Snowy owl (*Bubo scandiacus*)

The snowy owl is covered in snow-white feathers. This large species of owl is mainly found in Arctic tundra areas. The snowy owl can rotate its head up to 270 degrees giving it an extremely wide range of vision. While the male is almost purely white, the female's feathers are streaked with shades of black or brown. The female is also bigger than the male meaning that, unlike other owls, the snowy owl's sex can be easily distinguished. Unlike most other owls, the snowy owl is active during daylight hours. Summer in the Arctic circle features nights of "midnight sun", and the snowy owl, living in open areas such as tundras, grasslands, wetlands, or rocky areas, must hunt for prey from an elevated point with maximum vision of the area. For this reason, snowy owls are often very active during the day, even though hunting is commonly done in the mornings or evening. Their prey consists mostly of small rodents, but they occasionally feed on other birds too.

This papercraft is about one half the size of a real snowy owl.

Assembly Instructions

- 1) Carefully cut out the parts.
- 2) Make mountain folds and valley folds along the dotted lines, as indicated by the directions.
- 3) Assemble the parts in the order shown by the numbers on the glue tabs. (Read the assembly instruction for more information.)
- 4) Attach the parts in order. (Read the assembly instruction for more information.)
- 5) Your Paper craft model is finished.

Tools

Scissors, glue (We recommend craft glue.), rubber band

Caution

Glue, scissors and other tools may be dangerous to young children so be sure to keep them out of the reach of young children.

Notation Key

	Scissors line
	Cut in line
	Glue up to this line
	Mountain fold
	Valley fold
	Glue spot
	Glue reverse side

Canon Snowy owl (Female) : Assembly Instructions

Assemble the head
