Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

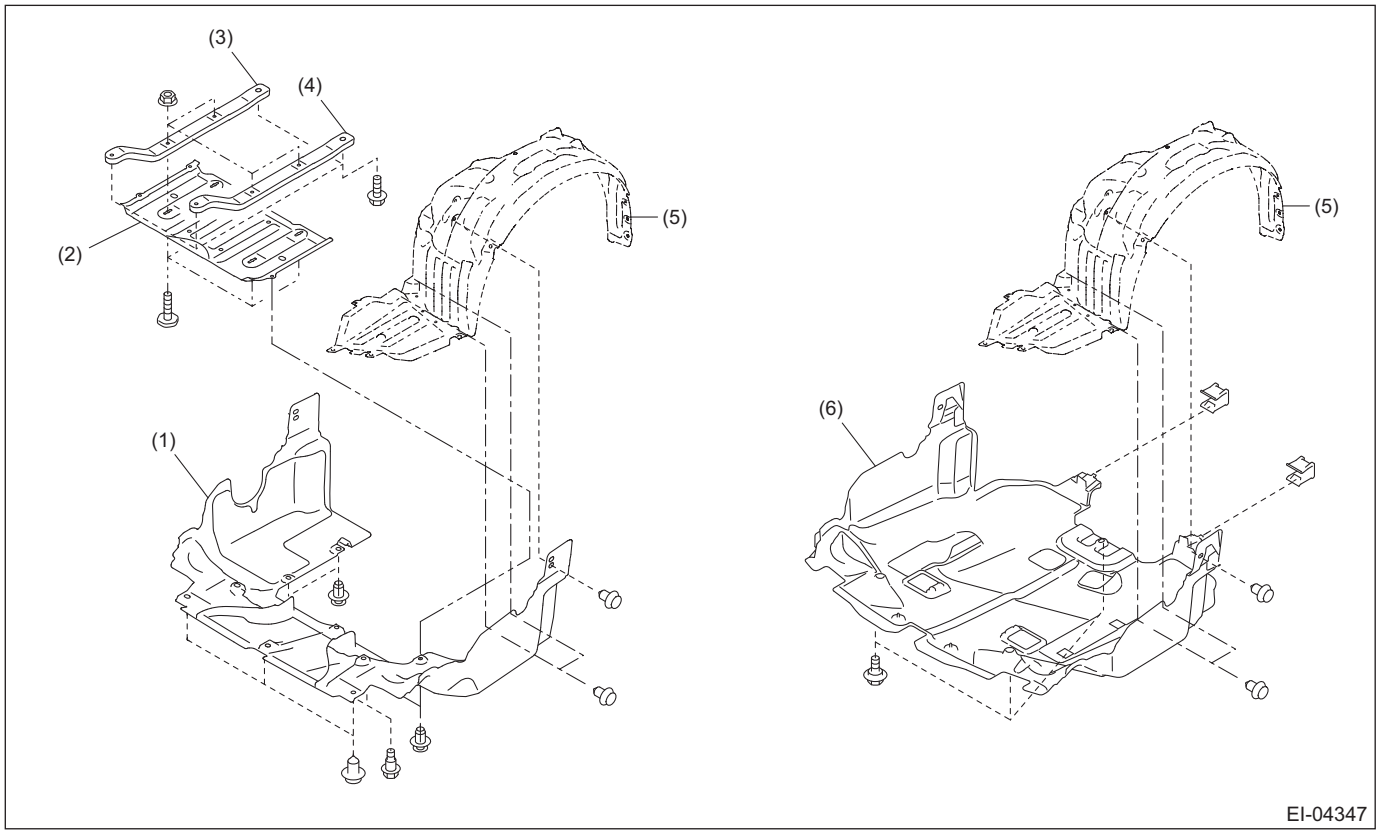
B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim. • KTC AP201-10A • KTC AP201-N • KTC AP203-10A • KTC AP20L-10B Or equivalent.
Clip clamp pliers	Used for removal of various clips and clamps. • KTC CCP-190 Or equivalent.

2. Front Under Cover

A: REMOVAL

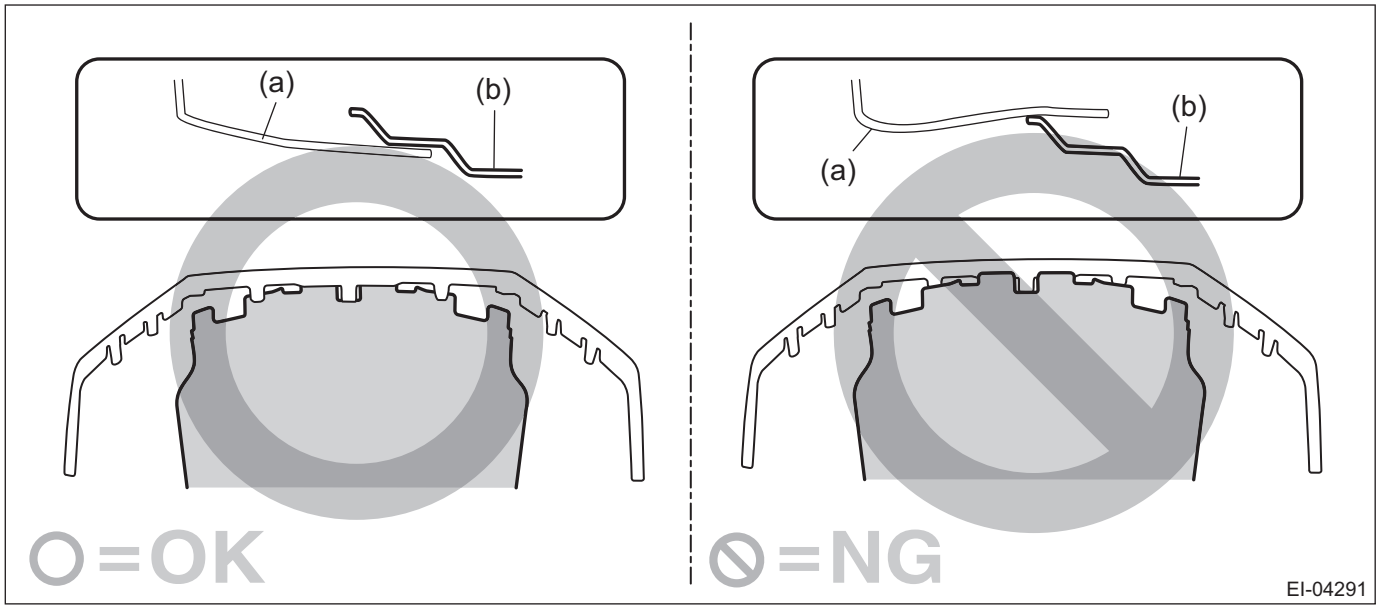
1) Lift up the vehicle.
2) Remove the bolts and clips, and remove the under cover - front.



(1)	Under cover - front (except for STI model)	(3)	Frame - under cover RH (except for STI model)	(5)	Mud guard - front
(2)	Plate - CTR (except for STI model)	(4)	Frame - under cover LH (except for STI model)	(6)	Under cover - front (STI model)

B: INSTALLATION

CAUTION:
Install the under cover so that the under cover front end (b) comes inside of the bumper face - front (a).



1) Install the under cover - front.

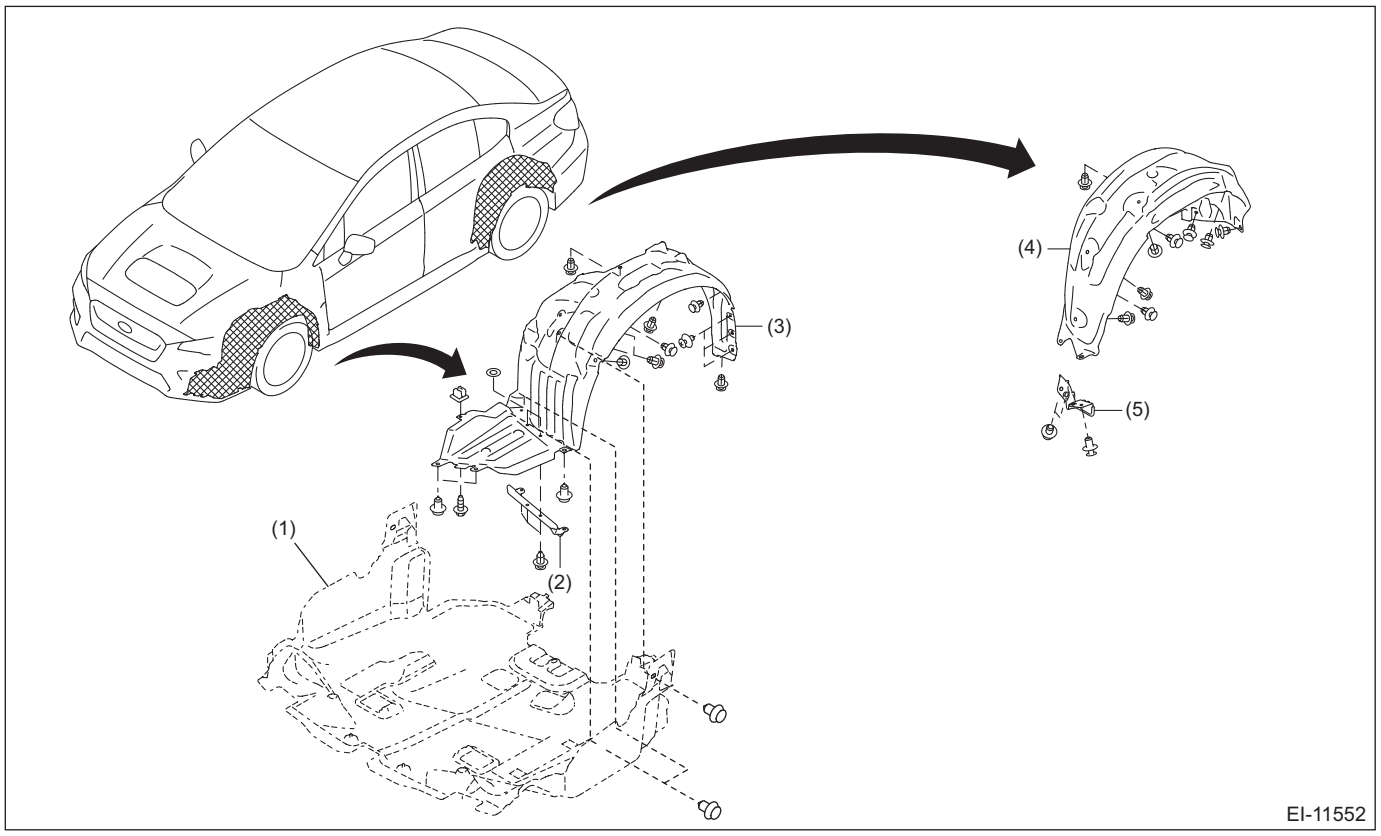
Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EI-2, FRONT UNDER COVER, COMPONENT, General Description.>

2) Lower the vehicle.

3. Mud Guard

A: REMOVAL

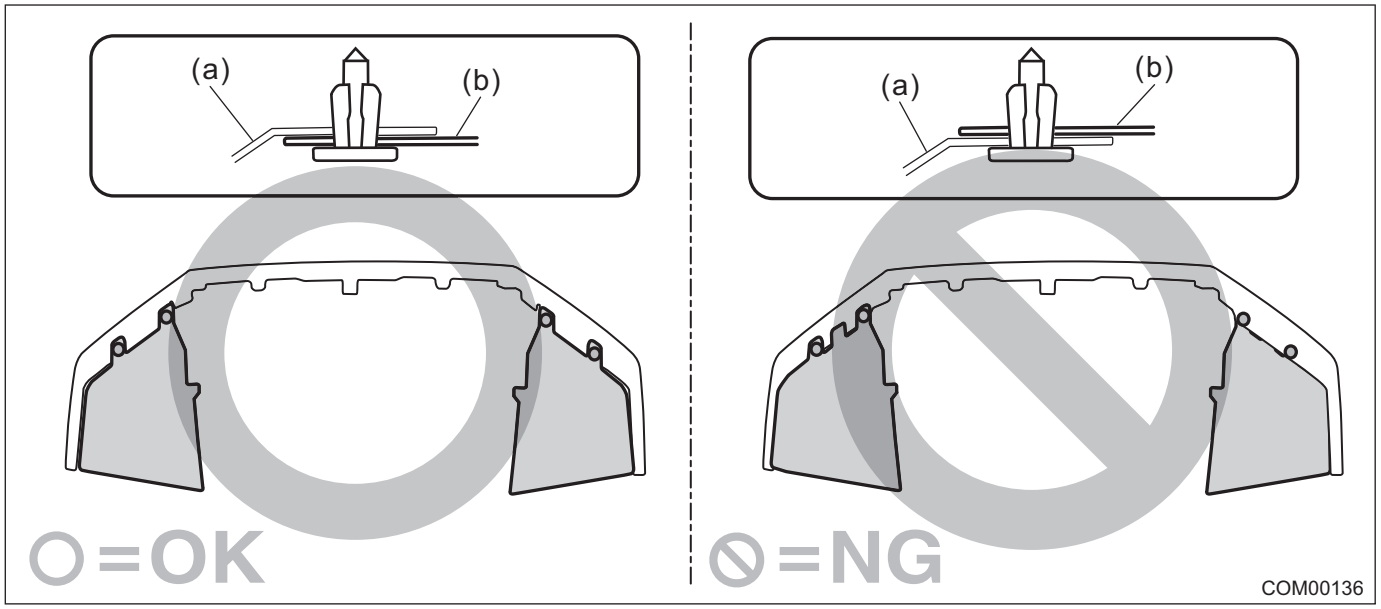
1) Lift up the vehicle.
2) Remove the wheels.
3) Remove the spoiler assembly - side. <Ref. to EI-53, REMOVAL, Side Garnish & Side Spoiler.>
4) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>
5) Remove the screws and clips to remove the mud guard.



(1) Under cover - front
(2) Plate air flap - front
(3) Mud guard - front
(4) Mud guard - rear
(5) Plate air flap - rear

B: INSTALLATION

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



1) Install the mud guard.
2) Install the spoiler assembly - side. <Ref. to EI-54, INSTALLATION, Side Garnish & Side Spoiler.>
3) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
4) Install the wheel.

Tightening torque:
Wheel nut: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
5) Lower the vehicle.

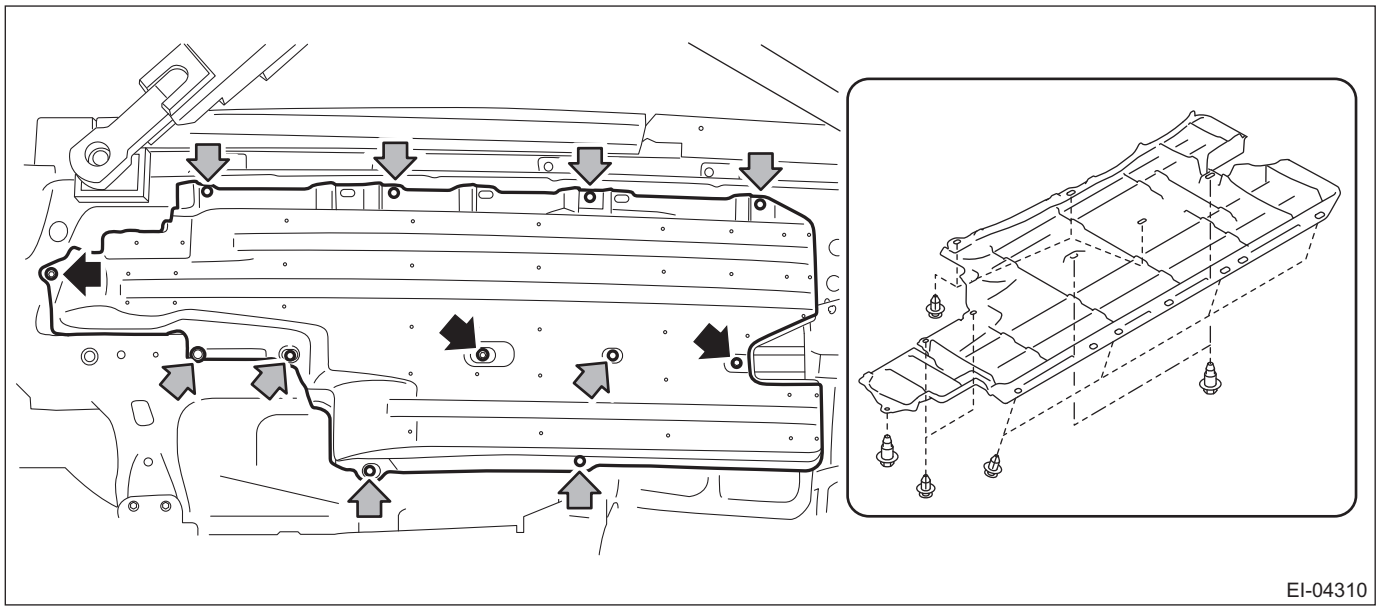
4. Floor Under Protector

A: REMOVAL

1) Lift up the vehicle.

CAUTION:
Do not use a plate type lift.

2) Remove the bolts and clips, and remove the floor under protector.



B: INSTALLATION

1) Install the floor under protector.

Tightening torque:

Small type
4.5 N·m (0.5 kgf-m, 3.4 ft-lb)

Large type
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Lower the vehicle.

5. Fuel Tank Protector

A: NOTE

Refer to “FUEL INJECTION” section for removal and installation procedure of the fuel tank protector.

6. Front Hood Duct

A: NOTE

For operation procedures for front hood duct, refer to “EXTERIOR BODY PANELS” section.

7. Front Grille

A: NOTE

For removal and installation of front grille assembly, refer to “DISASSEMBLY” and “ASSEMBLY” in “Front Bumper”.

8. Front Bumper

A: REMOVAL

1. FRONT BUMPER

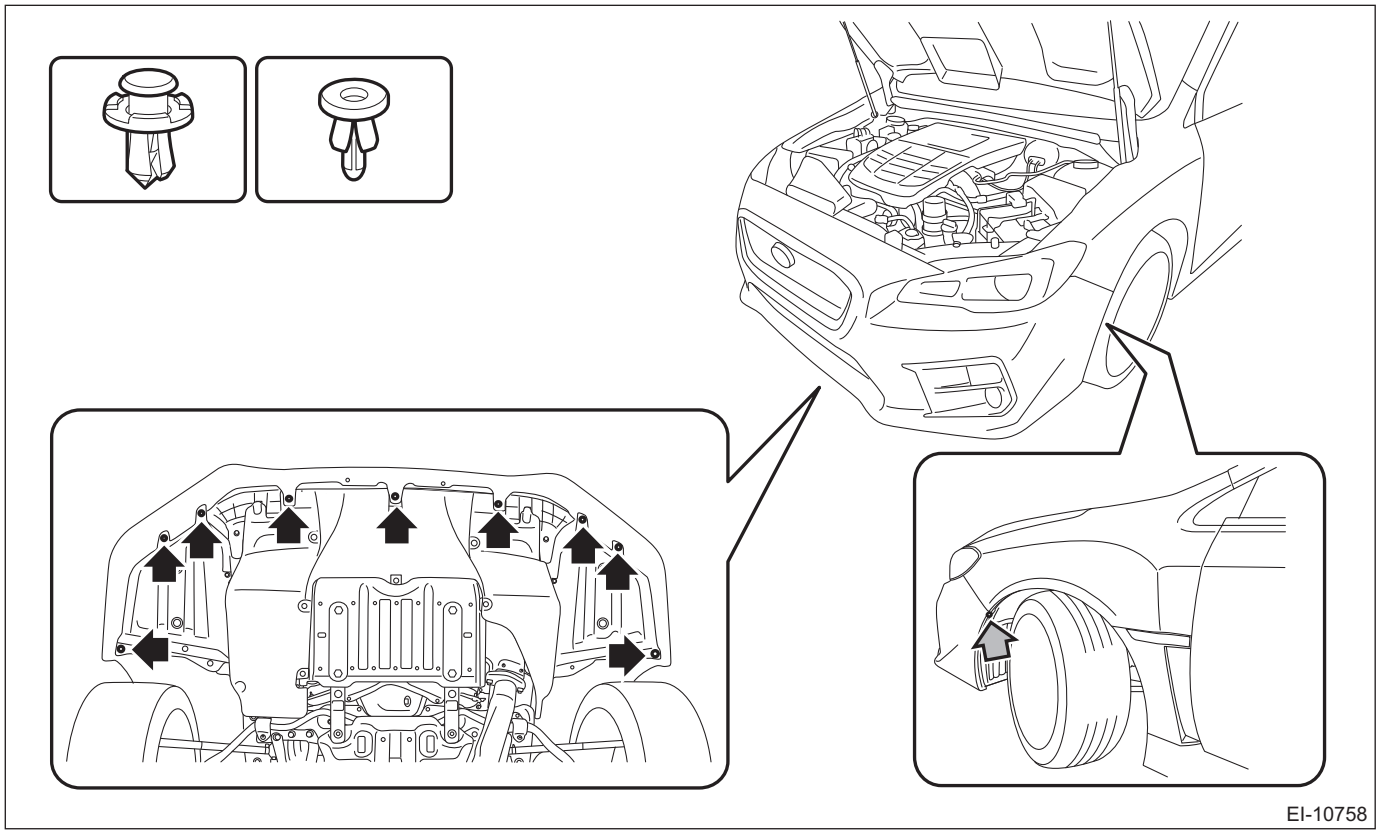
1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

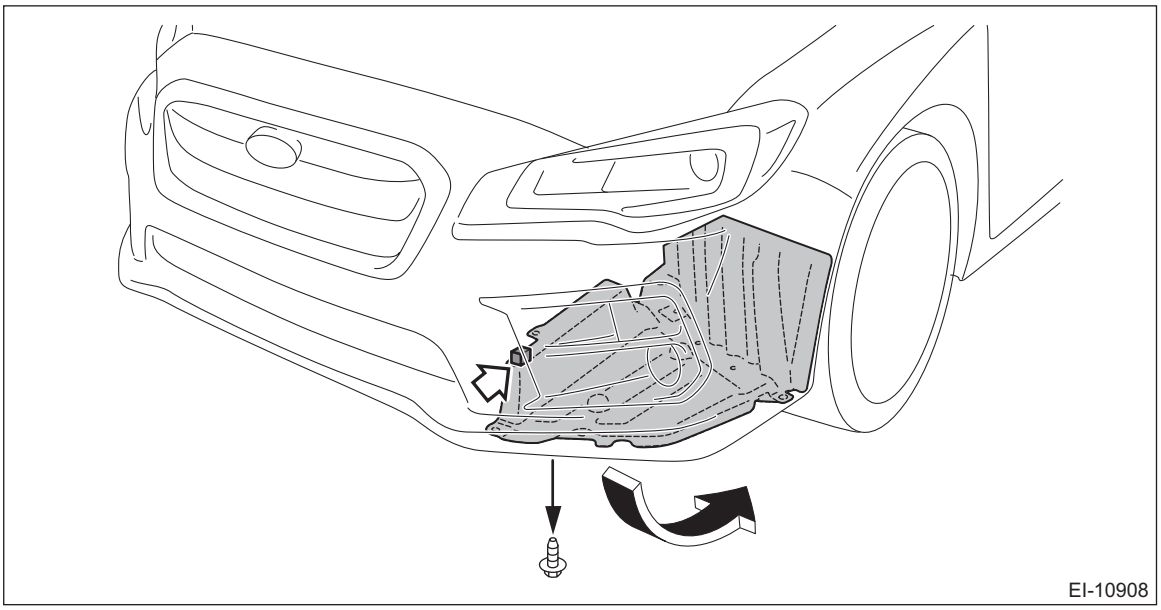
2) Remove the bumper face - front.
   (1) Remove the clips and bolts, and remove the plate UPR - front.

   (2) Remove the clips from the fender.

(3) Remove the clips at the lower side of the bumper face - front.



(4) Disconnect the integrated connector of the fog light assembly and turn signal light assembly. (Halogen type headlight model)



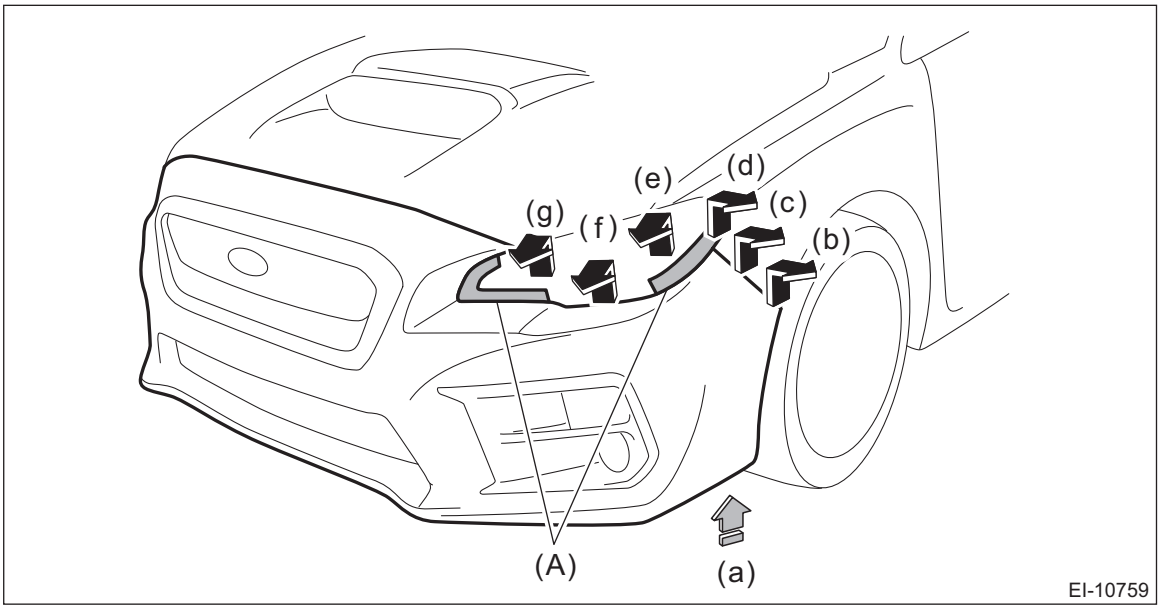
(5) Apply protective tape (A) to the light assembly - head.

(6) While pushing up the lower side (a) of the bumper face - front, release the engagement in the order from (b) to (g).

CAUTION:

• Do not pull forcibly. It may damage the flange section on the bumper face - front side when it comes off from the claws of the bracket - front bumper.

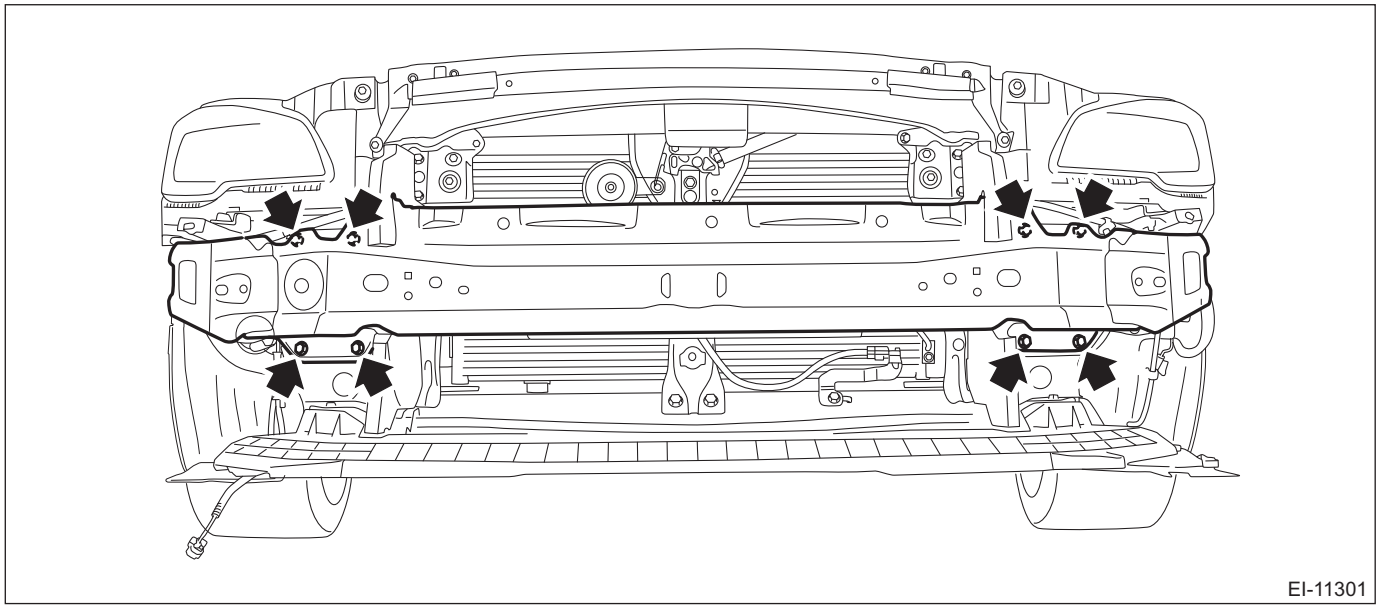
- **Disconnect the connector while pressing the bumper face - front to avoid open circuit.**



NOTE:
Detach the opposite side in the same manner.

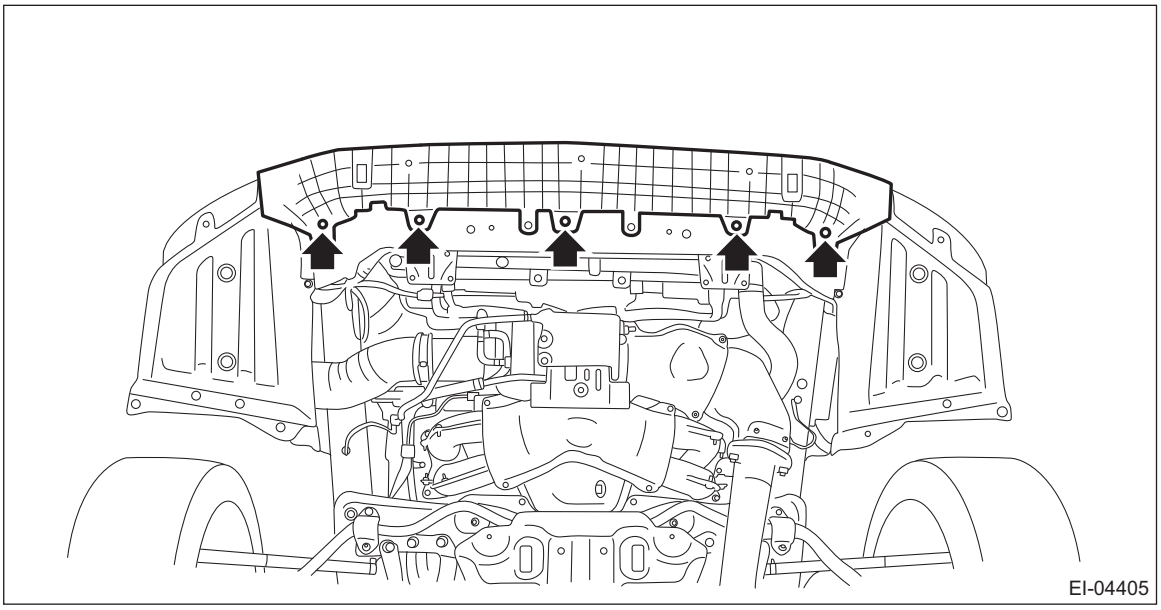
(7) Disconnect the front view camera connector.
(8) Disconnect the fog light assembly connector. (LED type headlight model)

3) Remove the energy absorber foam.
4) Remove the bolts, and remove the bumper beam COMPL - front.

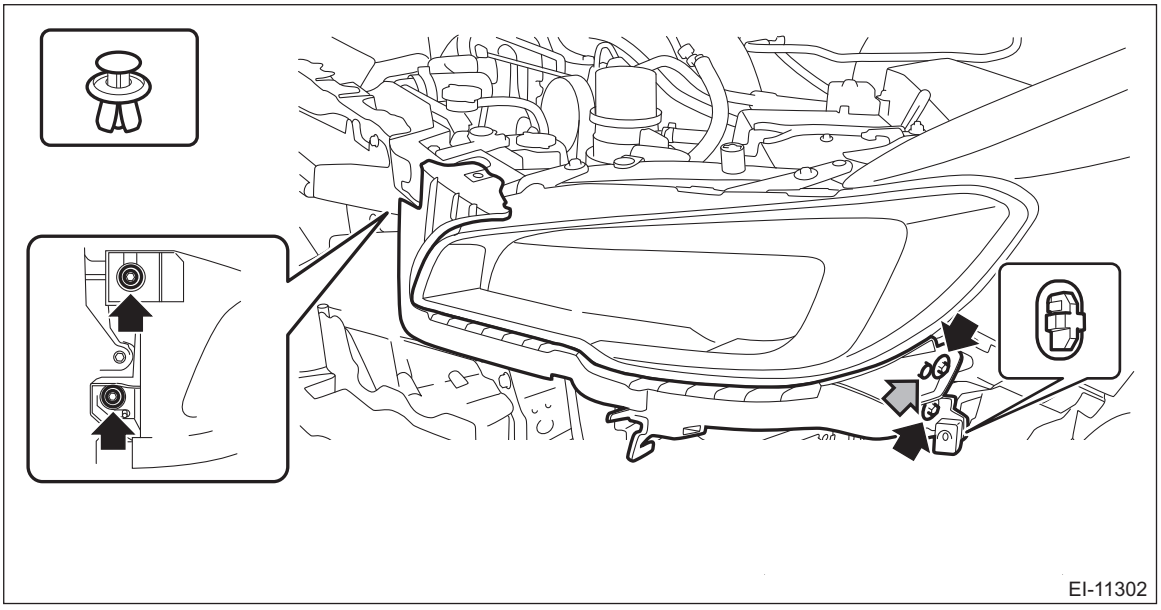


5) Remove the under cover - front. <Ref. to EI-22, REMOVAL, Front Under Cover.>

6) Remove the bolts, and remove the bracket - front center LWR.

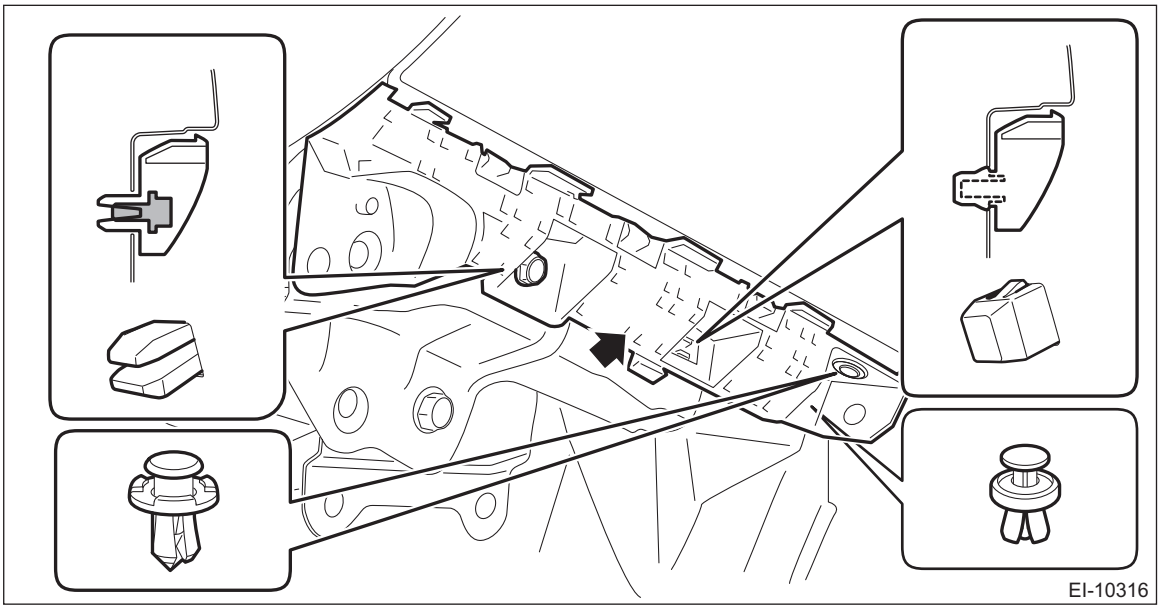


7) Remove the bolts and clips, and remove the bracket - front bumper corner.
   (1) Remove the keyless buzzer.
   (2) Remove the bolts and clips, and remove the bracket - front bumper corner.



8) Remove the bracket - front bumper side.
   (1) Remove the screws.

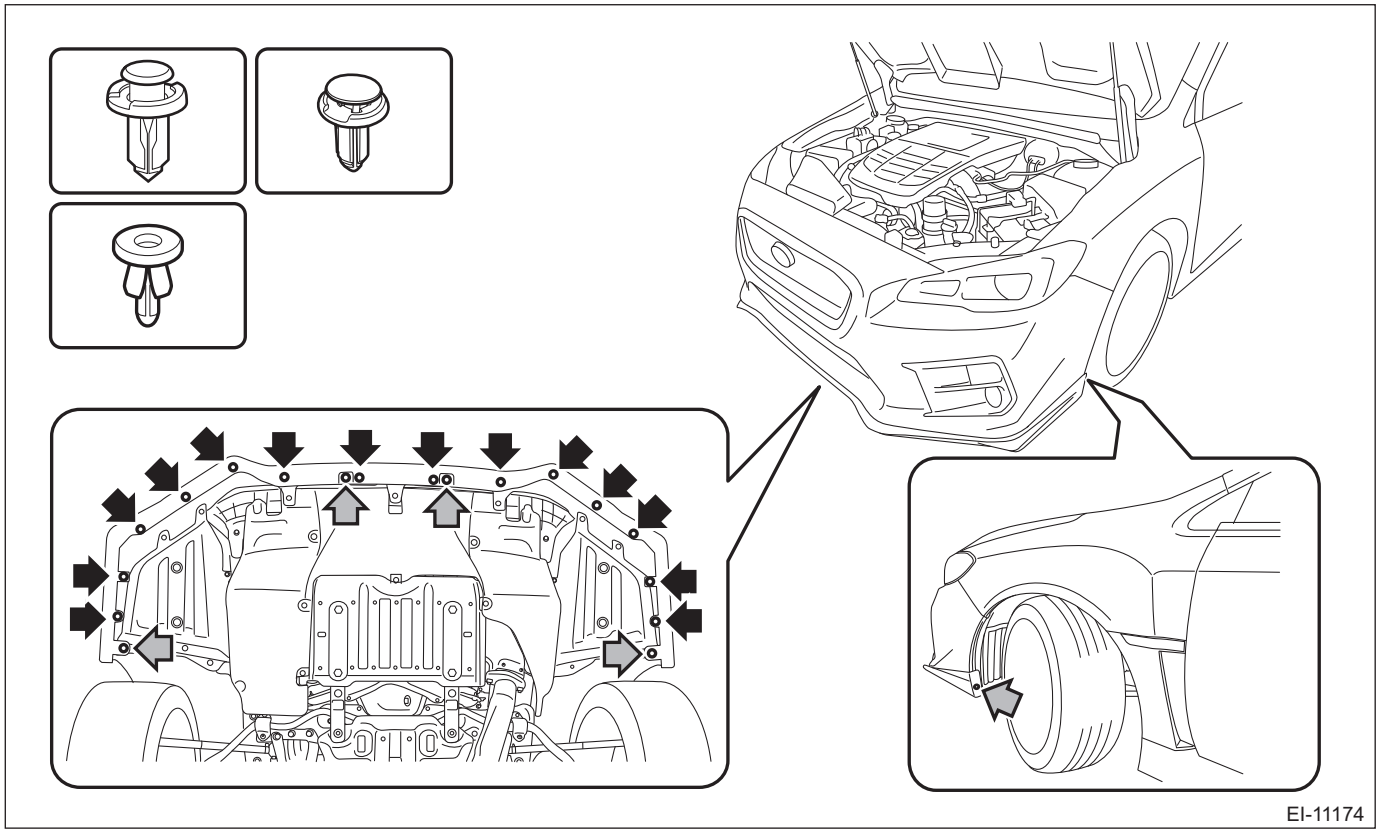
(2) Remove the claws from behind the fender front, and remove the bracket - front bumper side.



9) Remove the fog light assembly - front. <Ref. to LI-53, REMOVAL, Front Fog Light Assembly.>

2. FRONT UNDER SPOILER

1) Remove the front under spoiler.
(1) Remove the clips from the fender.
(2) Remove the bolt and clip at the lower side of the front under spoiler.

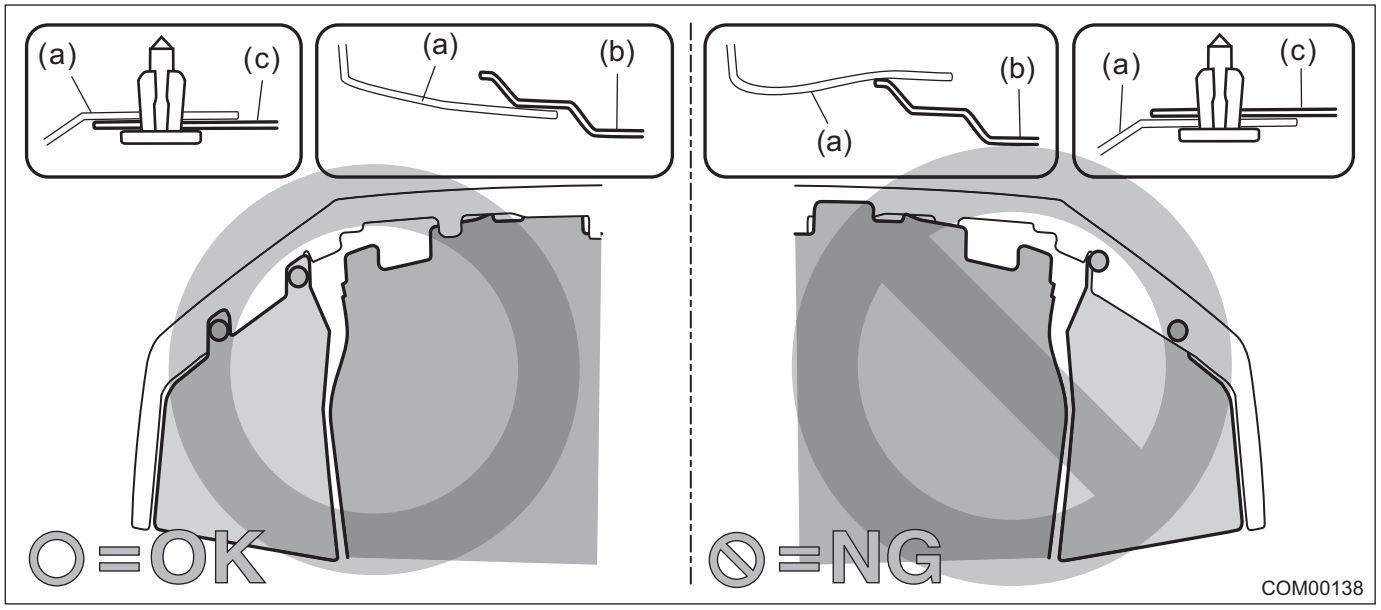


2) Remove the fog light assembly - front and the turn signal light assembly. <Ref. to LI-53, REMOVAL, Front Fog Light Assembly.>

B: INSTALLATION

1. FRONT BUMPER

CAUTION:
• Install so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) Install the fog light assembly - front.
2) Install the bracket - front bumper side.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the bracket - front bumper corner.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
4) Install the bracket - front center LWR.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
5) Install the under cover - front. <Ref. to EI-23, INSTALLATION, Front Under Cover.>
6) Install the bumper beam COMPL - front.

Tightening torque:
32 N·m (3.3 kgf-m, 23.6 ft-lb)
7) Install the energy absorber foam.
8) Install the bumper face - front.

NOTE:
Secure the flange section of the bumper face - front to the bracket - front bumper side.

Tightening torque:
Plate UPR - front: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
10) Adjust the headlight beam and fog light beam.
• Adjust the headlight beam. <Ref. to LI-38, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>

• Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>
11) Check the guide line of front view camera.

2. FRONT UNDER SPOILER

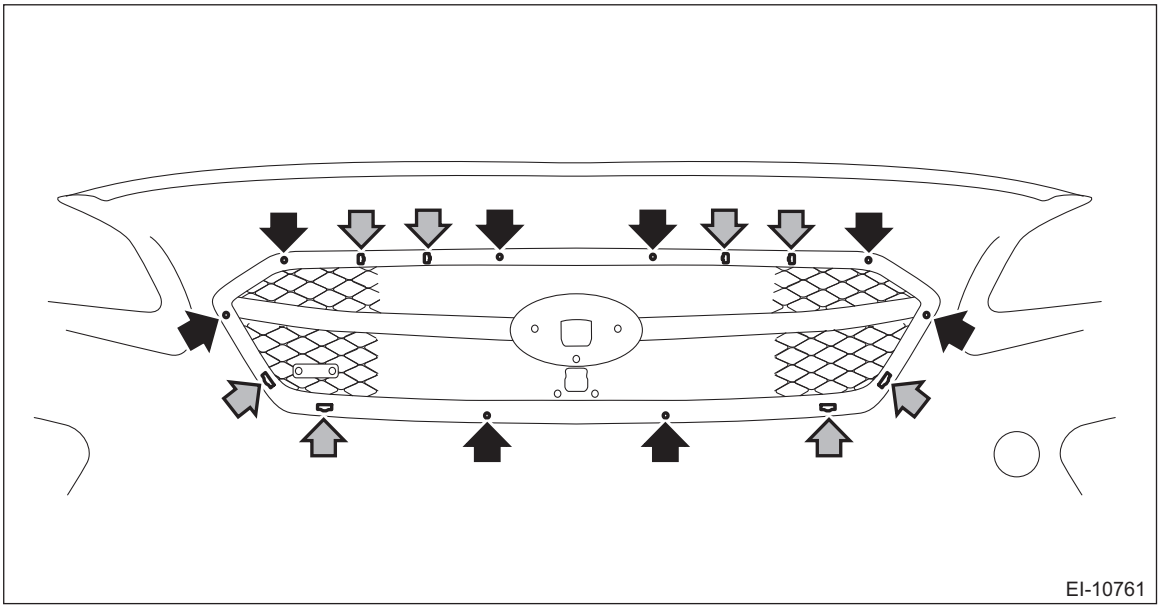
1) Install the bumper face - front.

NOTE:
Do not re-use the well nut.

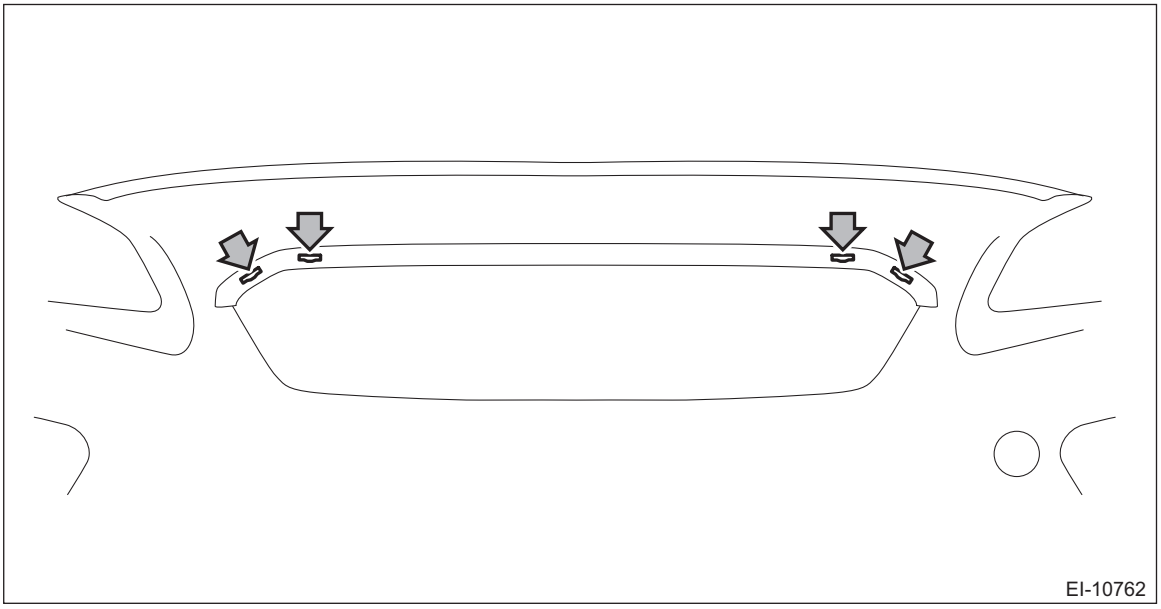
Tightening torque:
1.0 N·m (0.1 kgf-m, 0.7 ft-lb)

C: DISASSEMBLY

1) Remove the front grille assembly.
(1) Remove the screws on the back side.
(2) Release the claws, and remove the front grille assembly.

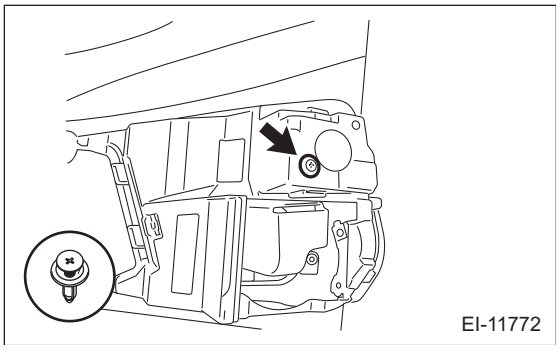


2) Release the claws, and then remove the spacer grille - front.

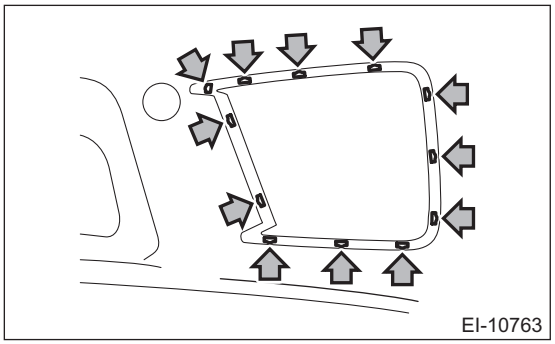


3) Remove the fog light assembly - front.

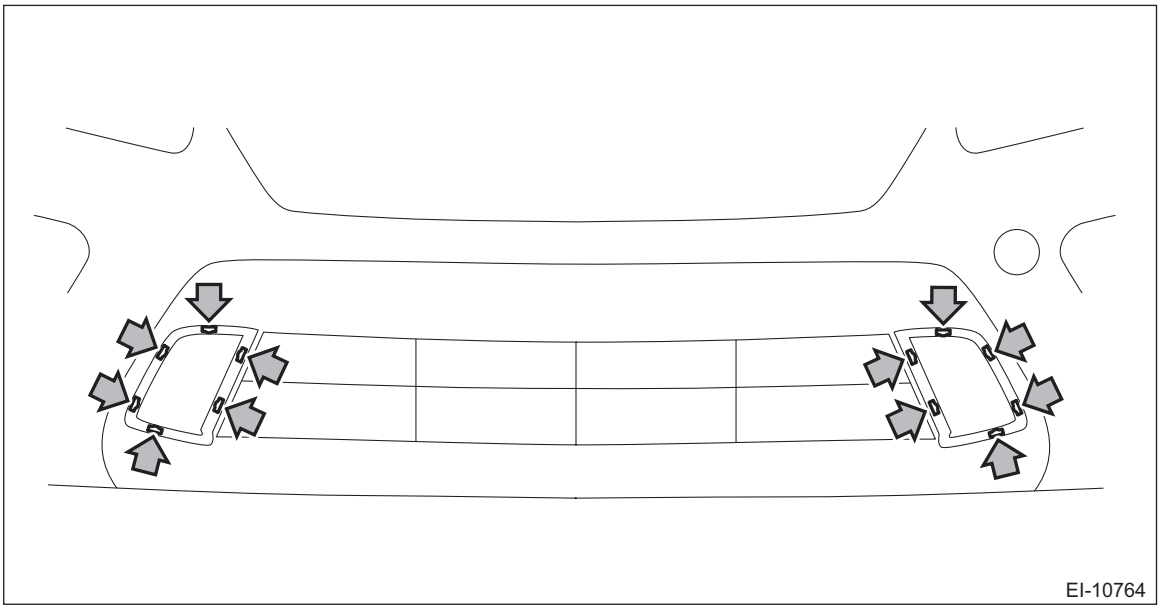
4) Remove the clip of the cover - fog light. (STI model)



5) Release the claws, and then remove the cover - fog light.



6) Release the claws, and then remove the cover intake - front.



D: ASSEMBLY

1) Install the cover intake - front.
2) Install the cover - fog light.
3) Install the clip of the cover - fog light. (STI model)
4) Install the fog light assembly - front.
5) Install the spacer grille - front.
6) Install the front grille assembly.

E: REPAIR

1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	Cross section of bumper  EI-00234 (1) Bumper (2) Paint worktable
2	Masking	Mask the black base with masking tape. Use masking tape for PP.	
3	Degreasing/cleaning	Clean all parts to be painted with appropriate cleaning solvent, normal alcohol, etc. to remove dirt, oil, grease, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature. [10 — 15 min. at 20°C (68°F)] In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)	Use section (block) paint for top coat. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minute intervals. For paint/hardener mixture, observe the specifications recommended by the manufacturers. • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kgf/cm^2, 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If the temperature is higher than 80°C (176°F), PP may be deformed. Keep maximum temperature at 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of masking	Remove the masking tape applied in procedure 2.	

2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:
If grained PP bumper surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter.

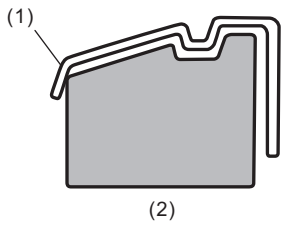
Repair methods are outlined below, based on a classification of the extent of damage.
1) Minor damage causing only a change in the luster of the bumper due to a light touch
Almost restorable.

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Cleaning</td><td colspan="2">Clean the area to be repaired using water.</td></tr>
<tr><td>2</td><td>Sanding</td><td colspan="2">Grind the repairing area with #500 sand paper in a “feathering” motion.</td></tr>
<tr><td rowspan="3">3</td><td rowspan="3">Finish</td><td>Resin section</td><td>Coated section</td></tr>
<tr><td>Repeatedly apply wax to the affected area using soft cloth (such as flannel).
Recommended wax: Tire wax or equivalent</td><td rowspan="2">Perform either the same procedures as for the resin section or process No. 18 and subsequent in section 3), depending on the degree and nature of damage.</td></tr>
<tr><td>Polish the waxed area with clean cloth after 5 — 10 minutes.</td></tr>
</table>

2) Deep damage caused by scratching with fences etc.
A dent cannot be repaired but a whitened or swelled part can be removed.

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Cleaning</td><td colspan="2">Clean the damaged area with water.</td></tr>
<tr><td>2</td><td>Removal of damaged area</td><td colspan="2">Cut off protruding area, if any, due to collision, using a putty knife.</td></tr>
<tr><td>3</td><td>Sanding</td><td colspan="2">Grind the affected area with #100 — #500 sand paper.</td></tr>
<tr><td rowspan="2">4</td><td rowspan="2">Finish</td><td>Resin section</td><td>Coated section</td></tr>
<tr><td>Same as process No. 3 in section “1)”.</td><td>Perform process No. 12 and subsequent operations in section “3)”.</td></tr>
</table>

3) Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>1</td><td>Bumper removal</td><td colspan="2">Remove the bumper as required.</td></tr>
<tr><td>2</td><td>Removal of parts</td><td colspan="2">Remove the parts built into bumper as required.</td></tr>
<tr><td>3</td><td>Bumper placement</td><td>Place the bumper on a paint worktable as required.
It is recommended to use the paint worktable conforming to internal shape of bumper.</td><td>Cross section of bumper
 


EI-00234
(1) Bumper
(2) Paint worktable</td></tr>
<tr><td>4</td><td>Surface preparation</td><td colspan="2">Remove dust, oil, etc. from areas to be repaired and surrounding areas, using an appropriate solvent (appropriate cleaning solvent or alcohol, etc.).</td></tr>
</table>

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td>5</td><td>Cutting</td><td>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</td><td> 
EI-00235
(1) Paint surface
(2) PP base surface
(3) 20 — 30 mm (0.79 — 1.18 in)
(4) 3 mm (0.12 in)</td></tr>
<tr><td>6</td><td>Sanding (I)</td><td colspan="2">Grind beveled surface with sand paper (#40 — #60) to smooth finish.</td></tr>
<tr><td>7</td><td>Cleaning</td><td colspan="2">Clean the sanded surface with the same solvent as used in process No. 4.</td></tr>
<tr><td rowspan="2">8</td><td rowspan="2">Temporary welding</td><td colspan="2">Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent.
Temporarily spot-weld the side, using PP welding rod and heater gun.</td></tr>
<tr><td colspan="2"> 
EI-00236
(1) Welded point (Use heater gun and PP welding rod)
(2) PP base surface
(3) Beveled section
NOTE:
• Do not melt welding rod until it flows out. This results in reduced strength.
• Leave the welded spot unattended until it cools completely.</td></tr>
<tr><td rowspan="2">9</td><td rowspan="2">Welding</td><td colspan="2">Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.</td></tr>
<tr><td colspan="2"> 
EI-00237
(1) Welding rod
(2) Melt hatched area
(3) Section
NOTE:
• Melt the sections indicated by hatched area.
• Do not melt the welding rod until it flows out, in order to provide strength.
• Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot.
• Leave the welded spot unattended until it cools completely.</td></tr>
</table>

<table>
<tr><th>Process No.</th><th>Process name</th><th colspan="2">Job contents</th></tr>
<tr><td rowspan="3">10</td><td rowspan="3">Sanding (II)</td><td colspan="2">Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at less than 1,500 r/min and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.</td></tr>

<tr><td>Use a “block” coating method.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 11 — 13 sec./20°C (68°F)
• Coating film thickness: 40 — 50 µ
• Spraying pressure: 245 — 343 kPa
(2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td><td>Use a “block” coating method.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 11 — 13 sec./20°C (68°F)
• Coating film thickness: 20 — 30 µ
• Spraying pressure: 245 — 343 kPa
(2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td></tr>
<tr><td>20</td><td>Leave unattended</td><td>Not required.</td><td>Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry.
NOTE:
Be careful to keep dust or dirt from coming in contact with the affected area.</td></tr>
<tr><td>21</td><td>Top coat (II)</td><td>Not required.</td><td>Apply a clear coat three times at an interval of 3 to 5 minutes.
For paint/hardener mixture, observe the specifications recommended by the manufacturers.
• Viscosity: 10 — 13 sec./20°C (68°F)
• Coating film thickness: 20 — 30 µ
• Spraying pressure: 245 — 343 kPa
(2.5 — 3.5 kgf/cm^2, 36 — 50 psi)</td></tr>
</table>

Process No.	Process name	Job contents
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.
23	Inspection	Carefully check the condition of the repaired area.
24	Removal of masking	Remove the masking tape applied in process No. 11 and 13.
25	Parts installation	Install parts on the bumper in reverse order of removal.
26	Bumper installation	Install the bumper.

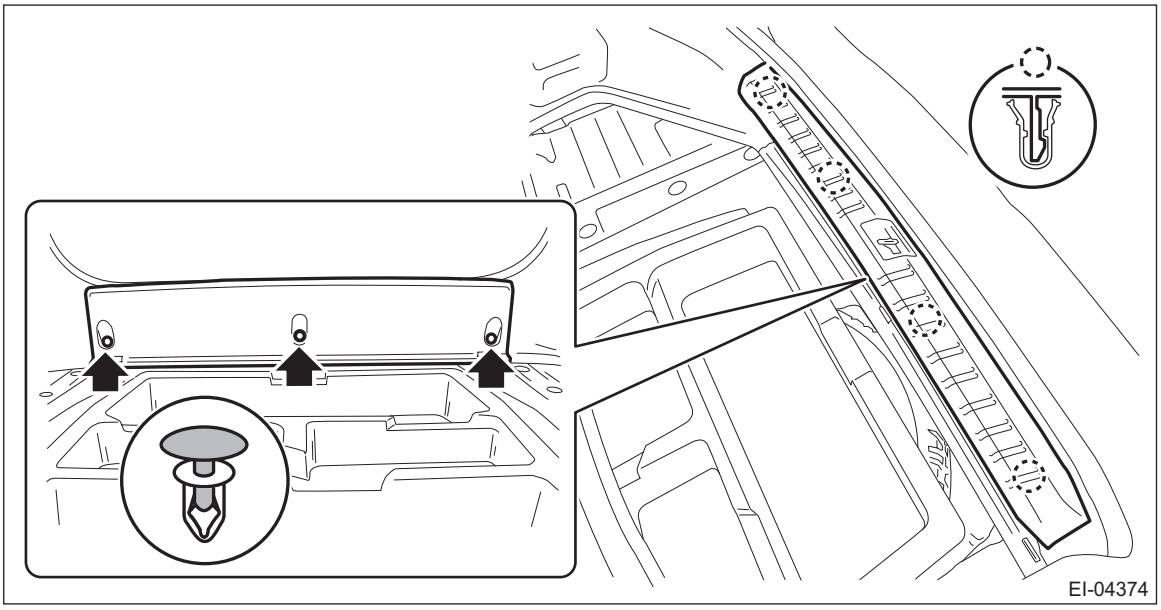
9. Rear Bumper

A: REMOVAL

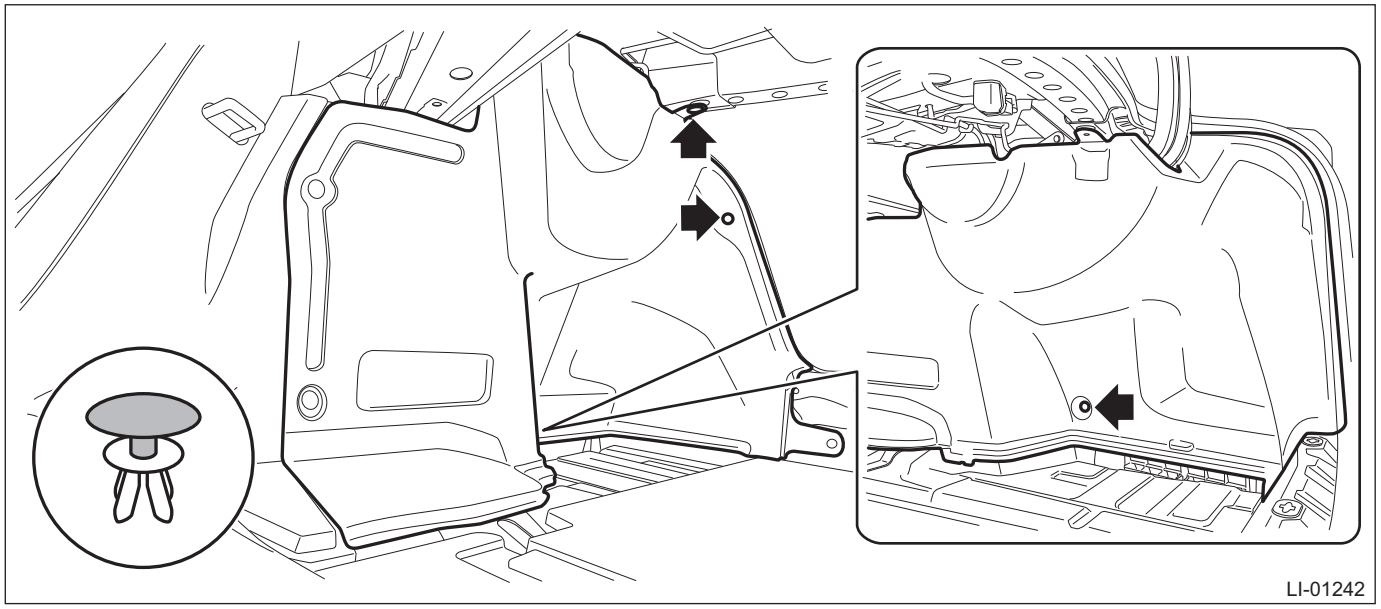
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trunk room mat.
3) Remove the trim panel - trunk rear.
   (1) Remove the clip.
   (2) Release the claws, and remove the trim panel - trunk rear.

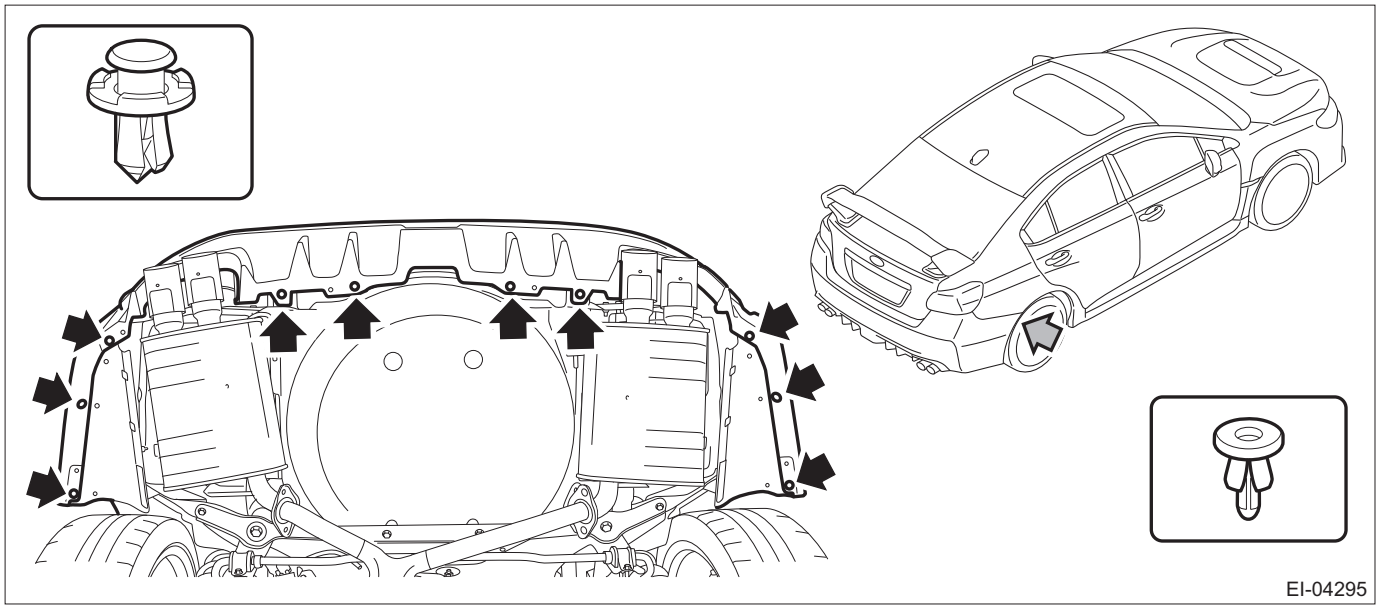


4) Remove the clips, and turn over the trim panel - trunk side.



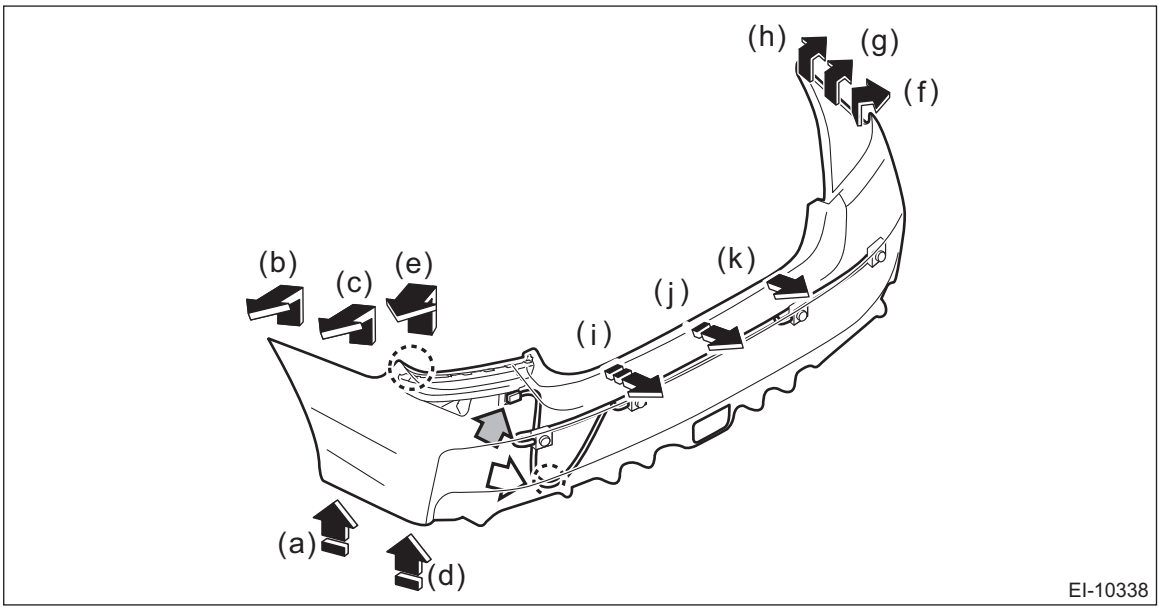
5) Remove the light assembly - rear combination. <Ref. to LI-61, REMOVAL, Rear Combination Light Assembly.>
6) Remove the bumper face - rear.
   (1) Remove the clips inside the wheel housing.

(2) Remove the clips at the lower side of the bumper face - rear.



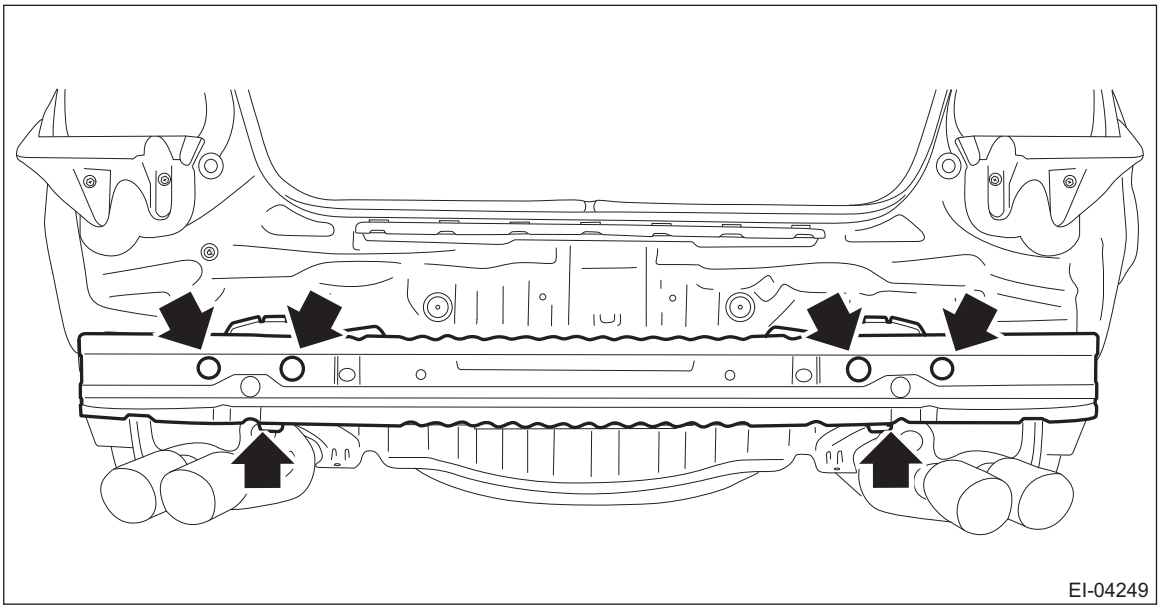
(3) Detach (b) and (c) while pulling up (a) of the bumper face - rear.
(4) Detach (e) while pulling up (d) of the bumper face - rear.
(5) Perform the same procedures when detaching (f) to (h) on the opposite side.
(6) Detach in order from (i) to (k) by carefully pulling toward you while pulling up the center of bumper face - rear.

CAUTION:
- **Pulling with excessive force may damage the bracket.**
- **For models with Reverse Automatic Braking, be careful not to damage the connector located on the gray arrow position.**

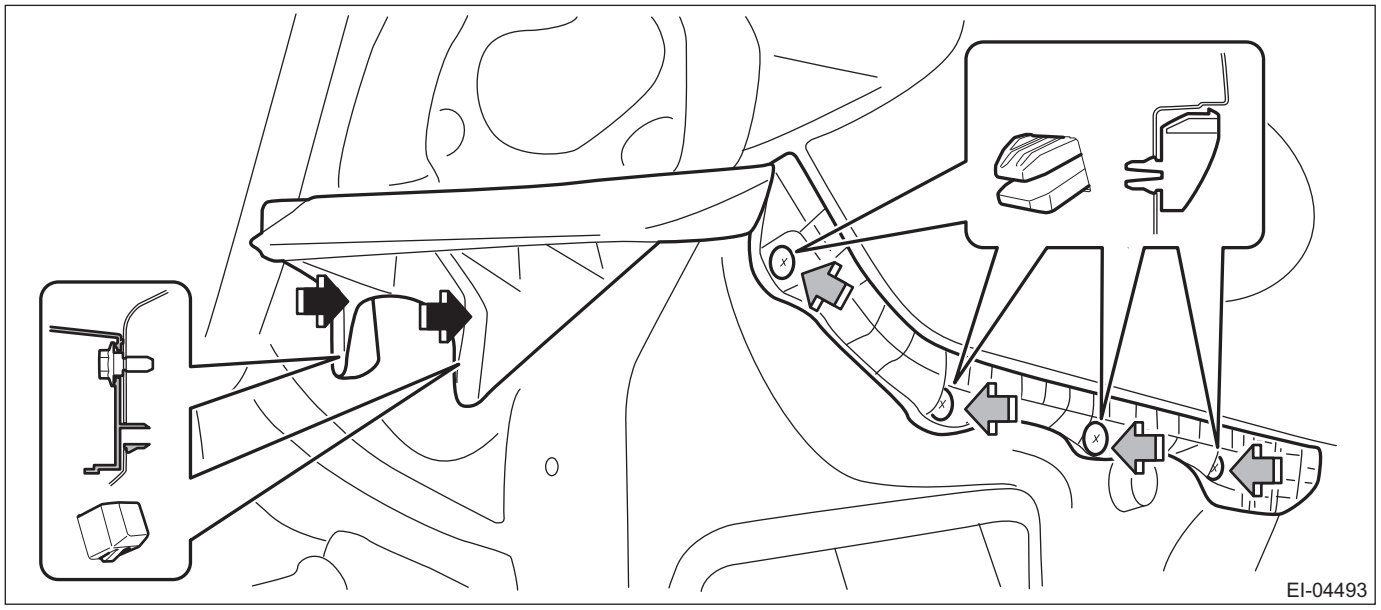


(7) For models with Reverse Automatic Braking, disconnect the connector of the cord assembly - sonar.

7) Remove the bolts and nuts, and remove the bumper beam COMPL - rear.



NOTE:
After all nuts are removed, raise the bumper beam COMPL - rear a little to remove it from vehicle body.
8) Remove bumper brackets.
(1) Remove the screws.
(2) Turn over the trim panel - trunk side, and detach the claw of the clip from the back side.



9) If removing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-7, REMOVAL, Sensor and Harness.>
- Cord assembly - sonar
- Sonar - sensor

B: INSTALLATION

CAUTION:
Before installing the bumper face, match the claws on the bracket - rear bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.
1) If installing the following parts, refer to “Sensor & Harness” of the “Reverse Automatic Braking” section. <Ref. to RAB-8, INSTALLATION, Sensor and Harness.>

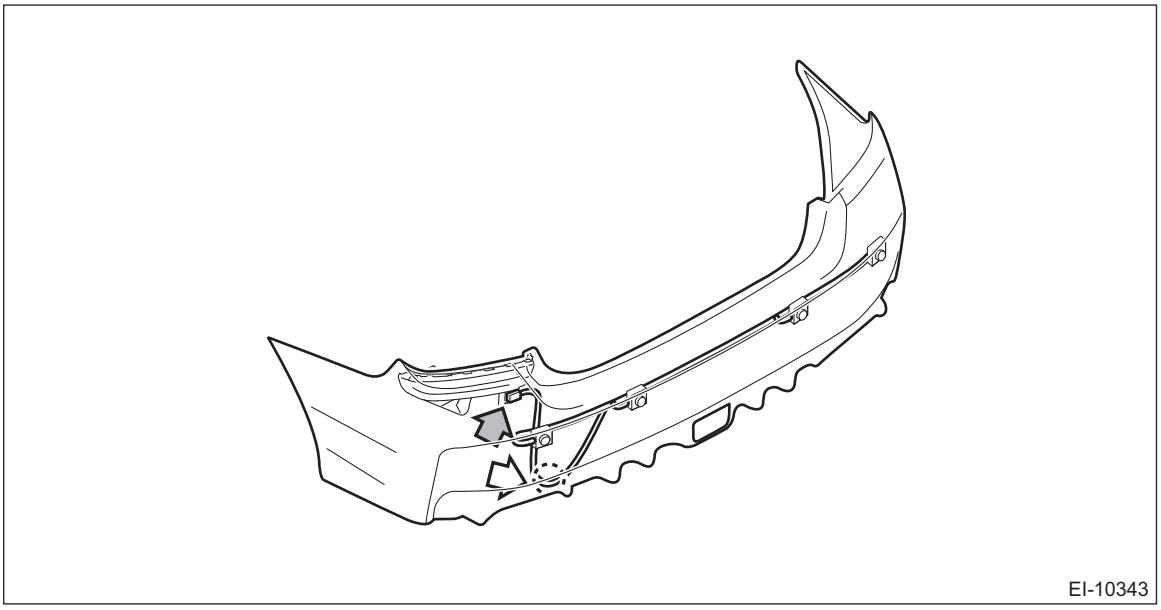
- Sonar - sensor
- Cord assembly - sonar
- Holder - sonar

2) Install each bumper bracket.
3) Install the bumper beam COMPL - rear.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

4) Install the bumper face - rear.

CAUTION:
For models with Reverse Automatic Braking, securely fasten the harness clamp (white arrow) of the cord assembly - sonar.



NOTE:
If the bumper face - rear comes off too easily, adjust the hook of the center bracket side.

5) Install the light assembly - rear combination.

CAUTION:
Replace the gasket - rear combination with a new part. If a gasket is reused, water leakage may occur.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.4 ft-lb)

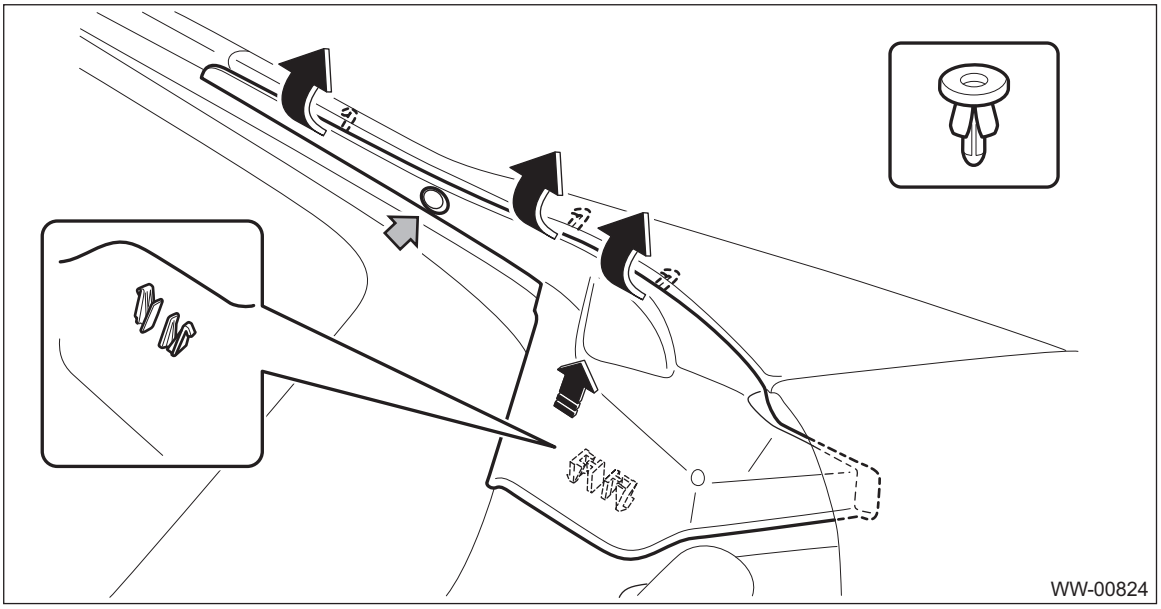
6) Install the trim panel - trunk rear and trunk room mat.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

10.Cowl Panel

A: REMOVAL

1) Remove the arm assembly - windshield wiper. <Ref. to WW-21, REMOVAL, Front Wiper Arm.>
2) Remove the cowl panel - side.
   (1) Remove the clips.
   (2) Release the claws, and then remove the cowl panel - side.

CAUTION:
Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.

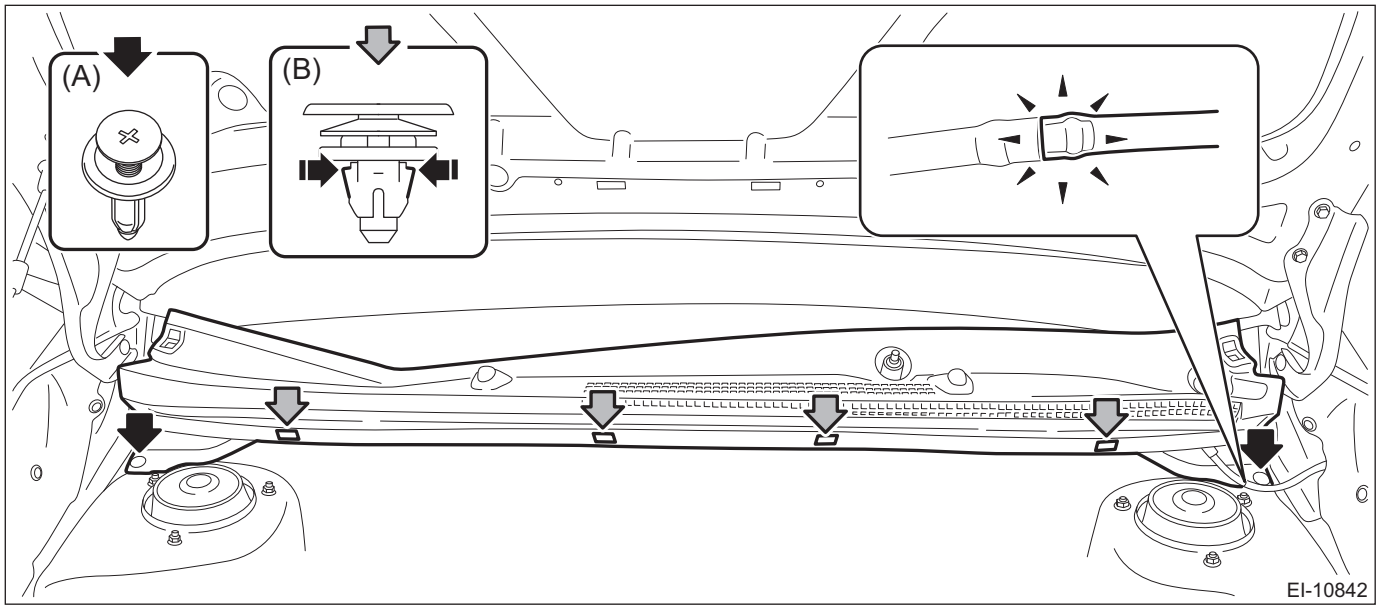


3) Remove the cowl panel assembly.

CAUTION:
Before removing the cowl panel, use an air blower and nylon brush to sweep gravel from the lower area of the front side of the glass.
   (1) Disconnect the washer hose.
   (2) Remove clips (A).
   (3) Check the direction of the clip (B), and push the claws from both sides to remove it.

CAUTION:
When removing the clip (B), push the claws of the clip first.
Be careful not to apply excessive force when pulling the clip (B), as the clip may become damaged.

(4) Remove the cowl panel assembly by pulling it out towards the front of the vehicle.



4) Remove the washer nozzle and washer hose as required. <Ref. to WW-31, REMOVAL, Front Washer Nozzle and Hose.>

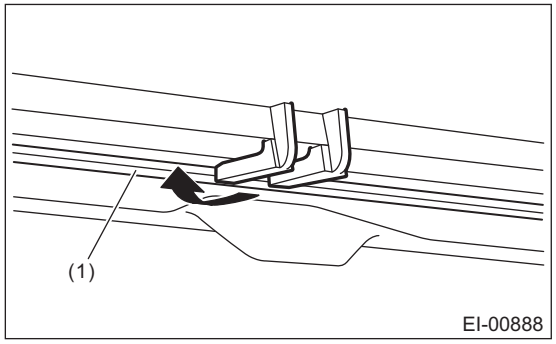
B: INSTALLATION

CAUTION:
Before installing the windshield glass and cowl panel, make sure there are no gravel in the installing area.

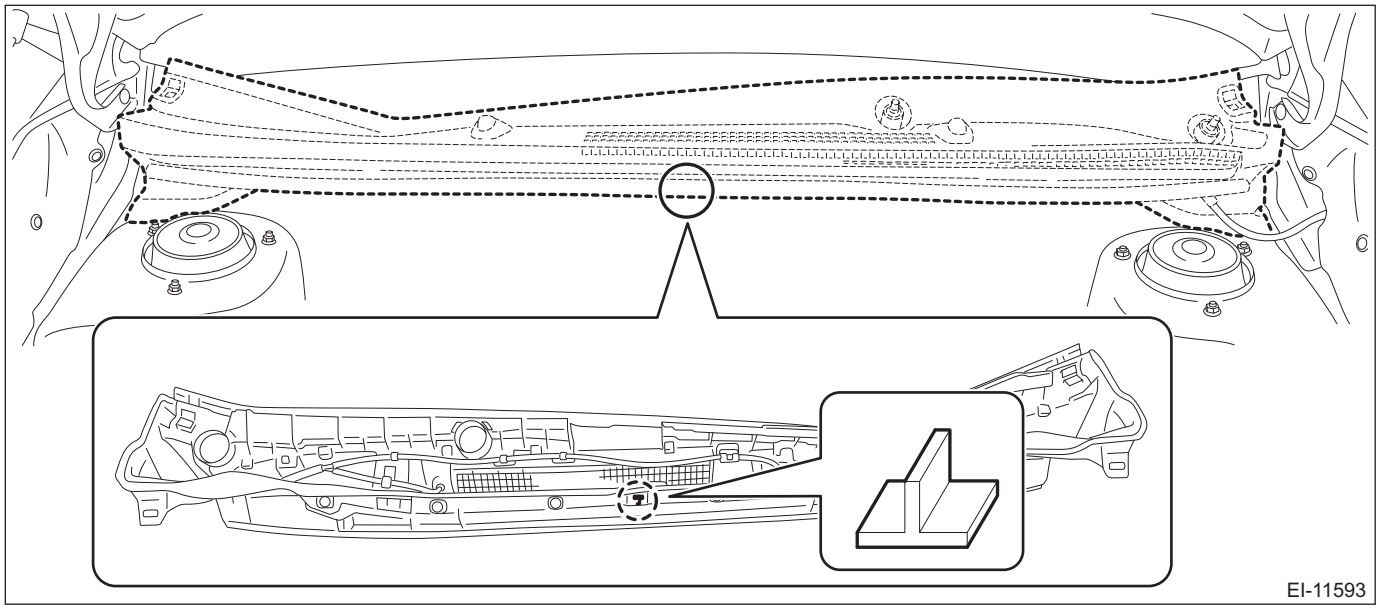
1) Install the cowl panel assembly.

CAUTION:
If the cowl panel assembly cannot be installed properly, do not hit or set it forcibly. The claws of the cowl panel or the windshield glass may be damaged.

(1) Hook the claw of the cowl panel on the lower end (1) of the windshield glass.



(2) Align the center protrusion of the cowl panel assembly to the cutout portion of the vehicle side, then install the cowl panel assembly.



(3) Attach the clip and connect the washer hose.

2) Install the cowl panel - side.

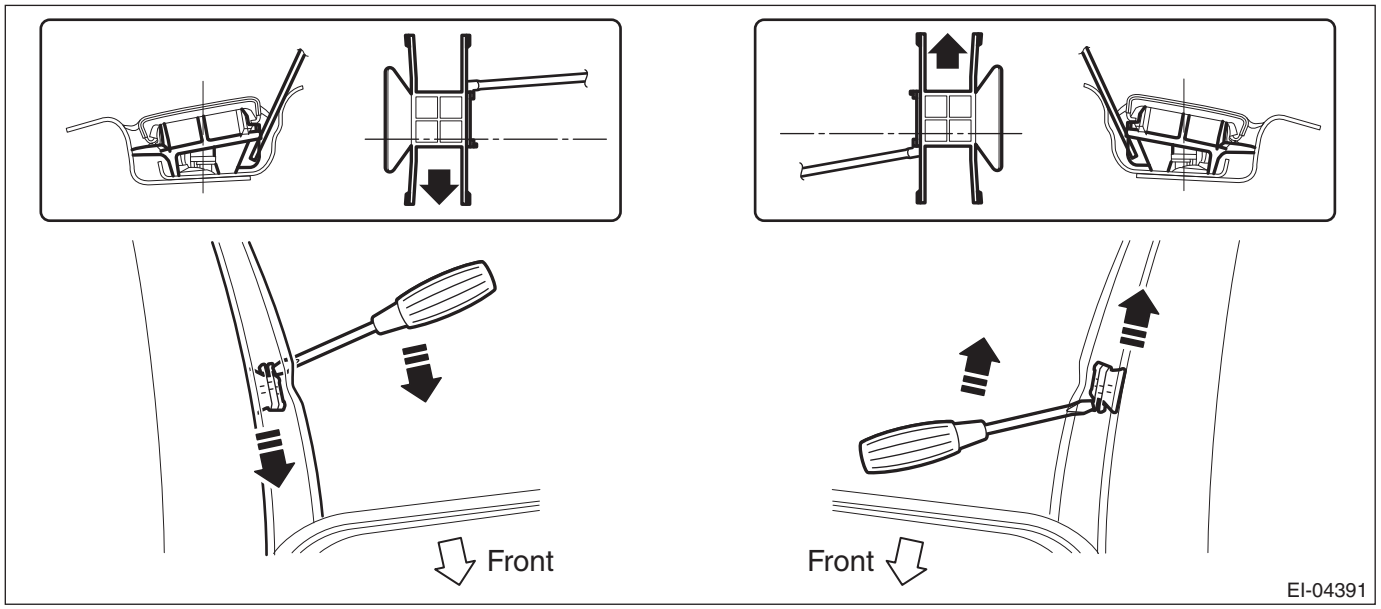
3) Install the arm assembly - windshield wiper. <Ref. to WW-23, INSTALLATION, Front Wiper Arm.>

4) If the washer nozzles have been removed from the cowl panel assembly, adjust the washer spray positions. <Ref. to WW-34, ADJUSTMENT, Front Washer Nozzle and Hose.>

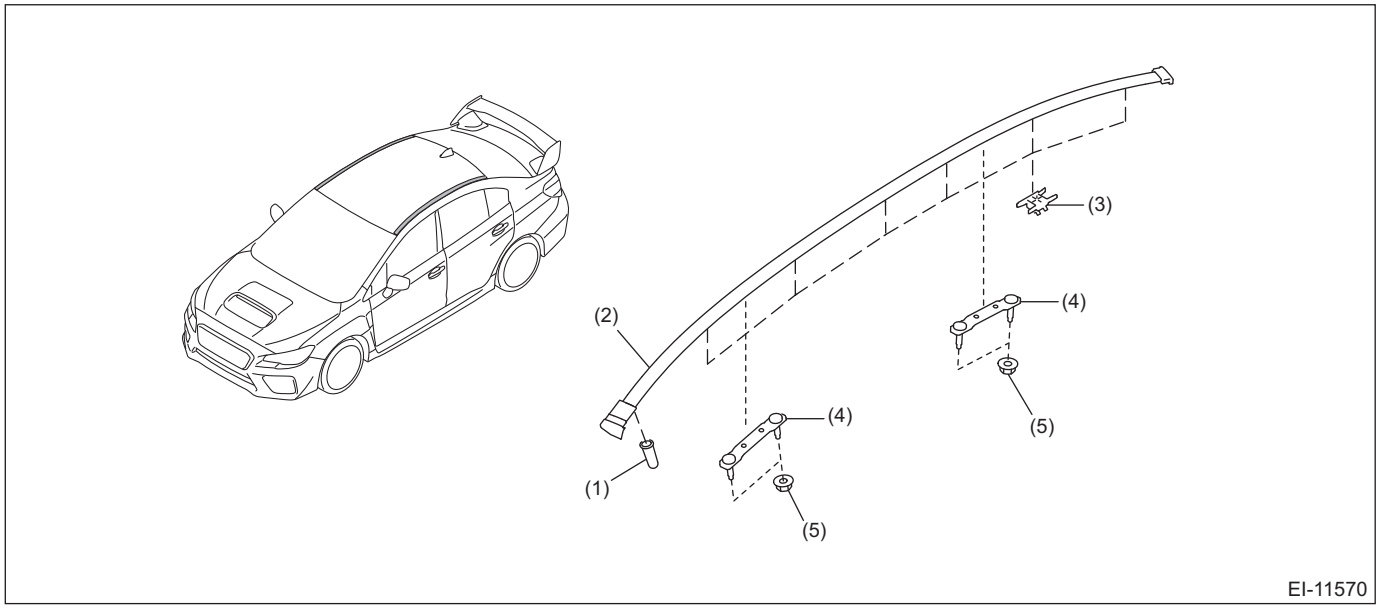
11.Roof Molding

A: REMOVAL

CAUTION:
Be careful not to damage the body.
1) Turn over the front end of the molding - roof.
2) Slide the inner fastener in the direction of the arrow using a flat tip screwdriver, then remove the fastener from the stud on the vehicle side.



Right side: Slide towards the front of the vehicle.
Left side: Slide towards the rear of the vehicle.
6 places per side



(1) Rivet
(2) Molding - roof
(3) Fastener
(4) Bracket - carrier
(5) Flange nut

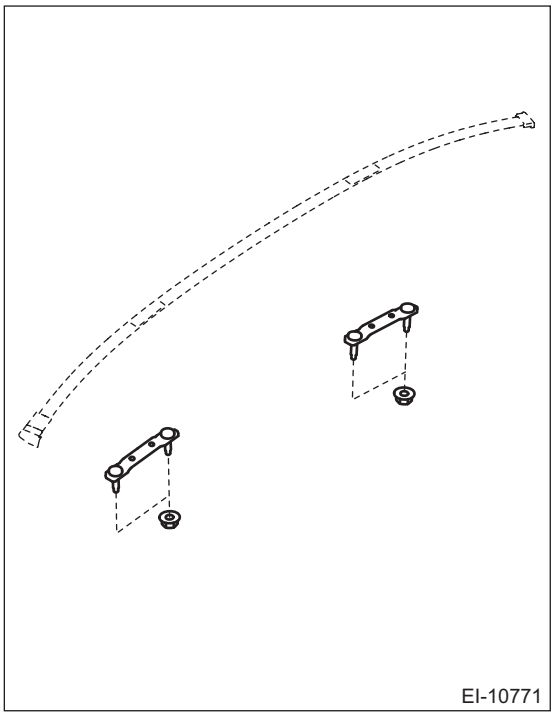
3) Pull up the molding - roof, and remove from the vehicle.

NOTE:
Remove the cap - molding as necessary.

4) Remove the trim panel - roof assembly. <Ref. to EI-101, REMOVAL, Roof Trim.>
5) Remove the curtain airbag module. <Ref. to AB-47, REMOVAL, Curtain Airbag Module.>

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Be careful not to damage the curtain airbag module during removal.

6) Remove the nuts, and remove the bracket - carrier.



B: INSTALLATION

1) Install the bracket - carrier.

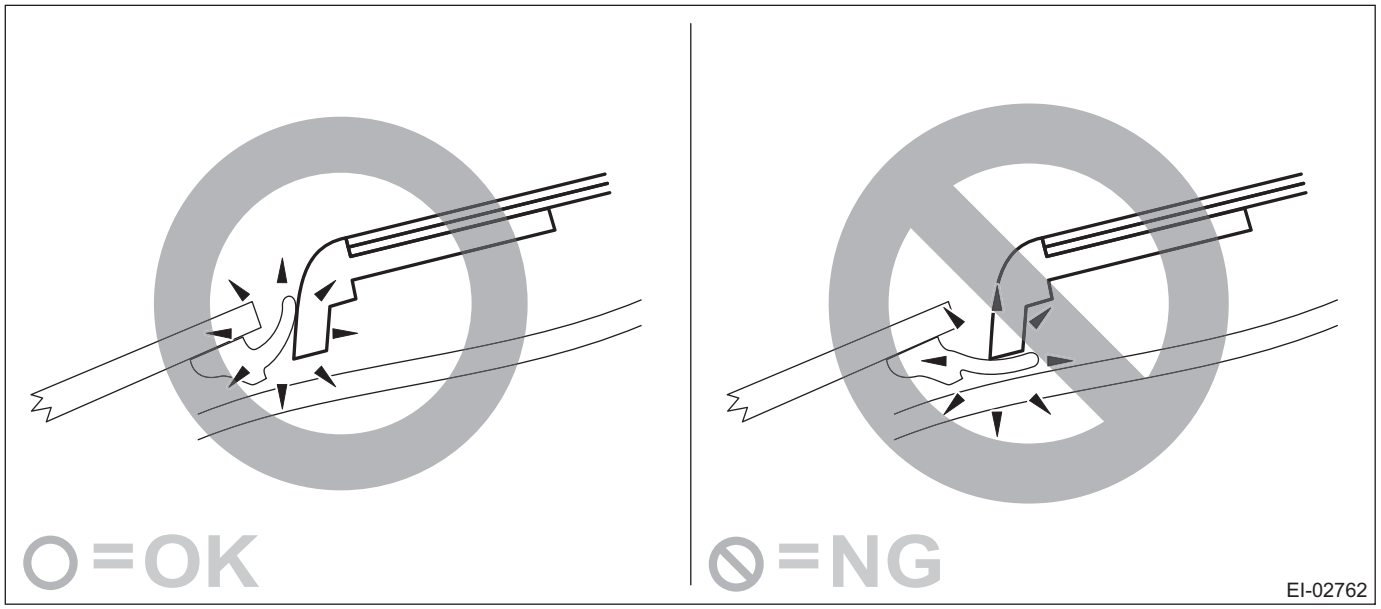
Tightening torque:
Bracket - carrier: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

CAUTION:
Do not reuse the nuts and bracket - carrier. Water leakage may occur if not replaced with a new part.

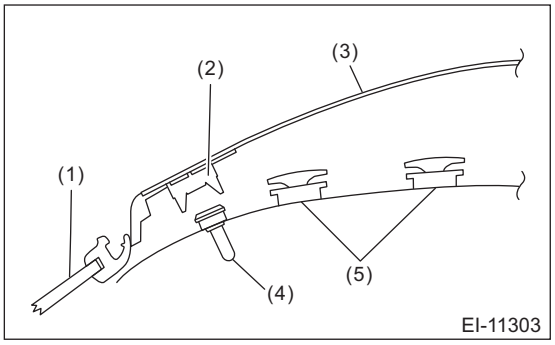
2) Install the curtain airbag module. <Ref. to AB-48, INSTALLATION, Curtain Airbag Module.>
3) Install the trim panel - roof assembly. <Ref. to EI-103, INSTALLATION, Roof Trim.>
4) Remove the clips from the molding - roof, and attach to the studs on the vehicle.

CAUTION:
• Always replace the clips that were damaged during removal of the molding - roof with new parts.

• While installing the molding - roof, be careful not to catch the glass molding with the tip of the front side and rear side.



5) Push the front end of the molding - roof against the front window, and attach the forward positioning clip onto the rivet on the body.

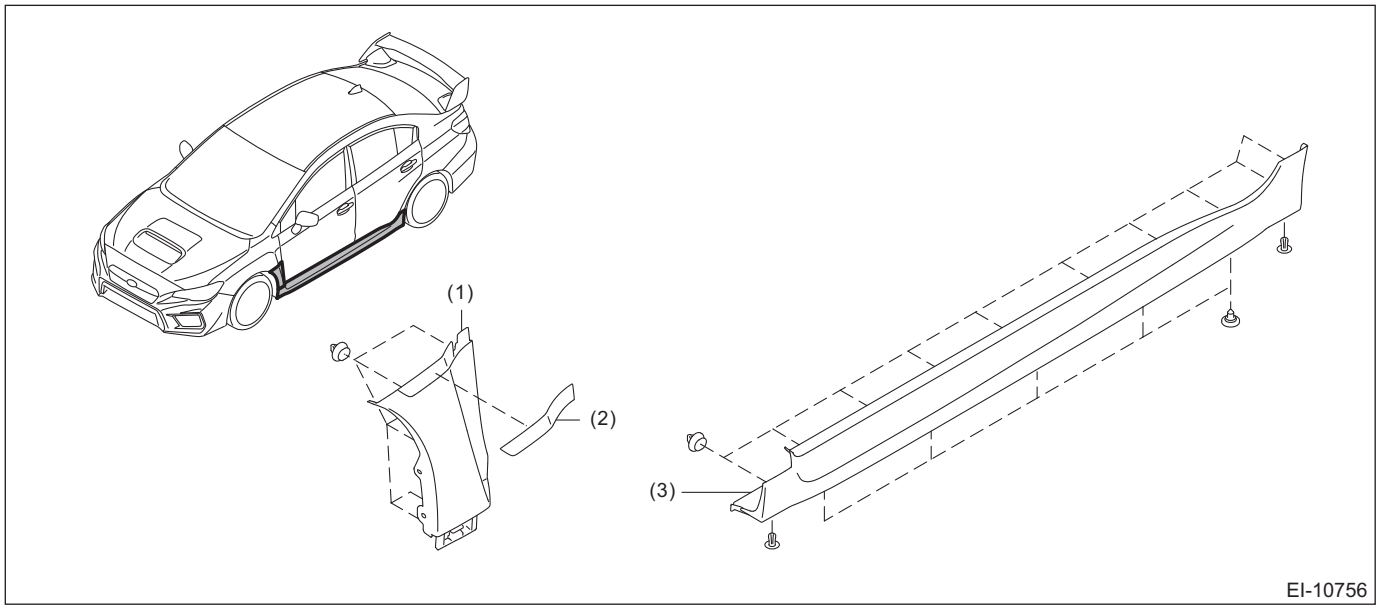


(1) Windshield
(2) Positioning clip
(3) Molding - roof
(4) Rivet
(5) Fastener

6) While pushing down the molding - roof from above, connect the molding - roof and the fastener.

12.Side Garnish & Side Spoiler

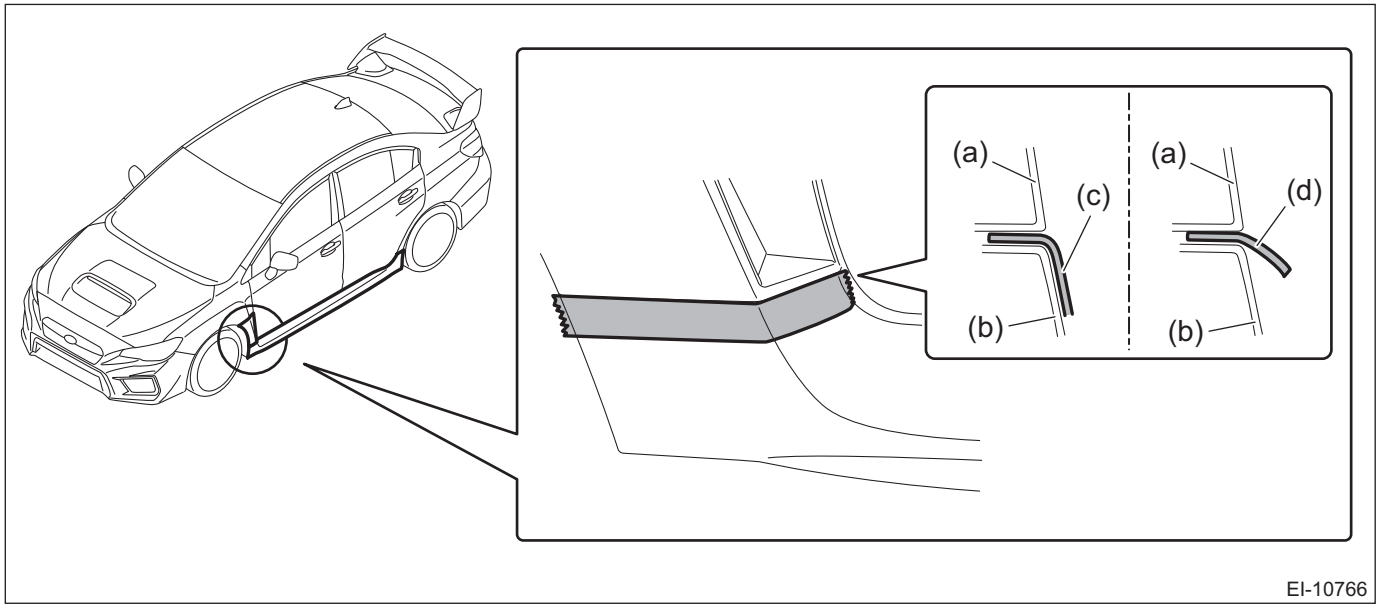
A: REMOVAL



(1) Garnish ASSY - fender (2) Molding (3) Spoiler ASSY - side

1) Remove the spoiler assembly - side.
(1) Apply protective tape to the gap between garnish assembly - fender and spoiler assembly - side.

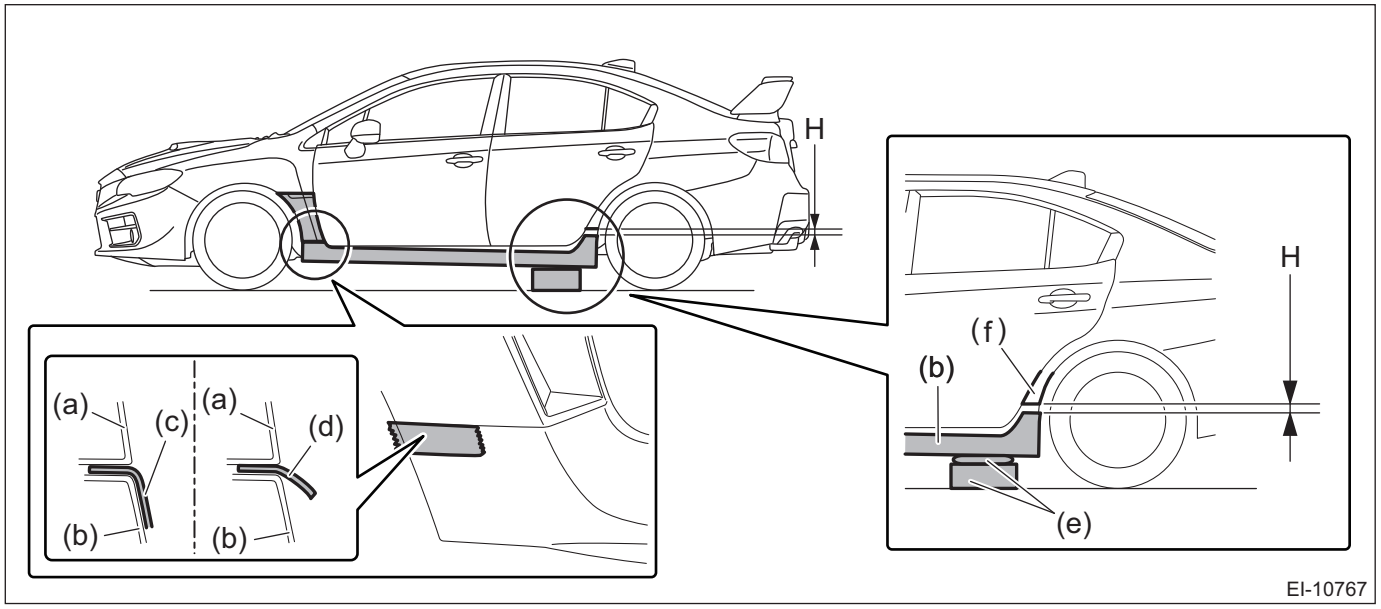
CAUTION:
If protective tape is not applied, a damage may occur when removing the spoiler assembly - side. If protective tape is difficult to apply, place a piece of paper, etc. between them.



(a) Garnish ASSY - fender (c) Protective tape (d) Paper
(b) Spoiler ASSY - side

NOTE:
If protective tape cannot be applied because there is no gap, perform the operations from the step (4) onward.
(2) Release the lower clip on the spoiler assembly - side.

(3) Release the clips one by one from the front edge to the rear side in sequence, and remove the spoiler assembly - side.
(4) Apply protective tape to the gap between garnish assembly - fender and spoiler assembly - side.



(a)	Garnish ASSY - fender	(d)	Paper	H:	30 — 35 mm (1.2 — 1.4 in)
(b)	Spoiler ASSY - side	(e)	Spacer (a cloth, etc. located on a box)		
(c)	Protective tape	(f)	Panel - side outer		

(5) Release the lower clip on the spoiler assembly - side.
(6) Release 7 clips one by one from the rear edge to the front side in sequence, and place the spoiler assembly - side on the spacer (e).
(7) Adjust the spacer height using a cloth, etc. so that the gap (H) between the rear edge of spoiler assembly - side and the panel - side outer becomes 30 — 35 mm (1.2 — 1.4 in).
(8) Release the clips, and remove the spoiler assembly - side.

2) Remove the garnish assembly - fender. <Ref. to EB-18, FENDER GARNISH, REMOVAL, Front Fender.>

B: INSTALLATION

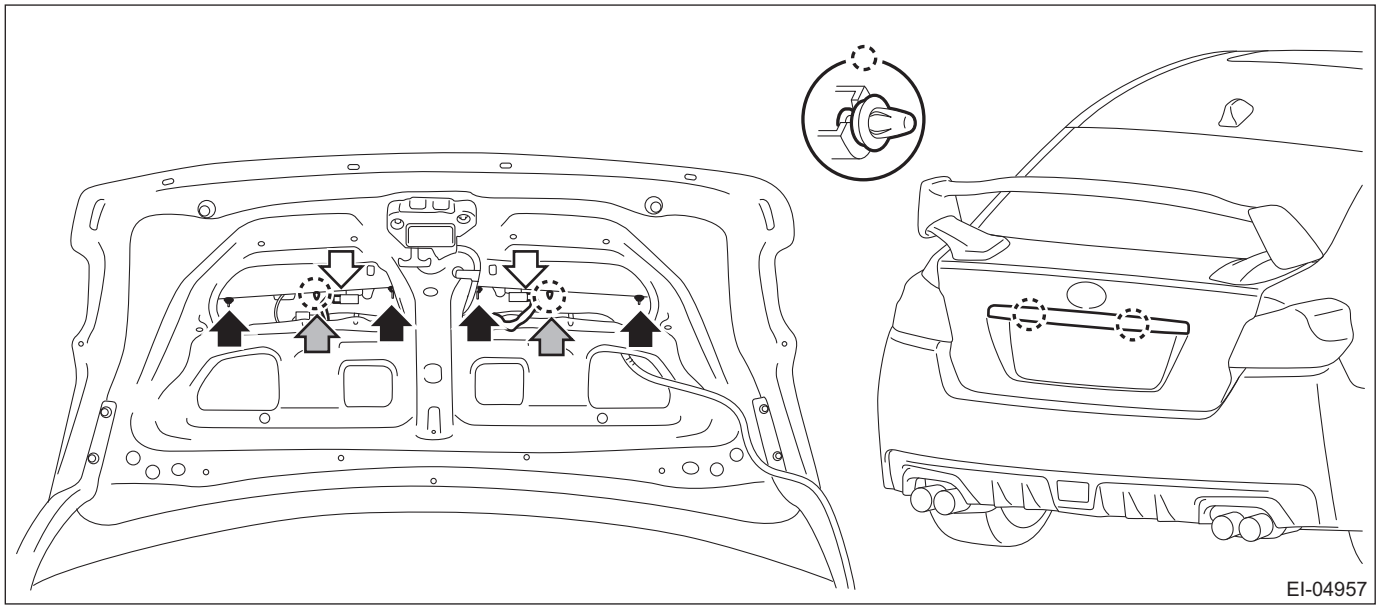
CAUTION:
Make sure that there is a gasket attached on the clip of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.
Install the spoiler assembly - side.

13.Trunk Lid Garnish

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - trunk lid. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the garnish - trunk.
   (1) Remove the nut.
   (2) Disconnect the clips and connectors, and remove the garnish - trunk.



B: INSTALLATION

CAUTION:
Make sure that there is a gasket attached on the clip of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.
1) Install the garnish - trunk.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
2) Install the trim panel - trunk lid.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

14.Rear Spoiler

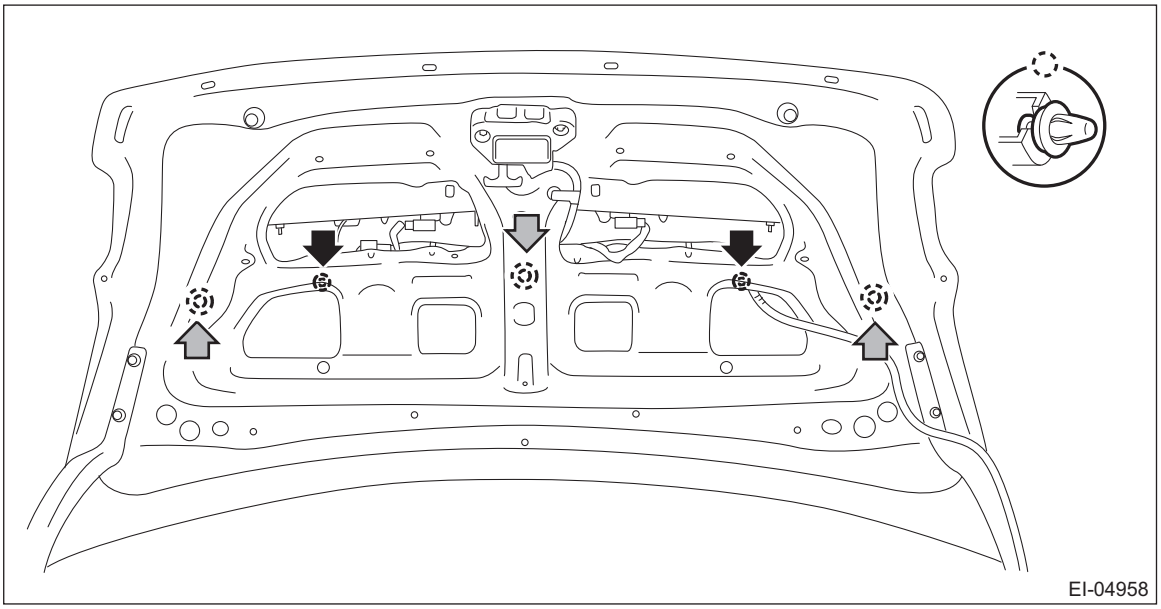
A: REMOVAL

1) Remove the trim panel - trunk lid. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
2) Detach the rear spoiler assembly.

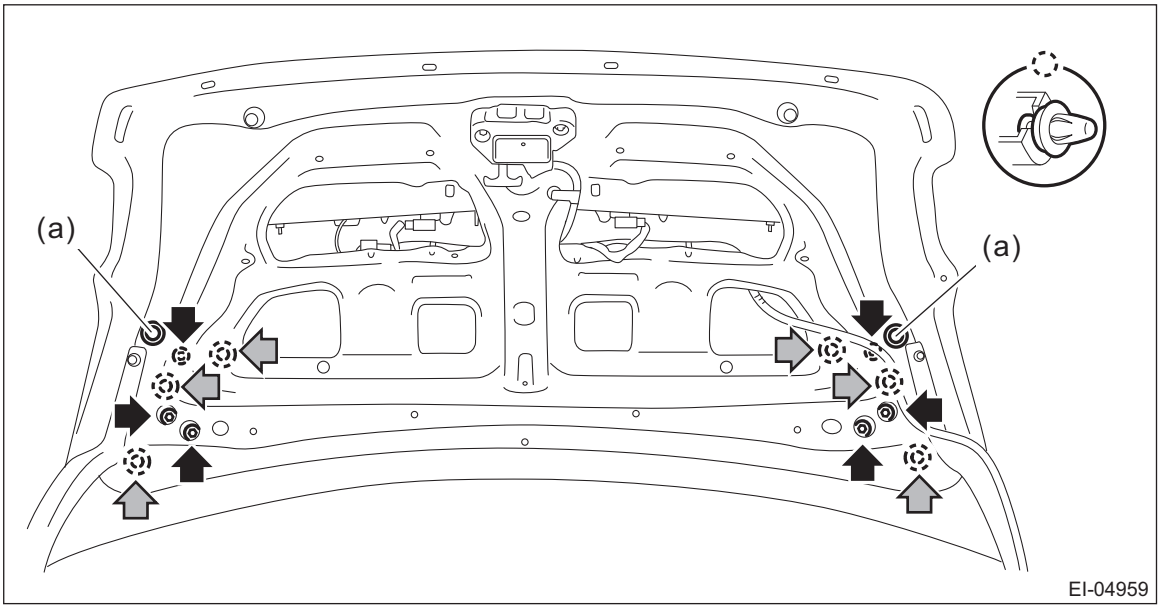
CAUTION:
- **When removing the nut, be careful not to drop the nut inside the trunk lid panel.**
- **Be careful not to damage the vehicle body during removal and installation.**
- **For model with the large rear spoiler, the reactive force of trunk lid increases when the rear spoiler is removed.**

(1) Remove the plugs (a). (Model with large rear spoiler)
(2) Remove the nuts.
(3) Disengage the clips and remove the rear spoiler assembly.

- Model with small rear spoiler



- Model with large rear spoiler



B: INSTALLATION

1) Clean the trunk lid and spoiler attachment surface before installation.

CAUTION:
Make sure that there is a gasket attached on the clip of the spoiler assembly or garnish assembly. If a gasket is not attached, water leakage may occur.
2) Install the rear spoiler assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
3) Install the trim panel - trunk lid. <Ref. to EI-98, INSTALLATION, Trunk Room Trim.>

15.Heat Shield Cover

A: NOTE

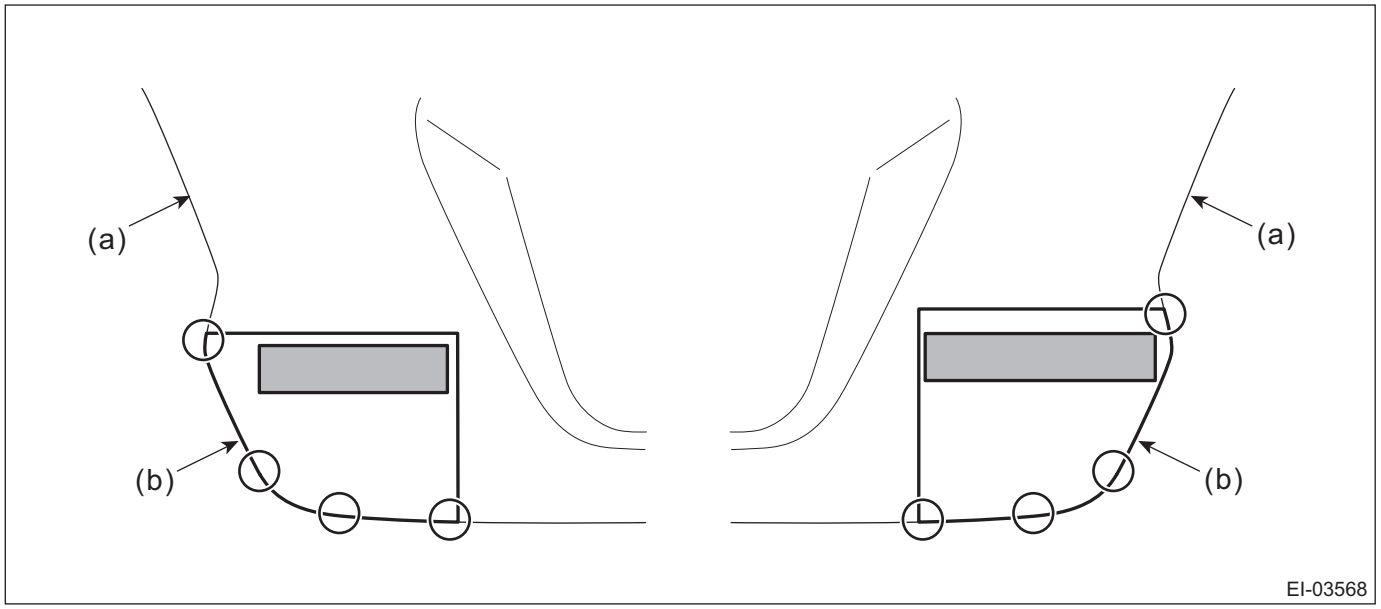
Refer to “EXHAUST” section for removal and installation procedure of the heat shield cover.

16.Ornament

A: INSTALLATION

1. LETTER MARK

Align the end of application tape with the end of panel, then adhere the letter mark.



(a) Trunk lid COMPL end

(b) Application tape end

17.Door Trim

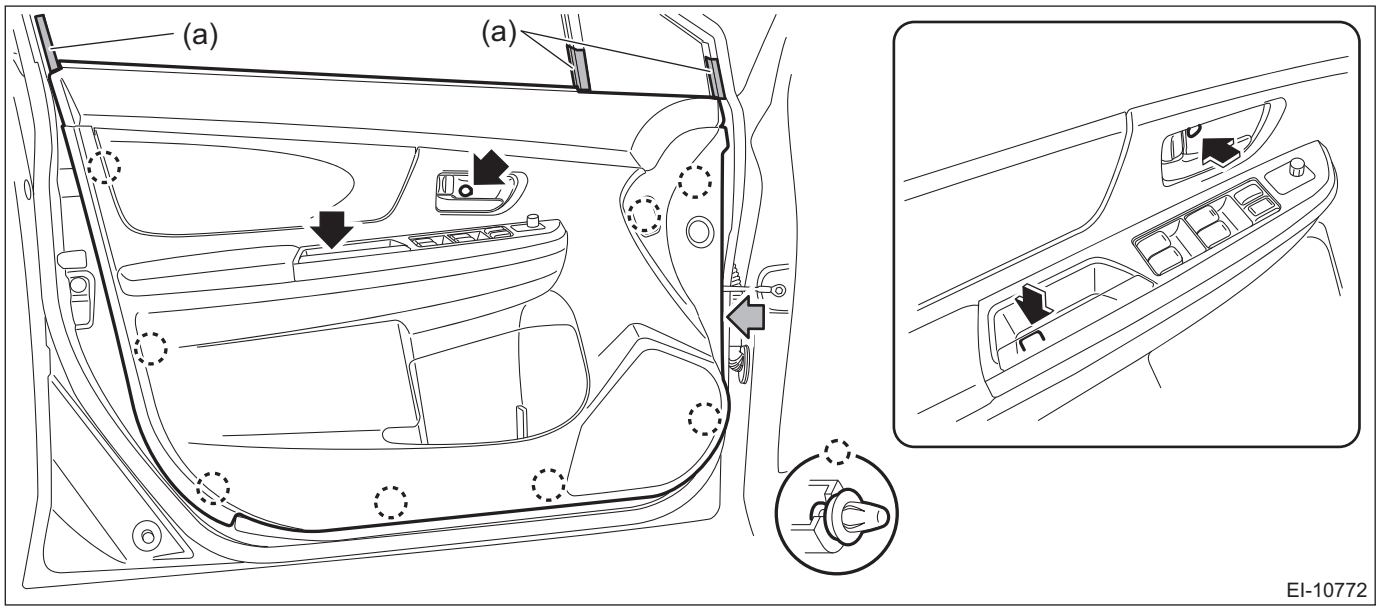
A: REMOVAL

1. FRONT DOOR

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - front door.
   (1) Attach the protective tape (a).
   (2) Open the cover and remove the screw.
   (3) Remove the clips, and remove the trim panel - front door from the panel assembly - front door.



NOTE:
It is easier to remove the door trim if the removal is performed from the gray arrow section.

   (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

   (5) Disconnect the harness connector and remove the trim panel - front door.

3) Remove each part as required.

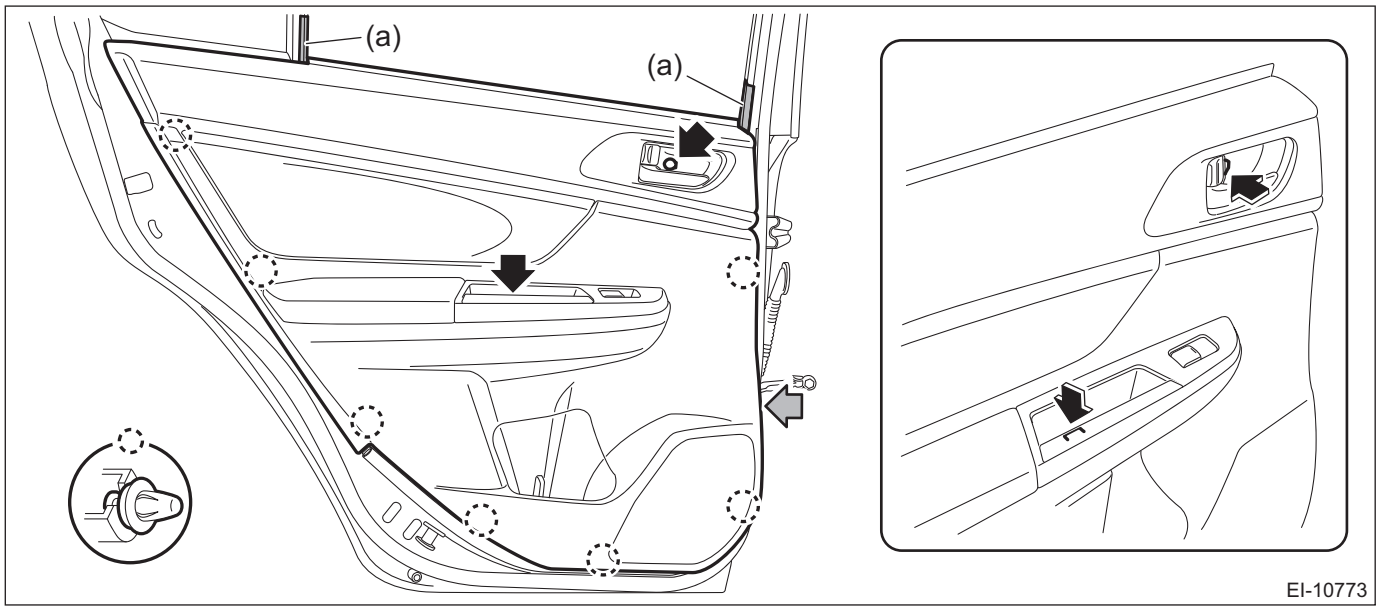
- Remote assembly - door: <Ref. to SL-31, REMOVAL, Front Inner Remote.>
- Switch - power window main: <Ref. to GW-11, MAIN SWITCH, REMOVAL, Power Window Control Switch.>
- Weather strip - door INN: <Ref. to EI-62, DISASSEMBLY, Door Trim.>

2. REAR DOOR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trim panel - rear door.
   (1) Attach the protective tape (a).
   (2) Open the cover and remove the screw.
   (3) Remove the clips, and remove the trim panel - rear door from the panel assembly - rear door.



NOTE:
It is easier to remove the door trim if the removal is performed from the gray arrow section.

   (4) Detach the door lock cable (a) and door open cable (b) from the remote assembly - door.

   (5) Disconnect the harness connector and remove the trim panel - rear door.

3) Remove each part as required.

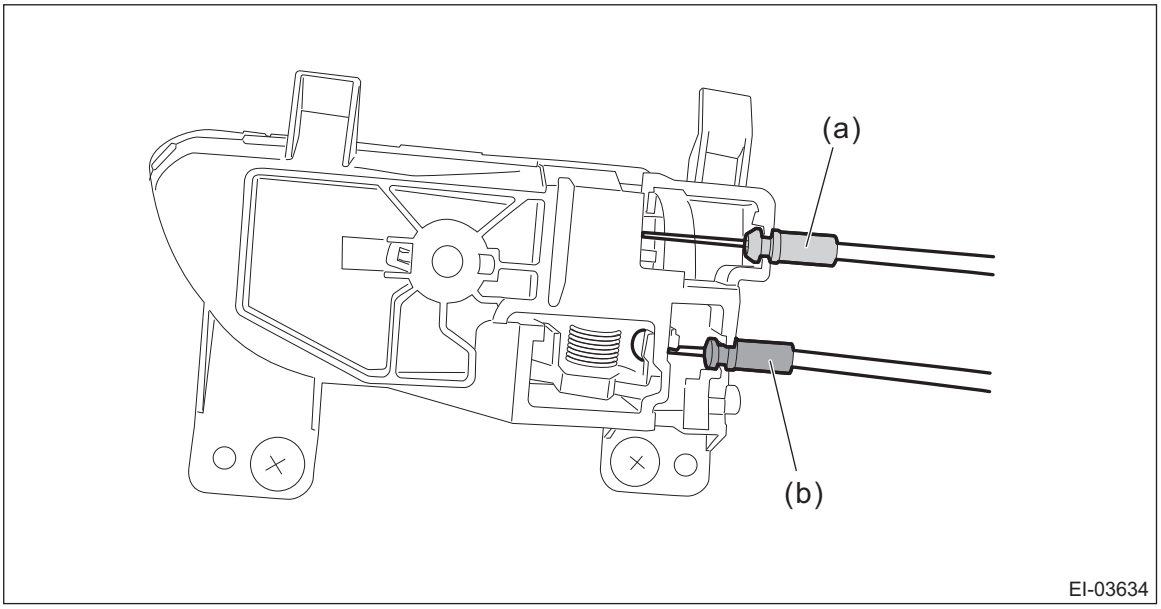
- Remote assembly - door: <Ref. to SL-39, REMOVAL, Rear Inner Remote.>
- Switch - power window sub: <Ref. to GW-12, SUB-SWITCH, REMOVAL, Power Window Control Switch.>
- Weather strip - door INN: <Ref. to EI-62, DISASSEMBLY, Door Trim.>

B: INSTALLATION

1) Before installation, check the following items.
- Cable is free from deformation such as fray.
- Grease is applied sufficiently to cable joints.

If grease is insufficient, add it as necessary before assembling the cable.
2) Install the removed parts to the trim panel - door.
3) Install the trim panel - door.

NOTE:
Attach the door lock cable (a - end ball: small) to the upper side, and attach the door open cable (b - end ball: large) to the lower side.

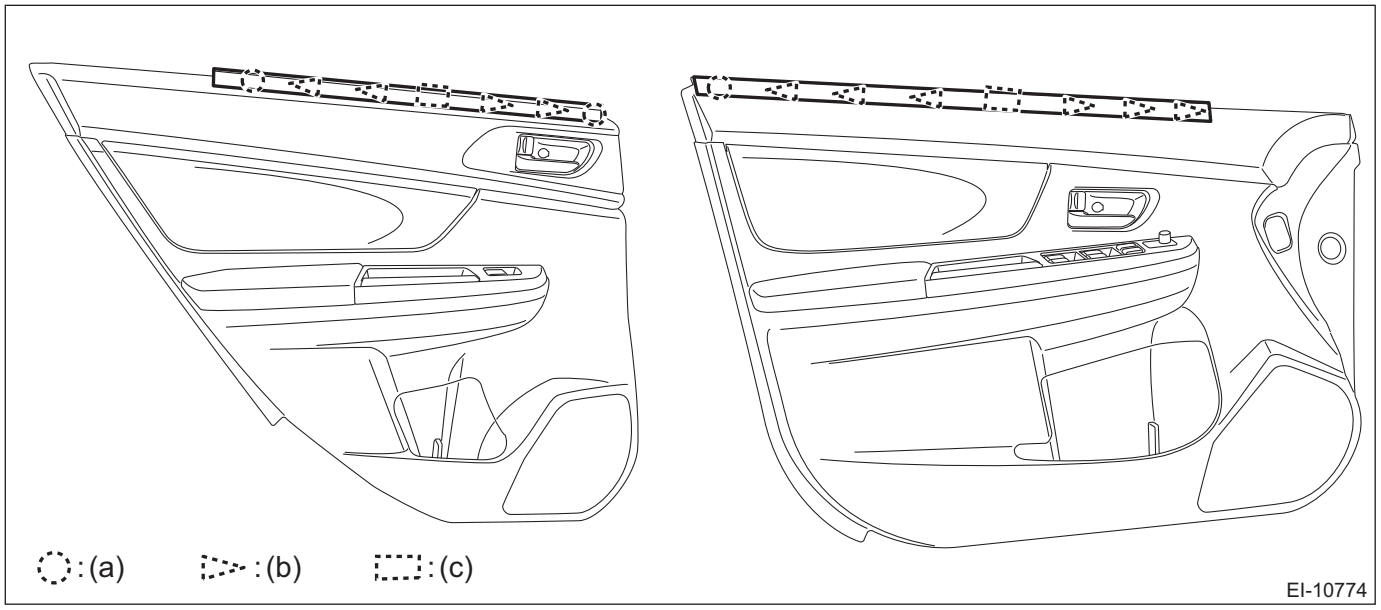


4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: DISASSEMBLY

1) Remove the trim panel - door.

2) Disengage the rivets and claws, and remove the weather strip - door INN from the trim panel - door.



(a) Rivet (b) Claw (c) Claw

NOTE:
Remove the rivets with a rivet cutter or nipper, etc.

D: ASSEMBLY

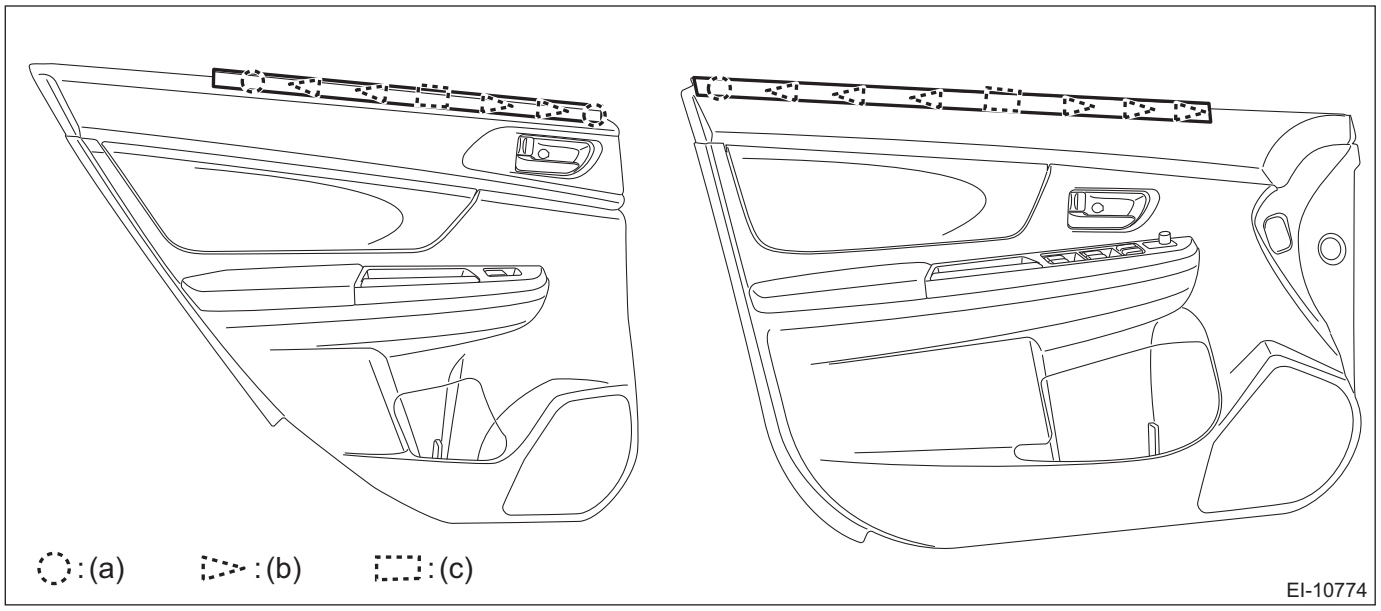
1) Bend the claws while pushing the weather strip - door INN against the trim panel - door.

CAUTION:
Beware of the direction of folding the claws.

2) Install the rivet.

CAUTION:
Set the height of rivet crimped section as 3 mm (0.12 in). If the crimp is not sufficient, press it with pliers, etc. in order not to interfere the trim panel - door.

Preparation tool and item:
Hand riveter (corresponding to ϕ3.2 mm (0.13 in))
Rivet



(a) Rivet
(b) Direction of folding claws
(c) Claw bending direction: bend forward for LH side, backward for RH side.

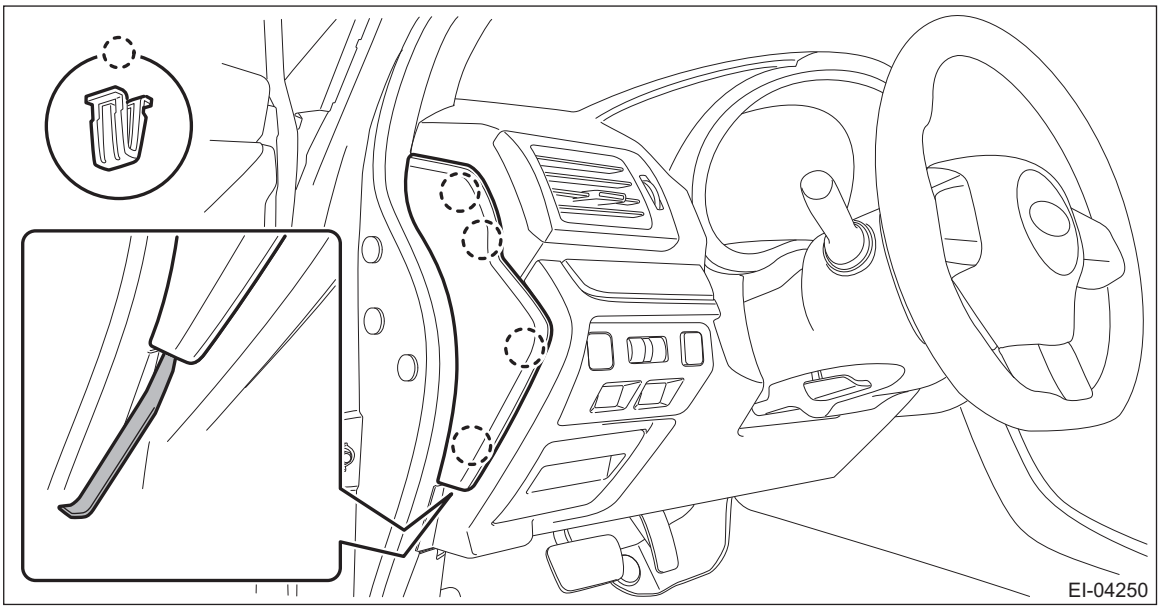
3) After installing the weather strip - door INN, perform the following checks.
- Make sure there are no gaps between the weather strip - door INN and the trim panel - door.
- Make sure there are no looseness when pulling the weather strip - door INN lightly.

18.Instrument Panel Lower Cover

A: REMOVAL

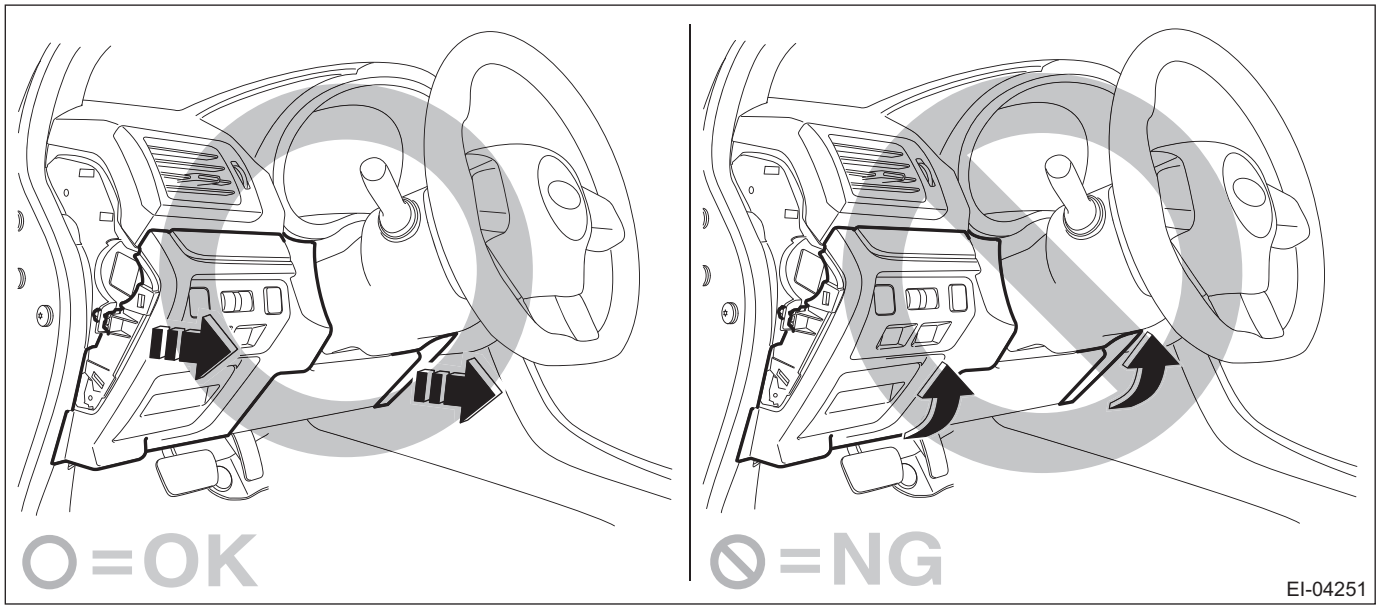
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the clips, and remove the cover - instrument panel side LH.



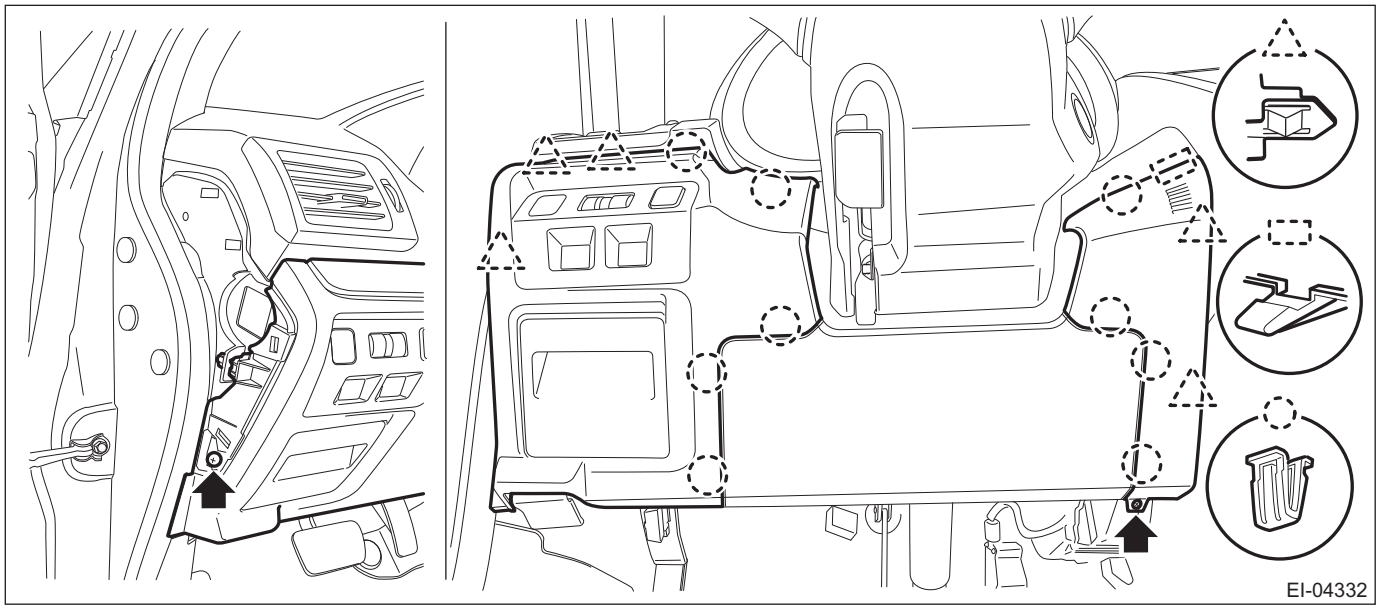
NOTE:
Using a plastic remover, open the cover - instrument panel side LH.
3) Remove the cover assembly - instrument panel LWR driver INN and OUT.

CAUTION:
When removing the cover assembly - instrument panel LWR driver, be sure to pull it toward you. If attempting to remove by turning it upward, the claws may be damaged.



(1) Remove the screws and release the clips and claws.

(2) Disconnect the harness connectors, and remove the cover assembly - instrument panel LWR driver INN and OUT.



B: INSTALLATION

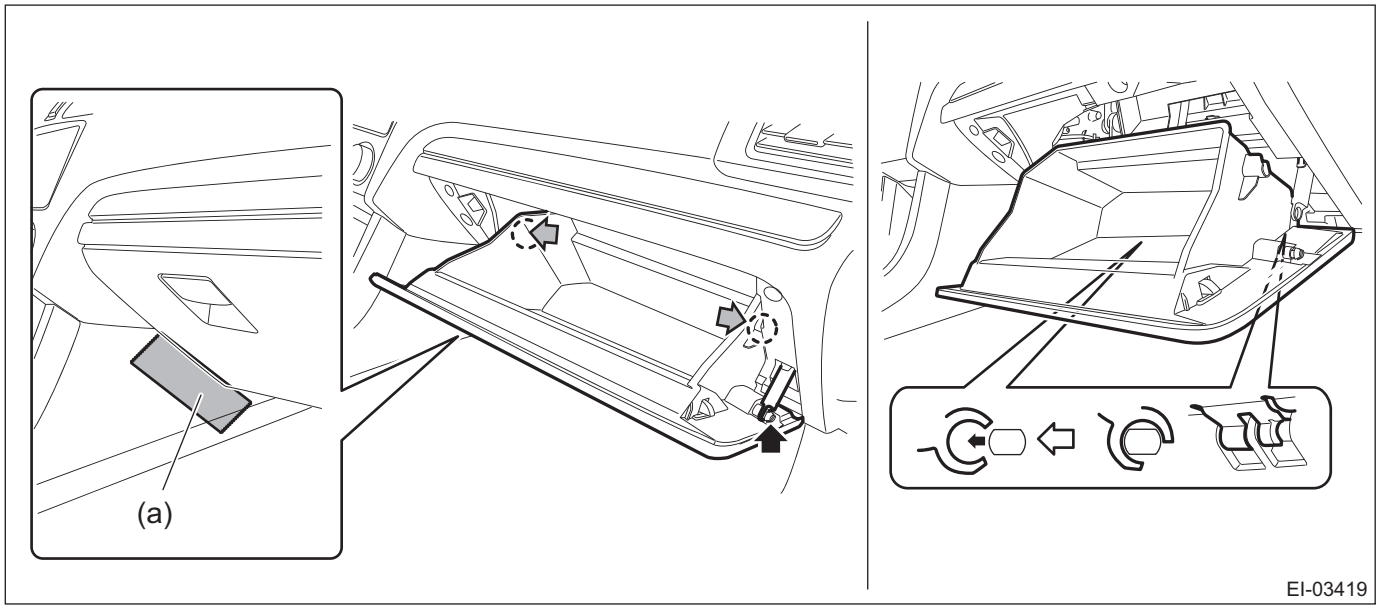
1) Install the cover assembly - instrument panel LWR driver INN and OUT.
2) Install the cover - instrument panel side LH.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

19.Glove Box

A: REMOVAL

NOTE:
Refer to “Security and Locks” section for key cylinder replacement. <Ref. to SL-71, GLOVE BOX LID, REPLACEMENT, Key Lock Cylinders.>
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

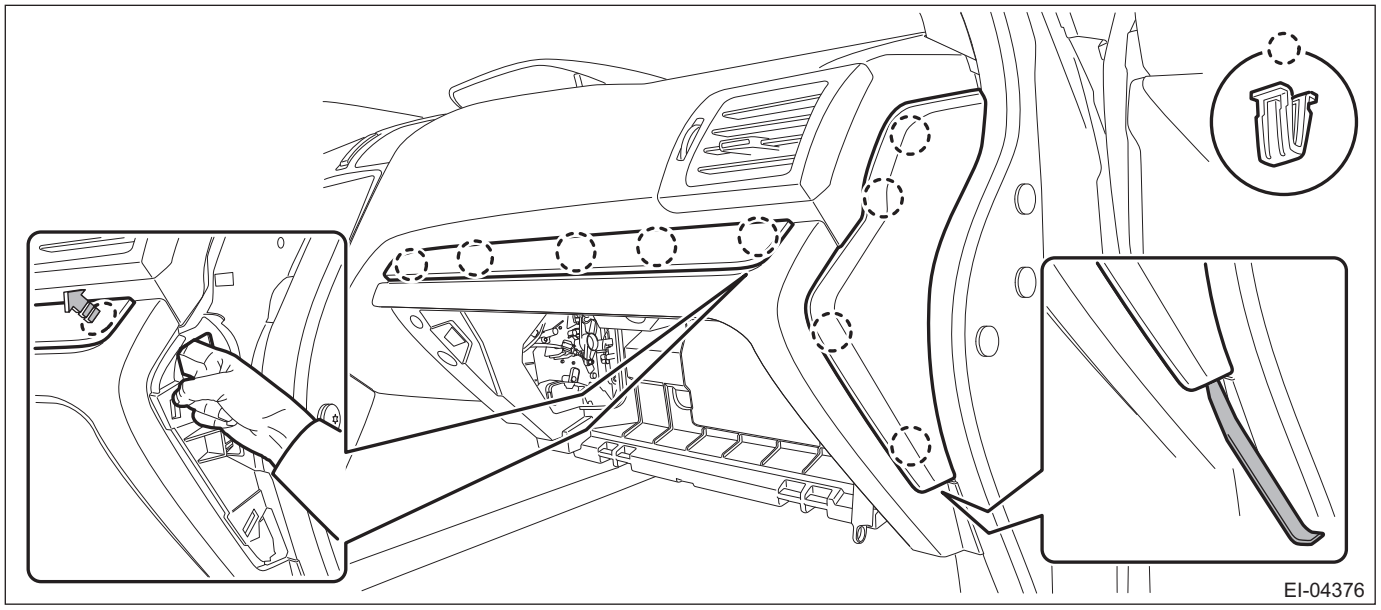
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the pocket assembly.
   (1) Attach the protective tape (a) to the panel center LWR.
   (2) Remove the damper COMPL - pocket.
   (3) Release the stoppers and remove the pocket assembly by pulling it toward you.



3) Remove the back panel - pocket.
   (1) Remove the clips, and remove the cover - instrument panel side RH.

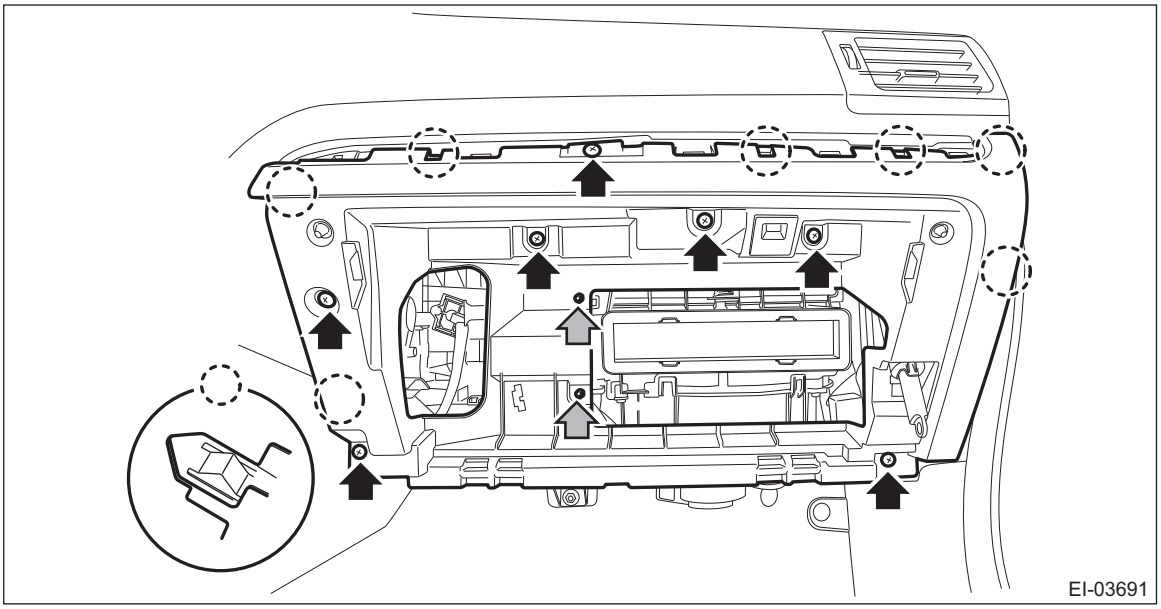
NOTE:
Remove the cover - instrument panel side RH by using a plastic remover.

(2) Release the clips, and remove the ornament - panel assembly passenger.



NOTE:
To facilitate the removal, push the clip of the ornament - panel assembly passenger from the backside.

(3) Remove the glove box light LED, and disconnect the connector.
(4) Remove the screws, claws and harness clamp, then remove the back panel - pocket.



B: INSTALLATION

1) Install the back panel - pocket.
2) Connect the connector, and install the glove box light LED.
3) Install the ornament - panel assembly passenger.
4) Install the under cover assembly - passenger.
5) Install the pocket assembly.
6) Install the cover - instrument panel side RH.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

20.Center Console

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the center grille assembly. <Ref. to AC-91, REMOVAL, Air Vent Grille.>
3) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>

B: INSTALLATION

CAUTION:
After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.
1) Install the audio assembly or navigation assembly.
2) Install the center grille assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

21.Console Box

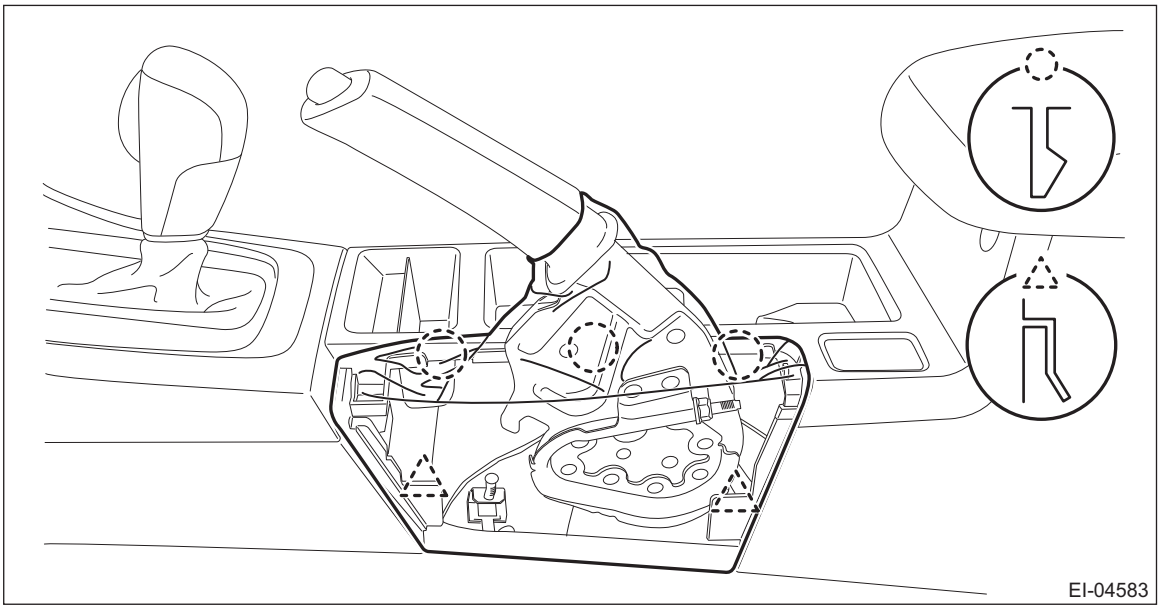
A: REMOVAL

1. MODEL WITH PARKING BRAKE LEVER

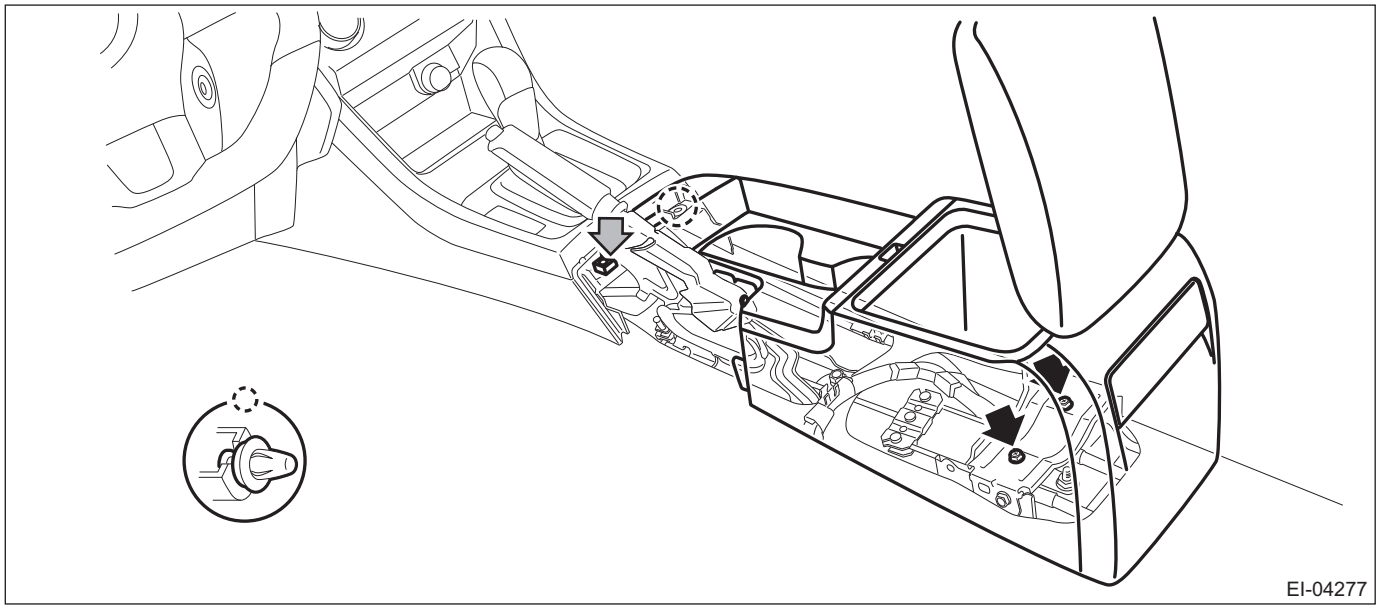
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into “N” before disconnecting the battery ground cable.

2) Release the claws, and then remove the boot - hand brake.

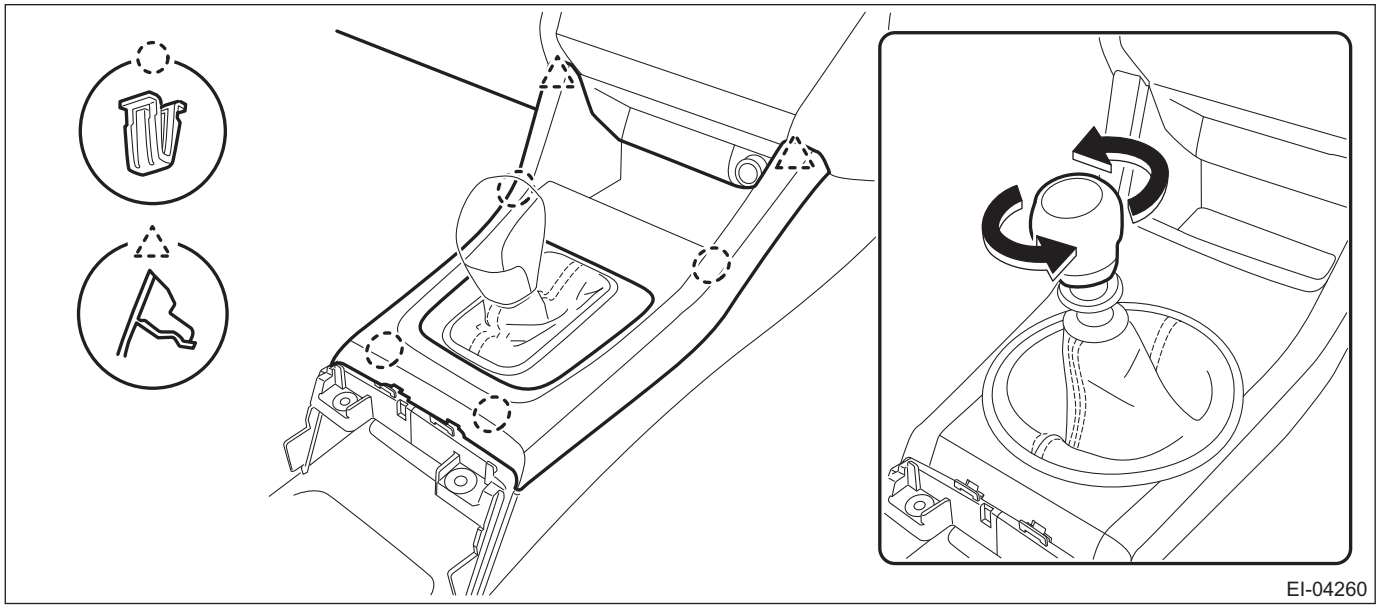


3) Remove the screws, bolts and clips, disconnect the harness connector and remove the console box assembly.

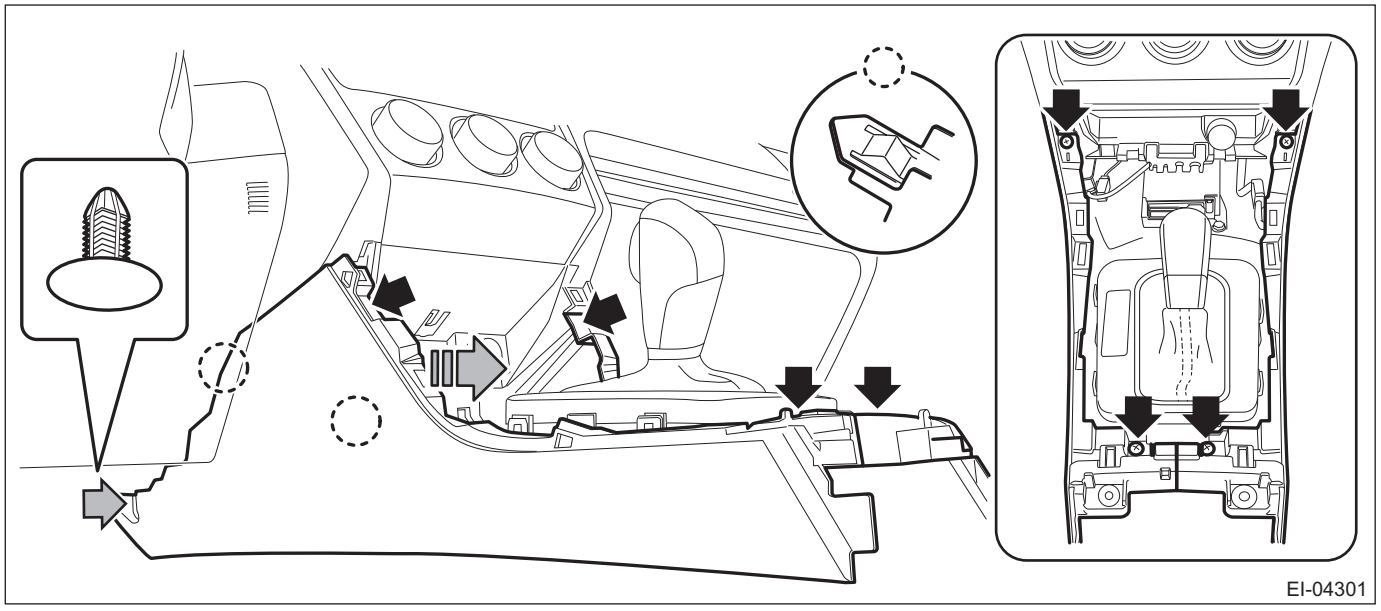


4) Remove the cover - shift lever.
   (1) Remove the shift knob. (MT model)
   (2) Release the clips and claws, then pull up the cover - shift lever.

NOTE:
For vehicles with smart and STI model, disconnect harness connector.



5) Remove the left and right panel center LWR.
   (1) Remove the screws and clips.
   (2) Release the claws, and then pull the panel center LWR to remove.

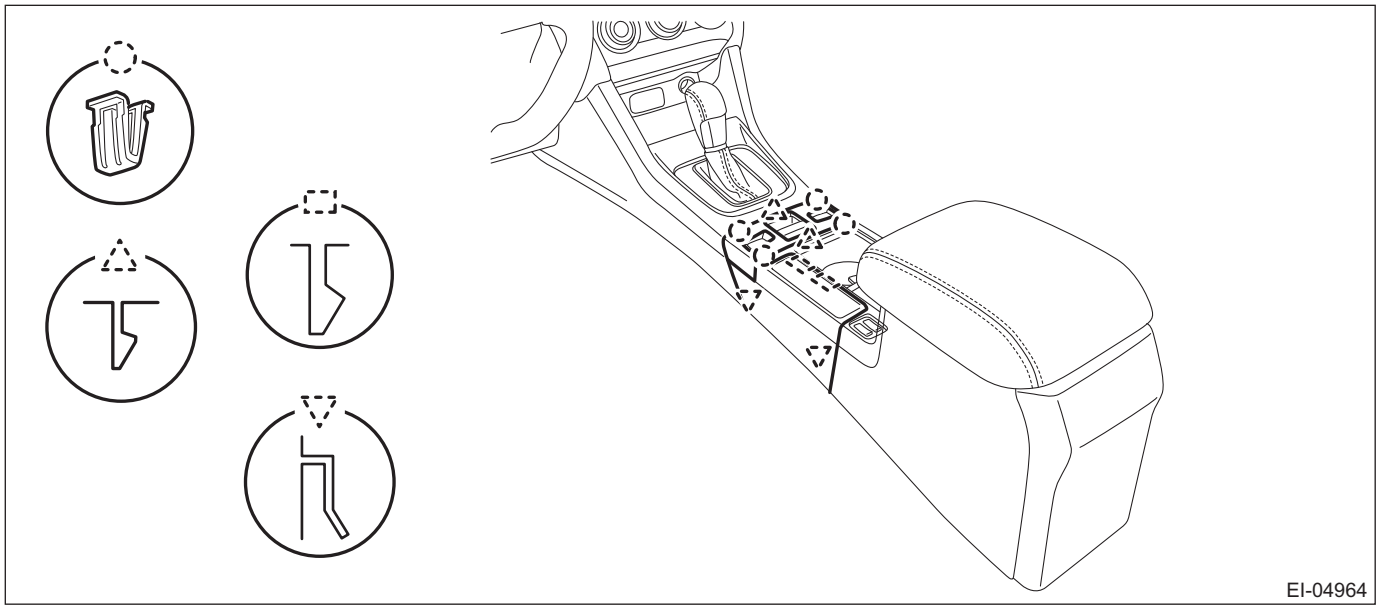


2. MODEL WITH ELECTRONIC PARKING BRAKE SWITCH

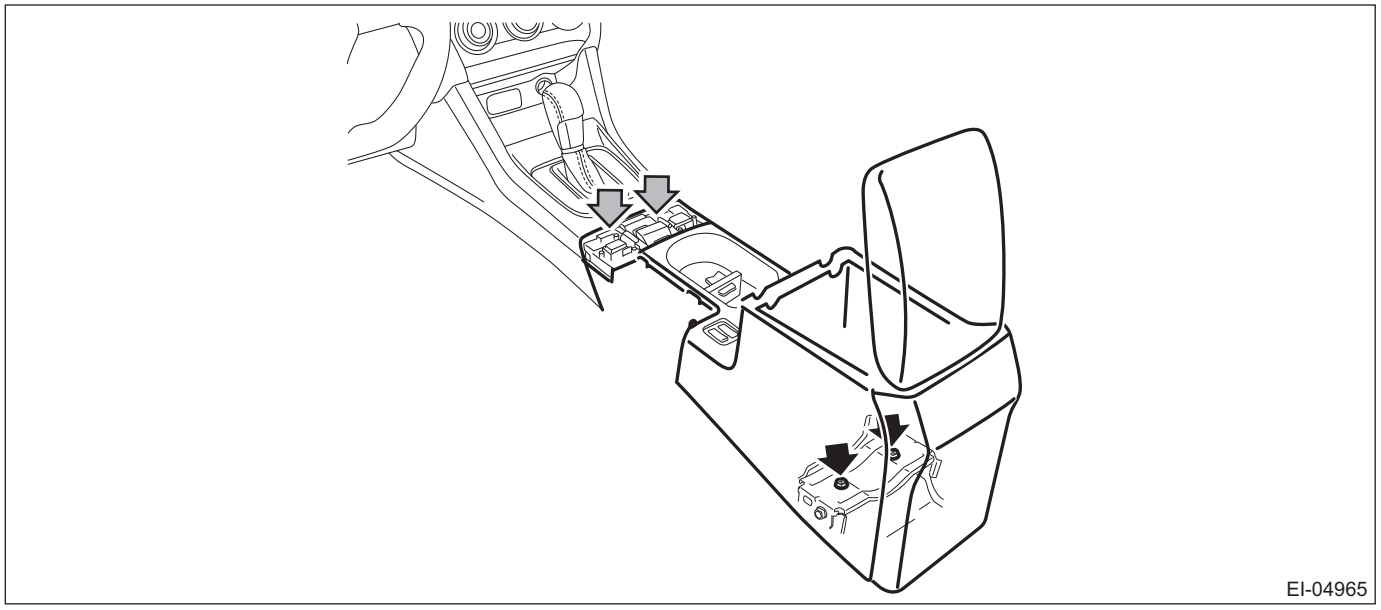
1) Disconnect the ground terminal from battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- Shift the select lever into “N” before disconnecting the battery ground terminal.
- For the power seat, move the seat to the front-most position before removing the battery ground terminal.

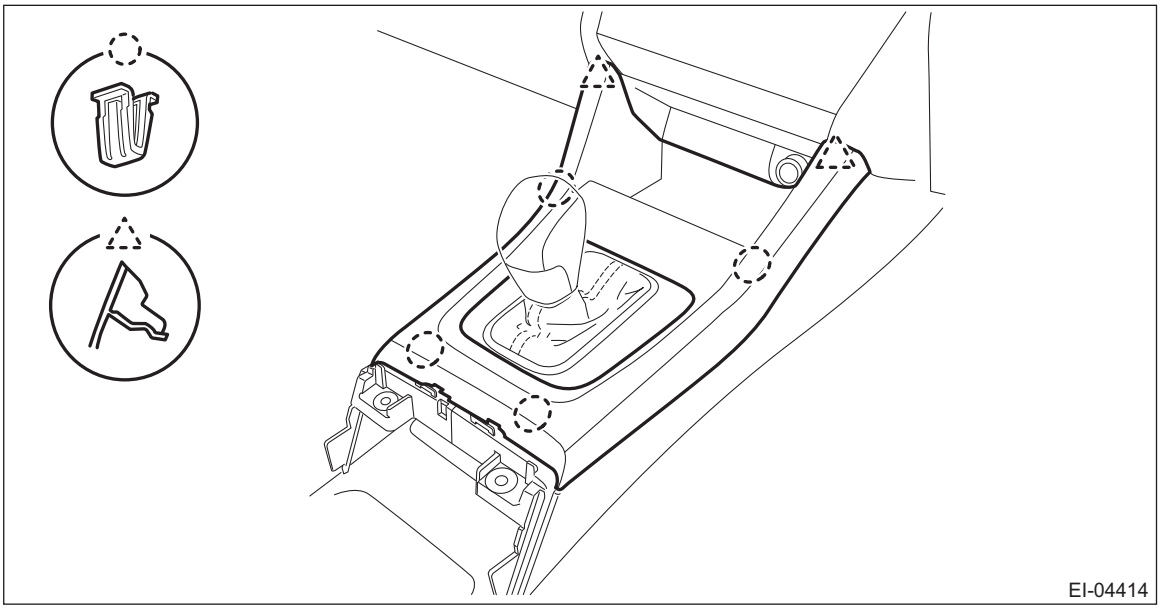
2) Remove the cover assembly - rear EPB and the cover pocket.



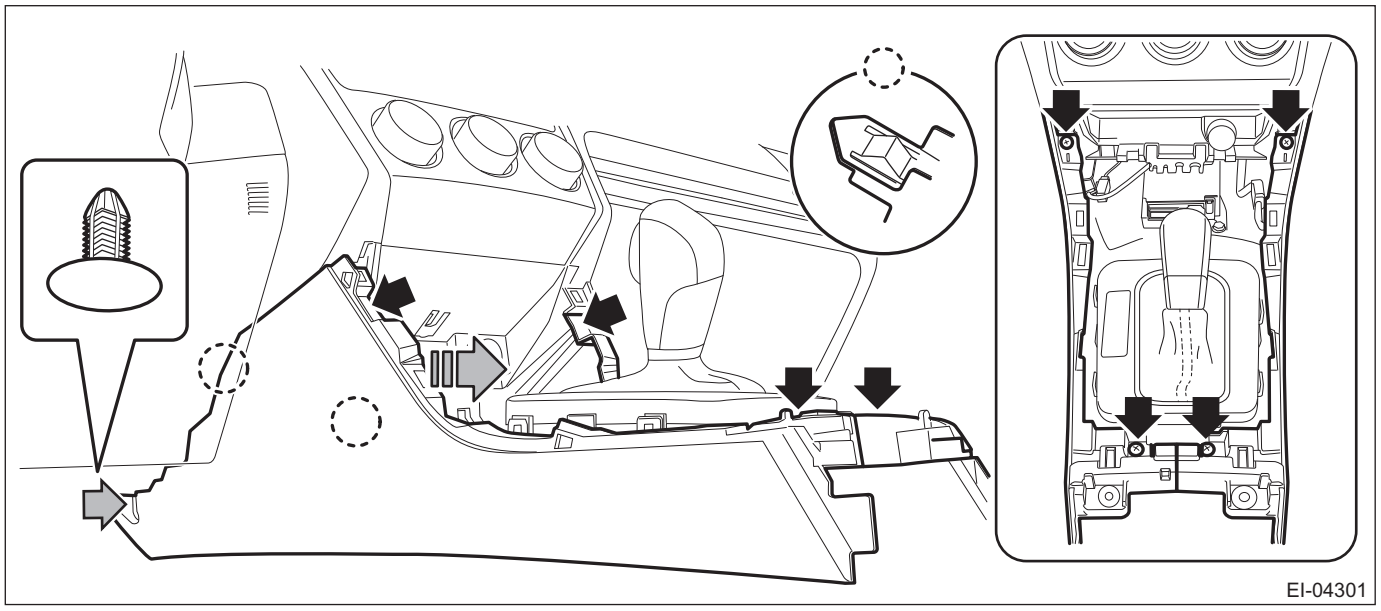
3) Remove the screws and bolts, disconnect the harness connector and remove the console box assembly.



4) Release the clips and claws, and then remove the cover - shift lever.



5) Remove the left and right panel center LWR.
   (1) Remove the screws and clips.
   (2) Release the claws, and then pull the panel center LWR to remove.



B: INSTALLATION

1. MODEL WITH PARKING BRAKE LEVER

1) Install the panel center LWR.
2) Install the cover - shift lever.
3) Install the shift knob.

NOTE:
Refer to “MT GEAR SHIFT LEVER” in the “CS” section. <Ref. to CS-65, INSTALLATION, MT Gear Shift Lever.>

4) Install the console box assembly.
5) Install the boot - hand brake.
6) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

2. MODEL WITH ELECTRONIC PARKING BRAKE SWITCH

1) Install the panel center LWR.
2) Install the cover - shift lever.
3) Install the console box assembly.
4) Install the cover assembly - rear EPB and the cover pocket.
5) Connect the ground terminal to battery sensor. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
After connecting the battery sensor terminal, place the select lever in the “P” position.

22.Instrument Panel Assembly

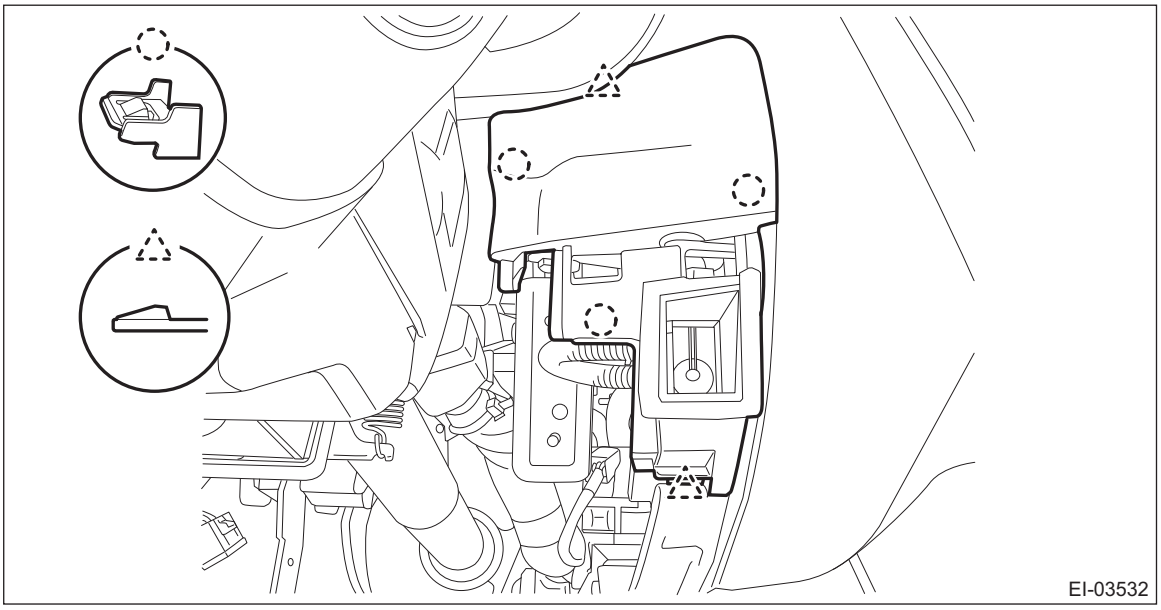
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.

NOTE:
Remove the instrument panel assembly and the beam COMPL - steering as a unit.
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
- For model with battery sensor, disconnect the ground terminal from battery sensor.
- On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
- For the power seat model, remove the console box before removing the battery ground terminal.

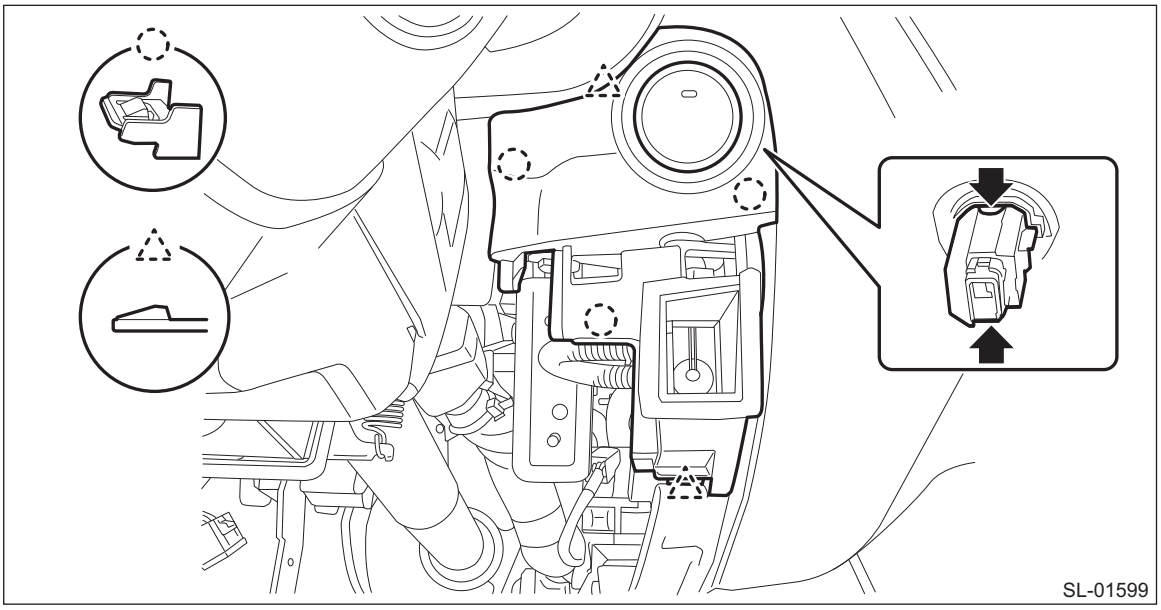
2) Remove the console box assembly, the cover - shift lever and the panel center LWR on the RH and LH sides. <Ref. to EI-70, REMOVAL, Console Box.>
3) Remove the cover assembly - instrument panel LWR driver. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the cover switch - starter. (Models without the keyless access with push button start)
   (1) Release the claws and remove the cover switch - starter.
   (2) Disconnect the connector and aspirator hose.



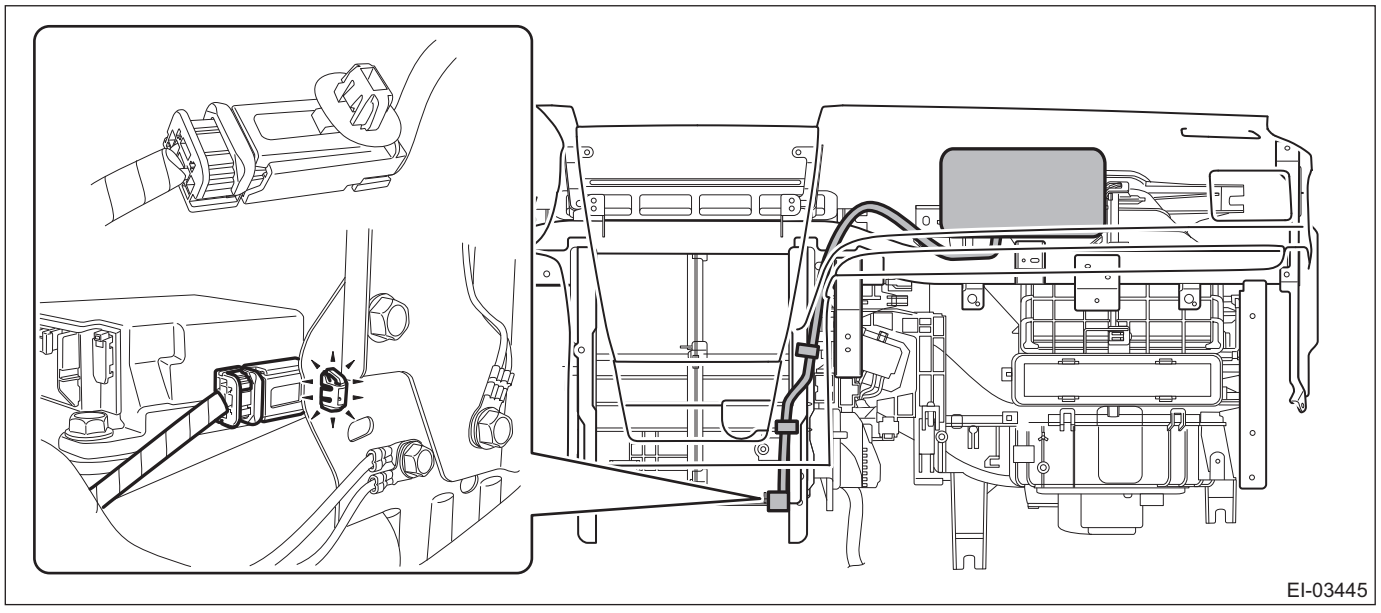
EI-03532

5) Remove the panel - switch. (Model with keyless access with push button start)
   (1) Release the claw of the switch - push button start, and disconnect the connector.
   (2) Release the claws, and then remove the panel - switch.

(3) Disconnect the connector and aspirator hose.



6) Remove the knee airbag module. <Ref. to AB-36, REMOVAL, Knee Airbag Module.>
7) Remove the left and right grille speaker sides. <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
8) Remove the trim panel - front pillar UPR on the left and right sides. <Ref. to EI-89, REMOVAL, Upper Inner Trim.>
9) Remove the glove box assembly. <Ref. to EI-67, REMOVAL, Glove Box.>
10) Remove the center grille assembly. <Ref. to AC-91, REMOVAL, Air Vent Grille.>
11) Remove the audio assembly or navigation assembly. <Ref. to ETM-16, REMOVAL, Audio.>
12) Remove the multi-function display assembly. <Ref. to IDI-19, REMOVAL, Multi-function Display (MFD).>
13) Remove the combination meter assembly. <Ref. to IDI-12, REMOVAL, Combination Meter.>
14) Disconnect the passenger's airbag module connector. <Ref. to AB-18, PASSENGER'S AIRBAG MODULE, PROCEDURE, Airbag Connector.>



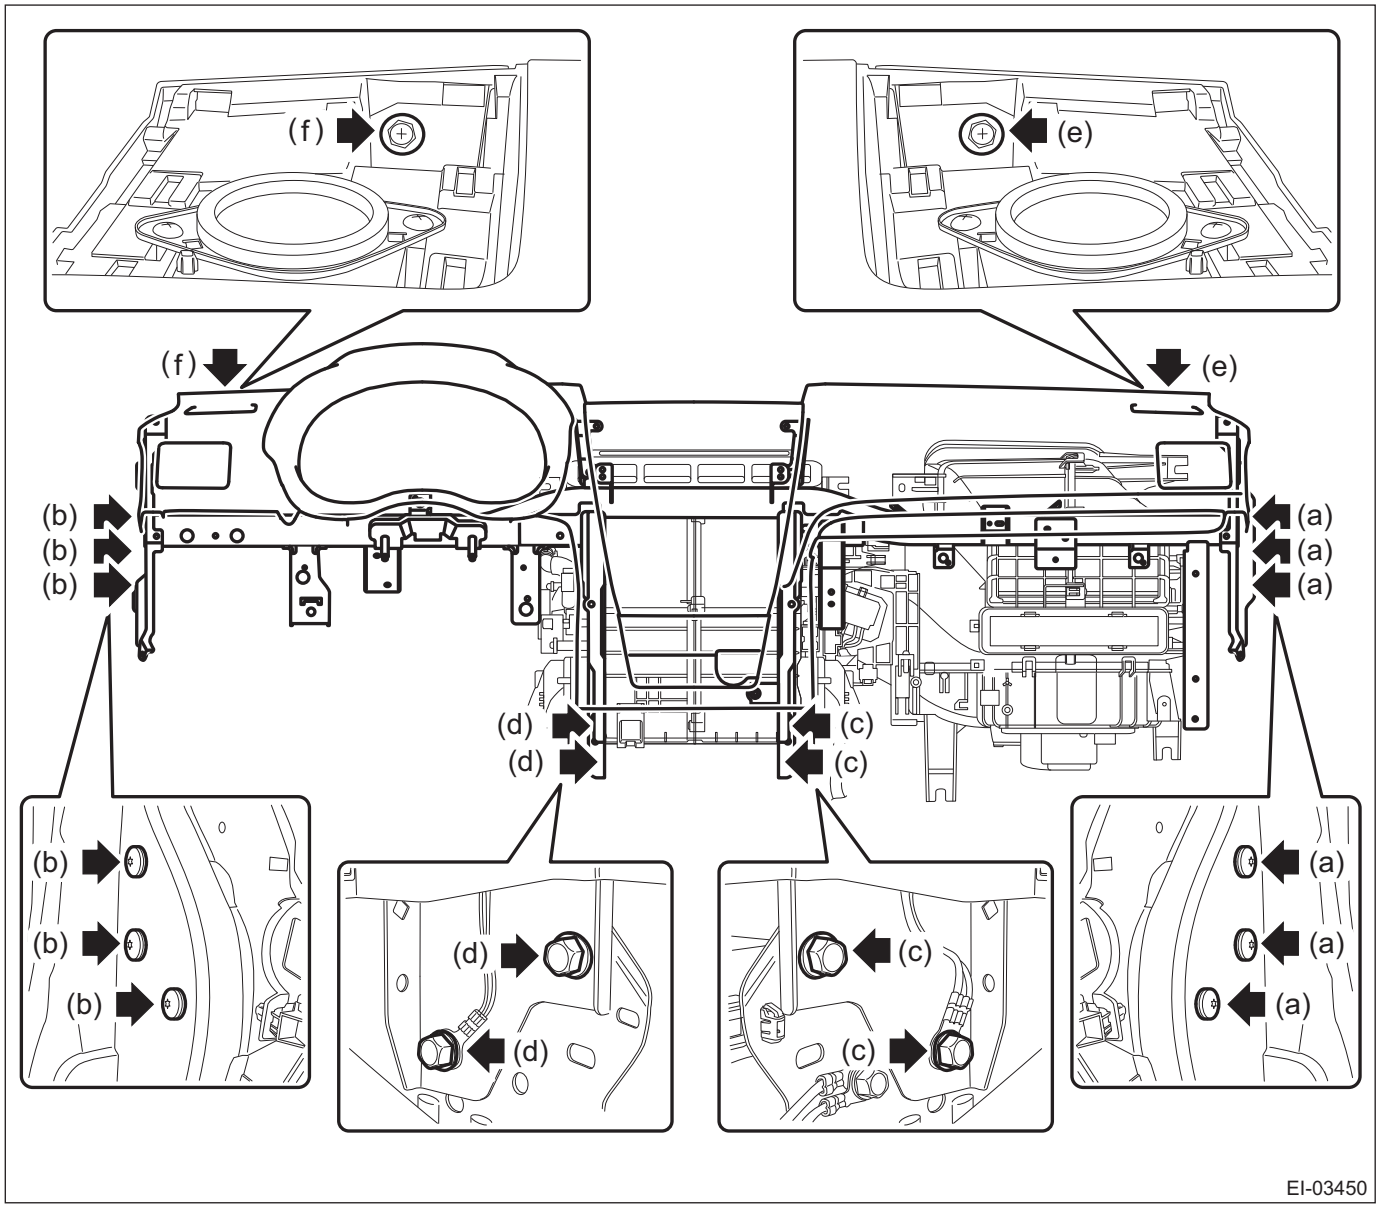
15) Remove the column assembly - steering. <Ref. to PS-24, REMOVAL, Steering Column.>
16) Release the claws, and then remove the cover side sill - front INN and cover side sill - front on the RH and LH sides. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
17) Remove the body side weather strip - flange front.
18) Remove the instrument panel assembly and the beam COMPL - steering as a unit.

CAUTION:
The instrument panel assembly and the beam COMPL - steering are heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.

(1) Remove the fuse box and relay box.
(2) Disconnect all harness clamps and connectors of the instrument panel harness.
(3) Remove the cap - bolt.
(4) Remove the TORX® bolt. (a), (b)

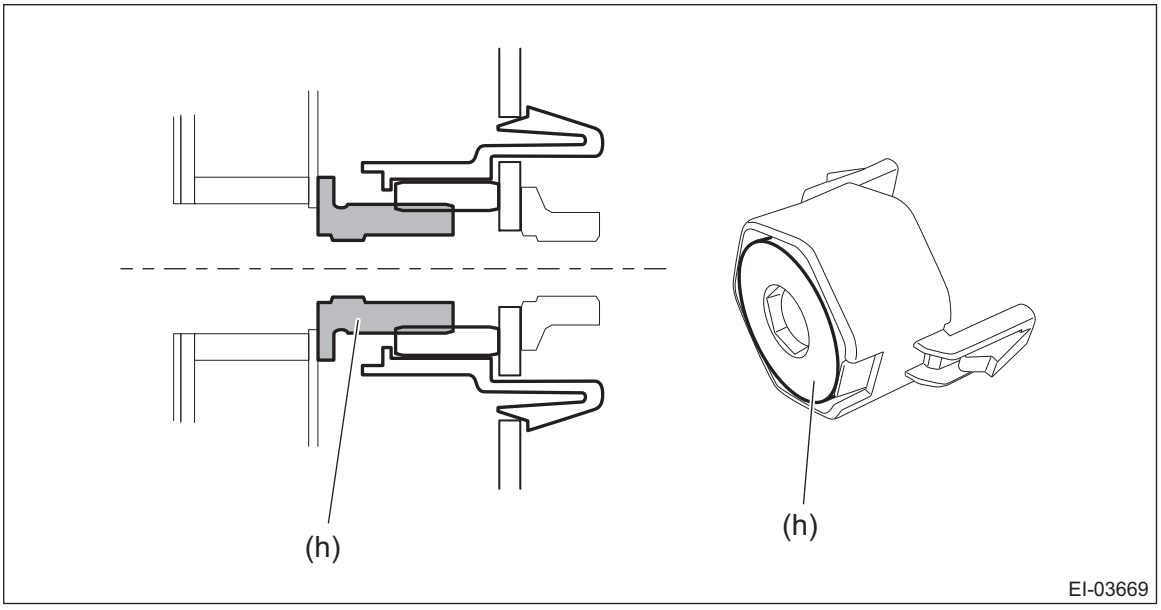
Preparation tool:
TORX® T40

(5) Remove the bolts at the floor center. (c), (d)
(6) Remove the bolt. (e), (f)



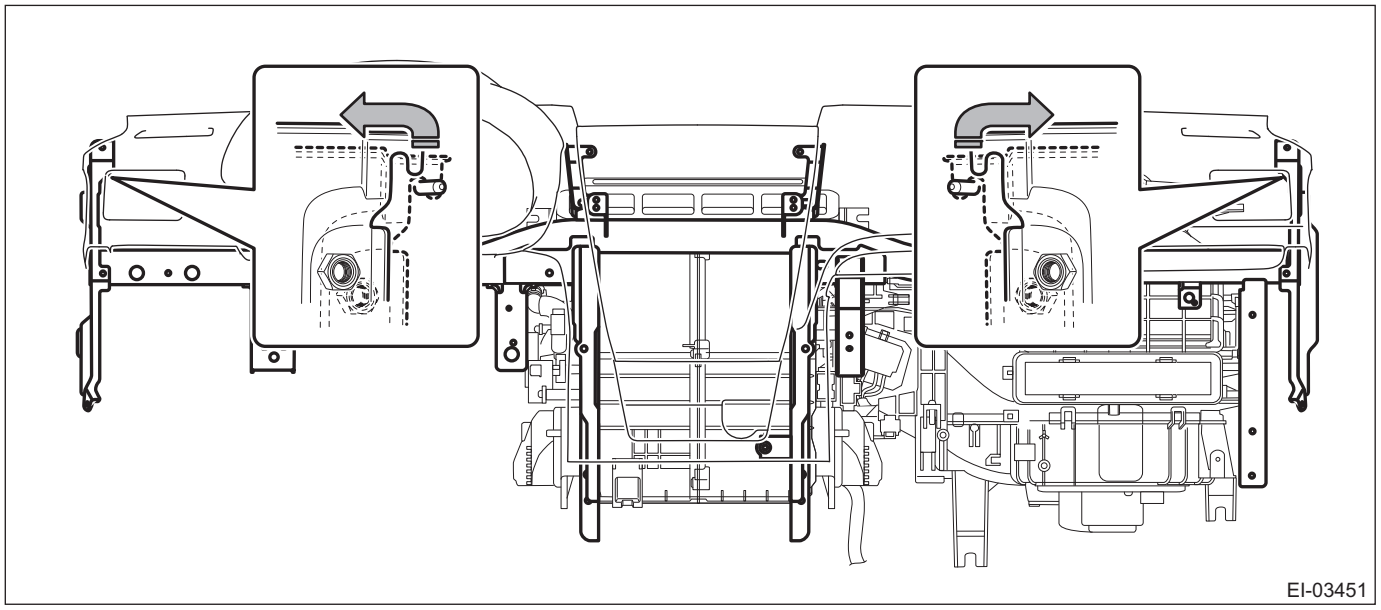
(7) Loosen the adjuster portion (h) of the adjuster - clip space. (Only LH side of the beam COMPL - steering)

Preparation tool:
Hexagon wrench: 8 mm (0.31 in)



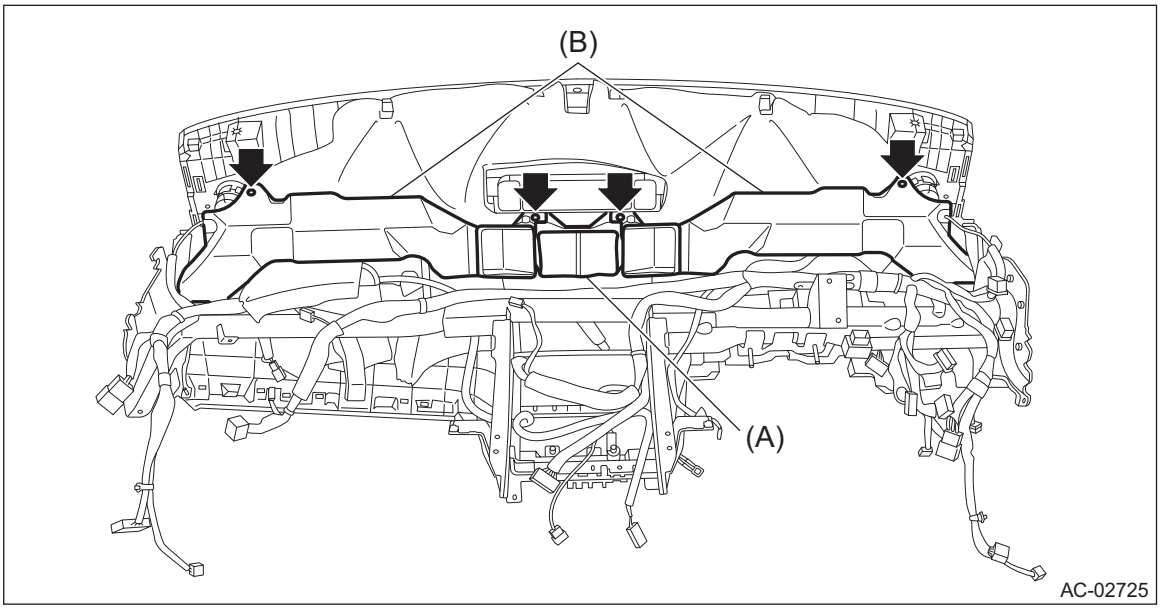
(8) Slightly lift the instrument panel assembly together with the beam COMPL - steering to detach the left and right pins. Then pull it toward you to remove the assembly.

CAUTION:
• Check that all harness clamps and connectors are detached.
• The instrument panel assembly and the beam COMPL - steering are heavy. Always work in a team of two persons when removing them from the vehicle, so as not to damage the vehicle interior.

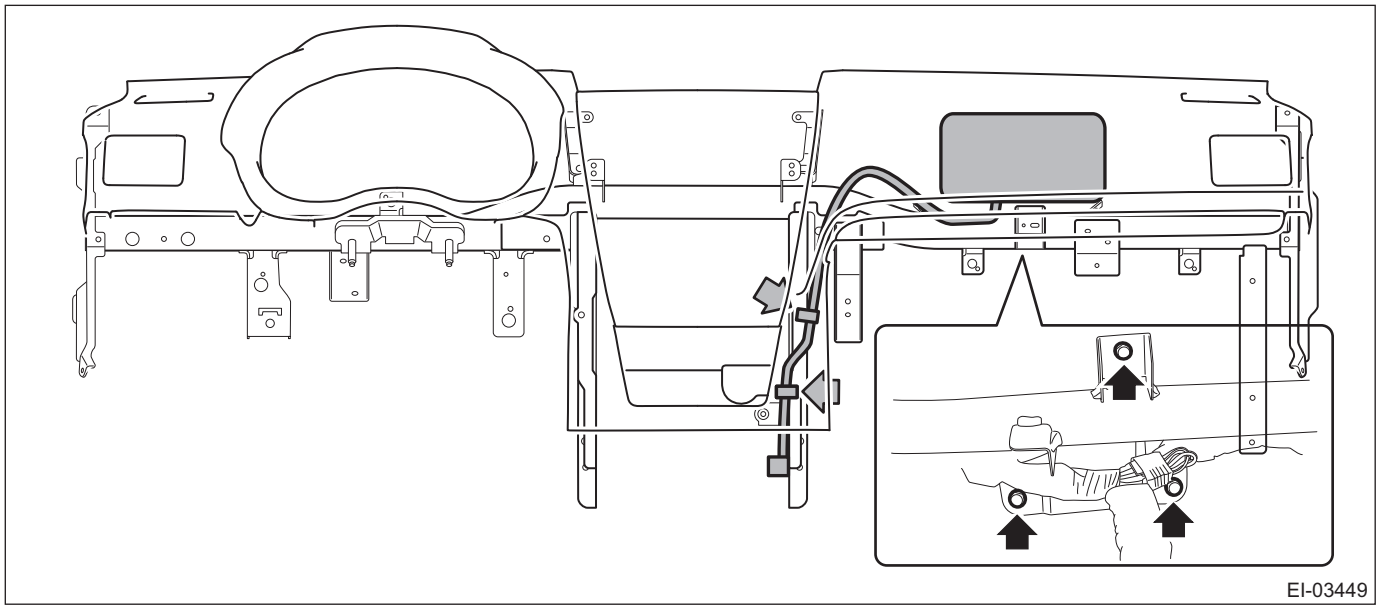


19) Remove the sunload sensor, sensor - automatic light and grille front defroster. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>

20) Remove the screws and remove the front (A) and side vent duct (B) LH, RH.



21) Separate the panel COMPL - instrument and the beam COMPL - steering.
(1) Remove the clamps and bolts of the passenger's airbag module harness.

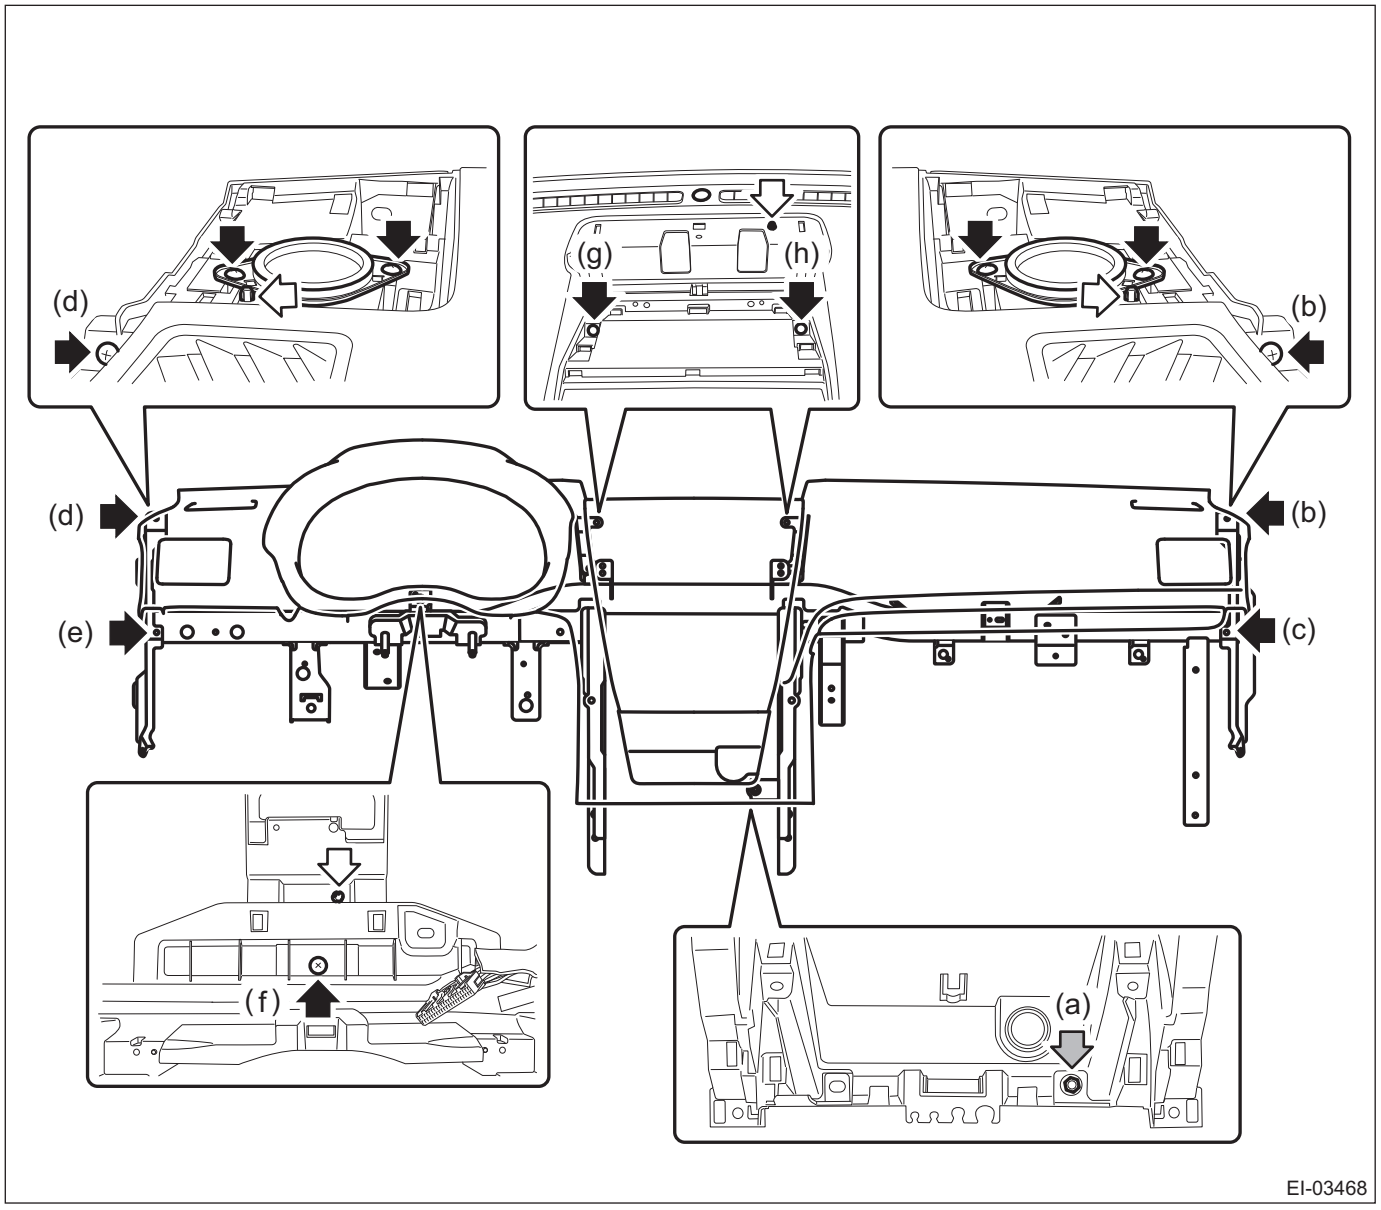


(2) Remove the left and right speakers.

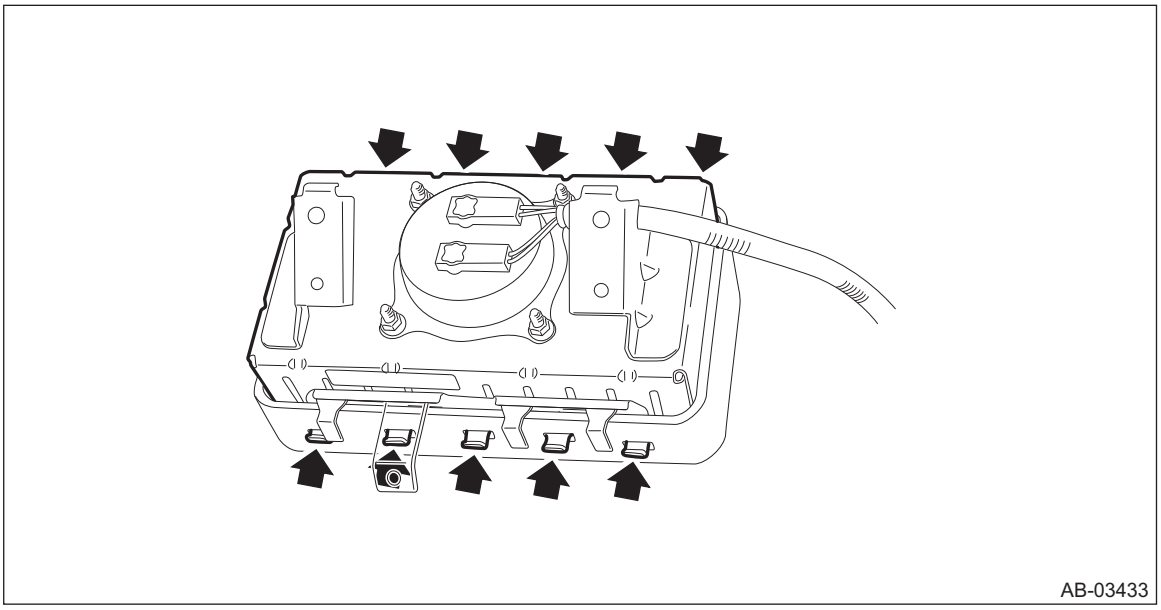
NOTE:
Detach the harness clamp together.

(3) Disconnect the front accessory socket connector.
(4) Remove the nut (a) and screws (b), (c), (d), (e), (f), (g) and (h).

(5) While being careful with the harness, separate the panel COMPL - instrument and the beam COMPL - steering.



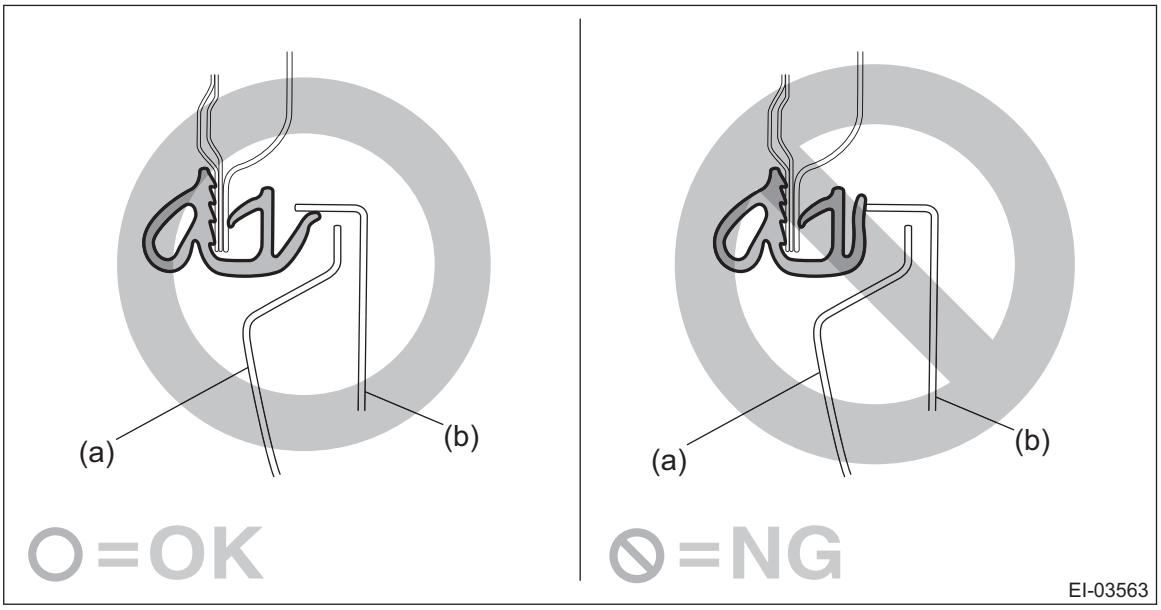
22) Remove the claws, and remove the passenger's airbag module.



B: INSTALLATION

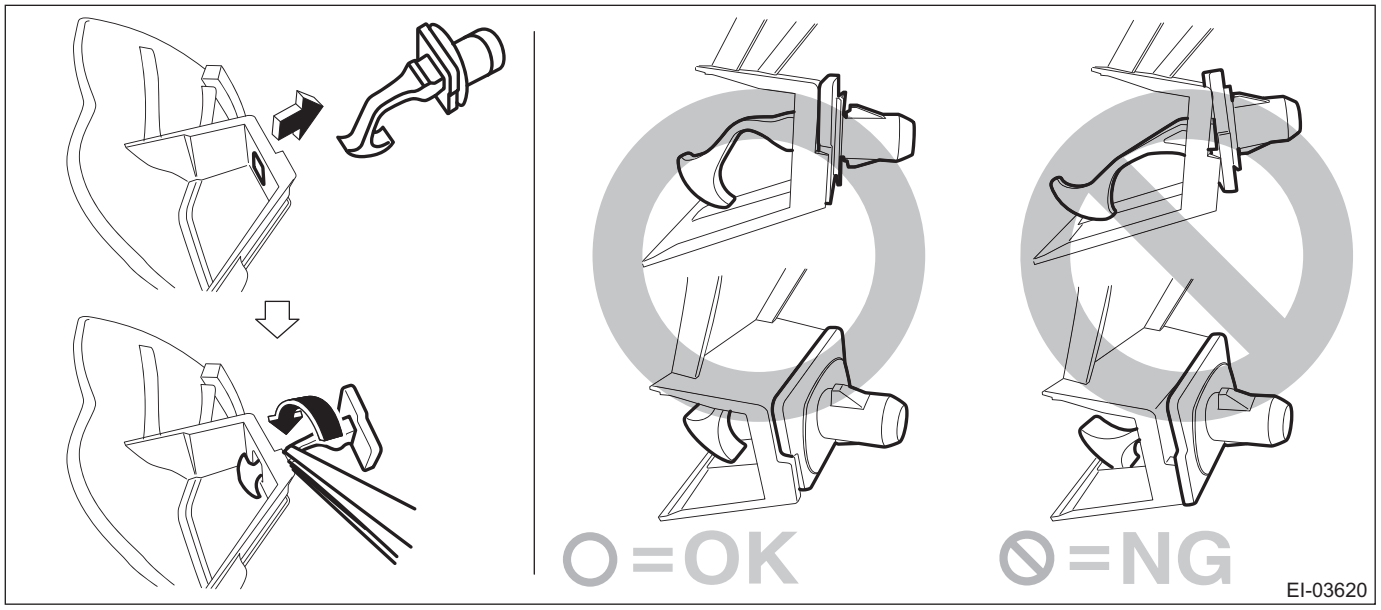
CAUTION:

- **Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>**
- **After installing the panel center assembly, check that the air vent grille of the panel center assembly is inserted correctly into the air vent duct.**
- **When installing the cover - instrument panel side (a), make sure that the body side weather strip - flange front does not come inside the panel COMPL - instrument (b).**



- **When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.**
- **Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.**

- **Check the installation status of the tether clips and install the trim panel - front pillar UPR.**



1) Attach components until the instrument panel assembly is formed, in the reverse order of removal.

NOTE:
Method of installing insulator
- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.
- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

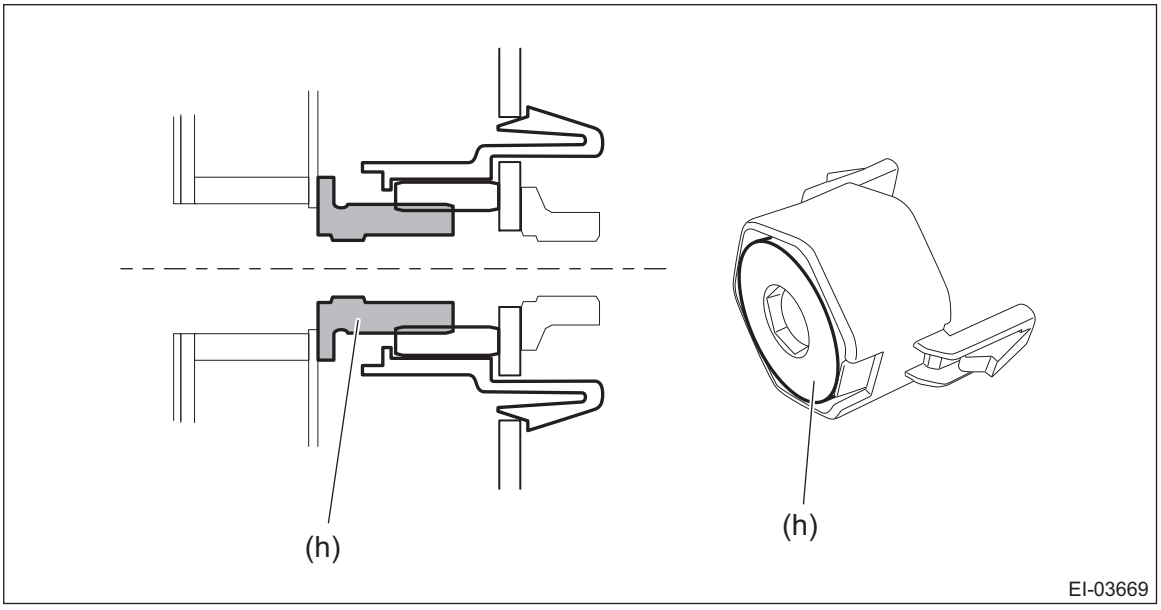
Tightening torque:
Passenger's airbag module: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Insert the matching pins on the body side (three locations - one in the center and the remaining two on both sides) into the instrument panel assembly and the beam COMPL - steering.
3) Check that the matching pins are inserted securely and that the harness is routed properly, and then connect each connector.
4) Install the sunload sensor, sensor - automatic light and the grille - front defroster.
5) Secure the instrument panel assembly and the beam COMPL - steering to the vehicle body.
   (1) Position the instrument panel assembly and the beam COMPL - steering to the vehicle body and tighten the adjuster - clip space.

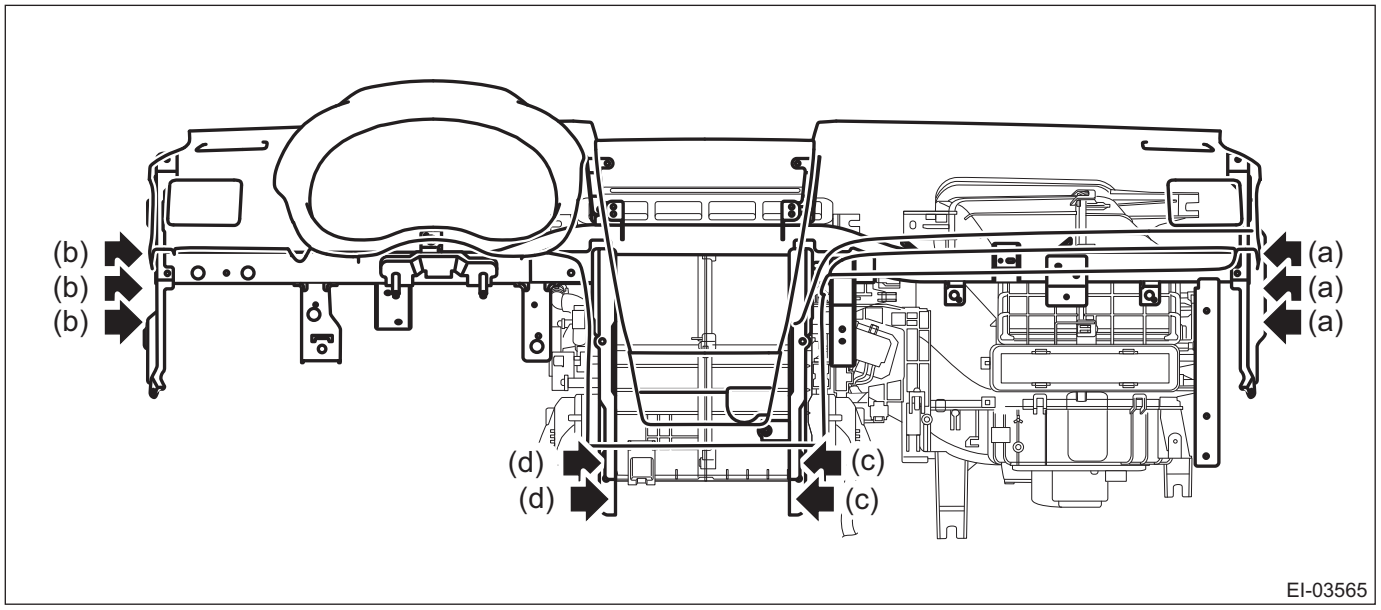
Preparation tool:
Hexagon wrench: 8 mm (0.31 in)

NOTE:
Tighten so that there is no gap between the adjuster portion (h) and the body.

Tightening torque:
Adjuster - clip space: 0.8 — 4 N·m (0.08 — 0.4 kgf-m, 0.6 — 3 ft-lb)



(2) Temporarily tighten the bolts (a), (b), (c) and (d) of the beam COMPL - steering.



(3) Tighten the beam COMPL - steering in the order from (a) to (d) to the specified torque.

Tightening torque:
Beam COMPL - steering: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

6) Install the body side weather strip - flange front.
7) Install the cover side sill - front on the RH and LH sides.
8) Install the cover side sill - front INN on the RH and LH sides.
9) Install the column assembly - steering.

Tightening torque:
Column assembly - steering: <Ref. to PS-4, STEERING WHEEL AND COLUMN, COMPONENT, General Description.>

10) Install the combination meter assembly.
11) Install the multi-function display assembly.
12) Install the audio assembly or navigation assembly.
13) Install the center grille assembly.

14) Install the glove box assembly.
15) Install the trim panel - front pillar UPR on the RH and LH sides.
16) Install the grille speaker side on the RH and LH sides.
17) Install the knee airbag module.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

18) Install the panel - switch. (Model with keyless access with push button start only)
19) Install the cover switch - starter. (Model without keyless access with push button start only)
20) Install the cover assembly - instrument panel LWR driver.
21) Install the panel center LWR on the RH and LH sides.
22) Install the cover - shift lever.
23) Install the console box assembly. <Ref. to EI-73, INSTALLATION, Console Box.>
24) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

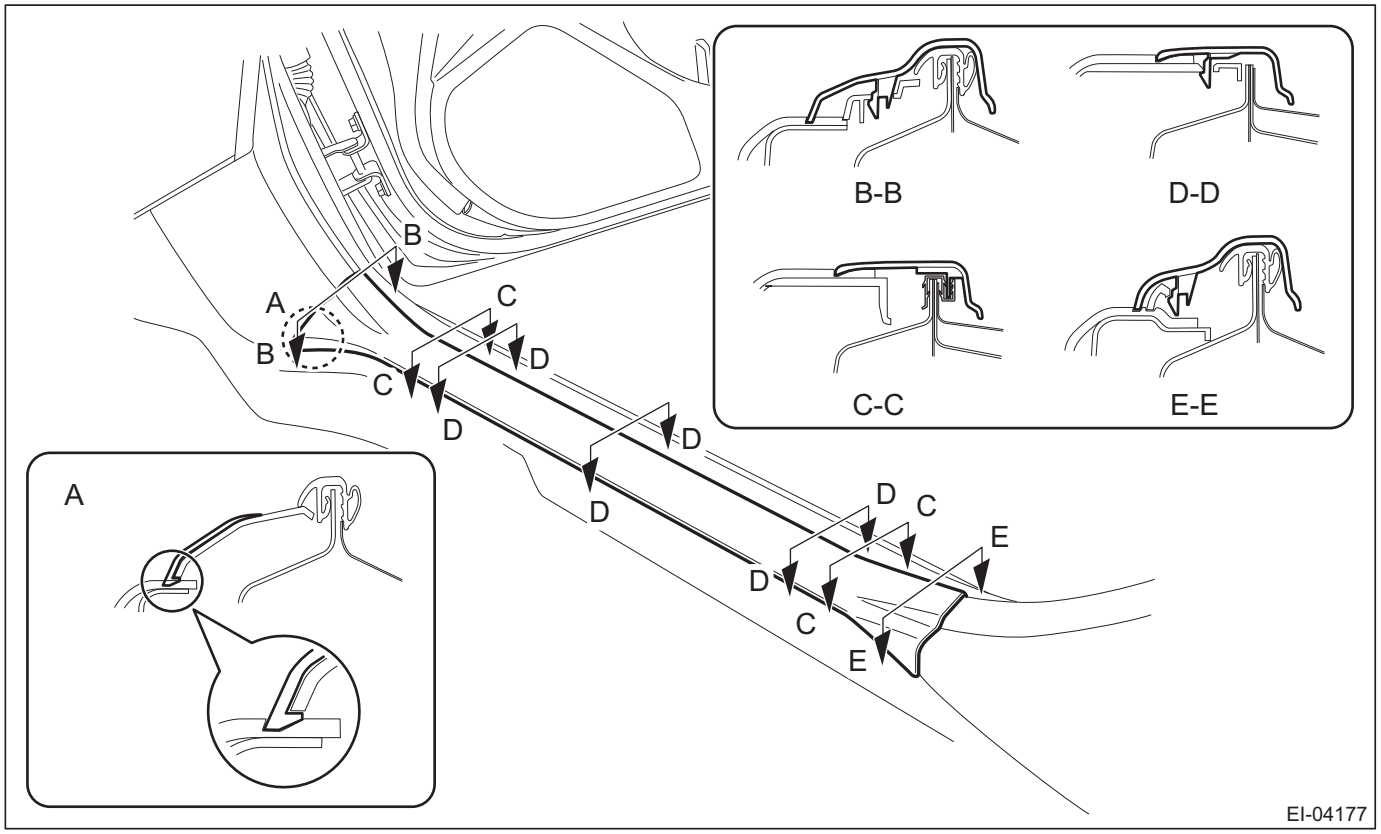
NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

23.Lower Inner Trim

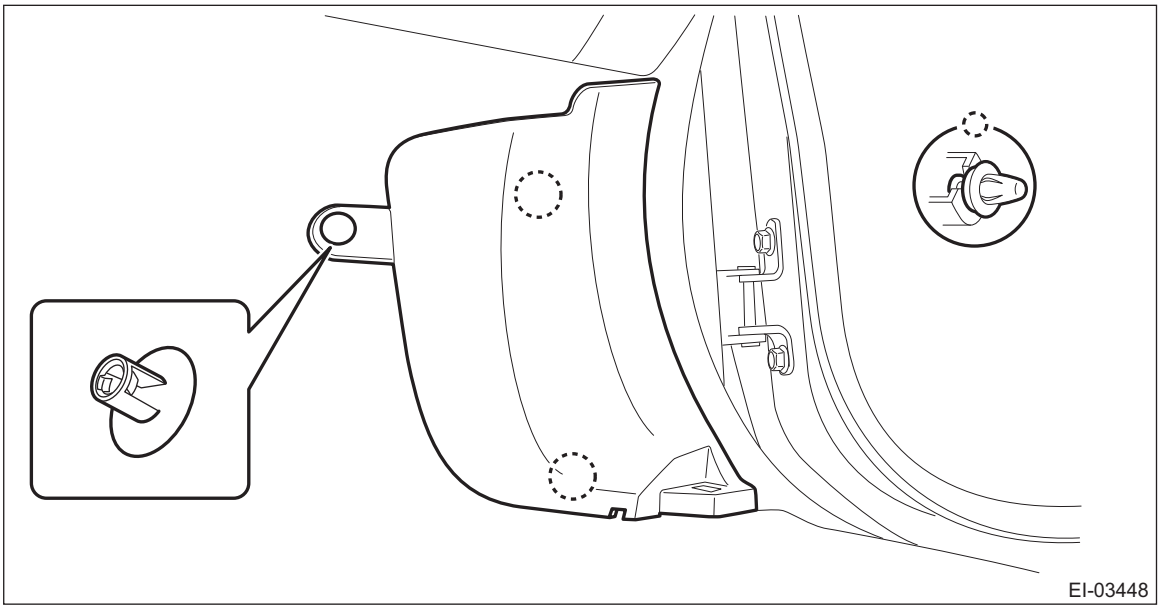
A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Release the claws, and then remove the cover side sill - front INN.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - front INN.

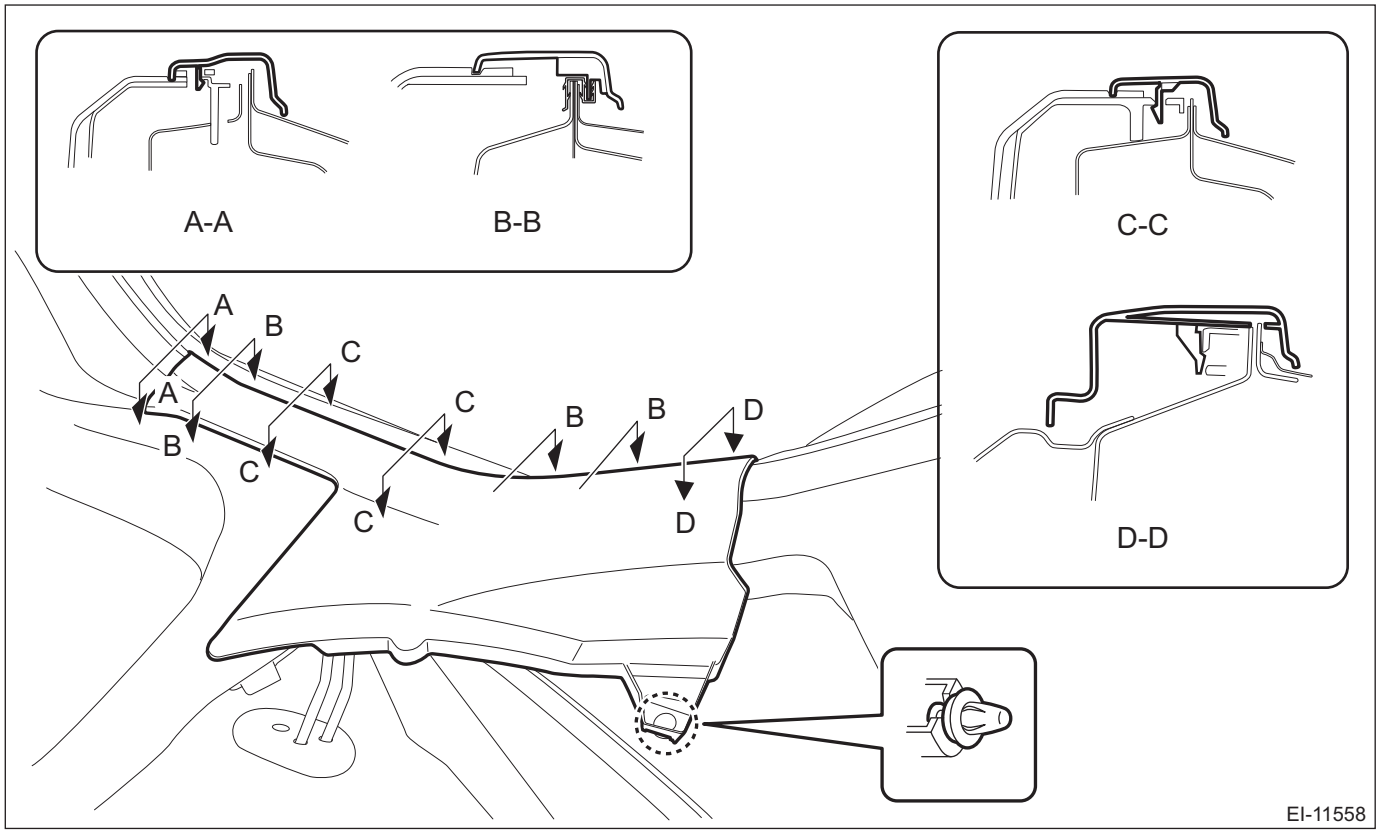


2) Remove the clips, and remove the cover side sill - front.



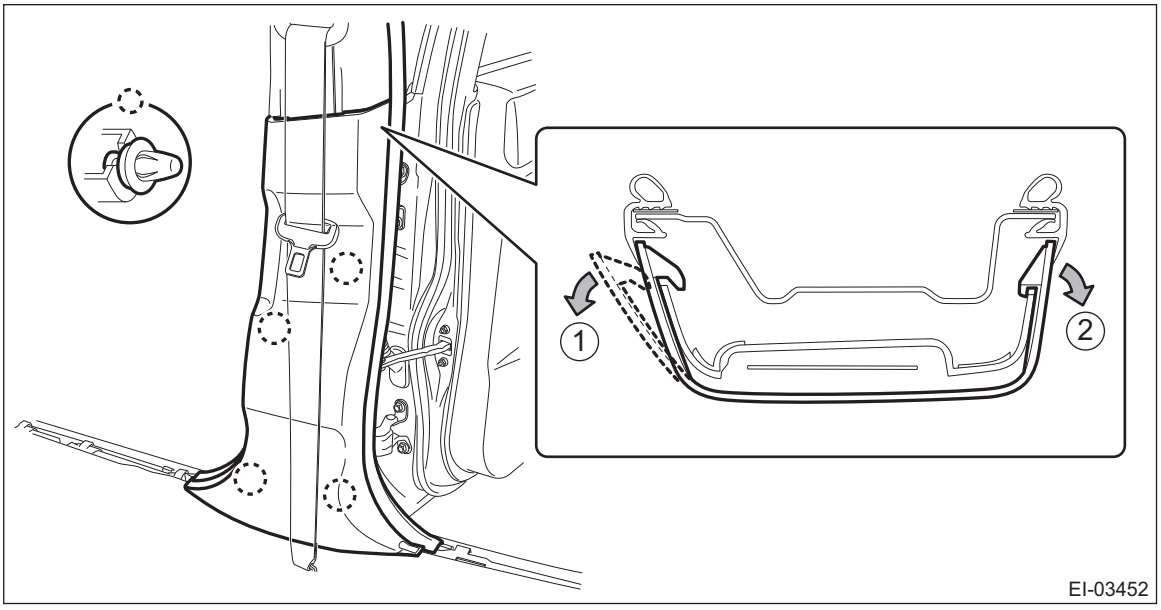
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Release the clips and claws, and then remove the cover side sill - rear INN.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.

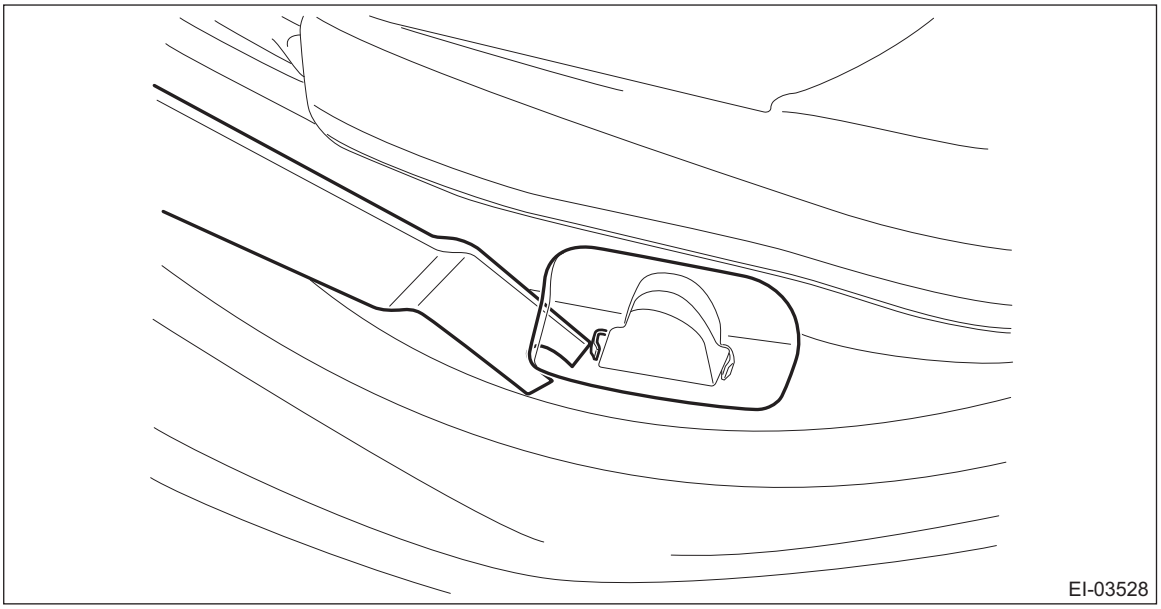


5) Remove the trim panel - center pillar LWR.
(1) Release the clip by pulling the trim panel - center pillar LWR toward you.
(2) Expand the claws of the trim panel - center pillar LWR outward, and remove it from the trim panel - center pillar UPR.

CAUTION:
Do not expand the trim panel - center pillar LWR excessively. Doing so may damage the trim.



NOTE:
First release the claw located to the front of the vehicle.
6) Disconnect the claws and remove the cover - catcher.

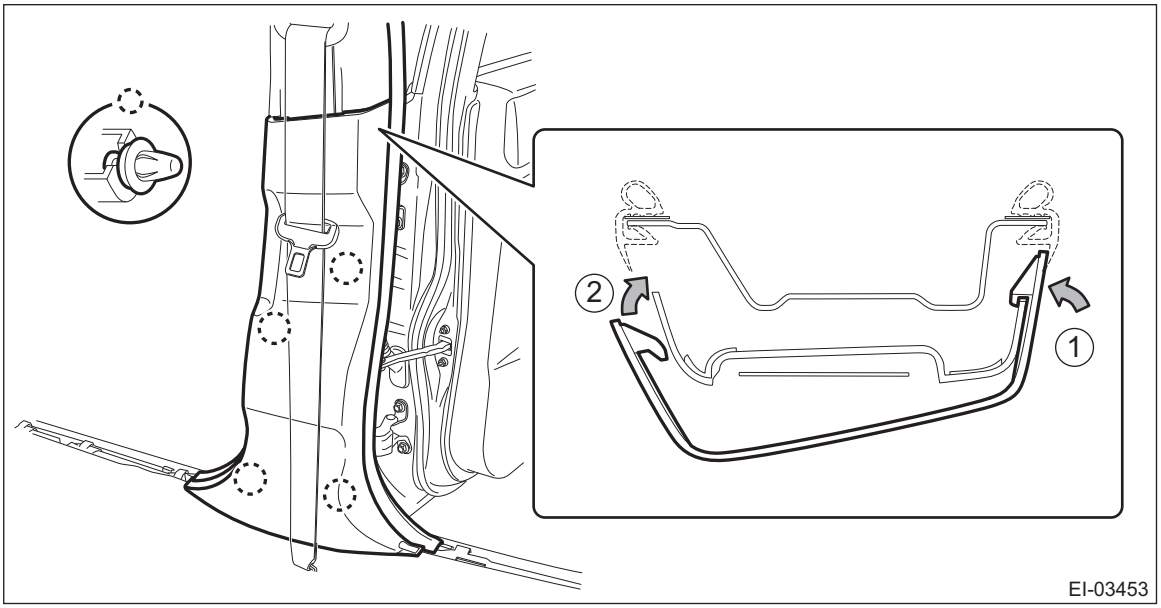


NOTE:
Remove the cover - catcher by using a plastic remover.

B: INSTALLATION

1) Install the cover - catcher.
2) Install the trim panel - center pillar LWR.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



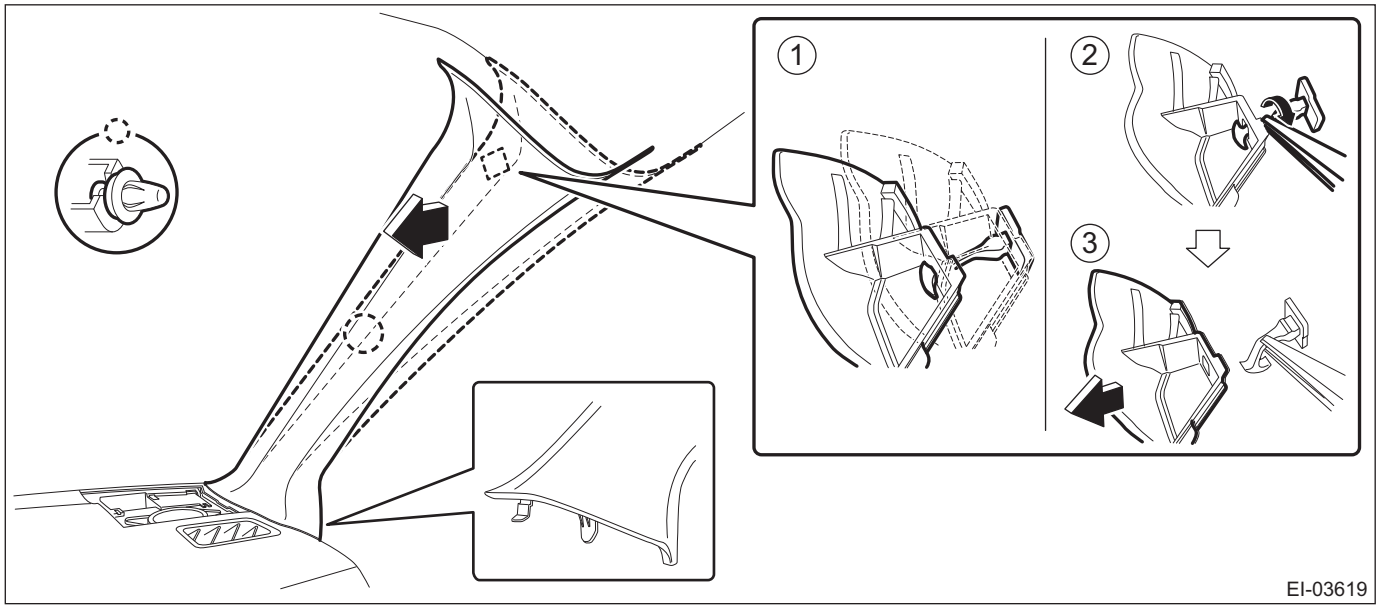
3) Install the cover side sill - rear INN.
4) Install the rear seat cushion assembly.
5) Install the cover side sill - front.
6) Install the cover side sill - front INN.

24.Upper Inner Trim

A: REMOVAL

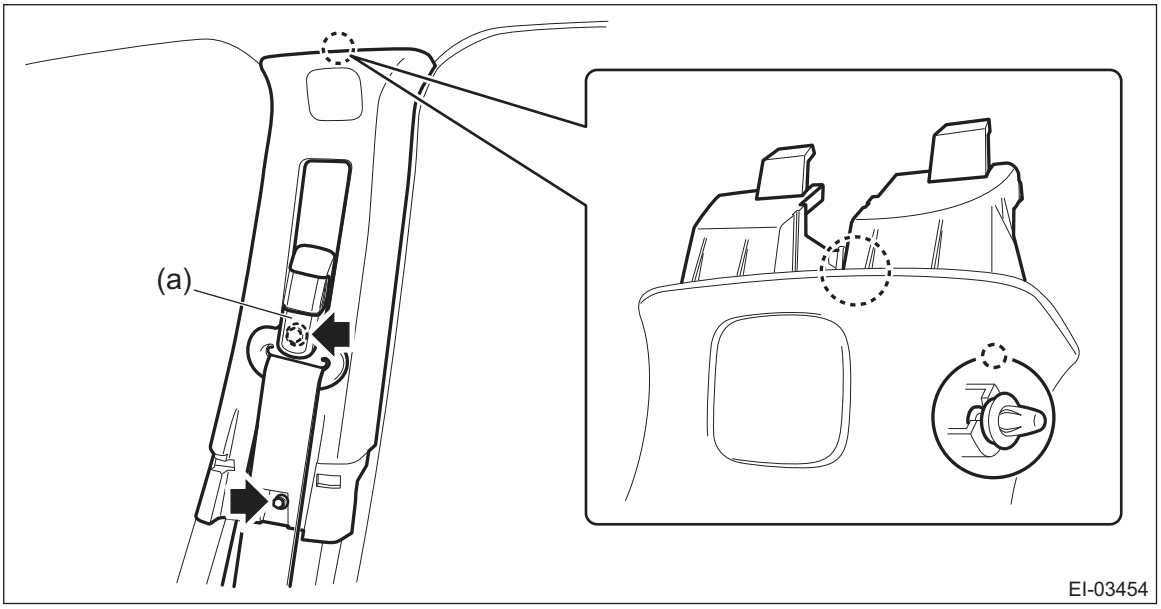
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Remove the left and right grille speaker sides. <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
2) Remove the trim panel - front pillar UPR.
(1) Pull the upper part of the trim panel - front pillar UPR towards the center of the vehicle.
(2) Insert long-nose pliers into the top part of the trim, grip the tether clip with the pliers and twist 90° in that position.

CAUTION:
Be careful not to damage the pillar trim surface and curtain airbag module when inserting the pliers.
(3) Holding the tether clip twisted as in the previous step, remove the trim panel - front pillar UPR from the tether clip.
(4) Remove the clips, and remove the trim panel - front pillar UPR.



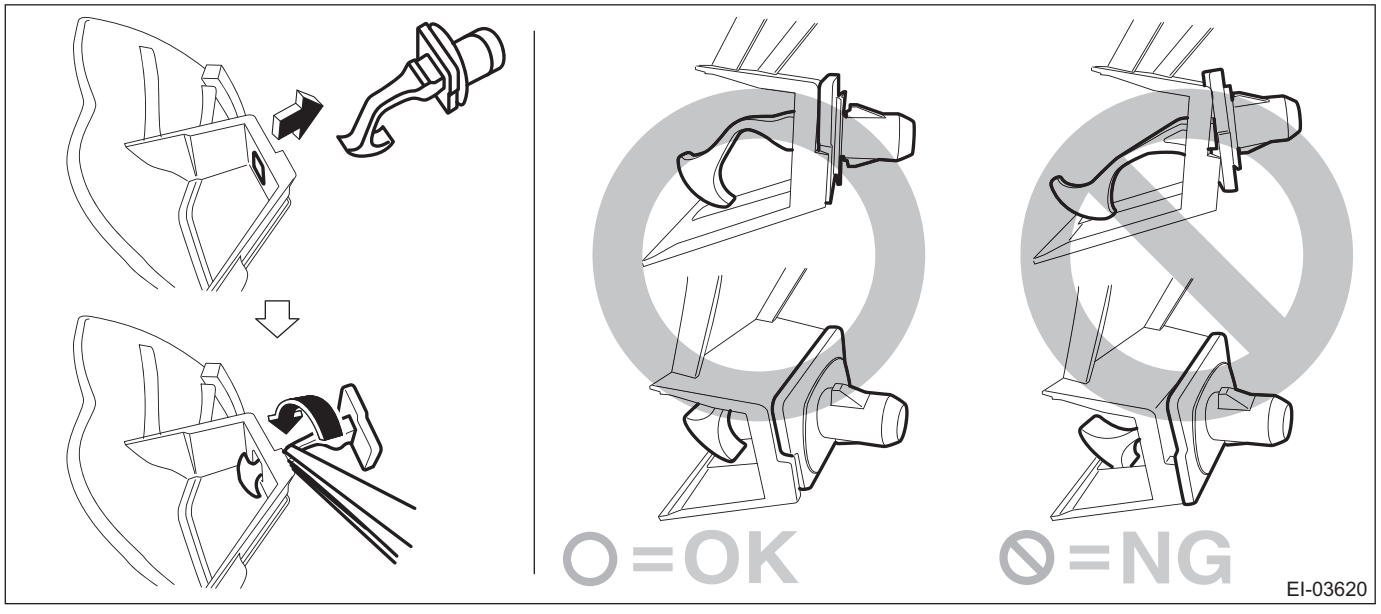
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the cover side sill - front INN, cover side sill - rear INN, and trim panel - center pillar LWR. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
5) Remove the trim panel - center pillar UPR.
(1) Remove the cover through (a), and remove the seat belt anchor bolt.
(2) Remove the bolt on the lower side of the trim panel - center pillar UPR.
(3) Remove the clip by pulling the upper part of the trim toward you, and while lowering the entire trim, remove the trim panel - center pillar UPR.

CAUTION:
Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.



B: INSTALLATION

CAUTION:
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
• Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
1) Remove the remaining tether clips from the vehicle body.
2) Check the installation status of the tether clips and install the trim panel - front pillar UPR.

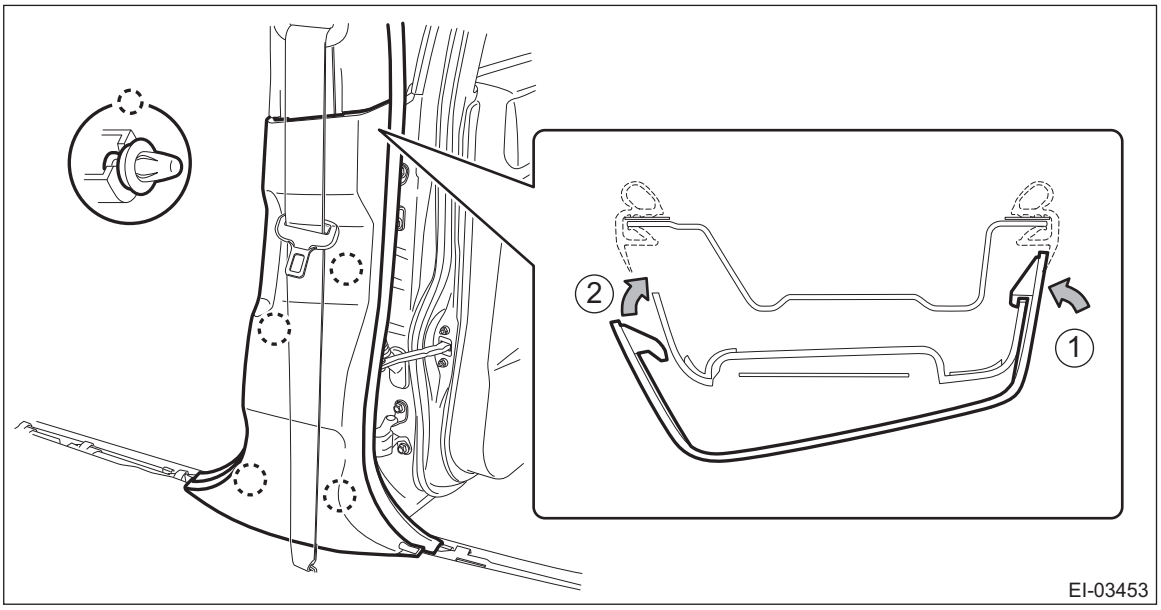


3) Install the grille speaker side on the RH and LH sides.
4) Install the trim panel - center pillar UPR.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)

5) Install the trim panel - center pillar LWR, cover side sill - front INN, and cover side sill - rear INN.

NOTE:
Assemble the trim panel - center pillar LWR to the trim panel - center pillar UPR securely.



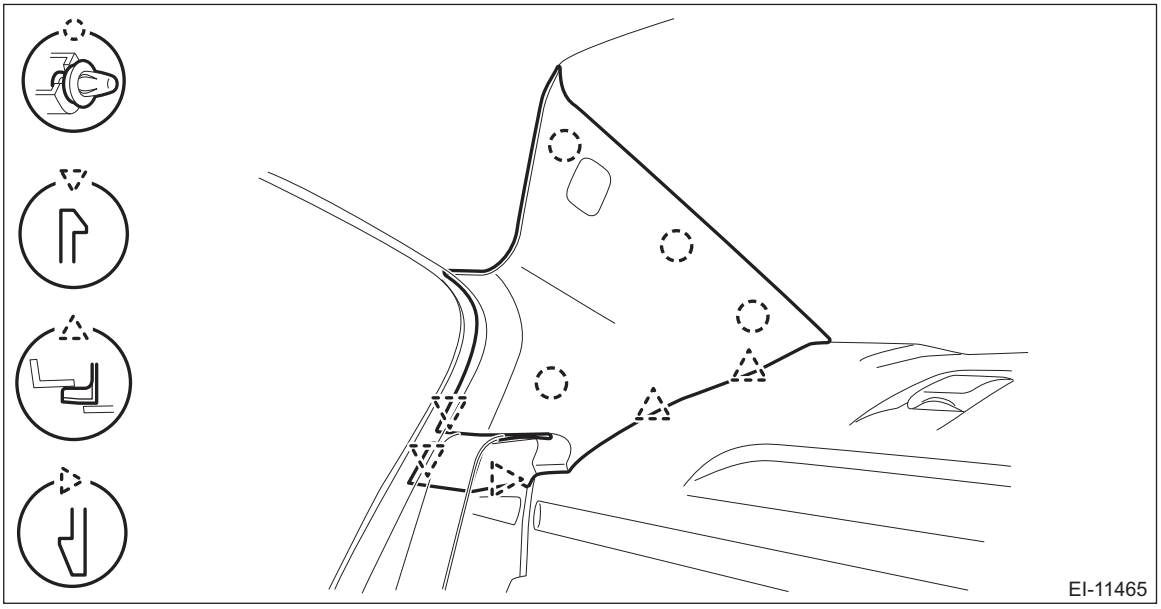
6) Install the rear seat cushion assembly.

25.Rear Quarter Trim

A: REMOVAL

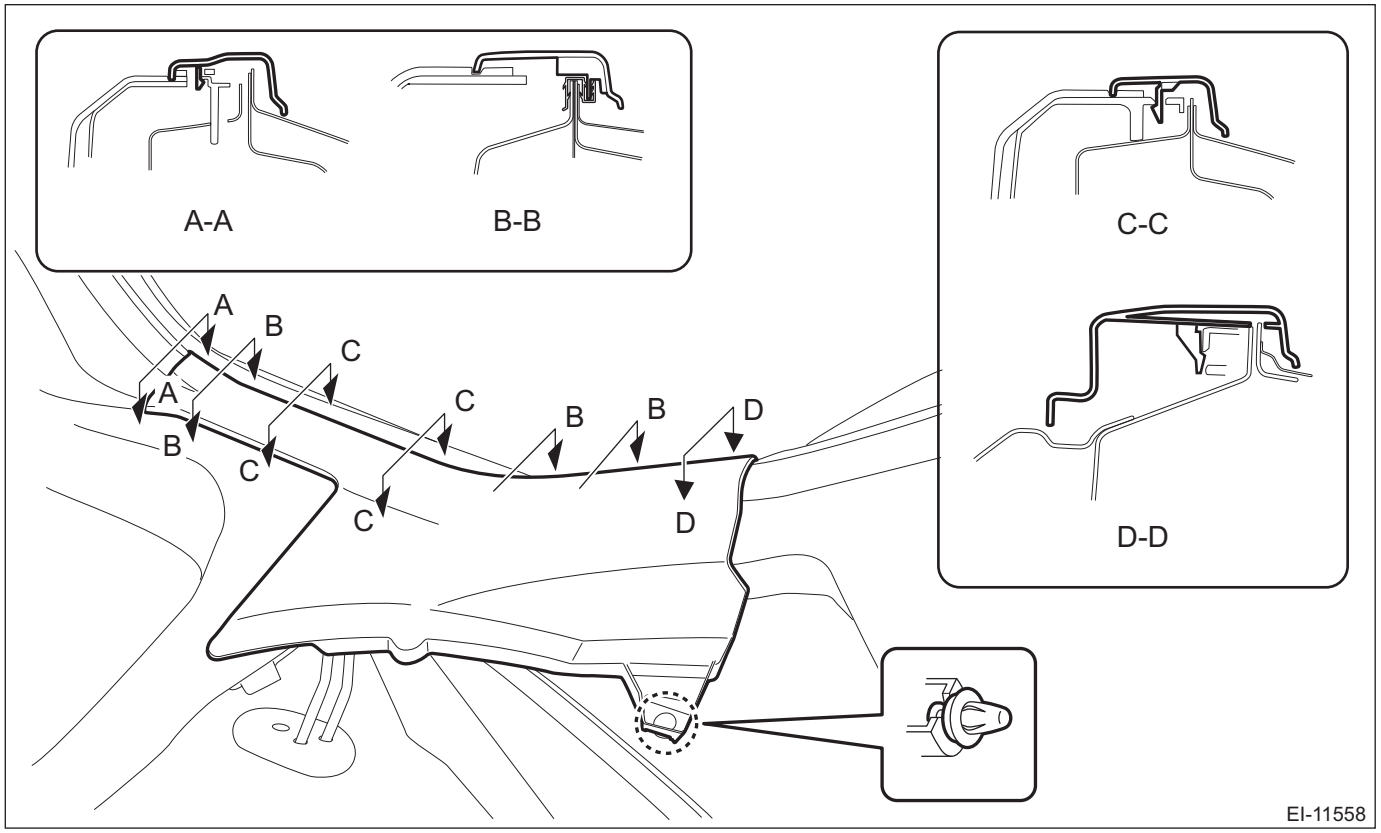
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the clips, and remove the trim panel - rear pillar UPR.

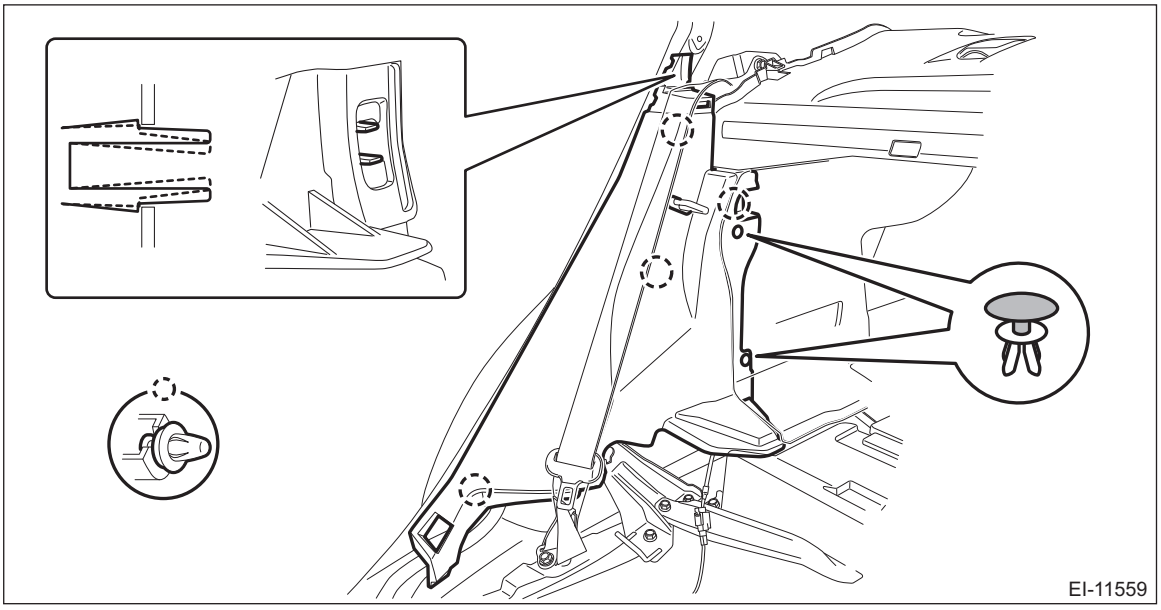


3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Release the clips and claws, and then remove the cover side sill - rear INN.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the cover side sill - rear INN.



5) Remove the trim panel - rear pillar LWR.
   (1) Remove the clips, and turn over the trim panel - trunk side.
   (2) Remove the clips, and remove the trim panel - rear pillar LWR.



B: INSTALLATION

1) Install the trim panel - rear pillar LWR.
2) Install the cover side sill - rear INN.
3) Install the rear seat cushion assembly.
4) Install the trim panel - rear pillar UPR.
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

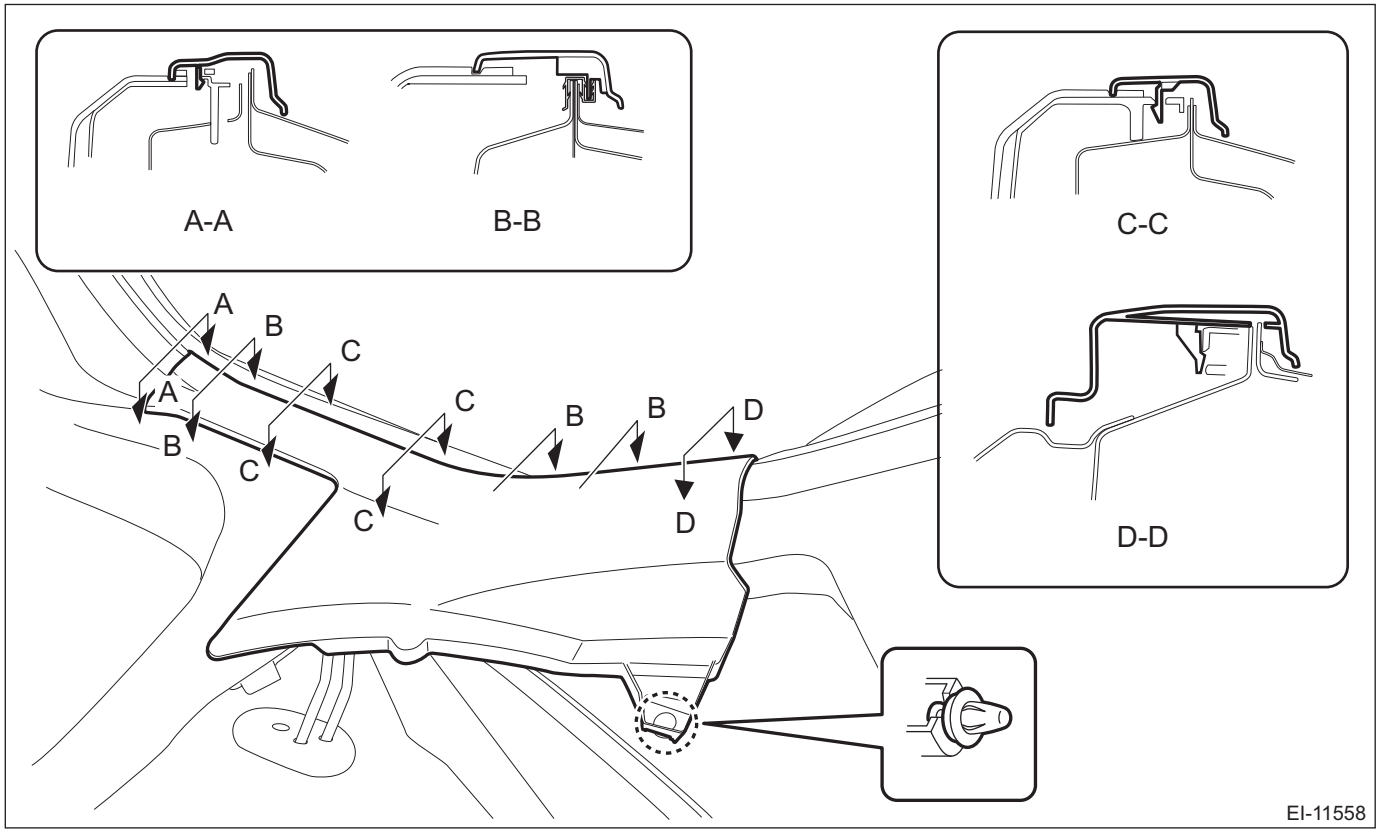
26.Rear Shelf Trim

A: REMOVAL

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

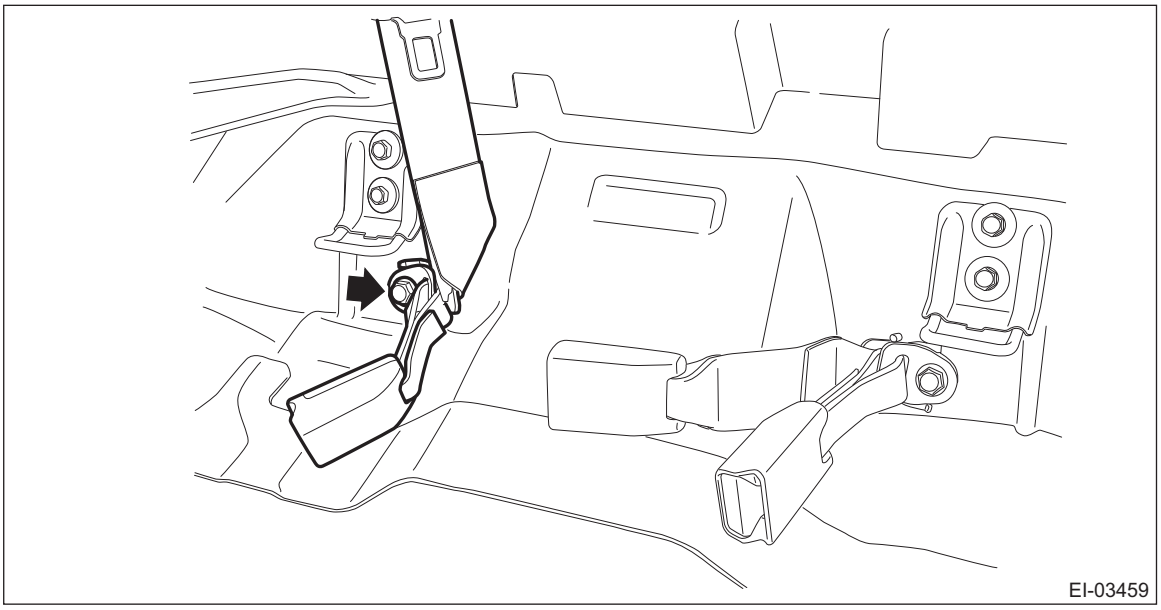
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
3) Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

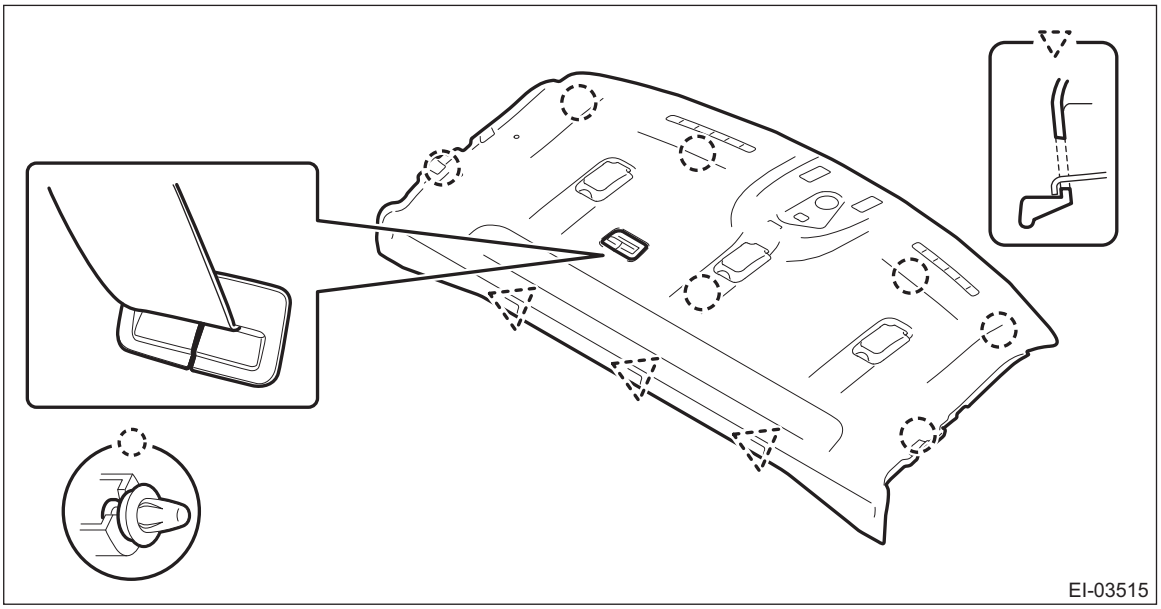


4) Remove the trim panel - rear pillar UPR and trim panel - rear pillar LWR on the RH and LH sides. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>

5) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.



6) Remove the high-mounted stop light. <Ref. to LI-70, REMOVAL, High-mounted Stop Light.>
7) Remove the trim panel assembly - rear shelf.
   (1) Release the clips to float the trim panel assembly - rear shelf.
   (2) Release the belt guide, and guide the anchor of the seat belt - rear shoulder CTR to behind the trim panel - rear shelf assembly.
   (3) Remove the trim panel assembly - rear shelf.



B: INSTALLATION

1) Install the trim panel assembly - rear shelf.
2) Install the high-mounted stop light.

CAUTION:
Make sure that the claw behind the light assembly - high-mounted is securely attached to the trim panel assembly - rear shelf.

3) Install the lower anchor of seat belt - rear shoulder CTR.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

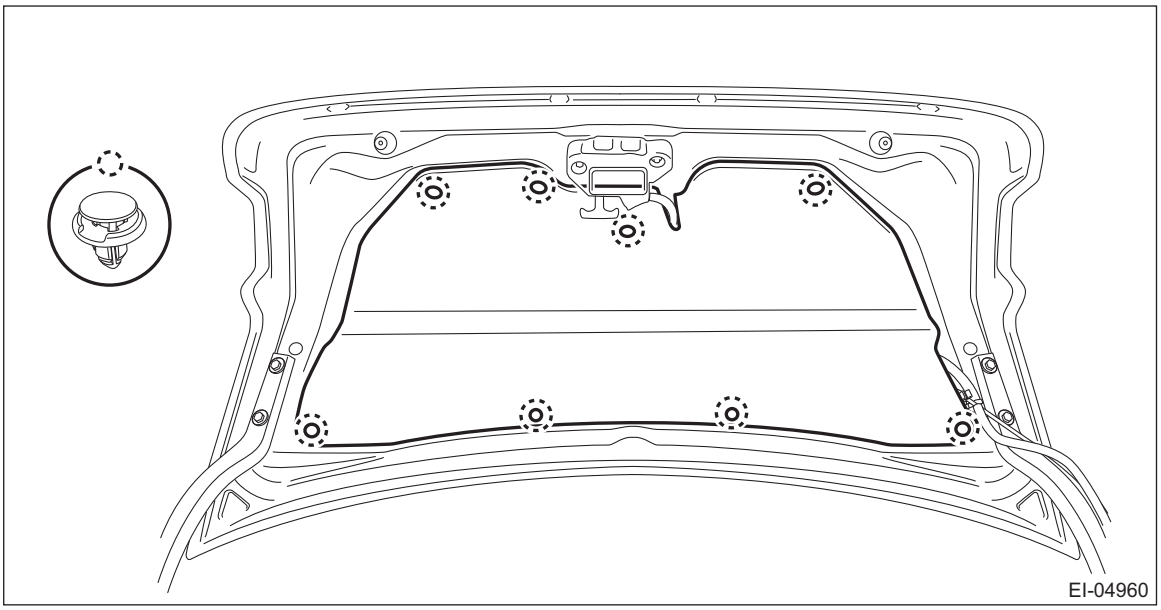
4) Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.

5) Install the side sill cover - rear INN.
6) Install the rear seat cushion assembly.
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

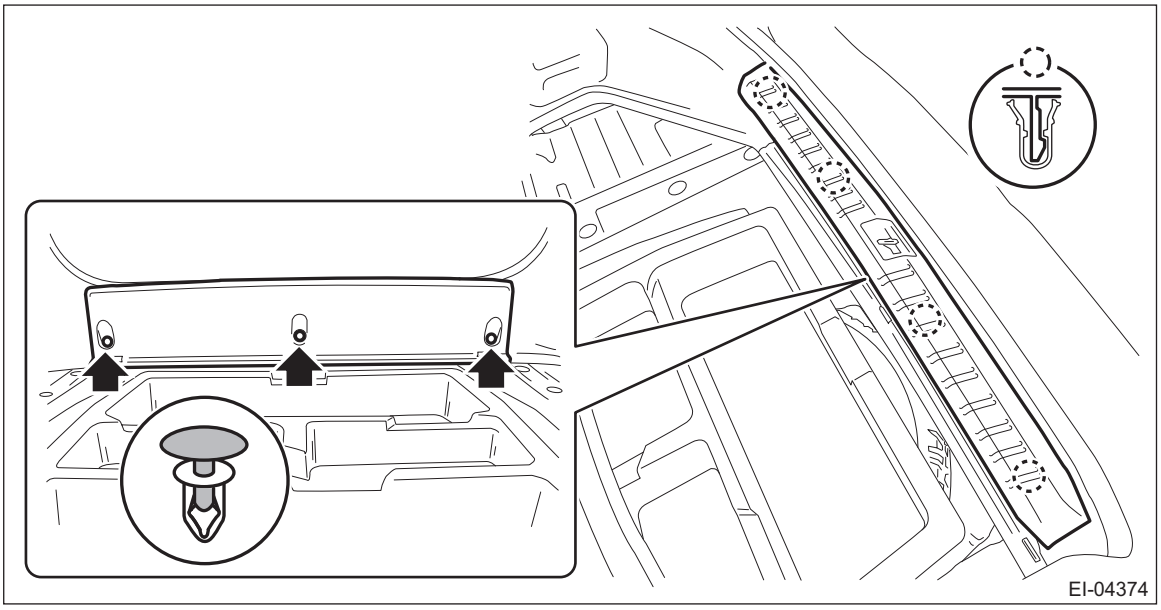
27.Trunk Room Trim

A: REMOVAL

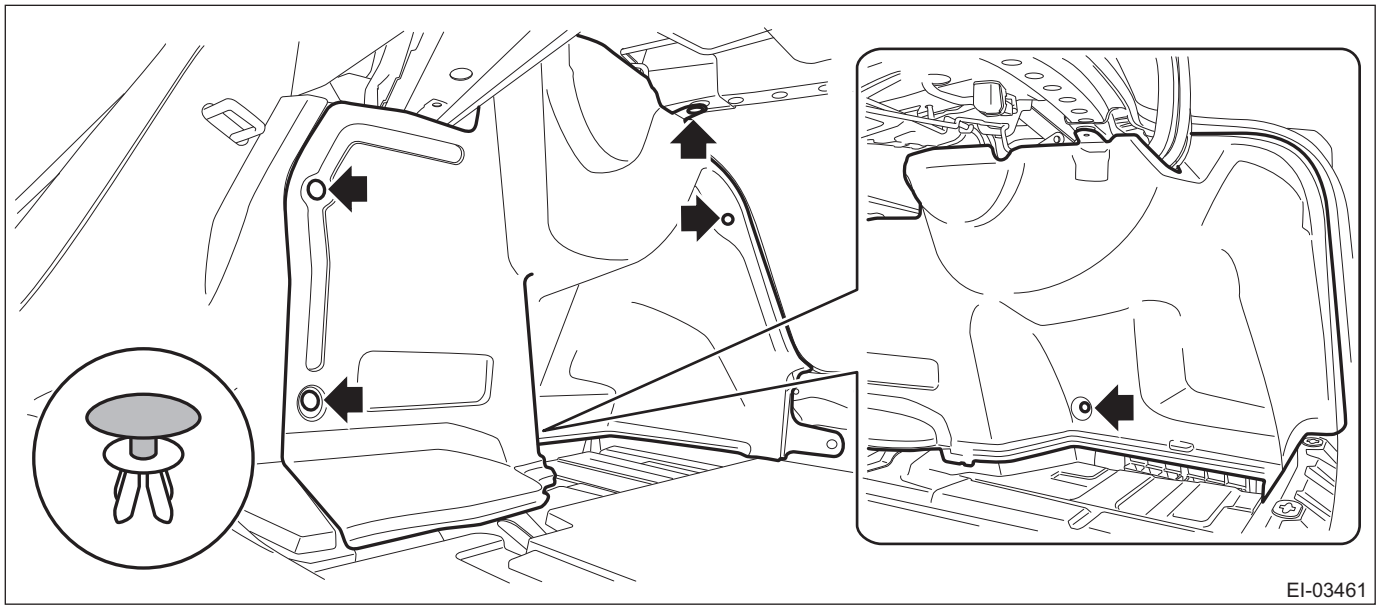
1) Remove the clips, and remove the trim panel - trunk lid.



2) Tilt the backrest assembly forward.
3) Remove the mat - trunk.
4) Remove the trim panel - trunk rear.
   (1) Remove the clip.
   (2) Release the claws, and remove the trim panel - trunk rear.



5) Remove the clips, and remove the trim panel - trunk side.



B: INSTALLATION

1) Install the trim panel - trunk lid.
2) Install the trunk room mat.
3) Install the trim panel - trunk rear.

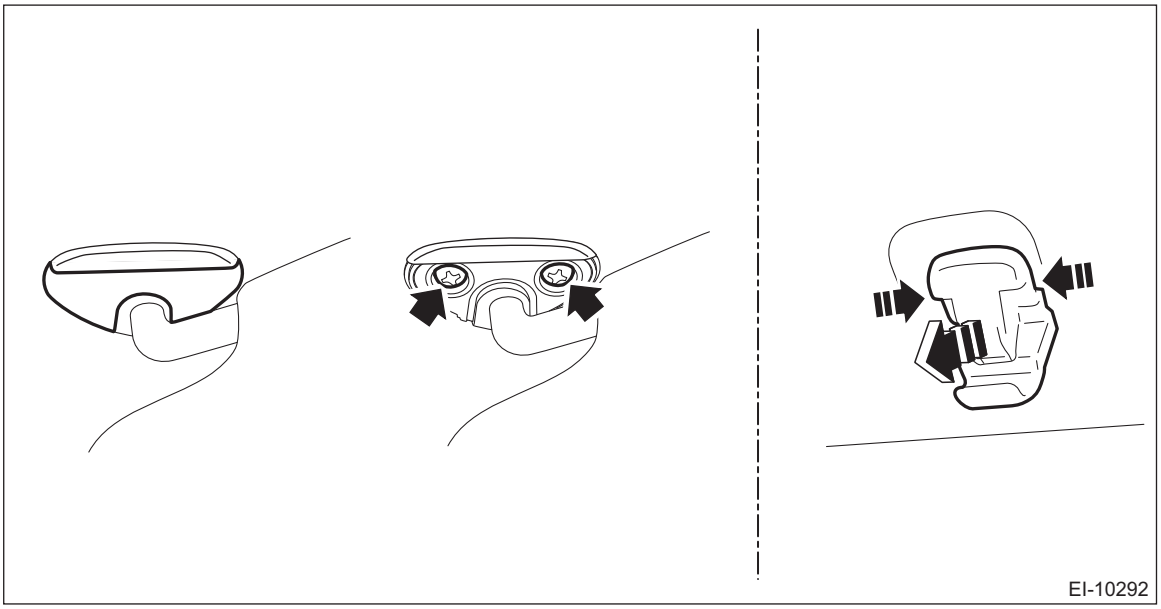
28.Sun Visor

A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. (Only model with vanity mirror light) <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the sun visor assembly.
   (1) Remove the cap - sun visor, and then remove the screws.
   (2) Disconnect the connector. (Only model with vanity mirror light)
   (3) Disconnect the connector and remove the sun visor assembly.
3) Remove the hook - sun visor.
   (1) Press both sides using a flat tip screwdriver.
   (2) Remove the hook - sun visor by pulling it toward you.



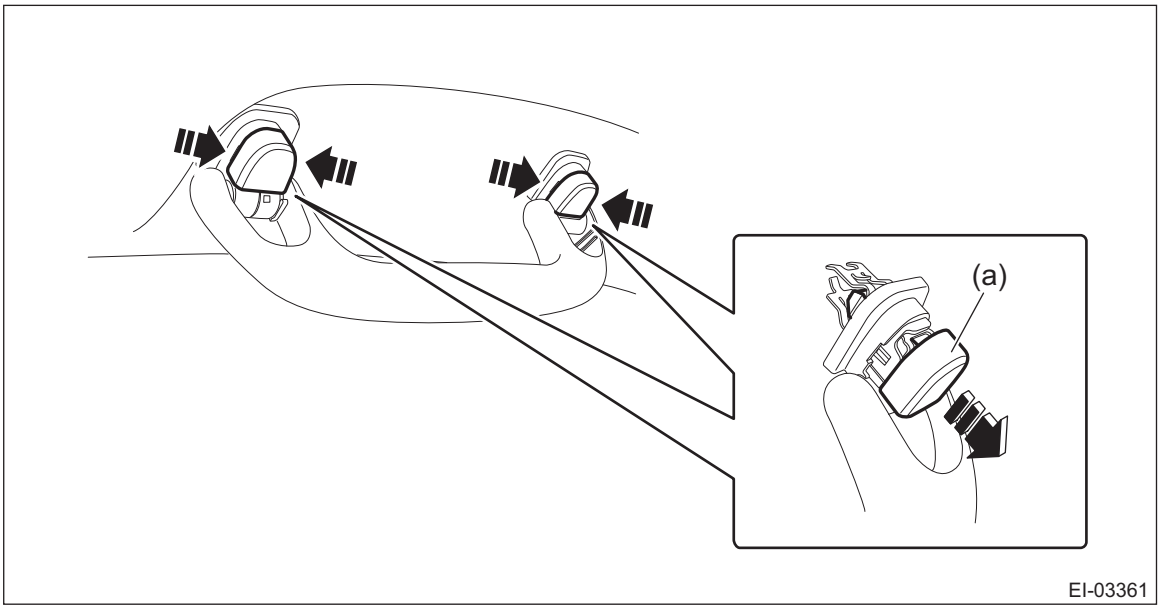
B: INSTALLATION

1) Install the hook - sun visor.
2) Install the sun visor assembly.
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

29.Assist Grip

A: REMOVAL

1) Pull both sides of the cap (a) using a flat tip screwdriver or similar tool wrapped with a protection tape.
2) Pull the assist grip toward yourself (toward the vehicle center) to remove.



B: INSTALLATION

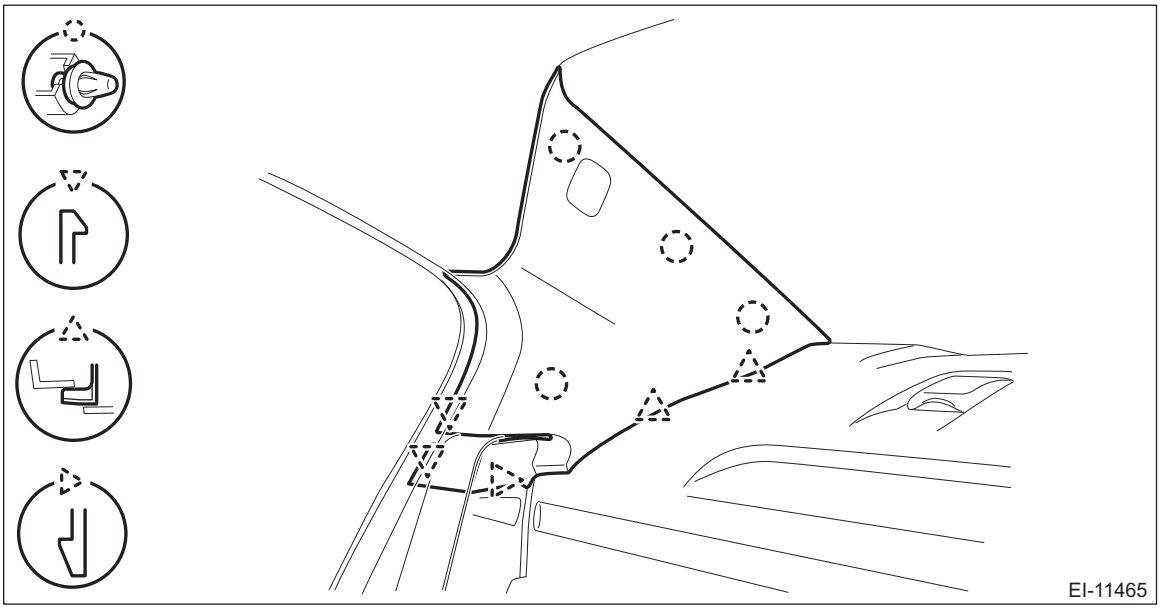
1) Attach the assist grip.
2) Press in the cap.

30.Roof Trim

A: REMOVAL

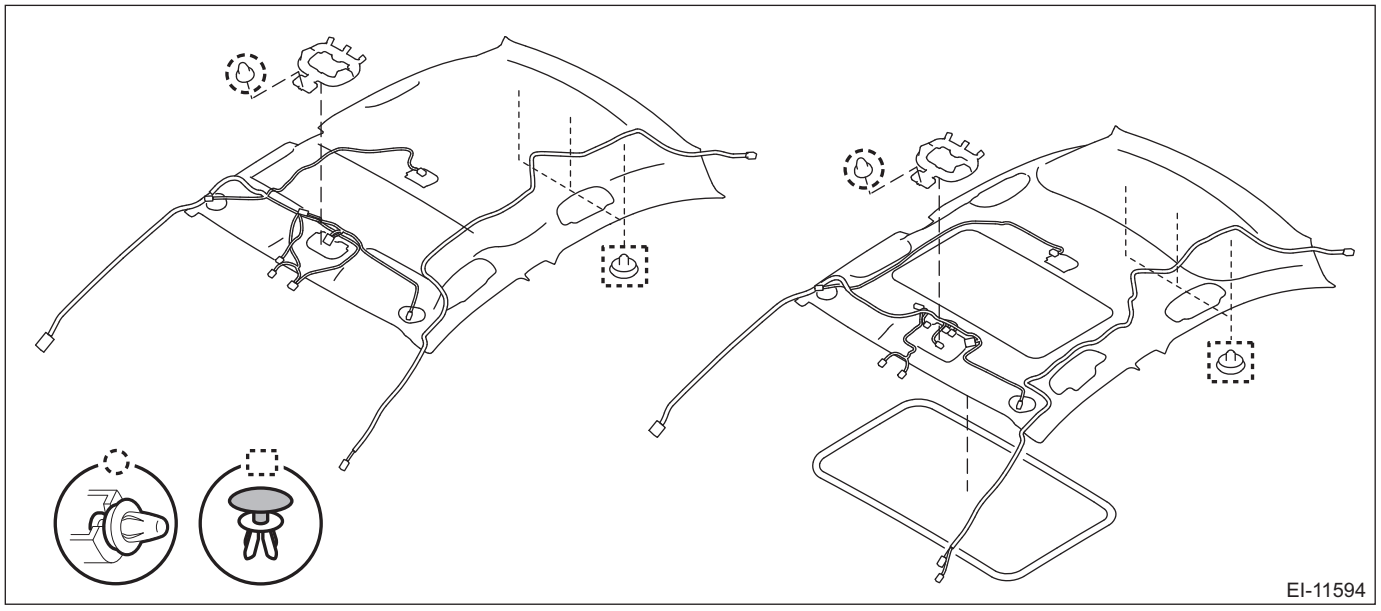
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Adjust the passenger's seat position.
(1) Remove the headrest.
(2) Move the passenger's seat to the front-most position and tilt the backrest rearward.
2) Disconnect the ground terminal from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
• For model with battery sensor, disconnect the ground terminal from battery sensor.
• On CVT models, shift the select lever into "N" before disconnecting the battery ground terminal.
• For model with power seat, adjust the passenger's seat to the specified position, and remove the driver's seat and then disconnect the battery ground terminal.
3) Remove the driver's seat. <Ref. to SE-11, REMOVAL, Front Seat.>
4) Remove the console box assembly and the cover - shift lever. <Ref. to EI-70, REMOVAL, Console Box.>
5) Cover the following areas to protect from damage.
• Steering wheel surface
• Instrument panel surface
• Glove box surface
6) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
7) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
8) Remove the upper inner trim on the RH and LH sides. <Ref. to EI-89, REMOVAL, Upper Inner Trim.>
9) Remove the clips, and remove the trim panel - rear pillar UPR on the left and right sides.

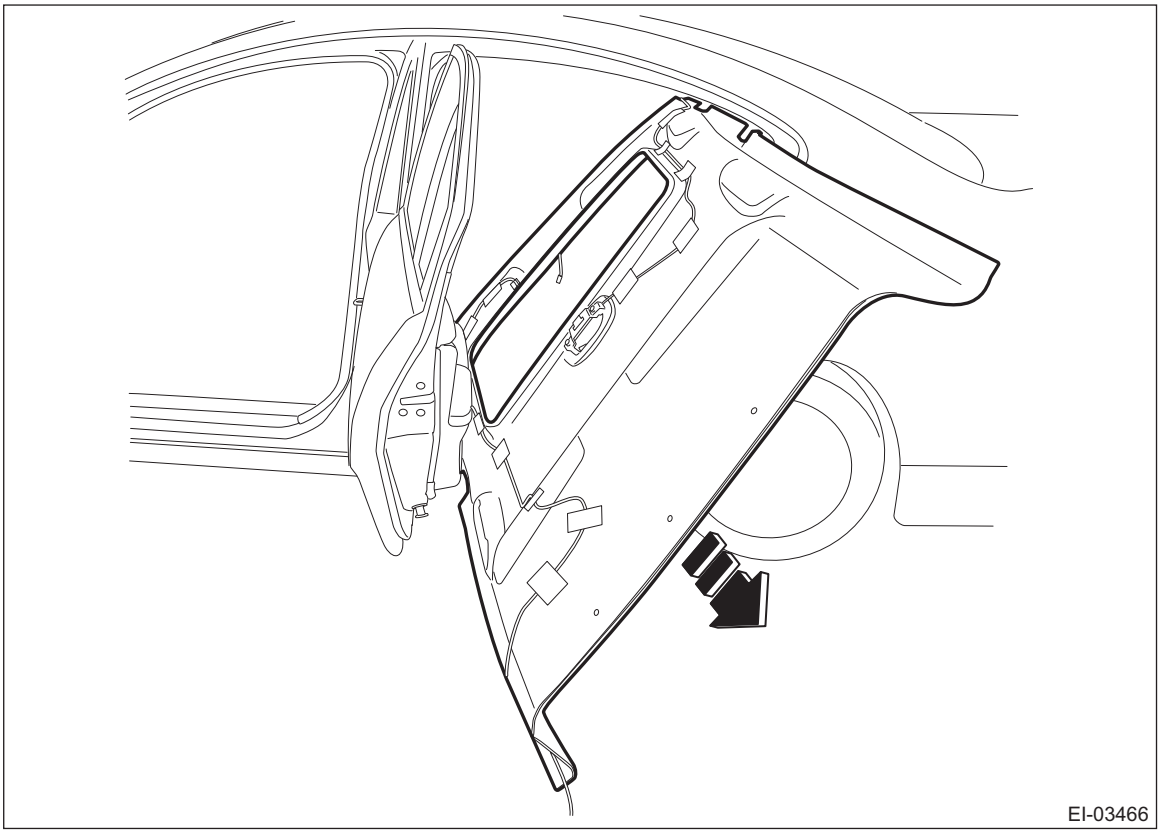


10) Remove the light assembly - map. (Models without EyeSight) <Ref. to LI-72, REMOVAL, Spot Map Light.>
11) Remove the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-7, REMOVAL, Stereo Camera.>
12) Remove the left and right sun visor assembly. <Ref. to EI-99, REMOVAL, Sun Visor.>
13) Remove the light assembly - room. <Ref. to LI-76, REMOVAL, Room Light.>
14) Remove all assist rails. <Ref. to EI-100, REMOVAL, Assist Grip.>
15) Remove the garnish - roof. (Model with sunroof)

16) Remove the trim panel - roof assembly.
(1) Remove the harness clamp of the cord assembly - antenna feeder and the cord - roof, and disconnect the connectors.
(2) Remove the clips and the Velcro tape behind the room light.
(3) Remove the weather strip - body side flange from the front/rear and left/right doors, and remove the trim panel - roof assembly.

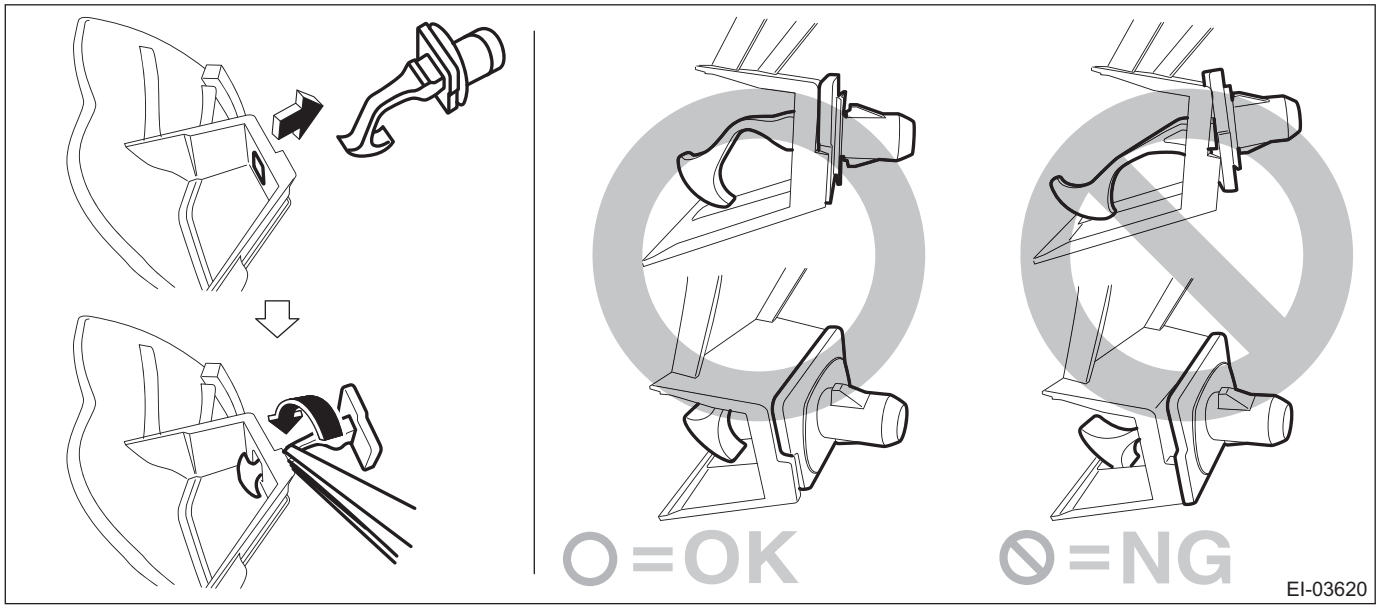


(4) Take out the trim panel - roof assembly from the vehicle.



B: INSTALLATION

CAUTION:
• For installation of the stereo camera cover assembly, refer to "INSTALLATION", "Stereo Camera" in the "EyeSight" section and observe the precautions for installation. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
• When reusing the tether clip on the upper part of the trim panel - front pillar UPR, check that there is no damage to the tether clip. If the tether clip is damaged, always replace it with a new tether clip. If the tether clip is damaged, its holding force is reduced and the trim panel - front pillar UPR may come off.
• Do not reuse the tether clip removed from the upper part of the trim panel - front pillar UPR. Always replace with a new part.
• Do not reuse the upper clips of the trim panel - center pillar UPR. Once the clip is removed, its holding force is reduced. Be sure to replace it with a new clip.
• Before installing the trim panel - front pillar UPR, check the condition of protective non-woven fabric (white) of the curtain airbag. If it is damaged (airbag module cloth is exposed), replace the curtain airbag module assembly with a new part.
• Check the installation status of the tether clips and install the trim panel - front pillar UPR.

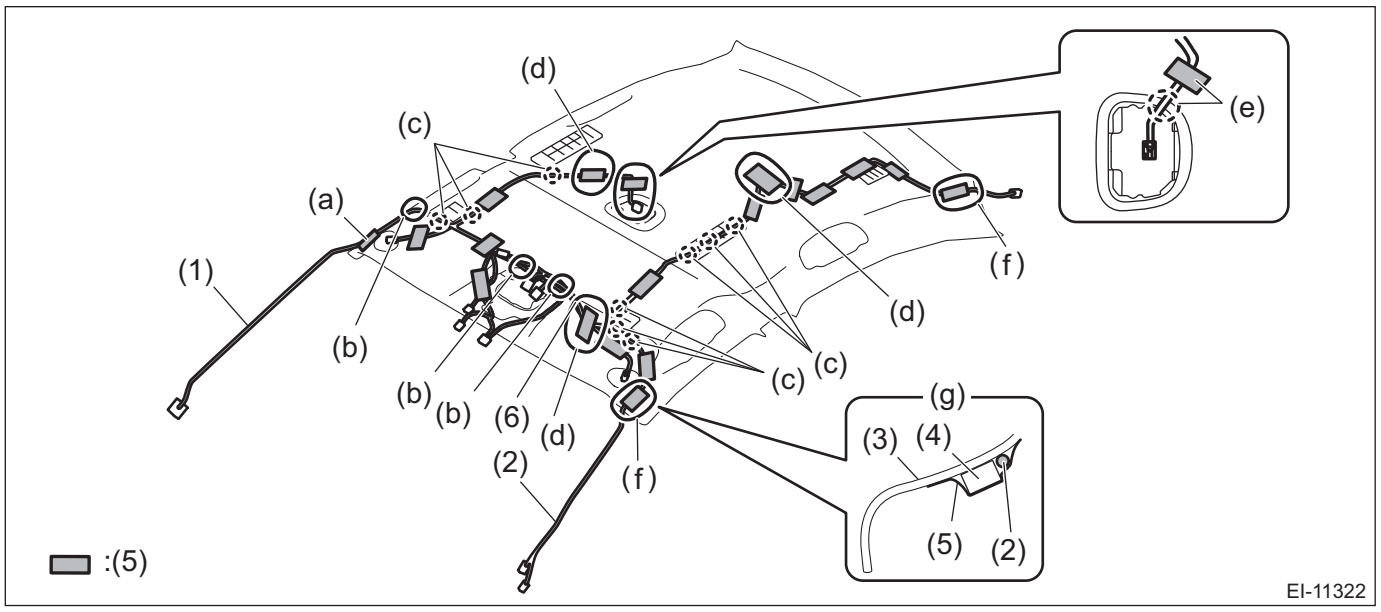


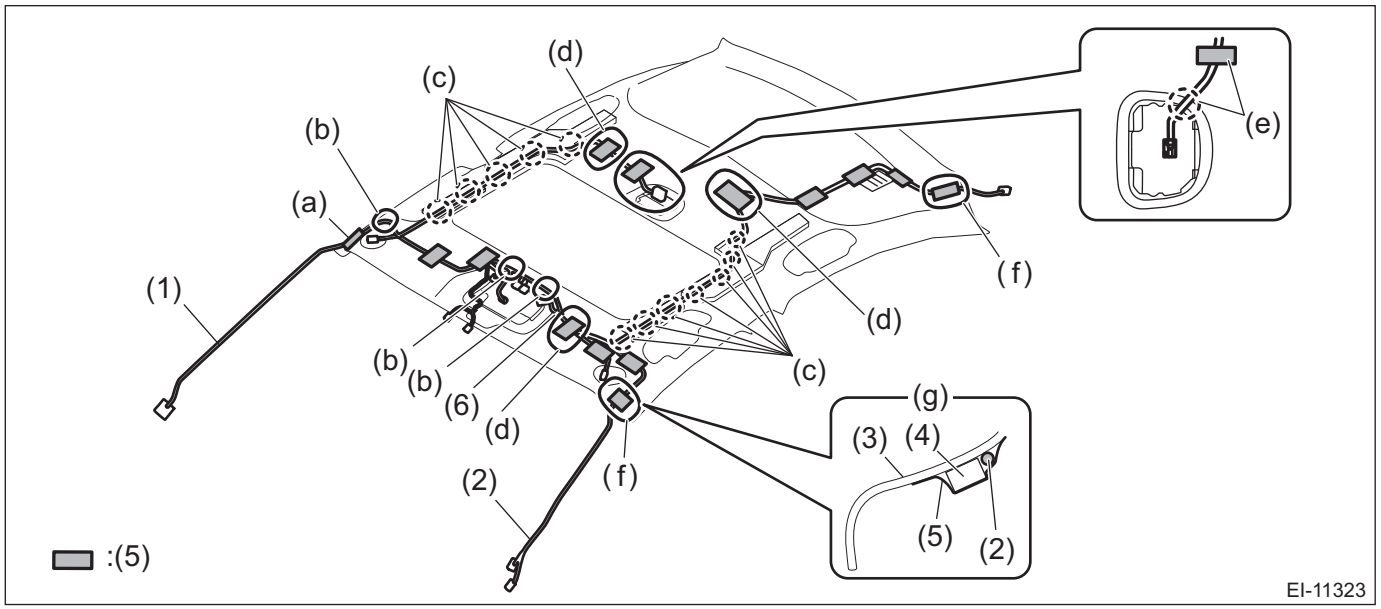
1) Install the trim panel - roof assembly.
   (1) Bring the trim panel - roof assembly inside the vehicle.
   (2) Attach the feeder cord and roof cord to the roof trim.

CAUTION:
Route each cord carefully. The cord may interfere, thus preventing normal deployment of the curtain airbag when necessary.

Preparation items:
Part No.: 86359SC000/TAPE

NOTE:
Use the tape (service parts) by cutting into 100 mm × 50 mm (3.9 in × 2 in).





(1) Roof cord
(2) Feeder cord
(3) Trim panel - roof
(4) Cushion
(5) Tape
(6) Telematics harness

(a) Align the center of the marking (white tape) on the cord with the trim end, then secure using the tape.
(b) Align the marking (white tape) of the cord with the clamp to secure.
(c) Secure the cord to the roof pad clamp.
(d) Adjust the excess cord at (d) position and secure using the tape.
(e) Put the marking (white tape) of the cord between the patch ribs so that the marking cannot be viewed from the passenger room. Secure it with clamp and secure the harness with tape.
(f) Align the center of the marking (red tape) on the cord with the roof trim end, then secure using the tape.
(g) Route the cord along inside of the cushion (to the vehicle center) and secure using the tape.

(3) Secure the trim panel - roof assembly with the clips.
2) Install the garnish - roof. (Model with sunroof)
3) Install the assist rail.
4) Install the light assembly - room.
5) Install the sun visor assembly.
6) Install the stereo camera cover assembly. (Models with EyeSight) <Ref. to ES-10, INSTALLATION, Stereo Camera.>
7) Install the light assembly - map. (Models without EyeSight)
8) Install the trim panel - rear pillar UPR.
9) Install the upper inner trim.

Tightening torque:
Trim panel - center pillar UPR: 7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
Front seat belt anchor: 30 N·m (3.1 kgf-m, 22.1 ft-lb)
10) Install the lower inner trim.
11) Install the rear seat cushion assembly.
12) Install the console box assembly and cover - shift lever.
13) Install the driver's seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)
14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

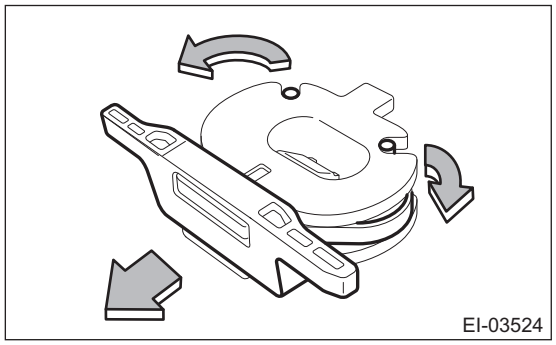
NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

31.Floor Mat

A: REMOVAL

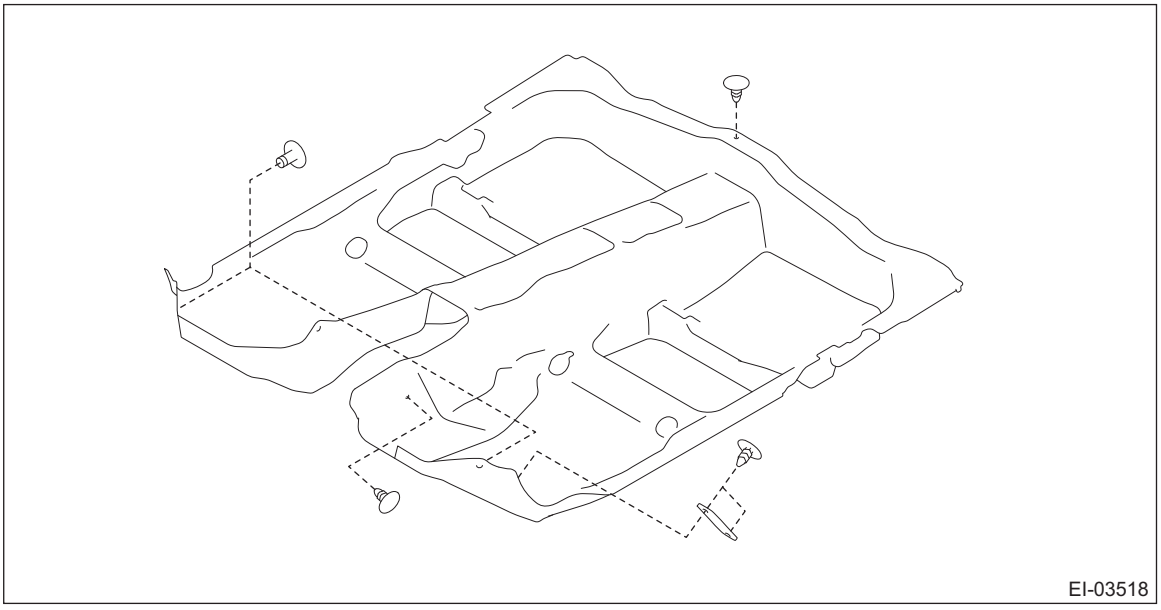
CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Airbag system satellite safing sensor is located under the front center of the rear seat cushion. Be careful not to apply strong impact to the sensor when working with the rear seat cushion removed.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
• For model with battery sensor, disconnect the ground terminal from battery sensor.
• On CVT models, shift the select lever into "N" before disconnecting the battery ground cable.
2) Remove the front seat assembly. <Ref. to SE-11, REMOVAL, Front Seat.>
3) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
4) Remove the console box assembly, the cover - shift lever and the panel center LWR. <Ref. to EI-70, REMOVAL, Console Box.>
5) Remove the lower inner trim on the RH and LH sides. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
6) Remove the pull handle cover. <Ref. to SL-57, FUEL FLAP, REMOVAL, Remote Openers.>
7) Remove the knobs of the hook - seat cushion rear.



EI-03524

8) Take out the floor mat from the vehicle.
(1) Remove the clips from the floor mat.
(2) Remove the mat hook on both sides.
(3) Take out the floor mat after folding down.

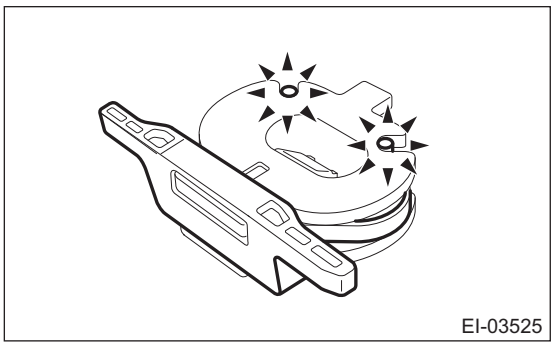


EI-03518

B: INSTALLATION

1) Bring the floor mat into the vehicle, and secure with the clips.

CAUTION:
Make sure that the knobs of the hook - seat cushion rear are securely installed.



EI-03525

2) Install the pull handle cover.
3) Install the lower inner trim.
4) Install the console box assembly, the cover - shift lever and the panel center LWR.
5) Install the rear seat cushion assembly.
6) Install the front seat.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For CVT models, after connecting the battery sensor terminal, place the select lever in the P position.

EXTERIOR BODY PANELS

EB

		Page
1.	General Description	2
2.	Front Hood	9
3.	Front Fender	17
4.	Front Door	21
5.	Front Sealing Cover	29
6.	Rear Door	30
7.	Rear Sealing Cover	37

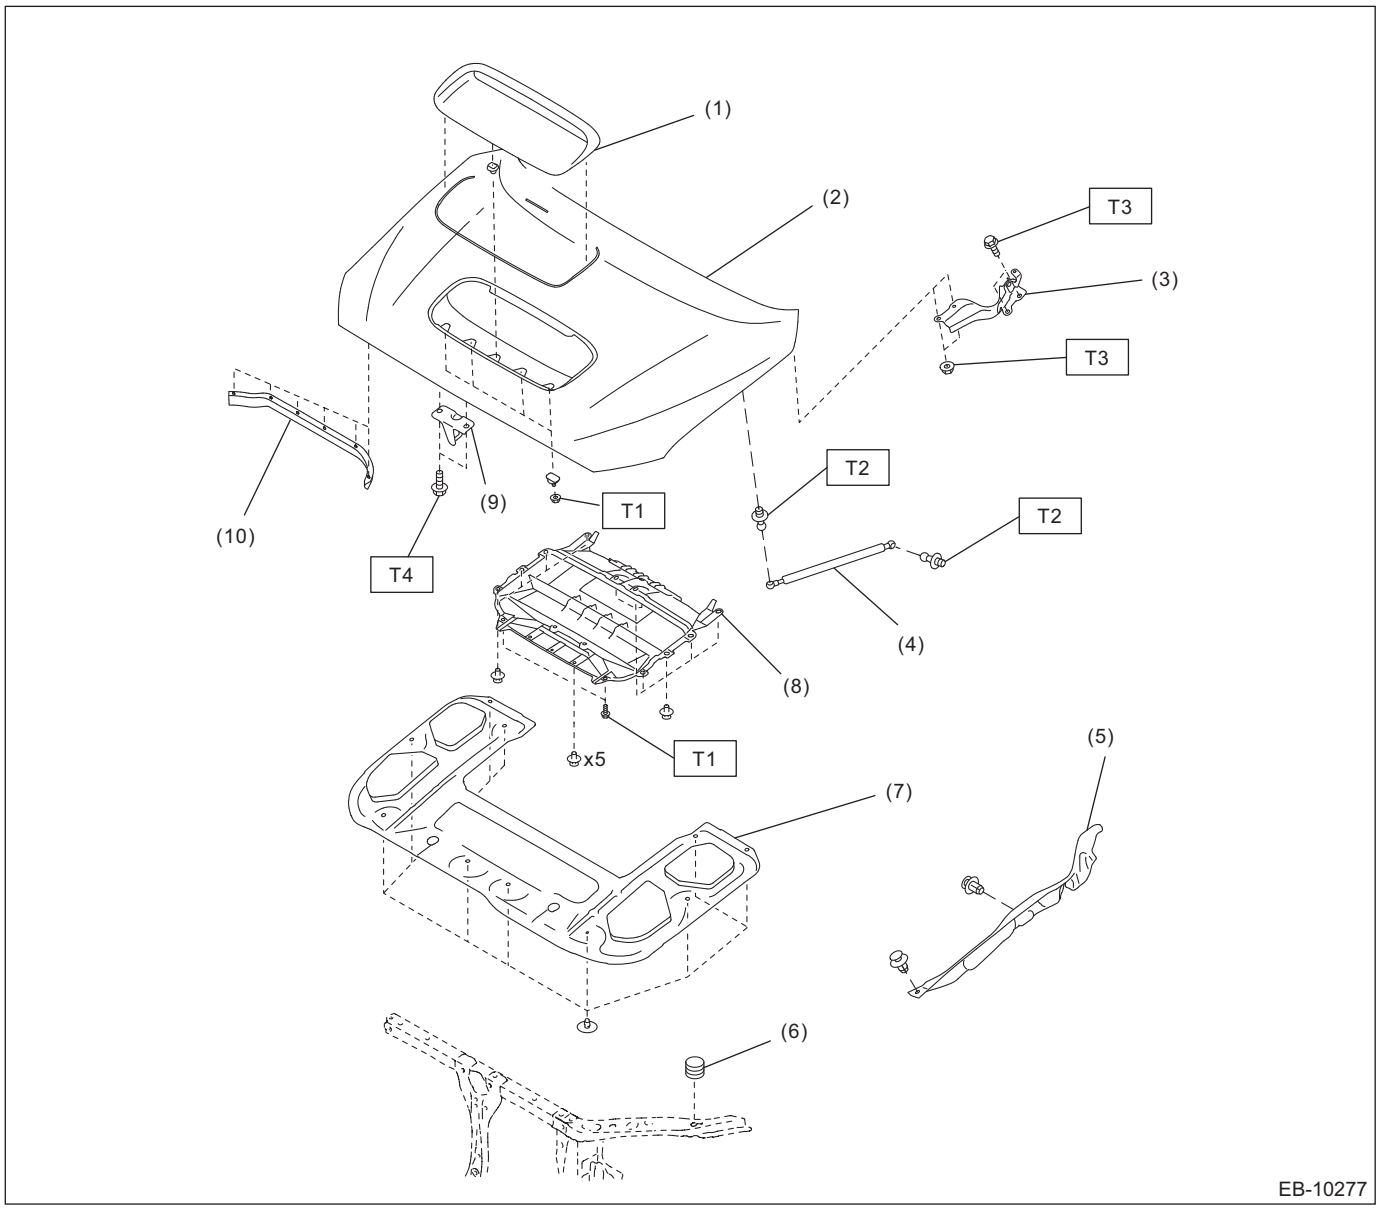
1. General Description

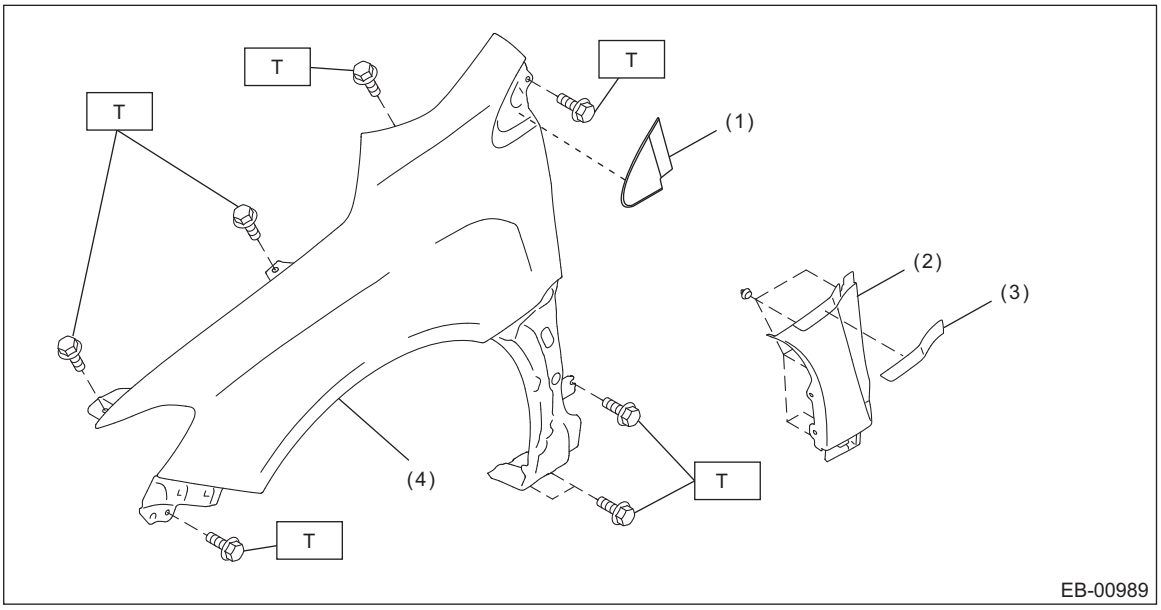
A: COMPONENT

1. FRONT HOOD



(1)	Grille - front hood	(6)	Buffer - front hood	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Hood COMPL - front	(7)	Insulator - front hood	***T1: 4.5 (0.5, 3.3)***
(3)	Hinge COMPL - front hood	(8)	Duct - inner front hood	***T2: 20 (2, 14.8)***
(4)	Stay ASSY - front hood	(9)	Striker - front hood	***T3: 25 (2.5, 18.4)***
(5)	Cover - front fender	(10)	Seal - front duct	***T4: 33 (3.4, 24.3)***

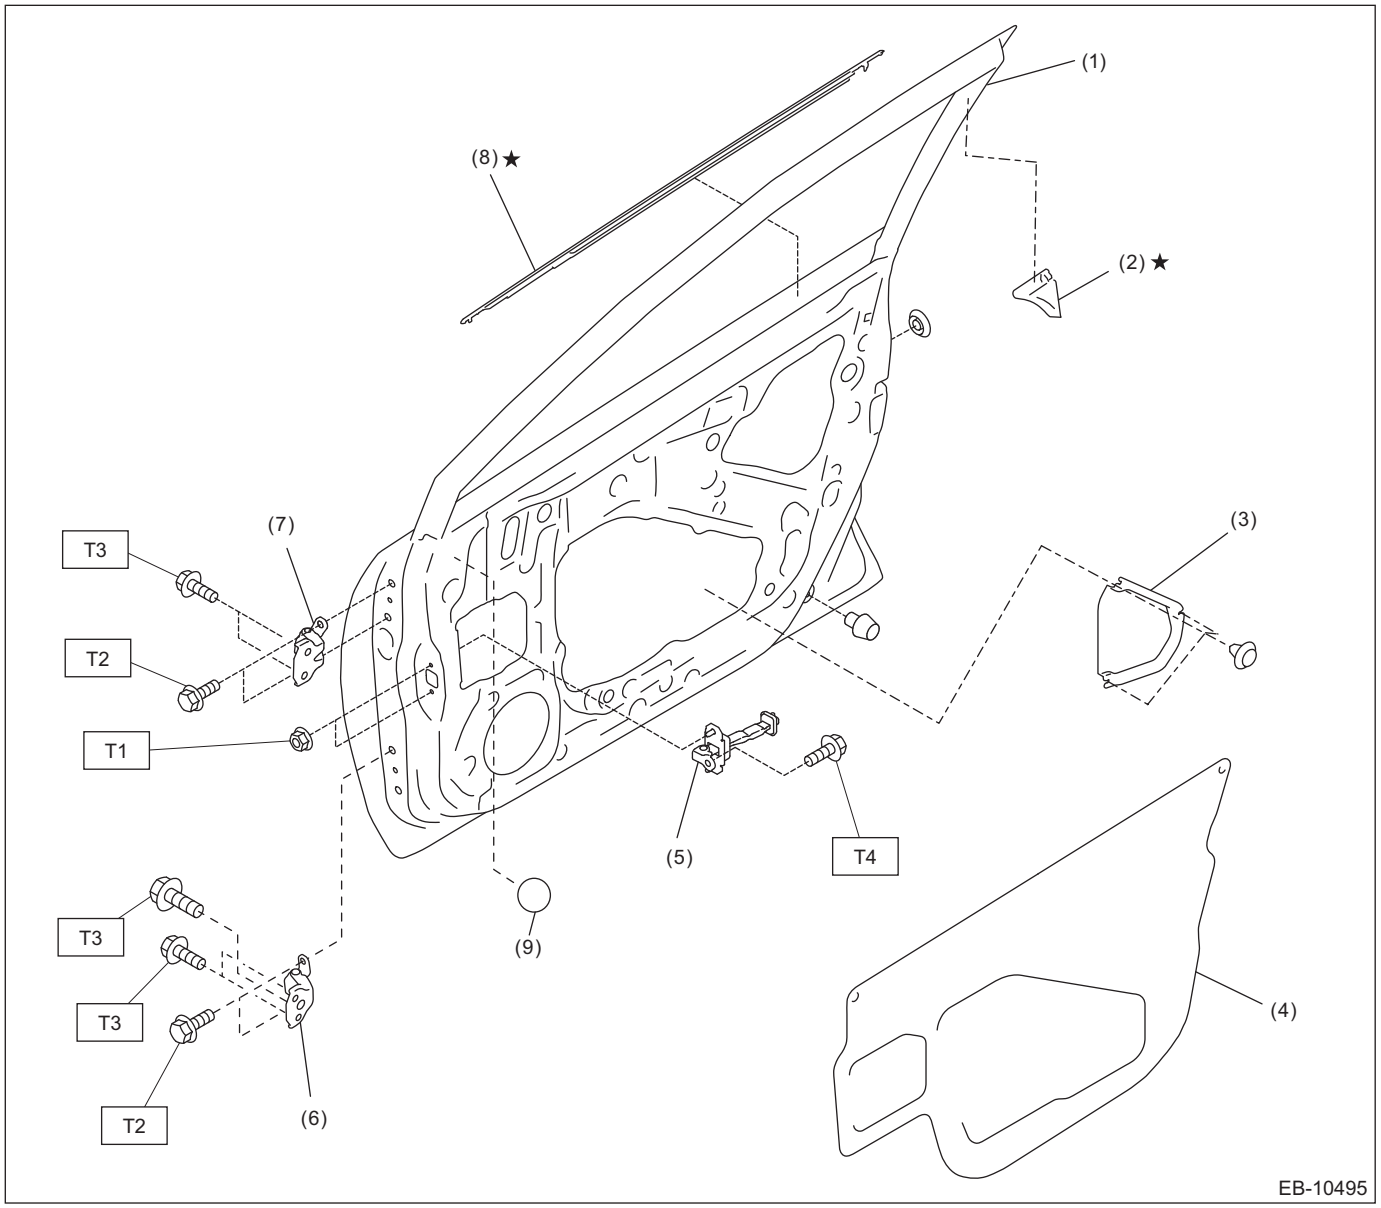
2. FRONT FENDER



(1) Cover - A pillar ASSY
(2) Garnish ASSY - fender
(3) Molding
(4) Fender front

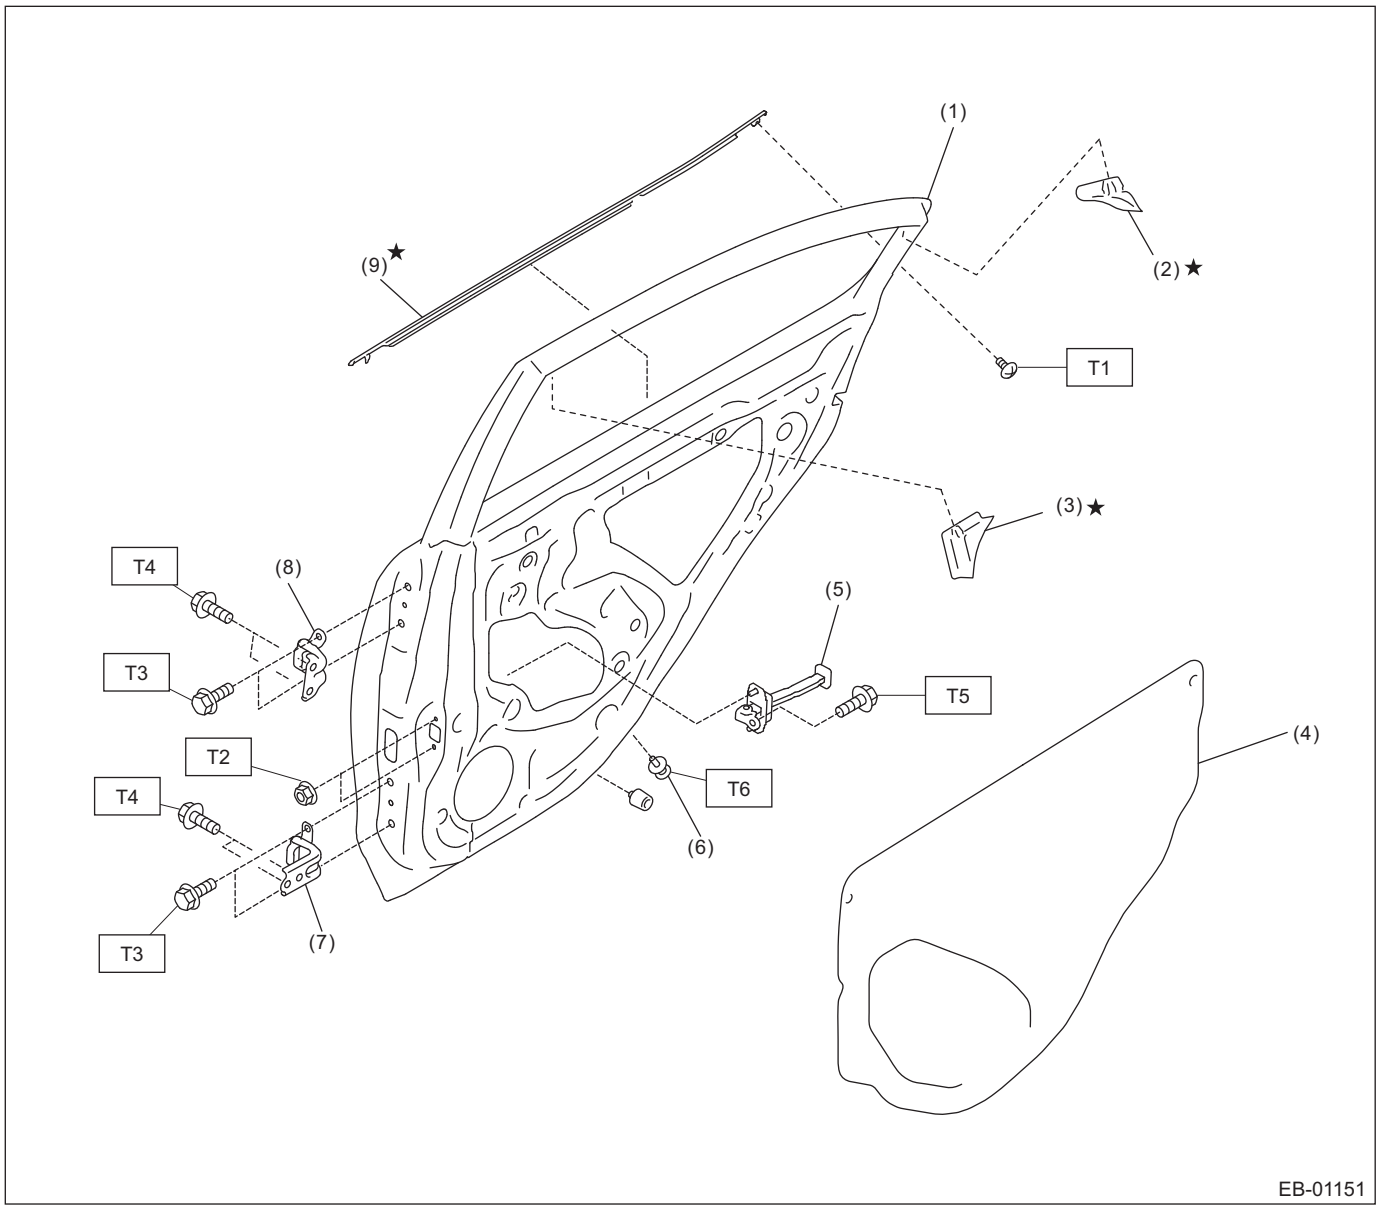
Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

3. FRONT DOOR



(1)	Panel ASSY - front door	(5)	Checker ASSY - front door	***Tightening torque: N·m (kgf-m, ft-lb)***
(2)	Cover B pillar - front door INN	(6)	Lower hinge - front door	***T1: 7.5 (0.8, 5.5)***
(3)	Front door inner pad	(7)	Upper hinge - front door	***T2: 25 (2.5, 18.4)***
(4)	Sealing cover - front door	(8)	Weather strip outer - front door	***T3: 30 (3.1, 22.1)***
		(9)	Grommet sheet	***T4: 33 (3.4, 24.3)***

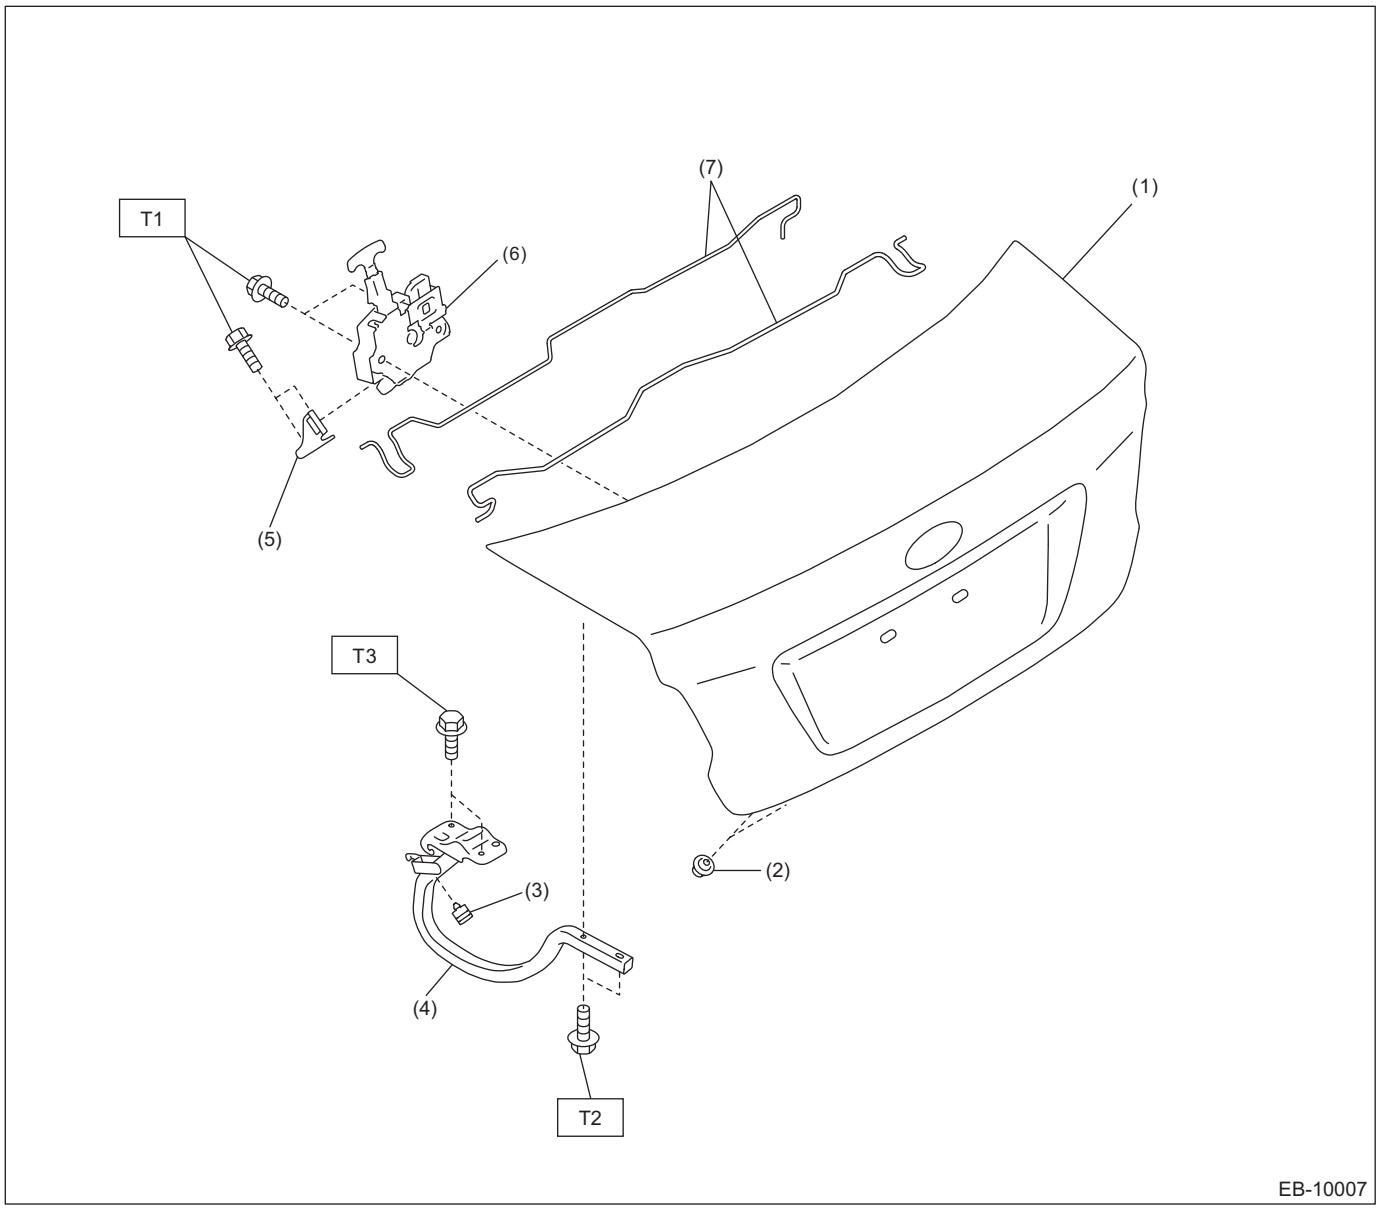
4. REAR DOOR



(1) Panel ASSY - rear door
(2) Cover C pillar - rear door INN
(3) Cover B pillar - rear door INN
(4) Sealing cover - rear door
(5) Checker ASSY - rear door
(6) Catcher - rear door
(7) Lower hinge - rear door
(8) Upper hinge - rear door
(9) Weather strip outer - rear door

Tightening torque: N·m (kgf-m, ft-lb)
T1: 2 (0.2, 1.5)
T2: 7.5 (0.8, 5.5)
T3: 25 (2.5, 18.4)
T4: 30 (3.1, 22.1)
T5: 33 (3.4, 24.3)
T6: 38 (3.9, 28)

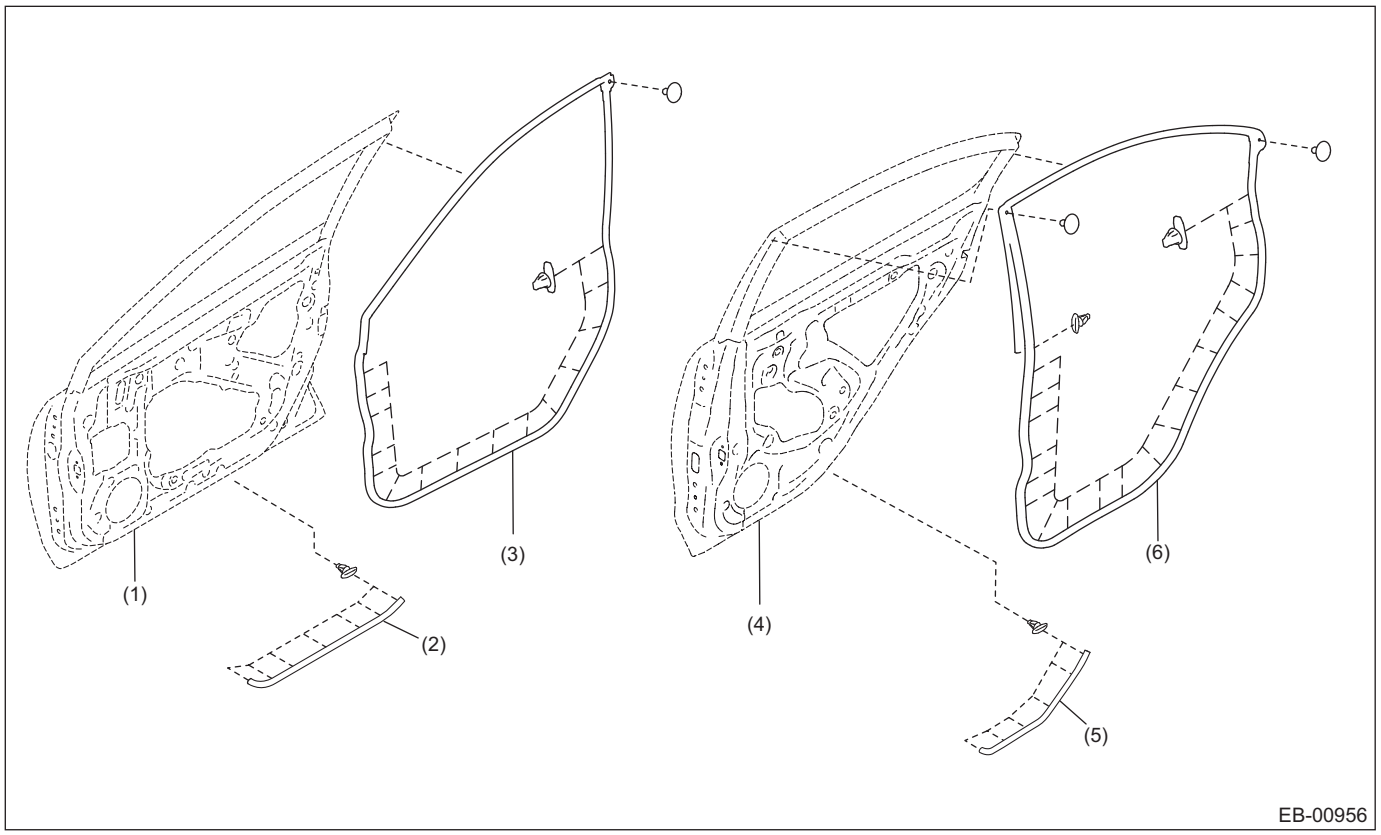
5. TRUNK LID PANEL



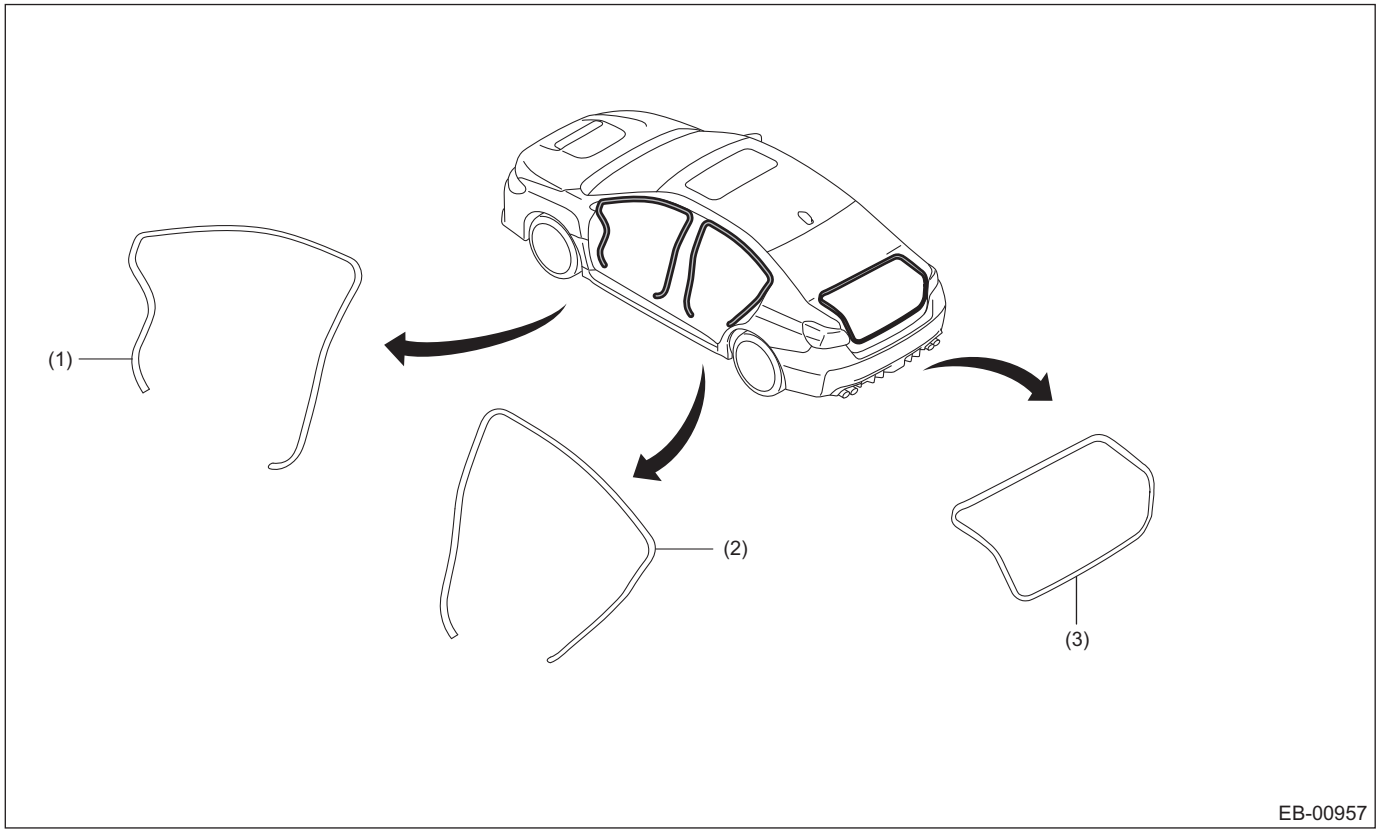
(1)	Trunk lid COMPL	(5)	Striker - trunk
(2)	Stopper - trunk lid	(6)	Lock ASSY - trunk lid
(3)	Stopper - trunk	(7)	Torsion bar - trunk lid
(4)	Trunk lid arm ASSY		

Tightening torque: N·m (kgf-m, ft-lb)
T1: 7.5 (0.8, 5.5)
T2: 14 (1.4, 10.3)
T3: 18 (1.8, 13.3)

6. WEATHER STRIP



(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door
(4) Panel ASSY - rear door
(5) Weather strip - rear door LWR
(6) Weather strip - rear door



(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid

B: CAUTION

Exterior body panels are heavy. When removing or installing, do not drop and damage the panels. Do not damage the panel painting surface.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST-927780000	927780000	REMOVER	• Used for removing and installing the trunk torsion bar. • REMOVER (99099FJ000) can also be used.
 ST99099FJ000	99099FJ000	REMOVER	• Used for removing and installing the trunk torsion bar. • REMOVER (927780000) can also be used.

2. GENERAL TOOL

TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

2. Front Hood

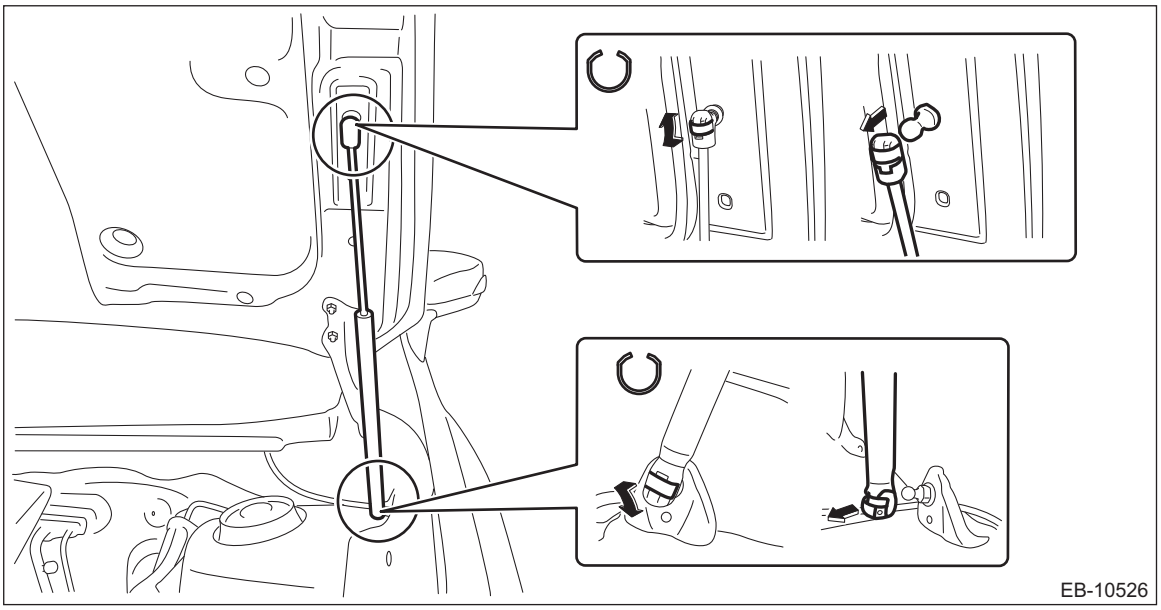
A: REMOVAL

CAUTION:
The hood COMPL - front is heavy. When removing and installing it, always work in a team of two or more persons.

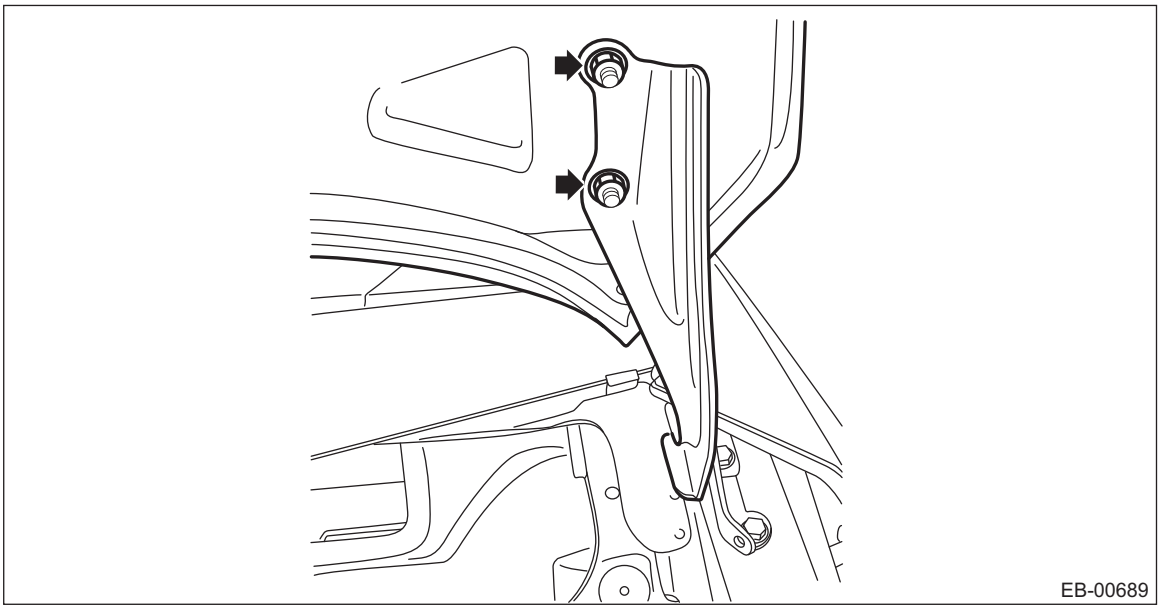
1) Open the hood COMPL - front.
2) Remove the stay assembly - front hood.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove from the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.



3) Remove the nut on the hood COMPL - front side, and remove the hood COMPL - front.



B: INSTALLATION

1) Install the hood COMPL - front to the hinge COMPL - front hood.

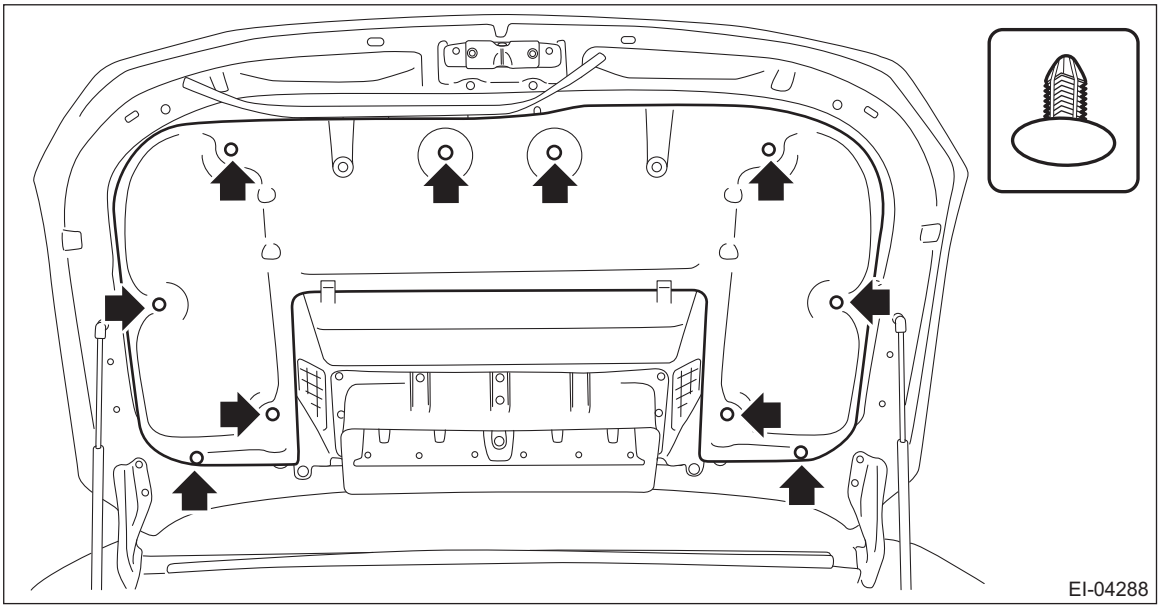
Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
2) Adjust the clearance around the hood COMPL - front. <Ref. to EB-15, ADJUSTMENT, Front Hood.>

C: DISASSEMBLY

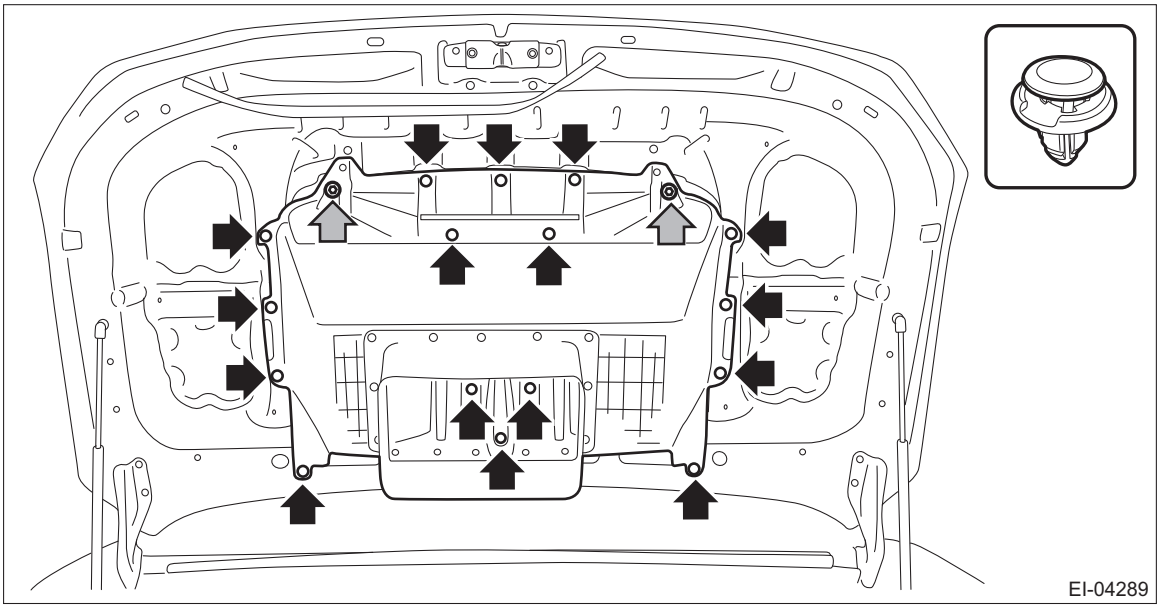
CAUTION:
- **Do not damage the piston rods and oil seals of stay assembly - front hood.**
- **Never disassemble the stay assembly - front hood: They contain gas.**
- **The hood COMPL - front is heavy. When removing or installing the hood COMPL - front, stay assembly - front hood, and hinge COMPL - front hood, be sure to work in a team of two or more persons.**

1) Remove the clips, and remove the insulator - front hood.

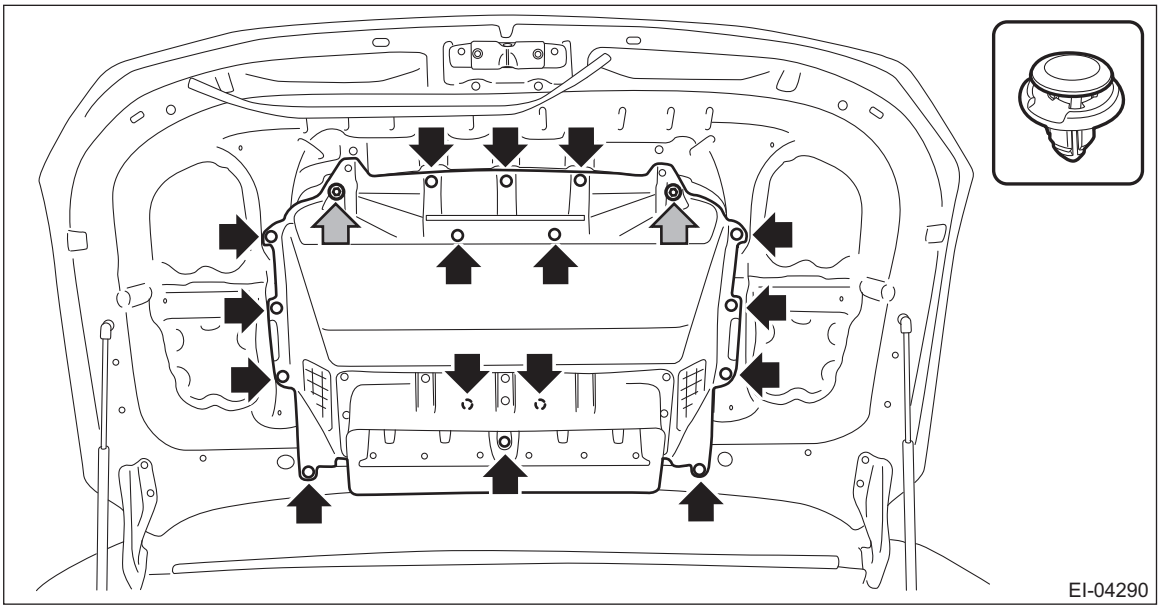
CAUTION:
Do not reuse any clips damaged during removal. The damaged clip cannot fix the insulator - front hood securely. Therefore, always replace with a new part.



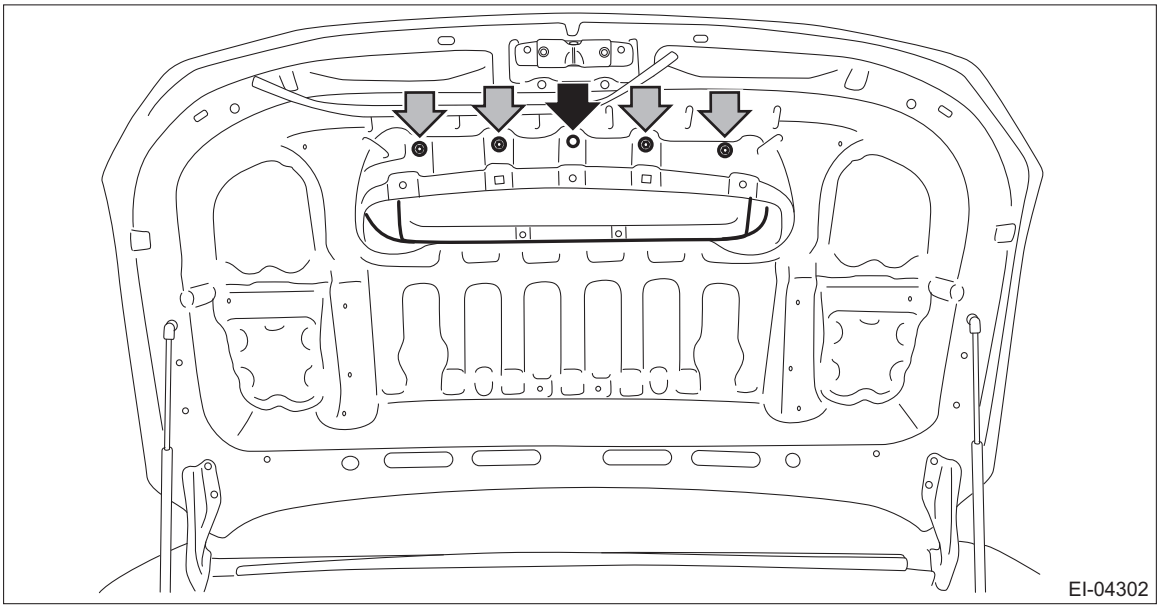
2) Remove the clips and bolts, and remove the duct - inner front hood.
- Except for STI model



- STI model

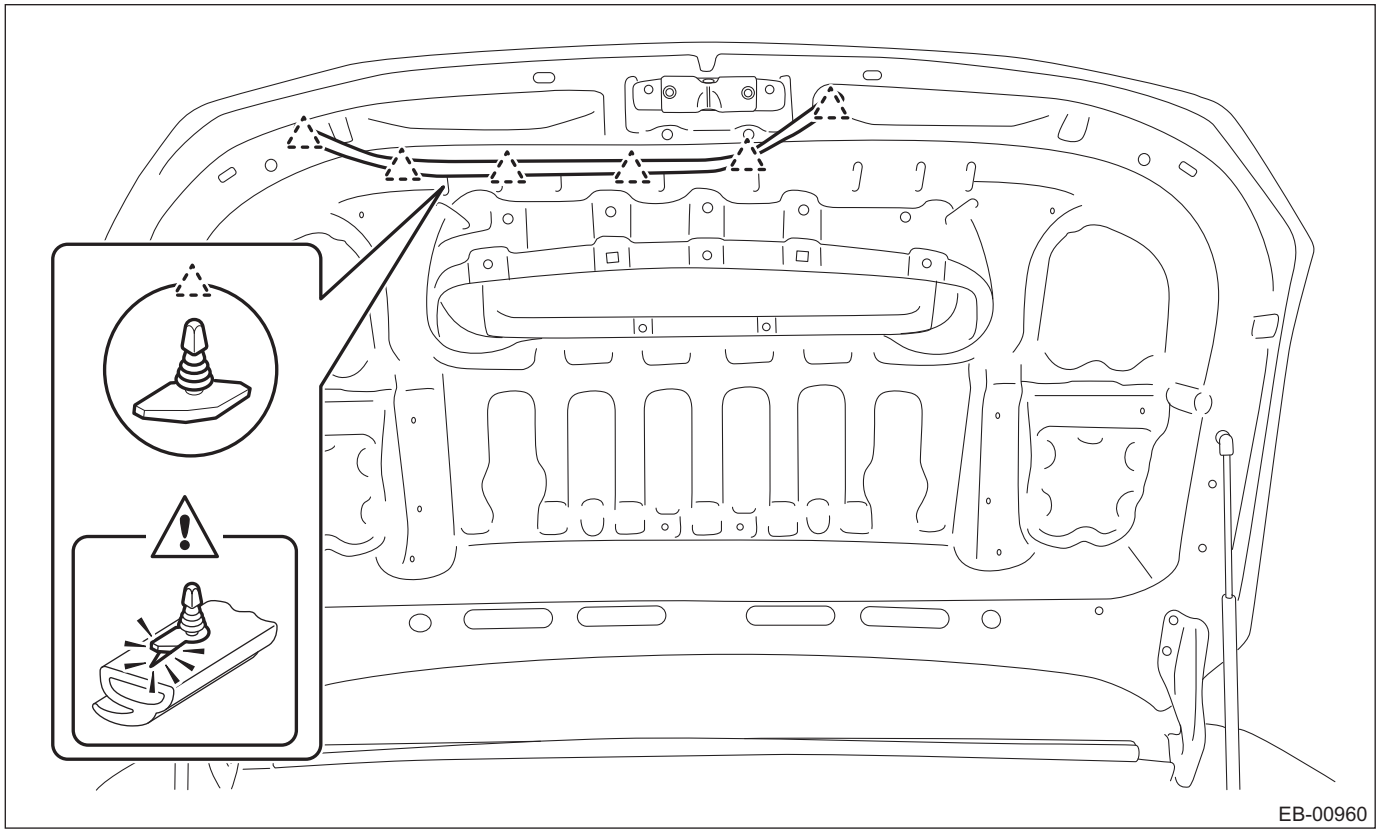


3) Release the nuts and clips, then remove the grille - front hood.

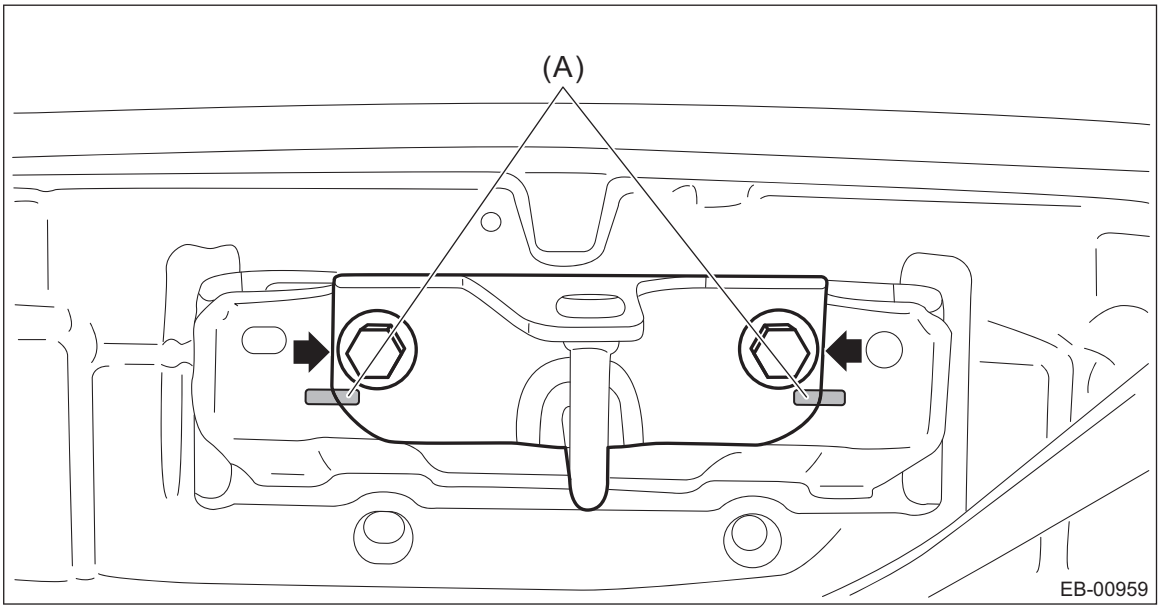


4) Remove the clip, and remove the seal - front duct.

CAUTION:
If the weather strip clip is removed with excessive force, the seal - front duct may be damaged. Be sure to use clip remover, etc. to remove.



5) Make alignment marks (A) and remove the bolts, and then remove the striker - front hood from the hood COMPL - front.



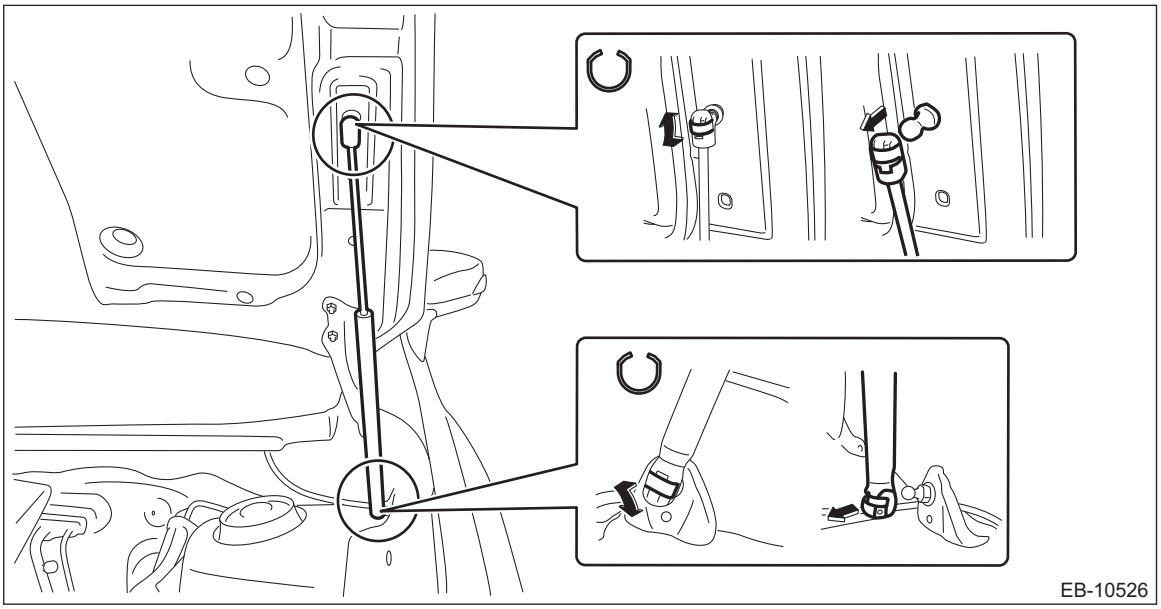
6) Release the clips and claws, then detach the cowl panel - side on the left and right sides.

CAUTION:
Pulling with excessive force may damage the cowl panel - side. If it is difficult to remove, use a plastic remover or equivalent tool.

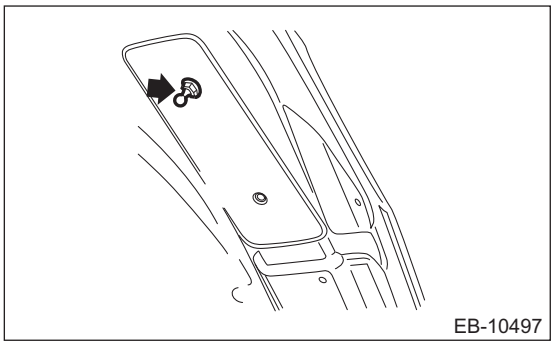
7) Remove the stay assembly - front hood from the body.

CAUTION:
Do not remove the stop ring completely. Raise it to the position enough to remove from the ball stud.

(1) Gently push the stop ring against the ball stud to be raised with a flat tip screwdriver.
(2) Pull the stay assembly - front hood toward you, and remove the stay assembly - front hood from the ball stud.

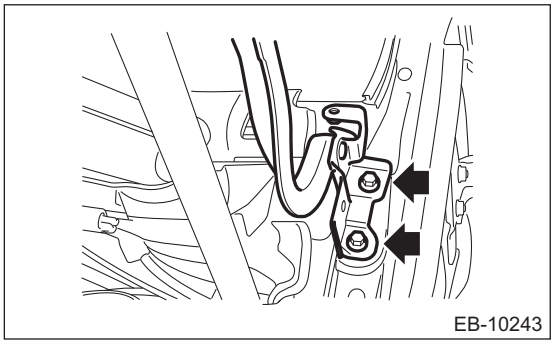


8) Remove the ball stud.



9) Remove the hinge COMPL - front hood from the body and the hood COMPL - front.

NOTE:
The body side mounting point of the hinge COMPL - front hood cannot be removed with the fender front attached. Therefore, remove the fender front beforehand.



D: ASSEMBLY

1) Install the hinge COMPL - front hood.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Install the cowl panel - side.
3) Install the ball stud.

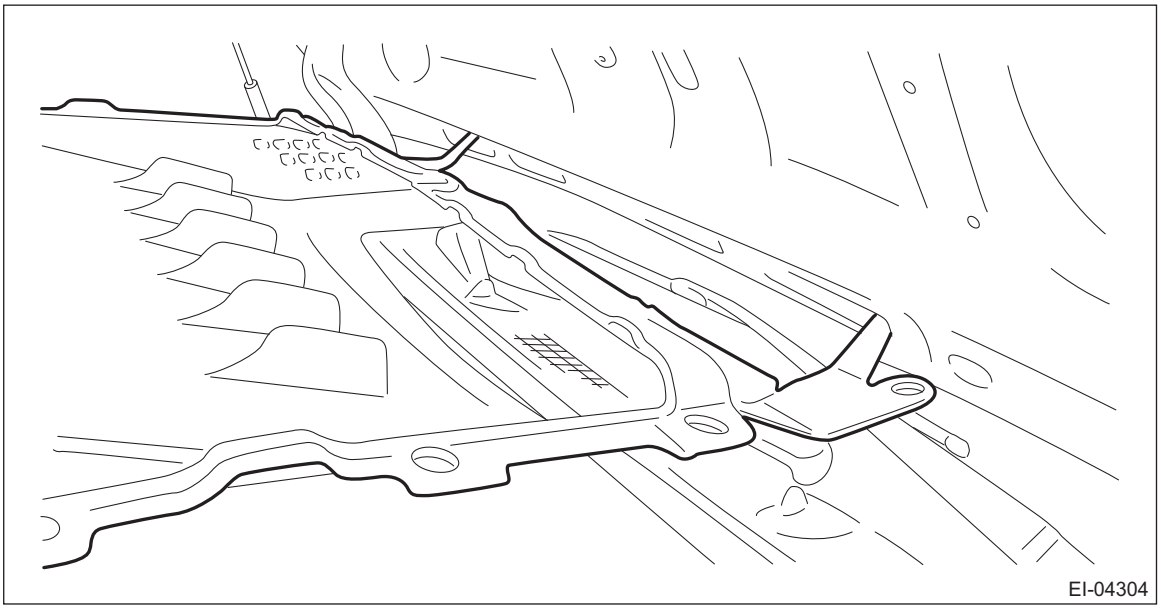
Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)
4) Install the stay assembly - front hood.

Tightening torque:
20 N·m (2 kgf-m, 14.8 ft-lb)
5) Install the seal - front duct.
6) Install the grille - front hood.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)
7) Install the duct - inner front hood.

Tightening torque:
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

NOTE:
Securely insert the claws of the duct - inner front hood.

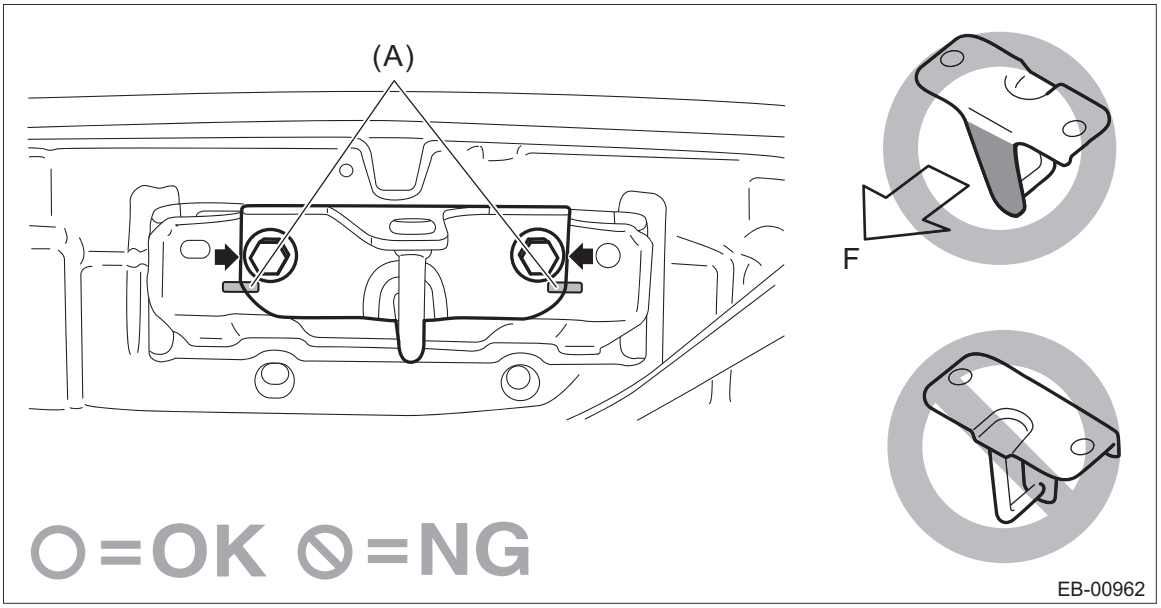


8) Install the insulator - front hood.
9) Align the alignment marks (A), and install the striker - front hood to the hood COMPL - front.

CAUTION:
When installing the striker - front hood, make sure that the front and rear sides are positioned in a correct direction.

NOTE:
It is not necessary to adjust the striker - front hood because there is no span of adjustable range.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

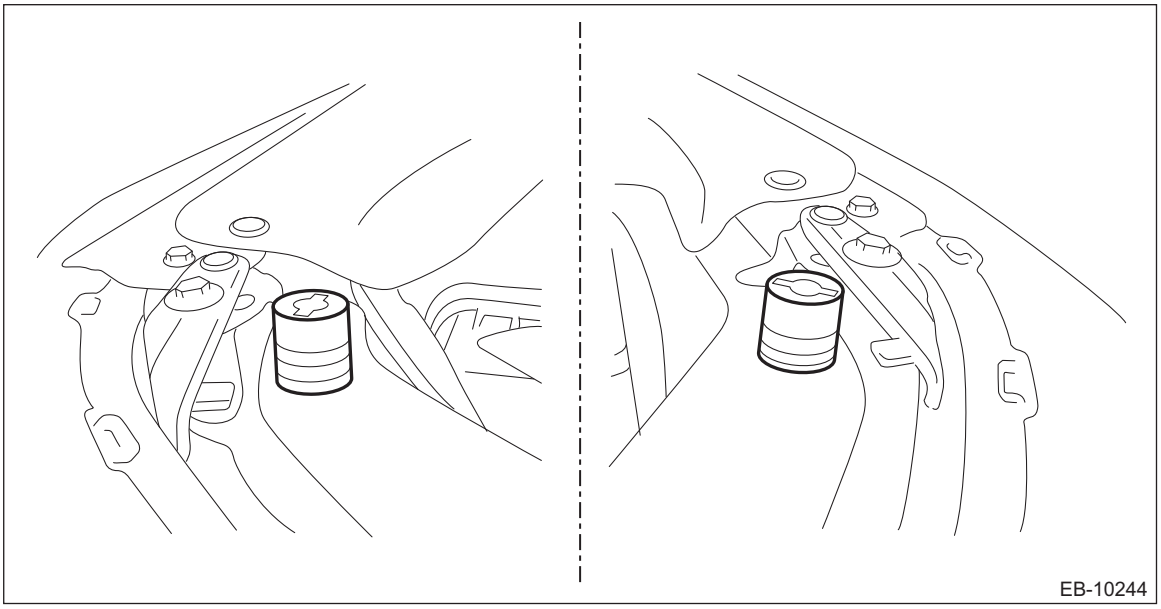


E: ADJUSTMENT

NOTE:
Adjustment should be performed on the fender front, lock assembly - front hood and the buffer - front hood, because adjustment cannot be performed on the hinge COMPL - front hood.
Adjust the clearance around the hood COMPL - front as follows.

	Part	Standard
A	Hood COMPL - front to Bumper face front	4.5±2 mm (0.18±0.08 in)
B	Surface level gap between Hood COMPL - front and Bumper face front	0+1.5, –2 mm (0+0.06, –0.08 in)
C	Offset value: Hood COMPL - front to Front end of fender front	0+0.5, –1 mm (0+0.02, –0.04 in)
D	Hood COMPL - front to Fender front (from front end to just before the curved section)	3.5±1 mm (0.14±0.04 in)
E	Hood COMPL - front to Fender front (from rear end to just before the curved section)	4.5±1 mm (0.18±0.04 in)
F	Surface level gap between Hood COMPL - front and Fender front	0.5+0.5, –1 mm (0.02+0.02, –0.04 in)

1) Adjust the front end height of the hood COMPL - front. <Ref. to SL-52, ADJUSTMENT, Front Hood Lock Assembly.>
2) Rotate the buffer - front hood to adjust the height.



3. Front Fender

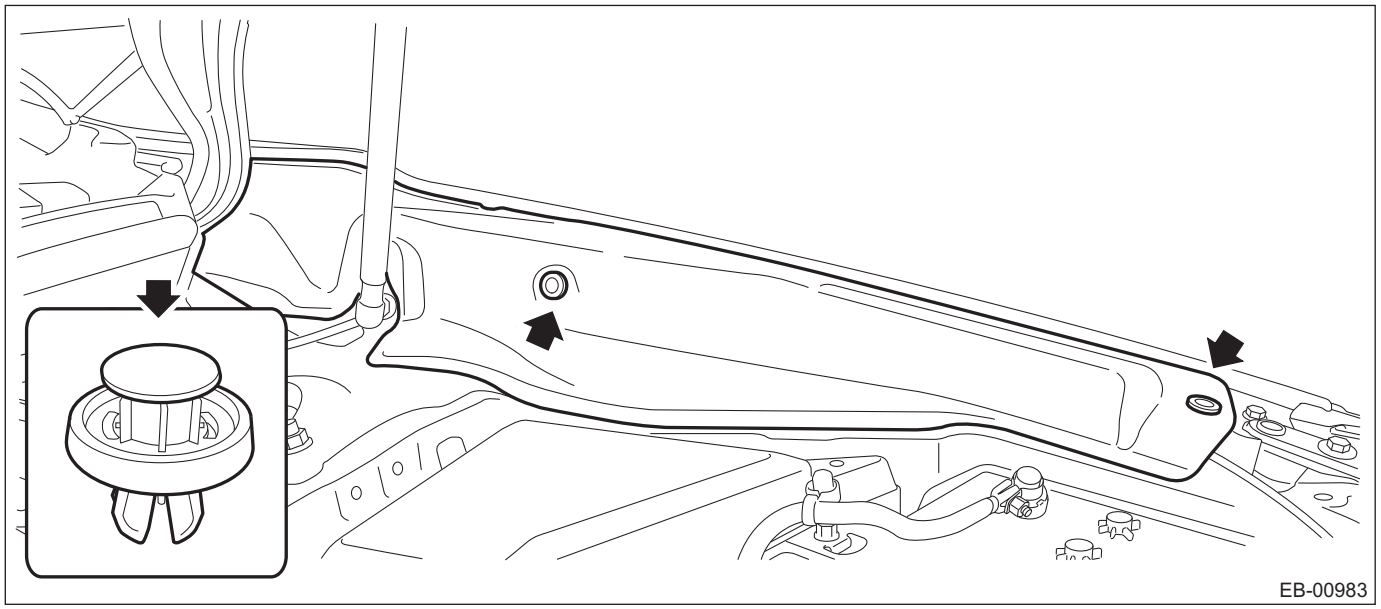
A: REMOVAL

1. FENDER PANEL

1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

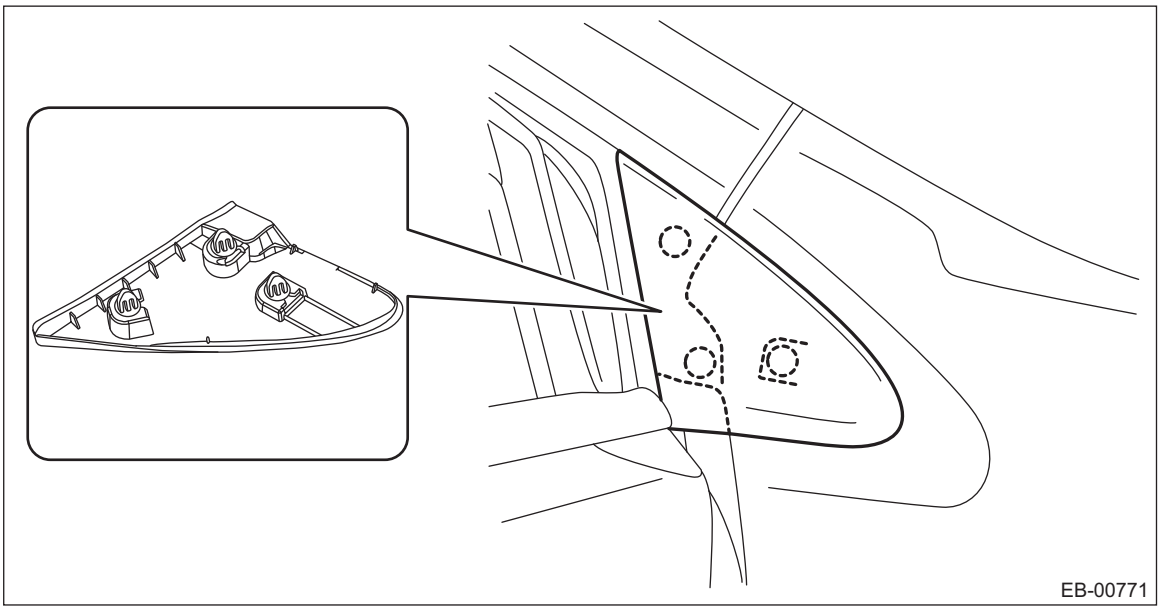
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the bumper face - front. <Ref. to EI-30, REMOVAL, Front Bumper.>
3) Remove the light assembly - head. <Ref. to LI-33, REMOVAL, Headlight Assembly.>
4) Remove the cover - front fender.
   (1) Remove the clip.
   (2) Release the claws by pulling them forward, and remove the cover - front fender.



EB-00983

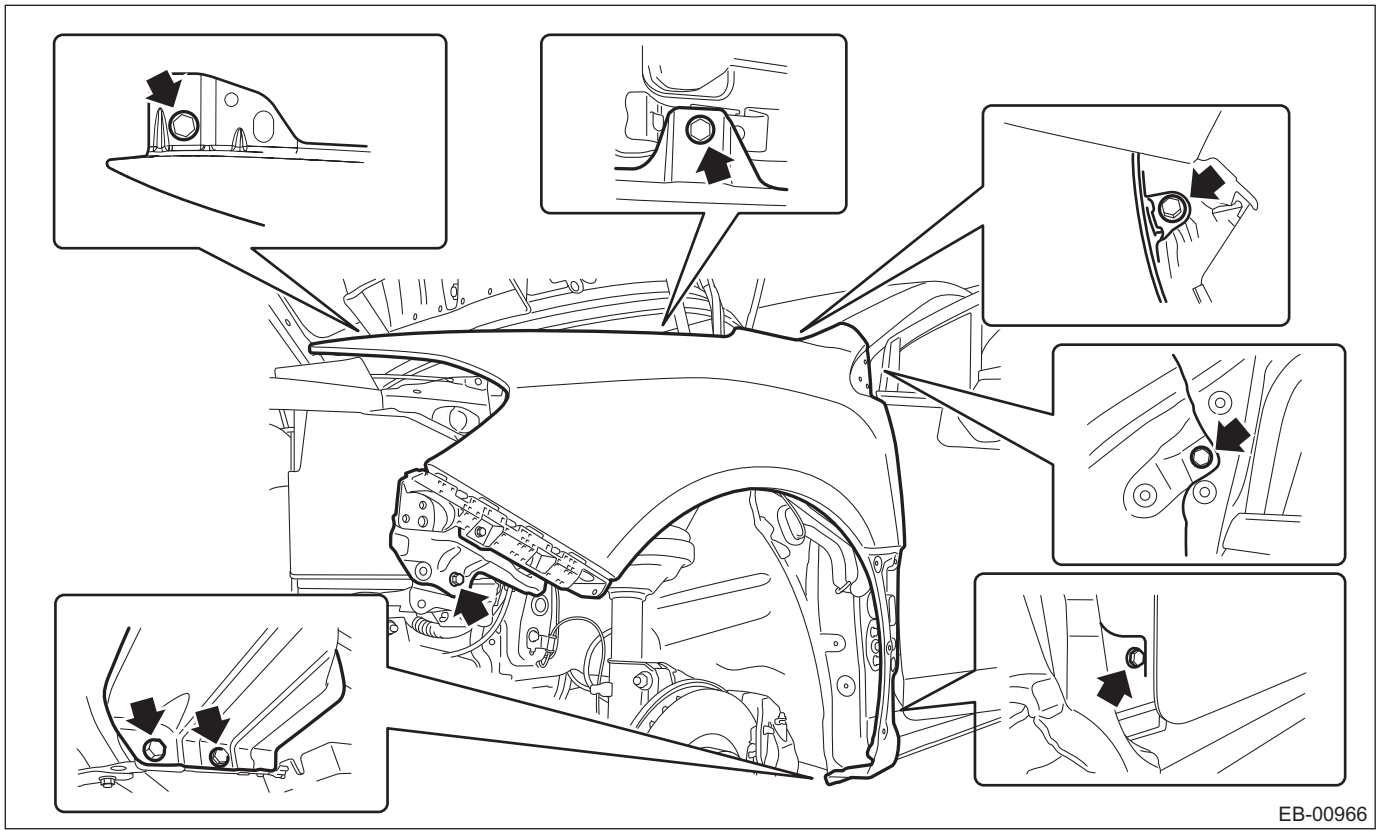
5) Release the clips and claws, then detach the cowl panel - side on the left and right sides.
6) Remove the mud guard - front. <Ref. to EI-24, REMOVAL, Mud Guard.>
7) Remove the spoiler assembly - side. <Ref. to EI-53, REMOVAL, Side Garnish & Side Spoiler.>
8) Remove the cover - A pillar assembly.



EB-00771

9) Remove the garnish assembly - fender. <Ref. to EB-18, FENDER GARNISH, REMOVAL, Front Fender.>

10) Remove the fender front.



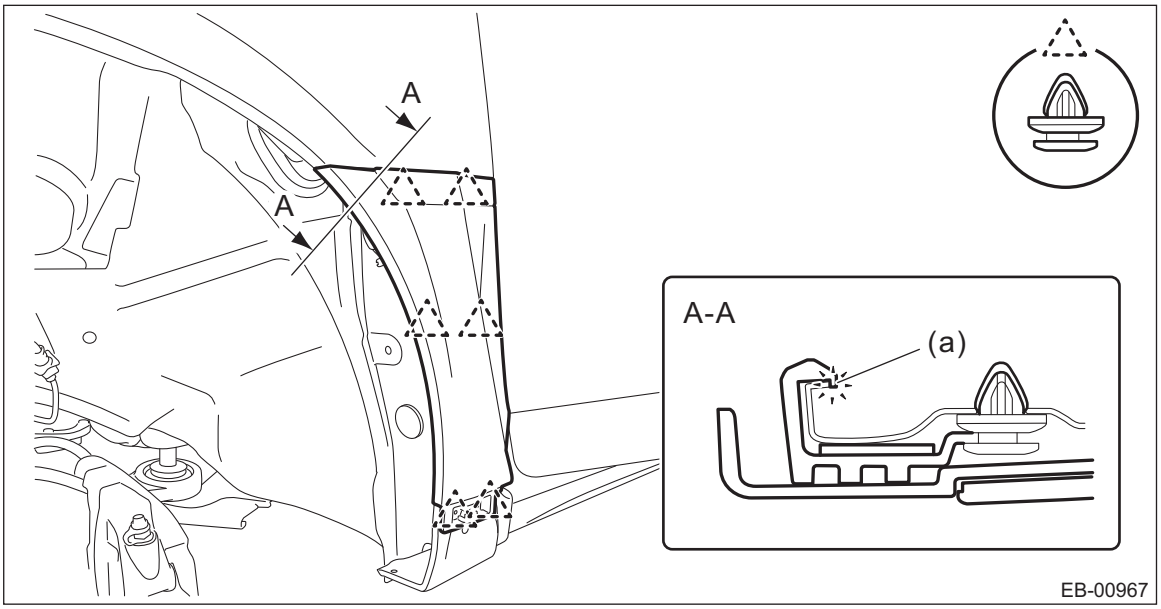
2. FENDER GARNISH

1) Remove the mud guard - front. <Ref. to EI-24, REMOVAL, Mud Guard.>
2) Remove the spoiler assembly - side. <Ref. to EI-53, REMOVAL, Side Garnish & Side Spoiler.>
3) Remove the garnish assembly - fender.

CAUTION:
Forcibly removing the garnish assembly - fender may damage the clips and the garnish assembly - fender.

NOTE:
- For easy removal, remove the clip by pinching its claw from the back of fender front using pliers, etc.

• Because there is a claw (a) at the front end of the garnish assembly - fender, turn from the back side to remove.

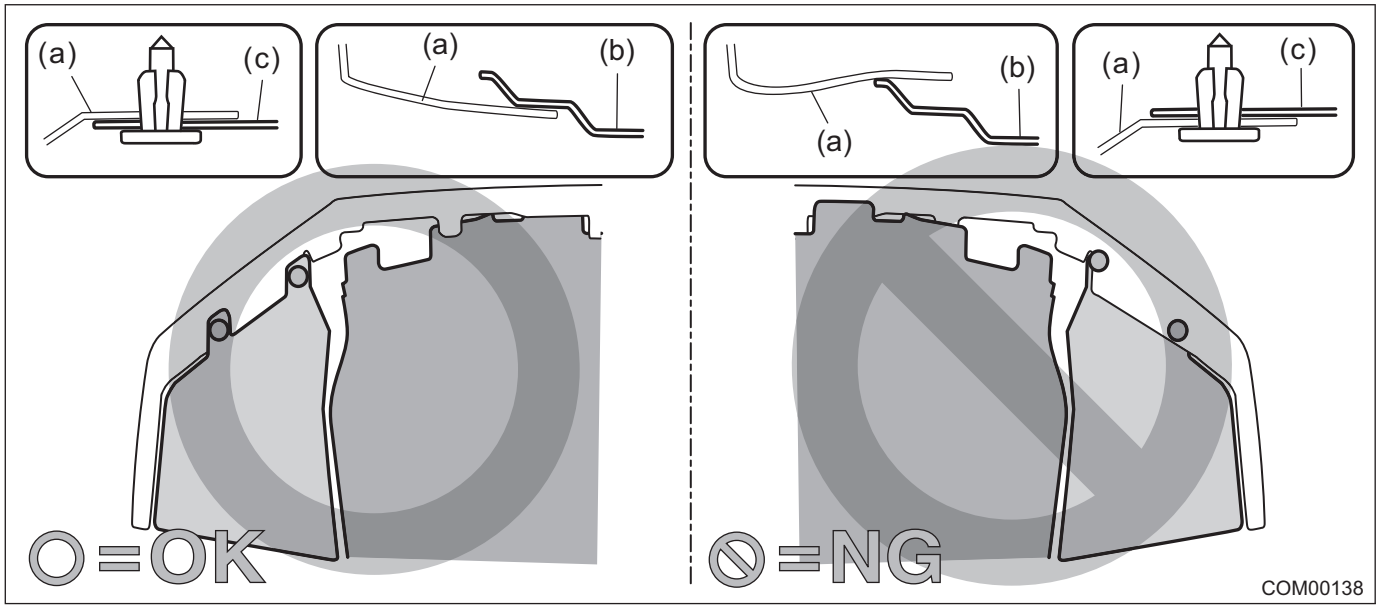


B: INSTALLATION

1. FENDER PANEL

CAUTION:

• Install the bumper face - front so that the front end of the under cover (b) comes inside the bumper face - front (a), and the front end of the mud guard (c) comes outside the bumper face - front (a).



• Before installing the bumper face, match the claws on the bracket - front bumper with the engaging position of flange section on the bumper face side. If the engaging position is not correct, the flange section may be broken or the clearance between fender panel and bumper face may not be uniform.

1) Install the fender front.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

NOTE:
Install while paying attention to make a uniform clearance around the fender front.

• Fender front to Hood COMPL - front: <Ref. to EB-15, ADJUSTMENT, Front Hood.>

- Fender front to Panel assembly - front door: <Ref. to EB-27, ADJUSTMENT, Front Door.>

2) Install the cover - A pillar assembly.
3) Install the garnish assembly - fender. <Ref. to EB-20, FENDER GARNISH, INSTALLATION, Front Fender.>
4) Install the spoiler assembly - side. <Ref. to EI-54, INSTALLATION, Side Garnish & Side Spoiler.>
5) Install the mud guard - front.
6) Install the cowl panel - side on the left and right side.
7) Install the cover - front fender.
   (1) Install the cover - front fender.
   (2) Install the clips.
8) Install the light assembly - head.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

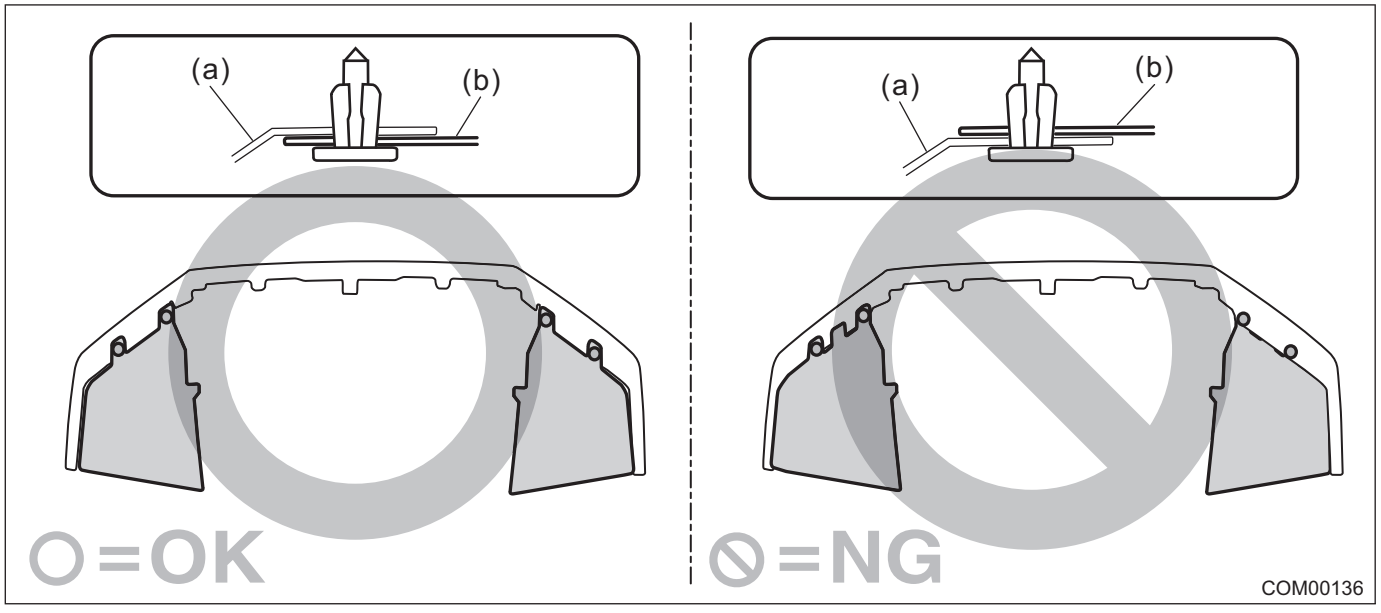
9) Install the bumper face - front. <Ref. to EI-35, INSTALLATION, Front Bumper.>
10) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
11) Adjust the headlight beam and fog light beam.

- Adjust the headlight beam. <Ref. to LI-38, HEADLIGHT BEAM ADJUSTMENT, ADJUSTMENT, Headlight Assembly.>
- Adjust the fog light beam. (Model with fog light) <Ref. to LI-55, FOG LIGHT AIMING, ADJUSTMENT, Front Fog Light Assembly.>

2. FENDER GARNISH

1) Install the garnish assembly - fender.
2) Install the spoiler assembly - side. <Ref. to EI-54, INSTALLATION, Side Garnish & Side Spoiler.>
3) Install the mud guard - front.

CAUTION:
Install the mud guard - front so that the front end of the mud guard (b) comes outside the bumper face - front (a).



4. Front Door

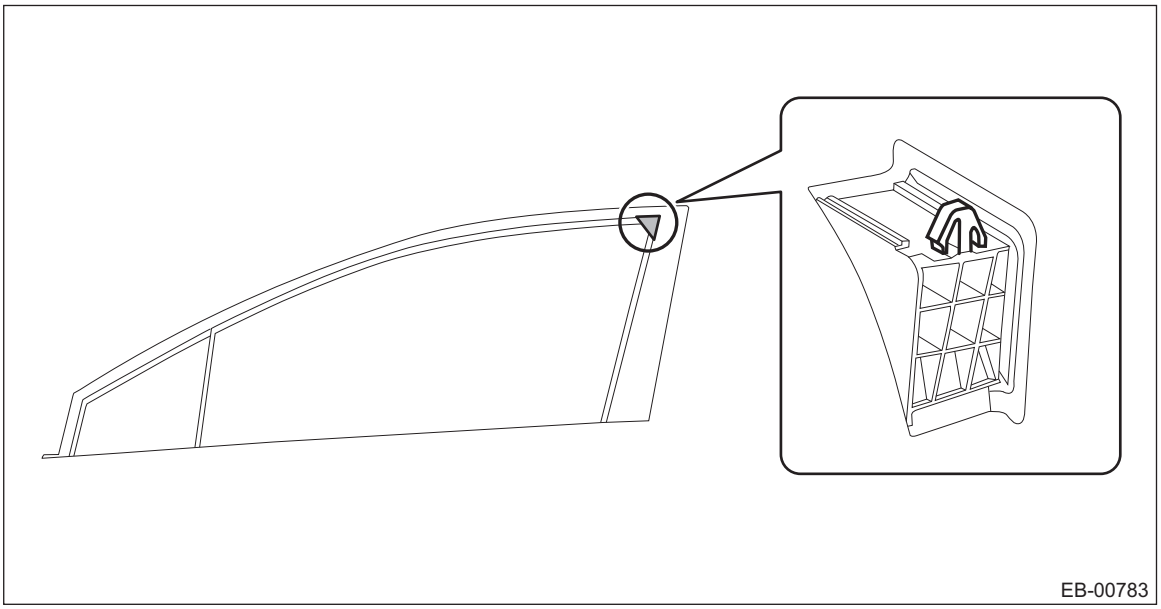
A: REMOVAL

1. FRONT DOOR PANEL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

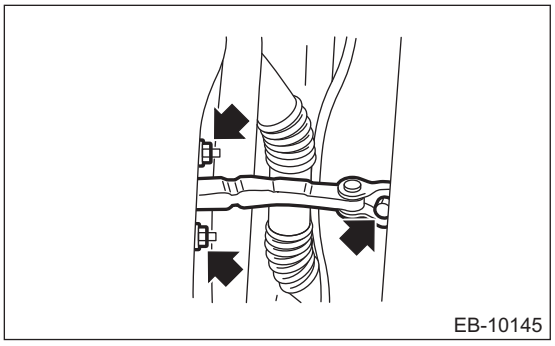
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
4) Remove the outer mirror assembly. <Ref. to GW-26, REMOVAL, Outer Mirror Assembly.>
5) Remove the front door speaker assembly. <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
6) Remove the cover B pillar - front door INN.

CAUTION:
- **Always replace with a new part, because engagement of the claw weakens.**
- **Do not damage the sash while removing.**



7) Remove the front door impact sensor assembly. <Ref. to AB-54, REMOVAL, Front Door Impact Sensor.>
8) Remove the glass assembly - front door and the glass - front door partition. <Ref. to GW-19, REMOVAL, Front Door Glass.>
9) Remove the door sash tape. <Ref. to EB-38, REMOVAL, Door Sash Tape.>
10) Remove the regulator & motor assembly - front of the front door. <Ref. to GW-23, REMOVAL, Front Regulator and Motor Assembly.>
11) Remove the latch and actuator assembly - front. <Ref. to SL-36, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
12) Remove the handle - door outer. <Ref. to SL-32, REMOVAL, Front Outer Handle.>
13) Remove the weather strip - front door. <Ref. to EB-54, REPLACEMENT, Weather Strip.>

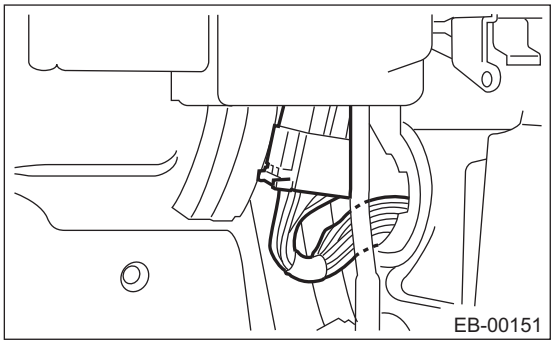
14) Remove the bolts and nuts, and then detach the checker assembly - front door.



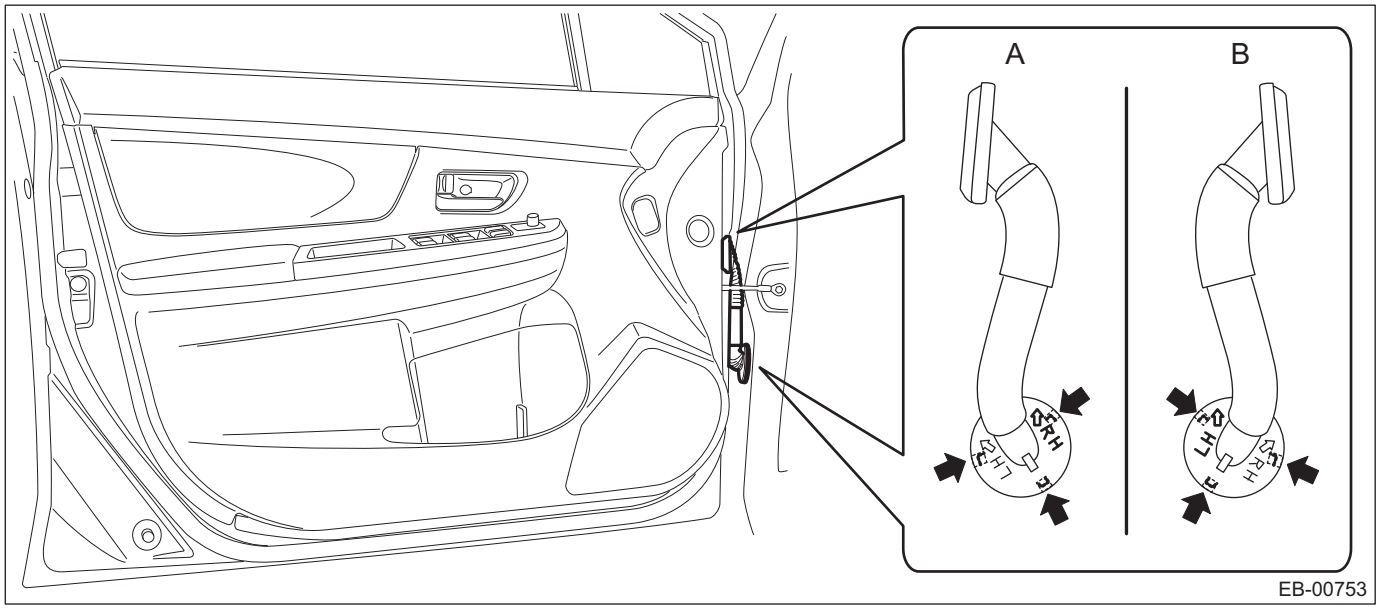
15) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>

16) Disconnect the front door harness connectors.

(1) Disconnect the connector of door harness from body harness.

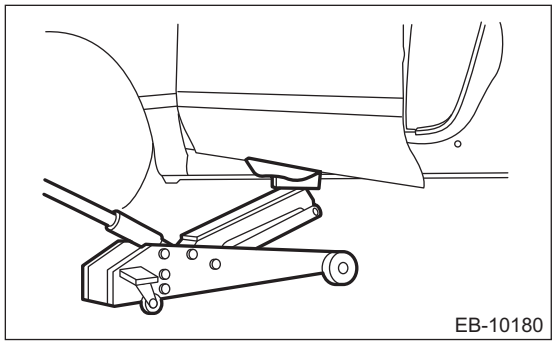


(2) Push in the claws to remove the grommet, and pull out the door harness connector.



A	Driver's side
B	Passenger's side

17) Before removing the panel assembly - front door, make the following preparations.



(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.

CAUTION:
Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.

18) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door and the lower hinge - front door to remove the panel assembly - front door.

CAUTION:
The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.

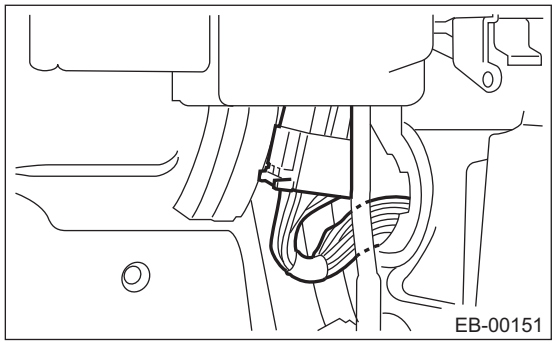
2. FRONT DOOR HINGE

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

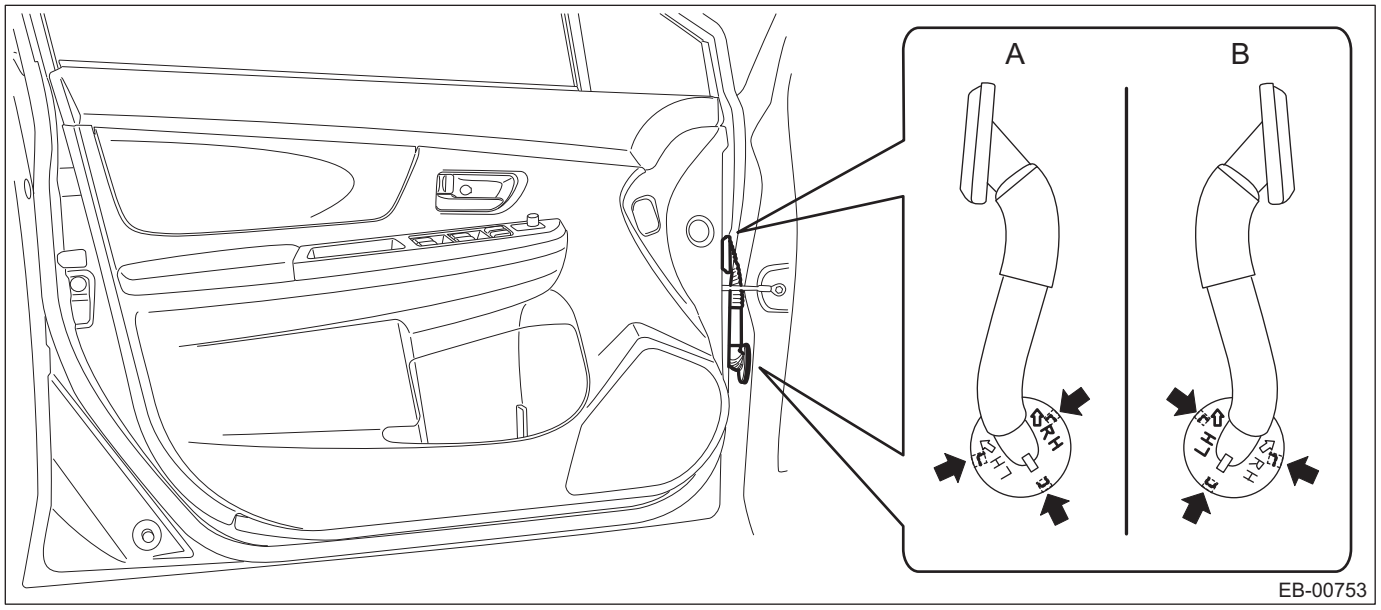
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the cover side sill - front INN and cover side sill - front. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>

3) Disconnect the front door harness connectors.
(1) Disconnect the connector of door harness from body harness.

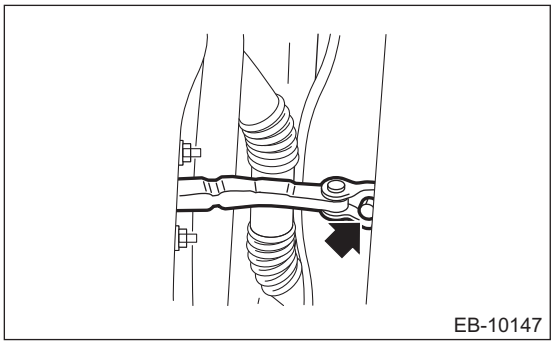


(2) Push in the claws to remove the grommet, and pull out the door harness connector.



A	Driver's side
B	Passenger's side

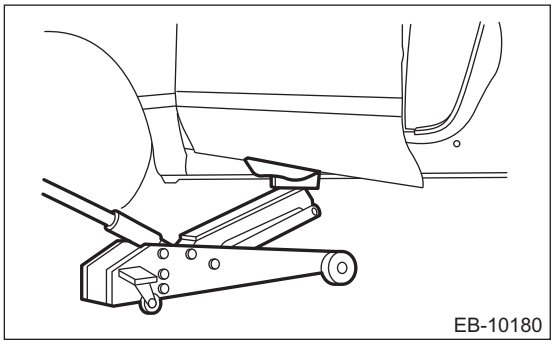
4) Remove the bolts on the vehicle side to disconnect the checker assembly - front door.



5) Before removing the door hinge, make the following preparations.

CAUTION:
• The panel assembly - front door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - front door with the floor jack. The door hinges may be damaged.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - front door.
(2) Support the panel assembly - front door with the jack to protect it from damage.



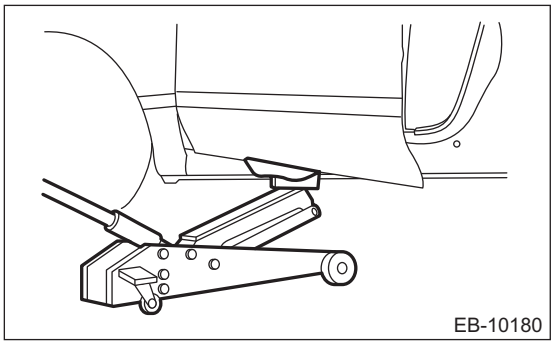
6) Remove the bolts on the side of the panel assembly - front door of the upper hinge - front door or the lower hinge - front door.

CAUTION:
Do not remove the upper hinge - front door and the lower hinge - front door at the same time.
7) Remove the hinge - front door from the vehicle.

B: INSTALLATION

1. FRONT DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - front door on it.



2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

NOTE:
• When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
• Perform installation while paying attention to the assembly direction of the grommet.
3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-27, ADJUSTMENT, Front Door.>
4) Tighten the mounting bolts of the panel assembly - front door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Tighten the bolts and nuts of the checker assembly - front door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>
6) Attach the door sash tape. <Ref. to EB-39, INSTALLATION, Door Sash Tape.>
7) Before installing each part, check the following items.
• Rod of the latch and actuator assembly - front is free from deformation.
• Grease is applied sufficiently to the rod joints of the latch and actuator assembly - front.
• Cable of the latch and actuator assembly - front is free from deformation such as fray.
• Grease is applied sufficiently to the cable joints of the latch and actuator assembly - front.
8) Install door internal parts in the reverse order of removal.
• Weather strip - front door
• Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
• Latch & actuator assembly - front

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)
• Regulator & motor assembly - front for the front door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
• Running channel - front door

CAUTION:
Check that the running channel - door is securely fixed to the panel assembly - front door and to the sash COMPL - partition.
- Glass assembly - front door, and glass - front door partition

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
9) Connect door harness connector, and install the cover side sill - front. <Ref. to EI-87, INSTALLATION, Lower Inner Trim.>
10) Install the front door impact sensor.

CAUTION:
Do not reuse the bolt and nut.
Always replace with the specified new bolts and nuts.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
11) Install the cover B pillar - front door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.
12) Install the front door speaker assembly.
13) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
14) Install the sealing cover. <Ref. to EB-29, INSTALLATION, Front Sealing Cover.>
15) Install the trim panel - front door. <Ref. to EI-62, INSTALLATION, Door Trim.>
16) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. FRONT DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
2) Adjust the height by the jack, and temporarily install the panel assembly - front door to the upper hinge - front door and the lower hinge - front door.

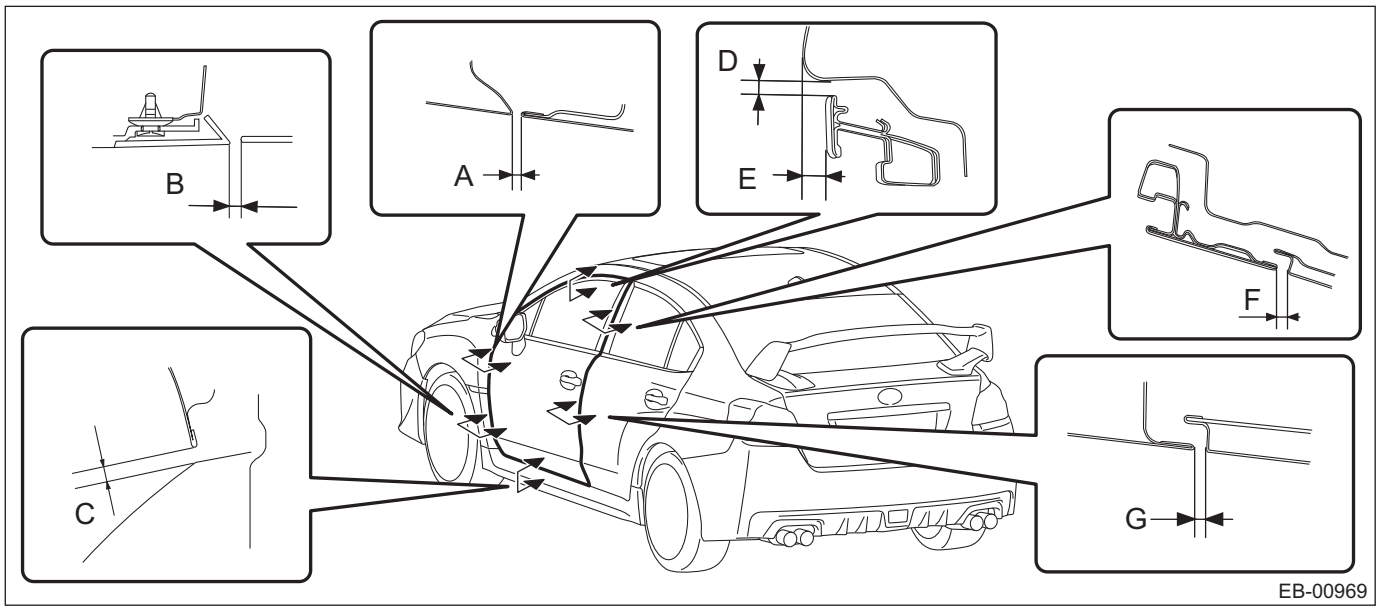
NOTE:
When installing the panel assembly - front door, make sure that a uniform clearance is created around the panel.
3) Adjust the clearance around the panel assembly - front door. <Ref. to EB-27, ADJUSTMENT, Front Door.>
4) Tighten the bolts of the panel assembly - front door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Connect door harness connector, and install the cover side sill - front. <Ref. to EI-87, INSTALLATION, Lower Inner Trim.>
6) Tighten the bolts on the vehicle side of the checker assembly - front door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-4, FRONT DOOR, COMPONENT, General Description.>
7) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: ADJUSTMENT

Adjust the clearance around the panel assembly - front door as follows.



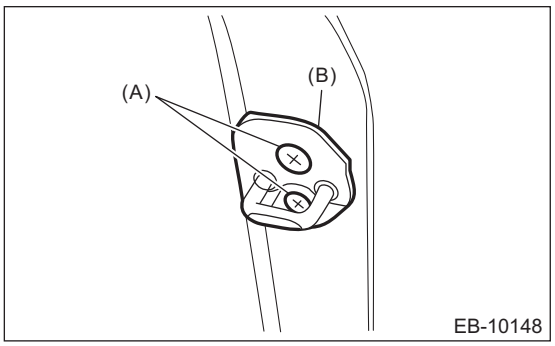
Part		Standard
A	Fender front to Panel assembly - front door	4.5±1 mm (0.18±0.04 in)
B	Panel assembly - front door to Garnish assembly - fender	4.5±1 mm (0.18±0.04 in)
C	Panel assembly - front door to Spoiler assembly - side	6+1.5, –1 mm (0.24+0.06, –0.04 in)
D	Panel - side outer to Front door sash	5.1+1.5, –1 mm (0.2+0.06, –0.04 in)
E	Surface level gap between Panel - side outer to Front door sash	7±1.5 mm (0.28±0.06 in)
F	Front door sash to Rear door sash	5.5+1.5, –1 mm (0.22+0.06, –0.04 in)
G	Panel assembly - front door to Panel assembly - rear door	4.5±1 mm (0.18±0.04 in)

1) Adjust the vertical and horizontal positions of the panel assembly - front door.
   (1) Using ST, loosen the bolts on vehicle side of the upper hinge - front door.

Preparation tool:
ST: WRENCH (925610000)

   (2) Turn over the mud guard, and loosen the bolts on vehicle side of the lower hinge - front door.
   (3) Adjust the vertical and horizontal clearance of the panel assembly - front door.
2) Adjust the surface level gap between the panel assembly - front door and the panel assembly - rear door.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.



(1) Loosen the screws (A).
(2) Tap the striker - front door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - front door and the front end of the panel assembly - rear door.

5. Front Sealing Cover

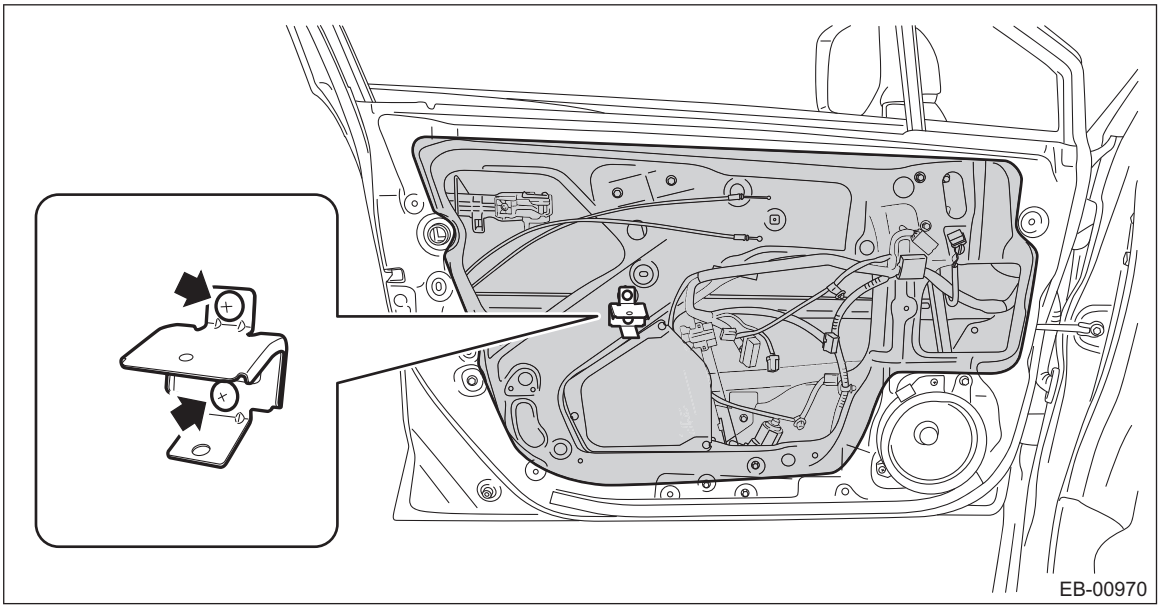
A: REMOVAL

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - front door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim front.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - front door.



B: INSTALLATION

CAUTION:
- **If the sealing cover - front door gets broken, replace it with a new part.**
- **Apply a uniform bead of butyl tape.**
- **Attach the sealing cover - front door, keeping it from becoming wrinkled.**
- **Breaks in the bead will allow water leakage and contamination.**

1) Install the sealing cover - front door.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

Preparation items:
Butyl tape: 3M Butyl Rubber 8626 or equivalent

2) Install the trim panel - front door. <Ref. to EI-62, INSTALLATION, Door Trim.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

If the sealing cover - front door is broken, replace it with a new part.

6. Rear Door

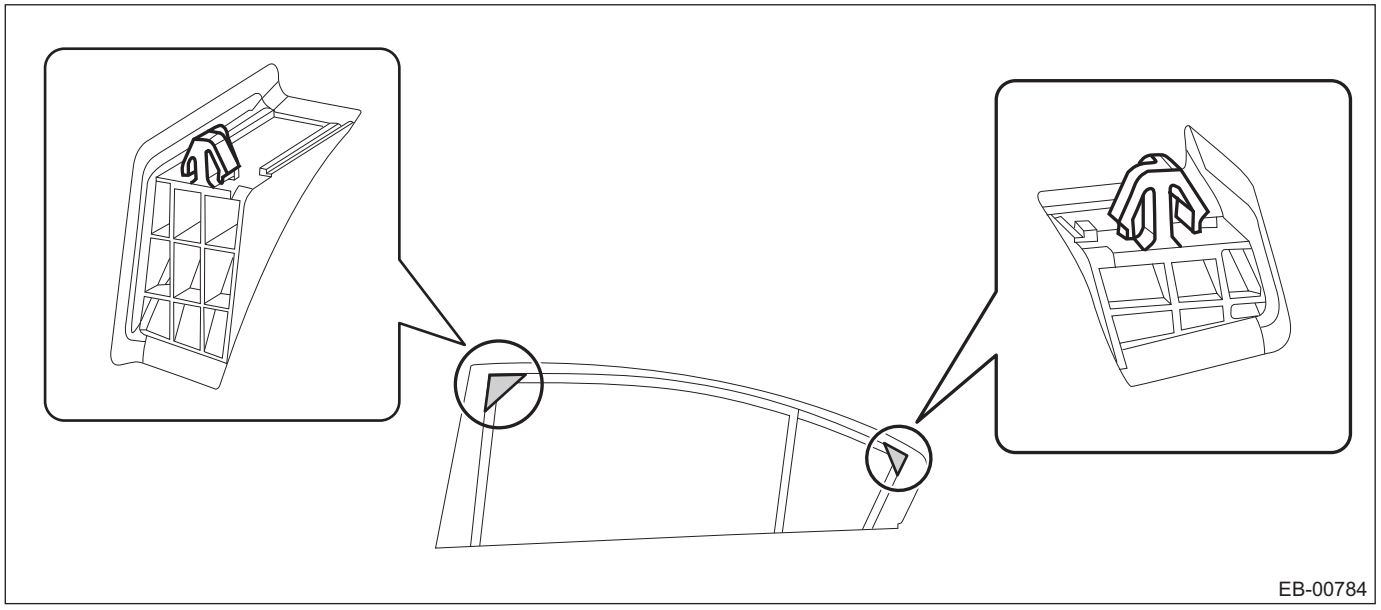
A: REMOVAL

1. REAR DOOR PANEL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

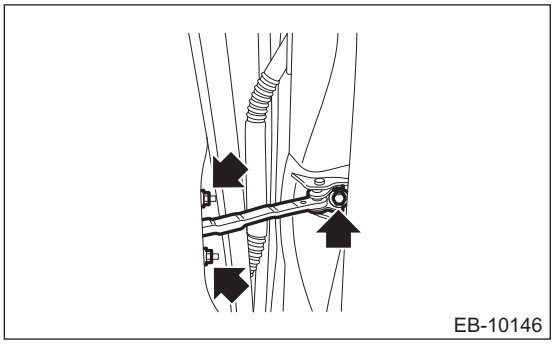
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door. <Ref. to EB-37, REMOVAL, Rear Sealing Cover.>
4) Remove the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
- **Always replace with a new part, because engagement of the claw weakens.**
- **Do not damage the sash while removing.**



EB-00784

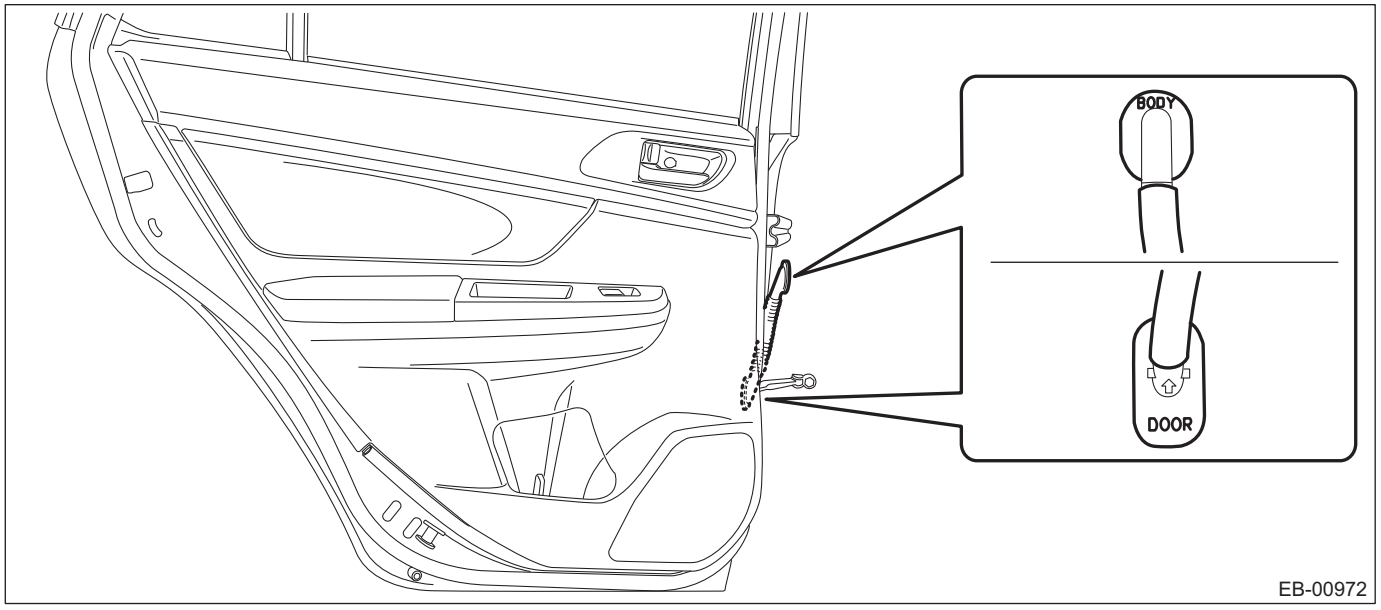
5) Remove the rear door speaker assembly. <Ref. to ETM-21, REMOVAL, Rear Speaker.>
6) Remove the sash COMPL - rear partition and the glass assembly - rear door. <Ref. to GW-34, REMOVAL, Rear Door Glass.>
7) Remove the door sash tape. <Ref. to EB-38, REMOVAL, Door Sash Tape.>
8) Remove the regulator - rear. <Ref. to GW-36, REMOVAL, Rear Regulator and Motor Assembly.>
9) Remove the latch and actuator assembly - rear. <Ref. to SL-44, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
10) Remove the cover - handle rear outer. <Ref. to SL-40, REMOVAL, Rear Outer Handle.>
11) Remove the weather strip - rear door. <Ref. to EB-54, REPLACEMENT, Weather Strip.>
12) Remove the bolts and nuts, and then detach the checker assembly - rear door.



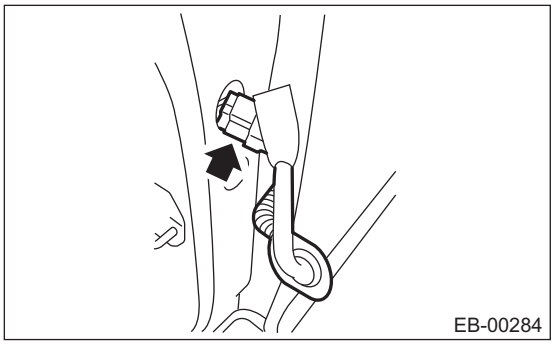
EB-10146

13) Remove the trim panel - center pillar LWR. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>

14) Disconnect the rear door harness connectors.
(1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.



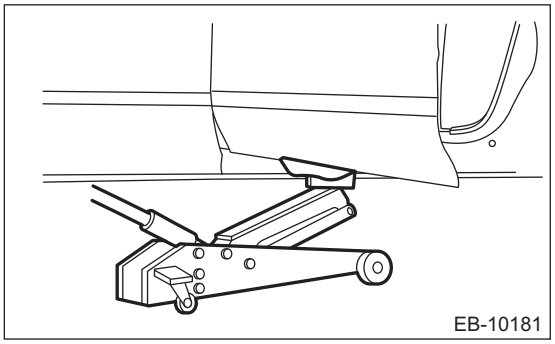
(2) Disconnect the rear door harness connectors.



15) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.

(1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
(2) Support the panel assembly - rear door with the jack to protect it from damage.



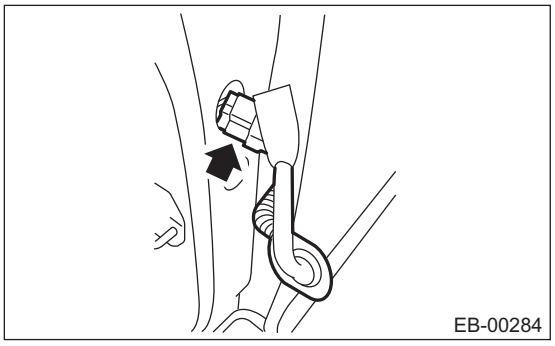
16) Remove the door-side bolts for the upper hinge - rear door and the lower hinge - rear door to remove the panel assembly - rear door.

CAUTION:
The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.

2. REAR DOOR HINGE

1) Remove the trim panel - center pillar LWR. <Ref. to EI-85, REMOVAL, Lower Inner Trim.>
2) Disconnect the rear door harness connectors.
   (1) Remove the grommet and pull out the rear door harness connector from inside the center pillar.

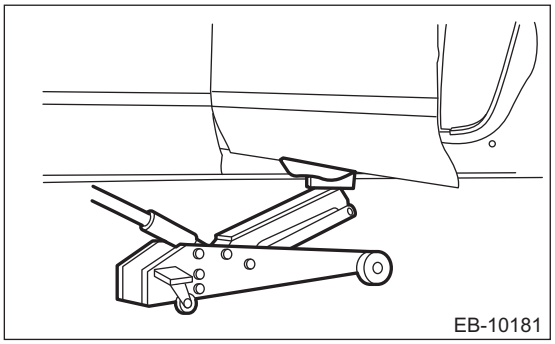
   (2) Disconnect the rear door harness connectors.



3) Before removing the panel assembly - rear door, make the following preparations.

CAUTION:
• The panel assembly - rear door is heavy. When removing and installing it, always work in a team of two or more persons.
• Do not excessively lift the panel assembly - rear door with the floor jack. The door hinges may be damaged.

   (1) Put a wooden block on a floor jack and place the jack under the panel assembly - rear door.
   (2) Support the panel assembly - rear door with the jack to protect it from damage.



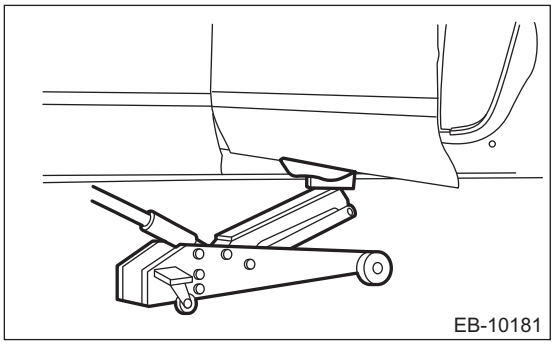
4) Remove the bolts on the side of the panel assembly - rear door of the upper hinge - rear door or the lower hinge - rear door.

CAUTION:
Do not remove the upper hinge - rear door and the lower hinge - rear door at the same time.
5) Remove the hinge - rear door from the vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

1) Put a wooden block and the like on a jack and place the panel assembly - rear door on it.



2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
• When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
• Perform installation while paying attention to the assembly direction of the grommet.
3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-35, ADJUSTMENT, Rear Door.>
4) Tighten the mounting bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Tighten the bolts and nuts of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>
6) Connect the door harness connector, and install the harness grommet.
7) Attach the door sash tape. <Ref. to EB-39, INSTALLATION, Door Sash Tape.>
8) Before installing each part, check the following items.
• Is the lever of the frame assembly - rear door outer is free from deformation?
• Is grease applied sufficiently to the lever joints of the latch and actuator assembly - rear?
• Is the cable of the latch and actuator assembly - rear free from deformation such as fray?
• Is grease applied sufficiently to the cable joints of the latch and actuator assembly - rear?
9) Install door internal parts in the reverse order of removal.
• Weather strip - rear door
• Handle - door outer

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
• Latch & actuator ASSY - rear

Tightening torque:
6.5 N·m (0.7 kgf-m, 4.8 ft-lb)

NOTE:
Make sure the child safety lock works correctly after installation.
• Regulator & motor assembly - rear for the rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

- Sash COMPL - rear partition, and glass assembly - rear door

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
- Running channel - rear door

CAUTION:
Check that the running channel - rear door is securely fixed to the panel assembly - rear door and to the sash COMPL - partition.
10) Install the cover B pillar - rear door INN and the cover C pillar - rear door INN.

CAUTION:
Always replace with a new part, because engagement of the claw weakens.
11) Install the rear door speaker assembly.
12) Install the sealing cover. <Ref. to EB-37, INSTALLATION, Rear Sealing Cover.>
13) Install the trim panel - rear door. <Ref. to EI-62, INSTALLATION, Door Trim.>
14) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. REAR DOOR HINGE

1) Apply grease to the sliding area of door hinges, and install to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
2) Adjust the height by the jack, and temporarily install the panel assembly - rear door to the upper hinge - rear door and the lower hinge - rear door.

NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
3) Adjust the clearance around the panel assembly - rear door. <Ref. to EB-35, ADJUSTMENT, Rear Door.>

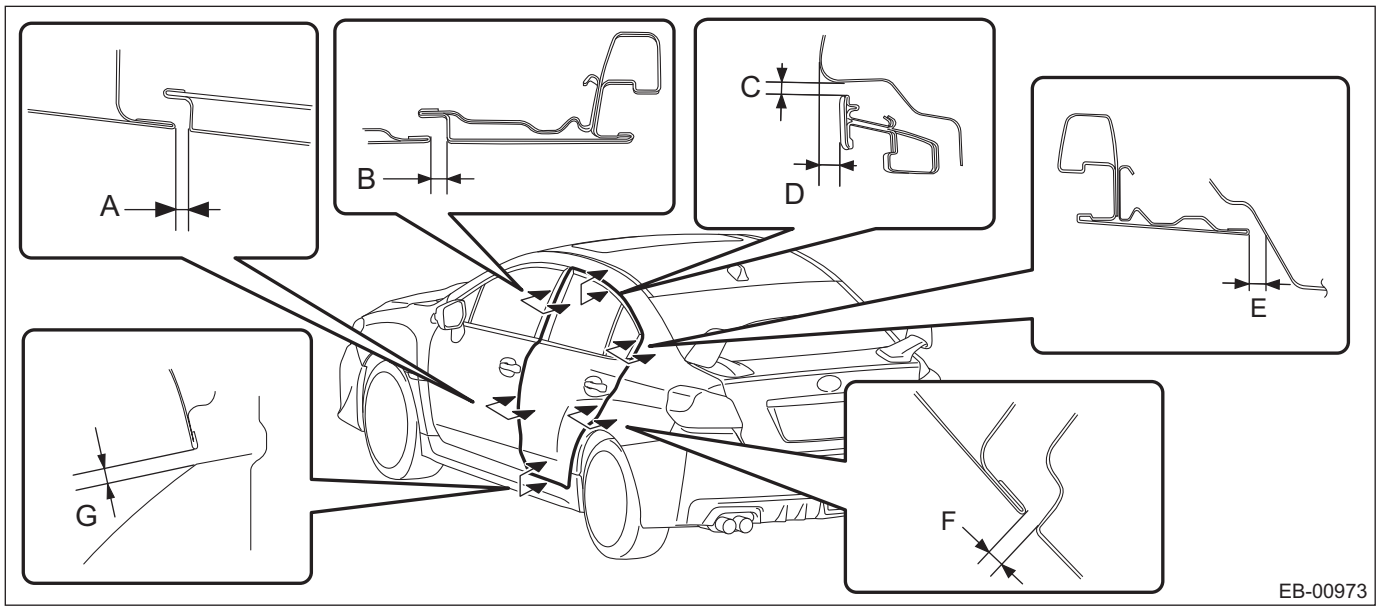
NOTE:
When installing the panel assembly - rear door, make sure that a uniform clearance is created around the panel.
4) Tighten the bolts of the panel assembly - rear door to the specified torque.

Tightening torque:
25 N·m (2.5 kgf-m, 18.4 ft-lb)
5) Connect the door harness connector, and install the trim panel - center pillar LWR. <Ref. to EI-87, INSTALLATION, Lower Inner Trim.>
6) Tighten the bolts on the vehicle side of the checker assembly - rear door.

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-5, REAR DOOR, COMPONENT, General Description.>

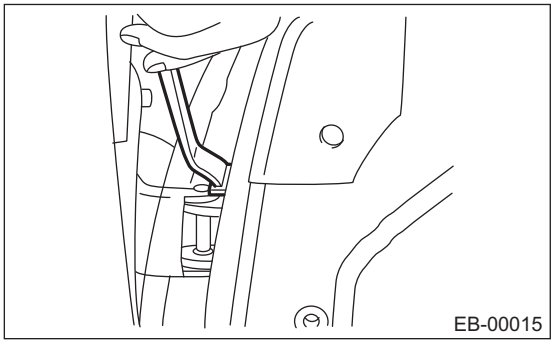
C: ADJUSTMENT

Adjust the clearance around the panel assembly - rear door as follows.



Part		Standard
A	Panel assembly - front door to Panel assembly - rear door	4.5±1 mm (0.18±0.04 in)
B	Front door sash to Rear door sash	5.5+1.5, –1 mm (0.22+0.06, –0.04 in)
C	Panel - side outer to Rear door sash	5.1+1.5, –1 mm (0.2+0.06, –0.04 in)
D	Surface level gap between Panel - side outer to Rear door sash	6.6±1.5 mm (0.26±0.06 in)
E	Rear door sash and Panel - side outer	5.5+1.5, –1 mm (0.22+0.06, –0.04 in)
F	Panel assembly - rear door to Panel - side outer	4.1±1 mm (0.16±0.04 in)
G	Panel assembly - rear door to Spoiler assembly - side	6±1.5 mm (0.24±0.06 in)

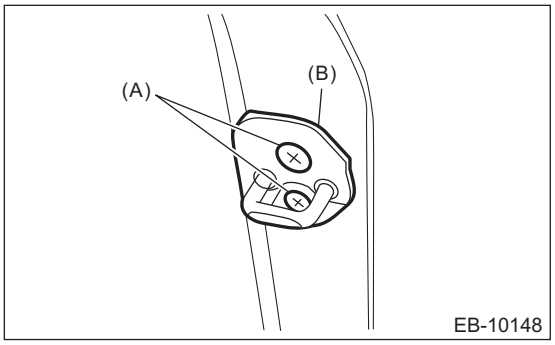
1) Adjust the vertical and horizontal positions of the panel assembly - rear door.
   (1) Loosen the body side bolts of the upper hinge - rear door and the lower hinge - rear door.
   (2) Adjust the vertical and horizontal clearance of the panel assembly - rear door.



2) Adjust the surface level gap between the panel assembly - rear door and the body.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.
   (1) Loosen the screws (A).

(2) Tap the striker - rear door (B) using a plastic hammer to adjust the surface level gap between the rear end of the panel assembly - rear door and the rear quarter.



7. Rear Sealing Cover

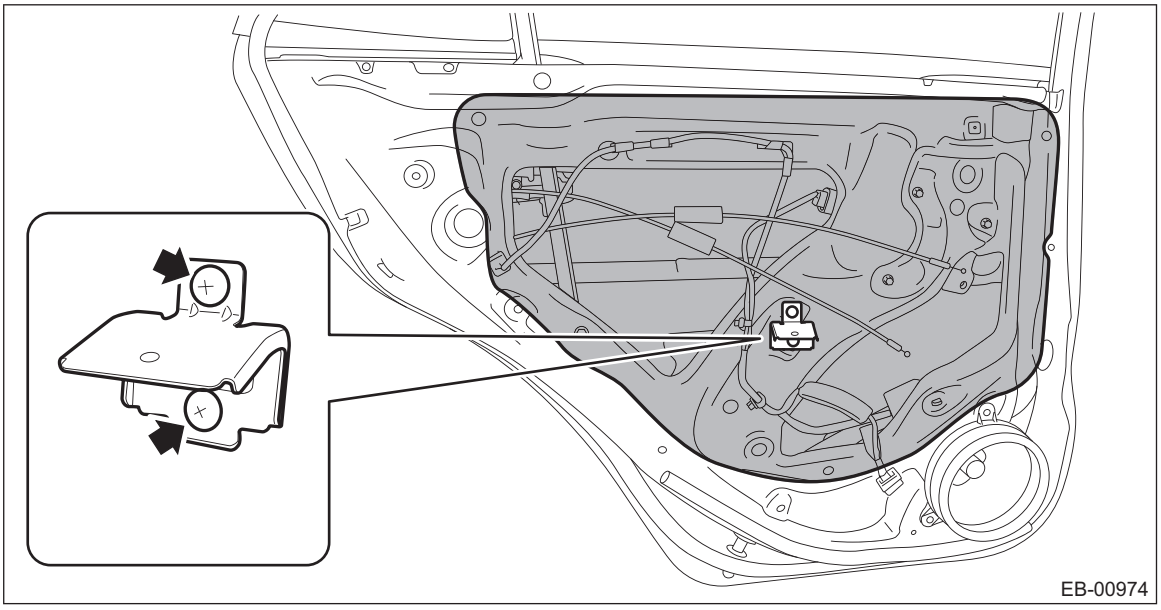
A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
3) Remove the sealing cover - rear door.

CAUTION:
- **Carefully remove the butyl tape. Excessive force will easily break the cover.**
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Be careful not to allow the butyl tape to contact any trims and seats because the butyl tape, which has a strong adhesive force, is difficult to remove once it adhered.**

(1) Remove the screw to remove the bracket - door trim rear.
(2) Disconnect connectors.
(3) Carefully remove the butyl tape to remove the sealing cover - rear door.



B: INSTALLATION

CAUTION:
- **If the sealing cover - rear door gets broken, replace it with a new part.**
- **Apply a butyl tape evenly.**
- **Attach the sealing cover - rear door, keeping it from becoming wrinkled.**
- **If the butyl tape is applied unevenly, it will cause water leakage and soiling.**

1) Install the sealing cover.
(1) Forcefully push the butyl tape portion to prevent any floating on surface.
(2) When replacing the sealing cover, use the butyl tape.

Preparation items:
Butyl tape: 3M Butyl Rubber 8626 or equivalent

2) Install the trim panel - rear door. <Ref. to EI-62, INSTALLATION, Door Trim.>
3) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

If the sealing cover - rear door is broken, replace it with a new part.

8. Door Sash Tape

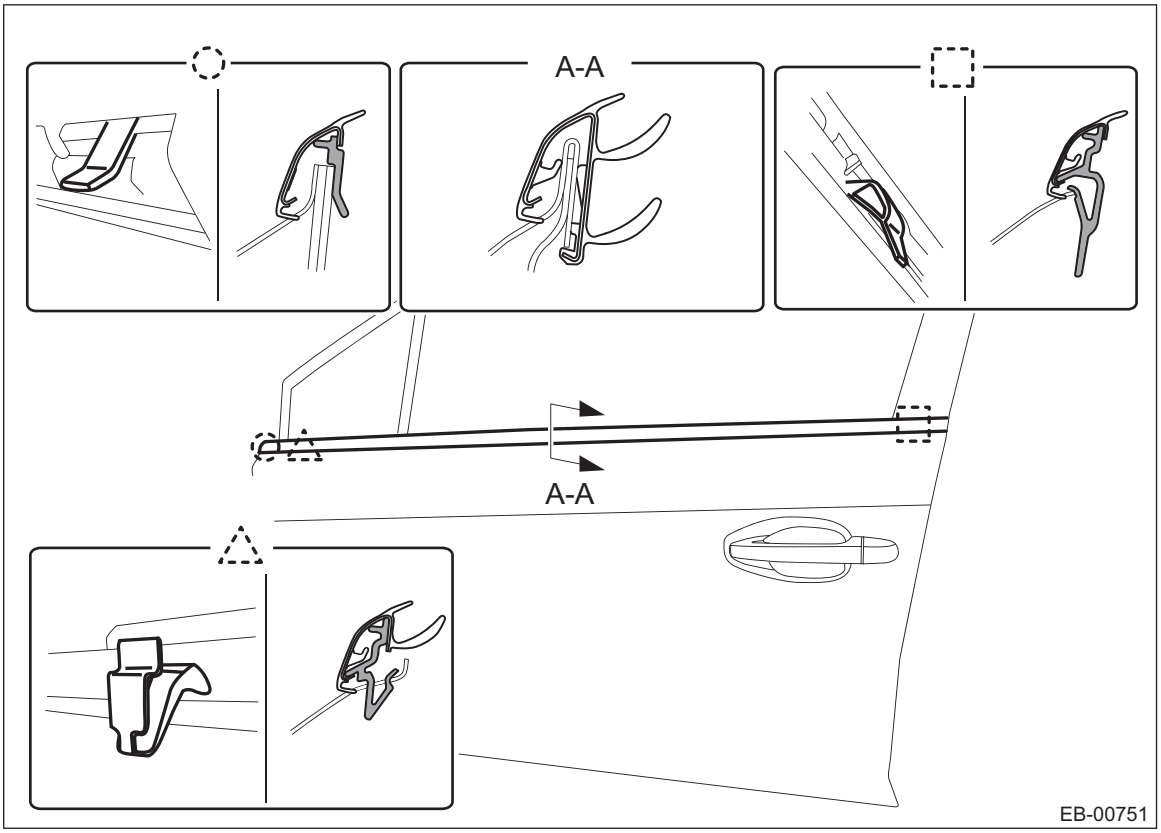
A: REMOVAL

1. FRONT DOOR

1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - front door. <Ref. to EI-60, FRONT DOOR, REMOVAL, Door Trim.>
3) Remove the outer mirror assembly. <Ref. to GW-26, REMOVAL, Outer Mirror Assembly.>
4) Remove the sealing cover - front door. <Ref. to EB-29, REMOVAL, Front Sealing Cover.>
5) Remove the glass assembly - front door. <Ref. to GW-19, REMOVAL, Front Door Glass.>
6) Remove the running channel - front door.
7) Remove the weather strip outer - front door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**



8) Peel the door sash tape from the door sash.

NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier.
Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

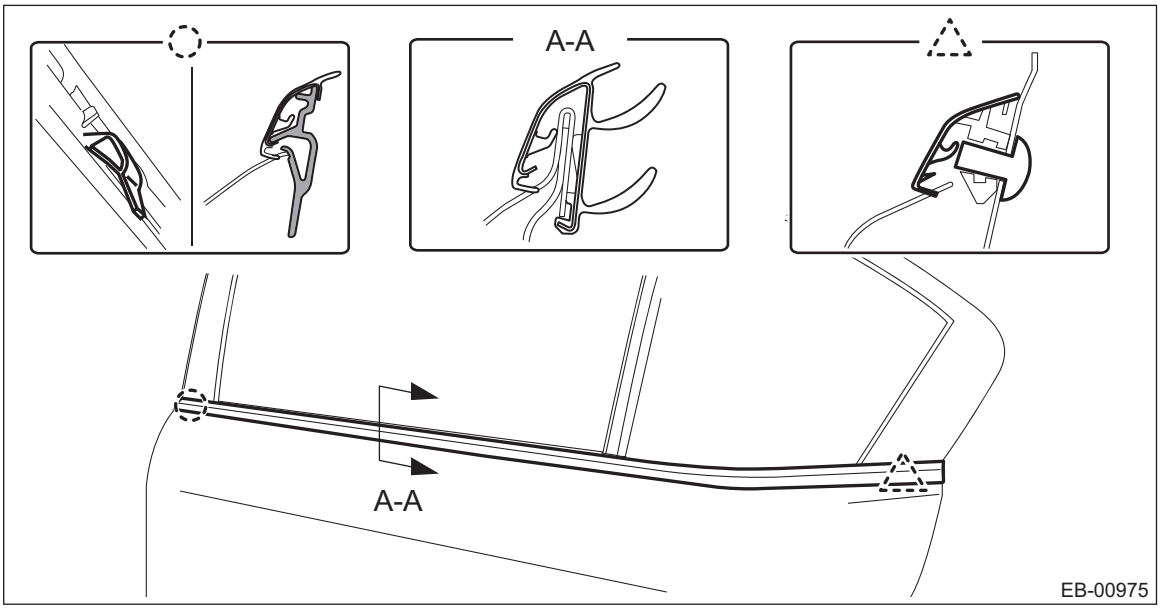
2. REAR DOOR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the trim panel - rear door. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>

3) Remove the sealing cover - rear door. <Ref. to EB-37, REMOVAL, Rear Sealing Cover.>
4) Remove the glass assembly - rear door. <Ref. to GW-34, REMOVAL, Rear Door Glass.>
5) Remove the running channel - rear door.
6) Remove the weather strip outer - rear door.

CAUTION:
- **When removing the weather strip outer, be careful not to damage the vehicle.**
- **Do not reuse the weather strip outer. Always replace with a new part.**



7) Peel the door sash tape from the door sash.

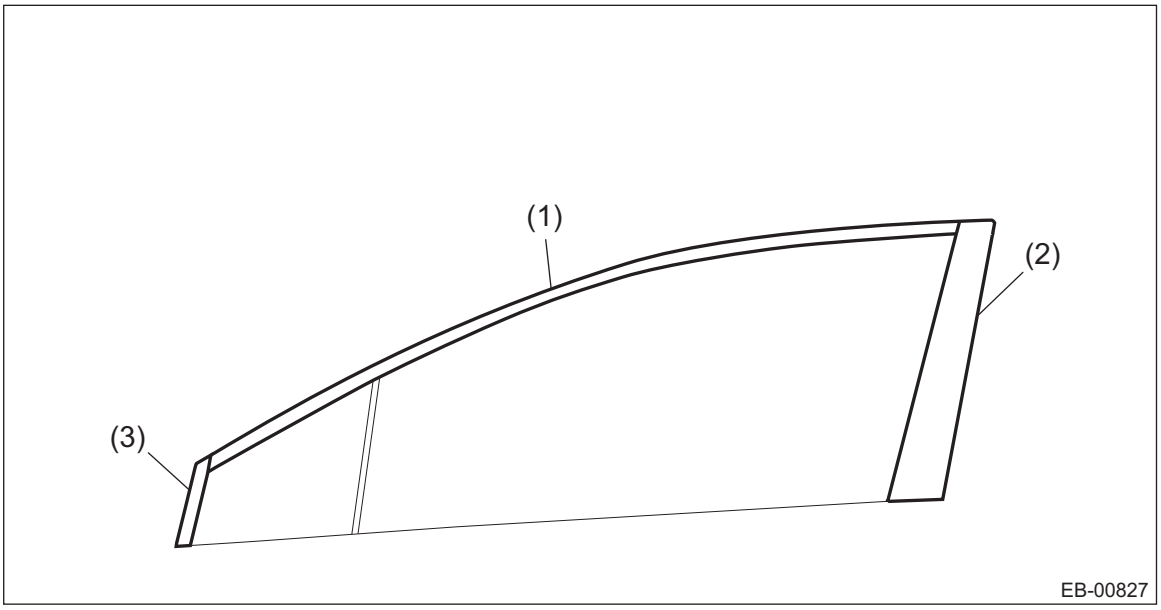
NOTE:
- If the tape is difficult to remove, warm the tape with a hairdryer, etc. to make the removal easier. Use a household hairdryer. Do not use industrial dryers.
- If tape residue is remaining on the door sash, wipe clean.

B: INSTALLATION

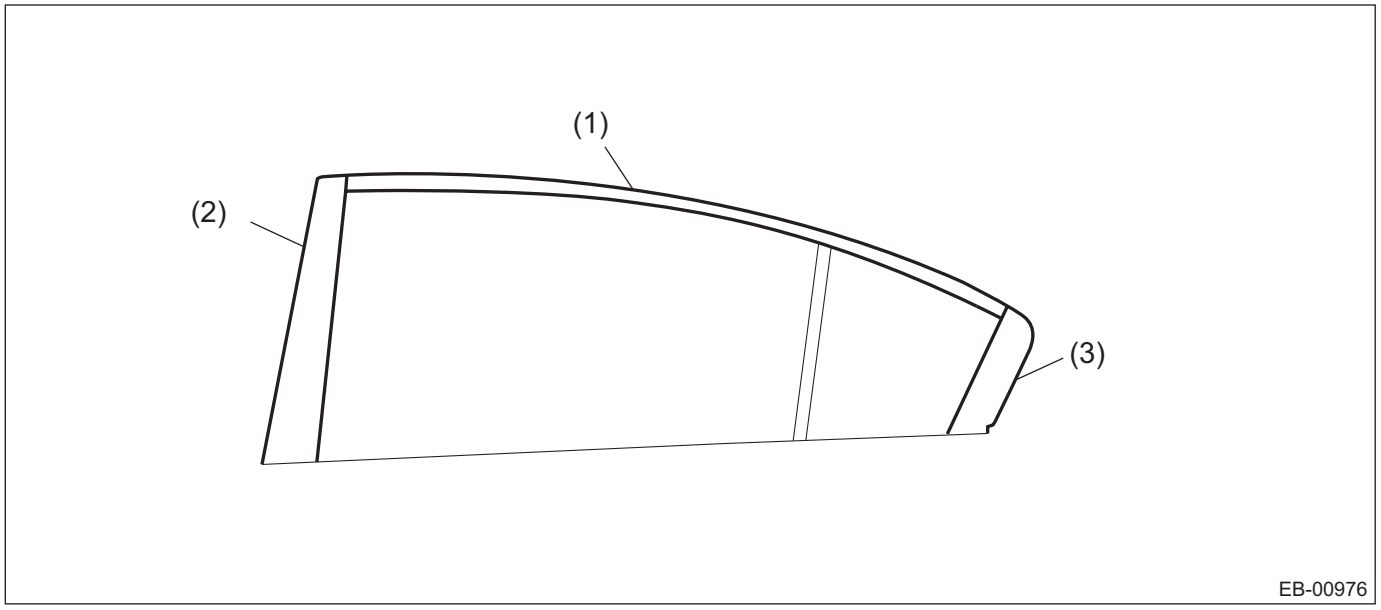
CAUTION:
- **Do not reuse the removed door sash tape. Replace it with a new tape.**
- **Press evenly along the sash when applying the tape using a spatula or similar object to make sure no bubbles are formed.**

If air bubbles are formed, reapply the tape.
- **If the tape is wrinkled, etc. during application, replace the tape.**
- **Be sure to press the ends of the tape firmly to adhere securely. If the tape comes off at the ends or where folded, the adhesive strength is weakened and the tape may peel off.**
- **There are locations where the tape ends will overlap each other. When applying the tape, be careful of the following order of their application.**

- **Front**



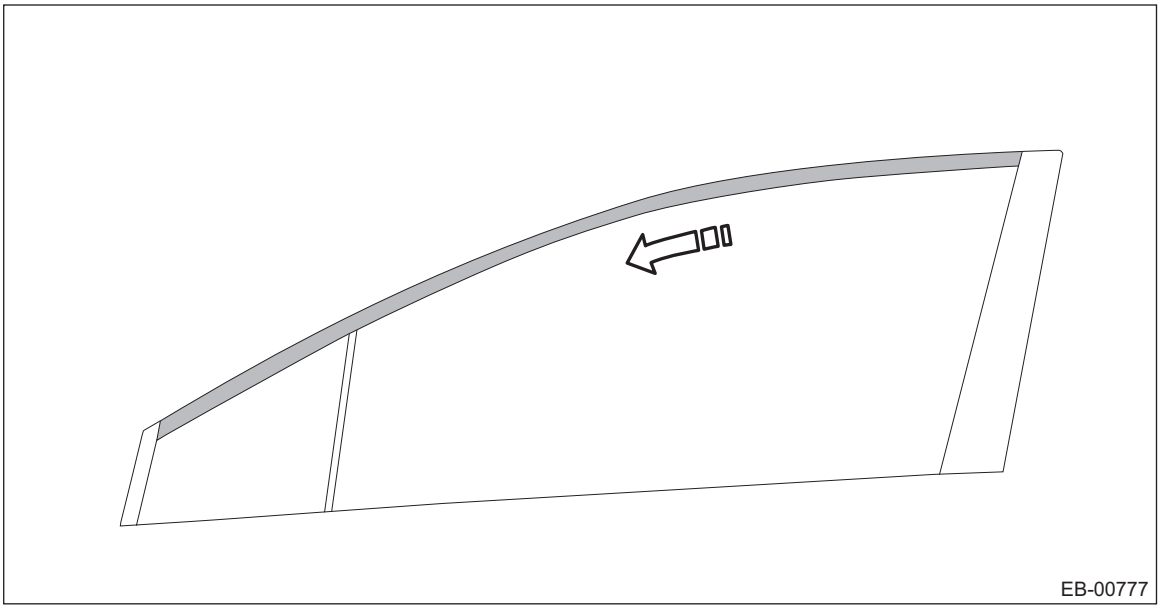
- **Rear**



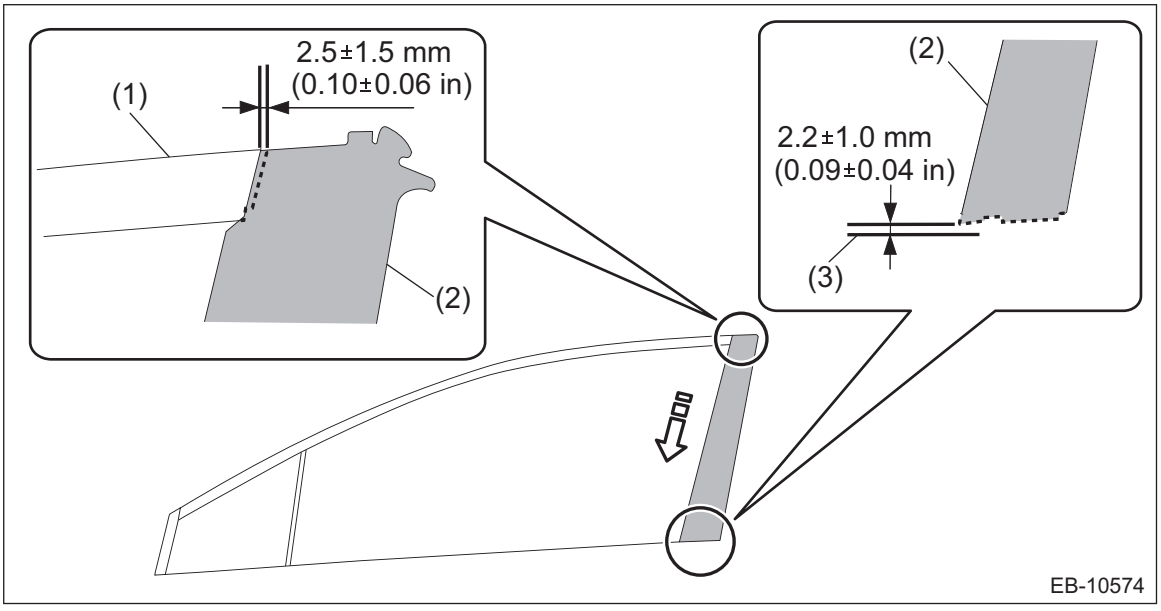
- **Do not reuse the weather strip outer. Always replace with a new part.**

1. FRONT DOOR

1) Apply the front door sash tape - medium from the rear of the vehicle towards the front.

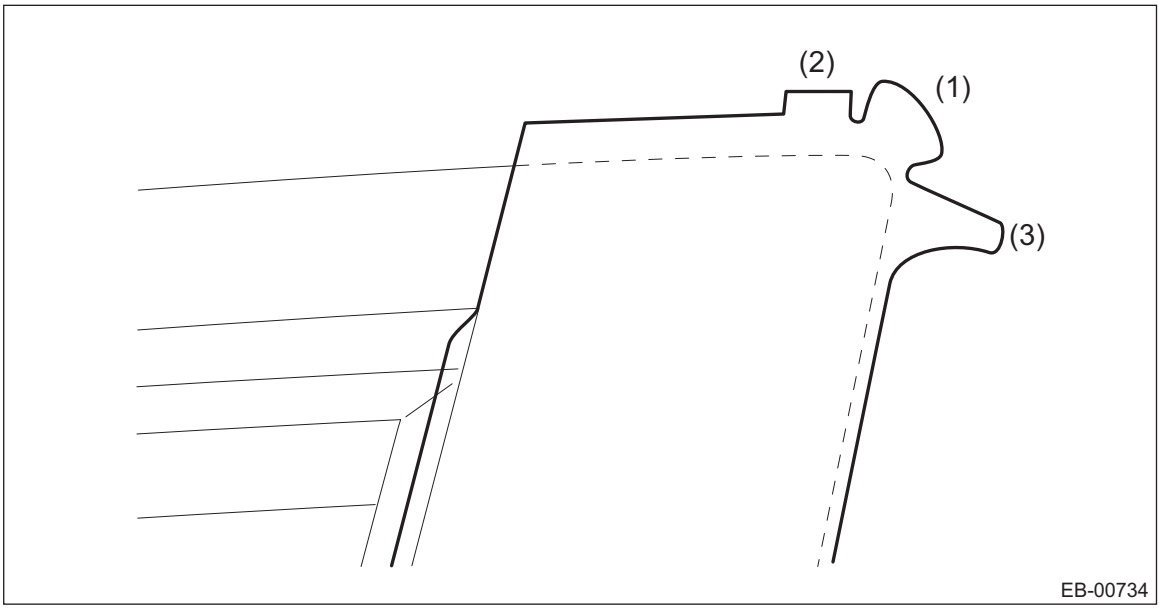


2) Apply the front door sash tape - rear from the top of the vehicle towards the bottom.

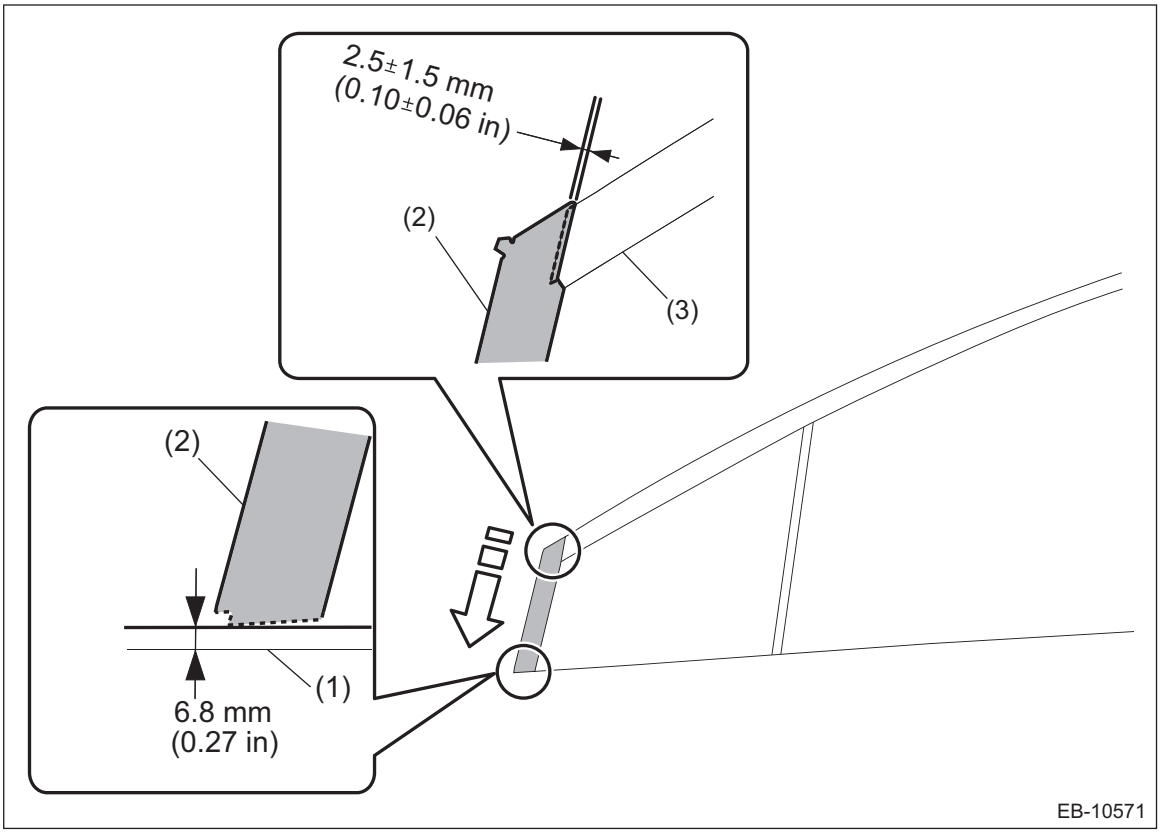


(1) Front door sash tape - medium (2) Front door sash tape - rear (3) End of panel outer

3) Fold the corners at the door upper end area in the order of (1) — (3).

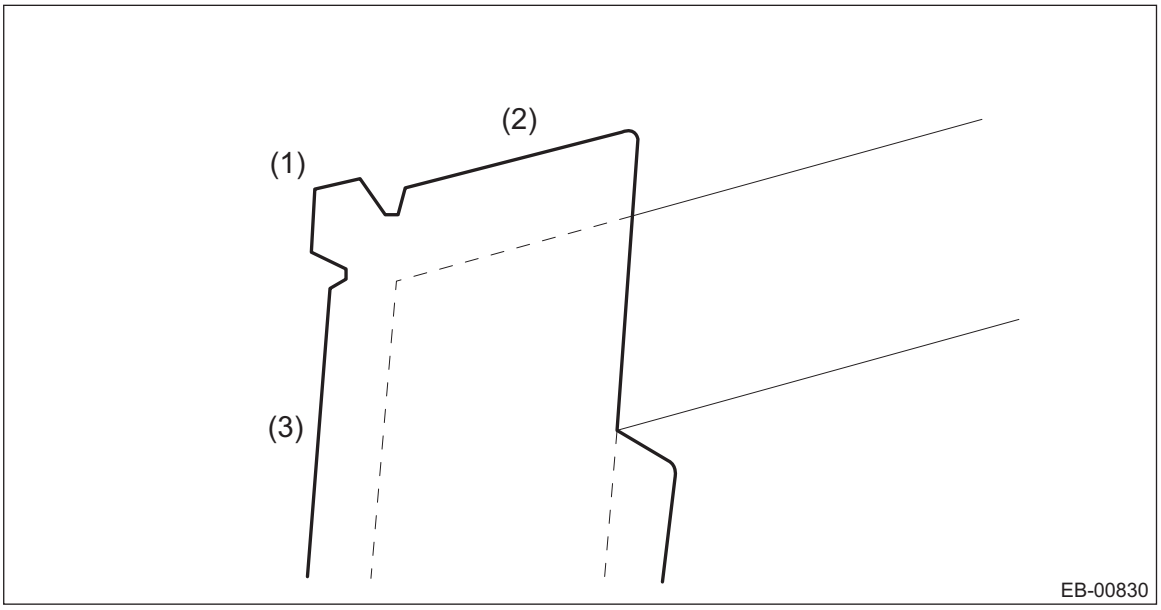


4) Apply the front door sash tape - front from the top of the vehicle towards the bottom.



(1) End of panel outer (2) Front door sash tape - front (3) Front door sash tape - medium

5) Fold the corners at the door upper end area in the order of (1) — (3).



6) Install the weather strip outer - front door.
7) Install the running channel - front door.
8) Install the glass assembly - front door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

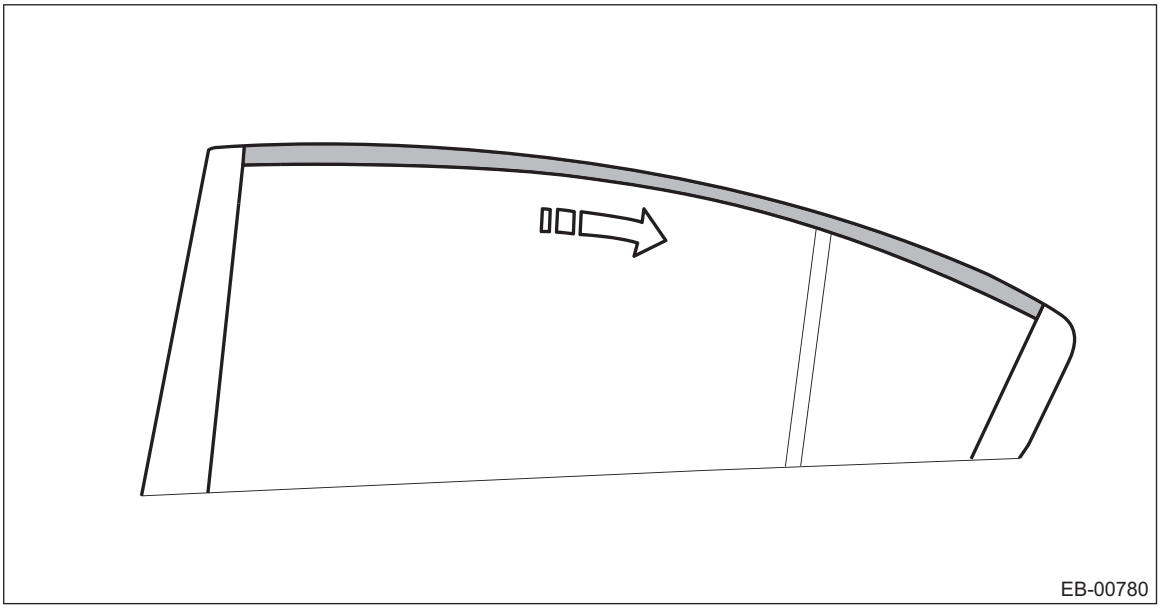
9) Install the sealing cover - front door.
10) Install the outer mirror assembly.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

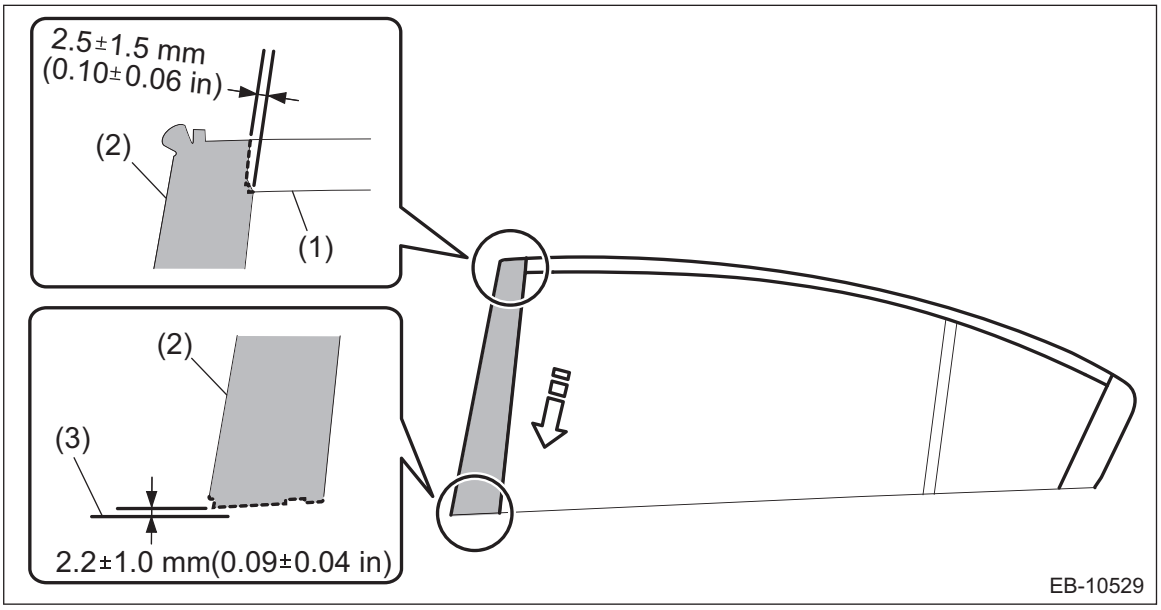
11) Install the trim panel - front door.
12) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

2. REAR DOOR

1) Apply the rear door sash tape - medium from the front of the vehicle towards the rear.

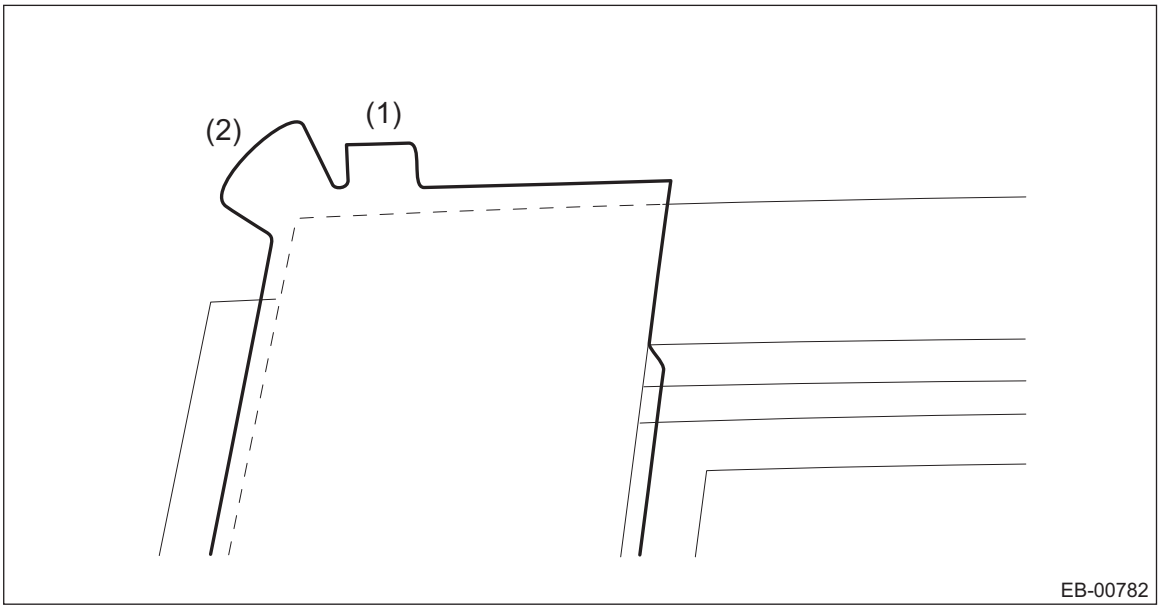


2) Apply the rear door sash tape - front from the top of the vehicle towards the bottom.

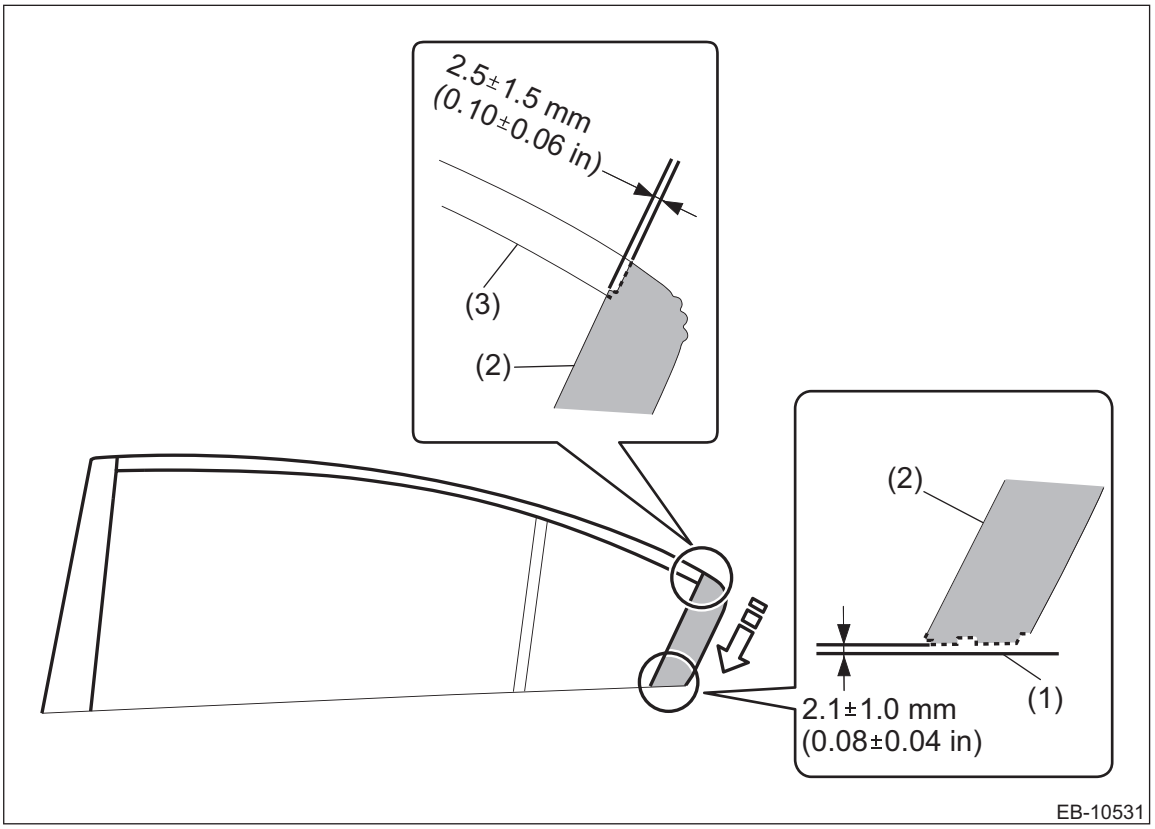


(1) Rear door sash tape - medium (2) Rear door sash tape - front (3) End of panel outer

3) Fold the corners at the door upper end area in the order of (1) — (2).

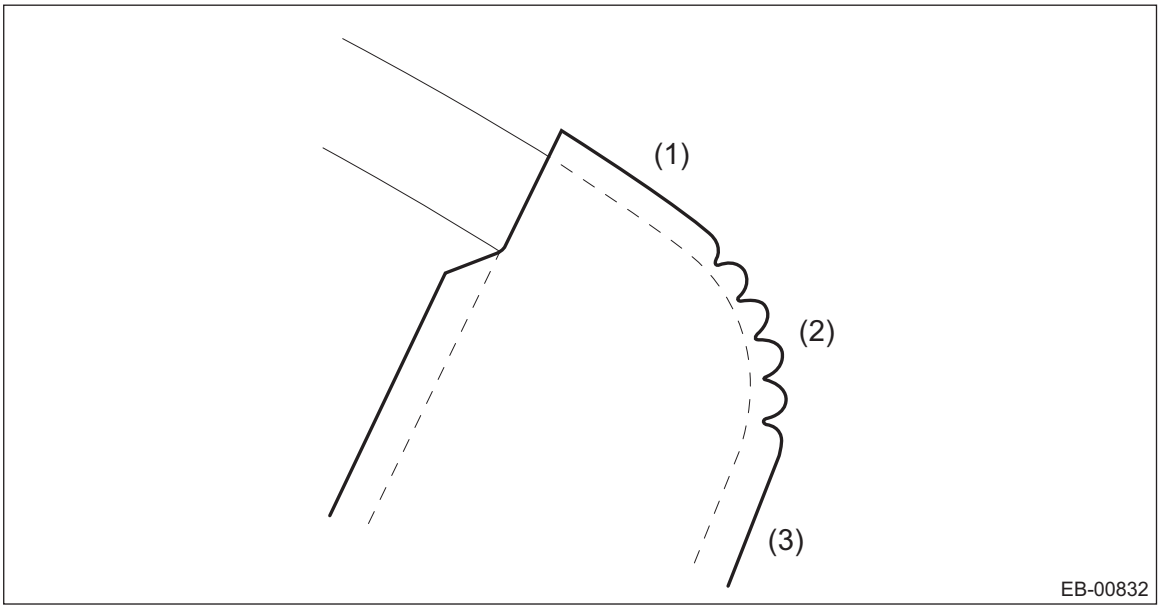


4) Apply the rear door sash tape - rear from the top of the vehicle towards the bottom.



(1) End of panel outer (2) Rear door sash tape - rear (3) Rear door sash tape - medium

5) Fold the corners at the door upper end area in the order of (1) — (3).



6) Install the weather strip outer - rear door.

Tightening torque:
2 N·m (0.2 kgf-m, 1.5 ft-lb)

7) Install the running channel - rear door.
8) Install the glass assembly - rear door.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

9) Install the sealing cover - rear door.
10) Install the trim panel - rear door.
11) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

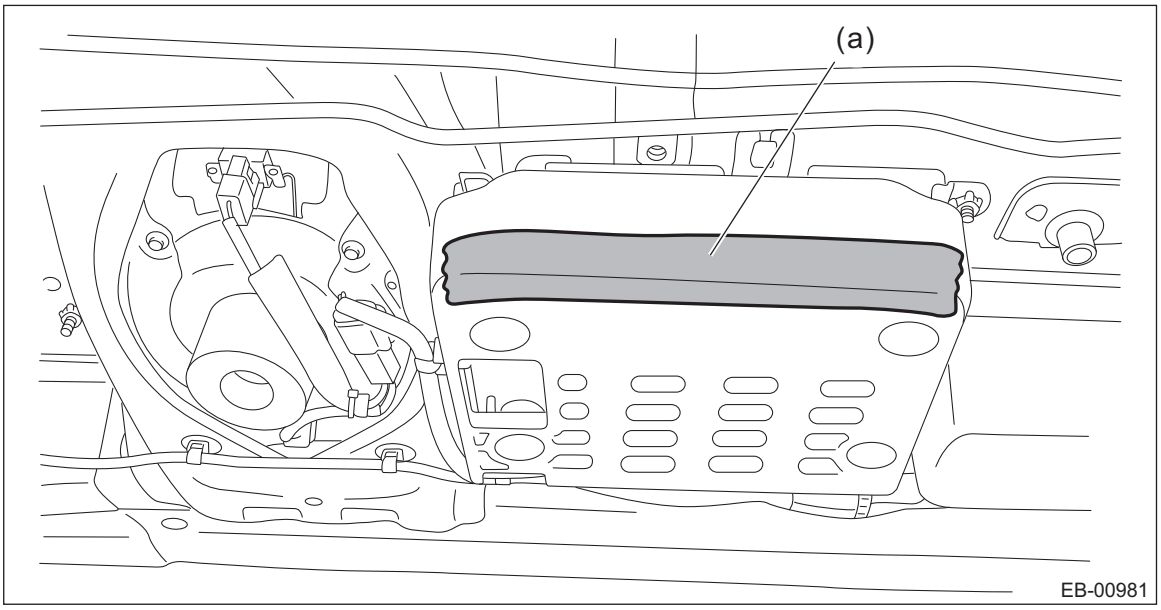
9. Trunk Lid

A: REMOVAL

1. TORSION BAR

CAUTION:
Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.

1) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
2) Attach the protective tape (a) to the amplifier case. (Only for models with power amplifier)



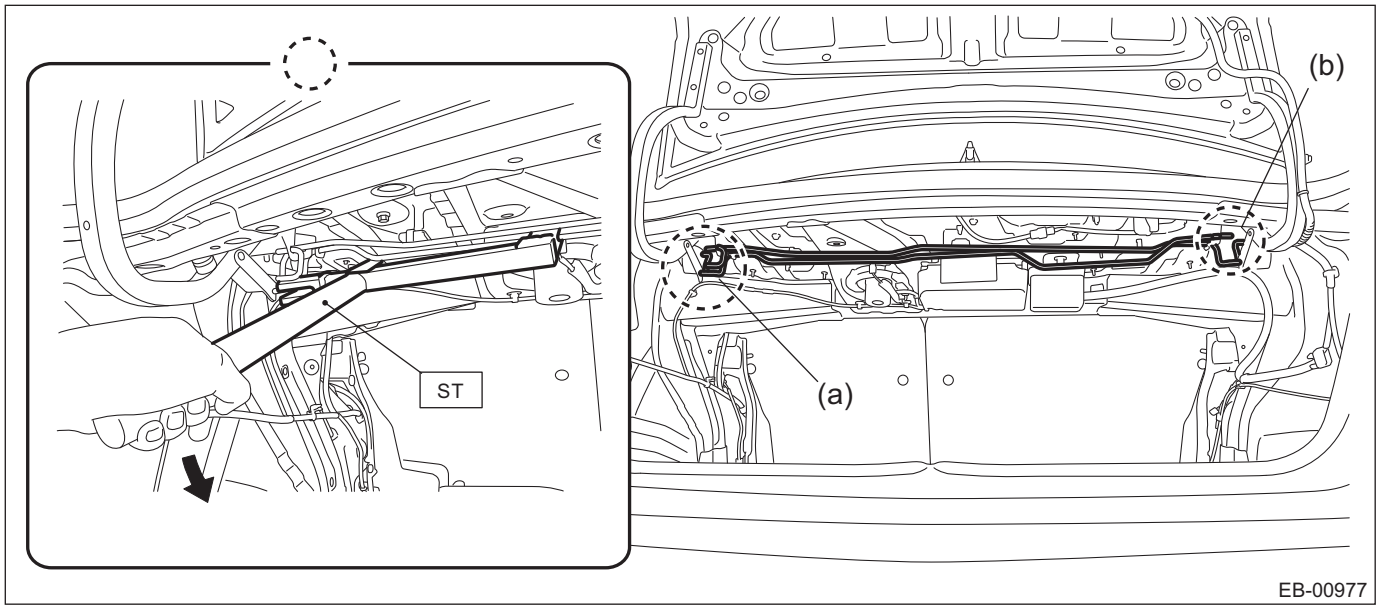
3) Remove the torsion bar - trunk lid.

CAUTION:
During removal and installation, handle the torsion bar - trunk lid carefully, because it will generate reactive force.

Preparation tool:
ST: REMOVER (99099FJ000) and REMOVER (927780000)

(1) Remove the torsion bar - trunk lid on the LH side from the hinge link (a).

(2) Remove the torsion bar - trunk lid on the RH side from the hinge link (b).

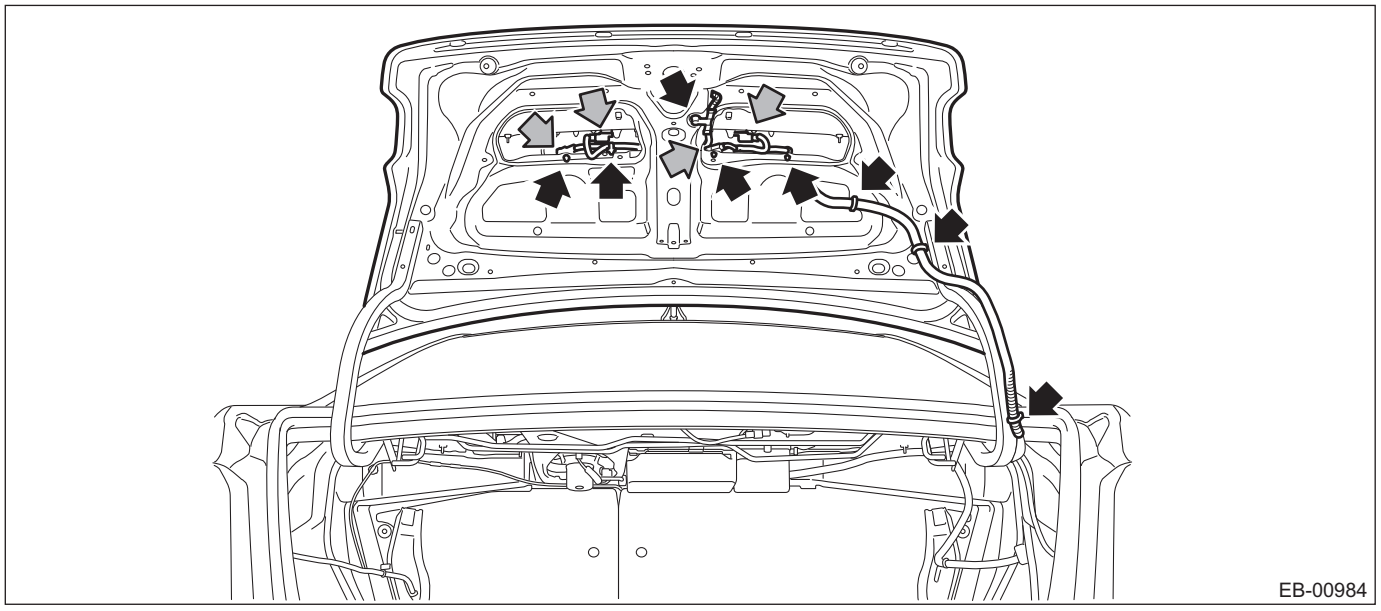


2. TRUNK LID PANEL

1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

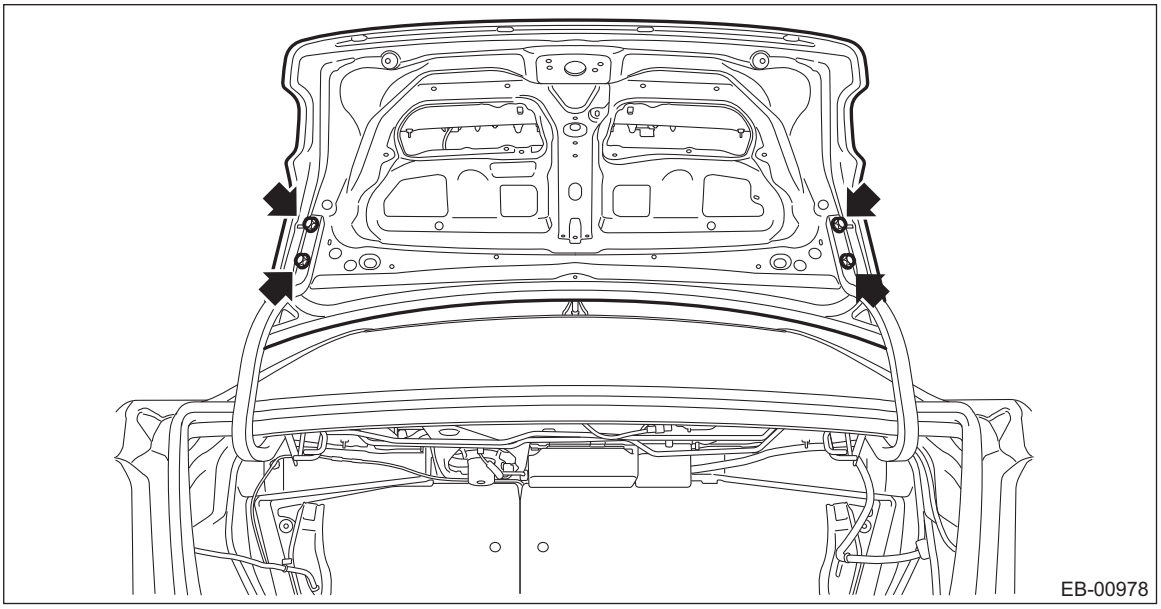
NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the trunk room trim. <Ref. to EI-97, REMOVAL, Trunk Room Trim.>
3) Remove the lock assembly - trunk lid. <Ref. to SL-48, REMOVAL, Trunk Lid Latch and Actuator Assembly.>
4) Disconnect the connector to remove the trunk lid harness.



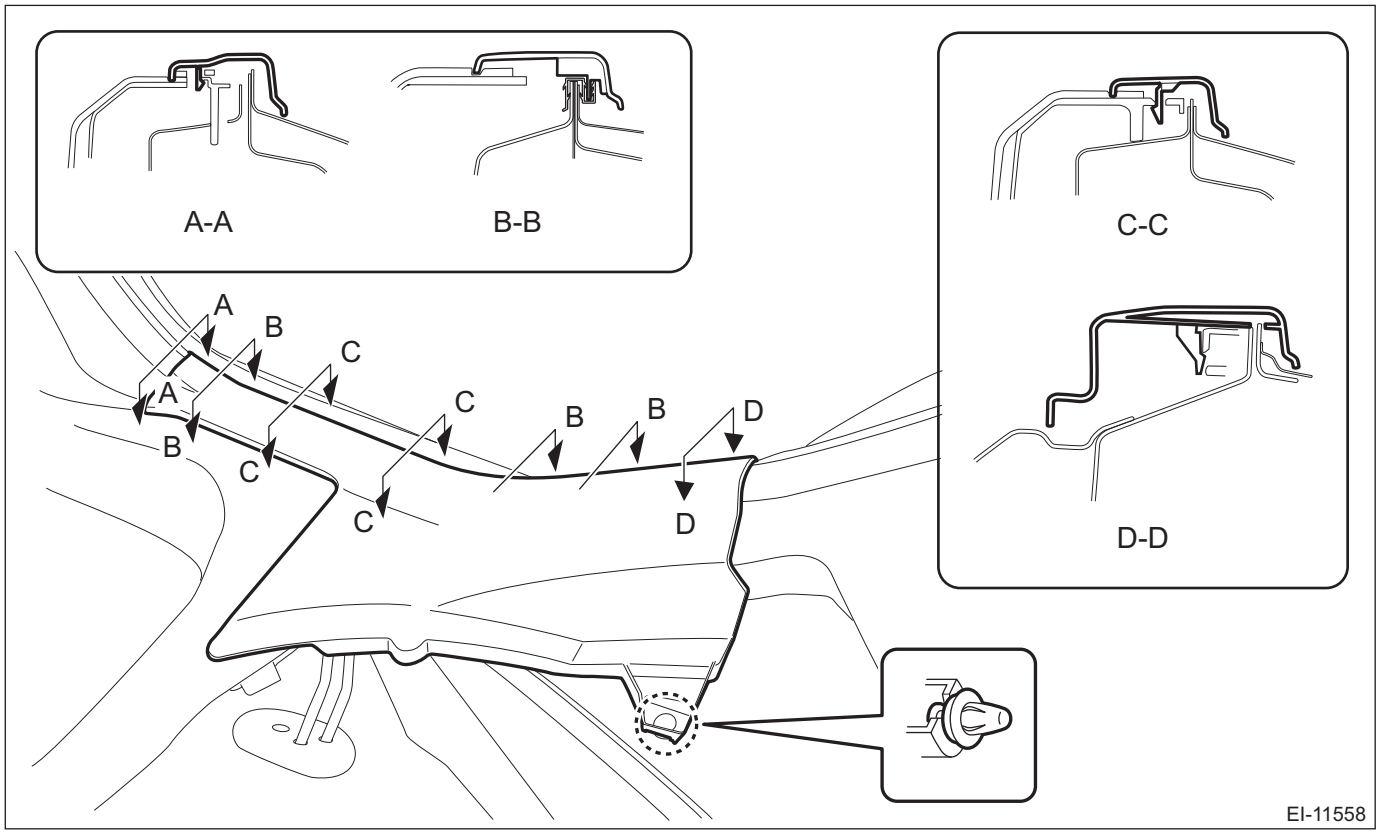
5) Remove the garnish - trunk. <Ref. to EI-55, REMOVAL, Trunk Lid Garnish.>
6) Remove the rearview camera assembly. <Ref. to ETM-46, REAR, REMOVAL, Camera.>
7) Detach the rear spoiler. <Ref. to EI-56, REMOVAL, Rear Spoiler.>
8) Remove the trunk lid COMPL.

CAUTION:
Trunk lid COMPL is heavy. When removing and installing it, always work in a team of two or more persons.



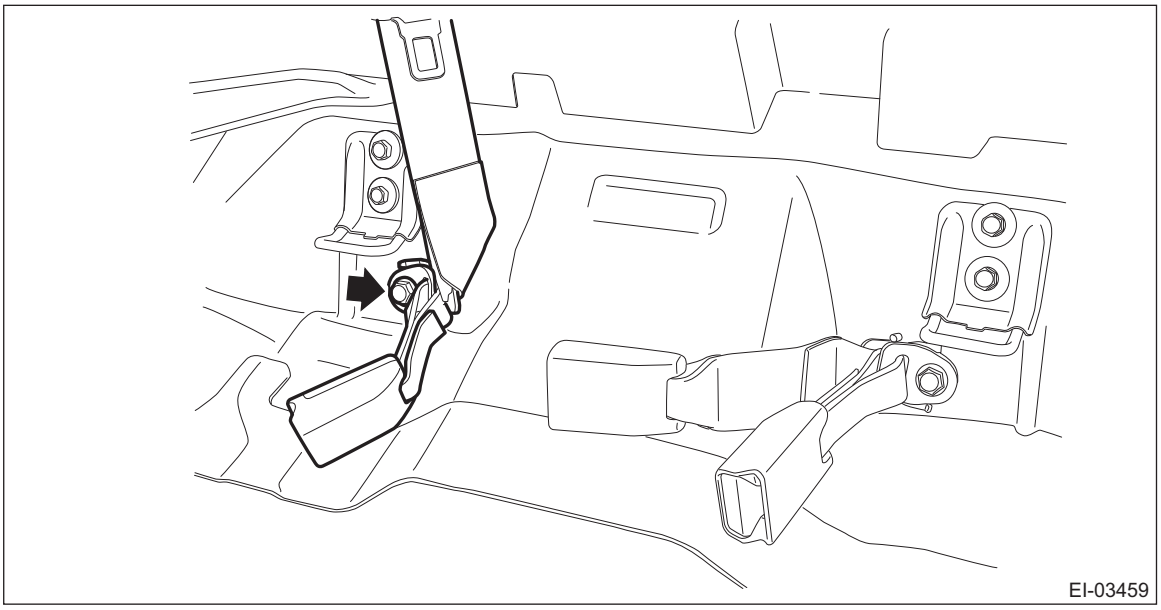
9) Remove the rear seat cushion assembly. <Ref. to SE-35, REMOVAL, Rear Seat.>
10) Release the clips and claws, and remove the side sill covers - rear INN on the left and right sides.

CAUTION:
Do not pull with excessive force. Doing so may damage the claws of the side sill cover - rear INN.

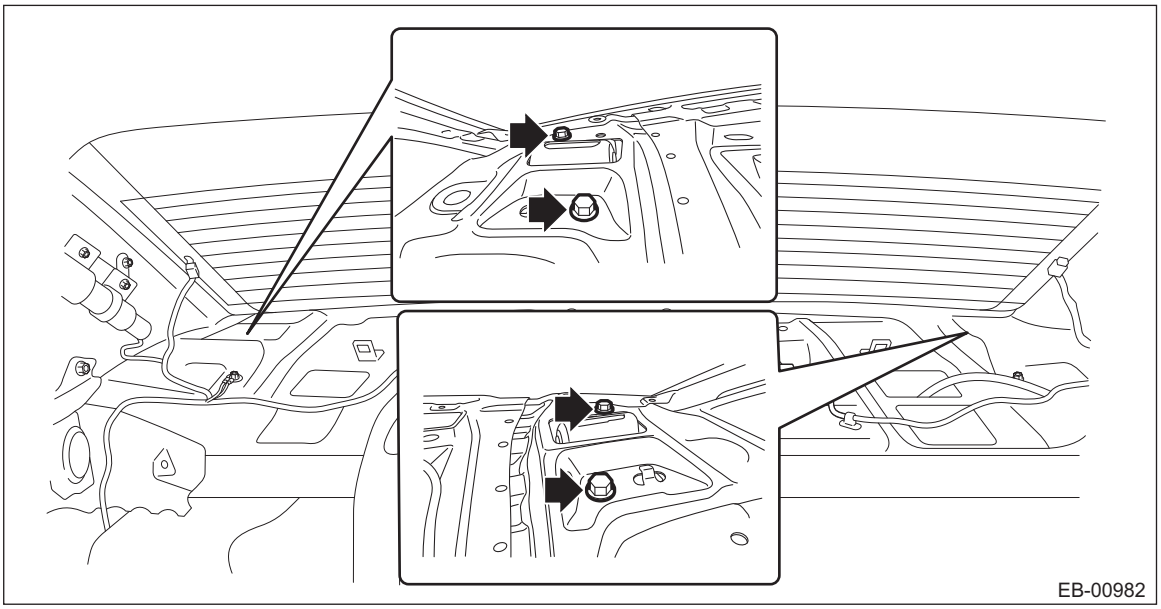


11) Remove the trim panel - rear pillar UPR and trim panel - rear pillar LWR on the RH and LH sides. <Ref. to EI-92, REMOVAL, Rear Quarter Trim.>

12) Remove the bolts, and remove the lower anchor of the seat belt - rear shoulder CTR.



13) Remove the high-mounted stop light. <Ref. to LI-70, REMOVAL, High-mounted Stop Light.>
14) Remove the trim panel assembly - rear shelf. <Ref. to EI-94, REMOVAL, Rear Shelf Trim.>
15) Remove the trunk lid arm assembly.
(1) Remove the torsion bar - trunk lid from the trunk lid arm. <Ref. to EB-47, TORSION BAR, REMOVAL, Trunk Lid.>
(2) Remove the bolts, then remove the trunk lid arm assembly.



B: INSTALLATION

1) Install the trunk lid arm assembly.

Tightening torque
18 N·m (1.8 kgf-m, 13.3 ft-lb)
2) Install the trim panel assembly - rear shelf.
3) Install the high-mounted stop light.

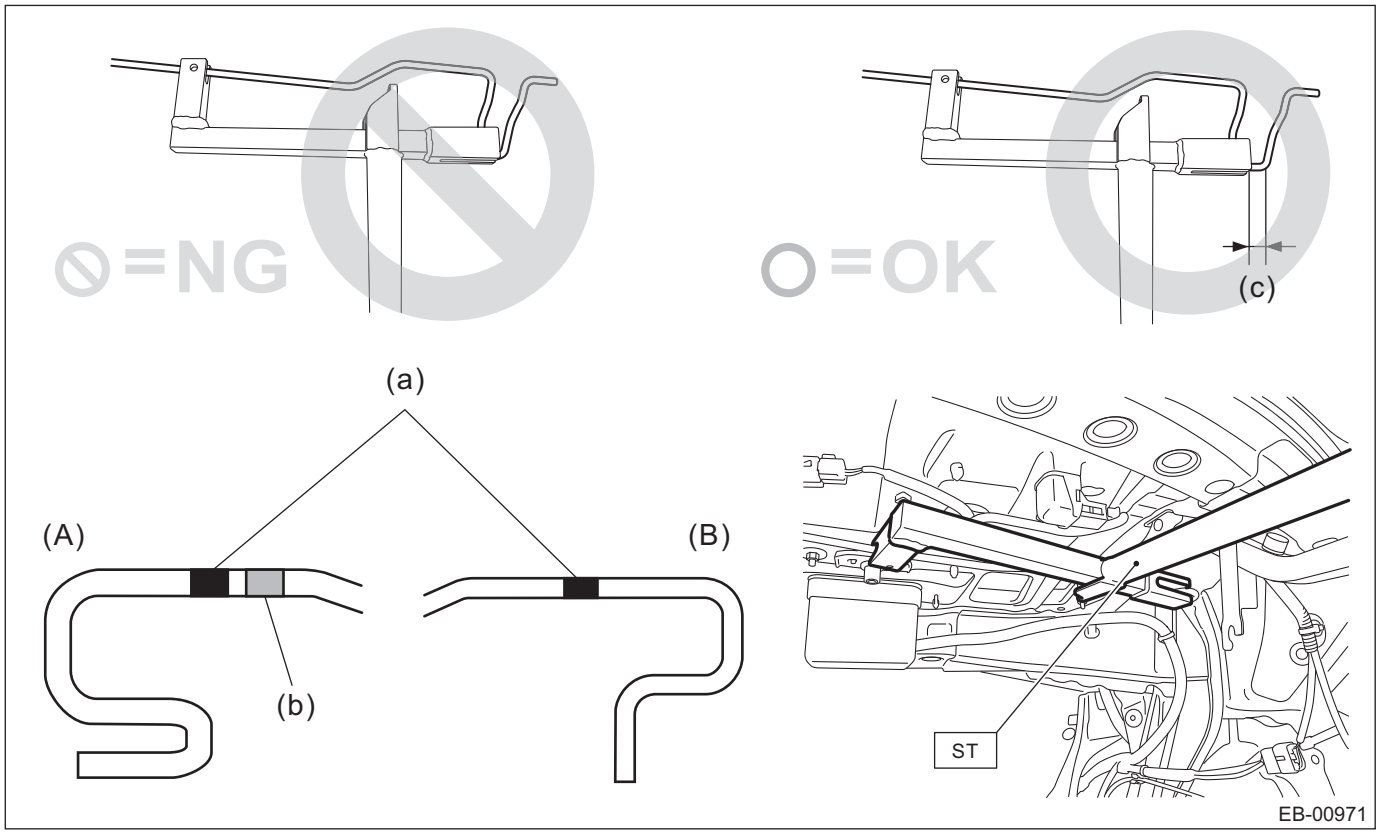
CAUTION:
Make sure that the claw behind the light assembly - high-mounted is securely attached to the trim panel assembly - rear shelf.
4) Install the lower anchor of seat belt - rear shoulder CTR.

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)

5) Install the trim panel - rear pillar UPR and the trim panel - rear pillar LWR.
6) Install the side sill cover - rear INN.
7) Install the rear seat cushion assembly.
8) Install the torsion bar - trunk lid.

CAUTION:
• When performing installation, pay close attention to the identification marks and shapes of the torsion bar - trunk lid on the RH and LH sides.
• When installing the remover to the torsion bar - trunk lid, leave a slight clearance (c).

Preparation tool:
ST: REMOVER (99099FJ000) and REMOVER (927780000)



(A)	Left Hand	(B)	Right Hand		
(a)	Common marking on the right and left sides	(b)	Marking on the left side only	(c)	Clearance

9) Install the trunk lid COMPL.

Tightening torque
14 N·m (1.4 kgf-m, 10.3 ft-lb)

10) Install the rear spoiler.

Tightening torque
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

11) Install the rearview camera assembly. <Ref. to ETM-47, REAR, INSTALLATION, Camera.>
12) Install the garnish - trunk.

Tightening torque
4.5 N·m (0.5 kgf-m, 3.3 ft-lb)

13) Connect the connector and install the trunk lid harness.
14) Install the lock assembly - trunk lid.

Tightening torque
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
15) Apply grease to the rotating area of hinges.
16) Install the trim panel assembly - rear shelf. <Ref. to EI-95, INSTALLATION, Rear Shelf Trim.>
17) Install while paying attention to make a uniform clearance around the trunk lid COMPL. <Ref. to EB-52, ADJUSTMENT, Trunk Lid.>

Tightening torque:
Refer to "COMPONENT" of "General Description". <Ref. to EB-6, TRUNK LID PANEL, COMPONENT, General Description.>
18) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

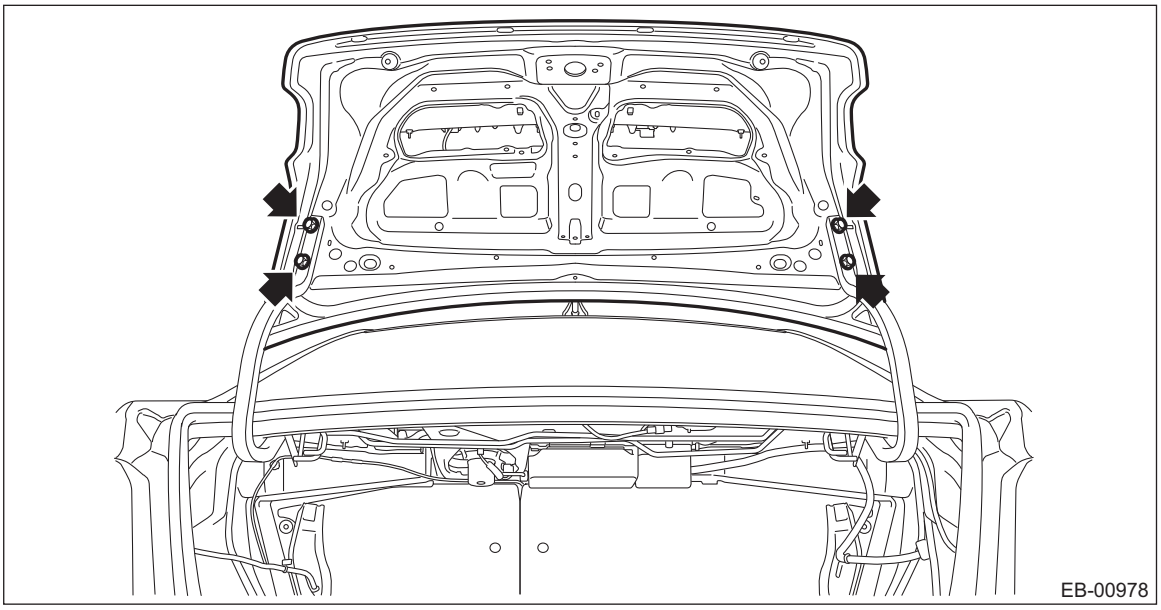
C: ADJUSTMENT

Adjust the clearance around the trunk lid COMPL as follows.

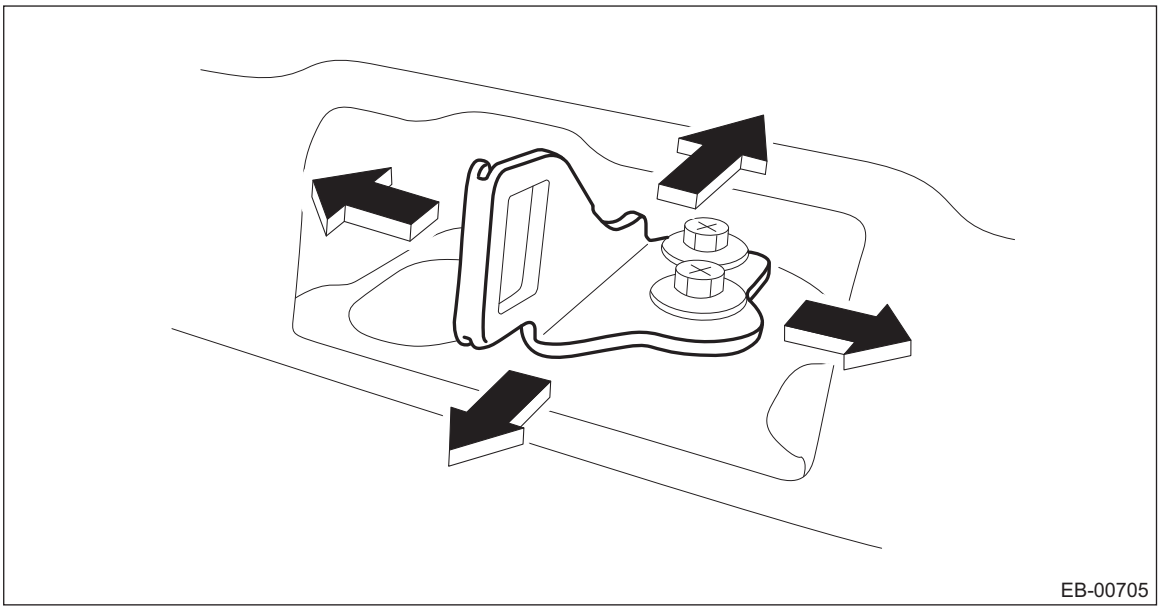
	Part	Standard
A	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
B	Surface level gap between Trunk lid COMPL and Panel - side outer	0.5+1, –0.5 mm (0.02+0.04, –0.02 in)
C	Trunk lid COMPL and Panel - side outer	3.5±1 mm (0.14±0.04 in)
D	Surface level gap between Trunk lid COMPL and Panel - side outer	0.5±0.7 mm (0.02±0.03 in)
E	Trunk lid COMPL to Bumper face - rear	7.5+2, –1 mm (0.3+0.1, –0.04 in)

1) Adjust the horizontal position of the trunk lid COMPL.
(1) Loosen the mounting bolt.

(2) Adjust the horizontal clearance of the trunk lid COMPL.



2) Adjust the surface level gap between the trunk lid COMPL and the body.
(1) Remove the trim panel - trunk rear.
(2) Loosen the bolt.
(3) Tap the striker - trunk using a plastic hammer to adjust the surface level gap between the trunk lid COMPL and the body.



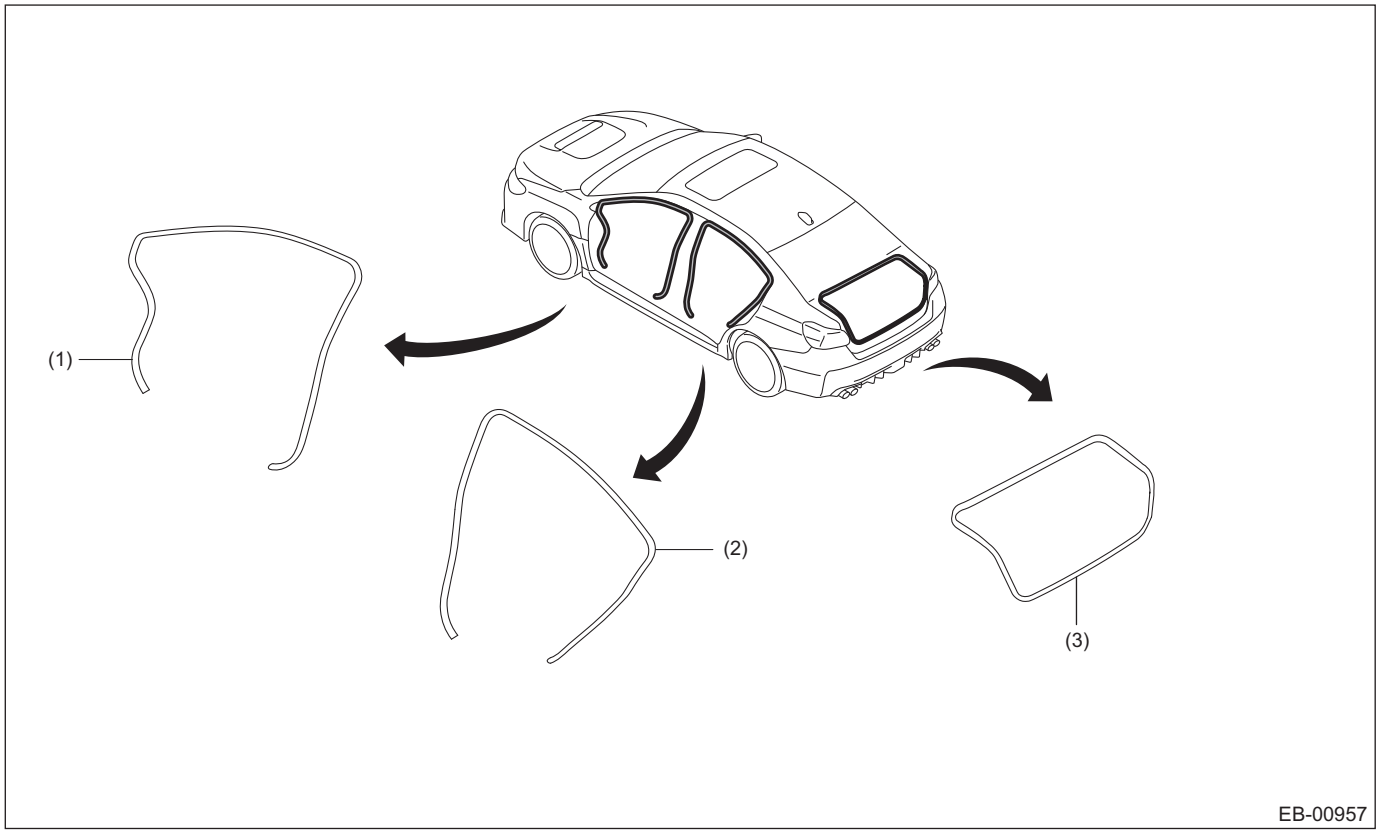
10.Weather Strip

A: REPLACEMENT

1. FLANGE

1) Remove the weather strip - body side flange while pulling the rubber. Be careful not to tear the rubber.
2) Replace the weather strip - trunk lid while pulling the rubber. Be careful not to tear the rubber.

NOTE:
While removing the weather strip - trunk lid, be careful not to allow adhesive to contact the trim panel - trunk side.

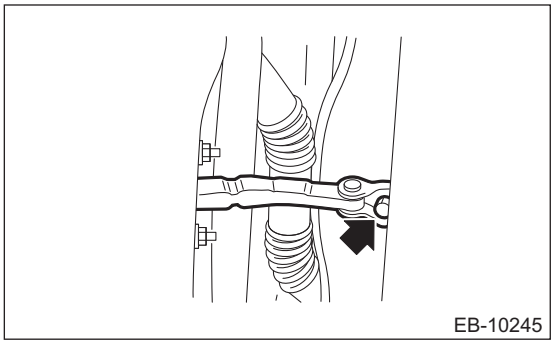


(1) Weather strip - body side flange front
(2) Weather strip - body side flange rear
(3) Weather strip - trunk lid

2. FRONT DOOR

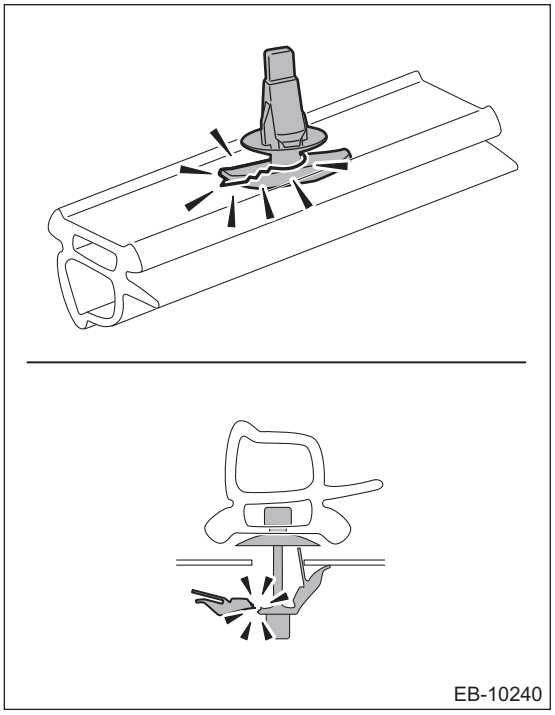
1) Remove the bolt from the checker assembly - front door.

CAUTION:
Cover the removed checker assembly - front door with a waste cloth to prevent scratching.

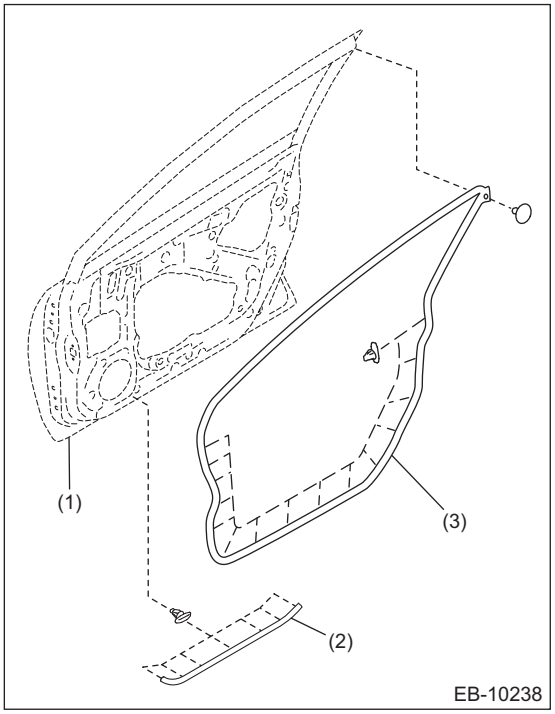


2) Remove the clips, and remove the each weather strips.

CAUTION:
Weather strip may be broken by pulling it. Forcibly removing the weather strip clips may also damage the weather strip clips.



EB-10240



EB-10238

(1) Panel ASSY - front door
(2) Weather strip - front door LWR
(3) Weather strip - front door

3) Install each weather strips.

CAUTION:
If the weather strip clip was broken, replace it with a new part.
If the broken piece of the clip fall into the door panel, always remove it.

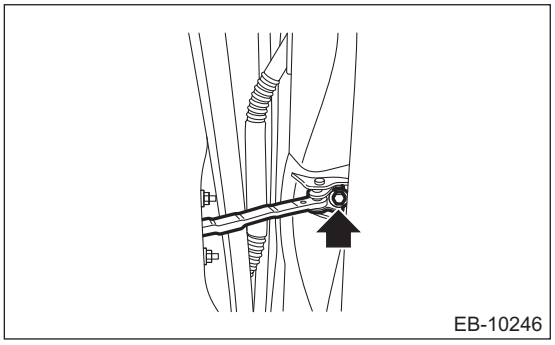
4) Install the checker assembly - front door.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

3. REAR DOOR

1) Remove the rear door trim. <Ref. to EI-61, REAR DOOR, REMOVAL, Door Trim.>
2) Remove the bolt from the checker assembly - rear door.

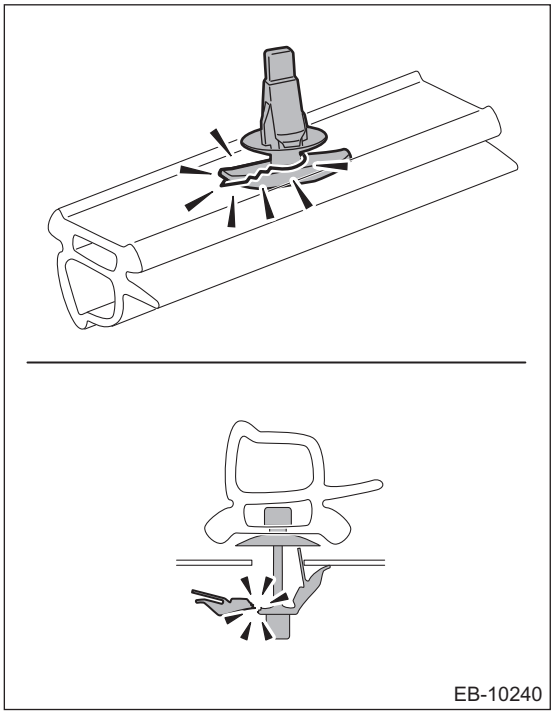
CAUTION:
Cover the removed checker assembly - rear door with a waste cloth to prevent scratching.



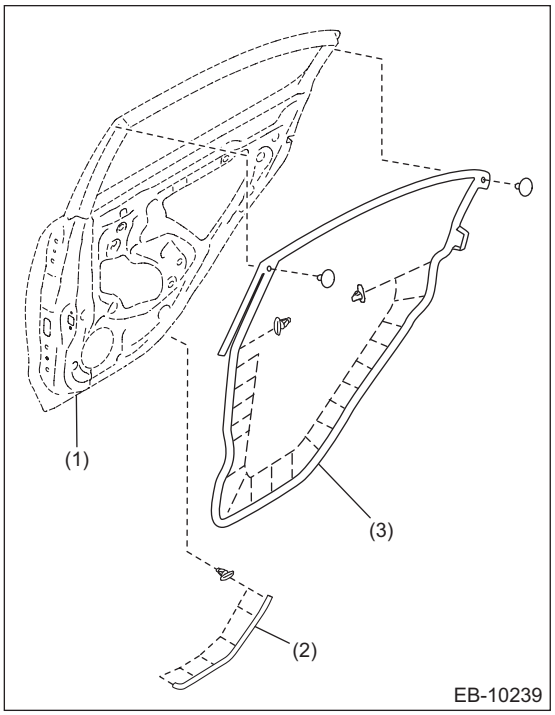
EB-10246

3) Remove the weather strip after removing the clip. Be careful not to tear the rubber.

CAUTION:
Weather strip may be broken by pulling it. Forcibly removing the weather strip clips may also damage the weather strip clips.
If the broken piece of the clip fall into the door panel, always remove it.



EB-10240



(1) Panel ASSY - rear door
(2) Weather strip - rear door LWR
(3) Weather strip - rear door

4) Install each weather strips.

CAUTION:
If the weather strip clip was broken, replace it with a new part.
If the broken piece of the clip fall into the door panel, always remove it.

5) Install the checker assembly - rear door.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

6) Install the rear door trim. <Ref. to EI-62, INSTALLATION, Door Trim.>

NOTE:
If the gap between the rear end of door trim upper and the weather strip is not even, refit the weather strips.

CRUISE CONTROL SYSTEM

CC

		Page
1.	General Description	2
2.	Relay and Fuse	3
3.	Cruise Control System	4
4.	Control Unit	5
5.	Cruise Control Command Switch	6
6.	Combination Meter	8
7.	Stop Light & Brake Switch	9
8.	Clutch Switch	10
9.	Inhibitor Switch	11
10.	Transmission Control Module (TCM)	12
11.	Neutral Position Switch	13
12.	Diagnostics with Phenomenon	14

1. General Description

A: LOCATION

Refer to “LOCATION” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-6, LOCATION, Electrical Component Location.>

B: CAUTION

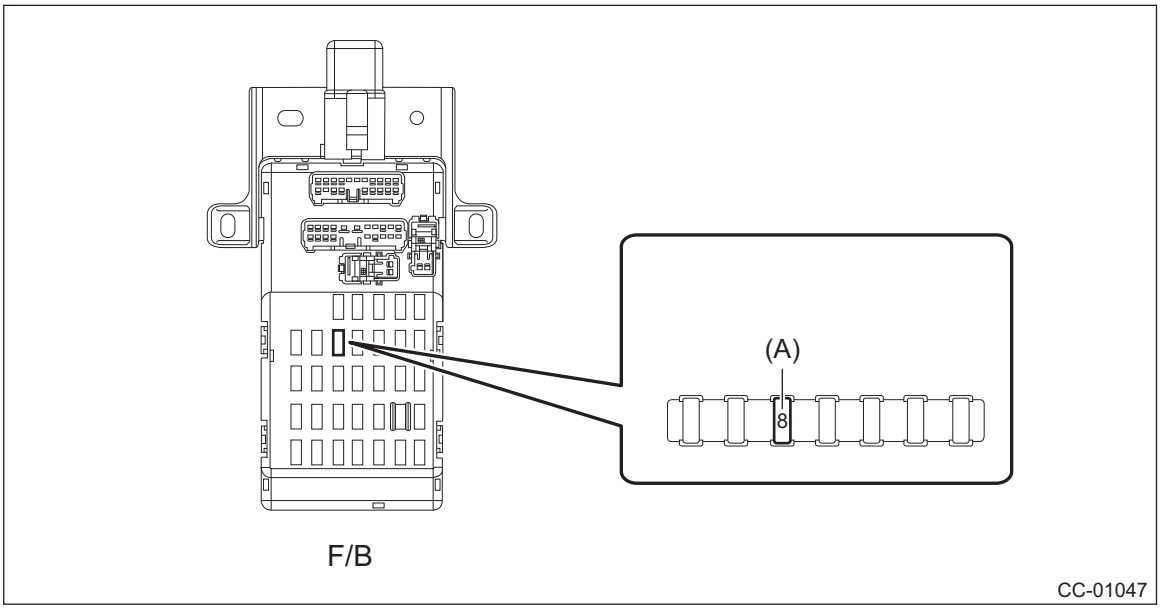
• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
• Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.
• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

2. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 7.5 A (stop light and brake switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Cruise Control System

A: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram.

- ENGINE TYPE FA: <Ref. to WI-131, ENGINE TYPE FA, WIRING DIAGRAM, Cruise Control System.>
- ENGINE TYPE EJ: <Ref. to WI-135, ENGINE TYPE EJ, WIRING DIAGRAM, Cruise Control System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)”. <Ref. to CC(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For operation procedures of each component of the cruise control system, refer to the respective section.

- Control module: <Ref. to CC-5, Control Unit.>

NOTE:
System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM):
  - Except for STI model: <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
  - STI model: <Ref. to FU(STI)-56, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

- Cruise control command switch: <Ref. to CC-6, Cruise Control Command Switch.>
- Combination meter: <Ref. to IDI-12, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-118, Stop Light Switch.>
- Clutch switch: <Ref. to CL-36, Clutch Switch.>
- Inhibitor switch: <Ref. to CVT(TR690)-93, Inhibitor Switch.>
- Neutral position switch:
  - Except for STI model: <Ref. to 6MT(TY75)-47, Switches and Harness.>
  - STI model: <Ref. to 6MT(TY85)-42, Neutral Position Switch.>

4. Control Unit

A: NOTE

System control of the cruise control is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM):
  - Except for STI model: <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
  - STI model: <Ref. to FU(STI)-56, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

5. Cruise Control Command Switch

A: REMOVAL

CAUTION:
Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
1) Set the tire to the straight-ahead position.
2) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
3) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-15, REMOVAL, Steering Wheel.>
5) Remove the cruise control command switch assembly. <Ref. to PS-16, DISASSEMBLY, Steering Wheel.>

B: INSTALLATION

CAUTION:
• Before handling the airbag system components, refer to "CAUTION" of "General Description" in "AIRBAG SYSTEM". <Ref. to AB-9, CAUTION, General Description.>
• Do not allow harness and connectors to interfere or get tangled up with other parts.
• Make sure that the steering roll connector is not turned from the original position.
• If the steering wheel and steering angle sensor (steering roll connector) are removed, perform "VSC(VDC) Centering Mode" of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• Securely install the switch. Improper insertion of the pin or claw of the switch may cause improper installation.
1) Install the cruise control command switch assembly.
2) Align the center position of the steering roll connector. <Ref. to AB-65, ADJUSTMENT, Roll Connector.>
3) Install the steering wheel.

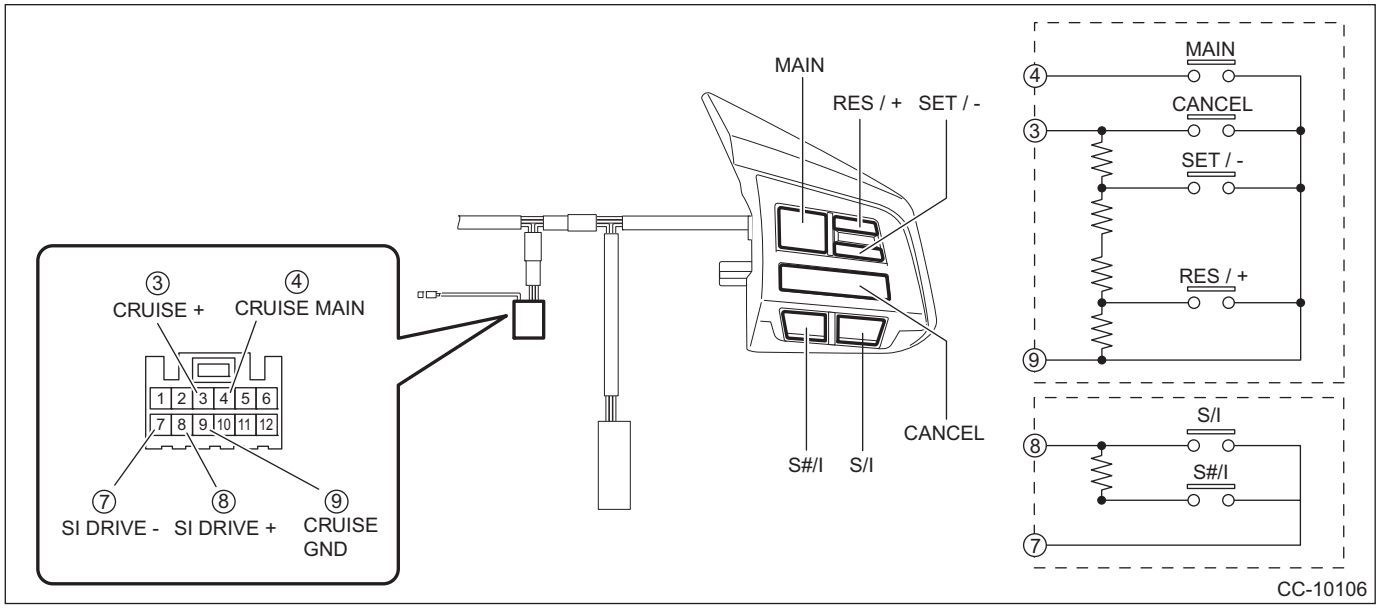
Tightening torque:
39 N·m (4 kgf-m, 28.8 ft-lb)

Clearance:
Between cover assembly - column and steering wheel: 4 — 6 mm (0.16 — 0.24 in)
4) Install the driver's airbag module. <Ref. to AB-35, INSTALLATION, Driver's Airbag Module.>
5) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
3 — 9	CANCEL SET/– RES/+	All OFF	Approx. 4,020 Ω
	CANCEL	ON	Less than 1 Ω
	SET/–	ON	Approx. 250 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	MAIN	OFF	1 MΩ or more
		ON	Less than 1 Ω
8 — 7	S/I S#/I	OFF	3 MΩ or more
	S/I	ON	Less than 1 Ω
	S#/I	ON	Approx. 1,800 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

3) Replace the cruise control command switch assembly if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-12, Combination Meter.>

7. Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-118, Stop Light Switch.>

8. Clutch Switch

A: NOTE

For the operation procedures for clutch switch, refer to “CLUTCH SYSTEM” section. <Ref. to CL-36, Clutch Switch.>

9. Inhibitor Switch

A: NOTE

For the operation procedures for inhibitor switch, refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR690)-93, Inhibitor Switch.>

10.Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

11.Neutral Position Switch

A: NOTE

For the operation procedures for neutral position switch, refer to “MANUAL TRANSMISSION AND DIFFERENTIAL” section.

- Except for STI model: <Ref. to 6MT(TY75)-47, Switches and Harness.>
- STI model: <Ref. to 6MT(TY85)-42, Neutral Position Switch.>

12.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “CRUISE CONTROL SYSTEM (DIAGNOSTICS)” section. <Ref. to CC(diag)-11, Diagnostics with Phenomenon.>

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

CC(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	General Description	5
3.	Electrical Component Location	6
4.	Engine Control Module (ECM) I/O Signal	7
5.	Subaru Select Monitor	8
6.	Read Cancel Code	9
7.	Real-time Diagnosis	10
8.	Diagnostics with Phenomenon	11
9.	List of Cancel Code	13
10.	Diagnostic Procedure with Cancel Code	16

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• When performing the entire diagnosis or cruise control diagnosis, first start the engine and wait until initial illumination of the ABS/VDC warning light completes. (If you start the diagnostics before performing the above procedures, the cancel code "43" is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)
• When performing diagnosis, observe the legal speed limit on the road.
• The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.
• Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

	Step	Check	Yes	No
1	**CHECK MALFUNCTION INDICATOR LIGHT.** Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step **5**.	Go to step **2**.
2	**CHECK CRUISE INDICATOR LIGHT.** Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step **7**.	Go to step **3**.
3	**CHECK CRUISE SWITCH OPERATION.** Check the CRUISE switch operation. (Check the illumination of the CRUISE indicator.)	Is the CRUISE switch turned on? (Does the CRUISE indicator illuminate?)	Go to step **4**.	Go to phenomenon 1. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	**CHECK CRUISE CONTROL SET OPERATION.** Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step **8**.	Go to step **7**.
5	**CHECK DTC.** Read all DTCs using the Subaru Select Monitor.	Is an engine or ABS/VDC related DTC displayed?	Record the DTC. Go to step **6**.	Go to phenomenon 2. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, check the Freeze Frame Data or Information in Trouble State.	Was the Freeze Frame Data or Information in Trouble State recorded?	Record the data. Perform the diagnosis according to the engine or ABS/VDC related DTC.	Perform the diagnosis according to the engine or ABS/VDC related DTC.
7	**CHECK CANCEL CODE.** Using the Subaru Select Monitor, read the cancel codes. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the cruise control command switch after the cruise control is deactivated. If the above is performed, the cancel code will be cleared.	Is it possible to read the cancel codes?	Perform the diagnosis according to the cancel code. <Ref. to CC(diag)-13, LIST, List of Cancel Code.>	Go to step **8**.

	Step	Check	Yes	No
8	**CHECK SET INDICATOR.** Check the illumination of the SET indicator.	Does the SET indicator illuminate?	Go to step **9**.	Go to phenomenon 3. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
9	**CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.** Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed ±3 km/h (±2 MPH)? (Make sure that on a level road.)	Go to step **10**.	Go to phenomenon 4. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
10	**CHECK RES/+ OPERATION.** Check the RES/+ switch operation.	Does the vehicle speed increase or return to set speed after RES/+ switch has been pressed?	Go to step **11**.	Go to phenomenon 5. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
11	**CHECK SET/– OPERATION.** Check the SET/– switch operation.	Does the vehicle speed decrease after SET/– switch has been pressed?	Go to step **12**.	Go to phenomenon 6. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
12	**CANCEL OPERATION CHECK.** Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step **13**.	Go to phenomenon 7. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
13	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step **14**.	Go to phenomenon 8. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
14	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step **15**.	Go to phenomenon 9. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
15	**CHECK CRUISE CONTROL RELEASE OPERATION.** Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-11, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

2. General Description

A: CAUTION

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

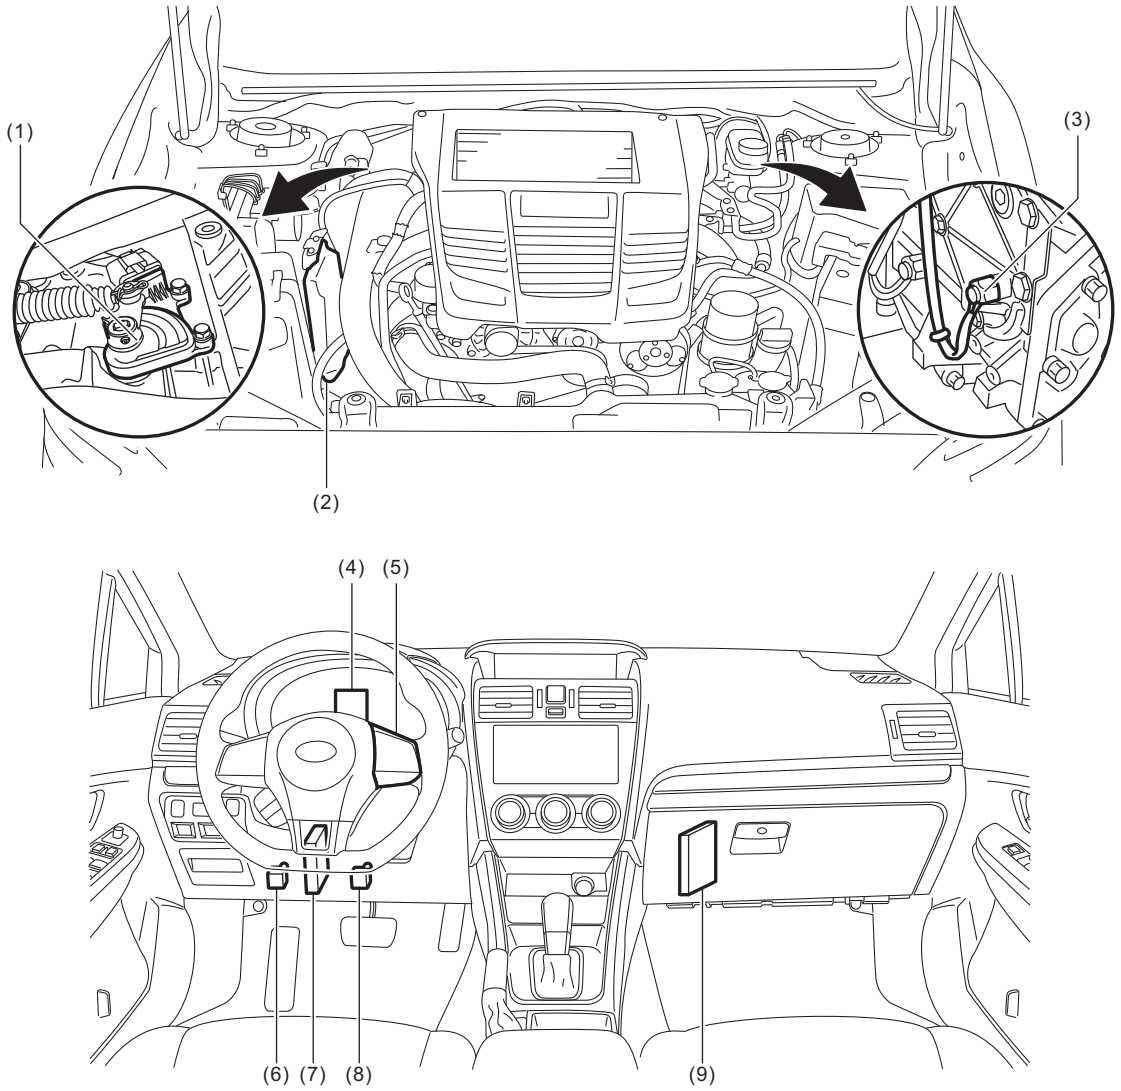
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used for Subaru Select Monitor 4.

C: INSPECTION

Check the battery. <Ref. to SC(STI)-24, INSPECTION, Battery.> <Ref. to SC(w/o STI)-50, INSPECTION, Battery.>

3. Electrical Component Location

A: LOCATION



(1) Inhibitor switch (CVT model)
(2) Engine control module (ECM) (engine type FA)
(3) Neutral position switch (MT model)
(4) Cruise indicator light and cruise set indicator light
(5) Cruise control command switch
(6) Clutch switch (MT model)
(7) Transmission control module (TCM) (CVT model)
(8) Stop light and brake switch
(9) Engine control module (ECM) (engine type EJ)

4. Engine Control Module (ECM) I/O Signal

A: ELECTRICAL SPECIFICATION

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-22, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(STI)(diag)-21, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to “Cruise Control System” in the wiring diagram. <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.
The on-board diagnosis function operates in two categories, which are used depending on the type of problems.
1) Cruise Control Cancel Conditions Diagnosis:
(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
(2) Cruise control memory in ECM stores the cancel code which occurred during driving. When there are multiple cancel code, they are shown on the Subaru Select Monitor.

CAUTION:
• In the cruise control memory, not only the cruise control "cancel" occurred (although the "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver is stored.
• The latest memory content (latest code) is cleared when ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.
2) Real-time Diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For detailed operation procedures, refer to "Application help".

6. Read Cancel Code

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

NOTE:
When performing the entire diagnosis or cruise control diagnosis, first start the engine and wait until initial illumination of the ABS/VDC warning light completes. (If you start the diagnostics before performing the above procedures, the cancel code “43” is recorded and CRUISE indicator does not illuminate even though the CRUISE switch is pressed.)

CAUTION:
- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver’s operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

6) When the set speed is cancelled by itself (when cancelled without a cancel operation such as applying the brake) or if the cruise control could not be set by performing the setting operation, selecting the «Cancel Code» on the engine malfunction diagnosis screen will display the cancel code on the select monitor display.

NOTE:
The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».
7) Perform Engine DTC Clear Memory operation. <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.> <Ref. to EN(STI)(diag)-79, OPERATION, Clear Memory Mode.>
Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:
- The latest code will be cleared by turning ignition switch to OFF.
- For detailed operation procedures, refer to “Application help”.
- For details on cancel codes, refer to List of Cancel Code. <Ref. to CC(diag)-13, List of Cancel Code.>

7. Real-time Diagnosis

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Make sure that normal display is shown when operated as follows:

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
- Turn the “CRUISE” switch to ON.
- Turn the “CANCEL” switch to ON.
- Turn the “SET/–” switch to ON.
- Turn the “RES/+” switch to ON.
- Depress or release the clutch switch.
- Place the shift lever in any position other than neutral.

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check Item	Note
1	CRUISE switch is not turned ON. (CRUISE indicator does not illuminate.) Or the cruise control is cancelled without CRUISE switch operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check the CRUISE indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation.	(1) Perform cruise cancel conditions diagnosis.	Perform the diagnosis according to displayed cancel code.
		(2) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(3) Check the cruise control command switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
		(4) Check stop light switch and brake switch.	<Ref. to BR-118, Stop Light Switch.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check clutch switch.	<Ref. to CL-36, Clutch Switch.> <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
		(6) Check the neutral position switch.	<Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-26, 62, Diagnostic Procedure with Cancel Code.>
		(7) Check vehicle speed sensor.	<Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>
3	SET indicator does not illuminate.	Check the SET indicator.	<Ref. to CC(diag)-12, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the RES/+ switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
6	Vehicle speed does not decrease after SET/– switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the SET/– switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
7	Cruise control is not released after CANCEL switch has been pressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the CANCEL switch.	<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
8	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-118, INSTALLATION, Stop Light Switch.>
9	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check the neutral position switch.	<Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC-13, Neutral Position Switch.>

Phenomenon		Check Item	Note
10	Cruise control is not released after clutch pedal has been depressed.	(1) Perform the real-time diagnosis.	Check the input signal of cruise control system.
		(2) Check clutch switch.	<Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.> <Ref. to CL-36, CLUTCH SWITCH, INSTALLATION, Clutch Switch.>

B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

Trouble symptom:
Cruise control can be set, but the CRUISE indicator and SET indicator do not illuminate.

Step		Check	Yes	No
1	**CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.** Perform the combination meter operation check. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the CRUISE & SET indicators illuminate?	Go to step **2**.	Replace the meter case assembly. <Ref. to IDI-12, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is a DTC of the LAN system detected?	Perform the diagnosis according to DTC for LAN system.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

9. List of Cancel Code

A: LIST

NOTE:
- The cancel code is registered even when cancel is performed intentionally by the driver.
- Cancel codes are cleared if the ignition switch is turned to OFF.
- If a different cancel code is input after a cancel code (latest code) has been input, the latest code is overwritten.
- If the cruise indicator light is flashing, a malfunction is occurring in the system or cruise control related switch. The cancel code at this time is saved even after ignition switch is OFF as a memory code of a past malfunction.
- To display a cancel code, use the Subaru Select Monitor to read the code after the cruise control is deactivated during a driving test.

Cancel code	Item	Contents of diagnosis	Note
11	Main switch	CRUISE switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the CRUISE switch. <Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
13	Clutch switch	Clutch switch is turned to ON, and then the cruise control is released.	This code is displayed without depressing the clutch pedal. <Ref. to CC(diag)-19, 13, Diagnostic Procedure with Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This code is displayed without shifting to neutral position. <Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This code is displayed without operating the cancel switch. <Ref. to CC(diag)-23, 15, Diagnostic Procedure with Cancel Code.>
16	Ignition SW	Ignition switch is turned to OFF, and then the cruise control is released.	This code is displayed without operating the ignition switch. <Ref. to CC(diag)-23, 16, Diagnostic Procedure with Cancel Code.>

List of Cancel Code

Cancel code	Item	Contents of diagnosis	Note
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This code is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-24, 21, Diagnostic Procedure with Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This code is displayed with normal operation. <Ref. to CC(diag)-25, 24, Diagnostic Procedure with Cancel Code.>
31	Abnormal engine speed Signal	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st (MT model only) or Reverse position.	Cruise in 2nd shift position or more. <Ref. to CC(diag)-25, 31, Diagnostic Procedure with Cancel Code.>
32	Cruse Control out of Range	• Controlled vehicle speed decreased under the limit during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This code is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-25, 32, Diagnostic Procedure with Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This code is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-25, 34, Diagnostic Procedure with Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, unreleased parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-26, 35, Diagnostic Procedure with Cancel Code.>

Cancel code	Item	Contents of diagnosis	Note
41	VDC/TCS Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	This code is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-26, 41, Diagnostic Procedure with Cancel Code.>
43	ABS/VDC Failure	• Detected the situation that some or all functions of ABS or VDC can not be activated during cruise driving or cruise setting. • The CRUISE switch was pressed before starting the engine, but the CRUISE indicator did not illuminate.	<Ref. to CC(diag)-26, 43, Diagnostic Procedure with Cancel Code.>
44	Body Integrated unit Failure	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-26, 44, Diagnostic Procedure with Cancel Code.>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-26, 45, Diagnostic Procedure with Cancel Code.>
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-26, 49, Diagnostic Procedure with Cancel Code.>
61	Stop & Brake switch	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-26, 61, Diagnostic Procedure with Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-26, 62, Diagnostic Procedure with Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-26, 63, Diagnostic Procedure with Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-27, 64, Diagnostic Procedure with Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Cruise control command switch malfunction is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-27, 65, Diagnostic Procedure with Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to CC(diag)-27, 66, Diagnostic Procedure with Cancel Code.>

10.Diagnostic Procedure with Cancel Code

A: 11

When CRUISE switch is pressed, or a malfunction related to CRUISE switch occurs, this is detected.

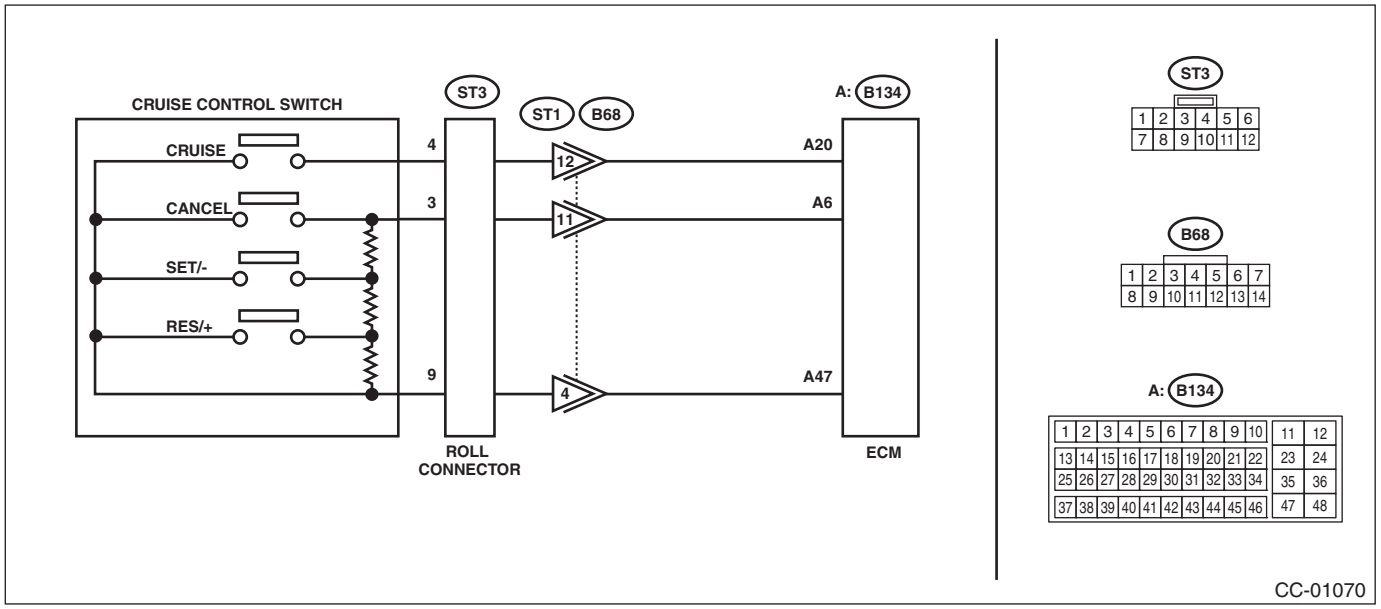
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

- Engine type: FA



- Engine type: EJ

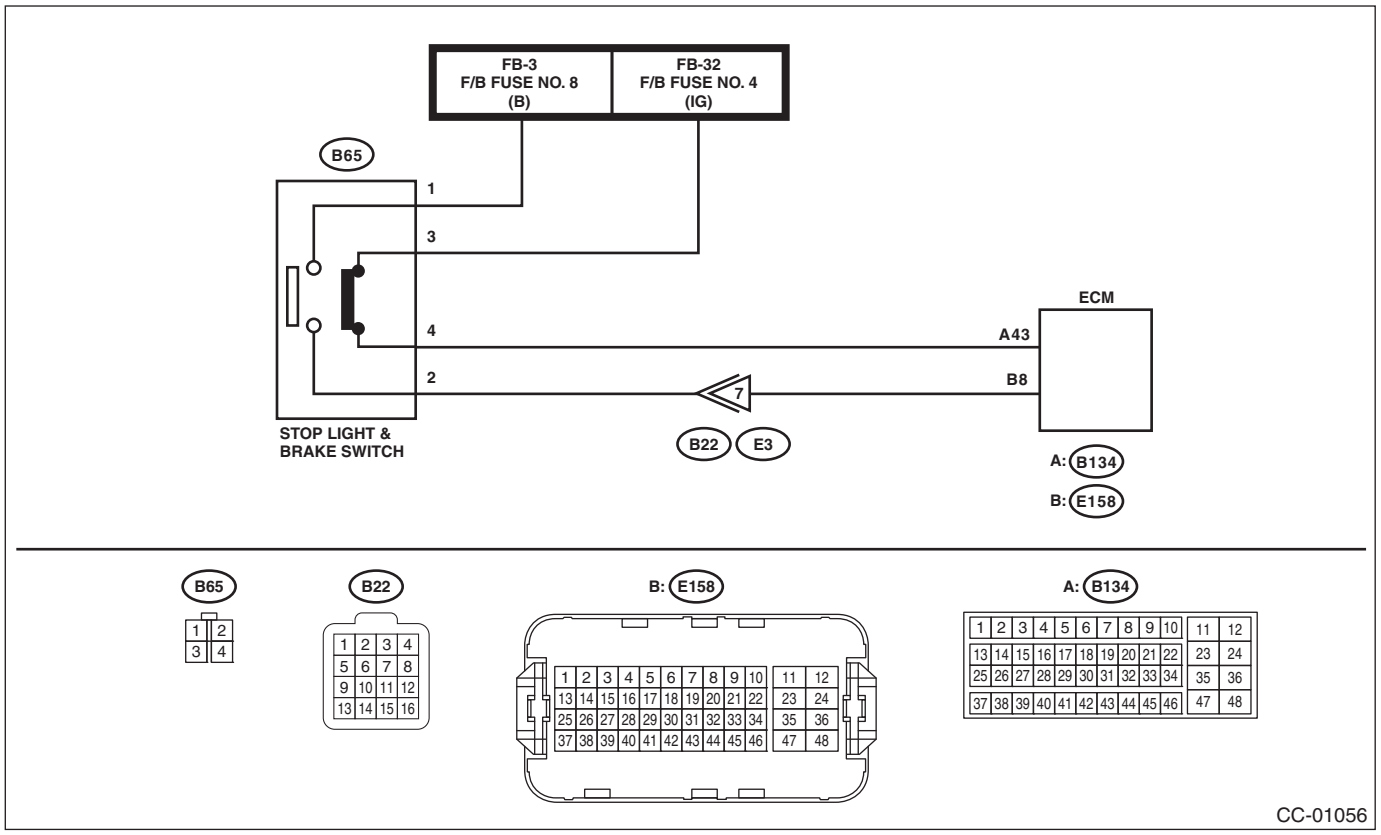
	Step	Check	Yes	No
1	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 3 (+) — Chassis ground (–):*** ***(ST3) No. 4 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
2	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between cruise control command switch, ECM, and chassis ground and check the ECM.
3	**CHECK CRUISE CONTROL COMMAND SWITCH.** Measure the resistance between switch terminals when the cruise control command switch is not depressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 4 kΩ?	Go to step **4**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
4	**CHECK CANCEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. less than 1 Ω when the CANCEL switch is pressed?	Go to step **5**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5	**CHECK SET/– SWITCH.** Measure the resistance between the switch terminals with the SET/– switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 250 Ω when the SET/– switch is pressed?	Go to step **6**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6	**CHECK RES/+ SWITCH CIRCUIT.** Measure the resistance between the switch terminals with the RES/+ switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approx. 1,500 Ω when the RES/+ switch is pressed?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

B: 12

Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.
Trouble symptom:
- Cruise control cannot be set.
- Cruise control cannot be released.

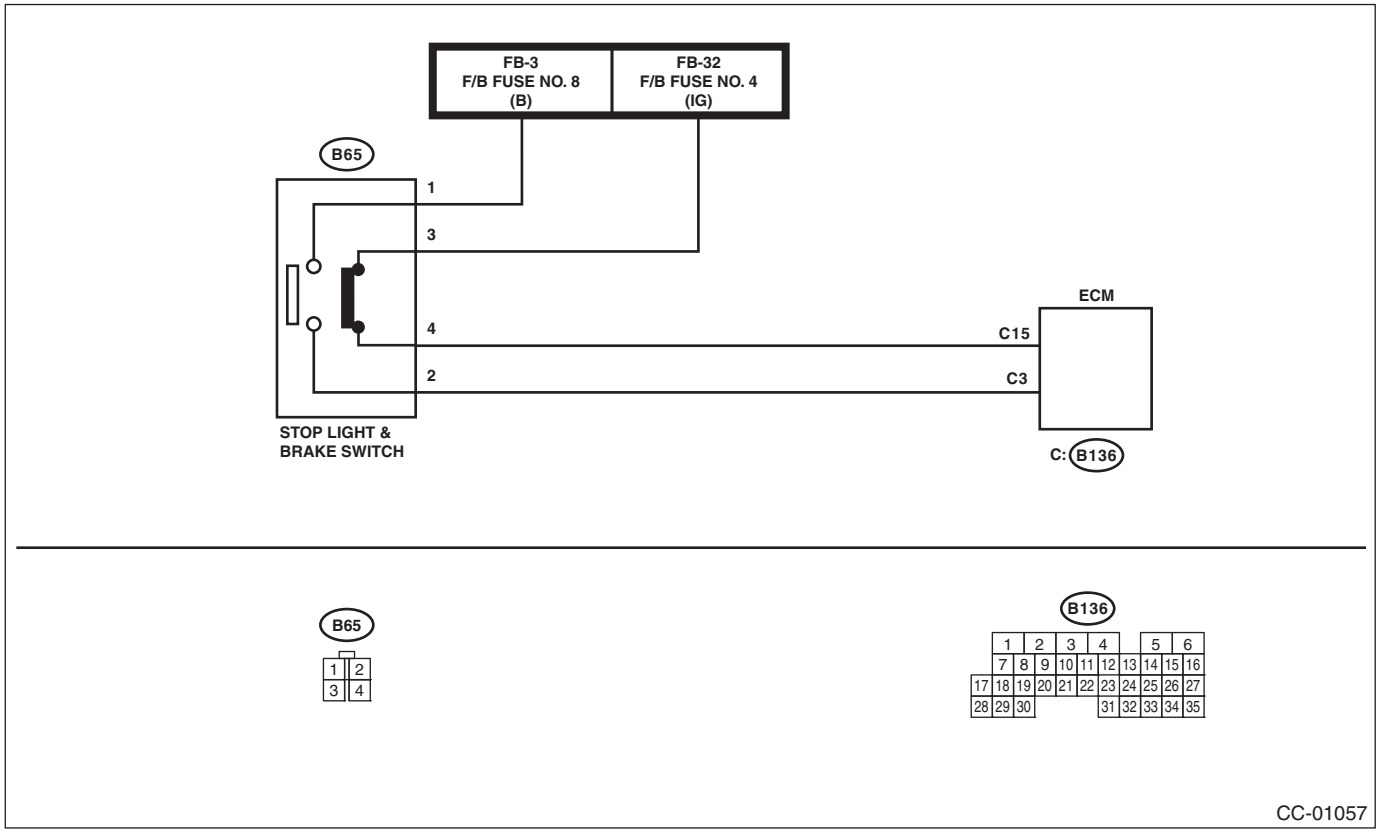
Wiring diagram:
Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

- Engine type: FA



CC-01056

- Engine type: EJ



CC-01057

	Step	Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>	Are the check results for the stop light & brake switch unit, and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 8 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	• Check the fuse No. 4 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
4	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 43 — (B65) No. 4:*** ***(E158) No. 8 — (B65) No. 2:*** ***Engine type: EJ*** ***(B136) No. 3 — (B65) No. 2:*** ***(B136) No. 15 — (B65) No. 4:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the harness.

C: 13

Detected when clutch pedal is depressed or malfunction related to clutch switch occurs.

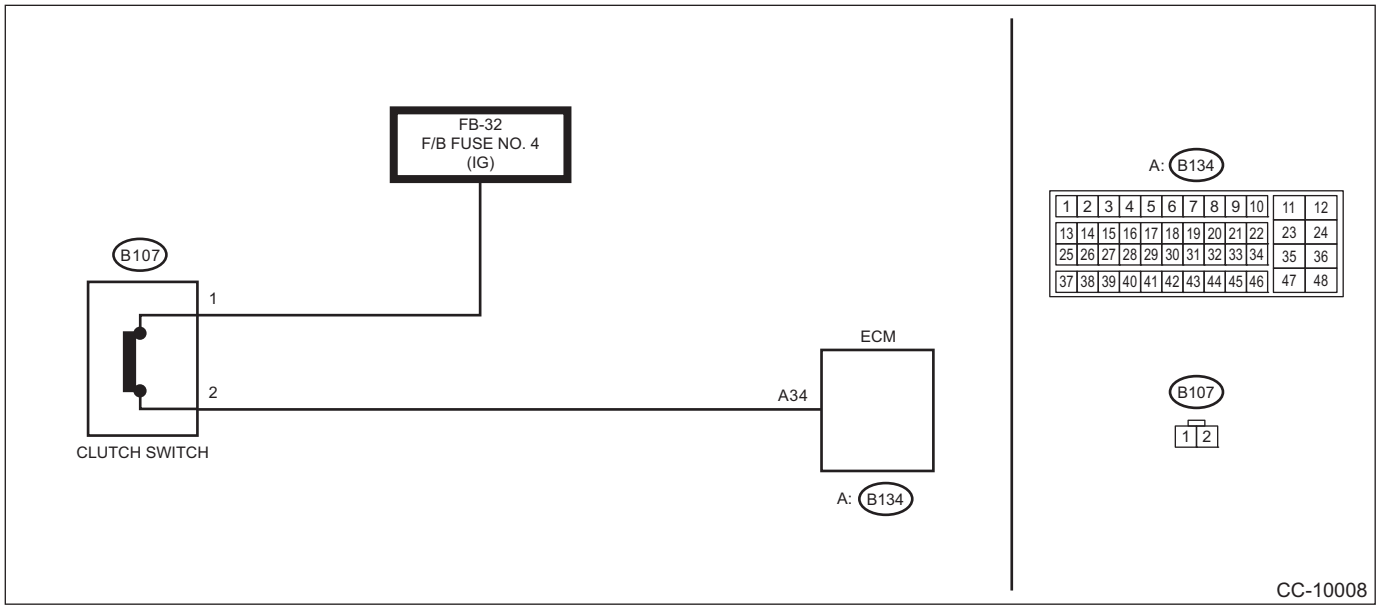
Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

- Engine type: FA



- Engine type: EJ

	Step	Check	Yes	No
1	**CHECK CLUTCH SWITCH.** Check the clutch switch. <Ref. to CC-10, Clutch Switch.>	Is the check result of the clutch switch unit and installation position OK?	Go to step **2**.	Replace the clutch switch. Or adjust the installation position.
2	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B107) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 4 (fuse & relay box). • Check open or shorted circuit of harness between clutch switch and fuse & relay box.

Step		Check	Yes	No
3	**CHECK CLUTCH SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. ***Connector & terminal*** ***Engine type: FA*** ***(B107) No. 2 — (B134) No. 34:*** ***Engine type: EJ*** ***(B107) No. 2 — (B135) No. 9:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Repair the harness.

D: 14

Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.

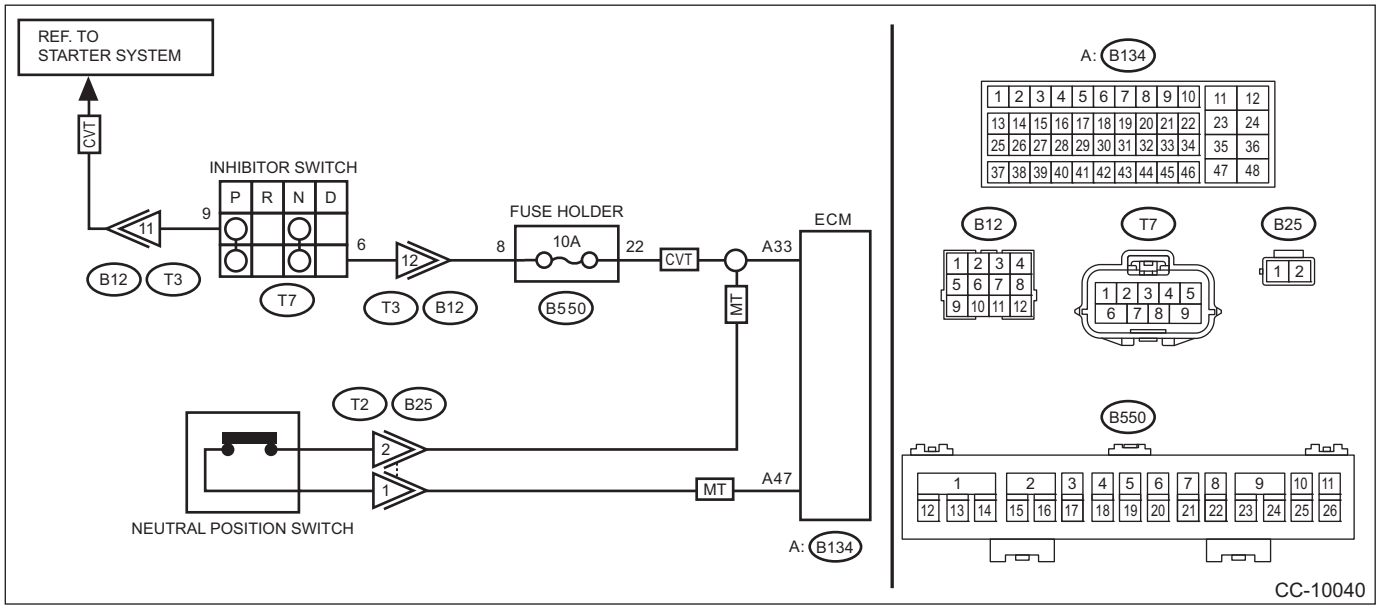
Trouble symptom:

Cruise control cannot be set.

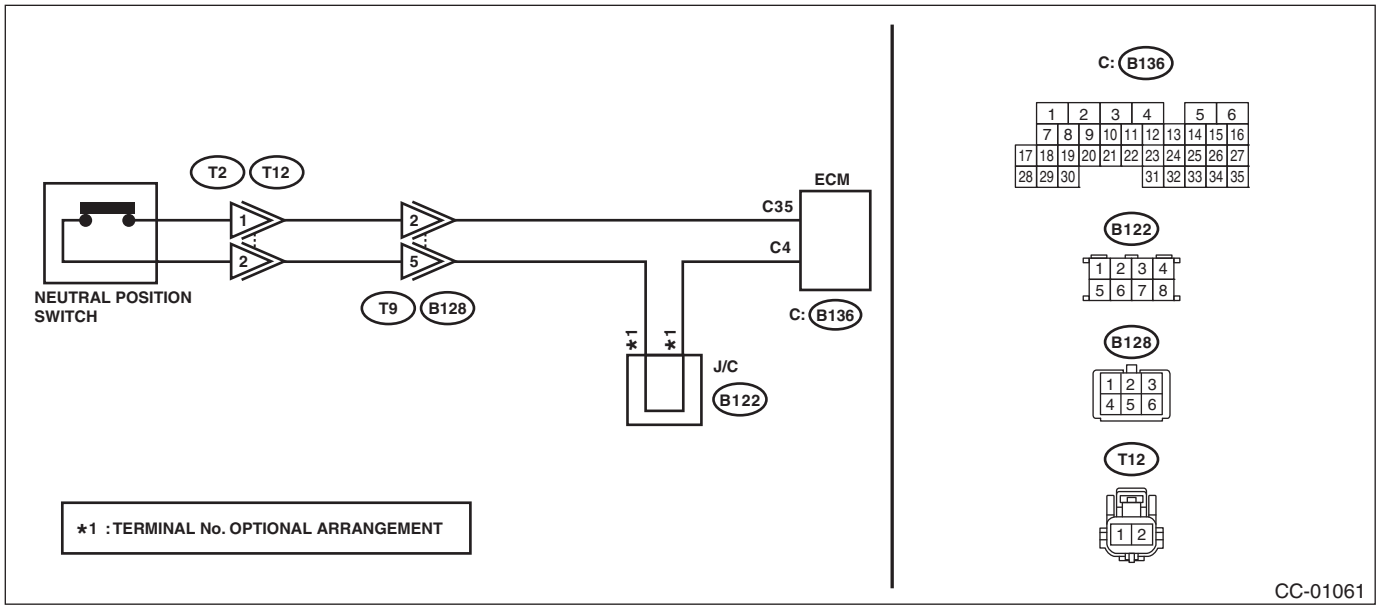
Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK TRANSMISSION TYPE.**	Is the transmission type CVT?	Go to step **2**.	Go to step **5**. (MT model)
2	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(T7) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check for open or short circuit in the harness between inhibitor switch and ECM.
3	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between the inhibitor switch harness connector terminal and the starter motor. ***Connector & terminal*** ***(T7) No. 9 — Starter motor:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the harness.
4	**CHECK INHIBITOR SWITCH.** Remove and check the inhibitor switch. <Ref. to CC-11, Inhibitor Switch.>	Is the check result OK?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Replace the inhibitor switch.

	Step	Check	Yes	No
5	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***Engine type: FA*** ***(B25) No. 2 (+) — Chassis ground (–):*** ***Engine type: EJ*** ***(T12) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for open or short in the harness between neutral position switch and ECM.
6	**CHECK NEUTRAL POSITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. ***Connector & terminal*** ***Engine type: FA*** ***(B25) No. 1 — Chassis ground:*** ***Engine type: EJ*** ***(T12) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the harness.
7	**CHECK NEUTRAL POSITION SWITCH.** Remove and check the neutral position switch. <Ref. to CC-13, Neutral Position Switch.>	Is the check result OK?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Replace the neutral position switch.

E: 15

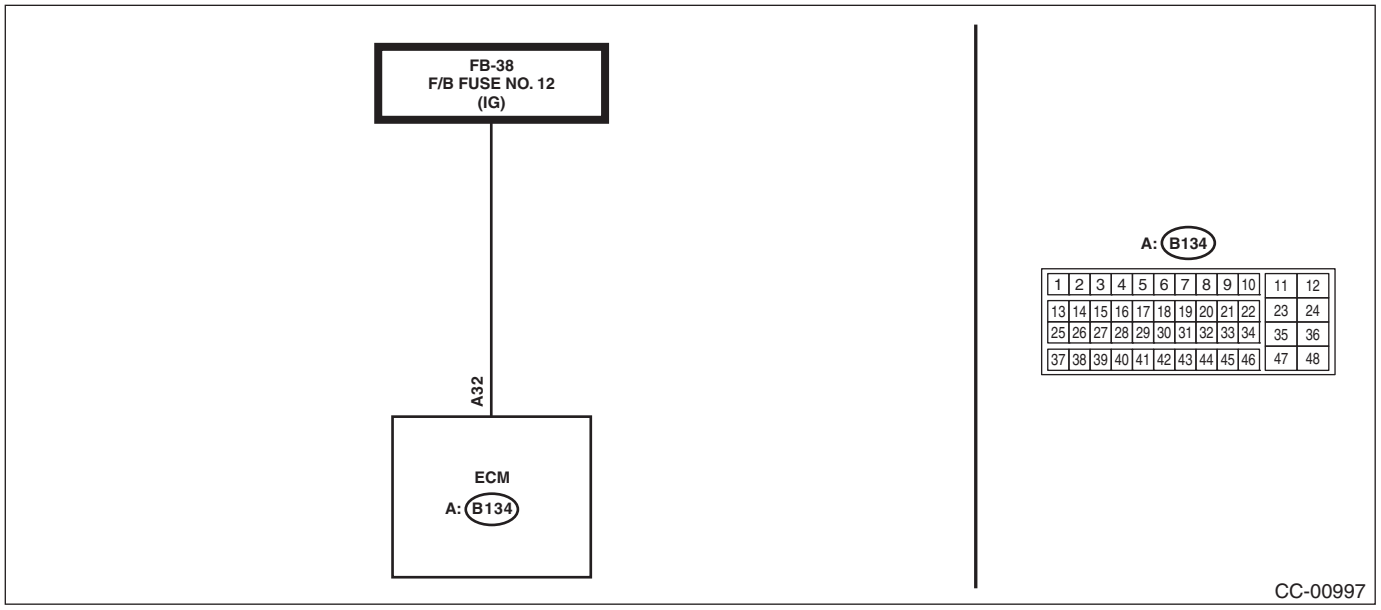
Detected when CANCEL switch is pressed or malfunction related to CRUISE switch occurs.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

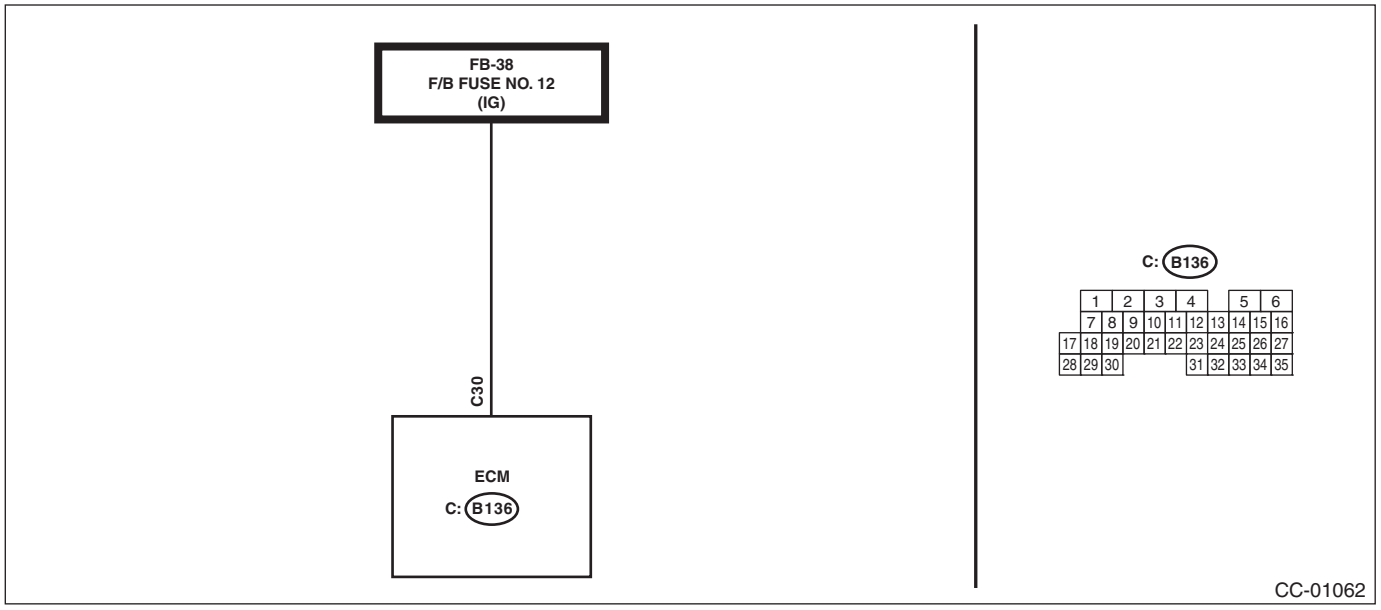
F: 16

Detected when ignition switch is turned to OFF or malfunction related to the ignition switch occurs.
Trouble symptom:
Cruise control cannot be set.
Wiring diagram:
Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 32 (+) — Chassis ground (–):*** ***Engine type: EJ*** ***(B136) No. 30 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	• Check the fuse No. 12 (fuse & relay box). • Check the harness for open or short circuit between ignition switch and ECM.

G: 21

Cruise control command switch malfunction is detected.
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

H: 22

Malfunction related to vehicle speed sensor is detected.
Diagnosis:
Open or short circuit in the vehicle speed sensor system.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	**CHECK ABS OR VDC WARNING LIGHT.** 1) Turn the ignition switch to ON. 2) After the initial operation of the combination meter finished, check if the ABS or VDC warning light stays illuminated.	Does the warning light stay illuminated?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.
2	**CHECK DTC OF LAN COMMUNICATION CIRCUIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform inspection according to DTC.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

I: 24

Malfunction in cruise control-related switch is detected.
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

J: 31

Engine speed signal malfunction is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st (only for MT vehicles) or Reverse position.
After driving at the 2nd gear position or higher, perform the cruise setting again. If a cancel code is not detected, it is normal.

K: 32

Detected when the vehicle speed is out of the system controllable range.
Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.
If cancel code is still detected after setting cruise again, perform the diagnosis for DTC 22.
Refer to 22 for diagnostic procedure.
<Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>

L: 34

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.
This cancel code is detected when driving for a long period of time at a speed higher than appropriate for cruise control setting by operating the accelerator pedal.
Perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

M: 35

Detected when it is impossible to perform the vehicle speed feedback.
Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, abnormal decrease of engine output, etc.) during cruise driving.
Cancel code is detected when driving condition is not suitable for cruise control.
Perform cruise set operation again after clearing the possible cause.

N: 41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC) or TCS/EPB is operated during cruise driving or cruise setting.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: 43

- The situation that some or all functions for ABS/VDC can not work is detected.

During cruise driving or cruise setting, the situation that some or all functions for ABS/VDC can not work is detected.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

- CRUISE indicator does not illuminate even though you pressed the CRUISE switch before starting the engine.

Detected when the CRUISE switch is pressed during the initial diagnosis of ABS/VDC. It is normal if the CRUISE indicator illuminates when you press the CRUISE switch again after starting the engine and confirming that the initial illumination of the ABS/VDC warning light has been ended.

P: 44

Body integrated unit malfunction is detected.
Body integrated unit system malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise control setting.
<Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: 61

Malfunction in the stop light & brake switch is detected.
Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to 12 for diagnostic procedure.
<Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>

T: 62

Neutral position switch malfunction is detected.
Trouble symptom:
Cruise control cannot be set.
Refer to 14 for diagnostic procedure.
<Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.>

U: 63

Malfunction of vehicle speed signal variation is detected.
Trouble symptom:

Cruise control cannot be set. (Cancelled immediately.)
Refer to 22 for diagnostic procedure.
<Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>

NOTE:
This cancel code may be detected when the vehicle suddenly started with VDC OFF on low μ road surface. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

V: 64

Malfunction related to engine is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: 65

Cruise control command switch malfunction is detected.
While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to CC(diag)-16, 11, Diagnostic Procedure with Cancel Code.>

X: 66

Cruise control calculation malfunction is detected.
Refer to the Engine Diagnostic Procedure for diagnostic procedure.
<Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

IMMOBILIZER (DIAGNOSTICS)

IM(diag)

Page

1. Basic Diagnostic Procedure 2

9. List of Diagnostic Trouble Code (DTC) 14
10. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 16

1. Basic Diagnostic Procedure

A: PROCEDURE

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Register the immobilizer system.	Go to step **2**.
2	**CHECK SECURITY INDICATOR LIGHT.** 1) Remove the ignition key from ignition switch. 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step **3**.	Check the security indicator light circuit. <Ref. to IM(diag)-11, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3	**CHECK KEY SWITCH.** Insert the ignition key in the ignition switch. (OFF or ACC)	Does the security indicator light remain blinking?	Check the key switch circuit. <Ref. to IM(diag)-12, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>	Go to step **4**.
4	**CHECK SECURITY INDICATOR LIGHT.** Check the security indicator light status in the condition of step 3.	Does the security indicator light go off?	Go to step **7**.	Go to step **5**.
5	**CHECK SECURITY INDICATOR LIGHT.** Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step **7**.	Go to step **6**.
6	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **8**.
7	**CHECK ENGINE START.** Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Go to step **9**.
8	**CHECK DTC.** Read the DTC of body integrated unit and ECM and time stamp using Subaru Select Monitor. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Go to step **10**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

	Step	Check	Yes	No
9	**CHECK DTC.** Read the DTC of body integrated unit and ECM and time stamp using Subaru Select Monitor. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).> NOTE: For time stamp, refer to “LAN SYSTEM”. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Are any DTCs displayed?	Go to step **10**.	Perform the diagnosis for engine system. <Ref. to EN(w/o STI)(diag)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.> <Ref. to EN(STI)(diag)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.>
10	**CHECK FREEZE FRAME DATA.** Using the Subaru Select Monitor, check the Freeze Frame Data.	Are the data recorded?	Record the data. Go to step **11**.	Go to step **11**.
11	**CHECK DTC.** Check the displayed DTC.	Are DTCs irrelevant to the immobilizer displayed?	Perform the diagnosis according to DTCs irrelevant to the immobilizer first.	Go to step **12**.
12	**PERFORM DIAGNOSIS.** 1) Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read DTCs again. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

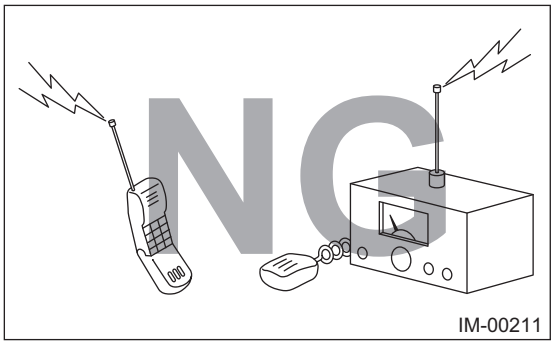
2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

NOTE:
For immobilizer diagnosis of model with the keyless access with push button start system, refer to “Keyless Access with Push Button Start System”. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>

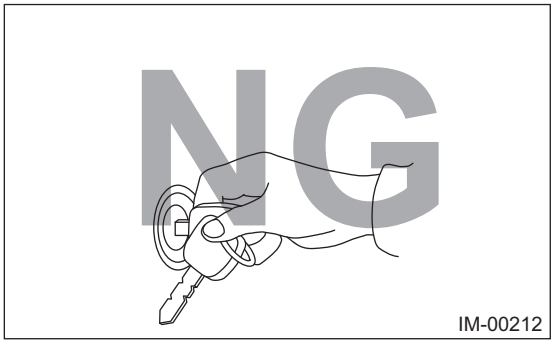
2. General Description

A: CAUTION

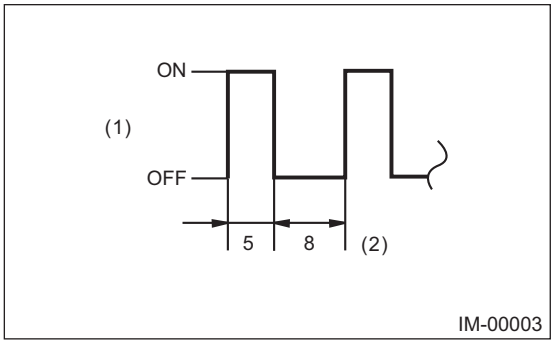
CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness.
• While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.



• When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.



• When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.



(1) Ignition switch position
(2) Sec.

• If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
• Before performing the diagnostics, obtain all keys for the vehicle from the owner.

• Do not register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

B: PREPARATION TOOL

1. SPECIAL TOOL

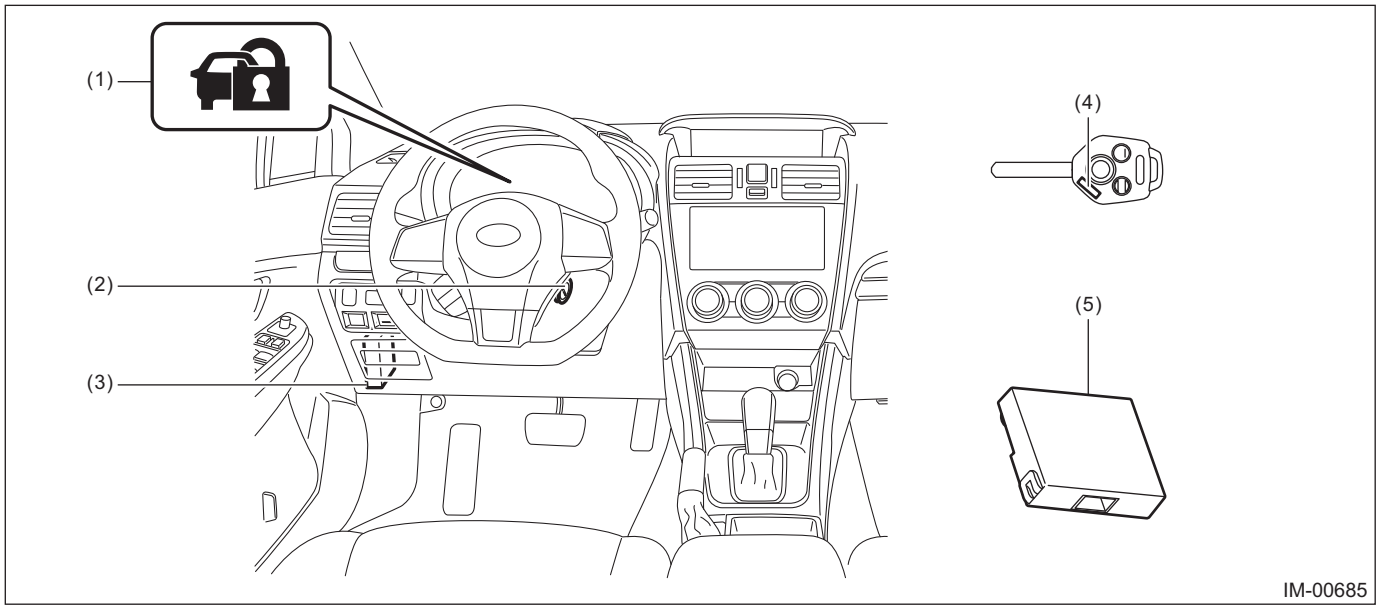
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. Electrical Component Location

A: LOCATION



(1) Security indicator light (LED bulb)
(2) Antenna
(3) Body integrated unit
(4) Transponder
(5) Security control module (for C0 model only)

4. Immobilizer Control Module I/O Signal

A: WIRING DIAGRAM

1. IMMOBILIZER

Refer to “Immobilizer System” in the wiring diagram. <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

For detailed operation procedures, refer to “Application help”.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>

NOTE:
If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-17, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to IM(diag)-14, List of Diagnostic Trouble Code (DTC).>

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».

2. BODY INTEGRATED UNIT

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».

7. Clear Memory Mode

A: OPERATION

NOTE:
For detailed operation procedures, refer to “Application help”.

1. ECM

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Engine Control System» and then select «Enter».
5) On «Engine Control System» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
Initial diagnosis of electronic throttle control is performed after memory clearance. Wait for 10 seconds or more after turning the ignition switch to ON, and then start the engine.

2. BODY INTEGRATED UNIT

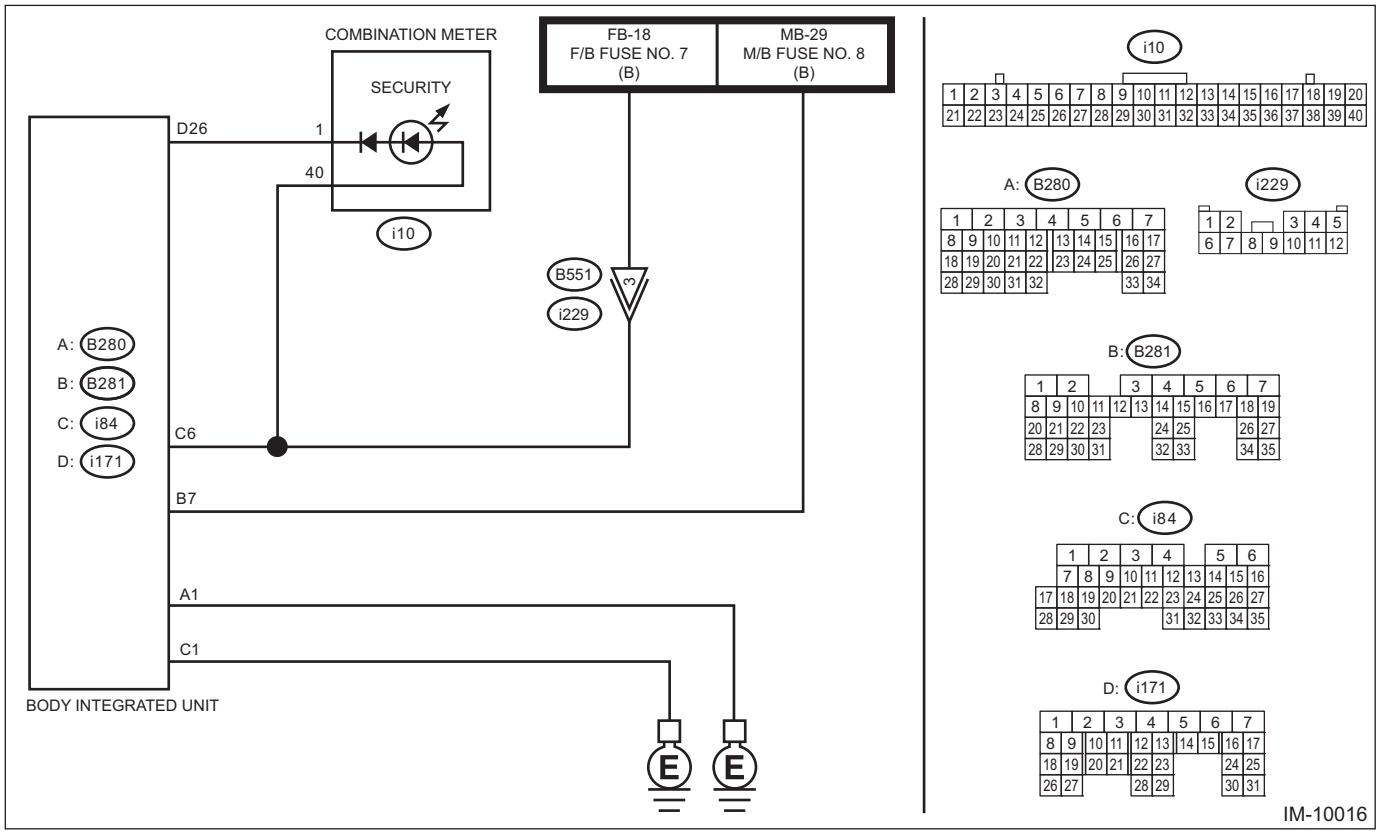
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Body Control» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

8. Diagnostics Chart for Security Indicator Light

A: INSPECTION

1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>

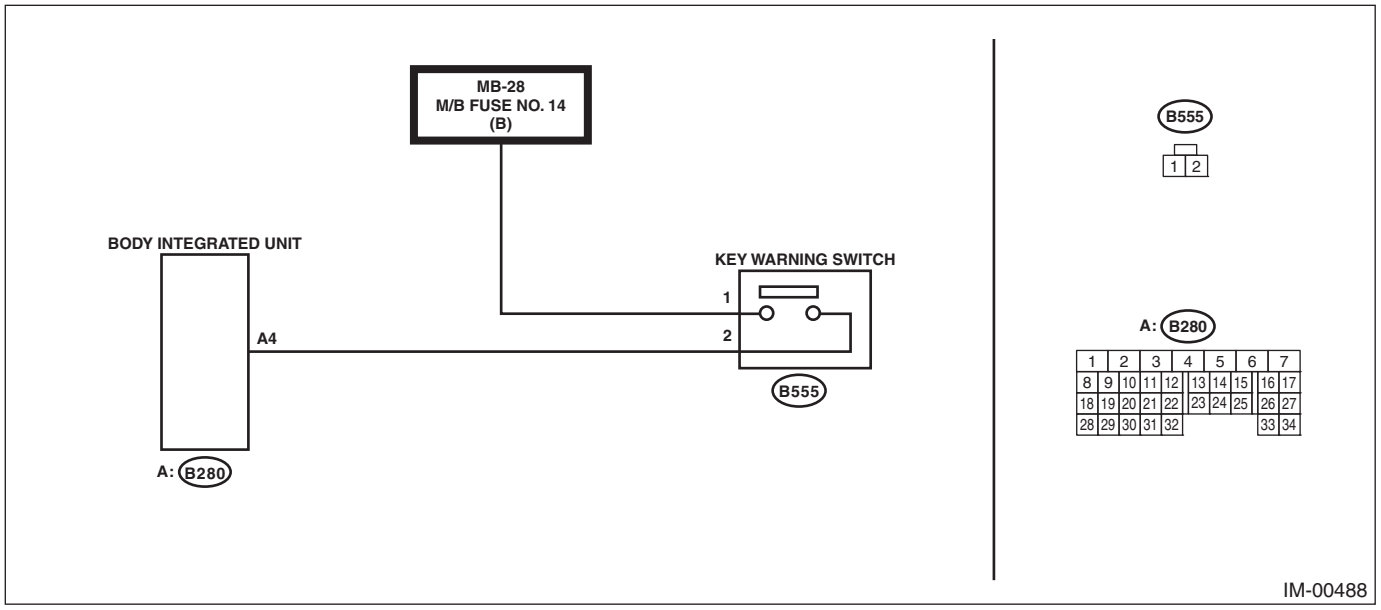


Step		Check	Yes	No
1	**CHECK FUSE.** 1) Remove the ignition key from ignition switch. Or, turn off the power. 2) Check the fuse (M/B No. 8).	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.
2	**CHECK SECURITY INDICATOR LIGHT.** 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 26 and chassis ground.	Does the security indicator light illuminate?	Go to step **3**.	Go to step **5**.

	Step	Check	Yes	No
3	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the open circuit of the body integrated unit ground circuit.
4	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (–):*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check the harness for open or short circuit between body integrated unit and fuse.
5	**CHECK COMBINATION METER CIRCUIT.** 1) Remove the combination meter. <Ref. to IDI-12, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. ***Connector & terminal*** ***(i10) No. 40 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for an open or short circuit in the harness between the combination meter and fuse.
6	**CHECK COMBINATION METER CIRCUIT (OPEN).** Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. ***Connector & terminal*** ***(i171) No. 26 — (i10) No. 1:***	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-13, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

2. CHECK KEY SWITCH CIRCUIT

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



Diagnostics Chart for Security Indicator Light

	Step	Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the connector from key warning switch. 2) Measure the voltage between key warning switch connector terminal and chassis ground. ***Connector & terminal*** ***(B555) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the harness for an open or short between the key warning switch and fuse.
2	**CHECK KEY WARNING SWITCH.** 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance less than 1 Ω?	Go to step **3**.	Replace the key warning switch. <Ref. to SL-68, Key Lock Cylinders.>
3	**CHECK KEY WARNING SWITCH.** 1) Remove the ignition key from ignition switch. 2) Measure the resistance between key warning switch connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Replace the key warning switch. <Ref. to SL-68, Key Lock Cylinders.>
4	**CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT (OPEN).** 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between key warning switch connector terminal and body integrated unit connector terminal. ***Connector & terminal*** ***(B555) No. 2 — (B280) No. 4:***	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between key warning switch and body integrated unit.

9. List of Diagnostic Trouble Code (DTC)

A: LIST

NOTE:
If DTCs irrelevant to the immobilizer are displayed, perform diagnosis according to the DTCs irrelevant to the immobilizer first.

1. ECM

DTC	Item	Contents of diagnosis	Index No.
B1571	REFERENCE CODE INCOMPATIBILITY	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-16, DTC B1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1572	IMM CIRCUIT EXCEPT ANTENNA CIRCUIT	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-17, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1576	EGI CONTROL MODULE EEPROM	ECM malfunctioning	<Ref. to IM(diag)-21, DTC B1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1577	IMM CONTROL MODULE EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-21, DTC B1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B1578	METER	Except for C0 model • Reference code incompatibility between combination meter and body integrated unit • Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-22, DTC B1578 METER, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		C0 model • Reference code incompatibility between body integrated unit and security control module • Communication failure between body integrated unit and ECM	

2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1401	METER COLLATION	Reference code incompatibility between combination meter and body integrated unit	<Ref. to IM(diag)-22, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1402	IMMOBILIZER KEY COLLATION	• Incorrect immobilizer key (use of unregistered key in body integrated unit) • Faulty antenna • Communication failure between key and body integrated unit	<Ref. to IM(diag)-23, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1572
B1405	SCU COLLATION	Reference code incompatibility between body integrated unit and security control module	<Ref. to IM(diag)-23, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1406	SCU_EEPROM	Malfunction of security control module	<Ref. to IM(diag)-24, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1407	MET COMMUNICATION	Communication failure between body integrated unit and combination meter	<Ref. to IM(diag)-24, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1408	METER NON-VOLATILE MEMORY	Combination meter malfunction	<Ref. to IM(diag)-24, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1409	SCU COMMUNICATION	Communication failure between body integrated unit and security control module	<Ref. to IM(diag)-26, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1578
B1410	TRANSPONDER COMMUNICATION	Communication failure between key and body integrated unit	<Ref. to IM(diag)-28, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1572
B1411	IMMOBILIZER ANTENNA	Faulty antenna	<Ref. to IM(diag)-28, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1572

NOTE:
The starter relay control is performed in immobilizer system. When the body integrated unit detects a non-conformity of reference code, it immediately outputs a starter relay cut signal to ECM, and then ECM stops the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Therefore, check DTC on the body integrated unit to identify the cause of the engine not starting.

10.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1571 REFERENCE CODE INCOMPATIBILITY

DTC detecting condition:
Reference code incompatibility between body integrated unit and ECM

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IMMOBILIZER KEY.** Confirm the number of registered immobilizer key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the number of registration 0?	Go to step **2**.	Go to step **3**.
2	**PERFORM IMMOBILIZER SYSTEM REGISTRATION.** Register the immobilizer system. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **4**.
4	**CHECK FOR ANY OTHER DTC ON DISPLAY.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the ECM. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1571 displayed?	Perform the diagnosis of DTCs other than B1571.	Go to step **5**.
5	**PERFORM ECM REGISTRATION.** 1) Replace the ECM. <Ref. to FU(STI)-56, Engine Control Module (ECM).> <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

B: DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

DTC detecting condition:

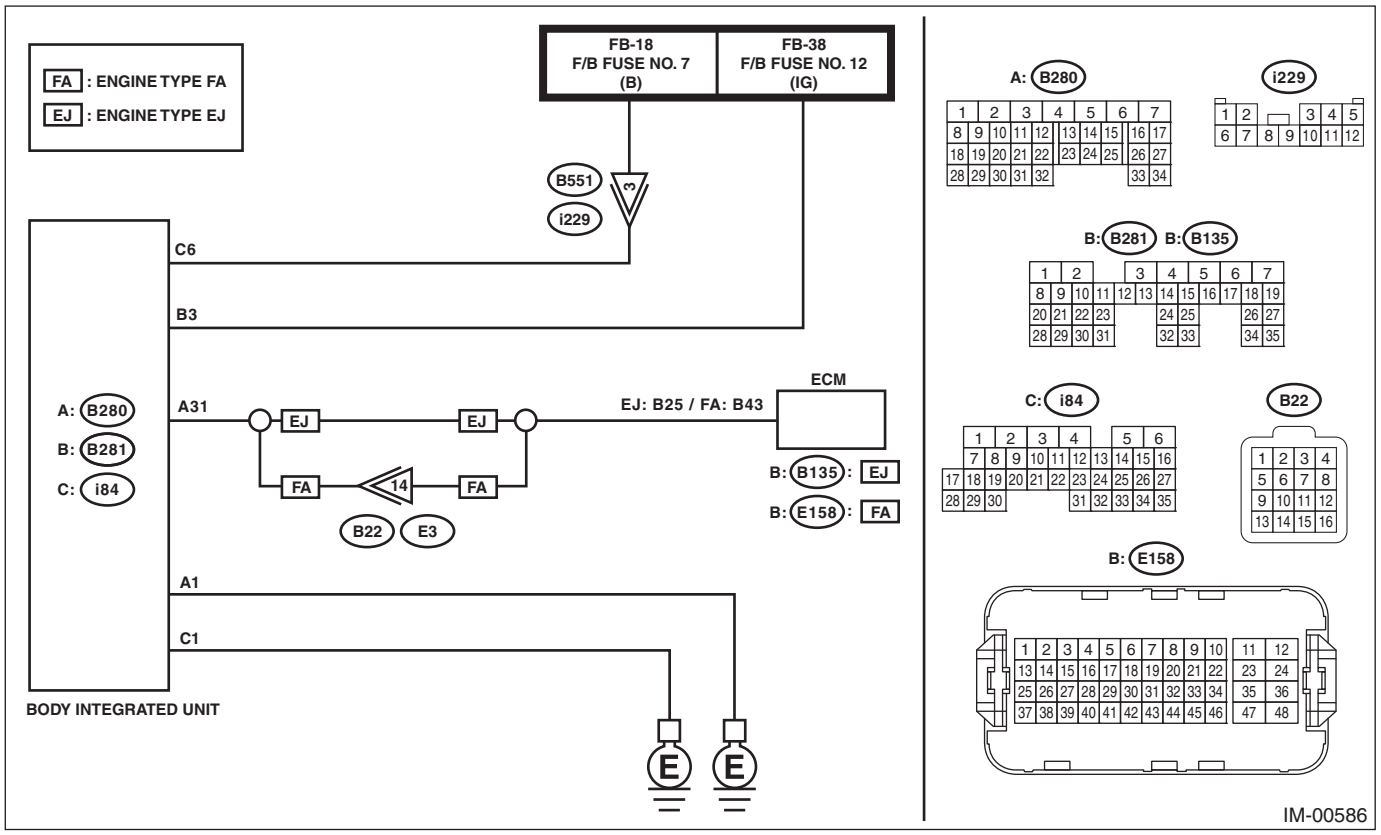
- Communication failure between body integrated unit and ECM
- Faulty antenna
- Incorrect immobilizer key (use of unregistered key in body integrated unit)
- Communication failure between ignition key and body integrated unit

CAUTION:

When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

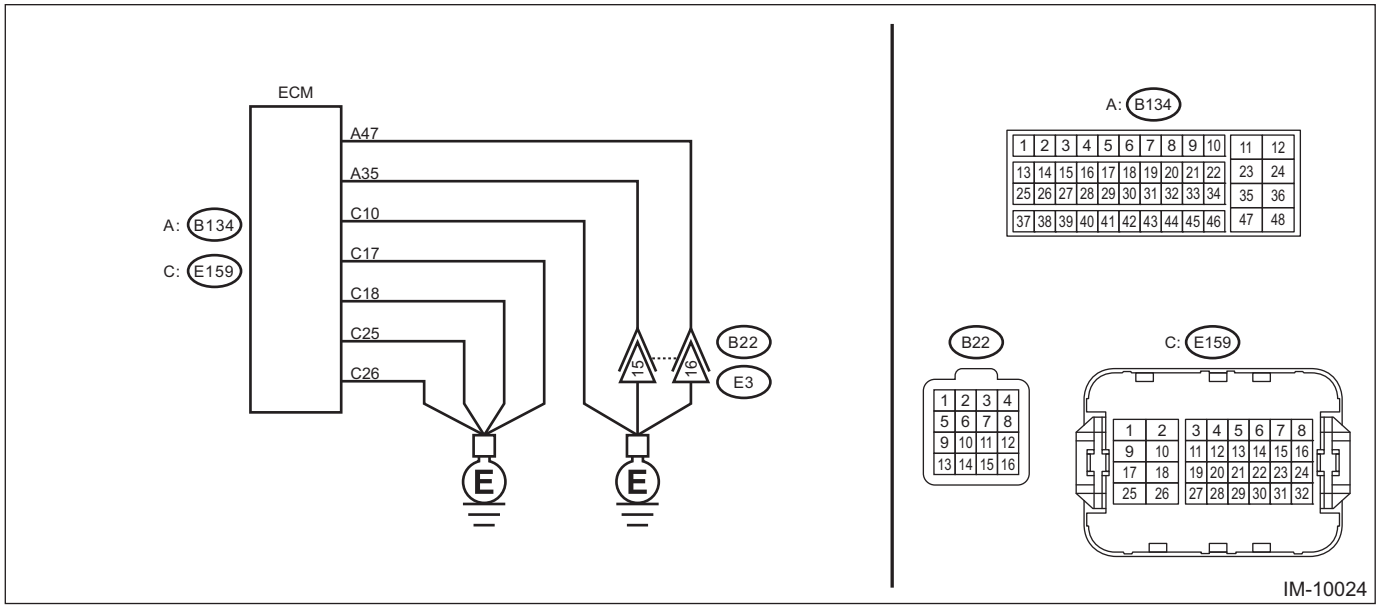
Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



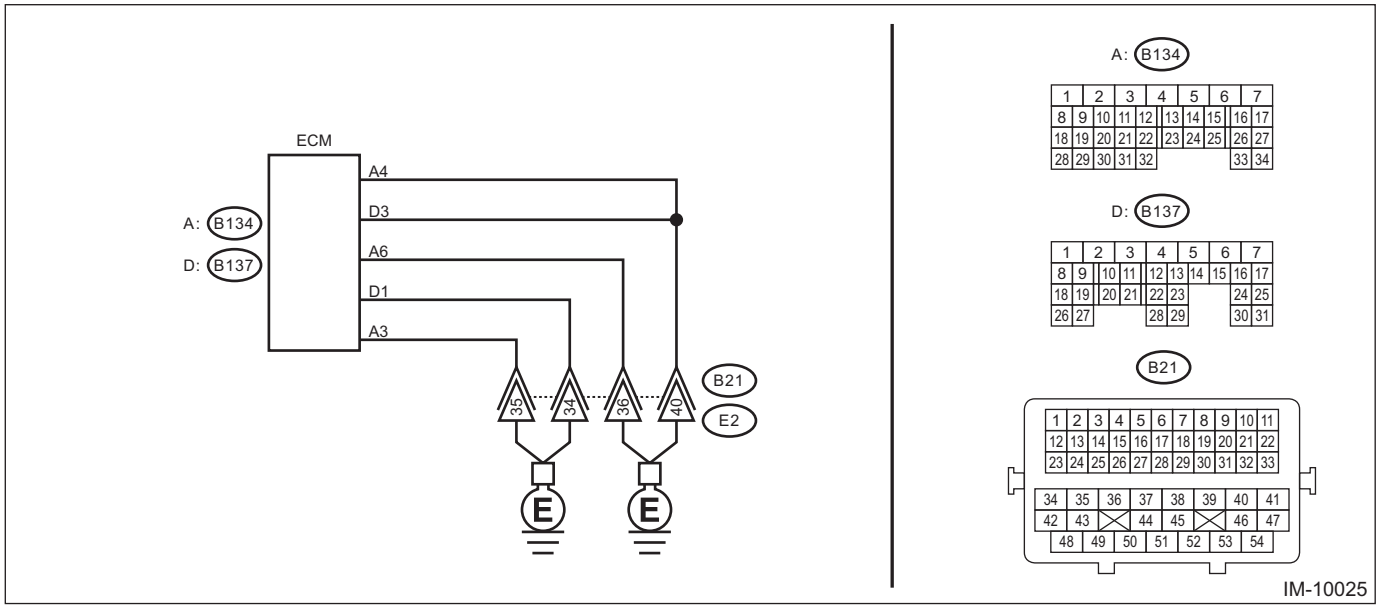
- Engine type FA

Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



- Engine type EJ

Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1402, B1410 or B1411 displayed?	Perform the diagnosis for the displayed DTC B1402, B1410 or B1411.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **3**.	Go to step **3**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the fuse. If the fuse blows out easily, repair the short circuit to power supply in harness between the battery and body integrated unit.
4	**CHECK CURRENT DATA.** Confirm the current data «BATT voltage (control)» display of body integrated unit. <Ref. to BC(diag)-20, Read Current Data.>	Is the display 10 V or more?	Go to step **5**.	Go to step **6**.
5	**CHECK CURRENT DATA.** Check the current data «Voltage of IGN» display of body integrated unit. <Ref. to BC(diag)-20, Read Current Data.>	Is the display 10 V or more?	Go to step **8**.	Go to step **7**.
6	**CHECK BODY INTEGRATED UNIT BATTERY POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Measure the voltage between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the open or short circuit of harness between the body integrated unit connector and fuse.
7	**CHECK BODY INTEGRATED UNIT IGN POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the open or short circuit of harness between the body integrated unit connector and ignition switch.
8	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between body integrated unit connector and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Repair the open circuit of harness between the body integrated unit connector and chassis ground.

	Step	Check	Yes	No
9	**CHECK GROUND CIRCUIT FOR ECM (OPEN CIRCUIT).** Measure the resistance between the ECM ground terminal and engine ground. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 35 — Engine ground:*** ***(B134) No. 47 — Engine ground:*** ***(E159) No. 10 — Engine ground:*** ***(E159) No. 17 — Engine ground:*** ***(E159) No. 18 — Engine ground:*** ***(E159) No. 25 — Engine ground:*** ***(E159) No. 26 — Engine ground:*** ***Engine type: EJ*** ***(B134) No. 3 — Engine ground:*** ***(B134) No. 4 — Engine ground:*** ***(B134) No. 6 — Engine ground:*** ***(B137) No. 1 — Engine ground:*** ***(B137) No. 3 — Engine ground:***	Is the resistance less than 10 Ω?	Go to step **10**.	Repair the ECM ground circuit.
10	**CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND ECM.** 1) Disconnect the ECM connector. 2) Measure the resistance between the body integrated unit connector and ECM. ***Connector & terminal*** ***Engine type: FA*** ***(B280) No. 31 — (E158) No. 43:*** ***Engine type: EJ*** ***(B280) No. 31 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **11**.	Repair the open circuit of harness between the body integrated unit connector and ECM.
11	**CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Disconnect the body integrated unit connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector and engine ground. ***Connector & terminal*** ***Engine type: FA*** ***(E158) No. 43 (+) — Engine ground (–):*** ***Engine type: EJ*** ***(B135) No. 25 (+) — Engine ground (–):***	Is the voltage 6 V or more?	Repair the short circuit to power supply in harness between body integrated unit connector and ECM connector.	Go to step **12**.
12	**CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the ECM connector and engine ground. ***Connector & terminal*** ***Engine type: FA*** ***(E158) No. 43 — Engine ground:*** ***Engine type: EJ*** ***(B135) No. 25 — Engine ground:***	Is the resistance less than 10 Ω?	Repair the ground short circuit of harness between body integrated unit connector and ECM connector.	Go to step **13**.

	Step	Check	Yes	No
13	**CHECK ECM.** 1) Replace the ECM. (Do not perform ECM registration.) <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).> 2) Connect all connectors. 3) Turn the ignition switch to ON. 4) Wait for 5 seconds. 5) Read DTC of engine. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1572 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Register the ECM. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

C: DTC B1576 EGI CONTROL MODULE EEPROM

DTC detecting condition:

- ECM malfunctioning
- Failed to access ROM in ECM during key registration.

CAUTION:
When the ECM is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

D: DTC B1577 IMM CONTROL MODULE EEPROM

DTC detecting condition:

- Body integrated unit malfunctioning
- Failed to access ROM inside the body integrated unit.

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Finish the diagnosis.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform the Clear Memory Mode. (ECM and body integrated unit) <Ref. to IM(diag)-10, Clear Memory Mode.> Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Refer to "Correspondence table when registration is not possible" in the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. If the registration still does not work properly, replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

E: DTC B1578 METER

DTC detecting condition:

- Except for C0 model

Reference code incompatibility between combination meter and body integrated unit or communication failure between body integrated unit and ECM

- C0 model

Reference code incompatibility between security control module and body integrated unit or communication failure between body integrated unit and ECM

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1401, B1405, B1406, B1407, B1408 or B1409 displayed?	Perform the diagnosis for the displayed DTC B1401, B1405, B1406, B1407, B1408 or B1409.	<Ref. to IM(diag)-17, DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

F: DTC B1401 METER COLLATION

DTC detecting condition:

Reference code incompatibility between combination meter and body integrated unit

CAUTION:

When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1407 or B1408 displayed?	Perform the diagnosis for the displayed DTC B1407 or B1408.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK COMBINATION METER REGISTRATION.** Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Currently, it is normal. (Combination meter registration is not complete.)	Go to step **3**.
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1407 or B1408 displayed?	Perform the diagnosis for the displayed DTC B1407 or B1408.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

G: DTC B1402 IMMOBILIZER KEY COLLATION

DTC detecting condition:

- Incorrect immobilizer key (use of unregistered key in body integrated unit)
- Faulty antenna
- Communication failure between key and body integrated unit

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CONFIRM NUMBER OF REGISTERED IGNITION KEY.** Using the Subaru Select Monitor, check the number of registered ignition keys. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is one or more ignition key(s) registered?	Go to step **2**.	Register the immobilizer.
2	**CHECK IGNITION KEY.** 1) Prepare all the pre-registered ignition keys. 2) Insert the ignition key in the ignition switch. 3) Turn the ignition switch to ON. 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).> 5) Perform the steps 2) to 4) on all the registered ignition keys.	Is DTC B1402 displayed for all ignition keys?	Refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume, and perform the actions for the case that all keys are faulty/lost.	Go to step **3**.
3	**REGISTER IGNITION KEY.** Register the key. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is the key registration complete properly?	Malfunction occurred in the ignition key.	Replace the ignition key.

H: DTC B1405 SCU COLLATION

DTC detecting condition:
Reference code incompatibility between security control module and body integrated unit

CAUTION:
When the security control module is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1406 or B1409 displayed?	Perform the diagnosis for the displayed DTC B1406 or B1409.	Go to step **2**.

	Step	Check	Yes	No
2	**PERFORM SECURITY CONTROL MODULE REGISTRATION.** Perform security control module registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is registration complete?	Currently, it is normal. (Security control module registration is not complete.)	Go to step **3**.
3	**CHECK DTC.** 1) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 2) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1406 or B1409 displayed?	Perform the diagnosis for the displayed DTC B1406 or B1409.	Replace the security control module. <Ref. to SL-73, Security Control Module.>

I: DTC B1406 SCU_EEPROM

DTC detecting condition:
- Defective security control module
- ROM of security control module cannot be accessed

CAUTION:
When the security control module is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**PERFORM SECURITY CONTROL MODULE REGISTRATION.** 1) Perform security control module registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 2) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1406 displayed?	Replace the security control module. <Ref. to SL-73, Security Control Module.>	Finish the diagnosis.

J: DTC B1407 MET COMMUNICATION

DTC detecting condition:
Communication failure between body integrated unit and combination meter

CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Are DTCs other than DTC B1407 displayed?	Perform the diagnosis of DTCs other than B1407.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

K: DTC B1408 METER NON-VOLATILE MEMORY

DTC detecting condition:
Defective combination meter

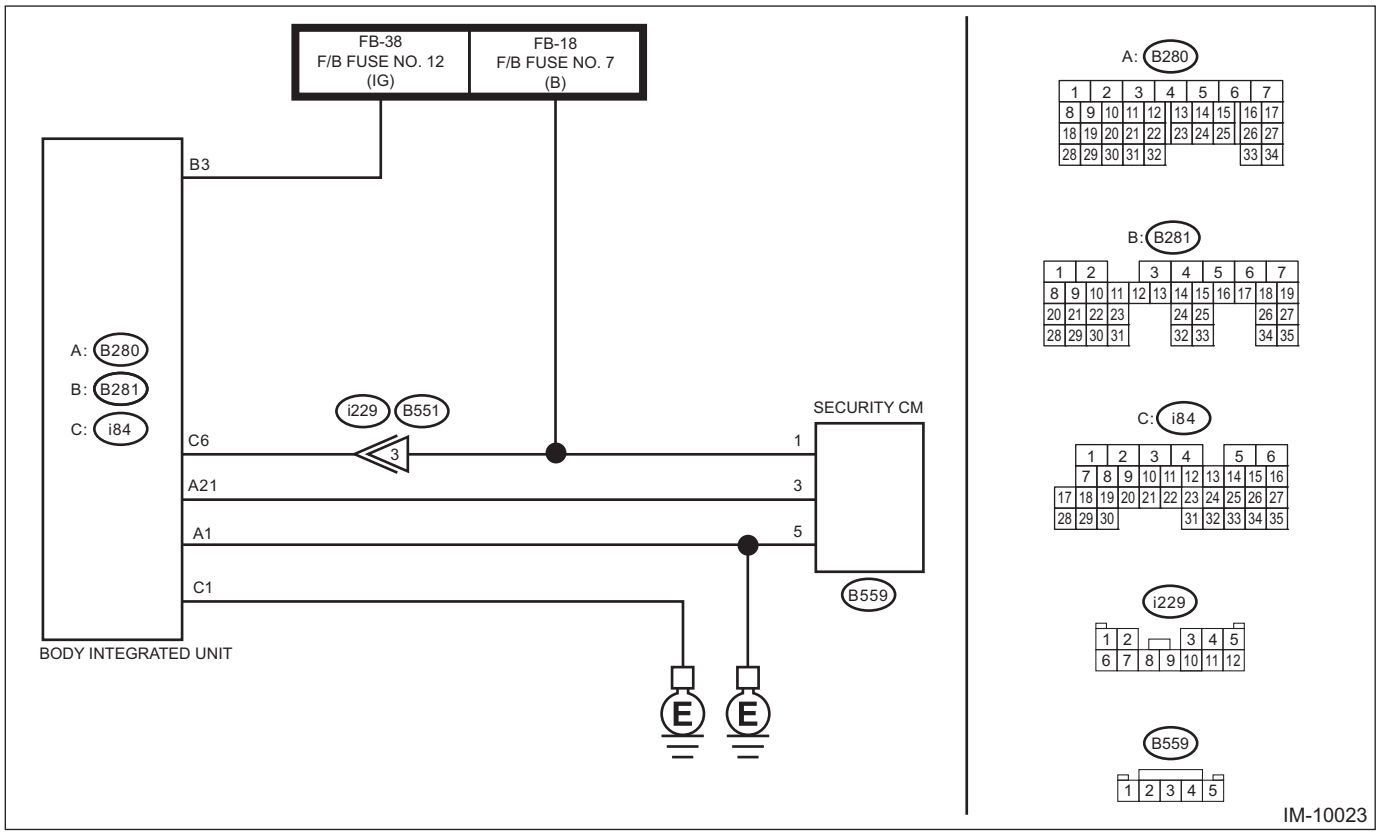
CAUTION:
When the combination meter is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER REGISTRATION.** 1) Perform the Clear Memory Mode. (Combination meter <Ref. to MET(diag)-12, Clear Memory Mode.> and body integrated unit <Ref. to IM(diag)-10, Clear Memory Mode.>) 2) Perform registration of combination meter. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1408 displayed?	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

L: DTC B1409 SCU COMMUNICATION

DTC detecting condition:
Communication failure between body integrated unit and security control module

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:
Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the harness for open or short circuit between body integrated unit and fuse.
2	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Check the harness for open or short circuit between the body integrated unit and ignition switch.

	Step	Check	Yes	No
3	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the open circuit of the body integrated unit ground circuit.
4	**CHECK SECURITY CONTROL MODULE POWER SUPPLY CIRCUIT.** 1) Disconnect the connector from the security control module. 2) Measure the power supply between security control module connector terminal and chassis ground. ***Connector & terminal*** ***(B559) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check for an open or short circuit in the harness between security control module and fuse.
5	**CHECK SECURITY CONTROL MODULE GROUND CIRCUIT (OPEN).** Measure the resistance between security control module connector terminal and chassis ground. ***Connector & terminal*** ***(B559) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair the open circuit of the security control module ground circuit.
6	**CHECK HARNESS (OPEN CIRCUIT) BETWEEN BODY INTEGRATED UNIT AND SECURITY CONTROL MODULE.** Measure the resistance between the body integrated unit connector terminal and security control module connector terminal. ***Connector & terminal*** ***(B280) No. 21 — (B559) No. 3:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair the harness between body integrated unit and security control module.
7	**CHECK COMMUNICATION LINE HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between security control module connector terminal and chassis ground. ***Connector & terminal*** ***(B559) No. 3 (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Repair the harness between body integrated unit and security control module.	Go to step **8**.
8	**CHECK COMMUNICATION CIRCUIT HARNESS (SHORT CIRCUIT TO GROUND).** 1) Turn the ignition switch to OFF. 2) Measure the resistance between security control module connector terminal and chassis ground. ***Connector & terminal*** ***(B559) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair the harness between body integrated unit and ECM.	Go to step **9**.
9	**CHECK SECURITY CONTROL MODULE.** 1) Replace the security control module. (Do not perform security control module registration.) 2) Turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1409 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Security control module was defective. Perform security control module registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

M: DTC B1410 TRANSPONDER COMMUNICATION

DTC detecting condition:
Communication failure between ignition key and body integrated unit

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

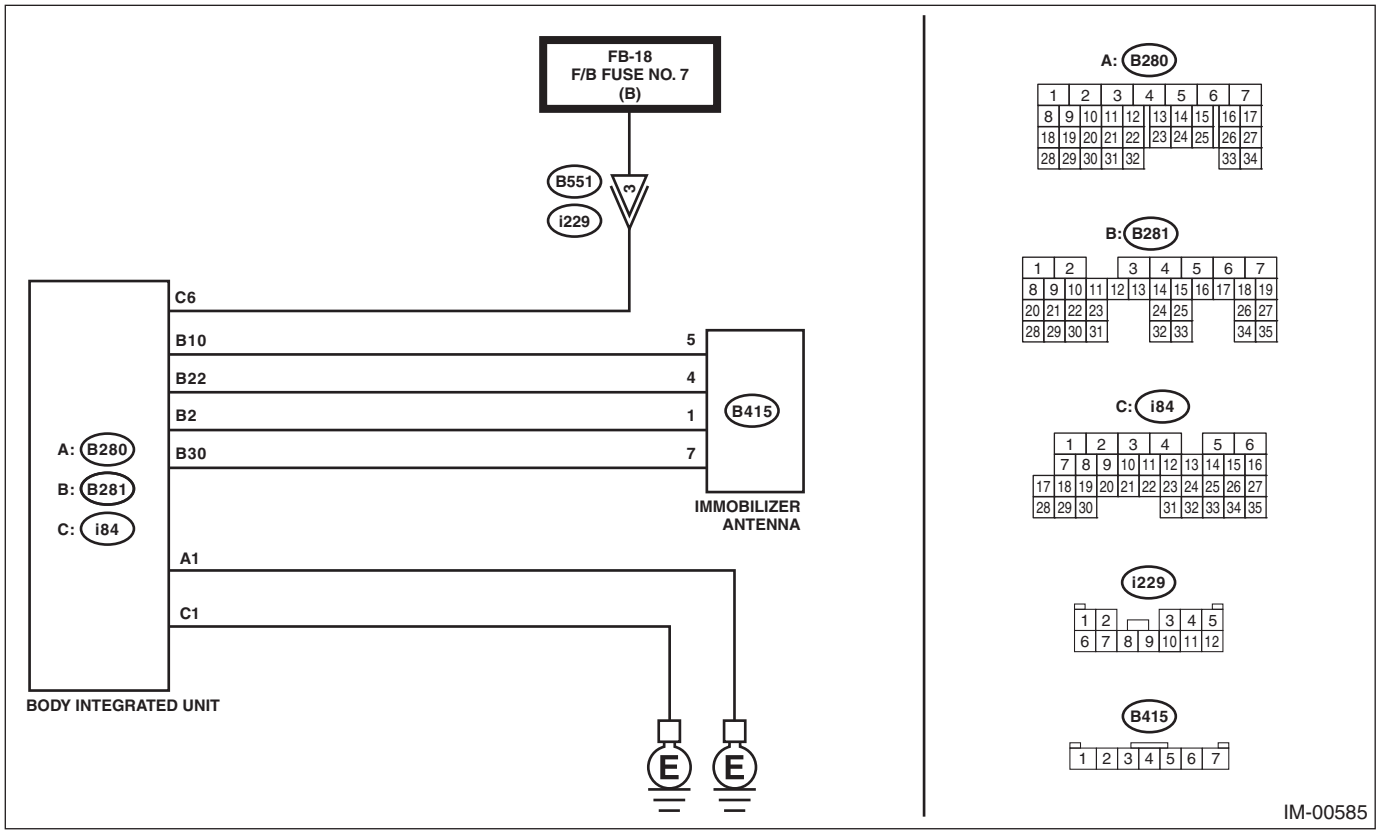
	Step	Check	Yes	No
1	**CHECK IGNITION KEY.** 1) Remove the ignition key from the ignition switch. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **2**.	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK IGNITION KEY.** 1) Prepare a spare ignition key that is already registered. 2) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Go to step **3**.	Malfunction occurred in ignition key. Or, the key was unregistered.
3	**CHECK DTC.** Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Perform the diagnosis of DTC B1411.	Go to step **4**.
4	**CHECK IMMOBILIZER ANTENNA.** 1) Insert the ignition key into the ignition switch, and then turn the ignition switch to ON. 2) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 3) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1410 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Malfunction occurred in the immobilizer antenna, ignition key, or body integrated unit.

N: DTC B1411 IMMOBILIZER ANTENNA

DTC detecting condition:
Faulty antenna

CAUTION:
When the body integrated unit is replaced, registration of the immobilizer system is required. For details, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



Step		Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the harness for open or short circuit between body integrated unit and fuse.
2	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT (OPEN CIRCUIT).** Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the open circuit of the body integrated unit ground circuit.
3	**CHECK ANTENNA POWER SUPPLY CIRCUIT.** 1) Connect the connector to body integrated unit. 2) Disconnect the connector from the antenna. 3) Insert the ignition key into the key cylinder, then measure the voltage between the antenna connector terminal and the chassis ground. ***Connector & terminal*** ***(B415) No. 1 (+) — Chassis ground (–):***	Is the voltage 5±0.5 V approx. 200 ms after inserting the ignition key into the key cylinder? And then, does the voltage return to 0 V within 2 s?	Go to step **5**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK ANTENNA POWER SUPPLY CIRCUIT (OPEN).** 1) Disconnect the connector from body integrated unit. 2) Measure the resistance of body integrated unit connector terminal and antenna connector terminal. ***Connector & terminal*** ***(B281) No. 2 — (B415) No. 1:***	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness or connector between body integrated unit and antenna.
5	**CHECK ANTENNA GROUND CIRCUIT (SHORT CIRCUIT TO GROUND).** Measure the resistance between antenna connector terminal and chassis ground. ***Connector & terminal*** ***(B415) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **7**.	Go to step **6**.
6	**CHECK ANTENNA GROUND CIRCUIT (OPEN).** 1) Disconnect the connector from body integrated unit. 2) Measure the resistance between antenna connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 30 — (B415) No. 7:***	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness or connector between body integrated unit and antenna.
7	**CHECK ANTENNA COMMUNICATION CIRCUIT (OPEN).** Measure the resistance of body integrated unit connector terminal and antenna connector terminal. ***Connector & terminal*** ***(B281) No. 10 — (B415) No. 5:*** ***(B281) No. 22 — (B415) No. 4:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair the harness or connector between body integrated unit and antenna.
8	**CHECK ANTENNA.** 1) Replace the immobilizer antenna. <Ref. to SL-88, Immobilizer Antenna.> 2) Insert the ignition key in the ignition switch. (OFF or ACC) 3) Perform the Clear Memory Mode. <Ref. to IM(diag)-10, Clear Memory Mode.> 4) Read the DTC of the body integrated unit. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>	Is DTC B1411 displayed?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Antenna has a failure.

LAN SYSTEM (DIAGNOSTICS)

3.	General Description	5
4.	Electrical Component Location	9
5.	Control Module I/O Signal	10
6.	Subaru Select Monitor	12
7.	Read Diagnostic Trouble Code (DTC)	34
8.	Clear Memory Mode	35
9.	CAN Communication Circuit Check	36
10.	List of Diagnostic Trouble Code (DTC)	111
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	117
12.	Diagnostics with Phenomenon	156

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis, reading current data, customizing and active test (compulsory drive).
• Remove foreign matter (dust, water, oil, etc.) from each control module connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Perform the diagnosis, and when the control module is replaced as a result of judgment that malfunction is the control module, re-check that the control module was actually malfunctioning. Replace to a new control module, and confirm that the malfunction is eliminated. Then, install the previously removed control module again and check that the malfunction reproduces again.
• Check List for Interview <Ref. to LAN(diag)-4, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to LAN(diag)-4, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).** Check the power supply circuit of the module which might affect CAN communication problem. <Ref. to LAN(diag)-7, INSPECTION WITHOUT USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Is the power supply circuit of each module that is performing CAN communication normal?	Go to step **3**.	Repair or replace the faulty portion.
3	**BASIC INSPECTION (CAN DIAGNOSTIC IS NOT USED).** Check the registration status of the body integrated unit which might affect CAN communication problem. <Ref. to LAN(diag)-7, INSPECTION USING CAN DIAGNOSTIC, INSPECTION, General Description.>	Does the registration status of the body integrated unit match the vehicle specification? (When the Subaru Select Monitor and the body integrated unit cannot communicate, and the registration status cannot be checked, Go to step **5**.)	Go to step **4**.	Match the registration status of the body integrated unit with the vehicle specification.
4	**CHECK COMMUNICATION FOR INITIALIZING.** Communicate with the all systems by connecting the Subaru Select Monitor.	Is the communication for initializing finished for all modules?	Go to step **5**.	Check the error of communication for initializing. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

	Step	Check	Yes	No
5	**CHECK DTC.** 1) Start the engine and read all DTCs. NOTE: When the engine does not start, perform the diagnosis for the engine start malfunction. <Ref. to EN(w/o STI)(diag)-100, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, Diagnostics for Engine Starting Failure.> 2) Record all DTCs (current malfunction and past malfunction), time stamp and freeze frame data. NOTE: For time stamp, refer to “TIME STAMP” of General Description. <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Is DTC U**** displayed on Subaru Select Monitor?	Go to step **6**.	Using the diagnostics with phenomenon, perform inspection. <Ref. to LAN(diag)-156, Diagnostics with Phenomenon.>
6	**CHECK USING THE DTC CHECK SHEET.** Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-113, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness. And then, Go to step **7**.	Perform the diagnosis for the displayed DTCs. And then, Go to step **7**.
7	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to LAN(diag)-35, OPERATION, Clear Memory Mode.> 2) Read the DTC. <Ref. to LAN(diag)-34, OPERATION, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Repeat the Basic Diagnostic Procedure from the beginning until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

1. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	Engine coolant temperature gauge display	❑ OK / ❑ NG
	Fuel gauge display	❑ OK / ❑ NG
	Tachometer display	❑ OK / ❑ NG (0 rpm at idling etc.)
Display of other indicators	Malfunction indicator light	❑ ON / ❑ Blink / ❑ OFF
	Sport indicator light (AT warning light)	❑ ON / ❑ Blink / ❑ OFF
	ABS warning light	❑ ON / ❑ Blink / ❑ OFF
	VDC warning light	❑ ON / ❑ Blink / ❑ OFF
	Security indicator	❑ ON / ❑ Blink / ❑ OFF
	AT OIL TEMP warning light	❑ ON / ❑ Blink / ❑ OFF
	Tire pressure warning light	❑ ON / ❑ Blink / ❑ OFF
	Engine coolant temperature warning light	❑ Blue light ON / ❑ Red light ON / ❑ Red light blinks / ❑ Blue and red lights blink
	CRUISE indicator	❑ ON / ❑ Blink / ❑ OFF
	Shift indicator	❑ OK / ❑ NG
	Fuel level warning light	❑ ON / ❑ Blink / ❑ OFF
	Airbag warning light	❑ ON / ❑ OFF
	VDC OFF indicator	❑ ON / ❑ OFF
	Brake warning light	❑ ON / ❑ OFF
	Headlight beam leveler indicator	❑ ON / ❑ OFF

2. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	❑ At standstill (while idling)			
	❑ When the vehicle is running	Vehicle speed	km/h (MPH)	
	❑ While accelerating	Acceleration	km/h (MPH) to	km/h (MPH)
	❑ Decelerating (with braking)	Deceleration	km/h (MPH) to	km/h (MPH)
	❑ Decelerating (without braking)	Deceleration	km/h (MPH) to	km/h (MPH)
	❑ Flat road ❑ Uphill ❑ Downhill ❑ Gravel road ❑ Bumpy road ❑ Snowy road			
	Does it occur when operating any part? Operated part: **Trouble symptom:**			
	Are there any other troubles occurred? From where: **Trouble symptom:**			

3. General Description

A: CAUTION

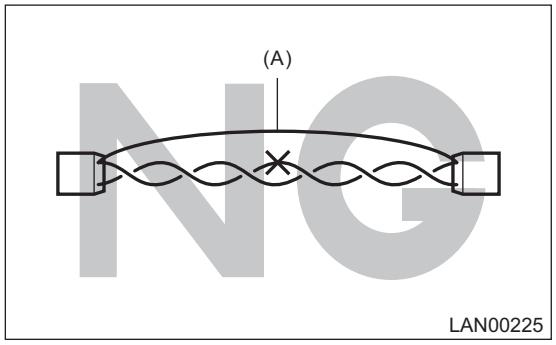
1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:
• Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.
• Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.

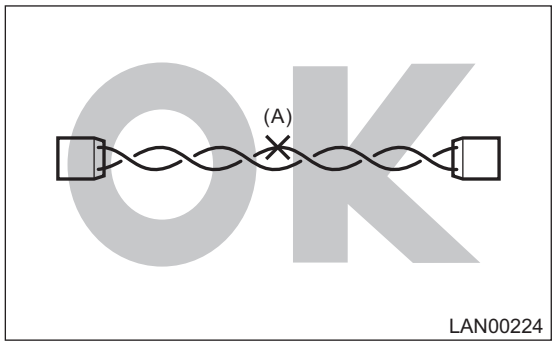
2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to by-pass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).



(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with electrical tape etc.



(A) Soldering and protection with electrical tape

3. TIME STAMP

There are three types of record data for the information of time stamp, and they are stored together with diagnostic codes.

NOTE:
Depending on DTCs, time stamp may not be stored.
a. **«Trip Count»**
This indicates the number of times that the ignition has been turned to ON since the vehicle was manufactured. The ignition ON count of when the diagnostic code is stored is displayed on the diagnostic code check screen.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	**«Trip Count»**	«Time Count»	«Category»
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	**983**	18000	Common
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	**984**	117800	Common

The current Trip Count can be checked at “Current Data Display & Save” in “Integ. unit mode”.
By comparing the current Trip Count and the Trip Count of when the diagnostic code was stored, it is possible to determine that it is how many ignition-ON operations ago that DTC was stored.

b. **«Time Count»**

The elapsed time from when the ignition is turned to ON to when the diagnostic code is stored is displayed on the diagnostic code check screen. It is possible to determine the length of time that passed between when the user started driving and when the diagnostic code was stored. Therefore, if Trip Count until the vehicle-received-date is determined by interviewing the user, it is possible to estimate where the user was driving when the diagnostic code was stored, using the information such as Trip Count and Time Count. This estimate is useful information to perform diagnosis including checking of repeatability.

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	**«Time Count»**	«Category»
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	983	**18000**	Common
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	984	**117800**	Common

When multiple diagnostic codes are recorded for one trouble, it is extremely important to determine the diagnostic code that was stored first. (It is important to perform the diagnosis for the first recorded diagnostic code.) In this case, it is also possible to immediately determine which diagnostic code was recorded first, using the information such as Trip Count and Time Count.

c. **«Category»**

Each unit individually counts the elapsed time since the ignition is turned to ON. However, these time counts may have some errors, and therefore, the control modules need to be adjusted to the time carried by the master-time unit (the body integrated unit). When the count is set as common, it means that each control module is already adjusted to the master time, and the display for the master integrated unit is always indicated as “Common”. When the count is indicated as “Originally”, it means that the time is not synchronized with the master time. In this case, check the communication between the corresponding control module and integrated unit. When all controls other than the body integrated unit is indicated as “Originally”, perform the basic inspection for the body integrated unit. <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

NOTE:
Subaru Select Monitor 4 screen (A/C system diagnostic code and time stamp)

Code	Description & trouble position	Trouble occurrence record	«Trip Count»	«Time Count»	**«Category»**
B14E1	Air Mix Door Actuator Stepping Motor Circuit Open (Driver)	Detected on the first time	983	18000	**Common**
B14E7	Heater Core Sensor Circuit Open	Detected on the 2nd time	984	117800	**Common**

Even when multiple diagnostic codes are stored in multiple control modules, it is possible to determine the code stored first through the count function.

NOTE:
Troubleshooting for CAN system U-code occurrence
When the first stored diagnostic code is a U-code for CAN system, perform the troubleshooting as a U code combination, instead of a U code alone. In addition, when CAN open circuit occurs, communication of the diagnostic device itself becomes impossible beyond the particular areas. However, trouble positions can also be determined by the combination of initial communication success/failure. Thus, by performing the basic diagnostic procedure in LAN system, trouble positions can be determined efficiently on the principle above. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: INSPECTION

1. INSPECTION WITHOUT USING CAN DIAGNOSTIC

	Step	Check	Yes	No
1	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>	Is the check result OK?	Go to step **2**.	Charge or replace the battery.
2	**CHECK FUSE.** Check the fuse which might affect the problem.	Is the check result OK?	Go to step **3**.	Replace the fuse. If the replaced fuse blows out easily, some type of fault is present. Therefore, repair the faulty portion.
3	**CHECK HARNESS.** Check the harness and harness connector connection which might affect the problem.	Is the check result OK?	In the Basic Diagnostic Procedure, Go to step **3**.	Repair or replace the faulty harness or harness connector.

2. INSPECTION USING CAN DIAGNOSTIC

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT REGISTRATION STATUS.** Check that settings of body integrated unit correspond to vehicle equipment. <Ref. to BC(diag)-29, Registration Body Integrated Unit.>	Does the vehicle equipment correspond to settings?	Go to step **2**.	Match the settings of the body integrated unit with the vehicle equipment.
2	**CHECK BODY INTEGRATED UNIT CUSTOMIZE SETTING.** Check that settings of body integrated unit correspond to vehicle condition. <Ref. to BC(diag)-26, User Customizing.>	Do the customize settings correspond to the vehicle condition?	Go to step **3**.	Match the settings of the body integrated unit with the vehicle condition.

Step		Check	Yes	No
3	**CHECK FACTORY INITIAL SETTING OF BODY INTEGRATED UNIT.** Confirm «Factory initial setting» of body integrated unit registrations is set to «Market». <Ref. to BC(diag)-29, Registration Body Integrated Unit.>	Is it set to «Market»?	In the Basic Diagnostic Procedure, Go to step **4**.	Switch from «Factory» to «Market».

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

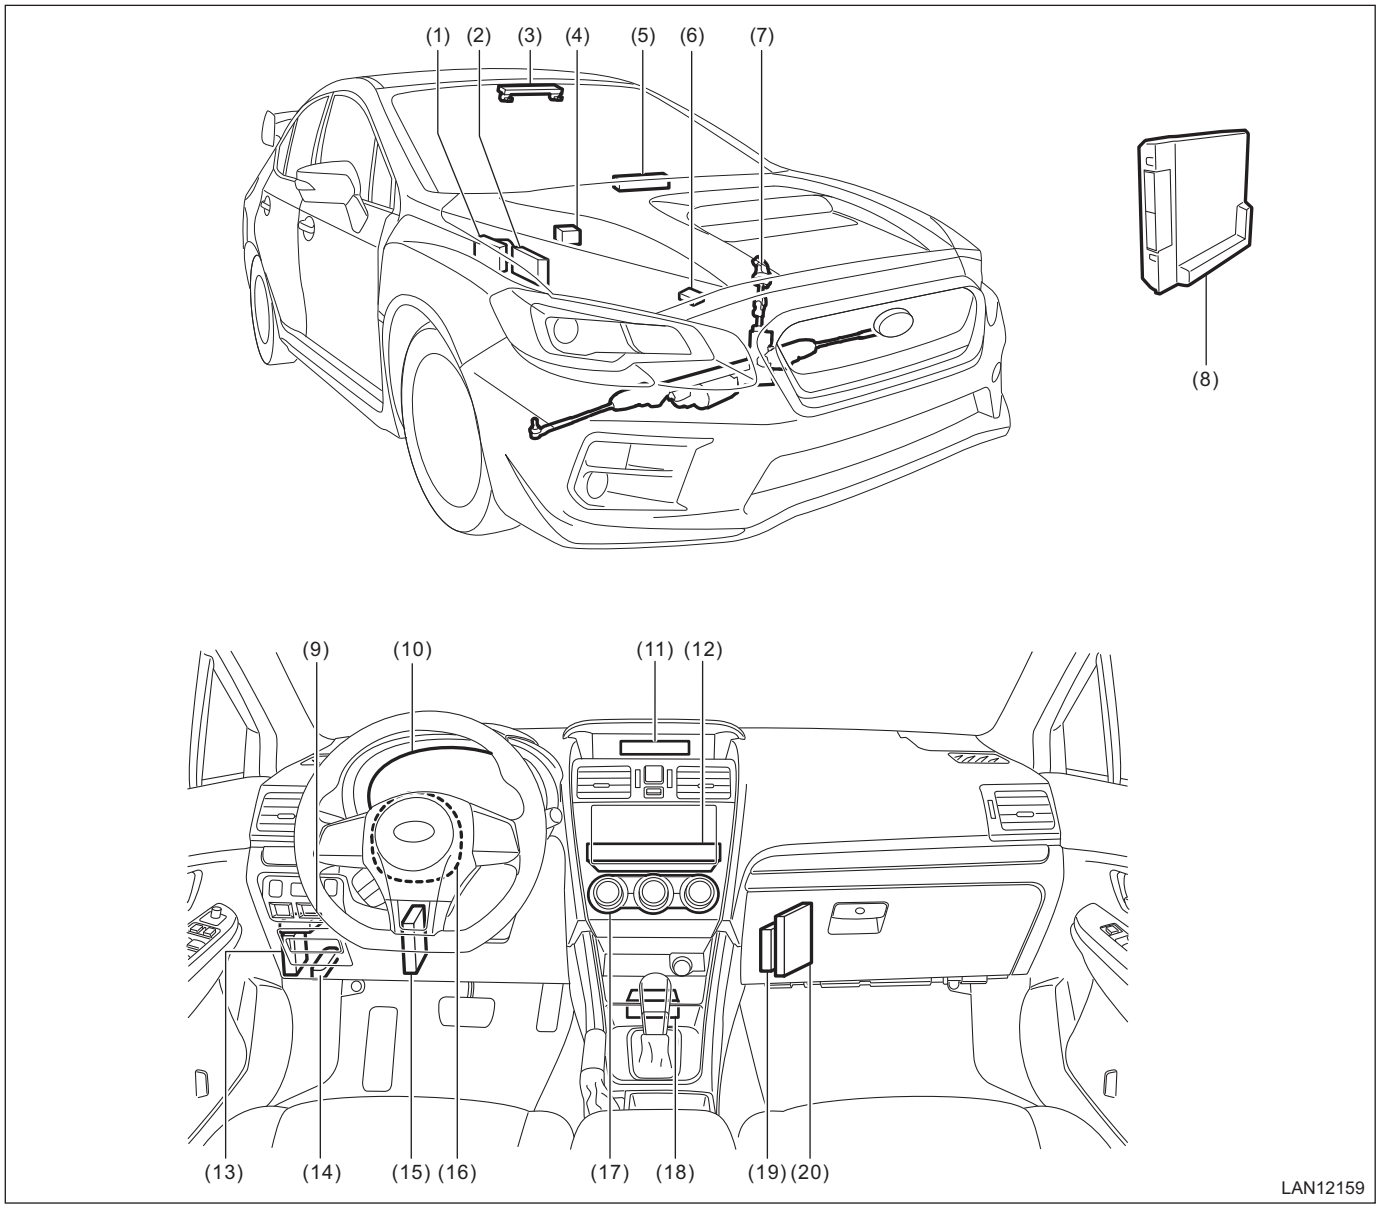
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

3. PREPARATION ITEMS

ITEM NAME	REMARKS
120 Ω resistance element (1/4 W or more)	Used as an alternative to end resistance.

4. Electrical Component Location

A: LOCATION



(1) VDC CM
(2) Engine CM (engine type FA)
(3) Stereo camera
(4) Radar sensor LH
(5) EyeSight assist monitor
(6) RAB CM
(7) Power steering CM
(8) Keyless access CM
(9) Auto headlight beam leveler CM
(10) Combination meter
(11) MFD
(12) Data communication module (DCM)
(13) Body integrated unit
(14) Data link connector
(15) Transmission CM
(16) Steering angle sensor
(17) A/C control panel
(18) Airbag CM
(19) Driver's control center differential (DCCD) CM
(20) Engine CM (engine type EJ)

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

- Body integrated unit

For I/O signals of the body integrated unit, refer to BODY CONTROL SYSTEM (DIAGNOSTICS). <Ref. to BC(diag)-8, Control Module I/O Signal.>

- Engine CM

For I/O signals of ECM, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(STI)(diag)-21, Engine Control Module (ECM) I/O Signal.>

- Transmission CM

For I/O signals of TCM, refer to AUTOMATIC TRANSMISSION (DIAGNOSTICS). <Ref. to CVT(diag)-10, Transmission Control Module (TCM) I/O Signal.>

- VDC CM

For I/O signals of VDC CM, refer to VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS). <Ref. to VDC(diag)-16, Control Module I/O Signal.>

- Driver's control center differential (DCCD) control module

For I/O signals of driver's control center differential (DCCD) CM, refer to MANUAL TRANSMISSION & DIFFERENTIAL (DIAGNOSTICS). <Ref. to 6MT(diag)-6, Driver's Control Center Differential (DCCD) Control Module I/O Signal.>

- Power steering CM

For unit I/O signals of power steering CM, refer to POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS). <Ref. to PS(diag)-9, Control Module I/O Signal.>

- A/C control panel

For unit I/O signals of A/C control panel, refer to HVAC SYSTEM (DIAGNOSTICS). <Ref. to AC(diag)-6, Auto A/C Control Module I/O Signal.>

- Combination meter

For I/O signals of combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-6, Control Module I/O Signal.>

- Airbag CM

For I/O signals of the airbag CM, refer to AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-18, Airbag Control Module I/O Signal.>

- High grade MFD

For I/O signals of high grade MFD, refer to MULTI-FUNCTION DISPLAY (DIAGNOSTICS). <Ref. to MFD(diag)-7, Control Module I/O Signal.>

- Keyless access CM

For I/O signals of keyless access CM, refer to KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM (DIAGNOSTICS). <Ref. to KPS(diag)-13, Control Module I/O Signal.>

- Auto headlight beam leveler CM

For I/O signals of auto headlight beam leveler CM, refer to INSTRUMENTATION/DRIVER INFO (DIAGNOSTICS). <Ref. to AL(diag)-8, Control Module I/O Signal.>

- Stereo camera

For I/O signals of stereo camera, refer to EyeSight (Diagnostics). <Ref. to ES(diag)-14, Control Module I/O Signal.>

- Radar sensor

For I/O signals of the radar sensor, refer to BSD/RCTA (DIAGNOSTICS). <Ref. to RVD(diag)-8, Control Module I/O Signal.>

- RAB CM

For I/O signals of the RAB CM, refer to Reverse Automatic Braking (DIAGNOSTICS). <Ref. to RAB(diag)-7, Control Module I/O Signal.>

- EyeSight assist monitor

For I/O signals of EyeSight assist monitor, refer to EyeSight ASSIST MONITOR (DIAGNOSTICS). <Ref. to EM(diag)-6, Control Module I/O Signal.>

- Data communication module (DCM)

For I/O signals of DCM, refer to TELEMATICS (DIAGNOSTICS). <Ref. to TEL(diag)-9, Control Module I/O Signal.>

- Data link connector

For I/O signals of data link connector, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-22, Engine Control Module (ECM) I/O Signal.> <Ref. to EN(STI)(diag)-21, Engine Control Module (ECM) I/O Signal.>

B: WIRING DIAGRAM

Refer to “CAN Communication System” in the wiring diagram. <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>

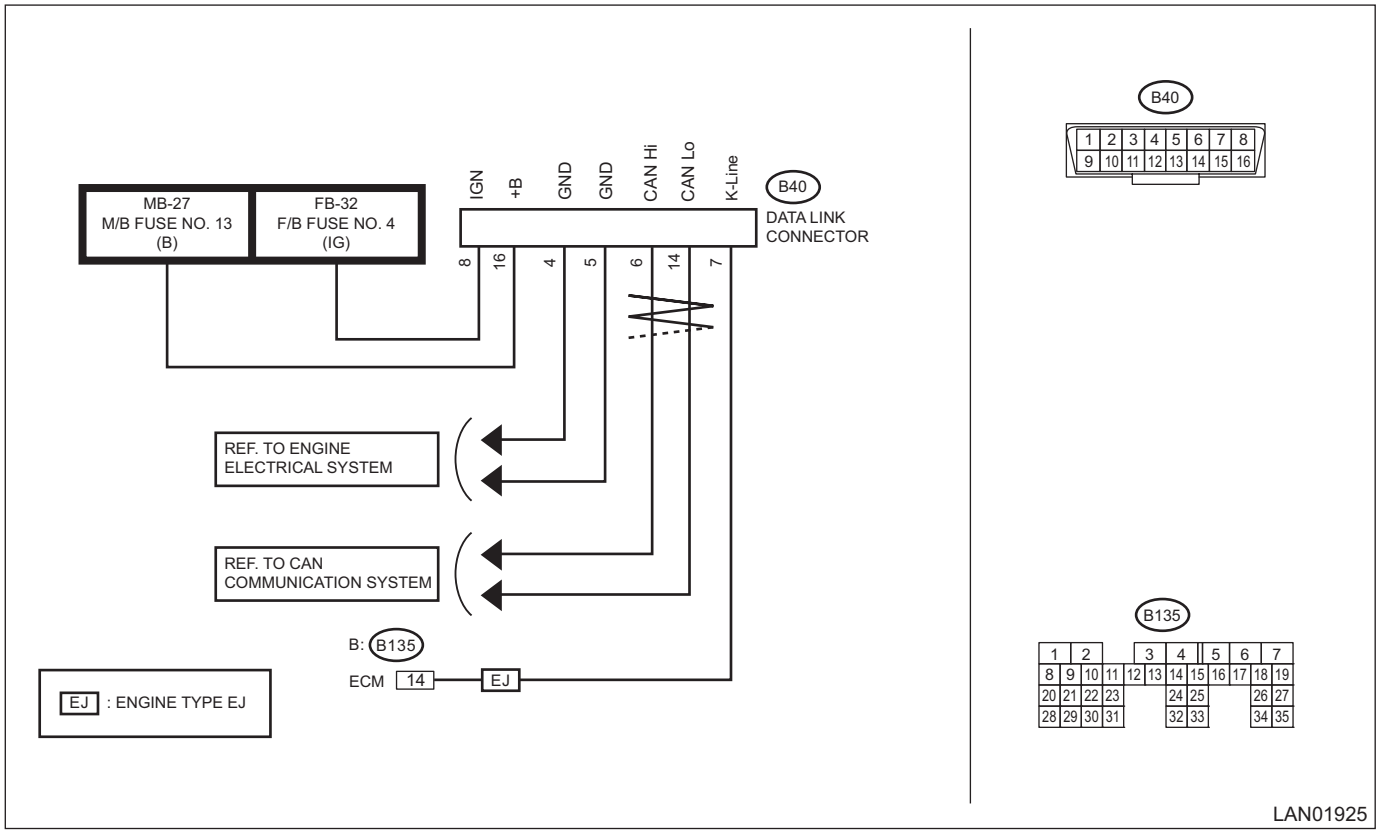
6. Subaru Select Monitor

A: OPERATION

For detailed operation procedures, refer to “Application help”.

B: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Diagnosis:
Subaru Select Monitor communication line is open or shorted.
Trouble symptom:
Not communicable with Subaru Select Monitor.
Wiring diagram:
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>

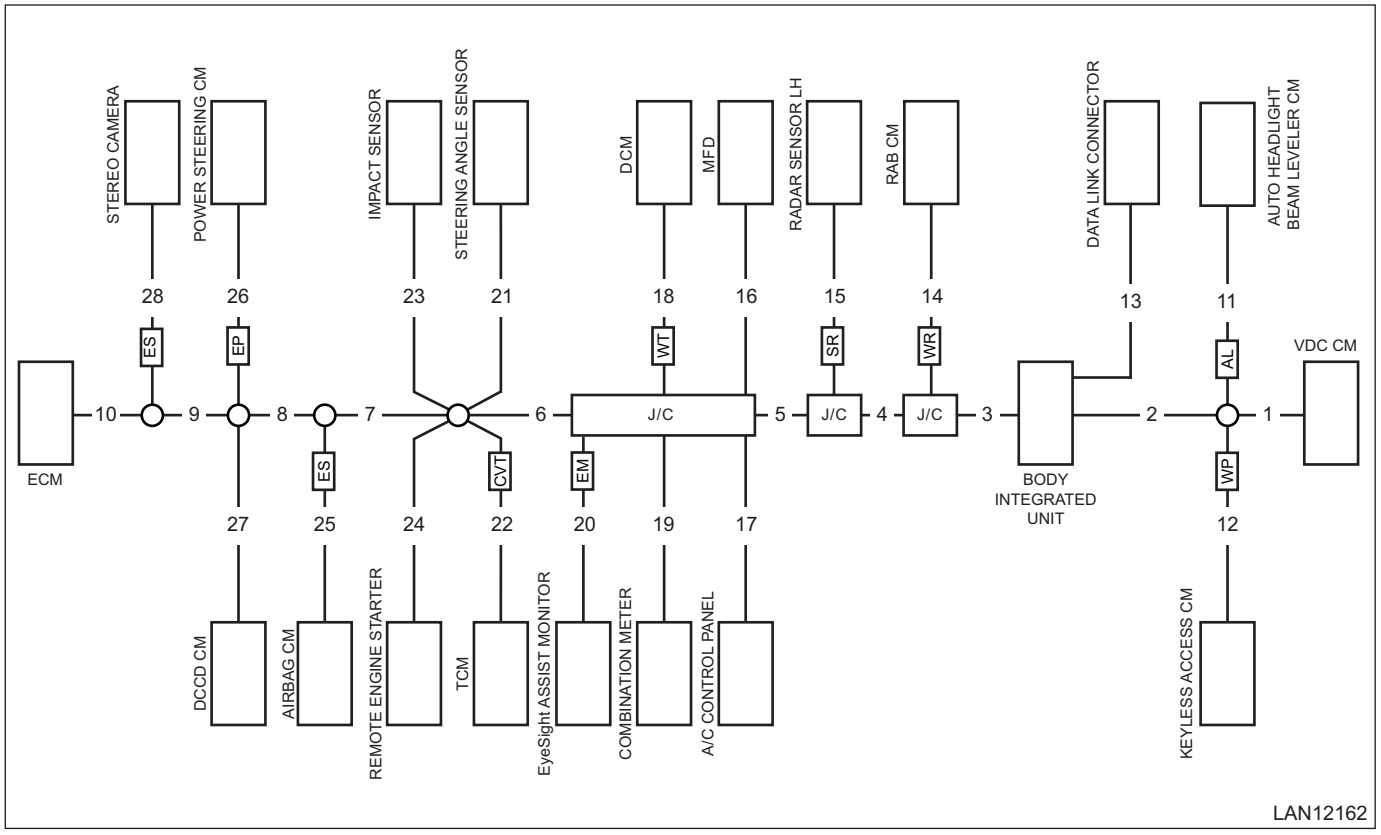


Step		Check	Yes	No
1	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to another vehicle. 2) Check communication condition between Subaru Select Monitor and vehicle.	Is communication performed normally?	Go to step **2**.	Subaru Select Monitor unit or diagnosis cable is faulty. Or check the fuse on the vehicle side.
2	**CHECK VEHICLE CONDITION.** Check the target vehicle.	Is the installed engine type EJ?	Go to step **3**.	For engine type FA, Go to step **9**.
3	**CHECK K-LINE.** 1) Establish the communication between Select Monitor and K-Line communication module. 2) Using a tester, check continuity between the modules that did not communicate with Select Monitor. ***Connector & terminal*** ***(B40) No. 7 — (B135) No. 14 (ECM):***	Is there continuity?	Go to step **4**.	Repair or replace the open circuit.

	Step	Check	Yes	No
4	**CHECK K-LINE.** Using a tester, check continuity between K-line and chassis ground. ***Connector & terminal*** ***(B40) No. 7 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit.	Go to step **5**.
5	**CHECK K-LINE.** Using a tester, check voltage between K-line and chassis ground. ***Connector & terminal*** ***(B40) No. 7 (+) — Chassis ground (–):***	Is the voltage 5 V or more with IG ON?	Repair or replace the short circuit.	Go to step **6**.
6	**CHECK K-LINE.** Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is there continuity?	Go to step **8**.	Go to step **7**.
7	**CHECK K-LINE.** 1) Disconnect the ECM connector. 2) Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is there continuity?	Check ECM ground.	Repair or replace the open circuit.
8	**CHECK K-LINE.** 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	K-Line is normal. Check the power supply circuit of each module.	Go to step **11**.
9	**CHECK DATA LINK CONNECTOR.** Use a tester to check for continuity in the ground circuit. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit.
10	**CHECK DATA LINK CONNECTOR.** 1) Turn the ignition switch to ON. 2) Using a tester, check the power supply of data link connector. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Check the power supply circuits to the data link connector.
11	**CHECK COMMUNICATION FOR INITIALIZING ERROR.** Perform the communication for initializing with each module by connecting the Subaru Select Monitor. (For systems whose module can communicate with diagnostic devices)	Is the communication possible with all modules?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the inspection using the check sheet of communication for initializing. <Ref. to LAN(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

1. CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING

- **Network diagram**



AL: With auto headlight beam leveler system
WP: With keyless access with push button start system
WR: With Reverse Automatic Braking
SR: With BSD/RCTA
WT: With telematics
EM: With EyeSight assist monitor
EJ: Engine type EJ model
CVT: CVT model
ES: With EyeSight
EP: With electric power steering

- **Check sheet of communication for initializing**

Step		Check	Yes	No
1	**MODULE INSTALLATION CHECK.** 1) Using the check sheet for communication for initializing, check the vehicle installation module (module targeted for CAN communication). 2) Write "-" marks in the field for installation check (A) if the vehicle to be inspected does not have relevant module. 3) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.	Was the module installation check on the left performed?	Go to step **2**.	Perform the module installation check, Go to step **2**.

	Step	Check	Yes	No
2	**SUBARU SELECT MONITOR COMMUNICATION INITIALIZATION CHECK.** 1) Connect the Subaru Select Monitor to the vehicle. 2) Check if communication with the module installed on the vehicle is possible. 3) Write "○" marks in the field for communication initialization (B) if the module succeeded in the communication for initializing with Subaru Select Monitor. If the module failed in the communication, write a "×". 4) Write "○" marks in all blank fields on the same row that the "○" mark has filled in. 5) When at least one field in a column of wiring location (E) is filled with the "○" mark, then the wiring for that location is normal. Write "○" marks in all blank fields on the same column that the "○" mark has filled in under the circled number.	Was the communication checked with all the modules installed on the vehicle?	Go to step **3**.	Perform the communication check, Go to step **3**.
3	**CHECK FIELD FOR COMMUNICATION FOR INITIALIZING (B).** Check if communication with all the modules installed on the vehicle was possible.	Is "×" written in all the fields for communication for initializing (B)? (The communication was not possible between all the modules and the Subaru Select Monitor.)	Go to step **6**.	Go to step **4**.
4	**CHECK WIRING LOCATION OF MODULE THAT CANNOT PERFORM COMMUNICATION.** Using the check sheet for communication for initializing, check open circuit of the modules which have no "○" mark in their columns of the wiring location (E) in ascending order by referring to the network diagram.	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **5**.
5	**CHECK POWER SUPPLY CIRCUIT OF CONTROL MODULE.** Check power supply circuit of the control module that cannot perform communication. (Check the harness between control module connector and battery, and check the fuse.)	Is power supply circuit faulty?	Repair or replace the faulty portion of the power supply circuit.	In the Basic Diagnostic Procedure, Go to step **5**.
6	**CHECK CAN COMMUNICATION LINE.** Check for short circuit to ground of CAN communication line. <Ref. to LAN(diag)-42, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **7**.
7	**CHECK CAN COMMUNICATION LINE.** Check for short circuit to power supply of CAN communication line. <Ref. to LAN(diag)-45, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **8**.
8	**CHECK CAN COMMUNICATION LINE.** Check for short circuit between the CAN communication lines. <Ref. to LAN(diag)-51, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **9**.
9	**CHECK CAN COMMUNICATION LINE.** Check the data link connector harness. (Check for open circuit of network diagram No. 13.)	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Go to step **10**.

Step		Check	Yes	No
10	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle to check whether the communication can be executed normally.	Is the Subaru Select Monitor OK?	It is possible that poor contact occurs at the data link connector.	The Subaru Select Monitor is faulty. Replace with a normal Subaru Select Monitor, and perform the diagnosis.

LAN11238

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to LAN(diag)-111, List of Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «All diagnosis code».
On «All diagnosis code» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

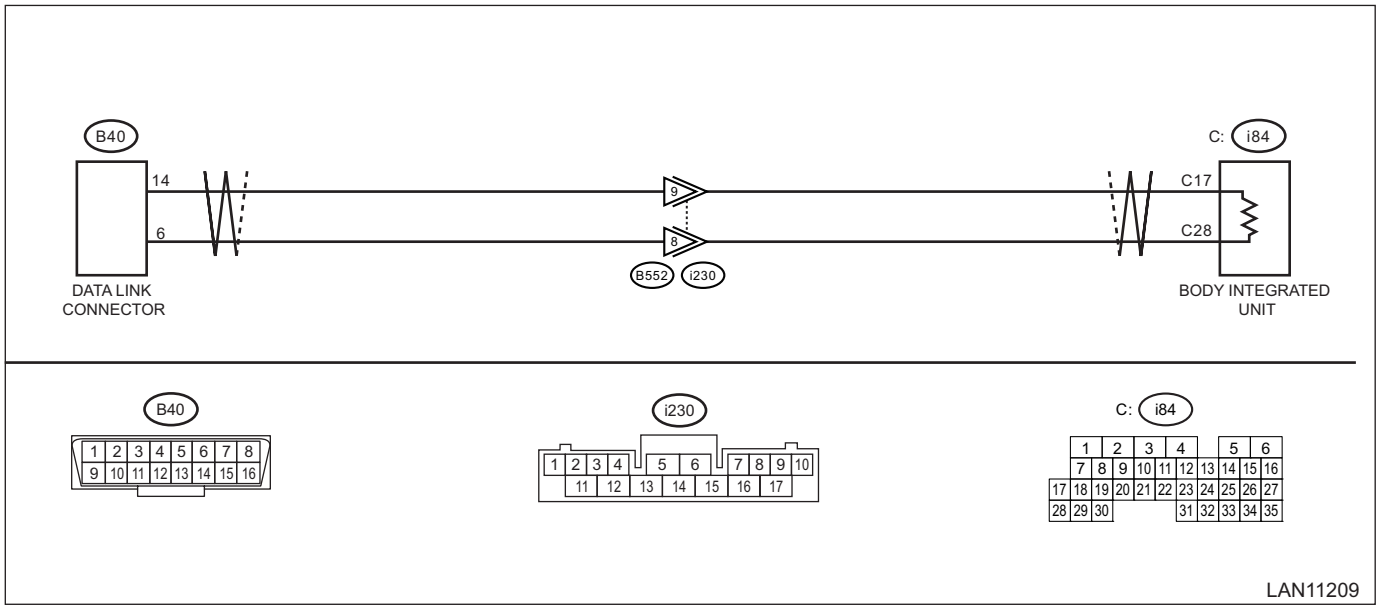
9. CAN Communication Circuit Check

A: PROCEDURE

1. DIAG-CAN

NOTE:
When measuring the resistance of CAN communication circuit, measure it in sleep status.
To enter sleep status
– With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
– On models with keyless access function, keep the access key 2 m or more away from the vehicle.

Wiring diagram:
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Check that the basic diagnosis has been performed up to step 7. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing “CHECK CAN COMMUNICATION CIRCUIT” using a tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
2	**CHECK SHORT CIRCUIT TO GROUND OF HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Using a tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 6 — Chassis ground:*** ***(B40) No. 14 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit to ground in harness between the data link connector and the body integrated unit.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK SHORT CIRCUIT TO BATTERY IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 6 (+) — Chassis ground (–):*** ***(B40) No. 14 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	Go to step **4**.	Repair or replace the short circuit to battery in harness between the data link connector and the body integrated unit.
4	**CHECK FOR SHORT CIRCUIT BETWEEN LINES IN HARNESS BETWEEN DATA LINK CONNECTOR AND BODY INTEGRATED UNIT.** 1) Turn the ignition switch to OFF. 2) Using the tester, measure the resistance between terminals of data link connector. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit between lines of the harness between data link connector and body integrated unit.
5	**CHECK END RESISTANCE.** 1) Connect the body integrated unit connector. 2) Using the tester, measure the resistance between terminals of data link connector. ***Connector & terminal*** ***(B40) No. 6 — No. 14:***	Is the resistance 114 — 126 Ω?	CAN communication circuit is normal.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

2. MAIN-CAN

NOTE:
- When measuring the resistance of CAN communication circuit, measure it in sleep status.

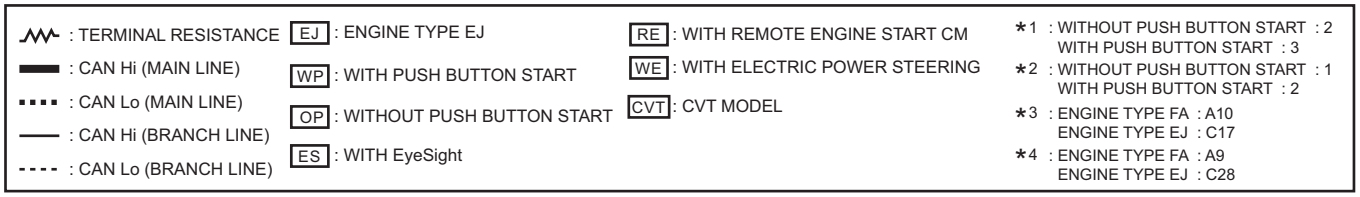
To enter sleep status
  – With ignition switch OFF and key or switch operation stopped, keep the doors, trunk, and rear gate all closed for one minute or more.
  – On models with keyless access function, keep the access key 2 m or more away from the vehicle.

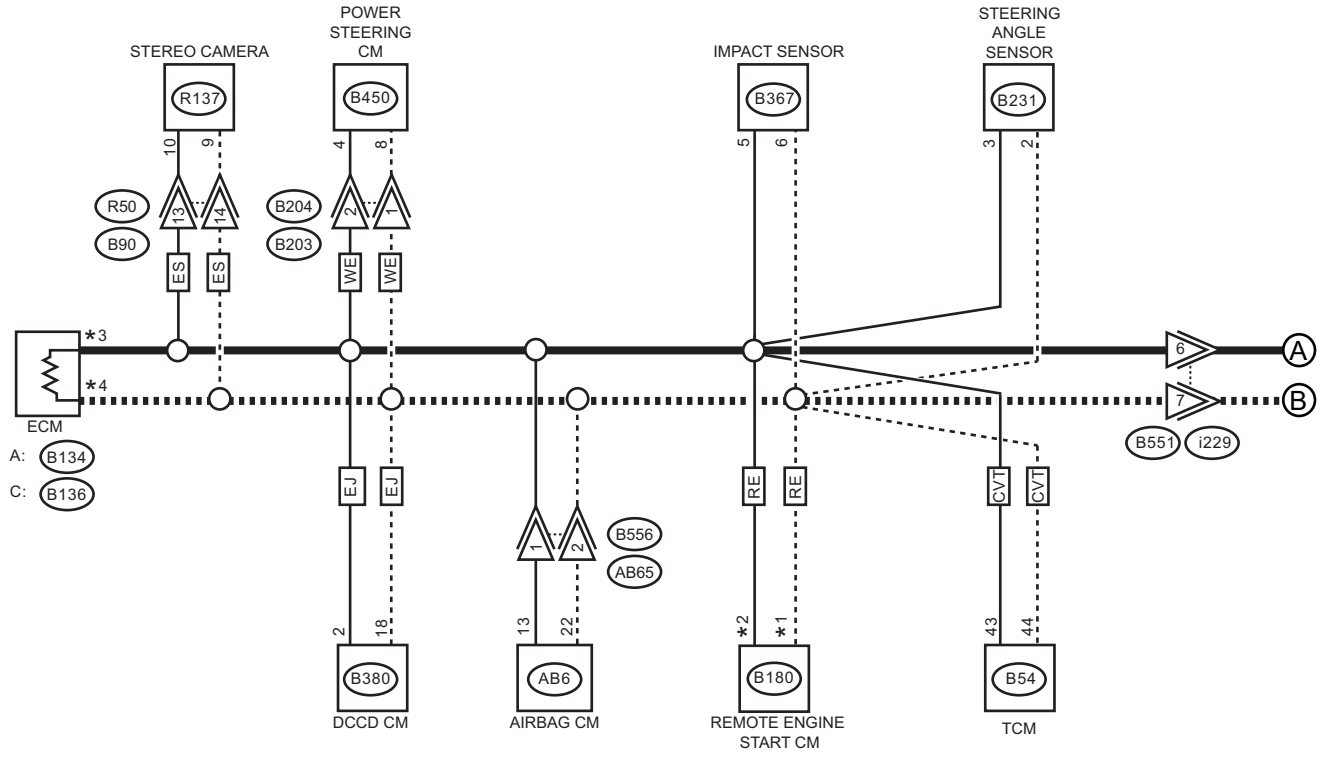
- When the bus line is measured, combined resistance of the end resistance (120 Ω) in ECM and the end resistance (120 Ω) in VDC CM can be measured. The combined resistance is supposed to be more than 52 Ω and less than 62 Ω with the stabilizing circuit included. If the measured resistance value becomes 52 Ω or less, main wiring harness or related lines may be shorted. Or, the combined resistance may have changed because of a resistance other than the end resistance created on the circuit. If the measured value is 62 Ω or more, there may be a malfunction such as open circuit in one of the end resistances, in the stabilizing circuit, or in the main wiring harness.

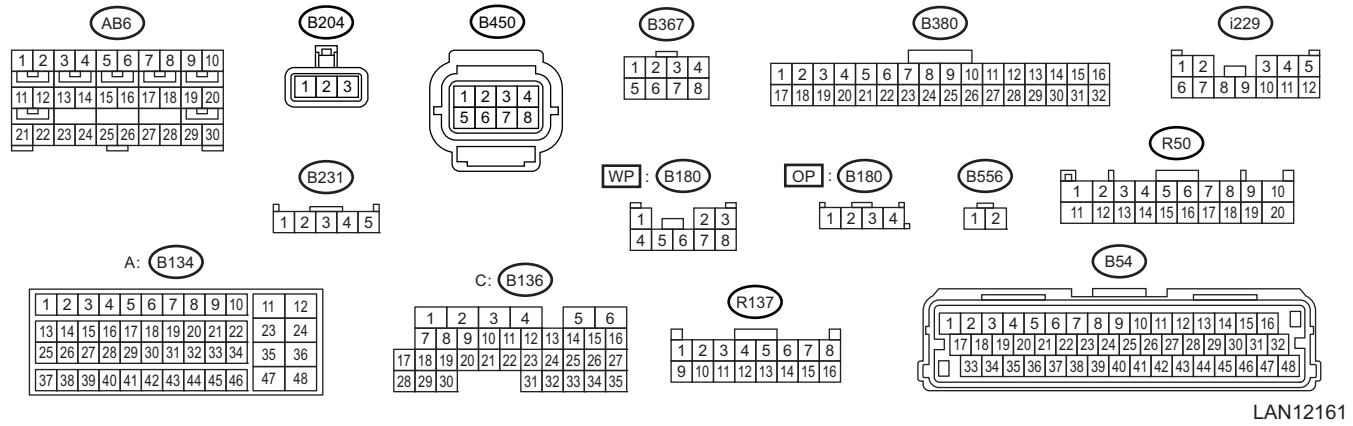
Also, even when the resistance value is more than 52 Ω and less than 62 Ω, related lines may be open if an error of communication for initializing or a CAN system U-code has occurred. (The resistance cannot be more than 52 Ω and less than 62 Ω if the main wiring harness is open.)

Wiring diagram:
- Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>

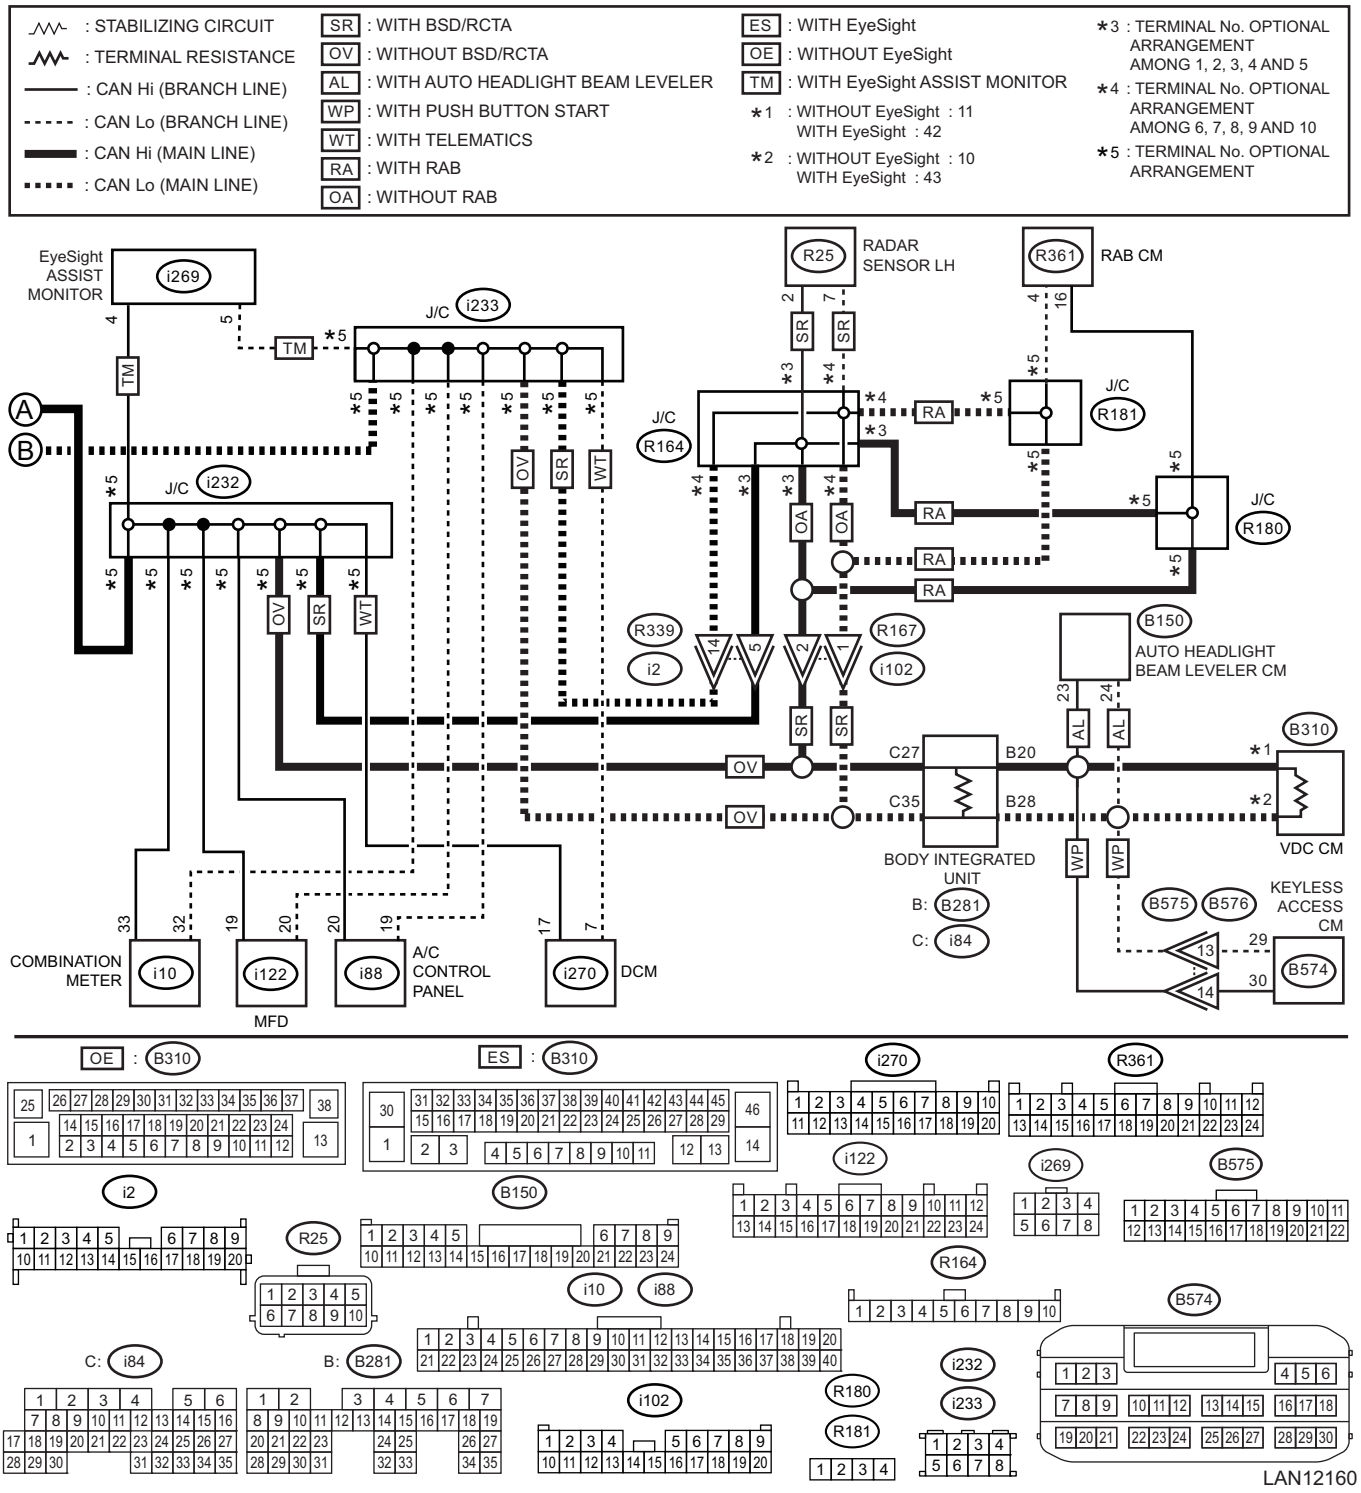
- CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



Step		Check	Yes	No
1	**CHECK BASIC DIAGNOSTIC PROCEDURE.** Check that the basic diagnosis has been performed up to step 7. NOTE: Possible defective parts can be narrowed easily by inspection using Subaru Select Monitor before performing “CHECK CAN COMMUNICATION CIRCUIT” using a tester.	Was the basic diagnostic procedure performed?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
2	**CHECK SHORT CIRCUIT TO GROUND OF MAIN-CAN COMMUNICATION CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Use a tester to measure the resistance between the steering angle sensor connector and chassis ground. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Check for ground short. <Ref. to LAN(diag)-42, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Go to step **3**.
3	**CHECK BATTERY SHORT CIRCUIT OF MAIN-CAN COMMUNICATION CIRCUIT.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the steering angle sensor connector and chassis ground. ***Connector & terminal*** ***(B231) No. 2 (+) — Chassis ground (–):*** ***(B231) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	Go to step **4**.	Check for battery short. <Ref. to LAN(diag)-45, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>
4	**CHECK SHORT CIRCUIT OF MAIN-CAN COMMUNICATION CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between steering angle sensor connector terminals. ***Connector & terminal*** ***(B231) No. 2 — No. 3:***	Is the resistance 52 Ω or less?	Perform the inspection for resistance of 52 Ω or less. <Ref. to LAN(diag)-51, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Go to step **5**.
5	**CHECK OPEN CIRCUIT OF MAIN-CAN COMMUNICATION CIRCUIT.** Using a tester, measure the resistance between steering angle sensor connector terminals. ***Connector & terminal*** ***(B231) No. 2 — No. 3:***	Is the resistance 62 Ω or more?	Perform the inspection for resistance of 62 Ω or more. <Ref. to LAN(diag)-55, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	If the display of CAN system U-code disappears from the current malfunction, the CAN network is currently normal. If the U-code has detected as current malfunction, related lines may be open. Perform the inspection for the related line corresponding to the detected DTC. <Ref. to LAN(diag)-40, LIST, CAN Communication Circuit Check.>

B: LIST

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Ground short inspection	<Ref. to LAN(diag)-42, GROUND SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to ground in the communication circuit or control module.

Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Battery short inspection	<Ref. to LAN(diag)-45, BATTERY SHORT INSPECTION, INSPECTION, CAN Communication Circuit Check.>	Shorted to battery power supply in the communication circuit or control module.
More than 52 Ω and less than 62 Ω	<Ref. to LAN(diag)-48, MORE THAN 52 Ω AND LESS THAN 62 Ω, INSPECTION, CAN Communication Circuit Check.>	Combined resistance of end resistance does not have malfunction; short to ground or +B short of the CAN communication circuit is possible, however.
52 Ω or less	<Ref. to LAN(diag)-51, 52 Ω OR LESS, INSPECTION, CAN Communication Circuit Check.>	Resistance is lower than combined resistance of end resistance. Short to CAN Hi and CAN Lo on the CAN communication circuit is possible.
62 Ω or more	<Ref. to LAN(diag)-55, 62 Ω OR MORE, INSPECTION, CAN Communication Circuit Check.>	Resistance is higher than combined resistance of end resistance. Open circuit of CAN communication circuit is possible.
Related lines more than 52 Ω and less than 62 Ω (TCM system)	<Ref. to LAN(diag)-59, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (TCM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No TCM data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (steering angle sensor system)	<Ref. to LAN(diag)-62, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (STEERING ANGLE SENSOR SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No steering angle sensor data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (A/C control panel system)	<Ref. to LAN(diag)-65, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (A/C CONTROL PANEL SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No A/C data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (power steering CM system)	<Ref. to LAN(diag)-68, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (POWER STEERING CM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No electric power steering data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (combination meter system)	<Ref. to LAN(diag)-71, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (COMBINATION METER SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No meter data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (MFD system)	<Ref. to LAN(diag)-74, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (MFD SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No MFD data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (airbag system)	<Ref. to LAN(diag)-77, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (AIRBAG CM SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No airbag data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (keyless access system)	<Ref. to LAN(diag)-80, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (KEYLESS ACCESS SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No keyless access CM data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (impact sensor system)	<Ref. to LAN(diag)-89, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (IMPACT SENSOR SYSTEM), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when impact sensor malfunction is detected.
Related lines more than 52 Ω and less than 62 Ω (DCCD system)	<Ref. to LAN(diag)-92, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (DCCD SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No DCCD data is received. Perform inspection when faulty is detected.

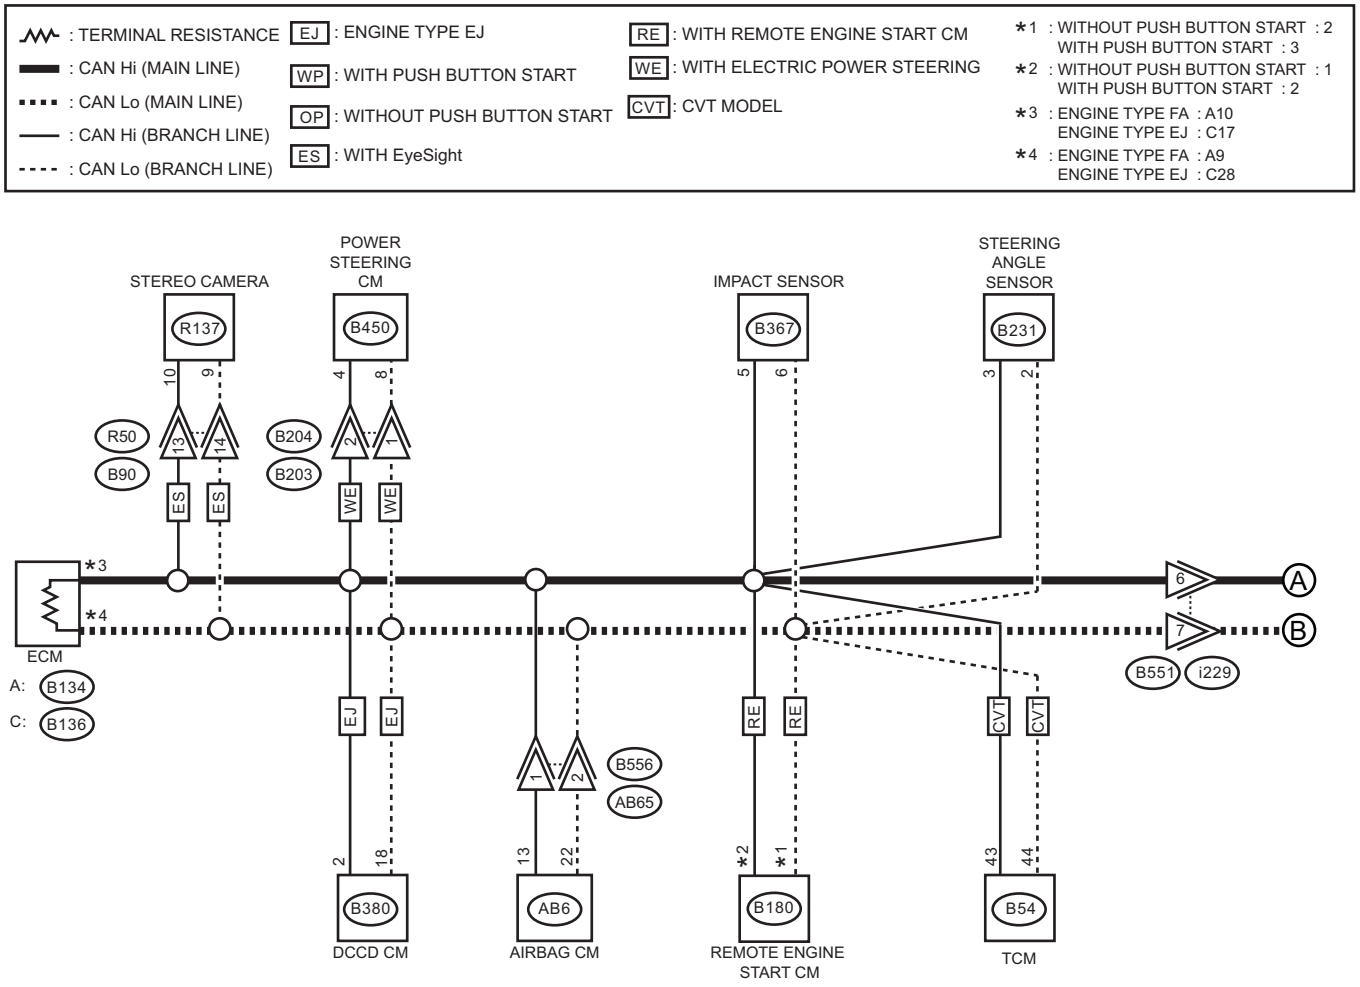
Resistance value between CAN Hi and Lo	Contents of inspection	Remarks
Related lines more than 52 Ω and less than 62 Ω (headlight beam leveler system)	<Ref. to LAN(diag)-83, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (HEADLIGHT BEAM LEVELER SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No headlight beam leveler data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (remote engine starter system)	<Ref. to LAN(diag)-86, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (REMOTE ENGINE STARTER SYSTEM), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when the remote engine starter does not operate, while the mobile key side operates normally.
Related lines more than 52 Ω and less than 62 Ω (BSD/RCTA system)	<Ref. to LAN(diag)-95, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (BSD/RCTA SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No BSD/RCTA data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (stereo camera system)	<Ref. to LAN(diag)-98, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (STEREO CAMERA SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No stereo camera data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (telematics system)	<Ref. to LAN(diag)-101, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (TELEMATICS SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No telematics data is received. Perform inspection when faulty is detected.
Related lines more than 52 Ω and less than 62 Ω (RAB system)	<Ref. to LAN(diag)-104, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (RAB SYSTEM), INSPECTION, CAN Communication Circuit Check.>	Perform inspection when no RAB data is received, or invalid data is detected.
Related lines more than 52 Ω and less than 62 Ω (EyeSight assist monitor system)	<Ref. to LAN(diag)-107, RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (EyeSight ASSIST MONITOR SYSTEM), INSPECTION, CAN Communication Circuit Check.>	No EyeSight assist monitor data is received. Perform inspection when faulty is detected.

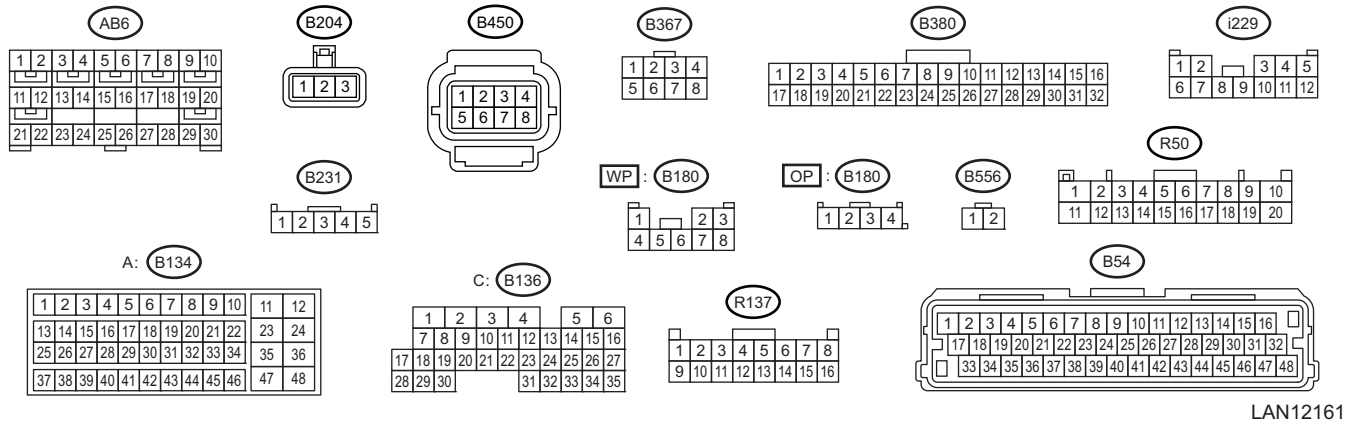
C: INSPECTION

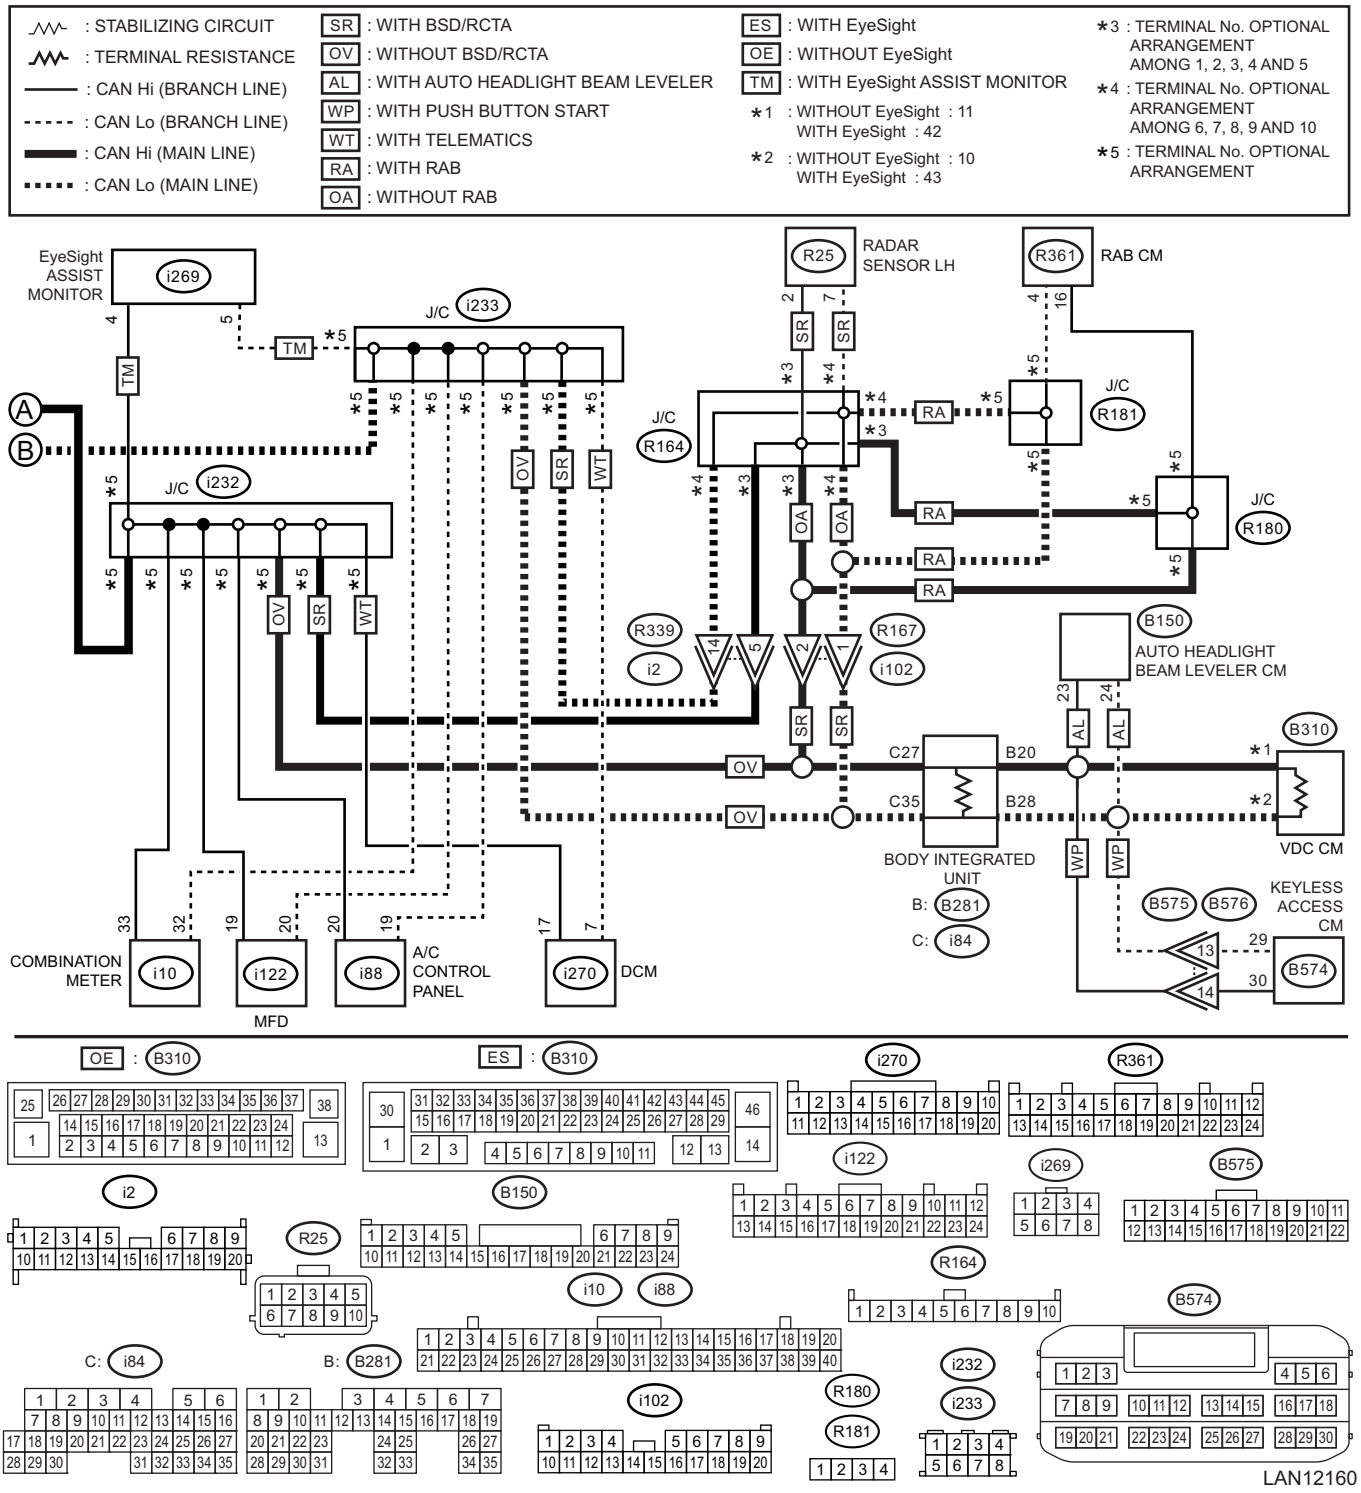
1. GROUND SHORT INSPECTION

Wiring diagram:

CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







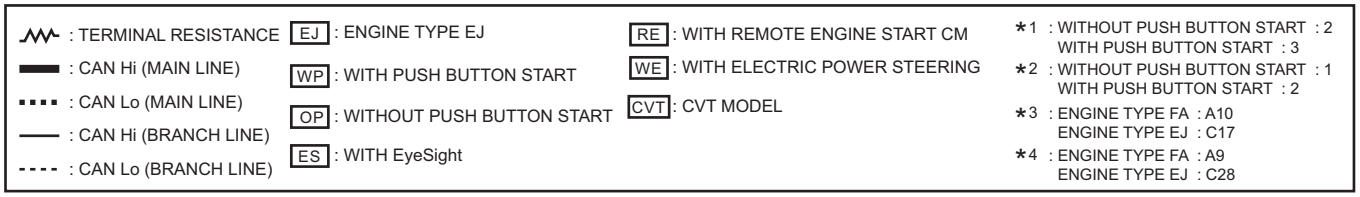
NOTE:
Main wiring harness or related lines may be shorted to ground, or shorted to ground in one of the control modules.

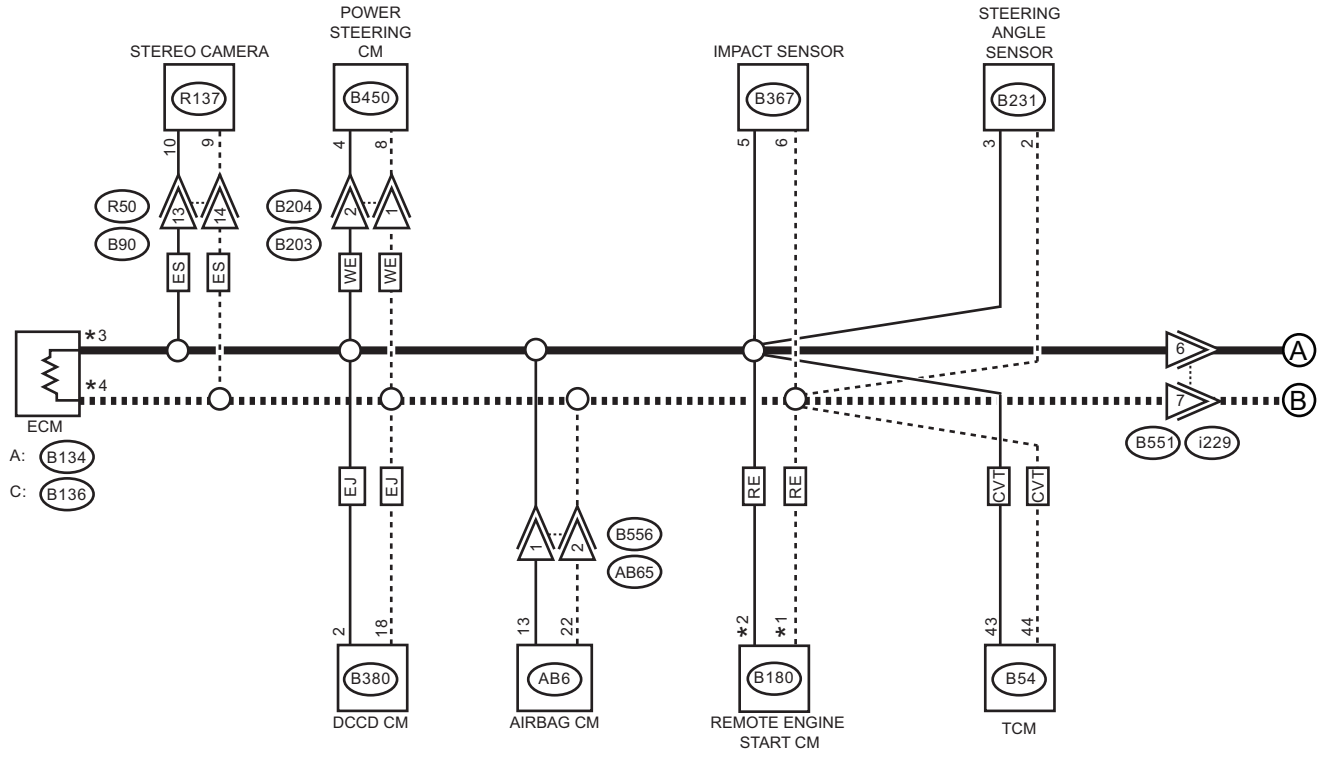
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Currently, it is normal.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the main wiring harness and related lines between body integrated unit and ECM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 20 — Chassis ground:*** ***(B281) No. 28 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the main wiring harness and related lines between VDC CM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

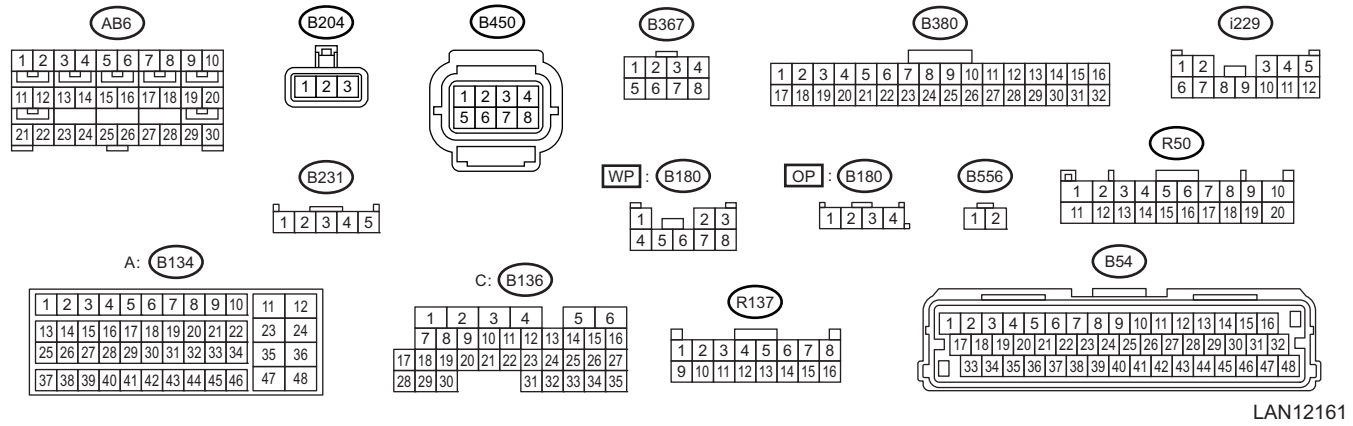
2. BATTERY SHORT INSPECTION

Wiring diagram:

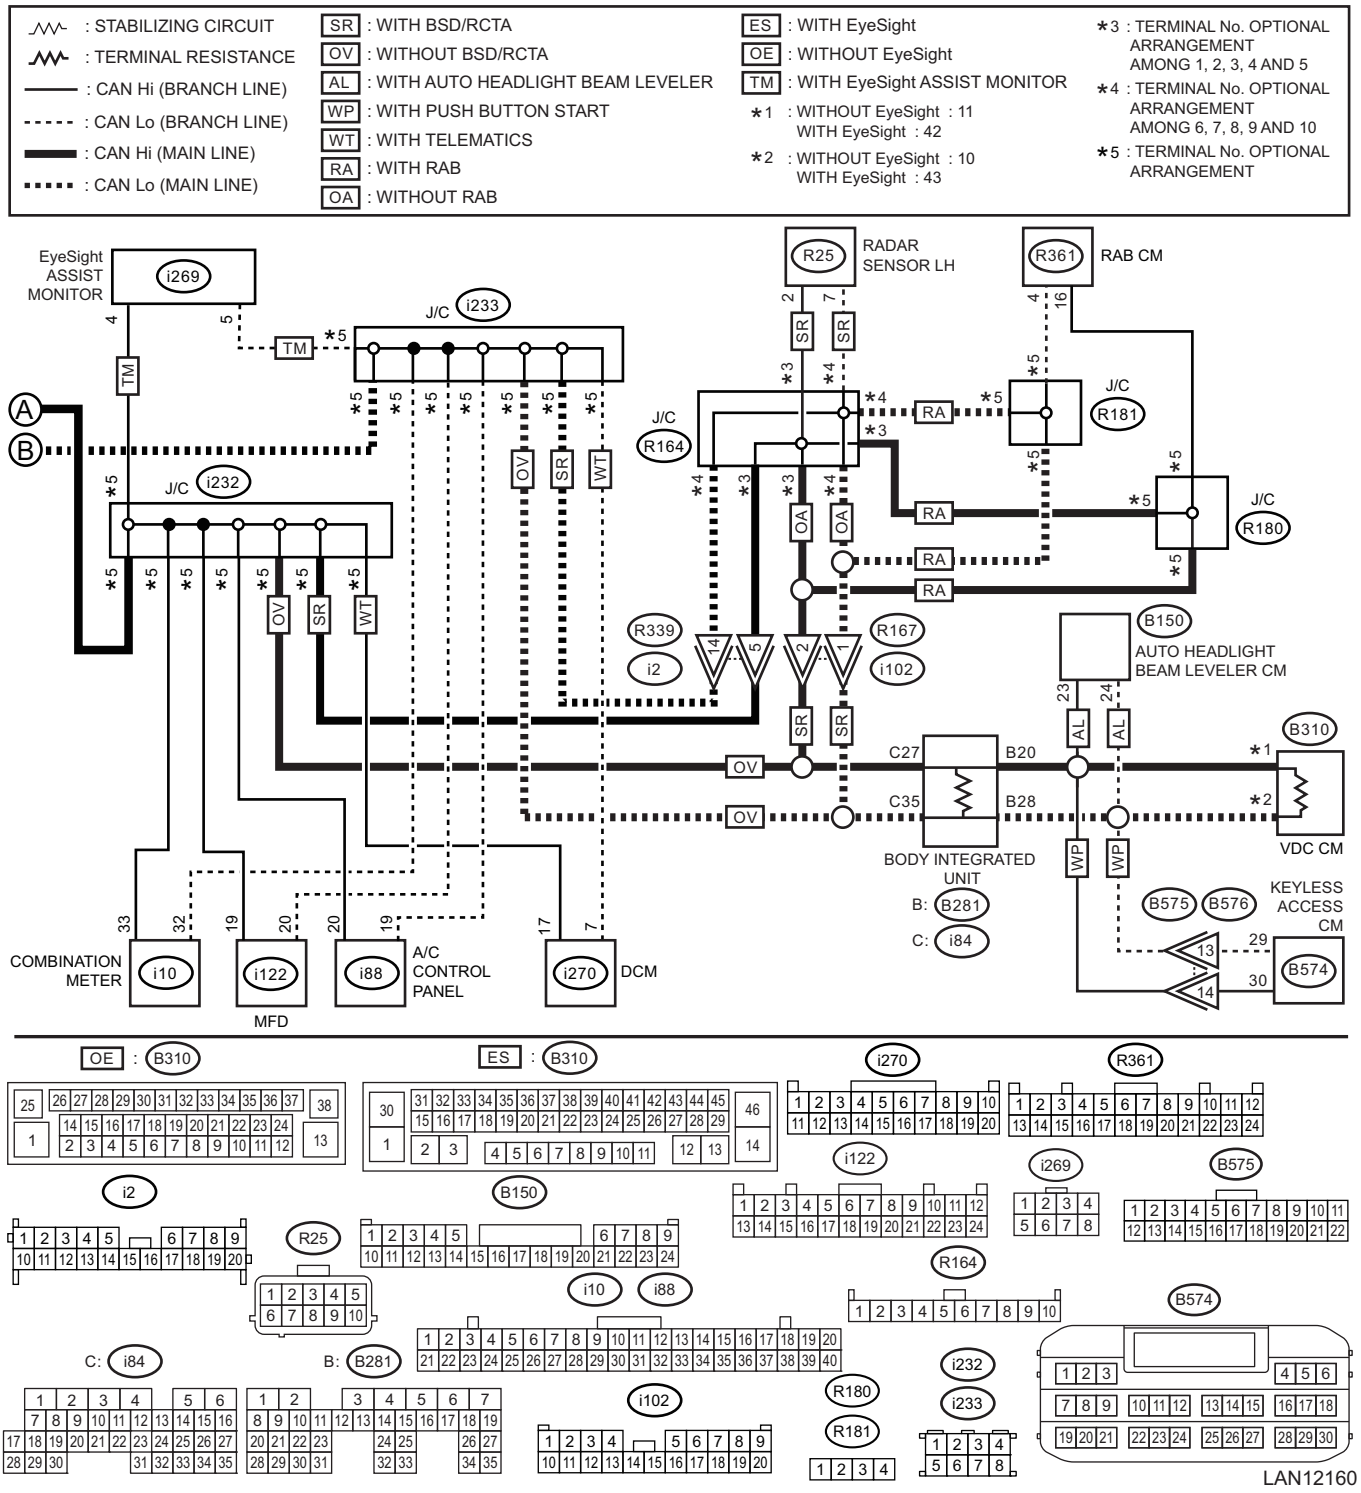
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



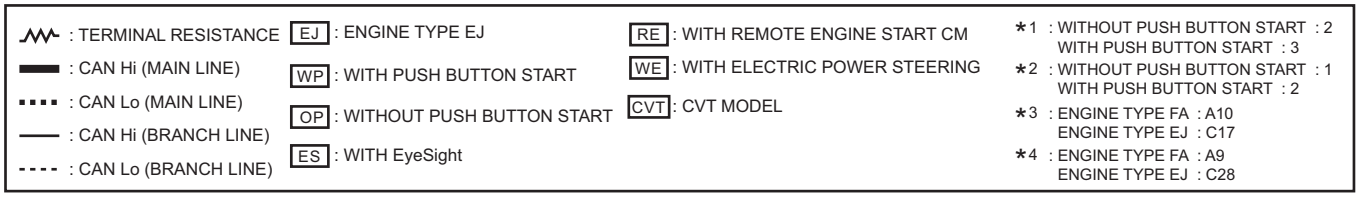
NOTE:
Main wiring harness or related lines may be shorted to battery circuit, or shorted to battery circuit in one of the control modules.

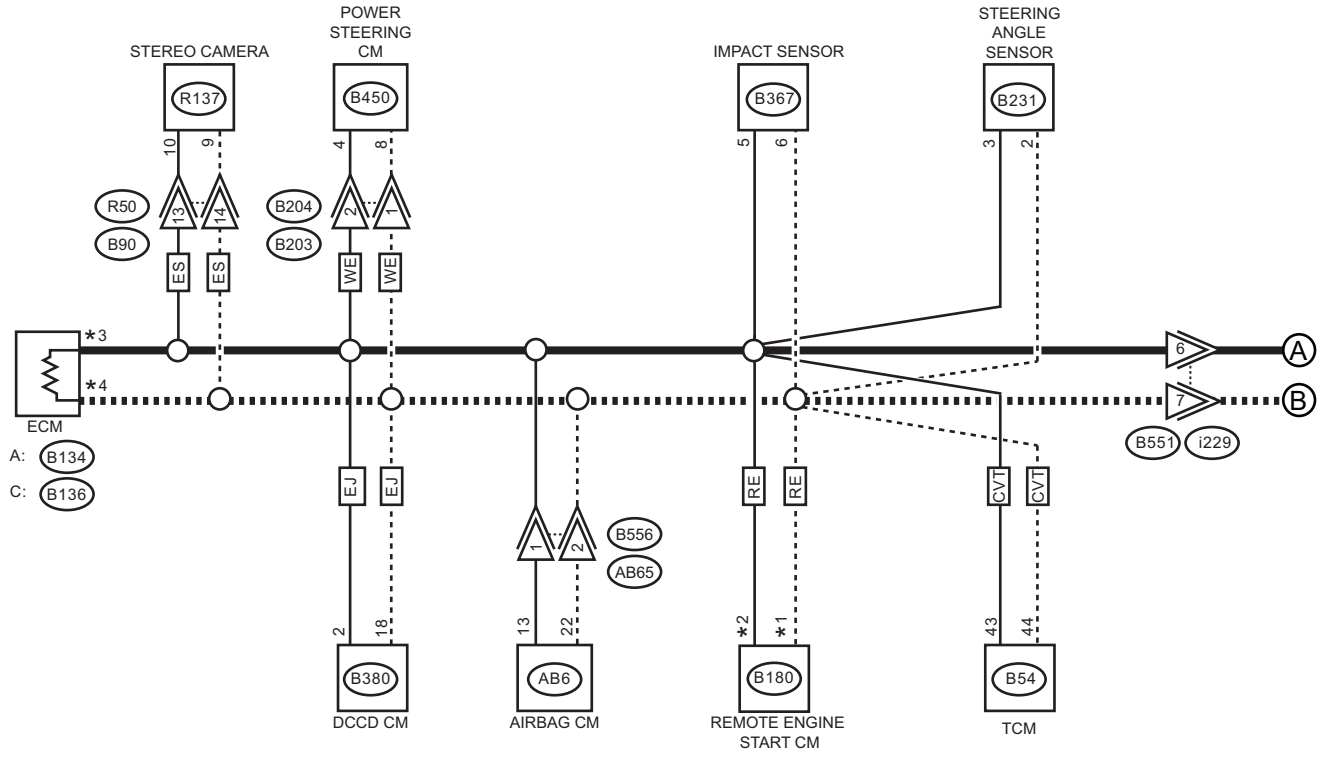
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Turn the ignition switch to ON. 4) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B231) No. 2 (+) — Chassis ground (–):*** ***(B231) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	Currently, it is normal.	Go to step **2**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B231) No. 2 (+) — Chassis ground (–):*** ***(B231) No. 3 (+) — Chassis ground (–):***	Did the voltage change to less than 5 V?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 20 (+) — Chassis ground (–):*** ***(B281) No. 28 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the short circuit of the harness between VDC CM and body integrated unit.

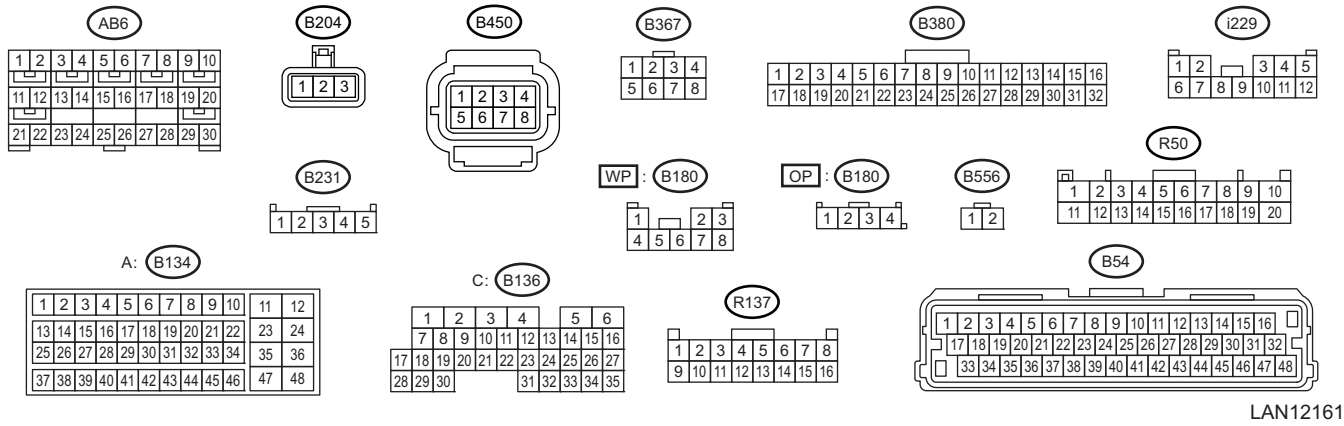
3. MORE THAN 52 Ω AND LESS THAN 62 Ω

Wiring diagram:

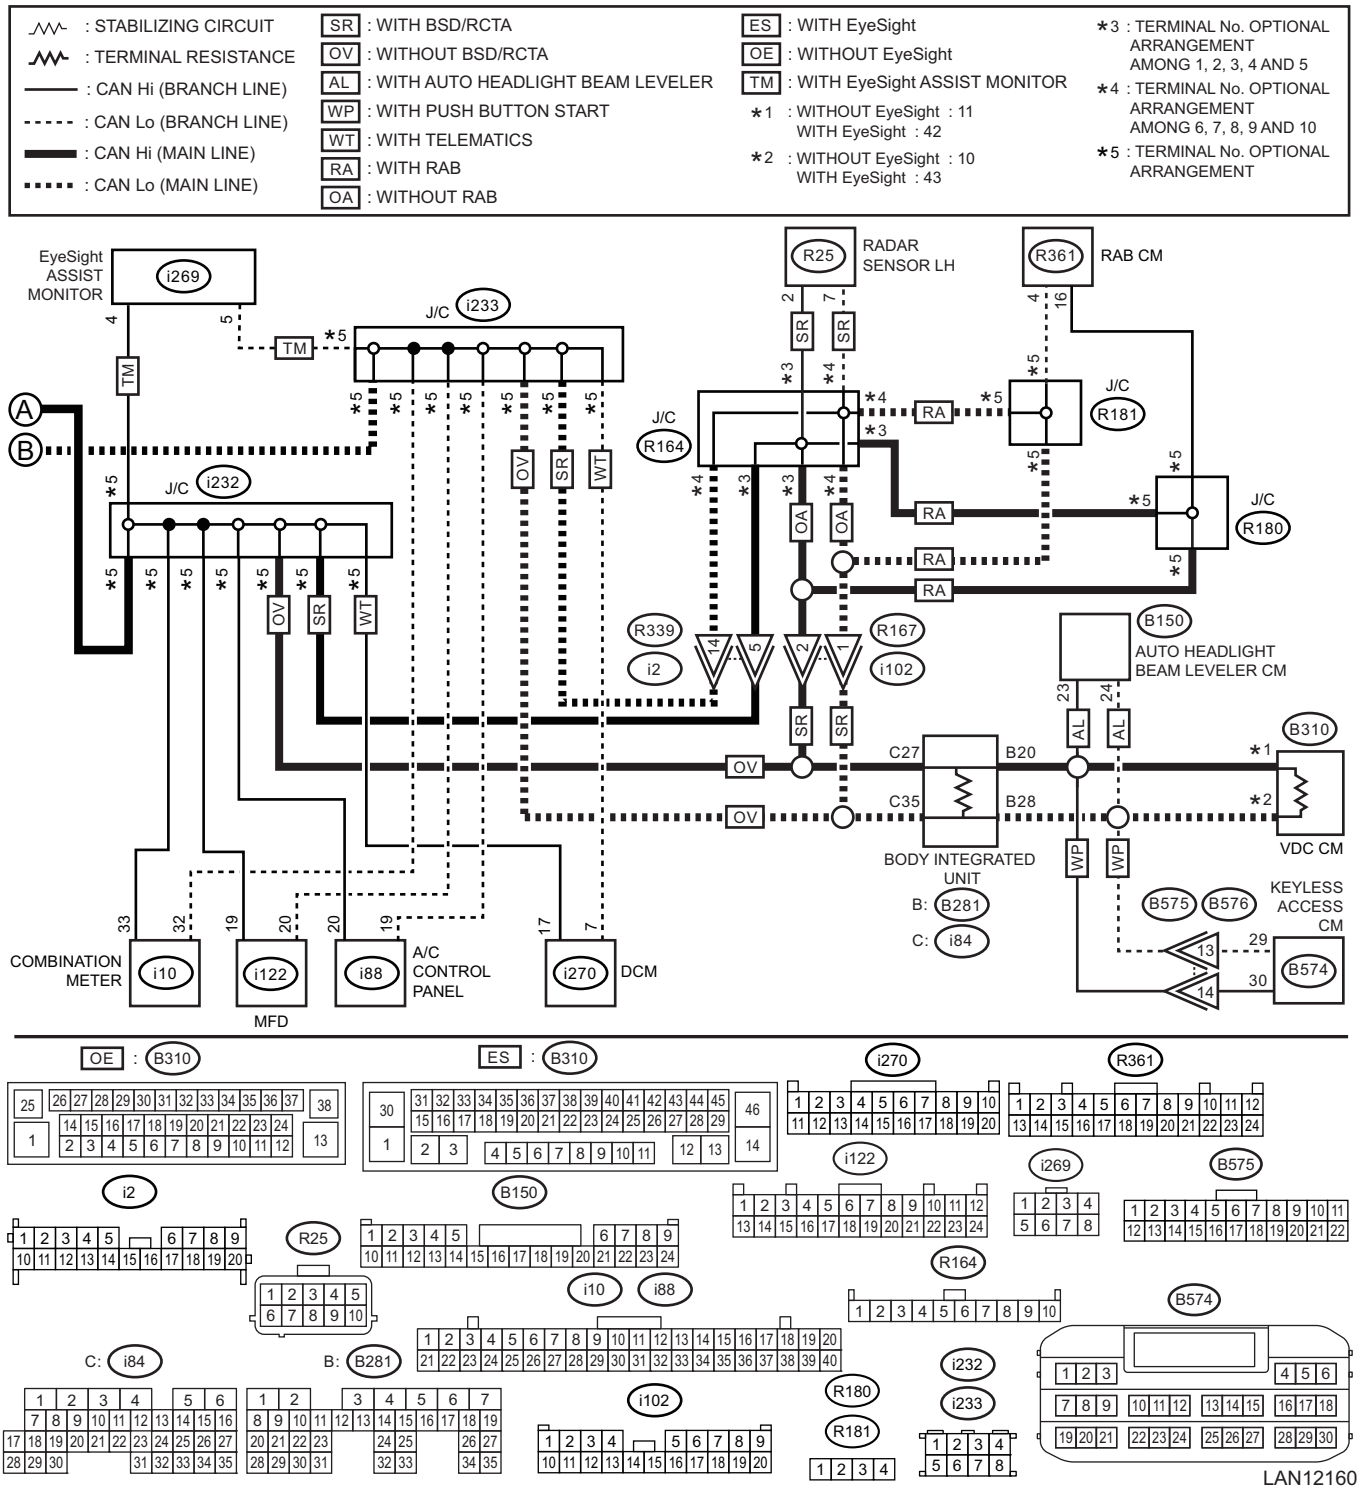
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



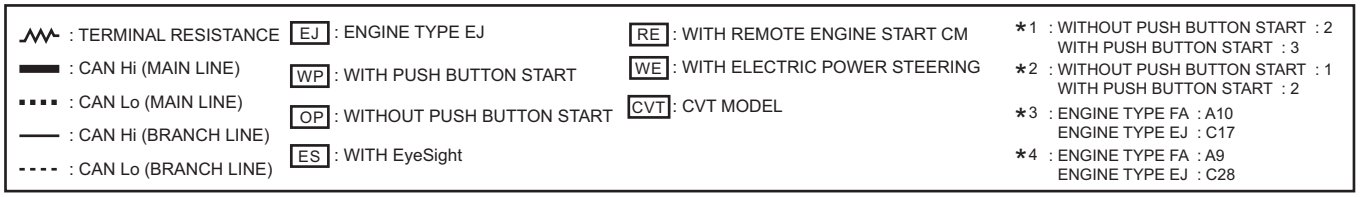
NOTE:
When the measured resistance value is more than 52 Ω and less than 62 Ω, main wiring harness or related lines may be shorted to ground, or shorted to power supply line, or related line may be open.

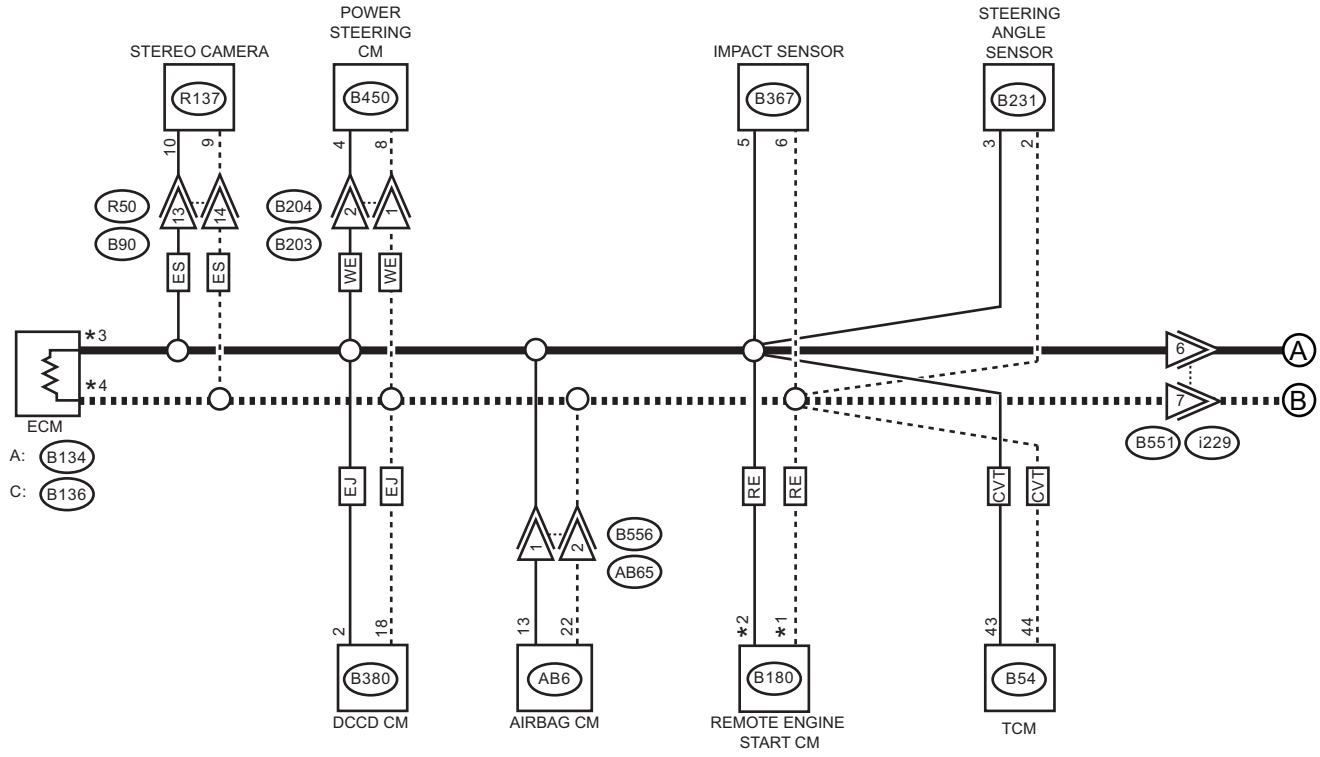
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **4**.
2	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B231) No. 2 — Chassis ground:*** ***(B231) No. 3 — Chassis ground:***	Did the resistance change to 10 Ω or more?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 20 — Chassis ground:*** ***(B281) No. 28 — Chassis ground:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the harness between VDC CM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B231) No. 2 (+) — Chassis ground (–):*** ***(B231) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	CAN communication circuit is normal.	Go to step **5**.
5	**CHECK CONTROL MODULE.** With the tester connected, disconnect control module. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B231) No. 2 (+) — Chassis ground (–):*** ***(B231) No. 3 (+) — Chassis ground (–):***	Did the voltage change to less than 5 V?	Replace the control module whose voltage has changed. When the value changed at disconnecting the body integrated unit, Go to step **6**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
6	**CHECK HARNESS.** Using a tester, measure the voltage between terminals and chassis ground. ***Connector & terminal*** ***(B281) No. 20 (+) — Chassis ground (–):*** ***(B281) No. 28 (+) — Chassis ground (–):***	Is the voltage less than 5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the short circuit of the harness between VDC CM and body integrated unit.

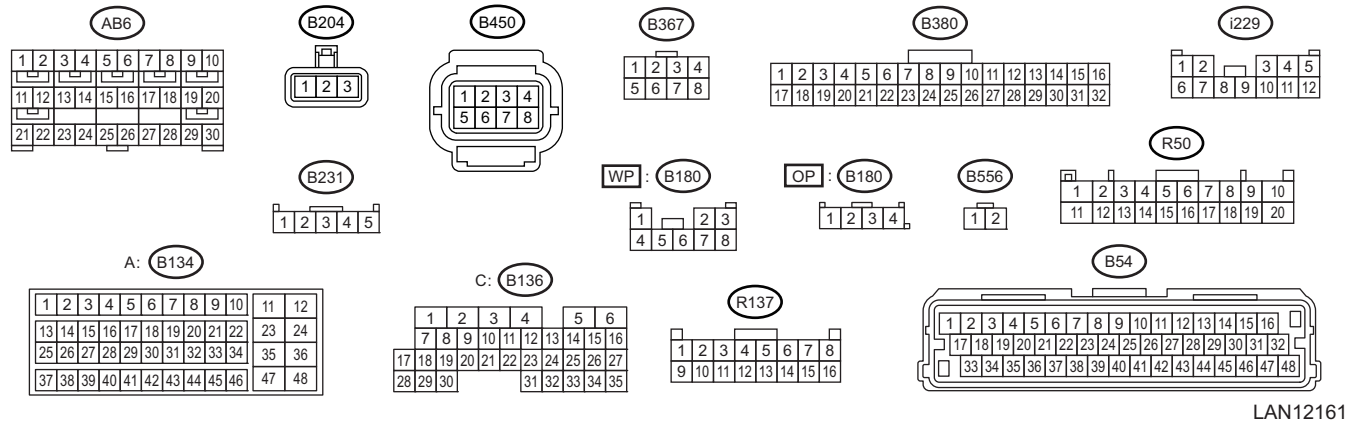
4. 52 Ω OR LESS

Wiring diagram:

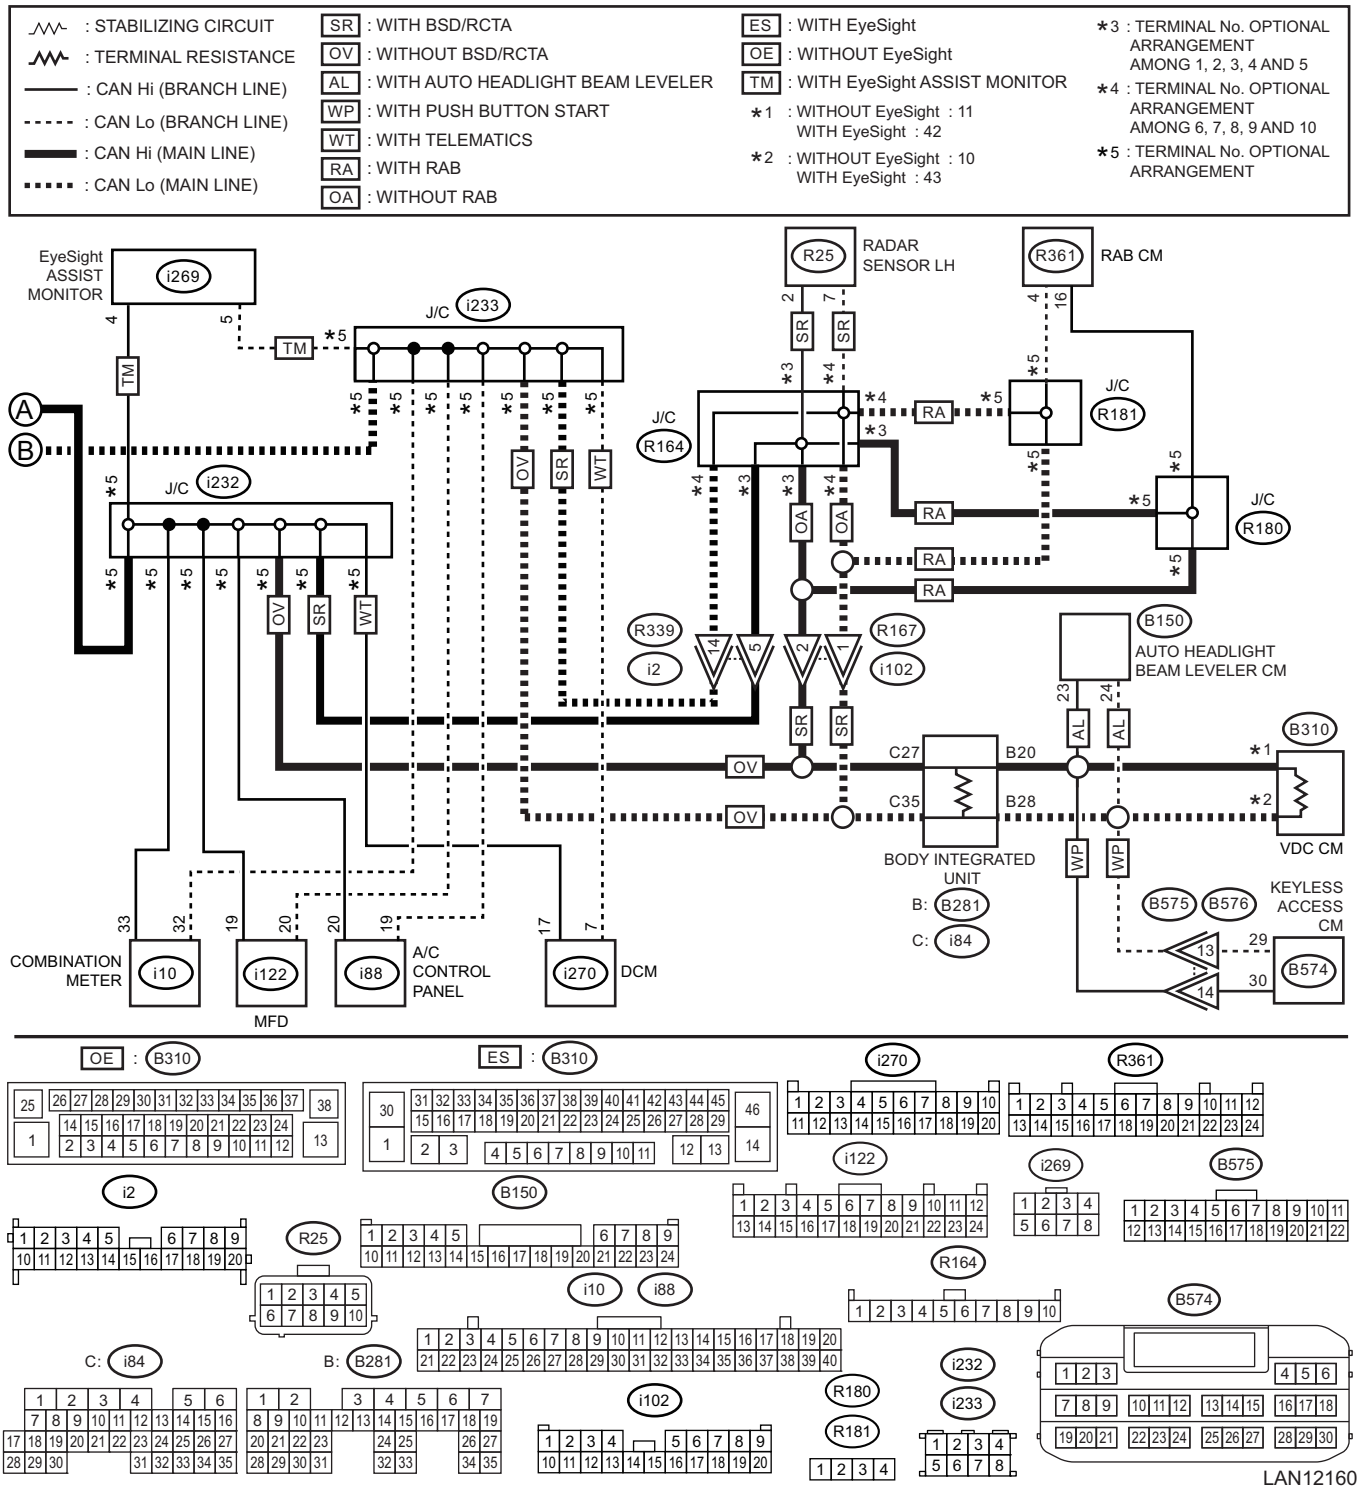
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



NOTE:
When the bus line is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is supposed to be more than 52 Ω and less than 62 Ω with the stabilizing circuit included. When the measured resistance value is 52 Ω or less, main wiring harness or related lines may be shorted, or combined resistance may have changed because resistance other than end resistance is created on the circuit.

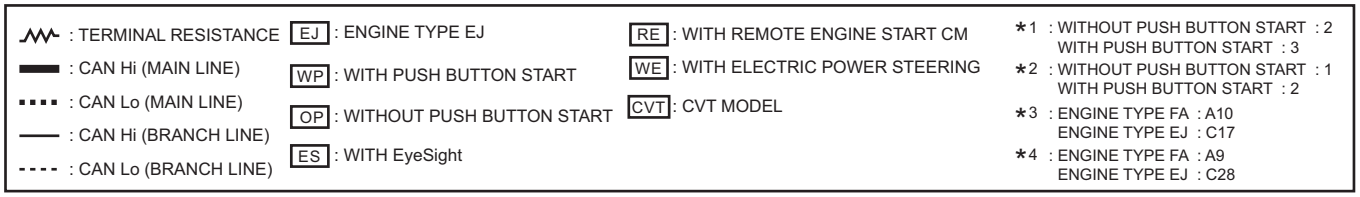
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — (B231) No. 3:***	Is the resistance less than 10 Ω?	Go to step **2**.	Go to step **4**.
2	**CHECK MAIN WIRING HARNESS AND RELATED LINES.** With a tester connected, disconnect control module connectors in order. NOTE: Disconnect the body integrated unit at the end. ***Connector & terminal*** ***(B231) No. 2 — (B231) No. 3:***	Is there any control module whose condition has changed from short state?	Replace the control module whose resistance has changed. When the value changed at disconnecting the body integrated unit, Go to step **3**.	Repair or replace the short circuit of the harness between body integrated unit and ECM.
3	**CHECK BETWEEN MAIN WIRING HARNESSES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 20 — (B281) No. 28:***	Is the resistance less than 10 Ω?	Repair or replace the short circuit of the harness between VDC CM and body integrated unit.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 9 — No. 10:*** ***(B310) No. 10 — No. 11 (without EyeSight):*** ***(B310) No. 42 — No. 43 (with EyeSight):*** ***Engine type: EJ*** ***(B136) No. 17 — No. 28:*** ***(B310) No. 10 — No. 11 (without EyeSight):*** ***(B310) No. 42 — No. 43 (with EyeSight):***	Is the resistance 114 — 126 Ω?	Go to step **5**.	Replace the control module whose end resistance value is out of the specified range.
5	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body integrated unit. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
6	**CHECK CONTROL MODULE.** Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **7**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

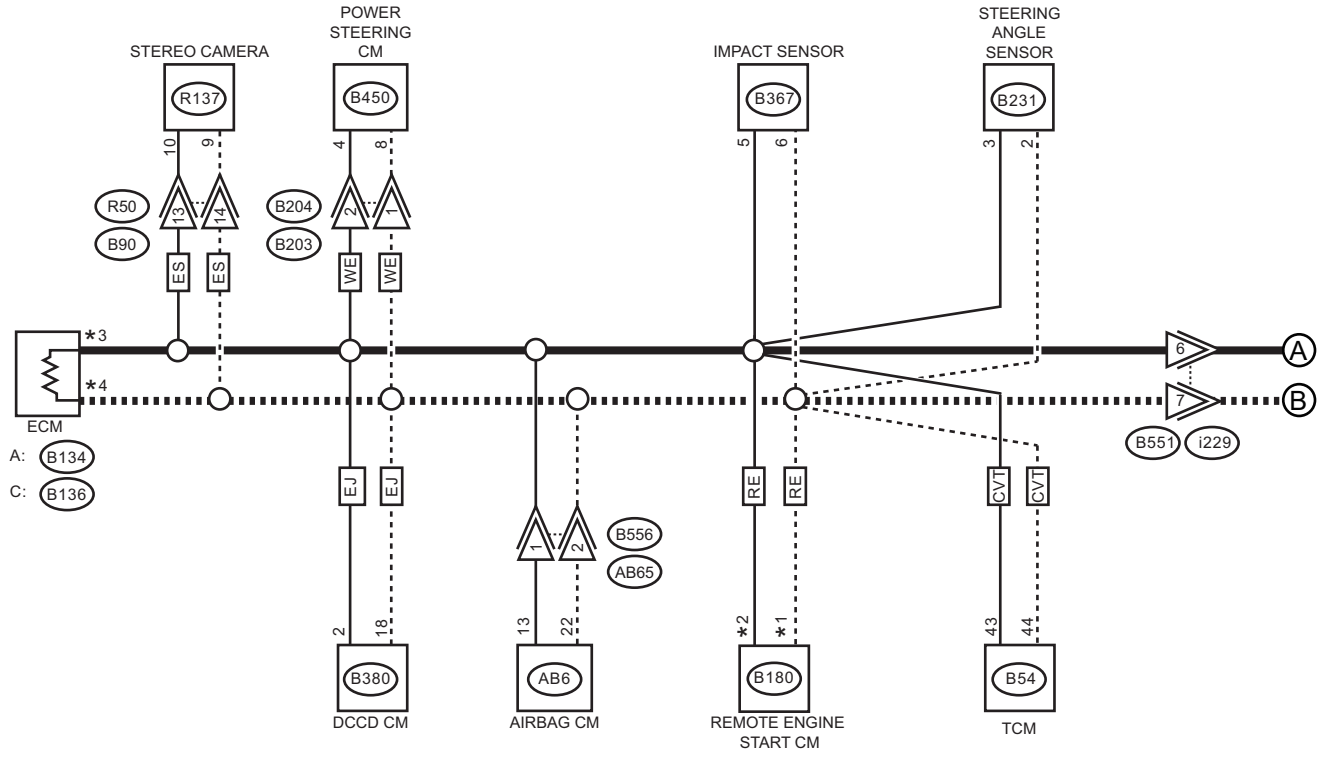
	Step	Check	Yes	No
7	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — (i10) No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **8**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
8	**CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD).** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 19 — (i122) No. 20:***	Is the resistance 2850 — 3150 Ω?	Go to step **9**.	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>
9	**CHECK HARNESS.** Using the tester, check the short circuit of each harness. ***Connector & terminal*** ***(B281) No. 28 — (B281) No. 20:***	Is the resistance 1 MΩ or more?	Go to step **11**.	Go to step **10**.
10	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(B281) No. 28 — (B281) No. 20:***	Are there any control modules whose resistance changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.
11	**CHECK CONTROL MODULE.** With a tester connected, disconnect control modules in order. ***Connector & terminal*** ***(i84) No. 27 — (i84) No. 35:***	Is there any control module whose resistance has changed to 1 MΩ or more?	Replace the control module that has changed.	Repair or replace the harness part which has resistance component.

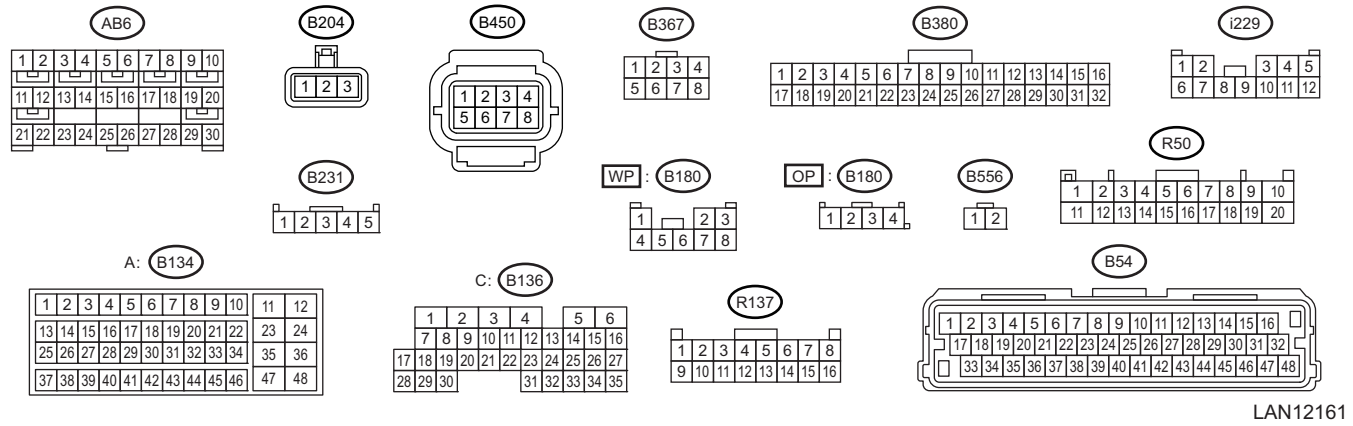
5. 62 Ω OR MORE

Wiring diagram:

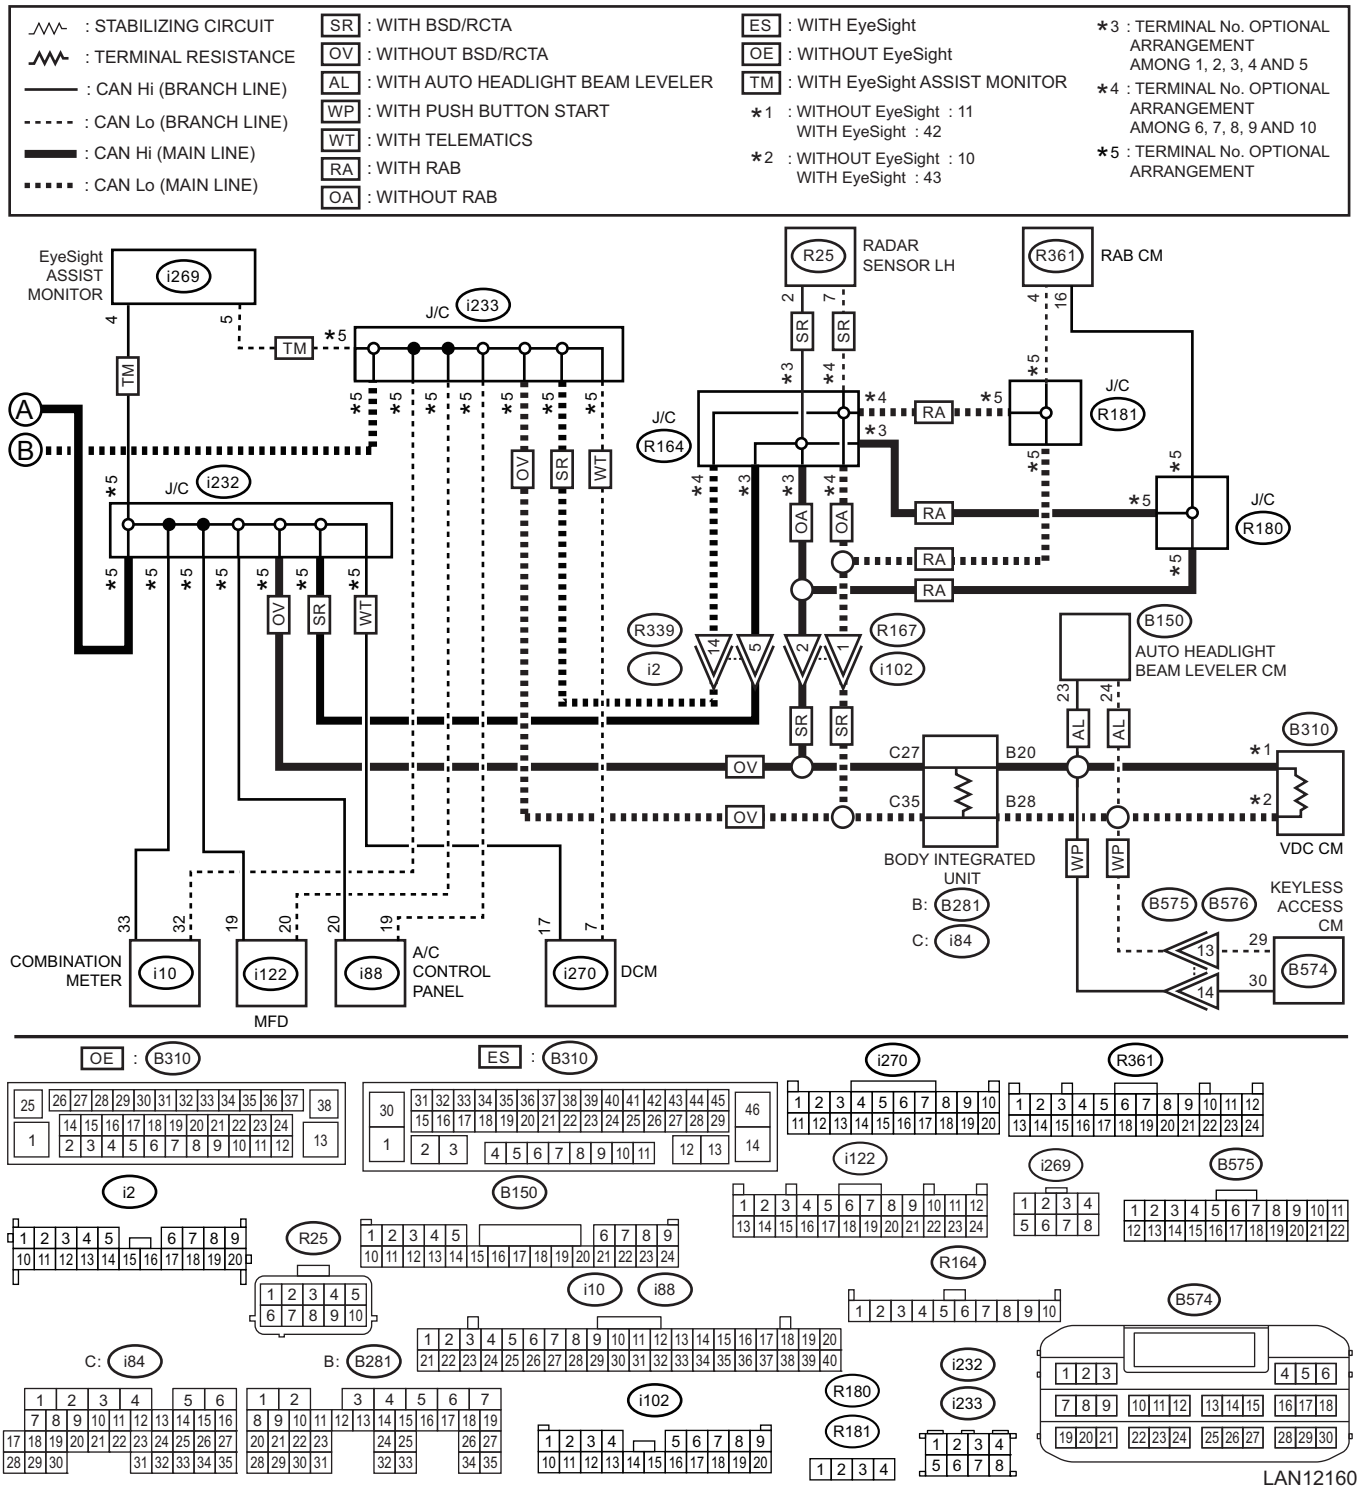
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



NOTE:
When CAN communication circuit is measured, combined resistance of end resistance (120 Ω) in ECM and end resistance (120 Ω) in VDC CM can be measured. The combined resistance is supposed to be more than 52 Ω and less than 62 Ω with the stabilizing circuit included. When the measured resistance value is 62 Ω or more, either one of the end resistances, or stabilizing circuit, or main wiring harness may have malfunction such as open circuit.

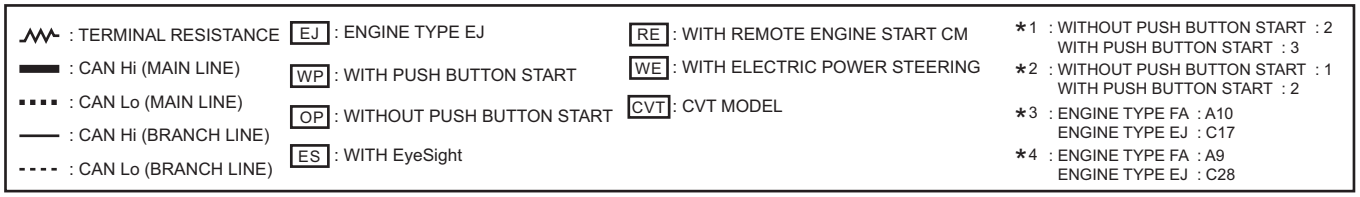
	Step	Check	Yes	No
1	**CHECK CONTROL MODULE.** 1) Disconnect ECM and VDC CM connectors. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***Engine type: FA*** ***(B134) No. 9 — No. 10:*** ***(B310) No. 10 — No. 11 (without EyeSight):*** ***(B310) No. 42 — No. 43 (with EyeSight):*** ***Engine type: EJ*** ***(B136) No. 17 — No. 28:*** ***(B310) No. 10 — No. 11 (without EyeSight):*** ***(B310) No. 42 — No. 43 (with EyeSight):***	Is the resistance 114 — 126 Ω?	Go to step **2**.	Replace the control module whose value is out of the specification.
2	**CHECK CONTROL MODULE.** 1) Disconnect the connector of body control module. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 27:*** ***(B281) No. 20 — (i84) No. 35:***	Is the resistance 2850 — 3150 Ω?	Go to step **3**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
3	**CHECK CONTROL MODULE.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B281) No. 28 — (i84) No. 35:*** ***(B281) No. 20 — (i84) No. 27:***	Is the resistance less than 1 Ω?	Go to step **4**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
4	**CHECK CONTROL MODULE.** 1) Disconnect the combination meter connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i10) No. 32 — (i10) No. 33:***	Is the resistance 2850 — 3150 Ω?	Go to step **5**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
5	**CHECK CONTROL MODULE (ONLY FOR MODELS WITH HIGH GRADE MFD).** 1) Disconnect the MFD connector. 2) Using a tester, measure the resistance between control module terminals. ***Connector & terminal*** ***(i122) No. 19 — (i122) No. 20:***	Is the resistance 2850 — 3150 Ω?	Go to step **6**.	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>
6	**CHECK HARNESS.** Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B281) No. 20 — (B310) No. 11 (without EyeSight):*** ***(B281) No. 28 — (B310) No. 10 (without EyeSight):*** ***(B281) No. 20 — (B310) No. 42 (with EyeSight):*** ***(B281) No. 28 — (B310) No. 43 (with EyeSight):***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.

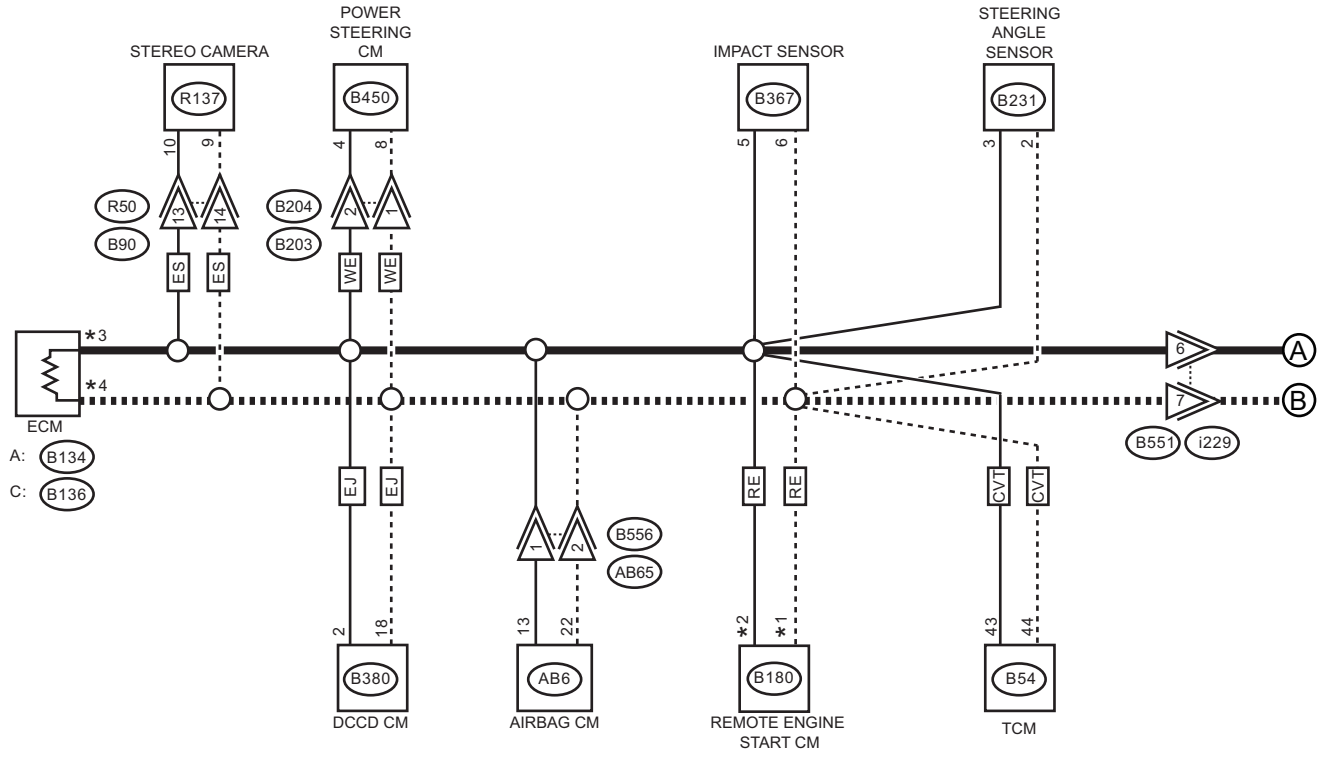
Step		Check	Yes	No
7	**CHECK HARNESS.** 1) Disconnect the ECM connector. 2) Using a tester, check continuity between terminals. ***Connector & terminal*** ***(B231) No. 3 — (i84) No. 27:*** ***(B231) No. 2 — (i84) No. 35:*** ***Engine type: FA*** ***(B231) No. 3 — (B134) No. 10:*** ***(B231) No. 2 — (B134) No. 9:*** ***Engine type: EJ*** ***(B231) No. 3 — (B136) No. 17:*** ***(B231) No. 2 — (B136) No. 28:***	Is there continuity?	It is possible that temporary poor communication occurs.	Repair or replace the open circuit of harness.

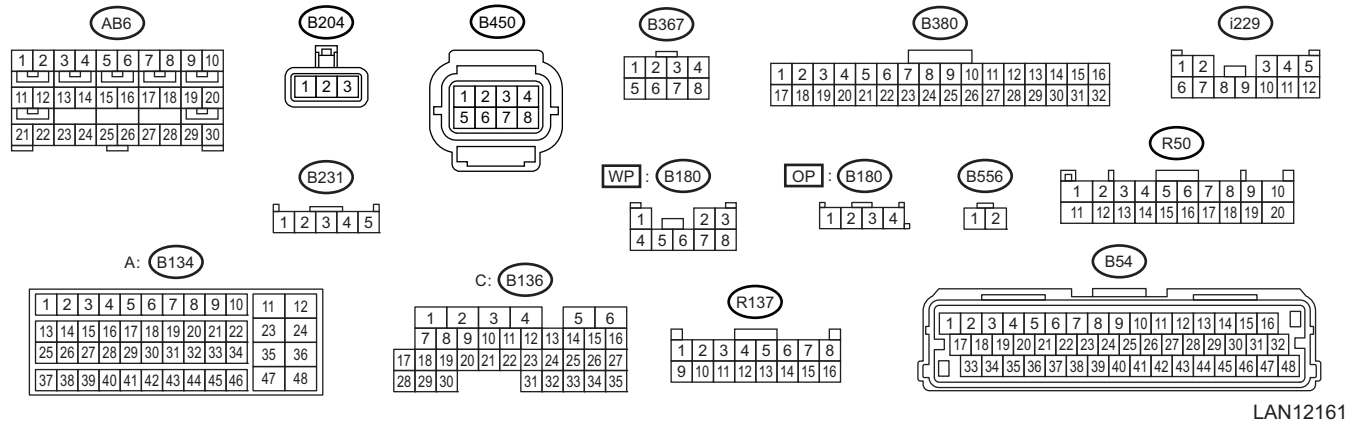
6. RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (TCM SYSTEM)

Wiring diagram:

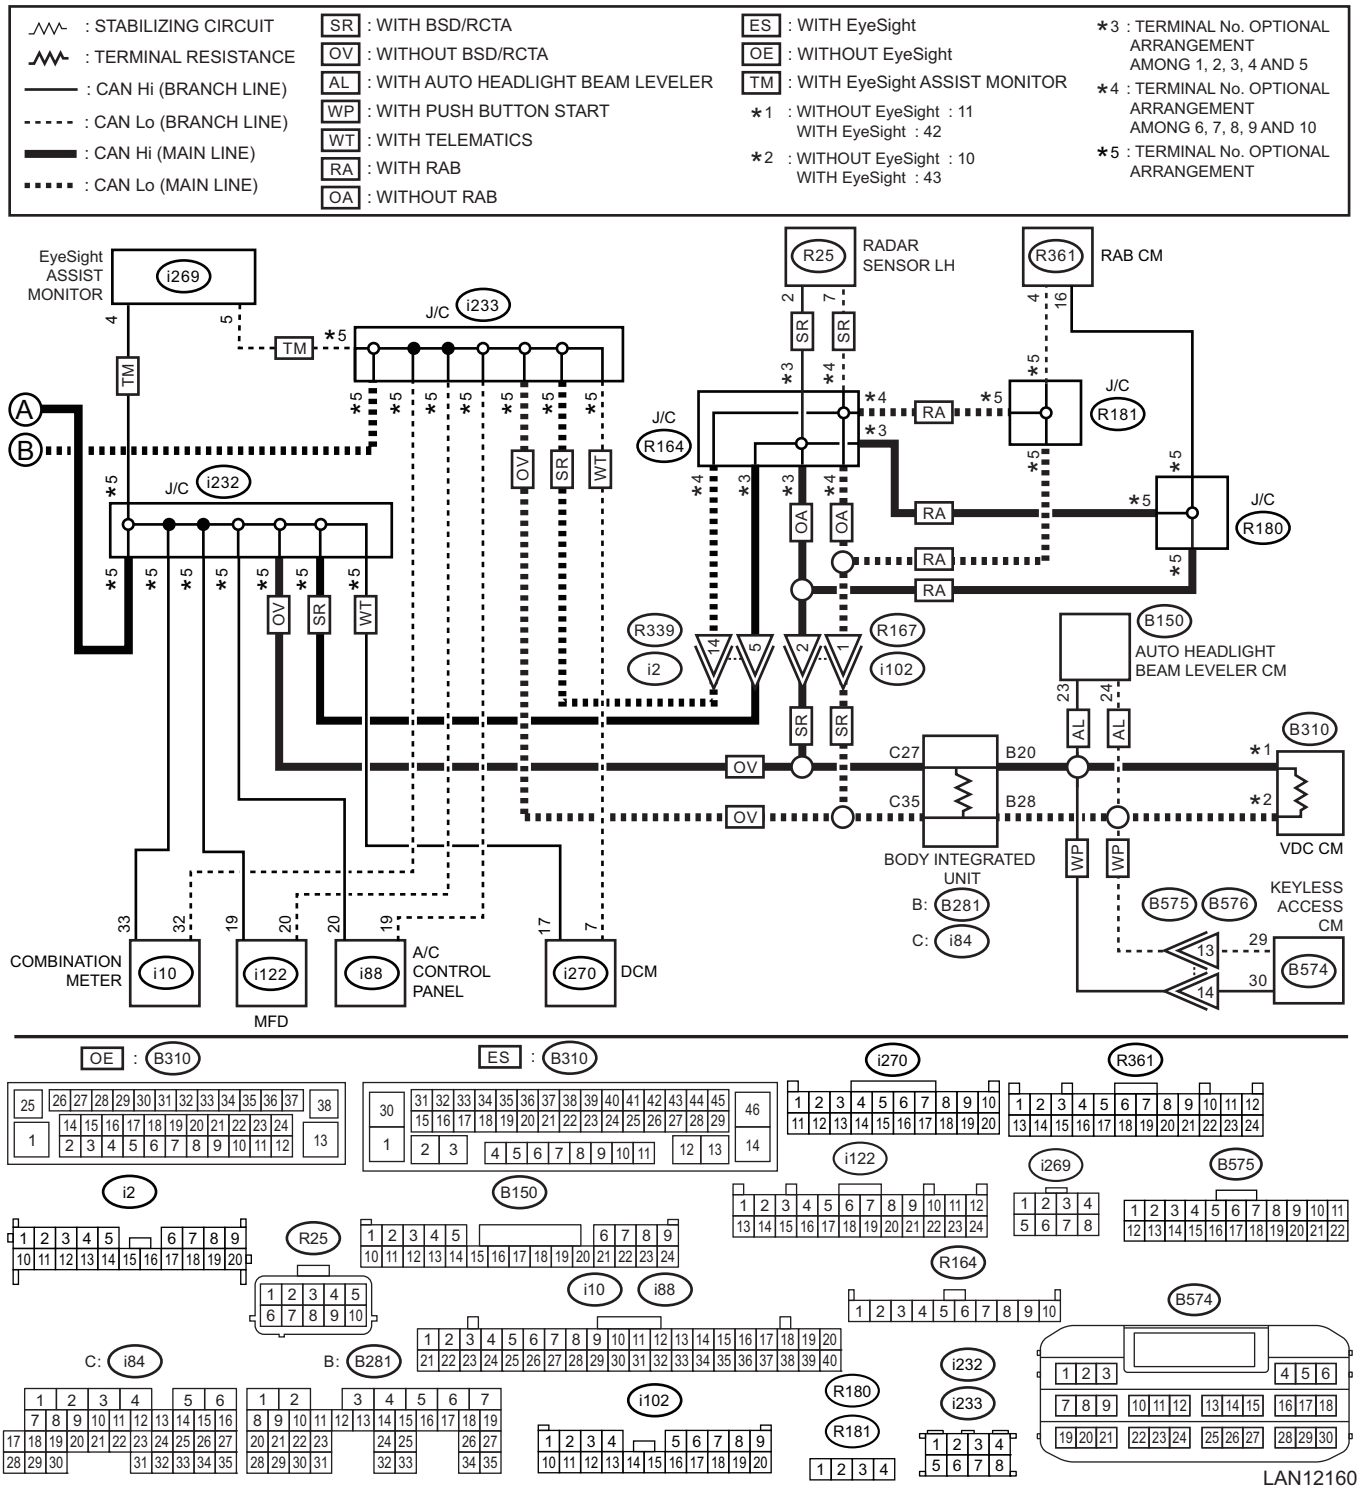
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



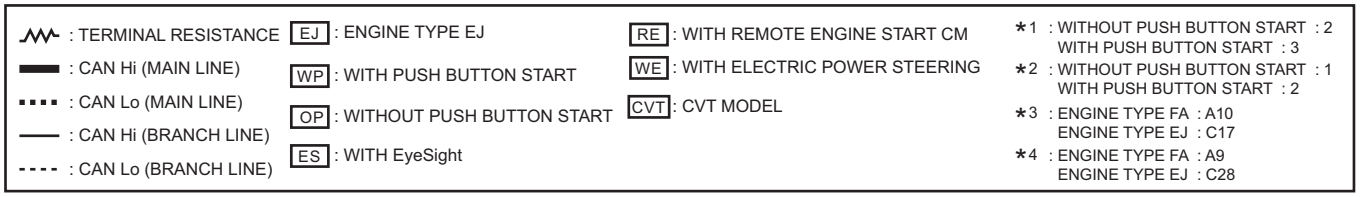
NOTE:
Perform inspection when no data is received, or faulty is detected. This is different from power supply shorted or ground shorted.

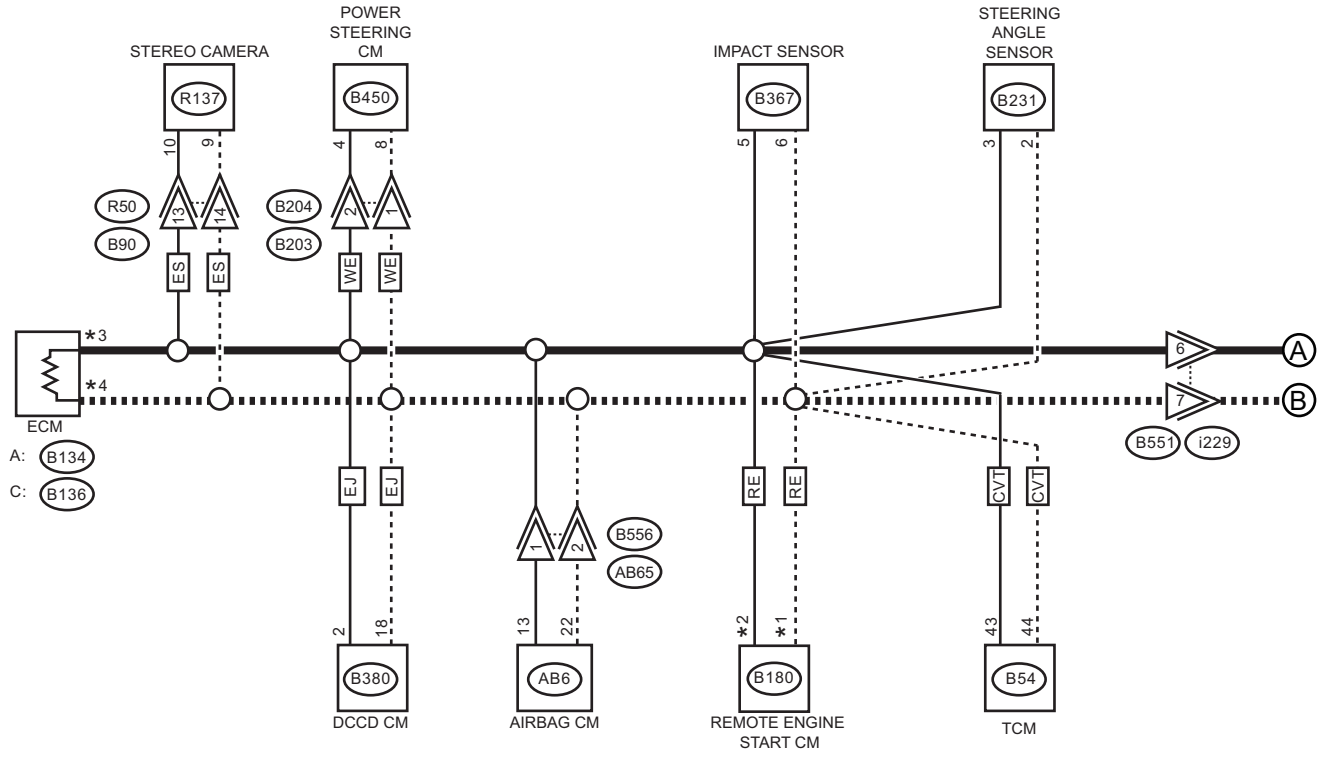
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the TCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B54) No. 43 — (B54) No. 44:***	Is the resistance 400 Ω or more?	Related lines between TCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B54) No. 44 — (B231) No. 2:*** ***(B54) No. 43 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of TCM related lines.	Check DTC of TCM. <Ref. to CVT(diag)-18, OPERATION, Read Diagnostic Trouble Code (DTC).>

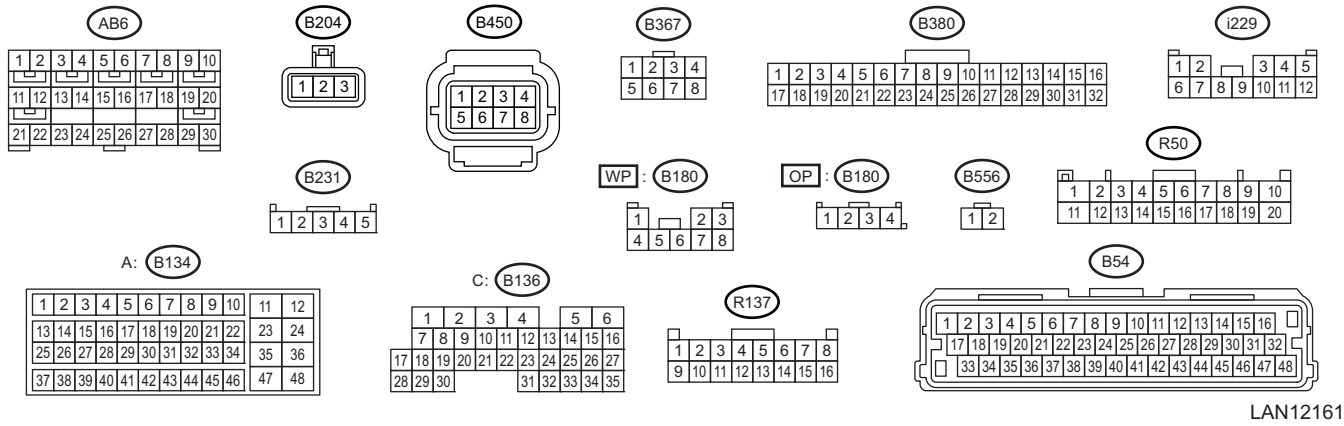
7. RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (STEERING ANGLE SENSOR SYSTEM)

Wiring diagram:

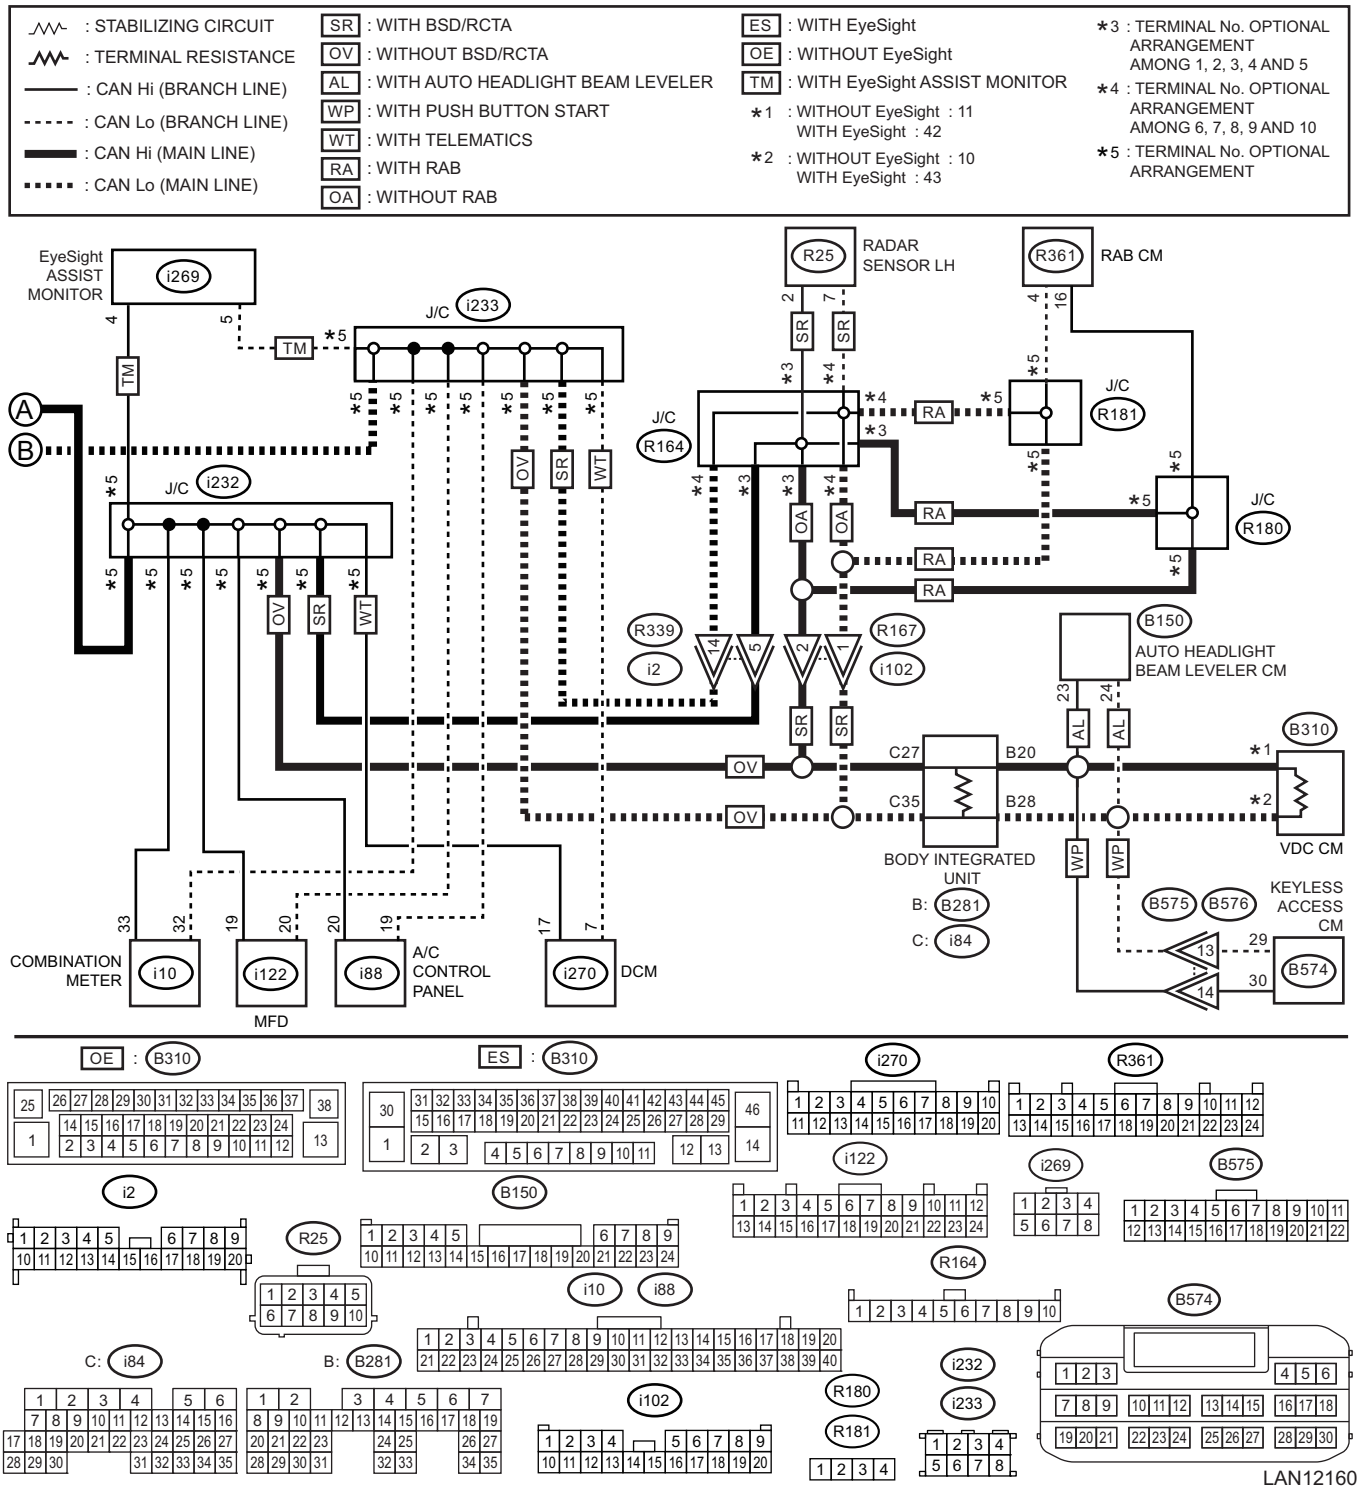
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



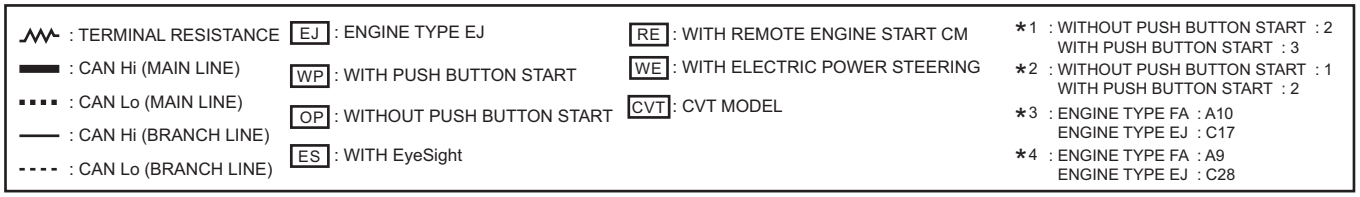
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the steering angle sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — (B231) No. 3:***	Is the resistance 400 Ω or more?	Related lines between steering angle sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

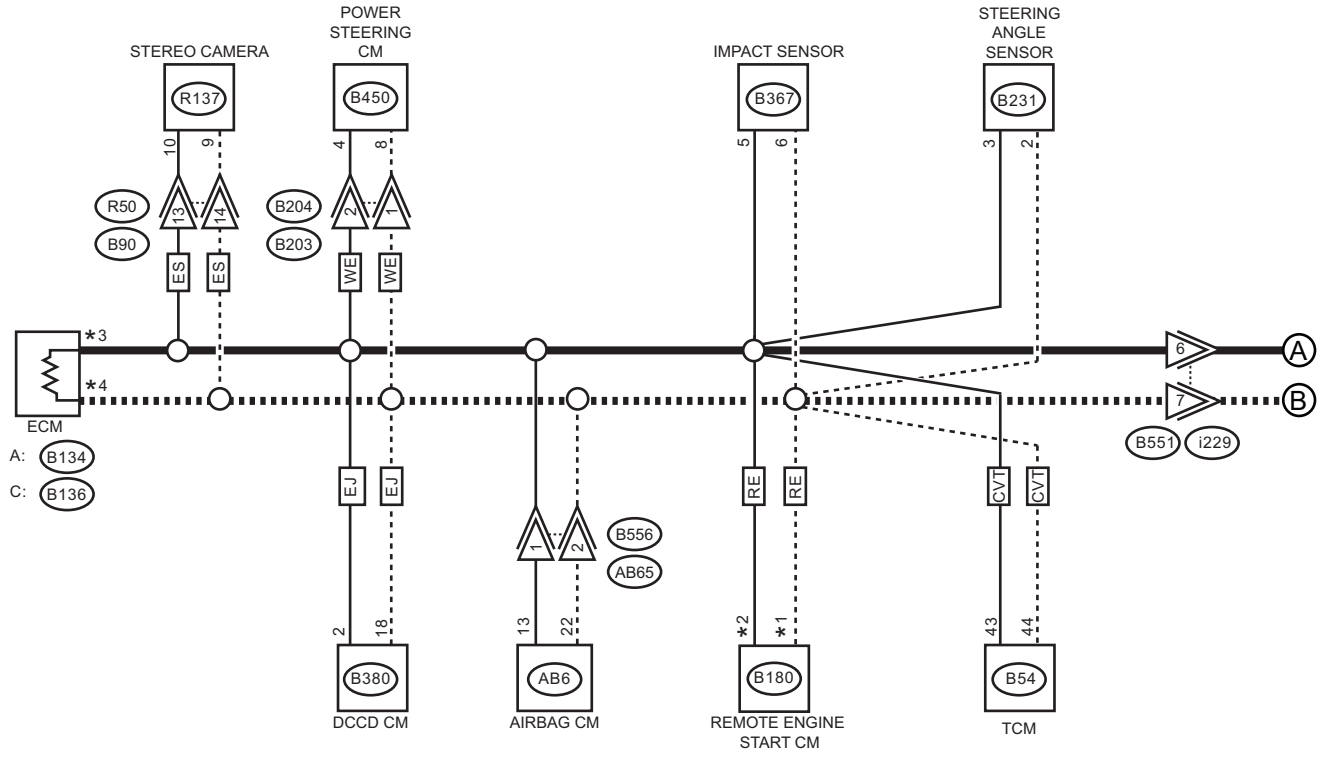
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B231) No. 2 — (i84) No. 35:*** ***(B231) No. 3 — (i84) No. 27:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of steering angle sensor related lines.	Check DTC of VDC CM. <Ref. to VDC(diag)-28, OPERATION, Read Diagnostic Trouble Code (DTC).>

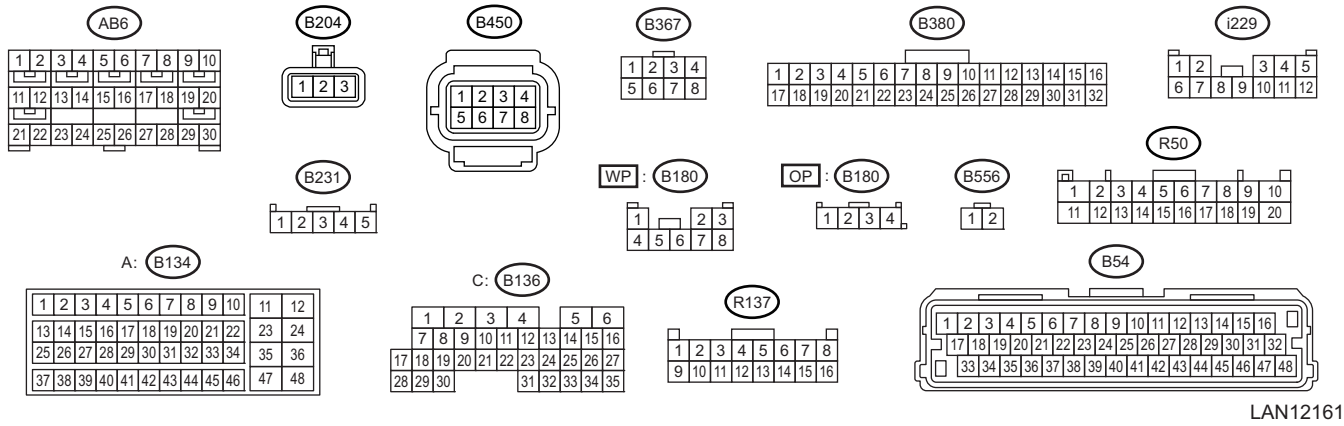
8. RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (A/C CONTROL PANEL SYSTEM)

Wiring diagram:

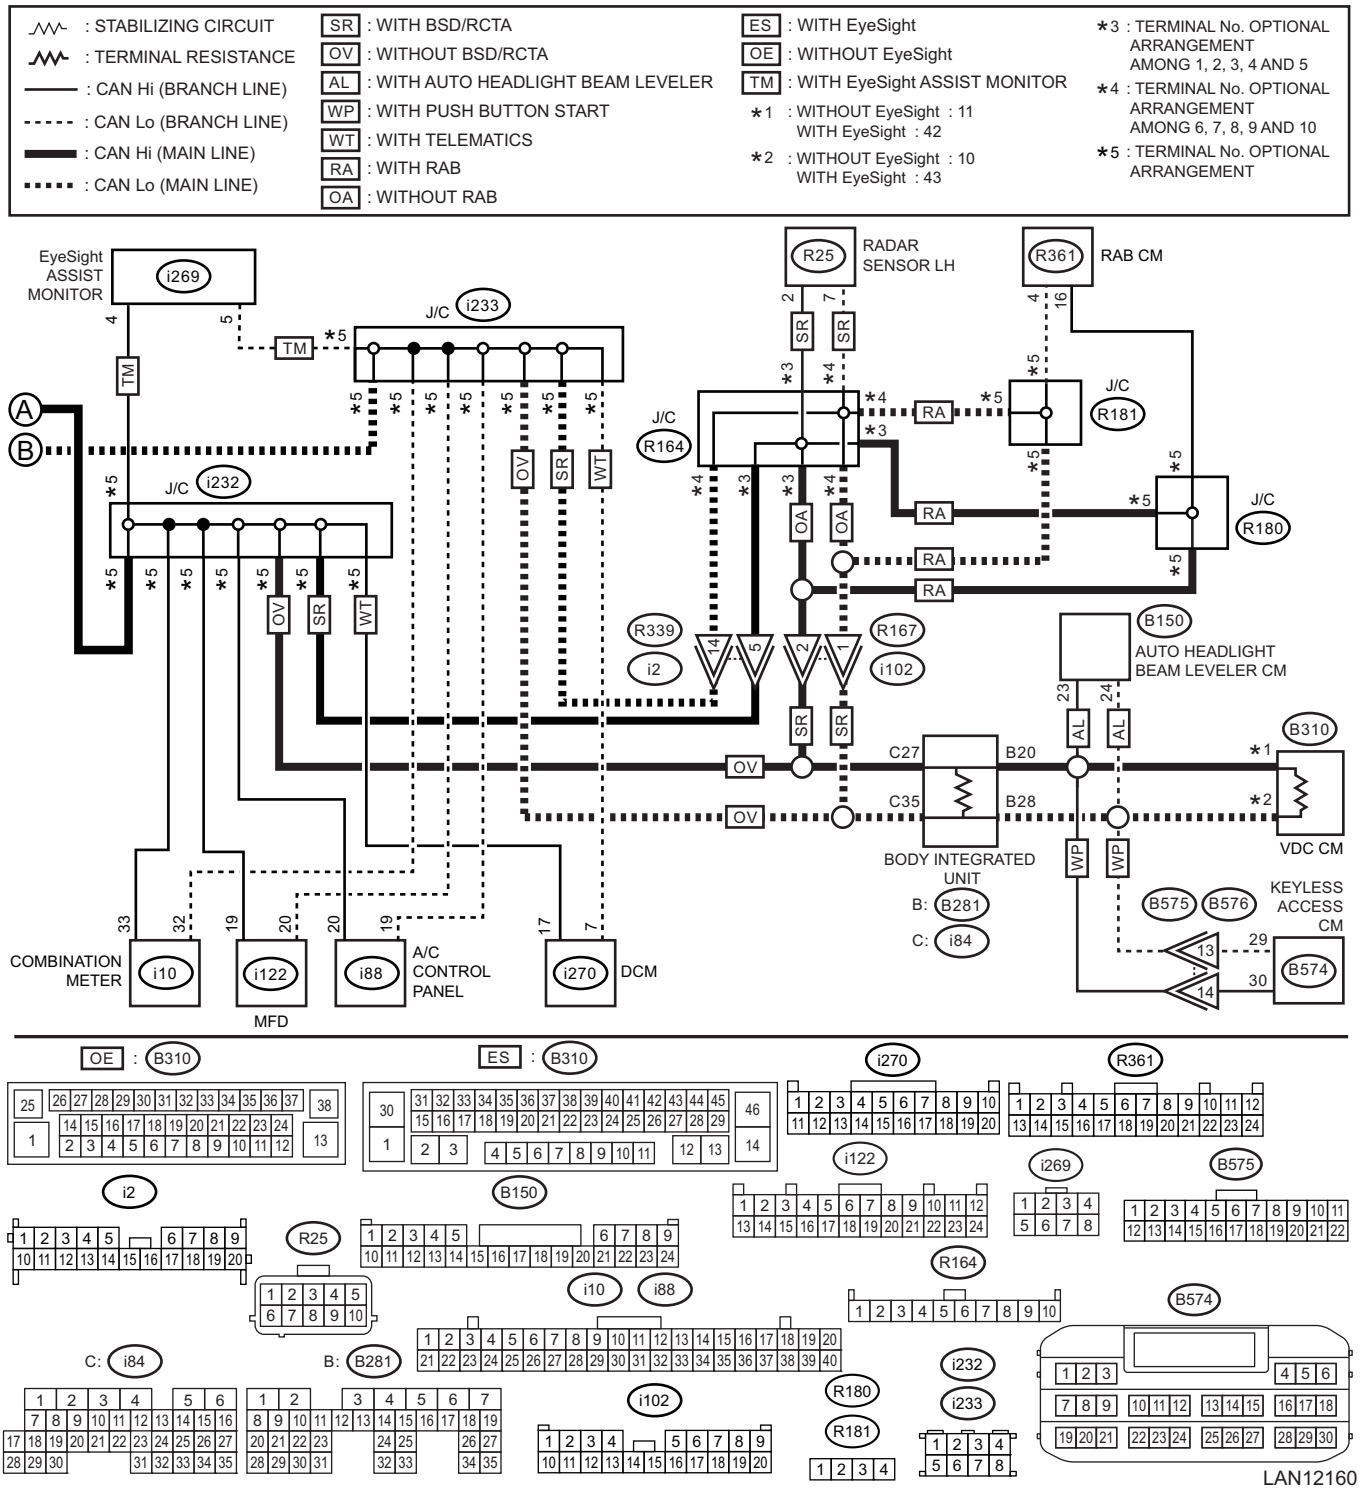
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



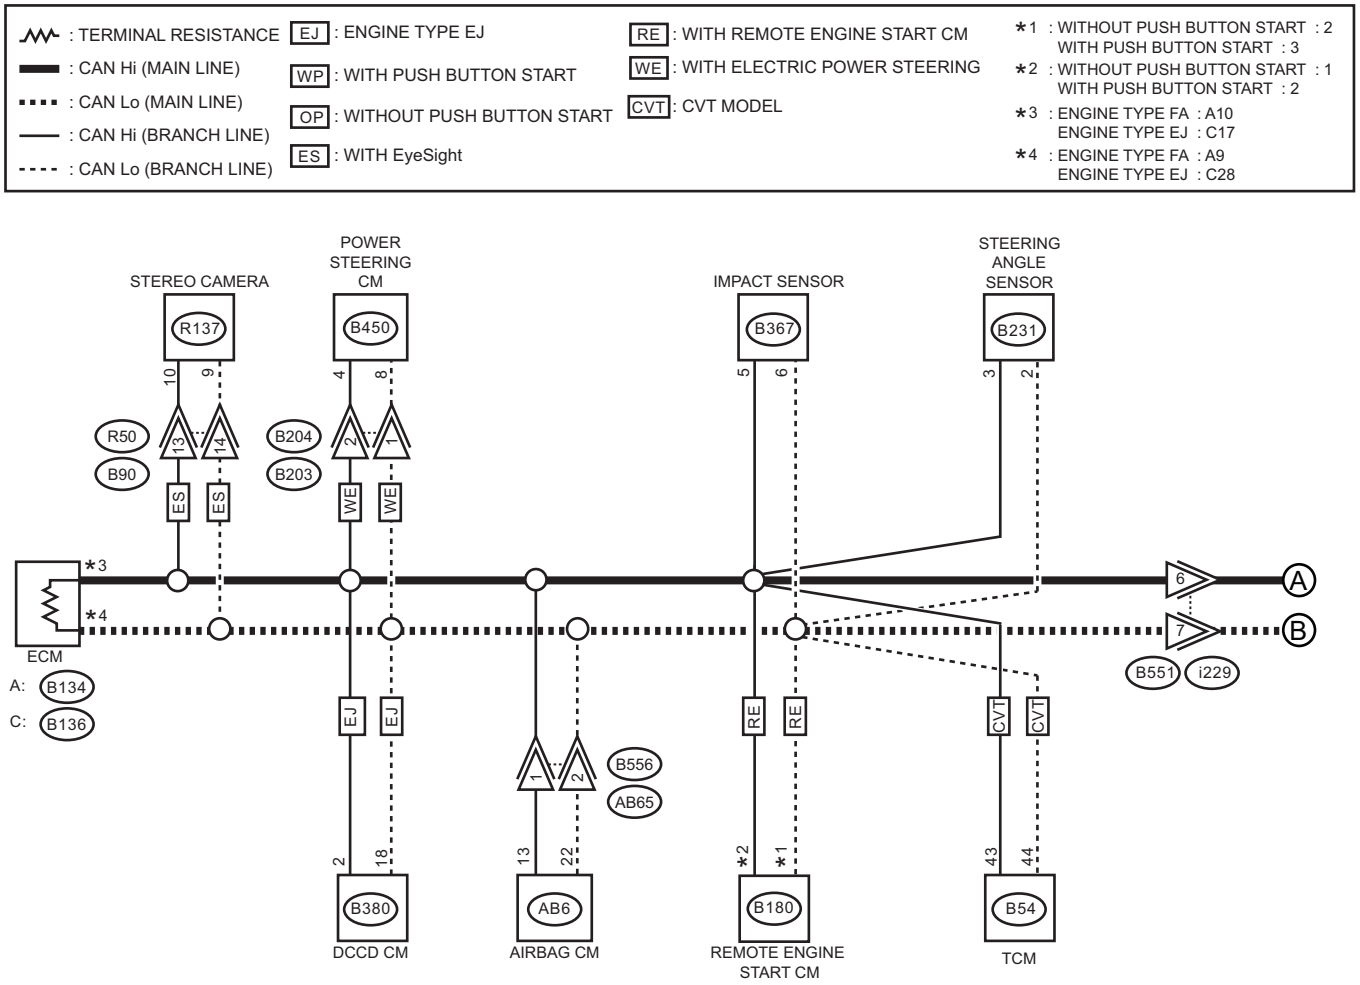
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the A/C control panel connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — (i88) No. 20:***	Is the resistance 400 Ω or more?	Related lines between A/C control panel and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

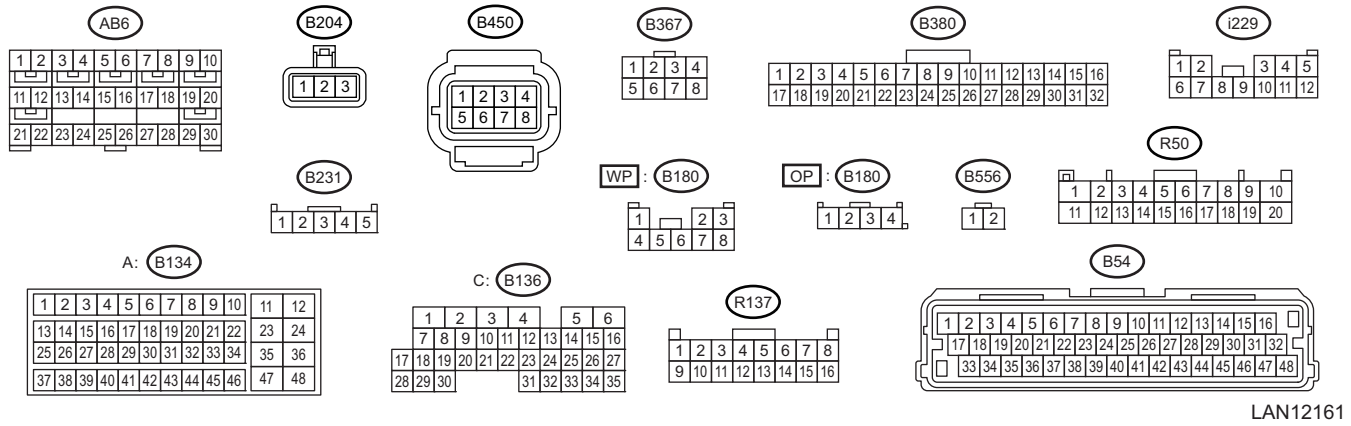
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i88) No. 19 — (B231) No. 2:*** ***(i88) No. 20 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of A/C control panel related lines.	Check the DTC of A/C control panel. <Ref. to AC(diag)-41, Read Diagnostic Trouble Code (DTC).>

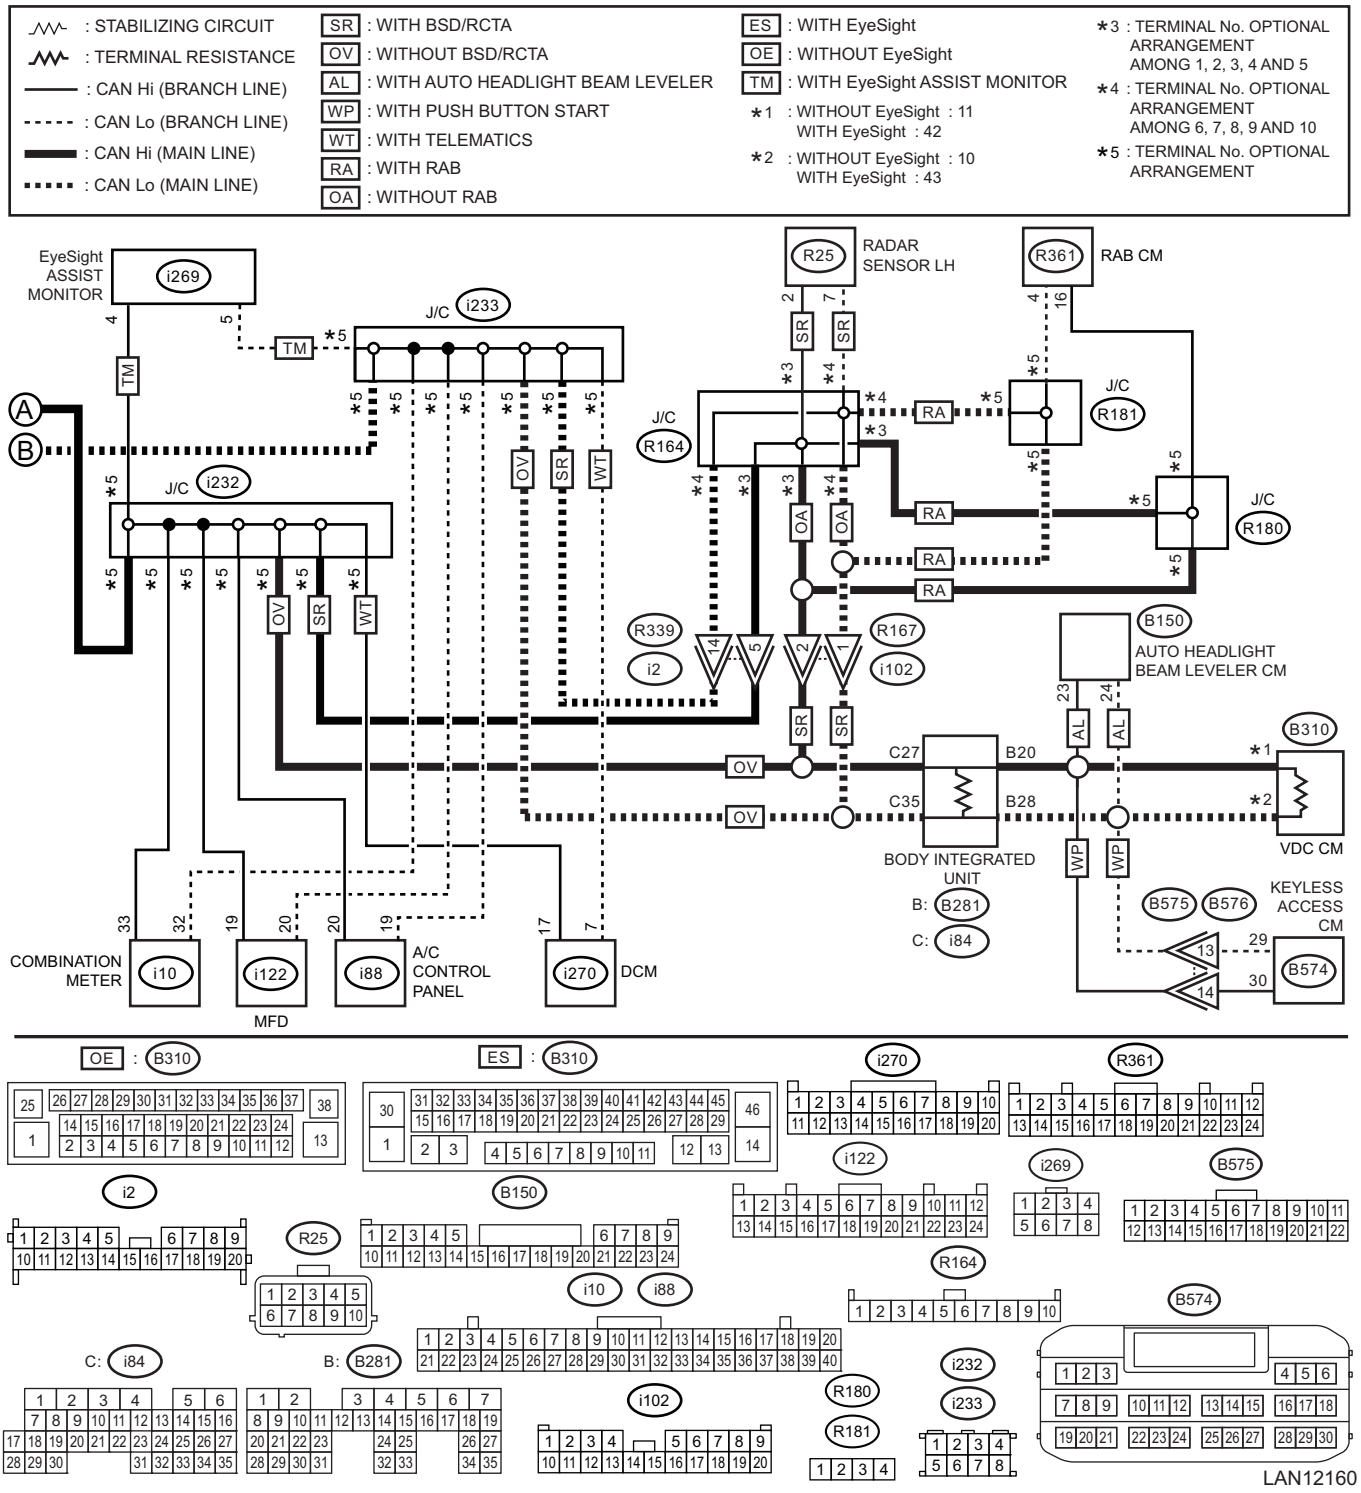
9. RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (POWER STEERING CM SYSTEM)

Wiring diagram:

CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







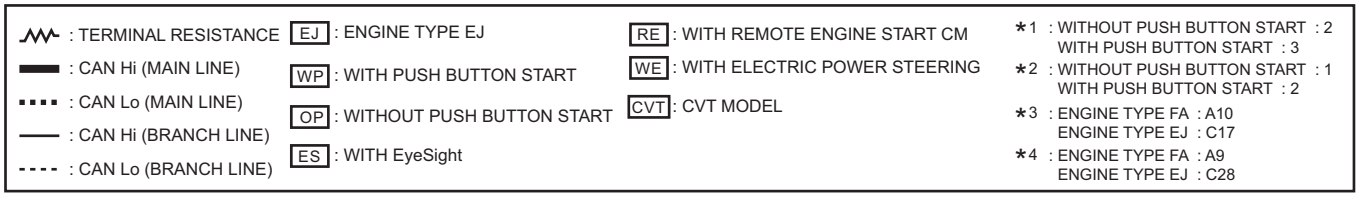
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the power steering CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 8 — (B450) No. 4:***	Is the resistance 400 Ω or more?	Related lines or main wiring harness between power steering CM and main wiring harness is open at two places or more.	Go to step **2**.

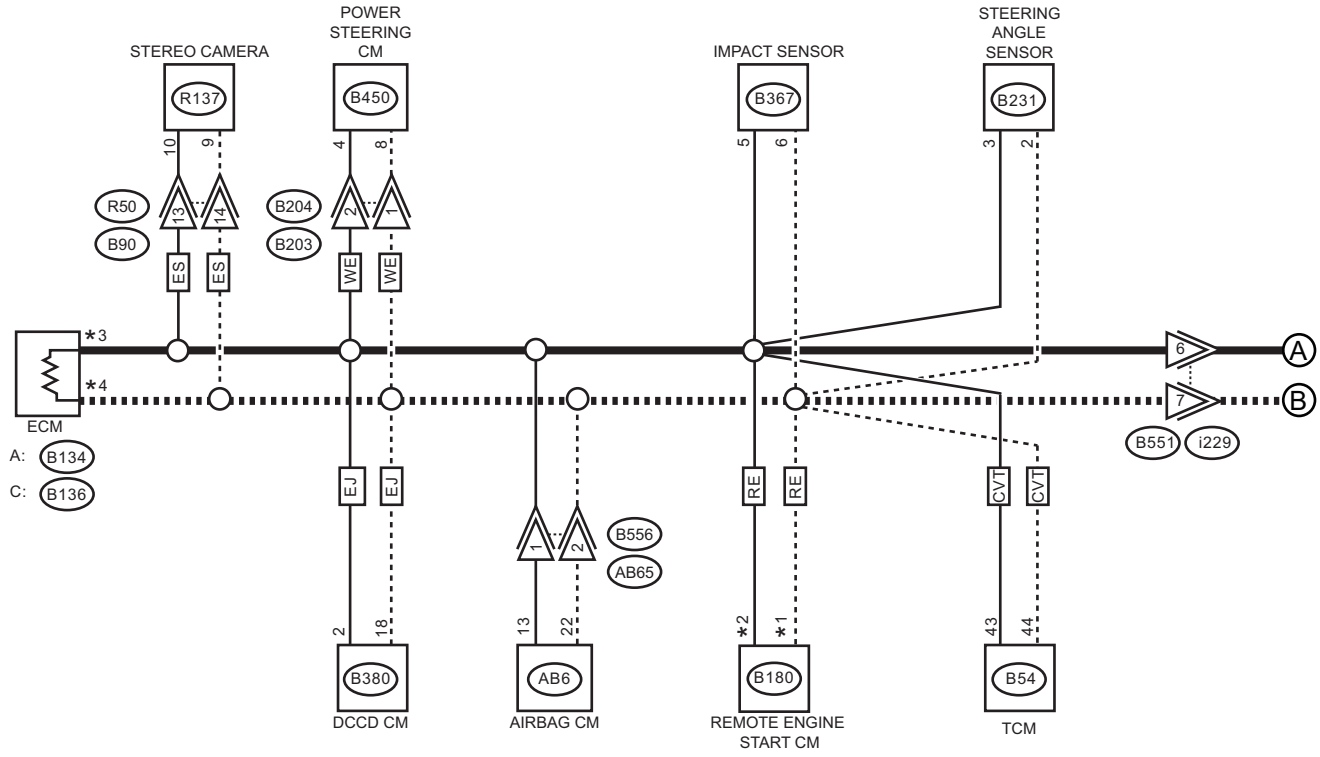
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B450) No. 8 — (B231) No. 2:*** ***(B450) No. 4 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of power steering CM related lines.	Check DTC of power steering CM. <Ref. to PS(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).>

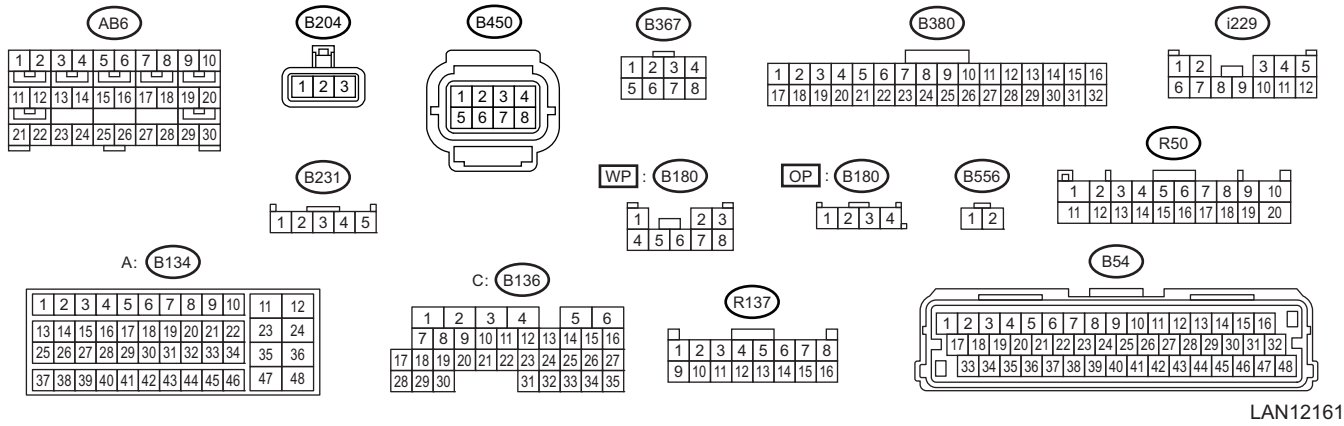
10.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (COMBINATION METER SYSTEM)

Wiring diagram:

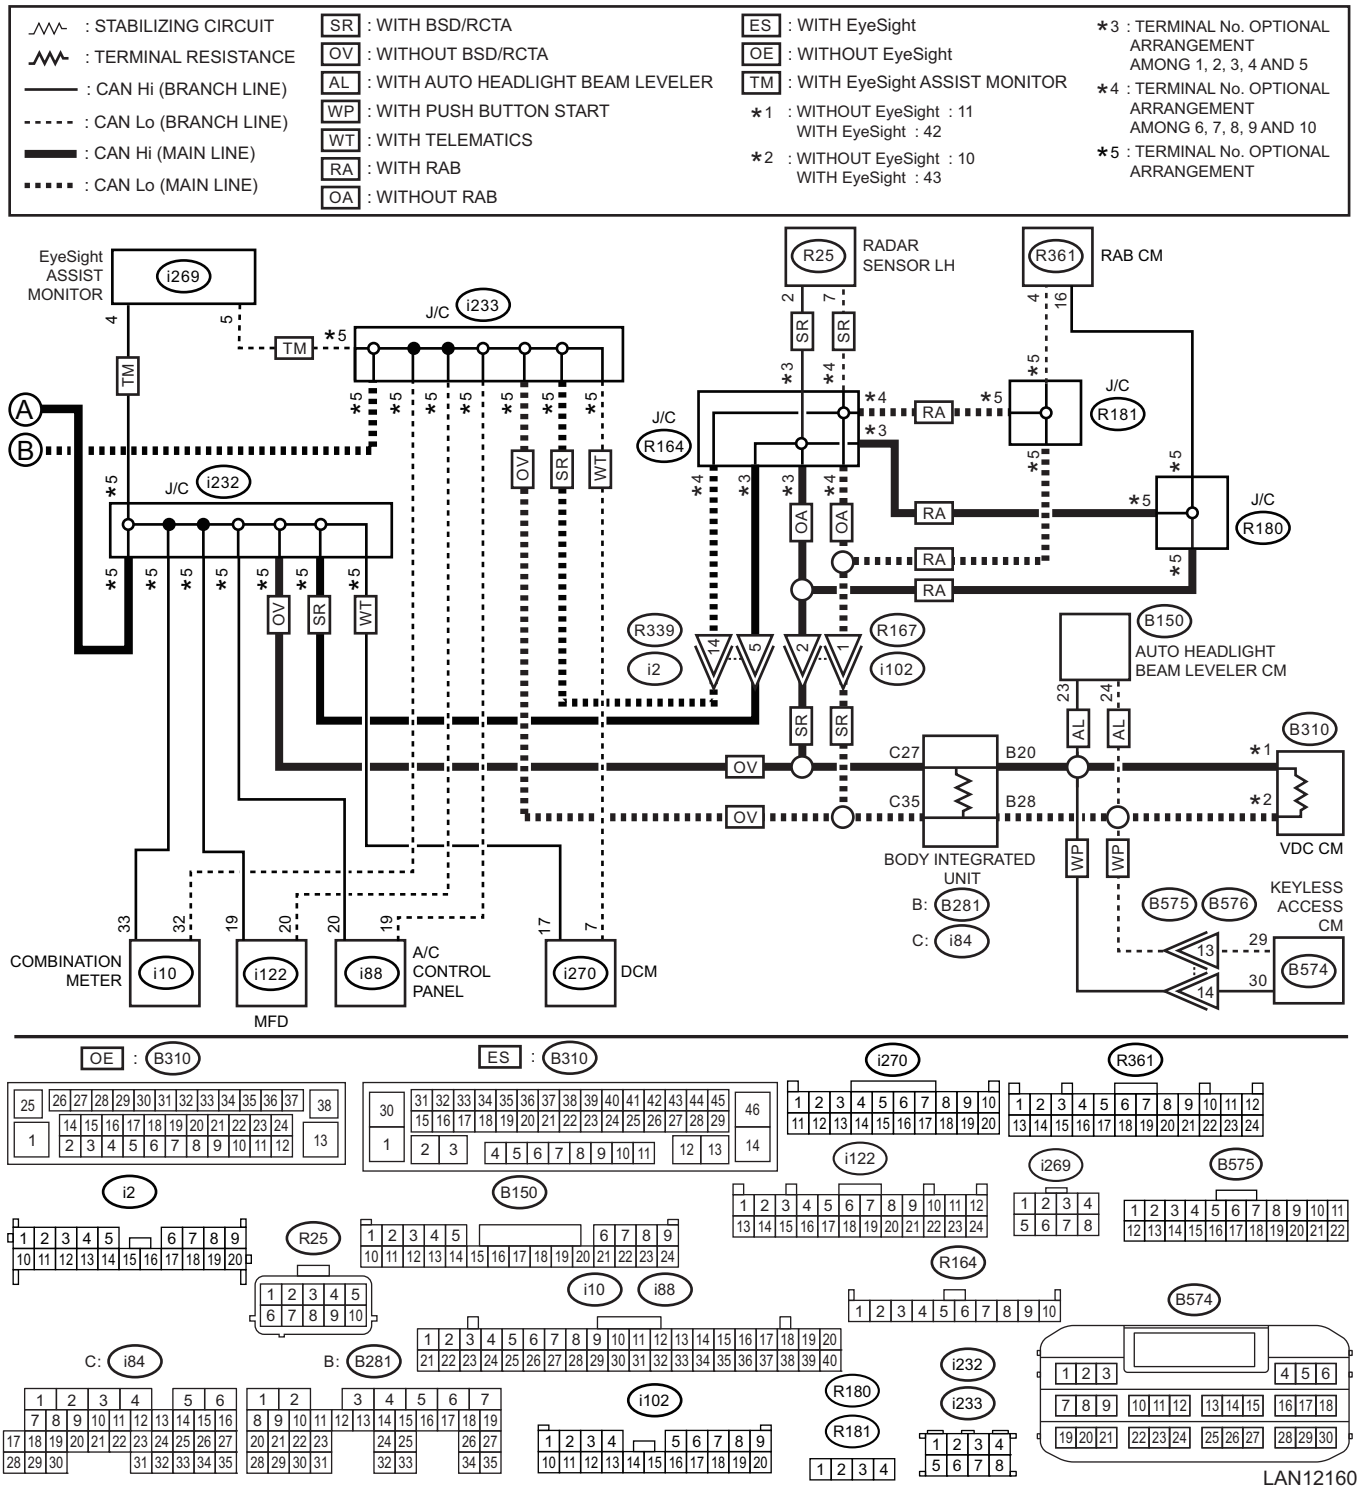
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



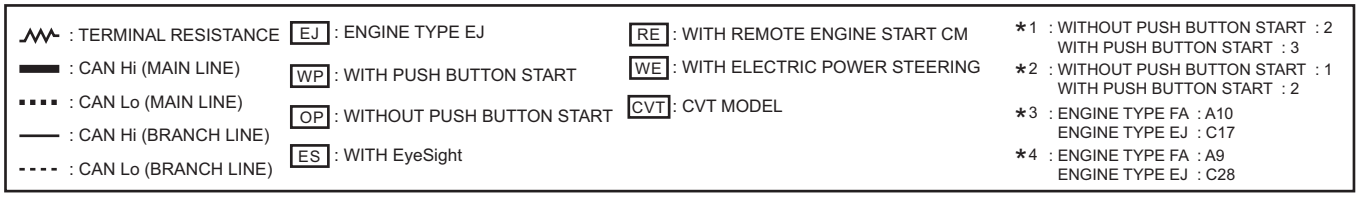
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the combination meter connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — (i10) No. 33:***	Is the resistance 400 Ω or more?	Related lines between combination meter and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

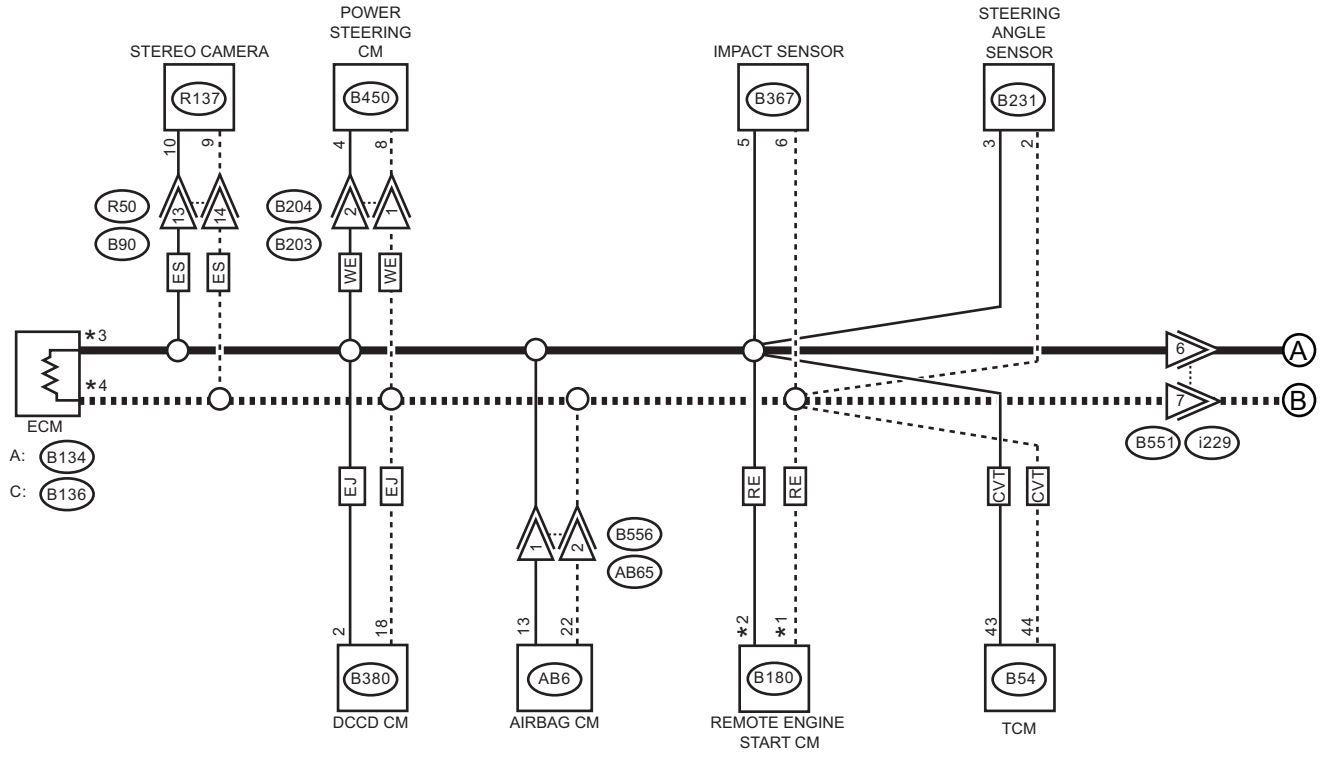
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i10) No. 32 — (B231) No. 2:*** ***(i10) No. 33 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of combination meter related lines.	Check DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>

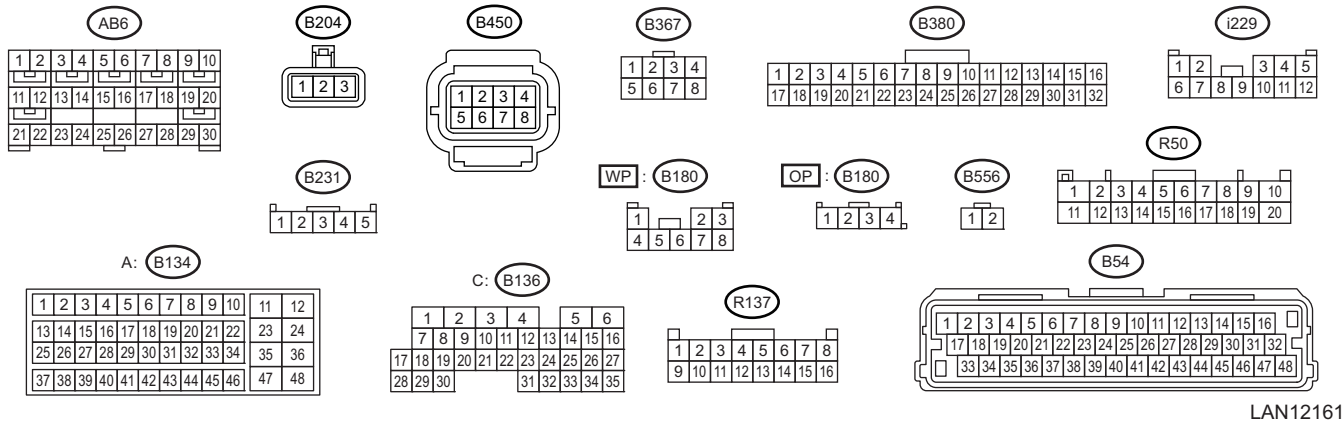
11.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (MFD SYSTEM)

Wiring diagram:

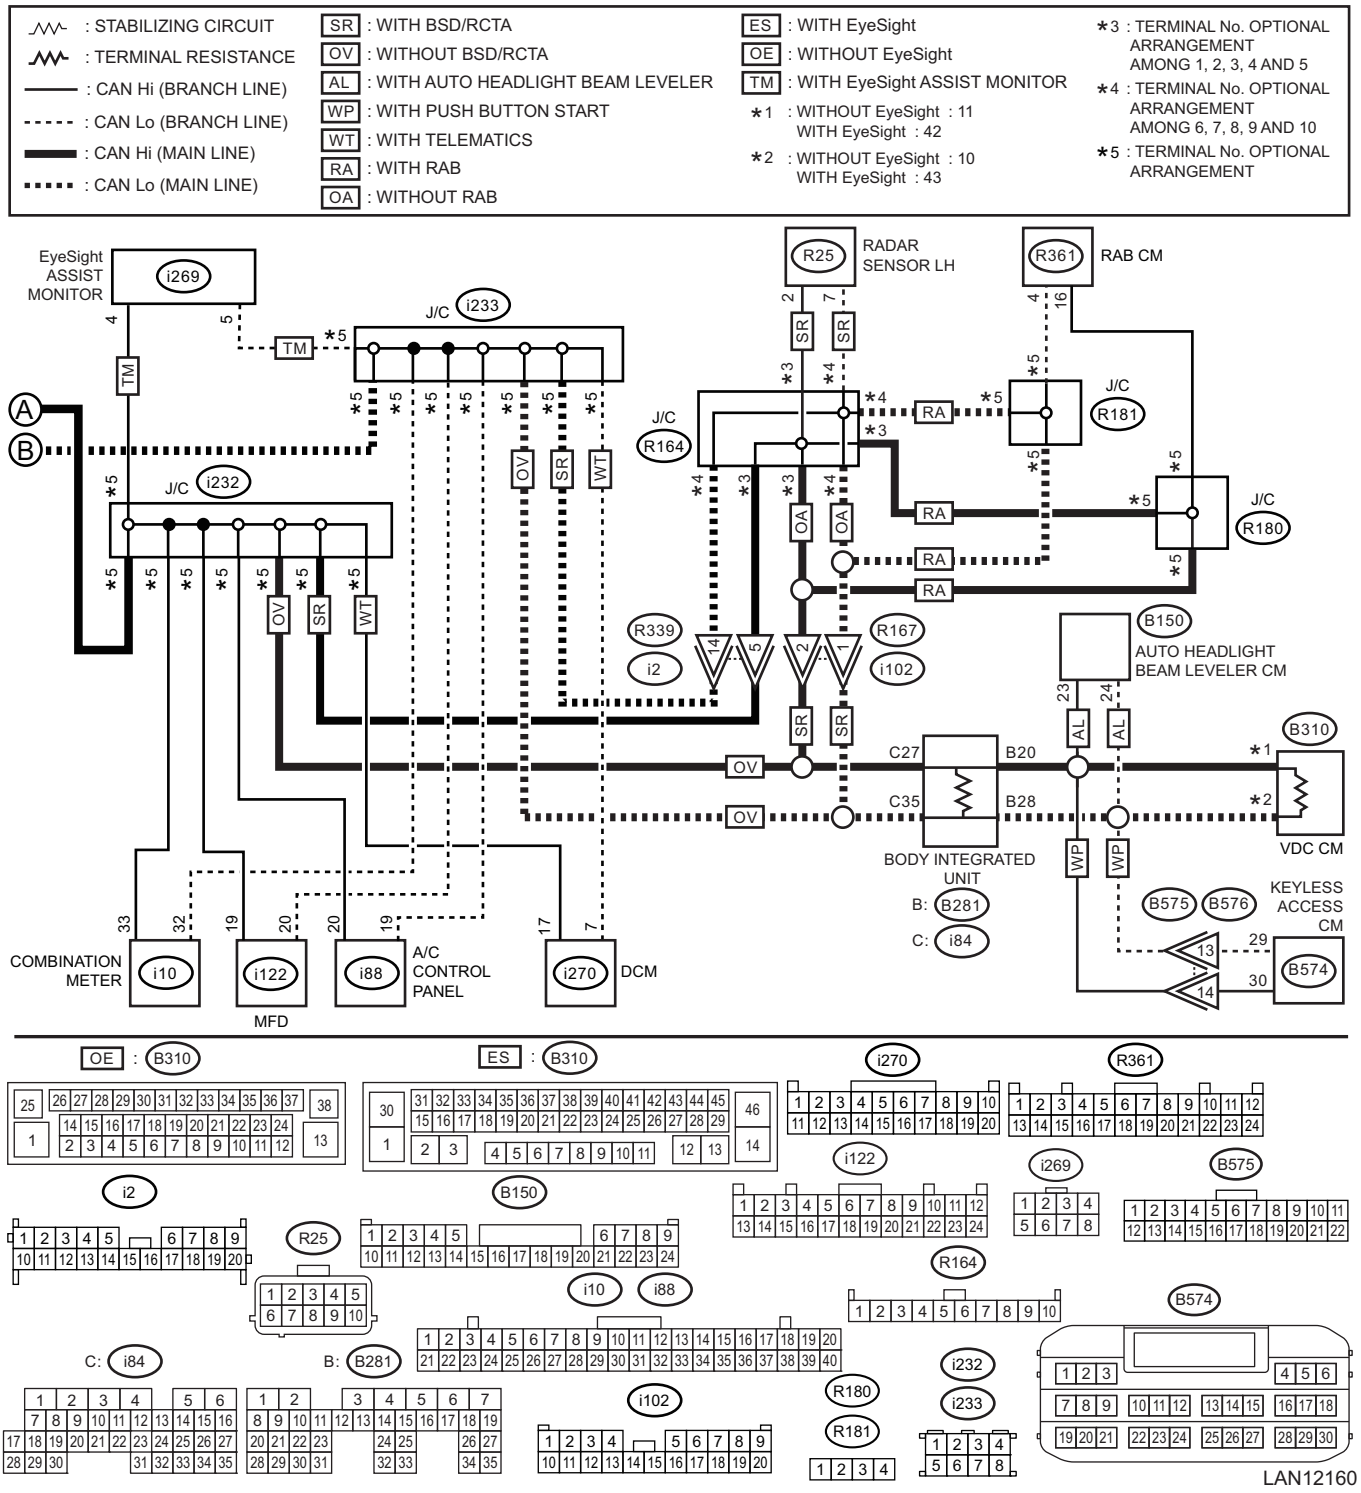
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



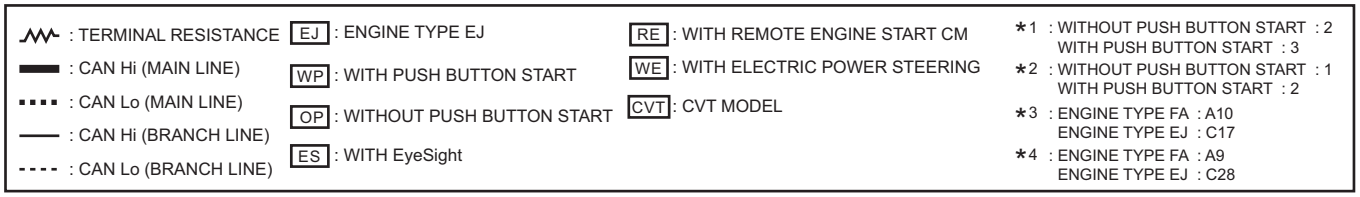
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the MFD connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i122) No. 19 — (i122) No. 20:***	Is the resistance 400 Ω or more?	Related lines between MFD and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

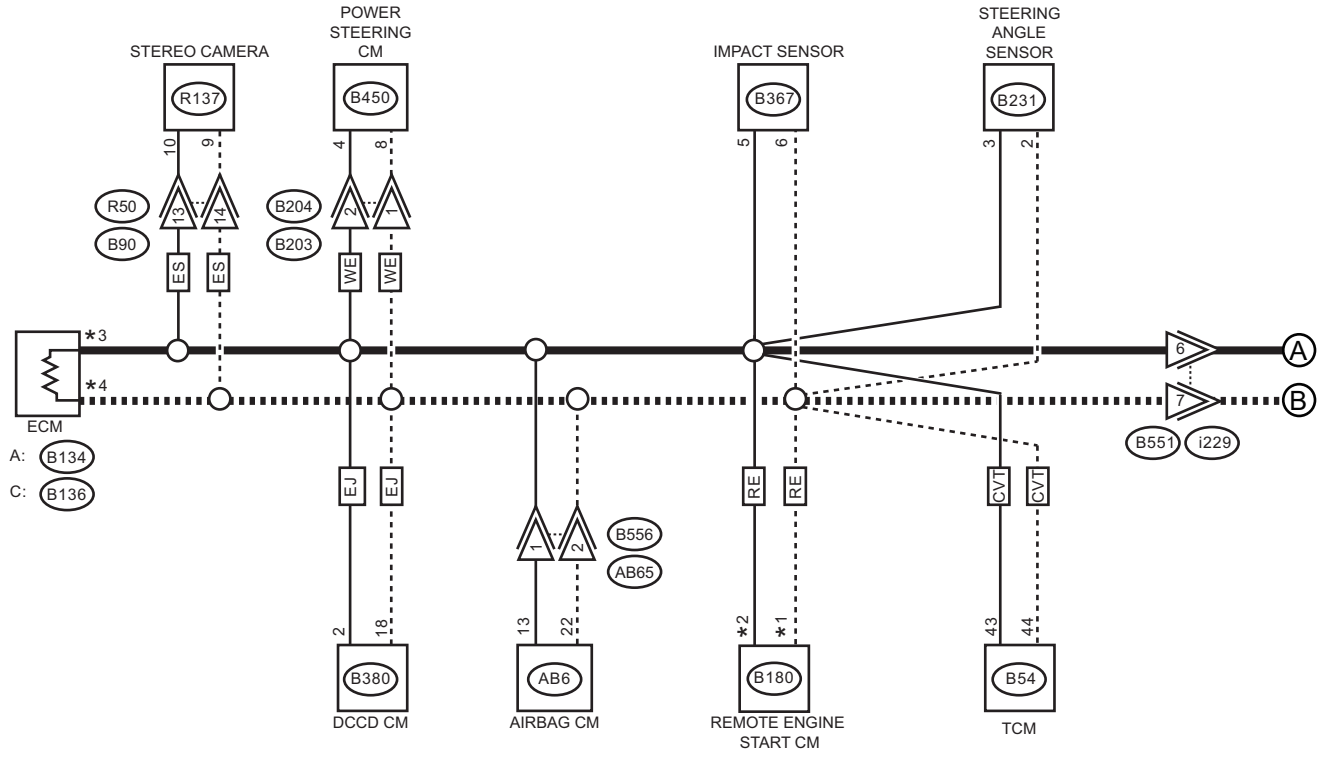
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i122) No. 20 — (B231) No. 2:*** ***(i122) No. 19 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of MFD related lines.	Check DTC of MFD. <Ref. to MFD(diag)-12, Read Diagnostic Trouble Code (DTC).>

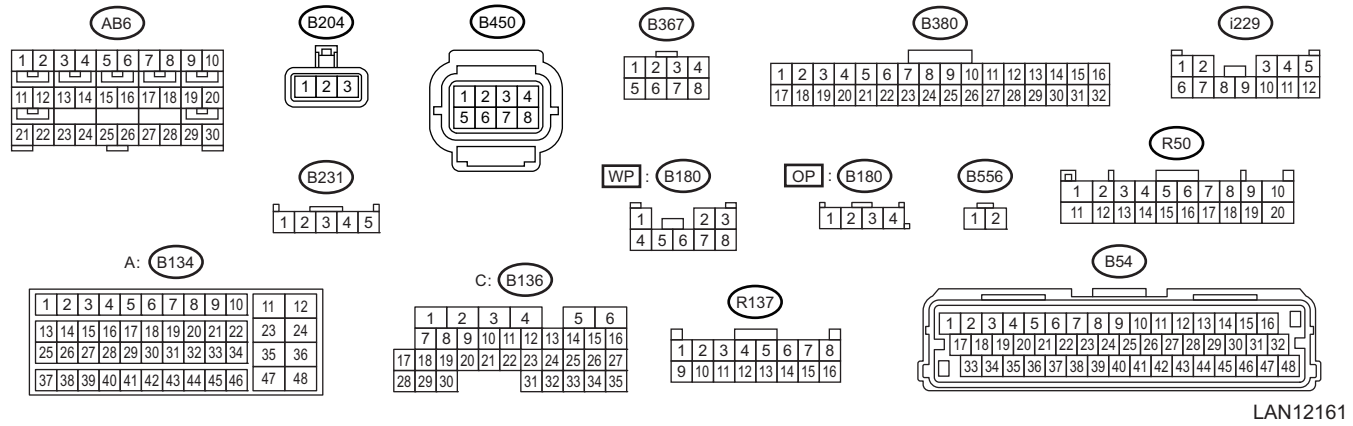
12.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (AIRBAG CM SYSTEM)

Wiring diagram:

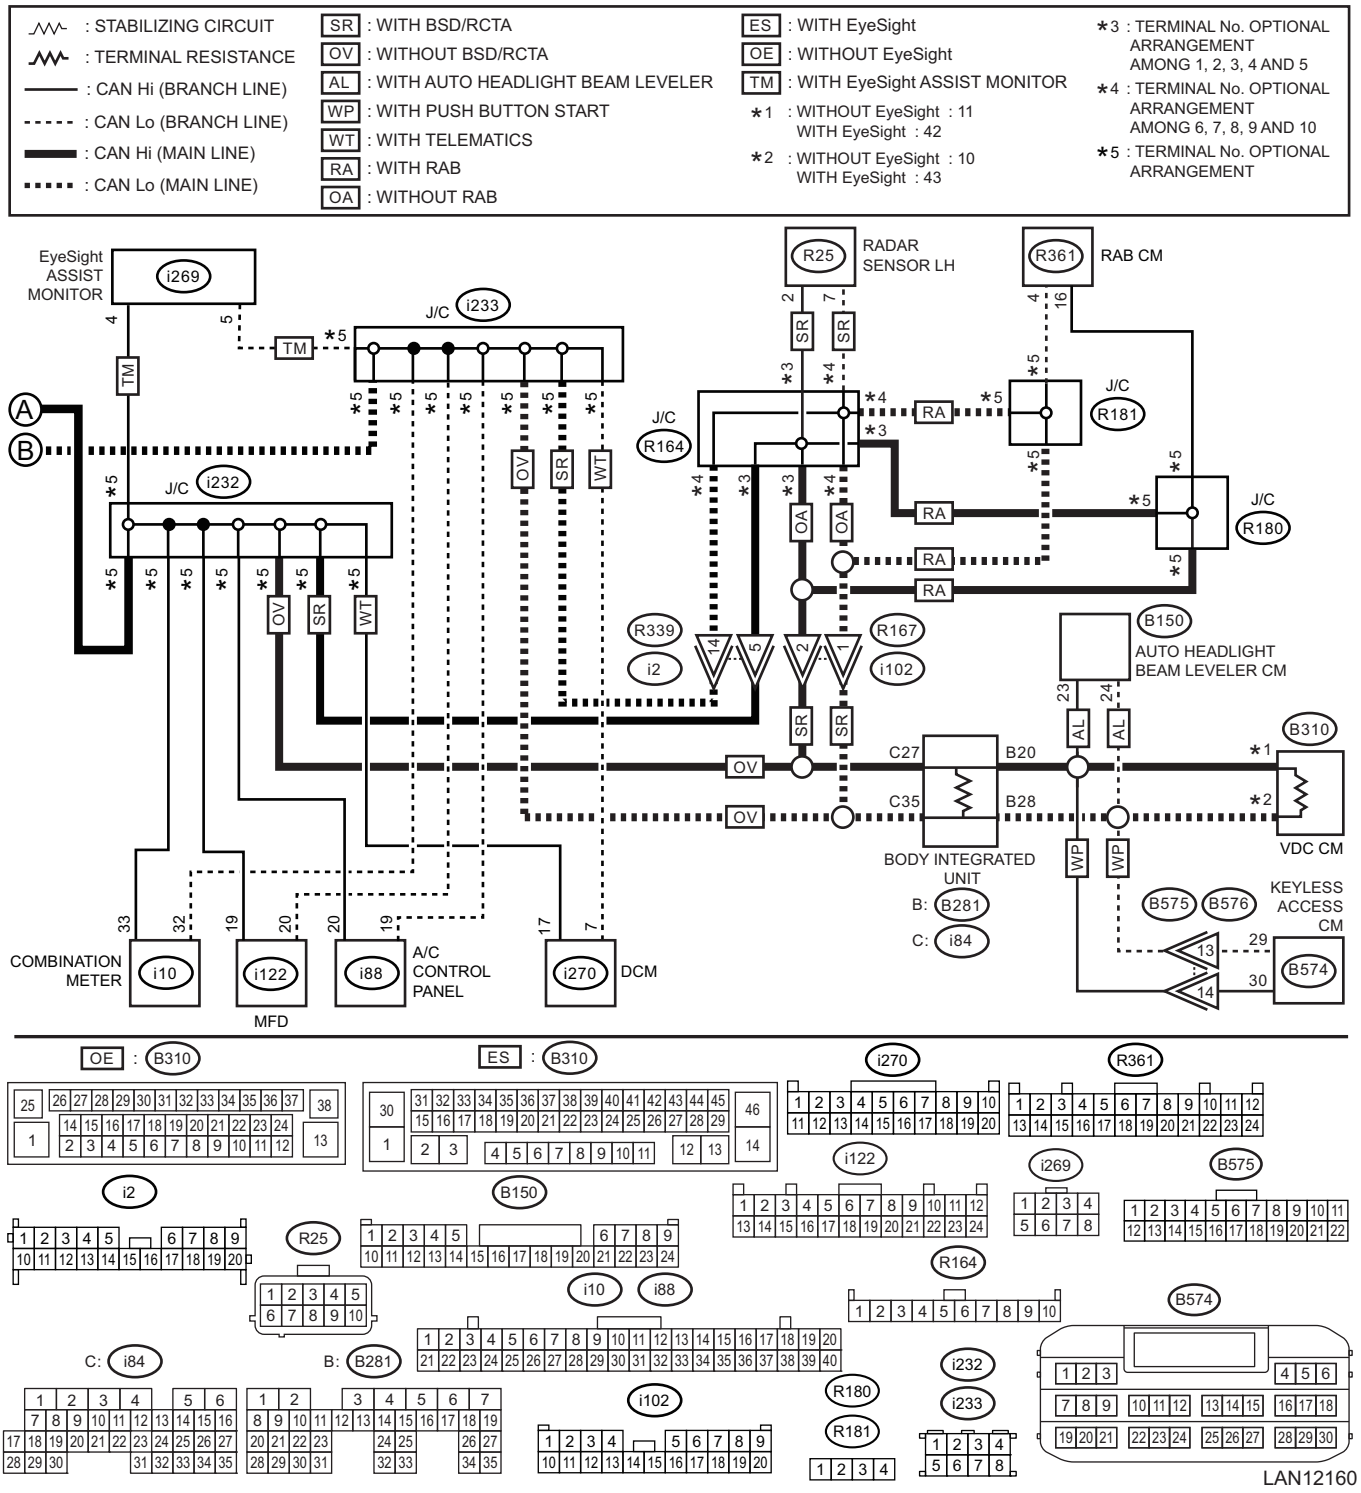
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



CAUTION:

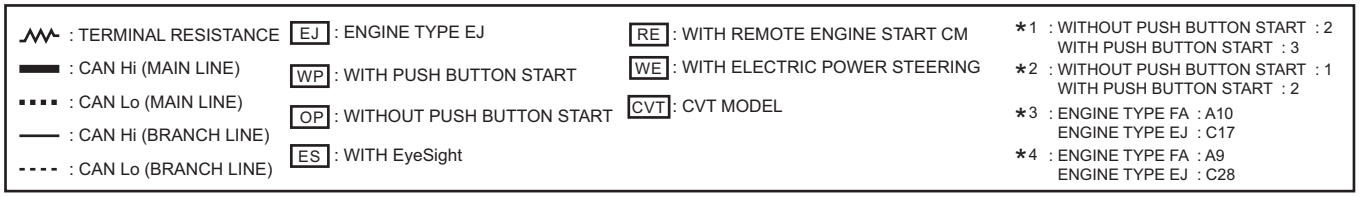
- **When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. <Ref. to AB-2, General Description.>**
- **To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. <Ref. to AB(diag)-4, General Description.>**

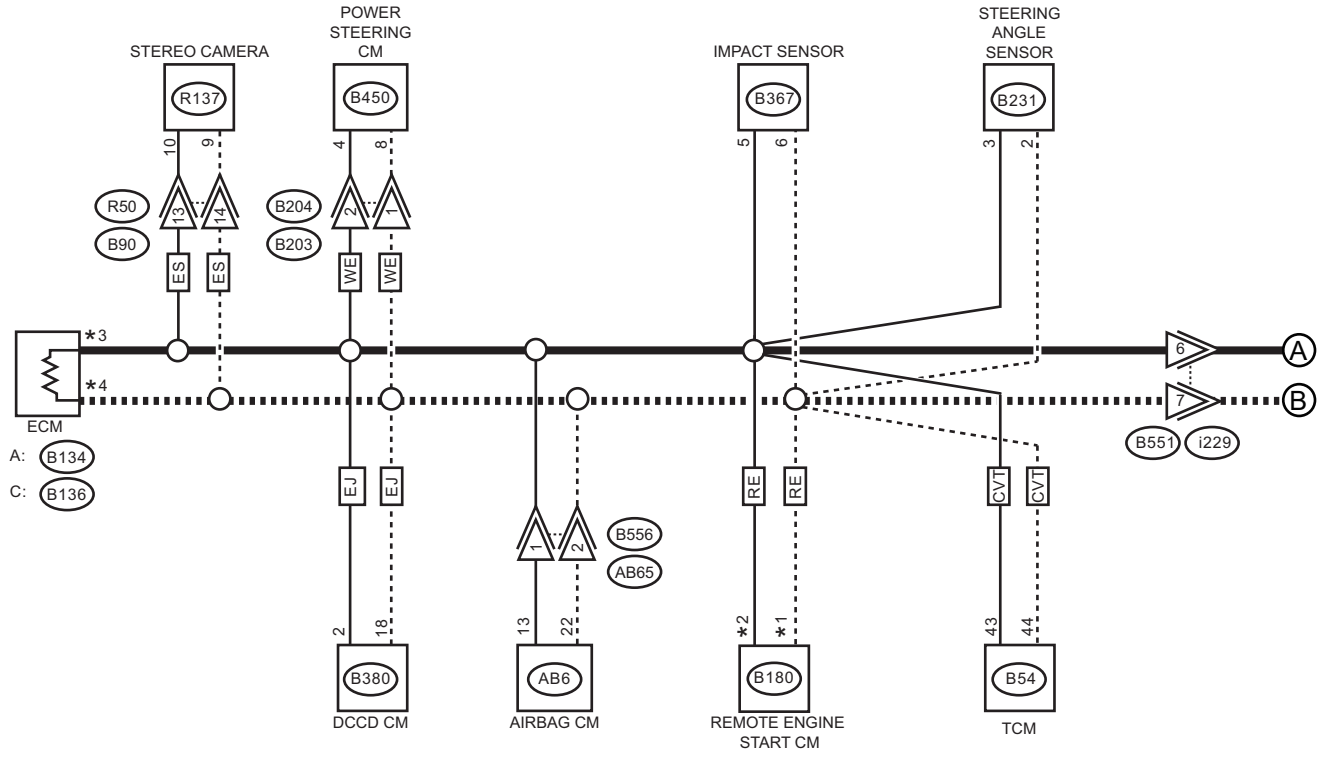
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the airbag CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AB6) No. 13 — (AB6) No. 22:***	Is the resistance 400 Ω or more?	Related lines between airbag CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(AB6) No. 22 — (B231) No. 2:*** ***(AB6) No. 13 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of airbag CM related lines.	Check DTC of airbag CM. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>

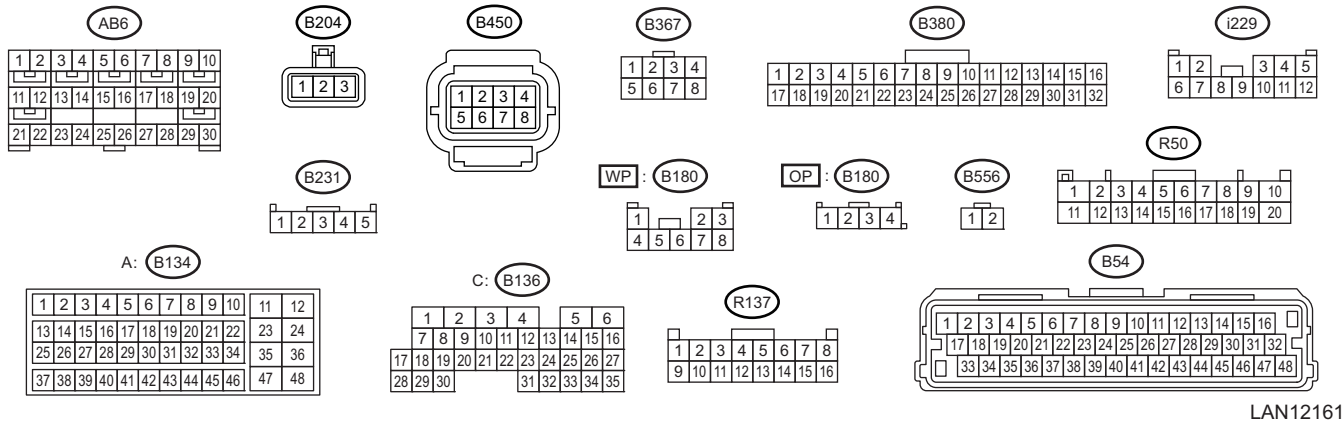
13.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (KEYLESS ACCESS SYSTEM)

Wiring diagram:

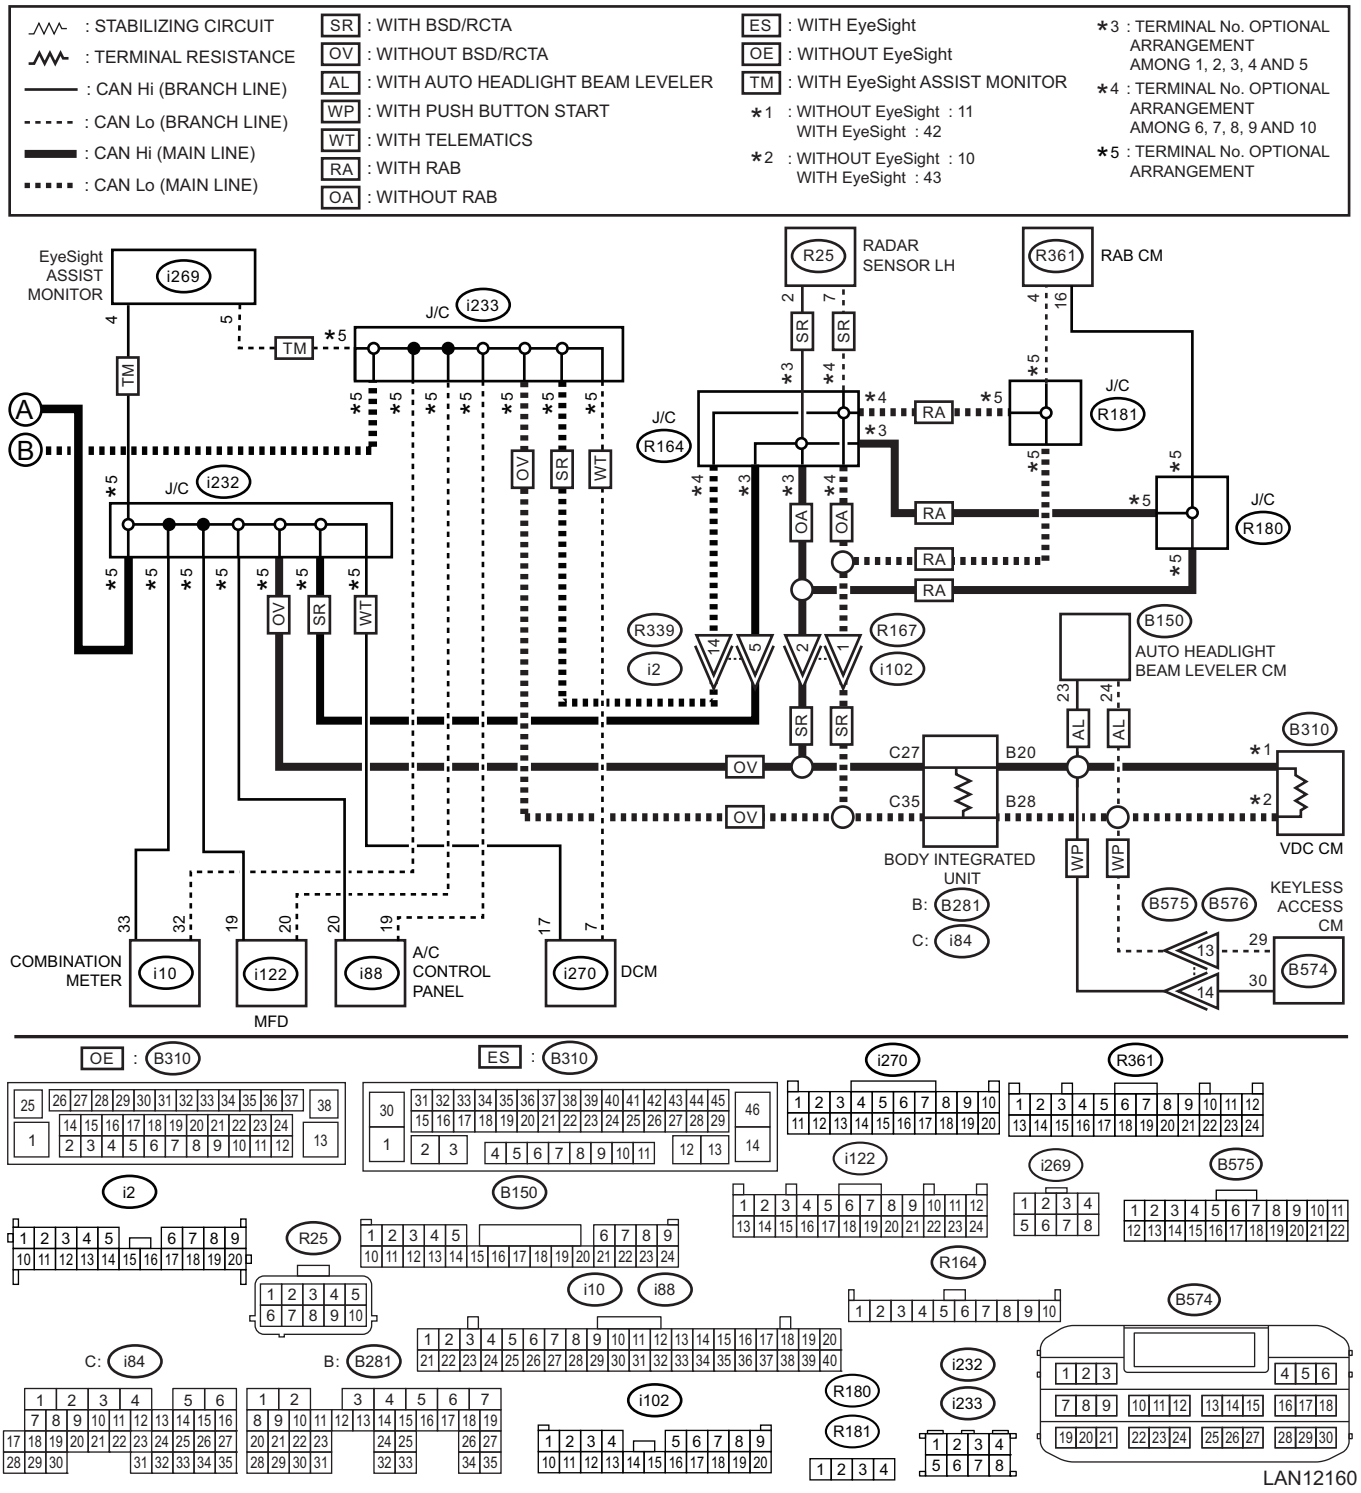
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



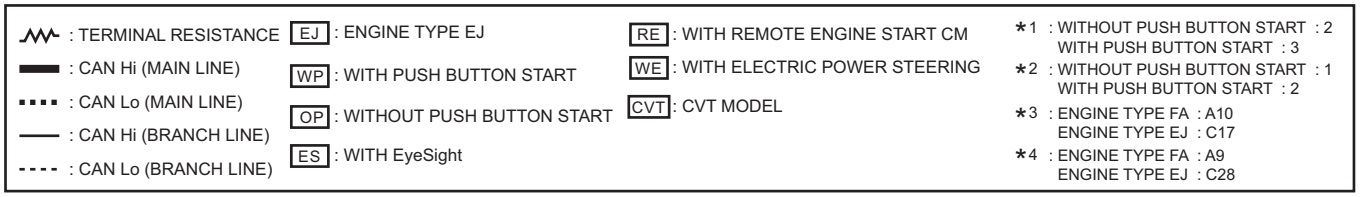
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 30 — (B574) No. 29:***	Is the resistance 400 Ω or more?	Related lines between keyless access CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

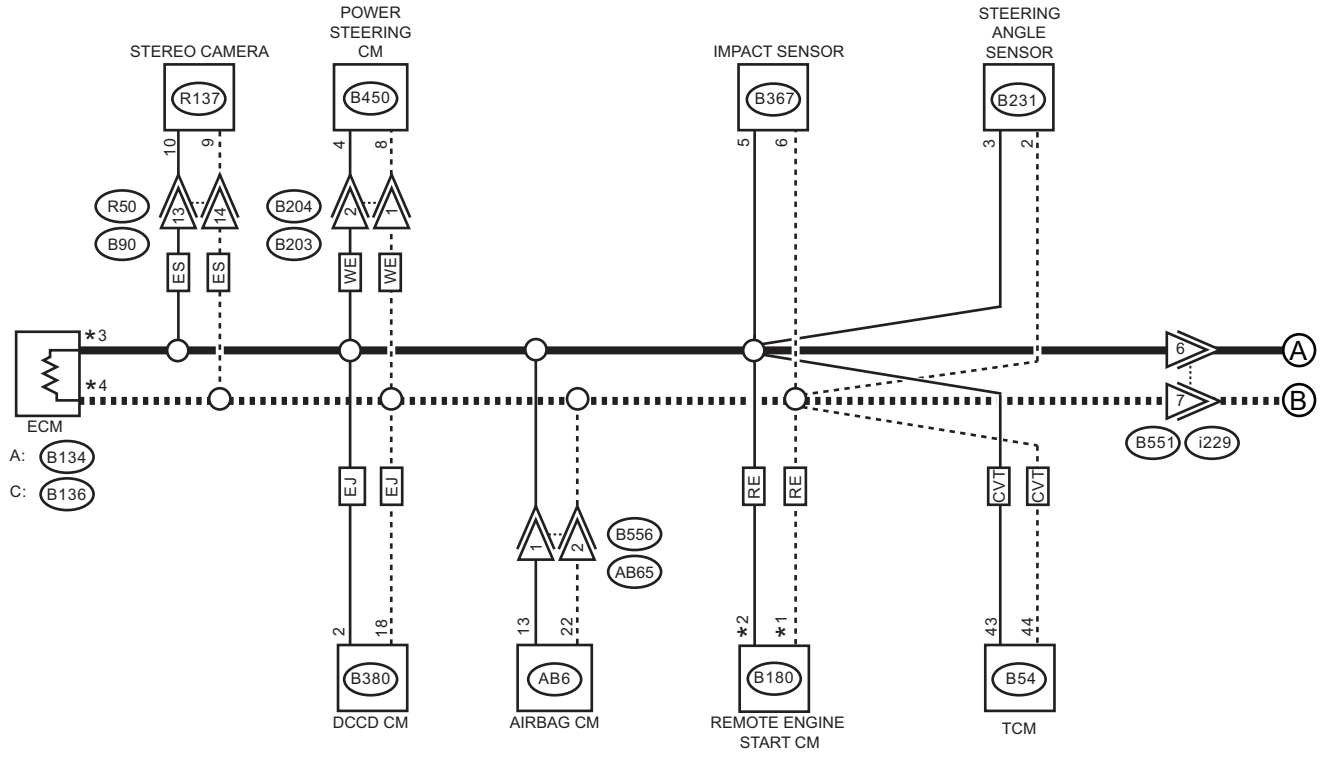
	Step	Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B574) No. 29 — (B231) No. 2:*** ***(B574) No. 30 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of keyless access CM related lines.	Check DTC of keyless access CM. <Ref. to KPS(diag)-45, OPERATION, Diagnostic Trouble Code (DTC).>

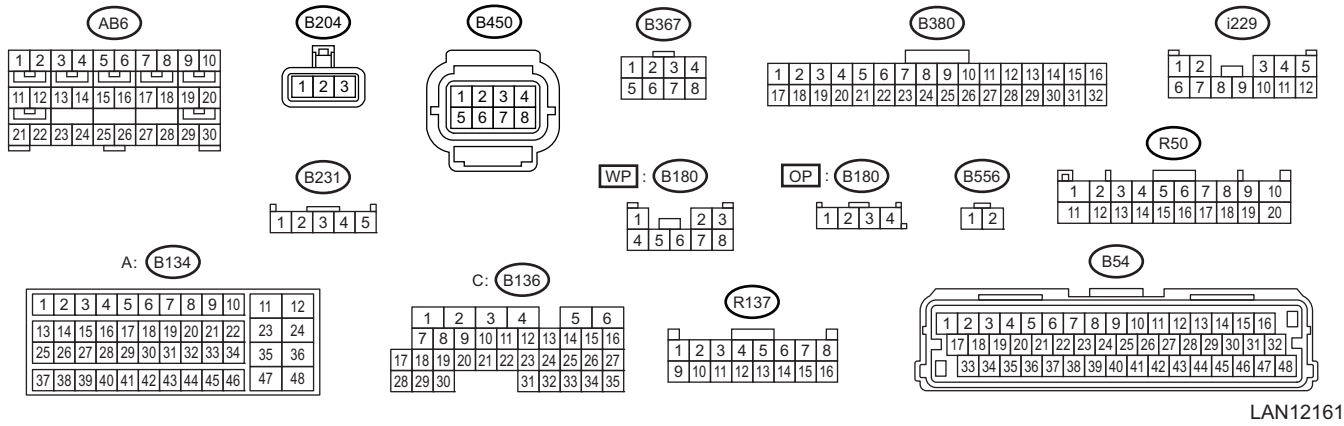
14.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (HEADLIGHT BEAM LEVELER SYSTEM)

Wiring diagram:

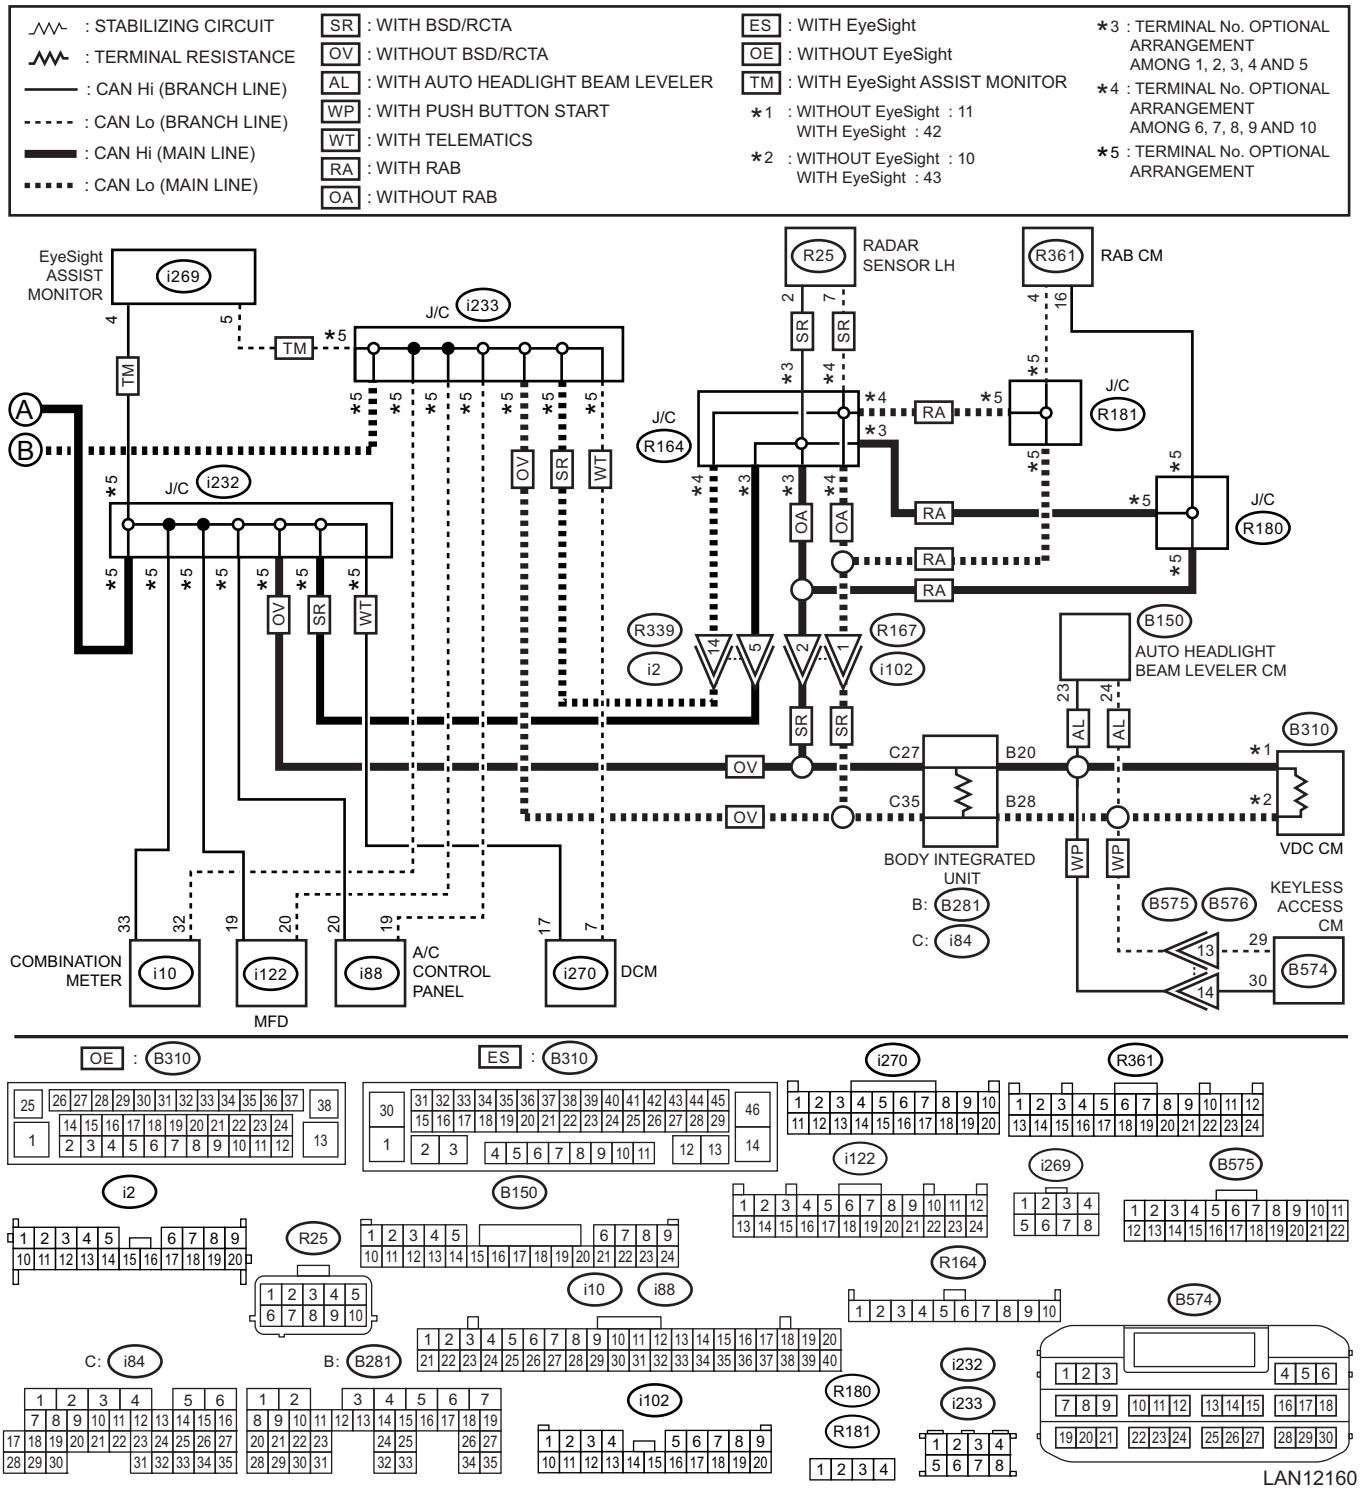
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the headlight beam leveler CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 23 — (B150) No. 24:***	Is the resistance 400 Ω or more?	Related lines between headlight beam leveler CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B150) No. 24 — (B231) No. 2:*** ***(B150) No. 23 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit portion of headlight beam leveler CM related lines.	Check DTC of headlight beam leveler system. <Ref. to AL(diag)-13, Read Diagnostic Trouble Code (DTC).>

15.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (REMOTE ENGINE STARTER SYSTEM)

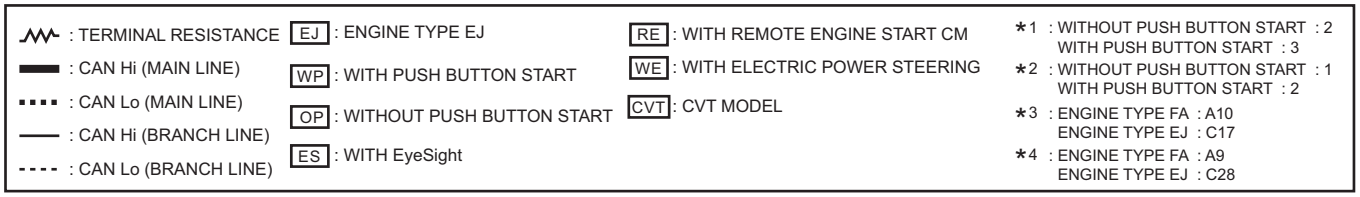
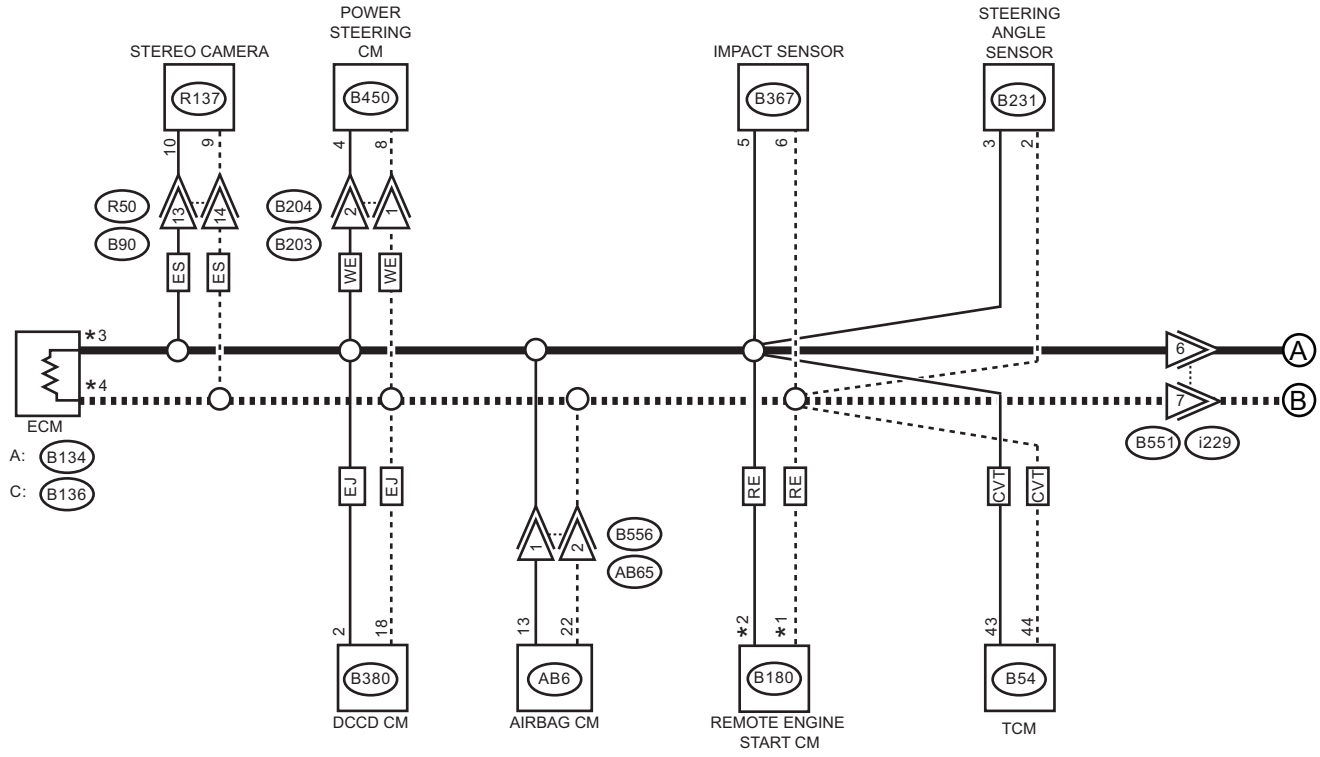
	Step	Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the remote engine start CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — (B180) No. 2:*** ***With push button start*** ***(B180) No. 2 — (B180) No. 3:***	Is the resistance 400 Ω or more?	Related lines between remote engine start CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***Without push button start*** ***(B180) No. 1 — (B231) No. 3:*** ***(B180) No. 2 — (B231) No. 2:*** ***With push button start*** ***(B180) No. 2 — (B231) No. 3:*** ***(B180) No. 3 — (B231) No. 2:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of remote engine start CM related lines.	The communication harness is normal. Check the remote engine starter CM or the mobile key.

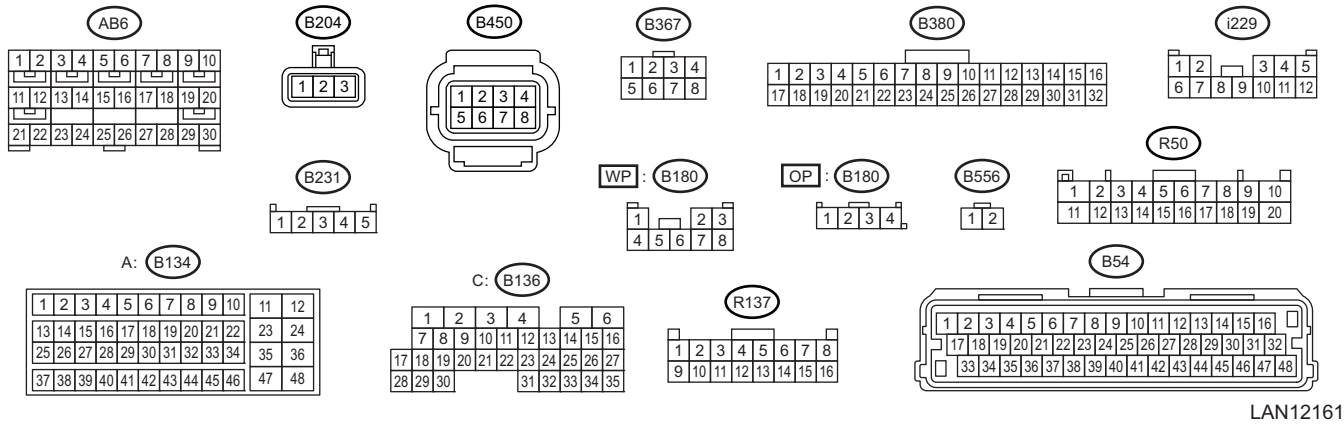
16.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (IMPACT SENSOR SYSTEM)

Wiring diagram:

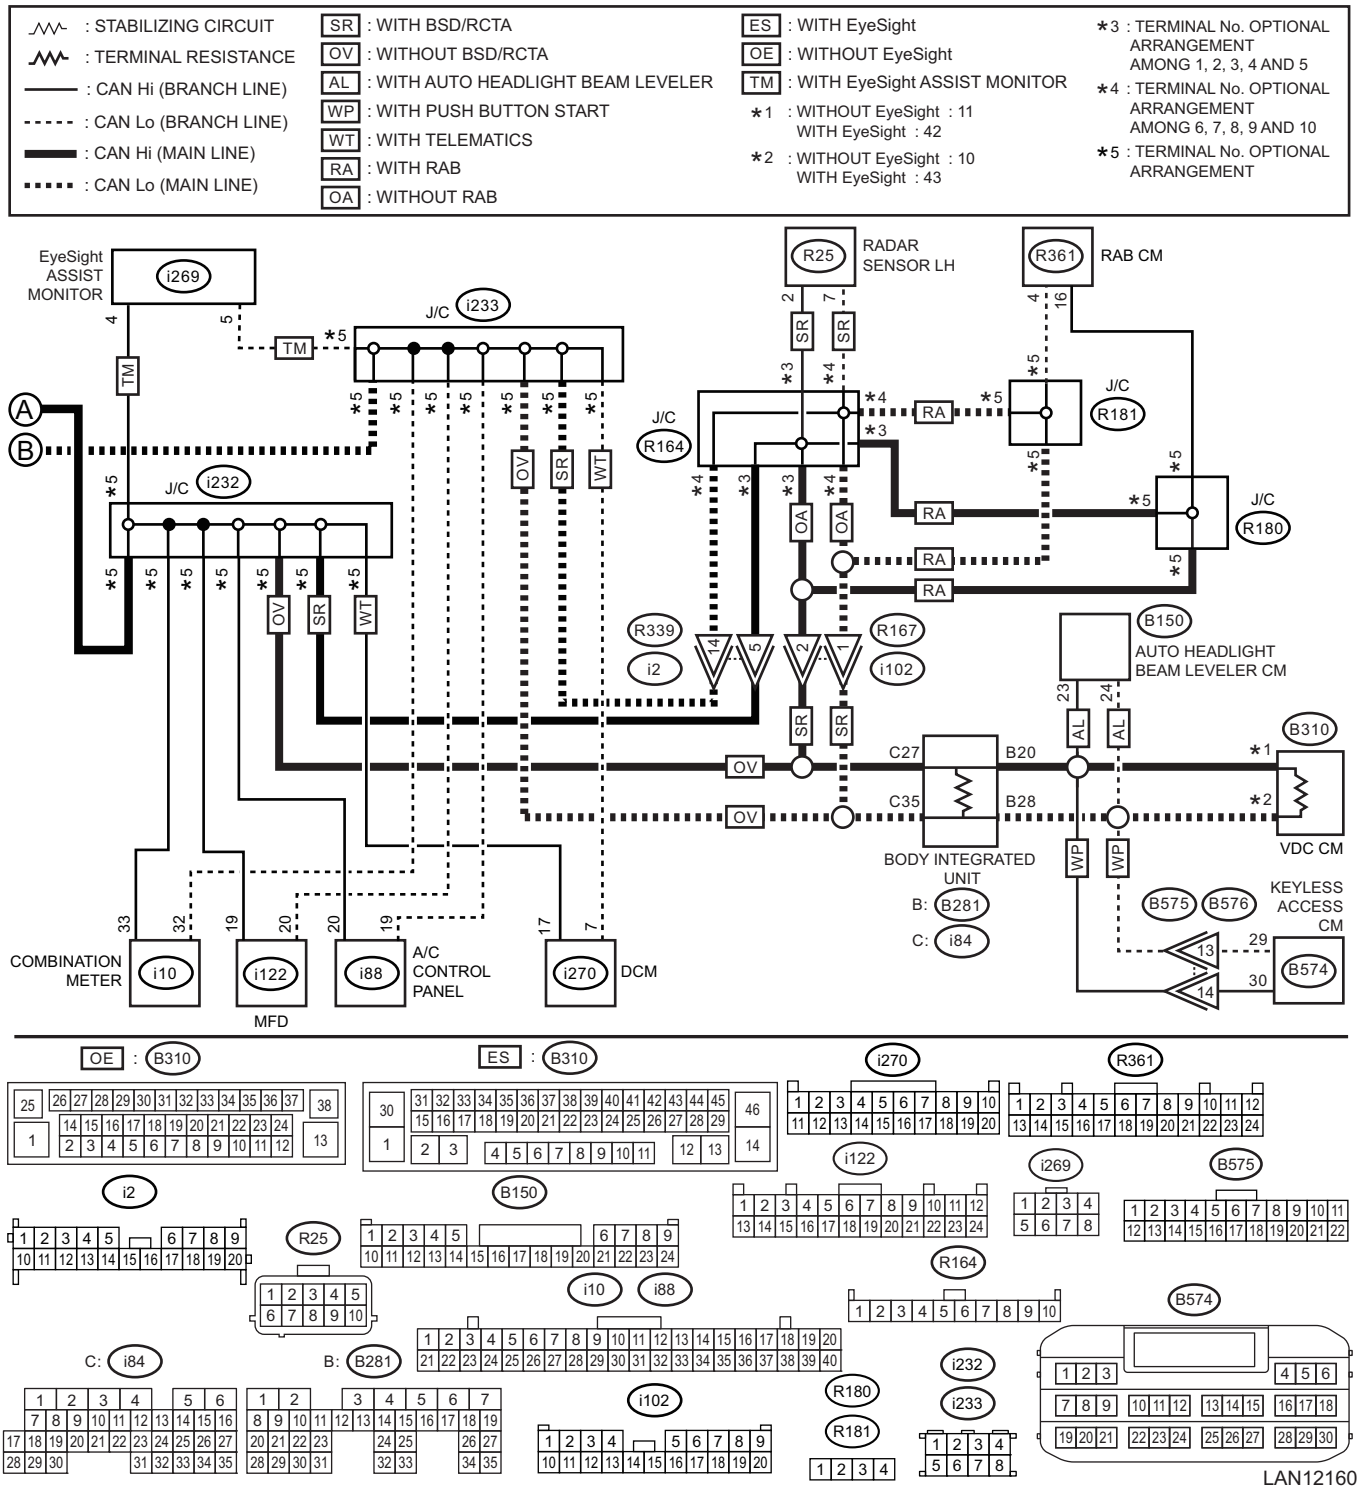
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



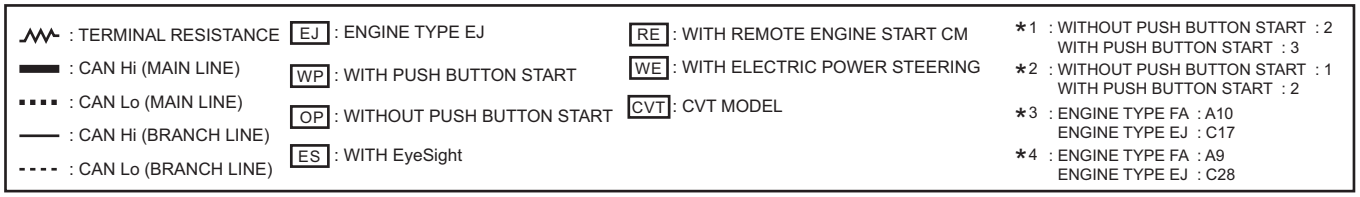
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the impact sensor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B367) No. 5 — (B367) No. 6:***	Is the resistance 400 Ω or more?	Related lines between the impact sensor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

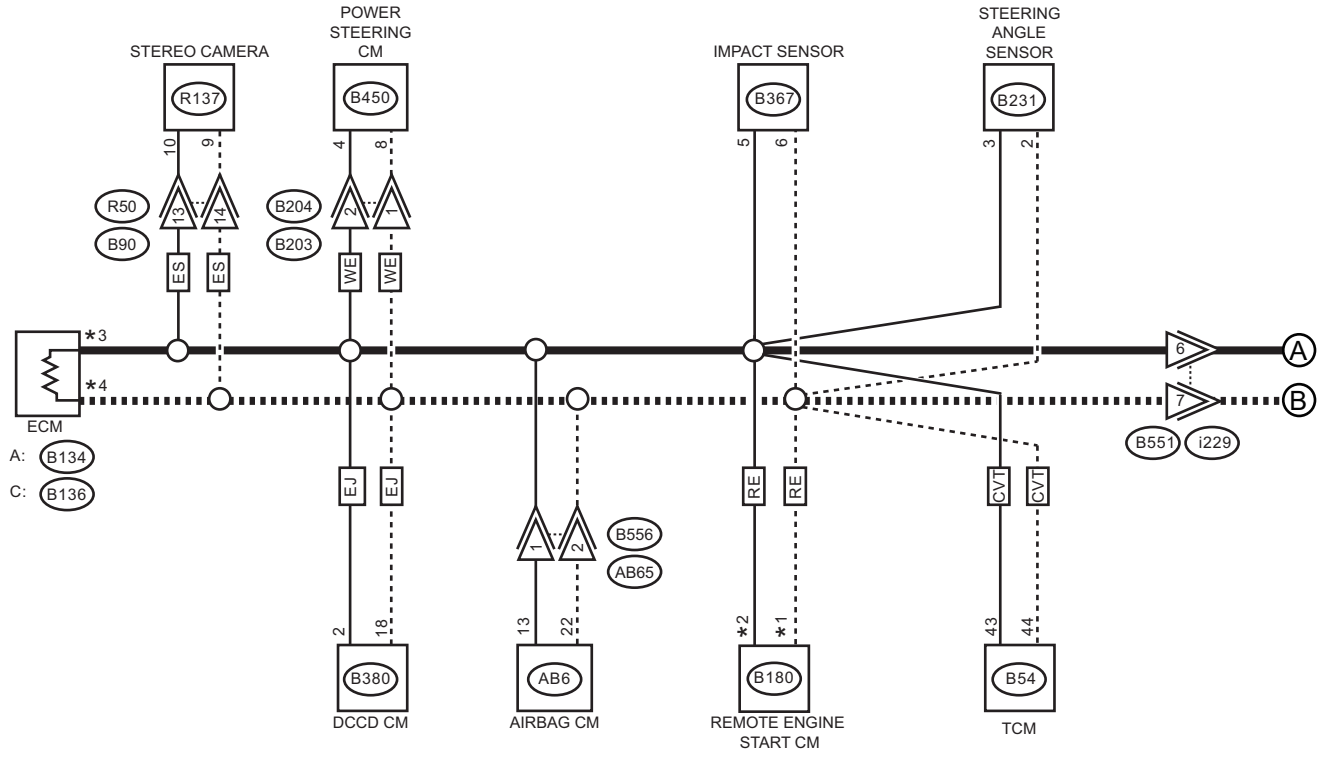
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B367) No. 6 — (B231) No. 2:*** ***(B367) No. 5 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the impact sensor system related lines.	The communication harness is normal. Check the impact sensor.

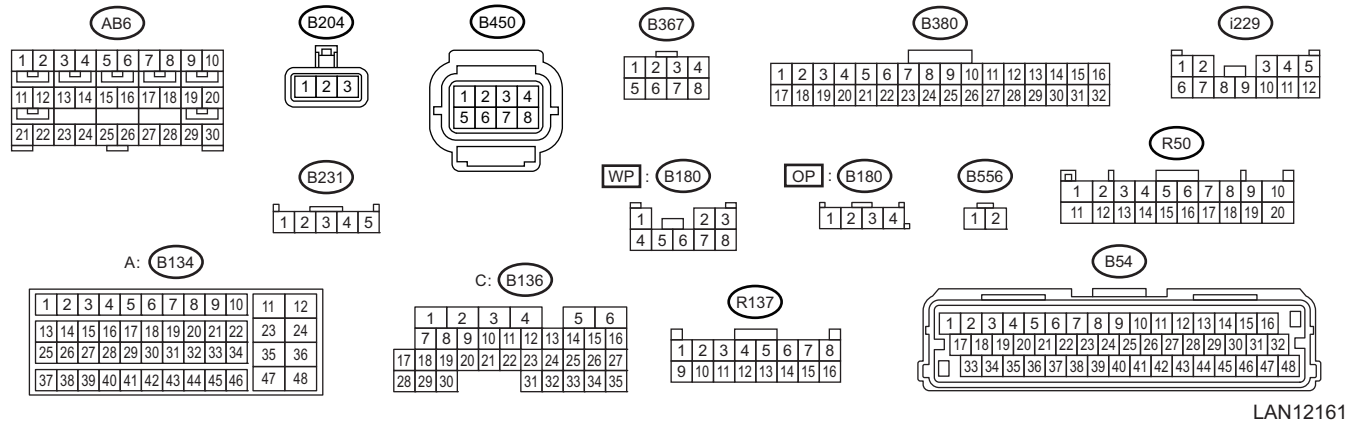
17.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (DCCD SYSTEM)

Wiring diagram:

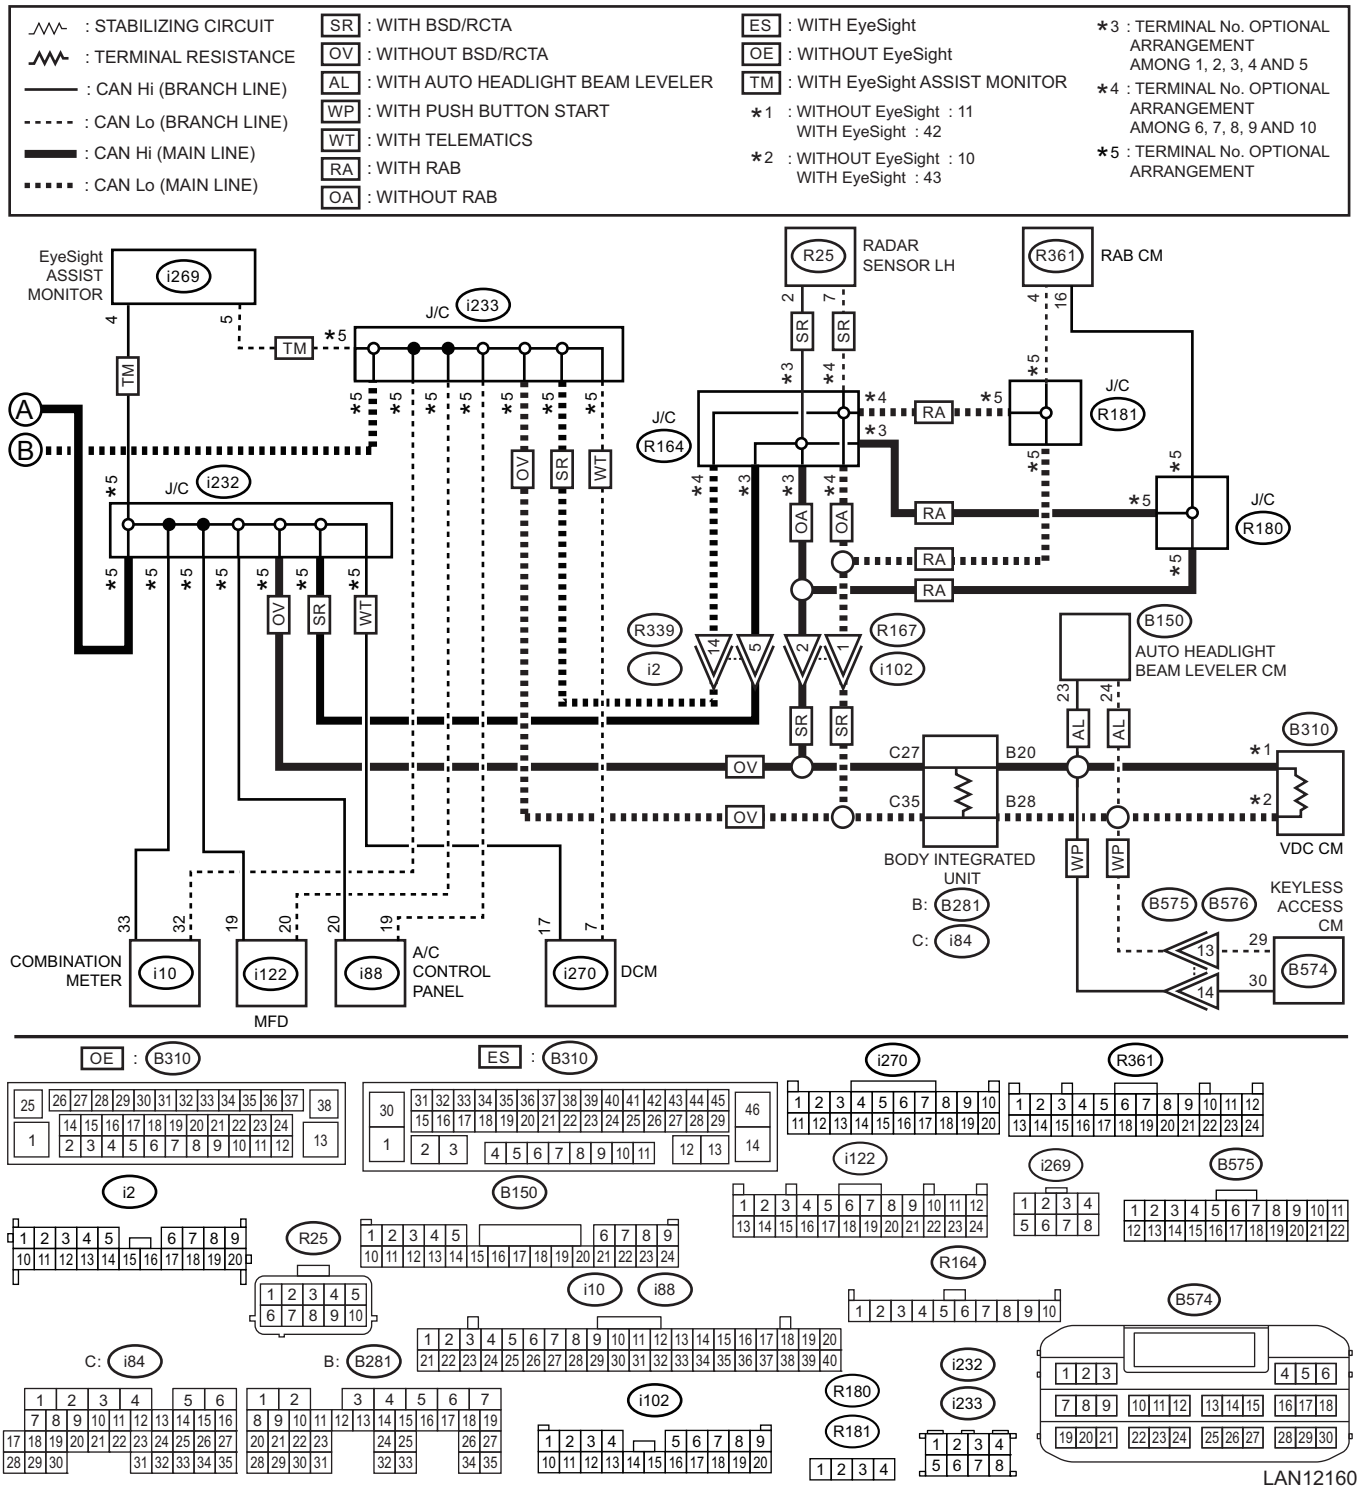
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



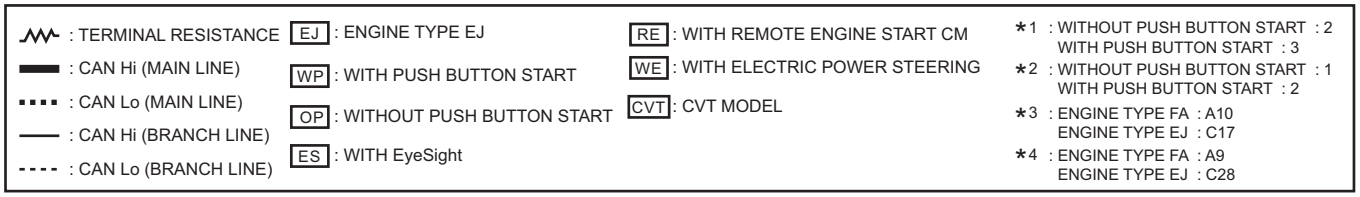
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the DCCD CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (B380) No. 2 — (B380) No. 18:***	Is the resistance 400 Ω or more?	Related lines between DCCD CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

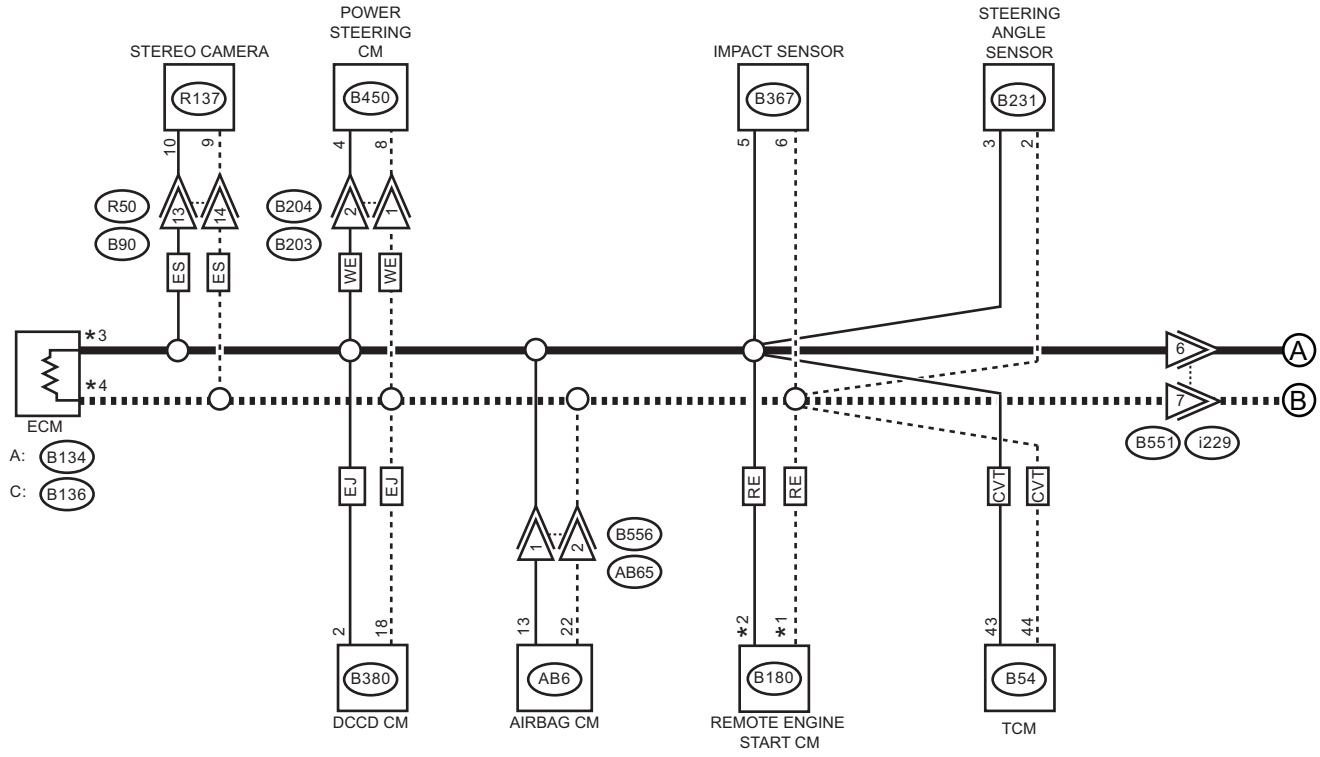
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B380) No. 18 — (B231) No. 2:*** ***(B380) No. 2 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open portion of DCCD CM related lines.	The communication harness is normal. Check the DCCD CM. <Ref. to 6MT(diag)-9, Read Diagnostic Trouble Code (DTC).>

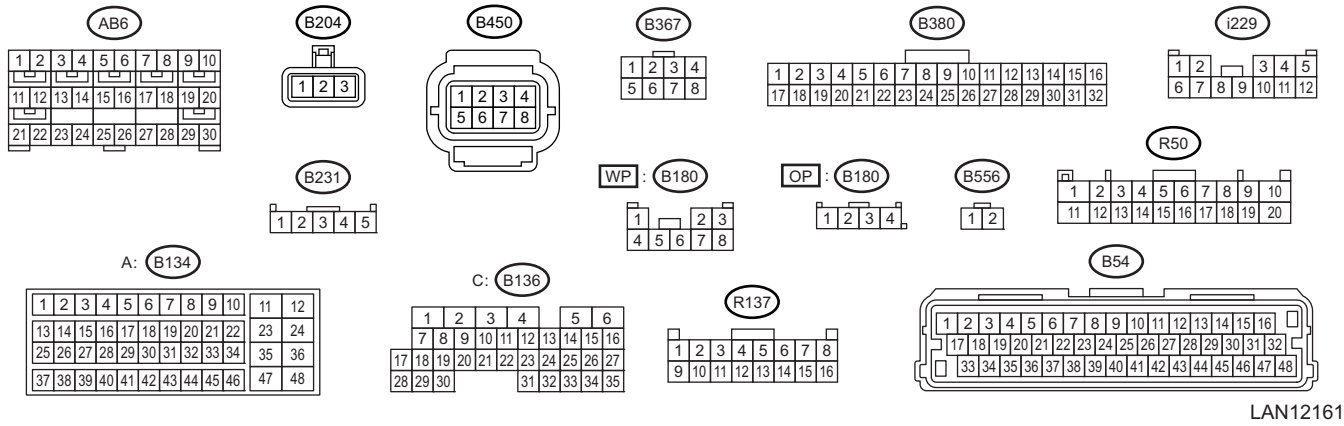
18.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (BSD/RCTA SYSTEM)

Wiring diagram:

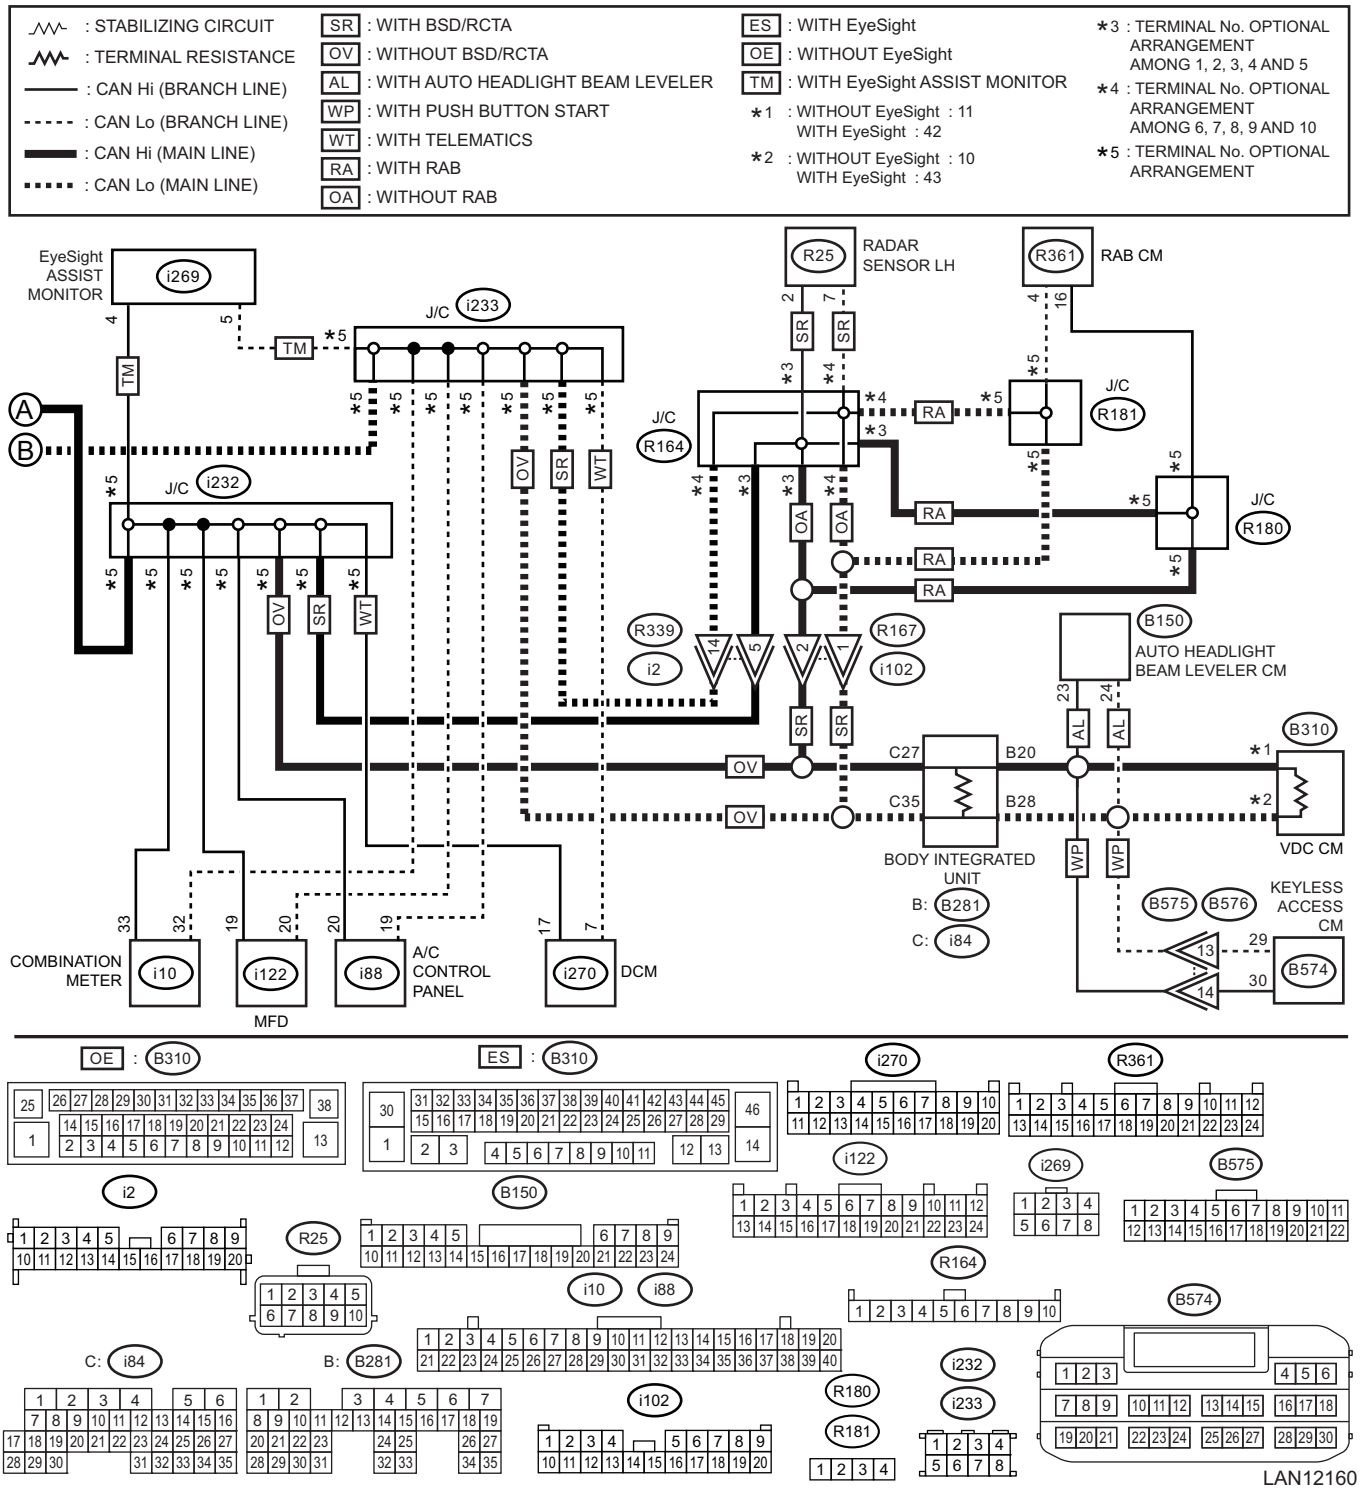
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



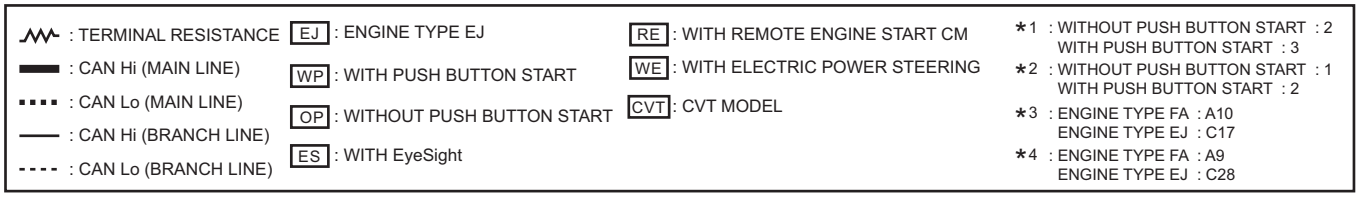
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the radar sensor LH connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R25) No. 2 — (R25) No. 7:***	Is the resistance 400 Ω or more?	Related lines between radar sensor LH and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

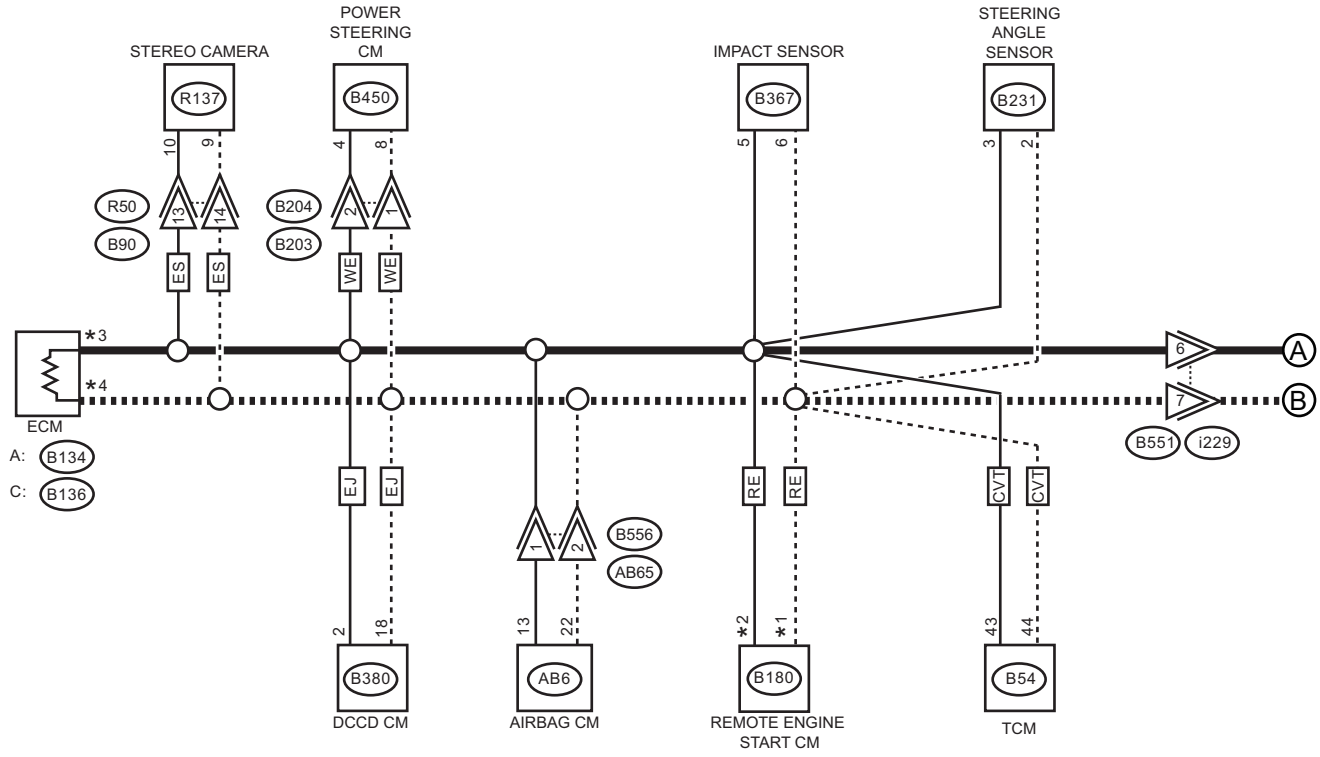
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R25) No. 2 — (B231) No. 3:*** ***(R25) No. 7 — (B231) No. 2:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of the Blind Spot Detection/Rear Cross Traffic Alert related lines.	The communication harness is normal. Check DTC of radar sensor. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>

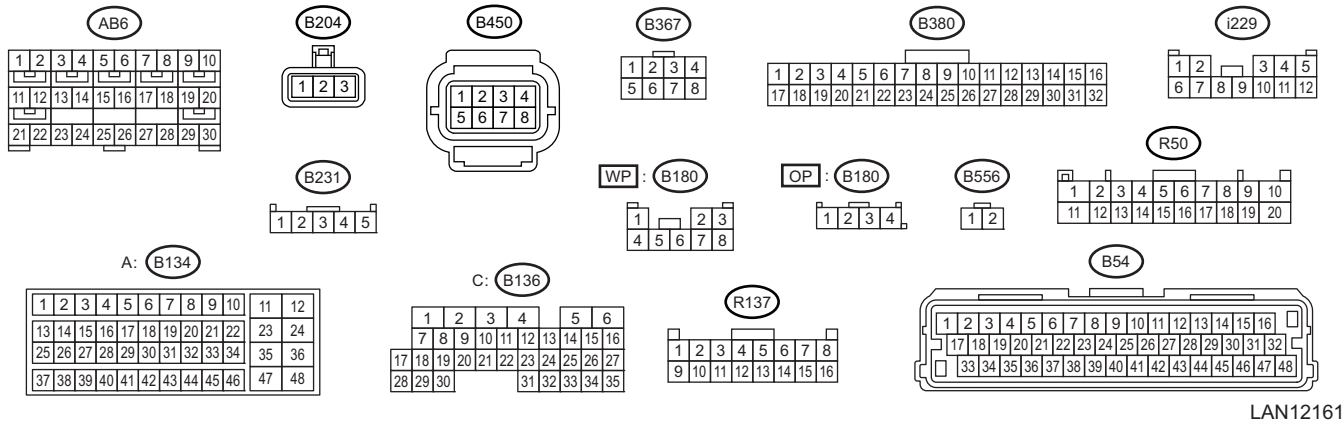
19.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (STEREO CAMERA SYSTEM)

Wiring diagram:

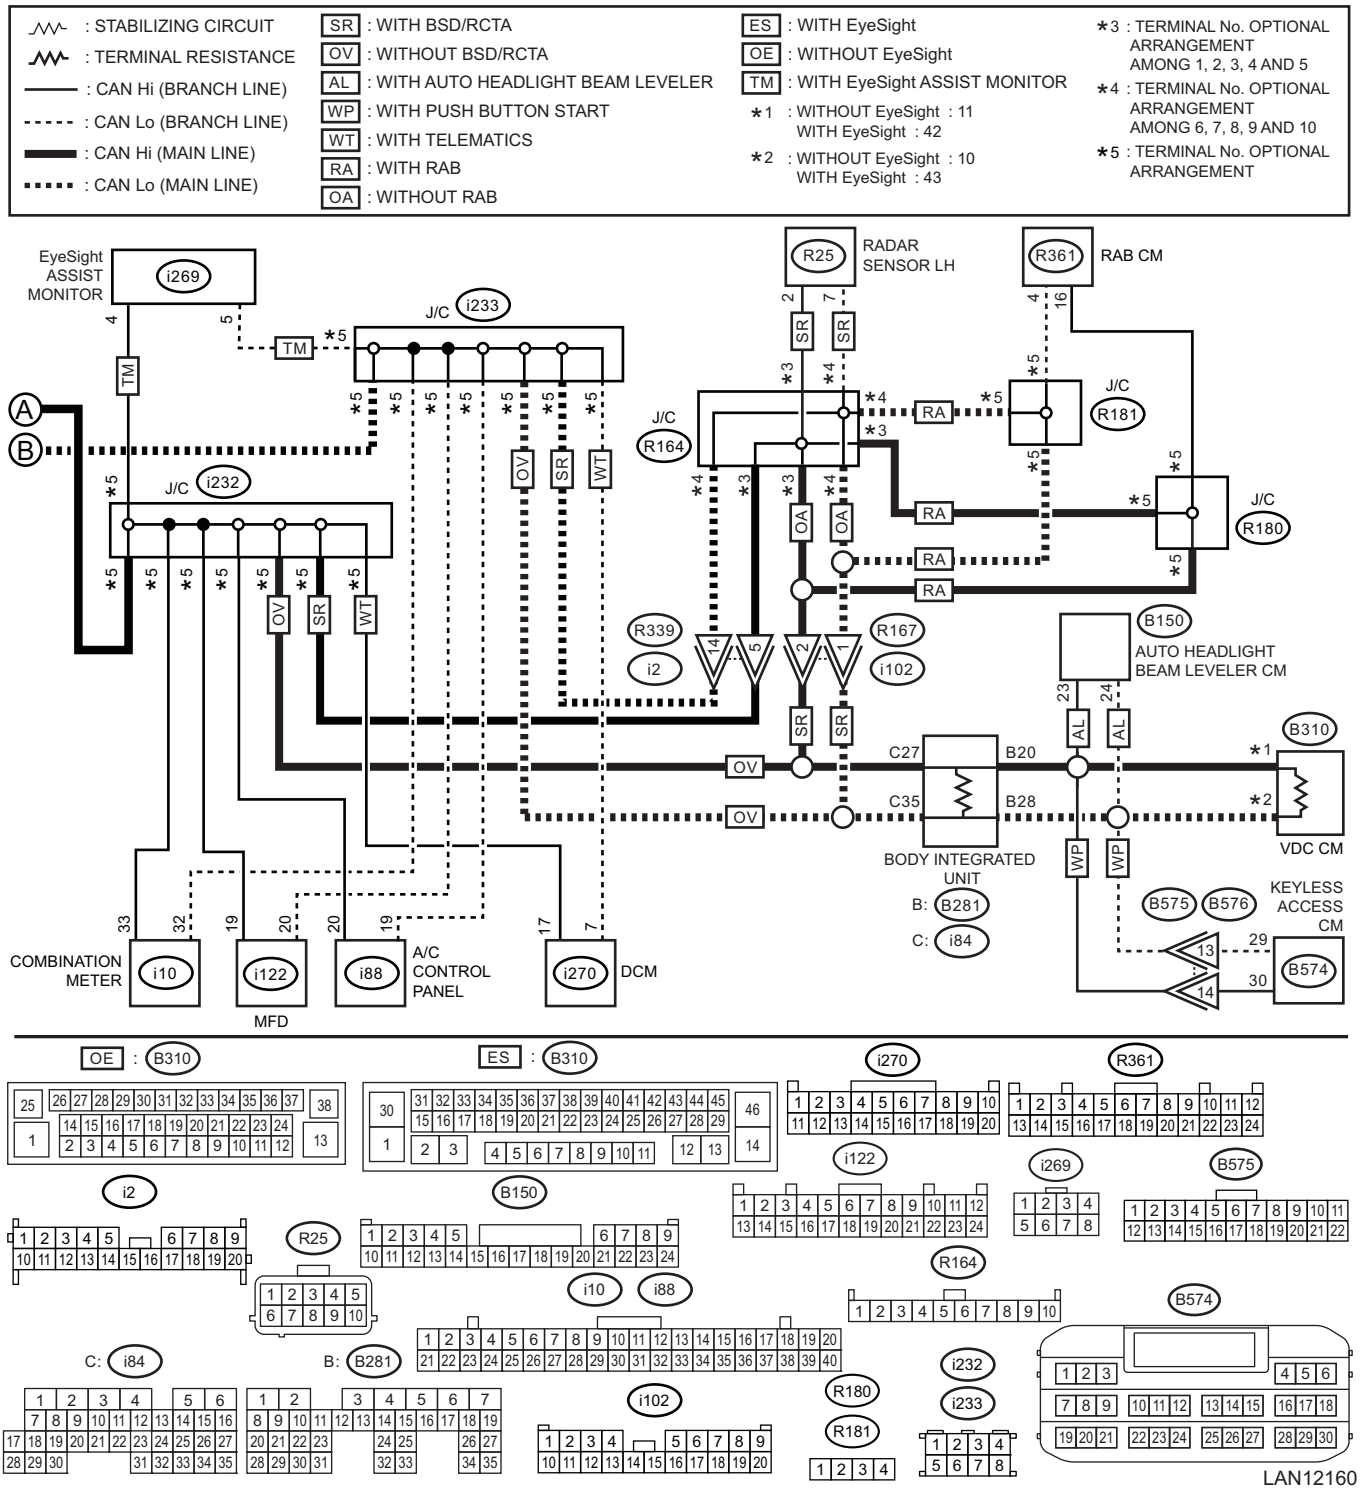
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



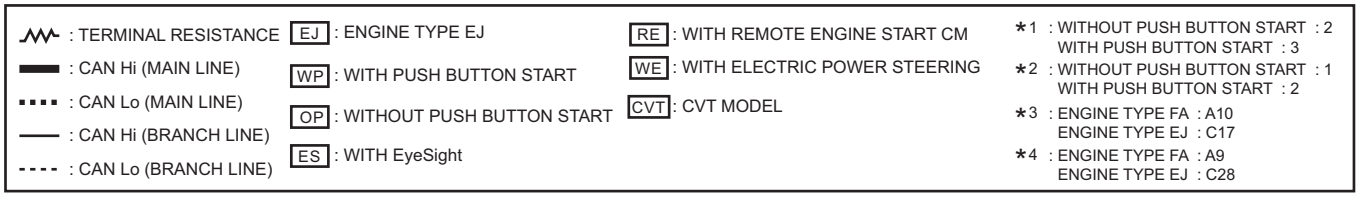
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the stereo camera connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R137) No. 10 — No. 9:***	Is the resistance 400 Ω or more?	Related lines between stereo camera and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

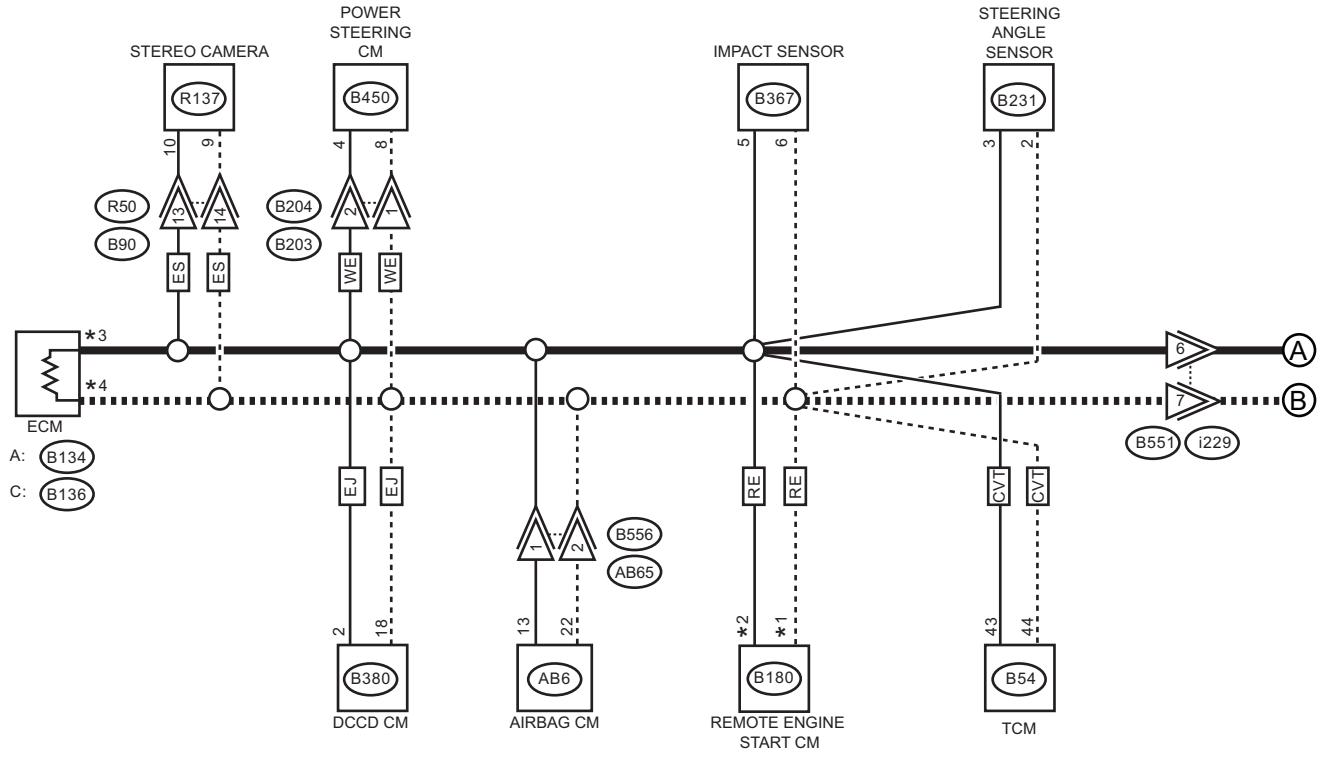
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R137) No. 9 — (B231) No. 2:*** ***(R137) No. 10 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of stereo camera related lines.	Check DTC of stereo camera. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>

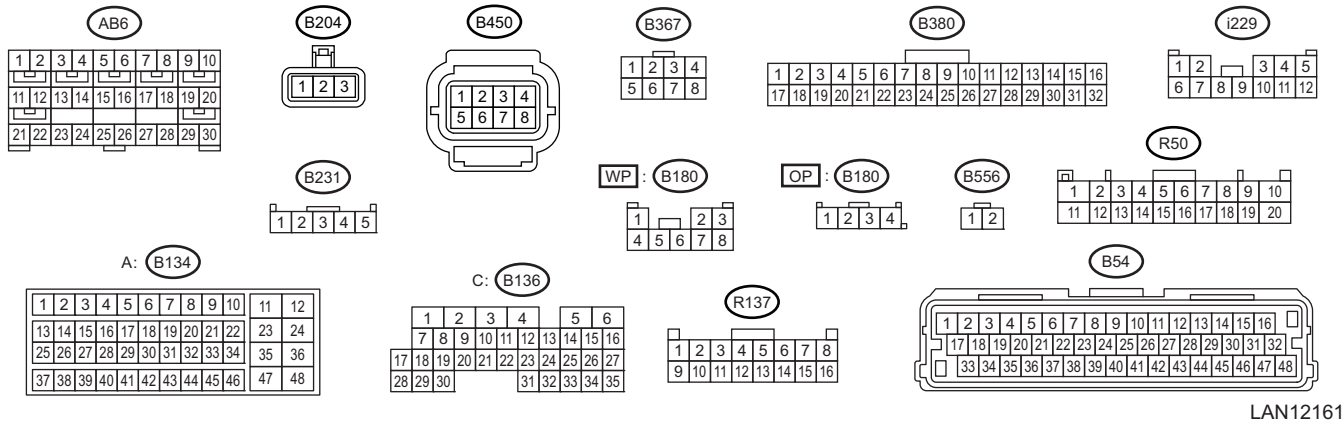
20.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (TELEMATICS SYSTEM)

Wiring diagram:

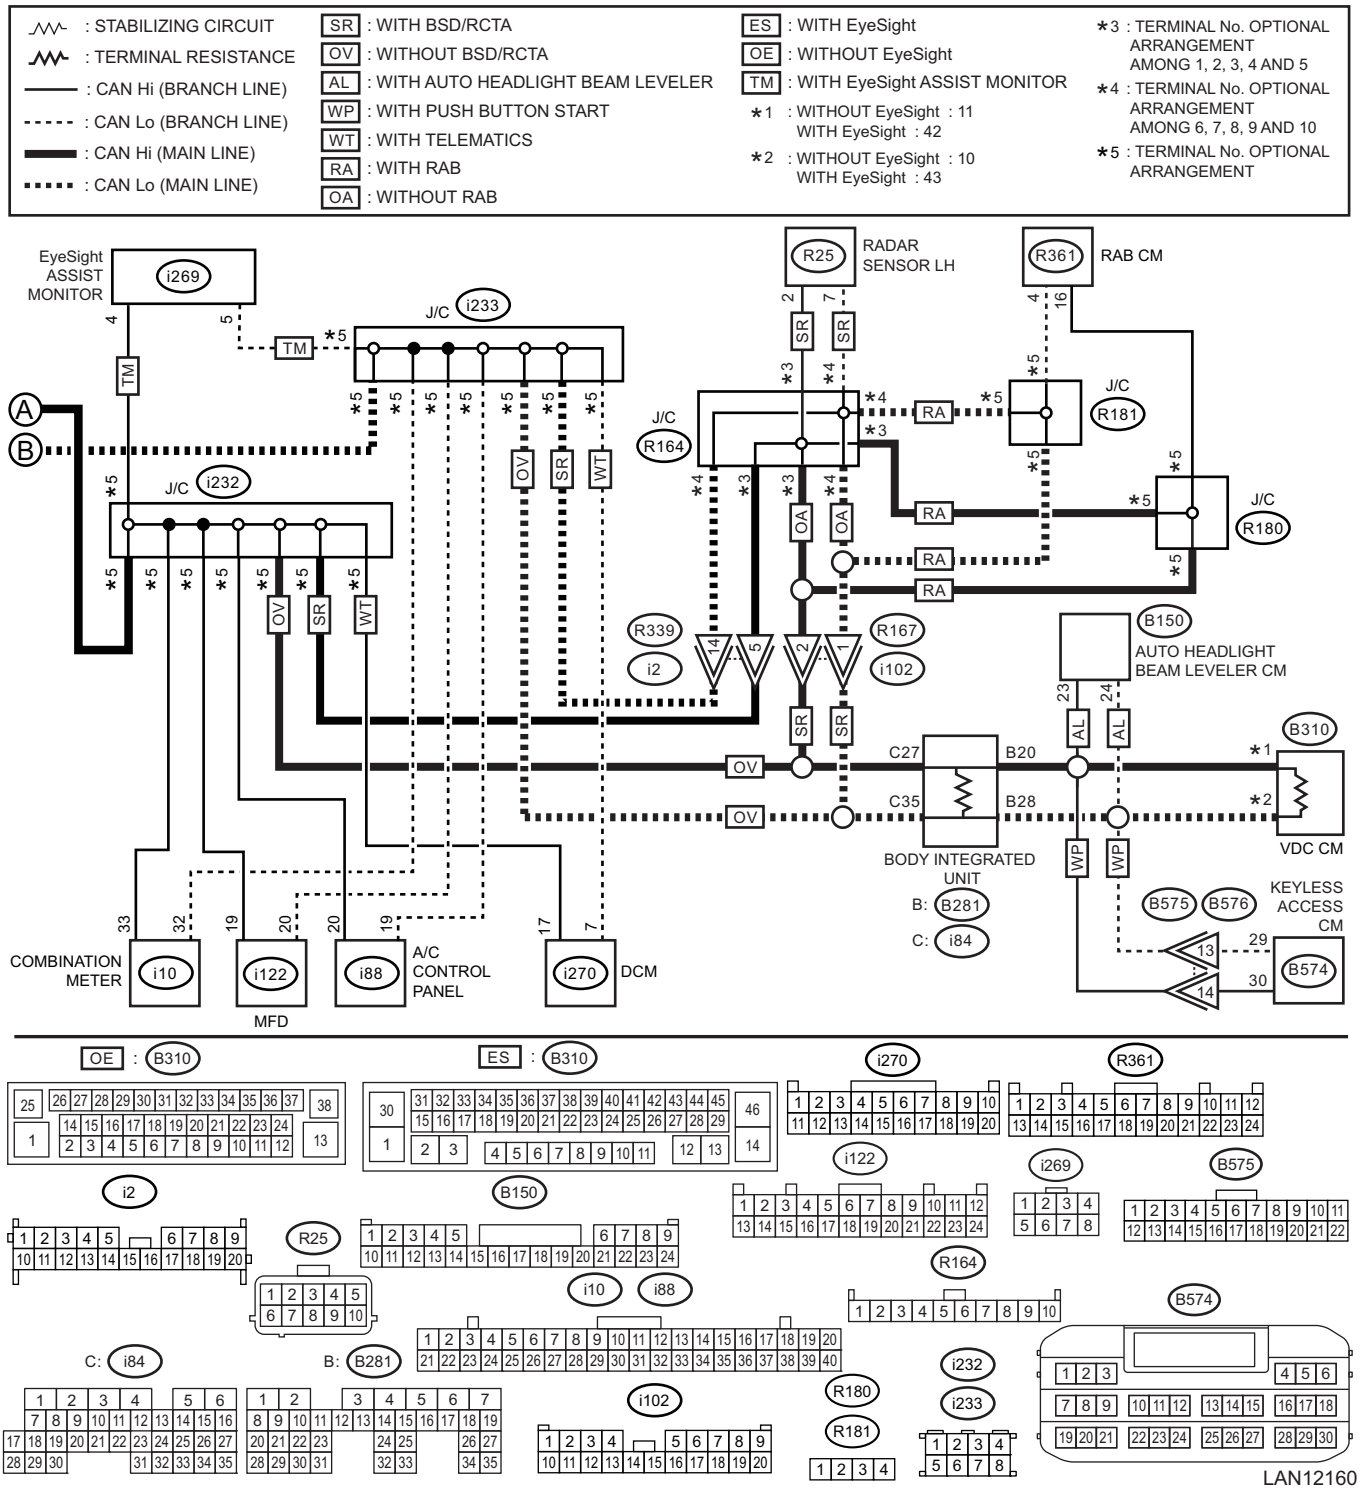
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



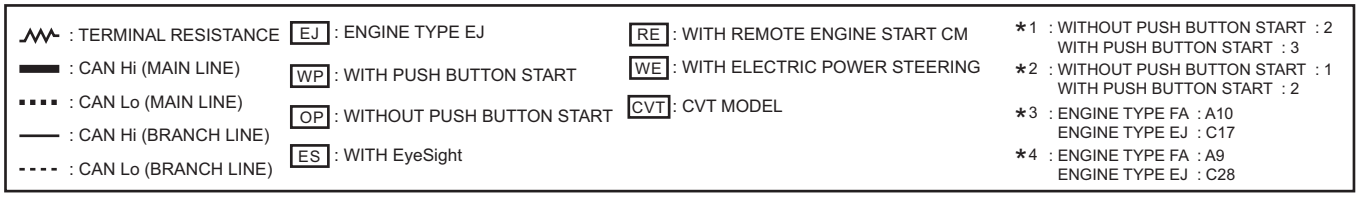
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the DCM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (i270) No. 7 — No. 17:***	Is the resistance 400 Ω or more?	Related lines between DCM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

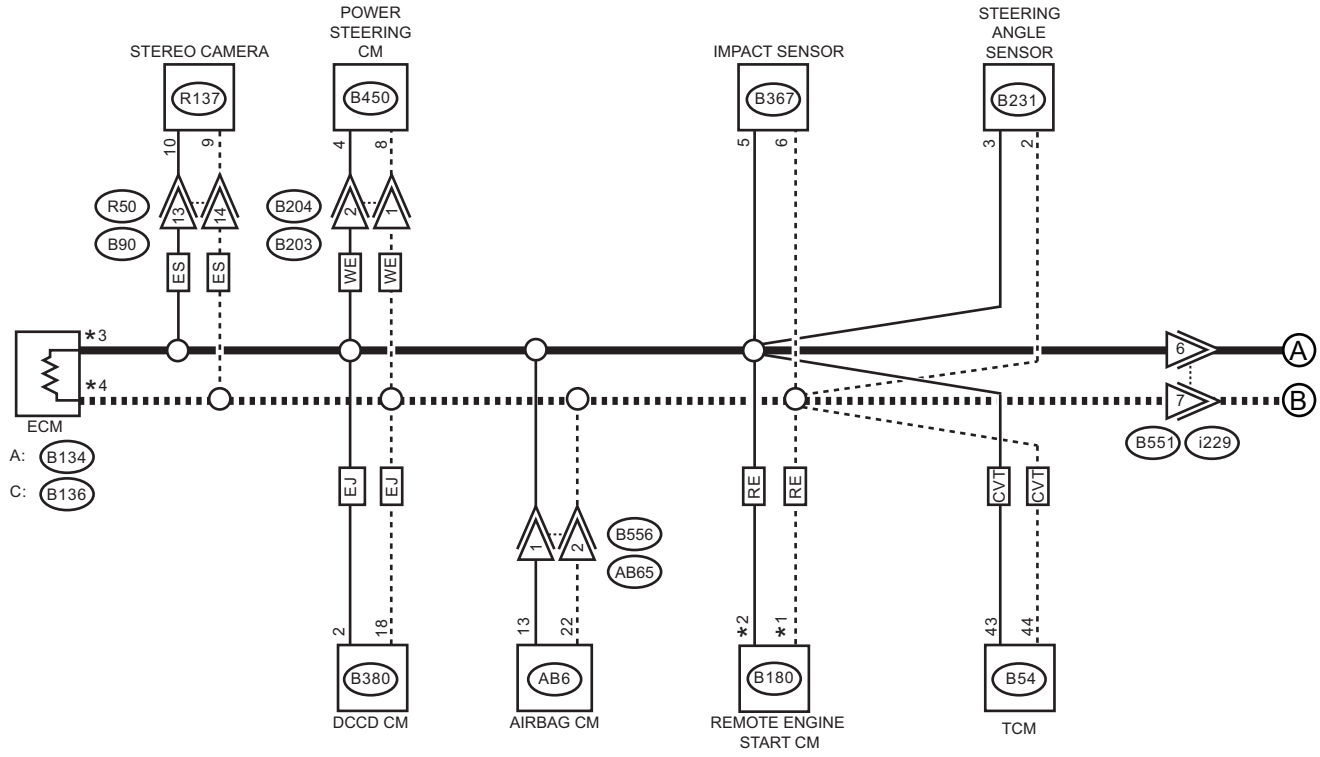
	Step	Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i270) No. 17 — (B231) No. 3:*** ***(i270) No. 7 — (B231) No. 2:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of telematics system related lines.	The communication harness is normal. Check DTC of the telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>

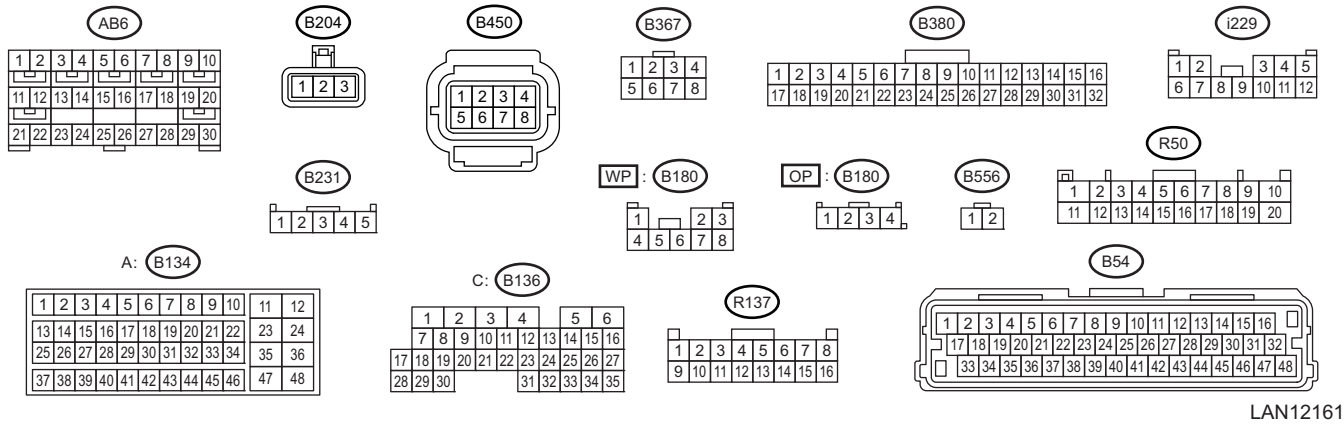
21.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (RAB SYSTEM)

Wiring diagram:

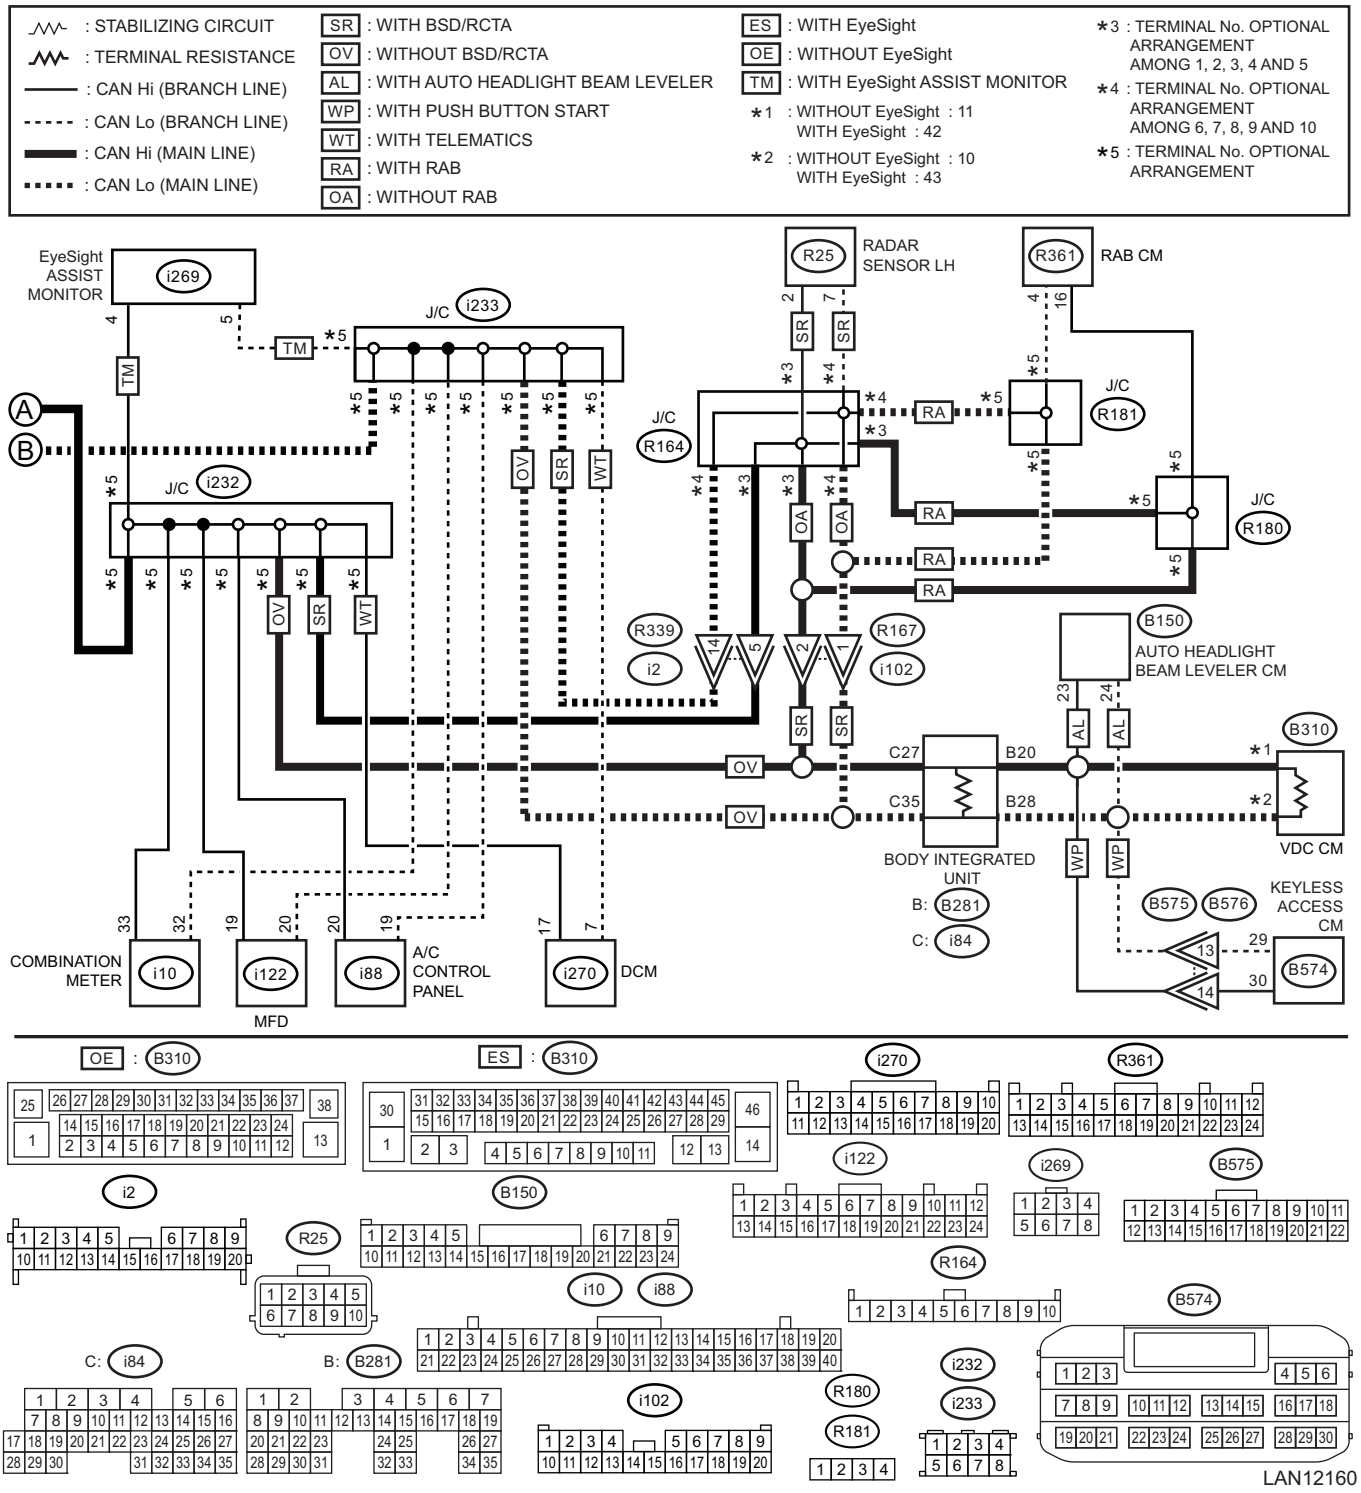
CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>







LAN12161



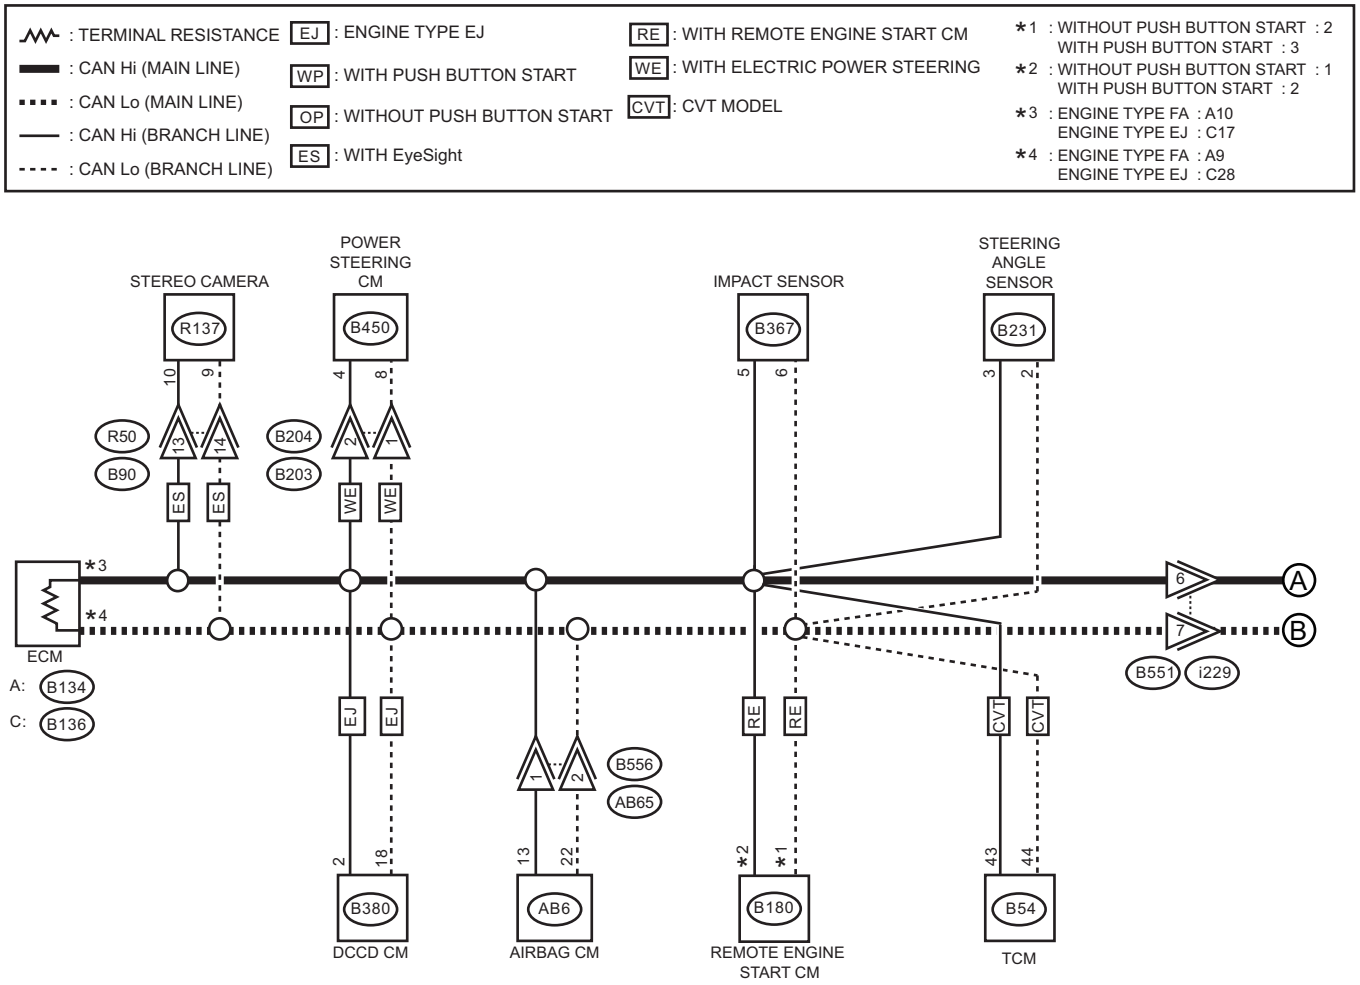
Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the RAB CM connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal (R361) No. 4 — No. 16:***	Is the resistance 400 Ω or more?	Related lines between RAB CM and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

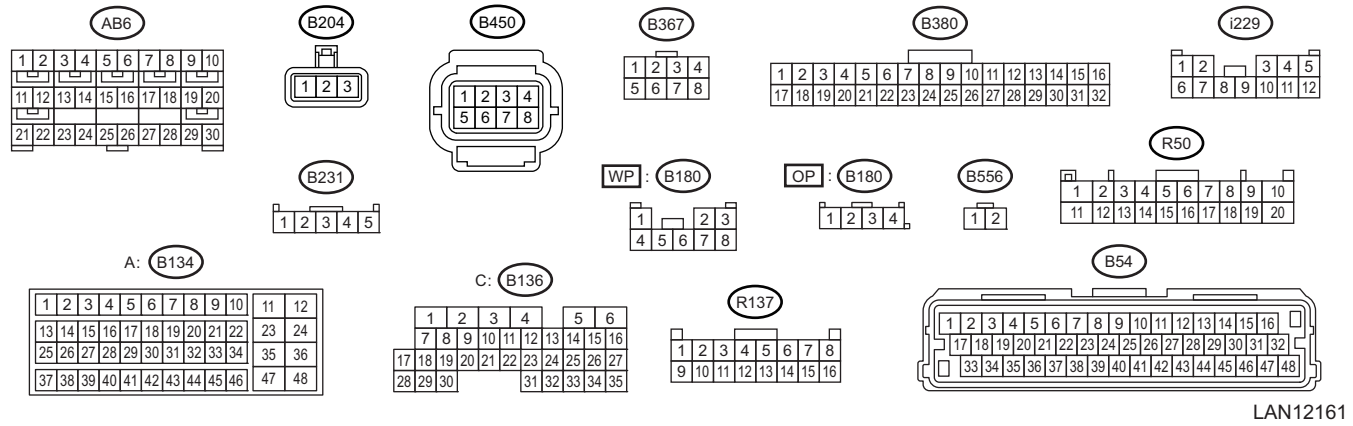
Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R361) No. 4 — (B231) No. 2:*** ***(R361) No. 16 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of RAB related lines.	The communication harness is normal. Check DTC of RAB. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>

22.RELATED LINES MORE THAN 52 Ω AND LESS THAN 62 Ω (EyeSight ASSIST MONITOR SYSTEM)

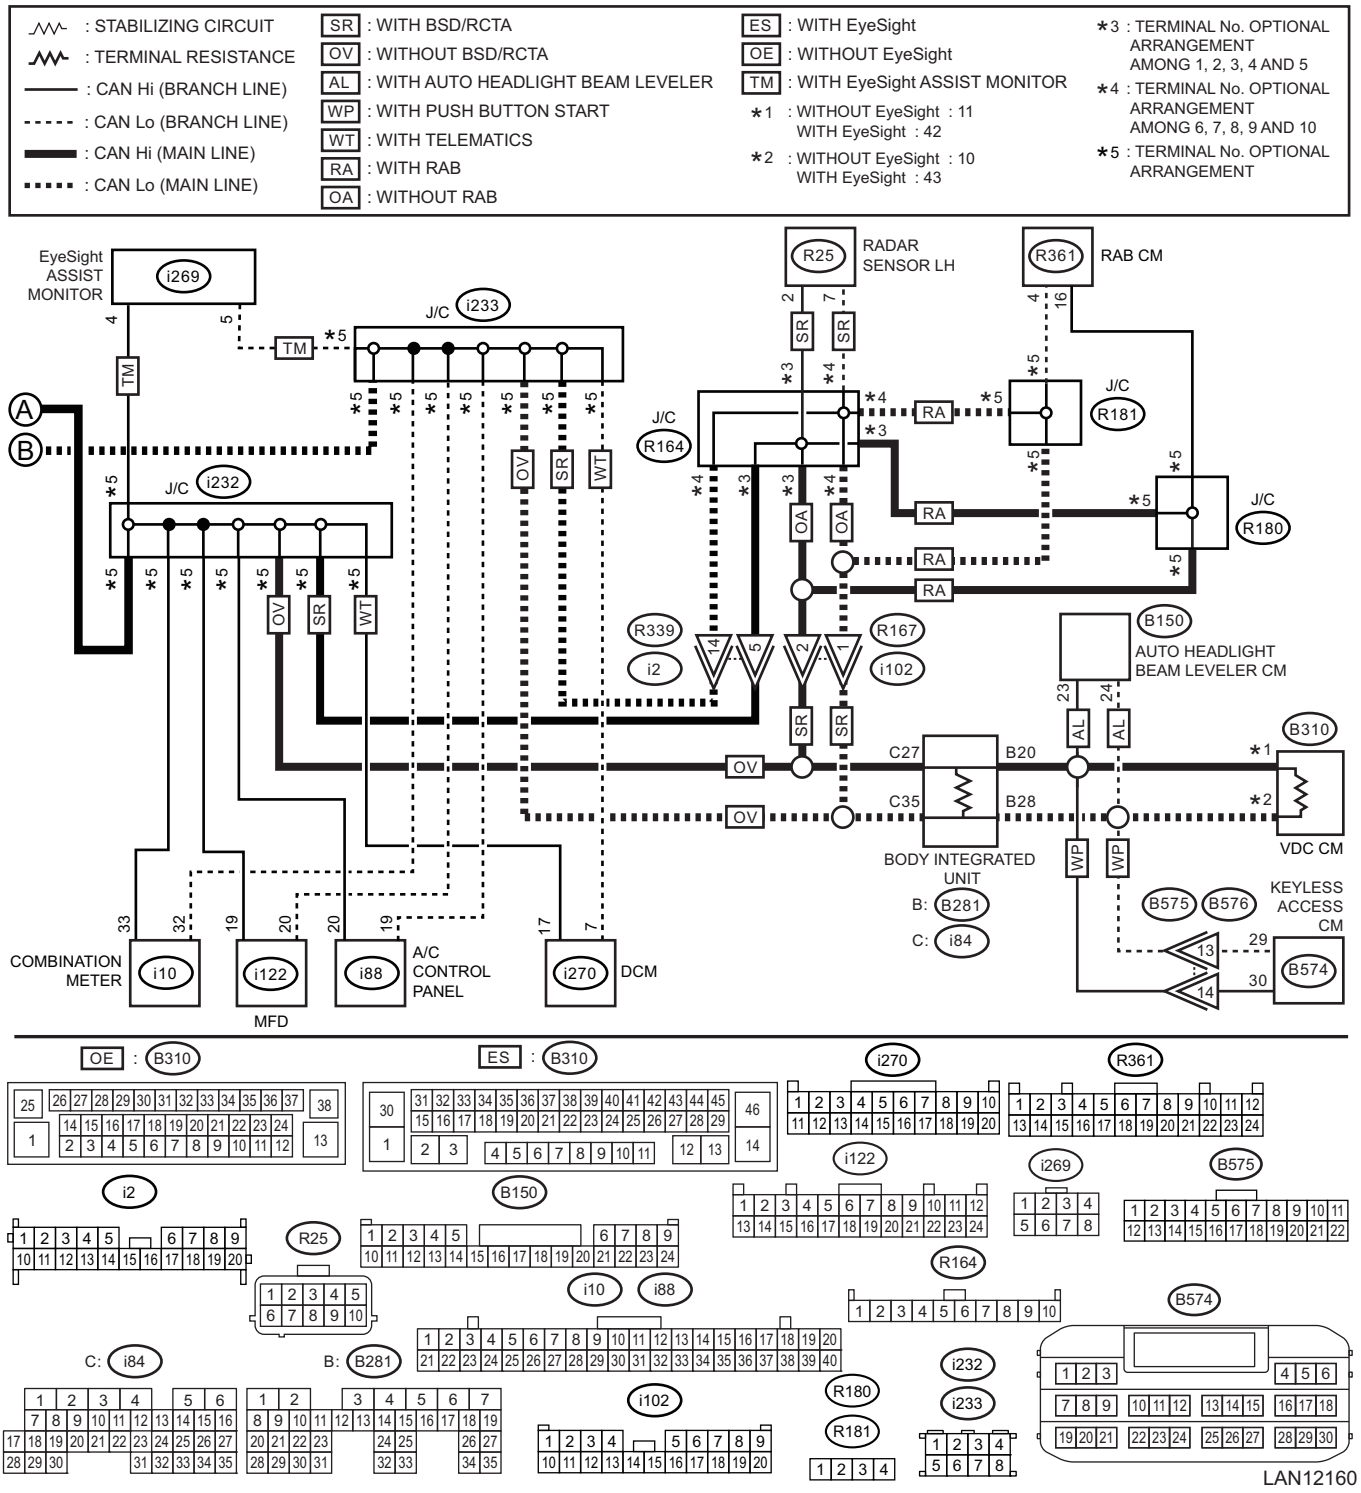
Wiring diagram:

CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>





LAN12161



Step		Check	Yes	No
1	**CHECK BETWEEN RELATED LINES AND MAIN WIRING HARNESS.** 1) Disconnect the EyeSight assist monitor connector. 2) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i269) No. 4 — (i269) No. 5:***	Is the resistance 400 Ω or more?	Related lines between EyeSight assist monitor and main wiring harness is open, or main wiring harness is open at two places or more.	Go to step **2**.

Step		Check	Yes	No
2	**CHECK RELATED LINES.** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i269) No. 5 — (B231) No. 2:*** ***(i269) No. 4 — (B231) No. 3:***	Is the resistance 10 Ω or more?	Repair or replace the open circuit of EyeSight assist monitor related lines.	Check DTC of EyeSight assist monitor. <Ref. to EM(diag)-10, Diagnostic Code(s) Display.>

10.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to LAN(diag)-117, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	<Ref. to LAN(diag)-118, DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	<Ref. to LAN(diag)-119, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	<Ref. to LAN(diag)-120, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to LAN(diag)-121, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	<Ref. to LAN(diag)-122, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0128	LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE	<Ref. to LAN(diag)-123, DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	<Ref. to LAN(diag)-124, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to LAN(diag)-125, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	<Ref. to LAN(diag)-126, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to LAN(diag)-127, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0156	LOST COMMUNICATION WITH INFORMATION CENTER "A"	<Ref. to LAN(diag)-128, DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0164	LOST COMMUNICATION WITH HVAC CONTROL MODULE	<Ref. to LAN(diag)-129, DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0181	LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE	<Ref. to LAN(diag)-130, DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0327	SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE	<Ref. to LAN(diag)-131, DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	<Ref. to LAN(diag)-132, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	<Ref. to LAN(diag)-133, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to LAN(diag)-134, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0417	INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE	<Ref. to LAN(diag)-135, DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
U0420	INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE	<Ref. to LAN(diag)-136, DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	<Ref. to LAN(diag)-137, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	<Ref. to LAN(diag)-138, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0424	INVALID DATA RECEIVED FROM HVAC CONTROL MODULE	<Ref. to LAN(diag)-139, DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0427	INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE	<Ref. to LAN(diag)-140, DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	<Ref. to LAN(diag)-141, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to LAN(diag)-142, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0457	INVALID DATA RECEIVED FROM INFORMATION CENTER "A"	<Ref. to LAN(diag)-143, DTC U0457 INVALID DATA RECEIVED FROM INFORMATION CENTER "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0482	INVALID DATA RECEIVED FROM HEADLAMP LEVELING CONTROL MODULE	<Ref. to LAN(diag)-144, DTC U0482 INVALID DATA RECEIVED FROM HEADLAMP LEVELING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1073	CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF	<Ref. to LAN(diag)-144, DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1135	LOST COMMUNICATION WITH DCCD CONTROL MODULE	<Ref. to LAN(diag)-146, DTC U1135 LOST COMMUNICATION WITH DCCD CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1140	LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN	<Ref. to LAN(diag)-147, DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1201	CAN-HS COUNTER ABNORMAL	<Ref. to LAN(diag)-147, DTC U1201 CAN-HS COUNTER ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1232	LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE	<Ref. to LAN(diag)-149, DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1233	LOST COMMUNICATION WITH RAB CONTROL MODULE	<Ref. to LAN(diag)-150, DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	<Ref. to LAN(diag)-151, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN	<Ref. to LAN(diag)-152, DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	<Ref. to LAN(diag)-153, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1533	INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE	<Ref. to LAN(diag)-154, DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1534	INVALID DATA RECEIVED FROM SONAR ECU	<Ref. to LAN(diag)-155, DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LAN12834

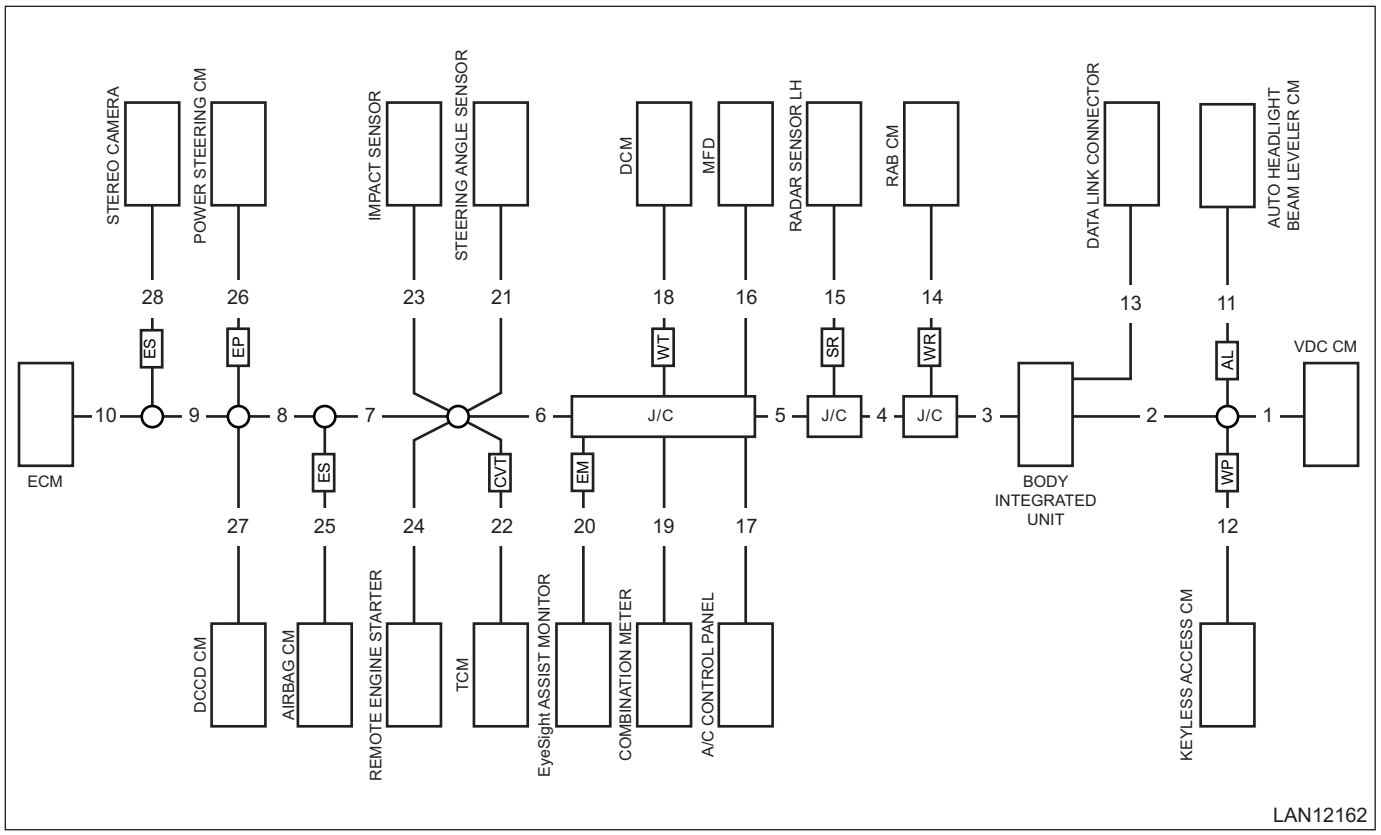
(A) Installation check
(B) Bus off detection
(C) Data no-receive detection
(D) Data abnormal detection

VDC: VDC CM
AHL: Auto headlight beam leveler CM
KPS: Keyless access CM
BIU: Body integrated unit
RAB: RAB CM
RAD: Radar sensor
MFD: High grade MFD
A/C: A/C control panel
EM: EyeSight assist monitor
DCM: Data communication module
MET: Combination meter
DCCD: Driver's control center differential CM
TCM: Transmission CM
A/B: Airbag CM
CAM: Stereo camera
EPS: Power steering CM
ECM: Engine CM

Step		Check	Yes	No
1	**MODULE INSTALLATION CHECK.** 1) Using the check sheet for communication for initializing, check the vehicle installation module (module targeted for CAN communication). 2) Write "-" marks in the field for installation check (A) if the vehicle to be inspected does not have relevant module. 3) Write "-" marks in all blank fields on the same row that the "-" mark has filled in.	Was the module installation check on the left performed?	Go to step **2**.	Perform the module installation check, Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).** Check the DTC. NOTE: It becomes impossible for CAN diagnostic module to read DTC, if there is a current malfunction of open harness (data not received). If this occurs, perform the “Check using the check sheet of communication for initializing” <Ref. to LAN(diag)-14, CHECK USING THE CHECK SHEET OF COMMUNICATION FOR INITIALIZING, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>, and use this check sheet to confirm that the corresponding part becomes the past malfunction.	Is DTC bus off or data not received?	Perform the diagnosis for the displayed DTCs.	Perform the communication check, Go to step **3**.
3	**CHECK DTC (BUS OFF DETECTION / DATA NOT RECEIVED).** Mark “X” in the field corresponding to the DTCs that has been detected by each module in the DTC check sheet.	Were all the corresponding field in the DTC check sheet filled?	Go to step **4**.	Fill all the corresponding field in the DTC check sheet, Go to step **4**.
4	**CHECK CAN COMMUNICATION LINE.** Check the CAN communication line by referring to the example of DTC data not received.	Is CAN communication line faulty?	Repair or replace the faulty portion of the harness.	Perform the diagnosis for the displayed DTCs.

2. EXAMPLE OF DTC DATA NOT RECEIVED



AL: With auto headlight beam leveler system
WP: With keyless access with push button start system
WR: With Reverse Automatic Braking
SR: With BSD/RCTA
WT: With telematics
EM: With EyeSight assist monitor
EJ: Engine type EJ model
CVT: CVT model
ES: With EyeSight
EP: With electric power steering

LAN12836

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-36, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-113, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U0073 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U0073 is not detected.

B: DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:
Integrated unit communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0074 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-36, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-113, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U0074 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U0074 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U0074 is not detected.

C: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:
No data is received from ECM.
Trouble symptom:
Cooperation control of transmission may not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0100 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor.	Is U0100 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0100 detected in several modules?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0100 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

D: DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:
No data is received from TCM.
Trouble symptom:
Cooperation control with transmission is not performed.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0101 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0101 detected in several modules?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0101 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

E: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
No data from VDCCM is received.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0122 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0122 detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0122 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

F: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

DTC detecting condition:
No data is received from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0126 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0126 detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-27, Steering Angle Sensor.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0126 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

G: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

DTC detecting condition:
No data from VDCCM is received.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0128 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0128 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0128 detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0128 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

H: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

DTC detecting condition:
No data is received from power steering CM.
Trouble symptom:
Cooperation control with power steering CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0131 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0131 detected in several modules?	Replace the power steering CM. <Ref. to PS-97, Power Steering Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0131 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

I: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0140 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0140 detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

J: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

DTC detecting condition:
No data is received from airbag CM.
Trouble symptom:
Cooperation control with airbag CM does not operate properly.

CAUTION:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. <Ref. to AB-9, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0151 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0151 detected in several modules?	Replace the airbag CM. <Ref. to AB-50, Airbag Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0151 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

K: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
No data is received from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0155 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0155 detected in several modules?	Replace the meter. <Ref. to IDI-12, Combination Meter.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0155 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

L: DTC U0156 LOST COMMUNICATION WITH INFORMATION CENTER "A"

DTC detecting condition:
No data is received from MFD.
Trouble symptom:
Display of MFD does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0156 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0156 detected in several modules?	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0156 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

M: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

DTC detecting condition:
No data is received from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0164 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0164 detected in several modules?	Replace the A/C control panel. <Ref. to AC-43, Control Panel.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0164 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

N: DTC U0181 LOST COMMUNICATION WITH HEADLAMP LEVELING CONTROL MODULE

DTC detecting condition:
No data is received from auto headlight beam leveler CM.
Trouble symptom:
Coordination control of auto headlight beam leveler CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0181 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0181 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0181 detected in several modules?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0181 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

O: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
No data is received from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0327 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC (CURRENT MALFUNCTION).** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0327 detected in several modules?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0327 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

P: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC detecting condition:
Defective data from ECM.
Trouble symptom:
Defective data on CAN communication occurs.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0401 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0401 detected in several modules?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0401 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Q: DTC U0402 INVALID DATA RECEIVED FROM TCM

DTC detecting condition:
Received error data from TCM.
Trouble symptom:
Sport indicator light blinks.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0402 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the TCM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0402 detected in several modules?	Replace the TCM. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0402 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

R: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
Data from VDCCM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0416 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0416 detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0416 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

S: DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

DTC detecting condition:
Data from VDCCM is faulty.
Trouble symptom:
ABS warning light and VDC warning light illuminate.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0417 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the VDC CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0417 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0417 detected in several modules?	Replace the VDC CM. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0417 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

T: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from EPS CM.
Trouble symptom:
Cooperation control with EPS CM does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0420 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the power steering CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0420 detected in the stereo camera?	Replace the power steering CM. <Ref. to PS-97, Power Steering Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0420 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

U: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0422 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0422 detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

V: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from combination meter.
Trouble symptom:
Display of combination meter does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0423 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0423 detected in several modules?	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0423 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

W: DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from A/C control panel.
Trouble symptom:
Cooperation control of air conditioner does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0424 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0424 detected in several modules?	Replace the A/C control panel. <Ref. to AC-43, Control Panel.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0424 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

X: DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from keyless access CM.
Trouble symptom:
Cooperation control of keyless access does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0427 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0427 detected in the body integrated unit?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0427 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Y: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

DTC detecting condition:
Defective data was transmitted from steering angle sensor.
Trouble symptom:
VDC CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0428 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the steering angle sensor connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0428 detected in several modules?	Replace the steering angle sensor. <Ref. to VDC-27, Steering Angle Sensor.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0428 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

Z: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from airbag CM.
Trouble symptom:
The airbag does not operate normally.

CAUTION:
When checking the airbag system, refer to the cautions regarding the airbag system prior to the inspection. <Ref. to AB-9, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0452 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0452 detected in DCM?	Replace the airbag CM. <Ref. to AB-50, Airbag Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0452 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AA:DTC U0457 INVALID DATA RECEIVED FROM INFORMATION CENTER "A"

DTC detecting condition:
Defective data was transmitted from MFD.
Trouble symptom:
MFD does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0457 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the MFD connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0457 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0457 detected in RAB CM?	Replace the MFD. <Ref. to IDI-19, Multi-function Display (MFD).>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0457 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AB:DTC U0482 INVALID DATA RECEIVED FROM HEADLAMP LEVELING CONTROL MODULE

DTC detecting condition:
Invalid data was transmitted from auto headlight beam leveler CM.
Trouble symptom:
The auto headlight beam leveler does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U0482 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the auto headlight beam leveler CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0482 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0482 detected in RAB CM?	Replace the auto headlight beam leveler CM. <Ref. to LI-85, Auto Headlight Beam Leveler Control Module.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0482 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AC:DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

DTC detecting condition:
RAB CM communication is shut down because of high speed CAN error.
Trouble symptom:
CAN communication is not normal.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U1073 a current malfunction?	Go to step **3**.	It may be a temporary poor contact. Perform the clear memory.
3	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-36, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **4**.
4	**CHECK DTC.** 1) Perform the inspection using the DTC check sheet. <Ref. to LAN(diag)-113, CHECK USING THE DTC CHECK SHEET, LIST, List of Diagnostic Trouble Code (DTC).> 2) Using the Subaru Select Monitor, read DTC of CAN system.	Is U1073 a current malfunction?	Go to step **5**.	System is normal.
5	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system.	Is there any control module that U1073 is not detected as a current malfunction?	Replace the control module.	Repeat 1) to 4) in step 3 until U1073 is not detected.

AD:DTC U1135 LOST COMMUNICATION WITH DCCD CONTROL MODULE

DTC detecting condition:
No data is received from DCCD CM.
Trouble symptom:
Cooperation control of DCCD does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1135 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1135 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1135 detected from combination meter?	Replace the DCCD CM. <Ref. to 6MT(TY85)-37, Driver's Control Center Differential Control Module.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1135 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AE:DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
No data is received from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1140 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1140 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1140 detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1140 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AF:DTC U1201 CAN-HS COUNTER ABNORMAL

DTC detecting condition:
Communication is unstable because of high speed CAN communication error.
Trouble symptom:
- Display of combination meter indicates faulty.
- Control faulty may occur due to CAN communication error.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
2	**CHECK CAN COMMUNICATION CIRCUIT.** Check CAN communication circuit. <Ref. to LAN(diag)-36, PROCEDURE, CAN Communication Circuit Check.>	Is CAN communication circuit faulty?	Repair the faulty portion, following the diagnosis procedure.	Go to step **3**.
3	**CHECK DTC (BUS OFF).** 1) Start the engine. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U0073 a current malfunction?	Perform the diagnosis of U0073. <Ref. to LAN(diag)-117, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1201 a current malfunction?	Go to step **5**.	It is possible that temporary poor communication occurs. Perform the clear memory.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1201 a current malfunction?	Go to step **6**.	It is possible that temporary poor communication occurs. Perform the clear memory.
6	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Disconnect the control modules other than body integrated unit in order. NOTE: When disconnecting ECM or VDC CM, connect resistance of 120 Ω between CAN Hi and CAN Lo as an alternative of end resistance. 3) Turn the ignition switch to ON. 4) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is there any control module that U1201 is not detected as current malfunction?	Replace the control module.	Repeat 1) to 4) in step 5 until U1201 is not detected.

AG:DTC U1232 LOST COMMUNICATION WITH REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:
No data is received from radar sensor.
Trouble symptom:
Cooperation control of radar sensor does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1232 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1232 detected from combination meter?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1232 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AH:DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

DTC detecting condition:
No data is received from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1233 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** 1) Check CAN communication circuit. <Ref. to LAN(diag)-36, CAN Communication Circuit Check.> 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1233 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1233 detected in the stereo camera?	Replace the RAB CM.	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1233 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AI: DTC U1235 LOST COMMUNICATION WITH EyeSight

DTC detecting condition:
No data from stereo camera is received.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1235 a current malfunction?	Go to step **4**.	Go to step **6**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Go to step **5**.	Go to step **6**.
5	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1235 detected in several modules?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Replace the module that the DTC has been detected.
6	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1235 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **7**.
7	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AJ:DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
Defective data was transmitted from body integrated unit.
Trouble symptom:
Cooperation control with body integrated unit does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1422 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1422 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1422 detected in several modules?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1422 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AK:DTC U1433 INVALID DATA RECEIVED FROM EyeSight

DTC detecting condition:
Defective data was transmitted from stereo camera.
Trouble symptom:
Cooperation control of EyeSight does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1433 a current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1433 detected in several modules?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1433 a current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AL:DTC U1533 INVALID DATA RECEIVED FROM REAR/SIDE RADAR CONTROL MODULE

DTC detecting condition:
Defective data was transmitted from radar sensor.
Trouble symptom:
Cooperation control of radar sensor does not operate properly.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1533 current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the radar sensor LH connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1533 current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1533 detected from combination meter?	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1533 current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

AM:DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

DTC detecting condition:
Defective data was transmitted from RAB CM.
Trouble symptom:
Coordination control of RAB CM does not operate normally.

	Step	Check	Yes	No
1	**CHECK CAN COMMUNICATION HARNESS.** Perform the basic diagnostic procedure to check for fault in CAN communication harness. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Was the basic diagnostic procedure performed up to step 7?	Go to step **2**.	Perform the basic diagnostic procedure. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
2	**CHECK DTC (OTHER THAN U-CODE).** Check the displayed DTC.	Are DTCs other than U*** displayed?	Perform the diagnosis for DTCs other than the displayed U-code.	Go to step **3**.
3	**CHECK DTC (U-CODE).** Check the displayed DTC.	Is DTC for the bus off or the data no-receive displayed?	Perform the diagnosis for DTCs for the displayed bus off or the data no-receive.	Go to step **4**.
4	**CHECK DTC (CURRENT MALFUNCTION).** Check the displayed DTC.	Is U1534 current malfunction?	Go to step **5**.	Go to step **7**.
5	**CHECK DTC (CURRENT MALFUNCTION).** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Connect the disconnected connectors. 4) Read the DTC using Subaru Select Monitor. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1534 current malfunction?	Go to step **6**.	Go to step **7**.
6	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of all the systems. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1534 detected in the stereo camera?	Replace the RAB CM.	Replace the module that the DTC has been detected.
7	**CHECK HARNESS.** 1) Shake the harness, and check for poor contact. 2) Using the Subaru Select Monitor, read DTC of CAN system. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is U1534 current malfunction?	Repair the poor contact of harness, or replace the harness.	Go to step **8**.
8	**CHECK CONNECTOR.** Check the connector used for high speed CAN for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC.

12.Diagnostics with Phenomenon

A: LIST

Symptoms	Reference
DTC other than U-code is displayed.	<Ref. to LAN(diag)-157, DTC OTHER THAN U-CODE IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Faster/slower vehicle speed than the actual speed is displayed.	<Ref. to LAN(diag)-157, FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
More/less fuel than the actual amount is displayed.	<Ref. to LAN(diag)-157, MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Fuel level warning light illuminates despite of sufficient fuel.	<Ref. to LAN(diag)-158, FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL, INSPECTION, Diagnostics with Phenomenon.>
Engine coolant temperature light blinks in red and blue alternately.	<Ref. to LAN(diag)-158, ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY, INSPECTION, Diagnostics with Phenomenon.>
[S], [I] or [S#] indicator is blinking.	<Ref. to LAN(diag)-159, [S], [I] OR [S#] INDICATOR IS BLINKING, INSPECTION, Diagnostics with Phenomenon.>
The VDC warning light illuminates.	<Ref. to LAN(diag)-159, THE VDC WARNING LIGHT ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
VDC-OFF indicator illuminates.	<Ref. to LAN(diag)-160, VDC-OFF INDICATOR ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Brake warning light illuminates.	<Ref. to LAN(diag)-160, BRAKE WARNING LIGHT ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Shift position is not displayed.	<Ref. to LAN(diag)-161, SHIFT POSITION IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
AT oil temperature warning light is blinking.	<Ref. to LAN(diag)-161, AT OIL TEMPERATURE WARNING LIGHT IS BLINKING, INSPECTION, Diagnostics with Phenomenon.>
Door indicator is not displayed.	<Ref. to LAN(diag)-162, DOOR INDICATOR IS NOT DISPLAYED, INSPECTION, Diagnostics with Phenomenon.>
Clearance indicator does not illuminate.	<Ref. to LAN(diag)-162, CLEARANCE INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
HI beam indicator does not illuminate.	<Ref. to LAN(diag)-163, HI BEAM INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
Front fog light indicator does not illuminate.	<Ref. to LAN(diag)-163, FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
Illumination is fixed at the maximum brightness.	<Ref. to LAN(diag)-164, ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS, INSPECTION, Diagnostics with Phenomenon.>
Cruise control indicator does not illuminate.	<Ref. to LAN(diag)-164, CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
AWD indicator illuminates.	<Ref. to LAN(diag)-165, AWD INDICATOR ILLUMINATES, INSPECTION, Diagnostics with Phenomenon.>
Hill hold indicator does not illuminate.	<Ref. to LAN(diag)-165, HILL HOLD INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. DTC OTHER THAN U-CODE IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC other than U-code displayed.	Perform the diagnosis for DTC other than the U-code.	Perform troubleshooting according to phenomenon of the problem. (If no phenomenon of the problem is present, it is normal currently.)

2. FASTER/SLOWER VEHICLE SPEED THAN THE ACTUAL SPEED IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK THE ACTUAL VEHICLE SPEED.** Check that the vehicle speed indicated in the meter matches with the actual vehicle speed.	Does the vehicle speed match?	Currently, it is normal.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK SPEEDOMETER.** Connect the Subaru Select Monitor, and perform forced operation of the speedometer with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indicated vehicle speed on Subaru Select Monitor and the speedometer indication match?	Perform a unit inspection for the vehicle speed sensor.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

3. MORE/LESS FUEL THAN THE ACTUAL AMOUNT IS DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is «DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK FUEL GAUGE.** Connect the Subaru Select Monitor, and perform forced operation of the fuel gauge with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the fuel gauge indication match?	Perform a unit inspection for the fuel sub level sensor and the fuel level sensor. <Ref. to FU(STI)-87, Fuel Sub Level Sensor.> <Ref. to FU(STI)-86, Fuel Level Sensor.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

4. FUEL LEVEL WARNING LIGHT ILLUMINATES DESPITE OF SUFFICIENT FUEL

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Is «DTC B1500 FUEL SENDER OPEN/SHORT-CIRCUIT DETECTION» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK FUEL LEVEL WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the fuel level warning light with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the fuel level warning light indication match?	Perform a unit inspection for the fuel sub level sensor and the fuel level sensor. <Ref. to FU(STI)-87, Fuel Sub Level Sensor.> <Ref. to FU(STI)-86, Fuel Level Sensor.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

5. ENGINE COOLANT TEMPERATURE LIGHT BLINKS IN RED AND BLUE ALTERNATELY

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of engine. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).>	Is any of «DTC P0116 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT RANGE/PERFORMANCE»«DTC P0117 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT LOW»«DTC P0118 ENGINE COOLANT TEMPERATURE SENSOR 1 CIRCUIT HIGH» displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the engine coolant temperature light with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the engine coolant temperature light indication match?	Perform a unit inspection of the engine coolant temperature sensor. <Ref. to FU(STI)-33, Engine Coolant Temperature Sensor.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

6. [S], [I] OR [S#] INDICATOR IS BLINKING

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of engine and combination meter. <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK THE ENGINE COOLANT TEMPERATURE LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of the SI-DRIVE indication with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indicated amount on Subaru Select Monitor and the SI-DRIVE indication match?	Check the engine. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

7. THE VDC WARNING LIGHT ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK VDC WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «VDC operation/failure indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «VDC operation/failure indicator» match?	Check the VDC warning light. <Ref. to VDC(diag)-31, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

8. VDC-OFF INDICATOR ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK VDC OFF INDICATOR LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «VDC OFF indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «VDC OFF indicator» match?	Check the VDC OFF indicator light. <Ref. to VDC(diag)-31, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

9. BRAKE WARNING LIGHT ILLUMINATES

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK BRAKE WARNING LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «BRAKE warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «BRAKE warning» match?	Check the brake warning light. <Ref. to VDC(diag)-31, Warning Light Illumination Pattern.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

10.SHIFT POSITION IS NOT DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK SHIFT INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of the shift indicator with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the shift indicator indication match?	Check the shift indicator. <Ref. to CVT(diag)-173, Diagnostic Procedure without Diagnostic Trouble Code (DTC).>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

11.AT OIL TEMPERATURE WARNING LIGHT IS BLINKING

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK AT OIL TEMP LIGHT.** Connect the Subaru Select Monitor, and perform forced operation of «AT (CVT) oil temperature warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and indication of «AT (CVT) oil temperature warning» match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
4	**PERFORM CVT LEARNING.** Connect the Subaru Select Monitor and perform the CVT learning. <Ref. to CVT(diag)-25, Learning Control.>	Does the AT oil temperature warning light go off?	Currently, it is normal.	Check the AT OIL TEMP light. <Ref. to CVT(diag)-27, AT OIL TEMP Warning Light Display.>

12.DOOR INDICATOR IS NOT DISPLAYED

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK DOOR INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of the door indicator with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the door indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display data monitor of the body integrated unit: «Driver's door SW input» «P-door SW input» «Rear right door SW input» «Rear left door SW input». <Ref. to BC(diag)-20, Read Current Data.>	Do the door open/close and data indication match?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Inspect door switch circuit. <Ref. to SL-16, INSPECTION, Keyless Entry System.>

13.CLEARANCE INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK CLEARANCE INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «Position light indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the clearance indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

	Step	Check	Yes	No
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Lighting I Switch Input». <Ref. to BC(diag)-20, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check the clearance light. <Ref. to LI-19, Clearance Light and Illumination Light System.>

14.HI BEAM INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK HI BEAM INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «High-beam indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the HI beam indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Dimmer Hi Switch Input». <Ref. to BC(diag)-20, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check the headlight system. <Ref. to LI-6, Headlight System.>

15.FRONT FOG LIGHT INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK THE FRONT FOG LIGHT INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «Front fog light indicator» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the front fog light indicator indication match?	Go to step **4**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
4	**CHECK DATA MONITOR FOR BODY INTEGRATED UNIT.** Connect the Subaru Select Monitor, and display the data monitor of the body integrated unit: «Front fog lamp SW input». <Ref. to BC(diag)-20, Read Current Data.>	Do the switch operation and data indication match?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check the front fog light system. <Ref. to LI-20, Front Fog Light System.>

16.ILLUMINATION IS FIXED AT THE MAXIMUM BRIGHTNESS

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of combination meter. <Ref. to MET(diag)-11, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK ILLUMINATION.** Connect the Subaru Select Monitor, and perform forced operation of «Illumination check» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the indicator indication match?	Check the clearance light & illumination light system. <Ref. to LI-19, Clearance Light and Illumination Light System.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

17.CRUISE CONTROL INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DATA MONITOR OF ENGINE.** Display the data monitor of engine «Main Switch» using Subaru Select Monitor. <Ref. to EN(w/o STI)(diag)-48, DISPLAY CURRENT ENGINE DATA, OPERATION, Subaru Select Monitor.> <Ref. to EN(STI)(diag)-37, DISPLAY CURRENT ENGINE DATA (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Do the switch operation and data indication match?	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	Check the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

18.AWD INDICATOR ILLUMINATES

	Step	Check	Yes	No
1	**CHECK MODE.** Connect the Subaru Select Monitor and change to AWD mode. NOTE: When AWD ON/OFF switching mode is not available, go to step 2.	Did the AWD indicator go off?	Currently, it is normal.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** Read the DTC of the TCM. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **4**.
4	**CHECK AWD INDICATOR.** Connect the Subaru Select Monitor, and perform forced operation of «AWD warning» with «Active Test» for the combination meter. <Ref. to MET(diag)-16, System Operation Check Mode.>	Do the indication on Subaru Select Monitor and the AWD indicator indication match?	Check the AWD indicator. <Ref. to CVT(diag)-30, AWD Warning Light Display.> <Ref. to 6MT(diag)-15, AWD Warning Light Display.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

19.HILL HOLD INDICATOR DOES NOT ILLUMINATE

	Step	Check	Yes	No
1	**CHECK DTC (CURRENT MALFUNCTION).** Read DTC of the VDC. <Ref. to VDC(diag)-28, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC (CURRENT MALFUNCTION).** 1) Start the engine. 2) Read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed?	Perform the diagnosis according to the basic diagnostic procedure in LAN SYSTEM (DIAGNOSTICS). <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the hill hold indicator light. <Ref. to VDC(diag)-31, Warning Light Illumination Pattern.>

1. General Description

A: LOCATION

1. EyeSight

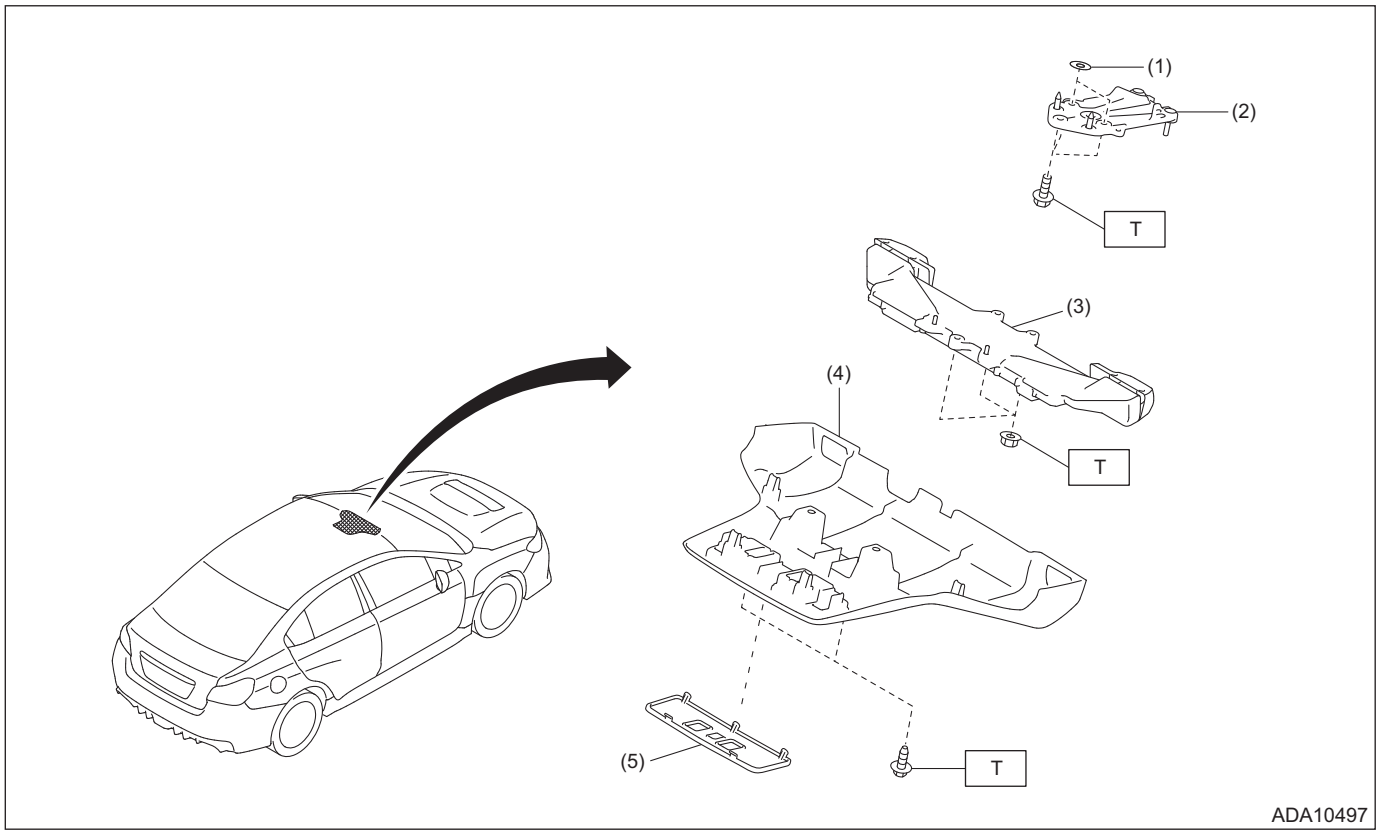
Refer to “LOCATION” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-11, LOCATION, Electrical Component Location.>

2. EyeSight ASSIST MONITOR

Refer to “LOCATION” of “EyeSight ASSIST MONITOR (DIAGNOSTICS)” section. <Ref. to EM(diag)-5, LOCATION, Electrical Component Location.>

B: COMPONENT

1. STEREO CAMERA



(1) Shim (washer)
(2) Camera plate
(3) Stereo camera
(4) Stereo camera cover ASSY
(5) Cap

Tightening torque: N·m (kgf-m, ft-lb)
T: 5.5±1 (0.56±0.1, 4.1±0.7)

C: CAUTION

- Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the audio and MFD parts provided with memory functions, record the memory contents before disconnecting the battery ground cable.
- Be careful of the following items. Failing to do so may cause the airbag system malfunction.
  – Yellow connectors and harnesses with yellow tapes around them are the connectors and harnesses for the airbag system. When using a tester on these circuits, follow the cautions of “AIRBAG SYSTEM”. <Ref. to AB-9, CAUTION, General Description.>
  – Be careful not to damage the airbag system wiring harness when servicing the electrical parts around the steering column.

• When removing, installing or replacing the VDCCM&H/U, VDCCM&H/U bracket, steering wheel or steering angle sensor (steering roll connector), perform “VSC(VDC) Centering Mode” of the VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
• If the damage is found in the glass repair prohibited area, always replace the glass. Damage, dirt, aftermarket part installation or sticker attachment in the prohibited area can affect the recognition of stereo camera, and thereby the EyeSight function may not operate properly. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>
• When the suspension-related components have been removed, installed or replaced, or the wheel alignment is adjusted, perform “Clear Active Lane Keep System Learning Value”. <Ref. to ES(diag)-49, OPERATION, Clear Active Lane Keep System Learning Value.>

D: PREPARATION TOOL

1. SPECIAL TOOL

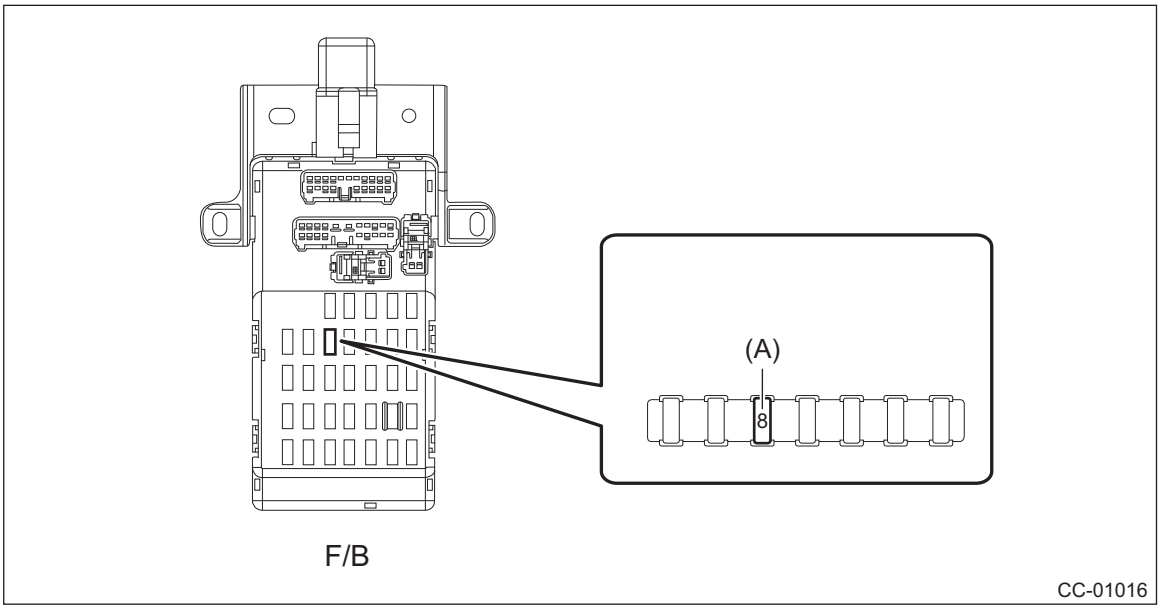
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
ST87599VA000	87599VA000	RANDOM CHART	Used for adjusting stereo camera.
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and troubleshooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting stereo camera.
Leveling line	
Plumb bob	
Packing tape	

2. Relay and Fuse

A: LOCATION



Relay & fuse box	Fuse 7.5 A (stop light and brake switch, brake light relay)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. EyeSight System

A: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the EyeSight system, refer to the respective section.

- Control module: <Ref. to ES-6, Control Unit.>

NOTE:
System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

  – Engine control module (ECM): <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
  – Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
  – VDC control module & hydraulic control unit (VDCCM&H/U): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
  – Stereo camera: <Ref. to ES-7, Stereo Camera.>
  – Power steering control module: <Ref. to PS-97, Power Steering Control Module.>
  – Body integrated unit: <Ref. to SL-80, Body Integrated Unit.>
  – Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>

- EyeSight assist monitor: <Ref. to ES-37, EyeSight Assist Monitor.>
- Combination meter: <Ref. to IDI-12, Combination Meter.>
- Stop light and brake switch: <Ref. to BR-118, Stop Light Switch.>
- Switches and harness: <Ref. to ES-35, Switches and Harness.>
- Roll connector (steering angle sensor): <Ref. to AB-61, Roll Connector.>

4. Control Unit

A: NOTE

System control of the EyeSight is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

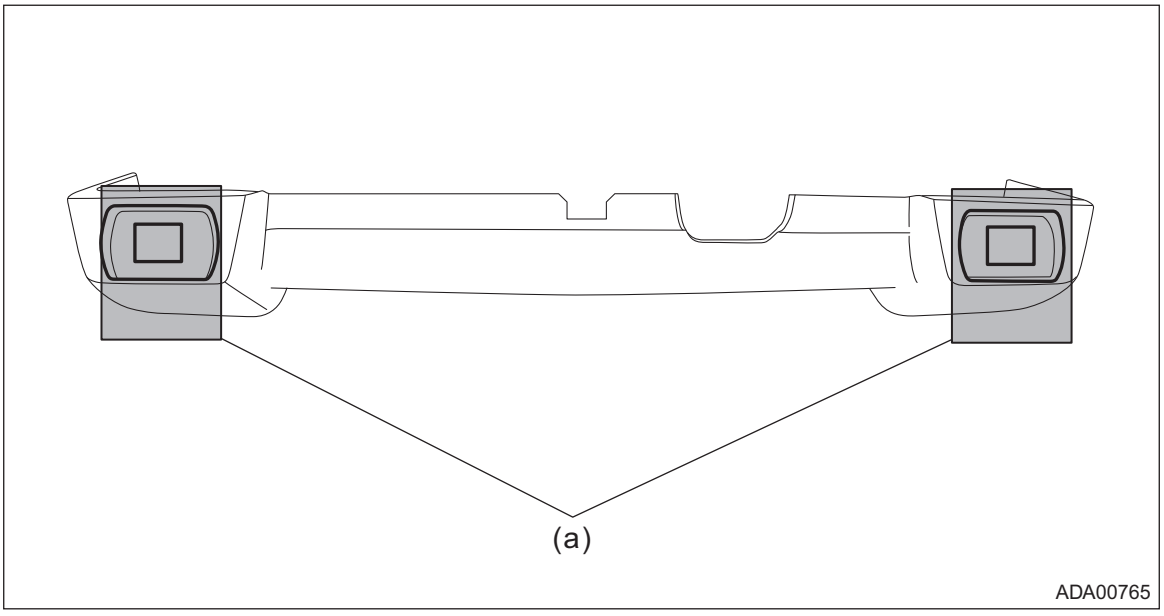
5. Stereo Camera

A: REMOVAL

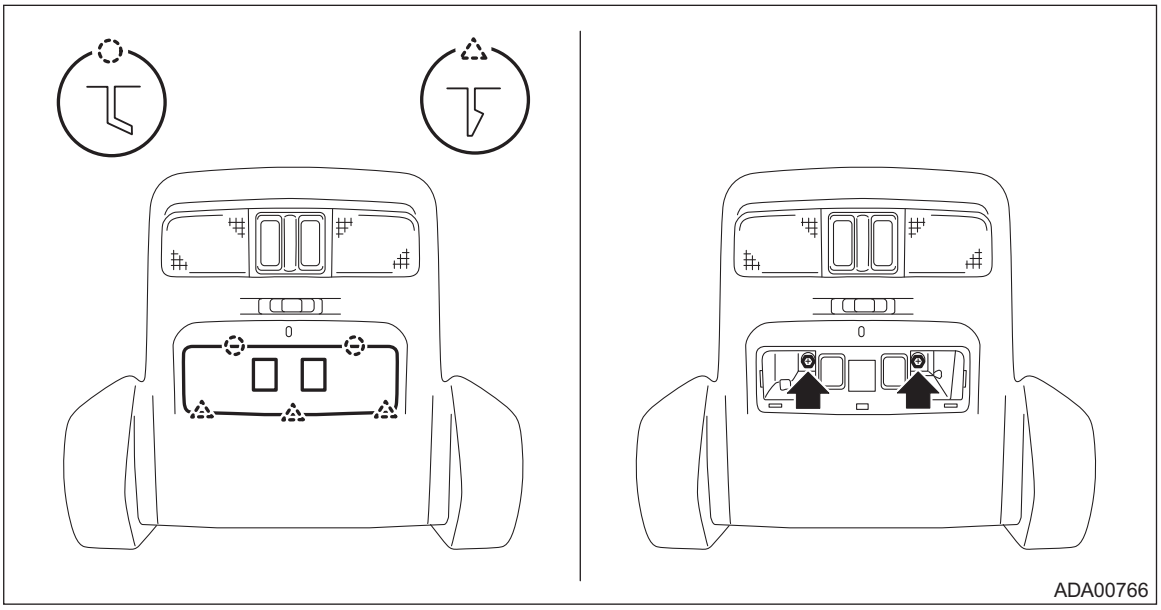
CAUTION:
• When the stereo camera or windshield glass has been replaced, removed or installed, always perform the adjustment and inspection of the camera. (When the stereo camera has been replaced with a new part, the camera remains in a failed state until adjustment and inspection are performed.)
• Since the stereo camera is a precision equipment, install the protective cover before handling it. (New stereo camera is equipped with a protective cover as a service part.)
• During removal, do not hold at the left and right cameras.
• Do not apply any impact to the stereo camera. Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.
• Do not tap the stereo camera cover assembly. Tapping it may apply an impact to the stereo camera.
• Do not disassemble the stereo camera.
• Attach the protective cover to the replacement part, put it into the box in the same way as the other parts and return it. Cover the replaced stereo camera with a protective cover.
• Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
• When removing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.
Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.
1) Disconnect the ground terminal from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Attach dust-free paper (a) such as copy paper to the stereo camera cover assembly.

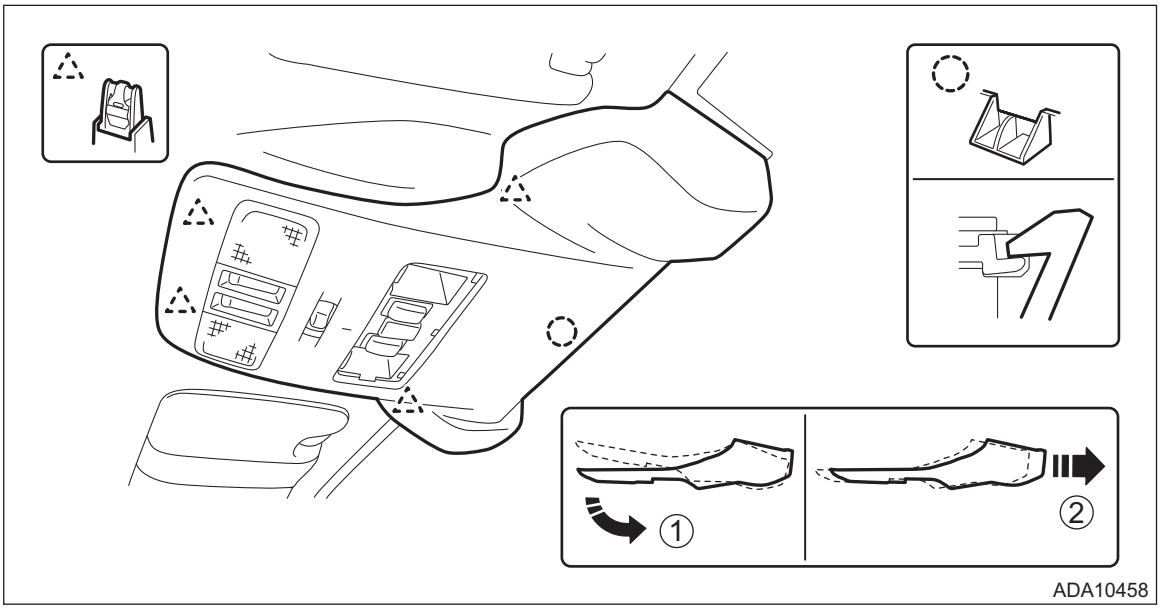


3) Remove the stereo camera cover assembly.
(1) Disconnect the claws and hooks and remove the cap.

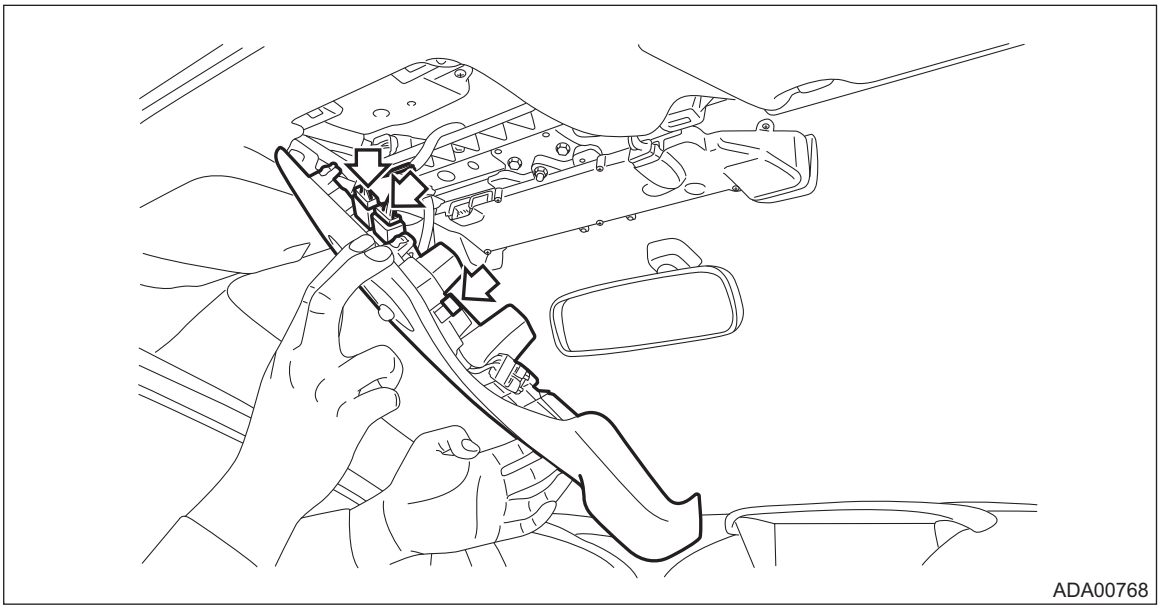
(2) Remove the bolt.



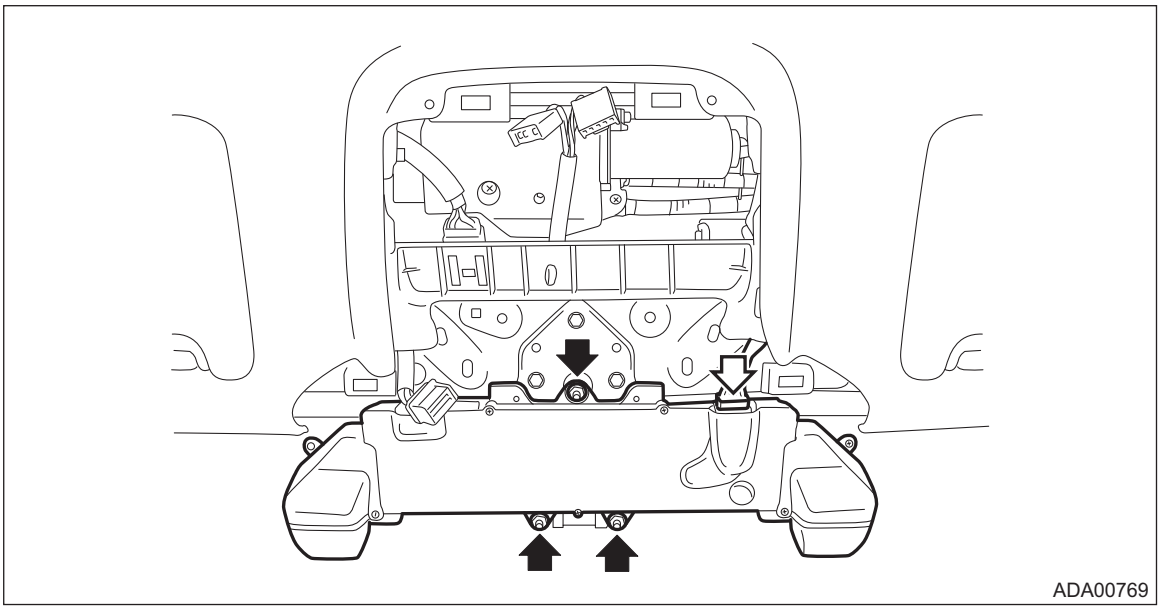
(3) Slowly pull down the rear of the stereo camera cover assembly, and then release the clips.
(4) Slide the stereo camera cover assembly toward the windshield glass, and detach the front hooks.



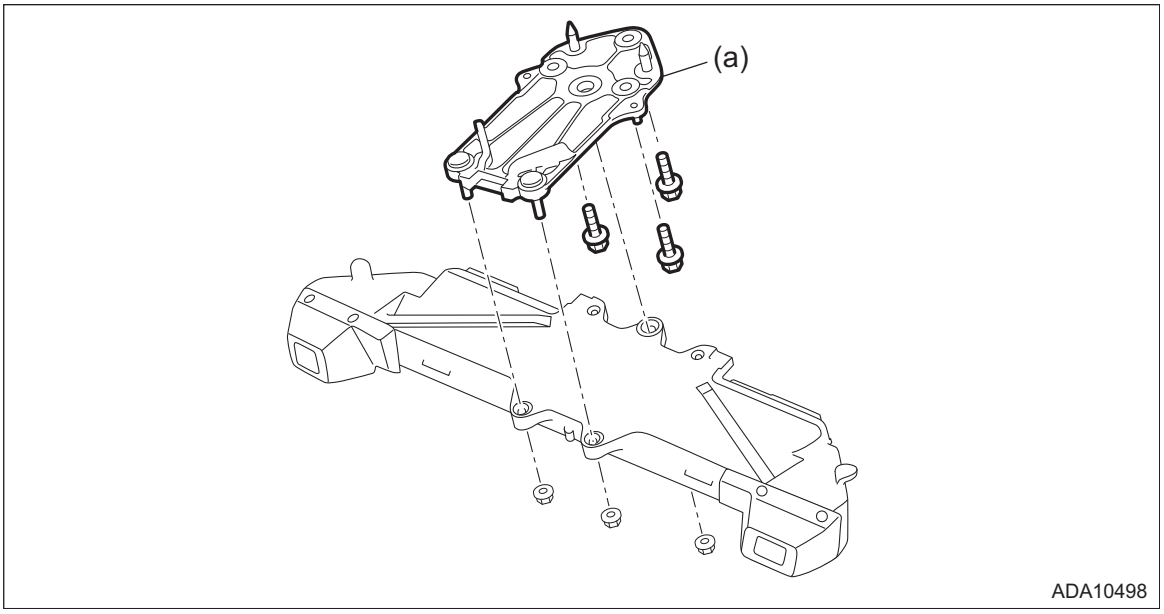
(5) Disconnect the connectors, and remove the stereo camera cover assembly.



4) Remove the stereo camera.
(1) Disconnect the connector.
(2) Remove the nuts, and then remove the stereo camera.



NOTE:
Remove the camera plate (a) as required.



B: INSTALLATION

CAUTION:
• Do not remove the protective cover until just before installing the stereo camera cover assembly. Using the bolt and nut, install the stereo camera with the protective cover attached, connect the connectors, and then remove the protective cover.
• Do not apply any impact to the stereo camera. (Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.)
• During installation, do not hold at the left and right cameras.
• Do not change the installation position of the stereo camera or do not modify the surrounding structure.
• Remove the protective cover, install the stereo camera cover assembly, and then perform adjustment and inspection of the stereo camera. <Ref. to ES-13, Camera Adjustment, Inspection.>
• Do not touch the lens filter on the stereo camera. If touched, replace the stereo camera.
• Do not apply any impact to the stereo camera. Even the slightest shock will deviate the optical axis of the camera, resulting in the loss of normal operation of the camera.
• Do not tap the stereo camera cover assembly. Tapping it may apply an impact to the stereo camera.
• When installing the stereo camera cover assembly, cover with dust-free paper such as copy paper to avoid interference with the lens filter section, and attach the paper using tape while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure.
Also, do not put your hand on the polyurethane section of the windshield contact surface. Doing so may cause the polyurethane section to be removed, which may interfere with the normal operation if it hangs down in front of the lens filter section.
• When installing the stereo camera cover assembly, take care so that the harnesses, etc. do not interfere with the stereo camera or do not get caught.
• Do not allow the stereo camera cover assembly to come in contact with the stereo camera. Install the stereo camera cover assembly precisely so that it will not block the visibility of the camera.
• Because the stereo camera is incompatible, be sure to check the part number before installation.
1) Attach the camera plate.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

NOTE:
Align the positioning pins of camera plate to the positioning holes of front rail.

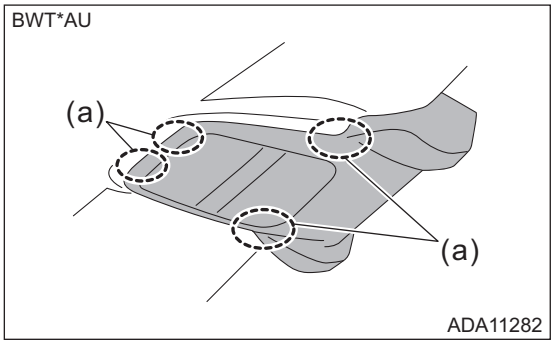
2) Install the stereo camera.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

NOTE:
Align the positioning holes of stereo camera to the positioning pins of camera plate.

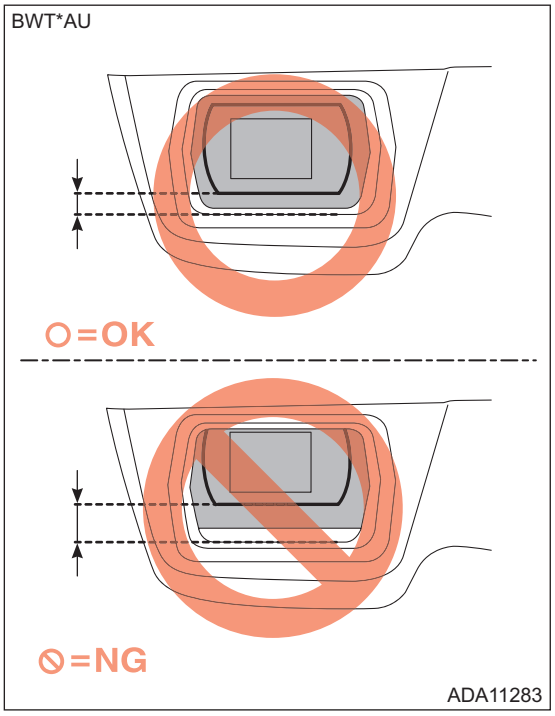
3) Install the stereo camera cover assembly.
(1) Connect each connector.
(2) Attach the front hook of the stereo camera cover assembly so that it covers over the plate (adjuster), and slide it to the rear of the vehicle.
(3) Press the part (a) of the stereo camera cover assembly upward to engage the clip, and install the stereo camera cover assembly.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)



(4) Install cap.

4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Remove the paper affixed to the stereo camera cover assembly.
6) Visually check from the front side of the vehicle that the stereo camera lens is positioned at the center of the stereo camera cover assembly opening.



NOTE:
If the stereo camera lens is not positioned at the center and there is a large gap between the lens and the stereo camera cover assembly, check the installation condition of the stereo camera cover assembly.

7) Perform the adjustment or inspection of the stereo camera. <Ref. to ES-13, Camera Adjustment, Inspection.>

6. Camera Adjustment, Inspection

A: PROCEDURE

CAUTION:
- **Perform the camera adjustment and inspection at curb weight without passengers.**
- **Handle RANDOM CHART (ST) carefully so as not to break it with the adhesive force of the tape.**

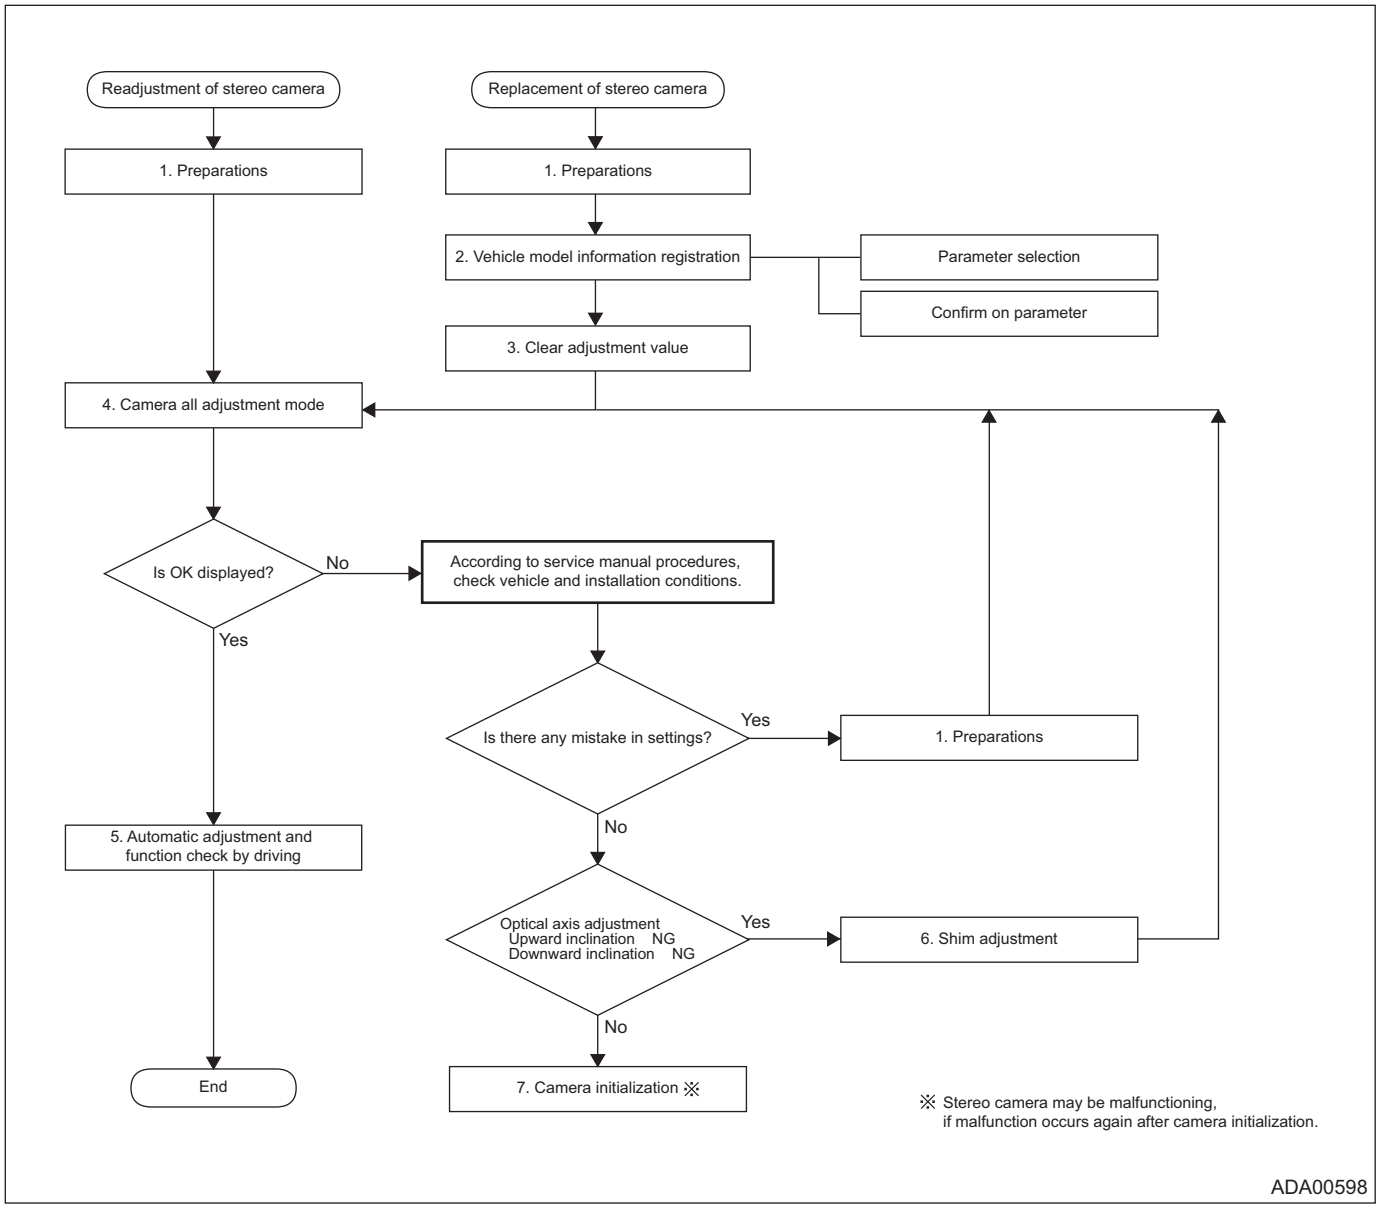
Perform inspection or adjustment according to the following procedures.
- Readjustment of stereo camera

Perform the adjustment in the following order: [1. Preparations] → [4. Camera all adjustment mode (replacement/removal)] → [5. Automatic adjustment and function check by driving].
- Replacement of stereo camera

Perform the replacement in the following order: [1. Preparations] → [2. Vehicle Model Information Registration] → [3. Adjustment value clear] → [4. Camera all adjustment mode (replacement/removal)] → [5. Automatic adjustment and function check by driving].

NOTE:
- When the stereo camera or windshield glass has been removed or installed, always perform readjustment of the stereo camera.

- If camera adjustment and inspection are started when the model information is not registered, NG termination will occur because the implementation conditions are not met.



1. PREPARATIONS

Perform the preparation of the adjustment and inspection for the stereo camera.

- **When performing adjustment or inspection by affixing RANDOM CHART onto partition**

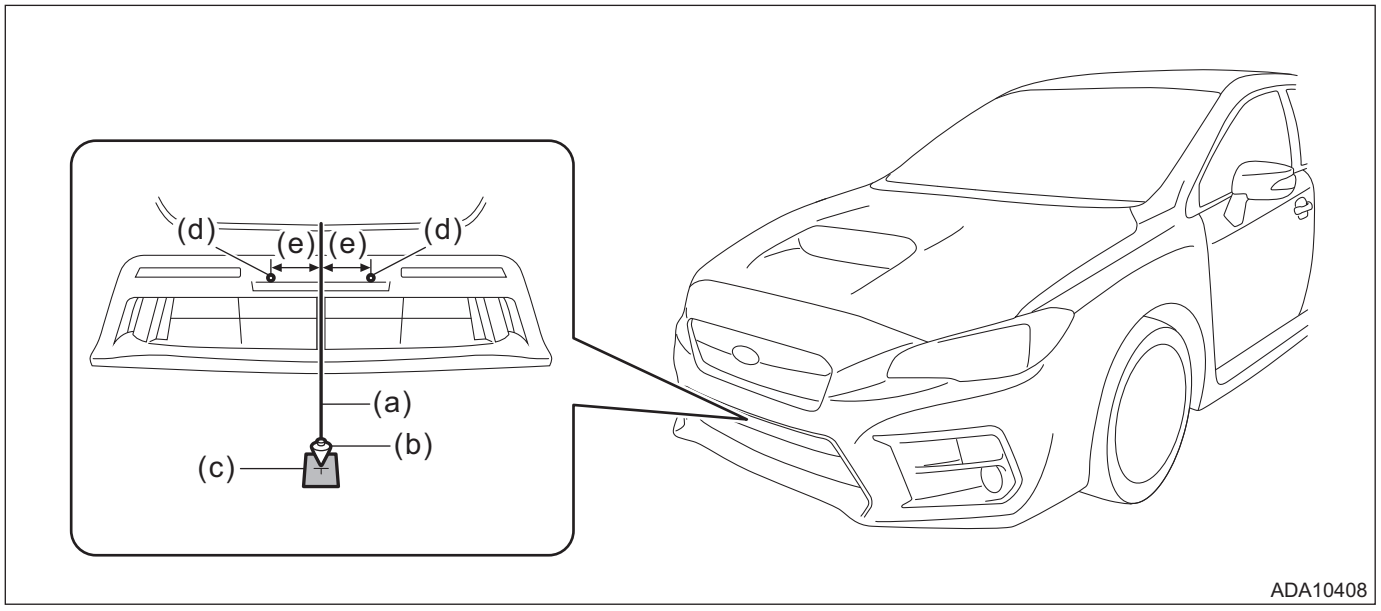
1) Before preparation, check the following items.
   (1) The headlight is off.
   (2) The vehicle is parked on a level surface.
   (3) The inflation pressure of tires is correct.
   (4) The vehicle does not have load.
   (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.

NOTE:
When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>
2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).

Preparation tool:
ST: RANDOM CHART (87599VA000)

3) Stop the vehicle on a level surface where approximately 5 m (16.41 ft) space can be secured in front of the vehicle.

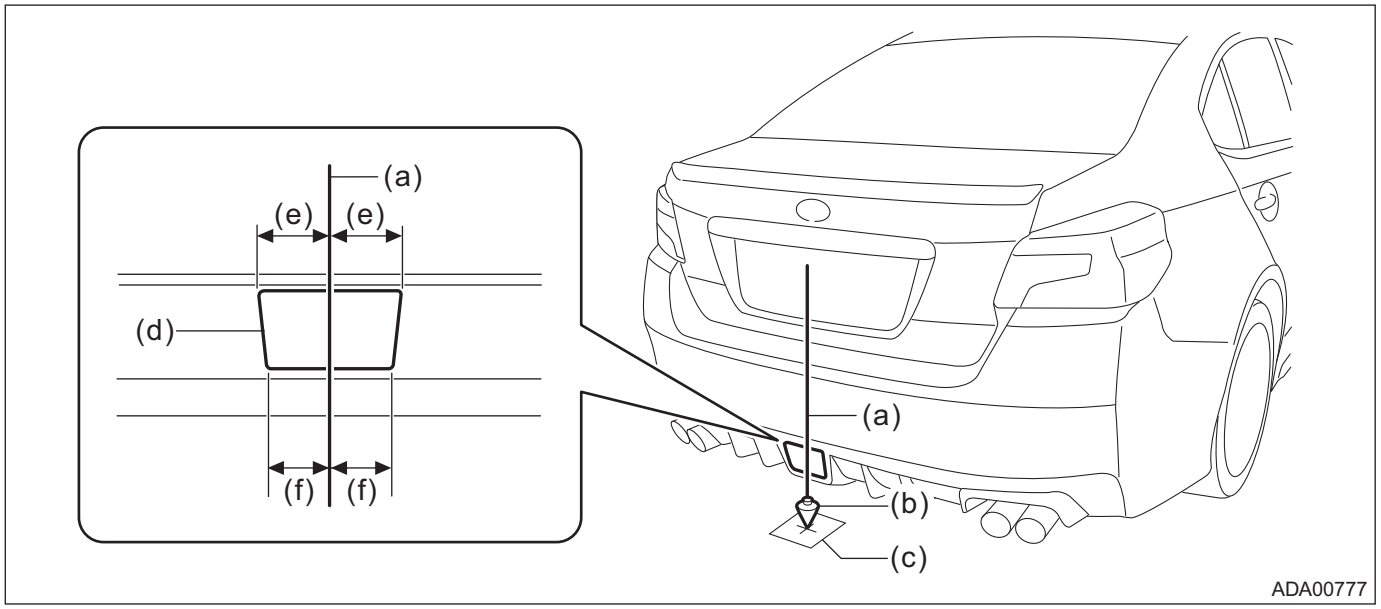
4) Suspend the plumb bob with leveling line from front center position of vehicle (center of the license plate base), and mark the position where the plumb bob touches the ground. (Point A)



(a) Leveling line
(b) Plumb bob
(c) Point A
(d) License plate base
(e) Same distance

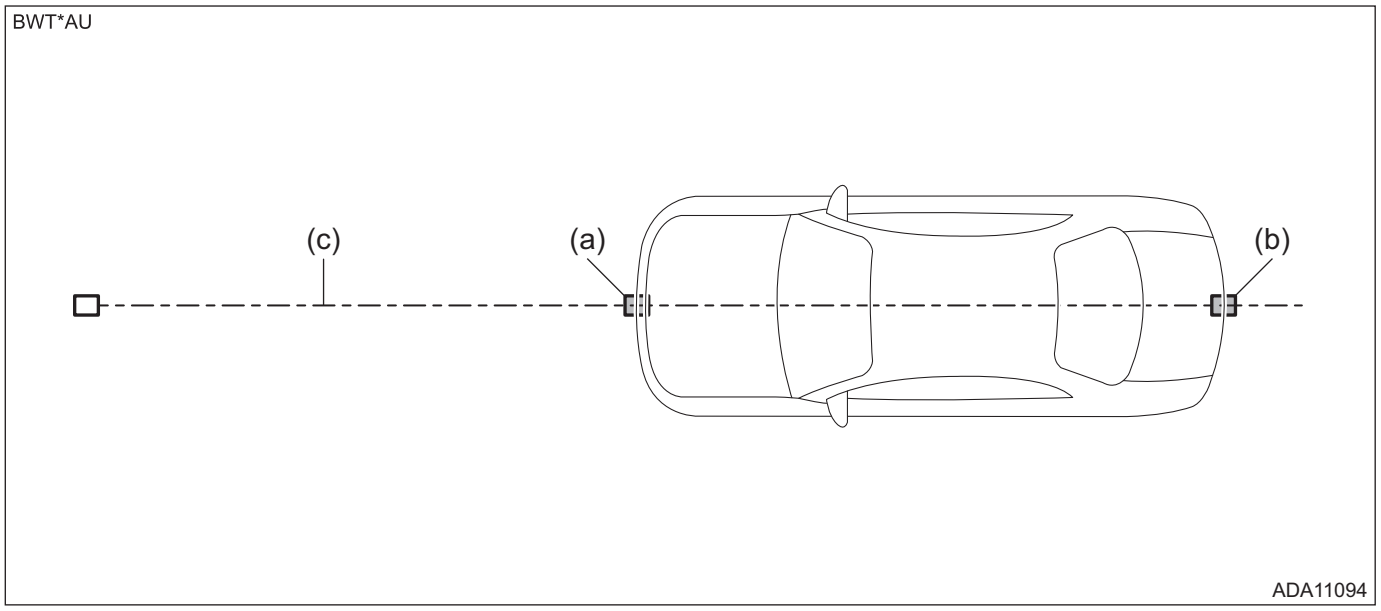
NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

5) Suspend the plumb bob with leveling line from rear center position of vehicle (center of the cover - rear bumper B), and mark the position where the plumb bob touches the ground. (Point B)



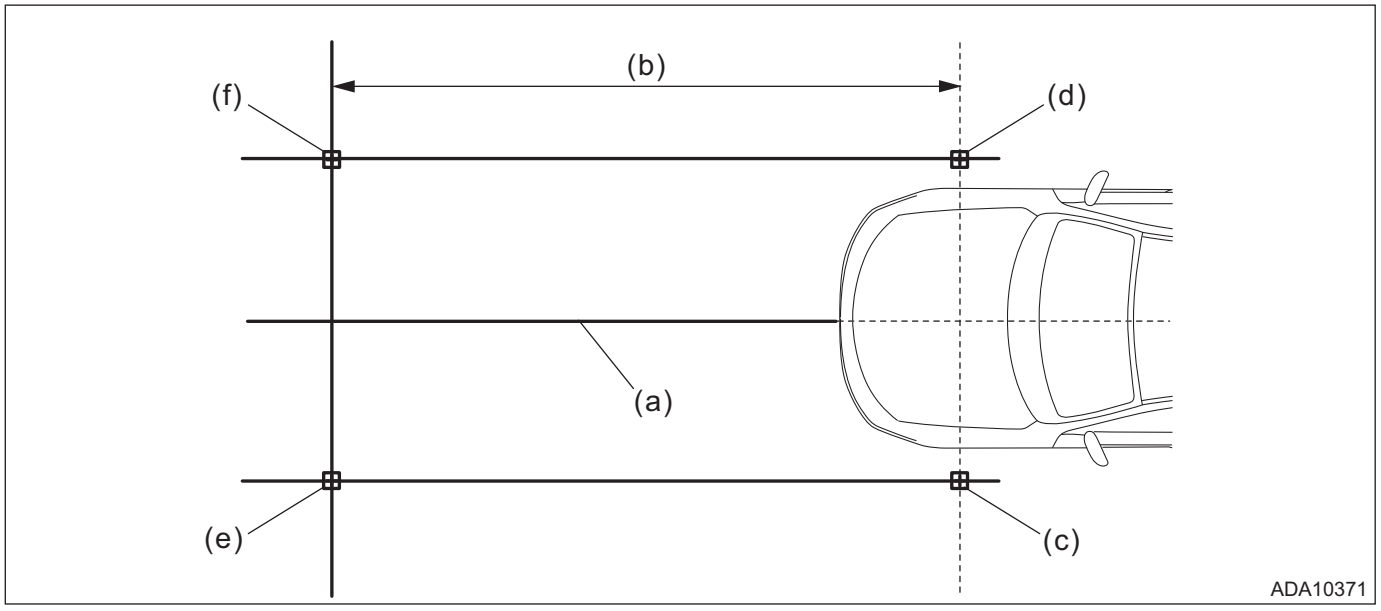
(a) Leveling line
(b) Plumb bob
(c) Point B
(d) Cover - rear bumper B
(e) Same distance
(f) Same distance

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.
6) Strain approximately 5 m (16.41 ft) leveling line from the marking point B through the marking point A toward front of the vehicle, and fix it with packing tape. (A-B line)



(a) Point A (b) Point B (c) Point C

NOTE:
Confirm that there is no wet condition or unevenness on the floor, to strain the leveling line correctly.
7) Mark the installation position of the partition.
(1) Suspend the plumb bob from the center of each front wheel, and mark the point C and point D.
(2) Strain the leveling lines from the point C and point D toward the front of vehicle parallel to the vehicle body center line (A-B line), and fix the leveling lines with packing tape.
(3) Make markings at the points 4,000 mm (13 ft, 1 1/2 in) ahead of the vehicle from the point C and point D. (Point E and point F)
(4) Strain the leveling line so that it passes through the point E and point F. (E-F line)

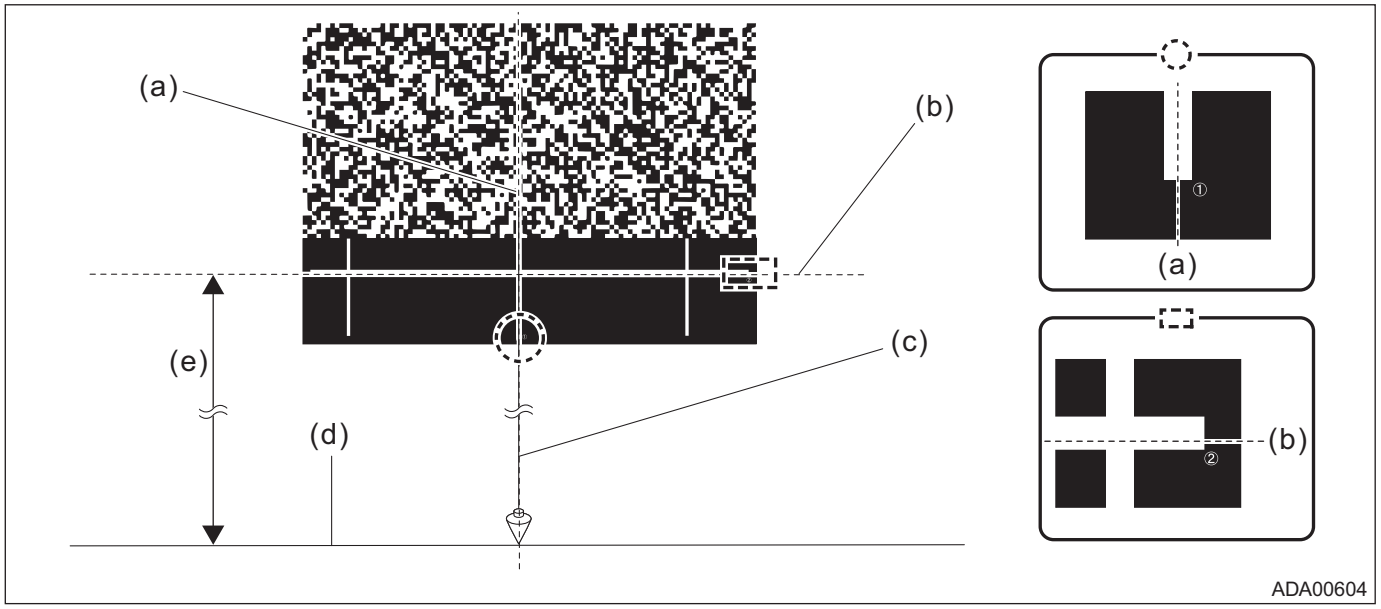


(a) Vehicle body center line (A-B line) (c) Point C (e) Point E
(b) 4,000 mm (13 ft, 1 1/2 in) (d) Point D (f) Point F

8) Place the partition and RANDOM CHART.

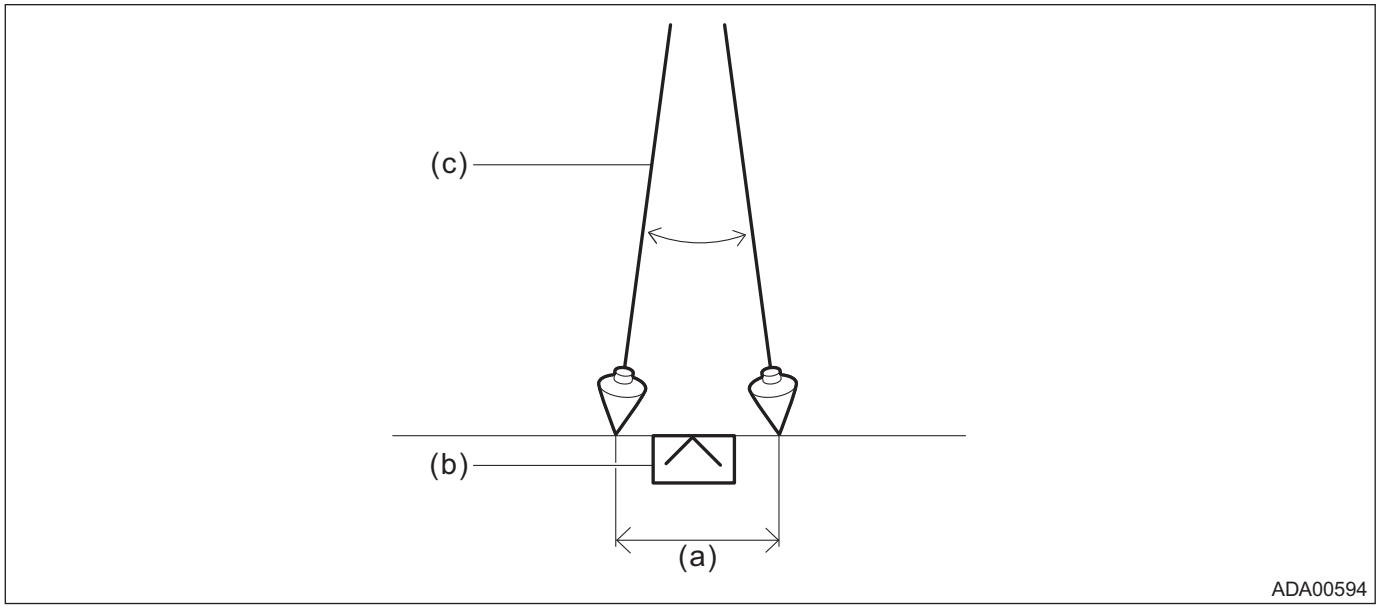
CAUTION:
• Affix the RANDOM CHART onto the vertical partition with flat surface.
• When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.
• Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.
• The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)

(1) Using the plumb bob, attach the RANDOM CHART on the partition, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).
(2) Adjust the partition so that it is parallel to E-F line.



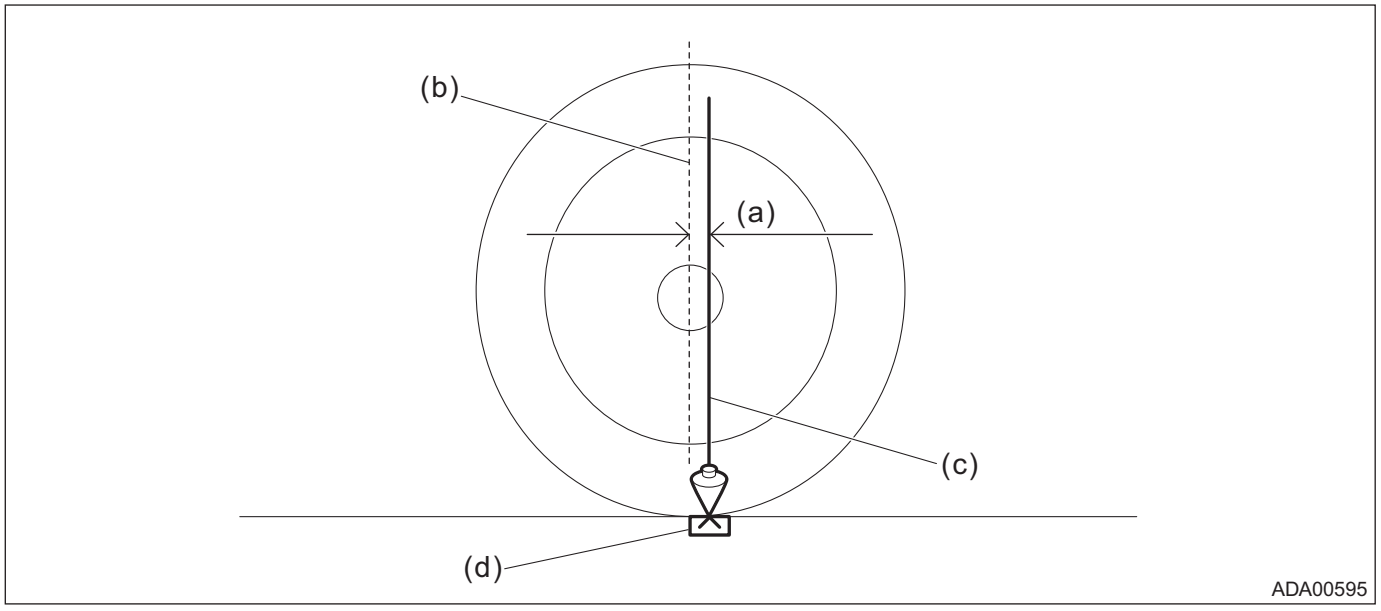
(a) ① = Setting reference (vertical line) and vehicle body center line (A-B line)
(b) ② = Setting reference (horizontal line)
(c) Plumb bob
(d) E-F line
(e) 1,000 mm (3 ft, 3 3/8 in)

CAUTION:
- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**



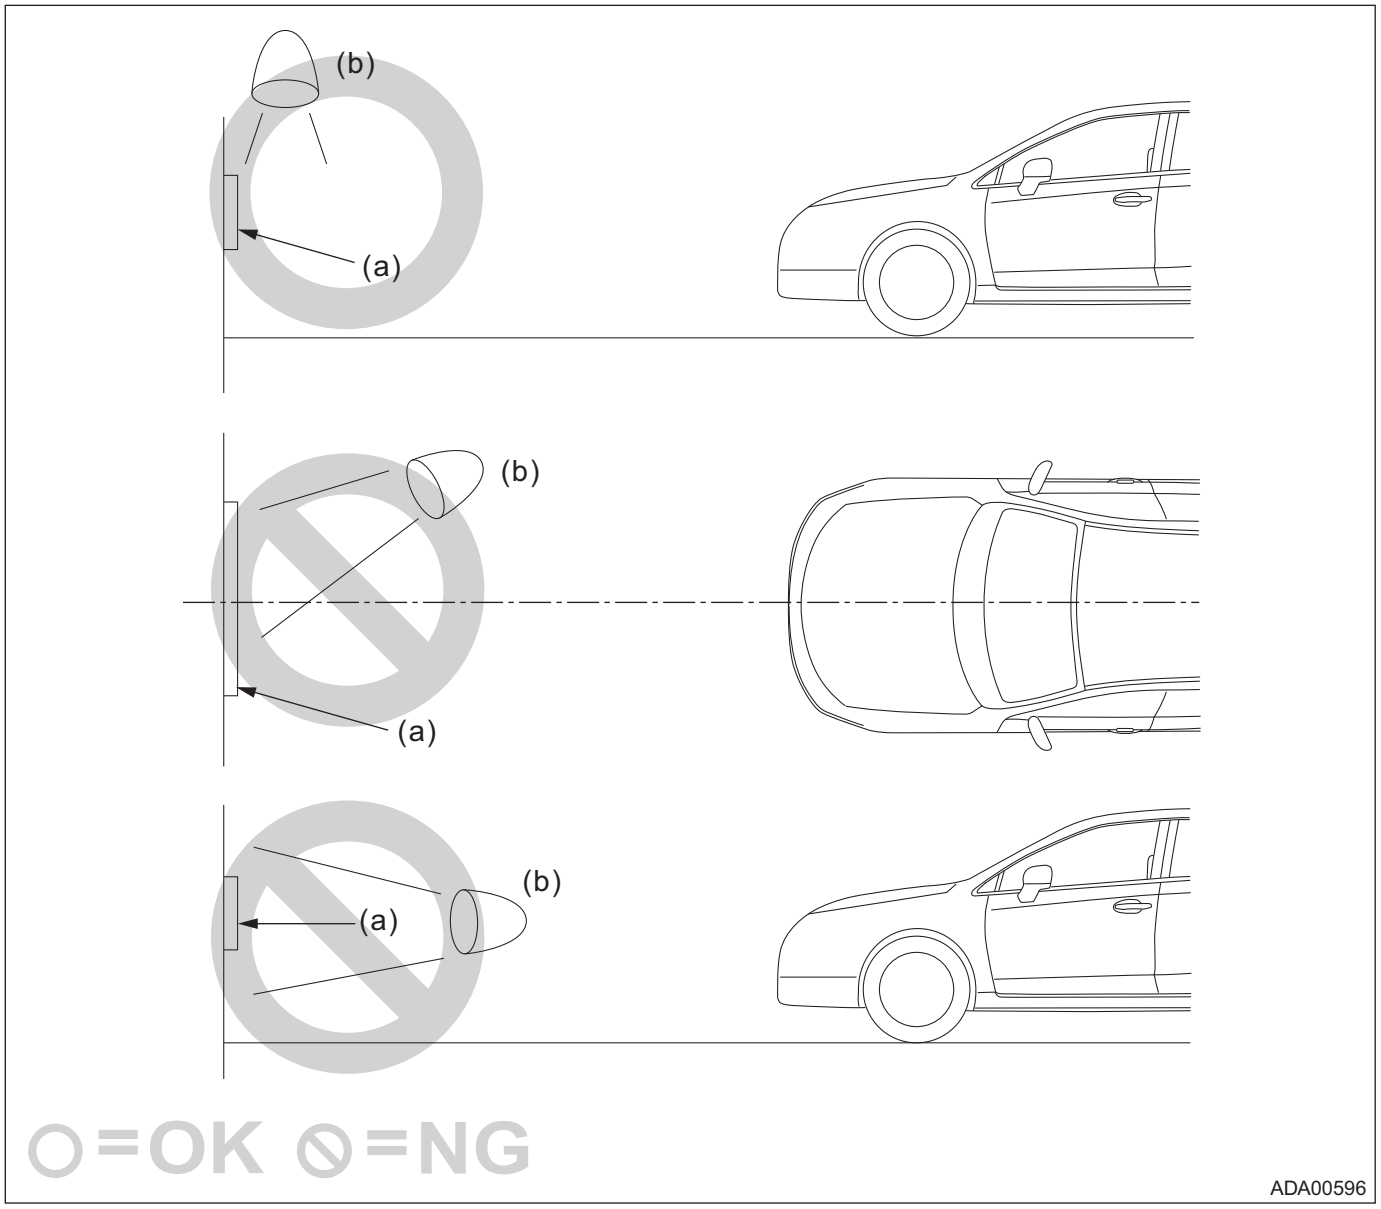
(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob

- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**



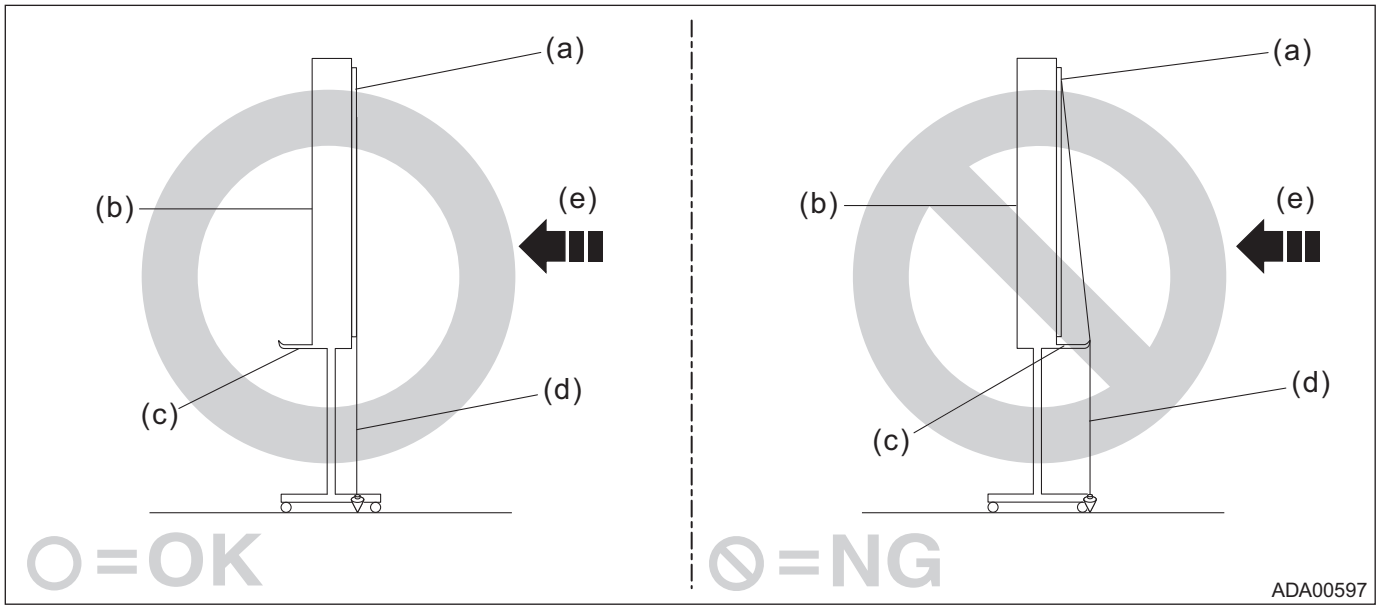
(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking
(b) Tire center line

• Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)



(a) RANDOM CHART (b) Lighting

• When using a white board as a partition, affix the RANDOM CHART on the flat surface without protrusion such as penholder. When suspending the plumb bob, suspend it vertically from the RANDOM CHART while avoiding any protrusion.



(a) RANDOM CHART
(b) White board
(c) Protrusion (penholder, etc.)
(d) Plumb bob
(e) Vehicle travel direction

9) Turn the ignition switch to OFF.
10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

CAUTION:
If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.
11) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
12) Turn the ignition switch to ON.
13) Wait for 10 seconds.
14) On «Start» display, select «Diagnosis».
15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
16) On «Main Menu» display, select «Each System».
17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time, and then select «Enter».

NOTE:
If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (For preventing misoperation)
Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».
18) On «Select Function» display, select «Work Support».
19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:
• When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.

• After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

• When performing adjustment or inspection by affixing RANDOM CHART onto wall

1) Before preparation, check the following items.
   (1) The headlight is off.
   (2) The vehicle is parked on a level surface.
   (3) The inflation pressure of tires is correct.
   (4) The vehicle does not have load.
   (5) The front wheels are directed to the straight ahead position, when the steering wheel is set to the center position.

NOTE:
When the front wheels are not directed to the straight ahead position, adjust the alignment. <Ref. to FS-14, ADJUSTMENT, Wheel Alignment.>

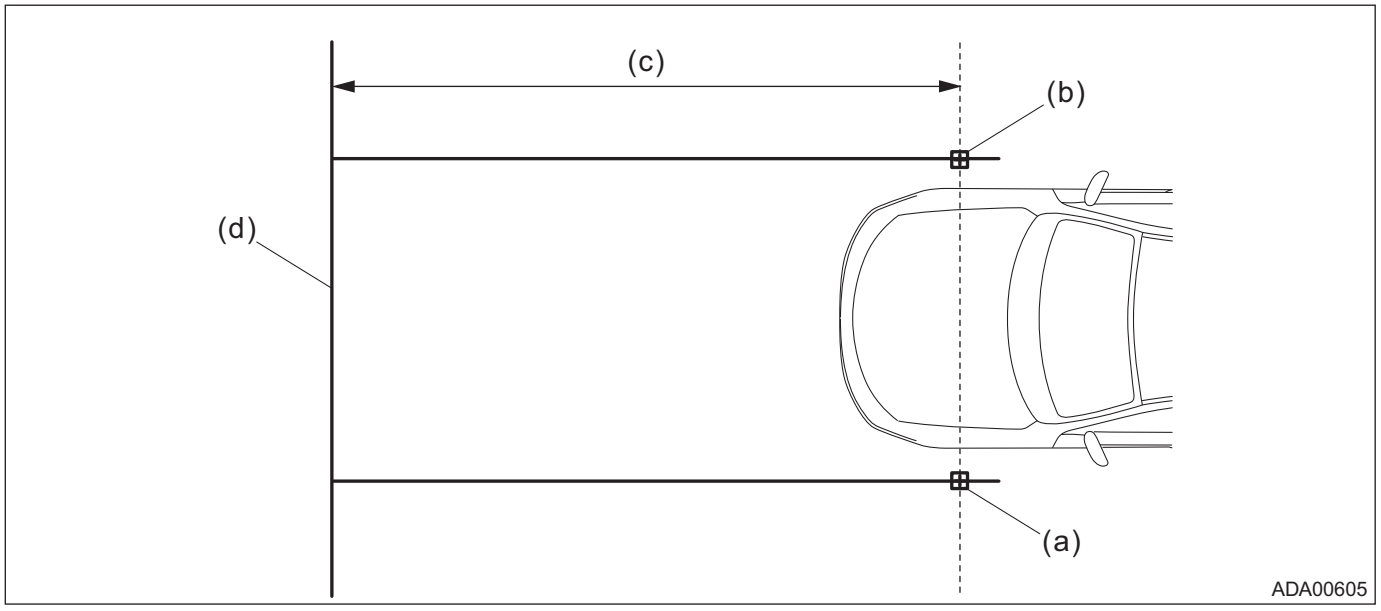
2) Prepare the Subaru Select Monitor, measure, plumb bob, leveling line and RANDOM CHART (ST).

Preparation tool:
ST: RANDOM CHART (87599VA000)

3) Mark the park position of the vehicle.
   (1) Strain the leveling lines so that they intersect at right angles with the wall on which RANDOM CHART is affixed, and fix the leveling lines with packing tape.
   (2) Make a marking 4,000 mm (13 ft, 1 1/2 in) away from the wall where the leveling line is fixed. (Point A and point B)

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

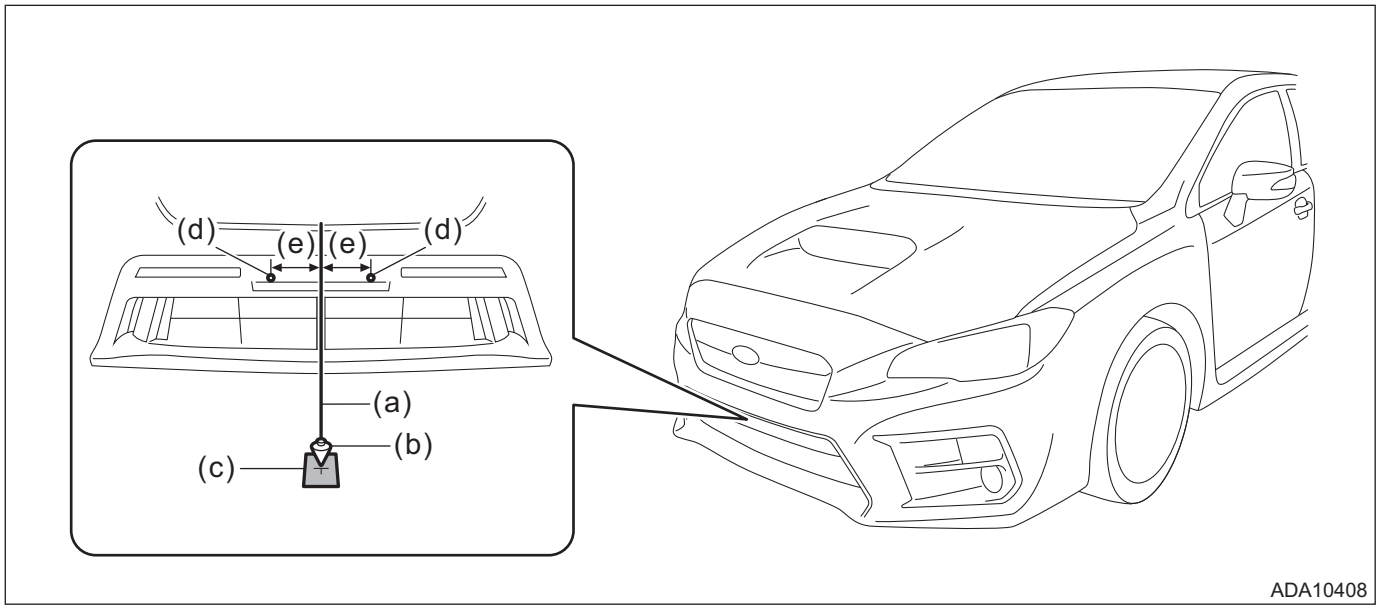
   (3) Strain the leveling line so that it passes through the point A and point B. (A-B line)



(a) Point A
(b) Point B
(c) 4,000 mm (13 ft, 1 1/2 in)
(d) Wall

4) Suspend the plumb bob from the center of each front wheel of the vehicle, and place the vehicle so that it is aligned with the leveling line (A-B line).

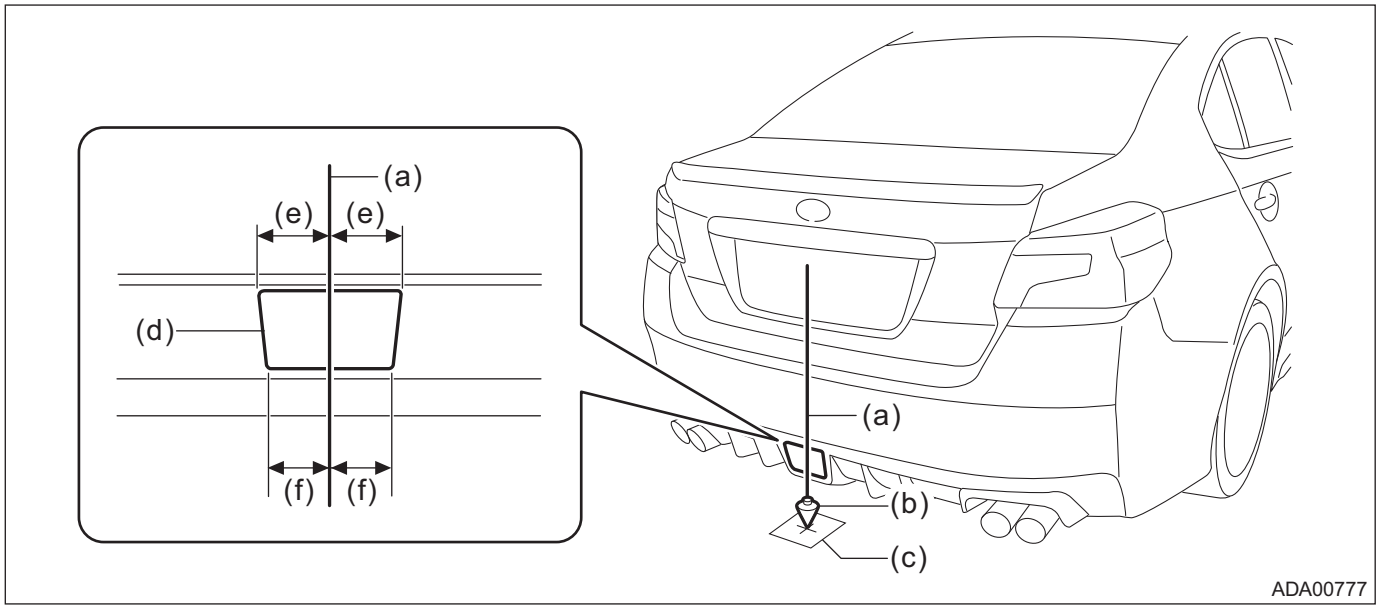
5) Suspend the plumb bob with leveling line from front center position of vehicle (center of the license plate base), and mark the position where the plumb bob touches the ground. (Point C)



(a) Leveling line
(b) Plumb bob
(c) Point C
(d) License plate base
(e) Same distance

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

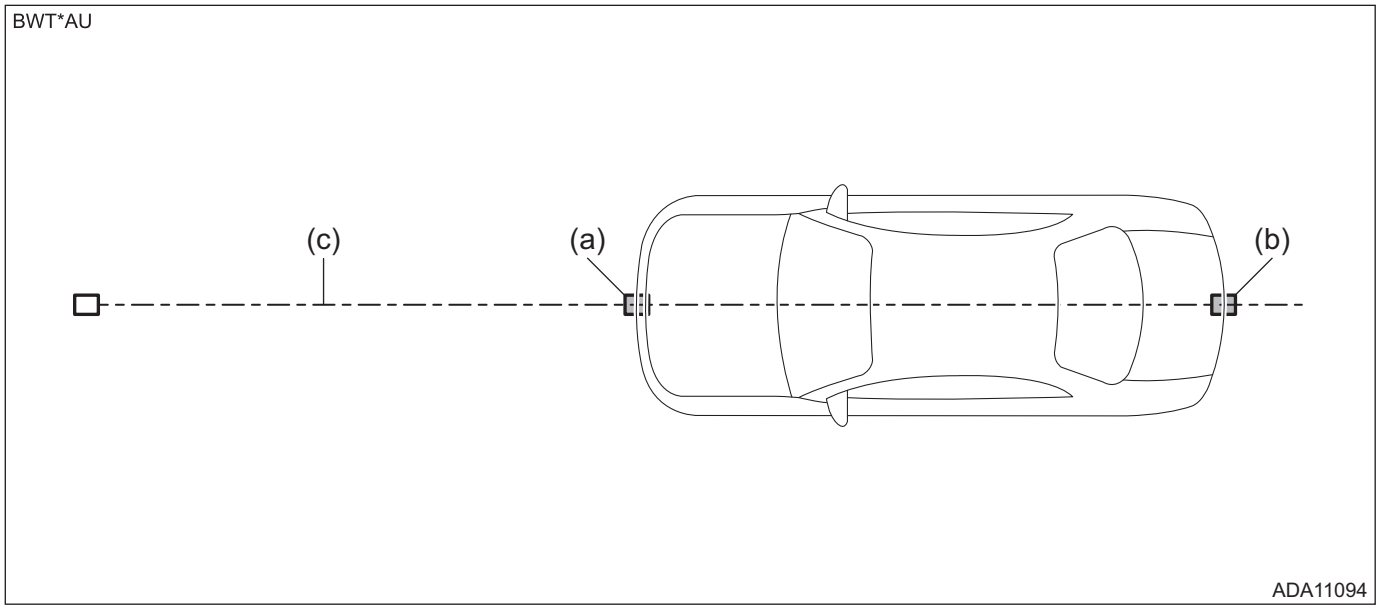
6) Suspend the plumb bob with leveling line from rear center position of vehicle (center of the cover - rear bumper B), and mark the position where the plumb bob touches the ground. (Point D)



(a) Leveling line
(b) Cover - rear bumper B
(c) Plumb bob
(d) Point D
(e) Same distance
(f) Same distance

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

7) Strain the leveling line from the making point D through the marking point C to the wall, and fix it with packing tape. (C-D line)

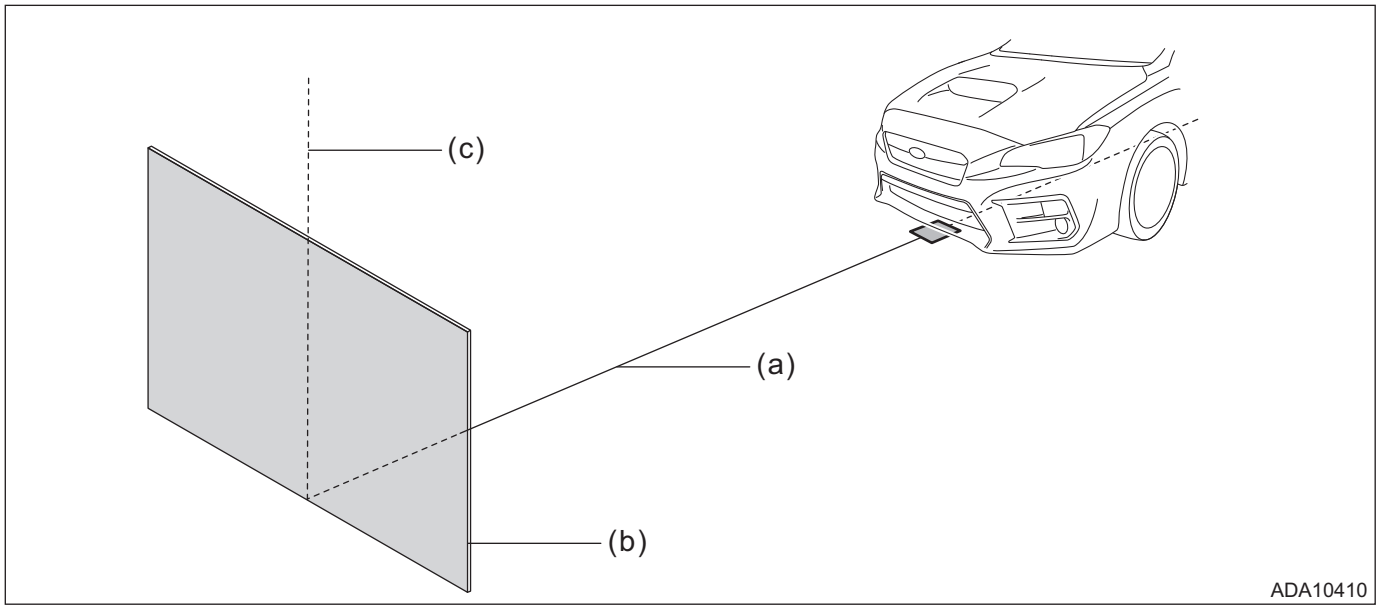


(a) Point C (b) Point D (c) Point E

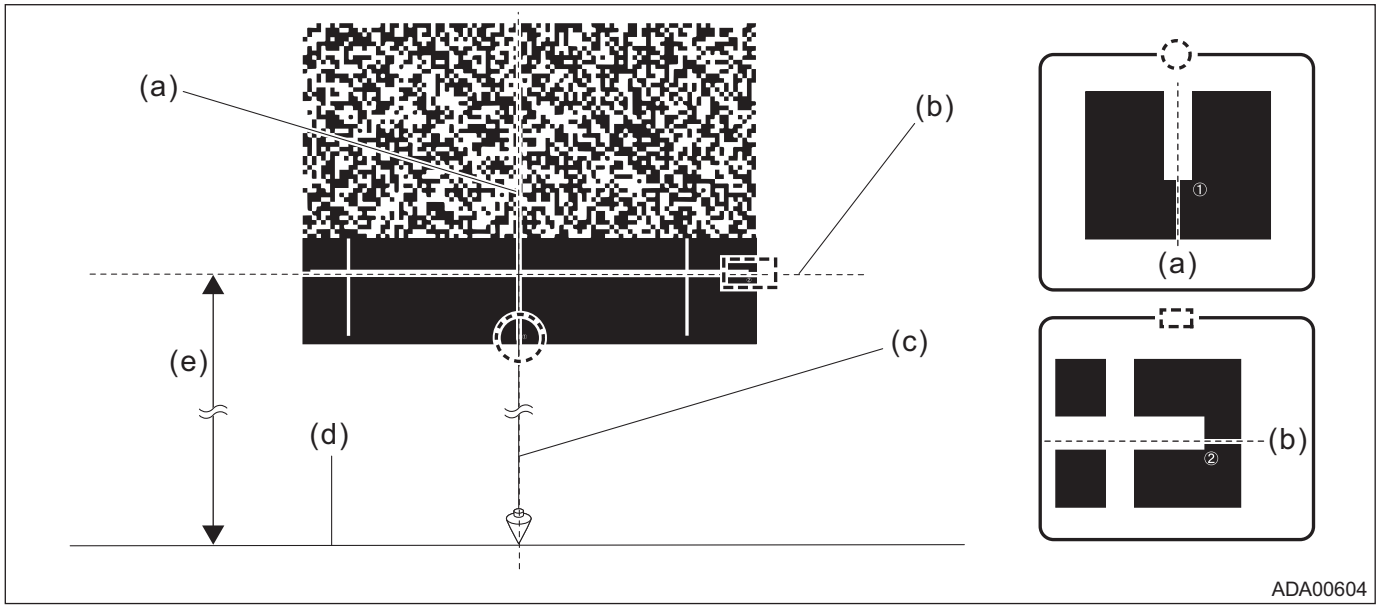
8) Place the RANDOM CHART.

CAUTION:
• Affix the RANDOM CHART onto the vertical wall, etc. with flat surface.
• When affixing the RANDOM CHART using tape, place the tape within 10 mm (0.39 in) from the edge of the CHART. In this case, do not affix with lustrous tapes which may reflect the light.
• Perform the adjustment work at lighted places. If the lighting is not enough, adjustment cannot be done, and accuracy rate may not be acquired.
• The adjustment in the outdoors cannot be recommended. Note the sun position, when adjusting it in outdoor by necessity. (It is not acceptable when the sunlight comes from front or rear of the vehicle)

(1) Using the plumb bob, attach the RANDOM CHART on a wall, so that the setting reference (vertical line) center is aligned with the vehicle body center line (leveling line) and the height of the setting reference (horizontal line) center from the floor is 1,000 mm (3 ft, 3 3/8 in).

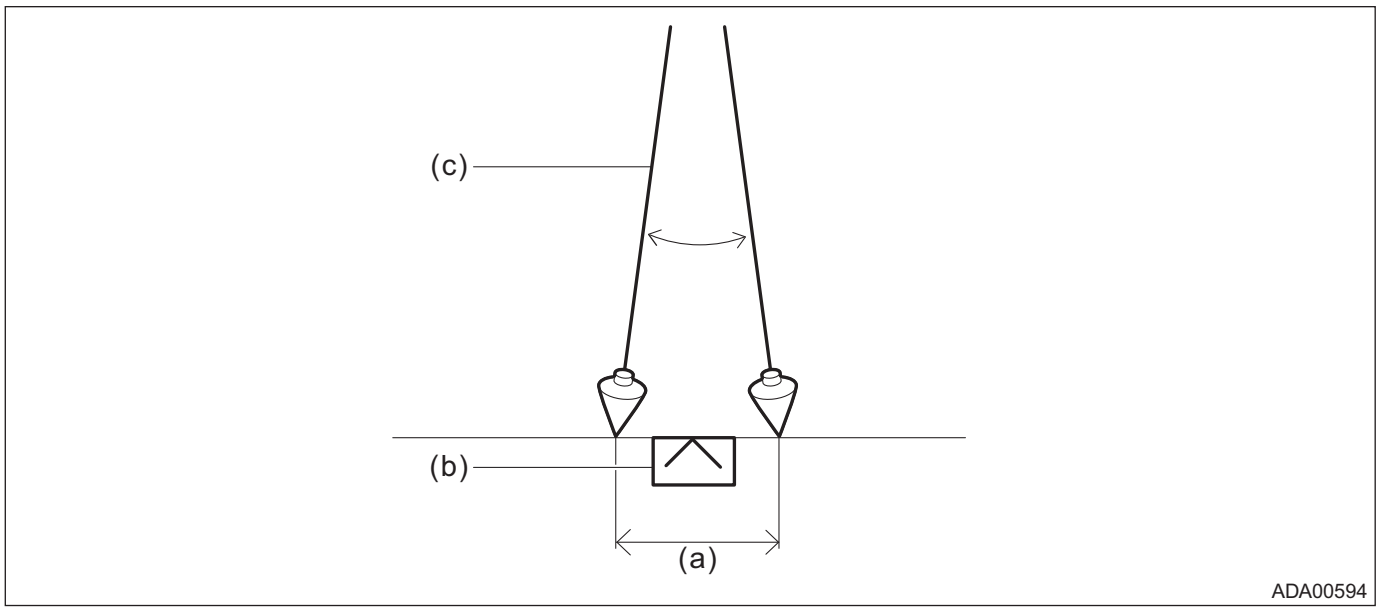


(a) Vehicle body center line (C-D line) (b) Wall (c) Setting reference (vertical line)



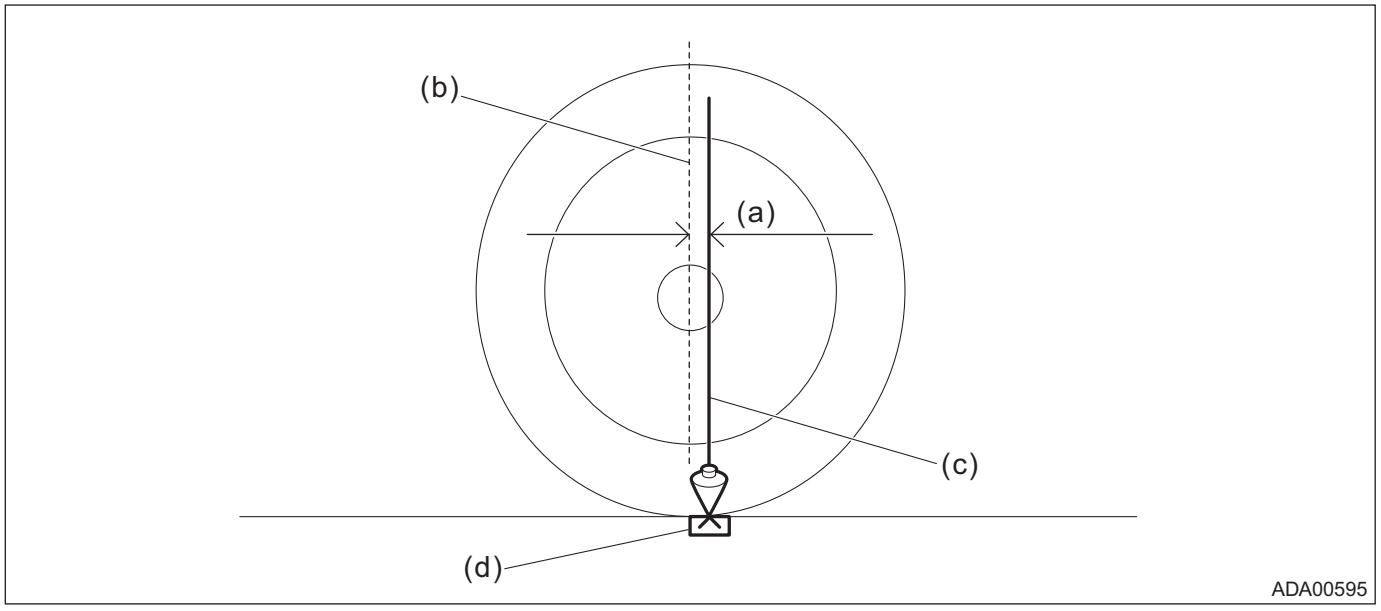
(a) ① = Setting reference (vertical line) and vehicle body center line (C-D line)
(b) ② = Setting reference (horizontal line)
(c) Plumb bob
(d) Floor
(e) 1,000 mm (3 ft, 3 3/8 in)

CAUTION:
- **Centering accuracy of the plumb bob shall be ±4 mm (±0.16 in) or less.**



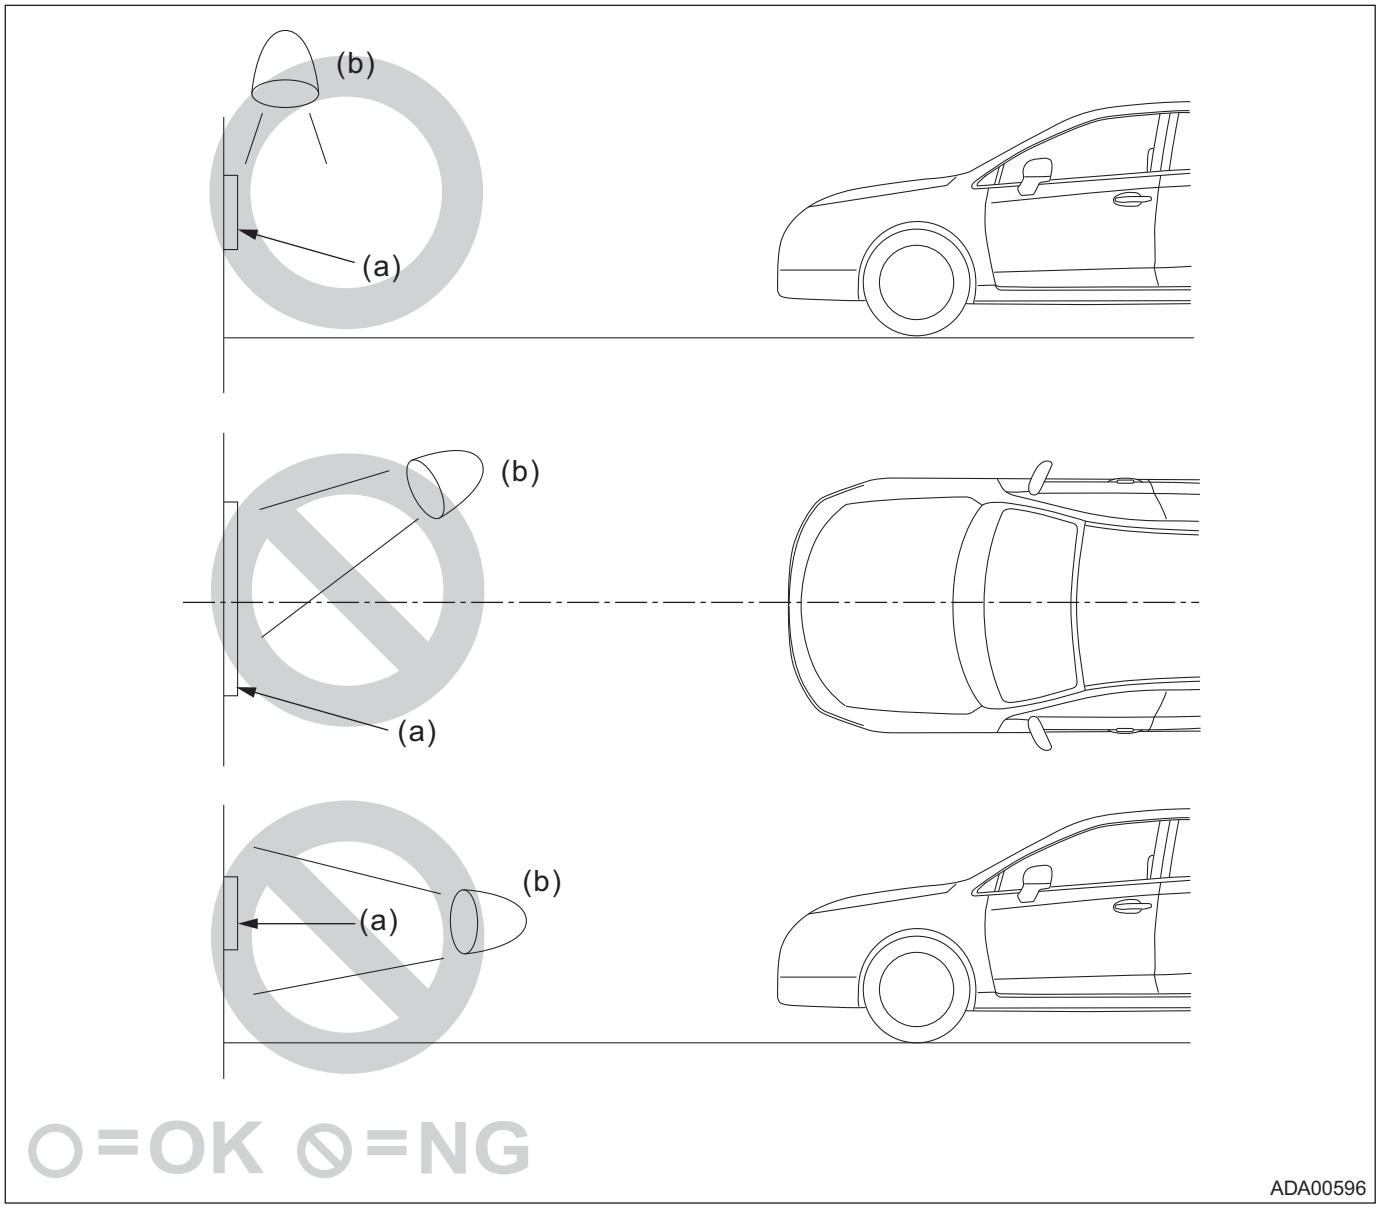
(a) ±4 mm (±0.16 in) (b) Marking (c) Plumb bob

- **Positioning accuracy of the measure shall be ±2 mm (±0.08 in) or less.**
- **Centering accuracy of the tire shall be ±4 mm (±0.16 in) or less.**



(a) ±4 mm (±0.16 in) (c) Plumb bob (d) Marking
(b) Tire center line

• Apply the lighting from the upper direction of RANDOM CHART, and make adjustment so that brightness is even in the CHART. (If the lighting is applied from the position where light reflects at RANDOM CHART, the adjustment cannot be done, because the reflected light enters the camera.)



(a) RANDOM CHART (b) Lighting

9) Turn the ignition switch to OFF.
10) Check the windshield glass and the dashboard. <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

CAUTION:
If there are any dirt, object or reflection from dashboard within the visibility of stereo camera, the correct adjustment and inspection can not be performed. Especially, do not put paper etc. on the dashboard.
11) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
12) Turn the ignition switch to ON.
13) Wait for 10 seconds.
14) On «Start» display, select «Diagnosis».

15) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
16) On «Main Menu» display, select «Each System».
17) Select «EyeSight» on «Select System» display while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time, and then select «Enter».

NOTE:
If «EyeSight» is selected without pressing two switches at the same time, the camera adjustment items are not displayed in «Work Support». (For preventing misoperation)
Also, the message is not displayed, when the camera does not finish the start-up (approx. 10 seconds after ignition switch ON). In this case, repeat from the selection of «EyeSight».
18) On «Select Function» display, select «Work Support».
19) From the work support item list, select and perform camera adjustment or other inspections.

NOTE:
• When performing {Camera adjustment, inspection}, pre-collision brake OFF indicator light, lane departure warning OFF indicator light in the meter will illuminate, and the normal function will be disabled.
• After camera adjustment, the function will be enabled, when the ignition switch is turned to OFF and system is restarted.

2. VEHICLE INFORMATION REGISTRATION

Perform when replacing stereo camera. (Do not perform when performing stereo camera re-adjustment and inspection)
Register the vehicle information according to the procedure of “Selection of Parameter”, and confirm the vehicle information content in “Confirm on parameter”.

PARAMETER SELECTION

NOTE:
• To check the applied model, refer to the “Model number plate” attached to the vehicle. <Ref. to ID-2, IDENTIFICATION, Identification.>
• If you entered a wrong applied model, you can re-write it.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
2) On «Start» display, select «Diagnosis».
3) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «EyeSight» and then select «Enter».
6) On «Select Function» display, select «Work Support».
7) From the work support item list, select «Selection of Parameter».
8) Check the applied model and option code indicated on the “Model number plate”. <Ref. to ID-2, IDENTIFICATION, Identification.>
9) Enter the applied model of 7-digit alphanumeric characters and press the Enter key.
10) When the option code input screen appears after entering the applied model, enter the option code consisting of 4-digit alphanumeric characters, and press the Enter key.
11) When the confirmation screen indicating the vehicle information appears, check that the correct applied model and OP code are displayed and click the «OK» button.

NOTE:
When the displayed applied model and OP code are different from those of the vehicle, perform registration operations again after clicking the «OK» button.
Note that checking the digit corresponding to OP code is not required if “*” or “_” is displayed for OP code.

PARAMETER CHECK

NOTE:
The parameter data registered in the stereo camera is shown on the display.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
2) On «Start» display, select «Diagnosis».
3) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
4) On «Main Menu» display, select «Each System».
5) On «Select System» display, select «EyeSight» and then select «Enter».
6) On «Select Function» display, select «Work Support».
7) From the work support item list, select «Confirm on parameter».
8) On the «Confirm on parameter» display screen, check that the applied model and OP code of the target vehicle are displayed, and click the «OK» button.
9) If the applied model and OP code of the target vehicle are not displayed on the «Confirm on parameter» display screen, perform parameter selection and registration.

NOTE:
Note that checking the digit corresponding to OP code is not required if “*” or “_” is displayed for OP code.

3. ADJUSTMENT VALUE CLEAR

Perform when replacing stereo camera. (Do not perform when performing stereo camera re-adjustment and inspection)
1) From the work support item list, select «Clear adjustment value».
2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».
3) When «Clear the adjustment value.» is displayed, select «OK».
4) When «Clearing adjustment value...» is displayed, wait until process finishes.
5) When the adjustment value clear is finished correctly, and «Adjustment value cleared OK!» is displayed, select «OK» to finish.
6) Turn the ignition switch to OFF and wait for approx. 5 seconds or more.

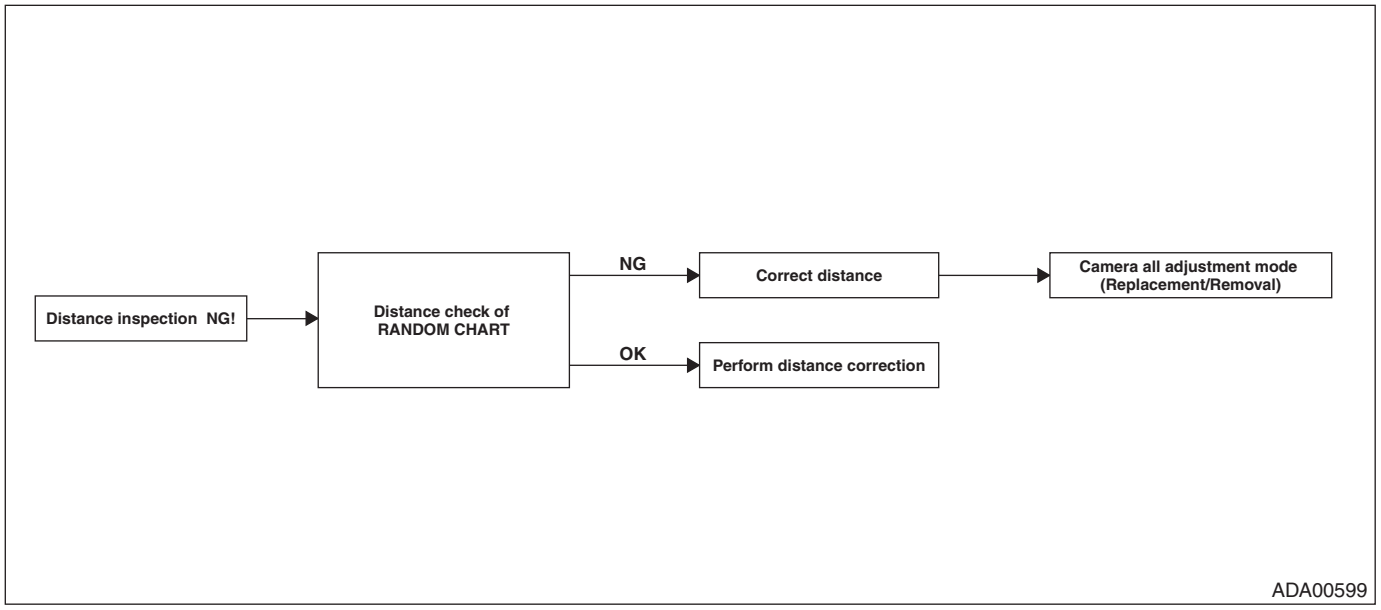
CAUTION:
If the ignition switch OFF period is short, the adjustment value clear can not be performed correctly.
7) Next, perform the camera all adjustment mode (replacement/removal). <Ref. to ES-28, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

4. CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL)

Perform this procedure when the stereo camera is replaced or re-adjustment is necessary (when stereo camera malfunctioning, when stereo camera reinstalled, when windshield glass replaced).

CAUTION:
• When the stereo camera is replaced, be sure to perform the «Clear adjustment value» first. When {Clear adjustment value} was skipped, restart the procedure from {Clear adjustment value} again. <Ref. to ES-28, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>
• Perform the camera adjustment and inspection at curb weight without passengers.
• When the camera all adjustment mode is performed, the procedures must be completed correctly to the end. Otherwise, the warning is displayed on the meter LCD when the vehicle moves.
1) From the work support item list, select «Camera all adjustment mode (replacement/removal)».
2) When «Make the following adjustment/inspection. Please push OK if ready.» is displayed, if preparation is ready, select «OK».
3) When «In process...» is displayed, wait until inspection finishes.
4) When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to step 9).

5) When «Distance inspection NG!» is displayed, refer to the NOTE below.



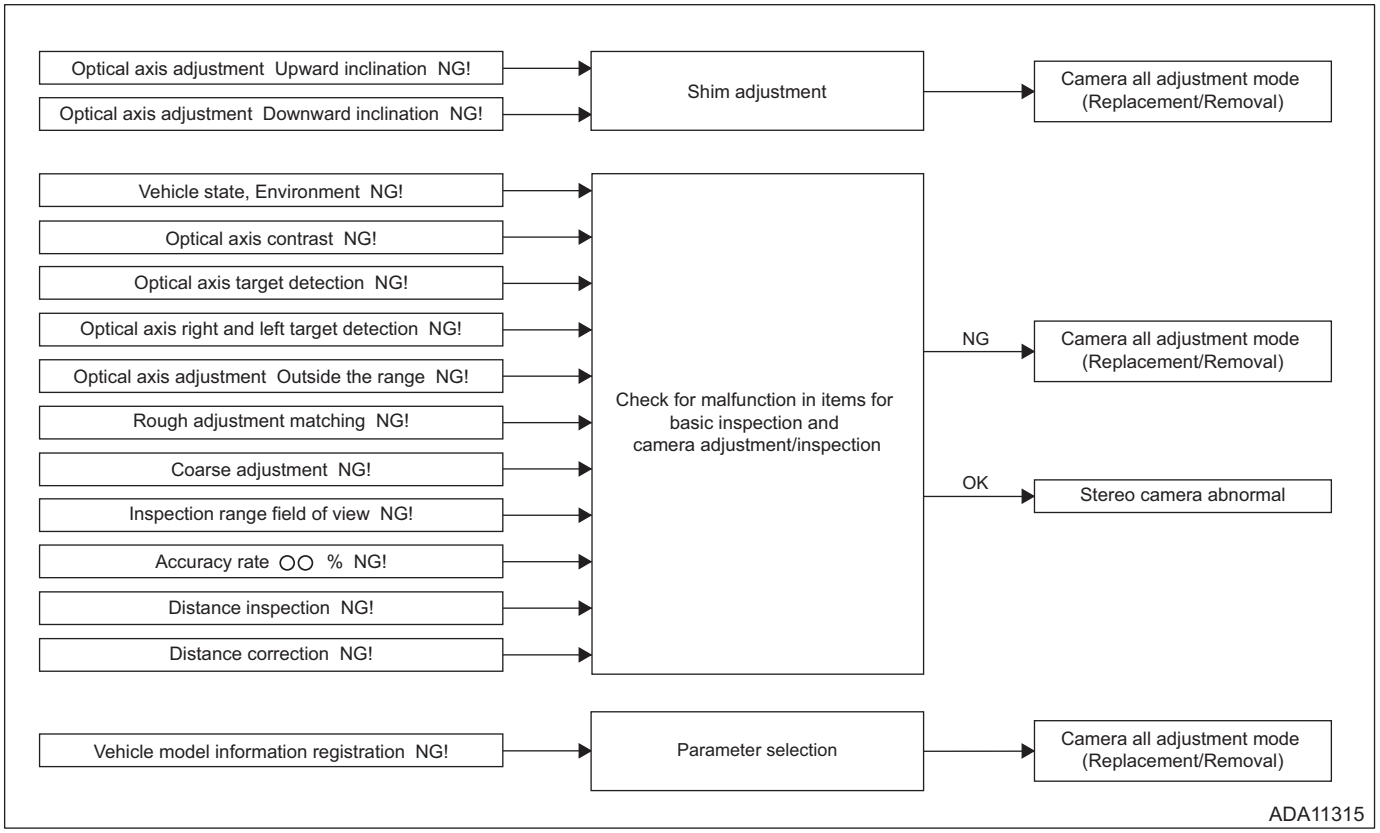
NOTE:
Distance check and adjustment of RANDOM CHART <Ref. to ES-14, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>

6) When «Perform distance correction.» is displayed, select «OK». When the distance correction is finished correctly, and «Distance correction OK!» is displayed, select «OK» and proceed to the accuracy rate inspection.

7) When «Perform accuracy rate inspection.» is displayed, select «OK». When the accuracy rate inspection is finished correctly, and «Accuracy rate ○○% OK!» is displayed, select «OK» to go to next.

8) When «○○ NG!» is displayed during adjustment, refer to the NOTE below.

CAUTION:
For details on the displayed items, refer to the following list. Check the list items, and if the same NG item is displayed even when camera adjustment and inspection are performed again, replace the stereo camera.



LIST

Error code	Display	Check items on error	Remarks
1401	«Vehicle State, Environment NG!»	Check body integrated unit.	—
1402	«Vehicle Model Information Registration NG!»	Confirm the part numbers and parameters (variant setting information) of EyeSight system components, and reconfirm that the unit should be installed to that vehicle. To confirm the components, check each item.	—

Error code	Display	Check items on error	Remarks
1403	«Optical Axis Contrast NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. Random chart for ver. 3 must be used. 5. There should be no obstacles that blocks the random chart. 6. Random chart must be set correctly for the vehicle. 7. Grid pattern of random chart should not be dirty or damaged. 8. Lighting circumstance for random chart should be normal. 9. Make sure that the headlight is off. 10.There should be no objects (reflection) on the instrument panel. 11.Dirt should not adhere to the windshield or the lens filter of the stereo camera. 12.There should be no crack on the windshield. NOTE: Detecting measures for the error codes 1403, 1404, 1405, 1406 and 1407 are different. Check items on error with high relevance are shown in the remarks.	Highly relevant with the check items 1 to 12.
1404	«Optical Axis Target Detection NG!»		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1405	«Optical Axis Target Detection NG!»		Highly relevant with the check items 4, 6, 7, 8, 9, 10, 11 and 12.
1406	«Optical Axis Right and Left Target Detection NG!»		Highly relevant with the check items 1 to 12.
1407	«Out of the Optical Axis Adjustment Range NG!»		Highly relevant with the check items 3 and 6.
1408	«Optical axis adjustment Upward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Camera adjustment and inspection must performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns downward.	—
1409	«Optical axis adjustment Downward inclination NG!»	1. Random chart must be set correctly for the vehicle. 2. Camera adjustment and inspection must performed with the vehicle at curb weight. 3. There should be no malfunction in the suspension. If there are no problems above, perform shim adjustment so that optical axis turns upward.	—
140 A	«Rough Adjustment Matching NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the stereo camera. 3. Stereo camera and camera plate are assembled with no gap. 4. There should be no obstacles that blocks the random chart. 5. Random pattern of random chart should not be dirty or damaged. 6. Lighting circumstance for random chart should be normal. 7. There should be no objects (reflection) on the instrument panel. 8. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 9. There should be no crack on the windshield. NOTE: Detecting measures for the error codes 140A, 140B and 140C are different. Check items on error with high relevance are shown in the remarks.	Highly relevant with the check items 1 to 9.
140B	«Coarse adjustment NG!»		Highly relevant with the check items 3, 5, 7 and 9.
140C	«Coarse adjustment NG!»		Highly relevant with the check items 3, 5, 7 and 9.

Error code	Display	Check items on error	Remarks
140E	«Inspection range field of view NG!»	1. Make sure that the stereo camera cover assembly is installed correctly. 2. There should be no obstacles that blocks the random chart. 3. Random pattern of random chart should not be dirty or damaged. 4. Lighting circumstance for random chart should be normal. 5. There should be no objects (reflection) on the instrument panel. 6. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 7. There should be no crack on the windshield. 8. Windshield for EyeSight should be assembled.	—
140F	«Distance inspection NG!»	1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—
1410	«Accuracy rate 00% NG!»	1. Lighting circumstance for random chart should be normal. 2. Random pattern of random chart should not be dirty or damaged. 3. There should be no objects (reflection) on the instrument panel. 4. Dirt should not adhere to the windshield or the lens filter of the stereo camera. 5. There should be no crack on the windshield.	—
1501	«Distance correction NG!»	When «Distance inspection NG!» is displayed and distance correction is performed without inspection, check the following. 1. Distance from random chart to wheel center of the vehicle should be 4,000 mm (13.12 ft). 2. Lighting circumstance for random chart should be normal.	—

NOTE:
• Shim adjustment: <Ref. to ES-34, SHIM ADJUSTMENT, PROCEDURE, Camera Adjustment, Inspection.>
• Basic inspection items: <Ref. to ES(diag)-8, INSPECTION, General Description.>
• Camera adjustment and inspection preparation items: <Ref. to ES-14, PREPARATIONS, PROCEDURE, Camera Adjustment, Inspection.>
9) Turn the ignition switch to OFF and wait for approx. 10 seconds. (Time necessary to save adjustment and inspection result)

CAUTION:
• If the ignition switch OFF period after adjustment and inspection finished is short, the adjustment and inspection result cannot be saved correctly. The warning is displayed on the meter LCD, when the vehicle moves.
• When camera adjustment and inspection begins, normal recognition process stops and the warning is displayed on the meter LCD. The warning display will be cleared by turning the ignition switch OFF → ON.
• If the steering wheel is operated many times during adjustment and inspection preparation, the power steering control module is overheated. Therefore, you may have to wait for at least 10 seconds after turning the ignition switch to OFF.
10) Turn the ignition switch to ON. Make sure the «Aiming Completion Status» of «Data monitor» is «Exit» using Subaru Select Monitor.
11) Perform the {Clear Memory}, and turn the ignition switch to OFF.
12) Next, perform the automatic adjustment and function check by driving. <Ref. to ES-33, AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING, PROCEDURE, Camera Adjustment, Inspection.>

5. AUTOMATIC ADJUSTMENT AND FUNCTION CHECK BY DRIVING

CAUTION:
Auto adjustment and function check by driving must be performed after replacing or re-adjusting the stereo camera and windshield glass for the purpose of ensured recognition accuracy of the stereo camera.

NOTE:
By performing auto adjustment and function check by driving, more precise adjustment of the stereo camera is possible in addition to adjustment of stereo camera using random chart.
1) Perform this procedure after finishing stereo camera adjustment and inspection.
2) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
3) On «Start» display, select «Diagnosis».
4) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
5) On «Main Menu» display, select «Each System».
6) On «Select System» display, select «EyeSight» and then select «Enter».
7) On «Select Function» display, select «Data Monitor».
8) From the data monitor item list, select «Automatic Adjustment Status».
9) Drive the vehicle until «Automatic adjustment status» displays «0F», «1F», «2F» or «3F».

CAUTION:
• For the automatic adjustment, drive the vehicle on straight road with white lines on both sides at a speed of 40 km/h (25 MPH) or more for at least five minutes, while maintaining distance from the preceding vehicle 40 m (132 ft) or more.
• Maintain the following conditions until «Automatic adjustment status» displays «0F», «1F», «2F» or «3F».
– Turn the active lane keep and cruise main to OFF.
– Hold down the pre-collision brake OFF switch for two seconds to turn OFF the pre-collision brake function.

Display	Contents	Unit of measure	Note (at idling)
Automatic adjustment status	Index for automatic adjustment operation performed by the driving test after the completion of the optical axis adjustment	—	«0F», «1F», «2F» or «3F» is displayed when completed.

NOTE:
• It may takes long until «0F», «1F», «2F» or «3F» is displayed depends on the road condition etc.
• For new vehicles, «00» may be displayed. A test-drive is not necessary before delivery because high-accuracy camera adjustment/inspection have been performed at the factory.
10) From the data monitor item list, display «Lane recognition status» to check if any of the following appears.

NOTE:
When driving does not continue until «0F», «1F», «2F» or «3F» is displayed, it may take long before recognition completes.
• Recognizing white lines on both sides during driving at 40 km/h (25 MPH) or more: «03»
• Recognizing white lines on both sides with lane width 3 m (10 ft) or more during driving at 60 km/h (37 MPH) or more: «05»

Display	Contents	Unit of measure	Note (at idling)
Lane recognition status	Display of lane recognition status	—	Recognized when vehicle lane can be seen by 20 m (66 ft) or more.

11) From the data monitor item list, display «Preceding vehicle distance» to check if the distance from the preceding vehicle is approximately the same.

6. SHIM ADJUSTMENT

1) Turn the ignition switch to OFF.
2) Detach the stereo camera cover assembly, and remove the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3) Remove the stereo camera plate, and insert the shim into the vehicle body and camera plate.

Preparation items:
Genuine part: Shim (washer) (031105000)

NOTE:
- Inserting the shim into the vehicle front side makes camera downward.
- Inserting the shim into the vehicle rear side makes camera upward.
- There is a case that the shim may be inserted at the production line, but it is not abnormal.

4) Install the stereo camera plate.

Tightening torque:
5.5±1 N·m (0.56±0.1 kgf-m, 4.1±0.7 ft-lb)

5) Install the stereo camera and stereo camera cover assembly. <Ref. to ES-10, INSTALLATION, Stereo Camera.>
6) Perform the camera all adjustment mode (replacement/removal). <Ref. to ES-28, CAMERA ALL ADJUSTMENT MODE (REPLACEMENT/REMOVAL), PROCEDURE, Camera Adjustment, Inspection.>

7. CAMERA INITIALIZATION

This is a recovery measures prepared for the data failure caused by the low battery voltage during data storage to inside the stereo camera.

CAUTION:
Do not usually perform camera initialization because it will clear the camera adjustment and inspection data and/or DTCs.
Perform the procedure only when the camera adjustment and inspection result is NG even if the vehicle parked position is normal as shown in the flowchart described in “A: Procedure”. After camera initialization, perform the camera adjustment and inspection in the same procedure as for camera replacement.
1) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
2) Turn the ignition switch to ON.
3) Wait for 10 seconds.
4) On «Start» display, select «Diagnosis».
5) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
6) On «Main Menu» display, select «Each System».
7) On «Select System» display, select «EyeSight» and then select «Enter».
8) On «Select Function» display, select «DTC».
9) Select «Clear Memory» while pressing the pre-collision brake OFF switch and the lane departure warning OFF switch mounted on stereo camera cover assembly at the same time.
10) Turn the ignition switch to OFF.
11) Wait for 5 seconds.
12) Next, perform the clear adjustment value. <Ref. to ES-28, ADJUSTMENT VALUE CLEAR, PROCEDURE, Camera Adjustment, Inspection.>

7. Switches and Harness

A: NOTE

1. PRE-COLLISION BRAKE OFF & LANE DEPARTURE WARNING OFF SWITCH

The pre-collision brake OFF & lane departure warning OFF switch is integrated in the stereo camera cover assembly.
If the pre-collision brake OFF & lane departure warning OFF switch is faulty, replace the stereo camera cover assembly. <Ref. to ES-7, Stereo Camera.>

2. EyeSight STEERING SWITCH

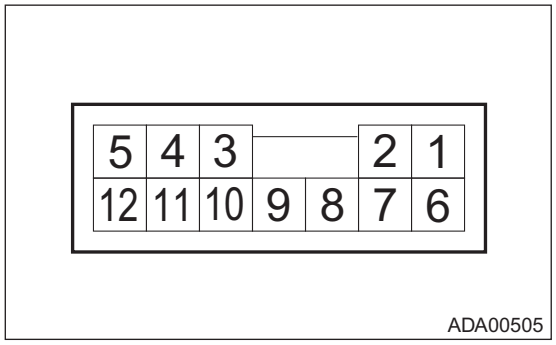
For the removal and installation operation procedures for the EyeSight steering switch, refer to “CRUISE CONTROL SYSTEM” section. <Ref. to CC-6, Cruise Control Command Switch.>

B: INSPECTION

1. PRE-COLLISION BRAKE OFF SWITCH AND LANE DEPARTURE WARNING OFF SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



- Pre-collision brake OFF switch

Terminal No.	Inspection conditions	Standard
10 — 8	OFF	Approx. 1 kΩ
	ON	Less than 1 Ω

- Lane departure warning OFF switch

Terminal No.	Inspection conditions	Standard
9 — 8	OFF	Approx. 1 kΩ
	ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

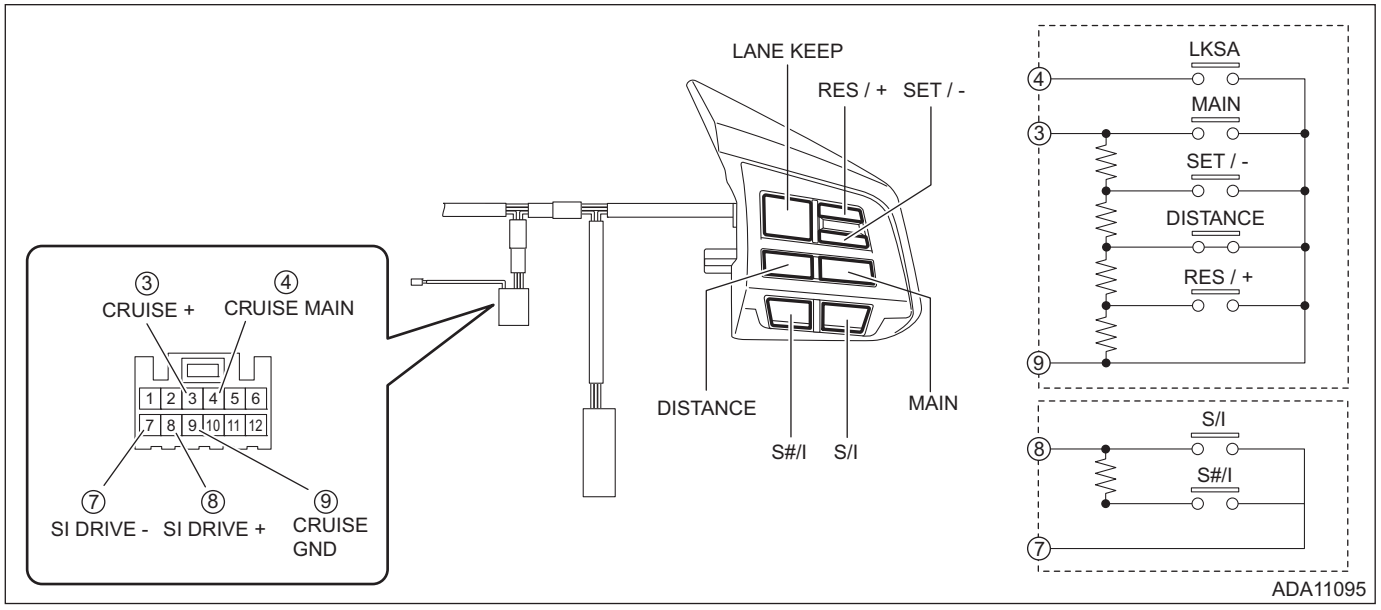
Terminal No.	Inspection conditions	Specification
6 (+) — 7 (–)	Apply battery voltage.	Light ON

3) Replace the stereo camera cover assembly if faulty is found in the inspection.

2. EyeSight STEERING SWITCH

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions		Standard
3 — 9	MAIN SET/– DISTANCE RES/+	All OFF	Approx. 4,020 Ω
	MAIN	ON	Less than 1 Ω
	SET/–	ON	Approx. 250 Ω
	DISTANCE	ON	Approx. 680 Ω
	RES/+	ON	Approx. 1,470 Ω
4 — 9	LANE KEEP	OFF	1 MΩ or more
		ON	Less than 1 Ω
8 — 7	S/I S#/I	All OFF	3 MΩ or more
	S/I	ON	Less than 1 Ω
	S#/I	ON	Approx. 1,800 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
10 (+) — 11 (–)	Apply battery voltage.	Light ON

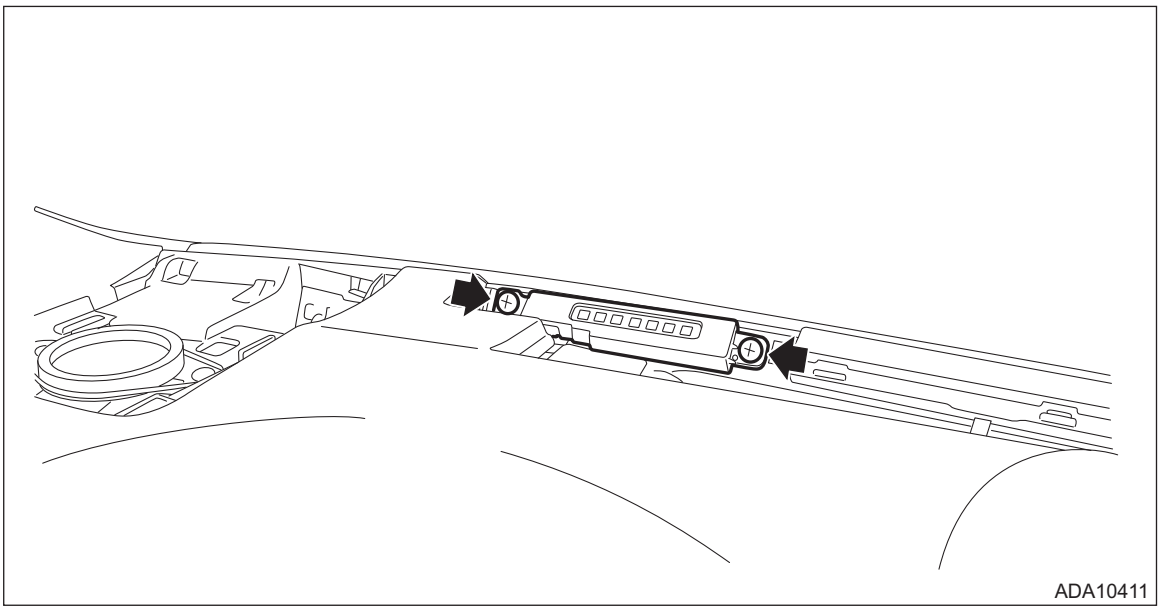
3) Replace the EyeSight steering switch if it is found defective.

8. EyeSight Assist Monitor

A: REMOVAL

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the grille speaker side. <Ref. to ETM-18, TWEETER, REMOVAL, Front Speaker.>
3) Remove the grille - front defroster. <Ref. to AC-74, REMOVAL, Sunload Sensor (Auto A/C Model).>
4) Remove the EyeSight assist monitor.
   (1) Remove the screws.
   (2) Disconnect the connector and remove the EyeSight assist monitor.



B: INSTALLATION

1) Install the EyeSight assist monitor.

NOTE:
- Make sure that the positioning pin is inserted properly.
- Confirm that the connector is locked securely.

2) Install the grille - front defroster.
3) Install the grille speaker side.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

Refer to “Basic Diagnostic Procedure” of “EyeSight ASSIST MONITOR (DIAGNOSTICS)”. <Ref. to EM(diag)-2, Basic Diagnostic Procedure.>

9. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-12, Combination Meter.>

10.Transmission Control Module (TCM)

A: NOTE

For the operation procedures for transmission control module (TCM), refer to “CONTINUOUSLY VARIABLE TRANSMISSION” section. <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>

11.Stop Light & Brake Switch

A: NOTE

For the operation procedures for stop light and brake switch, refer to “BRAKE” section. <Ref. to BR-118, Stop Light Switch.>

12.VDC Control Module and Hydraulic Control Unit (VDCCM&H/U)

A: NOTE

For the operation procedures for VDC control module & hydraulic control module (VDCCM&H/U), refer to “VEHICLE DYNAMICS CONTROL (VDC)” section. <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>

13.Power Steering Control Module

A: NOTE

For the operation procedures for power steering control module, refer to “POWER ASSISTED SYSTEM (POWER STEERING)” section. <Ref. to PS-97, Power Steering Control Module.>

14.Roll Connector

A: NOTE

For the operation procedures for roll connector (steering angle sensor), refer to “AIRBAG SYSTEM” section. <Ref. to AB-61, Roll Connector.>

15.Body Integrated Unit

A: NOTE

Refer to the “SECURITY AND LOCKS” section for operation procedures of the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

16.Reverse Automatic Braking CM

A: NOTE

For the operation procedures for Reverse Automatic Braking CM, refer to “Reverse Automatic Braking” section. <Ref. to RAB-6, Reverse Automatic Braking CM.>

17.Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “EyeSight (DIAGNOSTICS)” section. <Ref. to ES(diag)-50, Diagnostics with Phenomenon.>

EyeSight (DIAGNOSTICS)

ES(diag)

15.	ECM Cancel Code(s) Display	78
16.	ACC Cancel Code(s) Display	81
17.	Active Lane Keep System Code(s) Display	83
18.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	84
19.	Diagnostic Procedure with ECU Cancel Code	107

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Start the diagnosis after the engine has started. (Cruise control main switch does not turn on even if it is pressed before the engine starts.)
• When performing diagnosis, observe the legal speed limit on the road.
• ECM cancel code, ACC cancel code and lane keep assist code are not the diagnostic trouble codes (DTCs). These codes will also appear when the cruise control or the active lane keep is cancelled by the driver's operation. Do not confuse them.
• Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.
• Be sure to record the following data before performing the Clear Memory. (Data must be obtained before inspection because the Clear Memory operation deletes previous faults and temporary stop history.)
– All diagnostic trouble codes (DTCs)
– DTC of stereo camera (current malfunction, past malfunction)
– Freeze frame data of stereo camera
– ACC cancel code of stereo camera
– Lane keep assist code of stereo camera
– EyeSight temporary stop code of stereo camera
– Current data of stereo camera
(To obtain the data concerning camera adjustment information, previous trouble or temporary stop history, all data must be measured for a few seconds after the engine has started.)
• When a temporary stop occurs, stereo camera may be affected by a small amount of dirt that would not be perceived by the driver. In this case, cleaning the windshield glass is effective. <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.>

	Step	Check	Yes	No
1	**PREPARATION BEFORE INSPECTION.** Using the Check List for Interview, confirm the condition of the malfunction occurrence from the user. <Ref. to ES(diag)-3, CHECK, Check List for Interview.>	Is there any component that obviously seems to affect the malfunction?	Repair or replace the component that seems to affect the malfunction.	Go to step **2**.
2	**CHECK DTC.** Read the DTC using Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.> NOTE: When communication with the stereo camera could not be established, check the circuit. <Ref. to ES(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis according to DTC and freeze frame data. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.> <Ref. to ES(diag)-47, Freeze Frame Data Display.> If the diagnostic codes other than the stereo camera are displayed, refer to the diagnosis for the relevant codes.	Go to step **3**.
3	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Using the diagnostics with phenomenon, perform inspection. <Ref. to ES(diag)-50, Diagnostics with Phenomenon.>	Is the vehicle free from any problem described in the diagnostics with phenomenon? / Are indicators normal?	Finish the diagnosis.	Perform the diagnosis according to the diagnostics with phenomenon.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

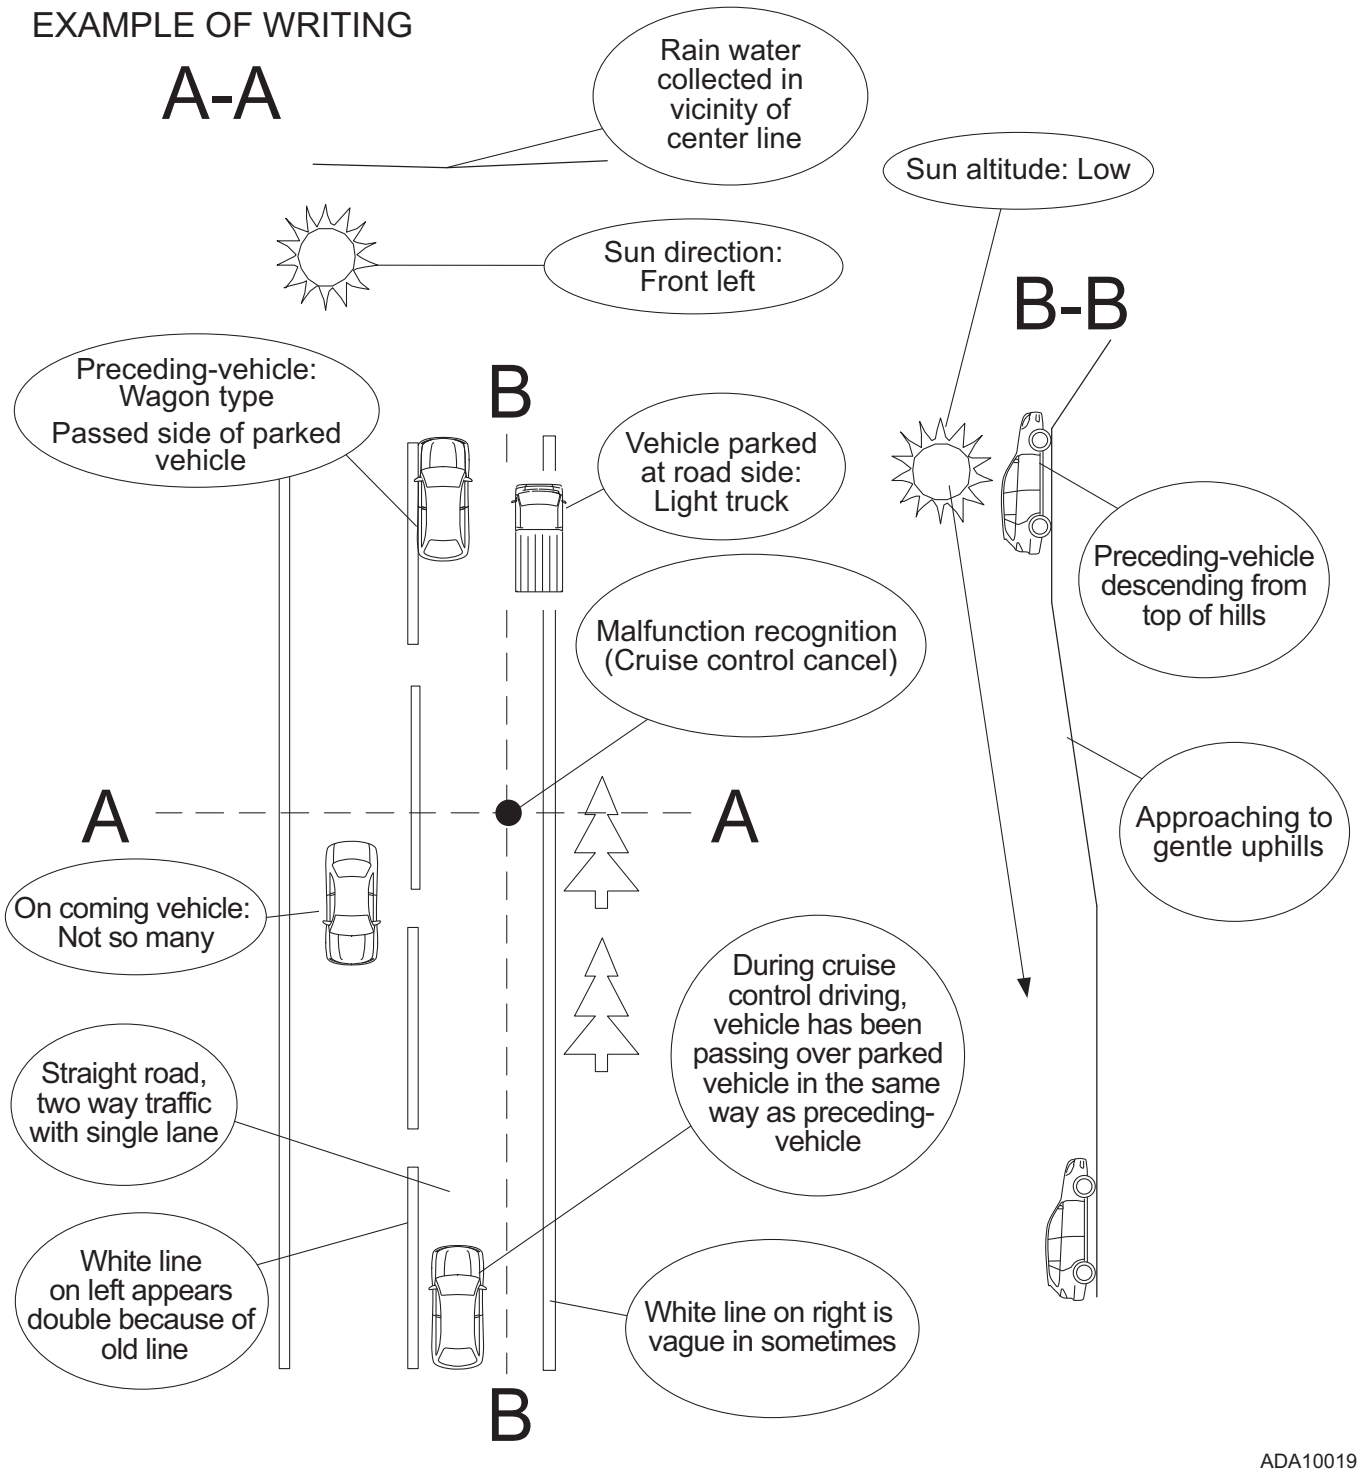
Writer/Inspector	Writer's name		
	Inspector's Name		
Vehicle information	Car accessory equipment condition	Car accessory is installed to the windshield glass.	No/Yes (Position:)
		Other	No/Yes (Accessory's name:)
	Is there any modification for the following items?	Suspension?	Not changed / Changed (Specifically:)
		Headlight?	Not changed / Changed (Specifically:)
		Tire size?	Not changed / Changed (Specifically:)
		Front wiper?	Not changed / Changed (Specifically:)
	How is the condition around camera?	Is there any scratch or damage on the windshield glass?	No/Yes (Specifically:)
		Are antennas, etc. attached on the prohibited area?	No/Yes (Specifically:)
		Is wide mirror or accessory attached?	No/Yes (Specifically:)
	How is the surface condition of the windshield glass?	Presence of oil film, fogging, dirt and/or glass coating	No/Yes (Specifically:)
	How is the condition of the dashboard?	Is there anything that can be easily reflected against the windshield glass on the dashboard?	No/Yes (Specifically:)
	How is the deterioration of the wiper?	Does any streak or uneven wiping area remain in front of the camera?	No/Yes (Specifically:)
	How is the condition of the tire?	Is there any wear? Is there any excessive wear difference?	No/Yes (Specifically:)
		Is the air pressure proper?	Proper/Improper (Specifically:)
	How is the condition of the camera lens filter?	Is there finger print adhesion or cracks on the lens filter?	No/Yes (Specifically:)

Check List for Interview

Description of malfunction	What kind of malfunction has been detected?	Failure / temporary stop / faulty operation of adaptive cruise control / faulty operation of pre-collision brake / other faulty operations	
	What kind of DTC and/or cancel code is displayed?		
	How is the meter display?	EyeSight warning light	Off/On/Blink
		Pre-collision brake OFF indicator light	Off/On
		Lane departure warning OFF indicator light	Off/On
		Multi information display	• EyeSight Disabled No Camera View • EyeSight Disabled Temp Range • Halt

Check List for Interview

<table>
<tr><td rowspan="10">Occurrence conditions</td><td>Occurrence date</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Vehicle speed at occurrence</td><td>Approx. km/h (MPH)</td><td>Occurrence timing</td><td>During driving / during stopping / continues after engine has started</td></tr>
<tr><td>Road type</td><td>Express way / limited highway / main highway / general road</td><td>Weather</td><td>Fine/cloudy/rainy/snowy/other</td></tr>
<tr><td>Road condition ①</td><td>Dry/slippery (Rainy • compacted snow • icy road)</td><td>Ambient temperature</td><td>Approx. ° C(°F)</td></tr>
<tr><td>Road condition ②</td><td>Asphalt / gravel / earth and sand / other</td><td>Position of solar radiation</td><td>Described in the detailed chart when the weather is fine.</td></tr>
<tr><td>Road shape</td><td>Uphill / downhill / bank / roll / uneven surface</td><td>Time elapsed after engine start</td><td>Immediately after engine start / within 5 minutes after engine start / more than 5 minutes after engine start</td></tr>
<tr><td>Wiper operation status</td><td>OFF/INT/LO/HI/AUTO</td><td>Light on status</td><td>Off / LO On / HI On</td></tr>
<tr><td>Vehicle weight</td><td colspan="3">Number of passengers: ( ),
Did the vehicle carry heavy load? (No/Yes (Approx. kg))</td></tr>
<tr><td colspan="4">Detailed chart
(Refer to the example of description.)</td></tr>
<tr><td colspan="4">In case of malfunction caused by temporary stop or faulty operation, describe the details by referring to the example below so that the following conditions can be recognized. (Images taken with a digital camera, etc. are acceptable.)
• Road shape (straight, curve, tunnel, number of lane, etc.)
• Road grade and it's change
• Presence of white line, guardrails and/or side wall (degree of clarity)
• Position of the sun
• Presence and shape of preceding vehicle, oncoming vehicle, vehicle running on the next lane or pedestrian
• Presence and shape of surrounding building or structure
• Traveled course of own vehicle and preceding vehicle</td></tr>
</table>



EXAMPLE OF WRITING
A-A
Rain water collected in vicinity of center line
Sun direction: Front left
Sun altitude: Low
B-B
Preceding-vehicle: Wagon type
Passed side of parked vehicle
B
Vehicle parked at road side: Light truck
Preceding-vehicle descending from top of hills
Malfunction recognition (Cruise control cancel)
A
A
Approaching to gentle uphills
On coming vehicle: Not so many
During cruise control driving, vehicle has been passing over parked vehicle in the same way as preceding-vehicle
Straight road, two way traffic with single lane
White line on left appears double because of old line
White line on right is vague in sometimes
B
ADA10019

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:
• Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch.

2. EyeSight

CAUTION:
• Do not hold the camera unit of the stereo camera.
• Do not touch the lens on the stereo camera.
• Do not clean the lens of the stereo camera.
• When cleaning the windshield glass, use care so that the glass cleaner, etc. does not come in contact with the lens of the stereo camera.
• Do not make an impact or apply excessive force to the stereo camera.
• Do not disassemble the stereo camera.
• Do not change the installation position of the stereo camera or do not modify the surrounding structure.
• If the stereo camera or windshield glass is removed or replaced, always adjust or check the stereo camera.
• When lifting up the vehicle to rotate the tires, turn off the pre-crash function.
• Stereo camera axis may be displaced even in a minor collision. So be sure to adjust the stereo camera even when the EyeSight warning light is not illuminated or when the "Stereo Camera Temporary Stop" is not displayed on the multi-information display.
• When removing the stereo camera cover assembly, cover it with a copy paper or similar dust-free paper to avoid any interference to the camera lens, and tape the paper while being careful not to let the adhesive surface contact the glass surface. Be sure to remove the paper after the procedure. <Ref. to ES-7, REMOVAL, Stereo Camera.>

B: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to "Application help".

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
Masking tape	Used for removing and installing stereo camera cover assembly.

TOOL NAME	REMARKS
DST-i	Used for Subaru Select Monitor 4.

C: INSPECTION

1. BATTERY

Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>

2. WINDSHIELD GLASS AND DASHBOARD

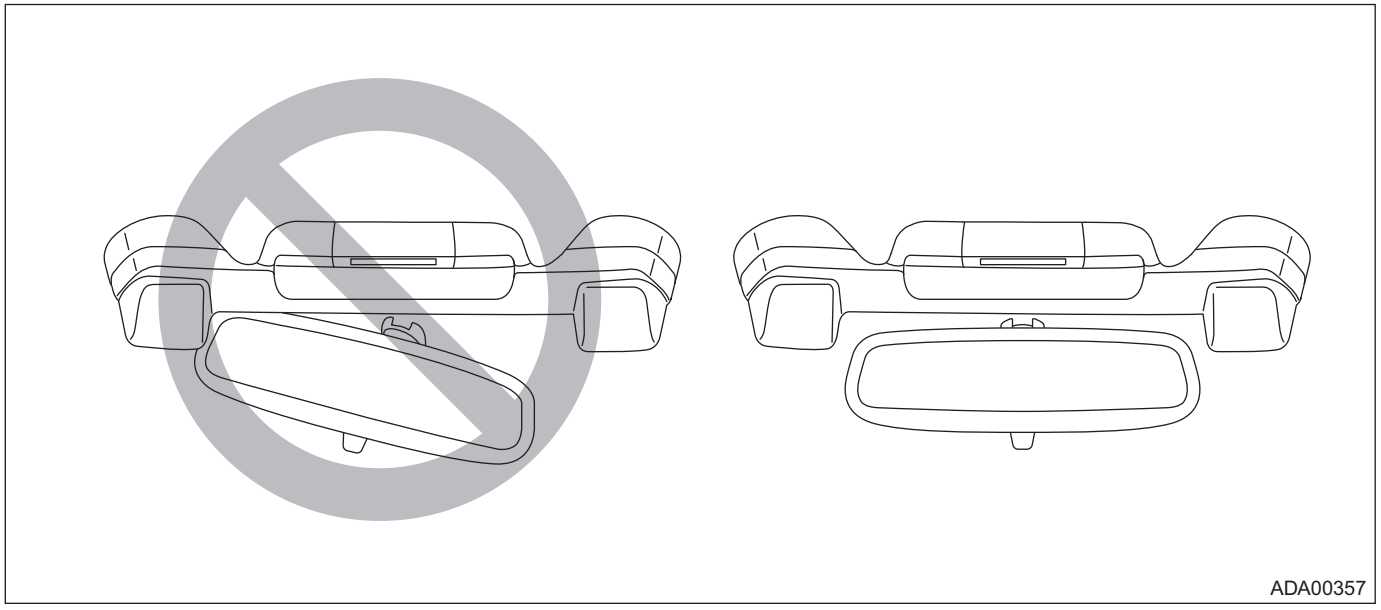
Remove the windshield glass and dashboard in front of the stereo camera. <Ref. to PC-8, CHECK WINDSHIELD GLASS INCLUDING PROHIBITED AREA FOR MODEL WITH HBA AND EyeSight, CAUTION, Precaution.>

3. REAR VIEW MIRROR

Check the rear view mirror condition.

Standard:

The rear view mirror other than genuine parts shall not be used. (Wide mirrors shall not be used)
The visibility of the stereo camera shall not be blocked.
— This will affect the visibility of the stereo camera, causing the system not to operate correctly.



4. FRONT WIPER

Check the wiping condition of windshield glass.

Standard:

Use Subaru genuine part only for wiper blade body and blade rubber.
— Using the part other than genuine part will affect the recognition of the stereo camera, which may cause the function not to operate correctly.
Do not continue to use damaged blade rubber.
— The windshield glass may be damaged. If the wiping performance decreases or any distinct streak is found, replace it as soon as possible.

NOTE:
Clean the windshield glass if there is an oil film or any dirt on the surface.

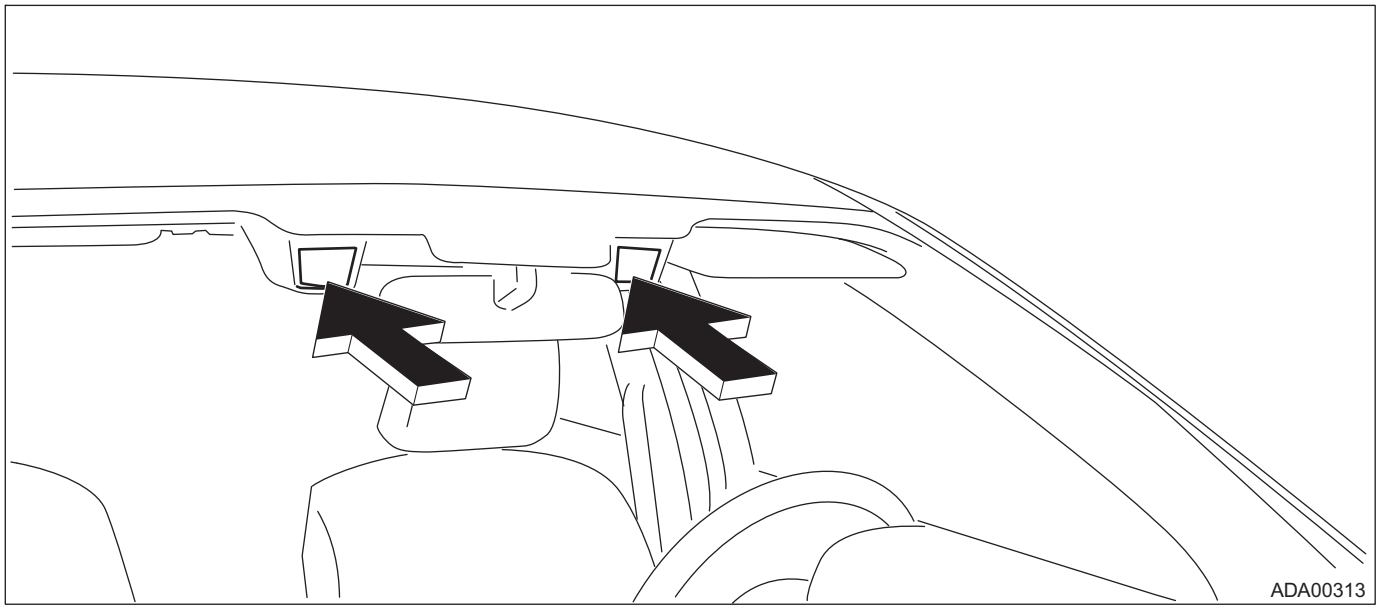
5. TIRE INFLATION PRESSURE

Check the tire air pressure.

Standard:
Adjust to the specified air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>
Do not install worn tire or tires with excessive wear difference.
Install tires with specified size.

6. STEREO CAMERA

Through the windshield glass, check if there are any fingerprints or faults such as crack found on lens filters at the left and right camera lenses of the stereo camera.



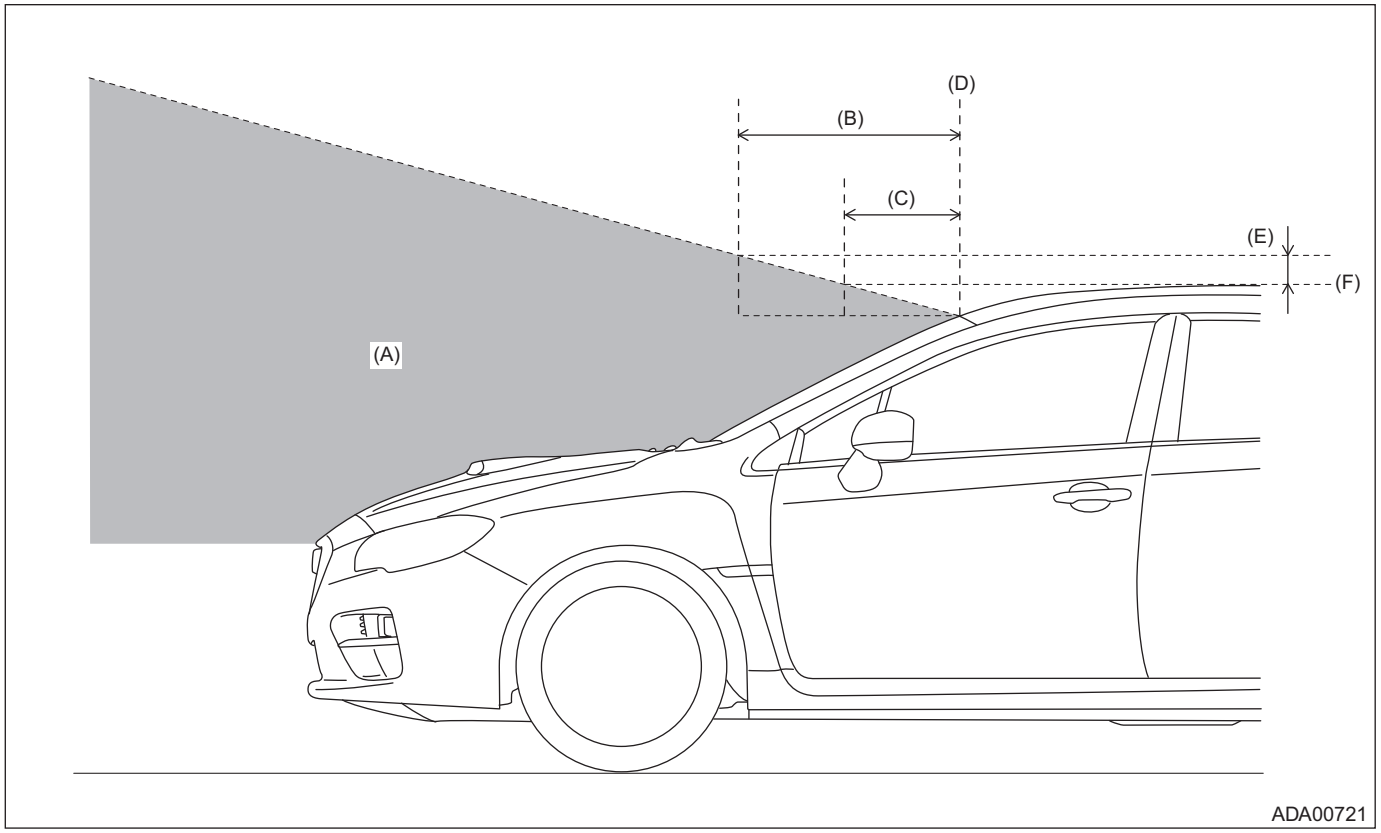
NOTE:
- Do not remove the camera or camera cover to check the lens.
- When spider's web or insects are found within the camera view or inside the lens hood, remove it by blowing air etc. while taking care not to touch the lens surface. Do not use a hand or a cloth.
- Thin and uniform adhesion of dust, dirt or tobacco stains to the lens filter surface resulting from normal use will not be an obstacle. Do not attempt to clean in such cases.
- If an oil film such as a fingerprint or any excessive dirt adheres, or if the lens filter cracks, replace the stereo camera. <Ref. to ES-7, Stereo Camera.>
- If the fingerprint adhesions or cracks occur on the lens filter, the following failures may arise.
  – The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the headlight of the oncoming vehicle.
  – The vehicle may not be able to detect the preceding vehicle or obstacle due to the effects of the brake light operation of the preceding vehicle.
  – All the functions of the EyeSight may be suspended by the self-diagnosis function equipped with the camera.
  – When the lens filter is broken, the vehicle may not be able to detect the preceding vehicle or obstacle all day and all night.
- Do not clean the lens filter with any cleaner. It is quite difficult to uniformly clean both of the right and left lenses, and such an attempt just ends up spreading dirt and will cause problems as same as those from oil film.

7. LOAD ON THE ROOF

Check that load on the roof is not sticking out to the front of the stereo camera.

Standard:

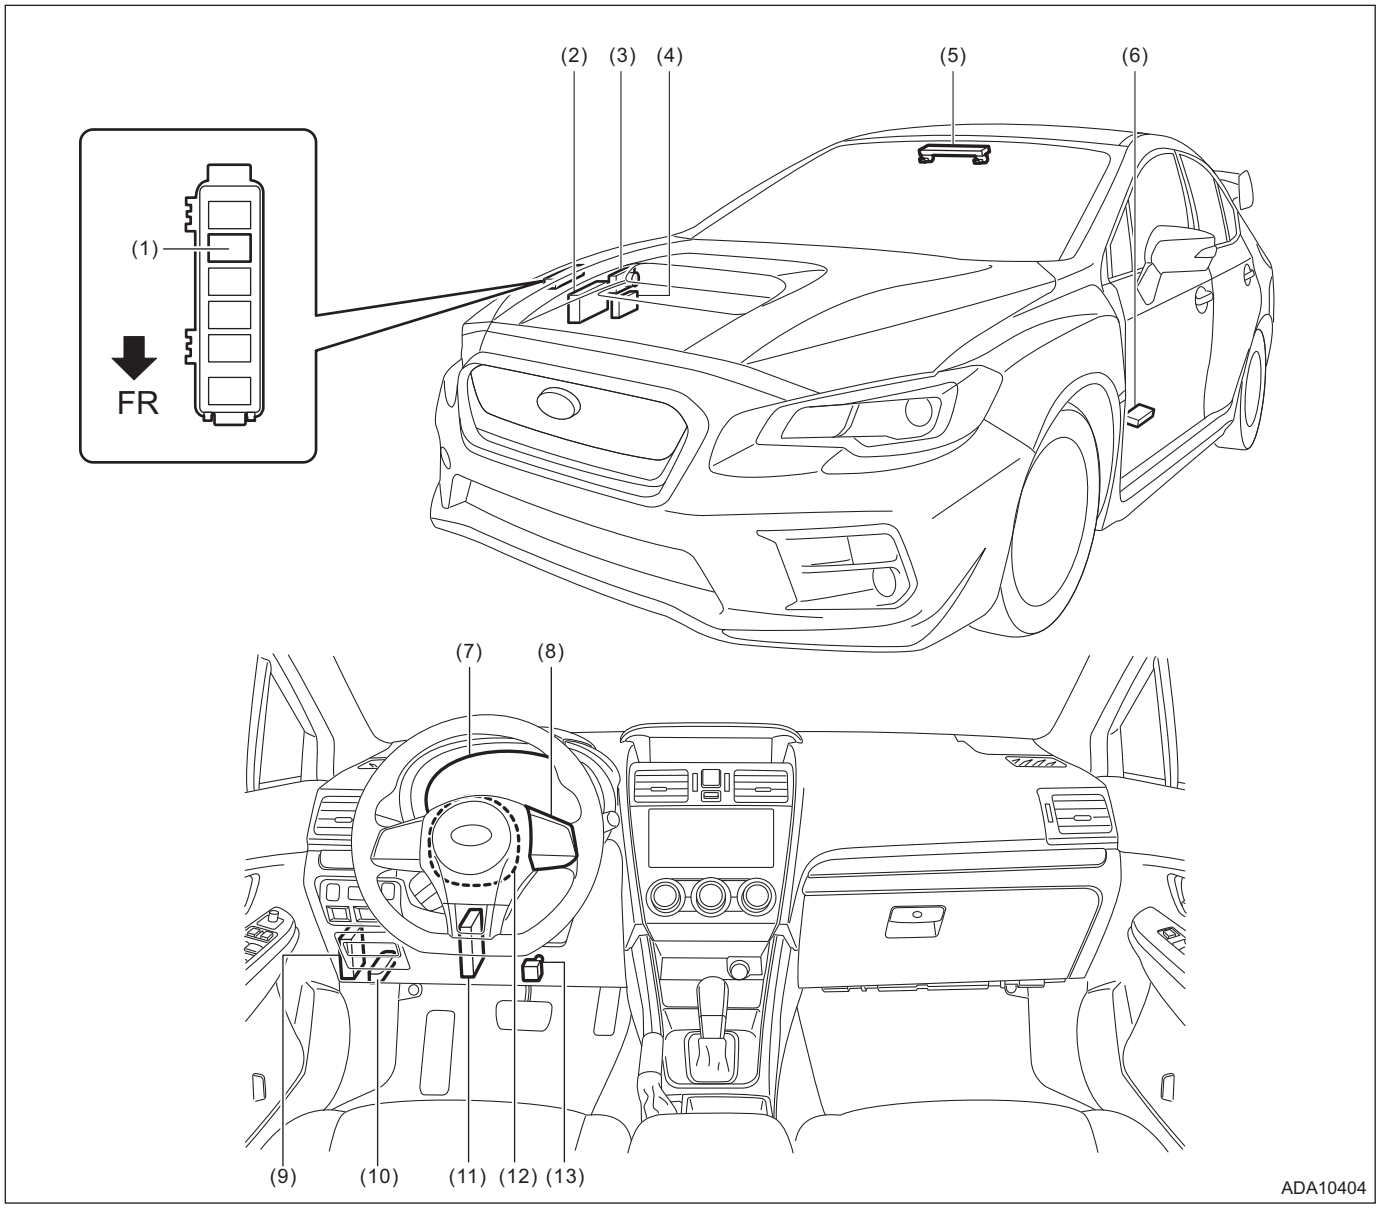
The load on the roof is placed outside the prohibited area (A) shown in the figure below.



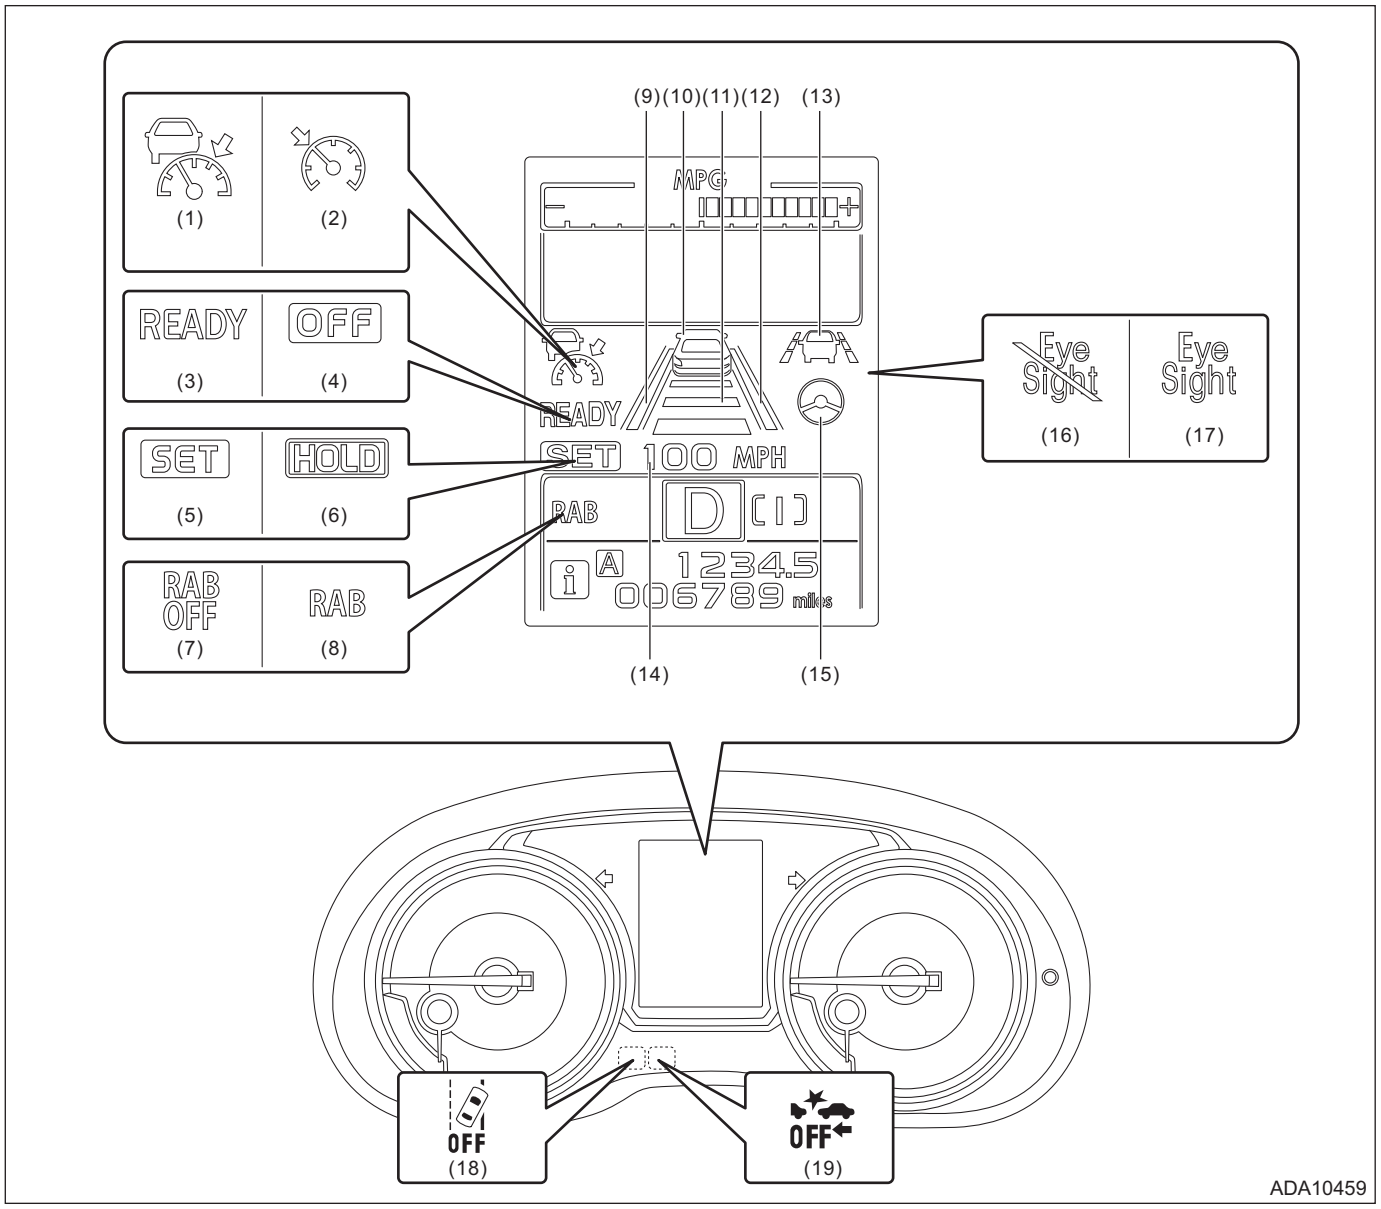
(A) Prohibited area
(B) 870 mm (34.3 in)
(C) 500 mm (19.7 in)
(D) Windshield glass upper end
(E) 100 mm (3.9 in)
(F) Highest surface of the roof

4. Electrical Component Location

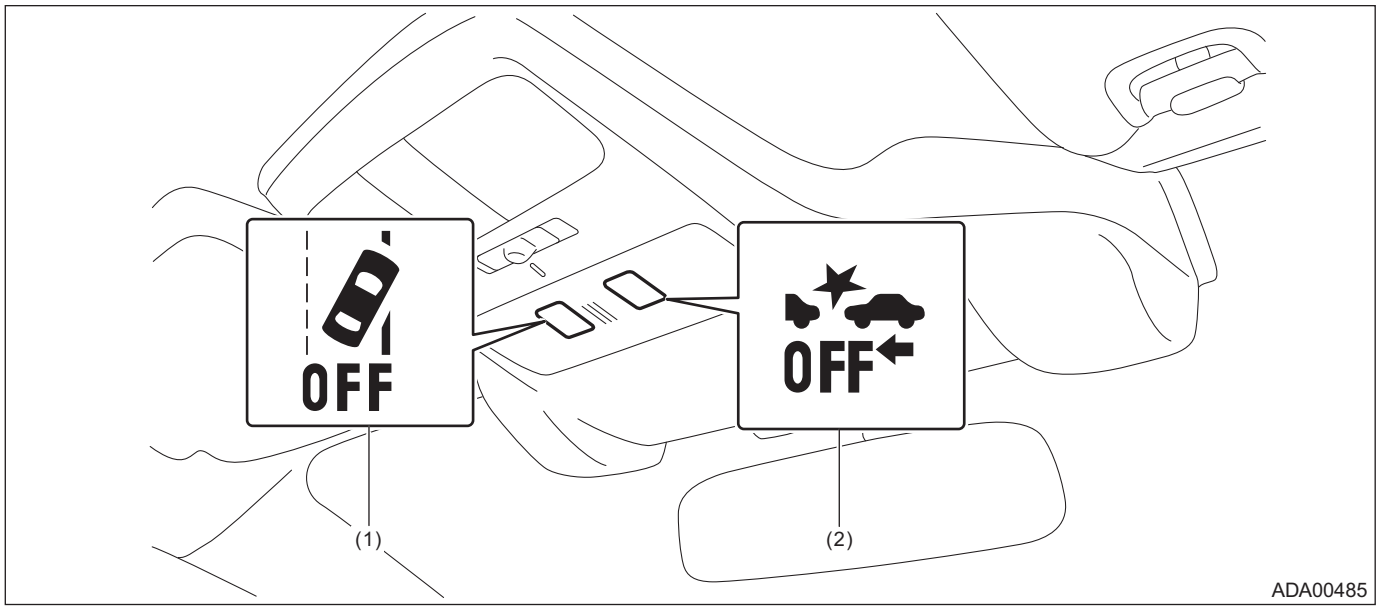
A: LOCATION



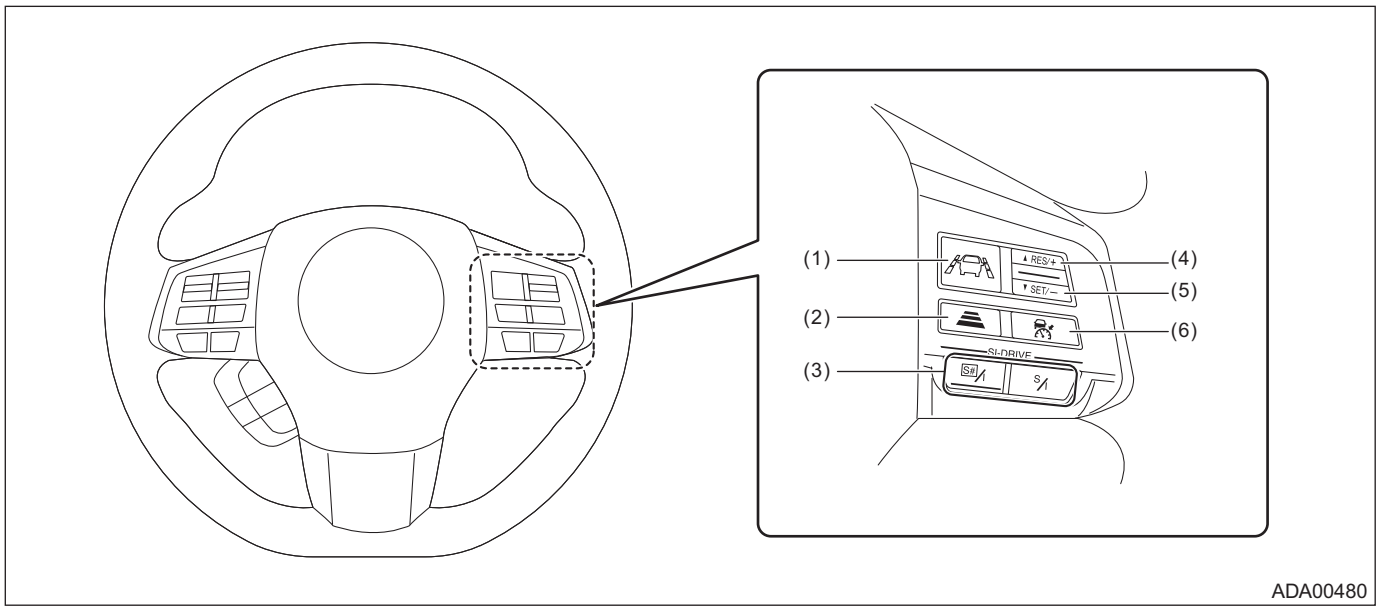
(1) Brake light relay
(2) ECM
(3) VDC CM
(4) Power steering CM
(5) Stereo camera
(6) RAB CM
(7) Combination meter
(8) EyeSight steering switch
(9) Body integrated unit
(10) Data link connector
(11) TCM
(12) Steering angle sensor
(13) Stop light and brake switch



(1) Adaptive cruise display
(2) Conventional cruise display
(3) READY indicator
(4) OFF indicator
(5) SET indicator
(6) HOLD indicator
(7) RAB OFF indicator
(8) RAB warning indicator
(9) Lane indicator (left)
(10) Preceding vehicle indicator
(11) Following distance setting indicator
(12) Lane indicator (right)
(13) Lane keep display
(14) Set vehicle speed display
(15) Steering wheel indicator
(16) EyeSight temporary stop indicator
(17) EyeSight warning indicator
(18) Lane departure warning OFF indicator light
(19) Pre-collision brake OFF indicator light



(1) Lane departure warning OFF switch
(2) Pre-collision brake OFF switch

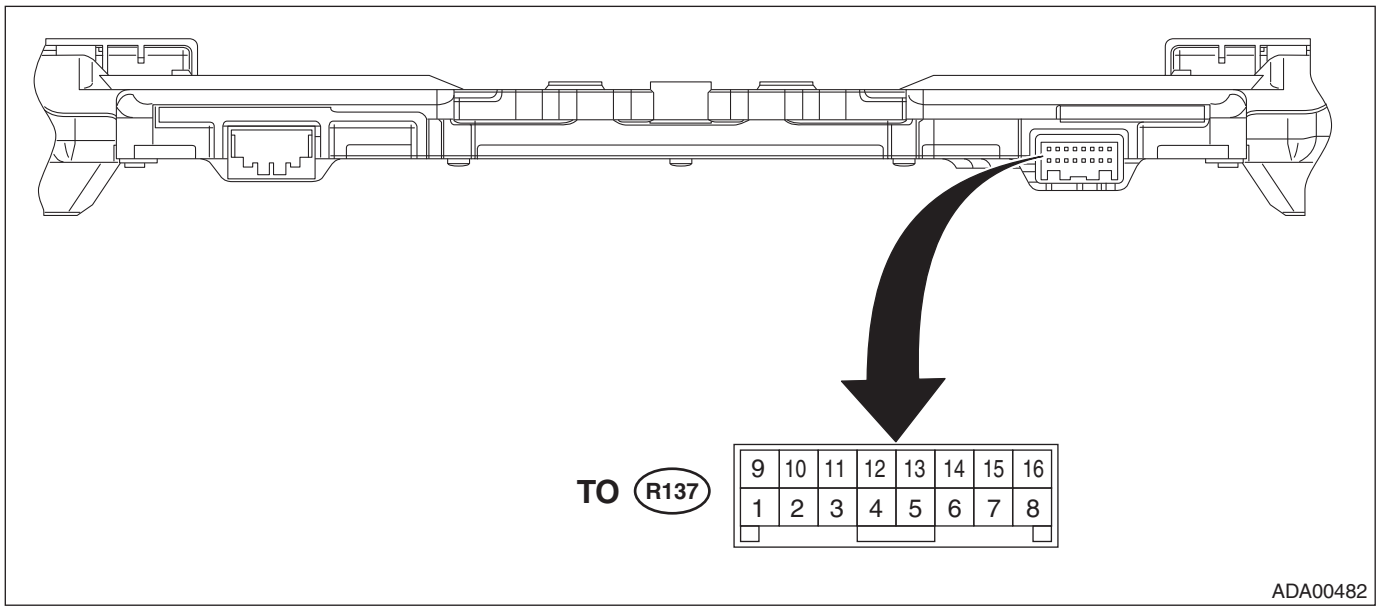


(1) Lane keep switch
(2) Following distance setting switch
(3) SI-DRIVE switch
(4) RES/+ (resume/plus) switch
(5) SET/– (set/minus) switch
(6) CRUISE switch

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. STEREO CAMERA



Terminal No.	Content	Measuring condition	Standard
(R137) No. 1 ←→ Chassis ground	Local CAN-H (RAB communication line)	Always	1 kΩ or more
(R137) No. 2 ←→ Chassis ground	Local CAN-L (RAB communication line)	Always	1 kΩ or more
(R137) No. 3	—	—	—
(R137) No. 4	—	—	—
(R137) No. 5	—	—	—
(R137) No. 6 ←→ Chassis ground	Ignition power supply	Ignition switch OFF → ON	Less than 1 V → 9 — 16 V
(R137) No. 7 ←→ Chassis ground	GND	Always	Less than 1 Ω
(R137) No. 8 ←→ Chassis ground	Battery power supply	Always	9 — 16 V
(R137) No. 9 ←→ Chassis ground	Main CAN-L	Always	1 kΩ or more
(R137) No. 10 ←→ Chassis ground	Main CAN-H	Always	1 kΩ or more
(R137) No. 11	—	—	—
(R137) No. 12 ←→ Chassis ground	Pre-collision brake OFF switch input	Pre-collision brake OFF switch OFF → ON	Approx. 1 kΩ → less than 1 Ω

		ALL OFF → SET/– ON	0.6 V — 1.5 V
		ALL OFF → CRUISE ON	0.0 V — 0.5 V
		ALL OFF → lane keep switch ON	3.6 V — 4.5 V
(R137) No. 15 ←→ Chassis ground	EyeSight steering switch GND	Always	Less than 1 Ω

Terminal No.	Content	Measuring condition	Standard
(R137) No. 16 ←→ (R137) No. 15	EyeSight steering switch input	ALL OFF (no switch operation)	2.6 V — 5.0 V
		ALL OFF → RES/+ ON	2.6 V — 5.0 V
		ALL OFF → following distance ON	2.6 V — 5.0 V
		ALL OFF → SET/– ON	2.6 V — 5.0 V
		ALL OFF → CRUISE ON	2.6 V — 5.0 V
		ALL OFF → lane keep switch ON	0.0 V — 2.5 V

2. ENGINE CONTROL MODULE (ECM)

For details on the input/output signals for the engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-22, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>

3. VDC CONTROL MODULE (VDCCM)

For details on the input/output signals for VDC control module, refer to VDC (DIAGNOSTICS). <Ref. to VDC(diag)-16, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. TRANSMISSION CONTROL MODULE (TCM)

For details on the input/output signals for the transmission control module, refer to AUTOMATIC TRANSMISSION (DIAGNOSTICS). <Ref. to CVT(diag)-10, Transmission Control Module (TCM) I/O Signal.>

5. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

6. COMBINATION METER

For details on the input/output signals for the combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-6, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

7. POWER STEERING CM

Refer to the POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS) for the I/O signal of the power steering CM. <Ref. to PS(diag)-9, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

8. RAB CM

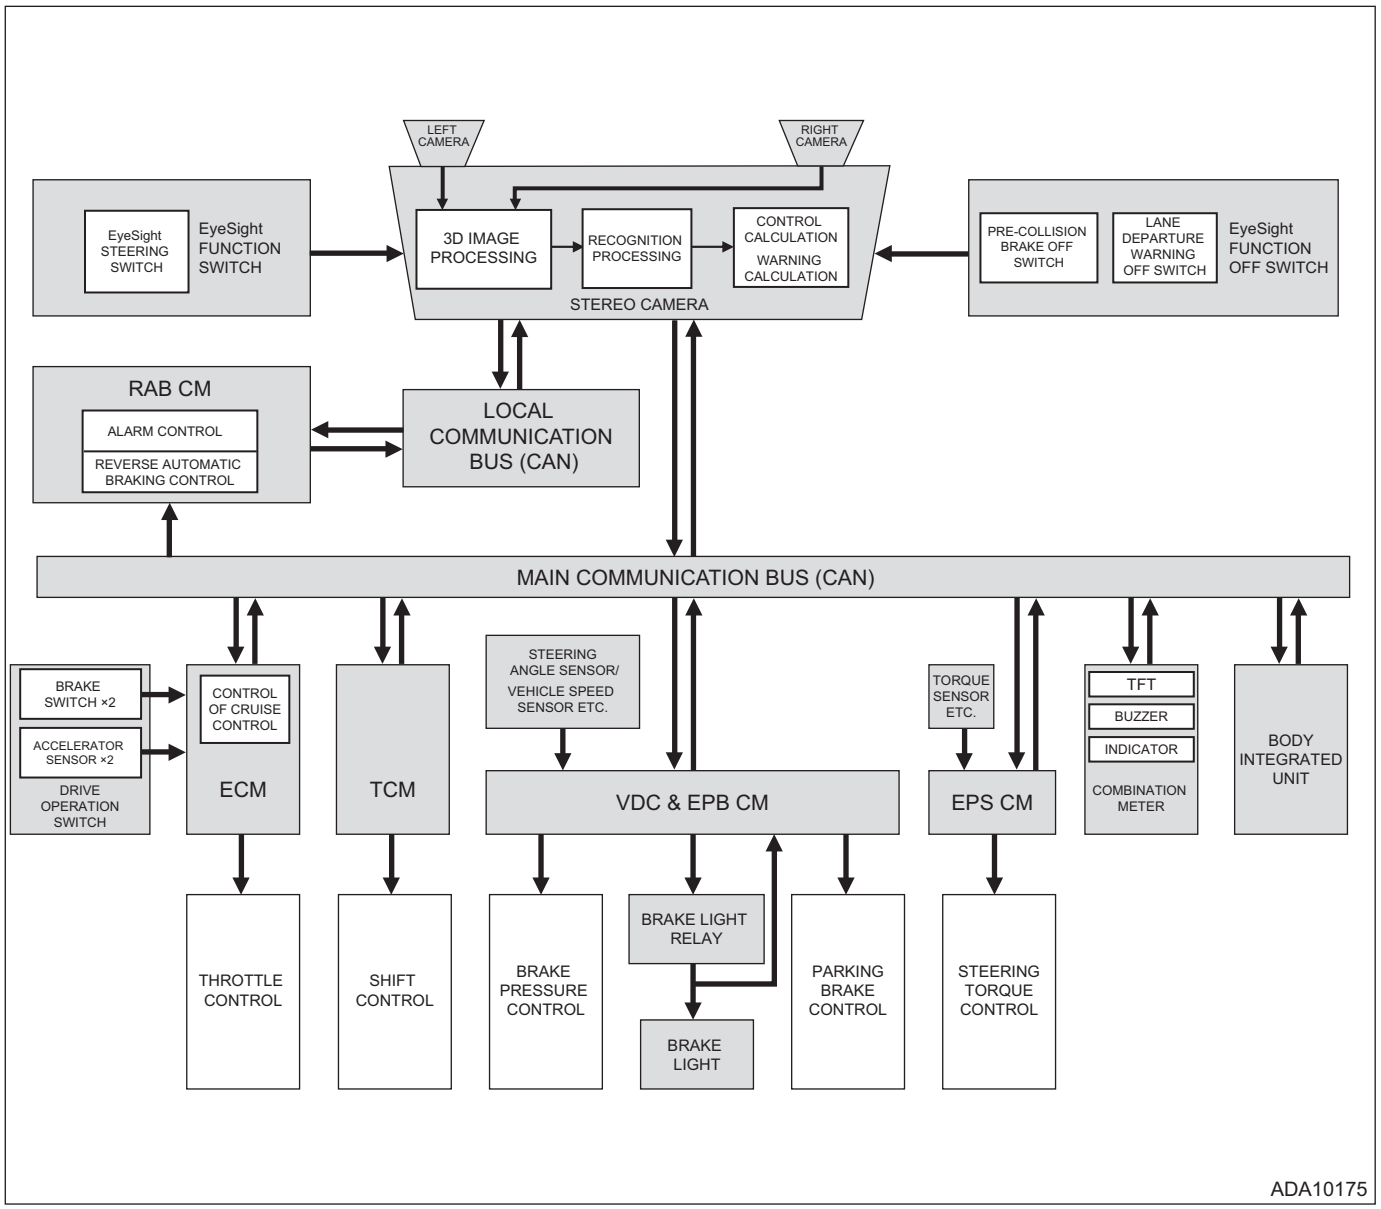
For details on the input/output signals for RAB CM, refer to RAB (DIAGNOSTICS). <Ref. to RAB(diag)-7, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

B: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-217, EyeSight System.>

C: SYSTEM BLOCK DIAGRAM

Main signals used between stereo camera and relevant CM



6. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

For on-board diagnosis function of the EyeSight, use the Subaru Select Monitor.
The on-board diagnosis function operates in three categories, which are used depending on the type of problems.
1) Diagnosis with diagnostic trouble code (DTC):
When the electrical failure occurs in the EyeSight, DTC is detected from the stereo camera. If the DTC is detected, the relevant DTC is displayed by illuminating or blinking the EyeSight warning light. To check the details concerning the DTC, use the Subaru Select Monitor.
2) Diagnosis with cancel code and lane keep assist code:
(1) This category of diagnosis requires actual driving of the vehicle in order to determine the cause in such a case when the set speed is cancelled during cruise control driving or the control is cancelled during active lane keep driving although any cancel condition is not entered.
(2) With ECM cancel code and stereo camera ACC cancel code, cancel condition (Code No.) is stored when detected during cruise control driving. With lane keep assist code of stereo camera, cancel condition (Code No.) is stored if active lane keeping does not operate or if control cancel occurs during active lane keep driving.

CAUTION:
• With ECM cancel code, not only the cruise control "cancel" occurred (although the driver does not input the "cancel" operation), but also the "cancel" condition input by the driver is stored.
• The latest memory contents of the ECM cancel code (latest code) is cleared when the ignition switch is turned to OFF. However, memory contents set by the diagnosis of faulty switches related to the system and cruise control will remain as trouble history (memory code) after the ignition switch is turned to OFF.
3) Real-time diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.
(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.
(2) Monitor the signal conditions from switches and sensors.

2. BASIC OPERATION

For detailed operation procedures, refer to "Application help".

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

- Communication error with stereo camera

Detecting condition:

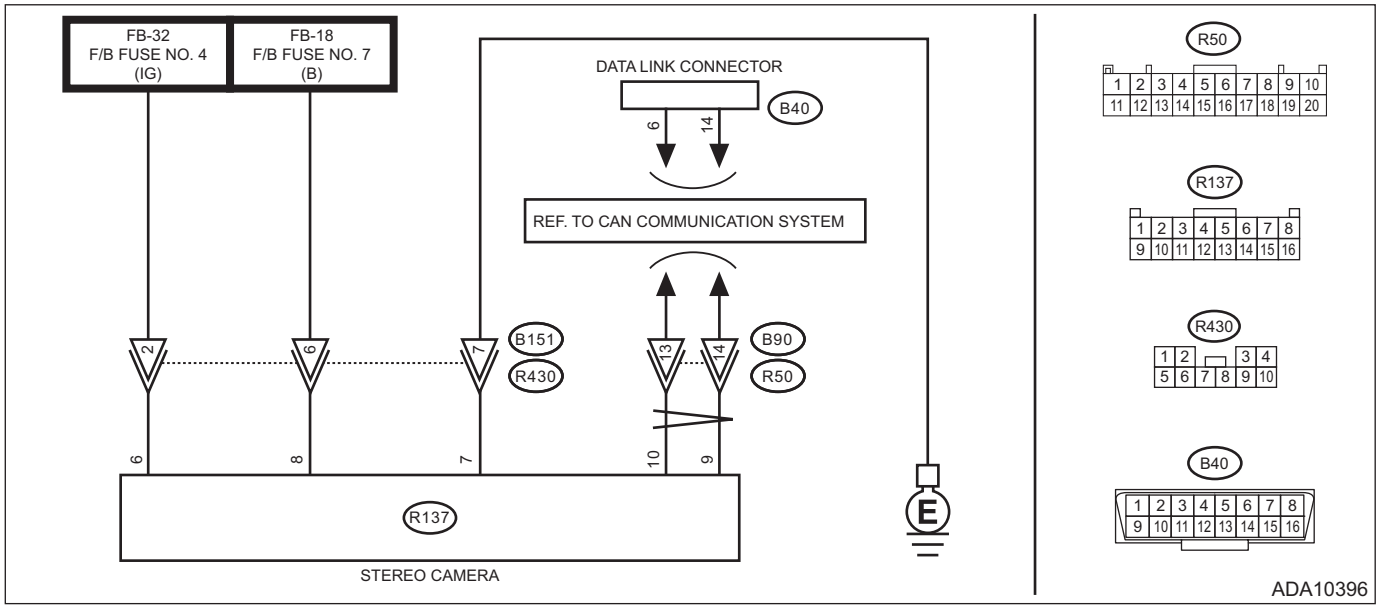
- Defective harness connector
- Power supply circuit malfunction
- Defective stereo camera
- Defective CAN system
- Defective Subaru Select Monitor

Trouble symptom:

- EyeSight warning light blinks.

Wiring diagram:

EyeSight System <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH.**	Is the ignition switch ON?	Go to step **2**.	Turn the ignition switch to ON, and select «EyeSight» using the Subaru Select Monitor.
2	**CHECK BATTERY.** 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 10 V or more?	Go to step **3**.	Charge or replace the battery.
3	**CHECK BATTERY TERMINAL.**	Is the battery terminal contact proper?	Go to step **4**.	Connect the battery terminal securely or replace it.
4	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether the communication can be executed normally.	Is the communication between Subaru Select Monitor and body integrated unit normal?	Go to step **5**.	Check the connection of the Subaru Select Monitor, and perform communication with the body integrated unit again.
5	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **6**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
6	**CHECK HARNESS CONNECTOR BETWEEN STEREO CAMERA AND DATA LINK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the stereo camera connector. 3) Measure the resistance between the stereo camera and the data link connector. ***Connector & terminal*** ***(R137) No. 10 — (B40) No. 6:*** ***(R137) No. 9 — (B40) No. 14:***	Is the resistance less than 10 Ω?	Go to step **7**.	Repair or replace the harness and connectors between the stereo camera and data link connector.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Measure the voltage between stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
8	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF, then disconnect the ground cable from battery. 2) Measure the resistance between harness connector of stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **9**.	Check the harness from stereo camera to chassis ground.
9	**CHECK CONNECTOR.**	Is there poor contact of stereo camera connector?	Repair the connector, or replace harness.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

7. Read Current Data

A: OPERATION

1. STEREO CAMERA

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

- **LIST**

Display	Contents	Unit of measure	Note
Camera ID	Display of serial No. inside the stereo camera	—	—
Control Software Version	Control software version	—	—
Recognition Software Version	Recognition software version	—	—
Model Registration	Display of displacement and vehicle model	—	—
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V	—
Initial Aiming Completion Status	Initial aiming completion flag	—	Quit (After factory shipping, when stereo camera is replaced or adjusted, "Not Finish" is displayed.)
Aiming Completion Status	Aiming completion flag	—	Not Finish (After factory shipping, when stereo camera is replaced or adjusted, "Finished" is displayed.)
Ignition SW ON Count	Total count of ignition switch ON	times	—
Trip Meter	Odometer value	• km • mile	—
Engine RPM	Engine speed	rpm	—
Accelerator Opening Angle	Acceleration opening angle signal	%	—
ETC Throttle Angle Signal	Electronic throttle control opening angle signal	%	—
Steering Angle Sensor Value (Right +) (Left -)	Steering angle sensor value signal	deg	—
Longitudinal G Sensor Value (Deceleration +) (Acceleration -)	Longitudinal acceleration	m/s^2	—
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa	—
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa	—
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa	—
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa	—
Target Torque	Target torque command signal	Nm	—
Engine Torque	Actual engine shaft torque value	Nm	—

Display	Contents	Unit of measure	Note
AT rapid start prevention, engine torque down command value	AT false start prevention control, engine torque down command value Or AT false start (reverse) prevention control, engine torque down command value	Nm	—
Warning Code	Warning code signal	—	• No alarm • HALT • Brake More or Following Distance or Pre-Collision Brake(1st) • ACC Cancel • Pre-Collision Brake (2nd Braking) • LDW/Privent • Lane Sway Warning • L_Keep Cancel • Detection/Lost of Vehicle Beep • Lead Vehicle Start Alert • Steering Wheel Not Held • Pre-Collision Throttle Management
Brake SW Input	Brake switch signal status	—	• OFF • ON
Brake Lamp SW (BIU)	Brake light switch signal status	—	• OFF • ON
Brake Lamp SW (VDC)	Brake light switch status	—	• OFF • ON

Image ON/OFF status	ON/OFF status of present image sensor	—	• OFF • ON
Camera Temperature (Current)	Current temperature display of stereo camera internal circuit	°C	—
Camera Temperature Operation Status	Camera temperature and operation status	—	• Normal • High Temp. • Low Temp.
Camera Temperature (Previous Maximum Value)	Display of stereo camera internal circuit temperature (past MAX value)	°C	—
Ignition SW ON Count When Camera Temperature (Previous Maximum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MAX value)	times	—
Camera Temperature (Previous Minimum Value)	Display of stereo camera internal circuit temperature (past MIN value)	°C	—

Display	Contents	Unit of measure	Note
Ignition SW ON Count When Camera Temperature (Previous Minimum Value)	Ignition switch ON count when stereo camera internal circuit temperature is displayed (past MIN value)	times	—
EyeSight Temporary 0 Continuation Count	Continuation count of EyeSight temporary stop 0	times	—
EyeSight Temporary 1 Continuation Count	Continuation count of EyeSight temporary stop 1	times	—
EyeSight Temporary 2 Continuation Count	Continuation count of EyeSight temporary stop 2	times	—
EyeSight Temporary 3 Continuation Count	Continuation count of EyeSight temporary stop 3	times	—
EyeSight Temporary 4 Continuation Count	Continuation count of EyeSight temporary stop 4	times	—
EyeSight Temporary 5 Continuation Count	Continuation count of EyeSight temporary stop 5	times	—
EyeSight Temporary 6 Continuation Count	Continuation count of EyeSight temporary stop 6	times	—
EyeSight Temporary 7 Continuation Count	Continuation count of EyeSight temporary stop 7	times	—
EyeSight HALT Code	EyeSight halt code signal	—	• OFF • E1(No Camera View) • E2(Out of Temp. Range) • E3(Other)
Ambient Air Temperature(Control)	Outside temperature for control signal	°C	—
Head Lamp (Clearance light)	Headlight small signal status	—	• OFF • ON
Headlight SW (LO)	Headlight LO switch operation status	—	• OFF • ON
Head Lamp High Beam	Headlight Hi beam signal status	—	• OFF • ON
Wiper SW (Front)	Front wiper switch operation status	—	• OFF • ON
VDC OFF SW	VDC OFF signal	—	• OFF • ON
VDC "OFF" Indicator Status	VDC OFF indicator status	—	• OFF • ON
EyeSight Input Control Suspended Status (EPS)	Overheat protection limit signal	—	• Not Detect • Detect
Camera Failure Real-Time Check (At The Time of Failure)	Camera failure real-time information at the time of failure	—	—
Camera Temperature (At The Time of Failure)	Camera temperature sensor at the time of failure	°C	—
Image ON/OFF Status/ Sensor Ready Status (At The Time of Failure)	Image ON/OFF status at the time of failure	—	• OFF • ON
Adaptive Cruise Control Failure (EyeSight → Combination Meter)	Stereo camera failure signal for combination meter	—	• Normal • Abnormal
EyeSight Failure(EyeSight → VDC)	Failure signal of stereo camera to VDC control module	—	• Normal • Abnormal

Display	Contents	Unit of measure	Note
EyeSight Reception (VDC)	Failure signal of stereo camera	—	• Not yet received • Reception
Hill Start Assist Operation Status	Hill start assist operation status signal	—	• Not Operate • Operate
EyeSight Failure (EyeSight → ECM)	EyeSight failure signal	—	• Normal • Abnormal
Engine Failure	Engine failure signal	—	• Normal • Abnormal
Transmission Failure	TCM failure signal	—	• Normal • Abnormal
EyeSight Failure (EPS → EyeSight)	Failure signal for EyeSight (EPS)	—	• Normal • Abnormal
Adaptive Cruise Control Failure (EyeSight → EPS)	Stereo camera failure signal for EPS control module	—	• Normal • Abnormal
ETC Failure	Electronic throttle control failure signal	—	• Normal • Abnormal
EEPROM Failure	Failure signal of combination meter	—	• Normal • Abnormal
Brake Lamp SW Fail Status	Brake light switch failure signal	—	• Normal • Abnormal
Brake Lamp Relay Drive	Brake light relay drive status signal	—	• Not Operating • Operating
EyeSight Communication Error (VDC)	Stereo camera communication failure signal	—	• Normal • Abnormal
Judgment of Lost Communication with Adaptive Cruise Control ECM CAN	No-receive signal of EyeSight CAN data	—	• Normal • Not Receive
EyeSight Received Data (ECM)	NG signal of stereo camera data	—	• Normal • Abnormal
Steering Angle Sensor Error Code	Steering angle sensor error code signal	—	• Normal • EEPROM Abnormal • IG Voltage Drop • Counter Overflow • ROM Trouble • RAM Trouble • Magnetometric Sensor Trouble
EyeSight Customization Change Request (Combination Meter → EyeSight)	EyeSight customization change request signal	—	• OFF • ON
EyeSight Customization Reset Request (Combination Meter → EyeSight)	EyeSight customization reset request signal	—	• OFF • ON

Display	Contents	Unit of measure	Note

2. ENGINE CONTROL MODULE (ECM)

For current data of engine control module, refer to ENGINE (DIAGNOSTICS). <Ref. to EN(w/o STI)(diag)-48, Subaru Select Monitor.>

3. VDC CONTROL MODULE (VDCCM)

For current data of VDC control module, refer to VDC (DIAGNOSTICS). <Ref. to VDC(diag)-19, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

4. TRANSMISSION CONTROL MODULE (TCM)

For current data of transmission control module, refer to CVT (DIAGNOSTICS). <Ref. to CVT(diag)-14, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

5. BODY INTEGRATED UNIT

For current data of body integrated unit, refer to BODY CONTROL (DIAGNOSTICS). <Ref. to BC(diag)-20, LIST, Read Current Data.>

6. POWER STEERING CM

For current data of power steering CM, refer to POWER ASSISTED SYSTEM (POWER STEERING) (DIAGNOSTICS). <Ref. to PS(diag)-11, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

7. COMBINATION METER

For current data of the combination meter, refer to COMBINATION METER (DIAGNOSTICS). <Ref. to MET(diag)-14, LIST, Read Current Data.>

8. RAB CM

For details on the current data for RAB CM, refer to RAB (DIAGNOSTICS). <Ref. to RAB(diag)-14, LIST, Read Current Data.>

8. Real-time Diagnosis

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Data Monitor».
6) Check that the display changes and the contents are correct when performing the operations as follows.

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
  - Item «Brake Lamp SW (BIU)» «Brake SW Input» «Brake Lamp SW (VDC)»
- Turn the main switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “SET/–” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “RES/+” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “Vehicle distance” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Turn the “Lane keep” switch to ON.
  - Item «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)»
- Operate the shift lever.
  - Item «Current gear position»
- Press and hold the pre-collision brake OFF switch.
  - Item «Pre-Collision Brake OFF Indicator»
- Press and hold the lane departure warning OFF switch.
  - Item «Lane Departure Warning OFF Indicator»

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Diagnostic Code(s) Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to ES(diag)-41, LIST, Diagnostic Code(s) Display.>
- Up to ten codes can be stored. When more than ten codes are output, they will not be stored.
- The same code is stored only once, and even when the same code occurs several times, information will not be updated.

B: LIST

- List of Diagnostic Trouble Code (DTC)

DTC	Item	Contents of diagnosis	Reference
U0073	CONTROL MODULE COMMUNICATION BUS OFF	Detected when bus off status (the stereo camera detects the failure and is disconnected from CAN line) occurs.	<Ref. to ES(diag)-84, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	Detected when CAN data from ECM is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0101	LOST COMMUNICATION WITH TCM	Detected when CAN data from TCM is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	Detected when CAN data from VDC is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0126	LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE	Detected when CAN data from steering angle sensor is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0128	LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE	Detected when CAN data from VDC is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0131	LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE	Detected when CAN data from EPS CM is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	Detected when CAN data from body integrated unit is not transmitted to stereo camera.	<Ref. to ES(diag)-84, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	Detected when CAN data from combination meter is not transmitted to stereo camera.	<Ref. to ES(diag)-85, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	Failure counter diagnosis of engine control module (ECM)	<Ref. to ES(diag)-85, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0402	INVALID DATA RECEIVED FROM TCM	Failure counter diagnosis of automatic transmission control module (TCM)	<Ref. to ES(diag)-85, DTC U0402 INVALID DATA RECEIVED FROM TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	Failure counter diagnosis of VDC control module (VDC CM)	<Ref. to ES(diag)-85, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0420	INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE	Failure counter diagnosis of EPS CM	<Ref. to ES(diag)-85, DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	Failure counter diagnosis of body integrated unit	<Ref. to ES(diag)-85, DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	Failure counter diagnosis of combination meter	<Ref. to ES(diag)-85, DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0428	INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE	Failure counter diagnosis of steering angle sensor	<Ref. to ES(diag)-85, DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1073	CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF	Detected when bus off status (the stereo camera detects the failure and is disconnected from the local CAN line) occurs.	<Ref. to ES(diag)-85, DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1233	LOST COMMUNICATION WITH RAB CONTROL MODULE	Detected when CAN data from RAB CM is not transmitted to the stereo camera.	<Ref. to ES(diag)-86, DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
U1534	INVALID DATA RECEIVED FROM SONAR ECU	Failure counter diagnosis of RAB CM	<Ref. to ES(diag)-86, DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2801	TCM ABNORMAL	Detected when error occurs in the automatic transmission.	<Ref. to ES(diag)-86, DTC B2801 TCM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2802	ETC ABNORMAL	Detected when error occurs in the electronic throttle control.	<Ref. to ES(diag)-86, DTC B2802 ETC ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2803	EPB OPERATION PROHIBIT	Detected when error occurs in EPB operation, or when executing VDC brake maintenance mode. (EPB operation prohibited)	<Ref. to ES(diag)-86, DTC B2803 EPB OPERATION PROHIBIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2804	EPB NO ACTIVITY DETECTED	Detected when error occurs in the EPB operation. (EPB operation abnormal)	<Ref. to ES(diag)-86, DTC B2804 EPB NO ACTIVITY DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2806	ECM ABNORMAL	Detected when error occurs in the engine control module (ECM).	<Ref. to ES(diag)-87, DTC B2806 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2807		Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.	<Ref. to ES(diag)-87, DTC B2807 ECM ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2809	VDC MALFUNCTION	Detected when error occurs in the VDC.	<Ref. to ES(diag)-87, DTC B2809 VDC MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280A	VDC ECHO BACK DISAGREEMENT	Detected when error occurs in the VDC. (VDC brake control malfunction 1)	<Ref. to ES(diag)-87, DTC B280A VDC ECHO BACK DISAGREEMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280B	VDC BRAKE FLUID PRESSURE	Detected when error occurs in the VDC. (VDC brake control malfunction 2)	<Ref. to ES(diag)-87, DTC B280B VDC BRAKE FLUID PRESSURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B280F	COMBINATION METER MALFUNCTION	Detected when error occurs in the CAN communication with combination meter.	<Ref. to ES(diag)-87, DTC B280F COMBINATION METER MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2810	INCOMPATIBLE WITH EyeSight (COMBINATION METER)	Detected when different (undesignated) type of combination meter is installed.	<Ref. to ES(diag)-87, DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2811	EPS ABNORMAL	EPS abnormal	<Ref. to ES(diag)-88, DTC B2811 EPS ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B2814	POWER SUPPLY LOW VOLTAGE	Detected when battery voltage is below specified value or when the +B harness of the stereo camera is broken.	<Ref. to ES(diag)-88, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2815	POWER SUPPLY HIGH VOLTAGE	Detected when battery voltage exceeds the specified value.	<Ref. to ES(diag)-89, DTC B2815 POWER SUPPLY HIGH VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2817	BRAKE LAMP	Detected when error occurs in the brake light illumination circuit.	<Ref. to ES(diag)-89, DTC B2817 BRAKE LAMP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281B	STEERING ANGLE SENSOR FAIL	Detected when error occurs in the steering angle sensor system.	<Ref. to ES(diag)-90, DTC B281B STEERING ANGLE SENSOR FAIL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281C	INCOMPATIBLE WITH EyeSight (EPS)	Detected when the EPS CM which is not exclusively for EyeSight is installed.	<Ref. to ES(diag)-90, DTC B281C INCOMPATIBLE WITH EyeSight (EPS), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281E	RAB CONTROL MODULE	Detected when there is a malfunction in sonar sensor or RAB CM.	<Ref. to ES(diag)-90, DTC B281E RAB CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B281F	Reverse Automatic Braking OVERRIDE	Detected when a stop hold command is output from RAB CM even when an accelerator override is generated by the driver.	<Ref. to ES(diag)-91, DTC B281F Reverse Automatic Braking OVERRIDE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2821	Reverse Automatic Braking CONTROL PROHIBITION	Detected when error occurs in RAB CM.	<Ref. to ES(diag)-91, DTC B2821 Reverse Automatic Braking CONTROL PROHIBITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2822	TCM DATA ABNORMAL	Detected due to judgment that the TCM module is abnormal, when the AT turbine speed signal is not input during driving.	<Ref. to ES(diag)-91, DTC B2822 TCM DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A0	VEHICLE MODEL JUDGMENT	Detected when the model code stored in EEPROM and the model code used for CAN data are different, or when +B harness of the stereo camera is broken at aiming completion.	<Ref. to ES(diag)-92, DTC B28A0 VEHICLE MODEL JUDGMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A1	EyeSight COMMUNICATION(ECM)	Abnormal judgment for stereo camera by ECM Or detected when the stereo camera or ECM is assembled incorrectly.	<Ref. to ES(diag)-94, DTC B28A1 EyeSight COMMUNICATION(ECM), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A2	EyeSight COMMUNICATION(VDC)	Abnormal judgment for stereo camera data by VDC	<Ref. to ES(diag)-95, DTC B28A2 EyeSight COMMUNICATION(VDC), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A3	EyeSight COMMUNICATION(METER)	Abnormal judgment for stereo camera data by combination meter	<Ref. to ES(diag)-96, DTC B28A3 EyeSight COMMUNICATION(METER), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B28A4	EyeSight COMMUNICATION(EPS)	Abnormal judgment for stereo camera data by EPS CM	<Ref. to ES(diag)-97, DTC B28A4 EyeSight COMMUNICATION(EPS), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A5	ENGINE TORQUE LIMITER CONTROL PROHIBIT	Detected when error occurs in the transmission data from stereo camera to ECM.	<Ref. to ES(diag)-98, DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A6	INTERNAL STEREO CAMERA COMMUNICATION 1	Detected when an communication error occurs inside the stereo camera.	<Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A7	STEREO CAMERA RECOGNITION(TARGET)	Detected when error occurs in the communication data inside the control module due to external factors such as noises.	<Ref. to ES(diag)-99, DTC B28A7 STEREO CAMERA RECOGNITION(TARGET), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A8	INTERNAL STEREO CAMERA COMMUNICATION 2		<Ref. to ES(diag)-99, DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28A9	STEREO CAMERA SYNCHRONIZED RECOGNITION DATA		<Ref. to ES(diag)-99, DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AA	STEREO CAMERA MICROCOMPUTER 1	Detected when error occurs in the communication with microcomputer 1 system inside the stereo camera.	<Ref. to ES(diag)-100, DTC B28AA STEREO CAMERA MICROCOMPUTER 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AB	STEREO CAMERA MICROCOMPUTER 2	Detected when error occurs in the communication with microcomputer 2 system inside the stereo camera.	<Ref. to ES(diag)-100, DTC B28AB STEREO CAMERA MICROCOMPUTER 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AC	STEREO CAMERA ASIC	Detected when error occurs in the ASIC system inside the stereo camera.	<Ref. to ES(diag)-100, DTC B28AC STEREO CAMERA ASIC, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AD	STEREO CAMERA IMAGE RECOGNITION	Detected when error occurs in the stereo camera image system.	<Ref. to ES(diag)-100, DTC B28AD STEREO CAMERA IMAGE RECOGNITION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28AE	INTERNAL STEREO CAMERA POWER SUPPLY	Detected when error occurs in the internal power supply system of stereo camera.	<Ref. to ES(diag)-100, DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Contents of diagnosis	Reference
B28AF	STEREO CAMERA ADJUSTMENT INCOMPLETE	Detected when adjustment/inspection of camera has not been completed normally.	<Ref. to ES(diag)-100, DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B1	STEREO CAMERA AUTOMATIC ADJUSTMENT	Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has been enlarged.	<Ref. to ES(diag)-101, DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B2	STEREO CAMERA HIGH TEMPERATURE	Detected when the temperature of the stereo camera excessively increases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-101, DTC B28B2 STEREO CAMERA HIGH TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B3	STEREO CAMERA LOW TEMPERATURE	Detected when the temperature of the stereo camera excessively decreases. (When this DTC is detected, the camera will not return to the normal state after performing adjustment or inspection. In this case, always replace the stereo camera.)	<Ref. to ES(diag)-101, DTC B28B3 STEREO CAMERA LOW TEMPERATURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B5	+B CIRCUIT OPEN	Detected when there is an open circuit in power supply line of the stereo camera.	<Ref. to ES(diag)-101, DTC B28B5 +B CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B6	PRE-COLLISION OFF SWITCH	Pre-collision brake switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-101, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B7	LDP OFF SWITCH	Lane departure warning OFF switch or harness is faulty. Detected also when the switch is held down for over 45 seconds.	<Ref. to ES(diag)-102, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B8	EyeSight STEERING SWITCH 1	Detected when EyeSight steering switch is malfunctioning, when the harness is abnormal or when there is an open circuit.	<Ref. to ES(diag)-104, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28B9	EyeSight STEERING SWITCH 2		<Ref. to ES(diag)-105, DTC B28B9 EyeSight STEERING SWITCH 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B28BA	STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED	• Detected when the center point of steering angle sensor deviates. • Detected when there is an excessive deviation in the alignment.	<Ref. to ES(diag)-105, DTC B28BA STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

10.Freeze Frame Data Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Freeze frame data is stored for three DTCs. Allocation of the three DTCs are as follows:
  – DTC that occurred first.
  – DTC that occurred first during the latest driving cycle (from IGN ON to IGN OFF).
  – DTC that occurred first during the second latest driving cycle.
  – However, DTCs will be stored in order of occurrence until these three DTCs are stored.
- For details on freeze frame data, refer to List of freeze frame data. <Ref. to ES(diag)-47, LIST, Freeze Frame Data Display.>
- Freeze frame data is cleared in Clear Memory Mode. <Ref. to ES(diag)-48, Clear Memory Mode.>

B: LIST

- List of freeze frame data

Display	Content	Unit
ECU Power Supply Voltage (IG)	Display of input voltage of stereo camera	V
Engine Speed	Engine speed	rpm
Accel opening angle	Acceleration opening angle signal	%
Brake Fluid Target Pressure	Target value of brake fluid pressure	MPa
Master Cylinder Actual Fluid Pressure	Brake pressure	MPa
Right Front Wheel W/C Actual Fluid Pressure	Right front wheel cylinder fluid pressure	MPa
Left Front Wheel W/C Actual Fluid Pressure	Left front wheel cylinder fluid pressure	MPa
Brake SW Input	Brake switch signal status	—
Brake Lamp SW (BIU)	Brake light switch signal status	—
Brake Lamp SW (VDC)	Brake light switch status	—
Trip Count	Timestamp information_Trip counter	times
Count	Timestamp information_original count identification information	—
Time Count [msec]	Timestamp information_time counter	ms
Drive Wheel Average Speed	Average wheel speed signal	km/h
Brake Lamp Command	Brake lamp light up command signal	—
EPB Activate Request	Electronic parking brake activate request	—
EPB Operation Status	Electronic parking brake operation status signal	—
Idle SW for EPB Control	Idle switch signal for electronic parking brake control	—
Driver Brake Detection	Driver brake detection signal	—
Brake Control Actuation	Brake operation permission signal	—
Pre-Collision Brake Assist Command	Pre-collision brake assist command signal	—
Pre-Collision Brake Action	Pre-collision brake command signal	—
Risk Avoidance Assist standby Command	Risk avoidance assist stand-by command signal	—
Adaptive Cruise Control Torque Down	Torque down prohibition signal of stereo camera	—
Hill Descent Control Status	Hill descent control status signal	—
Engine Failure	Engine failure signal	—
Brake Lamp SW Fail Status	Brake light switch failure signal	—

11.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Clear Active Lane Keep System Learning Value

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Clear Active Lane Keep System Learning Value».

NOTE:
• When suspension parts are replaced or wheel alignment is adjusted, perform «Clear Active Lane Keep System Learning Value».
• For detailed operation procedures, refer to “Application help”.

13.Diagnostics with Phenomenon

A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

1. TEMPORARY STOP OF EyeSight

Phenomenon		Check Item	Reference
1	Temporary stop occurs frequently. EyeSight temporary stop indicator illuminates frequently.	(1) Check EyeSight temporary stop code. <Ref. to ES(diag)-71, EyeSight Temporary Code(s) Display.>	For details on temporary stop codes, refer to CHECK LIST (CAMERA TEMPORARY STOP). Check list (camera temporary stop) <Ref. to ES(diag)-74, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

2. ADAPTIVE CRUISE CONTROL, CONVENTIONAL CRUISE CONTROL

Phenomenon		Check Item	Reference
1	Cruise control switch is not turned to ON. (CRUISE indicator light does not illuminate) Or cruise control was cancelled without operating the cruise switch.	(1) Check the ECM cruise control cancel code.	Perform the diagnosis according to displayed cancel code. <Ref. to ES(diag)-78, ECM Cancel Code(s) Display.> If not displayed, go to (2).
		(2) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When normal, go to (4). When abnormal, go to (3).
		(3) Check the EyeSight steering switch.	Check EyeSight steering switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
		(4) Check the CRUISE indicator.	Inspection of cruise indicator <Ref. to ES(diag)-68, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
2	Cruise control cannot be set. Or cruise control is cancelled without releasing operation. NOTE: • Do not turn the ignition switch to OFF after the cruise control is deactivated. • Do not operate the EyeSight steering switch after the cruise control is deactivated. If the above is performed, the cancel code the ECM will be cleared.	(1) Check the ECM cruise control cancel code.	Perform the diagnosis according to displayed cancel code. <Ref. to ES(diag)-78, ECM Cancel Code(s) Display.> If not displayed, go to (2).
		(2) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When normal, go to (6). When abnormal, go to the relevant items for (3), (4), (5).
		(3) Check the EyeSight steering switch.	Check EyeSight steering switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
		(4) Check stop light switch and brake switch.	Inspection of stop light switch and brake switch <Ref. to BR-114, Brake Pedal.> <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.>
		(5) Check the neutral position switch.	Inspection of neutral position switch <Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.> <Ref. to CC(diag)-26, 62, Diagnostic Procedure with Cancel Code.>
		(6) Check vehicle speed sensor.	Inspection of vehicle speed sensor <Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>

Phenomenon		Check Item	Reference
3	SET indicator does not illuminate.	Check the SET indicator.	Inspection of SET indicator <Ref. to ES(diag)-68, CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/ CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed ±3 km/h (±2 MPH) on a level road.	Check the vehicle speed sensor.	Inspection of vehicle speed sensor <Ref. to CC(diag)-25, 22, Diagnostic Procedure with Cancel Code.>
5	Vehicle speed does not increase or does not return to set speed after RES/+ switch has been pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the RES/+ switch.	Inspection of RES/+ switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
6	Vehicle speed does not decrease after SET/– switch has been pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the SET/– switch.	Inspection of SET/– switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
7	Cruise control is not deactivated after the cruise switch is pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the cruise switch.	Inspection of cruise switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
8	Following distance does not change, even after the following distance switch is pressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the following distance switch.	Inspection of following distance switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
9	Cruise control is not released after brake pedal has been depressed.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check stop light switch and brake switch.	Inspection of stop light switch and brake switch <Ref. to CC(diag)-17, 12, Diagnostic Procedure with Cancel Code.> <Ref. to BR-118, INSTALLATION, Stop Light Switch.>
10	Cruise control is not released after shifting to the neutral position.	(1) Perform the real-time diagnosis. Check the input signal of cruise control system.	Real-time Diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When abnormal, go to (2).
		(2) Check the neutral position switch.	Inspection of neutral position switch <Ref. to CC(diag)-21, 14, Diagnostic Procedure with Cancel Code.>

Phenomenon		Check Item	Reference
11	Acceleration or deceleration does not occur according to the preceding vehicle. The preceding vehicle is difficult to be detected. Braking force is weaker than usual. Alarm for requiring more brake pedal force does not sound.	(1) Using CHECK LIST (ADAPTIVE CRUISE CONTROL), check the condition and respond to it. 1) Does it apply to the condition that the use of adaptive cruise control is not desired? 2) Does it apply to the condition or the object that is hard to be recognized by the stereo camera? 3) Does it apply to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake? 4) Does it apply to the condition that brake force may become poor? 5) Does it apply to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance?	Check list (Adaptive cruise control) <Ref. to ES(diag)-57, CHECK LIST (ADAPTIVE CRUISE CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, go to (2).
		(2) Check the windshield glass and dashboard.	Inspection of windshield glass and dashboard <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> When normal, go to (3).
		(3) Check the front wiper.	Inspection of front wiper <Ref. to ES(diag)-8, FRONT WIPER, INSPECTION, General Description.> When normal, go to (4).
		(4) Check the stereo camera.	Check stereo camera. <Ref. to ES(diag)-9, STEREO CAMERA, INSPECTION, General Description.> When normal, go to (5).
		(5) Bleed air from brake system.	Air bleeding from brake system <Ref. to BR-104, BRAKE LINE, PROCEDURE, Air Bleeding.> Go to (6).
		(6) Check the optical axis of the stereo camera.	Adjust the optical axis of the stereo camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.>

3. PRE-COLLISION BRAKE, AT RAPID START PREVENTION CONTROL

Phenomenon		Check Item	Reference
1	Pre-collision brake does not operate. Or the pre-collision brake operates, but the vehicle cannot stop safely before collision. Or the pre-collision brake is released automatically. Or the pre-collision brake assist does not operate.	(1) Check that the pre-collision brake OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (PRE-COLLISION BRAKE), check the following and respond to it. 1) Does it apply to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision with the pre-collision brake? 2) Does it apply to the condition that there is a high possibility that the pre-collision brake does not operate due to the recognition status of the stereo camera? 3) Does it apply to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired? 4) Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Check list (pre-collision brake) <Ref. to ES(diag)-60, CHECK LIST (PRE-COLLISION BRAKE), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
2	Pre-collision brake operates improperly. Or the pre-collision brake is not released. Or the pre-collision brake assist operates improperly.	(1) Using CHECK LIST (PRE-COLLISION BRAKE), check the following and respond to it. 1) Does it apply to the condition that turning OFF of the pre-collision brake is desired? 2) Does it apply to the condition that the pre-collision brake may operate?	Check list (pre-collision brake) <Ref. to ES(diag)-60, CHECK LIST (PRE-COLLISION BRAKE), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
3	Pre-collision brake OFF indicator light does not go off. Or the pre-collision brake OFF indicator light illuminates automatically.	(1) Check that this failure occurs during engine start.	Light illumination for a while after the engine start is a normal.
		(2) Check EyeSight temporary stop code to see if temporary stop has occurred.	If the EyeSight temporary stop code is displayed, check the diagnosis from the List of EyeSight temporary stop code, and perform the corresponding operations. <Ref. to ES(diag)-71, EyeSight Temporary Code(s) Display.> If the cancel code is not displayed, go to (3).
		(3) Check the pre-collision brake OFF switch.	Inspection of pre-collision brake OFF switch <Ref. to ES(diag)-101, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	Pre-collision brake OFF indicator light does not illuminate. Or the pre-collision brake OFF indicator light goes off automatically.	(1) Check that this failure occurs during engine start.	Even if the pre-collision brake is turned off, it is turned on again when the engine switch is turned off and the engine has restarted.
		(2) Check the pre-collision brake OFF switch.	Inspection of pre-collision brake OFF switch <Ref. to ES(diag)-101, DTC B28B6 PRE-COLLISION OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Phenomenon		Check Item	Reference
5	AT rapid start prevention control does not operate. Or the AT rapid start prevention control is released automatically.	(1) Check that the pre-collision brake OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. 1) Does it apply to the condition that the AT rapid start prevention control may not operate? 2) Does it apply to the condition that the pre-collision brake OFF indicator light illuminates?	Check list (AT rapid start prevention control) <Ref. to ES(diag)-62, CHECK LIST (AT RAPID START PREVENTION CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
6	AT rapid start prevention control operates improperly. Or the AT rapid start prevention control is not released.	(1) Using CHECK LIST (AT RAPID START PREVENTION CONTROL), check the following and respond to it. 1) Does it apply to the condition that turning OFF of the AT rapid start prevention control is desired? 2) Does it apply to the condition that the AT rapid start prevention control may operate?	Check list (AT rapid start prevention control) <Ref. to ES(diag)-62, CHECK LIST (AT RAPID START PREVENTION CONTROL), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

4. LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION

Phenomenon		Check Item	Reference
1	Lane departure warning does not operate. Or the lane departure warning is released automatically.	(1) Check that the lane departure warning OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the lane departure warning does not operate or is difficult to operate? 2) Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

Phenomenon		Check Item	Reference
2	Lane departure warning operates improperly. Or the lane departure warning is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
3	Lane departure warning OFF indicator light does not go off. Or the lane departure warning OFF indicator light illuminates automatically.	(1) Check that this failure occurs during engine start.	Light illumination for a while after the engine start is a normal. Even if the engine switch is turned off and the engine is restarted, the status before the engine switch off is maintained.
		(2) Check EyeSight temporary stop code to see if temporary stop has occurred.	If the EyeSight temporary stop code is displayed, check the diagnosis from the List of EyeSight temporary stop code, and perform the corresponding operations. <Ref. to ES(diag)-71, EyeSight Temporary Code(s) Display.> If the cancel code is not displayed, go to (3).
		(3) Check the lane departure warning OFF indicator light.	Inspection of lane departure warning OFF indicator light <Ref. to ES(diag)-102, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	Lane departure warning OFF indicator light does not illuminate. Or the lane departure warning OFF indicator light goes off automatically.	(1) Check the lane departure warning OFF indicator light.	Inspection of lane departure warning OFF indicator light <Ref. to ES(diag)-102, DTC B28B7 LDP OFF SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
5	Sway warning does not operate. Or the sway warning is released automatically.	(1) Check that the lane departure warning OFF indicator light goes off.	If this indicator light illuminates, the operation is not performed.
		(2) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the sway warning may not operate? 2) Does it apply to the condition that the lane departure warning OFF indicator light illuminates?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
6	Sway warning operates improperly. Or the sway warning is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the sway warning may operate improperly?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

Phenomenon		Check Item	Reference
7	Forward vehicle's start monitoring function does not operate. Or the forward vehicle's start monitoring function is released automatically.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.
8	Forward vehicle's start monitoring function operates improperly. Or the forward vehicle's start monitoring function is not released.	(1) Using CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), check the following and respond to it. 1) Does it apply to the condition that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started?	Check list (lane departure warning, sway warning, forward vehicle's start monitoring function) <Ref. to ES(diag)-64, CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, the stereo camera may be malfunctioning.

5. ACTIVE LANE KEEP (LANE DEPARTURE PREVENTION)

Phenomenon		Check Item	Note
1	Lane keep switch is not turned to ON. (Lane keep indicator light does not illuminate in white.)	(1) Perform the real-time diagnosis. Check the input signal of EyeSight system.	Real-time diagnosis <Ref. to ES(diag)-40, Real-time Diagnosis.> When normal, go to (3). When abnormal, go to (2).
		(2) Check the lane keep switch.	Check EyeSight steering switch <Ref. to ES(diag)-70, CHECK EyeSight STEERING SWITCH, Diagnostics with Phenomenon.>
		(3) Check the combination meter.	Combination meter (diagnostics) <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Phenomenon		Check Item	Note
2	Lane keep (lane departure prevention) does not turn to standby mode. (Lane indicator light does not illuminate.) Lane keep (lane departure prevention) does not operate. (Lane keep indicator light does not illuminate in green.) Though lane keep (lane departure prevention) is operating, the vehicle departs out of the lane due to poor assistance.	(1) Read the lane departure prevention deactivate code. <Ref. to ES(diag)-83, Active Lane Keep System Code(s) Display.>	When there is a relevant item in the lane departure prevention deactivate code, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, go to (2).
		(2) Using CHECK LIST (LANE KEEP), check the current conditions and respond to it. 1) Does it apply to the condition that use of lane keeping is not desired? 2) Does it apply to the condition or the object that is hard to be recognized by the stereo camera? 3) Does it apply to the road condition that the white line is difficult to be recognized?	Check list (lane keep) <Ref. to ES(diag)-67, CHECK LIST (ACTIVE LANE KEEP), DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> When there is a relevant item in the check list, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved. If not solved, go to (3).
		(3) Check the windshield glass and dashboard.	Inspection of windshield glass and dashboard <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> When normal, go to (4).
		(4) Check the front wiper.	Inspection of front wiper <Ref. to ES(diag)-8, FRONT WIPER, INSPECTION, General Description.> When normal, go to (5).
		(5) Check the optical axis of the headlights.	Headlight optical axis adjustment <Ref. to LI-38, ADJUSTMENT, Headlight Assembly.> When normal, go to (6).
		(6) Check the stereo camera.	CHECK STEREO CAMERA. <Ref. to ES(diag)-9, STEREO CAMERA, INSPECTION, General Description.> When normal, go to (7).
		(7) Check the tires and wheel alignment.	When normal, go to (8).
		(8) Check the optical axis of the stereo camera.	Adjust the optical axis of the stereo camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.>
3	Lane keep (lane departure prevention) is cancelled without releasing operation.	Read the lane departure prevention deactivate code. <Ref. to ES(diag)-83, Active Lane Keep System Code(s) Display.>	When there is a relevant item in the lane departure prevention deactivate code, it can be the cause of malfunction. Eliminate the cause, and check that the malfunction has been improved.

6. CHECK LIST (ADAPTIVE CRUISE CONTROL)

Item Name	Yes/No
[1]: When the vehicle does not accelerate or decelerate according to the preceding vehicle, or when the preceding vehicle is difficult to be detected.	

Item Name			Yes/No	
1	Check that the current status applies to the condition that the use of adaptive cruise control is not desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
	10	Vehicle is tilted by the heavy load.	Yes	No
	11	Passenger capacity is exceeded.	Yes	No
	12	The vehicle is towing the trailer or other vehicle.	Yes	No
	13	The vehicle drives on the general road (other than limited highway). (Depending on the road environment (complicated roads etc.), the vehicle may not be able to drive according to the traffic condition, which may lead to the traffic accident.)	Yes	No
	14	The vehicle drives on the sharp bend.	Yes	No
	15	The vehicle drives on the slippery roads such as icy road or snow-covered road. (Tires can spin, losing the vehicle control.)	Yes	No
	16	The vehicle drives under the traffic condition that the certain vehicle distance is difficult to be maintained due to frequent acceleration and deceleration. (The vehicle may not be able to drive according to the traffic condition.)	Yes	No
	17	There is a steep downhill. (The vehicle may drive at higher speed than the set vehicle speed.)	Yes	No
	18	The vehicle performs adaptive driving while recognizing the preceding vehicle on the steep downhills. (Brake can be overheated.)	Yes	No
	19	The vehicle drives on the road with repeated steep uphills and downhills or crossover. (The vehicle may not be able to recognize the preceding vehicle or may recognize the road surface, and appropriate control may not be performed.)	Yes	No
	20	The vehicle is entering the interchange, service area, parking area, junction or tollgate. (The vehicle may not be able to recognize the preceding vehicle.)	Yes	No
	21	When the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changes.	Yes	No
	22	There are water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle. (The vehicle may not be able to recognize the preceding vehicle or may recognize the water, and appropriate control may not be performed.)	Yes	No
	23	The windshield glass is covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	24	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently. (The vehicle may not be able to recognize the preceding vehicle, and appropriate control may not be performed.)	Yes	No
	25	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No

		Item Name	Yes/No	
2	Check that the current status applies to the condition or the object that is hard to be recognized by the stereo camera.			
	1	That was a vehicle with large speed difference (low-speed driving vehicle, stopping vehicle, oncoming vehicle).	Yes	No
	2	That was a cutting-in vehicle.	Yes	No
	3	That was a motorcycle, bicycle, pedestrian or animal, etc.	Yes	No
	4	It was dim in the evening or in the morning.	Yes	No
	5	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	6	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	7	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	8	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
	9	There was an object extremely close to the bumper of the own vehicle.	Yes	No
3	Check that the current status applies to the driving condition that the preceding vehicle cannot be recognized or the vehicle on the next lane or the object on the roadside may be recognized by mistake.			
	1	The vehicle began adaptive cruise control from the condition that the vehicle distance was short immediately after the preceding vehicle was cut in.	Yes	No
	2	The vehicle drives on the curve, outlet and inlet of the curve, or the road with many curves in succession. (Recognition may not be performed properly, because the preceding vehicle is out of recognition area.)	Yes	No
	3	The position against the preceding vehicle deviated laterally.	Yes	No
	4	There were some objects just near the road side.	Yes	No
	5	The speed difference against the preceding vehicle was large.	Yes	No
	6	Other vehicle cut ahead of the own vehicle.	Yes	No
	7	The vehicle distance was extremely short.	Yes	No
	8	The own vehicle swayed in the vehicle lane.	Yes	No
	9	The road surface was uneven due to roll or unpaved track.	Yes	No
	10	The vehicle drove on the narrow lane because of the lane closure or construction work.	Yes	No
	11	The driving of own vehicle was unstable due to an accident or failure.	Yes	No
	12	The own vehicle was loaded with the extremely heavy load in the luggage compartment or on the rear seat.	Yes	No
[2]: When braking force is weaker than usual.				
1	Check that the current status applies to the condition that brake force may become poor.			
	1	The vehicle status (loading amount, passenger, etc.) was inappropriate.	Yes	No
	2	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
	3	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
	4	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
	5	The symptom occurred between immediately after engine started and after a while the vehicle started driving (Completion of warming up operation can be used as an indication.).	Yes	No
	6	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
	7	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No
[3]: When the alarm for requiring more brake pedal force does not sound.				

	Item Name		Yes/No	
1	Check that the current status applies to the condition that the alarm for requiring more brake pedal force does not sound even in a short vehicle distance.			
	1	The speed difference between own vehicle and preceding vehicle (when the vehicle speed of the own vehicle was approximately the same as that of the preceding vehicle) was small.	Yes	No
	2	The vehicle speed of the preceding vehicle was faster than that of the own vehicle (when the vehicle distance was getting longer).	Yes	No
	3	Other vehicle cut in extremely close to the own vehicle.	Yes	No
	4	The preceding vehicle decelerated abruptly.	Yes	No
	5	There are many continuous uphills and downhills.	Yes	No

7. CHECK LIST (PRE-COLLISION BRAKE)

	Item Name		Yes/No	
[1]: When pre-collision brake did not operate, or when vehicle could not stop safely before collision in spite of pre-collision brake operation.				
1	Check that the current status applies to the condition that the pre-collision brake does not operate, or there is a high possibility that the vehicle cannot stop safely before collision in spite of pre-collision brake operation.			
	1	Conditions such as the followings occurred: 1) Vehicle speed difference with the preceding vehicle is small. 2) Distance from the preceding vehicle is long. 3) Lateral deviation (offset amount) is large.	Yes	No
	2	The vehicle status (loading amount, number of passenger, etc.) was inappropriate.	Yes	No
	3	The road surface was very steep, slippery, sharp turn, or uneven.	Yes	No
	4	There was problem for the frontal visibility. (Rain, snow, fog, smoke, etc.)	Yes	No
	5	The objects were livestock, animals, guardrail, telephone pole, tree, fence, wall, etc.	Yes	No
	6	The object was motorcycle, bicycle, or pedestrian. However, the system could not recognize the object due to surrounding brightness, motion, posture, and/or angle.	Yes	No
	7	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
	8	The service maintenance condition of the vehicle (brake system, tire wear, tire pressure, spare tire, etc.) was inappropriate.	Yes	No
	9	The vehicle is towing the trailer or other vehicle.	Yes	No
	10	The brake was cold at low ambient temperature or immediately after the driving had started.	Yes	No
	11	The brake force becomes poor due to the overheating of the brake on the downhills.	Yes	No
	12	The brake force becomes poor because of the wet brake after driving onto the puddle or washing the vehicle.	Yes	No

		Item Name	Yes/No	
2	Check that the current status applies to the condition that there is a high possibility that the pre-collision brake does not operate depending on the recognition status of the stereo camera.			
	1	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
	2	The field of view was insufficient due to water, snow or sandy dust raised by the preceding vehicle or oncoming vehicle, or the moisture, sand or smoke blown in the wind.	Yes	No
	3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	4	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	5	The vehicle approached the motorcycle, bicycle or pedestrian in the night.	Yes	No
	6	It was dark in the evening or in the morning.	Yes	No
	7	The rearmost surface of the preceding vehicle was small, low or uneven. That was a truck equipped with an unloaded platform without gate, a vehicle that the luggage was protruding from the rear end of the vehicle, a vehicle of special shape (carrier car, side car, etc.) or a vehicle with low vehicle height.	Yes	No
	8	There was a wall in front of the stopping vehicle.	Yes	No
	9	There was an object close to the vehicle.	Yes	No
	10	That was a vehicle stopped sideways.	Yes	No
	11	That was a vehicle which was oncoming or driving in reverse.	Yes	No
	12	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes	No
	13	The preceding vehicle made a sharp turn, or performed abrupt acceleration or deceleration.	Yes	No
	14	Other vehicle, motorcycle, bicycle or pedestrian existed extremely close to the bumper of the own vehicle.	Yes	No
	15	The speed difference was 5 km/h (3.1 MPH) or less. (The control is performed in close distance. Depending on the objects shape and size, the rear end surface may be outside the camera visibility area.)	Yes	No
	16	Other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
	17	The own vehicle changed the vehicle lane, and followed the preceding vehicle right behind.	Yes	No
	18	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	19	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	20	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
	21	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
	22	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	23	Other vehicle, motorcycle, bicycle or pedestrian existed out of the illuminating area of the headlight.	Yes	No
	24	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes	No
	25	The road surface was uneven due to roll or unpaved track.	Yes	No
	26	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	27	The object was fence or wall.	Yes	No
	28	The object was a plate of glass, mirror wall or door.	Yes	No
3	Check that the current status applies to the condition that the system does not operate correctly and the turning OFF of the pre-collision brake is desired.			
	1	Tire pressure is not correct.	Yes	No
	2	The vehicle is equipped with the temporary spare tire.	Yes	No
	3	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	4	The vehicle is equipped with the tires out of specification.	Yes	No
	5	The suspension has been modified.	Yes	No
	6	The vehicle is equipped with the tire chain.	Yes	No
	7	Headlight is dirty or the optical axis is deviated. (The vehicle cannot correctly emit the headlight beam against the object and recognize it.)	Yes	No
	8	The driving status of own vehicle is unstable due to an accident or failure.	Yes	No
	9	The brake warning light illuminates.	Yes	No
	10	Vehicle is tilted by the heavy load. Or, passenger capacity is exceeded.	Yes	No

Item Name			Yes/No	
4	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the pre-collision brake does not operate.)			
	1	The pre-collision brake is turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When pre-collision brake operated improperly.				
1	Check that the current status applies to the condition that turning OFF of the pre-collision brake is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No
	7	When the vehicle uses the movable type car wash machine.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	When the exhaust gas emitted from the preceding vehicle is visible clearly at cold weather.	Yes	No
	6	There is an obstacle on the curve or crossing.	Yes	No
	7	The vehicle passes through close to other vehicle or obstacle.	Yes	No
	8	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

8. CHECK LIST (AT RAPID START PREVENTION CONTROL)

Item Name	Yes/ No
[1]: When AT rapid start prevention control did not operate.	

		Item Name	Yes/ No	
1	Check that the current status applies to the condition that the AT rapid start prevention control may not operate.			
	1	Conditions such as the followings occurred: 1) Distance from the front object is long. 2) Vehicle speed difference is small. 3) Lateral deviation (offset amount) is large.	Yes	No
	2	It was bad weather (heavy rain, snowstorm, dense fog).	Yes	No
	3	The visibility was insufficient due to sand or smoke blown in the air.	Yes	No
	4	The vehicle approached the object in the evening, in the morning or in the night.	Yes	No
	5	The vehicle approached the object in the dark place (e.g. closed-in parking lot).	Yes	No
	6	The height of the object was low. (low wall, low guardrail, vehicle with low height etc.)	Yes	No
	7	The object was small seen from the stereo camera. (Small animals, infants, person squatting down or lying down)	Yes	No
	8	The object or rearmost area of the preceding vehicle (trailer, etc.) was small. Or the vehicle approached them too close. (The system triggers the operation by recognizing the area other than the rearmost section, resulting in insufficient control.)	Yes	No
	9	The object such as other vehicle, motorcycle, bicycle or pedestrian cut in from the side or jumped in front of the own vehicle.	Yes	No
	10	The own vehicle changed the vehicle lane when it started, and approached right behind the object.	Yes	No
	11	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	12	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	13	The windshield glass has not yet been wiped off sufficiently during or after the use of the window washer.	Yes	No
	14	The recognition of the object was imperfect due to the raindrop or droplet of the window washer or the wiper blade blocking the visibility of the stereo camera.	Yes	No
	15	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	16	The object existed out of the illuminating area of the headlight.	Yes	No
	17	The vehicle drove on the sharp turn, steep uphills or steep downhills.	Yes	No
	18	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
	19	The object was a plate of glass, mirror wall or door.	Yes	No
	20	Crash avoidance operation (accelerator pedal, brake pedal, steering wheel, etc.) was performed.	Yes	No
2	Check that the current status applies to the condition that the pre-collision brake OFF indicator light illuminates. (When the pre-collision brake OFF indicator light illuminates, the AT rapid start prevention control does not operate.)			
	1	The pre-collision brake was turned off, using the pre-collision brake OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When AT rapid start prevention control operated improperly.				

		Item Name	Yes/ No	
1	Check that the current status applies to the condition that the releasing of the AT rapid start prevention control is desired.			
	1	The vehicle is towed.	Yes	No
	2	The vehicle is loaded on the carrier car.	Yes	No
	3	The chassis dynamometer or free roller is used.	Yes	No
	4	The vehicle is lifted up, engine is started and the tire is spun.	Yes	No
	5	The vehicle passes through the banners, flags, drooping branches or grass while making contact with them.	Yes	No
	6	The vehicle performs sporty driving on the circuit.	Yes	No
2	Check that the current status applies to the condition that the AT rapid start prevention control may operate.			
	1	The vehicle passes through the ETC gate at a speed exceeding the specification.	Yes	No
	2	The vehicle drives close to the preceding vehicle.	Yes	No
	3	The vehicle drives on the place where the road surface gradient changed suddenly.	Yes	No
	4	The vehicle passes through the moisture or mass of smoke.	Yes	No
	5	There is an obstacle on the curve or crossing.	Yes	No
	6	The vehicle passes through close to other vehicle or obstacle.	Yes	No
	7	The vehicle parks close to the wall in front or to other vehicle.	Yes	No

9. CHECK LIST (LANE DEPARTURE WARNING, SWAY WARNING, FORWARD VEHICLE'S START MONITORING FUNCTION)

Item Name	Yes/ No
[1]: When the lane departure warning did not operate.	

		Item Name	Yes/ No	
1	Check that the current status applies to the condition that the lane departure warning does not operate or is difficult to operate.			
	1	The lane departure warning is turned off.	Yes	No
	2	The vehicle speed of the own vehicle is approximately less than 50 km/h (31 MPH).	Yes	No
	3	That was approximately 7 seconds period after the lane departure warning had occurred once.	Yes	No
	4	The steering wheel was turned fully or rapidly.	Yes	No
	5	The brake pedal is depressed.	Yes	No
	6	The vehicle is accelerated by depressing the accelerator pedal.	Yes	No
	7	The vehicle distance from the preceding vehicle is short.	Yes	No
	8	That was approximately 7 seconds period while the turn signal indicator was operating or after the lever was returned.	Yes	No
	9	The vehicle has not returned inside the vehicle lane after the operation of the lane departure warning.	Yes	No
	10	The width of the vehicle lane is narrow.	Yes	No
	11	The vehicle lane is difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No
	12	The preceding vehicle performed crash avoidance action to avoid the obstacle, and the own vehicle performed steering operation after the preceding vehicle.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the lane departure warning does not operate.)			
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[2]: When the lane departure warning malfunctioned.				
1	Check that the current status applies to the condition that the vehicle lane is recognized erroneously and the lane departure warning may operate.			
	1	There was the tire track on the wet road or snow-covered road.	Yes	No
	2	There was the boundary line between snow-covered area and asphalt or on the trace of road repair.	Yes	No
	3	There was the double vehicle lane.	Yes	No
	4	The shadow of the guardrail was detected by mistake.	Yes	No
[3]: When the sway warning did not operate.				

		Item Name	Yes/ No	
1	Check that the current status applies to the condition that the sway warning may not operate.			
	1	The vehicle drove on the road with many curves in succession.	Yes	No
	2	The vehicle speed changed greatly.	Yes	No
	3	That was immediately after the vehicle lane had changed.	Yes	No
	4	The vehicle lane was difficult to be recognized seen from the stereo camera. (Lane line (white line, etc.) does not exist or is fading out. Or the color of the lane line is very similar to that of the road surface, and difficult to be seen. Or the width of the lane line is very thin.)	Yes	No
	5	That was immediately after the sway had begun.	Yes	No
2	Check that the current status applies to the condition that the lane departure warning OFF indicator light illuminates. (When the lane departure warning OFF indicator light illuminates, the sway warning does not operate.)			
	1	The lane departure warning is turned off, using the lane departure warning OFF switch.	Yes	No
	2	Approximately for 7 seconds after the engine has started.	Yes	No
	3	EyeSight is malfunctioning.	Yes	No
	4	EyeSight is stopped temporarily.	Yes	No
[4]: When the sway warning malfunctioned.				
1	Check that the current status applies to the condition that the sway warning may operate.			
	1	That was after the sway had stopped.	Yes	No
	2	The driver lost concentration on driving the vehicle due to fatigue or looking away.	Yes	No
[5]: When the forward vehicle's start monitoring function did not operate or when it malfunctioned.				
1	Check that the current status applies to the condition that the forward vehicle's start monitoring function does not operate even when the preceding vehicle has already started, or that the forward vehicle's start monitoring function operates even when the preceding vehicle has not yet started.			
	1	The motorcycle cut in the space between the own vehicle and the stopped preceding vehicle.	Yes	No
	2	The vehicle could not recognize the preceding vehicle properly due to the weather condition or road shape.	Yes	No
	3	The stereo camera lost sight of the preceding vehicle.	Yes	No
	4	The driver did not depress the brake pedal with select lever in D, M or N range. (At this time, forward vehicle's start monitoring function does not operate.)	Yes	No
	5	The forward vehicle's start monitoring function was turned OFF via the customization function.	Yes	No

10.CHECK LIST (ACTIVE LANE KEEP)

Item Name			Yes/No	
1	Check that the current status applies to the condition that use of lane keeping is not desired.			
	1	An object was placed on the dashboard.	Yes	No
	2	Tire pressure is not correct.	Yes	No
	3	The vehicle is equipped with the temporary spare tire.	Yes	No
	4	The vehicle is equipped with worn tire or tires with excessive wear difference.	Yes	No
	5	The vehicle is equipped with the tires out of specification.	Yes	No
	6	The flat tire is repaired using the temporary repair kit.	Yes	No
	7	The suspension (including STI parts) has been modified.	Yes	No
	8	Wheel balance is abnormal (balance weight falls off, slides off, etc.).	Yes	No
	9	Wheel alignment is out of the specified value.	Yes	No
	10	The steering wheel has been replaced with a non-genuine part.	Yes	No
	11	The steering wheel is off-center.	Yes	No
	12	The lighting devices, such as headlights and fog lights, have been modified.	Yes	No
	13	An abnormal vibration can be felt on the steering wheel.	Yes	No
	14	The steering wheel operation is heavier than usual.	Yes	No
	15	An error occurs, for example, no display appears in the combination meter or no alarm sounds.	Yes	No
	16	The headlight cannot illuminate the road surface sufficiently because the headlight is dirty, attached with ice, snow or mud, or the optical axis is deviated.	Yes	No
	17	The driving status of own vehicle was unstable due to an accident or failure.	Yes	No
	18	The vehicle carried heavy load.	Yes	No
	19	Passenger capacity was exceeded.	Yes	No
	20	The vehicle towed another vehicle.	Yes	No
	21	The vehicle drove on a general road (other than limited highways).	Yes	No
	22	The vehicle drove on a road with sharp curves, such as an urban highway.	Yes	No
	23	The vehicle drove on a slippery road such as icy roads or snow-covered roads.	Yes	No
	24	The vehicle drove on a lane restricted road or a temporary road due to road construction.	Yes	No
	25	The vehicle drove on a road where obsolete white lines did not disappear completely.	Yes	No
	26	On the road surface there were some snow, puddles, snow melting agent, cracks, road repair traces, obsolete white lines.	Yes	No
	27	The vehicle entered the interchange, service area, parking area, junction or tollgate.	Yes	No
	28	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
	29	The vehicle drove on a road where there was some water or sandy dust raised by a preceding vehicle or oncoming vehicle, or sand or smoke blown in the wind, or moisture in front of own vehicle.	Yes	No
	30	The windshield glass was covered with fog, snow, dirt, frost or sandy dust.	Yes	No
	31	The raindrops, water drops or dirt on the windshield glass were not wiped off sufficiently.	Yes	No
	32	Canoes etc. loaded on the roof block the visibility of the stereo camera.	Yes	No
	33	The vehicle drove immediately after the stereo camera was replaced or adjusted.	Yes	No

		Item Name	Yes/No	
2	Check that the current status applies to the condition or the object, such as a white line, that is hard to be recognized by the stereo camera.			
	1	The vehicle drove when it was dark in the evening or in the morning.	Yes	No
	2	The vehicle drove under the road condition, such as rainy or snowy weather, that the white line was difficult to be recognized.	Yes	No
	3	The headlight did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	4	The vehicle was exposed to the intense light (backlight such as sunlight or headlight) from the front of the vehicle.	Yes	No
	5	The vehicle drove on a road where the driving lane was yellow.	Yes	No
	6	The vehicle drove on a road where the color of the lane division line was similar to the color of the road surface, which was difficult to be recognized.	Yes	No
	7	The vehicle drove on a road where the width of the lane division line was narrow.	Yes	No
	8	The vehicle drove on a road where the lane division line did not exist or almost disappeared.	Yes	No
	9	The vehicle drove on a road where the width of the driving lane was narrow.	Yes	No
	10	The vehicle drove on a road where there was a fork lane, such as an interchange outlet of the highway, or an intersection.	Yes	No
	11	The vehicle drove on a road where the surrounding brightness (such as inlet and outlet of a tunnel) suddenly changed.	Yes	No
	12	The vehicle drove on a road where the white line had a special shape, such as a double line.	Yes	No
	13	The vehicle drove under the condition that the white line was difficult to be recognized due to the short distance to the preceding vehicle.	Yes	No
	14	Another vehicle cut in ahead of the vehicle from the next lane, or the preceding vehicle changed the driving lane.	Yes	No
	15	The vehicle drove on a road where the curve shape changed suddenly.	Yes	No
	16	A shadow of the guardrail formed on the white line.	Yes	No
3	Check that the current status applies to the condition that sufficient performance of lane keeping cannot be achieved.		Yes	No
	1	The vehicle was subjected to cross wind.	Yes	No
	2	The vehicle is equipped with winter tires or non-genuine tires.	Yes	No
	3	The vehicle drove on a uphill or a downhill where the road surface gradient suddenly changed.	Yes	No
	4	The vehicle drove on an uneven, rolling or jointed road surface.	Yes	No
	5	The vehicle drove on a road where the road surface cross gradient changed suddenly or was large.	Yes	No
	6	The acceleration or deceleration speed was large.	Yes	No
	7	The vehicle drove immediately after the tire was replaced or the tire air pressure was changed.	Yes	No
	8	The vehicle drove immediately after the vehicle weight was extremely changed.	Yes	No
	9	The vehicle drove immediately after the stereo camera was repaired, adjusted or replaced.	Yes	No
	10	The vehicle drove immediately after the suspension or steering system was repaired or replaced.	Yes	No
	11	The vehicle drove immediately after the engine was started at a low outside temperature.	Yes	No

B: CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

Trouble symptom:
Adaptive cruise control or conventional cruise control can be set, but adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light do not illuminate.

	Step	Check	Yes	No
1	**CHECK ADAPTIVE CRUISE CONTROL INDICATOR LIGHT/CONSTANT SPEED CRUISE CONTROL INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.** Check the combination meter. <Ref. to MET(diag)-16, OPERATION, System Operation Check Mode.>	Does adaptive cruise control indicator light/constant speed cruise control indicator light and cruise SET indicator light illuminate?	Go to step **2**.	Replace the meter case assembly. <Ref. to IDI-12, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Perform the diagnosis according to diagnosis for LAN system.

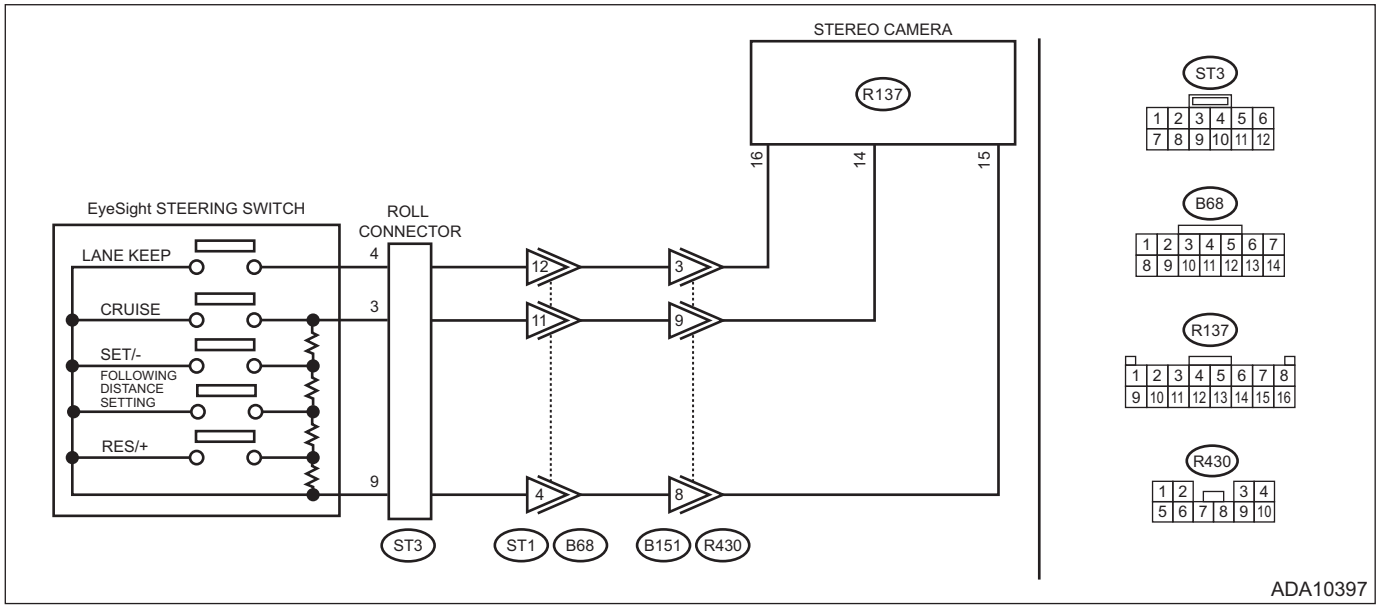
C: CHECK EyeSight STEERING SWITCH

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

EyeSight System <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>



Step		Check	Yes	No
1	**CHECK EyeSight STEERING SWITCH CIRCUIT.** 1) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.> 2) Disconnect the EyeSight steering switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 3 (+) — Chassis ground (–):*** ***(ST3) No. 4 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check for open/short circuit or poor contact in the harness between EyeSight steering switch and ECM and in the steering roll connector.
2	**CHECK EyeSight STEERING SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the EyeSight steering switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between EyeSight steering switch and chassis ground.
3	**CHECK EyeSight STEERING SWITCH.** Check EyeSight steering switch. <Ref. to CC-6, INSPECTION, Cruise Control Command Switch.>	Is the check result OK?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Replace the EyeSight steering switch.

14.EyeSight Temporary Code(s) Display

A: OPERATION

If the EyeSight pause code is detected from the stereo camera, all the functions of the EyeSight excluding the conventional cruise control stop temporarily and cannot be used. When the failure is resolved, the function starts operating.

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «EyeSight HALT Code».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Temporary stop is not released even if the lane departure warning OFF switch or pre-collision brake OFF switch is pressed.
- Depending on the situation, temporary stop may not be released even if the ignition switch is turned off.
- Up to 20 codes can be stored.
- Stored codes will be cleared by Clear Memory.
- For details on EyeSight temporary stop codes, refer to List of EyeSight temporary stop code. <Ref. to ES(diag)-72, LIST, EyeSight Temporary Code(s) Display.>

B: LIST

- List of EyeSight temporary stop code

EyeSight pause code	Item	Contents of diagnosis	Note
E5	Stereo Camera Temporary Stop	The operation stopped temporarily due to vertical deviation of the optical axis of the stereo camera. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	Perform inspection concerning the item for E5 of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-74, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> This code may be displayed when the rear of the vehicle is lowered by the overload. When the failure is resolved, and the operation returns from the temporary stop status after driving for a while, it is normal. If this code is displayed in an ordinary use under which the vehicle is not tilted, readjust the stereo camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.> If the same cancel code is still detected after readjustment, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
CC CD		Temporary stop was performed due to the bad weather, backlight, fogged window or dirty window interfering with the recognition function of the stereo camera. And this code may be displayed also when the front of the camera is blocked by the hand or when it is very dark around the vehicle or when the vehicle is surrounded by the blanket of snow and nothing can be seen from the stereo camera. (During CRUISE MAIN ON, “HALT(E1 camera view defectiveness)” is displayed in the multi-information display.)	Investigate the following items No. 1 and No. 2, and check that the possible cause of the temporary stop is applied either to No. 1 or No. 2. 1. Perform inspection concerning the item for CC and CD of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-74, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When there is a relevant item in the check list, it can be the cause of malfunction. 2. Read the temporary stop count stored in the temporary stop count of current data, and check the cause of the temporary stop occurred in the past from “LIST OF CONTENTS FOR CAMERA TEMPORARY STOP: 0 — 23 COUNTS”. <Ref. to ES(diag)-76, LIST OF CONTENTS FOR CAMERA TEMPORARY STOP, LIST, EyeSight Temporary Code(s) Display.> When the causes of the temporary stop for No. 1 and No. 2 correspond, drive the vehicle for a while after the cause of the temporary stop has been eliminated. If the operation returns from the temporary stop status, it is normal. (However, when the temporary stop takes place and is cancelled repeatedly, the temporary stop status is kept for a while to delay the return of the operation, which prevents the irritation.) When this is not the case, check the stereo camera and its periphery. <Ref. to ES(diag)-8, WINDSHIELD GLASS AND DASHBOARD, INSPECTION, General Description.> <Ref. to ES(diag)-8, FRONT WIPER, INSPECTION, General Description.> <Ref. to ES(diag)-9, STEREO CAMERA, INSPECTION, General Description.>

EyeSight Temporary Code(s) Display

EyeSight pause code	Item	Contents of diagnosis	Note
CE	Stereo Camera Temporary Stop	The temperature of the stereo camera became excessively high or low, and the operation stopped temporarily. (During CRUISE MAIN ON, “HALT(E2 camera temperature range outside)” is displayed in the multi-information display.)	Perform inspection concerning the item for CE of the “CHECK LIST (CAMERA TEMPORARY STOP)”. <Ref. to ES(diag)-74, CHECK LIST (CAMERA TEMPORARY STOP), LIST, EyeSight Temporary Code(s) Display.> When the operation returns from the temporary stop status after the failure is resolved, it is normal. When the operation does not return from the temporary status even if driving the vehicle for a while after the failure has been resolved, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
33		Detected when engine speed is 300 rpm or less. (Not detected at an initial ignition switch ON.) (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	Detected when the engine speed drops below 300 rpm after the engine has started once. If the same EyeSight temporary stop code is detected again when the engine is restarted, check the ECM. <Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
C0	Pre-Collision Second Braking Activation	The operation stopped temporarily because the pre-collision secondary brake operated three times between engine starting and stopping. (This is not a normal driving operation, or the system may be malfunctioning.) (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	This code may be displayed when the pre-collision brake is operated intentionally. Turn the ignition switch to OFF, and restart after a while. If the operation returns from the temporary stop status, it is normal. When temporary stop status continues with a code other than C0 after restart, perform diagnosis according to the code. When temporary stop status continues with the code of C0 after restart, the stereo camera may be malfunctioning. Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
A0	CAN Diagnosis	The voltage dropped below 10 V immediately after IGN ON. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	This code may be displayed when the engine is not started for a while with the ignition switch ON and when the engine has started after that. This is a normal operation. If this is not the case, the supply voltage may be malfunctioning. <Ref. to ES(diag)-88, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
A1	ECM Reprogramming	The operation stopped temporarily because the control module (CM) is being reprogrammed. (During CRUISE MAIN ON, “Halt” is displayed in the multi-information display.)	After the completion of the reprogramming operation, turn the ignition to OFF and restart. If the operation returns from the temporary stop status, it is normal.
F9	EPS Input Control Suspended	The operation stopped temporarily because an assist limitation (overheat prevention control) was operated in order to prevent the electric power steering malfunction due to overheat.	This code may be displayed when the steering wheel is operated repeatedly while the vehicle is stopped or running in very low speed. After stopping the engine, leave the vehicle for approximately 30 minutes to cool down, and restart the engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering voltage decrease.	This code may be displayed when battery power is low. Replace or charge the battery, and restart the engine. If the operation returns from the temporary stop status, it is normal.
		The operation stopped temporarily because of an electric power steering bus off.	Electric power steering detected a failure and was disconnected from CAN line.

1. CHECK LIST (CAMERA TEMPORARY STOP)

Even when the set status of the adaptive cruise control is canceled or when a temporary stop status occurs, the EyeSight temporary stop code will not be retained for the following conditions.

- When the VDC operation is stopped by pressing the VDC OFF switch
- When the pre-collision brake operation is stopped by pressing the pre-collision brake OFF switch
- When the lane departure warning is stopped by pressing the lane departure warning OFF switch
- Immediately after the engine start

When these cases does not apply but the EyeSight temporary stop code is displayed, perform the inspection according to the following items.

Item Name			Yes/ No	
[1]: EyeSight temporary stop code [CC, CD] (At this time, “EyeSight Disabled No Camera View” is displayed in the multi-information display.)				
1	Check that the current status applies to the condition that are difficult to be recognized by the stereo camera.			
	1	It was bad weather (heavy rain, snowstorm, dense fog; especially when the oil film adheres to the windshield glass, the glass coating agent is used, or when the old wiper is used).	Yes	No
	2	The vehicle was exposed to the intense light (backlight such as sunlight or headlight high-beam light) from the front of the vehicle.	Yes	No
	3	The raindrops, water drops or dirt on the windshield glass are not wiped off sufficiently.	Yes	No
	4	The windshield glass is covered with fog, snow, dirt, frost or sandy dust, and either of them blocks the visibility of the stereo camera.	Yes	No
	5	The vehicle was tilted excessively by the heavy load.	Yes	No
	6	Canoes etc. loaded on the roof blocked the visibility of the stereo camera.	Yes	No
	7	The field of view was insufficient due to water or snow raised by the preceding vehicle or oncoming vehicle, or the moisture, sand, smoke or sandy dust blown in the wind.	Yes	No
	8	The vehicle passed through the outlet or inlet of a tunnel.	Yes	No
	9	The rearmost area of preceding vehicle was small (trailer, etc.), low or uneven.	Yes	No
	10	The object was a fence or wall with even pattern (striped pattern or bricks) or unpatterned surface.	Yes	No
	11	The object was a plate of glass, mirror wall or door.	Yes	No
	12	The tail light of the preceding vehicle did not illuminate during nighttime hours or inside the tunnel.	Yes	No
	13	The vehicle passed through the banners, flags, drooping branches or grass.	Yes	No
	14	The vehicle drove on the steep uphills or steep downhills.	Yes	No
	15	Front of the camera was blocked by the hand.	Yes	No
	16	It was very dark and there was no obstacle around the vehicle.	Yes	No
	17	The surrounding ground surface was similarly colored. (There is snow as far as the eye can see.)	Yes	No
	18	Dirt such as fingerprint adhered to the lens portion of the stereo camera.	Yes	No
	19	Stable recognition was difficult because of reflection to the windshield glass.	Yes	No
	20	The stereo camera was subject to impact, and the displacement or distortion occurred.	Yes	No

EyeSight Temporary Code(s) Display

			Item Name	Yes/ No	
[2]: EyeSight temporary stop code [CE] (At this time, “EyeSight Disabled Temp Range” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the temperature of the stereo camera becomes excessively high or low.				
	1	The compartment temperature was high. (For example: The vehicle was left under the scorching sun.) Or the compartment temperature was low. (For example: The vehicle was left under the frigid environment.)		Yes	No
[3]: EyeSight temporary stop code [E5] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the vertical deviation occurs on the stereo camera optical axis.				
	1	The vehicle was tilted excessively by the heavy load.		Yes	No
	2	The vehicle drove on the steep uphills or steep downhills.		Yes	No
	3	The stereo camera was subject to impact, and the displacement or distortion occurred.		Yes	No
[4]: EyeSight temporary stop code [33] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the engine speed drops to 300 rpm or below.			Yes	No
[5]: EyeSight temporary stop code [C0] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the pre-collision secondary brake operated three times between starting and stopping of engine.			Yes	No
[6]: EyeSight temporary stop code [A0] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the voltage dropped below 10 V immediately after the ignition ON.			Yes	No
[7]: EyeSight temporary stop code [A1] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the control module (CM) is currently being reprogrammed.			Yes	No
[8]: EyeSight temporary stop code [F9] (At this time, “Halt” is displayed in the multi-information display.)					
1	Check that the current status applies to the condition that the steering wheel is operated repeatedly when the vehicle stops or moves very slowly.			Yes	No

2. LIST OF CONTENTS FOR CAMERA TEMPORARY STOP

Read the camera temporary stop count from Current Data Display & Save of Subaru Select Monitor, estimate the possible cause of the temporary stop according to the chart below. (After clearing the memory, the number of occurrences for each temporary stop is accumulated.)

Displayed item	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 0 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 1 Count	Front of the camera is blocked by hand, dirty window glass	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, very dark and no obstacle around the vehicle, unpatterned wall, blanket of snow around the vehicle and no obstacle is found
EyeSight Temporary 2 Count	Fogged window glass, frost on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 3 Count	Backlight	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle
EyeSight Temporary 4 Count	Water raised by preceding vehicle	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 5 Count	Dirty window glass, fogged window glass, oil film on the window glass	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle
EyeSight Temporary 6 Count	Storm of rain	Dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, bad weather (heavy rain, snowstorm, dense fog), water or snow raised by preceding vehicle, use of the window washer
EyeSight Temporary 7 Count	Object on the dashboard reflected against the windshield glass	Object on the dashboard reflected against the windshield glass, snowstorm
EyeSight Temporary 8 Count	Dirty window glass, bad weather	Backlight, dirty window glass, fogged window glass, frost on the window glass, oil film on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens, deteriorated wiper, front of the camera is blocked by hand, object on the dashboard reflected against the windshield glass, bad weather (heavy rain, snowstorm, dense fog), unpatterned wall, water drop raised by preceding vehicle, steep slope, continuous sharp curve, banner, grass, preceding vehicle with large uneven surface (trailer, etc.), preceding vehicle driving in the night without illuminating the tail light, preceding vehicle with snow adhered, use of the window washer
EyeSight Temporary 9 Count	Not used	—
EyeSight Temporary 10 Count	Not used	—

EyeSight Temporary Code(s) Display

Displayed item	Main causes	Possible conditions for temporary stop (including events occurring less frequently)
EyeSight Temporary 11 Count	Not used	—
EyeSight Temporary 12 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 13 Count	Not used	—
EyeSight Temporary 14 Count	Not used	—
EyeSight Temporary 15 Count	Not used	—
EyeSight Temporary 16 Count	Not used	—
EyeSight Temporary 17 Count	Not used	—
EyeSight Temporary 18 Count	Not used	—
EyeSight Temporary 19 Count	Not used	—
EyeSight Temporary 20 Count	Not used	—
EyeSight Temporary 21 Count	The vehicle is tilted excessively by the heavy load.	• The vehicle is tilted excessively by the heavy load. • The vehicle drives on the steep uphills or steep downhills. • The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 22 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 23 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 24 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 25 Count	Camera has been deformed by hitting it.	The stereo camera was subject to impact, and the displacement or distortion occurred.
EyeSight Temporary 26 Count	Dirty window glass left for a long time	Dirty window glass, fogged window glass, frost on the window glass, raindrop adhering to the window glass, fingerprint adhering to the lens
EyeSight Temporary 27 Count	Not used	—
EyeSight Temporary 28 Count	Can't see anything in a complete darkness.	The vehicle drove in a complete darkness with the headlight turned off. Or, the camera was blinded when driving.
EyeSight Temporary 29 Count	Not used	—
EyeSight Temporary 30 Count	Not used	—
EyeSight Temporary 31 Count	In a high temperature of 70°C (158°F) or more or in a low temperature of –10°C (14°F) or less	—

15.ECM Cancel Code(s) Display

A: OPERATION

1) On «Main Menu» display, select «Each System».
On «Select System» display, select «Engine Control System».
2) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

CAUTION:
- **When performing diagnosis, observe the legal speed limit on the road.**
- **The cancel code will also appear when the cruise control is cancelled by the driver's operation. Do not confuse them.**
- **Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.**

3) When the set speed is cancelled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, select the «Cancel Code(s) Display» on the engine malfunction diagnosis screen.

NOTE:
The «Current» and «The past» are contained in the cancel code. The latest code recognized during current test drive is displayed in «Current». Cancel codes resulting from fault diagnosis of switches relating to the system and cruise control are also displayed in «The past».
4) Perform Engine DTC Clear Memory operation. <Ref. to EN(w/o STI)(diag)-96, OPERATION, Clear Memory Mode.>
Cancel codes for switches relating to the system and cruise control are deleted by clearing memory on the engine side.

NOTE:
- For detailed operation procedures, refer to "Application help".
- The latest code will be cleared by turning ignition switch to OFF.
- For details on cancel codes, refer to List of ECM cruise control cancel code. <Ref. to ES(diag)-78, LIST, ECM Cancel Code(s) Display.>

B: LIST

- List of ECM cruise control cancel code(s)

When the cruise control is cancelled, the ECM outputs the following cancel codes.

Cancel code	Item	Contents of diagnosis	Reference
11	Main switch	Main switch of the EyeSight steering switch is turned to OFF, and the cruise control is released.	This DTC is displayed without operating the main switch. <Ref. to ES(diag)-107, 11, Diagnostic Procedure with ECU Cancel Code.>
12	Stop & Brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the brake pedal. <Ref. to ES(diag)-108, 12, Diagnostic Procedure with ECU Cancel Code.>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This DTC is displayed without shifting to neutral position. <Ref. to ES(diag)-109, 14, Diagnostic Procedure with ECU Cancel Code.>

Cancel code	Item	Contents of diagnosis	Reference
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is displayed without operating the cancel switch. <Ref. to ES(diag)-110, 15, Diagnostic Procedure with ECU Cancel Code.>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the ignition switch. <Ref. to ES(diag)-110, 16, Diagnostic Procedure with ECU Cancel Code.>
21	Abnormality of switches when Ignition switch on	When the ignition switch is turned to ON, each switch of the EyeSight steering switch is already turned ON.	This DTC is displayed when turning ignition switch to ON without operating the EyeSight steering switch. <Ref. to ES(diag)-111, 21, Diagnostic Procedure with ECU Cancel Code.>
22	Abnormality of change in vehicle speed	Malfunction of vehicle speed signal variation is detected.	<Ref. to ES(diag)-111, 22, Diagnostic Procedure with ECU Cancel Code.>
24	Abnormality of switches related to cruise control	Open circuit of the EyeSight steering switch is detected during cruise driving. (The system is judged as model without cruise control.)	This DTC is displayed with normal operation. <Ref. to ES(diag)-112, 24, Diagnostic Procedure with ECU Cancel Code.>
31	Engine Speed	• Abnormal increase of engine speed is detected. • Gear is placed in Neutral, 1st or Reverse position.	Cruise in 2nd shift position or more. <Ref. to ES(diag)-112, 31, Diagnostic Procedure with ECU Cancel Code.>
32	Cruse Control out of Range	• Vehicle speed exceeds the controllable range during cruising. • Set operation was performed at vehicle speed unavailable for setting. • RESUME operation was performed without memorized vehicle speed.	This DTC is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to ES(diag)-112, 32, Diagnostic Procedure with ECU Cancel Code.>
34	Prohibition of cruise control at continuing big Accel. angle	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	<Ref. to ES(diag)-112, 34, Diagnostic Procedure with ECU Cancel Code.>
35	Prohibition of cruise control at vehicle speed F/B malfunction	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	<Ref. to ES(diag)-112, 35, Diagnostic Procedure with ECU Cancel Code.>
41	VDC/TCS Operating	Vehicle dynamics control (VDC), TCS or EPB is operated during cruise driving or cruise setting.	<Ref. to ES(diag)-112, 41, Diagnostic Procedure with ECU Cancel Code.>
43	ABS/VDC Failure	When the cruise switch is ON, ABS or vehicle dynamics control (VDC) system malfunction is detected.	<Ref. to ES(diag)-112, 43, Diagnostic Procedure with ECU Cancel Code.>
44	Body Integrated unit Failure	When the cruise switch is ON, body integrated unit system malfunction is detected.	<Ref. to ES(diag)-113, 44, Diagnostic Procedure with ECU Cancel Code.>

ECM Cancel Code(s) Display

Cancel code	Item	Contents of diagnosis	Reference
45	Meter Failure	When the cruise switch is ON, combination meter malfunction is detected.	<Ref. to ES(diag)-113, 45, Diagnostic Procedure with ECU Cancel Code.>
47	Adaptive cruise control ECM abnormal	When the cruise switch is ON, stereo camera malfunction is detected.	Check the DTCs related to stereo camera.
49	TCM Failure	Transmission control module (TCM) malfunction is detected during cruise driving or cruise setting.	<Ref. to ES(diag)-113, 49, Diagnostic Procedure with ECU Cancel Code.>
53	Adaptive Cruise Control Forced Cancel	Stereo camera detects the release command of the cruise control during cruise driving or cruise setting operation.	Check the stereo camera. Check the ACC cancel code. <Ref. to ES(diag)-81, ACC Cancel Code(s) Display.>
54	Release SW	Brake control module detects the brake pedal operation by the driver during cruise driving or cruise setting operation.	If this code is detected when the brake pedal is not depressed intentionally, check the release switch.
55	Adaptive cruise control reception data abnormal	When the cruise switch is ON, malfunction is detected in the reception data from the stereo camera.	Check the cancel code of stereo camera.
61	Brake Switch Failure	Malfunction in the stop light & brake switch is detected.	<Ref. to ES(diag)-113, 61, Diagnostic Procedure with ECU Cancel Code.>
62	Neutral Switch Failure	Neutral position switch malfunction is detected.	<Ref. to ES(diag)-113, 62, Diagnostic Procedure with ECU Cancel Code.>
63	Abnormality 1 of change in vehicle speed	Malfunction of vehicle speed signal variation is detected. This code may be displayed by a sudden starting of the vehicle on a road with low μ and with the VDC OFF. In this case, restart the engine and perform the cruise setting again. If the cancel code is not displayed, the vehicle is in normal status.	<Ref. to ES(diag)-113, 63, Diagnostic Procedure with ECU Cancel Code.>
64	Engine Sensor Failure 1	Malfunction related to engine is detected.	<Ref. to ES(diag)-113, 64, Diagnostic Procedure with ECU Cancel Code.>
65	Abnormality 1 of switches related to cruise control	Malfunction of the EyeSight steering switch is detected. (When the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to ES(diag)-113, 65, Diagnostic Procedure with ECU Cancel Code.>
66	Cruise Control Calculation Error	Malfunction of the cruise control calculation (microcomputer) is detected.	<Ref. to ES(diag)-114, 66, Diagnostic Procedure with ECU Cancel Code.>

16.ACC Cancel Code(s) Display

A: OPERATION

When the ACC cancel code is detected from the stereo camera, the cruise control will be cancelled.
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «ACC Cancel Code(s) Display».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Up to 8 codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.
- Stored codes will be cleared by Clear Memory.
- For details on ACC cancel codes, refer to List of ACC cancel code. <Ref. to ES(diag)-81, LIST, ACC Cancel Code(s) Display.>

B: LIST

- List of ACC cancel code(s)

ACC cancel code	Item	Contents of diagnosis
02	Adaptive mode: Stop holding	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle.
04	Adaptive mode: Camera temporary stop	Displayed when the cruise control is canceled by the EyeSight temporarily stop while driving in the adaptive cruise mode.
08	Common: Vehicle Speed Sensor Abnormal	Displayed when the cruise control is canceled due to a wheel speed sensor malfunction.
09	Common: Brake operation	Displayed when the cruise control is canceled by the brake operation of the driver.
0A	Common: Pre-Collision Braking	Displayed when the cruise control is canceled because the pre-collision brake function is activated.
0B	Common: AT Manual Mode	Displayed when the cruise control is canceled because the AT manual mode is selected or paddle operation is performed.
0C	Common: VDC switch OFF	Displayed when the VDC function is turned OFF by the VDC OFF switch and the cruise control is canceled.
0D	Common: Any Door is Opened	Displayed when the cruise control is canceled because either of the driver’s door, passenger’s door, or rear doors is opened.
0E	Common: Driver Seat Belt Unfastened	Displayed when the cruise control is canceled because the driver’s seat belt is unfastened.
0F	Common: EPB operation	Displayed when the cruise control is canceled because the EPB is activated.
10	Common: EPB special mode	Displayed when the cruise control is canceled by an irregular operation of a driver, which repeats activation/deactivation of the EPB.
12	Common: AT Gear Range	Displayed in the following situations: The driver performed the SET or RES operation to drive the vehicle either in the adaptive cruise mode or in the constant speed mode, but that operation was not accepted because it was done immediately after shifting into D range.
13	Common: Steep Sloping Road	Displayed when the road surface was judged to be too steep and therefore the cruise control is canceled.
14	Common: ABS operation	Displayed when the cruise control is canceled because the ABS is activated.
15	Common: Large steering operation	Displayed when the cruise control is canceled because the steering wheel is fully turned.
16	Adaptive mode: Stop judgment	Displayed when the cruise control is cancelled after the own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode.
17	Common: Parking brakes pull	Displayed when the cruise control is cancelled because the parking brake is applied.

ACC Cancel Code(s) Display

ACC cancel code	Item	Contents of diagnosis
18	Adaptive mode: Stop forced cancellation	Displayed when the cruise control is cancelled under the following situations: The own vehicle stops following the preceding vehicle while driving in the adaptive cruise control mode, and the driver repeats the SET or RES operation and the automatic brake control continues for 120 seconds.
19	Common: X-Mode	Displayed when the cruise control is canceled because the X mode is activated.
1A	Common: TSM Activation	This item is displayed when the cruise control is cancelled by the operation of TSM commanded by VDC.
1B	Common: VDC Activation	Displayed when the cruise control is canceled because the VDC is activated.
1C	Common: Cancel SW Operation	This item is displayed when the cruise control is canceled by the operation of CANCEL switch.
1D	Common: Cruise SW OFF	This item is displayed when the cruise control is canceled by turning the cruise switch OFF.
1E	CC Mode: Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the constant speed mode.
1F	ACC Mode: Max Speed Exceeded	Displayed when the cruise control is canceled because the own vehicle speed exceeds the controllable range while driving in the adaptive cruise mode.

NOTE:
- “Adaptive cruise mode”: Adaptive cruise control
- “Constant speed mode”: Conventional cruise control
- “Common”: Adaptive cruise control and conventional cruise control

17.Active Lane Keep System Code(s) Display

A: OPERATION

Lane Departure Prevention Deactivate Code(s) Display: The lane departure prevention deactivate code is output, when the lane keep (lane departure prevention) is canceled during the operation or the standby state is canceled.

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight» and select «Enter».
5) On «Select Function» display, select «Cancel Code».
6) On «Cancel Code» display, select «Lane Departure Prevention Assist Deactivate Code(s) Display».

NOTE:

- For detailed operation procedures, refer to “Application help”.
- Up to 8 codes can be stored. When more than eight codes are output, the oldest code will be deleted to store the latest code.
- Stored codes will be cleared by Clear Memory.
- For details on lane keep assist codes, refer to List of lane keep assist code. <Ref. to ES(diag)-83, OPERATION, Active Lane Keep System Code(s) Display.>

B: LIST

- List of lane keep assist code

Code	Item	Contents of diagnosis
04	Lateral Acceleration is Large	Detected when rounding a curve at high speed or making a sharp turn.
0C	Lane Recognition Prohibition(Environmental Factor)	Detected when a driving lane width is narrowed.
18	Out of Control Return Possibility Range	Detected when lane departure prevention control continues for a predetermined time.
26	Real Yaw Rate Excessive	Detected when actual yaw rate exceeds the maximum value of target yaw rate by a specified amount.
37	Yaw Rate Sensor Abnormal(Control)	Detected when the difference between actual yaw rate and expected yaw rate becomes the specified value or more.
50	Camera Adjustment Abnormal 1	Detected when the accuracy of camera learning values is not sufficient. Usually detected after replacing the camera and performing an aiming, and resolved by an automatic adjustment while driving.
52	Yaw Rate Sensor Abnormal(Recognition)	Detected when the vehicle weaves all over the road or when the camera condition is not good and therefore white lines are not correctly recognized.

18. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line. (Bus off)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from engine control module (ECM) is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM is not transmitted to stereo camera.
When lost communication with TCM and TCM abnormal occur simultaneously, perform diagnosis for lost communication with TCM first.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC is not transmitted to stereo camera.
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0126 LOST COMMUNICATION WITH STEERING ANGLE SENSOR MODULE

Detected when CAN data from steering angle sensor is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

Detected when CAN data from VDC is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0131 LOST COMMUNICATION WITH POWER STEERING CONTROL MODULE

Detected when CAN data from EPS CM is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from body integrated unit is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter is not transmitted to stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Failure counter diagnosis of engine control module (ECM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

K: DTC U0402 INVALID DATA RECEIVED FROM TCM

Failure counter diagnosis of automatic transmission control module (TCM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Failure counter diagnosis of VDC control module (VDC CM)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0420 INVALID DATA RECEIVED FROM POWER STEERING CONTROL MODULE

Failure counter diagnosis of EPS CM

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Failure counter diagnosis of body integrated unit

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Failure counter diagnosis of combination meter

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0428 INVALID DATA RECEIVED FROM STEERING ANGLE SENSOR MODULE

Failure counter diagnosis of steering angle sensor

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U1073 CONTROL MODULE COMMUNICATION BUS "SONAR-CAN" OFF

Detected when the bus off status (the stereo camera detects the failure and is disconnected from the local CAN line) occurs.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U1233 LOST COMMUNICATION WITH RAB CONTROL MODULE

Detected when CAN data from RAB CM did not reach the stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U1534 INVALID DATA RECEIVED FROM SONAR ECU

Failure counter diagnosis of RAB CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC B2801 TCM ABNORMAL

Detected when error occurs in the transmission. Or detected when the EyeSight operation is prohibited because the performance cannot be guaranteed as the ATF temperature becomes high.
DTC detecting condition:
- Defective transmission
- High ATF temperature (In this case the DTC for the transmission is not detected.)

Trouble symptom:
All functions of EyeSight system do not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC U0101 displayed? (Current malfunction)	Perform the diagnosis for the DTC U0101. <Ref. to ES(diag)-84, DTC U0101 LOST COMMUNICATION WITH TCM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC related to transmission using the Subaru Select Monitor. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Is DTC for the transmission displayed? (Current malfunction)	Check the transmission. <Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Perform the check of AT OIL TEMP light illumination. <Ref. to CVT(diag)-27, AT OIL TEMP Warning Light Display.>

U: DTC B2802 ETC ABNORMAL

Detected when error occurs in the electronic throttle control.

NOTE:
Check the electronic throttle control. <Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC B2803 EPB OPERATION PROHIBIT

EPB operation is prohibited.
When the DTC is detected by the brake maintenance mode for VDC, the system malfunction does not exist. Therefore, perform Clear Memory Mode. <Ref. to ES(diag)-48, Clear Memory Mode.>

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC B2804 EPB NO ACTIVITY DETECTED

EPB control is abnormal.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

X: DTC B2806 ECM ABNORMAL

Detected when error occurs in the engine control module (ECM).

NOTE:
Perform check of the ECM. <Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Y: DTC B2807 ECM ABNORMAL

Detected when cruise indicator illumination request from ECM and ON/OFF information of cruise function do not match.

NOTE:
Perform check of the ECM. <Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC B2809 VDC MALFUNCTION

Detected when error occurs in the VDC. (VDC failure)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC B280A VDC ECHO BACK DISAGREEMENT

Detected when error occurs in the VDC. (VDC brake control malfunction 1)
When lost communication with vehicle dynamics control and vehicle dynamics control module abnormal or VDC echo back disagreement occur simultaneously, perform diagnosis for lost communication with vehicle dynamics control first.

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC B280B VDC BRAKE FLUID PRESSURE

Detected when error occurs in the VDC. (VDC brake control malfunction 2)

NOTE:
Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AC:DTC B280F COMBINATION METER MALFUNCTION

Malfunction is detected in the combination meter.
DTC detecting condition:
Defective combination meter
Trouble symptom:
- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Combination meter does not illuminate.

NOTE:
Check the combination meter. <Ref. to IDI-8, INSPECTION, Combination Meter System.>

AD:DTC B2810 INCOMPATIBLE WITH EyeSight (COMBINATION METER)

Detected when the combination meter, which is not designed exclusively for EyeSight is installed.
DTC detecting condition:
Incorrect specifications of combination meter
Trouble symptom:
All functions of EyeSight system do not operate.

NOTE:
Replace the combination meter with the one designed for EyeSight. <Ref. to IDI-12, Combination Meter.>

AE:DTC B2811 EPS ABNORMAL

Malfunction is detected in the electric power steering.

NOTE:
Check the electric power steering. <Ref. to PS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AF:DTC B2814 POWER SUPPLY LOW VOLTAGE

Detected when the status of 7.0 V or less continues approximately for 5 seconds and is judged to be low-voltage malfunction, or when the +B harness of the stereo camera is broken.

DTC detecting condition:

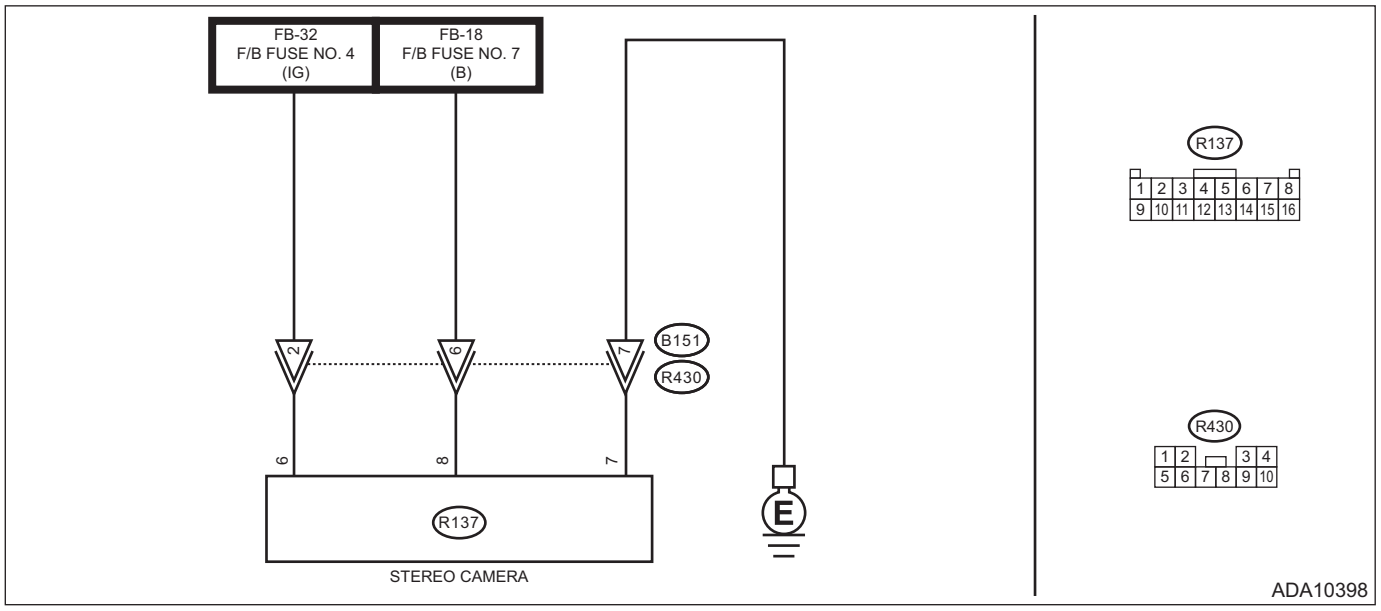
- Input voltage to stereo camera is out of specifications.
- Defective stereo camera control harness (open circuit in +B harness)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.
- Cruise indicator light blinks.
- Malfunction indicator light illuminates.
- VDC warning light illuminates.
- ATF temperature warning light illuminates.

Wiring diagram:

EyeSight System <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>



Step		Check	Yes	No
1	**CHECK GENERATOR.** 1) Start the engine and idle for a while. 2) Measure the voltage between generator terminal B and chassis ground. ***Connector & terminal*** ***Generator terminal B (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check the generator. <Ref. to SC(STI)-18, Generator.> <Ref. to SC(w/o STI)-31, Generator.>
2	**CHECK BATTERY TERMINAL.** Turn the ignition switch to OFF.	Is the battery terminal connected securely?	Go to step **3**.	Tighten the battery terminal securely.

	Step	Check	Yes	No
3	**CHECK FUSE.** Check the fuse. <Ref. to ES-4, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the faulty fuse. When the replaced fuse blows out easily, check the short circuit in harness.
4	**CHECK HARNESS (POWER SUPPLY CIRCUIT).** 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 6 (+) — Chassis ground (–):*** ***(R137) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
5	**CHECK HARNESS (GROUND CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
6	**CHECK POOR CONTACT OF CONNECTORS.** Check stereo camera connector.	Is there poor contact of the connector?	Repair the connector.	Go to step **7**.
7	**CHECK STEREO CAMERA.** 1) Connect all connectors and battery terminals securely. 2) Start the engine, drive the vehicle at 40 km/h (25 MPH) or more, stop the vehicle and then stop the engine. 3) After 3 seconds or more have elapsed, restart the engine. 4) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 5) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B2814 or B2815 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AG:DTC B2815 POWER SUPPLY HIGH VOLTAGE

Detected when the status for the battery voltage of 16 V or more continues approximately for 5 seconds and is judged to be abnormally high voltage.
Refer to DTC B2814 for DTC detecting condition, trouble symptom and diagnostic procedure. <Ref. to ES(diag)-88, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC B2817 BRAKE LAMP

DTC detecting condition:
- Defective brake light relay
- Defective brake light switch
- Defective VDC

Trouble symptom:
- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

- Brake light does not go off or illuminate.

NOTE:
When DTC B2817 is detected, check VDC system. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AI: DTC B281B STEERING ANGLE SENSOR FAIL

DTC detecting condition:
Defective steering angle sensor
Trouble symptom:
All functions of EyeSight system do not operate.

NOTE:
Check the steering angle sensor. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AJ:DTC B281C INCOMPATIBLE WITH EyeSight (EPS)

Detected when the EPS CM does not recognize EyeSight.
DTC detecting condition:
The EPS CM does not recognize EyeSight.
Trouble symptom:
All functions of EyeSight system do not operate.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC U**** displayed? (Current malfunction)	Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Does DTC B281C stay as a current malfunction?	Go to step **3**.	Perform the memory clear for EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-48, Clear Memory Mode.>
3	**CHECK CURRENT DATA.** Confirm the current data «EyeSight Specification» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Does the data show «Yes»?	Go to step **4**.	Go to step **5**.
4	**CHECK CURRENT DATA.** Confirm the current data «EyeSight Recognition Status (EPS)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Does the data show «Detect»?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Replace the EPS CM. <Ref. to PS-97, NOTE, Power Steering Control Module.>
5	**CHECK CURRENT DATA.** Confirm the current data «EyeSight Recognition Status (EPS)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Does the data show «Detect»?	Replace the EPS CM and combination meter. <Ref. to PS-97, NOTE, Power Steering Control Module.> <Ref. to IDI-12, REMOVAL, Combination Meter.>	Replace the combination meter. <Ref. to IDI-12, REMOVAL, Combination Meter.>

AK:DTC B281E RAB CONTROL MODULE

DTC detecting condition:

- Defective RAB CM.
- Defective unit that is cooperatively controlled with stereo camera.

Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

	Step	Check	Yes	No
1	**CHECK DTCS (DETERMINING A FAILURE OF COOPERATIVE CONTROL UNIT).** Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B281E displayed?	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DTC.** Read the DTC related to the Reverse Automatic Braking using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.

AL:DTC B281F Reverse Automatic Braking OVERRIDE

DTC detecting condition:
Defective RAB CM.
Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

NOTE:
Check the Reverse Automatic Braking. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

AM:DTC B2821 Reverse Automatic Braking CONTROL PROHIBITION

DTC detecting condition:
Defective RAB CM.
Trouble symptom:
- The Reverse Automatic Braking function does not operate.
- RAB warning light illuminates.

NOTE:
Check the Reverse Automatic Braking. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

AN:DTC B2822 TCM DATA ABNORMAL

DTC detecting condition:
Detected due to judgment that the TCM module is abnormal, when the AT turbine speed signal is not input during driving. Detected when all the conditions below are met.
- Drive wheel average wheel speed is 15 km/h or more
- Engine speed is 1000 rpm or more
- Turbine speed is 0 or less

Trouble symptom:
- Poor startability.
- All functions of EyeSight system do not operate.
- EyeSight warning light blinks or illuminates.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC related to transmission using the Subaru Select Monitor. <Ref. to CVT(diag)-18, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

AO:DTC B28A0 VEHICLE MODEL JUDGMENT

Detected when the model code for stereo camera and the model code used for CAN data are different.

DTC detecting condition:

- Defective CAN system
- Defective stereo camera
- In the aiming operation, there is an open circuit in the +B harness of the stereo camera.
- In the completion of the aiming operation, the switching from IGN OFF to IGN ON takes place too early, and the recording of the model information has not yet been finished.

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

Wiring diagram:

EyeSight system <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>

	Step	Check	Yes	No
1	**CHECK RELATED CM.** Check the part number of the ECM, TCM, VDC CM and combination meter.	Is each CM a genuine part?	Go to step **2**.	Replace the non-genuine CM with a genuine one.
2	**CHECK STEREO CAMERA.** 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Is the stereo camera genuine?	Go to step **3**.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK WORK SUPPORT DISPLAY.** Using Subaru Select Monitor, select «Work Support» on «Select Function» display.	Is «Confirm on parameter» displayed?	Go to step **5**.	Perform the adjustment or inspection of the camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.> Go to step **8**.
5	**PERFORM WORK SUPPORT.** On «Work Support» display, select «Confirm on parameter».	Are «Applied model» and «OP code» confirmation screens displayed?	Go to step **6**.	Go to step **7**.
6	**CHECK MODEL REGISTRATION INFORMATION.** Check «Applied model» and «OP code» displayed on the Subaru Select Monitor screen, and verify that they are appropriate for the concerned vehicle. NOTE: The «?» mark displayed on «OP code» means that there is no difference in the options.	Do «Applied model» and «OP code» correspond to the applied model and option code indicated on the concerned vehicle? <Ref. to ID-2, IDENTIFICATION, Identification.>	Go to step **8**.	On «Work Support» display, select «Selection of Parameter», and enter the applied model and option code indicated on the vehicle to register the vehicle information. After the registration is completed, turn the ignition switch OFF. After five seconds have elapsed, turn the ignition switch ON. Go to step **8**.
7	**PERFORM WORK SUPPORT.** On «Work Support» display, select «Selection of Parameter».	Is the input screen of «Applied model» displayed?	Enter the applied model and option code indicated on the vehicle to register the vehicle information. <Ref. to ID-2, IDENTIFICATION, Identification.> After the registration is completed, turn the ignition switch OFF. After five seconds have elapsed, turn the ignition switch ON. Go to step **8**.	Perform the adjustment or inspection of the camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.> Go to step **8**.
8	**CHECK DTC.** 1) Perform the memory clear for EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Turn the ignition switch OFF → ON. 3) Read the DTC related to EyeSight using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Does DTC B28A0 stay as a current malfunction?	Go to step **9**.	Currently, it is normal. Finish the diagnosis.
9	**CHECK FUSE.** Check the fuse. <Ref. to ES-4, Relay and Fuse.>	Is the check result OK?	Go to step **10**.	Replace the defective fuse. When the replaced fuse blows out easily, check the short circuit in harness.

	Step	Check	Yes	No
10	**CHECK HARNESS (POWER SUPPLY CIRCUIT).** 1) Disconnect the stereo camera. 2) Turn the ignition switch to ON. 3) Measure the voltage between harness connector of stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 6 (+) — Chassis ground (–):*** ***(R137) No. 8 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **11**.	Check the power supply system circuit, and if any fault is found, repair the defective parts or replace the harness.
11	**CHECK HARNESS (GROUND CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ground cable from battery. 3) Measure the resistance between stereo camera and chassis ground. ***Connector & terminal*** ***(R137) No. 7 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **12**.	Check the ground system circuit, and if any fault is found, repair the defective parts or replace the harness.
12	**CHECK POOR CONTACT OF CONNECTORS.** Check stereo camera connector.	Is there poor contact of connector?	Repair the connector.	Go to step **13**.
13	**CHECK STEREO CAMERA.** 1) Connect all connectors and battery terminals securely. 2) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 3) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A0 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AP:DTC B28A1 EyeSight COMMUNICATION(ECM)

Detected when the engine control module (ECM) detects the malfunction of stereo camera, or when the stereo camera or ECM is assembled incorrectly.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Incorrect assembly of stereo camera (when the stereo camera designed for EyeSight (Ver. 2) type vehicle is installed to the EyeSight (Ver. 3) type vehicle, etc.)
- Incorrect assembly of ECM (when the ECM designed for another model is installed, etc.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK ECM.** Check the part number of the ECM.	Is the ECM genuine?	Go to step **2**.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

	Step	Check	Yes	No
2	**CHECK STEREO CAMERA.** 1) Remove the camera cover. 2) Check the part number of the stereo camera.	Is the stereo camera genuine?	Go to step **3**.	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>
3	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **4**.
4	**CHECK ECM.** Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>	Is DTC for engine displayed?	Perform the diagnosis for DTC for the engine.	Go to step **5**.
5	**CHECK CONNECTOR.** Check the ECM connector and the stereo camera connector.	Is the check result OK?	Go to step **6**.	Repair or replace the connector.
6	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A1 displayed?	Perform the diagnosis for DTC other than DTC B28A1.	Go to step **7**.
7	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A1 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AQ:DTC B28A2 EyeSight COMMUNICATION(VDC)

Detected when the VDC control module (VDCCM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective VDC control module (VDCCM)
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK VDC.** Perform the diagnosis for VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for VDC displayed?	Perform the diagnosis of DTCs for VDC.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK CONNECTOR.** Check the VDC connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A2 displayed?	Perform the diagnosis for DTC other than DTC B28A2.	Go to step **5**.
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A2 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AR:DTC B28A3 EyeSight COMMUNICATION(METER)

Detected when the combination meter detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective combination meter
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for combination meter displayed?	Perform the diagnosis for DTC for the combination meter.	Go to step **3**.
3	**CHECK CONNECTOR.** Check the combination meter connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A3 displayed?	Perform the diagnosis for DTC other than DTC B28A3.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A3 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AS:DTC B28A4 EyeSight COMMUNICATION(EPS)

Detected when the power steering control module (EPS CM) detects the malfunction of stereo camera.

DTC detecting condition:

- Defective CAN system
- Defective EPS CM
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **2**.
2	**CHECK EPS CM.** Perform the diagnosis for the power steering system. <Ref. to PS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is DTC for power steering system displayed?	Perform the diagnosis for DTC for the EPS.	Go to step **3**.
3	**CHECK CONNECTOR.** Check the EPS CM connector and the stereo camera connector.	Is the check result OK?	Go to step **4**.	Repair or replace the connector.
4	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A4 displayed?	Perform the diagnosis for DTC other than DTC B28A4.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A4 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AT:DTC B28A5 ENGINE TORQUE LIMITER CONTROL PROHIBIT

Detected when abnormal data is transmitted from stereo camera to engine control module (ECM) and the engine control module (ECM) prohibits the AT rapid start prevention control, or when the engine control module (ECM) prohibits the AT rapid start prevention control.

DTC detecting condition:

- Defective CAN system
- Defective engine control module (ECM)
- Defective stereo camera
- Defective combination meter
- Incorrect assembly of combination meter (when the combination meter that is not for EyeSight is installed.)

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the part number of the combination meter.	Is the combination meter genuine?	Go to step **2**.	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>
2	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is DTC for LAN system displayed?	Perform the diagnosis of DTCs for LAN system.	Go to step **3**.
3	**CHECK ECM.** Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-2, Basic Diagnostic Procedure.>	Is DTC for engine displayed?	Perform the diagnosis for DTC for the engine.	Go to step **4**.
4	**CHECK CONNECTOR.** Check the ECM connector and the stereo camera connector.	Is the check result OK?	Go to step **5**.	Repair or replace the connector.
5	**CHECK STEREO CAMERA.** Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC other than DTC B28A5 displayed?	Perform the diagnosis for DTC other than DTC B28A5.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK STEREO CAMERA.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Read the DTC again. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A5 displayed?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.

AU:DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1

Detected when communication error occurs inside the stereo camera.
DTC detecting condition:
Communication error occurs inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.

	Step	Check	Yes	No
1	**CHECK RESTARTING.** 1) Turn the ignition switch to OFF. 2) Start the engine. 3) Read the DTC related to the stereo camera using the Subaru Select Monitor. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28A6 displayed after restarting the engine?*1	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Clear the memory, in which temporary communication failure occurs and complete the step.

*1: When malfunction is detected after restarting the engine, 0 is registered in IG counter. Other values can be regarded as DTCs detected in the past.

AV:DTC B28A7 STEREO CAMERA RECOGNITION(TARGET)

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If DTC B28A7 is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AW:DTC B28A8 INTERNAL STEREO CAMERA COMMUNICATION 2

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If DTC B28A8 is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AX:DTC B28A9 STEREO CAMERA SYNCHRONIZED RECOGNITION DATA

Detected when error occurs in the communication data inside the control module caused by external factors such as noises.

NOTE:
If DTC B28A9 is still detected after the engine has restarted, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

AY:DTC B28AA STEREO CAMERA MICROCOMPUTER 1

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC detecting condition:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AZ:DTC B28AB STEREO CAMERA MICROCOMPUTER 2

Detected when communication error occurs due to malfunction of microcomputer inside the stereo camera.
DTC detecting condition:
Communication error occurs due to malfunction of microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BA:DTC B28AC STEREO CAMERA ASIC

Detected when communication error occurs due to malfunction of ASIC.
DTC detecting condition:
Communication error occurs due to malfunction of ASIC.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BB:DTC B28AD STEREO CAMERA IMAGE RECOGNITION

Detected when improper image recognition occurs in the microcomputer inside the stereo camera.
DTC detecting condition:
Improper image recognition occurs in the microcomputer inside the stereo camera.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BC:DTC B28AE INTERNAL STEREO CAMERA POWER SUPPLY

Detected when improper power supply inside the stereo camera occurs.
DTC detecting condition:
Improper power supply inside the stereo camera occurs.
Trouble symptom:
All functions of EyeSight system do not operate.
Refer to DTC B28A6 for diagnostic procedure. <Ref. to ES(diag)-99, DTC B28A6 INTERNAL STEREO CAMERA COMMUNICATION 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BD:DTC B28AF STEREO CAMERA ADJUSTMENT INCOMPLETE

Detected when adjustment or inspection of stereo camera has not been completed normally.
DTC detecting condition:
- Operation is aborted during adjustment or inspection of the stereo camera.
- After the replacement of the stereo camera, adjustment or inspection of camera has not yet been performed.

Trouble symptom:
All functions of EyeSight system do not operate.
For diagnostic procedure, perform adjustment/inspection of camera. When the adjustment or inspection of camera is performed, and if it is not completed successfully, replace the camera.

BE:DTC B28B1 STEREO CAMERA AUTOMATIC ADJUSTMENT

Detected when the optical axis of stereo camera is deviated in lateral direction or when the fluctuation range of automatic adjustment value has expanded.

NOTE:
Readjust the stereo camera. <Ref. to ES-13, PROCEDURE, Camera Adjustment, Inspection.>
If DTC B28B1 is still detected after readjustment, replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

BF:DTC B28B2 STEREO CAMERA HIGH TEMPERATURE

Detected when the temperature of the stereo camera excessively increases.

NOTE:
When DTC B28B2 is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

BG:DTC B28B3 STEREO CAMERA LOW TEMPERATURE

Detected when the temperature of the stereo camera excessively decreases.

NOTE:
When DTC B28B3 is detected, performing adjustment or inspection of the camera will not return to the normal state. In this case, always replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>

BH:DTC B28B5 +B CIRCUIT OPEN

Detected when there is an open circuit in power supply line.

NOTE:
Refer to DTC B2814 for diagnostic procedure. <Ref. to ES(diag)-88, DTC B2814 POWER SUPPLY LOW VOLTAGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BI: DTC B28B6 PRE-COLLISION OFF SWITCH

Detected when pre-collision brake OFF switch circuit is not installed, open-circuited or is stuck to ON.
DTC detecting condition:
- Wiring of pre-collision brake OFF switch is not connected.
- Pre-collision brake OFF switch circuit is open.
- Pre-collision brake OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:
All functions of EyeSight system do not operate.
Wiring diagram:
EyeSight system <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>

	Step	Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Pre-Collision Brake OFF SW» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Does the display change according to ON/OFF operation of the pre-collision brake OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and the pre-collision brake OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and pre-collision brake OFF switch connector as well as chassis ground. ***Connector & terminal*** ***(R137) No. 12 — (R406) No. 3:*** ***(R406) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and pre-collision brake OFF switch connector or between the pre-collision brake OFF switch connector and chassis ground.
3	**CHECK HARNESS.** Using the tester, measure the resistance between the pre-collision brake OFF switch connector and chassis ground. ***Connector & terminal*** ***(R406) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the pre-collision brake OFF switch. <Ref. to ES-35, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and pre-collision brake OFF switch connector.

BJ:DTC B28B7 LDP OFF SWITCH

Detected when lane departure warning OFF switch circuit is not installed, open-circuited, or is stuck to ON.

DTC detecting condition:

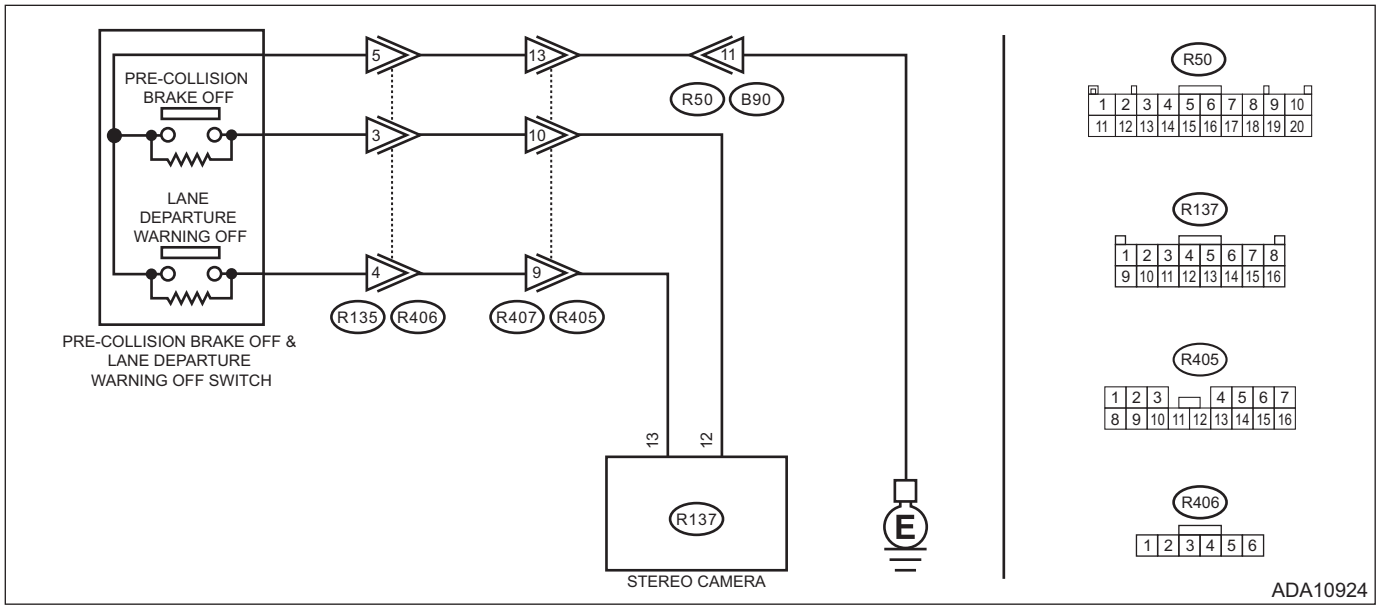
- Wiring of lane departure warning OFF switch is not connected.
- Lane departure warning OFF switch circuit is open.
- Lane departure warning OFF switch circuit stays ON for 45 seconds or more.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight system <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>



Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Lane Departure Warning OFF SW» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Does the display change according to the lane departure warning OFF switch ON/OFF operation?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and the lane departure warning OFF switch connector. 2) Using the tester, measure the resistance between the stereo camera connector and lane departure warning OFF switch connector. ***Connector & terminal*** ***(R137) No. 13 — (R406) No. 4:*** ***(R406) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and lane departure warning OFF switch connector or between the lane departure warning OFF switch connector and chassis ground.
3	**CHECK HARNESS.** Using the tester, measure the resistance between the lane departure warning OFF switch connector and chassis ground. ***Connector & terminal*** ***(R406) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the lane departure warning OFF switch. <Ref. to ES-35, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and lane departure warning OFF switch connector.

BK:DTC B28B8 EyeSight STEERING SWITCH 1

Detected when steering switch for EyeSight is not installed, is open-circuited or is stuck to ON.

DTC detecting condition:

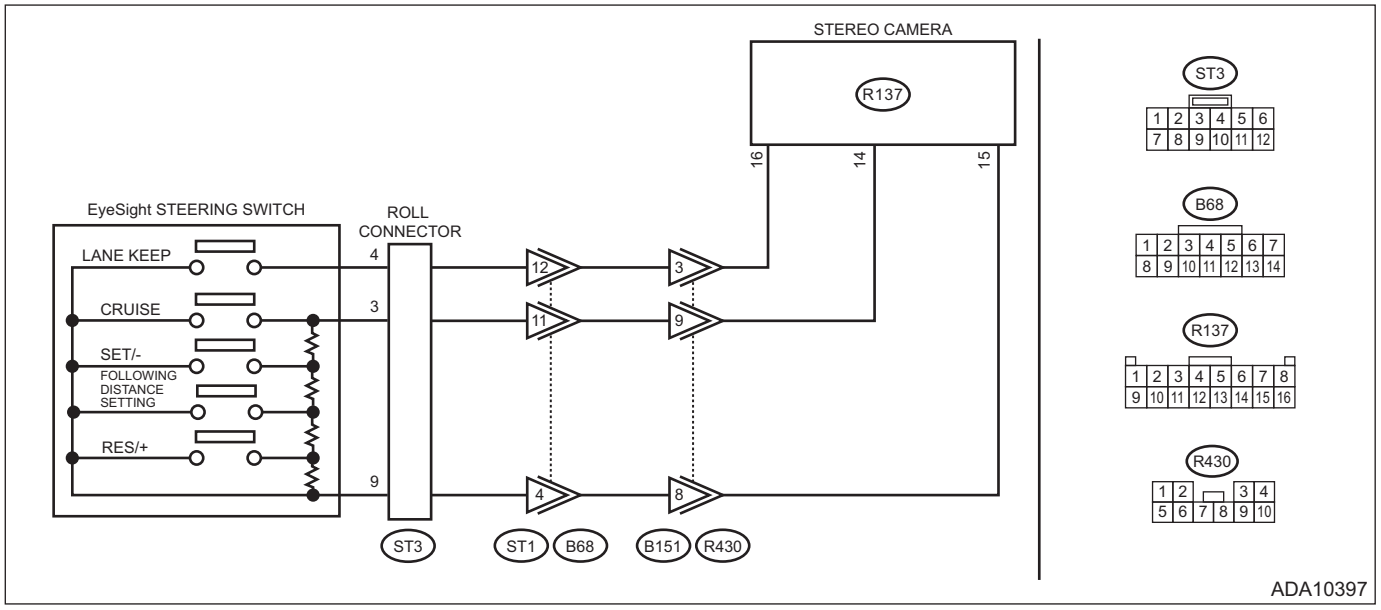
- Wiring of the EyeSight steering switch is not connected.
- EyeSight steering switch circuit is open.
- EyeSight steering switch circuit stays ON.

Trouble symptom:

All functions of EyeSight system do not operate.

Wiring diagram:

EyeSight System <Ref. to WI-217, WIRING DIAGRAM, EyeSight System.>



Step		Check	Yes	No
1	**CHECK CURRENT DATA.** Confirm the current data «Cruise Control SW Voltage (Port14)» and «Cruise Control SW Voltage (Port16)» of EyeSight using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.>	Is the voltage according to the pressed EyeSight steering switch displayed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, or temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK HARNESS.** 1) Disconnect the stereo camera connector and EyeSight steering switch connector. 2) Using the tester, measure the resistance between stereo camera connector and EyeSight steering switch connector. ***Connector & terminal*** ***(ST3) No. 4 — (R137) No. 16:*** ***(ST3) No. 3 — (R137) No. 14:*** ***(ST3) No. 9 — (R137) No. 15:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace an open circuit in harness between the stereo camera connector and the EyeSight steering switch connector.

	Step	Check	Yes	No
3	**CHECK HARNESS.** Using the tester, measure the resistance between EyeSight steering switch connector and chassis ground. ***Connector & terminal*** ***(ST3) No. 4 — Chassis ground:*** ***(ST3) No. 3 — Chassis ground:*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance 1 MΩ or more?	Check the EyeSight steering switch. <Ref. to ES-35, INSPECTION, Switches and Harness.>	Repair or replace the short circuit to ground in harness between the stereo camera connector and the EyeSight steering switch connector.

BL:DTC B28B9 EyeSight STEERING SWITCH 2

Detected when steering switch for EyeSight is not installed, is open-circuited or is stuck to ON.
Refer to DTC B28B8 for diagnostic procedure. <Ref. to ES(diag)-104, DTC B28B8 EyeSight STEERING SWITCH 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

BM:DTC B28BA STEERING ANGLE AND STEREO CAMERA CORRELATION MISALIGNED

- Detected when the center point of the steering angle sensor is misaligned.
- Detected when the alignment is extremely misaligned.

DTC detecting condition:

- Defective wheel alignment
- Defective VDC CM
- Defective stereo camera

Trouble symptom:

- All functions of EyeSight system do not operate.
- EyeSight warning light illuminates.

NOTE:

- Prior confirmation is required to check if the work related to alignment has been performed or there is an accident history.
- In advance, record the value of current data «Active Lane Keep System Control Check 3» of stereo camera using Subaru Select Monitor.

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTC of the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is DTC related to steering angle sensor displayed?	Perform the diagnosis for DTC for VDC, Go to step **2**.	Go to step **2**.
2	**CHECK DRIVING CONDITION.** Check the driving condition.	Is the steering wheel obviously tilted when the vehicle is travelling straight ahead? (Check if it is obviously tilted at the closest point between the column cover and the steering wheel.)	Perform the wheel alignment adjustment. <Ref. to FS-10, Wheel Alignment.>, and Go to step **3**.	Go to step **3**.
3	**CHECK CURRENT DATA.** 1) Display the current data «Steer Angle Sensor Op» of stereo camera using Subaru Select Monitor. NOTE: Do not use «Steering Angle Sensor Value (Right +) (Left -)» when checking. 2) Check the value when the vehicle is in the straight ahead position.	Is the value from –2 to+2 degrees?	Go to step **4**.	Perform «VSC(VDC) Centering Mode» for VDC. <Ref. to VDC-16, VDC SENSOR MIDPOINT SETTING MODE, ADJUSTMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> Repeat the step 3. Go to step **3**.

	Step	Check	Yes	No
4	**CHECK JOB CONTENT.** Check the job contents performed so far. (To identify whether the problem belongs to the vehicle or the stereo camera.)	Is one of the following actions performed: steering angle sensor diagnosis, wheel alignment adjustment or VDC sensor centering mode?	Go to step **5**.	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>
5	**LANE KEEP ASSIST LEARNING VALUE CLEAR.** 1) Perform «Clear Active Lane Keep System Learning Value». <Ref. to ES(diag)-49, Clear Active Lane Keep System Learning Value.> 2) Turn the ignition switch OFF → ON. 3) Display the current data «Active Lane Keep System Control Check 3» of stereo camera using Subaru Select Monitor.	Is the value of «Active Lane Keep System Control Check 3» 0?	Go to step **6**.	Performing «Clear Active Lane Keep System Learning Value» is not complete. Go to step **7**.
6	**CHECK DTC.** 1) Clear the memory. <Ref. to ES(diag)-48, Clear Memory Mode.> 2) Turn the ignition switch OFF → ON. 3) Read the DTC. <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Is DTC B28BA displayed?	Clearing the memory is not complete. Go to step **7**.	Currently, it is normal. Finish the diagnosis.
7	**CHECK SUBARU SELECT MONITOR CONNECTION.** Check the connection of Subaru Select Monitor.	Is there any fault in the harness and connection between Subaru Select Monitor and stereo camera?	Replace the harness or repair the connection. In case that the step 5 is not performed Go to step **5**. In case that the step 5 has been performed Go to step **6**.	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>

19.Diagnostic Procedure with ECU Cancel Code

A: 11

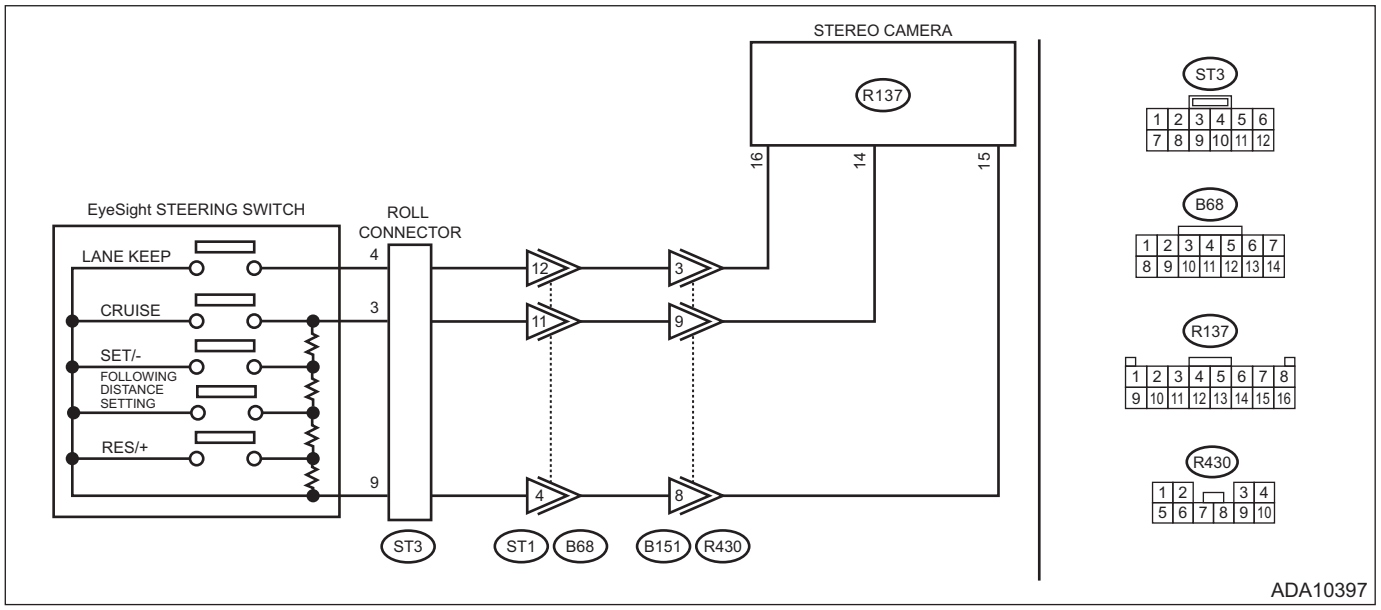
Detected, when the CRUISE switch is pressed. Or, when an error related to the CRUISE switch occurs.

Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>



Step		Check	Yes	No
1	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Remove the driver's airbag module. <Ref. to AB-34, REMOVAL, Driver's Airbag Module.> 2) Disconnect the harness connector of cruise control command switch. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 3 (+) — Chassis ground (–):*** ***(ST3) No. 4 (+) — Chassis ground (–):***	Is the voltage 5 V or more?	Go to step **2**.	Check the harness between cruise control command switch and stereo camera, and the steering roll connector for open or short circuit, or for poor contact.
2	**CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between harness connector terminal and chassis ground. ***Connector & terminal*** ***(ST3) No. 9 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **3**.	Check for open circuit between the cruise control command switch, stereo camera and chassis ground, and check the stereo camera.
3	**CHECK CRUISE CONTROL COMMAND SWITCH.** Measure the resistance between switch terminals, when the cruise control command switch is not pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance approximately 4 kΩ?	Go to step **4**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

	Step	Check	Yes	No
4	**CHECK CANCEL SWITCH.** 1) Turn the ignition switch to OFF. 2) Remove the cruise control command switch. <Ref. to CC-6, REMOVAL, Cruise Control Command Switch.> 3) Measure the resistance between switch terminals with the CANCEL switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance with the CANCEL switch pressed approximately less than 1 Ω?	Go to step **5**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
5	**INSPECTION OF SET/– SWITCH.** Measure the resistance between switch terminals with the SET/– switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance with the SET/– switch pressed approximately 250 Ω?	Go to step **6**.	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>
6	**CHECK RES/+ SWITCH CIRCUIT.** Measure the resistance between the switch terminals with the RES/+ switch pressed. ***Terminals*** ***No. 3 — No. 9:***	Is the resistance with the RES/+ switch pressed approximately 1,500 Ω?	Replace the stereo camera. <Ref. to ES-7, REMOVAL, Stereo Camera.>	Replace the cruise control command switch. <Ref. to CC-6, Cruise Control Command Switch.>

B: 12

Detected when the brake pedal is depressed, or the error related to the stop light & brake switch occurred.

Trouble symptom:

- Cruise control cannot be set.
- Cruise control cannot be released.

Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>

	Step	Check	Yes	No
1	**CHECK STOP LIGHT & BRAKE SWITCH.** Check the stop light & brake switch. <Ref. to CC-9, Stop Light & Brake Switch.>	Are the check results for the stop light & brake switch unit, and installation position OK?	Go to step **2**.	Replace the stop light & brake switch. Or adjust the installation position.
2	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 3 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	• Check the fuse No. 8 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
3	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B65) No. 1 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **4**.	• Check the fuse No. 4 (fuse & relay box). • Check for open or short circuit in harness between the stop light & brake switch and the fuse & relay box.
4	**CHECK STOP LIGHT & BRAKE SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. ***Connector & terminal*** ***(B134) No. 43 — (B65) No. 4:*** ***(E158) No. 8 — (B65) No. 2:***	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Repair the harness.

C: 14

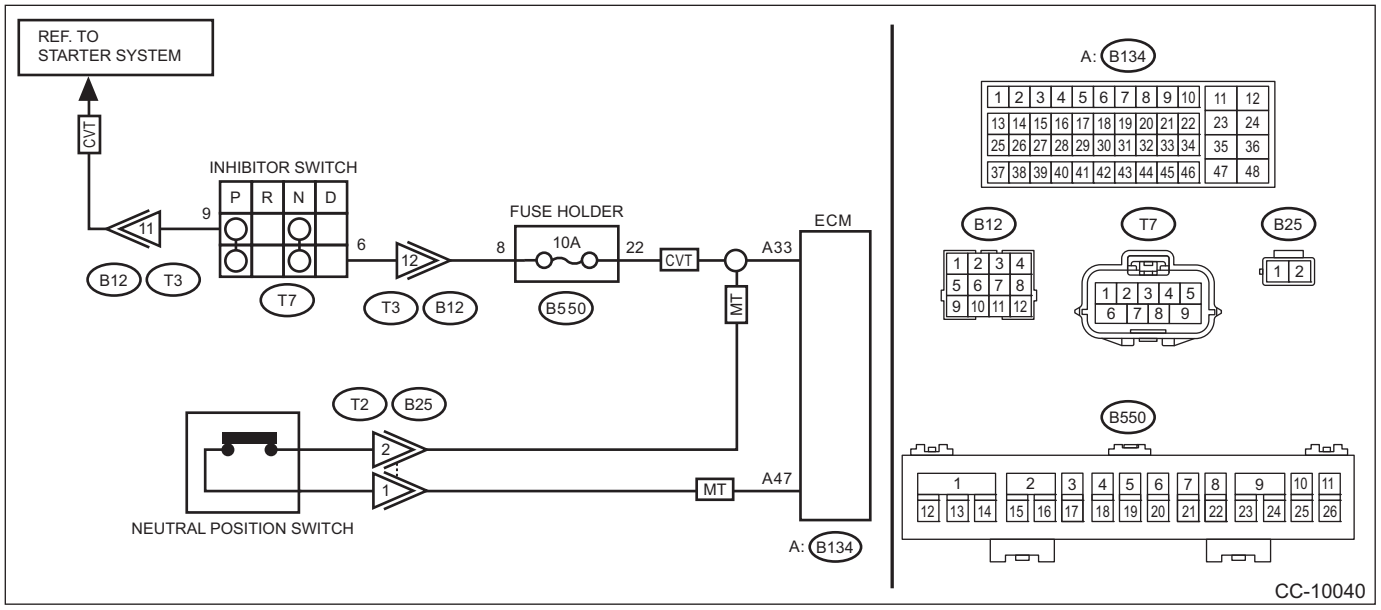
Detected when the select lever is shifted to the neutral position, or when an error related to the neutral position switch occurs.

Trouble symptom:

Cruise control cannot be set.

Wiring diagram:

Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>



Step		Check	Yes	No
1	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(T7) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **2**.	Check for open or short circuit in the harness between inhibitor switch and ECM.
2	**CHECK INHIBITOR SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between the inhibitor switch harness connector terminal and the starter motor. ***Connector & terminal*** ***(T7) No. 9 — Starter motor:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair the harness.
3	**CHECK INHIBITOR SWITCH.** Remove and check the inhibitor switch. <Ref. to CC-11, Inhibitor Switch.>	Is the check result OK?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>	Replace the inhibitor switch.

D: 15

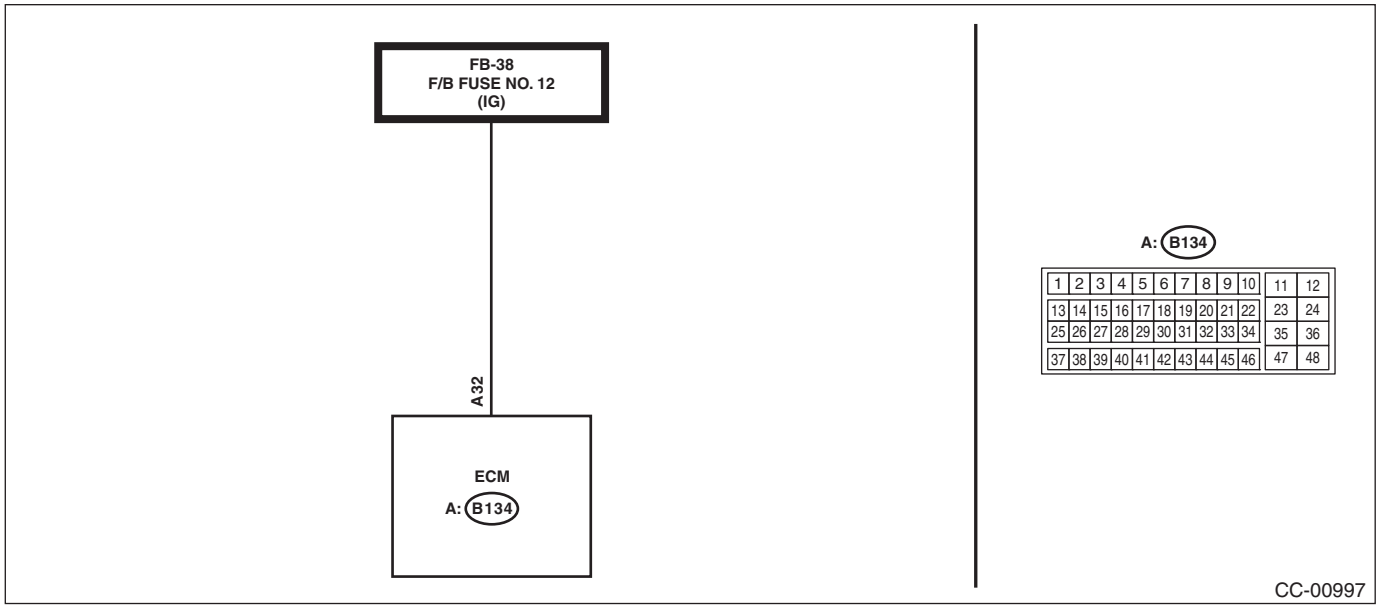
Detected when the CANCEL switch is pressed, or when an error related to the CRUISE switch occurs.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to ES(diag)-107, 11, Diagnostic Procedure with ECU Cancel Code.>

E: 16

Detected when the ignition switch is turned to OFF, or when an error related to the ignition switch occurs.
Trouble symptom:
Cruise control cannot be set.

Wiring diagram:
Cruise control system <Ref. to WI-131, WIRING DIAGRAM, Cruise Control System.>



Step		Check	Yes	No
1	**CHECK IGNITION SWITCH CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. ***Connector & terminal*** ***(B134) No. 32 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Check for poor contact of ECM connector.	• Check the fuse No. 12 (fuse & relay box). • Check open or short circuit in harness between the ignition switch and ECM.

F: 21

Cruise control command switch malfunction is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to ES(diag)-107, 11, Diagnostic Procedure with ECU Cancel Code.>

G: 22

Malfunction related to vehicle speed sensor is detected.
Diagnosis:
Open or short circuit in the vehicle speed sensor system.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)

Step		Check	Yes	No
1	**CHECK ABS OR VDC WARNING LIGHT.** 1) Turn the ignition switch to ON. 2) After the initial operation of the combination meter finished, check if the ABS or VDC warning light stays illuminated.	Does the warning light stay illuminated?	Check the VDCCM. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DTC OF LAN COMMUNICATION CIRCUIT.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC displayed?	Perform inspection according to DTC.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>

H: 24

Switch malfunction related to cruise control is detected.
Trouble symptom:
- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to ES(diag)-107, 11, Diagnostic Procedure with ECU Cancel Code.>

I: 31

Malfunction related to engine speed signal is detected.
Abnormal increase of engine speed is detected.
Gear is placed in 1st (MT model only) or Reverse position.
Drive with the gear in 2nd position or higher, and perform the cruise setting again. It is normal if the cancel code is not detected.

J: 32

Detected outside the system operation vehicle speed range.
Increase the vehicle speed to the speed available for cruise set and perform the cruise set operation again.
If the cancel code is detected even when the cruise setting is performed again, perform the diagnosis for 22.
Refer to 22 for diagnostic procedure.
<Ref. to ES(diag)-111, 22, Diagnostic Procedure with ECU Cancel Code.>

K: 34

The vehicle was driven at higher speed than the set vehicle speed for a long time (approximately 10 minutes) during cruise driving.
The cancel code is detected when the vehicle was driven for a long time at the higher speed than the speed available for cruise set through the accelerator operation.
Perform the cruise setting again. It is normal if the cancel code is not detected.

L: 35

Detected when the vehicle speed feedback is not possible.
Set vehicle speed cannot be maintained because of some reasons (steep uphill, parking brake forgotten to be returned to the home position, etc.) during cruise driving.
The cancel code is detected when the driving condition is not suitable for cruise control.
Eliminate the probable cause, and perform the cruise set operation again.

M: 41

VDC/TCS/EPB is operated.
Vehicle dynamics control (VDC), TCS/EPB is operated during cruise driving or cruise set operation.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: 43

- Detected that part or all of the functions of ABS/VDC are not able to function.

Detected that part or all of the functions of ABS/VDC are not able to function during cruise driving or cruise set operation.
<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

• The CRUISE indicator did not illuminate even if the CRUISE switch is pressed before the engine starts.
Detected when the CRUISE switch is pressed during the initial diagnosis of ABS/VDC. After starting the engine, wait until the initial illumination of the ABS/VDC warning light ends, and then press the CRUISE switch again. It is normal if the CRUISE indicator illuminates.

O: 44

Body integrated unit malfunction is detected.
Body integrated unit system malfunction is detected during cruise driving or cruise setting operation.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: 45

Combination meter malfunction is detected.
Combination meter malfunction is detected during cruise driving or cruise setting operation.
<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: 49

Automatic transmission malfunction is detected.
Automatic transmission malfunction is detected during cruise driving or cruise setting operation.
<Ref. to CVT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: 61

Malfunction in the stop light & brake switch is detected.
Trouble symptom:
- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to 12 for diagnostic procedure.
<Ref. to ES(diag)-108, 12, Diagnostic Procedure with ECU Cancel Code.>

S: 62

Neutral position switch malfunction is detected.
Trouble symptom:
Cruise control cannot be set.
Refer to 14 for diagnostic procedure.
<Ref. to ES(diag)-109, 14, Diagnostic Procedure with ECU Cancel Code.>

T: 63

Malfunction of vehicle speed signal variation is detected.
Trouble symptom:
Cruise control cannot be set. (Cancelled immediately.)
Refer to 22 for diagnostic procedure.
<Ref. to ES(diag)-111, 22, Diagnostic Procedure with ECU Cancel Code.>

NOTE:
This cancel code may be detected when the vehicle suddenly started with VDC OFF on low μ road surface. In this case, restart the engine and perform the cruise control setting operation again. If the cancel code is not detected, it is normal.

U: 64

Malfunction related to engine is detected.
For diagnostic procedure, refer to the malfunction diagnostic procedure for the engine.
<Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: 65

Cruise control command switch malfunction is detected.
When the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.
Trouble symptom:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to 11 for diagnostic procedure.
<Ref. to ES(diag)-107, 11, Diagnostic Procedure with ECU Cancel Code.>

W: 66

Cruise control calculation malfunction is detected.
For diagnostic procedure, refer to the malfunction diagnostic procedure for the engine.
<Ref. to EN(w/o STI)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

EyeSight ASSIST MONITOR (DIAGNOSTICS)

EM(diag)

		Page
1.	Basic Diagnostic Procedure	2
2.	Check List for Interview	3
3.	General Description	4
4.	Electrical Component Location	5
5.	Control Module I/O Signal	6

7.	Diagnostic Code(s) Display	10
8.	Clear Memory Mode	11
9.	Inspection Mode	12
10.	Active Test	13
11.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	14

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs. <Ref. to EM(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to EM(diag)-3, CHECK, Check List for Interview.>
2	**PERFORM BASIC INSPECTION.** Perform the basic inspection. <Ref. to EM(diag)-4, BASIC INSPECTION, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair or replace the faulty portion.
3	**PERFORM INITIAL OPERATION CHECK.** Perform the initial operation check. <Ref. to EM(diag)-4, INITIAL OPERATION CHECK, INSPECTION, General Description.>	Does the LED light illuminate?	Go to step **4**.	Go to step **7**.
4	**CHECK EyeSight ASSIST MONITOR.** Using the Subaru Select Monitor, read DTC of the EyeSight assist monitor. <Ref. to EM(diag)-10, Diagnostic Code(s) Display.> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to EM(diag)-8, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to EM(diag)-10, Diagnostic Code(s) Display.> After diagnosis, Go to step **6**.	Go to step **5**.
5	**CHECK EyeSight ASSIST MONITOR.** Check the operation of EyeSight assist monitor using Subaru Select Monitor. <Ref. to EM(diag)-13, Active Test.>	Is the check result OK?	System is normal.	Replace the EyeSight assist monitor. <Ref. to ES-37, EyeSight Assist Monitor.>
6	**CHECK EyeSight ASSIST MONITOR.** 1) Perform the Clear Memory Mode. <Ref. to EM(diag)-11, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to EM(diag)-12, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs.	Finish the diagnosis.
7	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the EyeSight assist monitor connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the EyeSight assist monitor connector and chassis ground. ***Connector & terminal*** ***(i269) No. 1 (+) — Chassis ground (–):*** ***(i269) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **8**.	Repair the open circuit in the wiring harness between fuse and EyeSight assist monitor connector.
8	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between the EyeSight assist monitor connector and chassis ground. ***Connector & terminal*** ***(i269) No. 3 — Chassis ground:***	Is the resistance 10 Ω or less?	Replace the EyeSight assist monitor. <Ref. to ES-37, EyeSight Assist Monitor.>	Repair the open circuit in the wiring harness between EyeSight assist monitor connector and chassis ground.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="4">EyeSight Assist Monitor Check List for Interview
Received Year Month Day
Date the Vehicle is</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration

3. General Description

A: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the problems related to EyeSight assist monitor.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the relay and fuse condition.
3) Check the connecting condition of harness and harness connector.

2. INITIAL OPERATION CHECK

1) Turn the ignition switch to ON.
2) LED illuminates in two cycles of yellow (twice) → red (four times) → green (once).

NOTE:
In some cases, the illumination is turned off for the second cycle with the user customizing setting for combination meter.

B: PREPARATION TOOL

1. SPECIAL TOOL

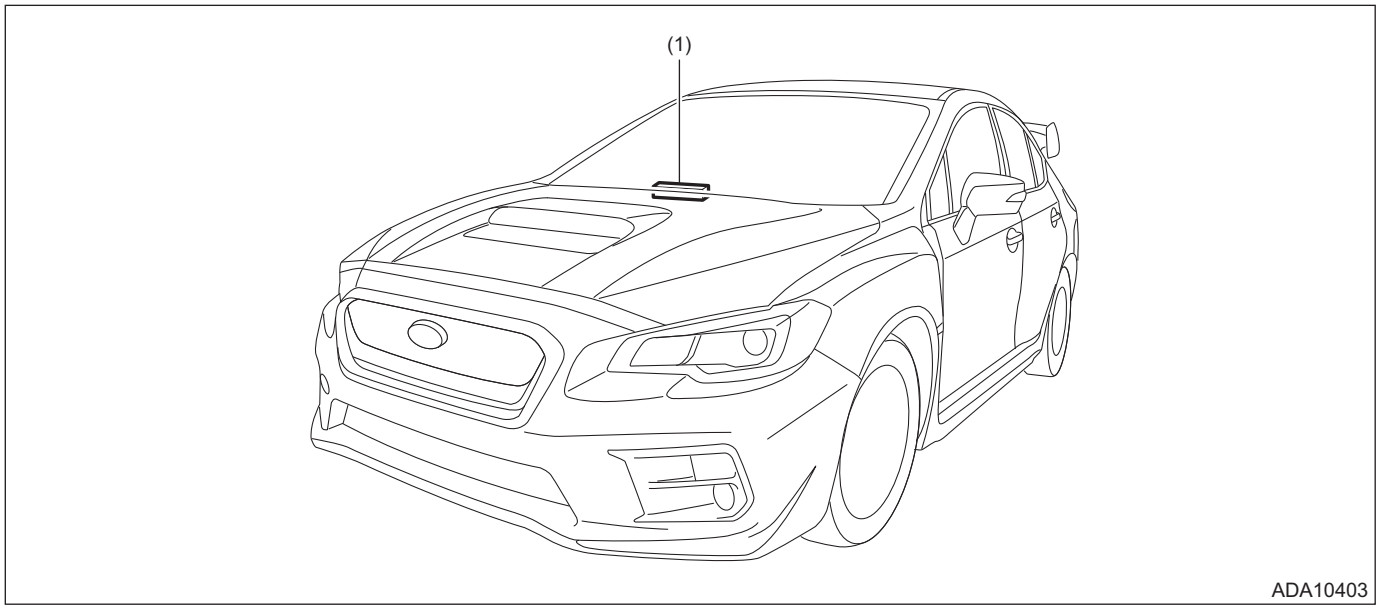
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

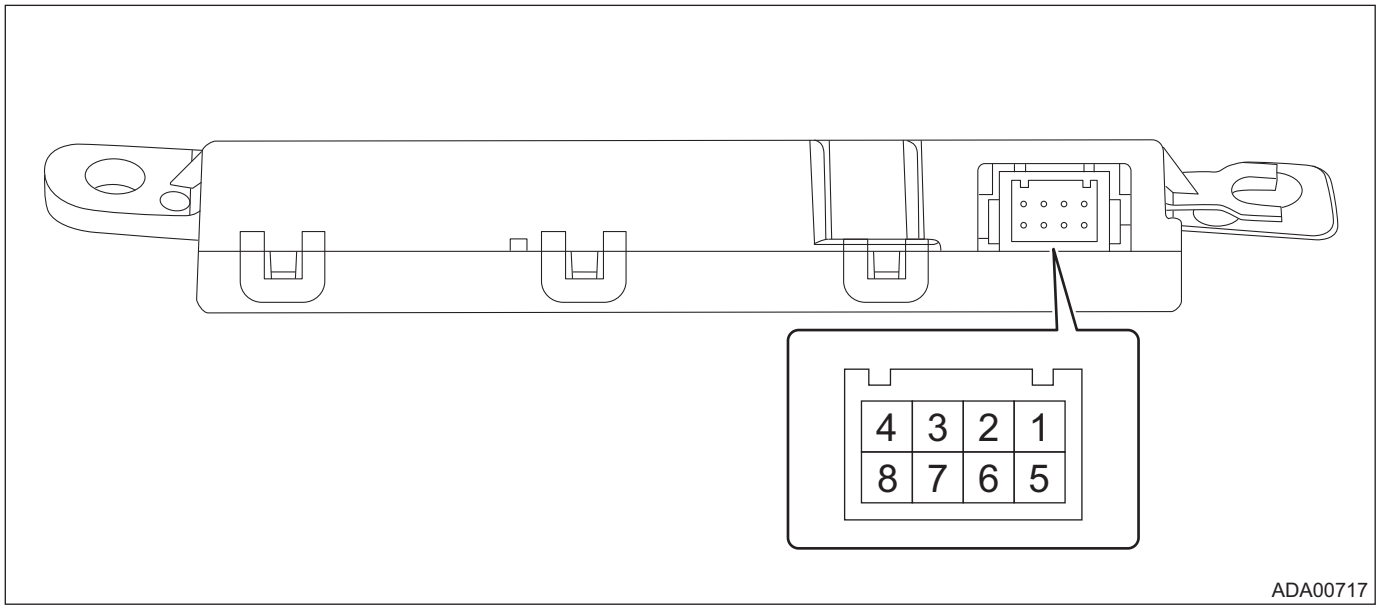
A: LOCATION



(1) EyeSight assist monitor

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Content	Measuring condition	Standard
1 ←→ Chassis ground	Battery power supply	Always	10 — 16 V
2 ←→ Chassis ground	Ignition power supply	Ignition switch OFF → ON	0 V → 10 — 16 V
3 ←→ Chassis ground	GND	Always	Less than 1 Ω
4	CAN+	Cannot be measured	—
5	CAN–	Cannot be measured	—
6	—	—	—
7	—	—	—
8	—	—	—

B: WIRING DIAGRAM

Refer to “EyeSight System” in the wiring diagram. <Ref. to WI-217, EyeSight System.>

6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When the EyeSight assist monitor cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to EM(diag)-8, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

- Communication error with EyeSight assist monitor

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective EyeSight assist monitor
- Defective CAN communication circuit
- Defective Subaru Select Monitor

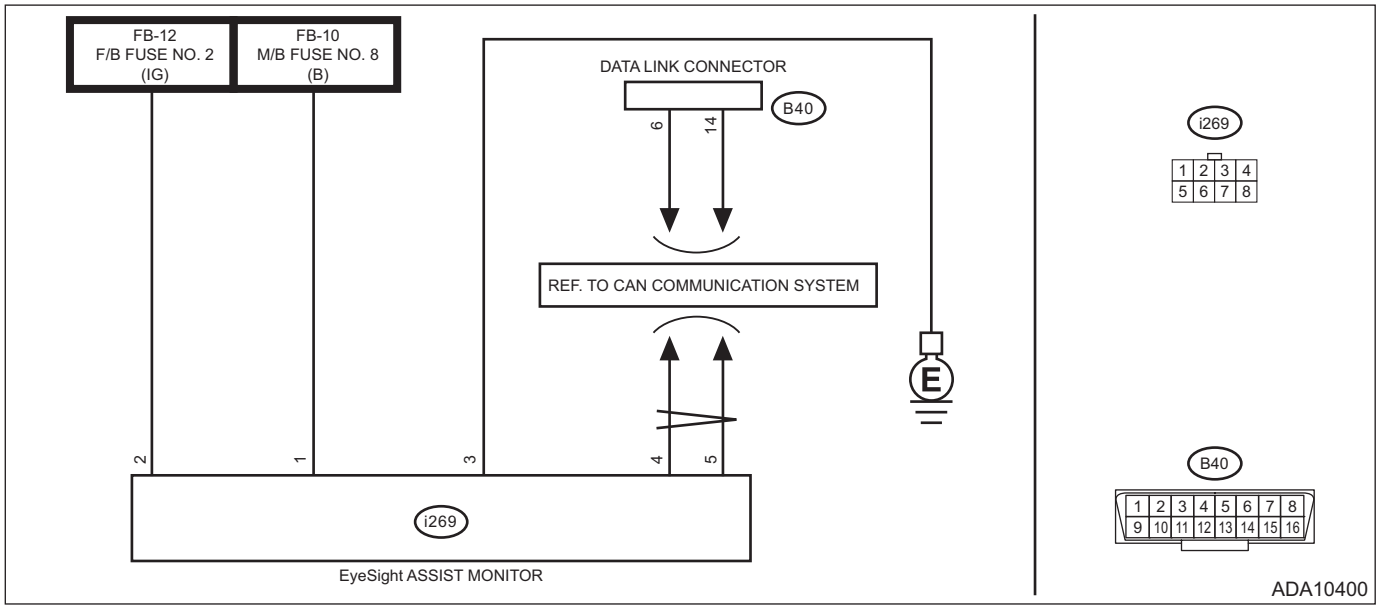
Trouble symptom:

Communication is impossible between the EyeSight assist monitor and Subaru Select Monitor.

Wiring diagram:

For the coupling connector, refer to “WIRING SYSTEM”.

CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse of the EyeSight assist monitor.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in the harness between fuse and EyeSight assist monitor.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the EyeSight assist monitor connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the EyeSight assist monitor connector and chassis ground. ***Connector & terminal*** ***(i269) No. 1 (+) — Chassis ground (–):*** ***(i269) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the wiring harness between fuse and EyeSight assist monitor connector.

	Step	Check	Yes	No
3	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between the EyeSight assist monitor connector and chassis ground. ***Connector & terminal*** ***(i269) No. 3 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit in the wiring harness between EyeSight assist monitor connector and chassis ground.
4	**CHECK LAN SYSTEM.** 1) Connect the EyeSight assist monitor connector. 2) Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK EyeSight ASSIST MONITOR.** Communicate with the EyeSight assist monitor.	Is communication possible?	Even if DTC is detected, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the EyeSight assist monitor. <Ref. to ES-37, EyeSight Assist Monitor.>

7. Diagnostic Code(s) Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight Assist Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EM(diag)-10, LIST, Diagnostic Code(s) Display.>

B: LIST

- List of Diagnostic Trouble Code (DTC)

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to EM(diag)-14, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to EM(diag)-14, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1140	LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN	<Ref. to EM(diag)-14, DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1235	LOST COMMUNICATION WITH EyeSight	<Ref. to EM(diag)-14, DTC U1235 LOST COMMUNICATION WITH EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	<Ref. to EM(diag)-14, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight Assist Monitor» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Inspection Mode

A: PROCEDURE

1) Turn the ignition switch to ON, and wait for 3 seconds or more.
2) Read the DTC and check that the DTC is not displayed. <Ref. to EM(diag)-10, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to EM(diag)-10, LIST, Diagnostic Code(s) Display.>

10.Active Test

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «EyeSight Assist Monitor» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) On «Active Test» display, select an item to be checked and select «Start».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

- «Light check»

Data	Note
All lamps lighted	All the lights are lit.
red lamps lighted	All red lights are lit.
yellow lamp(right) lighted	Right side yellow light is lit.
yellow lamp(left) lighted	Left side yellow light is lit.
green lamp lighted	Green light is lit.
green lamp illumination check	Green illumination light is lit.

11.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U1235 LOST COMMUNICATION WITH EyeSight

Detected when CAN data from the stereo camera does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

Detected when error data is received from the stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Blind Spot Detection/Rear Cross Traffic Alert

RVD

		Page
1.	General Description	2
2.	Relay and Fuse	4
3.	Blind Spot Detection/Rear Cross Traffic Alert	5
4.	Radar Sensor	6
5.	Switches and Harness	11
6.	Combination Meter	13
7.	Outer Mirror Assembly	14
8.	Diagnostics with Phenomenon	15

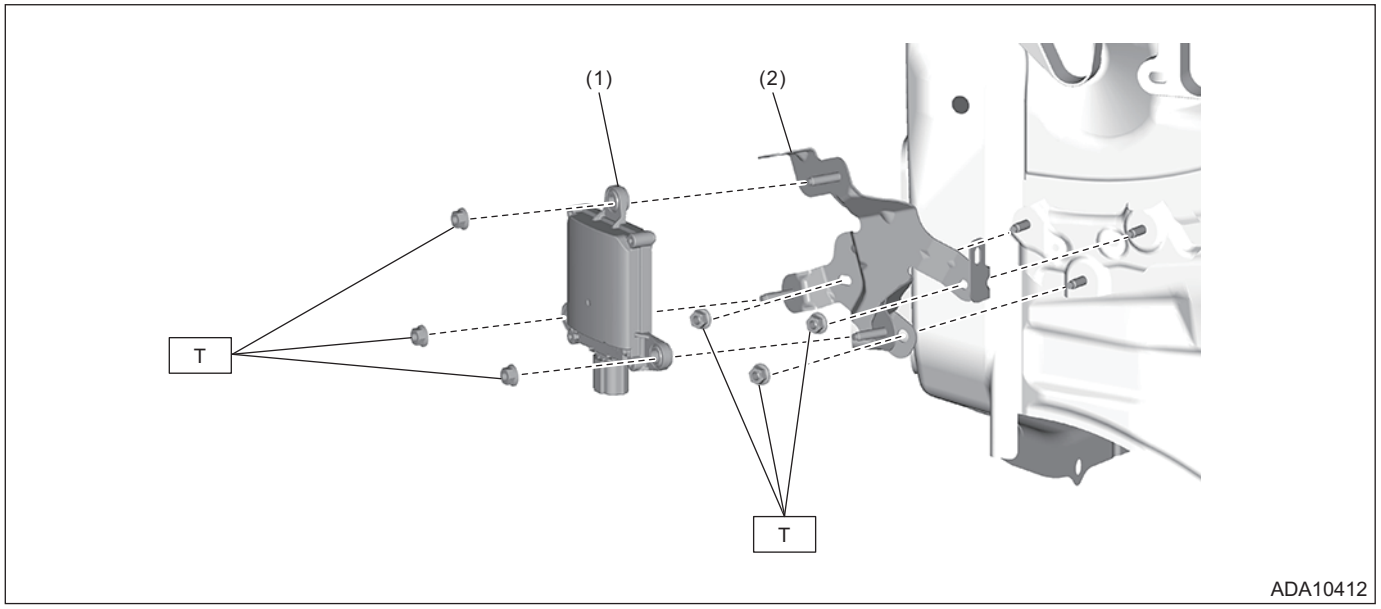
1. General Description

A: LOCATION

Refer to “LOCATION” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-7, LOCATION, Electrical Component Location.>

B: COMPONENT

1. RADAR SENSOR



(1) Radar sensor (master & slave) (2) Radar bracket

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

C: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• For precautions for rear vehicle detection function, refer to “CAUTION” in “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-4, CAUTION, General Description.>

D: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87699AL00A	87699AL00A	RADAR REFLECTOR	Used for adjusting the radar axis of the radar sensor. NOTE: Attach the radar reflector to a round pole with a diameter of approx. 20 mm (0.79 in) or a 20-mm (0.79-in) square pole.

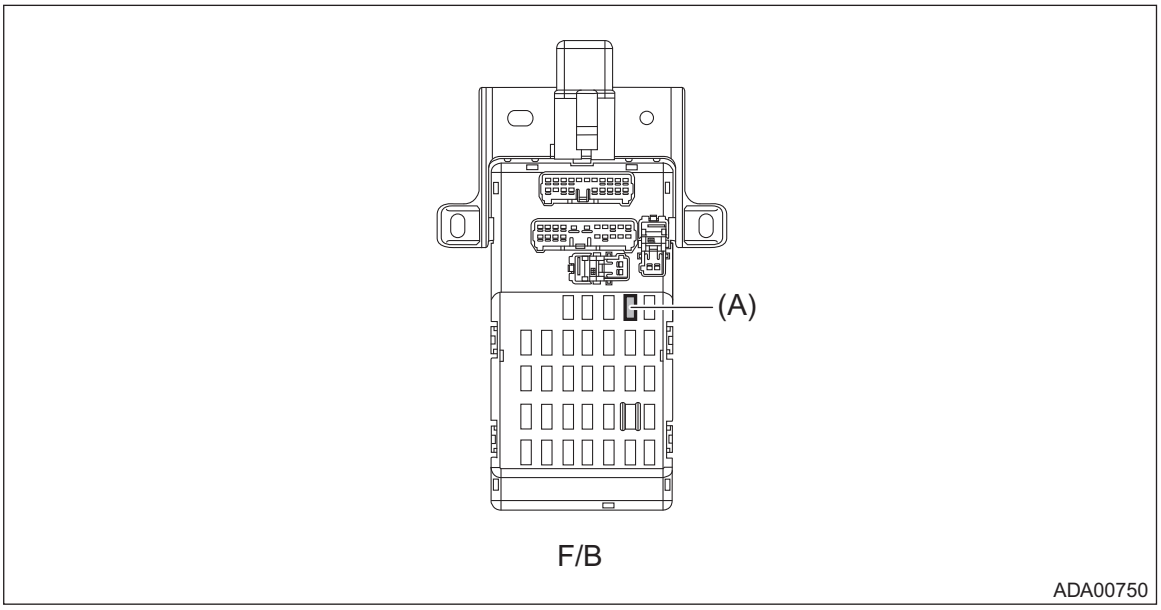
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.
Measure (5 m (16 ft) or more)	Used for adjusting the radar axis of the radar sensor.
Leveling line	
Plumb bob	
Packing tape	
Stand, tripod, etc.	

2. Relay and Fuse

A: LOCATION



Fuse & Relay Box	Fuse 10 A (radar sensor LH (master), radar sensor RH (slave), BSD/RCTA OFF switch)	(A)

NOTE:
For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Blind Spot Detection/Rear Cross Traffic Alert

A: WIRING DIAGRAM

Refer to “Blind Spot Detection/Rear Cross Traffic Alert system” in the wiring diagram. <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the Blind Spot Detection/Rear Cross Traffic Alert system, refer to the respective sections.

- Radar sensor: <Ref. to RVD-6, Radar Sensor.>
- BSD/RCTA OFF switch: <Ref. to RVD-11, Switches and Harness.>
- Combination meter: <Ref. to IDI-12, Combination Meter.>
- Outer mirror assembly: <Ref. to GW-26, Outer Mirror Assembly.>

4. Radar Sensor

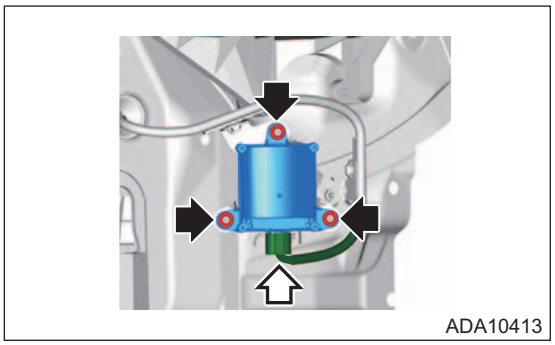
A: REMOVAL

1. RADAR SENSOR LH (MASTER)

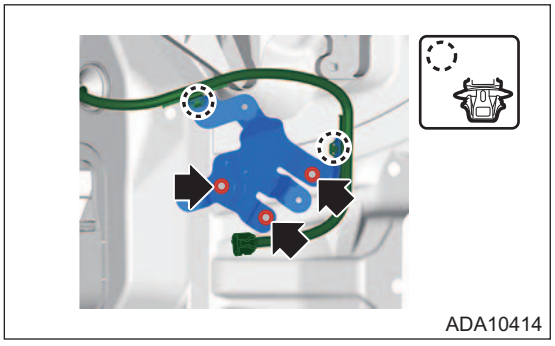
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

2) Remove the bumper face - rear. <Ref. to EI-43, REMOVAL, Rear Bumper.>
3) Remove the radar sensor LH (master).
   (1) Disconnect the connector.
   (2) Remove the nut and remove the radar sensor LH.



4) Remove the radar bracket.
   (1) Remove the harness clamp.
   (2) Remove the nut and remove the radar bracket.



2. RADAR SENSOR RH (SLAVE)

NOTE:
For the procedure of radar sensor RH (slave), refer to “RADAR SENSOR LH (MASTER)”.

B: INSTALLATION

1) Install the radar bracket.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

2) Install the radar sensor.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)

3) Install the bumper face - rear.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) Perform the adjustment of the radar sensor radar axis. <Ref. to RVD-7, RADAR AXIS ADJUSTMENT, ADJUSTMENT, Radar Sensor.>

C: ADJUSTMENT

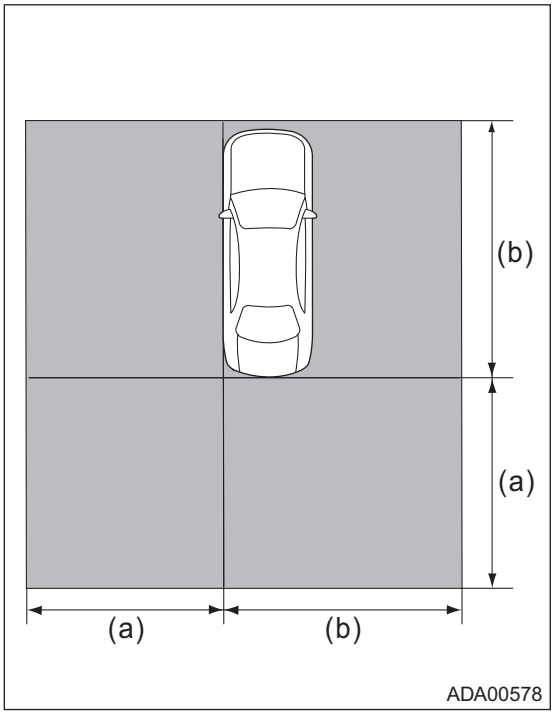
1. RADAR AXIS ADJUSTMENT

CAUTION:
• After removal/installation or replacement of the radar sensor or radar bracket, perform the radar axis adjustment.
• The procedure for the master is only shown here. However the procedure for the slave can also be done in the same way as the master.
1) Before performing the inspection, check the following items.
- The inflation pressure of tires is correct.
- The vehicle does not have load.
- Vehicle's fuel tank is fully filled.

2) Place the vehicle on a level surface, where approximately 5 square meters (16.41 square ft) area can be secured behind the vehicle.

CAUTION:
• No metallic objects around the vehicle and on the floor in the area.
• Do not let in objects other than the RADAR REFLECTOR (ST), persons and metallic objects inside the area.

NOTE:
The illustration shows the secured area for adjusting the radar axis on the master side.



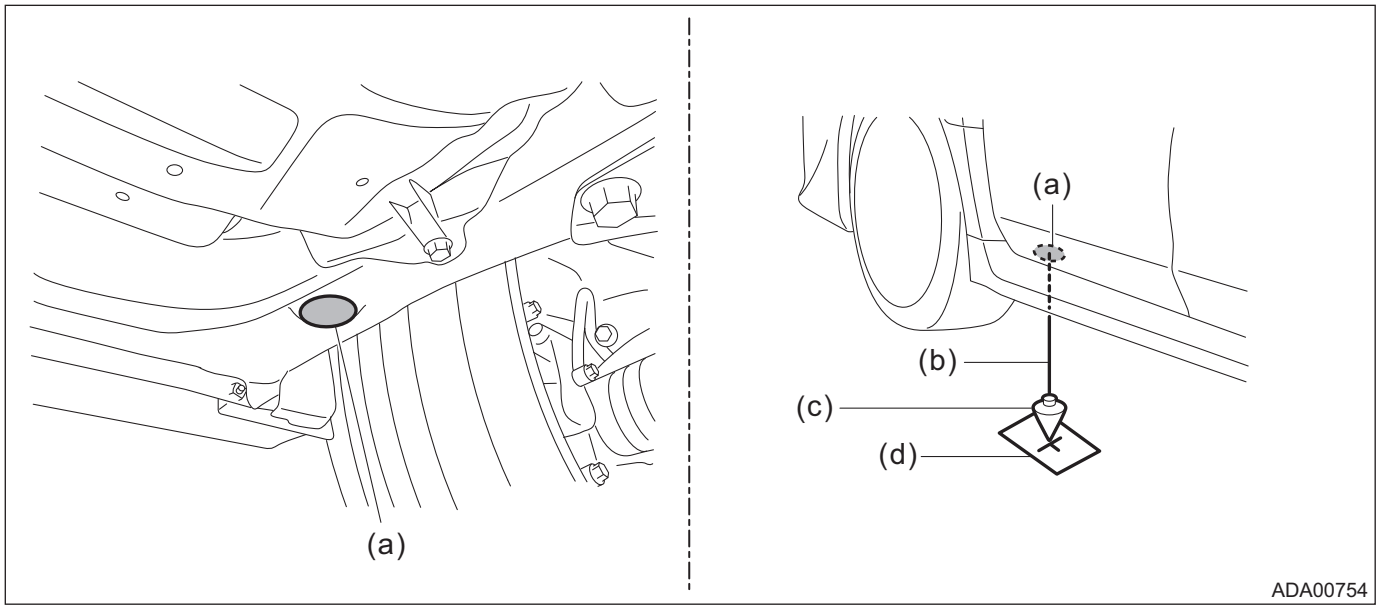
(a) Approx. 4 m (13.12 ft)
(b) Approx. 5 m (16.41 ft)

3) Prepare the Subaru Select Monitor, measure, leveling line, plumb bob, packing tape, RADAR REFLECTOR (ST), and stand or tripod for fixing the RADAR REFLECTOR.

Preparation tool:
ST: RADAR REFLECTOR (87699AL00A)
4) Set up the radar reflector.

NOTE:
The following procedure explains the method of setting the radar reflector so that the distance between radar reflector and radar sensor is 1,500 mm (4.92 ft) and the radar is positioned at an angle of 50 degree.

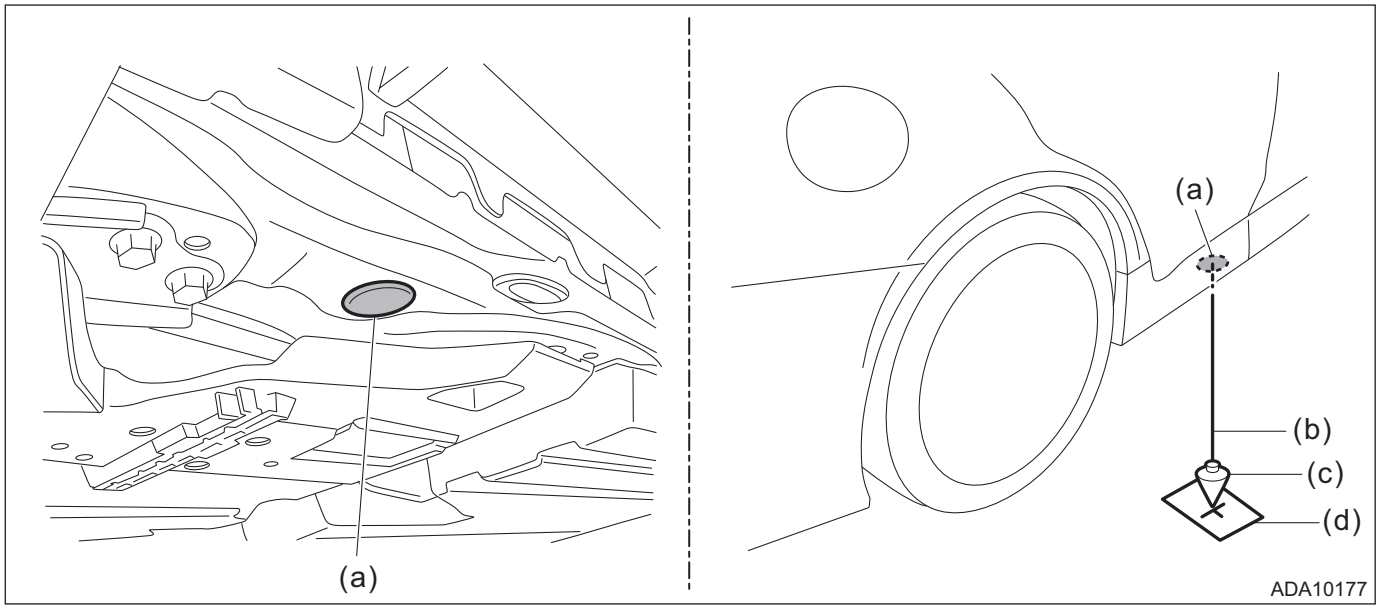
(1) Suspend the plumb bob from the center of the front hole cap, and mark the position where the plumb bob touches the ground. (Point A)



(a) Front hole cap
(b) Leveling line
(c) Plumb bob
(d) Point A

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

(2) Suspend the plumb bob from the center of the rear hole cap, and mark the position where the plumb bob touches the ground. (Point B)

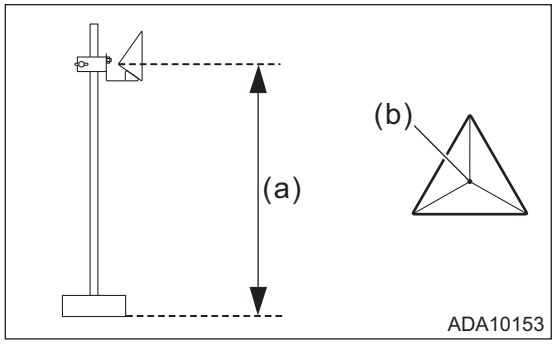


(a) Rear hole cap
(b) Leveling line
(c) Plumb bob
(d) Point B

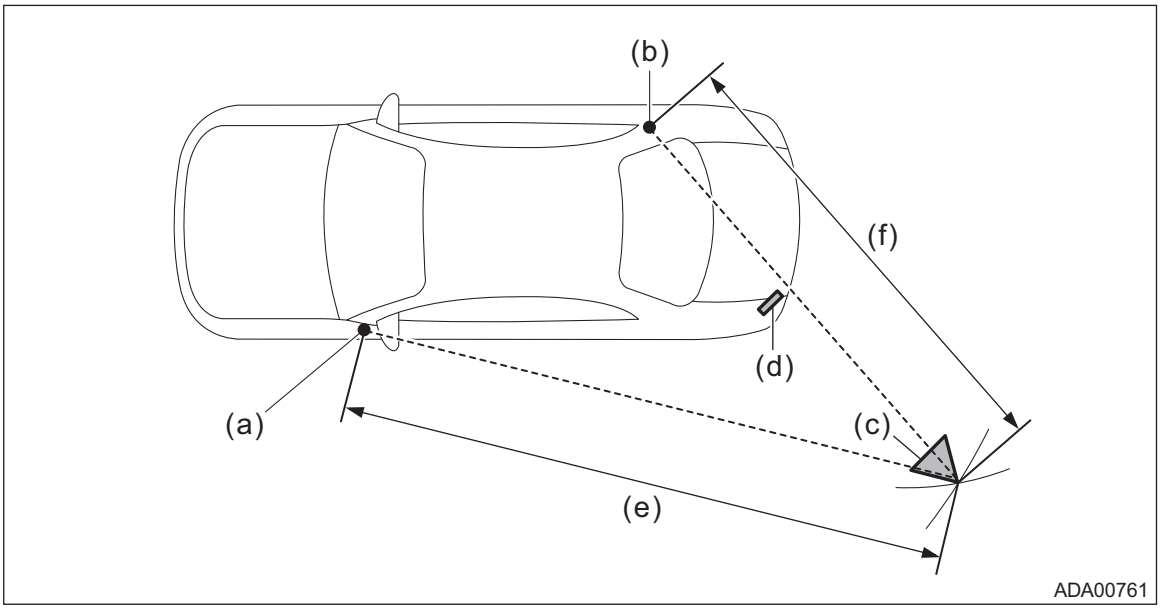
NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

(3) Stretch a leveling line to draw an arc with the marked point A as a pivot.
(4) Stretch a leveling line to draw an arc with the marked point B as a pivot.
(5) Set up the radar reflector at the cross point.

CAUTION:
When setting up the radar reflector, adjust the height so that the center of the pyramid points at the radar sensor as shown in the figure.



(a) 610±10 mm (24.02±0.39 in)
(b) Center of pyramid

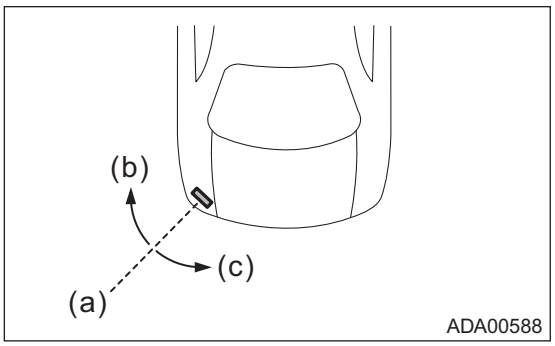


(a) Point A
(b) Point B
(c) Radar reflector
(d) Radar sensor
(e) 4,290 mm (14.08 ft)
(f) 3,430 mm (11.25 ft)

5) Connect the Subaru Select Monitor.

NOTE:
For detailed operation procedures, refer to “Application help”.
6) Turn the ignition switch to ON and wait for 10 seconds.
7) Perform radar axis adjustment.
(1) On «Start» display, select «Diagnosis».
(2) On «Vehicle selection» display, enter vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)» and then select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From the work support item list, select «RADAR Alignment».
(7) Follow the messages displayed on the Subaru Select Monitor screen when working.

NOTE:
Deviation of radar axis direction is indicated by + (plus) or – (minus).



(a) Center of radar
(b) + (plus)
(c) – (minus)

(8) If the result is out of permissive range, it is assumed that the radar reflector position may be incorrect or the radar bracket or its installation location on the vehicle may be deformed. Check the set position of the radar reflector, radar bracket and other attachment, and perform the radar axis adjustment again.

5. Switches and Harness

A: REMOVAL

BSD/RCTA OFF switch

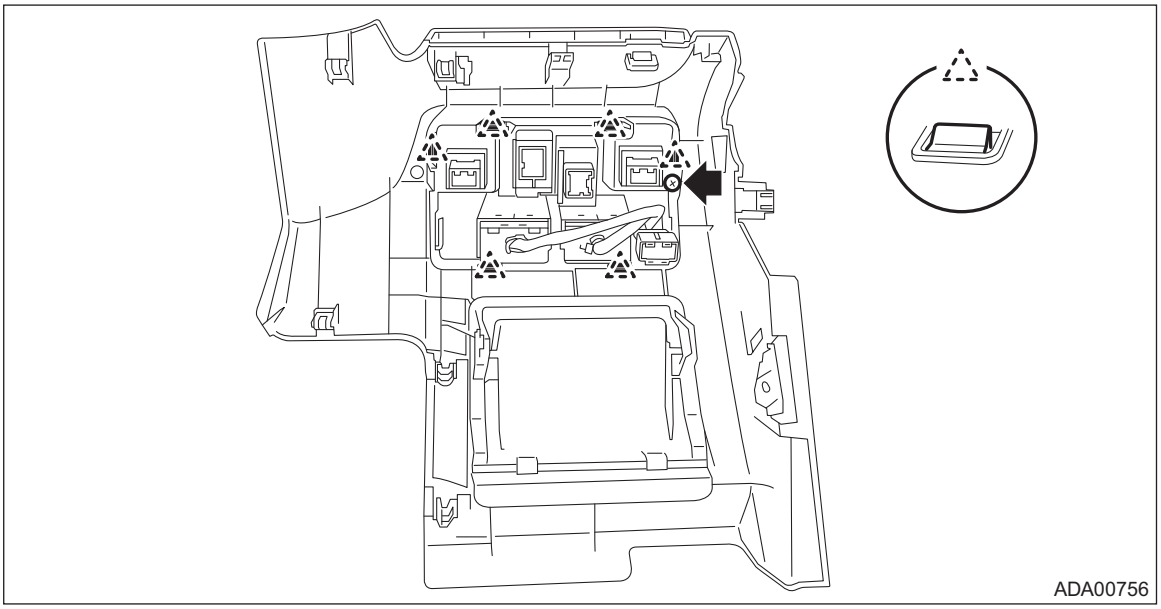
1) Disconnect the ground cable from battery and wait for at least 60 seconds before starting work. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.

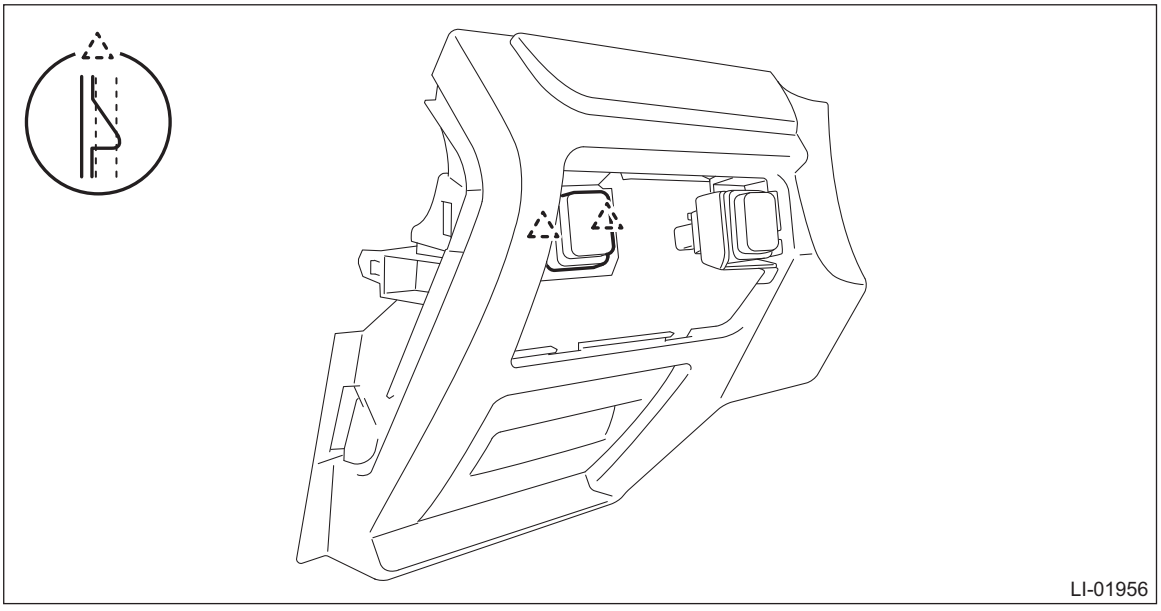
2) Remove the cover assembly - instrument panel LWR driver OUT. <Ref. to EI-65, REMOVAL, Instrument Panel Lower Cover.>

3) Remove the BSD/RCTA OFF switch.

(1) Remove the screw, release the claws, and then remove the panel - switch.



(2) Release the claws and remove the BSD/RCTA OFF switch.



B: INSTALLATION

BSD/RCTA OFF switch

1) Install the BSD/RCTA OFF switch.

2) Install the panel - switch.

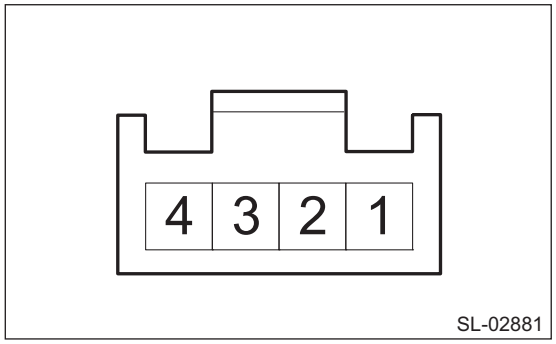
3) Install the cover assembly - instrument panel LWR driver OUT.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

C: INSPECTION

BSD/RCTA OFF switch

1) Measure the resistance between connector terminals.

Preparation tool:
Circuit tester



Terminal No.	Inspection conditions	Standard
2 — 3	Switch OFF	1 MΩ or more
	Switch ON	Less than 1 Ω

2) Apply battery voltage between the connector terminals to check lighting condition of illumination inside the switch.

Terminal No.	Inspection conditions	Specification
1 (+) — 4 (–)	Apply battery voltage.	Light ON

3) Replace the BSD/RCTA OFF switch if it is found defective.

6. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-12, Combination Meter.>

7. Outer Mirror Assembly

A: NOTE

For the operation procedures for the outer mirror assembly, refer to “GLASS/WINDOWS/MIRRORS” section. <Ref. to GW-26, Outer Mirror Assembly.>

8. Diagnostics with Phenomenon

A: INSPECTION

Refer to “Diagnostics with Phenomenon” of “Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)” section. <Ref. to RVD(diag)-44, Diagnostics with Phenomenon.>

Blind Spot Detection/Rear Cross Traffic Alert (DIAGNOSTICS)

RVD(diag)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how trouble occurs.	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to RVD(diag)-3, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Check for communication with the radar sensor. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to RVD(diag)-11, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK RADAR SENSOR.** Read the DTC and cancel code of the radar sensors LH and RH using the Subaru Select Monitor. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-15, Read Cancel Code.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs and cancel code. (Perform the diagnosis to the side that displayed the DTC.) <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).> <Ref. to RVD(diag)-15, Read Cancel Code.> After diagnosis, Go to step **6**.	Go to step **4**.
4	**PERFORM DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to RVD(diag)-44, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection. <Ref. to RVD(diag)-5, INSPECTION, General Description.> 2) Check the radar sensor. <Ref. to RVD(diag)-8, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to RVD(diag)-18, Read Current Data.>	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble.	System is normal.
6	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Blind Spot Detection/Rear Cross Traffic Alert Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td>Date when problem occurred</td><td>Year Month Date</td><td>Frequency of trouble occurrence</td><td>Always occurs
Sometimes occurs (times per day, times per month)</td></tr>
<tr><td rowspan="2">Condition of trouble occurrence
(How the trouble occurs)</td><td rowspan="2"></td><td>Weather</td><td>Fine • Cloudy • Rainy • Snowy • Others
( )</td></tr>
<tr><td>Temperature</td><td>°C (°F) — °C (°F)</td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td>Confirmation of trouble condition</td><td colspan="3"></td></tr>
<tr><td>Diagnostic trouble code</td><td colspan="3"></td></tr>
</table>

3. General Description

A: CAUTION

1. BSD/RCTA

1. In some cases, BSD/RCTA may not work correctly under the following conditions.
   - In bad weather such as heavy rain, fog, snow, sand storm, etc.
   - When ice, snow, dirt, etc. cover the rear bumper.
   - When the rear bumper has scratches or deformation in the area of the radar sensor.
   - When a difference of vehicle speeds between your own vehicle and another vehicle within the detection range is too large.
   - When there is another vehicle remaining within the detection range while your own vehicle starts from stationary state.
   - While driving on a steep slope with a series of uphills and downhills.
   - While driving on a wet road with such as puddles.
   - When more than one vehicle is approaching one after another with a short distance.
   - When vehicle speed of your own vehicle is almost the same as that of the vehicle within the detection range.
   - When a difference of the vehicle heights between your own vehicle and another vehicle in the next lane is too large.
   - Immediately after operating the BSD/RCTA OFF switch.
   - On wide lanes, when another vehicle of the next lane drives along the opposite edge so the distance is too large for the detection.
2. BSD/RCTA does not detect the following type of vehicles as well as objects other than vehicles.
   - Oncoming vehicle
   - Small motorcycle, bike, pedestrian, etc. *
   - Vehicle following behind on the same lane *
   - Stationary objects such as guardrail, wall, sign and parked vehicle*
   - Another vehicle driving on two lanes away*

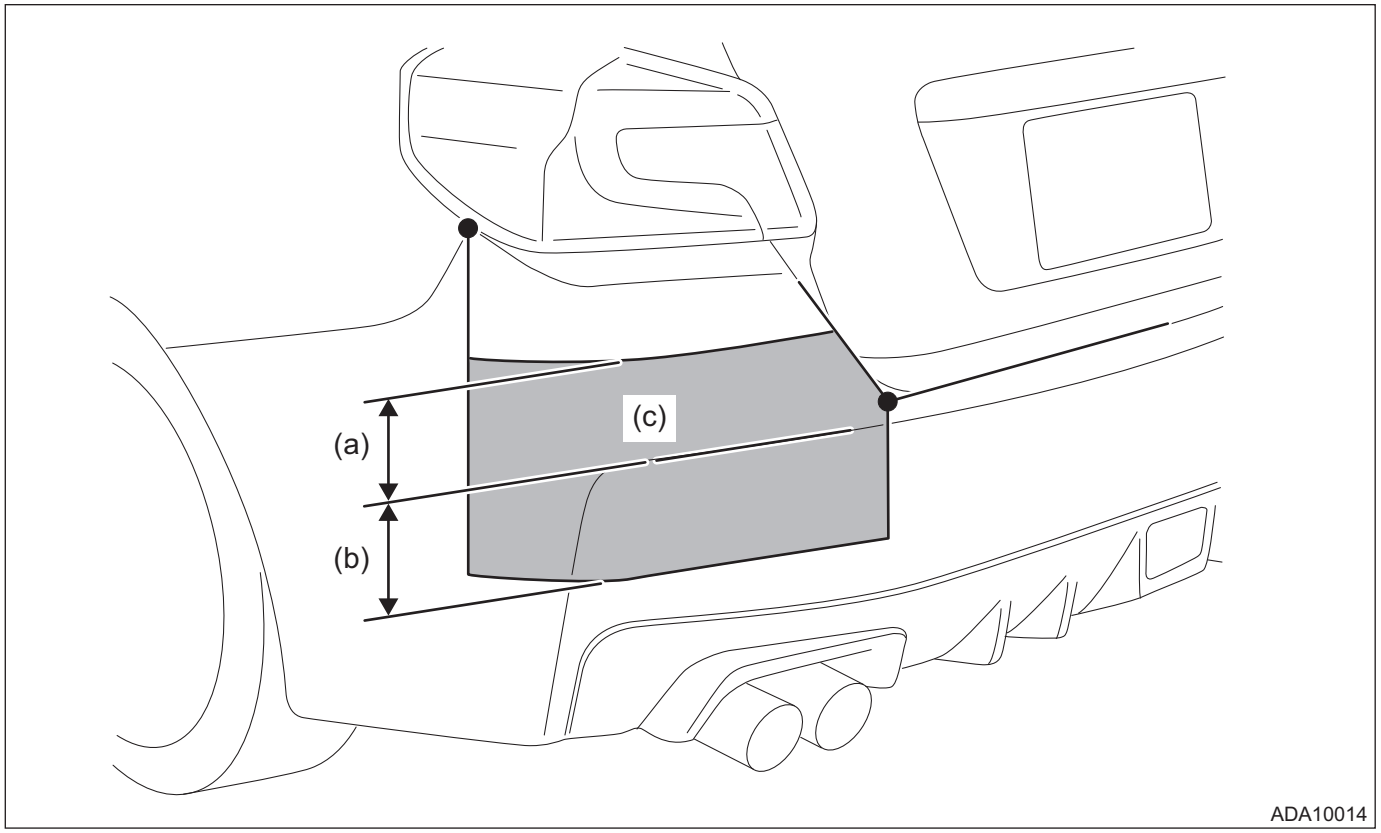
NOTE:
*: Detection may be successful depending on circumstances.

3. BSD/RCTA may perform unnecessary detection in the following conditions.
   - When guardrails or walls are close enough to be within the detection range.
   - When distance from the vehicle behind is short.
   - On narrow lanes, when another vehicle driving on two lanes away enters the detection range.

4. Radar sensors of BSD/RCTA are each located on LH and RH sides. Always observe the followings for proper operation of the system.
   - Always clean the vicinity of radar sensors.
   - Do not give a strong impact to the radar sensor areas. Displacement of the radar sensors may result in improper operation of the system such that it may not detect the vehicle entering the detection range.
   - Do not disassemble the radar sensors.
   - Do not scratch or deform the bumper areas with the radar sensors.

NOTE:
Replace the rear bumper in the following cases.
   – When there is any collision trace or dent inside the radar projection area.
   – When there is any scuffed (chipped off) section inside the radar projection area on the resin bumper.
   – When there is any crack inside the radar projection area.

NOTE:
Radar projection area



(a) 100 mm (3.9 in) (b) 100 mm (3.9 in) (c) Radar projection area

For other flaws, perform the sensor readjustment. If no problem is found, replacement is unnecessary.
- Do not put a sticker, etc. on/around the radar sensors.
- Do not retrofit the radar sensors or the bumper close to the radar sensors.
- Do not repaint the radar sensors or the bumper close to the radar sensors.

NOTE:
If there is any painting defect inside the radar projection area, replace the rear bumper without trying to repair it.
- Do not give a strong impact, force or drop-off to the radar sensors because they are precision devices.
- Do not reuse the radar sensors that were affected by strong impact, force, or fell off.

B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items that might provoke the problems related to BSD/RCTA.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to RVD-4, Relay and Fuse.>
3) Check the connecting condition of harness and connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

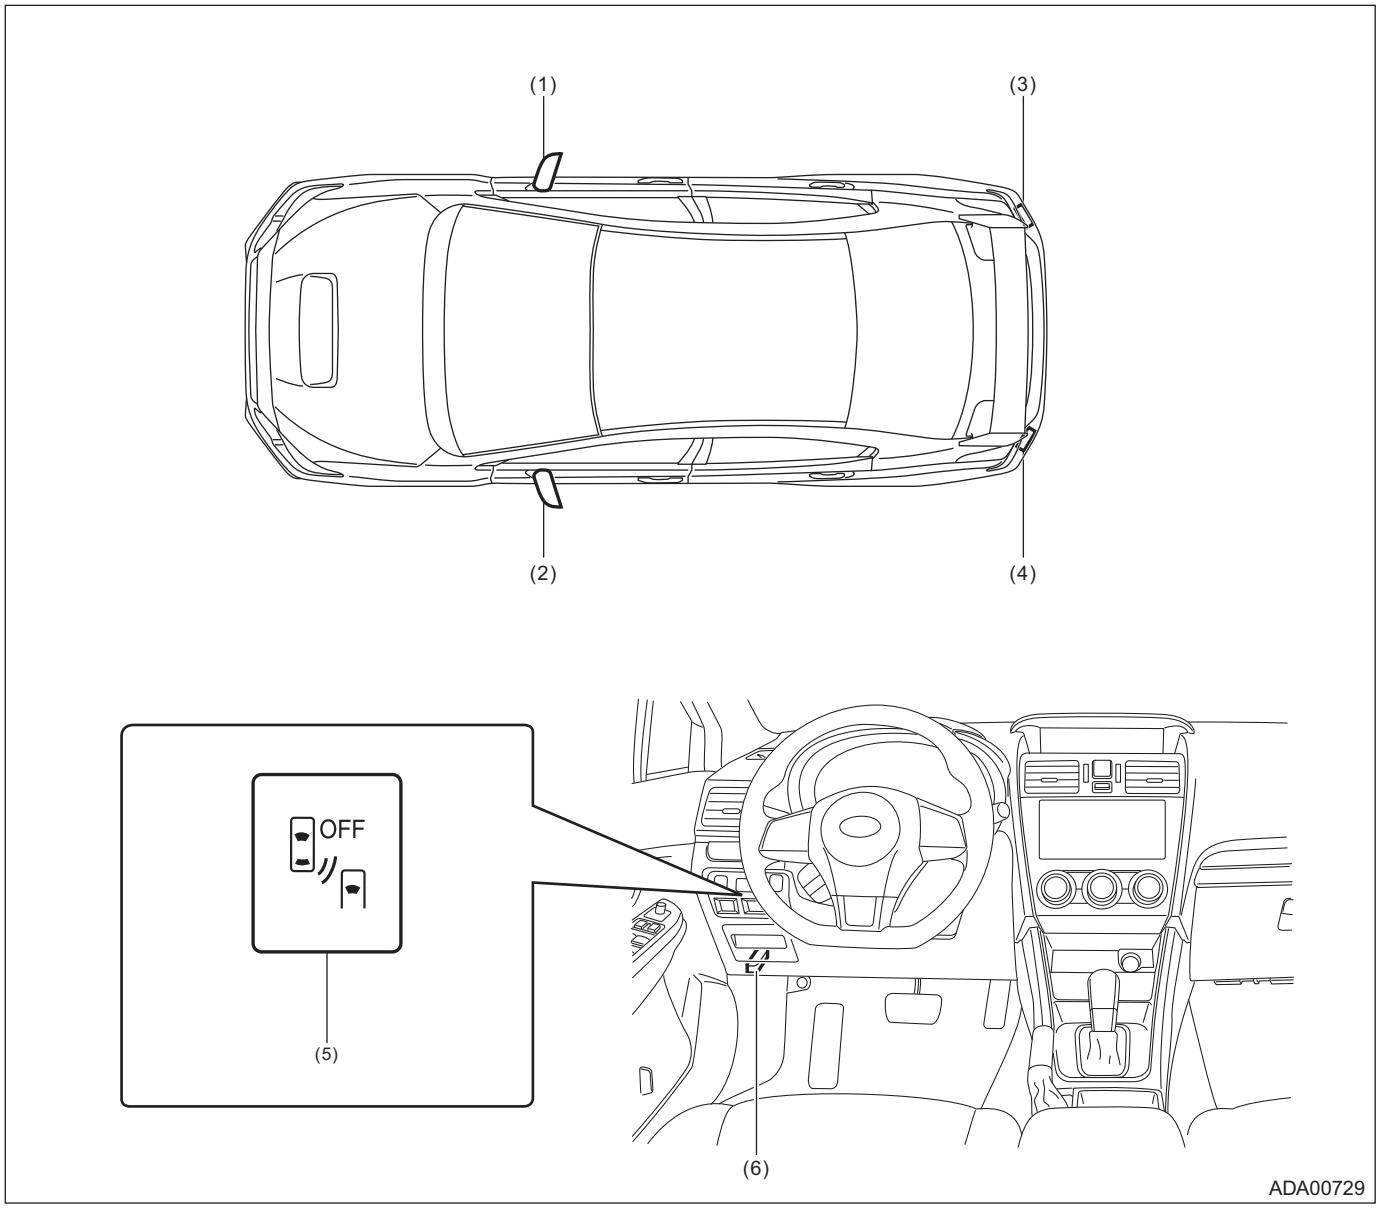
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

A: LOCATION

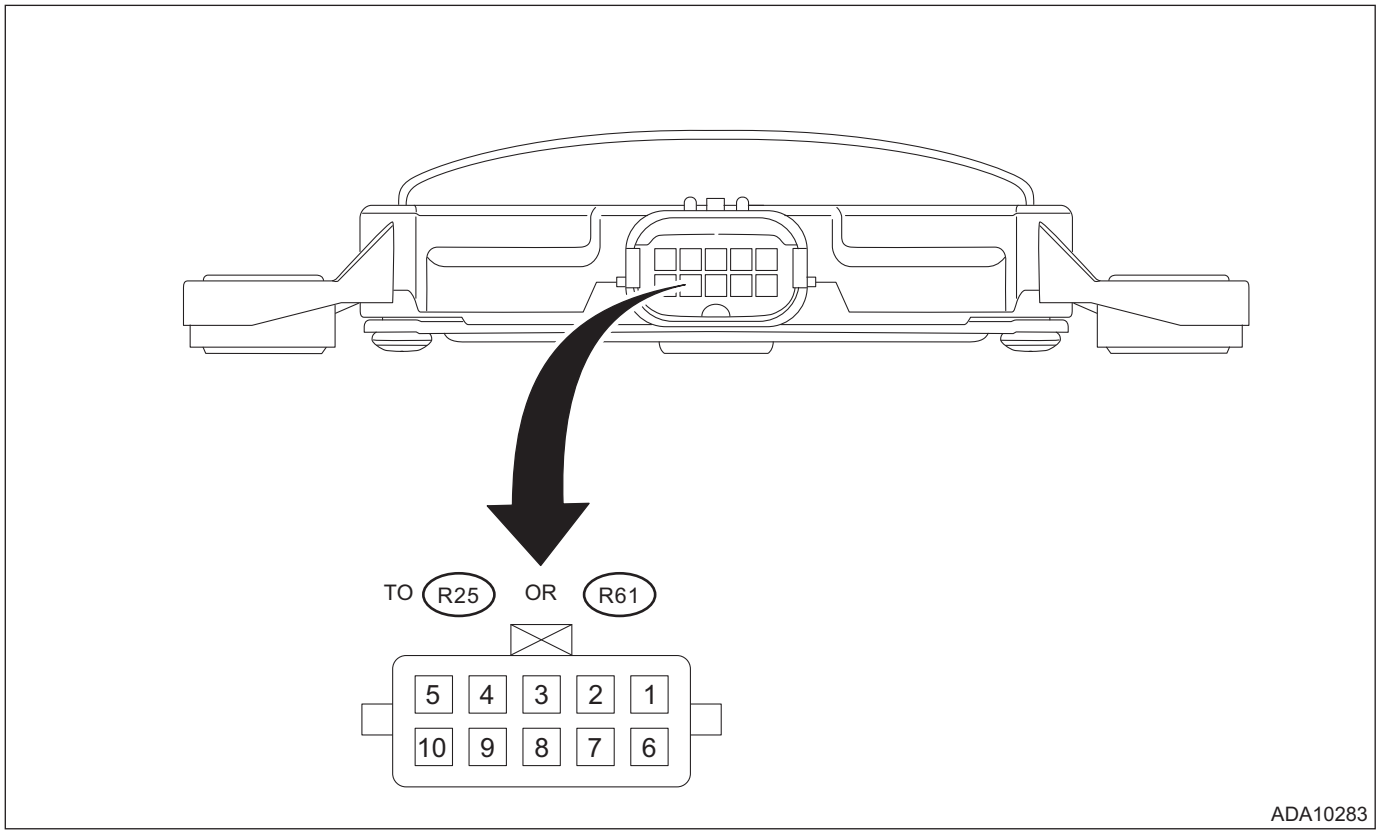


(1) Outer mirror ASSY RH
(2) Outer mirror ASSY LH
(3) Radar sensor RH (slave)
(4) Radar sensor LH (master)
(5) BSD/RCTA OFF switch
(6) Data link connector

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

1. RADAR SENSOR



Terminal No.	Content		Measuring condition	Standard
	Radar sensor LH (master)	Radar sensor RH (slave)		
1 ←→ Chassis ground	Private CAN H	Private CAN H	Always	1 MΩ or more
2 ←→ Chassis ground	Master CAN H	—	Always	1 MΩ or more
3 ←→ Chassis ground	—	—	—	—
4 ←→ Chassis ground	Left mirror LED output	Right mirror LED output	• Ignition switch OFF → ON • BSD/RCTA OFF switch OFF → ON	• When indicator is ON: 2.5 — 10.5 V • When indicator is blinking: 0 ←→ 2.5 — 10.5 V • When indicator is OFF: Less than 1 V
5 ←→ Chassis ground	Ignition power supply	Ignition power supply	Ignition switch OFF → ON	Less than 1 V → 9 — 16 V
6 ←→ Chassis ground	Private CAN L	Private CAN L	Always	1 MΩ or more
7 ←→ Chassis ground	Master CAN L	—	Always	1 MΩ or more
8 ←→ Chassis ground	BSD/RCTA OFF switch	—	• Ignition switch ON • BSD/RCTA OFF switch OFF → ON (while pressing and holding the switch)	Less than 1 V → 9 — 16 V

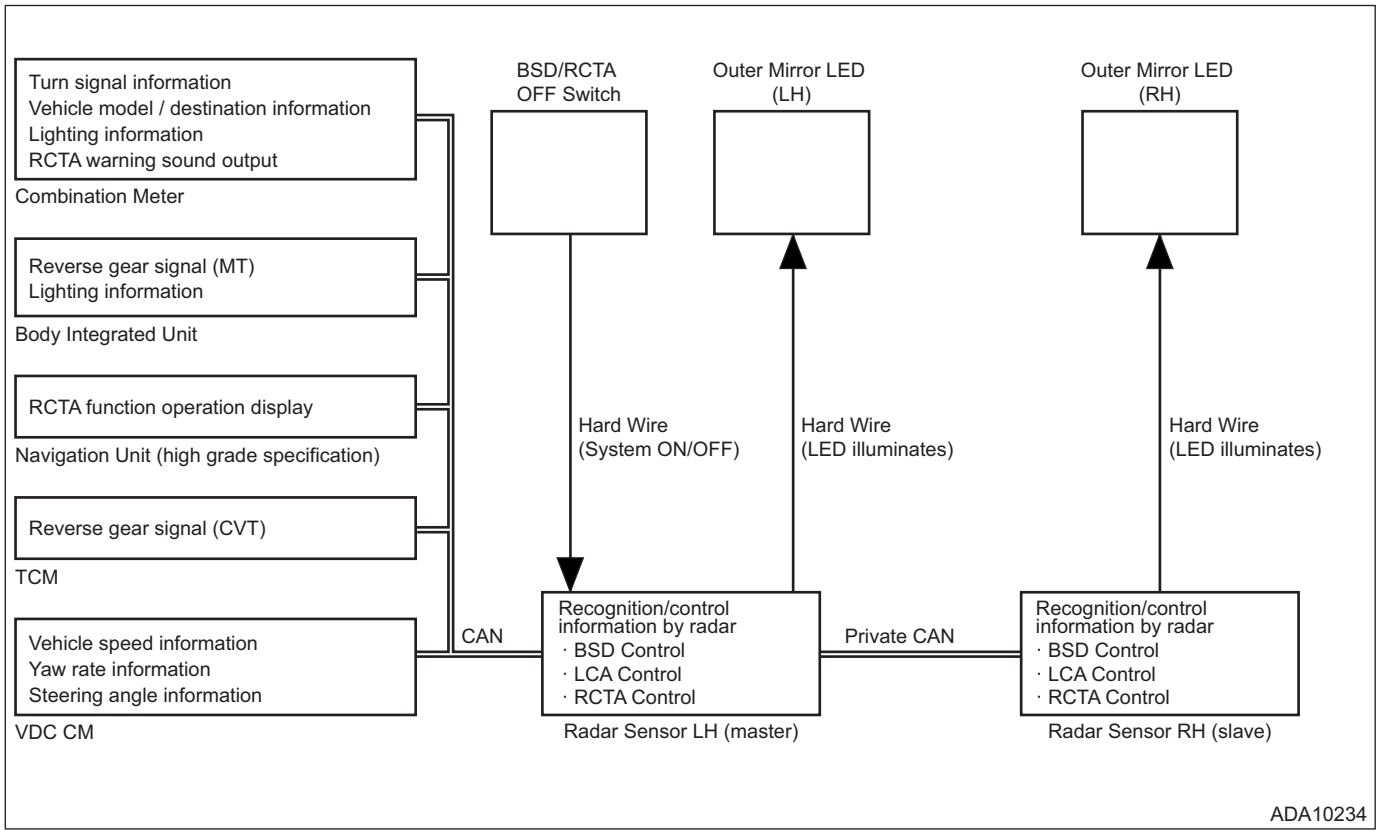
Terminal No.	Content		Measuring condition	Standard
	Radar sensor LH (master)	Radar sensor RH (slave)		
9 ←→ Chassis ground	—	—	—	—
10 ←→ Chassis ground	GND	GND	Always	Less than 1 Ω

B: WIRING DIAGRAM

Refer to “SRVD System” in the wiring diagram. <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/ Rear Cross Traffic Alert.>

C: SYSTEM BLOCK DIAGRAM

- Blind Spot Detection/Rear Cross Traffic Alert system consists of the following.
- There is a control ECM in the radar sensor main body, which performs the vehicle identification and the alert judgment control.
- The LH/RH radar sensors are identified as Master/Slave for control purposes. They are connected by the private CAN to execute the controls through mutual communication. The radar on the Master side receives the input from the vehicle CAN and the SRVD OFF switch, and information necessary for control can be obtained from other modules via the vehicle CAN.
- The outer mirror LED is directly driven by the signal from the radar sensor.



6. Subaru Select Monitor

A: OPERATION

- For operation procedures, refer to “Application help”.
- When the radar sensor cannot communicate with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to RVD(diag)-11, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with the radar sensor is impossible

Detecting condition:

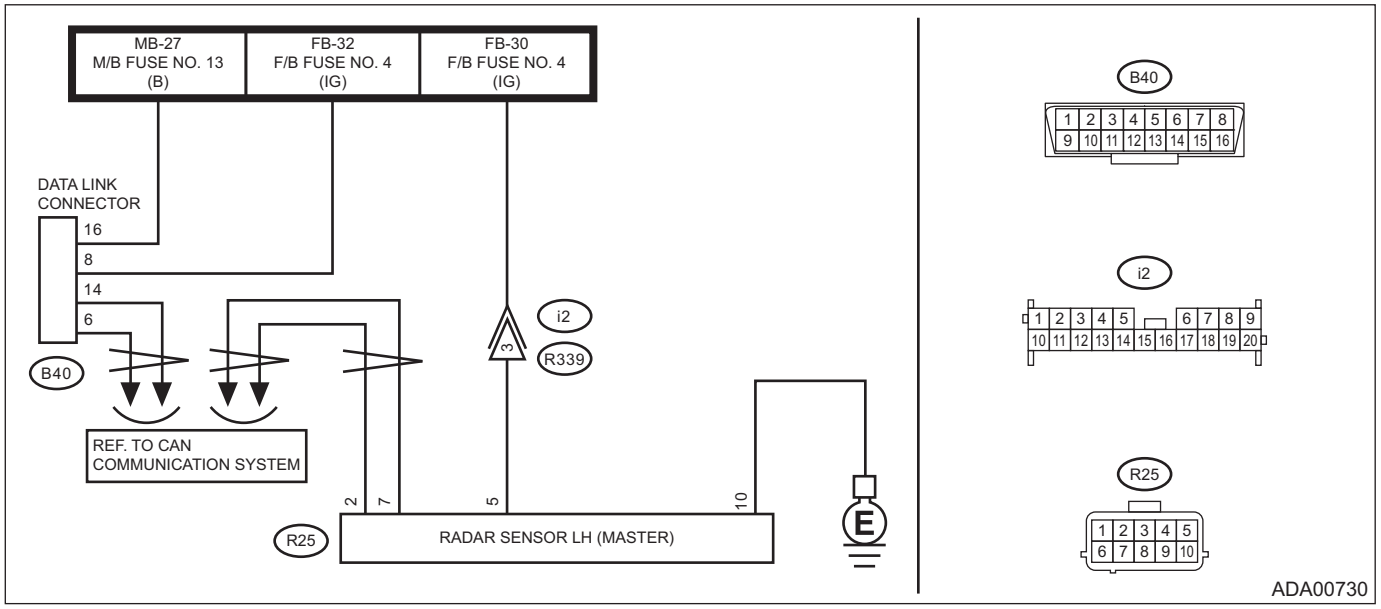
- Defective harness connector
- Power supply circuit malfunction
- Defective radar sensor
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between radar sensor and Subaru Select Monitor.

Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse for radar sensor LH. <Ref. to RVD-4, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and radar sensor LH.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor LH connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 5 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit of harness between fuse and radar sensor LH connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 10 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit in harness between radar sensor and chassis ground.

	Step	Check	Yes	No
4	**CHECK LAN SYSTEM.** 1) Connect the radar sensor LH connector. 2) Inspect LAN system. <Ref. to RVD(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK RADAR SENSOR.** Communicate with the radar sensor.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	• Replace the radar sensor LH if communicating with the radar sensor LH is not possible. <Ref. to RVD-6, Radar Sensor.> • If communicating with the radar sensor RH is not possible, replace the radar sensor RH when the radar sensor LH displays DTC B2350, or replace the radar sensor LH when it displays otherwise. <Ref. to RVD-6, Radar Sensor.>

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>
- Check and replace the side that displayed the DTC.

8. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

9. Read Cancel Code

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)» and then select «Enter».
5) On «Select Function» display, select «Cancel Code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning cancel codes, refer to the “List of Cancel Codes”. <Ref. to RVD(diag)-22, List of Cancel Code.>

10.Inspection Mode

A: OPERATION

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0402	INVALID DATA RECEIVED FROM TCM	—
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	—
U0422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE	—
U0423	INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE	—
B2304	REAR RADAR ON-OFF SWITCH STUCK	—
B2311	REAR RADAR DETECT TCM	—
B2313	REAR RADAR DETECT VDC	—
B2327	REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)	—
B2350	REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE	—
B2351	REAR RADAR LOST COMMUNICATION BETWEEN MASTER AND SLAVE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine and wait for 30 seconds or more.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

2. INSPECTION MODE 2

DTC	Item	Note
B2300	REAR RADAR CIRCUIT LOW	—
B2301	REAR RADAR CIRCUIT HIGH	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Start the engine.
4) Perform the System Operation Check Mode «Door mirror indicator active test». <Ref. to RVD(diag)-20, System Operation Check Mode.>
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

3. INSPECTION MODE 3

DTC	Item	Note
B2329	REAR RADAR AXIS ALIGNMENT INCOMPLETE	—

1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to RVD(diag)-13, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Perform the adjustment of radar axis.
4) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. <Ref. to RVD(diag)-21, List of Diagnostic Trouble Code (DTC).>

11.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

- «Blind Spot Detection/Rear Cross Traffic Alert (LH)»

Display	Content	Reference value	Note
SRVD System fail flag	Current failure status of BSD/RCTA system is displayed.	• Normal • Fail	—
SRVD System HALT flag	Current temporary stop status of BSD/RCTA system is displayed. Temporary stop: Temporarily stops when reception of radar sensor waves failed due to some obstacles or when the temperature is not within the range of –40°C (–40°F) — 85°C (185°F). Temporarily stops when the direction of the radar sensor is not correct.	• Normal • Halt	—
SRVD System ON-OFF flag	ON/OFF status of BSD/RCTA system is displayed. If this flag is set to «OFF» while the values of «SRVD System fail flag» and «SRVD System HALT flag» are «Normal», the BSD/RCTA system is set to OFF by the BSD/RCTA OFF switch.	• OFF • ON	—
LH-Side BSD caution 1st flag	ON is displayed when the 1st stage BSD warning on the left side is activated (when the outer mirror assembly illuminates).	• OFF • ON	—
LH-Side LCA caution 1st flag	ON is displayed when the 1st stage LCA warning on the left side is activated (when the outer mirror assembly illuminates).	• OFF • ON	—
LH-Side RCTA caution flag	ON is displayed when the RCTA warning on the left side is activated (when the outer mirror assembly illuminates and buzzer sounds).	• OFF • ON	—
LH-Side Radar Voltage value	Power supply voltage of the radar sensor LH is displayed.	0 — 25.5 V	—
LH-Side Temperature value	Ambient temperature of the radar sensor LH is displayed.	–128 — 127°C	—
Vehicle Series status	Vehicle model judgment status	• Impreza Type • Forester Type • — • Legacy/Outback Type • WRX Type	—
Vehicle Type Series status	Vehicle type judgment status	• SDN • WGN • OBK/XV	—
brightness Mode	Indicator brightness	• Day • Night	—

14.List of Cancel Code

A: LIST

Code	Item	Contents of diagnosis
B2320	Rear Radar Low Voltage (Less Than 9V)	Temporarily stops because the voltage supplied to radar drops to or below 9 V. Returns to normal when the voltage becomes normal.
B2321	Rear Radar High Voltage (More Than 16V)	Temporarily stops because the voltage supplied to radar rises to or above 16 V. Returns to normal when the voltage becomes normal.
B2328	Rear Radar Internal Failure (Radar Misalignment)	Deviation of the radar axis prevents normal detection. Returns to normal when the radar axis becomes normal. When B2328 is frequently detected, perform “Diagnostic Procedure with Cancel Code”. <Ref. to RVD(diag)-43, DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT), Diagnostic Procedure with Cancel Code.>
B2340	Radar ASSY B&S Out Of Operation Temperature Range	Temporarily stops because the temperature is outside the operative range (–40°C (–40°F) — 85°C (185°F)). Returns to normal when the ambient temperature falls within the operative range.
B2341	Radar ASSY B&S Degradation Of Detecting Performance	Temporarily stops because some obstacles blocked radar waves of the back and side radar. Returns to normal when the transmission and reception of radar signals becomes normal.

15.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2300 REAR RADAR CIRCUIT LOW

DTC detecting condition:

- Short circuit to ground in the harness between radar sensor and outer mirror assembly
- Ground short circuit of the harness in outer mirror assembly module (Malfunction of the outer mirror assembly)
- Defective radar sensor

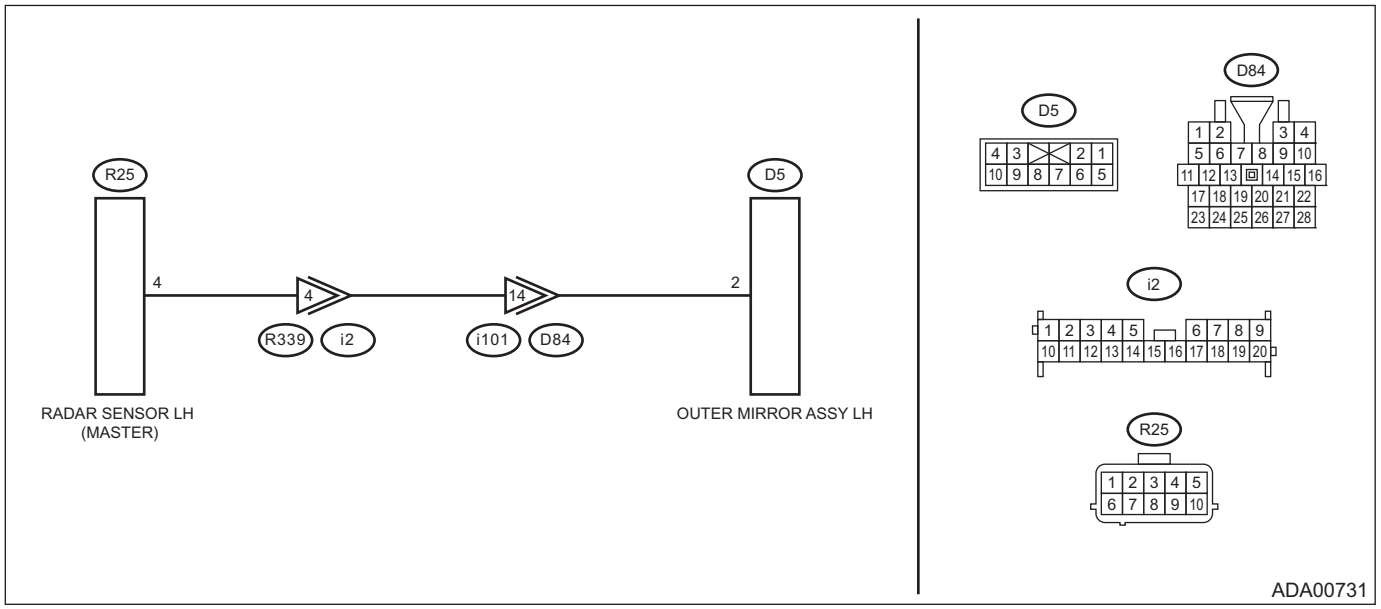
Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

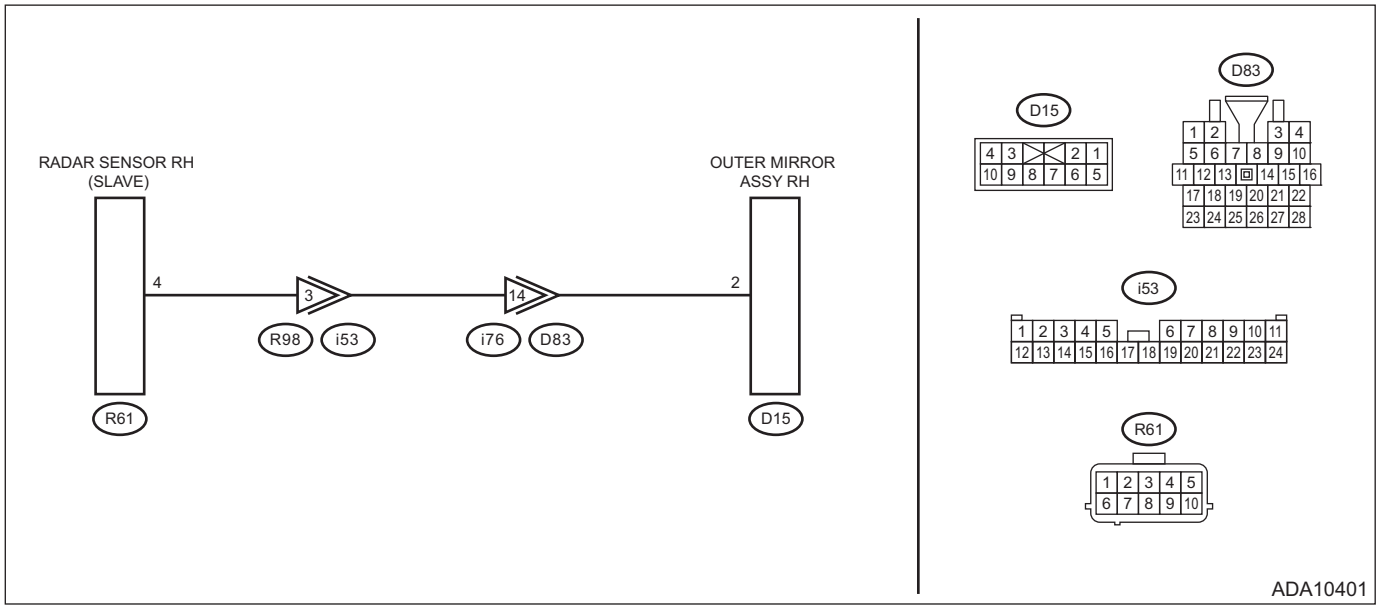
Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH



- Radar sensor RH



NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Perform the diagnosis of DTC B2327. <Ref. to RVD(diag)-34, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2300 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK OPERATION CHECK MODE.** Perform the system operation check mode «Door mirror indicator active test» from «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)». <Ref. to RVD(diag)-20, System Operation Check Mode.>	Does the indicator illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and the chassis ground. ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 — Chassis ground:*** ***Radar sensor RH*** ***(R61) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair the short to ground in harness between radar sensor connector and outer mirror assembly connector.

	Step	Check	Yes	No
5	**CHECK CONNECTOR.** Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **6**.	Repair the connector.
6	**CHECK OUTER MIRROR ASSEMBLY.** Perform unit-check for the outer mirror assembly. <Ref. to GW-26, Outer Mirror Assembly.>	Is the check result OK?	Go to step **7**.	Replace the outer mirror assembly.
7	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2300 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

B: DTC B2301 REAR RADAR CIRCUIT HIGH

DTC detecting condition:

- Open circuit or short circuit to power supply in harness between radar sensor and outer mirror assembly.
- Open circuit or short circuit to power supply of harness in the outer mirror assembly module. (Malfunction of the outer mirror assembly)
- Open circuit or short circuit to power supply of harness between outer mirror assembly and ground.
- Defective radar sensor

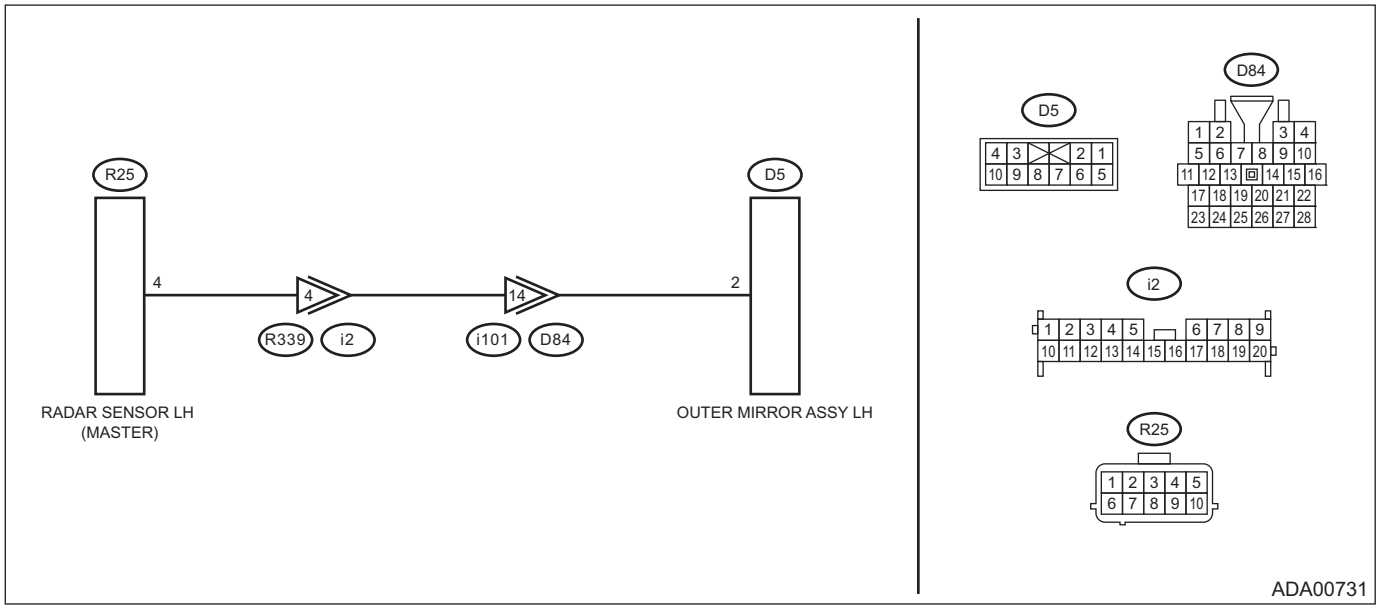
Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

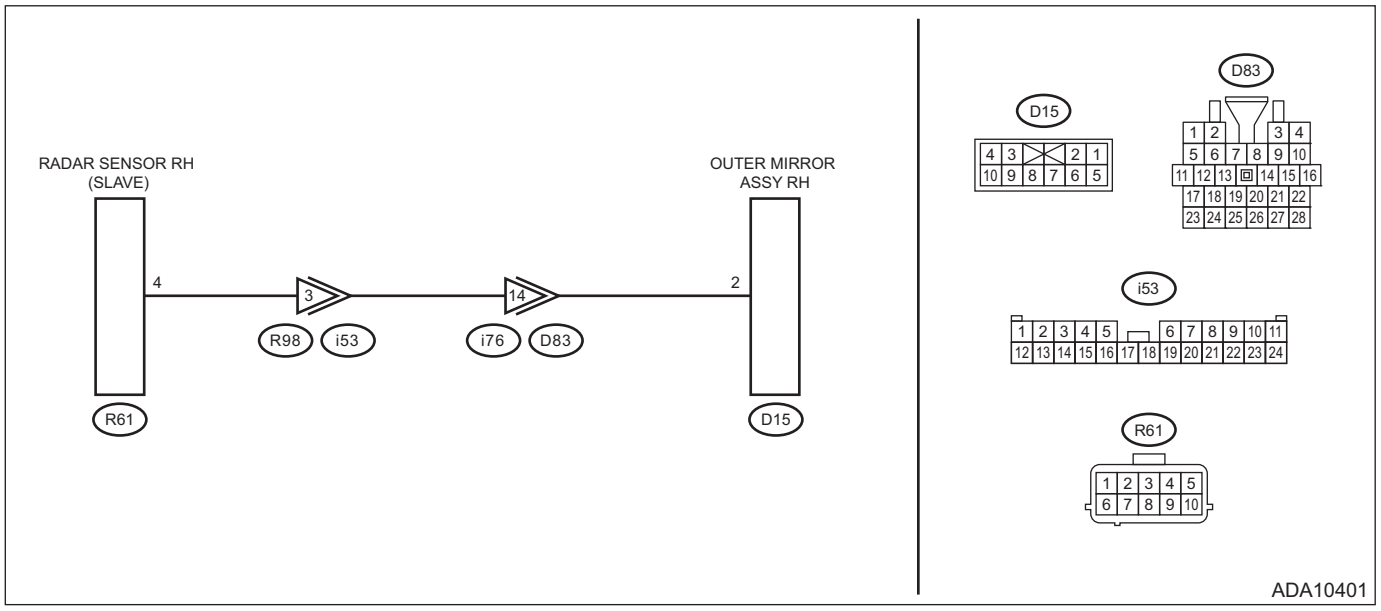
Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>

- Radar sensor LH



- Radar sensor RH



NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Perform the diagnosis of DTC B2327. <Ref. to RVD(diag)-34, DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.
2	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2301 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
3	**CHECK OPERATION CHECK MODE.** Perform the system operation check mode «Door mirror indicator active test» from «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)». <Ref. to RVD(diag)-20, System Operation Check Mode.>	Does the indicator illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connector. 2) Disconnect the outer mirror assembly connector. 3) Using a tester, measure the resistance between radar sensor connector (harness side) and outer mirror assembly connector (harness side). ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 — (D5) No. 2:*** ***Radar sensor RH*** ***(R61) No. 4 — (D15) No. 2:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair the open circuit of harness between radar sensor connector and outer mirror assembly connector.

	Step	Check	Yes	No
5	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between radar sensor connector (harness side) and the chassis ground. ***Connector & terminal*** ***Radar sensor LH*** ***(R25) No. 4 (+) — Chassis ground (–):*** ***Radar sensor RH*** ***(R61) No. 4 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair the short circuit to power supply in harness between radar sensor connector and outer mirror assembly connector.
6	**CHECK CONNECTOR.** Check the radar sensor connector and the outer mirror assembly connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **7**.	Repair the connector.
7	**CHECK OUTER MIRROR ASSEMBLY.** Perform unit-check for the outer mirror assembly. <Ref. to GW-26, Outer Mirror Assembly.>	Is the check result OK?	Go to step **8**.	Replace the outer mirror assembly.
8	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2301 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B2304 REAR RADAR ON-OFF SWITCH STUCK

DTC detecting condition:

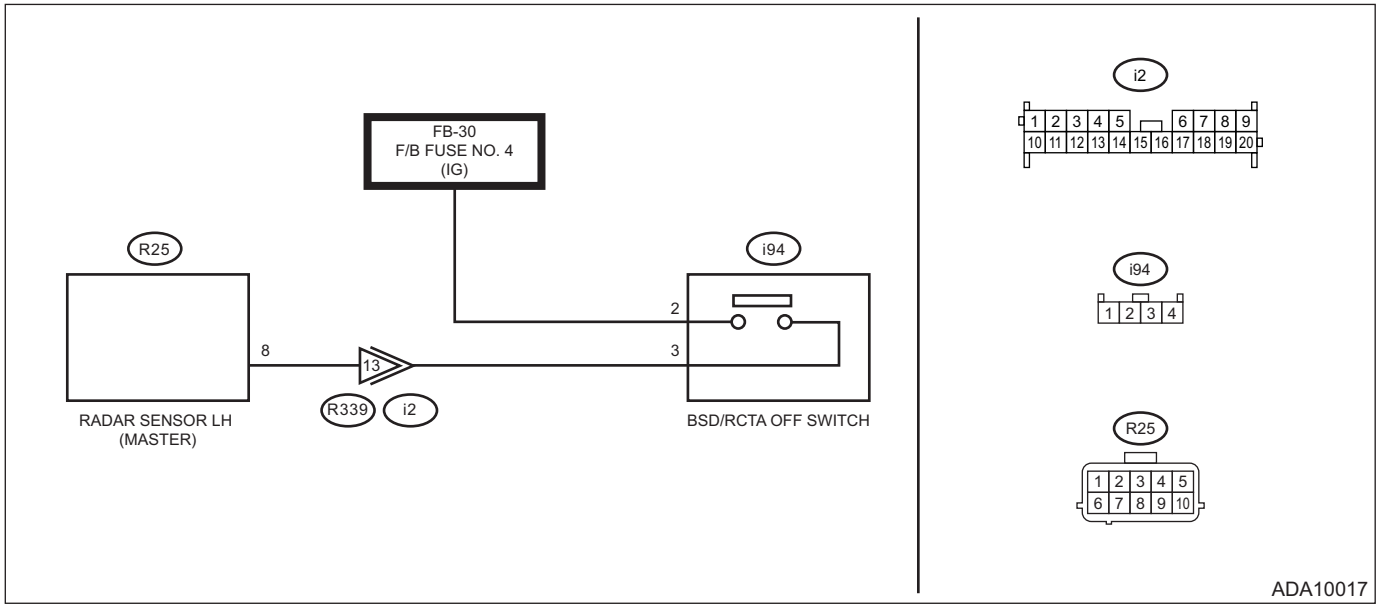
- BSD/RCTA OFF switch is stuck to ON. (Switch malfunction)
- Switch was left pressed for a prolonged time.
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>



Step		Check	Yes	No
1	**CHECK METER DISPLAY.** 1) Turn the ignition switch to ON. 2) Check the display of OFF indicator in the combination meter LCD display.	Does the display change according to operation of BSD/RCTA OFF switch?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: • Temporary poor contact of connector, temporary open or short circuit of harness may be the cause. • User may have kept pressing the switch for 30 seconds or more.	Go to step **2**.
2	**CHECK CURRENT DATA.** Check the current data «SRVD System ON-OFF flag» of «Blind Spot Detection/Rear Cross Traffic Alert(RH)» or «Blind Spot Detection/Rear Cross Traffic Alert(LH)». <Ref. to RVD(diag)-18, Read Current Data.>	Does the display change according to operation of BSD/RCTA OFF switch?	Check the combination meter. <Ref. to MET(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.

	Step	Check	Yes	No
3	**INSPECTION OF SWITCH UNIT.** Perform unit inspection of the BSD/RCTA OFF switch. <Ref. to RVD-11, Switches and Harness.>	Is the check result OK?	Go to step **4**.	Replace the BSD/RCTA OFF switch.
4	**CHECK BATTERY.** Check the battery. <Ref. to SC(w/o STI)-50, Battery.> <Ref. to SC(STI)-24, Battery.>	Is the check result OK?	Go to step **5**.	Charge or replace the battery.
5	**CHECK FUSE.** Check the fuse of BSD/RCTA OFF switch. <Ref. to RVD-4, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse and the BSD/RCTA OFF switch.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the BSD/RCTA OFF switch connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between BSD/RCTA OFF switch connector and chassis ground. ***Connector & terminal*** ***(i94) No. 2 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **7**.	Repair the open circuit of harness between the fuse and the BSD/RCTA OFF switch.
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the radar sensor LH connector. 3) Using a tester, measure the resistance between BSD/RCTA OFF switch connector and radar sensor LH connector (harness side). ***Connector & terminal*** ***(i94) No. 3 — (R25) No. 8:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair the open circuit of harness between BSD/RCTA OFF switch and radar sensor LH.
8	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i94) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **9**.	Repair the short circuit to ground in harness between BSD/RCTA OFF switch and radar sensor LH.
9	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the BSD/RCTA OFF switch connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i94) No. 3 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **10**.	Repair the short circuit to power supply in harness between BSD/RCTA OFF switch and radar sensor LH.
10	**CHECK CONNECTOR.** Check the radar sensor LH connector. (Insecure connection, poor contact, etc.)	Is the check result OK?	Go to step **11**.	Repair the connector.

	Step	Check	Yes	No
11	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2304 displayed? (Current malfunction)	Replace the radar sensor LH. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B2311 REAR RADAR DETECT TCM

DTC detecting condition:
Automatic transmission fails.
Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- AT OIL TEMP light blinks in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK TRANSMISSION.** Check the transmission. <Ref. to CVT(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis of the transmission.
2	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2311 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B2313 REAR RADAR DETECT VDC

DTC detecting condition:
Vehicle dynamics control (VDC) fails.
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.
- VDC warning light illuminates in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK VDC.** Check the VDC. <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the VDC diagnosis.
2	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2313 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B2327 REAR RADAR INTERNAL FAILURE (INTERNAL ELECTRIC CIRCUIT)

DTC detecting condition:
Defective radar sensor
Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK BSD/RCTA.** 1) Perform the Clear Memory Mode. <Ref. to RVD(diag)-14, OPERATION, Clear Memory Mode.> 2) Read the DTC again. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2327 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B2329 REAR RADAR AXIS ALIGNMENT INCOMPLETE

DTC detecting condition:
Axis adjustment of the radar sensor has failed.
(Forced termination of the Subaru Select Monitor, improper location of the target reflector, or deviation of the radar sensor due to impact.)

Trouble symptom:
- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
Check and replace the side that displayed the DTC.

	Step	Check	Yes	No
1	**CHECK REAR BUMPER.** Check the rear bumper. (Stickered, trace of repainting, etc.)	Is the check result OK?	Go to step **2**.	Replace or repair the bumper. <Ref. to EI-43, Rear Bumper.> Go to step **2**.
2	**CHECK RADAR SENSOR BRACKET.** 1) Remove the rear bumper. <Ref. to EI-43, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.)	Is the check result OK?	Go to step **3**.	Replace the mounting bracket of the radar sensor, or repair the installation position. Go to step **3**.
3	**ADJUSTMENT OF RADAR SENSOR AXIS.** 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-7, ADJUSTMENT, Radar Sensor.> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2329 displayed? (Current malfunction)	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

H: DTC B2350 REAR RADAR COMMUNICATION ERROR BETWEEN MASTER AND SLAVE

DTC detecting condition:

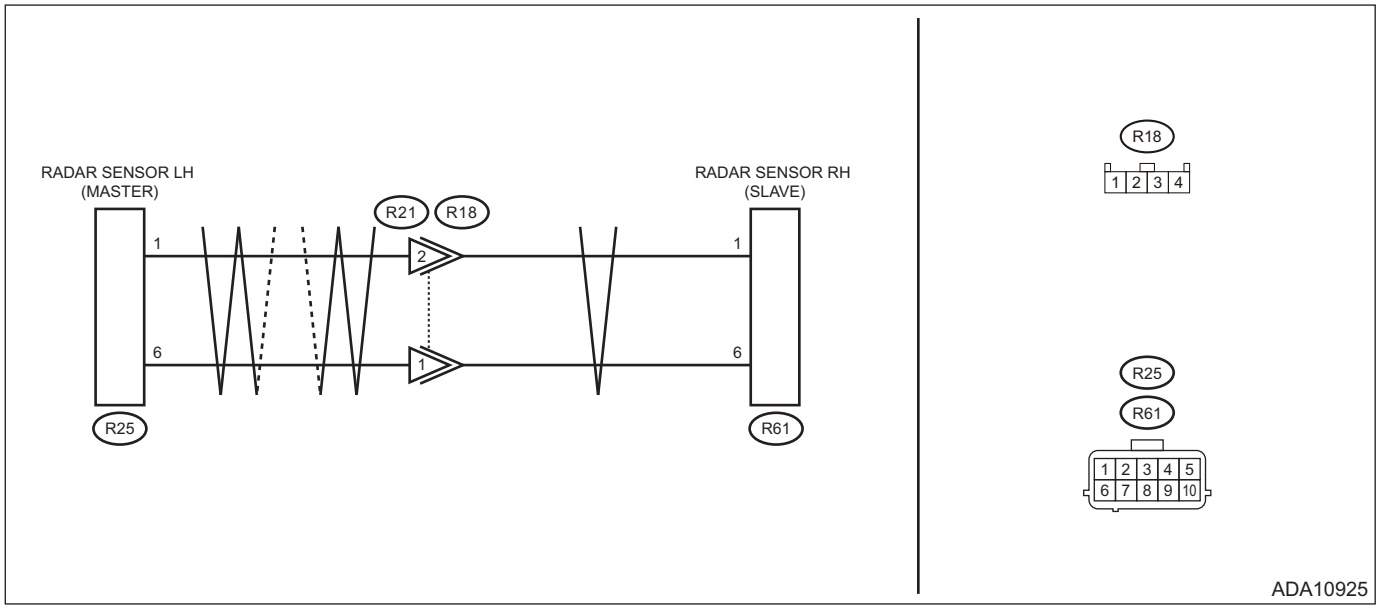
- Defective harness for CAN communication between radar sensor LH and radar sensor RH
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2350 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connectors LH and RH. 2) Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side). ***Connector & terminal*** ***(R25) No. 1 — (R61) No. 1:*** ***(R25) No. 6 — (R61) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.
3	**CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R25) No. 1 — Chassis ground:*** ***(R25) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 (+) — Chassis ground (–):*** ***(R25) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.
5	**CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).** Using a tester, measure the resistance between radar sensor LH connectors (module side) and the resistance between radar sensor RH connectors (module side). ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R61) No. 1 — (R61) No. 6:***	Is the resistance approximately 120 Ω?	Go to step **6**.	Replace the radar sensor RH or radar sensor LH. <Ref. to RVD-6, Radar Sensor.>
6	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2350 displayed? (Current malfunction)	Replace the radar sensor on the opposite side of that displayed the DTC. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

I: DTC B2351 REAR RADAR LOST COMMUNICATION BETWEEN MASTER AND SLAVE

DTC detecting condition:

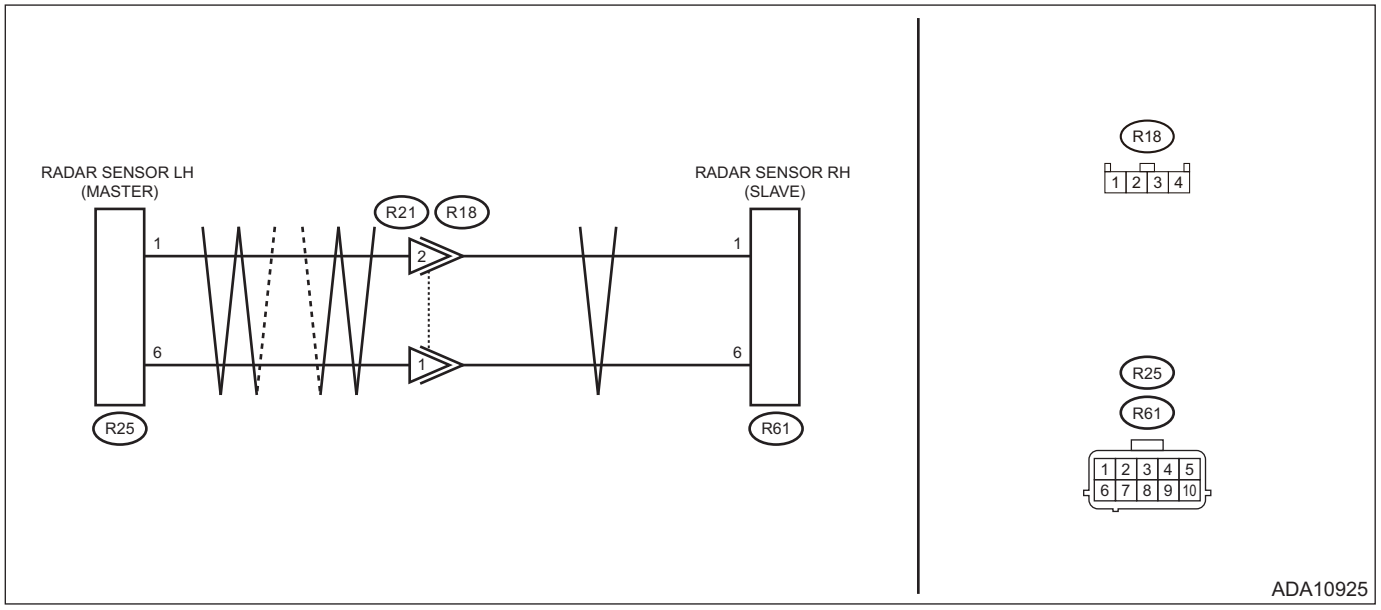
- Defective harness for CAN communication between radar sensor LH and radar sensor RH
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2351 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connectors LH and RH. 2) Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side). ***Connector & terminal*** ***(R25) No. 1 — (R61) No. 1:*** ***(R25) No. 6 — (R61) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.
3	**CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R25) No. 1 — Chassis ground:*** ***(R25) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 (+) — Chassis ground (–):*** ***(R25) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.
5	**CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).** Using a tester, measure the resistance between radar sensor LH connectors (module side) and the resistance between radar sensor RH connectors (module side). ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R61) No. 1 — (R61) No. 6:***	Is the resistance approximately 120 Ω?	Go to step **6**.	Replace the radar sensor RH or radar sensor LH. <Ref. to RVD-6, Radar Sensor.>
6	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2351 displayed? (Current malfunction)	Replace the radar sensor on the side that displayed the DTC. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

J: DTC B2352 RADAR ASSY B&S REPROGRAMMING ERROR

DTC detecting condition:

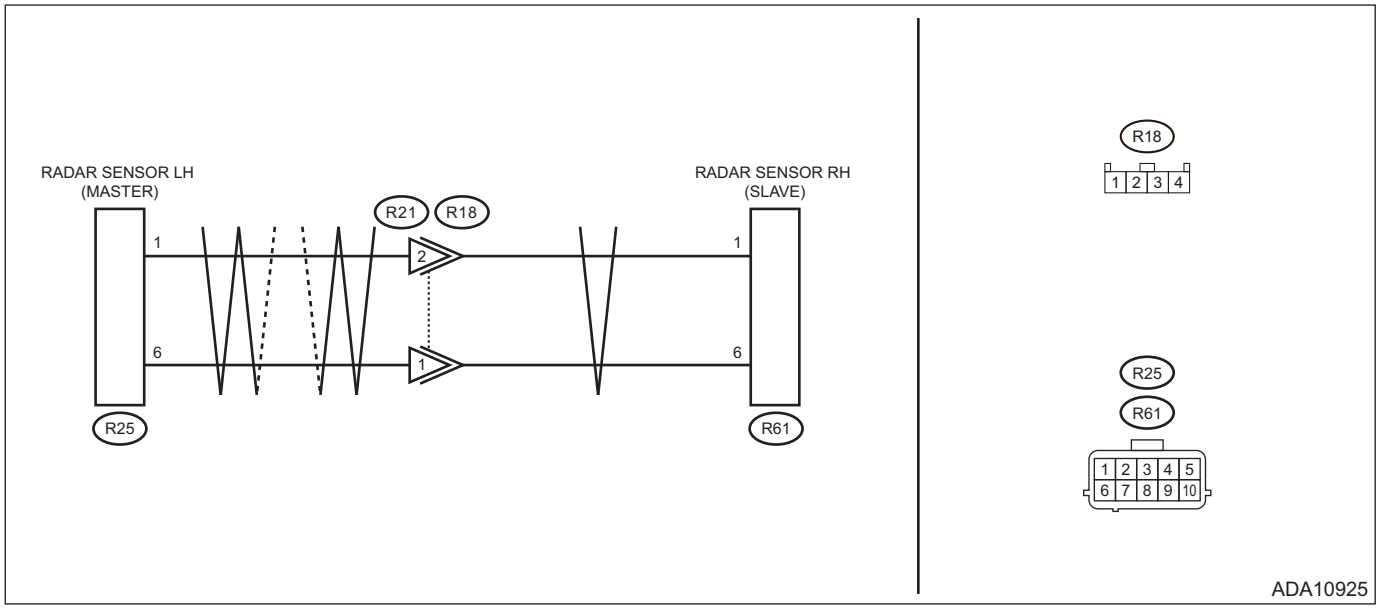
- Defective harness for CAN communication between radar sensor LH and radar sensor RH
- Defective radar sensor

Trouble symptom:

- All functions of BSD/RCTA stop.
- Fail icon is displayed in the combination meter LCD display.
- Failure-related notification is displayed for approx. two seconds on LCD display in the combination meter.

Wiring diagram:

SRVD system <Ref. to WI-106, WIRING DIAGRAM, Blind Spot Detection/Rear Cross Traffic Alert.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).>	Is DTC B2352 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the radar sensor connectors LH and RH. 2) Using a tester, measure the resistance between radar sensor RH connector (harness side) and radar sensor LH connector (harness side). ***Connector & terminal*** ***(R25) No. 1 — (R61) No. 1:*** ***(R25) No. 6 — (R61) No. 6:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair the open circuit of harness between radar sensor RH connector and radar sensor LH connector.

	Step	Check	Yes	No
3	**CHECK HARNESS (SHORT BETWEEN LINES, GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between radar sensor LH connectors (harness side) and the resistance between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R25) No. 1 — Chassis ground:*** ***(R25) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair the short circuit of harness between radar sensor RH connector and radar sensor LH connector.
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** Using a tester, measure the voltage between radar sensor LH connector (harness side) and chassis ground. ***Connector & terminal*** ***(R25) No. 1 (+) — Chassis ground (–):*** ***(R25) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair the short to power supply in harness between radar sensor RH connector and radar sensor LH connector.
5	**CHECK RADAR SENSOR. (INTERNAL IMPEDANCE).** Using a tester, measure the resistance between radar sensor LH connectors (module side) and the resistance between radar sensor RH connectors (module side). ***Connector & terminal*** ***(R25) No. 1 — (R25) No. 6:*** ***(R61) No. 1 — (R61) No. 6:***	Is the resistance approximately 120 Ω?	Go to step **6**.	Replace the radar sensor RH or radar sensor LH. <Ref. to RVD-6, Radar Sensor.>
6	**CHECK BSD/RCTA.** 1) Restore the vehicle to its original state. 2) Perform the Clear Memory Mode. <Ref. to RVD(diag)-13, OPERATION, Read Diagnostic Trouble Code (DTC).> 3) Perform the Inspection Mode. <Ref. to RVD(diag)-16, Inspection Mode.>	Is DTC B2352 displayed? (Current malfunction)	Replace the radar sensor on the side that displayed the DTC. <Ref. to RVD-6, Radar Sensor.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

K: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

L: DTC U0101 LOST COMMUNICATION WITH TCM

Detected when CAN data from TCM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC CM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data from BIU does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

O: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

P: DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Q: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U0422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE

Received error data from BIU.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from combination meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

16.Diagnostic Procedure with Cancel Code

A: DTC B2328 REAR RADAR INTERNAL FAILURE (RADAR MISALIGNMENT)

Detecting condition:

- Excessive impact was given to the installation area of the radar sensor, which resulted in deviation of the radar sensor axis.
- Mounting bracket for the radar sensor is deformed.
- Defective radar sensor

TROUBLE SYMPTOMS:

- All functions of BSD/RCTA are temporarily suspended.
- The icon indicating function suspended will be displayed in the combination meter LCD display.
- Function-suspended confirmation will be displayed for approx. two seconds on LCD display in the combination meter.

NOTE:
If DTC B2328 is detected repeatedly, check or replace the part corresponding to the cancel code.

	Step	Check	Yes	No
1	**CHECK REAR BUMPER.** Check the rear bumper. (Stickered, trace of repainting, etc.)	Is the check result OK?	Go to step **2**.	Replace or repair the bumper. <Ref. to EI-43, Rear Bumper.> Go to step **2**.
2	**CHECK RADAR SENSOR BRACKET.** 1) Remove the rear bumper. <Ref. to EI-43, Rear Bumper.> 2) Check the mounting bracket of the radar sensor as well as its installation position. (Visible damage, deformation, etc.)	Is the check result OK?	Go to step **3**.	Replace the mounting bracket of the radar sensor, or repair the installation position. Go to step **3**.
3	**ADJUSTMENT OF RADAR SENSOR AXIS.** 1) Install the rear bumper. 2) Perform the adjustment of radar axis. <Ref. to RVD-7, ADJUSTMENT, Radar Sensor.> 3) Read the cancel code. <Ref. to RVD(diag)-15, Read Cancel Code.>	Is B2328 displayed?	Replace the radar sensor. <Ref. to RVD-6, Radar Sensor.>	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

17.Diagnostics with Phenomenon

A: INSPECTION

Symptoms	Maintenance parts
BSD/RCTA does not operate.	Fuse
	LAN system <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Reverse Automatic Braking

RAB

Page

1. General Description 2
2. Relay and Fuse 4
3. Reverse Automatic Braking 5
4. Reverse Automatic Braking CM 6
5. Sensor and Harness 7
6. Control Unit 12
7. Stereo Camera 13
8. Combination Meter 14
9. Multi-function Display (MFD) 15

1. General Description

A: NOTE

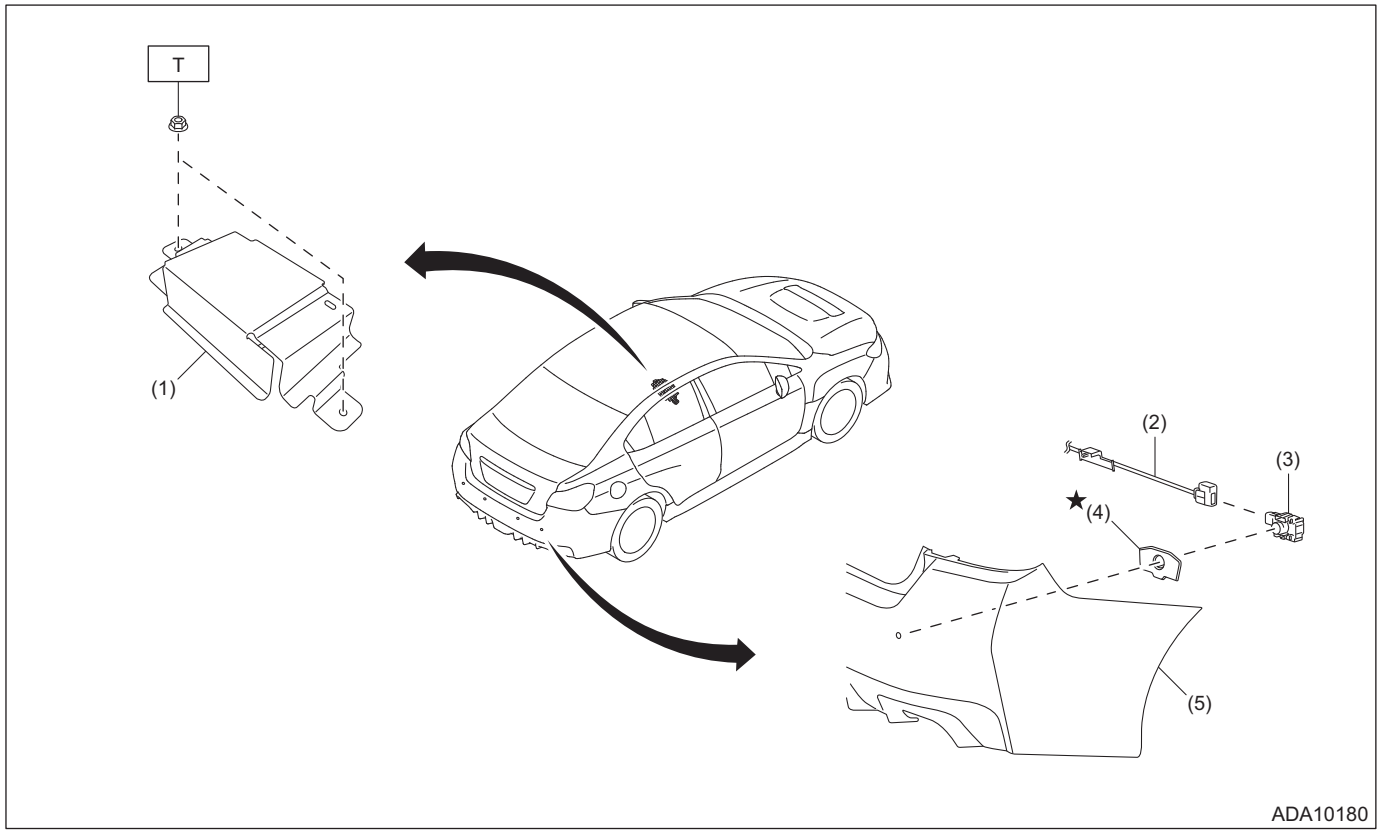
Using the EyeSight brake control, the Reverse Automatic Braking detects obstacles with the Reverse Automatic Braking CM and sonar sensor to operate the system.

B: LOCATION

Refer to “LOCATION” in the “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-6, LOCATION, Electrical Component Location.>

C: COMPONENT

1. REVERSE AUTOMATIC BRAKING CM AND SONAR SENSOR



(1) Reverse Automatic Braking CM
(2) Cord assembly - sonar
(3) Sonar sensor
(4) Holder - sonar
(5) Bumper face - rear

Tightening torque: N·m (kgf-m, ft-lb)
T: 7.5 (0.8, 5.5)

D: CAUTION

• Before disconnecting connectors of sensors or units, be sure to disconnect the ground cable from battery. When replacing the electrical parts provided with memory functions that store contents specified by a customer, record the memory contents before disconnecting the battery ground cable.
• For precautions for reverse automatic braking, refer to “CAUTION” in “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-4, CAUTION, General Description.>

E: PREPARATION TOOL

1. SPECIAL TOOL

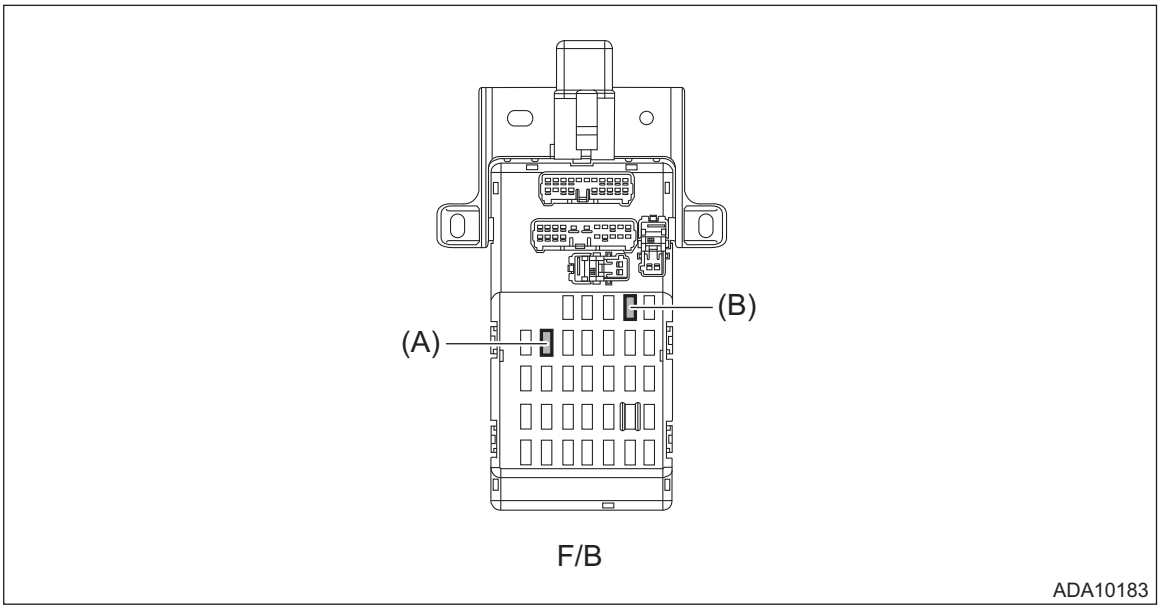
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST87692VA000	87692VA000	SONAR TOOL	Used for installing the holder - sonar.

2. GENERAL TOOL

TOOL NAME	REMARKS
Angle gauge	Used for inspecting height and angle of the sonar sensor.
Try square	
Measure	
Leveling line	
Plumb bob	
Packing tape	

2. Relay and Fuse

A: LOCATION



Fuse & Relay Box	Fuse 15 A (RAB CM)	(A)
	Fuse 10 A (RAB CM)	(B)

NOTE:
- Refer to “LOCATION” of the “EyeSight” section because the EyeSight system control is used. <Ref. to ES-4, LOCATION, Relay and Fuse.>
- For other related fuses, refer to the wiring diagram. <Ref. to WI-32, Power Supply Circuit.>

B: INSPECTION

1. CHECK FUSE

1) Remove the fuse and inspect visually.
2) If the fuse is blown out, replace the fuse.

NOTE:
If the fuse is blown again, check the system wiring harness.

3. Reverse Automatic Braking

A: WIRING DIAGRAM

Refer to “Reverse Automatic Braking” in the wiring diagram. <Ref. to WI-324, WIRING DIAGRAM, Reverse Automatic Braking.>

B: INSPECTION

Refer to “Basic Diagnostic Procedure” of “Reverse Automatic Braking (DIAGNOSTICS)” section. <Ref. to RAB(diag)-2, Basic Diagnostic Procedure.>

C: NOTE

For procedure of each component in the Reverse Automatic Braking, refer to the respective section.

- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>
- Sensor and harness: <Ref. to RAB-7, Sensor and Harness.>
- Control module: <Ref. to RAB-12, Control Unit.>

NOTE:
System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
- Body integrated unit: <Ref. to SL-80, Body Integrated Unit.>
- Parking brake actuator: <Ref. to PB-23, Parking Brake Actuator.>
- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>

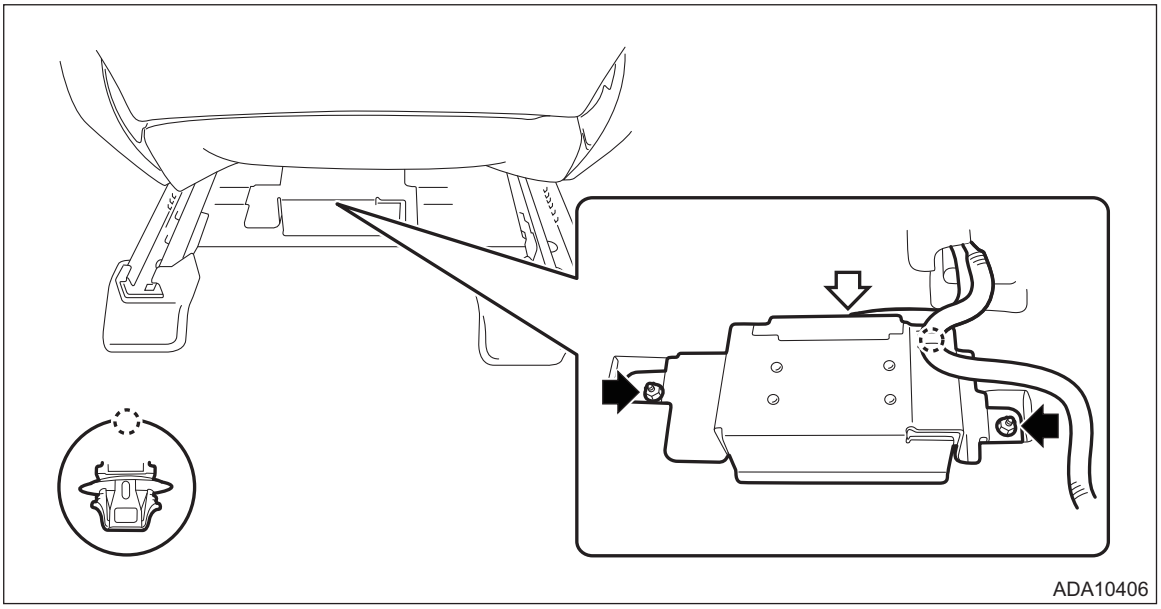
- Stereo camera: <Ref. to ES-7, Stereo Camera.>
- Combination meter: <Ref. to IDI-12, Combination Meter.>
- Multi-function display (MFD): <Ref. to IDI-19, Multi-function Display (MFD).>

4. Reverse Automatic Braking CM

A: REMOVAL

NOTE:
Remove the Reverse Automatic Braking CM after sliding the front seat LH back and forth as necessary.
1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the Reverse Automatic Braking CM.
   (1) Remove the connector and harness clip.
   (2) Remove the nut and remove the Reverse Automatic Braking CM.



B: INSTALLATION

1) Install the Reverse Automatic Braking CM.

Tightening torque:
7.5 N·m (0.8 kgf-m, 5.5 ft-lb)
2) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>

5. Sensor and Harness

A: REMOVAL

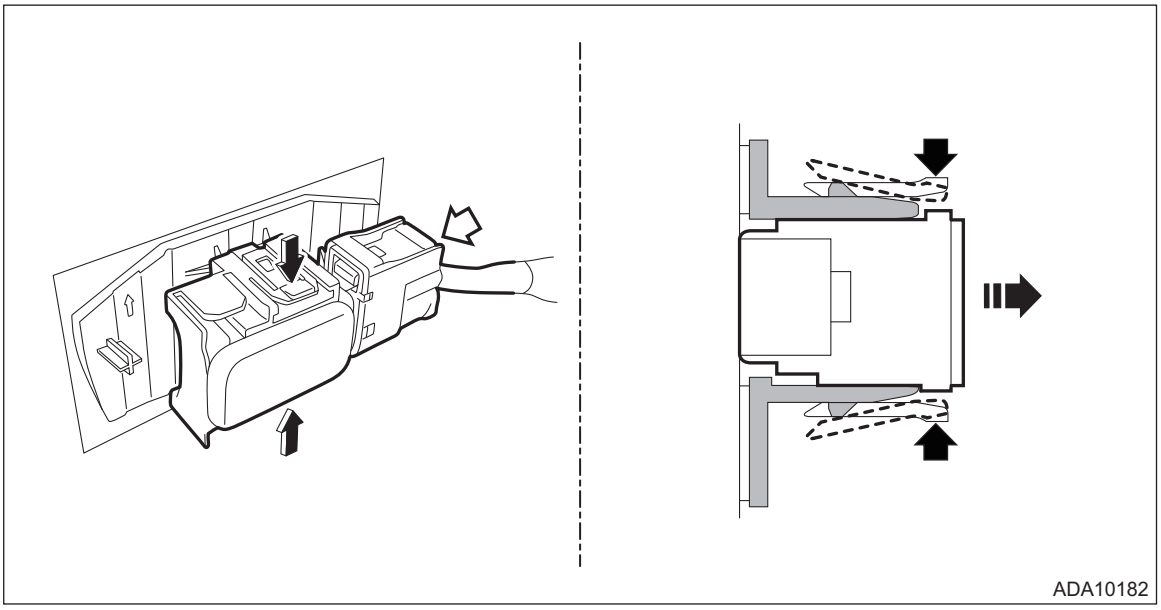
1. SONAR SENSOR

1) Disconnect the ground cable from battery. <Ref. to NT-6, BATTERY, NOTE, Note.>

NOTE:
For model with battery sensor, disconnect the ground terminal from battery sensor.
2) Remove the bumper face - rear. <Ref. to EI-43, REMOVAL, Rear Bumper.>
3) Remove the sonar sensor.

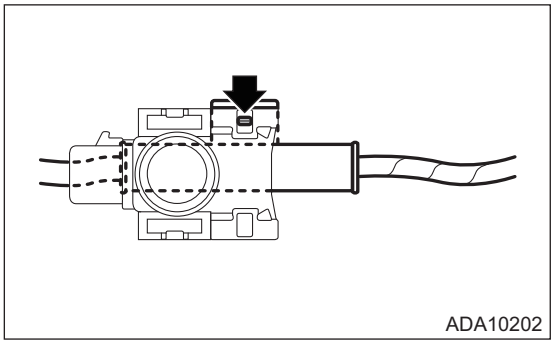
CAUTION:
• When reusing the sensor, make sure to place a mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.
• The holder - sonar is fixed to the bumper face - rear with the double-sided tape and therefore cannot be removed.

(1) Disconnect the connector.
(2) Release the claws and then remove the sonar sensor.



NOTE:
- The sonar sensors are equipped at four portions on the bumper face - rear.
- The figure indicates the sonar sensor (right corner). Remove the rest of the sensors in the same manner.

(3) Using a flat tip screwdriver wrapped with a protection tape or cloth, release the lock from the front side of the sonar sensor to remove the cord assembly - sonar.



NOTE:
Use a flat tip screwdriver with an appropriate size for the insertion opening.

B: INSTALLATION

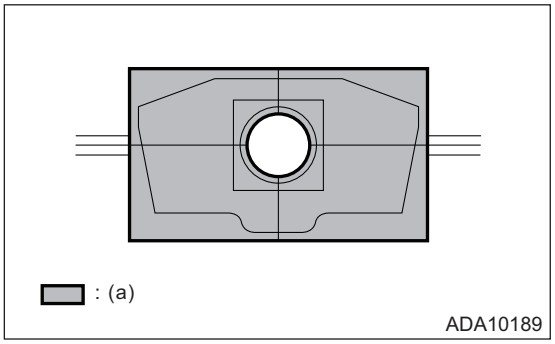
1. SONAR SENSOR

CAUTION:
• When reusing the sensor, make sure to align the mark on the sensor and the bumper face - rear or others, and surely return each sensor to the original position before removed.
• If either the bumper face - rear or the holder - sonar is damaged, replace both to new parts.

1) When installing the holder - sonar, perform work according to the following procedures.
(1) Clean the holder - sonar installation area of the bumper face - rear.
(2) Apply the primer to the primer application range frame (a) using sponge.

CAUTION:
• The primer has high volatility and can damage the coating surface. Therefore, be careful not to allow the primer overflow to the surface of the bumper face - rear.
• Do not reapply the primer over the dried surface.

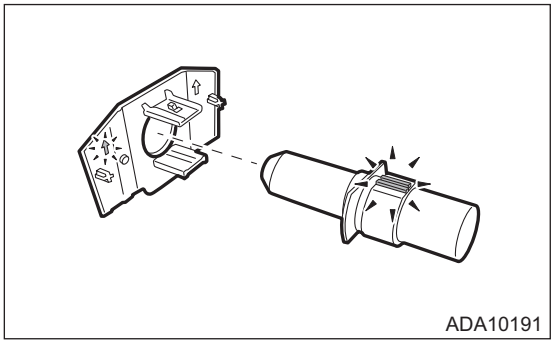
Preparation items:
Primer: 3M K-540NT or equivalent



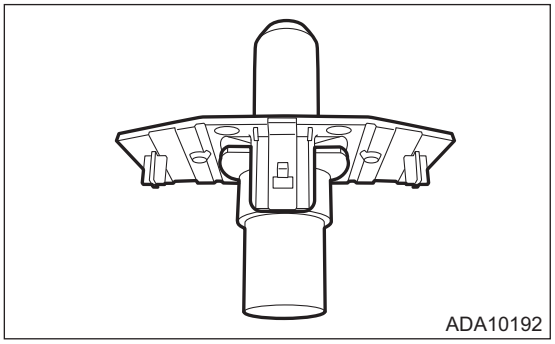
(3) Install SONAR TOOL (ST) to the holder - sonar.

Preparation tool:
ST: SONAR TOOL (87692VA000)

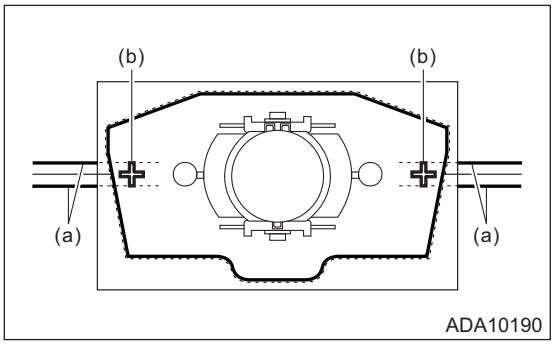
1. Confirm that the arrows of the holder - sonar are facing up, and then set SONAR TOOL (ST) with the two slit portions facing up.



2. Install the holder - sonar and SONAR TOOL (ST) so that there is no gap in between.



(4) Install the holder - sonar.
1. Check if the primer is dry.
2. Detach the double-sided tape of the holder - sonar.
3. Insert the centering pin ends of SONAR TOOL (ST) into the sensor holes of the bumper face - rear, and install while aligning with the mark-off line (shape of the holder - sonar) within the primer application range frame of the bumper face - rear.



NOTE:
The mark-off (a) and pins (b) of the holder - sonar come to the same position.

4. To prevent play or looseness between the installation surface of the bumper face - rear and the holder - sonar, press down SONAR TOOL (ST) with approximately 49 — 59 N (5 — 6 kgf, 11 — 13 lb) for one second.
(5) Remove SONAR TOOL (ST), and check if the holder - sonar is fixed securely.

2) Install the sonar sensor.
3) Install the bumper face - rear.
4) Connect the battery ground terminal. <Ref. to NT-6, BATTERY, NOTE, Note.>
5) When the bumper face - rear, holder - sonar and sonar sensor are replaced, check the installation height and angle. <Ref. to RAB-9, SONAR SENSOR, INSPECTION, Sensor and Harness.>

C: INSPECTION

1. SONAR SENSOR

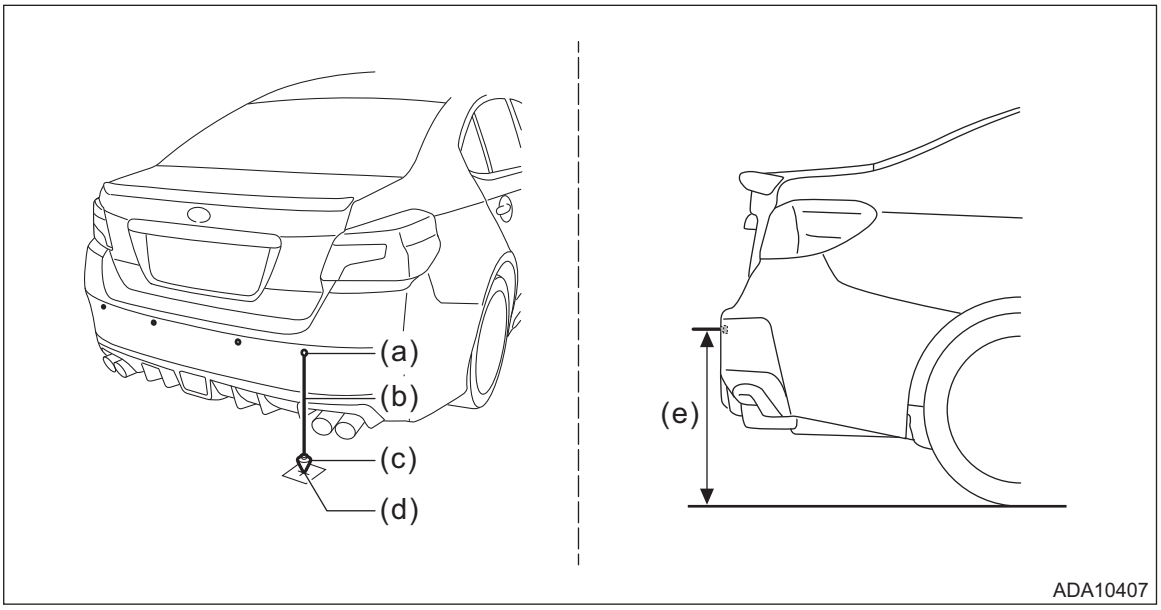
• Height and angle inspection

CAUTION:
Perform the inspection for each sonar sensor at curb weight.

1) Before performing measurement, check the following items.
(1) The vehicle is parked on a level surface.
(2) The inflation pressure of tires is correct.
(3) The vehicle does not have load.
(4) Check the area around the sensor and rear bumper for any scratches or other type of deformation.
2) Prepare the measure, plumb bob, leveling line, angle gauge and try square.
3) Measure installation height of the sonar sensor.
(1) Suspend the plumb bob with leveling line from the sensor, and mark the position where the plumb bob touches the ground. (Point A)

NOTE:
Stick the packing tape etc. on the floor, then make a marking on the tape.

(2) Measure the height from the sensor to the marked Point A.



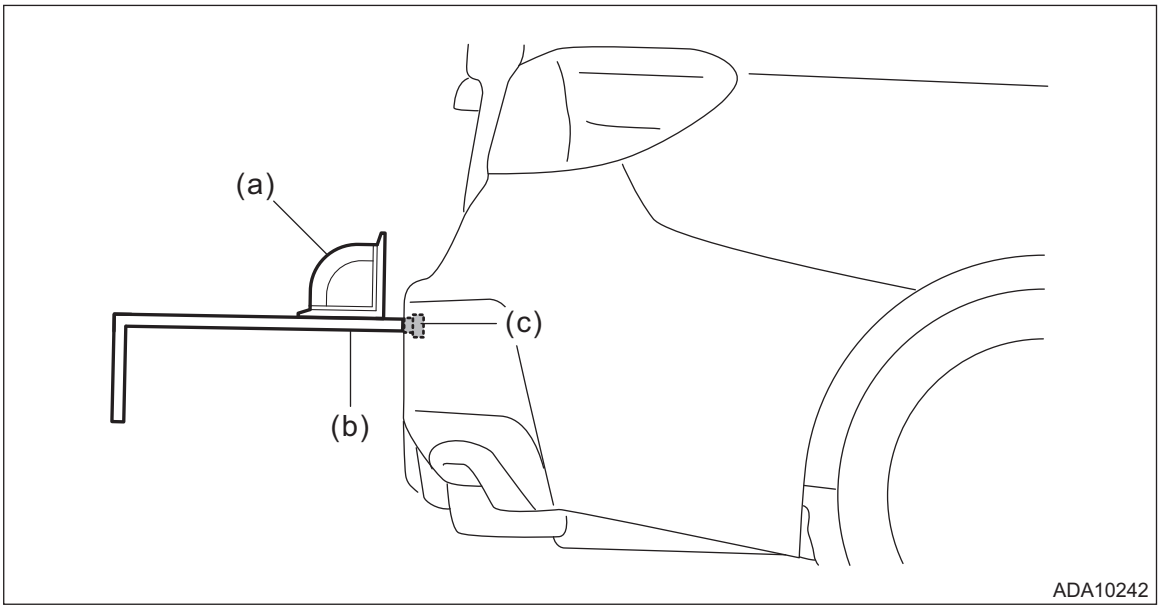
(a) Sonar sensor
(b) Leveling line
(c) Plumb bob
(d) Point A
(e) Height

(3) Confirm that sensor installation height is within the acceptable limit.

Specification:
560 — 600 mm (22.05 — 23.62 in)

4) Measure the installation angle of the sonar sensor.

(1) Using an angle gauge and try square, measure the installation angle as shown in the figure.



(a) Angle gauge
(b) Try square
(c) Sonar sensor

NOTE:
Use the measurement tools while placing them perpendicularly to the sonar sensor.

(2) Confirm that sensor installation angle is within the acceptable limit.

Specification:
2° — 5°

5) If the inspection result is not within the standard value, the rear bumper, holder - sonar or sonar sensor may be improperly installed or deformed. Check the installation status of each part, and perform inspection again.

6. Control Unit

A: NOTE

System control of the Reverse Automatic Braking is performed by each module. For procedure, refer to the following sections.

- Engine control module (ECM): <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).>
- Transmission control module (TCM): <Ref. to CVT(TR690)-128, Transmission Control Module (TCM).>
- VDC control module (VDC CM): <Ref. to VDC-9, VDC Control Module and Hydraulic Control Unit (VDC-CM&H/U).>
- Body integrated unit: <Ref. to SL-80, Body Integrated Unit.>
- Parking brake actuator: <Ref. to PB-23, Parking Brake Actuator.>
- Reverse Automatic Braking CM: <Ref. to RAB-6, Reverse Automatic Braking CM.>

7. Stereo Camera

A: NOTE

For the operation procedures for the stereo camera, refer to “EyeSight” section. <Ref. to ES-7, Stereo Camera.>

8. Combination Meter

A: NOTE

For the operation procedures for combination meter, refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-12, Combination Meter.>

9. Multi-function Display (MFD)

A: NOTE

For the operation procedures for Multi-Function Display (MFD), refer to “INSTRUMENTATION/DRIVER INFO” section. <Ref. to IDI-9, Multi-function Display (MFD) System.>

1. Basic Diagnostic Procedure

A: PROCEDURE

Step		Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the interview check list.	Did you interview the customer?	Go to step **2**.	Perform the interview.
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Reverse Automatic Braking». NOTE: For detailed operation procedures, refer to “Application help”.	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Record the DTC, time stamp and freeze frame data, and go to next.	Perform diagnosis according to the procedures in the diagnostics with phenomenon.
4	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis for the displayed DTCs. 2) Repair or replace the cause of trouble. 3) Perform the clear memory for «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-13, Clear Memory Mode.> 4) Execute the inspection mode. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed?	Repeat step 4 until DTC is not shown.	Finish the diagnosis.

2. Check List for Interview

A: CHECK

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Reverse Automatic Braking Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content
•
•
•</td></tr>
<tr><td rowspan="2">Date and time when the trouble occurred</td><td rowspan="2"></td><td rowspan="2">Frequency of trouble occurrence</td><td>Always occurs</td></tr>
<tr><td>Sometimes occurs (times per day, times per month)</td></tr>
<tr><td rowspan="2">Location where the trouble occurred</td><td rowspan="2"></td><td>Weather</td><td>❑ Fine ❑ Cloudy ❑ Rainy ❑ Snowy ❑ Others</td></tr>
<tr><td>Temperature</td><td>°C (°F) — °C (°F)</td></tr>
<tr><td>Road conditions</td><td colspan="3"></td></tr>
<tr><td>Road surface condition</td><td colspan="3"></td></tr>
<tr><td>Condition of warning light</td><td colspan="3">❑ On ❑ Off ❑ Blink</td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td>Diagnostic trouble code</td><td colspan="3"></td></tr>

(How the trouble occurs)</td><td colspan="3"></td></tr>
<tr><td>Vehicle bring-in history information</td><td colspan="3"></td></tr>
</table>

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

Airbag system harness is routed near the RAB CM.

CAUTION:
- **Do not use the electrical test equipment on the airbag system harnesses and connector circuits.**
- **Be careful not to damage the airbag system harness.**

B: INSPECTION

Before performing diagnostics, check the following item which might affect the Reverse Automatic Braking problems.

1. BASIC INSPECTION

1) Check the battery.
2) Check the main and other fuses, harnesses and connectors. Also check for proper grounding.

C: PREPARATION TOOL

1. SPECIAL TOOL

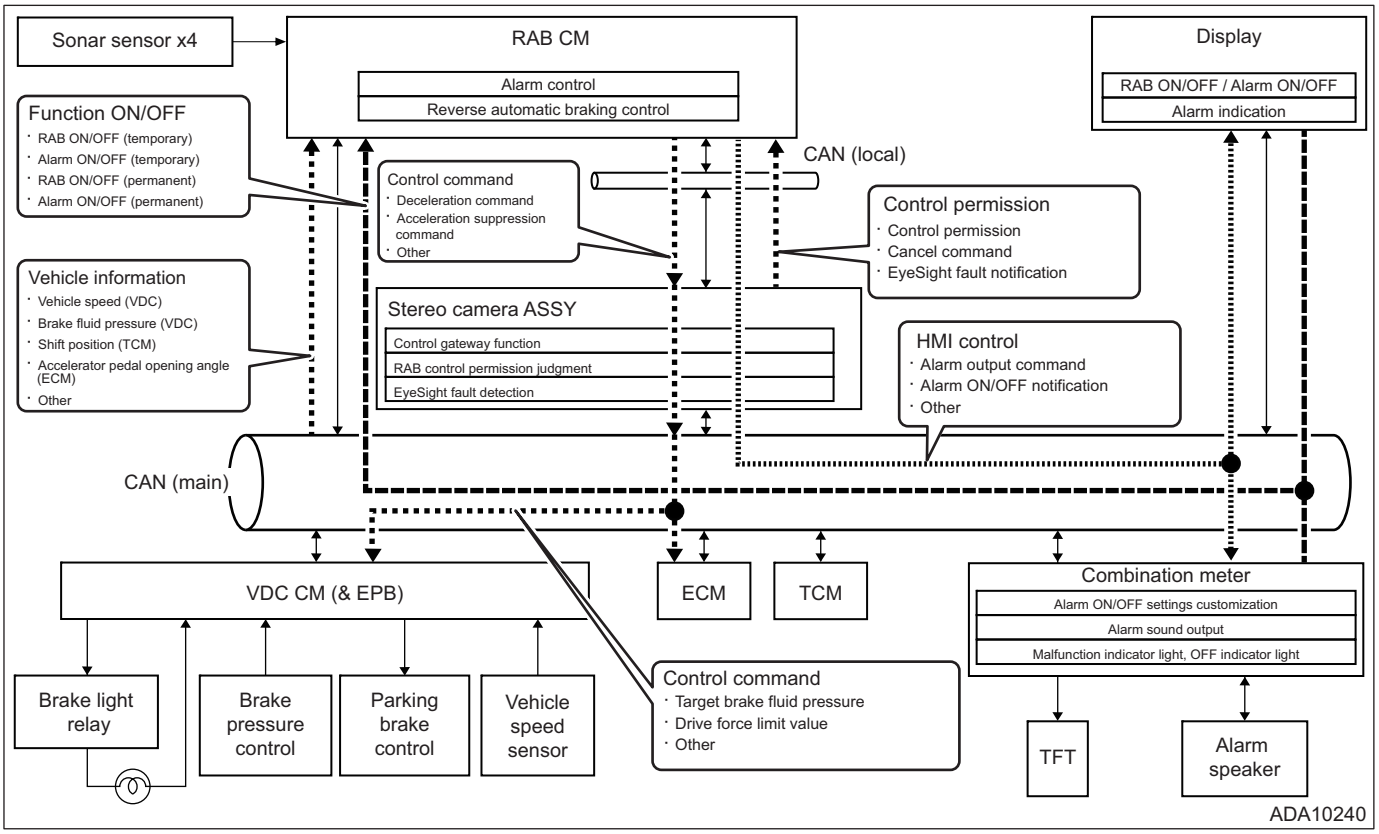
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

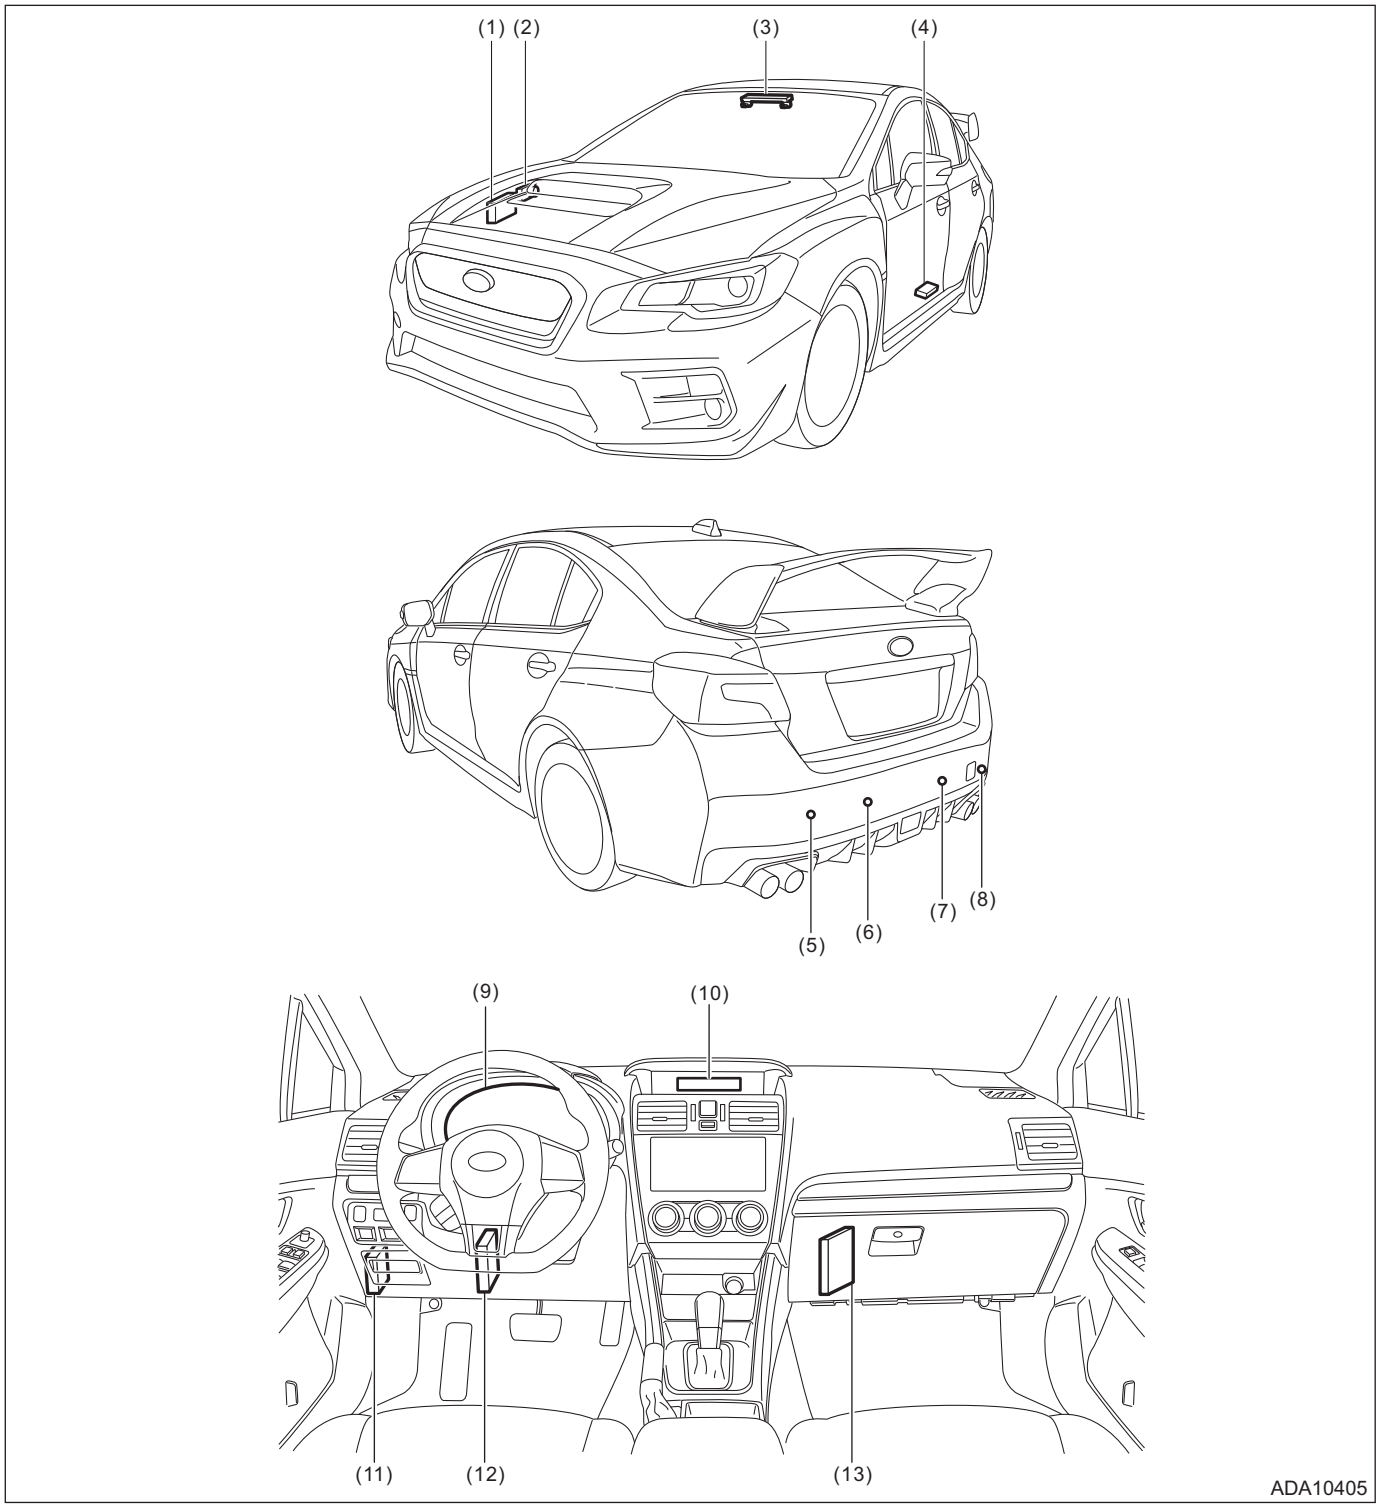
D: SYSTEM BLOCK DIAGRAM

The Reverse Automatic Braking is a system to avoid collision or reduce collision damage by informing with sound and operating the brake automatically, when the vehicle may collide with walls or obstacles on the rear during reversing.



4. Electrical Component Location

A: LOCATION



(1) Engine CM (engine type FA)
(2) VDC CM
(3) Stereo camera
(4) RAB CM

6. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform the inspection mode and make sure that the function is resumed correctly and the DTC is recorded.
1) Turn the ignition switch to ON, and wait for 6 seconds or more.(*1)
2) Confirm that the RAB warning light (RAB malfunction indicator light) of MID in the combination meter is off.
3) Read the DTC and check that the DTC is not displayed.(*2)
*1: Even with normal condition, “RAB warning light (RAB OFF indicator light)” illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.
*2: Perform all DTC diagnosis within 3 seconds after the ignition switch is turned to ON. It is not necessary to shift the gear in the R range to operate the function.

7. Warning Light Illumination Pattern

A: NOTE

- When the Reverse Automatic Braking has an error

“RAB” illuminates in MID in the combination meter.

- When the Reverse Automatic Braking is stopped temporarily

“RAB OFF” illuminates in MID in the combination meter.

NOTE:
Even with normal condition, “RAB warning light (RAB OFF indicator light)” illuminates for 6 seconds after turning the ignition switch to ON, and then goes off after 6 seconds.

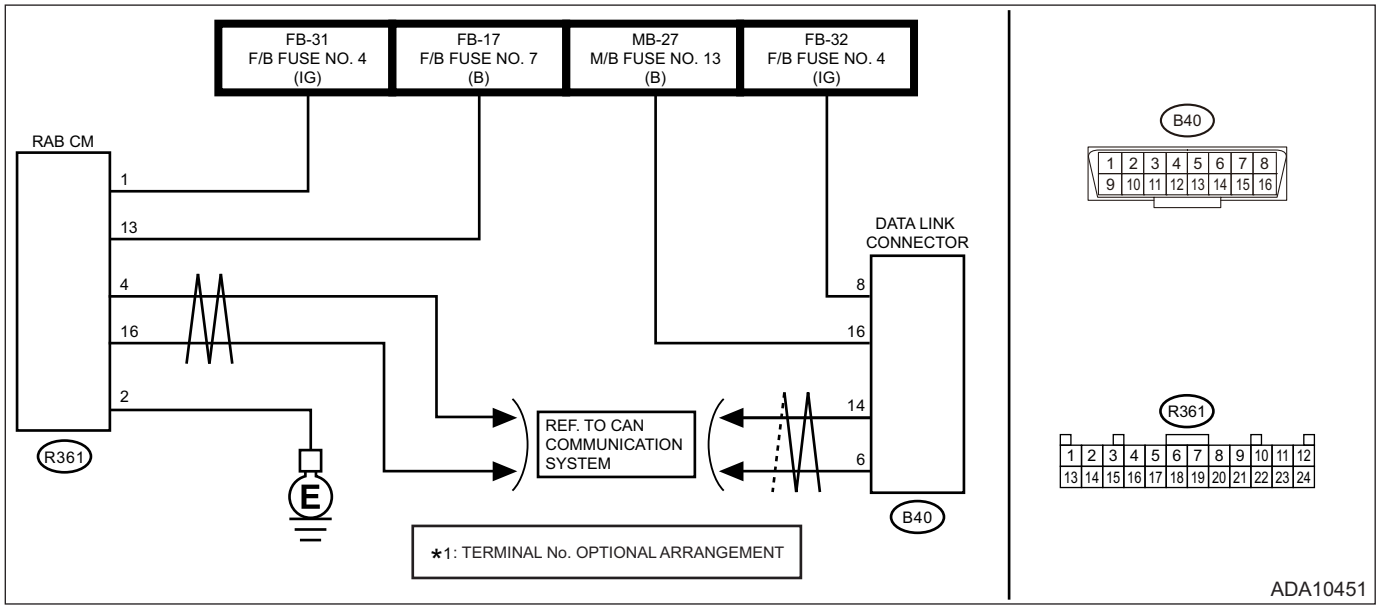
8. Diagnostic Procedure for Subaru Select Monitor Communication

A: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

Trouble symptom:
Communication is not possible with «Reverse Automatic Braking».
Detecting condition:
- Defective harness connector
- Power supply circuit malfunction
- Defective RAB CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse has blown out immediately, repair the short circuit to ground in harness between fuse and RAB CM.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the RAB CM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 1 (+) — Chassis ground (–):*** ***(R361) No. 13 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the harness between fuse and RAB CM connector.

	Step	Check	Yes	No
3	**CHECK GROUND CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair the open circuit of harness between RAB CM connector and chassis ground.
4	**CHECK LAN SYSTEM.** 1) Connect the RAB CM connector. 2) Inspect LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK SUBARU SELECT MONITOR.** Connect the Subaru Select Monitor to another vehicle.	Is the communication possible with the vehicle?	Go to step **6**.	Replace or repair the Subaru Select Monitor.
6	**CHECK RAB CM.** Communicate with «Reverse Automatic Braking».	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to RAB(diag)-23, List of Diagnostic Trouble Code (DTC).>

10.Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

11.Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

12.Freeze Frame Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- The system conditions when malfunction occurred (when DTC code was confirmed) can be stored up to 15 conditions.

13.Customize

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Customize» and then select «Enter».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Customize item	Initial setting value	Setting value	Content
RAB Function ON/OFF Information(SSM)	ON	ON OFF	ON/OFF of the RAB function can be selected.
RAB Alarm ON/OFF Information(SSM)	ON	ON OFF	ON/OFF of the alarm sound can be selected.

14.Work Support

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Work Support» and then select «Enter».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Work support item	Content
RAB Operation Record Data Save	When ignition switch ON counts of “Latest”, “1 block before”, “2 blocks before”... “4 blocks before” all shows “0”, it can be judges that there is no data. The display shows the latest data and the data in the previous 4 times in the order of their occurrence. Blue letter means that the data exists, and black letter means that there is no data. Select the blue letters and read out the details.
ECU Initialize	RAB CM is reset to the factory settings.
ECU Parts Number Display	RAB CM part number is displayed.
Software Information Display	Software information is displayed

Sensitivity of each sonar sensor can NOT be adjusted.

15.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Reference
B2C00	SONAR CONTROL MODULE CIRCUIT	<Ref. to RAB(diag)-26, DTC B2C00 SONAR CONTROL MODULE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

16.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B2C00 SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
10 ms
Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C00 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C00.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

B: DTC B2C01 RR SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C01 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C01.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

C: DTC B2C02 RRC SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C02 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C02.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

D: DTC B2C03 RL SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C03 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C03.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

E: DTC B2C04 RLC SONAR CONTROL MODULE CIRCUIT

Outline of diagnosis:
Detect the malfunction of the RAB CM.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2C04 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC B2C04.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

F: DTC B2C05 SONAR CONTROL MODULE POWER SUPPLY

Outline of diagnosis:
Voltage supply to the ignition power supply terminal and the battery power supply terminal was 16 V or more.
Time needed for diagnosis:
200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C05 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK RAB CM POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to OFF. 2) Disconnect the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between the RAB CM connector and chassis ground. ***Connector & terminal*** ***(R361) No. 1 (+) — Chassis ground (–):*** ***(R361) No. 13 (+) — Chassis ground (–):***	Is the voltage 16 V or less?	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Check the harness between the RAB CM connector and power supply.

G: DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (right corner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C06 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (right corner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 12 — (R366) No. 2:*** ***(R361) No. 22 — (R366) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C06 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner). <Ref. to RAB-7, Sensor and Harness.>

H: DTC B2C07 RR SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

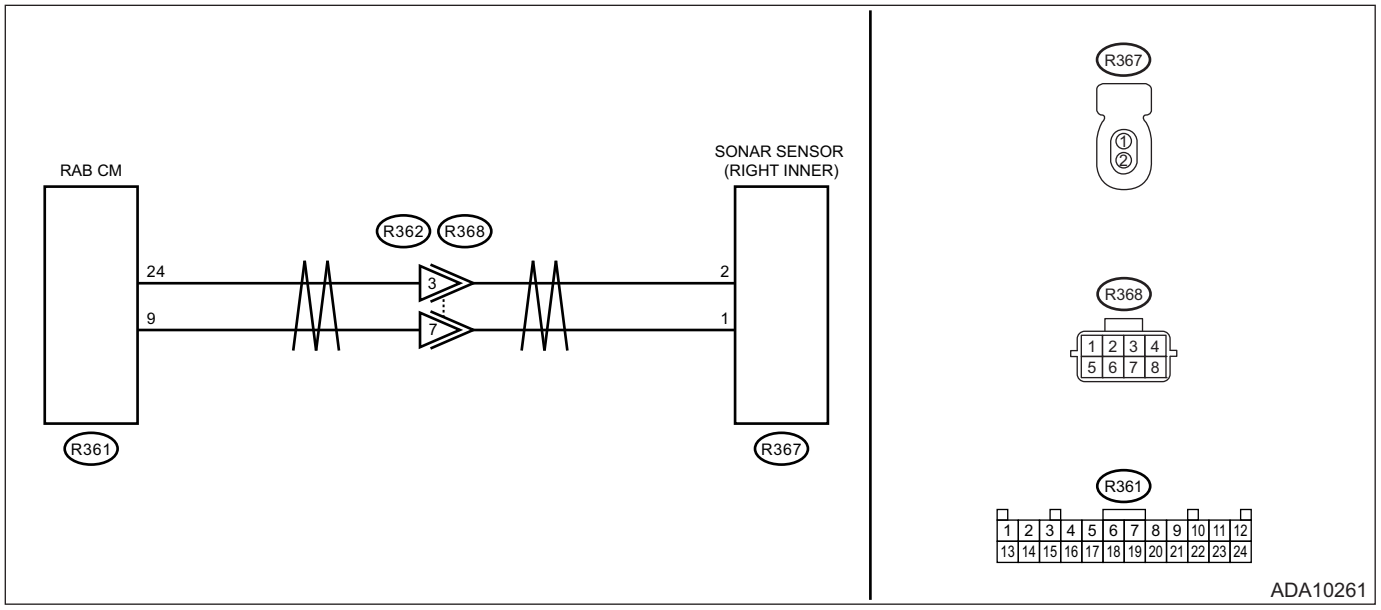
NOTE:
For the diagnostic procedure, refer to DTC B2C06. <Ref. to RAB(diag)-28, DTC B2C06 RR SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B2C08 RRC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (right inner) harness is open.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:

Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



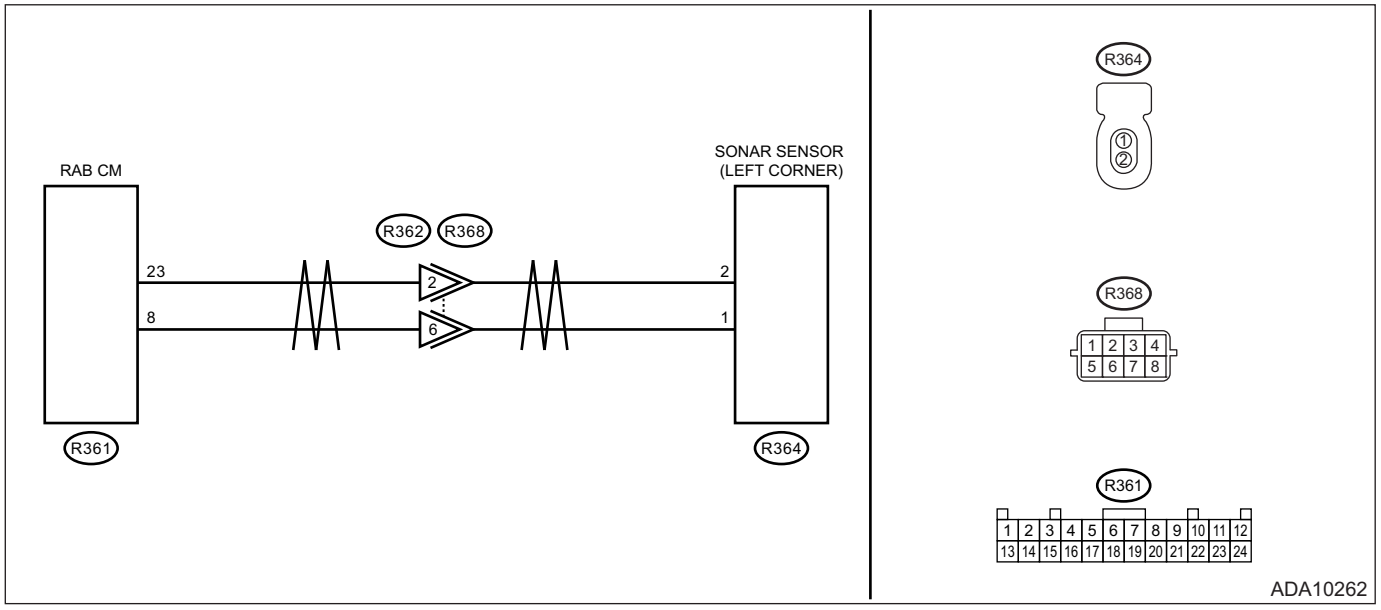
Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C08 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (right inner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 24 — (R367) No. 2:*** ***(R361) No. 9 — (R367) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C08 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner). <Ref. to RAB-7, Sensor and Harness.>

J: DTC B2C09 RRC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C07. <Ref. to RAB(diag)-29, DTC B2C07 RR SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (left corner) harness is open.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (left corner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 23 — (R364) No. 2:*** ***(R361) No. 8 — (R364) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0A displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner). <Ref. to RAB-7, Sensor and Harness.>

L: DTC B2C0B RL SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0A. <Ref. to RAB(diag)-31, DTC B2C0A RL SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL

Outline of diagnosis:
Sonar sensor (left inner) harness is open.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0C displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Using a tester, measure resistance value of the harness between the sonar sensor (left inner) connector and RAB CM connector. ***Connector & terminal*** ***(R361) No. 11 — (R365) No. 2:*** ***(R361) No. 21 — (R365) No. 1:***	Is the resistance less than 10 Ω?	Go to step **3**.	Repair or replace the open circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0C displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner). <Ref. to RAB-7, Sensor and Harness.>

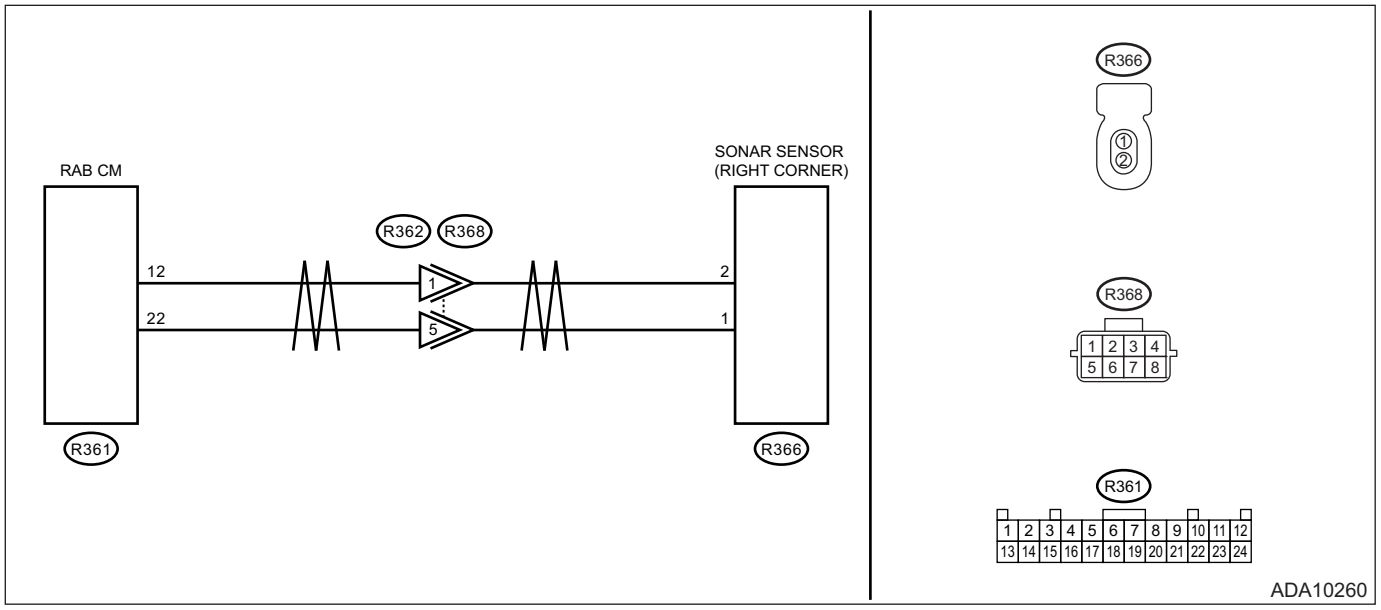
N: DTC B2C0D RLC SONAR SENSOR / SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0C. <Ref. to RAB(diag)-32, DTC B2C0C RLC SONAR SENSOR CIRCUIT / NO SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B2C0E RR SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:

Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0E displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (right corner) connector and chassis ground. ***Connector & terminal*** ***(R366) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.

Step		Check	Yes	No
3	**CHECK SONAR SENSOR.** 1) Turn the ignition switch to OFF. 2) Switch the sonar sensor (right corner) and sonar sensor (right inner). 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0E displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner).

P: DTC B2C0F RR SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

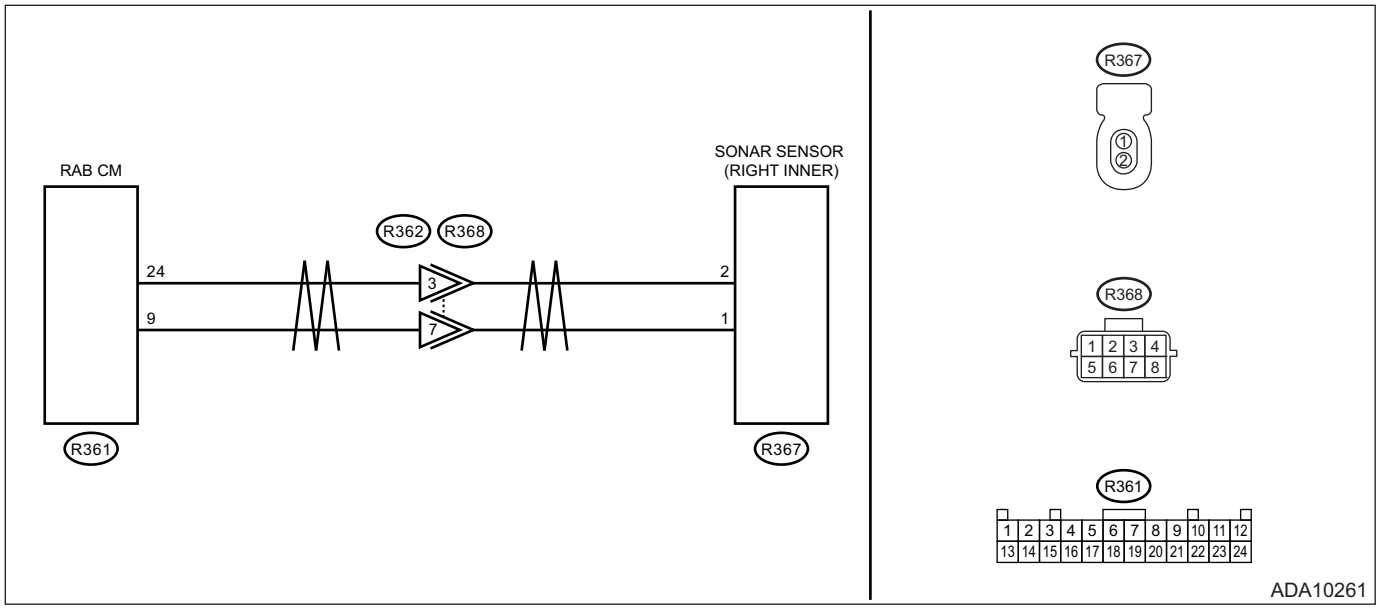
	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0F displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (right corner) connector and chassis ground. ***Connector & terminal*** ***(R366) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C0F displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner).

Q: DTC B2C10 RRC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to power supply.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:

Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

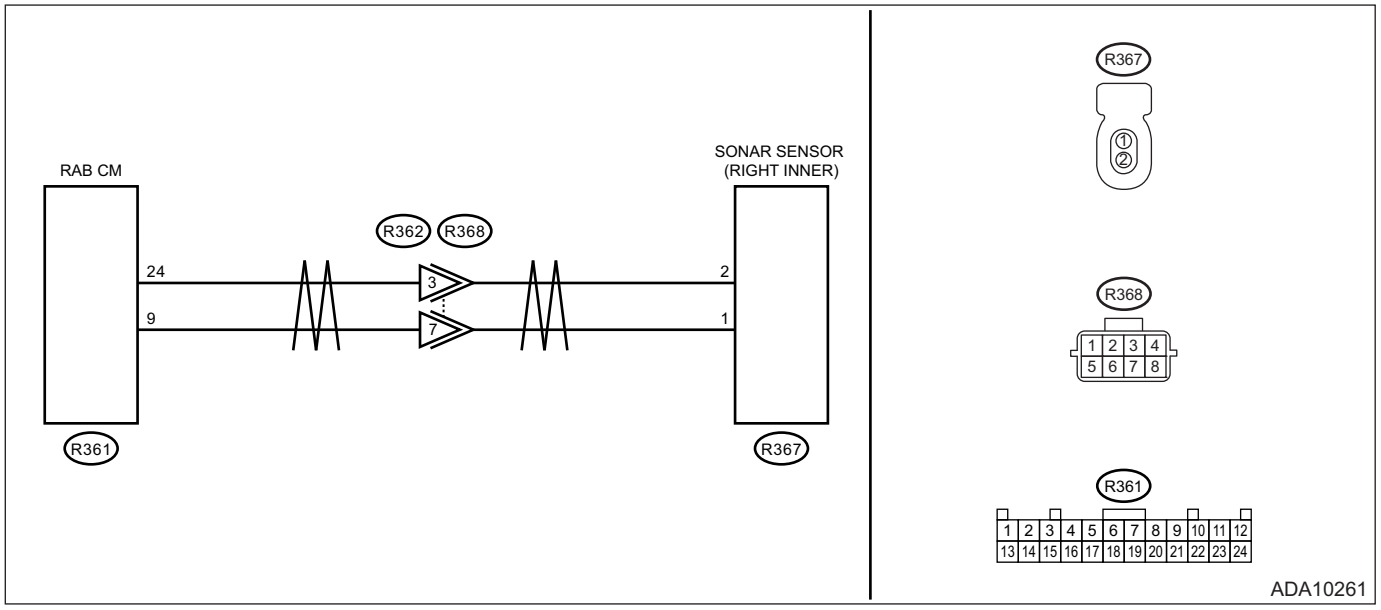


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C10 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure the voltage between sonar sensor (right inner) connector and chassis ground. ***Connector & terminal*** ***(R367) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C10 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner).

R: DTC B2C11 RRC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (right inner) harness is shorted to ground.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C11 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (right inner) connector and chassis ground. ***Connector & terminal*** ***(R367) No. 2 — Chassis ground:***	Is the resistance less than 1 MΩ?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C11 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner).

S: DTC B2C12 RL SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to power supply.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

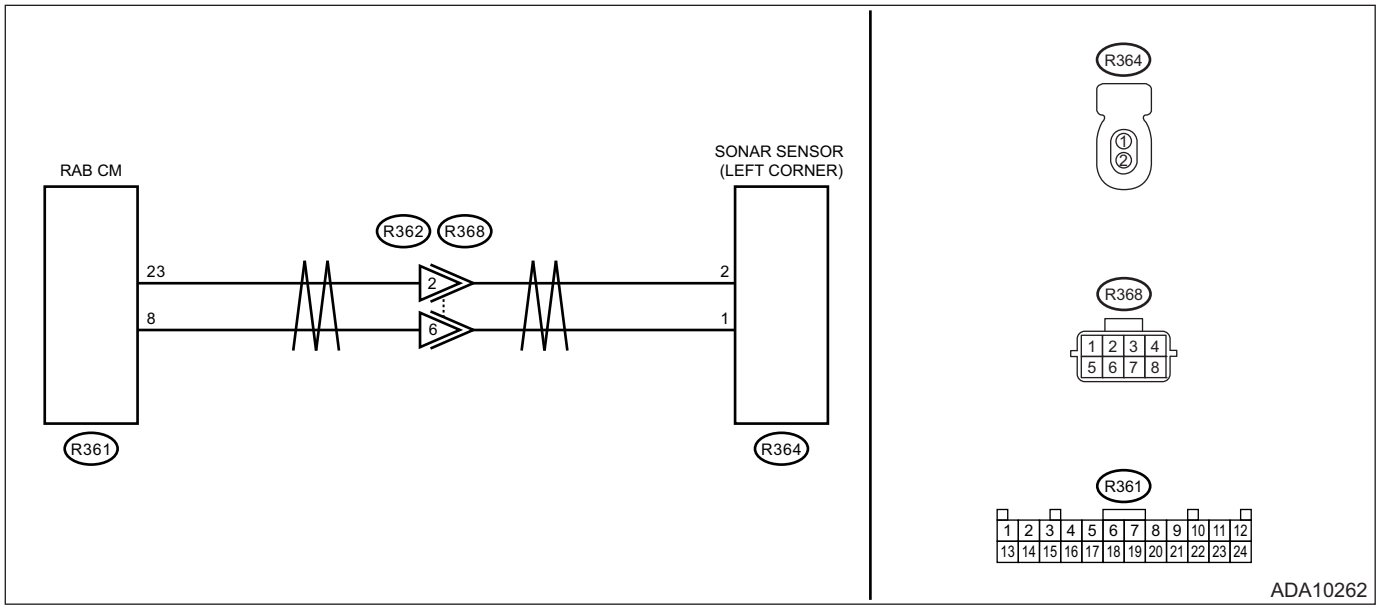
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C12 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (left corner) connector and chassis ground. ***Connector & terminal*** ***(R364) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C12 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner).

T: DTC B2C13 RL SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:

Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

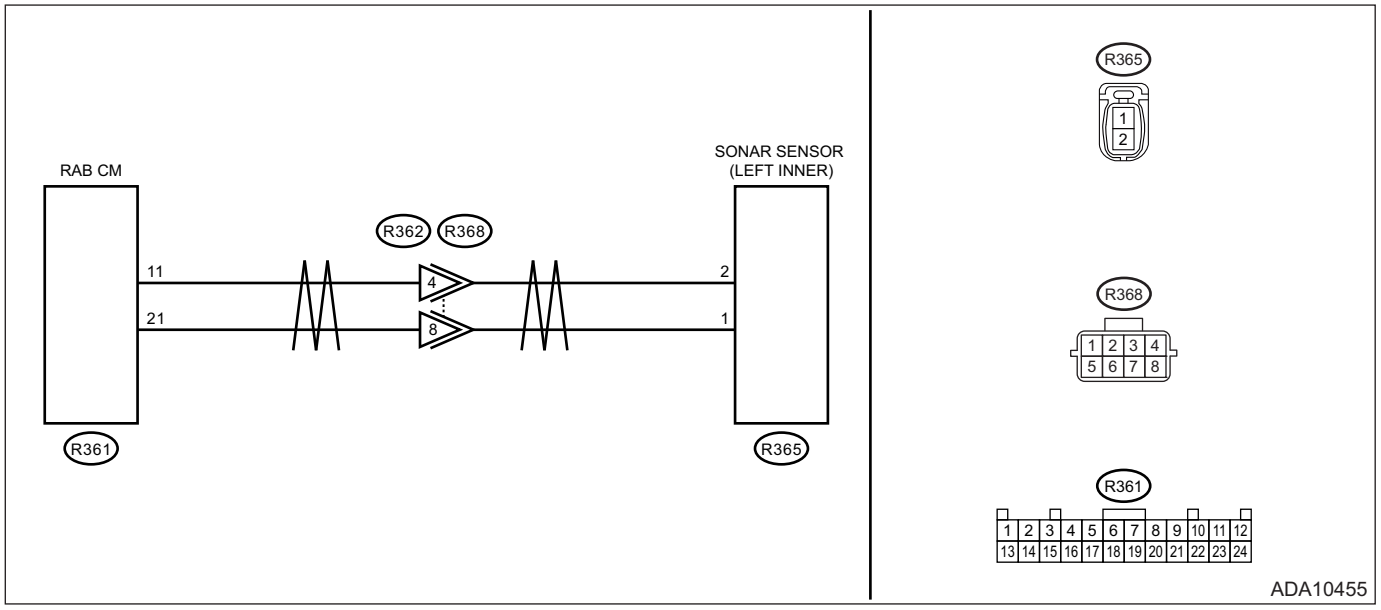


Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C13 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (left corner) connector and chassis ground. ***Connector & terminal*** ***(R364) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C13 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner).

U: DTC B2C14 RLC SONAR HARNESS HIGH

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to power supply.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C14 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Turn the ignition switch to ON. 4) Using a tester, measure the voltage between sonar sensor (left inner) connector and chassis ground. ***Connector & terminal*** ***(R365) No. 2 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C14 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner).

V: DTC B2C15 RLC SONAR HARNESS LOW

Outline of diagnosis:
Sonar sensor (left inner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C15 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS BETWEEN SONAR SENSOR CONNECTOR AND RAB CM CONNECTOR. (SHORTED TO GROUND).** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector and the RAB CM connector. 3) Using a tester, measure the resistance between sonar sensor (left inner) connector and chassis ground. ***Connector & terminal*** ***(R365) No. 2 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **3**.	Repair or replace the short circuit in the harness between sonar sensor connector and RAB CM connector.
3	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C15 displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner).

W: DTC B2C16 RRC SONAR HARNESS HIGH / RRC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C10. <Ref. to RAB(diag)-36, DTC B2C10 RRC SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

X: DTC B2C17 RLC SONAR HARNESS HIGH / RLC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C14. <Ref. to RAB(diag)-42, DTC B2C14 RLC SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Y: DTC B2C18 RR SONAR HARNESS HIGH / RR SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0E. <Ref. to RAB(diag)-33, DTC B2C0E RR SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

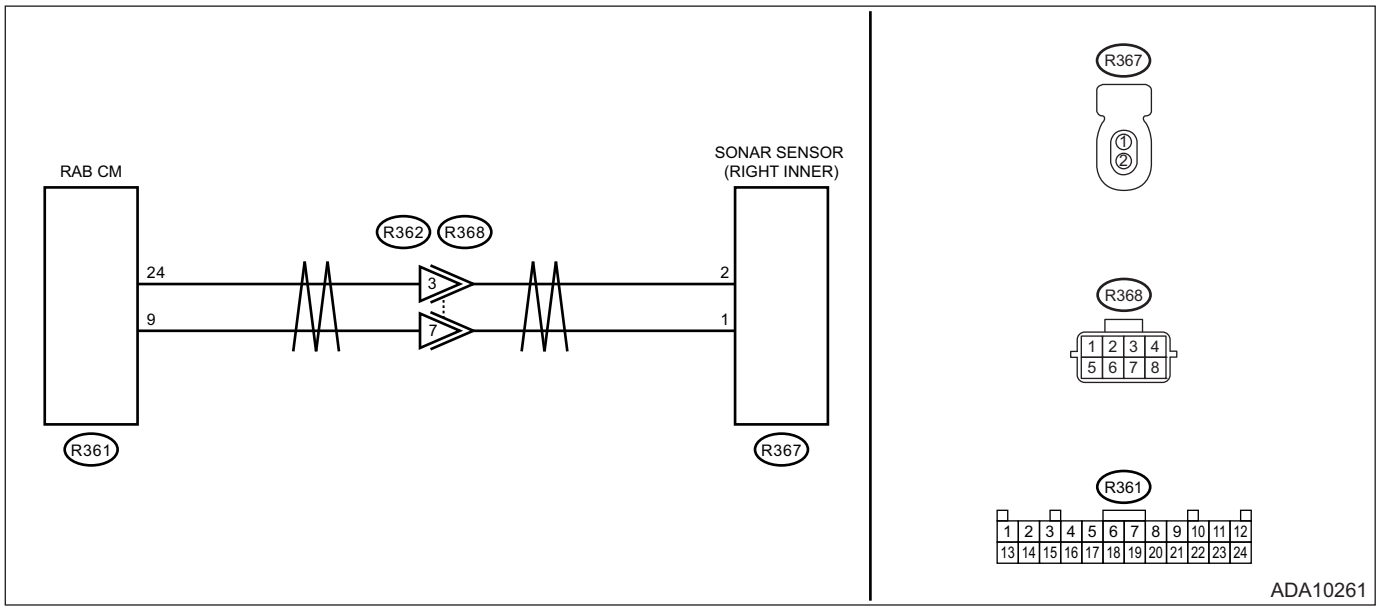
Z: DTC B2C19 RL SONAR HARNESS HIGH / RL SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C12. <Ref. to RAB(diag)-39, DTC B2C12 RL SONAR HARNESS HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AA:DTC B2C1A RRC SONAR SENSOR

Outline of diagnosis:
Sonar sensor (right inner) is faulty.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>



Step		Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right inner) and sonar sensor (right corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1A displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right inner). <Ref. to RAB-7, Sensor and Harness.>

AB:DTC B2C1B RLC SONAR SENSOR

Outline of diagnosis:
Sonar sensor (left inner) is faulty.
Time needed for diagnosis:
- 600 ms (when two waves transmitted)
- 1200 ms (when four waves transmitted)

Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left inner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left inner) and sonar sensor (left corner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1B displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left inner). <Ref. to RAB-7, Sensor and Harness.>

AC:DTC B2C1C RR SONAR SENSOR

Outline of diagnosis:
Sonar sensor (right corner) harness is shorted to power supply.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (right corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1C displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (right corner) and sonar sensor (right inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1C displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (right corner). <Ref. to RAB-7, Sensor and Harness.>

AD:DTC B2C1D RL SONAR SENSOR

Outline of diagnosis:
Sonar sensor (left corner) harness is shorted to ground.
Time needed for diagnosis:
1200 ms
Recovery conditions:
Ignition switch OFF → ON
Wiring diagram:
Reverse Automatic Braking <Ref. to WI-324, Reverse Automatic Braking.>

	Step	Check	Yes	No
1	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the sonar sensor (left corner) connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK SONAR SENSOR.** 1) Switch the sonar sensor (left corner) and sonar sensor (left inner). 2) Connect the disconnected connectors. 3) Turn the ignition switch to ON. 4) Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is DTC B2C1D displayed? (Current malfunction)	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>	Replace the sensor installed as a sonar sensor (left corner). <Ref. to RAB-7, Sensor and Harness.>

AE:DTC B2C1E RRC SONAR HARNESS LOW / RRC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C11. <Ref. to RAB(diag)-38, DTC B2C11 RRC SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AF:DTC B2C1F RLC SONAR HARNESS LOW / RLC SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C15. <Ref. to RAB(diag)-43, DTC B2C15 RLC SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AG:DTC B2C20 RR SONAR HARNESS LOW / RR SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C0F. <Ref. to RAB(diag)-35, DTC B2C0F RR SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AH:DTC B2C21 RL SONAR HARNESS LOW / RL SONAR CONTROL MODULE CIRCUIT

NOTE:
For the diagnostic procedure, refer to DTC B2C13. <Ref. to RAB(diag)-40, DTC B2C13 RL SONAR HARNESS LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AI: DTC B2C22 EyeSight SYSTEM

Outline of diagnosis:
EyeSight is faulty.
Time needed for diagnosis:

800 ms
Recovery conditions:
Ignition switch OFF → ON

NOTE:
Perform the diagnosis for EyeSight. <Ref. to ES(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AJ:DTC U0077 LOCAL CAN COMMUNICATION BUS OFF

Outline of diagnosis:
Local communication is faulty.
Time needed for diagnosis:
500 ms
Recovery conditions:
Ignition switch OFF → ON

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC relating the «Reverse Automatic Braking» using the Subaru Select Monitor. <Ref. to RAB(diag)-12, Read Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC U0077 displayed? (Current malfunction)	Perform the diagnosis for DTC other than DTC U0077.	Replace the RAB CM. <Ref. to RAB-6, Reverse Automatic Braking CM.>

AK:DTC U0100 LOST COMMUNICATION WITH ECM/PCM “A”

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

17.Cancel Code

A: NOTE

When the cancel codes are detected from the RAB CM, the Reverse Automatic Braking will be cancelled.

B: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Reverse Automatic Braking» and then select «Enter».
5) On «Select Function» display, select «Cancel Code».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- Up to three codes can be stored. When there are four or more codes, the oldest code is deleted and the newest code is stored.
- Stored codes will be cleared by Clear Memory.

C: LIST

Code	Description & trouble position	Content
0X01	+B Low Voltage	The battery power supply of RAB CM is reduced.
0X02	IGN Low Voltage	The ignition power supply of RAB CM is reduced.
0X03	RRC Sonar Noise	Sonar sensor (right inner) signal is interfered due to noise.
0X04	RLC Sonar Noise	Sonar sensor (left inner) signal is interfered due to noise.
0X05	RR Sonar Noise	Sonar sensor (right corner) signal is interfered due to noise.
0X06	RL Sonar Noise	Sonar sensor (left corner) signal is interfered due to noise.
0X07	RRC Sonar Dirty HALT I	Substance adhered to the sonar sensor (right inner).
0X08	RLC Sonar Dirty HALT I	Substance adhered to the sonar sensor (left inner).
0X09	RR Sonar Dirty HALT I	Substance adhered to the sonar sensor (right corner).
0X0A	RL Sonar Dirty HALT I	Substance adhered to the sonar sensor (left corner).
0X0B	RRC Sonar Dirty HALT II	Substance adhered to the sonar sensor (right inner).
0X0C	RLC Sonar Dirty HALT II	Substance adhered to the sonar sensor (left inner).
0X0D	RR Sonar Dirty HALT II	Substance adhered to the sonar sensor (right corner).
0X0E	RL Sonar Dirty HALT II	Substance adhered to the sonar sensor (left corner).
0X0F	RRC Sonar Mount Error	Substance adhered to the sonar sensor (right inner).
0X10	RLC Sonar Mount Error	Substance adhered to the sonar sensor (left inner).

15.	Diagnostic Trouble Code (DTC)	45
16.	Diagnostic Procedure with Diagnostic Trouble Code (DTC)	48
17.	Diagnostics with Phenomenon	126

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor kit is required for reading DTC, performing diagnosis and reading current data.
• Before removal or installation, be sure to remove any foreign matter (dust, moisture, oil, etc.).
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
Using the Function Setting (Customize), check that the keyless access system is not in a cancelled state. <Ref. to SL-116, OPERATION, Function Setting (Customize).>

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to KPS(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Perform the interview, and Go to step **2**.
2	**BASIC INSPECTION.** Perform the basic inspection. <Ref. to KPS(diag)-4, INSPECTION, General Description.>	Is the check result OK?	Go to step **3**.	Repair the failures from the basic inspection, and Go to step **3**.
3	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Select «Keyless Access with Push Button Start». NOTE: For detailed operation procedures, refer to "Application help".	Is communication possible?	Go to step **4**.	Check the communication circuit. <Ref. to KPS(diag)-27, Diagnostic Procedure for Subaru Select Monitor Communication.>
4	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Record the DTC, time stamp and freeze frame data, and Go to step **5**.	Go to step **6**.
5	**PERFORM DIAGNOSIS.** 1) Perform the diagnosis according to DTC. 2) Repair or replace the cause of trouble. 3) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 4) Execute the inspection mode. <Ref. to KPS(diag)-20, Inspection Mode.> 5) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Repeat step 5 until DTC is not shown. Go to step **5**.	Finish the diagnosis.
6	**CHECK DIAGNOSTICS WITH PHENOMENON LIST.** Check "Diagnostics with Phenomenon". <Ref. to KPS(diag)-126, Diagnostics with Phenomenon.>	Is there a symptom that corresponds in the phenomenon list?	Perform diagnosis according to the procedures in the phenomenon list.	keyless access with push button start system is normal.

2. Check List for Interview

A: CHECK

Inspect the following items regarding the vehicle's state.

<table>
<tr><td colspan="4">Keyless Access with Push Button Start System Trouble Check List for Interview
Received Year Month Date</td></tr>
<tr><td colspan="2" rowspan="2">Customer's name</td><td>Registration No.</td><td>Initial year of registration
Year Month Date</td></tr>
<tr><td>Vehicle model</td><td>Frame number</td></tr>
<tr><td>Interviewer</td><td>Inspector</td><td>Engine type</td><td>Odometer reading</td></tr>
<tr><td colspan="4">Customer specified content</td></tr>
<tr><td>Date and time when the trouble occurred</td><td></td><td>Frequency of trouble occurrence</td><td></td></tr>
<tr><td>Condition of trouble occurrence</td><td></td><td>Weather</td><td></td></tr>
<tr><td>Road conditions</td><td></td><td>Occurrence location</td><td></td></tr>
<tr><td>Accessory installation condition</td><td colspan="3"></td></tr>
<tr><td colspan="4">Trouble condition</td></tr>
<tr><td colspan="2">❑ DTC</td><td colspan="2">❑ ( )</td></tr>
<tr><td>❑ Immobilizer system</td><td colspan="2">Engine does not start</td><td>❑ Starter does not operate
❑ Starter operates but engine does not start
❑ Engine starts but stops immediately</td></tr>
<tr><td rowspan="2">❑ Steering lock system</td><td colspan="3">Does not start with remote engine starter</td></tr>
<tr><td colspan="3">The steering lock is not released</td></tr>
<tr><td rowspan="6">❑ Keyless access system</td><td colspan="3">The steering lock does not lock</td></tr>
<tr><td colspan="3">Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock) and trunk opener button</td></tr>
<tr><td colspan="2">Cannot lock with the touch sensor (lock)
Cannot unlock with the touch sensor (unlock)
Cannot lock nor unlock with the touch sensor (lock), touch sensor (unlock)
Trunk does not open with the trunk opener button.</td><td>❑ Driver's side door
❑ Passenger's side door</td></tr>
<tr><td colspan="2">Access key lockout protection function does not operate</td><td>❑ Passenger room
❑ Luggage room</td></tr>
<tr><td colspan="3">The LED does not illuminate when the access key button is pressed</td></tr>
<tr><td colspan="3">The external buzzer does not beep</td></tr>
<tr><td>❑ Other</td><td colspan="3">The passenger room buzzer does not sound
The room light or map light does not illuminate
( )</td></tr>
</table>

NOTE:

- Perform the diagnostics according to the basic diagnostic procedure. <Ref. to KPS(diag)-2, Basic Diagnostic Procedure.>
- If the room light or map light does not illuminate and the keyless access does not function at the same time, the back-up fuse may be loose or blown.

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Refer to “CAUTION” in AIRBAG SYSTEM for removal of airbag. <Ref. to AB(diag)-4, CAUTION, General Description.>

2. KEYLESS ACCESS WITH PUSH BUTTON START

When removing the keyless access with push button start-related components, refer to the cautions regarding the security & lock. <Ref. to SL-6, CAUTION, General Description.>

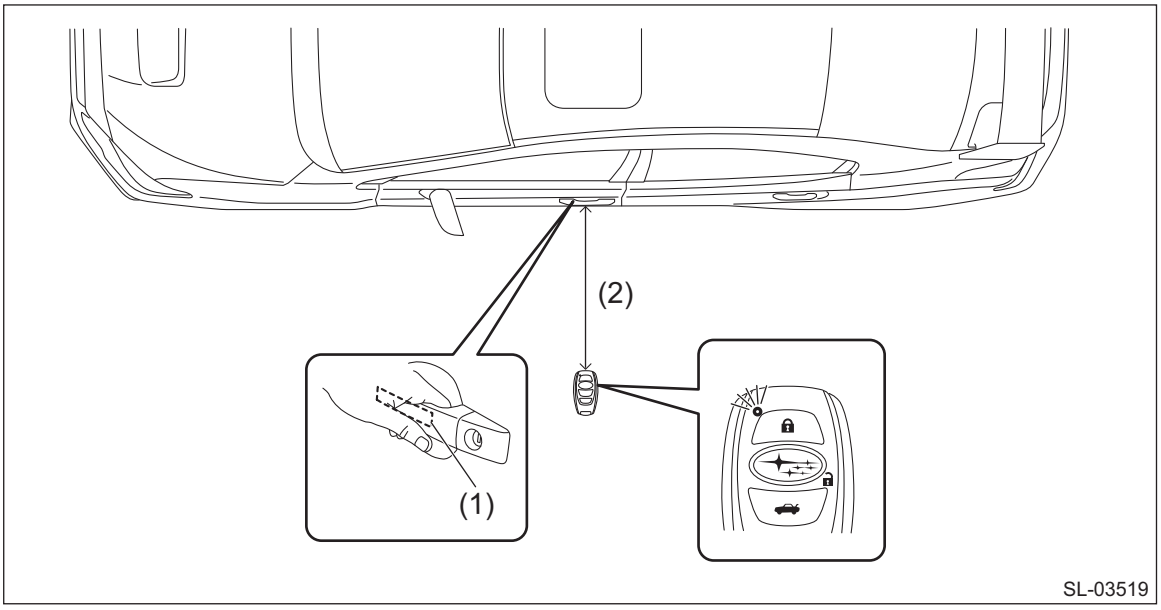
B: INSPECTION

1. BASIC INSPECTION

Before performing diagnosis, check the following items which might affect the keyless access with push button start system problems.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the fuse condition. <Ref. to SL-8, Relay and Fuse.>
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.

2. CHECK OPERATION

NOTE:
• Using the Function Setting (Customize), check that the keyless access with push button start is not OFF. <Ref. to SL-116, OPERATION, Function Setting (Customize).>
• The dark current is approx. 400 mA if there is communication between the vehicle and access key.
• The dark current is approx. 40 mA if there is no communication between the vehicle and access key.*
* No communication with the vehicle means that the keyless access function has been in the cancel state or in the power saving state (the communication is stopped while the access key has been near the vehicle for 15 minutes or more after door locking).
1) Keyless access door unlock function check

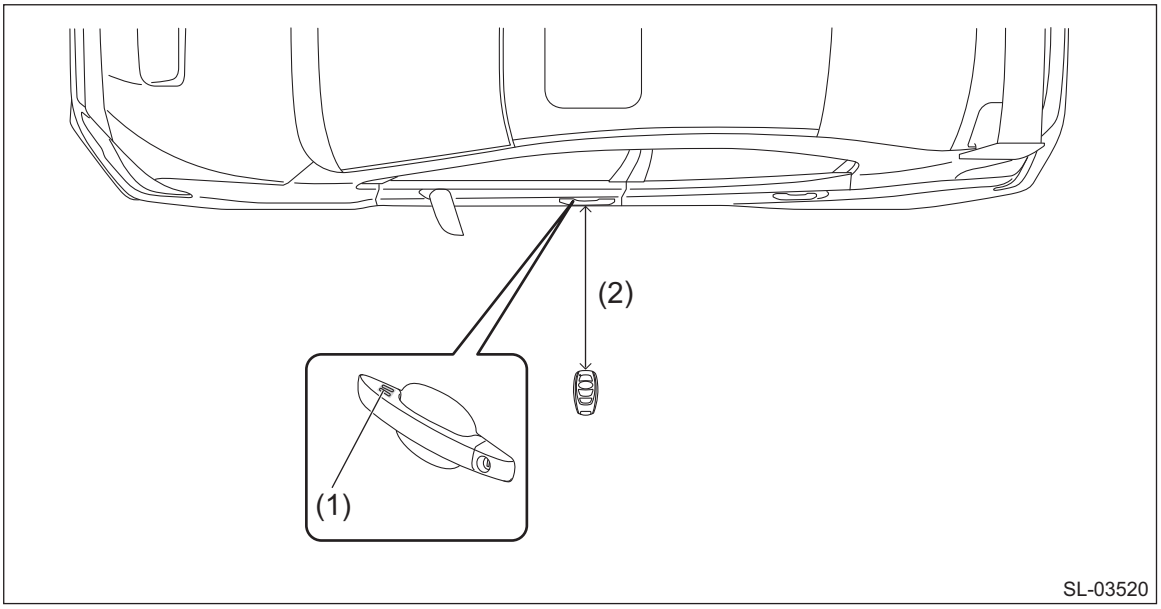


(1) Touch sensor (unlock) (2) 40 — 80 cm

(1) When carrying the access key with all doors locked by keyless lock operation, check that when the touch sensor (unlock) built in to the back side surface of door outer handle of front door is touched, the driver's door will unlock (when touched on the driver's side) or all doors will unlock (when touched on the passenger's side) and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice).
(2) In the keyless access door unlock detection area, hold the access key at the same height as the outer handle (approx. 80 cm from the ground) and in the direction shown in the figure, and check that the vehicle becomes unlock mode [access key LED (red) blinks] at 40 to 80 cm from the vehicle.

NOTE:
Check the access key battery if the LED (red) does not illuminates when the access key button is pressed. <Ref. to SL-86, INSPECTION, Access Key.>

2) Keyless access door lock function check



(1) Touch sensor (lock) (2) Approx. 30 cm

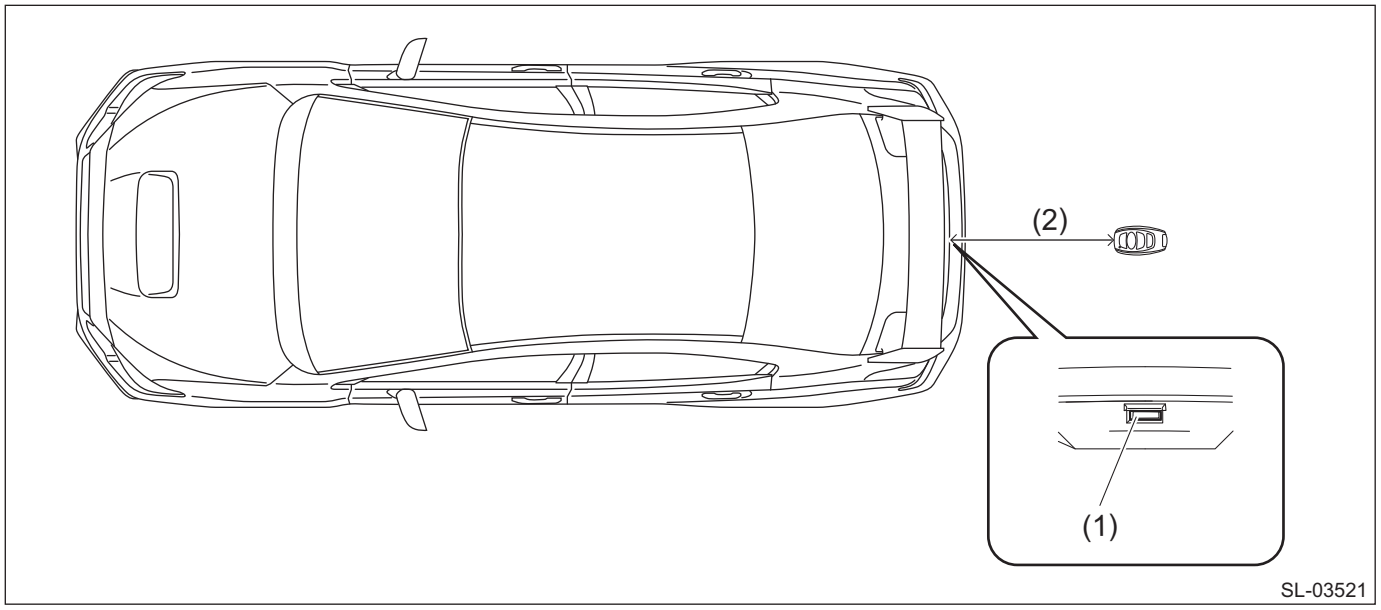
(1) When carrying the access key outside of the vehicle with all doors closed and unlocked, check that when the touch sensor (lock) on the surface of door outer handle of front door is touched, all doors will lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once).

CAUTION:
If the access key is within the vehicle but not within the detection area (in the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket), then lockout protection will not function when the doors are locked and the access key will be locked into the vehicle.

(2) To check the keyless access door lock operation range, hold the access key at a height of 10 cm under the bottom edge of the door glass (approx. 80 cm from the ground), point it in the direction shown in the figure at a distance of approx. 30 cm from the vehicle, and check that all doors lock and the answer-back function operates (hazard light blinks once, access buzzer sounds once) when you touch the touch sensor (lock).
(3) Check the passenger's side door in the same manner.

NOTE:
- When the door cannot lock if the touch sensor (lock) is touched, touch the touch sensor (lock) with palm.
- Since communication is not possible within close range (20 cm or less) of the door outer handle, the access key may not operate if you touch the touch sensor (lock) with the same hand you are holding the access key.
- If the lockout prevention buzzer sounds, it is possible that the interior transmitter has radio wave leakage.

3) Check of the keyless access trunk open function

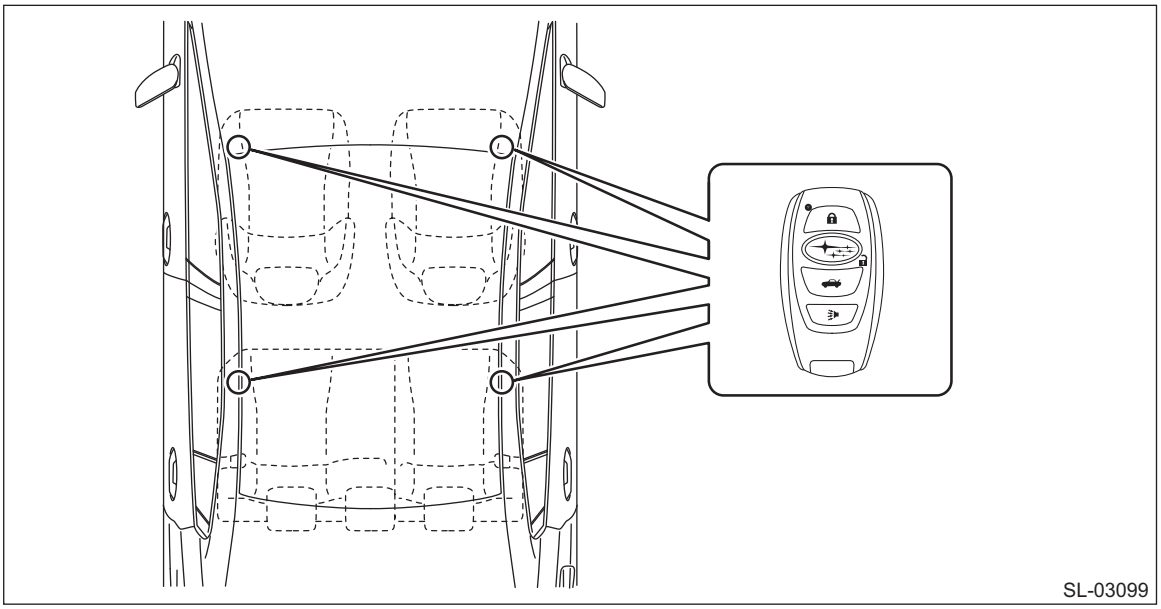


(1) Trunk opener button (2) 40 — 80 cm

(1) With the trunk closed, check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when you press the trunk opener button while carrying the access key.
(2) To check the keyless access trunk open operation range, hold the access key behind and in the center of the vehicle at the same height as the trunk opener button (90 cm from the ground), point it in the direction shown in the figure at a distance of 40 to 80 cm from the vehicle, and check that the trunk opens and the answer-back function operates (hazard light blinks twice, access buzzer sounds twice) when the trunk opener button is pressed.

4) Keyless access ignition switching function check
(1) With the ignition OFF, enter the vehicle while carrying the access key. Depress the brake pedal with the shift lever in the “P” range (CVT model) or depress the clutch pedal (MT model), check that the push button ignition switch indicator is illuminated in green, and check that the engine starts when you press the push button ignition switch.
(2) While carrying the access key, check that the status changes as follows each time you press the push button ignition switch without depressing the brake pedal (CVT model) or clutch pedal (MT model): ‘Ignition OFF’ → ‘ACC ON’ → ‘Ignition ON’ → ‘Ignition OFF’. However on the CVT model, if the shift lever is in other than the “P” range and the push button ignition switch is pressed from ignition ON, then the status will not change to ignition OFF and instead will change to ACC ON.
(3) After the vehicle has stopped, press the push button ignition switch and ignition is turned OFF (engine stopped • all power supplies OFF). However on the CVT model, if the shift lever is in other than the “P” range and the push button ignition switch is pressed with the vehicle stopped, then the power supply will not change to ignition OFF and instead will change to ACC ON. Check that the steering lock operates if the door is opened in the ignition OFF state. (For CVT model, the shift must be in the “P” range).

(4) To check the range of the keyless access ignition operation, check that the engine can start when you set the access key at the check position on the seat in the direction indicated in the figure.



CAUTION:
The access key may not be correctly detected even though it is within the detection area within the passenger room, if it is on the instrument panel, on the rear tray, in the glove box, on the floor, or in the door trim pocket.

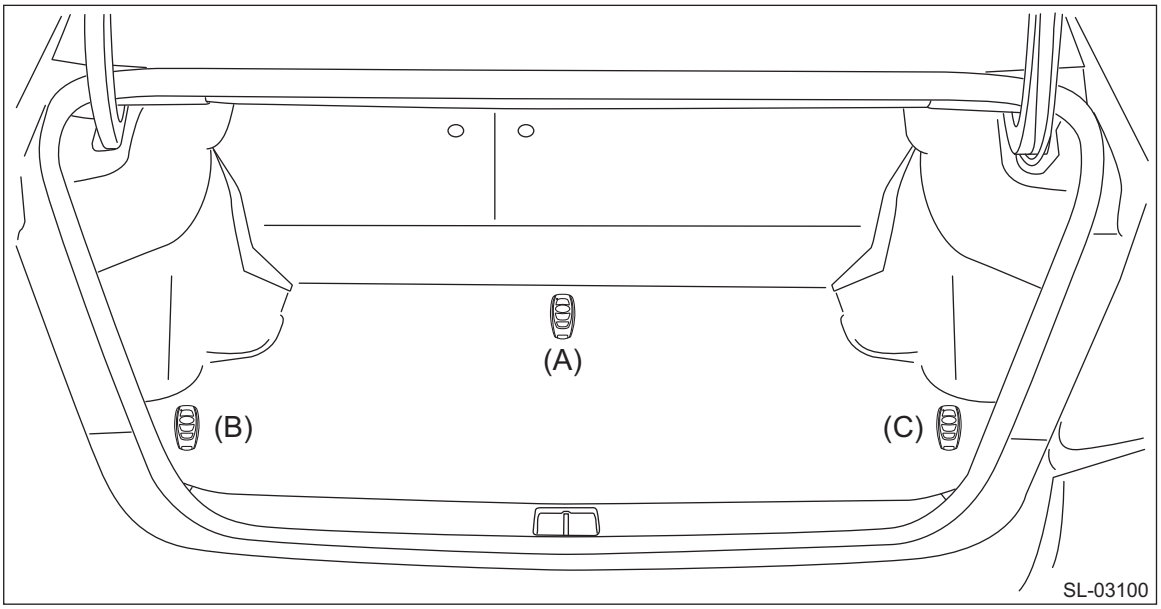
NOTE:
Perform the check multiple times, once each with the access key positioned on the driver's seat, on the passenger's seat, and on the rear seat in 2 locations.

5) Lockout protection function check with the access key in the trunk

CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) With all doors closed and locked, and with the access key in the trunk room and the trunk closed, check that the access buzzer sounds (approx. 2 seconds). Also check that the trunk opens when you press the trunk opener button.

(2) To check the detection range of the lockout protection function with the access key in the trunk, position the access key in the direction shown in the figure, and check that the lockout protection function operates normally when you check the lockout protection function for the access key locked in the trunk.



CAUTION:
The lockout protection function will not operate if the access key is any of the locations described below.

- Near the spare tire or on the edge of the trunk room.
- Inside a bag made of metallic material or near metal objects.

NOTE:
Check the trunk in two locations or more.

6) Lockout protection function check (in the passenger room)

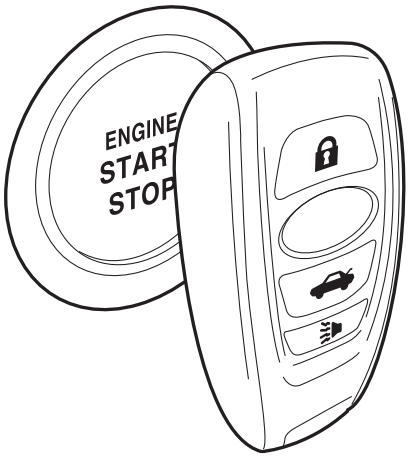
CAUTION:
Open one of the windows before performing this check in order to prevent the key from being locked inside the vehicle.

(1) Position the access key on the driver's or passenger's seat.
(2) Close all doors. (With all doors unlocked)
(3) Check that the doors do not lock and the lockout protection buzzer (exterior) sounds for 2 seconds when you touch the touch sensor (lock) of either the driver's or passenger's door.

7) Keyless access cancel function check

(1) After setting the keyless access cancel function, check that all keyless access and start system (keyless access) functions are inoperable. (For cancel setting, refer to <Ref. to SL-116, OPERATION, Function Setting (Customize).>)

NOTE:
When keyless access is cancelled, door lock and unlock can be operated by access key button operation and the starter system can be operated by passing the access key over the push button ignition switch with the access key button toward you.



SL-11931

8) Access key diagnostic mode
(1) Connect to the Subaru Select Monitor, and select «Diagnosis» on the «Start» display.
(2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
(3) On «Main Menu» display, select «Each System».
(4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
(5) On «Select Function» display, select «Work Support».
(6) From «Work Support», select «Keyless Access with Push Button Start Check».
(7) Select the transmitter to check from the items.
(8) Check that the door lock buzzer sounds (short blips, a continuous beeping sound for the center room antenna) when the access key is near the selected transmitter or antenna.

C: PREPARATION TOOL

1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

TOOL NAME	REMARKS
Oscilloscope	Used for measuring the waveform.

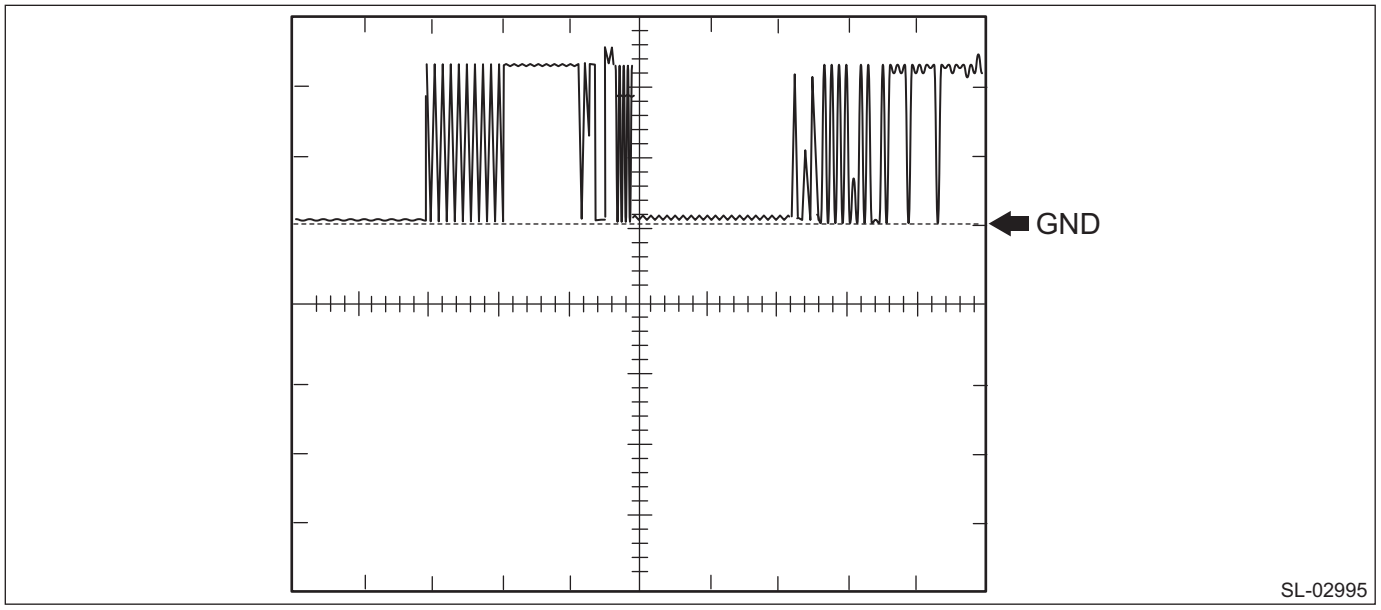
		Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch. (With the access key battery removed)	Waveform 3
(B574) No. 20 (LIN) ←→ (B574) No. 17 (GND2)	LIN communication	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation
(B574) No. 21 (VC5) ←→ (B574) No. 17 (GND2)	Immobilizer amplifier power supply	Wait for 30 seconds or more after the door was opened or closed with IGN OFF and the brake pedal released.	1 V or less
		Within 30 seconds after the push button ignition switch is pressed with IGN OFF and access key not in the passenger room	Waveform 4
(B574) No. 22 (CODE) ←→ (B574) No. 17 (GND2)	Immobilizer signal reception (start switch)	Wait for 30 seconds or more after the door was opened or closed with IGN OFF and the brake pedal released.	1 V or less
		Within 30 seconds after the push button ignition switch is pressed with IGN OFF and access key not in the passenger room	Waveform 1
(B574) No. 23	—	—	—
(B574) No. 24 (AGND) ←→ Chassis ground	Immobilizer amplifier GND	Always *1	Less than 1 Ω
(B574) No. 25 (CLG5) ←→ (B574) No. 17 (GND2)	Front interior antenna +	All doors closed, power OFF, access key not in passenger room, touch sensor (lock) OFF → ON	No pulse output → Pulse output detected
(B574) No. 26	—	—	—
(B574) No. 27 (STP1) ←→ Chassis ground	Stop light switch input	Brake pedal depressed → released	9.5 V or more → 1 V or less
(B574) No. 28	—	—	—
(B574) No. 29 (CANL) ←→ Chassis ground	CAN communication (Lo)	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation
(B574) No. 30 (CANH) ←→ Chassis ground	CAN communication (Hi)	ACC ON or IGN ON or power OFF, and open/close the door	Pulse generation

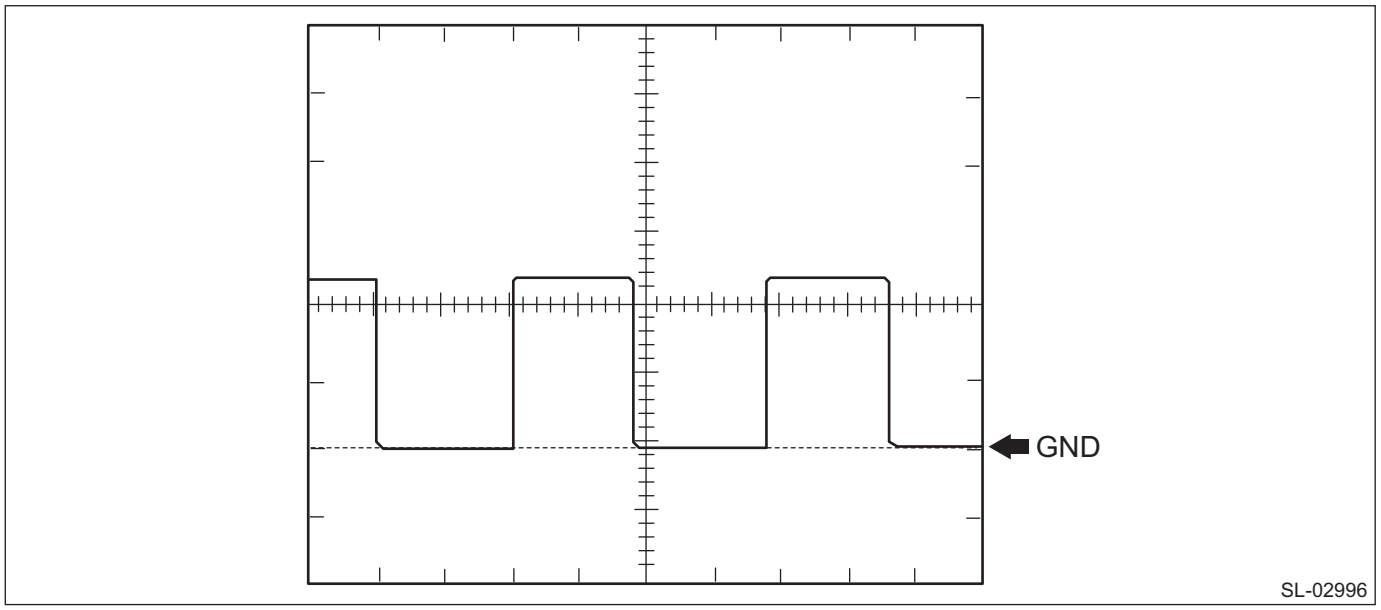
NOTE:
*1: Perform while the keyless access CM connector is disconnected.

1. Waveform 1



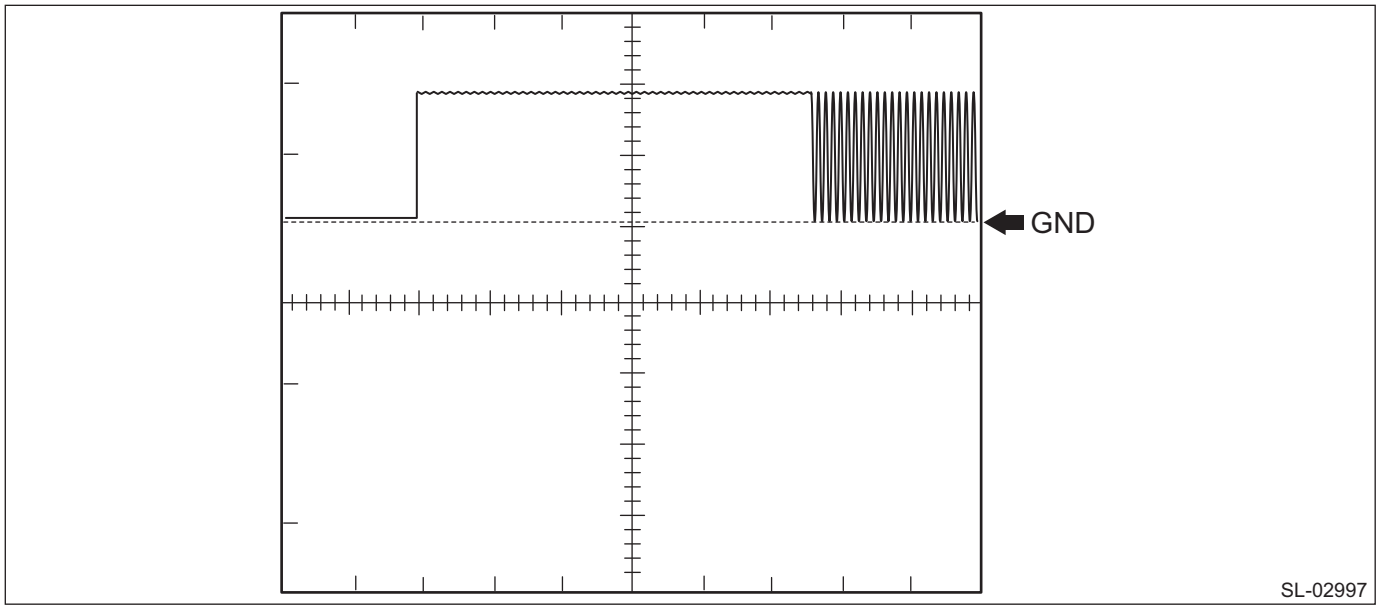
Item	Contents
Measured terminal	(B574) No. 22 (CODE) ⟷ (B574) No. 17 (GND2)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

2. Waveform 2



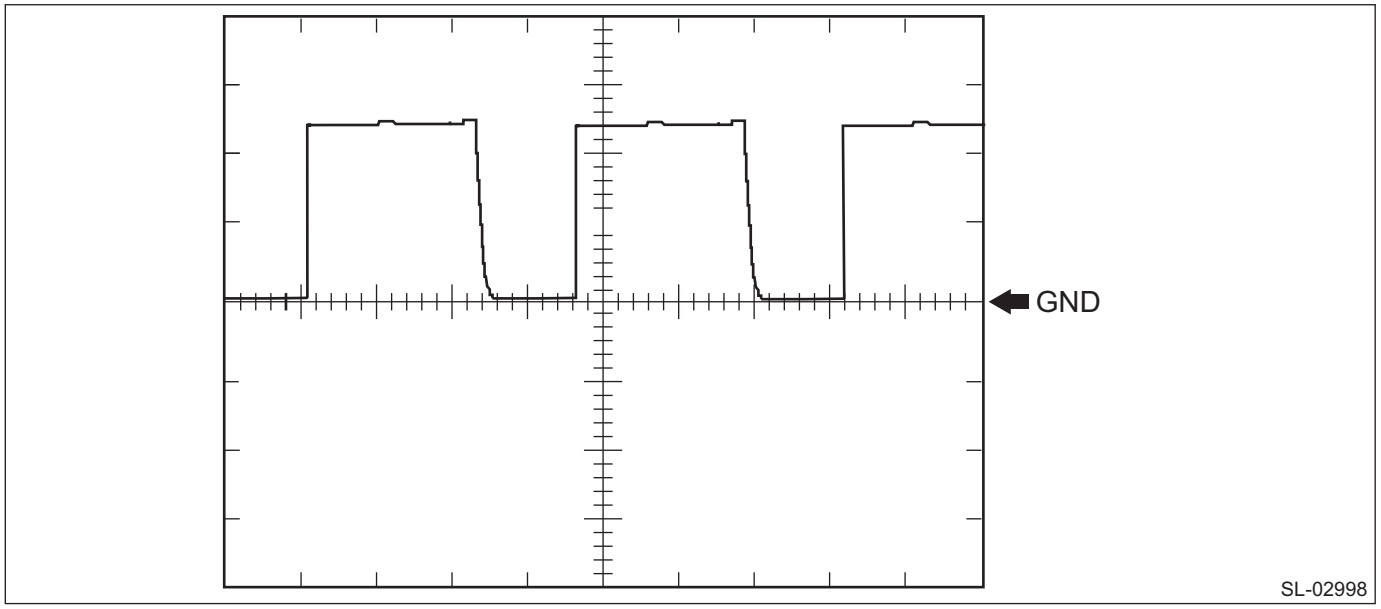
Item	Contents
Measured terminal	(B573) No. 6 (TACH) ⟷ Chassis ground
Equipment setting	5 V/DIV, 100 ms/DIV
Measuring condition	While engine idling

3. Waveform 3



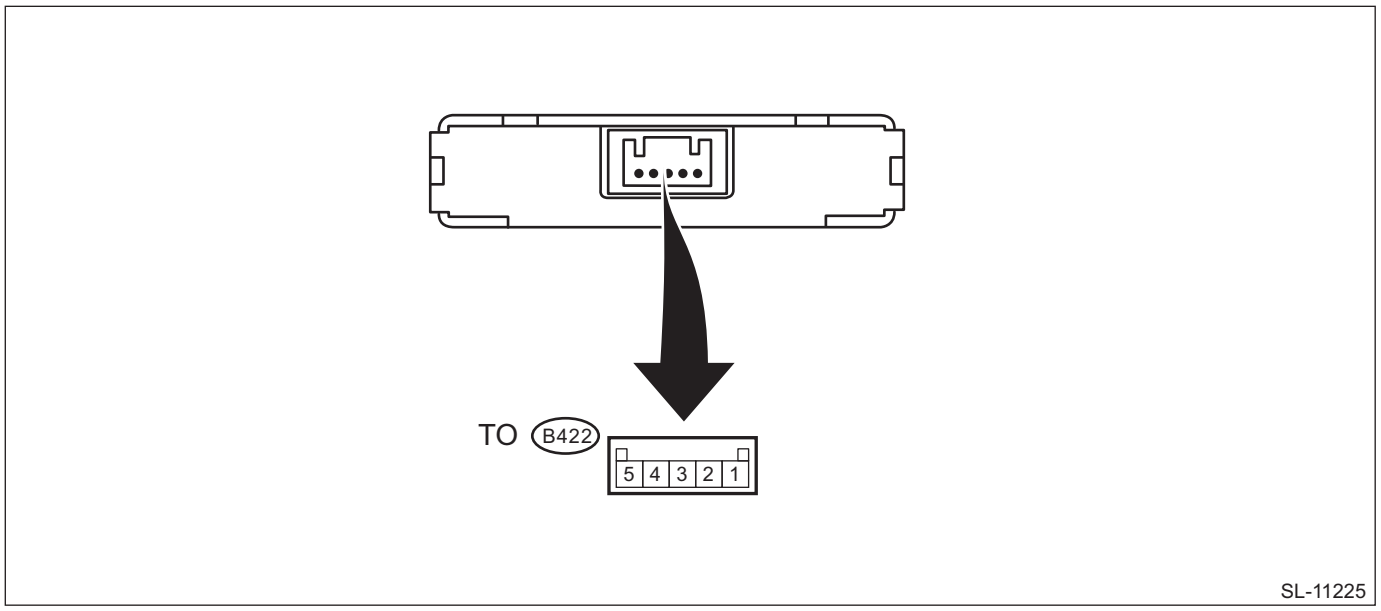
Item	Contents
Measured terminal	(B574) No. 19 (TXCT) ⟷ (B574) No. 17 (GND2)
Equipment setting	2 V/DIV, 20 ms/DIV
Measuring condition	Turn the ignition switch to OFF and with the access key near the push button ignition switch, press the push button ignition switch (with the access key battery removed).

4. Waveform 4



Item	Contents
Measured terminal	(B574) No. 21 (VC5) ⟷ (B574) No. 17 (GND2)
Equipment setting	2 V/DIV, 200 ms/DIV
Measuring condition	Within 30 seconds after the push button ignition switch is pressed with IG OFF and access key not in the passenger room

2. ID CODE BOX



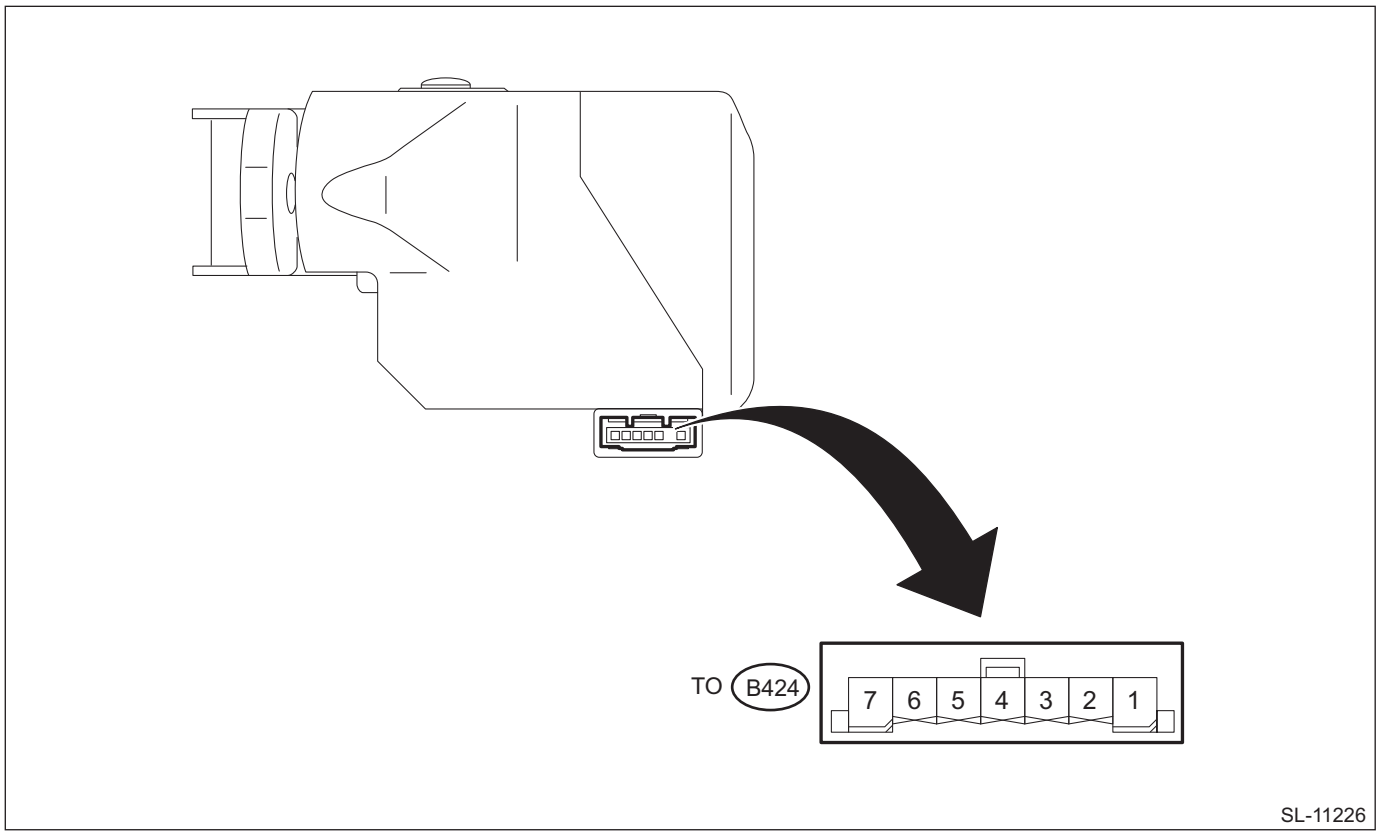
Terminal No.	Contents	Measuring condition	Standard
(B422) No. 1 ←→ (B422) No. 5	Battery power supply	Always *1	9.5 V or more
(B422) No. 2	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(B422) No. 3	—	—	—
(B422) No. 4 ←→ (B422) No. 5	Immobilizer communication 1	Ignition switch OFF	0 V
		Ignition switch ON	7 V or more → pulse generates temporarily
(B422) No. 5 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω

NOTE:
*1: Perform while the ID code box connector is disconnected.

3. BODY INTEGRATED UNIT

Refer to the BODY CONTROL SYSTEM (DIAGNOSTICS) for the I/O Signal of the body integrated unit. <Ref. to BC(diag)-8, ELECTRICAL SPECIFICATION, Control Module I/O Signal.>

4. STEERING LOCK CM



Terminal No.	Contents	Measuring condition	Standard
(B424) No. 1 ←→ Chassis ground	Ground	Always *1	Less than 1 Ω
(B424) No. 2	—	—	—
(B424) No. 3 ←→ Chassis ground	Steering lock motor drive power supply	Motor not operating → Motor operating	9.5 V or more → 1 V or less
(B424) No. 4 ←→ Chassis ground	Unlock position output	Lock → Unlock	9.5 V or more → 1 V or less
(B424) No. 5	LIN communication	ACC ON, IGN ON or power OFF, and open/close the door	Pulse generation
(B424) No. 6 ←→ Chassis ground	Ignition power supply	Ignition switch ON *1	9.5 V or more
(B424) No. 7 ←→ Chassis ground	Battery power supply	Always *1	9.5 V or more

NOTE:
*1: Perform while the steering lock CM connector is disconnected.

6. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

Code	Description & trouble position	Note
U0074	CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF	—
U0100	LOST COMMUNICATION WITH ECM/PCM "A"	—
U0101	LOST COMMUNICATION WITH TCM	—
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	—
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	—
U0401	INVALID DATA RECEIVED FROM ECM/PCM "A"	—
U1140	LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN	—
U1422	INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN	—
B2271	IGN RELAY CONTROL CIRCUIT	—
B2274	ACC RELAY CONTROL CIRCUIT	—
B2275	ENGINE START REQUEST CONTROL CIRCUIT	—
B2276	ACC RELAY OFF SIGNAL	—
B2277	SUBMERGING CIRCUIT	—
B227B	PUSH ENGINE START SWITCH INPUT PERFORMANCE	—
B227C	P RANGE SIGNAL PERFORMANCE	—
B2285	STEERING LOCK POSITION SIGNAL CORRELATION	—
B2286	ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)	—
B228A	ENGINE SPEED SIGNAL(WITH Auto Start Stop)	—
B2781	STEERING LOCK CM CONTROL CIRCUIT	—
B2782	STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION	—
B2785	LIN COMMUNICATION	—
B2786	STEERING LOCK CM COMMUNICATION	—
B2788	IGN SIGNAL CORRELATION (STEERING LOCK CM)	—
B2789	ID CODE BOX COMMUNICATION	—
B278B	CAN CONTROL MODULE STUCK	—
B278D	ID CODE BOX JUDGMENT CIRCUIT	—
B2793	BACKUP POWER	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4) Start the engine, and let it idle for 40 seconds or more.

5) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

2. INSPECTION MODE 2

Code	Description & trouble position	Note
B2779	REMOTE CONTROL ENGINE STARTER COLLATION	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4) Register the remote engine starter, and operate it.
5) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

3. INSPECTION MODE 3

Code	Description & trouble position	Note
B2784	ANTENNA CIRCUIT (PUSH ENGINE SWITCH)	—
B2790	ID CODE BOX CIRCUIT	—
B27A1	DRIVER SIDE EXTERNAL ANTENNA OPEN	—
B27A2	PASSENGER SIDE EXTERNAL ANTENNA OPEN	—
B27A5	FRONT INTERNAL ANTENNA OPEN	—
B27A6	REAR INTERNAL ANTENNA OPEN	—
B27A7	TRUNK/REAR GATE INTERNAL ANTENNA OPEN	—
B27A8	TRUNK/REAR GATE EXTERNAL ANTENNA OPEN	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

4. INSPECTION MODE 4

Code	Description & trouble position	Note
B2282	VEHICLE SPEED SIGNAL CORRELATION	—
B2283	VEHICLE SPEED SENSOR	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4) Drive for 20 seconds or more at a vehicle speed of 25 km/h (15.5 MPH) or more.
5) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

5. INSPECTION MODE 5

Code	Description & trouble position	Note
B2784	ANTENNA CIRCUIT (PUSH ENGINE SWITCH)	—
B278A	PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
4) Press the push button ignition switch with no access key in the passenger room.
5) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

6. INSPECTION MODE 6

Code	Description & trouble position	Note
B2284	BRAKE SIGNAL CORRELATION	—

Diagnostic procedure:
1) Check that the battery voltage is 12 V or more and fuel remains approx. half [20 — 40 L (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.>
3) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

4) Turn the ignition switch to ON, depress and hold the brake pedal for 20 seconds or more, then release the brake pedal and wait for 20 seconds and more.
5) Read the DTC of «Keyless Access with Push Button Start» using Subaru Select Monitor and check that the DTC is not displayed. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

7. Warning Light Illumination Pattern

A: INSPECTION

- Security indicator

Slowly blinks once when the push button ignition switch is not pressed.
Goes off when the push button ignition switch is pressed while the genuine access key is possessed.
The indicator remains blinking and the engine does not start, when the push button ignition switch is pressed while a non-genuine access key is possessed.

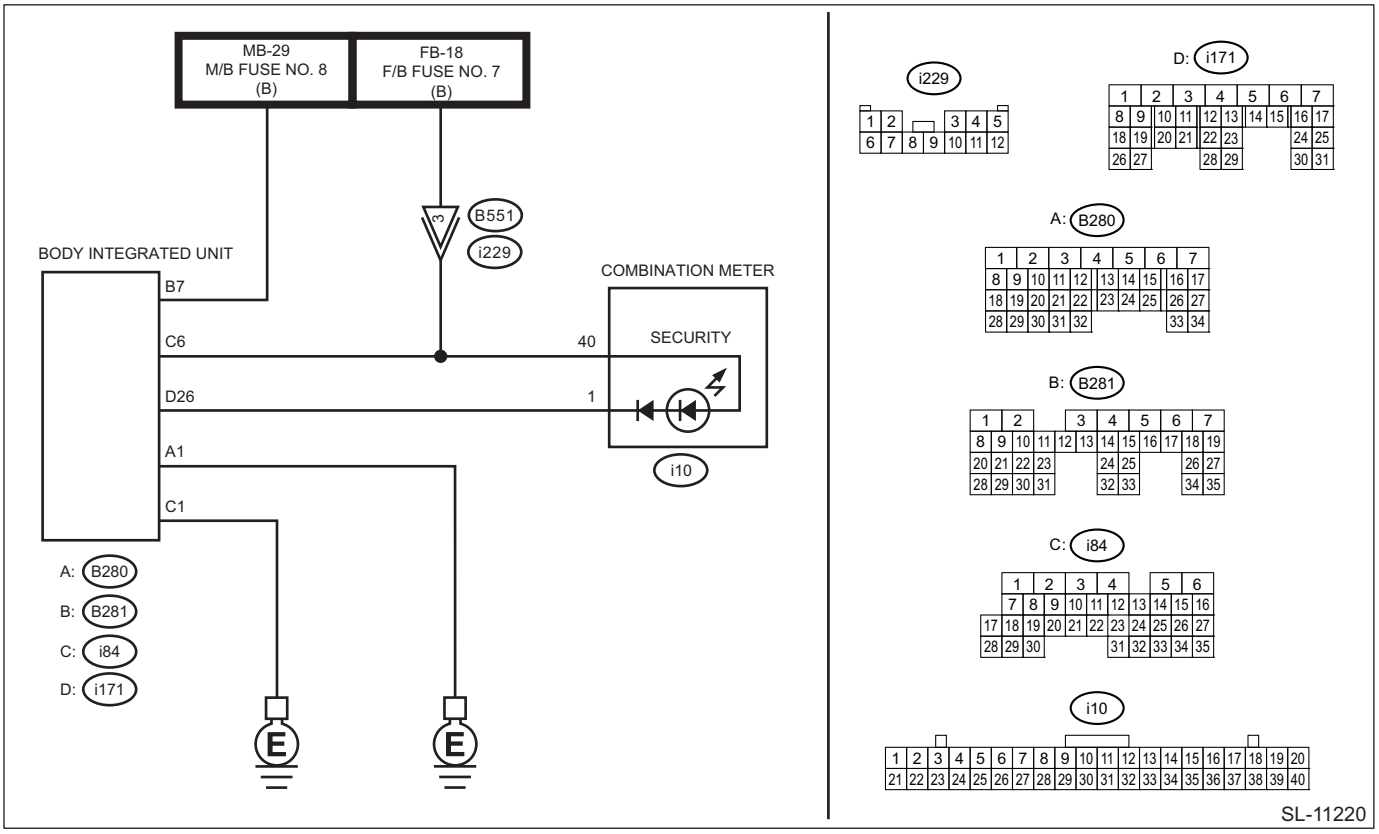
B: WARNING LIGHT DOES NOT ILLUMINATE

Trouble symptom:

- Power supply circuit is faulty.
- Grounding circuit is faulty.
- Body integrated unit failure
- Combination meter failure
- Failure of harness between combination meter and body integrated unit

Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



CAUTION:
Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Step		Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the short circuit in the harness between the fuse and body integrated unit.

	Step	Check	Yes	No
2	**CHECK SECURITY INDICATOR LIGHT.** 1) Disconnect the connector from body integrated unit. 2) Connect the resistor (100 Ω) between the body integrated unit connector terminal (i171) No. 26 and chassis ground.	Does the security indicator light illuminate?	Go to step **3**.	Go to step **5**.
3	**CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B280) No. 1 — Chassis ground:*** ***(i84) No. 1 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair the open circuit of the body integrated unit ground circuit.
4	**CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.** Measure the voltage between the body integrated unit connector terminal and chassis ground. ***Connector & terminal*** ***(B281) No. 7 (+) — Chassis ground (–):*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Check the harness for open or short circuit between body integrated unit and fuse.
5	**CHECK COMBINATION METER CIRCUIT.** 1) Remove the combination meter. <Ref. to IDI-12, Combination Meter.> 2) Measure the voltage between combination meter connector terminal and chassis ground. ***Connector & terminal*** ***(i10) No. 40 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check for an open or short circuit in the harness between the combination meter and fuse.
6	**CHECK COMBINATION METER CIRCUIT.** Measure the resistance between the body integrated unit connector terminal and combination meter connector terminal. ***Connector & terminal*** ***(i171) No. 26 — (i10) No. 1:***	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-13, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

C: WARNING LIGHT REMAINS ON

NOTE:
For the diagnostic procedures, refer to “WARNING LIGHT DOES NOT ILLUMINATE”. <Ref. to KPS(diag)-24, WARNING LIGHT DOES NOT ILLUMINATE, Warning Light Illumination Pattern.>

8. Diagnostic Procedure for Subaru Select Monitor Communication

A: INSPECTION

Detecting condition:

- Defective harness
- Power supply circuit malfunction
- Defective keyless access CM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Not communicable with Subaru Select Monitor.

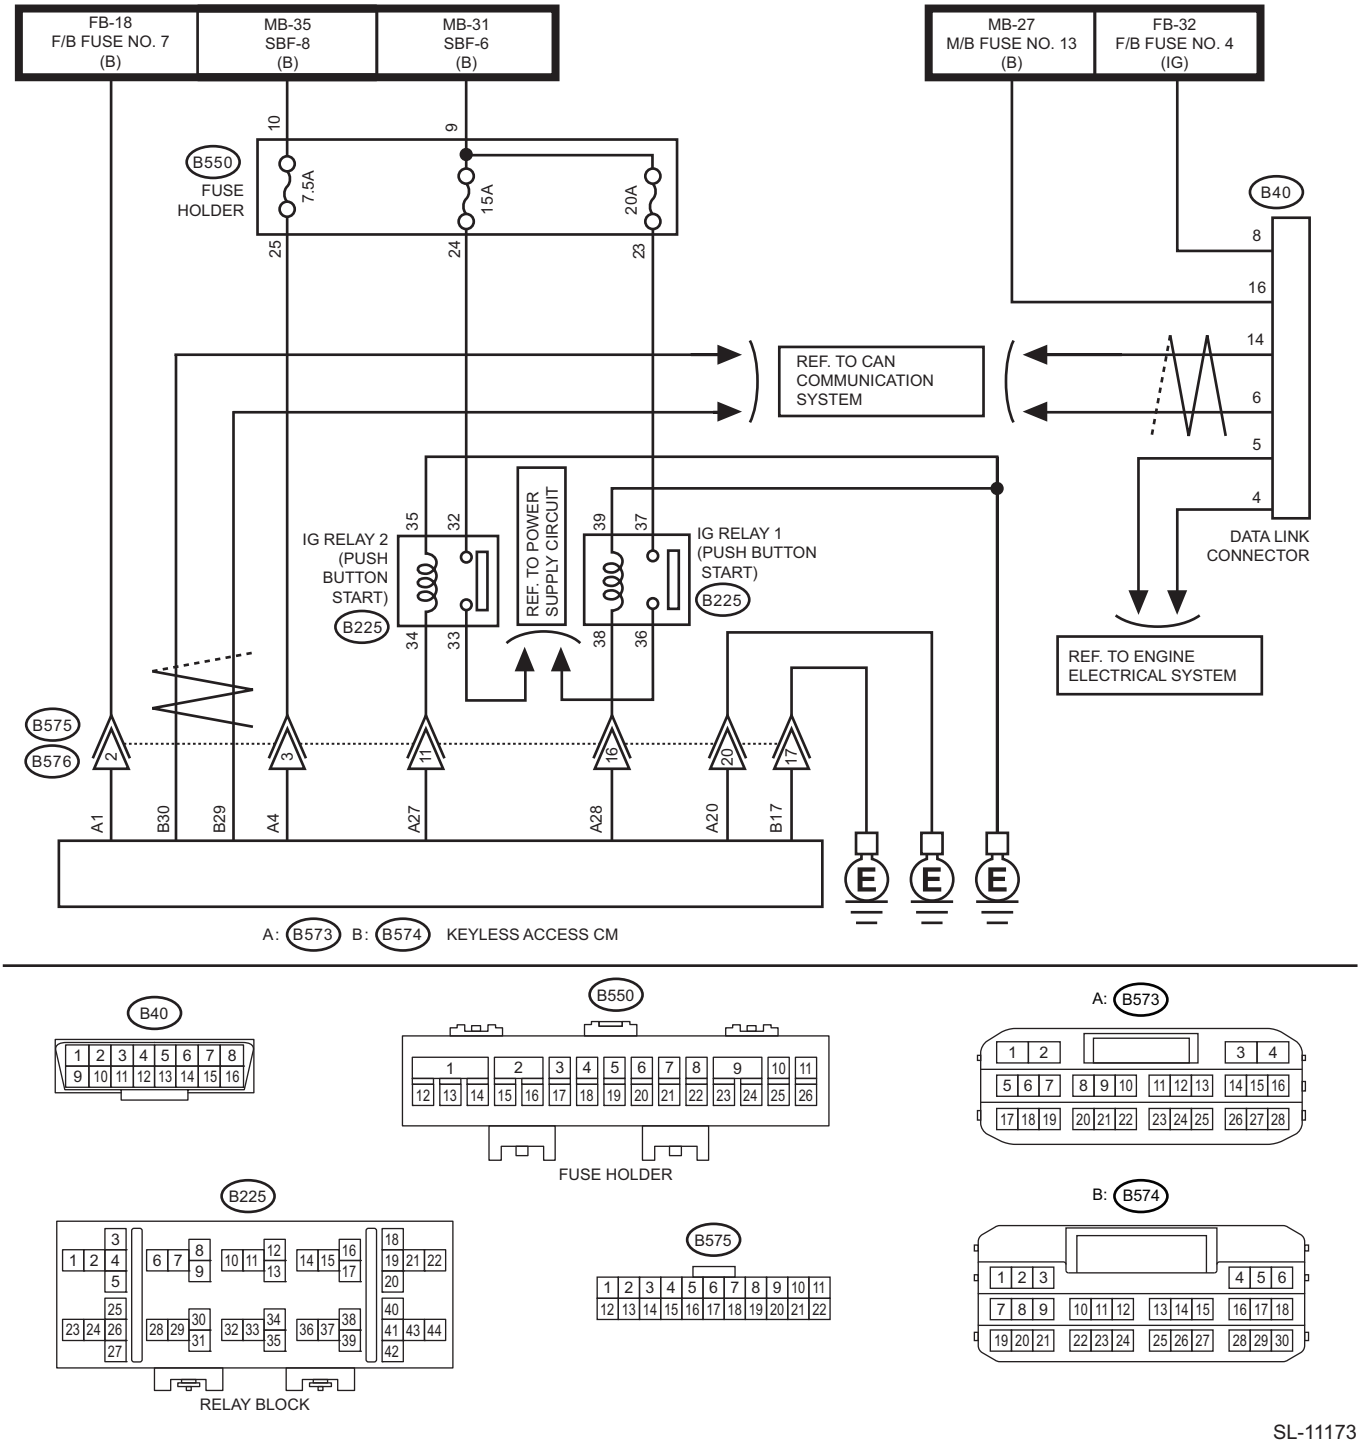
CAUTION:

Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

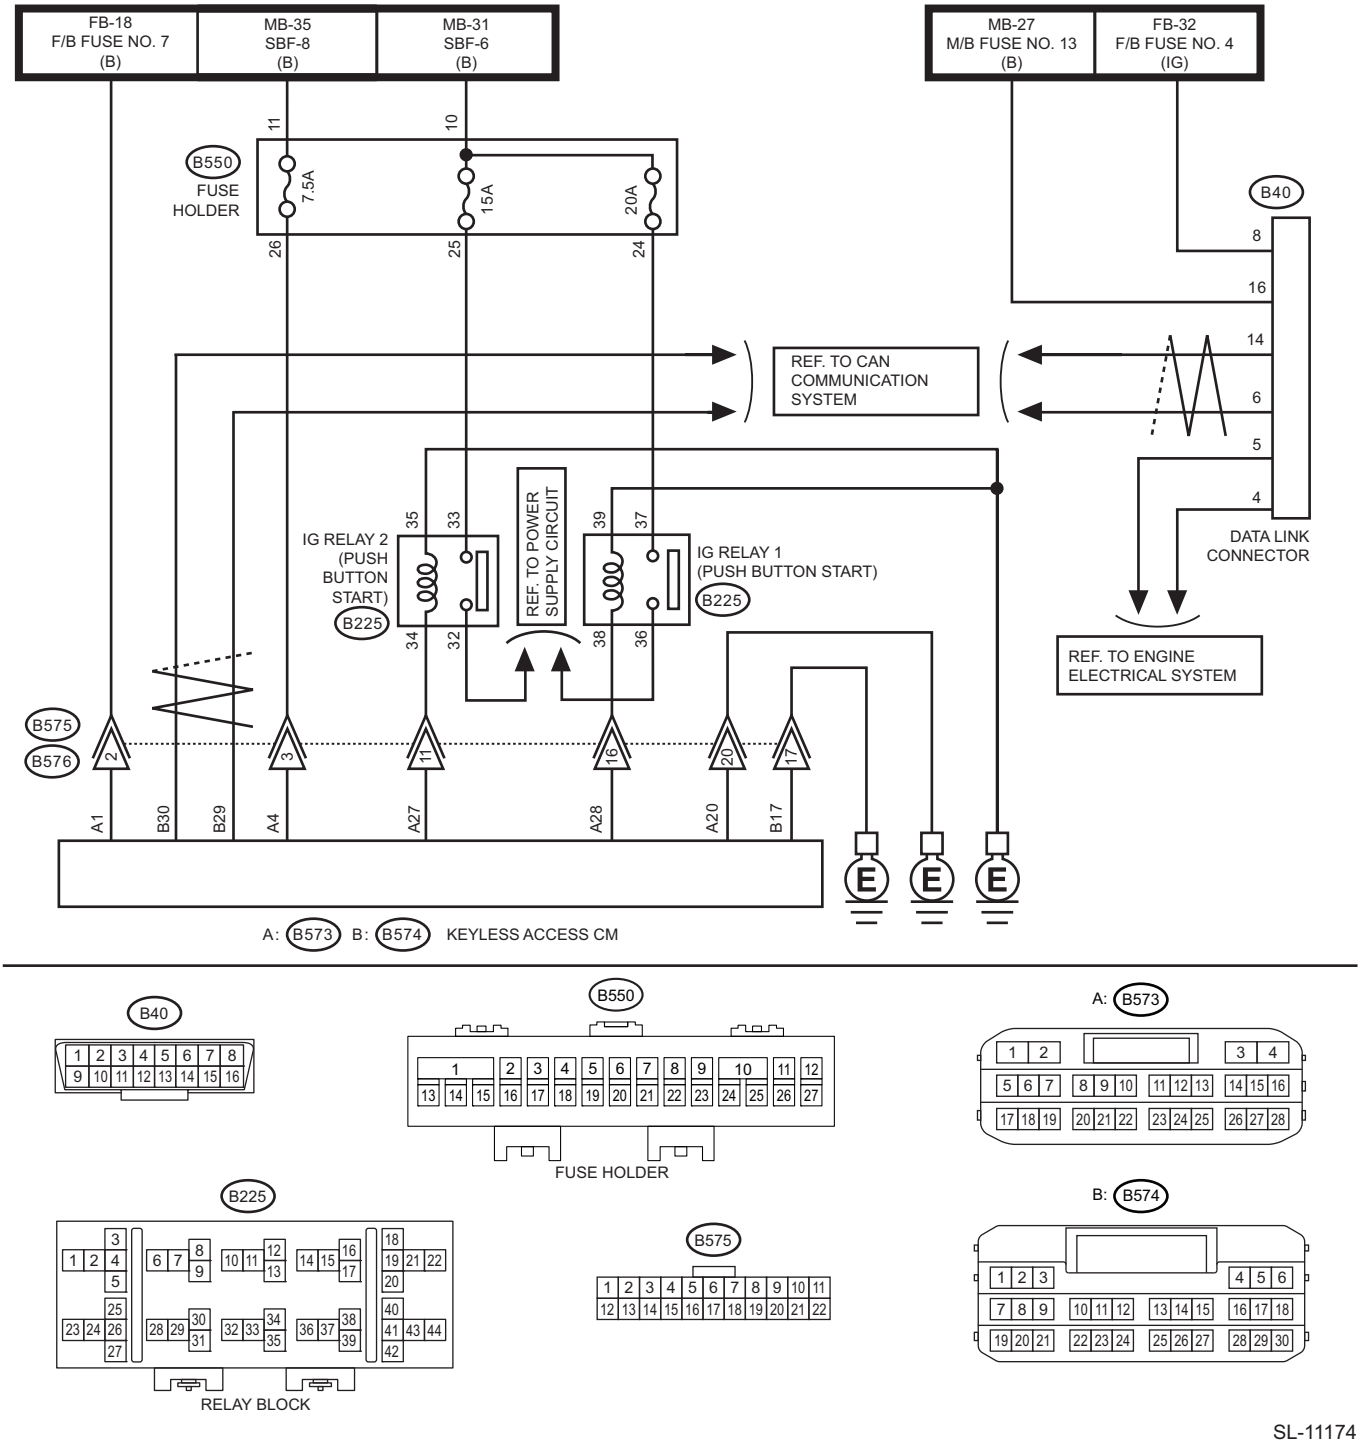
– Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
– CAN communication system <Ref. to WI-109, WIRING DIAGRAM, CAN Communication System.>

- Engine type: FA



SL-11173

- Engine type: EJ



SL-11174

Step		Check	Yes	No
1	**CHECK POWER SUPPLY CIRCUIT.** Connect DST-i to data link connector.	Does DST-i turn ON?	Go to step **4**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Using the tester, measure the voltage between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 8 (+) — Chassis ground (–):*** ***(B40) No. 16 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the power supply circuit. NOTE: In this case, repair the following item: • Open or ground short circuit of harness between battery and data link connector • Blown out of fuse
3	**CHECK HARNESS BETWEEN DATA LINK CONNECTOR AND CHASSIS GROUND (OPEN).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B40) No. 4 — Chassis ground:*** ***(B40) No. 5 — Chassis ground:***	Is the resistance less than 5 Ω?	Check for poor contact of the data link connector, and repair a fault, if any. When no fault is found, Go to step **4**.	Repair the harness and connector.
4	**CHECK SUBARU SELECT MONITOR.** 1) Connect the Subaru Select Monitor to a normal vehicle. 2) Start the engine and perform communication between the Subaru Select Monitor and vehicle.	Is communication possible?	Go to step **5**.	Use another Subaru Select Monitor because the CAN communication circuit of the Subaru Select Monitor is faulty.
5	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **6**.	Perform the diagnosis for LAN system.
6	**CHECK CONNECTOR.** Check poor contact of keyless access CM connector, data link connector and coupling connector.	Is the check result OK?	Go to step **7**.	Repair the connector.
7	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the keyless access CM fuse. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **8**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the keyless access CM and fuse.
8	**CHECK KEYLESS ACCESS CM POWER SUPPLY CIRCUIT (OPEN).** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 27 (+) — Chassis ground (–):*** ***(B573) No. 28 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **9**.	Repair the power supply circuit. Check for an open or short circuit in the harness between keyless access CM and fuse.

	Step	Check	Yes	No
9	**CHECK GROUND CIRCUIT OF KEYLESS ACCESS CM (OPEN).** Using a tester, measure the resistance between data link connector and chassis ground. ***Connector & terminal*** ***(B573) No. 20 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is the resistance less than 5 Ω?	Check the connection between the data link connector and Subaru Select Monitor.	Repair the harness for ground line.

9. Data Monitor

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

IGN1/2 external circuit abnormal	IGN relay output status	No: IGN 1/2 external circuit is normal Yes: IGN 1/2 external circuit is faulty	—

10.Freeze Frame Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «FFD».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Contents	Standard/unit	Note
Trip Count	Time stamp information <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	times	—
Count		—	—
Time Count		ms	—

11.Active Test

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Active Test».
6) Select a location to be inspected.

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

NOTE:
Each output check continues to run for five seconds before stopping automatically.

Active test items	Range	Contents	Execution condition
Driver seat sensor power supply	Output	Perform the output check for the driver’s door touch sensor.	—
	Stop		
Passenger seat sensor power supply	Output	Perform the output check for the passenger’s door touch sensor.	—
	Stop		
STSW	Output	Turn on the STSW. *2	—
	Stop		
ACC	Output	Turn on the ACC.	—
	Stop		
IGN1/2	Output	Turn on the IGN1/2.	—
	Stop		
Start SW character illumination lighted	Output	Perform ON output of the push button ignition switch back-up light. *1	—
	Stop		
Start SW indicator lighted (green)	Output	Perform ON output of the push button ignition switch back-up light. *1	—
	Stop		
Start SW indicator lighted (orange)	Output	Perform ON output of the push button ignition switch back-up light. *1	—
	Stop		
Steering lock power supply	Output	Output the power supply signal from keyless access CM to steering lock CM.	—
	Stop		

*1: When lit by a condition other than for the active test, it will not become unlit even when set to OFF or no output.
*2: When performed with ignition switch ON, engine will start. Therefore, great care must be exercised.

12.Customize

A: OPERATION

NOTE:
With the trunk open without key function only
1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Initial setting value	Setting value	Note
Trunk Open Without Key	ON	ON	When the vehicle is unlocked, trunk can be opened even if the smart key is not carried.
		OFF	When the vehicle is unlocked, trunk cannot be opened if the smart key is not carried.

13.Keyless Access with Push Button Start Check

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Keyless Access with Push Button Start» and then select «Enter».
5) On «Select Function» display, select «Work Support».
6) On «Work Support» display, select «Keyless Access with Push Button Start Check».
7) Select a transmitter to be checked.

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Customize setting	Remarks
Keyless Access with Push Button Start Check	Driver side external transmitter - internal tuner	When the setting content on the left is selected, the access key is neared to the selected transmitter (access antenna) and collation matches, the buzzer will sound.

16.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1571 REFERENCE CODE INCOMPATIBILITY (IMMOBILIZER CM TO ECM)

DTC detecting condition:
Incompatibility of reference code between keyless access CM (model without ID code box) or ID code box (model with ID code box) and ECM occurs.
Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of keyless access CM (model without ID code box) or ID code box (model with ID code box) or ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK ECM.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	ECM registration was not performed properly.	Go to step **2**.
2	**REPLACE ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace Keyless access CM (model without ID code box), <Ref. to SL-97, Keyless Access CM.> or replace ID code box (model with ID code box). <Ref. to SL-100, ID Code Box.>

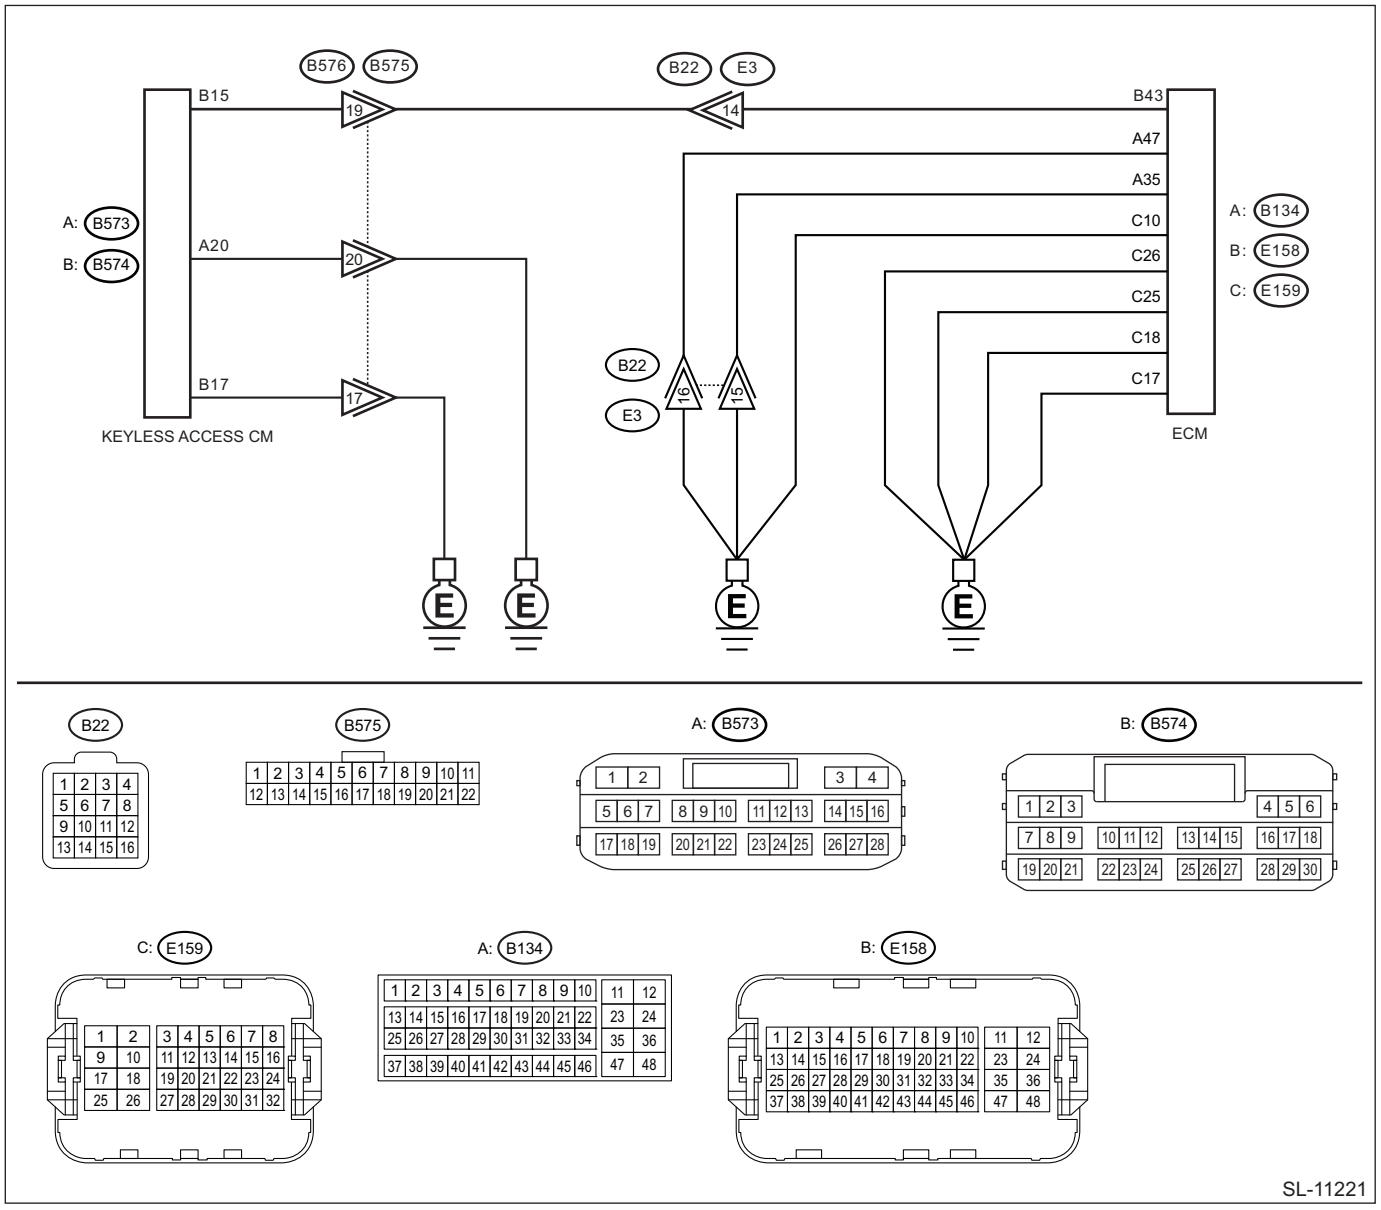
B: DTC B1572 IMM CIRCUIT EXCEPT ANTENNA CIRCUIT

1. EXCEPT FOR C0 MODEL

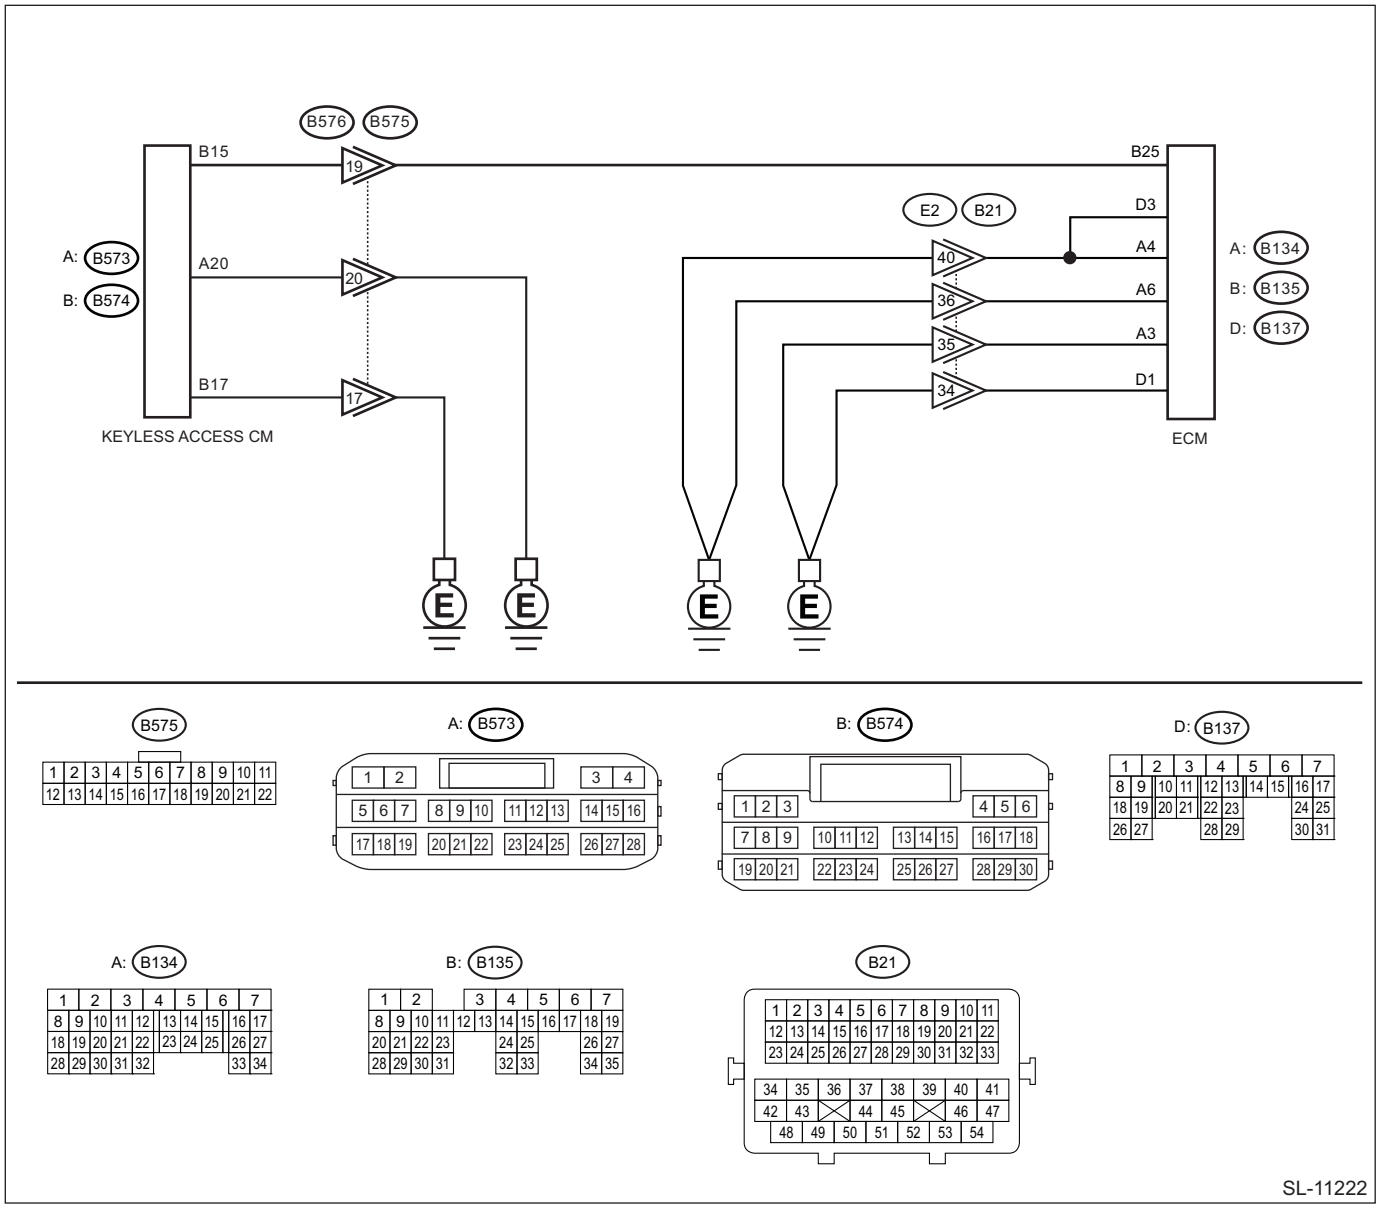
DTC detecting condition:
Communication error between keyless access CM and ECM
Trouble symptom:
Engine will not start.

CAUTION:
For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
Wiring diagram:

- Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
- Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>
- Engine type: FA



- Engine type: EJ



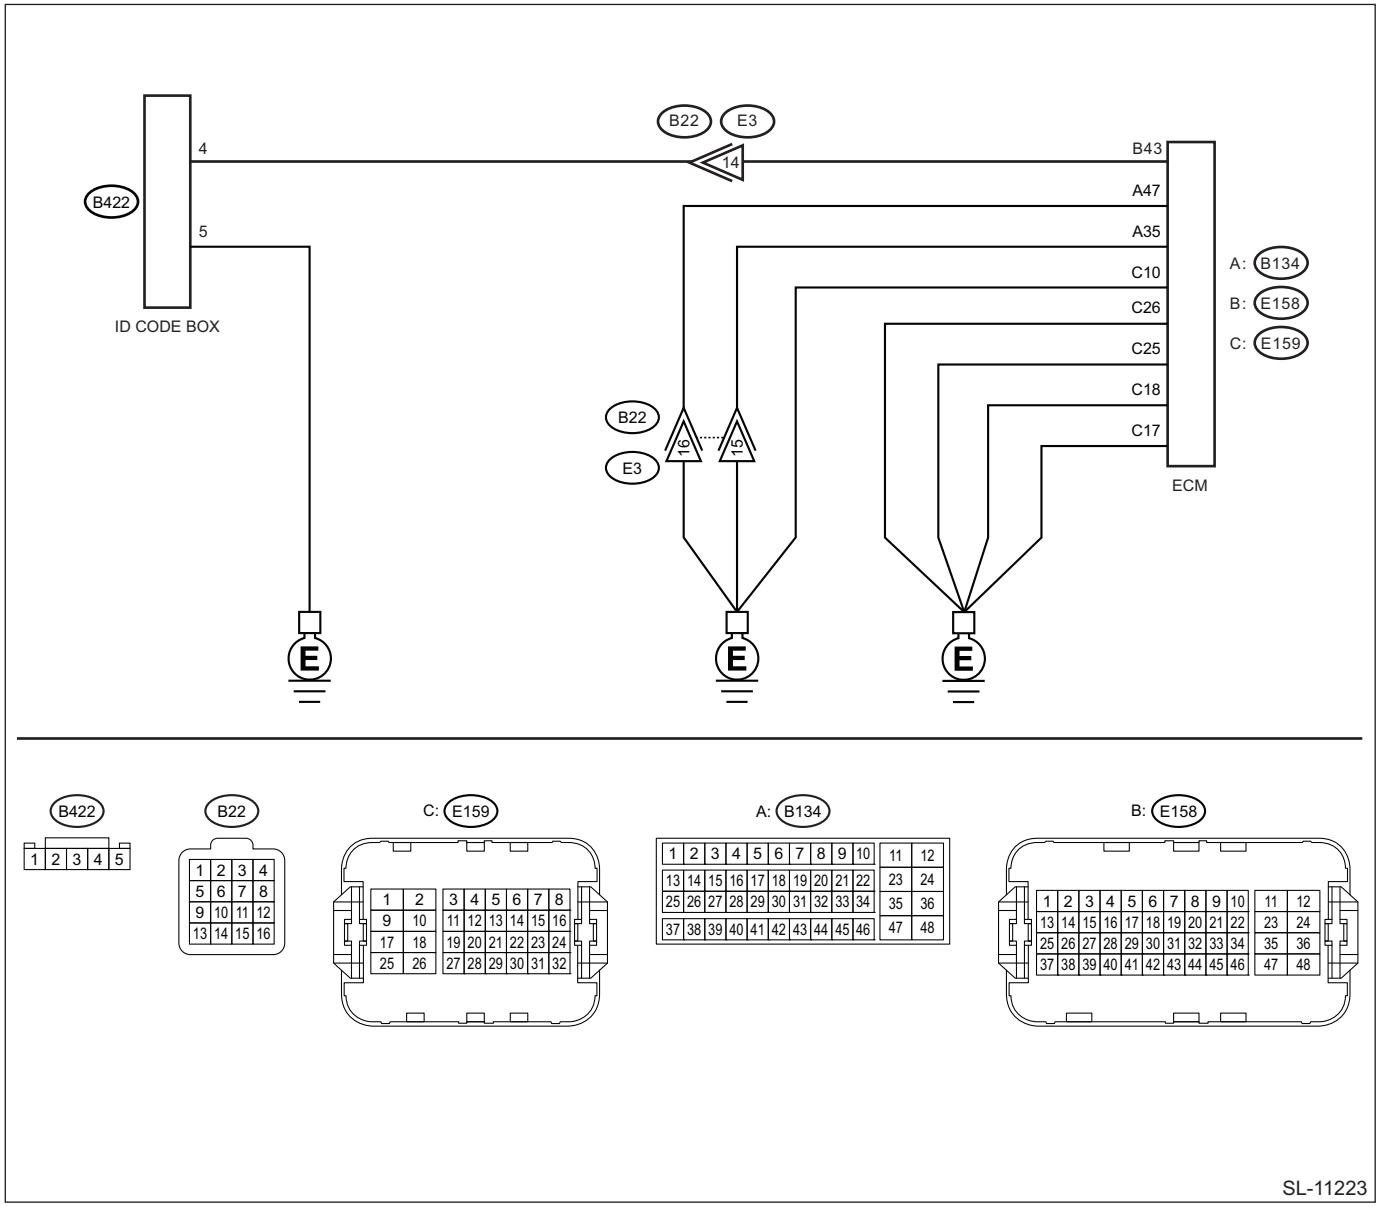
Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DATA MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> ***Data*** ***«Immobilizer» = «Unset»:*** ***«Engine start» = «Engine start permission»:*** ***«Unlock confirmation» = «Confirmed»:***	Is the data displayed as indicated on the left?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
3	**CHECK DATA MONITOR.** Using Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start», when holding down the push button ignition switch while depressing on the brake pedal (CVT model) or the clutch model (MT model). <Ref. to KPS(diag)-32, Data Monitor.> ***Data*** ***«EGI code reception status» = «Reception»:*** NOTE: If «Reception» is displayed, the status changes to «Not yet received» in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as indicated on the left?	Go to step **4**.	Repair or replace the harness between keyless access CM and ECM.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector and ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***Engine type: FA*** ***(B574) No. 15 — (E158) No. 43:*** ***Engine type: EJ*** ***(B574) No. 15 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 20 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

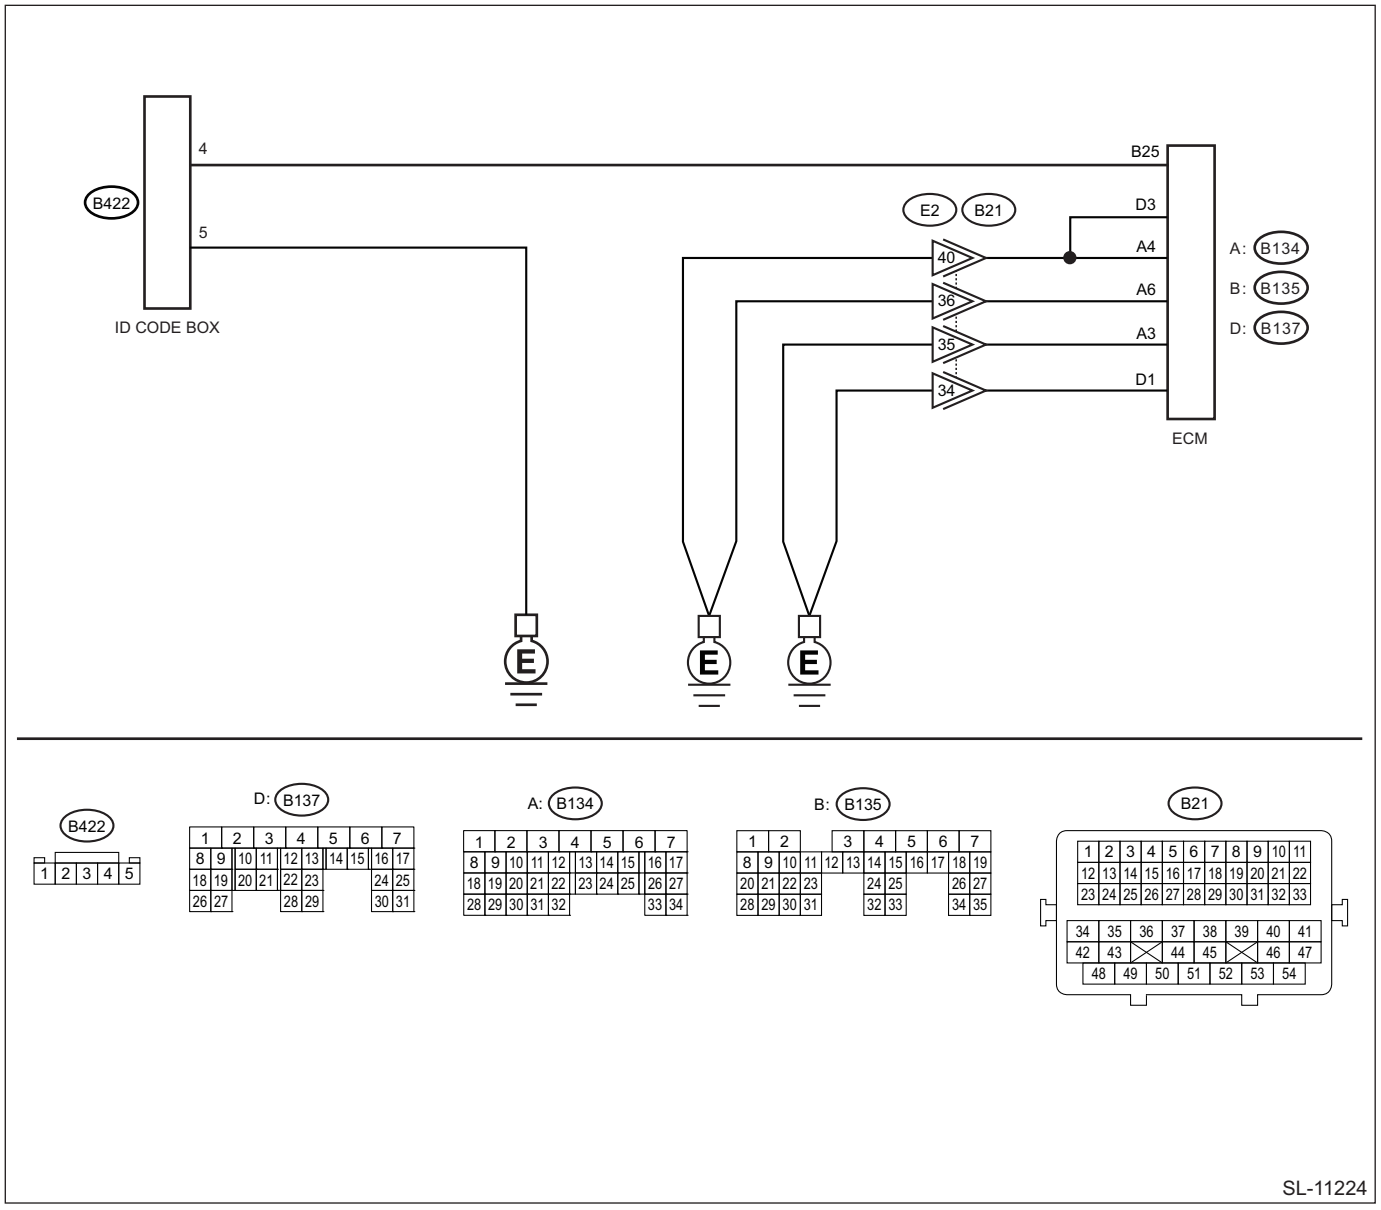
2. C0 MODEL

DTC detecting condition:
Communication error between ID code box and ECM
Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of ID code box and ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
- Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
- Engine electrical system <Ref. to WI-149, WIRING DIAGRAM, Engine Electrical System.>
- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK GROUNDING POINT.** Check the grounding point of the engine ground and chassis ground.	Are there any loose connections, any foreign objects caught in the ground lines or contact surface, or any fluid stains?	Remove the foreign matters, and tighten to the specified torque. Then start the engine, and check that the fault was removed. Check DTC <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>, and when DTC B1572 is still displayed, Go to step **2**.	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK DATA MONITOR.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> ***Data*** ***«Immobilizer» = «Unset»:*** ***«Engine start» = «Engine start permission»:*** ***«Unlock confirmation» = «Confirmed»:***	Is the data displayed as indicated on the left?	Go to step **3**.	Perform diagnostics with phenomenon. <Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
3	**CHECK DATA MONITOR.** Using Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start», when holding down the push button ignition switch while depressing on the brake pedal (CVT model) or the clutch model (MT model). <Ref. to KPS(diag)-32, Data Monitor.> ***Data*** ***«EGI code reception status» = «Reception»:*** NOTE: If «Reception» is displayed, the status changes to «Not yet received» in 10 seconds. When performing the check again, perform the check after turning the ignition to OFF.	Is the data displayed as indicated on the left?	Go to step **4**.	Repair or replace the harness between ID code box and ECM.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the ID code box connector and the ECM connector. 3) Using a tester, measure the resistance between ID code box connector and ECM connector. ***Connector & terminal*** ***Engine type: FA*** ***(B422) No. 4 — (E158) No. 43:*** ***Engine type: EJ*** ***(B422) No. 4 — (B135) No. 25:***	Is the resistance less than 10 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK ECM.** 1) Install the ECM from other normal operating vehicle (with push button start) which use same ECM to the vehicle to be diagnosed. 2) Perform ECM registration. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume.	Is ECM registration finished? And does the engine start?	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).> Install the ECM from other vehicle to the original vehicle.	Replace the ID code box. <Ref. to SL-100, ID Code Box.>

C: DTC B1576 EGI CONTROL MODULE EEPROM

DTC detecting condition:

- ECM malfunctioning
- When the ROM in ECM was inaccessible during registration.

Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of ECM, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **2**.
2	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Go to step **3**.
3	**PERFORM ECM REGISTRATION.** Perform ECM registration. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.	Is ECM registration complete?	Make sure that the engine can start. This completes the work.	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

D: DTC B1577 IMM CONTROL MODULE EEPROM

1. EXCEPT FOR C0 MODEL

DTC detecting condition:
- Defective keyless access CM
- When inaccessible to ROM in keyless access CM.

Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to KPS(diag)-44, Clear memory.> 3) Turn the ignition switch to OFF. 4) Remove and install the battery. 5) Turn the ignition switch to ON. 6) After 5 seconds or more, read the DTC of «Engine» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

2. C0 MODEL

DTC detecting condition:

- ID code box malfunction
- When inaccessible to ROM in ID code box.

Trouble symptom:

Engine will not start.

CAUTION:

• For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, perform the clear memory for «Engine». <Ref. to KPS(diag)-44, Clear memory.> 3) Turn the ignition switch to OFF. 4) Register the ID code box. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 5) After 5 seconds or more, read the DTC of «Engine» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B1577 displayed? (Current malfunction)	Replace the ID code box. <Ref. to SL-100, ID Code Box.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B2271 IGN RELAY CONTROL CIRCUIT

DTC detecting condition:

When malfunction (output value is different from the monitor result) judgment is generated three consecutive times at one-second intervals (periodic check), while the power supply status switches ACC ON → ignition switch ON (initial check), or during the ignition switch ON.

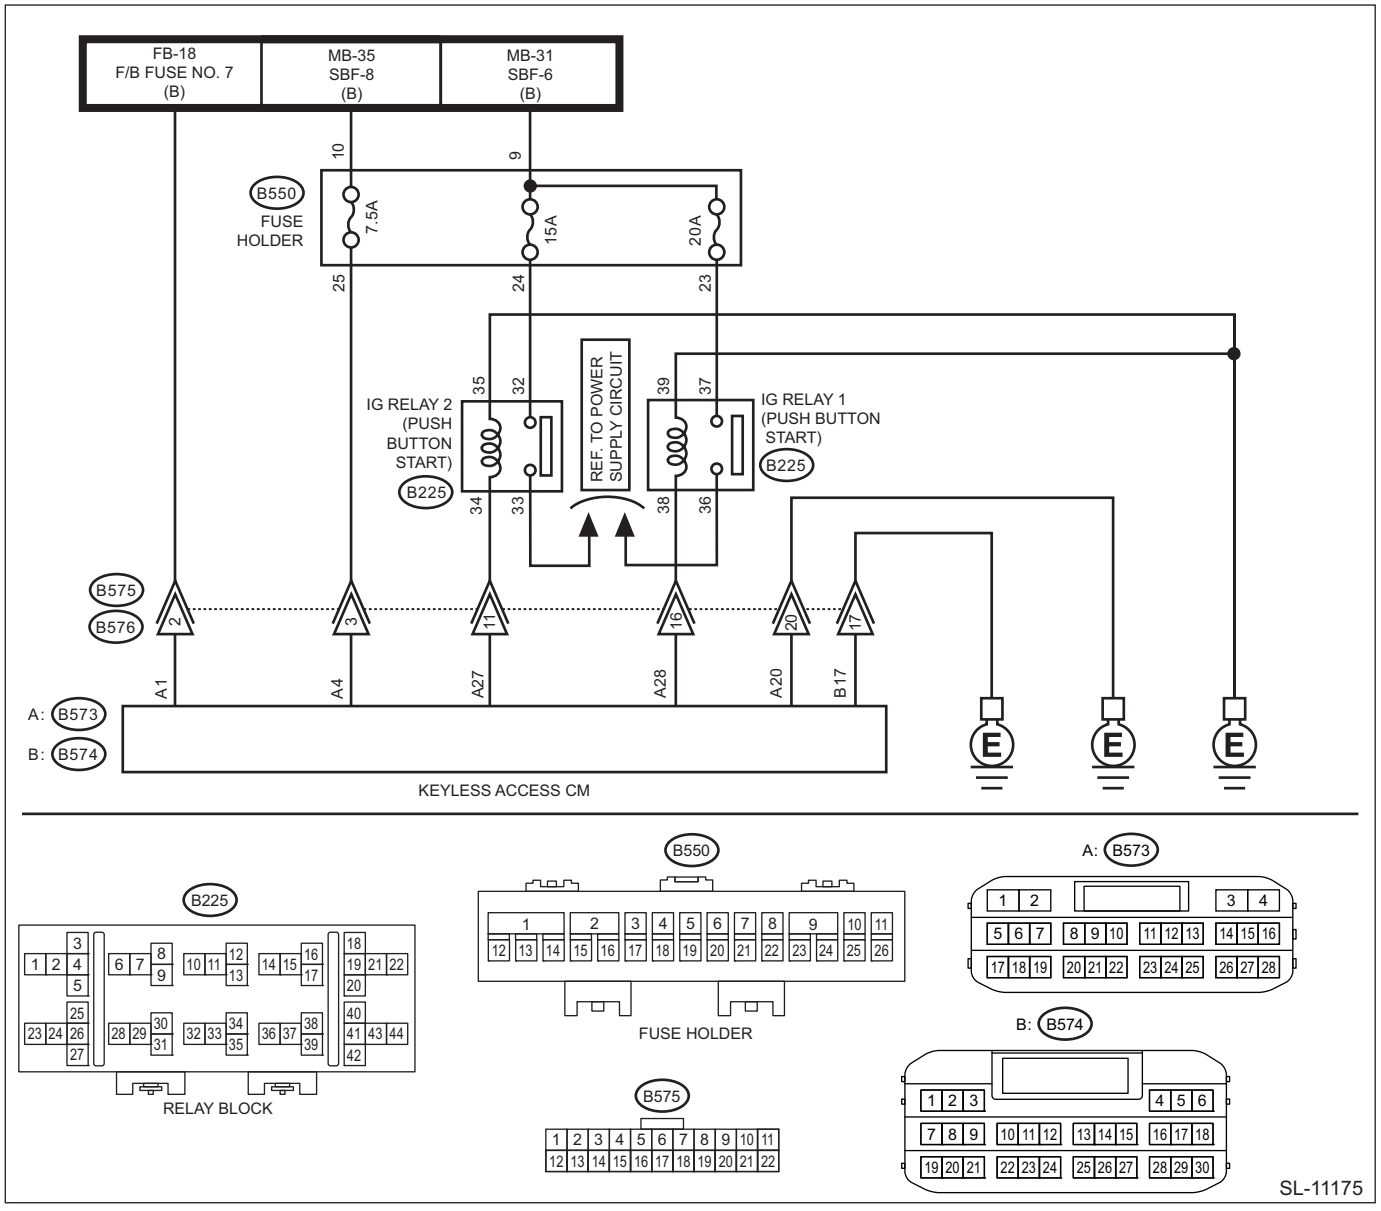
Trouble symptom:

Not all functions operate at IGN ON.

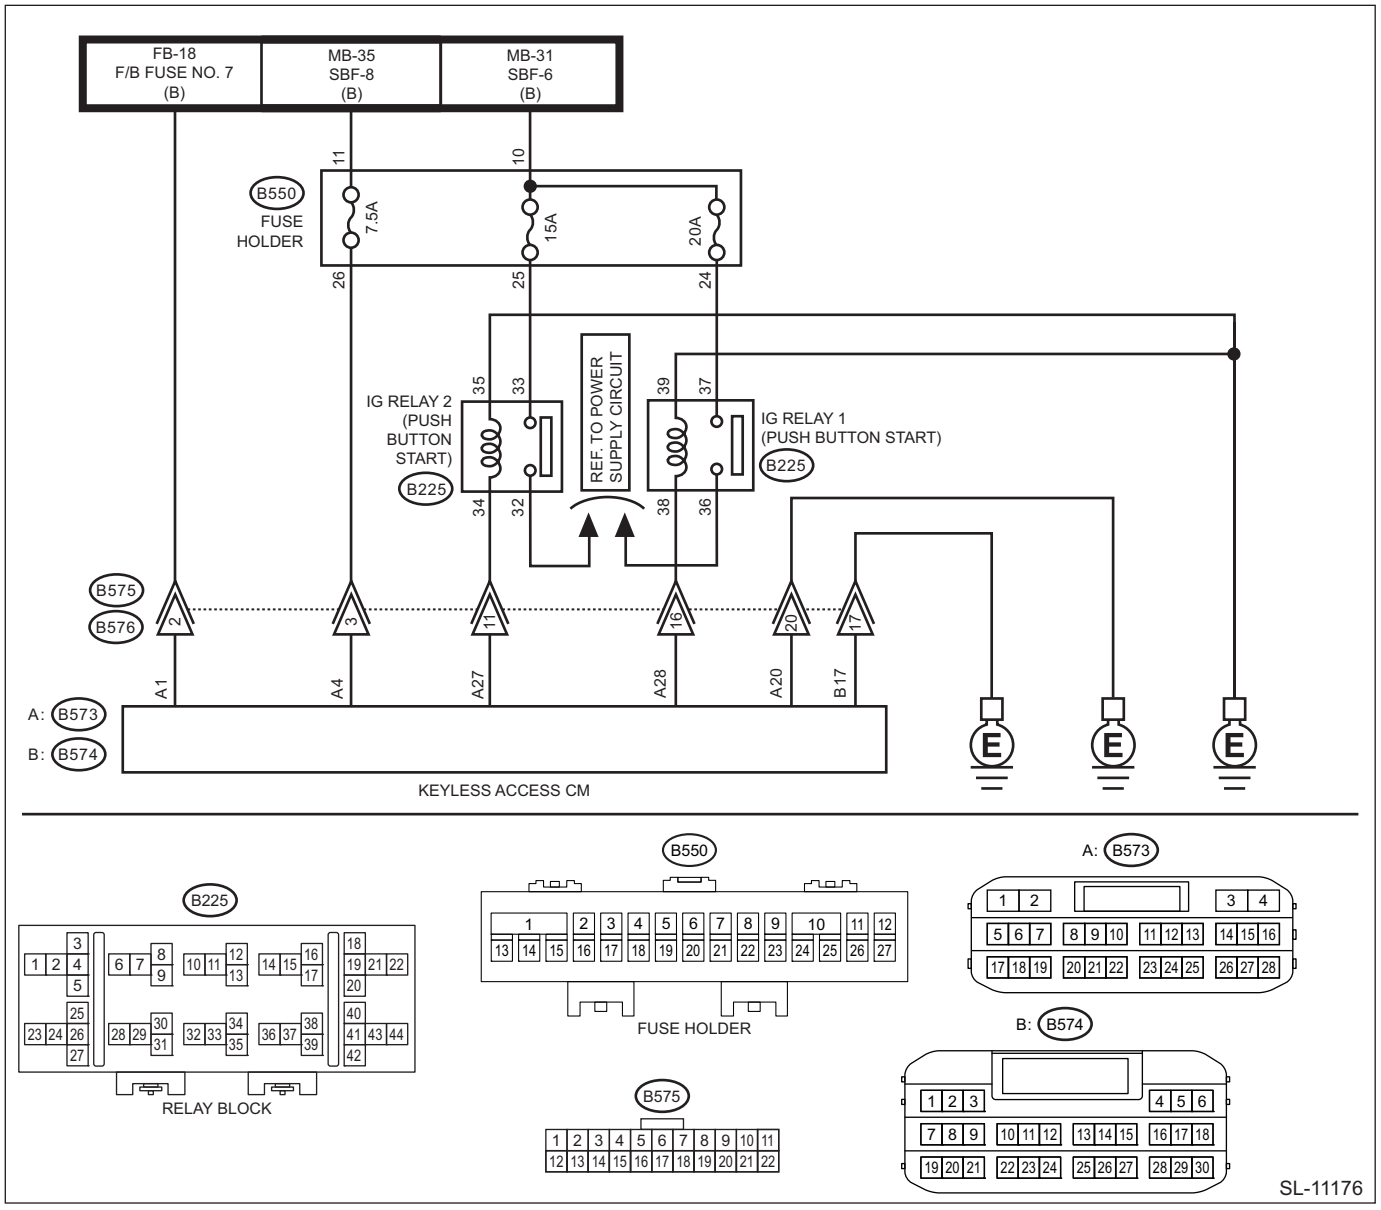
CAUTION:
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 27 — Chassis ground:***	Is resistance 74.15 — 460.88 Ω? (20°C)	Go to step **6**.	Check IG relay 2. Go to step **7**.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 28 — Chassis ground:***	Is resistance 50.87 — 72.17 Ω? (20°C)	Go to step **8**.	Check IG relay 1. Go to step **7**.
7	**CHECK RELAY.** Perform unit inspection of IG relay 1 and IG relay 2. <Ref. to SL-9, CHECK RELAY, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **8**.	Replace the relay. <Ref. to SL-8, Relay and Fuse.>
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 27 (+) — Chassis ground (–):*** ***(B573) No. 28 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when ACC → IGN ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

F: DTC B2274 ACC RELAY CONTROL CIRCUIT

DTC detecting condition:

When any of the following is established.

- ACC output ON and the output circuit monitor result OFF simultaneously continued for 10 seconds.

• The starter output OFF, the output circuit monitor result ON, and the remote engine starter not controlling simultaneously continued for 10 seconds.

Trouble symptom:

Each function does not operate at the ACC position.

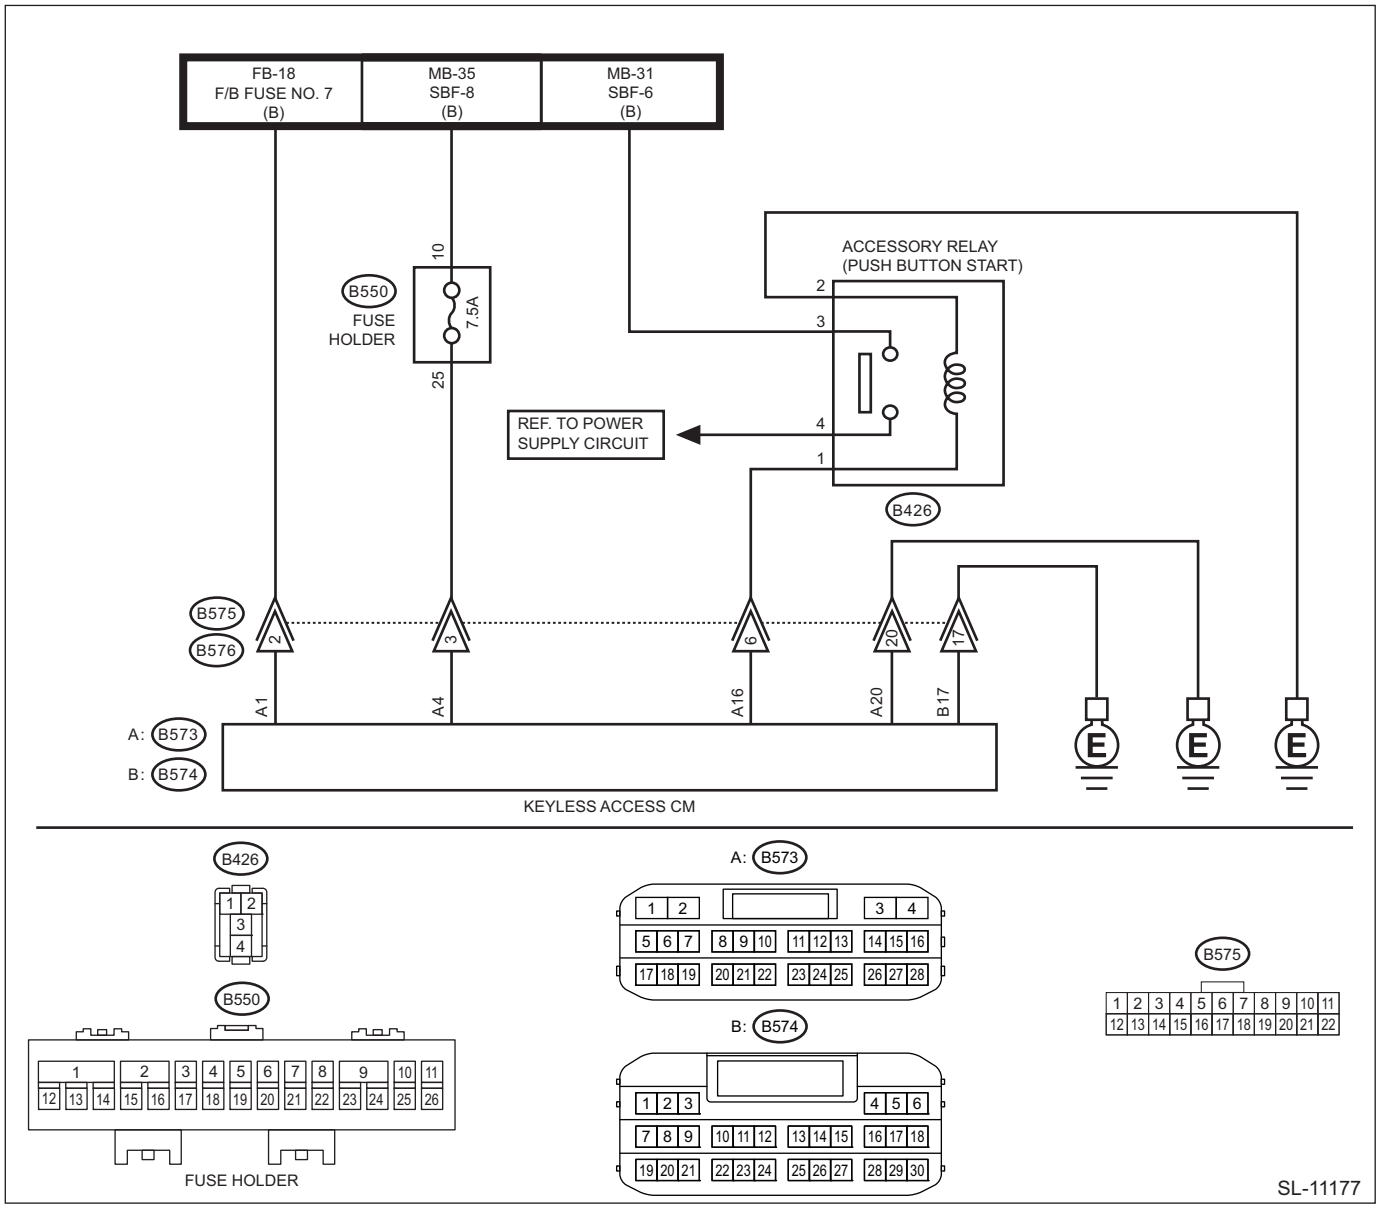
CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

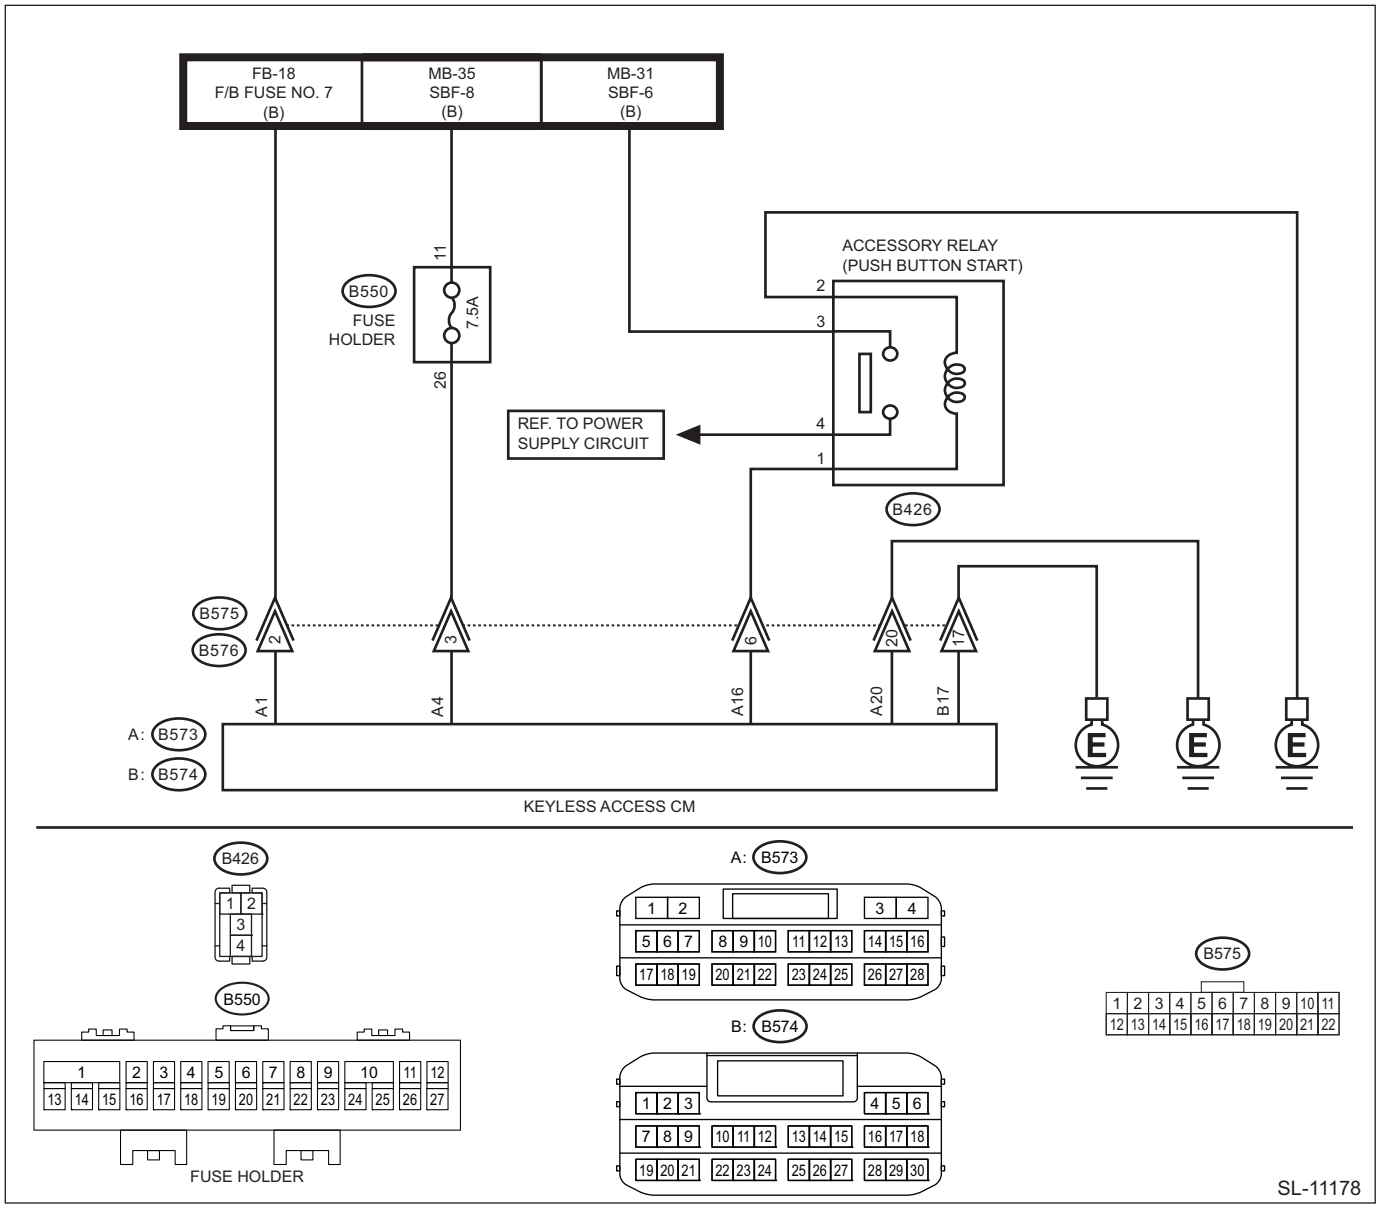
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

- Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
- Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>
- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

	Step	Check	Yes	No
3	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 16 — Chassis ground:***	Is resistance 152.61 — 216.5 Ω? (20°C)	Go to step **7**.	Go to step **6**.
6	**CHECK RELAY.** Perform inspection of ACC relay unit. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **7**.	Replace the relay.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and the accessory relay (push button start), and between the accessory relay (push button start) and chassis ground. ***Connector & terminal*** ***(B573) No. 16 — (B426) No. 1:*** ***(B426) No. 2 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 16 (+) — Chassis ground (–):***	Is the voltage 1 V or less → 9.5 — 16 V when OFF → ACC ON?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

G: DTC B2275 ENGINE START REQUEST CONTROL CIRCUIT

DTC detecting condition:

When any of the following is established with the ignition switch ON.

• Starter output ON and the output circuit monitor result OFF were simultaneously established three consecutive times.

• The starter output OFF, the output circuit monitor result ON, and the remote engine starter not controlling simultaneously continued for 10 seconds.

Trouble symptom:

Engine will not start.

CAUTION:

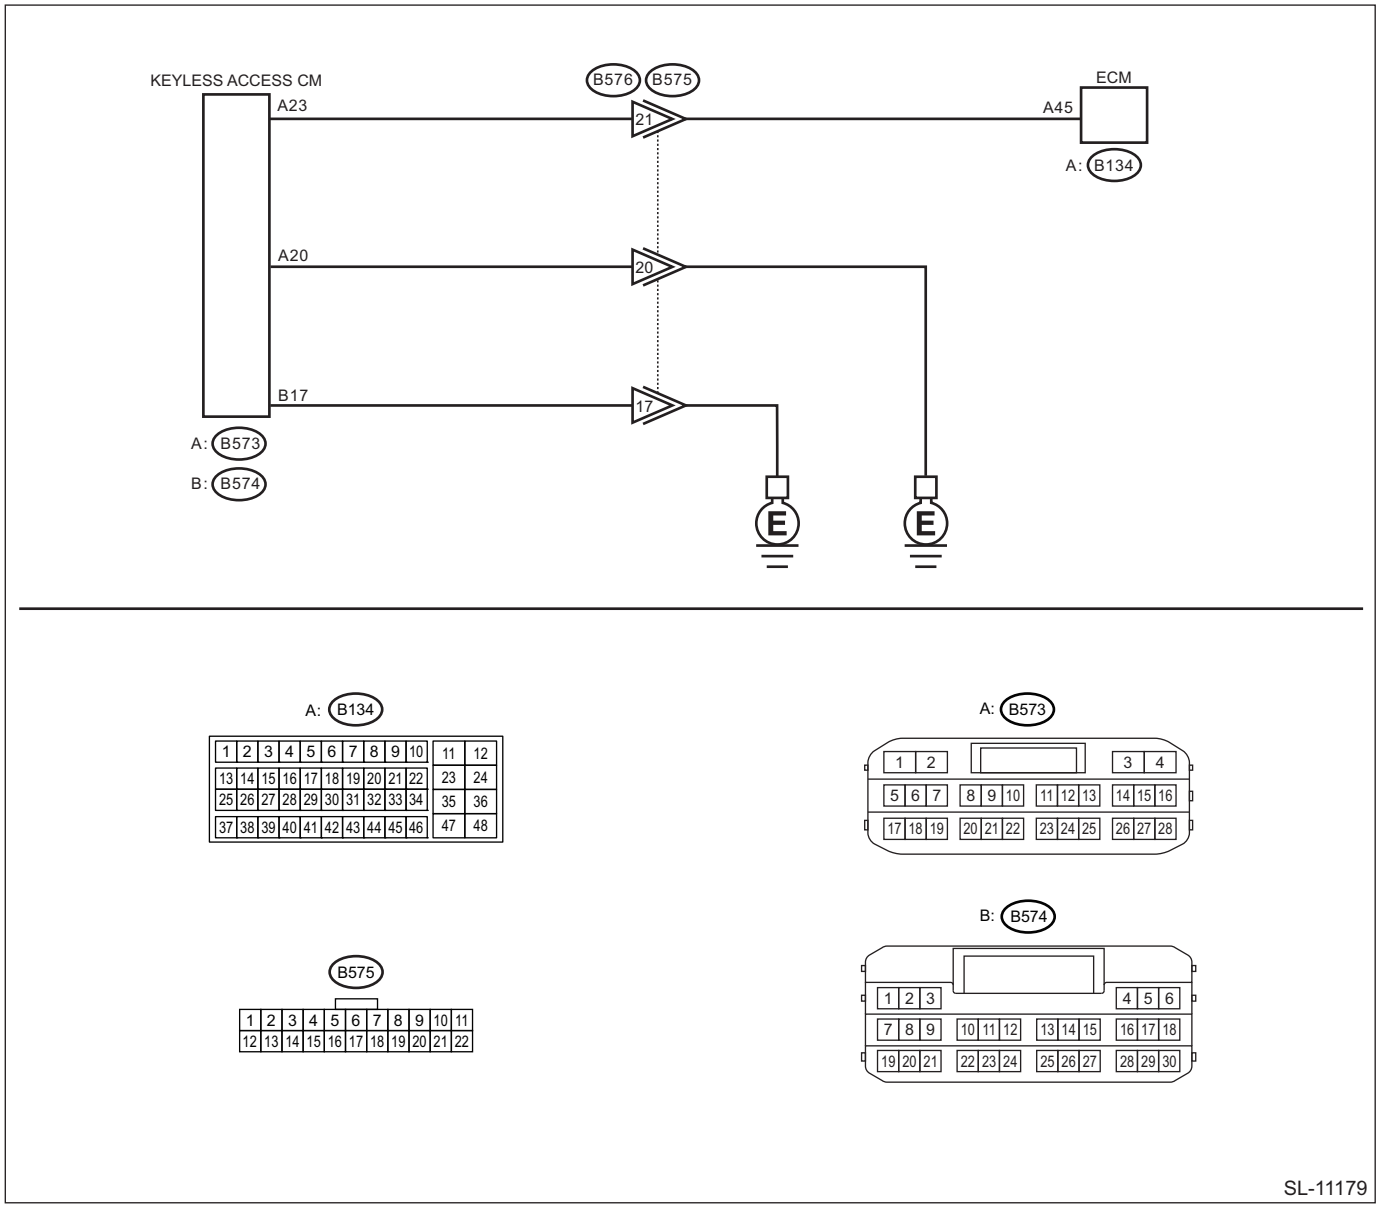
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

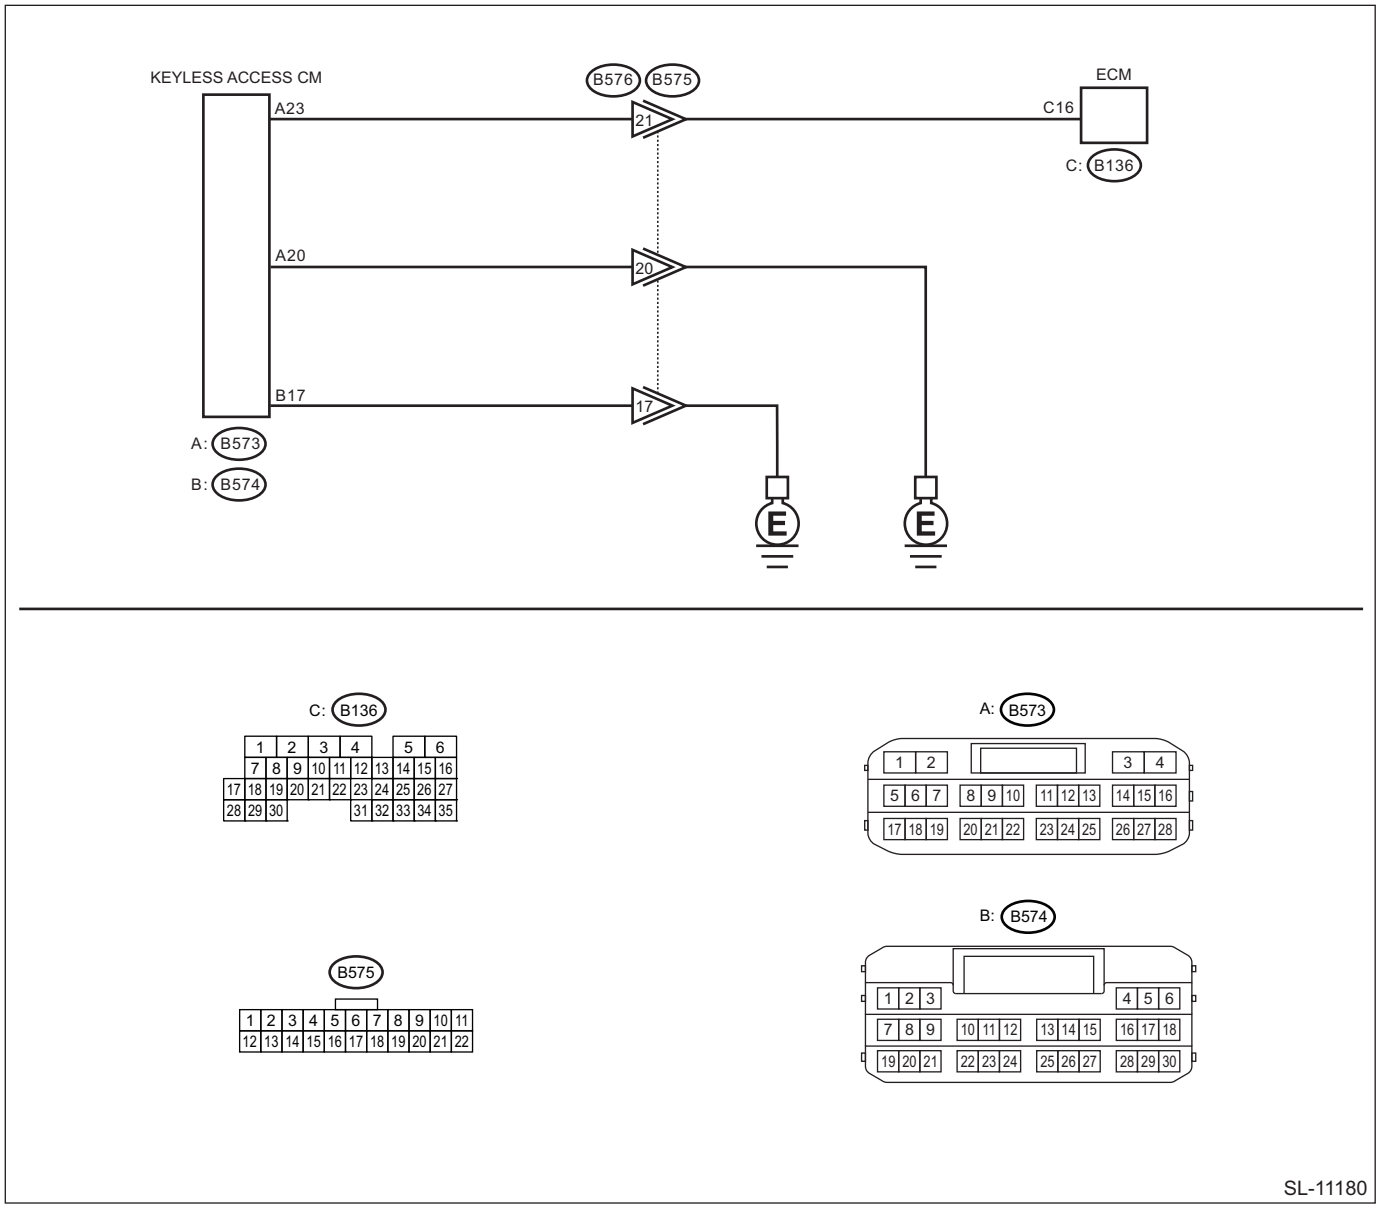
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

• Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.

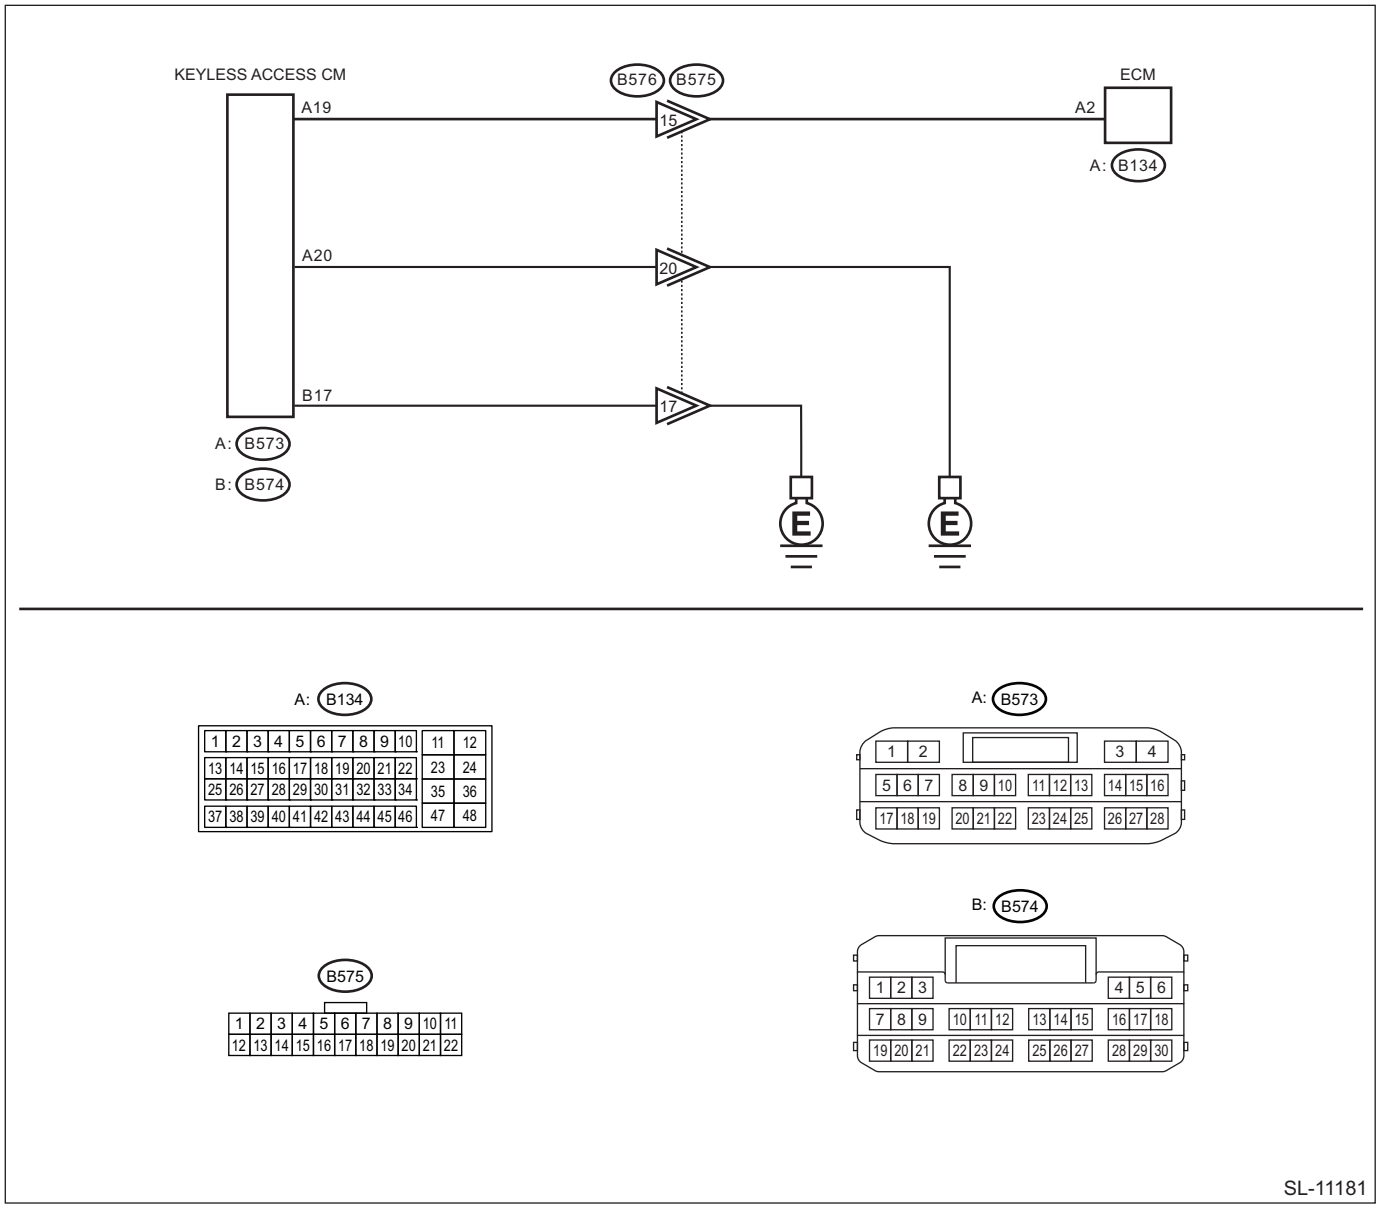
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***Engine type: FA*** ***(B573) No. 23 — (B134) No. 45:*** ***Engine type: EJ*** ***(B573) No. 23 — (B136) No. 16:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 23 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Place the access key in the passenger room. 3) Using a tester, measure the voltage between the terminals of keyless access CM connector. ***Connector & terminal*** ***(B573) No. 23 (+) — (B573) No. 20 (–):***	Does the voltage change as 2 V or less → 9 V or more when the push button ignition switch is turned on while depressing the brake pedal with the shift position in P or N (CVT model) or while depressing clutch pedal (MT model)?	Perform inspection according to the diagnosis of engine. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

H: DTC B2276 ACC RELAY OFF SIGNAL

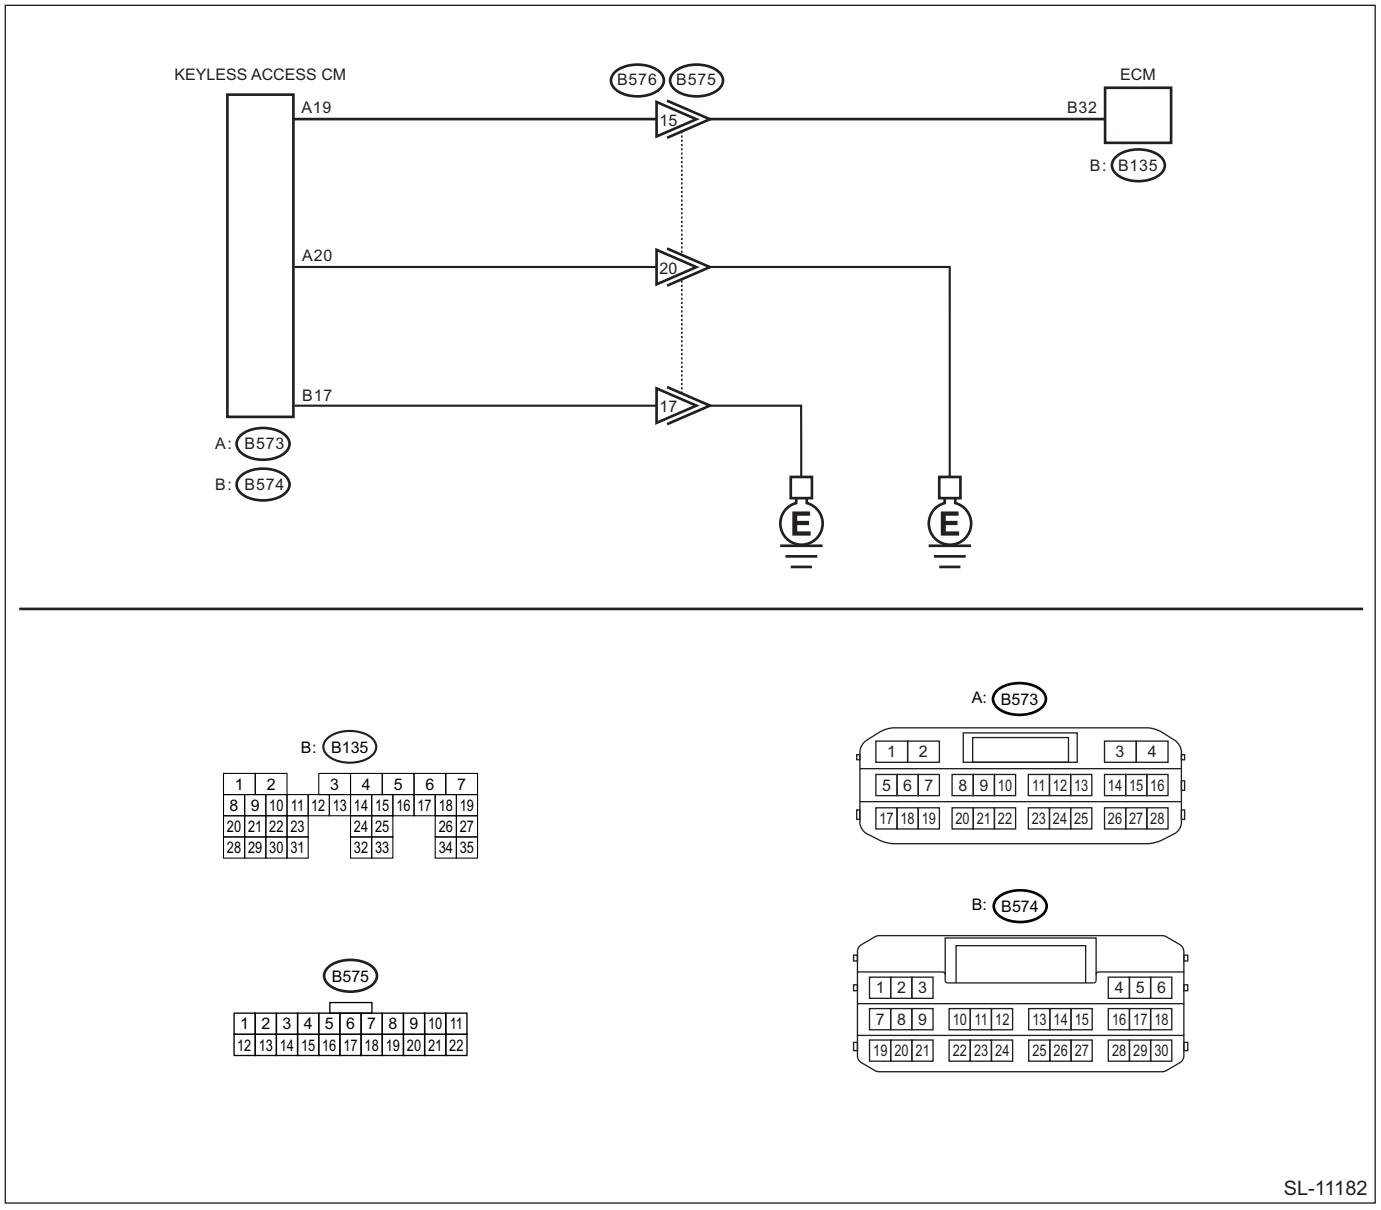
DTC detecting condition:
When ACC cutoff input ON ("L" level) continued for 40 seconds, when the ignition switch is turned ON.
Trouble symptom:
- The accessory power supply is not cut during engine start.
- Starter rotation is slow.

CAUTION:
• For replacement procedure of keyless access CM and ECM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and ECM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and ECM. ***Connector & terminal*** ***Engine type: FA*** ***(B573) No. 19 — (B134) No. 2:*** ***Engine type: EJ*** ***(B573) No. 19 — (B135) No. 32:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 19 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector and ECM connector. 2) Place the access key in the passenger room. 3) Using a tester, measure the voltage between terminals of the keyless access CM connector when the push button ignition switch is pressed, while depressing the brake pedal with the shift lever in the "P" range (for CVT model) or while depressing the clutch pedal (for MT model). ***Connector & terminal*** ***(B573) No. 19 (+) — (B573) No. 20 (–):***	Is the voltage 9.5 — 16 V → 1 V or less?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

I: DTC B2277 SUBMERGING CIRCUIT

DTC detecting condition:

When the water-submersion circuit monitor result ON continued for 300 seconds.

Trouble symptom:

- The ignition can be turned ON, but cannot be turned OFF.
- Engine will not start.

CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK SUBMERSION CONDITION.** Check the keyless access CM and environment of equipment, and check the harness for any trace of water submersion.	Is there any trace of water submersion?	Take necessary measures against water submersion and replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

J: DTC B227B PUSH ENGINE START SWITCH INPUT PERFORMANCE

DTC detecting condition:

When any of the following is established.
- Judged as switch ON stuck. (When any of the following is established.)
  1. When the push button ignition switch input (SSW1 terminal) is ON ("L" level), and the push button ignition switch input (SSW2 terminal) is OFF ("H" level) simultaneously continued for 40 seconds.
  2. When the push button ignition switch input (SSW1 terminal) is OFF ("H" level), and the push button ignition switch input (SSW2 terminal) is ON ("L" level) simultaneously continued for 40 seconds.
- Judged as OFF stuck. (When any of the following is established 10 consecutive times.)

Only when judgment is generated consecutively under the same judgment condition of either 1 or 2.
  1. When the push button ignition switch input (SSW1 terminal) is OFF ("H" level) → ON ("L" level) → OFF, and also the push button ignition switch input (SSW2 terminal) is OFF ("H" level).
  2. When the push button ignition switch input (SSW1 terminal) is OFF ("H" level), and also the push button ignition switch input (SSW2 terminal) is OFF ("H" level) → ON ("L" level) → OFF.

Trouble symptom:
- Power ON is not possible.
- Power OFF is not possible.

CAUTION:
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Press the push button ignition switch and perform OFF → ACC ON → IGN ON for one minute each. 3) Disconnect and connect the keyless access CM connector. 4) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B227B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector and the chassis ground. ***Connector & terminal*** ***(i150) No. 2 — (B573) No. 9:*** ***(i150) No. 7 — (B573) No. 8:*** ***(i150) No. 5 — Chassis ground:*** ***(i150) No. 4 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK PUSH BUTTON IGNITION SWITCH UNIT.** Perform individual inspection of the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>	Is the check result OK?	Go to step **4**.	Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>
4	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». • «Push start SW 1» • «Push start SW 2»	Is it ON when the push button ignition switch is pressed?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

K: DTC B227C P RANGE SIGNAL PERFORMANCE

DTC detecting condition:

When any of the following is established on CVT model.

• The ignition switch ON, the shift position (P terminal) in shift P ("L" level), and the CAN shift information in other than P simultaneously continued for 20 seconds.
• The ignition switch ON, the shift position (P terminal) in other than shift P ("H" level), and the CAN shift information in P simultaneously continued for 20 seconds.

Trouble symptom:

- Engine will not start.
- Power supply control is not possible.
- Steering lock is not possible.

CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Turn the ignition switch to ON. 3) Move the shift lever to a position other than P, and leave it for one minute. 4) Disconnect and connect the keyless access CM connector. 5) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B227C displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the P range switch connector. 2) Disconnect the keyless access CM connector. 3) Using a tester, measure the resistance between the P range switch connector and the keyless access CM connector and the chassis ground. ***Connector & terminal*** ***(B116) No. 1 — (B574) No. 18:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM and chassis ground. ***Connector & terminal*** ***(B574) No. 18 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the body integrated unit connector. 2) Using a tester, measure the resistance between the body integrated unit connector and the keyless access CM connector. ***Connector & terminal*** ***(B281) No. 20 — (B574) No. 30:*** ***(B281) No. 28 — (B574) No. 29:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK "P" RANGE SWITCH.** Check the "P" range switch. <Ref. to CS-57, INSPECTION, AT Shift Lock Solenoid and "P" Range Switch.>	Is the "P" range switch normal?	Go to step **6**.	Replace the "P" range switch. <Ref. to CS-55, AT Shift Lock Solenoid and "P" Range Switch.>

	Step	Check	Yes	No
6	**CHECK DATA MONITOR.** 1) Connect each connector. 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». • «Shift P signal(AT only)»	Is it ON when the shift position is in P? Is it OFF when the shift position is in other than P?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

L: DTC B2282 VEHICLE SPEED SIGNAL CORRELATION

DTC detecting condition:

When any of the following is established with the ignition switch ON.

• The vehicle speed signal of direct line less than 5 km/h (3 MPH), and the vehicle speed signal of CAN 25 km/h (16 MPH) or more simultaneously continued for 20 seconds.

• The vehicle speed signal of direct line 25 km/h (16 MPH) or more, and the vehicle speed signal of CAN less than 5 km/h (3 MPH) simultaneously continued for 20 seconds.

CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

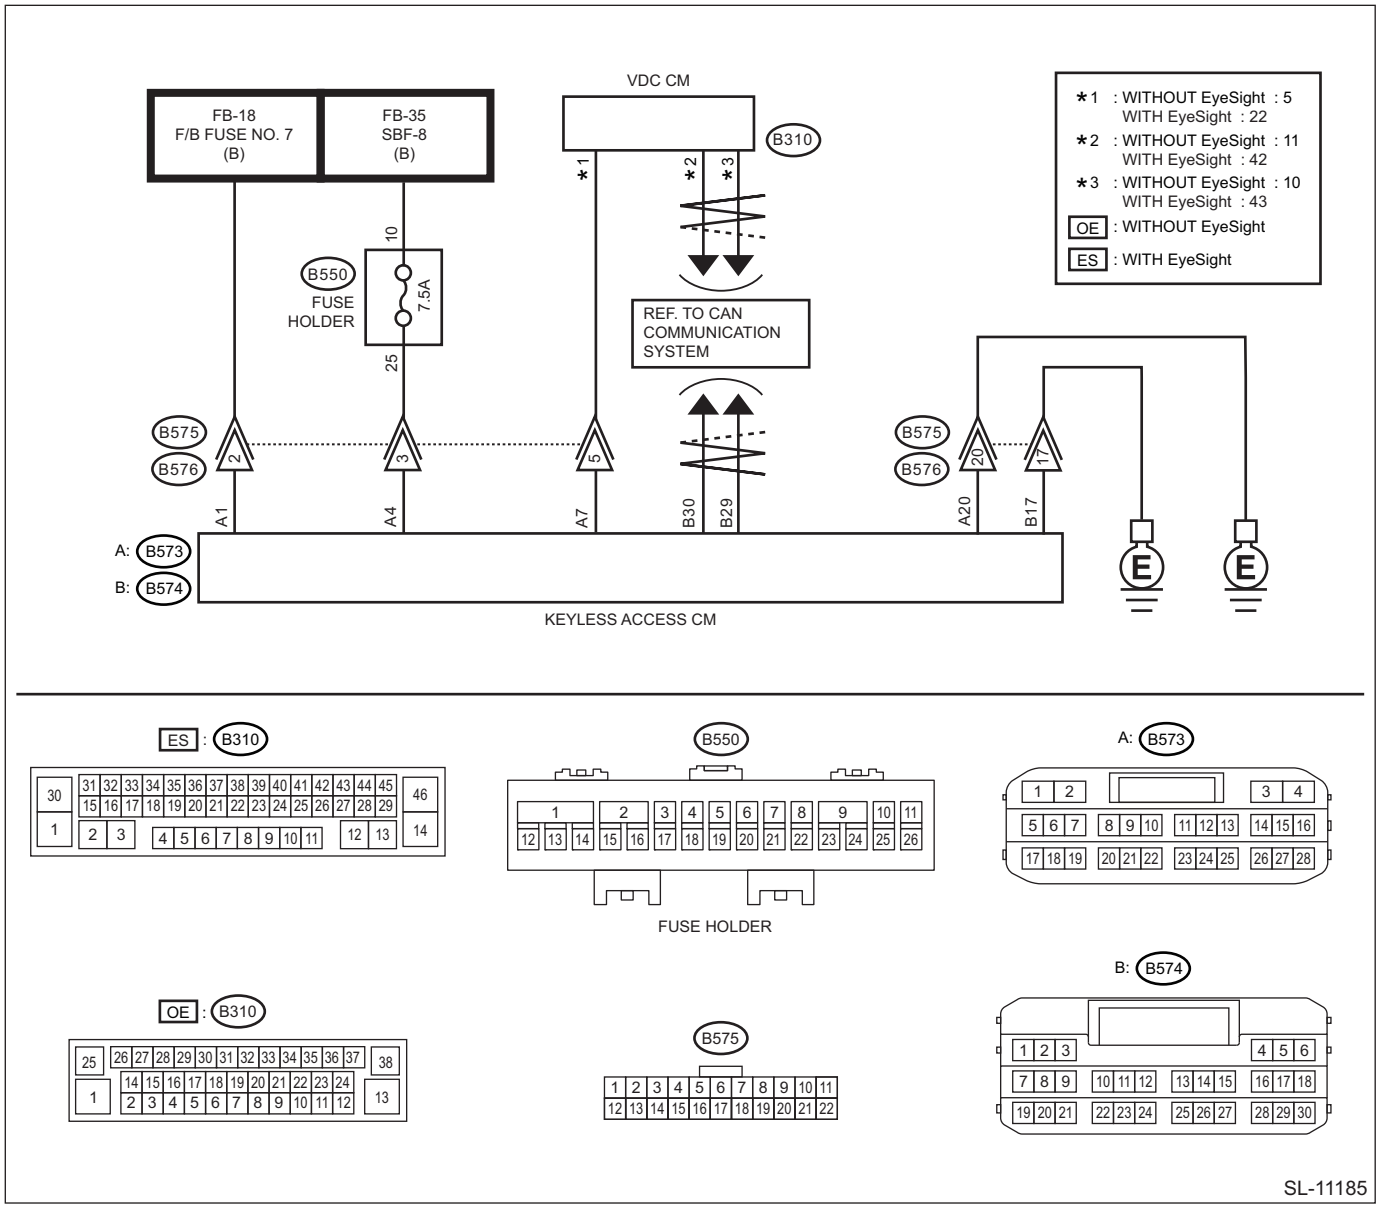
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

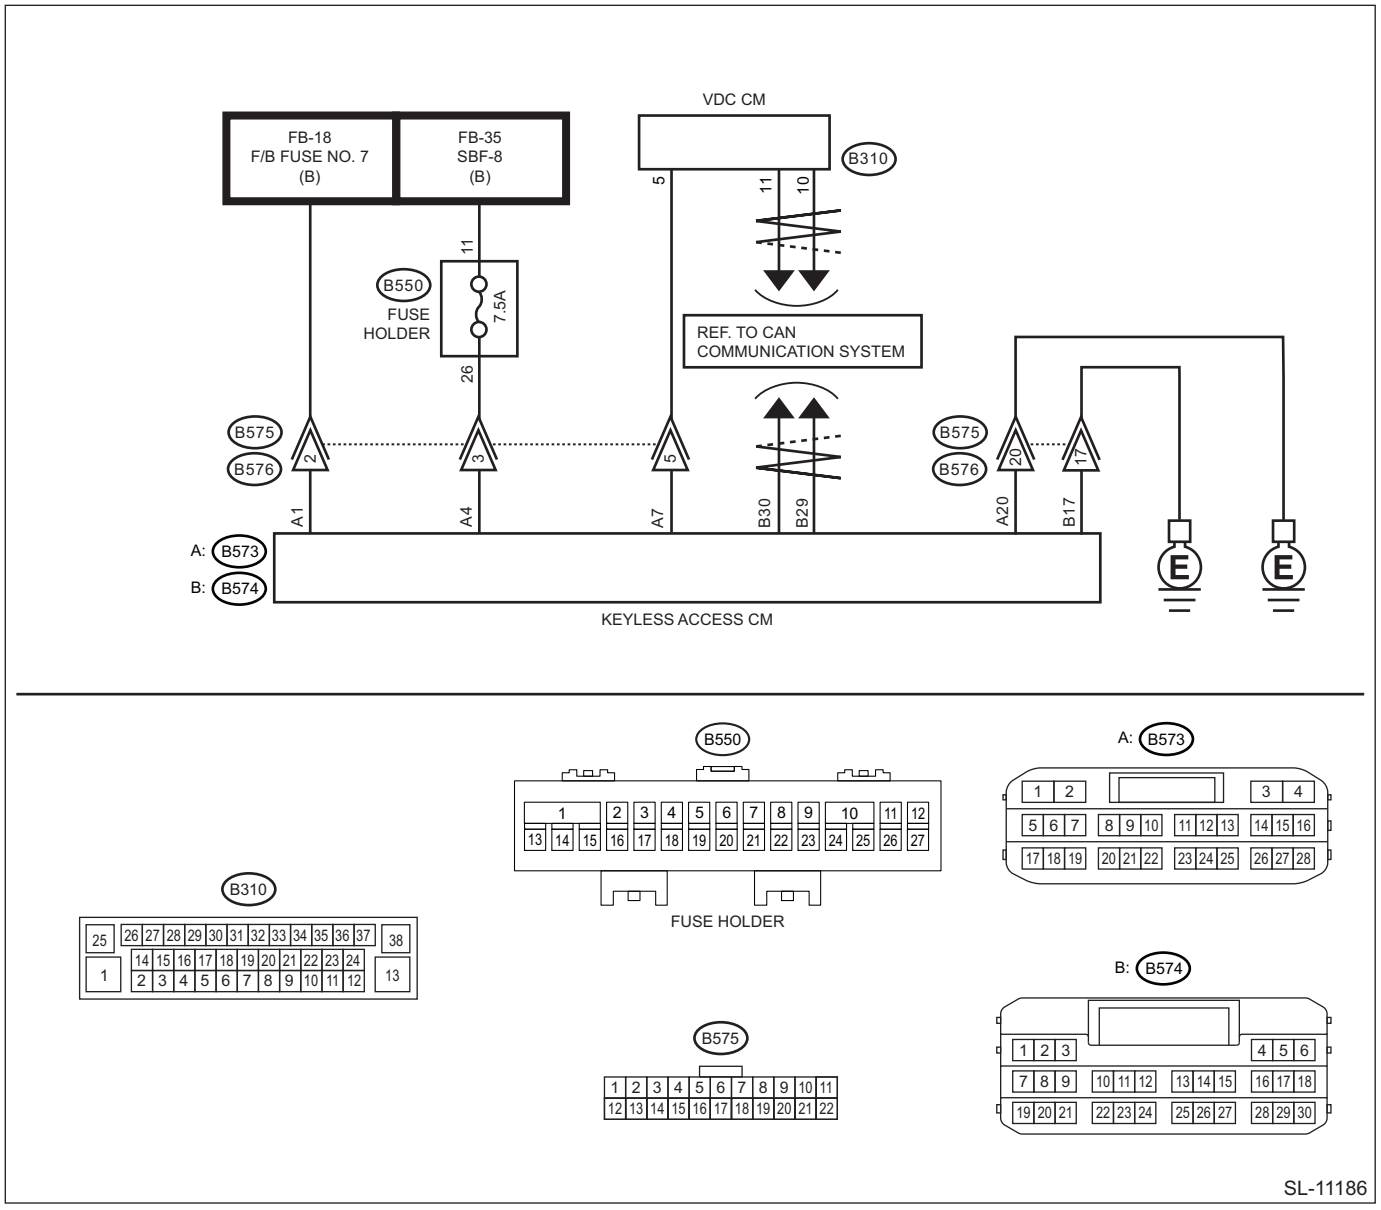
• Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

• Vehicle dynamics control system <Ref. to WI-365, WIRING DIAGRAM, Vehicle Dynamics Control System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the VDC CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***Engine type FA with EyeSight*** ***(B573) No. 7 — (B310) No. 22:*** ***Engine type FA without EyeSight*** ***(B573) No. 7 — (B310) No. 5:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 7 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 7 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

M: DTC B2283 VEHICLE SPEED SENSOR

DTC detecting condition:

When any of the following is established with the ignition switch ON.

- When the vehicle speed signal of CAN and direct line became 0 km/h (0 MPH) within one second after the vehicle speed signal of CAN or direct line 50 km/h (31 MPH) or more continued for 10 seconds.
- CVT model

When the following situations continued simultaneously for 300 seconds: Vehicle speed signals of CAN and direct line is 0 km/h (0 MPH), or the engine speed signal of CAN or direct line is 2000 rpm or more, and shift position is in P (P-SW or CAN), in other than N (CAN) range, and the accessory cut relay signal input information is ≈ "L" level.

• MT model

When the following situations continued simultaneously for 300 seconds: Vehicle speed signals of CAN and direct line is 0 km/h (0 MPH), or the engine speed signal of CAN or direct line is 2000 rpm or more, and the clutch switch is OFF, and the accessory cut relay signal input information is ≈"L" level.

Trouble symptom:

The steering lock cannot be released.

CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

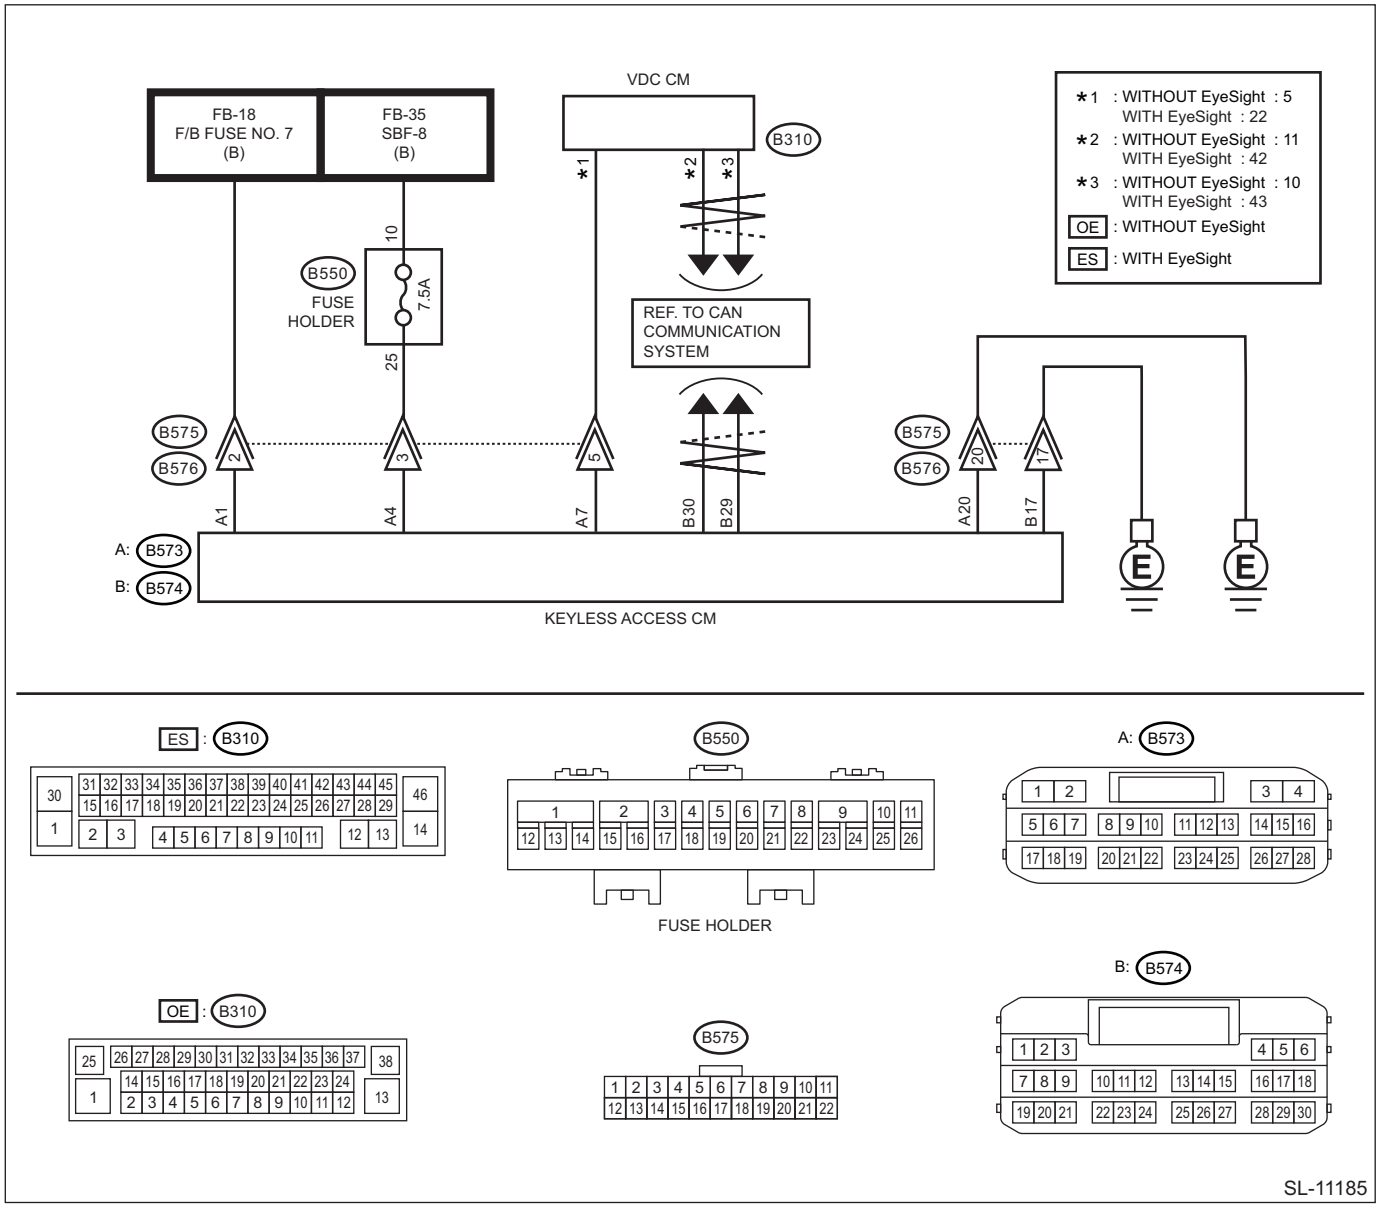
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

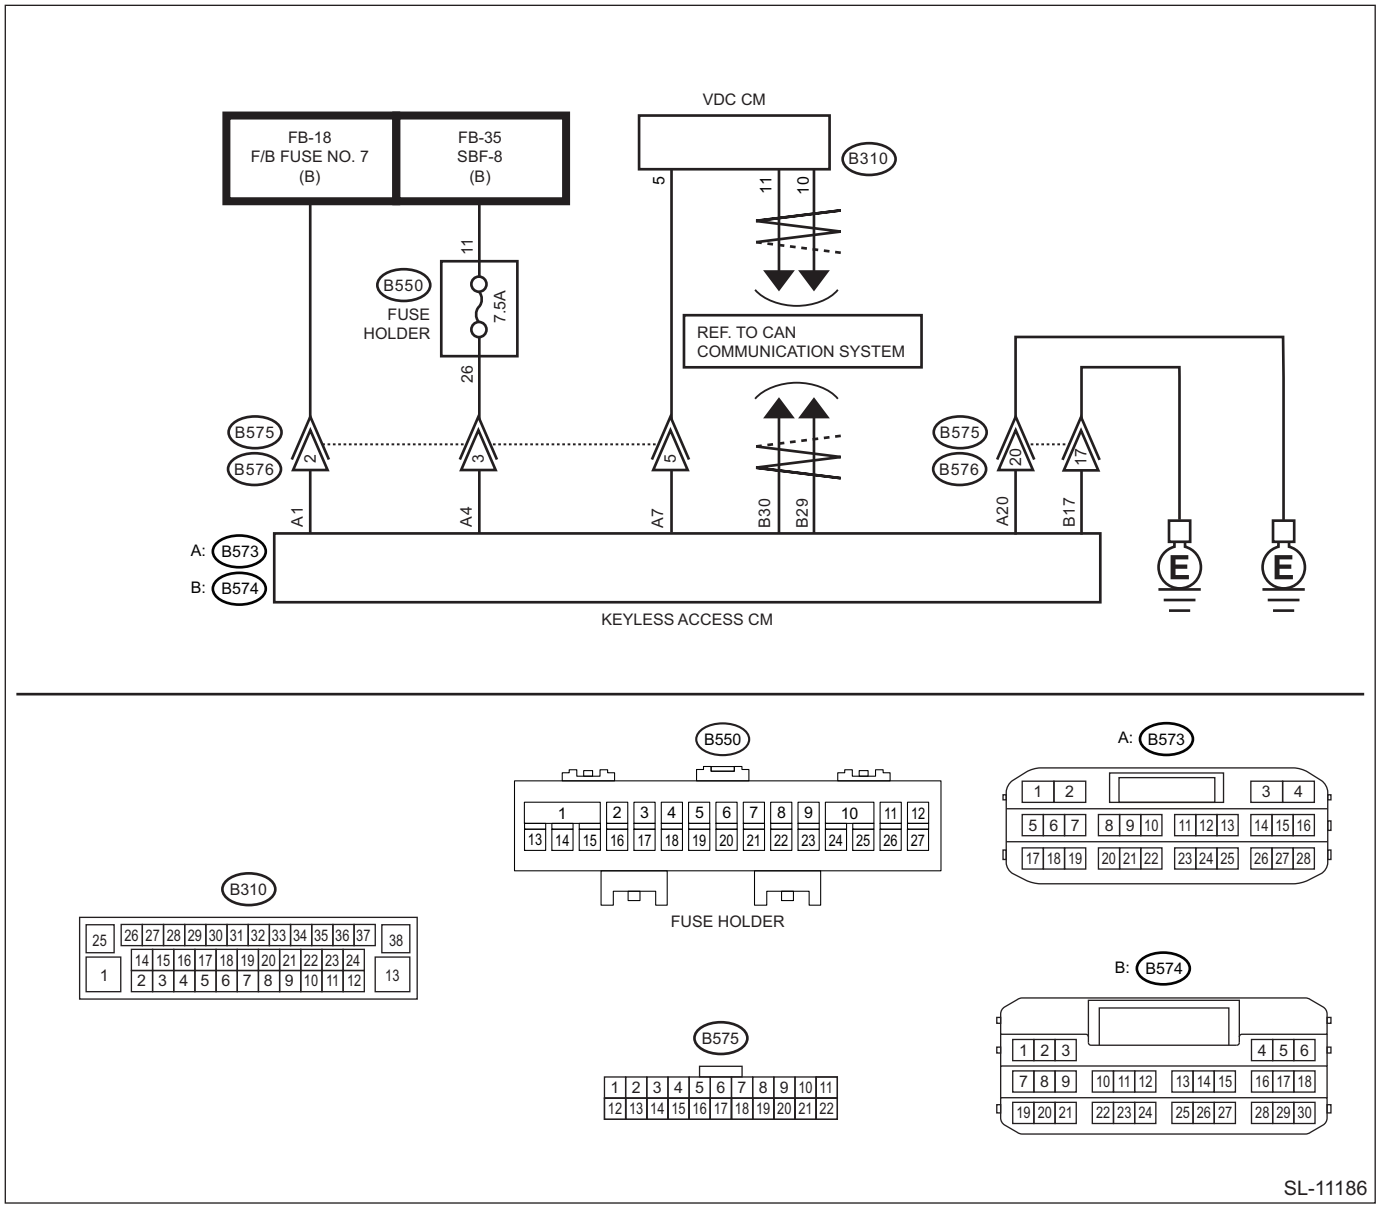
• Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

• Vehicle dynamics control system <Ref. to WI-365, WIRING DIAGRAM, Vehicle Dynamics Control System.>

• Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Check that the speedometer is displayed normally.	Is the meter display normal?	Go to step **3**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Vehicle speed signal»	Is the display normal according to the parked state or driving state?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the VDC CM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and VDC CM connector. ***Connector & terminal*** ***Engine type FA with EyeSight*** ***(B573) No. 7 — (B310) No. 22:*** ***Engine type FA without EyeSight*** ***(B573) No. 7 — (B310) No. 5:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 7 — Chassis ground:***	Is the resistance 30 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 7 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

N: DTC B2284 BRAKE SIGNAL CORRELATION

DTC detecting condition:

When mismatch of the brake signals (ON/OFF) of direct line and CAN continued for 20 seconds, when the ignition switch is turned ON.

Trouble symptom:

If the hard-wired brake signal is faulty, the engine does not start by the normal operation.

CAUTION:

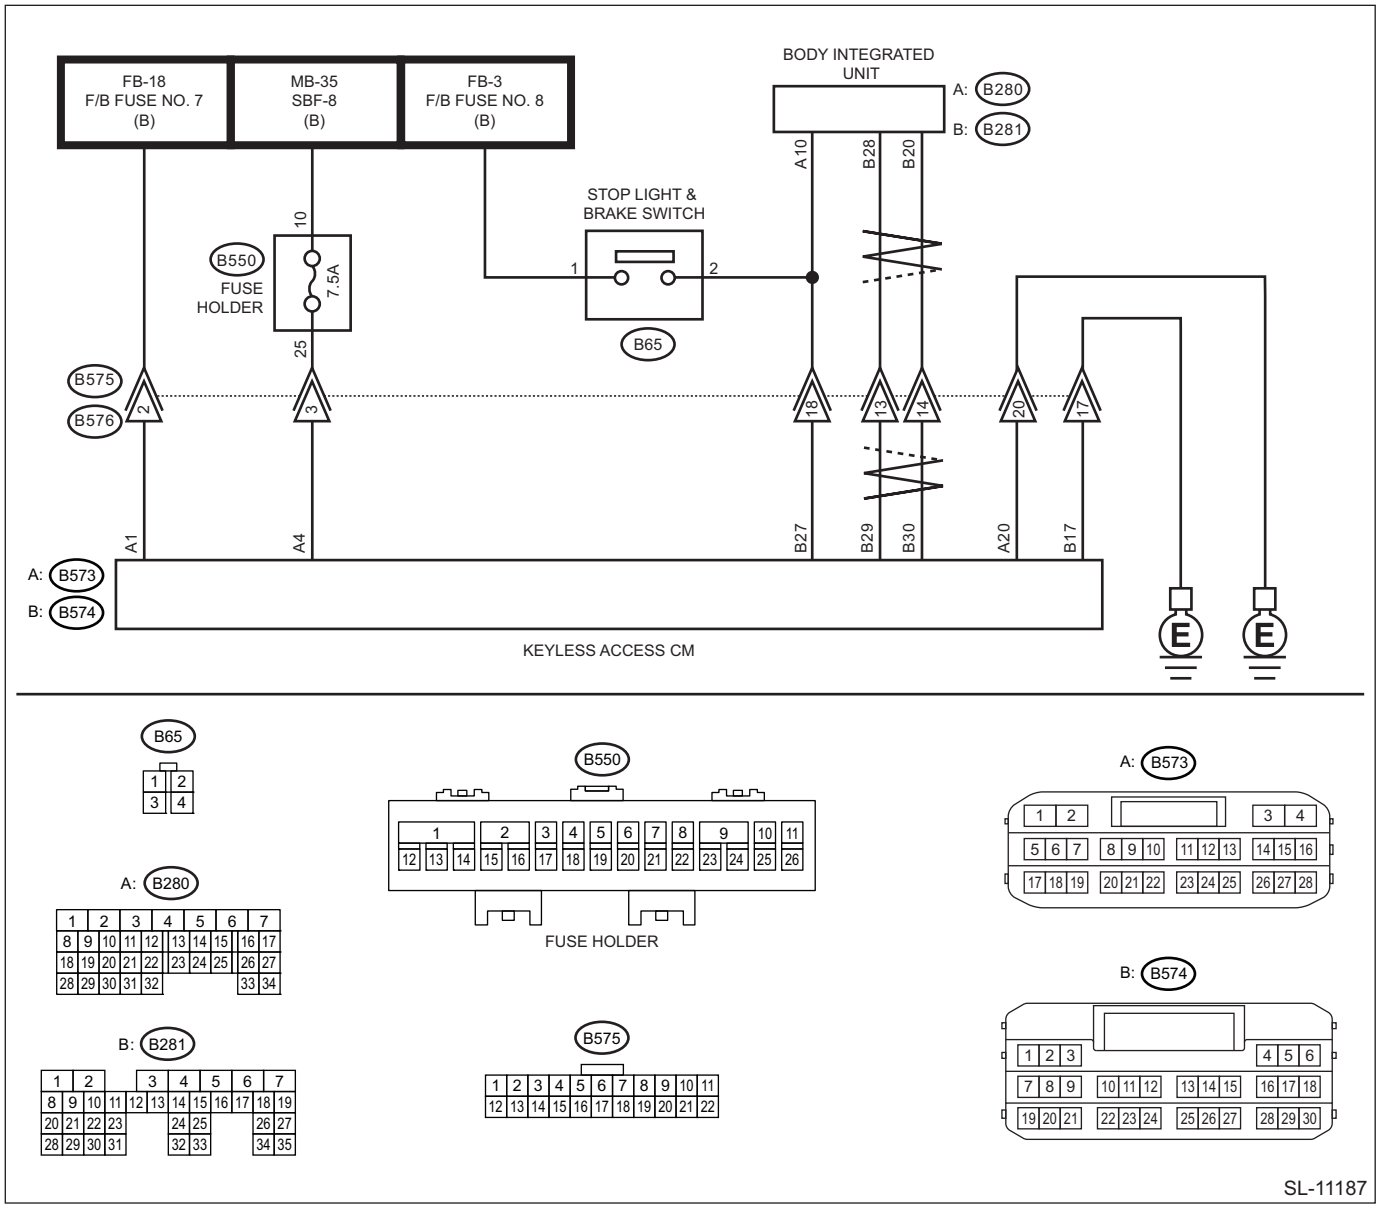
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

• Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Stop light system <Ref. to WI-346, WIRING DIAGRAM, Stop Light System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **3**.	Check the stop light system.
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Body Control» of «Keyless Access with Push Button Start». <Ref. to BC(diag)-20, Read Current Data.> «Stop light SW»	Is DTC displayed normally according to the brake pedal operation?	Go to step **4**.	Check body integrated unit <Ref. to BC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> and the stop light switch circuit.

	Step	Check	Yes	No
4	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **5**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **6**.	Check the power supply circuit.
6	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the stop light switch connector. 2) Using a tester, measure the resistance between the keyless access CM connector and stop light switch connector. ***Connector & terminal*** ***(B574) No. 27 — (B65) No. 2:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 27 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **9**.	Repair or replace the short circuit of the harness.
9	**CHECK HARNESS.** 1) Connect the stop light switch connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the brake pedal is depressed. ***Connector & terminal*** ***(B574) No. 27 (+) — Chassis ground (–):***	Does the voltage change as follows? 1 V or less (when the brake pedal is not depressed) → 11 — 14 V (when the brake pedal is depressed)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Check the power supply circuit of stop light switch.

O: DTC B2285 STEERING LOCK POSITION SIGNAL CORRELATION

DTC detecting condition:

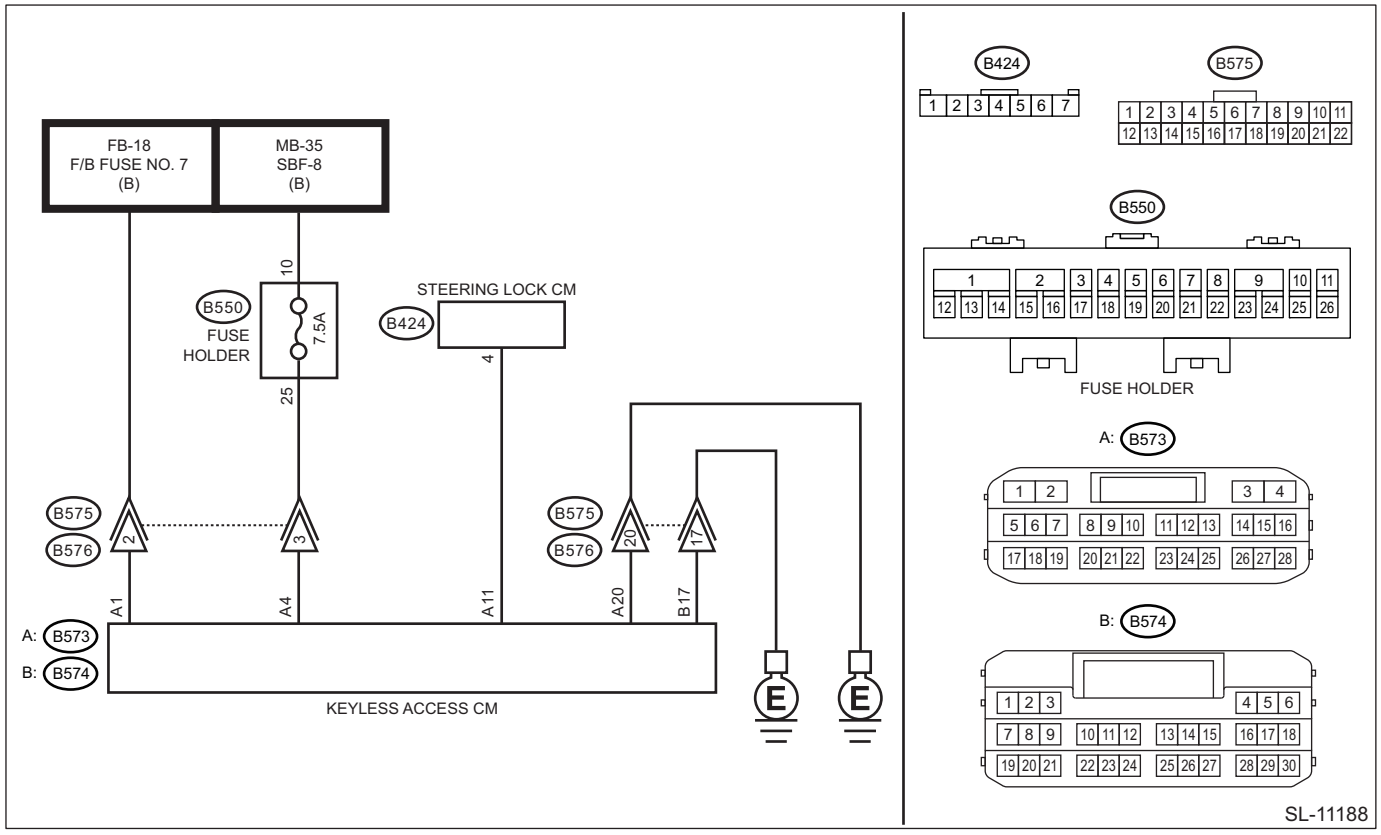
When any of the following is established with the ignition switch ON.

- The steering lock position information of direct line unlock ("L" level), and the steering lock position information of LIN communication other than unlock simultaneously continued for 40 seconds.
- The steering lock position information of direct line other than unlock ("H" level), and the steering lock position information of LIN communication unlock simultaneously continued for 40 seconds.

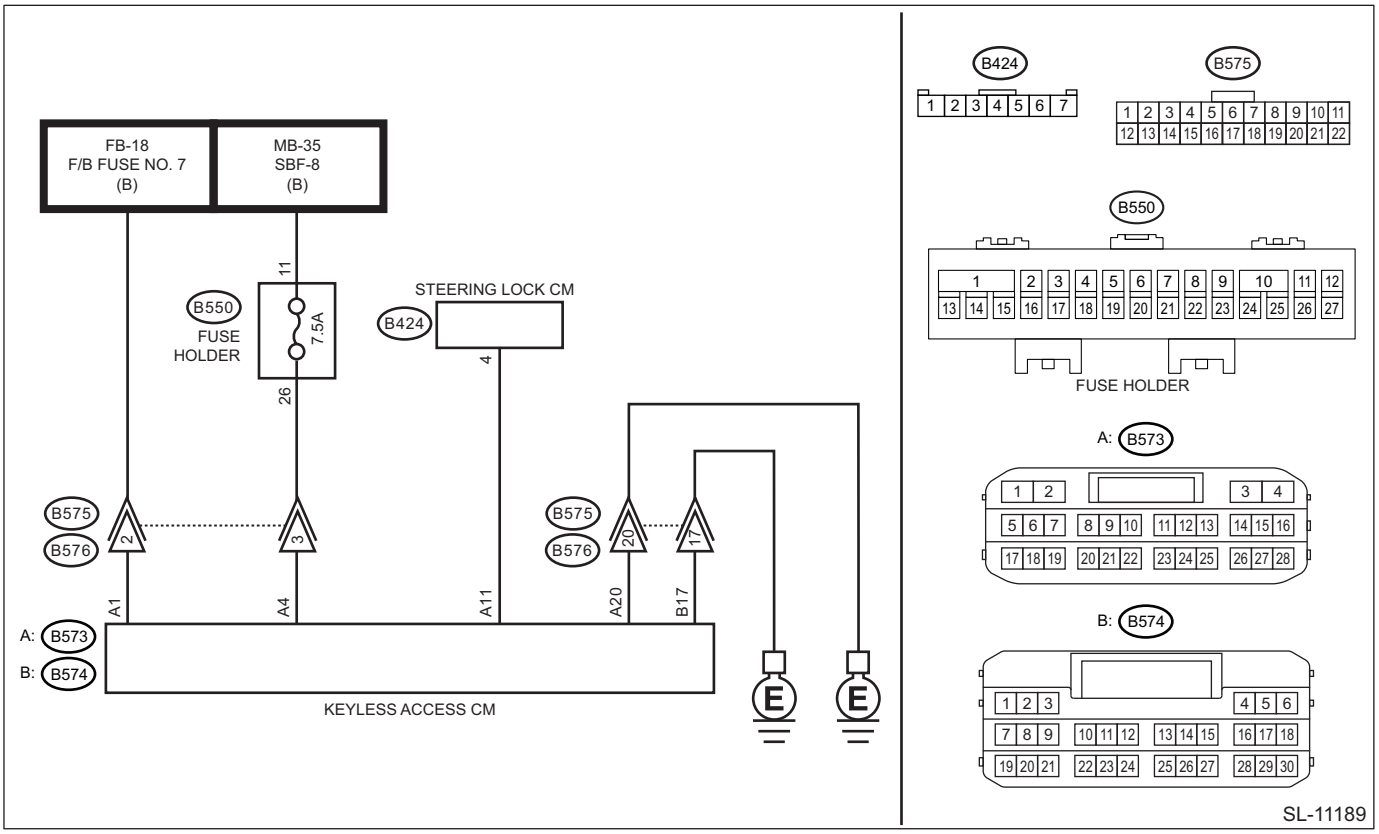
Trouble symptom:

- There are conditions when the steering lock is not released.
- Engine will not start.

CAUTION:
• For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>
• Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed?	Perform the diagnosis of DTC B2785. <Ref. to KPS(diag)-95, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> When locked: • «Lock side sensor status»: ON • «Unlock side sensor status»: OFF • «Lock confirmation»: Confirmed • «Unlock confirmation»: Not confirmed When unlocked: • «Lock side sensor status»: OFF • «Unlock side sensor status»: ON • «Lock confirmation»: Not confirmed • «Unlock confirmation»: Confirmed NOTE: To lock the steering lock, turn off the power supply, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Go to step **4**.	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>
4	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> When locked: • «Steering unlock SW»: OFF When unlocked: • «Steering unlock SW»: ON NOTE: To lock the steering lock, turn off the power supply, and open → close, or close → open the driver's door. To unlock the steering lock, turn the ignition switch to ACC ON or IGN ON.	Are the readings as shown on the left according to the steering lock status?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **5**.
5	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
6	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **7**.	Check the power supply circuit.
7	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
8	**CHECK HARNESS.** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 4 — Chassis ground:***	Does the following occur? Steering lock: 10 kΩ or more → Steering unlock: less than 1 Ω	Go to step **9**.	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>
9	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(B573) No. 11 — (B424) No. 4:***	Is the resistance less than 1 Ω?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 11 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the short circuit of the harness.

P: DTC B2286 ENGINE SPEED SIGNAL(WITHOUT Auto Start Stop)

DTC detecting condition:

When any of the following continued for 20 seconds on the model without Auto Start Stop while the ignition switch is ON.

- The engine speed signal of direct line is less than 200 rpm, and also the engine speed signal of CAN is 1000 rpm or more.
- The engine speed signal of direct line is 1000 rpm or more, and also the engine speed signal of CAN is less than 200 rpm.

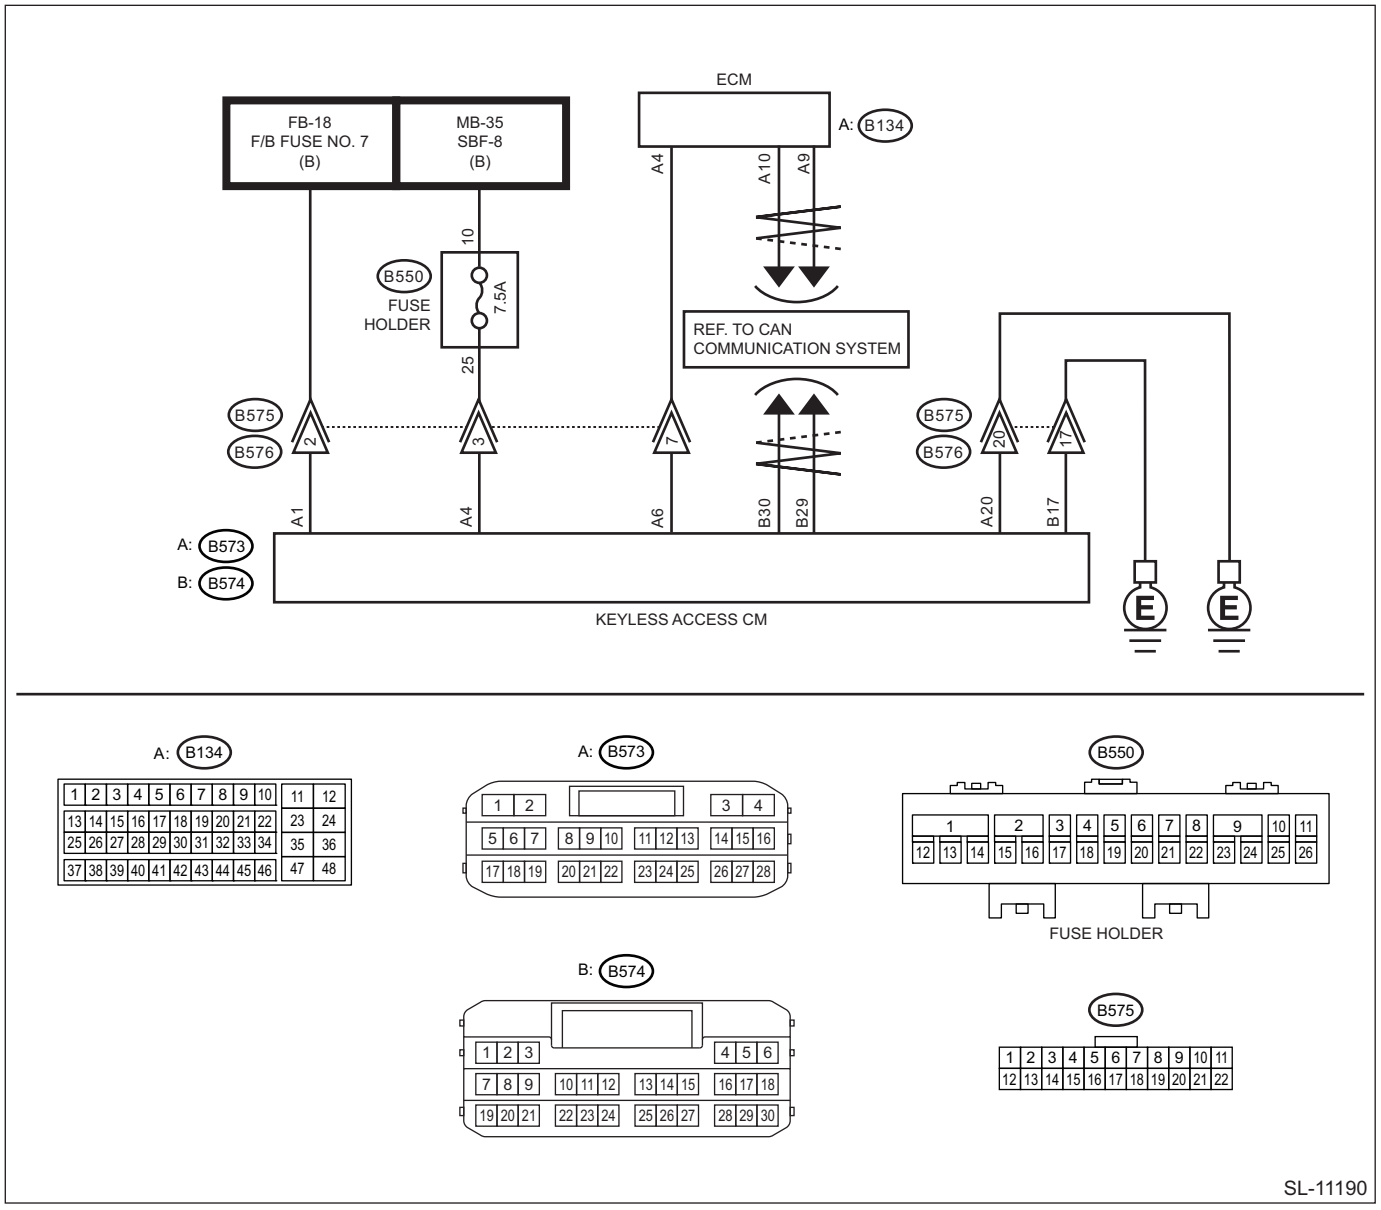
CAUTION:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

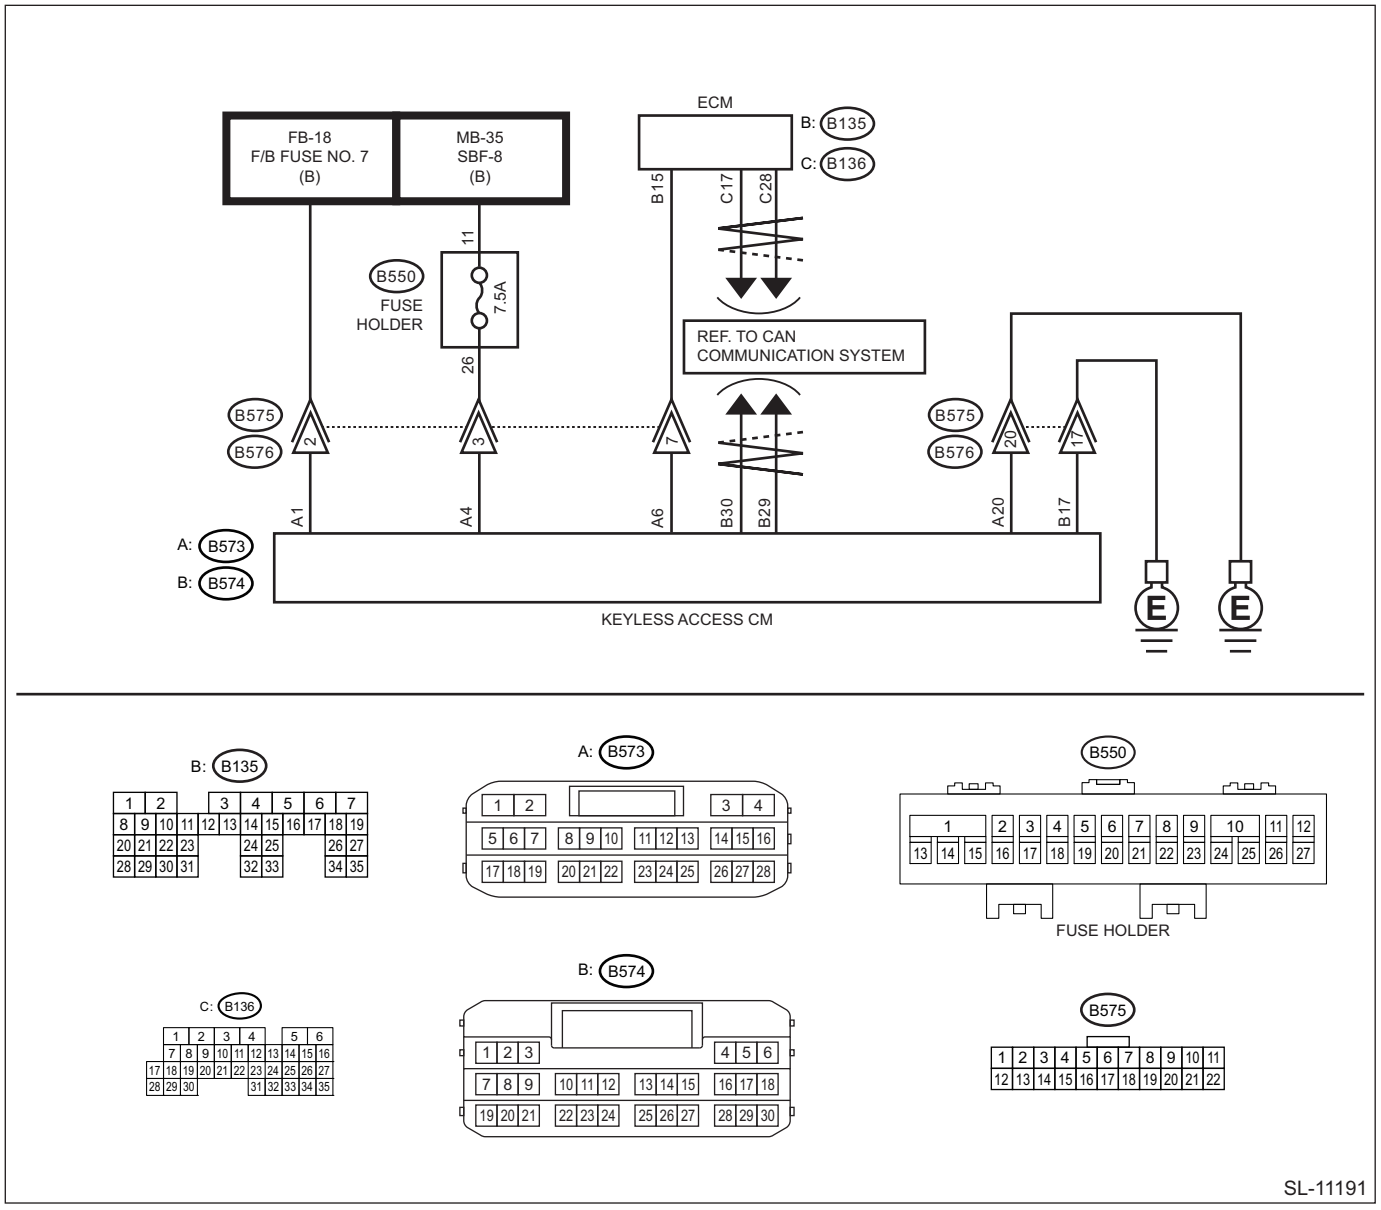
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ



SL-11191

Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK COMBINATION METER.** Confirm that the speedometer is displayed normally.	Is the display of combination meter OK?	Go to step **3**.	Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>

	Step	Check	Yes	No
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> «Engine speed»	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***Engine type: FA*** ***(B573) No. 6 — (B134) No. 4:*** ***Engine type: EJ*** ***(B573) No. 6 — (B135) No. 15:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 6 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>

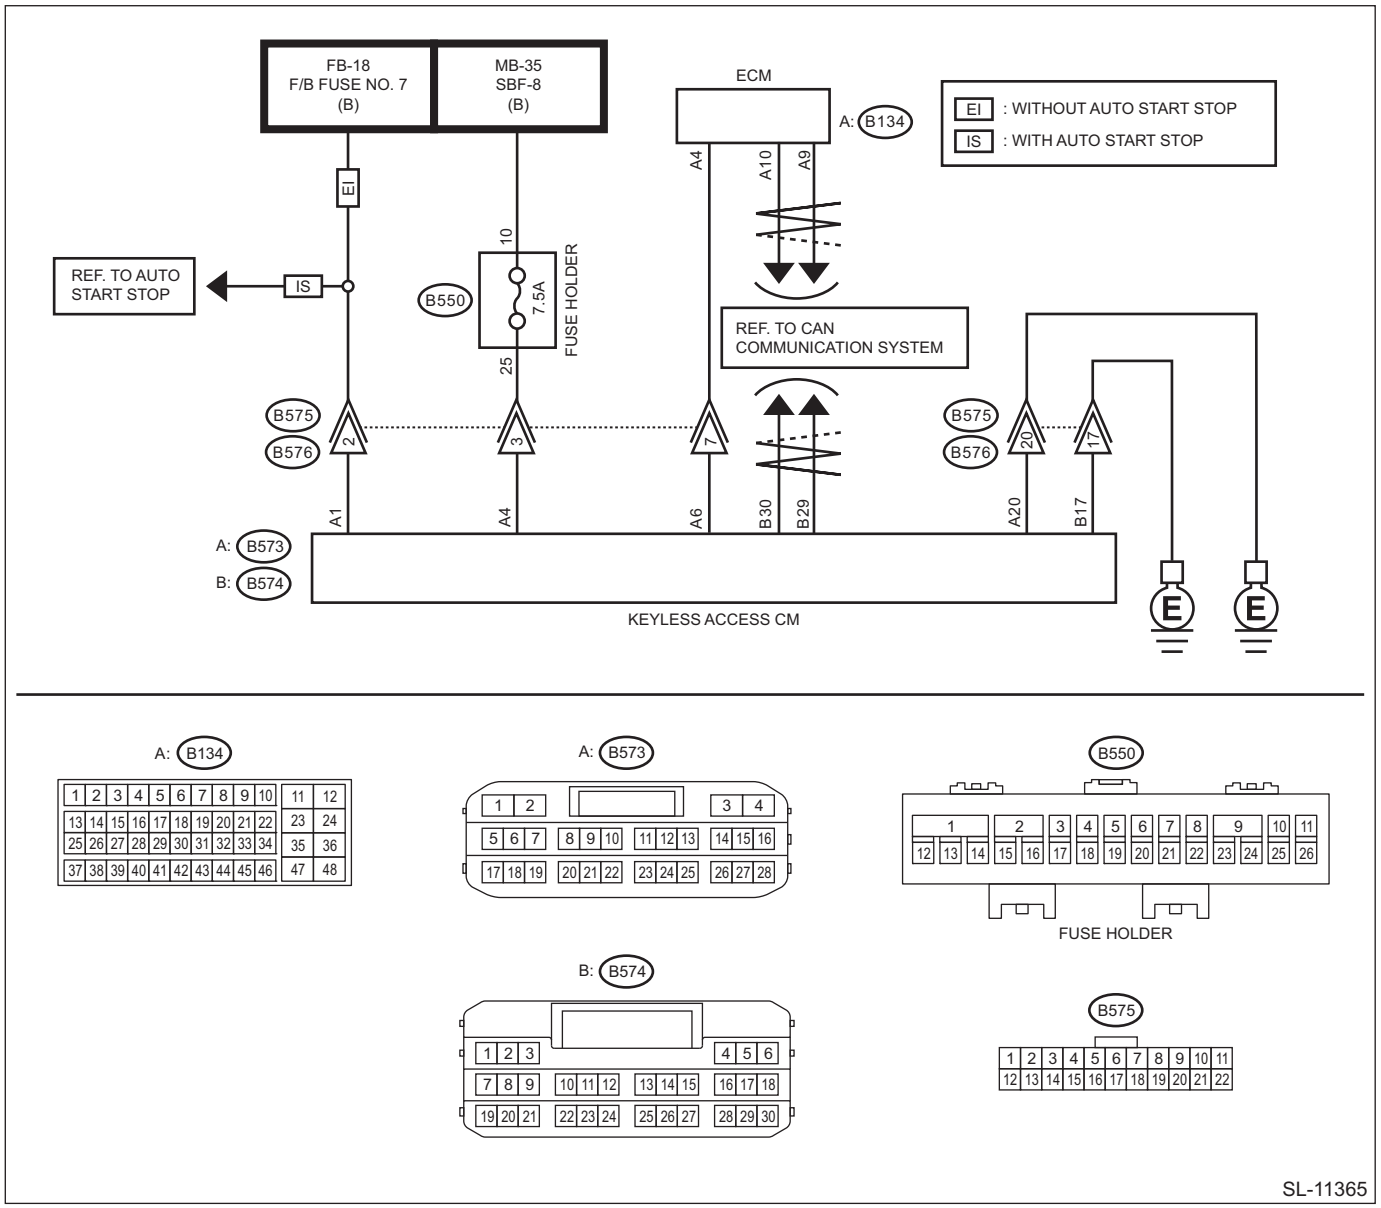
Q: DTC B228A ENGINE SPEED SIGNAL(WITH Auto Start Stop)

DTC detecting condition:

When any of the following continued for 20 seconds on the model with Auto Start Stop while the ignition switch is ON.

- The engine speed signal of direct line is less than 200 rpm, and also the engine speed signal of CAN is 1000 rpm or more.
- The engine speed signal of direct line is 1000 rpm or more, and also the engine speed signal of CAN is less than 200 rpm.

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.

	Step	Check	Yes	No
2	**CHECK COMBINATION METER.** Confirm that the speedometer is displayed normally.	Is the display of combination meter OK?	Go to step **3**.	Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> «Engine speed»	Can the data be read normally?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the ECM connector. 3) Using a tester, measure the resistance between the keyless access CM connector and ECM connector. ***Connector & terminal*** ***(B573) No. 6 — (B134) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**CHECK HARNESS.** 1) Connect the keyless access CM connector and ECM connector. 2) Using an oscilloscope, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 6 — Chassis ground:***	Does the pulse stop when the engine is stopped, and does the pulse generate when the engine is started?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Perform the diagnosis for the engine. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>

R: DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION

DTC detecting condition:
When any of the following is established upon the remote engine starter registration, or the remote engine starter operation.
- No response from the remote engine starter (including retrying).
- Code communication mismatch with the remote engine starter (including retrying).

Trouble symptom:
Remote engine starter does not function.

CAUTION:
• For replacement procedure of the remote engine starter, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**REGISTER THE REMOTE ENGINE STARTER.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Perform remote engine starter registration using the Subaru Select Monitor. (Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.) NOTE: When the registration failed, refer to "Correspondence table when registration is not possible" in "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2779 displayed? (Current malfunction)	Replace the remote engine starter.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

S: DTC B2781 STEERING LOCK CM CONTROL CIRCUIT

DTC detecting condition:
When any of the following is established.
- When the sensor for steering lock position (in steering lock CM) is faulty.
- When the steering lock motor driver (in steering lock CM) is short-circuited.
- When the steering lock motor driver (in steering lock CM) is open-circuited.

Trouble symptom:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
• For replacement procedure of steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

NOTE:
When all ECMs connected to collation system LIN bus cannot communicate with the keyless access CM, DTC B2785 is output. <Ref. to KPS(diag)-95, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Perform the diagnosis of DTC B2785. <Ref. to KPS(diag)-95, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>

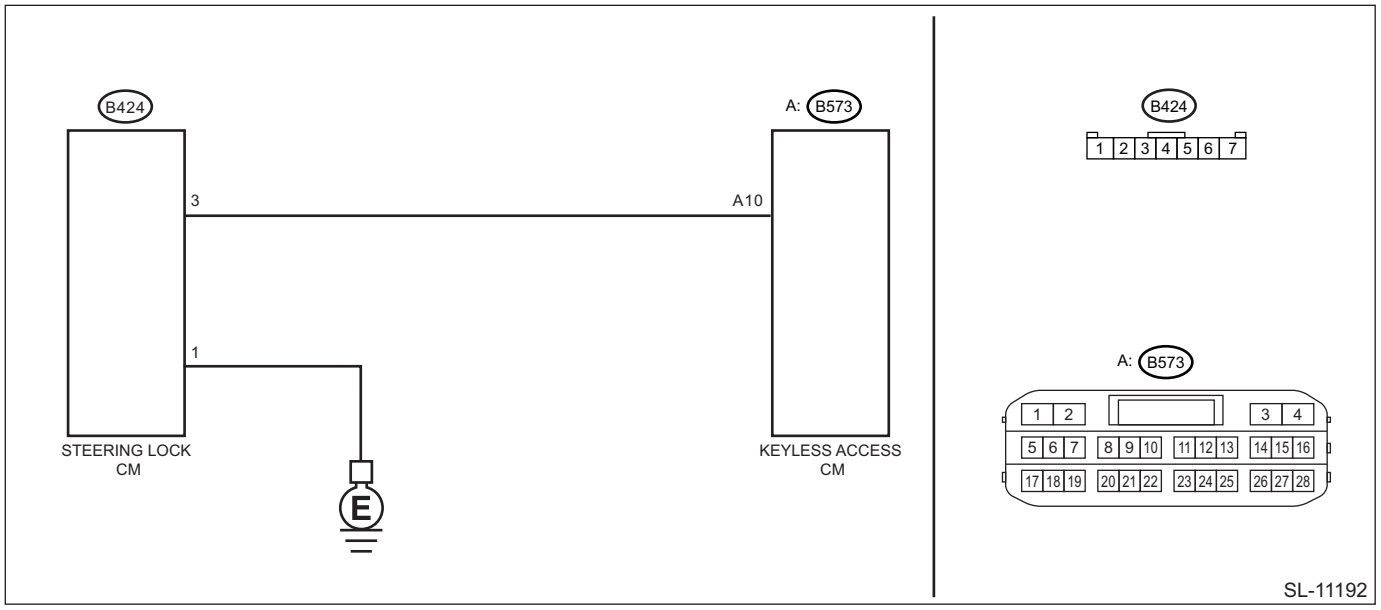
T: DTC B2782 STEERING LOCK DRIVE REQUEST SIGNAL CORRELATION

DTC detecting condition:
When any of the following is established.
- Motor power supply terminal (SLR + terminal) is short-circuited.
- Motor power supply terminal (SLR + terminal) is open-circuited.

Trouble symptom:
- The steering lock cannot be released.
- Engine will not start.

CAUTION:
• For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM connector. 2) Set to ACC OFF, IGN OFF, and shift position P (CVT model). 3) Using a tester, open the door, and measure the voltage between terminals of steering lock CM connector when the steering lock motor is driven. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Does the voltage change as follows? 1 V or less (when the steering lock motor is in operation) → 11 — 14 V (when the steering lock motor is not in operation)	Go to step **3**.	Go to step **4**.
3	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Turn the ignition switch to OFF. 4) Disconnect the battery ground cable and reconnect it, and then clear the abnormal information displayed on the data monitor. 5) Turn the ignition switch to ON. 6) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2782 displayed? (Current malfunction)	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
4	**CHECK CONNECTOR.** 1) Disconnect the steering lock CM connector. 2) Disconnect the keyless access CM connector. 3) Check each connector.	Is the check result OK?	Go to step **5**.	Repair or replace the connector.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between steering lock CM connector and keyless access CM connector. ***Connector & terminal*** ***(B573) No. 10 — (B424) No. 3:***	Is the resistance less than 1 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the short circuit of the harness.

U: DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH)

DTC detecting condition:

When the keyless access CM received erroneous data for the antenna coil from the transponder key amplifier through the transponder communication (communication between keyless access CM — push button ignition switch) upon the transponder collation start operation.

Trouble symptom:

Power supply does not switch and engine does not start, even when the access key is pointed toward the vehicle.

CAUTION:

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the push button ignition switch connector. 2) Disconnect the keyless access CM connector. 3) Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector. ***Connector & terminal*** ***(i150) No. 9 — (B574) No. 19:*** ***(i150) No. 10 — (B574) No. 22:*** ***(i150) No. 14 — (B574) No. 21:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **2**.	Repair or replace the open circuit of harness.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 14 — Chassis ground:*** ***(i150) No. 9 — Chassis ground:*** ***(i150) No. 10 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **3**.	Repair or replace the short circuit of the harness.
3	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2784 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Malfunction occurred in the push button ignition switch.

V: DTC B2785 LIN COMMUNICATION

DTC detecting condition:

When LIN communication error is detected three consecutive times.
(Communication cannot be received due to faulty such as ongoing power supply short or ground short of LIN communication bus and consecutive noise occurrence to the LIN communication bus)

Trouble symptom:

The keyless access function may not be operable.

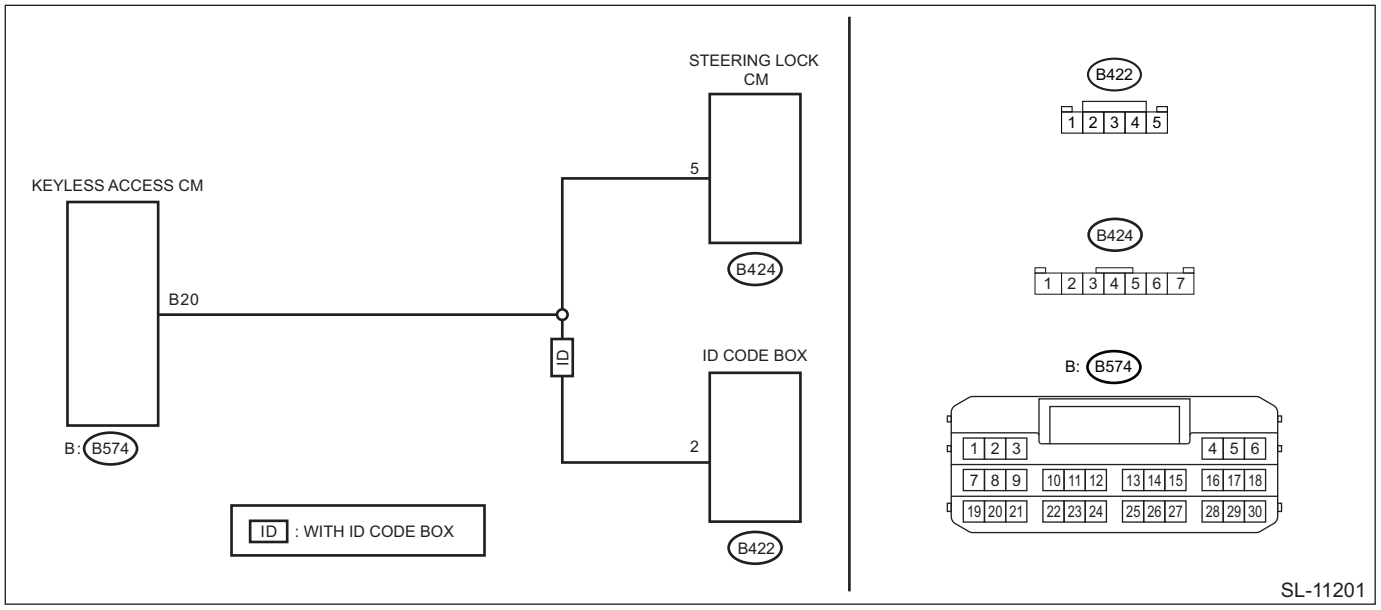
CAUTION:

• For replacement procedure of keyless access CM, steering lock CM and ID code box, refer to "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Disconnect the ID code box connector. (With ID code box) 4) Using a tester, measure the resistance between the keyless access CM connector and the steering lock CM connector or the ID code box connector (with ID code box). ***Connector & terminal*** ***(B574) No. 20 — (B424) No. 5:*** ***(B574) No. 20 — (B422) No. 2: (with ID code box)***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector, the steering lock CM connector or the ID code box connector (with ID code box) and chassis ground. ***Connector & terminal*** ***(B574) No. 20 — Chassis ground:*** ***(B424) No. 5 — Chassis ground:*** ***(B422) No. 2 — Chassis ground: (with ID code box)***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK DTC.** 1) Connect the keyless access CM connector only. 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **5**.
5	**CHECK ID CODE BOX.** NOTE: For model without ID code box, go to the next step. 1) Connect the ID code box. 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Replace the ID code box. <Ref. to SL-100, ID Code Box.>	Go to step **6**.
6	**CHECK STEERING LOCK CM.** 1) Connect the steering lock CM. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

W: DTC B2786 STEERING LOCK CM COMMUNICATION

DTC detecting condition:

When the LIN transmission frame cannot be received for 10 consecutive seconds during the LIN bus Wake UP after being received once from the steering lock CM.

Trouble symptom:

The steering lock cannot be released.

CAUTION:

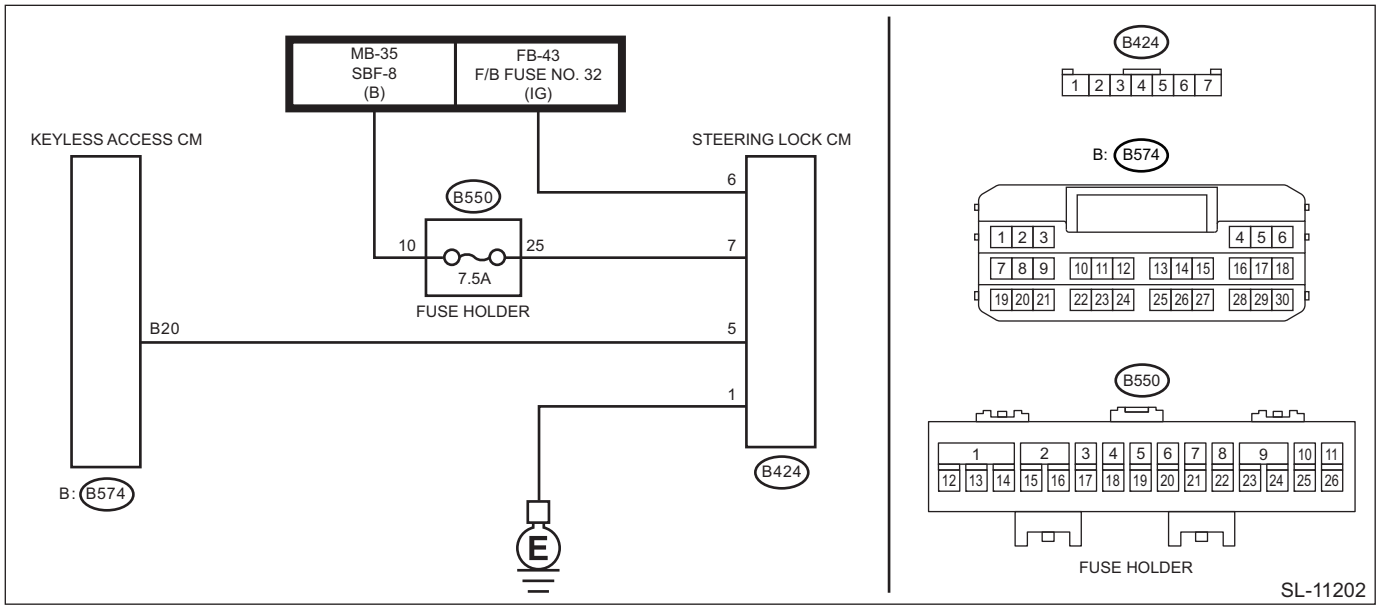
• For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is a DTC other than DTC B2786 displayed? (Current malfunction)	Perform the diagnosis of DTCs other than B2786.	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the steering lock CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal (B574) No. 20 — (B424) No. 5:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM and chassis ground. ***Connector & terminal*** ***(B574) No. 20 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** 1) Turn the ignition switch to ON. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 6 (+) — Chassis ground (–):*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **7**.
7	**CHECK STEERING LOCK CM.** 1) Turn the ignition switch to ON. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2786 displayed? (Current malfunction)	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

X: DTC B2788 IGN SIGNAL CORRELATION (STEERING LOCK CM)

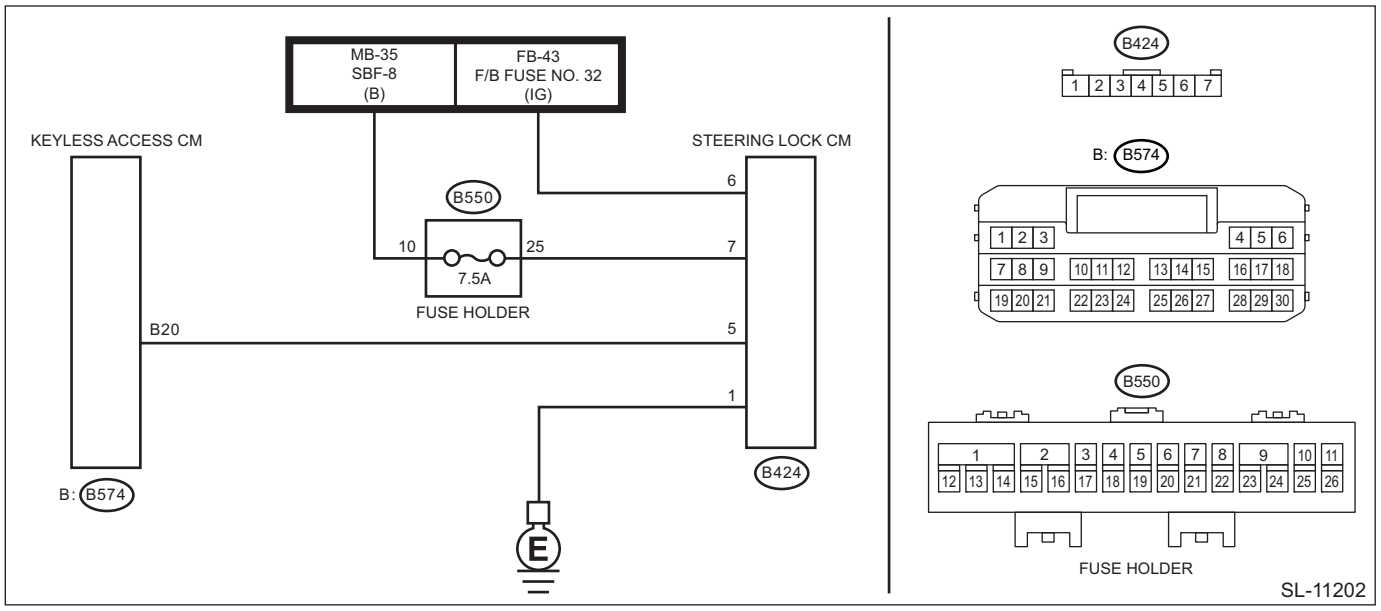
DTC detecting condition:
When mismatch of the ignition switch status of LIN communication and direct line continued for one second.
Trouble symptom:
The steering lock cannot be released.

CAUTION:
• For replacement procedure of keyless access CM and steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

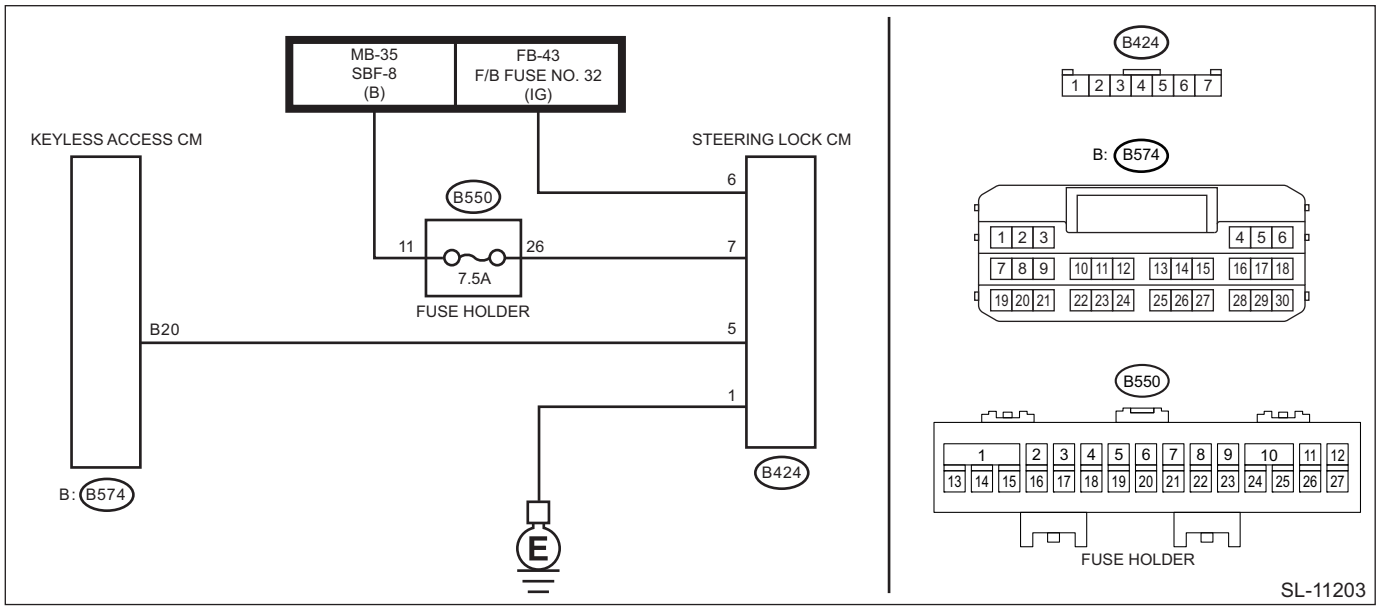
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
2	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «IGN1/2 relay monitor (drive output)»	Is the display normal according to the ignition switch operation?	Go to step **3**.	Go to step **5**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the resistance between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS.** 1) Connect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector terminals. ***Connector & terminal*** ***(B424) No. 6 (+) — (B424) No. 1 (–):***	Is the voltage 11 — 14 V with IG ON? Is the voltage less than 1 V with IG OFF?	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Check the DC power supply circuit.
5	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2271 displayed? (Current malfunction)	Perform the diagnosis of DTC B2271. <Ref. to KPS(diag)-56, DTC B2271 IGN RELAY CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

Y: DTC B2789 ID CODE BOX COMMUNICATION

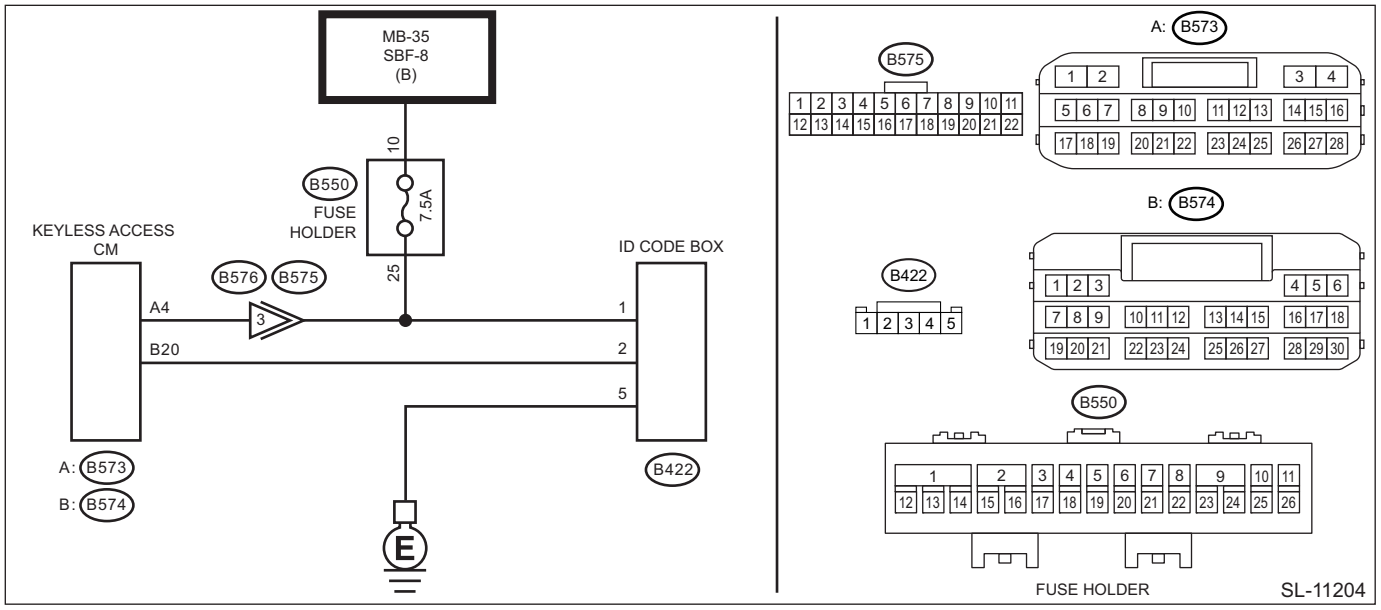
DTC detecting condition:
When the LIN transmission frame cannot be received for 10 consecutive seconds during the LIN bus Wake UP after being received once from the ID code box.

Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of keyless access CM and ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (GROUND SHORT CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 20 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **3**.	Repair or replace the short circuit of the harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the ID code box connector. 2) Using a tester, measure the resistance between the keyless access CM connector and the ID code box connector. ***Connector & terminal*** ***(B574) No. 20 — (B422) No. 2:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 5 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS.** Using a tester, measure the voltage between ID code box connector and chassis ground. ***Connector & terminal*** ***(B422) No. 1 (+) — Chassis ground (–):***	Is the voltage 11 — 14 V?	Go to step **6**.	Repair or replace the faulty portion of the power supply circuit.
6	**CHECK ID CODE BOX.** 1) Turn the ignition switch to ON. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2789 displayed? (Current malfunction)	Replace the ID code box. <Ref. to SL-100, ID Code Box.>	Go to step **7**.

Step		Check	Yes	No
7	**CHECK ID CODE BOX.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2785 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Z: DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT

DTC detecting condition:

Transponder power supply (VC5 terminal) short circuit to ground upon the transponder collation start operation.

(Short circuit to ground is determined when transponder power supply (VC5 terminal) output level is judged as "L" level while monitored in the keyless access CM when the transponder power supply (VC5 terminal) outputs "H" level.)

Trouble symptom:

Engine does not start even when the access key is pointed toward the vehicle.

CAUTION:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>

	Step	Check	Yes	No
1	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Take the access key out of the passenger room. 3) Using an oscilloscope, measure the waveform between he push button ignition switch connectors. (Waveform within 30 seconds after the push button ignition switch is pressed) ***Connector & terminal*** ***(i150) No. 14 — (i150) No. 8:*** 	Is the waveform shown in the left column displayed?	Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>	Go to step **2**.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the push button ignition switch connector. 3) Using a tester, measure the resistance between the push button ignition switch connector and the keyless access CM connector. ***Connector & terminal*** ***(i150) No. 14 — (B574) No. 21:*** ***(i150) No. 8 — (B574) No. 24:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 21 — Chassis ground:*** ***(B574) No. 24 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B278A displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

AA:DTC B278B CAN CONTROL MODULE STUCK

DTC detecting condition:
When mismatch is detected two consecutive times for every Wake Up of the microcomputer after the mismatch of the data written into the CAN check-targeted resistor and the read data is detected after resetting. (When mismatch is detected three consecutive times in total: once at resetting + twice at microcomputer Wake UP)

Trouble symptom:
Operation is performed using the previous value information as true. However, basically the system becomes inoperative.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC B278D ID CODE BOX JUDGMENT CIRCUIT

DTC detecting condition:
When the key is unregistered with the keyless access CM, the harness for the ID code BOX presence judgment is not connected, and also ID code BOX LIN response is present.

Trouble symptom:
Initial registration for the access key is not possible.

CAUTION:

- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Turn the ignition switch to OFF → ON. 4) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B278D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Measure the resistance between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 18 — Chassis ground:***	Is the resistance less than 1 Ω?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the open circuit of harness.

AC:DTC B2790 ID CODE BOX CIRCUIT

DTC detecting condition:
When EEPROM writing is not possible, or there is no reading response.
Trouble symptom:
Engine will not start.

CAUTION:
• For replacement procedure of ID code box, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Turn the ignition switch to OFF → ON. 4) Register the ID code box. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume. 5) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2790 displayed? (Current malfunction)	Replace the ID code box. <Ref. to SL-100, ID Code Box.>	ID code box registration was not performed properly.

AD:DTC B2793 BACKUP POWER

DTC detecting condition:
When +B power supply (SUB) input of less than 9.5 V continued for 10 seconds, when the ignition switch is turned ON. (Voltage is checked at one second intervals)

Trouble symptom:
None

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:
Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

	Step	Check	Yes	No
1	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «ECM power supply voltage (back-up)»	Is «ON» displayed?	Go to step **2**.	Go to step **3**.
2	**CHECK DTC.** 1) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 2) Start the engine, and let it idle for 40 seconds or more. 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B2793 displayed? (Current malfunction)	Go to step **3**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
3	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **4**.	Replace the fuse. When the replaced fuse is blown immediately, check the power supply circuit for short-circuited.
4	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the open circuit of harness.

AE:DTC B27A1 DRIVER SIDE EXTERNAL ANTENNA OPEN

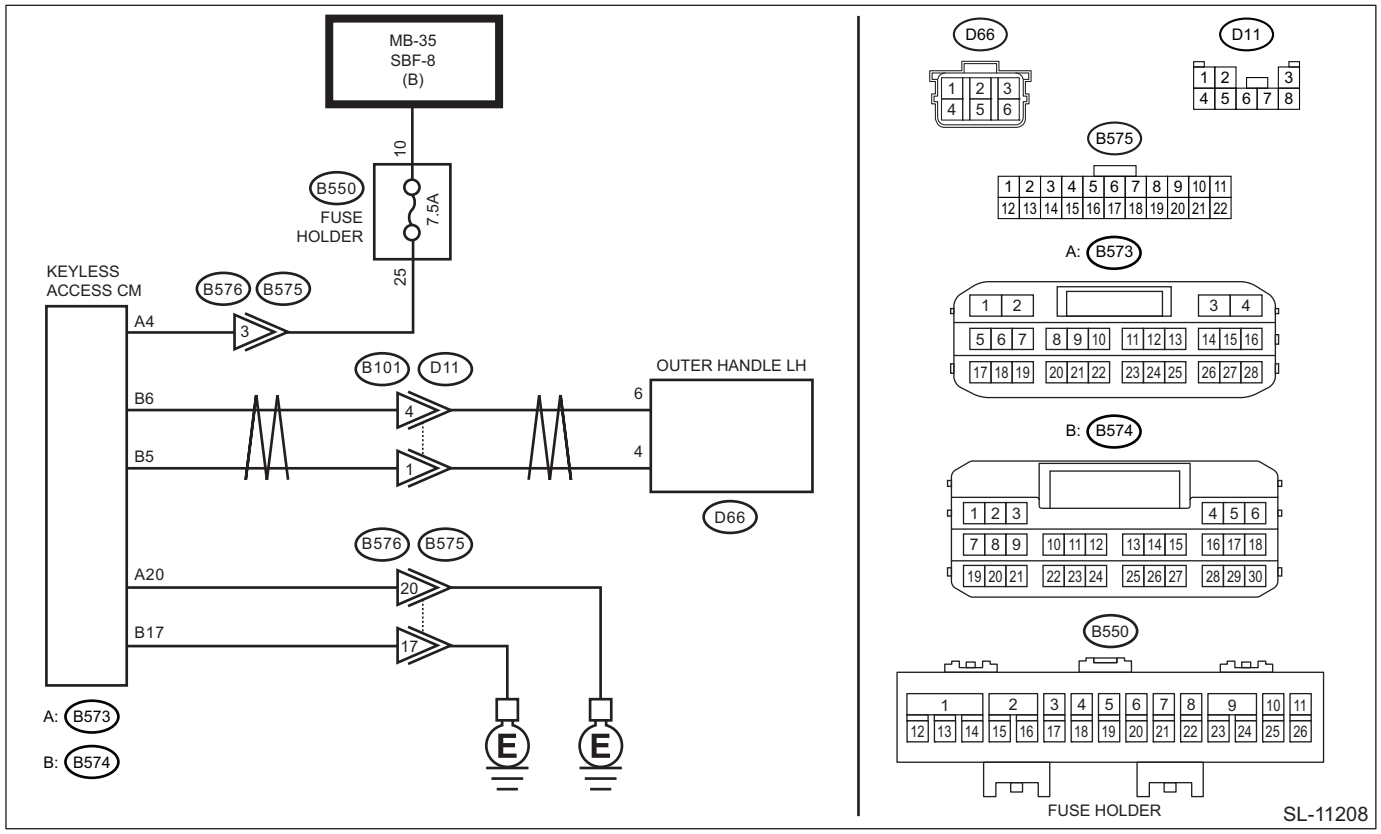
DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and driver's side front door outer handle antenna.

Trouble symptom:
The keyless access with push button start system does not operate.

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>

- Engine type: FA



- Engine type: EJ

	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 5 — (D66) No. 4:*** ***(B574) No. 6 — (D66) No. 6:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 5 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Step		Check	Yes	No
7	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the driver's side front door outer handle with the passenger's front door outer handle. <Ref. to SL-32, Front Outer Handle.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A1 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the driver's side front door outer handle. <Ref. to SL-32, Front Outer Handle.>

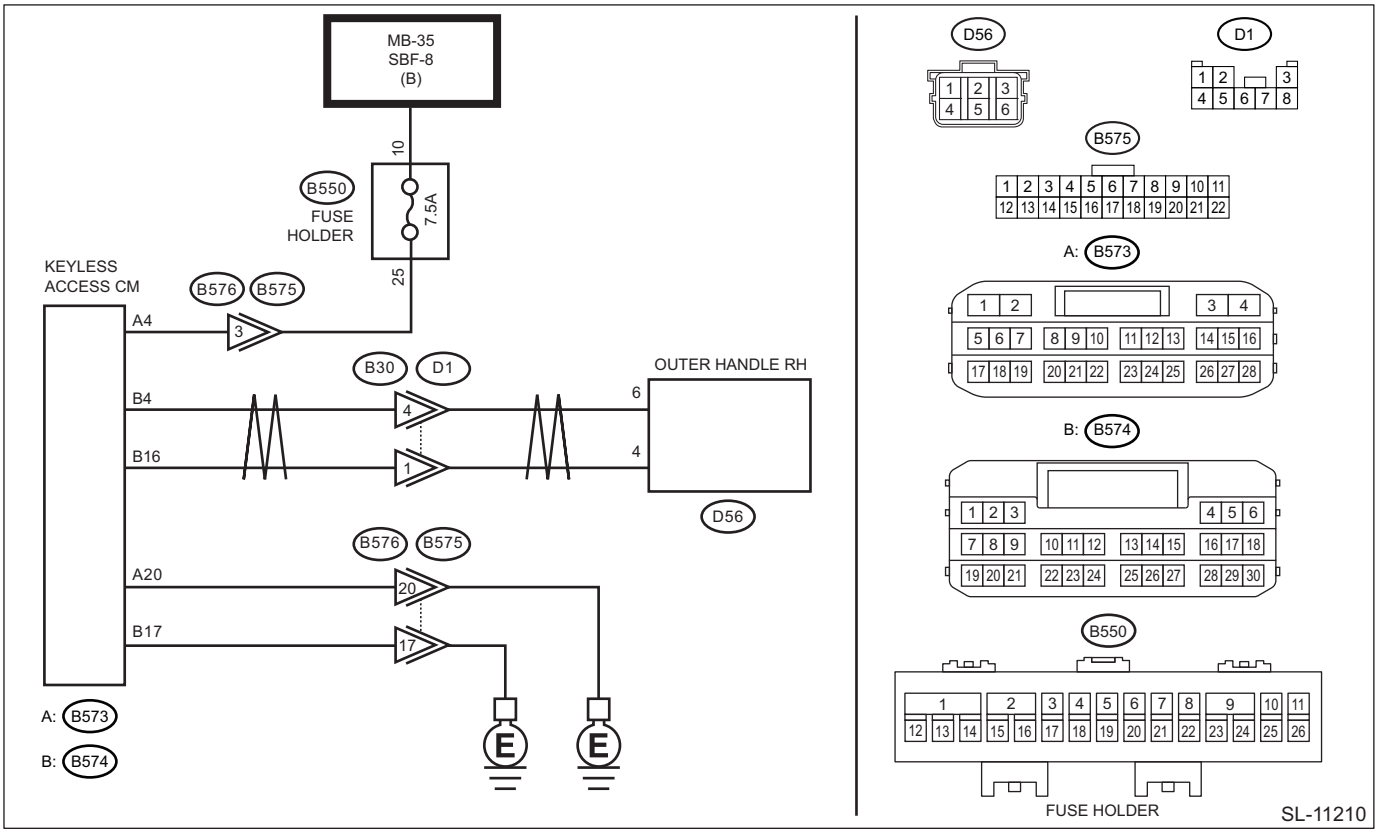
AF:DTC B27A2 PASSENGER SIDE EXTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and passenger's side front door outer handle antenna.

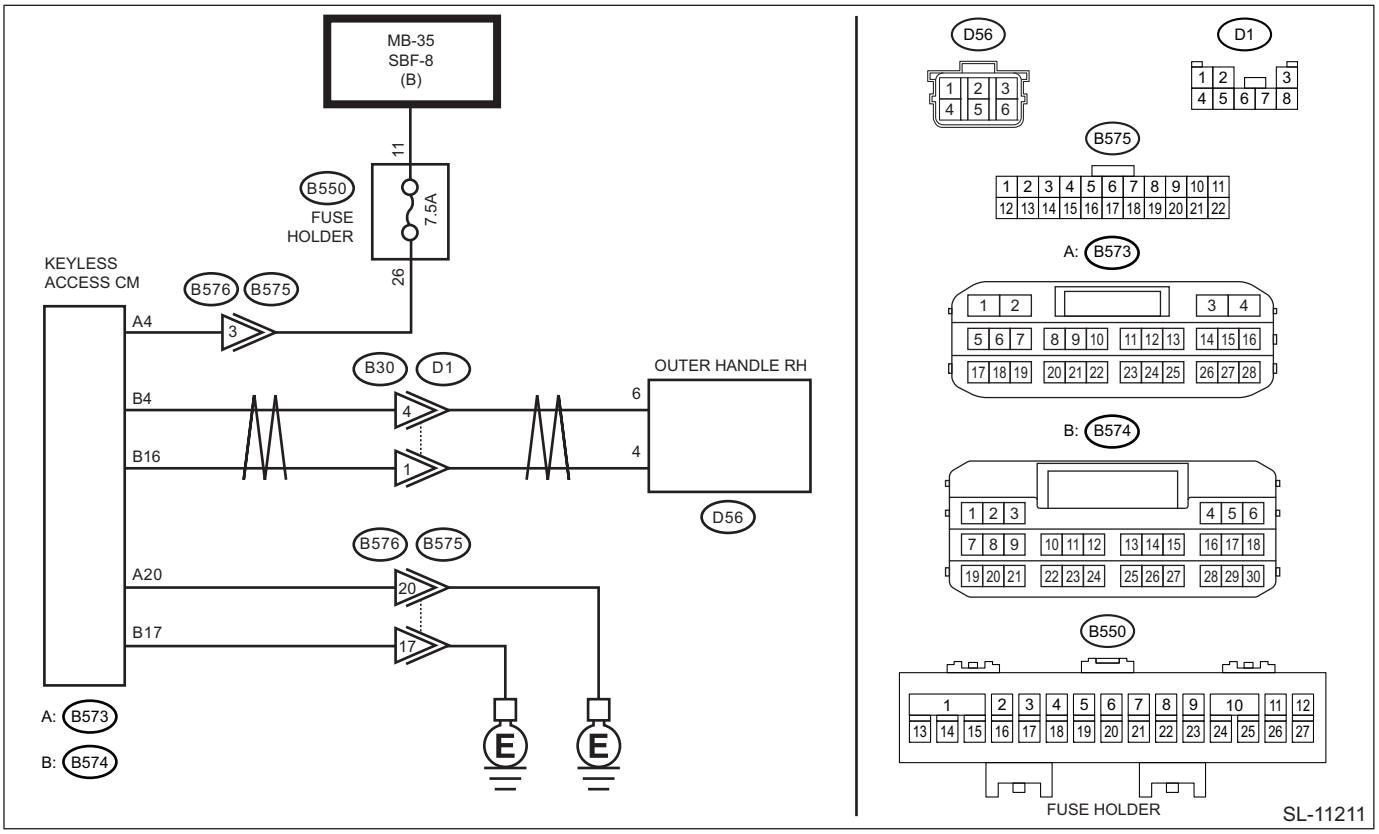
Trouble symptom:
The keyless access with push button start system does not operate.

CAUTION:
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>
- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front door outer handle connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front door outer handle connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — (D56) No. 6:*** ***(B574) No. 16 — (D56) No. 4:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

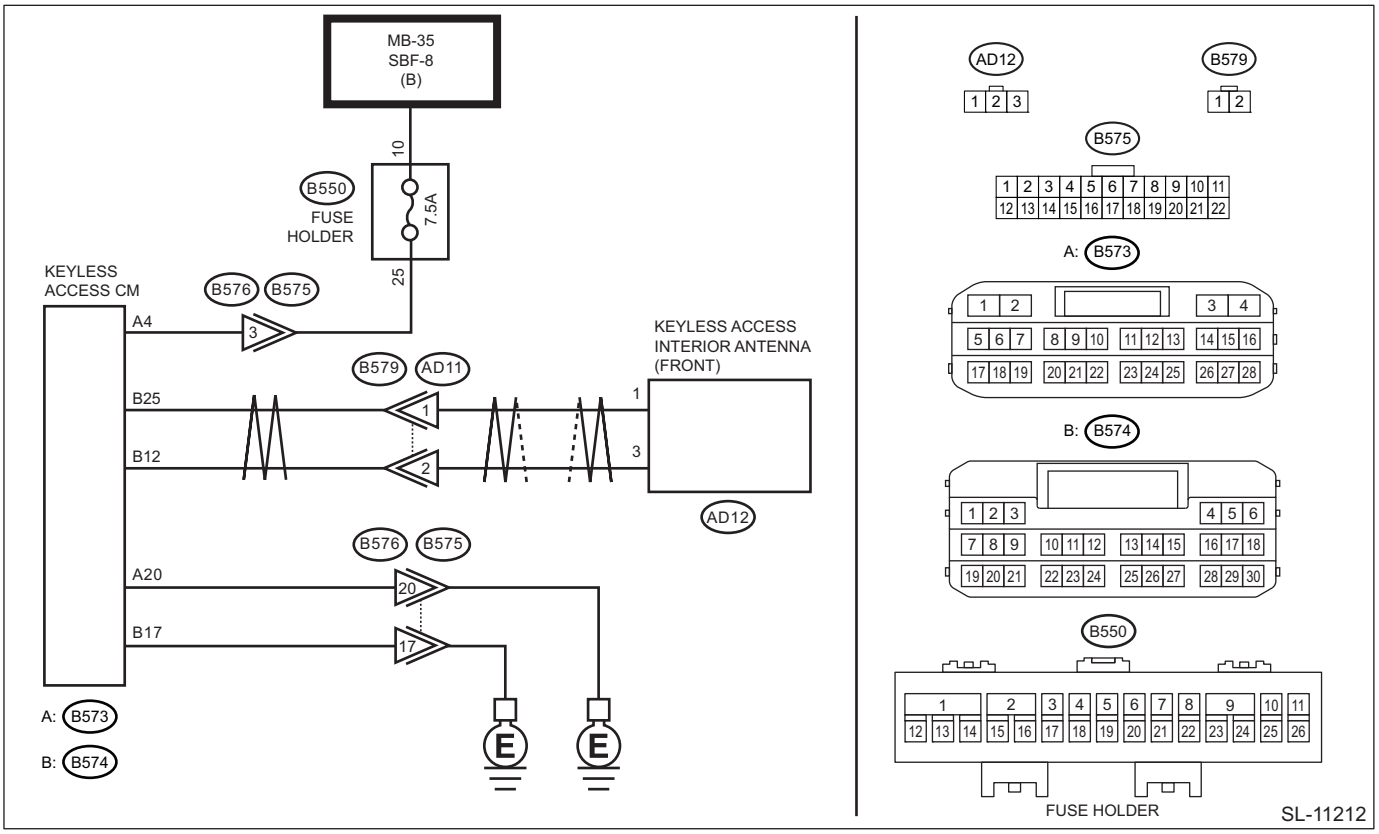
	Step	Check	Yes	No
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 16 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK FRONT DOOR OUTER HANDLE.** 1) Replace the passenger's side front door outer handle with the driver's front door outer handle. <Ref. to SL-32, Front Outer Handle.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A2 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the passenger's side front door outer handle. <Ref. to SL-32, Front Outer Handle.>

AG:DTC B27A5 FRONT INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and front interior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (When the access key is in the front area of the passenger room)

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>

- Engine type: FA



- Engine type: EJ

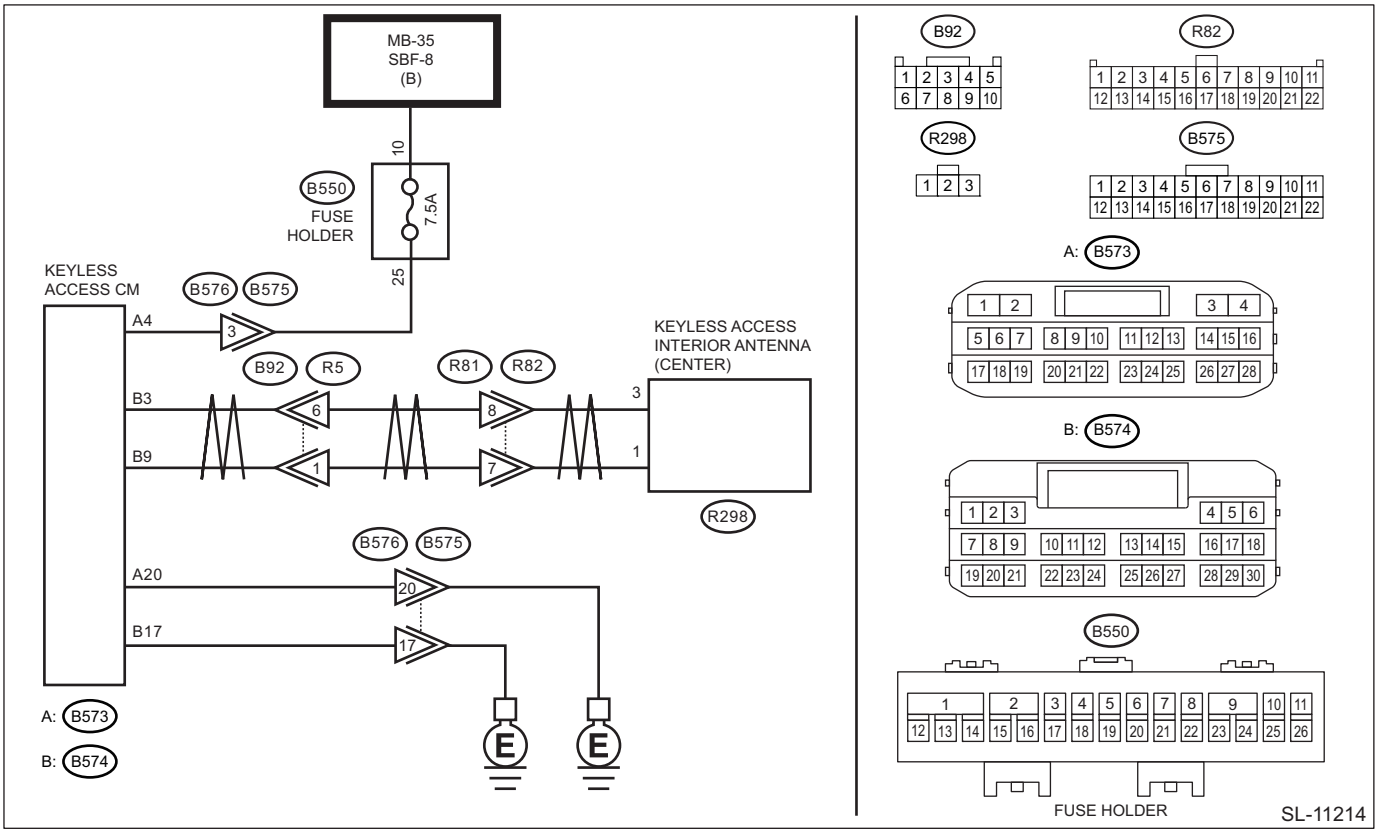
	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the front interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and front interior antenna connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 25 — (AD12) No. 1:*** ***(B574) No. 12 — (AD12) No. 3:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 25 — Chassis ground:*** ***(B574) No. 12 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Step		Check	Yes	No
7	**CHECK FRONT INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A5 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Malfunction occurred in the front interior antenna.

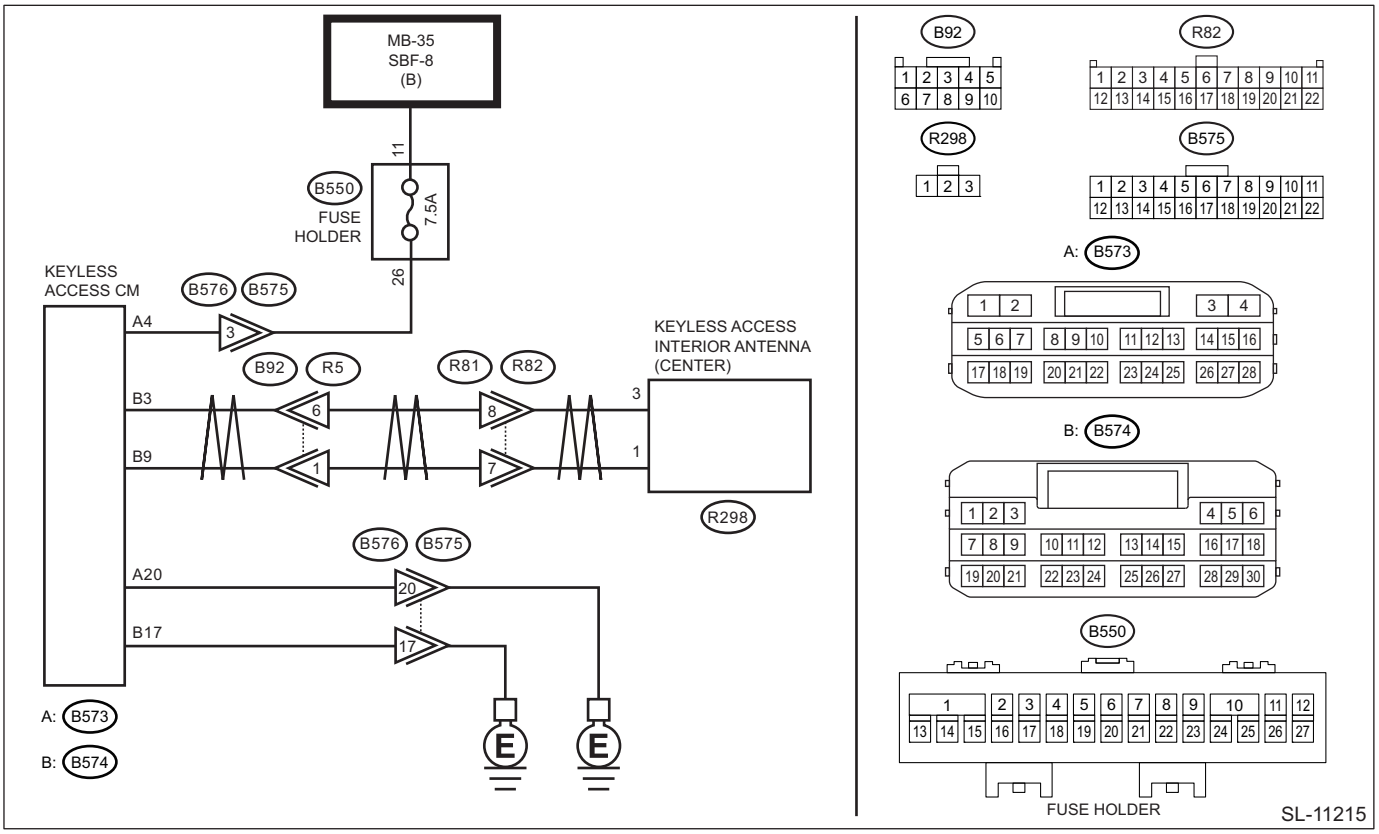
AH:DTC B27A6 REAR INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and center interior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (When the access key is in the rear area of the passenger room (near the seat))

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>
• Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the center interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and center interior antenna connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 9 — (R298) No. 1:*** ***(B574) No. 3 — (R298) No. 3:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

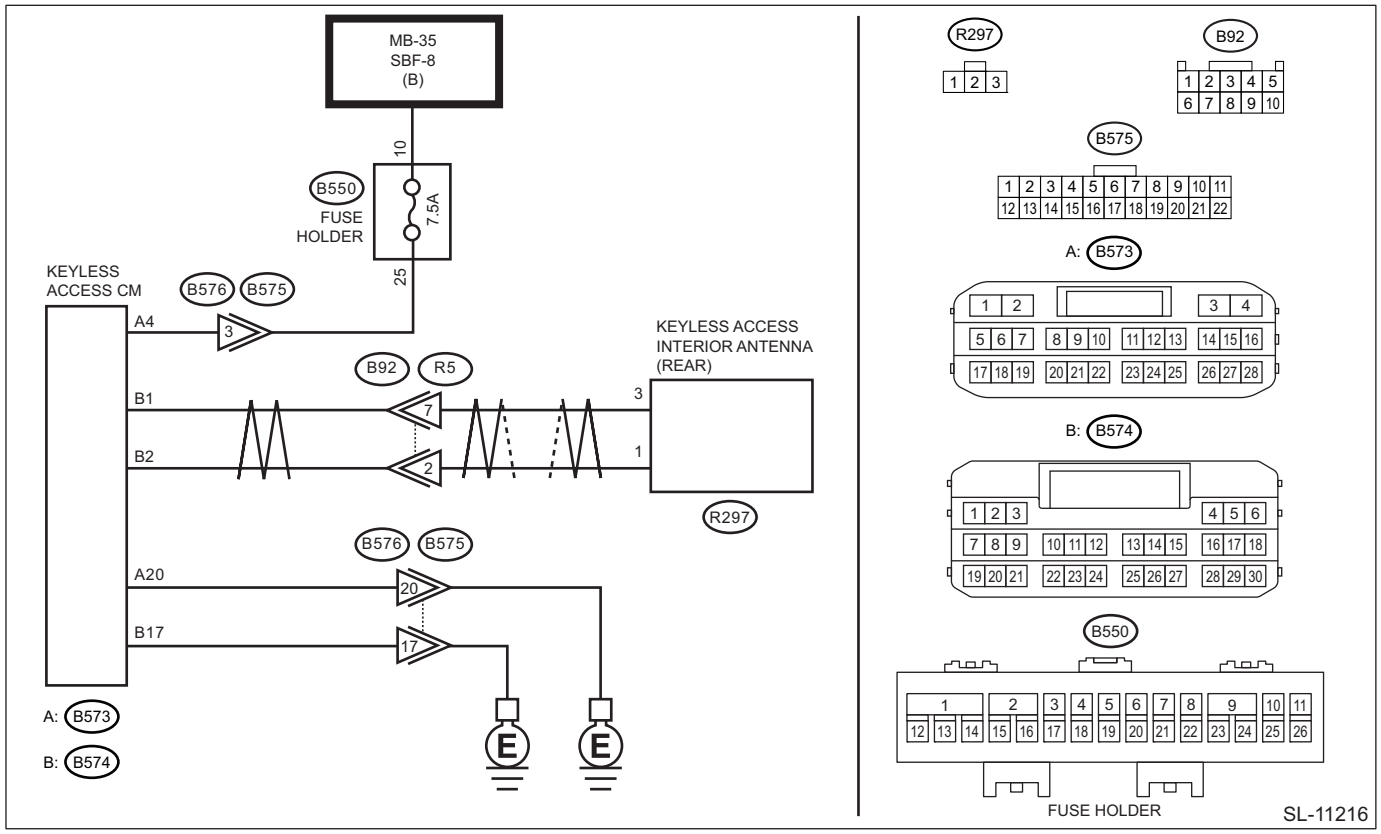
	Step	Check	Yes	No
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 9 — Chassis ground:*** ***(B574) No. 3 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK CENTER INTERIOR ANTENNA.** 1) Replace the center interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A6 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Malfunction occurred in the center interior antenna.

AI: DTC B27A7 TRUNK/REAR GATE INTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear interior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (When the access key is in the rear area of the passenger room (within trunk))

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>

- Engine type: FA



- Engine type: EJ

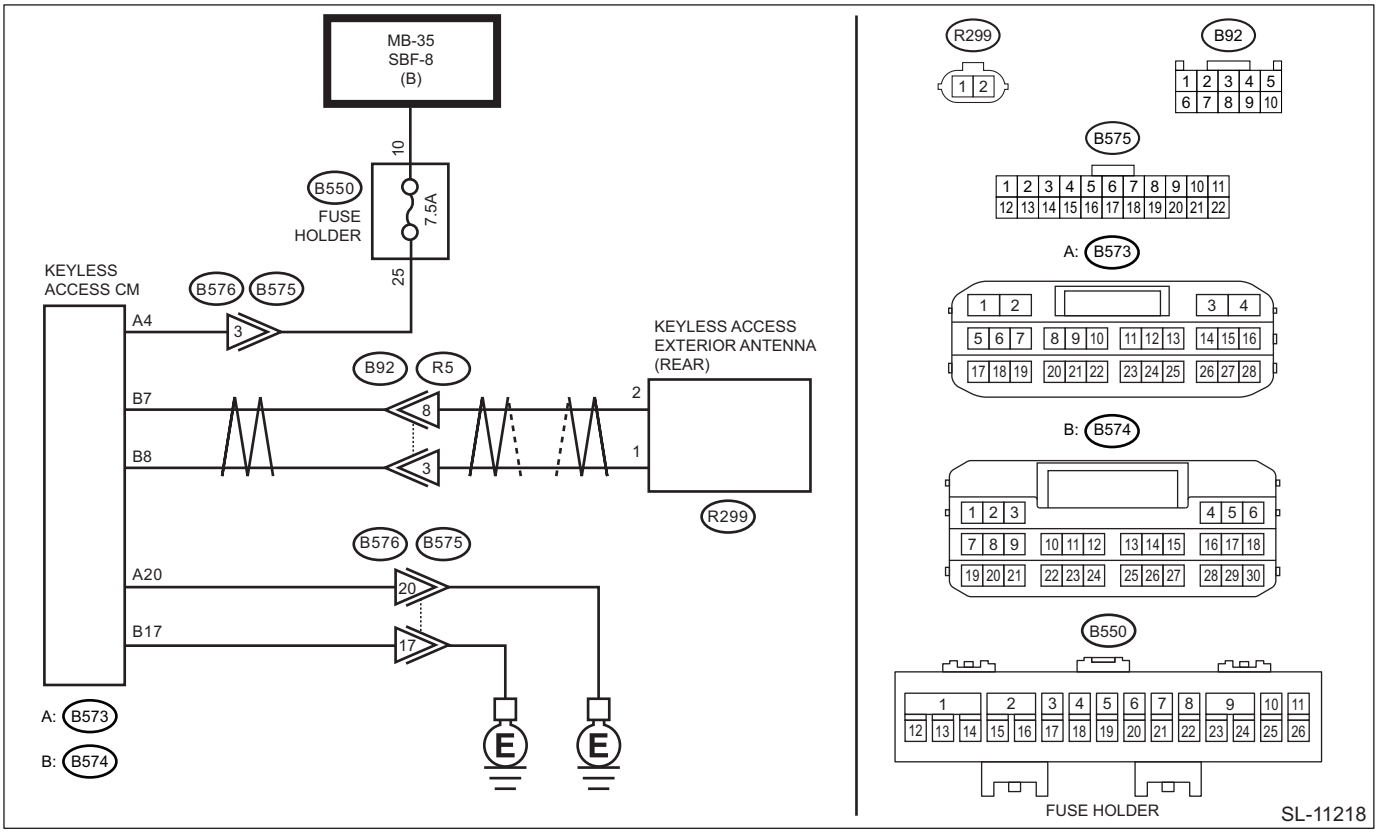
	Step	Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear interior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear interior antenna connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 2 — (R297) No. 1:*** ***(B574) No. 1 — (R297) No. 3:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 2 — Chassis ground:*** ***(B574) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

Step		Check	Yes	No
7	**CHECK REAR INTERIOR ANTENNA.** 1) Replace the rear interior antenna with the front interior antenna. <Ref. to SL-91, Keyless Access Indoor Antenna.> 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A7 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Malfunction occurred in the rear interior antenna.

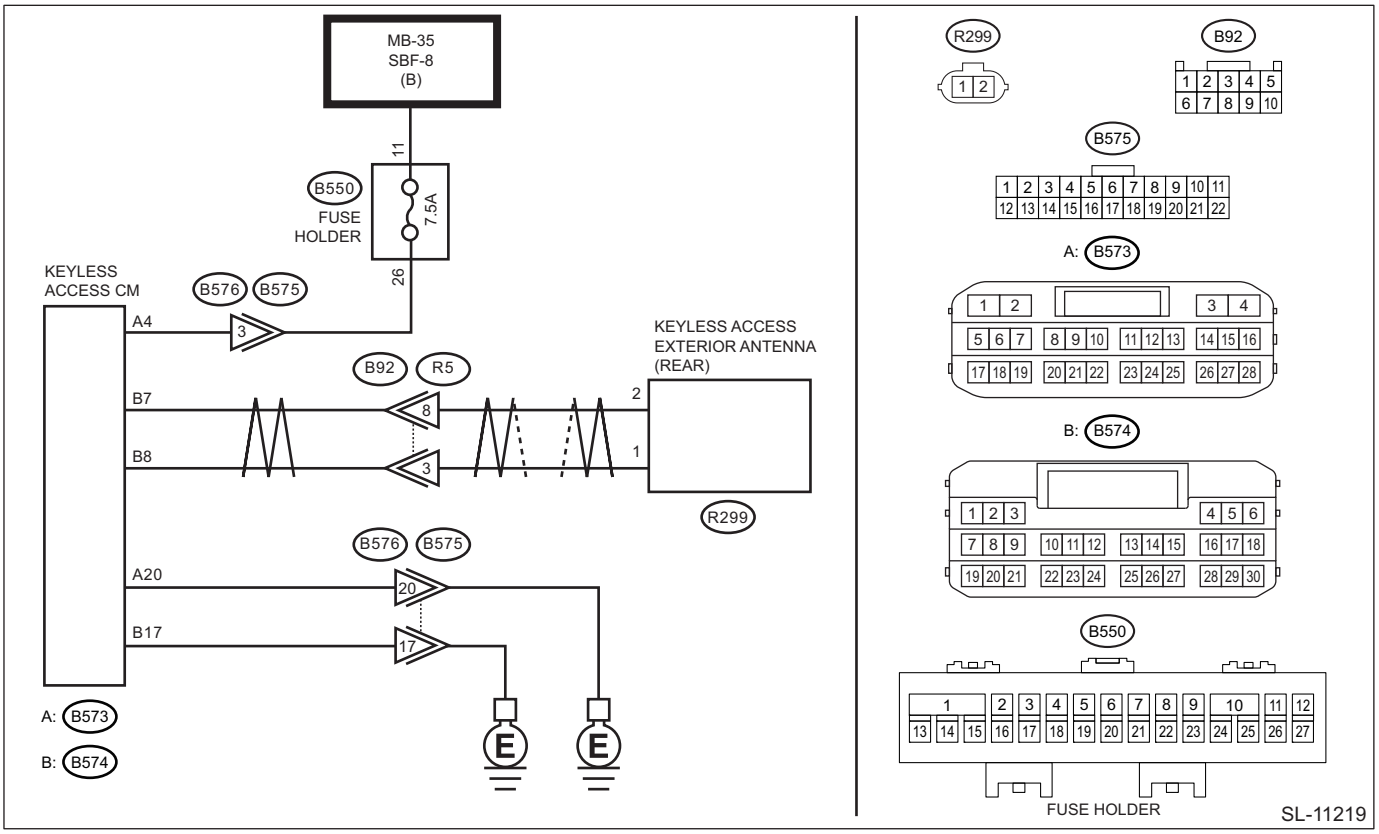
AJ:DTC B27A8 TRUNK/REAR GATE EXTERNAL ANTENNA OPEN

DTC detecting condition:
When open circuit occurs in the harness between keyless access CM and rear exterior antenna.
Trouble symptom:
The keyless access with push button start system does not operate. (Cannot unlock using the trunk opener button.)

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>
Wiring diagram:
Keyless access system <Ref. to WI-253, WIRING DIAGRAM, Keyless Access System.>
• Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK LAN SYSTEM.** Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **2**.	Perform the inspection according to the diagnosis for LAN system.
2	**CHECK CONNECTOR.** 1) Disconnect the keyless access CM connector. 2) Disconnect the rear exterior antenna connector. 3) Check the connector.	Is the check result OK?	Go to step **3**.	Repair or replace the connector.
3	**CHECK POWER SUPPLY CIRCUIT.** Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **4**.	Check the power supply circuit.
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and rear exterior antenna connector, and between keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 8 — (R299) No. 1:*** ***(B574) No. 7 — (R299) No. 2:*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 8 — Chassis ground:*** ***(B574) No. 7 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed? (Current malfunction)	Go to step **7**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
7	**CHECK REAR EXTERIOR ANTENNA.** 1) Short the antenna terminal of keyless access CM. ***Connector & terminal*** ***(B574) No. 8 — Chassis ground:*** ***(B574) No. 7 — Chassis ground:*** 2) Perform the clear memory for «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-44, Clear memory.> 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Is DTC B27A8 displayed? (Current malfunction)	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Malfunction occurred in the rear external antenna.

AK:DTC U0074 CONTROL MODULE COMMUNICATION BUS "BODY-CAN" OFF

DTC detecting condition:
When the bus off is detected by CAN function conforming to ISO11898 six consecutive times.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AL:DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

DTC detecting condition:
When the reception ID frame is not normally received for 10-consecutive seconds while the ignition switch is ON. (Including when the frame is cancelled due to DLC (data length code) check error)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AM:DTC U0101 LOST COMMUNICATION WITH TCM

DTC detecting condition:
When the reception ID frame is not normally received for 10-consecutive seconds while the ignition switch is ON. (Including when the frame is cancelled due to DLC (data length code) check error)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AN:DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

DTC detecting condition:
When the reception ID frame is not normally received for 10-consecutive seconds while the ignition switch is ON. (Including when the frame is cancelled due to DLC (data length code) check error)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AO:DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

DTC detecting condition:
When the reception ID frame is not normally received for 10-consecutive seconds during the CAN bus Wake up. (Including when the frame is cancelled due to DLC (data length code) check error)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AP:DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

DTC detecting condition:
When all of the following are established.
- Data no-receive DTC for the monitoring target node is not currently faulty.
- Failure detecting counter for the monitoring target node is not updated 32 consecutive times.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AQ:DTC U1140 LOST COMMUNICATION WITH BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
When the reception ID frame is not normally received for 10-consecutive seconds during the CAN bus Wake up. (Including when the frame is cancelled due to DLC (data length code) check error)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AR:DTC U1422 INVALID DATA RECEIVED FROM BODY CONTROL MODULE BODY-CAN

DTC detecting condition:
When all of the following are established.
- Data no-receive DTC for the monitoring target node is not currently faulty.
- Failure detecting counter for the monitoring target node is not updated 32 consecutive times.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

17.Diagnostics with Phenomenon

A: LIST

1. IMMOBILIZER SYSTEM

Symptoms	Note
Engine does not start	<Ref. to KPS(diag)-158, ENGINE DOES NOT START, INSPECTION, Diagnostics with Phenomenon.>
	<Ref. to KPS(diag)-94, DTC B2784 ANTENNA CIRCUIT (PUSH ENGINE SWITCH), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-104, DTC B278A PUSH ENGINE SWITCH POWER SUPPLY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-95, DTC B2785 LIN COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-101, DTC B2789 ID CODE BOX COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	<Ref. to KPS(diag)-107, DTC B2790 ID CODE BOX CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
	Check the brake switch. <Ref. to BR-118, INSPECTION, Stop Light Switch.>
	Check the parking switch signal. <Ref. to CS-57, INSPECTION, AT Shift Lock Solenoid and “P” Range Switch.>
	Check the DTC of the ECM.
Cannot register the immobilizer.	Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.
Engine does not start with the remote engine starter.	<Ref. to KPS(diag)-91, DTC B2779 REMOTE CONTROL ENGINE STARTER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. KEYLESS ACCESS SYSTEM

Symptoms	Reference
All doors cannot be locked/unlocked with keyless access.	<Ref. to KPS(diag)-127, KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock with keyless access from the driver’s door.	<Ref. to KPS(diag)-128, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the driver’s door with keyless access.	<Ref. to KPS(diag)-129, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the driver’s door with keyless access.	<Ref. to KPS(diag)-130, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot unlock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-134, CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock/unlock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-133, CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Cannot lock from the passenger’s door with keyless access.	<Ref. to KPS(diag)-131, CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER’S DOOR, INSPECTION, Diagnostics with Phenomenon.>
Keyless access passenger room buzzer does not sound.	<Ref. to KPS(diag)-139, KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND, INSPECTION, Diagnostics with Phenomenon.>
Keyless access external buzzer does not beep.	<Ref. to KPS(diag)-140, KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP, INSPECTION, Diagnostics with Phenomenon.>
Interior collation does not function.	<Ref. to KPS(diag)-141, INTERIOR COLLATION DOES NOT FUNCTION, INSPECTION, Diagnostics with Phenomenon.>
Trunk does not open with the trunk opener button.	<Ref. to KPS(diag)-135, TRUNK DOES NOT OPEN USING KEYLESS ACCESS (OR THE TRUNK DOES NOT OPEN BY THE TRUNK OPEN WITHOUT KEY), INSPECTION, Diagnostics with Phenomenon.>
Access key lockout protection function in the trunk does not operate.	<Ref. to KPS(diag)-138, ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

3. STEERING LOCK SYSTEM

Symptoms	Reference
The steering lock cannot be released (Cannot start the engine).	<Ref. to KPS(diag)-144, THE STEERING LOCK IS NOT RELEASED, INSPECTION, Diagnostics with Phenomenon.>
The steering lock does not operate.	<Ref. to KPS(diag)-147, THE STEERING LOCK DOES NOT OPERATE, INSPECTION, Diagnostics with Phenomenon.>

4. POWER SUPPLY SWITCHING SYSTEM

Symptoms	Reference
Power will not turn ON (both accessory and ignition).	<Ref. to KPS(diag)-148, POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (accessory only).	<Ref. to KPS(diag)-151, POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON), INSPECTION, Diagnostics with Phenomenon.>
Power will not turn ON (ignition only).	<Ref. to KPS(diag)-154, POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON), INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. KEYLESS ACCESS LOCK/UNLOCK CANNOT BE PERFORMED FROM ANY OF THE DOORS

Trouble causes:
- Exterior antenna, oscillator, touch sensor, lock/unlock buttons failure
- Access key, access key battery failure
- Door lock control system failure
- Keyless access CM power supply circuit failure
- Keyless access CM failure

CAUTION:
- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of access key or keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK OPERATION OF KEYLESS DOOR LOCK.** Using the keyless function of the access key, check the operation of the door lock.	Does it lock/unlock normally?	Check the exterior antenna, touch sensor, lock/unlock button.	Go to step **2**.
2	**CHECK ACCESS KEY.** Check for whether lock and unlock is possible with the registered access key.	Is there any access key which can lock/unlock when the touch sensor is operated?	Check the access key that does not operate. Go to step **3**.	Go to step **4**.
3	**CHECK ACCESS KEY.** Measure the battery voltage of the access key that does not operate.	Is the voltage 2.5 — 3.2 V?	Replace the access key.	Replace the battery.

	Step	Check	Yes	No
4	**CHECK DOOR LOCK.** Operate the driver's center door lock switch.	Does the door lock operate?	Go to step **5**.	Check the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>
5	**CHECK HARNESS.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B574) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **6**.	Check the keyless access CM power supply circuit.
6	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 20 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is the resistance less than 10 Ω?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the open circuit of harness.

2. CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

Trouble causes:

- Door lock control system failure
- Door lock status switch circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure
- Front door outer handle failure

CAUTION:

- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Driver's seat lock status SW input» 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.

	Step	Check	Yes	No
3	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Driver's lock touch sensor SW» 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 5 — (D66) No. 4:*** ***(B574) No. 6 — (D66) No. 6:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 6 — Chassis ground:*** ***(B574) No. 5 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

3. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

Trouble causes:

- Door lock control system failure
- Keyless access CM power supply circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure
- Front door outer handle failure

CAUTION:

- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 5 — (D66) No. 4:*** ***(B574) No. 6 — (D66) No. 6:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 5 — Chassis ground:*** ***(B574) No. 6 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Using an oscilloscope, measure the waveform between keyless access CM connectors. ***Connector & terminal*** ***(D66) No. 4 — (D66) No. 6:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

4. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR

Trouble causes:

- Door lock control system failure
- Door lock status switch circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure
- Front door outer handle failure

CAUTION:

- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Driver's seat lock status SW input» 2) Read the data when locking/unlocking the driver's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Driver's unlock touch sensor switch» 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 5 — (D66) No. 4:*** ***(B574) No. 6 — (D66) No. 6:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 6 — Chassis ground:*** ***(B574) No. 5 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the driver's side front outer handle with the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

5. CANNOT LOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:
- Door lock control system failure
- Door lock status switch circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure

- Front door outer handle failure

CAUTION:
• Check that there are no other registered access keys inside the passenger room.
• Check that the access key is not too close to the vehicle.
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Passenger's seat lock status SW input» 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Passenger's lock touch sensor SW» 2) Read the data when operating the touch sensor (lock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 4 — (D56) No. 6:*** ***(B574) No. 16 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 16 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

6. CANNOT LOCK/UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:

- Door lock control system failure
- Keyless access CM power supply circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure
- Front door outer handle failure

CAUTION:

- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **3**.	Replace the fuse.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 4 — (D56) No. 6:*** ***(B574) No. 16 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 16 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Turn the ignition switch to OFF, close all doors and take the access key out of passenger room. 3) Using an oscilloscope, measure the waveform of the front door outer handle. ***Connector & terminal*** ***(D56) No. 4 — (D56) No. 6:***	Does pulse output change from pulse output OFF → pulse output ON by the lock operation using access key?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

	Step	Check	Yes	No
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

7. CANNOT UNLOCK WITH KEYLESS ACCESS FROM THE PASSENGER'S DOOR

Trouble causes:

- Door lock control system failure
- Door lock status switch circuit failure
- Failure of harness between keyless access CM and front door outer handle
- Keyless access CM failure
- Front door outer handle failure

CAUTION:

- **Check that there are no other registered access keys inside the passenger room.**
- **Check that the access key is not too close to the vehicle.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check that the lock/unlock operates with the driver's door lock switch.	Does it lock/unlock normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>
2	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Passenger's seat lock status SW input» 2) Read the data when locking/unlocking the passenger's side lock actuator.	Does the data change from ON/OFF?	Go to step **3**.	Check the door lock switch circuit.
3	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Passenger's unlock touch sensor switch» 2) Read the data when operating the touch sensor (unlock) of the door outer handle.	Does the data change from ON/OFF according to the sensor operation?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Disconnect the front outer handle connector. 3) Using a tester, measure the resistance between the keyless access CM connector and front outer handle connector. ***Connector & terminal*** ***(B574) No. 4 — (D56) No. 6:*** ***(B574) No. 16 — (D56) No. 4:***	Is the resistance less than 1 Ω?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, measure the resistance between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 4 — Chassis ground:*** ***(B574) No. 16 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**REPLACE FRONT DOOR OUTER HANDLE.** Replace the passenger's side front outer handle with the driver's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Does it operate properly?	Replace the passenger's side front outer handle. <Ref. to SL-32, Front Outer Handle.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

8. TRUNK DOES NOT OPEN USING KEYLESS ACCESS (OR THE TRUNK DOES NOT OPEN BY THE TRUNK OPEN WITHOUT KEY)

Trouble causes:
- Door lock control system failure
- Failure of the harness between the body integrated unit and trunk lid lock actuator
- Trunk lid lock actuator failure
- Body integrated unit failure
- Access key failure
- Failure of harness between the trunk opener button and keyless access CM
- Trunk opener button failure
- Keyless access CM failure
- VDC CM failure
- Failure of harness between the exterior rear antenna and keyless access CM
- Exterior rear antenna failure

CAUTION:
- **Check that there are no other registered access keys inside the trunk.**
- **Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.**
- **Check that the keyless access function is not stopped.**
- **For replacement procedure of access key or keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**
- **Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>**

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, SYMPTOM CHART, INSPECTION, Door Lock Control System.>

Step		Check	Yes	No
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **7**.	Go to step **3**.
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using Subaru Select Monitor, check the following items in «Active Test» of «Body Control». <Ref. to BC(diag)-33, Function Check.> • «R gate/trunk UNLK output» 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-48, Trunk Lid Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-48, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** Check the access key LED when the trunk opener button of the access key is operated.	Does the access key LED illuminate?	Go to step **8**.	Replace the access key. <Ref. to SL-85, Access Key.>
8	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **9**.	Replace the access key. <Ref. to SL-85, Access Key.>
9	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Trunk opener button» 2) Read the data when pressing the trunk opener button.	Does the data display ON?	Go to step **13**.	Go to step **10**.
10	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the trunk opener button connector and the keyless access CM connector. 2) Using a tester, check continuity between the trunk opener button connector and keyless access CM connector. ***Connector & terminal*** ***(R294) No. 2 — (B573) No. 17:***	Is there continuity?	Go to step **11**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
11	**CHECK HARNESS (OPEN CIRCUIT).** 1) Using a tester, check the continuity between the trunk opener button connector and chassis ground. ***Connector & terminal*** ***(R294) No. 1 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK TRUNK OPENER BUTTON.** Using a tester, check the continuity between trunk opener button connector terminals. ***Terminals*** ***No. 1 — No. 2:***	Is there continuity when pressing the switch?	Go to step **13**.	Replace the trunk opener button. <Ref. to SL-96, Trunk Opener Button.>
13	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the exterior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the exterior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R299) No. 1 — (B574) No. 8:*** ***(R299) No. 2 — (B574) No. 7:***	Is there continuity?	Go to step **14**.	Repair or replace the open circuit of harness.
14	**CHECK OUTSIDE REAR ANTENNA.** Replace the outside rear antenna with new or properly working parts. <Ref. to SL-94, Keyless Access Outdoor Antenna.>	Does it operate properly?	The outside rear antenna has a failure.	Go to step **15**.
15	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START CHECK.** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Trunk external transmitter + interior tuner» 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	Go to step **16**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
16	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Vehicle speed signal»	Is it properly displayed with the vehicle at a standstill?	Go to step **18**.	Go to step **17**.
17	**CHECK KEYLESS ACCESS CM.** 1) Connect each connector. 2) Using the Subaru Select Monitor, measure the waveform between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 7 — Chassis ground:***	Is 3.54 Hz displayed when the vehicle is driven at approx. 5 km/h (3 MPH)? Or does the value change from 3.54 Hz when the vehicle stops?	Go to step **18**.	Check the VDC. <Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

	Step	Check	Yes	No
18	**CHECK KEYLESS ACCESS CM.** 1) Press the trunk opener button with all doors unlocked and the access key not carried.	Does it open normally?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM.

9. ACCESS KEY LOCKOUT PROTECTION FUNCTION IN THE TRUNK DOES NOT OPERATE

Trouble causes:

- Door lock control system failure
- Failure of the harness between the body integrated unit and trunk lid lock actuator
- Trunk lid lock actuator failure
- Body integrated unit failure
- Access key failure
- Keyless access CM failure
- Failure of harness between the exterior rear antenna and keyless access CM
- Exterior rear antenna failure

CAUTION:

• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• For replacement procedure of access key or keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK TRUNK OPENER BUTTON.** Check that the trunk opens with the driver's seat trunk opener button.	Does it open normally?	Go to step **2**.	Check the door lock circuit. <Ref. to SL-10, INSPECTION, Door Lock Control System.>
2	**CHECK KEYLESS OPERATION.** Check that the trunk opens when the trunk opener button of the access key is operated.	Does it open normally?	Go to step **7**.	Go to step **3**.
3	**CHECK TRUNK UNLOCK OPERATION.** 1) Using Subaru Select Monitor, check the following items in «Active Test» of «Body Control». <Ref. to BC(diag)-33, Function Check.> • «R gate/trunk UNLK output» 2) Check that the trunk opens when the R gate/trunk UNLK signal is output.	Does it open normally?	Go to step **7**.	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the body integrated unit connector and trunk lid lock actuator connector. 2) Check the continuity between body integrated unit connector and trunk lid lock actuator connector. ***Connector & terminal*** ***(i171) No. 7 — (R186) No. 1:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Check the continuity between the trunk lid lock actuator connector and chassis ground. ***Connector & terminal*** ***(R186) No. 2 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK TRUNK LID LOCK ACTUATOR.** Check the trunk lid lock actuator. <Ref. to SL-48, Trunk Lid Latch and Actuator Assembly.>	Is the check result OK?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Replace the trunk lid latch & actuator assembly. <Ref. to SL-48, Trunk Lid Latch and Actuator Assembly.>
7	**CHECK ACCESS KEY.** 1) Prepare all access keys registered to the vehicle. 2) Check that the trunk opens with each access key.	Does it open normally?	Go to step **8**.	Replace the access key. <Ref. to SL-85, Access Key.>
8	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the interior rear antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the interior rear antenna connector and keyless access CM connector. ***Connector & terminal*** ***(R297) No. 1 — (B574) No. 2:*** ***(R297) No. 3 — (B574) No. 1:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK PASSENGER ROOM REAR ANTENNA.** Replace the passenger room rear antenna with a new or properly functioning part. <Ref. to SL-91, Keyless Access Indoor Antenna.>	Does it operate properly?	The passenger room rear antenna has a failure.	Go to step **10**.
10	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START CHECK.** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Trunk internal transmitter + interior tuner» 2) Hold the access key 1 m or more away from the trunk, then come closer to within 0.8 m.	Does the outside buzzer sound?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

10.KEYLESS ACCESS PASSENGER ROOM BUZZER DOES NOT SOUND

Trouble causes:

- Combination meter failure
- Keyless access CM failure

CAUTION:
• Inspect LAN system according to the basic diagnostic procedure, and make sure that there is no fault.
• Check that the keyless access function is not stopped.
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK COMBINATION METER.** Check the combination meter. <Ref. to MET(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>	Is the check result OK?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>

11.KEYLESS ACCESS EXTERNAL BUZZER DOES NOT BEEP

Trouble causes:
- Incorrect setup of body integrated unit
- Failure of the harness between the body integrated unit and keyless buzzer
- Keyless access CM failure
- Keyless buzzer failure

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Answer-back Buzzer»	Is the setting «ON»?	Go to step **2**.	Change the setting to «ON».
2	**CHECK BUZZER OPERATION.** Using Subaru Select Monitor, check the following items in «Active Test» of «Body Control». <Ref. to BC(diag)-33, OPERATION, Function Check.> • «Keyless buzzer output»	Does the buzzer sound?	Go to step **3**.	Go to step **5**.
3	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.** 1) Turn to IGN OFF. 2) With all doors closed and the access key carried, touch the touch sensor (lock) on the driver's door handle.	Does the door lock?	Go to step **4**.	Refer to "CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR" and perform inspection. <Ref. to KPS(diag)-128, CANNOT LOCK WITH KEYLESS ACCESS FROM THE DRIVER'S DOOR, INSPECTION, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM.** 1) Turn to IGN ON. 2) Open the door glass. 3) Turn to IGN OFF. 4) Place the access key on the driver's seat, and close the door. 5) Touch the touch sensor (lock) on the driver's door handle.	Does the buzzer sound? (Lock-out protection warning)	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
5	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn to IGN OFF. 2) Disconnect the connectors of the body integrated unit and keyless buzzer. 3) Measure the resistance between body integrated unit connector and keyless buzzer connector. ***Connector & terminal*** ***(B280) No. 20 — (B164) No. 1:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 1 — Chassis ground:***	Is the resistance 10 kΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** Measure the resistance between keyless buzzer connector and chassis ground. ***Connector & terminal*** ***(B164) No. 2 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK BODY INTEGRATED UNIT.** 1) Connect the connector of body integrated unit. 2) Using Subaru Select Monitor, check the following items in «Active Test» of «Body Control». <Ref. to BC(diag)-33, OPERATION, Function Check.> • «Keyless buzzer output» 3) Measure the voltage between body integrated unit connector and chassis ground using an oscilloscope. ***Connector & terminal*** ***(B280) No. 20 (+) — Chassis ground (–):***	Is the frequency 2 kHz, and the voltage 9 V or more?	Replace the keyless buzzer. <Ref. to SL-115, Access Buzzer.>	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

12.INTERIOR COLLATION DOES NOT FUNCTION

Trouble causes:

- Access key battery failure
- Keyless access CM power supply circuit failure
- Failure of harness between the keyless access CM and each interior antenna
- Interior antenna failure

CAUTION:
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK ACCESS KEY.** Check the battery of the access key. <Ref. to SL-86, INSPECTION, Access Key.>	Is the check result OK?	Go to step **2**.	Replace the battery.
2	**CHECK POWER SUPPLY CIRCUIT.** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 4 (+) — Chassis ground (–):*** ***(B573) No. 1 (+) — Chassis ground (–):***	Is the voltage 9.5 — 16 V?	Go to step **3**.	Check the power supply circuit.
3	**CHECK INTERIOR ANTENNA (FRONT).** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Front interior transmitter + interior tuner» 2) Using a tester, check the output between keyless access CM connector terminals while performing «Keyless Access with Push Button Start Check». ***Connector & terminal*** ***(B574) No. 25 — (B574) No. 12:***	Is a pulse output?	Go to step **4**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
4	**CHECK INTERIOR ANTENNA (CENTER).** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Rear interior transmitter + interior tuner» 2) Using a tester, check the output between keyless access CM connector terminals while performing «Keyless Access with Push Button Start Check». ***Connector & terminal*** ***(B574) No. 9 — (B574) No. 3:***	Is a pulse output?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
5	**CHECK INTERIOR ANTENNA (REAR).** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Trunk internal transmitter + interior tuner» 2) Using a tester, check the output between keyless access CM connector terminals while performing «Keyless Access with Push Button Start Check». ***Connector & terminal*** ***(B574) No. 2 — (B574) No. 1:***	Is a pulse output?	Go to step **6**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

	Step	Check	Yes	No
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the front interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the front interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(B574) No. 25 — (AD12) No. 1:*** ***(B574) No. 12 — (AD12) No. 3:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the center interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the center interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(B574) No. 9 — (R298) No. 1:*** ***(B574) No. 3 — (R298) No. 3:***	Is there continuity?	Go to step **8**.	Repair or replace the open circuit of harness.
8	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the rear interior antenna connector and the keyless access CM connector. 2) Using a tester, check continuity between the rear interior antenna connector and the keyless access CM connector. ***Connector & terminal*** ***(B574) No. 2 — (R297) No. 1:*** ***(B574) No. 1 — (R297) No. 3:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK ANTENNA.** Replace the front interior antenna with a new or properly functioning part. <Ref. to SL-91, Keyless Access Indoor Antenna.>	Does it operate properly?	Front interior antenna has a failure.	Go to step **10**.
10	**CHECK ANTENNA.** Replace the center interior antenna with a new or properly functioning part. <Ref. to SL-91, Keyless Access Indoor Antenna.>	Does it operate properly?	Center interior antenna has a failure.	Go to step **11**.
11	**CHECK ANTENNA.** Replace the rear interior antenna with a new or properly functioning part. <Ref. to SL-91, Keyless Access Indoor Antenna.>	Does it operate properly?	Rear interior antenna has a failure.	Go to step **12**.
12	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START CHECK.** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Front interior transmitter + interior tuner» 2) Hold the access key 1 m or more away from the audio panel, then come closer to within 0.8 m, while performing «Keyless Access with Push Button Start Check».	Does the buzzer sound?	Go to step **13**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

Step		Check	Yes	No
13	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START CHECK.** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Rear interior transmitter + interior tuner» 2) Hold the access key 1 m or more away from the center of the second row seats, then come closer to within 0.8 m, while performing «Keyless Access with Push Button Start Check».	Does the buzzer sound?	Go to step **14**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
14	**CHECK KEYLESS ACCESS WITH PUSH BUTTON START CHECK.** 1) Using Subaru Select Monitor, check the following items on «Keyless Access with Push Button Start Check» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-43, Keyless Access with Push Button Start Check.> • «Trunk internal transmitter + interior tuner» 2) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m. 3) Hold the access key 1 m or more away from the back of the rear seat, then come closer to within 0.8 m, while performing «Keyless Access with Push Button Start Check».	Does the buzzer sound?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

13.THE STEERING LOCK IS NOT RELEASED

Trouble causes:

- ECM failure
- Steering lock circuit failure
- Steering lock CM failure
- Keyless access CM failure

CAUTION:

• Check that there are no other registered access keys inside the vehicle.
• Check that the keyless access function is not stopped.
• Inspect LAN system or keyless access with push button start system according to the basic diagnostic procedure, and make sure that DTC is not input.
• For replacement procedure of keyless access CM or steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.
• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK OPERATION.** 1) Depress the brake pedal (CVT model) or clutch pedal (MT model). 2) While turning the steering wheel lightly to the left and right, press the push button ignition switch. 3) Confirm that the steering lock is released and the engine starts.	Does the engine fail to start with the steering lock released?	Perform the diagnosis for engine system. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>	Go to step **2**.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Steering lock unlock request reception status» and • «Steering lock lock/unlock command reception history» 2) Read the data when the push button ignition switch is pressed while in possession of the access key. (Maintain for 10 seconds after switch operation)	Does the data change from “Not yet received” to “Reception”, and from “OFF” to “ON”?	Go to step **4**.	Go to step **7**.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the steering lock CM connector. 2) Using a tester, measure the voltage between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 7 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the steering lock CM connector and chassis ground. ***Connector & terminal*** ***(B424) No. 1 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK STEERING LOCK CM.** 1) Connect the disconnected connectors. 2) Using a tester, measure the voltage between steering lock CM terminals right after the ignition switch is turned to ON. ***Connector & terminal*** ***(B424) No. 3 (+) — (B424) No. 1 (–):***	Is the voltage 1 V or less right after the ignition ON?	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Repair or replace the open circuit of harness.

Step		Check	Yes	No
7	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between smart ECM and ID code box»	Is data displayed as being normal?	Go to step **9**.	Go to step **8**.
8	**CHECK DATA MONITOR.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-100, ID Code Box.> 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between smart ECM and ID code box»	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
9	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between steering locked ECM and ID code box»	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **10**.
10	**CHECK ID CODE BOX.** 1) Replace with a properly functioning or new ID code box. <Ref. to SL-100, ID Code Box.> 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between steering locked ECM and ID code box»	Is data displayed as being normal?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **11**.

	Step	Check	Yes	No
11	**CHECK STEERING LOCK CM.** 1) Replace with a properly functioning or new steering lock CM. <Ref. to SL-101, Steering Lock CM.> 2) After registering, the steering lock operates when the ignition is turned to OFF and the driver's door is opened and closed. 3) Turn the ignition to ON. 4) Operate the steering and check for whether the steering lock is released.	Is the steering lock released, and does the engine start?	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

14.THE STEERING LOCK DOES NOT OPERATE

Trouble causes:

- Door switch circuit failure
- P range switch circuit failure
- Steering lock circuit failure
- Steering lock CM failure
- Keyless access CM failure

CAUTION:

• For replacement procedure of keyless access CM or steering lock CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs.	Go to step **2**.
2	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items in «Data Monitor» of «Body Control». <Ref. to BC(diag)-20, Read Current Data.> • «Driver's door SW input» 2) Read the data when opening and closing the driver's door.	Does the data change from ON to OFF according to the opening and closing?	CVT model: Go to step **3**. MT model: Go to step **4**.	Inspect door switch circuit.
3	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Shift P Signal»	Is the status displayed correctly when the shift lever is shifted from P to other than P?	Go to step **4**.	Check the P range switch and harness.
4	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between smart ECM and ID code box»	Is the status normal?	Go to step **5**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
5	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Code collation result between steering locked ECM and ID code box»	Is the status normal?	Go to step **6**.	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>

	Step	Check	Yes	No
6	**CHECK DATA MONITOR.** 1) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Steering lock lock/unlock command reception history» 2) While in possession of the access key, perform engine start operations, and read data within 10 seconds after starting.	Is data displayed as ON?	Go to step **7**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
7	**CHECK STEERING LOCK CM.** Using an oscilloscope, measure the waveform between steering lock CM terminals immediately after the following operations. Perform ignition ON, driver's side door close → shift lever "P" range (CVT model), ignition OFF, and close → open the driver's side door. ***Connector & terminal*** ***(B424) No. 3 — (B424) No. 1:***	Is the waveform immediately after opening the driver's side door abnormal?	Replace the steering lock CM. <Ref. to SL-101, Steering Lock CM.>	Go to step **8**.
8	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and the steering lock CM connector. 2) Using a tester, check continuity between the keyless access CM connector and steering lock CM connector. ***Connector & terminal*** ***(B424) No. 3 — (B573) No. 10:***	Is there continuity?	Go to step **9**.	Repair or replace the open circuit of harness.
9	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the open circuit of harness.

15.POWER WILL NOT TURN ON (BOTH ACCESSORY AND IGNITION)

Trouble causes:

- Keyless access CM power supply circuit failure
- Relay failure
- Push button ignition switch circuit failure

CAUTION:

• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.

	Step	Check	Yes	No
2	**CHECK POWER SUPPLY.** 1) Remove IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, measure the voltage between the relay block connector and chassis ground.	Is the voltage 10 V or more?	Go to step **3**.	Check the DC power supply circuit.
3	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **4**.	Repair the connector, or replace harness.
4	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B574) No. 17 — Chassis ground:*** ***(B573) No. 20 — Chassis ground:***	Is there continuity?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK DTC.** 1) Connect the keyless access CM connector. 2) Carrying the access key, depress the brake pedal (CVT model) or clutch pedal (MT model), and push the push button ignition switch. 3) Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs.	Go to step **7**.
7	**CHECK DATA MONITOR.** 1) Display the current data «Push start SW 1» and «Push start SW 2» of «Keyless Access with Push Button Start» using Subaru Select Monitor. <Ref. to KPS(diag)-32, Data Monitor.> 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». • «Push start SW 1» • «Push start SW 2» 3) Read the data when pressing the push button ignition switch. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Does it change from OFF to ON along with the operation?	Go to step **8**.	Go to step **13**.
8	**CHECK RELAY (PUSH BUTTON START).** Check IG relay 1 and 2 (push button start), and accessory relay (push button start). <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **9**.	Replace the faulty relay.

	Step	Check	Yes	No
9	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). 2) Using a tester, check continuity between terminals of keyless access CM connector, IG relay 1 (push button start), IG relay 2 (push button start) and accessory relay (push button start). ***Connector & terminal*** ***(B573) No. 28 — (B225) No. 38:*** ***(B573) No. 27 — (B225) No. 34:*** ***(B573) No. 16 — (B426) No. 1:***	Is there continuity?	Go to step **10**.	Repair or replace the open circuit of harness.
10	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 28 — Chassis ground:*** ***(B573) No. 27 — Chassis ground:*** ***(B573) No. 16 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **11**.
11	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between IG relay 1 (push button start), IG relay 2 (push button start), accessory relay (push button start) and chassis ground. ***Connector & terminal*** ***(B225) No. 39 — Chassis ground:*** ***(B225) No. 35 — Chassis ground:*** ***(B426) No. 2 — Chassis ground:***	Is there continuity?	Go to step **12**.	Repair or replace the open circuit of harness.
12	**CHECK KEYLESS ACCESS CM.** 1) Connect all the disconnected connectors. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B573) No. 28 (+) — Chassis ground (–):*** ***(B573) No. 27 (+) — Chassis ground (–):*** ***(B573) No. 16 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less to +B-2 V or more?	Go to step **13**.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
13	**CHECK PUSH BUTTON IGNITION SWITCH.** 1) Disconnect the push button ignition switch connector. 2) Using a tester, check the continuity between the push button ignition switch connector terminals. ***Terminals*** ***No. 7 — No. 5:*** ***No. 2 — No. 5:***	When the button was pressed, did it change to continuity exists? (No continuity when button is released)	Go to step **14**.	Replace the push button ignition switch. <Ref. to SL-103, Push Button Ignition Switch.>
14	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check the continuity between the push button ignition switch connector and chassis ground. ***Connector & terminal*** ***(i150) No. 4 — Chassis ground:*** ***(i150) No. 5 — Chassis ground:***	Is there continuity?	Go to step **15**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
15	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, check continuity between the keyless access CM connector and the push button ignition switch connector. ***Connector & terminal*** ***(i150) No. 7 — (B573) No. 8:*** ***(i150) No. 2 — (B573) No. 9:***	Is there continuity?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Repair or replace the open circuit of harness.

16.POWER WILL NOT TURN ON (ACCESSORY DOES NOT TURN ON, BUT IGNITION TURNS ON)

Trouble causes:

- Keyless access CM power supply circuit failure
- Relay failure
- Push button ignition switch circuit failure

CAUTION:

• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

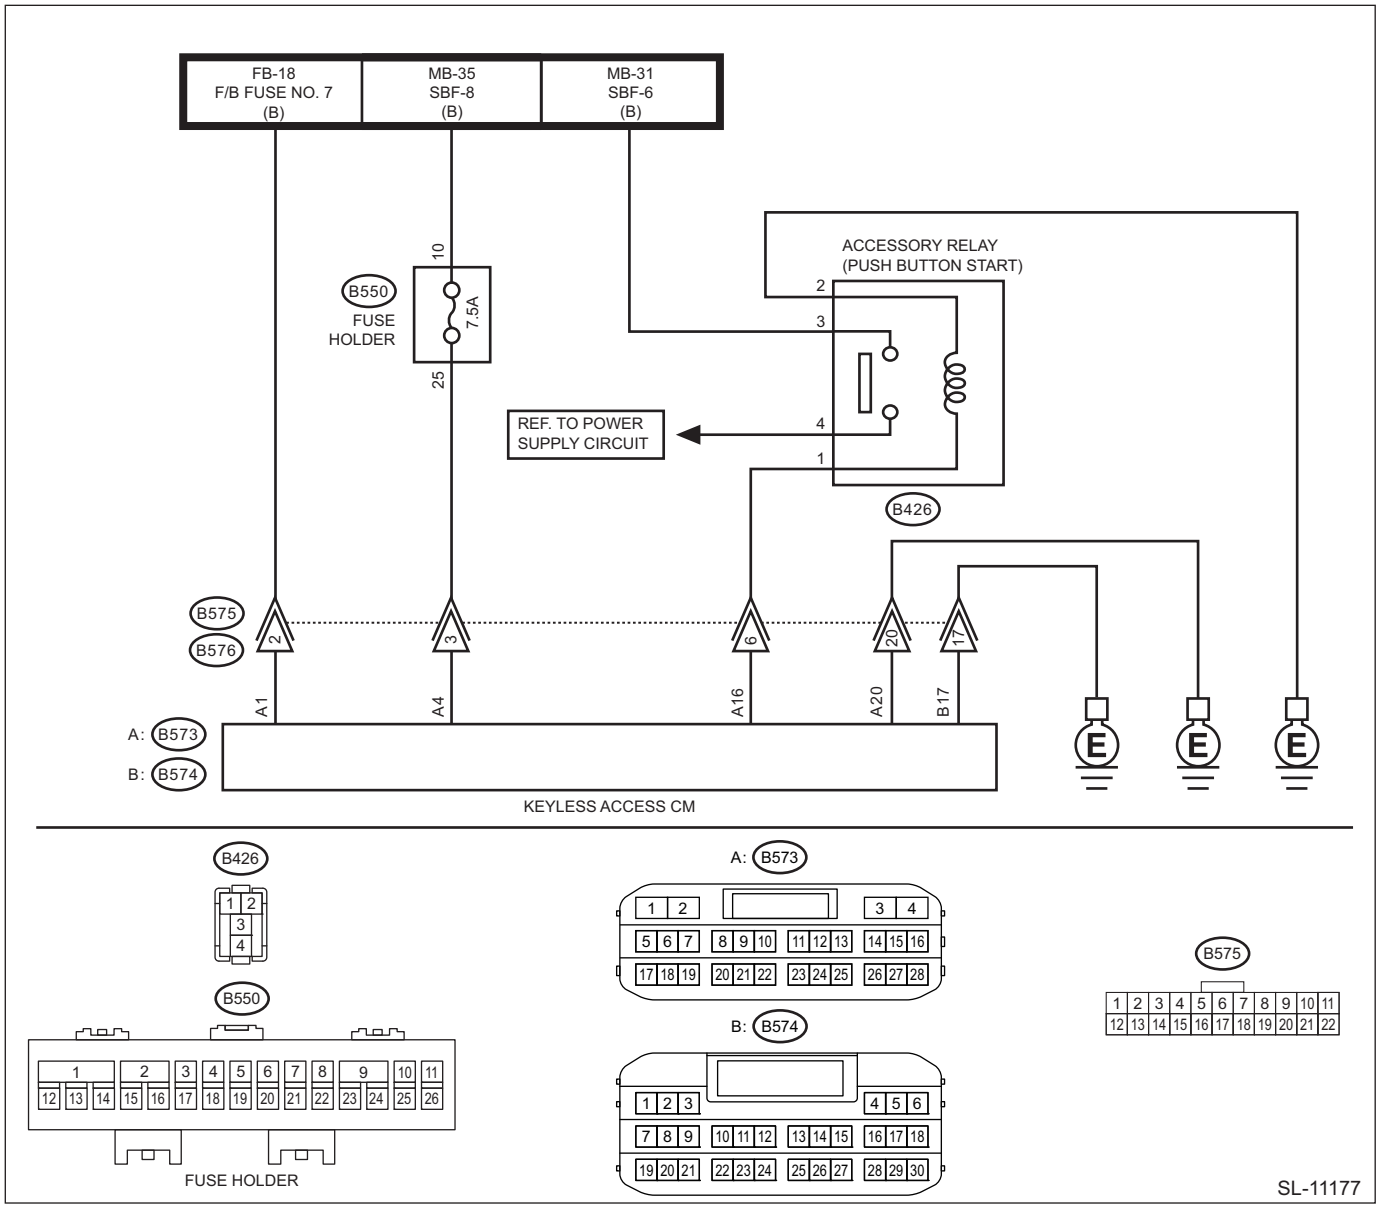
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

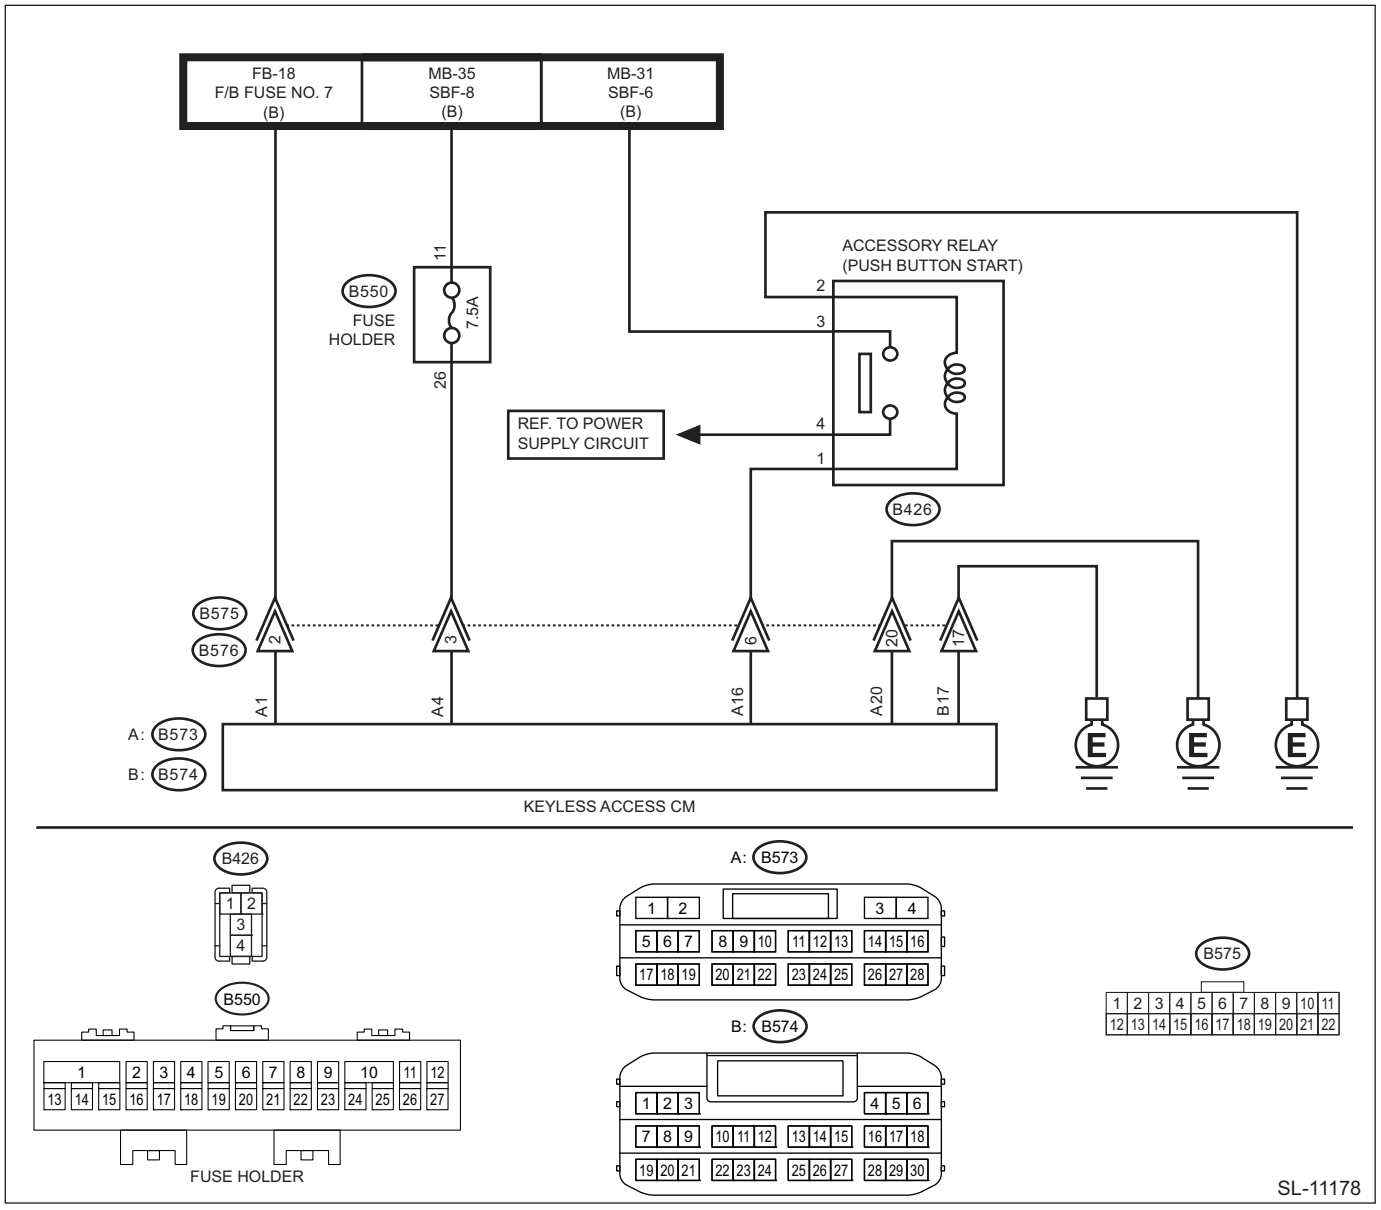
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 20 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK ACCESSORY RELAY (PUSH BUTTON START).** Check the accessory relay (push button start). <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the relay.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector and the accessory relay (push button start). 2) Using a tester, check continuity between the keyless access CM connector and accessory relay (push button start). ***Connector & terminal*** ***(B573) No. 16 — (B426) No. 1:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 16 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B573) No. 16 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

17.POWER WILL NOT TURN ON (ACCESSORY TURNS ON, BUT IGNITION DOES NOT TURN ON)

Trouble causes:

- Keyless access CM power supply circuit failure
- Relay failure
- Push button ignition switch circuit failure

CAUTION:

• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

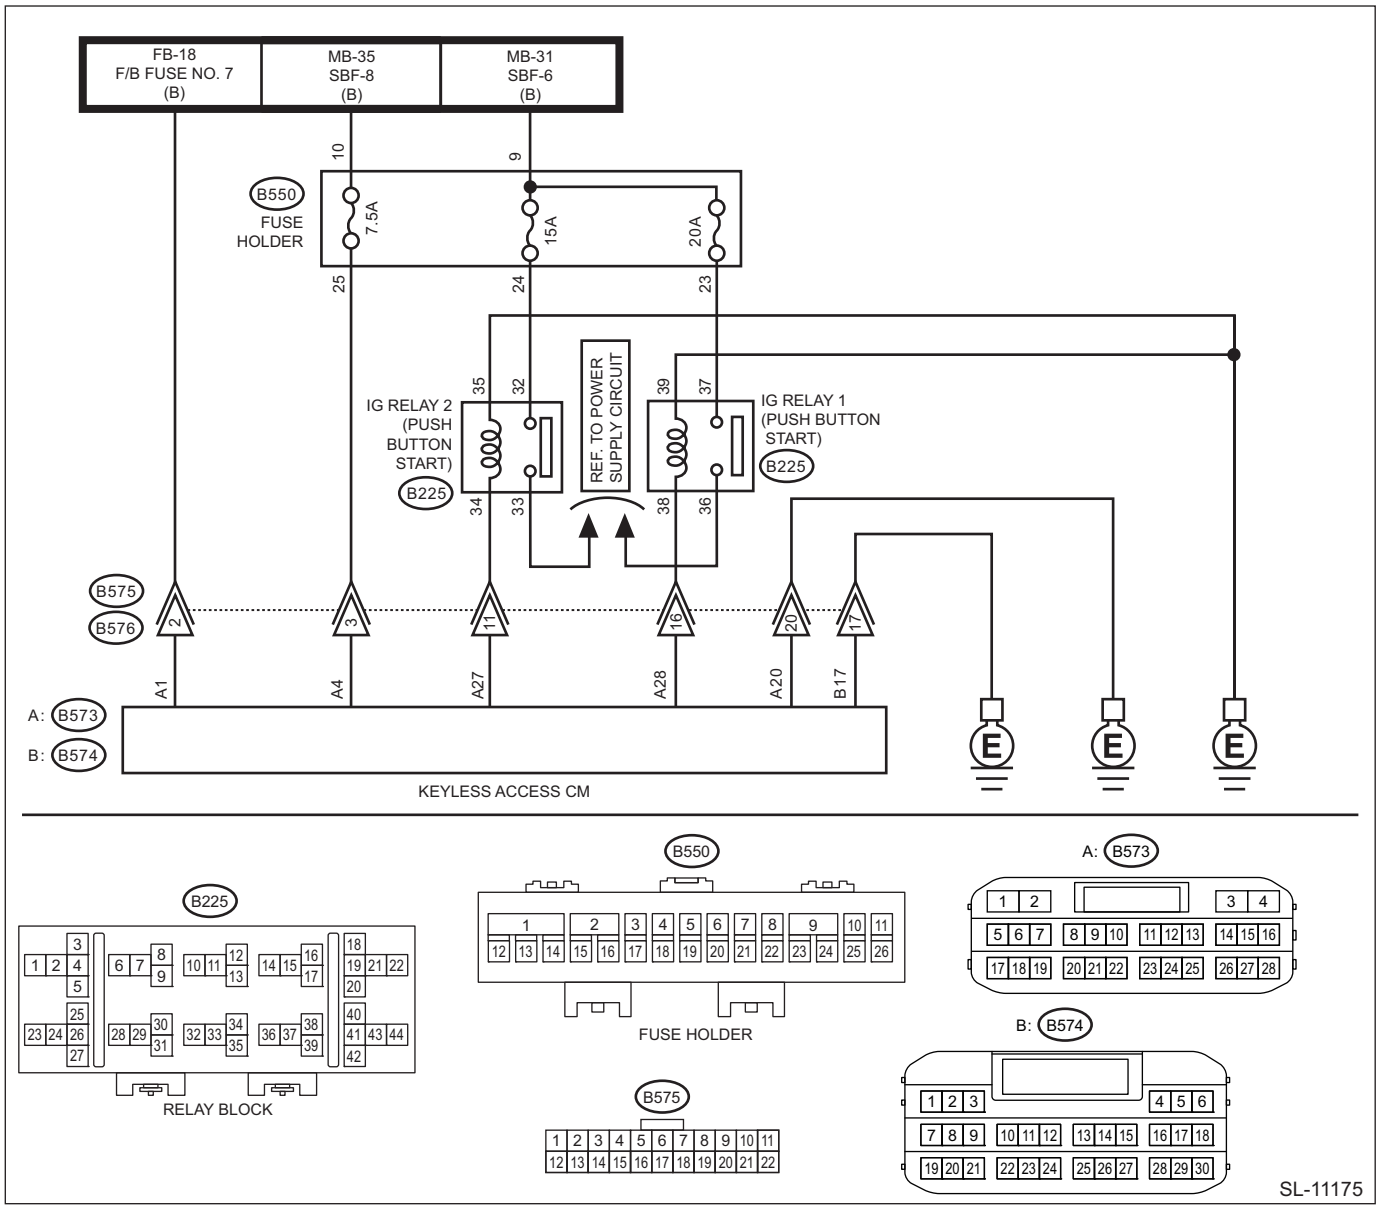
• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

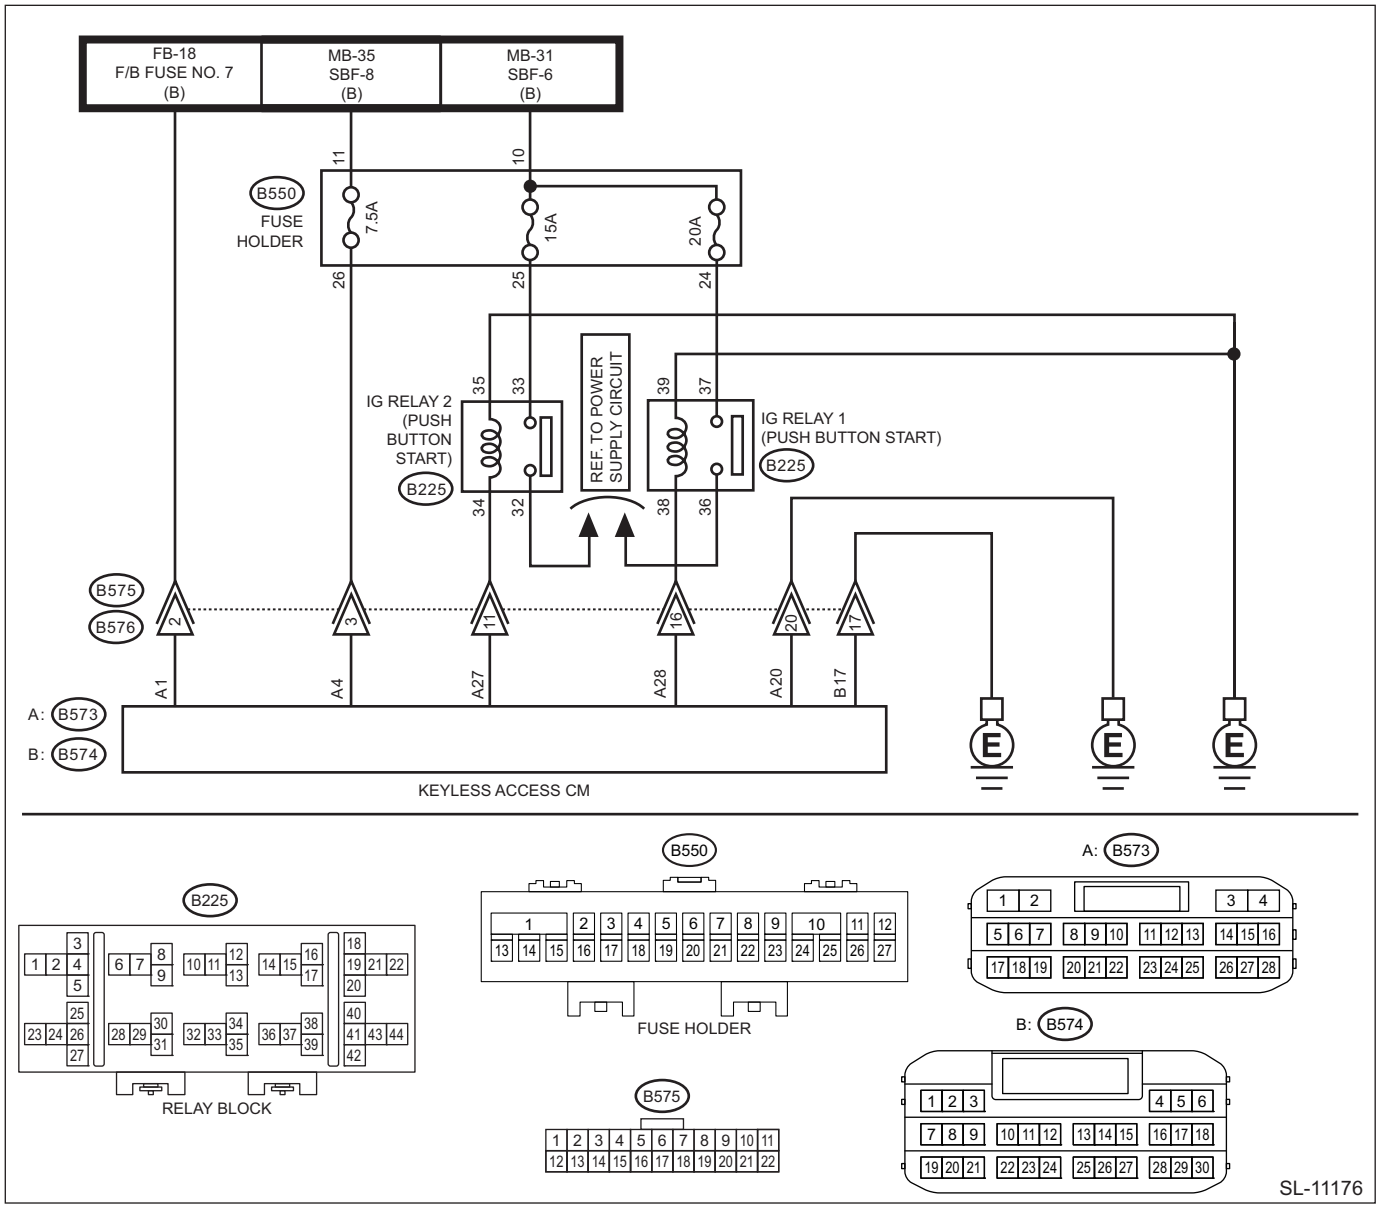
Wiring diagram:

Push button start system <Ref. to WI-301, WIRING DIAGRAM, Push Button Start System.>

- Engine type: FA



- Engine type: EJ



Step		Check	Yes	No
1	**CHECK FUSE.** Check the fuse. <Ref. to SL-8, INSPECTION, Relay and Fuse.>	Is the check result OK?	Go to step **2**.	Replace the fuse.
2	**CHECK CONNECTOR.** Check the engagement of each connector and terminal for any deformation or looseness.	Is the check result OK?	Go to step **3**.	Repair the connector, or replace harness.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 1 (+) — Chassis ground (–):*** ***(B573) No. 4 (+) — Chassis ground (–):***	Is the voltage between 8 V and 16 V?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (OPEN CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 20 — Chassis ground:*** ***(B574) No. 17 — Chassis ground:***	Is there continuity?	Go to step **5**.	Repair or replace the open circuit of harness.
5	**CHECK IG RELAY 1 AND 2 (PUSH BUTTON START).** Check IG relay 1 (push button start) and IG relay 2 (push button start). <Ref. to SL-8, Relay and Fuse.>	Is the check result OK?	Go to step **6**.	Replace the relay.
6	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the keyless access CM connector, IG relay 1 (push button start) connector, and IG relay 2 (push button start). 2) Using a tester, check continuity between keyless access CM connector and IG relay 1 (push button start) connector, and IG relay 2 (push button start). ***Connector & terminal*** ***(B573) No. 28 — (B225) No. 38:*** ***(B573) No. 27 — (B225) No. 34:***	Is there continuity?	Go to step **7**.	Repair or replace the open circuit of harness.
7	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Using a tester, check continuity between the keyless access CM connector and chassis ground. ***Connector & terminal*** ***(B573) No. 28 — Chassis ground:*** ***(B573) No. 27 — Chassis ground:***	Is there continuity?	Repair or replace the short circuit of the harness.	Go to step **8**.
8	**CHECK KEYLESS ACCESS CM.** 1) Connect the keyless access CM connector. 2) Using a tester, measure the voltage between the keyless access CM connector and chassis ground when the ignition is turned from OFF to ON. ***Connector & terminal*** ***(B573) No. 28 (+) — Chassis ground (–):*** ***(B573) No. 27 (+) — Chassis ground (–):***	Did the voltage change from 1 V or less → +B-2 V or more?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>

18.ENGINE DOES NOT START

Trouble causes:

- Engine system failure
- Keyless access CM failure
- Failure of keyless access with push button start system power supply system
- Steering lock system failure
- P range switch circuit failure
- Stop light switch circuit failure
- Inhibitor switch circuit failure
- Clutch switch circuit failure

CAUTION:

• When the keyless access CM is replaced with a new unit, and the battery ground terminal is connected, it will become ignition ON. Also, if the battery is disconnected, it will resume to a condition with the battery cut off.

• For replacement procedure of keyless access CM, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

• Before performing diagnosis, refer to "CAUTION" in "General Description". <Ref. to KPS(diag)-4, CAUTION, General Description.>

	Step	Check	Yes	No
1	**INITIALIZE STEERING LOCK.** 1) Shift the shift lever to parking (CVT model) or neutral (MT model). 2) Operate the driver's door switch ON/OFF with the ignition switch OFF. 3) Wait for 10 seconds. 4) Place the access key on the driver's seat. 5) With depressing the brake pedal (CVT model) or clutch pedal (MT model), push the push button ignition switch.	Can the engine start?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **2**.
2	**CHECK DTC.** Read DTCs of «Keyless Access with Push Button Start» using the Subaru Select Monitor. <Ref. to KPS(diag)-45, Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs. <Ref. to KPS(diag)-45, LIST, Diagnostic Trouble Code (DTC).>	Go to step **3**.
3	**CHECK POWER SUPPLY SWITCHING.** 1) Place the access key on the driver's seat. 2) Without depressing the brake pedal (CVT model) or clutch pedal (MT model), push the push button ignition switch.	When the switch is operated, does the <IG-OFF> → <ACC-ON> → <IG-ON> → <IG-OFF> change occur?	Go to step **4**.	Perform the diagnostics according to the symptom for power supply switching system in General Diagnostic Table. <Ref. to KPS(diag)-127, POWER SUPPLY SWITCHING SYSTEM, LIST, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
4	**CHECK DATA MONITOR.** 1) Place the access key on the driver's seat. 2) With depressing the brake pedal (CVT model) or clutch pedal (MT model), push the push button ignition switch. 3) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start», when pressing the push button ignition switch. <Ref. to KPS(diag)-32, Data Monitor.> • «STSW signal monitor» NOTE: If it is difficult to confirm, press the push button ignition switch for approximately five seconds longer.	Does the data change from OFF → ON?	Go to step **11**.	CVT model: Go to step **5**. MT model: Go to step **8**.
5	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Shift P signal(AT only)»	Is «ON» displayed in parking position, and «OFF» displayed in other positions?	Go to step **6**.	Go to step **12**.
6	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Stop light SW»	Is «ON» displayed when brake pedal depressed, and «OFF» displayed when brake pedal not depressed?	Go to step **7**.	Go to step **14**.
7	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Shift N signal(AT only)»	Is «ON» displayed in parking and neutral positions, and «OFF» displayed in other positions?	Go to step **9**.	Go to step **16**.
8	**CHECK DATA MONITOR.** Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Clutch SW (MT only)»	Is «ON» displayed when clutch pedal is depressed, and «OFF» displayed when clutch pedal is not depressed?	Go to step **9**.	Go to step **17**.
9	**CHECK STEERING LOCK.** Operate the push button ignition switch to perform the power supply switching and check steering lock condition during ACC-ON condition.	Is the steering lock in unlocked condition?	Go to step **10**.	Perform the diagnostics according to the symptom for steering lock system in General Diagnostic Table. <Ref. to KPS(diag)-127, STEERING LOCK SYSTEM, LIST, Diagnostics with Phenomenon.>

	Step	Check	Yes	No
10	**CHECK KEYLESS ACCESS CM.** 1) Turn the ignition switch to OFF. 2) Disconnect the ECM connector. 3) Using a tester, measure the voltage between the keyless access CM connector and chassis ground in the following procedures. 1. While depressing the brake pedal (CVT model) or clutch pedal (MT model), push the push button ignition switch. (Measure within 10 seconds.) 2. Release the push button ignition switch from the condition of step 1. above. ***Connector & terminal*** ***(B573) No. 23 (+) — Chassis ground (–):***	Does the value change from 1 V or less to +B-2 V or more in the step 1, and return to 1 V or less in the step 2?	Perform the diagnosis for engine system. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
11	**CHECK DATA MONITOR.** 1) Connect the disconnected connectors. 2) Using the Subaru Select Monitor, check the following items on «Data monitor» of «Keyless Access with Push Button Start». <Ref. to KPS(diag)-32, Data Monitor.> • «Engine start permission request reception status»	Is “Reception” displayed with ignition switch ON, and “Not yet received” displayed in other positions?	Perform the diagnosis for engine system. <Ref. to EN(w/o STI)(diag)-100, PROCEDURE, Diagnostics for Engine Starting Failure.> <Ref. to EN(STI)(diag)-88, PROCEDURE, Diagnostics for Engine Starting Failure.>	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>
12	**CHECK “P” RANGE SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the AT shift lever connector. 3) Using a tester, check the continuity of P range switch. ***Terminals*** ***No. 1 — 2:***	Does it change from Continuity ←→ No continuity according to shift lever operation?	Go to step **13**.	Replace the “P” range switch. <Ref. to CS-55, AT Shift Lock Solenoid and “P” Range Switch.>
13	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the keyless access CM connector. 3) Using a tester, check continuity between the keyless access CM connector and the AT select lever connector, and between the AT select lever connector and chassis ground. ***Connector & terminal*** ***(B116) No. 1 — (B574) No. 18:*** ***(B116) No. 2 — Chassis ground:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the harness.
14	**CHECK STOP LIGHT SWITCH.** 1) Turn the ignition switch to OFF. 2) Disconnect the stop light switch connector. 3) Using a tester, check continuity of the stop light switch connector. ***Terminals*** ***No. 1 — No. 2:***	Does it change from Continuity ←→ No continuity according to brake pedal operation?	Go to step **15**.	Replace the stop light switch. <Ref. to BR-118, Stop Light Switch.>

	Step	Check	Yes	No
15	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, check continuity between the keyless access CM connector and the stop light switch connector, and between the stop light switch connector and fuse. ***Connector & terminal*** ***(B574) No. 27 — (B65) No. 2:*** ***(B65) No. 1 — F/B fuse No. 8:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the harness.
16	**CHECK INHIBITOR SWITCH.** Check the inhibitor switch. <Ref. to CVT(TR690)-93, INSPECTION, Inhibitor Switch.>	Is the check result OK?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Replace the inhibitor switch. <Ref. to CVT(TR690)-93, Inhibitor Switch.>
17	**CHECK CLUTCH SWITCH.** Check the clutch switch. <Ref. to CL-37, INSPECTION, Clutch Switch.>	Is the check result OK?	Go to step **18**.	Replace the clutch switch. <Ref. to CL-36, REMOVAL, Clutch Switch.>
18	**CHECK HARNESS.** 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch connector. 3) Using a tester, check continuity between the keyless access CM connector and clutch switch connector. ***Connector & terminal*** ***(B573) No. 14 — (B106) No. 2:*** ***(B106) No. 1 — F/B fuse No. 21:***	Is there continuity?	Replace the keyless access CM. <Ref. to SL-97, Keyless Access CM.>	Repair or replace the harness.

1. Basic Diagnostic Procedure

A: PROCEDURE

CAUTION:
• Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
• Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
• Registration of immobilizer may be needed after the replacement of control modules, etc. For detailed procedure, refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.

NOTE:
• To check harness for open or short circuits, shake the suspected trouble spot or connector.
• Check List for Interview <Ref. to BC(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	**CHECK PRE-INSPECTION.** Ask the customer when and how the trouble occurred using the Check List for Interview. <Ref. to BC(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer.
2	**BASIC INSPECTION.** Check components which might affect body control. <Ref. to BC(diag)-6, INSPECTION, General Description.>	Is the check result of the component that might influence the body control problem OK?	Go to step **3**.	Repair or replace each component.
3	**CHECK DTC.** 1) Read the DTC. <Ref. to BC(diag)-14, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.> 2) Record all DTCs, time stamp and freeze frame data. NOTE: For time stamp, refer to "LAN SYSTEM". <Ref. to LAN(diag)-5, TIME STAMP, CAUTION, General Description.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-34, List of Diagnostic Trouble Code (DTC).> Go to step **5**.	Go to step **4**.
4	**PERFORM GENERAL DIAGNOSTICS.** Inspect using the "General Diagnostic Table". <Ref. to BC(diag)-56, General Diagnostic Table.>	Is the check result OK?	The body control system is normal.	Go to step **5**.
5	**PERFORM DIAGNOSIS.** 1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, OPERATION, Clear Memory Mode.> 2) Perform the Inspection Mode. <Ref. to BC(diag)-16, Inspection Mode.>	Is DTC displayed on Subaru Select Monitor?	Perform the diagnosis for the displayed DTCs. <Ref. to BC(diag)-34, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

2. Check List for Interview

A: CHECK

1. BODY CONTROL

Inspect the following items regarding the vehicle's state.

Body Control Check List for Interview		Date of Vehicle Bring-in Year Month Day	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the trouble occurred		Frequency of trouble occurrence	
Condition of trouble occurrence		Weather	
Road conditions		Occurrence location	
Accessory installation condition			
Diagnostic trouble code			

2. HIGH BEAM ASSIST

Inspect the following items regarding the vehicle's state.

High Beam Assist Check List for Interview		Date of Vehicle Bring-in Year Month Day	
Customer's name		Registration No.	Initial year of registration Year Month Date
		Vehicle model	Frame number
Interviewer	Inspector	Engine type	Odometer reading
Customer specified content			
Date and time when the symptom occurred	Year Month Date Approximate time		
Frequency of symptom occurrence	Always occurs Sometimes occurs (times per day/ times per month)		

Check List for Interview

Conditions upon symptom occurrence	Weather	• Fine • Cloudy • Rainy • Snowy• Foggy • Other ( )	
	Temperature	°C (°F) — °C (°F)	
	Vehicle speed	km/h (MPH) to km/h (MPH)	
	Road surface condition	• Dry • Wet • Accumulated snow • Unpaved road • Bumps (uneven) Other ( )	
	Road conditions	Own vehicle	• Straight • Gentle right-hand curve • Gentle left-hand curve • Sharp right-hand curve • Sharp left-hand curve • Uphill • Downhill • Intersection • Top of the hill • Other ( )
		Oncoming vehicle * Relative position from user's viewpoint	• No oncoming vehicle • Straight • Gentle right-hand curve • Gentle left-hand curve • Sharp right-hand curve • Sharp left-hand curve • Uphill • Downhill • Intersection • Top of the hill • Other ( )
		Headlight of oncoming vehicle * When the type is unknown, indicate the color.	• HID/LED (white) • Halogen • Only one side was lit • Other ( )
		Preceding vehicle	• No preceding vehicle • Straight • Gentle right-hand curve • Gentle left-hand curve • Sharp right-hand curve • Sharp left-hand curve • Uphill • Downhill • Intersection • Top of the hill • Other ( )
		Number of street light ahead	• 0 • 1 • 2 • 3 • 4 • 5 • More ( )

Check List for Interview

<table>
<tr><td rowspan="5">Conditions upon symptom occurrence</td><td rowspan="2">Road conditions</td><td rowspan="2">Reflection board/Signs</td><td>• 0

<tr><td>Other
NOTE:
• Describe things that were noticed, if any.
• Attach illustration or photo of the road ahead of the vehicle at the time of the symptom occurrence.</td><td colspan="3"></td></tr>
</table>

3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and body control circuits.

CAUTION:
- **Do not use the electrical test equipment on all airbag system wiring harnesses and connectors.**
- **Be careful not to damage the airbag system wiring harness, when servicing the body control system.**

B: INSPECTION

Before performing diagnosis, check the following items which might affect body control system problems.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the fuse condition.
Make sure that ampere of the fuse is setting value, and it is not blown out.
3) Check the connecting condition of harness and harness connector.
4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to BC(diag)-29, OPERATION, Registration Body Integrated Unit.>
5) Make sure that the User Customizing of the body integrated unit matches the vehicle equipment. <Ref. to BC(diag)-26, OPERATION, User Customizing.>
6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.

C: PREPARATION TOOL

1. SPECIAL TOOL

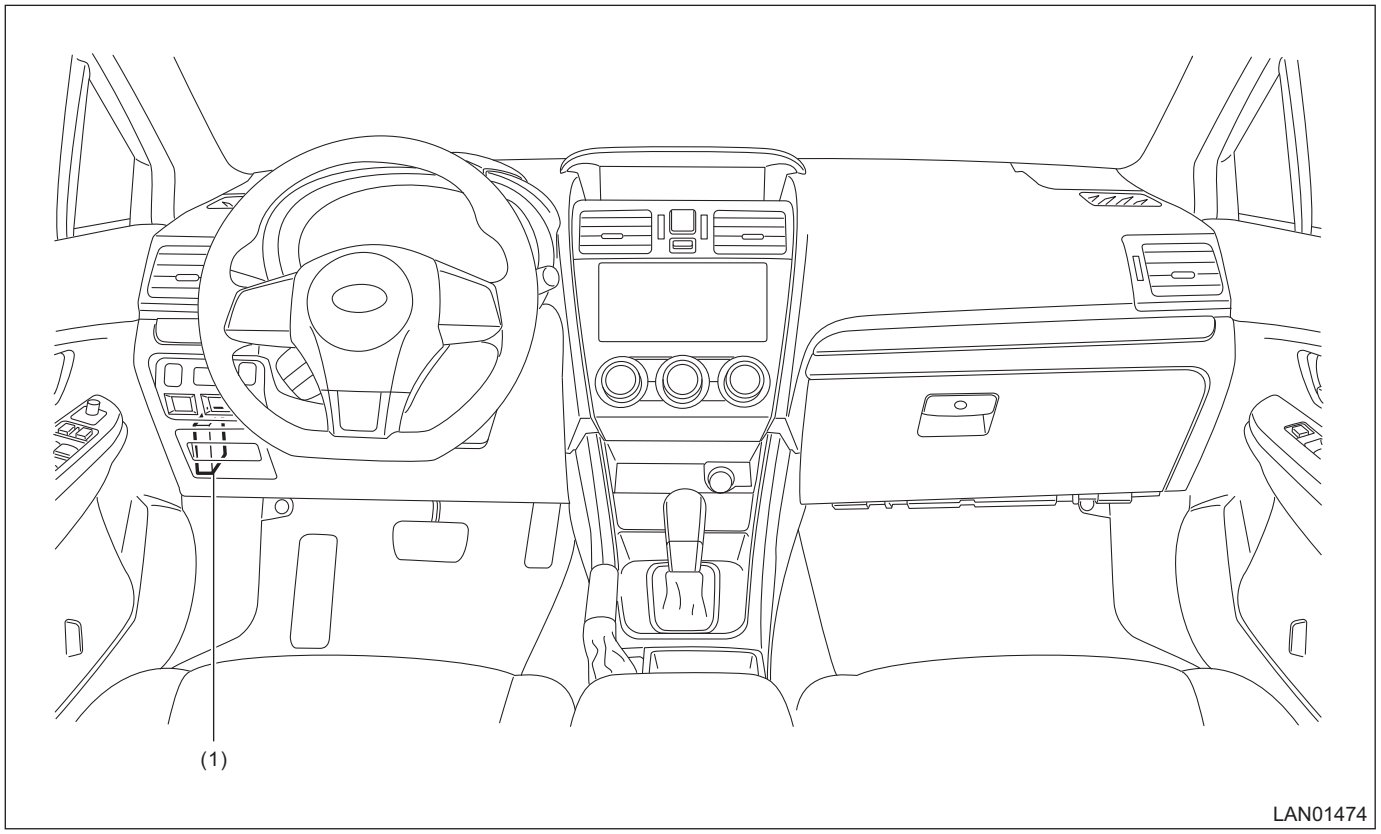
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

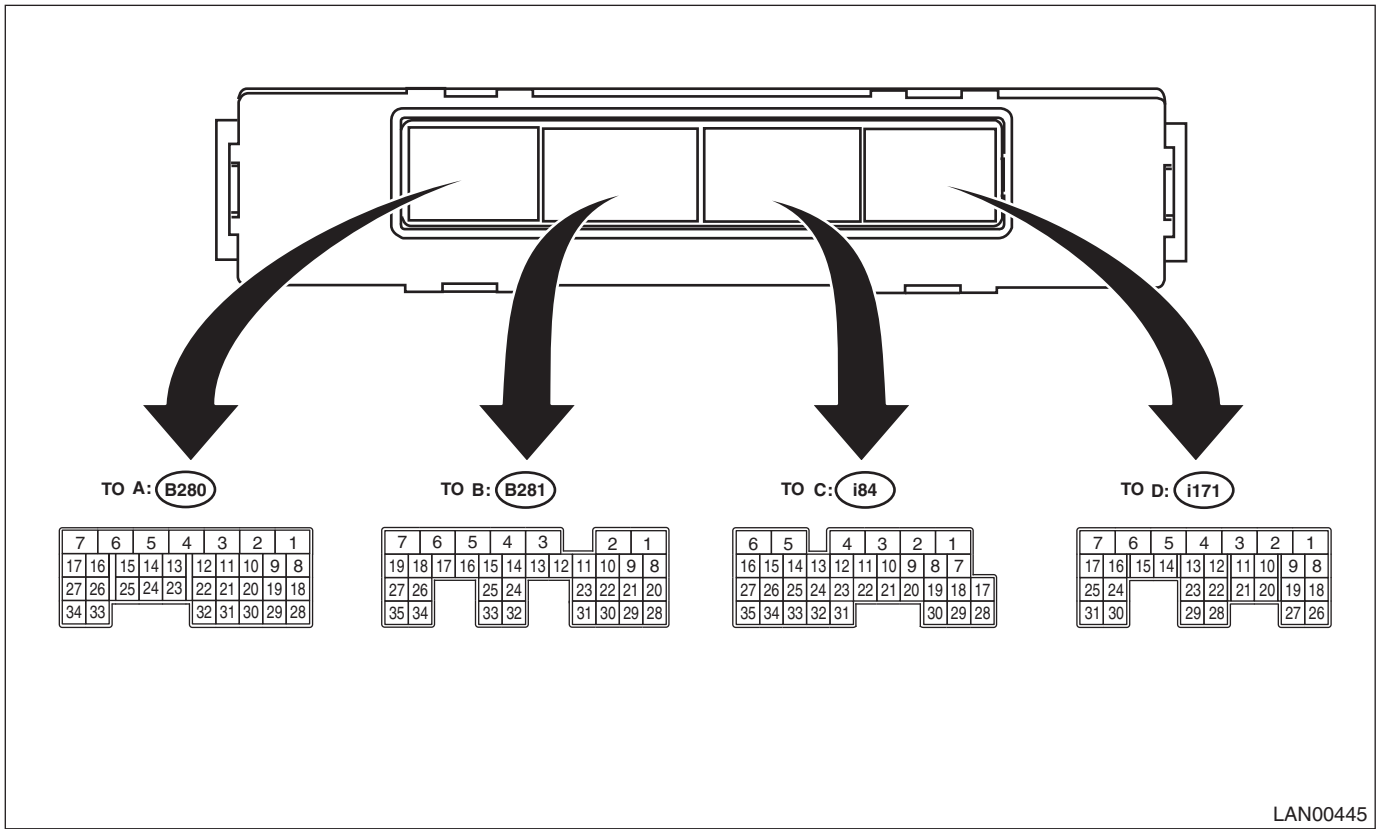
A: LOCATION



(1) Body integrated unit

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION



Terminal No.	Contents	Measuring condition	Standard
(B280) No. 1 ←→ Chassis ground	GND	Always	Less than 1.5 V
(B280) No. 2 ←→ Chassis ground	Front wiper return	When front wiper is reversed	Less than 1 V → 9 V or more
(B280) No. 3 ←→ Chassis ground	Lighting relay power supply (redundant circuit)	ACC or key-in switch ON	10 — 13 V
(B280) No. 4 ←→ Chassis ground	ACC input	ACC ON (model with the keyless access with push button start system)	Less than 1.5 V → 10 — 13 V
(B280) No. 4 ←→ Chassis ground	Key-in switch	When key is inserted (model without the keyless access with push button start system)	Less than 1.5 V → 10 — 13 V
(B280) No. 5	—	—	—
(B280) No. 6	—	—	—
(B280) No. 7	—	—	—
(B280) No. 8	—	—	—
(B280) No. 9	—	—	—
(B280) No. 10 ←→ Chassis ground	Stop light SW	Stop light switch OFF → ON	Less than 1.5 V → 8 V or more
(B280) No. 11 ←→ Chassis ground	Impact sensor	Apply an impact	8 V or more
(B280) No. 12	—	—	—
(B280) No. 13	—	—	—
(B280) No. 14	—	—	—

Terminal No.	Contents	Measuring condition	Standard
(B280) No. 15 ←→ Chassis ground	Front fog light output	Lighting II switch ON, then front fog light switch OFF → ON	9 V or more → less than 1.0 V
(B280) No. 16 ←→ Chassis ground	Lighting relay I output	Lighting I switch at ON position	9 V or more → less than 1.0 V
(B280) No. 17 ←→ Chassis ground	Lighting Hi relay output	Dimmer switch at Hi position	9 V or more → less than 1.0 V
(B280) No. 18	—	—	—
(B280) No. 19 ←→ Chassis ground	Illumination sensor signal	Ignition switch OFF → ON	0.2 — 4.5 V
(B280) No. 20 ←→ Chassis ground	Answer-back buzzer output	When answer-back operates	Less than 1.0 V → 9 V or more
(B280) No. 21	Security UART	(Models without the keyless access with push button start system)	Serial communication
(B280) No. 22	—	—	—
(B280) No. 23	—	—	—
(B280) No. 24 ←→ Chassis ground	Security horn output	When security is operating	8 V or more → less than 1.0 V
(B280) No. 25 ←→ Chassis ground	Key ring illumination	Illumination ON (models without the keyless access with push button start system)	9 V or more → less than 1.0 V
(B280) No. 26 ←→ Chassis ground	Rear defogger relay output	Rear defogger switch ON	9 V or more → less than 1.0 V
(B280) No. 27 ←→ Chassis ground	Lighting Lo relay output (redundant circuit)	Lighting II switch at ON position	9 V or more → less than 1.0 V
(B280) No. 28	—	—	—
(B280) No. 29	Illumination sensor GND	—	—
(B280) No. 30	—	—	—
(B280) No. 31 ←→ Chassis ground	ECM immobilizer communication	Communicating with ECM (model without keyless access with push button start system)	Serial communication
(B280) No. 32 ←→ Chassis ground	ACC power supply	ACC ON	Less than 1.5 V → 10 — 13 V
(B280) No. 33	—	—	—
(B280) No. 34 ←→ Chassis ground	Lighting II switch (redundant circuit)	Switch at II position	8 V or more → less than 1.5 V
(B281) No. 1 ←→ (B280) No. 29	Illumination sensor power supply	Ignition switch OFF → ON	Less than 1.5 V → 4.5 V or more
(B281) No. 2 ←→ (B281) No. 30	Immobilizer antenna amplifier power supply	Communicating with ignition key (model without keyless access with push button start system)	4.5 V — 5.5 V
(B281) No. 3 ←→ Chassis ground	Ignition power supply	Ignition switch ON	Less than 1.5 V → 10 — 13 V
(B281) No. 4 ←→ Chassis ground	Key lock solenoid output	LOCK status is ON (CVT model without the keyless access with push button start system)*2	Less than 1.0 V → 9 V or more
(B281) No. 5 ←→ Chassis ground	Shift lock solenoid output	When shift lock is operating (CVT models)	Less than 1.0 V → 9 V or more
(B281) No. 6 ←→ Chassis ground	Battery power supply (shift lock/key lock)	Always (CVT model)	10 — 13 V

Terminal No.	Contents	Measuring condition	Standard
(B281) No. 7 ←→ Chassis ground	Battery power supply (back-up)	Always	10 — 13 V
(B281) No. 8	Illumination output	Illumination ON	Pulse output
(B281) No. 9 ←→ Chassis ground	Turn signal RH input/output	When turn signal switch (RH) is operating	9 V or more → less than 1.5 V
(B281) No. 10 ←→ Chassis ground	Immobilizer antenna (A)	Communicating with ignition key (model without keyless access with push button start system)	Serial communication
(B281) No. 11	—	—	—
(B281) No. 12 ←→ Chassis ground	MT reverse switch	Reverse switch ON (MT model)	Less than 1.5 V → 8 V or more
(B281) No. 13	—	—	—
(B281) No. 14	Hood switch diagnosis	Always	Less than 1.0 V
(B281) No. 15 ←→ Chassis ground	Dimmer Hi beam switch	Switch at Hi beam position	8 V or more → less than 1.5 V
(B281) No. 16 ←→ Chassis ground	Lighting AUTO switch	Switch at AUTO position	8 V or more → less than 1.5 V
(B281) No. 17 ←→ Chassis ground	Lighting I switch	Switch at I position	8 V or more → less than 1.5 V
(B281) No. 18 ←→ Chassis ground	P range switch	Shift lever shifted from P range to other than P range (CVT model)	8 V or more → less than 1.5 V
(B281) No. 19 ←→ Chassis ground	Lighting relay power supply (control)	ACC or key-in switch ON	10 — 13 V
(B281) No. 20	Driving system CAN communication circuit 1 (Hi)	Except for sleep status*1	Serial communication
(B281) No. 21 ←→ Chassis ground	Turn signal LH input/output	When turn signal switch (LH) is operating	9 V or more → less than 1.5 V
(B281) No. 22	Immobilizer antenna (B)	Communicating with ignition key (model without keyless access with push button start system)	Serial communication
(B281) No. 23	—	—	—
(B281) No. 24	—	—	—
(B281) No. 25 ←→ Chassis ground	Dimmer passing switch	Switch at passing position	8 V or more → less than 1.5 V
(B281) No. 26 ←→ Chassis ground	Front fog light switch	Front fog light switch ON	8 V or more → less than 1.5 V
(B281) No. 27	—	—	—
(B281) No. 28	Driving system CAN communication circuit 1 (Lo)	Except for sleep status*1	Serial communication
(B281) No. 29	Accessory connector	—	—
(B281) No. 30 ←→ Chassis ground	Immobilizer antenna amplifier GND	Always (models without the keyless access with push button start system)	Less than 1.5 V
(B281) No. 31 ←→ Chassis ground	GND	Always	Less than 1.5 V
(B281) No. 32	Front washer switch	Switch at ON position	8 V or more → less than 1.5 V
(B281) No. 33	Hood switch	Hood closed → open	Less than 1.5 V → 8 V or more
(B281) No. 34 ←→ Chassis ground	Lighting II switch (control)	Switch at II position	8 V or more → less than 1.5 V

Terminal No.	Contents	Measuring condition	Standard
(B281) No. 35 ←→ Chassis ground	Lighting Lo relay output (control)	Lighting II switch at ON position	9 V or more → less than 1.0 V
(i84) No. 1 ←→ Chassis ground	GND	Always	Less than 1.5 V
(i84) No. 2	—	—	—

*1: For CAN sleep state, hold on for approx. one minute with ignition OFF and the doors, trunk, and rear gate all closed.
*2: Use an oscilloscope for measurement due to short output time.

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning the DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to BC(diag)-34, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

8. Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode. After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
B1010	BODY CONTROL SYSTEM (BIU) MALFUNCTION	—
B1011	BATTERY CONTROL POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the battery, and then wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B1012	BATTERY BACKUP POWER SUPPLY	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Disconnect and reconnect the back-up fuse, and then wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

3. INSPECTION MODE 3

DTC	Item	Note
B1013	IGNITION POWER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

4. INSPECTION MODE 4

DTC	Item	Note
B1014	ACC POWER	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After ACC is ON, wait for one minute or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

5. INSPECTION MODE 5

DTC	Item	Note
B1015	KEY INTERLOCK CIRCUIT	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, press the shift knob switch and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

6. INSPECTION MODE 6

DTC	Item	Note
B1016	SHIFT LOCK CIRCUIT	—

Diagnostic procedure:
1) Perform the Clear Memory Mode. <Ref. to BC(diag)-15, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) After the ignition switch is ON, wait for 10 seconds or more without depressing the brake pedal. Or, after the ignition switch is ON, press the shift knob switch with the brake pedal depressed and wait for 10 seconds or more.
4) Read the DTC and check that the DTC is not displayed. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

7. INSPECTION MODE 7

10.User Customizing

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For detailed operation procedures, refer to “Application help”.
List of User Customizing item

Data	Initial setting value	Customize setting	Remarks
Off delay time	30 Seconds	OFF	Room light off delay time can be selected.
		10 Seconds	
		20 Seconds	
		30 Seconds	
Auto Light Sensitivity Adjustment	Normal	Dull	Slow response
		Normal	Standard
		Sensitive	Quick response
		Very sensitive	Fairly quick response
Remote Trunk Open/Power Rear Gate Open Function(ON/OFF)	ON	ON	Trunk / power rear gate open function is activated by operating the keyless transmitter.
		OFF	Trunk / power rear gate open function is not activated by operating the keyless transmitter.
Lane change signal setting	ON	ON	One-touch blinker control is performed.
		OFF	One-touch blinker control is not performed.
Rear wiper auto setting	OFF	ON	Existence of rear wiper linked with reverse operation can be set.
		OFF	
TPMS Setting	— (*1)	TPMS	Set to “ON” for model with TPMS.
		No TPMS	
Driver’s Door Unlock Setting	Select	Select	When the touch sensor (unlock) on the driver’s side is touched, only the driver’s door is unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked.
		ALL	When the touch sensor (unlock) on the driver’s side is touched, all doors are unlocked. When the touch sensor (unlock) on the passenger’s side is touched, all doors are unlocked.
Rear Gate Unlock Setting	Select	Select	When the rear gate opener button is pressed, only the rear gate is unlocked.
		ALL	When the rear gate opener button is pressed, all doors are unlocked.
Daytime Running Light(DRL) Setting for North America	— (*1)	High Beam Dimming System	Set according to the daytime running light source type.
		Alternate DRL System	
Wiper link Auto Light Setup	ON	ON	Wiper interlock auto light function is activated.
		OFF	Wiper interlock auto light function is deactivated.
Steering Responsive Fog Lamp Setting	— (*1)	ON	SRF control is performed.
		OFF	SRF control is not performed.

Data	Initial setting value	Customize setting	Remarks
Head Lamp Low Beam Specification	— (*1)	Halogen	Set according to the headlight type.
		HID	
		LED	
Head Lamp High Beam Specification	— (*1)	Halogen	
		HID	
		LED	
High Beam Assist Current Setting	— (*1)	ON	Set to ON for models with HBA.
		OFF	
High Beam Assist Function Setting (mirror/EyeSight)	— (*1)	No HBA	Set according to the HBA type.
		EyeSight HBA	
		mirror HBA	
Rear defogger operation mode	Normal	Normal	Automatically stops in 15 minutes after the switch is turned to ON.
		Continuous	Repeats activated for 15 minutes and deactivated for 2 minutes until the switch is turned to OFF.
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) becomes activated.
		OFF	Security alarm becomes deactivated.
Impact Sensor Setup	OFF	ON	Workable when the Impact Sensor Setup is set to “ON”. Impact sensor function becomes activated.
		OFF	Impact sensor function becomes deactivated. (Be sure to set to “OFF” for models without sensors.)
Alarm delay setup	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.
		ON	Delay time is 30 seconds.
		OFF	Delay time is 0 seconds.
Lockout prevention	ON	ON	key lockout prevention function is activated. (The function does not operate if safety knob is locked by hand.)
		OFF	Key lockout prevention function is deactivated.
Impact sensor	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to “OFF” for models without the impact sensor. When “ON”, hazard, horn or siren become activated by keyless lock (alarm monitor start).)
		OFF	Vehicle is controlled in impact sensor non-equipped mode.
Buzzer sounding setting	ON	ON	Buzzer operates when lock/unlock is selected by keyless entry system operation.
		OFF	Buzzer does not operate when lock/unlock is selected by keyless entry system operation.
Abnormal warning lamp flashing setting	ON	ON	Hazard blinks when lock/unlock is selected by keyless entry system operation.
		OFF	Hazard is not interlocked when lock/unlock is selected by keyless entry system operation.
Initial keyless setting	—	—	—

*1: Customization item according to the actual vehicle equipment

6) When the setting is complete, see «Data monitor» to make sure that the alterations are consistent with the actual equipment on the vehicle.

CAUTION:
- **the above settings must match the actual vehicle equipment.**
- **Do not change settings except for setting above while setting the functions.**
- **Be sure not to change the factory initial setting except when installing a new body integrated unit.**

NOTE:
For detailed operation procedures, refer to “Application help”.

11.Registration Body Integrated Unit

A: OPERATION

1. CONFIRM CURRENT SETTING

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».
6) Save the setting.

Required items for new registration. (Except for system not equipped)

Item	Item to confirm				Remarks

2. REGISTRATION BODY INTEGRATED UNIT (FUNCTION SETTING)

CAUTION:
For the body integrated unit, function selection is available to control the entire vehicle systems. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.
- **Be sure to correspond registrations, or User Customizing settings to vehicle equipment.**
- **Do not change the settings of vehicle improperly.**
- **Make sure that the key illumination does not blink with ignition switch ON, or that the body integrated unit registration item "Factory initial setting" is set to "Market". If "Factory initial setting" is set to "Factory", key illumination blinks when the ignition switch is turned ON, to notify that the settings are not confirmed. (If the vehicle is a model with the keyless access with push button start system, check by the current data display function of Subaru Select Monitor because no key illumination is available.)**
- **Key illumination does not blink with ignition switch turned to ON and go off with door closed. (Except for model with the keyless access with push button start system)**
- **Be sure to register immobilizer if body integrated unit is replaced with a new part. (Except for model with the keyless access with push button start system)**
- **Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER" provided as a separate volume.**

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Customize».

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen. <Ref. to BC(diag)-31, DESTINATION SETTING, OPERATION, Registration Body Integrated Unit.>

6) Change the setting to the contents saved at confirmation of current setting.

CAUTION:
- **To perform normal operation of vehicle and diagnosis, the above settings must match the actual vehicle equipment.**
- **When the body integrated unit is new or in Factory mode, the key illumination blinks, and user customizing is incomplete. Check the user customizing settings. (For models with keyless access with push button start system, the room light illuminates.)**
- **Be sure not to change Factory initial setting except when installing a new body integrated unit.**

NOTE:
"Factory" mode:

• Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON. (Except for model with the keyless access with push button start system)
• All replacement body integrated units are set to “Factory” mode. When replacing a body integrated unit, be sure to perform the registration operation.
“Market” mode:
• Each settings have been set. It can be recognized by key ring illumination coming on in concocting with room light and going off with ignition switch turned to ON. (Except for model with the keyless access with push button start system)
7) Perform the factory initial setting. Select «Factory initial setting» in the «Customize» screen of the Subaru Select Monitor.
8) Change the mode from Factory to Market.
9) Turn the ignition switch to OFF to settle the setting.
10) Perform the User Customizing. <Ref. to BC(diag)-26, OPERATION, User Customizing.>
11) Register the immobilizer key. Follow the procedure of the “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume. (Models without the keyless access with push button start system)
12) For vehicles with remote engine starter, refer to “REGISTRATION MANUAL FOR IMMOBILIZER” provided as a separate volume and perform registration of the remote engine starter. (Models without the keyless access with push button start system)

NOTE:
For detailed operation procedures, refer to “Application help”.

3. DESTINATION SETTING

NOTE:
For the vehicle requiring the destination setting, if the destination setting is not finished, display can not be shifted into customizing screen.

	Step	Check	Yes	No
1	**CONFIRM CURRENT SETTING.** Always perform confirmation of current setting before replacing the module. Record the contents of the “Destination Setting”. NOTE: Refer to the “Read Current Data” and “CONFIRMATION OF CURRENT SETTING” to confirm the current setting. <Ref. to BC(diag)-29, CONFIRM CURRENT SETTING, OPERATION, Registration Body Integrated Unit.> <Ref. to BC(diag)-20, OPERATION, Read Current Data.>	Is the current setting recorded?	Go to step **2**.	Confirm the current setting. Go to step **1**.
2	**CONFIRM DESTINATION SETTING.** 1) Connect the Subaru Select Monitor, and run the application. 2) On «Start» display, select «Diagnosis». 3) On «Vehicle selection» display, input the target vehicle information and select «Confirmed». 4) On «Main Menu» display, select «Each System». 5) On «Select System» display, select «Body Control» and then select «Enter». 6) On «Select Function» display, select «Customize». 7) The vehicle destination screen is displayed.	Is the vehicle destination setting screen displayed?	Go to step **3**.	Go to step **4**.
3	**CONFIRM DESTINATION SETTING.** Confirm the screen displayed on Subaru Select Monitor and the actual vehicle destination.	Is it necessary to change the destination setting?	Select [Yes], Go to step **4**.	Select [No], Go to step **5**.

	Step	Check	Yes	No
4	**ENTER DESTINATION CODE.** Enter the appropriate code in the screen. JPN: JP00 KA, KC: KA00 KS: KS00 U4, U5, U6, C6 and C0, C5 (with the keyless access with push button start system): U400 C0, C5 (without the keyless access with push button start system): C000 EK, ER: EK00 Except above: EC00	Is the appropriate code entered?	Select [OK]. Go to step **5**.	Enter the destination code. Go to step **5**.
5	**REGISTER VEHICLE EQUIPMENT.** Customizing screen is displayed. NOTE: Match the each item setting of body integrated unit registration item list with the vehicle equipment.	Do all setting contents match with the vehicle equipment specification?	Go to step **6**.	Change the items until each content setting match with the vehicle equipment specification. Go to step **6**.
6	**CONFIRM MARKET MODE.** 1) Customizing screen, select the {Factory initial setting} to change the setting from “Factory” mode to “Market” mode. 2) Turn the ignition switch to OFF. NOTE: When the setting is changed from “Factory” mode to “Market” mode, turning the ignition switch from ON → OFF confirms the setting. 3) Turn the ignition switch to ON, and check the contents of settings.	Is the mode changed to “Market” mode?	Go to step **7**.	Perform the destination setting from the first step. Go to step **1**.
7	**CONFIRM MARKET MODE.** Check the following. Make sure that the “Destination Setting” in the current data display is the same as the one you confirmed in step 1.	Is the display the same as indicated?	Registration of body integrated unit is finished.	It is possible that harness malfunction may occur. Perform the diagnosis.

12.Function Check

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Body Control» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
• In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.
• For detailed operation procedures, refer to “Application help”.

B: LIST

Item	Display	Note
lock actuator LOCK output	ON/OFF	—
All seat UNLOCK output	ON/OFF	—
R gate/trunk UNLOCK output	ON/OFF	—
Shift lock solenoid output	ON/OFF	—
Key lock solenoid output	ON/OFF	—
Keyless Buzzer Output	ON/OFF	—
Horn Output	ON/OFF	—

NOTE:
If not equipped (depending on destination area or vehicle equipment condition), process will not go on.

13.List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Note
None	COMMUNICATION FOR INITIALIZING IMPOSSIBLE	<Ref. to LAN(diag)-12, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Subaru Select Monitor.>

U123C	LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE	<Ref. to BC(diag)-51, DTC U123C LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1433	INVALID DATA RECEIVED FROM EyeSight	<Ref. to BC(diag)-51, DTC U1433 INVALID DATA RECEIVED FROM EyeSight, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U1500	KEYLESS UART COM. MALFUNCTION	<Ref. to BC(diag)-52, DTC U1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

14.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC B1010 BODY CONTROL SYSTEM (BIU) MALFUNCTION

DTC detecting condition:
System error in body integrated unit
Trouble symptom:
LAN communication immobilizer function may not be executed normally.

Step		Check	Yes	No
1	**CHECK DTC.** Check DTC indicated by body integrated unit. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1010 a current malfunction?	Go to step **2**.	Temporary EEPROM access error occurred.
2	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Connect the disconnected connectors. 4) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1010 displayed? (Current malfunction)	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Temporary EEPROM access error occurred.

B: DTC B1011 BATTERY CONTROL POWER SUPPLY

DTC detecting condition:

- Voltage failure caused by poor contact of battery power supply control circuit
- Battery voltage of body integrated unit is not within the range of 8.5 — 16.5 V.

Trouble symptom:

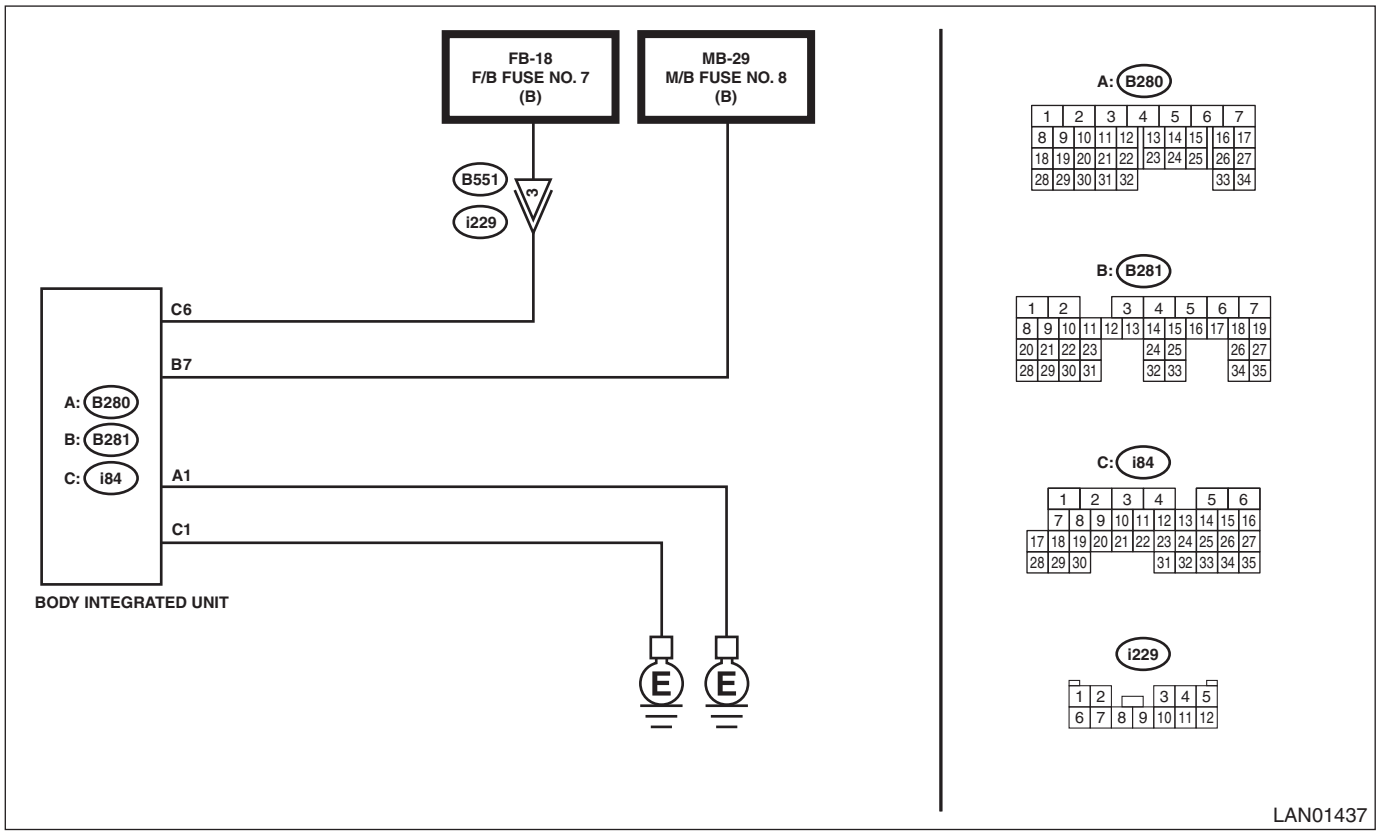
Functions of body integrated unit stop.

NOTE:

When B1012 «BATTERY BACKUP POWER SUPPLY» is output at the same time, all the function of body integrated unit may not operate.

Wiring diagram:

Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



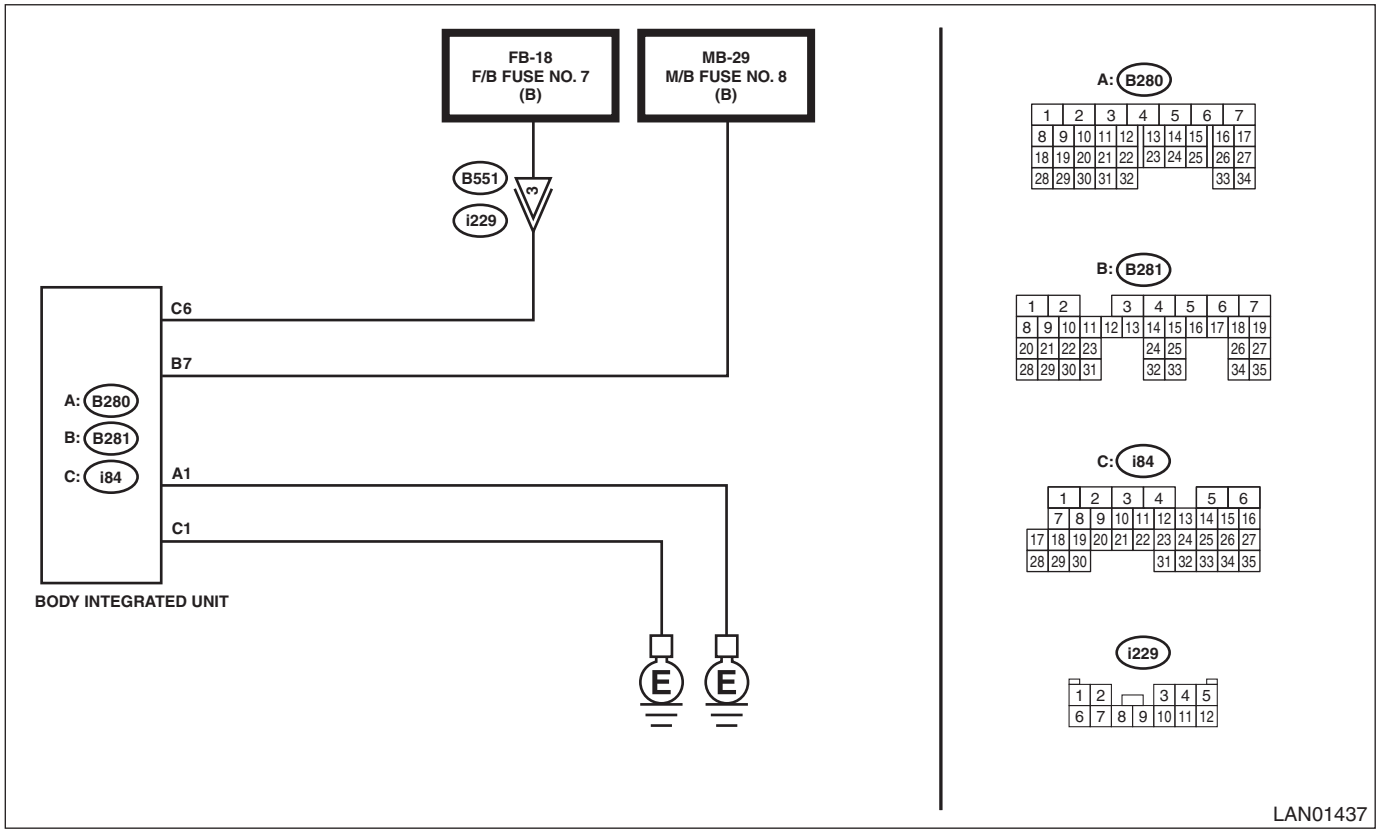
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1011 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1011 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(i84) No. 6 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

C: DTC B1012 BATTERY BACKUP POWER SUPPLY

DTC detecting condition:
Voltage failure caused by poor contact of battery power supply backup circuits
Trouble symptom:
Illuminations for the keyless entry, map light, luggage light, trunk light, room light, and ignition switch do not turn on.

NOTE:
When B1011 «BATTERY CONTROL POWER SUPPLY» is output at the same time, all the function of body integrated unit may not operate.
Wiring diagram:
Immobilizer system <Ref. to WI-242, WIRING DIAGRAM, Immobilizer System.>



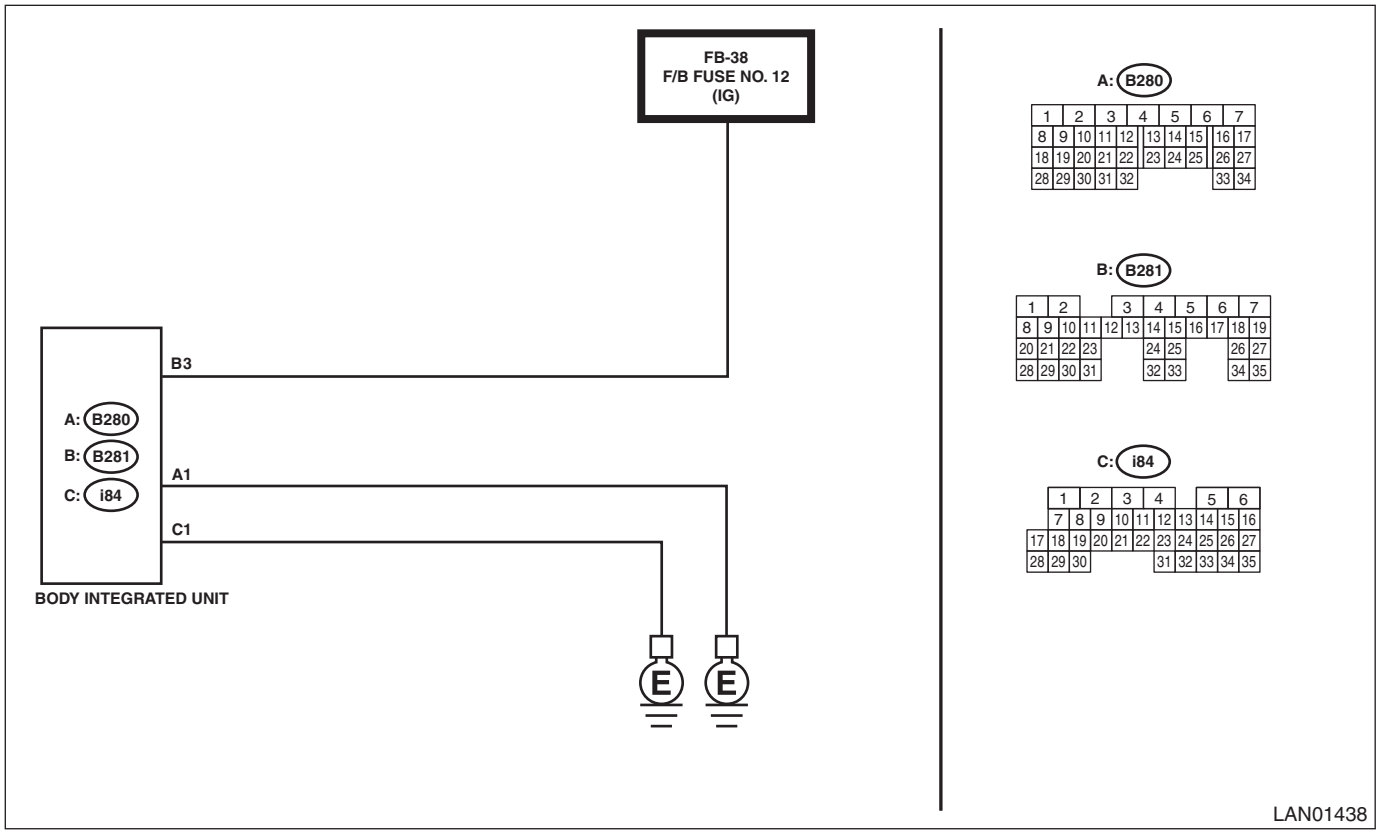
Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1012 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1012 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.

	Step	Check	Yes	No
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal (B281) No. 7 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

D: DTC B1013 IGNITION POWER

DTC detecting condition:
Voltage failure caused by poor contact of IGN power supply circuits
Trouble symptom:
Symptoms such as shift lock or wiper not operating may occur.
Wiring diagram:

Shift lock control system <Ref. to WI-339, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1013 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1013 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B281) No. 3 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.

	Step	Check	Yes	No
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

E: DTC B1014 ACC POWER

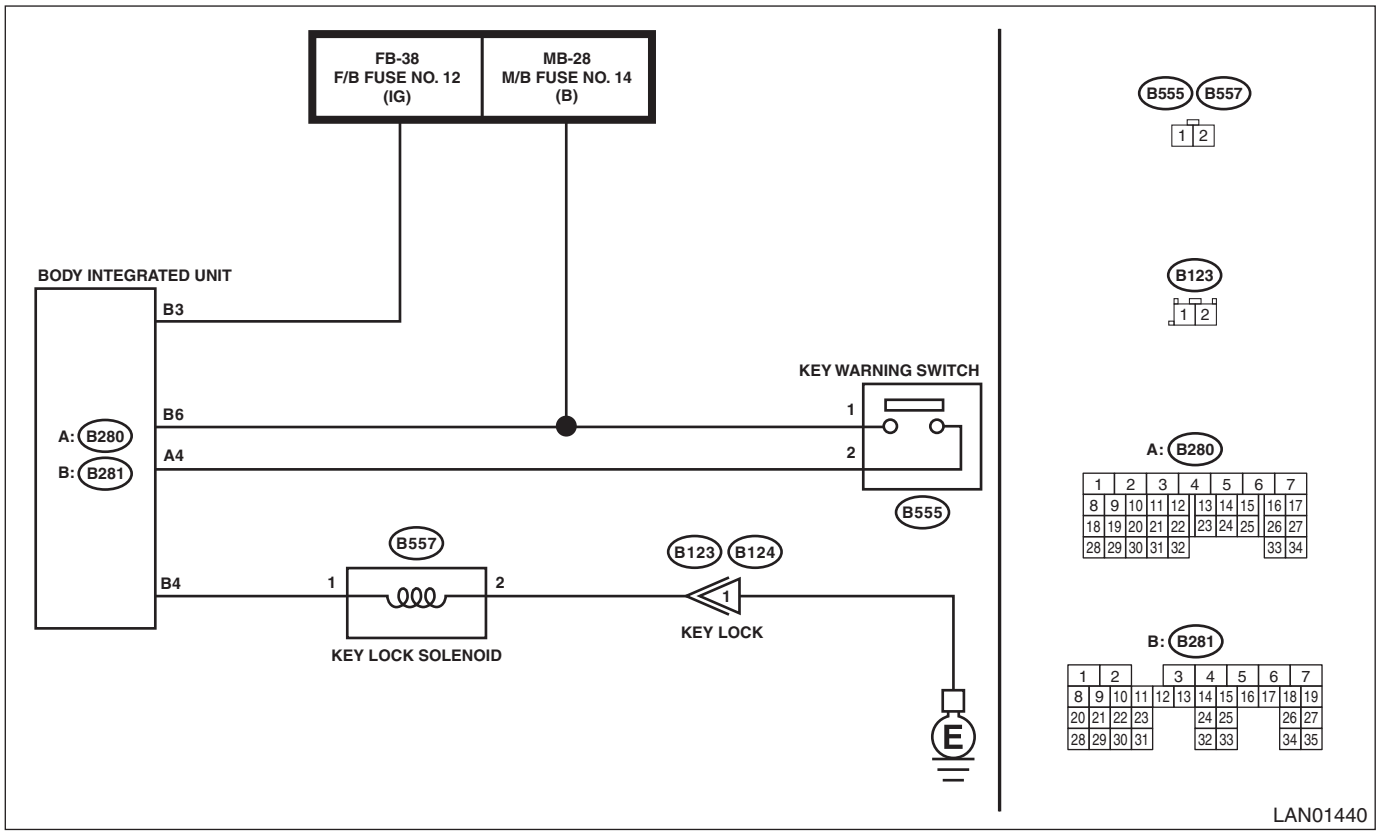
DTC detecting condition:
Voltage failure caused by poor contact of ACC power supply circuit
Trouble symptom:
DRL may not illuminate.
Wiring diagram:
Shift lock control system <Ref. to WI-339, WIRING DIAGRAM, Shift Lock Control System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1014 displayed? (Current malfunction)	Go to step **2**.	Go to step **5**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect and then connect the body integrated unit connector. 3) Wait approx. 2 minutes. 4) Turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1014 displayed? (Current malfunction)	Go to step **3**.	Go to step **5**.
3	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse.	Is the check result OK?	Go to step **4**.	Replace the defective fuse.
4	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector. 2) Using the tester, measure the voltage between terminals. ***Connector & terminal*** ***(B280) No. 32 (+) — Chassis ground (–):***	Is the voltage 8.5 — 16.5 V?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair the harness between body integrated unit and fuse.
5	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector.	Is there poor contact of connector?	Repair or replace the poor contact of connector.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

F: DTC B1015 KEY INTERLOCK CIRCUIT

DTC detecting condition:
Short to ground in key interlock circuit
Trouble symptom:
Key interlock does not keep lock condition.
Wiring diagram:
Shift lock control system <Ref. to WI-339, WIRING DIAGRAM, Shift Lock Control System.>



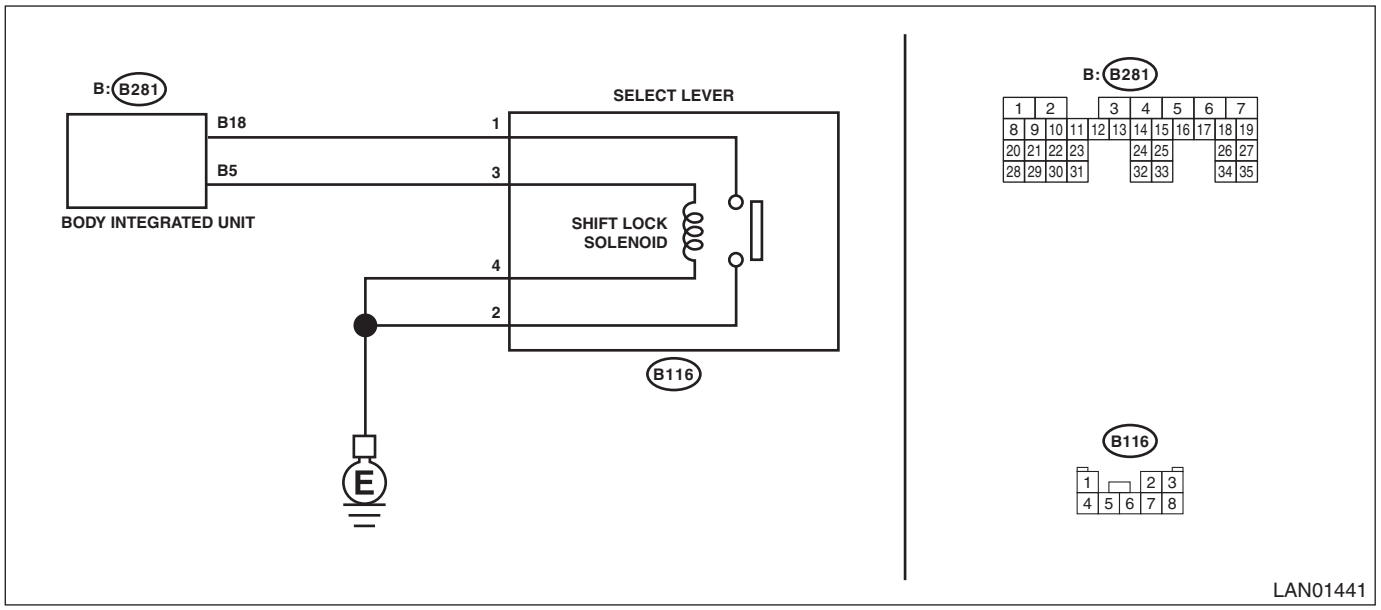
Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key. 2) Turn the ignition switch to ON. 3) Shift to the Neutral range. 4) Shift into P range. 5) Shift to the Neutral range. 6) Shift into P range. 7) Shift to the Neutral range. 8) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1015 displayed? (Current malfunction)	Go to step **2**.	Go to step **8**.

	Step	Check	Yes	No
2	**CHECK DTC.** 1) Shift the select lever to P range. 2) Remove the ignition key. 3) Disconnect the key actuator connector (B557) and body integrated unit connector (B281). 4) Connect the disconnected connectors. 5) Insert the ignition key. 6) Turn the ignition switch to ON and shift into Neutral. 7) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1015 displayed? (Current malfunction)	Go to step **3**.	Go to step **8**.
3	**CHECK KEY ACTUATOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the key actuator connector (B557). 3) Measure the resistance between key actuator connectors. ***Terminals*** ***Key actuator*** ***No. 1 — No. 2:***	Is the resistance 103 — 115 Ω?	Go to step **4**.	Replace the key actuator. <Ref. to SL-68, Key Lock Cylinders.>
4	**CHECK KEY ACTUATOR.** Connect the battery terminals to the key actuator. ***Terminals*** ***Key actuator*** ***No. 1 — Positive terminal:*** ***No. 2 — Ground terminal:***	Is the actuator activated and then key locked?	Go to step **5**.	Replace the key actuator. <Ref. to SL-68, Key Lock Cylinders.>
5	**CHECK HARNESS.** 1) Disconnect the body integrated unit connector (B281). 2) Measure the resistance between body integrated unit and key actuator using tester. ***Connector & terminal*** ***(B557) No. 1 — (B281) No. 4:***	Is the resistance less than 10 Ω?	Go to step **6**.	Repair or replace the open circuit of harness.
6	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **7**.	Repair or replace the short circuit of the harness.
7	**CHECK HARNESS.** 1) Connect the body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit and chassis ground using tester. ***Connector & terminal*** ***(B281) No. 4 (+) — Chassis ground (–):***	Is the voltage 6 V or more?	Go to step **8**.	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

	Step	Check	Yes	No
8	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector (B281) and key actuator connector (B557).	Is there poor contact at disconnected connector terminal?	Repair the terminal where poor contact exists, or replace harness.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

G: DTC B1016 SHIFT LOCK CIRCUIT

DTC detecting condition:
Shift lock circuit is open, or shorted to power or ground.
Trouble symptom:
Shift lock does not be released or remain locked.
Wiring diagram:
Shift lock control system <Ref. to WI-339, WIRING DIAGRAM, Shift Lock Control System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Turn the ignition switch to ON. 2) Keep the Parking range for approx. 5 seconds. 3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Go to step **6**.	Go to step **2**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON, then keep the Parking range for approx. 5 seconds. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Go to step **3**.	Go to step **7**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the shift lock solenoid connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(B116) No. 4 — Chassis ground:***	Is the resistance less than 10 Ω?	Go to step **4**.	Repair or replace the open circuit of harness.

	Step	Check	Yes	No
4	**CHECK SHIFT LOCK SOLENOID.** Using a tester, measure the resistance between shift lock solenoid terminals. ***Terminals*** ***Shift lock solenoid*** ***No. 4 — No. 3:***	Is the resistance between 27 — 31 Ω?	Go to step **5**.	Replace the shift lock solenoid. <Ref. to CS-55, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
5	**CHECK SHIFT LOCK SOLENOID.** Connect the battery terminal to shift lock solenoid. ***Terminals*** ***Shift lock solenoid*** ***No. 3 — Positive terminal:*** ***No. 4 — Ground terminal:***	Does the shift lock solenoid operate and then release the lock?	Go to step **6**.	Replace the shift lock solenoid. <Ref. to CS-55, REMOVAL, AT Shift Lock Solenoid and "P" Range Switch.>
6	**CHECK HARNESS (OPEN CIRCUIT).** Use a tester to measure the resistance between harness terminals. ***Connector & terminal*** ***(B116) No. 3 — (B281) No. 5:*** NOTE: If body integrated unit and shift lock connector are not disconnected, disconnect them first and then perform measurement.	Is the resistance less than 10 Ω?	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>	Repair or replace the open circuit of harness.
7	**CHECK DTC.** 1) Depress the brake pedal at the parking range. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Go to step **8**.	Go to step **9**.
8	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector. 3) Connect the disconnected connectors. 4) Turn the ignition switch to ON. 5) Depress the brake pedal at the parking range. 6) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC B1016 displayed? (Current malfunction)	Go to step **4**.	Go to step **9**.
9	**CHECK CONNECTOR.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector and shift lock connector.	Is there poor contact of connector terminal?	Repair or replace the poor contact of terminal.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

H: DTC B1401 METER COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-22, DTC B1401 METER COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

I: DTC B1402 IMMOBILIZER KEY COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-23, DTC B1402 IMMOBILIZER KEY COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

J: DTC B1405 SCU COLLATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-23, DTC B1405 SCU COLLATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

K: DTC B1406 SCU_EEPROM

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-24, DTC B1406 SCU_EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

L: DTC B1407 MET COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-24, DTC B1407 MET COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

M: DTC B1408 METER NON-VOLATILE MEMORY

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-24, DTC B1408 METER NON-VOLATILE MEMORY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

N: DTC B1409 SCU COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-26, DTC B1409 SCU COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

O: DTC B1410 TRANSPONDER COMMUNICATION

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1410 TRANSPONDER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P: DTC B1411 IMMOBILIZER ANTENNA

For detailed diagnosis procedure, refer to IMMOBILIZER (DIAG). <Ref. to IM(diag)-28, DTC B1411 IMMOBILIZER ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Q: DTC U1201 CAN-HS COUNTER ABNORMAL

Malfunction of high-speed CAN communication.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

R: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when malfunction occurs in CAN line. (Bus off)

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

S: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

No data is received from ECM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

T: DTC U0101 LOST COMMUNICATION WITH TCM

No data is received from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

U: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

No data is received from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

V: DTC U0128 LOST COMMUNICATION WITH PARK BRAKE CONTROL MODULE

No data is received from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

W: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Not received data from meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

X: DTC U0164 LOST COMMUNICATION WITH HVAC CONTROL MODULE

No data is received from A/C control panel.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Y: DTC U0327 SOFTWARE INCOMPATIBILITY WITH VEHICLE SECURITY CONTROL MODULE

No data is received from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

Z: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Received error data from ECM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AA:DTC U0402 INVALID DATA RECEIVED FROM TCM

Received error data from TCM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AB:DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

Received error data from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AC:DTC U0417 INVALID DATA RECEIVED FROM PARK BRAKE CONTROL MODULE

Received error data from VDC.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AD:DTC U0423 INVALID DATA RECEIVED FROM INSTRUMENT PANEL CLUSTER CONTROL MODULE

Received error data from meter.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AE:DTC U0424 INVALID DATA RECEIVED FROM HVAC CONTROL MODULE

Received error data from A/C control panel.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AF:DTC U0427 INVALID DATA RECEIVED FROM VEHICLE SECURITY CONTROL MODULE

Received error data from keyless access CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AG:DTC U1235 LOST COMMUNICATION WITH EyeSight

No data from stereo camera is received.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

AH:DTC U123C LOST COMMUNICATION WITH HIGH BEAM ASSIST CONTROL MODULE

NOTE:
When the customize setting for the high beam assist is not the same as the actual setting on the vehicle, DTC is detected. Check the customize settings. <Ref. to BC(diag)-26, User Customizing.>

AI: DTC U1433 INVALID DATA RECEIVED FROM EyeSight

Received error data from stereo camera.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

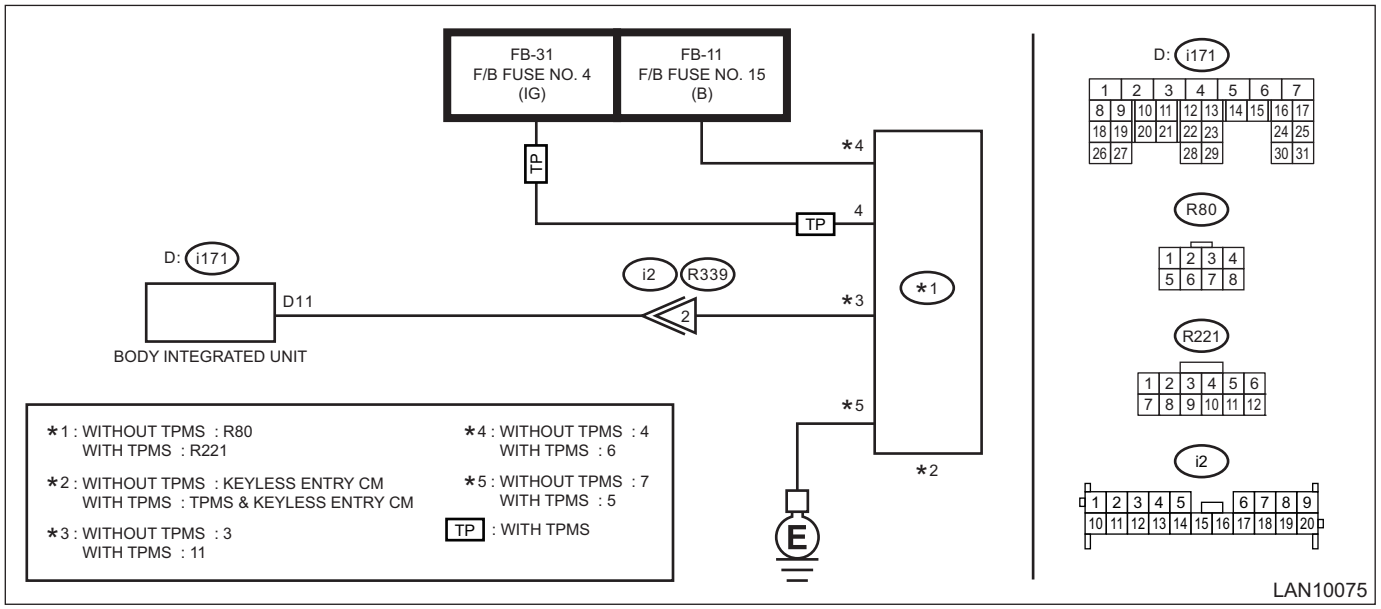
AJ:DTC U1500 KEYLESS UART COM. MALFUNCTION

1. MODEL WITHOUT KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:
UART between the TPMS & keyless entry CM or keyless entry CM and the body integrated unit is open or shorted, or has communication failure.

Trouble symptom:
- Door lock does not operate with keyless.
- TPMS does not operate. (With the indicator blinking)

Wiring diagram:
Keyless entry system <Ref. to WI-269, WIRING DIAGRAM, Keyless Entry System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) Insert the ignition key to the ignition key cylinder and remove. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless entry CM or keyless entry CM connector. 3) Connect the disconnected connectors. 4) Insert the ignition key to the ignition key cylinder and remove. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **3**.	Go to step **7**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS & keyless entry CM or keyless entry CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(i171) No. 11 — (R221) No. 11:*** ***Without TPMS*** ***(i171) No. 11 — (R80) No. 3:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 6 (+) — Chassis ground (–):*** ***(R221) No. 4 (+) — Chassis ground (–):*** ***Without TPMS*** ***(R80) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.
5	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***With TPMS*** ***(R221) No. 5 — Chassis ground:*** ***Without TPMS*** ***(R80) No. 7 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK CONTROL MODULE.** 1) Turn the ignition switch to OFF. 2) Remove the TPMS & keyless entry CM or the keyless entry CM. 3) Install a TPMS & keyless entry CM or keyless entry CM that was operating normally on another vehicle.	Does it operate with the remote control key of another vehicle?	Replace the TPMS & keyless entry CM or keyless entry CM. <Ref. to SL-77, REMOVAL, Keyless Entry Control Module.> <Ref. to WT-8, REMOVAL, Tire Pressure Monitoring System.>	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK CONNECTOR.** Check the connector used for keyless communication for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to BC(diag)-15, Clear Memory Mode.>

2. MODEL WITH KEYLESS ACCESS WITH PUSH BUTTON START SYSTEM

DTC detecting condition:

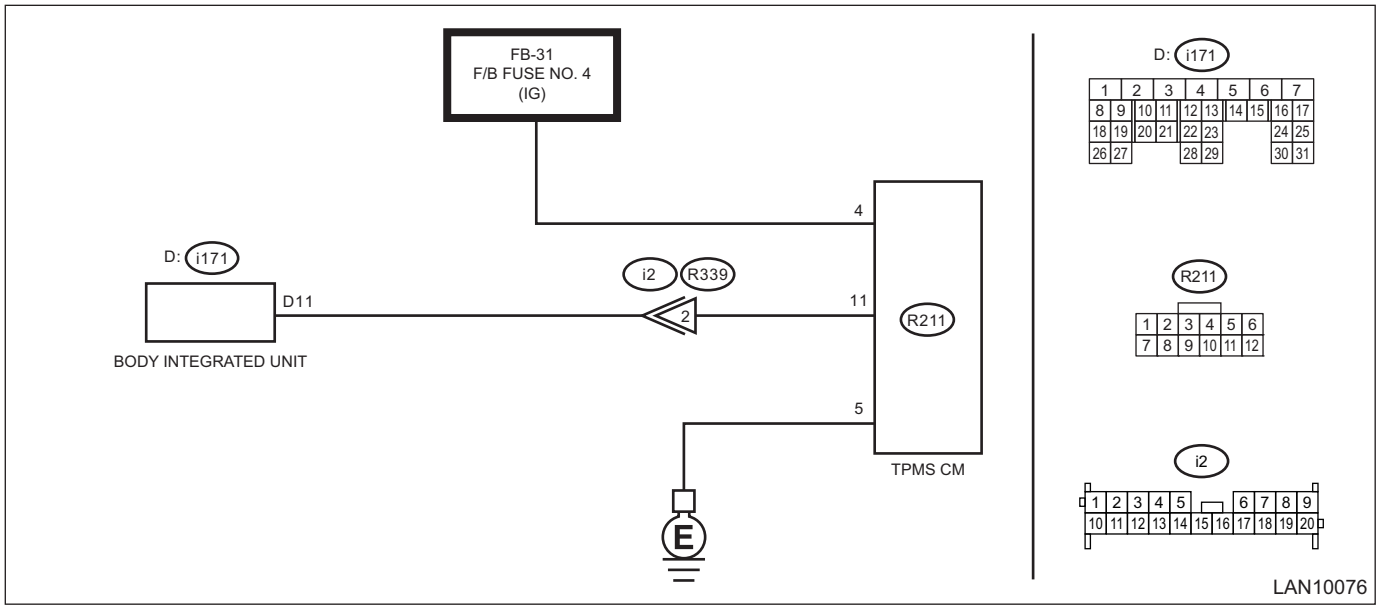
UART between the TPMS CM and the body integrated unit is open or shorted, or has communication failure.

Trouble symptom:

TPMS does not operate. (With the indicator blinking)

Wiring diagram:

Tire Pressure Monitoring System <Ref. to WI-359, WIRING DIAGRAM, Tire Pressure Monitoring System.>



Step		Check	Yes	No
1	**CHECK DTC.** 1) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 2) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **2**.	Go to step **7**.
2	**CHECK DTC.** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Connect the disconnected connectors. 4) With the access key in the vehicle, press the push button ignition switch twice without depressing the brake to turn the ignition switch to ON. 5) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).>	Is DTC U1500 displayed? (Current malfunction)	Go to step **3**.	Go to step **7**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit and the TPMS CM connector. 3) Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(i171) No. 11 — (R211) No. 11:***	Is the resistance 10 Ω or less?	Go to step **4**.	Repair the open circuit of harness or replace harness.
4	**CHECK POWER SUPPLY CIRCUIT.** 1) Turn the ignition switch to ON. 2) Use a tester to measure the voltage between the terminals. ***Connector & terminal*** ***(R211) No. 4 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **5**.	Repair the power supply circuit.

	Step	Check	Yes	No
5	**CHECK HARNESS (OPEN CIRCUIT).** Using the tester, measure the resistance between terminals. ***Connector & terminal*** ***(R211) No. 5 — Chassis ground:***	Is the resistance 10 Ω or less?	Go to step **6**.	Repair the ground circuit.
6	**CHECK CURRENT DATA.** 1) Turn the ignition switch to OFF. 2) Remove the TPMS CM. 3) Install a TPMS CM that was operating normally on another vehicle. 4) Display the current data of TPMS using Subaru Select Monitor.	Is the current data of TPMS displayed?	Replace the TPMS CM. <Ref. to WT-8, TPMS CM, REMOVAL, Tire Pressure Monitoring System.>	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>
7	**CHECK CONNECTOR.** Check the connector used for keyless communication for poor contact.	Is there poor contact of connector?	Repair the connector that has poor contact, or replace harness.	It is possible that temporary poor communication occurs. Delete the DTC. <Ref. to BC(diag)-15, Clear Memory Mode.>

15.General Diagnostic Table

A: INSPECTION

Read the DTC using Subaru Select Monitor. <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> Or check the following data under the current data display screen. <Ref. to BC(diag)-20, Read Current Data.>

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic trouble code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis for the displayed DTCs.	—
Clearance light (Low beam) (High beam)	Clearance light and low/high beams illuminate normally when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
Auto light	When the area around the light control sensor is darkened after the ignition switch and the lighting switch (AUTO) are turned to ON, the clearance light and the low beam illuminate after 15 seconds. Indicator in the combination meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	—
	When the ignition switch and the lighting switch (AUTO) are turned to ON after the area around the light control sensor is darkened, the clearance light and the low beam illuminate immediately. Indicator in the combination meter illuminates at the same time.			—
Fog light	Front and rear fog lights illuminate when the switch is operated. Indicator in the meter illuminates at the same time.	System is normal.	Check the lighting system, combination meter system and LAN system.	Rear fog light operates when “Rear fog light setting” of the body integrated unit is set to on.
Rear defogger	Rear defogger operates when the switch is operated. The indicator illuminates at the same time.	System is normal.	Check the rear window defogger system and A/C system.	—
Wiper deicer	Wiper deicer operates by operating the switch. The indicator illuminates at the same time. When the ambient temperature is 5°C (41°F) or higher, press the switch 3 seconds or more to forcibly activate the system.	System is normal.	Check the wiper deicer system and A/C system.	Wiper deicer operates when “Wiper deicer setting” of the body integrated unit is set to on.
DRL	After starting the engine and releasing the parking brake, the DRL illuminates.	System is normal.	Check the lighting system and LAN system.	—
Rear wiper	Rear wiper operates when the switch is operated.	System is normal.	Check wiper or washer system.	Depending on user customizing “Sedan/Wagon Setting” of the body integrated unit, vehicle sensory time varies.
Key interlock	• Key cannot be removed in other than P range. • Key can be removed in P range.	System is normal.	Check the body control system.	—

Item	Operation	Specifications		Note
		YES	NO	
Shift lock	The select lever can be moved from the P range to other ranges only when the brake pedal is depressed with IG ON.	System is normal.	Check the body control system.	—
Key warning switch alarm	When the driver's door is open without the key removed, the buzzer sounds.	System is normal.	Check the combination meter and body control system.	—
Door lock	The doors lock/unlock when the door switch is operated. Rear gate/trunk opens when the rear gate/trunk release switch is operated.	System is normal.	Check the security & lock and body control system.	If user customizing "Sedan/Wagon Setting" is different, trunk and rear gate do not open.
Keyless entry	The lock locks/unlocks when the keyless transmitter is operated. Trunk/rear gate unlocks when trunk/rear gate unlock button is operated.	System is normal.	Check the keyless entry and body control system.	—
Keyless access with push button start system	The lock locks/unlocks when the access key is operated. With the access key held, the touch sensor (lock) operation locks/touch sensor (unlock) operation unlocks. Rear gate unlocks by operating the rear gate unlock button.	System is normal.	Check the keyless access with push button start system and the body control system.	—
Answer back	Answer-back operates when the keyless entry/keyless access with push button start system locks/unlocks.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	—
Room light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation.	System is normal.	Check the room light system, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the room light blinks when "Factory Reg" is selected. For vehicles with the keyless entry, the room light blinks when the keyless registration mode connector is connected.
Map light	Turns ON/OFF according to the door open/close operation, the lock/unlock operation with the keyless entry/keyless access with push button start system, and the ignition operation. (Except for rear gate)	System is normal.	Check the spot map light, security & lock, keyless access with push button start system, and LAN system.	For vehicle with the keyless access with push button start system, the map light blinks when "Factory Reg" is selected. For vehicles with the keyless entry, the map light blinks when the keyless registration mode connector is connected.
Key illumination	The light illuminates/goes off according to the driver's door open/close. The light goes off, when the doors are locked with the keyless entry/keyless access with push button start system and the ignition is turned ON while illuminating.	System is normal.	Check the ignition switch illumination, security & lock, and LAN system.	For vehicles with keyless entry, the key illumination blinks when "Factory Reg" is selected.

Item	Operation	Specifications		Note
		YES	NO	
Illumination control	Illumination volume control is available.	System is normal.	Check the illumination control switch, combination meter, and body control system.	Illumination volume control is not available when user customizing “Illumination Control On/Off” of the body integrated unit is set to off.
Engine start	Engine starts.	System is normal.	Check the engine system, immobilizer, and LAN system.	—
Vehicle security	Security monitoring/security canceling can be performed by operating the keyless entry/keyless access with push button start system.	System is normal.	Check the security & lock, keyless access with push button start system, and LAN system.	Security monitoring starts and at the same time the warning buzzer sounds, when impact sensor is not connected and user customizing “Impact Sensor” of the body integrated unit is set to on.
Welcome lighting (enter)	When dimming out around the light control sensor after turning the lighting switch (AUTO) to ON, use keyless transmitter or access key to unlock. At this time, the clearance light and headlight low beam illuminates for the preset time. And, use keyless transmitter or access key to lock. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item “Illumination Sensor Setting” in body integrated unit is set to ON and “Welcome Light Off Delay Time(Approaching)” is set to other than OFF.
Welcome lighting (exit)	The clearance light and headlight low beam continues to illuminate, when the ignition switch is OFF (or when the key is removed for vehicles without keyless access with push button start system) while the auto light function is operating. Use keyless transmitter or access key to lock two consecutive times. At this time, the clearance light and headlight low beam go off.	System is normal.	Check the lighting system (auto light), security & lock (keyless entry) or keyless access with push button start system.	Operates when user customization item “Illumination Sensor Setting” in body integrated unit is set to ON and “Welcome Light Off Delay Time(Exiting)” is set to other than OFF.

16.Diagnostics with Phenomenon

A: LIST

1. HIGH BEAM ASSIST SYSTEM

Symptoms	Note
High beam assist indicator does not illuminate.	<Ref. to BC(diag)-59, HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE, INSPECTION, Diagnostics with Phenomenon.>
The setting does not switch automatically from low beam to high beam.	<Ref. to BC(diag)-60, THE SETTING DOES NOT SWITCH AUTOMATICALLY FROM LOW BEAM TO HIGH BEAM, INSPECTION, Diagnostics with Phenomenon.>
The setting does not switch automatically from high beam to low beam.	<Ref. to BC(diag)-60, THE SETTING DOES NOT SWITCH AUTOMATICALLY FROM HIGH BEAM TO LOW BEAM, INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. HIGH BEAM ASSIST INDICATOR DOES NOT ILLUMINATE

Trouble symptom:
High beam assist indicator light does not illuminate though the operating conditions for the high beam assist are met.

NOTE:
If the combination switch, combination meter, illumination sensor for auto lighting, or auto lighting operation is defective, diagnose each system first.

	Step	Check	Yes	No
1	**CHECK BODY INTEGRATED UNIT SETTING.** Confirm «Data monitor» of «Body Control» using Subaru Select Monitor. <Ref. to BC(diag)-20, Read Current Data.> • «High Beam Assist Function Setting (mirror/EyeSight)» • «High Beam Assist Current Setting»	Are «High Beam Assist Function Setting (mirror/EyeSight)» set to «EyeSight HBA», and «High Beam Assist Current Setting» set to «ON»?	Go to step **2**.	Set «High Beam Assist Function Setting (mirror/EyeSight)» to «EyeSight HBA», and «High Beam Assist Current Setting» to «ON».
2	**CHECK DTC.** Using the Subaru Select Monitor, read all DTCs. <Ref. to LAN(diag)-34, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK "EyeSight TEMPORARY STOP INDICATOR".** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON. 3) Check the "EyeSight temporary stop indicator".	Is "EyeSight temporary stop indicator" displayed?	Perform inspection according to "EyeSight Temporary Code(s) Display" in "ES(diag)".	Go to step **4**.
4	**CHECK HIGH BEAM ASSIST OPERATION LIGHT.** 1) Turn the ignition switch to ON. 2) Set the lighting switch position to Auto. 3) Turn dimmer Hi SW to ON. 4) Shade the illumination sensor for the auto lighting.	Is the high beam assist indicator illuminating?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. Note: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK HIGH BEAM ASSIST OPERATION LIGHT.** Using Subaru Select Monitor, check the following items in «Active Test» of «Combination Meter». <Ref. to MET(diag)-16, System Operation Check Mode.> • «HBA operation light»	Does the high beam assist indicator illuminate?	Replace the combination meter. <Ref. to IDI-12, Combination Meter.>	Replace the body integrated unit. <Ref. to SL-80, Body Integrated Unit.>

2. THE SETTING DOES NOT SWITCH AUTOMATICALLY FROM LOW BEAM TO HIGH BEAM

Trouble symptom:
High beam light does not turn on while the high beam assist indicator is illuminating, even when there is no object in front of the vehicle.

	Step	Check	Yes	No
1	**CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).** Check for the activation of the high beam. • Light SW position: Second notch • Dimmer Hi SW: ON	Does the high beam light come on?	Go to step **2**.	Check the headlight system. <Ref. to LI-6, Headlight System.>
2	**CHECK DTC.** Using the Subaru Select Monitor, read DTC of «EyeSight». <Ref. to ES(diag)-41, Diagnostic Code(s) Display.>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs.	Go to step **3**.
3	**CHECK "EyeSight TEMPORARY STOP INDICATOR".** 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON. 3) Check the "EyeSight temporary stop indicator".	Is "EyeSight temporary stop indicator" displayed?	Perform inspection according to "EyeSight Temporary Code(s) Display" in "ES(diag)".	Go to step **4**.
4	**RECOGNITION TEST (CHECK OF NIGHT JUDGMENT).** 1) Set the lighting switch position to Auto. 2) Turn dimmer Hi SW to ON. 3) With the vehicle stopped, turn the ignition switch to OFF. 4) Shade in front of the stereo camera. NOTE: It is recommended to perform the test with all illumination off in a complete dark room without windows. When the test cannot be performed in a complete dark room, turn off illumination in a room with no direct sunlight and cover the windshield glass and windows on the driver's side and passenger's side with a high light-blocking cloth or the like from outside the vehicle. **CAUTION:** **To avoid contacting the lens portion of the stereo camera, do not perform light-blocking measures directly on the lens portion.** 5) Turn the ignition switch to ON. 6) Confirm «Data monitor» of «EyeSight» using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.> • «Night-time judging flag»	Is «Judgment Night» set to «Night»?	System is normal. It is considered that the conditions for the high beam activation are not satisfied enough for an environmental reason.	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>

3. THE SETTING DOES NOT SWITCH AUTOMATICALLY FROM HIGH BEAM TO LOW BEAM

Trouble symptom:
High beam light does not go off automatically even when the high beam assist indicator is illuminating.

	Step	Check	Yes	No
1	**CHECK HIGH BEAM ACTIVATION (CHECK BY MANUAL OPERATION).** Check for the activation of the high beam. • Light SW position: Second notch • Dimmer Hi SW: ON	Does the high beam light come on?	Go to step **2**.	Check the headlight system. <Ref. to LI-6, Headlight System.>
2	**CHECK LOW BEAM ACTIVATION (CHECK BY MANUAL OPERATION).** Turn the dimmer Hi SW to OFF from the condition of step 1.	Does it switch to low beam?	Go to step **3**.	Check the headlight system. <Ref. to LI-6, Headlight System.>
3	**RECOGNITION TEST (CHECK OF HBA HI PERMISSION FLAG).** 1) Set the vehicle in a parked state. 2) Set the lighting switch position to Auto. 3) Turn dimmer Hi SW to ON. 4) Confirm «Data monitor» of «EyeSight» using Subaru Select Monitor. <Ref. to ES(diag)-20, Read Current Data.> • «HBA permission flag»	Is «HBA Control Permission» set to «ON»?	Replace the stereo camera. <Ref. to ES-7, Stereo Camera.>	Check the headlight system. <Ref. to LI-6, Headlight System.>

TELEMATICS SYSTEM (DIAGNOSTICS)

TEL(diag)

Page

1. Basic Diagnostic Procedure 2

6. Subaru Select Monitor 11
7. Read Current Data 14
8. Diagnostic Code(s) Display 18
9. Clear Memory Mode 20
10. Inspection Mode 21
11. System Operation Check Mode 24
12. Diagnostic Procedure with Diagnostic Trouble Code (DTC) 25
13. Diagnostics with Phenomenon 54

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Check	Yes	No
1	**PERFORM CUSTOMER INTERVIEW.** Using the Check List for Interview, ask the customer the condition of how the trouble occurred. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>	Did you interview the customer?	Go to step **2**.	Interview the customer. <Ref. to TEL(diag)-3, CHECK, Check List for Interview.>
2	**CHECK SUBARU SELECT MONITOR COMMUNICATION.** Using the Subaru Select Monitor, check whether communication to the telematics system can be executed. NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. (Refer to "Communication for initializing impossible".) <Ref. to TEL(diag)-12, INSPECTION, Subaru Select Monitor.>	Is communication possible?	Go to step **3**.	Check the communication circuit.
3	**CHECK TELEMATICS.** Using the Subaru Select Monitor, read DTC of the telematics system. <Ref. to TEL(diag)-18, OPERATION, Diagnostic Code(s) Display.> NOTE: If DTC is detected, only RED LED will illuminate. For details, refer to "LED operation status list". <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **4**.
4	**CHECK DIAGNOSTICS WITH PHENOMENON.** Check the list of Diagnostics with Phenomenon. <Ref. to TEL(diag)-54, Diagnostics with Phenomenon.>	Does the symptom apply?	Perform diagnosis according to the procedures in the diagnostics with phenomenon.	Go to step **5**.
5	**CHECK TROUBLE PHENOMENON.** 1) Perform the basic inspection and function check. <Ref. to TEL(diag)-6, INSPECTION, General Description.> 2) Check the data communication module. <Ref. to TEL(diag)-9, Control Module I/O Signal.> 3) Perform check of current data. <Ref. to TEL(diag)-14, Read Current Data.> 4) Perform a unit check.	Was the trouble cause found?	Perform the Clear Memory after repairing or replacing the cause of trouble. <Ref. to TEL(diag)-20, Clear Memory Mode.>	System is normal.

2. Check List for Interview

A: CHECK

1. CHECK LIST FOR INTERVIEW

- Inspect the following items regarding the vehicle's state.
- Print out this page for interviewing customers.

<table>
<tr><td colspan="2">Telematics Check List for Interview</td><td colspan="2">Received Year Month Date</td></tr>

Diagnostic trouble code	

2. LED ILLUMINATION STATUS LIST

	RED LED illuminates	RED LED blinks	RED LED goes off

GREEN LED illuminates	Initial collation with the server failed. It is possible that the server/DCM are malfunctioning.	—	Communication with the server and DCM are operating normally (communication failure with the STAR-LINK server. DTCs are not found within the vehicle unit).
GREEN LED blinks	—	Collation with the server is in progress.	Connection to the server is being attempted and in progress.
GREEN LED goes off	It is possible that communication with the server/DCM are malfunctioning.	It is possible that communication with the server/DCM are malfunctioning.	Telematics function is not activated.

3. General Description

A: CAUTION

1. AIRBAG SYSTEM

CAUTION:
- **Do not use the electrical test equipment on all airbag harnesses and connector circuits.**
- **Be careful not to damage the airbag harness.**

B: INSPECTION

1. BASIC INSPECTION

Before performing the diagnosis, check the following items which may affect the problems relating to the telematics system.
1) Check the battery. <Ref. to SC(w/o STI)-50, INSPECTION, Battery.> <Ref. to SC(STI)-24, INSPECTION, Battery.>
2) Check the relay and fuse condition. <Ref. to ETM-11, Relay and Fuse.>
3) Check the connecting condition of harness and harness connector.

C: PREPARATION TOOL

1. SPECIAL TOOL

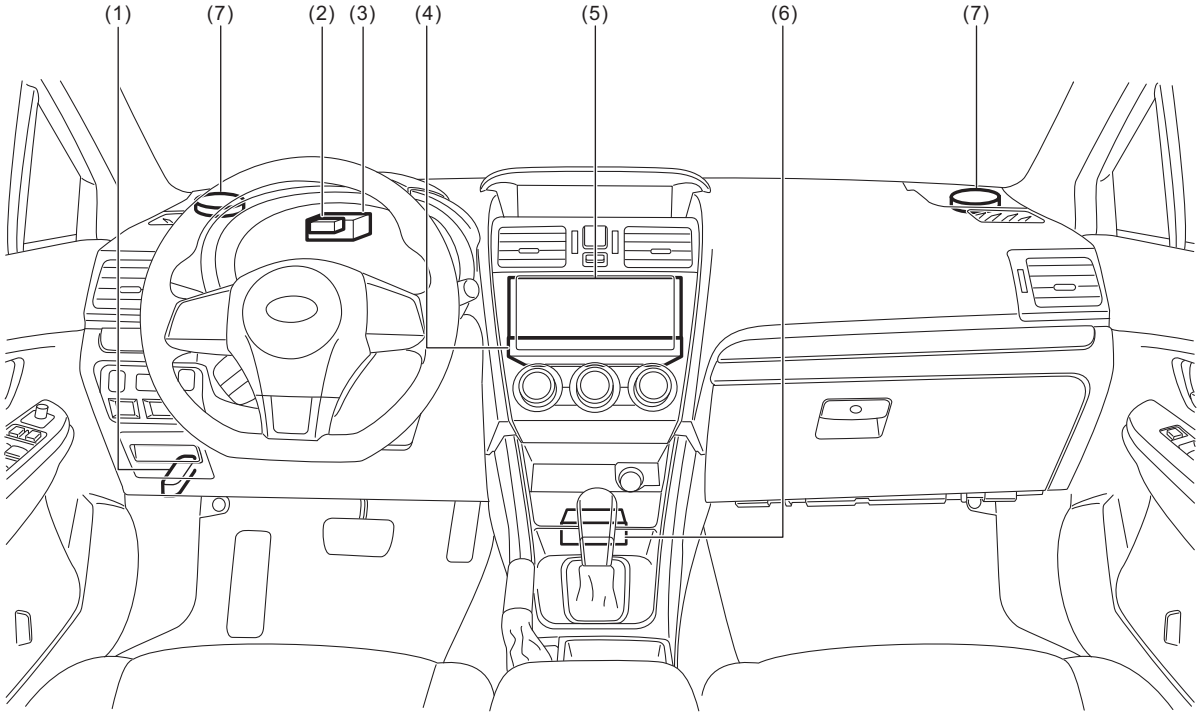
ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
STSSM4	—	SUBARU SELECT MONITOR 4	Used for setting of each function and trouble-shooting for electrical system. NOTE: For detailed operation procedures of Subaru Select Monitor 4, refer to “Application help”.

2. GENERAL TOOL

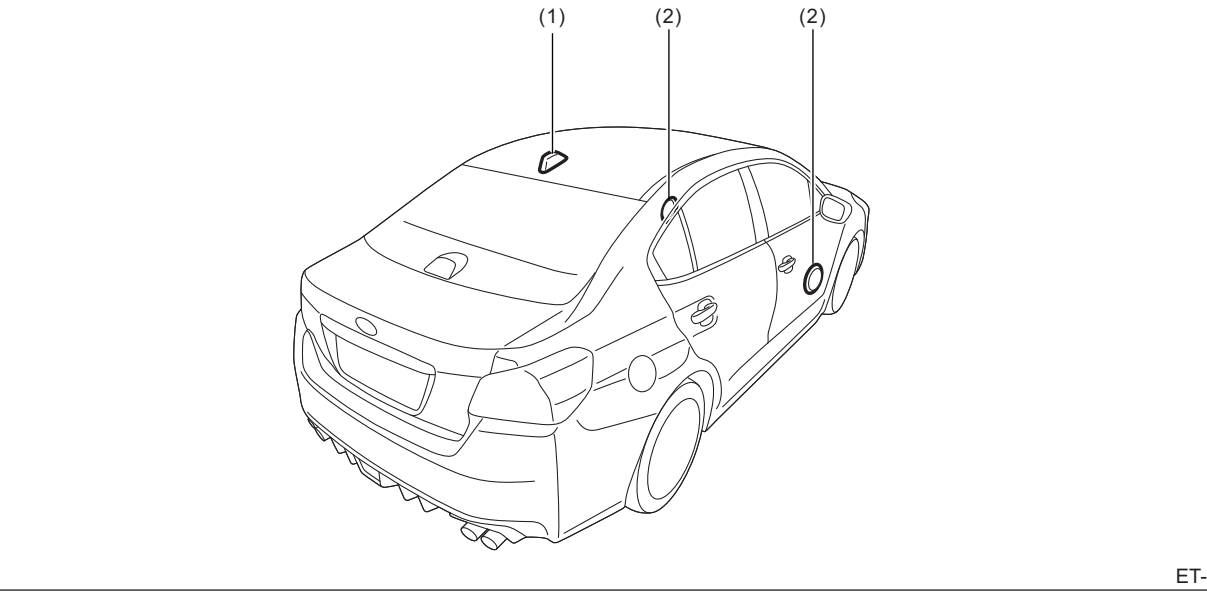
TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.
DST-i	Used together with Subaru Select Monitor 4.

4. Electrical Component Location

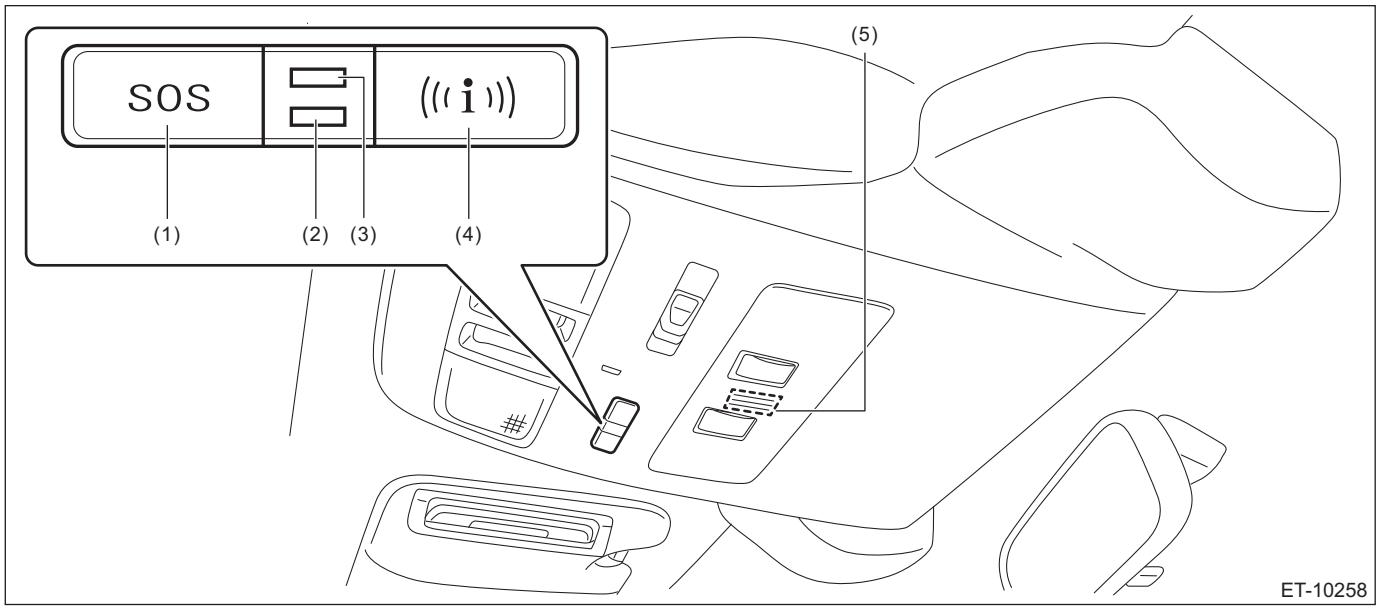
A: LOCATION



(1) Data link connector
(2) GPS antenna
(3) Telematics sub antenna
(4) Data communication module (DCM)
(5) Audio or navigation
(6) Airbag CM
(7) Instrument panel speaker (standard and H/K specifications)



(1) Telematics antenna
(2) Door speaker (standard specification)



(1) SOS button
(2) RED LED
(3) GREEN LED
(4) i-button
(5) Microphone

NOTE:
For the LED operation condition, refer to “LED operation condition” in “Check List for Interview”. <Ref. to TEL(diag)-4, LED ILLUMINATION STATUS LIST, CHECK, Check List for Interview.>

5. Control Module I/O Signal

A: SPECIFICATION

1. DATA COMMUNICATION MODULE (DCM)

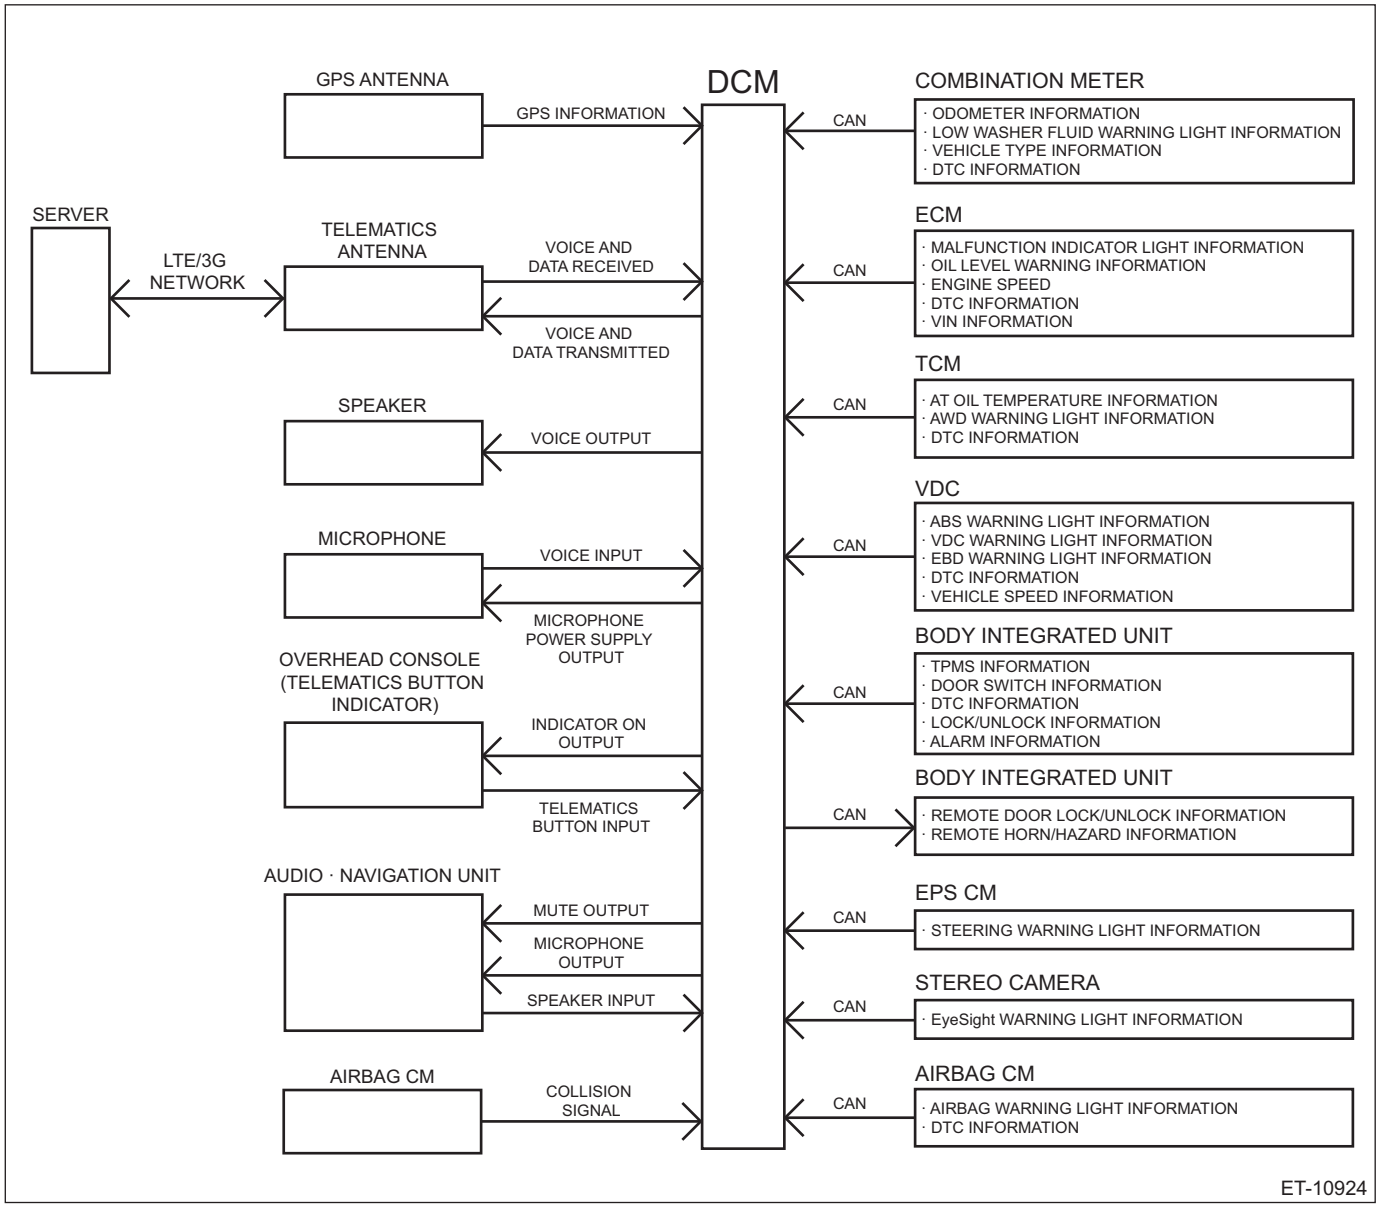
B: WIRING DIAGRAM

Refer to “TELEMATICS SYSTEM” in the wiring diagram. <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>

C: SYSTEM BLOCK DIAGRAM

Main signals used between DCM and relevant CM



6. Subaru Select Monitor

A: OPERATION

- For detailed operation procedures, refer to “Application help”.
- When DCM cannot establish communication with Subaru Select Monitor, perform “COMMUNICATION FOR INITIALIZING IMPOSSIBLE”. <Ref. to TEL(diag)-12, INSPECTION, Subaru Select Monitor.>

B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

When communication with DCM is impossible

Detecting condition:

- Defective harness connector
- Power supply circuit malfunction
- Defective DCM
- Defective CAN communication circuit
- Defective Subaru Select Monitor

Trouble symptom:

Communication is impossible between DCM and Subaru Select Monitor.

CAUTION:

CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Wiring diagram:

Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>

	Step	Check	Yes	No
1	**CHECK FUSE.** 1) Turn the ignition switch to OFF. 2) Check the fuse of the DCM.	Is the check result OK?	Go to step **2**.	Replace the fuse. If the replaced fuse blows out easily, repair the ground short circuit in harness between the fuse — DCM connector.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Disconnect the DCM connector. 2) Turn the ignition switch to ON. 3) Using a tester, measure the voltage between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 8 (+) — Chassis ground (–):*** ***(i270) No. 10 (+) — Chassis ground (–):***	Is the voltage 10 V or more?	Go to step **3**.	Repair the open circuit in the wiring harness between fuse and DCM connector.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Using a tester, measure the resistance between DCM connector (harness side) and the chassis ground. ***Connector & terminal*** ***(i270) No. 14 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair the open circuit in the wiring harness between chassis ground and DCM connector.
4	**CHECK LAN SYSTEM.** Inspect LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Is the check result OK?	Go to step **5**.	Perform the inspection according to the diagnosis for LAN system.
5	**CHECK TELEMATICS.** Using the Subaru Select Monitor, communicate with the telematics system.	Is communication possible?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>

7. Read Current Data

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Data Monitor».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

8. Diagnostic Code(s) Display

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «DTC».

NOTE:
- For detailed operation procedures, refer to “Application help”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>

B: LIST

DTC	Item	Note

B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-53, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

9. Clear Memory Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «DTC».
6) On «DTC» display, select «Clear Memory».

NOTE:
For detailed operation procedures, refer to “Application help”.

10.Inspection Mode

A: PROCEDURE

It is possible to diagnose the DTC by performing the indicated inspection mode.
After correcting the DTC, perform a necessary inspection mode and make sure that the function is resumed correctly and the DTC is recorded.

1. INSPECTION MODE 1

DTC	Item	Note
U0073	CONTROL MODULE COMMUNICATION BUS OFF	<Ref. to TEL(diag)-25, DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0100	LOST COMMUNICATION WITH ECM/PCM “A”	<Ref. to TEL(diag)-25, DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0122	LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0140	LOST COMMUNICATION WITH BODY CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0151	LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0155	LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0401	INVALID DATA RECEIVED FROM ECM/PCM “A”	<Ref. to TEL(diag)-25, DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A", Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0416	INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
U0452	INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE	<Ref. to TEL(diag)-25, DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A00	VIN READING	<Ref. to TEL(diag)-26, DTC B2A00 VIN READING, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A01	LTE1 ANTENNA CIRCUIT	<Ref. to TEL(diag)-26, DTC B2A01 LTE1 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A02	LTE2 ANTENNA CIRCUIT	<Ref. to TEL(diag)-28, DTC B2A02 LTE2 ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A03	GPS ANTENNA CIRCUIT	<Ref. to TEL(diag)-28, DTC B2A03 GPS ANTENNA CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A07	BACKUP BATTERY CHARGE SYSTEM PERFORMANCE	<Ref. to TEL(diag)-37, DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DTC	Item	Note
B2A08	SOS BUTTON CIRCUIT	<Ref. to TEL(diag)-39, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A09	I-CALL BUTTON CIRCUIT	<Ref. to TEL(diag)-41, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0C	DCM INTERNAL FAULT	<Ref. to TEL(diag)-48, DTC B2A0C DCM INTERNAL FAULT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0D	AIRBAG SIGNAL	<Ref. to TEL(diag)-49, DTC B2A0D AIRBAG SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0E	MUTE LINE CIRCUIT	<Ref. to TEL(diag)-51, DTC B2A0E MUTE LINE CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0F	BACKUP BATTERY DEGRADATION	<Ref. to TEL(diag)-52, DTC B2A0F BACKUP BATTERY DEGRADATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A10	BATTERY VOLTAGE HIGH	<Ref. to TEL(diag)-53, DTC B2A10 BATTERY VOLTAGE HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-20, Clear Memory Mode.>
2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).
3) Turn the ignition switch to OFF.
4) Turn the ignition switch to ON, and wait for 5 seconds or more.
5) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

2. INSPECTION MODE 2

DTC	Item	Note
B2A04	MIC CIRCUIT	<Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A05	LEFT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-32, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A06	RIGHT SPEAKER/AUDIO CIRCUIT	<Ref. to TEL(diag)-35, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0A	RED LED CIRCUIT	<Ref. to TEL(diag)-43, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
B2A0B	GREEN LED CIRCUIT	<Ref. to TEL(diag)-46, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

Inspection steps:
1) Perform the Clear Memory Mode. <Ref. to TEL(diag)-20, Clear Memory Mode.>

2) Read the DTC and check that the DTC is not displayed. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs. After solving the DTC, repeat from step 1).

3) Turn the ignition switch to OFF.
4) Close all doors. (The vehicle enters CAN sleep state.)
5) Wait for approx. 1 minute. After the indicator goes off, wait for another 1 minute. (DCM standby mode)
6) Turn the ignition switch to ON, and wait for 5 seconds or more.
7) Read the DTC and check that the DTC is not displayed.

NOTE:
If the DTC is displayed on the screen, the trouble is still present. Perform the diagnosis for the displayed DTCs.

11.System Operation Check Mode

A: OPERATION

1) On «Start» display, select «Diagnosis».
2) On «Vehicle selection» display, input the target vehicle information and select «Confirmed».
3) On «Main Menu» display, select «Each System».
4) On «Select System» display, select «Telematics» and then select «Enter».
5) On «Select Function» display, select «Active Test».

NOTE:
For detailed operation procedures, refer to “Application help”.

B: LIST

System operation check mode	Note
GREEN LED Lighting	GREEN LED illuminates/flashes/goes off.
GREEN LED Flashing	
GREEN LED OFF	
RED LED Lighting	RED LED illuminates/flashes/goes off.
RED LED Flashing	
RED LED OFF	
Speaker ON	Outputs to speaker.

12.Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC U0073 CONTROL MODULE COMMUNICATION BUS OFF

Detected when CAN line abnormality is detected.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

B: DTC U0100 LOST COMMUNICATION WITH ECM/PCM "A"

Detected when CAN data from ECM does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

C: DTC U0122 LOST COMMUNICATION WITH VEHICLE DYNAMICS CONTROL MODULE

Detected when CAN data from VDC does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

D: DTC U0140 LOST COMMUNICATION WITH BODY CONTROL MODULE

Detected when CAN data is not received from body integrated unit.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

E: DTC U0151 LOST COMMUNICATION WITH RESTRAINTS CONTROL MODULE

Detected when CAN data is not received from airbag CM.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

F: DTC U0155 LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IPC) CONTROL MODULE

Detected when CAN data from combination meter does not arrive.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

G: DTC U0401 INVALID DATA RECEIVED FROM ECM/PCM "A"

Detected when CAN data from ECM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

H: DTC U0416 INVALID DATA RECEIVED FROM VEHICLE DYNAMICS CONTROL MODULE

This is detected when CAN data from VDC is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

I: DTC U0452 INVALID DATA RECEIVED FROM RESTRAINTS CONTROL MODULE

Detected when CAN data from airbag CM is abnormal.

NOTE:
Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

J: DTC B2A00 VIN READING

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
When ignition switch is ON, VIN information (CAN) sent from ECM cannot be read.
Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A00 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Check DTCs in the following systems. • Telematics <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.> • Engine <Ref. to EN(w/o STI)(diag)-70, Read Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-50, Read Diagnostic Trouble Code (DTC).>	Is DTC U**** displayed? (Current malfunction)	Perform the diagnosis for LAN system. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step **3**.
3	**CHECK CURRENT DATA.** Confirm VIN information from the engine OBD mode. <Ref. to EN(w/o STI)(diag)-43, General Scan Tool.> <Ref. to EN(STI)(diag)-32, General Scan Tool.>	Is VIN information displayed?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the ECM. <Ref. to FU(w/o STI)-125, Engine Control Module (ECM).> <Ref. to FU(STI)-56, Engine Control Module (ECM).>

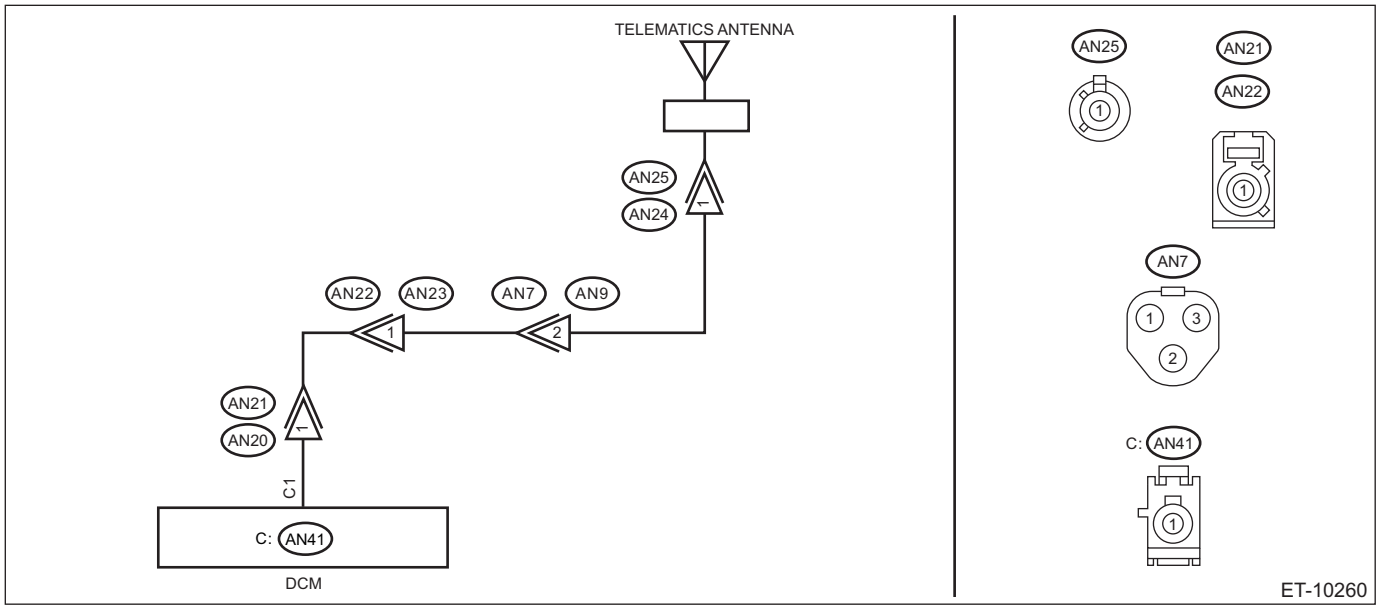
K: DTC B2A01 LTE1 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE1 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE1 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

Wiring diagram:

Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A01 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the antenna connector. 3) Disconnect the DCM connector. 4) Disconnect the PRG DU connector. 5) Measure the resistance between antenna connector and DCM connector. ***Connector & terminal*** ***(AN41) No. 1 — (AN24) No. 1:***	Is the resistance less than 1 Ω?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(AN41) No. 1 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
4	**CHECK HARNESS (SHORT CIRCUIT TO POWER SUPPLY).** 1) Turn the ignition switch to ON. 2) Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(AN41) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK ANTENNA.** Check the telematics antenna. <Ref. to ETM-22, Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics antenna. <Ref. to ETM-22, Antenna.>

L: DTC B2A02 LTE2 ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- LTE2 impedance is more than 1 MΩ. (Detached antenna, etc.)
- LTE2 impedance is less than 1 kΩ. (Short-circuited antenna, etc.)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A02 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK ANTENNA.** Visually check the telematics sub antenna. <Ref. to ETM-22, Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics sub antenna. <Ref. to ETM-22, Antenna.>

M: DTC B2A03 GPS ANTENNA CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the followings continues for 5 seconds or more.
- GPS antenna impedance is more than 1 MΩ. (Detached antenna, etc.)

- GPS antenna impedance is less than 10 Ω. (Short-circuited antenna, etc.)

Trouble symptom:

- Telematics function cannot be used.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

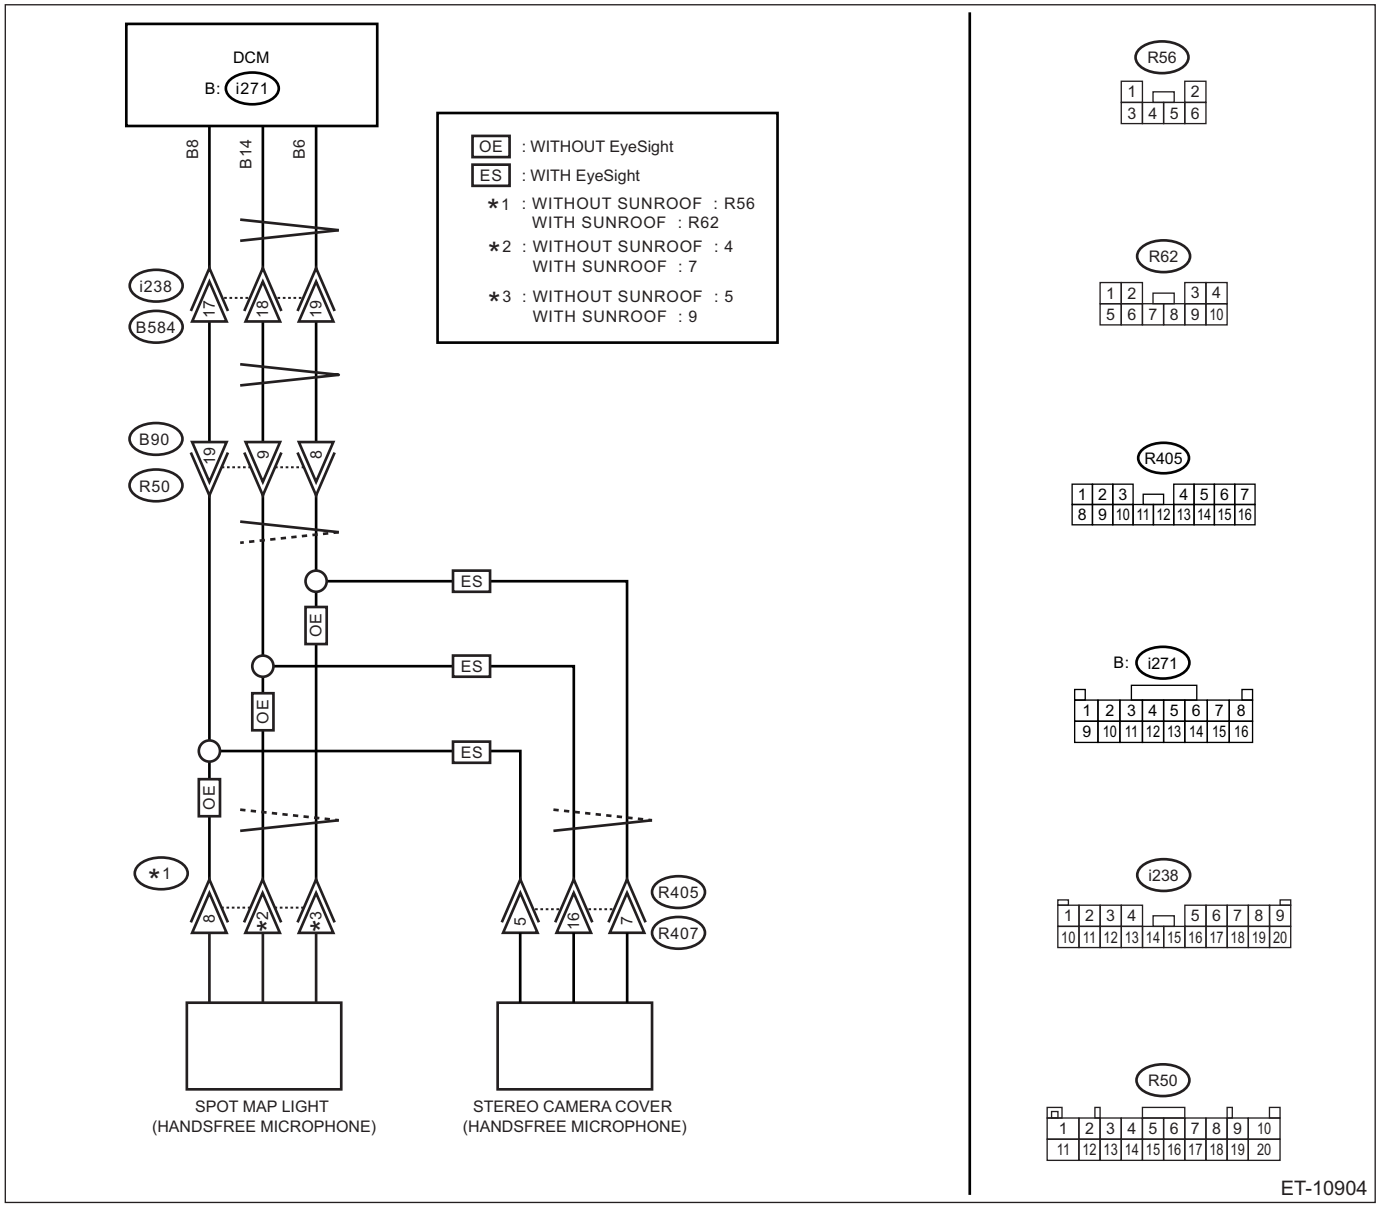
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A03 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK GPS ANTENNA.** Visually check the GPS antenna. <Ref. to ETM-40, GPS Antenna.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the GPS antenna. <Ref. to ETM-40, GPS Antenna.>

N: DTC B2A04 MIC CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Any of the followings continues for 1 second or more.
- MIC impedance is more than 10 kΩ. (Detached MIC, etc.)
- MIC impedance is less than 10 Ω. (Short-circuited MIC, etc.)

Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



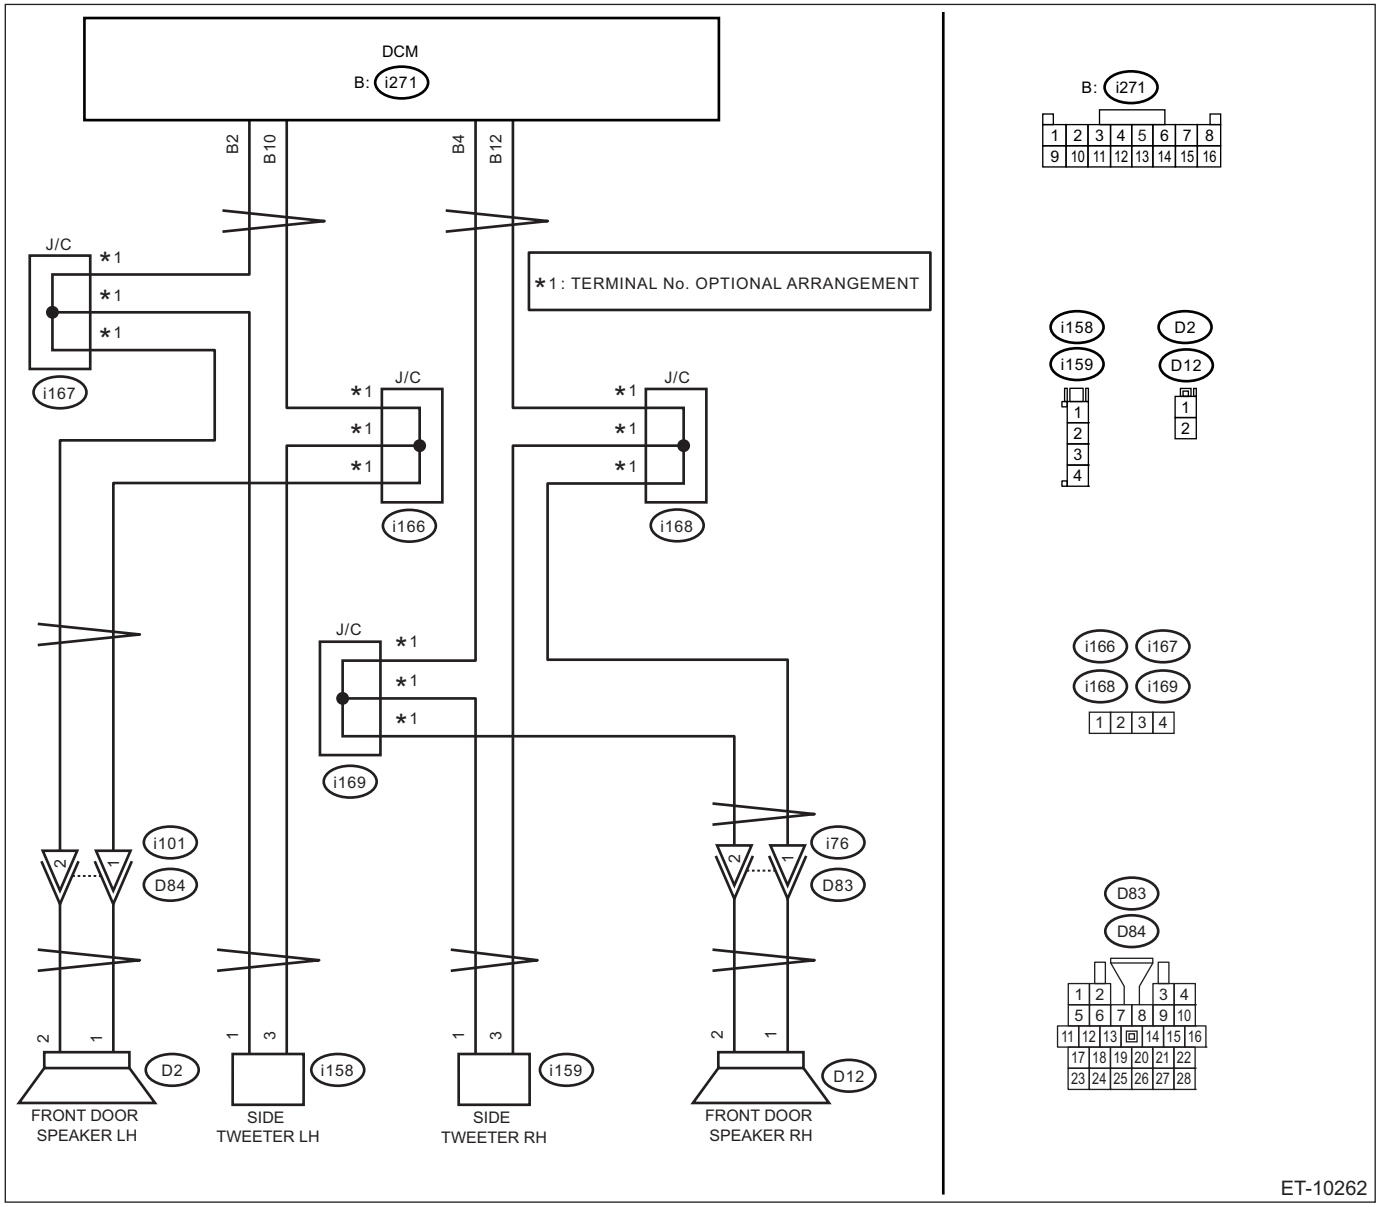
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A04 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the microphone connector. 3) Disconnect the DCM connector. 4) Measure the resistance between microphone connector and DCM connector. ***Connector & terminal*** ***Without EyeSight and without sunroof*** ***(R56) No. 8 — (i271) No. 8:*** ***(R56) No. 4 — (i271) No. 14:*** ***(R56) No. 5 — (i271) No. 6:*** ***Without EyeSight and with sunroof*** ***(R62) No. 8 — (i271) No. 8:*** ***(R62) No. 7 — (i271) No. 14:*** ***(R62) No. 9 — (i271) No. 6:*** ***With EyeSight*** ***(R405) No. 5 — (i271) No. 8:*** ***(R405) No. 16 — (i271) No. 14:*** ***(R405) No. 7 — (i271) No. 6:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 — Chassis ground:*** ***(i271) No. 14 — Chassis ground:*** ***(i271) No. 6 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 8 (+) — Chassis ground (–):*** ***(i271) No. 14 (+) — Chassis ground (–):*** ***(i271) No. 6 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK MICROPHONE.** Confirm the microphone voice input.	Is the voice input OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the microphone. <Ref. to ETM-29, Microphone.>

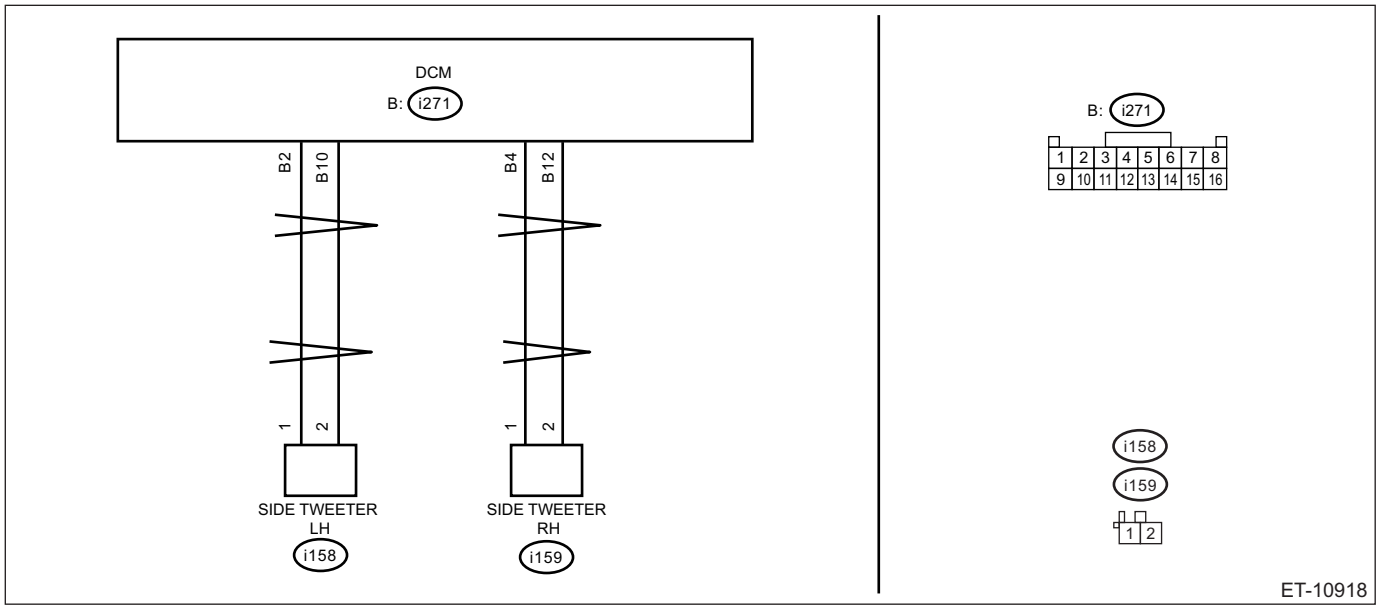
O: DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)
Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>
- Without audio amplifier



- With audio amplifier



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

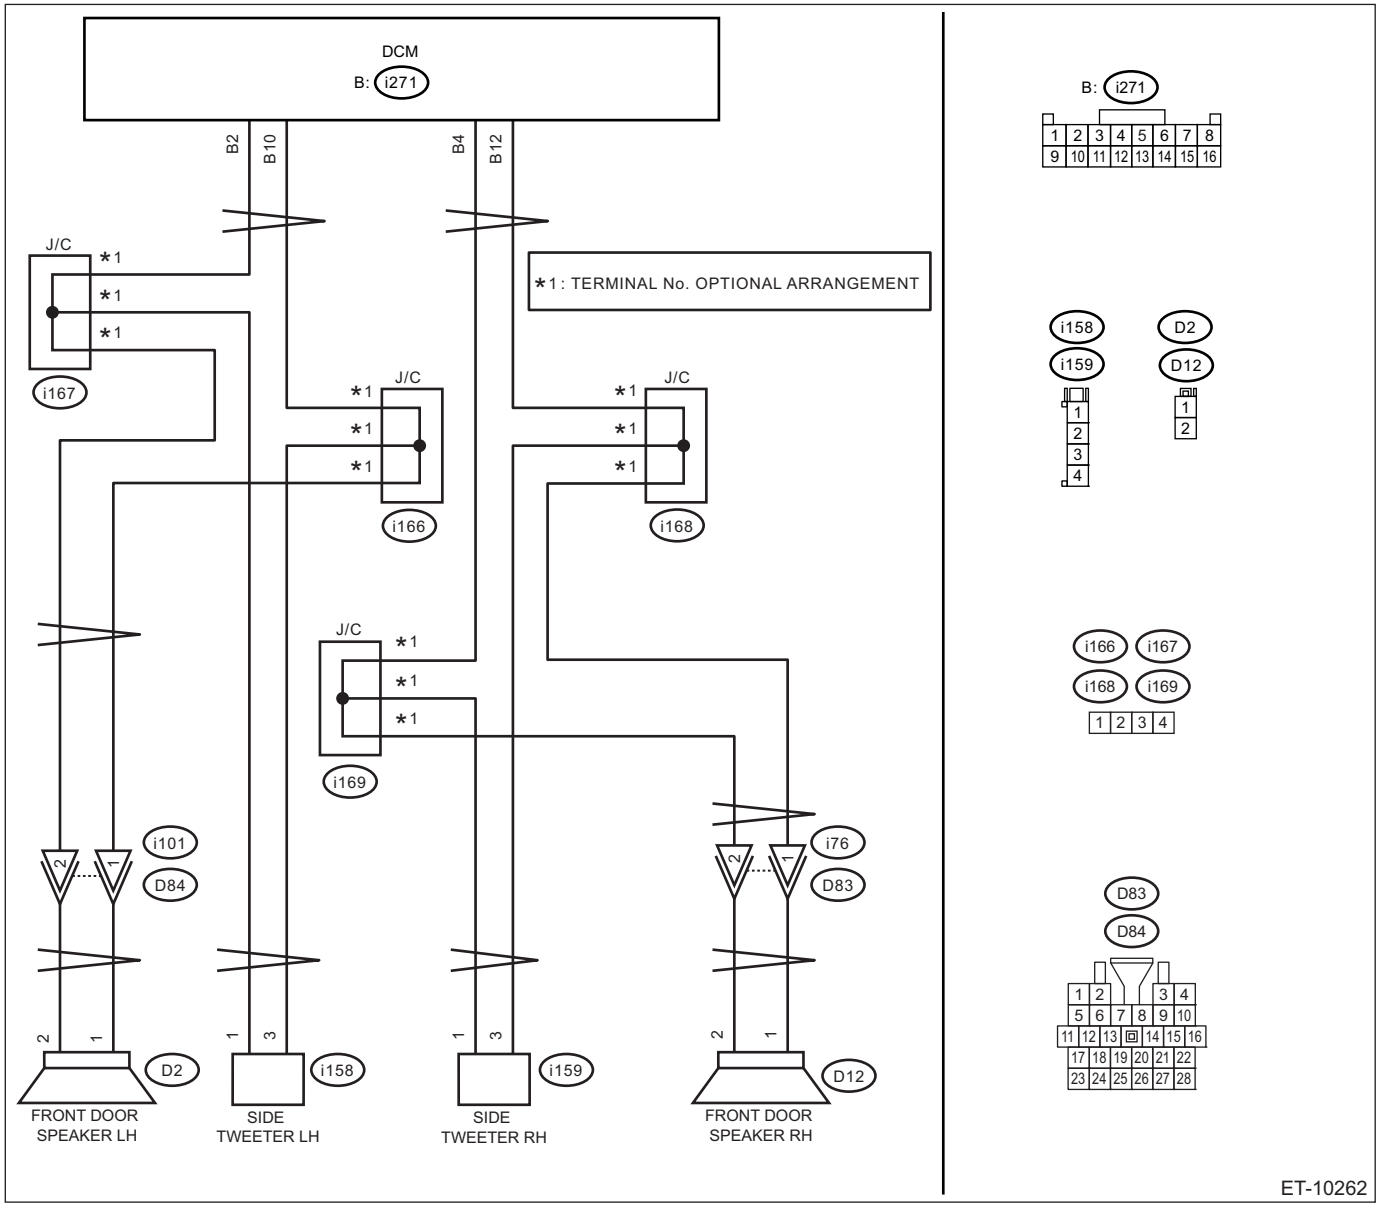
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A05 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform the System Operation Check Mode «Speaker ON». <Ref. to TEL(diag)-24, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***Without audio amplifier*** ***(i271) No. 2 — (D2) No. 2:*** ***(i271) No. 2 — (i158) No. 1:*** ***(i271) No. 10 — (D2) No. 1:*** ***(i271) No. 10 — (i158) No. 3:*** ***With audio amplifier*** ***(i271) No. 2 — (i158) No. 1:*** ***(i271) No. 10 — (i158) No. 2:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 — Chassis ground:*** ***(i271) No. 10 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 2 (+) — Chassis ground (–):*** ***(i271) No. 10 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ETM-18, Front Speaker.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ETM-18, Front Speaker.>

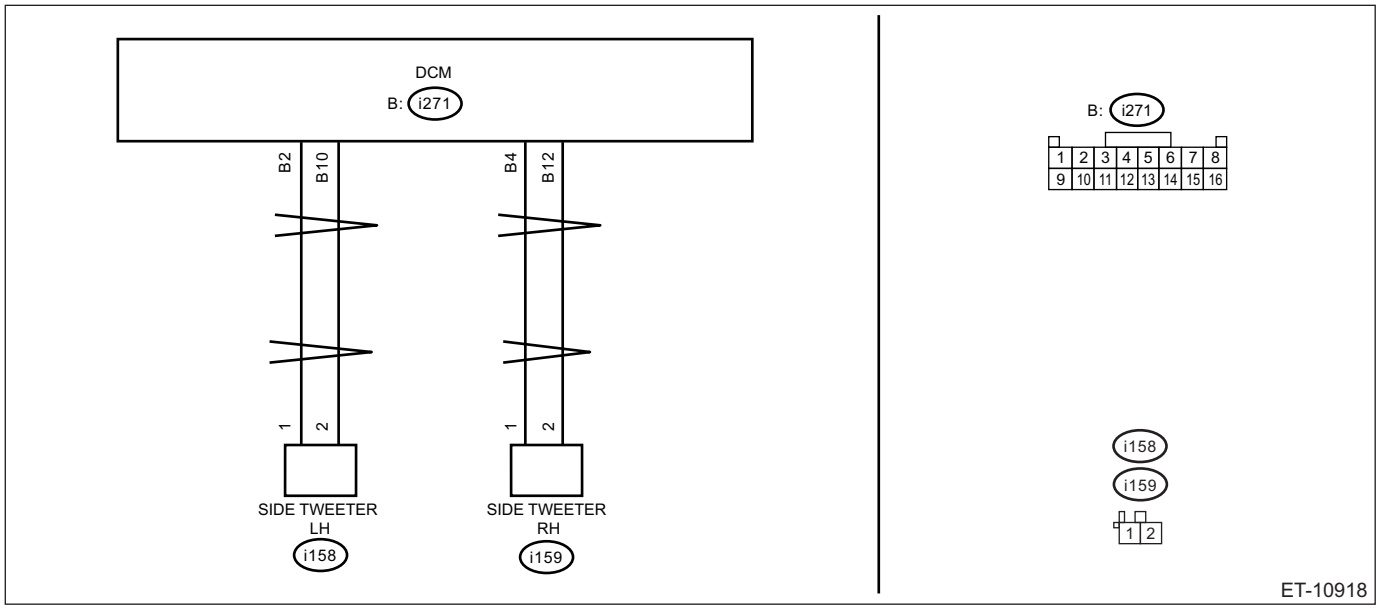
P: DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
Speaker impedance is more than 10 kΩ for 100 ms. (Detached speaker connection, etc.)
Trouble symptom:
- Call function cannot be used.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>
- Without audio amplifier



- With audio amplifier



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A06 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform the System Operation Check Mode «Speaker ON». <Ref. to TEL(diag)-24, System Operation Check Mode.>	Does it sound?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.

	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the speaker connector and tweeter connector. 3) Disconnect the DCM connector. 4) Measure the resistance between speaker connector and tweeter connector and DCM connector. ***Connector & terminal*** ***Without audio amplifier*** ***(i271) No. 4 — (D12) No. 2:*** ***(i271) No. 4 — (i159) No. 1:*** ***(i271) No. 12 — (D12) No. 1:*** ***(i271) No. 12 — (i159) No. 3:*** ***With audio amplifier*** ***(i271) No. 4 — (i159) No. 1:*** ***(i271) No. 12 — (i159) No. 2:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 — Chassis ground:*** ***(i271) No. 12 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i271) No. 4 (+) — Chassis ground (–):*** ***(i271) No. 12 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.
6	**CHECK THE SPEAKER.** Perform the inspection of speaker unit and tweeter unit. <Ref. to ETM-18, Front Speaker.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the speaker and tweeter. <Ref. to ETM-18, Front Speaker.>

Q: DTC B2A07 BACKUP BATTERY CHARGE SYSTEM PERFORMANCE

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Backup battery is disconnected for at least 5 seconds when the ignition switch is turned ON. (Detached back-up battery connection, etc.)
Trouble symptom:
- ACN/SOS function cannot be used when the main battery is disconnected.
- RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

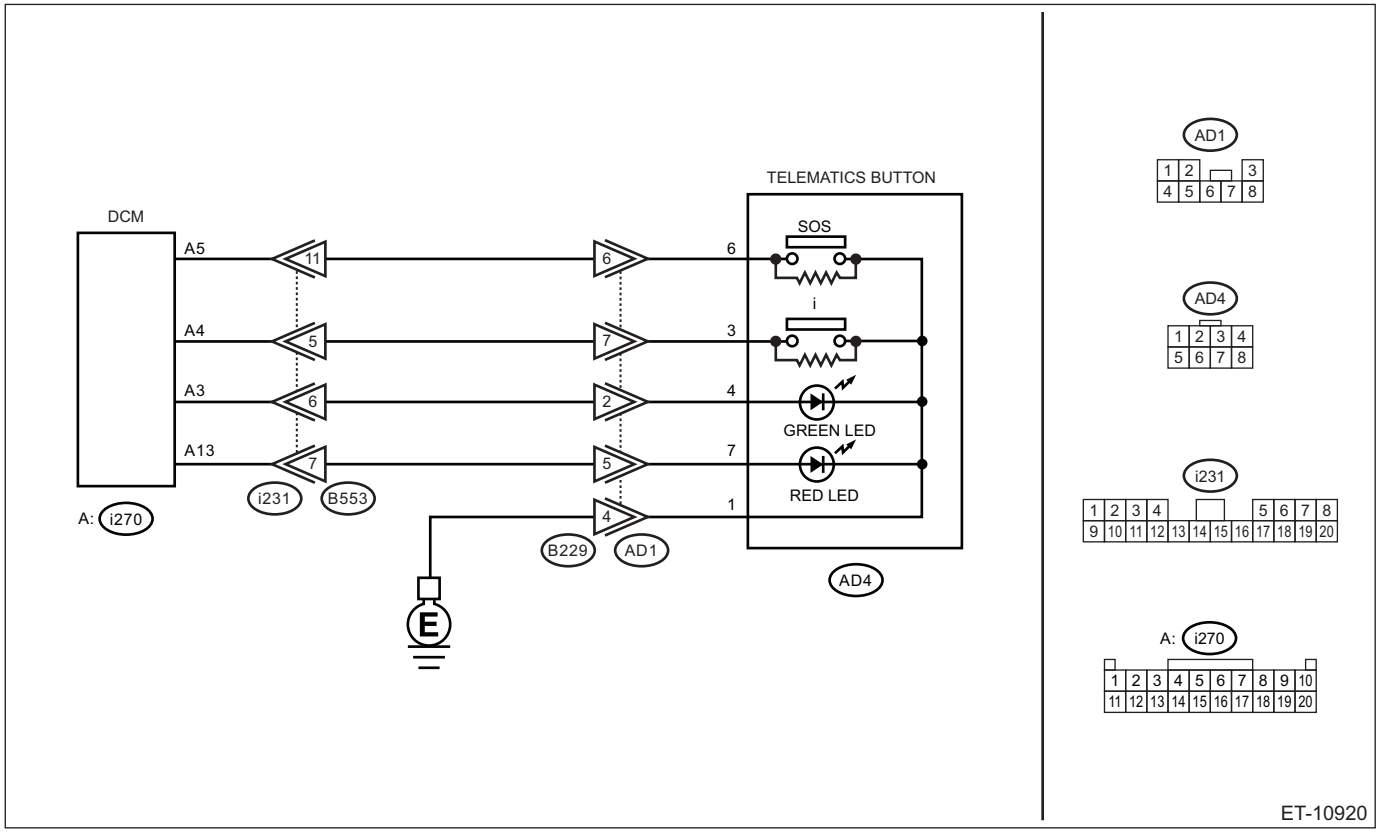
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A07 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK THE BACKUP BATTERY.** 1) Remove the DCM. <Ref. to ETM-43, Data Communication Module.> 2) Remove the backup battery cover. 3) Disconnect the backup battery connector. 4) Measure the backup battery voltage.	Is the voltage 2.0 V or more?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the backup battery. <Ref. to ETM-43, Data Communication Module.>

R: DTC B2A08 SOS BUTTON CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- The SOS button impedance is more than 10 kΩ for at least 50 ms.
- SOS button is stuck for at least 60 seconds.

Trouble symptom:
- SOS function cannot be used.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

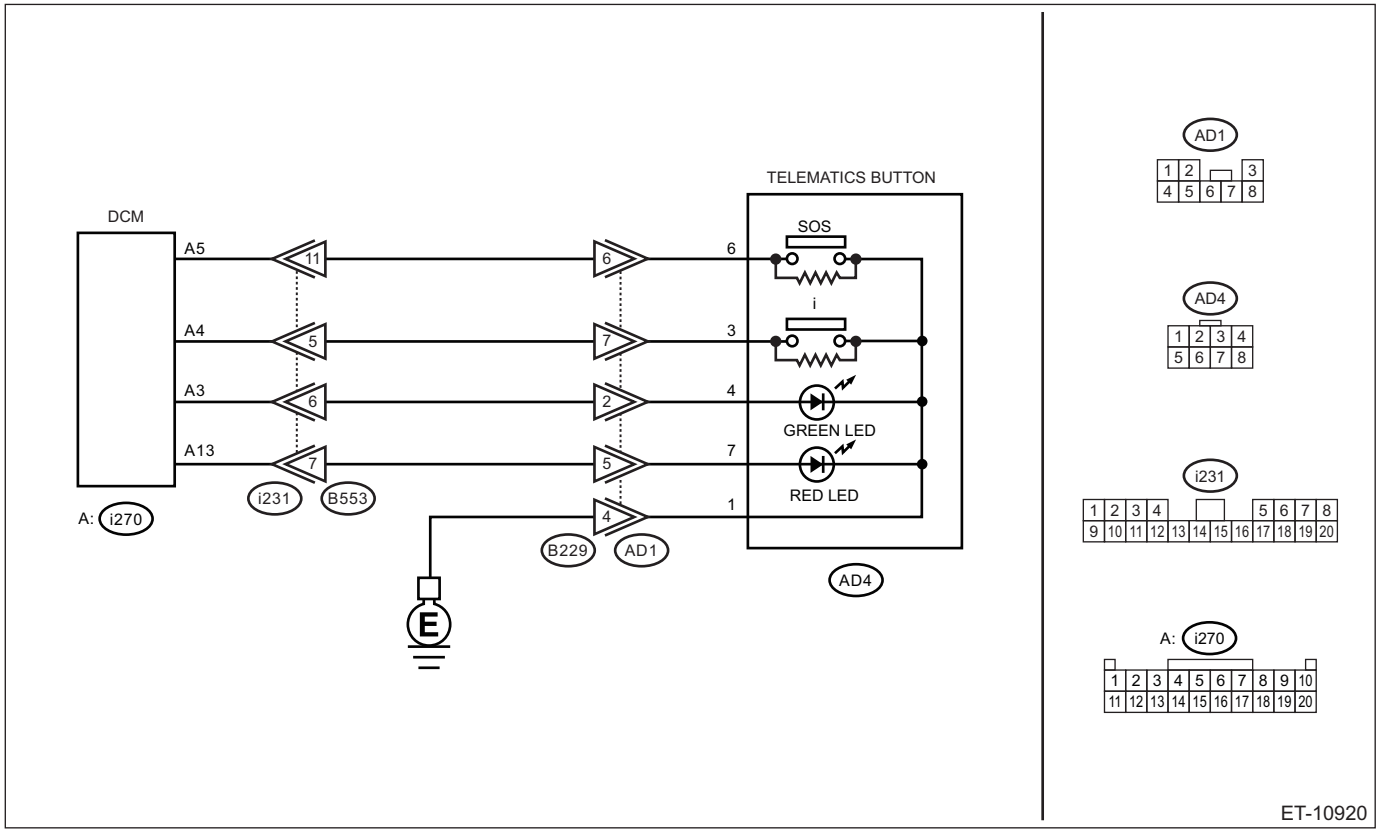
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A08 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 5 — (AD4) No. 6:*** ***(AD4) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 5 (+) — Chassis ground (–):*** ***(AD4) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE SOS BUTTON UNIT.** Measure the resistance of the SOS button unit. ***Terminals*** ***No. 6 — No. 1:***	Is the resistance 1 Ω or less when SOS button is ON, and 1.6 (±5%) kΩ or more when SOS button is OFF?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics button. <Ref. to ETM-26, Switches and Harness.>

S: DTC B2A09 I-CALL BUTTON CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- The i-button impedance is more than 10 kΩ for at least 50 ms.
- i-button is stuck for at least 60 seconds.

Trouble symptom:
- i-Call function cannot be used.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



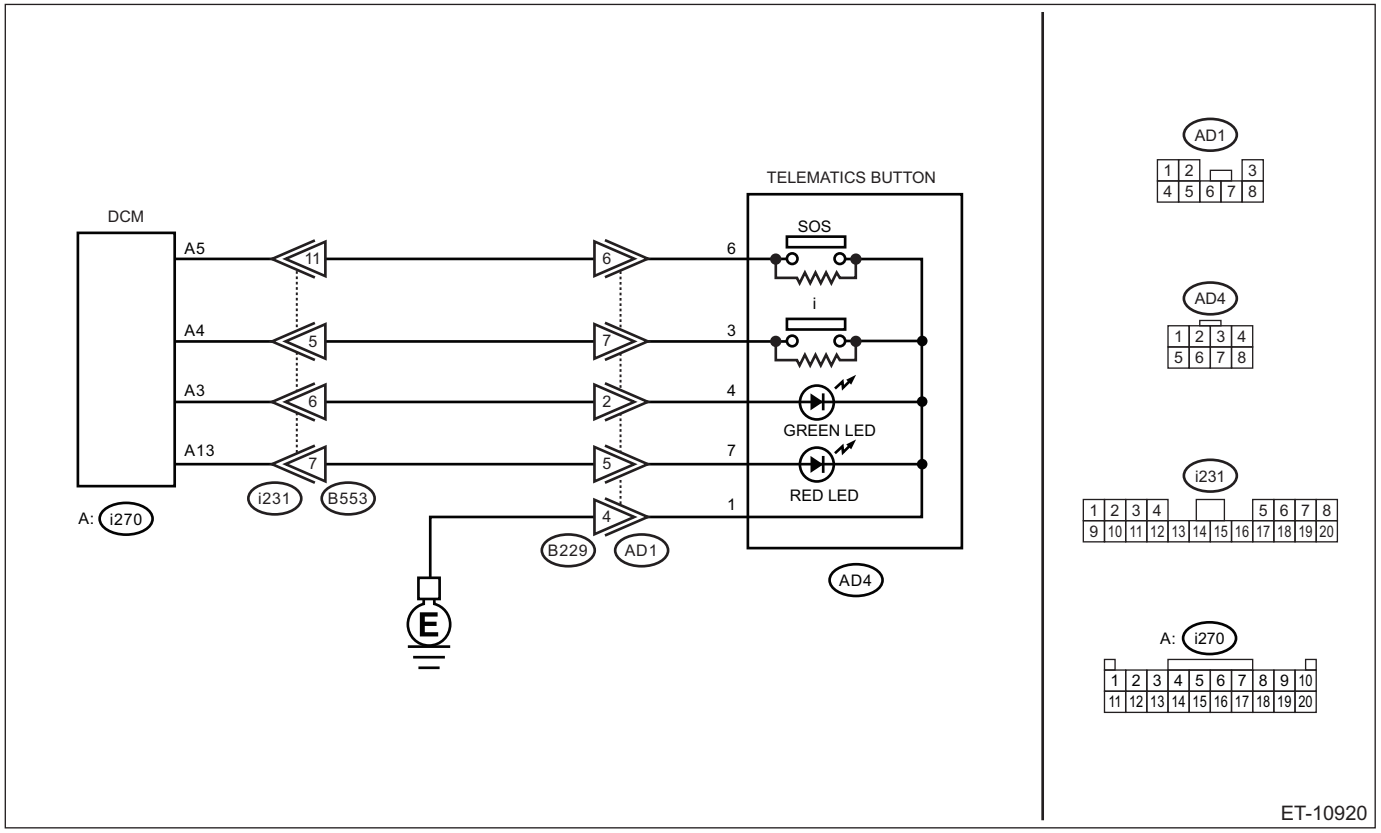
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A09 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 4 — (AD4) No. 3:*** ***(AD4) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 4 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 4 (+) — Chassis ground (–):*** ***(AD4) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE I-BUTTON.** Measure the resistance of the i-button unit. ***Terminals*** ***No. 3 — No. 1:***	Is the resistance 1 Ω or less when i-button is ON, and 1.6 (±5%) kΩ or more when i-button is OFF?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics button. <Ref. to ETM-26, Switches and Harness.>

T: DTC B2A0A RED LED CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
The following conditions occur for at least 50 ms.
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

Trouble symptom:
LED does not illuminate.
Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

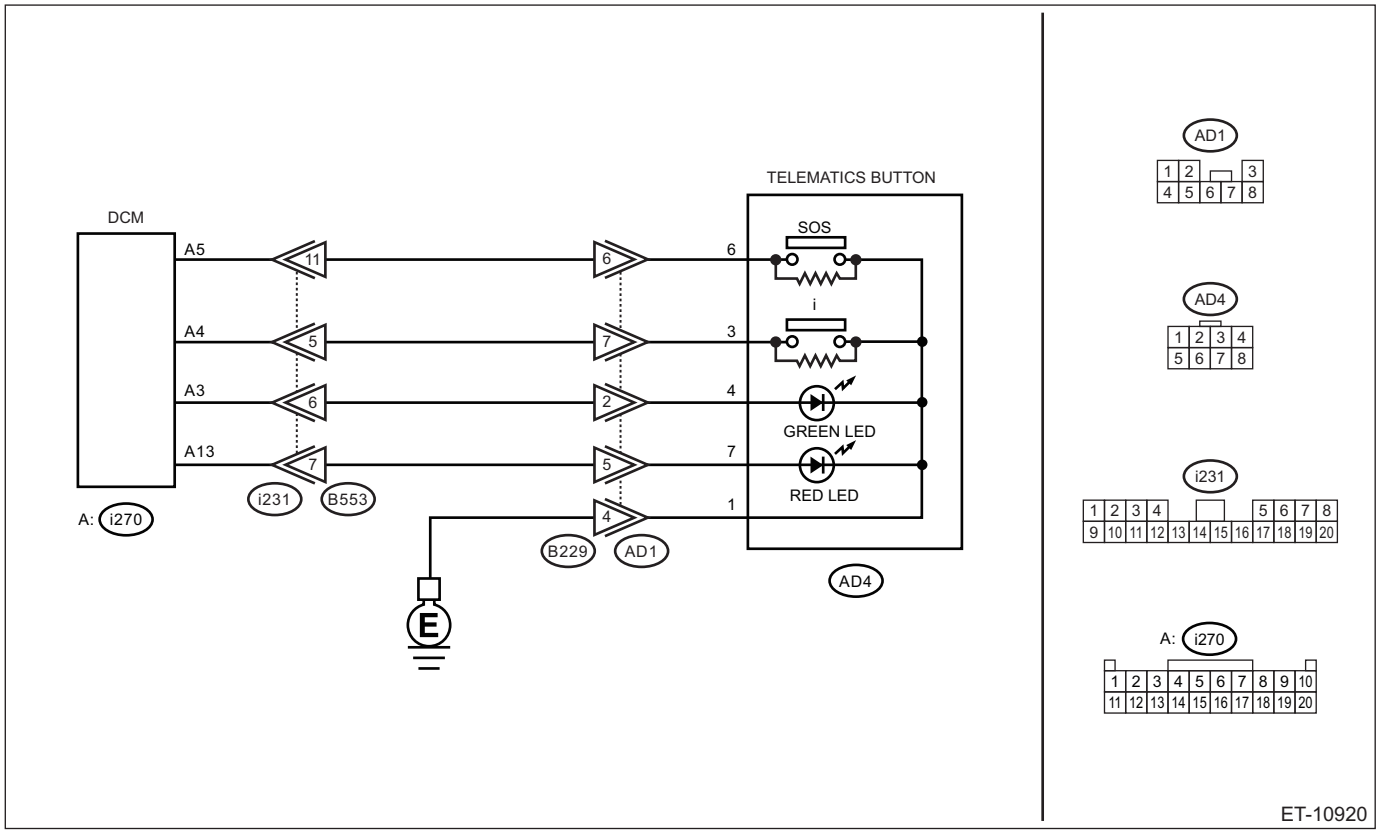
	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0A displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform «RED LED Lighting» in the system operation check mode. <Ref. to TEL(diag)-24, System Operation Check Mode.>	Does the RED LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 13 — (AD4) No. 7:*** ***(AD4) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 13 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 13 (+) — Chassis ground (–):*** ***(AD4) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**CHECK THE TELEMATICS BUTTON (LED) UNIT.** 1) Turn the ignition switch to OFF. 2) Apply the battery voltage to the single unit of the telematics button (LED) to check whether the telematics button (LED) illuminates. **CAUTION:** **Be careful not to connect the battery voltage terminal in a reverse way. Otherwise the telematics button (LED) will be damaged.** ***Terminals*** ***No. 7 (+) — No. 1 (-):***	Does the telematics button (LED) illuminate?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics button. <Ref. to ETM-26, Switches and Harness.>

U: DTC B2A0B GREEN LED CIRCUIT

Diagnosis start condition:
When ACC is ON.
DTC detecting condition:
The following conditions occur for at least 50 ms.
- Current in LED is less than 1 mA. (Improper LED connection, etc.)
- Current in LED is more than 200 mA. (Short-circuited LED, etc.)

Trouble symptom:
RED LED illuminates.
Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0B displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**PERFORM THE SYSTEM OPERATION CHECK.** Perform «GREEN LED Lighting» in the system operation check mode. <Ref. to TEL(diag)-24, System Operation Check Mode.>	Does the GREEN LED illuminate?	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the telematics button connector. 3) Disconnect the DCM connector. 4) Measure the resistance between telematics button connector and DCM connector. ***Connector & terminal*** ***(i270) No. 3 — (AD4) No. 4:*** ***(AD4) No. 1 — Chassis ground:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 3 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 3 (+) — Chassis ground (–):*** ***(AD4) No. 1 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Go to step **6**.	Repair or replace the short circuit of the harness.

	Step	Check	Yes	No
6	**CHECK THE TELEMATICS BUTTON (LED) UNIT.** 1) Turn the ignition switch to OFF. 2) Apply the battery voltage to the single unit of the telematics button (LED) to check whether the telematics button (LED) illuminates. **CAUTION:** **Be careful not to connect the battery voltage terminal in a reverse way. Otherwise the telematics button (LED) will be damaged.** ***Terminals*** ***No. 4 (+) — No. 1 (-):***	Does the telematics button (LED) illuminate?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics button. <Ref. to ETM-26, Switches and Harness.>

V: DTC B2A0C DCM INTERNAL FAULT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- Main microcomputer and communication circuit IC cannot communicate. (Defective IPC)
- SIM (communication chip) cannot be read. (Defective SIM)

Trouble symptom:
- Telematics function cannot be used.
- RED LED illuminates.

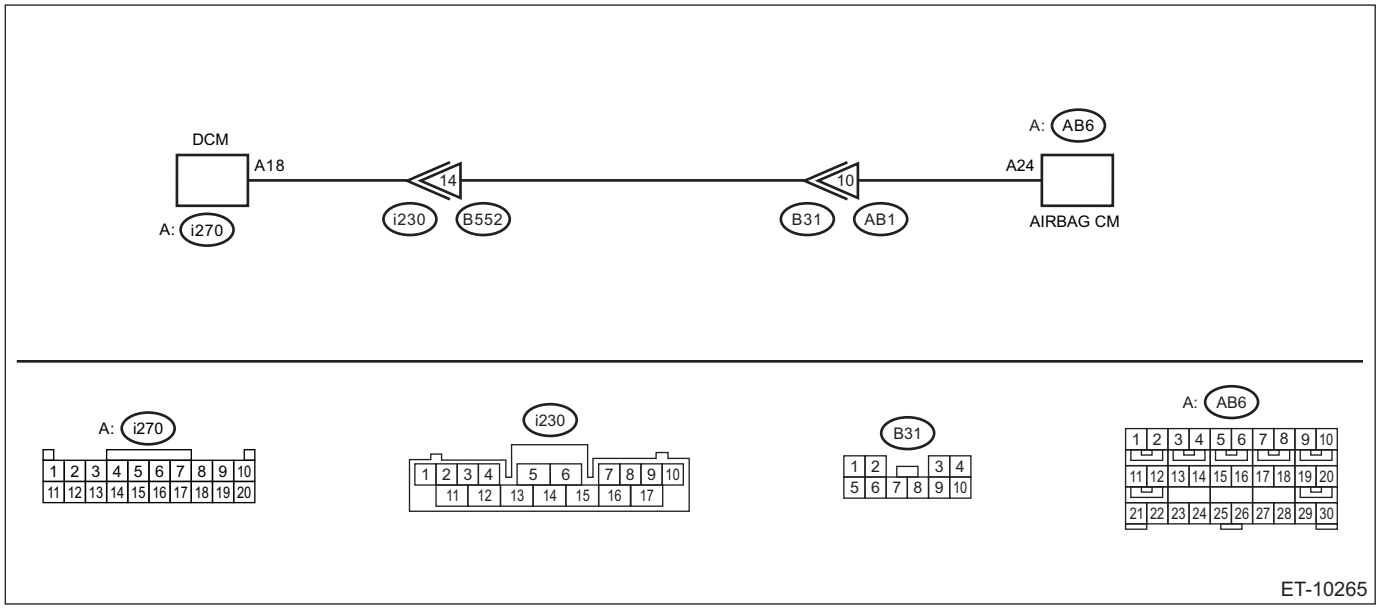
CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0C displayed? (Current malfunction)	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

W: DTC B2A0D AIRBAG SIGNAL

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Either the regular signal or collision detection signal cannot be detected from the airbag CM for at least 30 seconds.
Trouble symptom:
- ACN function does not operate.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0D displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK DTC.** Read DTC of the airbag. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Are any DTCs displayed? (Current malfunction)	Perform the diagnosis for the displayed DTCs of airbag.	Go to step **3**.

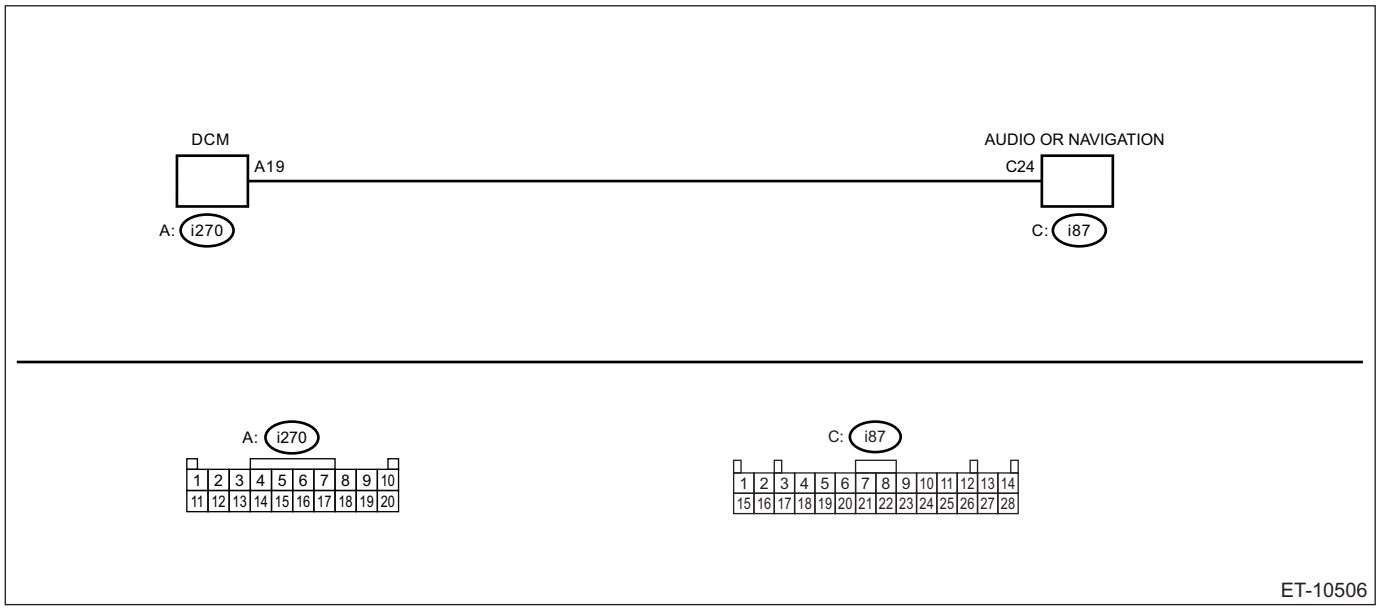
	Step	Check	Yes	No
3	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the airbag CM connector. 3) Disconnect the DCM connector. 4) Measure the resistance between airbag CM connector and DCM connector. **CAUTION:** **To measure the voltage and resistance of airbag system component, be sure to use the specified test harness. <Ref. to AB(diag)-4, General Description.>** ***Connector & terminal*** ***(i270) No. 18 — (AB6) No. 24:***	Is the resistance 1 Ω or less?	Go to step **4**.	Repair or replace the open circuit of harness.
4	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **5**.	Repair or replace the short circuit of the harness.
5	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 18 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Repair or replace the short circuit of the harness.

X: DTC B2A0E MUTE LINE CIRCUIT

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
Any of the following conditions occurs continuously for five seconds or more after the ignition switch is turned to ON when DCM does not mute the audio or navigation system.
- Current in the mute line is less than 1 mA. (Improper line connection, etc.)
- Current exceeds 50 mA. (Short-circuited line, etc.)

Trouble symptom:
- The mute function of audio or navigation system does not operate.
- RED LED illuminates.

Wiring diagram:
Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

Step		Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0E displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.

	Step	Check	Yes	No
2	**CHECK HARNESS (OPEN CIRCUIT).** 1) Turn the ignition switch to OFF. 2) Disconnect the audio or navigation connector. 3) Disconnect the DCM connector. 4) Measure the resistance between audio or navigation connector and DCM connector. ***Connector & terminal*** ***(i270) No. 19 — (i87) No. 24:***	Is the resistance 1 Ω or less?	Go to step **3**.	Repair or replace the open circuit of harness.
3	**CHECK HARNESS (GROUND SHORT CIRCUIT).** Measure the resistance between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 — Chassis ground:***	Is the resistance 1 MΩ or more?	Go to step **4**.	Repair or replace the short circuit of the harness.
4	**CHECK THE CONNECTOR (SHORT CIRCUIT TO POWER SUPPLY).** Measure the voltage between DCM connector and chassis ground. ***Connector & terminal*** ***(i270) No. 19 (+) — Chassis ground (–):***	Is the voltage less than 1 V?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Repair or replace the short circuit of the harness.

Y: DTC B2A0F BACKUP BATTERY DEGRADATION

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
- Backup battery voltage of charger is low.
- Charging attempt of 2 V or more fails after the backup battery has been charged for 1 hour continuously.
- Full charging is not achieved after the backup battery is charged for 7 hours in total (not continuously).

Trouble symptom:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0F displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK THE BACKUP BATTERY.** Check the backup battery unit. <Ref. to ETM-43, Data Communication Module.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the backup battery. <Ref. to ETM-43, Data Communication Module.>

Z: DTC B2A10 BATTERY VOLTAGE HIGH

Diagnosis start condition:
When ignition switch is ON.
DTC detecting condition:
DCM battery power supply input of 16 V or more continues for 5 seconds.
Trouble symptom:
RED LED illuminates.

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTC.** Read the DTC. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A10 displayed? (Current malfunction)	Go to step **2**.	Even if DTC is displayed, the circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.
2	**CHECK CURRENT DATA.** Check the current data «Battery Voltage» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is «Battery Voltage» OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Go to step **3**.
3	**CHECK BATTERY.** Check the battery unit. <Ref. to SC(STI)-24, Battery.> <Ref. to SC(w/o STI)-50, Battery.>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the battery. <Ref. to SC(STI)-24, Battery.> <Ref. to SC(w/o STI)-50, Battery.>

13.Diagnostics with Phenomenon

A: LIST

No.	Symptoms	Reference
1	The system does not notify the Telematics Service Provider Center automatically after collision.	<Ref. to TEL(diag)-55, THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION, INSPECTION, Diagnostics with Phenomenon.>
2	The system does not notify the center even if the SOS button is pressed.	<Ref. to TEL(diag)-57, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED, INSPECTION, Diagnostics with Phenomenon.>
3	The system places an SOS call unintentionally during driving.	<Ref. to TEL(diag)-58, THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
4	The system places an I-CALL unintentionally during driving.	<Ref. to TEL(diag)-58, THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING, INSPECTION, Diagnostics with Phenomenon.>
5	The system does not notify the center even if the i-button is pressed upon vehicle malfunction.	<Ref. to TEL(diag)-58, THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION, INSPECTION, Diagnostics with Phenomenon.>
6	Remote Vehicle Locator cannot locate the vehicle.	<Ref. to TEL(diag)-59, REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
7	Remote Vehicle Locator indicates an incorrect location and therefore the vehicle cannot be located.	<Ref. to TEL(diag)-61, REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
8	Remote Door Lock does not lock the doors of the vehicle.	<Ref. to TEL(diag)-61, REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE, INSPECTION, Diagnostics with Phenomenon.>
9	The doors lock unintentionally.	<Ref. to TEL(diag)-63, THE DOORS LOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
10	The doors unlock unintentionally.	<Ref. to TEL(diag)-63, THE DOORS UNLOCK UNINTENTIONALLY, INSPECTION, Diagnostics with Phenomenon.>
11	Remote Horn & HAZARD Lights do not operate upon request.	<Ref. to TEL(diag)-64, REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST, INSPECTION, Diagnostics with Phenomenon.>
12	When the Vehicle Security Alarm is activated, notification is not sent.	<Ref. to TEL(diag)-65, WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
13	When a Malfunction indicator light/warning light is lit, notification is not sent.	<Ref. to TEL(diag)-66, WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
14	Maintenance Notifications are not sent.	<Ref. to TEL(diag)-67, MAINTENANCE NOTIFICATIONS ARE NOT SENT, INSPECTION, Diagnostics with Phenomenon.>
15	The LED does not display the status. (LED malfunction)	<Ref. to TEL(diag)-68, THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION), INSPECTION, Diagnostics with Phenomenon.>
16	Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)	<Ref. to TEL(diag)-70, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

B: INSPECTION

1. THE SYSTEM DOES NOT NOTIFY THE TELEMATICS SERVICE PROVIDER CENTER AUTOMATICALLY AFTER COLLISION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-70, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK COLLISION TYPE.** Check the type of collision of the vehicle.	Is it a frontal collision, or a side collision, or a rollover?	Go to step **2**.	For rear collision, Go to step **4**.
2	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light illuminate at all times?	Go to step **3**.	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.
3	**CHECK DTCS.** Read DTC of the airbag. <Ref. to AB(diag)-23, Read Diagnostic Trouble Code (DTC).>	Is DTC any of «Front Impact Deployment», «Side Impact Deployment» or «Rollover Ignition»?	There is no malfunction in the airbag system. Go to step **7**.	Perform the diagnosis for the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>
4	**CHECK COLLISION DETECTION SIGNAL RECEPTION STATUS.** Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is a time stamp recorded?	Go to step **7**. (Rear collision detection was activated)	Go to step **5**.
5	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **6**.
6	**CHECK AIRBAG WARNING LIGHT.** Check the airbag warning light.	Does the airbag warning light illuminate at all times?	Perform the diagnosis for the airbag system. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>	There is no malfunction in the airbag system. Since the airbag CM does not transmit the collision detection signal in the event of a minor collision, it is normal that the automatic notification function does not work.

	Step	Check	Yes	No
7	**CHECK MODE STATUS.** Display the current data «Subscription Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «Normal Mode»?	Go to step **8**. NOTE: If step 5 is in progress, Go to step **9**.	This is not a malfunction because the function is limited in other than normal mode. Press and hold the SOS button for two seconds to enter normal mode.
8	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **9**.
9	**CHECK THE RECEIVED SIGNAL STRENGTH AT THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «RSSI at ACN Event» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data 26% or more?	Go to step **11**.	Go to step **10**.
10	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Check whether the SOS button was pressed within the cellular coverage area.	Is the location where the collision occurred within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **11**.	The collision occurred outside the specified area.
11	**CHECK THE COMMUNICATION STATUS AT THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «Call Status at ACN Event» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **12**. B: Replace the DCM. <Ref. to ETM-43, Data Communication Module.> C: Replace the antenna. <Ref. to ETM-22, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
12	**CHECK THE TIME OF THE ACCIDENT. (CHECK THE CURRENT DATA.).** Display the current data «TimeStamp at ACN Event» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the accident match with the data?	Replace the antenna. <Ref. to ETM-22, Antenna.>	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>

2. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE SOS BUTTON IS PRESSED

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)". <Ref. to TEL(diag)-70, PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.), INSPECTION, Diagnostics with Phenomenon.>

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «SOS Active» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Check whether the SOS button was pressed within the cellular coverage area.	Is the location where the SOS button was pressed within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **5**.	The SOS button was pressed outside the cellular coverage area.
5	**CHECK THE COMMUNICATION STATUS OF WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Call status at SOS/ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ETM-22, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—

	Step	Check	Yes	No
6	**CHECK THE TIME OF WHEN THE SOS BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the SOS button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>
7	**CHECK THE SOS BUTTON.** Check the SOS button. <Ref. to TEL(diag)-39, DTC B2A08 SOS BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the SOS button. <Ref. to ETM-26, Switches and Harness.>

3. THE SYSTEM PLACES AN SOS CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the SOS button. <Ref. to ETM-26, Switches and Harness.>

4. THE SYSTEM PLACES AN I-CALL UNINTENTIONALLY DURING DRIVING

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the i-button. <Ref. to ETM-26, Switches and Harness.>

5. THE SYSTEM DOES NOT NOTIFY THE CENTER EVEN IF THE I-BUTTON IS PRESSED UPON VEHICLE MALFUNCTION

NOTE:
Perform the diagnostics for "Phone conversation is not possible. (The microphone does not respond to a voice. No sound is heard from the speaker.)".

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «ICALL Active» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.

	Step	Check	Yes	No
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **3**.
3	**CHECK THE RECEIVED SIGNAL STRENGTH WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «RSSI at SOS/ICALL(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data 26% or more?	Go to step **5**.	Go to step **4**.
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Check whether the i-button was pressed within the cellular coverage area.	Is the location where the i-button was pressed within the AT&T cellular coverage area? (For the AT&T cellular coverage area, refer to the AT&T website. The system operates only on 3G and 4G technology.)	Go to step **5**.	The i-button was pressed outside the cellular coverage area.
5	**CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Call status at SOS/ICALL Event(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	If the data shows «Call Started» or «Call Connected»; Go to A. If the data shows «Call Not Started»; Go to B. If the data shows «No Network Service»; Go to C. If the data shows «Call Ended by SXM»; Go to D.	A: Go to step **6**. B: Go to step **7**. C: Replace the antenna. <Ref. to ETM-22, Antenna.> D: The connection ended due to a server-side reason; therefore, there is no failure on the vehicle.	—
6	**CHECK THE COMMUNICATION STATUS OF WHEN THE I-BUTTON WAS PRESSED. (CHECK THE CURRENT DATA.).** Display the current data «Timestamp at Time of Button Push(1)» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.> NOTE: The time stamp is displayed in the Coordinated Universal Time (UTC), which is different from actual time at each location. Therefore, time difference needs to be corrected for use. Example: [12/22 01:30 in UTC time] is corrected as [12/21 20:30 in New York time].	Does the time of the i-button operation match with the data?	Go to step **7**.	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>
7	**CHECK THE I-BUTTON.** Check the i-button. <Ref. to TEL(diag)-41, DTC B2A09 I-CALL BUTTON CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Is the check result OK?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the i-button. <Ref. to ETM-26, Switches and Harness.>

6. REMOTE VEHICLE LOCATOR CANNOT LOCATE THE VEHICLE

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.

	Step	Check	Yes	No
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Is the current location displayed?	Currently no failure is found. If the current location is not displayed, the user's Internet environment (radio waves, etc.) possibly had a problem.	Go to step **4**.
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

7. REMOTE VEHICLE LOCATOR INDICATES AN INCORRECT LOCATION FOR THE VEHICLE

CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **2**.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can display the current location.	Can the current location be displayed correctly? (Is the deviation range 100 m (328 ft) or less?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Go to step **3**.
3	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check again that the user's smartphone can display the current location in a place where the sky is open.	Can the current location be displayed correctly? (Is the deviation range 100 m (328 ft) or less?)	Currently no failure is found. When the user had a problem, there was a failure with the GPS antenna reception environment, etc.	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>

8. REMOTE DOOR LOCK DOES NOT LOCK THE DOORS OF THE VEHICLE

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE DOOR LOCK FUNCTION.** Check that the user' smartphone can lock the doors in the current situation.	Are the doors locked?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data 26% or more?	Go to step **6**.	Go to step **5**.

	Step	Check	Yes	No
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK THE DOOR LOCK FUNCTION.** Check that the keyless transmitter can lock the doors of the vehicle.	Are the doors locked?	Go to step **7**.	Perform the diagnosis according to the inspection for the door lock control system. <Ref. to SL-10, INSPECTION, Door Lock Control System.>
7	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

9. THE DOORS LOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>	Is the check result OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>

10.THE DOORS UNLOCK UNINTENTIONALLY

	Step	Check	Yes	No
1	**CHECK DOOR LOCK SWITCH.** Check the door unlock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>	Is the check result OK?	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	Perform the diagnosis according to the inspection for the door lock switch. <Ref. to SL-10, INSPECTION, Door Lock Control System.>

11.REMOTE HORN & HAZARD LIGHTS DO NOT OPERATE UPON REQUEST

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data displayed as «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light currently operate by the user's smartphone.	Do the horn and hazard light operate?	Currently no failure is found. When the user had a problem, there was a failure with the Internet connection environment, etc.	Go to step **4**.
4	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Does the data indicate 26% or more?	Go to step **6**.	Go to step **5**.
5	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **6**.	The location of the remote control operation was outside the cellular coverage area.
6	**CHECK THE HORN AND HAZARD LIGHT FUNCTIONS.** Check that the horn and hazard light operate by the keyless transmitter. (Press the lock button three times.)	Do the horn and hazard light operate?	Go to step **8**.	Go to step **7**.
7	**CHECK HORN OPERATION.** Activate the function check «Horn Output» of the body integrated unit. <Ref. to BC(diag)-33, Function Check.>	Does the horn sound?	Check the keyless transmitter. <Ref. to SL-83, Keyless Transmitter.><Ref. to SL-85, Access Key.>	Check the horn circuit. <Ref. to WI-241, Horn System.>

	Step	Check	Yes	No
8	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

12.WHEN THE VEHICLE SECURITY ALARM IS ACTIVATED, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data displayed as «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that the user's smartphone can be connected to the Internet.	Can it be connected to the Internet?	Go to step **3**.	The user's smartphone or the Internet environment has a problem.
3	**CHECK THE SECURITY ALERT SYSTEM.** Operate the security alert system.	Does it operate?	Go to step **4**.	Check the security alert system. <Ref. to SL-27, INSPECTION, Security System.>
4	**CHECK THE CURRENT COMMUNICATION ENVIRONMENT OF THE USER'S SMARTPHONE.** Check that a notification is sent to the user's smartphone after the security alert is activated.	Does the smartphone receive a notification?	Currently no failure is found.	Go to step **5**.
5	**CHECK THE CURRENT RECEIVED SIGNAL STRENGTH. (CHECK THE CURRENT DATA.).** Display the current data «Signal Strength» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Does the data indicate 26% or more?	Go to step **7**.	Go to step **6**.

	Step	Check	Yes	No
6	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she operated the remote control.	Is the location of the remote control operation located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Go to step **7**.	The location of the remote control operation was outside the cellular coverage area.
7	**CHECK DTCS.** Check DTCs in the following systems. • Body control <Ref. to BC(diag)-14, Read Diagnostic Trouble Code (DTC).> • Telematics <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs of body control, or of telematics. <Ref. to BC(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

13.WHEN A MALFUNCTION INDICATOR LIGHT/WARNING LIGHT IS LIT, NOTIFICATION IS NOT SENT

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Diagnostic Alert Active» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data displayed as «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.
2	**CHECK WARNING LIGHT.** Check if the warning light illuminates.	Does it Illuminate?	Go to step **3**.	Currently no failure is found. Since the warning light is not lit, notification is not sent.
3	**CHECK DTCS.** Check the DTC of telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Go to step **4**.

	Step	Check	Yes	No
4	**CHECK THE AT&T CELLULAR COVERAGE AREA.** Ask the user where he/she turned the ignition switch to OFF after the warning light was lit.	After the warning light comes on, is the location where the user turned the ignition switch to OFF located within the AT&T coverage area? (For the AT&T coverage area, refer to the AT&T website. This system operates on 3G and 4G mobile communication technology.)	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.	The location where the ignition switch was turned to OFF (where warning light illumination information was sent) was outside the cellular coverage area.

14.MAINTENANCE NOTIFICATIONS ARE NOT SENT

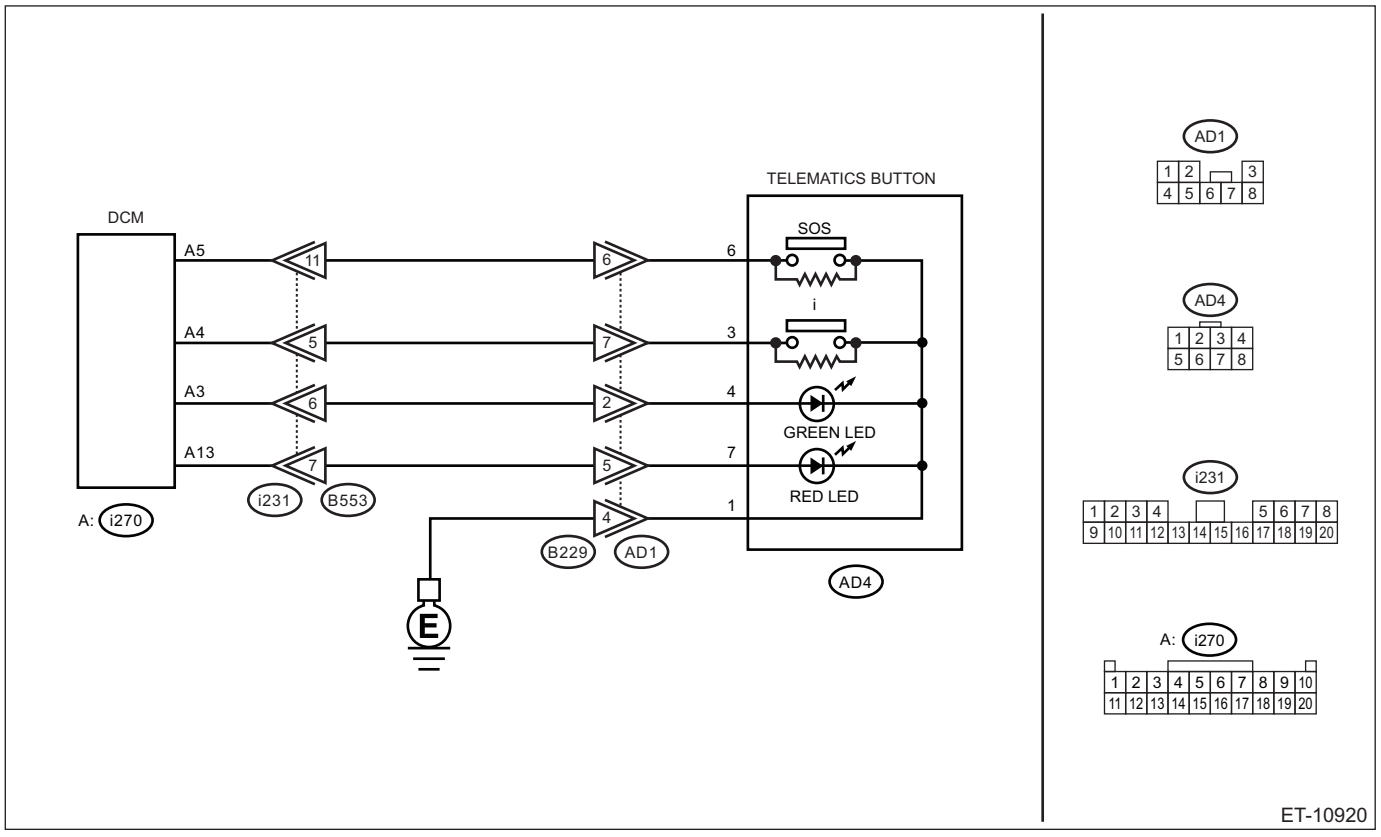
	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Maintenance Alert Active» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data displayed as «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure.

Step		Check	Yes	No
2	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Are any DTCs displayed?	Perform the diagnosis for the displayed DTCs. <Ref. to TEL(diag)-18, LIST, Diagnostic Code(s) Display.>	Check the Starlink Server report to verify that there was no server outage that coincides with the day/time the customer reported that the issue occurred. (Refer to STARLINK Server Maintenance/Down Report under Reports and Starlink section in Subarunet.) If no outage exists for that time frame, it is possible that there was environmental interference (radio waves, etc.) when the user performed the operation. No further actions are recommended.

15.THE LED DOES NOT DISPLAY THE STATUS. (LED MALFUNCTION)

Wiring diagram:

Telematics <Ref. to WI-351, WIRING DIAGRAM, Telematics System.>



CAUTION:
CommCheck is required after replacing the DCM. <Ref. to ETM-42, REGISTRATION (COMM CHECK), OPERATION, Telematics System.>

	Step	Check	Yes	No
1	**CHECK THE SUBSCRIPTION STATUS.** Display the current data «Account Status» of the Telematics. <Ref. to TEL(diag)-14, Read Current Data.>	Is the data «TRUE»?	Go to step **2**.	The user does not have a service subscription; therefore, it is not a failure. (Both LEDs are turned off.)
2	**CHECK THE LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Go to step **3**.
3	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A0A or B2A0B displayed?	Perform the diagnosis for the displayed DTC B2A0A or B2A0B. <Ref. to TEL(diag)-43, DTC B2A0A RED LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-46, DTC B2A0B GREEN LED CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **4**.
4	**CHECK THE LED ILLUMINATION CONDITION.** Perform the telematics system operation check. <Ref. to TEL(diag)-24, System Operation Check Mode.>	Is the LED turned on or off?	Go to step **5**.	Go to step **6**.

	Step	Check	Yes	No
5	**CHECK THE LED.** 1) Turn the ignition switch to ON. 2) Check the LED condition.	Does the RED LED go off and the GREEN LED illuminate?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>
6	**CHECK THE LED.** 1) Turn the ignition switch to OFF. 2) Apply the battery voltage to the single unit of the telematics button (LED) to check whether the telematics button (LED) illuminates. **CAUTION:** **Be careful not to connect the battery voltage terminal in a reverse way. Otherwise the telematics button (LED) will be damaged.** ***Terminals*** ***No. 7 (+) — No. 1 (–):*** ***No. 4 (+) — No. 1 (–):***	Does the telematics button (LED) illuminate?	Replace the DCM. <Ref. to ETM-43, Data Communication Module.>	Replace the telematics button. <Ref. to ETM-26, Switches and Harness.>

16.PHONE CONVERSATION IS NOT POSSIBLE. (THE MICROPHONE DOES NOT RESPOND TO A VOICE. NO SOUND IS HEARD FROM THE SPEAKER.)

	Step	Check	Yes	No
1	**CHECK DTCS.** Read DTCs of the Telematics. <Ref. to TEL(diag)-18, Diagnostic Code(s) Display.>	Is DTC B2A04, B2A05 or B2A06 displayed?	Perform the diagnosis for the displayed DTC B2A04, B2A05 or B2A06. <Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-32, DTC B2A05 LEFT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to TEL(diag)-35, DTC B2A06 RIGHT SPEAKER/AUDIO CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step **2**.

	Step	Check	Yes	No
2	**CHECK THE SPEAKER OPERATION.** Perform [Speaker ON] in the telematics system operation check. <Ref. to TEL(diag)-24, System Operation Check Mode.>	Does it sound?	Go to step **3**.	Go to step **4**.
3	**CHECK MICROPHONE.** Perform the microphone voice input.	Is the voice recognized?	Go to step **4**.	Replace the microphone.
4	**CHECK THE SPEAKER.** Check the speaker.	Is the check result OK?	Go to step **5**.	Replace the speaker.
5	**CHECK THE TELEPHONE CALL.** 1) Place the mobile phone in the vehicle. 2) Establish a Bluetooth connection between the mobile phone in the vehicle and the vehicle unit. 3) Make a call from outside to the mobile phone in the vehicle. 4) Check that a telephone call is available through the in-vehicle microphone with the hands-free function.	Is a telephone call successful?	The circuit has returned to a normal condition at this time. Reproduce the failure, and then perform the diagnosis again. NOTE: In this case, temporary poor contact of connector, temporary open or short circuit of harness may be the cause.	Perform the diagnosis of DTC B2A04 MIC CIRCUIT. <Ref. to TEL(diag)-30, DTC B2A04 MIC CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

WIRING SYSTEM SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.
This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which fault is the root cause of the symptom, to save time and labor.

2. IDENTIFICATION OF TROUBLE CAUSE

1) Using the diagnostics, narrow down the causes.
2) Refer to the wiring diagram and check the system's circuit. If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing component parts, check for fuse blowout, open wiring harness on the power supply circuit and the ground circuit, and poor connectors, switches, relays, etc. If no problem is encountered, check the component parts.

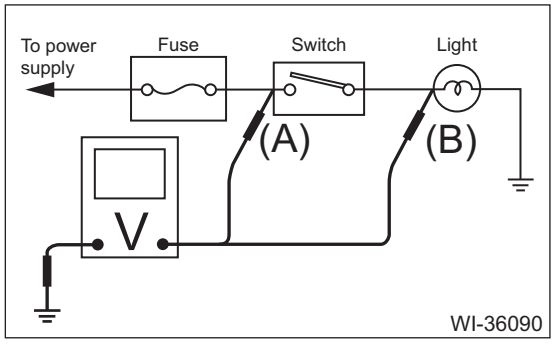
3. SYSTEM OPERATION CHECK

After inspection and repair, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT

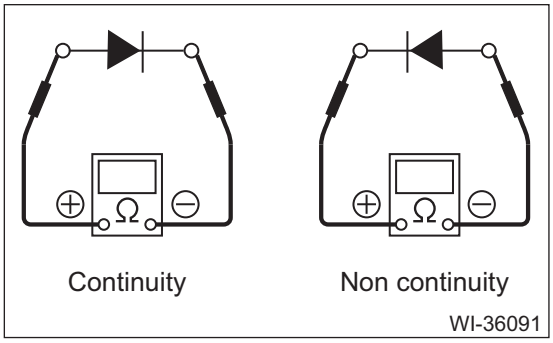
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal. Connect the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Shift the positive lead contacting the connector (A) to the connector (B). The voltmeter will indicate no voltage.
4) Turn the switch to ON with the positive lead contacting the connector (B).
The voltmeter will indicate a voltage and, at the same time, the light will illuminate.
5) The circuit is normal. If a problem such as a light failing to illuminate occurs, use the procedures above to track down the malfunction.



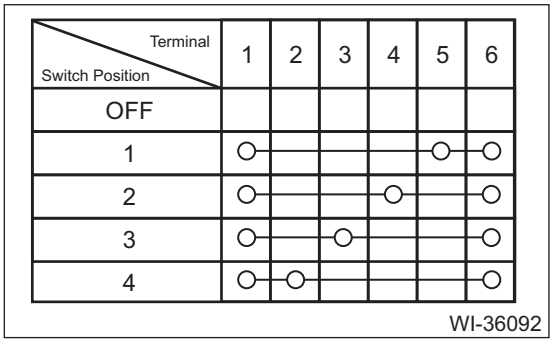
2. CONTINUITY CHECK

1) Disconnect the battery terminal or connector so there is no voltage between the check points.
Contact the leads of an ohmmeter between the check points, and check that there is continuity.
2) When checking the diode continuity using an ohmmeter, allow the positive lead to contact the diode positive side and the negative lead to the negative side. At this time, there must be continuity. Also, when contacting the leads in reverse, there should be no continuity.

NOTE:
Some testers have reverse polarity, therefore, refer to the instruction manual of the tester.

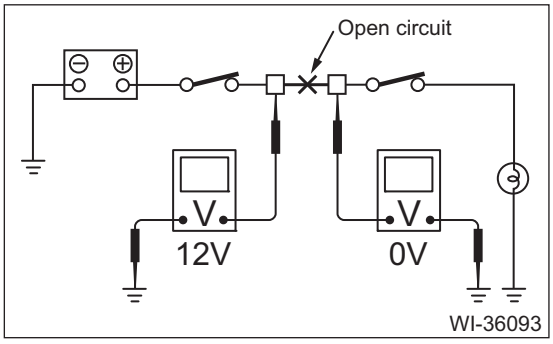


3) When checking switch continuity using an ohmmeter, perform the check while the switch operates. For example, when a switch position is at 3, continuity exists among terminals 1, 3 and 6, as shown below.

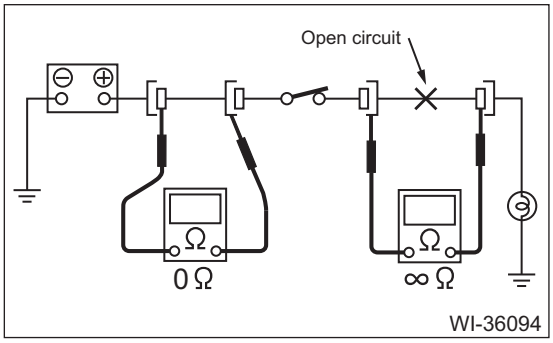


3. HOW TO IDENTIFY AN OPEN CIRCUIT

1) With voltmeter:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previously checked point is open.

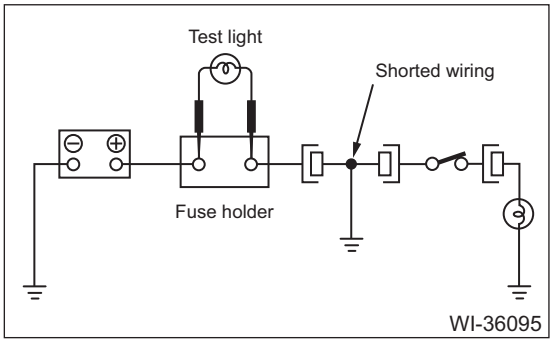


2) With ohmmeter:
Disconnect all connectors affected, and check continuity in the harness between adjacent connectors. When the ohmmeter indicates “infinite”, the harness is open.

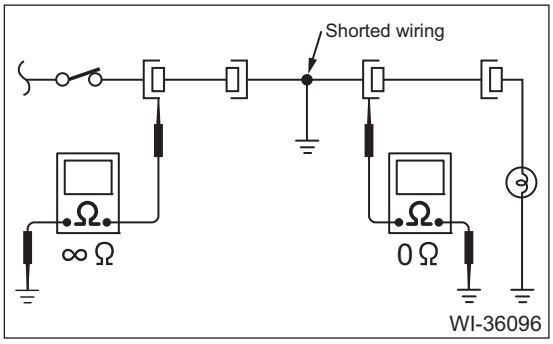


4. HOW TO DETERMINE A SHORT CIRCUIT

1) With test light:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time. At that time, always start with the connector located farthest from the power supply. If the test light goes out when a connector is disconnected, the harness between that connector and the next connector (farther from the power supply) is shorted.



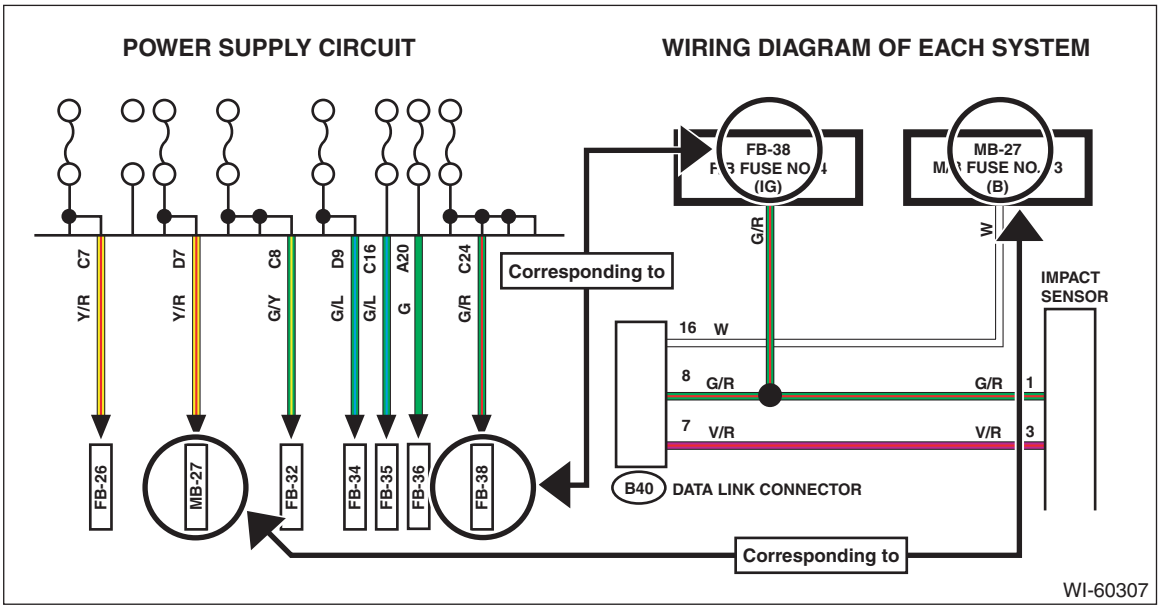
2) With ohmmeter:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.



C: HOW TO READ WIRING DIAGRAMS

1. POWER SUPPLY CIRCUIT

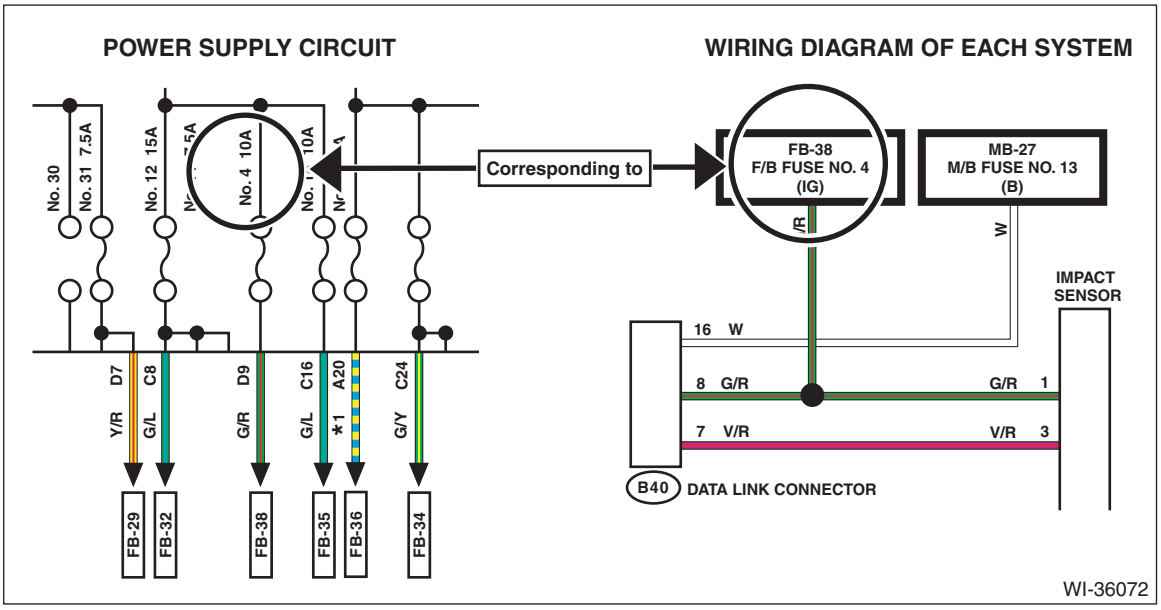
Circuits are described to indicate the power supply in the wiring diagram of each system. “MB-5”, “MB-6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram of each system. Accordingly, using the DC power supply circuit and the wiring diagram of each system permits service personnel to understand the entire electrical arrangement of the system.



2. WIRING DIAGRAM OF EACH SYSTEM

1. **Fuse No. & rating**

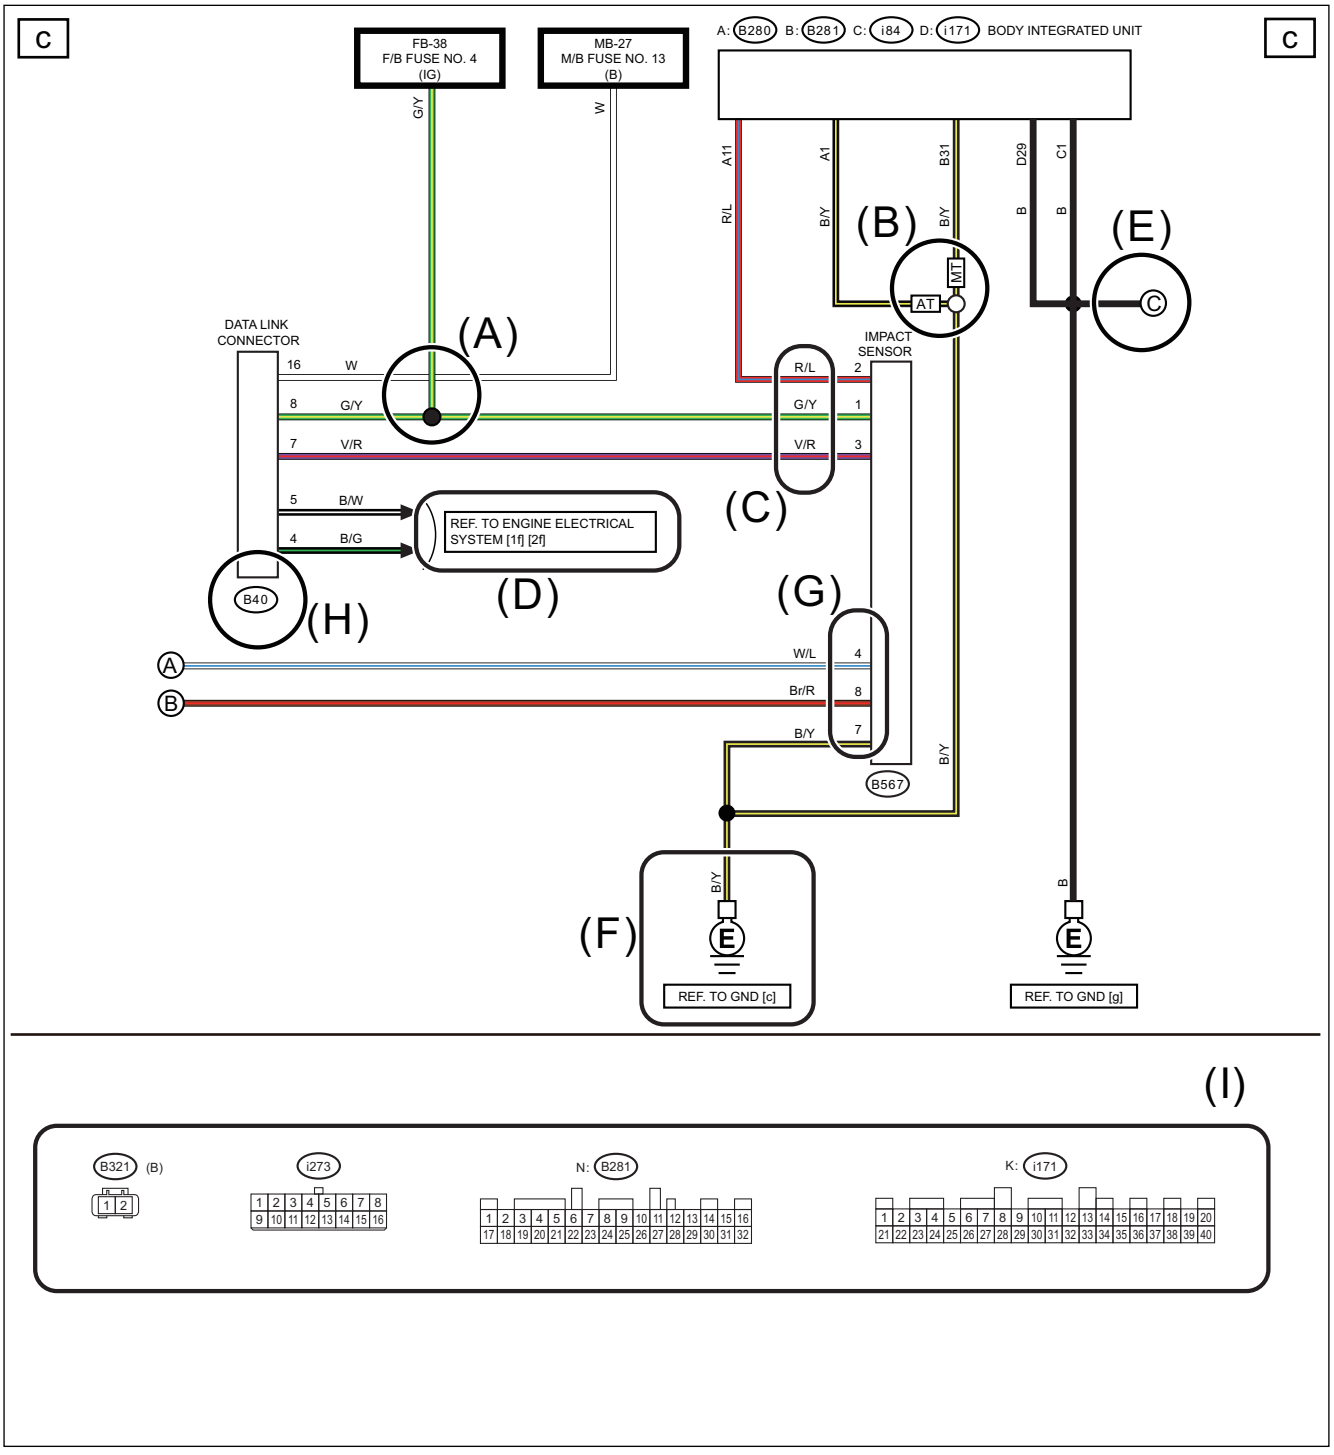
The “Fuse No. & rating” is the same description as that in the DC power supply circuit, and corresponds with that used in the vehicle.



2. **Wiring diagram of each system**

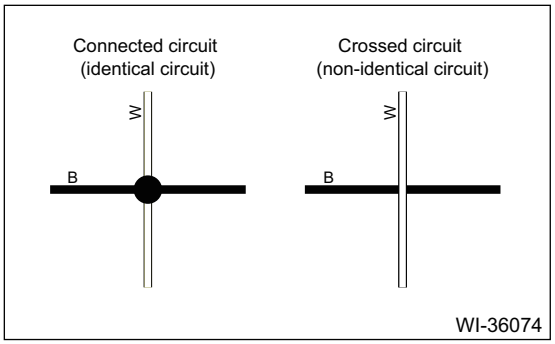
To help figure out the route from the DC power supply circuit, wiring diagrams are classified and described in each system.

NOTE:
This manual includes harness information. Information of parts that are not routed via harness and adapter code is described as a reference. If no information is described in this manual, refer to each section.



WI-62491

- (A):Wire connection and crossing in a circuit



- (B):Classification by specifications

If a circuit differs from another circuit according to vehicle specifications, the specification difference is indicated with abbreviations.

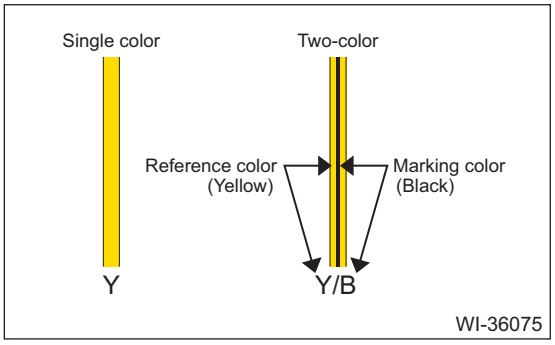
- (C):Color code

Indicates the color of harness and connector housing.

Color code	Color	Color code	Color	Color code	Color
B	Black	S	Shield line	Gr	Gray
G	Green	V	Violet	Lg	Light green
L	Blue	W	White	Sb	Light blue
Or	Orange	Y	Yellow	★	White or natural color
P	Pink	Be	Beige		
R	Red	Br	Brown		

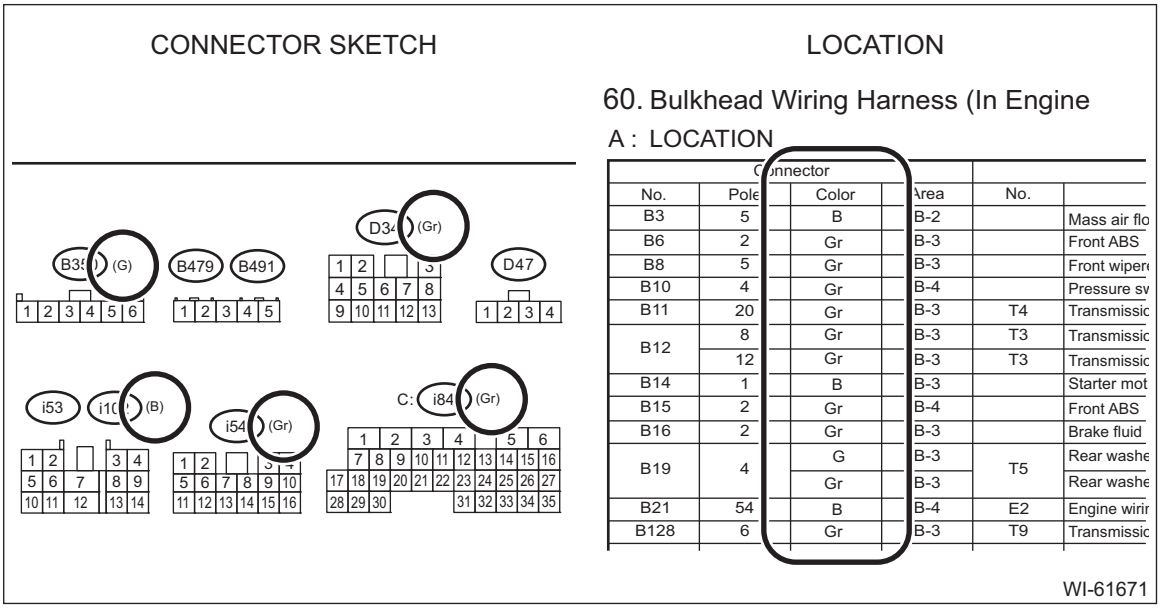
(Color code of harness)

Single color is indicated with a color code, and double colors are indicated with “standard color / marking color”.



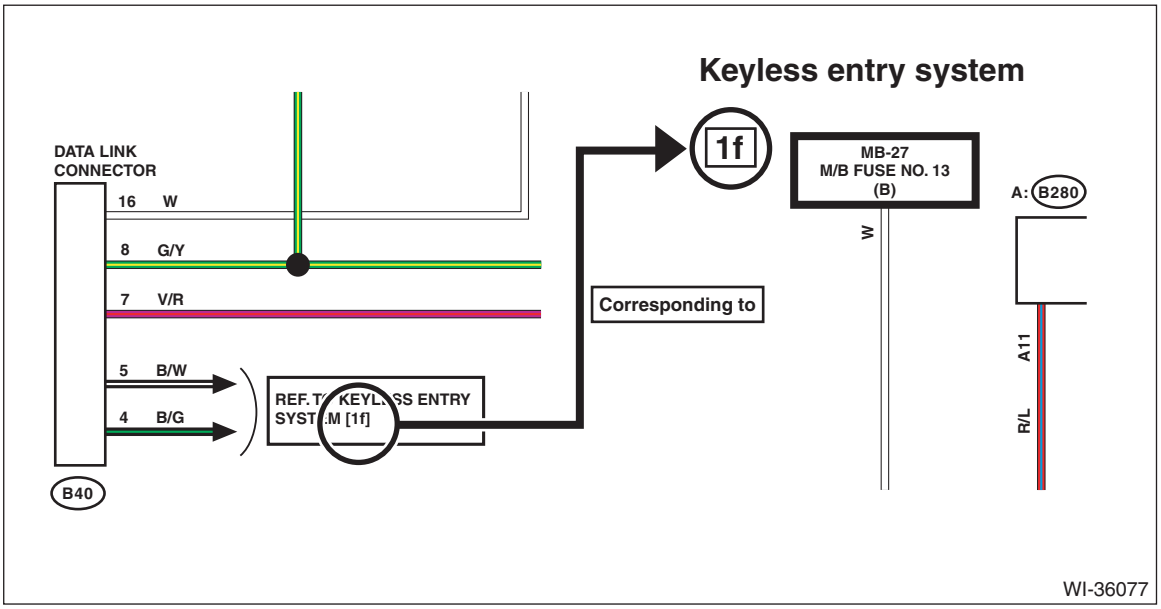
(Color code of connector housing)

Used in the connector sketch and the locations.



- (D):Connection to another system in the same circuit

Indicates the connecting to with alphanumeric characters, which correspond to the descriptions shown on the upper section of each page.

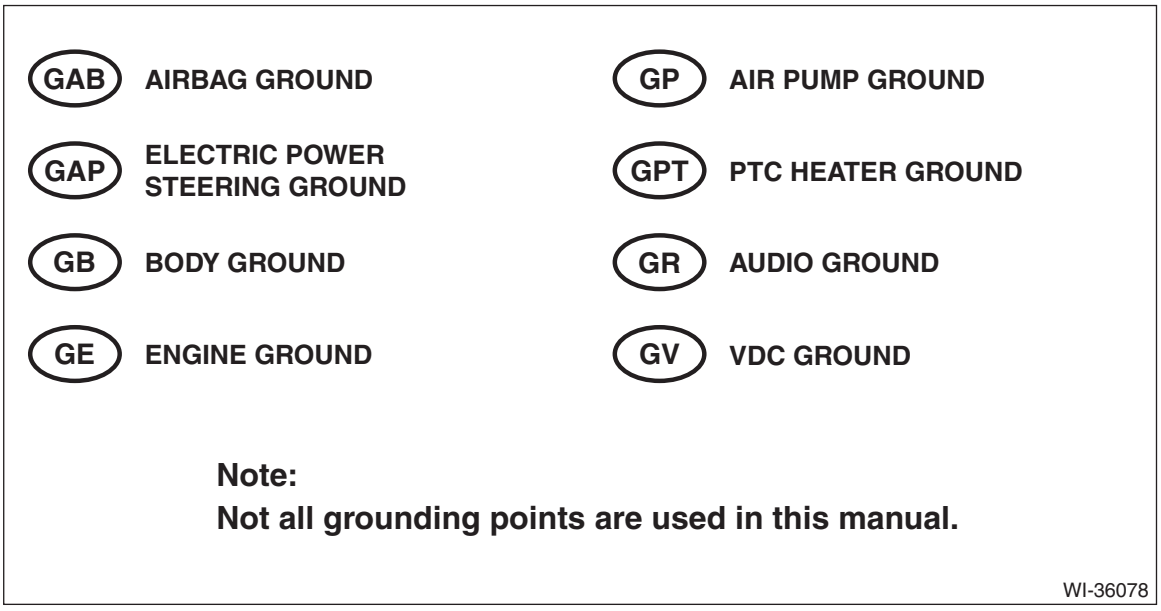


- (E):Connections in the system

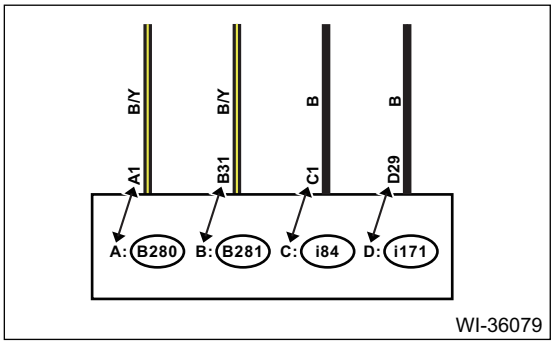
Indicates with alphabetic characters, which correspond to the same alphabetic characters shown in the following pages.

- (F):Ground

The ground points shown in the ground circuit refer to the following, which correspond to the locations.



• (G):Terminal No.
Indicates the terminal number of the connector to be connected. If several connectors are connected to a component, they are identified with alphabetic characters.



• (H):Connector No.
The first alphabetic characters of the connector number correspond with the following symbols that indicate harnesses or systems.

Symbol	Harness/cord	Symbol	Harness/cord
AB	Airbag wiring harness	F	Front wiring harness
AD	Adapter cord		Generator cord
AT/T	Transmission cord	i	Instrument panel Wiring harness
B	Bulkhead wiring harness		
D	Door cord / Rear gate code	R	Rear wiring harness
E	Engine wiring harness		Fuel cord / Roof cord
	Oxygen sensor cord		Rear gate cord / Trunk lid cord
ST	Steering cord		

• (I):Connector sketch
The connector sketch at the bottom shows the connectors used in the wiring diagram.

3. **Connector**

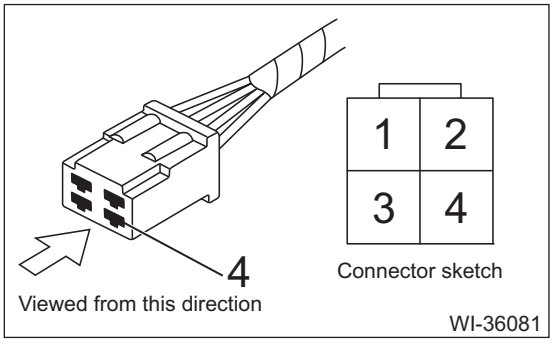
The following shows the connector shape, lock position, connection and terminal number that are used in this manual.

For connector shape, refer to the connector sketch.

Connector used in vehicle	Connector shown in wiring diagram		
	Connector sketch	Wiring diagram symbol	Terminal arrangement order
 Male connector			Numbered in order from upper right to lower left.
 Female connector			Numbered in order from upper left to lower right.

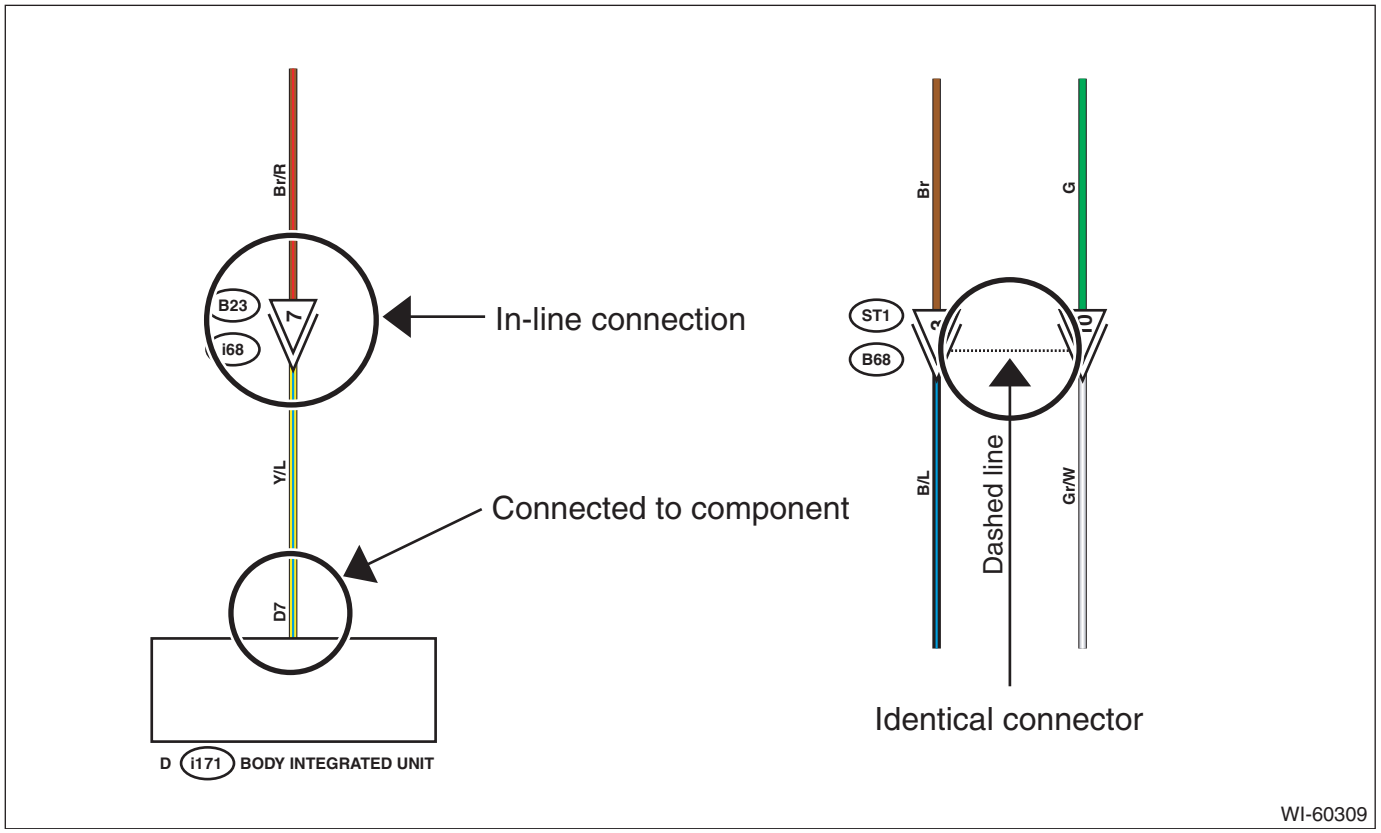
WI-41116

• The sketch of the connector and the terminal number are indicated in a disconnected state which is viewed from the terminal side.

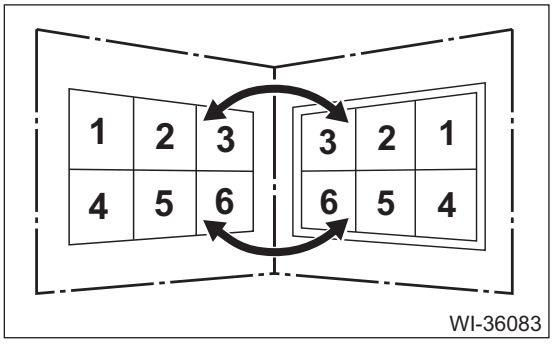


• The connector sketch usually indicates a female connector.

• The connector used in the wiring diagram of the system indicates only the intermediate connection, therefore, no parts, J/Cs and grounds are described. In addition, if the different circuits are connected with the same connector, a dot line is used to indicate that these are the same.



• When connecting the connector, the terminals with the same number are jointed. When the connector is disconnected, the terminal location is symmetrical.



3. LOCATION

In this manual, the location is classified in each harness, and the connector location is indicated using coordinates.

CONNECTOR LOCATION CHART

60. Bulkhead Wiring Harness (In Engine Com

A : LOCATION

Connector					
No.	Pole	Color	Area	No.	
B3	5	B	B-2		Mass air fl
B6	2	Gr	B-3		Front ABS
B8	5	Gr	B-3		Front wiper
B10	4	Gr	B-4		Pressure s
B11	20	Gr	B-3	T4	Transmissi
B12	8	Gr	B-3	T3	Transmissi
	12	Gr	B-3	T3	Transmissi

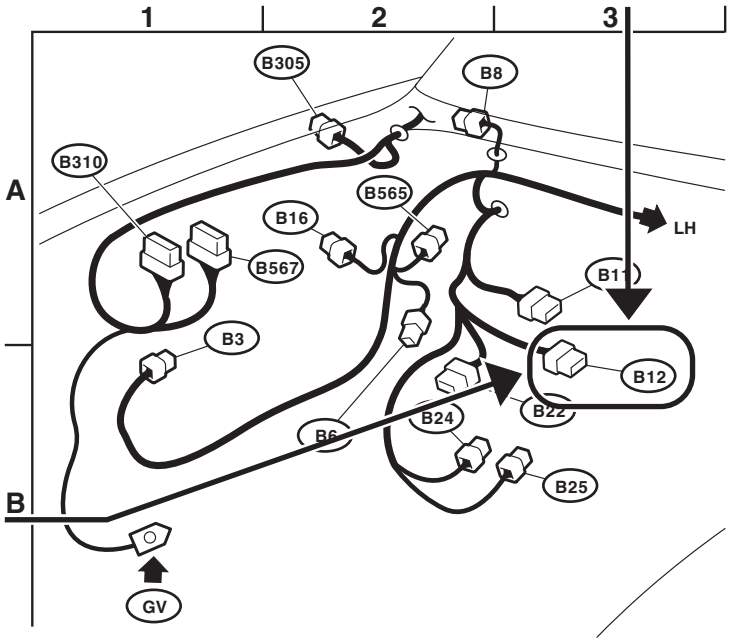
B128	6	Gr	B-3	T9	Transmissi

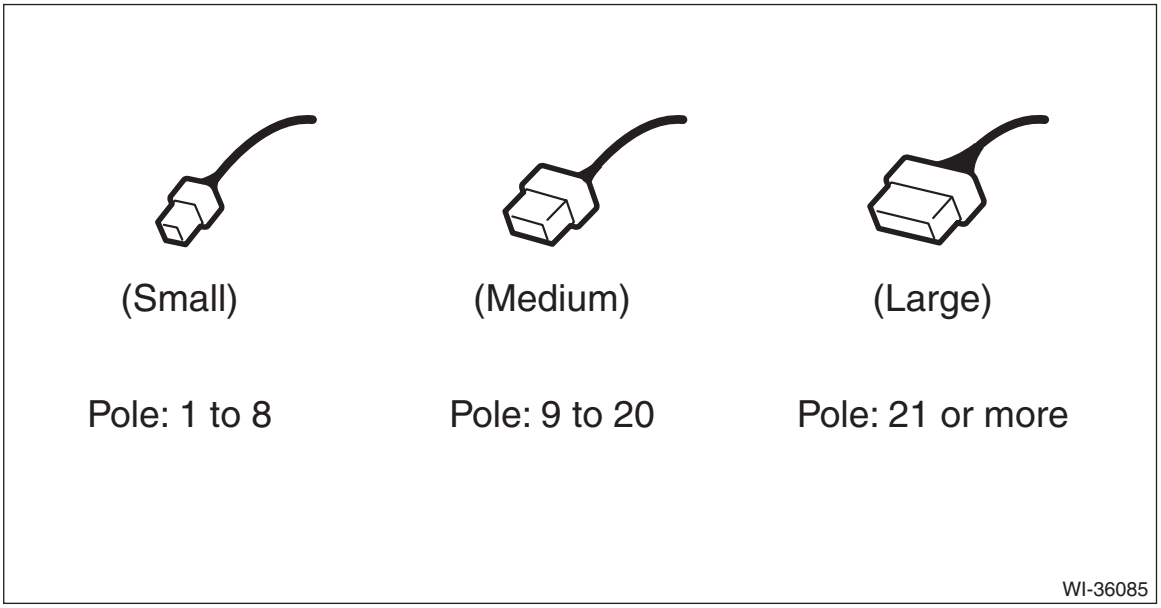
CONNECTOR LOCATION VIEW



Letters in "Area" corresponds with connector location view.
"B" indicates vertical line and "3" indicates horizontal line in above chart.

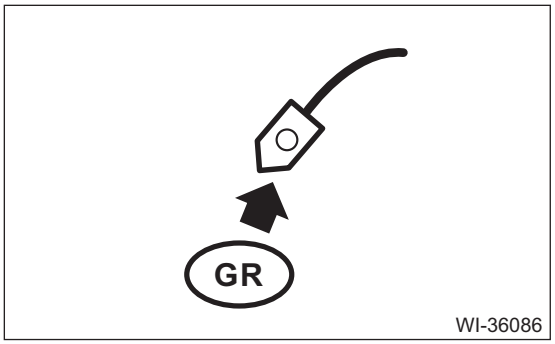
WI-60310

- The following connector symbols are used to easily identify the connectors.

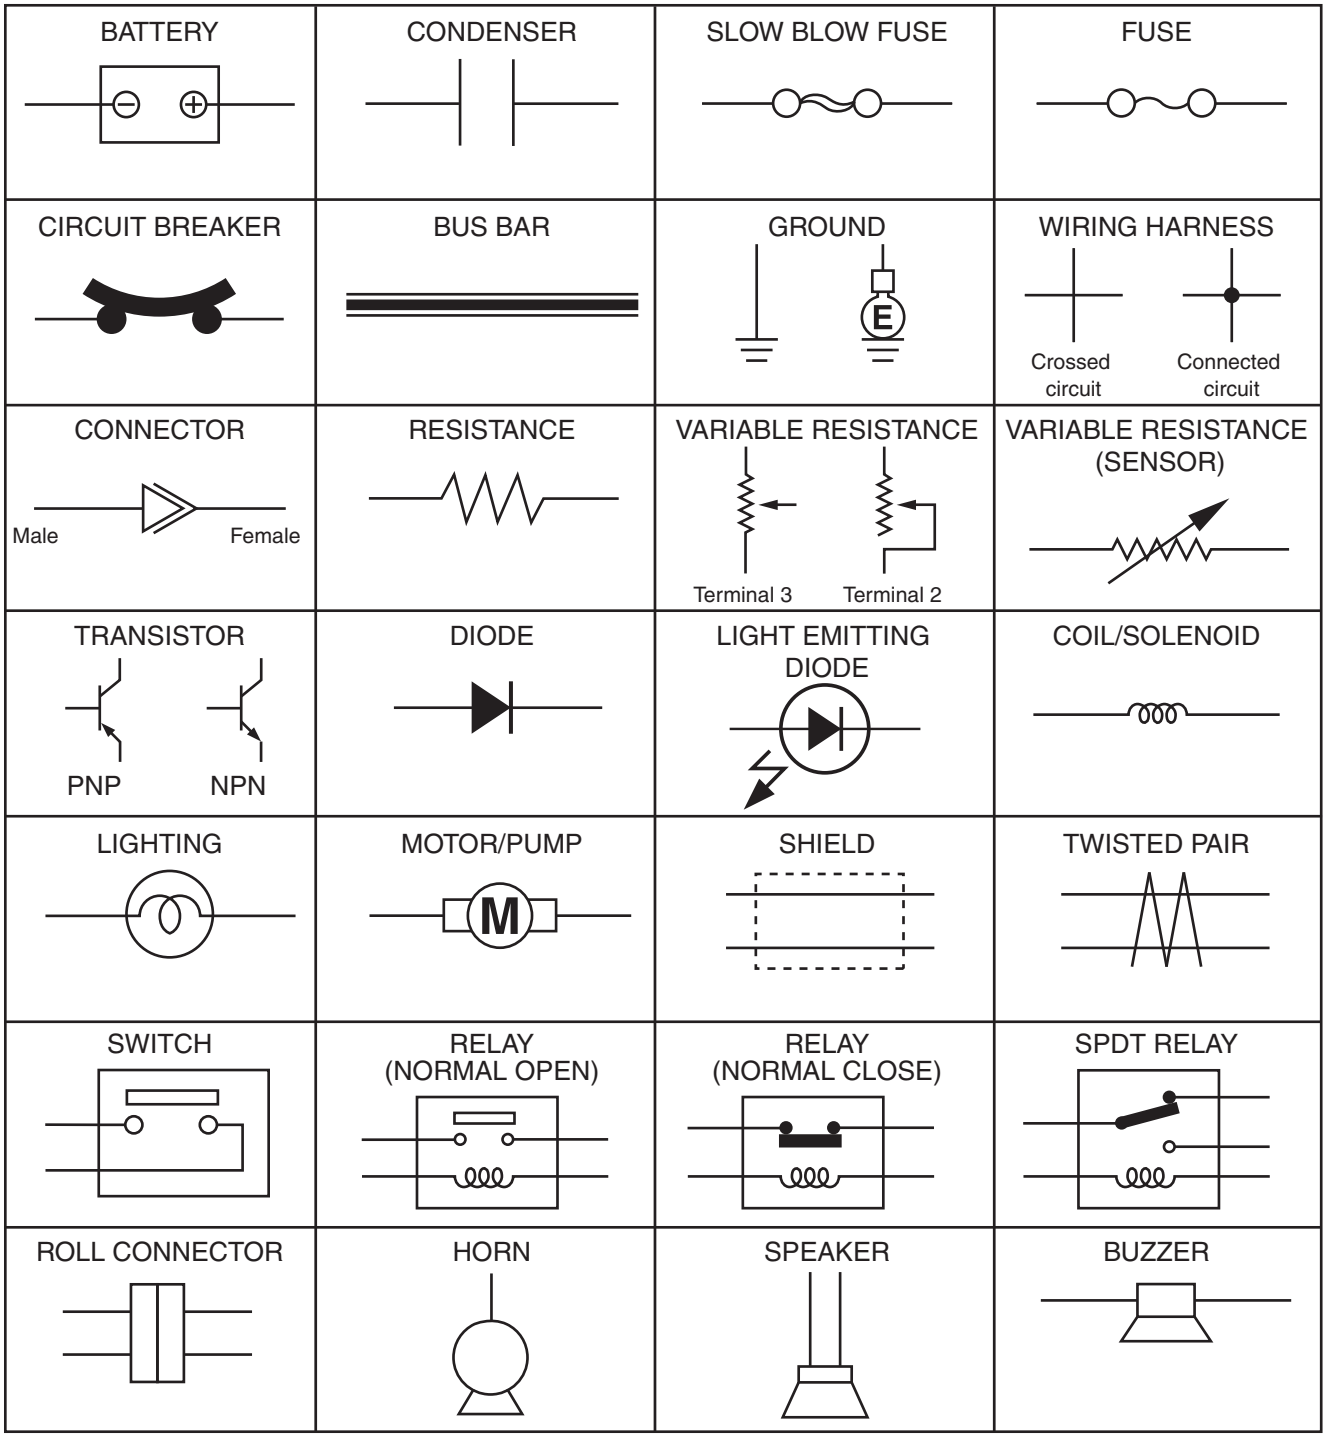


WI-36085

- The ground point is indicated as follows.



4. SYMBOLS IN WIRING DIAGRAMS



WI-36087

5. ABBREVIATIONS IN THIS MANUAL

Abbr.	Full name
ABS	Anti-lock Brake System
ACC	Accessory
A/C	Air Conditioner
ASSY	Assembly
A/F	Air/Fuel (air fuel ratio sensor)

Abbr.	Full name
ATF	Automatic Transmission Fluid
AUX	Auxiliary Audio Input Terminal
AVH	Auto Vehicle Hold
AWD	All Wheel Drive
B, BAT	Battery

Abbr.	Full name
BSD/RCTA	Blind Spot Detection/Rear Cross Traffic Alert
CAN	Controller Area Network
CL	Close
CM	Control Module
CVT	Continuously Variable Transmission
D	Drive range or Down
DC/DC	Direct Current / Direct Current (converter)
DCCD	Driver's Control Center Differential
DN	Down
E	Ground
ECM	Engine Control Module
EEPROM	Electrically Erasable Programmable Read-Only Memory
EGR	Exhaust Gas Recirculation
EPB	Electronic Parking Brake
F	Front
F/B	Fuse & Relay Box
FL	Front Left
FR	Front Right
G	Gravity (G sensor)
H/L	Headlight
HI	High
I/F	Interface
IG	Ignition
INT	Intermittent
ISO	International Organization for Standardization
J/C	Joint Connector
LCD	Liquid Crystal Display
LED	Light Emitting Diode
L, LH	Left Hand
LO	Low
LWR	Lower
M	Motor
M/B	Main Fuse Box
MFD	Multi Function Display
MIST	Wiper for mist
MT	Manual Transmission
N	Neutral Range
OP	Optional Parts or Open
P	Parking or Parking range
PASS	Passing
R	Reverse Range
RAB	Reverse Automatic Braking
RES	Reset
R, RH	Rear or Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse

Abbr.	Full name
SI-DRIVE	SUBARU Intelligent Drive
SRH	Steering Responsive Headlight
ST	Starter
SW	Switch
TCM	Transmission Control Module
TEL	Telephone
TFT	Thin Film Transistor
TPMS	Tire Pressure Monitor System
UP	Up
UPR	Upper
VDC	Vehicle Dynamics Control
WASH	Washer

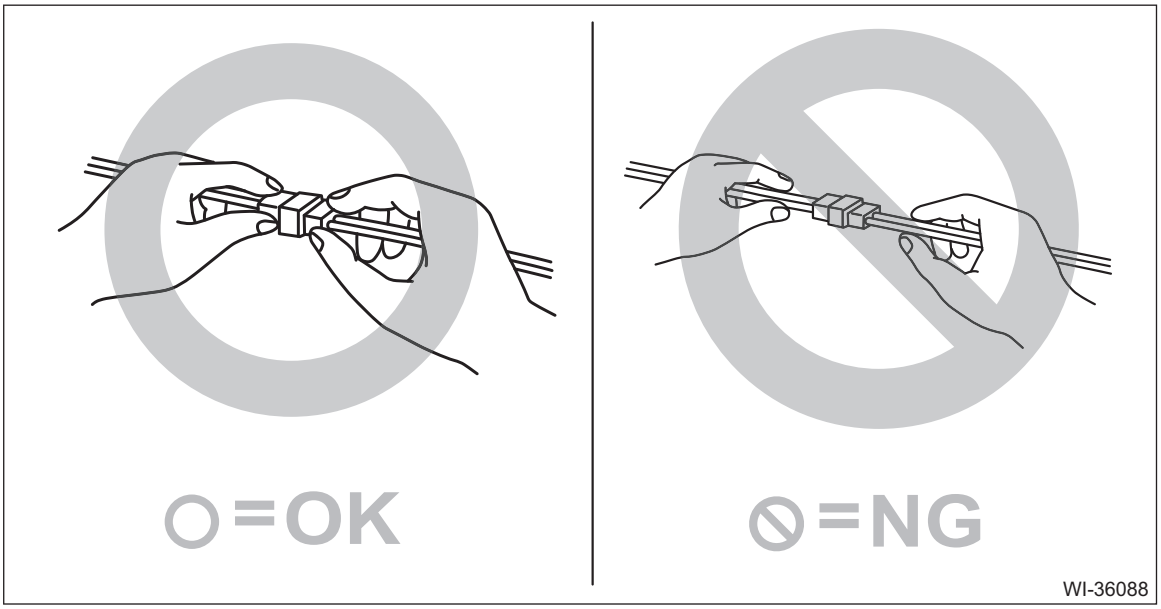
2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

1) Always refer to “CAUTION” and “NOTE” of “General Description” in the same model’s service manual before starting the service.
2) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
3) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
4) Be sure the workshop is properly ventilated when running the engine.
5) Be careful not to touch the rotating parts such as a belt or a fan while the engine is operating.
6) Be careful not to touch hot metal parts immediately after the engine has been turned on or off.

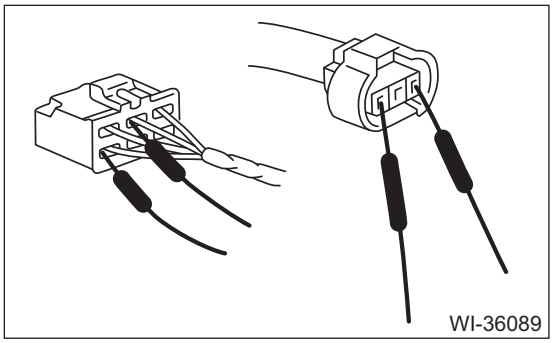
B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

1) Always refer to “CAUTION” and “NOTE” of “General Description” in the same models service manual before starting the diagnostics and repair.
2) Always refer to the cautions of each section when diagnosing and repairing each system and component.
3) The battery cable must be disconnected from the negative terminal after the ignition switch is set to the OFF position, unless otherwise required by the diagnostics.
4) When disconnecting a connector, do not pull the harness, but pull while holding the connector housing.



5) Confirm the locking shape completely before disconnecting a connector. In addition, firmly push in the connector until a click sounds when connecting a connector.
6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always touch tester probe (s) to terminals from the harness side.
If the probe is too thick to gain access to the terminal, do not push it in forcibly but use a mini test lead.
7) When measuring the voltage or resistance of individual sensor or all electrical control modules, use a tapered pin with a diameter of 0.6 mm (0.024 in) or less and touch it to the tip of terminal. Never insert the tapered pin into the terminal at this time. Doing so may cause internal deformation and a malfunction can occur.

8) To check water-proof connectors (which are not measurable from the harness side), touch tester probes on the terminal side and be very careful not to bend or damage the terminals.



9) Securely fasten the harness with clamps and clips so that the harness does not interfere with the body end parts, edges, bolts or screws.
10) When installing a harness and a component, be careful not to catch them on the harness.
11) Sensors, relays, units, etc., are sensitive to strong impacts. Handle them with extra care so that they are not dropped or mishandled.
12) Because the HID headlight uses high voltage, be sure to confirm that the power supply is turned off before diagnostics and repair. Furthermore, do not perform diagnostics and repair with wet hands because there is a possibility of electrical shock.
13) When inspecting the airbag system, in order to avoid malfunction, always refer to “CAUTION” of “General Description” of the airbag system in the same model’s service manual.
