear door to the top position.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
4) Remove the sealing cover - rear door. <Ref. to EB-37, REMOVAL, Rear Sealing Cover.>
5) Remove the glass assembly - rear door. <Ref. to GW-34, REMOVAL, Rear Door Glass.>
6) Remove the TORX® bolt to remove the latch & actuator assembly - rear.

Preparation tool:
TORX® T30



B: INSTALLATION

NOTE:
Make sure the child safety lock works correctly after installation.
1) Before installation, check the following items.
- Cable is free from deformation.
- Grease is applied sufficiently to lever joints.

If grease is insufficient, add it as necessary before assembling.
- If the lever is deformed, replace the frame assembly - rear door outer.

2) Install the latch and actuator assembly - rear.

CAUTION:
- **Do not reuse the TORX® bolt. Always replace with a new part.**
- **Hook the lever to the latch shaft.**

Preparation tool:
TORX® T30

Tightening torque:
6.5 N·m (0.7 kgf-m, 5.2 ft-lb)
3) Install the glass assembly - rear door. <Ref. to GW-35, INSTALLATION, Rear Door Glass.>
4) Install the sealing cover - rear door.
5) Install the trim panel - rear door.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

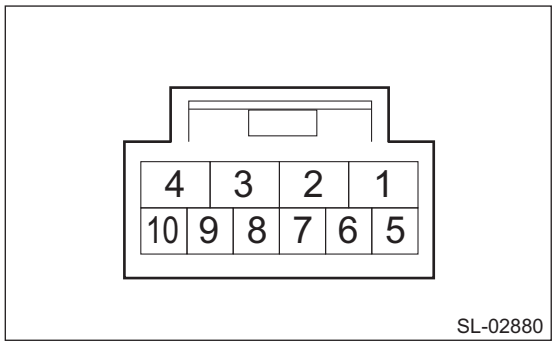
C: INSPECTION

1. LATCH

Check if the latch operates normally.
If the cable is faulty, replace the latch & actuator assembly - rear.

2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	LOCK
1 (+) — 4 (–)		UNLOCK

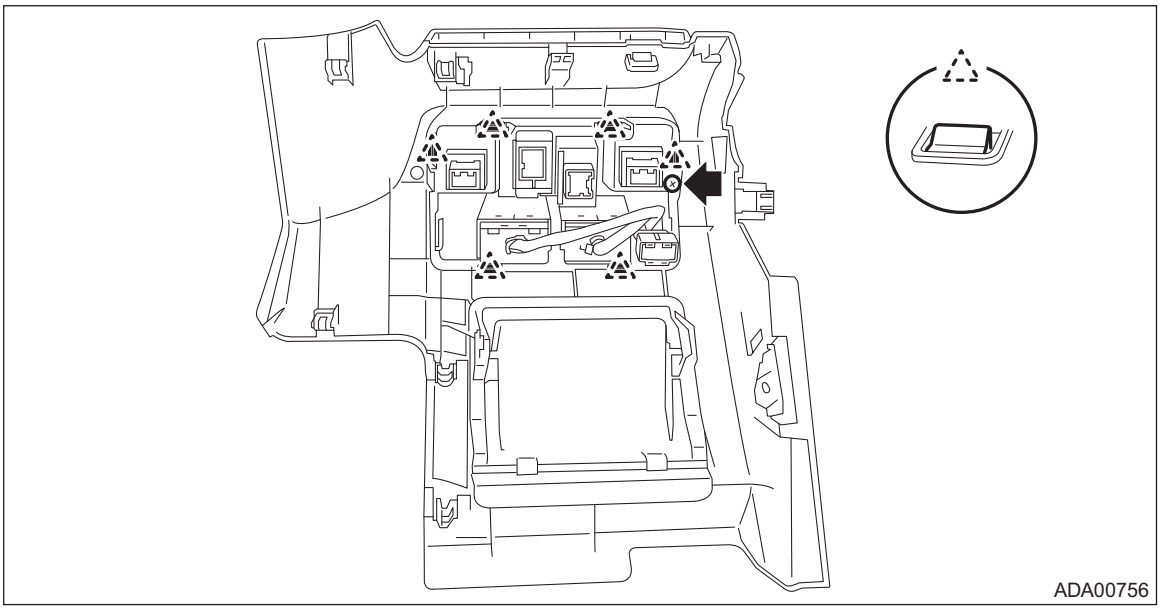
2) If it does not operate properly as a result of inspection, replace the latch & actuator assembly - rear.

14.Trunk Opener Switch

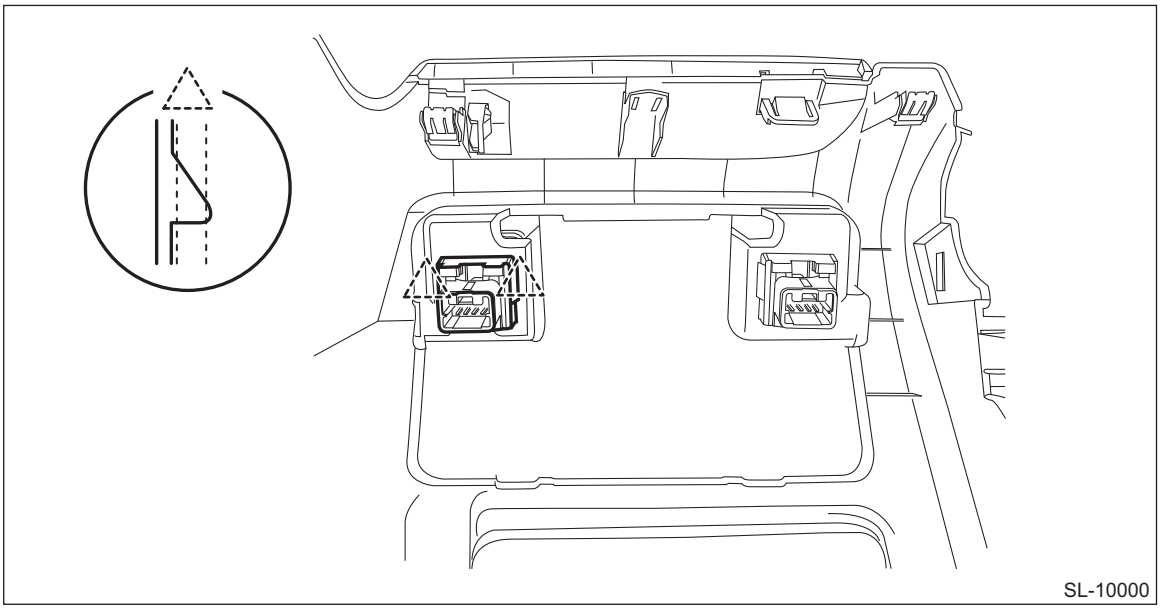
A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the trunk opener switch.
(1) Remove the screw, release the claws, and then remove the panel - switch.



(2) Release the claws and remove the trunk opener button.



B: INSTALLATION

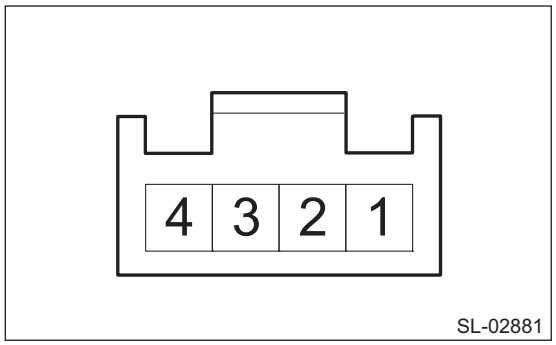
1) Install the trunk opener button.
2) Install the panel - switch.
3) Install the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-66, INSTALLATION, Instrument Panel Lower Cover.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
4 (+) — 1 (–)	Apply battery voltage.	Light ON

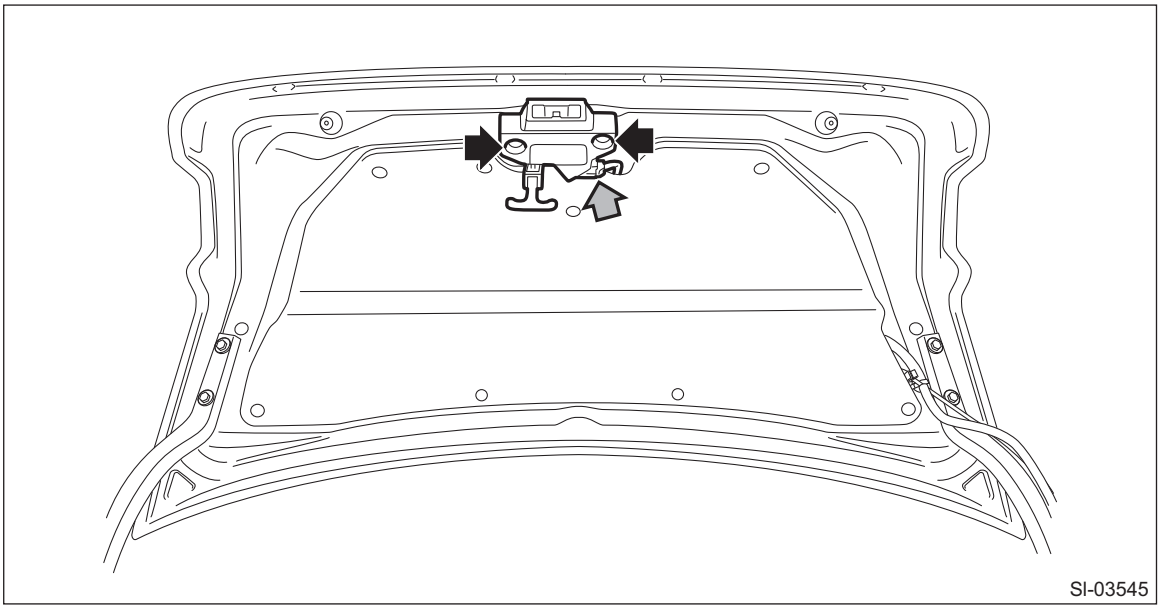
3) Replace the trunk opener button if it is found defective.

15.Trunk Lid Latch and Actuator Assembly

A: REMOVAL

1) Open the trunk lid COMPL.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the lock assembly - trunk lid.
   (1) Disconnect the connector.
   (2) Remove the bolts, then remove the lock assembly - trunk lid.



B: INSTALLATION

1) Install the lock assembly - trunk lid.
   (1) Install the lock assembly - trunk lid with bolts.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
   (2) Install the connector.
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

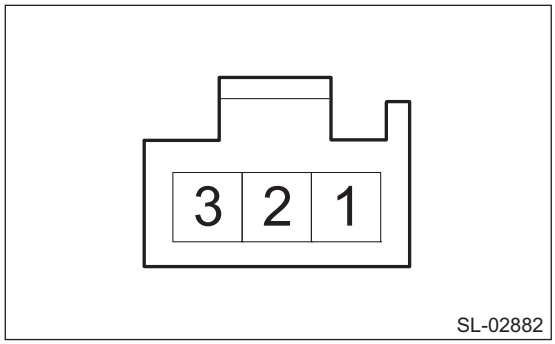
C: INSPECTION

1. LATCH

Check if the latch operates normally.
If latch deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - trunk lid.

2. ACTUATOR

1) Check door lock operation
Check the door lock operation when battery voltage is applied between the connector terminals.



Terminal No.	Inspection conditions	Specification
1 (+) — 2 (–)	Connect battery to the terminals	LOCK → UNLOCK

2) Check switch
Measure the resistance between connector terminals.

Preparation tool:
Circuit tester

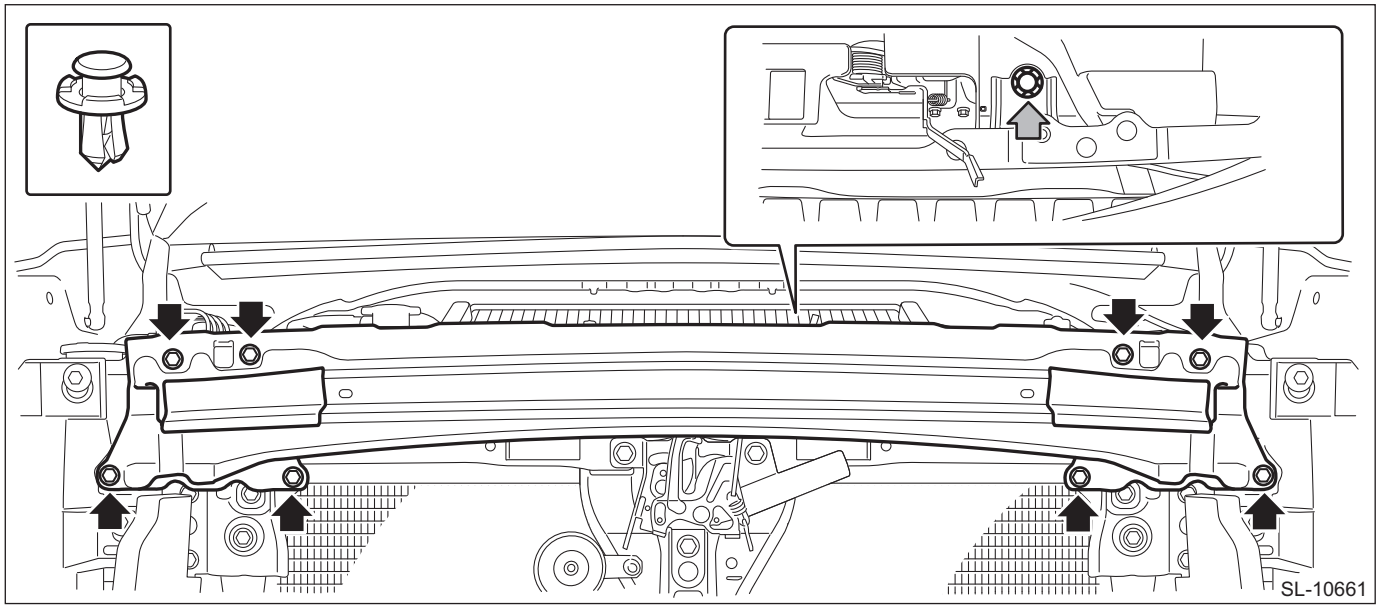
Terminal No.	Inspection conditions	Standard
2 — 3	LOCK	1 MΩ or more
	UNLOCK	Less than 1 Ω

3) Replace the lock assembly - trunk lid if faulty is found in the inspection.

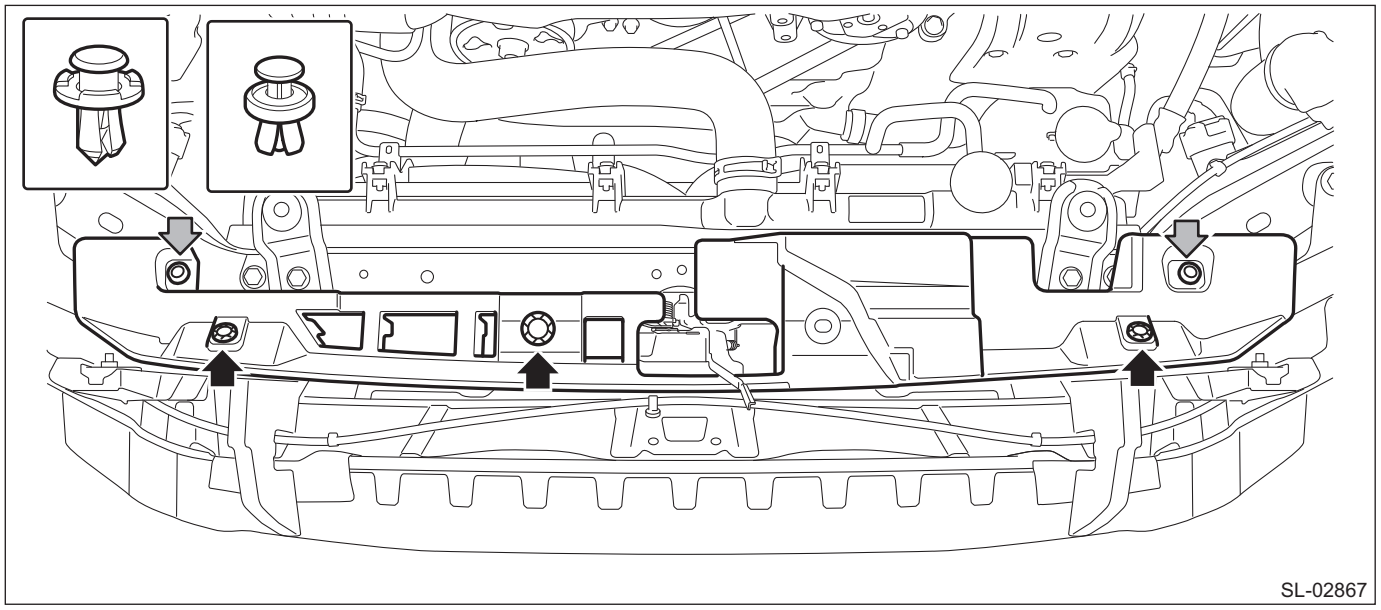
16.Front Hood Lock Assembly

A: REMOVAL

1) Open the front hood.
2) Remove the bumper face - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
3) Remove the bolts and clips, and remove the energy absorber plate - front.

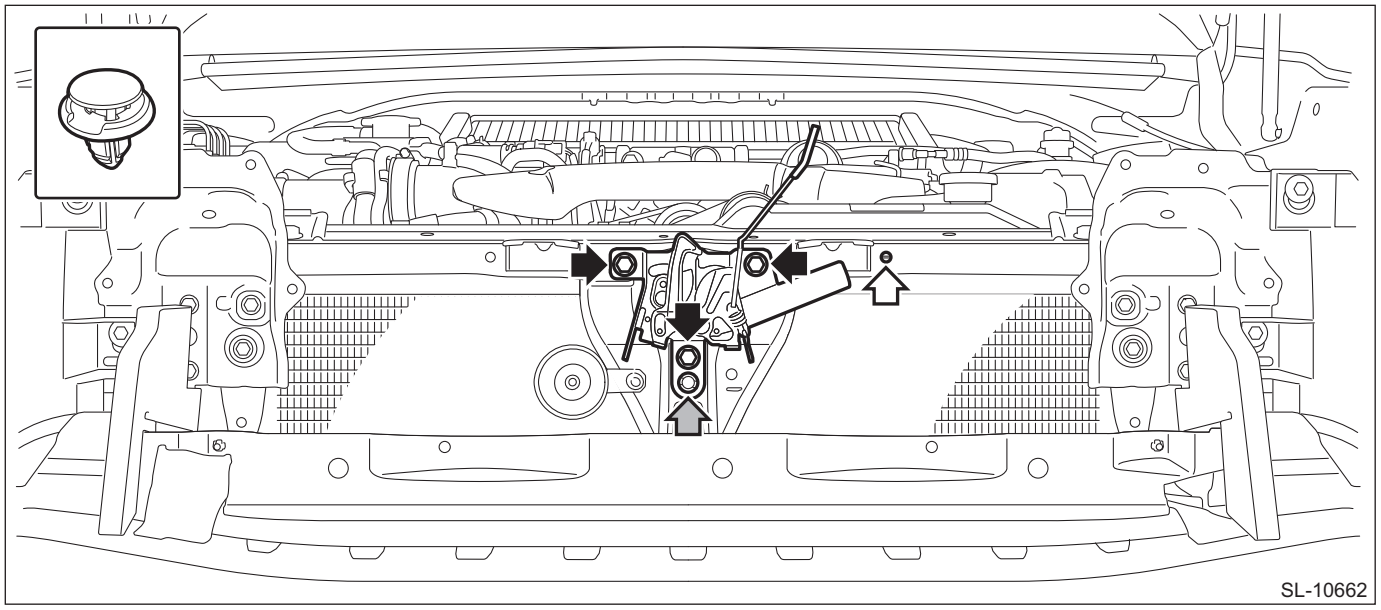


4) Remove the clips, and remove the cover UPR - front.

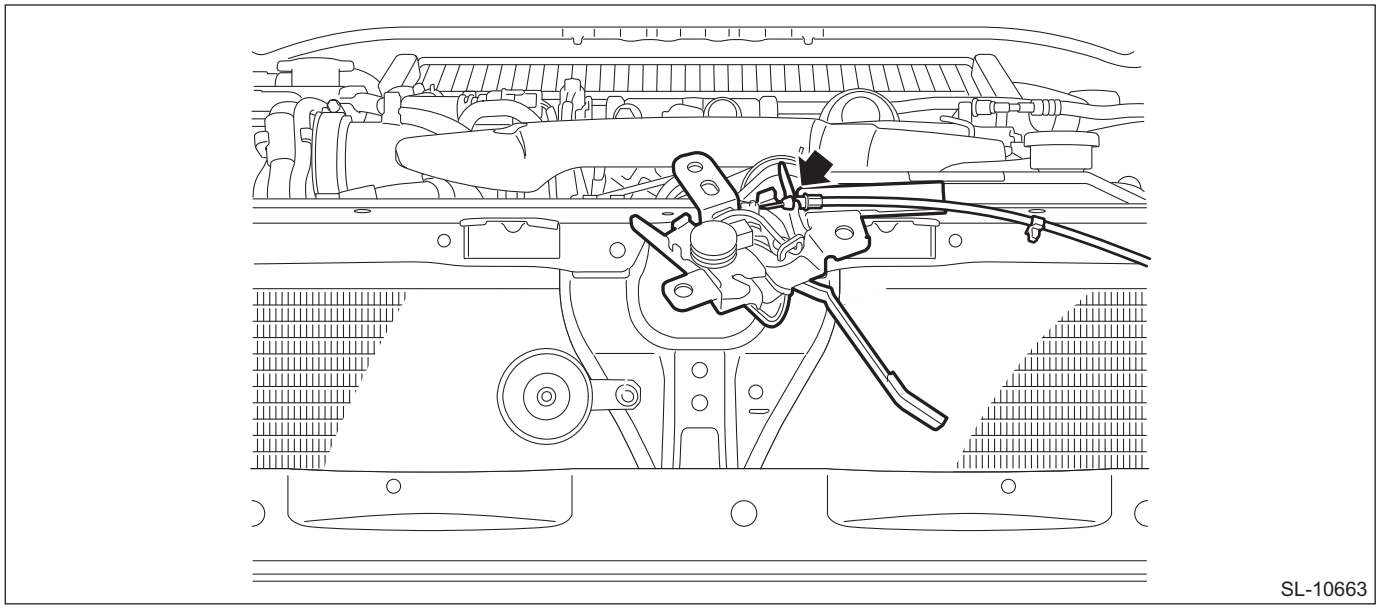


5) Remove the lock assembly - front hood.
   (1) Disconnect the connector.

(2) Remove the bolt and clip.



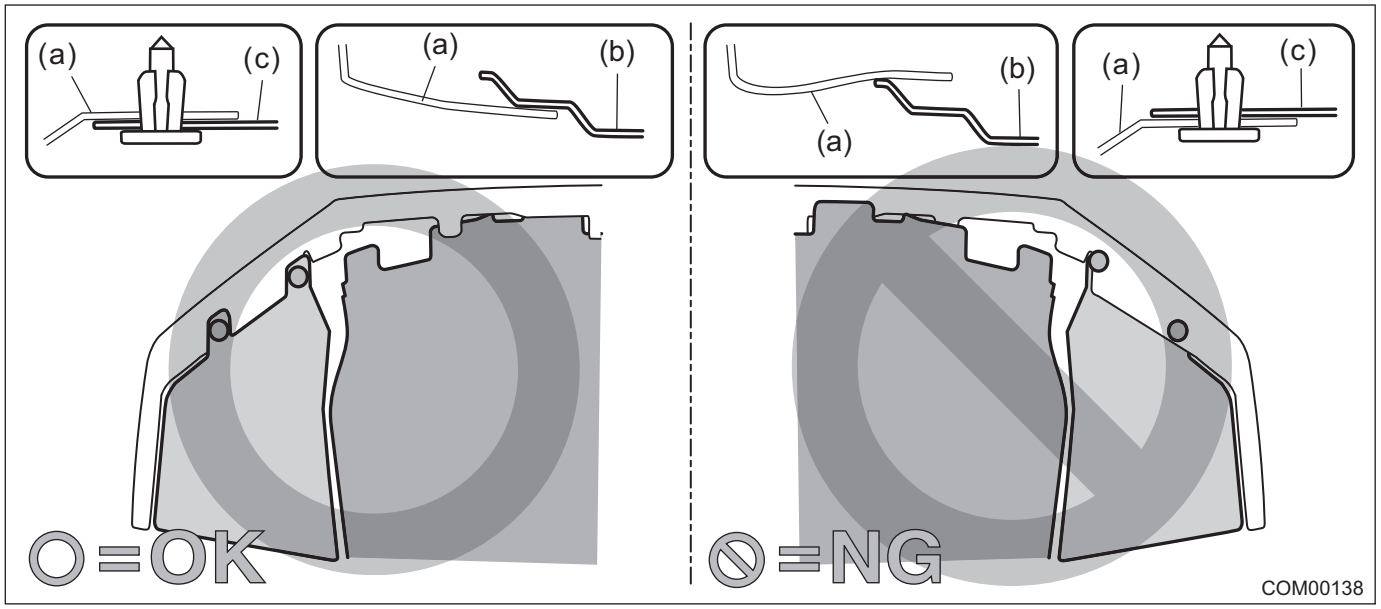
(3) Disconnect the release cable, and detach the lock assembly - front hood.



NOTE:
When disconnecting the release cable, refer to “FRONT HOOD OPENER” of “Remote Openers”. <Ref. to SL-55, FRONT HOOD OPENER, REMOVAL, Remote Openers.>

B: INSTALLATION

CAUTION:
• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Before installation, check the following items.
- Is the cable deformed?
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Adjust and install the lock assembly - front hood.

NOTE:
Refer to “ADJUSTMENT” of the lock assembly - front hood. <Ref. to SL-52, ADJUSTMENT, Front Hood Lock Assembly.>

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)
3) Install the energy absorber plate - front.

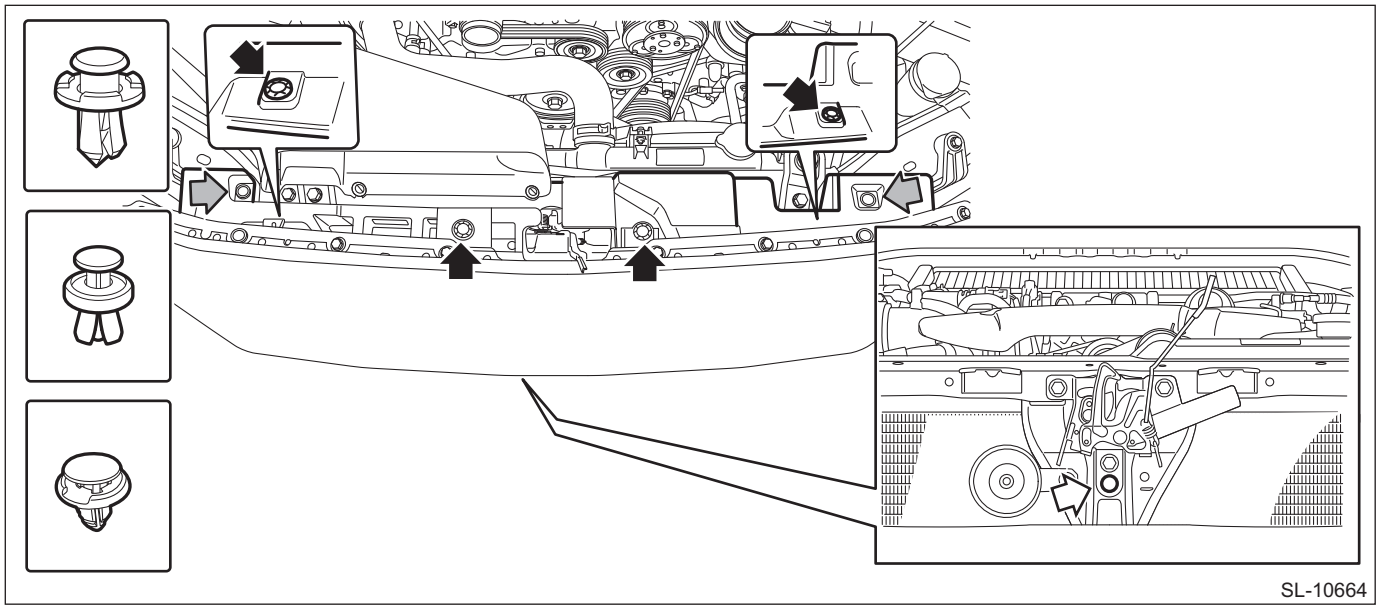
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the cover UPR - front.
5) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>

C: ADJUSTMENT

1) Remove the clips at the cover UPR - front and lock assembly - front hood.

NOTE:
After adjusting the lock assembly - front hood, dispose the clips since they are no longer needed.

The clips cannot be inserted because the clip holes become smaller due to adjustment.



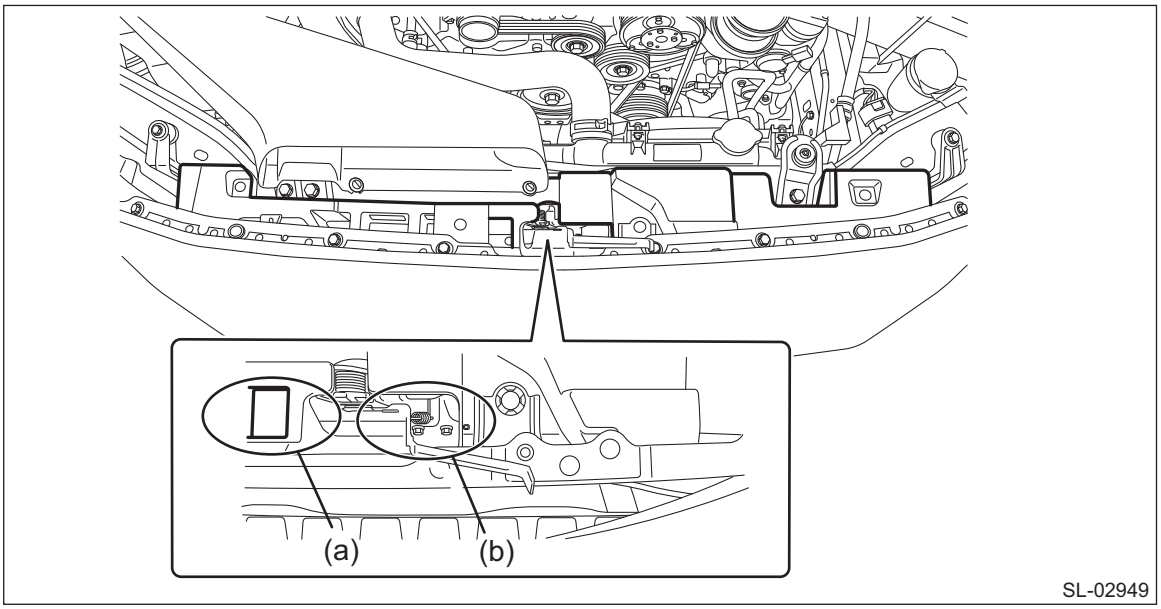
2) Using the ST, make adjustment by loosening the bolt at upper left through the opening (a) of the cover UPR - front, and loosening the bolts at upper right and lower side through the opening (b).

CAUTION:
- **For the bolt at upper left from the vehicle front view, use the ST.**
- **After adjustment, tighten the bolts securely.**

NOTE:
Adjustment range of the lock assembly - front hood becomes 0±1 mm (0±0.04 in).

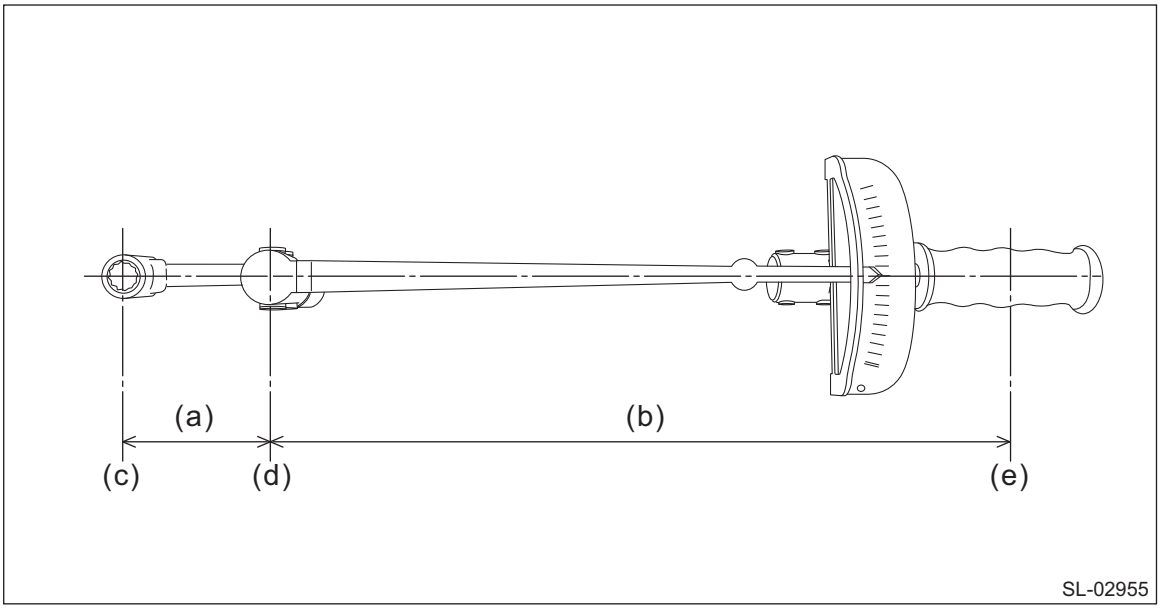
Preparation tool:
ST: WRENCH COMPL (499987400)

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)



Calculation formula
T = L/(100 mm (3.94 in) + L) × 33 N·m (3.4 kgf-m, 24.3 ft-lb)

T: Tightening torque
L: Effective length of torque wrench
NOTE:
If the effective length of the torque wrench used is unknown, consult the manufacturer of the torque wrench.



(a) Effective length of the ST
(b) Effective length of the torque wrench
(c) Center of drive angle of the ST
(d) Center of drive angle of the torque wrench
(e) Center of the position where a force is applied by hand

D: INSPECTION

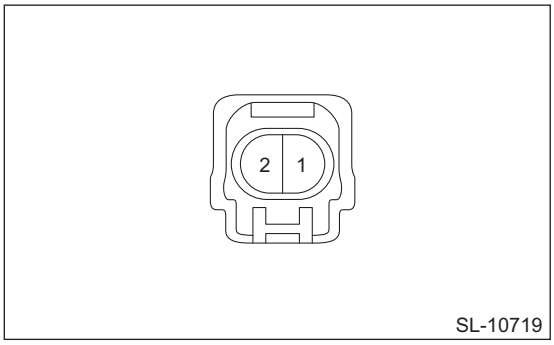
1. CHECK OPERATION

Check if the lock assembly operates normally.
If lever deformation, abnormal wear, or unsmooth lock operation is observed, replace the lock assembly - front hood.

2. CHECK HOOD SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
1 — 2	Close the front hood.	1 MΩ or more
	Open the front hood.	Less than 1 Ω

2) Replace the lock assembly - front hood if the inspection result is not within the standard value.

17.Remote Openers

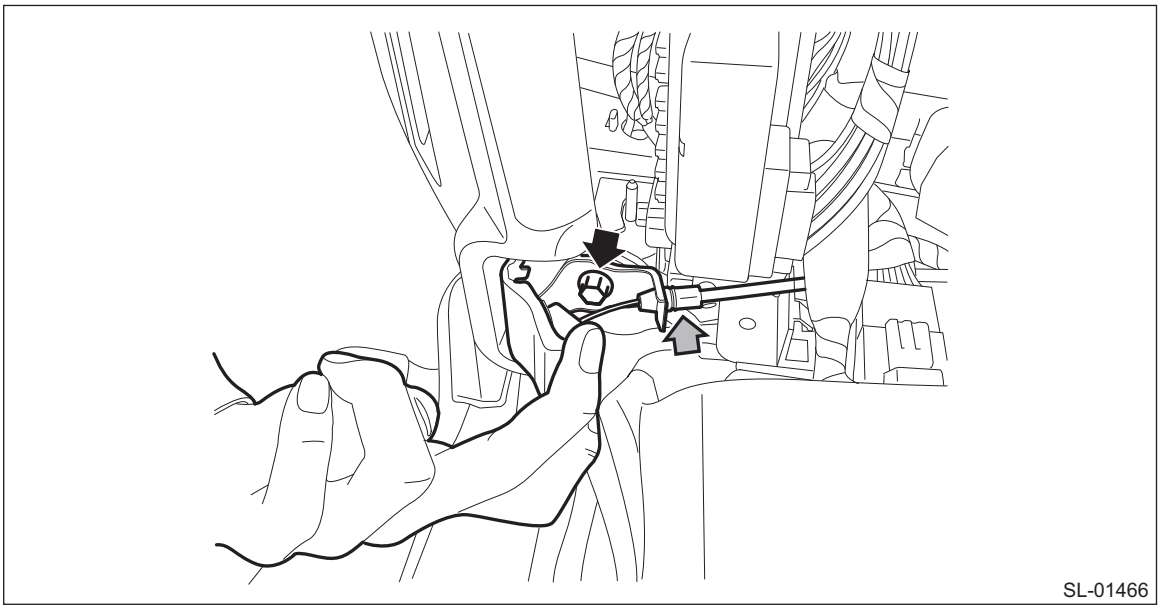
A: REMOVAL

1. FRONT HOOD OPENER

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the cover side sill - front. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
4) Remove the opener handle.
   (1) Remove the cable - front hood.
   (2) Remove the bolt, and remove the opener handle.



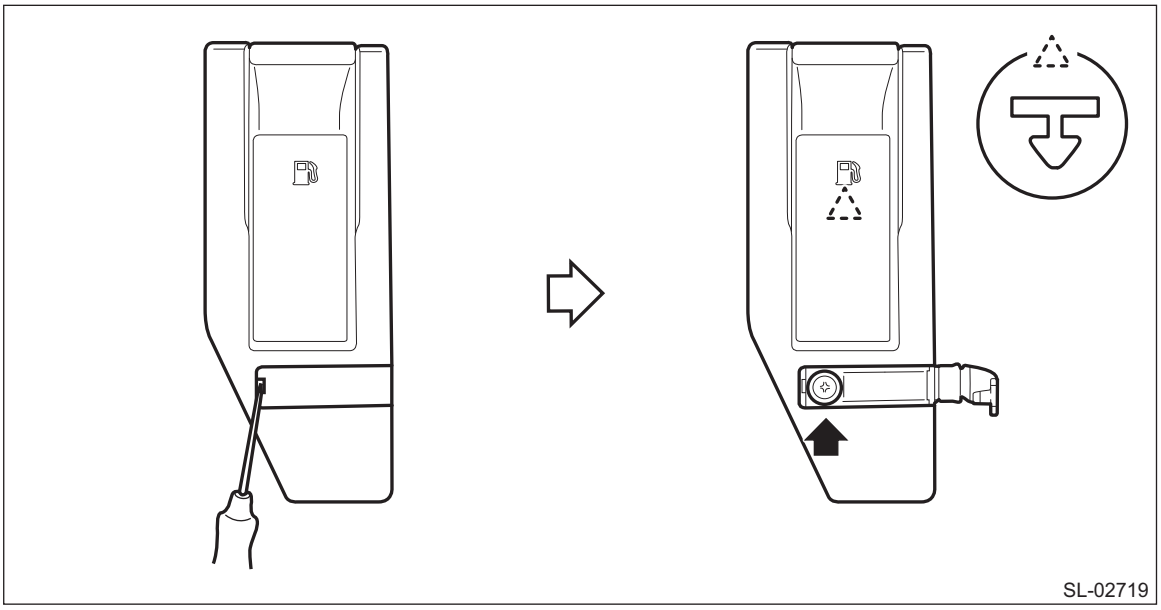
5) Remove the mud guard - front LH. <Ref. to EI-24, REMOVAL, Mud Guard.>
6) Remove the lock assembly - front hood. <Ref. to SL-50, REMOVAL, Front Hood Lock Assembly.>
7) Attach a string to the end of cable - front hood, and remove the cable clip and cable - front hood.

NOTE:
- Leave the string attached to the body, and use it during installation.
- A string makes operation easier during installation.

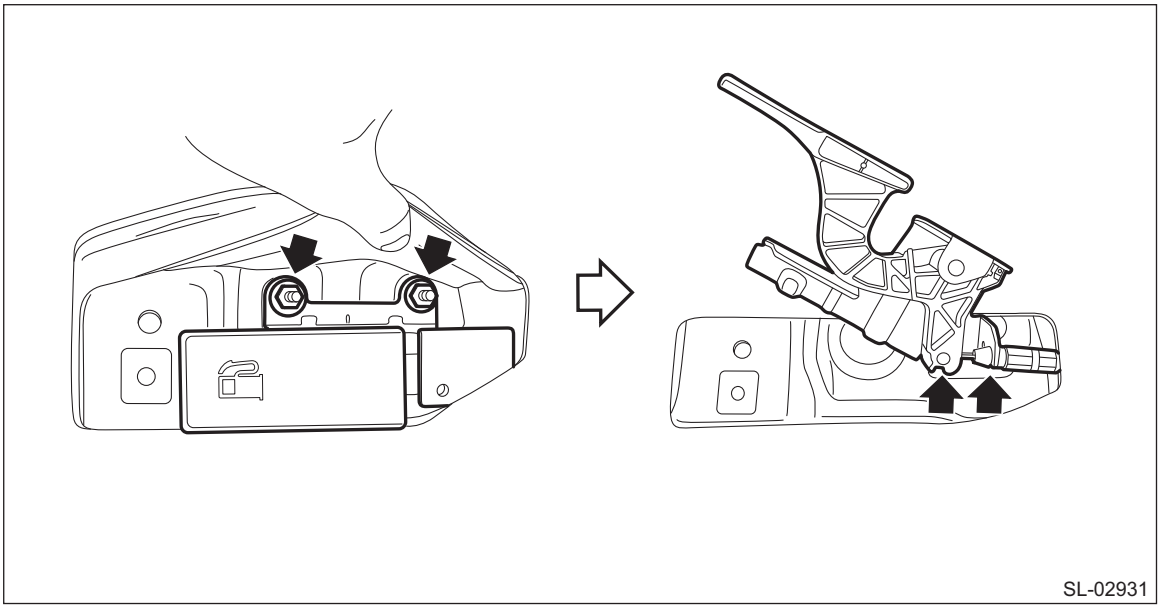
2. FUEL FLAP OPENER

1) Remove the lower inner trim. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
2) Remove the cover - handle.
   (1) Open the cover by using a flat tip screwdriver.

(2) Remove the screws and detach the cover - handle.

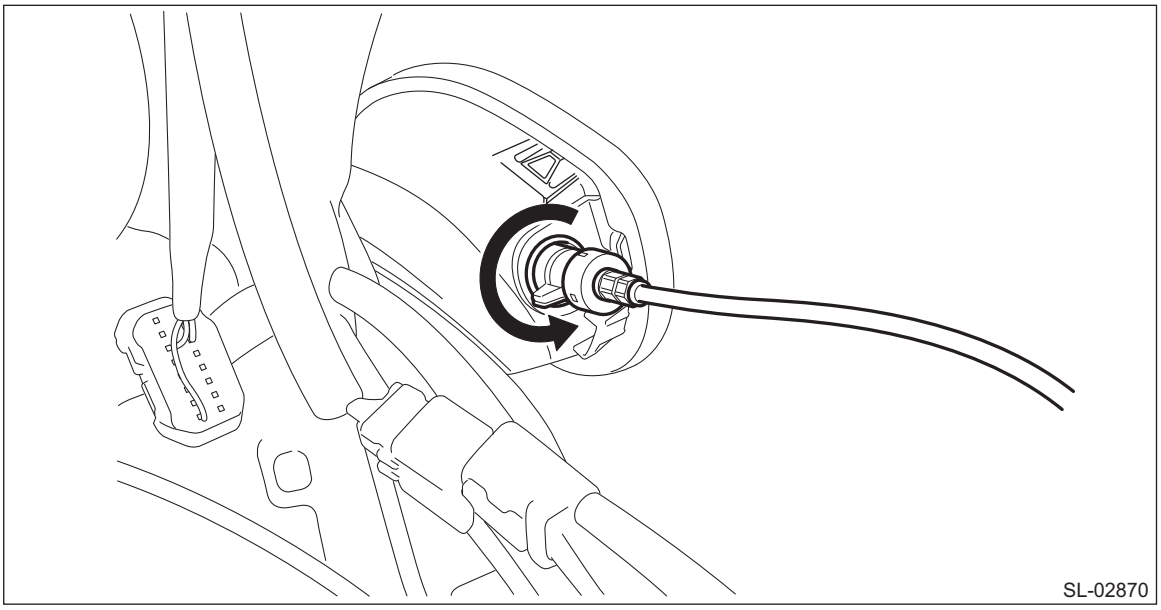


3) Remove the pull handle - opener.
(1) Remove the nut.
(2) Remove the cable from pull handle - opener.

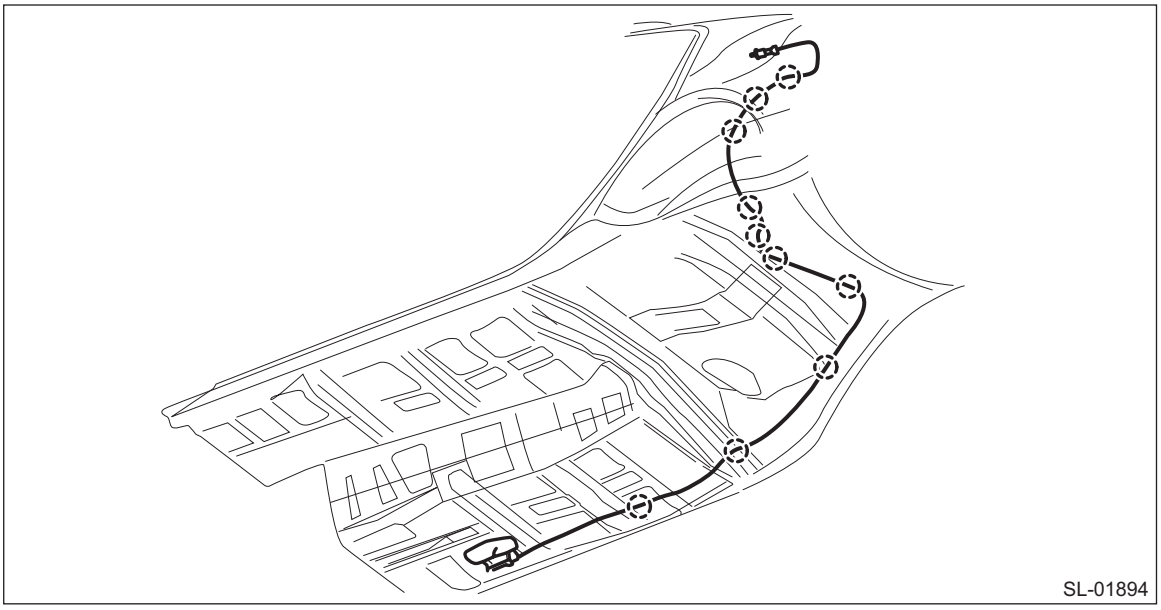


4) Remove the trim panel - trunk side RH. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
5) Remove the cable assembly - fuel inside the quarter panel.

(1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.



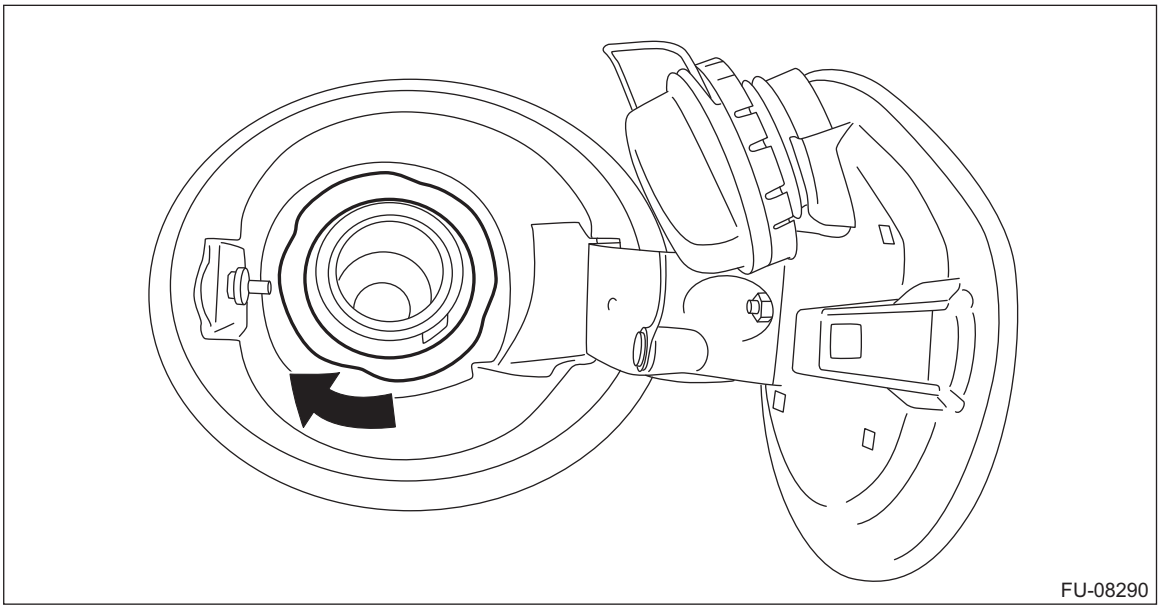
6) Remove the cable clip, and remove the cable.



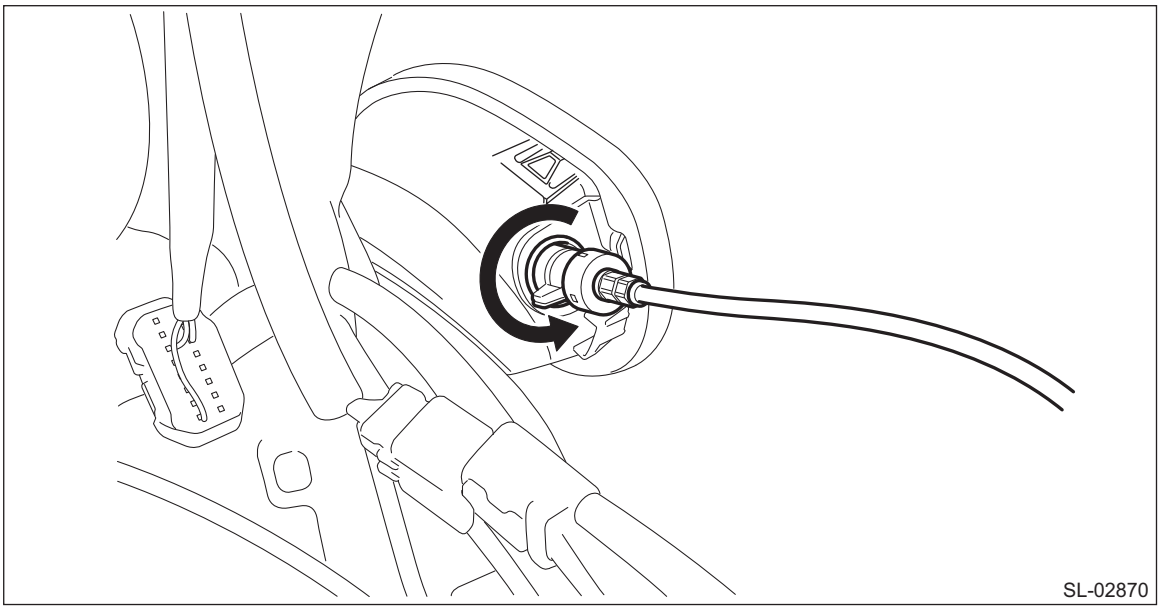
3. FUEL FLAP

1) Open the fuel flap and remove the fuel filler cap.

2) Turn the fuel filler pipe protector in the direction of the arrow to unlock and remove it.

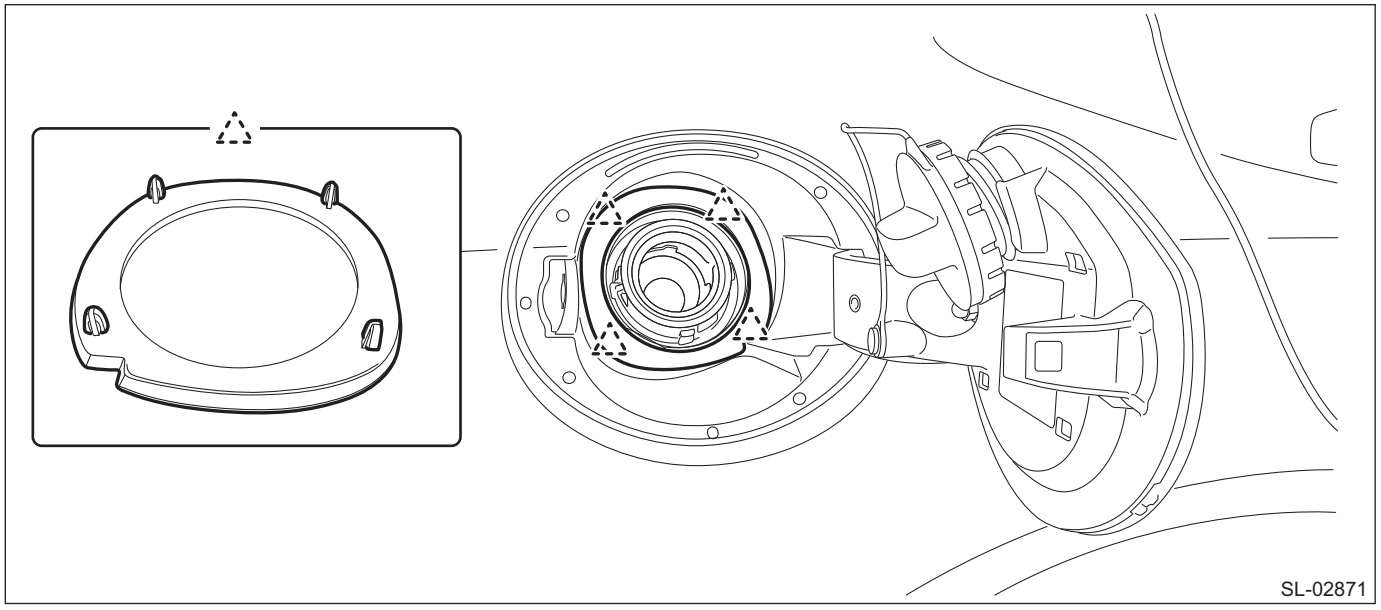


3) Remove the trim panel - trunk side RH. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
4) Remove the cable assembly - fuel inside the quarter panel.
   (1) Turn the cable assembly - fuel counterclockwise and pull toward vehicle rear.



5) Disconnect the ring clips.

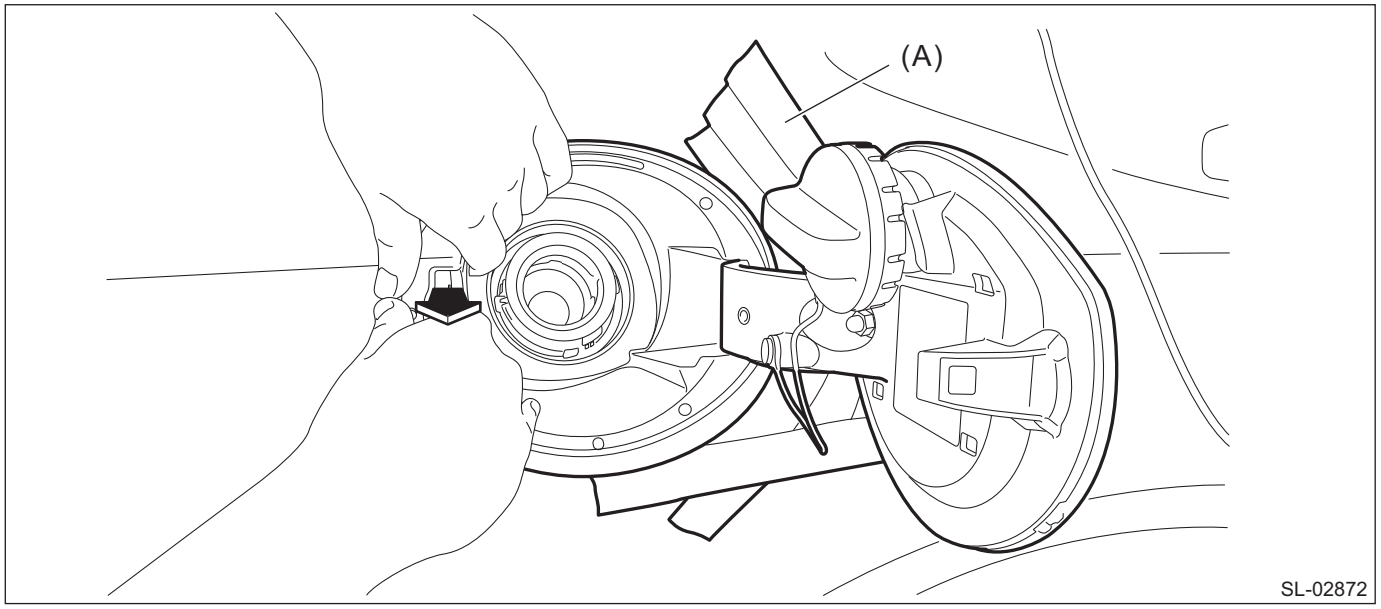
CAUTION:
Always replace with a new part, because engagement of the claw weakens.



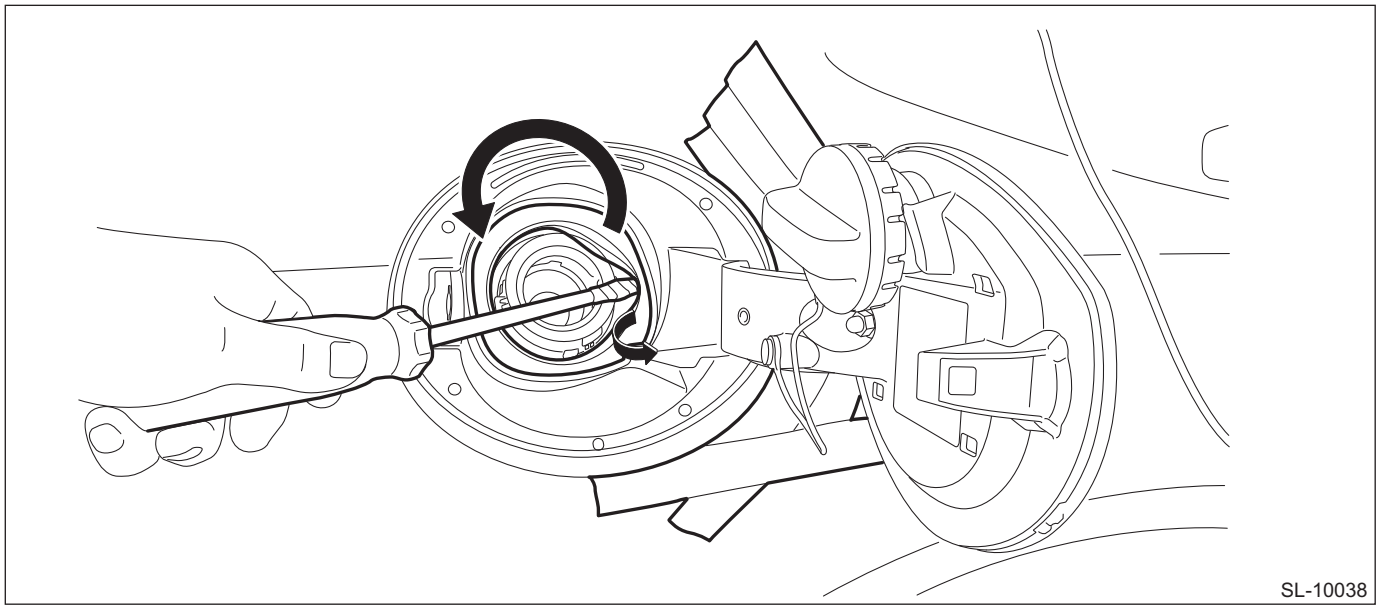
6) Remove the saucer - COMPL.

CAUTION:
Be careful not to damage by forcibly prying at the rubber portion with a flat tip screwdriver or similar tool.

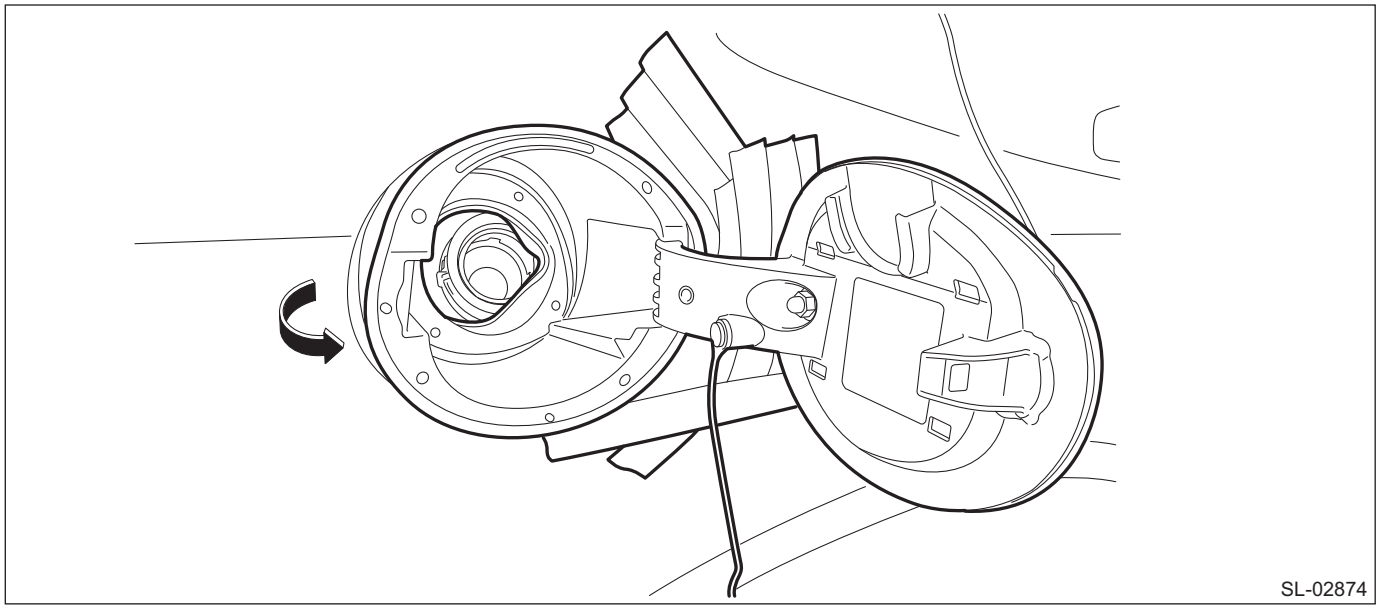
(1) Attach the protective tape (A) to the panel side outer.
(2) Hold the position shown in the figure with your hands, release the claw and pull out toward yourself.



(3) While pulling out toward yourself, remove the rubber portion from the fuel filler pipe using a flat tip screwdriver or similar tool wrapped with a protection tape.

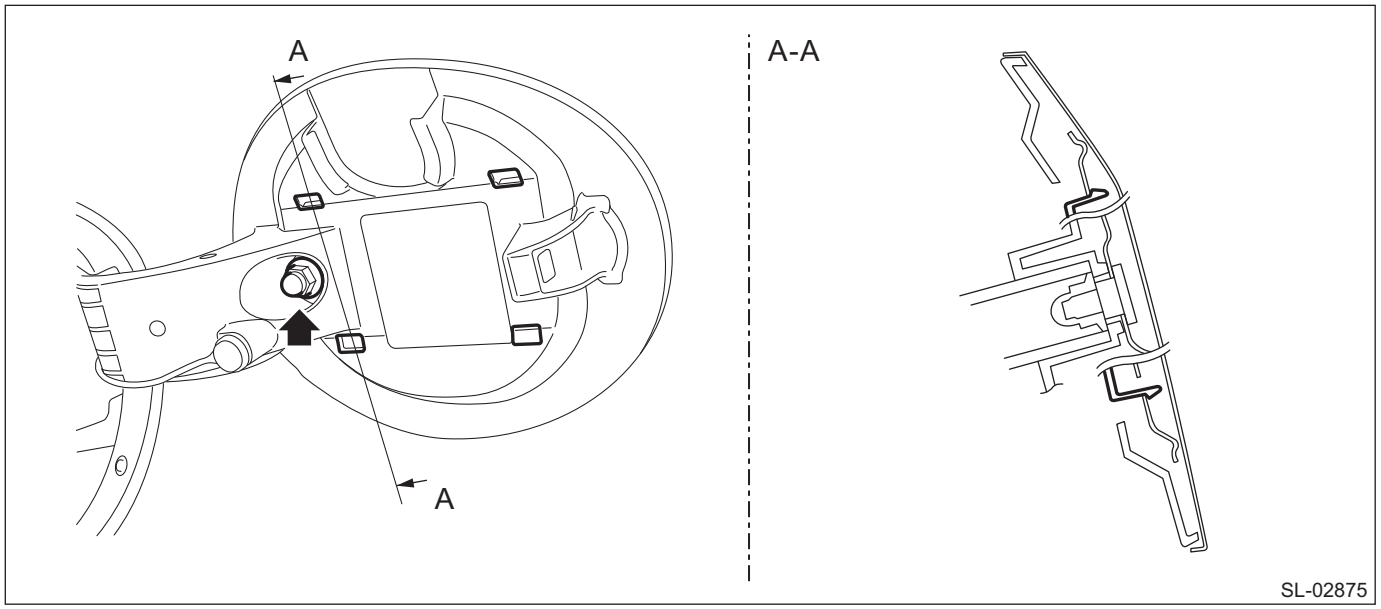


(4) Pull out while tilting toward the front of vehicle.



7) Remove the flap - COMPL fuel from the saucer - COMPL.

(1) Remove the nut and release the claws using a flat tip screwdriver or similar tool wrapped with a protection tape.



B: INSTALLATION

1. FRONT HOOD OPENER

1) Before installation, check the following items.
- Cable is free from deformation such as fray.

2) Pull the string attached to the body into the vehicle, and install the cable clip and cable - front hood.
3) Install the lock assembly - front hood. <Ref. to SL-52, INSTALLATION, Front Hood Lock Assembly.>
4) Install the opener handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

5) Install the cover side sill - front.
6) Install the cover assembly - instrument panel LWR driver OUT.
7) Install the mud guard - front LH.
8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. FUEL FLAP OPENER

1) Install the cable assembly - fuel.
2) Install the pull handle - opener and cover - handle.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the trim panel - trunk side RH.
4) Install the lower inner trim.

3. FUEL FLAP

1) Install the flap - COMPL fuel to the saucer - COMPL.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the saucer - COMPL.

NOTE:
Securely install the rubber portion of the saucer - COMPL to the fuel filler pipe assembly.
3) Attach the ring clips.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.

4) Install the fuel filler pipe protector.
5) Install the fuel filter cap.
6) Install the cable assembly - fuel.
7) Install the trim panel - trunk side RH.

C: INSPECTION

Check if the front hood and fuel flap operate normally.

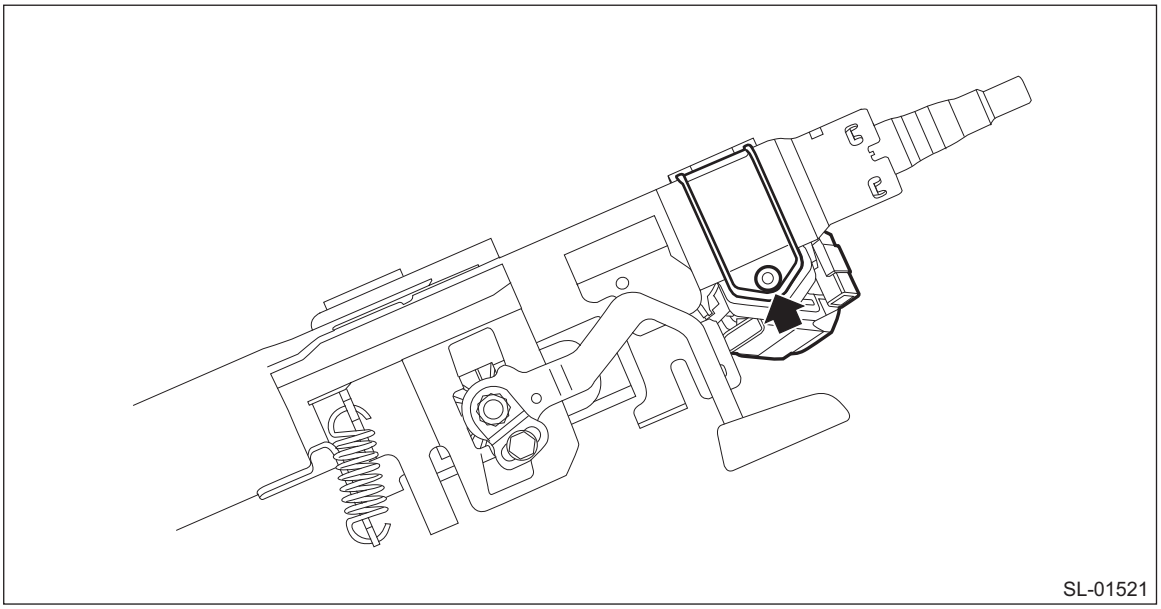
18.Ignition Key Lock

A: REPLACEMENT

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>

CAUTION:
To prevent damage to the universal joint assembly - steering and improper steering effort, make sure to remove the universal joint assembly - steering.
4) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
5) Remove the ignition key lock.
(1) Secure the column assembly - steering in a vise.
(2) Use the reverse tap and drill to remove the set bolt and remove the ignition key lock.



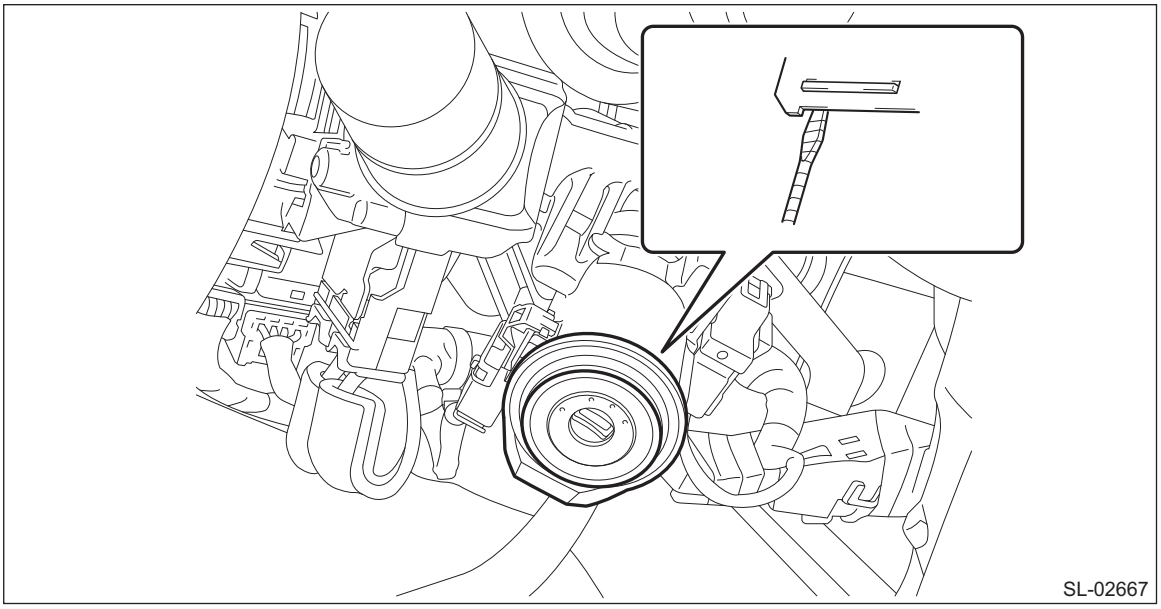
SL-01521

6) Install the ignition key lock.
(1) Secure the ignition key lock to the column assembly - steering.
(2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
7) Install the column assembly - steering. <Ref. to PS-26, INSTALLATION, Steering Column.>
8) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

B: DISASSEMBLY

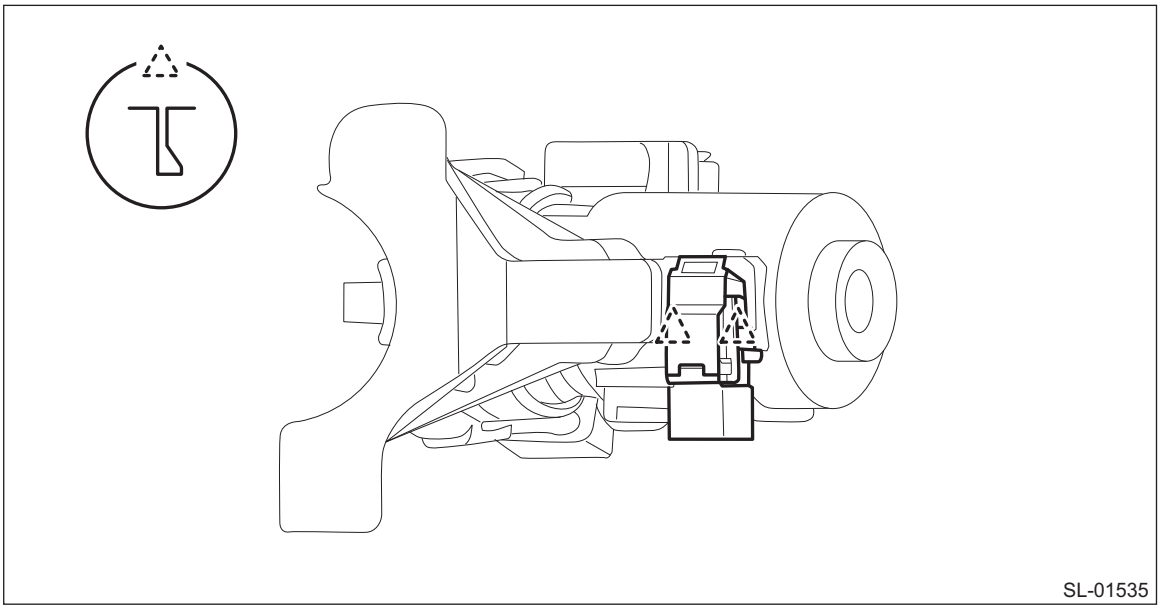
1) Remove the immobilizer antenna assembly.
(1) Disconnect the connector.
(2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.

CAUTION:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.



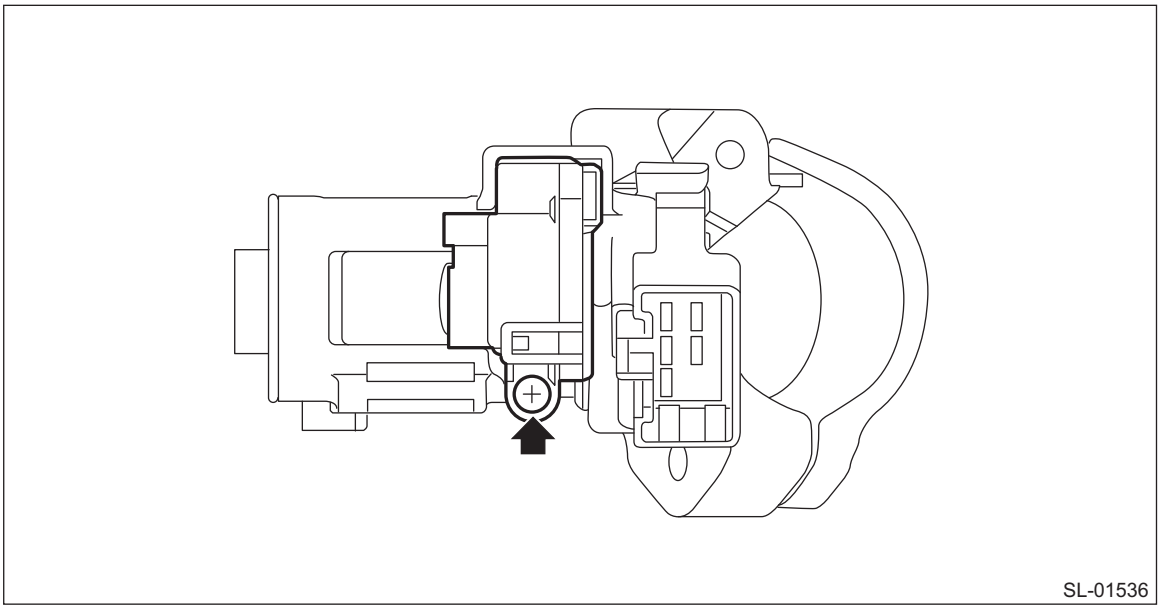
SL-02667

2) Release the claws, and pull the key warning switch downwards to remove.

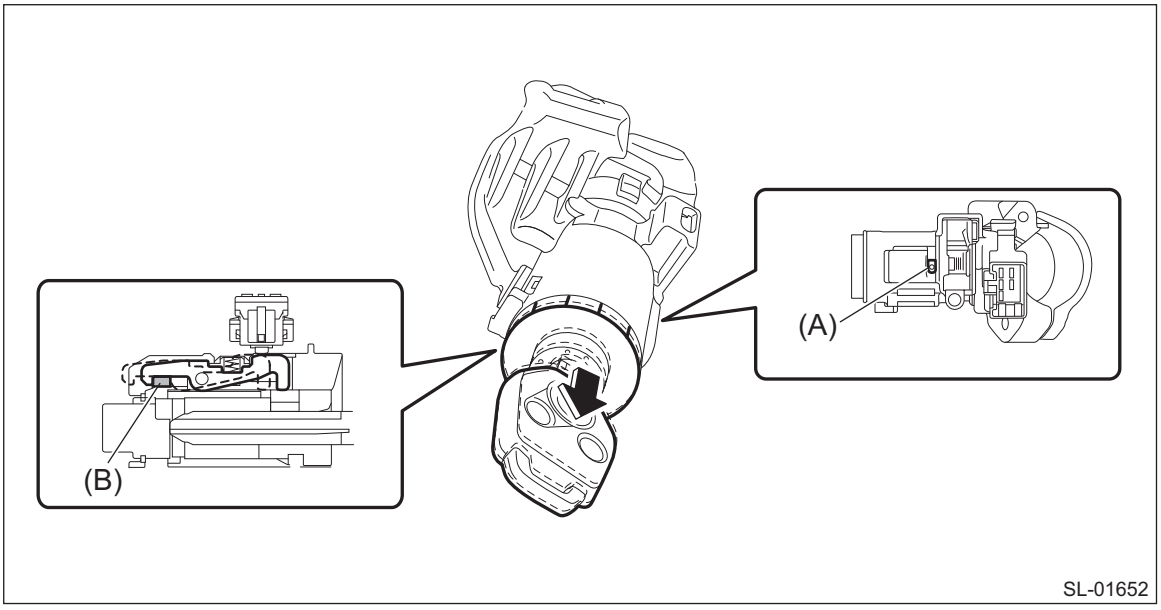


SL-01535

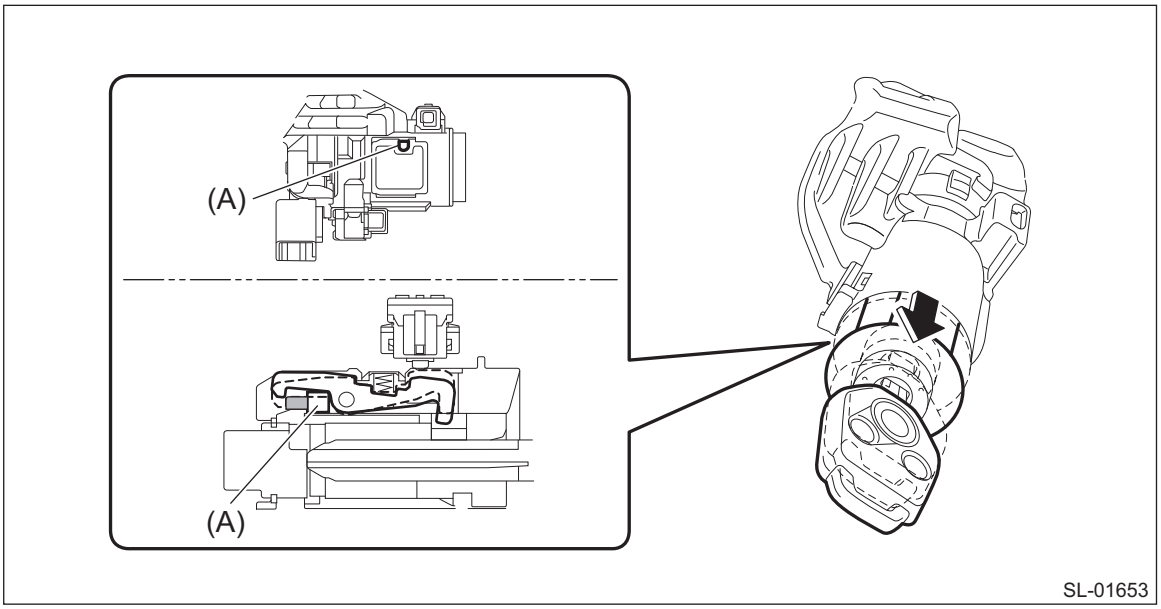
3) Remove the screws and remove the key lock solenoid.



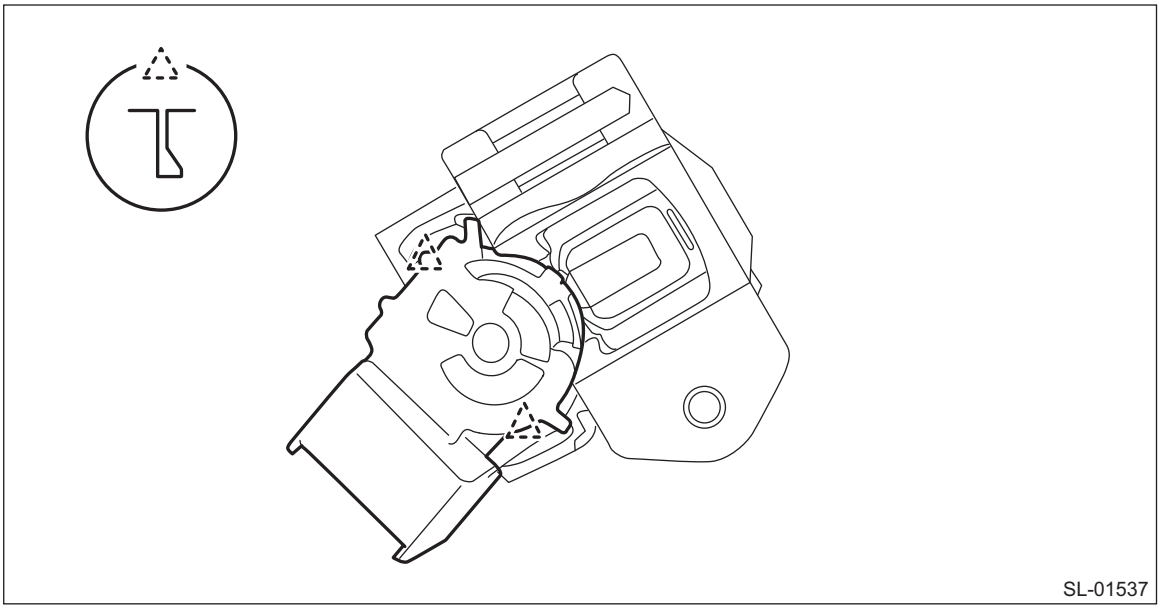
4) Replace the key cylinder.
   (1) Insert the key into the key cylinder, and turn the key to the ACC position.
   (2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).



(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.



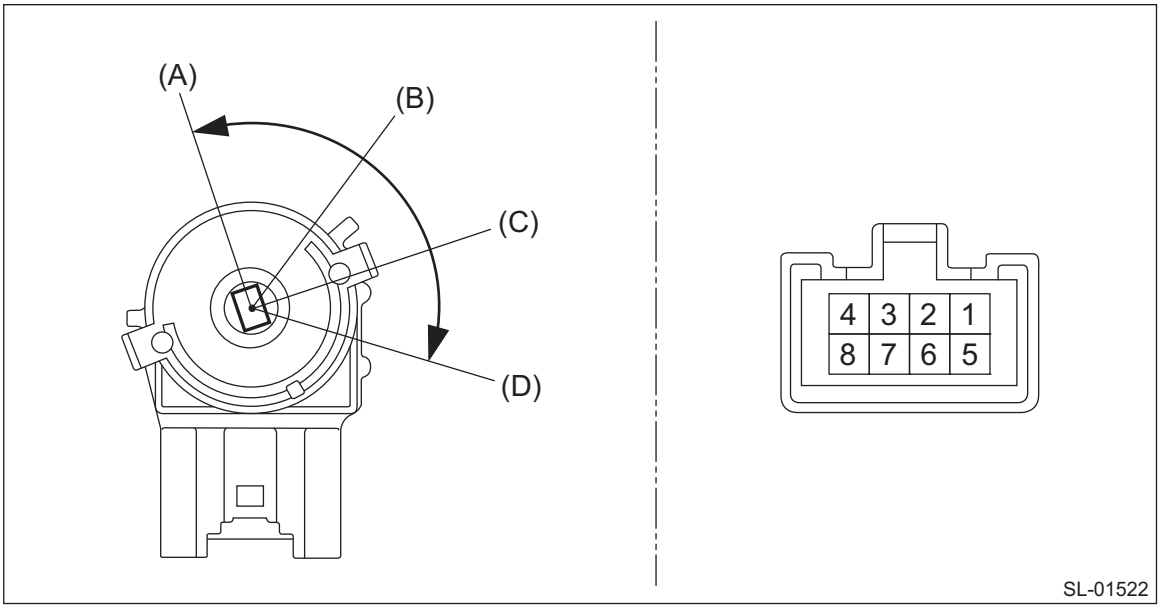
5) Release the claws and remove the ignition switch assembly.



C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
Between all terminals	(A)	LOCK	1 MΩ or more
2 — 4	(B)	ACC	Less than 1 Ω
1 — 2 — 4 5 — 6	(C)	ON	Less than 1 Ω
1 — 3 — 4 5 — 6 — 7	(D)	ST	Less than 1 Ω

2) Replace the ignition switch assembly if the inspection result is not within the standard.

19.Key Lock Cylinders

A: REPLACEMENT

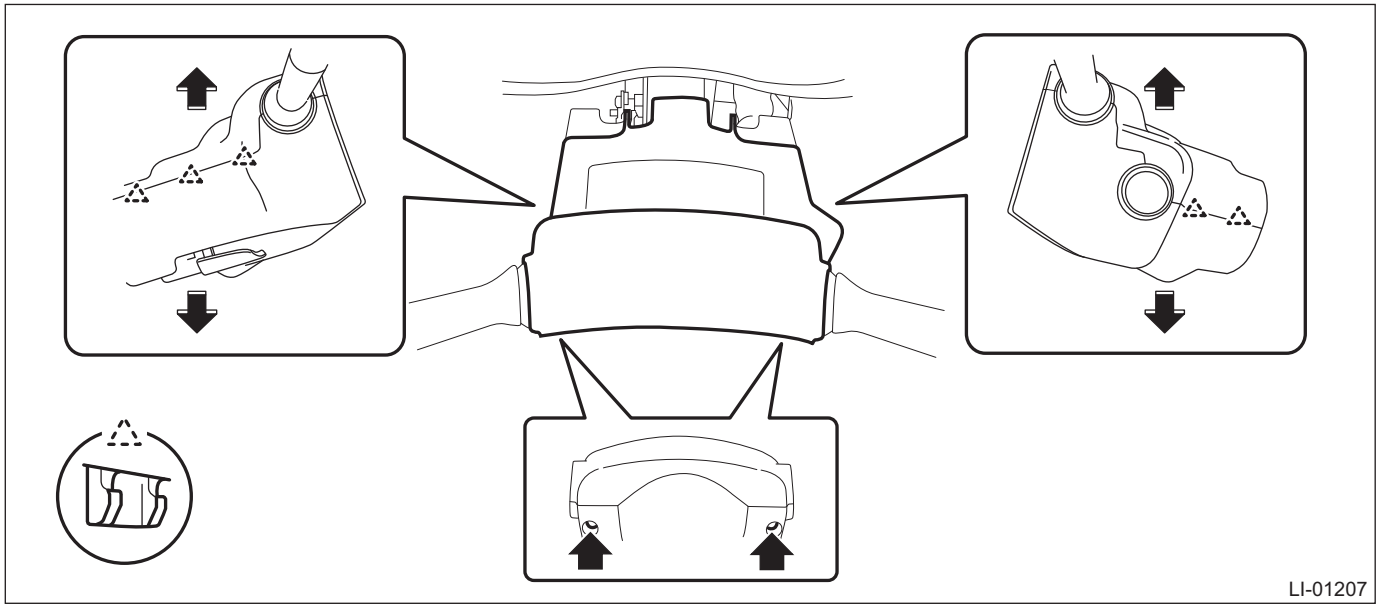
1. STEERING LOCK

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.

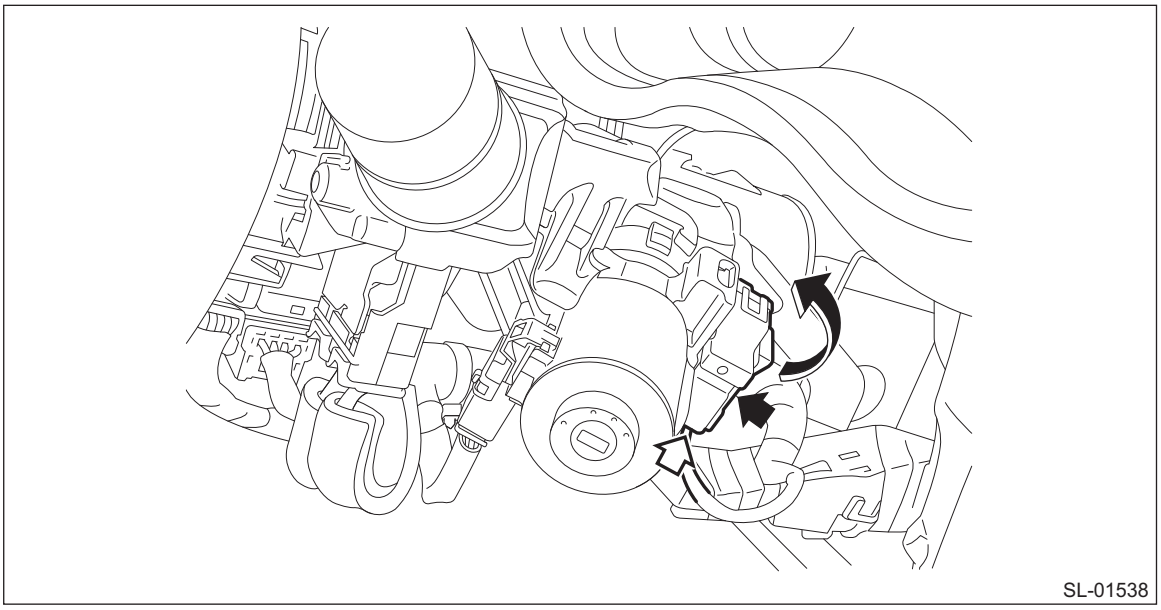
   (2) Remove the screws by turning the steering wheel to right and left.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



3) Remove the immobilizer antenna assembly or the ignition switch illumination. <Ref. to SL-88, REMOVAL, Immobilizer Antenna.>

4) Remove the key lock solenoid.
   (1) Disconnect the connector.

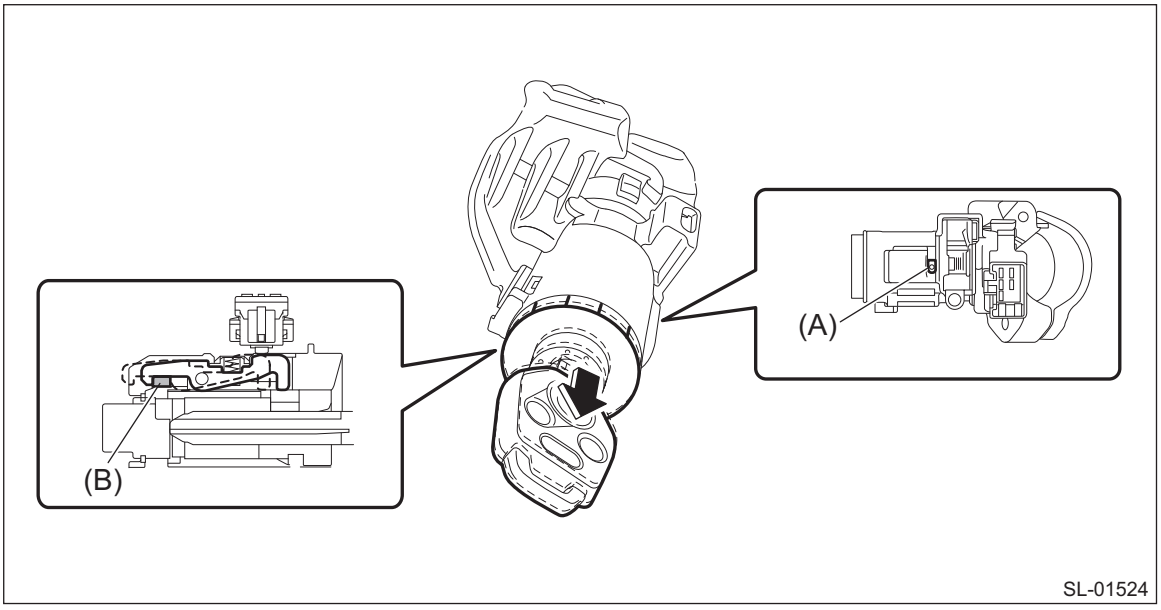
(2) Remove the screws and remove the key lock solenoid.



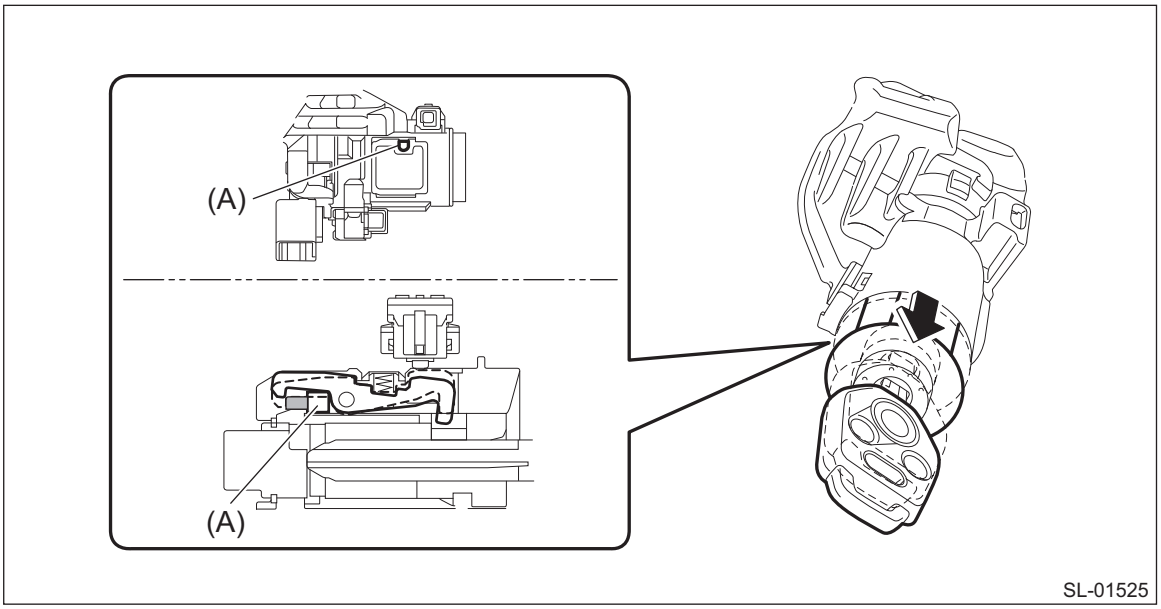
5) Replace the key cylinder.

(1) Insert the key into the key cylinder, and turn the key to the ACC position.

(2) Insert a flat tip screwdriver from the steering lock frame hole (A), and pull the key cylinder until the key cylinder claws touch the steering lock frame stopper (B).



(3) Insert a flat tip screwdriver from the steering lock frame hole (A), and release the claws to pull out the key cylinder.



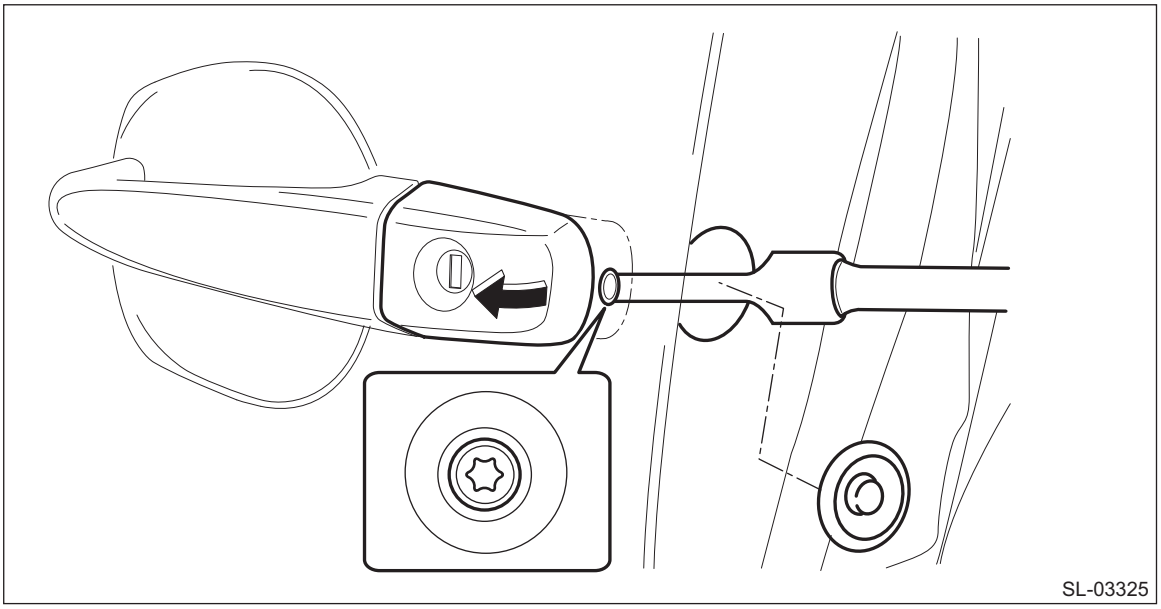
6) Install each part in the reverse order of removal.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. FRONT DOOR

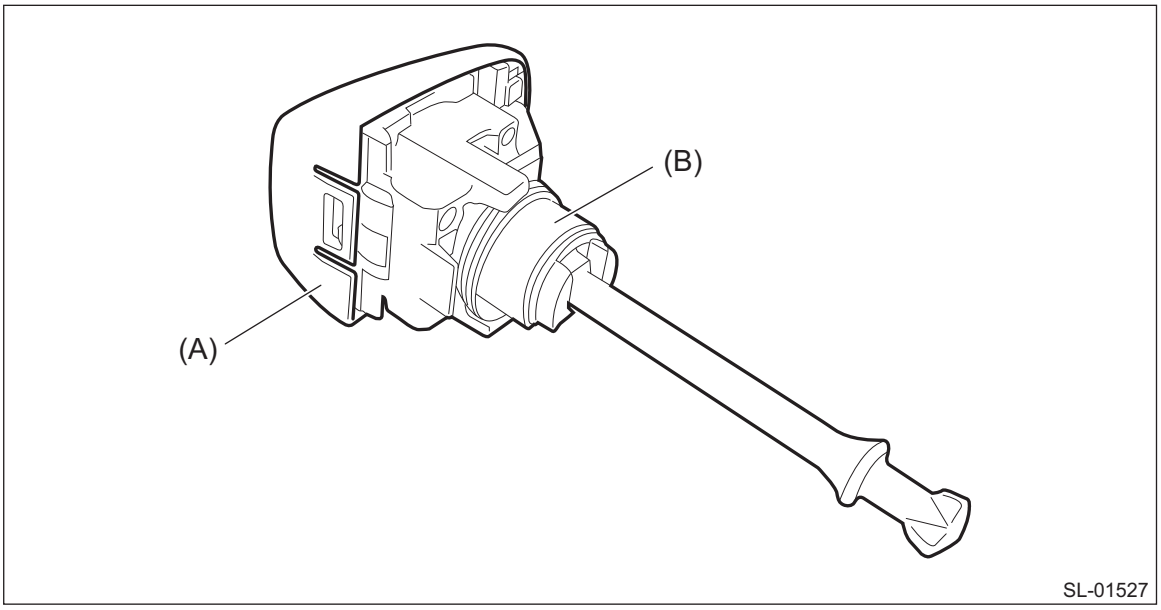
1) Raise the glass assembly - front door to the top position.
2) Remove the cover - handle front outer.

Preparation tool:
TORX® T30

(1) Remove the plug at the rear end of the panel assembly - front door.
(2) Loosen the TORX® bolt and remove the cover - handle front outer.



3) Remove the key cylinder (B) from the cover - handle front outer (A), and replace the key cylinder.



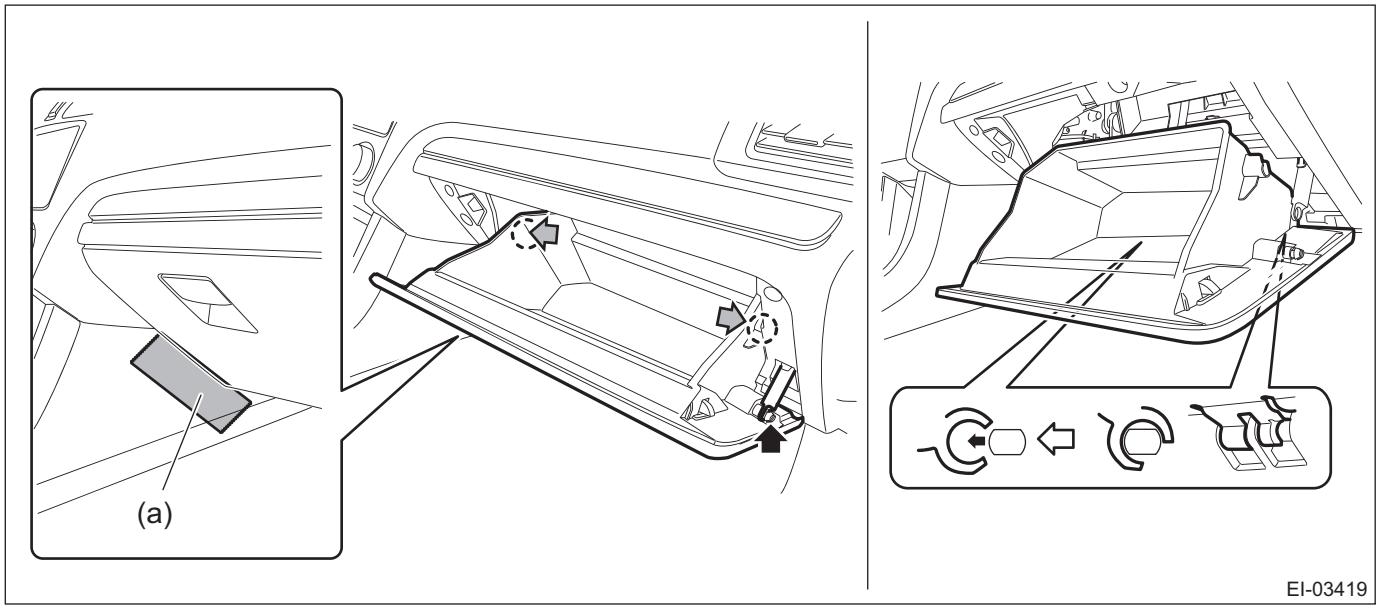
4) Install each part in the reverse order of removal.

CAUTION:
When installing the cover - handle front outer on driver's side, make sure that the key cylinder shaft is correctly inserted into the latch & actuator assembly - front.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

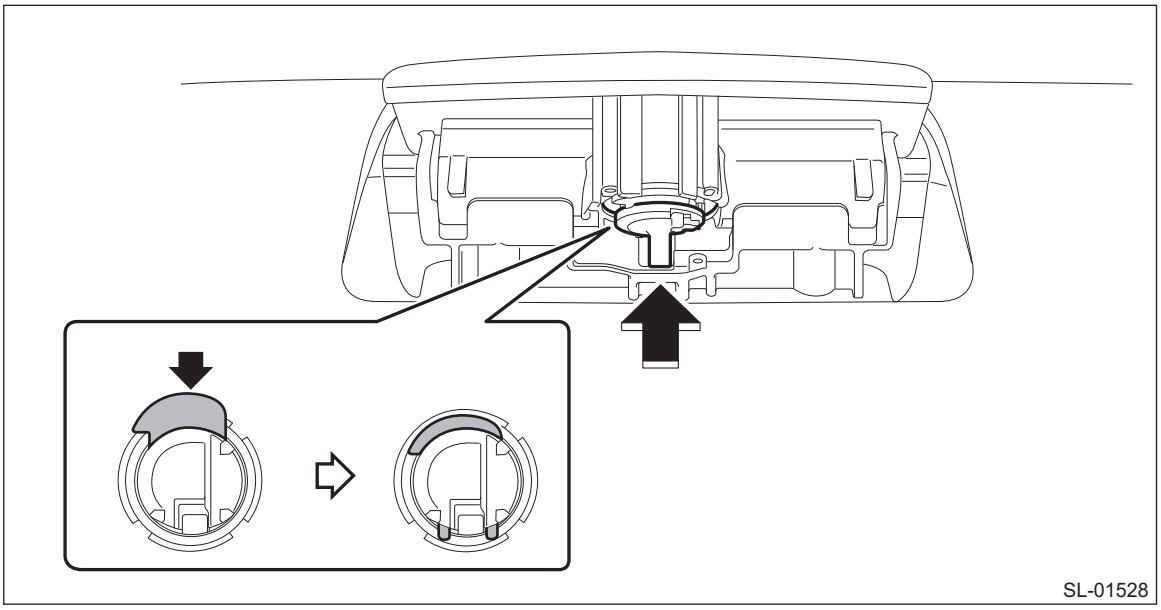
3. GLOVE BOX LID

1) Remove the pocket assembly.
(1) Attach the protective tape (a) to the panel center LWR.
(2) Remove the damper COMPL - pocket.
(3) Release the stoppers and remove the pocket assembly by pulling it toward you.



2) Replace the key cylinder.
(1) Pull up the lock knob.

(2) Push out the key cylinder from the pocket assembly while pressing in the metal plate.



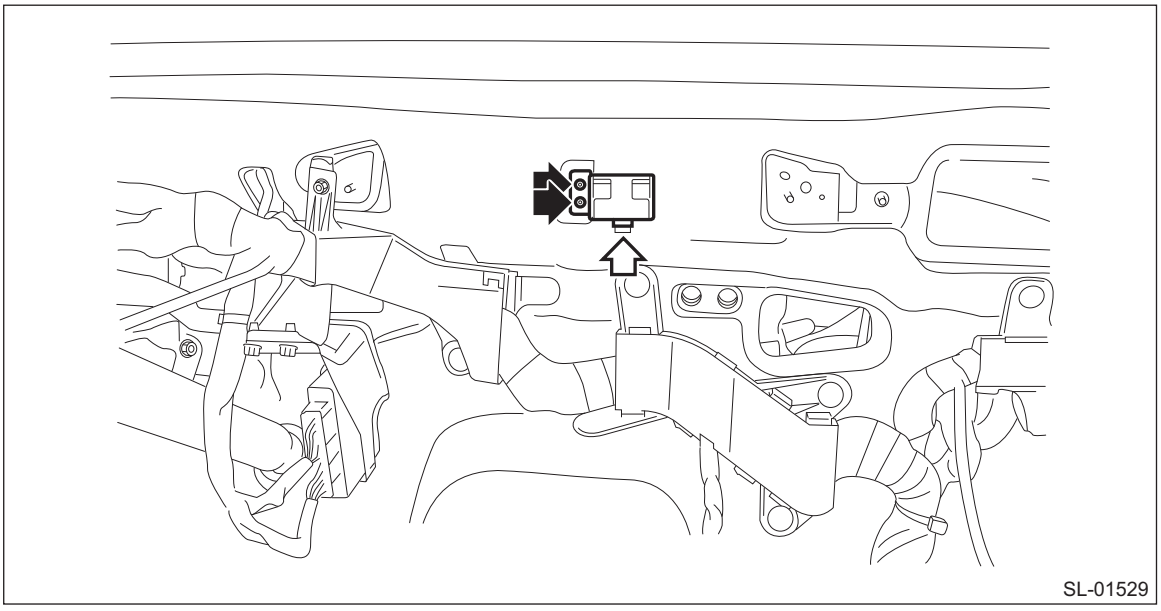
3) Install each part in the reverse order of removal.

20.Security Control Module

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
5) Remove the instrument panel assembly. <Ref. to EI-75, REMOVAL, Instrument Panel Assembly.>
6) Remove the heater and cooling unit assembly. <Ref. to AC-54, REMOVAL, Heater and Cooling Unit.>
7) Remove the security control module.
(1) Disconnect the connector.
(2) Remove the nuts, and remove the security control module.



B: INSTALLATION

CAUTION:
• When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Install the security control module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the heater and cooling unit assembly. <Ref. to AC-55, INSTALLATION, Heater and Cooling Unit.>
3) Install the instrument panel assembly. <Ref. to EI-81, INSTALLATION, Instrument Panel Assembly.>
4) Install the knee airbag module. <Ref. to AB-36, INSTALLATION, Knee Airbag Module.>
5) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-66, INSTALLATION, Instrument Panel Lower Cover.>
6) Install the steering wheel. <Ref. to PS-15, INSTALLATION, Steering Wheel.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

21.Impact Sensor

A: REMOVAL

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all doors and trunk lid.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
5) Remove the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

B: INSTALLATION

1) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
2) Close all doors and trunk lid.
3) Press the UNLOCK button of the keyless transmitter or access key.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Install the impact sensor.
6) Change the setting of impact sensor using Subaru Select Monitor.

C: OPERATION

1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

1) Make an impact sensor setting.
   (1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
   (2) Turn the ignition switch to ON.
   (3) On «Start» display, select «Diagnosis».
   (4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
   (5) On «Main Menu» display, select «Each System».
   (6) On «Select System» display, select «Body Control» and then select «Enter».
   (7) On «Select Function» display, select «Customize».
   (8) From the Customize item list, select «Impact sensor» and «Impact Sensor Setup».
   (9) Make an impact monitor setting.
   - When installing: ON
   - When removing: OFF

   (10) Make an impact monitor ON/OFF setting.
   - When installing: ON
   - When removing: OFF

   (11) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

D: ADJUSTMENT

1. CHECK IMPACT SENSOR

1) Close all the windows.
2) Pull out the key from the ignition switch, or turn the ignition switch to OFF.
3) Close all the doors, trunk lid and front hood.
4) Press the LOCK button of the keyless transmitter or access key from outside of vehicle.
5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles after 30 seconds.
6) By hitting all windows with your palm, check that the security alarm operates.

NOTE:
Warning condition: the horn and hazard light are intermittently output four times.
7) Hit all windows with the palm with force repeatedly, to check for whether the security alarm operates.

NOTE:
Alarm condition: the horn and hazard light are intermittently output for 30 seconds.
8) If NG, adjust the impact sensitivity.

2. IMPACT SENSITIVITY ADJUSTMENT

1) Adjust the impact sensitivity.
(1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Impact Sensor» and then «Enter».
(7) On «Select Function» display, select «Work Support».
(8) From the work support item list, select «Sensitivity Adjustment Mode».
- Sensitivity can be adjusted in 11 levels (0 to 10).
- Initial setting is 5.
- Smaller number means more sensitive.
- Larger number means less sensitive.

(9) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

NOTE:
- Set the sensor so that it is not triggered by normal vibrations (someone reclining on the door, hit by a ball, etc.).
- Set the sensor to operate the alarm when the windshield glass or door is hit hard repeatedly, etc, where it can be assumed that there is an attempt to damage the car by a burglar, etc.
- Even if there is no burglary attempt, if there is vibration (road construction, elevated parking lots, passage of trains or boarding of ferries), the alarm can be triggered. Because of this, ask the customer about their parking conditions, and set an appropriate sensitivity level after discussion.
- If the sensitivity setting was not performed properly, a buzzer will sound four times. In this case, check that there is no error in CAN communication.

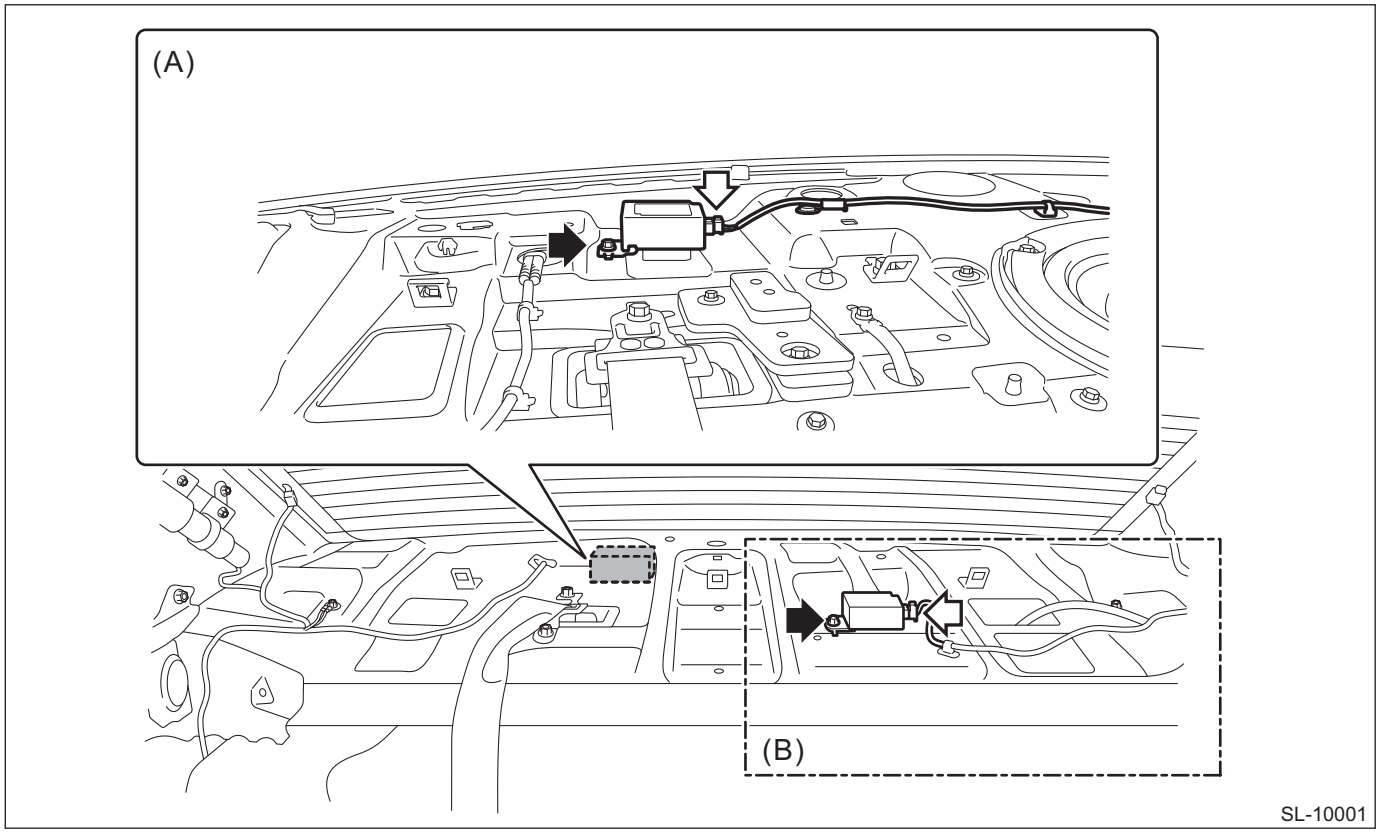
22.Keyless Entry Control Module

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel assembly - rear shelf. <Ref. to EI-94, REMOVAL, Rear Shelf Trim.>
3) Remove the keyless entry control module.
   (1) Disconnect the connector.
   (2) Remove the bolt and then remove the keyless entry control module.

NOTE:
For models with power amplifier, installation position of the keyless entry control module is different.



(A) Model with power amplifier (B) Model without power amplifier

B: INSTALLATION

1) Install the keyless entry control module.

Tightening torque:
13 N·m (1.3 kgf-m, 9.6 ft-lb)
2) Install the trim panel assembly - rear shelf.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

23.Keyless Buzzer

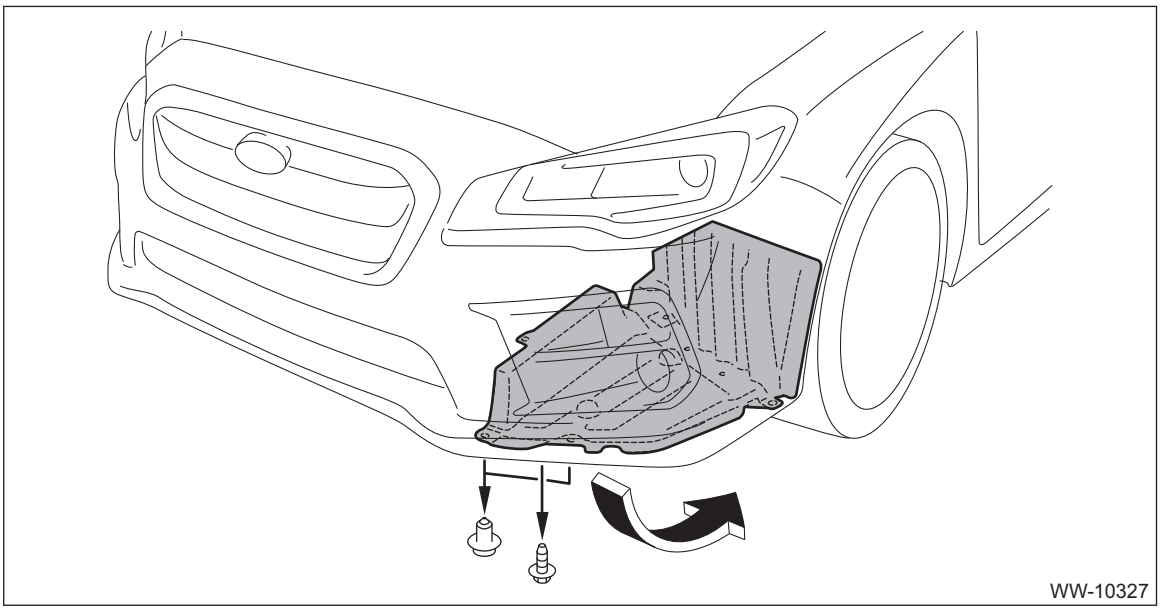
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

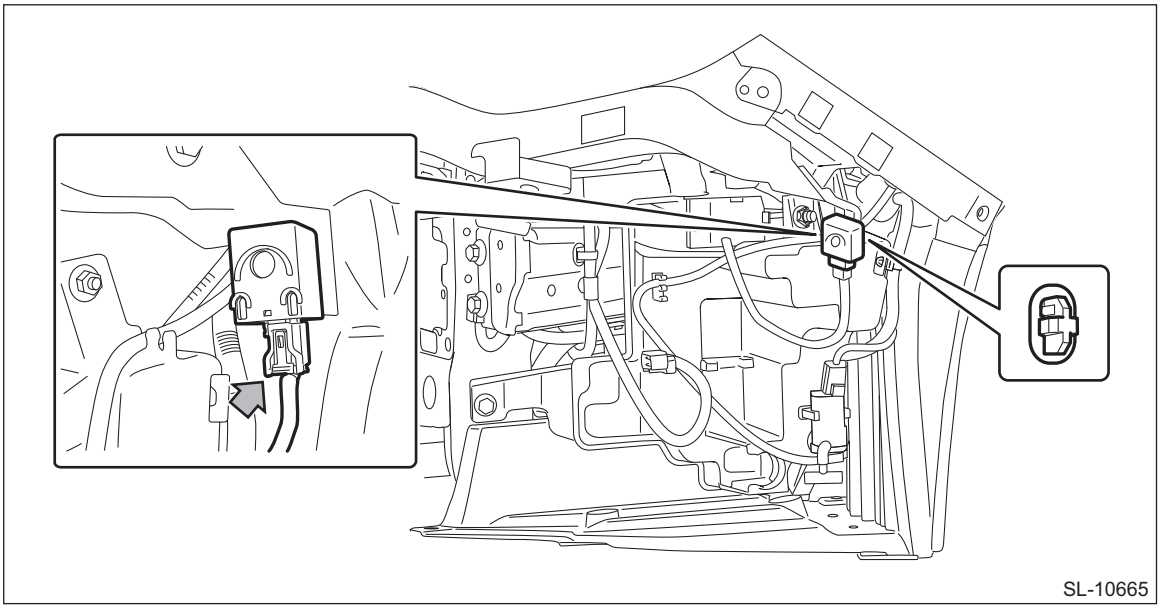
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the air cleaner case.
- STI model: <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
- Except for STI model: <Ref. to IN(w/o STI)-13, REMOVAL, Air Cleaner Case.>

3) Lift up the vehicle.
4) Remove the screw and clips, and turn over the mud guard - front LH.



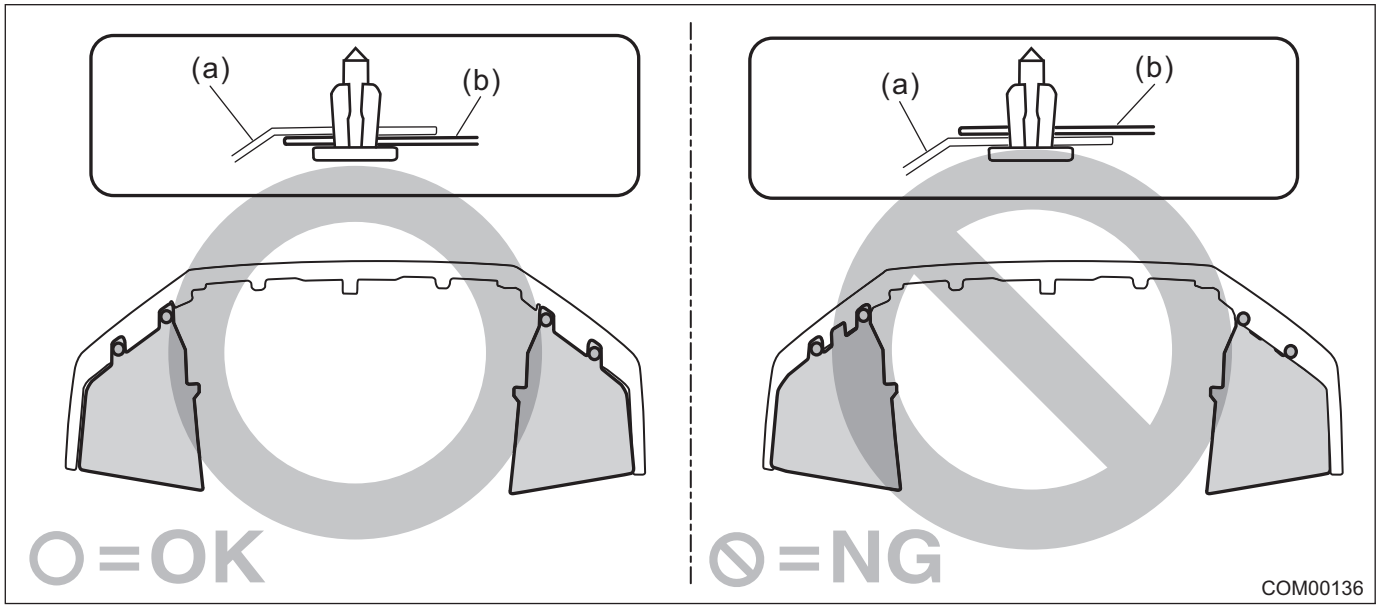
5) Remove the keyless buzzer.
   (1) Disconnect the connector.
   (2) Remove the clip and detach the keyless buzzer.



B: INSTALLATION

1) Install the keyless buzzer.
2) Install the mud guard - front.

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



3) Install the air cleaner case.
- STI model: <Ref. to IN(STI)-8, INSTALLATION, Air Cleaner Case.>
- Except for STI model: <Ref. to IN(w/o STI)-16, INSTALLATION, Air Cleaner Case.>

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

- Using the Subaru Select Monitor, set the volume of the keyless buzzer. <Ref. to BC(diag)-26, User Customizing.>
- Using the Subaru Select Monitor, perform forced operation of the keyless buzzer. <Ref. to BC(diag)-26, OPERATION, User Customizing.>

If the buzzer does not sound, replace the keyless buzzer.

24.Body Integrated Unit

A: NOTE

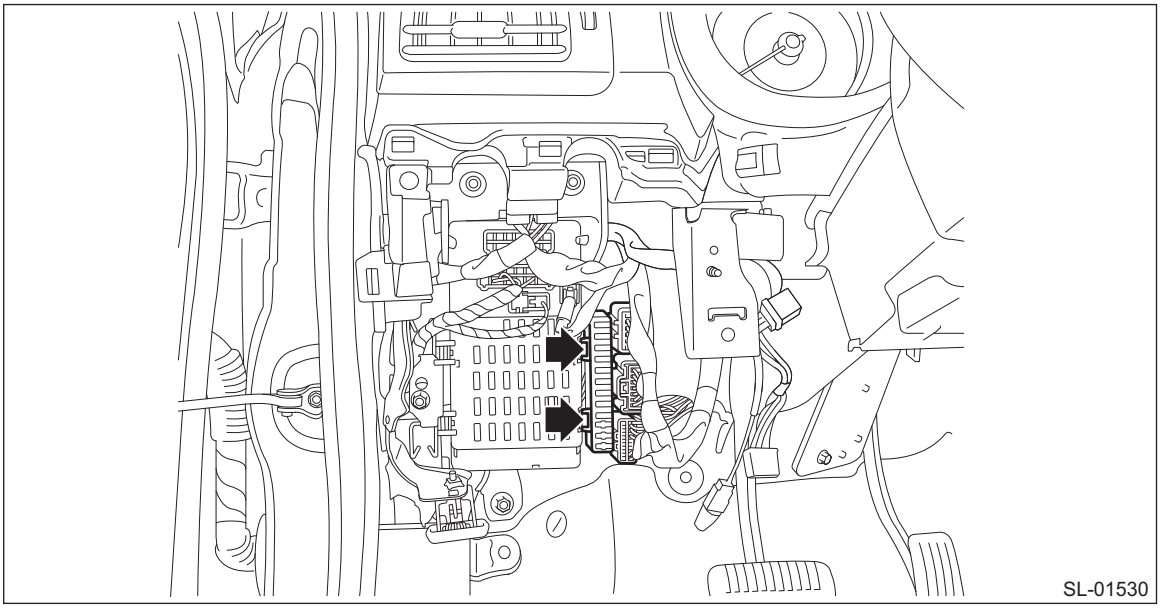
1. REPLACE BODY INTEGRATED UNIT

1) Check and record the current setting. <Ref. to BC(diag)-29, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.>
2) Prepare all immobilizer keys already registered. (Models without the keyless access with push button start)
3) Replace the body integrated unit with a new part.
4) Set the current settings as recorded. <Ref. to BC(diag)-30, REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING), OPERATION, Registration Body Integrated Unit.>
5) Register the immobilizer. For detailed operation procedure, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

B: REMOVAL

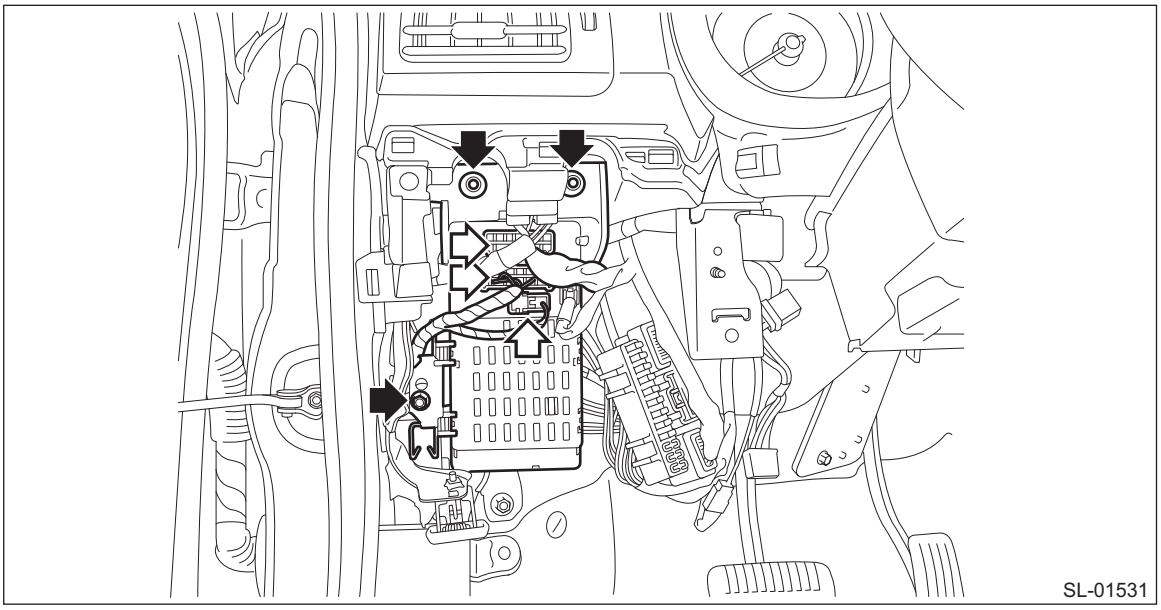
CAUTION:
Before handling the airbag system components, refer to “CAUTION” of “General Description” in “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



5) Remove the relay & fuse box.
(1) Disconnect the connector.

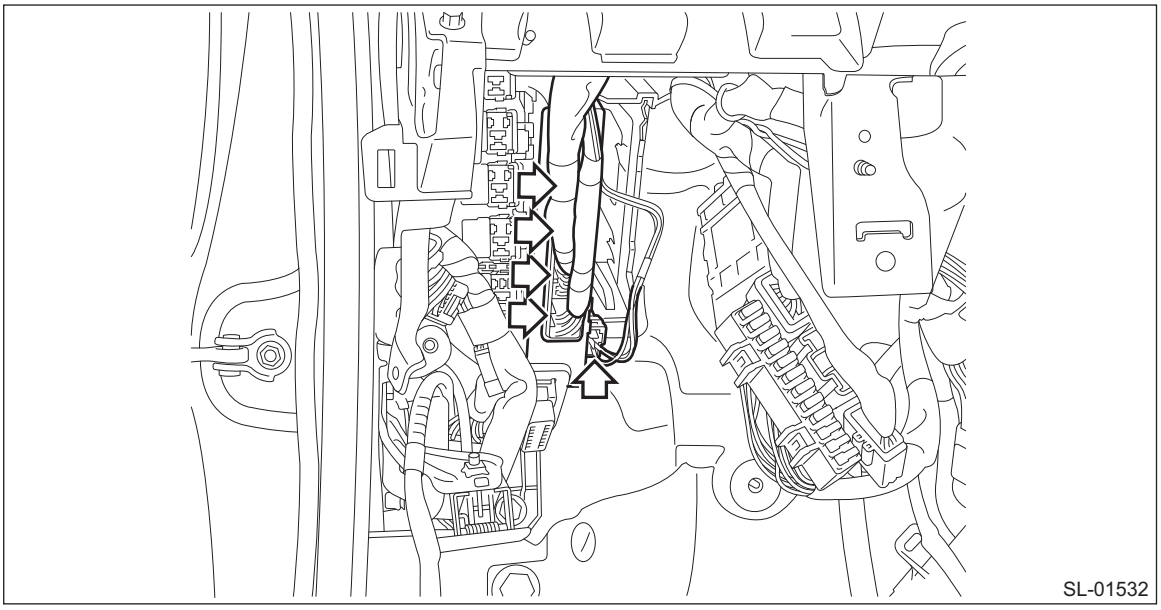
(2) Remove the bolts and nuts, and remove the relay & fuse box.



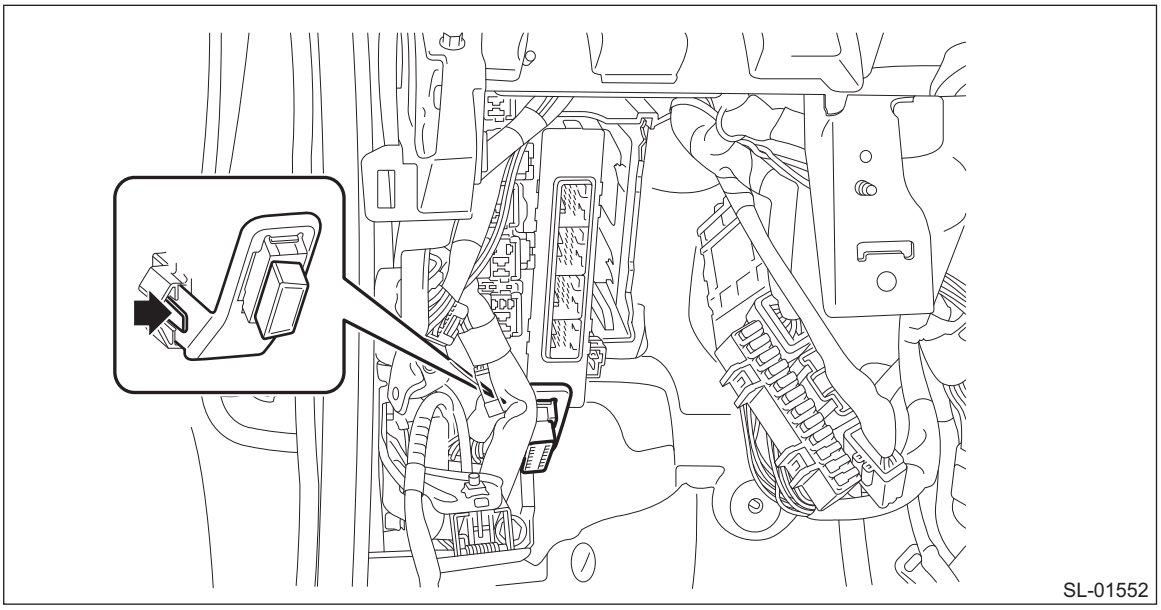
6) Remove the body integrated unit.

CAUTION:
Be careful to keep water and other foreign materials away from body integrated unit terminals.

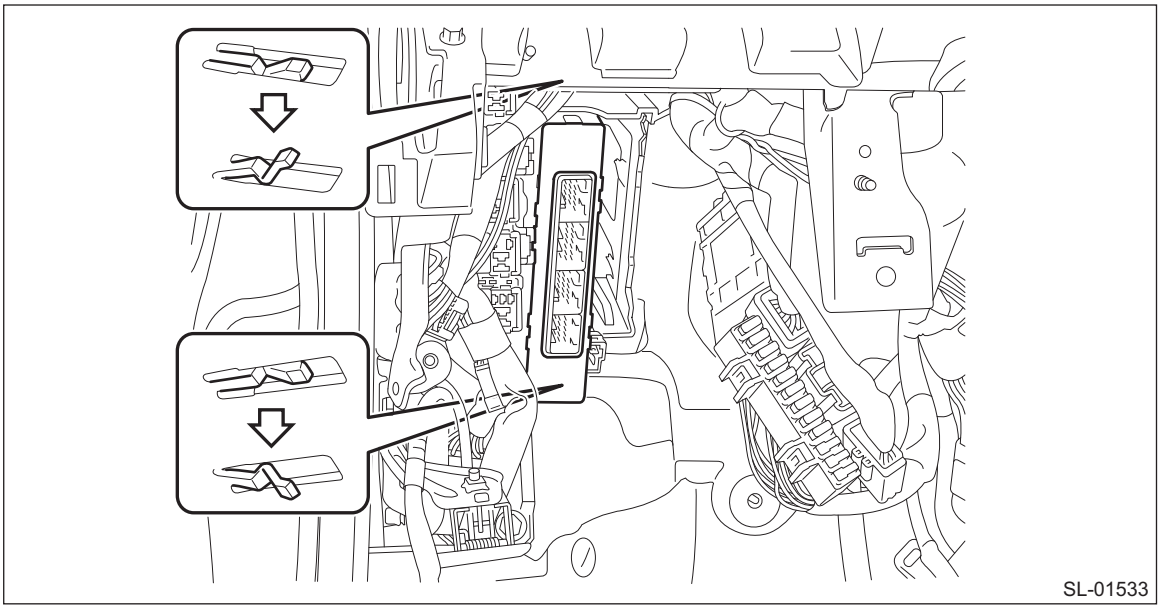
(1) Disconnect the connector.



(2) Release the lock and remove the data link connector bracket.



(3) Release the claws, and pull out the body integrated unit.



C: INSTALLATION

CAUTION:

• When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type B" described in "REGISTRATION MANUAL FOR IMMOBILIZER".

• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the body integrated unit.
2) Install the relay & fuse box and fuse holder.

Tightening torque:

Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover assembly - instrument panel LWR driver and the knee airbag module.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

25.Keyless Transmitter

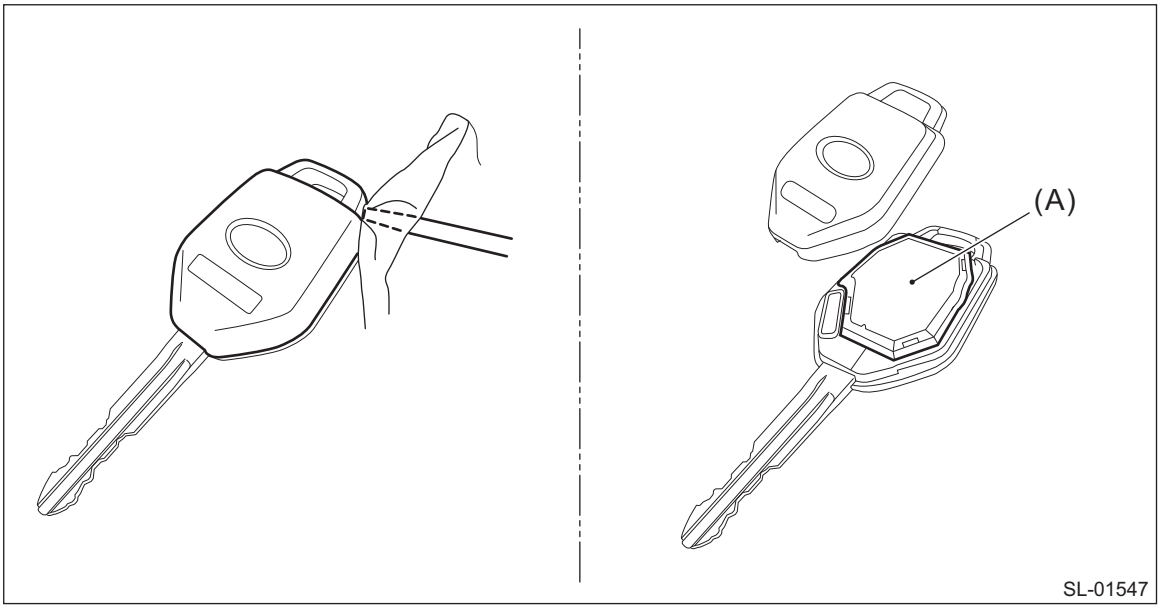
A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY

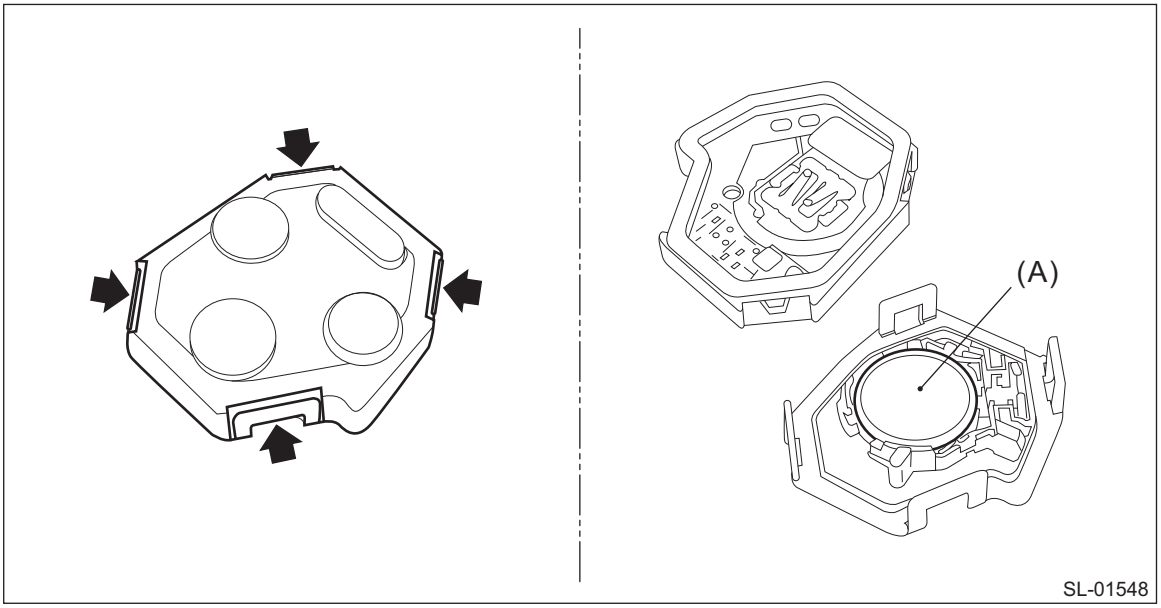
CAUTION:
To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

1) Remove the keyless transmitter cover, and take out the transmitter case (A).

CAUTION:
Use a flat tip screwdriver with protective tape or cloth in order not to damage the components.



2) Release the claws to open the transmitter case, then remove the battery (A).



B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

Install each part in the reverse order of removal.

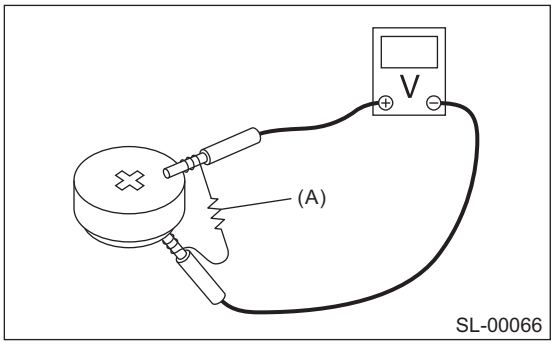
C: INSPECTION

1. KEYLESS TRANSMITTER BATTERY

1) Measure the keyless transmitter battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.



Battery terminal	Inspection conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3 V

2) Replace the battery if the inspection result is not within the standard value. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

NOTE:
- A maximum of four keyless transmitters can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Register the transmitter.
(1) Connect the Subaru Select Monitor to data link connector.

NOTE:
For detailed operation procedures, refer to “Application help”.
(2) Turn the ignition switch to ON.
(3) On «Start» display, select «Diagnosis».
(4) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(5) On «Main Menu» display, select «Each System».
(6) On «Select System» display, select «Body Control» and then select «Enter».
(7) On «Select Function» display, select «Work Support».
(8) On «Work Support» display, select «Keyless ID registration».
(9) According to the directions on the screen, press the button of the transmitter to be registered in order of Lock → Unlock. (When registration completed: Outside buzzer sounds once.)

NOTE:
- Repeat the procedure as many times as the number of transmitters to be registered.
- When attempting to register a key that has already been registered, the external buzzer sounds twice.

(10) Press the [Exit] button to finish the operations.

2. CLEAR THE REGISTRATION OF IMMOBILIZER

For detailed immobilizer registration clear, refer to “Type B” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

26.Access Key

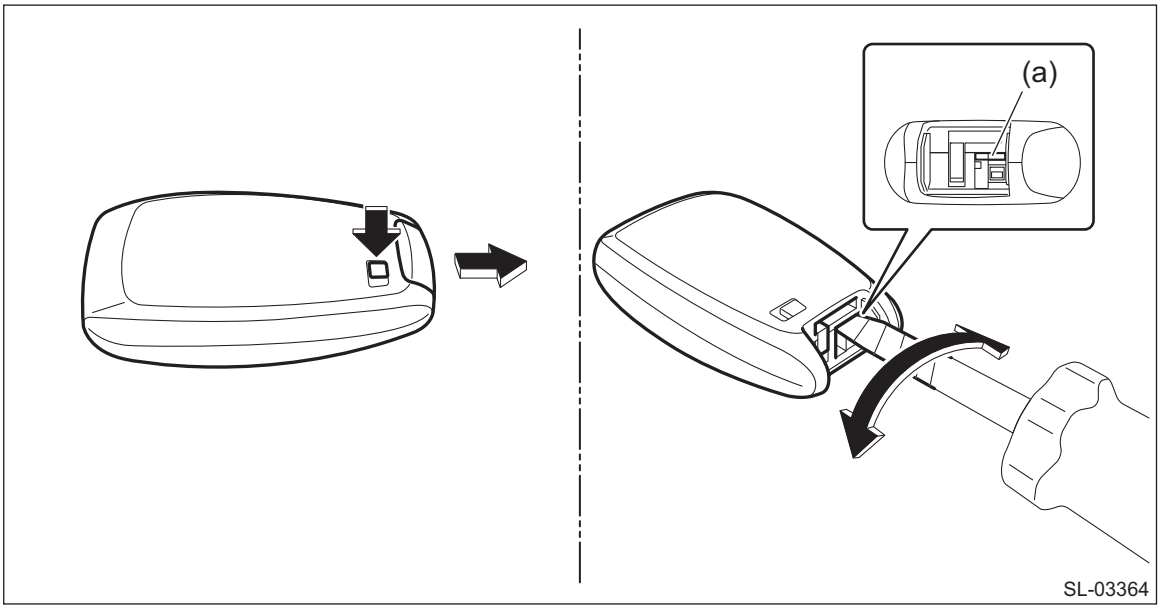
A: REMOVAL

NOTE:
Refer to keyless transmitter for model without keyless access with push button start. <Ref. to SL-83, KEYLESS TRANSMITTER BATTERY, REMOVAL, Keyless Transmitter.>

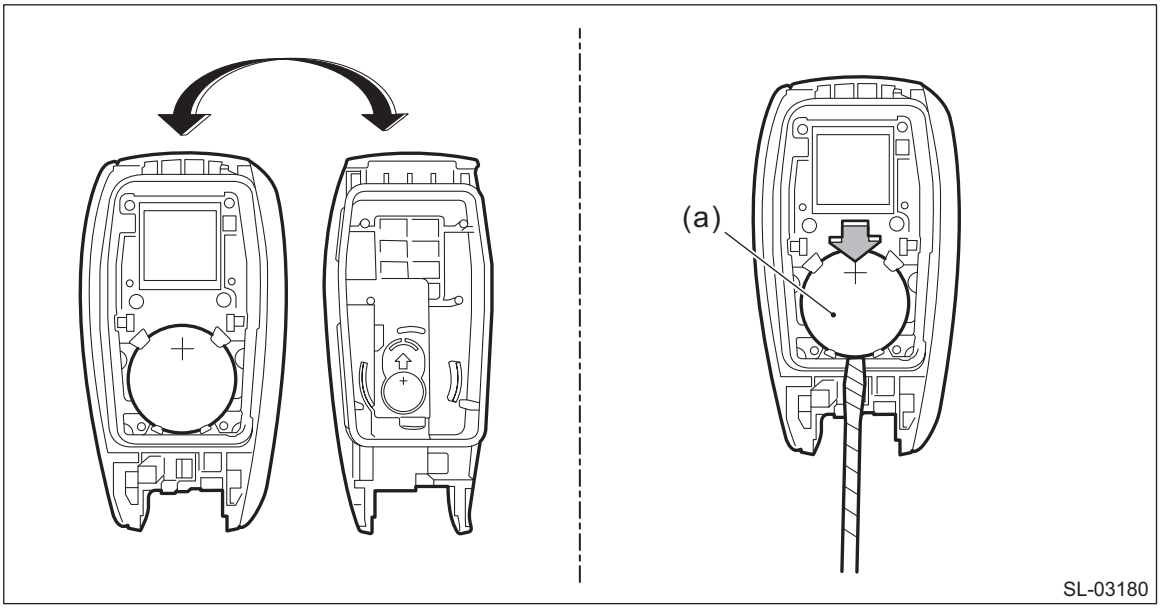
1. ACCESS KEY BATTERY

CAUTION:
To prevent static electricity damage to the access key printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the access key.

1) Push the lock button and remove the mechanical key from the access key.
2) Insert a flat tip screwdriver end wrapped with insulating tape etc. into the slit (a) of the access key to open the case.



3) Insert a flat tip screwdriver wrapped with insulating tape, and while holding the upper side of the battery (a), remove the battery (a) from the case.



B: INSTALLATION

1. ACCESS KEY BATTERY

Install each part in the reverse order of removal.

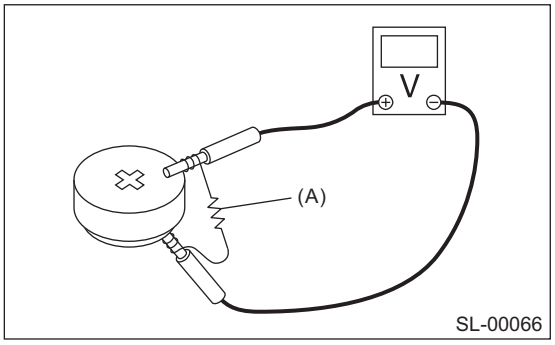
C: INSPECTION

1. ACCESS KEY BATTERY

Measure the access key battery voltage.

Preparation tool:
Circuit tester

NOTE:
Complete the measurement within 5 seconds because the battery discharges during measurement.



Battery terminal	Inspection conditions	Standard
(+) — (–)	Connect resistor (A) 47 Ω	2.5 — 3 V

Replace the battery if the inspection result is not within the standard value. (Use CR2032 or equivalent.)

D: REPLACEMENT

1. ACCESS KEY REGISTRATION

NOTE:
- A maximum of seven access keys can be registered for each individual vehicle.
- When replacing or adding an access key, new registration of the access key is necessary.
- When the access key has been newly added, it is registered to the immobilizer system at the same time.

2. CLEARING ACCESS KEY REGISTRATION

For detailed access key registration clear, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

27.Immobilizer Control Module

A: NOTE

The control of immobilizer system is carried out in body integrated unit. For operation procedures, refer to “Body Integrated Unit”. <Ref. to SL-80, Body Integrated Unit.>

28.Immobilizer Antenna

A: REMOVAL

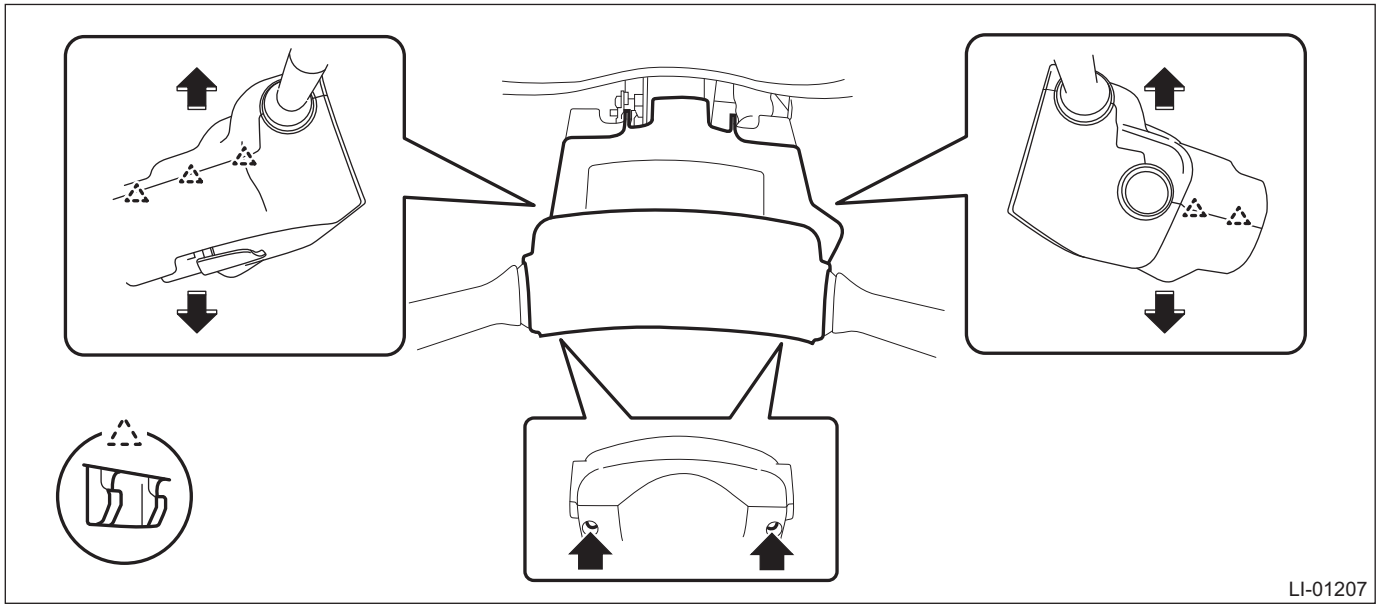
1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

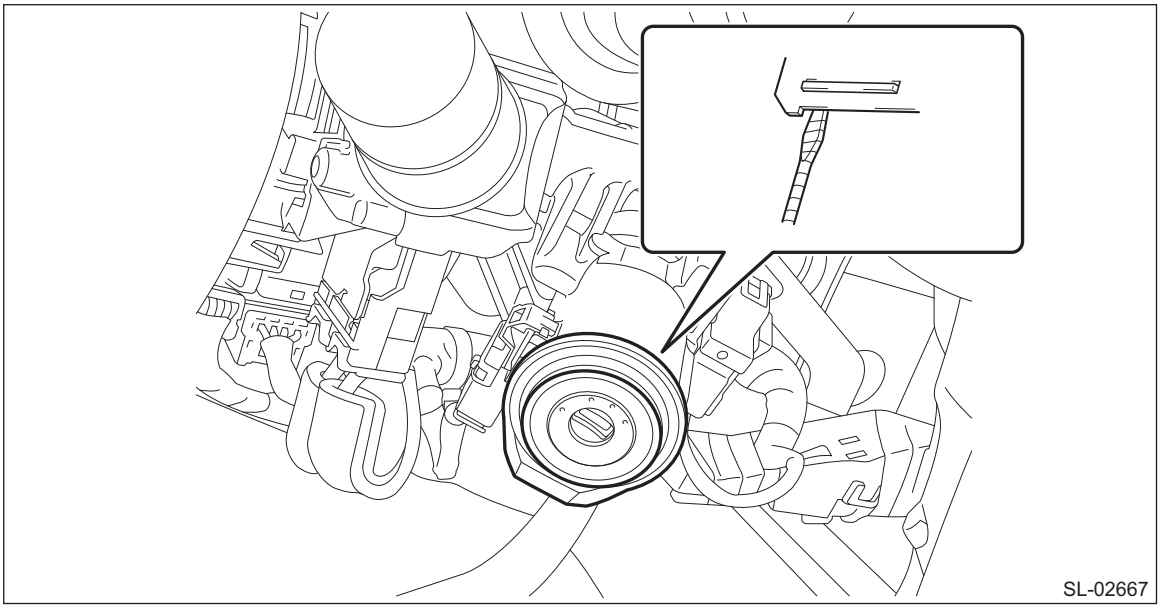
2) Remove the cover assembly - column.
   (1) Release the clips, and remove the cover assembly - steering UPR.

   (2) Remove the screws by turning the steering wheel to right and left.
   (3) Release the claw, and remove the cover assembly - column UPR and the cover assembly - column LWR.



3) Remove the immobilizer antenna assembly.
   (1) Disconnect the connector.
   (2) Release two claws using a flat tip screwdriver or similar tool wrapped with a protection tape, and remove the immobilizer antenna assembly.

CAUTION:
Do not apply excessive force to disengage the lock of immobilizer antenna assembly. Otherwise they may be broken because those parts are the products made of a plastic.

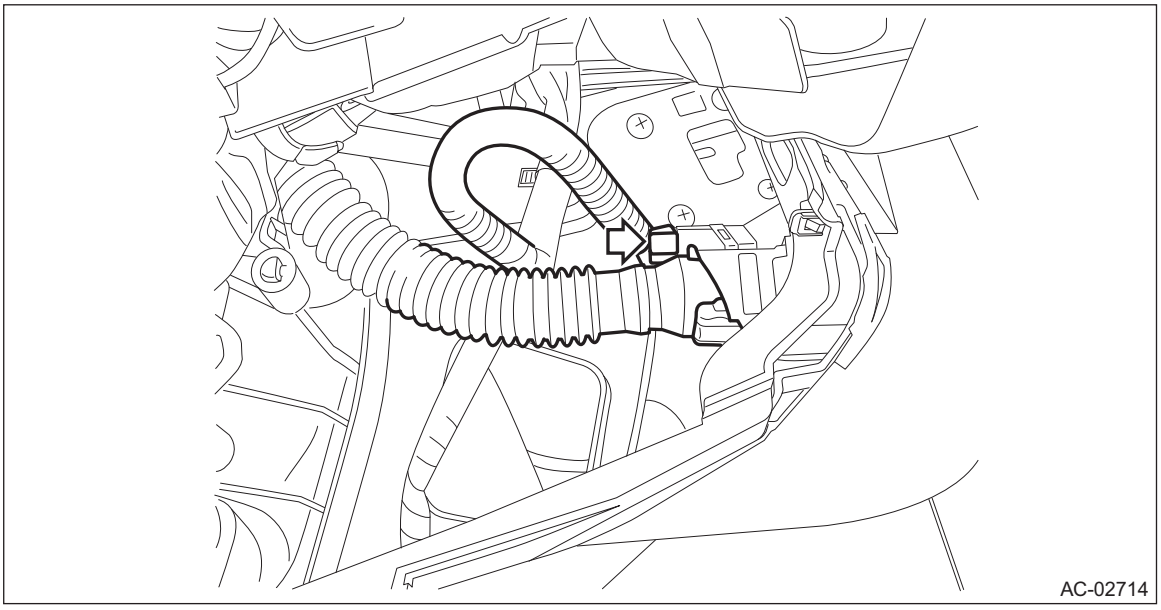


SL-02667

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

NOTE:
Immobilizer antenna is integrated with the push button ignition switch.
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

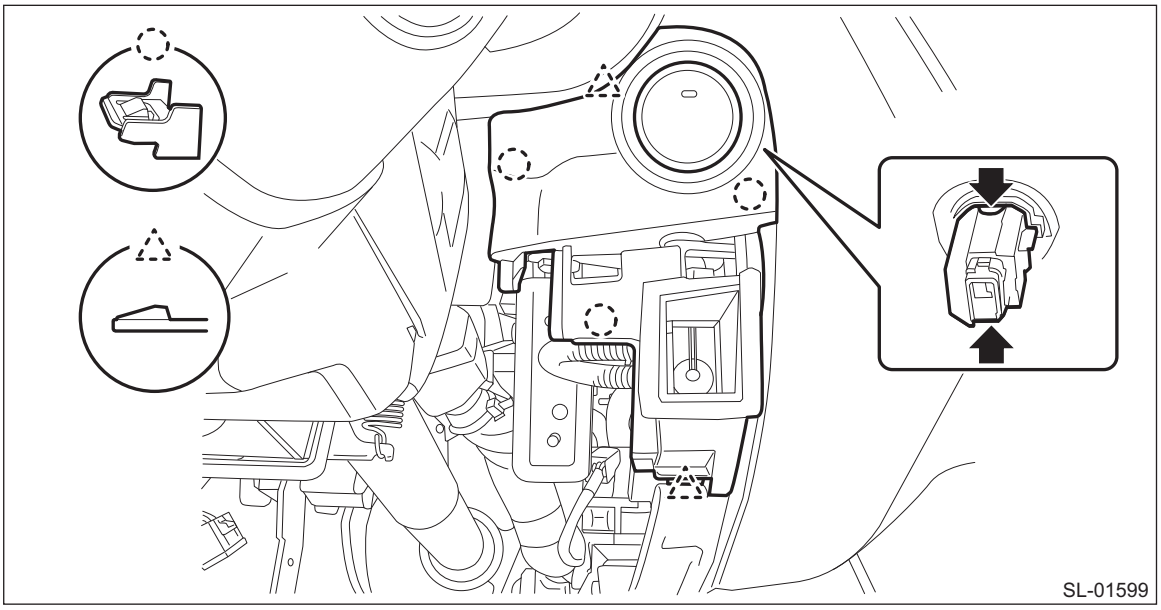
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the push button ignition switch.
(1) Disconnect the connector, and remove the aspirator hose.



AC-02714

(2) Release the claws, and then remove the panel - switch.

(3) Release the claws, and then remove the push button ignition switch from the panel - switch.



B: INSTALLATION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START

1) Install the immobilizer antenna assembly.
2) Install the cover assembly - column.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START

1) Install the push button ignition switch to the cover assembly - instrument panel LWR driver INN.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

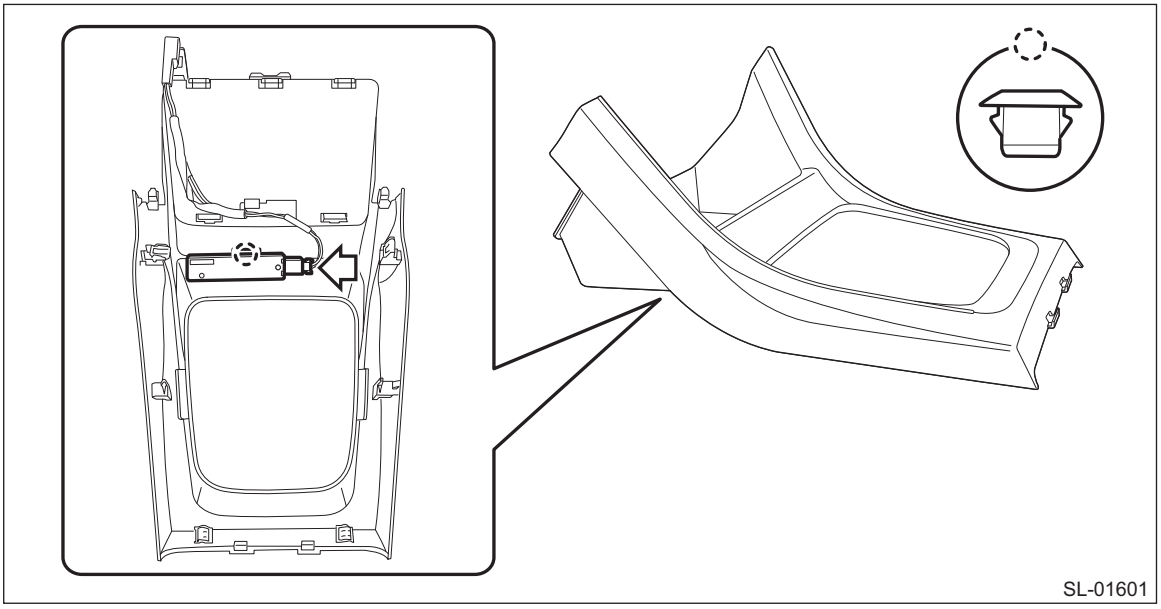
29.Keyless Access Indoor Antenna

A: REMOVAL

1. FRONT ANTENNA

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
3) Disconnect the connector and remove the front antenna assembly - interior.



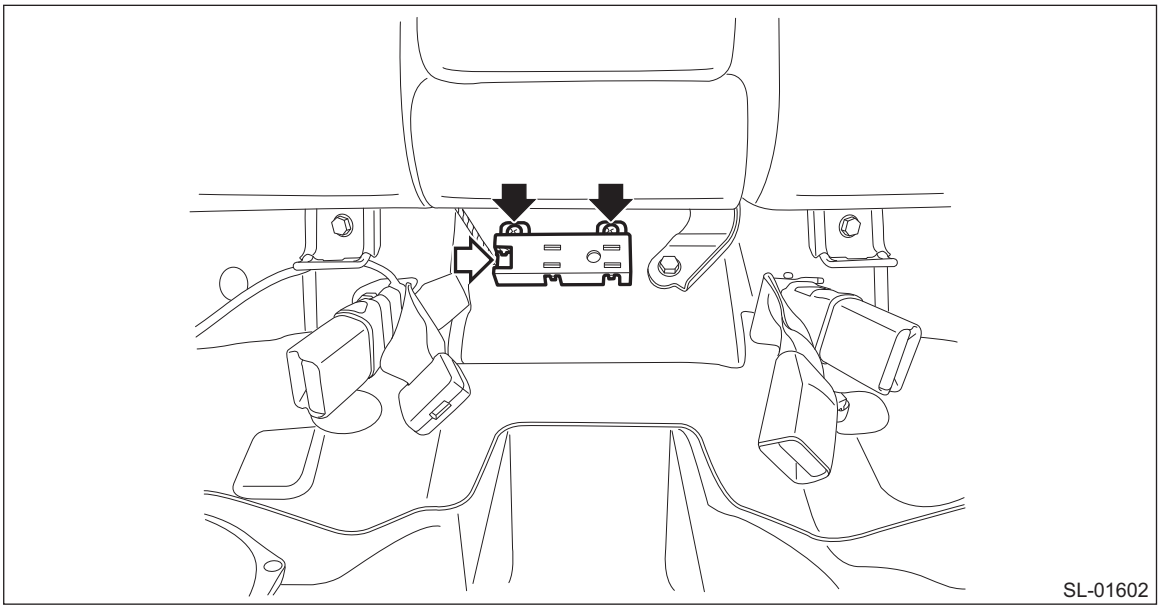
2. CENTER ANTENNA

CAUTION:
• The airbag system is fitted with the airbag power supply. After disconnecting the battery ground cable, the airbag may operate if you do not wait for 60 seconds before starting the service of airbag system.
• Airbag system satellite safing sensor is located in the lower of the rear seat cushion center. Before removing the rear seat, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM" section. <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
3) Remove the center antenna assembly - interior.

NOTE:
Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.
(1) Disconnect the connector.

(2) Remove the screw, and remove the center antenna assembly - interior.



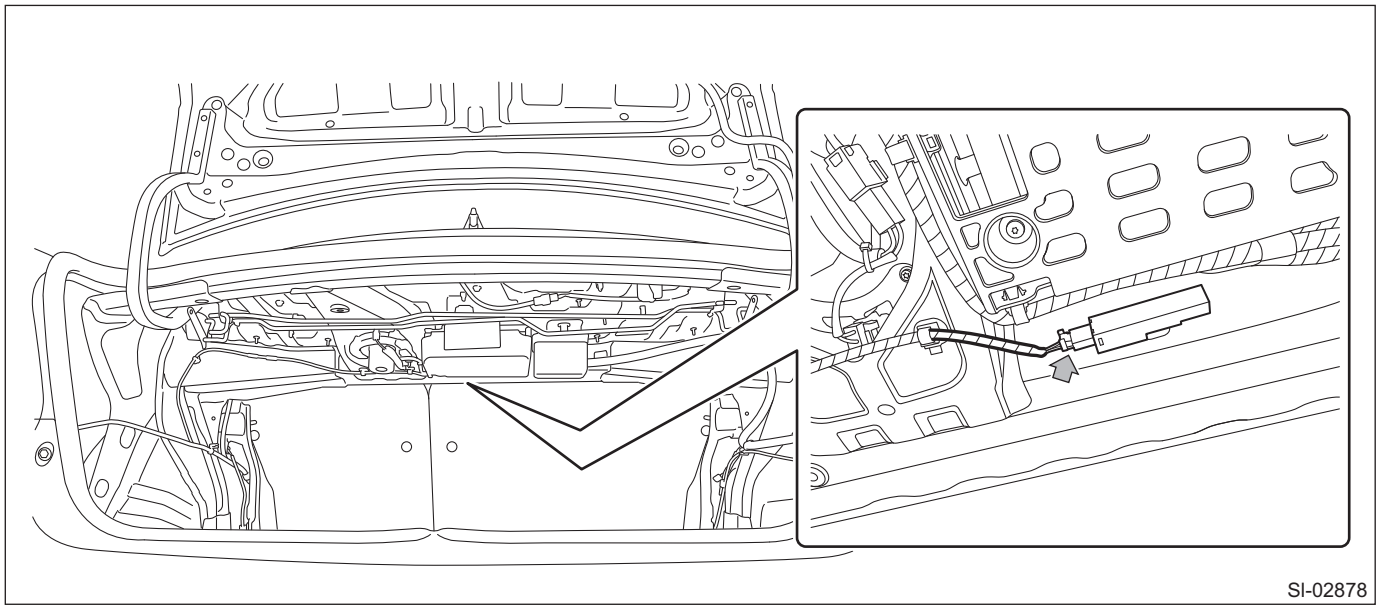
3. REAR ANTENNA

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Disconnect the connector and remove the rear antenna assembly - interior.

NOTE:
Do not remove the antenna assembly from the cover. If removed, the antenna assembly and cover mounting becomes loose, causing abnormal noises.



B: INSTALLATION

1. FRONT ANTENNA

1) Install the front antenna assembly - interior.
2) Install the cover - shift lever. <Ref. to EI-73, INSTALLATION, Console Box.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. CENTER ANTENNA

1) Install the center antenna assembly - interior.
2) Install the rear seat cushion assembly. <Ref. to SE-38, INSTALLATION, Rear Seat.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

3. REAR ANTENNA

1) Install the rear antenna assembly - interior.
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

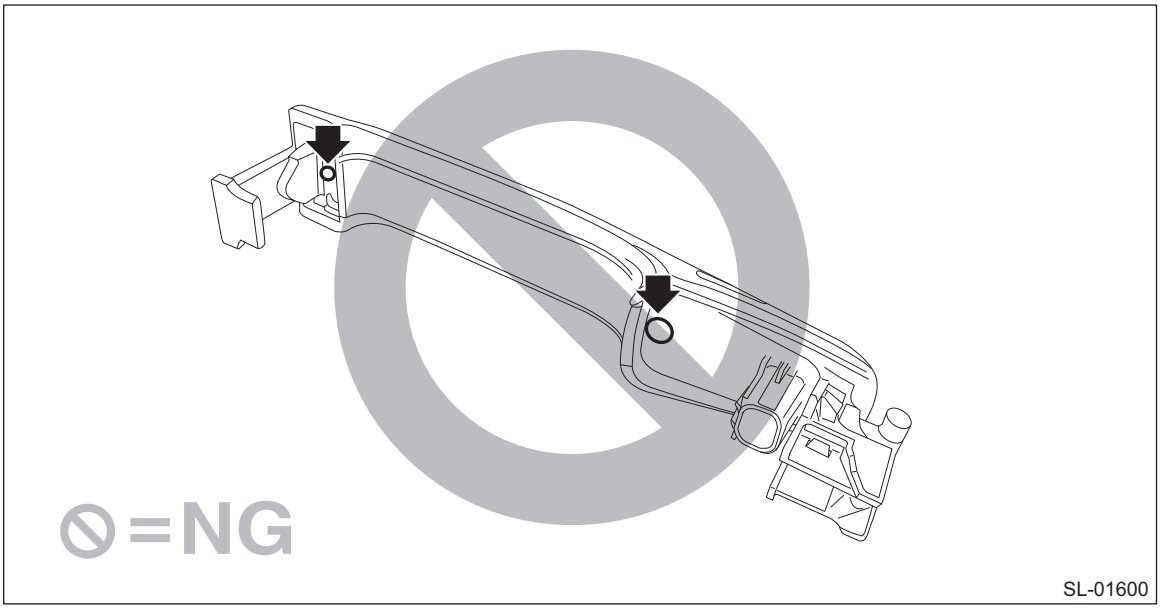
1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-43, OPERATION, Keyless Access with Push Button Start Check.>
2) Disconnect the Subaru Select Monitor. Operate the touch sensor of the door outer handle to check if door lock operates.
3) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-126, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

30.Keyless Access Outdoor Antenna

A: REMOVAL

1. FRONT ANTENNA

CAUTION:
Do not detach the antenna from the front door outer handle.
If replacement is required, replace the front outer handle assembly as a whole.



1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

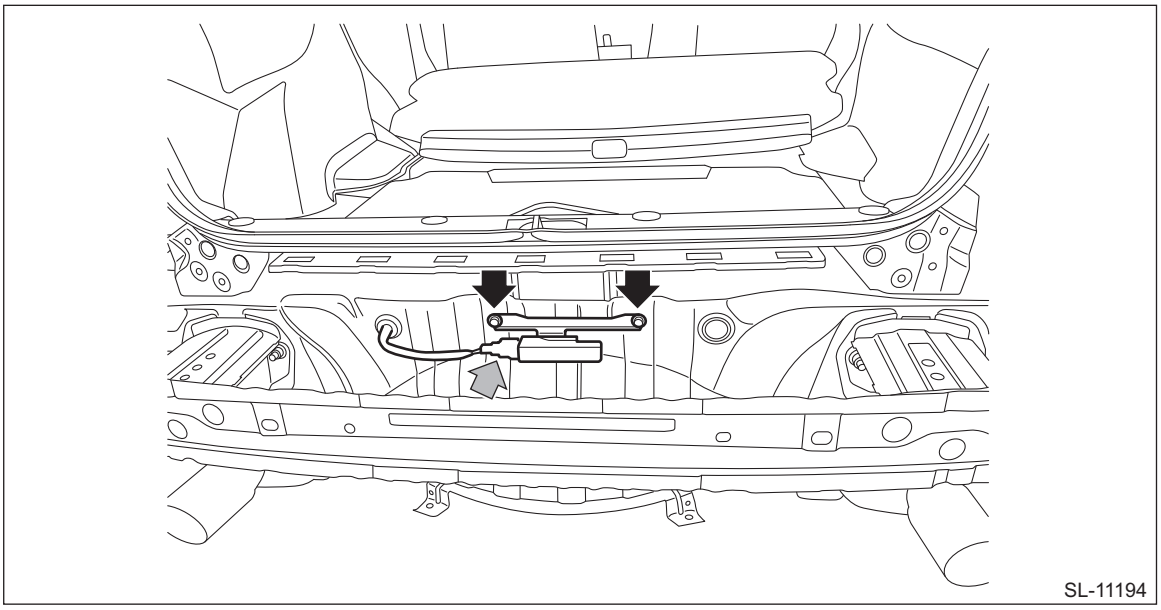
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the handle - door outer. <Ref. to SL-32, REMOVAL, Front Outer Handle.>

2. REAR ANTENNA

CAUTION:
• Do not detach the antenna except when replacing it. Detaching unnecessarily will lead to insecure attachment of the antenna.
• When replacing the antenna, do not reuse the tapping screw. Always replace with new tapping screws.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the bumper face - rear. <Ref. to EI-43, REMOVAL, Rear Bumper.>
3) Remove the rear antenna assembly - exterior.
(1) Disconnect the connector.

(2) Remove the screws, and remove the rear antenna assembly - exterior.



B: INSTALLATION

1) Install the rear antenna assembly - exterior.
2) Install the bumper face - rear.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

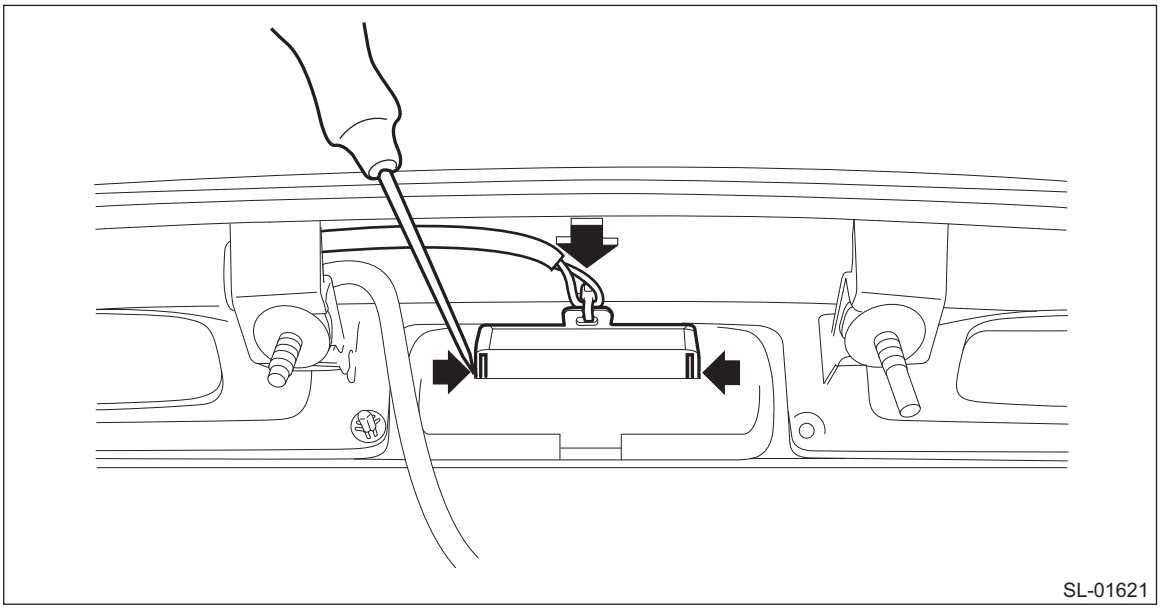
1) Check the setting by performing Keyless access system check using the Subaru Select Monitor. <Ref. to KPS(diag)-43, OPERATION, Keyless Access with Push Button Start Check.>
2) Disconnect the Subaru Select Monitor. While bringing the access key, operate the touch sensor on door handle to check if door lock or unlock operates.
3) Disconnect the Subaru Select Monitor. While bringing the access key, operate the trunk opener button to check if the trunk is opened.
4) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-126, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

31.Trunk Opener Button

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the garnish - trunk. <Ref. to EI-55, REMOVAL, Trunk Lid Garnish.>
3) Release the locks at both ends of the trunk opener button by pushing them with a flat tip screwdriver.



B: INSTALLATION

1) Install the trunk opener button to the garnish - trunk.
2) Install the garnish - trunk.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

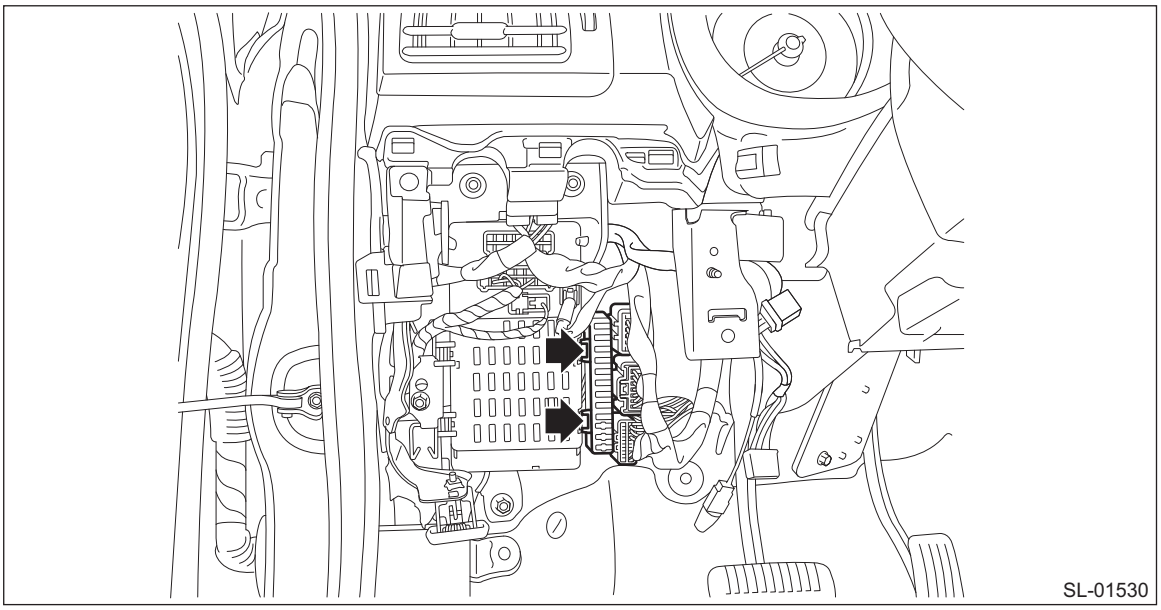
1) Using the Subaru Select Monitor, display «Rear gate/Trunk UNLOCK output» from «Data monitor».
2) Check that the display changes when the trunk opener button is operated.
3) If the display is not correct as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-126, KEYLESS ACCESS SYSTEM, LIST, Diagnostics with Phenomenon.>

32.Keyless Access CM

A: REMOVAL

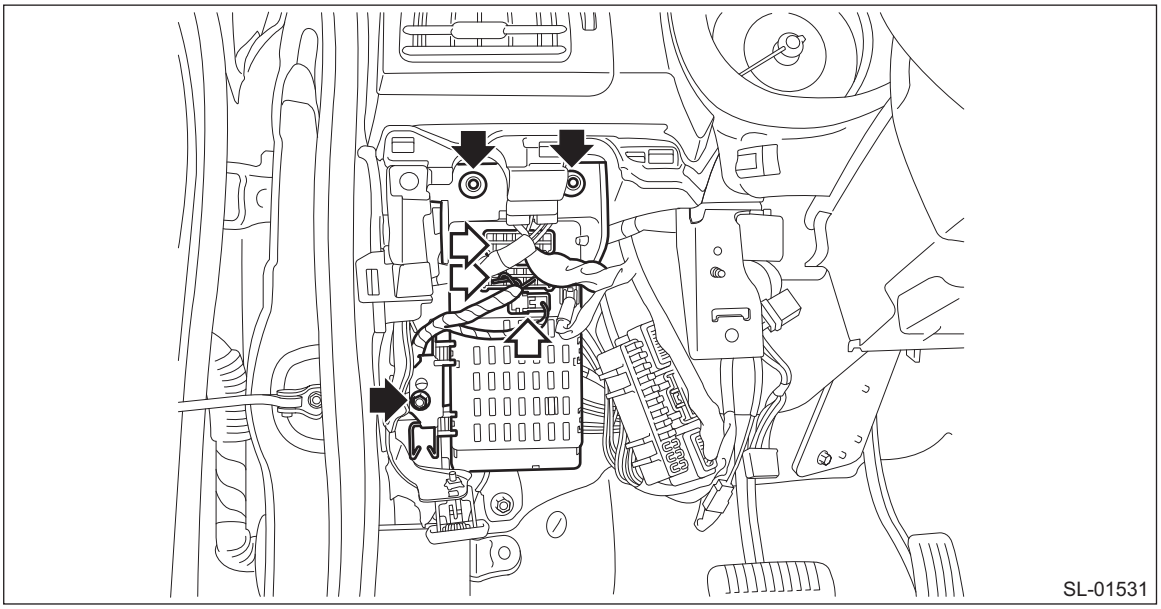
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



SL-01530

5) Remove the relay & fuse box.
(1) Disconnect the connector.
(2) Remove the bolts and nuts, and remove the relay & fuse box.

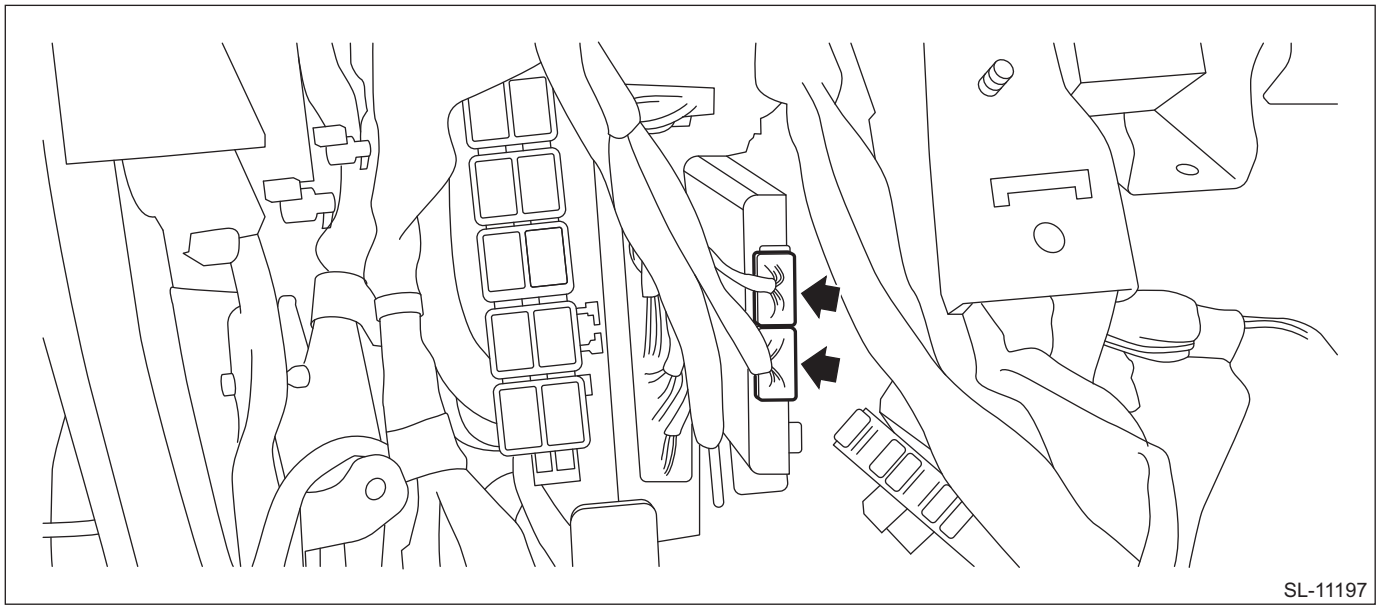


SL-01531

6) Remove the keyless access CM.

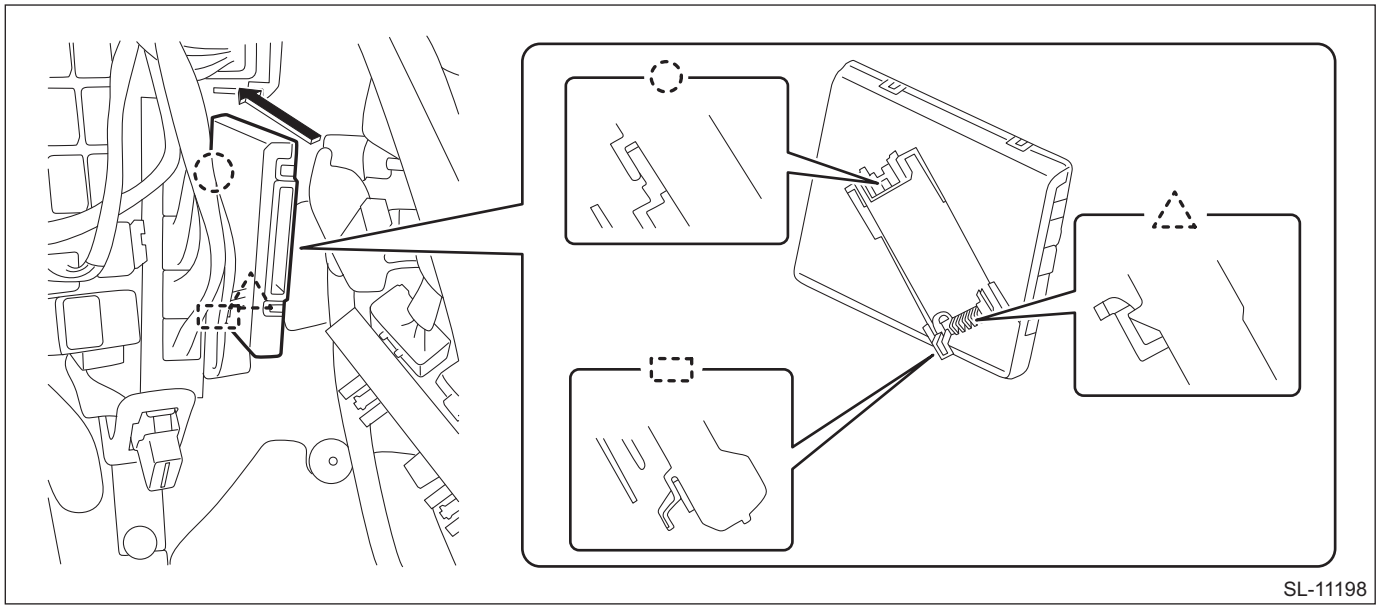
CAUTION:
Be careful to keep water and other foreign materials away from body integrated unit terminals.

(1) Disconnect the connector.



SL-11197

(2) Release the claws and remove the guide, and then remove the keyless access CM.



SL-11198

B: INSTALLATION

CAUTION:
• When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the keyless access CM.
2) Install the relay & fuse box and fuse holder.

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the cover assembly - instrument panel LWR driver and the knee airbag module.

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

33.ID Code Box

A: NOTE

CAUTION:
When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to “Type D” described in “REGISTRATION MANUAL FOR IMMOBILIZER”.

NOTE:
- Equipped on C0 model with keyless access with push button start.
- The ID code box is located at the place of security control module.

Refer to “Security Control Module” for operation procedures on ID code box. <Ref. to SL-73, Security Control Module.>

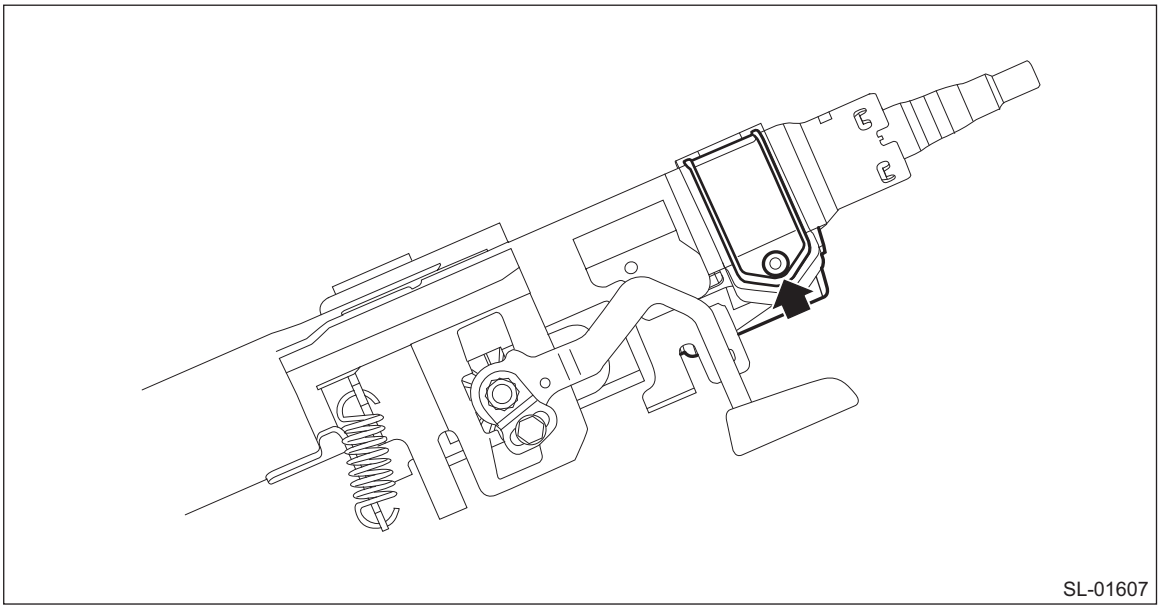
34.Steering Lock CM

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the universal joint assembly - steering. <Ref. to PS-19, REMOVAL, Universal Joint.>
4) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
5) Remove the steering lock CM.
(1) Secure the column assembly - steering in a vise.
(2) Use the reverse tap or drill to remove the set bolt and remove the steering lock CM.

CAUTION:
Do not apply any impact to the set bolt by a chisel or punch. Doing so may damage the CM.



SL-01607

B: INSTALLATION

CAUTION:
• When the control module related to immobilizer has been replaced, be sure to perform the registration of immobilizer system. For detailed operation procedure, refer to "Type D" described in "REGISTRATION MANUAL FOR IMMOBILIZER".
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
1) Secure the steering lock CM to the steering column.

2) Use new set bolts. Tighten the bolt until the bolt head is broken (bolt head wrenched off).
3) Install the column assembly - steering.
4) Install the universal joint assembly - steering. <Ref. to PS-20, INSTALLATION, Universal Joint.>
5) Install the cover assembly - instrument panel LWR driver. <Ref. to EI-66, INSTALLATION, Instrument Panel Lower Cover.>
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

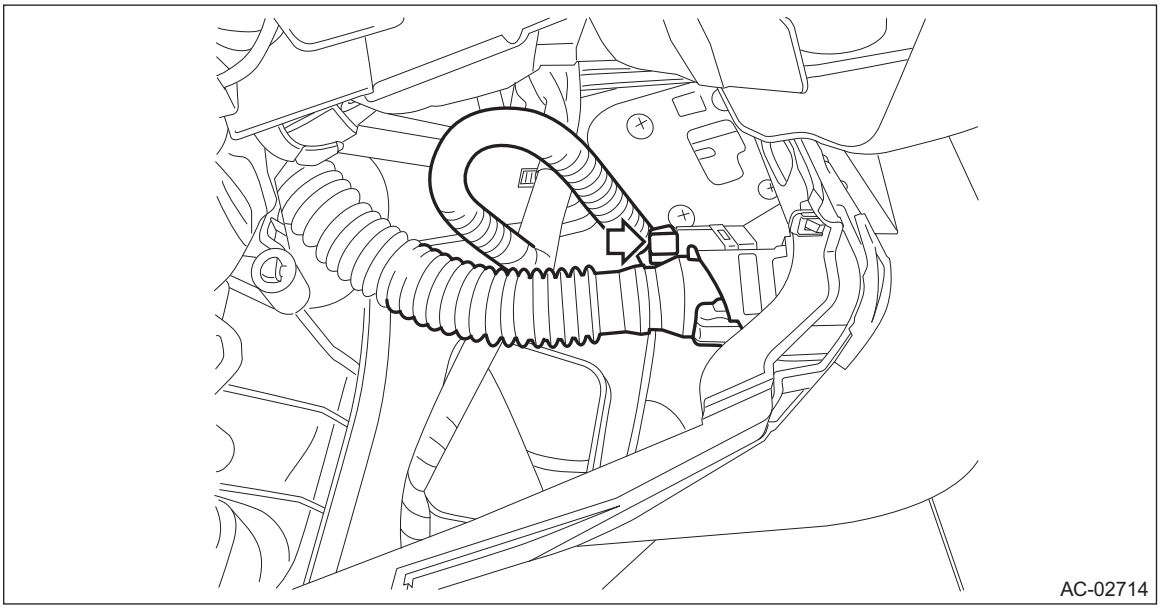
1) Check if the steering lock is released when you start the engine using the push button ignition switch.
2) If the system does not operate normally as the result of inspection, refer to “General Diagnostic Table” of the “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-127, STEERING LOCK SYSTEM, LIST, Diagnostics with Phenomenon.>

35.Push Button Ignition Switch

A: REMOVAL

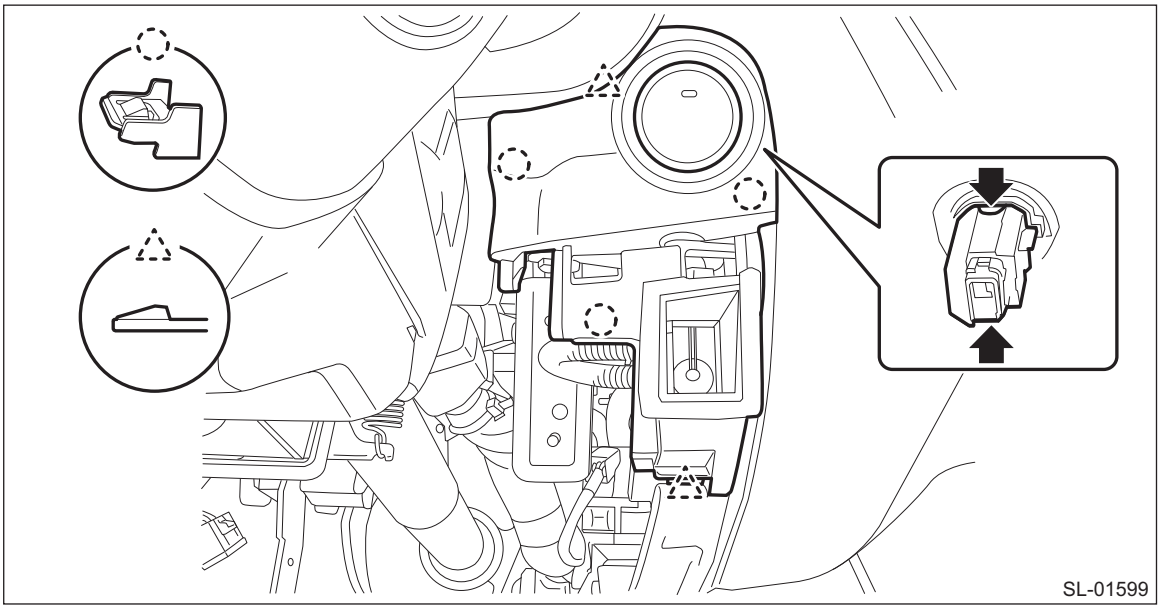
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Remove the push button ignition switch.
(1) Disconnect the connector, and remove the aspirator hose.



AC-02714

(2) Release the claws, and then remove the panel - switch.
(3) Release the claws, and then remove the push button ignition switch from the panel - switch.



SL-01599

B: INSTALLATION

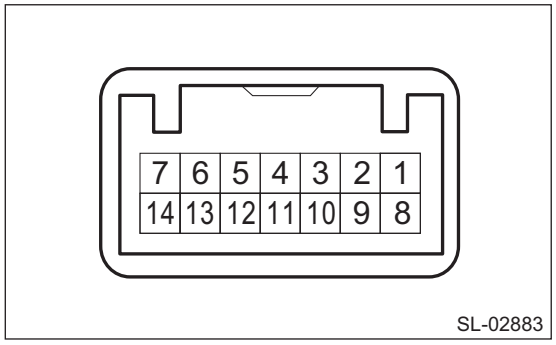
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the push button ignition switch to the cover assembly - instrument panel LWR driver INN.
2) Install the cover assembly - instrument panel LWR driver.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Check the continuity between the connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Specification
4 (COM) — 5 (GND)	Always	Continuity exists
7 (SSW1) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists
2 (SSW2) — 5 (GND)	Push button ignition switch released → pressed	Continuity exists

2) Check the push button ignition switch operation when battery voltage is applied between the connectors.

Terminal No.	Inspection conditions	Specification
11 (SWIL) — 5 (GND)	Connect battery to the terminals	Goes off → Red switch illumination light
12 (INDS) — 5 (GND)		Turns off → Switch indicator lights in green
13 (INDW) — 5 (GND)		Turns off → Switch indicator lights in orange

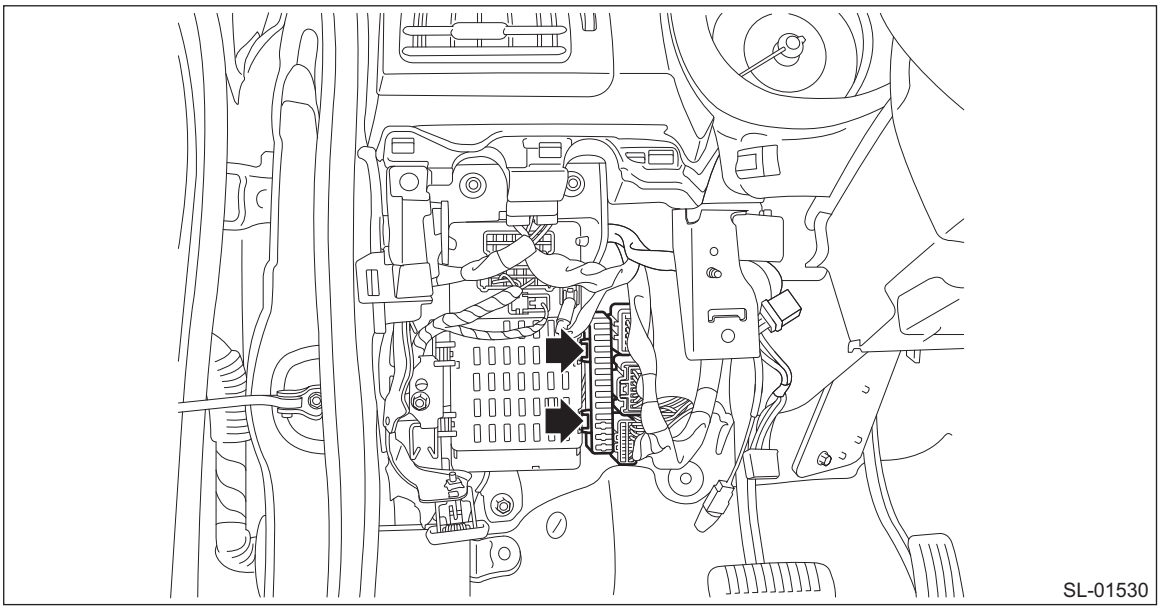
3) Replace the push button ignition switch if it is found defective.

36.Starter Relay (Push Button Start)

A: REMOVAL

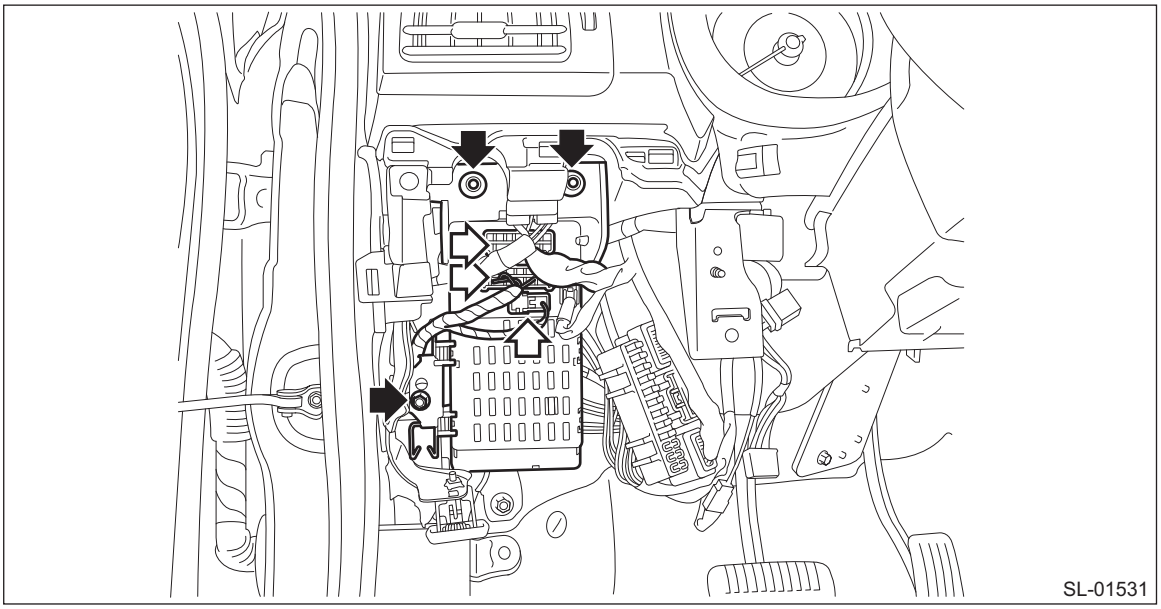
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



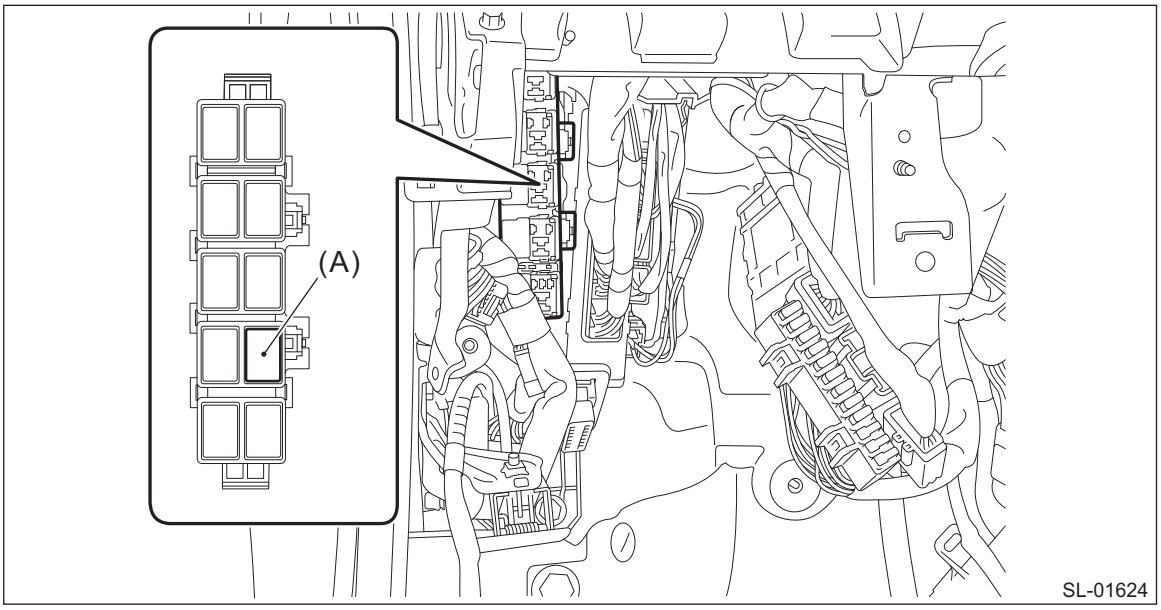
SL-01530

5) Remove the relay & fuse box.
   (1) Disconnect the connector.
   (2) Remove the bolts and nuts, and remove the relay & fuse box.



SL-01531

6) Remove the starter relay (push button start) (A) from the relay holder.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the starter relay (push button start).
2) Install the relay & fuse box and fuse holder.

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

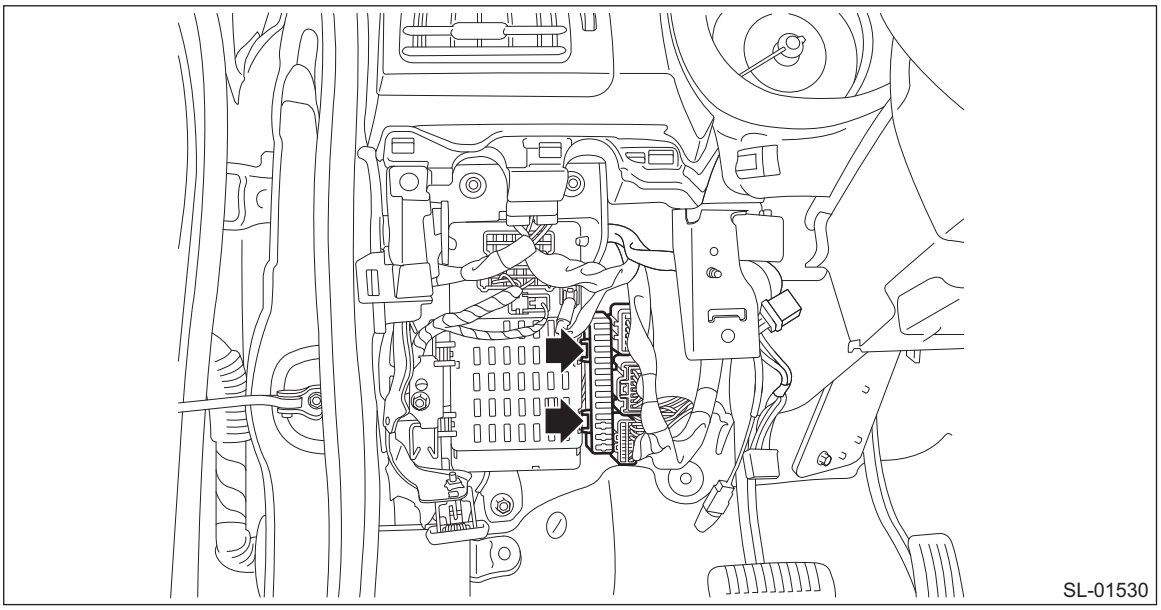
Refer to "CHECK RELAY" in "Relay and Fuse". <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

37.IG Relay1 (Push Button Start)

A: REMOVAL

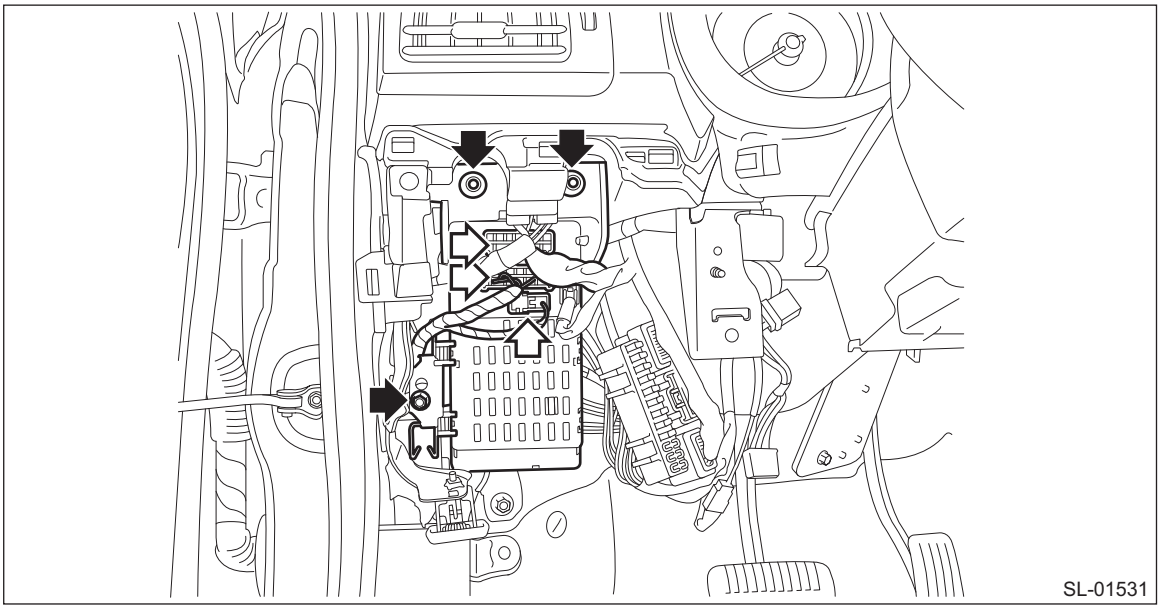
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



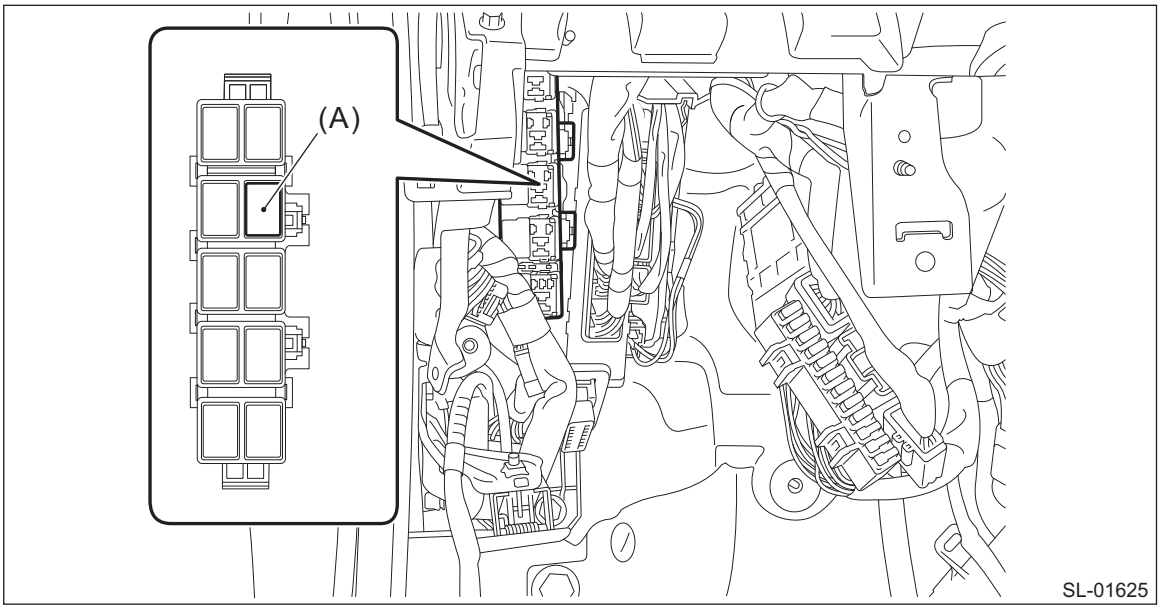
SL-01530

5) Remove the relay & fuse box.
   (1) Disconnect the connector.
   (2) Remove the bolts and nuts, and remove the relay & fuse box.



SL-01531

6) Remove IG relay 1 (push button start) (A) from the relay holder.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the IG relay 1 (push button start).
2) Install the relay & fuse box and fuse holder.

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

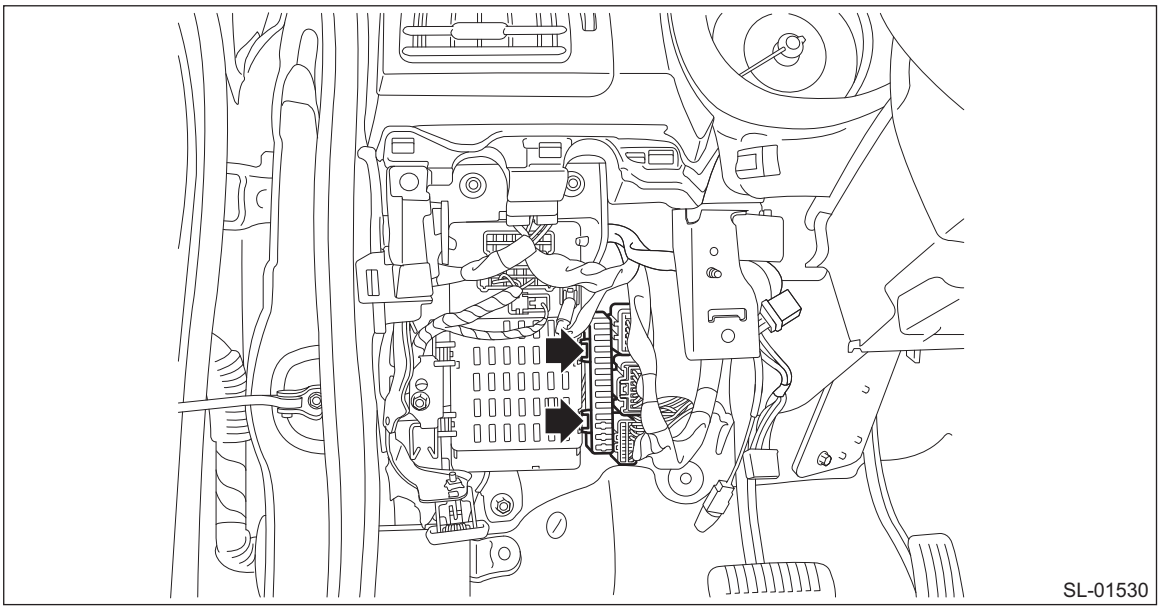
Refer to "CHECK RELAY" in "Relay and Fuse". <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

38.IG Relay2 (Push Button Start)

A: REMOVAL

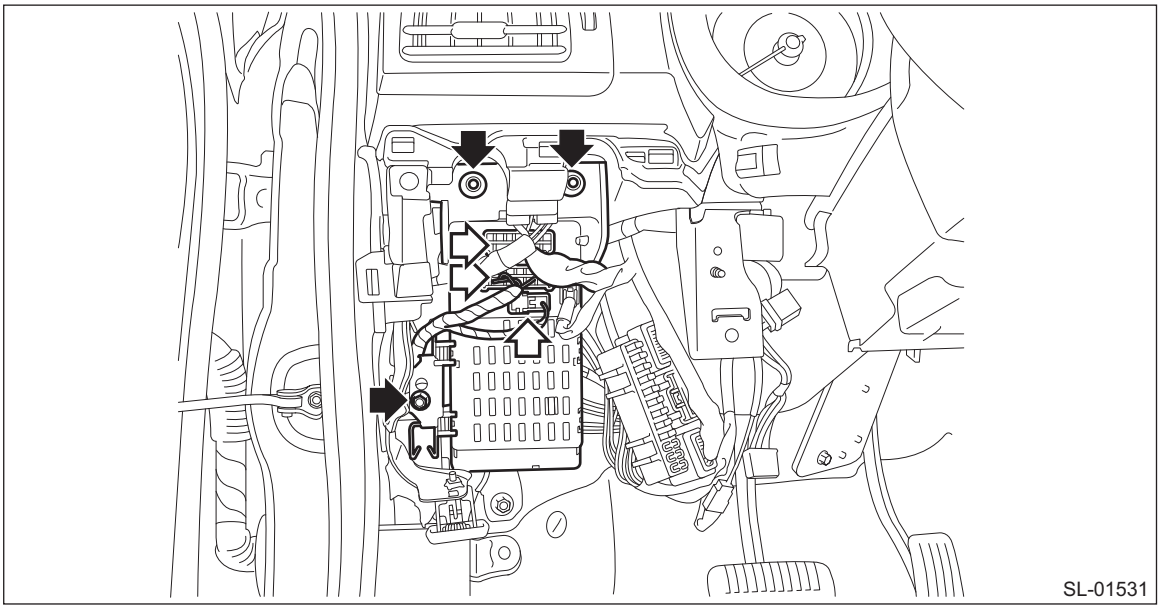
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



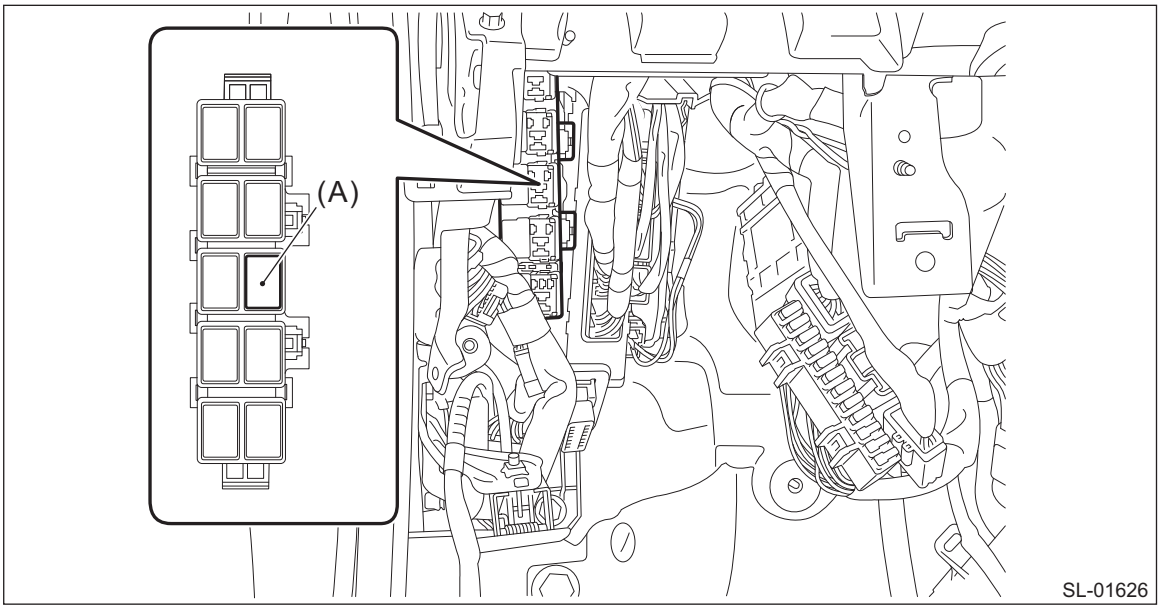
SL-01530

5) Remove the relay & fuse box.
   (1) Disconnect the connector.
   (2) Remove the bolts and nuts, and remove the relay & fuse box.



SL-01531

6) Remove IG relay 2 (push button start) (A) from the relay holder.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the IG relay 2 (push button start).
2) Install the relay & fuse box and fuse holder.

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

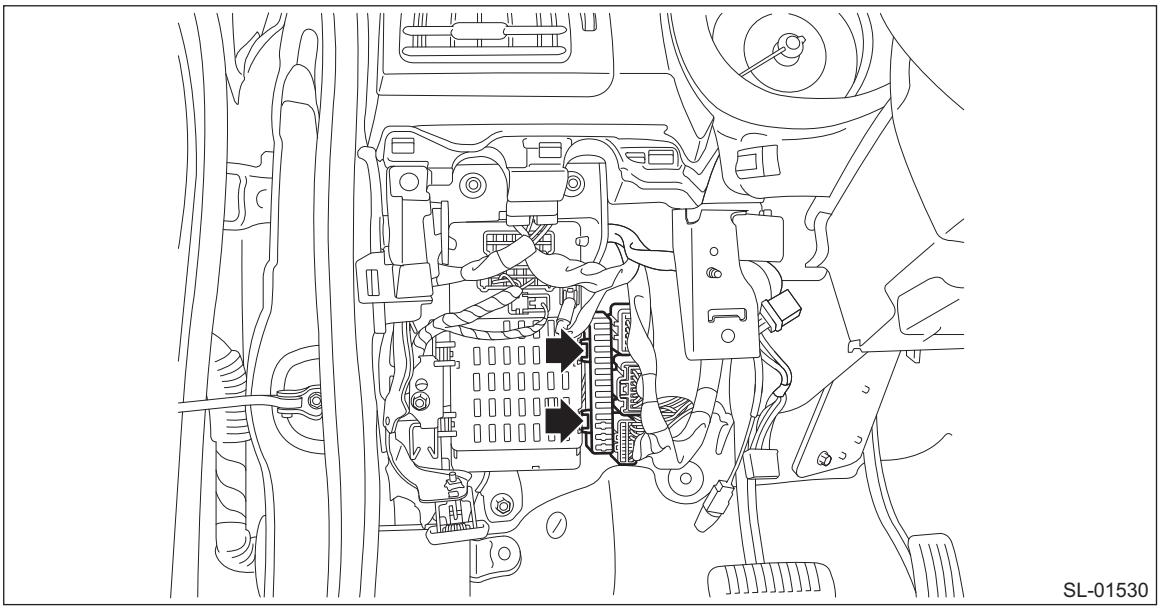
Refer to "CHECK RELAY" in "Relay and Fuse". <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

39.Accessory Relay (Push Button Start)

A: REMOVAL

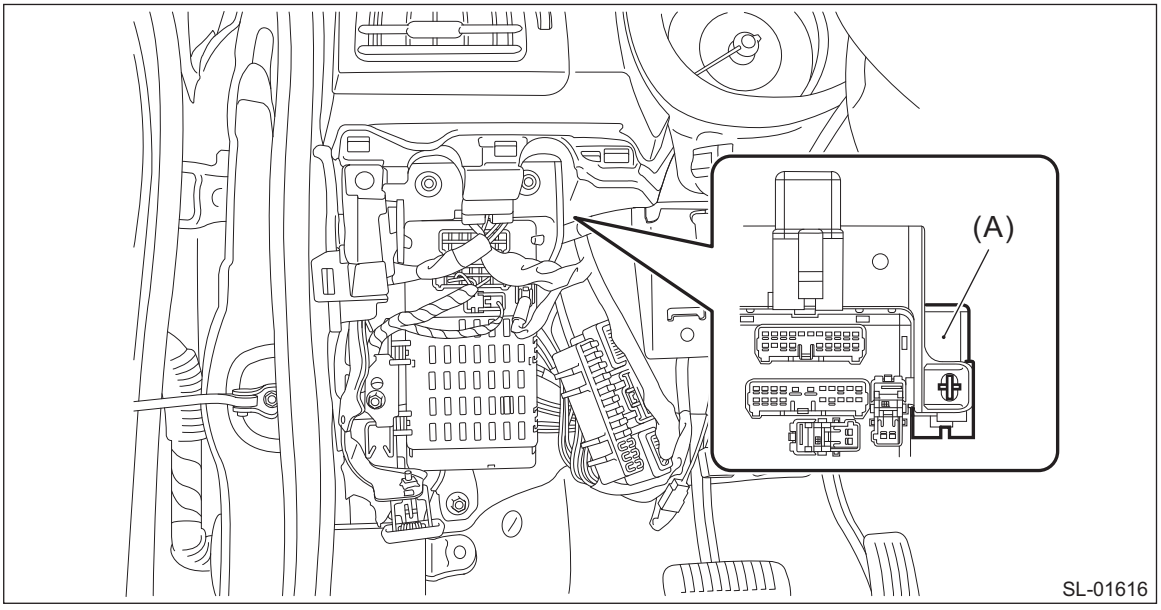
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



SL-01530

5) Remove the accessory relay (push button start) (A) from the relay and fuse box.



SL-01616

B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the accessory relay.
2) Install the fuse holder.
3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

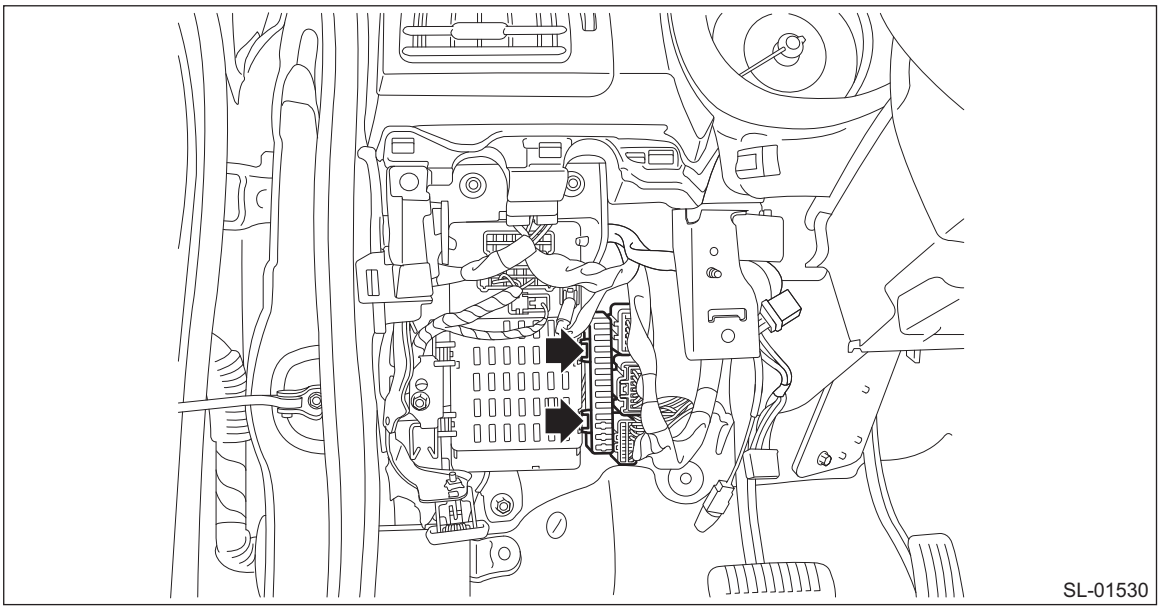
Refer to "CHECK RELAY" in "Relay and Fuse". <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

40.Starter Cut Relay

A: REMOVAL

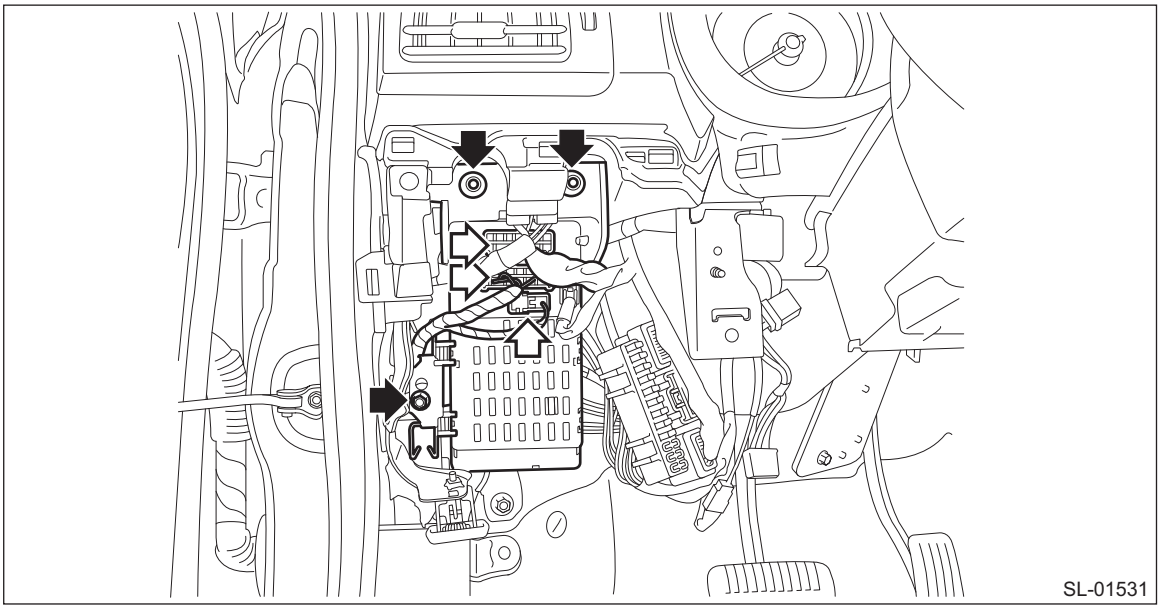
CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
4) Release the lock and remove the fuse holder.



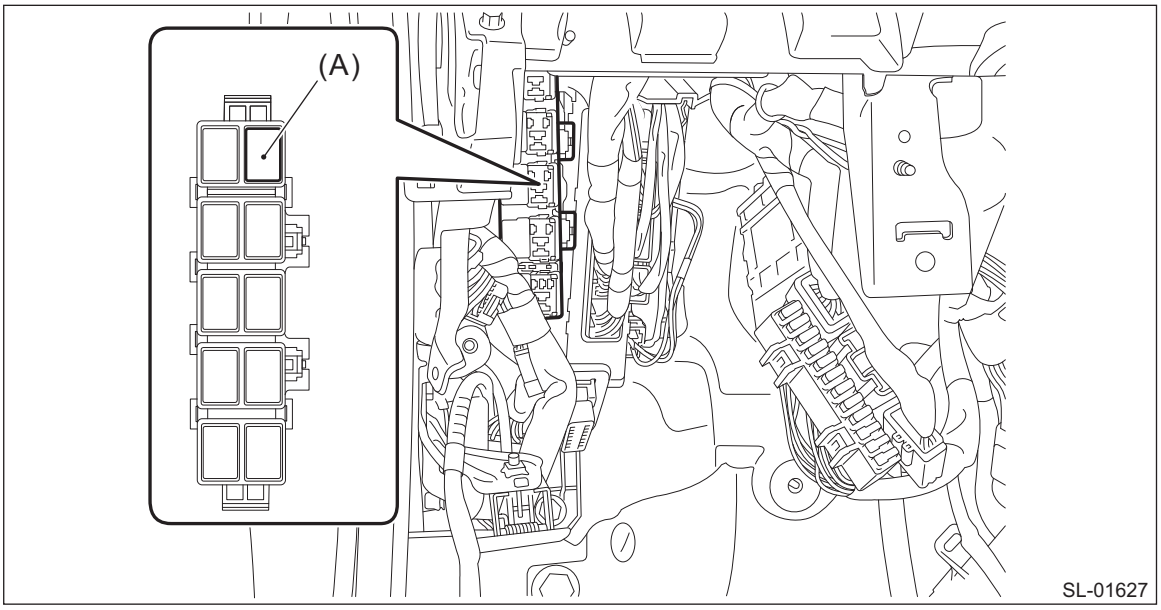
SL-01530

5) Remove the relay & fuse box.
   (1) Disconnect the connector.
   (2) Remove the bolts and nuts, and remove the relay & fuse box.



SL-01531

6) Remove the starter cut relay (A) from the relay holder.



B: INSTALLATION

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>

1) Install the starter cut relay.
2) Install the relay & fuse box and fuse holder.

Tightening torque:
Relay & fuse box: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

4) Install the cover assembly - instrument panel LWR driver.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Refer to "CHECK RELAY" in "Relay and Fuse". <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>

41.Access Buzzer

A: NOTE

For operation procedures of the access buzzer, refer to “KEYLESS BUZZER” section. <Ref. to SL-78, Keyless Buzzer.>

42.Function Setting (Customize)

A: OPERATION

Disabling/Activating the keyless access system

The following functions are disabled when the keyless access system functions are disabled:
- LOCK function performed by the operation of touch sensor on the door outer handle
- UNLOCK function by holding the door handle
- Trunk lid open function by trunk opener button operation in the trunk lid lock condition
- Lockout protection function
- Warning function
- Engine starting control using keyless access collation

B: PROCEDURE

1. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY DOOR OPEN/CLOSE PROCEDURE

1) Check that the vehicle status is as follows:
- Ignition switch OFF
- One window is completely open
- Keyless access system is activated (or disabled if re-activating)

2) Sit in the driver's seat with the door closed and press the door lock switch to UNLOCK once.
3) Open the driver's door within five seconds.
4) Within 5 seconds, with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
5) Within 10 seconds after finishing step 4), perform the closing → opening operation of the driver's door twice.
6) Within 10 seconds after finishing step 5), with the driver's door opened, slowly press the door lock switch to UNLOCK twice.
7) Within 10 seconds after finishing step 6), perform the closing → opening operation of the driver's door once.
8) Within five seconds after finishing step 7), close the drivers door.

NOTE:
- Perform the same procedures to re-activate the keyless access system from the disabled condition.
- In step 4) and step 6), press the door lock switch completely. The function may not work properly if the switch is pressed shortly.

9) The buzzer sounds for two seconds, and the function stops.

2. STOPPING KEYLESS ACCESS SYSTEM FUNCTION BY USING ACCESS KEY

1) Open the driver's door, and then push the door lock knob forward (LOCK direction).
2) Press the lock button of access key and trunk/rear gate button simultaneously for five seconds or more.
3) The buzzer sounds for two seconds, and the function stops.

NOTE:
Perform the same procedures to re-activate the keyless access system from the disabled condition.

43.Keyless Access With Push Button Start System

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Refer to “Diagnostics with Phenomenon” of “KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS)” section. <Ref. to KPS(diag)-126, Diagnostics with Phenomenon.>

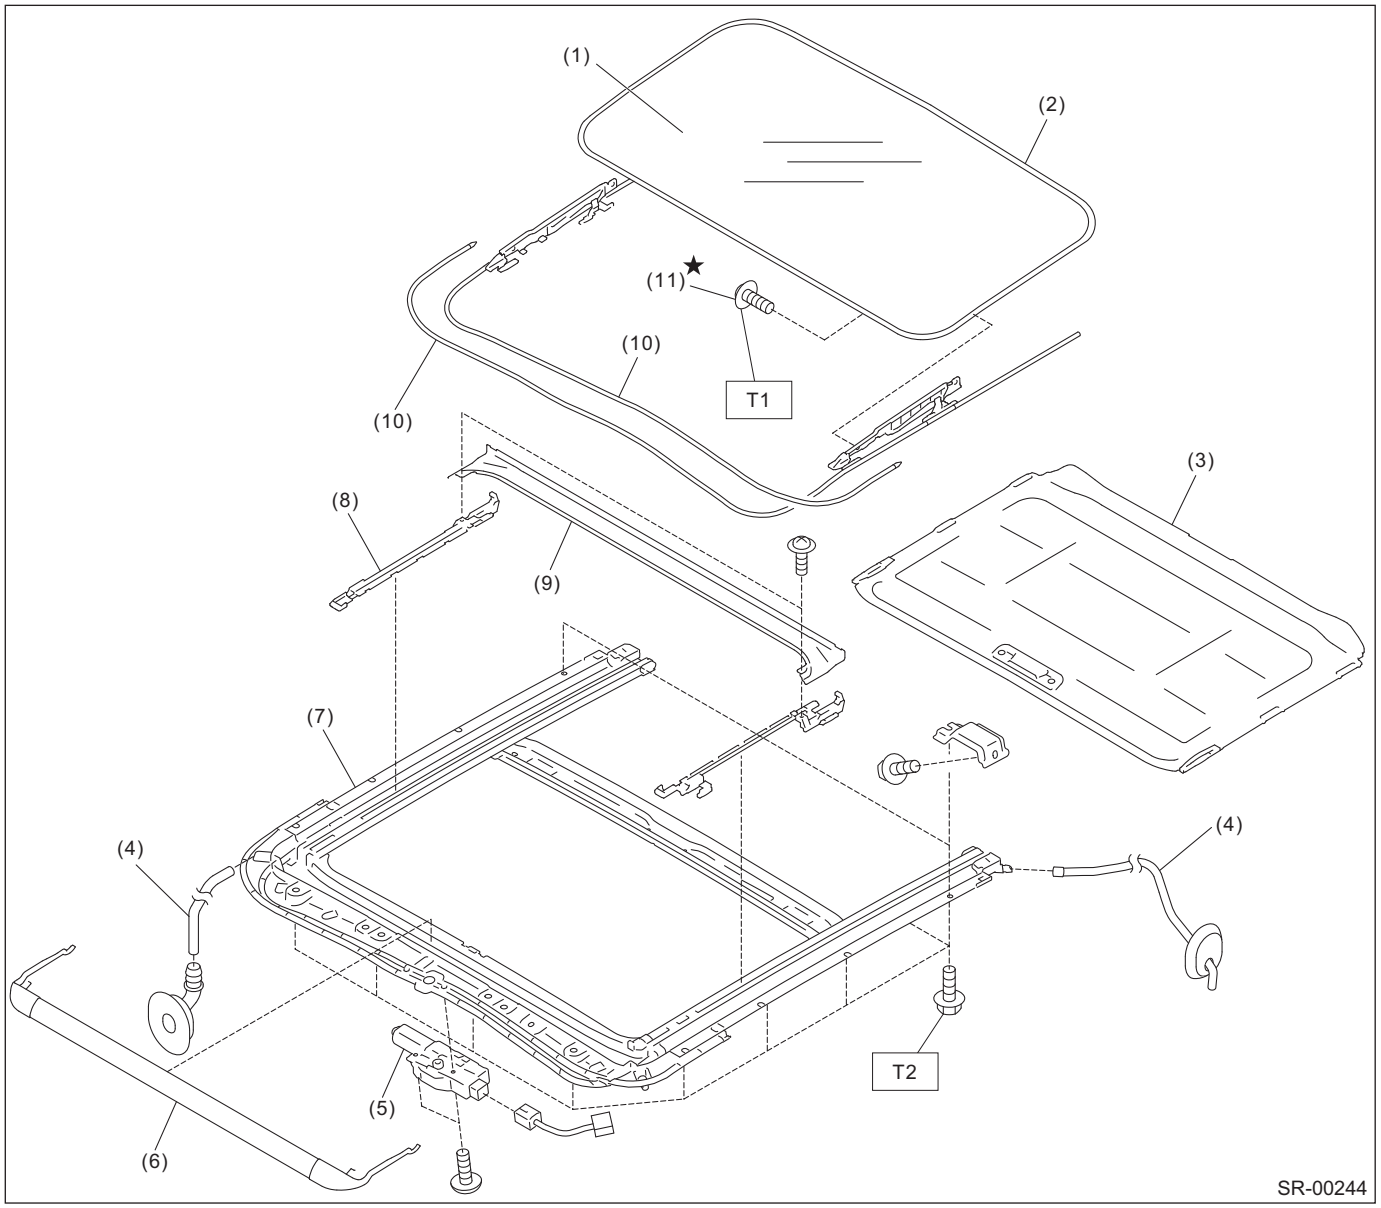
SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SR

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Sunroof Control System	5
4.	Glass Lid	7
5.	Sunroof Assembly	11
6.	Sunroof Motor	18
7.	Sunroof Switch	20
8.	Sunshade	22

1. General Description

A: COMPONENT



(1)	Lid ASSY - sunroof	(6)	Deflector ASSY - sunroof	(11)	TORX® bolt
(2)	Weather strip	(7)	Rail ASSY - sunroof		
(3)	Sunshade ASSY	(8)	Link - drain sunroof	***Tightening torque: N·m (kgf-m, ft-lb)***	
(4)	Drain tube - sunroof	(9)	Drain ASSY - sunroof	***T1: 4.5 (0.5, 3.3)***	
(5)	Motor ASSY - sunroof	(10)	Cable ASSY	***T2: 6 (0.6, 4.4)***	

B: CAUTION

Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.

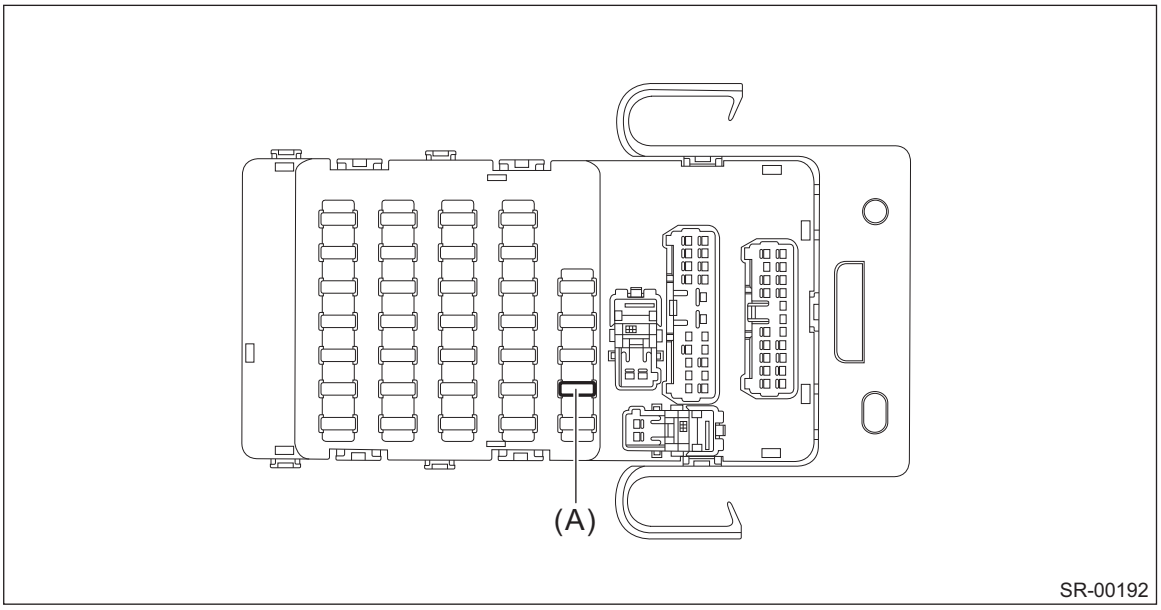
C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Hexagon wrench	Used for forcibly driving the motor assembly - sunroof. Width across flat 4 mm (0.16 in)
TORX® T25	Used for removing and installing the lid assembly - sunroof and motor assembly - sunroof.

2. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 10 A (IG 2)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

3. Sunroof Control System

A: WIRING DIAGRAM

Refer to “Sunroof Control System” in the wiring diagram. <Ref. to WI-350, WIRING DIAGRAM, Sunroof Control System.>

B: INSPECTION

Symptoms	Inspection steps
Water leakage	1. Check the roof panel and the lid assembly - sunroof for improper or poor sealing. 2. Check the drain tube - sunroof for clogging. 3. Check the joints of the rail assembly - sunroof for improper sealing and for proper installation to the body.
Booming noise, wind noise and other noise	1. Check the lid assembly - sunroof and the roof panel for improper clearance. 2. Check the sunshade assembly and the trim panel - roof assembly for improper clearance.
Abnormal motor noise	1. Check installing part of motor for looseness. 2. Check gears and bearings for wear. 3. Check cable assembly for wear. 4. Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	1. Check guide rail for foreign particles. 2. Check guide rail for improper installation. 3. Check parts for mutual interference. 4. Check cable slider for improper clinching. 5. Check cable assembly for improper installation.
Motor does not rotate or it does not rotate normally.	1. Check fuse for blown out. 2. Check switch for improper function. 3. Check motor assembly for incorrect terminal voltage. 4. Check the relay for improper operation. 5. Check harness for open or short and terminals for poor connections.
Incorrect reverse operation of the lid assembly - sunroof	Check guide rail for foreign particles.

Incorrect reverse operation of the lid assembly - sunroof while driving on rough road

The lid assembly - sunroof has auto-reverse function. When the lid assembly - sunroof is pushed in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1.0 kgf, 2.2 lbf), the glass lid moves in reverse and stops.

Therefore, if you operate (open or close) the lid assembly - sunroof while driving on rough road, the vibration may be judged as a force and the lid may incorrectly move in the reverse direction.

When the incorrect reverse operation is occurred repeatedly, perform inspection around the sunroof frame. If there are no problems, perform the initialization operation with following procedure.

C: OPERATION

1. INITIALIZE OPERATION

CAUTION:

During initialization, perform the position learning and the sliding learning. Sliding learning mode can not be initiated unless the position learning is performed.

NOTE:

When initialize operation is performed, it is necessary to press the switch repeatedly as it operates for only at the moment when the switch is pressed, even when the switch is held down.

Position learning

1) Position the lid assembly - sunroof at the full tilt up position, and press and hold the tilt up switch for ten seconds.

2) The motion of the glass lid shifts to inching operation until it reaches the full close position. After that, it returns to the full tilt up position and then stops.

3) Release the tilt up switch to finish the position learning.

Sliding learning

1) Within six seconds after the position learning is finished, press and hold the tilt up switch again.
2) The lid assembly - sunroof moves to the full close position, full open position, and the full close position successively, and stops at the full close position.
3) Release the tilt up switch and turn the IG to OFF to finish the initializing.

D: NOTE

For procedure of each component in the sunroof control system, refer to the respective section.
- Glass lid: <Ref. to SR-7, Glass Lid.>
- Sunroof assembly: <Ref. to SR-11, Sunroof Assembly.>
- Sunroof motor: <Ref. to SR-18, Sunroof Motor.>
- Sunroof switch: <Ref. to SR-20, Sunroof Switch.>
- Sunshade: <Ref. to SR-22, Sunshade.>

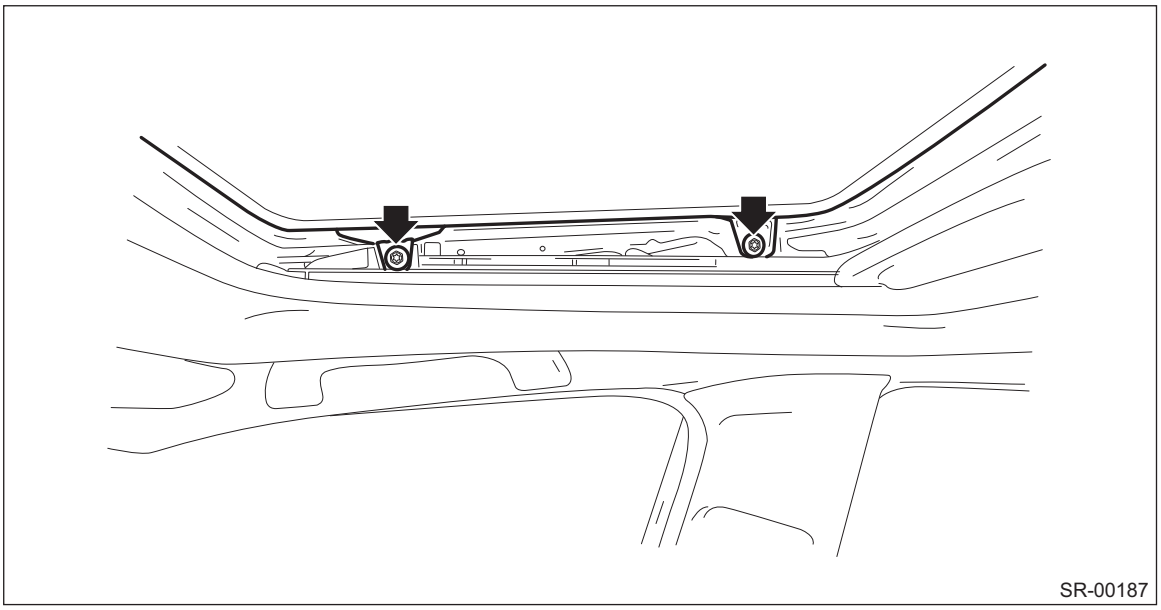
4. Glass Lid

A: REMOVAL

1. GLASS LID

CAUTION:
Be careful not to damage the lid assembly - sunroof.
1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
2) Remove the lid assembly - sunroof.

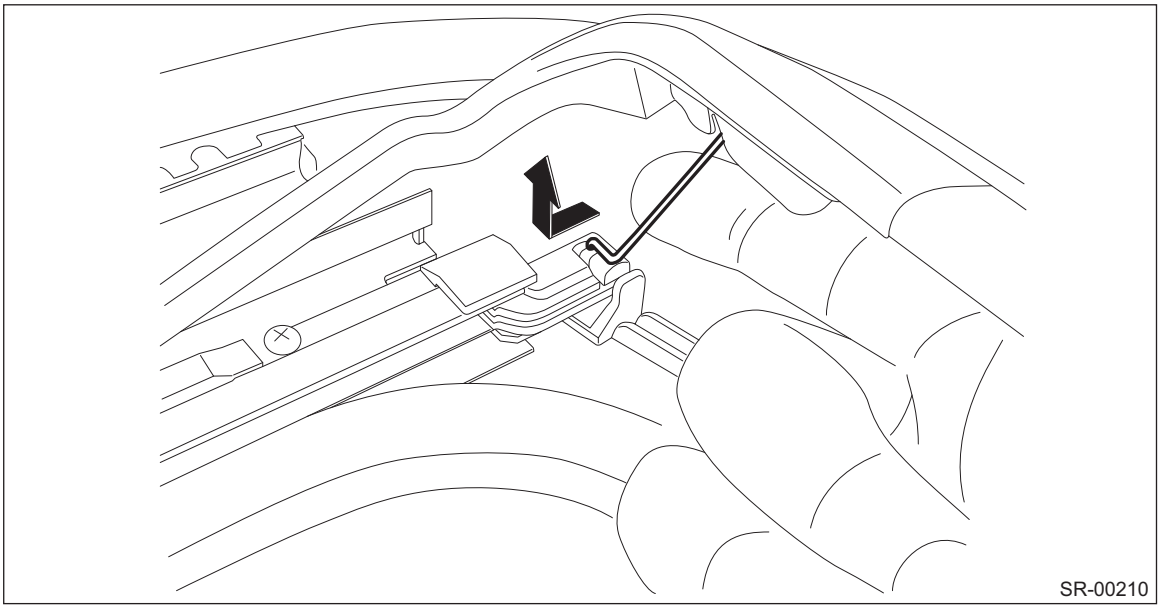
Preparation tool:
TORX® T25



SR-00187

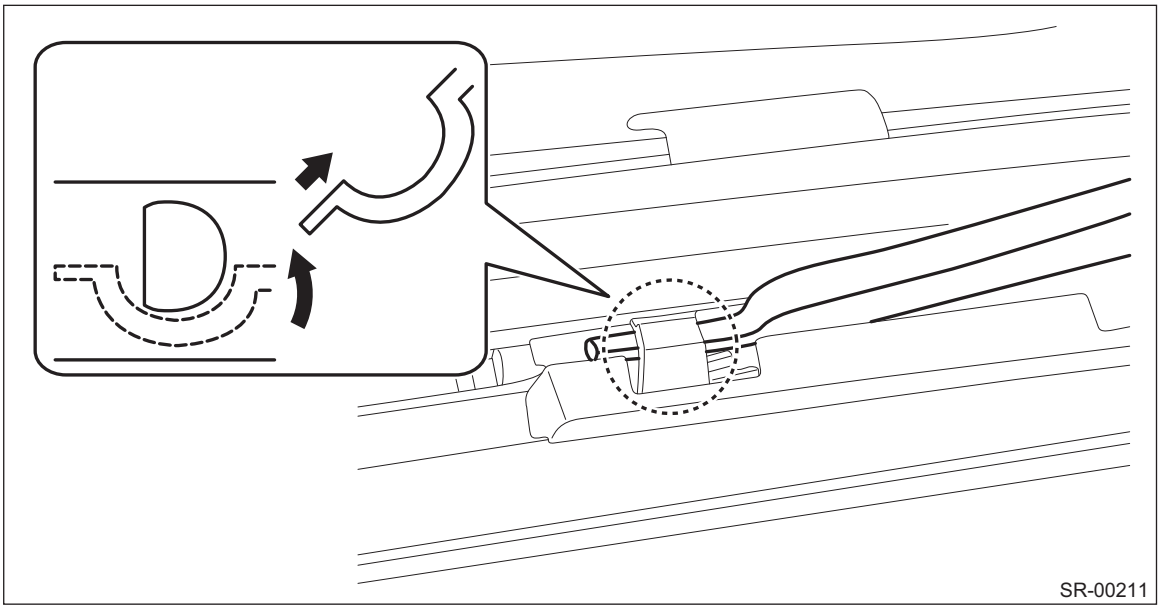
2. DEFLECTOR ASSEMBLY

1) Open the lid assembly - sunroof and the sunshade assembly.
2) Remove the deflector assembly - sunroof.
   (1) Remove the spring from the rail assembly - sunroof.



SR-00210

(2) While lifting up the deflector assembly - sunroof, remove the deflector assembly - sunroof from the hook on the rail assembly - sunroof.



B: INSTALLATION

1. GLASS LID

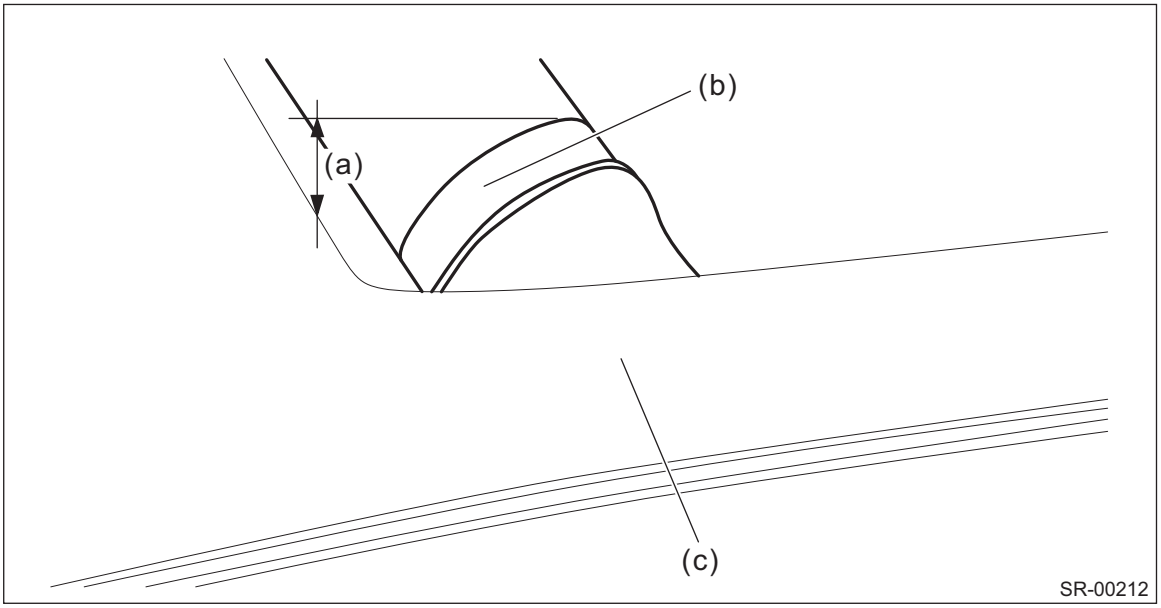
1) Using a new TORX® bolt, install the lid assembly - sunroof.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

2) Perform the open/close operation checks for the glass lid.
3) Check the height of the lid assembly - sunroof and the roof panel, and perform adjustment when there is a difference between up and down, and left and right. <Ref. to SR-9, ADJUSTMENT, Glass Lid.>

2. DEFLECTOR ASSEMBLY

1) Install the deflector assembly - sunroof.
2) After installation, measure the height from the roof panel when deflector assembly - sunroof is activated.

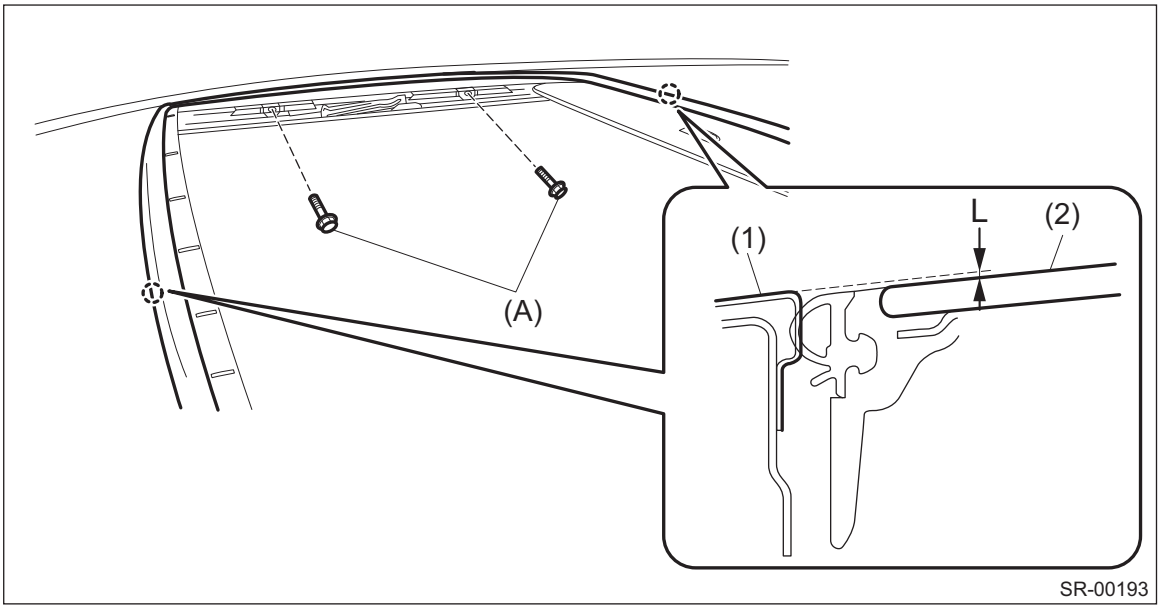


(a) 14 mm (0.55 in) (b) Deflector ASSY - sunroof (c) Roof panel

C: ADJUSTMENT

1) Adjust the height of the lid assembly - sunroof and the roof panel.
2) Loosen the lid assembly - sunroof mounting bolts (A), and then adjust the height by moving the lid assembly - sunroof side.

Lid assembly - sunroof height difference L:
Lid assembly - sunroof to Roof panel: 0.7±1 mm (0.03±0.04 in)



(1) Roof panel (2) Lid ASSY - sunroof

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

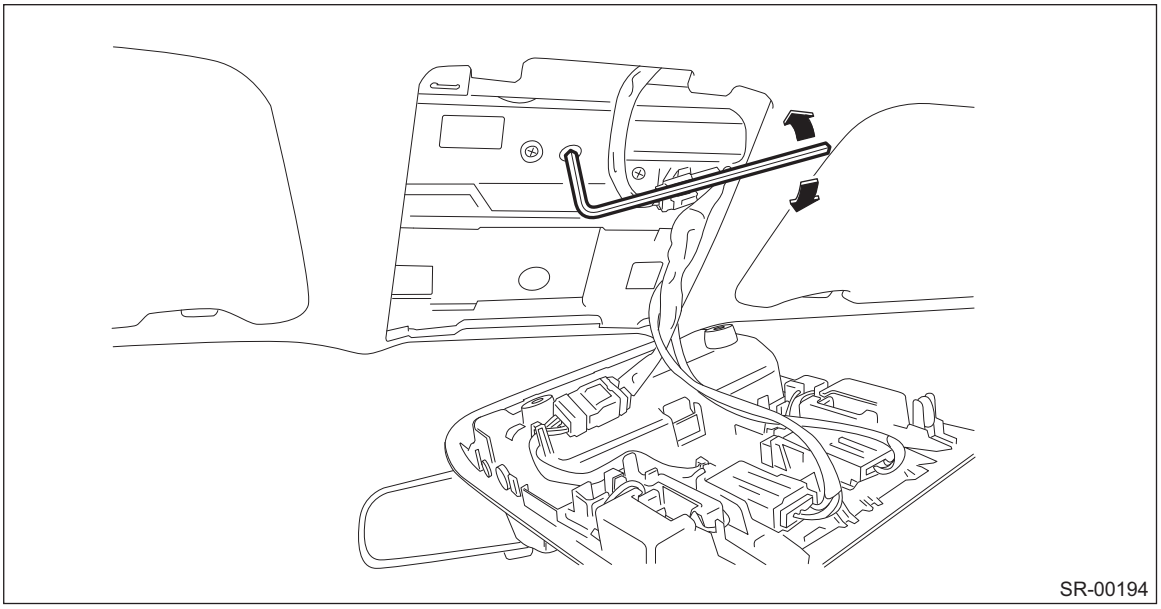
D: FORCED DRIVE

If the lid assembly - sunroof does not operate or the motor assembly is not supplied with power, move the lid assembly - sunroof using the hexagon wrench.

Preparation tool:
Hexagon wrench: width across flat 4 mm (0.16 in)

CAUTION:
After a forced operation, make sure to perform an initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
1) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-72, REMOVAL, Spot Map Light.>
2) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
3) Insert the hexagon wrench securely until it touches the motor shaft end.
4) Turn the hexagon wrench, and move the lid assembly - sunroof.
- Turning right, the lid assembly - sunroof opens.
- Turning left, the lid assembly - sunroof closes.

CAUTION:
Be careful not to damage the adjacent parts with the rod end when moving the lid assembly - sunroof with the hexagon wrench.



5) Install the light assembly - map. (Models without EyeSight) <Ref. to LI-74, INSTALLATION, Spot Map Light.>
6) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>

5. Sunroof Assembly

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• When removing the clip, use great care not to damage the trim panel - roof assembly.

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

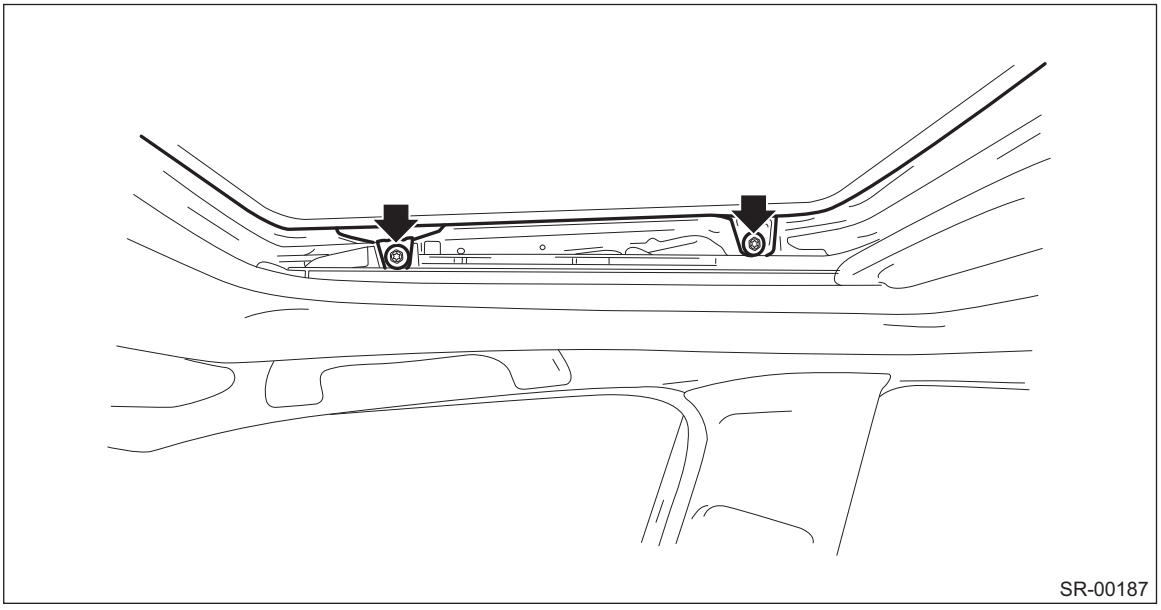
NOTE:
- Completely close the lid assembly - sunroof, then disconnect the ground cable.
- For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the lid assembly - sunroof.

CAUTION:
Be careful not to damage the lid assembly - sunroof.

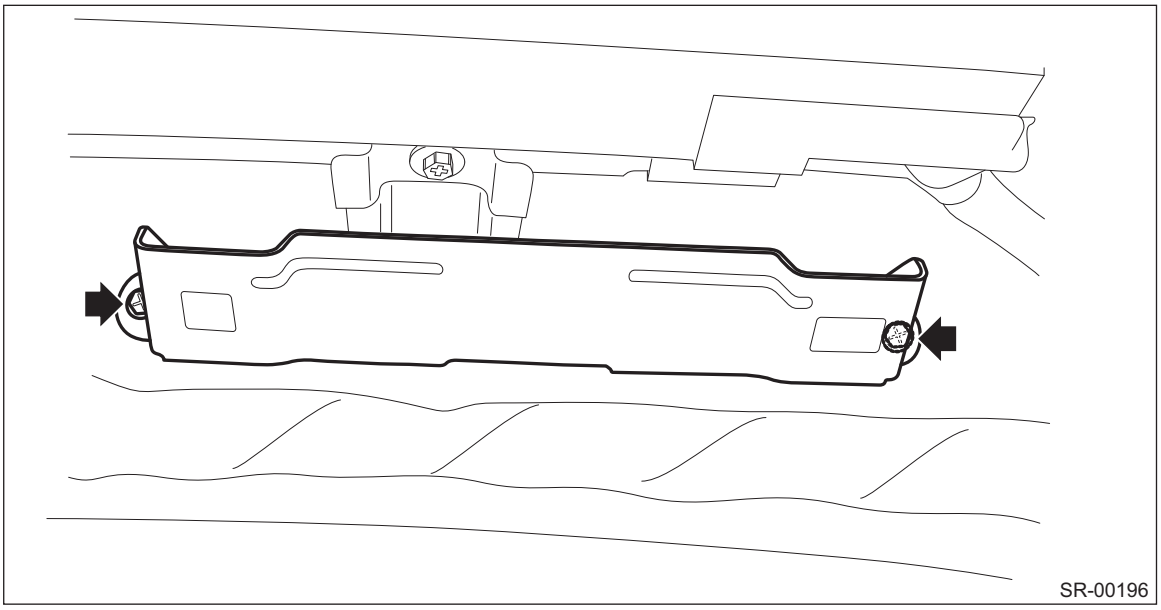
(1) Completely close the lid assembly - sunroof, and open the sunshade assembly.
(2) Remove the lid assembly - sunroof.

Preparation tool:
TORX® T25



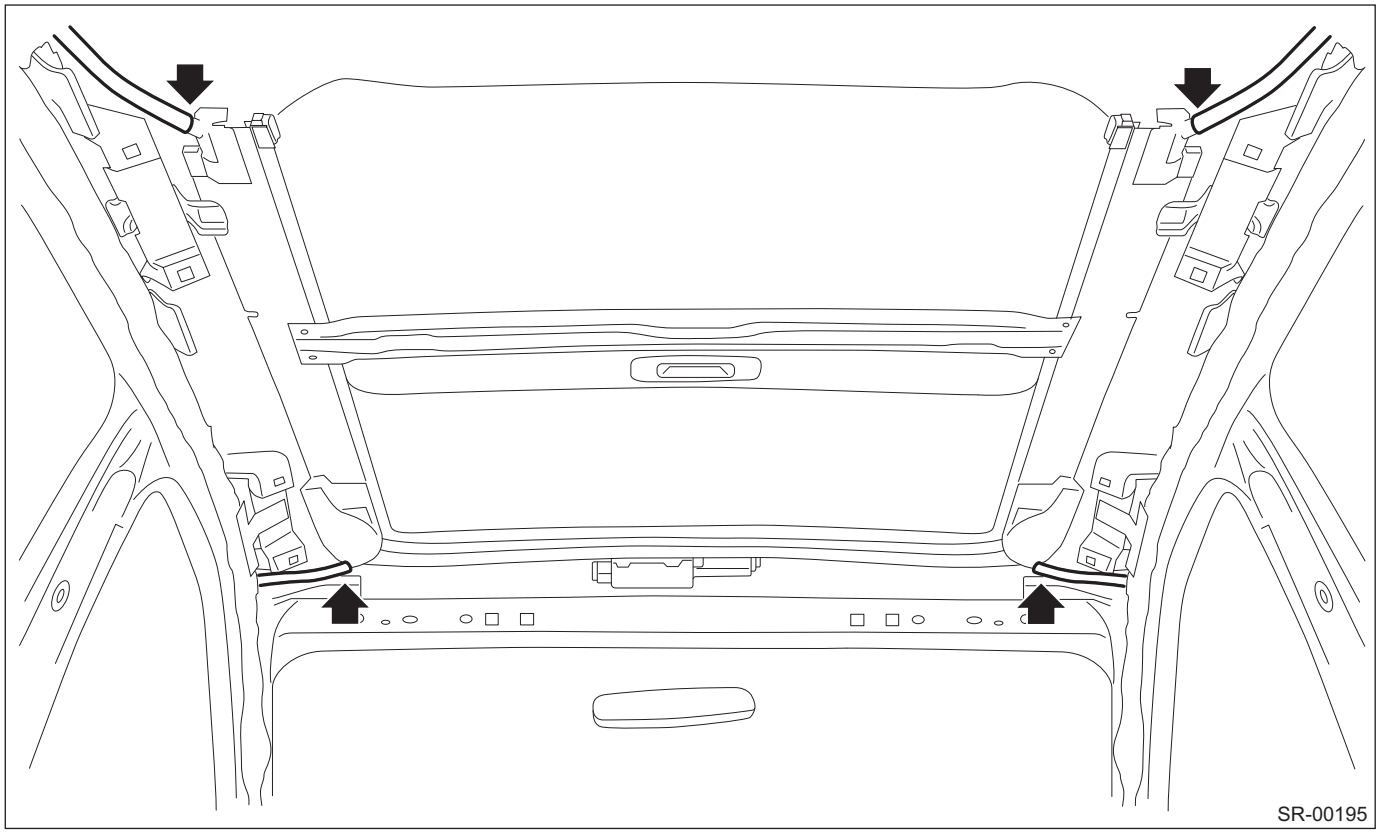
3) Remove the trim panel - roof assembly. <Ref. to EI-101, REMOVAL, Roof Trim.>

4) Remove the bracket - assist rail.



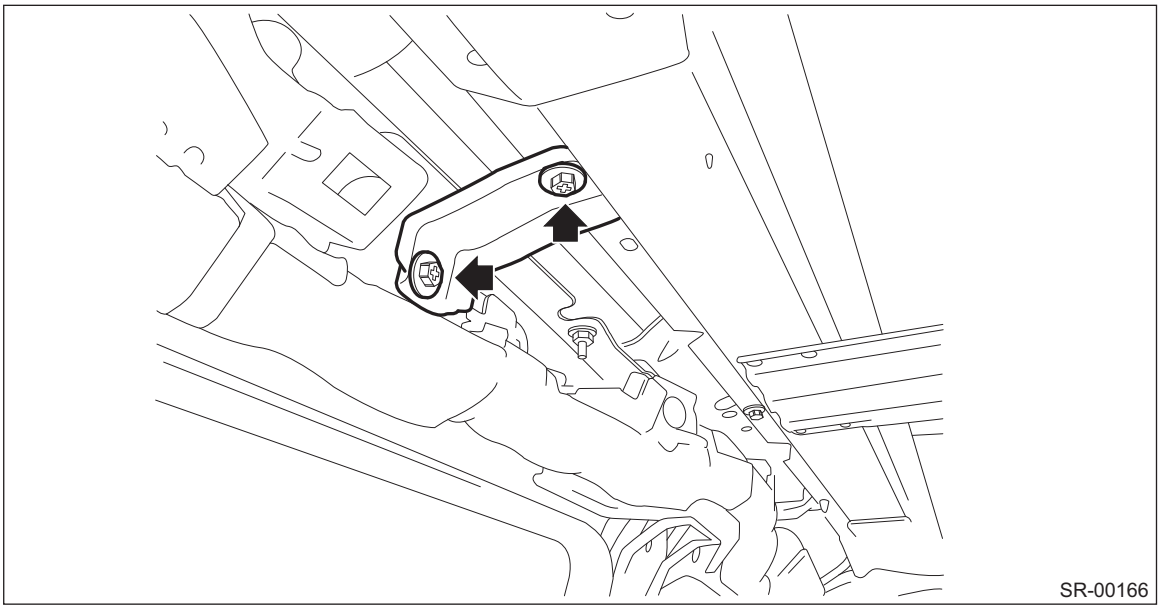
5) Disconnect the connector of the motor assembly - sunroof.
6) Remove the drain tube - sunroof.

NOTE:
When removing the drain tube - sunroof completely, perform the step 8).

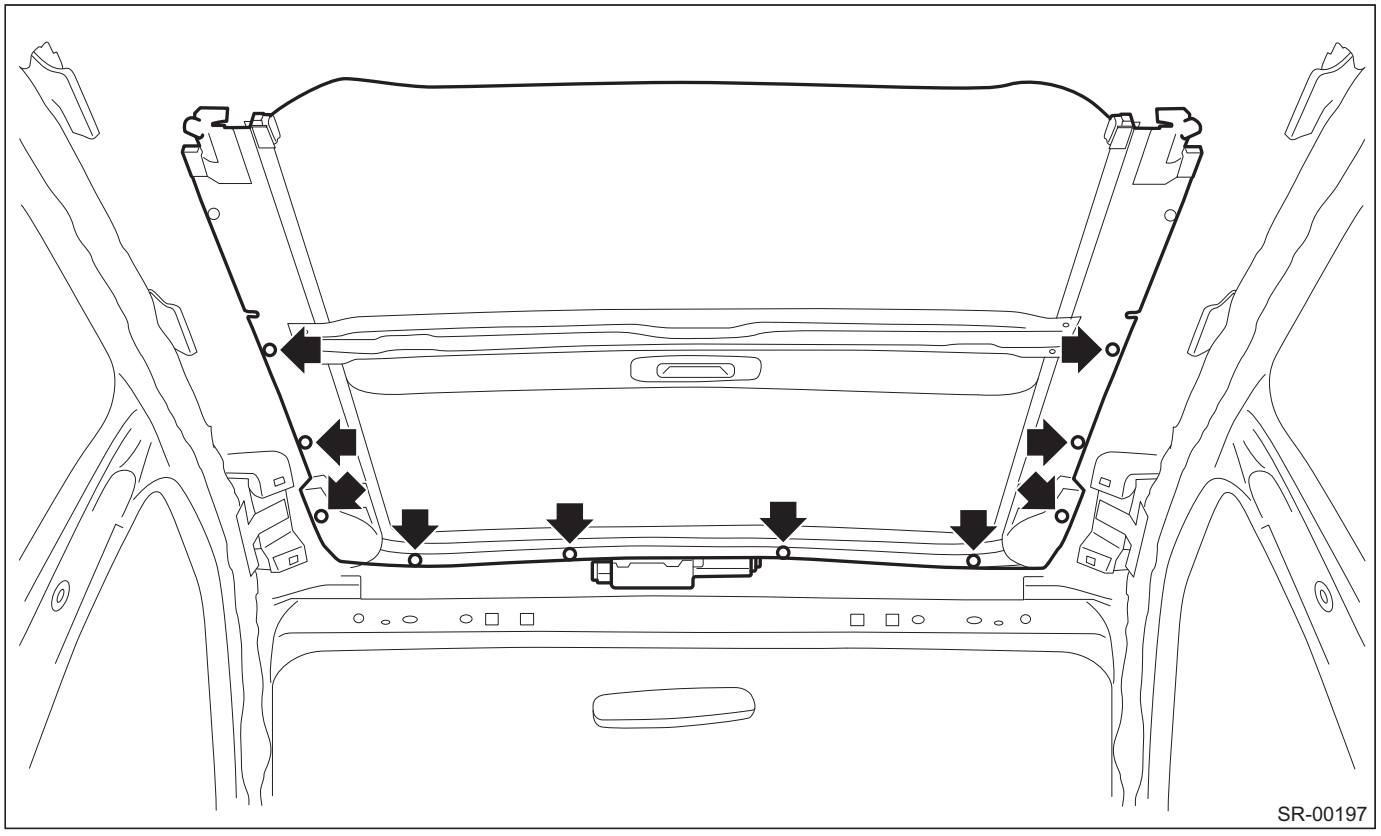


7) Remove the rail assembly - sunroof.
   (1) Remove the curtain airbag module. <Ref. to AB-47, REMOVAL, Curtain Airbag Module.>

(2) Remove the bolts and then remove the sunroof bracket.



(3) Remove the bolts, then remove the rail assembly.

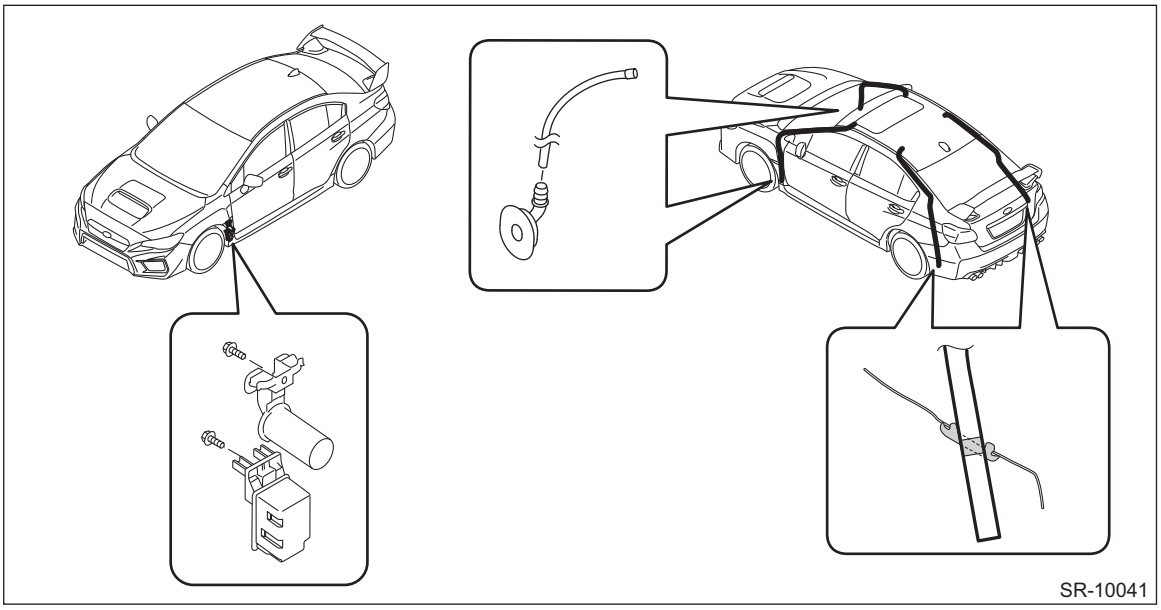


8) Remove the drain tube - sunroof.

NOTE:
For easy replacement work, attach a string when pulling the drain tube - sunroof.

(1) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
(2) Disconnect each connector, bolt and clip, then remove the connector holder.
(3) Remove the front side of drain tube - sunroof.
(4) Remove the mat - rear floor and the spacer - rear floor.

(5) Remove the rear side of drain tube - sunroof.



B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
• Be careful not to snag the harness.

1) Install each connector and the drain tube - sunroof.

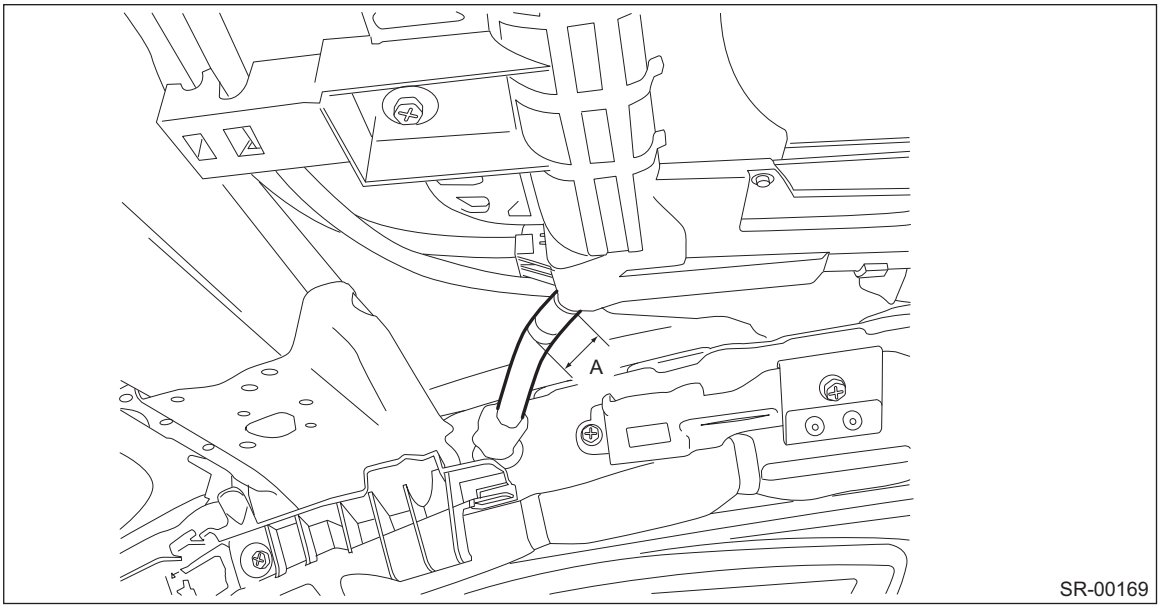
Tightening torque:
Connector holder: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Ground bolt: 13 N·m (1.3 kgf-m, 9.6 ft-lb)

2) Install the cover side sill - front.
3) Install the sunroof bracket and the rail assembly - sunroof.

Tightening torque:
6 N·m (0.6 kgf-m, 4.4 ft-lb)

4) Connect the harness connector of the drain tube - sunroof and the motor assembly.

CAUTION:
Insert the four drain tubes 15 mm (0.59 in) or more into the drain pipes (A).



5) Install the bracket - assist rail.

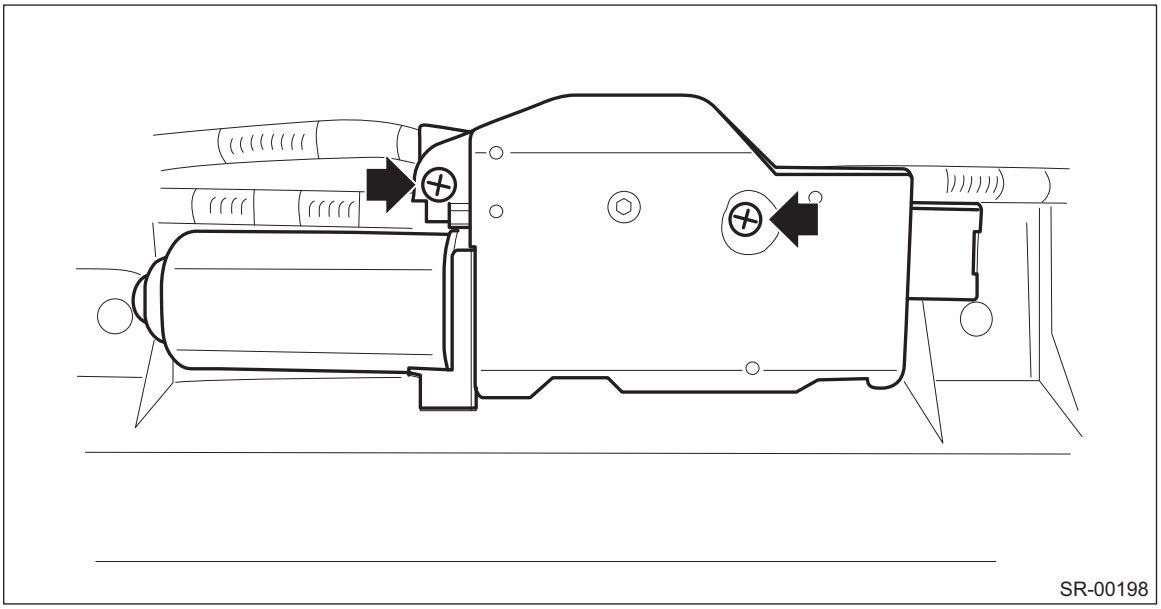
Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

6) Install the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
7) Using a new TORX® bolt, install the lid assembly - sunroof.

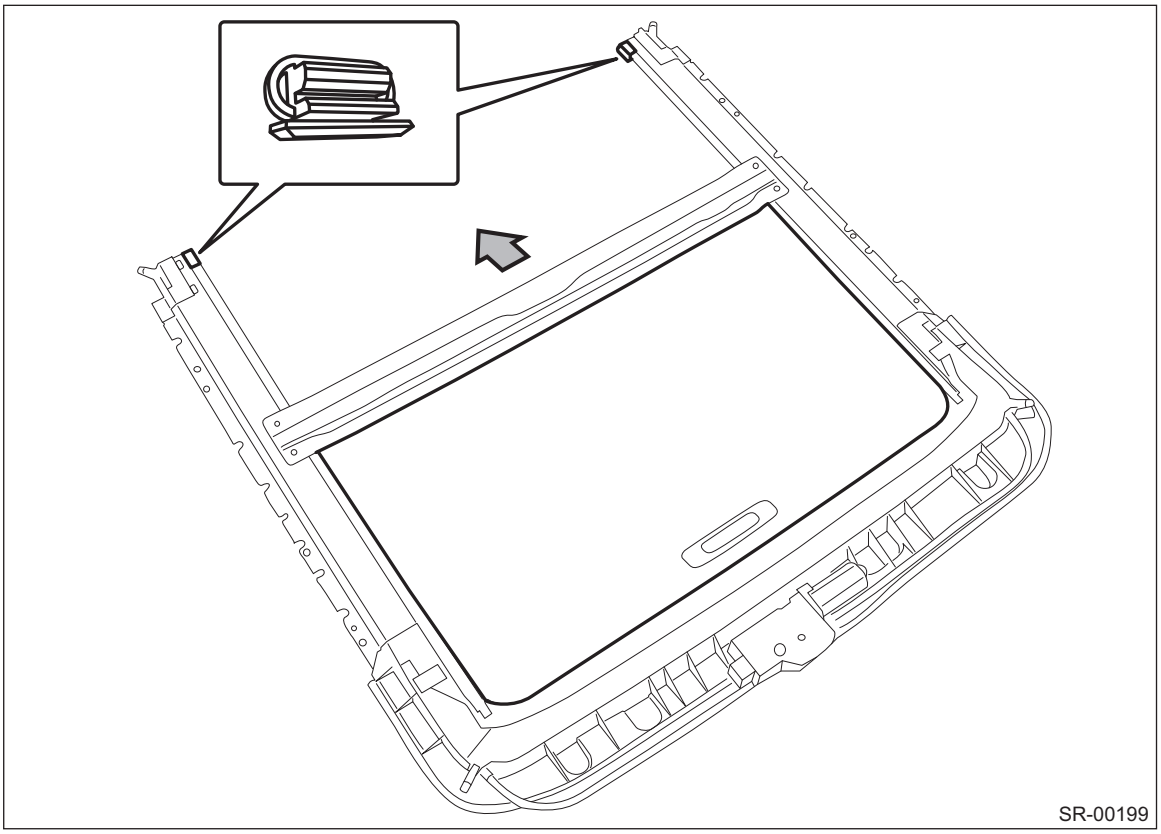
Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

C: DISASSEMBLY

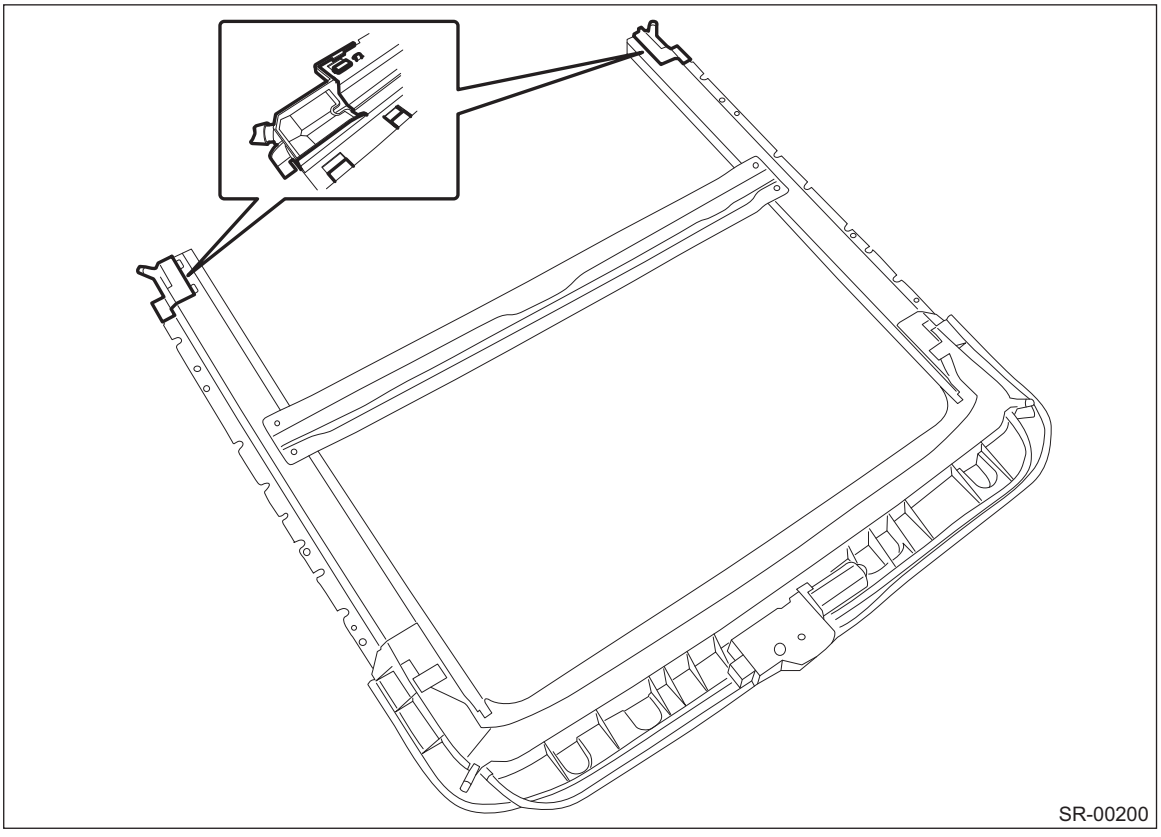
1) Remove the screw and remove the sunroof motor.



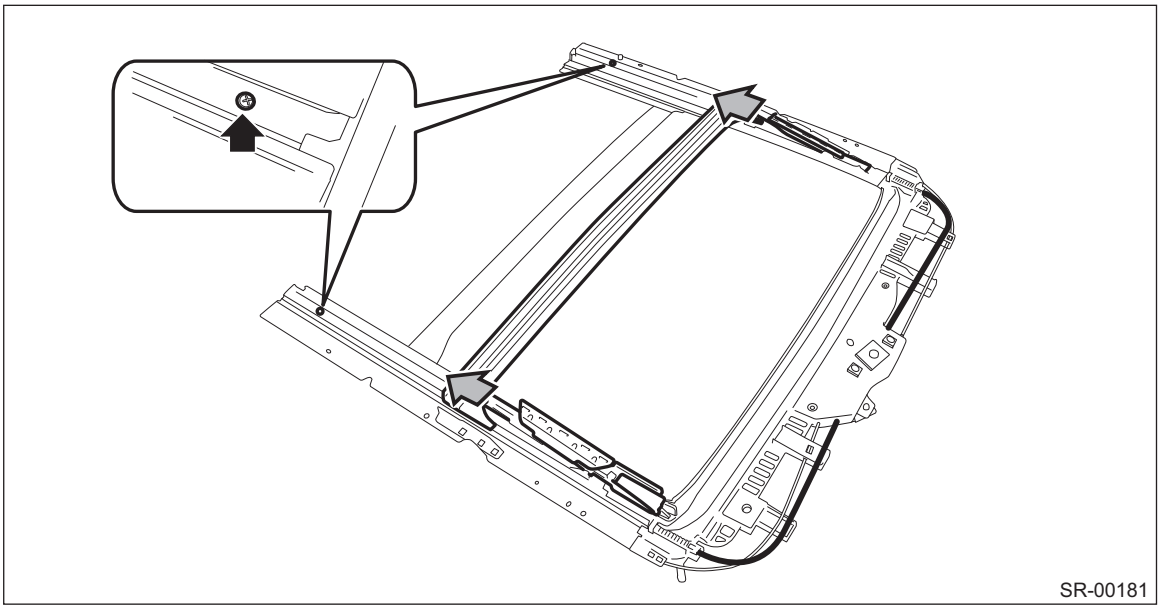
2) Remove the stopper rubber and pull out the sunshade assembly from the rail assembly - sunroof.



3) Disconnect the claws and then remove the drain holder.



4) Remove the screw and pull out the cable assembly from the rail assembly - sunroof.



D: ASSEMBLY

1) Insert the cable assembly into the rail assembly - sunroof.
2) Install the drain holder.
3) Insert the sunshade assembly into the rail assembly - sunroof, and install the stopper rubber.
4) Install the sunroof motor.

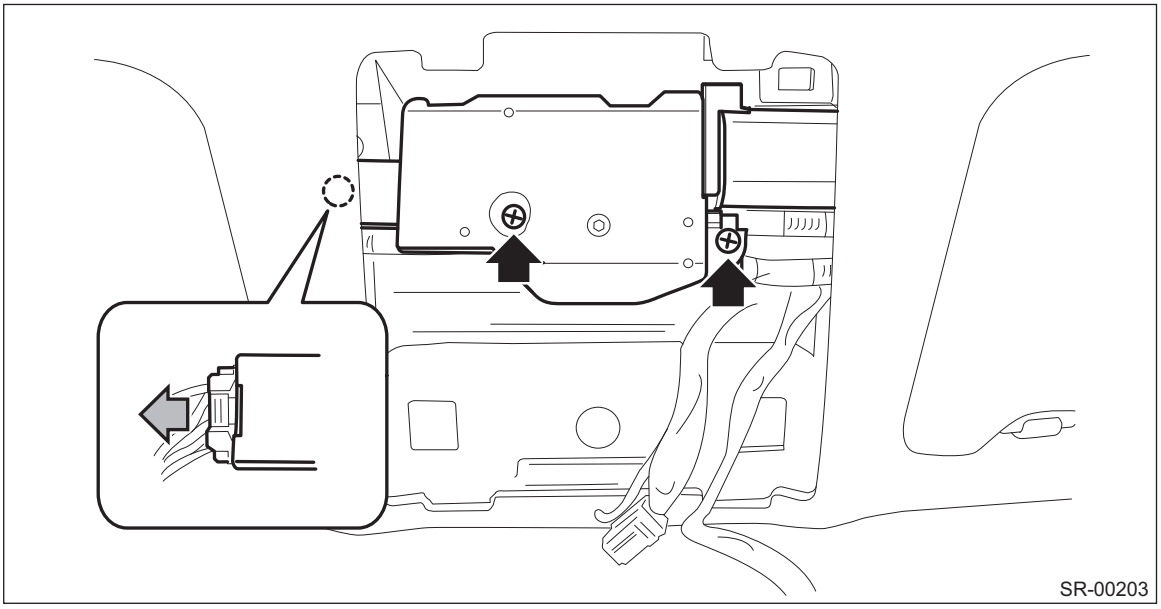
6. Sunroof Motor

A: REMOVAL

1) Completely close the lid assembly - sunroof.
2) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-72, REMOVAL, Spot Map Light.>
4) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
5) Remove the motor assembly - sunroof.
   (1) Disconnect the harness connector.
   (2) Remove the screws and remove the motor assembly - sunroof.

CAUTION:
When removing the motor assembly - sunroof, secure the cable assembly so that it does not move.



B: INSTALLATION

CAUTION:
- **For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>**
- **When installing the motor assembly - sunroof, be careful not to move the cable assembly.**

1) Install the motor assembly - sunroof.
2) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
3) Install the light assembly - map. (Models without EyeSight)
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Perform the initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>
6) Check the operation of sunroof by following the table below.

Operation	Switch position
(1) Lid assembly - sunroof closes completely.	Close
(2) Lid assembly - sunroof is tilted up to the top position.	Tilt up
(3) Lid assembly - sunroof closes completely.	Tilt down

Operation	Switch position
(4) Lid assembly - sunroof opens 295 mm (11.61 in) away from completely closed position.	Open
(5) Lid assembly - sunroof opens completely.	Open
(6) Lid assembly - sunroof closes completely.	Close

C: INSPECTION

Check the auto-reverse mechanism.

CAUTION:
Do not place objects in the way to check the auto-reverse mechanism.
1) Open the lid assembly - sunroof.
2) Push the lid assembly - sunroof in the opening direction with a force of 110±10 N (11.2 kgf, 24.7 lbf±1 kgf, 2.2 lbf) during the auto-closing operation, and check whether the window auto-reverse mechanism functions.

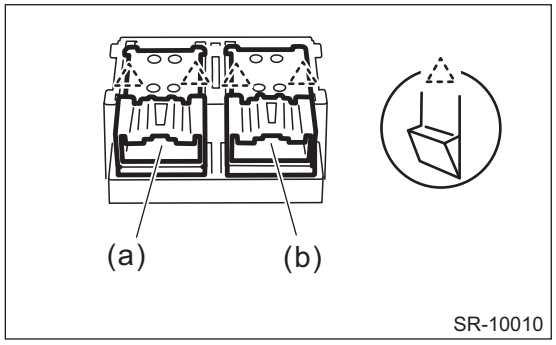
NOTE:
If the auto function is cancelled, perform the initialize operation. <Ref. to SR-5, INITIALIZE OPERATION, OPERATION, Sunroof Control System.>

7. Sunroof Switch

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-72, REMOVAL, Spot Map Light.>
3) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
4) Release the claws and remove the sunroof switch from the light assembly - map.



(a) Sunroof switch (tilt)
(b) Sunroof switch (slide)

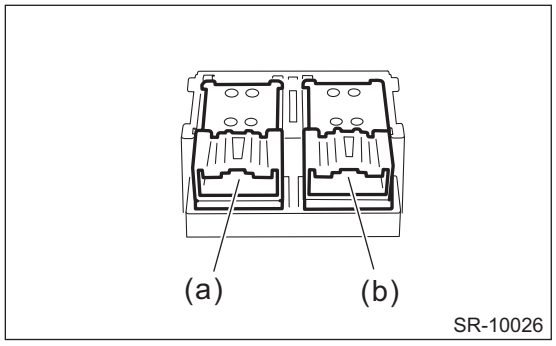
B: INSTALLATION

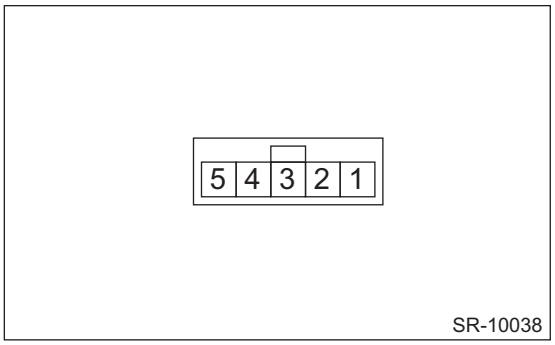
CAUTION:
For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
1) Install the sunroof switch.
2) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
3) Install the light assembly - map. (Models without EyeSight)
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Disconnect the harness connector of sunroof switch.
2) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester





Terminal No.	Inspection conditions	Standard	Connector
1 — 3	Open	Less than 1 Ω	(b): Slide switch
4 — 3	Close	Less than 1 Ω	
1 — 3	Tilt up	Less than 1 Ω	(a): Tilt switch
4 — 3	Tilt down	Less than 1 Ω	

3) Replace the sunroof switch if the inspection result is not within the standard value.

8. Sunshade

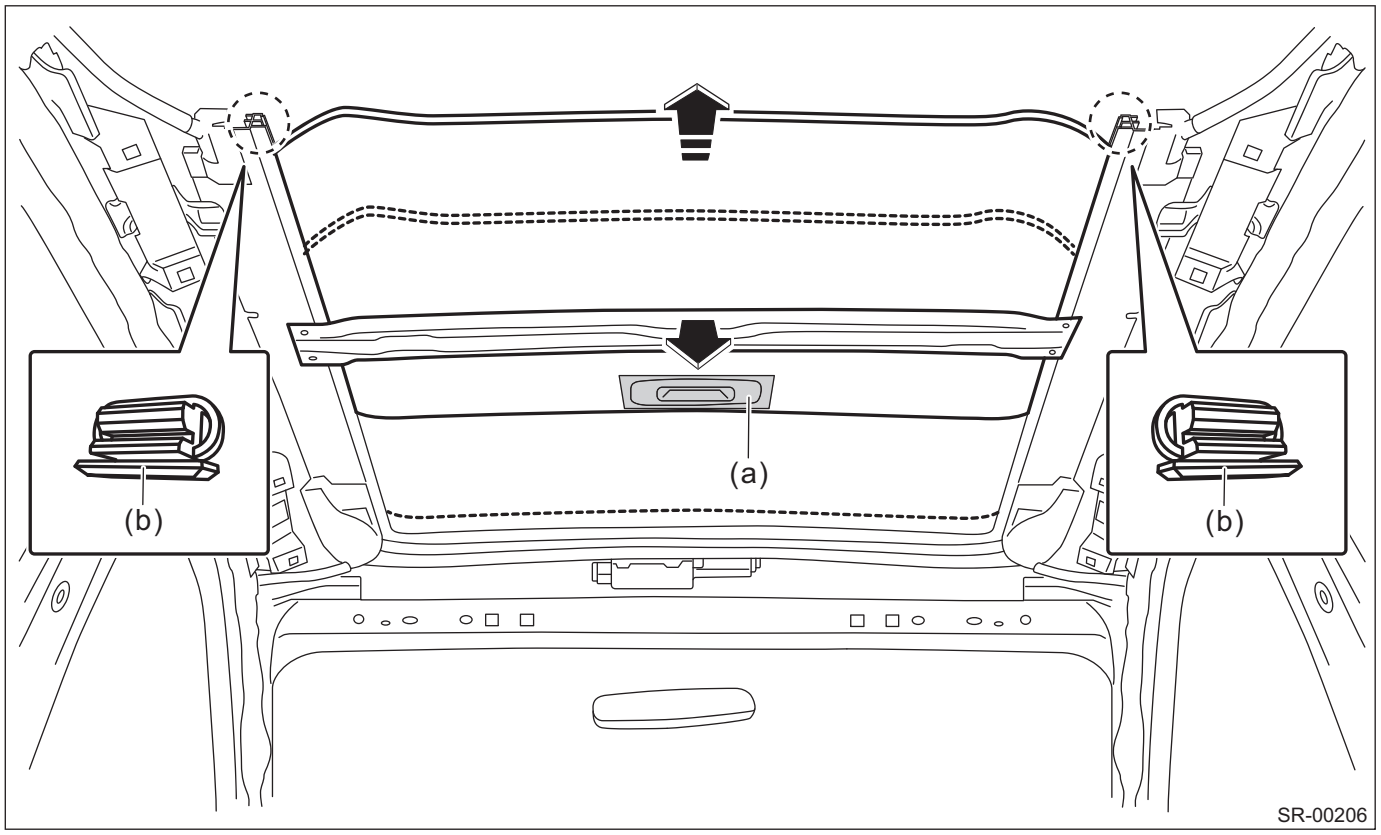
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>
3) Remove the trim panel - roof assembly. <Ref. to EI-101, REMOVAL, Roof Trim.>
4) Remove the sunroof assembly. <Ref. to SR-11, REMOVAL, Sunroof Assembly.>
5) Remove the sunshade assembly.

CAUTION:
Be careful not to damage the sunshade assembly.

(1) Attach protective tape (a) on the handle of sunshade assembly.
(2) Remove the left and right stoppers (b).
(3) Remove the sunshade assembly while pulling the center of the brace downward.



B: INSTALLATION

CAUTION:
For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>

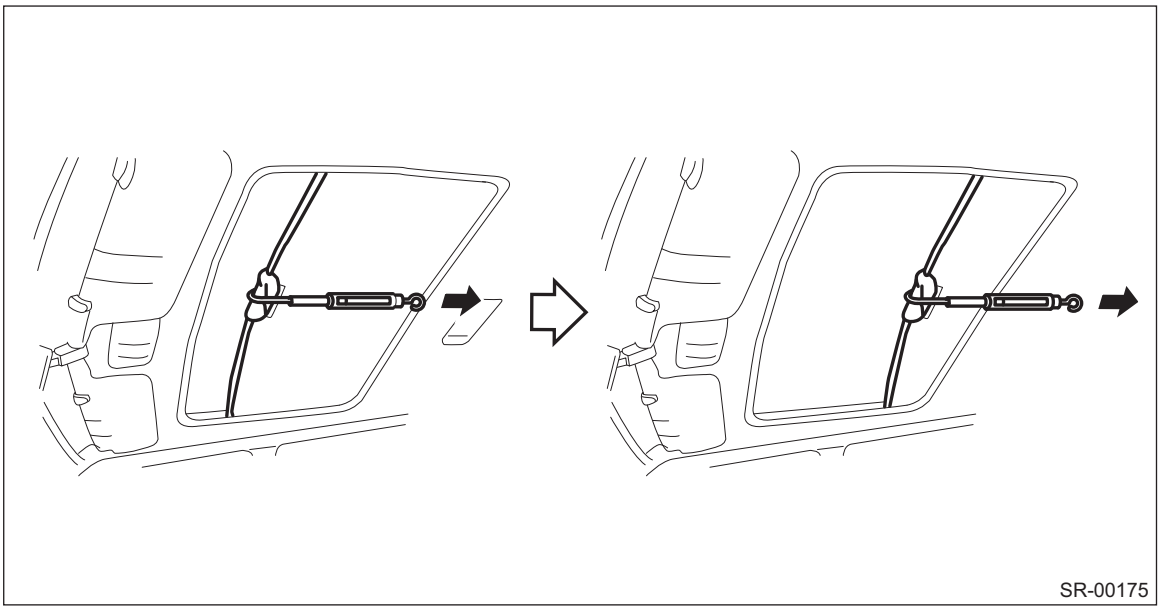
1) Attach protective tape on the handle and the edge surface of the sunshade assembly, and install the sunshade assembly.
2) Install the drain holder.
3) Install the sunroof assembly. <Ref. to SR-14, INSTALLATION, Sunroof Assembly.>
4) Install the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
5) Install the lid assembly - sunroof. <Ref. to SR-7, REMOVAL, Glass Lid.>
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1. MOVING LOAD OF SUNSHADE ASSEMBLY

1) Attach a spring scale together with a cloth to the edge of sunshade assembly.
2) Pull the spring scale to check the moving load of the sunshade assembly.

Moving load of sunshade assembly:
14±6 N (1.43 kgf, 3.1 lbf±0.61 kgf, 1.3 lbf)



NOTE:
Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while the sunshade assembly is sliding smoothly.
3) If the inspection result exceeds the standard, check that the sunshade assembly or the rail assembly - sunroof is installed properly. If necessary, replace the sunshade assembly or the rail assembly - sunroof.

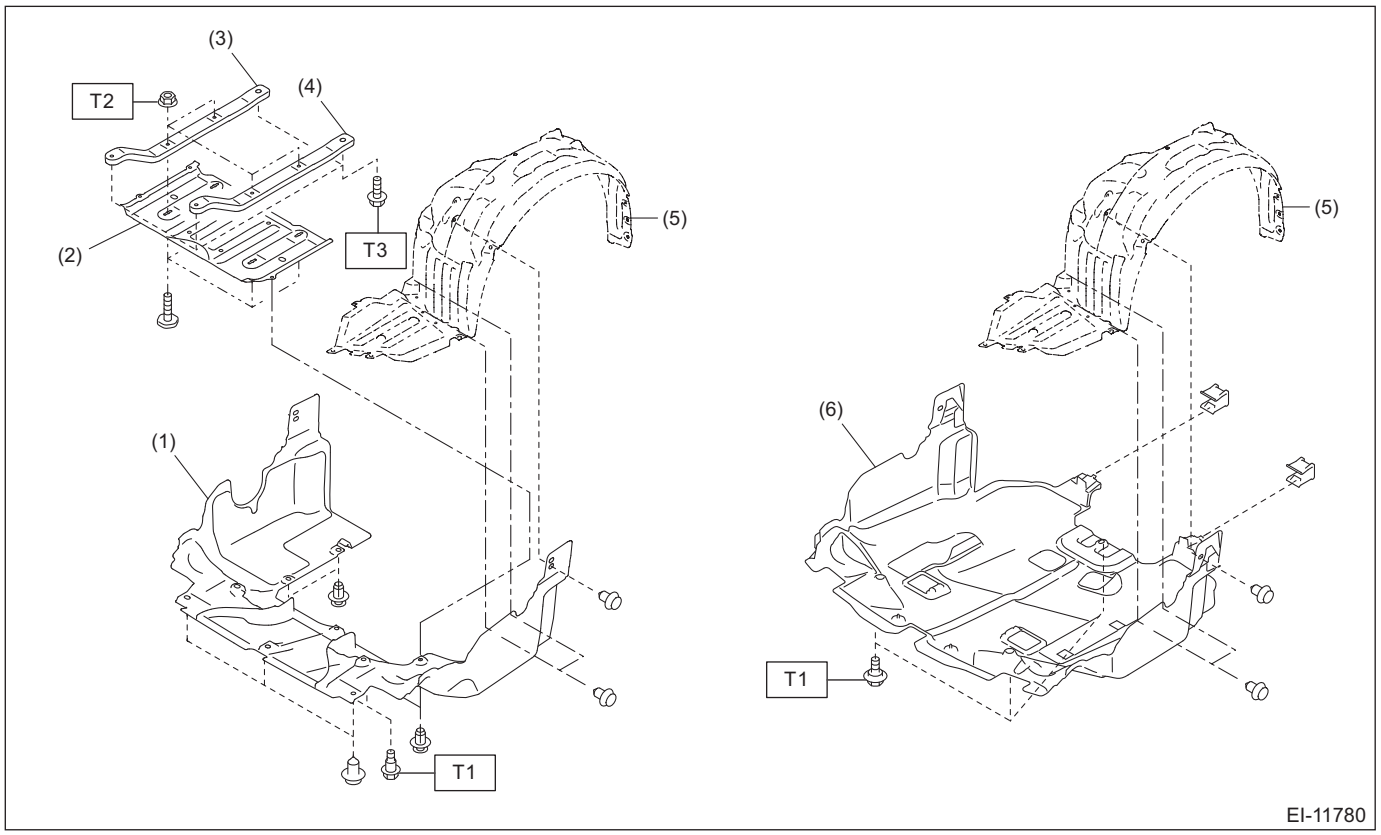
1. General Description

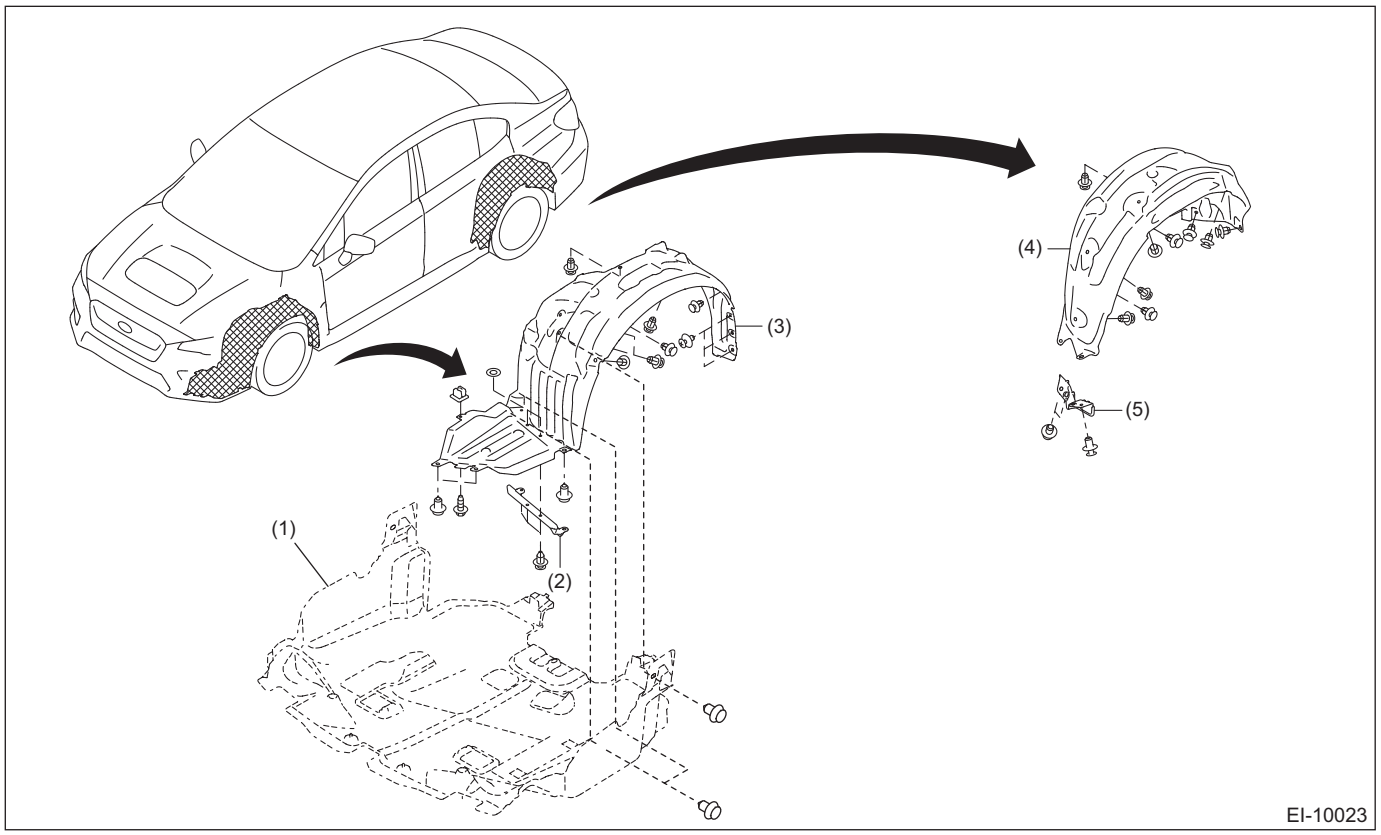
A: COMPONENT

1. FRONT UNDER COVER



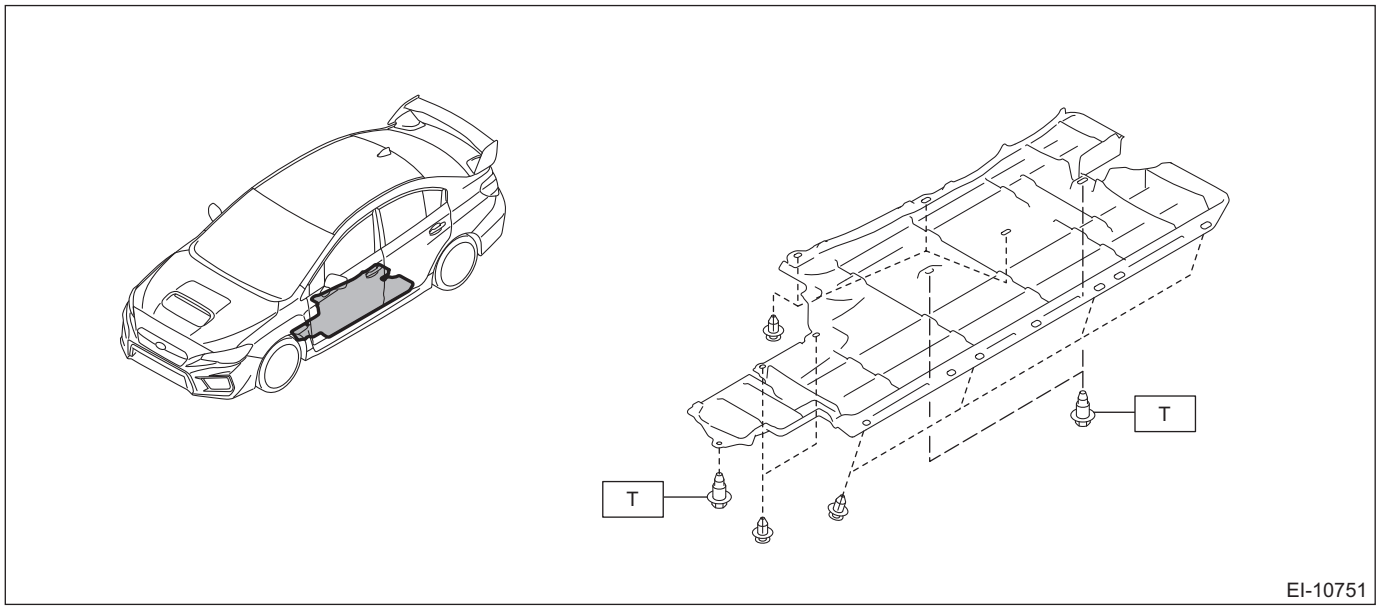
(1)	Under cover - front (except for STI model)	(4)	Frame - under cover LH (except for STI model)	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Plate - CTR (except for STI model)	(5)	Mud guard - front	***T1: 18 (1.8, 13.3)***
(3)	Frame - under cover RH (except for STI model)	(6)	Under cover - front (STI model)	***T2: 20 (2, 14.8)***
				T3: 25 (2.5, 18.4)

2. MUD GUARD



(1) Under cover - front
(2) Plate air flap - front
(3) Mud guard - front
(4) Mud guard - rear
(5) Plate air flap - rear

3. FLOOR UNDER PROTECTOR

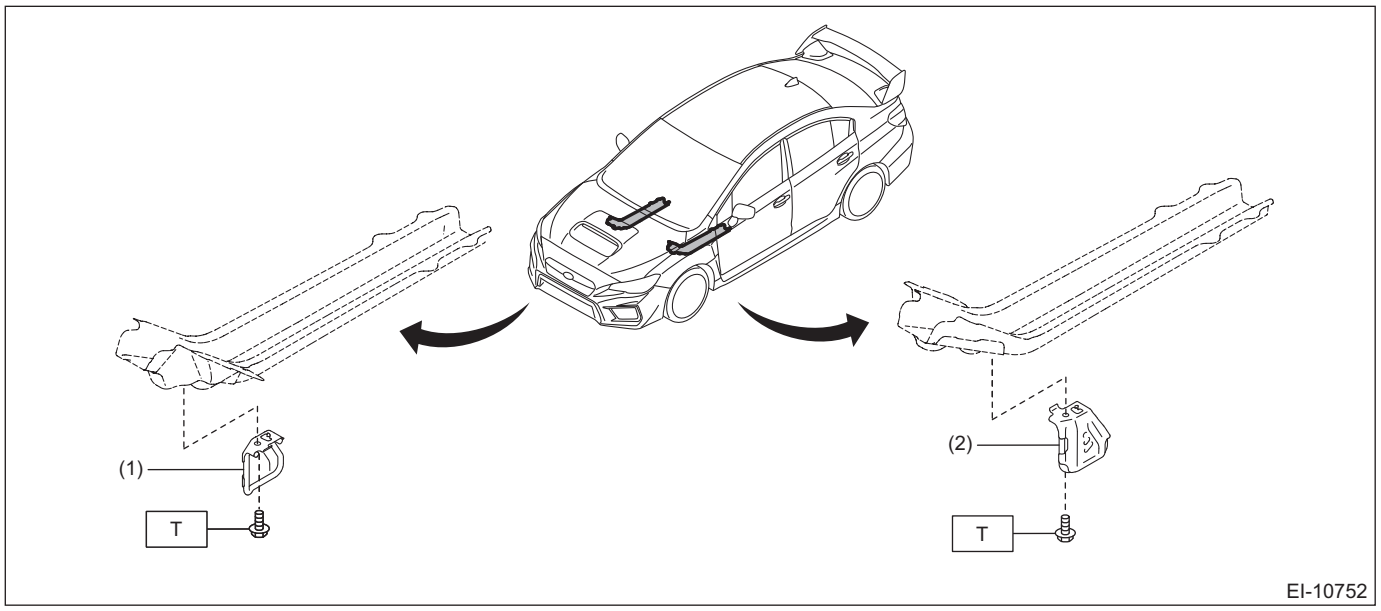


Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

4. FUEL TANK PROTECTOR

For exploded view of the fuel tank protector, refer to “FUEL TANK” of “FUEL INJECTION” section.

5. PROTECTOR OIL COVER



(1) Protector oil cover RH (CVT model)
(2) Protector oil cover LH (CVT model)

Tightening torque: N·m (kgf-m, ft-lb)

T: 100 (10.2, 73.8)

6. FRONT HOOD GRILLE
