HINT:

- "Check PCS system" is displayed on the combination meter's multi-information display when the DTCs on the previous page are output. The fail-safe function of the pre-crash safety system is operating ([see page 05-97](#)) if "PCS not Available Now" is displayed on the multi-information display.
- When DTC B2060 is output, there may be a malfunction in the ABS WITH EBD & BA & TRC & VSC system. Check the DTCs on the ABS & Traction actuator assy (skid control ECU).
- When DTC B2055, B2056, B2065, U0235, or U1102 is output, there may be a malfunction in the dynamic laser cruise control system. Check the DTCs on the cruise control ECU assy (distance control ECU) ([see page 03-6](#)). DTCs for the dynamic laser cruise control system may not be output when the cruise control's speed is set to 40 km/h (25 mph) or less.
- When DTC B2063 is output, there may be a malfunction in the supplemental restraint system. Check the DTCs on the airbag sensor assy center (see Pub.No.RM1049E,page 05-978).
- DTC U0145 may be output at the same time as DTC B1266 or B1267, which indicate malfunctions in BEAN communication. If so, the multiplex communication system may have a malfunction. Check the DTCs of the multiplex communication system (see Pub.No.RM1049E,page 05-3140).
